HYMN, a derivative of the Latin hymnum, which comes from the Greek ὕμνος, derived from ὧμι, to sing. In ancient pagan literature ὕμνος designates a prize song to the gods or heroes set to the accompaniment of the cithara (ὕμνος μὲν ἐς τοὺς θεοὺς τοῦτον, ὕμνος ἑστὶ ἀνδρῶν, Arrian., IV, xii), at first written in the epic measure like the oldest hymn to the Delphic Apollo, later in distichs or in the refined lyric measures of Alceus, Anacreon, and Pindar. In Christian literature the noun ὕμνος occurs in only two passages in the New Testament, namely Eph., v, 19, and Col., iii, 16, and then together with the synonymous ὀλοπλος and ὑμνηστική. With these can be compared the verb ἐρωτεύω in Matt., xxvi, 26; xxvii, 34, 50; Acts, xvi, 25; Heb., ii, 12. Notwithstanding the many attempts at definitions made by exegetes it is difficult to decide to what degree, if at all, a distinction among these three kinds of Divine praises is made by the three different terms, psalms, hymns, and spiritual canticles. Psalm is applied only to those songs composed by David, but, if the spiritual contents of these songs be considered, they may justly be called spiritual canticles, while their adaptability to singing makes them hymns. Thus, in the language of the Vulgate, the Psalms of David are termed hymni; "hymnus David canentes" (II Par., vii, 6); and that ὕμνος sung by Christ the Lord and His disciples at the Last Supper, as they are described by the Evangelist Matthew (xxvi, 30) as ὑμνῆς, et ὑμνηστικής was the great Hallel prescribed by Jewish custom for the paschal feast. From this it is to be inferred that ὕμνος was originally used in the general acceptance of "song of praise to God". At the same time it can be supposed that the early church could not have been satisfied with the term used by early Christian writers, but that Gentle Christians used more commonly the expression ὕμνος or ὑμνηστική, the latter requiring the complementary τετυμηστική to distinguish it from prose odes.

The Latin word hymnus is unknown in the pre-Christian literature. For it the word carmen is used by the classic authors, so that hymnus is specifically a Christian derivative from the Greek, like so many other expressions of the liturgy. In the ancient Christian writers hymnus is generally paraphrased as "laus Dei cum cantu" (Rufinus, "in Ps. lxxii") or as "hymnus specialiter Deo dictus" (Ambrose, "De Off., I, xiv"). The most celebrated definition is that contained in Augustine's letter to Fausta. He there says: "Know ye what a hymn is? It is a song with praise of God [cantus est cum laude Dei]. If thou praisest God and singest not, thou utterest no hymn if thou singest and praisest not God but another thing, thou utterest no hymn. A hymn then consists of two parts; the song is not the same as the praise of God [cum laude] and that praise of God [Dei]." The expression "praise of God" must not however be taken so literally as to exclude the praise of his saints. Saint Augustine himself says in the explanation of the same psalm, verse 14: "hymnus omnibus sanctis eius". "What then meaneth this 'A hymn to all His saints'? Let His saints be offered a hymn." God is really praised in His saints and in all His works, and therefore "a praise of the saints" is also a "praise of God".

But Saint Augustine's definition, if it should command all and be at once which has been considered in the course of time as hymnus, requires some limitation and an extension. A limitation: a song in praise of God can also be composed in prose, in unmetrical language, as for instance the "Gloria in excelsis" and the "Te Deum". These are still called "Hymnus angelicus", or "Hymnus Ambrosianus", evidently because of their elevated lyrical movement. But we have long understood by hymnus a song whose sequence of words is ruled by metre or rhythm, with or without rhyme, or, at least, by a symmetrical arrangement of the stanzas. To the earliest Christian authors and their pagan contemporaries it is most probable that such a limitation of the acceptance was unknown, hymnus on the contrary being entirely a general term which included the psalms, the Biblical cantica, the doxologies, and all the other songs of praise to God in prose or in rhythmical language. It is therefore clear why it was that the labour lost to seek for the origins of hymnal poetry in Pliney the Younger (Emp., X, xvii), Tertullian (Apol., ch. ii), Eusebius (Hist. eccl., III), Sozomen (IV, iii), Socrates (V, xxii), and others. On the other hand the expression cantus in Saint Augustine's definition must be extended. Although the hymn was originally intended for chanting and often for singing, it made no progress in the form that led to hymnology till it was recited aloud or used as silent prayers. Very early indeed religious poems arose which were conceived and written only for private devotion without ever having been sung, although they were genuine lyrical and emotional productions and are counted among the head of hymnody. Consequently, the term cantus is not to be limited to songs which are really sung and set to melodies, but can be applied as well to every religious lyrical poem which can be sung and set to music. With this interpretation Saint Augustine's definition is wholly acceptable, and we may reduce it to a shorter formula, if we say: Hymn in the broader meaning of the word is a "spiritual song" or a "lyrical religious poem", consequently, hymnody is "religious lyric" in distinction from epic and didactic poetry and in contradistinction to profane lyric poetry. Hymn in the closer interpretation of the word, as it will be shortly shown, is a hymn of the Divine.

BRANCHIES AND SUBDIVISIONS.—The religious song or hymn in the broader sense comprises a great number of different poems, the classification of which is not mentioned by Saint Augustine and which is in reality first completely introduced in the "Analecta hymnica mediæ ævi" edited by Blume and Dreves.
This classification does not apply to the hymnody of the Orient (Syrian, Armenian, and Greek), but to the hymnody as it is used in the liturgy of the Roman Church.

First, there are two great groups according to the purpose for which the hymn is intended. Either it is intended for public, common, and official worship (the liturgy), or only for private devotion (although hymns of the latter group may be also used during the liturgical service). Accordingly, the whole Latin hymnody is either liturgical or non-liturgical. Liturgical hymnody is again divided into two groups. Either the hymn belongs to the sacrificial liturgy of the Mass, and as such has its place in the official books of the Mass-liturgy (the Missal or the Gradual), or the hymn belongs to the liturgy of canonical prayer and has its place in a prayer-book or in the antiphonary. In like manner the non-liturgical hymnody is of two kinds; either the hymn is intended for song or only for silent private devotion, meditation, and prayer. Both of these groups have again different subdivisions. In accordance with the above, there arise the following systematic tables:

I. LITURGICAL HYMNODY.—A. Hymnody of the Breviary or the Antiphonary.—(1) Hymns in the Closer Sense of the Word (hymni).—These are the spiritual songs which are inserted in the horae canonici recited by the priest and are named after the different periods of the day in which they are sung, viz.: “Hymnus” (later “ad Missam”), “ad Matutinum” (later “ad Laudes”), “ad Laudes” (later “ad Laudes”), “ad Primam”, “ad Tertia”, “ad Sextam”, “ad Nonam”, “ad Vesperas”, “ad Completorium”. (2) Tropes of the Breviary (tropi antiphonales, verbata, proselia).—These are poetical interpolations, or preliminary, complementary, or intercalary ornamentation of a liturgical text of the Breviary, particularly of the response to the third, the sixth, and the ninth lesson. (3) Rhythmic Offices (historiae rhythmicae or rhythmata).—These are offices in which not only the hymns, but all that is sung, with the single exception of the psalms and lessons, are composed in measured language (rhythmical, metrical, and later also rhymed verses).

B. Hymnody of the Missal or the Gradual.—(1) Sequences (sequence, prosa).—These are the artistically constructed songs, consisting of strophe and counterstrophe, inserted in the Mass between the Eucharistic Gospel and the Tenebrae of the Mass (tropi graduales).—During the Middle Ages, all those parts of the Mass which were not sung by the priest but by the choir, e. g. the Kyrie, Gloria, Sanctus, Agnus Dei (tropi ad ordinarium missae) also the Introit, Gradual, Offertory, Communion (tropi ad prosessionem) were published in a kind of interpolatio, more even than the Breviary. These tropes (q. v.) came to be known as “Tropus ad Kyrie”, “Tropus ad Gloria”, etc. or “Troped Kyrie”, “Troped Gloria”, and so on. (2) Rhythmic or Metrical Masses (missae rhythmata).—We include under this heading Masses in which the above mentioned parts (under B, 2) are either entirely or partly composed in metrical form. This form of poetry found very few devotees. (3) Processional Hymns (hymni ad processionem) used during the procession before and after Mass, and therefore having their place in the Missal or Gradual. They have neither place in the breviary nor the missal.

II. NON-LITURGICAL HYMNODY.—A. Hymnody intended for Singing.—(1) Canticles (cantiones), spiritual songs which do not belong to the liturgy, but were employed after and during the liturgy, without being incorporated, like the tropes, with it. Two classes of these are distinguished, from which the canticles are differentiated by being written in ecclesiastical Latin and being sung by the official cantors, but not by the people. (2) Motets (muteti, motellis).—These are the artistic forerunners of the canticles and nearly related to the tropes of the Mass, as much as they grew out of the gradual responses of the Mass. They were sung in the processions of processional hymnody and hymnology. In general they may be defined as polyphonic church songs which were to be sung a cappella (without musical accompaniment).

B. Hymnody intended for Silent Private Devotion.—The general name for these poems is in Latin rhythm or psia dictamina. As they were intended for private devotion and not to be sung during the liturgical service, they may be called the hymnological prayer (in German Reimgebet). Among the various kinds of these poems are the following:—(1) Rhythmic psalters (psalteria rhythmica), that is, poems of 150 strophes, corresponding to the 150 Psalms, mostly treating of Christ or His Blessed Mother. Originally every morning prayer or the Rosary was corresponding to it in number. (2) Rhythmic rosaries (rosaria rhythmica), similar poems, but which had only fifty strophes corresponding to the fifty “Hail Marys” of the Rosary. (3) Hours-Songs (officia parva); these were rhythmic prayers which supplemented (for private meditation) each of the canonical hours with a strophe or a group of strophes. (4) Gloss-Songs, which paraphrased, extended, and explained each separate word of a popular prayer or a church antiphon (e. g. the Lord’s Prayer, the “Hail Mary”, the “Alma Redemptoris”, and so on) by a separate strophe or, at least, a separate verse. These spiritual poems of which absolution is rendered generally accessible by the great collection known as “Analecta hymnica mediæ ævi”, fall within the general acceptance of the word hymn. Several of the more important kinds are treated under separate articles, see RHETORICAL OFFICES, and SEQUENCIAS. Their development and lofty meaning will be more fully treated under HYMNOLOGY AND HYMNOLOGY.

Clemens Blume.

HYMNOLOGY and Hymnology.—Hymnology, taken from the Greek ψαλμοθε, means exactly “hymn song”, but as the hymn-singer as well as the hymn-poet are included under ψαλμοθέ, so we also include under hymnology the hymn verse or religious lyric. Hymnology is the science of hymnody or the historico-philological investigation and aesthetic estimation of hymns and hymn writers.

PRELIMINARY REMARKS.—Hymnology is still recent in its origin. Until lately the vast material of Latin hymnody lay buried for the most part in the manuscripts of the different libraries of Europe, notwithstanding the interest taken in spreading among the people a knowledge and love of hymns, especially after the Middle Ages, with a peculiar development and an activity in which the subject has been investigated in England, France, and Germany since the middle of the last century. As the “Realencyclopaedie fur protestantische Theologie” asserts: “Research in regard to hymns, as in general concerning the Latin ecclesiastical poetry of the Middle Ages, has made as yet but little progress in spite of the studies so actively pursued during the nineteenth century. Although it may have been thought that the compilations of Neale, Mone, Daniel, and others had provided fairly complete materials for research, we have since learnt how incomplete in quantity and quality the hitherto known material was by the publication of the "Analecata Hymnica", begun by the Jesuit Father Drees in 1886, continued after 1896 with his fellow Jesuit Father Blume [and since 1906 carried on by the latter aided by Rev. H. M. Bannister] . . . . Until this magnificent compilation is completed, the history of the Latin hymnody of the Middle Ages will be impossible; and even then it will first of all require a most minute and thorough examination” (Op. cit., 3rd ed., s. v. "Kirchenlied", II). The "Analecata Hymnica" in the meantime has reached
the fifty-second volume and will be completed in six more volumes and several indexes. This work, however, only lays the foundations for a history of hymnody, which had hitherto been practically nonexistent. We have been and are still in an incomparably worse state in regard to the hymnody of the Orient; for the Syrian, Armenian, and Greek hymns, in addition to the liturgical hymns of Bickell, Krumbacher, and others, remain for the most part unpublished and even uninvestigated. For this reason also, only the broadest outlines of the origin and development of hymnody can be given at present, and we must expect many future corrections and many additions to the foregoing list of hymn writers. The latest researches have already changed the whole aspect of the subject.

II. THE EARLIEST BEGINNINGS OF HYMNOLOGY.—To praise God in public worship through songs or hymns in the widest meaning of the word (see Hymn) is a custom which the primitive Christians brought with them from the Synagogue. For that reason the ecclesiastical songs of the Christians and the Jews in the first centuries after Christ are essentially similar. They consisted mainly of the psalms and the canticles of the Old and New Testaments. The congregation (whether in the Synagogue or in the church) sang these in the service, it seems, by imitating the responses or refrains, single acclamations, the Doxologies, the Alleluias, the Hosannas, the Trisagion, and particularly the Kyrie—Eleison, and so originated the Christian folk-song. Genuine hymns even in the broadest sense of the term were not yet to be met with. Even the four songs handed down to us through the "Constitutiones Apostolicæ" which were intended as hymns in the morning, in the evening, before meals, and at candle lighting, cannot be considered hymns. They are rather prayers which, in spite of the lyric tone and rhythm, cannot be regarded as genuine hymns. The reason is that they are not composed of extracts from the Scripture. The first of these four interesting songs is the Morning Hymn (Θεοπλησία) in its heading in the Codex Alexandrinus of the fifth century in London; and the fourth of those in the seventh book of the "Constitutiones Apostolicæ," in which the "Hymnus Angelicus": Δόξα εν δόξω Θεος (Gloria in excelsis Deo). The first part of this song of praise was written before 150 A.D., and Saint Athanasius, after translating it into Latin, inserted the whole in the Western Liturgy (see N.F.K. S. 295; March, lit. 6, p. 201). The Evening Hymn: Αλεξία, παυλίδε, Κόρης, αλεξία τι θύμων Κυριου is the same as the "Gloria in excelsis" in a shorter form and with the first verse of Psalm exi as introduction. The Hymn of Grace at meals begins: Εὐχαριστείτος εις ἡμῶν ουκ ἄνευ ἁπάντων ὑποτάσσομαι τῷ Θεῷ. These words show plainly their origin in the Holy Scriptures, and from them can be seen to what extent, if at all, they are ruled by rhythm and metre. The fourth song, the celebrated "Candle-light Hymn" beginning Φως ἐν φως which St. Basil describes as old in his day, is more rhythmical than the others. It is usually divided into twelve verses; these verses vary between five, six, eight, nine, ten and eleven syllables. This at most is the very beginning of what is termed a hymn in metrical language. The fact that in the fifth and later centuries these songs and prayers were called "hymns" is another instance of the error committed by the originators of the term. It is a word that found no echo in their living speech. The danger lurked here will not be under-estimated by the historian; for had there not been invented and received at the appointed time another artistic form of expression, the Greek nation would have lost forever the treasure of a true religious poetry. Thanks to this new form alone a sort of literature arose which
poetical feeling, variety, and depth may be placed beside the greatest productions of ancient poetry. This effective artistic form which arose with a magic cry the poetic genius of the Hellenes and lent to the lethargic tongues measures of ancient power is rhythmical verse ("Gesch. der byzant. Lit.", Munich, 1864, p. 655). To a greater degree the above is true in regard to Latin hymnody, especially for the Middle Ages.

The Christian poets did not all immediately abandon the old classic quantitative metre for the accentual. Many even reverted to its use later particularly in the age of the Carolingians. It is interesting, however, to note that such poems had no favour with the people and therefore were rarely incorporated in the Liturgy. Occasionally, indeed, their lack of rhythm was redeemed by excellent qualities; for instance, when they employed a very popular metrical form and took care that the natural word accent should correspond as far as possible with the accent required by the quantitative metre, i.e. the accented syllables of the word should occur in the long accented place of the verse scheme. The last case is therefore a compromise between the quantitative and the accentual or rhythmical principles. We have a clear example of all three in the hymns of St. Ambrose. He observes the rules of quantity, but chooses a popular metre, the iambic dimeter, with its regular succession of accented and unaccented syllables, from which arises the so-called alternating rhythm which marks the human step and pulse and is, therefore, the most natural and popular rhythm. He usually avoids a conflict between the word accent and the verse accent; his quantitative hymns can therefore be read rhythmically. This is one of the reasons of the lasting popularity of the hymns of St. Ambrose. The metre he selected, a strophe consisting of four iambic dimeters, was so popular that most of the following hymns to the same tune, and are called hymni Ambrosiani. Soon, however, many writers began to neglect the quantity of the syllables and their verses became in the fifth century purely rhythmical. The earliest known writer using such rhythmical iambics is Bishop Auspicius of Toul (d. about 470); hence, the purely rhythmical strophe is called the Auspician strophe. Both these iambic dimeters probably sprang from the versus saturnius, the favourite metre of the profane popular poetry of the Romans. To this metre in popularity was the versus popularis or responsoria, the name of which explains its character. Christian poetry adopted this metre also on account of its popularity. For instance, let us compare the following child-puzzle verse:

Rex erit, qui recte faciet / qui non faciet, non erit / with the beginning of a hymn of St. Hilary of Poitiers:

Adae carnis gloriosa / est caducè corporis.

This versus popularis and the iambic dimeter are the two metres in which most of the early Christian hymns were written, both in Latin and in Greek. This proves that Christian hymnody strove for popularity even in its outward form. For a similar reason the quantitative principle was gradually abandoned by hymn writers in favour of the rhythmical. "It is certainly no more chance," as has been very justly said in the "Byzantinische Zeitschrift" (XXI, 244), "that Christians were the first to break away from the lectern, to let his numhles into his mouth without even the eye alone; for they wished to reach the ear of the masses. These early Christians strove for and attained by means of the metrical system of their ecclesiastical poetry that which in German religious poetry was first achieved by Luther...contact with the people, with their ear, and thus, with their heart."

The further development of this rhythmical poetical form, especially in Latin, is thus briefly described by Meyer: "First, from the fifth century a slow growing struggle with many essays, clumsy but still attractive in their ingenuity. In the eleventh century begins the contrast of a finished art which in complete regularity creates the most various and beautiful forms, on the surviving examples of which the Romanesque poets and also the later lyric poets model their work even to-day" (Meyer, "Gesammelte Abhandlungen zur mittelalterlichen Rhythmik", Berlin, 1905, 1, 2). The rhythmical principle, especially in its union with rhyme, gained a complete victory over the ancient classic principles.

IV. HYMNODY OF THE ORIENT.—A. Syriac Hymnody.

The first known Christian hymn writer among the Syrians is also the first in point of importance and fecundity, St. Ephraem the Syrian (c. 373). It is impossible to say which of the many songs ascribed to him are authentic as there is no satisfactory edition of his works. His poems may be divided into the two classes so common in Syriac hymnody: "Mdmr" and "Madraschê". The former are poetic speeches or expositions of the Holy Scriptures in uniform metre without division into strophes; they scarcely come within the description of "lyric". The latter are the Hymns in all but name are songs and hymns composed in strophes, the strophes consisting of from four to six verse lines and closing as a rule with a refrain. St. Ephraem was particularly fond of the seven-syllable verse line, hence called the Ephrasic metre. The quantity of the syllables is scarcely regarded, the syllables for the most part being simply counted. Among the songs which are ascribed to St. Ephraem, no fewer than sixty-five are directed against different heretics; others have as their theme Christmas, Paradise, Faith, and Death. To this last subject he dedicated eighty-five hymns, probably intended for funeral services. Many were composed for the church, of which several, not to the same tune, were adopted by the Syriac Liturgy and have been preserved in it ever since. The main tenor of these hymns is often very dissimilar to that in the early Greek and especially the Latin hymnody. The sensuousness and the glow of Oriental imagination and the love of symbolism are evident, in some hymns more, in others less. Among the disciples and imitators of Ephraem we may note in particular Cyril Longinus (end of the fourth century) whose hymns on the Crucifixion, Easter, and the Grain of Wheat are still extant; Balaerus (c. 490) after whom the Syriac versified verse is named; Sarugh (d. 521) named by his contemporaries the "flute of the Holy Spirit and the harp of the believing church", though he was a Monophysite. None of these equalled St. Ephraem in poetic gift. Syriac hymnody may be said to have died out after the beginning of the twelfth century as a result of the conquest of Syria by the Arabs, though the following centuries produced several poets whose hymns are chiefly to be found in the Nestorian Paterals.

B. Greek Hymnody.—Here also we must be contented with the barest outlines, only a small part of the material has been gathered from the libraries notwithstanding the publications by Pittra, Christ, Paranikas, Daniel, and Amphilocheus and the detailed investigations by Mone, Bouvy, Wilhelm Meyer, and especially Krumbacher. Greek hymnody, if we take hymn in the wider sense of the word, begins with St. Gregory of Nazianzus (d. 391). In the early centuries the Greek hymnody was based on ancient classical foundation and are exclusively governed by the laws of quantity. Their language unites delicacy and verbal richness to subtlety of expression and precision of theological definition glowing with the warmth of feeling. The verbal portion of his poetical compositions are lyrical, and even among these only hymns in the wider sense of the
HYMNODY

word are found, as the glorious ἱμάτιον τῆς Ἱεροτοιχίας in the Eumenides of Aeschylus. These hymns in artistic form did not reach the people in every form of the Liturgy. They are a rosary of twelve hymns of singular sublimity, delicacy, and polish, whose contents at times betray the neo-Platonic; six of them, however, written probably by St. Andrew in a later period of the artistry of the distinctly Christian Church. To all of them the term "prayer rather than hymn should be applied. "The easy metres that have something playful in them are unsuited to the dignity of the contents, while the failure to separate the verses into strophes and their prominent subjective tone disqualified them for use in the Liturgy" (Baumgarten, "Gesch. der Weltlit. ", IV, 62). We may look upon the inventive and stirring writer Romanos (d. probably c. 500) as the real founder of Greek hymnody. In his poems the quantitative principle has completely given way to the accentual, rhymthical principle; and with the triumph of this principle, the metre of the Christian hymnody begins. About eighty hymns of Romanos have come down to us; nearly all of them show the artistic form of the "contakia". These contakia consist of from twenty to thirty or even more strophes of uniform structure to which is prefixed as a rule one, but occasionally two or three strophes of varying structure; every strophe (τριστρόφον or στροφή), the numerous verses of which are generally different, is followed by a refrain of one or two short lines. The most popular of his hymns was the Christmas hymn which was performed with great festal pomp at the imperial court every year, until the twelfth century, by a double choir from the St. Sophia and the Church of the Apostles. It may well be called a performance, for such a lengthy song, set to music, sung by choirs and counterchoirs, and supplied with proem and refrain, resembles rather a dramatic oratorio than what we are accustomed to call a hymn. It begins thus: Η ραθύμιος στίχος του ἰεροτοιχίας.

Romanos deserves, as the greatest of the Byzantine poets, the surname μετάτροπος. Clear and precise in thought, he possesses the thematic depth and fire of a true lyric poet. He was unable, however, to avoid monotony and repetition owing to the uncommon length of the hymns, and a comparison with the father of Latin hymnody, Saint Ambrose, must leave him at a disadvantage.

John of Damascus, a Monothelite (610–41), followed as a poet very closely in the path of Romanos. It is, however, more than doubtful if the Ἀκανθόρα τῆς άνωθεν (so called because the clergy and people were obliged to stand while intoning it) should be ascribed to him; it is also impossible to ascertain whether this lengthy song of thanksgiving to the Mother of God, inspired by the rescue of Constantinople and the empire from the Avars, was composed in the year 626 or 677 or 711. At all events it is still greatly revered in the Greek Church and is a shining witness of the poetical creative power of the seventh century. Whatever enthusiasm for the Blessed Virgin, whatever knowledge of Biblical types and in general of religious objects and ideas was able to accomplish, whatever ornamen of speech, versatility of expression, skill of rhythm and rhyme could add, all that is expressed here in an unsurpassed degree ("Zeitschrift für Kirchengeschichte", V. 228 sq.). The Patriarch Sophronius of Jerusalem (629) devoted himself more to a learned, and often very arid, artificial form of poetry. To these chief representatives of the florescence of Greek hymnody may be added Andreas-Pyrhos, eight of whose charming "idiomela" on the chiefs of the Apostles are preserved; and Byzantinos and Cyprianos, of whom, however, only the names are known. At the opening of the eighth century St. John of Damascus (d. about 743) wrote the artistic measure of the "canons". A canon is a hymn composed of eight or, in remembrance of the nine Canticles of the Old Testament, of nine different songs, each of which has a peculiar construction and consists of three, four and, originally, more strophes. St. Andrew wrote one hymn and only one. The rest wrote those that became known on account of its length and is called χειρωνακτίς. The influence of the great Romanos is unmistakable in the poems of St. Andrew; besides, the reflections and great verbosity often give a jarring and tiring impression. The canons were particularly cultivated in the eighth century by St. John of Damascus and his half-brother St. Cosmas. Their model in language and metre was St. Gregory of Nazianzus, so they tried to revive the use of the old classical quantitative principle. In this artificial verse their description grew subtitled and often obscure, and genuine poetic feeling suffered from it. These were, however, inferior to the natural stirring contakia, these canons were greatly admired and imitated by contemporary hymn writers.

Disastrous as was its effect on hymnody the iconoclasm of the eighth and ninth centuries called forth a spiritual reaction which was forcibly expressed in religious poetry and inspired many excellent songs. These songs in particular have been the longest retained in the Greek Liturgy. After the Syracusians, Gregory and Theodosius, St. Joseph the Hymnographer (d. about 853) and the imposing succession of Studites are especially to be noted here. The great monastery of the Studium (Studion) at Constantinople became a nursery of hymnography. The hegemones (or abbot) of the monastery, St. Theodore (d. 866), began with the triumphal canon for the great festival that commemorated the victory of the icons, with his canon on the Last Judgement, so popularly ascribed by Neale as "the great Judgment-hymn of the Church", and with numerous other hymns. After him come his brother Joseph, later Bishop of Thessalonica, who suffered martyrdom, the Studites, Theophanes, Antonios, Arsenios, Basilios, Nicolaoe, and lastly George of Nicomedia and Theodorus of Smyrna. Among the best of these, along with some excellent qualities, there is more or less Byzantine bombast or inflated exaggeration and heaping of epithets. A remarkable personality at this time is the talented poetess Kasia (Ἰασώτα) who about 830 was chosen as a bride for the future Emperor Theophilus in account of her beauty, but was rejected because of her too great frankness. She then founded a convent of nuns in which she devoted herself to profane and sacred poetry, as did the celebrated nun Hroswith of Gandersheim long after her. Her best known poems are the three idiomela on the birth of Christ, on the death of St. John the Baptist, and on the Wednesday of Holy Week, all of which were incorporated in the Liturgy. A disastrous event for hymnody was the revision of the hymnal undertaken in the ninth century. Many beautiful contakia were dropped from the Liturgy in favour of the canons, and many of the old hymns were "improved", that is, mutilated. The kind of revolutionary change of which we were speaking was declining. Hymnody now gleaned only a scanty aftermath. In the eleventh century even the Greek Liturgy ceased to develop and there remained no soil in which Greek religious poetry could thrive. Only a few isolated hymn writers appeared in the Byzantine Empire after that time; such were Johannes Mauro
Hymnody

600

Hymnody

pus, Johannes Zonarae, and Nicephorus Olemmidia. On foreign soil, in Italy, there was, however, in the eleventh and twelfth centuries a renaissance, especially in the Basilian convent at Grottaferrata near Rome, founded by Nils the Younger in 1005.

V. Hymnody of the West.—Latin Hymnody.—
The West began to cultivate religious poetry at the same time as the East. From the beginning up to the twelfth century, the Western Church has been as much alive to the beauty of the word as the Eastern Church had been to the beauty of the liturgy. Throughout the Middle Ages, the Western Church preserved and transmitted music and hymns from the East. However, the Western Church was able to develop its own style and form of hymnody, which was distinct from the Eastern Church.

The works of the religious lyric poetry give us an instructive picture of the culture and spiritual life of the early Christian Age and of the Middle Ages that is wholly unexpected. In this religious poetry the entire Church co-operated, popes, kings, cardinals, bishops, the brightest lights of science, influential statesmen and ambassadors, humble monks, and simple schoolmasters. . . . The versatility and universality of religious culture, the harmony of mental life with the life of feeling lent to religious poetry that richness and depth, that fullness and fervour, which the East had already acquired. Richard B. Buxtorf, of Dublin, writes of the hymns of St. Ambrose as follows: "After being accustomed to the softer and richer strains of the later Christian poets . . . it is some little while before one returns with a hearty consent and liking to the almost austere simplicity which characterises the hymns of St. Ambrose. . . . Only after a while does one learn to feel the grandeur of this unabored metre, and the profound, though it may have been more instinctive than conscious, wisdom of the poet in choosing it; or to appreciate that noble confidence in the surpassing interest of his theme, which has rendered him indifferent to any but its simplest setting. For in the hymns of St. Ambrose one feels that the living God, he would observe the Levitical precept, and rear it of unbroken stones, upon which no tool has been lifted. The great objects of faith in their simplest expression are felt by him so sufficient to stir all the deepest affections of the heart, that any attempt to dress them up, to array them in moving language, were merely superfluous. The passion is there, but it is latent and repressed, a fire burning inwardly, the glow of an austere enthusiasm, which reveals itself indeed, but not to every careless holder. Nor do we presently fail to observe how true to the old these poems belong to their time and to the circumstances under which they were produced; how suitably the faith which was in actual conflict with, and was just triumphing over, the powers of this world, found its utterance in hymns such as these, wherein is no softness, perhaps little tenderness; but in that strong and direct voice, the old and the new muted and glorified into that nobler Christian courage, which encountered and at length overcame the world" ("Sacred Latin Poetry", London, 1874, 87 sq.).

Notwithstanding the deep impression made by St. Ambrose’s hymns on St. Augustine, the latter did not contribute to hymnody, and his hymns were not set to music. The hymnody was developed by the Church in the West. The hymnody was not only a means of expressing the faith, but it also contributed to the liturgy. The hymns were sung during the liturgy, and they were also used for private devotion.

Fece vitam verum factum et caro.

In that hymn, each strophe of which consists of three versus politici, that is, of trochaic tetrameters, is described the "Hostis fallax securorum et damnarum artifex" (str. 0, 1); in the tenth strophe the single handwriting in which these three hymns are given us breaks off. The language is profound and obscure, and it is only too clear that St. Hilary could not have become popular with such hymns. All other hymns ascribed to him must be rejected as spurious with the exception of the hymn to Christ, written in twenty-four strophes: Hymnun dicat lupa gratum, l hymnum cantus per-

sont, Christo regi concinnantes, I laudem demus debitam. It was reserved for St. Ambrose (d. 397) to become the real "Father of Latin hymnody". Of his pithy and profound hymns fourteen genuine ones have come down to us in addition to four others which are now used at Trier, Sept, and None in the Roman Breviary, in the hymn "Hymnus / virginum", which are of very doubtful authenticity. Their outer form has been described above. They became at once favourites with the people, drew tears of devotion from the great St. Augustine, and were committed to memory by his mother St. Monica and others. They gave a model and form for all the later Breviary hymns, and from the beginning they remained as component parts of the Liturgy, the revisors of the Breviary having left at least these of them in the prayers of the canonical hours, namely: "Æterna Christi munera" , "Æterne rerum conditor" and the inimitably beautiful hymn at Lauds "Splendor paternae gloriae". The first strophes of the last-named hymn give an idea of the profound poetry of St. Ambrose. St. Ambrose (note that the two strophes form one sentence):

Splendor paternae gloriae, Verusque sol, illabere De luce lucem proferebatur, Micans notus perpetu
Lucis et fons luminis, Tubarque sancti spiritus
Dies dierur, illuminae Infunde nostris sanabula.

Richard B. Buxtorf, of Dublin, writes of the hymns of St. Ambrose as follows: "After being accustomed to the softer and richer strains of the later Christian poets . . . it is some little while before one returns with a hearty consent and liking to the almost austere simplicity which characterizes the hymns of St. Ambrose. . . . Only after a while does one learn to feel the grandeur of this unabored metre, and the profound, though it may have been more instinctive than conscious, wisdom of the poet in choosing it; or to appreciate that noble confidence in the surpassing interest of his theme, which has rendered him indifferent to any but its simplest setting. For in the hymns of St. Ambrose one feels that the living God, he would observe the Levitical precept, and rear it of unbroken stones, upon which no tool has been lifted. The great objects of faith in their simplest expression are felt by him so sufficient to stir all the deepest affections of the heart, that any attempt to dress them up, to array them in moving language, were merely superfluous. The passion is there, but it is latent and repressed, a fire burning inwardly, the glow of an austere enthusiasm, which reveals itself indeed, but not to every careless holder. Nor do we presently fail to observe how true to the old these poems belong to their time and to the circumstances under which they were produced; how suitably the faith which was in actual conflict with, and was just triumphing over, the powers of this world, found its utterance in hymns such as these, wherein is no softness, perhaps little tenderness; but in that strong and direct voice, the old and the new muted and glorified into that nobler Christian courage, which encountered and at length overcame the world" ("Sacred Latin Poetry", London, 1874, 87 sq.).

Notwithstanding the deep impression made by St. Ambrose’s hymns on St. Augustine, the latter did not contribute to hymnody, and his hymns were not set to music. The hymnody was developed by the Church in the West. The hymnody was not only a means of expressing the faith, but it also contributed to the liturgy. The hymns were sung during the liturgy, and they were also used for private devotion.

Fece vitam verum factum et caro.

In that hymn, each strophe of which consists of three versus politici, that is, of trochaic tetrameters, is described the "Hostis fallax securorum et damnarum artifex" (str. 0, 1); in the tenth strophe the single handwriting in which these three hymns are given us breaks off. The language is profound and obscure, and it is only too clear that St. Hilary could not have become popular with such hymns. All other hymns ascribed to him must be rejected as spurious with the exception of the hymn to Christ, written in twenty-four strophes: Hymnun dicat lupa gratum, l hymnum cantus per-

sont, Christo regi concinnantes, I laudem demus debitam. It was reserved for St. Ambrose (d. 397) to become the real "Father of Latin hymnody". Of his pithy and profound hymns fourteen genuine ones have come down to us in addition to four others which are now used at Trier, Sept, and None in the Roman Breviary, in the hymn "Hymnus / virginum", which are of very doubtful authenticity. Their outer form has been described above. They became at once favourites with the people, drew tears of devotion from the great St. Augustine, and were committed to memory by his mother St. Monica and others. They gave a model and form for all the later Breviary hymns, and from the beginning they re-
tion and form they stood in complete contrast to the hymns of his post predecessors. The Muse indeed that speaks in the songs of the Spaniard is quite different from the Muse of the hymns of the Milanese; Drexes has termed it the romantic Muse. The highly poetic songs which compose the two books "Kathemerinon" and "Peristerophon" of Prudentius should not be compared with St. Ambrose's hymns; the former are the latter are masterpieces of their kind. St. Ambrose's hymns, like the old Roman done, impress us by their classical dignity and weight, while Prudentius, like the Gothic cathedral, elevates our souls by the richness of his form and the bold flights of his fancy. The exquisite beauty of the hymns is indebted to the Musæus to incorporate in their Liturgy some of the martyr hymns from the "Peristerophon" notwithstanding their great length and their private devotional character.

In the Roman service as well, several beautiful extracts or cento's were used in the Liturgy. Such are those hymns which were used for Lauds on Tuesday, Wednesday, and Thursday and are still retained in the Roman Breviary, namely: "Ales diei nuntius"; "Nox et tenebrae et nubila"; and the charming hymn to the Holy Innocents: "Salve lectes flores martyrum". It is regrettable that others have gone up, for example, the Christmas hymn which was widely known in the Middle Ages, the first strophe of which is as follows:

Corde natus ex parentis / ante mundi exordium, 
Alpha et O cognominatus, / i pipere fons et claustula
Omnium, que sunt, fuerunt, / queque futura sunt

Secessor meus eseculius.

Prudentius had apparently no followers, but St. Ambrose, as soon as the desire and courage awoke to introduce other hymns than his into the Liturgy, was the permanent model and pattern. These additions were made in the fifth century and were occasioned by the increased number of festivals. The so-called hymni Ambrosiani bear witness to this fact, as they are identical in outer form with the hymns of St. Ambrose; while each strophe consists of four iambic dimeters, as a rule, eight strophes form a hymn. The authors are mostly unknown. It cannot be determined from the "Carmina paschali" which was the first among them. According to Gennadius he is said to have written among other works a book of hymns; but it cannot be ascertained what they were, as among the extant lyrical poems of Paulinus there is no hymn proper to be found, though there are three poetical paraphrases of the Psalms and a morning prayer written in hexameters:

Omni potens genitor, rerum cui summum potestas, etc.

Pope Gelasius I (d. 496) wrote genuine Ambrosian hymns as Gennadius tells us; but no single hymn can be ascribed with certainty to this pope. Of the poet Caesarius Sedulius (about 469) we have two hymni so entitled by him, besides a great "Carminum paschale" (a kind of harmonized Gospel). Of these hymni, one, in spite of the refrain, is really a didactic poem; the other is still preserved in the Liturgy. The latter is the abecedary:

A solis ortus cardine
Ad usque tarda limitem
Christum canamus praeipsum
Natum Maria virgine, etc.

The metre and form of these strophes are those favoured by St. Ambrose while the number of strophes corresponding to the letters of the alphabet is much greater. The "Carminum paschali" were taken later several hexameter verses which now form the Introit of the votive Mass of the Blessed Virgin: "Salve, sancta parens, enixa puerpera regem", etc. The most faithful, one might almost say slavish, imitator of St. Ambrose was Magnus Felix Emnidius, Bishop of Pavia (d. 521) who, while archdeacon of

Milan, wrote twelve hymns which correspond in outer structure with those of St. Ambrose; but they were not incorporated in the Liturgy.

In the empire of the Frankish dynasty of the Merovingians Venantius Fortunatus, Bishop of Poitiers (d. about 605), is the most prominent poet. He was chiefly a non-liturgical poet; but he left a lasting monument in the Liturgy in the two fine hymns on the Crucifixion:

Pange lingua gloriosi
Praelium certaminis, etc.,

and

Vexilla regis prodeunt,
Fulget crucis mysterium,

and in the one to Our Lady:

Quem terra, pontus, aethera,
Colunt, adoran, predecant.

The two last-mentioned hymns are Ambrosian in metre, structure, and number of strophes. The Professional hymn formerly sung at Easter, "Salve festa dies totus veneribilis evos", is especially to be noted; it was taken from his soaring Easter song:

Tempora florigerous rutilant distincta sereno
Et maiore poli lumine porta patet.

Many of Fortunatius's hymns have been lost. The "Hymnus ad Mandatum" on Holy Thursday was a very popular and well-known hymn written in the Ambrosian style by the Bishop Flavius of Chalon-sur-Saône (d. 591). It begins:

Tellus ac astra ubiulent
In magno cena principis.

No other hymns by this bishop are known. As curiosities from this age two hymns are to be mentioned in honour of St. Medardus by one of the Merovingians, namely the highly gifted but notorious profligate King Chilperic I (d. 584). They are bad verses but the contents are profound and the imagery is striking. These hymns never found a place in the Liturgy.

As in Italy, the cradle of hymnody, and in the Merovingian Empire, hymnody flourished more and more after the seventh century in Spain, whose great writer Prudentius we have already noticed. The object of the writers to supply the Mozarabic Liturgy with hymns was carried out so well that we can speak of a particular Mozarabic "nunci". Among the works of Mozarabic hymnody consisting of over 200 hymns independent of the songs adopted from the hymnal works of St. Ambrose, Prudentius, and Sedulius or borrowed from the Roman Liturgy. The writers of these hymns were without exception bishops, as Isidore of Seville (d. 636), Braulio of Saragossa (d. 651), Eugenius of Toledo (d. 657), Quiricus of Barcelona (d. 664) and Cynulla of Toledo (d. about 783). With few exceptions it remains doubtful which Mozarabic hymns should be attributed to each of these poets. Most of these productions are in the metre of St. Ambrose, and as all the hymns of that saint, except the one in honour of the Milanese saints, were used in the Mozarabic service, his influence is unquestionable. The poetic value of the Mozarabic poems is far from being uniform; the greater part have only historico-literary interest.

Of a quite different order are the Latin poems of the ancient Irish Church. They are all intended for private devotion or non-liturgical uses. Not only the quantitative, but also the accentual principle is rejected. The number of syllables forms the verse but in union with rhyme and alliteration. Rhyme is used there as early as the sixth century; it develops steadily and appears in the seventh and especially in the eighth century in its richest and purest form. The progress in rhyme is so constant that it may be taken as a criterion of date. Singular, too, is the taste for alliteration as expressed in verses like "O rex o rector reginis" or "Patrem precor potentem". The oldest hymn written in Ireland, and at the same time the oldest purely rhythmical Latin hymn, is that of St.
Secundinus or Sechnall (d. about 448) to St. Patrick:
Audi, omnes amantes Deum, sancta merita.
It is written in the rhythm of St. Hilary's "Hymnum dicat turba fratum"; and the latter hymn may possibly have inspired it. St. Hilary was very popular in Ireland as were his compositions, and many ancient Irish songs are approximately exactly of the same form. The next poet in point of time to be mentioned is St. Gildas (d. 569), with his singular song (Lorica): Suggestare trinitatis unitas,
Unitatis miserere trinitas, etc.
which found widespread popularity through Lateanum sanctagens (Londinium). Other hymn writers are St. Columba (Colum Cille, d. 597), five of whose hymns are extant; St. Columbanus (d. 615), St. Ultan of Ardbreckan (d. 656), Colman Mac Murech, Abbot of Maghbite (died about 731), Gengus Mac Tipirata (about 741), Cuchiunne (about 746) and Saint Moicrusin, Abbot of Tallaght (d. 792). In the beginning of the ninth century the productivity of ancient Irish hymnody seems to have ceased. An Irishman by birth, but not writing in the ancient Irish manner, was the Scholastic of Lige, Sedulius Scotus (d. about 874). Here the Venerable Bede, born in the British Isles, lived, and though his exegetical influence through his generally dry hymns than through his more important work "De arte metrica" is remarkable at first sight that no Irish Latin hymn was adopted into the Liturgy or into the ancient Irish Church. In seeking an explanation of this fact we are led back to one of the most striking personalities of the second half of the sixth century, Pope Gregory the Great (d. 604). According to an old Irish legend, he sent about the year 592 a hymn book to St. Columba with the "hymns of the week", i.e. with the hymns for Matins, Lauds, and Vespers for the different days of the week. This hymn book, to which the term of the "Commune Sanctorum" is added before the ninth century, supplanted towards the end of that century the old Benedictine hymns in the Roman Breviary among the "hymni dominicales et feriales", and in the hymns used for the "Commune Sanctorum". Many of these hymns were written by Gregory the Great himself, which shows that he merits an important place in a history of Latin hymnody. Lack of space forbids closer examination of this question, with which is connected the introduction of hymns into the Roman Liturgy during the ninth century.

(2) Period from the Carolingian to the Crusades.
That lessers of the first Carolingians benefited poetry also but it was not in every way advantageous for hymnody, as there was a return to artificial poetry and the old classical metre, whereby the development of accentual rhythm and folk-song was again somewhat hampered. Only by degrees the accentual folk-poetry rose again in the eleventh century to the surface, with renewed vigour owing largely to the impulse given it by the school of St. Gall. In this last stage of transition there are side by side with fine poems many clumsy efforts in barbaric language, especially in the hymns of unknown authors of the tenth century. The separate groups and schools of poets of this period can be sketched here only briefly. First we find the circle of poets from the palace school of Charlemagne: Paulinus Diaconus (d. 793), Paulinus of Aquileia (d. 802), Alcuin, Abbot of St. Martin of Tours (d. 894), Theodore, Bishop of Orleans (d. 821), and Rabanus (d. 856) who introduce us to the so-called "Carolingian". All these contributed extensive poetical works to hymnody. Thus, Paulinus Diaconus is the author of a celebrated hymn on St. John the Baptist: "Ut quanta lexis resonare fibris", a masterpiece of spiritual and harmonious lyricism in Sapphic strophes, but somewhat bizarre; and a hymn on the Assumption of Our Lady: "Quis possit ampo famine praepotens". Paulinus of Aquileia is known by his nine hymns, among them the splendid one on the chiefs of the Apostles: "Felix per omnes festum mundi cardines", with the division: O Roma Felix, quae tantorum principum Es purpurea pretioso sanguine.
Of Theodulf we have among others the once widespread processus of Parma: "Laus te laus et honor tibi sit, rex Christe, redeemer". Alcuin in the great bulk of his poems has only left two real hymns. With Rabanus, afterwards Archbishop of Mainz, we reach the poetic school of Fulda, the importance and influence of which require closer examination. It is remarkable that Rabanus, who in other writings and poems adhered closely to his predecessors, is much more original in his hymns which show no small poetical power. His Ascension hymn was widely known: "Festum num celebre magnumque gaudium", and the Liturgy still retains the hymn of the martyr "Sanctorum meritis inedita gaudia", the two hymns to St. Michael: "Christe, sanctorum decus angelorum" and "Tibi, Christe, splendor patri" (now transposed: "Te splendor et virtus patri") and above all the celebrated hymn: "Veni, creator spiritus". Among the following names those of Rabanus, called as hymn writers: Walafridus Strabo (d. 849), Gottschalk of Orsais (d. 869), and Hermannic of Ellwangen (d. 874).
Of great importance for hymnody was that district in which lay the old Abbeys of St-Amand, Landevenec, St-Omer and Prum. There arose in this district in the latter part of the eleventh century an altogether new kind of poetry that subsequently flourished brilliantly, namely that of the metrical and rhythmic Offices. The chief writer of the school of St-Amand (Schola Elmenesia) is Hucbald (d. 930), the inventor of the "ars organisandi". He was preceded by the productive poet Milo (d. 872). The Landevenesiac monastery was among those that the monks of St-Amand and the abbot Gudrestin (d. 884). Prum was represented by his hagiographer and poet Wandalbert (d. about 870). St. Gall, however, surpassed all the schools of poets and singers of that time in fame and influence. The poetry of the sequences, though not invented here, was cultivated and encouraged. This kind of poetry freed hymnody from the classical restraints and the scanty rhetorical form of the Carlovingian time (see Sequences). In St. Gall were written a considerable number of beautiful processionary hymns, and religious songs of welcome to distinguished guests. The second great lyric poet Ratpert (d. after 884), Waldradmus (d. towards the end of the ninth century), Tuttilo (d. 895), the prince of sequence poetry Notker Balblius (d. 912), Abbot Hartmann (d. 925), Eckehard I (973), Notker Physicus (d. 975), and Hermann Contractus (d. 1034) sang and wrote in St. Gall. This same period witnessed the origin of the trope, of which the motets and cantiones were developments (see Tropes).

In France the Abbey of Cluny contributed to hymnody by the writings of its abbots Odo (d. 943) and Odilo (d. 1045). Other talented French poets of this period are: Fulbert of Chartres (d. 1029), Ademar of Chabannes (d. 1034), Odorannus of Sens (d. 1045), Rainald of St. Maurice at Angers (d. about 1074), Eusebius Bruno of Angers (d. 1081) and Berengarius of Tours (d. 1085). Germany produced the poets Arnold of Vohburg (d. about 855), Willehad of Echternach (d. 901), Ulrich of Siegburg (d. 1048), Othelo of St. Emmeram in Ratisbon (d. 1072), Gottschalk of Limburg (d. 1098), and Bruno, Count of Egsheim, later Pope Leo IX (d. 1054).
We owe to this pope, of whom Anonymus Melissenius speaks as "in musica subtilissimus", a Christmas hymn: Ego preces meae, quam volo, invocavit Dominus, etc.
"O pater, Deus æterne, de caelis altissime" and a rhythmical Office of St. Gregory, in a somewhat
et nymy form. In England Wulstan (Wolstan of Winchester d. 990) and St. Anselm, Archbishop of Canterbury (d. 1109) were prominent though there is still great obscurity regarding the hymnal activity of the latter. Finally Italy is represented not only by Wido of Ivrea (eleventh century) and Alberich of Monte Cassino (d. 1088), but by those brilliant writers Alphanus of Salerno (d. 1058) and St. Peter Damian (d. 1072). The two latter, especially St. Peter Damian, are poets of great fertility. Alphanus wrote only in classical metre and is admirable for the purity of his expression and the skill of his forms. St. Peter Damian chose the rhythms of the Middle Ages and contented himself with a less ornate form; but the plainer close of his thought and the pathos of his fancy, and a warmth of feeling which captivates and inspires the reader. Especially beautiful is his rhythmus, often ascribed to St. Augustine:

Ad perennis vitae fontem | mens attc nunc arida,  
Claustra carnis praesto frangi | clausa queruit anima, etc.

(3) Period of Zenith and of Decline (until the rise of Humanism).—In the twelfth and thirteenth centuries, the zenith of the culture of the Middle Ages, there appeared a wealth of poems of the highest order that it is impossible to mention here all the poets and the principal works. Still less is it possible to give an appreciation of them or to note the more important of the far greater number of poems by unknown authors. The newly founded religious orders took an active share in hymnody and enriched the list of hymn writers with glorious names. The poetic forms became even richer, the language more elegant, the rhythm more regular, and the rhyme purer. In the first rank comes France. Marbot, Bishop of Rennes (d. 1123), Baldric, Abbot of Bourgueuil (1130), the Archbishop of Tours, Hildebert of Lavardin (d. 1133), and Reginald — by birth and education French — who had been canon of St. Aug. of Canterbury (d. 1136) form a group of poets, with the common trait that they still follow mostly the quantitative principle. Their works, especially those of Hildebert, are brilliant; the writers are book-poets, and votaries of the epic and didactic style, but apart from profane poetry, they contribute relatively little to hymnody proper. Next to them in importance is the accentuating principle Godfried, Abbot of Vendôme (d. 1132). Then follows Peter Abelard, Abbot of St. Gildas (d. 1142) who composed a complete hymn-book for his convent, "The Paraclete". Peter the Venerable, Abbot of Cluny (d. 1156) and St. Bernard of Clairvaux (d. 1153) were the one as ascetic and opponent, in close relation to the remarkable Abelard. The former devoted himself to a considerable extent to the quantitative as well as to the accentual poetry, and not without result. But St. Bernard contributed to hymnody only three rhythmical hymns on St. Victor and St. Malachy. All the other poems ascribed to him are unauthentic, particularly the celebrated "Jesu dulcis memoria". The above-mentioned rhythmical hymns show that Bernard, the great preacher, was but a mediocre poet. The name of the Abbot of Clairvaux has been connected too with that beautiful "Mariele" which is best known by the verses beginning: "Omni die die Marie | Mea laudes anima". But the author of this polished hymn is the contemporary monk of Cluny, Bernard de Morlas (d. about 1140).

The zenith, not only of this period but of all hymnology, was reached by Adam of St. Victor (d. 1142). His numerous sequences, the exact number of which has not yet been determined, are incomparably beautiful. The splendid

Laudes crucis attollamus  
Nosi quis crucis exultatus

Specialis gloria  
is also ascribed to him: but it seems more probable that Adam had an equally gifted forerunner among the monks of St. Victor who wrote this sequence, and to whom therefore must now be ascribed some other sequences which until lately bore the signature of Victor. We must further mention in France Adalbert, Bishop of Mende (d. 1187), Guido of Bassesches (d. 1203), Goswin of Bossut (d. about 1250), and particularly Philippe de Thaon, Chancelor of the churches of Paris (d. 1236). Through the last named poet the poetic art of the "cantio" reached its highest point of perfection in a number of songs which appeal more to the intellect than to the heart. But Philippe also wrote several very fervent hymns. France and Germany must share the honour of claiming Julian von Omnium (d. about 1250) as a son, a nobleman, the Frankish king and later a Minorite in the Franciscan Convent at Paris. He composed wonderful rhythmical Offices of St. Francis and St. Anthony.

In Germany, out of the great number of religious poems written in this period several may be ascribed to each of the following names: Henry of Breitenau (d. about 1150), Ulrich of Maintau, Abbot of St. Ulrich and St. Afra in Augsburg (d. 1150), St. Hildegard, superior of the Rupertsberg convent near Bingen (d. 1179), Herrat, Abess of Hohenburg (d. 1165), and Blessed Hermann Josef of Steinfeld (d. 1241). In Flanders we find Jan van Leuven (d. 1263) creating a didactic and versified allegorical poem "Anticlaudianus", also Adam de la Bassée (d. 1258). England has but few great poets during this period: Alexander Neckam, Abbot of Canterbury (d. 1217), John Hoveden, the confessor of Queen Eleanor of England (d. 1275), and John Peckham, Archbishop of Canterbury (d. 1274). Hoveden wrote besides other poems the delightful nightingale song "Philomena" a long lyric-epic on the Life and Passion of Our Lord; and Peckham is immortal through his beautiful rhythmical Office of the Holy Trinity. Italy also witnessed in the thirteenth century the rise of the Canticle, especially the less celebrated and gifted. They were: Thomas of Capua (d. 1243), writer of the hymn on St. Francis "In celesti collegio" and "Decus morum dux Minorum"; Rainierus Capocci of Viterbo (d. 1252); Thomas of Celano (d. about 1250), to whom we owe, it is said, besides other sequences the immortal "Dies Irae" of St. Thomas Aquinas (d. 1274), the master-singer of the Blessed Sacrament of the Altar in the hymns "Pange lingua gloriosi", "Sacris sollemnibus" and "Verbum supernum prodiens", in the sequence "Lauda Sion salvatorum" and in the rhythmical prayer "Adoro te devote" poems that are highly valued. Bonaventura of Arezzo (d. 1274), general of the Order of the Friars Minor, was the author of the "Lignum vitae", of a rhythmical Office of the Passion of Our Lord, and of a beautiful song of the Cross, "Recordare sancte crucis". About the end of the thirteenth century the touching classical sequence "Stabat mater" must have been written in Italy too, by a Franciscan monk, but whether by Jacopone da Todi (d. 1306) is more than doubtful. Finally we note Orrigo Scaccabarozzi, archpriest of Milan (d. 1293), who has left numerous liturgical poems of mediocre value.

During the fourteenth and fifteenth centuries hymnody still flourished. But the creative power continued to decrease slowly. Many beautiful poems were written, but their number in comparison to the number of inferior ones dwindled, particularly in the fifteenth century, and above all in France, which had held the premier place in hymnody. The outer form became neglected more and more, the accentual principle with the regular rhythm gradually sank back, so that by the fifteenth century to the bare counting of syllables. Of the poets of this period only the most important are mentioned here: the Cistercian monk Christian von Lilienfeld (d. before 1332); the Carthusian Konrad von Gaining (d. 1380); Archbishop Johann von Jenstein of Prague (d. 1400); and the Venerable
HYPNEROTOM

604

HYPNERA

Thomas a Kempis (d. 1471), who besides his immortal "Imitation of Christ" has left us a considerable number of hymns. In France begins the Clericureia, Guarigian, De Rebus, after 1358, Philippus de Maiestis, a nobleman of Picardy (d. 1405), was especially prominent. As hymn writers from Scandinavia the following are to be mentioned: Bishop Brynolf of Scarra (d. 1317), confessor of the convent of Vadstena, Petrus Olavsson (d. 1378), and Bishop Birger Gergersen (d. 1379).

That this once so flourishing art of hymnody should have declined and finally died out cannot be wondered at, if it be considered that in all human undertakings the period of growth is followed by one of decay unless a new spirit pours fresh life into the old forms. This was not the case with hymnody, and external causes hastened its decline. Owing to the exiles of the popes at Avignon and divers other religious and political entanglements of the age, and not the least to the Schism, abuses sprang up which lay like a frost on the hymnody of the people, rooted as it was in deep religious sentiment. The freedom to compose their own Liturgies, which each diocese and convent enjoyed at that time, degenerated into total lack of control. Hymns and sequences of more than doubtful worth, composed by men who were anything but poets, were introduced. Hymnody grew exuberantly and ran to weeds. The favorable moment for Huns acquired to oppose hymnody successfully. The Humanists abominated the rhythmical poetry of the Middle Ages from an exaggerated enthusiasm for ancient classical forms and metres. Hymnody then received its death blow as on the revision of the Breviary under Pope Urban VIII, the medieval rhythmical hymnody was forced into more classical forms by means of so-called corrections. The hymnody of the Middle Ages with its great wealth is now only an historical monument which bears witness to the artistic skill, the joyful singing, and the deep religious life of our forefathers. For a long time was neglected, but it is the last century in which it has come to be understood and appreciated more thoroughly.

Aeumtio episcopus hymnorun cum testu (Paris, 1485); Texte sequentiarum cum expositionibus ac facili (Hagegen, 1493); Joh. Aedelius, Hymni de temporis et de sanctis; Idem, Sequen-
torium luculentia interpretatio (Strassburg, 1491); Joh. Badius, Excerpta hymnica from sec. unum Spiritus (Paris, 1462); Mich. Witsbaliens, Expositio hymnorumque interpre-
tatio (Krakow, 1516); Chl. Chytrcius, Sumolatorium (Paris, 1549); J. Mamert, Hymni ecclesiastici (Cologne, 1536); M. Hyppeps, titular see of Asia Minor, suffragan of Epheus, was a small town on the southern slope of the Tmolus, looking towards the plain of Caystrus. Artemis Persica was worshipped there, and its women were noted for their beauty and their skill in dancing. It obtained its own monies, until the time of Emperor Gordianus. It is now a little village in the vilyest of Smyrna, called by the Turks Tapou, though the Greeks retain the ancient name. It has ruins dating from classical and medieval times. The see survived until the thirteenth century; under Isaac Angelus Comnen, it became a metropolis. The see is said by Ch. II (695) mentions six bishops: Mithres, present at the Council of Nicea, 325; Euporus, at Ephesus, 431; Julian, at Ephesus, 449, and at Chalcedon, 451; Anthony, who abjured Monothelism at the Council of Constantinople, 680; Theophylactus at the Council of Nicaea in 787; Gregoras, 788. To these may be added Michael, who in 1230 sent a document issued by the Patriarch Germanus II (Revue des études greques, 1894, VII).

Hyperdulia. See ADORATION; DULIA; MAHY, THE BLESSED VIRGIN.

Hypnotism (Gr. ὑπνόν, sleep).—By Hypnotism, or Hypnosis, we understand here the nervous sleep, induced by artificial and external means, which has in our case been made the subject of systematic study by men of science, physicians or physiologists. It does not differ, however, essentially from the "animal magnetism" which for a hundred years achieved such remarkable success in drawing-rooms without reaching the point of forcing the doors of the scientific universities, "from the "Braidism" which will have to be explained in the course of the historical exposition of the subject. The causes of hypnosis have been discussed and are still open to discussion; but what has been ascer-
tained beyond possibility of questioning is the existence of a special kind of sleep, artificially brought on by means of "passing, Hallucinations, vertigo, or prolonged sensations, of a sustained attention, or of an effort of the will. The belief in a subtle, impalpable fluid, analo-
gous to that of mineral magnetism, but peculiar to living beings—the "magnetic" or "vital fluid"—does not date from the eighteenth century, and some have thought, but goes back to a high antiquity. Pliny, Galen, and Aristeus bear witness to its existence. In the fifteenth century, Pomponius re-
marks that "certain men have salutary and poten properties which are brought out by hypnotism and produce remarkable effects upon the body; others receive them: "Francus, on his part, says that the soul, being affected with passionate desires, can set not only upon its own body, but even upon a neigh-
bouring body, above all if the latter be the weaker". Lastly, it is Paracelsus who for the first time (in "De Peste") gives body to the doctrine by the hypnothet
of a fluid emanating from the stars and placing living beings in communication, as well as a power of attraction which enables persons in sound health to draw the sick to them; this force he compares to that of the leapt and calls its magnets. And this is the original, fundamental constituent of "magnetism". The doctrine of Paracelsus is later on taken up and developed by a number of writers—Bartholin, Hahnemann, Goclenius, Roberti, and Van Helmont, the champion of "magnetic medicine", Robert Fludd, Father Kircher, author of a famous treatise "De arte magnetica", and many others. They do not all experiment in the same way; some use munies (talisman, or magic boxes) to direct the fluid, others operate directly by touch, rub, or "passe".

But no complete theory is found until we come to Mesmer (1733-1815). The Viennese physician supposes that there exists a universally diffused fluid, so continuous as to admit of no void, a fluid subtle beyond comparison and of its own nature qualified to receive, to propagate, and to communicate all the sensible effects of movement. He proposes to apply the name of fluid to those effects that have an action by the fluid, the fluid, which renders it susceptible to the influence of the heavenly bodies and to the reciprocal action of those that surround it, a property that is manifested by its analogy with the magnet. "It is by means of this fluid", he says, "that we act upon nature, and make beings live as if they were a mechanic, the fluid gives motion to it and serves to communicate it." (Memoire sur la decouverte du magnetisme animal.) Mesmer came to Paris in 1778, publicly expounded his system, and so soon gained name and fame. He next set up as a healer, and obtained some successful results; the sick soon flocked to him in such numbers that he could not treat them individually, but had to group a number of them around a baquet and magnetize them all together. The magnetic baquet worked admirably. It was an ordinary tub, closed with a lid, from which issued a number of polished iron rods, bent back, and each ending in a dull point. These iron rods, or branches, conducted the magnetic fluid to the patients who stood in the circle. The baquet was the most famous and most popular means of producing the magnetic condition, but not the only one. Mesmer used other methods very much like those employed by hypnotists to-day: massage, sponging, pouring water, blowing, and the like. The eye was fixed on the face, fixing the patient's eyes on some object, application of the hands to the abdomen, etc. Mesmer, unfortunately, dealt with sick people, and around his baquet he had the opportunity of observing more fits and hysterical convulsions than somnambulistic states. But these "convulsory" of a new kind, far from inhering in the magnetizer or discrediting his method, added to his credit and his renown. The Academy, prejudiced against the innovator, and ill-pleased at the noisy advertisement he was receiving, could not remain heedless of the results he produced; it soon had to yield to pressure of general public opinion. A commission was named in 1784 to examine Mesmer's theory and practice; among its members were the most illustrious savants of the time—Bailly, Lavoisier, Franklin, de Jussieu. To surrender to the evidence presented, and to recognize the reality of the facts, was inevitable; but all the members of the commission, with the single exception of de Jussieu, refused to attribute the facts to any cause but imagination or imitation.

This direct blow at Mesmerism did not retard its progress. It made many adepts, among whom must be mentioned Desfons, Peré Hiervier, and above all the Marquis de Puysegur, founder of one of the most celebrated magnetic societies. It was on his estate of Busanay, under the "magnetized tree", that M. de Puysegur achieved his most splendid successes and renewed the marvels of his master's baquet. He did better; he discovered the curious phenomenon of somnambulism. But the hour of this science had not yet come, and, in spite of positive results and inevitable demonstrations, the science in relief of the importance of the fluid, did not recover its vogue; it was neglected or forgotten during the Revolution and the Empire. It was reserved for an Indo-Portuguese priest, a man of strange bearing, the Abbé Farla, to recall public attention to animal magnetism and to revive the science. The Abbé Farla was the first to effect a breach in the theory of the "magnetic fluid", to resolve the mystery of suggestion, and to demonstrate the existence of "auto-suggestion"; he also established the truth that the nervous sleep belongs only to the natural order. From his earliest magnetizing séances, in 1814, he boldly developed his doctrine. Nothing comes from the magnetzer, everything comes from the subject and takes place in his imagination. Magnetism is only a form of sleep. Although of the moral order, the magnetic action is often aided by physical, or rather by physiological, means—fixedness of look and cerebral fatigue. Here the Abbé Farla showed himself too little of a worker, too much a theorist. The misadventure of his contemporaries, and even by posterity. He was the creator of hypnotism; most of the pretended discoveries of the scientist of to-day are really his. We need only recall here that he practised suggestion in the waking state and post-hypnotic suggestion. General Noiset, who was a close friend of the Abbé Farla, had for his intimate friend a young magnetizer, Dr. Alexandre Bertrand, who believed in the existence of the magnetic fluid. Between the extreme and mutually exclusive doctrines of his master and of his friend, he had the intelligence and the courage to form his own opinion half-way, recognizing equally the share of the imagination and that of the magnetic fluid. We are inclined to think that his view of the matter was a just one, and apt to lead to the upbuilding of the definitive solution.

Thanks to the labours of those just mentioned, the revival of magnetism was assured. A number of writers—Virey, Deleuze, the Baron du Potet, Robouin, Georget, and others—aroused contemporary thought by their published works, their lectures, and their experiments; one of them, Dr. Foissac, in 1826, succeeded in bringing about the appointment by the Academy of Medicine of a commission to examine the phenomenon of passivity. This commission was not disturbed by anything that disturbed the Academy, and in 1828, the commission's report was received with enthusiasm and in 1831 a second commission was named to examine the subject. This second commission of the Academy took its work seriously and for five years conscientiously studied the question. Dr. Husson was charged with the preparation of the report, which appeared in June, 1831. He describes the properties of magnetism at length and with great impartiality, proclaims its virtues, and concludes by asking the Academy to encourage the study of the subject as one of importance for physiology and therapeutics. This victory of magnetism, in a quarter where it had until then met only with disdain and rebuffs, was highly significant, but it had no influence on the public mind. Afraid of the truth, they preserved an obdurate silence, and the report of Husson was thrust away in the archives without being accorded the honours of type. Shortly after this, a violent attack on magnetism by Dubois (of Amiens) met with a cordial reception from the Academy, in spite of Husson's protests. At last, on 1 Oct. 1844, after several attempts by the Academy and several able tests, the learned assembly definitively buried the question, declaring that thenceforward no reply would be given to communications on animal magnetism. Cast out by science, magnetism fell, by inevitable necessity, into commerce on the one hand and into the spiritism on the other. Only a few spirits, in the last century, have plundered it, opening deposits of the fluid in Paris and in the country to heal the ills of humanity. Others had recourse to "table-turning" to know the past
HYPNOTISM

and foretell the future. Superstition and quackery put an end to all honest scientific research. Nevertheless, the ideas of the Abbé Faria were not abandoned, they had been collected and clarified by a number of experts, and they soon found in James Braid (1795–1860), an intelligent and prudent commentator. Dr. Durand de Groes, an old medical Manchester doctor set himself to destroy completely the Mesmerian edifice; he only succeeded in developing it. No doubt he absolutely rejects the transmission of any magnetic or vital fluid, but he recognizes that the magnetic sleep is mainly of a nervous kind. Most authors have the idea that he attributes this sleep to suggestion alone; this is a grave misapprehension against which Braid protested energetically. He is generally considered the founder of hypnotism, and that splendid title is sufficient for his fame. His contemporaries disregarded him and did not appreciate his doctrine as they should. They refused to see in nervous and sensory concentration the cause of the sleep, and they maintained that, like Faria and Bertrand, the Manchester surgeon acted only on the imagination of his subjects. Braid’s decisive answer to his detractors was to say that Faria and Bertrand act, or pretend to act, in the same way as the aid of other means; the former means is of the mental order; mine is purely physical, and consists in fatiguing the eyes and, by the fatigue of the eyes, producing that of the brain.” In fact, as Dr. Durand de Groes has justly remarked, Braid was an ingenious discoverer who did not know how to make his discovery appreciated at its true worth; he brought to the art of Mesmer and of Faria its necessary complement, its superb capstone, and thus in very truth transformed it. He recognized that the act of gazing fixedly at one point for a certain length of time induces not only sleep, as physiologists before him had observed, but “a profound mental influence on the subject, being which renders it apt to receive the magnetic influence and mental suggestion”. From Braid to our own days hypnotism has grown and developed without interruption. The partisans of mesmerism, momentarily discomfited, have not laid down their arms, and, while accepting the new theories of nervous fatigue and suggestion, have continued to maintain the existence of a fluid. The theories of Grimes on electro-biology (1848), and of Dr. Philippe (pseudonym of Dr. Durand de Groes) on vital electro-dynamism (1855) deserve to be recalled in this context. At this stage the theoretical solution for the masses, and the greater number of writers have established themselves on the ground of experiment and clinical practice, multiplying experiments in order to reconstitute the vast field of hypnotism. We may mention, from amongst these, Dr. Liébeault, Dr. Nahum of Bordeaux, Professor Charcot of Paris, Dr. Bernheim of Nancy. Theoretical discussions could not, however, remain forever apart on their own ground, since every effect demands a cause; they naturally followed the discovery of facts and soon brought on a notable division of opinions. Two clear-cut schools, as is known, divided the world of science: the school of Nancy, and the Salpêtrière, or Paris, school. The former, represented by Drs. Liébeault, Bernheim, Beaunis, and others, recognizes, under different forms, but one cause of hypnotism, and deliberately pronounces it to be suggestion. The latter, of which Charcot was the renowned chief, believes in the physiological cause, that attributes hypnotism to a nervous or cerebral modification of the subject, which modification it attributes to a malady of the nervous system—hysteria.

Both of these doctrines are supported by arguments and facts the force and value of which it would be vain to contest in either case. But, if both are equally worthy of consideration, they are too absolutely opposed and mutually exclusive to be both completely true. Suggestion does not explain all the phenomena of hypnosis, any more than does nervous system account for them. The nervous sleep, with the strange and manifold phenomena which accompany it, is beyond comprehension in the light of our actual knowledge. The intimate nature of that cerebral and rational sleep, this plain Manchester doctor did not need to reassert the necessary condition is not known, and there is nothing to prevent its reconciliation with the hypothesis of the nervous or magnetic fluid. As to the theory of suggestion, so dear to the Nancy school, it belongs to the psychical order, and is manifestly insufficient to account for all the psychic phenomena which characterise hypnotic sleep. Professor Beaunis himself does not hesitate to confess its weakness. All this being so, it would seem opportune to inquire if the two hostile—or, rather, rival—schools of Paris and Nancy, either of them singly incapable of explaining hypnosis, might not find additional light and a welcome means of reconciliation in that hypothesis of animal magnetism which science in its earlier days too readily abandoned. The problem is only indicated here; its solution belongs to the future.

Hypnotism, we have said, is an artificial nervous sleep. It is brought on in many ways; by fixity of look, by hypnosis and suggestion, the necessary condition is the convergence of the axes of vision, by a sustained and monotonous sensation, by a vivid sensory impression such as that produced by the sound of a gong, by a brilliant light, etc. All these means produce the effect only upon one vitally important psychic condition—the consent of the subject, the surrender of his will to the hypnotist. No one can be hypnotised against his will; but once a person has given himself up to an operator, and gone through the exercises by which the effect is obtained, the operator can put him to sleep at pleasure, and even without the subject’s knowledge... M. Bottey admits for women a proportion of only 30 per cent. In short, the Nancy experts have greatly exaggerated the figures by including in their statistics all cases, both the slightly marked and the complete. The sleep induced may last for a long period—for some hours—but ordinarily is of rather short duration. Some hypnotized persons awake spontaneously, others at the departure of the operator, or at some noise. Most often the return to the waking state is brought about by a command or by blowing lightly on the subject’s eyes. Once hypnotised, the subject may pass through three distinct phases: catalepsy, lethargy, somnambulism. On this point there have been lively debates between the Paris school and the Nancy school. The latter contends that these three states do not exist, and that suggestion suffices to explain all the phenomena; in this it is greatly the Nancy school too. It has been wrong in maintaining, contrary to observed facts, that every hypnotized subject passes successively, and always in the same order, from catalepsy into lethargy, and from lethargy into somnambulism. This order is not always followed; some hypnotized persons fall directly into somnambulism, or into lethargy, without passing through catalepsy. We will consider the three states separately.
HYPNOTISM

Catalepsy reduces the subject to the state of an inflexible corpse: it is characterized by impassibility and muscular rigidity; the subject keeps every position into which the experimenter puts him. He can be caught and thrown this way or that, pinched, pricked, slapped, without showing the least sign of sensibility. He is so rigid that he can remain indefinitely supported on the backs of two chairs, touching them only with the back of his neck and his heels, without showing the least fatigue. The experimenter can climb upon his body without causing it to diverge from the horizontal straight line. Certain movements communicated to the patient are continued automatically and without variation. Even words are sometimes repeated mechanically; what is striking is the expressionless reaction of a gesture upon the facial expression, and vice versa. If the subject is placed in a pugilistic attitude, his features, until then impassive, straightway express determination and defiance. If his eyebrows are drawn downward and inward (by the operator) his whole countenance becomes sad and gloomy. Let the hands be taken up, and applied to the lips, and the corners of the mouth move apart and communicate a tender and smiling air to the whole physiognomy. Make the subject kneel as for prayer, and immediately the hands clap, and the face expresses recollection and adoration.

If catalepsy into lethargy it is sufficient to close his eyes or to gently rub his elbow or the top of his head. In the waking state this hypnotic condition is produced by pressing the eyeballs under the closed lids. In lethargy, the head falling back as if wearied, the face acquires the expression of profound slumber; there is no longer either consciousness or intelligence, memory or sensation. The contraction of the muscles responds with extreme readiness to the least excitation. A gentle friction or pressure applied to the top of the head brings on somnambulism. Here the sleep is lighter. The subject's eyes are open; he is insensible to pain, but his muscular strength and the power of his senses are increased to a remarkable degree; he sees, hears, speaks, and walks with uncommon vigour, and avoids the obstacles in his way. He has the appearance of being awake, but is not in possession of himself; he is only an automaton, with the operator powerful over him.

All the activity of the somnambulist is under the operator's control by means of verbal suggestion. If a suggestion be made to the hypnotized subject that it is cold, he straightway shivers. Tell him it is hot, he pants and fans himself, wipes his forehead, and tries to take off his coat. Hand him a glass of cold water and say, "Drink this glass of good Bordeaux," and he sips and smacks his lips. Tell him it is vinegar; he barely tastes it, and puts it away in disgust. Persuade him that he is listening to a beautiful piece of music, and he hears it so well that he beats time to it. The somnambulist seems to know all that is possible to suggest, and nothing is more amusing than his animated conversations with his absent relations and friends. Just as the absent can be made present to him, so a person who is really present can be made to disappear—can be eliminated. 'By suggestion,' says M. Beaunis, 'we can lay an interdict on an object or a person actually present, so that the person or object shall be, for him, non-existent. . . . More than this, we can make a person disappear partially: the subject will not see him, but will hear him; or he will be able to see and hear him, but not be aware of him by contact.' Charcot often performed this experiment at the Salpetrière at the request of the subject, or at the suggestion of the observer. When you awake, 'he would say, 'you will not see M. X.' He awoke the subject, and, in fact, the interdicted individual was invisible to him. M. X. places himself directly in his path, and he takes no notice of the obstruction; M. X. stands between him and the window, and he sees only a cloud shutting out the daylight. A hand is placed on the head of the subject with astonishment at seeing a hat suspended in the air without anything to support it. A still more complicated experiment is possible: out of ten cards, all exactly alike, one is pointed out to the somnambulist which he is told will be invisible to him, and another on which he is shown an imaginary portrait. The ten cards are placed face down upon the table. The somnambulist discovers the non-existent portrait on the same card on which it was previously shown to him, while the other of the two indicated cards passes absolutely unperceived.

Cutaneous insensibility is general, but the hypnotism can remove it or localize it at his own pleasure; he can trace a circle, for example, on an arm and make that portion of the limb insensible, while the other part of the arm continues normal. Dr. Barth makes a pretense of touching an hysterical subject on the forearm with a lighted cigar, and immediately a white spot develops on the skin, as large as a bean and surrounded by a circle of red. Itchings and inflammations can be produced. On the other hand, the appearance of water blisters, or phlyctane, vesication, and cutaneous hemorrhages (experiments of Focalhvm, Bourru, and Burut) are among the most seriously questioned and most questionable experiments; they have never been verified. Dr. Lander, in a case of subjects affected with dermographism, suggested not only works upon the sensibility, but acts very powerfully on the motive faculty of the subject. It determines either contractions or paralyses, the rigidity of one member, the flaccidity of another. The subject is told: "Your fingers are glued together; separate them if you can." The man makes strenuous efforts to separate his fingers, but cannot. The arm is forbidden to make this or that movement, the hand to write certain letters, the larynx to pronounce a vowel, and the prohibition is effectual; a subject can be made to stutter, to fall dumb, or be afflicted with aphasia at the operator's discretion. The consciousness, the personality, or, more precisely, the memory, may be subjected to strange metamorphoses. 'I say to a subject: 'C., you are six years old, you are a little child. Go and play with the other children.' And up he jumps, leaps, goes through the most incredible capers. At the operator's command, it is a matter of proper order, measures the distance with his hand, takes aim carefully, runs and puts them in a row, and thus keeps up his game with an attention and precision of detail most astonishing. In the same way he plays at hide-and-seek and at leap-frog, vaulting over one or two imaginary playmates in succession and increasing the distance each time—all with an ease of which, considering his illness, he would be incapable in the waking state. He transforms himself into a young girl, a general, a curté, an advocate, a dog. But when you saddle him with a personality above his ability, he tries in vain to read it (Thomson)."

The hypnotist can modify his subject, can make him believe that he is changed into another person, and even setside by side in the same person two existences—one real, the other suggested—which are parallel and mutually inconsistent. M. Gurney calls out a word or a number before a hypnotized subject, and tells him some story, then proceeds to state plainly that she remembers nothing about it. Then taking her hand he puts a pencil in it and interposes a screen so that she cannot see it. Presently the hand begins to move about and, without the knowledge of the awakened subject, writes the word, or number, that was written in it. The subject is in the state of a sleeping subject. It is a trick of the under-self, an automatic act of memory. Suggestion does not always produce its effects immediately; the operator can retard development; he can defer the execution
for many weeks or months after the subject's awakening. "I give an order to L. like this: 'At the third stroke your hands will be raised, at the fifth they will be lowered, at the sixth the thumb of one hand will be applied to the tip of your nose, and the four fingers extended (un pie de nez), at the ninth you will kneel into the room; at the sixteenth the window will open, you will hear a knock at the door, you will fall asleep in an arm-chair.' There is no memory of all this, when the awakening takes place, but all the acts are performed in the order desired" (Janet). The idea of the act suggested remains buried in the memory and re- lives only at the period assigned and upon the given signal, the subject then acts by his own bidding. Nothing about the origin of the impulse, but thinks he is following his own initiative; he is, without knowing it, the puppet of a brain function. Retroactive suggestions are no less curious. A subject can be made to believe that at such and such a time he has seen a certain event take place, heard a sermon, or performed some action, and the illusory memory becomes so firmly fixed in his mind as to pass for truth and carry conviction with it; he is persuaded when he awakes that he really has seen and heard these things—in one word, that the things have taken place.

Are all suggestions possible and realizable? Can a suggestion once given be resisted? The answer is nowadays no longer in doubt; but for a long time the quacks fostered a belief that they absolutely controlled their subjects, and that there was no such thing as an impossible suggestion. This is an error. Whenever a thing is displeasing or repugnant to him, the hypnotized person yields slowly and with difficulty; if the act proposed is a forbidden or a culpable one in the sight of his conscience, he refuses point blank. An honest woman in the hysterical condition will not permit the least trespass on decency; nor will a respectable person regard the rights of property, but respect for good morals, nor do those who in their normal state are victims of evil habits and yield to the lowest instincts. Nevertheless, there is a certain danger that the clever, powerful hypnotist, who is also unscrupulous, may obtain his ends if he presents reprehensible acts to his subject as innocent and permissible; the will, in hypnosis, is so weak and so unstable that the idea of duty based upon good habits may not always counterbalance the operator's action, and the repetition of alluring suggestions may at last result in drawing the subject into evil. Such cases are not purely hypothetical; we shall come back to this consideration in connection with the dangers of hypnosis. Fanatical partisans of the suggestion method do not see its dangers, while they vaunt its merits and its practical applications. Has it the therapeutic virtues with which the Nancy school credits it? With the leaders of the Paris school and with Professor Craske and Montpellier, we decidedly question this. That hypnosis easily conquers hysteria, especially the more localized and circumscribed manifestations of it, no one can deny. The connexion between these two abnormal states has been established, and it is so intimate that Gilles de la Tourette could say: "Hypnosis is only an hyperparoxysm of hysteria." It is not wonderful that symptoms of monoplegia and of limited anesthesia should be made to disappear by suggestion, but the cure cannot be counted on in any given case, nor is it enduring when it does result. As to neurosenesia, Bérillon and Bernheim affirm that just as good results have been obtained in this form of hysteria, but Pitres, Terrien, and other hypnotists strongly question this.

Writers also note the curative action of hypnosis in a certain number of more or less localized nervous states (St. Vitus's dance, tic, incontinence of urine, seasickness, vertigo, menstrual troubles, constipation, warts, etc.), but this action is in fact observed only in hysterical cases, and it is not constant. Is hypnosis applicable to the treatment of psychosis—of the divers forms of mental alienation—in a word, of madness? Forel, Pitres, Terrien, Lloyd, Tuckey, all agree in confessing its impotence. Auguste Voisin does not believe in its powers; he was obliged to admit that only ten per cent of the cases were hypnotizable. Even this was too much to say: for mania is characterized by the loss of volition, and we know that hypnosis is produced by a fixing of the attention. Against the widespread vices of alco- holism, morphinism, the ether habit, etc., hypnosis has not been employed, but it has prevented speedy and fatal relapses. Still, when all other means have failed, this method could not be altogether ignored. It may be doubted whether organic maladies are amenable to hypnotic treatment. Bernheim claims to have remedied nervous and spinal affections. Wetternand declares that he has cured or relieved patients afflicted with "rheumatism, haemorrhages, pulmonary phthisis, maladies of the heart, Bright's disease," etc. As to Liébeault, he knows no malady that has resisted its suggestions. It is needless to remark that these marvellous cures have not been demonstrated, and that physicians refrain to believe in them. The hypnotic method is nervous and hysterical sufferings, and permanency of cure is not assured in their cases. Besides, it is incontestable that hypnotists have forced the note and outrageously exaggerated their successes.

The applications of hypnosis in surgery, as a means of inducing anaesthesia, have not been frequent, but the cases are remarkable. As early as the year 1829, Cloquet amputated the breast of a hypnotized woman. At Cherbourg, in 1845, Dr. Loyerse performed the amputation of a leg; at Poitiers, in 1847, Dr. Jarois operated on a ten-year-old boy. In 1859, Broca, in Paris, opened an abscess on the border of the anus. It was Guérinane who amputated a thigh; and, later, Tillaux performed with hypnosis a serious operation of colpothorpy. Hypnotism began to be applied in obstetrics less than thirty years ago. Pritzel performed an accouchement in this way in 1885. Dr. Dumontpellier had less success with a first childbirth, but secured complete painlessness for his patient in the earlier stages of labour. Liébeault, Mesnet, Auvard and Sechevron, Fanton, Dobrovsky, Le Menant des Chesnais, Voisin, Bonjour, Joire, and Bourdon have published observations that confirm the belief in the value of hypnosis in anaesthesia produced by hypnosis. But here, as in surgery, it is an exception, a mere object of curiosity. No one dreams of setting up a comparison between hypnosis and chloroform, or of substituting the one for the other. Besides, hypnosis is successful only with nervous and hysterical subjects, and that not uniformly. Hypnotism has not only been cried up as a therapeutic resource, it has also been applied in pediagogy and in pedagogy. Durand (of Grose) is the true initiator of this method, but it is Bérillon who has claimed a place for it in science, failing to distinguish between pediagogy, which is related to medicine and pedagogy, which is the province of the director of free and conscious education. Suggestion would be in place for serious perversions or invertebrate vices—kleptomania impulses, impulses to lying, debauchery, sloth, indecency, indecency, onanism, etc. Without going so far as Bérillon, Liébeault and Liégeois of Nancy have not to be considered as in hysterical treatment in this way and to have made excellent persons of them. They have cited some cures, but have not stated how long the good effects lasted. Education by hypnosis alone is not to be taken seriously; it does not correspond to the essential demands of education, which is the joint work of two—an intelligent, voluntary, effective collaboration of pupil and teacher.
Hypnosis is not only powerless to effect a moral or physical cure, to heal radically any malady whatever, but it is also, and above everything else, a dangerous method. It is right that this point should be insisted on. The practice of hypnosis is not a scientifically improvised thing; there are physical or physiological, psychic or intellectual, and above all moral, dangers. The wonders of hypnosis as achieved in the laboratories at the Salpêtrière are astounding and incontestable, but one must not fail to consider the price at which they are obtained. Hypnosis is not a naturally expedient thing; it is an induced, artificial state, prepared for in advance; an "intensive culture" is necessary, a scientific and patient preparation—at least in so far as the aim is to obtain anything more than the common nervous sleep. Hysteria is the true soil for its growth; it supplies the best subjects, those who respond to the most difficult suggestions and exhibit the most striking effects. Experimentation on those affected in this way, when carried to extremes, is calculated to bring on the most harmful results. Their sensibility, already perverted and exaggerated by neurosis, cannot fail to be a total abatement and the instillation of deep melancholy as a sequel of the long and arduous stances. Many of them halt on the road, having ceased to be capable subjects. But, even when it succeeds, hypnotic education finds as its reward a corresponding failure of the psycho-sensitive life, a growing disturbance of the emotional or general sensibility. We may point to the cases of supposed hypnotized persons, in which the melancholy was aggravated by hospital stances until restraint in an asylum became necessary. Hypnosis is a twofold weapon, capable of doing more harm than good. Disturbance and perversion of the higher faculties follow those of the sensitive. The cerebral motor is acted upon in the most delicate kind, and the intense practice of hypnosis has the effect of throwing that mechanism out of gear. Hypnotic suggestions set ideas and sentiments, senses and reason, in conflict, and vitiate the functioning of the mind. This effect is all the more fatal as the subjects are, to begin with, enervated and predisposed to lose their mental balance.

Hypnotism, therefore, is a dangerous, if not a morally detestable, practice. In the process of suggestion the individual alienates his liberty and his reason, handing himself over to the domination of another. He may even come to the right idea to renounce the duty towards his personality. It has been objected to this view that there is the same effect in intoxication or the use of chloroform; but the argument is of no validity. Drunkenness is not justifiable; it is a grave sin against temperance. As for chloroform, it has its precise indications strictly marked. It is only lawfully employed in medicine to make insensible sick people who are about to undergo a surgical operation. Can hypnotism be employed in the same way as chloroform? Has it any social utility, or does it play a humanitarian rôle in any way? Its supporters have tried to prove to the contrary, in order to give it a scientific turn, but in spite of all their efforts, hypnotism remains, not only an idle curiosity, but a dangerous game. Such is the certain conclusion to which we are led by a study of hypnotism in its relation to civil and criminal law. It is a generally recognized fact that criminal or unlawful acts have been, or can be, committed on sleeping subjects. Even without proceeding to actual crime, the hypnotist may make insidious and improper suggestions. Many have boasted of having obtained delicate secrets from young girls, humiliating avowals which they could not have made to have men; such procedure is an odious abuse of confidence. We pass on to the consideration of crimes due to hypnosis: women have been made the victims of attempts on their honour, and even of actual rape. Sometimes, too, by means of suggestion, the subject is made to consent to the crime, as criminal records show. We have no proper assurance that this is not also practised by means of hypnosis, but such things are nevertheless possible. The evidence given in all such cases should be regarded with mistrust; the subject may be deliberately trying to deceive, or he may be in good faith mistaken, and so accuse an innocent person. Of this the famous La Ronciere case (1894) is a sad example.

The hypnotized person is not always a victim; he may be the criminal. But it is necessary to know the circumstances of each case, and not confound hospital patients with normal subjects. The suggestion of intra- and post-hypnotic acts is a usual operation of hypnotists, and the existence of "laboratory crimes"—i.e., crimes suggested in the course of experiment—no longer needs demonstration. But from these jocose crimes we cannot infer the existence of real crimes. Hypnosis, moreover, is complete or partial; only in the former (true somnambulism) is the moral responsibility lost, but only in the latter is the responsibility only lessened (auto-suggestion, suggestion, persuasion). Then, too, resistance to suggestion is frequent; there is an inward struggle, a mental debate, proportioned to the standard of education imparted to the subject, the moral strength of the individual. In the administration of justice to the testimony of such cases, the judge must not by his authority alone accept the hypnotic influence should be accepted only with the most decided reservations. Apart from the hypnotism, the subject can lie and deceive like any other hysterical person. Another cause of unconscious lying is retroactive amnesia: the subject, on awakening from hypnosis, may manifest a complete forgetfulness of what took place, not only in the hypnosis, but also in the period preceding it (Bernheim). Writers are divided on the question of spontaneous falsehood in hypnosis, but they are at one in recognizing the frequency of suggested lies and false testimony. It is doubtful if any one could succeed in causing an oath or a deed of gift to be made by mere suggestion, but it is a sufficiently serious thing that the possibility of such a crime should even be thought of. It has been proposed to use hypnosis as a means of examining prisoners. In this connexion Liégeois has formulated the following conclusions: (1) No one has the right to hypnotize a prisoner in order to obtain from him by that means confessions or evidence against other persons which he refuses in his normal state—that is, when he is in possession of his free will. (2) If, on the other hand, an accused person or the victim of a crime should apply for it, it would be proper to resort to this process in order to elicit indications which the applicant might think likely to be favourable to him. (3) The same conclusion for civil acts, contracts of every kind, bonds, loans, acquired from hypnotic suggestion, and for donations or wills. This system would be fertile of abuses and odious in the highest degree. (4) This principle would be no more justifiable than the old kind (Cullerere).

The Church has not waited for the verdict of science to put the faithful on their guard against the dangers of magnetism and hypnotism, and to defend the rights of human conscience; but, even prudent, she has condemned only abuses, leaving the way free for scientific research. "The use of magnetism, that is to say, the mere act of employing physical means otherwise permissible, is not morally forbidden, provided that it does not tend to an illicit end or one which may be in any manner evil" (Response of the Holy Office, 2 June, 1843). TheencyclicalLaSantu romana (1855)has confirmed the same, and the value of the Medical Tribunal of August, 1856, only confirms this, and Père Coconnier has referred to it in his famous work "L'Hypnotisme franc", in which he studies the subject...
apart from all extraneous considerations. Taking up the latest teachings of Rome, Canon Moureou, of Lille, writes: "Hypnotism is tolerated, in theory and in practice, by the Church; but it is one of those phenomena which would certainly be preternatural." This is the opinion of most theologians, and it is the utterance of reason.

After the accident, the civil authority was concerned at the results occurring from the use of hypnotism, and has sought to regulate the practice and prevent its prevalence. The task was not an easy one, and the French Government found it above its powers to effect. Some efforts have been made in other countries, but without result or harmony of opinion. In Austria, Italy, and Belgium, in consequence of serious complaints, the police have forbidden public séances. In Denmark and Germany they have done better: laws have been passed making the diploma of Doctor of Medicine a necessary condition for the practice of hypnotism. These are excellent measures, but they do not provide for the possible malpractices of a dishonest or avaricious physician. There is no solid basis of duty except in the conscience, and of this the civil law does not take cognizance. Many of the United States have proscribed hypnotism under the severest penalties, but even there no uniform and efficacious legislation exists. Public opinion demands of the various nations some concerted action to put a stop to the crying abuses of hypnotism, but a respect for human life and human conscience will need to be secured except by the observance of religious morality. Meanwhile the scientific world contemplates with interest the phenomena of hypnotism, though it is evident that those phenomena move always in the same narrow circle. It cannot be denied that they have grown in each of their mystery and their scope. Philosophers confess that psychology has derived but little illumination from hypnotism, and physicians recognize that, from a therapeutic view-point, suggestion is almost void of results. In the hospitals the practice of hypnotic methods is manifestly on the decline. It is regarded rather as a source of social amusement, a game attended with some risk, than as a clinic process. The masters of the art themselves rarely employ it, and the successors of Charcot at the Salpêtrière tend more and more to have recourse only to "waking suggestion", a surer and less dangerous means of obtaining the same results.

Georgios Surbeldi (Gr. όρη, under, and προφανής, to contend —hence adequately "to answer" on the stage, "to play a part", "to feign or pretend") is the presentation to qualities which one does not possess, or, more cogently to the scope of this article, the putting forward of a false appearance of virtue or religion. Essentially its malice is identical with that of lying; in both cases there is discordance between what a man has in his mind and the expression of himself. So far as the morality of the act goes, it is unimportant that this difference between the interior and the exterior be set out in words, as happens in formal lies, or be acted out in one's demeanour, as is true of simulation. It is deserving of notice that the more concealment of one's own sin, unless one be interrogated by legitimate authority, is more straight-way to be accounted hypocritical. With the purpose of measuring the degree of sinfulness attributable to this vice, St. Thomas Aquinas teaches that we must carefully differentiate its two elements: the want of goodness, and the presence of having it. If a person be so minded as definitely to intend both things, it is of course obvious that he is guilty of grievous sin, for that is only another way of saying that a man lacks the indispensable righteousness which makes him pleasing in the sight of God. If, however, the hypocrize be occupied rather with successfully enacting the lie, he has assumed, then even though he sin at the time, it will not always follow that the act of counterfeiting is itself a mortal sin. To determine when it is so, cognizance must be taken of the motive which prompts the sinner to adopt his hypocritical bearing. If the end he has in view be such as being deemed worthy of the law (Gen. 19:10). On the other hand, for example, if his purpose were thus to spread abroad false doctrine more unimpededly and more thoroughly, he must clearly be considered to have committed mortal sin. When, on the other hand, his animus does not involve such opposition to the supreme law of charity, the sin is esteemed to be venial, as, for instance, when one's goods satisfaction in the completeness with which he carries off his part. The portrait of hypocrisy is drawn with appalling vividness by Christ in His denunciation of the Pharisees in Matt. xxiii: "Woe to you scribes and Pharisees, hypocrites; because you tithe mint, and anise, and cumin, and have left the weightier things of the law; judgment, and mercy, and faith. These things you ought to have done, and not to leave those undone. Blind guides, who strain out a gnat, and swallow a camel." (vv. 23, 24).

Hypothetical, see person.

Hypothetic Union, a theological term used with reference to the Incarnation to express the revealed truth that in Christ one person subsists in two natures,
the Divine and the human. Hypostasis (ὑπόστασις) means, literally, that which lies beneath as basis or foundation. Hence it came to be used by the Greek philosophers to denote reality as distinguished from appearances or hybrid religiosity. It occurred also in St. Paul’s Epistles (II Cor., ix, 4; xi, 17; Heb., i, 3: iii, 14), but not in the sense of person. Previous to the Council of Nicea (325) hypostasis was synonymous with ousia, and even St. Augustine (De Trin., V, 8) avers that he sees no difference between them. The distinctions that are nowadays so gradually and gradually the controversies to which the Christological heresies gave rise, and was definitively established by the Council of Chalcedon (451), which declared that in Christ the two natures, each retaining its own properties, are united in one subsistence and one person (ἐσ’ ἐν θεόσιν καὶ πληρ’ οὐσίασιν) (Denzinger, ed. Bannwart, 148). They are not joined in a moral or accidental union (Nestorius), nor commingled (Eutyches), and nevertheless they are substantially united. For further explanation and bibliography see: INCARNATION; JESUS CHRIST; MONOPHYSITISM; NATURE; PERSON.

Hypsistarians, or worshippers of the Hypsistos (ὕψιστος), i. e. of the “Most High” God; a distinct Jewish-pagan sect which flourished from about 200 B. C. to about A. D. 400, mostly in Asia Minor (Cappadocia, Bithynia, Pontus) and on the South Russian coast of the Euxine Sea. The names ὑψιστωτήρ, ὑψιστός first occur in Gregory of Nazianzus (Orat., xviii, 5) and the name ὑψιστοιοι in Gregory of Nyssa (Contra Eunom., I), i. e. about A. D. 374, but a great number of votive tablets, inscriptions, and oracles of Didymos and Klarios establish beyond doubt that the cult of the Hypsistos (ὕψιστος, with the addition of Ἰεως or Ζεως or Αὐγος, but frequently without addition) as the sole and supreme God was widespread in the countries adjacent to the Bosporus (cf. Acts, xvi, 17, “these men are servants of the most high God”—oracle of the pythionessa at Philippi). It seems probable that the native Cappadocian cult of Zeus Sabasios was deliberately merged in the cult of Hypsistos, which was to be actualised by the numerous and intellectually predominant Jewish colonies, and that associations (σοδαλία, θάδεος) of strict monotheists were formed, who fraternised with the Jews, but considered themselves free from the Mosaic Law. The importance and exalted ideas of these associations can be gathered from the fact that when someone asked Apollo of Klarios whether the Hypsistos alone was without beginning and end, he answered: “He is the Lord of all, self-originated, self-produced, ruling all things in some ineffable way, encompassing the heavens, spreading out the earth, riding on the waves of the sea: mixing fire with water, soil with air, and earth with fire; of winter, summer, autumn, and spring, causing the changes in their season, leading all things towards the light and settling their fate in harmonious order.” The existence of these Hypsistarians must have been partially responsible for the astounding swiftness of the spread of Christianity in Asia Minor, yet not all of them accepted the new faith, and small communities of monotheists, neither Christians nor Jews, continued to exist, especially in Cappadocia. The father of Gregory of Nazianzus belonged to such a sect in his youth, and they are described in his panegyric written by his son. They rejected pagan mystery beliefs which entailed a acknowledgment of the Creator (πατερωτέων) and the Most High, to whom however, in opposition to the Christians, they refused the title of “Father”; they had some superstitions in common with the Jews, their worship of fire and light, the keeping of the Sabbath, the distinctions of food, but circumcission they rejected. No doubt Persius had Hypsistarians in view when he ridiculed such monotheists in his lines 173–184, and Tertullian seems to refer to them in “Ad Nationes”, 1, iii. The statement that Hypsistarians continued to exist till the ninth century, is based on a mistaken interpretation of Nicephorus Const., “Antirhet. adv. Const. Corp.”, I, in Magne, F. G., col. 209. Hypsistarians and such monotheists in general are Caelesta in a decree of the Emperors Honorius and Theodosius (A. D. 408), in which their places of worship are transferred to the Catholics.

J. P. ARENDZEN.

Hyril, Joseph, Austrian anatomist, b. at Eisenstadt in Hungary, December 7, 1816; d. July 10, 1880, on his estate near Vienna. He began his medical studies in Vienna in 1831, having received his preliminary education in his native town. His parents were poor, and he had to find some means to help defray the expenses of his medical education. In 1833, while he was still a medical student, he was named prosecutor in anatomy, and the preparations which this position required him to make for teaching purposes attracted the attention of as well as students. His graduation thesis, “Antiquitates anatomicae rariores”, was a prophecy of the work to which his life was to be devoted. On graduation he became Prof. Geercken’s assistant (Jenomus) and later became also the curator of the museum. He added valuable treasures to the museum by the preparations which he made for it. As a student he set up a little laboratory and dissecting room in his lodgings, and his injections of anatomical material were greatly admired. He took advantage of his post in the museum to give special courses in anatomy to students and in practical anatomy to physicians. These courses were numerously attended.

In 1837, when but twenty-six, Hyril was offered the professorship of anatomy at the University of Prague, and by his work there laid the foundation of his great reputation. After he had completed his well known text-book of human anatomy, which went through some twenty editions and has been translated into every modern language. The chair of anatomy at Vienna falling vacant in 1845, he would have applied for it, so satisfied was he with the opportunities for work at Prague, but his friends insisted; he was immediately elected. Five years later he published his “Handbook of Topographic Anatomy”, the first text-book of applied anatomy of its kind ever issued. Before his death he was to see this department of anatomy become one of the most important of the medical schools of the world. It was as a teacher that Hyril did his great work. Professor Karl von Bardeleben, himself one of the great teachers of the nineteenth century, did not hesitate to say that in this Hyril was unequalled. His fame spread throughout Europe, and he came to be looked upon as the special glory of the University of Prague. On the occasion of the celebration of the five-hundredth anniversary of the foundation of the university, he was chosen rector in order that, as the most distinguished member of the university, he should represent her on that day. His inaugural address as rector had for its title: “The Master of Sciences, and the Universe of Our Time”. In this he brought out very clearly the lack of logic in the materialistic view of the world and concluded: “When I bring all this together
It is impossible for me to understand what scientific grounds are founded this resurrection of the old materialistic view of the world that had its first great expression from Epicurus and Lucretius. Nothing that I can see justifies it, and there is no reason to think that it will continue to hold domination over men's minds."

In 1880 there was a magnificent celebration of Hyrtl's seventieth birthday, when messages of congratulation were sent to him from all the universities of the world. After retiring from his professorship he continued to do good work, his last publication being "Handbuch der topographischen Anatomie" (Prague, 1846); "Handbuch der Vergliederungskunst" (Vienna, 1860). His monograph for the formation of anatomical terminology "Onomatologia Anatomica" (Vienna, 1880), attracted widespread attention.

JAMES J. WALSH.

Hyssop (Heb., Sept. swcren), a plant which is referred to in a few passages of Holy Writ, and which cannot be identified with certainty at the present day. Its existence in Egypt is proved by Ex., xii, 22, wherein Moses is represented as bidding the elders of Israel to take a bunch of hyssop and to sprinkle it with the blood of the paschal lamb upon the lintel and the side posts of the doors of their dwellings. In the wilderness hyssop was also ready at hand, as can be inferred from Ex., xxiv, 18, completed by Heb., ix, 19, according to which Israel's great lawgiver sprinkled the Hebrews with hyssop dipped in the blood of victims, at the sealing of the old covenant between Yahweh and His people. The references to hyssop contained in the Mosaic ritual show clearly that it was a common plant in the peninsula of Sinai and in the land of Chanaan, and disclose its principal uses among the Hebrews. Thus, it is with hyssop that the blood of a bird offered in sacrifice is to be sprinkled for the cleansing of a man or a house affected with leprosy (Lev., iv, 11-16; Num., x, 1-10). Besides being thus used as an instrument in the act of sprinkling, hyssop was employed as one of the elements to be burned in the preparation of the water of purification itself (Num., xix, 6). It is not therefore surprising to find that this manifold and intimate connexion of hyssop with the various purifications of the Old Law led the Psalmist (Ps. 1 [Heb. ii], 9) to regard the sprinkling with hyssop as symbolical of a thorough purification of the heart, a view which the Catholic Church has made her own in the ceremony of the Asperges which usually begins the solemn offering of Holy Mass. Nor is it surprising to find that this same connexion of hyssop with the various cleansings of the Mosaic Law suggested to many writers the identification of that plant with the Hyssopus officinalis, or common hyssop, with which they were particularly acquainted, and the detergent properties of which they not unnaturally thought had induced the Hebrew legislator to select it as especially fit for the purificatory services in Israel. However widely received in the past, such identification is now commonly rejected for this reason, among others, that the Hyssopus officinalis appears to have been unknown in ancient Syria and Egypt. The plant, which at the present day, is considered as more probably the hyssop of the Mosaic rite, is the Origanum maru. Like the Hyssopus officinalis it belongs to the family of the labiate, has aromatic and deterrent properties, and can be easily made into a bunch for purposes of sprinkling. The following are some of its particular claims to be considered as the hyssop spoken of in the Old Testament. In the first place, it is to the Origanum—not to the Hyssopus officinalis—that all ancient traditions point when referring to the hyssop of the Scriptures. In the next place, its Egyptian name of supho, is clearly allied to the Aramaic sefo and the Hebrew 'ez'ob. Lastly, the Origanum maru grows on the walls of all the terraces throughout Palestine and Syria. This last claim in favour of the identification of the hyssop of the Old Testament with the Origanum maru, is in distinct harmony with III Kings, iv, 33 (Heb. I Kings, iv, 33) where we read that Solomon "treated about trees from the cedar that is in Libanus, unto the hyssop that cometh out of the wall". The chief difficulty in the way of this identification is drawn from John, xix, 29, where it is stated that some of those present at Christ's Passion "putting a sponge full of vinegar about (or rather: upon) hyssop, put it to his mouth". It is oftentimes supposed that the stalk of the Origanum maru would be too short and too slender for the purposes described in this passage, and that another plant with a longer and firmer stem, for instance, the caper-plant (corpusia spinosa) is the one meant by the Fourth Evangelist. This supposition, however, does not appear necessary to many commentators. They think that the cross whereon Jesus lay was not such a lofty object as is assumed by the opponents of the identification, and that in consequence the Origanum maru is not only shorter in length, and undoubtedly near at hand on Calvary, was used either alone, or together with a reed (cf. Matt., xxvii, 29; Mark, xv, 36) to carry the sponge dipped in vinegar to the lips of the Saviour. Numerous other plants, more or less akin to the Origanum maru are also regarded, and indeed with some probability, as the hyssop spoken of in Holy Writ.

FRANCIS E. GIGOT.
Ibagué, Diocese of (Ibaguenia), suffragan of Bogotá, in the Republic of Colombia, South America. Owing to the difficulties of providing adequately for the spiritual needs of the people over the wide area of the Diocese of Tolima, that see was suppressed by decree of 20 June, 1900, and two new bishoprics were formed in its stead: Ibagué and Garzón. Ibagué has jurisdiction over the two provinces that constitute the northern and central portions of the republic. The town of Ibagué (San Bonifacio de Ibagué) is the capital of the Department of Tolima, and is picturesquely situated on a fertile plain, about sixty miles west of Bogotá, at an altitude of more than 4000 feet above sea-level. This city, the seat of the bishopric, is located in the centre of a prosperous district, and dates from 1550. It was for a short time (1554) the capital of the republic. The first and actual bishop of the diocese, Mgr. Ismaël Perdomo, was born at El Gigante, now in the Diocese of Garzón, 22 Feb., 1872. On 29 April, 1903, he was elected to govern the Diocese of Ibagué; he received episcopal consecration at Rome on 19 June, and on 25 June was consecrated. The number of Catholics in the diocese is computed approximately, at 250,000. The cathedral, which is in process of construction, will be dedicated to the Immaculate Conception (see BOGOTÁ; GARZÓN).

Ibar, Saint, a pre-Patrickian Irish saint, who laboured in the present County Wexford from 425 to 450, recognized the jurisdiction of St. Patrick, and was confirmed in his episcopacy. Thus, though a missionary before the arrival of the great national apostle, St. Ibar was a contemporary of St. Patrick, and is regarded as the patron of Begerin, in Wexford harbour. Although at first not disposed to yield to St. Patrick he afterwards submitted and became his disciple. Much obscurity attaches to his early training, but about the year 480 he settled at Begerin, where he built an oratory and cell. In the "Life of St. Abban" it is stated that St. Ibar's retreat was soon peopled with numerous disciples from all parts of Ireland, and the "Litany of Aengus" invokes the three thousand confessors who placed themselves under St. Ibar's direction. His nephew, St. Abban, as a boy of twelve came to Begerin in St. Ibar's old age and accompanied him to Rome. His name is variously written Ibar, Iberius, and Ivor, and his death is chronicled in the year 500 on 23 April, on which day his feast is observed. Although Begerin was formerly an island in the north of Wexford harbour, it has long since been one of the reclaimed Sloblands.

Ibarra, Diocese of (Ibarrensis), in Northern Ecuador, suffragan of Quito, created by Pius IX, 20 December, 1862, out of the provinces of Carchi and Imbabura, previously within the Archdiocese of Quito. Francesco Jabani, the Apostolic Delegate, named as executor of the Bull the Bishop of Antioquia (Colombia), Antonio Riaño, at that time in exile at Quito, under whom the canonical erection of the Diocese of Ibarra took place 6 August, 1865. For two months Bishop Riaño took charge of the diocese as administrator Apostolic, and was succeeded by José María Jerovi, later Archbishop of Quito, and Arsenio Andrade, afterwards Bishop of Riobamba. Finally, in April, 1867, José Ignacio Checa y Barbo was appointed first Bishop of Ibarra, but in June of the following year was transferred to the archbishopric of Quito, being succeeded in June, 1869, in the diocese of Ibarra by Tomás Antonio Iturralde, who resigned in 1875. The next two bishops Pedro Rafael González Calixto (1876-93) and Federico González Suárez (1896-1906) were later appointed Archbishops of Quito. The present (fifth) incumbent is Ulpiano Pérez Quiñones, born 4 August, 1863, at Quito, ordained in 1887, later professor and rector of the seminary at Atocha, in 1895 made canon, in 1898 vicar-general of Quito, and appointed to the Bishopric of Ibarra, 11 January, 1907, being consecrated on 19 May of the same year at Quito.

Statistica.—According to a communication from the bishop dated 23 May, 1907, the diocese has an area of 3661 sq. miles, with a Catholic population of 104,000, including 36,000 in the province of Carchi (Tulcan, the capital, alone comprising 5000), and 68,000 in the province of Imbabura (Ibarra, the capital and seat of the diocese, numbering 5000). The 28 parishes of the diocese are divided among 8 deaneries (vicariatos foranos): Tulcan, S. Gabriel, and Mira, in the province of Carchi; Otavalo, Cotasachi, Urcuqui, Hatunataqui, and Ibarra (forano central), in the province of Imbabura. In addition to the 55 secular priests, 2 Dominicans and 2 Mercedarians devote themselves to the care of souls, each order having a church at Ibarra. The Discalced Carmelite Sisters have a community of 14 sisters at Ibarra; the Bethlehemitas, an academy for girls at Ibarra and one at Tulcan; the Sisters of Mercy, schools for girls at Ibarra and Guataco and a hospital and orphan asylum at Ibarra. In addition to the primary grammar schools there are at Ibarra a preparatory seminary (Seminario Conciliar S. Didaco) and the national college of S. Alfonso, besides a national college at Tulcan. Candidates for the priesthood study in the seminary at Ibarra. The cathedral chapter, erected 13 June, 1866, consists of 12 canons, including 2 dignitaries (dean and archdeacon) and 4 officials (theologici, doctoraeis, magistralis, permittenarii). The city of Ibarra, founded 28 September, 1606, which in 1906 celebrated the tercentenary of its foundation, with great splendour, was repeatedly destroyed by earthquakes, and on the night of 15-16 August, 1868, razed to the ground. It has since partially recovered from the catastrophe, and contains, besides the cathedral, the parish church of S. Augustin and the churches connected with the monasteries of the Dominicans (S. Domingo) and the Mercedarians (Nuestra Señora de la Merced), the church formerly in charge of the Capuchins (S. Francisco), and that of S. María del Cármen. There are also 6 public chapels. The confraternities which have been canonically

IBAS

Ibervel, Pierre Le Motte, Sieur d’, founder of the colony of Louisiana, b. at Villemarie, Montreal, July 6, 1661; d. at Havana, 9 July, 1706. He was the third son of the Sieur de Longueuil, and the son of Sieur de St. Marie, from which name he took the title of Sieur de Longueuil in Canada, and of Catharine Primot. Several of his brothers distinguished themselves greatly as explorers and sailors, viz., the Sieur de Longueuil, Sainte-Hélène, Maricourt, Sérigny, Châteauguay, and Bienville. Iberville became a soldier at an early age and served as a volunteer under the Chevalier de Troyes in Hudson Bay. In 1688 he began a brilliant career as soldier and sailor, and took part in many expeditions against the English. In an attack against Fort Rupert, with his brother Maricourt and nine men in two bark canoes, he captured the English ship with the governor of Hudson Bay. In 1694 he took Fort Nelson in Hudson Bay, which he named Bourbon, and in 1696 Fort Pemaquid in Maine. In 1696 also he captured all the English settlements on the coast of Newfoundland, and in 1697 he led an expedition against the English on Hudson Bay. He had a squadron of four ships and a brigantine and commanded the “Pelican” (50 cannon). Separated by ice from his ships Iberville, on 5 Sept., 1697, attacked alone three English ships, sank the “Hampshire” (56 cannon), captured the “Hudson Bay” (32 cannon) and put to flight the “Derry” (36 cannon). He lost his ship and his party near the island of “Rivière-au-Renard,” and on the arrival of three ships of his squadron he captured Fort Nelson (Bourbon).

Iberville sailed for France in November, 1697, and was chosen by the Minister of Marine to lead an expedition to discover the mouth of the Mississippi River, and to colonize Louisiana, which the English coveted. Iberville’s fleet sailed from Brest on 24 October, 1698. It consisted of two small frigates, the “Badine,” commanded by Iberville himself, and the “Marin,” and two store-ships. At Santo Domingo the warship “Francois” joined the expedition and accompanied it to the Spanish Main. On 25 January, 1699, Iberville reached Santa Rosa Island in front of Pensacola, founded by the Spaniards; he sailed from there to Mobile Bay and explored Masacre Island, later Dauphine. He cast anchor between Cat Island and Ship Island, and on 13 Feb., 1699, he went to the mainland, Biloxi, with his brother Bienville and the military council of justinian.

On 27 February he set out with two rowboats, two birch canoes and forty-eight men in search of the mouth of the Mississippi, which he discovered on 2 March, 1699. He sailed up as far as the mouth of Red River and returned to his ships through Bayou Anfiany and then down the Mississippi, which he believed to be the mouth of the Red River. On 1 May, 1699, he completed a fort on the north-east side of the Bay of Biloxi, a but also all writings that inclined towards Nestorianism; they thought the letter of Ibas was impious, because it calumniated St. Cyril, criticized the procedure of the Council of Ephesus, and seemed to justify Nestorius and the Nestorians; others asserted, however, that the letter was apocryphal. In the eighteenth century, however, the dogmatists and theologians defended the aforesaid letter and did not anathematize it, and him who defends it and who says that it is wholly or at least in part correct...let him be anathematized”. Pope Virginius, who had at first expressed a contrary opinion, and for that reason was attacked by Justinian, ended by sanctioning the decisions of the council. It is to be remarked that it was not the person of Ibas, but only his letter to Maria, that was condemned on this occasion.

JÉRÔME LABOURT.

IBAS was (Syriae Infra or Hisas, i.e. Donatus), elected Bishop of Edessa in 439 as successor of Rabbanus, one of the most ardent supporters of St. Cyril; d. 457. His policy, however, was just the reverse, as he inclined strongly to the doctrines of Theodore of Mopsuestia. His reign as bishop was most disturbed. The infuriated partisans of Dioscorus protested and had him deposed at the Second Synod of Ephesus (the “Robber Synod”), in 449. He was, however, restored to his see by the Council of Chalcedon (451), Ibas holds a very important place in the history of dogma. Unfortunately the only authentic writing of his that we possess is a letter addressed to Maris and Ardashir (i.e. to Dadiash, Catholics of Seleucia-Ctesiphon and Patriarch of Persia), a famous subject of discussion at six councils. By the Monophysite he was accused of Nestorianism, nor can it be denied that he was in complete sympathy with the theological school of Antioch, whose masters were Diodorus of Tarsus, Theodore of Mopsuestia, and Theodoret of Cyrus. He taught for many years in the “Persian School” at Edessa, where he had among his pupils several future bishops of the Persian Church; he inspired them with admiration for Theodore of Mopsuestia, and translated for them or had them translate the latter’s works. But the fact that he was a Monophysite Bishop of Mopsuestia, by antonomasia, the Interpreter. However, Ibas protests that he did not approve Nestorius when that patriarch refused the title of Mother of God to Mary: he only blames the methods adopted by Cyril to procure the condemnation of Nestorius; this much he openly declares in his letter to Maria. Moreover, at the Council of Chalcedon, he anathematized Nestorius both orally and in writing, and was rehabilitated almost unanimously by the Fathers. He indignantly repudiated certain assertions attributed to him by his adversaries, for instance: “I do not envy Christ His becoming God, for I can become no less than He”, and there is no reason for doubting the sincerity of his protestations. What is certain is that, to avoid all suspicion of Monophysitism, i.e. the confusion, or rather fusion, of the Divine nature and the human nature in Christ, he did not admit what is called the communication of persons, i.e. the possibility of attributing to the Divine Person the concrete attributes of the human nature, and to the human nature the concrete attributes of the Divine Person. But that is not a sufficient reason for impugning his orthodoxy, as this theory was in his time far from being fully established and extended. At the Council of Chalcedon the Patriarch Maximus of Antioch and the Roman legates declared: “Having read his letter again, we declare that he is orthodox.” But the Fathers did not adopt that opinion unanimously.

A hundred years later, the letter of Ibas to Maris was one of the famous “Three Chapters” condemned at the Third Ecumenical Council (401), at the instigation of Justinian. Among the theologians of that council, some, like the Western, thought that, as the Council of Chalcedon had rehabilitated Ibas, to condemn his writings would be equivalent to condemning that council, in other words to approve its Monophysite teachings. Others, in the Monophysite partisans known as Severians, thought it necessary to condemn once more, not only Nestorius,
IBORA

little to the rear of what is now Ocean Springs. This fort was called Maurepas or Old Biloxi. On 4 May, 1699, Iberville sailed for France with the "Badine" and the "Martin", leaving Sauvole in command of the infant colony. He returned on 8 Dec., 1699, went up the Mississippi as far as Natchez, and ordered a fort to be built fifty-four feet from the mouth of the river, which was abandoned in 1705. On 28 May, 1700, Iberville returned to France, and came back to Louisiana on 18 Dec., 1701. He remained in the colony until 27 April, 1702, and sent Bienville to found Fort Louis of Mobile on Mobile River, 16 Jan., 1702. In 1706 Iberville captured the island of Nevis from the English, and went to Havana to obtain reinforcements from the Spaniards for an attack on the Carolinas. He died at Havana of yellow fever. He was capitaine de vaisseau in the French navy and was said to have been as "military as his sword". He was an able sailor, soldier, explorer, and colonizer.

ACLEE FORTIER.

IBORA, a titular see in the Province of Helenopont, suffragan of Amasia. The primitive name of the city was Gaziura, formerly a royal city, mentioned by Strabo as deserted (XII, xv; Dion Cassius, XXXV, 12). In fact a Greek inscription, which dates from the times of Mithridates of Pontus, has been discovered on the rock of Lepcada; a small sanctuary of a Semiramis, thrown from the rock, descends to the interior of the mountain, and served perhaps as a secret depository for the royal treasures. Evagrius Ponticus, the famous Oriental ascetic of the fourth century, was a native of Ibara (Sozomen, "His Eccl.", VI, XXX); situated not far from Livania, the see was the depository of the priceless manuscripts of Old St. Basil, who led a religious life on the banks of the river Iris with his friend St. Gregory and his sister Macrina. There is frequent mention in the correspondence of these two saints of Ibara, which, according to Procopius (Historia Arcana, xviii), was destroyed by an earthquake in the sixth century. Le Quen (Orients Christ., I, 533) mentions seven bishops of Ibara, from the fourth to the ninth century. The bishopric still existed about the year 1170 under Manuel Comnenus (Parthey, "Heroici SYNODAEMUS", 108). To-day Ibara is called Turkual; it is a casa in the sanjak of Tokat, in the vilayet of Sivas. The village numbers 3000 inhabitants. Between 1705 and 1706 Iberville captured the island of gardens and orchards. Nearby is the Lake of Turku, three to three and a half miles in circumference.

S. VALLE.

ICELAND.—The island called Iceland, which, though really a part of America, is considered, because of its population and history as forming a part of Europe, is situated in the North Atlantic Ocean, between 63° 23' and 66° 33' N. lat., and is separated from the New World by the comparatively narrow and almost entirely ice-bound Strait of Greenland. It is a compact body of land much indented by fiords on its northern and western shores. A small peninsula, with very sinuous outline, lies a little to the north-east end, and is connected with the main body by a narrow isthmus. The area of the island is about 39,756 sq. m., only two-fifths of which are inhabited. From the barren and rocky plateau, the average height of which is 2000 feet above the level of the sea, rise extensive glaciers (jokul, p. 161), broad summits, and high mountains, most of which are of volcanic origin, e.g., Hecla, over 5000 feet; Oshaera, 6424 feet), and frequently belch forth tremendous masses of lava and mud and work great havoc (e.g. 1783, 1845, 1873). Earthquakes are also frequent. The rivers, though short, are numerous and carry a large volume of water. There are also inland lakes. The climate, which is on the whole of the oceanic type (moderate fluctuations of the mean temperature and precipitations), differs, nevertheless, considerably according to locality. It is more severe along the northern coast, which frequently remains ice-bound until the late summer, but it is tempered by the Gulf Stream on the southern and western coasts. The excellent sulphur is found in the interior, besides some coal and quarry stone. The flora is scanty. Some parts of the island are covered with rich grass, while birch trees, alder trees, and willows grow in protected spots to a height of twenty-seven feet. Small groups of these are to be seen here and there, but the growth of a real forest is prevented by the terrible storms which sweep over the island. The cultivation of grain is out of the question; only berries, and potatoes, and some other vegetables can be raised with profit. The breeding of sheep and horses is the principal occupation in Iceland. While the former supply milk, butter, meat, and wool, the small hardy rough-haired ponies serve as saddle horses and bears. The fish are an important article of exportation. Cattle are less numerous; hogs and domestic fowl rare. Game abounds: reindeer, seals, polar foxes, and polar bears, as well as birds of many varieties, which are sought after for their eggs and feathers. Fishing also is an important occupation, followed not only by the Icelanders, but also by foreigners. Manufacturers and handicrafts are still in their infancy. Trade, on the other hand, carried on chiefly by barter, is fast increasing and represents a value of over five million dollars a year. New roads and bridges, and the establishment of the postal service and of telegraphy, are doing much to develop commerce. The revenues, formerly insignificant, have doubled in the last two decades, and are systematically applied to further the culture and material well-being of the people.

The scant population (80,000 souls) dwell chiefly by the shores of the ocean, and in the river valleys which open towards the sea. They belong for the greater part to the North Germanic race (Norsemen). Their language dates back to very early times and has a rich literature. The official creed, since 1550, is the Augsburg Confession; but of late infidelity has been spreading, and new sects have sprung up. Backward industries, local conditions, and frequent occurrence of storms (earthquakes, floods, etc.) formerly caused considerable emigration, especially to America.

Since 1874, and especially since 1904, Iceland has become autonomous, is governed by its own laws, and has its own courts and an independent administration. Arms: a white field in field argent. It is not, as formerly, under the immediate jurisdiction of Denmark, though the Danish king is nominally the sovereign of Iceland. The seat of government and meeting-place of the legislative body (the Althing), with its two chambers, is Reykjavik, which is at the northern tip of the island. The capital is the seat of the Lutheran bishop; its population approaches 10,000. It has a Lutheran cathedral, a Catholic church, and several hospitals. The three other cities, Akureyri, Isafjarður and Seydisfjarður are also growing rapidly.

HISTORICAL HISTORY.—Icelanders, according to legend, were the first discoverers of the island about the year 800. Colonization did not begin until much later, when King Harold I Harfagri of Norway subdued the Norse nobles, who had been independent until then, and made himself absolute lord of Norway in 872. Many liberty-loving men at that time left the land of their fathers (874), and of the new homes of the sea; the uninhabited island which is said to owe its name to
the Norwerman, Flosk Viğerdarson. This immigration (Landsnahme) continued for sixty years. The colonists (noblemen, with their serfs, among whom were men of Germanic and Celtic origin) divided the soil among themselves, and the chieftains not only continued to exercise judicial prerogatives over the low tenants and serfs, but also performed the functions of high-priests (gött). Freemen, however, might claim the right of voting at the most public assembly of the freemen, and their families could take part. But this body was not always able to exercise its powers, and it happened quite often that internal quarrels were settled by the sword. Thirty years later the country was divided into four quarters, subdivided in turn into thing-districts. To simplify business, there was a special court of law for each district, under the general jurisdiction of the Althing. A committee (Býgþótt), to which each quarter sent twelve representatives, carried on the administration in the name of the Althing. The republic was on friendly terms with the Kingdom of Norway, the two countries having been for ever joined and obliged to serve their citizens by treaty. But it was not long before King Olaf Haraldsson (1024) and Harold Hardrada (1066) made unsuccessful attempts to bring the island into dependence on Norway.

The inhabitants had in the meantime been converted to Christianity, and for a long while the Catholic bishops exerted over them a powerful and beneficial influence. At their instance the old laws (Grágás) were written down in 1117. Unfortunately, soon afterwards bloody feuds broke out among the chief nobles of the State, in the course of which Sturla attempted to make himself king. The people, tired of protracted wars, offered no resistance to King Hakon the Elder when, in 1258, he appointed Gisur Thorwaldsson Governor (Jarl). A few years later the whole island swore allegiance to the new master, still insisting, however, on retaining certain privileges (1354) that the island had enjoyed under Olaf, strictly speaking, a province of Norway. Norwegian Iceland is always referred to in public documents of the fifteenth, and in chronicles of the sixteenth century as a dominion of the Crown (see Styrre, "Skandinavien under Unionstider", Stockholm, 1880), and at first it retained its constitutional organisation. In the year 1354, when the first bishop was introduced by the judge, Jon Einarsson, patterned on the Norwegian laws (Jonsbok). Hakon II having died (1380), his son Olaf, who since 1376 had ruled Denmark, ascended the throne, and under this monarch the present union of Denmark and Iceland was consummated. During the reigns of Christian III and his successors the ecclesiastical hierarchy in the island was dissolved, and Luther's teachings were forced upon the people, who were deprived of all their rights. In 1662 its representatives were compelled by force of arms to acknowledge the absolute sovereignty of the King of Denmark, and in 1800 the Althing, whose powers it must be noted, had previously been reduced to a minimum, was finally suppressed. Forty-three years later it was revived, at first as an advisory body only. There followed long and violent constitutional conflicts with Denmark, which was weakened by foreign wars and internal troubles, and the island was left free. The monarchy has been recognized since 1845 by the demands of the Icelanders. Since 1904 the Iceland patriots have in the main succeeded in the achievement of their wishes: national independence and autonomy in the administration of their own affairs. De jure, the country is again autonomous; de facto, this is not yet recognised by Denmark. The future is shrouded in darkness.

Cronica Historica—The Norwerman, who settled in Iceland, from the end of the ninth century, were pagans; and, as we have already observed, it was one of the functions of their chieftains, called gött, to conduct religious services. But, as the Icelanders made frequent journeys, and often to distant lands, they were soon brought into contact with Christian populations, from whom they gained a knowledge of a higher civilization. Thus was the soil prepared in advance for the seed of the Gospel. The first native missionary was one Stenfin Thorgilsson (996), commissioned by King Olaf Trygvesson. The somewhat abrupt method characterised his religious zeal brought him at first but a small fortune, but, about the year 1000, Gisur and Hjalti, two highly esteemed Icelanders who had been exiled from the country, on returning from Norway Christians, soon obtained a decree from the Althing whereby pagan practices were suppressed, and the people compelled to accept baptism. The actual conversion of the nation of course was only achieved after long and laborious efforts and the careful instruction of the people. The names of the missionaries and of their bishops are only known in part and there is no information concerning their work. It must at any rate be admitted that for a long period, from 1056 until 1106, the church was without a bishop. In 1106 a bishopric was erected at Holar. These two dioceses were first under the Archbishopric of Lund, later (1152) under that of Trondheim, and until the middle of the sixteenth century were in close communion with Rome. The bishops were selected by the Althing, but the nominees were consecrated by the metropolitan. Many of their prelates were distinguished for their virtue and wisdom. (For details see Baumgartner in "Kirchenlexikon", s. v. "Island").

The priests of Iceland frequently went to French and English universities to make their studies. Many among the clergy and laity made pilgrimages to the hallowed spots of both East and West. Canon law was in force at an early period (1063). There sprang up a number of cloistered houses similar to the Abbeys of Thingear, Munkathverar, Kirkjubœ, and the Augustinian convents of Thrykkvibœ, Flatey, Vidœ, Æðrœ, and Skriða. "A strong intellectually atmosphere pervaded these monasteries. They were centres of learning and literature, and thoroughly national in character. It is beyond question that it was from these cloistered schools of Iceland, indebted for the origin and prosperous growth of her earlier literature, down to the middle of the sixteenth century" (Hermann, vol. II, p. 91).

There were religious as well as historical treatises. The "Lilja" of Eystein Asgrimson, an Augustinian monk of Thrykkvibœ, was particularly celebrated as "the most soulful and artistic poem of the Middle Ages" (ibid.), and was highly appreciated long after the introduction of Protestantism. Works of learning also issued from these cloistered cells. Thus we find that an attempt was made in Munkathverar as early as the middle of the thirteenth century to translate the Bible into the vernacular. Abbots Brandr Jonsson was thoroughly versed in Latin literature. Even the "Niallassaga" seems to have originated at Munkathvera. But scholars and artists were to be found not alone in the monasteries, but among the secular clergy, of whom some 300 were distributed among 250 secular parishes. Thus it is related of Torstein Illugason (1335) that he excelled in calligraphy, painting, and wood-carving. The churches were adorned with mural decorations, sculptures, and metal-work, and were provided with priestly vestments, relics of which have been pre-
served to this day at Bessastad, Gardar, etc. In the museum of Reykjavik are to be found handsome crucifixes, statues, antependia, etc., which recall the Catholic past.

Iceland was most disastrously affected in the beginning of the fifteenth century by internal unrest, factional conflicts, earthquakes, and epidemics which struck men and beasts alike. About this period, also, religious life left much to be desired. Certain bishops, like Eiríkur Ólafsson (1415-18), Jón of Skálholt, neglected their flocks or made themselves odious by their acts of tyranny; others, such as the otherwise eminent Arason Jón (1524-50), of Holar, gave scandal by disregarding the law of celibacy. The conflict which lasted for a number of years between Arason Jón and the last Bishop of Skálholt, Ogmundur Pálsson (1520-42) was particularly unfortunate.

The first to preach the new faith were two disciples of Luther, Oddur Gotskállason and Gissur Einarrsson. These soon secured followers, particularly after King Christian III of Denmark and Norway declared himself a convert to the Reformation at the Diet of Holstein (1536). The priestly reception of the English form of the Reformation, and the employment ofpriestly force to establish Lutheranism in his kingdom. His object was not to spread the teachings of Luther, but to destroy the last vestiges of liberty in his domains. The imprisonment of the Bishop of Skálholt left only Arason Jón to work at the conversion of the bishops for a time, until he was betrayed into the hands of his enemies, who executed him on 7 November, 1550. To this day his countrymen revere his memory for the heroism which marked his life and glorified his death. (Cf. the drama "Jón Arason", by Mathias Jøhvanesson, Jægerdúr, 1900.) It was not difficult to scatter the flock after the shepherds had been slain, especially since here, as in Denmark, the people were deceived by the introduction at first of only slight ceremonial changes. The chief efforts being directed to the confiscation of church property. The former ecclesiastical divisions were allowed to remain; the superintendents at Skálholt and Holar took the title of bishops, while the preachers retained the name of priests (praestor). But they were very scantily paid, and from that time the Iceland pastor was obliged to take part in the work of agriculture, if he desired to live at all. It was only the newly made office of chaplain, the official language of the Church until the year 1568. Confirmation and catechetical instruction were introduced as late as the year 1741, and at times during fast days and holydays. The Hanesa (high Mass), which lasts an hour and a half, opens with the Kyrie and Gloria. The Epistle and Gospel are followed by the Creed and the Fater Noster, after which the sermon is preached. Communion frequently comes next. The prayer of the priest, the celebrant, the deacon, and the skilled altar servers, in the cities at least, over the altar a chasuble on the back of which is a golden cross.

Since 1801 Iceland has had only Protestant bishops, who reside at Reykjavik. There are 20 deaneries and 141 parishes, or scarcely half of the former number. Only seven of the churches are built of stone, most of these dating back to Catholic times; 217 are wooden structures, while for the rest turf or peat is the material used. A distinction is made between principal and secondary churches. The former contain thirty or thirty-two pews generally unpainted, with room for about one hundred persons. The interior is as bare and unadorned as at Home. There is an altar, times a baptismal font, and a primitive pulpit. Frequently a picture hangs above the altar, which is nothing more than a table. Both the principal church, which frequently adjoins the presbytery, and the subsidiary church, which is generally found near the estate of a wealthy farmer, serves during the week as storehouses for clothing, wool, etc., or as sleeping quarters for guests. Organs are very rare. (Herrmann, op. cit.)

Schools, properly so called, are to be found only in the cities. Instruction is a home duty, and is supervised by the preacher as far as circumstances permit. Of course the results thus obtained are not of a high order, but most of the young men can read and write passably, and write a little. The higher educational institutions of Iceland number a classical high school, a medical school, one seminary for preachers, one naval and several agricultural schools. The State Library at Reykjavik is comparatively well endowed. Those who wish to pursue higher studies enter the University of Copenhagen.

The standard of morality is not high, and illegitimate births are numerous. No doubt this is partly due to the fact that the two sexes live in close proximity, occupying together undivided rooms, and that the women greatly outnumber men, many of whom succumb to hunting or fishing accidents. It is a characteristic fact, that of all the works of foreign poets, those of Heine are the most widely read.

Formerly the rigorous laws of Denmark, which were also in force in Iceland, prohibited under severe penalties the celebration of Catholic services. For more than three hundred years no Catholic service was permitted to be held in any part of the country. The first to dare settle in this country (1859) were Frenchmen, the Abbé Bernard and Baudoin. But the intolerance to which they were subjected, on the part of preachers and state officials alike, caused them much suffering, which soon drove Bernard to abandon the country, while Baudoin persevered until 1875. He was the author of the first manual of the Catholic religion in modern Icelandic. After his departure, the mission remained forsaken, although freedom of worship had existed since the preceding year (1874). In 1895 missionary work was resumed with great vigour. It is now conducted by the Maristes (2 priests and 2 lay brothers), and boasets of a pretty wooden church, a school (which is also attended by Protestant children), and an excellent hospital, in which the nursing is done by the Sisters of St. Joseph, of Cambrai. The Catholic community is still small, numbering only about 50 souls, and their temporary increase in the past few years is the result of the arrival of seamen. But the outlook is more promising than Protestant writers affect to believe. Here and there Protestant clergymen ardently study the Fathers of the Church, and there are presbyteries in which the image of the Madonna hangs alongside that of Luther. Furthermore, in spite of all opposition, there are still cherish hymns in honour of the Blessed Virgin; these have been collected by Dr. Thorolksson, whose son was reconciled with the Church in 1905.

P. WITTMAN.

ICELANDIC LITERATURE is in its beginning closely
connected with that of Norway; in fact it is originally
Norse. Iceland was colonized in the ninth and tenth
centuries by Norwegians who left their native land
when Harold Hafgarfi, forced all Norway to submit
to his sway (a. d. 872). Iceland, though politically
independent until 1262, remained in close contact
with the mother country; its language also remained
Norse. The introduction of Christianity into the
island (a. d. 999) did not interrupt the intellectual de-
velopment, as in other Germanic lands. Literature
was zealously cultivated by priests and laymen, and
never lost its popular character.

The oldest Norse poems date from about 850; of
the poetry preceding this date almost nothing is
known. The first transmission of literature was oral;
a written literature did not begin until the twelfth
century. Most of the manuscripts that we possess,
and which are preserved chiefly at Copenhagen, Up-
sala, and Stockholm, date from the thirteenth and
fourteenth centuries. Old Norse poetry, like all
ancient poetry, is rather a creative, but, with the
Old English as well as Old High German poetry
written in the epic long line, Old Norse poetry is
strophic. The oldest and most important mon-
ument of Old Norse poetry is the Edda, which is
discussed in a special article. Besides Eddic poetry
there was also Skaldic poetry. While the two kinds
cannot always be clearly distinguished, still there
are important differences. The Eddic poems are
anonymous, the Skaldic poems are almost always of
known authorship and deal with historic personages
or events. Skaldic poetry was essentially a courtly
art; it usually enjoys the praise of some princely
patron. While the Eddic poems are simple, the Skaldic
poems are extremely artificial in structure and lan-
guage, employing alliteration and assonance, as well
as making elaborate use of such rhetorical devices as
heiti and kenningar (metaphors and figurative para-
phrases). The most pretentious kind of Skaldie poem
was the drápa, a literally "longverse".

The beginnings of Skaldic art are lost in mythic
obscurely. The earliest skalds were Norwegians, the
first historical name being Bragi, who later figures as
the god of poetry in Valhalla. With King Harold
Hafragfi (872-930) we get on historic ground. To
this king belonged two court poets, Eilfr Thjodholf of
Hvin, both authors of famous panegyrics.

Eyrvind Finnsson, known Skaldasvipilir
(spoiler of skalds), composed on King Hakon's death
(961) the "Hakonarmal" on the model of the "Eiriksmal",
which an unknown skald had composed in honor of
the memory of King Eric (d. 950). But
the greatest skalds came from Iceland, the most
famous being Egill Skallagrimssson (d. 982), whose
wild career is the subject of a well-known saga. Of
his poems the "Hofudhlausn" (Redemption of the
Head) and "Sonartorrek" (Loss of the Son) are the
most famous. Eilfr Ugason is known for his "Hus-
rdrap" (985), an important poem for the study of
mythology. Most of the Icelandic poets were court
poets of Norwegian and other kings. Such were
Kormak Ogmundarson (d. 967), Einar Helgason, and
Hallfred Otarsson, a follower of King Olaf Tryg-
valdson. Olaf Skulason is known for his "Hus-

Olafsdrap" (1000), as also Gunnlaug, named
Ormstunga (serpent's tongue), on account of his biting
satire. Among the skalds of St. Olaf (1015-1030)
the most prominent were Thormodhin Bersason and Sigh-
vat Thordarson (d. about 1045), the king's fa-
vourite poet, who in his "Bersogislfeir" (Strains of
Candour) addressed a fearless warning to King Mag-
num, Olaf's son and successor. After the eleventh
century Skaldic art declines. Of later Skaldie poems
Einar Skulason's "Geisli" (Song of the Deer) and
the tale of St. Olaf, is noteworthy, as also the "Hattatali" of
Snorri Sturluson (q. v.). With Snorri's nephews, Olaf
and Sturla, the list of skalds closes.

Poetry continued in the old forms, but its content
was chiefly religious. Poems were written in honour
of Christ, the Virgin, and various saints. Of this
kind are the "Solasjold" (Song of the Sun), com-
posed about 1200, and the famous "Lilja" (Lily)
written about 1340 by Eysteinn Aastrims, an Augus-
tinian monk. After the fourteenth century
the chief form of Icelandic poetry were the rimur,
medieval verse poems, the content of which
was drawn chiefly from older sagas.

The finest and most characteristic product of Ice-
lundic genius is the saga, the prose narrative of
historical events. Unlike Skaldic poetry the saga is of
purely Icelandic origin and can be traced back as far
as the tenth century. The material is taken from
real life; the sagas are frequently the biography
of eminent Icelanders (isenlingsaeg), or else of
Norwegian kings (konungsagaer). The sagas treated
their material with poetic freedom and in a perfectly
objective manner; dialogue enlivens the narrative,
and poetic citation is appropriately used. In
the sagas resembles Old Irish prose narrative, and
Irish influence is quite possible. No Germanic litera-
ture of medieval times can boast of prose writings as
idiomatic and excellent as those of Iceland.

After the Latin language and script had been
introduced as a consequence of the adoption
of Christianity, the sagas after 1170 were written down.
Historiography began. The earliest historians were
Semund Sigfusson, who wrote in Latin, and Ari
Thorgilsson (d. 1148), who first wrote history in the
vernacular. Of his history of Iceland only an ab-
stract is preserved. The "Landnamsbok", the most
complete history of the settlement of Iceland, made
liberal use of Ari's work. While Ari's work is exact
and scholarly, the writings of the sognur are more
literary. The sagas tell their story with poetic
freedom. The greatest of the isenlingsaeg, or
Icelandic family sagas, are the "Egilsaga", the hero
of which is the skald Egil, the "Thorgils saga
Vestfirdinga", connected with the history of the
inhabitants of the Luxa valley in Western Iceland,
the "Eyrbyggja", which has for its main theme
the life of the godhi (chieflain) Snorri, and the
"Njals saga", the longest and most prominent of all the sagas,
the scene of which is laid in Southern Iceland.
In these and in many other sagas, those of
Gunnar and Njals, have been fused. No saga gives
clearer insight into the state of the island's living
during the period from 960 to 1016.

Of the numerous other sagas of this kind, mention
may be made of those of Gunnlaug Ormstunga, of
Kormak, of Grettir the Strong, of Ivar Brekke, as
well as of the "Vatnsstel" and the "Vapnfordinga-
saga". The discovery of Greenland and Vinland
(America) is related in the "Eirikssaga raudha" (Saga
of Eric the Red), which was written about 1200.
The heroic age of Iceland terminates in 1030. Later
events are treated in the "Sturlunga-Saga", which
arose about 1300 in Western Iceland. It is a

collection of sagas grouped around the main portion,
the "Isendingaaga" of Sturla Thordarson. The history
of the Icelandic Church is presented in the "Biskupa-
sognur" (bishops' sagas), composed for the most part
by clerics and men of learning. These are the
Icelandic sagas. The story of the conversion of
Iceland is told in the "Kristinisaga", which seems a
continuation of the "Landnamsbok" based on Ari's work.
The history of the Norwegian kings is related in the
konungsagaer. The oldest extant attempt at a
complete history is the "Agrip af Norge Konunga-
sognur".
ICONIUM

Epitome of Norwegian Kings’ Sagas). A collection of similar character is the so-called “Fagragkinna” (Fine Parchment), in which Skaldic poems are extensively used. But the greatest historic work in Icelandic is the famous “Kunungabók” of Snorri Sturluson (1178–1241), known also from its opening words as “Heimskringla” (earth’s circle). Here the history of Norway is told from the mythological Norse gods to the 12th century. The work was probably completed between 1220 and 1230. Snorri’s nephew, Sturla, was also an historian. He is the author of sagas of the Kings Hákon Hákonarson and Magnús.

But there were also sagas of purely fictitious content, telling of folk-tale and adventure, generally known in the history of Norwegian. Of this type is the so-called fornaldarsögur (stories of olden times), among which are reckoned the “Volsungasaga”, based mainly on Eddic poems (see Edda), the “Frithjófs saga” and the “Hervararsaga”. All these sagas are known only in late versions of the fourteenth century.

Under foreign influence, notably that of French courtly poetry, arose the riddarasögur (knightly stories), which treat of the adventures of the heroes of Arthurian romance, Tristan, Perceval, and others. Many of these sagas are mere translations or adaptations. The “Thidrekssagas”, composed about 1250 in Norway, based on Latin accounts, gives the stories of Dietrich of Bern and is of the greatest importance for the study of the Germanic heroic legends. Lastly we must mention the sagas that tell of sacred legends. Of these that of Barlaam and Josaphat is the most noteworthy.

The most remarkable monument of Icelandic erudition is the “Snorra Edda”. Legal literature plays a prominent part in Icelandic letters; the Northern lawbooks are very important for the study of Germanic civilization. The code of laws in force during the days of the republic was first set down by Ulfjört in 930, on the basis of the Norwegian law. The manuscript in which this code is transmitted was called since the seventeenth century by the strange name of “Grægða” (gray goose).

With the end of the Middle Ages, Icelandic literature declined. Little original writing that commands attention among the world’s literature was produced; as more organized ratings assured the secular great revival of learning in Scandinavia, Iceland furnished her quota of scholars. Thórar Skulason translated the Bible from Luther’s German version; Brynjolf Sveinsson discovered the manuscript of the “Elder Edda” (q. v.); Thorolf Torfason and Arne Magnusen wrote prominently in literature. In the field of history Jan Æropolín (d. 1836) won an enviable reputation. The number of poets in modern times is large, but there are few great names. Hallgrim Pétursson (d. 1674) and Jon Thorhleifson Vidalin (d. 1720) gained fame as writers of psalms, while Bjarne Ólafsson (d. 1841) attained a commanding position in the nineteenth century. The attempt at the epic and drama call for no notice.

The Skaldic poems were edited rather uncritically by Vígbússon and Powell in the “Corpus poeticum boreale” (Oxford, 1883), with English versions and notes; a better edition is Wissen’s “Carmina norroena” (2 vols., Lund, 1886–89). Ari’s “Islendingabók” was edited by Goltzer (Halle, 1892); the “Heimskringla” by F. Jónsson (4 vols., Copenhagen, 1893–1901), English translation in Morris and Magnusson’s “Saga Library” (London, 1891); “Landnámabók”, ed. Jónsson (Copenhagen, 1900), tr. Ellwood (London, 1910). The best sagas (including “Egils” “Eyrbyggja”, and “Laxdasla”) are edited in Ceder- shöld, Gering, and Mogk’s “Alt nordische Sagabibliothek” (Halle, 1892–96). The “Njáls saga” was edited by Glásson in “Lindingsa Sögur”, III (Copenhagen, 1849), I sq., also separately (Copenhagen, 1875); English translation by G. Webbse Dasein (Edin- burgh, 1861). The saga material relating to the discovery of America was published in the “Antiquitates Americanae” (Copenhagen, 1837); a phototypic edition of the “Eiríks saga raudha” was given by Reeves, “The Finding of Wineland the Good” (London, 1890); critical edition of same saga by G. Storm (Copenhagen, 1891). The “Biukapassígar” were published by the Iceland society, Copenhagen (1858–78). The Riddarsásgar were edited by Ceder- shöld under the title of “Form og Sögur Sudhrlanda” (Lund, 1884). The literature treating of the Blessed Virgin has been edited by Unger under the title “Maria Saggas” (Christiania, 1871).

ARTHUR F. J. REMY.

Icoonium, a titular see of Lycaonia. Xenophon (Anab., I, ii, 19) says that it is the easternmost town of Phrygia; other writers, e. g., Cicero (Ad. famil., III, 6; XV, 3), Ammianus Marcellinus (XIV, 2), place it in Lycaonia, and others in Galatia. It is known that the boundaries of these provinces were often changed. It was the possession of M. Antoninus Polemon, with the city of Olbe, to whom Antony gave it, and who reigned from 39 to 26 b. c. (Pliny, “Hist. Natur.”, V, 37; Strabo, XII, vi, 1). Iconium later formed part of the Roman Province of Galatia, when the latter was constituted, 25 a. c. Under Claudius the town became a Roman colony, mentioned in many coins and inscriptions. St. Paul preached here (see his first missionary journey, Acts xix, 10). In 125 c. the city was converted and took the name of Iconium, and was placed in Cappadocia and brought under the present time, for Iconium is yet the centre of a schismatical Greek diocese.

What constitutes the reputation of the town is that from 1063 to 1309 it was the capital of the sultans of the Seljuk Turks, who on the extinction of their dynasty adopted as their heir Osman, the founder of the present dynasty. A large number of monuments or works of art of the period have been preserved, such as the ruins of the mosque of the Sultan Ala-od-Din, the blue medreseh (school), a vast hall of the palace with a magnificently decorated roof, the golden mosque, the mosque of Selim II, the tomb of Djelal-Edin, the Minarets, the whirling dervishes. The superior general of these Turkish religious, surnamed Tellebe, always resides at Koniah and has the privilege of girding each new sultan with the sabre of Osman, which for Turkish sovereigns corresponds to the ceremony of coronation. At Koniah, the number of the inhabitants, who numbers make nearly 2,000,000 inhabitants, three-fourths of whom are Mus- ultans. There are about 300 Catholics. In 1892 the Augustinians of the Assumption established a mission here with a school which is very prosperous to-day. The Oblate Sisters of the Assumption con-
duet a dispensary and a school. The Greek and above all the Armenian schismatics are very numerous. The town is connected with Constantinople by a railroad, and important works of irrigation have been set on foot in order to cultivate the plain which has hitherto been very arid. Koniah is one of the holy cities of Islam. It contains more than 10,000 deravishes (Turkish monks) and theological students.

S. VAULIHE.

Iconoclasms (Eikonoklastis, "Image-breaking") is the name of the heresy that in the eighth and ninth centuries disturbed the peace of the Eastern Church, caused the last of the many breaches with Rome that prepared the way for the schism of Photius, and was echoed on a smaller scale in the Frankish kingdom in the West. The story in the East is divided into two separate persecutions of the Catholices, at the end of each of which stands the figure of an image-worshiping Empress (Irene and Theodora).

I. THE FIRST ICONOCLAST PERSECUTION—The controversy began with a movement in government worship (for the use of this word see Images, Veneration of) of images has been much discussed. It has been represented as an effect of Moslem influence. To Moslems, any kind of picture, statue, or representation of the human form is an abominable idol. It is true that, in a sense, the Khalifs at Damascus began the whole disturbance, and that the Iconoclast emperors were warmly applauded and encouraged in their campaign by their rivals at Damascus. On the other hand it is not likely that the chief cause of the emperor's zeal against pictures was the example of his bitter enemy, the head of the rival religion. A more probable origin will be found in the opposition to pictures that had existed for some time among Christians. There seems to have been a dislike of holy pictures, a suspicion that their use was, or might become, idolatrous, among certain Christians for many centuries before the Iconoclastic persecution began (see Images, Veneration of). The Paulicians, Theophylact, and John of Damascus held that all matter (especially the human body) is bad, that all external religious forms, sacraments, rites, especially material pictures and relics, should be abolished. To honour the Cross was specially reprehensible, since Christ had not really been crucified. St. John of Damascus says some words that were allowed to have occasional great influence at Constantinople, intermittently with suffering very cruel persecution (see PAULICIANS). But some Catholics, too, shared their dislike of pictures and relics. In the beginning of the eighth century several bishops, Constantine of Nocera in Calabria, Theodosius of Ephesus, Thomas of Claudiciopolis, and others are mentioned as having these views. A Nestorian bishop, Xenaes of Hierapolis, was a conspicuous forerunner of the Iconoclasts (Hardouin, IV, 306). It was when this party got the ear of the Emperor Leo III (the Isaurian, 716-41) that the persecution began.

The first act in the story is a similar persecution in the domain of the Khalifs at Damascus. Yezid I (680-883) and his successors, especially Yezid II (720-24), thinking, like good Moslems, that all pictures are idols, tried to prevent their use among even their Christian subjects. But this Moslem persecution was not in the least one of the Chalkean Seven Monocles or in the presence of the Christians, is unimportant except as the forerunner of the troubles in the empire. Leo the Isaurian was a valiant soldier with an autocratic temper. Any movement that excited his sympathy was sure to be enforced sternly and cruelly. He had already cruelly persecuted the Jews and Paulicians. He was also suspected of leanings towards Islam. The Khalif Omar II (717-20) tried to convert him, without success, except as far as persuading him that pictures are idols. The Christian enemies of images, notably Constantine of Nocaria, then easily gained his ear. The emperor came to the conclusion that images were the chief hindrance to the conversion of Jews and Moslems to the Christian superstition, weakness, and division in his empire, and opposed to the First Commandment. The campaign against images was part of a general reformation of the Church and State. Leo III's idea was to purify the Church, centralize it as much as possible under the Patriarch of Constantinople, and thereby strengthen and centralize the State of the empire. There was also a strong rationalistic tendency among these Iconoclast emperors, a reaction against the forms of Byzantine piety that became more pronounced each century. This rationalism helps to explain their hatred of monks. (For Leo III's reform of the empire see J. Bury, 'History of the Later Roman Empire', London, 1889, bk. VI, ch. ii.) Once persuaded, Leo began to enforce his idea ruthlessly. Constantine of Nocaria came to the capital in the early part of his reign; at the same time John of Synnada wrote to the patriarch Germanus I (716-30), telling him that Constantine was causing disturbance among the other bishops of the province by preaching against the use of holy pictures. Germanus, the first of the heroes of the image-worshipers (his letters in Hardouin, IV, 239-62), then wrote a defence of the practice of the Church addressed to another Iconoclast, Thomas of Claudicopolis (i.e., 245-62). But Constantine and Thomas had the emperor on their side. In 726 Leo III published an edict declaring images to be idols, forbidden by Exodus, xx, 4, 5, and commanding all such images in churches to be destroyed. At once the soldiers began to carry out his orders, whereby disturbances were provoked throughout the empire. There was a famous picture of Christ, called Χριστος αἰματωριος, over the gate of the palace at Constantinople. The destruction of this picture provoked a serious riot among the people. Germanus, the patriarch, protested against the edict and appealed to the pope (Gregory II, 727). The pope, Leo the Isaurian (730) and had Anastasius (730-54), formerly synclis of the patriarchal Court, and a willing instrument of the Government, appointed in his place. The most steadfast opponents of the Iconoclasts throughout this story were the monks. It is true that there were some writers of the sixth and seventh centuries who held that all the Church with its buildings and books, the body Eastern monasticism was steadfastly loyal to the old custom of the Church. Leo therefore joined with his Iconoclast a fierce persecution of monasteries, and eventually tried to suppress monasticism altogether.

The Pope at that time was Gregory II (715-31). Even before he had received the appeal of Germanus a letter came from the emperor commanding him to accept the edict, destroy images at Rome, and summon a general council to forbid their use. Gregory answered, in 727, by a long defence of the pictures. He explains the difference between icons and idols, with some surprise that Leo does not already understand it. He describes the lawful use of, and reverence paid to, pictures by Christians. He blames the emperor's interference in ecclesiastical matters and his persecution of image-worshippers. A council is not wanted; all Leo has to do is to stop disturbances. The execution of the Imperial edict is left to be done by Leo himself. If he decree that all pictures at Rome, break the statue of St. Peter (apparently the famous bronze statue in St. Peter's), and take the pope prisoner, Gregory answers it by pointing out that he can easily escape into the Campagna, and reminding the emperor how futile and now abhorrent to all Christians was Constant's persecution of Mar-
tin I. He also says that all people in the West detest the emperor's action and will never consent to destroy their images at his command (Greg. II, "Ep. I ad Leonem", Jaffé, "Reg.", n. 2180). The emperor answered Rome by murder, for in his argument the general council had yet said a word in favour of images, that he himself is emperor and priest (ιερακάν χωρίς λεπτόν) in one, and therefore has a right to make decrees about such matters. Gregory writes back regretting that Leo does not yet see the error of his ways. Again, he says, the popes and the Councils, therefore, do not pretend to discuss every point of the faith: it was unnecessary in those days to defend what no one attacked. The title Emperor and Priest had been conceded as a compliment to some sovereigns because of their zeal in defending the very faith that Leo now attacked. The pope declares himself determined to withstand the emperor's tyranny at any cost, though he has no defence but to pray that Christ may send a demon to torture the emperor's body that his soul be saved, according to I Cor., v, 5 (Jaffé, l. c., n. 2162).

Meanwhile the persecution raged in the East. Monasteries were destroyed, monks put to death, tortured, or banished. The Iconoclasts began to apply their principle to relics also, to break open shrines and burn the bodies of saints buried in churches. Some of them rejected all intercession of saints. These two other points (destruction of relics and rejection of prayers to saints), though not necessarily involved in the main issue, are frequently (not quite always) added to Iconoclasm. Meanwhile, St. John Damascene (d. 754), safe from the emperor's anger under the rule of the Khaila, was writing, at the monastery of Mar Saba, his famous apologies "against those who destroy the holy icons". In the West, at Rheea, Ravenna, and Naples, the palace rose against the emperor's law. This anti-imperial movement is one of the factors of the breach between Italy and the old empire, the independence of the papacy, and the beginning of the Papal States. Gregory II already refused to send taxes to Constantinople and himself appointed the imperial dux in the Duxus Romanus. From this time the pope becomes practically sovereign of the Duxus. The emperor's anger against image-worshippers was strengthened by a revolt that broke out about this time in Hellas, ostensibly in favour of the icons. A certain Constantine set up a rival emperor. The insurrection was soon crushed (727), and Cosmas was beheaded. After this a new and severer edict against images was published (730), and the fury of the persecution was redoubled.

Pope Gregory II died in 731. He was succeeded at once by Gregory III, who carried on the defence of holy images in exactly the spirit of his predecessor. The new pope sent a priest, George, with letters against Iconoclasm to Constantinople. But George, when he arrived, was afraid to present them, and came back without having accomplished his mission. He was sent a second time on the same errand, but was arrested and imprisoned in Bithynia by the imperial governor. The emperor now proceeded with his policy of enriching and strengthening his own patriarchate at Constantinople. He conceived the idea of making it as great as all the empire over which he still actually ruled. Isauria, Leo's birthplace, was taken from Antioch by an imperial edict and added to the Byzantine patriarchate, increasing it by the Metropolis, Seleucia, and about twenty other sees. Leo further pretended to withdraw Illyricum from the Roman patriarchate and to add it to that of Constantinople (Duchesne, "L'Illyricum ecclésiastique", in his "Editions scelées", Paris, 1905, pp. 229-79), and commuted all the proconsul of the Roman See on which he could lay his hands, in Sicily and Southern Italy. This naturally increased the enmity between Eastern and Western Christendom. In 731

Gregory III held a synod of ninety-three bishops at St. Peter's, in which all persons who broke, defiled, or took away images of Christ, of His Mother, the Apostles, or other saints, were declared excommunicae. Another decree anathematized all who pasted an image or held a copy of this decree and of its application to the emperor, but was again arrested and imprisoned in Sicily. Leo then sent a fleet to Italy to punish the pope; but it was wrecked and dispersed by a storm. Meanwhile every kind of calamity afflicted the empire; earthquakes and famines enriched the provinces, while the Moslems continued their victorious career and conquered further territory.

Leo III died in June, 741, in the midst of these troubles, without having changed his policy. His work was carried on by his son Constantine V (Copronymus, 741-775), who became an even greater persecutor of image-worshippers than had been his father. As soon as Leo III was dead, Artabasdos (who had married Leo's daughter) seized the opportunity and took advantage of the unpopularity of the Iconoclast Government to raise a rebellion. Declaring himself the protector of the holy images, he took possession of the imperial himself crowned emperor by the pliant patriarch Anastasius, and immediately restored the images. Anastasius, who had been intruded in the place of Germanus as the Iconoclast candidate, now veered round in the usual Byzantine way, helped the restoration of the icons and excommunicated Constantine, but not by a public, but by a private and denier of Christ. But Constantine marched on the city, took it, blinded Artabasdos and began a furious revenge on all rebels and image-worshippers (743). His treatment of Anastasius is a typical example of the way these later emperors behaved towards the patriarchs through whom they tried to govern the Church. Anastasius was flogged in public, blinded, driven shamefully through the streets, made to return to his Iconoclasm and finally reinstated as patriarch. The wretched man lived on till 754. The pictures restored by Artabasdos were again removed. In 754 Constantine, taking up his father's original idea summoned a great synod at Constantinople that was to count as the Seventh General Council. About 340 bishops attended; as the See of Constantinople was vacant by the death of Anastasius, Theodosius of Ephesus and Pastilias of Ferze presided. Rome, Alexandria, Antioch, and Jerusalem sent legates, since it was clear that the bishops were summoned merely to carry out the emperor's commands. The event showed that the patriarchs had judged rightly. The bishops at the synod servilely agreed to all Constantine's demands. They decreed that images of Christ are either Monophysite or Nestorian, for—since it is impossible to represent his Divinity—they either confound or divorce His two natures. The only lawful representation of Christ is the Holy Eucharist. Images of saints are equally to be abhorred; it is blasphemous to represent by dead wood or stone those who live with God. All images are an invention of the heathens. The fact that the sun, the moon, and the stars are also gods, is proof of the impiety of the pagans—"Deut. v, 8; John, iv, 24; Rom., i, 23-25.

Certain texts of the Fathers are also quoted in support of Iconoclasm. Image-worshippers are idolaters, adorers of wood and stone; the Emperors Leo and Constantine are light of the Orthodox Faith, our savours from idolatry. A special curse is pronounced against three chief defenders of images—Germanus, the former Patriarch of Constantinople, John Damascene, and a monk, George of Cyprus. The synod declares that "the Trinity has destroyed these three" ("Acts of the Iconoclast Synod of 754" in Mansi, XIII, 205 sq.).

When the bishops finally elected a successor to the vacant see of Constantinople, Constantine, Bishop of Syeneum (Constantine II, 754-66), who was of course a creature of the Government, prepared to carry on its
campaign. The decrees were published in the Forum on 27 August, 754. After this the destruction of pictures and images began in earnest. All the bishops of the empire were required to sign the Acts of the synod and to swear to do away with icons in their dioceses. The Paulicians were now treated well, while image-worshippers and monks were fiercely persecuted. Instead of painting of saints the churches were decorated with pictures of fruits, fruit, and birds, so that the pictures would look like grocers' stores and bird shops. A monk Peter was scourged to death on 16 May, 761; the Abbott of Monagria, John, who refused to trample on an icon, was tied up in a sack and thrown into the sea on 7 June, 781; in 767 Andrew, a Cretan monk, was flogged and lacerated till he died (see the Acts with 1 Oct.; Romans Martin' Sagmianus with 8 Oct.; and Nilles, "Kalendari manuale," 2nd ed., Innsbruck, 1906, p. 303); in November of the same year a great number of monks were tortured to death in various ways (MartYROLOGY, 28 Nov.; Nilles, op. cit., p. 336). The emperor tried to abolish monasticism (always the centre of the defence of images); monasteries were turned into barracks; the monastic habit was forbidden; the patriarch Constantine II was made to swear in the ambo of his church that, although formerly a monk, he had now joined the secular clergy. Relics were dug up and thrown into the sea. The destruction of icons was forbidden. In 766 the emperor fell foul of his patriarch, had him scourged and beheaded and replaced by Nicetas I (786-80), who was, naturally, also an obedient servant of the Iconoclast Government. Meanwhile, the countries which the emperor's power did not reach kept the old custom and broke communion with the Iconoclast Patriarch of Constantinople and his bishops. Cosmas of Alexandria, Theodore of Antichon, and Theodore of Jerusalem were all defenders of the holy icons in communion with Rome. The Emperor Constantine V died in 775. His son Leo IV (775-80), although he did not repeal the Iconoclast law, was much milder in enforcing them. He allowed the exiled monks to come back, tolerated at least the intercession of saints, and tried to reconcile all parties. When the patriarch Nicetas I died in 780 he was succeeded by Paul IV (780-84), a Cypriote monk, who carried on a half-hearted Iconoclast policy only till the death of the Government in 788 (the Government was at this time no more than the marriage of Irene). Irene was always a steadfast image-worshipper. Even during her husband's life she concealed holy icons in her rooms. At the end of his reign Leo had a burst of fiercer Iconoclast. He punished the courtiers who had replaced images in their apartments and was so successful that the emperor was September 780. At once a complete reaction set in.

II. THE SEVENTH GENERAL COUNCIL (Second of Nicea, 787). The Empress Irene wasregent for her son Constantine VI (780-97), who was nine years old when his father died. She immediately set about undoing the work of the Iconoclast emperors. Pictures and relics were restored to the churches; monasteries were re-opened. Fear of the army, now fanatically Iconoclast, kept her for a time from repealing the laws; but she only waited for an opportunity to do so and to restore the broken communion with Rome and the other patriarchates. The Patriarch of Constantinople, Paul IV, resigned, and retired to a monastery, giving openly as his reason repentance for his former concessions to the Iconoclast Government. He was succeeded by a pronounced image-worshipper, Tarsias (784-806, "Vita Tarsaei", ed. Heikel, 1859). Tarsias and the empress now openly corresponded with Rome. They sent a deputation to Pope Adrian I (772-95) acknowledging the primacy and begging him to come to himself or, at least, to send legates, to a council that should undo the work of the Iconoclast synod of 754 (Mansi, XII, pp. 884-86; Hefele, "Conciliageschichte," 3rd ed., II, 446-47). The pope answered by two letters, one for the empress and one for the patriarch. In these he agrees to the proposed council, insists on the authority of the Holy See, and demands the restitution of the property confiscated by Leo III. He blames the sudden elevation of Tarsias (who from being a layman had suddenly become patriarch), and rejects his claim to Ecumenical Patriarch, but he praises his thodoxy and zeal for the holy images. Finally, he commits all these matters to the judgment of his legates (Jaffé, "Rege," 2448 and 2449; Hefele, I, c. 448-452). These legates were an archpriest Peter and the abbot Peter of St. Saba near Rome. The other three patriarchs were unable to answer, they did not receive a letter, and their legates produced no evidence of the tumult at that time in the Moelem state. But two monks, Thomas, abbot of an Egyptian monastery, and John Syncllius of Antioch, appeared with letters from their communities explaining the state of things and showing that the patriarchs had always remained faithful to the images. These two seem to have acted in some sort as legates for Alexandria, Antioch, and Jerusalem.

Tarsius opened the synod in the church of the Apostles at Constantinople, in August, 786; but it was at once dispersed by the Iconoclast soldiers. The emperor, with his troops, came from a distance, forbade the synod to continue, and scattered the people of others; it was arranged that the synod should meet at Nicea in Bithynia, the place of the first general council. The bishops met here in the summer of 787, about 300 in number. The council lasted from 24 September to 23 October. The Roman legates were present; they signed the Acts first and always had the first place in the list of members (Mansi, XII, 993; XIII, 366, 379, etc.), but Tarsias conducted the proceedings, apparently because the legates could not speak Greek. In the first three sessions Tarsias gave an account of the events that had led to the Council, the papal and other letters were read out, and many repentant Iconoclast bishops were reconciled. The fathers accepted the pope's letters as true formulae of the Catholic Faith. Tarsias, when he read the letters, left out the passages about the restitution of the confiscated papal property, the reproaches against his own sudden elevation, and use of the title "Ecumenical Patriarch," and mutilated them, in order to preserve the primacy (Mansi, XIII, 1077-1084). The fourth session established the reasons for which the use of holy images is lawful, quoting from the Old Testament passages about images in the temple (Ex., xxxvi, 18-22; Num., vii, 89; Esch., xii, 18-19; Heb., xi, 5), and citing a great number of them. He died, 8 December of that year. The Synod of Sardes at the end of the session read a profession of faith in this sense. In the fifth session Tarsias explained that Iconoclam came from Jews, Saracens, and heretics; some Iconoclast misquotations were exposed, their books burnt, and an icon set up in the hall in the midst of the fathers. The sixth session was occupied with the Iconoclast synod of 754; its claim to be a general council was denied, because neither the pope nor the three other patriarchs had had a share in it. The decree of that synod (see above) was refused clause by clause. The seventh session drew up the symbol (euseb) of the council, in which, after repeating the Nicene Creed and renewing the condemnation of all manner of former heretics, from Arians to Monothelites, the fathers make their definition. Images are to receive veneration (ευφημίως), not adoration (καταπτάω); the honour paid to them is only relative (ευρημά), for the sake of their prototype (κατασκευή), not for their own sake. They sent their synod to the emperor, who, according to the council, see IMAGES, VENERATION). Anathemas are pronounced against the Iconoclast leaders; Germanus John Damascene, and George of Cyprus are praised. In opposition to the formula of the Iconoclast synod the fathers declare: "The Trinity has made these three
glorious” ( ἡ θεία τος τοις δυνάμεις). A deputation was sent to the empress with the Acts of the synod, a letter to the clergy of Constantinople acquainted them with its decision. Twenty-two canons were drawn up, of which these are the chief: canons i and ii confirm the canons of all former general councils; canons iii–vi forbids the appointment of ecclesiastical persons by the State; only bishops may elect other bishops; canons viii–xi condemn to the emperor imprisonment for five years, exile, or banishment; canons x and xi in connection with canon iii, give the Emperor power to depose, to consecrate churches without relics, and to ordain priests to their parishes without their bishop's consent; canons xii, xiii, xiv commands all deposed monasteries to be restored, and all heretical and schismatic churches to be restored to the Church; canons xvi, xvii, xviii regulate abuses in monasteries (see these canons in Mansi, XII, 417–40). An eighth and last session was held on 23 October at Constantinople, in the presence of Irene and her son. After a discourse by Tarasius the Acts were read out and signed by all, including the empress and the emperor. The synod was closed with the usual Polychronia or formal proclamation (see the full text of the Acts in Harlequin, IV, pp. 27–502; Mansi, XII, pp. 992; XIII, p. 440; also Hefele, op. cit., III, pp. 441 sq.), and Epiphanius, a deacon of Catania in Sicily, preached a sermon to the assembled fathers (Mansi, XIII, 441–48). A Latin translation of the above account of all that had happened (“Ep. ad Adrianum”, Mansi, i.c., 458), and Adrian approved the Acts (letter to Charles the Great, Harlequin, IV, 773–820) and had them translated into Latin. But the question of the property of the Holy See in Southern Italy and the friendship of the pope towards the Franks still caused bad feeling between East and West, and over the Iconoclast party still existed at Constantinople, especially in the army.

III. THE SECOND ICONCLAST PERSECUTION.—Twenty-seven years after the Synod of Nicea Iconoclasm broke out again. Again the holy pictures were destroyed, and their defenders fiercely persecuted. For twenty-eight years the former story was repeated with wonderful exactness. The places of Leo III, Constantine V, and Leo IV are taken by a new line of Iconoclast emperors—Leo V, Michael II, Theophilus. Pope Paschal I acts just as did Gregory II, the faithful Paschal I, but his position was not to be rivaled. The iconoclast emperor John III, a Damascene lives again in St. Theodore the Studite. Once again the synod rejects icons, and another, following it, defends them. Again an empress, regent for her young son, puts an end to the storm and restores the old custom—this time finally.

The second outbreak is not far to seek. There had remained, especially in the army, a considerable Iconoclast party. Constantine V, their hero, had been a valiant and successful general against the Moslems, Michael I (811–13), who kept the Faith of the Second Council of Nicaea, was singularly unfortunate in his attempt to defeat the empire. The Iconoclasts made back and regrettfully to the glorious campaigns of his predecessor, they evolved the amazing conception of Constantine as a saint, they went in pilgrimage to his grave and cried out to him: “Arise, come back and save the perishing empire!” When Michael I, in June, 813, was utterly defeated by the Bulgars and fled to his capital, the soldiers forced him to resign his crown and set up one of the generals, Leo the Armenian (Leo V, 813–20) in his place. An officer (Theodotus Cassiteras) and a monk (the Abbot John Grammaticus) persuaded the new emperor that all the misfortunes of the empire were a judgment of God on the idolators of images; Leo the Armenian persuaded, used all his power to put down the icons, and so all the trouble began again.

In 814 the Iconoclasts assembled at the palace and prepared an elaborate attack against images, repeating almost exactly the arguments of the synod of 784. The Patriarch of Constantinople was Nicephorus I (806–15), who became one of the chief defenders of images in this second persecution. The emperor invited him to a discussion of the question with the Iconoclasts; he refused, since it had been already settled by the Seventh General Council. The work of demolishing images began again. The picture of Christ, restored by Irene over the iron door of the palace, was again removed. In 815 the patriarch was summoned to the emperor, who imprisoned him and two bishops, promulgated a council of bishops, and set up a new synod of bishops, and the last of the lexicographers, and held a long discussion with Leo and his Iconoclast followers. In the same year the emperor summoned a synod of bishops, who, obeying his orders, deposed the patriarch and elected Theodotus Cassiteras (Theodotus I, 815–21) to succeed him. Nicephorus was banished across the Bosporus. Till his death, in 829, he defended the cause of the images by controversial writings (the “Lesser Apology”, “Antirhetikoi”, “Greater Apology”, etc., in P. G., C, 301–855; Pitra, “Spicileg. Scolast.”, I, 302–503; IV, 233, 380), wrote a history of his own time (Teogonia storica, P. G., C, 876–994) and a general chronography from Adam (Χρονογράφια στοιχεῖα, in P. G., C, 995–1060). See the “Vita Nichephori patriarchae auctore Ignatio diacono” (ed. de Door, Leipzig, 1880) and Krumbacher, “Byzantinische Literatur” (Munich, 1897), 71–73, 352. Among the men who opposed the Iconoclast emperor in 815 was Theodore, Abbot of the Studium monastery at Constantinople (d. 826). Throughout this second Iconoclast persecution St. Theodore (Theodorus Studites) was the leader of the faithful monks, the chief defender of the icons. He comforted and encouraged Nicephorus in his resistance to the emperor, who three times banished by the Government, wrote a great number of treatises, controversial letters, and apologies in various forms for the images. His chief point is that Iconoclasts are Christological heretics, since they deny an essential element of Christ’s human nature, namely, that it can be represented graphically. This amounts to a denial of its reality and material quality, whereby Iconoclasts revive the old Monophysite heresy. Ehrhard judges St. Theodore to be “perhaps the most ingenious [der scharfsinnigste] of the defenders of the cult of images” (in Krumbacher’s “Byz. Litt.”, p. 150). In 816 the empress dispatched the pope to Rome, and Pope Stephen III was deposed, banished, tortured. Theodore of Studium refused communion with the Iconoclast patriarch, and went into exile. A number of persons of all ranks were put to death at this time (Nilles, “Kal. Man.”, I, 321–327.)

The first thing the new patriarch Theodorus did was to hold a synod which condemned the council of 787 (the Second Nicaea) and declared its adherence to that of 754. Bishops, abbots, clergy, and even officers of the Government, who accepted its decree, were deposed, banished, tortured. Theodore of Studium refused communion with the Iconoclast patriarch, and went into exile. A number of persons of all ranks were put to death at this time (Nilles, “Kal. Man.”, II, 515–18, and his references); pictures of all kinds were destroyed everywhere. Theodore appealed to the pope, Paschal I, 817–824, in the name of the persecuted Eastern image-worshippers. At the same time Theodotus, the Iconoclast patriarch, sent legates to Rome, who were, however, not admitted by the pope, since Theodotus was a schismatical intruder in the sees of which Nicephorus was still lawful bishop. But Paschal received the monks, settled them in Rome, and gave up the monastery of St. Praxedes to them and others who had fled from the persecution in the East. In 818 the pope sent legates to the emperor with a letter defending the icons and once more refuting the Iconoclast accusation of idolatry. In this letter he insists chiefly on our need of exterior signs for
invisible things; sacraments, words, the sign of the Cross, and all tangible signs of this kind; how, then, can people who admit these reject images? (The fragment of this letter that has been preserved is published in Pitra, “Spicileg. Scolast.”, II, p. xi sq.) The last man who was exiled and imprisoned from this time especially that the Catholics in the East turn with more loyalty than ever to Rome as their leader, their last refuge in the persecution. The well-known texts of St. Theodore in which he defends the primacy in the strongest possible language—e. g., “Whatsoever you may bring against the Church, or those who wander from the truth must certainly be referred to Peter or to his successor. . . . Save us, chief pastor of the Church under heaven” (Ep. i, 33, P. G., XCIX, 1018); “Arrange that a decision be received from old Rome as the custom has been handed down from the beginning by the tradition of our fathers” (Ep. ii, 36; ibid., 1531—were written during this persecution).

The protestations of loyalty to old Rome made by the Orthodox and Catholic Christians of the Byzantine Church at this time are her last witness immediately before the Great Schism. There were then two separate parts of the East: the East having two concurrent patriarchs, the Orthodox and the Catholic. Each other: the Iconoclast persecutors under the emperors, with their anti-patriarch Theodotus, and the Catholics led by Theodore the Studite, acknowledging the lawful patriarch Niecesphorus and above him the distant Latin bishop who was to them the “chief pastor of the Church under heaven”. On Christmas Day, 830, Leo V ended his tyrannical reign by being murdered in a palace revolution that set up one of his generals, Michael II (the Stammerer, 820—29), as emperor. Michael was also an Iconoclast and continued his predecessor’s policy, though at first he was anxious not to persevere but to conciliate everyone. But he changed nothing of the Iconoclast laws, and when Theodotus the anti-patriarch died (821) he was refused to restore Niecesphorus and set up another usurper, Antony, formerly Bishop of Syleum (Antony I, 821—32). In 822 a certain general of Slav race, Thomas, set up a dangerous revolution with the help of the Arabs. It does not seem that this revolution had anything to do with the question of images. Thomas represented rather the party of the murdered emperor, Leo V. But after it was put down, in 824, Michael became much more severe towards the image-worshippers. A great number of monks fled to the West, and Michael himself wrote a letter full of bitter threats to his idolatry to his rival Louis the Pious (814—20) to persuade him to hand over these exiles to Byzantine justice (in Mansi, XIV, 417—22). Other Catholics who had not escaped were imprisoned and tortured, among whom were Methodius of Syracuse and Euthymius, Metropolitan of Sardis. The deaths of St. Theodore the Studite (11 Nov., 826) and of the lawful patriarch Niecesphorus (2 June, 828) were a great loss to the orthodox at this time. Michael’s son and successor, Theophanes (828—42), continued the persecution still more fiercely. A monk, Lazarus, was scourged till he nearly died; another monk, Methodius, was shut up in prison with common riffians for seven years; Michael, Synod of Jerusalem, and Joseph, a famous writer of hymns, were tortured. The two brothers Theophanes and Theodore were scourged with 200 strokes and branded in the face with hot iron as idolaters (Lam. 27 Dec.; Nibles, “Kal. Man.”, I, 369). By this time all images had been removed from the churches and public places, the prisons were filled with their defenders, the faithful Catholics were reduced to a sect hiding about the empire and a crowd of exiles in the West. But the emperor’s wife Theodore and her mother Theocista were faithful to the Emperor, and it was said that Great Justin was working on the emperors, even towards the emperor’s statues, and therefore applied naturally to holy pictures, seeming to

III (the Drunkard, who lived to cause the Great Schism of Photius, 842—67), and the regent was Michael’s mother, Theodora. Like Irene at the end of the first persecution, Theodora at once began to change the situation. She opened the prisons, let out the confiscated books, restored the churches, recalled the exiles. For a time she hesitated to revoke the Iconoclast laws, but soon she made up her mind, and everything was brought back to the conditions of the Second Council of Nicesa. The patriarch John VIII (832—42), who had succeeded Antony I, was given this choice between the images and retiring. He preferred to retire, and his place was taken by Methodius, the monk who had already suffered years of imprisonment for the cause of the icons (Methodius I, 842—46). In the same year (842) a synod at Constantinople approved of John VIII’s deposition, renewed the decree of the Second Council of Nicesa, and excommunicated Iconoclasts. This is the last act in the story of this heresy. On the first Sunday of Lent (19 February, 842) the icons were brought back to the churches in solemn procession. That day (the first Sunday of Lent) was made into a perpetual memorial of the triumph of Orthodoxy at the end of the long years of persecution. It is the “Day of Orthodoxy” of the Byzantine Church, still kept very solemnly by both Uniate and Orthodox. Twenty years later the Great Schism began. So large has this, the last of the old heresies, loomed in the eyes of Eastern Christians that the Byzantine Church looks upon it as a kind of type of heresy in general. The Feast of Orthodoxy, founded to commemorate the defeat of Iconoclasm, has become a feast of the triumph of the Church over all heresies. It is in this sense that it is now kept. The great Synodikon read out on that day anathematizes all heretics (in Russia rebels and nihilists also), among whom the Iconoclasts appear only as one fraction of a large and varied class (for the text of the Synodikon see Nibles, “Kal. Man.”, II, 109—18). After the restoration of the icons in 842, there still remained an Iconoclast party in the East, but it never again got the ear of an emperor, and so gradually dwindled and eventually died out.

IV. ICONOCLASM IN THE WEST.—There was an echo of these troubles in the Frankish kingdom, chiefly through misunderstanding of the meaning of Greek expressions used by the Second Council of Nicesa. As early as 767 Constantine V had tried to secure the sympathy of the Frankish bishops for his campaign against the iconoclastic imagery, when he threatened to send Gentily a declaration to Pope Paul I (757—67) which quite satisfied him (Hefele, “Consiliengeschichte”, III, 431). The trouble began when Adrian I (772—93) sent a very imperfect translation of the Acts of the Second Council of Nicesa to Charles the Great (Charlemagne, 768—814). The errors of this Latin version are obvious from the quotations made from it by the Frankish bishops. For instance, in the third session of the council, Constantine, Bishop of Constantia, in Cyprus, had said: “I receive the holy and venerable images; and I give the deaconship of (the great harp) only to the consubstantial and life-giving Trinity” (Mansi, XII, 1148). This phrase had been translated: “I receive the holy and venerable images with the adoration which I give to the consubstantial and life-giving Trinity;” (“Libri Carolini,” III, 17, LXXVII, “Kal. Man.”, I, 369). By this time all images had been removed from the churches and public places, the prisons were filled with their defenders, the faithful Catholics were reduced to a sect hiding about the empire and a crowd of exiles in the West. But the emperor’s wife Theodore and her mother Theocista were faithful to the Emperor, and it was said that Great Justin was working on the emperors, even towards the emperor’s statues, and therefore applied naturally to holy pictures, seemed to
these Franks servile, degrading, even idolatrous. The Franks saw the word προσκύνησιν (which meant worship only in the sense of reverence and veneration) transformed into προσκύνησις (as meaning homage due only to God). Lastly, there was their indignation against the political conduct of the Empress Irene, the state of friction that led to the coronation of Charlemagne at Rome and the establishment of a rival empire. Suspicion of everything done by Greeks, disdain for all their customs, led to the rejection of the council by the Frankish Church. But it should be noted that this rejection of the council did not mean that the Frankish bishops and Charlemagne sided with the Iconoclasts. If they refused to accept the Nicene Council they equally rejected the Iconoclast synod of 754. They had holy images and kept them; but they thought that the 5a of Nicea must be the decision of this council. With some time disputed, is now established (Hefele, "Conciliengeschichte," III, 694-717). In it the bishops reject the synods both of 787 and of 754. They admit that pictures of saints should be kept as ornaments in churches—and as well as relics and the saints themselves—should receive a certain proper veneration (opportuna veneratio); but they declare that God only can receive adoration (meaning adoratio, προσκύνησις); pictures are in themselves indifferent, have no necessary connexion with the Faith, are in any case inferior to relics, the Cross, and the Bible. The pope, in 794, answered these eighty-five chapters by a long exposition and defence of the cult of images ("Hadrianus ep. ad Carol. Reg." in Jaffé, "Regesta," n. 2483; Mansi, XIII, 759-810; P. L., XC VIII, 1247-92), in which he mentions, among other points, that twelve Frankish bishops were present at, and had agreed to, the Rovereto synod. Before the letter arrived, the Frankish bishops held the Synod of Frankfort (794) in the presence of two papal legates, Theophylactus and Stephen, who do not seem to have done anything to clear up the misunderstanding. This synod formally condemns the Second Council of Nicaea, showing, at the same time, that it altogether misunderstands the Faith of Nicea. The essence of the decree at Frankfort is its second canon: "A question has been brought forward concerning the new synod of the Greeks which they held at Constantinople [the Franks do not even know where the synod they condemn was held] in connexion with the adoration of images, which, in the synod of 787, they were told that it was wrong not to give service and adoration to pictures of saints just as much as to the Divine Trinity are to be anathematized. But our most holy Fathers, whose names are above, refusing this adoration and service despise and condemn [that synod]" (Mansi, XIII, 909).

Charlemagne sent these a letter asking them to leave Rome and denounce the condemnation of Irene and Constantine VI. The pope of course refused to do so, and matters remained for a time as they were, the Second Council of Nicaea being rejected in the Frankish kingdom.

During the second Iconoclast persecution, in 824, the Emperor Michael II wrote to Louis the Pious the letter which, besides demanding that the Byzantine monks who had escaped to the West should be handed over to him, entered into the whole question of image-worship at length and contained vehement accusations against its defenders. Part of the letter is quoted in Leclercq-Hefele, "Histoire des conciles," III, 1, p. 612. Louis begged the pope (Eugene II, 824-27) to receive a document to be drawn up by the Frankish bishops in which he would promise that no image in his empire should be collected. Eugene agreed, and the bishops met in 825 at Paris. This meeting followed the example of the Synod of Frankfort exactly. The bishops try to propose a middle way, but decidedly lean towards the Iconoclasts. They produce some arguments against the image-worship of the Byzantines. Pictures may be tolerated only as marks of recognition. Adrian I is blamed for his assent to Nicea II. Two bishops, Jeremias of Sens and Jonas of Orleans, are sent to Rome with this document; they are especially warned to treat the pope with every possible reverence and humility, and to efface any passages by which offended him. Adrian, also, wrote to the pope, protesting that he only proposed to help him with some useful quotations in his discussions with the Byzantine Court; that he had no idea of dictating to the Holy See (Hefele, l. c.). Nothing is known of Eugene's answer, or of the further developments of this incident. The correspondence about images continued for some time between the Holy See and the Frankish Church; gradually the decrees of the Second Council of Nicea were accepted throughout the Western Empire. Pope John VIII (872-82) sent a better translation of the Acts of the council, which helped much to remove the mystery of this incident.

There are a few more isolated cases of Iconoclasm in the West. Claudius, Bishop of Turin (d. 840), in 824 destroyed all pictures and crosses in his diocese, forbade pilgrimages, resource to intercession of saints, veneration of relics, even lighted candles, except for the image of Christ, and for an image of a Frankish abbott, Theodemir, wrote against him (P. L., CV); he was condemned by a local synod. (See "Claudi Taurin. De cultu imaginum" in the Cologne "Bibl. Patrum," IX, 2.) Agobard of Lyons at the same time thought that no external signs of reverence should be paid to images; but he had few followers.

Walfred Strabo ("De occesi. rerum exordio et incremento" in P. L., CXIV, 916-66) and Hinemar of Reims ("Opusc. de Hinemarum Lauden," xx, in P. L., CXXVI) defended the Catholic practice and contributed to put an end to the exceptional principles of Frankish bishops. But it was not until the eleventh century that the Bishop of Bomy still held these ideas, for which he was severely reprimanded by Pope Alexander II.

The Acts of the various synods are in the Pope, Concilia concilii (Bonn, 1790); Hefele, Conciliorum collectanea (Freiburg i. Br., 1877); 366-490; 678-717; Fr. tr., edited with valuable notes by L. Plummer, Historia canonica (1878, 2 vols.). The essence of the decree in the Synod of Frankfort, 1812; MARX, Der Bilderdarstelle der byzantinischen Kaiser (1839); SCHWARZ, Der Bilderdarsteller. Ein Kampf der griechischen Kirche um die Bilderverehrung u. ihre Früchte (Gotthe, 1886); Guichard, Histoire de l'empire des iconoclastes (2 vols., Paris, 1893); Ruppert, Historia imaginum restituta (Antwerp, 1869); SCHLOMANN, Geschicht des Bilderdarstellens in das Konzil von Konstanz (1874); MARX, Der Bilderdarsteller der byzantinischen Kaiser (1839); SCHWARZ, Der Bilderdarsteller. Hefele, Conciliorum collectanea (Freiburg i. Br., 1877); 366-490.

ADRIAN FORTESCUE.

Iconography, Christian, is the science of the description, history, and interpretation of the traditional representations of God, the saints, and other sacred subjects in art. Almost from the beginning the Church has employed the arts as potent means of instruction and edification. In the first centuries the walls of the catacombs were decorated with paintings and mosaics (see CATACOMBS), and in all later times churches have lent their walls, ceilings, and windows, as well as their altars, furniture, and liturgical vessels and books, to be adorned with scenes from the Old and the
New Testament, from the lives and legends of the saints, and even from old mythologies, modified, of course, and harmonized with Christian teaching. (For the details of Christian iconography see the articles, Diptychs; Ivories; Metal-work; Mosaics; Painting; Reliquaries; Sculpture; Windows; Wood-Carving.)

The object of iconography is to give the history of these various representations, to note their prevalence or absence at some particular time or in some particular place, to compare those of different lands and different periods, to explain the personal or historical, and to interpret the symbolical. Studied thus, they have an important historical and dogmatic interest, as completely shutting off the altar and the sanctuary from the worshipper. It has three doors: the great royal door in the middle (so called because it leads directly to the altar upon which the King of kings is sacrificed), the deacon’s door to the right, and the door of the prosomide (preparation for Mass) upon the left, when viewing the structure from the standpoint of a worshipper in the body of the church.

Two pictures or icons must appear upon every iconostasis, no matter how humble, in the Greek church; the picture of Our Lord on the right of the Royal door, and that of Our Lady upon the left. But in the finer churches of Russia, Greece, Turkey, they attest the unity of ecclesiastical tradition and the faith of the age in which they were produced.

Special articles dealing with subjects of Christian iconography, besides those already mentioned, are Anchor; Dove; Eucharist; Early Symbols of; Fish, Symbolism of; Lamb; Nimbus. See also Ecclesiastical Art.

Molanus, De historia imaginum (1570); Detiehl, Die christliche Iconographie (Freiburg, 1895); Barrière de Montaigly, Traité d’iconographie chrétienne (Paris, 1890); Didron, Iconographie chrétienne (Paris, 1845)—Eng. tr. in Bohn’s Library; Helmbrecher, Christliche Kunstsymbolik und Iconographie (Frankfort, 1839); Alt, Die Heiligenbilder oder die bildene Kunst und die Idee. Wissenschaft in ihrem gegenseitigen Verhältnisse (Berlin, 1845); Jamieson, Sacred and Legendary Art (London, 1845); Hübner, Emblems of Saints (London, 1860); Tuffing, Symbols and Emblems of Early and Medieval Christian Art (London, 1860).

Iconostasis (Gr. εἰκονοστάσιον, εἰκονοστάσιον, picture screen, from εἰκόνα, image, picture, and ἱερόν, place), the chief and most distinctive feature in all Greek churches, whether Catholic or Orthodox. It may be said to differentiate the Greek church completely from the Roman in its interior arrangement. It consists of a great screen or partition running from side to side of the apse or across the entire end of the church, which divides the sanctuary from the body of the church, and is built of solid materials such as stone, metal, or wood, and which reaches often (as in Russia) to the very ceiling of the church, thus com-
usually painted in the stiff Byzantine manner, although in many Russian churches they have begun to use modern art; the Temple of the Saviour, in Moscow, is a notable example. Iconostasis in the Greek (Hellenic) churches have never been so lofty and as full of paintings as those in Russia and other countries. A curious form of adornment of the icons or pictures has grown up in Russia and is also found in other parts of the East. Since the Orthodox Church admits no iconostasis in the inside of churches (although they often have numerous statues upon the outside) they imitated an effect of sculpture in the pictures placed upon the iconostasis which produces an incongruous effect upon the Western mind. The icon, which is generally painted upon wood, is covered with rich draperies and hands with a raised silver of silver, gold, or seed pearls showing all the details and curves of the drapery, clothing and halo; thus giving a crude cameo-like effect around the flat painted face and hands of the icon.

The iconostasis is really an Oriental development in adorning the holy place about the Christian altar. Originally the altar stood out plain and severe in both the Oriental and Latin Rites. But in the Western European churches and cathedrals the Gothic church builders put a magnificent wall, the reredos, immediately behind the altar and hipped ornamentation, figures upon wood, etc., until it became it was ornamented with beauty. In the East, however, the Greeks turned their attention to the barrier or partition dividing the altar and sanctuary from the rest of the church and commenced to adorn and beautify that, and thus gradually it was higher and covered it with pictures of the Apostles, Prophets, and saints. Thus the Greek Church put its ornamentation of the holy place in front of the altar instead of behind it as in the Latin churches. In its present form in the churches of the Byzantine (and also the Coptic) Rite the iconostasis is comparatively modern, not older than the sixteenth or seventeenth centuries. It was never used in the Roman churches or any of the Latin churches of the West, and was unknown to the early Church. The modern chancel rail of the Latin Rite correctly represents the primitive barrier separating the altar from the people. In the great Gothic cathedrals in France or England it is in what manner to be the analogue of the iconostasis, but that is the nearest approach to it in the Western Church. None of the historians or liturgical writers of the early or middle Greek Church ever mention the iconostasis. Indeed the name to-day is chiefly in Russian usage, for the Russian word is not restricted merely to the altar screen, but is applied to any object supporting a picture. The word is first mentioned in Russian annals in 1528 when one was built by Macarius, Metropolitan of Novgorod.

In the early Greek churches there was a slight barrier about waist high, or even lower, dividing the altar from the people. This was variously known as κυνηγίς, grating, ἄφρακτον, fence, διατήρα, a barrier made of columns, according to the manner in which it was constructed. Very often pictures of the saints were affixed to the tops of the columns. When Justinian constructed the "great" church, St. Sophia, in Constantinople, he adorned it with twelve high columns (in memory of the twelve Apostles) in order to make the barrier or chancel, and over the tops of these columns he placed an architrave which ran the entire width of the sanctuary. On this architrave or cross-beam large disks or shields were placed containing the pictures of the saints, and this arrangement was called τυφλον (tympli). This fancied resemblance to the front of the old temples or as expressing the Christian idea of the shrine where God was worshipped. Every church of the Byzantine Rite eventually imitated the "great" church and so this open tympli form of iconostasis began to be adopted among the churches of the East, and the name itself was used to designate what is now the iconostasis.

Many centuries elapsed before there was any approach towards making the solid partition which we find in the Greek churches of to-day. But gradually the demand for greater adornment grew, and to satisfy it pictures were placed over the entire iconostasis, and so it began to assume somewhat the present form. After the Council of Florence (1438) when the last conciliar attempt at reunion of the Churches failed, the Greek clergy took great pleasure in building and adorning their churches as little like the Latin ones as possible, and from them on the iconostasis assumed the form of the wall-like barrier which it has at present. As its present form is merely a matter of development of Church architecture suitable and adapted to the Greek Rite, the iconostasis was continuously used by the Catholics as well as by the Orthodox.

Idaho (probably an Arapho Indian word, "Gem of the Mountains"), the name first suggested for the Territory of Colorado, one of the Pacific Slope States, lying like a roughly shaped rudder and stretching 485 miles south from the boundary separating the United States from Canada, with its base extending east from Oregon to Wyoming. It is bounded on the south by Utah and Nevada, on the west by Oregon and Washington, and on the east by Wyoming and Montana, on the north by British Columbia. Its area is 83,779 square miles, of which one-third is set apart as United States Government forest reserves.

Physical Features, Climate, Etc.—Central Idaho is a vast mountainous section, containing the Salmon River, Lost River, Saw Tooth, Boise, Seven Devils, and other ranges, which are in general well-timbered. The mean elevation of the state is about 4700 feet, its altitude varying between the extremes of 760 feet and over 12,000 feet. The Bitter Root range, a part of the great Continental Divide, forms the greater portion of the eastern boundary line of the state. In the extreme southern portion of the state are high forested mountain ranges, the Owyhee, Goose Creek, Bear River, Portneuf, and Bannock ranges. In the great valley between these central and southern mountain ranges flows the Snake River, the largest river of Idaho and the main tributary of the Columbia River, draining over three-fourths of the area of the state. It rises in the Yellowstone National Park, flows westerly in an archlike course through the southern end of Idaho, then turning north it forms the western boundary line of the state for 300 miles. The drainage waters of a vast area of the
country north of the Snake River flow out upon and are absorbed in the lava and sage-brush plains, and thence find their way beneath the lava overflow by subterranean passages into the river, or burst through the lava on the surface. For 250 miles of its course not a stream flows into the Snake River from the north; the valley of the river, and most of its tributaries, is a lava plain overlaid with a soil of volcanic ash, which when irrigated produces with wonderful fertility; a large area is irrigated and has an available value as grazing ground in the winter for sheep, cattle, and horses, the snowfall being light and the temperature rarely reaching zero. The principal tributary valleys of the Snake River are the Boise, Payette, Salmon, and Weiser, drained by rivers of identical names; the northerly course of the river is through deep canyons, between majestic mountain ranges, and far below the great wheat land prairies, the plateaux and rolling hills of Northern Idaho; the river is navigable below Lewiston, but in its course through Idaho the rapid fall of the stream and its extensive use for irrigation prevent navigation. In Idaho's many basins are many and numerous waterfalls of great depth and picturesque surroundings; the principal lakes are the Cœur d'Alène, Pend d'Oreille, Payette, and Bear, the latter extending into Utah. Many wonderful waterfalls are found in the state; the four principal ones are formed by the Snake River, and are called the American, Twin, Snowshoee, and Fish— the last-mentioned being 210 feet high and 1200 feet wide and having a worldwide fame.

The climate varies according to location and elevation, the northern part of the state being in the humid, and the southern part in the arid, region. In the latter section the climate is very dry, bracing, and invigorating. In the valleys and agricultural districts zero temperature is almost unknown, and the winters are short with long growing seasons in spring and summer.

POPULATION.—According to the census returns, the population was 13,990 in 1870; 32,610 in 1880; 84,385 in 1890; 161,772 in 1900. In 1908 the population of the state was estimated at 360,000, and that of its capital, Boise, at 25,000. The cities with an estimated population of from five to ten thousand are Pocatello, Twin Falls, Idaho Falls, Cœur d'Alène, Sandpoint, Lewiston, Moscow, and Nampa.

No state possesses resources more varied than those of Idaho. Agriculture, mining, lumbering, sheep and cattle raising, and horticulture are successfully carried on, while the lead mines of Northern Idaho produce the purest lead in the country, and supply about one-third of the total output of the United States. The Idaho mines in 1907 produced minerals valued at $22,165,191.37: lead yielded $12,470,341.74; silver yielded $5,546,553.82; copper yielded $2,241,177.17; gold yielded $1,373,031.40; zinc yielded $534,057.24. Valuable deposits of coal and phosphates exist; magnificent building stones, granite, sand and marble, are found in great abundance. The placer mines of the Boise basin have produced since 1863 over $250,000,000 in gold, and are still extensively mined by hydraulic plants and dredges. Railway facilities are inadequate and vast mountainous areas of mineral land are yet practically unexplored, so that the mineral resources of Central and Northern Idaho cannot be correctly estimated.

AGRICULTURE.—The six northern counties of the state are in the humid region, with an annual rainfall of over 20 inches, and great crops of grain and grass are raised without irrigation. In the southern part of the state practically no crops are raised without the application of water, and in this province there are over 300 days of sunshine in the year. Idaho has profited greatly by the provisions of the Carey Act, and has been granted 2,000,000 acres of land under that act by the United States Government, being one of the few states so favoured. Enormous irrigation works have been constructed during the last five years, and the greater ones are in course of construction. In 1908 Idaho had 4,554 miles of main canals and 5,654 miles of lateral canals constructed at a cost of $28,389,271.00, with 4,040,131 acres under canal, and 1,825,550 acres actually irrigated. Ben Davis and Jonathan enjoy perfection in the horticultural lands of the Boise, Payette, and Kootenai valleys, and every year thousands of pounds of prunes and pears are shipped yearly; several canning factories are in operation in the Boise and Payette valleys. The southern section of the state is noted for its melons, and the eastern section for potatoes. Alfalfa is the principal forage crop, although other grasses are grown; wheat and oats are very successfully raised. Near Lewiston, grapes, cherries, and peaches are produced in large quantities. The enormous development going on in the State of Idaho at the present day, particularly under the irrigation reclamation projects, renders present figures an incentive. Idaho's agricultural industry is in its infancy, yet the statistics for 1907 show the value of farm products as over $66,000,000: wheat, the principal crop, being valued at $12,500,000; oats at over $14,000,000; alfalfa at over $7,000,000.

OTHER INDUSTRIES.—The principal manufacturing industry is that of lumber; there are in the state over 60,000,000,000 cubic feet of timber, mostly white and yellow pine, with some red fir, cedar, hemlock, tamarack, and white fir; in 1907 there were 224 saw and planing mills, with an output valued at $7,000,000. Although electric power plants have only begun to utilize the wonderful natural water-fall of the various streams of the state, in 1907 thirty-nine of such power plants were already in existence, representing an outlay of $4,500,000. In Southern Idaho, in 1908, four great sugar factories produced from sugar beets grown on irrigated lands 52,425,500 pounds of sugar; the total output of manufacturing plants in 1907 was $22,000,000, and 7,887 workmen were employed.

COMMUNICATION.—There are four telegraph companies in the state, the Western Union, Postal Telegraph, Postal Cable, and Pacific and Idaho Northern, with wires stretching to all the western states and territories. The telephone company is the Rocky Mountain Bell, but there are a number of independent companies; the number of miles covered is 16,616. Water transportation in the state is limited, but passenger and freight steamers ply Lakes Cœur d'Alène and Pend d'Oreille. The railroads of the state include the Harriman system, the Northern Pacific, Great Northern, the Idaho Northern, the Pacific & Idaho Northern, and the Spokane & International; there are also electric lines, Cœur d'Alène & Spokane Electric Railway, the Boise & Interurban, and Boise Valley. Great development is taking place, and much construction is being done in the state. The railroad mileage in 1907 was 1,978.56 miles.

EDUCATION.—The constitution provides that the public school funds of the state shall forever remain intact, and only the interest thereon shall be used; this fund for the most part consists of the revenue derived from the sale of thousands of acres of land, sections 16 and 32 of each township in the state, and granted to the public schools of Idaho by the United States Government. These lands are sold at auction to the highest bidder, the minimum price being ten dollars per acre; no religious test or qualification is required for admission as either teacher or pupil; in public schools all the pupils are required to participate in any religious services, and no sectarian or religious doctrines may ever be taught, or any distinction or classification made as to
race or colour. No books or documents of a political or denominational character may be used. Education is compulsory for at least three years between the ages of six and eighteen years. Besides the public schools there is the state university at Moscow, opened in 1892, which confers the degrees of master and bachelor in arts, science, agriculture, and the degree of bachelor in music, domestic science, law, forestry, and veterinary surgery, civil engineering, mining engineering, electrical and mechanical engineering, the student body about 540. There are normal schools at Albion and Lewiston, the academy of Idaho at Pocatello, and a school for deaf, dumb, and blind at Boise, all maintained by the state. In addition to these schools there are one Presbyterian, one Seventh Day Adventist, and four Mormon schools and colleges, while there are seven Catholic academies and five Catholic parochial schools. In 1908 there were 2,052 teachers in the public schools, and 70,000 pupils enrolled; the total expenditure for common schools was in that year over $1,700,000. In 1880 there was a settlement that the Rev. Stuet, S.J., the first white settler, organized school districts and erected splendid schools, even before the erection of permanent business and residential structures.

HISTORY.—The first white man known to have visited Idaho was Chevalier De La Verandaye, Governor of Quebec; sixty-two years later the great orator of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewiston, Governor of Lewisto
the people of the State of Idaho, grateful to Almighty God for our freedom, etc. The constitution guarantees the free exercise of religion, and that no one shall be molested in person or property on account of his mode of worship. Bigamy and polygamy are prohibited in the state; the legislature is advised: "The first concern of good government is the virtue and sobriety of the people and the purity of the home, the first would include temperance in eating and drinking, and the latter a sacred respect for the furtherance of temperance and morality." Sunday is established by law as a day of rest, and practically all business is prohibited on that day; this law is generally well observed even in the mining, irrigation, and railway construction camps.

The Industrial School for Orphans and Homeless Children — The law is created under the laws of the state ends with the words "so help me God". Witnesses in all courts are sworn by an oath ending "so help me God". Affirmation is permitted, also swearing according to the peculiar form of the witness's religion. The use of profane language is punishable by fine and imprisonment. A chaplain is appointed by each branch of the legislature, and each day's session is opened with prayer. Legal holidays include all Sundays, Christmas Day, and days appointed by the President of the United States or the governor for a public fast, or holidays. Clergymen are not excused from testifying as to any confession or statement made in the course of religious ministrations. Religious corporations sole can be formed, the duration of such corporations being unlimited, by a bishop or other clergyman in whom title to church property vests; rights are given to hold, sell, and rent real property, to contract, to borrow money and issue bonds, without limitation as to amount.

Exemption.—Churches, chapels, and other buildings used for religious worship, together with the necessary land, furniture, and equipment, are exempt from taxation, as are also all schools, cemeteries, and hospital property not used for profit. All able-bodied males between eighteen and forty-five are liable to military duties except in time of peace, when those with conscientious scruples against bearing arms are exempt. A priest or minister of any denomination is exempt from jury duty.

MARRIAGE AND DIVORCE.—Marriage is a civil contract which may be solemnized by any justice, judge, governor, mayor, minister or priest; no form is required, but a licence must be procured from the county recorder. The divorce laws are not strict, and many decrees are obtained, for the most part in default of evidence. The law for divorce is not玳inent. There are cases for divorce for adultery, wilful desertion, neglect to provide if continued for a year, habitual intemperance, insanity, conviction of felony, and extreme cruelty; for the last cause divorces are frequently granted on account of the infliction of grievous mental suffering. Bona fide residence must be shown for only six months before the court takes jurisdiction; large discretion is vested in the trial courts, but they are generally favourably inclined to the granting of divorces.

CHARITABLE ORGANIZATIONS.—Charitable organizations may incorporate under the laws providing for corporations not organized for profit, and may hold such real estate as may be necessary to carry out their purposes. Bequests and devises to such institutions are not valid, except when made by will and executed more than thirty days before the death of the testator, and cannot exceed one-third of the decedent's property when he leaves lineal descendants.

SALE OF LIQUOR.—Liquor is sold under city, county, and state licences; county commissioners and city and town councils may refuse licences, local option being thus practically given to the people. In 1909 a local option bill was passed by the legislature, but as yet no attempt has been made to test its provisions. The agricultural communities will have no doubt exclude saloons and liquor selling; but the mining and lumbering communities where the sale of liquor under licence and certain regulations.

PRISONS AND REFORMATORIES.—The state penitentiary with 200 inmates is located at Boise; the Idaho industrial school with 70 inmates is located at St. Anthony; each county has a jail for persons in need of reform. The school for the blind and deaf is at Boise. The industrial school is for the detention of juvenile delinquents and vagrant children between the ages of 5 and 18 years; the inmates are taught useful and honest occupations and trades. In 1900 an appropriation of $20,000 was made, and a similar amount has been granted in the form of a contract by the Children's Home Finding Society, the object of which is to keep abandoned, neglected, and orphan children and those of pauper parentage, until proper homes can be secured for them (see Boise, Diocese of).

BANCROFT, History of Washington, Idaho and Montana (San Francisco, 1890): Constitution, Revised Laws and Session Laws of Idaho (Boise, 1892 and 1909); GODDARD, Reminiscences of a Judge (Boise, 1909); Reports of Idaho Commissioners on Immigration, Labor and Statistics (Boise, 1908); ELLIOTT, History of The Territorial (San Francisco, 1908); Twelfth Census of the United States Reports (Washington, 1909).
chronological order of his writings is not certain, and, finally, still more because we do not know how far the mythologica setting is to be taken literally. Approximately, however, Plato's view seems to come to this: —To the universal notions, or concepts, which constitute science, or general knowledge as it is in our modern idiom, he opposes ideas as a priori forms, conceived from without, presupposing the mind. These ideas are truly universal. They possess objective reality in themselves. They are not something indwelling in the individual things, as, for instance, form in matter, or the essence which determines the nature of an object. Each universal idea has its own separate and independent existence apart from the individual object related to it. It seems to dwell in some sort of celestial universe (ἐν οὐρανῷ τῷ ἄνω). In contrast with the individual objects of sense experience, which undergo constant change and flux, the ideas are perfect, eternal, and immutable. Still, there must be some sort of community between the individual object and the corresponding idea, between Socrates and the idea of man, between this act of justice and the idea of justice. This community consists in "participation" (μετέχεια). The concrete individual participates, or shares, in the universal idea or conception by participation in the idea itself in a certain kind or nature. But what then, is this participation, if the idea dwells in another sphere of existence? It seems to consist in imitation (μίμησις). The ideas are models and prototypes, the sensible objects are copies, though very imperfect, of these models. The ideas are reflected in a feeble and obscure way in them. The idea is the archetype (ἀρχετός), individual objects are merely images (στάματα). Finally, what precisely is the celestial universe in which the ideas have eternally existed, and what is their exact relation to God or to the idea of the good? For Plato, the latter is unanswerable. The transcendent region of ideas. Here we meet a fundamental difference between the answers from two schools of interpreters. Aristotle, who, his critics notwithstanding, was as competent as they to understand Plato, and was Plato's own pupil, teaches that his master ascribed to the various ideas an independent, autonomous existence. They are a multiplicity of isolated essences existing separated from the individual objects which copy them, and they are united by no common bond. All the relations subsisting in the hierarchies of our universal concepts, however, seem in Plato's view to be of an analogous character to those existing among autonomous ideas. Aristotle's interpretation was accepted by St. Thomas and the main body of the later Scholastics; and much pain has been devoted to establishing the absurdity of this alleged theory of separation. But the ultra realism of the Platonistic theory of ideas was susceptible of a more benevolent interpretation, which, moreover, was adopted by nearly all the early Fathers of the Church. Indeed they found it easier to Christianize his philosophy than did Albertus Magnus and St. Thomas to do the like for that of Aristotle. They unanimously understood Plato to locate this world of ideas in the Mind of God, and they explained his σῶμα ρώσις as a system of Divine conceptions—the archetypes according to which God was to form in the future the various species of created beings. With respect to the origin of our knowledge of these universal ideas, Plato cannot conceivably escape it from oneself, therefore teaches that our universal concepts, which correspond to these ideas, are, strictly speaking, innate, inherited by the soul from a previous state of existence. There, in that transcendental Eden, the soul, by direct contemplation of the ideas, acquired these ideas. Sensate experience of the objects around us now merely occasion the reminiscence of these pre-natal cognitions. The acquisition of knowledge is thus, strictly speaking, a process of recollection. Aristotle vigorously attacked Plato's theory of universal ideas. He himself teaches that sensible experience of the concrete individual is the beginning and foundation of all cognition. Intellectual knowledge, however, is concerned with the universal. But it must have been derived from the experience of the individual, which, therefore, must itself be the result of a universal. The universal cannot exist, as such, apart from the individual. It is immanent in the individual as the essence, or nature, specifically common to all members of the class. Since this essence, or nature, constitutes the thing specifically what it is, man, square, triangle, etc., it answers the question: What is the thing? (Quid est?) It has therefore been termed the quiddity of the thing. In Greek, according to Aristotle, the τὸ ἐστίν ὁ εἶκος, ὁ ἔοικός, and ὁ λόγος ὑπόηθος are one and the same thing—the essence, or quiddity, which determines the specific nature of the thing. This is the foundation for the general concept in the mind, which abstracts the universal form (ἕνως ὑποθέτοι) from the individual. Several of the early Fathers, as we have said, interpreted Plato benevolently, and sought to harmonize as much of his doctrine as possible with Christian thought. The idea is that the ideas or archetypes are the mind's reflections of the thoughts of God, the archetypes, or patterns, or forms in the mind of the Author of the universe according to which he has made the various species of creatures. "Idee principales formas quasdam vel rationes rerum stabiles atque incommutabiles, quae in divina intelligentia continentur" (St. August., "De Div.", Q xxi, 2). These Divine ideas must not be looked on as distinct entities, for this would be inconsistent with the Divine simplicity. They are identical with the Divine Essence contemplated by the Divine Intellce as susceptible of imitation ad extra. The Scholastic Period gives the doctrine of the Fathers received its complete elaboration from the Schoolmen in the great controversy concerning universals (de universitibus) which occupied a prominent place in the history of philosophy from the tenth to the thirteenth century. The ultra-realists tended towards the Platonic view in regard to the real existence of universal forms, as such, outside of the human mind, though they differed as to their explanation of the nature of this universality, and its participation by the individuals. Thus William of Champeaux seems to have understood the universal to exist essentially in its completeness in each individual of the species. Individuals are but accidents, and however difference they have is one of accidents, not of substance. This would lead to a pantheistic conception of the universe, akin to that of Scotus Eriugena. On the other hand, the extreme Nominalist, view, advocated by Roscelin, denies all real universality, except that of words. —A common name may be applied to the several objects of a species or genus, but neither in the existing individuals nor in the mind is there a genuine basis or correlate for this community of predication. The Aristotelian doctrine of moderate realism, which was already in possession before the thirteenth century, held its ground throughout the whole period of Scholasticism, notwithstanding the appearance of distinguished champions of the rival hypothesis, and at last permanently triumphed with the establishment of the authority of St. Thomas. This theory, which in its complete form we may call the Scholastic doctrine of universals, distinguished universalia antea sa, in rebus post res, in rebus anterius existis in the Divine Mind only as an idea, model, or prototype of a plurality of creatures before the individual is realized. Genus or species cannot in order of time precede the individual. Plato's separate ideas, did they physically exist, would have been individualized by the reasoning of the universals. The universal exists in the individual only potentially or fundamentally, not actually or
formally as universal. That is, in each of the individuals of the same species there is a similar nature which the mind, exercising its abstractive activity, can represent by a concept or idea as separate, or apart, from its individualizing notes. The nature, or essence, so conceived is capable of being realized in an indefinite number of individuals, and therefore incapable of being realized as an individual. Spinoza assigned it, accordingly, as the third term of the concept. Finally, by a subsequent reflective generalizing act, the mind considers this concept, or idea, as representative of a plurality of such individuals, and thereby constitutes it a formally universal concept, or idea. In fact, it is only in the concept, or idea, that true universality is possible, for in consequence there is there really reference of the one to the many. Even a common name, or any other general symbol, viewed as an entity, is merely an individual. It is its meaning, or significant reference, that gives it universality. But the fact that in the external world individual beings of the same species, e.g., men, oak trees, gold, iron, etc., have perfectly similar natures, affords an objective foundation for our subjective universal ideas and thereby makes physical science possible.

Diverse Meaning of Idea with Medieval and Modern Scholastic Writers.—We have just been using the term *idea* in the modern Scholastic sense of being synonymous with "concept". By the Schoolmen the terms *conceptio*, *conceptus mentis*, *species intelligibilis*, and *verbum mentale* were all employed, sometimes as equivalents and sometimes as connoting slight differences, to signify the universal intellectual concepts of the mind. The term *idea*, however, probably to a certain extent because of the Platonic usage, was for a long period employed chiefly, if not solely, to signify the forms or archetypes of things existing in the Divine Mind. Even when referred to the human mind, it commonly bore the significance of *forma exemplaris*, the model pictured by the practical intellect, with a view to artistic production, rather than that of a representation effected in the intellect by the object apprehended. The former was described as an exercising of the "practical", the latter of the "speculative", intellect, though the faculty was recognized as really the same. St. Thomas, however, says that *idea* may stand for the act of the speculative intellect also—"Sed tamen si ideam committere appellermus similitudinem vel rationem, sic idea etiam ad speculativam cognitionem pure pertinent poteat" (Q Q Disp. de Ideis, a. 3). But I have not been able to find any passage in which he himself employs the word "idea" in the modern Scholastic sense as being antecedent to the intellectual concept of the human mind. The same is true as regards Suarez; so that the recognized general usage of the term in modern Scholastic textbooks does not seem to go much farther back than the time of Descartes.

Modern Philosophy.—Emerging from the Schoolmen to modern philosophy, whilst, among those Catholic writers who adhered in general to the medieval philosophy, the term *idea* came to be more and more used to designate the intellectual concept of the human mind, outside of the Scholastic tradition it was no longer confined to intellectual acts. Descartes seems to have been the first influential thinker to introduce the vague and inaccurate use of the word *idea* which characterizes modern speculation generally. Locke, however, as we have mentioned, is largely responsible for the confusion in respect to the term which has penetrated into philosophical literature. Descartes seems, if I am not mistaken, to have been the first to distinguish generally by the term *idea* "all that is in our minds when we conceive a thing"; and he says, in another place, "idea est ipsa res cogitata quatenus est objective in intellectu." The Cartesian meaning of idea seems, then, to be the general psychical determinant of cognition. This wide signification was generally adopted by Gassendi, Hobbes, and many other writers, and the problem of the origin of ideas became that of the origin of all knowledge. There is, however, throughout, a reversal of the Platonic usage, for in its modern sense *idea* connotes something essentially subjective and intra-mental. With Plato, on the other hand, the ideas were emphatically objects as opposed to the mind, and warned his readers to distinguish it from phantoms of the imagination, *imago rerum* *imaginationis*. We have cited at the beginning of this article Locke's vague definition. The confused and inconsistent usage to which he gave currency contrasts with the clearness of Berkeley's definitions of *idea* and *perception*, and Hume's scepticism. From the position frequently adopted by Locke, that ideas are the object of our knowledge, that is, what the mind knows or perceives are ideas, the conclusions drawn by Berkeley, that we have therefore no justification for asserting the existence of anything else but ideas, and that the hypothesis of a material world, the unperceived external causes of these ideas, is useless and unwarranted, was an obvious inference. Hume starts with the assumption that all cognitive acts of the mind may be divided into "impressions" (acts of perception), and "ideas", faint images of the former, and then shows that "the doctrine of ideas consists in the degrees of force and liveliness with which they strike on the mind." He then shows without much difficulty that genuine knowledge of reality of any kind is logically impossible. Kant assigned quite a new meaning to the term. He defines ideas as "concepts of the unconditioned which is thought of as a last condition for every conditioned". The transcendentalist ideas of metaphysics with him are, God, freedom, and immortality, "a pure concept" (ein reiner Begriff) may be either a *Verstandesbegriff* (notion), or a *Vernunftbegriff* (idea), the difference being that "the latter transcends the possible experience," In the Hegelian philosophy the term again assumed an objective meaning, though not that of Plato. It is a name for the Absolute and the World process viewed as a logical category. It is the absolute truth of which everything that exists is the expression.

Such being the varying signification of the term in the history of philosophy, we may now return to consider more closely its adopted meaning among Catholic philosophers. The term *idea*, and especially universal idea, being generally accepted by them as equivalent to the "universal concept" is the foundation of the intellectual, or *intellectus*, distinguishing from the sensuous faculties. It is an act of the mind which corresponds to a general term in ordinary speech. Thus, in the sentence, "water is composed of oxygen and hydrogen", the three words *water*, *oxygen*, and *hydrogen* stand for any genuine concepts of these substances. The ideas have a definite yet universal meaning. The mental act by which that universal meaning is realized is the universal idea. It is a quite distinct thing from the particular sensation or image of the imagination, more or less vivid, which may accompany the intellectual act. The image may be distinct or confused, lively or feeble. It probably varies from moment to moment. It is felt to be of a subjective, contingent, and accidental character, differing considerably from the corresponding image in other persons' minds. It is, however, always an individualistic concrete entity, pertaining to a single object of sense, not to the intellectual idea. This possesses stability. It is unchangeable, and it is universal. It refers with equal truth to every possible specimen of the class. Herein lies the difference between thought and sensuous feeling, between spiritual and organic activity (see INTELLIGENCE).
mind in mature life is in possession of such universal ideas, or concepts, the question arises: How have they been attained? Plato, as we have seen, was inclined to think of the abstract intellect as suppositing the object. The idea is of the object that we are directly conscious, not of the idea. In popular language we sometimes call the object "an idea", but in such cases it is in a totally different sense, and we recognise the term as signifying a purely mental creation.

Outline of Ideas.—There remains the problem of the validity, the objective worth, of our ideas, though this question is already in great part answered by what has gone before. As all cognition is by ideas, taken in their widest significance, it is obvious that the question of the validity of our ideas in this broad sense is that of the truth of our knowledge as a whole. To dispute this is to take up the position of complete scepticism, and this, as has often been pointed out, means intellectual suicide. Any chain of reasoning by which it is attempted to demonstrate the falsity of our ideas has to employ ideas, and, in so far as it demands assent to the conclusion, implies belief in the validity of all the ideas employed in the premises. Again, assent to the fundamental mathematical and logical axioms, including that of the principle of contradiction, implies admission of the truth of the ideas expressed in these principles. With respect to the objects involved in the introduction of such ideas generally, the question is raised that of the existence of an independent material world comprising other human beings. The idealism of Hume and Mill, if consistently followed out, would lead logically to solipsism, or the denial of any other being save self. Finally, the main foundation of all idealism and scepticism is the assumption, explicit or implicit, that the mind can never know what is outside of itself, that an idea as a cognition can never transcend itself, that we can never reach to and mentally lay hold of or apprehend anything save what is actually a present state of our own consciousness, or a subjective modification of our own mind. Now, first, this is an a priori assumption for which no real proof is or can be given; secondly, it is not only not self-evident, but directly contrary to what our mind affirms to be our direct intellectual experience. What it is possible for a human mind to apprehend cannot be laid down a priori. It must be ascertained by the immediate observation of the direct act of cognition. But that the mind cannot apprehend or cognize any reality existing outside of itself is not only not a self-evident proposition, it is directly contrary to what such observation and the testimony of mankind affirm to be our actual intellectual experience.

We have already said that Mill and other idealists do not admit the validity of memory and expectation; but, in every act of memory or expectation which refers to any experience outside the present instant, our cognition is transcending the present modifications of the mind and judging about reality beyond and distinct from the present states of consciousness. Considering the question as specially concerned with universal concepts, only the theory of moderate realism adopted by Aristotle and St. Thomas can claim to guarantee objective value to our ideas. According to the nominalist and conceptualist theories there is no true correlate to the concepts corresponding to the universal term. Were this the case there would be no valid ground for the general statements which constitute science. But mathematics, astronomy, physics, chemistry, and the rest claim that their universal propositions are true and deal with realities. We can be allowed the conviction of science that the physical laws formulated by the mind do not change in the working of agents in the external universe. But unless the general terms of these sciences and the ideas which they signify have, corresponding to them, objective corollaries in the common natures and essences of the objects with which these sciences deal,
then those general statements are unreal, and each science is nothing more than a consistently arranged system of barren propositions deduced from empty, arbitrary definitions, and postulates, having no more genuine objective value than any other coherently devised system of arbitrary and imaginary beings. But the fruitfulness of science and the constant verifications of its predictions are incompatible with such an hypothesis.

In the presentation of his doctrine of ideas scattered through most of his works, especially the Republic, Phaedrus, Theaetetus, and Parmenides. The subsequent literature on the Platonic form in philosophy in general is the subject of various articles in particular: ADAMSON, The Development of Greek Philosophy (Edinburgh, 1905); STEWART, Plato’s Doctrine of Ideas (Oxford, 1901). Outline of Plato’s pamphlet, ‘The Critique of Plato’ (Oxford, 1900). For the doctrine of St. Thomas see his Summa, i. c. xvii, and De Veritate, q. iii; see also Schrrer, Handbuch der Geschichte der Philosophie, tr. FINLAY (Dublin, 1887 and 1903); TURNER, History of Philosophy (New York, 1903); E. KUHN, History of Philosophy, 3rd ed. (New York and London, 1890); MAHER, Psychology, ee. xii-xiv (New York and London, 1898). See also A. E. MICHAEL MAHER.

Idealism.—In discussing this term and its meaning, reference must be had to the cognate expressions, idealist, idealized, ideal (adjective), and the ideal (noun), all of which are derived from the Greek idea. This signifies "image," "figure," "form"; it can be used in the sense of "likeness" or "copy" as well as in that of "type," "model," or "pattern"; it is this latter sense that finds expression in "ideal" and the derivatives mentioned above. In speaking of the "ideal," what we have in mind is not a copy of any perceptible object, but a type. The artist is said to "idealize" his subject when he represents it as fairer, nobler, more perfect than it is in reality. Idealism in life is the characteristic of those who regard the ideas of truth and right, goodness and beauty, as standards and directive forces. This signification betrays the influence of Plato, who made idea a technical term in philosophy. In the world of nature is simply a copy of a supersensible, intelligible, ideal world, and consequently "things" are but the impress stamped on reality by that which is of a higher, spiritual nature.

Platonism is the oldest form of idealism, and Plato himself the progenitor of idealists. It is usual to place in contrast Plato's idealism and Aristotle's realism; the latter in fact denies that ideas are originals and that things are mere copies; he holds that the essence or form is intelligible, but that it is immanent in the things of nature, whereas it is put into the pre-existing material. It is more correct, therefore, to designate his teaching an immanent idealism as contrasted with the transcendental idealism of Plato. Both these thinkers reveal the decisive influence of that moral and aesthetic idealism which permeated Greek life, thought, and action; but for both, what lies deepest down in their philosophy is the conviction that the first and highest principle of all things is the perfect spiritual Being which they call God, and to which they lead back, by means of intermediate principles—essence and form, purpose and law—the multifarious individual beings of the visible world. In Plato, idealism is dualism, i.e. the doctrine of a higher spiritual world, independent of the lower and material; and this doctrine again is clearly opposed to the monism which would derive the higher and the lower alike out of one and the same All-being.

This older idealism teaches, not that there is One-All, but that there is an Alpha and Omega, i.e., a supermundane Cause and End, of the world. By means of its principles, idealism maintains the distinctness of God and the world, of the absolute and the finite, in their mutual independence. The idealists hold that ideas exist in a region or world of their own, intermediate between reality and knowledge, by ascribing to things dimension, form, purpose, value, and law, at the same time securing for thought the requisite certainty and validity; it establishes objective truth in the things that are known and subjective truth in the mind that knows them. In this sense, the Schoolmen teach that forma est esse et distinguere, i.e., the principle which formally constitutes the object, likewise, in the act of cognition, informs the mind. Inasmuch as its principles express the cause and purpose of things, their determinate nature and value, idealism unites the speculative and the ethical, the true and the good, moral philosophy and the philosophy of nature.

In this sense St. Augustine developed the Platonic teaching, and his philosophy is idealism in the genuine meaning of the term. From him comes the definition of idealism as "the science which holds that which is formed is not the same as that which forms it" (De civitate Dei, xci). See also EYBERG, Philosophisches Wörterbuch, a. V. Ie, Dic. VEBERGO, History of Philosophy.

This line of thought the Scholastics adopted, developing it in their treatises as ideology. Their theory indeed is described not as idealism, but as realism; but this does not imply that they are in conflict with the doctrine of Augustine; it means rather that the ideal principles possess real validity, that as ideas they subsist in the Divine mind before the things corresponding to them are called into existence, while, as forms and essences, they really exist in nature and are not merely products of our thinking. The idea, i.e., stands above the form and substance, ideas had long before been regarded by the philosophers of antiquity and especially by the Stoics, who held that ideas are nothing else than mental representations. This erroneous and misleading view appeared during the Middle Ages in the guise of nominalism, a designation given to the system whose adherents claimed that our concepts are mere names (nomina), which have as their counterparts in the world of reality individual things, but not forms or essences or purposes. This opinion, which robs both science and moral principles of their universal validity, is akin to the philosophical system of agnosticism, was combated by the leaders of Scholasticism—Anselm of Canterbury, Albertus Magnus, Thomas Aquinas, Bonaventure, and Duns Scotus—nevertheless, from the fourteenth century onwards, it had its champions and propagators, notably William of Ockham. For the untrained mind it was easier to consider individual things as the only realities and to regard forms and essences as purely mental products.

So it came to pass that the word idea in the various languages took on more and more the meaning of "representation," "mental image," "conception," and also "concept." In English, too, there was gradually introduced the terminology which we find in the writings of Berkeley, and according to which idealism is the doctrine that ascribes reality to our ideas, i.e., our representations.
Otto Willmann.

Idioms, Communication Of. See Communicatio Idiomatum.

Idiot (Raymundus Jordanus) = the nom de plume of an ancient, learned, and pious writer whose identity remained unknown for some centuries. The name need not be understood in the ordinary sense as now used. According to the original Greek, Idiot means simple, private, or peculiar, and it is probable that the writer in question employed it in this sense to signify that he was, contrary to the rules of his system, too ignorant to understand the works of this author soon became widely known although he himself remained unknown. They have all been printed several times in the "Bibliotheca Patrum", and his "Contemplationes de amore divino" are often found in small manuals bound up with the meditations of St. Augustine, St. Bernard, and St. Anselm. In the "Magna Bibliotheca Venerum Patrum" published in 1618, his works are given among the writers of the tenth century and, according to Cardinal Bellarmine, Idioti flourished about the year 990.

Father Theophilus Raynaud, S. J., was the first to discover that Raymundus Jordanus was the author of the works found in the library of the Fathers under the name Idioti. In his preface to one of the works of Idioti, the "Oculus Mysticus", which he published in 1641, he accounts for this discovery by the testimony of contemporary writers, and by the fact that some of the original MSS. had been signed by Raymundus. Biographical writers have, in general, accepted Raynaud's theory since the year 1654, when, under his editorship, a complete edition of the works of Idioti was published in Paris under the name of Raymundus Jordanus. It is known for certain that this Raymundus was a Frenchman, a Canon Regular of St. Augustine, prior of the house of his order at Uzès, in France, and afterwards Abbot of Selles-sur-Cher, France where he lived and died. Selles, it appears, was not then a Cistercian monastery. Raymundus wrote about the year 1381. In an account of a transaction between the Canons Regular and the Bishop of Uzès which occurred in the year 1377, Raymundus is styled licentiate, and it is stated that he was elected by the chapter of his order to present and conduct its cause before an ecclesiastical tribunal presided over by Cardinal Sabbenensi, which he did with such ability and success that his order, or whether Raynaud is right in his theory that Raymundus Jordanus is the author whether Idioti is to remain unknown like the Auctor operis imperfecti, so often quoted by spiritual writers, may still be regarded by many as an open question.

There is however no question as to the works themselves. They were all written in Latin and none of them has been translated into any other language. In the edition of his works published in Paris in the year 1654 we have the following collection—six books of "Meditations"; a "Treatise on the Blessed Virgin"; a "Treatise on the Religious Life"; and the "Spiritual or Mystical Eye". He wrote also a "Commentary on Psalm xv". His book of "Meditations" contains the following chapters: (1) De amore divino; (2) De Virginis Maria; (3) De vera patientia; (4) De continuo conficiuntur carnis et animae; (5) De innocentia perdit; (6) De morte. These meditations were published in Paris in 1519, and the volume is said to have been the work of a pious and holy man who have no other name but the "Idiotus". They are written in a simple, clear, and pure style; and they are replete with Christian wisdom. They well deserve to be classed with the works of the early Fathers of the Church, and to be made known in the vernacular for the benefit and edification of pious readers.

Idolatry (Gr. εἰδολατρία) etymologically denotes Divine worship given to an image, but its signification has been extended to all Divine worship given to anyone or anything but the true God. St. Thomas (Summa Theol., II-II, q. xxiv) treats of it as a species of the genus superstition, which is a vice opposed to the virtue of religion and consists in giving Divine honour (cultus) to things that are not God, or to God Himself in a wrong way. The specific note of idolatry is its direct opposition to the primary object of Divine worship; it is the reverence due to God alone. It does so in several ways. The creature is often represented by an image, an idol. "Some, by nefarious arts, made certain images which, through the power of the devil, produced certain effects whence they thought that these images contained something divine and, consequently, that divine worship was due to them." Such was the opinion of Hermes Trismegistus. Others gave Divine honours not to the images but to the creatures which they represented. Both are hinted at by the Apostle (Rom., i, 23-25), who says of the first: "They changed the glory of the incorruptible God into the likeness of the image of a corruptible man, and of birds, and of four-footed beasts and of creeping things"; and of the second: "They worshipped and served the creature rather than the Creator". These worshippers of creatures were of three kinds. Some held that certain men were gods, and these they honoured through their statues, e.g., Jupiter and Mercury. Others opined that the whole world was one God, God being conceived of as the rational soul of the corporeal world. Hence they worshipped the world and all its parts, the air, the water, and all the rest of their idols, according to Varro, as reported by St. Augustine (De Civ. Dei, VIII, xx, xxii), were the expression of that belief. Others again, followers of Plato, admitted one supreme God, the cause of all things; under Him they placed certain spiritual substances of His creation and participating in His Divinity; these substances they called gods, and to these they paid the souls of the heavily bodies and, below these again the demons who, they thought, were a sort of animal living beings (animalia). Lowest of all they placed the human souls, which, according to merit or demerit, were to share the society either of the gods or of the demons. To this God attributed Divine worship, as St. Augustine says (De Civ. Dei, VIII, 14).

An essential difference exists between idolatry and the veneration of images practised in the Catholic Church, viz., that while the idolater credits the image he venerates with Divinity or Divine powers, the Catholic knows that in images there is no Divinity or virtue on account of which they are to be worshipped, that no petitions can be addressed to them, and that no trust is to be placed in them... that the honour which is given to them is referred to the objects (prototypoi) which they represent, so that through the images we kiss, and before which we uncover our heads and kneel, we adore Christ and venerate the Saints whose likenesses they are" (Conc. Trid., Sess. XXV, "de invocatione sanctorum").

Moral Aspect.—Considered in itself, idolatry is the greatest of mortal sins. For it is, by definition, an attack on God's sovereignty, on the worship of the throne that belongs to Him alone. Even the simulation of idolatry, in order to escape death during persecution, is a mortal sin, because of the pernicious falsehood it involves and the scandal it causes. Of Seneca who, against his better knowledge, took part in idolatrous worship, St. Augustine says: "He was the more to be condemned for doing mendaciously what people believed him to do sincerely". The guilt of idolatry, however, is not to be estimated by its abstract nature alone; the concrete form it assumes in the conscience of the sinner is the all-important element. No sin is mortal—i.e., debarred from attaining the beatific vision—by itself but merely by the mode in which it is committed, and this mode is not committed with clear knowledge and free determination. But how many, or how few, of the countless millions of idolaters are, or have been, able to distinguish between the one Creator of all things and His creatures? and, having made the distinction, how many have been pure enough to worship the creature in preference to the Creator?—It is reasonable, Christian, and charitable to suppose that the "false gods" of the heathen were, in their conscience, the only true God they knew, and that their worship being right in its intention, went up to the one true God with that of Jews and Christians to whom He had revealed Himself. "In the day when God shall judge the secrets of men by Jesus Christ... the gentle who have not the law, shall be judged by their conscience" (Rom., ii, 14-16). God, who wishes all men to be saved, and Christ, who died for all who sinned in Adam, would be frustrated in their merciful designs if the princes of this world were to carry off all idolaters.

Causes.—Idolatry in its grosser forms is so far removed from the Christianized mind that it is no easy matter to account for its origin. Its persistence after gaining a first footing, and its branching out in countless varieties, are sufficiently explained by the moral necessity imposed on the younger generation to walk in the path of their elders with only insignificant deviations to the right or to the left. Thus Christian generations follow upon Christian generations; if sects arise they are Christian sects. The question as to the origin of idolatry is thus answered by St. Thomas: "The cause of idolatry is twofold: dispossession on the part of man; consummative on the part of the demons. Men were led to idolatry first by disordered affections, insomuch as they bestowed divine honours upon someone whom they loved or venerated beyond measure. This cause is indicated in Wisdom, xix, 15: 'For a father being afflicted by the death of his son, placed the image of his son who was quickly taken away; and him who then had died as a man, he began now to worship as a god...'; and xiv, 21: 'Men serving either their affection or their king, gave the incommunicable name to stones and wood'. Second: By the natural love for the beautiful excites demented men, seeing statues cunningly reproducing the figure of man, worshipped them as gods. Hence we read in Wisdom, xiii, 11 sq., 'An artist, a carpenter, has cut down a tree proper for his use in the wood... and by the skill of his art fashioneth it and taketh it like the image of man and there maketh prayers to it, inquiring concerning his substance and his children or his marriage'. Third: By their ignorance of the true God: man, not considering the excellence of God, attributed divine worship to certain creatures excelling in beauty or virtue: Wisdom, xiii, 1-2: 'neither by attending to the works have [men] acknowledged who was the workman, but have imagined either the fire, or the wind, or the swift air, or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world'.—The consummative cause of idolatry was the influence of the demons who offered themselves to the worship of erring men, giving good rewards to do things, or doing things, which were good and marvelous, whence the Psalmist says (Ps. xcv, 5): 'All the gods of the gentiles are devils!' (II-II, Q, xcv, a. 4).

The causes which the writer of Wisdom, probably an Alexandrian Jew living in the second century B.C.,
assigns to the idolatry prevalent in his time and environment, are sufficient to account for the origin of all idolatry. Man's love for sense images is not a vagary but a necessity of his mind. Nothing is in the intellect that has not previously passed through the senses. All thought that transcends the sphere of direct sense knowledge is clothed in material garments, be they only a word or a mathematical symbol. Likewise, the knowledge of things impertinent to our senses, that comes to us by revelation, is communicated to us through the senses. The externals of the divine being are so impressed on the human mind that He seems to us by parables and similitudes. The human mind, when sufficiently ripe to receive the notion of God, is already stocked with natural imagery in which it clothes the new idea. That the limited mind of man cannot adequately represent, picture, or coin give to the perfection of God, is self-evident. If left to his own resources, man will slowly and imperfectly develop the obscure notion of a superior or supreme power on which his well-being depends and whom he can-conciliate or offend. In this process intervenes the second cause of idolatry: ignorance. There is no other reason for the popular cults than the workings of nature; in sun and stars, in fertile fields, in animals, in fancied invisible influences, in powerful men. And there, among the secondary causes, the "groping after God" may end in the worship of sticks and stones. St. Paul told the Athenians that God had "winked" at the times of ignorance; during which the erect altars "To the unknown God", which implies that He had compassion on their ignorance and sent them the light of truth to reward their good intention (Acts, xvii, 22-31). As soon as the bright hope had located his unknown god, love and fear, which are but the manifestations of the instinct of self-preservation, shape the cultus of the idol into sacrifices or other congenial religious practices. Ignorance of the First Cause, the need of images for fixing higher conceptions, the instinct of self-preservation—these are the psychological causes of idolatry.

IDOLATRY IN ISRAEL. — The worship of one God is inculcated from the first to the last page of the Bible. How long man, on the strength of the revelation transmitted by Adam and subsequently by Noe, adored God in spirit and truth is an insoluble problem. Monotheism, however, appears to have been the starting-point of the Jewish nation, much as the man of science speaks to us in parables and similitudes. The Animism, Totemism, Fetishism of the lower races; the nature-worship, ancestor-worship, and hero-worship of civilized nations are hybrid forms of religion, evolved on the psychological lines indicated above; all are incarnations in the atavistic or cultured mind, and manifestations of one fundamental notion, namely, that there is above man a power on whom man is dependent for good and evil. Polytheism is born of the confusion of two causes with the First Cause; it grows in inverse ratio of higher mental faculties; it dies out under the clear light of reason or revelation. The first undeniable mention of idolatry in the Bible is in Genesis, xxxi, 19: "Rachel stole away her father's idols [teraphim]", and when Laban overtook Jacob in his flight and made search for "his gods", Rachel "in haste hid the idols under the camel's furniture, and sat upon them" (xxxii, 34). Yet Laban also worshipped the same God as Jacob, who swears an oath with his hand upon all the distortions of all the distorted and fanciful forms which a liquid is liable to assume in a collapsible vessel, or clay in the potter's hands. As, in the course of ages, the power of healing has been attributed to almost every substance
and combination of substances, so has the Divine power been traced in all things, and all things have been worshipped accordingly. As an illustration, the worship of animals may be boldly considered. From the beginning and throughout his history, man is associated with the lower animals. Adam is surrounded by them in Eden, and Eve speaks familiarly to the serpent. Sacrificed animals link man to God, from the sacrifice of Abel to the taurobolium of Agrippa Pontifex. Of particular interest is the legend of the goat-rams in Eden; the sacred goat carries with it the sins of the people, the paschal lamb redeems them. The Lamb that taketh away the sins of the world, the dove which represents the Holy Ghost, the animal emblems of the Evangelists, the dragon of St. Michael and of St. George of England, not to mention others, are familiar to Christians.

The heathen mind has moved in similar grooves. In oldest Egypt we find the bull associated with the godhead and receiving divine homage—whether as a special representative, a manifestation, a symbol, or a receptacle of the divinity, it is impossible to decide. From the seventh century B.C. onwards every god is figured with the head of some animal sacred to him; that has the head of an ibis, Amon a ram’s, Horus a hawk’s, Anubis a jackal’s, etc. Were the Egyptians and other zoolaters guided by the same symbolism that leads us to call on “the Lamb of God” for forgiveness of our sins? If so, animal-worship runs through the history of humanity, and a close association with animal life fills his mental storehouse with compositional images, e.g., the faithful dog, the sly fox, the cunning serpent, the patient ass—in which the animal embodies a human attribute. Next, the adjective is dropped, and the animal name is used as a predicate of persons, as a personal family, tribal, or divine name. At this point the process branches off according to the religious temper of the people. Where Monotheism rules, the animal, alive or figured, is but an emblem or a symbol; among untutored savages, like the Red Indians, it is the bearer of the tribe’s tutelary spirit and the object of various degrees of worship; in deceiving religions, e.g., Egyptian later polytheism—it is identified with the god whose characteristic it represents, and shares with him in divine honours. The light of Revelation has cleared away the aberrations of this natural process wherever it has penetrated; in the animal names of it remains embedded, for example, perhaps in all languages. Thus Wodan’s sacred wolf still enters into 357 personal names borne by Germans. (See also IMAGES; RELIGION; WORSHIP.)

For dogmatic and moral side, see works quoted in text. The whole subject is now studied scientifically, and there is no standard Catholic work on the subject. For monographs, see BABYLONIA; CHINA; EGYPT; GREECE; also the series of the London Catholic Truth Society, History of Religion (32 lectures in 4 vol., London, 1906—); and two similar series, each called Science of Religion (Paris).

J. WILHELM.

Idumæa, the country inhabited by the descendants of Edom. The word Idumæa is the grecised form of the Hebrew word Edom; hence the Edomites, Edom, Edomite, U-du-um-ma-at, U-du-mu, U-du-mi), which appears to have been applied to the region from the red colour of its sandstone cliffs. Idumæa was situated south of Judæa and the Dead Sea, but its limits, bordering on the wilderness, are difficult to determine. According to Gen., xxxvi, 8, Mt. Seir, on leaving Chanaan, Esau took his abode on Mt. Seir, then the home of the Horites (Gen., xiv, 6; D. V.: Chorreans). Mt. Seir is commonly thought to be the Jebel esh-Shera, a range prolonging the mountains of Moab, to the E. of the Arabah; various indications, however, suggest a more westerly location and lead one to believe that Mt. Seir should be sought in the vicinity of the Khasmus (modern Wady Waiy, formerly the master of Sardinia), still exist. In 1323 the city was taken after a long resistance by James II of Aragon, who thus began the conquest of all Sardinia. Sulei was an episcopal see as early as the seventh cen-
tury. After its decline the bishop took up his residence at the village of Tratalias; in 1503 the see was reunited with that of Cagliari. In 1763 the see was re-established, and Giovanni Ignazio Gattier appointed bishop. The see was once burned in 1285, but has been restored in later times. Iglesias has 24 parishes with 73,000 souls, 1 school for boys, and 1 girls.

U. BENIGNI.

Iglesias de la Casa, José, a Spanish poet of the coterie gathered about Meléndez Valdés, b. at Salamanca, 31 October, 1748; d. prematurely at his native place in 1791. He pursued his studies at the famous University of Salamanca, and in 1783 took Holy orders at Madrid. During his lifetime he published only two rather mediocre poems, "La niñez Laureadas" (dealing with an infant prodigy, who at the age of hardly four years underwent a university examination), and "La Teología". Before producing these he had composed his really important poems, which are chiefly satirical and epigrammatical in their nature. In fact, as a satirist he is to be ranked only lower than the great Quevedo. Certain portions of his satirical lyrics proved offensive to the authorities, and the 1798 edition of them was put on the Index by the Inquisition. The necessity of this action was denied by some of his warm friends. Among the better-known editions of his works are those of Barcelona (1820 and 1837), of Paris (1821), and of Madrid (1841). They are most readily accessible in the "Bibliotheca de autores Españoles", vol. LXI, which contains about 38 letrillas—in the composition of which he excelled—besides a number of satires, epigrams, odes, anacreontics, eclogues, etc. Not long since, some of his unedited poems were published by R. Fouche-Delboe, in the "Revue Hispanique", vol. II.

J. D. M. FORD.

Ignacio de Ávila, BLESSED, b. at Oporto, Portugal, 1528; d. near Palma, one of the Canary Islands, 15 July, 1570. He entered the Society of Jesus at Córdoba, 28 December, 1548, and became successively rector of the Jesuit college at Lisbon, provincial of Portugal, and rector at Broja. St. Francis Borgia, soon after his election as superior general of the Society, appointed Ignacio visitor of the missions of Brazil. After three years of arduous labour in that country he returned, but asked to be sent back as missioner to Brazil. With thirty-nine companions he started on his voyage, but was seized and martyred by Huguenots pirates near the island of Palma. The forty martyrs were beatiified on 11 May, 1854.

JEAN-FRANCOIS D'AVINCE, Vie du Bienheureux Ignace d'Ávila (Brussels, 1854).

Leo A. Kelly.

Ignatius Loyola, SainT, youngest son of Don Basilio yñanes de Óñez y Loyola and Herna Saenz de Licona y Balda (the name Óñez de Recalde, though accepted by the Bollandist Father Pien, is a copyist's blunder), b. in 1491 at the castle of Loyola above Aspeitia in Guipuscoa; d. at Rome, 31 July, 1556. The family arms are: per pale, or, seven bendes gules (? vert) for Óñez; argent, pot and chain sable between two grey wolves rampant, for Loyola. The saint was baptised Ilígo, after St. Eneceu (Innicus), Abbot of Oña: the name Ignatius was assumed in later years, while he was residing in Rome. For the saint's genealogy, see Pérez (op. cit. below, 131); Michel (op. cit. below, II, 389); Polanco (Chronicon, I. 1.), and Astrain, J. M., "Confessions", I. 1. Conversion, 1491–1521.—At an early age he was made a cleric. We do not know when, or why he was released from clerical obligations. He was brought up in the household of Juan Velásquez de Cuellar, contador mayor to Ferdinand and Isabella, and in his suite probably attended the royal court from time to time, though not in the royal service. This was perhaps the time of his greatest dissipation and extravagance. He was afforded ample means to buy hair and dresses, consumed with the desire of winning glory, and would seem to have been sometimes involved in those darker intrigues, for which handsome young courtiers too often think themselves licensed. How far he went on the downward course is still debated. The balance of evidence seems to show that his own subsequent humble confessions of having been a great sinner should not be treated as pious exaggerations. But we have no details, not even definite charges. In 1517 a change for the better seems to have taken place; Velásquez died and Ignatius took service in the army. The turning-point of his life came in 1521. While the French were besieging the citadel of Pamplona, a cannon ball, passing between Ignatius' legs, tore open the left calf, and broke the right shin (Whit-Tuesday, 20 May, 1521). With his fall the garrison lost heart and surrendered, but he was well treated by the French and carried on a litter to Loyola, where his leg had to be rebroken and reset, and afterwards a protruding end of the bone was sawn off, and the limb, having been shortened by clumsy setting, was stretched out by weights. All these pains were undergone voluntarily, without uttering a cry or submitting to be bound. But the pain and weakness which followed were so great that the patient began to fail and sink. On the eve of Sts. Peter and Paul, however, a turn for the better took place, and he soon threw off his fever.

Ignatius had shown himself none but the ordinary virtues of the Spanish officer. His dangers and sufferings had doubtless done much to purge his soul, but there was no idea yet of remodelling his life on any higher ideals. Then, in order to divert the weary hours of convalescence, he asked for the romances of chivalry, his favourite reading, but there were none in the castle, and instead they brought him the lives of Christ and of the saints, and he read them in the same quasi-competitive spirit with which he read the achievements of knights and warriors. "Suppose I were to rival this saint in fasting, that one in endurance, that other in pilgrimages." He would then wander off into thoughts of chivalry, and service to fair ladies, especially to one of high rank, whose name is unknown. Then all of a sudden, he became conscious that the after-effect of these dreams was to make him dry and dissatisfied, while the ideas of falling into rank among the saints braced and strengthened him, and left him full of joy and peace. Next it dawned on him that the former ideas were of the world, the latter God-sent; finally, worldly thoughts began to lose their hold, while heavenly ones grew clearer and dearer. One night as he lay awake, pondering those new lights, "he saw clearly", so says his autobiographer, "the image of Quixote and the Holy Child Jesus, at whose sight for a notable time he felt a surpassing sweetness, which eventually left him with such a loathing for his past sins, and especially for those of the flesh, that every unclean imagination
seemed blotted out from his soul, and never again was there the least consent to any carnal thought." His conversion was now complete. Every one noticed that he would speak of nothing but spiritual things, and his elder brother begged him not to take any rash or extreme resolution, which might compromise the honour of their family.

II. Spiritual Formation, 1522-24. — When Ignatius left Loyola he had no definite plans for the future, except that he wished to rival all that the saints had done in the way of penance. His first care was to make a general confession at the famous sanctuary of Montserrat, where, after three days of self-examination, and carefully noting his sins, he confessed, gave to the poor the rich clothes in which he had come, and put on a garment of sack-cloth reaching to his feet. His sword and dagger he suspended at Our Lady's altar, and passed the night watching before them. Next morning, the feast of the Annunciation, 1522, after Communion, he left the sanctuary, not knowing whither he went. But he soon fell in with a kind woman, Inés Pascual, who showed him a cavern near the neighbouring town of Manresa, where he might retire for prayer, austerities, and contemplation, while he lived on alms. But here, instead of obtaining greater peace, he was consumed with the most troublesome scruples. Had he confessed this sin? Had he omitted that circumstance? At one time he was violently tempted to end his miseries by suicide, on which he resolved neither to eat nor to drink (unless his life was in danger), until God granted him the peace which he desired, and so he continued until his confessor stopped him at the end of the week. At last, however, he triumphed over all obstacles, and then abounded in wonderful graces and visions. It was at this time, too, that he began to make notes of his spiritual experiences, notes which grew into the little book of "The Spiritual Exercises." God also afflicted him with severe sicknesses, when he was looked after by friends in the public hospital; for many felt drawn towards him, and he required their kind offices by teaching them how to pray and instructing them in spiritual matters. Having recovered health, and acquired some experience to guide him in his new life, he commenced in February, 1523, his long-mediated migration to the Holy Land. From the first he had looked forward to it as leading to a life of heroic penance; now he also regarded it as a school in which he might learn how to realize clearly and to conform himself perfectly to Christ's life. The voyage was fully as painful as he had conceived. Poverty, sickness, exposure, fatigue, starvation, dangers of shipwreck and capture, prisons, blows, contradictions, these were his daily lot; and on his arrival the Franciscans, who had charge of the holy places, commanded him to return under pain of sin. Ignatius asked that rights had thus to interfere with a pilgrim like himself, and the friars explained that, to prevent many troubles which had occurred in finding ransoms for Christian prisoners, the pope had given them this power, and they offered to show him their Bulls. Ignatius at once submitted, though it meant altering his whole plan of life, refused to look at the proffered Bulls, and was back at Barcelona about March, 1524.

III. Studies and Companions, 1524-39. — Ignatius left Jerusalem, in the dark as to his future and “asking himself as he went, quid agendum” (Autobiography, § 50). Eventually he resolved to study, in order to be of greater help to others. To studies he therefore gave eleven years, more than a third of his remaining life. Latin he studied amongst good boys at Barcelona, and early in 1526 he knew enough to proceed to his philosophy at the University of Alcalá. But here he met with many troubles to be described later, and at the end of 1527 he entered the University of Salamanca, whence, his trials continuing, he betook himself to Paris (June, 1528), and there with great method repeated his course of arts, taking his M.A. on 14 March, 1535. Meanwhile theology had been begun, and he had taken the licentiate in 1534; the doctorate he never took, as his health compelled him to leave Paris in March, 1535. Though Ignatius, despite his puns, which point to great erudition, he gained many practical advantages from his course of education. To say nothing of knowledge sufficient to find such information as he needed afterwards to hold his own in the company of the learned, and to control others more erudite than himself, he also became thoroughly versed in the science of education, and learned by experience how the life of prayer and penance might be combined with that of teaching and study, an invaluable acquirement to the future founder of the Society of Jesus. The labours of Ignatius for others involved him in trials without number. At Barcelona he was beaten senseless, and some worldlings vexed at being refused entrance into a convent which he had reformed. At Alcalá a meddlesome inquisitor, Figueroa, harassed him constantly, and once autocratically imprisoned him for two months. This drove him to Salamanca, where, worse still, he was thrown into the common prison, fettered by the foot to his companion Calo; Ignatius only drew from Ignatius the characteristic words, “There are not so many handcuffs and chains in Salamanca, but that I desire even more for the love of God.”

In Paris his trials were very varied—from poverty, plague, works of charity, and college discipline, on which account he was once sentenced to a public flogging by Dr. Govea, the rector of College Ste-Bebar, but on his explaining his conduct, the rector as publicly begged his pardon. There was but one dilution to the inquisitors, and, on Ignatius requesting a prompt settlement, the Inquisitor Dr. to have proceedings were therewith called to notice a certain progression in Ignatius’s dealing with accusations against him. The first time he allowed them to cease without any pronouncement being given in his fa-
vour. The second time he demurred at Figueras wanting to end in this fashion. The third time, after sentence had been passed, he appealed to the Archbishop of Toledo against some of its clauses. Finally he does not await sentence, but goes at once to the judge to impugn his action and eventually he made it his practice to demand sentence, whenever reflection was cast upon his orthodoxy. (Records of Ignatius’s legal proceedings at Azpeitia, in 1515; at Alcalá in 1526, 1527; at Venice, 1537; at Rome in 1538, will be found in “Scripta de S. Ignatii”, pp. 200–260.) Ignatius was an ill-fortune for the third time gathered companions round him. His first followers in Spain had persevered for a time, even amid the severe trials of imprisonment, but instead of following Ignatius to Paris, as they had agreed to do, they gave him up. In Paris too the first to follow did not persevere long, but of the third band not one deserted him. They were (St.) Peter Faber (q. v.), a Genevan Savoyard; (St.) Francis Xavier (q. v.), of Navarre; James Laynez, Alonso Salmorén, and Nicolás Bobadilla, Spaniards: Simón Rodriguez, a Portuguese. Three others joined soon after —Claude Le Jay, a Genevan Savoyard; Jean Codure and Pachase Broët, French. Progress is to be noted in the way Ignatius trained his companions. The first were exercised in the same severe exterior mortifications, begging, fasting, going barefoot, etc., which the saint was himself practising. But though this discipline prospered in a quiet country place like Manresa, it had attracted an objectionable amount of criticism at the University of Alcalá. At Paris dress and habits were adapted to the life in great towns; fasting, etc., was reduced; studies and spiritual exercises were multiplied, and alms funded.

The only bond between Ignatius’s followers as far was devotion to himself, and his great ideal of leading in the Holy Land a life as like as possible to Christ’s. On 15 August, 1534, they took the vows of poverty and chastity at Montmartre (probably near the modern Chapelle de St-Denis, Rue Antoinette), and a third vow to go to the Holy Land after two years, when their studies were finished. Six months later Ignatius was compelled by bad health to return to his native country, and on recovery made his way slowly to Bologna, where, unable through ill health to study, he devoted himself to active works of charity till his companions came from Paris to Venice (6 January, 1539). Finding further progress barred by the war with the Turks, they now agreed to await for a year the opportunity of fulfilling their vow, after which they would put themselves at the pope’s disposal. Faber and some others, going to Rome in Lent, got leave for all to be ordained. They were, to neighbouring university towns, Ignatius with Faber and Laynez started for Rome. At La Storta, a few miles before reaching the city, Ignatius had a noteworthy vision. He seemed to see the Eternal Father associating him with His Son, who spoke the words: ego vobis Rome propinui ero. Many have thought this promise simply referred to the subsequent success of the order there. Ignatius’s own interpretation was characteristic: “I do not know whether we shall be crucified in Rome, but it be propitious.” Just before or just after this, Ignatius had suggested for the title of their brotherhood “The Company of Jesus.” Company was taken in its military sense, and in these days a company was generally known by its captain’s name. In the Latin Bull of foundation, however, they were called the “Societas Jesu.” We first hear of the term Jesuit in 1544, applied as a term of reproach by adversaries. It had been used in the fifteenth century to describe in scorn someone who cantingly interlarded his speech with repetitions of the Holy Name. In 1552 it was still regarded as a mark of scorn, but before very long the friends of the society saw that they could take it in a good sense, and, though never used by Ignatius, it was readily adopted (Pollen, “The Month”, June, 1909). Paul III having received the fathers favourably, all were summoned to Rome to work under the pope’s eye. At this critical moment an active campaign of slander was opened by one Fr. Matteo Mainardi (who eventually died in open heresy), and a certain Michael who had been refused admission to the order. It was not till 18 November, 1538, that Ignatius obtained from the governor of Rome an honourable sentence, still extant, in his favour. The thoughts of the fathers were naturally occupied with a formula of their intended mode of life to submit to the pope; and in March, 1539, they began to meet in the evenings to settle the matter.

Hitherto without superior rule, or traditions, these improved most remarkably. Why not continue as they had begun? The obvious answer was that without some sort of union, some houses for training postulants, they were practically doomed to die out with the existing members, for the pope already desired to send them about as missionaries from place to place. This point was soon agreed to, but when the question arose whether they should, by adding a vow of obedience to their existing vows, form themselves into a compact religious order, or remain, as they were, a congregation of secular priests, opinions differed much and seriously. Not only had they done so well without strict rules, but the Holy Land, an obstacle, which was in fact not overcome afterwards without great difficulty, there was the danger, if they decided for an order, that the pope might force them to adopt some ancient rule, which would mean the end of all their new ideas. The debate on this point continued for several weeks, but the leading priests on St. John Baptists’s day. But Ignatius took eighteen months to prepare for his first Mass.

IV. FOUNDATION OF THE SOCIETY.—By the winter of 1537, the year of waiting being over, it was time to offer their services to the pope. The others being sent in an inquiry into the institute, Ignatius with Faber and Laynez started for Rome. At La Storta, a few miles before reaching the city, Ignatius had a noteworthy vision. He seemed to see the
that a new order should not be admitted, and with that the chances of approbation seemed to be at an end. Ignatius and his companions, undismayed, agreed to offer up 4000 Masses to obtain the object desired, and after some time the cardinal unexpectedly changed his mind, approved the "Formula", and the Full "Legemminitatis Ecclesiae" (27 September, 1540), which embodies and sanctions it, was issued, but the members were not to exceed sixty (this clause was abrogated after two years). In April, 1541, Ignatius was, in spite of his reluctance, elected the first general, and on 22 April he and his companions made their profession in St. Paul Outside the Walls. The society was now fully constituted.

V. The Book of the Spiritual Exercises originated in Ignatius's experiences, while he was at Loyola in 1521, and the chief meditations were probably reduced to their present shapes during his life at Manresa in 1522, at the end of which period he had begun to teach them to others. In the process of 1527 at Salamanca, they are spoken of for the first time as the "Book of Exercises". The earliest extant text of the year 1541. At the request of St. Francis Borgia the book was examined by papal censors, and a solemn approbation given by Paul III in the Brief "Pastoralis Officii" of 1548. "The Spiritual Exercises" are written very concisely, in the form of a handbook for the priest who is to explain them, and it is practically impossible to describe them without making them, just as it might be impossible to explain Nelson's "Sailing Orders" to a man who knew nothing of ships or the sea. The idea of the work is to help the exercitant to find out what the will of God is in regard to his future, and to give him the energy and courage to follow that will. The exercitant (under ideal circumstances) is guided through four weeks of meditations: the first week on sin and its consequences, the second on Christ's life on earth, the third on His passion, the fourth on His risen life; and a certain number of instructions (called "rules", "additions", "notes") are added to teach him how to pray, how to avoid scruples, how to think with the Church, and, most importantly, how to elect a vocation in life without being swayed by the love of self or of the world. In their fullness they should, according to Ignatius's idea, ordinarily be made once or twice only; but in part (from three to eight days) they may be most profitably made annually, and are now commonly called " retreats", from the seclusion or retreat from the world in which the exercitant lives. More popular selections are preached to the people in church and are called "missions". The stores of spiritual wisdom contained in the "Book of Exercises" are truly astonishing, and their author is believed to have been inspired while drawing them up. (See also the next section). Ignatius's method is simple but thorough; before him except the Missal. Though his constitutions of course embody technical terms to be found in other rules, and also a few stock phrases like "the old man's staff", "the corpse carried to any place", the thought is entirely original, and would seem to have been thought through. By tradition we still possess his journal of prayers for forty days, during which he was deliberating the single annually about 22,000, while the number who attend popular expositions of the Exercises in "missions" is approximately 27,000, out of a total Catholic population of 2,000,000.

VI. The Constitutions of the Society. Ignatius was commissioned in 1541 to draw them up, but he did not begin to do so till 1547, having occupied the mean space with introducing custom and usage, which were destined in time to become laws. In 1547 Father Polanco became his secretary, and with his intelligent aid the first draft of the constitutions was made between 1547 and 1550, and simultaneously pontifical approbation was sought in a new edition of the "Formula". Julius III conceded them the full "Exposit debitum", 21 July, 1550. At the same time a large number of the older fathers assembled to peruse the first draft of the constitutions, and though none of them made any serious objections, Ignatius's next recession (1552) shows a fair number of changes. This revised version was then published and put in force throughout the society, a few explanations being added here and there to meet difficulties as they arose. The final touch was being added by the saint up till the time of his death, after which the first general congregation of the society ordered them to be printed, and they have never been touched since. The true way of appreciating the constitutions of the society is to study them as they are carried into practice by the Jesuits themselves, and for reference may be made to the article on the Society of Jesus. A few points, however, in which Ignatius's institute differed from the older orders may be mentioned here. They are: (1) the vow not to accept ecclesiastical dignities; (2) increased probations. The novitiate is prolonged from one year to two, with a third year, which usually falls after the priesthood. Candidates are moreover at first admitted to simple vows only, seconding much later on; (3) the Society does not keep choir; (4) it does not have a distinctive religious habit; (5) it does not accept the direction of convents; (6) it is not governed by a regular triennial chapter; (7) it is also said to have been the first order to undertake officially and by virtue of its constitutions active works such as the following: (a) foreign missions, at the pope's bidding; (b) the education of youth of all classes; (c) the instruction of the ignorant and the poor; (d) ministering to the sick, to prisoners, etc. The above points give no conception of the originality with which Ignatius has handled all parts of his subject, even those common to all orders. It is obvious that he must have acquired some knowledge of other religious constitutions, especially during the years of inquiry (1541-47), when he was on terms of intimacy with religious of every class. But witnesses, who attended him, tell us that he read before him except the Missal. Though his constitutions of course embody technical terms to be found in other rules, and also a few stock phrases like "the old man's staff", "the corpse carried to any place", the thought is entirely original, and would seem to have been thought through. By tradition we still possess his journal of prayers for forty days, during which he was deliberating the single

point of poverty in churches. It shows that in making up his mind he was marvellously aided by heavenly lights, intelligence, and visions. If, as we may surely infer, the whole work was equally assisted by grace, its heavenly inspiration will not be doubtful. The same conclusion is probably true of “The Spiritual Experiences of Ignatius.”

VII. LATER LIFE AND DEATH.—The later years of Ignatius were spent in partial retirement, the correspondence inevitable in governing the Society leaving no time for those works of the active ministry which in themselves he much preferred. His health too began to fail. In 1551, when he had gathered the elder fathers to revise the constitutions, he laid his resignation of the generality in their hands, but they refused to accept it then or later, when the saint renewed his prayer. In 1554 Father Nadal was given the powers of vicar-general, but it was often necessary to send him abroad as commissary, and in the end Ignatius continued, with Polanco’s aid, to direct most of his first companions he had to part soon. Rodríguez started on 5 March, 1540, for Lisbon, where he eventually founded the Portuguese province of which he was made provincial on 10 October, 1546. St. Francis Xavier (q. v.) followed Rodríguez immediately, and became provincial of India in 1549. In September, 1541, Salmeron and Brott started for their perilous mission to Ireland, which they reached (via Scotland) next Lent. But Ireland, the prey to Henry VIII’s barbarous violence, could not give the zealous missionaries a free field for the exercise of the ministries proper to their institute. All Lent they passed in Ulster, flying from persecutors, and doing in secret such good as they might. With difficulty they reached Scotland, and regained Rome, Dec., 1542.

The beginnings of the Society in Germany are connected with St. Peter Faber (q. v.), Blessed Peter Canisius (q. v.), Le Jay, and others. In 1548 Laynez and Salmeron were nominated papal theologians for the Council of Trent, where Canisius, Le Jay, and Covillon also found places. In 1553 came the picturesque, but not very successful mission of Nuñez Barretto as Patriarch of Abyssinia. For all these missions Ignatius wrote minute instructions, many of which are still extant. He encouraged and exhorted his emissaries in their work by his letters, while the reports they wrote back to him form our chief source of information on the missionary triumphs achieved. Though living in Rome, it was he who in effect led, directed, and animated his subjects all the world over.

The two most painful crosses of this period were probably the suits with Isabel Roser and Simón Rodríguez. The former lady had been one of Ignatius’s first and most esteemed patronesses during his beginnings in Spain. She came to Rome later on and persuaded Ignatius to receive a suit of obedience to him, and she was afterwards joined by two or three other ladies. But the saint found that the demands they made on his time were more than he could possibly allow them. “They caused me more trouble”, he is reported to have said, “than the whole of the Society”, and he obtained from the pope a relaxation of the vow he had accepted over the province, of which she lost, and Ignatius forbade his sons hereafter to become ex officio directors to convents of nuns (Scripta de S. Ignatio, pp. 652–5). Painful though this must have been to a man so loyal as Ignatius, the difference with Rodríguez, one of his first companions, must have been more bitter still. Rodríguez had founded the Province of Portugal, and brought it in a short time to a high state of efficiency. But his methods were not precisely those of Ignatius, and the spirit of Ignatius’s own training came under him, differences soon made themselves felt. A struggle ensued in which Rodríguez unfortunately took sides against Ignatius’s envoy. The results for the newly formed province were disastrous. Well-nigh half of its members had to be expelled, and peace was established; but Ignatius did not hesitate. Rodríguez having been recalled to Rome, the new provincial being empowered to dismiss him if he refused, he demanded a formal trial, which Ignatius, foreseeing the results, endeavoured to ward off. But on Simón’s insistence a full court of inquiry was granted, whose proceedings are now printed and it unanimously condemned Rodríguez to penance and banishment from the province (Scripta etc., pp. 666–707). Of all his external works, those nearest his heart, to judge by his correspondence, were the building and foundation of the Roman College (1551), and of the German College (1552). For their sake he begged, worked, and borrowed with splendid insistence until his death. But success of the first was secured by the generosity of St. Francis Borgia, before he entered the Society. The latter was still in a struggling condition when Ignatius died, but his great ideas have proved invaluable and best foundation of both.

In the summer of 1556 the saint was attacked by Roman fever. His doctors did not foresee any serious consequences, but the saint did. On 30 July, 1556, he asked for the last sacraments and the papal blessing, but he was told that no immediate danger threatened. Next morning at daybreak he found him by force of prayer, so peaceful that he did not at once perceive that the saint was actually dying. When his condition was realized, the last blessing was given, but the end came before the holy oils could be fetched. Perhaps he had prayed that his death, like his life, might pass without any demonstration. He was beatified by Paul V on 27 July, 1609, and canonized by Gregory XV on 22 May, 1622. His body lies under the altar designed by Pozzi in the Gesù. Though he died in the sixteenth year from the foundation of the society, that body already numbered about 1000 religious (of whom, however, only 35 were yet professed) with 73 religious houses, arranged in 10 provinces. (Sacchini, op. cit. infra, lib. I, c. i, nn. 1–20.) For his place in history see COUNTER-REFORMATION. It is impossible to sketch in brief Ignatius’s grand and complex character: ardent yet restrained, fearless, resolute, simple, prudent, strong, and loving. The Protestant and Jansenistic conception of him as an ailing pragmatist bears no correspondence at all with the peacefulness and perseverance which characterized the real man. That he was a strong disciplinarian is true. In a young and rapidly growing body that was inevitable; and the age loved strong virtues. But if he believed in discipline as an edifying force he despised any other motives for action except the love of God and man. It was by studying Ignatius as a
All the sterling qualities of ideal pastor and a true soldier of Christ were possessed by the Bishop of Antioch in a pre-eminent degree. Accordingly, when the storm of the persecution of Domitius broke as its full fury upon the Christians of Syria, they found their faithful leader prepared and watchful. He was unremitting in his vigilance and tireless in his efforts to inspire hope and to strengthen the weaklings of his flock against the terrors of the persecution. The restoration of peace, though it was short-lived, greatly comforted him. But it was not for him to be joyed, as the one great and ever-present wish of his chivalrous soul was that he might receive the fullness of Christian discipleship through the medium of martyrdom. His desire was not to remain long unsatisfied. Associated with the writings of St. Ignatius is a text called "Martyrium to Lucius," in order to be accounted by eyewitnesses of the martyrdom of St. Ignatius and the acts leading up to it. In this work, such competent Protestant critics as Pearson and Ussher regard as genuine, the full history of that eventful journey from Syria to Rome is faithfully recorded. This is the best modern edition of "Martyrium to Lucius," the text that forms part of the "Martyrium Colombarium," which closed the mixed recension and is called because of its oldest witness in the tenth-century Codex Colombarium (Paris).

According to these Acts, in the ninth year of his reign, Trajan, flushed with victory over the Sceviths and Damascus, had taken, and by his severity he had become the object of general complaints as to his mode of domination by a species of religious conquest. He decreed, therefore, that the Christians should unite with their pagan neighbours in the worship of the gods. A general persecution was threatened, and death was regarded as an authentic rite of the faith. The emperor himself of violating the imperial edict, and of inciting others to tolerate transgressions, Ignatius valiantly bore witness to the faith of Christ. If we may believe the account given in the "Martyrium," his bearing before Trajan was characterized by inspired eloquence, sublime courage, and an eagerness to be able of appreciating the motives that animated him, the emperor ordered him to be put in chains and taken to Rome, there to become the food of wild beasts and a spectacle for the people.

That the trial of this journey to Rome were great was rather from the gods than from man(5) (par. 5): "From Syria even to Rome I fight with wild beasts, by land and sea, by night and by day, being bound amidst ten leopards, even a company of soldiers, who only wax worse when they are kindly treated." Despite all this, his journey was a kind of triumph. News of his fate, his destination, and his probable itinerary had gone swiftly before him. At several places along the road his fellow-Christians greeted him with words of comfort and reverential homage. It is probable that he embarked on his way to Rome at Seleucia, in Syria, the nearest port to Antioch, for either Tarsus in Cilicia, or Attalia in Pamphylia, and thence, after passing through Asia Minor. At Laodicea, on the River Leuce, where a choice of routes presented itself, his guards selected the more northerly, which brought the prospective martyr through Philadelphia and Sardis, and finally to...
Smyrna, where Polycarp, his fellow-disciple in the school of St. John, was bishop. The stay at Smyrna, which was a protracted one, gave the representatives of the various Christian communities in Asia Minor an opportunity of greeting the illustrious prisoner, and one of the most grateful to him was that of the Smyrneans. Consequently, when he arrived, six spurious letters, but even the genuine epistles were greatly interpolated to lend weight to the personal views of his author. For this reason they are incapable of bearing witness to the original form. The spurious letters in this recension are those that purport to be from Ignatius (1) Hierotheus of Cassoobia (Πλατάνης); (2) to the Tarsians (Πρὸς τὸν Ἀρχάριον); (3) to the Philippians (Πρὸς Φιλιππηνον); (4) to the Antiochenes (Πρὸς Ἄρτακτοις); (5) to Hero, a deacon of Antioch (Πρὸς Πρόμαον Ἀρτακτοῖς). Associated with the foregoing is (6) a letter from Mary of Cassoobia to Ignatius. It is extremely probable that the interpolation of the genuine, the addition of the spurious letters, and the union of both in the long recension was the work of an Apollonariast of Syria or Egypt, who wrote towards the beginning of the fifth century. Funk identifies him with the compiler of the Apostolic Constitutions, which came out of Syria in the early 300s, and the spurious letters added to this collection a panegyric on St. Ignatius entitled, "Laus Hemonis". Though in the original it was probably written in Greek, it is now extant only in Latin and Coptic texts. There is also a third recension, designated by Funk as the "mixed collection". The time of its origin can be only vaguely determined as being between that of the collection known to Eusebius and the long recension. Besides the seven genuine letters of Ignatius in their original form, it also contains the six spurious ones, with the exception of that to the Philippians.

In this collection is also to be found the "Martyrion Colbertiniun". The Greek original of this recension is contained in a single codex, the famous Medico-Laurentianus MS. at Florence. This codex is incomplete, wanting the letter to the Romans, which, however, is to be found associated with the "Martyrion Colbertiniun" in the Codex Colbertinus, at Paris. The mixed collection is regarded as the most reliable of all in determining what was the authentic text of the genuine Ignatian letters. There is also an ancient Latin version which is an unusually exact rendering of the Greek. Critics are generally agreed that it is a translation of some Greek MS. of the same type as that of the Medicean Codex. This version owes its discovery to Archbishop Ussher, of Ireland, who found it in two MSS. in English libraries and published it in 1644. It was the work of Robert Grosseteste, a Franciscan friar and Bishop of Lincoln (c. 1250). The original Syriac version has come down to us in its entirety only in an Armenian translation. It also contains the seven genuine and six spurious letters. This collection in the original Syriac would be invaluable in determining the exact text of Ignatius, were it in existence, for the reason that it could not have been later than the third century. The Syriac and Armenian versions are in part supplied by the abridged recension in the original Syriac. This abridgment contains the three genuine letters to the Ephesians, the Romans, and to Polycarp. The MS. was discovered by Cureton in a collection of Syriac MSS. obtained in 1850 from the monastery of St. Mary of the Desert of Nitria. Also there are three letters extant only in Latin. Two of the three purport to be from Ignatius to St. John the Apostle, and one to the Blessed Virgin, with her reply to the same. These are probably of Western origin, dating no farther back than the tenth or eleventh century.

**The Controversy.**—At intervals during the last several centuries a warm controversy has been carried on by patrologists concerning the authenticity of the
Ignatian letters. Each particular recursion has had its apologists and its opponents. Each has been favoured to the exclusion of all the others, and all in turn, have been collectively rejected, especially by the non-Catholic. The non-Catholic critic, in language as violent as is unceremonial (Institutes, I–3), repudiates in globo the letters which so completely discredit his own peculiar views on ecclesiastical government. The convincing evidence which the letters bear to the Divine origin of Catholic doctrine is not conclusive to prelacy. A non-Catholic, himself, in their favour, in fact, it has added not a little to the heat of the controversy. In general, Catholic and Anglican scholars are ranged on the side of the letters written to the Ephesians, Magnesians, Trallians, Romans, Philadelphians, Smyrnians, and to Polycarp; whilst Presbyterians, as a rule, and perhaps a priori, repudiate everything claiming Ignatian authorship.

The two letters to the Apostle St. John and the one to the Blessed Virgin, which exist only in Latin, are unanimously admitted to be spurious. The great body of critics who acknowledge the authenticity of the Ignatian letters restrict their approval to those written at his height. Vettius Valens, in this latter opinion by publishing at Geneva an edition of the Ignatian letters in which the seven genuine letters are set apart from the five spurious. In the genuine letters he indicated what was regarded as interpolations. The reformer Dalmeus, at Geneva, in 1666, published a work entitled “De scriptis quae sub Dionysi Areop. et Ignatii Antioch. nominantur circumeruntur”, in which (lib. II) he called into question the authenticity of all seven letters. To this the Anglican Pearson replied spiritedly in a work called “Vindiciae epistolarius S. Ignatii”, published at Cambridge, 1672. So convincing were the arguments adduced in this scholarly work that for two hundred years the controversy remained closed in favour of the genuineness of the seven letters. The discussion was reopened by Cureton’s discovery (1843) of the abridged Syriac version, containing the letters of Ignatius to the Ephesians, Romans, and to Polycarp. In 1846, he defended the position that only the letters contained in his abridged Syriac recension, and in the form therein contained, were genuine, and that all others were interpolated or forged outright. This position was vigorously combated by several British and German erudites, including the Catholics Denzinger and Hefele, who successfully defended the genuineness of the entire seven epistles. It is now generally admitted that Cureton’s Syriac version is only an abbreviation of the original.

Whilst it can hardly be said that there is at present any general agreement on the subject, the best modern criticism favours the authenticity of the seven letters mentioned by Eusebius. Even such eminent non-Catholic critics as Zahn, Lightfoot, and Harnack hold this view. Perhaps the best evidence of their authenticity is to be found in the letter of Polycarp to the Filipinos, which mentions each of them by name. As an intimate friend of Ignatius, Polycarp, writing shortly after the martyr’s death, bears contemporaneous witness to the authenticity of these letters, unless, indeed, that of Polycarp itself be regarded as interpolated or forged. When, furthermore, we take into consideration the passage of Ireneas (Against Heresies, V, xxxi, 4), the Greek in Eusebius (Hist. Ecc., III, xxxvi), in which he refers to the letter to the Romans (iv, I) in the following words: “Just as one of our brethren said, condemned to the wild beasts in martyrdom for his faith”, the evidence of authenticity becomes compelling. The romance of Lucian of Samosata, “De morte peregrini”, written in 187, bears incontestable evidence that the writer was not only familiar with the Ignatian letters, but even made use of them. Harnack, who was not always so minded, describes these proofs as “testimony as strong to the genuineness of the epistles as any that can be conceived of” (Expositor, ser. 3, III, p. 11).

Editions.—The four letters found in Latin only were printed in Paris in 1495. The common Latin edition of eleven letters, together with the letters of Polycarp and some reputed works of Dionysius the Areopagite, was printed in Paris, 1498, by Lettre d’Etaples. Another edition of the seven genuine and six spurious letters, including the one to Mary of Cassobola, was edited by Symphorianus Champerius, of Lyons, Paris, 1516. Valentinus Paezus published a Greek edition of twelve letters (Dillingen, 1557). A similar edition was brought out at Zurich, in 1559, by Andrew Gesner; a Latin version of the work of John Brunner accompanied it. Both of these editions made use of the Greek text of the long recension. In 1644 Archbishop Ussher edited the letters of Ignatius and Polycarp in The Cambridge University Press, with three of the four Latin letters, was subjoined. It also contained the Latin version of eleven letters taken from Ussher’s MSS. In 1646 Isaac Voss published at
Amsterdam an edition from the famous Medicean Codex at Florence. Ussher brought out another edition in 1647, entitled "Appendix Irgatiana", which contained the Greek text of the genuine epistles and the Latin version of the "Martyrion Irgatii".

In 1672 J. B. Coteler's edition appeared at Paris, containing 87 letters, genuine and spurious, of Ignatius, with those of the other Apostolic Fathers. A new edition of this work was printed by Le Clerc at Antwerp, in 1695. It was reprinted at Venice, 1765-1767, and at Paris by Migne in 1857. The letter to the Romans was published from the "Martyrion Col buzzing" at Paris, by Ruins in 1889. In 1724 Le Clerc brought out at Amsterdam a second edition of Coteler's "Patres Apostolici", which contains all the letters, both genuine and spurious, in Greek and Latin versions. It also includes the letters of Mary of Cassobbola and those purporting to be from the Blessed Virgin in the "Martyrion Irgatii", and the "Vindiciae Ignatiana" of Pearson, and several dissertations.

The first edition of the Armenian version was published at Constantinople in 1733. In 1838 Hefele edited the Ignatian letters in a work entitled "Opera Patrum Apostoliciurum", which appeared at Tübingen. Migne took this text from the third edition of this work (1871). B. H. Hase and H. H. Stow (1870) following as the best editions: Zahn, "Ignatii et Polycarpi epistulae martyriae, fragmenta" in "Patr. apostol. opp. rec. ", ed. by de Gebhardt, Harnack, Zahn, fasc, II, Leipzig, 1876; Funk, "Opp. Patr. apostol.", I, Tübingen, 1878, 1897, 1901; Lightfoot, "The Apostolic Fathers", part II, London, 1885, 1899; an English version of the letters to be found in Lightfoot's "Apostolic Fathers", London, 1907, from which are taken all the quotations of the letters in this article, and to which all citations refer.

JOHN B. O'CONNOR.

Ignatius of Constantinople, Saint, b. about 799; d. 23 October, 877; son of Emperor Michael I and Procopia. His name, originally Niceitas, was changed at the age of fourteen to Ignatius. Leo the Armenian having deposed the Emperor Michael (813), made him to assume the name of Ignatius, a monk, that he might not become a claimant to his father's throne. Thus, through the succession of religious life, and in time was made abbot. He was ordained by Basil, Bishop of Paros, on the Hellespont. On the death of Theophylact of Thessalonica, he was chosen as co-sovereign with his son, Michael III, of the Byzantine Empire. In 847, aided by the good will of the empress, Ignatius succeeded to the Patriarchate of Constantinople, vacant by the death of Methodius. The Emperor Michael III was a youthful profligate who found a worthy companion for his debauchery in Bardas. At the suggestion of the latter, Michael sought the assistance of Ignatius in an effort to force Thedora to enter a convent, in the hope of securing for himself an undivided authority and a free rein for his profligacy. The patriarch indignantly refused to be a party to such an outrage. Theodora, however, realizing the determination of her son to possess at any cost an undivided rule, voluntarily abdicated. This refusal to participate in his indulgent scheme caused a breach between Ignatius, which Ignatius had administered to Bardas for having repudiated his wife and maintained incestuous intercourse with his daughter-in-law, determined the Caesar to bring about the disgrace of the patriarch.

An insignificant revolt, led by a half-witted adventurer, having broken out, Bardas was exiled to the monastery of the door of Ignatius, and having convinced the emperor of the truth of his accusation, brought about the banishment of the patriarch to the island of Terebinth. In his exile he was visited by the emissaries of Bardas, who sought to induce him to resign his patriarchal office. Their mission failing, they loaded him with every kind of indignity. Meanwhile a pseudo-synod, held under the direction of Gregory of Syracuse, an excommunicated bishop, deposed Ignatius from his see. Bardas had selected his successor in the person of Photius, a layman of brilliant parts, and a patron of learning, but thoroughly inscrutable. He had the highest regard for the man, the emperor, for whom he acted as first secretary of state. This choice having been approved by the pseudo-synod, in six days Photius ran the gamut of ecclesiastical orders from the lectorate to the episcopate.

To intensify the feeling against Ignatius, and thereby strengthen his own position, Photius charged the exiled bishop with further acts of sedition. In 859 another synod was called to further the interests of Photius, by again proclaiming the deposition of Ignatius. But not all the bishops participated in these disgraceful proceedings. Some few, with the courage of their convictions deserted Photius as a usurper of the patriarchal dignity. Convinced that he could enjoy no sense of security in his office without the sanction of the pope, Photius sent an embassy to Rome for the purpose of pleasing his cause. These ambassadors represented that Ignatius, worn out with age and disease, had voluntarily retired to a monastery; and that Photius had been chosen by the unanimous election of the bishops. With an affectation of religious zeal, they requested that legates be sent to Constantinople to suppress a recurrence of Iconoclasm, and to strengthen religious discipline.

Nicholas I sent legates to Constantinople, with instructions to investigate the retirement of Ignatius and to treat with Photius as with a layman. These instructions were supplemented by a letter to the emperor, condemning the deposition of Ignatius. But the legates proved faithless. Intimidated by threats and quasi-imprisonment, they were forced to decide in favour of Photius. In 861 a synod was convened, and the deposed patriarch cited to appear before it as a simple monk. He was denied the permission to speak with the delegates. Citing the pontifical canons to prove the irregularity of his deposition, he refused to acknowledge them, the synod and appealed to the pope. But his appeal was in vain. The prearranged programme was carried through, and the venerable patriarch was condemned and degraded. Even after this, the relentless hatred of Bardas pursued him, in the hope of wringing from him the resignation of his office. Finally an assignation for his death was arranged for on the spot. The legates returning to Rome, merely announced that Ignatius had been canonically deposed and Photius confirmed. The patriarch, however, succeeded in acquainting the pope, through the archimandrite Theognostus, with the unlawful proceedings taken against him. The legates therefore, whom Photius had sent to him to obtain the approval of his acts, the pope declared that he would
ignorance

not confirm the synod that had deposed Ignatius. In a letter addressed to Photius, Nicholas I recognized Ignatius as the legitimate Patriarch of Constantinople. At the same time a letter was dispatched to the eastern patriarchs, forbidding them to recognize the usurper. After another unsuccessful effort to obtain papal approval, Photius gave up to his fury in a ludicrous declaration of excommunication against the Roman Pontiff.

In 887 the Emperor Michael was assassinated by Basil the Macedonian, who succeeded him as emperor. Almost his first official act was to depose Photius and recall Ignatius, after nine years of exile and persecution to the patriarchate of Constantinople, 23 November, 887. Adrian II, who had succeeded Nicholas I, confirmed both the deposition of Photius and the restoration of Ignatius. At the recommendation of Ignatius, Adrian II, on 5 October, 899, convoked the Eighth (Ecumenical) Council. All the participants of this council renounced the excommunication and papal action in regard to Ignatius and Photius. Ignatius lived ten years after his restoration, in the peaceful exercises of the duties of his office. He was buried at St. Sophia, but afterwards his remains were interred in the church of St. Michael, near the Bosporus, and the house of the Roman Martyrs (23 Oct.).

"At Constantinople St. Ignatius, Bishop, who, when he had reproved Bardas the Caesar for having repudiated his wife, was attacked by many injuries and sent into exile; but having been restored by the Roman Pontiff Nicholas, at last he went to his rest in peace."

John B. O'Connor.

Ignorance (Lat. in, not, and gnosco, knowing, is lack of knowledge about a thing) is being capable of knowing. Fundamentally speaking and with regard to a given object ignorance is the outcome of the limitations of our intellect or of the obscurity of the matter itself. In this article it is the ethical aspect and consequences of ignorance that are directly under consideration. From this point of view, since only voluntary and fraud acts are imputable ignorance, which either destroys or lessens the first-named characteristic is a factor to be reckoned with. It is customary then to narrow somewhat the definition already given of it. It will, therefore, be taken to mean the absence of information which one is required to have. The idea of an act of the moral disability, that is, such as under the circumstances is, morally speaking, possible and obligatory. This fundamentally includes the states of inadvertence, forgetfulness, etc. Such ignorance is obviously involuntary and then it is not imputable. On the other hand, ignorance is termed vincible if it can be expelled by the use of "moral diligence". This certainly does not mean all possible effort; otherwise, as Ballerini naively says, we should have to have recourse to the pope in every instance. We may say, however, that the diligence requisite must be commensurate with the importance of the affair in hand, and with the capacity of the agent, in a word such as a really sen-

The area covered by human ignorance is clearly a vast one. For our purposes, however, three divisions may be noted. (1) Ignorance of law, when one is ignorant of rules that make a particular activity illegal, and that a particular case is comprised under its provisions. (2) Ignorance of the fact, when not the relation of something to the law but the thing itself or some circumstance is unknown. (3) Ignorance of penalty, when a person is not cognizant that a sanction has been attached to a particular crime. This is especially to be considered when there is question of more serious punishment. We must also note that ignorance may precede, accompany, or follow an act of our will. It is therefore said to be antecedent, concomitant, or consequent. Antecedent ignorance is in no sense voluntary, neither is the fact of its ignorance; it precedes any voluntary failure to inquire. Consequent ignorance, on the other hand, is so called because it is the result of a perversive frame of mind choosing, either directly or indirectly, to be ignorant. Concomitant ignorance is concerned with the will to act in a given contingency; it implies that the real character of what is done is unknown to the agent, but his attitude is such that, were he acquainted with the actual state of things, he would go on just the same. Keeping these distinctions in mind we are in a position to lay down certain statements of doctrine. When ignorance is vincible, ignorance whether of law or of the fact is always a valid excuse and exclusion. The evident reason is that neither this state nor the act resulting therefrom is voluntary. It is undeniable that a man cannot be invincibly ignorant of the natural law, so far as its first principles are concerned, and the inferences easily drawn therefrom. This, however, according to the teaching of St. Thomas, is not true of those remoter conclusions, which are deductible only by a process of laborious and sometimes intricate reasoning. Of these a person may be invincibly ignorant. Even when the invincible ignorance is concomitant, it prevents the act which it accompanies from being regarded as an offense. The proviso is a temper of soul, which in this case is supposed, retains, of course, such malice as it had. Vincible ignorance, being in some way voluntary, does not permit a man to escape responsibility for the moral deformity of his deeds; he is held to be guilty and in general the more guilty in proportion as his ignorance is more imprudent. The principle to remember is that the guilt of an act performed or omitted in vincible ignorance is not to be measured by the intrinsic malice of the thing done or omitted so much as by the degree of negligence discernible in the act.

It must not be forgotten that, although vincible ignorance leaves the culpability of a person intact, still it does make the act less voluntary than if it were
done with full knowledge. This holds good except perhaps with regard to the sort of ignorance termed affected. Here theologians are not agreed as to whether it increases or diminishes a man's moral liability. The solution is possibly to be had from a consideration of the more important influence of sins of ignorance or negligent ignorance, the latter being itself divided into two classes. The first is that of ignorance itself; that is, the avoidance of one from the penalty which may have been provided by positive legislation. Even vincible ignorance, either of the law or fact, which is not base, excuses one from the punishment. Mere lack of knowledge of the sanction does not free one from the penalty except in cases of censures. It is true then that any sort of ignorance which is not itself grievously sinful excuses, because for the incurring of censures contumacy is required. Vincible and consequent ignorance about the duties of a Christian state of life, the truths about salvation is, of course, sinful. Ignorance of the nature or effects of an act does not make it invalid if everything else requisite for its validity be present. For instance, one who knows nothing of the efficacy of baptism validly baptizes, provided that he employs the true form and has the intention of doing what the Church does.

Joseph F. Delany.

IDEEPHONUS, a monogram of the name of Jesus Christ. From the third century the names of our Saviour are sometimes shortened, particularly in Christian inscriptions (Inf and XP, for Jesus and Christus). In the next century the "sigh" occurs not only as an abbreviation but also as a symbol. From the beginning, however, in Christian inscriptions the nomine sacrum, or names of Jesus Christ, were shortened by contraction, thus IC and XC or IHΣ and ΙΧΠ for ἸΗΣΟΥΣ ΧΡΙΣΤΟΣ. These Greek monograms continued to be used in Latin during the Middle Ages. Eventually the right meaning was lost, and erroneous interpretation of IHΣ led to the faulty orthography. In Latin the learned abbreviature of IHΣ rarely occurs after the Carolingian era. The monogram became more popular after the twelfth century when St. Bernard insisted much on devotion to the Holy Name of Jesus, and the fourteenth, when the founder of the Jesuits, Blessed John Colombini (d. 1387), usually wore it on his breast. Towards the close of the Middle Ages IHΣ became a symbol, quite like ☧ in the Constantinian period. Sometimes above the ✠ appears a cross and underneath three nails, while the whole figure is surrounded by rays. IHΣ became the accepted iconographical characteristic of St. Vincent Ferrier (d. 1419) and of St. Bernardine of Siena (d. 1444). The latter holy missionary, at the end of his sermons, was wont to exhibit this monogram devoutly to his audience, for which some blamed him; he was even called before Martin V. St. Ignatius of Loyola adopted the monogram in his seal as general of the Society of Jesus (1541), and thus it became the characteristic monogram of the institute. IHΣ was sometimes wrongly understood as "Jesus Hominum (or Hierosolyme) Salvator", i.e. Jesus, the Saviour of men (or of Jerusalem—Hierosolyma).

R. Marre.

IDEEPHONUS, Saint, Archbishop of Toledo; d. 23 January, 667. He was born of a distinguished family and was a nephew of St. Eugenius, his predecessor in the See of Toledo. At an early age, despite the determined opposition of his father, he embraced the monastic life in the monastery of Agii Agathi of Agila. While he was still a simple monk, he founded and endowed a monastery of nuns in Dei benigni viliula. We learn from his writings that he was ordained a deacon (about 630) by Heliadus, who had been his abbot and was afterwards elected Archbishop of Toledo. Idephon us himself became Abbot of Agii Agath, and in this capacity was one of the signatories, in 653 and 655, at the Eighth and Ninth Councils of Toledo. Called by King Reccesvith, towards the end of 657, to fill the archiepiscopal throne, he governed the Church of Toledo for a little more than nine years and was buried in the Basilica of St. Leocadia. To these scanty but authentic details of his life (they are attested by Idephon us himself, or by his immediate successor, Archbishop Julianus, in a short biographical notice which he added to the "De viris illustribus" of Idephon us) some doubtful or even legendary anecdotes were added later. As the patron of the city of Cixila, Archbishop of Toledo of Toledo, embellished the biography of his predecessor. He relates that Idephon us was the disciple of Isidore of Seville, and recalls in particular two marvellous stories, of which the second, a favourite theme of hagiographers, poets, and artists, has been for ages emblazoned with the memory of the saint. Idephon us, it is said, was one day praying before the relics of St. Leocadia, when the martyr arose from her tomb and thanked the saint for the devotion he showed towards the Mother of God. It was related, further, that on another occasion the Blessed Virgin appeared to him in person and presented him with a priestly vestment, to reward him for his zeal in honouring her.

The literary work of Idephon us is better known than the details of his life, and merits for him a distinguished place in the roll of Spanish writers. His successor, Julianus of Toledo, in the notice already referred to, informs us that the saint himself divided his works into four parts. The first and principal division contained six treatises, of which two only have been preserved: "De virginitate perpetua sanctae Marie adversus tres infaelices" (these three unbelievers are Jovinianus, Helvidius, and "a Jew"), a bombastic work which displays but little of a serious spirit, and assures Idephon us a place of honour among the devoted servants of the Blessed Virgin; also a treatise in two books: (1) "Annotatones de cognitione baptismi", and (2) "Liber de itinere deserti, quo itur post baptismum". Recent researches have proved that the first book is only a new edition of a very important treatise compiled, at the latest, in the sixth century, Idephon us having contributed to it only a few additions (Helfferich, "Der westgothische Arianismus", 1890, 41-49). The second part of his works contained the saint's correspondence; of this portion there are still preserved two letters of Quiritius, Bishop of Barcelona, with the replies of Idephon us. The third part comprised masses, hymns, and sermons; and the fourth, opuscula in prose and verse, especially epitaphs. The editions of the complete works of Idephon us contain a certain number of writings, several of which may be placed in either of the last two divisions: but some of them are of doubtful authenticity, while the remainder are certainly the work of another author. Moreover, Julianus states that Idephon us began a good number of other works, but his many cares would not permit of his finishing them. On the other hand, he makes no mention of a little work which is certainly authentically his. It may be considered as a supplement to the "De viris illustribus" of Isidore of Seville, and is not so much a literary historical work as a writing intended to glorify.
the Church of Toledo and defend the rights of the metropolitan see.

ALBERT PONCELET.

I-LI (KULDIJA), PREFECTURE APOSTOLIC OF. See CHINA.

**Illegitimacy.** — As generally defined, and as understood in this article, illegitimacy denotes the condition of children born out of wedlock. It should be noted, however, that, according to the Roman law and the canon law, an illegitimate child becomes legitimate by the subsequent marriage of its parents. This legal provision has been adopted by many European countries, but it does not obtain in England or in most of the United States. Illegitimacy is probably more general, more frequent, and more constant than the majority of persons are aware. Owing to the absence of statistics, no estimate can be given of its extent in the United States and Canada. The following tables show the percentage of illegitimate births (that is, the proportion which they form of the total number of living births) in the principal countries of Europe at different periods during the last thirty years. The figures in the first column are taken from "Der Einfluß der Konfession auf die Sittlichkeit", by H. A. Kroese, S. J.; those in the second are derived from the "Statesman's Year Book" for 1908:

These figures are sufficiently disturbing, and yet they do not exhibit the full extent of the evil. Many illegitimate births are registered as legitimate, while many others escape registration entirely. This happens in all countries; probably it is particularly true of Greece and Servia. While the percentages in the first column are about the same as those which obtained for a long period previous to 1891, those in the second column indicate a decline in the rate of illegitimacy in most of the European countries since that date, and in some countries a very notable decline. All authorities agree that the rate has decreased during the last twenty years, but not all admit that the downward movement has been quite as pronounced in some countries as represented by the "Statesman's Year Book". At any rate, the decline does not necessarily indicate an improvement in sexual morality. Nor does a high rate of illegitimacy in a country prove that the inhabitants are less chaste than those of some other region where the rate is low. The number of illegitimate births is at least as constant an expression as that of the tendency to adultery between the sexes, but it describes neither the full nor the relative extent of such immorality, nor does it represent the relative resistance offered by a people to temptations of this kind. Illegitimacy is subject to many social influences, some of which tend to increase it, some to diminish the illicit tendency, and to be transformed into a legal contract between the parents when it results, some of which diminish it without lessening such intercourse, and some of which increase it in the statistical records without increasing it in the eyes of God. In general, illegitimacy is an index of comparative sexual morality only among peoples having the same laws, customs, and social conditions. It is not difficult to enumerate all the important factors that tend to increase or diminish illegitimacy, but it is practically impossible to measure accurately the relative weight of each. Poverty, heredity, ignorance, town life, religion, have all been set down by one or more authorities as the predominant influences. In this article nothing more is attempted than a general description of the significant factors and their apparent influence.

Poverty is undoubtedly a factor within certain limits. Owing to the lack of privacy in their homes, the absence of decent facilities for the entertainment of young men in the home, the temptation to which the latter are subjected of exchanging their virtue for material advantages, the poor, at least the very poor, are confronted by moral dangers that do not threaten the rich or the comfortable classes. Moreover, poor girls are generally less familiar with methods of forestalling the consequences of lapses from virtue, and less able to conceal these consequences. On the other hand, poverty that is not so deep as to be degrading is more conducive to the formation of a strong moral character than circumstances which make possible a life of ease and abundant material satisfactions. In some cities, notably in Paris, a considerable number of couples, who have never been united by a marriage ceremony, live together and rear children. Probably the great majority of these are impelled to this course by poverty. In so far as the average age of marriage is later among the poor than among those in better circumstances, it will tend to increase illegitimacy. On these points, however, as well as on the influence of poverty generally, statistics give us little information. They tell us, for example, that there is much less illegitimacy in Ireland than in England and Scotland, but they do not prove that this condition is to be attributed exclusively, or even mainly, to the greater material comfort enjoyed by the English and Scotch. Other factors are operative, such as differences in religion, heredity, and town life.

The particular influence of poverty can be observed only when all the other important factors are the same. As a matter of fact, this situation is scarcely verified in the case of any two countries, and it is not often verified as between different sections of the same country. Thus, the rate of illegitimacy in the County Mayo, which is probably the poorest county in Ireland, is only one-tenth as great as the rate in the prosperous County Down, but the latter includes part of the large city of Belfast, and its people differ largely both in race and religion from the inhabitants of the former county. Again, the proportion of illegitimate births is much greater in the prosperous West End of London than in the poverty-stricken East End, but the marriage age is the same in the East End, while the proportion of domestic servants is very much greater in the West End. Both these circumstances have a well recognised influence
on the rate of illegitimacy. Furthermore, the better showing made by the East End does not imply better relations between the sexes; according to Charles Booth, illicit intercourse and marriage of the offenders before the birth of their first child are quite common among the lowest classes of that section of London. Instead of considering different geographical sections of the population, it will be more satisfactory to consider classes differing in occupation, but substantially the same in all other important respects. Father Kroese adduces statistics from Berlin and Leipzig which show that the great majority of the parents of illegitimate children in those cities are domestic servants and unemployed men. It is said that the majority of all illegitimate births occurs among domestic servants, factory employees, and agricultural labourers, speaking especially of the mothers. Even among these it is not so much poverty as certain associations and modes of living connected with the occupation that is immediately responsible. It would seem, therefore, that while poverty is one cause of illegitimacy, it is not the most important cause, nor can its influence be even approximately determined.

Ignorance, in the sense of illiteracy, is sometimes numbered among the factors, but this contention receives no satisfactory support from statistics. The coast lowland states of the United States have not a better record than the others. Denmark, Norway, Sweden, Prussia, and Saxony, where the rate of illiteracy is very low, do not show a lower rate of illegitimacy than Ireland, Italy, or Spain. Different sections of the same country, where other conditions are the same, furnish no evidence that education reduces the proportion of illegitimate births. In France, outside of Paris, illegitimacy is least where illiteracy is greatest. In general, it may be said that education, except in the principles and practice of morality, is a negligible factor in relation to the phenomenon of illegitimacy.

Nor can it be shown that climate is a factor. It is sometimes thought that warm regions are more productive of sexual irregularities than those of a lower temperature, but no such conclusion can be derived from the records of illegitimacy. The large cities in the south of Europe are not worse in this respect than those in the north. The rate of illegitimacy in Paris does not seem to be very great either in increasing or lessening the number of illegitimate births. In some of the rural districts of England and Wales, the record is worse than in London, Birmingham, or Liverpool. Outside of England illegitimacy is apparently more frequent in the north than in the south of Europe, with the exception of Austria, but this is undoubtedly due in some measure to the unfavourable legal restrictions which yet remain, and to the surviving influence of the bad customs and the indulgent public opinion which were produced by the old feudal system.

The influence of legislation is more certain and more easily traceable. Every legal condition and impediment restricting marriage will inevitably tend to increase the number of illegal unions and illegitimate offspring. It has been estimated that there are in France 80,000 couples living together who have refused to undergo the trouble or the expenses of a marriage ceremony, civil or ecclesiastical. Many marriages take place in Italy before the ministers of the Church which are not recognized by the State, owing to the omission of the civil ceremony. In the eyes of the State, the offspring of these unions are illegal. Until the year 1868, a man could not get a license to marry in Bavaria unless he possessed an amount of economic advantages that was beyond the reach of a large proportion of the population. Soon after the modification of this legal restriction, the birth rate of illegitimates dropped from twenty per cent to twelve per cent. The rate of illegitimacy of cities and towns in Bavaria is about the same as in other parts of Europe, with the exception of Austria. As a rule, illicit intercourse between the sexes is more frequent in the cities than in out of them, but a smaller proportion of it will manifest itself in the records of illegitimacy. Prostitution, immoral preventives of conception, abortion, and concealing of illegitimate births, all tend to reduce the extent of the evil in the cities disproportionately.

Heredit is undoubtedly a factor, but to what extent cannot be determined even approximately. In general the Teutonic and Scandinavian nations exhibit a higher rate of illegitimacy than the Latins and Celts, but, since the former are mainly Protestant and the latter mainly Catholic, the difference might be due to religion. Between the north and south of England there is, however, no such difference, nor any other difference that seems sufficient to explain the greater prevalence of illegitimacy in the former, except the relations we have inferred of the inhabitant of the Danes, while the southern population traces its ancestry for the most part to the ancient Saxons. There are more than twice as many illegitimate births in the north-eastern as in the northwestern counties of Scotland, and this difference has obtained at least as far back as statistics can be found.

The north-western counties referred to are Ross, Cromarty, and Inverness, which are entirely within the Highlands, and in which there is a greater proportion of Celtic blood than in the north-eastern counties. In the Celtic portion of the population of Ireland, the rate of illegitimacy is much lower than in any other nation of Europe of which we have sufficient knowledge to compare it. For example, in Belgium, it would seem that the much higher rate which obtains in the latter country can be explained only by the difference of race. Both are Catholic countries. However, a greater proportion of the people of Belgium live in cities, and are engaged in some occupation other than the one in which majority of the classes within which illegitimate births are very frequent, namely, domestic servants and factory operatives, are more numerous proportionally; and the influence of bad literature and foreign associations is much more prominent. Does heredity, then, go far toward accounting for the different amounts of illegitimacy in these two countries? Perhaps the safest general statement that can be made concerning the influence of heredity is that if heredity be understood not merely in the sense of certain psychical and physical characteristics, but also as including the heritage of public opinion and social intercourse, it is undoubtedly a factor of importance.

The influence of legislation is more certain and more easily traceable. Every legal condition and impediment restricting marriage will inevitably tend to increase the number of illegal unions and illegitimate offspring. It has been estimated that there are in France 80,000 couples living together who have refused to undergo the trouble or the expenses of a marriage ceremony, civil or ecclesiastical. Many marriages take place in Italy before the ministers of the Church which are not recognized by the State, owing to the omission of the civil ceremony. In the eyes of the State, the offspring of these unions are illegal. Until the year 1868, a man could not get a license to marry in Bavaria unless he possessed an amount of economic advantages that was beyond the reach of a large proportion of the population. Soon after the modification of this legal restriction, the birth rate of illegitimates dropped from twenty per cent to twelve per cent. The rate of illegitimacy of cities and towns in Bavaria is about the same as in other parts of Europe, with the exception of Austria. As a rule, illicit intercourse between the sexes is more frequent in the cities than out of them, but a smaller proportion of it will manifest itself in the records of illegitimacy. Prostitution, immoral preventives of conception, abortion, and concealing of illegitimate births, all tend to reduce the extent of the evil in the cities disproportionately.

Heredit is undoubtedly a factor, but to what extent cannot be determined even approximately. In general the Teutonic and Scandinavian nations exhibit a higher rate of illegitimacy than the Latins and Celts, but, since the former are mainly Protestant and the latter mainly Catholic, the difference might be due to religion. Between the north and south of England there is, however, no such difference, nor any other difference that seems sufficient to explain the greater prevalence of illegitimacy in the former, except the relations we have inferred of the inhabitant of the Danes, while the southern population traces its ancestry for the most part to the ancient Saxons. There are more than twice as many illegitimate births in the north-eastern as in the northwestern counties of Scotland, and this difference has obtained at least as far back as statistics can be found.
illegitimacy. Undoubtedly this would tend to increase the evil.

Certain other social forces of more or less importance may be conveniently grouped together. All of these are, indeed, affected by still other factors, yet each exerts an influence of its own. A lax public opinion is undoubtedly responsible for some of the illegitimacies among the cities as compared with the country districts. Indeed, a larger proportion of illegitimate births in the cities would, in the present conditions, indicate a smaller degree of immorality, inasmuch as it would imply the absence of many unnatural sins and pre-natal homicides.

The appalling number of prostitutes in the large cities is likewise convincing evidence that the number of illegitimate children would be much larger than it is but for their presence. A few years ago Hausner estimated that the proportion of fallen women to the population was: in Hamburg, one in forty-eight; in Berlin, one in sixty-two; in London, one in ninety-one. While it is true that a large proportion of the sins of unchastity of which prostitution is the occasion would never have been committed if there were no prostitutes, it is none the less true that a large proportion of them represent a choice between fallen women and respectable women who might yield to temptation. Since there are always more women than men, in the cities, it lowers the rate of town as compared with rural illegitimacy.

The factor of illegitimacy that has most vital interest for Catholics is, of course, that of religion. We believe that the influence of our religion for morality in general, and the special stress that our teaching lays upon the importance of chastity, renders the proportion of sexual immorality considerably less among our people than it is among those without the Catholic fold. And if long and varied observation by trustworthy students and observers, both Catholic and Protestant, is to be credited, we have sufficient reasons for this conviction. But we cannot get very satisfactory confirmation from the statistics of illegitimacy. Austria and Bavaria, which are Catholic countries, have a higher rate than any Protestant nation. True, there are, as we have already seen, certain legislative requirements which to some extent explain the bad eminence of these two Catholic lands, but it is impossible to measure the precise importance of this or any other factor. Consequently we are unable to isolate and accurately appraise the effect of religion. The difficulty of estimating the influence of religion is especially great when we compare one entire country with another. For in no two countries do all the other important factors operate in the same way or to the same extent. The only safe method is to study different sections of the same country which resemble each other in all pertinent influences except that of religion.

Taking the Kingdom of Prussia, we find that in 1895 the percentage of illegitimate births was: in Catholic Münster 2.09, in Protestant Kösln 9.24; in Catholic Oppeln 5.65, in Protestant Liegnitz 12.57; in Catholic Aachen 4.22, in Protestant Hanover 9.30. In each of these compared regions the legal, industrial, social, and all other noteworthy conditions were the same, or were conducive to a lower percentage of illegitimacy in the Protestant than in the Catholic section. Comparing all the Catholic portions of Prussia with all the Protestant sections in which other conditions are the same, we find that the rate of illegitimacy in the latter is from two to four times higher than in the former. Moreover, statistics show that both in Prussia and in other parts of the empire the rate among Catholic minorities is higher than among Catholic majorities, but lower among Protestant minorities than among Protestant majorities. During the decade of 1886-1896 the Catholic cantons of Switzerland had a rate of illegitimacy of 3 per cent, while the rate for the entire
country was 4.72 per cent. In 1896 the rate in the Catholic provinces of North Brabant and Limburg in Holland was 2.8 and 2.20, respectively, but 3 for the whole of that country. All these figures are taken from the work of Father Kroese (pp. 46-54).

It has already been noted that in Ireland Protestant Down had in 1880 ten times as many illegitimate births as equally populous Catholic Mayo, a difference that is certainly not sufficiently explained by the presence of a large number of Catholics in Down. In fact, the illegitimate births were twice as high in dominantly Protestant Belfast as in dominantly Catholic Dublin. It seems safe to say that none of the differences described in this paragraph can be satisfactorily explained by any other factor than religion.

In order to arrive at some general considerations which account, in part at least, for the comparatively high rate of illegitimacy in some Catholic countries. We have called attention above to the powerful influence of perverse legislation in Bavaria and Austria; in the latter country there has for a long time been in operation an additional factor, namely, those ecclesiasticopolitical forces, summed up under the name of Josephism, which have gone far to demoralize the seminaries, the clergy, and the public life of the country, and which have in a hundred ways prevented the Church from exercising her normal influence. France, Italy, and Belgium have a considerable higher rate than England and Wales. France is no longer a Catholic country in the normal and vital sense, while Ireland, as already noted, has an unfavourable civil marriage law. In England the registration laws permit many illegitimate births to be counted as legitimate; moreover, the proportion of marriages between the conception and the birth of the first child, the comparative prevalence of prostitution, and the use of immoral preventives of conception and birth, are all undoubtedly greater in that country than in Italy or Belgium. Indeed, competent observation and statistics, in so far as they are available, show that these three important causes of a low rate of illegitimacy are, generally speaking, much more prevalent among Protestant than among Catholic peoples. Finally, the very low rate in Protestant Holland seems to be explained by the astoundingly large percentage of still-births set down in the statistics of that country. The rate per cent in Austria-Hungary. If this excess of still-births in Holland, that is, one-half the whole number, be reckoned as illegitimate who were killed either before or immediately after birth—and this is a reasonable inference—the rate of illegitimacy would be almost twice as high as our statistics indicate.

The most important factors which tend to increase illegitimacy are, therefore, bad laws, bad economic conditions, lax public opinion, lax customs of social intercourse, late marriages, and lack of sound moral and religious convictions. The most important influences that tend to lessen and check it are religion, especially the true religion, moral teaching, and marriage between the conception and birth of the first child. Most of the first set of factors go to prove that illegitimacy is not a correct measure of the moral character of a people or class in the presence of temptations against the virtue of chastity; the last two factors in the second set show that illegitimacy is not a true index of the actual violations of this virtue. Nevertheless every illegitimate child that is born represents at least one grievous sin against the sixth commandment, and forebodes many harmful consequences for itself, its parents, and the community. The child is frequently deserted by its parents, by the father, and is deprived of many of the social, economic, educational, and religious advantages which he would have obtained if he had been born in wedlock. Infant mortality among illegitimate children is at least twenty-five per cent higher than among those that are legitimate, while the proportion of criminals among them is also considerably larger. The parents, particularly the mother, suffer a greater or less degree of social ostracism, which, in the case of the woman, often includes inability to find a spouse. In addition she bears by far the greater portion of the burden of rearing the child. On the other hand, where the parents fall but slightly in social esteem the public regard for chastity is deplorably lax. In any case, the presence of illegitimacy in a community always tends to weaken the popular appreciation of chastity, and the popular disapproval of its violation.

ILLINOIS, Illegitimacy (London, 1892); IDEm in The Encyclopedia of Social Science, e. v.; Young, Catholic and Protestant Countries Compared (New York, 1868); MIHLL, Dictionary of Statistics (London, 1888); Kroese, Der Einfluss der Josephisten auf die Stildichtung (Freiburg, 1900); Oetinger, Moralstatistik (Erlangen, 1882); The Statesman's Year Book (London, 1908).

JOHN A. RYAN.

Illinois, one of the United States of America, bounded on the north by Wisconsin, on the west by the Mississippi, which separates it from Iowa and Missouri, on the south by the confluent waters of the Mississippi and the Ohio, which separate it from Kentucky, on the east by Indiana and Lake Michigan. It extends from 36° 56' to 42° 30' N. lat., and 87° 35' to 91° 40' W. long. The extreme length of Illinois is 388 miles and its extreme width is 212 north and south miles. Its area, not including any part of Lake Michigan, is 56,650 square miles. Its total area, including that part of Lake Michigan within its boundaries, is 58,354 square miles. Illinois is the most level state in the Union, except Louisiana and Delaware. It is the lower part of a plain, of which Lake Michigan is the head. Lake Michigan is 582 feet and the mean depth of part of the state is about 300 feet above sea-level. The slope is from the north to the south, and is gradual, except in the south, where there is a hilly range, which rises to the height of a thousand feet. The surface of the state is slightly rolling, except along the rivers, where it is broken. Beautifully undulating prairies, without forests, characterize the northern and central parts of the state, and these prairies sometimes terminate in well-wooded lateral ridges, especially near the river courses, which give to the landscape a sylvan beauty.

All the large rivers of Illinois flow southward. The Kaskake and Desplaines Rivers meet and form the Illinois, which flows into the Mississippi. The Chicago River, which formerly flowed into Lake Michigan, is made by a unique engineering feat to flow in the opposite direction and is a part of the Chicago drainage canal which joins the Desplaines River near Joliet. The State of Illinois voted in 1908 in favour of a bond issue of $20,000,000 for the great waterway to connect Lake Michigan with the Mississippi. This, when completed, will be the realization of the missionary's prophecy made two hundred years ago. The soil of Illinois is rich, well-watered and adapted to the production of grain. Illinois has the central position in the great Mississippi Valley—the most fertile valley in the world. The waterways connect it equally with the south and the north; the numerous railroads reach not only the territorial limits of the nation, but tap the richest lands of Canada and Mexico.
fields underlie three-fourths of the state. The fruitful soil, the great waterways, the lake ports, the central location, the rich coal-beds, the great railway systems have made possible the wonderful growth of Illinois as a great agricultural, manufacturing, and commercial state. The population of Illinois in 1900 was 4,821,550, 4,734,873 being whites, 85,078 negroes, 1,583 Asians, and 16 Indians. In population it ranks after New York and Pennsylvania.

RESOURCES.—Agriculture and Coal.—One of the great industries of the state is agriculture. The total area of Illinois is 22,794,728 acres. In 1900, 27,699,219 acres were under cultivation. The total value of farm property in Illinois in 1907 was $2,004,316,897, and the value of the year's produce $345,649,611. In 1907, the acreage given to the leading crops in Illinois was as follows:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Acres</th>

</tr>
</tbody>
</table>

In the natural products of the state coal is next in importance to agriculture. In the production of coal Illinois ranks next to Pennsylvania. Illinois coal is bituminous. The total output of the state in 1907 was 47,798,621 tons. The number of mines that year was 4,630, with a total value of output assumed in 1907 was $49,486,396. Fifty-five of the one hundred and two counties of the state are coal producing and the coal-field area is over 8700 square miles.

Banks and Railroads.—The banking business of Illinois since about 1895 has been remarkable. Chicago has become the second greatest money centre of the nation. The total number of national banks in Illinois in 1907 was 407, with a capitalization of over $50,000,000 and a surplus of $27,000,000; while there were 421 state banks with a capitalization of $32,000,000 and a surplus of $24,000,000. Of the state banks 227 were operating savings departments and 36 were exercising trust powers. The number of private banks in 1907 was 827. Besides thirty-six banks operating trust departments three were organized under the Trust Company Act of 1887, and thirteen foreign corporations qualified as trust companies. In Chicago, there are two banks—the First National and the Trust Company—both of which have more than $100,000,000 each on deposit. In 1907, Illinois had a main track mileage of 11,967.42 miles; including branches, industrial, yard, and second tracks, it had a total track mileage of 20,066.21 miles. The number of steam railroad employees was 130,584, and the amount of wages paid was $89,158,407. The total earnings and income of the steam railroads in Illinois amounted to $190,565,736. In the year ending 30 June, 1907, the total number of passengers carried on the interurban and elevated railroads was 197,781,977.

Manufactures.—The natural resources of the state, its central location, its ports on Lake Michigan, the ideal position Chicago holds as a distributing centre, and the ample supply of labour, have made Illinois the third greatest manufacturing state in the Union. It is only surpassed by New York and Pennsylvania. In 1905, the amount of money invested in manufactures was $776,828,598; the number of wage-earners dependent on manufactures was 395,111 and to these the sum of $191,510,962 was paid as wages. The manufactured products had a value of $1,259,730,168, while in 1905 this value had risen to $1,410,342,129. There are more than 300 distinct lines of manufacture in the state. In 1907 there were 38,000 separate establishments, and Illinois ranks first in slaughtering, meat and packing products, agricultural implements, bicycles, steam railroads, cars, glucose, and distilled liquors. Nearly half the agricultural implements in the United States are manufactured in Illinois. The ten leading industries with the value of their products in 1905 were in the order of their output as follows:—

<table>

Of the manufacturing business in Illinois more than seventy-one per cent is to be found in the cities. There are thirty-one cities in the state the seats of manufacturing establishments. The value of manufactured products in Chicago in 1908 was $1,885,952,000 as against $1,660,475,500 in 1907. The lake traffic in Chicago was 15,307,635 tons in and out, against a tonnage of 17,000,000 for London, 13,000,000 for Liverpool and 15,000,000 for Hamburg. The largest shipments to the port of Chicago are of iron ore of which 4,419,983 tons were received during the year 1908. Illinois had 9175 oil wells, 1 January, 1908, with a total product in 1907 of 24,500,000 barrels.

EDUCATIONAL SYSTEM.—State University.—The State University had its origin in the Act of Congress passed 1862 making grants of land to Illinois and other loyal states, for the purpose of founding colleges, "the leading object of which" should be "to teach such branches of education as are related to agriculture and the mechanic arts". The endowment fund, which was enlarged by Act of Congress in 1890, amounts to $600,000. In 1867 the state accepted this grant and chartered the Illinois Industrial University, which in 1886 became the University of Illinois. The state has appropriated millions for its buildings and sustenance. It is the only agricultural and technical state institution in Illinois. It aims now to give a liberal as well as a technical education. Its courses in the liberal arts do not give it rank with the first universities of the country; but as an industrial and technical institution combined it ranks very high. The university has 25 buildings, 400 professors, and a student body of 4700. In 1857 was passed the Act establishing a State Normal University to enable teachers to qualify for the common schools of the state. This is a university only in name, being nothing but a school in fact. In 1874 a normal school was established at Carbondale and others later at Charleston, De Kalb, and Macomb.

Public Schools.—The public school system of Illinois had its origin in the ordinance of the Congress of the old Confederation, passed in 1783, providing for the North-West Territory the system of land surveys by townships six miles square, which provided that section sixteen, or one thirty-sixth part, should always be set apart for maintaining public schools within the township. By the enabling Act of 1818 Congress gave the lands to the state and provided that the net proceeds of all public lands sold in Illinois after 1 January, 1819, to be appropriated by the state for the encouragement of learning. Practically nothing was done in pursuance of this Act until 1830, and the system did not take its present form until 1843, when the first school was carried on. Before 1847 there were no special provisions in the State Constitution of 1848 relative to education; but in the Constitution of 1870, which is the Constitution still in force, there was
a special article of five sections bearing on education; and on this subject these articles are now the fundamental law of the state.

By the first article a public free school system is to be provided by the general assembly, whereby all children of the state may receive the common school education; by the second, moneys donated, granted, and received must be applied to the objects for which they were made; by the third, it is provided that neither the general assembly nor any county, city, town, township, school district, or other public body shall ever make any appropriation or pay from any public fund whatever, anything in aid of any church or sectarian purpose, or to help support or sustain any school, academy, seminary, college, university, or other literary or scientific institution controlled by any church or sectarian denomination whatever; nor shall any grant or donation of land, money, or other personal property ever be made by the state, or any such public corporation, to any church or for any sectarian purpose.

Section four provides that no teacher or school officer shall be interested in the sale, proceeds, or profits of books or school materials which he obtains for the school; and that no teacher whatever be bonded to provide that there may be a superintendent in each county, whose powers, duties, and manner of election are to be prescribed by law.

Under this article of the constitution there has been much legislation, and the first section has been stretched in its meaning to permit the building of high schools. There has also been legislation permitting the mayor of Chicago to name school trustees to manage the schools and select a superintendent. In 1906 there were in Illinois 12,973 public free schools, in which there were 28,125 teachers, of whom 8835 were men and 22,150 were women. The male teachers received on an average $74.37 per month and the females $57.54. In the year 1906 the total cost of the public schools was $25,895,178.90, which is a cost of $17.58 for every pupil. This amount was derived from the income of the invested township funds, the state tax, and the district tax levies. In 1907 there were 435 high schools enrolling 52,394 pupils, from which 6311 pupils were graduated.

University of Chicago.—The University of Chicago is not only the greatest educational institution in Illinois, but one of the most richly endowed universities in the United States. John D. Rockefeller is its principal benefactor. The assets of the university are now more than $25,900,000. The present University of Chicago was incorporated in September, 1890. The university has preparatory, under-graduate, graduate, post-graduate, and professional departments. In the schools of law, theology, education, and mediæ, the number of additional courses are given. Unlike any other American university it has no vacation period. The scholastic year is divided into four quarters of twelve weeks each. Students may enter at the first of any quarter and are allowed such credits as they may have from other accredited universities. In the scholastic year 1905–06 there were 3062 enrolled students. The university has a library of more than 400,000 volumes.

The North-Western University at Evanston is a Methodist institution, which in 1907 had 3662 enrolled students. In 1907 there were in Illinois 55 collegiate institutions, with 1781 instructors and 29,858 students.

Catholic Educational System.—Illinois is preeminent for its Catholic educational system. In recent years it is conceded that in America the parochial schools are the life of the Church. In Chicago there are 87,040 pupils in the parochial schools. There are five high schools with an attendance of 1250 students; in the colleges for boys there are 3000 students; in the academies for girls there are 5100 pupils. In Chicago the total number of pupils in the parochial schools, academies, and colleges is 96,390.

Catholic Colleges in Illinois.—Loyola University, Chicago, which is still in course of construction, will be, when completed, the largest Catholic educational institution in Illinois. Three fine buildings will stand in a semicircle facing Lake Michigan on the north side, about the same distance from the centre of the city as the Chicago University is from the centre of Chicago on the south side. The law school, which is now established, is in the down-town district; and the other schools, when established, will also be there. The preparatory and collegiate departments will be on the university grounds. The university will be, when completed, one of the finest Jesuit institutions in America. St. Ignatius College, Chicago, was erected in 1869 and exists under a charter granted by the State of Illinois. The number of students in 1907 was 600. The college library contains 28,000 volumes. Only a few miles distant from St. Ignatius College is the place on the south branch of the Chicago River where Father Marquette, the great Jesuit explorer of Illinois, founded the first mission on the site of the metropolitan city of Chicago. De Paul University (formerly St. Vincent's College), Chicago, is conducted by the Vincentian Fathers. The number of students in 1907–08 was 252.

The importance of the Catholic school system here is shown by the fact that in Illinois there are 20 colleges and academies for boys with an attendance of 3838; 44 academies for girls with an attendance of 8533; 1042 parochial schools with an attendance of 119,425. Figuring the cost of educating every Catholic pupil at $17.58, which is the cost under the public school system, there is an annual saving to the state by the Catholic educational system of $2,097,509.08. In Illinois as in other states the Church receives no state aid and Catholics pay taxes for the support of all schools. The standard of secular education in the Catholic schools ranks higher than that in the public schools. In examinations for teachers in the public schools and in competitive examinations for the civil service, graduates of Catholic schools have taken higher percentages than graduates of public schools. No religious training of any kind is given in the public schools.

First Settlers.—In 1790 only 4280 persons were found between the Ohio River and the Mississippi and the Pennsylvania and the Mississippi. In 1791 there were only 1221 white inhabitants in Illinois. The country had been explored by the Jesuit and other Catholic missionaries and French traders. Some French settlers followed the missionaries. American immigration did not begin until the year 1779–80. The southern part was the first to be populated. The first immigrants came from Pennsylvania, West Virginia, Maryland, South Carolina, and Kentucky. In 1810, the census returns showed the inhabitants of Illinois to number 11,501 whites, 168 slaves, and 613 of all others, an increase of four hundred per cent during the preceding decade. Population was 5079. In the south a large proportion were Irish republicans, who believed in Ireland as an independent nation, and who understood and sympathized thoroughly with American ideals and institutions even before their arrival in the States. Many of these Irish pioneers in Illinois had a good education, among them John Doy, the first schoolteacher in the state; they made their impress especially on the southern part. A descendant of one of them, Stephen A. Douglas, a convert to Catholicism, was a judge, U. S. senator from Illinois, and presidential candidate against Lincoln. So important was this element in the political life of the state, that eight of the first sixteen governors were Americans of Irish descent.

The northern half of Illinois, because of its location,
was originally peopled by other races. New England had held French power in Canada under control until Wolfe broke it on the plains of Abraham; but the Americans had not driven the red man from the lake region until a considerable time after Clark had entered from the north. The United States of America, so far as the red man gave way at the narrow gateway, between Lake Erie and the Ohio River, and then there was an influx of Americans of varied foreign descent as well as more recent immigrants from Europe. The majority were the Puritans of New England, Irish Catholics, and Germans from Pennsylvania. Up to the year 1810 the Irish immigration was the largest and the German second; afterwards the German was the largest and the Irish second, then come the Swedes, the Poles, the English, the Bohemians, the Canadians, the Norwegians, the Danes, the Scotch, the Swiss, the Welsh, and the Belgians in order. Since about 1800 the great tide of immigration has been Slavic and Italian.

ADMISSION TO THE UNION.—Illinois was admitted to the Union 31 December, 1818, during the presidency of James Monroe. The enabling Act of 1818 gave the people the right to form a state constitution within the limits fixed by Congress. There was a convention in 1817, in which the citizens of which were selected by the white citizens who were six months in the territory. The delegates were empowered to call a new convention to form a constitution or they might do the work themselves. The only conditions imposed were that the form of government must be republican, that the state should not ask for the appointment of a delegate to Congress, the northern boundary of the state was extended to the parallel of 42° 30' N. lat. instead of 41° 39' as reported by the committee. The object of this amendment, as stated by Judge Pope, was “to gain for the proposed state a coast line to the Lake Michigan, and secure to the perpetuity of the Union, as much as Illinois would thereby be connected, through the lakes with the states lying to the eastward.” The bill, as amended, passed; and if the amendment had not been adopted the territory out of which fourteen counties have been carved, would have been lost to Illinois and become a part of Wisconsin. By adding this territory covered by the amendment, Illinois in 1824 was saved from becoming a slave state, and thereby, afterwards under the guiding hand of Lincoln, made safe for the Union. Although the Missouri compromise of 1820 prohibited slavery north of 36° 30', and Illinois was north of 36° 30', yet the slaveholders made a desperate attempt to make Illinois a slave state; but the friends of freedom, especially those in the northern counties, led by Governor Cole won the fight in 1824, when the state declared against slavery in its constitution. This was accomplished until the adoption of the Constitution of 1848.

Mormonism got a foothold in Illinois between 1840 and 1846, at a place called Nauvoo on the Mississippi, but Joseph Smith, the so-called prophet, precipitated a local civil war and was killed by a mob while in jail; the Mormons were driven out of Illinois and afterwards moved to Utah. Nauvoo now contains a Catholic academy for girls. Extensive internal improvements in the state were projected between 1830 and 1840, and some were made, the most important and successful enterprise being the building of the Illinois and Michigan canal. The state was saved from bankruptcy by the able leadership of Governor Ford.

In the fifties Illinois assumed the most important rôle in the life of the nation. Stephen A. Douglas and Abraham Lincoln became national characters. The Kansas-Nebraska bill, which was fathered by Stephen A. Douglas, declared in one section the Missouri Compromise to be inconsistent with the principle of non-interference by Congress with slavery in the states and territories as recognized by the compromise measure of 1850. The goal of the ambition of Douglas was the presidency. The Fugitive Slave Law had been passed and the demands of the slave owners were confirmed by the Supreme Court of the United States in the Dred Scott decision. Douglas wanted to be senator from
Illinois in 1858, and president in 1860. Lincoln was a senatorial candidate at the same time. The election resulted in Douglas's being chosen senator, but certain of his declarations on the slave question enraged the slaveholders of the South, split the Democratic party and made Lincoln the focal figure and President of the United States. When Fort Sumter was fired on in April, 1861, most of the Illinois Democrats followed the leadership of Stephen A. Douglas, pledged their support to, and afterwards offered their lives for, the cause of the Union. In the Civil War Illinois furnished the equivalent of 214,193 men for the Union army, eleven times as many as the Illinois Union army men like Logan, Grant, Shields, and Mulligan.

Ecclesiastical Statistics. — The ecclesiastical province of Chicago, which coincides in its territorial limits with the State of Illinois, comprises the Archdiocese of Chicago, and the Dioceses of Belleville, Alton, Peoria, and Rockford. In it there are 1 archbishop, 6 bishops, 1,217 priests, 211 ecclesiastical students, 806 churches, 84 missions, 86 chapels, 2 training schools for boys, 1 industrial school for girls, 12 orphan asylums, 2 infant asylums, 1 industrial and reform school, 100,872 young people under Catholic instruction. In the last twenty years that Chicago has been a city, there has been the opening of

1 working-boys' home, 3 working-girls' homes, 1 school for the aged, 11 homes for the aged, 50 hospitals, 5 committees nursing sick at their homes, and a Catholic population of 1,488,644. No records have been kept or census taken which would show the number of Catholics residing in Illinois, but the Catholics of Irish birth or descent far outnumber all others. Then in their order come the Germans, Poles and other Slavic people, Italians, Bohemians, and French. Chicago was made an episcopal see by Pope Gregory XVI, and Right Rev. William Quarter, a native of Ireland, was appointed as its first bishop in 1838, and was consecrated 10 April, 1844, and died 10 April, 1848. He began his labours with several priests in his diocese and no ecclesiastical students. He ordained twenty-nine priests and left forty clergymen and twenty ecclesiastical students. He built thirty churches, ten of which were either brick or stone; at his death all these were free from debt. His successors were Bishops James Van de Velde, Anthony O'Regan, and James Duggan.

In 1880 Chicago became an archbishop, the Most Reverend Patrick A. Feehan being its first archbishop, during whose administration schools were built to accommodate 7,000 pupils. Before the first archbishop is the Reverend James E. Quigley; having found that the Church had made such growth in his diocese, that it could not be effectively administered by one person, he petitioned Rome to erect the Diocese of Rockford, and include in it twelve counties then forming part of the archdiocese. The petition was granted 23 September, 1868. The Archdiocese of Chicago now comprises the Counties of Cook (including Chicago), Lake, Du Page, Kankakee, Will, and Grundy, and in Catholic population is next to the Archdiocese of New York (see CHICAGO, ARCHDIOCESE OF). The Bishop of Alton is Rt. Rev. James Ryan; of Belleville is Rt. Rev. John Jansen. The Bishop of Peoria was Rt. Rev. John Lancaster Spalding, who has recently resigned on account of failing health; the administrator is Rt. Rev. Peter J. O'Reilly. The Bishop of Rockford is Rt. Rev. Peter J. Muldoon, formerly auxiliary Bishop of Chicago.

The most important event in the history of the Catholic Church in America since the Third Plenary Council of Baltimore was the first American Catholic missionary congress held in Chicago, 15-18 November, 1908, under the auspices of the Catholic Church Extension Society of the United States of America. At that missionary congress eighty-nine distinguished members of the American Catholic hierarchy, as well as His Excellency, the Most Reverend Diomede Falcone, were in attendance. The Catholic Church Extension Society (see MISSIONS) was founded and fostered by Archbishop Quigley, who guided its destinies and gathered around him the men who made the Church Extension a great factor in the Catholic life of America. The following are the names of Chicago's clergy who were representatives of the Catholic bishops of Illinois: Males, John Dougherty. Lieutenant-Governor, was always a Catholic; Governor Bissell, Justice Mulkey of the Supreme Court, and Stephen A. Douglas were converts.

Principal Religious Denominations. — The religious census of 1906 for Illinois gives a total population of 5,418,670, of whom 3,341,473 did not attend any church. Members of all denominations numbered 2,077,197, of whom 932,094 were Roman Catholics (the ecclesiastical authorities, however, computed their number as being 15 per cent greater, i. e., 1,071,836), while in 1900 they are believed to have numbered 1,465,844; of Greek Orthodox there were 17,590; all kinds of Methodists, 263,344; all kinds of Lutherans, 202,
566; Baptists, 152,870; Presbyterians, 115,602; Disciples of Christ, 105,068; German Evangelists, 59,973; Congregationalists, 54,875; Christian Scientists, 5675; Unitarians, 2339; Quakers, 2343; others, 162,922. The total number of church organizations (parishes, etc.) in Illinois in 1864 was 9374 in number, valued, $66,222,514; debt, $6,317,979.

Law and Religion.—Freedom of worship is guaranteed by the Constitution of 1870. It is provided by the criminal code that: "Whoever disturbs the peace and good order of society by labor (works of necessity and charity excepted) or by amusement or diversions on Sunday, is guilty of a misdemeanor or if such disturbance or riot or amusement on Sunday, whereby the peace of any family may be disturbed, shall be fined not to exceed $25". In the administration of oaths in legal matters the person swearing uplifts his hand and swears by the ever-living God but is not compelled to lay the hand on or kiss the Gospels. Where a person has conscientious scruples against taking an oath he may make his solemn affirmation or declaration. There is no provision in the Criminal Code of Illinois against blasphemy and profanity; but one guilty of blasphemy and profanity may be charged with disorderly conduct and fined not to exceed $300. Both houses of the Legislature according to custom are opened with prayer. Christmas Day and New Year's Day are legal holidays; but Good Friday is not. The clergy are exempt from jury service, but not from military service. Custom, however, exempts them from military service.

Seal of Confession.—There is no statute in Illinois making confessions to a priest privileged communications. The common law is therefore in force. Greenleaf in his standard work on Evidence I-XIII, p. 248, states what this common-law rule is: "In the course of discovery the party is not entitled to require the testimony of clergymen and laymen; but all confessions, and other matters not confided to legal counsel, must be turned over when required for the purpose of justice. Neither penitential confessions, made to the minister or to members of the party's own Church, nor secrets confided to a Roman Catholic priest in the course of confession, are regarded as privileged communications". While this is and has been the law in Illinois there is no instance where the courts have forced a priest to divulge the secrets of the confessional. No priest would divulge them and no court in Illinois would hold him for contempt in refusing to answer. The Church is a corporation sole and acts by the archbishop or in his absence by the auxiliary, or in case of death by the administrator. This corporation exists under a special statute. In this corporation sole is vested the title to all diocesan property and this has been most conducive to the growth of the Church. In other dioceses of the state the title to church property is vested in the bishop. Under section 3, article ix, of the constitution property used exclusively for education, religious, charitable and charitable purposes may be exempted from taxation; but such taxation must be by general law. By the Revised Act, property used exclusively for church purposes has been exempted; but property used for parochial school purposes has not been exempted. No attempt, however, has been made to collect taxes for such schools.

Marriage and Divorce.— Marriages.—Marriages between cousins of the first degree or closer relations are prohibited. Insane persons and idiots are not capable of contracting marriage. Male persons over the age of seventeen years and females over the age of fourteen years may marry. Marriages may be celebrated, either by a minister of the Gospel in regular standing in the church or society to which he belongs, by a judge of any court of record, by a justice of the peace, by any superintendent of any public institution for the education of the deaf and dumb, or if the parties or either of them are Quakers they may be lawfully married in a certain form prescribed by law. All persons belonging to any religious society, church, or denomination may celebrate their marriage according to the rules and principles of such religious society, church, or denomination. Persons intending to be joined in marriage must before their marriage obtain a licence from the county clerk of the county where the marriage is to be celebrated. For the purpose of ascertaining the age of the parties, and the legality of the contemplated marriage, the county clerk may, and he always does, request the affidavit of either of the parties, or other witnesses. When a minor is an applicant for a marriage licence, or if any applicant is desirous of obtaining a licence to marry a minor, and the parent or guardian of such minor is not present to give his or her consent, then such consent may be in writing, and must be attested by two witnesses. The county clerk would incur a heavy penalty if he issued a licence for the marriage of a male under the age of twenty-one or a female under the age of eighteen, without the consent of parent or guardian.

The person authorized to marry any couple must, within thirty days after the solemnization of the marriage, make a certificate thereof, and return the same together with the licence, if any have been issued, to the clerk of the county in which the marriage was celebrated. The county clerk must make a registry thereof in a book kept for that purpose in his office, a registry containing the Christian names and surnames of the parties, the time of their marriage and the name of the person certifying the same; he also endorses on such certificate the time when the same is registered, gives it a number and preserves the same. If the clerk fail to register the marriage certificate within thirty days after the same is returned to him for that purpose (his fees therefor being paid), or if any minister, judge, justice of the peace, or other authorized person shall celebrate a marriage without a licence having been first obtained therefor, as provided by law, or shall fail to make and return to the county clerk such certificate in the time and manner provided by law, he shall forfeit and pay $100. Common law marriages were recognized in Illinois until recently, when by statute the rule was changed because of the number of fraudulent and fraudulent claims of the benefit of these meretricious relations.

Divorce.—The grounds for divorce are impotency, wife or husband living at time of such marriage, adultery, desertion without reasonable cause for the space of two years, habitual drunkenness for the space of two years, attempted murder, poisoning, or other means showing malice, extreme and repeated cruelty, conviction of felony or other infamous crime. The party asking the divorce must be a resident of the state one year before the filing of the bill, unless the offence complained of was committed within the state, or whilst on board of any vessel, both of the parties resided in the state. Divorce in no way affects the legitimacy of the children of such marriage, except in cases where the marriage is declared void on the ground of a prior marriage. The proceedings must be had in the county where the complainant resides, but process may be directed to any county in the state. The court may, in its discretion, order the process to be served on the parties by publication. When the defendant appears and denies the charges in the complainant's bill of complaint, either party has the right to have the case tried by a jury, but jury trials are rarely asked for. When the court takes the case out of chancery, the cause is usually tried by examination of witnesses in open court. Where no answer is put in by the defendant a trans-
cript of the evidence must be signed by the judge and preserved as a certificate of evidence in order to sustain the decree. Most default decrees are obtained on the theory of desertion or cruelty. If the charge be cruelty there must be proof of more than one act, and the complainant must be supported by at least one witness. In Illinois, as in other states, divorces have become a menace to society.

The court may on application of either party make such order concerning the custody and care of the minor children of the parties as will promote the welfare of the children. The court may award alimony pendente lite, solicitor's fees, and suit money, and when a divorce is decreed the court may make such order touching the alimony and maintenance of the parties as will promote the welfare of the children, as from the circumstances of the parties and the nature of the case, shall be fit, reasonable, and just; and in case the wife be the complainant, to order the defendant to give reasonable security for such alimony and maintenance, or may enforce the payment of such alimony and maintenance in any other manner consistent with the rules and practices of the court. And the court may on application, from time to time, make such alterations in the allowance of alimony and maintenance, and in the care, custody, and support of the children, as shall appear necessary. Any judgment or order of divorce is subject to a fine of from $100 to $1000 for each offence, or imprisonment in the county jail not less than three months nor more than one year, or both in the discretion of the court. Neither party to the divorce must marry within one year. There is a "separate maintenance" statute in Illinois, which is in the nature of a divorce a mensa et thoro.

PUBLIC INSTITUTIONS.—In Illinois there are schools for the deaf and blind at Jacksonville; industrial home for the blind at Chicago; charitable eye and ear infirmary at Chicago; hospitals for the insane at Jacksonville, Kankakee, Elgin, Anna, Watertown, and Bartonville; asylum for insane criminals at Chester; colony for epileptics in process of organization, location not yet decided upon; asylum for feeble-minded children at Lincoln; soldiers' orphans' home at Normal; soldiers' and sailors' home at Quincy; soldiers' widows' home at Woodstock; New York Penitentiary, Joliet; fourth ward, Chester; a reformatory at Pontiac; a training school for girls and home for juvenile female offenders at Geneva; and a school for boys at St. Charles.

SALE OF LIQUOR.—The sale of liquor is considered a legitimate business in Illinois if the keeper of the dramshop be of a license, but the keeping of any of a tipping house on Sunday is forbidden by statute under penalty of $200: however, in Chicago there is an "open Sunday" under an ordinance in contravention of the statute. The Dramshop Act of Illinois provides heavy penalties for the sale of liquor at retail without a license, and trespass penalties governing the sale of liquor within their territorial limits. A violation of either the Dramshop Act or a city or village ordinance is quasi criminal in its nature, and the punishment may be either a fine or imprisonment or both. It may be said generally with reference to the sale of liquor, that the people of Illinois have adopted the theory of regulation rather than prohibition.

WILLS AND TESTAMENTS.—In Illinois the privilege of disposing by will is not recognized by the civil law as a natural right, but depends on positive law, which within its sphere is applicable. Any citizen of Illinois one who has testamentary capacity may make a will; and the tests of testamentary capacity are: ability to transact ordinary business, and to understand the business in hand at the time of making the will. To entitle a will to probate it must be in writing and signed by the testator or testatrix, or in his or her presence by some one under his or her direction; attested by two or more credible witnesses; two witnesses must sign the will, one who signed the testator or the testatrix sign the will in their presence or that he or she acknowledged the same to be his or her act or deed; they must swear that they believed (or believe) the testator or testatrix to be of sound mind or memory at the time of signing or acknowledging the same. A will made according to the laws of foreign countries, which was the testator's domicile, may be proved in Illinois as to personalty only; and if made and proved in another state, an exemplified copy may be admitted to probate in Illinois, and affect reality as well as personality. A citizen of Illinois, temporarily absent, may make a will according to the laws of the country where he or she is situated. The courts do not favour defeating a will for mere informality; and if the intention can be ascertained from the instrument, that intention will be carried out if possible. No time is prescribed within which a will must be presented for probate; but there is a penalty for neglecting to take a will. A husband cannot disinherit a wife by his will; she may renounce and take under the statute. Appeal lies from the order of the probate or county court to the circuit court. A bill in chancery under the statute may be filed to set aside a will or the probate thereof. Any act of fraud and deception is an appeal from the circuit court, and is not a limitation upon any general jurisdiction. Only a party in interest can contest the validity of a will.

CHARITABLE BEQUESTS.—The statute of charitable uses (43 Eliz. 7) is a part of the common law of the state of Illinois, and has not been repealed by statutes for the regulation and maintenance of state charitable institutions. Charitable bequests are viewed favourably in equity; and while equitable jurisdiction over them is not derived from the statute of charitable uses, such statute is regarded as showing the general intent of the term "charitable". The Supreme Court of Illinois in the leading case of "Haefner et al. vs. Clogan et al., 171 Ill. 462" has defined "charity" as a gift to be applied consistently with existing laws, for the benefit of an indefinite number of persons, either by bringing their hearts under the influence of education or by relieving them from suffering, or constraint, by assisting them to establish themselves for life, or by erecting or maintaining public buildings, or works, or otherwise lessening the burdens of government. In the case of supreme court of Illinois held that the doctrine of superstitious uses, arising from the statute of 1 Edward VI, ch. 14, under which devises for procuring the saying of masses were held void, is not in force in Illinois and has never obtained in the United States; and that a devise of real estate to a religious society in trust, the property to be sold and the proceeds expended for saying masses for the repose of the testator's soul and the souls of his relatives, is a valid charitable bequest. And the court also held in this case, that a devise in trust to an unincorporated religious society will not be allowed to fail for want of a trustee, as the court will appoint a trustee to take the gift and apply it to the purposes of the trust. In this case the court laid stress on the fact that the Masses said in the church were public. Charitable trusts will be upheld in Illinois though vague and general in terms; and they do not fail because the beneficiaries are subject to change.

Cemeteries.—Cemetery associations or companies incorporated for cemetery purposes, by any general or special law in Illinois, may acquire by purchase, gift, or devise, and may hold, own, and convey, for burial purposes, only so much land as may be necessary for use as a cemetery or burial-place for the dead.
There may be a conveyance of any lot of land not exceeding five acres to a county for the interment of the dead, for the use of any society, association, or neighbourhood, and such will thereafter be exempted from taxes. There are laws in Illinois prohibiting the sale or lease of land for cemetery purposes; the sale of land not suitable for cemetery purposes; the removal of cemeteries; fixing penalties for destroying, mutilating, or injuring any tomb or other property, or committing a breach of the peace; the enforcement of police protection; the making of grants in trust for purposes of repairs, improvements, and ornamentation; the investment of trust funds; the exemption of trust funds from taxation; the organization of county cemetery boards and providing for burial of indigent soldiers and sailors. The laws governing cemeteries impose no additional burden on cemeteries owned by Catholic institutions.

Illinois Indians (Illinois, through the French, from Illini-wek, i. e., men: the name used by them-selves), an important confederacy of Algonquian tribes formerly occupying the greater part of the present state of Illinois, together with the adjacent portion of Wisconsin, Iowa, and Missouri. Their language, which was perhaps the softest of all the Algon- quian tongues, differed only dialectically from that of the Ojibwa, their eastern neighbours and several other tribes. They possessed original villages numbering from 000 to 10,000 souls, in five principal sub-tribes, the Cahokia, Kasaskia, Michigamea, Peoria, and Tamaroa. Physically the early Illinois were described as tall, robust and well- featured, but lacking in courage and steadiness of purpose, and greatly given to licentiousness. The priests and teachers have been the same as among other tribes. They were more hunters than farmers and seldom kept their villages long in one place. Their houses were long communal cabins, with four to five fires ranged along the central passage, each fire accommodating two families. The greatest village of the confederate tribes in 1682 was estimated by Father Rasle to contain 300 such cabins, while other explorers of about the same period reported as high as 400. Polygamy was common, a

man sometimes marrying several sisters of the same family, and they appear to have had the clan system. Among their great ceremonies was the noted Calumet dance, the special aversion of the missionaries, which spread from the Illinois to all the tribes of the central region. Their dead were generally disposed of by being wrapped in skins and fastened upright to trees. They carried on a defensive war against most of the surrounding tribes, as well as against the invading Iroquois, but were uniformly friendly toward the French and the English traders. They were said to live on the banks of the Des Moines in Iowa, and on his return passed through their villages on the Illinois, preening as he went. He had already made a study of the language, at La Pointe, in anticipation of establishing a mission, as they now requested. Père Laib and Père Hennepin went to the Immaculate Conception, among the Kaskaskias in April, 1675, but died a month later while on his way to Mackinaw. The work was taken up by Allouez, but again discontinued owing to the Iroquois inroads and the opposition of La Salle, who brought in three Recollet missionaries to the Illinois, under the care of Father Hennepin. They found little encouragement, however, and Father La Ribourelle being slain by a roving war party, the Recollect attempt was abandoned. In 1684 Allouez returned and resumed work among the Peoria gathered at the French fort at the head of Peoria Lake (Rockford, Ill.). He was followed by Gravier (1687), Rasles (1692), and again by Gravier (1693), to whom we owe the first grammar and dictionary of the language. Father Gravier died in 1706 from a wound received in an encounter with a heathen mob. A second mission was founded about 1700 among the Tamaroa, near the French post of Cahokia, nearly opposite St. Louis, and another about the same time among the Kaskaskias. Twice a year, for a few weeks in summer and for a longer period in winter, all the bands left their villages for the buffalo hunt and were followed by the missionaries. When visited by Charlevoix in 1721 the missions were jointly under the care of Father Charlevoix and Père de la Cane. The missions. The Peoria were still almost all pagan, as were portions of the other tribes, but the majority were now Christian, and intermarriage with the French settlers had become common. About this time several of the nation, including the chief, Chicaco, visited France and were much impressed by what they saw.

In spite of their receptive temperament the Illinois were fickle, and intermarriage introduced by the French garrisons did much to nullify the work of the missionaries and demoralize the tribes. As allies of the French against the hostile Chickasaws and Natchez they had encouraged an expedition in 1730 a detachment accompanied the ill-fated expedition of d'Artaguettes against the Chickasaws, and among the prisoners who suffered a horrible death at the state was the devoted Jesuit missionary, Senat. By this time invasion by the northern tribes and wholesale dissipation at home had rapidly thinned the number of the Illinois, and in 1750 they had been reduced to about 1000 souls with apparently but one mission. The priests of the Foreign Missions were now devoting themselves entirely to the French. On the transfer of Louisiana to Spain in 1763 the Jesuit missions, including those of the Illinois, were suppressed. Although the missions generally remained as secular priests. The murder of the celebrated chief Pontiac, by a Kaskaskia Indian bribed by an English trader, brought
down upon the Illinois the swift vengeance of the
consecrated northern tribes, who began a war of
extermination that in a few years reduced the na-
tion to a handful of refugees among the French
settlements. In 1778 there remained only 380 in two
villages in the neighborhood of Kaskaskia, completely
demoralized by the fears of 1776. In 1780, before he came into
conference with the Papal representatives
by Kaskaskia and Peoria, sold their remaining lands
in Illinois and removed to north-east Oklaho-
ma, where they are now confederated with the remnant
of the Wea and Kickapoo (part of the Miami), under
the official designation of "Peoria and confederated
tribes." The entire Kickapoo nation, estimated in
1808 to consist of all of mixed white blood, but still retaining some
share of their language and their Catholic inheritance.

JAMES MOONEY.

Intlyd (Iltutus), Saint, flourished in the latter
part of the fifth and beginning of the sixth century,
and was held in high veneration in Wales, where many
churches were dedicated to him, chiefly in Glamor-
ganshire. Born in Armorica, of Bicts and Bicts-
quinilla, sister of Embr Lindw, he was a grand-
nephew of St. Germanus, Bishop of Auxerre. Ac-
cording to one account he crossed to Britain and joined
King Arthur's Court, and later went to Glamorgan,
where he was miraculously converted by St. Cadoc.
This story is a late life of the saint (Cottonian MS., Vesp. A XIV).
He is supposed to have been ordained by St. Dubeiuicus, Bishop of
Landaff, and with the assistance of Meirchion, a
Glomorgan chieftain, to have built a church and a
monastery, which became a centre of learning, one of
the three great monastic schools in the Diocese of
Landaff. Among the scholars who flocked thither
were Sts. Gildas, Samson, and Maglorius, whose lives,
written about 600 ("Acta SS. Ordinis S. Benedicti",
Venice, 1733), constitute the earliest source of informa-
tion on St. Intlyd. According to these, his school
was situated on a small waste island, which, at his inter-
cession, became a fertile mainland, and was known as Llanilleyd Fawr, the
Welsh form of Llantwit Major, Glamorganshire. The story of
the miracle may have been inspired by the fact that the
saint was skilled in agriculture, for he is supposed to
have introduced among the Welsh better methods of
ploughing, and to have helped them reclaim land from
the sea. The legendary place of his burial is close by
the chapel dedicated to him in Brecknockshire, and is
called Bedd Gwyl Intlyd, or the "grave of St. Intlyd's
eve," the old custom having been to keep vigil there
on the eve of his feast, which was celebrated 7 Febru-
ary. There is still to be seen in Llantwit Major a
cross, probably of the ninth century, bearing the in-
scription: SAMSON POSUIT HANC CRUCEM PRO ANIMA
EIDUS ILYTILSAMSON REGIS SAMUEL EBISAR.

F. M. RUDGE.

Illuminati, the name assumed by the members
of a secret society founded by Adam Weishaupt in 1776.

History.—Weishaupt was born of Westphalian
parents at Ingolstadt (Bavaria), on 6 February, 1748,
and lost his father in 1753. Although educated at a
Jesuit college he was an early upholder of the
free-thinking godfather, of the director of the high-
school of Jena, to whom he owed his appointment
as professor of civil law at the University of Ingol-
stadt in 1772. He was the first layman to occupy the
chair of canon law at this university (1773), but, in
consequence of the growing rationalistic influence
which he exerted over the students both in his aca-
demic capacity and in his personal intercourse with
them, his career was rendered more and more
unpopular by the clergy of his diocese, and by his
loyal adherents of the Church and with those who
were influential in government circles. As, furth-
more, his obstinate nature led him to quarrel with
almost everyone with whom his intercourse was at all
prolonged, he felt the need of a powerful secret
organization to shield him in his conflict with his
adversaries and in the execution of his rationalistic
schemes along ecclesiastical and political lines.
At first (1774) he aimed at an arrangement with the
Freemasons. Closer inquiry, however, destroyed his
high estimate of this organization, and he resolved to
found a new society which, surrounded with the greatest
possible secrecy, would enable him most effect-
ually to realize his aims and could at all times be
precisely adapted to the needs of the age and local
conditions.

His order was to be based entirely on human
nature and observation; hence its degrees, ceremonies, and
rites were to be developed by himself in the light of experience and
wider knowledge, and with the co-operation of all the members, they were
to be steadily improved. For his prototype he relied
mainly on Freemasonry, in accordance with which he
modelled the degrees and ceremonial of his order.
After the pattern of the Society of Jesus, though dis-
torting to the point of caricature its essential features,
he built up the strictly hierarchical organization of his
society. "To utilize for good purposes the very
means which that order employed for evil ends," was,
according to Philo (Endl. Erklä., 60 sq.), "his desideratum.
For him the respect for authority, regarded as essential the "despotism of superiors"
and the "blind, unconditional obedience of subor-
dinates" (ibid.), along with the utmost secrecy and
mysteriousness. At the beginning of 1777 he entered
a Masonic Lodge and endeavoured, with other mem-
ers of the order, to render Freemasonry as subser-
vient as possible to his aims. As Weishaupt, how-
ever, despite all his activity as an agitator and the
theoretic shrewdness he displayed, was at bottom
only an unpractised bookworm, without the necessary
experience of the world, his order for a long time made
no headway. The same may be said of the Masonic
agent Freiherr von Knigge (Philo), a man of wide
experience and well known everywhere in Ma-
sionic circles, gave matters a decisive turn. In com-
pany with Weishaupt, who, as a philosopher and
jurist, evolved the ideas and main lines of the con-
stitution, Knigge began to elaborate the necessary
degrees and statutes (until 1780 the Min-
erval degree was the only one in use), and at the same
time worked vigorously to extend the order, for which
within two years he secured 500 members. When the
great international convention of Freemasons was
held at Wilhelmsbad (10 July to 29 August, 1752) the
"Illuminated Freemasons" with Weishaupt now
proclaimed to be the only "pure" Free-
masonry, had already gained such a reputation that
almost all the members of the convention clammed
for admission into the new institution. Particularly
valuable for the order was the accession of Bode
(Freimun, who commanded the highest Masonic circles. Assisted by Bode, Knigge laboured
dollently to convert the whole Masonic body into
"Illuminated Freemasons". A number of the most
prominent representatives of Freemasonry and "en-
lightenment" became Illuminati, including, in 1788,
Duke Ferdinand of Brunswick, the foremost leader
of European Freemasonry and the prince represen-
tative of the illuminism of his age. Other famous
members were Goethe, Herder, and Nicolai. The order was also propagated in Sweden, Russia, Poland, Denmark, Hungary, Austria, and France. But in 1783 dissensions arose between Kniej and Weishaupt, which resulted in the final withdrawal of the former on 1 July, 1784. Kniej could no longer endure Weishaupt’s pedantic and universalizing, which he frequently assumed offensive forms. He accused Weishaupt of “Jesuitism,” and suspected him of being “a Jesuit in disguise” (Nachtr., I, 129). “And was I,” he adds, “to labour under his banner for mankind, to lead men under the yoke of so stiff-necked a fool and so injurious a spirit?”

Moreover, in 1783 the anarchistic tendencies of the order provoked public denunciations which led, in 1784, to interference on the part of the Bavarian Government. As the activity of the Illuminati still continued, four successive enactments were issued against them (22 June, 1784; 2 March, and 16 August, 1785; and 18 August, 1787), in the last of which recruiting for the order was forbidden under penalty of death. These measures put an end to the corporate existence of the order in Bavaria, and, as a result of the publication, in 1786, of its degrees and of other documents concerning it, the last part of a rather compromising nature—but fortunately the Bavarian Government no longer believed it possible. The spread of the spirit of the Illuminati, which coincided substantially with the general teachings of the “enlightenment,” especially that of France, was rather accelerated than retarded by the persecution in Bavaria. In two letters addressed to the Bishop of Freising (18 June and 12 November, 1785) Fusi VI had also condemned the order. As early as 16 February, 1785, Weishaupt had fled from Ingolstadt, and in 1787 he settled at Gotha. His numerous apologetic writings failed to exonerate either the order or himself. Being now the head of a numerous family, he lived as a jurisconsult of society and public opinion, and died in 1803, reconciled with the Catholic Church, which, as a youthful professor, he had doomed to death and destruction—as the chronicler of the Catholic parish in Gotha relates.

**OBJECTS AND ORGANIZATION.**—As exhibiting the objects and methods of the order, those documents are authoritative which are given in the first and second sections of the bibliography. The subsequent modifications of the system, announced by Weishaupt in his writings after 1785, are irrelevant, since the order had spread far and wide before these modifications were published. The above-named documents reveal as the real object of the Illuminati the elaboration and propagation of a new, popular religion and, in the domain of politics, the gradual establishment of a universal democratic republic. In this society of the future, according to Weishaupt, was to be regulated by reason. By “enlightenment” men were to be liberated from their silly prejudices and become “moral” and “rational,” and thus to outgrow the religious and political tutelage of Church and State, of “priest and prince”. Morals was the science which makes man “mature”, and renders him conscious of his dignity, his destiny, and his power. The principal means for effecting the “redemption” of the world was found in unification, and the chief organs of this political and religious station of “wisdom”. These “schools” declares, “are always the archives of nature and of the rights of man; through their agency, man will recover from his fall; princes and nations, without violence to force them, will vanish from the earth; the human race will become one family, and the world be rational beings. Moral science alone will effect these reforms imperceptibly; every father will become, like Abraham and the patriarchs, the priest and absolute lord of his household, and reason will be man’s only code of law” (“Nachtr.”, pp. 80 sq.; repeated verbatim in Kniej, “Die neuesten Arbeiten”, p. 38). This redemption of mankind by the restoration of the original “freedom and equality” through “illuminatation” and universalism turned the sect into a cult, which is likewise the true esoteric doctrine of Christ and his Apostles. Those in whom the “illuminating” grace of Christ is operative (cf. Heb., vi, 4) are the “Illuminati”. The object of pure (i.e. illuminated) Freemasonry is none other than the propagation of this “enlightenment” and the securing of the conditions of this idea and will be so widely scattered that no efforts at extirpation, however violent, will avail to prevent the harvest (“Nachtr.”, pp. 44, 118; “Die neuesten Arb.”, pp. 11, 70). Weishaupt later declared (Nachtrag zu meiner Rechtfertigung, 77 sqq., 112 sqq.) that Masonry was the school from which “these ideas” emanated.

These objects of the order were to be revealed to members only after their promotion to the “priestly” degree (Nachtr., I, 68). The preliminary degrees were to serve for the selection, preparation, and concealment of the true “Illuminati” who were to open the way for the free religion and social organization of the future, in which all distinction of nations, creeds, etc., would disappear. The government of the order was administered by the superiors of the Masonic “churches”, “provincials”, “nationals”, and “areopagites” (who constituted the supreme council), under the direction of Weishaupt as general of the order. Members were acquainted only with their immediate superiors, and only a few trusted members knew that Weishaupt was the founder and supreme head of the order. All the members were obliged to give themselves a training in accordance with the aims of the society, and to make oaths, and to profess the order, on its part, pledged itself to further their interests by the most effectual means. They were especially recommended to systematically observe persons and events, to acquire knowledge, and to pursue scientific research in so far as it might serve the purposes of the order. Concerning all persons with whom they had intercourse they were to gather information, and on all matters which could possibly affect either themselves or the order they were to hand in sealed reports; these were opened by superiors unknown to the writers, and were, in substance, reported to the general council. The purpose of the other regulations was to enable the order to attain its object by securing for it a controlling influence in all directions, and especially by pressing culture and enlightenment into its service. All illuministic and official organs, the press, schools, seminaries, cathedral chapters (hence, too, all appointments to sees, pulpits, and chairs) were to be brought as far as possible under the influence of the organization, and princes themselves were to be surrounded by a legion of enlightened men, in order not only to disarm their opposition, but also to compel their energetic cooperation. A complete transformation of society was to be effected: public opinion would be controlled; the “priests and princes” would find their hands tied; the marplots who ventured to interfere would repent their temerity; and the order would become an object of dread to all its enemies.

Concerning the influence actually exerted by the Illuminati, the statements of the Freemasons—L. A. Hosseman, J. A. Starck, J. Robinson, the Abbé Baruel, etc.—must be accepted with reserve, when they ascribe to the order a leading role in the outbreak and progress of the French Revolution of 1789. Their presentation of facts is often erroneous, their inferences untenable, and their evidence not only lacking, but, in view of our present knowledge of the French Revolution (cf., e.g., Aulard, “Hist. pol. de l'
At the time of the division of provinces under Hadrian, it was subdivided into seventeen provinces, comprising also Thrace. When Constantine the Great in A.D. 324 divided the entire Roman Empire into four prefectures, Illyricum, as one prefecture, was assigned to Western Rome, the residence of the Illyrian prefect and pretorian prefect residing at Sirmium. But after the death of Theodosius I (379), the prefecture was divided into Eastern and Western Illyricum, the former embracing the two civil dioceses of Macedonia, including Epirus, Thessaly, and Greece, and Dacia, under the jurisdiction of a pretorian prefect residing at Thessalonica (Salona). Western Illyricum was placed under the civil diocese under the authority of a vicar of the prefect of Italy residing at Sirmium. In 379, or more probably, not until 395, Eastern Illyricum became a part of the Eastern Empire (cf. Rauschen, "Jahrbücher der christlichen Kirche unter dem Kaiser Theodosius dem Großen" Freiburg, 1897, 469-73).

Ecclesiastically, the whole of Illyricum, which had first received Christianity from St. Paul the Apostle, and Titus, his disciple, was from the first under the Bishop of Rome, as the Patriarch of the West, and, after the division of the empire, formed the eastern part of the territory subject to the pope, or Patriarch of Rome, although politically by Byzantium. As the patriarchs of Constantinople endeavored to extend their patriarchal authority over Eastern Illyricum, the popes sought to preserve intact their jurisdiction over the eastern part of Illyria by appointing the bishops of Thessalonica papal vicars for Illyricum. The first of these vicars is said to have been Bishop Acholus or Ascholius, (d. 383 or 384), the friend of St. Basil. His successor, Anyuius, was confirmed by Pope Damasus and his successor, Pope Siricius, as representative of the Roman See. In like manner, the succeeding popes, Anastasius I and Innocent I, extended the power of the bishops of Thessalonica over Illyria. The authority vested in the bishops of Thessalonica over the metropolitan and other prelates of Illyria was substantially that which usually enjoyed by a patriarch, except that patriarchal power is ordinary and attached to a definite see, while the jurisdiction of the vicars of Thessalonica was delegated; they exercised the patriarchal authority belonging to the pope, as his special commissary. The papal Vicariate of Thessalonica persisted for a century with practically no interruption until the connexion was weakened by the first Greek schism, brought about by Acacius, Patriarch of Constantinople (d. 444), and Petrus Megas, also of Alexandria, in the "Helenicon". The bishops of Illyria withdrew from communion with Rome, without attaching themselves to Constantinople, and remained for a time independent. Not until Dorothea, Bishop of Thessalonica, declared for the intruded patriarch, Timotheus, did the Illyrian bishops renounce allegiance to him (515) and proclaim to Pope Hormidas their loyalty to Rome.

After the suppression of the Acacian Schism, the vicarship of the bishops of Thessalonica does not seem to have been immediately restored, owing to the policy of the Byzantine emperors, Zenon and Anastasius; still they enjoyed a certain precedence over the other Illyrian bishops. When, in 541, Justinian I, to increase the prestige of his native city Scupi (the present Skopje or Uskup), raised the bishop of that city to the rank of Archbishop of Justiniana Prima, and placed him over the ecclesiastical provinces of the civil diocese of Dacia, without consulting Pope Agapetus, but was divided between the Metropolitan of Thessalonica, for the provinces in which Latin was spoken, and the Metropolitan of Justiniana Prima, for those in which Greek was the native tongue. Pope Vigilius (c. 545) was the first to give his approbation to this arrangement. The title of papal vicar was henceforth almost an
honorary title, as the popes, in the exercise of their patriarchal power, now dealt, for the most part directly with the individual bishops. At first the political situation was in their favour, Italy and Illyricum being both under the Eastern Empire. But even after a large part of both lands had been lost to the Byzantine Empire, Illyricum remained under the jurisdiction of the Western patriarchs, the popes, as for example Gregory the Great and Martin I, who exercised their metropolitan authority, without any objections on the part of the Eastern emperors or the patriarchs of Constantinople. As late as the middle of the 7th century, the ecclesiastical provinces of Eastern and Western Illyricum were undoubtedly within the Patriarchate of Rome. Soon afterwards, however, they began gradually to withdraw from communion with Rome, and the patriarchs of Constantinople succeeded in bringing Illyria under their jurisdiction. Even Pope Nicholas I attempted in vain to recover the ancient privilege of the Roman See to appoint the Bishop of Thessalonica as his vicar. From the end of the ninth century, the Roman Illyria appears in the "Notitiae episcopatuum" as wholly within the Patriarchate of Constantinople, with which it was involved in the Great Schism.

Meanwhile political changes of a far-reaching nature were taking place. Towards the end of the sixth century, Western Illyria was overrun by Avars and Slavic tribes, and at the beginning of the seventh century, it was occupied by Croats and Serbs. These gradually developed into the Slavic kingdoms of Dalmatia and Croatia, whose history was one of varied fortunes until at last they came under the authority of the Hapsburgs. Nothing but the eastern coast and the islands of the Adriatic remained under Byzantine control, and these only until the eleventh century. When the Republic of Venice was established in the ninth century, it was to establish her authority there. The Byzantine rule was of longer duration in Eastern Illyria, but even there was frequently threatened and weakened by Serbia and Bulgaria, until in the fourteenth and fifteenth centuries the Ottomans conquered the whole Balkan Peninsula. The name of Illyria then disappeared from history, only to acquire new significance through the modern history of Austria. Under Leopold I (1656–1705) the Serbs or Raizhi, who had been established on Hungarian territory since 1690, were designated as the Illyrian nation; to provide for their protection, the Magyar Pressburg in Hungary was created at the Court of Vienna, known as the Illyrian Court Deputation, which was abolished in 1777, and in 1791 enjoyed a brief revival as the "Illyrian Imperial Chancery." Napoleon united the territories on the Adriatic Sea, ceded by Austria in the Peace of Schönbrunn, in 1809, and then the province of Dalmatia, and the city of Ragusa, under the title of the "Seven Illyrian Provinces," made them a part of the French Empire, and placed their administration in the hands of a governor general (Marmont, Funot, and Fouqué). After his fall the territories reverted to Austria, and were constituted, together with the islands, a kingdom of Illyria, to which two Provinces were added in 1822 the civil district of Croatia and the littoral were separated and united with Hungary; the organization of the year 1849 did away entirely with the Kingdom of Illyria, resolving it into the crownlands of Carnia, Carniola, and the coast lands (Gore and Gradiska), and Thessaly.

Illyria. Illyricum septem (8 vols., Venice, 1751–1819; vol. V to VIII, ed. Coletti; OCTAVIANI, De veteribus et notis romani patriarchatu (Naples, 1828); DUCHER, L’Illyricum ecclesiasticum, Mystagogia, etc.; D’ARCHAMBEAU, L’Illyricum septem, etc., ed. Paris, 1905); NEMER in Kirchenlex.; the authenticity of the twenty-six papal Briefs concerning the Church of Thessalonica, from the third to the fifth centuries, has been attacked by J. FREYMARK in Sitzungsberichte der bayerischen Akademie der Wissenschaften, phil.-hist. Classe, Munich, 1891, 771–97, and par-
(Ex., xxv, 18-22; III Kings, vi, 23-8; viii, 6-7, etc.). But, except for the human heads of the cherubim (Ezech., xli, 19; Ex., xxv, 20; the references to them when combined seem to point irresistibly to some such figures as the Assyrian winged bulls with human heads as symbolizing the power of those who succeed to the favor of the Old Testament. In this point at least the Jew seems to have understood the commandment to forbid the making of such statues, though even this is not clear in the earlier periods. The ephod was certainly once a statue of human form (Judges, viii, 27; xvii, 6; I Kings, xx, 13, etc., and were the tetrarch, because it had images of living things (pyrrh pedophs); since our laws forbid us to make such things (Jos. vita, 12). The Jews at the risk of their lives persuaded Pilate to remove the statues of Caesar set up among the standards of the army in Jerusalem (Ant. Jud., i, Xvii, c. iii, iv). In both Jud., ix (xiv), 2-3; they implored Vitellius not even to carry such statues through their land [ibid., c. v (vii), 3]. It is well known how fiercely they resisted various attempts to set up idols of false gods in the temple (see Januars, II); though this would be an abomination to them even apart from their general horror of images of any kind. So it became the general conviction that Jews abhor any kind of statue or image. Tacitus says: "The Jews worship one God in their minds only. They hold those to be profane who make images of the gods with corruptible materials in the likeness of them; for he is sure to be profane who aims at the match of an idol in their temple, Jews, especially in the Diaspora, made no difficulty about embellishing their monuments with paintings even of the human form. There are a number of Jewish catacombs and cemeteries decorated with paintings representing birds, beasts, fishes, men, and women. Dom Henri Iroule has described the tombs in his "Manus d'archéologie chrétienne" (I, 495-528). At Gamart, North of Carthage, is one whose-tombs are adorned with carved ornaments of garlands and human figures; in one of the caves are pictures of a horseman and of another person holding a whip under a tree, another at Palmyra is of Diana Randanini by the Appian Way has a painted ceiling of birds, fishes, and little winged human figures around a centre-piece representing a woman, evidently a Victory, crowning a small figure (reproduced op. cit., p. 515). At Palmyra is a Jewish funeral chamber painted throughout with winged female figures holding up round portraits; above is a picture, quite in the late Roman style, of Achilles and the daughters of Lycomedes (p. 515). Many other tombs have been found elsewhere (see especially the cone on p. 522 where purely classical figures support the seven-branched candlestick), wall-paintings, and geometrical ornaments, all in the manner of Pompeian decoration and the Christian catacombs, but from Jewish cemeteries, show that, in spite of their exclusive religion, the Jews in the first Christian centuries had submitted to the artistic influence of their Roman neighbours. So that in this matter when Christians began to decorate their catacombs with holy pictures they did not thereby sever themselves from the custom of their Jewish forefathers.

(2) CHRISTIAN IMAGES BEFORE THE EIGHTH CENTURY.—Two questions that obviously must be kept apart are those of the use of sacred images and of the reverence paid to them. That Christians from the very beginning adorned their catacombs with paintings of Christ, of the saints, of scenes from the Bible (the categories of which are too obvious to need any one to point them out) is a fact known for it to be necessary to insist upon the fact. The catacombs are the cradle of all Christian art. Since their discovery in the sixteenth century,—on 31 May, 1578, an accident revealed part of the catacomb in the Via Salaria,—and the investigation of their contents that has gone on steadily since, we are able to reconstruct an exact idea of the paintings that adorned them. That the first Christians had any sort of prejudice against images, pictures, or statues is a myth (defended amongst others by Erasmus) that has been abundantly dispelled by all students of Christian archeology. The idea that they must have feared the danger of idolatry among their new converts is disproved in the simplest way by the pictures, even statues, that remain from the first centuries. Even the Jewish Christians had no reason to be prejudiced against pictures, as we have seen; still less had the Gentile communities any such feeling. They accepted the art of their time and used it, as well as a poor and persecuted community could, to express their religious ideas. Roman pagan cemeteries and Jewish catacombs already showed the way; Christians followed these examples with natural modifications: From the second half of the first century to the time of Constantine their doors and tombs had been adorned with their rites in these underground chambers (Kraus, "Gesch. der christl. Kunst", I, 38). The old pagan sarcophagi had been carved with figures of gods, garlands of flowers, and symbolic ornament; pagan cemeteries, rooms, and tombs had been painted with scenes from mythology. The Christians could not have been or were ornamented with indifferent or symbolic designs—palms, peacocks, vines, with the chi-rho monogram (long before Constantine), with bas-reliefs of Christ as the Good Shepherd, or seated between figures of saints (Kraus, op. cit., 236-40), and sometimes, as in the famous one in Rome, one of the elaborate tombs of the New Testament (ibid., 237). In the catacombs were covered with paintings. There are other decorations such as garlands, ribands, stars, landscapes, vines—no doubt in many cases having a symbolic meaning.

One sees with some surprise motives from mythological employed in a Christian sense (Psyche, Eros, winged Victories, Orpheus), and evidendy used as a type of our Lord. Certain scenes from the Old Testament that have an evident application to His life and Church recur constantly—Daniel in the lions' den, Noe and his ark, Samson carrying away the gates, Jonah. Moses striking the rock. Scenes from the New Testament are very common too, the Nativity and arrival of the Wise Men, our Lord's baptism, the miracle of the loaves and fishes, the marriage feast at Cana,
Lazarus, Christ teaching the Apostles. There are also purely typical figures, the woman praying with uplifted hands representing the Church, harts drinking from a fountain that springs from a chi-rho monogram, sheep. And there are especially pictures of Christ as the Good Shepherd, as law-giver, as a child in His mother’s arms, His head alone also a defiled one. Lady alone, of St. Peter and St. Paul—pictures that are not scenes of historic events, but, like the statues in our modern churches, just memorials of Christ and His saints (for all this see Palmer, “An Introduction to Early Christian Symbolism,” ed. Brownlow and Nolle, ed. T. W. Butler, 1900; Kuttner, op. cit., I, 65–68, and especially the classified list in Leclercq, op. cit., I, 529–88). In the catacombs there is little that can be described as sculpture; there are few statues for a very simple reason. Statues are much more difficult to make, and cost much more than wall-paintings. But there was no principle against them. Eusebius describes the ancient statues at Casarea Philippi representing Christ and the woman He healed there (“H. ecle.,” VII, xviii; Matt., ix, 20–2). The earliest sarcophagi had bas-reliefs. As soon as the Church came out of the catacombs, became richer, had no fear of persecution, the same people who had painted their houses with frescoes made the same subjects. The famous statue of the Good Shepherd in the Lateran Museum (Kraus, I, 227) was made as early as the beginning of the third century; the statues of Hippolytus and of St. Peter date from the end of the same century (ibid., 250–252). The principle was quite simple. The first Christians were accustomed to see statues of emperors, of pagan gods and heroes, as well as pagan wall-paintings. So they made paintings of their religion, and, as soon as they could afford them, statues of their Lord and of their heroes, without the remotest fear or suspicion of idolatry (Leclercq, op. cit., II, 245–252).

The idea that the Church of the first centuries was in any way prejudiced against pictures and statues is the most impossible fiction. After Constantine (306–337) there was of course an enormous development of every kind. Instead of burrowing catacombs Christians began to build splendid basilicas. They adorned them with costly mosaics, carving, and statues. But there was no new principle. The mosaics represented more artistically and richly the motives that had been painted on the walls of the old caves, the larger statues continue the tradition begun by carved sarcophagi and life-size figures of emperors. We can see that with the Iconoclast persecution holy images are in possession all over the Christian world. St. Ambrose (d. 397) describes in a letter how St. Paul appeared to him one night, and he recognized him by the likeness to his pictures (Ep. ii, in P. L., XVII, 821). St. Augustine (d. 430) refers several times to pictures of our Lord and the saints in churches (e.g. “De cons. Evang.,” X, in P. L., XXXIV, 1049; “Contra Faust. Man.,” xxxii, 73, in P. L., XLI, 446); he says that some people even adore them (“De mor. ecle. cath.,” xxxiv, P. L., XXXII, 1342). St. Jerome (d. 420) also writes of pictures of the Apostles as well known ornaments in the churches (In Io. Fan., 19). St. Paulinus of Nola (d. 431) paid for mosaics representing Biblical scenes and saints in the churches of his city, and then wrote a poem describing them (P. L., LXI, 884). Gregory of Tours (d. 594) says that a Frankish lady, who built a church at St. Stephen, showed the artists who painted its walls in Hildesleceq. “To the last, the Church is a book (Hist. Franc., II, 17, P. L., LXX, 215). In the East St. Basil (d. 379), preaching about St. Barlaam, calls upon painters to do the saint more honour by making pictures of him than he himself can do by words (“Or. in St. Barlaam,” in P. G., XXXI, 488–489, ch. 11-12). In the fourth century a friend for wishing to decorate a church with profane ornaments, and exhorts him to replace these by scenes from Scripture (Epist. IV, 56, in Hefele-Leclercq, ibid.). St. Cyril of Alexandria (d. 444) was so great a defender of icons that his opponents accused him of idolatry (for all this see Schwarzlose, “Der Bilderstreit,” 3–15). St. Gregory the Great (d. 604) was always held to be a great defender of icons. The pictures of His Passion even in the catacombs (e.g. the crowning of thorns in the Catacomb of Praxentrasus on the Appian way—Leclercq, I, 542), but the favourite representation is either the Good Shepherd (by far the most frequent) or Christ showing His power, raising Lazarus, working some other miracle, standing among His Apostles, seated in glory. There are no pictures of the Crucifixion except the mock-crucifix scratched by some pagan soldier in the Palantine barracks (Kraus, I, 173). In the basilicas also the type of the triumphant Christ remains the normal one. The curve of the apotheosis over the altar is regularly filled with mosaic representations of the Christ and His symbolic group. Our Lord sits on a throne, dressed in the tunica talaris and pallium, holding a book in His left hand, with the right lifted up. This is the type that is found in countless basilicas in East and West from the fourth century to the seventh. The group around him varies. Sometimes it is saints, apostles, patriarchs, or angels (St. Pudentiana, Sts. Cosmas and Damian, St. Paul at Rome, St. Vitalis, St. Michael); often on either side of Christ are purely symbolic figures, lambs, harts, palms, cities, the symbols of the evangelists (S. Apollinare in Classe; the chapel of Galla Placidia at Ravenna). A typical example is the church of Rotonda in the concha-mosaic of old St. Peter’s at Rome (destroyed in the sixteenth century). Here Christ is enthroned in the centre in the usual form, bearded, with a nimbus, in tunica and pallium, holding a book in the left hand, blessing with the right. Under His feet four streams arise (the rivers of Eden, Gen., ii, 10), from which two stags drink (Ps. xlii, 2). On either side of Christ are St. Peter and St. Paul, beyond each a palm tree; the background is sprinkled with stars, while above rays of light and a hand issuing from under a small cross suggest God the Father. Below is the inscription out of which we read “Iesus nares” (Iesus nares), either end (marked Hierusalem and Bethlem) towards an Agnus Dei on a hill, from which again flow four streams. Behind the Agnus Dei is a throne with a cross, behind the lambs is a row of trees. Figures of a pope (Innocent III, 1198–1216) and an emperor preceded the inscription of lambs were added later; but the essential plan of this mosaic (often repeated) dates from the fourth century (see illustration in S. Beisiel, S.J., “Altchristliche Kunst.”, p. 130).

Although representations of the Crucifixion do not occur till later, the cross, as the symbol of Christianity, dates from the very beginning. Justin Martyr (d. 165) describes it in a way that already implies in us, as a symbol (Dial. cum Tryph., 91). He says that the cross is providentially represented in every kind of natural object, the sails of a ship, a plough, tools, even the human body (Apol. I, 55). According to Tertullian (d. about 240), Christians were known as worshipers of the cross. The cross is mentioned in the Gospels, and the chi-rho monogram is a common ornament of catacombs; combined with palm branches, lambs, and other symbols they form an obvious symbol of Christ (see illustrations in Kraus, op. cit., I, 85, 93, 94, 95, 105, 119, 121, etc., especially 130–3; Leclercq, op. cit., II, 544–545). In the Middle Ages the tree was made splendid with gold and gems, was set up triumphantly as the standard of the conquering Faith.
A late catacomb painting represents a cross richly jewelled and adorned with flowers (Kraus, I, 133). Constantine’s Labarum at the battle of the Milvian Bridge (312), and the story of the finding of the True Cross by St. Helen, gave a fresh impulse to its worship. It appears (without a figure) above the image of Christ in the apsidal mosaic of St. Pudentiana at Rome, in 390 (Kraus, I, 140). It held (or it before: Kraus, I, 230) a prominent place on an altar or throne (as the symbol of Christ), in nearly all mosaics above the aepse or in the chief place of the first basilicas (St. Paul at Rome, ibid., 183; St. Vitalis at Ravenna, Beissel, op. cit., p. 173, etc.). In Gallia Placidia’s chapel at Ravenna Constantine the Great (third century) holds a great cross in His left hand (Beissel, p. 151). The cross had a special place as an object of worship. It was the chief outward sign of the Faith, was treated with more reverence than any picture; “worship of the cross” (σταυρολατεία) was a special thing distinct from image-worship, so that we find the milder Iconoclasts in after years making an exception for the cross, still treating it with reverence, while they destroyed pictures. A common argument of the image-worshippers to their opponents was that since the latter too worshipped the cross they were inconsistent in refusing to worship other images (see Iconoclasm). The Canons of Hippolytus tell the Christian: “Sign thy forehead with the sign of the cross in order to defeat Satan and to glory in thy Faith” (c. xxix, 247—Cabrol-Leclercq, “Monumenta ecclesiae liturgica”, Paris, 1900–2, I, p. 271; cf. Tertullian, “Adv. Marc.”, III, 22). People prayed with extended arms to represent a cross (Origen, “Hom. in Exod.”, iii, 3; Tertullian, “de Orat.”, 14). So also to make the sign of the cross over a person or thing became the usual gesture of blessing, consecrating, exorcising (Lactantius, “Divin. Instit.”, IV, 27), actual material crosses adorned the vessels used in the Liturgy, a cross was brought in procession and placed on the altar during Mass. The First Roman Ordo (sixth century) alludes to the cross in the ceremony of the procession (21, ed. Ateley, London, 1905, p. 146). As soon as people began to represent scenes from the Passion they naturally included the chief event, and so we have the earliest pictures and carvings of the Crucifixion. The first mentions of crucifixes are in the sixth century. A travel- logue of the ninth century contains a painting of a church at Gaza (Kraus, I, 173); in the West, Venantius Fortunatus saw a palla embroidered with a picture of the Crucifixion at Tours, and Gregory of Tours refers to a crucifix at Narbonne (ibid.). For a long time Christ on the cross was always represented alive. The oldest crucifixes known are those on the wooden doors of St. Sabina at Rome and an ivory carving in the British Museum (Kraus, “Ueber Begriff... der christl. Archäologie”, Freiburg im Br., 1879). Both are of the fifth century. A Syriac manuscript of the sixth century contains a miniature representing the scene of the crucifixion (Kraus, “Christl. Kunst”, I, 175). There are other such representations down to the seventh century, after which it becomes the usual custom to add the figure of our Lord to crosses; the crucifix is in possession everywhere. [See Stockbauer, “Kunstgeschichte des Kreuzes”, Schaffhausen, 1899; — zur Entstehungsgeschichte des Crucifixen” in “Jahrb. der k. mon. archäol. Gesellschaft zu samml.”, I, 1880; L. Bréhier, “Les origines du crucifix dans l’art chrétien” in series “Science et religion”, no. 287 (2nd ed., Paris, 1905).]

The conclusion then is that the principle of adorning churches and chapels with pictures dates from the very earliest Christian times; centuries before the Iconoclast troubles they were in use throughout Christendom. So also all the old Christian Churches in East and West use holy pictures constantly. The only difference is that even before Iconoclasm there was in the East a certain prejudice against solid statues. This has been accentuated since the time of the Iconoclasm heresy (see below, section 5). But there are also several rules set by the Arian (Nestorian and Monophysite) Churches that broke away long before Iconoclasm. The principle in the East was not universally accepted. The emperors set up their statues at Constantinople without blame; statues of religious purpose existed in the East before the time of Christ. The Eastern Churches used the shepherds from Thrace, Athens, and Sparta, the Madonnas and Child from Saloniki—Kraus, op. cit., I, 228, 234, etc.), but they are much rarer than in the West. Images in the East were generally flat—paintings, mosaics, bas-reliefs. The most zealous Eastern defenders of the holy icons seem to have felt that, however justifiable such flat representations may be, there is something about a solid statue that makes it suspiciously like an idol.

(3) THE VENERATION OF IMAGES.—Distinct from the admission of images is the question of the way they are treated. What signs of reverence, if any, did the oldest Christians assign to the images in their temples and churches? For the first period we have no information. There are so few references to images at all in the earliest Christian literature that we should hardly have suspected their ubiquitous presence were they not actually there in the catacombs as the most convincing argument. But these catacomb paintings tell us nothing about how they were treated. We may take it for granted, on the one hand, that the first Christians understood quite well that paintings may not have any share in the adoration due to God alone. Their monotheism, their insistence on the fact that they serve only one almighty unseen God, their horror of the idolatry of their neighbours, the torture and death that their martyrs suffered rather than lay a grain of incense before the statue of the emperor’s nymen are enough to convince us that they were not setting up rows of idols of their own. On the other hand, the place of honour they give to their symbols and statues, the care they took in them, and the way they argued that they treated representations of their most sacred beliefs with at least decent reverence. It is from this reverence that the whole tradition of venerating holy images gradually and naturally developed. After the time of Constantine it is still mainly by common consent that one has to draw an unbroken line from how the images were treated. The etiquette of the Byzantine court gradually evolved elaborate forms of respect, not only for the person of Caesar but even for his statues and symbols. Philostratus (who was an Iconoclast long before the eighth century) says that in the fourth century by the Christian emperors in the East, offered gifts, incense, even prayers (!) to the statues of the emperor (Hist. eccl., II, 17). It would be natural that people who bowed to, kissed, incensed the imperial eagles and images of Caesar (with no suspicion of anything like idolatry), who paid elaborate reverence to an empty throne as his symbol, should give the same signs to the cross, the images of Christ, and the like. So in the first Byzantine centuries there grew up traditions of respect that gradually became fixed, as does all ceremonial. Such practices spread in some measure to Rome and the West, but their home was the Court at Constantinople. Long afterwards the Frankish bishops in the West were unable to understand forms that in the East were natural and obvious, but to Germans seemed degrading and servile (Synod of Frankfort, 794—see Iconoclasm IV). It is significant too that, although Rome and Constantinople agree entirely as to the principle of honouring holy images with signs of reverence, the
descendant of the subjects of the Eastern emperor still go far beyond us in the use of such signs. To the Byzantine Christian of the fifth and sixth centuries prostrations, kisses, incense were the natural ways of showing honour to any one; he was used to such things, even applied to his civil and social superiors; he was accustomed to treat symbols in the same way, giving them real meaning that was not the least idea of their prototypes. And so he carried his normal habits with him into church. Tradition, the conservative instinct that in ecclesiastical matters always insists on custom, gradually stereotyped such practices till they were written down as rubrics and became part of the ritual. Nor is there any suspicion that the people who were unconsciously evolving this ritual, confused the image with its prototype or forgot that to God only supreme homage is due. The forms they used were as natural to them as saluting a flag is to us.

At the same time one must admit that just before the Iconoclast outbreak things had gone very far in the direction of image-worship. Even then it is inconceivable that any one, except perhaps the most grossly stupid peasant, could have thought that an image could hear prayers, or do anything for us. And yet the way in which some people treated their holy images more than the merely relative matters that Catholics are taught to observe towards them. In the first place images had multiplied to an enormous extent everywhere; the walls of churches were covered inside from floor to roof with icons, scenes from the Bible, allegorical groups. (Dom Leclercq quotes S. Maria Antiqua built in the seventh century in the Roman Forum, with its systematic arrangement of paintings covering the whole church, as an example of this—Hefele-Leclercq, "Histoire des Conciles", III, 610 sq.). Icons, especially in the East, were taken on journeys as a protection, they marched at the head of armies, and presided at the races in the hippodrome; they hung in a place of honour in every room, over every shop; they covered cups, garments, furniture, rings; wherever a possible space was found, it was filled with a picture of Christ, our Lady, or a saint. It is difficult to understand exactly what those Byzantine Christians of the seventh and eighth centuries thought about it. The icon seems to have been the channel through which the saint was approached; it had an almost sacramental virtue in arousing sentiments of faith, love and so on, in those who gazed upon it; through and by the icon God worked miracles; the icon even seems to have had a kind of life of its own. These pictures were specially efficacious for certain graces (see F. Marin, "Les moines de Constantinople", Paris, 1897, pp. 315-21; Hefele-Leclercq, op. cit., III, pp. 607-8). Icons were crowned with garlands, incensed, kissed. Lamps burned before them, hymns were sung in their honour. They were applied to sick persons by contact, set out in the path of a fire or flood to stop it by a sort of magic. In many prayers of this time the natural inference from the words would be that the actual picture is addressed.

If so much reverence was paid to ordinary images "made with hands", how much more was given to the miraculous ones "not made with hands" (εἰκόνας ἄκμηροτριγματ). Of these there were many that had descended miraculously from heaven, or—like the most famous of all at Edessa—had been produced by our Lord Himself by impressing His face on a cloth (see "Dict. d'arch. chrét.", s. v. "Abgar"). The story of the Edessa icon has its parallel in the Eastern legend). The Emperor Michael II (820-9), in his letter to Louis the Pious, describes the excesses of the image-worshipers: "They have removed the holy cross from the churches and replaced it by images before which they burn incense... They sing psalms before these images, prostrate themselves before them, implore their help. Many dress up images in linen garments and crown them with gold crowns for their children. Others who become monks, forsaking the old tradition according to which the hair that is shorn off is received by some distinguished person, let it fall into the hands of some image. Some priests scrape the paint off images, mix it with the consecrated bread and wine and give it to the faithful. Others place the book of the Lord in the hands of the images, from which it is taken by the communicants. Others again, despising the churches, celebrate Divine Service in private houses, using an image as an altar" (Mansi, XIV, 417-22; Hefele-Leclercq, op. cit., III, 612). These are the words of a bitter Iconoclast, and should, no doubt, be received with caution. Nevertheless much of the practices described by the emperor can be established by other and quite unimpeachable evidence. For instance, St. Theodore of the Studion writes to congratulate an official of the court for having chosen a holy icon as godfather for his son (P. Ch., XCI, 962-3; Hefele-Leclercq, loc. cit. 613). Such excesses as these explain in part at least the Iconoclast reaction of the eighth century. And the Iconoclast storm produced at least one good result—the Seventh Ecumenical Synod (Nicea II, 787), which, while defending the holy images, explained the kind of worship that was allowable, that which was to be venerated and disowned all extravagances. A curious story, that illustrates the length to which the worship of images had gone by the eighth century, is told in the "New Garden" (Nor Fapadnax—Pratum Spiritual) of a monk of Jerusalem, John Moscheus (d. 619). This work was long attributed to Sophronius of Jerusalem (Krubacher, "Byz. Lit.", 188). In it the author tells the story of an old monk at Jerusalem who was much tormented by temptations of the flesh. At last the devil promised him peace on condition that he would cease to honour his picture of our Lady He promised, kept his word, and then began to suffer temptations against faith. He consulted his abbot, who told him that he had better suffer the former evil (apparently even give way to the temptation) “rather than cease to worship our Lord and God Jesus Christ with His mother” (quoted by Schwarzlose, "Der Bilderschmuck", pp. 19-20).

On the other hand, in Rome especially, we find the position of holy images explained soberly and reasonably. They are the books of the ignorant. This idea is a favourite one of St. Gregory the Great (d. 604). He writes to an Iconoclast bishop, Serenus of Marseilles, who had destroyed the images in his diocese: "It is not without reason that we allow the churches to be painted, the saints to be painted in holy places. And we indeed entirely praise thee for not allowing them to be adored, but we blame thee for breaking them. For it is one thing to adore an image, it is quite another thing to learn from the appearance of a picture what we must adore. What books are to those who can read, that is a picture to the ignorant who look at it; in a picture even the unlearned may see what example they should follow; in a picture they who know no letters may read. Hence, for barbarians especially, a picture takes the place of a book" (Ep. ix, 105, in F. L., LXXVII, 1027). But in the East, too, there were people who shared this more sober Western view. Anastasius, Bishop of Theoplis (d. 609), who was a friend of St. Gregory and translated his "Regula pastoralis" into Greek, expresses himself in almost the same way and makes the distinction between προσευκτα and προσευκτα that became so famous in the East:

We worship of you, O Lord, of Christ, and of the holy angels; we do not adore (καταφερομεν) them. Moses says: Thou shalt worship thy God and Him only shalt thou adore. Behold, before the word 'adore' he puts 'only', but not before the word 'worship'; because it is lawful to worship [creatures], since worship is only giving
special honour (τρίτο τιμήσεως), but it is not lawful to adore them nor by any means to give them prayers of adoration (προσκυνατά).” (Schwarzlose, op. cit., 24).

(4) ENEMIES OF IMAGE-WORSHIP BEFORE ICONOCLASMS. — Long before the outbreak in the eighth century there were isolated cases of persons who feared the ever-growing cult of images and were ready with a retort to the old idolatry. We need hardly quote in this connection the invective of the Apostolic Fathers against idols (Athenagoras, “Legatio pro Christi.,” xvi-xvii; Theophilus, “Ad Autolycum,” II; Minicius Felix, “Octavius,” xxvii; Arnobius, “Disp. adv. Gentes;” Tertullian, “De Paenitentia,” 24; Origen, “De Principiis,” 2, 1). In which they denounced not only the worship but even the manufacture and possession of such images. These texts all regard idols, that is, images made to be adored. But canon xxxvi of the Synod of Elvira is important. This was a general synod of the Church of Spain held, apparently about the year 300, in a city near Granada (Hefele-Leclercq, “Hist. des Conc.,” I, 212-64). It made many severe laws against Christians who resiled into idolatry, herey, or sins against the Sixth Commandment. The canon reads: “It is ordained (Placuit) that pictures are not to be in churches, so that no idol be formed. How to be painted on walls” (ibid., p. 240). The meaning of the canon has been much discussed. De Rossi and Hefele thought it was only a precaution against possible profanation by pagans who might go into a church (ibid.). Dom Leclercq (“Manuel d’archéologie,” II, 140) and J. Tournel (“Rev. du clergé français,” 1906, XLV, 508) see it in a law against pictures on principle. In any case the canon can have produced but a slight effect even in Spain, where there were holy pictures in the fourth century as in other countries. But it is interesting to see that just at the end of the first period the church fathers, who did not think of cult of images. Eusebius of Cesarea (d. 340), the Father of Church History, must be counted among the enemies of icons. In several places in his history he shows his dislike of them. They are a “heathen custom” (τηναν συνήθεια), Hist. eccl., VII, 18; he wrote many arguments to persuade Constantine’s sister Constantia not to keep a statue of our Lord (see Mansi, XIII, 169). A contemporary bishop, Asterius of Amasia, also tried to oppose the spreading tendency. In a sermon on the parable of the rich man and Lazarus he says: “Do not paint pictures of Christ; he humbled himself and became a servant of us” (quoted by Schwarzlose, op. cit., 7, from Combes, “Aquinc. nov.”, I, “Hom. iv in Div. et Lat.”). Epiphanius of Salamis (d. 403) tore down a curtain in a church in Palestine because it had a picture of Christ or a saint (Schwarzlose, ibid., 7-8). The Arian Philostorgius (fifth century) too was a forerunner of the Iconoclasts (Hist. Eccl., II, 12; VII, 3), as also the Bishop of Marseilles (Serenus), to whom St. Gregory the Great wrote his defence of pictures (see above). Lastly we may mention that in at least one province of the Church (Central Syria) Christian art developed to great perfection while it systematically rejected all representation of the human figure (L. Brébier, “La quere de les images,” p. 8-9; Hefele-Leclercq, III, 613-4). These exceptions are few compared with the steadily increasing influence of images and their worship all over Christendom, but they serve to show that the holy icons did not win their place entirely without opposition. It seems as if they represent a thin stream of opposition as the antecedent of the virulent Iconoclasm of the eighth century.

(5) IMAGES AFTER ICONOCLASM. — Coronation of Images. — After the storm of the eighth and ninth centuries (see Iconoclast), the Church throughout the world was again in possession of images. Since their triumphant return on the Feast of Orthodoxy in 842, their position has not again been questioned by any of the old Churches. Only now the situation has become more clearly defined. The Seventeenth General Council (Nicaea II, 787) had laid down the principles, established the theological basis, restrained the abuses of image-worship. That council was accepted by the great Church of the five patriarchates as equal in its decrees as an ordinary; no one could be a member of that church, no one can to-day be Catholic or Orthodox. Images and their cult had become an integral part of the Faith; Iconoclasm was now definitely a heresy condemned by the Church as much as Arianism or Nestorianism. The situation was not changed by the Great Schism of the ninth and eleventh centuries. The Church still maintain the same principles in this matter; both equally revere as an ecclesiastical synod the last council in which they met in unison before the final calamity. The Orthodox agree to all that Catholics say (see next paragraph) as to the principle of venerating images. So do the old Eastern schismatical Churches. Although they broke away long after Iconoclasm and Nicaea II they took with them then the principles we maintain—sufficient evidence that those principles were not new in 787. Nestorians, Armenians, Jacobites, Copts, and Abyssinians fill their churches with pictures of them, incense them, kiss them, just as do the Orthodox.

But there is a difference not of principle but of practice between East and West, to which we have already alluded. Especially since Iconoclasm, the East dislikes solid statues. Perhaps they are too reminiscent of the old idol gods. At all events, the Eastern icon (whether Orthodox, Nestorian or Mono-physite) is always flat—a painting, mosaic, bas-relief. Some of the less intelligent Easterns even seem to see a question of principle in this and explain the difference between a holy icon, such as a Christian man should venerate, and a divine idol, in the simplest and crudest way: icons are flat, idols are solid. However, that is a view that has never been suggested by their Church officially; she has never made this a ground of complaint against Latins, but admits it to be (of course it is) simply a difference of fashion or habit, and she recognizes that we are justified by the Second Council of Nicaea in the honour we pay to our statues, just as she is in the far more elaborate reverence she pays to her flat icons.

In the West the exuberant use of statues and pictures during the Middle Ages is well known and may be seen everywhere in the East. In that case, destroy the carving. A discussion of early medieval use in England will be found in Daniel Rock, “Church of our Fathers,” chapters vii and ix (ed. G. W. Hart and W. H. Frere, London, 1905, vol. III). In the East it is enough to go into any Orthodox Church to see the crowd of holy icons that cover the walls, that stand right across the church from the iconostas. And the churches of the Eastern sects which have no iconostasis show as many pictures in other places. As specimens of exceedingly beautiful and curious icons painted after the Iconoclast troubles at Constantinople, we may mention the mosaic of the Kähr-Voicí (the old “Monastery in the Country,” Moștul de la Pârâu) near the Adrianople gate. The Turks by some accident have spared these mosaics in turning the church into a mosque. They were put up by order of Andronicus II (1282-1328); they cover the whole church within, representing complete cycles of the events of Christ’s life, images of Him, His mother, and various saints; and still show in the deserted building an example of the splendid pomp with which the later Byzantine Church carried out the principles of the Second Nicaean Council (see Ch. Diehl, “Les Mo- saïques de Kähr-Voicí” in his “Etudes byzantines,” Paris, 1905, pp. 12-22).
Latin Rite the priest is commanded to bow to the cross in the sacristy before he leaves it to say Mass ("Ritus servandus" in the Missal, II, 1); he bows again profoundly to the altar or the image of the crucifix placed upon it when he begins Mass (ibid., II, 2); he begins incensing the altar by incensing the crucifix on it (IV, 4), and bows to it every time he passes it (ibid.). He also incenses any relics or images of saints that may be on the altar (ibid.). In the same way many such commands throughout our rubrics show that always a reverence is to be paid to the cross or images of saints when we approach them. The Byzantine Rite shows if possible even more reverence for the holy icons. They must be arranged according to a systematic scheme across the screen between the choir and the altar from that fact is called iconostasis (εἰκονόστασις, picture-stand; see Fortescue, "Orth. Eastern Church," pp. 403-4); before these pictures in the Eastern lamps are kept always burning. Among them, on either side of the royal door, are those of our Lord and His Mother. As part of the ritual the celebrant and the deacon before they go in to vesture profoundly before these and say certain fixed prayers: "We worship (ευφημορία) to their principal image in the Holy Bible, and finding nothing about them in the New Testament, sought in the Old Law rules that were never meant for the Church but discovered in the First Commandment (which they called the second) a command not even to make any graven image. Their successors have gradually tempered the severity of this, as of many other of the original principles of their founders. Calvinists keep the rule of admitting no statues, not even a cross, fairly exactly still. Lutherans have statutes and crucifixes. In Anglican churches one may find any principle at work, from that of a bare cross to a perfect plethora of statues and pictures.

The coronation of images is an example of an old and obvious symbolic sign of honour that has become a fixed rite. The Greek pagans offered golden crowns to their gods as specially worthy gifts. St. Ireneus (d. 202) already notices that certain Christian heretics (the Montanists) in their mimic observation of the Bible, and the apostles ("Adv. omn. her." I, xxv, sixth edition, Leipzig, 1853, p. 233). The offering of crowns to adorn images occurred in a pious fervour of many Churches. In itself it would mean no more than adding such additional splendour to the icon as might also be given by a handsome gold frame. Then the affixing of the crown naturally attracted to itself a certain amount of ritual, and the crown itself, like all things dedicated to the use of the Church, was blessed before it was affixed.

At Rome, too, a ceremony evolved out of this pious practice. A famous case is the coronation of the picture of our Lady in St. Mary Major. Clement VIII (1592-1605) presented crowns (one for our Lord and one for His Mother, both of whom are represented in the picture) to adorn it; so also did succeeding popes. These crowns were lost and Gregory XVI (1831-46) determined to replace them. On 15 August, 1837, surrounded by cardinals and prelates, he brought crowns, blessed them with a prayer composed for the occasion, sprinkled them with holy water, and consecrated them. The "Regina Caeli" he affixed the crowns to the picture, saying the form — "Sicuti per manus nostras coronaris in terris, ita te gloria et honore coronari mereamus incelesti" — for our Lord, and a similar form (per te a Jesu Christo Filio tuo . . . ) for our Lady. There was another collect, the Te Deum, a last collect, and then a High Mass coron Pontificæ. The same day the pope issued a Brief (Casula) about the rite. The crowns are to be kept by the custodians of St. Mary Major.

The ceremonial used on that occasion became a standard for similar functions (see Moroni, "Dizionario di Erudizione storico-ecclesiastica", Venice, 1842, XVII, pp. 239-41, where the prayers and ceremonies are given in full).

The Chapter of St. Peter have a right to crown statues and pictures of our Lady since the seventeenth century. A certain Count Alexander Sforza-Pallavicini of Piacenza set aside a sum of money to pay for crowns to be used for this purpose. The first case was in 1631, when the chapter, on 27 August, crowned a famous picture, "Santa Maria della febbre," in one of the sacristies of St. Peter. The count paid the expenses. Soon after, at his death, by his will dated 3 July, 1636 he left considerable property to the chapter with the condition that they should spend the revenue on crowning famous pictures and statues of the Virgin. They have adhered to this since. It is the custom of the Church that a bishop may apply to the chapter to crown an image in his diocese. The canons consider his petition; if they approve it they have a crown made and send one of their number to carry out the ceremony. Sometimes the pope himself has crowned images for the chapter. In 1818 Pius VII did it, and again in 1816 at Galloro near Castel Gandolfo. A list of images so crowned down to 1792 was published in that year at Rome (Raccolta delle immagini della btmia Vergine ornate della cora d'oro). The chapter has an "Ordo servandus in tradendis coronis aureis que donantur a Hipo Capitolii S. Petri de Urbe sacris imaginibus B. M. V." apparently in manuscript only. The rite is almost exactly that used by Gregory XVI in 1837 (see Moroni, loc. cit., pp. 238-45).

(6) THE PRINCIPLES OF IMAGE-WORSHIP. Lastly something must be said about Catholic principles concerning the worship of sacred images. The Latin Cultus sacrarum imaginarum may quite well be translated (as it always was in the past) "worship of holy images", and "image-worshipper" is a convenient term for culator imaginum — εἰκονοδοκός, as opposed to εἰκονοδικός (image-breaker). Worship by means of images is condemned by the Roman Church—"it be given only to God. It is a general word denoting some more or less high degree of reverence and honour, an acknowledgment of worth, like the German Verehrung ("with my body I thee worship" in the marriage service; English city companies are "worshipful"; a magistrate is "Your worship," and so on. See the excellent note on the use of this word in D. Rock, "The Church of our Fathers", III, p. 285). We need not then hesitate to speak of our worship of images; though no doubt we shall often be called upon to explain the term.

I note in the first place that the First Commandment (except inasmuch as it forbids adoration and service of images) does not affect us at all. The Old Law—including the ten commandments—as far as it only promulgates natural law is of course eternal. No possible circumstances can ever abrogate, for instance, the Fifth, Sixth, and Seventh Commandments. On the other hand, as far as it is positive law, it was once for all abrogated by the promulgation of the Gospel (Rom., viii., 1-2; Gal., iii., 23-5, etc.; Acts, xv., 28-9). Christians are not bound to circumscribe, to abstain from levitically unclean food and so on. The Third Commandment that ordered the Jews to keep Saturday as a typical day of rest has been replaced by another by the Christian Church. So in the First Commandment we must distinguish the clauses—"Thou shalt not have strange gods before
me," "Thou shalt not adore them nor serve them"—which are eternal natural law (prohibition quia malum), from the clause: "Thou shalt not make to thyself any graven image", etc. In whatever sense the adoration is paid to our reverence for the real thing, it is implied that a natural law, nor can anyone prove the inherent wickedness of making a graven thing; therefore it is Divine positive law (malum quia prohibuit) of the Old Dispensation that no more applies to Christians than the law of marrying one's brother's widow.

Since there is a Divine prohibition that the image is to be paid to the cross, images of Christ and the saints, while the intention directs it all really to the persons these things represent. The text then of the decision of the seventh session of Nicaea II is: "We define (διδυμος) with all certainty and care that both the figure of the sacred and life-giving Cross, as also the venerated and holy images, whether made in colours or mosaic or other materials, are to be placed suitably in the holy churches of God, on sacred vessels and vestments, on walls and pictures, in houses and by roads; that is to say, the images of our Lord God and Saviour Jesus Christ, of the Lord of the church, of our God, of the honourable angels and all saints and holy men. For as often as they are seen in their pictorial representations, people who look at them are ardently lifted up to the memory and love of the originals and induced to give them respect and worshipful honour for our Lord and our God (διδυμος και τυμπανη προσκυνησις) but not real adoration (διδυμος λατρεια), which according to our faith is due only to the Divine Nature. So that offerings of incense and lights are to be given to these as to the figure of the sacred and life-giving Cross, to the holy Gospel-books and other sacred objects in order to do them honour, as was the pious custom of ancient times. For a honour paid to an image passes on to its prototype; he who worships (διδυμος) an image worships the reality of him who is painted in it." (Mansi, XIII, pp. 378-9; Harduin, IV, pp. 453-6; Denzinger, "Enchiridion", 10th ed., no. 302; Hefele-Leclerq, op. cit., III, pp. 772-3).

That is still the standpoint of the Catholic Church. The question was settled for us by the Seventh (Oecumenical) Council; nothing has since been added to that definition. The customs by which we show our "respect and worshipful honour" for holy images naturally vary in different countries and at different times. Only the author of the Church has occasionally stepped in, sometimes to prevent a spasmodic return to Iconoclasm, more often to forbid excesses of such signs of reverence as would be misunderstood and give scandal.

The Schoolmen discussed the whole question at length. St. Thomas declares what the view is in the "Summa Theologica", II-II, Q. xcv, and explains the use of images in the Catholic Church (ib., a. 2, ad 1um). He distinguishes between latræia and dulia (ib., II-II, Q. cii). The twenty-fifth session of the Council of Trent (Dec., 1543) repeats faithfully the principles of Nicaea II: "The Synod, commands that images of Christ, the Virgin Mother of God, and the saints are to be held and kept especially in churches, that due honour and reverence (debitum honorem et veneracionem) are to be paid to them, not that any divinity or power is thought to be in them for the sake of which they may be worshipped, or that anything can be asked of them, or that any trust may be put in images, as was done by the heathen who put their trust in their idols [Ps. cxxxiv, 15 sqq.]; but because the honour shown to them is referred to the prototypes which they represent, so that by kissing, uncovering to, kneeling before images we adore Christ and honour the saints whose likeness they bear" (Denzinger, no. 986). As an example of contemporary Catholic teaching on this subject one could hardly quote anything better expressed than the "Catechism of Christian Doctrine" used in England by command of the Cath-
olic bishops. The four answers, nos. 184–187, sum up the whole position exactly: (184) "It is forbidden to give divine honour or worship to the angels and saints, for this belongs to God alone." (185) "We should pay to the angels and saints an inferior honour or veneration because they are due to the servants or special friends of God." (186) "We should give to relics, crucifixes and holy pictures a relative honour, as they relate to Christ and his saints and are memorials of them." (187) "We do not pray to relics or images, for they can neither see nor hear nor help.

LE CLERCQ, Manuel d'archéologie Chrétienne depuis les origines jusqu'au XVe siècle (2 vols., Paris, 1907); KRAUS, Geschichte der christlichen Archäologie (Freiburg in Br., 1921); KAUFMANN, Handbuch der christlichen Archäologie (Faderborn, 1905); PALMER (ed., Brownlow and Northcote), An Introduction to, from the sense of intuition, the sense of intuition, pain and the memory, and, on the other hand, distinct from the spiritual intellect. The last distinction is to be specially noted on account of the similarity between the operations of the imagination and certain acts of the intellect. We acquire knowledge of our different faculties from a study of their operations, and the nature of image is the object of endless controversy. Is it psychologically identical with perception, being differentiated only by lesser intensity? Or, on the contrary, has it a specific nature of its own? It would be hard to say. The problem is very complex and perhaps insoluble. The analogy and the points of contact between the image and the perceptive representation are evident; but they hardly seem to justify an identification of the image with the complete perception, and the opinion which regards them as distinct still seems to us the more probable. The imagination is a psycho-physical faculty. To think is not to know, and it is evident that the brain is an unwarranted and misleading assumption, though it is quite clear that its operations postulate a material basis. Cerebral fatigue, mental disease, and the necessarily quantitative character of its objects leave no room for doubt on this point.

Object.—Although the imagination is independent of actual impression by sensible objects, yet it can represent only what has in some way passed through the senses. There is in this regard, however, a very marked difference between the different external senses. In the case of normal subjects visual images are the most numerous and the most perfect. These derived from the sense of hearing are also very common; but the images arising from the senses of taste, smell, and touch are much rarer, and many persons, normally constituted, declare that they never have them unless perhaps in almost imperceptible degree. There has been much discussion of late in regard to "affective" images. Ribot believes that the brain is tending to assert their existence; they are constituted, he claims, by the revival of an affective state, independent of the mental representation of the object which first occasioned it. But the question is not settled; many persons emphatically deny the existence of such images, and there is no general opinion whether the so-called "affective image" is not the mere imaginative representation of a past affection, or the actual affective re-echo of an unusually impressive image.

DIVISIONS.—Imagination is twofold, retractive (reproductive) and creative (productive). The object of the first is a sensible reality, which we have previously perceived or thought of as a creative form of the object by combining elements which were separately perceived. The analysis of the creative imagination is of considerable importance for the psychology of invention, and of artistic and intellectual initiative. It brings us in contact with that as yet mysterious region, which is designated by the very indefinite term "collective consciousness". Judged by their relative perfection, images are complete or incomplete, generic or schematic. The complete image approaches, in richness and precision, objective perception. It occurs most frequently among the passive images which will be discussed farther on. The incomplete image, as its name indicates, is less rich, less precise. Certain details of the object escape consciousness, but what is represented is still sufficient to characterize an individual object. Of course, its complete or incomplete character is relative and, consequently, susceptible of innumerable gradations. The generic or schematic image is much more summary. It is hardly ever sought for its own sake; it gives only the schema of the object, that is to say certain characteristic outlines sufficient to support the intellect in its proper functions. As a rule the schematic image alone would be insufficient for this purpose; it is, for instance, impossible to imagine a multitude of 40,000 objects, in a manner sufficiently precise to supply the intellect with the sensible factors, indispensable for the mathematical operations to which this number lends itself. Hence the irresistible tendency to complete the schematic image by the verbal image, and the part which the word thus comes to play in the process of thought has given rise to serious errors. Not a few psychologists have mistaken the verbal image, which adds precision to the schematic image, for the idea itself. It is evident that such a psychological error leads directly to nominalism.

As regards genesis, images are either voluntary or spontaneous. Voluntary images are produced freely. We will to imagine our home, our parents, or some familiar place we have left. These images are usually incomplete, vague, and dull; we render them some what more definite by fixing the attention on each part in turn, the grouping of all the parts into a unit being the work of memory. Spontaneous, or passive images are entirely different. Without the slightest impulse or direction of our will, they spring up suddenly, without consciousness, representing at times an object which has no apparent connexion with the trend of our thoughts. Images occurring in a dream are a good example, but sleep is by no means necessary for their production; any one who is accustomed to introspection will readily acknowledge that there are constantly arising from the depths of the subconscious mind images which we can neither control nor direct.

Imaginative External.—The relation existing between the image and the "consciousness of presence" is highly complex. The main point is to
determine whether the image tends naturally to externalize itself, i.e., whether the image if left to itself would picture its object as existing outside the mind. This has been denied at times, on account of the probable distinction between the perception and the image, and also because a complete image is a rare occurrence to admit of a concrete and schematic image could externalize itself? To admit this would not settle the question; it is, rather, probable that every image would project itself were it not inhibited by some other influence. It is, indeed, difficult to recognize in a dream anything else than the play of the imagination. For the animal in a dream manifestly runs its course in exterior space, and provokes acts, which, if the externalizing of images be denied, are quite incomprehensible. This theory is supported by the characteristics of hallucination, which also throw some light on the mechanism of inhibition. In the case of hallucination the image, even though corrected by reason, represents its object as existing in exterior space. We must remark, further, that hallucination takes place in cases of extreme fatigue or when certain cerebral centres appear to be paralyzed by poison. It is possible, of course, to refer the phenomenon not to paralysis but to toxic stimulation. But all stimulations are always a combination of two opposite stimulations. The manner in which we seize on the subconscious elements and by the circumstances in which these elements come to the surface. Pseudo-hallucination offers a form intermediate between the totally inhibited image and hallucination. At times the objects appear with wonderful clearness making us feel the presence, but the space they occupy does not correspond with external space, nor have they any spatial relation with the objects which we perceive by our senses. They occur most naturally when one is dreaming or in a half-awakened state; and it is well-known that they are rest tendencies to externalize themselves. It is consequently when the image is most intense and when another function, especially critical reason, is in abeyance, that images display a tendency to externalize themselves, and, sometimes, are actually externalized. It seems therefore that, normally, the image would be projected, if no other factor intervened. An analysis of normal perception leads to the same conclusion. This, we know, is the outcome both of sensory impressions and of the images that we externalize. What the latter contribute is, it seems to us, just as objective as what is derived by the former impressions. There may be another way of interpreting the phenomenon; but when we consider it in conjunction with the facts just mentioned, it seems necessary to admit that, normally, the image externalizes itself.

Psychologists often raise the question why certain states of consciousness, such as perception, give the impression of the external presence of an object. Probably this impression is a primordial characteristic and, from a psychological point of view, it would be more natural to enquire why images, in certain cases, are devoid of that characteristic. Of course, that is no solution of the philosophical problem concerning the objectivity of our faculties; but the fact is of considerable importance in the domain of experimental psychology. The only possible answer to the question seems to be as follows: the image is inhibited and appears as subjective whenever its externalization would produce incoherence in the things perceived. It is certain that among the processes which put an end to intellectual function, the critical sense and fewer acquired associations, readily believe "whatever comes into their heads"; and again great fatigue, drunkenness, and other states of the sort which are evidently obstacles to the action of reason are precisely the conditions in which images have the greatest tendency to externalize themselves.

In normal circumstances there is always some special note in the image or in the thing perceived which prevents them from corresponding exactly. Disagreements therefore appear which force us to place images in a category distinct from that of perceptions, and our acquired associations convince us that they belong to the unreal, or at least less real, world of the conscious subject. This view is corroborated by the phenomenon of not-perception. An image may be so vivid and so strong as to stir up through association images that complete them; the latter, then, must be in perfect accord with the former, and, as a matter of fact, we know that we externalize them spontaneously. In dreams we project into outer space incoherent images, but frequent attention shows that we coordinate and shape them, arranging them in a logical whole. It would seem then most likely that along with this coherence we produce their illusory externalization. It is well known how suddenly fantastic images disappear as soon as we recognize their absurdity. There seems to be no doubt then that images of their own nature tend to externalize themselves, and they do so as long as no conflict results therewith. It will be urged, perhaps, that we are not conscious of this rational criticism demonstrating the logical impossibility of externalizing the images; to this we rejoind that analytic reason intervenes in exceptional cases only, and that it is always a question of exceptional cases of association. Dogs and cats, without an inking of the principle of causality, seek the cause of sensible phenomena. In like spontaneous fashion we inhibit or suppress our subjective images when they differ too widely from reality.

The Motive Force of Images.—It is well known that an image inclines to action, and Ribot has formulated the general law that "every image tends to its own realization". If external action does not always reveal all the images that arise in consciousness, the reason is that many of them are neutralized by antagonistic images which may occur to the subject at the same time. Both, owing to their object, tend to issue in actions of an opposite sort. This motive force of images makes itself felt at every moment of our lives; but it should be observed that ordinarily it acts only through an emotional state and perhaps, as scholastic philosophers maintain, by means of a special "locomotive" faculty. Be that as it may, it seems to be proved that, in order to influence action and movements, images need not necessarily be in consciousness, much less at its focus. "Marginal" images, or even totally subconscious images, can act on our members and produce at times very complex movements. It would be an error to think that this occurs only exceptionally and in abnormal conditions; nevertheless it is through the practices of spiritualism, table turning, automatic writing, etc., that special attention has been drawn to it and the most striking examples of it offered to the psychologist. The "motive force" of images is only a particular instance of a law so general that it dominates the whole psychic life. Each psychic state, wherever it may occur in the human person, tends to spread over adjacent areas and thereby produce equilibrium, i.e. the harmonious condition of the whole personality. An image causing a muscular contraction illustrates this diffusion in a very striking way, and that is why it has been observed sooner and formulated in a more precise manner than any other.

Elaboration of Images by the Intellect.—The image is the starting point and in some measure the immediate matter of all our intellectual operations. It is certain that a certain process of elaboration, which puts an end to intellectual function, and since these two faculties, imagination and intelligence, are subjectively distinct, this dependence must be of an objective sort, i.e. the intellect borrows from the imagination. An analysis of our higher knowledge, even the most abstract, gives this explanation all the corroborations that immediate experience can furnish. The ideas of the most spiritual things, such as God or

VII.—43
virtue, yield through analysis just those elements which are taken from the purely sensible order, and are presented by the imagination. Consequently, there can be no doubt as to the objective co-operation of the imaginative faculty in the phenomenon of ideation. But certain dangerous errors in this matter must be avoided. Here we have arrived at a distinction to be observed between the schematic image and the idea. It would be a serious mistake to admit that any combination of images, however summary and refined, can furnish the object of the idea. Abstraction is often explained as though it is the act of leaving out the individualizing notes, applied to the image itself, and as though the residue of that operation were the intellectual determinant, the *species impressa*, which starts the intellect itself into action. This is clearly an illusion. The image in its own essence is, and remains, individual; no separation of parts can bring to view the universal, the non-quantitative, in it. We must consider the rôle of the image in ideation as something quite different. It determines, not the *intelluctus agens*, which would be inconceivable, but the conscious subject, to produce the intellectual object. There is no proportion, so far as the nature of the process goes, between the image and the object of the intellect. Of a spiritual faculty (the *intelluctus agens*) is proportioned to such an object; but the image is, as it were, a bait, which, in accordance with the nature of its own object, draws out the superior powers of the conscious subject. Hence, although everything in our intellectual knowledge is derived from the images, in it transcends them. These two aspects of the question, the essential dependence of the intellect on the images, and its transcendence in respect to them, must always be considered if we are to understand accurately the part played by the image in the process of ideation. The result therefore important consists in the study of which pertains to the psychology of intelligence.

To conclude: we conceive the higher realities only by analogy with sensible things, but it in no way follows that we conceive nothing but what is material. Images play a very important part in all the activities of the intellectual order; but they do not constitute that order itself. The very spirituality of the human soul depends on this latter truth.

M. P. DE MUNNTRECK.

Imbonati, CARLO GIUSEPPE, Cistercian of the Reform of St. Bernard, orientalist, biographer, theologian; b. at Milan; flourished in the latter half of the seventeenth century. The date of his death is disputed; yet it certainly did not occur before the year 1696. He occupied the chairs of theology and Hebrew in Rome and was raised to the dignity of abbot. A contemporary of Baron Salinacci, who was a member of the same order and projector of the "Bibliotheca magna rabbinica," Imbonati eventually became his master's collaborator. Upon the demise of the latter he completed and edited the fourth volume (Rome, 1699) of this monumental work, which, notwithstanding its shoddiness, bears witness to the industry and vast erudition of its authors, and laid the foundation for Wolf's "Bibliotheca hebraica" and other works of the kind. Imbonati brought out a supplementary fifth volume under the title "Bibliotheca latino-hebraica, sive de Scripturibus latini, quae diversas nationibus contra Judaeos vel de re hebraice utcumque scripserit" (Rome, 1694). This volume also contains a "Chronicon of Sacred Scriptures," containing a list of an apostle and other persons of a personal character (viz., on the Messiahs, and on the Divinity and Humanity of Christ) based upon miscellaneous Hebrew, Greek, and Latin writings. Imbonati's "Chronicon Tragicum, sive de eventibus tragici Principum" (Rome, 1696) has a didactic as well as a scientific aim, and was written chiefly for the guidance of "Principes veritatis amatores". The dedicatory letter, prefixed to this work and addressed to Cardinal Celestino Sfondrato, O.S.B., is dated from the Monastery of St. Bernard in the Baths of Diceletian, 1 April, 1696. This is the latest date ascertainable concerning Imbonati's career. (See Bartolocci, Gilo).

THOMAS FLEMMANN.

Imhof, MAXIMUS VON, German physicist; b. 26 July, 1758, at Rüssbach, in Bavaria; d. 11 April, 1817, at Munich. He was the son of a shoemaker. After preliminary studies at Landschut he entered the Augustinian Order in 1780 and taught, in the monastery at Hofmar, physics, mathematics, and experimental physics and chemistry. He was elected prior of his monastery in 1798. In 1802 he left the order and was made canon of the Freiekirche in Munich. During twenty-one years he superintended the installation of lighting-rods in Bavaria. His important published works are: "Thesaurus electricitatis," Munich, 1790; " Institutiones physicae," Munich, 1796; "Experimental-Naturlehre," Munich, 1795; "Anfangsgründe der Chemie," Munich, 1802; "Anweis ueben Blitsabsteifer," Munich, 1816.

WILLIAM FOX.

Imitation of Christ, a work of spiritual devotion, also sometimes called the "Following of Christ." Its purpose is to instruct the soul in the ways of Christ in the perfection of the life of grace, and to acquaint it with the interior conditions of the life of grace. It consists of a series of counsels of perfection written in Latin in a familiar and even colloquial style, and is divided into four parts or books: (1) Useful admonitions for a spiritual life; (2) Admonitions concerning spiritual action; (3) Of the interior conditions of the life of grace; (4) Of the consecration of the soul to Christ. With the exception of the Bible, it is perhaps the most widely read spiritual book in the world. It was first published anonymously in A. D. 1418. Its authorship was until recently in dispute, being attributed to various spiritual writers, St. Bernard, St. Bonaventure, St. Bonifacius, St. Alphonsus, St. Thomas and St. Thomas Aquinas. It was finally attributed to Thomas Kempis, and it was published under his name in 1700. Thereafter it was universally acknowledged as his work, and an encomium was written in his honor by his friend, the Abbé de Noailles. In recent years, with the publication of the works of St. Thomas Aquinas, the authorship has been re-established.

Immaculate Conception.—The Doctrine.—In the Constitution "Ineffabilis Deus" of 8 December, 1854, Pius IX pronounced and defined that the Blessed Virgin Mary was "in the first instant of her concep-
IMMACULATE

IMMACULATE

aton, by a singular privilege and grace granted by God, in view of the merits of Jesus Christ, the Saviour of the human race, was preserved exempt from all stain of original sin. This doctrine is found in the apocryphal Gospel of the Virgin Mary (Hebrew version, 10th century), and the Epistle of Baruch (c. 164-195).

The subject of this immunity from original sin is the person of Mary at the moment of the creation of her soul and its infusion into her body. The term conception does not mean the active or generative conception by her parents. Her body was formed in the womb of the mother, and the soul from her father, and both had an equal share in its formation. The question does not concern the immaculateness of the generative activity of her parents. Neither does it concern the passive conception absolutely and simply (conceptio seminis, carnis, inchoata), which, according to the order of nature, precedes the infusion of the rational soul. The formal active essence of original sin was not infused into the soul at the moment of its creation, and infused into the body. Mary was preserved exempt from all stain of original sin at the first moment of her animation, and sanctifying grace was given to her before sin could have taken effect in her soul. The formal active essence of original sin was not infused into the soul of Mary by baptism, since she was excluded from the temporal penalties of Adam—from sorrow, bodily infirmities, and death. The immunity from original sin was given to Mary by a singular exemption from a universal law through the same merits of Christ, by which other men are cleansed from original sin by baptism. Mary needed the redeeming Saviour to obtain this exemption, and to be delivered from the universal necessity and debt (debitum) of being subject to original sin. The person of Mary, in consequence of her origin from Adam, should have been subject to sin, but, being the New Eve who was to be the mother of the New Adam, she was, by the eternal counsel of God, and by the merits of Christ, withdrawn from the general law of original sin. Her redemption was the very masterpiece of Christ's redeeming wisdom. He is a greater redeemer who pays the debt that it may not be incurred, than he who has fallen only (Julianus, "Immac. Conception", p. 89). Such is the meaning of the term "Immaculate Conception".

THE HOLY SCRIPTURE.—No direct or categorical and stringent proof of the dogma can be brought forward from Scripture. But the first scriptural passage which contains the promise of the immaculation mentions also the Mother of the Redeemer. The sentence against the first parents was accompanied by the earliest Gospel (Proto-evangelium), which put eminence between the serpent and the woman: "And I will put enmity between thee and the woman; and thy seed shall bruise his heel" (Gen. iii, 15). The translation "she" of the Vulgate is interpretative; it originated after the fourth century ("Katholik", 1893, 425), and cannot be defended critically. The conqueror from the seed of the woman, who should crush the serpent's head, is Christ; the woman at enmity with the serpent is Mary (Hoberg, "Grund", p. 157; cf. Leimbach, "Messianische Weissagungen", 1909, pp. 5 sq.). God puts enmity between her and Satan in the same manner and measure, as there is enmity between Christ and the seed of the serpent. Mary was ever to be in that exalted state of soul which the serpent was in, when he was expelled from the garden of Eden. Only the continuous union of Mary with God by grace explains sufficiently the enmity between her and Satan. The Proto-evangelium, therefore, in the original text contains a direct promise of the Redeemer, and in conjunction therewith the manifestation of the masterpiece of His Redemption, the perfect preservation of His Virginal Mother from original sin.

My guardian angel, Hail, full of grace (Luke, i, 28; cf. Bardenhewer, "Mariä Verkündigung", 95 sq.)—indicates a unique abundance of grace, a supernatural, godlike state of soul, which finds its explanation only in the Immaculate Conception of Mary. But the term sancta in conceptu (full of grace) serves only as an illustration, not as a proof of the dogma. From the texts Prov., viii, and Ecclus., xxiv, which exalt the Wisdom of God and which in the liturgy are applied to Mary, the most beautiful work of God's Wisdom, or from the Canticle of Canticles (iv, 7, "Thou art all fair, O my love, and there is not a spot in thee"), no theologian concludes the existence of the soul of Mary, and this application to the Mother of God, may be readily understood by those who know the privilege of Mary, but do not avail to prove the doctrine dogmatically, and are therefore omitted from the Constitution "Ineffabilis Deus". For the theologian it is a matter of invincible cogency to extend the expression of the soul of Mary, etc. to the creature texts which might imply the prerogatives of God.

Tradition.—In regard to the sinlessness of Mary the older Fathers are very cautious: some of them even seem to have been in error on this matter. Original sin was attributed to Mary and her children (C Dickens, "Immaculata", 1885, p. 150). Exactly in the same manner St. Basil writes in the fourth century: he sees in the word, of which Simeon speaks, the doubt which pierced Mary's soul (Basil, Ep. colix; Lehner, op. cit., p. 152). St. Chrysostom accuses her of ambition, and of putting herself forward unduly, when she sought to speak to Jesus at Capernaum (Matt., xii, 48; Chrysostom, Hom. xiv; cf. also "In Matt.", hom. iv; Lehner, pp. 152 sq.; E. Lucius, "Anfange des Heiligenkultus", Tubingen, 1904, p. 439; Hunter, "Dogmatic Theol.", II, p. 565). But these stray private opinions merely serve to show that theology is a progressive science. If we were to attempt to decide to set forth the doctrine concerning the sanctity of the Blessed Virgin, which includes particularly the implicit belief in the immaculateness of her conception, we should be forced to transcribe a multitude of passages. In the testimony of the Fathers two points are insisted upon: her absolute purity and her position as the second Eve (cf. J. Corny, xv, 22). This celebrated comparison between Eve, while yet immaculate and incorrupt— that is to say, not subject to original sin—and the Blessed Virgin is developed by Justus (Dialog. cum Tryphone, 100), Irenæus (Contra Harreses, III, xxii, 4), Tertullian (De carne Christi, xvii), Julius Firmianus Maerarius (De glorore profan. relig. xxvi), Cyril of Jerusalem (Catecheses, xii, 29), Epiphanius (Hæreres, lxxxiv, 18), Theodotus of Ascola (Or. in S. Deip., n. 11), Sedulius (Carmen paschale, II, 28). The Fathers call Mary the tabernacle exempt from defilement and corruption (Hippolytus, "Orat. in illud, Dominum pacem instituam in Galliand", "Bibl. pratrum", II, 496); worthy of God, immaculate of the immaculate, most complete sanctity, perfect justice, neither deceived by the persuasion of the serpent, nor infected with his poisonous breathings (Origen, "Hom. i in diversa"); incorrupt, a virgin immune through grace from every stain of sin (C. Deus, xxii, 2); "caviest vessel for the cult of Christ, not because of her habit of body, but because of original grace (Maximus of Turin, "Hom. viii de Natali Domini"); a virgin innocent, without spot, void of culpability, holy in body and in soul, a
My springing among thorns, untaught the ills of Eve... nor was there any communion in her of light with darkness, and, when not yet born, she was consecrated to God (Theodatus of Anzyna, "Crat. in S. Dei Gen."
and other passages in Galland's IX, 475). In prolonging
Pelagius St. Augustine declares that all the just have
truly known of sin "except the Holy Virgin Mary, of
whom, for the honour of the Lord, I will have no
question whatever where sin is concerned" (De natura
et gratia, c. xxxvi). Mary was pledged to Christ in
the womb, she was born, she was consecrated to
"Sanctum excl de Amunt. B. V. M."); it is evident and
notorious that she was pure from eternity, exempt
from every defect (Typicon S. Sabae); she was formed
without any stain (St. Proclus, "Laudatio in S. Dei
Gen. ort.", I, 3); she was created in a condition more
sublime and glorious than all other nature. (Theo-
dorus of Jerusalem in Manli, XII, 1140); when the
Virgin Mother of God was to be born of Anne, nature
did not dare to anticipate the germ of grace, but
remained devoid of fruit (John Damascene, "Hom. i in
B. V. Nativ."); ii; cf. Ullathorne, op. cit., 112 sq.).

The Syrian Fathers never tire of extolling the sin-
lessness of the Virgin Mary. St. Ephraem, who is too
tame and oversimplified a theologian too high to describe the excellence of Mary's
grace and sanctity: "Most holy Lady, Mother of
God, alone most pure in soul and body, alone exceed-
ing all perfection of purity... alone made in thy
entirety the home of all the graces of the Most Holy
Spirit, and hence surpassed all women. She received
the angelic virtues in purity and sanctity of soul and
body... my Lady most holy, all-pure, all-immacu-
late, all-stainless, all-unblemished, all-inviolable... ap-
pointed robe of Him Who clothes Himself with light as with a garment... flower unfading purple woven by God, alone most imma-
culate" ("Precautiones ad Deiparam" in Opp. Grac.
Lat., III, 524-37). To St. Ephraem she was an inno-
cent as Eve before her fall, a virgin most estranged
from every stain of sin, more holy than the Seraphim,
the sealed fountain of the Holy Ghost, the pure seed of
God, ever in body and mind intact and immaculate
("Carmina Nishbena", ed. Bickell, p. 122). Jacob of
Sarug says that "the very fact that God has elected
her proves that none was ever holier than Mary; if
any stain had disfigured her soul, if any other virgin
had been purer and holier, God would have selected
her and rejected Mary" (ed. Bickell, "Ausgewählte
Geistschriften", p. 229 sqq.).

Jacob of Sarug, if he had any clear idea of the doctrine
of sin, held that Mary was perfectly pure from original
sin ("the sentence against Adam and Eve") at the
Annunciation (op. cit., p. 242).

St. John Damascene (Or. i Nativ. Deip., n. 2)
estimates the supernatural influence of God at the
generation of Mary to be so comprehensive that he
extends it also to her parents. He says of them that,
during the generation, they were filled and purified
by the Holy Ghost, and freed from sexual concupis-
cence. Consequently, according to the Damascene,
even the semen of her parents, with which she was
formed, was pure and holy. This opinion of an imma-
culate active generation and the sanctity of the "conceptio carnis" was taken up by some
Western authors; it was put forward by Petrus
Comestor in his treatise against St. Bernard (ed.
Louvain, 1536) and by others. Some writers even
tauled as the" true flesh of the Lord", and which Schleier-
maer was conceived in a miraculous manner when Joachim and Anne met at the golden gate of the temple (Trom-
belli, "Maris SS. Vita", sect. V, ii, 8; Summa aurea,
II, 948. Cf. also the "Revelations" of Catherine Em-
merich which contain the entire apocryphal legend of
of the first six centuries", 208 sqq.). From this sum-
mary it appears that the belief in Mary's immu-
ni from sin in her conception was prevalent amongst
the Fathers, especially those of the Greek Church. The
rhetorical character, however, of many of these
and the literal sense may have too much stress on them, and interpreting them in a strictly
literally sense. The Greek Fathers never formally or
explicitly discussed the question of the Immaculate
Conception.

CONCEPTION OF ST. JOHN.—A comparison with
the conception of Christ and the Conception of St. John may
serve to throw light both on the dogma and on the
reasons which led the Greeks to celebrate at an early
date the Feast of the Conception of Mary. The
conception of the Mother of God was beyond all com-
parison more noble than that of St. John the Baptist,
while it was immaterially beneath that of her
Divine Son. The soul of the precursor was not pre-
erved immaculate at its union with the body, but was
sanctified either shortly after conception from a
previous state of sin, or through the presence of Jesus
at the Visitation. Our Lord, being conceived by the
Holy Ghost, was, by virtue of his miraculous con-
ception, ipso facto consecrated without sin from the
twenth week of pregnancy (Livius, op. cit., 249). Of these three conceptions the Church celebrates feasts.
The Oriental have a Feast of the Conception of St. John the Baptist (23
Sept.), which dates back to the fifth century, is thus
older than the Feast of the Conception of Mary, and,
likewise, was kept by the Middle Ages, although it
was not celebrated in the Western dioceses on 24 September. The Conception of Mary is celebrated by the Latins on 8 December;
by the Orientals on 9 December (cf. De Meester, op.
cit. infra, p. 9); the Conception of Christ has its feast
in the universal calendar on 23 March. In celebrating
the feast of Mary's Conception the Greeks of old did
not consider the theological distinction of the active
and the passive conceptions, which was indeed un-
known to them. They did not think it absurd to
celebrate a conception which was not immaculate, as
we see from the Feast of the Conception of St. John.
They solemnized the Conception of Mary, perhaps
because, according to the "Proto-evangelium" of St.
James, it was preceded by miraculous events (the
appearance of an angel to Joachim, etc.), similar to
which preceded the conception of St. John, and that
of our Lord Himself. Their object was less the
purity of the conception than the holiness and be-
neficient effects of the conception (Luke, i, 15); hence
the feast of 9 December, however, Mary, from the time of her
conception, is called beautiful, pure, holy, just, etc.,
terms never used in the Office of 23 September (of.
St. John the Baptist). The analogy of St. John's
sanctification may have given rise to the Feast of
the Conception of Mary. If it was necessary that the
precursor of the Lord should be so pure and "filled
with the Holy Ghost" even from his mother's womb,
such a purity was assuredly not less befitting His
Mother. The moment of St. John's sanctification is
by later writers thought to be the Visitation ("the
infant in the womb"). But the words of Joachim (Luke, i, 15) seem to indicate a sanctification at the
conception. This would render the origin of Mary
more similar to that of John. And if the Conception of John had its feast, why not that of Mary?

THE DOCTRINE PROBABLE.—There is an inco-
gruity in the proposition that the flesh, from which
the infant in the bosom of Joachim was to be formed, should ever have belonged to one who was the slave of that
arch-enemy, whose power he came on earth to destroy.
Hence the axiom of Pseudo-Anselmus (Eadmer)
developed by Duns Scotus, Decui, potuit, ergo fecit,
it was becoming that the Mother of the Redeemer
had been sanctified from the first moment of her existence; God could
give her this privilege, therefore He gave it to her.
Again it is remarked that a peculiar privilege was
granted to the prophet Jeremiah and to St. John the Baptist. They were sanctified in their mother's womb, because by their preaching they had a special share in the work of preparing the way for Christ. Consequently some much higher prerogative is due to Joseph (A treatise of P. Mabbe) claiming for St. Joseph also the privilege of St. John, was placed on the Index in 1633.) Scotus says that "the perfect Mediator must, in some one case, have done the work of mediation most perfectly, which would not be unless there was someone one person at least, in whose regard the wrath of God was satisfied and not answered." (H. D. D. Dogm., "De Jesu Theol.", 1895, II, 552.)

The Feast.—The older feast of the Conception of Mary (Conc. of St. Anne), which originated in the monasteries of Palestine at least as early as the seventh century, and the modern feast of the Immaculate Conception are not identical in their object. Originally the Church only celebrated the Feast of the Conception of Mary, as she kept the Feast of St. John's conception, not discussing the sinlessness. This feast in the course of centuries became the Feast of the Immaculate Conception, as dogmatic argumentation brought about precise and correct ideas, and as the theology of dogma required a preservation of Mary from all stain of original sin gained strength. Even after the dogma had been universally accepted in the Latin Church, and had gained authoritative support through diocesan decrees and papal decisions, the old term remained, and before 1584 the term "Immaculata Conceptrix" is nowhere found in the liturgical books, except in the invitatorium of the Votive Office of the Conception. The Greeks, Syrians, etc. call it the Conception of St. Anne (268 οῆς τῆς άγγειος καὶ θεοφόρου τούτου, "the Conception of St. Anne, the ancestress of God"). Persia, in his "Immaculata Deiparae Conspectus," beseeching his opinion upon the "Typicon" of St. Samuel, which was substantially composed in the fifth century, believes that the reference to the feast forms part of the authentic original, and that consequently it was celebrated in the Patriarchate of Jerusalem in the fifth century (II, n. 1604). But the Typicon was interpolated by the Damascus, Sophronius, and others, and, from the ninth to the twelfth centuries, many new feasts and offices were added (Toscani and Cozza, op. cit. infra, XIV, 20). To determine the origin of this feast we must take into account the genuine documents we possess, the oldest of which is the canon of the feast of St. Andrew in the liturgical hymns in the second half of the seventh century, when a monk at the monastery of St. Sabbas near Jerusalem (d. Archbishop of Crete about 720). But the solemnity cannot then have been generally accepted throughout the Orient, for John, first monk and abbot of the island of Babous, about 750 in a sermon, speaking in favour of the propagation of this feast, says that it was not yet known to all the faithful (οι καὶ κατὰ τούτως ιεροπροέτατον; De Meester, p. 7; Migne, P. G., XCVI, 1499). But a century later George of Nicomedia, made metropolitan by Photius in the second half of the eighth century, says that the solemnity was not of recent origin (P. G., C, 1395). It is therefore, safe to affirm that the Feast of the Conception of St. Anne appears in the Orient not earlier than the end of the seventh or the beginning of the eighth century. Allatius (Dissert. de lb. ecol. Græc. p. 44), Assemani (Kal. und T. I, 245), Kellner (Heiratlogie, 242), Nilles (Kal. man., I, 349) hold this opinion. As in other cases of the same kind the feast originated in the monastic communities. The monks, who arranged the psalmody and composed the various poetical pieces for the office, also selected the date, 9 December, which was always retained in the Calendar. Gradually emerged from the cloister, entered into the cathedrals, was glorified by preachers and poets, and eventually became a fixed feast of the calendar, approved by Church and State. It is registered in the Calendar of Basil II (976-1025), and by the Constitution of Emperor Manuel I Comnenus on the days of the year which are half or entire holidays, promulgated in 1261. It is numbered first of all the commemorations and sabbath rest. Up to the time of Basil II, Lower Italy, Sicily, and Sardinia still belonged to the Byzantine Empire; the city of Naples was not lost to the Greeks until 1127, when Roger II conquered the city. The influence of Constantinople was consequently strong in the Neapolitan Church, and, as early as the thirteenth century, the Feast of the Immaculate Conception was obviously kept there, as elsewhere in Lower Italy on 9 December, as indeed appears from the marble calendar found in 1742 in the Church of S. Giorgio Maggiore at Naples (Martinow, "Annu s grecos-slavici, 9 Dec."). To-day the Conception of St. Anne is in the Greek Church one of the minor feasts of the year (De Meester, 5). The lesson in Mattias contains allusions to the apocryphal "Proto-evangelium" of St. James, which dates from the second half of the second century (see Anne, Saint). To the Orthodox Greeks of our days, however, the feast means very little; they are content to call it the "Feast of St. Arethusa," perhaps unintentionally, perhaps, the active conception which was certainly not immaculate. In the Menaia of 9 December this feast holds only the second place, the first canon being sung in commemoration of the dedication of the Church of the Resurrection at Constantinople. The Russian hagiographer Muravia, and several other orthodox authors even loudly declaimed against the dogma after its promulgation, although their own preachers formerly taught the Immaculate Conception in their writings long before the definition of 1584 (cf. Martinow, loc. cit.).

In the Western Church the feast appeared (8 Dec.), was in the Orient it took almost a standstill. The timid beginnings of the new feast in some Anglo-Saxon monasteries in the eleventh century, partly smothered by the Norman conquest, were followed by its reception in some chapters and dioceses by the Anglo-Norman clergy. But the attempts to introduce it officially provoked contradiction and theoretical discussion, bearing upon its legitimacy and its meaning, which were continued for centuries and were not definitively settled before 1584. The "Martyrology of Tallaght" compiled about 790 and the "Feilire" of St. Aengus (800) register the Feast of the Conception, which is not found in the "Lives of the Irish Saints", V, 102; Thurstor, "The Irish Origin of our Lady's Feast of the Conception" in "Month", 1904, p. 61). It is doubtful, however, if an actual feast corresponded to this rubric of the learned monk St. Aengus. This Irish feast certainly stands alone and outside the line of liturgical development. It is a mere isolated appearance, not a living germ (E. Bishop, "Origin etc.", p. 6). The Scholiast adds, in the lower margin of the "Feilire", that the conception (Inceptio) took place in February, since Mary was born after seven months—a singular notion found also in some Greek authors. The first definite and reliable knowledge of the Feast in the West comes from England: it is found in a calendar of Old Minster, Winchester (Conception S'oe Dei Genetricis Mariæ), dating from about 1030, and in another calendar of New Minster, Winchester, written between 1055 and 1059 (Hampson, "Cal. medii Evii", p. 41, 325); a pontifical of the eleventh century (assigned to 1046-1072) contains a "beneficio in Conceptione S. Mariæ"; a similar beneficio is found in a Canterbury pontifical written probably in the first half of the eleventh century, certainly before the Conquest. These episcopal benedictions shew that the feast not only commended itself to the devotion of individuals, but that it was recognized by authority and was observed by the Saxon monks.
with considerable solemnity. The existing evidence goes to show that the establishment of the feast in England was due to the monks of Winchester before the Conquest (1066).

The Normans on their arrival in England were disposed to treat in a contemptuous fashion English liturgical observances; to them this feast must have appeared chiefly English (III, 175), and therefore of insular simplicity and ignorance. Doubtless its public celebration was abolished at Winchester and Canterbury, but it did not die out of the hearts of individuals, and on the first favourable opportunity the feast was restored in the monasteries (Bishop, p. 30). At Canterbury, however, it was restored in 1328. Several documents (Ullathorne, 161 sq.) state that in Norman times it began at Ramsay, pursuant to a vision vouchsafed to Heslin or Æthelsige, Abbot of Ramsey, on his journey back from Denmark, whither he had been sent by William I about 1070. An angel appeared to him during a severe gale and saved the ship; after the abbot had promised to establish the Feast of the Conception in his monastery. However we may consider the supernatural feature of the legend, it must be admitted that the sending of Heslin to Denmark is an historical fact (Thurston in "Month", July 1904; Ullathorne, p. 164). The assumption of the feast in the effective breviaries, even into the Roman Breviary of 1473. The Council of Canterbury (1328) attributes the re-establishment of the feast in England to St. Anselm, Archbishop of Canterbury (d. 1109). But although this great doctor wrote a special treatise, "De Conceptu virginali et originali pecato", by which he laid down the principles of the Immaculate Conception, it is certain that he did not introduce the feast anywhere. The letter ascribed to him, which contains the Heslin narrative, is spurious (Bishop, p. 8). The principal propagator of the feast after the Conquest was Anselm, the nephew of St. Anselm. He was educated at Canterbury where he may have known some Saxon monks who remembered the solemnity in former days; after 1109 he was for a time Abbot of St. Sabas at Rome, where the Divine Offices were celebrated according to the Greek calendar. When in 1121 he was appointed Abbot of Bury St. Edmund's he established it there; probably the efforts other monasteries also adopted it, like Reading, St. Albans, Worcester, Gloucester, and Winchester (Bishop, 32).

But a number of others deemed its observance as hitherto unheard of and absurd, the old Oriental feast being all the more worshiped in mind only. Thus Salisbury and Bernard of St. Davids, declared that the festival was forbidden by a council, and that the observance must be stopped. And when, during the vacancy of the See of London, Osbert de Clare, Prior of Westminster, undertook to introduce the feast at Westminster (1203), a number of monks arose against him in the cloister and said that such a feast must not be kept, for its establishment had not the authority of Rome (cf. Osbert's letter to Anselm in Bishop, p. 24). Whereupon the matter was brought before the Council of London in 1129. The synod decided in favour of the feast, and Bishop Gilbert of London accepted it for his diocese. Thereafter the feast spread in England, but for a time retained its private character, the Synod of Oxford (1222) having refused to raise it to the rank of a holiday of obligation. In Normandy at the time of Bishop Rotric (1165–83) the Conception of Mary, in the Archdiocese of Rouen and its six suffragan dioceses, was a feast of precept equal in dignity to the Annunciation. At the same time the Norman students at the University of Paris chose it as their patronal feast. Owing to the close connexion of Normandy with England, it may have been imported from the latter country into Nor- mandy, or the Norman barons and clergy may have brought it home from their wars in Lower Italy, where it was universally solemnized by the Greek inhabitants. During the Middle Ages the Feast of the Conception of Mary was commonly called the "Feast of the Norman nation", which shows that it was celebrated in Normandy with great splendour and that it spread from there over Western Europe. Passaglia (1520) says that the feast was celebrated in Spain in the seventh century; Bishop Ullathorne also (p. 161) finds this opinion acceptable. If this be true, it is difficult to understand why it should have entirely disappeared from Spain later on, for neither does the genuine Mozarabic Liturgy contain it, nor the tenth century calendar of John of Toledo, edited by Morin (Kellner, op. cit., p. 254). The two proofs given above are futile: the life of St. Isidore, falsely attributed to St. Ildefonsus, which mentions the feast, is interpolated, while, in the Visigoth lawbook, the expression "Conceptio S. Marie" is to be understood of the Annunciation.

The Controversy. — No controversy arose over the Immaculate Conception on the European continent before the twelfth century. The Norman clergy abolished the feast in some monasteries of England where it had been established by the Anglo-Saxon monks. But towards the end of the eleventh century, when the Greek monks had been expelled, the feast was taken up again in several Anglo-Norman establishments. That St. Anselm the Elder re-established the feast in England is highly improbable, although it was not new to him. He had been made familiar with it as well by the Saxon monks of Canterbury, as by the Greeks with whom he came in contact during his exile in Campania and Apulia (1059–9). The treatise "De Conceptu virginali", usually ascribed to him, was composed by his friend and disciple, the Saxon monk Eadmer of Canterbury (Kellner, op. cit., 446). When the canons of the cathedral of Lyons, who no doubt knew Anselm the Younger, Abbot of Bury St. Edmund's, personally introduced the feast into their choir, after the death of their bishop in 1240, St. Bernard deemed it his duty to publish a protest against this new way of honouring Mary. He addressed to the canons a vehement letter (Epist. xxxiv), in which he reproved them for taking the step upon their own initiative and on the advice of a monk who had had no such authority. Not knowing that the feast had been celebrated with the rich tradition of the Greek and Syrian Churches regarding the sinlessness of Mary, he asserted that the feast was foreign to the old tradition of the Church. Yet it is evident from the tenor of his language that he was not in mind only the canons, bishops, he reproved them for the active conception of the flesh, and that the distinction between the active conception, the formation of the body, and its animation by the soul had not yet been drawn. No doubt, when the feast was introduced in England and Normandy, the axiom "decuit, potuit, ergo fecit", the childlike piety and enthusiasm of the simples builded upon revelations and apocryphal legends, had the upper hand. The object of the feast was not clearly determined, no positive theological reasons had been placed in evidence.

St. Bernard was perfectly justified when he demanded a careful inquiry into the reasons for observing the feast. Not adverting to the possibility of sanctification at the time of the infusion of the soul, he writes that there can be question only of a sanctification after conception, which would render holy the nativity not the conception itself (Scheeben, "Dogmatik", III, p. 550). Hence Albert the Great observes: "We say that the blessed Virgin was sanctified before animation, and the affirmative contrary to this is the heresy condemned by St. Bernard in his epistle to the canons of Lyons" (III Sent., dist. iii, i, ad 1, Q. i). St. Bernard was at once answered in a treatise written by either Richard of St. Victor or Peter Comestor. In this treatise appeal is
made to a feast which had been established to commemorate an incontestable tradition. It maintained that the flesh of Mary needed no purification; that it was sanctified before the conception. Some writers of those times maintained sanctification after conception; but before Adam fell, a portion of his flesh had been reserved by God and transmitted from generation to generation, and that out of this flesh the body of Mary was formed (Scheeben, op. cit., III, 551), and this formation they commemorated by a feast. The later of these writers did not reject the extension of the feast, for in 1154 it was observed all over France, until in 1275, through the efforts of the Paris University it was abolished in Paris and other dioceses. After the saint's death the controversy arose anew between Nicholas of St. Albans, an English monk who defended the festival as established in England, and Peter Celimassi, the celebrated Bishop of Chartres. Nicholas remarks that the soul of Mary was pierced twice by the sword, i.e. at the foot of the cross and when St. Bernard wrote his letter against her feast (Scheeben, III, 551). The point continued to be debated throughout the thirteenth and fourteenth centuries in the greater part of the French province. St. Peter Damian, Peter the Lombard, Alexander of Hales, St. Bonaventure, and Albert the Great are quoted as opposing it. St. Thomas at first pronounced in favour of the doctrine in his treatise on the "Sentences" (in I Sent. c. 44, q. 1 ad 3), yet in his later works he objected strongly. Much discussion has arisen as to whether St. Thomas did or did not deny that the Blessed Virgin was immaculate at the instant of her animation, and learned books have been written to vindicate him from having actually drawn the negative conclusion. For this controversy see: Cornoldi, "Sententia S. Thome etc." (2nd ed., Naples, 1870); Ronard de Card, "L'Ordre des Frères-prêcheurs et l'Immaculée Conception" (Brussels, 1864); Pesch, "Pres. dogm." III (Freiburg, 1895), 170; Heimburger, "Dogmat. Theol." VII (Mainz, 1896), 436; Tobbe, "Die Stellung des hl. Thomas zu der unbes. Empfängnis" (Münster, 1892); C. M. Schneider, "Die unbes. Empfängnis und die Erbsünde" (Ratisbon, 1892); Pohle, "Lehrbuch d. Dogmatik", II (Paderborn, 1903), 254. Yet it is hard to say that St. Thomas did not require an instant at least, after the animation of Mary, before her sanctification, as great a sanctification as was ascribed to the soul at the moment of creation. This difficulty he raised in no fewer than ten passages in his writings (see, e.g., "Summa Theol." III, Q. xxvii, a. 2, ad 2am). But while St. Thomas thus held back from the essential point of the doctrine, he has, however, laid down the principles which, after they had been drawn together and worked out, enabled other minds to furnish the true solution of this difficulty from his own premises.

In the thirteenth century the opposition was largely due to a want of clear insight into the subject; in certain cases even "competent senses", which had not been separated by careful definition. If St. Thomas, St. Bonaventure, and other theologians had known the doctrine in the sense of the definition of 1854, they would have been its strongest defenders instead of being its opponents. We may formulate the question discussed by them in two propositions, both of which are against the sense of the dogma of 1854: (1) The sanctification of Mary took place before the infusion of the soul into the flesh, so that the immunity of the soul was a consequence of the sanctification of the flesh and there was no liability on the part of the soul to contract original sin. This would approach the opinion of the Damascene concerning the holiness of the active conception. (2) The sanctification took place after the infusion of the soul by redemption from the servitude of sin, into which the soul had been drawn by its union with the un sanctified flesh. This form of the thesis excluded an immaculate conception. The theologians, however, did not reject the intermediate idea of sanctification at the very moment of its infusion into the body. Their principal difficulty was the declaration of St. Paul (Rom., v. 12), that all men have sinned in Adam. The purpose of this Pauline declaration, however, is to insist on the need which all men have of redemption by Christ. Our Lady was no exception to this rule. A second difficulty was the silence of the earlier Fathers. But the divines of those times were distinguished not so much for their knowledge of the Fathers or of history, as for their exercise of the power of reasoning. They read the Western Fathers more than those of the Eastern Church, who exhibit a far greater concern to secure the doctrine of the Immaculate Conception. And many works of the Fathers which had then been lost sight of have since been brought to light. The famous Duns Scotus (d. 1308) at last (in III Sent., dist. iii, in both commentaries) laid the foundations of the true doctrine so clearly and dialectically that he has never been objected to. Thus the question was satisfactorily, that from that time onward the doctrine prevailed. He showed that the sanctification after animation—sanctification post animationem—required that it should follow in the order of nature (naturam) not of time (temporalem); he removed the great difficulty of St. Thomas showing that, so far from being excluded from redemption, the Blessed Virgin obtained of her Divine Son the greatest of redemptions through the mystery of her preservation from all sin. He also brought forward, by way of illustration, the somewhat dangerous and doubtful argument of Eadmer (S. Anselm) "decuit, potuit, ergo fecit" (cf. Scheeben, III, 555, sqq.).

From the time of Scotus not only did the doctrine become the common opinion at the universities, but the feast spread widely to those countries where it had not been previously adopted. With the exception of the Dominicans, all the orders of the religious orders took it upon itself. The Franciscans, as the general chapter at Pisa in 1263 adopted the Feast of the Conception of Mary for the entire order; this, however, does not mean that they professed at that time the doctrine of the Immaculate Conception. Following in the footsteps of their own Duns Scotus, the learned Petrus Aureolus and Franciscus de Mayronis became the most fervent champions of the doctrine, although their older teachers (St. Bonaventure included) had been opposed to it. The controversy continued, but the defenders of the opposing opinion were almost entirely confined to the members of the Dominican order. In 1438 a metropolitan and nearly all the members of the Council of Basle brought before the Council of Basle where the University of Paris, formerly opposed to the doctrine, proved to be its most ardent advocate, asking for a dogmatic definition. The two referes at the council were John of Segovia and John Turrecremata (Torquemada). After it had been discussed for the space of two years before that assembled, the bishops declared the Immaculate Conception to be a doctrine which was pious, consonant with Catholic worship, Catholic faith, right reason, and Holy Scripture; nor, said they, was it henceforth allowable to preach or to demonstrate to the contrary (Mansi, XXI, 182). The Fathers of the Council say that the Church of Rome was celebrating the feast. This is true only in a certain sense. It was kept in a number of the churches of Rome, especially in those of the religious orders,
but it was not received in the official calendar. As the council at the time was not ecumenical, it could not pronounce with authority. The memorandum of the Dominican Torquemada formed the armoury for all attacks upon the doctrine made by S. Antoninus of Florence (d. 1459), and by the Dominicans Bandelli and Spina (Ronard de Caroli, Ordre de Frerees Petites) (Tusc. Conc., 1864).

By a Decree of 28 Feb., 1476, Sixtus IV at last adopted the feast for the entire Latin Church and granted an indulgence to all who would assist at the Divine Offices of the solemnity (Denzinger, 734). The Office adopted by Sixtus IV was composed by Leonard de Nogaret, who, since 1470, had a very beautiful Office from the pen of Bernardine dei Busti (Sicut Licitum), which was granted also to others (e.g. to Spain, 1761), and was chanted by the Franciscans up to the second half of the nineteenth century. As the public acknowledgment of the feast of Sixtus IV did not prove sufficient to appease the conflict, he published in 1483 a constitution in which he punished with excommunication all those of either opinion who charged the opposite opinion with heresy (Grave nimis, 4 Sept., 1483; Denzinger, 735). In 1546 the Council of Trent, when the question was touched upon, declared that it was not the custom of this Holy Synod to include in the decree which concerns original sin the Blessed and Immaculate Virgin Mary, Mother of God” (Sess. V, De peccato originali, v, in Denzinger, 792). Since, however, this decree did not define the doctrine, the theological opponents of the mystery, though more and more reduced in numbers, did not yield. St. Pius V not only condemned proposition lxxiii of Baius that “no one but Christ was without original sin, and that therefore the Blessed Virgin had died because of the sin contracted in Adam, and had endured afflictions in this life, like the rest just, as the punishment of actual and original sin” (Denzinger, 1703), but he also issued a constitution in which he forbade all public discussion of the subject. Finally, he inserted a new and simplified Office of the Conception in the liturgical books ("Super speculum", Dec., 1570; "Supermi omnipotentia", March, 1571; “Bullarium Marianum”, pp. 72, 75).

Whilst these disputes went on, the great universities and almost all the great orders had become so many bulwarks for the defense of the dogma. In 1497 the University of Paris decreed that henceforward no one should be admitted to the lectures of the Immaculate Conception, the order of the Seyes was forbidden to defend and assert the Immaculate Conception of Mary. Toulouse followed the example; in Italy, Bologna and Naples; in the German Empire, Cologne, Mainz, and Vienna; in Belgium, Louvain; in England, before the Reformation, Oxford and Cambridge; in Spain, Salamanca, Toledo, Seville, and Valencia; in Portugal, Coimbra and Evora; in America, Mexico and Lima. The Friars Minor confirmed in 1621 the election of the Immaculate Mother as patron of the order, and bound themselves by oath to teach the mystery in public and in private. The Dominicans, however, were under special obligation to follow the doctrines of St. Thomas, and the common conclusion was that St. Thomas was opposed to the Immaculate Conception. Therefore the Dominicans asserted that the doctrine was an error against faith (John of Montesano, 1373); although they adopted the feast, they termed it persistently “Sanctificatio R. Virginis Mariae, Conceptio Mariae” (Denzinger, II, 237), until in 1622 Gregory V abolished the term “sanctificatio”. Paul V (1617) decreed that no one should dare to teach publicly that Mary was conceived in original sin, and Gregory V (1622) imposed absolute silence (in scripta et sermonibus etiam privata) upon the adversaries of the doctrine until the Holy See should define the question. To put an end to all further cavilling, Alexander VII promulgated on 8 December, 1661, the famous constitution “Sollicitudo omnium Ecclesiarum”, defining the true sense of the word “conceptio”, and forbidding all further discussion against the common and pious sentiment of the Church. He declared that the immunity of the Church from original sin passed to the first moment of the creation of her soul and its infusion into the body was the object of the feast (Denzinger, 1100).

Explicit Universal Acceptance. - Since the time of Alexander VII, long before the final definition, there was no doubt on the part of theologians that the doctrine was among the truths revealed by God. Wherefore Pius IX, surrounded by a splendid assembly of cardinals and bishops, 8 December 1854, promulgated the dogma. A new Office was prescribed for the entire Latin Church by Pius IX (25 December, 1863), by which decree all the other Offices in use were abolished, including the old Office Sicut Licitum of the Franciscans, and the Office composed by Pasquale (approved 2 Feb., 1849). In 1904 the golden jubilee of the definition of the dogma was celebrated with great splendour (Pius X, Enc., 2 Feb., 1904).

Clement XI added to the feast an octave for the dioceses within the temporal possessions of the pope (1667). Clement XI decreed on 6 Dec., 1708, that the feast should be a holiday of obligation throughout the entire Church. At last Leo XIII, 30 Nov., 1879, raised the feast to a double of the first class with a vigil, a dignity which had long before been granted to Sicily (1739), to Spain (1780), and to the United States (1847). A Votive Office of the Conception of Mary, which is now recited in almost the entire Latin Church on free Saturdays, was granted first to the Benedictines in the Church of St. Anne at Rome in 1603, to the Franciscans in 1609, to the Conventuals in 1612, etc. The Syrian and Chaldean Churches celebrate this feast with the Greeks on 9 December; in Armenia it is one of the few immovable feasts of the year (9 December); the Cypriots and Byzantine Catholics keep the feast on 25 August whilst they celebrate the Nativity of Mary on 1 May; the Catholic Copts, however, have transferred the feast to the 10 December (Nativity, 10 September). The Catholic Orientalists have since 1854 changed the name of the feast in accordance with the dogma to the “Beatae Virginis Mariae concepptionem” and added it to the various calendars in Nîmes, "Cal. man. utr. eccl.").

The Archdiocese of Palemo solemnizes a Commemoration of the Immaculate Conception on 1 September to give thanks for the preservation of the city on occasion of the earthquake, 1 September, 1726. A similar commemoration is held on 14 July at Genoa, 14 July at Genoa, 11 Jan., 1891; and by the Oblate Fathers on 17 Feb., because their rule was approved 17 Feb., 1826. Between 20 September, 1839, and 7 May, 1847, the privilege of adding to the Litany of Loreto the invocation, “Queen conceived without original sin”, had been granted to 300 dioceses and religious communities. The Immaculate Conception was declared on 8 November, 1760, principal patron of all the possessions of the crown of Spain, including those in America. The decree of the first Council of Baltimore (1846), electing Mary in her Immaculate Conception principal Patron of the United States, was: "Apostolicae Sedis, De Immac. Conceptione, B.M.V. (3 vols., Rome, 1855); Ballarini, Syllabo monumentorum ad myster. Immac. Conceptionis spectantium (Rome, 1854-6); Scheren, Dogmatic Catalogus, 4th ed. (Brussels, 1858); Hering, Dogmatic Catalogus, 4th ed. (Brussels, 1858); Fleck: Rosekavn, De b. Virginis Mariae in suo conceptu imag. (13 vols., Buda, 1869-77); Lassue, L'imm. Conc. et l'Imm. Conc. de Paris..."

IMMACULATE CONCEPTION, CONGREGATION OF THE.

—I. CONGREGATION OF THE IMMACULATE CONCEPTION OF OUR LADY, founded in 1454 at Toledo, Spain, by Beatrix de Silva, sister of Blessed Amadeus. On the marriage of Princess Elizabeth of Portugal with John II, King of Castile, Beatrix had accompanied the queen to the court of her husband, but her great beauty had caused envy of the queeness, especiably with difficulty and took refuge in the Dominican convent at Toledo. Here for forty years she led a life of great holiness, without, however, becoming a member of the order. Inspired by her devotion to the Blessed Virgin to found a new congregation in her honour, Beatrix, with some companions, took the vow of perpetual poverty and at first by herself. In 1489, by permission of Innocent VIII, the sisters adopted the Cistercian rule, bound themselves to the daily recitation of the Office of the Immaculate Conception, and were placed under obedience to the prior of the archidomestic. In 1501 Alexander VI united the community of San Pedro de las Dueñas, under the Rule of St. Clare, but in 1511 Julius II gave it a rule of its own, and in 1616 special constitutions were drawn up for the congregation by Cardinal Ugincz. The second convent was founded in 1507 at Torrigo, from which, in turn, were established seven others. The congregation soon spread through Spain, Italy, and France. The foundress determined on the habit, which was white, with a white scapular and blue mantle.

F. M. RUDGE.

II. MISSION PRIESTS OF THE IMMACULATE CONCEPTION (usually called MISSIONAIRES OF RENNES), founded at St.-Méen in the Diocese of Rennes, by Jean-Marie-Robert de Lamennais, for the care of the diocesan seminary and the holding of missions. The disciples of the founder's younger brother, Félicité, in 1829 withdrew with him into the solitude of La Chénée, forming the famous Society of St. Peter, with which the elder community at its own request was united, under the superintendence of Félicité. The new congregation was placed under simple vows, the aims proposed being the defence of the Faith, the education of youth, and the giving of missions. A house of studies was erected at Malestroit, near Floérec, and placed under the superintendence of Father de Lamennais, while Lamennais remained at La Chénée, with the younger members, writing for them his "Guide de la jeunesse", and for the more advanced the "Journées du chrétien". Lamennais's long-cherished project of forming a body of priests to thoroughly equipped for pressing needs in the Church of France, a scheme which had been outlined in 1824, and which, in the person of Father Salinis, seemed well on the way towards fulfilment. A vivid picture of the rule of life and the spirit of La Chénée is to be found in the letters of Maurice de Guérin, whose companions were such men as Gerbet, Guéranger, Gaume, Scourbiac, and Ch. de Sainte-Foi. The condemnation of "L'Avvenir" disturbed only temporarily the activity of La Chénée. On the final defection of Félicité, however, the Bishop of Rennes transferred to Jean-Marie the superintendence of the congregation, the members of which left La Chénée for Malestroit, laymen being now excluded. The congregation, reorganized, gained a new lease of life in 1837 and by 1861 had 350 members in 9 houses, under the mother-house at Rennes.

F. M. RUDGE.

III. SERVITS OF THE IMMACULATE CONCEPTION, founded in 1864 by Peter Cariscianer, a Georgian priest, at Constantinople, to minister to the spiritual wants of Georgian Christians. The congregation was confirmed by Pius IX, 29 May, 1875. Approval was given for the three rites, Latin, Armenian, and Georgian, the first two for use among the Georgians in their native country, the last to keep up the Greek-Georgian Rite in the monastery at Constantinople, which is the mother-house of the congregation. The foundation of the Immaculate Conception has the charge of three congregations at Constantinople, one at Feri-kuei, for Georgians and Armenians, another for the Latins in Scutari, and a third for Georgians at Pera. Candidates for the priesthood are ordained by the Bishop of Saratow, who is the ecclesiastical superior of Georgia; for a time the title parish duties were secularized, but an attempt is now being made by which they are appointed by the congregation to some post where they may minister to their countrymen.

THE SISTER SERVITS OF THE IMMACULATE CONCEPTION conduct two primary schools, to which children are admitted, without distinction of creed.

HEIMBACHER, Orden und Kongregationen, III (Paderborn, 1907), 353.

F. M. RUDGE.

IV. SISTERS OF PROVIDENCE OF THE IMMACULATE CONCEPTION, founded at Jodoigne, in 1833, definitively established at Champion near Namur in 1836, by Canon Jean-Baptiste-Victor Kinet, for the instruction of children, the care of orphan asylums, and the service of the sick and prisoners. In 1858 the congregation received the approbation of the apostolic See, and shortly afterwards the confutation of the bishop. By 1876 there were a hundred and fifty convents in Belgium, England, Italy, and the United States. The mother-house is at Champion.

F. M. RUDGE.

V. SISTERS OF THE IMMACULATE CONCEPTION, a branch of the Institute of the Holy Family, founded in 1820 by the Abbé Pierre Bonaventure Noailles, Canon of Bordeaux. Abbé Noailles when studying at the Seminary of St. Sulpice, Paris, conceived the idea of founding a congregation, in which Christians of every class of life might lead a life of perfection. In 1820 he placed the first three members of the Holy Family in a house at Bordeaux, under the name of the Ladies of Loreto. As the numbers increased the sisters were divided by their founder into two categories: (1) Those engaged directly in the various works undertaken by the Institute (2) Lay sisters who perform household duties, and are called the Sisters of St. Martha. The first are sub-divided into three branches (a) The Sisters of St. Joseph who undertake the charge of orphans (b) The Sisters of the Immaculate Conception, who devote themselves to educational work (c) The Sisters of Hope, who nurse the sick. The Institute encountered much opposition at first, but in 1850 it was canonically approved by the Holy See. The works of the Sisters of the Immaculate Conception are very numerous; they devote themselves to educational work and visiting the poor. They have fifteen con-
vents in Great Britain and Ireland, to all of which and to five boarding-schools elementary schools are attached. About 250 sisters teach in these convents. The English Novitiate is at Rock Ferry, Cheshire. The other English houses are at Great Preestreet, London, E.; Leeds; Sickinghall, Yorkshire; Stockport; Macclesfield; Stalybridge; Woodford, Essex; Ramsgate; Liscard, Cheshire; Birkenhead; Wrexham, Wales; Leith, Scotland. Attached to the Leeds convent is a juniorate for testing vocations. The habit in England is only blue with a white girdle and a black veil. In Ireland they have one house in the Archdiocese of Armagh at Magherafelt, and another in Kildare, to both of which schools are attached. The institute has novitiate houses at Bordeaux, France; Bas-Oha, Liège, Belgium; Horta, Madrid, Spain; Bellaria, Naples; Stalowa, Poland; and in Asia. Besides the novitiates there are juniorates attached to some of the convents. There is one at Lozère, Mende, France, one at Liège, Belgium, and one at Fromont, Spain.

**Francesca M. Steele.**

**Immanence (Lat. in manere, to remain in) is the quality of any action which begins and ends within the agent. Thus, vital action, as well as the physiological, intellectual, and moral life of an individual, is immanent, because it proceeds from that spontaneity which is essential to the living subject and has for its term the unfolding of the subject’s constituent energies. It is initiated and is consummated in the interior of the same being, which may be considered as a closed system. But is this system so shut in as to be self-sufficient and incapable of receiving anything from without—or can it enrich itself by taking up elements which its environment offers and which are at times even necessary, as nourishment, to the immanent activity of the body? This is the problem which the philosophies of immanence propose and attempt to solve, not only in respect to man considered as a particular being, but also in respect to the universe considered as a whole. It is, indeed, with reference to this latter aspect that the controversy arose in ancient times.

**Historical Sketch.**—The doctrine of immanence came into existence simultaneously with philosophical speculation. This was inevitable, since man first conceived all things after his own likeness. He regarded the universe, then, as a living thing, endowed with immanent activity, and working for the full unfolding of its being. Under the veil of poetic fiction, we find the Monotheism of the Hindoos and again among the sages of Greece. The latter hold a somewhat confused Hylolozism: as they see it, the cosmos results from the evolution of a single principle (water, air, fire, unity), which develops like an animal organism. But Socrates, coming back to the study of “things human,” refuses to look upon anything as merely part and parcel of the Great All. He asserts his independence and declares himself distinct from the universe; and thus he shifts the pivotal problem of philosophy. What he professes is, indeed, the immanence of the subject, but that immanence he does not conceive as absolute, for he recognizes the fact that man is subject to external influences. The Church, therefore, these two conceptions of immanence are to alternate in ascendency and decline. After Socrates, Plato, and Aristotle, absolute immanence regains its sway through Zeno of Citium, who gives it its clearest expression; before it falls back on the preaching of Christianity, which sets forth clearly the universal providence of God and the distinction between God and the world. The Alexandrians, in the wake of Philo, impart a new lustre to the doctrine of absolute immanence; but St. Augustine, borrowing from Plotinus the Stoic notion of “seminal principles,” contends for relative immanence which in the Middle Ages triumphs with St. Thomas. With the Renaissance comes a renewal of life for the theory of absolute immanence. In the seventeenth and eighteenth centuries, on the contrary, Descartes and Kant maintain the transcendency of God, though recognizing the relative immanence of man. But their disciples exaggerate this latter fact and thus fall into subjective idealism: the ego is shut up in its absolute immanence; it posits the non-ego, the world, unsherred by God. Hegel, the same path is taken by Cousin, Vacherot, Bergson, and many others. The principle of absolute immanence becomes a dogma which they seek to impose upon contemporary philosophy. It confronts revealed religion, and appears as one of the sources of modernism, with its profound reactions of morality and scorn with liberal Protestantism. The notion of immanence is at the present day one of the centres around which the battle is being fought between the Catholic religion and monism.

Before passing on to larger developments, we note that (1) under its various aspects, the conception of immanence is the interpretation and extension of a fact observed in the living subject; (2) in every age it takes on two parallel and opposite forms, which the Encyclical “Pasendi gregis” defines in an eminently philosophical way, as follows: “Etenim hoc quern quae omnino deus intitulit sibi non spatium, non temporis, non aetatis, non sapientiae, non industriae, non praecipitati de rei etiam neque Angeli, neque Angelorum, neque mortales pote distinguant necne? Si distinctum, quid tum in catholicae doctrina differt aut doctrinam de revelatione cur rejecit? Si non distinctum, pantheismum habemus. Atqui immanentiam haec modernistarum vult atque admittit omne conscientia phenomenon ab homine, ut homo est, propter et in quo, nos, haec, non immanen, non “manifest”, non “immanen” make God and man distinct or not? If it does, then in what does it differ from the Catholic doctrine? or why does it reject what is taught in regard to revelation? If it does not make God and man distinct, it is Pantheism. But this immanence of the Modernists would claim that every phenomenon of consciousness proceeds from man as such.

**Division.**—From this general consideration of the subject the following division arises. A. The doctrine of immanence, (1) absolute, (2) relative. And, as this doctrine has of late years given birth to a new method in apologetics, we shall next consider: B. The emmanence of the method of immanence, (1) absolute, (2) relative.

**A. The Doctrine of Immanence.** (1) Absolute Immanence. (a) Its Historical Evolution.—At its outset the doctrine of immanence, properly so called, was concerned with solving the problem of the world’s origin and the nature of the cosmos: and the modernist, desires “Supreme Intelligence”, postulated by Aristotle as the final cause of universal activity. There existed, then, but one principle under a seeming duality; it was corporeal, though it expressed itself sometimes in terms of passivity, when it was called matter, and sometimes in terms of activity, when it was called force, or cause. It was the technic fire presiding over the genesis of the world; it was the Divine seminal principle from which all things were born (φύσις, λόγος στηρίσματος). This principle, which is the first to move, is also the first to be moved, since nothing is outside of it; as beings find in themselves the source of their origin and the principle of their being; in other words, in the moments of its evolution, they are born and they die through its perpetual becoming. The fiery spirit seems to move the chaotic mass as the soul moves the body, and this is why it is called the "soul of the
world". Human souls are but sparks from it, or rather its phenomena, which vanish at death and are re-absorbed into the bosom of nature. This is Hylomorphism in its ultimate laikasion.

The Greek and Roman Stoics changed nothing in this conception. Philo alone, before Christianity, attempted to transform it. Pursuing the syncretic method which he brought into repute in the School of Alexandria, he undertook to harmonize Moses, Plato, and Zoroaster. This was impossible, and sort of involved Stoicism, setting up at the origin of all things no longer a corporeal seminal principle, but a spiritual God, perfect, anterior to matter, from whom everything is derived by a process of outflow and downfall continued without limit. Proclus, Porphyry, Jamblique, and Plotinus, established emanationism and panentheism, which formed the basis of their neo-Platonism. From Egypt the Alexandrian ideas spread over the West through two channels. First, in the fourth century, they entered Spain with a certain Mark, who had lived at Memphis; in Spain they developed by amalgamating with Manichaeanism, under the influence of Priscillian, and the Germanic independence of Spain, they passed into Gaul. In the latter country, moreover, they were propagated by the Latin translations of Boethius. Later on, we find traces of them in Scoto-Eriugena (ninth century), then in Abelard (twelfth century), Amaury of Béne, and David of Dinant (thirteenth century). Spinoza, the celebrated Meister Eckhart (fourteenth century). Soon after this the Renaissance restores the ancient doctrines to honourable consideration, and the philosophy of immanence reappears in the commentaries of Pomponazzi on Aristotle and those of Marsilio Ficino on Plotinus. Giordano Bruno saw in God the monad of monads, who by an inward necessity produces a material creation which is inseparable from Himself. Veneti gave God immanent in the forces of nature, while, according to Jacob Böhme, God acquires reality only through the evolution of the world. By an unbroken tradition, then, the doctrine of immanence comes down to modern times. The Cartesian revolution seems even to favour its development. Exaggerating the distinction between soul and body, the former of which moves the latter by means of the pineal gland, the mechanical theories prepared the way for Malebranche's occasionalism, which, however, "theorizes about a true cause, because there is but one true God." Spinoza, too, admits only one cause. A disciple of Descartes in the geometrical rigour of his deductive processes, but still more a disciple of the rabbis and of Giordano Bruno in the spirit of his system, he sets up his nature naturans unfolding its attributes by an immanent progression. This is all but the revival of Alexandrian thought.

True Cartesianism, however, was not favourable to theories of this sort, for it is based on personal evidence, and it distinguishes sharply between the world and its transcendent cause. With its vivid realization of the importance and independence of the individual, it follows, rather, the Socratic tradition. That insight, defined and purified by Christianity, had all along served as a barrier against the encroachment of the doctrine of absolute immanence. It could not but derive fresh strength from the philosophy of Cogito, ergo sum, and it was indeed strengthened even to excess. Jealous of its own immanence, which it had learned to know better than ever, the human mind overshot its first intention and turned the doctrine of absolute immanence to its own profit. At first it sought only to solve the problem of knowledge, while keeping a clear empiricism. In the Kantian epoch it still clung to the absolute immanence, for it believed in the existence of a transcendent Creator and admitted the existence of noumena, unknowable, to be sure, but with which we maintain relations. Soon the temptation becomes stronger; having hitherto pretended to impose its own laws on knowable reality, thought now credits itself with the power of creating that reality. For Fichte, in fact, the ego not only posits knowledge, it also posits the nonego. It is the pre-eminent form of the Absolute (Schelling). No longer is it the Substance that, as natura naturans, produces the world by a process of derivation and degradation without limit; it is an obscure germ, which in its ceaseless becoming, rises to the point of becoming a kind of substance, and comes into contact with the conscious of itself. The absolute becomes Hegel's "idee", Schopenhauer's "will", Hartmann's "unconscious", Renan's "time joined to the onward tendency" (le Temps joint à la tendance au progrès), Taine's "eternal axiom", Nietzsche's "superman", Comte's "conscience". Under all the forms of evolutionistic monism, lies the doctrine of absolute immanence.

Considering the religious tendencies of our age, it was inevitable that this doctrine should have its corresponding effect in theology. The monism which it preaches, setting aside the idea of separateness between God and the world, also removes entirely the distinction between the natural order and the supernatural. It denies anything transcendent in the supernatural, which, according to this theory, is only a conception springing from an irresistible need of the soul, or "the ceaseless palpitation of the soul panting for the infinite" (Bunyan). This theory is the product of our interior evolution; it is of immanent origin, for "it is in the heart of mankind that the Divine resides". "I am a man, and nothing Divine is foreign to me" (Bulfinch). Such is the origin of religion in this view. And herein we recognize the process of liberal Protestantism as well as that of the Modernists.

(b) The actual content of the doctrine of Absolute Immanence.—As it is nowadays presented, the doctrine of absolute immanence is the resultant of the two great currents of contemporary thought. Kant, reducing everything to the individual consciousness, and declaring all metaphysical investigation to be illusory, locks the human soul in its own immanence and condemns it thenceforth to agnosticism in regard to transcendent realities. The Positivist movement reaches the same terminus. Through mistrust of that reason of which Kant regarded it as the supreme medium, Comte rejects as worthless every conclusion that goes beyond the range of experience. Thus the two systems, setting out from opposite exaggerations, arrive at one and the same theory of the unknowable: nothing is left us now but to fall back upon ourselves and contemplate the phenomena which emerge from the depths of our own ego. We have no other means of information, and it is from this inner source that all knowledge, all faith, and all rules of conduct flow out by the immanent evolution of our life, or rather of the Divine, which thus manifests itself through us. This initial position determines the solutions which the several systems of immanence furnish for the problems concerning God and Man.

(i) God.—The problems of the Divine life and action are among the foremost to interest the partisans of absolute immanence. They talk incoherently of Trinity, Incarnation, and Redemption, but only, as they claim, to do away with the mysteries and to use in these theological terms merely the symbols that express the evolution of the first principle. Philo's Trinity, like that of neo-Platonism, was an attempt to describe this evolution, and the moderns have only resuscitated the Alexandrian allegory. The great being, the great fetish, and the great medium (Comte), the evolving idea, in a relation (Hegel), unity, variety and their relation (Cousin)—all these, in the thought of their originators, are but so many revivals of the Oriental myths. But conscience now demands the abolition of all such
symbols. "The religious soul is in fact forever interpreting and transforming the traditional dogmas." (Sahatier), because the stress of the absolute reveals to us new meanings as it makes us more fully conscious of the Divinity that is immanent in us. Through this progress the incarnation of God in humanity goes on without ceasing, and the Christian mystery (they make the blasphemous assertion) has no other meaning. There can be no further question of a redemption; nor could there have been an original fall, since in this view, disobedient Adam would have been God Himself. At most the pessimists admit that the Supreme will, or the unconscious, which blundered into the production of the world, will recognize its blunder one day, and will cleanse humanity by individuals, and will repair that blunder by annihilating the universe. In that hour of cosmic suicide, according to Hartmann, the Great Crucified will have come down from his cross. Thus is Christian terminology incoherently subjected to new interpretations. "We still speak of the Trinity . . . of the Divinity of Christ, but with a meaning more or less different from that of our forefathers" (Buisson, in his "La Religion, la Morale et la Science"). Thus explains the influence of the doctrine of immanence upon the interpretation of dogmas in liberal Protestantism.

To explain the origin of the world, the evolution of the Divine principle is put forward. This hypothesis would also account for the organization of the cosmos. Hence the universal order is considered as the outcome of the action of blind energies, and no longer as the realization of a plan conceived and executed by a providence. From the physico-chemical forces life issues; the absolute slumbers in the plant, begins to dream in the animal, and at last awakens to full consciousness in man. Between the stages of this progress there is no breach of continuity; it is one and the same principle that rises in them in its own forms, yet never withdraws from any of them. Evolutionism and transformationism, therefore, are but parts of that vast system of absolute immanence in which all beings enfold one another, and none is distinct from the universal substance. Consequently, there is no longer any abyss between matter and the human soul; that transcendental spirituality of the soul is a fable, its personification an illusion, its individual immortality an error.

(iii) Dogmas and Morals.—When the Absolute reaches its highest form in the human soul, it acquires self-consciousness. This means that the soul discovers the Divine principle in itself and recognizes it as constituting its essential nature. But the perception of this relation with the Divine—or, rather, of this "withinness" of the Divine—is what we are to call Revelation itself (Loisy). At first confused, perceptible only as a vague religious feeling, it develops by means of religious experience (James), becomes clearer through reflection, and asserts itself in the conceptions of the religious consciousness. These conceptions formulate dogmas—"admirable creations of human thought" (Buisson)—or rather of the Divine principle immanent in human thought. But the expression of dogmas is always inadequate, for it marks but one moment in the religious development; it is a venture which the progress of Christian faith and especially of Christian life will soon cast off. In a word all religion wells up from the depths of the sub-conscious (Myers, Prince) by vital immanence; but the religious immanence and the more or less agnostic "symbolism" with which the Encyclical "Pascendi gregis" reproaches the Modernists.

The human soul, creator of dogmas, is also the creator of moral precepts, and that by an absolutely autonomous act. Its will is the living and sovereign law, for in it is definitively expressed the will of the God immanent in us. The Divine flame, which warms the atmosphere of our life, will inevitably cause those hidden germ of morality to develop which the Absolute has implanted. Hence, there can be no longer any question of effort, of virtue, or of responsibility; these words have lost their meaning, since there is neither original sin nor actual and freely willed transgression. There is no longer any blame-worthy concupiscence; all our instincts are impregnated with Absolute, all our desires are just, good, and holy. To follow the impulse of passion, to rehabilitate the flesh (Saint-Simon, Leroux, Fourrier), which is one form under which the Divinity manifests itself (Heine), is duty. In this way, indeed, we cooperate in the redemption which is being accomplished day by day, and which will, in the end, and when the absolute shall have completed its incarnation in humanity, be the part which moral science has to play consists in discovering the laws which govern this evolution, so that man in his conduct may conform to them (Berthelot) and thus ensure the collective happiness of humanity; social utility is to be hencetoward the principle of all morality; solidarity (Bourgeois), which procures it, is the most scientific form of immanent morality, and of this man is, in the universe, the beginning and the end.

(2) Relative Immanence. (a) Its Historical Evolution.—Since the World, Life, and the Soul, to explain the origin of the world, the evolution of the Divine principle is put forward. This hypothesis would also account for the organization of the cosmos. Hence the universal order is considered as the outcome of the action of blind energies, and no longer as the realization of a plan conceived and executed by a providence. From the physico-chemical forces life issues; the absolute slumbers in the plant, begins to dream in the animal, and at last awakens to full consciousness in man. Between the stages of this progress there is no breach of continuity; it is one and the same principle that rises in them in its own forms, yet never withdraws from any of them. Evolutionism and transformationism, therefore, are but parts of that vast system of absolute immanence in which all beings enfold one another, and none is distinct from the universal substance. Consequently, there is no longer any abyss between matter and the human soul; that transcendental spirituality of the soul is a fable, its personification an illusion, its individual immortality an error.

When the Absolute reaches its highest form in the human soul, it acquires self-consciousness. This means that the soul discovers the Divine principle in itself and recognizes it as constituting its essential nature. But the perception of this relation with the Divine—or, rather, of this "withinness" of the Divine—is what we are to call Revelation itself (Loisy). At first confused, perceptible only as a vague religious feeling, it develops by means of religious experience (James), becomes clearer through reflection, and asserts itself in the conceptions of the religious consciousness. These conceptions formulate dogmas—"admirable creations of human thought" (Buisson)—or rather of the Divine principle immanent in human thought. But the expression of dogmas is always inadequate, for it marks but one moment in the religious development; it is a venture which the progress of Christian faith and especially of Christian life will soon cast off. In a word all religion wells up from the depths of the sub-conscious (Myers, Prince) by vital immanence; but the religious immanence and the more or less agnostic "symbolism" with which the Encyclical "Pascendi gregis" reproaches the Modernists.

The human soul, creator of dogmas, is also the creator of moral precepts, and that by an absolutely autonomous act. Its will is the living and sovereign law, for in it is definitively expressed the will of the God immanent in us. The Divine flame, which warms the atmosphere of our life, will inevitably cause those hidden germ of morality to develop which the Absolute has implanted. Hence, there can be no longer any question of effort, of virtue, or of responsibility; these words have lost their meaning, since there is neither original sin nor actual and freely willed transgression. There is no longer any blame-worthy concupiscence; all our instincts are impregnated with Absolute, all our desires are just, good, and holy. To follow the impulse of passion, to rehabilitate the flesh (Saint-Simon, Leroux, Fourrier), which is one form under which the Divinity manifests itself (Heine), is duty. In this way, indeed, we cooperate in the redemption which is being accomplished day by day, and which will, in the end, and when the absolute shall have completed its incarnation in humanity, be the part which moral science has to play consists in discovering the laws which govern this evolution, so that man in his conduct may conform to them (Berthelot) and thus ensure the collective happiness of humanity; social utility is to be hencetoward the principle of all morality; solidarity (Bourgeois), which procures it, is the most scientific form of immanent morality, and of this man is, in the universe, the beginning and the end.

Again we find this conception of relative immanence in Plato. He transports it, in a rather confused manner, into the cosmological order. He thinks, in fact, that, if there are things great and good and beautiful, then there must be some cause or principle of beauty, of greatness, and of goodness. But this participation does not result from an emanation, an outflowing from the Divinity into finite beings; it is only a reflection of the ideas, a resemblance, which the reasonable being is in duty bound to perfect, as far as possible, by his own efforts. With Aristotle this notion of an immanent energy in individuals acquires a new definiteness. The very exaggeration with which he refuses to admit in God any efficient causality, as something unworthy of His beatitude, leads him to place at the heart of finite being the principle of the action which it puts forth with a view to that which is supremely lovable and desirable. Now, according to him, these principles are individualized; their development is limited; their orientation determined to a definite aim; and they act upon one another. It is, therefore, a doctrine of relative immanence, according to which he holds that reviving the physics of Heraclitus, came back to a system of absolute immanence with their theory of seminal capacities. The Alexandrian Fathers borrowed this term from them, taking out of it, however, its pantheistic sense, when they set themselves to search in the writings of the pagans for "the sparks of the light of the Word" (St. Justin), and, in human souls,
for the innate capacities which render the knowledge of God so easy and so natural. St. Augustine, in his turn defines these capacities as "the active and passive potentialities from which flow all the natural effects of beings," and this theory he employs to demonstrate the real, but relative, immannence of our intellectual and moral life. Our natural desire to know transcends the rights of the senses do not thus germinate in us unless their seeds are in our soul. These are the first principles of reason, the universal precepts of the moral consciousness. St. Thomas calls them "habitus principiorum," "seminalia virtutum" "dispositiones naturales," "inchoationes naturales." He fixates the beginning of all our logical, intellectual, and moral progress, and, following the course of their development, he carries to the highest degree of precision the concept of relative immannence. The Thomist tradition—continuing after him the struggle against empiricism and positivism on the one side and, on the other, against rationalism carried to the extreme of monism—has always defended the same position. It recognizes the fact of immannence, but rejects every exaggeration on either side.

(b) Actual Content of the Doctrine of Relative Immannence.—This doctrine rests upon that innermost experience which reveals to man his individuality, that is, his ordered unity, his distinctness from the world, and which makes him conscious of his personality, that is to say, of his essential independence with respect to the beings with which he is in relation. It, moreover, avoids all imputation of monism, and the manner in which it conceives of immanence harmonizes excellently with Catholic teaching. "An eiusmodi immanentia Deum ab homine distinguat, nee nee Si distinguat, quid tum a catholica doctrina differt?" (Encyc. "Pascendi").

(i) God.—God, then, transcends the world which He has created, and in which He manifests His power. We know His works; through them we can demonstrate His existence and find out many of His attributes. But the mysteries of His inner life escape us; Trinity, Incarnation, Redemption are known to us only by revelation, to which revelation the immanence of our rational and moral life presents no obstacle whatever.

(ii) The World, Life, and the Soul.—The organization of the world is governed by Divine Providence, whose ordaining action can be conceived in diverse ways, whether we suppose successive interventions for the formation of various beings, or whether, following St. Augustine, we prefer to maintain that God by His essence and through simul omnia creavit." (De Genesi ad lit.). In the latter case we should invoke the hypothesis of germinal capacities, according to which hypothesis God must have deposited in nature energies of a determinate sort —"Mundus gravitus est causis nascientium" (Bible)—the evolution of which unfavourable junctures of time would organize the universe. This organization would be due to an immanent development, indeed, but one proceeding under external influences. Thus did plants, animals, and men appear in succession, though there could be no question of attributing to them a common nature; on the contrary, the doctrine of relative immannence draws a sharp line of demarcation between the various substances, and particularly between matter and soul; it is extremely careful to maintain the independence of the human person. Not only does this doctrine, joining issue with the latter, show that no part of the human mind is a living energy, which, far from letting itself be transformed by influences from without, forms its necessary and universal principles by its own action under the pressure of experience—not only this, but it also safeguards the autonomy of human reason against that encroachment of the Divine which the ontologists maintained.

(iii) Dogma and Moral.—The human soul, then, enjoys an immanence and an autonomy which are relative indeed but real, and which Divine Revelation itself respects. Supernatural truth is, in fact, offered to an intelligence in full possession of its resources, and the reasonable assent which we give to revealed dogmas is by no means "a bondage" or "a limitation of the rights of thought." To oppose this with "a preliminary and comprehensive demurrer" ("une fin de non-recevoir préliminaire et globale")—Le Roy in the name of the principle of immanence, is to misinterpret that principle, which, rightly understood, involves no such exigencies (see below, "The Method of Immanence.") Nor should this relative immanence stand in the way of progress in the understanding of dogmas "in eodem sensu eademque sententia" (Conc. Vatic., sess. III). The human soul, then, receives the Divine verities as the disciple receives his master's teaching; it does not create those verities. Neither does it create principles of moral conduct. The natural law is certainly not foreign to it, being graven upon the very foundation of man's constitution. It lives in the heart of man. This law is immanent to the human person, which consequently enjoys a certain autonomy. No doubt it recognizes its relation to a transcendent legislator, but it no more than that no principle from another authority would be accepted by the conscience if it was in opposition to the primordial law, the requirements of which are only extended an clearly defined by positive laws. In this sense the human will preserves its autonomy when, in obeying a Divine law, it acts with a fundamentally inviolable liberty. This liberty, however, may be aided by natural and supernatural helps. Conscious of its weakness, it seeks and obtains the assistance of grace, but grace does not absorb nature; it only adds to nature, and in no way infringes upon our essential immannence.

B. Employment of the Method of Immanence.—The notion of immannence occupies so large a place in contemporary philosophy that many make an axiom of it. It is held to be a directing principle of thought and Le Roy makes bold to write that "to have acquired a clear consciousness of the principle of immannence is the essential fact of metaphysics" (Dogme et Critique). Now it is in the name of this principle that "a preliminary and comprehensive demurrer" (ibid.) is presented in bar of all Revelation, for in the light of it "a dogma has the appearance of a subjection to bondage, a limitation of the rights of thought and an intellectual tyranny" (ibid.). And this creates a religious situation with which apologists is deeply concerned, and with good reason. All the efforts of this science will be vain, all its arguments inconclusive, if it cannot, first of all, compel minds imbued with the prejudice of absolute immanence to take the problem of the transcendent. Without this precaution, antinomy is inevitable: on the one hand, it is claimed, the mind cannot receive a heterogeneous truth; on the other, revealed religion proposes to us truths which go beyond the range of any finite intelligence. To solve this difficulty we have recourse to the method of immanence. But this method has been understood in two different ways which lead to diametrically opposite results.

(1) Method Based on the Idea of Absolute Immanence.—This is the positivist and subjectivist method. It consists in accepting off-hand the postulate of an absolute immanence; the mind is therefore obliged to lower revealed truth to the level of scientific truths which the mind attains solely by its own energy. Thus, some, like Lechatier, have proposed to modify dogmatic formulæ and "dissolve the symbols" of them in order to harmonize both with the aspirations of the soul which thinks them. By
this means "the higher realities, which religious myths have for so many centuries striven to express, will be found identical with those which positive science has just established". Revealed truth will then appear as coming from us; it will present itself as the reflection of our soul, which the constructor of his idea can no longer find itself in him. In this way there will no longer be any antimony, since human reason will be the principle of dogmas. Others following Loisy, hope to find in themselves, through a psychological analysis, the expression of revelation. This would be the outcome of an immanent progress, "the consciousness which man has formulated in his relations with God". Revelation is realized in man, but it is "the work of God in him, with him, and by him". Thus the difficulty arising out of the opposition between the natural order and the supernatural would disappear—but at the price of a return to the doctrine of absolute immanence. It seems, too, that Laberthonnière, though in spite of his principles, ends by accepting this very same doctrine which he had undertaken to combat, when he writes that "since our action is at once ours and God's, we must find in it the supernatural element which enters into its constitution as an aid to the realization of this theological art. We will discover the Divine element immanent in our action, the inward God "more present to us than we ourselves". Now this "living God of conscience" can be discerned only through an intuition which we get by a sort of moral and dynamic ontologism. But how will this presence of the Divine manifest itself in us? By the true and imperative demand of our nature which calls for the supernatural.—Such is the abuse of the method of immanence which the Encyclical "Pascendi gregis" points out and deplores: "And here again we have reason for grievous complaint, because among Catholics there are to be found men who, while professing the doctrine of immanence and divinity, make use of it nevertheless for apologetic purposes, and do this so recklessly that they seem to admit in human nature a genuine exiguity properly so called in regard to the supernatural order." With still less reserve, those whom the Encyclical calls "integralists" boast of showing the unbeliever the supernatural germ which has been transmitted to humanity from the consciousness of Christ, and hidden in the heart of every man. This is the thought of Sabatier and of Buisson, theologians of the liberal Protestant school—"I am a man, and nothing Divine is foreign to me".

(2) Method Based on the Idea of Relative Immanence.—There is another application of the method of immanence much more reserved than the one just described since it keeps within the natural order and confines itself to stating a philosophic problem, viz.: Is man sufficient for himself? or is he aware of his insufficiency in such a way as to realize his need of some help from without? Here we are not at all concerned—as the Encyclical "Pascendi gregis" reproaches the Modernists—"with inducing the unbeliever to make trial of the Catholic religion"; we are concerned only with (1) compelling a man who analyses his own being to break through the circle within which, supposing, the doctrine of immanence confines him, and which makes him reject a priori, as out of the question, the whole argument of objective apologetics; and then (2) with bringing him to recognize in his soul "a capacity and fitness for the supernatural order which Catholic apologetics can say with any pretension that this "desired increase" is a supernatural Unnamed. As a matter of fact, (1) the natural order far exceeds in vastness the object of my analysis; (2) between my nature and the supernatural there is the preternatural; (3) the aids to which my nature aspires, and which God grants, are necessarily a way of having the supernatural order. Besides, even if a supernatural action does in fact manifest itself under these religious aspirations, immanent
analysis, apprehending only psychological phenomena, cannot detect it. But the question is still under consideration; it is not for us to solve the mystery of the transcendent in a definitive manner and from the point of view of the method of immanence.

**Immortality.** See Baptism, sub-title VI, Matter and Form of the Sacrament.

**Immigration.** See Migration.

**Immortality** (Lat., in, mortal; Germ., Unsterblichkeit).—By immortality is ordinarily understood the doctrine that the human soul will survive death, continuing in the possession of an endless conscious existence. Together with the question of the existence of God, it forms the most momentous issue with which philosophy has to deal. It falls primarily to rational or metaphysical psychology and the philosophy of religion, though it comes also into contact with other branches of philosophy and some of the natural sciences.

Belief in a future life of some sort seems to have been practically universal at all times. Here and there individuals have rejected this belief, and particular forms of religion or systems of philosophy logically incompatible with it have had adherents; still, however vague and inconsistent may have been the views among different peoples as to the character of the life beyond the grave, it remains true that the persuasion of the reality of a future existence seems to have been hitherto ineradicable throughout the human race as a whole. The doctrine of immortality, strictly or properly understood, means personal immortality, the endless conscious existence of the individual soul. It implies a being which shall not cease to exist as a personality and be connected by conscious memory with the previous life. Unless the individual’s interest be preserved, a future existence has relatively little interest. From the doctrine of immortality thus explained there have been sundry variations. Some have held that after a future life of greater or lesser duration the soul will ultimately perish. Throughout the East there has been a widespread tendency to believe in metempsychosis or transmigration—that individual souls successively animate different human beings, and even the bodies of lower animals. A special form of this view is the theory of metamorphosis, that in such a series of reincarnations the soul undergoes or can undergo evolution and improvement of its condition. Pantheism, if logical, can offer only an impersonal immortality, a future condition in which the individual is absorbed into the absolute—the one infinite being, whether conscious or unconscious. Pantheism has little from annihilation of the materialist, the soul, or the conscious life, is but a function of the organism, and necessarily perishes at death. Positivists, however, while adopting this conclusion, would still cheer mankind with the hope of a place in the “choir invisible”, that is, a future existence in the minds and on the life of future generations —a not very substantial form of immortality, and one of a very aristocratic character, the franchise being narrowly limited.

**History.**—Egypt affords at a very early date the most abundant evidence of an extremely vivid and intense belief in a future life. Offerings of provisions of all sorts to the spirits of the departed, elaborate funeral ceremonies, and the wonderfully skillful mausoleum construction of the dead point to a witness to the strength of the Egyptians’ convictions of the reality of the next life. (See Egypt, especially sections on The Future Life and The Book of the Dead.)

India.—The doctrine of personal survival with a future retribution for good and ill conduct is found in the earliest forms of Indian religion. A period of the thousand years after the death of a Brahmin philosophers evolved a system of vague Pantheism in which absorption into the Infinite Being is the final goal. Still, the popular belief has in practice always tended towards Polytheism, whilst the doctrine of successive reincarnations of the soul in different human beings or animals remained a constant expression of belief in survival. A special form of this belief is the doctrine of Karma—the persisting existence and transmission through re-incarnations of the sum of the past deeds and merits of the individual (see Brahminism). Akin to the pantheistic absorption in philosophical Pantheism is the theory of Transmigration, which forms the central tenet of strict Buddhism. Whatever Nirvana may mean for the philosophers and saints of Buddhism, for the multitude the ideal liberation from labour and pain is restful quiet, not death or extinction (see Brahminism and Buddhism).

China.—In China worship of ancestors is evidence of belief in some form of personal survival which carries us back to the earliest ages of that most ancient and conservative nation. The departed spirits are both helped and propitiated to aid their descendants by sacrifices and sundry services of filial piety (see Confucianism).

Japan.—Similarly in Japan, whatever may be the genuine logical theory of the soul in the religion of Shintoism, the popular mind finds in the great institution of ancestor worship instinctive satisfaction and expression for the belief in a future life, which seems so deeply and universally rooted in human nature.

Judaism.—That early Jewish history shows that the Hebrew nation did not believe in a future life, is sometimes stated. It is true that temporal rewards and punishments from God are much insisted upon throughout the Old Testament, and that the doctrine of a future life occupies a less prominent position than that of hersafter. It is probable that a careful study of the Old Testament reveals incidental and indirect evidence quite sufficient to establish the existence of this belief among the Israelites at an early date (see Gen. ii, 7; Wis., ii, 22, 23; Eccl., xi, 7; Prov., xv, 24; Is., xxxv, 10; ii, 6; Dan., xii, 2, etc.). It would, however, on a priori ground, have been incredible that the Hebrew people should not have held this belief, considering their intimate contact with the Egyptians on one side and the Chaldeans on the other (see Atzberger, “Die christliche Eschatologie”, Freiburg, 1890).

Greece.—The Greeks seem to have been among the first to attempt systematic philosophical treatment of the question of immortality. Belief in a future life is clear in Homer, though the character of that existence is vague. Pindar’s conception of immortality and of its retributive character is more distinct and also more spiritual. The Pythagoreans are vague and tinctured by the influence of Orphism, content with a vague outline of the doctrine of a future life and of metempsychosis. We have not definite texts defining Socrates’ view, but it seems clear that he must have been a believer in immortality. It is, however, in the hands of his great pupil Plato that the doctrine attained its most elaborate philosophical exposition and defence. Plato’s teaching on the subject is given in several of his
writings, the "Meno", "Phaedrus", "Gorgias", "Timeus", and "Republic", but especially in the "Phaedo". There are many variations and seeming inconsistencies, with liberal use of myth and allegory, in the unfolding of his ideas in these different works. For Plato, the soul is a being quite distinct from the body, related to it as the pilot to the ship, the charioteer to the chariot. The rational soul is the proper soul of man. It is a Divine element, and it is this which is immortal. Among his arguments in favour of immortality are the following: (1) Throughout the universe opposites alternately generate and work. Death and life, death and life are not out of death life is again generated. Man must be no exception to this general law. (2) The soul is a simple substance, akin in nature to the simple and immutable idea, and therefore, like the latter, incorruptible. (3) The essence of the soul is life and self-movement. Being a soul only in so far as it participates in the idea of life, it is incapable of death. (4) The process of learning is really only reminiscence, the recall of knowledge of a past life. Man is, therefore, to survive the present life. (5) Truth dwells in us; the soul is made for truth, but truth is eternal. (6) The soul is made for freedom and knowledge, and the great liberating function of the soul is the sympathetic liberation of oneself from bodily passion. (7) The soul is not a harpy, but the lyre itself. (8) Destruction can be effected only by a principle antagonsitic to the very nature of a being. Vice is for the soul the only principle of this kind, but vice cannot destroy the being of the soul, therefore the soul is indestructible. Otherwise the wicked would have no future punishment to expect. Finally, he urges, in many forms, the argument from retributive justice and the necessity of future existence for adequate reward of the good and punishment of the wicked. In Aristotle's philosophical system, on the other hand, the conception of immortality is inseparable from the concept of a future life at all. He teaches clearly that the nous, the active intellect, is indestructible and eternal; but then it is not certain that he did not understand this nous in a pantheistic sense. It is, however, in his Ethics that Aristotle is most disappointing on this subject. For obviously, the question of the reality of a future life is of the first importance in any complete philosophical treatment of morality, whilst Aristotle in this treatise practically ignores the problem. His attitude here proves how much all modern ethical philosophy is indebted to the Christian Revelation. The Epicurean School offers us the most complete and reasoned negation of immortality among ancient philosophers. Indeed the most recent Materialism has little of force to add to Lucretius' elaborate exposition of the Epicurean arguments (De Natura Rerum, III). He is quite candid in stating that his object is to relieve men from fear of that life. The position of the Stoics is more uncertain. Their Pantheism presents difficulties to the doctrine of survival, yet at times they seem to favour the belief. But in Greece and Rome, as elsewhere, whatever may have been the teaching of the philosophers as a whole, the mass of even pagan mankind clung to a faith and hope in a future existence, however degraded and incoherent their conception of its character.

Christianity.—With the birth of the Christian religion the doctrine of immortality took quite a new position in the world. It formed the foundation of the whole of the Christian Faith. For many it became a dubious philosophical tenet, or a hazy popular opinion, it is now revealed in clear and distinct terms. The dogma of the Fall, the Christian conception of sin, the Incarnation of the Son of God, all the means of grace and redemption, and the priceless value of each living soul, are connected in this article of the Creed. As part of the Christian Faith this doctrine was one of the chief factors in establishing the equality of man and the liberation of the slave. The doctrine received its complete philosophical elaboration from St. Thomas. Accepting the Aristotelian theory that the soul is the form of the body, Aquinas still insists that, possessing spiritual faculties of intellect and will, it is a being of existence separate from animal forms. Through form of the body, it is not to be conceived as immersed according to its whole being in the body. That is, it is not completely and intrinsically dependent on the body which it animates, like forma educte ex materiâ. For the human soul is created and infused into the body, and there it subsists thus as a being of existence separate from the body. Still, the human soul possesses vegetative and animal faculties, its natural condition is that of union with a body, and during this life the activities of the spiritual powers of intellect and will presuppose the co-operation of the organic faculties of imagination and sensation. Even the most spiritual operations of the soul are therefore extrinsically dependent on the bodily organism. The sensory and vegetative activities of the soul must necessarily be suspended when the soul is separated from the body, whilst its conscious spiritual life must then be carried on by some means other than its present. What that manner is, our present experience does not enable us adequately to conceive. Yet St. Thomas holds that we can prove the fact of the soul's conscious life when separate from the body. Modern thought has not added much to the philosophical immortality. Decartes' conception of the soul would lend itself to some of the Platonico arguments. Leibnitz's theory the soul is the chief monad in the human nature. It is a simple, spiritual substance of a self-active nature. From this he infers its indestructibility and immortality, but he also believes that its pre-existence is similarly deductible. Spinoza's Pantheism is indeed opposed to the Christian immortality. In Kant's critical philosophy, substantiality is a mere subjective category or form of moulding our way of thinking. The conception of the soul as a substance is illusory, and every attempt to establish immortality by rational argument is a mere sophism. Yet, like the existence of God, he restates it as a postulate of the practical reason. For Hume and Sensationists generally, to whom the mind is merely a series of mental states attached to certain cerebral changes, there can obviously be no metaphysical basis for the doctrine of immortality, though J. Stuart Mill argues that his skepticism have no special difficulty in adhering to the belief in an endless series of such conscious states.

JUSIFICATION OF THE DOCTRINE OF IMMORTALITY.—As we have already observed, the immortality of the human soul is one of the most fundamental tenets of the Christian Religion. Consequently, every evidence for the Divine character of Christianity goes to prove and confirm the foundation upon which the whole edifice rests. Catholic philosophers, however, with the exception of Scotus and his followers, have generally claimed to establish the validity of the belief apart from revelation. Still its adequate treatment presupposes, as already demonstrated, some of the theses of natural theology, ethics, and psychology. It is itself the crowning conclusion of this last branch of philosophy. Only the briefest outline of the argument can be attempted here. For fuller discussion the reader may consult any Catholic text-book of philosophy. The following is a list of some of the points involved in the building up of the doctrine: The human soul is a substance or substantial principle. It is a simple, or indivisible, and also a spiritual being, that is, intrinsically independent of matter. It is naturally incorruptible. It cannot be annihilated by any creature. God is bound to preserve the blessedness of its conscious life, at least for some time, after death. Finally, the evidence all leads to the conclusion that
the future life is to continue for ever. By the human mind, or soul, is meant the ultimate principle within me by which I feel, think, and will, and by which my body is a matter. A substance with an accident, is a being which subsists in itself, and does not merely inhere in another being as in a subject of inherence. Now the ultimate subject to which my mental states belong must be a substance—even if that substance be the bodily organism. Further, reflexion of my whole life and of my own personal identity assure me of the present abiding character of this substantial principle which is the centre of my mental life. Again, the simplicity and spiritual character of many of my mental acts or states prove the principle to which they belong to be of the spiritual nature. The characteristic of an activity exhibits the nature of the agent. The effect cannot transcend its cause. But careful psychological observation and analysis of many of my mental operations prove them to be both spiritual and simple in nature. Our universal ideas, intellectual judgments and reasonings, and especially the reflective activity of self-consciousness manifest their simple or indivisible and spiritual character. They cannot be the activities of a corporeal agent or the actions of a faculty exerted by or essentially dependent on a material being.

Again, psychology shows that our volitions are free, and that the activity of free volition cannot be exerted by a corporeal agent, or be intrinsically material matter. If volition were thus intrinsically dependent on matter, all our acts of choice would be inexorably bound up with and predeterm ined by the physical changes in the organism. The soul is thus a simple or indivisible, substantial principle, intrinsically independent of matter. Not being composite, it is not liable to perish by corruption or internal dissolution, nor by the destruction of the material principle with which it is united, since it is not intrinsically dependent on this latter being. If it perish at all, this must be by simple annihilation. But annihilation, like creation, pertains to God alone, for, as shown in natural theology, it can be effected only by the withdrawal of the Divine activity, through which all creatures are immediately conserved in existence. God could of course, by an exercise of His absolute power, reduce the soul to nothingness; but the nature of the soul is such as cannot be destroyed in a finite time. For positive evidence, however, that the soul will continue after death in the possession of a conscious life, we must appeal to teleology and the consideration of the character of the universe as a whole. All science proceeds on the assumption that the universe is rational, that it is governed by reason, law, and uniformity throughout. Theistic philosophy explains, justifies, and confirms this postulate in establishing the government of the universe by the providence of an infinitely wise and just Creator. But the consideration of certain characteristics of the human mind reveals a purpose which can be realized only by the soul's continuing existence in the universe. It is, however, invisible and inexplicable.

Firstly, there is in the mind of man, as distinguished from all the lower animals, the capacity to look back to the indefinite past and forward to the distant future, the impulse to project itself in imagination beyond the limits of space and time, to rise to the conception of endless duration. There is an ever-increasing yearning for knowledge, a craving for an ever fuller possession of truth, which expands and grows with every advance of science. There is the character of unfinishedness in our mental life and development—the contrast between the capabilities of the human intellect and its present destiny. "Between the immensity of man's outlook and the dimness of the horizon, between the splendour of his ideals and the insignificance of his attainments" (Marshall), which all demand a future existence unless the human mind is to be a wasteful failure.

Again, there is the craving of the human will, the insatiable desire of happiness, universal throughout the race. This cannot be appeased by any temporal joy. A substantial argument. Human reason affirms that the performance of duty is both right and reasonable in the fullest sense, that it cannot be better in the end for the man who violates the moral law than for him who observes it. But were this the only life this would often be the case. It would be assuredly not a rational one. We have seen that it would be in irreconcilable conflict with the notion of the moral government of the world by a Just and Infinite God, if vice were to be rewarded and virtue punished—that the swindler, the murderer, the adulterer, and the persecutor should enjoy the pleasures of this life to the end, wallowing in the midst of the honest victim, the chaste, and the martyr may undergo lifelong injustice, privation, and suffering.

Argument from Universal Belief.—We have already traced at such length the history of belief in a future life that it is only necessary here to point out that a universal conviction of this kind, in opposition to all sensible appearances, must have its roots in man's rational nature, and therefore claims to be accepted as valid, unless we are prepared to hold that man's rational nature inevitably leads him into profound error in a matter of fundamental importance to his moral life.

Evidence from Spiritualism.—During the last quarter of a century considerable labour has been devoted to investigating what is called "experimental evidence" of another life. This, it is supposed, is specially suited to the Zeitgeist of our day. The Society for Psychical Research, founded in 1882, has published a score of volumes of "Proceedings", and a dozen volumes of a "Journal", in which is accumulated a mass of evidence in regard to extraordinary phenomena connected with thought-reading, clairvoyance, telepathy, mesmeric trance, automatic writing, apparitions, ghost, spiritualism, and the like. In the last few years, also, several works by individual investigators, who have selected material from the Society's "Proceedings" or elsewhere, have appeared, urging these phenomena as scientific proof, or rather as evidence guaranteed by scientific method, in favour of the hypothesis of another life.

The main evidence adduced is that in most of the recent works is the alleged communications of certain mediums with the souls of particular deceased persons. These mediums are, it is supposed, gifted with some supernormal faculty by which they get into relations with departed spirits. They receive at times, it is alleged, information from those deceased persons which they reveal to the investigator. This knowledge, it is asserted, is frequently of a kind which the medium cannot have attained by any recognised means, and therefore establishes the personal identity of the communicating spirit. In some cases the spirit furnishes much information about its present condition—which is, however, invariably good. Amongst the grounds of objection against this line of argument it may be urged: The total number of mediums who give evidence of remarkable experiences is relatively small. Many are shown to be impostors. Those whose testimonies have been tested and authenticated are extremely few. The prominence of one or two well-known mediums in all the recent literature evinces this. The communications from the "departed" obtained even by the most successful mediums in their most fortunate experiments are very imperfect and disconnected in character, while the quality of the information received is ludicrously trivial, suggestive in some cases of an argument which want to shut up in asylums for idiots (Royce).

Further, the alleged mediunistic communications from the discarnate spirit, of however singular or private a nature, can never prove the personal identity of the
spirit with any particular deceased human being. It can only prove that the "control" of the medium is exercised by an intelligence built into the apparatus; there is no sort of evidence to prove the versativeness of such an intelligence. The reality of occasional obsession by evil spirits has, since the time of Christ, been always believed in the Church. Finally, the mediumistic faculty, if it be the exercise of genuine power of communication with souls passed out of this life, must, according to Catholic theology, be effected not by use of a merely supernormal personal aptitude, but by a preternatural agency. It is the teaching of the Church that no good, but serious moral evil will be the ultimate result of invoking the intervention of such an agency in human affairs. The view that faith in life after death is a genuine bond to the living by Church and secular authority in the miraculous history of the Christian Religion, when once lost may be restored by the instrumentality of experiences like those of Moses Stainton or Mrs. Piper, does not seem so vividly founded (see Obsession and Spiritualism).

St. Thomas, Con. Gent., II, ixxx. ixxx; Summa Theol., I, Q. ixxxvi, 20: PLATO, Phaedo; FELL, Immortality of the Human Soul, London, 1855; MAHER, Psychology (6th ed., New York and London, 1905); MARTINICH, Study of Religion (2 vols., 2nd ed., Oxford, 1889); ALKEN, The Destiny of the Soul, or, The Doctrine of a Future Life (14th ed., New York, 1899); contains a valuable bibliography of the subject, but the writer's presentation of Catholic doctrine is often full of errors. For a modern presentation see WILLIAMS, REVERE, Modern Wisdom and Modern Science, tr. (New York and London, 1907); Ingersoll, Lectures by William James, Rapee, Fiske, Ossian (Boston, 1879); these are useful for particular points; RÖMER, Psyche, Dedekunst und Unterbewusstsein der Dinge, (Freiburg, 1901); Der Bewusstsein für die Unterbewusstsein der Dinge (Freiburg, 1903); KNABENBAUER, Das Zeugnis für die Unterbewusstsein (Freiburg, 1878); PLAY, Destiné de l'homme (Paris, 1889); JANET et STASILLE, History of the Problems of Philosophy, tr. (London, 1895).

The literature of what claims to be the evidence of spiritualism has rapidly increased in recent years. See HYATT, Science and Human Life (New York and London, 1900); DELANY, Evidence for a Future Life, tr. (London, 1899); LODGE, Survival of Man (London, 1899); MYERS, Human Personality and the Survival of Earthly Bodies (London, 1902-3); INNIS, Science and a Future Life (New York and London, 1898); TWEEDALE, Man's Survival after Death (London, 1899).

MICHAEL MAHER.

Immovable Feast. See Feasts, Ecclesiastical.

Immunity (Lat. immunitas) means an exemption from personal or property taxation (mutuum) imposed on a person or his property by law, custom, or the order or superior (lex 214, sqq. De verb. signif., 1, 50, tit. 16). This exemption is therefore a kind of privilege and follows the same rules. In ecclesiastical terminology, immunities are exemptions established by law in favour of sacred places and sacred things, church property and clergy. If we consider the different immunities, which vary at divers times and in divers countries, but their principle, immunity may be defined as the exemption of ecclesiastical persons and property from secular jurisdiction. This principle varies necessarily in its application according to circumstances.

In strongly hierarchical societies, for instance in a feudal society, immunities play an important part; on the other hand, in our modern society, where men are much more on a basis of equality, immunities are less useful; they are looked on with disfavour by the highly centralised secular power, and suffer, as is evident, much more restriction.

Division.—An immunity according to its object, is local, real, or personal. Local immunity refers to places consecrated to Divine worship, to churches; real immunity, to Church property; personal immunities, to the clergy: these duties and trials, and, in a measure, to their property. We shall briefly consider each of these three kinds as viewed by canon law, after which we shall see to what extent they are in vogue in our modern societies.

A. Local immunity withdraws places dedicated to Divine worship from secular jurisdiction and pre-
Immunity

has greatly decreased, and no longer enjoys real immunity; except as a matter of principle, it hardly differs from secular property. However, with regard to buildings used for Divine worship, and the movable property appertaining thereto, most Governments consider them as property of public utility, dedicated to the service of the community, and therefore exempt from taxation. That is also the reason why in several of the United States, charitable and educational institutions pay no taxes; in this, however, it is impossible to recognize an ecclesiastical immunity properly so called, based on the religious character of these establishments.

C. Personal immunity is that which withdraws clerics from secular jurisdiction, on account of their perpetual dedication to the service of God. It is not coextensive with the seclusion or their acts and that of acts of the clergy as clerics, and in their official capacity; it is clear that, from such a point of view, they are solely under ecclesiastical jurisdiction, without there being any necessity to have recourse to any immunity. Personal immunity withdraws them from secular jurisdiction, which has been inserted merely as a protection to the clergy, but not to the HD.

If clerics are obliged to keep the ordinary laws, they take their orders and commands solely from ecclesiastical authority; the penal sanctions which they would incur for violating the ordinary laws, may not be imposed on them by secular judges, but the privilege of the clergy would subject them to the jurisdiction of the ecclesiastical judges (see PRIVILEGES, CEREMONIAL). The privilege of the tribunal of the has disappeared almost completely today, with the consent, whether tacit or explicit, of the Church in the various concordats (see Nussi, "Quinquaquintae Conventiones", Rome, 1860, § 20). Further, personal immunity exempts the clergy from public duties imposed by law on citizens in general or on certain classes, and also from taxation and impostas. Some of these public duties were considered servile, for instance, statute labour, the duty of contributing personally to the upkeep of roads and bridges; others were considered honourable, as guardianship, the municipal magistracy (cura), military service. The clergy, like the nobility, by reason of the highest of all ranks, were exempt from all public duties; they were excused from the others, by reason of the withdrawal from secular business. The first class of duties has disappeared in our days; as to the second, the immunity has been maintained to a large extent under modern laws, such is the manifest incompatibility of the clergy and the exigencies of secular society. Nevertheless, does not cease to be essentially a temporal thing, and consequently subject to the secular power; that all immunities originate in concessions of emperors and Christian princes. Recent canonists hold a middle opinion (cf. Cavagnis, "Instit. juris public. eccles.", II, 233 sqq., 4th ed., Rome, 1906). They remark that the Church has never given an official answer to the question, but that it seems possible to ascertain exactly what she thinks from two facts: on the one hand the Church grants freely by the civil authorities. On the other hand, yielding to the conditions and circumstances of modern society, she makes no effort to revive the immunities that have disappeared, at least the right of asylum and exemption from property taxes, which are the exclusive privilege of the clergy, and as such are changeable prescriptions of the Divine law. These authors conclude that the immunities are founded in Divine right, but emanate from positive canonical legislation; they repeat with the Council of Trent

must be recognized however that the latter exemption was practically disregarded by all nations except the Papal States. It has now completely disappeared.

C. Personal immunity is that which withdraws clerics from secular jurisdiction, on account of their perpetual dedication to the service of God. It is not coextensive with the seclusion or their acts and that of acts of the clergy as clerics, and in their official capacity; it is clear that, from such a point of view, they are solely under ecclesiastical jurisdiction, without there being any necessity to have recourse to any immunity. Personal immunity withdraws them from secular jurisdiction, which has been inserted merely as a protection to the clergy, but not to the HD.

If clerics are obliged to keep the ordinary laws, they take their orders and commands solely from ecclesiastical authority; the penal sanctions which they would incur for violating the ordinary laws, may not be imposed on them by secular judges, but the privilege of the clergy would subject them to the jurisdiction of the ecclesiastical judges (see PRIVILEGES, CEREMONIAL). The privilege of the tribunal of the has disappeared almost completely today, with the consent, whether tacit or explicit, of the Church in the various concordats (see Nussi, "Quinquaquintae Conventiones", Rome, 1860, § 20). Further, personal immunity exempts the clergy from public duties imposed by law on citizens in general or on certain classes, and also from taxation and impostas. Some of these public duties were considered servile, for instance, statute labour, the duty of contributing personally to the upkeep of roads and bridges; others were considered honourable, as guardianship, the municipal magistracy (cura), military service. The clergy, like the nobility, by reason of the highest of all ranks, were exempt from all public duties; they were excused from the others, by reason of the withdrawal from secular business. The first class of duties has disappeared in our days; as to the second, the immunity has been maintained to a large extent under modern laws, such is the manifest incompatibility of the clergy and the exigencies of secular society. Nevertheless, does not cease to be essentially a temporal thing, and consequently subject to the secular power; that all immunities originate in concessions of emperors and Christian princes. Recent canonists hold a middle opinion (cf. Cavagnis, "Instit. juris public. eccles.", II, 233 sqq., 4th ed., Rome, 1906). They remark that the Church has never given an official answer to the question, but that it seems possible to ascertain exactly what she thinks from two facts: on the one hand the Church grants freely by the civil authorities. On the other hand, yielding to the conditions and circumstances of modern society, she makes no effort to revive the immunities that have disappeared, at least the right of asylum and exemption from property taxes, which are the exclusive privilege of the clergy, and as such are changeable prescriptions of the Divine law. These authors conclude that the immunities are founded in Divine right, but emanate from positive canonical legislation; they repeat with the Council of Trent
(Sess. XXV, c. 20, "De Ref."). that immunities arise by divine direction and ecclesiastical sanctions, "divinæ ordinatiónes et ecclesiasticiæ sanctionibus". To the partisans of the first view they answer that the custom of ancient races, the prescriptions of the Mosaic law, and the practice of the early ages of the Church proves that immunities are in conformity with divine law, but they do not demonstrate the existence of a law properly so called. What the divine law pointed out required to be defined and completed by positive legislation. To the "regalists" they reply that all the immunities did not originate from imperial or pontifical concessions; some of them having been established positively by the Church, in agreement, it is true, with the secular powers; moreover, that the others have been "canonized" and inserted in ecclesiastical law and constitute for the Church an acquired right; besides they are sufficiently based on divine law not to be considered as purely gratuitous favours conferred by the State on the Church. This middle theory adopts therefore all that is reasonable in the two extreme opinions.

Brief History of the Immunities. — The history of ecclesiastical immunities is a chapter of the more extensive history of the relations of Church and State. Moreover, some of the privileges and the privilégium and the privilege of the tribunal, have had especially chequered careers. In general, we may say that the immunities developed with the growth of the Church, then they have been continuously restricted in proportion as the separation of the two powers became accentuated and the State became laïcized. As long as the civil power, as such, was religious and Catholic, the laws on mixed questions settled by agreement, the clergy the first order in the State, and the public authorities helped to enforce the legislation and to carry out the decisions of the officially-recognized ecclesiastical authority, immunities were, in a certain sense, a social necessity; and that were especially true of a state of society wherein privileges and private laws played an important part, as in the feudal days. The feudal system adopted the immunities of the Roman law. When the Christian religion was recognized by the Roman empire, nothing seemed more natural than to grant it immunities and privileges equal to those that had been enjoyed by the religion that had hitherto been the official one. Constantine granted immunity to the churches, and to the clergy an exemption from all public and municipal charges and even certain taxes, as the poll-tax (Cod. Theod., tit. III, § 22, the episcopici, ex leg. 2). If the law placed difficulties in the way of the curias who wished to join the clergy, it opposed the bringing of the clergy into the curia (ibid., leg. 7, 9, 11). As to property, not only could it be freely acquired and held by the churches, but being devoted to a public service, it was exempted by Constantine from common taxes and extraordinary charges (lib. XI, tit. i and xvi). This legislation maintained by Justinian, was received and confirmed by the imperial German law (Auth. "item nulla", of Frederick II, according to leg 2 of the Cod. lib. i, tit. iii, "De episcopo") in favor of the king of the Franks, the property of the Church did not at first enjoy a general immunity, but it was often granted by a special concession of the king; later, the exemption was common, but repaid, doubtless more than equitably, by the contributions of which we have spoken, and which were gratuitous in nothing but the name (dona gratia). In order to the king of the Franks, as of others, is well known, with the period of the greatest authority of the Church, represents the greatest extension of the personal and real immunities; it is the legislation explained above theoretically in vigour; it has remained as a kind of ideal, never realized in practice.) As early as the fifteenth century, ecclesiastical immunities had been curtailed more than once by temporal princes; the Council of Trent (Sess. XXV, c. 20, "De Ref."), after confirming the canon law concerning immunities, addressed a solemn warning to the secular powers, the emperor, kings, and princes; it recalled to them their obligation of defending the churches, clergy, and ecclesiastical property against all who attacked their "liberty, immunity, and jurisdiction". But the movement was too late to be thus easily overcome; on the contrary, it increased, and the end of the eighteenth century saw in France the suppression not only of immunities but even of Church property. The example was followed sooner or later by other countries, and there resulted an almost complete extinction of immunities, as we have explained above.

Immunities were maintained longer in Italy, and especially in the Papal States, owing to the care of the popes and especially of the Congregation of Immunity. In the movement for a thorough ecclesiastical reform following the Council of Trent, the popes could not neglect immunities; Sixtus V had confided this matter to the cardinals forming the "Congregation of Bishops"; but shortly afterwards, Urban VIII, by the Bull "Inscrutabile" (22 June, 1626), established a special congregation, which he called "Congregatio Immunitatis", which latter, under the direction of the others of a certain number of cardinals, one of whom was its Prefect, assisted by a secretary, a fiscal lawyer, two bishops charged with drawing up reports, and a staff of lower officials, was appointed to look after the defence and enforcement of immunities. It was kept busily occupied and gave many decisions; no official collection of these has been made, but the Abbé General of Oteau, Pierre André Ricci, published in 1708 a reportory of them, arranged alphabetically, "Synopis, decreta et resolutiones Sac Cong. Immunitatis super controversias jurisdictionibus complectens"; the work was re-edited with numerous additions by Mgr. Gicquel de Montaulmont; it was finished, the work of this congregation continued till the invasion of Rome by the Italian troops in 1870; it was then joined to the Sacred Congregation of the Council and was suppressed in the recent reorganization of the Roman Curia by Pius X in 1908.

Imola, Diocese of (Imolanensis), suffragan of Bolonga. The city is located on the Santerno, and was anciently called Forum Cornelli, from the dictator L. Cornelius Sulla, who founded it about 82 B.C. The name Imola was first used in the seventh century by the Lombards, who gave it to the fortress (the present Castellacce), the construction of which is attributed to the Lombard Cesi, whence the name passed to the city itself. According to Paul the Deacon, Imola was in 412 the scene of the marriage of Atawulf, King of the Visigoths, and Placidia, Imbus, daughter of Theodoric the Great, and after the Lombard invasion, it was held alternately by the Byzantines and barbarians. With the exarchate it passed under papal authority. In the ninth century it was bravely defended against the Saracens and Hungarians by Fausto Alidosi. In the tenth century Troilo Nordigio acquired great power over the town and the feudal state, and the latter was to the Lombard state wars against the Ravnitseae, the Faentines, and Bolongese, as well as to the intestine struggles of the Castrimolesi (Castro Imolese) and the Sacconascensi (San Cassiano). Amid these conflicts was formed the republican constitution of the city. In the contest between popes and emperor, Imola was generally Guelfic, though it often returned to the popes (e.g. in

1248). Several times, powerful lords attempted to obtain the mastery of the city (Alidossi, 1292; Maghi-
nardo Pagano, 1295). But in 1321 the city and its territory over to Lippo Aldossi with the title of pontifical vicar, the power remaining in the same family (Alidossi) until 1424, when Angelo della Pergola, "capitano" for Filippo Maria Visconti, gained the supremacy. But in 1426 the city was restored to the Farnesio family (Rogero Farnesio) by a papal bull, and Capranica inaugurated a new regime in public affairs.

In 1434, 1438, and 1470 Imola was conferred on the Sforza, who had become lords of Milan. It was again brought under papal authority when it was bestowed as dowry on Catherine Sforza, the bride of Girolamo Riario. In 1482 Sixtus IV, a distinguished patron of the arts, was installed with the Principality of Forli and Imola. This proved advantageous to Imola, which was embellished with beautiful palaces and works of art (e.g. in the cathedral, the tomb of Girolamo, murdered in 1488 by conspirators of Forli). The rule of the Ricardi, however, was brief, as Alexander VI deprived Ottaviano, son of Girolamo, of power, and on 25 November, 1499, the city surrendered to Cesare Borgia. On his death, two factions, that of Galeazzo Riario and that of the Church, contested the rule of the city. The ecclesiastical party was victorious, and in 1504 Imola submitted to Julius II. The last traces of these contests were seen between two rival families of chiefs of the Ricardi. In 1707 the French established a provincial government at Imola; in 1719 it was occupied by the Austrians; in 1800 it was united to the Cisalpine Republic. After that it shared the fortunes of the Romagna.

Noteworthy among the secular edifices of Imola are the Paresotti and the municipal palaces. In the latter is a fresco representing Clement VII and Charles V (1535) passing through the city. The public library was established in 1747 by the Conventual Prese Setti. In the sixteenth century the Accademia degli Incamminati flourished. Among the celebrated men of Imola were: Pope Honorius II; Bevenuto da Imola (Rambaldi), a lecturer on Dante at the University of Bologna in the fourteenth century; Taddeo della Volpe, a captain in the service of the popes and Venice (in 1510 Venice presented him with a gold chain and his image in simul. arte et dentibus utar); Giovanni Sassetti, known as Cagnacco, who was also a captain; Ottaviano Vestri and his son Marcello, famous jurists of the sixteenth and seventeenth centuries; Innocenzo da Imola (Franceschi), a pupil of Francis and Gregory of the Augustinians, distinguished by the name of Giuseppe Bagnari, noted for his skill in inlaid work; Cosimo Morelli, the famous architect who designed the sacristy of St. Peter's, Rome.

The Christian origins of Imola are obscure. The episcopal see certainly antedates St. Ambrose, who sede vacante ordered the Bishop of Vigorosa to visit the church of Imola and provide for the election of a pastor. The martyrdom of St. Cassian is likewise certain, being described by Frumentius (Peristephe, IX) from pictures seen by him in the cathedral of Imola. St. Cassian was a schoolmaster, put to death for his faith by his pupils, under Diocletian. Some have identified him with Saint Cassian, Bishop of Sabiona. (Sáben in the Tyrol), said to have been transferred to Imola, but this would place the martyrdom in the time of Julian. In 435 Valentine III built the church of S. Maria in Arenula. The bishop then was St. Cornelius, whose deacon was made Bishop of Ripatone by St. Pius I, and is known as Peter Chrysologus. His successor was Projectus, at whose ordination Chrysologus pronounced a magnificent eulogy of St. Cornelius. Chrysologus himself was buried at Imola. His tombstone, discovered in 1698, was a rude block on which was written Peter. Of the gifts of St. Peter Chrysologus to the church of Imola there is still preserved a paten, with the figure of a lamb on an altar, surrounded by the metrical legend:

Quem plebes tunc caras crucis anguem fixit in ara.

Hostia fit gentis prumi pro lale parentis.

These monastic verses, however, indicate a much more recent date. At the same period flourished the deacon St. Donatus. Other bishops worthy of mention were: John (946-47), who restored the cathedral, and Baliano (929-45), who rebuilt the tomb of St. Peter Chrysologus; Blessed Basil (1063); Ridolfo (1146), and Enrico (1174), who suffered for their adherence to Alexander III. Enrico laid the foundations of the present cathedral, finished in 1271 under Bishop Sinibaldo; Pietro Ondedi (1184), who distinguished himself for his charity; and Cardinal Gaspare Sighiogni (1450), learned and saintly; Girolamo Dandini (1546), formerly nuncio at Paris, founder of an orphan asylum; Francesco Gua-
ni (1656), the founder of the seminary; Cardinal Fabio Chigi (1652), afterwards Pope Alexander VII; Cardinal Filippo Gualtieri (1702), founder of a more frumentario to supply the poor peasants with seed; Cardinal Barnaba Chiaramonti (1785), afterwards Pope Pius VII; Cardinal Giovanni Maria Mastai Ferretti (1852), afterwards Pius IX.

Imola has 121 parishes with 120,000 souls; 7 religious houses of men and 12 of women; 4 educational institutions for boys, and 12 for girls.

IMOLA

IO. BENIGNI.

Imola, Innocenzo di Pietro Francucci da, Italian painter; b. at Imola, c. 1494; d. at Bologna, c. 1550. When but twelve years of age he arrived at the latter city to study painting as a pursuing of his native town, which, by an ordinance dated 17 March, 1506, had voted him an annual subsidy of ten barrels of grain. He entered Francia's atelier, as is proved by this extract from the master's register, given by Malvasia: "1508. On the 7 May I took into my school Nectario Francucci of Imola, on the recommendation of Folesini and Giovanni di Francesco. His name is Giov. Francucci. I took him to Florence and that he studied for some time under the direction of Mariotto Albertini. Soon he was invited by Count Giovanni Battista Bentivoglio to take up his residence at Bologna. Here Innocenzo passed the remainder of his life, and here are still to be found many of his works. But a sovereign influence, that of Raphael, had already taken possession of the artist and effaced in him all the influences which had preceded it; or rather, he found in the work of Raphael the finished expression of that quality which had charmed him in Francia and Mariotto, in Anima del Sarto and Fra Bartolommeo. It is doubtful, however, whether he ever knew Raphael, who had left Florence in 1508 and returned only for a few months in 1517, when Innocenzo was busy at Bologna in the famous convent of S. Michele in Bosco. It is almost certain that he never was at Rome, and, consequently that he was not acquainted—unless by engravings—with the great decorations of the Stanze and the Farnesina; for him Raphael is still the painter of the Maddonnes. On the other hand, we know that Francia had friendly relations with the Urbinate master. "We know, too, that one of the first pieces of work executed by Innocenzo for Bentivoglio was a copy of the "Virgin of the Fish", now at Madrid, a picture then already famous and in the possession of a nobleman. Such copies, no doubt, were scattered throughout Italy, popularizing the genius of Rafael. Thus did the master's influence radiate quite beyond the limits of his school, and artists like Garofalo and Bagnacavallo were to be seen
**Impanation**

establishing at a distance from that school—at Ferrara and at Bologna—veritable foe of Raphaelian imitation.

Innocenzo is one of the striking examples of this influence. With him it was not, as it was with Bagnacavallo, a form of servility impelling him to travesty now the "Transfiguration," now the "Healing of the Paralytic"; but through a kind of natural sympathy the ideas of the master were caught up and re-echoed in the kindred soul of the disciple. The force of Innocenzo's love was such as to give those ideas a new life in himself. His art is only a reflected art, and yet it keeps a certain spontaneity. With forms which are nearly all borrowed, the feeling remains ingenuous, and at times charming. For the most part, however, Innocenzo's works are only anthologies of Rafael, like the "Holy Family with his patrons" or the "St. Michael with the saints" in the Bologna museum, formed by the fusion of the "Virgin of Foligno" with the "St. Michael" of the Louvre. Other works, on the other hand, are freely created in the spirit of Raphael, such as the "Marriage of St. Catherine" in S. Giacomo Maggiore, which perhaps is his best, with a solidity of execution very remarkable in a work of that date (1536). The predelles with which he loved to embellish his work are almost invariably charming works in themselves; the predella often better than the picture. In general, Innocenzo painted little besides altar pieces. Such a part of his art and his style he uses as a means of enhancing the glory of the name of the Hieronyma della Via, where Cardinal d'Ivrea entrusted him with the painting of a altarpiece. Lastly, his frescoes in S. Michele in Bosco are not to be despised, demonstrating his love of large and simple subjects.

His work is interesting precisely because it maintained in some measure the subtility of the old religious art, avoiding the pompous and violent subjects which were beginning to seduce the minds of his contemporaries. His was a delicate poetic talent, with little originality, and the old themes offered it sufficient scope; and, in an age that was already abandoning those themes, this very spirit of tradition constituted a sort of originality. His life was that of a simple, hard-working artist, wholly given to the art which he respected and for which he won respect. Affable and modest, shunning the licentious society of his fellow-artists, he possessed the charm of a gentle and kindly disposition. Carried off, at the age of fifty-six, by a fever which left him in a state of memory of an upright artist and an exemplary man.

**Impanation**, an heretical doctrine according to which Christ is in the Eucharist through His human body substantially united with the substances of bread and wine, and thus is really present as God, made bread: *Deus panis factus*. As, in consequence of the union, the properties of the Divine Word can be ascribed to the human Christ, and the perfection of the man Christ can be predicates of the Word (*communicatio idiomatum*), in the very same way, in consequence of the impanation—a word coined in imitation of incarnation—an interchange of predicates takes place between the Son of God and the substance of the Eucharist, only through the body of the body of Christ. The doctrine of impanation agrees with the doctrine of consubstantiation, as it was taught by Luther, in these two essential points: it denies on the one hand the Transubstantiation of bread and wine into the Body and Blood of Christ, and on the other it rejects the presence of Christ in the Eucharist. Yet the doctrines differ essentially in so far as Luther asserted that the Body of Christ penetrated the unchanged substance of the bread but denied a hypostatic union. Orthodox Lutheranism expressed this so-called sacramental union between the Body of Christ and the substance of the bread in the well-known formula: The Body of Christ is "in, with and under the Eucharistic substance, sub pane; really present, though only at the moment of its reception by the faithful—in us, non extra usum." The theologians of the Reformed Churches, calling this doctrine, in their attack against the Lutherans, *impanation*, use the term not in the strict sense explained above, but in the modern sense of a kind of *consubstantiation* (*Christum quodammodo impanans*). Guitumand thinks this to be the essence of Berengarius's doctrine (*hanc esse subtiliorem Berengarii sententiam*). This teaching, however rightly or wrongly attributed to Berengarius, evidently does not profess impanation in the strict sense of the term; it rather coincides with the above-mentioned doctrine of the Presence of the body of Christ, taught by Luther. Alger of Liège (1131), in his work, "De sacramento corporis et sanguinis Christi*, I, 6 (P. L., CLXXX, 439-434), without mentioning any definite names, points out and opposes the errors of some (errantes quidem) who say that Christ's Person is impanated in the bread, just as God is incarnated in the human flesh" (disunt its personaliter in pane impanatum Christum sicut in carne hominum personali ter incarnatum Deum). He calls this a heresy, which ought to be utterly rooted out, because it is an absurd novelty (quia nova et abusivum). Who was it that introduced this new heresy? For a long time the well-known Abbot Rupert of Deuts (1135) was suspected. Cardinal Bellarmine (De Euch., III, xi, xv), Baroniuss (Ann. Eccl.: ad annum 1111, n. 49), Suarez, and Vasques thought they could trace back the doctrine of impanation to him (cf. his work "De div. officia", II, 2 and 3), and John P. Rossholl ("De rupert v. Deuts et Gutenguth, 1886, 247") reproached the same charge. Others, however, acquit him of this error, as Alexander Natalis, Tournely, and especially Gerberon in his "Apologia Ruperti Tuitiensis" (Paris, 1669); and, amongst modern writers of the history of dogmatic theology, J. Bach ("Dogmengeschichte des Mittelalters", I, Vienna, 1876, 412 sqq.) and Schwane ("Dogmengeschichte", III, Freiburg, 1882, 641). They seem to be right, for a critical examination of all the passages bearing on the subject shows that Rupert, though at times he used ambiguous expressions, nevertheless believed in the Transubstantiation of the substance of the bread and wine into the body of Christ. However this be, it cannot now be decided whether Alger of Liège cited Rupert as an advocate of impanation, since it remains unknown whether Rupert had already published his ambiguous expression at the time when Alger wrote his attack.

With much better reason, John of Paris (d. 1308) is considered the mediator of the doctrine of impanation. In his work, "Determinatio de modo existendi corpus [sic] Christi in sacramento altaris aliquam saeclum tenet Ecclesia" (ed. Peter Alix, London, 1886), he tries, in conscious opposition to the Church, to establish, as plausible at least, the hypothesis that the body of Christ is in the Eucharist, that is assumed through the Flesh or through the Body of Christ as a part of the esse and hypostasis of the Logos" (Ego dicto panem ibi manere
Impediments.

Impediments, Canonical.—I. General Notion of an Impediment.—The Latin word impedimentum signifies directly whatever embarrasses or hinders a person, whatever is an obstacle to his movements, and in this sense the word is called impedimenta. Jurisdictional language applies the term to whatever hinders the free action of an agent, or to whatever prevents him from performing, or at least from performing regularly, any act that the law takes cognizance of. The impediment therefore affects directly the juridical capacity of the agent, restrains it, or even excludes it, or prevents direct action; it is a hindrance to the exercise of the power itself, which it renders more or less defective or even null. An impediment consequently produces its effect by reason of a defect; it ceases when the agent has legally recovered his capacity, whether that be by a dispensation or by his fulfilling the conditions requisite for the act he wishes to perform. The impediment, in other words, the restriction or suppression of the juridical capacity of the agent, may arise from natural laws, from Divine law, or from human law, ecclesiastical or civil; we may, however, point out that certain cases of nullity, certain defects of acts that the law takes cognizance of, are caused by the absence of an essential constitutive element; for example, in the case of marriage, the absence of consent on one side, or there would be no impediment unless in a wide improper sense of the term. This general idea of impediments is applicable to all those acts in regard to which the law regulates the juridical capacity of the agents; for instance, acquisition of jurisdiction, contracts in religious matters, the sacraments. Canon law affords a multitude of examples. A layman, a heretic, an excommunicated person is incapable of acquiring spiritual jurisdiction; better known are the restrictions placed on minors, religious, children not yet emancipated, etc., in the matter of making contracts; finally, there are many legal impediments, including the case of the faithful to receive licitly or even validly, baptism, confirmation, penance, and particularly Holy orders and matrimony.

Canon law uses the word impediment in its restricted and technical sense, only in reference to marriage, while impediments to Holy orders are spoken of as irregularities (q. v.). We may remark, however, that several real impediments or obstacles to the reception of Holy orders are not called irregularities: thus, women and unbaptized persons, who are by Divine law incapable of being ordained, are not termed irregular. But speaking of matrimony, the word impediment refers to all obstacles, whether arising from natural or Divine law. Another interesting fact is that whereas the word impediment has thus acquired a precise technical meaning in canon law, the cognate words impedivis, impedientes, impeditus, have preserved their wide grammatical signification and may be applied to other matters; so writers speak of those unable to go personally to Rome to be absolved from censures as impedis adire Romanam, and the Constitution "Apost. Sedis" speaks of those who hinder (impedientes) the exercise of ecclesiastical jurisdiction.

II. Impediments to Marriage, in General.—The fundamental idea of an impediment to matrimony is contained implicitly in the well known prohibitions of Leviticus and some ancient canonical texts; in the latter may be discovered the basis of the celebrated distinction between diriment impediments which render a marriage null and void, and prohibitory impediments which only render it illicit; sometimes the canons of councils insist on the separation of the parties who have violated the law, which implies that the marriage was valid though more or less in opposition to the law. But these authors sometimes do not give a complete list of impediments, much less a general theory concerning them. It is only at the end of the twelfth century that we find, for the first time, the use of the word "impediment" in its technical sense, together with a catalogue of matrimonial impediments. In his "Decree", Gratian neither speaks definitively, nor does he enumerate them. It was Peter Lombard in his "Sentences". About 1190 Bernard of Pavia uses freely the expression, which became classical, "impedit contrahendum et dirimt contractus", and further he enumerated the impediments: "sunt autem quae matrimonium impedunt...". But he adds that these obstacles to matrimony are not a perfect impediment, but a time, for some time until the impediment remain for some time longer unsettled. However the doctrine of the School soon becomes fixed.
and with it the terminology. The distinction between diriment and prohibitory impediments is sharply marked, and a more or less successful attempt is made to classify the diriment impediments. Their number is not determined, not because the doctrine is uncertain, but because several of them may be included under the same title. Certain canonists try to limit them to the quasi sacred number fourteen (twice seven); others reckon twelve, sixteen, or even more. The gloss of the "Deeere" (Causa xxvii, q. 1, v. 10; "Quidam", before can. 1) says there are sixteen matrimonial impediments, fourteen of which are diriment; it enumerates them without order in the following distichs:

Votum, condicio, violentia spiritualis,
Proximitas, error, dissimilium fides,
Culpa, dies vetus, honor, ordo, ligatio, sanguis,
Quae sit et affinitas, ququa coire nequibus.

Additum asitas, habitum conjunctione furoris;
His interdictum subditur Ecclesiae.
Hee, si canonicis vis consentire rigori
Te de iure vetant yura subire tori.

In spite of its insertion in the gloss, this enumeration is not adopted generally, doubtless because it did not separate the prohibitory from the diriment impediments, and because the former class was incomplete. The list that was received almost universally, and which, with a few changes, still figures in most canonical treatises on marriage, and is followed step by step by many authors in later ages, is the following (Theol. Mor., 1 VI, et al., 1086), and was composed by Tancred (1212-1214). It contains four prohibitory impediments separated from thirteen diriment:

Ecclesiae vetitum, tempus, sponsalia, votum,
Impediunt fieri, permittant facta teneri.
Error, condicio, votum, cognatio, crimen,
Cultus disperatae, vis, ordo, ligamen, honestas,
Dissensus, et affinis, si forte coire nequibus,
Hee facienda vetant concubina, facta retractant.

But after the Council of Trent, which created the impediments of abduction and clandestinity, these thirteen were increased to fifteen; the last hemistich, "si forte coire noquibus", was replaced by "si clandestinus, et impo"; and for abduction was added the hexameter Raptave sit mulier, loco nec redadita tuto. Though this method of enumerating them is so common, it is not satisfactory, being somewhat confused. No official list of impediments has ever been published, and indeed it would be very difficult to compile such a list, as there are many ways of reckoning the impediments improperly so called, all of which may be included under a defect of consent, such, for instance, as error, insanity, constraint, dissimulation and others. It is possible likewise to count in different ways the prohibitory impediments among which that of "mixed religion" must be included. Of the many definitions of matrimonial impediments formulated by canonists, we prefer that of D'Annibal (Summula, III, n. 428): "Any circumstance of which the law takes cognizance that is opposed to a licit or valid marriage."

Impediments have been classified and divided in many ways, of which the following are the more important. (1) The chief division is that which distinguishes between prohibitory and diriment impediments, the former rendering the marriage illicit, the latter making it void; we have already said enough about this. (2) They have been divided according to the cause: some of them arise from natural law, as the different forms of defective consent, impotence, relationship in direct ascending or descending line; others arise from Divine law, which demands unity and perpetuity of marriage, thus forbidding polygamy and marriage after divorce; others, finally, while suggested by natural and Divine law have been created by ecclesiastical law. (3) A distinction must be made between absolute and relative impediments. The former forbid any marriage of the person on whom the impediment falls, for instance, impotence, Holy orders, etc., the latter forbid the marriage with certain definite persons only; such for example are relationship, consanguinity, etc. (4) Impediments may be also public or hidden according as the fact is known or secret, or in other words, may be proved easily or with difficulty. Examples of public impediments are relationship, lawful affinity, Holy orders, etc.; hidden impediments are those arising from purely private and especially concealed facts, for instance, affinity are due from certain forms of "crime", etc. (5) A very practical division is based on the nature of the dispensation that is granted or refused by the church. Most of the impediments arising from ecclesiastical law are dispensed from with more or less facility (cf. Lehmkühl, "Theol. Mor.", II, n. 792). (6) Finally, it is important to distinguish impediments properly so called from those that are only improperly so termed. The former are those that arise from an absence of capacity to contract on the part of one of the individuals, who cannot enter into a valid marriage even if he performs all the forms and conditions of the act of marrying. Such would be the case of a married man, who had obtained a divorce, he being thereby absolutely incapable of validly marrying another woman. Such also is the impediment of form, or clandestinity, which renders the contract null and void, if the requisite conditions, not public but secret, be contravened, with, namely, the presence of the parish priest of the locality or his delegate, and of two witnesses; it is an impediment properly so-called, though it does not act directly by affecting the personal capacity of the contracting party. On the other hand, impediments improperly so called do not imply the juridical incapacity of the agent, but the absence of a due consent on his part, whether from want of knowledge, liberty, or will. In that case it is the contract that is non-existent, because it lacks an essential element; whereas, such impediments are not, properly speaking, created or established by the law, and are not matter for dispensation. They spring from the natural law in the sense that they are the application to Matrimony of the laws that regulate all contracts and arise from the very nature of things. Ecclesiastical law cannot intervene directly; it is limited to pointing them out and applying opportune measures to prevent as far as possible such marriages affected by these different forms of defective consent.

Marriage is juridically a contract, and a Christian marriage does not cease to be a contract because it is a sacrament. Being a sacrament it is a sacred thing, and as such is subject to the authority of the church; and, being a contract, the church can establish impediments to matrimony, either personal or formal. Having the power to establish them, she can abrogate them, modify them, and, consequently, dispense from them in individual cases (see MARRIAGE; DISPENSATION).

III. IMPEDIMENTS TO MARRIAGE, IN PARTICULAR.—The following is the list of the impediments of marriage arranged in what seems the most logical order, with the essential notions on each, except where reference is made to special articles.

A. Prohibitory impediments, that is to say, those which render a marriage illicit, but do not impair its validity.—(1) Betrothal. — A valid engagement to marry, entered into by two individuals, constitutes an absolute, prohibitory impediment, that is, an obstacle to any other marriage; by plighting his troth, the man creates a correlative right on the part of the woman, and any other marriage would be a violation of that right (see BETROTHAL). (2) Vow.—Such a vow as those of a vow of chastity or profession of a vow of chastity constitutes a diriment impediment. The
obligation by vow towards God is an obstacle to any marriage; consequently it too is an absolute prohibitory impediment (see CHASTITY, and VOW). (3) Mixed Marriage.—Whereas the marriage of a baptized person to a non-baptized person is null and void, the CATHOLIC Church with the non-Catholic object is the subject of a prohibitory impediment, mixed religion (mixta religio); it is therefore a relative impediment. For the dispensation in case of mixed marriages and the conditions attached to it see MIXED MARRIAGES. (4) Vetus Et Usus.—A marriage, if the parties were a precept, imposed by ecclesiastical authority on a particular individual, would also be a personal impediment if it had a general character; it affects only the capacity of an individual. This precept is imposed to delay a marriage until a given condition has been fulfilled, for instance, till the removal of the obstacle to a marriage arising from a preceding betrothal to another person. (5) Forbidden Times (tempus clausum, tempus foriatum) is only an impediment improperly so-called, because it does not affect the personal capacity of the contracting parties; and, because it prohibits, not the marriage itself, but only the solemn celebration of the marriage; although it is true, it is used especially, respect to the marriage. These forbidden periods, though formerly much longer, were reduced by the Council of Trent (Sess. XXIV, cap. x, “De Reform. Matrim.”) to the two following times: from Advent to the Epiphany, and from Ash Wednesday to Low Sunday.

For a marriage to be valid, it must render the marriage null and void, form three groups: (1) Impediments properly so called, which are personal incapacities, some absolute, some relative. Two arise from the personal incapacity of the subject: impuberty and impotency. Puberty is the state of physical development requisite for generation. The age of puberty varies with the individual and the climate; the legal presumption of the Roman law fixed it at twelve years for girls and fourteen for boys. The church has followed this rule or presumption, but it has not made want of a fixed age an impediment properly so-called which would render the marriage void under every hypothesis. It is presumed that young people reach the age of puberty at twelve and fourteen; it is presumed that they do not reach it before this time; but if as a matter of fact they have reached it, and a marriage be necessitated by the circumstances of the case (quando malitia supplet astenam), the marriage is valid with regard to the rites of marriage. For the dispensation from this impediment were granted, but on the condition that the common life should begin only later. Impotency is the state of one who is incapable of normal sexual relations. It is clear that an impotent person cannot validly contract marriage since he is physically incapable of realizing its object. For this particular impediment we must refer to the technical treatises on the subject and limit ourselves to some conclusions. The impotency which is a cause of nullity is the incapacity of having conjugal relations (impotentia coeunti), not incapacity of engendering (impotentia genus), in other words, one is presumed impotent once he has reached the legal or real age of puberty; consequently, no one, except eunuchs, can be prevented by authority from marrying (Sixtus V, 27 June, 1587). The different classifications of impotency, absolute or relative, antecedent or subsequent, perpetual or temporal, to be met with in various treatises on this subject, are of no practical importance now. Only perpetual antecedent impotency is a cause of nullity; nowadays it is seldom necessary to examine too closely into this matter, as all cases arising from it are treated as far as possible under the form of dispensations of non-consummated marriages.

Next we have an impediment based on the presumption of want of consent, abduction (ruptus). In as far as it is an impediment, it is the incapacity of the abduc-

tor of contracting valid marriage with the woman whom he has abducted, until she has first been allowed to go free. Two impediments arise from religious obligations which exclude marriage with any person whatever they are, A solemn vow (notas), that is to say, a vow taken in an order that has a solemn profession of its members, whether men or women; and Holy orders (ordo), that is to say, the sub-diocesan and major orders. Another impediment of a religious nature is that called disparity of worship (cultus dispeciosus); it renders void the marriage of a Christian with an infidel, that is, of a baptized person with one who is unbaptized (see DISPARITY OF WORSHIP). Next in order we have a previous matrimonial engagement (ligamen), an impediment rendered void any marriage of a married person, during the lifetime of the person to whom he or she has been validly married. This impediment due to marriage has caused to be prohibited the union of persons who have attacked the sanctity of the marriage of one or other of the parties by killing his or her partner, or by committing adultery with a promise of marriage or an attempted marriage; that is the impediment of crime (crimen). (See CRIME.) This is the basis of the impediment of relationship (cognatio), which occurs in five forms: (a) natural relationship or community of blood (consanguinitas), which prohibits all marriages in the direct ascending or descending line (infinitum), and in the collateral line to the fourth degree or fourth generation; (b) all relationships of blood (affines), which establishes a bond of relationship between each of the married parties and the blood relations of the other, and forbids marriage between them to the fourth degree. Such is the case when the affinity springs from conjugal relations; but as canon law considers affinity to spring also from illicit intercourse, there is an illicit affinity which annuls marriage to the second degree only; (c) public decorum (honestas publica), a legal anticipation of affinity; those who will be related by the consummation of marriage are already looked upon as related when they are betrothed or have only ratified the marriage contract. This impediment is as extensive as affinity, if it springs from a reception of the Sacrament of Matrimony; if it arises solely from betrothal it extends only to the first degree; (d) spiritual relationship (cognatio spiritualis). Spiritual birth has been considered as producing a kind of relationship between those who took an active part in the rite of baptism. This is an impediment to confirmation, and marriage between them is forbidden. The impediment arising from these sacraments has been restricted by the Council of Trent (Sess. XXIV, cap. ii, “De Ref. Matr.”): it prevents the marriage of the sponsor with the child or with the child’s parents, also the marriage of the godfather or godmother with the person baptized or confirmed and with his parents. But we must remark that as far as the Sacrament of Confirmation is concerned there can be no question of the marriage of the minister; also as confirmation requires only one sponsor, who must be the same sex as the person confirmed, this impediment is sterile. The only case between them: the only case therefore where it would occur is in a marriage of the sponsor in confirmation with the parent of the child, which would be null and void; (e) Lastly there is the purely legal relationship of adoption, with the prohibitions of marriage attached to it in Roman law; the church has merely accepted and defined them.

(2) The second kind comprises the only diriment impediment that is based on a question of form, to wit, clandestinity.

(3) Next we have the impediments, improperly so called, which do not affect the capacity of the agent, but only the validity of the marriage. The first is the impediment of consent. This defect may arise from the intellect or the will; hence we have two classes. Arising from the intellect, we have: insanity; and total ignorance, even
there is a threefold imposition, viz.: (a) when the ordaining prelate followed by the priests, lays hands on the head of the candidate, or if the candidate extend hands during the prayer, “Oremus, fratres carissimi”, and (e) when he implores hands at giving power to forgive sins, saying “Accipe Spiritum Sanctum”. The first and second of these impositions combined constitute in the Latin Church partial matter of the sacrament, namely mistake relative to his liberty (conditio servitutis): a marriage with a slave who is believed to be free is null and void. Arising from the will, a defect of consent may be caused through deceit or dissimulation when one expresses exteriorly a consent that does not really exist; or from constraint imposed by an unjust external force, which causes the consent not to be free (nullum consensum), even real, is destroyed if to the contract be added clauses or conditions contrary to the essential elements of marriage, as divorce or adultery; but it must be noted that a mere concomitant intention is not a cause of nullity; not being expressed formally as a condition, it is presumed non-existent. It is clear that the impediments improperly so-called are as varied as the ways in which the validity of the matrimonial consent, psychologically considered, can be affected.

In addition to the treatises of canonists and moralists on marriage, the historical analysis of Fabricius, Geschichtliche und katholische Ehelehre (Tübingen, 1888); for the classification of the impediments, G. FORZARI, Tractatus de matrimonio (Paris, 1904).

A. BOUDINHON.

**Imposition of Hands** is a symbolical ceremony by which one intends to communicate to another some favour, quality or excellence (principally of a spiritual kind), or to depute another to some office. The rite has had a profane or secular as well as a sacred usage. It is extremely ancient, having come down from patriarchal times. Jacob bequeathed a blessing and inheritance to his two sons Ephraim and Manasse by placing his hands upon them (Gen., xlvi, 14) and Moses conferred on Josue the hegemony of the Hebrew people in the same manner (Num., xxvii, 18, 23).

In the New Testament Our Lord employed this rite to restore life to the daughter of Jairus (Matt., ix, 18) and to give health to the sick (Luke, vi, 19). The religious aspect of this ceremony first appeared in the consecration of a vessel for holy office or to his priesthood. Before immolating animals in sacrifice the priests, according to the Mosaic ritual, laid hands upon the heads of the victims (Ex., xxix: Lev., viii, ix); and in the expressive dismissal of the scapegoat the officiant laid his hands on the animal’s head and prayed that the sins of the people might descend thence and be expiated in the wilderness (Lev., xvi, 21). The Apostles imposed hands on the newly baptized, that they might receive the gifts of the Holy Ghost in confirmation (Acts, viii, 17, 19; xix, 6); on those to be promoted to Holy orders (Acts, vi, 6; xiii, 3; I Tim., iv, 14; II Tim., i, 6, Matt., xix, 2); and on others to bestow some supernatural gift or corporal benefit (Acts, xiv, 3; passim). In fact this rite was so constantly employed that the “imposition of hands” came to designate an essential Catholic doctrine (Heb., vi, 2).

To understand clearly the extent to which the imposition of hands is employed in the Church at present it will be necessary to view it in its sacramental or theological as well as in its ceremonial or liturgical aspect. In confirmation, the imposition of hands constitutes the essential matter of the sacrament, not however that which precedes the anointing, but that which takes place at the actual application of the chrism (S. C. de Prop. Fide, 6 Avg., 1840). In the imposition of Holy orders it enters either wholly or in part, into the substance of the rite by which most of the higher grades are conferred. Thus in the ordination of deacons according to the Latin rite it is at least partial matter of the sacrament; in conferring the priesthood

**IMPOSERS.**—Under this heading we may notice a certain number of objectionable characters who, while not of sufficient importance to claim separate treatment, have at the sacraments so far achieved notoriety or caused disturbance in the Church by their mendacity or their moral turpitude, that they cannot be entirely passed over in such a work as the present. That there would be hypocrites who would take advantage of a profession of piety to mask their own evil designs

**PATRICK MORRISBRO.**

**IMPOSITION** 698
had been clearly foretold by Christ in the Gospels. "Beware of false prophets," he had said, "who come to you in the clothing of shepherds, but inwardly they are ravening wolves." (Matt., vii, 15), and again "there will be false Christs and false prophets who shall shew signs and wonders, to seduce (if it were possible) even the elect" (Mark, xiii, 22). The same note is heard in the other books of the New Testament; for example: "Many false prophets are gone out into the world" (I John, iv, 1); "But there were also false prophets among the people, even as there shall be among you, who shall shew signs and wonders, to seduce them, if so be they shall come in the name of the Lord," (II Pet., ii, 1), and the early fulfillment of these predictions is attested by the language of the "Didache" (cc. xi and xvi), and by Justin Martyr (about A. D. 160) who observes: "Our Lord said that many false prophets and false Christs would appear in His name and would deceive many; and so it has come about. For many have taught godless, blasphemous and unholy doctrines forging them in His name" ("Dial., c. lxxxiii"). Putting aside, as lying beyond our province, the succession of pseudo-Messiahs among the Jews, men like John of Gischala and Simon Bar-Giora, who played so terrible a part in the story of the siege of Jerusalem, recognized by many persons whom we read in Acts viii, 5-24, the first notorious impostor of Christian church history. He offered St. Peter money that he might have power to impart to others the gifts of the Holy Ghost, and the Acts do not tell us very much more about him than that he had put an end to the sorcery of Simon Magus of Samaria. But Justin Martyr and other early writers inform us that he afterwards went to Rome, worked miracles there by the power of demons, and received Divine honours both in Rome and in his own country. Though much extravagant legend afterwards gathered round the name of this Simon, and in particular the story of a supposed contest in Rome between him and St. Peter, when Simon attempting to fly was brought to earth by the Apostle's word, breaking his leg in his fall, it seems nevertheless probable that there must be some foundation in fact for the account given by Justin and accepted by Eusebius. The historical Simon Magus no doubt founded some sort of religion as a counterfeit of Christianity in which he claimed to play a part analogous to that of Christ.

With the histories of the second and third centuries, as with those of later ages, a large number of impostors, who flattered by cynical hypocrisy, Marcus is declared to have combined the most extravagant teaching of formulæ, by which the initiated would after death leave their bodies in this world, their souls with the Demiurge, and "ascend in their spirits at the pleroma", with the lowest kind of juggling tricks, pretending, for example, to show the contents of a glass chalice miraculously changed in colour after consecration (Irenæus, "Contra Hæreses", I, xii-xxi). Similarly it is at least very doubtful whether the frenzied prophecysings of the two women, Priscilla and Maximilla, who left their husbands to scour the country of Phrygia with the heretic Montanus, are not to be regarded as the unconscious dreams of these women. Their episcopal opponents strenuously maintained that all the leaders of the sect were possessed by the devil and ought to be compelled to submit to exorcism. Neither were such extravagances confined to the East, although they met a more favouring climate in the West. St. Gregory of Tours tells us of a half crazy fanatic at the end of the sixth century who declared himself to be Christ and who travelled in the neighbourhood of Aries in company with a woman whom he called Mary. He was debarred to work miracles of healing and crowds of people believed in him and paid him Divine honour. In the end he moved about with a following of more than one thousand persons and was offering violence to an envoy of Bishop Aurelius. The woman named Mary under torture made a disclosure of all his frauds, but many of the populace still believed in them, and a number of other adventurers accompanied by hysterical propheticesses seem to have flourished in Gaul at the same epoch (Greg. Turon., "Hist.", X, 25). Still more famous were Adelbert and Clement, who opposed the authority of St. Boniface in Germany about the year 744. Adelbert, who was a Gaul, claimed to have been honoured with supernatural favours from his birth. He drew the people away from the churches, gave them pieces of wood for nails and hails, and was not ashamed to announce his intentions as unnecessary for them to confess their sins to him because he already read their hearts. Clement, a Scotman, rejected the canons of the Church about marriage and other disciplinary questions and maintained that Jesus Christ, in his descent into Hell, had set free all the souls confined there, even the lost and the unbaptized. The question of these heretical bishops was referred to Rome and discussed by Pope Zachary in a council held there in 745, at which there was read aloud a miraculous letter from Jesus Christ which Adelbert pretended had fallen from heaven and had been picked up by the Archangel Michael. In the end the council pronounced the two accused (cf. Hefele, "Conciliengeschichte", §§363-367; Hauck, "Kirchengeschichte Deutschlands", I, 554 seq.).

Throughout the Middle Ages we meet with many examples of such half crazy fanatics and our imperfect information does not enable us to pronounce in what measure insanity or conscious fraud was responsible for their pretensions. Such cases are wont more particularly to be multiplied at times of national calamity or religious excitement. The epoch of the year 1000, owing to some vague expectation (an expectation, however, which has been much exaggerated), of the coming of the day of judgment (cf. Apc. xx, 7) marked such a crisis, and Raoul Glaber (Migne, P. L., CXLII, 643-644) tells us in particular of two ecclesiastical agitators, one named Leotardus, at Châlons, and the other Willigardus, at Ravenna, who at that time caused great disturbance. Leotardus pretended to have had extraordinary revelations and preached some sort of socialistic doctrine preventing the people from paying tithes. When his followers eventually deserted him he drowned himself in a well. Willigardus appears to have been a literary fanatic who believed that he had been commanded by Virgil, Horace, and Juvenal to scan the world. The book was published with the impostorage of the Church. He had many followers and for a while a sort of schism until he was condemned by papal authority. Of all the deluded persons, however, whose sanity must always remain in doubt, the Anabaptist John of Leyden (John Bokeloon), who became tyrant of Münster at a much later period (1533), is the most remarkable. He believed himself endowed with supernatural powers and gifts, but preferred to act as the public executioner of his own sentences, hacking his victims to pieces with his own hands. The period of the great Schism of the West was also an epoch when many fanatical or designing persons resorted to the exercise of the authority of the populace. A Greek, known as Paulus Tigrinus, pretending to be Patriarch of Constantinople, after a successful career of fraud in Cyprus and elsewhere, came to Rome, where he was detected and imprisoned by Urban VI. At the election of Boniface IX, he was released and made Duke of Savoy, whom he imposed upon with the same pretence of being the true Patriarch of Constantinople. By this prince he was sent with a dozen horses to Avignon and received as patriarch by the antipope, Clement VII. Thence he eventually made his escape, carrying with him many rich presents which he had received from the deluded German. Another leader of this period was a Franciscan friar, one James of Jülisch, who performed all the functions of a bish
without ever having received episcopal consecration. He was at first admitted as a bishop auxiliary by Florentius, Bishop of Utrecht. Great scandal and disturbance were caused when the truth was discovered, on account of the large numbers of persons whom he had (of course illegally) ordained into the holy priesthood. He was solemnly degraded, in 1392, by a commission of seven bishops and on being handed over to the secular arm was sentenced to be boiled alive, but this sentence was mitigated in execution. Nothing, however, could more clearly illustrate the extent to which a person might encourage visionaryaries and make impostors than the history of France's sainted heroine, Joan of Arc. In fact the principal obstacle to the recognition of her own inspiration has been found in the circumstance that several other visionaryaries, of whom Catherine of La Rochelle was the most noted, claimed similar Divine missions at about the same period. The facts have been exaggerated for their own purposes by such writers as Vallet de Virville (Charles VII, II, 129) and Anatole France (Jeanne d'Arc, II, 96); but there certainly were a number of such impostors, both male and female; and in particular five years after the Maid was burnt at the stake among them is the impostor of Orleans as the true Joan of Arc, and found influential supporters in that character for more than three years.

Other cases of imposture in the fifteenth century were undoubtedly fostered by the Wycliffite and Hussite movements. If Sir John Olivy, the martyr, really believed, as is asserted on good contemporary authority, that he would rise again three days after his death, he was clearly the victim of delusions, but the details associated with the veneration of the ashes of Richard Wych, burned in 1440 (Gairdner, "Lollardy", I, 171), imply some admixture of deliberate fraud. In Germany the great impostor, Joachim von Locmand, was encouraged by Hussite doctrines was turned to account by more than one adventurer. Johann Böm, who in 1476 gathered round him a crowd of peasants, numbering sometimes as many as 30,000, at Nilsthausen in Franconia, seems to have been the tool of Hussites more sateur than himself. He professed to have had revelations from the Blessed Virgin, and declared war upon all recognition of priestly authority, upon the payment of tithes, and in fact upon all property. He was eventually captured by the Bishop of Würzburg and burnt (Janssen, "Gesch. d. deutschen Volkes", II, 442). Somewhat similar in its partially social aims was the rebellion on English soil of Jack Cade, who professed to be a descendant of the Earls of Mortimer. How far these pretensions and a certain mountebank element in his character gained him his influence over his followers it is difficult to decide. After London had for a day or two been in the hands of the rebels, the revolt was put down, and Cade eventually slain (1450). Two other impostures of somewhat later date—those of Lambert Simnel (1487), who pretended to be the son of the murdered Duke of Clarence, and Perkin Warbeck (1497), who announced himself as Richard Duke of York, the younger of the two pretences to have been smoothed in the Tower—are famous in English history, but neither of them had any religious character. For the same reason we need not touch here upon sundry other noted impersonations of characters of royal dignity, e.g. the Alexis Comnenus who appeared in the twelfth century as the rival of Isaac Comnenus II; the Baldwin who appeared as the Pretender in 1284, who took the name of the true Baldwin in the East; the adventurer who impersonated Frederic II and who when seized and tortured by the Emperor Rudolph in 1284 confessed the fraud, not to speak of several others. Two similar pretenders to royalty, however, are of more consequence, and the impersonation if impersonation it was, is buried in deeper mystery. When King Sebastian of Portugal in 1578 fought his last desperate battle against the Moors upon African soil, there was some conflict of evidence regarding the manner of his death, and though what purported to be his dead body was brought back and interred in Portugal, rumours persisted that he was (of course illegally) slain, and was still alive. Influenced by the fact that Philip II of Spain now claimed and occupied the throne of the sister kingdom, a whole series of pretenders appeared, each averring that he was in truth the Sebastian whom men believed to have perished. The first three of these plagiature wereruins (September 1578), but the last, whose name is hardly known, played his part with extraordinary firmness and conviction. He obtained recognition from a number of people who had known Sebastian well, and though the Spanish Viceroy of Naples seized him and sent him to the galleys, he seems to have been treated by the Spanish authorities with a curious degree of consideration. Even now it cannot be affirmed with absolute certainty that his story was a false one, though nearly all historians pronounce against him. Still more doubtful is the case of "the false Demetrius." The true Demetrius, the son of Tigran, the Terrible, was murdered in 1592. Muscovy after his death fell into the hands of his son, and afterwards there appeared in Poland a young man who declared that he was Demetrius who had escaped the massacre, and that he now meant to press his claim to the throne of the Tsars. Sigismund, King of Poland, lent him his support. He made himself master of Moscow, but was generally regarded as a false imposter, and the Poles himself, although he made no secret of the fact that during his residence in Poland he had adopted the Roman Faith. Probably the merits of the historical controversy as to his identity have never been quite fairly judged, because all have agreed in describing him as a tool of the Jesuits, and have, consequently, taken it for granted that he was not a genuine impostor, a fulsome coup devised by them to draw Russia over to the Roman obedience. It has, however, been clearly shown how doubtful is the assumption that Demetrius was really an impostor. (See Pierling, "Rome et Demetrius", Paris, 1878; and "La Russie et le Saint-Siege" of the same author.) Of the other royal pretenders, and notably of the six various adventurers who came forward in the character of the Dauphin Louis, the son of Louis XVI, there is no need to say anything. Neither need we linger over such fantastic personages as Paracelsus (Philipp Bombast von Hohenheim, 1493–1541), with his crude notions of Divine inspiration, or Nostradamus (1503–1566), the Parisian astrologer and prophet, who also practised as a physician, or Caglificio (Giuseppe Balsamo, 1743–1795), who died in the dungeons of the Castle of Sant' Angelo after an almost unprecedented career of fraud, in which a sort of freemasonry, called "Egyptian Masonry", invented by him in England, played a notable part. Such English astrologers on the other hand as John Dee (1527–1608), whose life has recently been written by C. F. Smith (1899), William Lilly (1602–1681), and John Gadbury (1627–1704), seem to have been sincere believers in their own strange science, and that curious character, Valentine Greatrakes (1629–1683), was not a mere charlatan but undoubtedly possessed some natural gift of healing. More to our purpose are a number of feigned or deplumed ecclesiastics who often traded upon the popular credulity in countries like Spain that were ready to believe the most incredible. An outstanding case of these was Magdalena de la Crux (1487–1560), a Franciscan nun of Cordova, who for many years was honoured as a saint. She was believed to have the stigmata and to take no other food than the holy Eucharist. The Blessed Sacrament was said to fly to her tongue from the hand of the priest who was given Holy Communion, and it seemed at such moments that
she was raised from the ground. The same miraculous levitation took place during her ecstasies at that time also she was radiant with supernatural light. So universal was the popular veneration, that ladies of the highest rank, when about to be confined, sent her to the cradles of the marvellous to expect, that child, that she might bless them. This was done by the Empress Isabel, in 1527, before the birth of Philip II. On the other hand St. Ignatius Loyola had always regarded her with suspicion. Falling dangerously ill in 1543, Magdalena confessed to a long dream of being delivered by her Guardian Angel from the power of demons by which she was possessed, but maintaining their reality. She was sentenced by the Inquisition, in an auto-da-fé at Cordova, in 1546, to perpetual imprisonment in a convent of her order, and there she is believed to have ended her days most piously amid marks of the sincerest repentance (see Görres, "Mystik", V, 168-174; Lea, "Chapters from Relig. Hist. of Spain", 330-335). A large number of similar cases have been discussed in considerable detail by Lea both in his "Chapters" just cited, and also in the fourth volume of his "History of the Inquisition of Spain", but Lea, though indefatigable as a compiler, appears to rely on the conclusions and inferences he draws.

One Italian impostor at this period, who achieved a European reputation, was Joseph Francis Borro or Borri (1627-1695). In consequence of some crime committed in his dissolute youth, he had taken sanctuary at Rome. There he pretended to be a monk, and to have received from God a mission as a reformer. He had revelations about the Trinity, and declared that God had appointed him to be Generalissimo of an army, in which the name of the pope was to exterminate all heretics. He also maintained that the Blessed Virgin was divinely and miraculously converted, the latter word being, as a consequence, of the same nature as her Son and present with Him in the Blessed Eucharist. Borro was arrested by the Inquisition and sentenced in 1661, but he managed to escape and travelled in many parts of Europe. He seems to have lent himself entirely to a career of vulgar fraud, and amongst his other victims he obtained considerable sums of money from Queen Christina of Sweden (this was before her reception into the Catholic Church), upon the pretext of making researches to discover the philosopher's stone. Eventually he gravitated back to Rome, was there arrested, and died in the Castel Sant'Angelo (see Lea, "Chapters from Relig. Hist. of Spain", 330). It is also hardly to be doubted that in consequence of the witch-finding mania which prevailed in both the Protestant and Catholic countries of Europe, during the last half of the sixteenth and the greater part of the seventeenth century, as well as the exaggerated belief in demonic possession current at the same period, the minds of many weak, vicious, or designing persons were fascinated by the supposed possibilities of intercourse with the devil in a more or less visible shape. How much credit is to be attached to the confessions undoubtedly made by many of those accused of sorcery, it seems impossible to decide. Neither is it easy to arrive at the real facts in such criminal indictments as that of the priest Louis Gauffridi, burnt for his satanical practices and his immoral relations with the "convulsionnaires" in the Ursuline convent of the Sainte-Baume, near Aachen, in 1611, that of the pretended ecстатica, Madeleine Bailleul, that of the similar cases of her confessor at Louviers, in 1647, or that of Urban Grandier, the necromancer priest, supposed to have cast a spell over the possessed nuns of Loudun in the time of Cardinal Richelieu. These and similar stories, which have been exploited again and again in such prurient and anti-religious works as Michael "La Sorcière", from an historical point of view still remain shrouded in an almost impenetrable obscurity.

On the other hand few will now venture to identify themselves with that unquestioning acceptance of all kinds of satanic and demoniacal phenomena which is to be found in the fourth and fifth volumes of Görres's "Mystik". The dangers of excessive credulity of this kind have been forcibly brought home to our own generation by the outrageous impostures of "Léo Taxil" to be readily forgotten. At present the tendency of historians is to detect deliberate fraud, not so much perhaps in the sorcerers themselves, as in the pretended intuitions of such "witch-finders" as Matthew Hopkins. He deliberately tortured hundreds of miserable victims in East Anglia, under the pretext of finding witch-marks, a procedure which generally ended in their condemnation and death. It is pitiable that the most devout Nonconformist leaders, men like Baxter and Calamy, regarded Hopkins as the inspired agent of Heaven in this work.

Towards the close of the seventeenth century, the discovery of the supposed Popish Plot occasioned an epidemic of malicious impostures in England. The persecution of Catholics for more than a hundred years previously had let loose a tribe of spies who, passing under the cloak of superstition, acted at all times to sell themselves at no form of trickery. In a man like the priest-hunter, Richard Topcliffe (1532-1604), who cruelly tortured Father Southwell, the martyr, in his own house, the note of brutality prevailed, but that of treachery and fraud was not absent. With Gilbert Burnet (d. 1709), the "Confession of Faith and Morning and Evening Prayer of Mary Queen of Scots to her doom, the case was reversed. Not only he, but Robert Bruce (d. 1602), the Scottish spy and swindler, John Cecil (d. 1626), the agent of Burleigh and afterwards the associate of the "Appellant" priests, and several others were pitiable dupes prepared at all times to sell themselves to the highest bidder. A little later was an example of the same type in James Wadsworth (1604-1656), the son of a fervent convert of the same name, who had become in his later years a priest and Jesuit. James Wadsworth the younger lived upon the money which he earned by his treacherously acquired knowledge of English Catholics and their secrets. Whatever may be said of James Le Cloche, a supposed natural son of Charles II and for a while a Jesuit scholastic, whose story has recently attracted attention (see Barnes, "The Man of the Mask" and the review, by Andrew Lang, in "The Athenæum", 26 Dec., 1908), it is clear that Le Cloche was at least a swindler, though not of the treacherous order. However, the comparative respite accorded to Catholics by the accession of Charles II was also accompanied by a great recrudescence of anti-papal feeling. Two unprincipled scoundrels, Israel Tongue (who, though less clearly culpable than his confederate, cannot have acted in good faith) and Titus Oates, a young man whose record was already infamous, concocted a scheme to exploit the anti-popery ferment. Oates, to worm himself into the secrets of the Catholics, pretended conversion and offered himself to the Jesuits. He was sent to Valladolid on trial but was soon expelled. Professing repentance he was allowed another trial at St-Omer, but expelled a second time. Coming to Tongue in London, the two, in August, 1678, evolved the details of a wildly extravagant plot which the pope and the Jesuits were supposed to have brought to the verge of execution. All the preposterously similar details were put to the populace, and in the panic which ensued some thirty-five victims, Catholics of position, Jesuits, and others, had their lives sworn away by the grossest perjury. Oates, whom his modern biographer (Seccombe, "Twelve Bad Men", 154) describes as "the bloodiest villain since the world began", found a host of abettors and imitators, amongst whom Thomas Dandridge, an adventurer who also personated the Duke of Mon-
mouth and claimed miraculous gifts of healing, with Stephen Dugdale, William Bedloe, Edward Turberville, and Robert Bolron, were the most conspicuous. Oates soon after became discredited, and in 1658, under James II, he was convicted of perjury and punished by floggings of unexampled severity, but under William III, his sentence was reversed, and after a period of fresh malpractices he received a large pension from the Government, which he drew until his death in 1705. With Oates in his later years was associated William Fuller (1670-1717), seemingly the inventor of the "warming-pan story" (concerning the birth of James, the Marquis of haystack, and center of fictitious Jacobite plots. He published letters of Mary of Modena but was convicted and pilloried.

Another swindler who tried to make money out of the fabrication of pretended Jacobite plots was Robert Young. He succeeded for a while, during that age of intrigue and mistrust, in imposing upon the popular credulity, but he was in the end detected. He was afterwards convicted of coining and executed (1700).

Robert Ware the forger, the author of "Foxes and Firebrands", who has of late years been so thoroughly exposed by Father Bridgett, traded upon the same prejudices. His more public career began contemporaneously with that of Oates, and he was suspected behind the high reputation of his dead father, Sir James Ware, amongst whose manuscripts he pretended to discover all kinds of compromising papers, he obtained currency for his forgeries, remaining almost undetected until modern times. Many foul aspersions upon the character of individual popes, Jesuits, and other Catholics, and also upon some Puritans, which have found their way into the pages of respectable historians, are due to the fabrications of "this literary skunk", as Fr. Bridgett not unjustifiably calls him (see Bridgett, "Blunders and Forgeries", p. 5). Some other vindictive and unbridled scoundrels whose imputations for the most part took a literary form may also be mentioned here, though without any hope of exhausting the list. Foremost among them comes the Abbé Zahorowski, a Jesuit expelled from his order in which as a young scholar he had been guilty of certain mean and discreditable tales, and Mary his host expelled from the college in which he wrote and published the notorious "Monita Secreta", which, as a code of secret instructions issued by authority, pretended to lay bare the shameless and Machiavellian policy followed by the Society of Jesus. That the "Monita Secreta" are a forgery is now universally acknowledged by opponents of the memoirs of Father Wielecki (Scriptores Reorum Polonicarum, vols. VII, X, XIV) no doubt remains that Zahorowski was the author (see Duh, "Jesuitenfabeln" No. 5; Bou, "Les Jésuites de la Légende", I, 281). Hardly less clear to the no-pope champion than the "Monita Secreta" is the fictitious "Hungarian Confession" or "Fluchformular". It is a profession of faith supposed to have been exacted of converts to the Church in Hungary (c. 1676), by which among other things they were required to declare that the pope ought to receive Divine honours, and that the Blessed Virgin ought to be held higher than Christ himself. The forger seems to have been traced to the door of George Lani, an Evangelical minister, sent to the galleys for political intrigues against the Government in Hungary, who first published it in a work called "Cattività Papisticae". Whether it was his own fabrication is not, however, certain, and possibly it may have been in good faith, some satirical composition in circulation at the time (see Duh, "Jesuitenfabeln", No. 7, and S. F. Smith in "The Month", July-August, 1896).

Such satirical compositions have often been taken seriously. An example is the "Letter of the Three Bishops", though written by an apostate of infamous character, Peter Paul Vergerius (1654), and professing to be a letter of advice given by three bishops to the pope to help to strengthen the power of the papacy, is obviously a skit rather than a forgery. But his letter has been quoted as authentic by hundreds of Protestant controversialists from Crashaw downwards (see Lewis "The Letter of the Three Bishops"). Of such a nature was in fact the letter that was supposed to have been granted by Tetzel to remit sins unrepented of, a document really derived from a burlesque Latin drama (see "The Month", July, 1905, p. 96); but forgery of the most flagrant type was often used, as, for example, by the ex-Capuchin Father Norbert Piarist, later called and center of fictitious Jacobite plots.

In the encouragement of the crowd of impostors who flourished at the beginning of the eighteenth century many leading members of the Anglican episcopate, notably Archbishop Tenison, Bishops Compton of London and Winton, and Bishop Bonner, were involved, and by the 1750s, to the extent that was possible, the Church was conspicuous. A whole tribe of Huguenots and French "proseletes" (i.e. seceders from Catholicism) were welcomed in England with open arms; but the frauds and immorality of these men, many of which were brought to light in the recriminations of the famous "Bangor Controversy" (a name derived from Hondy, Bishop of Bangor, the patron of de la Pironière, an ex-Jesuit who played a principal part in the fray), would suffice to fill a volume. It seems plain that such converts to Protestantism as Malard, Rouire, and Fournier, despite the eminence of their ecclesiastical foundations, were no better. The movement was "Weeds from the Pope's Garden", in "The Month", Feb., 1897). For example, the last named, obtaining Bishop Hoadly's signature on a scrap of paper, wrote over it a promissory note for £2000 and sued the bishop for the money. When the claim was resisted, Fournier, an ex-priest, impudently declared that the bishop was in the habit of writing promissory notes and given it to him in payment of a debt. But even at this stage, Fournier, strong in his denunciations of popery, found supporters against the bishop. The same was conspicuously the case with the ex-Jesuit, Archibald Bower, who published in 1743 a most scurrilous manual, "History of the Popes". The book not only libeled but excommunicated his former co-religionists. He was ardently taken up by eminent Protestant ecclesiastics and statesmen, but his insincerity in the end became so patent that he was exposed and denounced by the Anglican, John Douglass, afterwards Bishop of Salisbury (see Pollen in "The Month", Sept., 1908). More nearly corresponding to the ordinary type of impostor was the famous Psalmanazar (1679-1783), a Frenchman, educated in childhood by the Dominicans, who coming to England pretended to be a pagan from Formosa, and professed himself a convert to Anglicanism, winning favour by abusing the Jesuits. He was warmly encouraged by Bishop Compton, to whom he presented a Catechism in "Formosan", a purely fictitious language. Afterwards he fell into poverty and disrepute, confessed the fraud, and is said to have been sincerely repentant, being visited by Dr. Johnson in his last days. His accomplice and mentor Innes, an American clergyman, was recognized, served three years, and was rewarded by being made chaplain-general of the English forces in Portugal.

Passing over a certain number of religious enthusiasts who may in various degrees have been self-convinced and who range from the crazy hallucinations of Joanna Southcott (d. 1814), who believed she was to bring forth the Messiah, or of Richard Brothers,
the Divinely-crowned descendant of King David and ruler of the world (c. 1792), to the miracle-working claims of Anna Lee (d. 1784), the founderess of the American Shakers, we will pause only to say a word of Joseph Smith (1805-1844), the first apostle of Mormonism. It cannot be doubted that this man, who saw a distressing dream in which he had secured a golden book, consisting of metal plates inscribed with strange characters, which he dug for and found, was a deliberate impostor. Smith pretended to decipher and translate these mystical writings, after which the "Book of Mormon" was taken back to heaven by an angel. The translation was then recorded, and a host of revelations was still vouchsafed to the seer. Followers, who adopted the name of "The Latter Day Saints", gathered round him, and after some rather brutal treatment in Missouri provoked by their polygamy and other doctrines, the sect finally settled in Nauvoo, Illinois. In this State Joseph Smith and Hyrum his brother were lynched on 27 June, 1844, amid circumstances of great barbarity. A revulsion of feeling followed, and Brigham Young, Smith's successor, achieved a corresponding success when he transferred the head-quarters of the sect to Utah (see Lyman, "Story of the Mormons"; and Nelson, "Sciences of Mormonism"), and it is now a matter of common knowledge that Mormonism was afforded by the Agapemonists from 1848 onward, who under their founder, H. K. Prince, combined a fantastic belief in a reincarnation of the Deity in Prince and his successors with the grossest laxity of morals. But leaving out of account the class of criminal impersonations for motives of gain (like that of Arthur Orton in the celebrated Tichborne case, where the pretender, we may note, seriously damaged his case by his ignorance of the life and Catholic practice of the Jesuit College of Stonyhurst in which Roger Tichborne was brought up), anti-Catholicism, or opposition to the Church, is the usual motive of modern impostors. Famous among these are the supposed revelations of Maria Monk, who professed to have been a nun for some years in the convent of the Hôtel-Dieu, at Montreal, and who published in 1835 a book which became a sensation and was current in high and low circles (see "The True History of Maria Monk", Catholic Truth Soc. pamphlet, Lond., 1880). Not less famous is the case of Dr. Aclili, an ex-Dominican and anti-popyer lecturer, whose long career of debauchery, first as a Catholic and then as a pretended convert to Protestantism, Dr. (afterwards Cardinal) Newman exposed in 1852. In the libel action which Aclili was forced to bring, a verdict was given against Newman on certain points, but almost the whole Protestant press of the country described the trial as a gross miscarriage of justice. Aclili's credit was in consequence completely destroyed. In the case of many of these purveyors of "awful revelations" on both sides of the Atlantic, the previous record of the lecturer is of the most scandalous kind. The masculinity of Dr. Aclili is illustrated by the "Book of Mormon" and "James Rutherford", as well as the "escaped nun", Edith O'Gorman, may also be specially mentioned in this connexion. Hardy more creditable is the history of Pastor Chinniquy (1809-1899), who for many years denounced in highly prurient books and pamphlets, notably that called "The Priest, the Woman, and the Confessional", the alleged abuses of the Catholic Church. It is admitted that he had been twice suspended by two different bishops before he seceded from the Church, and there is no room to doubt that these suspensions were moved by grave moral lapses of which the bishops in question had full and convincing information, though, as often happens in such cases, the facts to which the episcopal action was addressed were not made public. But even had his "Fifty years in the Church of Rome" (1885), he represents himself as forced to relinquish Catholicism by the appalling scandals he had witnessed (see S. F. Smith's "Pastor Chinniquy", Catholic Truth Soc. pamphlet, Lond., 1908). But by that time he knew what the Protestant public demanded, while all who could effectively confute his statements were dead.

Of a different type is the most notorious imposture of modern times, that of "Léo Taxil" and "Diana Vaughan". Léo Taxil, whose true name was G. Jogand-Pages, had long been known as one of the most notorious Methodists in France. He had been repeatedly sentenced to fines and imprisonment for the filthy and libellous works he published. For example, on account of his atrocious book "Les Amours de Pie IX" he was sentenced to pay 60,000 francs at the suit of the pope's nephew. He had also founded the "Anti-Clerical" a journal which fanatically attacked all revelation and religion. In 1885 it was announced that Léo Taxil had been converted, and he soon proceeded to publish a series of pretended exposures of the practices of Freemasonry, and particularly of the "Satanism" or Devil-worship with which he claimed he was connected, and which he publicly bound up. Amongst other attractions he introduced a certain "Diana Vaughan", the heroine of "Palladism", who was destined to be the spouse of the demon Asmodeus, but clung to virtue, and was constantly visited by angels and devils. Various other writers, Bataille, Margiotta, Hacks, etc., exploited the same theme and became in a mod when once Taxil's name was bandied about. In 1896-1897 the imposture was finally shown up and Taxil cynically admitted that Diana Vaughan was only the name of his typist. [See Portalé, "La Fin d'une mystification", Paris, 1897, and H. Gruber (H. Gerber), "Léo Taxil, Palladismus Roman", and other works, 1897-8.] Of Diana Dow, who pretended to have been a second coming on earth of the prophet Elias, and of his followers the "Zionists", of the Christian Scientists, of the late Madame Blavatsky and A. P. Sinnett, the prophets of Esoteric Buddhism, of Mrs. Annie Besant and the believers in reincarnation, there is no need to say more here than that the existence of such cults proves conclusively that the age of credulity is not yet over.

No book or article of note seems to have been specially devoted to the general subject of imposture, although illustrations have been given in the course of the article, and it will be sufficient to add here that most of the statements made can be found recorded in any good historical or dictionary, notably in the Dictionary of National Biography, so far as concerns the English impostors mentioned.

HERBERT THURSTON.

Impotence. See Divorce; Impediments, Canonical; Marriage.

Impovertia is the reproaches which in the liturgy of the Offices of Good Friday, the Saviour is made to utter against the Jews, who, in requital for all the Divine favours and particularly for the delivery from the bondage of Egypt and safe conduct into the Promised Land, inflicted on Him the ignominies of the Passion and a cruel death. It is during the Adoration of the Cross that these touching remonstrances are rendered by the choir. In all they consist of three
distinct parts. Of these the third—composed of the antiphon "Crucem torum adoramus," the first verse of Psalm lxvi, the versicle "Crux fideli," and the hymn "Pange lingua gloriosi laurum"—does not belong to the Improperia strictly so called. The first part consists of three reproaches, namely, the "Popule meus" (Mich., vi, 3), "Ego eduxi" (Jer., ii, 21) and "Quid ultra" (Is., vi, 2, 4), the Trisagion (Sancius Deus, Sanctus fortis, Sanctus asepticus) being repeated after each in the Latin and Greek languages. The second part contains nine reproaches pervaded by the same strain of remorse. Each of these is a verse taken from some portion of the Scriptures and followed in every instance by the "Popule meus" as a sort of refrain. Finally, the whole setting was wrenched to a plain-song melody. In the year 1560 Palestreina gave them such an appropriate and beautiful musical setting that Pius IV ordered it to be used in the Sixtine Chapel, where one may still hear on Good Friday each year these exquisite compositions, which are unsurpassed in simple beauty, dramatic feeling, and depth of impressiveness. The best edition of Palestreina's "Improperia" is probably that published by Dr. Proke in the fourth volume of "Musica Divina" in 1863. This version is founded on the Allaempe-Ottoboni MS. preserved in the Vatican Library, and is a "Dictionary of Music." The precise date of the appearance of the Improperia in the liturgy is not ascertained. Definite references to it are found in documents of the ninth and tenth centuries, and even traces exist in manuscripts of a much earlier date. In his work "De antiquâ ecclesiâ disciplinâ," Martiæ (c. xxii) gives a number of fragmentary Ordines, some of which go back as far as 600. Many others mention the Improperia. In the beginning the order was not quite what it is now, and in many places the officiant himself at the Good Friday Office sang the verses of the reproaches, while the people joined in the responses or refrains. Thus the representative character of these moving words seems to have been more effectually observed.

Roman Missal: Pius IX in Kirchenlex., s. v. Improperiat. For music see Liber usuale Missae et Officii (Solemnis ed. Tournai, 1904), and for ceremonies the ordinary handbooks of Liturgy.

Incantation. See MAGIC.

Incarnation and Exarchation (Lat. cardo, a pivot, socket, or hinge—hence, incardinare, to hang on a hinge, or fix; exarcidinare, to unhinge, or set free).—In the theological sense these words were used to mean that a given person is freed from the jurisdiction of one bishop and is transferred to that of another. The term cardinare is used by St. Gregory I (590-604), and incardinare, in the sense of inscribing a name on the list or matricula of a church, is found in the ancient Liber Diurnus of the Roman chancery. Exarchation is the full and perpetual transference of a given person from the jurisdiction of one bishop to that of another. Incardination is canonical and perpetual enrollment in the new diocese to which a given person has been transferred by letters of exarchation. It must be remembered that in canon law a person belongs to the enrolling diocese and not to that prescribed by Innocent XII in the Constitution "Speculatores" (1694) for acquiring a new domicile (S. C. C., 20 July, 1898). Further, the incardination is not accomplished unless the cleric presents a legally executed document which sets forth that the cleric has been transferred especially from his former diocese, the bishop of which gives testimony (secretly if necessary) as to the subject’s birth, life, morals, and studies.

When the above conditions have been complied with, clerics after they have been transferred may be ordained, although it is recommended that the bishop should give a further trial before imposing hands upon his new subject. In general the Council of Trent declares, he should ordain none, except for the need or convenience of his diocese (Sess. XXXIII, "De Ref.", c. xvi). A greater amount of supervision is required when it is questioned of incardinating a cleric or a layman from a foreign country or of ordaining a foreigner. The Council states that bishops are bound to inquire most strictly as to their life from their former ordinaries (S. C. C., 20 July, 1898). Clerics and laymen who do not wish to use the benefits of exarchation are bound by the aforesaid Constitution "Speculatores". In connexion with exarchation and incardination, it is generally accepted now that...
the vicar capitular (q. v.) has no power to grant perpetual letters of excommunication, nor can he receive a cleric into the diocese in perpetuity, but for a time he may do either in any cases which present themselves during his period of office ("Clement", I: 2: De Sede vacante", n. 77).

In course of time special legislation on this subject has become necessary in various countries. The following is a brief résumé of the same. Where clerics are ordained ad titulum missionis they are bound thereby not only to the diocese, but to the province also, "so that priests thus ordained may, with the consent of both ordinances, be transferred from one diocese into another merely by conferring a fresh title without the necessity of taking a fresh oath". In Scotland a three years trial is recommended before such transfer be made. The Third Plenary Council of Baltimore made obligatory on the bishops of the United States a three years trial (or even five, but no more) for a strange priest, unless the bishops of both dioceses should agree to the immediate reception of the applicant. This is called by the council formal in- cardination. If, after the lapse of this period, the bishop formally requires the applicant, the latter is legally presumed to have accepted him (nos. 63, 66).

This council also reminds all ordinaries of the special rules to be observed in the case of clerics who have taken the "mission oath", and of members of religious orders desirous of joining a diocese (nos. 64, 65; cf. Cong. Prop., 30 Nov., 1866, and 17 April, 1871). To obtain uniformity of action, the council recommends that bishops use an identical printed formula for excommunication and incardination. A decree of the Congregation of the Council (14 Nov., 1903) concerns secular clerics who wish to go to North America or the Philippine Islands. It again calls attention to a circular sent to the American and Italian bishops in 1890, which instructed the latter not to allow their clergy to emigrate to America unless they have an excellent record concerning their previous ministry, are of mature age, are likely to edify by their zeal, piety, and prudence, and are also able to assign a valid and serious reason for leaving home. This circular now applies to all priests who propose to emigrate to America or the Philippines, or even to make prolonged visits to those countries without the consent of the congregation. In case of real and urgent necessity the bishops can only grant permission for absences during six months in such cases, the first permission being the condition of the permission given. The bishops of Brazil have lately adopted the same precautions. In the Third Plenary Council of Baltimore (no. 69) the Fathers approve of the custom of bishops having an abundant supply of priests, lending to more needy bishops some of their priests, but such transfers to be of a temporary nature. The Holy See approved the custom of the American bishops. The councils of Westminster contain a command received from Propagation and imposed upon all bishops in missionary countries and also prefects and vicars Apostolic, that with their institution they require strange clerics and priests to present complimentary letters from their bishops. Those who have them not are in no way to be received. A priest who wishes to leave the diocese to which he is attached must be furnished with a letter of incorporation, i. e. incorporation (commonly called an exeat) from his ordinary, and no bishop can ordain to his diocese a priest who is not possessed of such letter (First Synod of Westminster, no. 19, c. vii.). Further, no bishop shall ordain a cleric born in the diocese of another bishop without a testimonial or diocesian letter from that bishop. This rule should be observed also in the case of clerics who wish to enter the sacred ministry to the Church. For the special rules which govern the sojourn at Rome of ecclesiastics belonging to other dioceses, see the decree of the S. Cong. of the Council, 22 Dec., 1894, and the instruction of Pius X, 6 Aug., 1905.

Besides the aforesaid decree of the Councils of Westminster and Baltimore, and of the Congregations of the Council and Propagation, see BOULX, De Eminentiis Ecclesiasticis (Paris, 1882) dioceses sede vacante (reprint, Paris, 1876); GABARRE, De Sacra Apostolicaani et Ordinis Ordinationibus, e. Sede Vacante; BARIGLIATU, Prefect, Acta Synodicae Generalis Concilii Tridentini (Rome, 1697); TAVERNOR, Law of the Church (St. Louis, 1905), e. V. Incardination.

DAVID DUNFORD.

**Incarnate Word, Sisters of Charity of the.**—This congregation, with simple vows, was founded by Rt. Rev. C. M. Dubuis, Bishop of Galveston. In 1866, this prelate travelled as far as France in search of religious, who would devote themselves to works of mercy in his large diocese. He addressed himself to Mother Angélique, Superiors of the Convent of the Incarnate Word, at Lyons, and requested her to train some worthy subjects for the missions of Texas. Mother Angélique complied with his demand, received into her community two or three postulants, and prepared them in a special manner for their future work; thus was formed the nucleus of the new congregation, which was to be known as the Sisters of Charity of the Incarnate Word. The sisters embarked for Texas soon after, and landed at Galveston in December, 1866. Arrived at their mission, they devoted themselves to the care of the sick. In 1867 and 1868 other bands of zealous sisters, educated and professed in the same convent at Lyons, came to their assistance; their arrival opened for the congregation a new era: the existing works were perfected, and others established. On 31 March, 1869, Bishop C. M. Dubuis sent from Galveston a colony of these sisters to found a convent at San Antonio; in 1870, he erected this new community into an independent cenacle, on the occasion of vesting the first postulants admitted into the San Antonio novitiate. Previous to 1874, the sisters had been solely occupied in caring for the sick, the aged, and orphans, but following the counsel of Rt. Rev. A. D. Pellerin, first Bishop of San Antonio, they then engaged in educational work. The community of San Antonio, with its dependent houses, was organized into a generality in August, 1897, with the sanction of Bishop John A. Forest.

At present, the congregation is governed by a superiororess general and her council composed of six members. The mother-house, novitiate, and normal department are situated in San Antonio, Texas. The congregation is professed and novitiate for women aged twenty-one years. Perpetual profession is preceded by five years of annual vows. The constitutions, based upon the Rule of St. Augustine, were approved by the Holy See in 1905. The congregation, as its name indicates, is especially consecrated to the Incarnate Word. The sisters foster the pious and constant ambition to learn and to teach how to know, love, and serve more and more God made Man; they endeavour to reproduce in their daily conduct His two favourite virtues, charity and obedience. The sisters also cultivate a particular devotion to the Blessed Sacrament and to Mary Immaculate. The congregation has developed considerably since its little colony in San Antonio. From a small colony of three sisters in 1869, it has grown to a flourishing community of five hundred and forty-two members, and has under its direction five colleges, thirteen academies, twenty-eight schools, four orphanages, nine hospitals, and two homes for the aged. The many strangers, who, during the past fifteen years, have passed through the states of Texas, Missouri, and Oklahoma, and the Republic of Mexico.

JAB. P. CANNING.
Incarnate Word and Blessed Sacrament, ORDER OF THE, founded in the early part of the seventeenth century by Jeanne Chézard de Matel. The illustrious foundress was born in 1596, at Roanne, France, and was canonized in 1670 at Lyon, France. At the time of the French Revolution the religious were driven out of their monasteries, and destruction threatened the order, but the Word Incarnate watched over its preservation, and, after the restoration of peace, the order was re-established. Azerables, Fourth century, is the privilege of use of the word: the resuscitated order. It thence again spread its branches over many parts of France. In 1852, Bishop Odin, first Bishop of Texas, visited France to obtain religious for his far-off mission. A little band, headed by the noble and self-sacrificing Mother St. Claire, left Lyons to transplant to the shores of the Mississippi the Incarnate Word. At Brownsville, Texas, then a mere fort, was founded the first house in America. Many hardships had to be encountered, and many difficulties faced, but the wise and prudent management of the superiors, and the devotion and self-sacrifice of the Sisters, enabled it to grow rapidly. In 1866 an establishment was founded at Victoria by religious from Brownsville, Texas, Mother St. Claire being again chosen superior. The same wise administration caused this house to prosper, and in a few years it had sent out subjects to begin foundations at Corpus Christi, Houston, and Halletsville. These, in turn, made foundations in many places in Mexico. The community of Victoria consists at present of forty-four members. Mother M. Antoinette, who was then a novice of the house of Lyons, and was the first to join the community after its commencement here, is the present superior. The institute is in a very flourishing condition. A new, excellently-equipped academy has been built at Victoria, where a high standard of education is maintained by an efficient staff.

Mother Antoinette.

Incarnation, the mystery and the dogma of the Word made Flesh. In this technical sense the word Incarnation was adopted, during the twelfth century, by the Norman-French, which in turn had taken the word over from the Latin incarnatio (see Oxford Dictionary, s. v.). The Latin Fathers, from the fourth century, make veneration of use of the word; so Sainte Jerome, Ambrose, Hilary, etc. The Latin incarnatio (in: caro, flesh) corresponds to the Greek σάρκωσις, or ἐνσαρκίζω, which words depend on John (1:14) καὶ ἀπέστειλεν τὸ φανερὸν καὶ ἐν σάρκι, “And the Word was made flesh”. These two terms were in use by the four Latin Fathers of St. Thomas’ time, i.e., according to Harnack, a. p. 181-189 (cf. Eiren., “Adv. Har.” III, 19, n. i.; Migne, VII, 939). The verb ἐπεσαρκίζεται, to be made flesh, occurs in the creed of the Council of Nicaea (cf. Deminger, “Ehrethidion”, n. 80). In the language of Holy Writ, flesh means, by synecdoche, human nature or man (cf. Luke, iii, 6; Rom., iii, 20). Suarez deems the choice of the word incarnation to have been very apt. Man is called flesh to emphasize the weaker part of his nature. When the Word is said to have been incarnate, to have been made Flesh, the Divine goodness is better expressed whereby He “emptied Himself . . . and was found in outward being (ἐξορθοκοίτω) like man” (Phil. ii, 7); He took upon Himself not only the nature of man, a nature capable of suffering and sickness and death, He became like a man in all save only sin (cf. Suarez, “De Incarnatione”, Pref. n. 5).

The Fathers now and then use the word ἐνσαρκισμός, the act of becoming man, to which correspond the terms humanatio, used by some Latin Fathers, and menschwerdung, current in German. The mystery of the Incarnation is entitled by other terms: ἐνσαρκίζομαι, the act of taking on a nature (Heb., ii, 16): ἐνσαρκίσω, appearance (II Tim., i, 10); φανερωμαι, manifestation in the flesh (I Tim., i, 16); εὐανεκκοσμημαι, the fitting of a body, what some Latin Fathers call incorporeo (Heb., x, 5); ἐνσαρκίσω, the act of giving up the divinity of the Spirit (Phil., i, 7). In this article, we shall treat of the fact, nature and effects of the Incarnation.

I. The Fact of the Incarnation implies three facts: (1) The Divine Person of Jesus Christ; (2) The Human Nature of Jesus Christ; (3) The Hypostatic Union of the Human with the Divine Nature in the Divine Person of Jesus Christ.

(1) The Divine Person of Jesus Christ.—We presuppose the historicity of Jesus Christ,—i.e. that He was a real person of history (cf. Jesus Christ); the Messiahship of Jesus; the historical worth and authenticity of the Gospels; the Divinity of Jesus Christ established thereby; the establishment of an infallible and never failing teaching body to have and to keep the deposit of revealed truth entrusted to it by the Divine ambassador, Jesus Christ; the handing down of all this deposit by tradition and of part of it by Holy Writ; the common inspiration of the Sacred Scripture; all these questions will be found treated in their proper places.

Moreover, we assume that the Divine nature and Divine personality are one and inseparable (see TRINITY). The aim of this article is to prove that the historical person, Jesus Christ, is really and truly God, i.e. that He has the nature and is the Son of God.

The Divinity of Jesus Christ is established by the Old Testament, by the New Testament, and by tradition.

A. The Old Testament proofs of the Divinity of Jesus Christ presuppose its testimony to Him as the Christ, the Messiah (see MESSIAH). Assuming then, that Jesus is the Christ, the Messiah promised in the Old Testament, from the terms of the promise it is certain that the One promised is God, is a Divine Person in the strictest sense of the word, the second Person of the Holy Trinity, the Son of the Father, One in nature with the Father and the Holy Spirit, and the argument is cumulative. The texts from the Old Testament have weight by themselves; taken together with their fulfilment in the New Testament, and with the testimony of Jesus and His apostles and His Church, they make up a cumulative argument in favour of the Divinity of Jesus Christ, and the argument is cumulative. The Old Testament proofs we draw from the Psalms, the Sapiential Books and the Prophets.

(a) Testimony of the Psalms.—Ps. ii, 7. “The Lord hath said to me: Thou art my son, this day have I begotten thee. Here Jahweh, i.e., God of Israel, speaks to the Messiah, and it is the Messiah himself who testifies the text (Heb., i, 5) while proving the Divinity of Jesus from the Psalms. The objection is raised that St. Paul is here not interpreting but only accommodating Scripture. He applies the very same words of Ps. ii, 7 to the priesthood (Heb., v, 5) and to the resurrection (Acts, xiii, 33) of Jesus; but only in a figurative sense did the Father begat the Messiah in the priesthood and resurrection of Jesus; hence only in a figurative sense did He beget Jesus as His Son. We answer that St. Paul speaks figuratively and accommodates Scripture in the matter of the priesthood and resurrection but not in the matter of the eternal generation of Jesus. The objection of St. Paul in this chapter shows there is a question of real sonship and real Divinity of Jesus. In the same verse, St. Paul applies to the Christ the words of Jahweh to David, the type of Christ: “I will be to him a father, and he shall
be to me a son". (II Kings, vii, 14.) In the following verse, Christ is spoken of as the first-born of the Father, and as the object of the adoration of the angels; but only God is adored: "Thy throne, O God, is forever and ever. . . Thy God, O God, hath sworn. . ." (Ps. cxv, 6, 7). St. Paul (Rom. viii, 29) paraphrases this beautiful passage and refers it to Jesus Christ (Heb., i, 3). It is clear, then, from the text-study of the books themselves, from the interpretation of these books by St. Paul, and especially, from the admitted interpretation of the Fathers and the Syriac use of them, that the personal and wisdom of the Sapiential Books is the uncreated Wisdom, the Incarnate Logos of St. John, the Word historically united with human nature, Jesus Christ, the Son of the Eternal Father. The Sapiential Books prove that Jesus was really and truly God.

(c) Testimony of the Prophetic Books.—The prophets clearly state that the Messiah is God. Isaiah says: "God Himself will come and will save you" (Isa., xxi, 4); "Make ready the way of Jehovah" (Isa., 3); "Lo Adonai Jehovah will come with strength" (Isa., x, 10). That Jehovah here is Jesus Christ is clear from the use of the passage by St. Mark (i, 15). The prophet of Isaiah speaks of the Christ as speaking a new Divine name. "His name will be called Emmanuel" (Isa., vii, 14). This new Divine name St. Matthew refers to as fulfilled in Jesus, and interprets to mean the Divinity of Jesus. "They shall call his name Emmanuel, which being interpreted, is, God with us." God is the Name Jesus gives Himself and calls the Messiah God: "A child is born to us. . . his name shall be called Wonderful, Counselor, God the Strong One, the Father of the world to come, the Prince of Peace." Catholics explain יְהוָֹה (Yahweh) as YHWH; the very same child is called God the Strong One (ix, 6) and Emmanuel (vii, 14); the conception of the child is prophesied in the uncreated Word; the birth of the very same child is prophesied in the former verse. The name Emmanuel (God with us) explains the name that we translate "God the Strong One." It is critical and prejudiced on the part of the rationalists to go outside of Isaiah and to seek in Ezoechiel the meaning "mightiest among heroes" for a word that everywhere else in Isaiah is the name of "God the Strong One" (see Is., x, 21). Theodotion translates literally μεγάλος ἁρματος; the Septuagint has "messenger". Our interpretation is that commonly received by Catholics and by Protestants of the text of Delitzsch ("Messianic Prophecies", p. 45). Isaiah also calls Jehovah "Jehovah of Jehovah" (iv, 2), i.e. that which has sprung from Jehovah as the same in nature with Him. The Messias is "God our King" (Is., lii, 7), "the Saviour sent by our God" (Is., lii, 10, where the word for Saviour is the abstract form of the word for Jesus); "Jehovah the God of Israel" (Is., lii, 12). "He that hath made thee, Jehovah of the hosts His name" (Is., lv, 5). The other prophets are as clear as Isaiah, though not so detailed, in their foretelling of the Godship of the Messias. To Jeremias, He is "Jehovah our Just One" (xxiii, 6; also xxxiii, 10). Mischeus speaks of the two-fold coming of the Christ, His birth in time at Bethlehem and His procession in eternity from the Father (v, 2). The Messianic value of this text is proved by its interpretation in Matthew (ii, 6). Zacharias makes Jehovah to speak of the Messias as "my Companion"; but a companion is on an equal footing with Jehovah (xiii, 7). Malachias says: "Behold I send my angel, and he shall go before my face, and presently the Lord, whom you seek, and the angel of the testament, whom you desire, shall come to his temple" (iii, 1). The messenger spoken of here is certainly St. John the Baptist. The words of Malachias are interpreted by the Precurser of Our Lord Himself (Matt., xi, 10). But the Baptist prepared the way before the face of Jesus Christ. Hence...
the Christ was the spokesman of the words of Malachi. "But the words of Malachi are uttered by Jehovah the great God of Israel. Hence the Christ or Messiah and Jehovah are one and the same and Divine Person. The name of Messiah is rendered "Son of God" by the fact that not only is the speaker, Jehovah the God of hosts, here one and the same with the Messias before Whose face the Baptist went: but the prophecy of the Lord's coming to the Temple applies to the Messias a name that is ever reserved for Jehovah alone. Therefore the name of Messiah is used as another time (Ex. xiii. 17; xxxiv. 23; Is. i, 24; iii, 1; x, 16 and 33; xix, 4) outside of Malachi, and is clear in its reference to the God of Israel. The last of the prophets of Israel gives clear testimony that the Messias is the very God of Israel Himself. This argument from the prophets in favour of the Divinity of the Messias is most convincing if received in the light of Christian revelation, in which light we present it. The cumulative force of the argument is well worked out in "Christ in Type and Prophecy", by Maas.

B. New Testament Proofs.—We shall give the witness of the Four Evangelists and of St. Paul. The argument from the New Testament is overwhelming in its effectiveness, once the inspiration of the New Testament and the Divine ambassadorship of Jesus are proved (see inspiration; Christianity). The process of the Catholic apologetic and dogmatic building up is logical and harmonious. The Catholic system of the Christian church unifies the teaching body to which Christ gave His deposit of revealed truth, to have and to keep and to hand down that deposit without error or failure. This teaching body gives us the Bible; and gives us the dogma of the Divinity of Christ in the unwritten and the written Word of God. In tradition and Scripture. When contrasted with the Protestant position upon "the Bible, the whole Bible and nothing but the Bible"—no, not even anything to tell us what is the Bible and what is not the Bible—the Catholic position upon the Christ-established, never-failing, never-erring teaching body is impregnable. The weakness of the Protestant position is evidenced in the matter of this very question of the Divinity of Jesus Christ. The Bible is the one and only rule of faith of Unitarians, who deny the Divinity of Jesus; of Modernistic Protestants, who make out His Divinity to be an evolution of His inner consciousness, or of the universe, and so be the Christ of Christ whatever they may. The strength of the Catholic position will be clear to any one who has followed the trend of Modernism outside the Church and the suppression thereof within the pale.

(a) Witness of the Evangelists.—We here assume the Gospels to be authentic, historical documents given to us by the Church as the inspired Word of God. We waive the question of the dependence of Matthew upon the Logia, the origin of Mark from "Q", the literary or other dependence of Luke upon Mark; all these questions are treated in their proper place. It is enough to point out the body of the Gospel apologetic and dogmatic theology. We here argue from the Four Gospels, as from in the inspired Word of God. The witness of the Gospels to the Divinity of Christ is varied in kind.

(a) Jesus is the Divine Messiah.—The Evangelists, as we have seen, refer to the Prophecies of the Divinity of the Messias as fulfilled in Jesus (see Matt., i, 23; ii, 6; Mark, i, 2; Luke, vii, 27).

(b) Jesus is the Son of God.—According to the testimony of the Evangelists, Jesus Himself bore witness to His Divine Sonship. As Divine Ambassador He can not have borne false witness.

The Epistle of St. Paul to the Galatians (James, ii, 12, 24). He that believeth in me, the Son of God, shall never die. For I, the Son of God, am not the Son of a man, but a Son of God. (John, xiv, 19). And he that believeth not the Son shall not see life; but the wrath of God abideth on him. (John, iii, 36, 37). He that believes in me has eternal life. (John, vii, 37). We also believe in Jesus Christ, the Son of God. (John, xiv, 9). For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life. (John, iii, 16). He that believeth on the Son of God has eternal life. (John, xiv, 11). For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life. (John, iii, 16).

The Jewish converts, as well as the disciples of the Lord, were taught that there is a profound mystery in the name of the Son of God, and that He was a Son of God (Mark, xii, 28). The Baptist asked Jesus, "Art thou the Christ?" (John, xi, 27). The disciples asked Jesus, "Art thou the Son of God?" (John, xix, 9). The Lord answered, "Art thou the Son of God?" (John, xix, 9). The Lord said, "Thou art a Son of God" (Mark, xiv, 62). He was not a Son of God, but a Son of God. (John, xiv, 15). He said, "My Father is in heaven." (John, xiv, 28). He was his Father, and He was the Son of God (Mark, xi, 11). He was the Son of God, and He was His Father (John, xiv, 28). He was not His Father, but His Father (Mark, xi, 11). He was His Father, and He was not His Father (John, xiv, 28). He was His Father, and He was not His Father (Mark, xi, 11). He was not His Father, but His Father (John, xiv, 28). He was His Father, and He was not His Father (Mark, xi, 11). He was His Father, and He was not His Father (John, xiv, 28). He was not His Father, but His Father (Mark, xi, 11). He was His Father, and He was not His Father (John, xiv, 28).
of the enslaved Jewish nation. The first time, the great high priest, Caiphas, stood up and demanded: "I adjure thee by the living God, that thou tell us if thou be the Christ the Son of God" (Matt., xxvi, 63). Jesus had before held His peace. Now His mission calls for a reply. "Thou hast said it" (ibid., 64). The confession of Jesus was likely a statement of the question with a tone of affirmation rather than of interrogation. St. Matthew reports that answer in a way that might leave some doubt in our minds, had we not St. Mark's report of the very same answer. According to St. Mark, Jesus replies simply and directly: "Thou art He that art" (Mark, xxviii, 39). St. Mark clearly sees the difficulty of the reply of Jesus. The Jews understood Him to make Himself the equal of God. They probably laughed and jeered at His claim. He went on: "Nevertheless I say to you, hereafter you shall see the Son of man sitting on the right hand of the power of God, and coming in the clouds of heaven" (Matt. xxvi, 64). Caiphas rent his garments and accused Jesus of blasphemy. All joined in condemning Him to death for the blasphemy whereof they accused Him. They clearly understood Him to make claim to be the real Son of God; and He allowed them so to understand and to put it to a test of understanding and rejection of His claim. It were to blind one's self to evident truth to deny the force of this testimony in favour of the thesis that Jesus made claim to be the real Son of God. The second appearance of Jesus before the Sanhedrin was like to the first; a second time He was asked to say clearly: "Art thou then the Son of God?" He made reply: "You say that I am." They understood Him to lay claim to Divinity. "What need we any further testimony? for we ourselves have heard it from his own mouth" (Luke, xxii, 70, 71). This twofold witness of Jesus and the Jews as to a time before the great Sanhedrin, and in that it is the cause of the sentence of death. Before Pilate, the Jews put forward a mere pretext at first. "We have found this man perverting our nation, and forbidding to give tribute to Caesar, and saying that he is Christ the king" (Luke, xxiii, 2). What was the result? Pilate found no cause of death in Him! The Jews seek another pretext. "He stirreth up the people...from Galilee to this place" (ibid., 5). This pretext fails. Pilate refers the case of sedition to Herod. Herod finds the charge of sedition not worth his serious consideration. Over and again the Jews come to the front. Only one pretext over again Pilate finds no cause in Him. At last the Jews give their real cause against Jesus. In that they said He made Himself a king and stirred up sedition and refused tribute to Caesar, they strove to make it out that he violated Roman law. Their real cause of complaint was not that Jesus violated Roman law; but that they branded Him as a violator of the Jewish law. How? "We have a law; and according to that law he ought to die, because he made himself the Son of God" (John, xix, 7). The charge was most serious; it caused even the Roman governor to fear the more. What law was here referred to? There can be no doubt. It is the dread law of Leviticus: "He that blasphemeth the name of the Lord, dying let him die: all the multitude shall stone him, whether he be a native or a stranger. He that blasphemeth the name of the Lord, dying let him die" (Lev., xxiv, 17). By the law, the Jews stood on the point of stoning Jesus; by virtue of this law, they often took Him to task for blasphemy whenever He made Himself the Son of God; by virtue of this same law, they now call for His death. It is simply out of the question that these Jews had any intention of accusing Jesus of the assumption of that adopted sonship of God which every Jew had by blood and every prophet had by special free gift of God's grace.

Fifthly, we may only give a summary of the other uses of the title Son of God in regard to Jesus. The angel Gabriel proclaims to Mary that her son will be "the Son of the most High" (Luke, i, 32); "the Son of God" (Luke, i, 35); St. John speaks of Him as "the only begotten of the Father" (John, i, 14); at the baptism of Jesus Abraham, a name given to Jesus by His Traced as a voice from heaven cries: "This is my beloved Son" (Matt., iii, 17; Mark, i, 11; Luke, iii, 22; Matt., xvii, 5); St. John gives it as his very set purpose, in his Gospel, "that you may believe that Jesus is the Christ, the Son of God" (John, xx, 31). Fifthly, in the divinity of John, Jesus identifies Himself absolutely with the Divine Father. According to John, Jesus says: "he that seeth me seeth the Father" (ibid., xiv, 9). St. Athanasius links this clear testimony to the other witness of John "I and the Father are one" (ibid., x, 30); and thereby establishes the consubstantiality of the Father and the Son. St. John Chrysostom interprets the text in the same sense. A last proof from John is in the words that bring his first Epistle to a close: "We know that the Son of God is come: and He hath given us understanding that we may know the true God; and may be in his true Son. This is the true God, and eternal life" (1 John, v, 11)."
certain passages, the term "Son of God" in its application to Jesus, presumably meant only adopted sonship of God. Against these writers was issued the condemnation of the proposition: "In all the texts of the Gospels, the name Son of God is merely the equivalent of the name Messiah, and does not in any wise mean that Christ is the true and natural Son of God" (see Billot, "De Verbo Incarnato," 1904, p. 529). Conly, a very careful student of the original texts and of the versions of the Bible, declared that, whenever the title Son of God is given to Jesus in the New Testament, this title has the inspired meaning of natural Divine Sonship; Jesus is by this title said to have the same nature and substance as the Heavenly Father (see "Spielegium," II, p. 42).

(7) Jesus is God.—St. John affirms in plain words that the Father and the Son are one in person and essence of the species. The principle was to teach the Divinity of Jesus in the Gospel, Epistles, and Apocalypse that He has left us; He was aroused to action against the first heretics that bruised the Church. "They went out from us, but they were not of us. For if they had been of us, they would no doubt have remained with us" (I John, ii, 19). They did not confess Jesus Christ with that confession which they had obliged to make (I John, iv, 3). John's Gospel gives us the clearest confession of the Divinity of Jesus. We may translate from the original text: "In the beginning was the Word, and the Word was in relation to God and the Word was God" (John 1, 1). It is a doctrine of the first chapter of the Gospel of St. John, and St. John, in the Greek text, the expression πρὸς τὸν Θεόν reminds one forcibly of Aristotle's τὸ πρὸς τὸν θεὸν. This Aristotelian way of expressing relation found its like in the Platonic, Neo-Platonic, and Alexandrian philosophy; and it was the influence of this Alexandrian philosophy in Ephesus and elsewhere that John set himself to combat. It was, then, quite natural that John adopted some of the phraseology of his enemies, and by the expression δὲ λέγεται πρὸς τὸν Θεόν gave forth the mystery of the relation of Father with Son: "the Word stood in relation to the Father" (John 1, 1). The clause δὲ λέγεται means "the Word was God." This meaning is driven home, in the irresistible logic of St. John, by the following verse: "All things were made by him." The Word, then, is the Creator of all things and is true God. Who is the Word? It was made flesh and dwelt among us (verse 14), and of this Word John the Baptist bore witness (verse 15). But certainly it was Jesus, according to John the Evangelist, who dwelt with us in the flesh and to Whom the Baptist bore witness. Of Jesus the Baptist says: "This is he, of whom I said: After me there cometh a man, who is preferred before me: because he was before me" (verse 28). This testimony and other passages of St. John's Gospel are so clear that the modern rationalist takes refuge from their forcefulness in the assertion that the entire Gospel is a mystic contemplation and no fact-narrative at all (see John. Gospel or Saint). Catholics may not hold this view, but they are not unreasonable, and the Holy Office, in the Decree "Lamentabili," condemned the following proposition: "The narratives of John are not properly speaking history but a mystic contemplation of the Gospel; the discourses contained in his Gospel are theological meditations on the mystery of salvation and are destitute of historical truth." (See prop. xvi.)

(b) Witness of St. Paul.—It is not the set purpose of St. Paul, outside of the Epistle to the Hebrews, to prove the Divinity of Jesus Christ. The great Apostle takes this fundamental principle of Christianity for granted. Yet so clear is the witness of Paul to this fact of Christ's Divinity, that the Rationalists and rationalistic Lutherans of Germany to-day strive to get away from one of the foundations of the Christian Apostle by rejecting his form of Christianity as not conformable to the Christian of Jesus. Hence they cry: "Los von Paulus, surück zu Christus!"; that is, "Away from Paul, back to Christ." (see Jülicher, "Paulus und Christus," ed. Mohr, 1909). We assume the historicity of the writings of Paul; to a Catholic, the Divinity of St. Paul is one and the same with the Christian of Christ. (See Paul, Saint.) To the Romans, Paul writes: "God sending his own Son, in the likeness of sinful flesh and of sin" (viii, 3). His Own Son (οὗτος ουράνιος Υἱός) the Father sends, not a Son by adoption. The angels are by adoption the children of God; they participate in the Father's nature by the free gifts He has bestowed upon them. Not so the Own Son of the Father. As we have seen, He is more the offspring of the Father than are the angels. How more? In this that He is adored as the Father is adored. He is one of the species of the Father, as Jesus is the Father's Son. This is Paul's argument in the first chapter of the Epistle to the Hebrews. Therefore, in St. Paul's theology, the Father's Own Son, Whom the angels adore, Who was begotten in the to-day of eternity, Who was sent by the Father, clearly existed before His appearance in the Flesh, and is, in point of fact, the great I am that I am—the Jehovah who spoke to Moses on Horeb. This identification of the Christ with Jehovah would seem to be indicated, when St. Paul speaks of Christ as ὁ ὢτε ἐστὶν καὶ ὢτε ἐνήκος "who is over all things, God blessed for ever" (Rom., ix, 5). This interpretation and punctuation are sanctioned by all the Fathers that have used the text and all the Fathers that came after, who is God over all." Petavius (De Trin., II, 9, n. 2) cites fifteen, among whom are Irenaeus, Tertullian, Cyprian, Athenasius, Gregory of Nyssa, Ambrose, Augustine, and Hilary. The Peschitta has the same translation as we have given. Alford, Trench, Westcott and Hort, and most Protestants are at one with us in this interpretation.

This identification of the Christ with Jehovah is clearer in the First Epistle to the Corinthians. Christ is said to have been Jehovah of the Exodus. "And all drank the same spiritual drink; (and they drank of that spiritual rock that followed them) at whomver believed as Christ," (x, 4). It was Christ Whom some of the Israelites "tented, and (they) perished by the serpents" (x, 10); it was Christ against Whom "some of them murmured, and were destroyed by the destroyer" (x, 11). St. Paul takes over the Septuagint translation of Jehovah as οὐράνιος, and he uses this title distinctive of Jesus. The Colossians are threatened with the deception of philosophy (ii, 8). St. Paul reminds them that they should think according to Christ; "for in him dwelteth the fulness of the Godhead (πλήρωμα τοῦ θεουργοῦ) corporeally" (ii, 9); nor should they go so low as to believe that they are not, the adoration that is due only to Christ (ii, 18, 19). "For in Him were all things created in heaven and on earth, visible and invisible, whether thrones or dominations or principalities or powers; all things were created by Him and for Him" (viii, 6). He is the cause and the end of all things, even of the angels who the Colossians are so ready to believe. His name is given him (i, 16). The cultured Macedonians of Philippi are taught that in the name of Jesus every knee should bow, of those that are in heaven, on earth, and under the earth; and that every tongue should confess that the Lord Jesus Christ is in the glory of God the Father" (ii, 10, 11). This is the very same genuflexion and confession that the Romans are bidden to make to the Lord and
the Jews to Jehovah (see Rom., xiv, 6; Is., xlv, 24). The testimony of St. Paul could be given at much greater length. These texts are only the chief among many others that bear Paul’s witness to the Divinity of Jesus Christ.

C. Witness of Tradition.—The two main sources which draw our information as to tradition, or the unwritten Word of God, are the Fathers of the Church and the general councils. (a) The Fathers are practically unanimous in explicitly teaching the Divinity of Jesus Christ. The testimony of many has been given in our exegesis of the dogmatic texts that prove the Divinity of Christ. It would take overmuch space to cite the Fathers adequately. We shall confine ourselves to those of the Apostolic and apologetic ages. By joining these testimonies to those of the Evangelists and St. Paul, we can see clearly that the Holy Office was right in condemning these propositions of Modernism: “The Divinity of Christ is not proven by the Gospels but is a dogma that the Christian conscience has evolved from the notion of a Messiah. It may be taken for granted that the Christ Whom history shows us is much inferior to the Christ Who is the object of Faith” (sec. xxvii and xxix of the Lamentabili); (a) St. Cyprian of Carthage (May 85–98); Harnack, in his first epistle to the Corinthians, xvi, 2, speaks of “The Lord Jesus Christ, the Saviour of the Might of God” (Funk, “Patres Apostolici,” Tübingen ed., 1901, p. 118), and describes, by quoting Is., iii, 1–12, the humiliation that was foretold and came to pass in the self-imagination of Jesus. As the writings of the Apostolic Fathers are very scanty, and not at all apologetic but rather devotional and exhortative, we should not look in them for that clear and plain defence of the Divinity of Christ which is evidenced in the writings of the apologists and later Fathers. The only witness of them to the Apostolic age (A. d. 110–117, according to Harnack) is almost that of the apologetic age, in whose spirit he seems to have written to the Ephesians. It may well be that at Ephesus the very same heresies were now doing havoc which about ten years before or, according to Harnack’s chronology, at the very same time, St. John had written his Gospel to undo. If this be so, we understand the bold confession of the Divinity of Jesus Christ which this grand confessor of the Faith brings into his greetings, at the beginning of his letter to the Ephesians: “Igiatuo . . . to the Church of Ephesus, the Father and of Jesus Christ Our God (τῷ Θεῷ τοῦ Θεοῦ). He says: “The Physician in One, the Flesh and of the Spirit, begotten and not begotten, who was God in Flesh (ο ο Θεός ὁ Θεός).” Jesus Christ Our Lord (c. vii; Funk, I, 218). “For Our God Jesus Christ was born in the womb by Mary” (c. viii, 2; Funk, I, 226). To the Romans he writes: “For Our God Jesus Christ, abiding in the Father, is manifest even the more” (c. iii, 3; Funk, I, 250). (γ) The witness of the Letter of Barnabas (Sunday, A. D. 70–79; Harnack, a. d. 130): “Lo, again, Jesus is not the Son of God but the Son of Man, made manifest in form in the Flesh. And since men were going to say that the Christ was the Son of David, David himself, fearing and understanding the malice of the wicked, made prophecy: The Lord said to my Lord. . . . Lo, how David calls Him the Lord and not son” (c. xiii; Funk, I, 77). (v) In the apologetic age, Saint Justin Martyr (A. D. 110–165): “I write this bold, heretical letter to define the dogma of the Divinity of Christ in the clearest terms: ‘We believe . . . in one Lord Jesus Christ, the Son of God, the Only-begotten, generated of the Father (γενομένου αυτού τοῦ Θεοῦ)’, that is, of the substance of the Father, God of God, Light of Light, True God of True God, begotten not made, in the same nature in the Father (υἱός τοῦ Θεοῦ) by Whom all things were made” (see Denninger, 54).
The Human Nature of Jesus Christ.—The Gnostics taught that matter was of its very nature evil, somewhat as the present-day Christian Scientists teach that it is an "error of mortal mind"; hence Christ as God could not have had a material body, and His body was only apparent. These heretics, called Gnostics, numbered the Greeks, Marcion, and others. Valentinus and others admitted that Jesus had a body, but a something heavenly and ethereal; hence Jesus was not born of Mary, but His airy body passed through her virgin body. The Apollinarists admitted that Jesus had an ordinary body, but: Him a human soul; thus His nature took the place of the rational mind. Against all these various forms of the heresy that denies Christ is true Man stand countless and clearest testimonies of the written and unwritten Word of God. The title that is characteristic of Jesus in the New Testament is Son of Man; it occurs some eighty times in the Gospels; it was His Own acclaimed title for Himself. The phrase is Aramaic, and would seem to be an idiomatic way of saying "man". The life and death and resurrection of Christ would all be a lie were He not a man, and our Faith would be vain (I Cor., xv., 14). "For there is one God, and one mediator between God and men, the man Christ Jesus" (I Tim., ii., 5). Why, Christ even enumerates the parts of His Body. "See my hands and feet, that it is I myself; handle and see: for a spirit hath not flesh and bones, as you see me to have" (Luke, xxiv., 39). St. Augustine says, in this matter: "If the Body of Christ was a fancy, then Christ erred; and if Christ erred, then He is not the Truth. But Christ is the Truth; hence His Body was not a fancy" (Q.Q. xxiii., q. 14; P. L., XI., 14). In regard to the human soul of Christ, the Scripture is equally clear. Only a human soul could have been sad and troubled. Christ says: "I...was sorrowful even unto death" (John, xxi., 33). "Now is my soul troubled" (John, xii., 27). His obedience to the heavenly Father and to Mary and Joseph supposes a human soul (John, iv., 34; vi., 38; Luke, xxi., 42). Finally, Jesus was really born of Mary (Matt., i., 18), made of a woman (Gal., iv., 4), after the angel had promised that He should be conceived of Mary (Luke, i., 31); this woman is called the mother of Jesus (Matt., i., 18; ii., 11; Luke, i., 43; John, ii., 3); Christ is said to be really the seed of Abraham (Gal., iii., 16), the son of David (Matt., i., 1), made of the seed of David according to the flesh (Rom., x., 13); He is the harbinger of the New David (Acts, ii., 30). So clear is the testimony of Scripture to the perfect human nature of Jesus Christ, that the Fathers held it as a general principle that whatsoever the Word had not assumed was not healed, i.e., did not receive the effects of the Incarnation. The Hypostatic Union of the Divine Nature and the Human Nature of Jesus in the Divine Person of Jesus Christ.—Here we consider this union as a fact; the nature of the union will be later taken up. Now it is our purpose to prove that the Divine Nature was really and truly united with the human nature of Jesus, i.e., that one and the same Person, Jesus Christ, was God and Man. We speak here of no moral union, no union in a figurative sense of the word; but a union that is physical, a union of two substances or natures so as to make One Person, a union which means that God is Man and Man is God in the Person of Jesus Christ. The Witness of Holy Writ.—St. John says: "The Word was made flesh" (i., 14), that is, He Who was God in the Beginning (i., 2), and by Whom all things were created (i., 3), became Man. According to the testimony of St. Paul, the very same Person, Jesus Christ, "being in the form of God [στῇ φυσιν τοῦ Θεοῦ]...by taking the form of a servant [και εμφανίσθη υἱός οντων]" (Phil., ii., 6, 7). It is always one and the same Person, Jesus Christ, Who is said to be God and Man, or is given predicates that denote Divine and human nature. The author of life (God) is said to have been killed by the Jews (Acts, iii., 15); but He could not have been killed were He not Man. B. Witness of Tradition.—The early forms of the creed will make profession of faith, not in one Jesus Who is the Son of God and in another Jesus Who is Man and was crucified, but "in one Lord Jesus Christ, the Only-begotten Son of God, Who became Man for us and was crucified". The forms vary, but the substance of each creed invariably attributes to one and the same Jesus Christ the predicates of the Godhead and of man (see Denzinger, "Enechiridion"). Franzelin (thesis xvii.) calls special attention to the fact that, long before the heresy of Nestorius, according to Epiphanius (Ancon., i., 123, in P. G., XLI., 234), it was the custom of the Oriental Church to propose to catechumens a creed that was very much more detailed than that proposed to the faithful; and in this creed the catechumens said: "We believe...in one Lord Jesus Christ, the Son of God, begotten of God the Father...that is, of the substance of the Father...in Him Who for us men and for our salvation came down and was made Flesh, that is, the eternal Godhead and the human person united in one Person of the Holy Spirit; Who became Man, that is, took perfect human nature, soul and body and mind and all whatsoever is human save only sin, without the seed of man; not in another man, but unto Himself did He form Flesh into one holy unity [εἰς μίαν άγιαν θεότητα]; not as He breathed and spoke and wrought in the prophets, but He became Man perfectly; for the Word was made Flesh, not in that It underwent a change nor in that It exchanged Its Divinity for humanity, but in that It united Its Flesh unto Its one holy totality and Divinity [εἰς μίαν άγιαν θεότητα της υιου εις την ενωσιν της θεοτητος του ουρανου και της θεοτητος του ουρανου]." One holy totality! Transcends personality, a person being an individual and complete subject of rational acts. This creed of the catechumens gives even the Divinity of the totality, i.e., the fact that the individual Person of Jesus is a Divine and not a human Person. Of this intricate question we shall speak later on.

The witness of tradition to the fact of the union of the two natures in the one Person of Jesus is clear not only from the symbols or creeds in use before the condemnation of Nestorius, but also from the words of the late-Nicene Fathers. We have already given the words of St. Augustine, St. Gregory the Great, St. Clement of Rome, St. Justin the Martyr, in all of which are attributed to the one Person, Jesus Christ, the actions or attributes of God and of Man. Melito, Bishop of Sardis (about 175), says: "Since the same (Christ) was at the same time God and perfect Man, He made His two natures evident to us; His Divine nature by the miracles Which He wrought during the three years after His baptism; His human nature by those thirty years that He first lived, during which the lowness of the Flesh covered over and hid away all signs of the Divinity, though He was at one and the same time true and everlasting God" (Frag. viii in P. G., V, 1221). St. Irenaeus, toward the close of the second century, argues: "If one person suffered and another person remained incapable of suffering: if one person was born and another person came down upon him that was born and thereafter left him, not one person but two are proven... whereas the One knew Who One was suffered!" (Adv. Haer., III, xvi, n, 9, in P. G., VII, 928). tertullian bears firm witness: "Was not God really crucified? Did He not really die as He really was crucified?" (De Carne Christi), c. v, in P. L., II, 760.

The Nature of the Incarnation.—We have treated the fact of the Incarnation, that is, the fact of the Divine nature of Jesus, the fact of the human
nature of Jesus, the fact of the union of these two natures in Jesus. We now take up the crucial question of the nature of this fact, the manner of this tremendous miracle, the way of uniting the Divine with the human nature in one and the same Person; as Athanasius conceived the fact of this union. No other heresy rent and tore the body of the Church to any very great extent in the matter of this fact after the condemnation of Arius in the Council of Nicaea (325). Soon a new heresy arose in the explanation of the fact of the union of the two natures in Christ. Nicaea had, indeed, defined the union of the two natures in Christ; it had not explicitly defined the nature of that fact; it had not said whether that union was moral or physical. The Council had implicitly defined the union of the two natures in one hypostasis, a union called physical in opposition to the mere juxtaposition or joining of the two natures called a moral union. Nicaea had professed a belief in "One Lord Jesus Christ...true God of true God...Who took flesh, became Man and suffered". This belief was in one Person Who was at the same time God and Man, that is, had at the same time Divine and human nature. Such a teaching is an implicit definition of all that followed later on denied by Nestorius. We shall find the great Athanasius, for fifty years the determined foe of the heresiarchs, interpreting Nicaea's decree in just this sense; and Athanasius must have known the sense meant by Nicaea, in which he was the antagonist of the heresiarchs.

(1) In spite of the efforts of Athanasius, Nestorius, who had been elected Patriarch of Constantinople (428), found a loophole to avoid the definition of Nicaea. Nestorius (q. v.) called the union of the two natures a mysterious and an inseparable joining (συνέκτρωσις), but would admit no unity (συμβίωσις) in the strict sense of the word to be the result of this joining (see "Serm.", ii, n. 4; xii, n. 2, in P. L., XLVIII). The union of the two natures is not physical (φυσικά) but moral, a mere juxtaposition in state of being (συμβίωσις); the Word indwells in Jesus like as God indwells in the just (Loc. cit.); the indwelling of the Word in Jesus is, however, more excellent than the indwelling of God in the just man by grace, for that the indwelling of the Word purports the Redemption of all mankind and the most perfect manifestation of the Divine activity (Serm. vii, n. 24); as a consequence, Mary is the Mother of Christ (Χριστοτότις), not the Mother of God (Θεοτότις). This is a useful term for Oriental literature, the metaphysical refinement of Nestorius was faulty, and led him into a practical denial of the mystery that he had set himself to explain. During the discussion that Nestorius aroused, he strove to explain that his indwelling (συνέκτρωσις) theory was quite enough to keep it within the definition of the Church. He insisted that "the Man Jesus should be co-adoored with the Divine union and almighty God [ἡς τῇ συνεκτρωσθῇ τῷ παντοκράτῳ θεῷ συμμετακομολογεῖται άδιδωτῷ]" (Serm., vii, n. 35); he forcibly denied that Christ was two persons, but proclaimed Him as one person (οὐκέτας άνεξαντίονας) up of two substances, the Person was however only moral, and not at all physical. Despite whatever Nestorius said as a pretext to save himself from the brand of heresy, he continually and explicitly denied the hypostatic union (υἱόντως καθ' άντιστροφήν, κατὰ φύσιν, καθ' οὐσίαν), that union of physical realities and of substances which the Church defends in Jesus. He affirmed a position in authority, dignity, energy, relation, and state of being (συστάσεως καθ' αύλαντιαν, ζύλων, ζωότροπον, ἀνθρώπουν, σχεσιών); and he maintained that the Fathers of Nicaea had nowhere said that God was born of the Virgin Mary (Serm., v, nn. 5 and 6).

In this sense of Nicaea clearly went against the tradition of the Church. Before he had denied the hypostatic union of the two natures in Jesus, that union had been taught by the greatest Fathers of their time. St. Hippolytus (about 230) taught: "the Flesh [ρύγα] apart from the Logos had no hypostasis [σώμα]...Ὁ δὲ ὁ παρείδηθαι οὐσία, was unable to act as principle of rational activity," for that its hypostasis was in the Word (Iren., ii, n. 15, in P. G., X, 232). St. Epiphanius (about 365): "The Logos united body, mind, and soul into one totality and spiritual hypostasis" ("Her." xx, n. 4, in P. G., XLI, 277). "The Logos made the Flesh to subsist in the hypostasis of the Logos [ἡς λόγου καθ' άντιστροφήν ζωότροπον]..." ("Her." xxvii, n. 8, in P. G., XLI, 684). St. Athanasius has said: "No one who says that it is one person who is the Son that suffered, and another person who did not suffer...the Flesh became God's own nature [κατὰ φύσιν], not that it became consubstantial with the Divinity of the Logos as if coeternal therewith, but that it became God's own Flesh by its very nature [κατὰ φύσιν]." In this entire discourse ("Contra Apollinarium", i, 12, in P. G., XXVI, 1113), St. Athanasius directly attacks the specious pretexts of the Arians and the arguments that Nestorius later took up, and defends the union of two physical natures in Christ [κατὰ φύσιν] to the metaphysical position of the joining of the same natures [κατὰ συστάσεις]. St. Cyril of Alexandria (about 415) makes use of this formula often even than the other Fathers; he calls Christ "the Word of the Father united in nature with the Flesh [ὁ λόγος θεοῦ Πατρὸς άνεξαντίονας κατὰ φύσιν ουσίως]" ("De Recta Fide", n. 8, in P. G., XLI, 1210). For other and very numerous citations, see Petavius (III, 4). The Fathers always explain that this physical union of the two natures does not mean the intermingling of the natures, nor any such union as would imply a change in God, but only such union as was necessary to explain the fact that one Divine Person had human nature as His own true nature together with His Divine nature.

B. The Council of Ephesus (431) condemned the heresy of Nestorius, and defined that Mary was mother in the flesh of God's Word made Flesh (can. i.). It Anathematized all who denied that the Word of God the Father was united with the Flesh in one hypostasis (καθ' άντιστροφήν); all who deny that there is only one Christ with Flesh that is His own; all who deny that the same Christ is God at the same time and man (can. ii). In the remaining ten canons drawn up by St. Cyril of Alexandria, the anathema is aimed directly against Nestorius. "If in one person are the substances, after they have been once united, and joins them together merely by a juxtaposition [συνεκτρωσθέν αὐτὰς συνεκτρωσθέν] of honour or of authority or of power and not rather by a union into a physical unity [συμβίωσις καθ' άντιστροφήν], let him be accursed" (can. iii). These twelve canons condemn piecemeal the various subfugues of Nestorius. St. Cyril saw heresy lurking in phrases that seemed innocent enough to the unsuspecting. Even the co-adoration theory is condemned in an attempt to separate the Divine from the human nature in Jesus by giving to each a separate hypostasis (see Demzinga, "Exclusiorum", ed. 1908, nn. 113-26).

(2) The condemnation of the heresy of Nestorius saved for the Church the dogma of the Incarnation, "the great mystery of godliness" (1 Tim., iii, 16), but lost to her a portion of her children, who, though dwindled down to insignificant numbers, still remain with her from her earliest history, as well as in one Person was saved. The battle for the dogma was not yet won. Nestorius had postulated two persons in Jesus Christ. A new heresy soon began. It postulated only one Person in Jesus, and that the Divine Person. It went farther. It went too far. It was the heresy of Monophysite. Its leader of this heresy was Eutyches. His followers were called Monophysites. They varied in their ways of explanation. Some
thought the two natures were intermingled into one. Others are said to have worked out some sort of a conversion of the human into the Divine. All were condemned by the Council of Chalcedon (451). This Fourth General Council of the Church defined that Jesus Christ remained, after the Incarnation, “perfect in both natures” (ibid., pp. 650-651). The two natures were not substance with us according to His humanity . . . one and the same Christ, the Son, the Lord, the Only begotten, to be acknowledged in two natures not intermingled, not changed, not divisible, not separable (ibid., p. 148). The definition of error and definition of the truth, the dogmas of the Incarnation were once again saved to the Church. Once again a large portion of the faithful of the Oriental Church were lost to their mother. Monophysitism resulted in the national Churches of Syria, Egypt, and Armenia. These national Churches are still heretic, although there have in later times been formed Catholic rites called the Catholic Syriac, Coptic, and Armenian rites. The Catholic rites, as the Catholic Chaldaic rite, are less numerous than the heretic rites.

(3) One would suppose that there was no more room for mystery in the explanation of the nature of the Incarnation. There is always room for heresy in the matter of explanation of a mystery, if one does not hear the infallible teaching body to whom and to whom alone Christ entrusted His mysteries to have and to keep and to teach them till the end of time. Three patriarchs of the Oriental Church gave rise, so far as we know, to the new heresy. These three heresiarchs were Sergius, the Patriarch of Constantinople, Cyrus, the Patriarch of Alexandria, and Athanasius, the Patriarch of Antioch. St. Sophronius, the Patriarch of Jerusalem, remained true and delayed his fellow patriarchs to follow Honorious. His successor, in the see of Peter, St. Martin, condemned the error of the three Oriental patriarchs, who admitted the decrees of Nicaea, Ephesus, and Chalcedon; defended the union of two natures in one Divine Person; but denied that this Divine Person had two wills. Their principle was expressed by the words, εν δύoυ αυτοις τοις δύoυς ζωοις, by which they would seem to have meant one will and one activity, i.e. only one principle of action and of suffering in Jesus Christ and that one principle Divine. These heresies were called Monothelites. Their error was condemned by the Sixth General Council (the Third Council of Constantinople, 586). It declared that there were two natural wills and two natural activities, the Divine and the human; and that the human will was not at all contrary to the Divine, but rather perfectly subject thereto (Denzinger, n. 291). The Emperor Constans sent St. Martin into exile in Chersonesus. We have trace of only one body of Monothelites. The Maronites, founded about the monastery of John Maron, were converted from Monothelism in the time of the Crusades and have been true to the Faith ever since. The other Monothelites seem to have been absorbed in Monophysitism, or in the schism of the church later on.

The error of Monothelism is clear from the Scripture as well as from tradition. Christ did acts of adoration (John, iv, 22), humility (Matt., xi, 29), reverence (Heb., v, 7). These acts are those of a human will. The Monothelites denied that there was a human will in Christ. Jesus prayed: “Father, if Thou hast made me this challenge of my will, but thine be done” (Luke, xxi, 42). Here there is question of two wills, the Father's and Christ's. The will of Christ was subject to the will of the Father. "As the Father hath given me commandment, so do I" (John, xiv, 31). He became obedient even unto death. The Divine will in Jesus could not have been subject to the will of the Father, with which will it was really identified.

(4) Thus far we have that which is of Faith in this matter of the nature of the Incarnation. The human and Divine natures are united in one Divine Person so as to remain that exactly which they are, namely, Divine and human natures with distinct and perfect activities of their own. Theologians go farther in their attempts to give a complete explanation of the Incarnation, so as, at least, to show that there is therein no contradiction, nothing that right reason may not safely adhere to. This union of the two natures in one Person has been for centuries called a hypostatic union, that is, a union in the Divine Hypostasis and hypostasis. What is an hypostasis? The definition of Boethius is classic: substantia cum ultimo complemento (III, Q. ii, a. 3, ad 2um), a substance in its entirety. Hypostasis superadds to the notion of rational substance this idea of entirety; nor does the idea of rational nature include this notion of entirety. Human nature is the principle of human activities; but the human hypostasis of a human person, if he exercises these activities. The Schoolmen discus the question whether the hypostasis has anything more of reality than human nature. To understand the discussion, one must needs be versed in scholastic philosophy. Be the case as it may in the matter of human nature that is not united with the Divine, the human nature that is hypostatically united with the Divine, that is, the human nature that the Divine Hypostasis or Person assumes to itself, has certainly more of reality united to it than the human nature of Christ would have were it not hypostatically united to the Word. The Divine Logos identified with Divine nature (Hypostasis of the Word, or Word, or Logos) appropriates to itself human nature, and takes in every respect the place of a human person. In this way, the human nature of Christ, though not a human person, loses nothing of the perfection of the perfect man; for the Divine Person supplies the place of the human.

It is to be remembered that, when the Word took Flesh, there was no change in the Word; all the change was in the Flesh. At the moment of conception, in the womb of the Blessed Mother, through the forcefulness of God's Spirit, not in the mind of the Word, but a human mind of Christ created but the Word assumed the man that was conceived. When God created the world, the world was changed, that is, it passed from the state of nonentity to the state of existence; and there was no change in the Logos or Creative Word of God the Father. Now was there change in the Logos when it began to terminate the human nature. A new relation ensued, to be sure; but this new relation implied in the Logos no new reality, no real change; all new reality, all real change, was in the human nature. Anyone who wishes to go into this very intricate question of the manner of the Hypostatic Union of the two natures in the one Divine Personality may with great profit read St. Thomas (III, q. iv, a. 2) Scutum (in III, Dist. i); (De Incarnatione, Disp. II, sect. 3); Gregory of Valentina (in III, D. i, q. 4). Any modern text book on theology will give various opinions in regard to the way of the union of the Person assuming the human nature.

III. EFFECTS OF THE INCARNATION.—(1) On Christ Himself.—A. On the Body of Christ.—Did union with the Divine nature do away with all bodily imperfections? The Monophysites were split up into two parties by this question. Catholics hold that, before the Resurrection, the Body of the Christ was subject to all the bodily weaknesses to which human nature is universally subject; such are hunger,
thirst, pain, death. Christ hungered (Matt. iv, 2), thirsted (John xix, 28), was fatigued (John iv, 6), suffered pain and death. "We have not a high priest, who cannot have compassion on our infirmities: but one tempted in all things like as we are, without sin" (Heb., iv, 15). "For in that, wherein he himself hath suffered and been tempted, he is able to succour them also that are tempted" (Heb., ii, 18). All those weaknesses were not miraculously but about by Jesus; they were the natural results of the human nature He assumed. To be sure, they might have been impeded and were freely willed by Christ. They were part of the free oblation that began with the moment of the Incarnation. "Wherefore when he came into the world, he saith, Sacrifice and offering thou wouldest not; but a body thou hast fitted to me" (Heb., x, 5). The Fathers deny that Christ assumed sickness. There is no mention in Scripture of any sickness of Jesus. Sickness is not a weakness that is a necessary belonging of human nature. It is true that pretty much all mankind suffers sickness. It is not true that any specific sickness is suffered by all mankind. Not all men must needs have measles. No one definite sickness universally belongs to human nature; hence no one definite sickness was assumed by Christ. St. Athanasius gives the reason that it was necessary to assume such sickness as He would have endured Himself not healed (P. G., XX, 133). Weaknesses due to old age are common to mankind. Had Christ lived to an old age, He would have suffered such weaknesses just as He suffered the weaknesses that are common to manliness. Death from old age would have come to Jesus, had He not been violently put to death (see St. Augustine, "De Peccat.", II, 29; P. L., XLIV, 180). The reasonableness of these bodily imperfections in Christ is clear from the fact that He assumed human nature so as to satisfy for that nature’s sin. Now, to satisfy for the sin of another is to accept the punishment for sin which that other and not He would have to bear, if He had not been made man. Hence Christ should take upon himself all those penances of the sin of Adam that are common to man and becoming, or at least not unbecoming, to the Hypostatic Union. (See St. Thomas, III, Q. xiv, for other reasons.) As Christ did not take sickness upon Himself, so other things, such as death, which are common to mankind, were not His. St. Clement of Alexandria (III Pedagogus, e. 1), Tertullian (De Carne Christi, c. ix), and a few others taught that Christ was deformed. They misinterpreted the words of Isaiah: "There is no beauty in him, nor comeliness of form; and we shall see him no more. He was despised and rejected of men; a man of sorrows, and acquainted with grief. And we hid, as it were, our faces from him; he was despised, and we esteemed him not. Surely he hath borne our griefs, and carried our sorrows: yet we did esteem him stricken, smitten of God, and afflicted" (Is., 53, 1-3). The words refer only to the suffering Christ. Theologians now are unanimous in the view that Christ was noble in bearing and beautiful in form, such as a perfect man should be; for Christ was, by virtue of His incarnation, a perfect man (see Stentrup, "Christologia", theses ix, lxii). B. On the Hypostatic Union. (a) In the Will. —(a) Sinlessness.—The effect of the Incarnation on the human will of Christ was to leave it free in all things save only sin. It was absolutely impossible that any stain of sin should soil the soul of Christ. Neither sinful act of the will nor sinful habit of the soul were in keeping with the Hypostatic Union. The fact that Christ never sinned is an article of faith (see Council, Ephes., can. x, in Denzinger, 122, wherein the sinlessness of Christ is implicit in the definition that He did not offer Himself for Himself, but for us). This fact of Christ’s sinlessness is evident from the Scriptures. Theologians commonly quote: "Surely he hath borne our griefs, and carried our sorrows" (Is., 53, 4). "Him, who knew no sin, he hath made sin for us" (II Cor., vii, 21). The impossibility of a sinful act by Christ is taught by all theologians, but variously explained. Günther defended an imposibility consequent solely upon the Divine provision that He would not sin (Vorschule, II, 44). This is no impossibility at all. Christ is God. It is absolutely impossible, antecedent to the Divine provision, that God should allow His flesh to sin. If God allowed His flesh to sin, He might sin, that is, He might turn away from Himself; and it is absolutely impossible that God should turn from Himself, be untrue to His Divine attributes. The Scotists teach that this impossibility is sin, antecedent to the Divine provision. All those due to the finite nature, but is like to the impossibility of the beatified to sin and is due to a special Divine Providence (see Scotus, in III, d. xiii, Q. 1). St. Thomas (III, Q. xv, a. 1) and all Thomists, Suarez (d. xxxii, § 2), Vasques (d. ix, c. iii), de Lugo (d. xxvi, § 1, n. 4), and all theologians of the Society of Jesus teach the now almost universally accepted doctrine that the impossibility of a sinful act on the part of Christ was due to the hypostatic union of His human nature with the Divine. (b) Liberty.—The will of Christ remained free after the Incarnation. This is an article of faith. The Scripture is most clear on this point. "When he had tasted, he would not drink" (Matt. xxvii, 34). "I will; be thou made clean" (Matt., viii, 3). The liberty of Christ was such that He merited. "He humbled himself, becoming obedient unto death, even to the death of the cross. For which cause God also hath exalted him" (Phil., ii, 8). "Who having joy set forth the form of Cornwall (Rom., i, 16). When Christ was free in the matter of death, is the teaching of all Catholics; else He did not merit nor satisfy for us by His death. Just how to reconcile this liberty of Christ with the impossibility of His committing sin has ever been a crux for theologians. Some seventeen explanations are given (see St. Thomas, III, Q. xiv, a. 8, ad 3sum; Molina, "Compendium", d. liii, mem. 4). (b) In the Intellect.—The effects of the Hypostatic Union upon the knowledge of Christ will be treated in a special article (see KNOWLEDGE OF CHRIST). (c) Sanctity of Christ.—The Humanity of Christ was holy by a twofold sanctity: the grace of union and sanctifying grace. The grace of union, i. e. the Substantial and Hypostatic Union of the two natures in the Divine Word, is called the substantial sanctity of Christ. St. Augustine says: "Tunc ergo sanctificavit se in se, hoc est hominem se in Verbo se, quia homo est Christus Sanctus, ac sanctificatur Christus, qui est homo Sanctus in Verbo" (When the Word was made Flesh then, indeed, He sanctified Himself in Himself, that is, Himself as Man in Himself as Word; for that Christ is One Person, both Word and Man, and renders His human nature holy in the holiness of the Word). (In Johan. tract. 108, n. 5, in F. L., XXXY, 191). Before the grace of Hypostatic Union, there was in the soul of Christ, the accidental sanctity called sanctifying grace. This is the teaching of St. Augustine, St. Athanasius, St. John Chrysostom, St. Cyril of Alexandria, and of the Fathers generally. The Word was not full of grace (John, ii, 18) of His fulness we all have received, and grace for grace (John, i, 16). The Word were not full of grace, if any grace were wanting in Him which would be a perfection fitting to His human nature. All theologians teach that sanctifying grace is a perfection fitting the humanity of Christ. The mystical body of Christ is the Church, whereof Christ is the Head (Rom., xii, 4; I Cor., xii, 11; Eph., i, 20; iv, 4; Col. i, 18; ii, 10). It is especially in this sense that we say the grace of the Head flows through the channels of the sacraments of the Church—through the veins of the body of Christ, the mystical, body of Christ is the Church, (of John, ii, 19). At the beginning of His existence, He received the fullness of sanctifying grace and other supernatural gifts (except, faith, hope, and the moral virtue of penance); nor did He ever increase in these gifts or this sanctifying grace. For so to increase would be to become more pleasing to the Divine Majesty: and this was impossible in Christ. Hence St. Luke mentions (li, 52).
that Christ showed more and more day after day the effects of grace in His outward bearing.

The human likes and dislikes. — The Hypostatic Union did not deprive the Human Soul of Christ of its human likes and dislikes. The affections of a man, the motions of a man were His in so far as they were becoming to the grace of union, in so far as they were not out of order. St. Augustine well argues: "Human affections were not out of place in Him in whom there was the holy body and a holy soul" (De Civ. Dei, XIV, ix, 3). We find that he was subject to anger against the blindness of heart of sinners (Mark, iii, 5); to fear (Mark, xiv, 33); to sadness (Matt., xxvi, 37); to the sensible affections of hope, of desire, and of joy. These likes and dislikes were not excluded from the whole of Christ. The fomes peccati, the kindling-wood of sin—that is, the likes and dislikes that are not under full and absolute control of right reason and strong will-power—could not, as a matter of course, have been in Christ. He could not have been tempted by such likes and dislikes to sin. To have taken upon Himself this penalty of sin would not have been in keeping with the absolute and substantial holiness which is implied by the grace of union in the Logos.

C. On the God-Man (Deus-Homo, Θεόν-Πάρθενον). —
One of the most important effects of the union of the Divine nature and human nature in One Person is a mutual influence between the Divine and human nature in it, and the complete identity between God and man, the Communicatio Idiomatum. The God-Man is One Person, and to Him in the concrete may be applied the predicates that refer to the Divinity as well as those that refer to the Humanity of Christ. We may say God is man, was born, died, was buried. These predicates refer to the Person Whose nature is human, as well as Divine; to the Person Who is man, as well as God. We do not mean to say that God, as God, was born; but God, Who is man, was born. We may not predicate the abstract Divinity of the abstract humanity, nor the abstract humanity of the abstract concrete man, nor vice versa; nor the concrete God of the abstract humanity, nor vice versa. We predicate the concrete of the concrete: Jesus is God; Jesus is man; the God-Man was sad; the Man-God was killed. Some ways of speaking should not be used, not that they may not be rightly expected, but they may easily be misunderstood in an heretical sense (see Communicatio Idiomatum).

(2) The Adoration of the Humanity of Christ. — The human nature of Christ, united hypostatically with the Divine nature, is adored with the same worship as the Divine nature (see adoration). We adore the Father, we adore Christ, We adore the Holy Trinity. The Word, the Word God is God. The human nature of Christ is not at all the reason of our adoration of Him; that reason is only the Divine nature. The entire term of our adoration is the Incarnate Word; the motive of the adoration is the Divinity of the Incarnate Word. The partial term of our adoration may be the human nature of Christ; that human nature is adored with the cult called litria. But the cult that is due to a person is due in like manner to the whole nature of that Person and to all its parts. Hence, since the human nature is the real and true nature of Christ, that human nature and all its parts are the object of the cult called litria, i.e., adoration. We shall not here enter into the question of the adoration of the Sacred Heart of Jesus (see H. I. X. or Jesus, Devotion to the). (For the Adoration of the Cross, Cross and Crucifix, The, subtitle II.)

(3) Other Effects of the Incarnation, such as affected the Blessed Mother and us, will be found treated under the respective special subjects. (See Grace; Justifieation; Satisfaction; Immaculate Conception; Mary, the Blessed Virgin.)

Members of the Church: St. Isidore, Adversus Hæret.; St. Athanasius, De Incarnatione Verbi; St. Ambrose, De Incarnatione; St. Gregory of Nyssa, Antichristi Incarnatus; St. Isidore, De Apollinarismo et Athopulum contra Apollinarium; the writings of St. Gregory Thaumaturgus, St. Cyril of Alexandria, and others who attacked the Arians, Nestorians, Monophysites, and Monothelites.

Scholastics: St. Thomas, Summa, III, Q. i-x; St. Bonaventura, Sermon, IV; Idem, in III Sent, Bellarmine, De Christo Cepite Fidei; Beringer, De Incarnatione; de Lugo, De Incarnatione, III, P. Petavius, De inc. Verbe; Theologia Dogmatica (Rome, 1851); Stentrup, Christologia, II (Innsbruck, 1882); Hurter, Theologia Dogmatica, II (Innsbruck, 1885); Franke, De Verbo Incarnato (Rome, 1894); Fesch, Praelectiones Dogmaticae IV (Freiburg, 1800); Wimber and Scannell, Manual of Catholic Theology, II (New York, 1896); Gourdin, De Verbo (Louvain, 1874); Tanqueray, Dogmata Theologia Dogmatica (New York, 1895).

Protestants: Gore, The Incarnation of the Son of God (New York, 1891); Bridgman, Messianic Prophecy (New York, 1896); Delitzsch, Messianic Prophecy (New York, 1897); Liddon, On the Divinity of Our Lord and Saviour Jesus Christ (London, 1880).

Incense. See Peru.

Incense (Lat. thymos, Gr. ψυλόν), an aromatic substance which is obtained from certain resinous trees and largely employed for purposes of religious worship. The word is also used to signify the smoke or perfume arising from incense when burned.

In the olden time. — In very ancient times, furnishing for two trees, viz., the Boswellia sacra of Arabia Felix, and the Boswellia papyrifera of India, both of which belong to the Terebinthian family. Mention is made of it in Num., vii, 14; Deut., xxxiii, 10, etc. It was procured from the bark much as gum is obtained at present. To enhance the fragrance and produce a thicker smoke various foreign elements were added (cf. Josephus, "Bella Jud." V, 5). These ingredients generally numbered four, but sometimes as many as thirteen, and the task of blending them in due proportion was assigned under the Old-Law ordinances to particular families (Cant., III, 6).

Use. — The use of incense was very common. It was employed for profane purposes as an antidote to the lassitude caused by very great heat (cf. Lane, "Manners and Customs of Modern Egyptians," III, 8) as perfumes are now used. Mention of its introduction into the Church is made by classical writers (cf. Ovid, "Metamorph." VI, 14, Virgil, "Æneid," I, 146). Herodotus testifies to its use among the Assyrians and Babylonians, while on Egyptian monumental tablets kings are represented swinging censers. Into the Jewish ritual it entered very extensively, and in connexion with the eucharistic offerings of oil, fruits, and wine, or the bloody sacrifices (Leviticus, vi, 15). By the command of God Moses built an altar of incense (cf. Ex., xxx), on which the sweetest spices and gums were burned, and to a special branch of the Levitical tribe was entrusted the office of daily renewal (I Par., ix, 29).

Where, exactly, incense was introduced into the religious services of the Church it is not easy to say. During the first four centuries there is no evidence for its use. Still, its common employment in the Temple and references to it in the New Testament (cf. Luke, i, 10; Apoc., viii, 3-5) would suggest an early familiarity with it in Christian worship. The earliest authentic reference to its use in the service of the Church is found in Pseudo-Dionysius ("De Hier. Ecc.,") III, 2). The Liturgies of Sts. James and Mark —which in their present form are not older than the fifth century—refer to its use at the Sacred Mysteries of Ambrose, a contemporary of Augustine. The Roman Ordo of the seventh century mentions that it was used in the procession of the bishop to the altar and on Good Friday (cf. "Ordo Romanus VIII." of St. Amand; for the Ordo in Einsiedeln M.S., cf. Du Bois, "Christian Worship," 481). The pilgrim Ethelwold saw
INCENSE

In the Vigil Office of the Sunday in Jerusalem (cf. Peregretatio, II). Almost all Eastern liturgies bear witness to its use in the celebration of the Mass, particularly at the Offertory (cf. Gogar, "Etchelologium Grecorum," 73; Renaudot, "Coll. liturgiarum orient.," I, 200). In the Roman Church incensation at the Gospel of the Mass appears very early—at the Office of Ambrose that worships the Incarnation in the twelfth century, at the Benedictus and Magnificat of the canonical Hours about the thirteenth century, and, in connexion with the Elevation and Benediction of the Blessed Sacrament, about the fourteenth century. "Ordo Romanus VI" describes the incensation at the Elevation and Benediction of the Missal (Rat. off. Div.) the assisting clergy were incensed. In the present discipline of the Western Church incense is used at solemn Mass, solemn blessings, functions, and processions, choral offices, and absolutions for the dead. On these occasions persons, places, and things such as relics of Christ and the saints, crucifix, altar, book of Gospels, censer, remains, sepulchre, etc. are incensed. When used the incense is generally burned. There are two cases, however, when it is not consumed: (a) the grains put into the Paschal candle and (b) the grains put into the sepulchre of consecrated altars. At Mass incense is generally blessed beforehand.

Symbolism and Manner of Incensing.—Incense, with its sweet-smelling perfume and high-ascenting smoke, is typical of the good Christian's prayer, which, enkindled in the heart by the fire of God's love and exhaling the odour of Christ, rises up a pleasing offering in His sight (cf. Amalarius, "De eccles. officiis" in P. L., CV). Incensing is the act of imparting the odour of incense. The censer (q. v.) is held in the right hand at the height of the breast, and grasped by the chain near the cover; the left hand, holding the top of the chain, is placed on the breast. The censer is raised up in the right hand of the eyes, given an outward motion and slightly ascending towards the object to be incensed, and at once brought back to the starting point. This constitutes a single swing. For a double swing the outward motion should be repeated, the second movement being more pronounced than the first. The swing, and also which of the two things will determine whether the swing is to be single or double, and also whether one swing or more are to be given. The incense-boat is the vessel containing the incense for immediate use. It is so called from its shape. It is generally carried by the thurifer in the diocese. (See Encyclopaedia Biblica (London, 1901), s. v.; Dictionnaire de la Bible (Paris, 1890), s. v.; Martene, De antiqua eccles. stiidibus (Antwerp, 1784), passim; Rock, Histoire du Louvain (London, 1857); O'Loain, Ceremonies de (Dublin, 1891); Van der Steppen, Sacra Liturgia, V (Mebchin, 1902).

P. Morrisroe.

Incense Altar. See Altar (in Scripture).

Incenum (Lat. in, not, and caustus, chance) is sexual intercourse between those who are related by blood or marriage. Its specific malice is contracted by such unlawful commerce between those related within the fourth degree of consanguinity or affinity, as computed by canonists. The guilt is incurred not only by those sinful acts which are, as theologians say, fully consummated acts, but also any incomplete acts. The particular deformity of incest comes not merely from the violation of the virtue of chastity, but also from the offense against the mingled affection and reverence with which parents and, proportionately, other relatives should be regarded. It is certain that this crime is its distinctive deformity from the habitual law of the natural law, where there is question of the first degree in the direct line, for instance, between parents and children. For the other degrees it is probable that recourse must be had to the ecclesiastical law which invalidates marriage within those limits. It is commonly held, with regard to those related by consanguinity or affinity, that with the exception of the first degree in the direct line all forms of incest are, morally speaking, of the same species, and therefore for the integrity of confession there is no necessity to distinguish between them. It must be noted, however, that carnal sins between those who are spiritually or legally related within the bonds of kinship would render their intercourse illicit, as those are separate species of incest. A decree of the Holy Office, 25 June, 1885, declares that in applications for matrimonial dispensations it is no longer necessary to make mention of the circumstance of incestuous relations between the petitioners.

J. Raynaud,

Inchbald, Elizabeth, novelist, dramatist, and actress; b. at Staningfield, near Bury St. Edmunds, 15 Oct., 1753; d. at Kensington, London, 1 Aug., 1821. daughter of John Simpson (d. 1781), a Catholic farmer of some social position. From an early age she wished to be an actress, but an impediment in her speech raised a difficulty. She visited London several times and then suddenly left her home in 1772 and went to town to seek her fortune as an actress. In the same year she married Joseph Inchbald, a Presbyterian and Catholic, whom she had met some months earlier. From that time her career was marked out. She began by playing Cordelia to her husband's Lear and continued to act in a large number of characters until she retired from the stage in 1789. She is said to have won warm praise from her audiences though she was not a great actress. Her husband died in 1779, and in 1782 she had her first play accepted. As a dramatist she produced more than a dozen plays (chiefly to be found in old dramatic collections), of which some, however, were translations or adaptations. None of her dramatic work takes a high rank, though the characters are fairly well drawn, and the dialogue is vivid and witty. Her life during the time following her husband's death, and, indeed, before, was by no means an easy one, but she made good friends, amongst them Mrs. Siddons and John Keble, and her wit, warmth of feeling, and talent for a good place in the house which she greatly enjoyed. In 1791 she produced her first novel, "A Simple Story," which was successful at once. The story is one of much interest and pathos, and is simply and vivaciously told; it is one of the earliest specimens of the English novel of passion and has been very often reprinted (last edition, London, 1866). Her second story, "Nature and Art," is not so good, but it won popularity and is still interesting to the student of the eighteen-century novel. It contains in a mild form some of the revolutionary opinions concerning society which nearly all the young literary people of that time discussed in their work (a handy modern edition of it is that of Mrs. Inchbald, London, 1886). Though at times she grew lax in the practice of her faith, Mrs. Inchbald all her life was a sincere Catholic and at the close of her life turned fervently to the ways of piety. On the advice of Dr. Poynter, vicar Apostolic of the London district, she burnt her memoirs which she had prepared for publication. All her biographers agree as to her beauty and charm, her stainless life, and her generous charities.

Kate M. Warren.

In Oena Domini, a papal Bull, so called from the feast on which it was annually published in Rome, viz. the feast of the Lord's Supper, or Maundy Thursday. The ceremony took place in the loggia of St. Peter's in the presence of the pope, the College of Cardinals, and the Roman Court. The Bull was read first in Latin by an auditor of the Sacred Roman Rota,
and then in Italian by a cardinal-deacon. When the reading was over the pope flung a lighted waxen torch into the piazza beneath. The Bull contained a collection of censures of excommunication against the perpetrators of various offences, abjuration from which was made to, to the pope. The papal or pontifical publication of censures is an old one. The tenth canon of the Council of York (1195) orders all priests to publish censures of excommunication against perjury with bell and lighted candle thrice in the year. The Council of London (1200) commands the yearly publication of excommunication against mendicants, lepers, the blind, thieves, and those guilty of rape. The first list of censures of the "Bulla Comma" appeared in the fourteenth century, and was added to and modified as time went on, until its final revision under Urban VIII in the year 1637, after which it remained practically unchanged till its formal abrogation in the last century. Under Urban V (1363) the list contained seven cases; under Gregory XI (1372) nine; under Martin V (1420) ten; under Julius II (1511) twelve; under Paul III (1536) seventeen; under Gregory XIII (1577) twenty, and under the same pontiff in the year 1583 twenty-one; under Clement VIII and 1610 twenty-five; and 1646 thirty. The number in the final shape given to it by Urban VIII.

The main heads of the offences struck with excommunication in the Bull are as follows: (1) Apostasy, heresy, and schism. (2) Appeals from the pope to a general council. (3) Piracy in the person of the bishop, who is pillaged with wrecked vessels and seizure of flotsam and jetsam. (5) The imposition of new tolls and taxes, or the increase of old ones in cases where such was not allowed by law or by permission of the Holy See. (6) The falsification of Apostolic Briefs and Bulls. (7) The supply of arms, ammunition, war-material to Saracens, Turks, or other enemies of Christendom. (8) The hindering of the exportation of food and other commodities to the seat of the Roman court. (9) Violence done to travellers on their way to and from the Roman court. (10) Violence done to cardinals, legates, nuncios, etc. (12) Violence done to those who were treating matters with the Roman court. (13) Appeals from ecclesiastical to secular courts. (14) The avocation of spiritual causes from ecclesiastical to lay courts. (15) The subjection of ecclesiastics to lay courts. (16) The molestation of ecclesiastical judges. (17) The usurpation of church goods, or the sequestration of church goods without legal authority. (18) The usurpation of spiritual and temporal jurisdiction. (20) The invasion, occupation, or usurpation of any part of the Pontifical States. There was a clause in the older editions of the Bull, ordering all patriarchs, archbishops, and bishops to see to its regular publication in their spheres of jurisdiction, but this was not carried out, as we learn from a letter of Pius V to the King of Naples. The efforts of this pope to bring about its solemn publication in every part of the Church were foiled by the opposition of the reigning powers. Philip II, in the year 1582, expelled the papal nuncio from his kingdom for attempting to publish the Bull. Its publication was forbidden in France and Portugal. Rudolf II (1576-1612) likewise opposed it. In spite of the opposition of princes it was known to the faithful, for through the channels of the papal court, and the promulgation of jubilees, Confessors were often ordered to have a copy of it in their possession; St. Charles Borromeo had a copy of it posted up in every confessional in his diocese. In Rome its solemn publication took place year after year, on Holy Thursday, that is, when it was omitted by Clement XIV and never again resumed.

A widespread and growing opposition to papal prerogatives in the eighteenth century, the works of Febronius and Pereira, favouring the omnipotence of the State, eventually resulted in a general attack on the Bull. A very few of its provisions were rooted in the old medieval relations between Church and State, and could not be effective against the Church, the cause of the oppressed, and by his spiritual power remedy evils, with which temporal rulers were powerless or unwilling to deal. They had outlived their time. The excommunication of Ferdinand, Duke of Parma, by Clement XIII on 30 January, 1768, proved the last appeal to the Bull in the conflict of the Church against the Holy Thursday Bull in almost all the European states. Joseph I of Portugal issued an edict on 2 April, 1768, declaring it treason to print, or sell, or distribute, or make any judicial reference to the Bull. Similar edicts followed in the same year from Ferdinand IV of Naples, the Duke of Parma, the Prince of Monaco, the free states of Genoa and Venice, and Maria Teresa, Empress of Austria, to her subjects in Lombardy. Joseph II followed the lead of his mother, and on 14 April, 1781, he, pope-like, informed his subjects that "the power of absolving from the cases reserved in the 'Bulla Comma', which the pope had hitherto given to the social fabric, has been withdrawn". On 5 May of the same year he ordered the Bull to be struck out of the rituals, and no more use to be made of it. In 1769 appeared Le Brete's well-known attack on the Bull in four volumes, under the title "Pragmatische Geheimnisse der Bullae, des Pflugs, der Breu und ihrer fortherlichen Folgen fuer Staat und Kirche" (Frankfort, 1769). Towards the end of the work he appeals to the humanity, wisdom, and magnanimity of the newly-elected pontiff, Clement XIV, to suppress it. Clement, who already as cardinal had expressed his view as to the necessity of living in peace and harmony with the best parts of Christendom, omitted its publication, but did not formally abrogate it. St. Pius V had inserted a clause in it, which stated that it would continue to have the force of law until the Holy See should substitute another in its place. In the quinquennial faculties delivered to bishops the pope continued to grant power to absolve from its cases. This was done so late as 1855 by Pius IX. For these reasons theologians and canonists commonly held that the main provisions of the Bull were still in force. Nevertheless, there was good ground for supposing that few obnoxious clauses had found their place in the present editions of the Bull, no longer applicable to the Christian community, had ceased to have any binding force. The Bull was formally abrogated by Pius IX through the issue of the new Constitution "Apostolice Sedis" (q. v.), in which the censures against piracy, against appropriating shipwrecked goods, against supplying infidels with war-material, and against the levying of new tolls and taxes find no place. In the preamble to the Constitution the pope remarks that, with altered times and customs, certain ecclesiastical censures no longer fulfilled their original purpose, and had ceased to be useful or opportune.

In the controversies that arose at the time of the Vatican Council about papal infallibility, the Bull "In Coena Domini" was dragged to the front, and Janus said of it that if any Bull bears the stamp of an ex cathedra decision it must surely be this one, which was confirmed again and again by so many popes. Herzog's "Buch der Papiere" (Berlin, 1771), and severalLetters in Kirchenzeuger, s. v. Bulla in Coena Domini; HERZOG, Die Kirchenzeuge der Katholiken und Protestant in Deutschland (Berlin, 1895); HERZBERG, "Catholic Church and Christian State" (London, 1878).
In Comendum.—A phrase used in canon law to designate a certain manner of collating an ecclesiastical benefice. The word *comendum* is the accusative of the Low Latin noun *comenda*, "trust", or "custody", which is derived from the verb *comendare* (to give in trust). The phrase in *comendum* was applied to the provisional nature of the tenure and occupation of an ecclesiastical benefice which was temporarily without an actual occupant. It was thus opposed to the phrase in *titulum* which was applied to the regular and unconditioned collation of benefices. The custom of giving benefices in *comendum* goes back to the first century. Tertullian (c. 160–220) and Ambrose makes mention of a church which he gave in *comendum*, while he was Bishop of Milan: "Comendo tibi, fili, Ecclesiastam que est ad Forum Cornelli... donee ci ordinetur episcopus." (Ep. ii, P. L., XVI, 866–87). The Third Council of Orleans, held in 538, in its eighteenth canon puts commendam under episcopal supervision (Mansi, "Coll. Amplissim. Cone.", IX, 17). Gregory the Great on various occasions gave churches and monasteries in *comendum* to such bishops as had been driven from their sees by the invading barbarians, or whose own churches were too poor to furnish them a decent living. (E.g., Lib. Epist. 43; v. 21, 7; Lib. XIX. LXXVII, 495, 577, 614, 812). In course of time the custom arose of allowing ecclesiastics, and even laymen, to draw the revenues of ecclesiastical benefices, without having any jurisdiction over spiritual affairs. In many cases, also, the one who held a benefice in *comendum* in this manner had the right to engage in the obligations and duties of all benefices. In the Middle Ages such commendam were often given to students, professors, church diplomats, cardinals, and others. (Concerning the abuses of this practice and the right of laymen to act in its place, see *Comendatio Abbot*.) The pope has now reserved to himself the right of giving benefices in *comendum*, but makes use of this right only in cases of cardinals who reside in Rome. At present Cardinal Oreglia holds in *comendum* the Church of Sant' Ambrogio di Porta Ticinese; Cardinal Agliardi, the Church of San Lorenzo in Damaso; Cardinal Vincenzo Vannutelli, the Church of San Silvestro in Capite; Cardinal Cassetta, the Church of San Vito, Modesto e Crescentia, and Cardinal Rampolla is Grand Comendatory Prior of the Knights of Malta.

In the United States.—While in England corporations exist or are created by prescription, royal charter, or Act of Parliament, in the United States they are created by the state legislature, either by special Act or under the provisions of general statutes. Congress may create corporations only as incident to its powers of government, as set forth in the federal constitution, and not in any case, religious corporations. General provisions for the incorporation of religious societies are found, at an early date, in the laws of several of the states (see e.g., N.Y., 1784). Any provisions for the incorporation of the churches of special denominations soon followed (in New York, for the Protestant Episcopal Church in 1813; for the Society of Friends in 1839; for the Catholic Church in 1863). Prior to the Revolution, the Catholic Church was without civil rights in the colonies. Title to its property was held in the name of individuals. The Jesuit estates in Maryland were so held for one hundred and fifty years. With the establishment of the United States, Catholic bodies proceeded after the fashion of their fellow citizens of other denominations, to incorporate. The first was: the Sulpicians at Baltimore, in 1805; the Jesuits at Georgetown, in 1815; some years later the Dominicans, by Act of legislature in Ohio, etc. With the acquiescence of Archbishop Carroll many parishes also incorporated; St. Mary's and Holy Trinity, two Philadelphia congregations, as early as 1758. There was no uniform plan followed in these articles of incorporation, and no sufficient safeguarding of ecclesiastical discipline. In the ensuing years a number of dissatisfying controversies arose between lay trustees on the one hand and the bishop or representatives of the other, chiefly regarding the right of the bishop to designate for the congregation a pastor not of his choice, or (as in the case of the famous Hogan schism in Philadelphia, 1821–2) to exclude a pastor deemed unfit or disqualified. Troubles of this kind led to a Brief dated August 22, 1822, from Pius VII to Archbishop Mundella, in which "the immediate and unlimited right which trustees or the administrators of the temporal properties of the Church assume independently of the diocesan bishops", is condemned. As a further consequence, the fifth decree of the First Provincial Council of Baltimore (1829), orders: "Since lay trustees too often abused the power given them by the civil law, to the great detriment of religion, we greatly desire that in the future no church shall be built or consecrated unless it shall have been assigned, by written instrument to the bishop in whose diocese it is to be built, wherever this can be done." Thus, the present control of the property of Catholic church property in the United States for the ensuing generation, and by 1855 Catholic churches in the United States (except those held by religious orders) were almost wholly in the name of the bishops.

But in the meanwhile, it appears to have been recognized that the holding of such property by the bishop, under the rules of canon law, was fraught with some dangers and inconveniences. In
1855 the New York legislature had passed a law providing that "no interest in property, real or personal, should be conveyable or descendible to any ecclesiastic or his successor in any ecclesiastical office". There was similar legislation in Pennsylvania and Ohio. Such legislation, with the waning of the anti-Catholic spirit which had fostered it, was soon repealed; but in 1863, for the incorporation of Catholic church property, drawn by the eminent lawyer, Charles O'Conor, at the request of Archbishop Hughes, was enacted by the New York legislature. This measure may be regarded as another deviation in the policy of the hierarchy, away from the plan of vesting in one man or in a large number of persons all the rights of property in one man, even though subject to the trusteeship prescribed in the canon law, and a return to some of the features of lay trusteeship, limited and safeguarded however by the rules of ecclesiastical discipline.

Meanwhile such instances as the attempt of European relatives in 1868 to contest the will of Bishop Barga, devising the church property of the Marquette Diocese to his successor, and the Purcell failure in 1879 (involving two hundred pieces of church property and a long period of litigation), were so persuasive that "the Third Plenary Council of Baltimore (1884), in its session of 1881-10, in its session of 1884, and in its session of 1886, as well as in its session of 1888," "the bishops to place all church property under the protection of legal incorporation, where it can be done safely, as in the State of New York; where such incorporation cannot be made it requests the bishop to have himself made a corporation sole and thus hold the property as any other corporation would; and where this cannot be done it permits him to hold the property in fee simple" (Rev. J. M. Farley, now Archbishop Farley, in "The Forum", June, 1894). Justice Strong, formerly of the United States Supreme Court, says: "Almost all, if not all, the questions mooted in the civil law, regard ing to corporations, and applicable to ecclesiastical, discipline, officers or members, have arisen incidentally in controversies respecting church property" (Relation of Civil Law to Church Polity, p. 40).

It is recognized in numerous decisions of American courts (Am. and Eng. Ency. of Law, XXIV, 530), that the "church" and "incorporation" are not identical. The former is the larger term—its objects and purposes are moral and religious, the church corporation is subsidiary, having to do chiefly with the care and control of the temporalities. While for various, and no doubt sufficient reasons, the title to church property continues in the bishop, he does not hold it in the same capacity as has been pointed out in the case of the States, e. g. Ohio, Pennsylvania, the tendency is towards incorporation, either by special acts making the bishop a "corporation sole" or under the terms of general provisions drawn especially to suit the needs and circumstances of the Catholic Church, e. g. the New York law of 1863, or the Michigan law of 1897. In Maryland the Archbishop of Baltimore holds all church property as a corporation sole. This title was obtained from the legislature of Maryland by Archbishop Whitfield; its powers and scope were enlarged in the time of Archbishop Spalding, and again in the time of Archbishop Bayley and also under Cardinal Gibbons. By an act of the Massachusetts legislature (ch. 560; 1897) "the present Roman Catholic Archbishop of the Archdiocese of Boston, and his successors in office, shall be and are made a body politic and corporation sole" to receive, take and hold, by sale, devise or otherwise, any real or personal property of every description for religious, charitable and burial purposes. There are similar Acts for the other dioceses in Massachusetts. In the Chicago Archdiocese all diocesan property is held by "the Catholic Bishop of Chicago" as a corporation sole; he is responsible for all matters pertaining to its administration. This is in accordance with the statute of the State of Illinois. Under the provisions of the California code, the church property in the several Catholic dioceses within the state is held by the bishop or archbishop as a corporation sole. Section 602 of the California code provides: "Whenever the rules, regulations or discipline of any religious denomination, society or church so require, for the temporalities of the church and the property thereof, it shall be lawful for the bishop, chief priest, or presiding elder of such religious denomination, society or church to become a sole corporation, in the manner prescribed in this title, as nearly as may be, and with all the powers and duties, and for the uses and purposes provided for by this title. The property of a religious corporation and subject to all the provisions, conditions and limitations in said title prescribed." By the terms of the New York Act of 1863 (ch. 45), the Roman Catholic archbishop or bishop, the vicar-general, the pastor of the congregation and two laymen, the two last being selected by the three first mentioned or by a majority of them, form the board of trustees. The two laymen hold office for one year and their successors are appointed in the same manner as provided for the original selection. The New York law has furnished the model for like statutes in Minnesota, North and South Dakota, and other states. In Wisconsin, as before 1861-10; in 1861-10, "the bishop of each of the dioceses being the only trustee of each Roman Catholic church in his diocese, may cause any or all congregations therein to be incorporated by adding four more members as trustees as hereinafter provided. The bishop and vicar-general of each diocese, the pastor of the congregation to be incorporated together with two laymen, practical communicants of such congregation (the latter to be chosen from and by the congregation) shall be trustees." It is provided that the bishop and vicar-general may be represented by proxy at any meeting of the board of trustees. The trustees or directors, may, by unanimous vote, adopt by-laws not contrary to the statutes of the diocese and the discipline of the Roman Catholic Church.

In Michigan an Act to revise, amend, and consolidate the laws for the incorporation of ecclesiastical bodies, passed in 1897, was regarded by the late Rev. P. A. Bancroft, of "the great and important ecclesiastical law in the country" on the subject. He says that "being a general law which fits all denominations, it will not be easily changed in the future." Some of the provisions of this enactment are as follows: "Section 1. The people of the state of Michigan enact, That it shall be lawful for any five or more persons of full age and of good moral character residing in the same corporation, or in any other corporation, or in any Sunday school or other society for the purpose of diffusing moral or religious knowledge by complying with the following conditions. . . . ") These relate to the statements to be contained in the articles of association and the filing of such articles with the registrar of deeds and the secretary of state, as in section 4. The persons forming such corporations shall adopt by-laws, and execute and acknowledge them in the same manner as the articles of association above provided for, and such by-laws shall be recorded in the office of the registrar of deeds of the county where such corporation is to hold its regular meetings. Such by-laws shall prescribe the qualifications of members; the manner in which they shall be admitted, suspended or expelled; the officers of such corporations, their official title, their term of office; the manner of their election and removal from office; their official duties; the finances, real or personal, and the administration of the same, etc." The constitution of one state, West Virginia, prohibits the granting of charters of incorporation to religious societies. It may be said that as a rule, all Catholic educational and charitable institutions throughout the United States which have attained any importance or permanence are incorporated, usually under the provisions of general statutes for the
incorporation of civil corporations. In states, such as Indiana, California, Michigan, Wisconsin and New York (especially prior to 1893), where the principle of the statute of charitable uses is not recognized, because for unincorporated institutions have frequently been declared invalid because of the uncertainty of the beneficiary (Ruth and others vs. Oberbrunner and another: 40 Wis. 238). In many states, such as New York and Pennsylvania, legacies to religious corporations are exempt from the inheritance tax; whereas a bequest to an unincorporated institution even though religious in its purpose, would be charged with the inheritance tax. Thus, in New York, a bequest to a missionary society, known as "The Paulist Fathers" was held liable to the tax (In re Kavanaugh estate (Surr.), 6 N.Y., Supp. 619). The inheritance tax legislation, which is novelty of the bishopric and generally decided states where the title to Catholic church property is still held by the bishop in fee simple, raise issues of some financial importance when it comes to transferring the estate of a deceased bishop to his successor. The policy of the law evidences favours the incorporation of religious societies. This is also shown in the extent to which the statutes of many states throw about the incorporated cemetery.

In Great Britain.—The state does not consider the Catholic Church as a corporation. Neither is a Catholic bishop made a corporation sole. Catholic Church property is usually held by trustees under a trust made by the owner, however no one has been declared unconstitutional. The mere purpose of holding or administering Catholic church property would not be admitted by the Registrar-General as a purpose which would warrant the registering of a corporation under the Companies Act. Up to 1832, when the Roman Catholic Charities Act was enacted, the only way the English Catholics had of securing bequests and foundations of land to the property money in the names of private persons who could be declared as desired by the donor. If these private parties appropriated the property or money or in any manner disregarded the trust, there was no remedy, as in the eyes of English law it was held to be their private property. A great deal of Catholic church property at the present day is simply invested in names, generally three, without mentioning any trust. When the Roman Catholic Charities Act of 1800 was before Parliament, the question of incorporating these foundations by the English bishops to the Holy See. Cardinal Wiseman was of opinion that owing to bequests for Masses, etc., and conditions which the courts would hold as superstitious there was great danger of losing the property altogether. The Holy See took the opinion of the majority of the bishops, and in 1869 decided that such trusts might be declared in accordance with the Act except in cases where there would be danger to the property. As a rule, however, the implied trust is generally recognized even to the extent of exuding such property from inheritance or succession duty. There is a charity Trust Act (1853) with later amendments) and by 1869 the regulation of missions, schools and conventual property as a means of securing it for the purpose intended; but owing to the powers of the government department over such registered property and the publicity involved, many bishops and superiors have not availed themselves of the advantages of the Act.

TYLER, American Ecclesiastical Law (Albany, 1866); BEACH, On Private Corporations (New York, 1891); AMERICAN AND ENGLISH AT TRIAL. HUMPHREY J. DRESDON.

IN CANADA.—Corporate bodies may be created in Canada either by authority of the Dominion Parlia-

ment or of the Legislature of any of the provinces. The respective powers as to incorporation are derived from the "British North America Act," 1867, under which the Dominion was constituted. Section 91 of that Act sets out the powers of the Parliament of Canada, and Section 92 the exclusive powers of the provincial Legislatures. To the latter was given the right to make laws in relation to "municipal institutions in the province," "local works and undertakings" (with certain specified exceptions), "the incorporation of corporations even though religious in its purposes, and "property and civil rights in the province," and "generally all matters of a merely local or private nature in the province." Bodies corporate falling within any of the above classes can be created by provincial charter. In all other cases the charter must be procured from the federal authorities. The sections of the "British North America Act," dealing with the distribution of the legislative powers, and very particularly in their application to commercial corporations, have been subjected to judicial interpretation in many cases decided in the Canadian Courts and in the judicial committee of the Privy Council. A provincial Act empowering the incorporation or bodies corporate for carrying on certain operations within that particular province, and the Dominion Parliament may pass Acts empowering corporations to carry on the same operations throughout the whole Dominion. If a Dominion corporation should decide to carry on operations in a province for which no chartered status as a corporation is not thereby affected. On the other hand, it has been decided that a fire insurance company created under authority of a provincial Act is not inherently incapable of entering, outside its province of origin, into a valid contract of insurance relating to property also outside of those limits (Can. Pac. Ry. Co. vs. Ottawa Fire Ins. Co., 39 Sup. Ct. Rep. 405). Corporations, whether federal or provincial, may be created in two ways,—by special Act or by letters patent. When the former mode is adopted, the Bill to create the corporation is introduced and passed through Parliament or the Legislature, as the case may be, in the same manner as other Bills, and subject to the rules of procedure of the legislative body. Religious corporations are created by special Act. Commercial companies are generally created by letters patent; and application therefor is made by petition, setting forth the proposed name of the company, the purpose for which it is to be incorporated, the amount of the capital, number of shares, and information of a like nature. After examination of the petition and payment of a prescribed fee, the Governor-General of Canada or the Governor of the province, as the case may be, issues letters patent to the applicants. All corporations must comply with the provincial regulations, as to payment of license to do business within any particular province, and with municipal regulations as to payment of taxes, etc. Foreign corporations are permitted to exercise their functions within any of the provinces of Canada under the conditions set forth by the Act, but they must also comply with all local regulations.

INDEX, CONGREGATION OF THE. See Roman Congregations.

INDEX OF PROHIBITED BOOKS, or simply INDEX, is used in a restricted sense to signify the exact list or catalogue of books, the reading of which is forbidden.
INDIA—In popular language the name "India", in its widest extension, is taken to include British India proper, Native States, Portuguese and French India, Burma, and Ceylon, and is even sometimes stretched to include Indo-China. In its strictest sense, however, the British Empire in India consists of the provinces properly so-called of the Indian Empire, as at present constituted, comprises (besides the peninsula) Burma, Aden, the Laccadive, Maldives, Andaman, and Nicobar Islands, but does not include Ceylon, which is a Crown colony politically distinct. Its total area exceeds 1,500,000 square miles—fifteen times that of the United Kingdom, nearly one-sixth of the area of the whole British Empire, and three-quarters of the area of Europe. About 1,000,000 square miles are directly under British rule, the rest consisting of Native States and Agencies and the small possessions of France and Portugal. The greatest length, from Kashmir to Cape Comorin, is 4,222 miles. The extreme breadth, from Ewar, Burmah to Karachi, 2520 miles. The land frontier measures about 6000, and the coast line about 9000 miles. It will be useful at the outset to point out the impossibility of forming one united conception of anything connected with India. It is not a country but rather a continent, comprising such a variety of physical features, climates, seasons, products, races, religions, customs, and languages as to require an encyclopedia by itself. Nor can any amount of knowledge gathered in one part of this immense territory be taken as applicable without qualification to another.

PHYSICAL FEATURES.—The peninsula is separated on the north from Tibet and Central Asia by the Himalaya, Hindu Kush, and Karakoram mountains,
and some lower ranges divide it from Afghanistan and Baluchistan. Attached to the Bombay Presidency is a certain portion of Baluchistan bordering on the Afghan frontier. Within its general boundaries there are several small portions of territory belonging to Portugal and France, having their centres of government at Goa and Pondicherry respectively. In point of contour, Bengal, Sind, Rajputana, and the Punjab are flat, being formed by the alluvium of the Ganges and Indus respectively. The rest of the peninsula is roughly speaking a plateau rising abruptly at the western edge and gradually sloping down to the east coast. As a consequence the watershed line is generally at the summit of the western Ghats, 30 to 100 miles from the west coast. From this point a few small rivers run their short course to the Arabian Sea, but the greater ones rise in the heart of the Ghats and run across the whole peninsula, increasing in volume as they progress, and empty their waters into the Gulf of Bengal (Mahanadi, Godavery, Kistna, Kaveri, etc.). In the more northerly parts, however, the plateau recedes inland, and here two rivers of considerable size (Tapti and Nerbudda) run into the Arabian Sea. The average level of the Deccan plateau is under 2000 feet; but it contains many ranges and isolated mountains rising over 4000 feet, chiefly along the western edge, and there are still higher parts in the Mysore and neighbouring districts, where the highest point is 8840 feet above sea level. The coast is for the most part flat and straight, with a considerable number of small indentations suitable for small craft; but there are very few large harbours: Karachi (mostly artificial), Bombay, and Marmagao are the only ones which are practicable on the west side, while on the east there is not a single one, Madras harbour being purely artificial, and Calcutta over 100 miles up the River Hooghly.

The climate is on the whole dry and rainless for two-thirds of the year, during which time crops are possible only by means of irrigation. The rainy season (called the monsoon) occupies the remaining four months but differs on the two sides of the country. On the western coast it lasts from June to September, while on the east coast it occurs from October to December—in each case the rain being borne on to the land by the sea breeze. The rainfall on the western coast strip is about 70 inches, while on the Ghat line it sometimes rises to 300, but falls in the interior to 30, 20 and even less than 10 inches. In the northern parts and on the east coast the rainfall is less, while in the desert districts of Sind, Rajputana, etc. it is very scanty. About the Himalayas the conditions approach more nearly to those of Europe. One-half of the latitude of India falls within the tropics. Ice and snow are entirely unknown except in the high altitudes, and hail is rare and phenomenal. The temperature, which varies much locally, falls in the aggregate rarely lower than 50° and rises in parts as high as 120° in the shade. In the tropical portions there are two hot seasons, the one before and the other after the rains (May and October). With due precautions against exposure to the sun, avoidance of chills, a carefully adjusted diet and judiciously regulated exercise, Europeans find the country on the whole healthy though enervating; but any weakness in the constitution is more likely to reveal itself there than at home, especially among men who go out after the prime of life. The people as a whole are of a mild and inoffensive character, and obsequious to the European; and except for a chance of robbery among the remote hill tribes, the traveller is everywhere as safe as he would be in any part of Europe.

India is covered over with a network of railways,
along which the chief business centres and the chief objects of interest for the traveller are situated—the rest being accessible by journeys of a few miles by tonga along decent roads. Except in the cities much frequented by Europeans hotels are scarce; but refreshment rooms and even sleeping rooms are found in the more important railway stations, otherwise resort must be had to ‘travellers’ bungalows’, in some of which food can be obtained by previous notice. In Native States respectable Europeans are accepted as guests of the State, and guest-houses are provided for them. In other remote districts resident European officials can be relied upon for incidental hospitality in case of emergency. In a few large cities such as Calcutta, Bombay, and Karachi, European commodities of every kind are obtainable, and the social and domestic life differs in no way from that at home. The same is true to a more limited extent in towns occupied as military stations. Elsewhere it is generally impossible even to obtain anything so European as a loaf of bread, except at the refreshment room of the station, if there is one.

One of the peculiarities of Indian life is the hill stations, “suburban towns” they might be called, to which those who have the opportunity flock from the plains in the hot seasons, and occasionally at other times, to recover from the enervating influence of the plains. For instance Darjeeling, Simla, Mussoorie, Murree, Nainital, etc., on the slopes of the Himalayas; Mount Abu in Rajputana; Khandala, Poona, Mathura, and Mahabaleshwar, in the western Ghats; Bangalore, Wellington, and Conoor, in the Mysore hills; Kandy and Nuwara Eliya, in Ceylon.

POPULATION AND LANGUAGE.—According to the census of 1901 the total population of the Indian Empire amounted to 294,361,036, of which 62,461,549 belong to the Native States, and 231,899,507 to strictly British territory. The whole of this population is divided racially as follows: (1) The Aryans, mostly in Northern India and the Deccan, about 221 millions or nearly three-fourths of the total; (2) The Dravidian races of Southern India, about sixty millions; (3) the Kolarian aborigines of the Central Provinces, from four to five millions; (4) the Tibeto-Burmese, above eleven millions; (5) Europeans, a fluctuating figure something over 170,000; (6) Parsees about 94,000; (7) Jews, 18,000—smaller classifications being omitted. The prevailing language, correspondingly the Aryan (Hindi, Bengali, Marathi, Punjabi, O., Gujarati, Urdu, Oriya, Sindhi, etc.); the Dravidian (Telugu, Tamil, Malayalam, and Canarese); the Kolarian (Santali) and the Tibetan and Burmese. There are also very many minor languages confined to small districts or to the tribes. The linguistic frame of the country is Hindustani, or Urdu, a mixture of Hindi and Persian and Arabic words, and written in the Arabic or in the Devanagari character—its prevalence being due to the Mogul domination.

POLITICAL HISTORY.—The historical vicissitudes of India have been likened to the waves of the ocean flowing into a shallow bay, one following after another, and each obliterating wholly or partially the effects of the preceding. It may also be likened to a kaleidoscope of ever-changing colour and form, as kingdom after kingdom has risen and fallen, coagulated and disintegrated, and as the supremacy has passed from hand to hand. The ancient portion of this history is almost without dates, and even the events themselves are mostly gathered from precarious references. Consequently, as regards origins, even what is certain must from the nature of the case be vague. Down to some unascertainable date (possibly about 1500 B.C.) India was inhabited partly by the various aboriginal peoples (Kolarians, etc.) whose remnants are still found surviving in the country, and partly by Dravidian immigrants who had superseded these aborigines at some very early period. About that time the great Aryan family divided into two sections, one passing southwards into India. This Aryan race in great part was aloof from the people they subjugated, whom they regarded with contempt. But in some degree mixture was inevitable; and thus a large number of local tribes, some pure Aryan, others aboriginal, others mixed, came into existence. When Alexander the Great made his expedition to India in 326 B.C., his sphere of activity did not extend beyond the Sutlej. After his death and the breaking up of his empire, the people of India, under the leadership of a prince of Patna (305 B.C.) forced the Greek invader to relinquish all share in the country. Many of the Indian tribes were then gradually consolidated into an empire which reached its highest organization under Asoka (272-232 B.C.). The empire of Asoka comprised practically the whole of the peninsula except the portion south of Madras, which was held independently by the more ancient Chola, Pandya, Chera, and Satuja dynasties. Soon after Asoka’s death, his kingdom broke up into several smaller ones bearing the names of Kajanga, Andhra, Malwa, and Magadha, besides numbers of minor states. Early in the Christian era fresh Scythian hordes poured into India and founded the Kushan Empire, which comprised the whole north-west down to the Vindhyas Mountains. This empire reached the summit of power under King Kanishka, the great patron of Buddhism who ruled about A.D. 120. By the fourth century A.D. the Guptas and the Western satraps rose in importance, and divided the supremacy between them till the latter were swallowed up by the former. The Gupta Empire lasted till the end of the fifth century A.D. when it was destroyed by a Mongol tribe, the White Huns. In the sixth century the White Huns were overcome by the Persians and by Turkish tribes, and their hold on India fell before a confederacy of Indian princes under the King of Magadha. In the beginning of the seventh century there existed two superpowers—that of the Persians under the Chosroes, and that of the south in the hands of the Chalukyas, with the River Nerbudda as the boundary between them. These organizations soon fell to
pieces, and for several centuries India became once more a congress of petty chiefdoms.

The next foreign invaders were the Mohammedians of Afghanistan, who gradually took possession of the middle and southern parts of the peninsula, while in the south the supremacy of the Chalukyas was succeeded by that of the Cholas. In the fourteenth century the Afghan Empire had expanded over almost the whole of the country, the chiefdoms of Kashmir, Orissa, Kutch, Junagadh, and the Comorin Coast alone retaining indifference. But there was a constant tendency among the various provinces of this empire to throw off the yoke, in which for the most part they succeeded. In the fourteenth century the country south of the Kistna was held by the Indian princes with their capital at Vijayanagar, while north of this the Bahmani emperors, those of Malwa, Gondwana, Telungana, Behar, Bengal, Jaunpur, etc., were in various degrees independent of the Afghan dominion of Delhi. Two hundred years later the Afghan empire had shrunk up towards the Himalayas and was fringed round with more or less independent kingdoms which now included Rajputana, Sind, Multan, Gujarat, Malwa, Gondwana, Khandesh, Berar, Bidar, Golconda, Ahmednagar, Bijapur, etc. The year 1526 marks the entrance into India of the Moguls, who under the famous Akbar (1556-1605) finally broke the Afghan power and set up the Mogul supremacy in its place. The empire of Akbar comprised the provinces of Kabul, Lahore, Multan, Delhi, Agra, Oudh, Allahabad, Ajmere, Gujarat, Multan, Bengal, Bhur, Khandesh, Berar, Ahmednagar, Orissa, Sind, and Kashmir, the southern boundary being roughly speaking marked by the River Godaveri and the latitude of Bombay. South of this extended the Moslem sultanes of Ahmednagar, Bidar, Golconda, and Bijapur, south of which lay the two chief of the Indian confederacy of Vijayanagar. The latter power was irrecoverably defeated by the former in the battle of Talikot (1565). The barrier which had withstood the Moslem power for three centuries was thus removed; and this prepared the way to an extension southwards as far as Mysore—the southern princes having now declined so as to become almost negligible. But these victorious Moslem sultanes were in turn attacked from the rear by the Mogul power which under Aurung-Zebe (1658-1707) swallowed up the Kingdoms of Ahmednagar, Bijapur, and Golconda. But the Mogul supremacy, like all former ones, was incapable of permanency. Besides successful efforts after independence made by the tribes of the north, a new enemy now appeared in the rising power of the Maharrattas (Aryans of the Deccan) who under Sivaji (1627-1680) played havoc wherever they went. By 1750 the Maharratta confederation had extended over the greater part of Central India and the western coast, while the Mogul Empire had been resolved into several kingdoms of which Rajputana, Ahmedabad, Oudh, Behar, Bengal, the Nizam's dominions (Hyderabad-Deccan) were the chief—the Dravidian princes still reigning on the Canara and Travancore coasts. By the end of the eighteenth century the Maharratta confederacy had still further extended its range northwards so as to include Rajputana.

Meanwhile various European powers were gradually securing a footing in the country. First came the Portuguese in 1498, and secured certain strips of the western coast (Goa, Chaul, Bombay, Bassein, Dambo, Diu). More than a century later the Dutch, sworn enemies of the Portuguese, established themselves in Nagapatam, Madras, Pulicat, etc., besides at Cochin and other portions of territory from the Portuguese. The English East India Company (founded in 1600) soon acquired stations at Sarat, Calicut, Masulipatam, Madras, and (by cession) Bombay (1661-5). Before 1700 the French had secured Masulipatam, Pondicherry, and Chandernagore, while at the same time the Danes held Tranquebar and Serampur. In the conflict which followed the Portuguese, Dutch, and Danes counted for little, and the two last named powers ultimately lost all footing in the country. The struggle was chiefly between the English and the French, both of whom tried to win the various native princes over by persuasion, treaty, subsidy, or force, and played them off against the opposing power. The growth of the English supremacy was steady but gradual. By the battle of Plassey in 1757 they became virtually masters of Bengal. By 1784 they had secured sway along the east coast (Circars and Carnatic). In 1795 they were dominant in Bengal and Behar, the Circars, Madras, Nagpur, Behar, Bengal, Oudh, Behar, the Circars, Madras, etc. In 1805 they ascended the Ganges valley as far as Delhi, and in the south from Madras as far as Bellary and along the Kanara coasts. In 1823 British territory reached almost all round the coast from Assam to Gujarat, and extended inwards in such a way that the Native States resembled islands in a sea (Travancore, Mysore, Nizam's dominions, Kolhapur, Mahatta States, Rajputana, Oudh, etc.). In 1843 Sind was added to the British dominions; in 1849, the Punjab; in 1854, Nagpur; in 1856, Oudh; and in 1855, Burma. Where conquest or cession by treaty did not take place, the Native States were taken under military protection, the British troops stationed in them being an effectual preventative of revolt or foreign alliance. The conquest of India would present an interesting study in ethics, as would most other conquests in the world, but one thing is clear: the history of India before the English supremacy was a history of war, devastation, arbitrary rule, fall of empire upon empire, chaos, and insecurity, while under British rule it has become precisely the opposite. The foregoing sketch, inadequate and incomplete, will suffice to convey a general impression of the whole field; and it will be rendered more intelligible if read with Jeppen's "Historical Atlas of India", from which it has chiefly been taken.

Present Political Organization. British India.

—India is at present divided into British territory, independent Native States, and protected Native
States—which latter are in varying degrees under the sway of the supreme executive authority of the Governor-General of India, more commonly known as the viceroy. For purposes of administration the Indian Empire is divided into the nine great provinces of Madras, Bombay, Bengal, Eastern Bengal and Assam, United Provinces of Agra and Oudh, the Punjab, Burma, Central Provinces, and the North-West Frontier Province, under officials variously designated governor, lieutenant-governor and chief commissioner—the minor charges being Coorg, Ajmere-Marwara, British Baluchistan, and the Andaman Islands, each under a chief commissioner.

Of independent States there are only two, Bhutan and Nepal, both in the Himalayas. Of the protected States, Hyderabad (Deccan), Baroda, and Mysore are the most important, while the smaller ones are to a great extent grouped together into Agencies, e.g., Rajputana, Kathiawar, Central India, etc. The chiefs of these protected states retain their own internal administration, but under British supervision, which is exercised sometimes through political agents, in other cases by political residents. The princes have no right to make war or peace, or to send ambassadors to other states, or to maintain a military force beyond a certain specified limit; and the supreme government can exercise any degree of control in case of misgovernment; moreover, some of them are required to pay a fixed annual tribute.

Portuguese India.—The actual Portuguese possessions at the present time within the peninsula are Goa, Damao and Diu. Goa is a tract of picturesque and fertile country on the West Coast about 250 miles south of Bombay, measuring 43 miles in length by 40 miles in breadth. It comprises a nucleus of "old conquests", Goa, Bardez, and Salete (to be distinguished from the Island of Salsette near Bombay); an outer belt of "new conquests"; and the Island of Angadiva. The population borders on half a million; the majority are native Catholics whose ancestors were converted centuries ago. Freedom of religion is tolerated, but no public form of worship other than the Catholic is admitted within the "old conquests." Goa is regarded as an integral part of the Portuguese Empire, and (with its two dependencies, Damao and Diu) forms a province subject to a Governor-General. Damao, 100 miles north of Bombay, a fortified Portuguese town with a small outlying district in the interior, has an area of the total population of over 50,000. Diu is a small fortified island at the southern point of the Kathiawar coast, measuring about 7 miles by 2, with a population of something over 12,000. (For ecclesiastical particulars see under Goa and Damao.)

French India.—The French possessions consist of five settlements. Of these Pondicherry is the chief, having an area of 115 square miles and a population of about 150,000. Next comes Karikal with 53 square miles and 26,000 inhabitants. The rest are much smaller, namely, Chandernagore, near Calcutta, Mahe, on the Malabar coast, and Yanaon, north of Madras, the total area of French India being 203 square miles, with a total population of about 300,000. In British territory round about Pondicherry, etc., there are also a number of small plots, the sites of former French factories, over which the French possess certain rights. Administration is in the hands of a governor residing at Pondicherry. (For ecclesiastical particulars see Pondicherry, Archidiocese of.)

The Government and the People.—There has arisen in India of recent years a wave of national aspiration, which is by some viewed with alarm, and by others with indifference. It originated or first manifested itself by the formation of the Indian National Congress in 1886, which began to hold annual meetings wherein "to give voice to our aspirations and to formulate our wants" (Gokhale in 1905). In 1904 a party-protest against the partition of Bengal was followed by an attempt to force the hand of Government by the boycott of imported goods in favour of Indian manufactures (Swadeshi movement), which in turn developed into an effort after "national revival". This movement issued in a certain amount of seditious writing, systematic spread of disaffection among the masses, and even resort to anarchistic methods such as the use of bombs, etc. Given that the element of sedition and violence is suppressed with a firm hand, the movement does not (in the present writer's opinion) forebode anything like a mutiny, or jeopardize British dominion. But in its constitutional elements, which are based on democratic ideas derived from European education, it will have to be reckoned with. Viewed in this light, it means that an ever-increasing number of Hindus, who have been educated on English lines and many of them in English universities, realize keenly their position as British subjects, claim equality with Europeans in talent, education, and citizenship, seek to be admitted more extensively to Government offices, aim at a representative instead of an autocratic form of government, demand financial autonomy for the country, etc., etc., and are endeavouring to develop public opinion in favour of all these points, first among their own class, and then among the community in general. No one can question with this aspiration so long as it is worked on constitutional lines, and in a measure calculated to promote the real welfare of the country. The practical difficulty arises from the fact that while in the eyes of most Europeans the country is not yet ripe for such measures, the promoters of the movement either believe that it is ripe, or else they take the matter the country can be made ripe far sooner than if matters are left alone. This seems a fair and moderate view of the movement, putting aside the more extreme tendencies connected with it. With regard to the policy of Government in dealing with the situation, account must be taken of the tendency of the Oriental mind to respect power and to take advantage of good nature. Anything like leniency or long-
suffering in dealing with disturbance is in India sure to be taken as a sign of weakness, and hasty endeavours to pacify the people by partially acceding to their demands will only be interpreted as indications of fear, and an encouragement to further agitation. A few concessions on the part of Government, even to entertain any idea of concession till all signs of disorder have permanently disappeared, would probably be more effectual than any other measure.

It does not come within the scope of this article to discuss the political situation. Our only concern here is to dispel certain false or exaggerated notions as to the relations between Government and people. There does not, it is true, exist in India much positive patriotism in favour of British rule; but at the same time neither does there exist anything like a deep or widespread spontaneous indignation. The mass of the people usually confine their interest to the narrow horizon of their own personal wants. They find that contact with Europeans brings a great increase to their revenues; and in fact there is a danger of whole classes being spoiled by the lavishness with which, compared with former times, they are remunerated for their services. It is quite certain that the people prefer to deal with European rather than with native officials. On the whole, Government is considerate in remitting or reducing taxation as soon as scarcity is felt. A considerable grievance has been removed or greatly diminished by the reduction of the salt tax, but another grievance remains regarding the toddy tax (native palm-tree liquor). It is true that preferential treatment in favour of British trade has done much to destroy the older native industries; but this has been amply compensated for by the increased facilities of obtaining articles of comfort and convenience, as also in the employment given to natives in Government posts, office work, public works, industries, outlets for produce, etc. No one will deny that detailed improvements in administration are possible and desirable; but the grievances which exist, while affording matter for constitutional representation, are not sufficient to justify any real disaffection, still less resort to violent measures.

The really serious evils of India as felt by the masses are three in number. The first is the artificial creation of famines. The constant recurrence of famine in India is not due to local scarcity of food; for it is notorious that there is always in the country at large plenty of grain for the people, and abundant store—a fact proved by the diminished exportation which goes on all the time. The cause of famine is due simply to the combination of the native grain-dealers, who buy up the supplies and establish famine-prices as soon as the first sign of scarcity is observed. All other explanations of famine in India are either false, or inadequate and negligible. Government expedients of famine relief-works and free distribution of food are neither adequate nor radical. The proper and effectual remedy would be for Government to make laws keeping the prices down and forcing the merchants to sell at those prices. This, however, Government will not do, on the plea of not interfering with freedom of trade—thus losing sight of the duty of the State to protect particular classes of the population from what is equivalently gross oppression. The second evil is the extraordinary usury practised by the native Marwaris or money lenders, who have the people at their mercy in times of stress, and who carry on their business in such a way that getting into their hands usually means total ruin. The necessity of borrowing small sums of money being recognized, the only remedy would be for Government to prohibit or at least mitigate the usury, and to make it a matter easy to theorise about but difficult to achieve. The third evil in India is petty tyranny, extortion, and corruption on the part of subordinate native officials. Such a charge can only be proved in detailed cases, but its widespread existence seems to be universally admitted and complained of. And as such acts are done under cover of authority, the blame of them is popularly attributed to the British Government, which in truth is utterly incapable of coping with the evil. With the removal or diminution of these three evils, and a few adjustments of taxation in view of local circumstances, India would be a most prosperous and happy country as far as good government can make it one.

These remarks, based on six years' careful observation in the country itself, ought to put writers outside India on their guard against the monstrous misrepresentations which are so frequently circulated in the press.

EDUCATION.—In India there are five universities, namely, those of Calcutta, Madras, Bombay, Allahabad, and the Punjab. They are all organized on the examining-body system, having affiliated to them a large number of teaching colleges, some of which are worked by Government, some by missionary bodies, etc. Below these come numerous high-schools, middle schools, primary-schools, and technical schools of various kinds, to a total of over 160,000. Of those institutions 27,220 are public, 73,192 aided, and 60,057 private and unaided. According to the census of 1901 the statistics of literacy run as follows:

<table>
<thead>

* Add unspecified 946,159.

It should be noted that immense progress has taken place since then; but even now it is estimated that only 25.3 per cent of the boys and 3.4 per cent of the girls of school-going age attend school.

REligious History.—Mention has already been made of the Aryan tribes which immigrated into India many centuries before Christ. It was during their sojourn in the Punjab that the first sacred hymns were composed (the Rig Veda). While the Aryans migrated eastwards and southwards, the first beginnings of the caste system were formed and the rest of the sacred books written (see Vedas). Their religion, which had in the
first instance was a simple kind of nature and hero-worship, was developed by the Brahmin priests and sages into a highly ceremonial cult with a theoretical background of exoteric pantheism as formulated later on in the Vedanta. While the speculative and liturgical portions of the Hindu religion were being developed by the learned and the popular class, the old gods were being transformed by contact with the older local tribes. The polytheism induced by the co-existence of various local deities received a monothetic explanation from the Brahmins, each god being regarded as a particular manifestation of the supreme one. Buddhism came into existence in the sixth century B.C. (Gautama Buddha fl. circa 527 B.C.). It adopted many of the fundamental ideas of the prevailing Brahminical creed and developed its ascetical consequences, but made no account of the system of caste, and afterwards degenerated into saint and hero-worship. During the following centuries Buddhism gradually spread throughout the country, and constituted a formidable rival to Brahminism. A reaction, however, supervened, during which Buddhism gradually disappeared from the land, though it continued to prevail in Burma and Ceylon. From the thirteenth century A.D., Brahminism has retained a permanent hold in three-quarters of the population. Out of a miscellaneous collection of elements—Vedic pantheism, Puranic mythology, aboriginal animism, polytheism, demon worship, and sorcery, there developed a promiscuous system of religious belief and practice which became hereditary, and which may be called "exoteric or popular Hinduism" distinguished from the esoteric or philosophical religion of the select few. The study of Hinduism therefore naturally falls into two corresponding parts of which a totally separate treatment is necessary (see BRAHMINISM). Besides Hinduism in these two senses of the term, there existed a large number of religions, the chief of which may be enumerated as follows:—

1. Anism and a promiscuous collection of archaic low cults and superstitions, still maintained by the more remote aboriginal tribes—a survival of the time prior to the Aryan immigration; and also a rite to a great extent among the masses of Hindus. (2) Jainism, a form of religion allied equally with Hinduism and Buddhism and found Chiefly in the districts of Gujerat and Kathiawar. Its adherents, Mahavira, is said to have died just when Buddha was entering into his missionary labours (circa 527 B.C.). (See JAISNISM.) (3) Sikhism, an offshoot (originating in the Punjab in the sixteenth century A.D.) of a modification of Hinduism, in which, however, the worship of a sacred book has largely taken the place of the worship of images (see SIKHISM). (4) Zoroastrianism, brought into India by a body of Parsees who fled before the Mohammedan conquerors of Persia, and resided in India about A.D. 700. This religion has neither influenced nor been largely influenced by Hinduism, and is still kept up among the Parsee community exclusively (see AVSTRA; Parsees). (5) Mohammedanism, introduced into India by the Moslem conquerors, who, beginning about A.D. 1000, gradually spread their domination over the land till in the seventeenth century it reached almost to Cape Comorin. Large numbers were brought over from Hindustan to this creed. But they retained much of their old caste and ceremonial ideas, and thus brought into existence a modified form of popular Mohammedanism, outwardly resembling the Hindoos, but with a deeper and more secret组织. Many of the Mohammedans settled in this country, and are considered by some in several other parts of the Mohammed and Mohammedanism. (6) Christianity, said to have existed among the White Huns, through whom it may have contributed to the Krishna legend; prevalent for a long time on the Malabar coast, and in some extent in several other parts of the country. Extensively spread by the Portuguese from the year 1500, and afterwards by missionaries of other European nations. In recent times Christian ideas have exercised much indirect influence on the educated classes of Hindu, resulting partly in efforts to purify popular Hinduism of its grimmer elements, partly in adopting a more rationalized interpretation of Hinduism and the popular class. But the popular religion among the masses remains untouched. (Present Religious Statistics.)—According to the census of 1901 the religious statistics of the Indian Empire stands as follows:—The votaries of Hinduism numbered 207,147,026, or about three-quarters of the population. The Mohammedans numbered 62,485,077. The Buddhists numbered 2,16,476,759, or about one-twelfth in Burma and Assam. Animaism prevails among the aboriginal tribes to the number of 3,584,148. Christians come next with a total of 2,923,241. The Sikhs (chiefly in the Punjab) number 2,195,339; the Jains (chiefly on the western coast), 1,334,418; the Parsees (chiefly in Bombay), 94,190; the Jews, 18,232—the rest being insignificant or unclassified. The Christian statistics are detailed as follows:

Ecclesiastical History.—The history of the Catholic Church in India can be divided into the following parts, from the commencement of the first century B.C. to the present time:—

(1) The Roman occupation of the country, beginning with the advent of the Portuguese, and especially the traditions regarding St. Thomas and the community believed to have been founded by him (see Thomas Christians). (2) Portuguese missionary enterprise, dating from the year 1498, a brief outline of which appears under Goa. (3) The dispute regarding concessions to Hindu usage, commencing with Robert de Nobili in 1605 and ending with the final decisions of the Holy See in 1742 (see MALABAR RITES; MADURA MISSION). (4) Propaganda missionary enterprise, commencing about the year 1637. (5) The conflict of jurisdiction between the Holy Apostolic Vicariate of the Eastern Church and the Portuguese Propaganda, reaching its climax in the eighteenth century, reaching its climax in 1838, and its final settlement in 1886 (see GOA, ARCIDIOCESE OF; PADBRODO). (6) The establishment of the hierarchy in 1886 and subsequent organization down to the present time. Besides the special articles referred to, local details will be found under the different dioceses. Here it will be sufficient to take a brief survey of the whole. From very early times there existed on the Malabar and Coromandel Coast a considerable community of native Christians claiming to have received the Faith from the Apostle St. Thomas, whose martyrdom is held to have taken place near Mylapur, three miles south of Madras. His reputed tomb seems to have been in the hands of Nestorians, and the community generally appears for several centuries to have been ruled by bishops from Persia or Babylonia who were also Nestorians. When the Mohammedan empire began to extend to the country, they set themselves to the task of removing this Nestorian taint and bringing the community into union with the Catholic Church, and this was accomplished by the Synod of Diamper in 1599. In 1633, in consequence of domestic quarrels, a revolt took place, followed by a small movement of the Pudukottai mades, who, while a considerable minority fell away, and became later on a prey to Jacobite influences. The Syrian Catholics—as they
are called on account of their liturgy—still flourish and are governed by three vicars Apostolic at Ernakulam, Trichur, and Changanacherry respectively.

Portuguese missionary enterprise, which began shortly after 1500, partly followed the progress of conquest, but also extended beyond it, so that large communities were conciliated in the south of the peninsula and as far as Madras on the east coast, and Damascus on the west, while sporadic efforts were made from time to time further northwards, as far as Bengal, Agra, and even Tibet. The chief successes were, first, within the strictly Portuguese territory of Goa, where the full influence of the State lay at the back of the mission. It was conciliated, on the Fishery Coast about Cape Comorin; thirdly, in the inland districts of Madura; fourthly, in the districts of Bassein, Salsette, Bombay, Karanja, and Chaul on the western coast, north of Goa. The Franciscans and Dominicans were the first orders in the field, soon to be followed by the Jesuits and Augustinians, and later on by the Carmelites, Theatines, Hospitallers of St. John, and Oratorians. The tide of enterprise reached its height after the mid-16th century, when vast numbers had been enrolled in the membership of the Church. The work of attending to the wants of such large communities naturally placed a limit on further missionary extension. Moreover, as the power of Portugal itself began to decline, there was a falling off in the supply of missionaries, and after the suppression of the Jesuits in 1773 it may be said that missionary progress under Portuguese patronage came practically to a standstill. Meanwhile the Holy See, recognizing the inadequacy of the Portuguese resources to deal with so vast a country, began to provide independently for the spread of the Gospel by appointing vicars Apostolic, under Propaganda, the first being that of the Deccan, afterwards called the Vicar Apostolic of the Great Mogul, and finally the Vicar Apostolic of Bombay. This appointment, made about 1637, was followed by others down to recent times, till the whole of the country outside the actual sphere of Portuguese ministrations was in some way provided for. It soon happened that where the vicars Apostolic came into contact with the Portuguese clergy there arose a conflict of jurisdiction—the vicars Apostolic reserving their claims on the direct delegation of the Holy See, while the Portuguese party took their stand on the ancient prerogatives of the patronage as well as the prescriptive right of possession. The policy of Rome throughout this conflict was to support unequivocally the position of the vicars Apostolic, at the same time recommending them to use caution and thereby avoid dissension wherever possible. The strained relations between the two parties reached a climax when in 1838 the Holy See cancelled the jurisdiction of the three suffragan Sees of Cranganore, Cochin, and Mylapur and transferred it to the nearest vicar Apostolic, and did the same with regard to certain portions of territory which had formerly been under the authority of Goa itself. The struggle,

which was most fierce in the districts of Bombay, Madras, and Madura, continued till 1857, when a concordat was drawn up which gave comparative peace to the churches, but left the two conflicting jurisdictions almost in status quo. Finally in 1886 another concordat was established, and at the same time the whole country was divided into ecclesiastical provinces and certain portions of territory, withdrawn from 1838, were restored to the jurisdiction of the Portuguese see. The delineations made in 1886 were afterwards supplemented by adjustments and subdivisions down to 1899, since when the ecclesiastical distribution has been stable. The following list will summarize the main facts thus described: (1) The old and established relations between the Portuguese Church and the Holy See, afterwards restored to the jurisdiction of the Portuguese see (Goa, 1534; Cochin, 1557; Cranganore, 1600; San Thomé (Mylapur), 1606. (2) Vicariates founded before 1800:—Great Mogul, 1637; Malabar, 1659; Bombay and Tibet, 1720, Ava and Pegu (Burma), 1722. (3) Vicariates founded from 1800 to 1886:—Tibet, 1825; Bengal, Madras, and Ceylon, 1834; Madura and Coromandel, 1836; Agra and Patna, 1845; Jaffna, 1847; East and West Bengal, 1848; Pondicherry, 1855; Coimbatore and Mylapore, 1850; Hyderabad (Deccan), 1851; Mangalore, Quilon, and Verapoly, 1853; Poona, 1854; Central Bengal, North and South Burma, 1870; Punjab and Kashmir, 1880; Kandy, 1883; East Burma, 1886. (4) The hierarchy as established in 1886 consisted of eight archbishops bearing the titles of Agra, Calcutta, Madras, Bombay, Goa, Pondicherry, Verapoly, and Ceylon, each having his subject dioceses, vicariates, and prefectures Apostolic. (5) The following new subdivisions were made after 1886:—Kashmir, Nagpur, Trichur, and Valparaiso, 1887; Assam, 1889; Ernakulam, and Changanacherry, 1890; Rajputana, 1891; Bettia, 1892; Galle and Trincomalee, 1893; Kumbakonam, 1899. These must be added the three vicariates Apostolic of Burma.

CATHOLIC STATISTICS.—The ecclesiastical organization connected with India does not by any means coincide with the political divisions of the country. India consists of eight ecclesiastical provinces, seven of which are in the peninsula and the eighth in Ceylon. The Provinces of Agra, Calcutta, Bombay, Madras, Verapoly are entirely in the Indian Empire. The Province of Goa comprises Portuguese India and some portion of British India, besides the suffragan sees in Africa and the Far East. The Province of Pondicherry comprises French India and some portion of British India, as well as the Diocese of Malacca in the Straits Settlements. The Province of Colombo is entirely in Ceylon and so outside the Indian Empire. On the other hand, the three vicariates of Burma which are present belong to the Indian Empire, are not part of ecclesiastical India proper, and lie outside the Apostolic Delegation of the East Indies. The same is true of Aden, which belongs politically to the Bombay Presidency. Our best course, therefore, in giving ecclesiastical statistics, will be to take the general group just described, indicating certain subtractions.
which must be made in order to bring the figures into
relation with the Government census of India. The
following estimate of the Catholic population has
been compiled from the "Madras Catholic Directory"
for 1909, eked out in a few instances from other
sources.

325,281 (Thomas Christians). By subtracting the figures for French India, Portuguese India, Malacca, and Ceylon, and separating off the Syrian vicariates, the total results for the Indian Empire (including Burma) for the year 1908 are as follows:—Latin Catho-
lics 1,439,066; Syrian Catholics 325,281. A compari-
son with the census of 1891 shows an increase of
190,325 Latin Catholics, and 2695 Syrian Catho-
lics—which is probably a fair estimate of progress during
the last eight years. As far as older statistics can be
obtained for purposes of comparison, the total number of Catho-
lies in British India (not including Burma or Cochin) in 1857 was 86,807; in 1858 they had risen to 1,030,100, and in 1905 to 1,582,186.

DOUBLE JURISDICTION.—One of the peculiarities
of ecclesiastical India, though not unknown in other
parts of the Church, is the existence in certain places
of what is popularly known as a "double jurisdic-
tion." The historical explanation lies in the fact that when
the jurisdiction conflict was brought to a close in 1866,
the Padroado sphere of influence was not restricted
only to Portuguese territory, but allowed to remain in many
parts of British India where the Padroado clergy were
in actual possession. In the first place the See of Goa was allowed to remain considered as almost
exclusive over the north country north and south of Goa; while the
two ancient Sees of Cochin and Melayap and the newly erected See of Damão were all three totally
in British territory. But it happened that in the
case of Melayap there existed a certain widely scattered
and isolated parishes which were actually under
Portuguese clerical administration, and these were
retained as exempted churches in the midst of Propa-
ganda territory. Thus to the Bishop of Melayap
belong no fewer than fifteen separate churches scattered over the Diocese of Trichinopoly, with others in
Madras, Calcutta, and Dacca giving a total number of
forty-eight. In the case of Bombay, which was made over to the Diocese of Damão, six churches remained attached to the Propa-
ganda jurisdiction of Bombay. In some of these places both jurisdic-
tions exist side by side, the one holding terri-
torial sway, the other possessing exemption. In
Bombay a more special arrangement was made—
the archbishop under Propaganda enjoying territorial
jurisdiction, while the Bishop of Damão holds
personal jurisdiction over those who are Goanese by
birth or otherwise connected with Padroado rule;
and a certain complicated code exists for determin-
ing territorial jurisdiction to which individuals belong (see under
GOA; BOMBAY; DAMÃO; ST. THOMAS OF MALAPAN). In the Archdiocese of Veracaz (Malabar Coast) another
form of double jurisdiction exists, this time based
on a difference of rite. There the Latins are under
the Archbishop of Veracaz, while the Syrian Christians
(Syrians not by race but by liturgy only) in the same
territorial limits are assigned to three vicars Apostolic of the
same rite.

THE CATHOLIC CLERGY.—Under the Portuguese
regime, the first missionary work was done by
the religious orders. In course of time a large body
of native secular clergy came into existence, a body
of whom strongly developed the apostolic spirit; but in
general their work was to take charge of the parishes
and mission-stations which had already been founded
by the missionary orders. On the expulsion of
the religious orders from Portuguese territory in 1834,
the whole care of the faithful devolved on the secular
clergy, who at present number about 1,000. There are
the Dioceses of Goa, Cochin, Melayap, and Damão—a few being European
Portuguese, and the rest natives of India. Of recent
years a few Jesuits have been introduced in the parts
which lie outside Portuguese territory.

Similarly the vicariates Apostolic were initiated
and continued by the European missionaries of different orders and nationalities, assisted by
such secular native or other priests as they were able.
to train up. When the hierarchy was established in 1858 the same regime was retained, the bishops being generally of the same order or congregation. The foregoing list shows the orders and nationalities in the various dioceses. The fewness of missionaries of British extraction in India is sometimes made a matter of criticism by Englishmen not conversant with history. They forget that at the time when India was assigned to Her Majesty's Apostolic, England was not in a condition to send out foreign missionaries. Secondly, it is much less than a century ago since England began to acquire anything like a general footing in the country. Even at the present time the clergy of England have their hands full in attending to their own business, and have no time to spare for outside enterprise. Then again, as regards the far greater part of India, the nationality of the missionaries is a matter of indifference, since the work is almost entirely with native communities, who have to be dealt with in the vernacular. In the larger towns, where English is a current language, the clergy manage to equip themselves with a sufficient knowledge of English, and the same is true of military chaplains, though in individual cases a deficiency may sometimes be found. Those who travel will never come across a European missionary in British territory who cannot make himself understood in English, and in the majority of cases the proficiency attained is remarkable.

The actual statistics of the clergy for the whole ecclesiastical group already described may be estimated approximately at 2800 priests, of whom about 1050 are Europeans, and about 1750 of native extraction. By a cross division about 2000 may be classed as secular clergy (including the Mill Hill Fathers and the Foreign Mission Fathers), and about 800 as members of religious orders or congregations. There are also more than 500 brothers of various orders and congregations, and about 3000 nuns; and the number of churches and chapels served rises above 5000.

Catholic Missionary Work.—The figures of Catholic population given above include only those who are ascertainably members of the Church—all converts being subjected to careful tests and instruction before baptism. The numbers are mostly made up of native Christians, partly of the higher classes and chiefly of the lower castes, together with a certain percentage of Europeans belonging to the army, government and civil service, railways, etc., and a number of Eurasians. The Catholic population is densest among the Thomas Christians of Travancore, who are the smallest in the whole of India, but there are many in the coastal districts and in the central parts of the state, the local tendency was rather to be tolerant of paganism and to let religious propaganda go; and when, under pressure from the King of Portugal, an organized policy of support for the Faith was framed, physical coercion was not one of its elements. It may safely be said that there existed in the legislature no law enforcing a born pagan to become a Christian; nor was compulsion exercised in practice. The methods adopted by the State consisted, first, in a ruthless destruction of pagan temples, and fouling of sacred tanks in districts where the civil power was fully dominant and the Gospel had been preached; and also in forbidding the public exercise of any alien religion within the Portuguese confines. Political and social advantages of various kinds were attached to conversion, and corresponding disabilities to non-conversion; and in certain parts, all adults over the age of fifteen were compelled to listen to Christian instructions on Sundays under pain of fine and, if obstinate, of expulsion from the district. This policy had partly driven the converts, often of dubious quality, into the Church, and partly of driving away from Portuguese confines those who were tenacious of their ancestral creed. But it is to be noted that these measures were by no means carried into effect uniformly at all times and in all places, and that the number of converts was not less than the number of catechumens preparing for baptism counted about 45,000. At the present time the rate of progress, though not definitely ascertainable in detail, has certainly advanced.

Missionary Success.—One of the moot questions
Portuguese nobility stood sponsors to the neophytes and bestowed on them their illustrious family names—hence the prevalence of De Souzas, De Mellos, Almeidas, Pereiras, and even Albuquerque, etc. among the people to this day. Another usage was to rescue slaves from the slave-dealers, either by căceria or picketing, and turn them into Christians; or again, take charge of all orphans and bring them up in the Faith. In some cases outside Portuguese territory, conversion was promoted by affording protection to the helpless classes against the tyranny of the Mohammedans, as occurred on the Fishery Coast. Hence it seems clear that part in the event of conversion were in some cases a partial, but never the sole or adequate, cause of conversions. This is shown by the fact that missionary work proceeded with equal or even greater success in districts altogether remote from state influence, e.g., Madura, where the missionaries worked on lines of persuasion alone, unaided by even the mere prestige of Portugal at their back.

If then, as must be admitted, the progress of missionary success in modern times is not so notable as in the past, a complexity of causes must be assigned, of which the following are the chief:—The era has had the advantage of 1348 years of experience in working an open field. They were at first unharried by the existence of large communities of Christians needing constant parochial care. They had, moreover, the stimulus of novelty, and their message had also the advantage of novelty. It came to the people in surprise, and the bodies of Jains could be brought in before the enemies of the Faith had time to formulate objections to Christianity and to imbue the minds of the people with them. Besides this there were no Protestant missions in those days (the first beginning of Protestant enterprise was at Tranquebar in 1704), so that Christianity was able to avoid the slings and arrows of such rival sects and creeds as were played off one against another. Then again, the terms on which Christians were admitted to baptism were much more lenient than nowadays. A willing disposition, accompanied by a brief instruction, was in many cases taken as sufficient grounds for admitting thousands together to baptism; whereas at present a careful course of instruction and probation lasting at least a whole year is the usual requirement—less reliance being placed on subsequent instruction and training than was formerly the case. The result is probably a better quality of converts nowadays than could be obtained then. If it is allowed that the prestige of the Portuguese State went then for a great deal in favour of conversion, it must be added that at present the professed neutrality of the British Government is nothing short of a public encouragement of indifferentism. The ideals of Western civilization are also undoubtedly an important obstacle to the progress of Christianity in modern times, for they materialize the people’s minds and interests, induce agnosticism or indifferentism, sophisticate the simple, and encourage the worldly—disintegrating the old creeds, but building up nothing in their place. In the obtrusive and obstinate desire to keep the people themselves, rigid conservatism of mind and the trammels of the caste system are certainly of the first magnitude. Hence it is found to-day, as it was found in Portuguese times, that in places where the pressure of the State was unfelt, the Brahmins were the most difficult to convert, and the least prepared to those missionary efforts, while elsewhere, in the island states, the people are naturally the most receptive. In the island states, the greatest missionary success is invariably found (1) among the aborigines or depressed classes; (2) among those who are without caste and outside the influence of the Brahmins; (3) in districts most remote from railways and centres of civilization; and (4) in places when missionary work is least bold. Among the educated classes, especially those who have been trained in the European manner, conversions are extremely rare—sometimes on account of indifference and unbelief imported from the west; sometimes for want of practical seriousness of purpose in religious discussion, of which many are extremely fond; and sometimes on account of a certain slackness of mind and a tendency to vague viewiness, or sympathy and poetical impulse, or a love of facing and gripping facts—a peculiarity temperamental to the eastern mind.

Catholic Education.—Besides strictly ecclesiastical ministrations to the faithful, and efforts for the spread of the Faith, the clergy of India take a prominent part in the educational work of the country. The latest complete collection of statistics in this branch was compiled in 1904. It includes the whole ecclesiastical group already mentioned with the exception of the Burman (according to Krose some of the figures for Burma can be supplied as follows:—schools, 151, with 8933 pupils; orphans, 969). The following particulars are taken from this list:—

Male Education.—23 ecclesiastical seminaries with 697 native students; 8 scholasticates of religious orders with 101 scholars; 15 novitiates with 79 novices; 12 university colleges (most of them small) with 47 students; 295 high schools with 10,390 pupils; 251 middle schools with 23,889 pupils; 2465 primary schools with 98,687 pupils; 4 normal schools with 77 pupils; 26 industrial schools with 977 pupils; 17 schools for catechists with 277 students; 114 male orphans with 5141 inmates; 76 boarding schools with 9037 inmates.

Female Education.—67 novitiates for conventual orders with 450 novices; 61 high schools with 3202 pupils; 248 middle schools with 15,229 pupils; 683 primary schools with 41,283 pupils; 11 normal schools with 190 pupils; 59 industrial schools with 2335 pupils; 135 female orphans with 7489 inmates; 1337 religious institutions in the country. The total number of children under education in Catholic schools is 204,481 (137,326 boys and 67,155 girls). This figure includes 12,650 orphans of both sexes.

It is to be noted that the numbers of pupils in schools includes a large proportion of non-Catholics. The policy of opening our schools to outsiders is due to the fact that in many places the Catholics are either too few or too poor to maintain efficient schools and colleges for themselves alone, and the admission of others is in most cases the only means by which a good education under Catholic auspices can be secured. But it must be recognized that any instigation to give a separate education to the Catholic or the Hindu is to be avoided with regard to the others. The part played by the Catholic clergy in the general educational work of the country, as well as the results, second to none, which are obtained, brings great prestige to the Catholic body. It also establishes excellent relations with large numbers of better-class Hindus, Mohammedans, Parsees, etc., who openly express their indebtedness to the Catholic clergy. The high esteem in which the Catholic clergy are held owes much to the high esteem which they enjoy in the country.

Catholic Literary Enterprise.—On the whole the Catholic clergy of India do not make much use of the press as a means of exercising influence on those outside the Fold. Their publications consist mostly of the Scriptures, Bible histories, catechisms, prayer-books, and devotional books in English. The Catholic Press is most in the vernacular, executed at mission presses in Calcutta, Bombay, Trichinopoly, Mholgol, Agra, Betti, etc. Of Catholic weekly newspapers there are several such as “The Catholic Herald of India” (Calcutta), “The Examiner” (Bombay), “The Catholic Watchman” (Madura), “The Catholic” (Goa), “The Catholic” (San Thome)—all in English; “O Crente”, official organ of the Archdiocese of Goa; “O Anglo-Lusitano”,

INDIA 732  INDIA
representing the Goan community in Bombay; beside several others in English and sundry local idioms. On the whole the Catholic press confines its attention to Catholic interests without entering into the social or political affairs of the country. For the use of the clergy a "Promptuarium Canonico-Liturgicum" is published at Ernakulam. Mention should also be made of the "Madras Catholic Directory", giving the status of the dioceses for the whole of India, and published annually since the year 1851.

Protestant Missionary Work.—The first Protestant missionaries to set foot in India were two Lutherans from Denmark, who began work in 1705 in the Danish settlement of Tranquebar. Their first step was to translate the Bible into Tamil, and afterwards into Hindustani. They made little progress at first, but gradually spread to Madras, Cuddalore, and Tanjore. In 1750 Schwartz carried on the work thus begun and extended it to Tinnevelly near Cape Comorin. After the Lutherans came the Baptists, who began work at Serampur near Calcutta. In 1758 a Danish missionary first devoted attention to Calcutta. In 1790 there was a great outburst of energy at Serampur, whose missionaries are said in the space of ten years to have translated the Bible into thirty-one languages or dialects, and by 1816 had formed a community of 700 converts. The London Missionary Society entered the field in 1798. By the "New Charter" of 1813 the East India Company provided for the establishment of the Anglican Archdeaconries of Calcutta, with three archdeaconries, one for each presidency. This led the way to further enterprise on the part of the Church Missionary Society, which started in 1814, and the Society for the Propagation of the Gospel, which followed in 1826. Their greatest successes were scored in Southern India, in the fields already opened by the Lutherans. In 1838 the See of Madras was established, and in 1837 that of Bombay. In 1877 two missionary bishops assistant to the Bishop of Madras were appointed for the Tinnevelly missions, and new sees were erected at Lahore and Rangoon, in Burma. The missionary Bishopric of Travancore and Cochin was established in 1879. The first missionary sent by the Church of Scotland arrived in 1830. Since then the Presbyterian Church of Ireland, the Wesleyan Methodists, the Salvation Army, and various other bodies, European and American, have been added to the list. Summing up the figures of missionaries find that in 1830 there were only nine Protestant missionary societies at work, with about 27,000 native Protestants in India, Burma, and Ceylon. In 1870 there were no fewer than thirty-five such societies, with an estimate of 318,363 Protestant Christians. In 1852 there were 459 Protestant missionaries and 5,872 there were 609. Features of the Protestant methods of work are: the spread of the Scriptures in the local vernacular; education of children specially in vernacular schools; special efforts in the way of female education; and a very extensive use of native missionaries, not only ordained ministers, but also lay preachers both male and female (Hunter's "Indian Empire").

Great stress is sometimes laid on the rapid growth of Protestant numbers, and the relatively smaller increase of Catholic numbers. Thus Mr. J. N. Farquhar, writing in the "Contemporary Review" for May, 1908, offers the following comparisons (Catholics including Latins and Syrians, and comprising British and Portuguese, but not Portuguese India; while Protestants include all native Christians in India excluding Burma):—

<table>
<thead>
<tr>
<th>Year</th>
<th>Catholics</th>
<th>Protestants</th>
</tr>
</thead>
<tbody>
<tr>
<td>1851</td>
<td>732,587</td>
<td>91,002</td>
</tr>
<tr>
<td>1871</td>
<td>934,400</td>
<td>224,258</td>
</tr>
<tr>
<td>1891</td>
<td>1,313,653</td>
<td>559,661</td>
</tr>
<tr>
<td>1901</td>
<td>1,550,614</td>
<td>871,991</td>
</tr>
</tbody>
</table>

From these and other figures he calculates that, whereas the Catholic increase for fifty years is only 111.5 per cent, that of the Protestants during the same period is 867.2 per cent. The question is a complicated one, because we do not know the methods by which the Protestant figures are obtained, i.e. whether they include only really initiated Christians; what proportion of the conversions are permanent, or how far pecuniary assistance has to do with many of them. Putting this aside, it is to be noted that whereas most of our Catholic energy is taken up by permanent ministrations to numerous stable bodies of hereditary Catholics, Protestant missionary enterprise is to a great extent of recent origin, and has had before it an open field. The different missionary societies on their first arrival find themselves free from pre-existing ties, and can give their whole energy to breaking new ground in remote districts, where there is always the best chance of securing rapid results. Only after the pioneer work is finished, and the Protestant converts are settled down as hereditary Christians, will the comparison of percentages provide a fair test. Moreover if percentages are left aside, and attention paid to the actual growth of numbers, it will be found from the above figures that whereas Catholics have increased by 817,727, Protestants during the same period have only increased by 780,899. This fact puts quite a different aspect on the case.

Architecture and Archaeology.—India is rich in archaeological monuments of various kinds, and presents a remarkable variety of architectural works of highest excellence, embodying the history of the past. First come the stupas or toposes connected with early Buddhism, and dating centuries before Christ. The chief of these are found at Sarnath near Benares, Gaya, Sanchi, and other parts of Northern India, the scene of the original Buddhist movement, and at Anuradhapura etc., in Ceylon. The country is also dotted over with Buddhist rock-cut temples and monasteries dating from a century before Christ to about the seventh century A.D., the most important being those at Ellora and Ajunta, Nasick, Badami,
Kennery in Salsette, and Karli near Poona, etc.; besides these there are numerous Brahminical rock-temples dating from about the seventh century, apparently in imitation of Buddhist precedent. Of these the best known is that of Elephanta near Bombay, cut during the seventh century. The most delicate and graceful are those at the great development of Hindu temple-building, chiefly in the South of India—of which noble specimens are to be seen in the Mysore and Dharwar districts, e.g., Lakundi, Aivally, Patdagut, Badami, etc., near Gadag, and also in the parts round about Madras. Hindu art reached its climax in the fourteenth and fifteenth centuries, as at Vijayanagar, Madura, Tanjore, Trichinopoly, and other places near the Coromandel Coast. Nor should Benares or the Orissa Coast be omitted. In the thirteenth century the Jains of Rajputana had attained wonderful perfection in the marble carvings of the interiors of their temples, of which the finest specimens are seen on Mount Abu and at Girnar. In the sixteenth and seventeenth centuries Moslem art also grew to the highest perfection in Agra, Delhi, and other northern centres, and also in the Deccan sultanes at Gulbarga, Golconda, and Bijapur. At Ahmedabad a style of Moslem architecture was developed through the employment of Hindu workmen under Mohammedan direction; while in Sind the mosques are remarkable for the splendour of their interior decoration with encaustic tile-work. Among secular buildings the palaces of rajahs and sultans, and the hill forts of the various chiefasl, are objects of interest. Add to this the eminence attained by Indian artisans of the past in all kinds of jewellery work, brass work, enamel work, wood carving, weaving, and embroidery, and it will be seen that there is probably no country which might more profitably be visited by the art student than India.

Catholic Archaeology. Except for the reputed tomb of St. Thomas near Mylapur, the two shrines at the Great and Little Mounts close by, a few early stone monuments, and a few inscriptions on copper in Travancore, ecclesiastical antiquities are wanting before Portuguese times. The Portuguese churches of the sixteenth and seventeenth centuries, though without pretension to high artistic style, were in many cases majestic and imposing. The finest group was naturally at Goa, but the ruins at Bassein and Chaul near Bombay are also of remarkable interest both for number and size. Elsewhere the churches are mostly of secondary importance. In course of time, however, Christianity is marked by numerous stone crosses of a peculiar shape scattered about the country, especially along the seashores and on the tops of hills near Bombay. Among modern buildings of note may be mentioned the cathedrals of Allahabad and Lahore, the churches of Mangalore and Trichinopoly, and the parish churches of Karachi and the Holy Name, Bombay. The college buildings of Trichinopoly, Calcutta, Darjeeling, and Bombay are also worthy of mention.

Religious Policy of Government. With regard to religion, the Indian Government maintains an attitude of strict neutrality. The Church of England is not in any sense "by law established", and whatever official countenance is given to it rests purely on the principle of providing for the religious requirements of subjects belonging to its communion, e.g., by appointments and salaries for bishops, military chaplains, and subsidies for the building or maintenance of military churches. A similar patronage, etc., is extended to the Scotch Presbyterian Church, and in a less degree to the Catholic Church. No better statement of the details of the law can be found than that already given by Mr. J. A. Salaman in the "Encyclopedia", 23 February, 1907, and 24 July, 1909, which runs as follows:

In British India. One of the fundamental principles of the British Government in India is the toleration and equal protection of all religions. Every religious denomination enjoys the utmost freedom of action, and the religious privileges and susceptibilities of every community, caste, and class are respected with due regard to the benefits consequent upon the general policy of the Government. The religious and social customs of every community and race are respected, provided they do not offend to the weaker as well as to the strong, to the Brahmin as to the Pariah, to the Christian, to the Mahomedan, and to the Pagan. This attitude of toleration, protection, and equal treatment of all religions was affirmed in the most emphatic language in the royal proclamation of 1858:—"We declare it to be our royal will and pleasure that none be in any wise favoured, none molested or disquieted by reason of their religious faith or observances, but all shall alike enjoy the equal and impartial protection of the Law; and we do strictly charge and enjoin all those who hold in authority to take care that there be no all interference with the religious belief or worship of any of our subjects, on pain of our highest displeasure. Assemblies within religious edifices or outside are never to be interfered with in British India except in cases of disorder. The police authorities have the right of licensing and regulating public assemblies on public roads under Act V of 1861. On the other hand, under the same enactment they are bound to keep order "in the neighborhood of places of worship, during the time of public worship. The utmost liberty is allowed to preach on religious subjects even in public streets, provided no occasion is given to offend the religious feelings of the hearers or others, and no disturbance of public peace or obstruction to traffic is caused. No restriction is imposed on other means of propagating a religion, except such as would bring the measures within any of the offences against religion or the offence of defamation as defined in the penal code.

Even practices regarded by the educated classes as grossly superstitious are tolerated. It is only in places to which the Prevention of Cruelty to Animals Act, 1860, has been specifically extended that measures can be legally taken to prevent the infliction of unnecessary pain on animals. In course of time, however, the superstitions and religious but inhuman practices of Sati and of Thaggu have been abolished by the strong hand of law.

No native of British India, nor any natural-born subject of His Majesty the King resident therein, is by reason only of his religion, place of birth, descent, colour, disabled from holding any office under the British Government (3 and 4 Will. IV, c. 85). The scrupulous regard to the policy of non-interference with religious practices of the people in British India is carried so far that the courts have always refused to interfere with the internal autonomy of caste. The principle is that where the caste exercises jurisdiction on a subject which interests its members, it is enough if it proceeds according to caste usage and exercises its powers with due care and in accordance with custom (see I. L. R. 24 Bom. 30; 26 Bom. 174). Where a community is a private and voluntary religious society resting upon a consensual basis, the law observed is that the members make rules for themselves and may constitute a tribunal to enforce the rules, and the decision of which tribunal is binding when it has acted within the scope of its authority and in a manner consonant with the general principles of justice. When the decision of a domestic tribunal has been arrived at bona fide, the court has no jurisdiction to interfere (I. L. R. XI Bom. 174). Act I of 1880 is the only enactment in the
British Indian Statute Book relating to religious societies. It confers on bodies associated for the purpose of maintaining religious worship certain powers in respect of (1) appointment of new trustees in cases not otherwise provided for, (2) vesting their properties in one trustee without a formal instrument, and (3) dissolution of the societies by three-fifths of their number at a meeting convened for such purpose. Questions regarding the validity of the appointments of any trustee, as to whether any person is a member of a society, etc., can be submitted for adjudication to the High Court. This Act confers only certain enabling powers on religious associations, and allows High Courts to interfere only when there are certain disputes within an association.

One of the striking features of the British Administration in India—the result of its respect for the customs of the people—is that by far the great mass of them are allowed to regulate their laws of succession, inheritance, property, etc., according to their immemorial usages. The enactments regarding succession, wills, etc., are intended for communities who are supposed not to have any set usages to fall back upon. The State scrupulously avoids interference even with the usages of converts to Christianity. In Abraham v. Abraham (9 M. I. A., 195) the Privy Council held, "The profession of Christianity releases the convert from the trammels of Hindu Law, but it does not of necessity involve any change in the rights or relations of the convert in matters with which Christianity has no concern, such as his rights and interests in property acquired, and powers over property acquired, either by the Hindu law, may by his conversion to Christianity as such matters, or by any other positive course of conduct after his conversion has shown, or by what law he intended to be governed as to those matters." A recent decision of the Bombay High Court has gone so far as to recognize the legal existence of the peculiar system of Hindu co-parcenary among the native Christians of Kanara (8 Bom. L. R. 770). It is interesting to note how, where the State has thought fit to pass special enactments as to marriages and dissolution of marriages among Christians or converts, the usages of the Romish Church have been duly respected, as in the Christian Marriage Act of 1872 (Sections 9, 10, 30, 32, 65), and the Dissolution of Native Converts' Marriages Act, 1866, Section 34, which provides that "nothing contained in this Act shall be taken to render invalid any marriage of a native convert to Roman Catholicism, if celebrated in accordance with the rules, rites, ceremonies, and customs of the Roman Catholic Church." Such laws or usages as inflict on any person forfeiture of rights or property, and may be held in any way to impair or affect any right of inheritance, by reason of his renouncing or having been excluded from the communion of any religious society or being deprived of caste, have been declared illegal by Act XXI of 1851.

The only apparent exception to the policy of equal favour to all religious communities is the modest endowment of the established religion by the maintenance of Protestant Anglican Bishops and civil chaplains, and churches under their control and their establishment. This arose from the fact that the officers of the East India Company, which established British dominion in India, constituted largely of Protestants; and while the East India Company took good care to maintain old Hindu and Mohammedan religious edifices and the establishments of their ministers of worship which had been endowed and maintained by previous rulers, it was but natural that it should have provided for an ecclesiastical establishment needed for the majority of its officers. The Government of India Act, 1833 (3 and 4 Will. IV, c. 85), while authorizing the Anglican ecclesiastical institution provides for the appointment of two chaplains of the Church of Scotland on the establishment of each presidency. "Provided always that nothing herein contained shall be so construed as to prevent the Governor-General in Council from granting from time to time to any sect, persuasion, or community of Christians, not being of the United Church of England and Ireland, or of the Church of Scotland, such sums of money as may be expedient for the purpose of instruction or for the maintenance of places of worship." In the last respect the Government of India cannot be said to be partial to Christians as compared with non-Christians; since it spends large sums of State money over a number of non-Christian religious edifices and institutions in continuance and perpetuation of the practice of their predecessors in the government of the country. This is done either directly by periodical payments, or indirectly by means of anuma or grant lands free from assessment. The Anglican ecclesiastical establishments had their origin in the ancient chaplaincies attached to the East India Company's factories in India.

The Roman Catholic religion comes in for rather an insignificant share of the State's bounty. Catholic troops are allowed the ministration of Catholic priests, but the State does not maintain them on anything like the scale extended to Anglican chaplains—the expenditure on Catholic military chaplains and their establishments, etc., for the whole of the Indian Army amounting to Rs. 254,000 per annum (1799). The allowance varies in value from 30 to 32 cents.) An instructive commentary on this part of the subject is furnished by the figures of expenditure in the Bombay Presidency. The Church of England costs Rs. 299,708 per annum; the Church of Scotland Rs. 34,453; while the Catholic Church receives only Rs. 10,574, or about equal to the salary of one Anglican junior chaplain. (The-Catholic allowance of Rs. 500 given to the archbishop is for statistical returns.) Compare this with the annual cash allowances given to non-Christian temples and mosques, amounting to not less than Rs. 255,000; in addition to the enormous revenues derived from lands presented to them by the State, on which the land assessment (which of course is not recovered) comes to close on Rs. 900,000. In other words, the British Government spends on non-Christian temples and
mosques over eleven lacs of rupees every year in the Bombay Presidency alone. Whether this obligation is inherited from its predecessors, and if so to what extent, is more than one can venture to say. In any case there is little ground for the extreme sensitiveness of the British Government to the religious susceptibilities of its non-Christian subjects.

In regard to educational institutions, the British Government in India generously patronizes and aids with grants schools and colleges established by individuals or associations, whether religious or secular. It is important to note that the Government and its civil authorities never think of interfering with the arrangements made in these aided schools for imparting religious instruction. What the Universities Act (VIII of 1904) and the educational codes require is that the schools and colleges should be efficiently maintained for imparting secular instruction up to the standard required. The question of the religious instruction of the pupils, even in institutions maintained by purely religious bodies, is one with which Government does not concern itself. Teachers of religion are not paid by Government as such, but they are select freedom in selecting the subject of religious instruction, the time of the day chosen, and the method of treatment. One cannot help wondering why this policy of the Government in India, viz., of non-interference with religious teaching in aided schools, cannot be adopted in England as a solution of its difficulty.

The British Indian law recognizes not only corporate bodies with rights of property vested in the corporation apart from its individual members, but also the juridical persons or subjects called foundations. A Hindu or a Mohammedan can establish a religious or charitable institution by simply expressing his purpose and endowing it; and the State will give effect to the bounty or at least protect it. A formal trust is not required for this purpose (I. L. R., 12 Bombay, 247; 7 Allahabad, 178). Under the native system of government it was looked upon as a heinous offence to appropriate to secular purposes the estate that had once been dedicated to pious uses (W. and B.; H. L. 207, 517). The State, however, in its secular executive and judicial capacity habitually intervened to prevent fraud and waste in dealing with religious endowments. It was quite in accordance with the legal consciousness of the people that the Bombay Regulation XVII of 1827 gave to the government the right to visit and inspect such institutions, to enforce an honest and proper administration of religious endowments. The connexion of the Government in its executive capacity with Hindu and Mohammedan foundations was brought to an end for Bombay by Bombay Act VII of 1863, and for Bengal and Madras by Act XXI of 1865. But the existence of such property and of the rights and obligations connected with it as objects of the jurisdiction of the civil courts is recognized by the laws just referred to. The law which protects the foundation against external violence guards it also internally against maladministration by its visitatorial government, confers the superintendence, the control of the institution, the use of its augmented funds. It is only as subject to this control in the general interest of the community that the State through the lawcourts recognizes merely artificial persons. It guards property and rights as devoted, and thus belonging, so to speak, to a particular allowed purpose, only on a condition of varying the application when either the purpose has become impracticable, useless, or pernicious, or the funds have augmented in an extraordinary measure. This principle is recognized in the law of England as it was in the Roman law, whence indeed it was derived by the modern codes of Europe, and is applied in constituting institutions, which, drawn in their plans through the guidance of the law, can draw up schemes for the management of a religious endowment and its funds, when internal disputes arise among its administrators or those interested in it, giving, however, due consideration to the established practice of the institution and position of the priests or ministers of worship and of other persons connected with it (see Justice West's remarks in I. L. R., 12 Bom., 247). Religious endowments have been held not to be vested in the public at large, but in the community public for whose religious benefit they were originally established (I. L. R., 7 All. 178).

The Courts in India have always refused to recognize the authority of the parishioners or the congregations of a church founded by the people themselves or their ancestors, and connected with religious worship according to the Roman Catholic ritual, to manage or divert its temporalities independently of their ecclesiastical superiors subject to the See of Rome, much less to interfere in its public worship or change the character thereof. Whatever be the rights of what are called "juntas" in certain parishes, the congregations are not deemed to have any legal existence independent of the vicar under the vicar Apostolic or bishop deriving his authority from the pope (see the decision of the Madras High Court of Feb., 1895, and the sub-judge's decision confirmed to it, printed in the "History of the Law, pt. III.," p. 273).

In Native States.—In the Interpretation Act, 1889 (52 and 53 Vict. c. 63), the expression "India" is defined as meaning British India together with any territories of any native prince or chief under the suzerainty of Her Majesty, exercised through the Governor General of India or through an Acting Governor or other officer subordinate to the Governor General of India. The territory of the Native States is not British territory; nor are their subjects British subjects. But the sovereignty over them, as Sir Courtenay Ilbert in his "Government of India" aptly observes, is "divided between the British Government and their rulers in proportions which differ greatly according to the history and importance of the several States, and which are regulated partly by treaties or less formal engagements, partly by sanads or charters, and partly by usage". The British Government has undertaken to protect these states from external aggression. But Government "as the paramount power (a) exercises exclusive control over the foreign relations of the State; (b) assumes a general but a limited responsibility for the internal peace of the State; (c) assumes a special responsibility for the safety and welfare of the British subjects resident in the States; (d) in the absence of a natural or legal power or principalities expressed by treaty or based on tacit and long usage. Such delegated jurisdiction is exercised also on British railways running through protected states, in civil stations, cantonments, and residences within them. In these areas a large number of British-Indian enactments have been introduced by the Governor General of India under the operation of Act XXI of 1879, the preamble of which runs as follows:—"Whereas by treaty, capitulation, agreement, grant, usage, custom, and other law, the Government of India in Council has power to regulate the conduct of the subjects of the Crown within the limits of British India."

It is by virtue of this legislative provision, that the Divorce Act (IV of 1869, as amended by Acts XI of 1889 and II of 1900), the Christian Marriage Act (XV of 1872, as amended by Acts II of 1891 and II of 1892), the Administrator General Act (II of 1874, as amended by Acts IX of 1890 and VI of 1900), Married Woman's Property Act (III of 1874), Births, Deaths and Marriages Registration Act (as amended by Act XVI of 1890) and Pilgrim Ships Act (XIV of 1895) have been made applicable to subjects of His Majesty within the dominions of Prince of Native States in India under the sovereignty of His Majesty.

The British Government also exercises jurisdiction in some Native States over the subjects or a class of the subjects, of such states, which is called residuary;
that is, what remains outside the actual sovereign powers exercised by the native princes. When any Indian chief dies without an heir, or leaving a minor heir, or proves himself incapable of ruling, the British Government steps in and administers the affairs of the State through their agent, and even when they have been named by Sir William Lee-Warner ("Protected Princes of India", p. 330), substituted jurisdiction. In such case it is the Governor-General of India or the local governors that conduct the administration, while the British Indian Legislatures are unable to extend their authority over the native subjects of Indian Princes or their territory. It is the prince, not the British Crown and not the British-Indian Legislatures, whose enactments may be introduced only by the British executive authority by means of special orders. In the exerexis of the substituted jurisdiction, as in Mysore during a long minority administration, a large number of Indian legislative enactments have been introduced in several Native States administrations.

The have also built up their legislative code on the model of the British-Indian legislation. Thus we shall find that there is no State in which the Indian Penal Code or some code like it has not been introduced with all the provisions relating to offences against religion (Sections 296-298 Indian Penal Code). But there is none so simple as that of a Chingle Native State which can boast among its legislative achievements any enactments similar to the Caste and Religious Disabilities act (XXI of 1851), which declares as illegal "such laws or usages as inflict on any person or property or may be held in any way to impair or affect the liberty of conscience, by reason of his renouncing or having been excluded from the communion of any religion or being deprived of caste". It is a master-piece of British statesmanship and policy of toleration and equal protection of all religions. That it should not find a place in the statute book of a State like Mysore governed on the highest liberal principles, in which a native Catholic of the State rose to the eminent position of a judge of the Mysore High Court and then that of a member of the Council of Administration, and in which Christianity thrives splendidly side by side with Hinduism and every other religion, is an enigma which outsiders are at a loss to understand. The agitation for the introduction of legislation on the lines of the British-Indian enactment in the large Native States of Mysore and Travancore has failed woefully.

But for this law in the administration of the Native States, it might be said to their credit that the principle of religious toleration has been generally respected by Indian princes and rulers. There have been some rare instances in which the British Government has found it necessary to interfere on the score of religious intolerance of a chief. One of the most memorable was the refusal of Lord Ripon to allow the Maharajah of Indore to restrict the freedom of religious worship of the Canadian missionaries within their own houses and in their own premises, a privilege which has extended to their converts and dependents, the native subjects of His Highness. Though there are native rulers, who have not surrendered a jot of their internal sovereignty over their native subjects, yet their very existence is tolerated and guaranteed by the conditions obtaining a just and peaceful administration combined with toleration of all religions—if not equal protection of all religious bodies and sects. The latter condition of equal protection could not be exacted from Indian chiefs by a European Government which boasted of an established Church supported by the State at home—though it has practically found its way in from such an entanglement in India. So every Indian State has its established church—generally that of the religion of the chief—maintained out of public funds. Many a ruler has at the same time extended his patronage to religious communities other than that to which he belongs by grants of land to their places of worship and nemmuku or allowances to their religious ministers. There are numerous Christian educational and charitable institutions in Native States, which have received large grants-in aid from Indian chiefs and darbars. Christian bishops and missionaries are generally treated with marked respect and receive every courtesy from darbars and their officers. Where religious propaganda is, it is true, looked upon with disfavour by the people especially those of higher castes of Hindus, and with the ancient impassable barriers of caste or fanaticism the progress of Christianity is necessarily slow in India, and slower still in most Native States which support an established church. Foreign missionaries have not so much suffered from the prohibition against their acquiring lands, but this prohibition does not apply to native Christians, in whose names any number of lands can be purchased for the use of missions. On the whole, Christian missionaries have to be thankful for the liberal principles on which native administrations are conducted under the guiding hand of the British Government.

**Ecclesiastical Literature.**—From the Catholic point of view nothing in the way of a complete general account of the Church in India has yet been written, though the materials for such work are abundant and might easily be collected. They consist chiefly of the records and histories of the different religious orders, collections of official documents, monographs on particular missions and biographies of eminent missionaries as well as occasional literature of various kinds. Some rather scanty general histories have been written by Protestants: but most of them are vitiated by a marked Protestant-Catholic, and have to be read with caution. The following is a somewhat promiscuous list of works, most of which are easily accessible:—On the Thomas Christian Movement in Travancore (1901): MEDLYCOTT, India and the Apostle St. Thomas (1865): RAYLE, History of Catholic Missions in Travancore (1745): CERDAN, The Church of Melchisedec and the Synod of Damien (1864): PHILIPS, The Syrian Church in Malabar (1899): KENNEDY, St. Thomas, Melnik Har, Syrian Church in India (1892): HOWARD, Christians of St. Thomas (1864), Concerning the Portuguese—LAVITTE, Decades (1777): DE LAUBADE, Relation de l'Inquisition de Goa; FORNARE, Sketch of the City of Goa (Bombay, 1870); Bullarum.
Indiana is one of the United States of America, the nineteenth in point of admission, lies between 37° 47' and 41° 50' N. lat., and between 84° 49' and 88° 2' W. long. Its length is 267 miles north and south, and its average width east and west, 140 miles. Its area is 38,855 square miles, or 22,966,400 acres. On the north it is bounded by the State of Michigan and Lake Michigan, on the east by the State of Ohio, on the south by the Ohio River, and on the west by the Wabash River and the State of Illinois. It is subdivided into ninety-two counties. Indianapolis is now the capital, situated in the geographical centre of the State. The State has only four large ports, Michigan City, Indiana Harbor, and Gary.

Physical Characteristics.—There are no mountains in the State; the area is generally level or undulating, but with continuous drainage slopes of considerable extent. The most rugged or broken portion of the State borders on the Ohio and extends north from twenty to fifty miles into the State, with many small valleys and table lands. There is more or less broken land adjacent to the larger streams, but back of these the country undulates and becomes level with easy drainage. More than eighty per cent. of the State was originally dense forest, interspersed with open stretches. In the north-west portion of the State the great prairie begins that stretches across Illinois. Approximately ninety per cent. of the original forest has been cleared and the land brought to a high state of cultivation. The Wabash and Ohio are the only navigable rivers, the former having once been navigable for light draught steamers as far as Richmond, and the latter as far as Vincennes. But navigation to any extent has receded to a point below Terre Haute. All streams originally abounded in fish, but the supply has greatly diminished in recent years; strict fishery laws are now in force to encourage an increase.

Population.—This, like the other central States north of the Ohio, is composed of a population of mixed origin (2,775,000 in 1906). Its first white settlers were the French from Canada, of whom some traces still exist, mainly near Vincennes, at Terre Haute, and around South Bend. The next in order of time were pioneers from Pennsylvania and New York, Ohio, who first settled the southern counties. With later material progress in the nineteenth century, New York and New England blood contributed to the population of the northern part of the State, with generous infusions from the mixed races of Pennsylvania and Maryland. The digging of the Wabash and Erie Canal attracted large numbers of Irish and German immigrants, who worked upon the project. With the railroad and agricultural development in the middle of the century came further infusions of Irish, German, New England, and Eastern blood—the two latter classes being the descendants of ancestors who had pressed the frontier, and who now, more than a century or more preceding the Revolution, but thoroughly Americanized under the conditions of their new habitat. Foreign immigration in the past thirty years has not added largely to the population, but has proceeded farther west, leaving, however, as it passed the State, some English, Swedish, Germans, and Swis.

Resources.—Although Indiana stands thirty-fifth in area among the states, in agricultural resources the State stands fifth in the production of wheat, and sixth in that of corn and oats. In 1908 the State produced 32,746,145 bushels of wheat from 2,639,390 acres; 31,368,520 bushels of oats from 1,528,502 acres; 120,447,862 bushels of corn from 3,884,980 acres; 4,143,064 bushels of potatoes from 66,884 acres; 1,835,244 tons of hay from 1,317,455 acres; besides important items of tomatoes, clover, tobacco, peas, oats, clover seed, but most of the crops are eggs and apples. The State is also a liberal producer of horses, cattle, hogs, and sheep. The assessed valuation of its farms is $600,172,175. In 1908 the population was 2,775,000; its total taxable wealth was $1,767,515,487. Of gravel and macadamised roads there were 20,000 miles of macadamised roads; 18,742 miles of railroads; 7,142, and 1,763 miles of electric inter-urban roads. Ohio and Switzerland are the only counties
INDIANA 739

without railroads. The manufacturing interests of the State are considerable; in 1905 there were 7,912 factories representing an investment of $311,526,000, with 154,174 wage-earners. The value of their product was $394,165,638, and the wages paid were $722,106,490. The total income of the State in 1907 was $3,135,715,715; its net income from its state industries was $5,103,297 barrels of oil valued at $4,488,213; of oolitic limestone the product value was $3,673,965.

EDUCATION.—According to latest estimates the total value of school property (public and religious) is $35,792,030; the number of teachers, 15,677; of pupils enrolled, 531,731. The public school fund of the State (including university fund) is $1,118,433. The State university is located at Bloomington, established according to the declaration of the first State constitution, and was opened in 1824. President Hall, a Princeton graduate, constituted at that time the whole faculty. It has many large buildings, a faculty numbering seventy-two, and about 1800 students, of whom over one-third are young ladies. Purdue University at Lafayette owes its name to John Purdue, a wealthy bachelor of that city, who endowed it as an agricultural college. It was founded by legislative enactment in 1863 as Indiana's land-grant college, under the congressional act of 1862, when 13,000,000 acres of government land were set aside for establishing industrial colleges to advance agriculture and the mechanical arts. It is one of sixty-five similar institutions founded in the United States. It has over 2100 students, 237 professors, some twenty-five substantial buildings, and a large U.S. experimental station. The campus and experimental farm cover 180 acres. Although supported by legislative appropriations it is over-taxed for room and facilities. Coeducation prevails at Purdue and the State university, and in other State educational institutions. It is estimated that in 1907 Purdue gave instruction to more than 100,000 people by its regular course, its short course in agriculture, its farmers' institutes, and, by its corn and fruit excursion trains with its professors and instructors accompanying the trains.

The public free school system of the State is now developed to a degree commensurate with the needs of the population. This development had its impetus from the spirit which dictated the constitution of 1852. Previous to that period, free public education was scattered and meagre. A system of consolidating public schools into larger units and to a greater efficiency and the free transportation of pupils (made possible by the law of 1897) are doing much in rural districts to lift education to a higher plane. Local township taxation has been liberal in advancing this system. No small factor in raising the level of rural intelligence, moreover, has been the extension of rural letter mail delivery, providing a daily mail, with daily newspapers and periodicals. The State is also well supplied with rural telephone systems and good roads.

Institutions worthy of mention are Wabash College at Crawfordsville, a Presbyterian school with 281 students; Earlham College, near Richmond, with 413 students, founded by the Society of Friends; Franklin College at Franklin, a Baptist institution; De Pauw University at Greencastle, under Methodist influence, with 924 students; Taylor University at Upland; Butler University (near Indianapolis), founded by the Church of the Disciples; Rose Polytechnic at Terre Haute, where also is the State normal school; Hanover College, founded in 1827 by Presbyterians, near Madison, with 138 students; Chautauqua classes at Winona Lake, and its technical institution at Indianapolis; Culver Military School, (Lake Shinook) near Notre Dame (in the U.S.); the normal school at Valparaiso, with 4000 students, the Indiana Kindergarten Training School at Indianapolis; manual training and domestic instruction have been instituted by about seventy-five towns; there are also State schools for blind, deaf and dumb, feeble-minded, and soldiers' orphans, where industrial training is also carried on.

History records that the first known regular school in the State was that of the Catholic priest Rivet at Vincennes (1793). Three years later there is an account of a little school in Dearborn County. As settlers came into the south-eastern counties children were taught in their homes. Owing to dangers from Indians and wild beasts, the teacher went to the homes, spending one-third of the day there. Thus with six families a teacher gave three lessons each week to all the children. Later, as danger of going through the forest decreased, the children congregated at the home of a centrally-located family, where a lean-to was built for their use against the pioneer's cabin. When possible a log house near some living spring would be built and a teacher hired for three or more months, and "boarded around" with the patrons. It is a matter of history that some of the early log school houses in Indiana and Washington County were constructed with loop-holes for shooting at Indians. Barns and mills were often utilized. At Vevay (a Swiss settlement) the first school taught in English was in a horse mill.

In many southern counties after the Indian wars, block-houses were turned into schools. The interiors were of the crudest character. Adventurers from England, Scotland and Ireland, or the East, were generally the teachers in these primitive days. Many of them, to increase their earnings, chopped wood after school and on Saturdays. In these days there were no regular school books. Any accessible book—the Bible, Gulliver's Travels, or Pilgrim's Progress—was used to teach pupils to read. Ink and paper were almost as scarce. But as time went on, with the advance of civilization, these primitive conditions, so common to all the States west of the Alleghenies at some time in their history, were replaced by larger facilities, with better teachers and a fuller supply of books. But this may be taken as a true picture of pioneer days previous to (if not for a decade after) the adoption of the constitution in 1816. Struggles against the forces of nature, the sparseness and poverty of the population, made education in a general way a secondary matter. It was out of this condition that was evolved the theory and the system of free schooling in the rudiments at public expense.

Harvay.—Indiana was originally part of the French possessions extending to the Gulf of Mexico. It was first visited in the latter part of the seventeenth century by hunters and Indian traders from Canada, and government posts were extended in the early years of the eighteenth century down the Wabash as far as Vincennes. In 1755 and 1757 the territory embraced by the State was ceded to England. At the time of the cession to Great Britain of the north-west territory
it is estimated that north of the Ohio it contained about 1200 adults, 800 children and 900 negro slaves. Many retired to French posts like St. Louis. That portion of this domain, now known as Indiana, remained territory less than ten years. By the treaty of 1783 it was ceded to the United States, after the English had been surprised and driven from Fort Vincennes by the heroic exploits of General George Rogers Clark. The post of Kaskaskia on the Mississippi was the first object of acquisition in Clark's asthma north-west territory.

It was at this old town that Clark first met Father Pierre Gibault, to whom (as Judge Law states in his history of Vincennes), next to Vigo and Clark himself, the United States is more indebted for the accession of this great domain than to any other man. He was a native of Montreal, where he was born in 1737. He had been ten years pastor at Kaskaskia, much beloved and of great influence. Having been formerly at Vincennes, he was well known there. He had little sympathy with his new masters, the English. Clark's humane and liberal treatment soon won the hearts of the Canadians and the influence of Father Gibault, there was easily wrested from the good priest to win over the allegiance of his compatriots at Vincennes. This he undertook at once in face of the difficulties of wilderness travel and Indian dangers, and readily accomplished it after a two days' sojourn there. The American flag was hoisted over the old fort by all who refused to take the oath of allegiance. Vincennes, so easily captured and at once garrisoned and officered by Clark, was soon afterwards (Dec. 1778) retaken by a large force of English under Colonel Hamilton, dubbed by Clark as the "hair buyer" general, because of his being accused of offering rewards to the Indians for American scalps, and of his efforts to harry the frontier by Indian raids. It was in the second and final capture of Vincennes from Hamilton that Clark and his pioneers proved their prowess and earned the gratitude of their country against almost superhuman difficulties.

It was again at this juncture that the influence and services of Father Gibault, supplemented by those of the Sardinian merchant Francois Vigo, were so essential to Clark's heroic enterprise. Patrick Henry (then Governor of Virginia) refers to him as "the priest to whom this country owes many thanks for his zeal and services". He probably the highest compliment paid to Gibault's loyalty and devoted services could be found in Colonel Hamilton's wrathful denunciation of his influence. Indian attacks continued to make the State an unsafe place of residence, but the campaign of General Wilkinson in 1791 and later of General Wayne discomfited and disorganized the savages, and many tribes submitted. In 1800 Ohio was carved off from the north-west territory as a separate State, and the territory west and north-west was designated Indiana Territory. On 4 July, William Henry Harrison became its first territorial governor, resident at Vincennes. In 1805 Michigan, and in 1809 Illinois was consecrated and organized. But settlements continued to increase against Indian and natural obstacles and by 1810 the population, confined mainly to the southern end of the territory, amounted to 24,250. From the day that the British flag was hauled down at Vincennes until a decade after the Indians were scattered by the pioneers of Kentucky and Indiana, fighting back to back at Tippecanoe, the history of the State was one of long and bloody effort upon the part of the settler to win the fertile soil for homestead and plough. Year by year the front line of civilization was pushed farther and farther up the State, its advance marked by block houses and by forts.

The record of this period is one of fierce reprisal of white man against red man, and of red man against white man, in which the savage played a steadily losing game. That deep-rooted hatred against the Indian for his aid to the English in the war of the Revolution, nothing could quench in the breast of the pioneer. He was the peer of the Indian in woodcraft, and stealthily and his mates to this day this weapon went with his plough side as, furrow by furrow, the soil yielded to its new claimant, forever. The threatening attitude for Tecumseh, who was an Indian of unusual ability of organization, determined the governor to proceed against him. On 6 Nov., 1811, Harrison's army moved on the Wabash, about five miles below the mouth of the Tippecanoe. The next morning, before daylight, in violation of previous agreement, the Indians (Tecumseh being absent), led by his brother, "The Prophet", attacked the Americans and a massacre was narrowly averted; but the frontiersmen fought bravely and stubbornly and turned the attack into a victory. Aside from minor skirmishes up to 1815, which marked the close of the war of 1812, the troubles from Indians were spasmodic (caused by wandering bands) for another decade. Yet the battle of Tippecanoe must stand as a decisive one in western history. In answer to a petition for arms from the people of the State admitting the State was passed in April, 1816, and on 29 June following the State adopted a constitution. On 11 December the State was formally admitted. It was not without considerable effort on the part of the free-soilers of that day that a clause excluding slavery was added.

From this time forward emigration, mostly from the south-east, was so rapid that by 1820 the population was 147,178, and by 1830 the sales of public lands for the previous decade reached 3,588,221 acres and the population was 343,031. It had more than doubled since 1820. Down the Mississippi and its tributaries (the Ohio and Wabash) was to be found the sole outlet for the increasing produce of the Middle West, whose waters drained into the great valley. Districts which were not upon streams navigable by even the lightest draught steamboat were sorely retarded. The small, flat boat was their main reliance. Roads suitable for heavy carriage were few up to the middle of the century. To meet this condition the building of canals (espoused by the constitution of 1816) was long advocated, in emulation of Ohio which took example after New York State. In 1826 Congress granted a strip two miles wide on each side of the proposed canals. A very extensive and ambitious scale of main and lateral canals and turnpikes was anticipated in consequence. The expense and time attending shipment of merchandise from the east at this time were almost prohibitive. Yet 100,000 bushels of salt came to the State each year from central New York, because it was a necessity, regardless of price. Work began on the Wabash and Erie Canal in 1832, on the White Water in 1836, on the Central in 1837. But bad financing and "bad times" nearly wrecked the whole scheme; yet the Wabash and Erie Canal was completed from Fort Wayne to Evanston, and has become a great development of the State, although it brought heavy loss upon the bondholders on the advent of the railroad, which competition the canal at that time could not stand.

Before the canal was in operation wheat sold at 37 to 43 cents, and corn at 16 to 20 cents per bushel. Salt brought $10 per barrel, and sugar from 25 to 35 cents per pound. But the canal increased prices of farm produce, three dollars for fourfold and reduced prices of household needs, 60%, a tremendous stimulus to agricultural development. By 1840 the population of the upper Wabash Valley had increased from 12,000 to 270,000. The canal boat that hauled loads of grain east came back loaded with immigrants. In 1846 it is estimated that over thirty families settled every day in the State. Manufacturing also developed.
rapidly. In the ten years between 1840 and 1850 the counties bordering the canal increased in population 397 per cent; those more fertile, but more remote, 199 per cent. The tide of trade, which had been heretofore to New Orleans, was reversed and went east. The canal also facilitated and brought emigration from Ohio, New York, and New England, in the newly settled regions in the north and east, and still more in the two northwestern counties of the State. The foreign immigration was mostly from Ireland and Germany. Later, this great canal fell into disuse, and finally very unwisely was abandoned, as railway mileage increased. In the next ten years, by 1840, of the public domain 9,122,688 acres had been sold, but the State had a debt, although growing rapidly. In 1851 a new constitution (now in force) was adopted. The first constitution was adopted at a convention assembled at Corydon, which had been the seat of government since December, 1813. The original state house, built of blue limestone, still stands; but in 1821 the site of the present capital (Indianapolis) was selected by the legislature; it was in the wilds, sixty miles from civilization; to-day it is a city of 225,000 inhabitants and the largest inland steam and electric railroad centre without navigation in the United States. Yet no railroad reached it before 1851.

The State sent three regiments to the Mexican war. Lew Wallace (afterwards general in the rebellion and the author of "Ben Hur") was a second lieutenant. All her regiments were officered by volunteer officers. During the war between the States, Colonel P. Morton (late U. S. senator) was the war governor and lent the full force of his strong character to the demand made upon this State, which furnished to the Civil War 208,000 soldiers. In addition to the sums expended by the State, the counties and townships gave in counties, $1,492,876; for the relief of soldiers and their families, $4,660,888; and for other expenses, $195,866. Her total loss from battle and the incidents of war was 24,416. Her troops saw service in every Southern State. There is a National Soldiers' Home at Marion, established by Congress in 1890, and a State Soldiers' Home near Lafayette, created by the legislature in 1865. Benjamin Harrison, the third President of the United States, had been a resident of the State since his twenty-first year and was the grandson of her first territorial governor, who was later elected ninth President of the United States. Thomas A. Hendricks, Vice-President of the United States, was elected with Grover Cleveland in 1884; both Harrison and Hendricks were lawyers of national reputation.

Religion.—History.—The first religion of Indiana, after its emergence into the daylight of history, was that of the Roman Catholic Church, brought thither by those missionaries of New France who followed the lakes and watercourses to the valley of the Wabash. The earliest of these priests was the Jesuit Allouez, whose rude mission-house stood on the St. Joseph River, within the present limits of Indiana, in close neighbourhood to the present site of Notre Dame University. The ground on which this mission stood is the earliest recorded land grant in the territory comprising the State's present limits. It was made in 1686 to the Jesuit Mission on condition of their erecting a house and chapel there within three years. Here the founder of the church in Indiana died in 1689. His place was taken by Father Claude Allouez, who for many years ministered to the Christian Indians and the flitting coureurs des bois, who passed back and forth over this portage, which transferred their canoes from the waters of the Great Lake basin to those of the Great Valley. The mission was suspended by trouble with the Miamis for a few years, but in 1708 was restored under Father James Gravier. In 1711 he was succeeded by Father Peter F. X. Chardon, but Charlevoix found it deserted in 1721. Until 1734 Father St. Pé was in charge and his successor was Father Du Jaunay. In 1719 at Fort Ouiautenon on the Wabash below the present Lafayette, then at Fort Miami where Fort Wayne now stands, and finally in 1753 at Poste au Ouabache near the present site of Vincennes, these stations were established almost continuously down to 1763. On 22 July, 1741, at Fort Ouiautenon was born a child, Anthony Foucher, who was destined to be the first native of the State to receive Holy orders. Ouiautenon was the head of navigation for the largest pinnaces. Here some of the Indians were transferred to canoes. This made it an important rendezvous. As many as 20,000 skins a year are said to have been shipped from Ouiautenon in 1720 and the decade following. Yet not a vestige of this post remains—not even a stone upon a stone. From that point of time, until the battle of Tippecanoe (1811) marked the close of serious Indian warfare, there were only visiting priests at Vincennes and Fort Wayne. Confirmation was first administered at Vincennes about 1814 by the Bishop of Bardstown. Communicants were mostly of French origin, remnants of the early days of French sovereignty. The (a) Diocese of Vincennes—The Diocese of the whole State, was established in 1834, and its first bishop was Simon Gabriel Bruté. At the time he was named for this diocese he was president of Mount St. Mary's College, Emmitsburg, to which he had donated his library of 5000 volumes. He died after incredible hardships in 1859, a veritable martyr to his zeal for the faith. There were only two priests besides in the State at the time of his consecration. Celestine de la Hailrière succeeded him. He attracted the Eudists to establish a theological seminary at Vincennes, drew Father Sorin and the Fathers of the Holy Cross to begin the work now flourishing at Notre Dame, and the Sisters of Providence whose house adjoins Terre Haute. He resigned (1847) and was followed by Bishop Bazin, who died in six months and was followed by Maurice de St. Palais, who had laboured many years on the frontier. To him the State owes its first bishop, the Rev. Thomas D. Grimes, now Bishop of the Diocese of Evansville. He substituted for the Benedictine monks, whose house is at St. Meinrad. Bishop St. Palais died in June, 1877, rich in labours accomplished and much beloved. He had been offered the Archbishops of Toulouse, but refused. His successor is the present Bishop Francis Silas Chabot, formerly at the head of the Catholic College in Rome, now resident at Indianapolis. His jurisdiction is now known and designated as the Diocese of Indianapolis.

(b) Diocese of Fort Wayne. Erected in 1857, it comprises the northern half of the State. Its first bishop, John Henry Luers, a tireless labourer, was the founder of an association to care for infirm priests, and did much to extend the church under his care. There were only three schools and one college when he came. When he died there were forty schools and a university. His successor (1872) was Joseph Dwenger, founder of the St. Joseph's Orphan Home at Lafayette, and one for girls at Fort Wayne, who did much to extend the work of his predecessor in establishing parochial schools. He was also instrumental in the establishment of St. Joseph's College, near Rensselaer, by the Community of the Precious Blood. He was followed (1893) by Joseph Rememacher, who was transferred to the Diocese of Tehuacan, where he was consecrated (1883). This zealous administrator died in 1900, and was succeeded by the present incumbent, Herman Joseph Alerding.
ulation. The accompanying table shows the various forms of religion represented, according to the latest state statistics (1907).

Two notable religio-sociological experiments on a considerable scale were tried in the early history of the State, which attracted widespread interest. In 1815 George Rapp transplanted his Rappist brethren, numbering 500, to a tract of 30,000 acres bordering the Wabash, where they built a substantial town which they called Harmonie; there they formed a socialistic celibate community of people belonging to the German peasant class, originally from Württemberg. Their church, structure, the most massive and notable one west of the Alleghanies, was in the form of a Greek cross, about 120 feet in length; the roof was supported by eighteen pillars of native walnut, cherry, and sassafras, some of them six feet in circumference. Although eminently successful in

and parsonage, and the land whereon said buildings are situate, not exceeding ten acres, when owned by a church, also every cemetery, are exempt from taxation."

Sunday is a dies non; and all contracts or acts, otherwise legal, are void if executed thereon; and all persons are under statutory prohibition from pursuing their usual business avocation, or rioting, hunting, fishing, or quarrelling upon that day. The penalty is a fine of not more than ten dollars. Exceptions are made for those conscientiously observing the Seventh Day, and travellers, tollgate-keepers, and ferrymen. Profanity and blasphemy at any time are also subject to fine. All witnesses must take an oath most consistent with and binding upon the conscience. Those conscientiously opposed to an oath may affirm, under the pains and penalties of perjury. The legislature is by custom opened by prayer. Sunday, New Year's

Material advancement, they sold their domain in 1824 to Robert Owen, a Scotch philanthropist, who was ambitious of exploiting there some of his social theories. He rechristened the town New Harmony, and brought with him or attracted there many men of eminent culture, and it became a veritable Mecca for scholars and travellers during the years of Owen's proprietorship, and was an enduring influence for many years upon the intellectual development of the State. The experiment came to an end in 1829, with failure marked across its record.

Legislation Directly Affecting Religion.—By statute (enacted in 1881 and now in force) " Clergymen, as to confessions or admissions made to them in the course of the discipline enjoined by their respective churches, shall not be competent witnesses." By statute (enacted in 1891 and in force) " Every building used and set apart for educational, literary, scientific or charitable purposes, and the tract of land on which such building is situated, not exceeding forty acres; also the personal property, endowment funds and interest thereon, set apart for the purpose"; likewise "Every building used for religious worship, pews and furniture, Day, Christmas, and days recommended by the President of the United States, or the governor, as a day of public fasting or thanksgiving, Lincoln's birthday, Washington's birthday, Memorial Day (30 May), Labour Day, and days of any general, state, or national election, shall be legal holidays. If any such day falls on a Sunday, the Monday following shall be the legal holiday. All traffic in intoxicating liquors is prohibited on Sunday, the Fourth of July, New Year's Day, Christmas, Thanksgiving Day, and upon the day of any election in the township, town, or city where held; such sale is also prohibited on all days between eleven p.m. and five a.m. There are strict statutes against obscene pictures or literature.

In the constitution of 1851, now in force, the provisions relating to religious freedom in the constitution of 1816 have been substantially re-enacted and are worthy of note: " All men shall be secured in their natural right to worship Almighty God according to the dictates of their own conscience. No law shall in any case whatever control the free exercise and enjoyment of religious opinions or interfere with the right of conscience: no preference shall be given by
law to any creed, religious society, or mode of worship; and no man shall be compelled to attend, erect, or support any place of worship, or to maintain any cause, against his consent. No religious test shall be required as a qualification for any office of trust or profit. No money shall be drawn from the treasury for the benefit of any religious or theological institution" (Art. I, §47-51).

Marriage and Divorce.—The statutory grounds of divorce are: adultery, impotency (pre-existing), abandonment for two years, cruel treatment, habitual drunkenness, failure to make provision for two years, or conviction of infamous crime. There has been generally considerable liberality upon the part of the courts in granting divorces. In 1907 there were 80,469 divorces and 3980 divorces. It is estimated that the divorces of the residents of the cities are fifty per cent above those from rural communities. The marriage of negroes and whites is prohibited; all parties contracting marriage must procure a license; solemnizing without a license is punished by a heavy fine. Recent enactment has yielded to the public sentiment against easy divorce, and greater restrictions have been thrown about the procurement of the marriage licence. But legislation is far short of checking the evil.

Sale of Liquor.—Temperance sentiment has grown strong among Indiana each year for the past twenty years and has voiced itself in increasingly restrictive legislation. The majority of voters in any township may by petition prevent the sale for two years thereafter of intoxicants. And by the most recent enactment it is provided that, upon petition signed by twenty per cent of the aggregate vote last cast in the county for secretary of state, an election must be ordered to determine whether intoxicants may be sold within the county. A majority of the votes cast at such election shall determine the issue. Since this law was passed (Sept., 1908) about ninety per cent of the counties of the State have been made "dry" territory. The general sentiment of the community therefore is overwhelmingly opposed to the evils of intemperance, and the influence of the saloon in politics. Even where tolerated there are many statutory penalties, such as for selling to minors, to intoxicants in "dry" territory, maintaining "dry" rooms", and the others evils incidental to the traffic. The disposition is growing stronger in favor of a drastic enforcement of these statutes.

Matters Affecting Religious Work.—The title to the property of the Roman Catholic Church in this State has recently years been vested in the bishop of the diocese and his vicars and vicars in para-church, done to avoid the inconvenience of lay trusteeship of church and cemetery property authorized by statute. The statutes relating to wills have not hampered the devising of property for charitable or religious purposes. Married women may (when of age) devise by will their real or personal estate since the statute of 1852. Foreign wills proved according to the law of the country where made are admissible to probate in this State in the manner specially prescribed. Under the constitution (Art. XII) no person conscientiously opposed to bearing arms shall be compelled to do martial duty, but shall pay an equivalent for exemption. By recent statute clergymen are exempt from grand jury service. But, although there is no special statute exempting them from petty jury service, it has been the invariable custom not to draw clergymen for such service. By common law (no statute contrary) clergymen are exempt from jury or military service.

Catholic Schools and Religious Houses.—Notre Dame University, in St. Joseph County, in charge of the Fathers and Brothers of the Holy Cross, is one of the largest Catholic institutions of learning in the United States. It was started in 1844 by Father Sorin, assisted by several brothers. The students in 1907 numbered 833, and the faculty, 69 professors. It has some 800 acres of land; upon this estate, over 10 miles distant from the university, is situated a large school for young ladies, called St. Mary's of the Lakes, started in 1855 and directed by the Sisters of the Order of the Holy Cross; the number of students in 1908 was 297. A similar school, called St. Mary's of the Woods, west of the limits of Terre Haute, dates from 1858 when six Sisters of Providence settled near Loire, came with Mother Theodore at their head; their mother-house is located here; there were 208 scholars in 1908, and they have several other schools in the State. The Congregation of the Most Precious Blood took charge of the Indian School at Rensselaer, founded by Mother Josephine; they have conducted it until the withdrawal of government support in 1896 forced a discontinuance of the work. The college (St. Joseph's) started in 1891 is in a flourishing condition, having been enlarged in 1897; the number of students in 1908 was 200. The Poor Handmaids of Jesus Christ have a mother-house at Fort Wayne; they have charge of St. Vincent's Orphan Asylum and a hospital at Fort Wayne. Since 1887 they have had a sanatorium for consumptives at South Bend, a hospital at Laporte, and numerous schools. The Sisters of St. Francis of the Perpetual Adoration have a hospital (St. Elizabeth's) at Lafayette; the mother-house adjacent to the college is in charge of St. Joseph's Orphan Asylum (for boys) and St. Anthony's Home for the Aged, in the same city. They have also founded hospitals at Hammond, Logansport, New Albany, Terre Haute, and Michigan City; and elsewhere are in charge of schools. The Sisters of St. Joseph (founded by the Jesuit Medaille in 1650) have a convent school near Tipton, an academy in Tipton, and schools at Delphi, Elwood, Kokomo, and Logansport. The Sisters of the Most Precious Blood began their labours in Jay County in 1853; they are in charge of the Kneip Sanatorium near Rome City, and several schools. The School Sisters of Notre Dame conduct several schools in the State. The Sisters of St. Agnes have been engaged in similar work since 1872. The St. Francis Sisters of the Sacred Heart have a Home for the Aged Poor at Avilla, and nine schools and two orphan asylums in the State. The School Sisters of Notre Dame conduct at Otis. The Sisters of the Holy Family of Nazareth teach two schools at South Bend. The Sisters of St. Dominic have charge of schools at Earlham and Mishawaka; the Sisters of St. Francis conduct the Wabash Railroad hospital at Peru. St. Meinrad's Benedictine Abbey and College in Spencer County has a school and a hospital and of stone, connecting with large community and college buildings. To the abbey belong 40 priests, 12 clerics, 6 choir novices, 42 lay brothers, and 1 novice. There are 80 ecclesiastical students, and in the college 271 students. St. Joseph's Orphan Asylum for boys at Lafayette was founded in 1875, with an endowment of 580 acres bequeathed by Rev. George A. Hamilton and a gift of 51 acres from Owen Ball and James B. Falley. It has ample brick buildings and cares for 133 children. The Poor Handmaids of Jesus Christ are in charge of St. Vincent's Asylum for girls at Fort Wayne, with 106 children. The Franciscan Fathers have at Oldenburg a monastery and the theological study house with 24 clerics and 7 lay brothers. They are also engaged in pastoral work at Indianapolis and Lafayette. The Little Sisters of the Poor have a house at Indianapolis with 136 inmates, and at Evansville with 101 inmates. The Sisters of the Good Shepherd have a house at Indianapolis where the Order of Charity have hospitals at Evansville and Indianapolis. The Poor Clares have a monastery at Evansville. The Nuns of the Order of St. Benedict have a convent and academy in the same city. The mother-house of the Sisters of St. Francis is located at Olden-
burb, with an academy of 100 pupils. The Sisters of Mercy have a hospital at Lawrenceburg. The Ursulines have houses in Madison and Evansville; and the Servants of Mary at Mount Vernon. The Catholic population of the Diocese of Indianapolis (formerly Vincennes) was 118,200; that of the Diocese of Fort Wayne was 96,405.

Catholics Distinguished in Public Life.—Individual Catholics have not been prominent in the higher offices of public life. Until recent years, predominant religious feeling would have barred such preferment. But to the highest lines of business and positions of trust and honor in our factories and our universities, Catholics have entered in large numbers. Timothy E. Howard, one of the judges for some time of the Supreme Court of Appeals, and John E. Lamb, for one term a member of Congress from the Terre-Haute district, are both Catholics.

**Indianapolis, Diocese of (Indianapolis):** suffragan of Cincinnati, established as the Diocese of Vincennes in 1834, but by brief dated 28 March, and promulgated 30 April, 1898, the pope changed the see to Indianapolis. It comprises the southern half of the State of Indiana, south of Fountain, Montgomery, Brown, and Parke counties, and the eastern part of Madison, Warren counties, an area of 18,470 square miles. In 1834 the diocese extended over Indiana and eastern Illinois and was detached from the then Diocese of Bardstown. The Catholic history of Vincennes runs back to the establishment there of a fort by some French traders in 1702 and it takes its name from one of these intrepid Canadian explorers. In the settlement that grew up about this, as through all the Illinois, Kaskaskia, and Indiana country, Catholic families settled and rude churches were built for the Jesuit and Recollect missionaries who from time to time visited or wandered through them. When a Jesuit, settled there in 1764 to care for the desolate chapels and disorganized congregations. The British having taken possession of this territory in 1763, it formed part of the diocese of the Bishop of Quebec, who lived at Kaskaskia, and occasionally visited Vincennes, which had no priest. In 1768 he sent there Pierre Gibault, “the patriarch of the West”, who spent two months reviving religion among the Catholics of the district, about seven hundred in all. This was the same Father Gibault who, when Col. George Rogers Clark captured Vincennes in 1779 for the cause of the revolting colonies, was chiefly instrumental in persuading the settlers of this part of the West to throw in their fortunes against the English and immediately accept the new government of the colonies.

The Catholic population of the diocese was poor and ignorant, scattered widely, without priests except a few who belonged to other dioceses. To rule over them, Father William Whitehead, who had been consecrated as the first bishop on 28 October, 1834. “No priests, not one except those from other dioceses. Having come alone, I reside alone, in a most depressing situation”, he wrote after having made a tour of his charge. He went to Europe to seek help. In July, 1835, and returned to Vincennes in August, 1836, bringing back nineteen priests and seminarians and enough money to start a seminary, an orphan asylum and a school, to finish a humble cathedral in Vincennes and to aid several small churches elsewhere. This whole western section awakened to new religious life under his zealous inspiration, but the hardships of the missionary field broke down his strength and he died 28 June, 1839.

Celestine Réné Laurent Guynemer, prefect apostolic of Fort Wayne, succeeded him as second bishop. Born 2 May, 1798, at Friandin, near Cambour, France, he was ordained priest 28 May, 1825, and volunteered for the American missions in 1836. He had returned to France and was begging for aid in 1842 when he was named vicar apostolic of Fort Wayne. He became coadjutor to Bishop Bruté, who died, however, before the new bishop was consecrated in Paris, 18 August, 1839. In 1841 he estimated the number of Catholics in the diocese at about 25,000, attended by 33 priests. The same year he introduced the Congregation of the Holy Cross (the present important foundation at Notre Dame) into the diocese, also the Eudists to take charge of a college and the Sisters of Providence. He subsequently became disconcerted with the lack of harmony between himself and his clergy and resigned the see 26 July, 1847, but took no titular appointment. He afterwards claimed his native town to which he had retired, 1 May, 1882.

Jean Etienne Basin, Vicar-General of Mobile, was appointed third bishop and consecrated 24 Oct., 1847. He was born at Duureen, near Lyons, France, 15 Oct., 1796, and ordained priest 22 July, 1822. He left France to minister in Mobile in October, 1850. He manifested great zeal in the work of his diocese; but he died 23 April, 1848.

Jacques Maurice de St. Palais, vicar-general of the diocese, was consecrated fourth bishop, 14 January, 1849. Born 15 November, 1811, at La Salvetat, France, he was ordained priest 28 May, 1836 and emigrated to the United States in 1846, where he was made a diocesan missionary. After his consecration he made an official visitation of his diocese, where he found about 30,000 Catholics with 35 priests, among whom he at once infused a hearty spirit of activity. He introduced a foundation of Benedictine monks from the Swiss Abbey of Einsiedeln in 1849, and began an orphan asylum. Under his direction the diocese increased steadily, the number of priests rose to 104, churches to 145 and the Catholic population to about 80,000, with schools, hospitals and other institutions. He died 28 June, 1877.

Don Obadiah Silas Sebastian Rockford, then rector of the North American College, Rome, was appointed the fifth bishop and consecrated in Rome, 12 May, 1878. He was born in Baltimore, Maryland, 13 December, 1834, and studied at Mount St. Mary's college, Emmitsburg. He then took up the study of medicine and received the degree of doctor at the University of Maryland, but soon decided to enter Holy orders, became a student at the Propaganda College, Rome, and was ordained priest there in June, 1862, winning the doctor's degree the following year. In 1868 he succeeded Rt. Rev. William G. McCloekey as rector of the American College, having for several years previously been associated with its administration.

In 1900 Bishop Chatard asked for an auxiliary and Rev. Denis O'Donoghue, rector of St. Patrick's Church, Indianapolis, was consecrated 25 April, 1900, titular Bishop of Pomario and auxiliary to Bishop Chatard. Bishop O'Donoghue was born 30 Nov., 1848, at Clarion, County, Russell, in the County of Mayo, England. He received his education at St. Meinard's College, and at St. Thomas' Seminary, Bardstown, Kentucky. He studied theology at the Sulpician Seminary, Montreal, where he was ordained priest 6 Sept., 1874. He served as chancellor of the diocese for twenty-one years.

The religious communities now established in the diocese include: Men, 172—Benedictines, Franciscans (St. Louis and Cincinnati provinces and Minor
Conventuals), Brothers of the Sacred Heart. Women, 1762—Sisters of St. Benedict, Sisters of Charity, Poor Clares, Sisters of St. Francis, Sisters of the Good Shepherd, Sisters of St. Joseph, Little Sisters of the Poor, Sisters of Providence, Ursuline Sisters, and Servants of Mary. (1862).—Bishops, 2; mitred abbots, 1; priests, 222 (religious, 62); churches with resident priests, 138; missions, 50; stations, 10; chapels, 30; seminaries for seculars, 1, with 60 students; for religious, 1, with 35 students; colleges and academies for boys, 2, with 200 pupils; for girls, 10, with 583 pupils; parish schools, 108, with 15,097 pupils; orphan asylums, 2, in St. Louis and Denver, 2, 1872, with 1877 pupils; total young people under Catholic care, 16,354; hospitals, 5; homes for aged poor, 3, inmates, 237; Catholic population, 115,420, in a total of 1,284,493.

Thomas F. Meenan.

Indian Missions, Bureau of Catholic, an institution originated (1874) by J. Roosevelt Bayley, Archbishop of Baltimore, for the protection and promotion of Catholic Indian mission interests in the United States of America. The United States Government holds the initiative in the Republic as its wards and, accordingly, supervises them in all their internal and external relations. Consequently, missionaries, philanthropists, traders, and others who have to do with the Indians or who live among them, are obliged to approach them through governmental channels, and to conduct all negotiations with them under permission of Government. Indian Catholic mission interests being extensive, varied, and scattered over many States and dioceses, the Church, as a measure of expediency bordering closely upon necessity, established, at the seat of Government, the Bureau of Catholic Indian Missions, through which to transact the affairs of the missions with the United States Indian Office—the director of the Bureau being the mouthpiece of the hierarchy and of the missionaries in their official relations, regarding Indian matters, with the Government. In order to do its work intelligently and effectively, the Bureau has a limited supervision over missions and mission-institutions. At the present time the bishops and missionaries, generally speaking, look to the Bureau for the support of the mission schools and for material assistance in maintaining and establishing missions. To meet these demands, the Bureau, through various agencies, solicits alms for the missions from the Catholic body (Indian and white) throughout the United States.

The Bureau comprises: a board of incorporators—the Archbishop of Baltimore (president), James Cardinal Gibbons; Archbishop of Philadelphia, Most Rev. Patrick J. Ryan; Archbishop of New York, Most Rev. John M. Farley: a director, Rev. Wm. H. Ketcham; a treasurer, Very Rev. E. R. Dyer, S.S.; a secretary, Charles S. Lusk; a legal-adviser, Hon. Charles J. Bonaparte; a field-lester, Rev. Charles Warren Currier. The Archbishops of Baltimore and Philadelphia and the director form the executive board. As for the greater portion of the work by an Appointing Committee, the advent of the Catholic missionary antedates that of the United States Government. Prior to the creation of the Bureau, Catholic Indian affairs were adjusted locally between bishops and missionaries and Indian agents and other Government officials. The present form of this Indian work, in realizing that the western Indians could not be kept in a pacific state by money or force or promises, President Grant looked for the solution of the Indian problem in the Christianizing of the tribes. Accordingly he announced to Congress (5 December, 1870) his "Indian Peace Policy";—"Indian agencies being civil offices, I determined to give all the agencies to such religious denominations as had heretofore established missions among the Indians" was fair and practicable and might have promised successful had it been carried out impartially. In 1874 two Indian agencies, and perhaps to some other denominations who would undertake the work on the same terms—i.e., as a missionary work. This plan to give the agencies over to such religious denominations as had heretofore established missions among the Indians was fair and practicable and might have promised successful had it been carried out impartially. In 1874 two Indian agencies, and in thirty-eight of these Catholic missionaries had been the first to establish themselves. Despite this fact only eight—Colville and Tulalip in Washington Territory, Umatilla and Grand Ronde in Oregon, Flathead in Montana, Standing Rock and Devil's Lake in Dakota, Papago in Arizona—were assigned to the Catholic Church. Eighty thousand Catholic Indians passed from Catholic influences to Protestant control.

This condition necessitated vigorous defensive measures on the part of the Church. At the instance of the bishops in whose jurisdictions they were located, Archbishop Bayley on 2 January, 1874, appointed General Charles Ewing Catholic Commissioner. The same year, Very Rev. J. B. A. Brouillet, Vicar-General of the Diocese of Nesqually, was called to Washington to assist General Ewing. In 1875 Catholic ladies of the city of Washington organized the Catholic Indian Missionary Association. Father Brouillet became the director and treasurer of The Catholic Indian Mission Work. In 1879 the Bureau was officially created with General Ewing, commissioner, Father Bourillet, director, and Rev. Felix Barott, treasurer. On 13 June, 1879, the Sacred Congregation of the Propagation gave a letter of commendment to The Catholic Indian Mission Work. Father Barotti died in 1881 and was succeeded as treasurer by Charles S. Jones of Washington, D. C. On 14 June, 1881, the Bureau was incorporated under the general incorporation law of the United States. On 1 July, 1877, the B. J. C. created Ewing a Knight of the Order of St. Gregory the Great. On General Ewing's death (1883), Captain John Mullan of San Francisco was appointed Catholic Commissioner. Father Brouillet died in 1884 and Rev. J. A. Stephe was appointed director. By a decree of the Third Plenary Council of Baltimore, the Bureau was recognized as an institution of the Church and placed under a committee of five prelates: James Cardinal Gibbons, Most Rev. Patrick W. Riordan, Archbishop of San Francisco, Right Rev. James A. Healy, Bishop of Portland, Right Rev. John B. Brudel, Bishop of Helena, and Right Rev. Martin Marty, Bishop of Sioux Falls (in 1893 this committee was increased to seven by the addition of Most Rev. Patrick J. Ryan, Archbishop of Philadelphia, and Most Rev. Placid L. Chapelle, Archbishop of Santa Fe). The committee of five made appointments as follows: president, Right Rev. Martin Marty; vice-president, Most Rev. Placid L. Chapelle; director, Rev. J. A. Stephe; assistant director, Rev. George L. Willard; treasurer, Rev. J. A. Walter. In 1884 the committee of regents was dissolved and the Bureau reconstituted. The old organization was superseded by a new corporation chartered in 1893 by the General Assembly of the State of Maryland (approved 6 April, 1894), the Most Rev. Archbishops of Baltimore, New York, and Philadelphia being the incorporators, and the corporate title, The Bureau of Catholic Indian Missions.

Under the new organization Bishop Marty was re-elected as president, and at his death in 1896 he was succeeded by Cardinal Gibbons. Right Rev. Monsignor J. A. Stephe was director until his death in 1901.
The office of assistant director, vacant since 1890, was successively filled by Rev. B. J. Kelly and Rev. E. H. Fitzgerald. The treasurer, appointed in 1894, still holds (1899) the office of private secretary to General Ewing, has in reality served as secretary of the Bureau from its incipiency.

Work of the Bureau.—The Indian Peace Policy was in force from 1874 to 1882, but even after its discontinuance the need for the Bureau remained imperative. Being on friendly terms with the officers of the Indian Office, the Bureau has been instrumental in ameliorating the condition of the Indian, and in making tolerable the lot of the missionary, who, at all times, has been under close and galling Governmental supervision, and, in numerous instances, subjected to annoyance, humiliations, and petty persecutions on the part of Indian agents and agency employees. From 1874 to 1879, the Government authorities refused to concede to all religious denominations an equal right to go upon Indian reservations. For this sole reason a Catholic missionary was expelled from a reservation assigned to Protostants, and in 1880 the Indian Government declared itself unable to grant a permit for a Catholic missionary to go upon a Protestant reservation, though the fact that a reservation was under Protestant control did not signify that the Indians were Protostants. The same year, by order of the Department, a Protestant missionary was expelled from the Indian agency. In 1887 the agitation wrought a change in popular sentiment, which, together with the agitation kept up by the Bureau, caused the recognition, rather theoretical than actual, of religious liberty for Indians and Indian missionaries. Even yet the rights of conscience, so far as Indians are concerned, are often violated, particularly in the case of Catholic Indian pupils attending Government schools.

A fund known as the Catholic Indian Mission Fund, created chiefly by the Catholic Indian Missionary Association and partly by charitable donations and bequests, provided support for the Bureau up to 1887, and supplied it with means to assist the missions. During the twenty-two years following its organization it received and disbursed from this fund $48,717.38. All the officers of the Bureau serve without salary, with the exception of the director, secretory, and field-lecturer. The salaries and running-expenses of the Bureau are paid the annual lenten collection for Indian and Negro missions. The influence of the Bureau for good has steadily increased. President Roosevelt recognized the value of the institution and during the present administration (1909) it has received marked condescension.

Impartial observers of Indian affairs admit that the greatest good accomplished for the Indians has been through the agency of religious schools and particularly of Catholic schools, and it is in this cause the Bureau has done its best work. In 1873 Catholic missionaries and the Sisters of St. Joseph started the first Catholic mission school for Indians in the United States, at Flandreau, South Dakota, a few years later the first Catholic mission school for Indians in the United States, at Great Falls, Montana. In 1882 the first Catholic mission school for Indians in the United States, at Phoenix, Arizona, was established. In 1883 the first Catholic mission school for Indians in the United States, at San Francisco, California, was established. In 1885 the first Catholic mission school for Indians in the United States, at Los Angeles, California, was established. In 1887 the first Catholic mission school for Indians in the United States, at San Diego, California, was established. In 1889 the first Catholic mission school for Indians in the United States, at San Francisco, California, was established.

The highwater mark in the number of schools (forty-three) and boarders (seventeen day) was reached in 1890 and of Government of Government in 1892.

The remarkable success of the Catholic schools aroused great opposition, Protestant denominations suddenly changed their policy and declined to accept Government help for their mission schools, popular sentiment unfavourable to the idea of a Catholic school system was created by the American Protective Association (q. v.), with the result that Congress in 1895 began to curtail its appropriations for education in mission schools, and in 1896 declared it "to be the settled policy of the Government to hereafter make no appropriation whatsoever of the United States, in Indian schools", and in 1900 made what it designated "the final appropriation for sectarian schools". During the term of the contract system, the Bureau secured from the Government for the tuition and support of Indian children in Catholic mission schools the grand total of $4,540,263. Since the discontinuance of the contracts some schools have been closed; on the other hand, new missions and new schools have been established. Most of the existing schools have been supported by the Bureau, which also aids in maintaining the missions and in providing priests for the work of instructing Catholic Indians. At present there are six Catholic Indian educational work, inclusive of Alaska, comprises fifty-five boarding and seven day schools. The Bureau furnishes support to forty-one of these boarding schools besides providing for the education of a number of Indian boys in an institution in the United States. In 1907 it disbursed to the missions and schools $251,517.31. This may be taken as an annual average of its work in this line.

The most important achievements of the Bureau within the last decade have been: (1) the revocation of the "Browning ruling" (1902) which denied the Indian parent the right to choose a school for his child, the Indian Office arrogating that right to itself; (2) the restoration of rations (1909), amounting approximately to $20,000, to pupils of mission schools entitled to them by right of treaty, these rations having been denied the mission school children in 1901; the securing of the hearing of the cases of the contract schools an average yearly income of $100,000, for the support and tuition of Indian pupils in certain mission schools payable out of Indian tribal funds, these contracts being granted by order of President Roosevelt (1904) and sustained by a decree of the Supreme Court of the United States, 18 May, 1908, in consequence of which the tuition and support of the pupils of the Catholic mission schools of the Menominee (Wisconsin), Sioux (South Dakota), Northern Cheyennes (Montana), Osages and Quapaws (Oklahoma), which tribes have tribal funds, are paid by the moneys of these tribes; (3) the recognition of the right of Catholic Indian pupils in Government schools to be exempted from attending Protestant worship and instruction, and to be provided with opportunities for Catholic worship and instruction; (5) the securing of the enactment by Congress (1909) of a law granting patents in fee simple for the mission and school lands on Indian reservations (aggregating over 10,000 acres) which have been held by the Church as tenant at will. Of the annual amount disbursed by the Bureau, Mother Katharine Drexel contributes more than half. This way from 1899 to 1937 the Bureau disbursed $157,370. Prior to 1891 no part of the annual Lenten collection was granted the Bureau for its educational work. Since that time it has received from that collection and disbursed to the schools $276,286.74. The remainder of the funds disbursed by the Bureau have
been accumulated by means of an appeal which it issues annually, and by donations, bequests, and societies instituted for the soliciting of alms for the Indian missions.

Societies.—(1) The Catholic Indian Missionary Society (indulged granted 16 July, 1876 and 20 July, 1876), for the support of the Bureau and its work, was organized (1875) in the city of Washington chiefly through the efforts of Mrs. General Wm. T. Sherman. This association accomplished its purpose. The contract school system rendered it unnecessary and it was abandoned.

(2) Society for the Preservation of the Faith among Indian Children (indulged granted 20 December, 1904), known as the Preservation Society, established by the Bureau in 1901, approved by the American hierarchy and commended by Pius X (3 April, 1908), collects from each of its members an annual fee of twenty-five cents for the benefit of the missions. It has maintained an average membership of from forty-five to fifty thousand. Recently the Most Reverend Incorruptors of the Bureau have requested the American Federation of Catholic Societies to take a special interest in this society and to secure and maintain it. In 1880 the number was eight hundred thousand. The director of the Bureau is the President of the Preservation Society.

(3) The Marquette League, an auxiliary to the Preservation Society (blessing bestowed by Pius X, July, 1904), was organized in New York City (1904) under the presidency of the Rev. H. G. Ganz and persisted for several years devoted his time to the promoting of the Preservation Society. The League exacts a membership fee of two dollars yearly and secures offerings for the repair and building of chapels, the support of catechists, scholarships for Indian pupils in Catholic Institutions, and other missionary purposes. Its funds are distributed through the Bureau. Branches of the League have been established in various eastern centers, but the New York City League, under the able management of its successive presidents, Mr. E. Eyre, Mr. Joseph H. Fargis, Hon. Eugene A. Phibbs, and the Brooklyn League, under its president, Mr. Alexander McKinney, have produced the best results.

Benefactors.—Mother M. Katharine Drexel has been the most generous helper of the Bureau and the Indian missions; in the Indian and Negro mission work of the American Church she holds a unique position. Other notable benefactors are: Cardinal Gibbons, Archbishop Corrigan, Archbishop Ryan, Archbishop Farley, Archbishop Keane, Bishop Horstmann, Rev. T. K. Crowley, Rev. N. Kersten, Mrs. Edward Morrill, Henry Heide, Theodore E. Tack, Thomas McMahon, E. Eyre, F. S. Han, John J. Horn, Mary H, A. Johnston, John G. Kuhne, Miss Juliana Klein, Michael Fogarty, Association of the Holy Childhood, Ludwig-Missions-Verein (Munich).

Bureau Publications.—From 1877 to 1881 the Bureau published "Annals of Catholic Indian Missions in America." In 1893 it published a pamphlet, "The Great Indian Tribes of the United States," and "The Catholic Indian Missions 1874 to 1895." From time to time it has circulated statistics and various pamphlets on topics relating to Indian educational and mission work. It publishes each year a Report of the Director to the Most Reverend Incorruptors of the Bureau in the "Annual Report of the Bureau of Catholic Indian Missions (Washington, D.C., 1902), in the interest of the Preservation Society. The present (1909) office of the Bureau is at 1326 New York Avenue, N. W., Washington, D. C.

has more advocates, as also more reasons in its favour. The fact that Japanese and other Asiatic adventurers have frequently landed upon the North Pacific coast of America is a matter of history, and tribal tradition and other evidence indicate that such contact was as frequent in prehistoric times, but whether all this has been sufficient to make permanent impression upon the physique or culture, let alone to account for a separate race. Some question has been raised, but some problem has been under systematic investigation by the American Museum of New York City, with promise of important results. So far as at present known, the only permanent migration has been in the opposite direction, the Eskimo tribe from Alaska having taken up permanent residence in Siberia within the historic period.

The theory of autochthonous origin is usually, though not necessarily, connected with that of extreme antiquity, several writers claiming for the Indian, as for the primitive savage of Europe, an existence contemporaneous with the glacial period. While this theory has many earnest advocates, basing their opinion upon such isolated finds as those of the Trenton gravels, the "Calaveras skull," and the "Lansing man," the consensus of scientific opinion is that evidence as to the original placement of these finds in undisturbed strata is not sufficient to establish the theory. The single parallel in paleozoic deposits in mass, the highest estimates of age do not give them more than a few thousand years, and Dall, our best authority for Alaska, allows the oldest midden on the Aleutian Islands not more than three thousand. The more civilized nations, as the Maya, the Toltec, the Muysca, and the Quichua, all probably had their origin, as such, within a thousand years, or within five hundred years of the discovery. Without going back to geologic periods, however, the practical similarity of physical type over both continents implies long occupancy.

The various claims for Jewish, Phoenician, Irish, or Welsh origin have no provable foundation, although the first especially has found advocates for nearly three centuries and has even furnished the motive for the Book of Mormon. The numerous mounds and other earthworks scattered over the eastern United States and the other ruins in the South-West, have also given opportunity for much speculation and theorizing as to the former existence in those regions of highly civilized nations now extinct. Scientific examination, however, shows that the ruins and earthworks are of the most rudimentary architectural character, being rude in structure, simple in construction and in dimensional measurements, while the various artifacts found within them are almost precisely identical with those still in use by the uncivilized tribes. The more important house ruins are historically or traditionally known to have been built and occupied by the ancestors of the Pueblos, Pima, and other tribes still inhabiting the same region. Some of the mounds of the eastern section are also known to have been in use as foundations for tribal "town-houses" within the historic period, but the majority of the larger earthworks, as those of Cahokia in Illinois, of T(C)owah in Georgia, the Serpent Mound and Newark earthworks in Ohio, are much more ancient, and probably originated with more populous tribes which afterwards moved down into more southern regions. The Aztec themselves, according to definite tribal tradition, reached the valley of Mexico from the far North, and literature establishes their connection with the great Shoshonid linguistic stock whose tribes extend almost continuously along the backbone of the continent from the Columbia River to the Yavapai of Panama. In the same way the Apache and Navaho of the Mexican border are known to have emigrated from the frozen shores of the Yukon and Mackenzie.

As in Europe and Asia, the general movement was from north to south, but the Algonkian (Ojibwa, etc.) and Siouan (Mohawk, etc.) tribes moved onward from the Atlantic seaboard, while the Muskhogean tribes of the Gulf States had their earlier home west of the Mississippi. One great South American stock—the Arawakan—after occupying the Antilles, completed the chain of connexion by planting a colony in Florida. The number of languages and well-marked dialects may have reached one thousand, constituting some 150 separate linguistic stocks, each stock as distinct from all the others as the Aryan languages are distinct from the Turanian or the Bantu. Of these stocks there are approximately seventy, with no evidence of others in the southern continent. They were all in nearly the same primitive stage of development, characterized by minute exactness of description with almost entire absence of broad classification. Thus the Cherokees, living in a country abounding in wild fruits, had no word for grape, but had instead a distinct descriptive term for each of the three varieties with which he was acquainted. In the same way he could not say simply, "I am here," but must qualify the condition as standing, sitting, etc.

The earliest attempt at a classification of the Indian languages of the United States and of the younger portion of America was made by Albert Gallatin in 1836. The beginning of systematic investigation dates from the establishment of the Bureau of American Ethnology under Major J. W. Powell in 1879. For the languages of Mexico and Central America the basis is the "Geografia" of Orozco y Berra, of 1864, supplemented by the later work of Brinoton, in his "American Races" (1891), and corrected and brought up to latest results in the linguistic map by Thomas and Swanton now in preparation by the Bureau of Ethnology. For South America, we have the "Catalogo de Hervas" (1784), which covers also the whole field of languages throughout the world; Brinoton's work just noted, containing the summary of all known up to that time; and Chamberlain's comprehensive summary, published in 1907.

To facilitate intertribal communication, we frequently find the languages of the more important tribes utilized by others in other parts of the same region, as Comanche in the southern plains and Navaho (Apache) in the South-West. From the same necessity have developed certain notable trade jargon, based upon some dominant language, with incorporations from many others, including European, all smoothed down and assimilated to a common idiom by commercial intercourse. Chief among these are those of the Gulf States, based upon Choctaw; the "Chinook jargon" of the Columbia and adjacent territories on the Pacific coast, a remarkable conglomerate based upon the extinct Chinook language; and the "lingua geral" of Brazil and the Paraná region, based upon Tupi-Guarani. To these must be added the noted "sign language" of the plains, a gesture code, which answered every purpose of ordinary intertribal intercourse from Canada to the Rio Grande.

**United States, British America, etc.—** **Houses.**

In the United States and adjacent parts of Canada the prevailing type was that commonly 
known under the Algongian term of wigwam, of 
wagon-top shape, with perpendicular sides and 
ends and rounded roof, and constructed of stout poles set in 
the ground and covered with bark or mats 
*Food and its Procurement.—*In the timbered region 
of the eastern and southern states and the adjacent 
portions of Canada, along the Missouri and among the 
Pueblos, Pima, and other tribes of the south-west, 
the chief dependence was upon agriculture, the principal 
crops being corn, beans, and squashes, besides a 
native tobacco. The New England tribes understood 
the principle of manuring, while those of the arid 
South-West built canals and practised irrigation. 
Along the whole ocean coast, in the lake region and on 
the Columbia, fishing was an important source of 
subsistence. On the south Atlantic seaboard elaborate 
weirs were in use, but elsewhere the hook and 
line, the seine, or the harpoon, were more common. 
Clams and oysters were consumed in such quantities 
along the Atlantic coast that in some favourite gathering-places the empty shells are piled into mounds ten 
feet high. From central California northward along 
the whole west coast, the salmon was the principal, 
and on the Columbia almost the entire, food 
dependence. The north-west coast tribes, as well as the 
Eskimo, were fearless whalers. Everywhere the wild 
game, of course, was an important factor in the food 
supply, particularly the deer in the timber region and the 
buffalo on the plains. The nomad tribes of the

rooms of various sizes, of stone or adobe laid in clay 
mortar, with flat roofs, court-yards, and intricate 
passageways, suggestive of Oriental things. The 
Plute siurip of Nevada was only one degree above the 
brush shelter of the Apache. California, with its long 
stretch from north to south and its extremes from 
the Columbia to the Eskimo border, the prevailing type was the rectangular board 
structure, painted with symbolic designs and with the 
great topem pole, carved with the heraldic crests of 
the owner, towering above the doorway. On the Yukon 
we find the subterranean dwelling, while the Eskimo 
had both the subterranean house and the usual iglu, built of blocks of broken snow. Besides 
the regular dwellings, almost every tribe had also 

some style of temporary structure, besides "sweat 
houses", summer arbors, provision caches, etc.
The Indians of the Sierras lived largely upon acorns and piñons. Those of Oregon and the Columbia region gathered large stores of camass and other roots, in addition to various species of berries. The Apache and other south-western tribes gathered the cactus fruit and roasted the root of the maguey. The tribes of the upper lake region made great use of wild rice, while those of the Ohio Valley made sugar from the sap of the maple, and those of the southern states extracted a nourishing oil from the hickory nut. Pemnecian and hominy are Indian names, as well as Indian invented pecan sugar. Salt was used by many tribes, especially on the plains and in the South-West, but in the Gulf States lye was used instead. Cannibalism simply for the sake of food could hardly be said to exist, but, as a war ceremony or sacrifice following a savage triumph, the custom was very general, particularly on the Texas coast and among the Iroquoian and Algon-Quian tribes of the east. The Tonkawas of the “Man- Eaters.” Apparently the only native intoxicant was *tejuan*, a sort of mild beer fermented from corn by the Apache and neighbouring tribes.

Domesticated Animals.—The dog was practically the only domesticated animal before the advent of the whites and was found in nearly all the tribes, being used as a beast of burden by day and as a constant sentinel by night, while with some tribes the flesh also was a Rivantage dish. He was seldom, if ever, trained to hunting. Eagles and other birds were occasionally kept for their feathers, and the children sometimes had other pets than puppies. The horse, believed to have been introduced by the Spaniards, speedily became as important a factor in the life of the plains tribes as the buffalo itself. In the same way, the cotton introduced by the early Franciscans, have become the chief source of wealth to the Navaho, numbering now half a million animals from which they derive an annual income of over a million dollars.

Industries and Arts.—In the fabrication of domestic implements, weapons, ornaments, ceremonial objects, boats, seines, and traps, in house-building, and in the making of pottery and baskets, the Indian showed considerable ingenuity of design and infinite patience of execution. In the division of labour the making of weapons, hunting and fishing requirements, boats, plate, ceremonial ornaments, clothing, and the preparation and preservation of food commonly devolved upon the women. Among the sedentary or semi-sedentary tribes house-building belongs to the men, but to the men sometimes assisted. On the plains the entire making and keeping of the tipi were assigned to the women. In many tribes the man cut, sewed, and decorated his own buckskin suit, and in some of the Pueblo villages the men were the basket-weavers.

While the house, in certain tribes, evidence considerable architectural skill, its prime purpose was always utilitarian, and there was usually but little attempt at decorative effect, excepting among the Haida, Tlingit, and others of the north-west coast, where the great carved and painted totem poles, sometimes sixty feet in height, set up in front of every dwelling, were a striking feature of the village picture. The same tribes were notable for their great sea-going canoes, hollowed out of large tree trunks, elaborately carved and painted, and sometimes large enough to accommodate forty men. The skin boat or *kaik* of the Eskimo was a marvel of lightness and buoyancy, being practically unsinkable. The birch-bark canoes of the eastern tribes was especially well adapted to its purposes of inland navigation. In the southern states we find the dugout canoe. On the plains the boat was virtually unknown, except for the tub-shaped skin boat of the Mandan and associated tribes on the upper Missouri. The Eskimo were noted for their artistic carving of bone and walrus ivory; the north-west coast tribes for their slate carving; the Pueblos for their turquoise inlaid work and their wood-carving, especially of mythologic figures; and the Atlantic and California coast tribes for their work in shell. The wampum, or shell beads, made chiefly from the shells of various clamss found along the Atlantic coast, have become highly valuable, having often been used as dress ornamentation, but also on treaty belts, as tribal tribute, and as a standard of value answering the purpose of money. The ordinary stone hammer or club, found in nearly every tribe, represented much patient labour, while the whole skill of the artist was frequently expended upon the stone-carved pipe. The black stone pipes of the Cherokee were famous in the southern states, and the red stone pipe of cat-linite from a single quarry in Minnesota was reputed sacred and was smoked at the ratification of all solemn tribal engagements throughout the plains and the lake region. Knives, lance-blades, and arrow-heads were also usually of stone, preferably flint or obsidian. Along the Gulf Coast keen-edged knives fashioned from split cane were in use. Corn mortars and bowls were usually of wood in the timber region and of stone in the arid country. Hide-scrapers were of bone, and spoons of wood or horn. Metal work was limited chiefly to the fashioning of gorgets and other ornaments hammered out from native copper, found in the southern Alleghenies, about Lake Superior, and about Copper River in Alaska. The art of smelting was apparently unknown. Under Franciscan and later Mexican teaching the metal work, a silver-working art which compares in importance with their celebrated blanket weaving, the material used being silver coins melted down in stone moulds of their own carving. Mica was mined in the Carolina mountains by the local tribes and fashioned into gorgets and mirrors, which found their way by trade as far as the western prairies. All of these arts belonged to the men.

The making of pottery belonged to the women and was practised in nearly all the tribes, excepting those of the plains and interior basin, and the cold north. The Eastern pottery was usually decorated with stamps, and the ceremonial or south-western tribes was smooth and painted with symbolic designs. A few specimens of glazed ware have been found in the same region, but it is doubtful if the process is of native origin. The Catawba and some other tribes produced a beautiful black ware by painting the vessel over with lye, the smoke permeated the pores of the clay. The simple hand process by coiling was universally used.

Basket-weaving in wood splits, cane, rushes, yucca or bark-fibre, and various grasses was practised by the same tribes which made pottery, and, excepting in a few tribes, was likewise a woman’s work. The basket was usually stained in various designs with vegetable dyes. The Cherokee made a double-walled basket. Those of the Choctaw, Pueblo tribes,
Jicarilla, and Piute were noted for beauty of design and execution, but the Pomo and other tribes of California excelled all in closeness and delicacy of weaving and richness of decoration, most of their grass baskets being water-tight and almost hidden under an interweaving of bright-coloured plumage, and further decorated around the top with pendants of shining mother-of-pearl. The weaving of grass or rush mats for covering beds or wigwams may be considered as a variant of the basket-making process, as likewise the delicate porcupine quill appliqué work of the northern plains and upper Mississippi tribes.

The useful art of skin-dressing also belonged exclusively to the women, excepting along the Arctic coasts, where furs, instead of denuded skins, were worn by the Eskimo. The raw materials of the larger sea animals were also utilized for waterproof garments. The skins in most general use were those of the buffalo, elk, and deer, which were prepared by scraping, stretching, and anointing with various softening or preservatives, and the parts of which the liver or brains of the animal were commonly a part. The timber tribes generally smoked the skin, a process unknown on the plains. A limited use was made of bird skins with the feet removed.

The weaving art proper was also almost exclusively in the hands of the women. In the East, aside from basket- and mat-making, it was confined almost entirely to the twisting of ropes or bowstrings and the making of belts, the skin fabric taking the place of the textile. In the South-West the Pueblo tribes wove native cotton upon looms of their own device, and, since the introduction of sheep by the Franciscan missionaries in the sixteenth century, the Navaho, enlarging upon their Pueblo teaching, have developed a weaving art which has made the Navaho blanket famous throughout the country, the stripping, spinning, weaving, and dyeing of the wool being all their own. The Piute of Nevada and others of that region wore blankets woven from strips of rabbit fur. Some early writers mention feather-woven cloaks among the Pueblo, but while the entire that the feathers were simply overlaid upon the skin garment.

It is notable that the Indian worker, man or woman, used no pattern, carrying the design in the head. Certain designs, however, were standardized and hereditary in particular tribes and societies.

Games and Amusements.—Naturally careless of the future, the Indian gave himself up to pleasure when not under the spur of immediate necessity or danger, and his leisure time at home was filled with a constant round of feasting, dancing, story-telling, athletic contests, and gambling games. The principal athletic game everywhere east of the Missouri, as well as with some tribes of the Pacific coast, was the ball-play, adopted by the French of Canada under the name of lacrosse and in Louisiana as raquette. In this game the ball was caught not with the hand, but with a netted ball-stick somewhat resembling a tennis racket. A special dance and most ceremonial preceded the contest. Next in tribal favour in the eastern region was the game known to the early traders under the corrupted Creek name of chuckee, in which one player rolled a stone wheel along the ground, while his competitor slid after it a stick curved at one end like an umbrella handle, with the design of having the spent wheel fall within the curve at the end of its course. This game, which was much hard running game, something kept up for honor. A somewhat similar game, played with a netted wheel and a straight stick, was found upon the plains, the object being to dart the stick through certain netted holes in the wheel, known as the buffalo bull, calf, etc. Foot-races were very popular with certain tribes, as the Pueblos, Apache, Wichita, and Crow, being frequently a part of great ceremonial functions. On the plains horse-racing furnished exciting amusement. There were numerous gambling games, somewhat of the dice order, played with marked sticks, plum stones, carved bones, etc., these being in special favour with the women. Target shooting with bow and arrow, and various forms of dart throwing were also popular.

Among distinctly women’s games were football and shinny, the former, however, being merely the bouncing of a ball from the toes with the purpose of keeping it in the air as long as possible. Hand games, in which a number of players ranged themselves in two opposing lines and alternately endeavoured to guess the whereabouts of a small object shifted rapidly from hand to hand were a favourite tipi pastime with both sexes in the winter evenings, to the accompaniment of songs fitted to the rapid movement of the hands. Story-telling and songs, usually to the accompaniment of the rattle or small hand-drum, filled in the evening. The Indian was essentially musical, his instruments being the drum, rattle, flute or flageolet, eaglebone whistle, and other more crude devices. Each had its special religious significance and ceremonial purpose, particularly the rattle, of which there were many varieties. Besides the athletic and gambling games there were games of divination played on rare occasions of necessity, writing on strips of paper, in pheromula in the keeping of special guardians. The Indian was fond also of singing and had songs for every occasion—love, war, hunting, gaming, medicine, satire, children’s songs, and lullabies.

The children played with tops, whips, dolls, and other toys, or imitated their elders in shooting, riding, and “playing house”.

War.—As war is the normal condition of savagery, so to the Indian warlike glory was the goal of his ambition, the theme of his oratory, and the purpose of his most elaborate ceremonial. His weapons were the knife, bow, club, lance, and tomahawk, or stone axe, which last was very soon superseded by the light steel hatchet supplied by the trader. To these certain tribes added defensive armour, as the body armour of rawhide or wooden rods in use along the north-west coast and in some other sections, and the shield more particularly used by the equestrian tribes of the plains. As a rule, the lance and shield were more common in the open country, and the tomahawk in the woods. The bow was usually of some tough and flexible wood with twisted sinew cord, but was sometimes of horn or horn backed with sinew wrapping. It is extremely doubtful if poisoned arrows were found north of Mexico, notwithstanding many assertions to the contrary.

Where the celan system prevailed the general con-
duct of war matters was often in the keeping of special clans, and in some tribes, as the Creeks, war and peace negotiations and ceremonials belonged to certain towns designated respectively as "red" and "white". With the Iroquois, and probably with other tribes, the final decision for war or peace rested with a council of the married women. On the plains the warriors of a tribe were organized into military societies of differing degrees of rank, from the boys in training to the old men who had passed their active period. Military service was entirely voluntary with the individual, who, among the eastern tribes, signified his acceptance in some public manner, as by striking the red-painted war-post, or, on the plains, by smoking the pipe sent round by the organizers of the expedition. Contrary to European practice, the command usually rested with several leaders of equal rank, who were not necessarily recognized as chiefs on other occasions. The departure and the return were made according to fixed ceremonial forms, with solemn chants of defiance, victory, or grief at defeat. In some tribes there were small societies of chosen warriors pledged never to turn or flee from an enemy except by express permission of their fellows, but in general the Indian warrior chose not to take large risks, although brave enough in desperate circumstances.

To the savage every member of a hostile tribe was equally an enemy, and he gloried as much in the death of the infant or its mother as in that of the warrior father. Victory meant indiscriminate massacre, with most revolting mutilation of the dead, followed in the early period in nearly every portion of the East and South by a cannibal feast. The custom of scalping the dead, so general in the later Indian wars, has been shown by Frederici to have been confined originally to a limited area east of the Mississippi, gradually superseding the earlier custom of beheading. In many western tribes the warrior's prowess was rated not by the number of his scalp trophies, but by the number of his coups (French term) or strokes upon the enemy, for which there was a regular scale according to kind, the highest honour being accorded not to the one who secured the scalp, but to the warrior who struck the first blow upon the enemy, even though with no more than a willow rod. The scalp dance was performed not by the warriors, but by the women, who thus revenged on the wives of their husbands and brothers. There was no distinctive "war dance".

Captives among the eastern tribes were either condemned to death with every horrible form of torture or ceremonially adopted into the tribe, the decision usually resting with the women. If adopted, he at once became a member of a family, usually as representative of a deceased member, and at once acquired full tribal rights. In the Huron wars whole towns of the defeated nation voluntarily submitted and were adopted bodily into the Iroquois tribes. On the plains torture was not common. Adults were seldom spared, but children were frequently saved and either regularly adopted or brought up in a mild sort of slavery. Along the north-west coast and as far south as California slavery prevailed in its harshest form and was the usual fate of the captive.

Society of Animal Names—Among most of the tribes east of the Mississippi, among the Pueblo, Navaho, and others of the South-West, and among the Tlingit and Haida of the north-west coast, society was based on the clan system, under which the tribe was subdivided into a number of large family groups, the members of which were considered as closely related and prohibited from intermarrying. The children usually followed the clan of the mother. The clans themselves were sometimes grouped into larger bodies of related kindreds, to which the name of phratry has been applied. The clans were usually, but not always, named from animals, and each clan paid special reverence to its tutelary animal. Thus the Cherokee had seven clans, Wolf, Deer, Bird, Paint, and three others with names not readily translated. A Wolf man could not marry a Wolf woman, but might marry a Deer woman, or one of any other of the clans, and his children were of the Deer or other clan accordingly. In some tribes the name of the individual indicated the clan, as "Round Foot" in the Wolf clan and "Crawler" in the Turtle clan. Certain functions of war, peace, or ceremonial were usually hereditary in special clans, and revenge for injuries within the tribe devolved upon the clan relatives of the person injured. The tribal council was composed of the elected chiefs of clans, and any alien taken into the tribe had to be specifically adopted into a family and clan.

The clan system was by no means universal, as supposed by Morgan and his followers of forty years ago, but is now known to have been limited to particular regions, and seems to have been originally an artificial contrivance to protect land and other property descent. It was absent almost everywhere west of the Missouri, excepting in the South-West, and appears also to have been unknown throughout the greater part of British America, the interior of Alaska, and probably among the Eskimo. Among many tribes the unit was the band, whose members camped together under their own chief in an appointed place in the tribal camp circle and were subject to no marriage prohibition, but usually married among themselves.

With a few notable exceptions, there was very little idea of tribal solidarity or supreme authority, and where a chief appears in history as tribal dictator, as in the case of Powhatan in Virginia, it was usually due to his own strong personality. The real authority was with the council as interpreter of ancient tribal customs. Even the Cherokee, Creeks and Cherokees were really only aggregates of closely cognate villages, each acting independently or in co-operation with the others as suited its immediate convenience. Even in the smaller and more compact
tribes there was seldom any provision for coercing the individual to secure common action, but those of the same clan or band usually acted together. In this lack of solidarity is the secret of Indian military weakness. In no Indian war in the history of the United States has a single large tribe ever attacked a solid rear of the home, while on the other hand other tribes have always been found to join against the hostiles. Among the Natchez, Timucua, and some other southern tribes, there is more indication of a central authority, resting probably with a dominant clan.

The Iroquois (q. v.) of New York had progressed beyond this stage before the people north of Mexico in the elaboration of a state and empire. Through a carefully planned system of confederation, originating about 1570, the five allied tribes had secured internal peace and unity, by which they had been able to acquire dominant control over most of the tribes from Hudson Bay to Carolina, and, if not prematurely checked by the advent of the whites, might in time have founded a northern empire to rival that of the Aztec.

Land was usually held in common, excepting among the Pueblos, where it was apportioned among the clans, and in some tribes of northern California, where individual right is said to have existed. Timber and other natural products were free, and hospitality was carried to such a degree that no man kept what his neighbour wanted. While this prevented extremes of poverty, on the other hand it paralysed individual industry and economy, and was an effective barrier to progress. The accumulation of property was further discouraged by the fact that in most tribes it was customary to destroy all the belongings of the owner at his death. The word for "brave" and "generous" was frequently the same, and along the north-west coast there existed a curious custom known as polelatch, under which a man saved for half a lifetime in order to acquire the rank of chief by finally giving away his entire hoard at a grand public feast.

Enslavement of captives was more or less common throughout the country, especially in the Southern states, where the captives were sometimes crippled, to prevent their escape. Along the north-west coast and as far south as California, not only the captives, but their children and later descendants were slaves and might be abused or slaughtered at the will of the master, being frequently buried alive with their deceased butcheted to provide a ceremonial tribal feast. In the Southern slave states, before the Civil War, Indians were frequent owners of negro slaves.

Men and women, and sometimes even the older children, were organized into societies for military, religious, working, and social purposes, many of these being secret. Especially those concerned with medicine and women's work. In some tribes there was also a custom by which two young men became "brothers" through a public exchange of names.

The erroneous opinion that the Indian man was an idle, aboriginal, woman a drudge and slave, is founded upon a misconception of the native system of division of labour, under which it was the man's business to defend the home and to provide food by hunting and fishing, assuming all the risks and hardships of battle and the wilderness, while the woman attended to the domestic duties, including the bringing of wood and water, and the rearing of the children, the setting up of the tipi. The children, however, required little care after they were able to run about, and the housekeeping was of the simplest, and, as the women worked usually in groups, with songs and gossip, while the children played about, the work had much of pleasure mixed with it. In all that chiefly concerned the home the woman was the mistress, and in many tribes the woman's council gave the final decision upon important matters of public policy. Among the more purely agricultural tribes, as the Pueblos, men and women worked in the fields together. In the far North, on the other hand, the harsh environment seems to have brought out all the savagery of the man's nature, and the woman was in fact a slave subject to every whim of cruelty, excepting among the Kutenin of the upper Yukon, noted for their kind treatment of their women. Polygamy existed in nearly all tribes excepting the Pueblos.

Religion and Mythology.—The Indian was an animist, to whom every animal, plant, and object in nature contained a spirit to be propitiated or feared. Some of these, as the sun, the buffalo, and the yew tree, the eagle, and the rattlesnake, were more powerful or more frequently helpful than others, but there was no overruling "Great Spirit" as so frequently represented. Certain numbers, particularly four and seven, were held sacred. Colours were symbolic and had local abiding place, and sometimes sex. Thus with the Cherokee the red spirits of power and victory lived in the Sun Land, or East, while the black spirits of death dwelt in the Twilight Land of the West. Certain tribes had paladiums around which centred their most elaborate ritual. Each man had also his secret personal "medicine". The priest was likewise the doctor, and medicine and religious ritual were closely interwoven. Secret societies were in every tribe, claiming powers of prophecy, hypnotism, and clairvoyance. Dreams were in great repute, and implicitly trusted and obeyed, while witches, fairies, and supernatural monsters were as common as in medieval Europe. Human sacrifices, either of infants or adults, were found among the Timucua of Florida, the Natchez of Mississippi, the Pawnee of the plains, and some tribes of California and the north-west coast, the sacrifice in the last-mentioned region being frequently followed by a cannibal feast. From time to time, as among more civilized nations, prophets arose to purify the old religion or to preach a new ritual. Each tribe had its genesis, tradition, and mythical hero, with a whole body of mythologic belief and folklore, and one or more great tribal ceremonials. Among the latter may be noted the Green-Corn Dance, Thanksgiving festival of the eastern and southern tribes, the Sun Dance of the plains, the celebrated Snake Dance of the Hopi (q. v.), and the Salmon Dance of the Columbia tribes.

Burial.—The method of disposing of the dead varied according to the tribe and environment, incumbrance being probably the most widespread. The Hurons and Iroquois allowed the bodies to decay upon scaffolds, after which the bones were gathered up and deposited with much ceremony in the common tribal sepulchre. The Nanticoke and Choctaw scraped the
flesh from the bones, which were then wrapped in a bundle and kept in a box within the dwelling. Tree, scaffold, and cave burial were common on the plains and in the mountains, while cremation was the rule in the arid regions farther to the west and south-west. Northward from the Columbia the body was deposited in a canoe raised upon posts, while cave burial reappeared among the Aleut of Alaska, and earth burial among the Eskimo. The dread of mentioning the name of the dead was as universal as the custom of destroying the property of the deceased, even to the killing of his horse or dog, while the custom of placing food near the grave for the spirit during the journey to the other world was almost as common. Laceration of the body, cutting off of the hair, general neglect increased in number, is a serious error, founded upon the fact that most official estimates begin with the Federal period, when the native race was already wasted by nearly three centuries of white contact and in many regions entirely extinct. An additional source of error is the fact that the law recognizes the name of even removed Indian rights, including in this category, especially in the former “Five Civilized Nations” of Indian Territory (now Oklahoma), several thousand individuals whose claims have always been stoutly repudiated by the native tribal courts. Moreover, the original Indian was a full-blood, while his present-day representative has often so little aboriginal blood as to be practically a white man or a negro. Many broken tribes of to-day contain not a single full-blood, and some few not even one of half Indian blood. The Cherokee Nation, officially reported to number 36,000 persons of pure or mixed Cherokee blood contains probably not 4000 of even fairly pure blood, the rest being of all degrees of admixture down even to one-sixty-fourth or less of Indian blood, besides some 7000 claimants officially recognized, but repudiated by the former Indian Government. In Massachusetts an official census in 1860 reported a “Yarmouth tribe” of 105 persons, all descended from a single Indian woman with a negro husband residing there in 1797. It is obvious that the term Indian cannot properly be applied to such diluted mixtures.

The entire aboriginal population of Florida, of the mission period, numbering perhaps 30,000, is long since extinct without descendants, the Seminole being a later emigration from the Creeks. The aborigines of South Carolina, counting in 1700 some fifteen tribes, of which the Catawba, the largest tribe, numbered some six thousand souls, are represented to-day by about a hundred mixed-blood Catawbas together with some scattered mongrels, whose original ancestry is a matter of doubt.

The same holds good upon the plains. The celebrated Pawnee tribe of some 10,000 souls in 1838 is now reduced to 650; the Kanza of 1500 within the same period have now not 200 souls; and the aborigines of Texas, numbering in 1790 perhaps 40,000 souls in many small tribes with distinct languages, is extinct except for some 900 Caddo, Wichita, and Tonkawa. The last-named, estimated at 1000 in 1805, numbered 700 in 1849, 314 in 1861, 108 in 1852, and 48 in 1905, including several aliens. In California the aboriginal population has fallen in the same period from perhaps a quarter of a million to about 15,000, and nearly the same proportion of decrease holds good along the whole Pacific Coast into Alaska. Not merely have tribes dwindled, but whole linguistic stocks have become extinct within the historic period. The only apparent exceptions to the general rule of decay are the Iroquois, Sioux, and Navaho, the first two of whom have kept up their number by wholesale adoptions, while the Navaho have been preserved by their isolation. The causes of decrease may be summarized as: (1) introduced diseases and disinfection, particularly by smallpox and whisky; (2) wars, hardship and general enfeeblement consequent upon frequent removals and enforced change from accustomed habit. The present Indian population north of Mexico is approximately 400,000, of whom about 265,000 are within the United States proper.

of the person, and ceremonial waiting, mourning and evening, sometimes for weeks, were also parts of their funeral customs.

Language and Population.—Nearly two hundred native languages, besides minor dialects, were spoken north of Mexico, classified into fifty-one distinct linguistic stocks, as given below, of which nearly one-half were represented in California. Those marked with an asterisk are extinct, while several others are now reduced to less than a dozen individuals keeping the language: Algonquian, Athapaskan (Déné), Attaganap, *Beothukan, Caddoan, Chitimakan, *Chimarikan, Chinimisian, Chinookan, Chitimachan, *Chumashan, *Coahuiltecan (Pakawá), Copehan (Wintun), Costanoan, Eskimaun, *Eskelian, Iroquoian, Kalapooian, *Karankawan, Keresan, Kiowan, Kitunahan, Kusilikan (Tlingit), Kusilapan (Pomo), *Kusan, Mariposan (Yokuts), Moqueluman (Miwok) Muskogean, Puyunan (Maidu), Quoratean (Karok), *Salinan, Salishan, Shastapian, Shoshonean, Siouan, Skagitatan (Haida), Takilman, *Timucean, *Tonikan, Tonkawan, Uchean, *Wailialpatuan (Cayuse), Wakashan (Nootka), Washoan, Weitspekan (Yurok), Wishuneskan, Yakonan, *Yanan (Nosi), Yukian, Yamian, Zunian.

While the Indian population was never dense, the idea that the Indian has held his own, or even actually
INDIANS

MEXICO, CENTRAL AMERICA, AND WEST INDIES.—Between the Rio Grande and the Isthmus of Panama was a large number of tribes, constituting some ten linguistic stocks. The Toltecs, at the lowest degree of culture from the lowest savagery to a fairly advanced civilization. Lowest of all were the tribes of the California peninsula, with the Seri of Tiburon Island. Of somewhat higher grade, but still savages, were the dwellers in the low coast-lands of Honduras, Nicaragua, and Costa Rica. The Tarasauri, Tepex- huan, Huichol, and others of the northern sierras were about on a level with our own Pueblo tribes, while the Aztecs, Totontepec, Tarasco, Zapotec, and Mixtec, the Maya, Kiché, and Cakechiquel, of the central regions, might almost be considered civilized nations, counting their citizens by hundreds of thousands, with agriculture and all the common industrial arts, a well-developed architecture, an established and orderly government, and a voluminous hieroglyphic literature.

As in the United States, the general direction of migration sets to have been from north to south, excepting for the tribes of Chibchan stock, an offshoot from the main body in Colombia. The celebrated Aztec, whose tribes occupied the valley of Mexico and its immediate environs, had a definite tradition of northern origin, and linguistic evidence shows them to have been closely cognate to the Pima and Shoshoni, while their culture was borrowed from the earlier and much more cultured, but less warlike, nations which they had overpowered some five centuries before their own conquest by Cortés in 1519. The empire which they had built up comprised many tribes of diverse stocks, held together only by the superior force of the conqueror, and easily disintegrated under the assaults of the Spaniards. The native civilizations, however, have left their permanent stamp upon both Mexico and Central America.

In general characteristics, the cultures of the several civilized nations were very similar. Agriculture was the primary and determining feature, canal irrigation, and even floating lake-gardens, being all utilized to meet the necessities of a swelling population. Stone, and more particularly obsidian, was still the chief material for ordinary implements, but they had discovered the art of bronze-casting, and weapons in gold and silver appeared, the master metal—was practically unknown upon the American Continent. They were neatly clothed in cotton garments of various colours. Their pottery, especially that of the Tarasco, was beautiful both in design and manufacture, with glazed surface and inlay of precious metal. Their public architecture included magnificent temples and pyramids, of cut and polished stone set in mortar and covered with hieroglyphic inscriptions. The ruined cities of the Maya of Yucatan—Mayapan, Uxmal, and Chichen-Itzā, with scores of others, all occupied at the time of the conquest with such other ruins as Teotihuacan, and Coba, and Mitla—rival the great remains of classical antiquity.

The social and political organization seems to have been based upon the family group. There was a system of public education in which boys were taught military science, writing, and religious ritual, while girls were instructed in music and domestic arts. Each civilized nation had an elaborate calendar system, that of the Maya proper being the most intricate, with cycles of 20, 52, and 260 years. The religious systems were characterized by the number and magnificence of their ceremonies, with armies of priests and priestesses, processions, feasts, and sacrifices, and by the general bloody tenor of their rituals, especially among the Aztec, who yearly sacrificed thousands to their gods, the bodies of the victims being afterwards eaten by the priests or by the original captors. The Maya religion, like the people, appears to have been of milder character, although still admitting human sacrifice. In all these nations the king was of absolute authority, and the literate clergy, who represented most of the ritual content, written in iconic or hieroglyphic characters upon paper of maguey fibre. Of those which have escaped the fanaticism of the first conquerors some of the most noted (Aztec)—are exemplified in Lord Kingsborough's great work. Of the Maya nations the most valuable literal monument is the "Popol Vuh" of the Kiché of Guatemala, translated by the Abbé Brasseur de Bourbourg. For a comprehensive view of these native civilizations our best authorities are Gomara and Herrera, of the earlier period, with Prescott and Hubert H. Bancroft of our own time. In spite of the exterminating wars of the conquest and the subsequent awful oppression under the slave system, the descendants of the aboriginal races—largely Christianized and assimilated to Spanish forms—still constitute the great bulk of the population between the Rio Grande and the Isthmus.

The ruder coast tribes of Central America present no very distinguishing cultural features, subsisting by a limited agriculture, supplemented by hunting and fishing, without arts, monuments, or history of importance. The Ulva of Honduras practised head-flatting. The Carib of the same region were forced immigrants from the north. Practically the whole of the West Indies was occupied by tribes of two linguistic stocks, the earlier of Arawakan origin, the more recent being Cariban invaders from the northern coast of South America. The Arawakan aborigines were about in the cultural status of our own Gulf tribes, subsisting chiefly by agriculture and practising the simpler arts, but unfitted by their peaceful habit to withstand the inroads of the predatory Carib, whose very name is synonymous with "cannibal". Under the awful cruelties of their Spanish conquerors and taskmasters they were virtually exterminated within a few generations of the discovery (see ARAWAKS).

As commonly recognized, the linguistic stocks represented in Mexico, Central America, and the West Indies were about twenty-five in number, as given below, those marked with an asterisk being also Mayan: w. *Aguatlan (Nicaragua); *Cari- ban (Honduras and islands); *Chichimeca (Chihuahua, Nicaragua, Costa Rica); *Chibchan (Panama); *Chinanteccan (Oaxaca); *Huavecan (Oaxaca); *Lencan (Honduras); *Matamatan, or Tamuulipan (Tamaulipas); *Maya (Yucatan, Tabasco, Chiapas and Guatemala); *Mosquitian (Honduras); *Nahuatlan Shoshonian (Mexico, etc.); *Olomean (Tamaulipas); *Otomi (Guerrero, etc.); *Pakwakan, or Coahuiltecan (Coahuila); *Payan (Honduras); Carribean (Sonora); *Subtibanan (Nicaragua); *Tarascan (Michoacan); *Tequiscatecan (Oaxaca, Guerrero); *Totontepec (Veracruz); *Ulomean (Nicara- gua etc.); Waikurian (California); Xanambarian (Tamaulipas); *Xicuanan (Honduras); Xincan (Gua- teamala); *Yuman (California).

marea, east of the Andes chain. Their ruling caste, the Incas, who claimed descent from the sun and to whom belonged the power and wealth of the empire, appear to have been originally the nucleus tribe of the empire, which in the course of centuries had gradually absorbed and assimilated almost all the tribes of cognate Quichuan stock, together with a number of other tribes and nations of alien stocks and of greater or less degree of culture. Most of the other tribes (or a few of the Arce, who held the most inferior of the four grades), after the welfare of every class and citizen, defining their privileges and duties, and handing each to a strict account in its contribution to the general welfare.

The religion partook of the same benevolent character, having none of the bloody sacrificial and cannibalistic rites of the Aztec. The material civilization was probably the most advanced in aboriginal America, agriculture, pottery-making, weaving, and metal-working in gold and bronze being at their highest, while the stupendous temples, fortresses, and roads, in massive cut stone, were without parallel on the Continent. The aboriginal sculptural art, however, they were behind the Aztec, Maya, and other northern nations, and in anything literary had not progressed beyond a simple system by means of quipus or knotted cords. Among the best accounts of the Inca civilization is that contained in Prescott's "Conquest of Peru," a description which will apply with approximate correctness to the others of the Andean region. The Chibcha race was virtually exterminated by the Spanish conquerors in their thirst for gold, but in Ecuador, Peru, and Bolivia the descendants of the old civilized nations still constitute the bulk of the population, and the Quichua is the dominant language outside of the cities.

The Araucanians (q. v.) of southern Chile, who have successfully resisted all attempts at their subjugation to the present day; the Mixos tribes of southern Bolivia and their neighbours, the Calchaqui of Argentina, and the populous Andean tribes, whether of the northern or the more southern region, were very loosely defined, and the religion of all seems to have been a simple animism, with apparently much less of ceremonial form than was common among the tribes of similar grade on the northern continent, probably due to the mild and paternal looking after the welfare of every class and citizen, defining their privileges and duties, and holding each to a strict account in its contribution to the general welfare.

INDIFFERENTISM

Indifferentism, Religious, is the term given, in general, to all those theories, which, for one reason or another, deny that it is the duty of man to worship God by believing and practising the one true religion. The doctrine of religious indifference, as distinct from political indifferentism, which is applied to the policy of a state that treats all the religions within its borders as being on an equal footing before the law of the country. Indifferentism is not to be confounded with religious indifference. The former is primarily a theory designed to prevent the establishment of any religion, the latter term designates the conduct of those who, whether they do or do not believe in the necessity and utility of religion, do in fact neglect to fulfil its duties.

I. Absolute Indifferentism.—Under the above general definition comes those philosophic systems which regard the existence of all material things as the realization of man's acknowledgment of his dependence on a personal creator, whom, in consequence of this dependence, he is bound to reverence, obey, and love. This error is common to all atheistic, materialistic, pantheistic, and agnostic philosophies. If there is no God, as the Atheist professes to believe, or if God be but the sum of material forces, or if the Supreme Being is an all-embracing, all-confounding totality in which human individuality is lost, then the personal relationship in which religion takes its rise does not exist. Again, if the human mind is incapable of attaining correct ideas of God, as the Pantheistic Divine is, or if, being unable to form any valid idea of God, it follows that religious worship is a mere futility. This error is shared also by the Deists, who, while they admit the existence of a personal God, deny that He demands any worship from His creatures. These systems are answered by the Christian who calls every one bound to practise religion as a duty towards God, and in order that he may attain the end for which he has been called into existence.

II. Restricted Indifferentism.—In distinction from this absolute Indifferentism, a restricted form of the error admits the necessity of religion on account, chiefly, of its salutary influence on human life. But it holds that all religions are equally worthy and profitable to man, and equally pleasing to God. The classic advocate of this theory is Rousseau, who maintains, in his "Emile", that God looks only to the sincerity of intention, and that everybody can serve Him by whatever method of worship he has been taught to set up, or by changing it at will for any other that pleases him more (Emile, III). This doctrine is widely advocated to-day on the grounds that, beyond the truth of God's existence, we can attain to no certain religious knowledge; and that, since God has left us thus in the dark, He will be pleased with whatever form of worship we sincerely offer Him. The full reply to this error consists in the proof that God has vouchsafed to man a supernatural revelation, embodying a definite religion, which He desires that all should embrace and practise. Without appealing to this fact, however, the correspondent of the contrary suffices to lay bare the inherent absurdity of this doctrine. All religions, indeed, may be said to contain some measure of truth; and God may accept the imperfect worship of ignorant sincerity. But it is injurious to God, Who is truth itself, to assert that truth and falsehood are indifferent in His sight. Since various religions are in disagreement, it follows that, wherever they conflict, if one possesses the truth the others are in error. The constituent elements of a religion are beliefs to be held by the intellect, precepts to be observed, and a form of worship to be practised. Now—to confine ourselves to this point—the Christian Deism of the 17th century, the deism of the French Encyclopedists and their descendants, and to the various German systems of anti-Christian thought. It has culminated in the prevalent materialistic, monistic, and agnostic philosophies of to-day. When the Reformers rejected the dogmatic authority for truth over error; that the true and the false are alike congenial to His nature. Again, to hold that truth and falsehood equally satisfy and perfect the human intellect is to deny that reason has a native capacity of itself to establish religious truths, for truth, in the latter sense, we deny that any trust is to be placed in our reason. Turn to the ethical side of the question. Here again there is conflict over almost all the great moral issues. Let an illustration or two suffice. Mohammedanism approves polygamy, Christianity uncompromisingly condemns it as immoral. If these two teachers are equally trustworthy guides of life, then there is no such thing as fixed moral values at all. If the obscure oracles of phallic worship are as pure in the sight of God as the austere worship that was conducted in the temple of Jerusalem, then we must hold the Deity to lie in the wilderness of error. From the earliest acts of the Church, the rationalist notion would be no grounds for religion at all. The fact is that this type of Indifferentism, though verbally acknowledging the excellence and utility of religion, nevertheless, when pressed by logic, recoils into absolute Indifferentism. "All religions are equally good" comes to mean, at bottom, that religion is good for nothing.

III. Liberal or Latitudinarian Indifferentism.—(a) Origin and Growth.—The foregoing types of Indifferentism are conveniently called infidel, to distinguish them from a third, which, while acknowledging the right of men to exercise their religion as they choose, and its consequent immeasurable superiority over all rival religions, holds that what particular Christian Church or sect one belongs to is an indifferent matter; all forms of Christianity are on the same footing, all are equally pleasing to God and serviceable to man. On approaching this third error, it may advantageously inquire into the genesis of Indifferentism in general. In doing so we shall find that liberal Indifferentism, as the third type is called, although it arises in belief, is closely akin to that of infidelity; and this community of origin will account for the tendency which is to-day working towards the union of both in a common mine of scepticism. Indifferentism springs from Rationalism. By Rationalism here we understand the principle that reason is the sole judge and discoverer of religious truth as of all other kinds of truth. It is the antithesis of the principle of authority which asserts that God, by a supernatural revelation, has taught us the religious truths upon which the whole of the universe is based, and imparts them to us unaided reason, as well as other truths which, though not absolutely beyond the native powers of reason, yet could not by reason alone be brought home to the generality of men with the facility, certitude, and freedom from error required for the right ordering of life. From the earliest acts of the Church, the rationalistic spirit manifested itself in various heresies. During the Middle Ages it infected the teachings of many notable philosophers and theologians of the schools, and reigned unchecked in the Moorish centres of learning. Its influence may be traced through the Renaissance to the rise of the Reformation (see Rationalism).

From the beginning of the Reformation the rationalistic current flowed with ever-increasing volume through two distinct channels, which, though rising apart, have been gradually approaching each other. The one operated through purely philosophic thought, which, whatever it set itself free from the authority of the Church, has on the whole served to display what has been justly called the "all-corroding, all-dissolving scepticism of the intellect in religious matters". Rationalistic speculation gave rise successively to the British Deism of the 18th century, the philosophy of the French Encyclopedists and their descendants, and to the various German systems of anti-Christian thought. It has culminated in the prevalent materialistic, monistic, and agnostic philosophies of to-day. When the Reformers rejected the dogmatic authority
of the living Church they substituted for it that of the Bible. But their rule of faith was the Bible, interpreted by private judgment. This doctrine introduced the principle of Rationalism into the very structure of Protestantism. The history of this movement is a record of continually increasing divisions, multiplications of sects, with a steady tendency to reduce the contents of a fixed dogmatic creed. In a few words Cardinal Newman has summed up the lesson of that history: "Experience proves surely that the Church does not answer a question for which it was never intended. It may be accidentally the means of converting individuals; but a book after all cannot make a stand against the wild living intellect of man, and in this day it begins to testify, as regards its own structure and contents, to the power of that universal solvent which is so successfully acting upon religious establishments" (Apologia pro Vita Sus, London, 1883, v. 245).

As divisions increased in the general body of Protestantism, and as domestic dissentions arose in the bosom of particular denominations, some of the leaders endeavoured to find a principle of harmony in the theory that the essential doctrines of Christianity are summed up in a few great, simple truths which are clearly expressed in Scripture, and that, consequently, whoever believes these and regulates his life accordingly is a true follower of Christ. This movement failed to stay the process of disintegration, and powerfully promoted the opinion that, provided a Christian life is maintained, it makes little difference to what particular denomination one adheres. The view spread that there is no creed definitely set forth in Scripture, therefore all are of equal value, and all profitable to salvation. Large numbers in the Church of England adopted this opinion, which came to be known as Liberalism or Latitudinarianism. It was not, however, confined to one form of Protestantism, but obtained adherents in almost every body inheriting from the Reformation. The effort was made to reconcile it with the official confessions by introducing the policy of permitting every one to interpret the compulsory formulae in his own sense.

Indifferentism, liberal and infidel, has been vigorously promoted during the past half century by the dominance of Rationalism in all the lines of scientific inquiry which touch upon religion. The theory of evolution, why should the Specimen of the Old and the New Testament, the comparative study of religions, archaeology, and ethnology, in the hands of men who assume as their primary postulate that there is no supernatural, and that all religions, Christianity included, are but the offspring of the feeling and thought of the natural man, have produced a general atmosphere of doubt or positive unbelief. As a result, large numbers of Protestants have abandoned all distinctly Christian belief, while others, still clinging to the name, have emptied their creed of all its essential dogmatic contents. The doctrine of Scriptural inspiration and inerrancy is all but universal, although few would not, perhaps, be inclined to say that the prevalent view to-day is that Christ taught no dogmatic doctrine, His teaching was purely ethical, and its only permanent and valuable content is summed up in the Fatherhood of God and the brotherhood of man. When this point is reached the Indifferentism which abounds in belief joins hands with the Indifferentism of infidelity. The latter substitutes for religion, the former advocates as the only essential of religion, the broad fundamental principles of natural morality, such as justice, veracity, and benevolence that takes concrete form in social service. In some minds this theory of life is combined with Agnosticism, in others with a vague Theism, while in many it is still united with some vestiges of Christian Faith.

Along with the intellectual cause just noted, another has been what one might call the automatic influence proceeding from the existence of many religions side by side in the same country. This condition has given rise to the political indifferentism referred to in the opening of this article. Where this condition prevails men may not meet one another in political, commercial, and social life, in order that they may carry on their relations harmoniously they will not demand any special recognition of their own respective denominations. Personal intercourse fosters the spirit of tolerance, and the majority may hold to the truth that there is but one true religion as apt to be guided in his judgments by the maxim, "From their fruits ye shall know them." On observing that probity and good intention mark the lives of some of his associates who differ in their religious beliefs, he may easily come to the conclusion that one religion is as good as another. Probably, however, many who speak thus would acknowledge the fallacy of this view if pushed by argument. On the other hand, great numbers of the theoretical Indifferentists display unmistakable hostility to the Catholic Church; while, again, persons devoid of all religious belief, favour the Church as an efficient element of political and the preservation of the social order.

(b) Criticism.—It would be beyond the scope of this article to develop, or even briefly sketch, the argument contained in the Scriptures and in the history of the Church for the truth that, from the beginning, Christianity was a dogmatic religion with a rule of faith, a rule of the true religion, in the system, with promises to be fulfilled for those who adhered to the creed, the discipline, and the system, and with anathemas for those who rejected them. The exposition and the proof of these facts constitute, in theology, the treatise on the Church (see Crunch). One obvious consideration may be briefly pointed out which lays bare the inconsistency of liberal indifferentism. If, as this theory admits, God did reveal any truth to men, then He surely intended that it should be believed. He can not have meant that men should treat His revelation as of no importance, or that it should signify one thing to you and something entirely different to me, nor can He be indifferent as to whether men interpret it correctly or incorrectly. If He revealed a religion, reason certainly tells us that such a religion must be true, and all others that disagree with it false, and that He desires men to embrace it; otherwise He would not have given us a general atmosphere of doubt or positive unbelief. It is true that in many places the Scriptures are obscure and furnishing to those who assume to interpret them by the light of private judgment alone many occasions of reaching irreconcilable conclusions. This fact, however, proves only the falseness of the Protestant principle of faith. The reason that it is not so is that all interpretations are equally trustworthy, but that, since God has given us a revelation which is not so clearly or fully expressed in the Scriptures that reason can grasp it with certitude, He must have constituted some authority to teach us what is the burden of revelation.

The cogency of this reasoning when set forth at adequate length has led into the Catholic Church many sincere non-Catholics, who have observed how Rationalism is rapidly dissolving religious faith over wide areas once occupied by dogmatic Protestantism. Present signs seem to indicate that, in the near future, the religious struggle shall be, not between this or that form of religion, but between Catholicism and no religion at all. It is true, of course, that reason, as the Vatican Council teaches, can, by its own native powers, reach with certitude the truths which suffice to form the basis of a natural religion. But it is also true, as Newman has said, the tendency of the hunger of the intellect, as such, has been, historically, towards simple unbelief in matters of religion: "No truth, however sacred, can stand against it in the long run; and hence it is that in the Pagan world, when our Lord came, the
INDIVIDUALISM

ast traces of the religious knowledge of former times were all but disappearing from those portions of the world in which the intellect had been active and had a career" (Apologia, chap. v). These words might stand with but little modification as a description of present-day conditions where the rationalistic spirit in its innate opposition to its own triumphant march, leading scepticism in its train, is the principle of authority embodied in the Catholic Church.

See the various theological treatises De Religione for the necessity of religion, HETTENGE, Natural Religion (New York, 1890); SCHANK, A Christian Apology (New York, 1881); BALFOUR, An Appeal of the Right and Wrong (London, 1892); DE LAMENNAIS, Essai sur L'Indifférence en matière de religion (Paris, 1859). For Liberal opinion, see F. D. Maurice, The Definition of Ultimate Reality in Tracts for the Times, Vol. V, No. 55. This lecture will be found also in Discussions and Arguments (London, 1891). JAMES J. FOX.

Individualism.—A comprehensive and logical definition of this term is not easy to obtain. Individualism is not the opposite of socialism, except in a very general and incomplete way. The definition given in the Century Dictionary is too narrow: "That theory of government which favours non-interference of the State in the affairs of individuals." This covers only one form of individualism, namely, political individualism. Perhaps the following will be a more satisfactory description: The tendency to magnify individual liberty, as against external authority, and individual activity, as against associated activity. Under external authority are included not merely political and religious governments, but voluntary and private institutions as well, and such things as are found in general standards of conduct and belief. Thus, the labourer who refuses on theoretical grounds to become a member of a trade union; the reformer who rejects social and political methods, and relies upon measures to be adopted by each individual acting independently; the writer who discards any sense of the recognized canons of his art; the man who regards the pronouncements of his conscience as the only standard of right and wrong; and the freethinker—are all as truly individualists as the Evangelical Protestant or the philosophical anarchist. Though all forms of individualism are made by its adherents upon the emphasis upon the importance of self in opposition to either restraint or assistance from without. Individualism is scarcely a principle, for it exhibits too many degrees, and it is too general to be called a theory or a doctrine. Perhaps it is better described as a tendency or an attitude.

The chief recognized forms of individualism are religious, ethical, and political. Religious individualism describes the attitude of those persons who refuse to subscribe to definite creeds, or to submit to any external religious authority. Such are those who call themselves freethinkers, and those who profess to believe in their private interpretation of the teaching of Scripture, but neither is he a logical Protestant. On the other hand, Catholics accept the voice of the Church as the supreme authority, and therefore reject outright the principle of religious individualism.

Political individualism is not often spoken of now, and the theories which it describes have not many confessed adherents. Of course, there is a sense in which all men are ethical individualists, that is, inasmuch as they hold the voice of conscience to be the immediate rule of conduct. But ethical individualism means more than this. It means that the individual conscience, or the individual reason, is not merely the decisive substitute for an external rule; it is the only rule; that there is no objective authority or standard which it is bound to take into account. Among the most important forms of the theory are the intuitionism, or common-sense morality, of the Scottish School (Hutcheson, Reid, Ferguson, and Smith), the autonomous morality of Kant, and all the individualistic systems of Hegel's philosophy. The assertion of utility or pleasure the supreme criterion of right and wrong. At present the general trend of ethical theory is away from all forms of individualism, and toward some conception of social welfare as the highest standard. Here, as in the matter of religion, Catholics are not individualists, since they accept as the supreme rule, the law of God, as and the final interpreter of that law, the Church. Considered historically and in relation to the amount of attention that it receives, the most important form of individualism is that which is called political. It varies in degree from the pure anarchism to the theory of the State as its only proper function is to maintain order and enforce contracts. In ancient Greece and Rome, political theory and practice were anti-individualistic; for they considered and made the State the supreme good, an end in itself, to which the individual was a means.

Directly opposed to this conception was the Christian teaching that the individual soul had an independent, indestructible value, and that the State was only a means, albeit a necessary means, to individual welfare. Throughout the Middle Ages, therefore, the ancient theory was everywhere rejected. Nevertheless the problems of political theory and practice are far removed from anything that could be called individualism. Owing largely to the religious individualism resulting from the Reformation, political individualism at length appeared: at first, partial in the writings of Hobbes and Locke; later, complete in the speculations of the French philosophers of the eighteenth century, notably Rousseau. The general conclusion from all these writings was that government was something artificial, and at best a necessary evil. According to the Social Contract theory of Rousseau, the State was merely the outcome of a compact made by its citizens to give them the advantage which they were under no moral obligation to form a State, and the State itself was not a moral necessity. These views are no longer held, except by professional anarchists. In fact, a sharp reaction has occurred. The majority of non-Catholic ethical and political writers of today approach more or less closely to the position of ancient Greece and Rome, or to that of Hegel; society, or the State, is an organism from which the individual derives all his rights and all his importance. The Catholic doctrine remains as always midway between these extremes. It holds that the State is normal, natural, and necessary, even if the family is necessary, but that it is not necessary for its own sake; that it is only a means to individual life and progress.

Moderate political individualists would, as noted above, reduce the functions of the State to the minimum that is consistent with social order and peace. They view the matter, there is always a presumption in favor of any interference. So far as the affairs of individuals, a presumption that can be set aside only by the most evident proof to the contrary. Hence they look upon such activities as education, sumptuary regulations, legislation in the interest of health, morals, and professional competency, to say nothing of philanthropic measures, or of industrial restrictions and industrial enterprises, as outside the
State's proper province. This theory has a much smaller following now than it had a century or even half a century ago; for experience has abundantly shown that the assumptions upon which it rests are purely artificial and thoroughly false. There exists no general presumption either for or against state activities. If there is any presumption with regard to particular matters, it is as apt to be favourable as unfavourable. The one principle of guidance which test of propriety in this field is the welfare of society and of its component individuals, as determined by experience. Whenever these ends can be better attained by state intervention than by individual effort, state intervention is justified.

Individual intervention in the affairs of industry that present-day individualism makes its strongest protest. According to the laissez-faire, or let alone, school of economists and politicians, the State should permit and encourage the fullest freedom of contract and of competition throughout the field of industry. This theory, which was derived partly from the political philosophy of the eighteenth century, already mentioned, partly from the Kantian doctrine that the individual has a right to the fullest measure of freedom that is compatible with the equal freedom of other individuals, and partly from the teachings of Adam Smith, received its most systematic statement in the Manchester of the nineteenth century. Its advocates opposed not only such public enterprises as state railways and telegraphs, but such restrictive measures as factory regulations, and laws governing the hours of labour for women and children. They also discouraged all associations of capitalists or of labourers. Very few individualists now adopt this extreme position. Experience has too frequently shown that the individual can be as deeply injured through an extortionate contract, as at the hands of the thief, the highwayman, or the contract breaker. The individual needs the protection of the State quite as much and quite as often in the former case as in any of the latter contingencies. As to state regulation or state ownership of certain industries and utilities, this too is entirely a question of expediency for the public welfare. There is no a priori principle, political, ethical, economic, or religious, by which it can be pronounced right or wrong. Many individualists, and others wise, who oppose state intervention in this field are victims of a fallacy. In their anxiety to safeguard individual liberty, they forget that reasonable labour legislation, for example, does not deprive the labourer of any liberty that is worth having, while it does ensure him real opportunity, which is the vital content of liberty. They forget, while state ownership and direction of certain industries undoubtedly diminishes both the liberty and the opportunity of some individuals, it may increase the opportunities and the welfare of the vast majority. Both individualists and non-individualists aim, as a rule, at the greatest measure of real liberty for the individual; all their disagreement relates to the means by which this aim is to be realized.

As in the matter of the necessity and justification of the State, so with regard to its functions, the Catholic position is neither individualistic nor anti-individualistic. It accepts neither the “policeman” theory, which would reduce the activities of the State to the protection of life and property and the enforcement of contracts, nor the proposals of Socialism, which would make the State the owner and director of all the instruments of production. In both respects its attitude is determined not by any metaphysical theory, but by the requirements of the practical state of society, and by the conception of the requisites of individual and social welfare.

JOHN A. RYAN.

Individual, Individuality (Lat. individuum; Ger. Einzelt; Fr. individu). An individual being is defined by St. Thomas as "quod est in se individuum, ab aliis vero divisum" (a being undivided in itself but separated from other beings). It implies therefore unity and separateness or distinctness. Individuality in general may be defined or described as the property or collection of properties by which an individual possesses this unity and separateness from other beings. What is it that constitutes an individual, or individuality? This is a problem which has exercised most of the great schools of philosophy. It may be considered from the metaphysical or the psychological standpoint, though these are intimately connected. Again, there is a sense in which individuality presents interesting questions to ethics and pedagogics.

METAPHYSICS.—The surrounding universe manifests itself to us, at all events at first sight, as a plural-ly, a collection of individual things. We recognise as individually distinct not only external objects—animals, men, and the like. We speak of the stacks of corn or the stones scattered over a field as so many individual things. Yet a little reflection reveals to us that the nature of the unity, and consequently of the individuality, possessed by many of these objects is of a very imperfect kind. A stack of corn is after all merely an aggregate of separate ears; and a stone is merely a group of smaller stones or particles of matter in accidental local contact, and bounded off by some other kind of matter. The unity of such an object is entirely extrinsic and accidental, whilst the separateness is due merely to the discontinuity beyond its surfaces of the kind of material of which the object is composed. Portions of lifeless matter have thus only an inferior or imperfect kind of individuality. Higher in the scale of beings come plants and animal organisms, though in the lower orders of life it is often a difficult problem for the scientist to decide whether a particular specimen is better described as a single living being or a colony of beings.

However, the broad fact remains that we look on the real world presented to our senses as made up of a vast number of separate individual beings, and so the other hand, as soon as mind to think, judge, or reason, or to make any sort of significant statements about these objects, it conceives them under universal aspects. It does not manipulate them as mere disconnected individuals, but groups them under certain common points of view. If the mind is to make any progress at all, it is compelled to organise its sensible experiences, to handle the individual facts presented to it by means of universal ideas. The psychological genesis of these ideas, their precise character, and the nature of the reality outside of the mind which corresponds to them.—in other words the great problem of universals—were keenly discussed by Plato and Aristotle, and became a still more burning question in the Christian and Arabic schools of philosophy from the tenth to the twelfth century (see Idea). But a counterpart of the same problem is the question of the individual. And this latter topic in the form of the controversy respecting the principle individualism was almost as prominent in the schools during the thirteenth and fourteenth centuries.

What constitutes an individual being? What gives it its own peculiar individuality? By what is it
distinguished from all other beings, and especially from other beings of the same species? One obvious answer is given in the enumeration of such differences as those of place, of time, of number, or of extrinsic relations. Nor is perfect identity, even in place, between two beings wholly inconceivable. These extrinsic differences, in fact, presuppose intrinsic differences. Two things must first differ in relation to each other before they can differ in relation to a third, or in being, such as the question which exercised the philosophical schools referred especially to intrinsic difference. What is the intrinsic principle of individuation by which one being is distinct from another? In the Aristotelian theory the corporeal objects around us are composite beings ultimately constituted of two principles, one passive and dependent (matter), the other active and determining (form). The latter gives the being its specific nature. The former is the ground of divisibility and multiplicity; and this is for Aristotle the source of individuation. The question, however, received much fuller development and discussion in the Metaphysics, wherein he brings out the idea that all the different replies advanced by different philosophers.

According to St. Thomas, who developed the Aristotelian doctrine, the form, in so far as corporeal beings are concerned, gives specific unity and determinateness to the thing. But many individuals can exist under the same species; it is the principle which furnishes the common basis for the universal idea. The form, therefore, cannot be the source of individuation, since it itself needs a principle by which it may be individuated. This principle, the ratio distinctionis, the cause of difference between one individual and another, must be sought in the limiting principle which receives the form, and is the ground of divisibility and multiplicity—the matter. This teaching of St. Thomas is made clearer by his doctrine concerning the nature of intelligences, or angels. They are pure forms devoid of any material element. Consequently the angelic nature contains no ground within it for multiplication; there can be only one in a species. Unlike men, who differ numerically in the same species, the several angels must differ specifically. In composite corporeal beings, the matter is the principle of limitation and individuation. But St. Thomas insists that the internal principle of individuation conferring numerical unity on the subject which it constitutes. Scotus tends partly towards this view, adding, however, a further entity to the form proper. Matter, he argues, cannot be the principle of individuation, because it is essentially divine, and autonomous. But he does not insist in the form, not, however, simply as universal nature, but with a particular formality added. This further difference determining the species down to the individual, he calls by the name, horcentias (thinness).

The Nominalist teaching on universals led its advocates to a solution of this question quite different from that of either St. Thomas or Scotus. According to them the universal has no existence outside of the mind, no foundation in external nature. Every reality, as such, is individual. As Occam urged: “Quaelibet res singularis eipsa est singularis, unum per se”; hence dispute about an internal principle of individuation is unnecessary. If there is no individuation we can only intelligibly allude to the creative will, or efficient cause, which gave existence to the thing. Others, however, who are very far from being Nominalists, also hold this view. Indeed it is adopted by Suarez himself, who maintains: “Omnes substantiam singularem nec allo indigere individuationis principio prater suam entitatem, vel aliaque essentiae interna substantia, nec possunt esse individuatea omnium substantiarum variarum individuatione, quia est deterrensis principium regii, quod movet et individuat.” (Disp. Meta-phys., V.) A view akin to that of Suarez was advocated by Leibniz in his treatise “De principio individui.”

Nowadays interest in the more subtle phases of the old metaphysical problem has declined, but a more fundamental question, raised by the theory of Monism, has come to the fore. Instead of the question, “How, precisely, do individual beings of the same species differ from each other?” we are asked, “Are there any truly individual beings in the universe at all? Or are the seemingly distinct, individual objects of the real world around us, in fact, different reactions of many modes, phases, or aspects of the Absolute, of the Infinite, of the underlying substratum or ground of all things?” For Spinoza “omnis determinatio est negatio”—every individual determination is merely a negation, a limitation of the universal, and nothing except the expenditure and expenditure of the substance, of which the seemingly distinct, individual, finite beings are merely parts or modes. This denial of true individuality to all finite beings is the doctrine of Monism which, whether in an idealistic or materialistic form, has acquired steadily increasing influence since the time of Spinoza, and especially during the last century. Consequently the question of individuality is now shifted to that of the personality of human beings; for, obviously, it is in regard to them that the question becomes of most interest, and at the same time most capable of decisive proof.

Psychology.—It is only of persons that individuality can in the strict sense be predicated. A person is usually defined as an individual substance of a rational nature. It implies independence or existence in itself. Neither animals nor lifeless matter are persons, and so they do not possess this complete individuation. The individuality of the reality of human beings in the world around us rests therefore on the evidence for human personality, and for each of us ultimately on the proof of our own personality. My conviction of my personality and individual existence is the outcome of my experience. Rational self-consciousness combined with memory assures me of the abiding identity of my own being. That I am the same person who underwent a dangerous illness long ago as a child, who acquired a knowledge of certain branches of learning during my youth, who have recently gone through some particular experiences, and who am now engaged in writing these sentences, is affirmed by my own performance and joy, by my intellect. Further, I have been conscious of exercising free volition and determining my own actions. I have found myself acted upon by certain impulses, and I have resisted or freely yielded to them. I have realized in and after such acts that they were mine, and that I was responsible for them. I have had it constantly impressed upon me that these external world which no effort of my will can annihilate. My reason assures me of my separateness from it and of its independence of me. If any truth is certain to me, then it must be that of my own abiding existence as a rational person responsible for my own acts. But if only the unity of mental or personal identity—the unity of my being together with the independence or separateness of my existence. The self-conscious ego is thus the perfect type of the individual being. But if I assert my own existence
as an individual being, I must allow that the existence of other similar beings is, at all events, not impossible. But, the possibility once conceded, all the evidence establishes the existence of other men like myself. Further, experience can establish nothing with more irresistible force for me than that I am not any of these other men, that none of them is myself, that we actually with potentiality, perhaps with reality, possess the experience of my limitations, the self-conscious cognition of my own abiding existence, the self-intimate awareness of my own free volition, the irrefragable assurance that I am answerable for my conduct—all combine to convince me that I am no mere irresponsible, a self-conscious, free, self-willed, free volitional, flickering dream of an impersonal Mind, but a real unitary being, a free, self-conscious, separate personality, possessed of a genuine individual existence of my own. It is clear that any philosophical theory which is compelled to repudiate or explain away this conviction of my own individuality, whatever other problems it may claim to solve, cannot claim to be a very rational account of the universe.

Psychology presents us also with a secondary or derived meaning of the word individuality—the collection of more marked or prominent qualities of intellect, feeling, and will, by which the character of the individual is determined and shaped. We speak of St. Francis of Assisi, or Bismarck, or Abraham Lincoln, or Daniel O’Connell, as men of marked individuality; but the term is applicable to normal mankind also. Every adult human being differs from other men by a collection of qualities possessed in varying degrees by each. When the deviation from the normal is marked, yet not of a desirable kind, we speak of it as eccentricity. The root of the qualities which subsequently constitute a man’s individual character lies in his congenital endowment, partly mental and partly physical, that coordinate dependence of soul and body renders it impossible, sometimes, to distinguish them. Obviously, the efficiency of the intellectual powers is conditioned by the perfection of the brain and nervous system. The aptitudes and dispositions due to his physical constitution are the main factors in the formation of the individual character. (See Character.) It has long been recognized that this is largely due to inheritance. But the scientific study of heredity is still in a most elementary stage. The work of Galton, though useful and suggestive, carries us but a little way. The experiments of Abbott available, are still in which the inheriting of light on the principles governing the inheritance of many characteristics throughout the animal kingdom. At the same time, in studying man we must be on our guard in ascribing to heredity traits which are the effect of imitation, training, and community of family environment. This is especially to be borne in mind in regard to the children of criminals. The total collection of elements which go to make up the mental constitution of man belong to the cognitive or appetitive faculties, or, according to the modern division, to the intellectual, emotional, or conative activities of the soul. Experience shows that each of these three varies in power and range in different human beings. To some the emotional capacity, to others will-power or intellectual aptitude may be more liberally allotted at the start. But, strictly speaking, the child is not possessed of a definite, actual individuality. It is endowed with potencies which may develop in various directions to the individual character possible of realization. For, besides the original capital of congenital aptitudes, there is the manner and degree—certainly of not less importance in the final total product—in which each of these aptitudes shall be fostered or starved. Exercise or indulgence during the plastic period develops each faculty and inclination, whilst each, on the other hand, becomes atrophied and enfeebled by neglect or suppression of function. The observation of young children, even of members of the same family, impresses us with the great variety of native capacity and disposition. Delicacy of sense-perception and observation, power of attention, tenacity of memory, alertness of mind, resourcefulness, self-reliance, practically the entire gamut of human characteristics are already exhibited in quite different proportions in children of the age of three or four years. But the relative strength to which each faculty will ultimately attain will be conditioned by its future activity. The final result is, in fact, the outcome of nature and nurture.

Ethics.—The value of individuality as an element of well-being to the individual and the nation or the race, is a problem of the highest importance. We speak of St. Francis of Assisi, or Bismarck, or Abraham Lincoln, or Daniel O’Connell, as men of marked individuality; but the term is applicable to normal mankind also. Every adult human being differs from other men by a collection of qualities possessed in varying degrees by each. When the deviation from the normal is marked, yet not of a desirable kind, we speak of it as eccentricity. The root of the qualities which subsequently constitute a man’s individual character lies in his congenital endowment, partly mental and partly physical, that coordinate dependence of soul and body renders it impossible, sometimes, to distinguish them. Obviously, the efficiency of the intellectual powers is conditioned by the perfection of the brain and nervous system. The aptitudes and dispositions due to his physical constitution are the main factors in the formation of the individual character. (See Character.) It has long been recognized that this is largely due to inheritance. But the scientific study of heredity is still in a most elementary stage. The work of Galton, though useful and suggestive, carries us but a little way. The experiments of Abbott available, are still in which the inheriting of light on the principles governing the inheritance of many characteristics throughout the animal kingdom. At the same time, in studying man we must be on our guard in ascribing to heredity traits which are the effect of imitation, training, and community of family environment. This is especially to be borne in mind in regard to the children of criminals. The total collection of elements which go to make up the mental constitution of man belong to the cognitive or appetitive faculties, or, according to the modern division, to the intellectual, emotional, or conative activities of the soul. Experience shows that each of these three varies in power and range in different human beings. To some the emotional capacity, to others will-power or intellectual aptitude may be more liberally allotted at the start. But, strictly speaking, the child is not possessed of a definite, actual individuality. It is endowed with potencies which may develop in various directions to the individual character possible of realization. For, besides the original capital of congenital aptitudes, there is the manner and degree—certainly of not less importance in the final total product—in which each of these aptitudes shall be fostered or starved. Exercise or indulgence during the plastic period develops each faculty and inclination, whilst each, on the other hand, becomes atrophied and enfeebled by neglect or suppression of function. The observation of young children, even of members of the same family, impresses us with the great variety of native capacity and disposition. Delicacy of sense-perception and observation, power of attention, tenacity of memory, alertness of mind, resourcefulness, self-reliance, practically the entire gamut of human characteristics are already exhibited in quite different proportions in children of the age of three or four years. But the relative strength to which each faculty will ultimately attain will be conditioned by its future activity. The final result is, in fact, the outcome of nature and nurture.

These tendencies may in some cases make for evil. Henry VIII and Napoleon each possessed an individuality not less distinct than that of Blessed Thomas More or George Washington. Still, the possibility of abuse does not annihilate the value of God’s gift and among souls brought up by a good mind and heart and which, when permitted a natural and just development, result in strong and varied individualities. Men are distinguished from the lower animals by the possession of individual characters; and enlarged freedom of opportunity increases the variety and variety. Mankind thus becomes richer. God does not repeat himself in the formation of human faces, nor does He in the creation of human souls. Variety is an essential element in the beauty of the universe—mental and moral as well as physical. It would be a poor world indeed if there were no variety of persons, no single or a few common moulds. Multiplicity of peoples and languages and forms of government is part of the order of Providence which governs the earth; and the smaller nations have contributed not less precious elements to the well-being of mankind than the largest empires. One disastrous effect of socialism is precisely the preclusion of out of personal individuality. Indeed a grave evil of modern civilization is the menace to individuality involved in the enormous extension of machinery and of production on the large scale, in the influence of the press, in state education, and the triumph of the largest nations in the struggle for life. In spite of his errors and exaggerations, there is a considerable measure of truth in Mill’s eloquent plea for the worth of individuality to the human race (On Liberty, c. iii.).

Pedagogics.—If individuality is a valuable asset in the adult man, then a first maxim for the teacher is: “Recognize the individuality in every one of your pupils.” As a matter of fact, good teachers have always instinctively done so. For what does the maxim mean? Study your pupils. Observe their diverse capabilities. Note the tastes, tendencies, and impulses of each. Ascertain their exact present attainments, their varying powers of application. Then modify your method of action so as to adapt it to each child.
Do not treat all in the same way. Be sympathetic. Constantly study how to get the most and the best out of each student. What are all these rules, as old as the art of teaching, but diverse expressions of the one universal principle: "Appreciate the individuality of your pupils"? This individuality will often exhibit itself in an inconvenient or disagreeable way. It is then distinctly expressed by the unempathetic teacher. The temptation to suppress and crush it will often be very strong. The unoriginal mind finds intense difficulty in tolerating individuality. Yet the educator must remember that it is his duty to draw out and cultivate in his pupil every element of good, to repress every evil; and he should never forget that the individual nature of each is the precious root out of which personal character is to be developed. The chief difficulty is in regard to aptitudes and inclinations, which, though in themselves indifferent, may easily make for evil if indulged, or want of sufficient self-control. Thus, an impulsive disposition or an unbending will are traits of character in a pupil which often come into disagreeable collision with the teacher's efforts; yet they may contain some precious elements of the raw material out of which, with patience and by judicious development, a fine and perfect form of personality may be formed. On the other hand a levelling-down method of education by constant repression and steady discouragement may enfeeble or altogether extinguish what would have been admirable features of individual character.

Michael Maher.

**INDO-CHINA.** The most easterly of the three great peninsulas of Southern Asia, is bounded on the north by the Mountains of Assam, the Plateau of Yunnan, and the Province of Kwang-si; on the east by the Gulf of Tong-kong, and the Sea of China; on the south by the Sea of Japan; on the west by the Gulf of Martaban and the Bay of Bengal. This territory is divided politically into: Upper and Lower India, which belong to the Inland; the Malay Peninsula, which England shares with Siam; the Empire of Siam; and French Indo-China, which includes the Colony of Cochinchina, the vassal Kingdoms of Cambodia and Annam, the Tong-king and Laos Protectorates; and—although not geographically included in Indo-China—the Territory of Kwang-chau-wan, leased in 1888 for ninety-nine years from the Chinese Government. The length of the peninsula from the Chinese frontier to Cape Cambodia is about 1200 miles; at its widest point, between the Gulf of Tong-king and the Bay of Bengal, its breadth is 1000 miles. Its approximate area is 753,000 square miles, or about one-seventh of the area of the United States. Its population is estimated at 34,000,000, that is 46 inhabitants to the square mile. In the present article, only general reference will be made to the British territories and Siam, for particulars concerning which the reader is referred to the articles INDIA and SIAM respectively in the Catholic Encyclopedia.

**PHYSICAL FEATURES, ETC.**—While manifesting a certain degree of uniformity in its physical formation, in the ethnographical relations of its inhabitants, and, to a lesser degree, in its fauna and flora, Indo-China lacks that political unity which characterizes its sister peninsula, Hindustan. As both this want of unity and the comparatively deserted state of the Indo-Chinese peninsula are almost entirely due to the configuration of the land, a clear exposition of the nature of the main peninsula must necessarily precede every attempt to treat intelligently of its history, civilization, peoples, and produce. In Indo-China we have a vast tract of territory almost four times the size of France, blessed with a soil capable of producing almost any crop, free from the barren wastes of the desert, and so situated that it may enjoy the same latitude, richly watered by enumerable rivers and streams, possessing a mineral wealth not greatly inferior to its agricultural possibilities, endowed by nature with numerous superb harbours, the natural rendezvous of traders between the West and the Far East, situated in the midst of an ocean of vast islands—many of which are unexplored for the richness of their soil—and yet exhibiting in spite of all these natural advantages a backwardness difficult at first to understand. Though perhaps referable to some extent to the character of the inhabitants, the cause of the backward state of Indo-China consists rather in the national indolence of the people. As already stated, it is primarily a geographical one. Francis Garnier, the famous explorer of the peninsula, compared the territory to the human hand with extended fingers. The fingers serve to indicate roughly the courses of the five great rivers which rise in the high plateau to the north of the peninsula: the Song-koi (Red River) flowing through Tong-king, the Me-kong through Laos and Cambodia, the Me-nam through Siam, and the Salwin and Irrawaddy through Burma. The upper basins of these rivers are effectually separated from each other by lofty mountain ranges, the geographical continuation of the Great Tibetan Plateau. As one descends towards the south, the river-valleys widen, the soil falls rapidly, and consequently the variation of climate, soil, animals, and plants is much more abrupt than that occasioned by a mere change of latitude. Thus, while the mountains between the river basins were an effectual bar to the development of a feeling of union among the tribes occupying the upper courses of the great rivers, the difficulties arising from the rapid change of climate served as an almost equally effectual check to their natural tribal growth, which in ancient times was effectuated by migration along the banks of the rivers. Those rivers, where also the climate except the Indus, run parallel to the equator, this natural growth of the population could take place without the necessity of encountering absolutely novel climatic and agricultural conditions.

The principal mountain ranges are the mountains of Assam (the Blue Mountains, 7100 feet) and Arakan-Yoma between the Brahmaputra and the Irrawaddy, the Shari-Yoma between the latter and the Salwin, which rises to the height of 10,500 feet; the Tana-taung-gyi Mountains between the Me-kong and the Salwin (Lai-pan-ngoun in the Shan Country, 8100 feet). The mountains between the Me-kong and the Song-koi continue southwards as the Annamite Coast Range between the Me-kong and the sea, turn westwards on reaching the south of the peninsula, and, thus describing a figure which may be compared to a rude S, have a very important influence on the climate of the different countries. Another chain runs parallel along the western coast, many peaks of which exceed 7000 feet.

**ETHNOLOGY AND NATIVE HISTORY.**—The early periods of the history of Indo-China are shrouded in a darkness illumined only by such stray gleams of information as can be obtained from a comparative study of its peoples, languages, civilizations, and customs. It is now universally accepted that its primitive
inhabitants were savage tribes of Malay origin, probably from the islands of the Pacific, and that they are represented to-day by the numerous wild tribes scattered over the great eastern range of mountains from Yun-nan to Cochinchina. They are variously named in the different localities: Mols in Annam, Pnongs in Cambodia, Khas in Laos, etc. They probably occupied at first the greater portion of the peninsula, but were driven by the invading races into the mountains, where they led a most wretched, if practically independent existence. They are dolichocephalic, of a swarthy complexion, and with wavy hair. The difference of type found among them is due mainly to intermarriage with members of the invading races who fled to the mountains to evade war, justice, or creditors. They represent every degree of color from the great eastern range of mountains (from five feet), dolichocephalic, of a swarthy complexion, and wavy hair. The difference of type found among them is due mainly to intermarriage with members of the invading races who fled to the mountains to evade war, justice, or creditors. They represent every degree of color from the foot of the Khas and Souls on the banks of the Se-bang-hieng on the western slopes of the Annamite Range to the half-civilization of the Muongs in the north-east of Tong-king and of the Thos of the River Lang-son. The Muongs are possibly more nearly related to the Laos (below) than to the Annamites, while their language bears more resemblance to the usual Laotian. As one proceeds southwards the mountain tribes become less and less civilized—a phenomenon traceable to the increasing influence of the brave and warlike people of the Muongs, a race which was characterized by the sale of its women and children as slaves, the traditions of which have been perpetuated in the works of the Hindu art. This form of slave-hunting is practised mainly by the Laotian races of the Annamite Range name themselves Phou-tayes, Souis, Bahnars, Steinges, Mols, Kouys, Pnongs, etc.: almost all are of Malay origin, and their language always resembles Laotian.

At a very remote period two great floods of immigration poured into Indo-China. The first of these currents consisted of the tribes of Aryan race coming from Northern India via Burmah and Siam—a tradition of the royal house of Cambodia makes the neighbourhood of Benares the cradle of the Khmer people. Driving the primitive inhabitants to the mountains the Aryans possessed themselves of the districts known to-day as Laos, Siam, Cambodia, Cochinchina, and Central and Southern Annam. That all these races were included in the territory of the mighty Khmer Empire seems established by the numerous existing monuments and inscriptions, by the striking similarity between the constitutions of Cambodia and Siam, and by the many resemblances between the characteristics, legends, and languages of the Khmers and Cambodians. It is impossible to fix definitely the date or sequence of the Aryan and Mongol invasions of Indo-China. We are, however, justified in supposing that the Khmers anticipated the peoples of yellow race, unless indeed the organization of their realms was much more rapid.

The second current of immigration was that of the Mon from the plateaux of Southern China. Establishing themselves first in Tong-king, they later proceeded southwards, occupied North Annam, and founded the Annamite Empire. If credence is to be attached to local legends, these invaders—whom we may henceforth call the Annamites—intempered freely with the primitive inhabitants and gradually absorbed them. A reference to the Annamites as the Giao-chi (i.e. the "big-toed")—the wide separation of the big toe from the others is still a distinctive characteristic of the Annamite), found in the Chinese Annals in 2357 B.C., affords us a faint clue to the great antiquity of the Annamite race, which some ethnologists believe not descended from, but coeval with the Chinese. According to Annamite legends, however, their first rulers were descended from the royal house of China, and the Chinese dynasty ruled Annam as vassals to the Celestial Empire until 257 B.C. From 257–110 B.C. the Annamite Empire was governed by two native dynasties, both feudatory to China, but in the latter years China occupied Annam from 52 to 110 B.C. to A.D. 939 Annam was administered by Chinese governors, except during the domination of a few short-lived native dynasties.

It is also to the Chinese Annals that we are indebted for our earliest documentary information concerning the Khmer Empire. From them we learn that early in the eleventh century Angkor, the great capital of the Khmers, was at its height. Throughout the centuries of vassalage, though the entire absence from Chinese records of all mention of Angkor until 1296 seems to suggest that the suzerainty of China may perhaps have been of a shadowy kind. As their subjugation of China must be taken as the first indication of Khmer decadence, our knowledge of the history of the nation is derived mainly from the productions of Hindu art. The striking resemblance of the carvings of the statues to the productions of Hindu art demonstrate clearly that the artistic greatness of the nation was contemporaneous with the Aryan predominance, and the decline of the Khmers is probably to be attributed to the weakening of the Aryan element in the population occasioned by intermarriage with the surrounding yellow races and Malays. A second indication of Khmer decline was the establishment of the Kingdom of the Ciampas in Central and Southern Annam about the fifth century. That the Khmers and Ciampas belonged to the same race is now undisputed, although some hold that the latter belonged to a later Indian immigration than that of the Khmers.

Concerning the first nine centuries of our era we have little historical information about Indo-China. About the beginning of the tenth century the Annamite chiefs revolted, cast off the Chinese yoke, and set up a separate empire. Through the next two centuries the Khmer Empire exercised a nominal suzerainty over Annam until the intervention of France in the nineteenth century. At this period Annam influence extended only over Tong-king and Northern Annam, but henceforth, unembarrassed by China, Annam directed all its forces against the Cambodians. The account of the Chinese to the Annamite advance may be judged from the fact that, notwithstanding the almost incessant warfare, Hue was still the capital of the Ciampas Kingdom as late as the fifteenth century. Forced subsequently into the southern provinces, the Ciampas chose Chau as their head-quarters, but, towards the close of the fifteenth century, they were driven out by the Annamites, and by the end of the seventeenth century the Kingdom of the Ciampas had disappeared. The ruin of the Khmer Empire occurred about the same period. In 1688 the King of Cambodia was defeated by the united Annamites and Ciampas on the northern frontier of Cochinchina, and compelled to acknowledge himself Annam's vassal. Civil war having broken out in his territory, Annam interfered in 1675 to re-establish peace, and, on the pacification of the country, set up one king at Oudong and another at Saigon. In 1809 Annam took advantage of a new revolution in Cambodia to establish in the country a royal commission, who colonized various districts with malefactors from Annam. The Empire of Annam now included all the territories which constitute the modern countries of Tong-king, Annam, and Cochinchina, and was fur-
thermore suzerain of Cambodia. Southern Annam and Cochinchina formed one province, administered by a governor of the Nguyen family.

The last decades of the eighteenth century are notable for the great insurrection called the Tay Son Thong Tae (the War of the Great Mountains of the French) which has given the name of "hay-shah" to its leaders—two brothers of the Nguyen family, Nguyen van Nha and Nguyen van Hue. The rebellion was at first entirely successful, the last member of the royal family of Le being forced to take refuge in China. Subsequently Nguyen-an, hereditary governor (chao) of the southern province, succeeded in eliciting French assistance in 1789, and with the aid of the Frenchmen, the American shahans, and Hue in 1801. In 1802 he entered Ke-so (Hanoi), the capital of Tong-king, and had himself declared emperor under the title of Gia-long—a name he was destined to make famous.

Now undisputed master of all the territories (except Laos) embraced in the present French Indo-China, Gia-long devoted his whole energy to the organization of the country. To him the peninsula is indebted for numbers of its canals and roads, especially for the great road, which, starting from Saigon, traverses Annam and Tong-king, and, passing through Hue and Hanoi, goes northward to Liang-tien, a distance of 900 miles. The road was constructed by the Chinese colony in the first half of the century. Minh-mang (1820–41), Gia-long's successor, was as noted for hatred of, as his father had been for benevolence towards Europeans. During Minh-mang's reign (1834) Siam snatched Cambodia from Annam, and made it tributary to the Siamese government, annexing the provinces of Battambang and Siem-reap (see below under Cambodia) to Siamese territories. It was the policy initiated by Minh-mang that led finally to French intervention, the history of which is so closely bound up with Christianity that it may be more properly considered under that heading.

The centre of the Indo-Chinese peninsula had meanwhile become the seat of a thinly populated Thai. Whether the Thais or Shans (both terms signify the "Free") are the last of the great invading races, came originally from the north-east of China or the plateaux of Southern China is still disputed: they first appear in history about the beginning of our era, when they occupied the upper basin of the Irrawaddy. As in the case of the other invading races, our information concerning the history of the Thais is very meagre. Having established themselves in the territories known to-day as Laos and the Shan States, they began their march southwards about the end of the sixth century, and began to establish their influence in the areas they had extended their dominion to the Gulf of Siam. They early split up into two branches: the Thai-nyai—the "Great Thai"—or Shans proper, of whom the Laotines are the direct descendants—and the Thai-noi—the "Little Thai"—or Siamese, whose history will be more fully treated under Siam. The Shans were the first to found a powerful empire. According to their own historians, all the early conquests of the Thais until the end of the thirteenth century are to be attributed to the Shans. Later their power began to wane, while that of the Siamese increased. Incessant wars with Burma and China between the fourteenth and the sixteentye centuries resulted in a great diminution of the Shan territories, and at the close of the seventeenth century Shan power was represented mainly by the Laotine kingdom with Vien-tian as its capital. Enfeebled by protracted quarrels with the hill tribes, the Laotines were so unfortunate as to invoke the aid of the French, which gradually extended its dominion over the Laos states, and by the middle of the eighteenth century Laos was a Siamese dependency. The Laotines made an attempt to shake off the Siamese yoke in 1767, after the Burmese had sacked Ayuthia, but their effort was unsuccessful, and by 1820, they were dominated by the relentless pillaging of the Siamese officers commissed by Siam, the King of Vien-tian made a final attempt to break the fetters which bound his nation. The Siamese general, Prayà Mitop (to this day the bugbear of Laotine children), was at once despatched against Vien-tian, seized and destroyed the town, burnt numbers of the people alive, and, in obedience to true Oriental ethics of warfare, performed every imaginable barbarity to impress upon the people the awfulness of Siamese wrath. Luang Prabang, after Vien-tian the principal Laotine centre, showed more prudence on this occasion, and, though having to submit to the numerous indignities always heaped by Orientals on subject native races, is still the principal centre of the Laotine nation. Eastern Laos (see below) became a French protectorate in 1893.

Neglecting the wild tribes which occupy the mountainous districts the distribution of races at the present day is as follows: (1) the French Colony of Cochinchina, for which alone proper statistics are forthcoming, including in its population 1,965,000 Annamites, 233,000 Cambodians (Khmers), 92,000 Chinese, 7,800 Europeans (including about 2,500 French troops); (2) in Annam and Tong-king the population is almost exclusively Annamite; (3) Cambodia is peopled by the descendants of the ancient Khmers and Champeas, and some Annamites and Chinese. The people of Laos (the Laotines) are probably the purest race in Indo-China, and the direct descendants of the Thai or Shan nation.

FRENCH INDOST-CHINA, which embraces the whole of the eastern and a large portion of the northern and southern sections of the peninsula, is bounded on the north and north-east by the Chinese provinces of Yun-nan and Kwang-si, on the east and south-east by the Gulf of Tong-king and the Sea of China; on the south-west by the Gulf of Siam; on the west by a conventional line between Siam and Cambodia and then by the right bank of the Mekong, which separates it from Siam and Burma. It is 1,464 miles long and 352 miles wide, or 262,000 square miles, but this does not include (a) the provinces of Battambang and Siem-reap restored to Cambodia in accordance with the terms of the Franco-Siamese Treaty of 1907; (b) the neutral zone 25 kilometres wide (roughly 15½ miles) on the right bank of the Mekong, which is placed under French control; (c) the new region between the basins of the Mekong and Me-nan, estimated approximately at 77,000 square miles, lately ceded to French influence. The Annamite Range extends from the extreme north, where it branches out into numerous steep and rugged ranges, to Cape St. Jacques in the south. It is covered for the most part with thick forests, and towards the centre and south approaches so close to the sea that it seems at times to rise abrupt from the waters. This range separates the basin of the Mekong from the river systems of Tong-king and Annam. French Indo-China has a coast-line of about 1,500 miles. Beginning from the north, the first 375 miles of its shores are washed by the Gulf of Tong-king. For about 100 miles the sea is studded with islands—Ke-bao, Kak-ba, and the Pirate Islands, long the haunt of Chinese corsairs, being the most notable. To the south of Kak-ba, the coast is low-lying and marshy, and characterized by the numerous mouths of the rivers Thai-bing, Song-koi, Song-ma, Song-ka, whose alluvium has formed the delta of Tong-king as well as the fertile plains of Thanh-hoa and Nghe-an. From Cape Bung-kwia to Cape St. Jacques steep promontories—terminology of the minor chains thrown off from the Annamite Range—alternate with the wide plains formed by the countless short rivers which rush down from the mountains into the Sea of China. The principal harbours are those that are formed by the River of Hue (at Thuan-an), the Bay of Turau, the Ports of Kwi-nhon and Song-kau, the Bays of Van-fong, Nha-trang, Nám-rang, and Fan-thiet.

From Cape St. Jacques to Hai-tien the coasts are again
low and intersected by the numerous embouchures of the Me-kong, to the alluvial deposits of which this fertile section of Indo-China owes its existence. From Ha-tien to the conventional Siamese frontier cliffs and sandy plains again alternate. The Me-kong, the Me-kete, and the Chao-pra-yea, which join one after another along its south bank, deepen it and give it new fertility and territory, rises in the central plateau of Asia and on entering the peninsula is already a mighty river. Owing to its numerous rapids, the river can be used for purposes of navigation only on restricted stretches, until below the Rapids of Khone. Even here, however, some minor rapids which are not, however, an insurmountable obstacle to traffic. From Pnom-penh, where the river divides into two branches, the navigation is easy. These branches—known to the French colonists as the Fleuve antérieur and the Fleuve postérieur—subdivide in turn, and form the network of streams which are the chief means of communication between the various commercial centres of Cochinchina and Cambodia. Other rivers of importance will be referred to later in treating of the separate political division.

Climate and Hygienic Conditions.—Although the climate of Indo-China is, in general, like that of other insular tropical and subtropical regions, there is a great difference in the climatic conditions of the various districts. In Cochinchina the wet and dry seasons succeed each other with the utmost regularity, and correspond with the monsoons. The period of the north-easterly monsoon, which begins in October or early November, lasts until April, during which the thermometer registers between 78° and 80.6° by day and 68° by night. About the middle of April the monsoon changes to the south-west, and the temperature rises to 98°, and the season of daily rain begins. The climate of Cambodia resembles in general that of Cochinchina, except that, deprived of the north-west monsoons, the heat is much more rigorous. In Annam the climate is less regular. The heavy rains do not coincide with the south-west monsoon, which is intercepted by the Annamite Range, but fall usually during the season of the north-east. In Hue they begin in September and last until December, the temperature falling below 60°, and so consistent and heavy is the downpour that it is often impossible to leave the house for several successive days. The other seasons are by no means rainless; there is, however, no regularity in the intervals between the showery are very heavy, but last only a few hours. Tong-kiang has two clearly defined seasons corresponding with the monsoons: a winter from October to April, and a summer which is the remaining period of the year. April and October are themselves months of transition, and resemble somewhat our spring and autumn. During the winter the temperature is comparatively low, the thermometer falls to 42° or 40°, and instances of white frost have been recorded. During this season the wind blows from the north-east, but, when it chances to veer to the south, the thermometer rises suddenly 12, 15, or even 20 degrees. The weather is most changeable, being now bright and clear, then foggy, and again clear; the latter, however, rare, and the length of the winter allows one to recuperate one's strength after the exhausting summer. A fine rain falls almost uninterruptedly from January to April. In the latter month the wind changes to the south-east, and the temperature rises to 75°. In July and August, the hottest months, the temperature varies between 80° and 86°, although not infrequently the thermometer rises to 95°, 100°, and even 104°, and remains there for days. As the wind usually falls away at sunset, the nights are often as hot as the days. During the summer the rains are rare, and usually very heavy and accompanied by violent storms. The hottest months of the year are August and September, and a rainfall of four inches within twenty-four hours has been recorded in the latter month.
so frequent nor so serious as in Tong-king. Of all the divisions of Indo-China, the heat of Cochin China and Cambodia is the severest test for foreigners in consequence of the unvarying elevation of the temperature, especially in their respective capital cities. To avoid sea-borne diseases, the most careful avoidance of mid-day heat and all unusual exertion can safeguard the European. He must also take great care to guard against changes of temperature, for even the slightest variation at night often suffices to occasion attacks of dysentery almost impecunious and ruinous to delicate and invalid systems. With the general very unhealthy, and the climate is rendered the more intolerable for foreigners by the privations necessitated by the absence of proper or regular communication with Tong-king and Annam.

**Government of French Indo-China.**—The authority of the French Republic is represented by the Governor-General, whose powers have been defined by decree of 21 April, 1891. Having the sole right to correspond with the French Government, he is in direct communication not alone with the ministers in France, but also with all the French diplomatic representatives in the Far East. He has complete control of the local Treasury in Indo-China, and by means of an emergency which demands immediate action, can any military or naval operation take place without his authorization. He is also intrusted with the organization and administration of the native police and all public services. All or any of his powers may be delegated to the Cochin-China, Cochinchine, or the Resident Superior of any other of the political divisions. The Residents Superior, in addition to their political and diplomatic relations with the sovereigns of the vassal territories, have charge of the local budgets and the general administration of the political divisions into which the vassal territories are divided. The Governor-General is assisted by two councils, the Conseil supérieur de Cochin China and the Conseil de défense. To the former belong the Governor-General (president), the commander-in-chief of the French naval and military forces, the Lieutenant-General of Cochin China, the Residents Superior of the other divisions, the heads of various councils, and two indigenous members appointed annually by the Governor-General. This council sits each year to consider the general budget for Indo-China (including Kwang-chau-wan since 1900), and the local budgets for the five constituent territories, revenues, duties, public impositions, and to discuss in general matters of public interest. The place of assembly lies in the discretion of the Governor-General. The Conseil de défense, which also sits under the presidency of the Governor-General, is attended by the chiefs of all the important divisions of the land and sea forces, its deliberations being mainly concerned with measures for the preservation of peace within the territories. Though all effective authority is thus vested in the French representatives, certain local powers are exercised in matters of purely native interest by the native sovereigns.

**The Political Divisions of French Indo-China.**—1. Cochin China.—This term, which was formerly applied to the territories of the Annamite Empire (Tong-king, Annam, and Cochin China proper), is now confined to the French colony in the south-east of the peninsula. Cochin China proper is bounded on the north and north-east by Cambodia and the Province of Binh-thuan (Annam), on the east and south by the Sea of China, and on the west by the Gulf of Siam. Its area is estimated at 23,000 square miles; its population at 2,973,128 inhabitants (1900). For purposes of administration, the colony is divided into 21 arrondissements (districts), comprising 207 cantons and 2,426 communes. Each arrondissement is administered by a French functionary known as the administrateur des affaires indigènes, and, through its conseil d'arrondissement, votes a special budget, called the budget régional. The Islands of Poou Condore are included.

**Public Education.**—In spite of the increasing tendency to centralize all the fundamental offices of government, the organization of public education in the various divisions is still entrusted to the five territorial Conseils. A short description may be here given of the educational system in Cochin China, where alone it is at present properly developed. The direction of education in this colony is entrusted to a Directeur, immediately responsible to the Lieutenant-General. Every village of any importance has its école canonale (primary school), at which the native children above six years are first instructed in reading, writing, and arithmetic. The écoles d'arrondissement (district schools) impart secondary education, and are directed by a European professor, assisted by native teachers. The École professionelle at Saigon aims at producing expert workmen for various industries (e. g. bookbinders, leatherworkers, coach-building), and consists of several practical departments, professors giving the practical instruction, while the scientific is supplied by the staff of the Collège Chaine-loup-Laubat. This last-named college, together with that at Mytho, are the leading educational institutions of the peninsula. Écoles de caractères choisis, in which the Chinese and Annamite ideograms characters are taught, are kept by old native scholars in almost every canton. Save in the case of these alone education in Indo-China is free. In imitation of the native custom throughout the Far East the French make no provision for the education of the native women. For the daughters of European or European and native parents, the Institution municipale has been instituted, as also an École maternelle. The mistresses and staff of both these institutions are appointed by the Mayor of Saigon. In 1899 the École française de l'Extrême-Orient was founded at Saigon for the study of the history, languages, and literature of Indo-China, and within the last few years, a Grande école has been instituted at Cholon to supply the young Chinese with the education which they had previously sought in Japan. The recent organization of a Conseil supérieur de l'enseignement indigène for Indo-China is another instance of the growing desire of the French to respect the ancient civilization of the people, while imparting to them a proper acquaintance with Western learning. The numerous schools carried on by the various religious orders will be dealt with under the heading of Christianity.
In Cochin China, the largest being used as a penitentiary for criminals whose sentences are at least ten years. Cochin China is represented in Parliament by one deputy. Situated on the route from Europe and India to Japan and China, Cochin China seems destined by nature to play a leading part in the development of the Far East. The delta of the Me-kong and numberless canals and arteries (sea channels) which connect them, must be reckoned among the most fertile in the world. More than one-fourth of the whole surface is devoted to the cultivation of rice, of which 2,000,000 tons are produced annually. The rice growing is of the best variety, betel-nuts, earth-nuts, pepper (the cultivation of which has increased very rapidly), and coffee. Rice is shipped principally to China, Manila, Japan, France and other European countries. The other important exports are fish and fish oil ($2,000,000), pepper ($1,300,000), live animals, cotton, gamboge, indigo, hides, silks, cotton (cloth), and rice (planting and raising rice has greatly increased). There are some important salt mines at Bien-hoa and granite quarries at Bien-hoa and Chau-duc; to the last-mentioned Cochin China is indebted for the stone necessary for the construction of roads.

Saigon, the former capital of French Indo-China, is situated on the Saigon River, about forty miles from the coast. It has a population of 50,870 inhabitants, of whom 5,500 are French. Owing to the great depth of the river, ships of the largest tonnage sail up to the Port of Saigon, from which 824 ships of 1,500,000 tons cleared in 1907. Under the French Saigon has become one of the great cities of the world. Its streets are wide, well-planned, and decorated with gardens and monuments. It possesses a celebrated collection of the flora and fauna of Indo-China in its botanical and zoological gardens, while its government palace has an architectural fame throughout the Far East. Saigon is one of the seven chartered cities of French Indo-China. The mayor is elected according to the restricted franchise: its Conseil municipal also includes ten French members and four native councillors. Cholon, the chief commercial centre (163,000 inhabitants), is situated about four miles to the south of Saigon. It is the headquarters of the Chinese, who, here as elsewhere throughout the peninsula, almost monopolise the commerce. It is the centre of the rice trade, the rice being here prepared and put in sacks. Cholon is connected with the capital by a steam railroad and by an arroyo. The former passes through the celebrated "Plain of the Tombs", a vast desert of wilderness of imposing mausoleums and modest tombs. This is the Annamite cemetery, and the mournful appearance of the scene is increased by the treeless and almost verdunrness character of the landscape. The mayor of Cholon, nominated by the Governor-General, is assisted by three deputies—one French, one Annamite, one Chinese—and nine councillors, three being from each of the representative races. The French are nominated by the Lieutenant-General; the Annamite and Chinese by the notables (see below under Annam) among the inhabitants. Myrto (228,000), the chief town of the homonymous province, is the capital of the Binh Duong Province of Dinh-Tuong. It is situated on the left bank of the lower arm of the Me-kong, at a distance of about 23 miles from the sea and 44 miles from Saigon, with which it is connected by railway and by the boats of the Service des Messageries Maritimes. As a port it is not of the first rank, but it is an important port of call for trading vessels.

(2) Annam, which formerly contained nine of the thirty-one provinces constituting the Annamite Empire—Tong-king being composed of sixteen and Cochin China of six—embraces to-day twelve provinces, Thanh-hoa, Nghe-an, and Ha-tinh having been added to its territories by the Treaty of June 1844. Its coast line extends from Cape Bake in the south to Cape Prey in the north, a distance of about twelve hundred miles, and the rich alluvial plain in the extreme north of the territory, are of importance. The mountainous regions between Annam and Laos—known as the Territories of the Mois, Pou-ans, and Phou-tays—are direct dependencies of Annam. The distance between the sea and the foot of the mountains varies from eighteen to fifty miles. The area of Annam is about 62,000 square miles, and its population, according to a recent estimate (1909), 7,096,465 inhabitants. Although the people of the Annamite dependencies are receiving increased attention of recent years, even an approximate estimate of their numbers is impossible; the Saigon population is 37,000, and that of Hue (population 100,000), the capital of Annam, is situated on the left bank of the river of the same name. It has two distinct divisions: the citadel fortified according to plans supplied by French engineers and occupied by the French and Annamite administrations and French troops, and the districts occupied by the natives. The principal ports in Annam are Turan, Kwi-nhon, and Xuan Day.

While the soil of Annam is most fertile and admirably adapted for the cultivation of the most varied crops, its advantages are marred by the one hand by the short dry period and the other by the heavy rains. It is distinct from the climate of Cochin China, is also its summer—and on the other by the devastating inundations of the rivers which rise in the mountains and hurl themselves after a short course into the sea. At present, although two crops are sown annually, one in every three harvests fails, and the rice produced is insufficient to satisfy local needs. To overcome these obstacles to cultivation proper systems of irrigation and protective measures against the inundations must be instituted on a large scale. Tea and coffee, the planting of which is a comparatively recent experiment, are established mainly in Cochin China. The excellence of the former leads one to believe that Annam will rapidly develop into a serious rival of India and China in the production of this commodity. The other agricultural products include maize, sugar, potatoes, cotton, earth-nuts, mulberry, ricinus com- munit, castor-oil plant, indigo, coco, areca-nut, tobacco, and cinnamon. Apart from agriculture the chief industries of Annam are the threshing and winnowing of rice and the extraction of the oil, the scrapping of cotton, and the preparation of jute, indigo, and tobacco. Silk is manufactured everywhere, but little pains are taken to produce quantities of it. More attention is given to cotton in the manufacture of which the Annamite excels the Chinese. The river and the sea fishing are both of great importance, dried fish forming an important article of diet here as elsewhere in Indo-China. The sugar industry is monopolised by the Chinese. The saltpans of Binh Duong and Ha-tinh supply a sufficient surplus over local needs to permit of the exportation of more than 1,000,000 tons of salt yearly. Pure anthracite coal is mined at Nong-son in the province of Turan; the mine is situated about forty miles from the coast on the banks of a river. Copper mines are found at Due-bo and gold at Bong-nieu. The latter, which were worked for centuries by the
natives, are being at present exploited by a French company. The domestic animals are the buffalo, ox, horse, and pig. In the unpopulated districts of the interior, the tiger, leopard, elephant, stag, peafowl, and numerous species of reptiles abound. The wild game includes, and wild horse, and wild cat.

A little space may be devoted to a description of the domestic organization of Annam, which formerly extended (and still extends with modifications, more or less serious) also to Tong-king and Cochin-China. The whole constitution is patriarchal, i.e. the sovereign—thou shalt not have two masters—he is regarded also as the father and high-priest of the community. The emperor thus enjoys at least theoretically absolute authority; his acts may no more be questioned by his subjects, than the actions of parents by their children. He is assisted by a Co-mat, or secret council, without whose advice he gives no important decision. Apart from this idea of absolute authority, the rather sentimental than really operative, there is complete equality among registered citizens; all are eligible for public office, and the only distinction is the adventitious ones of fortune and office. The inhabitants are divided into two classes: the registered (inscrits, Dzon-lan), and the unregistered (inscrivbles, Dezen-lan). By the latter are meant the citizens who are considered too poor to be placed upon the roll of tax-payers. The registered citizens alone enjoy civil rights, and only of their number does the government keep a record. It is on these lists of tax-payers that every estimate of the population is based, the ratio between the assessable and the non-assessable citizens being accepted as one to fifteen. Only the registered citizens can become "notables" (i.e. hold office). According to the importance of their offices, the notables are divided into two classes, major and minor. The notables, who are appointed by their predecessors for a fixed period (though varying in different localities), constitute the Conseil de communes, in which the minor notables may advise but have no vote. In addition to his duties as councillor, each major notable fulfils some special function in the community. The mayor, who is nominated by the major notables, is the only official whose election must be submitted for the sanction of the government. He is neither the head nor president of the council, but merely its agent. It is his duty to execute all the orders of the Government respecting his commune, to collect the taxes, and to see that justice is done to all delinquents. The constitution of the higher councils is analogous to that of the communal, and their powers are strictly defined by law and custom.

In Annam legislative and judicial powers are never separated. Every legal action, criminal and civil, begins in the commune and is finally investigated by the communal administration, which, having heard the evidence, either pronounces sentence, or, if the matter be grave, refers the case to the tribunal of the sub-prefecture or of the prefecture. The competence of every court is carefully defined by Annamite Law. Very grave matters must be tried (except in the province, and every penalty of death must receive the emperor's sanction before being put into execution. In civil matters disputes between members of the same family are usually decided by the head of the family, against whose decision there is rarely an appeal.

There are very few countries in which education is held in higher esteem than in Annam, and very few in which the instruction is less scientific and less practical. Almost every village possesses its school, and illiteracy is extremely rare among the natives. Although all state functions are open to public competition, the instruction is confined to the history, customs, and laws of the country, and the tenets of Confucianism. Even among the most accomplished there is an abo-
society, to secure obedience to the parental and royal authority.

(3) Tong-king is bounded on the north and northeast by China, on the east by the Gulf of Tong-king, on the south by Annam, and on the west by Laos. Its area is about 300,000 square miles, and the population is estimated variously between ten and fifteen millions. Its surface may be divided into three distinct sections: (1) the flat alluvial plain (the Delta) to the south and east, which constitutes about one-seventh of the total surface; (2) an intermediate plateau of about 15,000 square miles, and (3) the mountainous and sparsely populated region bordering China. The Delta, which alone contains about 10,000,000 inhabitants, is the great centre of industry, and both in the fertility of its soil and in the number of its waterways, bears a striking resemblance to Cochin China. The principal rivers are the Song-koï (Red River), which runs in Yün-nan, and its two great tributaries, the Song-lo and Song-bo (the Clear and the Black River). Linked by a myriad of canals and arroyos, these afford an easy, if slow means of communication between the various commercial centres, but their utility is greatly impaired by the very currents of the wet season, and by the bars, shelving ridges, and shallows, which obstruct their courses. The remarkable absence of large trees in the Delta is attributable to the typhoons: the great forests of the interior are still practically unexploited owing to the lack of proper means of transport. It is a noteworthy fact, for which no scientific explanation seems yet forthcoming, that along the coast of Tong-king there is but one tide daily for the greater portion of the year. This is believed to be the only part of the world where this phenomenon occurs.

As elsewhere in Indo-China rice is the principal crop. It gives two harvests annually, but periodic failures, here as in Annam, contrast unfavourably with the constancy of the harvests in Cochin China. Maize, sugar-cane, buckwheat, millet, sorgho, and tea are also extensively cultivated. All the European vegetables thrive in the country, and experimental plantations of coffee have met with a most gratifying success. The gardens surrounding the villages are filled with bananas, orange, papaw, tamarind, cinnamon, and pine-apple trees. Cotton and mulberry-trees are cultivated everywhere along the banks of the rivers, while the cultivation of jute has greatly increased within the last few years. Some of the mines of Tong-king are of great importance, although the disturbed history of the country has prevented their development. Along the coast is a large bed of anthracite of excellent quality, which is at present being worked at Hongay and on the Island of Ke-bao. The mountainous region contains almost every variety of mineral, but little attempt has yet been made to exploit them. Lead, argentiferous copper, sulphur, tin, cinnaabar, and nitre have received attention; the gold mines, however, are almost abandoned, and on the silver and iron mines work has ceased.

Although the administration of Tong-king bears a great resemblance to that of Annam, there are some marked differences, all tending to inflate the influence of France. In Tong-king the office of France is not confined to a general direction of the central government and public services as in Annam: the Treaty of 1884 entitles her to appoint, side by side with the Annamites, representatives, resident at the capital and the chief towns, where their presence should be desired desirable. Although these officials take no part in the details of the local administration, they control the acts of the district mandarins, and have thus the virtual direction of the political, judicial, and financial administration of the interior. Hanoi (164,260), the chief town of Tong-king, replaced Saigon as capital of French Indo-China on 1 January, 1902. It is situated on the right bank of the Song-koï about eighty miles from the coast.

Founded during the early centuries of our era, it was until recently little more than a collection of native villages. Rid to-day of the marshes which disfigured it, it is rapidly becoming a charming town. Its green lawns, luxuriant shrubbries, and quaint intermixture of native and European architecture, form a fitting frame for the celebrated Pagoda of Vong-dình. The railroad from Haiphong to Hanoi passes over the huge bridge across the Song-koï. In view of the extreme fierceness of the river during the period of the floods, this bridge (about 14 miles in length) must be regarded as a triumph of engineering skill. Haiphong, the principal commercial port of Tong-king, is situated at the confluence of the Cua-cam and Song-tambac, about twenty miles from the coast. Vessels of more than twenty feet draught can cross the bar only at high tide. When Haiphong was conceded to France by Annam in 1874, the town was only a small native market; it is to-day a prosperous city of over 20,000 inhabitants. Hanoi and Haiphong are both incorporated cities administered by a mayor and municipal council. Besides the mayor, who is appointed by the Governor-General, each council contains fourteen members—ten elected by French residents and naturalized citizens of France and five elected by the Annamites. At Hanoi the four native councillors must be Annamites; at Haiphong two are Annamites and two Chinese.

(4) Cambodia, the centre of the ancient Khmer Empire, is bounded on the north-west and north by Siam and the Laos territories; on the east by Annam; on the south by Cochin China; on the southeast by the Gulf of Siam. To celebrate the restoration of the provinces of Battambang and Siem-reap—which territory stand the famous ruins of Angkor, the capital of the Khmer Empire—the Consul Supérieur met at Phnom-penh in December, 1907, on which occasion King Siwathow declared the deep debt of gratitude which Cambodia owed to France. The area of Cambodia is about 37,500 sq. miles; its population is estimated at from 1,500,000 to 2,500,000. The population of Cambodia is almost entirely confined to the vicinity of the ports and the banks of the rivers. The country is covered with immense forests yielding gamboge, gumlaque, and cinnamon, and frequented by elephants, tigers, and countless other species of wild game. From the elevated regions in the west of the territory rush down impetuous torrents, which, on reaching the plain, develop into great rivers and after a short course enter the sea on the coast of Tong-king. The chief agricultural products are rice, cotton, areca-nut, indigo, mulberry-trees, tobacco, cardamoms, and pepper. Successful experiments have within late years been made in tea and coffee plantation. Fishing is an important industry of the country—not alone for the fish ascending the Me-kong and lying along the coasts, but also for mother-of-pearl and holothurie. The little port of Ha-tien has become the central market of the mother-of-pearl industry, which is practically monopolized by the Annamites. The silks woven by the Cambodian women according to a method inherited from a long-past civilization are much sought after. Cambodia is divided into fifty-seven provinces, and the administration differs little from that of Tong-king. Phnom-penh (population 50,000) on the right bank of the Me-kong is the capital of the country and seat of the chief of the royal family chosen by the Governor-General from the ranks of the higher civil servants of Indo-China. The municipal council also includes five French and three Asiatic
(Cambodian, Annamite, and Chinese) councillors, all of whom are appointed by the Resident Superior on the recommendation of the mayor. Kampot, situated opposite the Island of Fu-kwok, is an important port of call for coast-traders. Situated near the mouth of the Tonle Sap in the midst of dense forest are the ruins of Angkor Thom (Great Angkor), once the capital of the Khmer Empire. Its former extent can be traced from the remains of the fortifications, fifty feet broad and thirty feet high, and from the ditch 300 feet wide, which surround the ruins. They were once four times bridged by gigantic statues. Within the walls still remain superb palaces, battlements, terraces, a glorious temple of three stories with concentric galleries, above which rise forty-two turrets (covered like the walls with delicate carvings) and a central tower 130 feet high, looming above the circular colonnades. Between these ruins and the lake stands the temple of Angkor-Wat, perhaps the vastest and most glorious monument raised by the hand of man in the Far East. It is constructed of massive blocks of sandstone, many weighing more than eight tons and fitted together with the greatest accuracy although no cement was used, and has galleries from the river, gigantic and seemingly endless staircases, the square and round columns are covered with carvings rivaling the most beautiful remains of Hindoo art (cf. Clifford, “Further India”, pp. 146–66). It is impossible to fix definitely the date at which this temple was built, but we may assume that its erection must have occurred during the golden period of the Khmer power and civilization. Whether the temple was consecrated to Buddha, or whether the sanctuary in the central tower, ornamented with gigantic statues looking towards the cardinal points, contained an enormous lingam is also disputed, but, to view the numerous lingams found in various parts of Cambodia, the latter opinion is the more probable.

The Cambodians or Khmers, although their type is in general greatly modified by intermarriage with other races, still preserve the Aryan characteristics. Tallier than the Annamite or Thai, their eyes are rarely oblique, their nose is straight, and, though their complexion is now yellow, they preserve their agglutinative or polysyllabic language intact in the midst of races speaking isolating or monosyllabic tongues. Though lazy, given to opium-smoking, and unfit for manual employment, they are of a mysterious and glorious past, a great attraction for the sociological student owing to their gentleness, courtesy, loyalty, and their innate pride which makes them prefer to submit to any misery rather than labour for another. They practise Buddhism slightly tinged with Brahminism. Very superstitious, they believe that the noise of trumpets drives away the evil genii, and that a man seen in the open country silhouetted against the sky above the horizon is doomed to an early death. Attached to each pagoda is a college of bonzes, who are highly esteemed by every class. The bonzes are easily distinguished from the rest of the people by their yellow robes; they are bound to celibacy, live in community, and depend for their sustenance on the rice which they receive each day ready-cooked in the villages. At definite periods they assemble the men in the pagoda and read from the sacred books, written in a syllabary, and concerning the past of the Buddha, the libraries connected with the pagodas contain ancient works dealing with astrology, chronomancy, the vulgar Cambodian tongue, and Pali, together with works on education and historical treatises, unfortunately relating only to recent times. The bonzes are also the teachers of the Cambodian youth, and the only teaching body in the kingdom, excepting of course the Catholic orders. The Khmers are monogamous and greatly attached to their families. Marriages, religious ceremonies, the celebration of the first day of the year, the ceremony of the first cutting of the hair, which occupies an important place in the social life, are all occasions for great rejoicing. The most popular national song is the great national amusement, from the Royal Theatre at Phnom-Penh to the little travelling shows which play under the palm or fruit-tree. The parts are enacted by little girls of about fourteen, dressed in costumes exactly like those seen on the bun-reliefs of the ancient ruins of the town.

(5) Laos.—The principalities of the Laos or Lawa nation included at the most flourishing period of its history the whole valley of the Me-kong from China to Cambodia, the upper basin of the Me-nam, and portion of the basin of the Salwin. To-day its extent is confined to the valley of the Me-nam (Western Laos), which is subject to Siam, and the valley of the Me-kong (Eastern Laos), which, being under the protection of France, alone concerns us in the present article.

French Laos is bounded by China on the north, by Tongking and the Annamite Range on the east, by Cambodia on the south, while on the west it is separated from the British territories by the Me-kong, except that a narrow strip of country on the right bank of the Me-kong and to the west of Luang Prabang, averaging about fifty miles in breadth, is included in French Laos. Within these limits Laos has an area of 88,000 square miles, and a population of perhaps 1,000,000. The whole north of the country is occupied by a lofty and compact group of mountains, between ridges of which the Me-kong has hollowed out a narrow and rocky course. At about 18° north latitude, the basin widens and thenceforth the river pursues its course through undulating plains which keep on enlarging until the delta is reached. The whole country is covered by an immense forest, which covers the sides of the mountains, crowns their summits, descends into the deep gorges, and stretches over the plains. Almost every genus of tree grows on this wonderfully fertile soil. Teak, benzoin, cinnamon, gamboge, and cardamom are furnished by the forests, while the higher altitudes supply varieties of oak, chestnut, elm, and other trees, usually associated with countries in a more northern latitude.

The Laotians have established themselves in little villages along the banks of the rivers. Their plantations of rice, peanuts, and sugar-cane, are so extensive that they are able to live in welcome relief from the gloomy background of the forest. In these little settlements, rescued from the forests, the cultivation of rice occupies the foremost place. Buckwheat, potatoes, peaches, pears, prunes, and various other fruits are also grown. Tea is produced in considerable quantities, and, as an indication of its unrivalled quality, it may be mentioned that here are grown the famous teas reserved for the Emperor of China. Laos possesses no coast-line, but its river-fishing is of great importance. The Me-kong yields a gigantic fish, called by the natives the pla-buek, which, when dried, forms an important element of the national diet. The Me-nam has become a great storehouse of the raising of cattle and buffaloes for the Cambodian and Siamese markets. Laos contains some very important iron mines, exploited by the natives; deposits of sapphire, copper, and gold are very numerous—gold being also found in the beds of various streams. The long-coveted railroad to connect Laos with the coast would afford the country an opportunity of competing in the outer markets, but a tremendous development of the country would have to be effected.
before a line, presenting so many engineering difficulties, could be a financial success. The Government of Laos is directed by a French administrator in the person of the king; and the civil administration is borne by Cochinchina, five-thirteenths by Annam-Tong-king, and two-thirteenths by Cambodia.

The Laotine is taller than the Annamite, and more graceful if less robust. His forehead is high and narrow; his face long and oval, his complexion varies from fair to brown. His hair is black, and his obliquity characteristic of so many of the Far Eastern races, his hair is straight and black, and he seldom wears moustache or beard. Light-hearted and indolent he limits his exertions to such as are indispensable at the moment, the fertile and inexhaustible soil of his and neighboring valleys making all sense of struggle unnecessary. The men work but six months of the year, during which they prepare the rice-fields, fish, hunt, or ply on the Great River their trim pirogues, guiding them with a careless skill through the most dangerous rapids. The remainder of the year is spent peacefully in the midst of their families, and all labour is henceforth thrown exclusively on the women, without, however, lessening in any degree their imperturbable gaiety.

In the Laotine home a word of anger, a dispute is unknown; the greatest misfortunes are accepted in a spirit of quiet resignation, the outcome equally of the attractive disposition and the religious belief that the mystery of the life of the soul is the residence of the king and the French administrator, that Laotine life may be seen under the most favourable conditions. Situated in the midst of lofty mountains clad with primeval forests, life in this town is one endless succession of promenades, choral entertainments in the cool of the evening, dances, theatre regattas, etc. The old capital, Vien-tian, destroyed by the Siamese in 1828, is already overgrown with jungle. Apart from its historical associations it contains to-day nothing to attract the visitor save the remains of the palace and a pagoda, which for beauty of architecture and originality of ornamentation are still unrivalled in Laos. For the Catholic Vien-tian possesses a further interest as the scene of the first attempt to preach Christianity in the then extensive Kingdom of Laos. The Portuguese Jesuit, Giovanni Maria Leria, preached the Gospel here for five years, up to the close of the Indopuchon war, during which he was compelled to leave in December, 1647.

In Laos as in Annam, Buddhism, though its tenets have somewhat tinged popular beliefs, can no longer be regarded as the popular religion. Its philosophy, scarcely understood by a few of the bonzes and educated clergy, is a mystery to the great multitudes, who revere the Laotine of the present day as a nature-worshipper and a fatalist. Pha ya gnom phi ban, the great chief of the Phi-ba (or genii), watches over all beings on this earth, and each day sends his emissaries to distribute illness and death to men in accordance with the decrees fixed from all eternity. With a curious disregard for consistency in his fatalism, the Laotine believes that these phis, the immediate cause of all good and evil, are accessible to prayer. The supposed intervention of these occult powers is sufficient explanation for every natural phenomenon. If a native falls ill and ordinary medicines fail, the phi is the cause and the sorcerer alone can save the invalid. The sorcerer consulted proceeds, after certain prescribed prayers to half-bury an egg in a bowl of rice. Some additional grains are then let fall on the egg, and the even or odd number remaining thereon is conclusive proof of the presence or otherwise of the phi in the invalid's body. If present, the phi is questioned in the same manner as to his wishes. Is it the sacrifice of a buffalo or a pig that he desires? According to Laotine beliefs, spirits are everywhere and one must exercise the greatest care to preserve health and life. The Ngmoc lies in wait for boasters who fail to discharge their debt of prayers and offerings; the Phi-pet and the Phi-louc infest the villages; the Phi-huen can be prevented from entering the houses and insinuating themselves into the bodies of the children by daily offerings of water and rice placed on the little altars built for the purpose near the huts. In Laos there are certain men— the Phi-pop—who are supposed to communicate with the demons and to have marvellous powers of making themselves invisible, introducing evil genii into the bodies of the children to cause illness. Once suspected of belonging to this class, a native is no longer tolerated in the village, but is banished to one of the numerous hamlets specially reserved for the Phi-pop and avoided by all travellers. Although amulets are common in Laos, they are seldom worn on the person. The amulet consists of a teapot, a boar, horns of a stag, tiger-claws, and religious verses as amulets is an important perquisite of the bonzes.

(6) Kuang-chau-teen.—According to the terms of the Franco-Chinese Convention of 10 April, 1898, China agreed to lease to France a bay on its southern coast, and granted to the latter country, among other concessions, the permission to build a railway—at present in course of construction—from Tong-king to Yun-nan. The group of little islands at the entrance to the bay were ceded to France in August, 1899, the total French territory having now an area of about 200 square miles and a population of 150,000. The bay isNavigable far up to the Eng Hap by vessels of 200 tons, and is a great centre of trade with the south-west of Hong-kong. It has two narrow, easily defended entrances, is about twenty miles in length, and is perfectly sheltered from storms. A large river empties itself into the bay, and on its bank stands the town of Chek-hem, an important commercial centre with an extensive coast trade. The imports include cotton yarns, cottons, and opium; the principal exports are earth-nuts, mate, sacks, and sailes. As the possession of the bay includes the control of the pre-lectures of Lei-chai, Lien-chai, and Ka-chai, the whole peninsula of Lei-chai is under French influence.

CHRISTIANITY.—There are numerous references to Indo-China—the classical Chrysea, i.e. the Golden Island, as it was at first esteemed, or the Golden Chersonese—in early Western literature. In his "Antiquities of the Jews", Josephus identifies it with the Ophir from which Solomon drew his stores of gold. The Jesuits, however, in the sixteenth century, recast theLocality and attributed it between 350 and 550, and was the first to spread clear ideas concerning the relative positions of it and other countries in the Far East. We owe much of our earliest information concerning the customs of the natives to Blessed Odorcio of Forodone, a Franciscan of the Jesuit Order, who wrote his 'Jornada del Estante' in 1530. But it was only after Vasco da Gama had doubled the Cape of Good Hope in 1497 that regular communication between the West and the Far East was made possible, and the work of evangelisation could be begun in earnest.

The appearance of Christianity in Indo-China may be dated from the beginning of the sixteenth century, when it was preached by some Portuguese missionaries. The early missions do not seem to have made much impression on the natives, owing perhaps to the great hatred of Europeans infused into the Easterns by the cruelties of the Portuguese filibusters, but on the arrival of Jesuit missionaries in the early decades of the seventeenth century Christianity began at once to make rapid headway. Both in Cochinchina and in Tong-king the Jesuits worked with incredible zeal from 1618. Between 1627 and 1630 Fathers Alexander de Rhodes and Antonio de Lemos, editors of the French Province, traveled 8,000, including numerous bonzes, who, during the temporary expulsion of the Jesuits dictated by fear of their wonderful success, kept alive the Faith. So rapidly did the Christian community increase that in 1659 the spiritual administration of Tong-king and Cochinhina
was entrusted to Mgr. Pallu and Mgr. de la Motte-Lambert, the first vicar Apostolic of the Society of Foreign Missions. Under their direction parishes were established, seminaries built, and many foundations of the Amantes de la Croix (i.e. Votaries of the Cross) for Christians. Christianity among the Annamites with a Catholic country could not fail to inculcate a deeper respect for and knowledge of Christianity, Mgr. Pallu's great ambition was to establish friendly commercial relations between France and Tong-king. In 1672 he urged Colbert, the French minister, to establish a French trading-house in the latter country, and later petitioned Louis XIV to use his influence to prevail on King Le-hi-tong to allow the freedom of Christian worship. Louis dispatched a letter accompanied by presents to the Annamite monarch, in which he made overtures for a commercial agreement between the countries, described the beauty and grandeur of the Christian Faith, and urged the king to protect and embrace it. Although Louis' mission did not effect the removal of the interdiction of Catholic worship, it secured for the Christians a few years of comparative peace and the cessation of the murder and massacre of the Chinese mandarins and the spoliation of the Chinese mandarins.

In 1678 the Vicariate Apostolic of Tong-king was divided into two vicariates, those of Eastern and Western Tong-king; the former was entrusted to the Spanish Dominicans, who were destined later to bear the brunt of one of the terrible persecutions and the massacre of the Chinese mandarins. The rapidly growing religious influence exercised by the priests and bishops soon led to a renewal of persecution, and for over 100 years the missionaries had to contend with every imaginable obstacle. Banished repeatedly from the country, they had scarcely lost sight of shore before they turned their ships towards land again. Their single-minded, unremitting zeal during this period presents none of those striking situations which constitute the frame-work of history: it was only when the day of active persecution later called for martyrs, and thousands of the Annamites—a race whose name has become a byeword for fickleness—gladly laid down their lives for the Faith, that we recognize how exceedingly fruitful had been the ministry of those hidden apostles.

On 2 November, 1741, was born at Béthaine, France, a man who was destined to influence profoundly the religious and mission work in the historical missions of Indo-China. This was Pierre-Joseph Pignieux. After the usual preparation for the priesthood, he set out for the Far East in 1765, and there displayed such zeal that in 1771 he was named Vicar Apostolic of Cochin China and Bishop of Adran. On one of his journeys through his spiritual dependencies, he met Nguyen-an, then a fugitive from the rebellious Tay-shons. A friendship having quickly sprung up between the bishop and the exiled prince, who had already spent years of fruitless effort in trying to recover his lost kingdom, Mgr. Pignieux offered to enlist the help of France against the Tay-shons. Nguyen-an accepted the offer and entrusted his small remaining crowd, the grand seal of Cambodia to the bishop to serve as his credentials at the French Court. Without delay Mgr. Pignieux set out for France, and, as plenipotentiary of the Annamite prince, signed a convention on 28 November, 1787, according to which France was to assist Nguyen-an to recover his throne, and was to receive in return the Port of Turan and the Island of Poulo-Condore, as well as the exclusive privilege of trading with Cochin China. Assured of French assistance, the bishop returned to his viceroy, but on his arrival was dismayed to find that France had—owing pretext of a terrible fire at home—abruptly abandoned its project of aiding Nguyen-an. Setting out immediately for Pondicherry, Mgr. Pignieux succeeded in prevailing on 20 officers and about 500 men to accompany him. Thanks to the assistance of this force—for far from insignificant when contrasted with the badly-armed, ill-disciplined Annamites—Nguyen-an succeeded not only in recovering his lost territories in Cochin China, but in making himself Emperor of Annam. In 1789, Christian missionaries made wonderful progress throughout the Annamite Empire during the reign of gia-long (Nguyen-an), as if in preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1500 nuns. Gia-long was succeeded by the cruel and prodigal Mgr. Tran Dinh Ngoc (1826-41), who immediately manifested his fierce hatred of Christianity. Having dismissed M. Chaingneau, the French Consul and gia-long's trusted friend, he engaged on a campaign to obliterate every vestige of Christianity within his realms. He first issued an order excluding all new missionaries and summoning those already in the country to appear at court, believing that the flock, deprived of its pastors, would be rapidly dispersed. His object was, however, defeated at once by the seal of the missionaries, who, regardless of personal danger neglected the decree, and by the voluntary resignation of the missionaries who promised to be forthcoming, were always willing to close their eyes when new missionaries arrived in port. The advocacy of the Vicerey of Cochin China, an old soldier of gia-long who fearlessly remonstrated with Minh-mang for his persecution of the missionaries to whom he rather owed his throne, proved fatal to the new rule, and from adopting more serious measures for the time, but the vicerey's death in 1832 was quickly followed by the Edict of 6 January, 1833. This ordered all Christians to renounce their Faith, and, in token of the sincerity of their recantation, to trample the crucifix under foot. All churches and religious houses were to be razed to the ground, and teachers of Christianity to be treated with the utmost rigour. In 1836 all ports were closed to Europeans except Turan, and penalty of death pronounced against priests. Ships coming to port were submitted to a rigid examination, and all offices were commanded under threat of the severest penalties to hunt down the missionaries, for which duty special troops were also appointed. A secret clause to the edict ordered the immediate dispatch of all priests to the capital. These edicts were the signal for the outbreak of a persecution, which, with short intermissions, lasted for fifty years.

In 1833 Father G. B., Vicar of Cochin China, was arrested and beheaded. Father Marchand was sentenced in 1835 to "the hundred wounds", Father Cornay to disembemberment in 1837. Martyrdom awaited Mgr. Borie in 1838, in which year Bishop Delgado, then in his eighty-fourth year, died in prison, his conductor (aged eighty-one) facing execution with numerous Dominicans and native Christians. In 1840 Father Delamotte died in prison. Flying from place to place to administer the consolations of religion and to instruct their spiritual children, the intrepid missionaries managed to keep the lamp of faith burning down the turbulent destinies of the land. A large part of this credit is due to the fidelity of the natives to their pastors: regardless of danger, they sheltered the proscribed priests, escorted them by concealed paths to their next place of hiding and ministry, and, although the prisons were filled with Christians, cases of apostasy were extremely rare. Even the unfortunate Christians, who, subject to the curse, renounced their religion, seized in almost every instance the first opportunity of becoming reconciled with the Church, which only physical weakness had led them to forsake.

The persecution abated somewhat on the death of Minh-mang in 1841. The new emperor, Tien-tri (1841-7), had not the energy of his predecessor, and was in addition sobered by the English successes in China and the threat of France to intervene, if
persecution continued. In 1844 Cochin China was divided into the Vicariates Apostolic of Eastern and Western Cochin China, while in 1846 the Vicariate Apostolic of Western and Southern Tong-king replaced the ancient Vicariate of Western Tong-king. Cambodia and the northern provinces of Cochin China were left under the old designation. The expedition of Tu-duc in 1848 was quickly followed by an edict setting a price on the heads of the missionaries. In 1851 a second edict was issued, accusing the Christians of conspiracy against the emperor, and ordering the European priests to be cast into the sea or the rivers and the native priests to be cut in two. The first result of this sanguinary edict was the decapitation of Fathers Augustin Schoffler (1851) and Bonnard (1852). In 1855 a universal proscription of Christians was issued: Christian mandarins were commanded to abjure the Faith within a month, all others within six months, while a reward of $450 was offered for the detention of each European, and $160 for the detention of each native priest. The persecution was now renewed with increased fury, and at last Napoleon III determined to intervene. The ships, however, which accompanied the French envoys, were separated in a storm, and, the deprived of necessary subsistence, the native potentate failed to achieve anything tangible. Before departing M. de Montigny, the French plenipotentiary, was seized with the unlucky thought of threatening Annam with French vengeance, if the execution of Christians continued. It may be doubted whether the native potentate did not suspect the Christians of having invited French intervention, and thenceforth a political motive for persecution was added to the religious one. On 20 July, 1856, Father Tru was beheaded, and the general massacre of Christians began. The Spanish bishop, Mgr. Diaz, was executed in 1857; in January, 1858, the Spanish legation was occasioned, and several Christians and all the inhabitants butchered. Roused by the slaughter of their countrymen, France and Spain took action in the autumn of 1858 to demand redress for the violence committed against the Christians of the Annamite Empire (then estimated at 600,000). On 31 August, 1858, the joint expedition under Vice-admiral Rigault de Genouilly and Colonel Lanzanrote seized Turan, and defied every attempt of the Annamites to dislodge them. Having vainly awaited reinforcements for some months, Genouilly, finding that sickness was decimating his troops, changed his tactics, sailed north, and seized the capital. Disregarding the reiterated warnings and entreaties of Mgr. Puginier, this functionary ordered the immediate evacuation of Tong-king, and thus made France break faith with the huge body of Christians, who had accepted Garnier's proposals, and promised to assist France in its endeavours to secure liberty of worship, and civil recognition for Christians. Misinterpreting the French departure for weakness, as Mgr. Puginier had foreseen, the pagans now prepared to surfeit their hatred against the Christians. The whole Vicariate of Western Tong-king was completely wrecked; but the Annamite Tong-king, except the ruins. In view of this system of universal butchery the missionaries had given the faithful permission to take up arms, when the persecution came to an abrupt close in a remarkable manner. In the Province of Nghe-an (Northern Annam) one of those periodical local revolts, with which Annamite history is littered, assumed the proportions of the fall of the头脑. The forces had been signally defeated in several engagements, a large tract of country had within a short period fallen into the hands of the rebels, and it needed only the defection of certain high dignitaries, then wavering in their allegiance, to ensure the complete success of the revolution. To this end the mandarins hastened to summon to the defence of legitimate authority the Christians, whom they had
but a few days before delivered over to massacre and pillage. Reinforced by the Catholics, the regular army defeated the rebels in several successive engagements. Thus, in one fell swoop the French government extinguished the last vestiges of the missionary activity in the territories. On 15 March, 1874, a new treaty was signed between France and Annam, which guaranteed explicitly religious freedom and the safety of the missionaries. All enactments against the Christians were annulled; perfect liberty was accorded the Annamite Catholics to worship freely and to propagate Christianity, religion was to form no obstacle to public employment; all terms and phrases in the official codes etc., objectionable to Catholics, were to be removed; priests and bishops were accorded unrestricted freedom to move about the empire without being subject to interrogation or espionage; all confiscated property, not yet occupied, was to be restored to its Christian owners.

From 1874 to 1882 the Christians enjoyed a period of relative peace, but in the latter year the mandarins had again begun to act with such an absolute disregard of the treaty that France was once more compelled to interfere. Finding it impossible to secure any satisfactory engagement from the mandarins, Commander Rivière seized the citadel of Hanoi on 25 April and then occupied Nam-dinh, but was slain in an engagement with the Black Flags on 19 May. On the same day Father Bechet and numbers of his catechists and flock were decapitated in the name of Annam. A proposal in the Royal Council to decree a general massacre of Christians was vetoed by Tu-duc. This was one of the Annamite monarch's last important acts, and contrasted favourably with his general policy throughout his long reign (1847–83). Stirred now from its inaction, France dispatched strong reinforcements under General Bouet and Admiral Courbet. The bombardment of Thuan-an and the capture of Hue led to the Treaty of 25 August, 1883. As, however, the Black Flags still continued to massacre and pillage about Hanoi, Admiral Courbet proceeded against Son-tai, and, despite its desperate defense, captured the town on 17 December. To avenge themselves for their defeats the Annamite authorities forthwith decreed a general massacre of Christians. Troops were dispersed throughout the country to rob, burn, pilage, slay, and leave no trace of Christianity in the French-speaking vicariates. A Fleming who escaped a French bullet, on 5 June, 1884, indicated clearly what confidence could be reposed in Annamite faith. France at once attacked China, annihilated the Chinese fleet, bombarded Fou-chou, seized the Pescadores, and blockaded Formosa. Such salutary terror did this prompt action cause the Chinese authorities that they hastened to conclude peace on 9 June, 1885. The Franco-Annamite Treaty of 1884 was ratified on 23 February, 1886. Annam became a French protectorate, and the influence which China had exercised over its affairs for more than 4000 years came to an end.

A detailed description of the sufferings of the missions during the "Great Massacres" cannot be attempted here. The following figures given in Piolet (op. cit. infra, II, pp. 470–1) will sufficiently indicate the ruthlessness of the butchery and the fierce determination of the Annamite authorities to destroy the prestige of the Christian Faith. In Eastern Cochin China the martyrs included 15 priests (7 native), 60 catechists, 270 nuns, and 24,000 Christians (out of 41,234); all the charitable institutions and ecclesiastical buildings of the mission—including the episcopal curia, churches, presbyteries, 2 seminaries, a printing establishment, 17 orphanages, 10 convents, and 225 chapels—were destroyed. In Southern Cochin China, 10 native priests and 885 Christians were massacred in the Province of Quang-ngai alone—the only province in which there were hundreds of martyrs; two-thirds of the churches, presbyteries, etc., of the mission were pillaged and burned. In the Mission of Southern Tong-kong 163 churches were burned; 4799 Catholics were executed, while 1151 died of hunger and misery. These figures, however, do not include the figures for the French missionaries, one native priest, 63 catechists, and 400 Christians were massacred in Western Tong-kong, while 10,000 Catholics only saved themselves by flight. The carnage extended even to the remote forests of Laos, where seven missionaries, several native priests, and thousands of Christians were butchered.

Present Condition of the Catholic Church in French Indo-China.—Although but twenty-five years have elapsed since it had to endure a persecution, without parallel since the fiercest days of the Reformation, the Catholic Church has never been in so flourishing a condition in Indo-China as it is to-day (1910). Beginning with 5782 conversions of adults in 1887, the annual figure mounted rapidly and steadily, and averages at present about fifteen thousand. It will be instructive to set down here the latest statistics (at the beginning of 1910) for the twelve vicariates apostolic, into which Indo-China is divided, at the same time warning the reader that the vicariates are not to be taken as conterminous with the geographical territories suggested by their names:

(1) Western Cochin China: vicar, Mgr. Mossard, titular Bishop of Medea (residence, Saigon); total population, 1,564,000; Catholics, 63,660; catechists, 1600; priests, 134 (56 European); 50 catechists; 2 seminaries with 122 students; 72 Brothers of the Christian Schools; nuns (Carmelite, St. Paul of Chartres, Filles de Marie), 6 houses with 713 sisters; 237 churches and chapels; 122 schools with 7960 pupils; 15 orphanages with 1106 inmates; 15 hospitals; 15 pharmacies.

(2) Eastern Cochin China: vicar, Mgr. Grangeon, titular Bishop of Utina (residence, Binh-dinh, Annam); population, 3,500,000; Catholics, 83,000; catechists, 10,000; priests, 101 (64 European); 85 catechists; 2 seminaries with 250 students; 24 Brothers of the Christian Schools, 1 house with 6 religious; Amantes de la Croix, 10 houses with (in 1901) 238 religious; 855 churches and chapels; 42 schools with 1889 pupils; 20 orphanages with 1567 inmates; 1 hospital; 3 dispensaries.

(3) Northern Cochin China: vicar, Mgr. Allys, titular Bishop of Phacusa (residence, Hue; Annam); population, 2,700,000; Catholics, 58,635; priests, 100 (48 European); 47 catechists; 2 seminaries with 123 students; Sisters of St. Paul of Chartres, 3 houses with 11 religious; Filles de Marie, 18 houses with 525 religious; Brothers of the Christian Schools, 1 house with 8 religious; 205 churches and chapels; 30 schools with 707 pupils; 3 orphanages with 478 inmates; 2 hospitals (1 for lepers); 8 pharmacies.

(4) Cambodia: vicar, Mgr. Bouchut, titular Bishop of Panemotic (residence, Phnom-penh); population, 2,900,000; Catholics, 38,107; catechists, 4500; 77 priests (45 European); 52 catechists; 1 seminary with 103 students; Sisters of Providence, 168 (37 European); Filles de Marie, 32; 156 churches and chapels; 72 schools with 4235 pupils; 6 orphanages with 951 inmates; 7 hospitals; 5 pharmacies.

(5) Laos—formerly included in the Vicariate Apostolic of Siam—erected on 4 May, 1899; vicar, Mgr. Cuas, titular Bishop of Hermopolis Minor (residence, Nong-seng); population, 2,500,000 (about one-third in French territory); Catholics, 10,682; catechists, 1172; 33 priests (29 European); 33 catechists; 1 seminary with 8 students; Sisters of St. Paul of
Chartres, 2 houses with 8 religious; Amantes de la Croix, 15; 54 churches and chapels; 35 schools with 797 pupils; 22 orphanages with 304 inmates;
(6) Maritime Tong-king, erected on 15 January, 1913; titular Bishop of Lysiade (residence, Phat-diem); population, 2,000,000; Catholics, 90,000; priests, 88 (33 European); catechists, 172; seminaries, 2 with 223 students; Sisters of St. Paul of Chartres, 3 houses with 12 religious; Amantes de la Croix, 6 houses with 112 religious; 336 churches and chapels; 38 schools with 10,400 pupils; 5 orphanages with 1173 inmates; 18 hospitals (2 for lepers with 324 patients);
(7) Southern Tong-king: vicar, Mgr. Pineau, titular Bishop of Calama (residence, Xa-doai); population, 2,000,000; Catholics, 132,266; catechumens, 362; priests, 115 priests (57 European); 250 catechists; 2 seminaries with 342 students; Amantes de la Croix, 6 houses with 148 religious; 395 churches and chapels; 182 schools with 5932 pupils; 6 orphanages with 1730 inmates; 12 pharmacies;
(8) Western Tong-king: vicar, Mgr. Gendreau, titular Bishop of Simpao (residence, Hurun); population, 2,200,000; Catholics, 140,379; catechumens, 6329; priests, 134 (42 European); catechists, 380; 2 seminaries with 288 students; Carmelites Sisters, 1 house with 17 religious; Sisters of St. Paul of Chartres, 1 house with 35 religious; Amantes de la Croix, 16 houses with 42 religious; 160 churches and chapels; 600 schools with 17,480 pupils; 5 orphanages with 2436 inmates; 5 hospitals; 2 pharmacies;
(9) Upper Tong-king, erected 15 April, 1895: vicar, Mgr. Ramond, titular Bishop of Linoe (residence, Hang-hoa); population, 2,000,000; Catholics, 21,130; 47 priests (29 European); 57 catechists; 1 seminary with 70 students of St. Paul of Chartres; 2 houses with 12 religious; Amantes de la Croix, 4 houses with 106 religious; 117 churches and chapels; 75 schools with 1599 pupils; 3 orphanages with 165 inmates; 7 hospitals (3 for lepers); 5 pharmacies;
These nine vicariates Apostolic have been entrusted to the Society of Foreign Missions (Paris). The remaining three are administered by the Dominicans:
(10) Central Tong-king: vicar, Mgr. Munagorre Obyneta, titular Bishop of Pityus (residence, Bu-chu); population, 2,000,000; Catholics, 219,650; 114 priests (59 European); 233 catechists; 2 seminaries with 150 students; Third Order of St. Dominic, 16 houses with 427 sisters; Amantes de la Croix, 3 houses with 33 religious; Sisters of St. Paul of Chartres, 15; 615 churches and chapels; 679 schools; 5 orphanages with 500 inmates; 7 hospitals (5 for lepers with 500 inmates);
(11) Eastern Tong-king: vicar, Mgr. Arellano, titular Bishop of Coecusus (residence, Hai-duong); population, 2,000,000; Catholics, 54,200; catechumens, 400; 57 priests (17 European); 110 catechists; 2 seminaries with 102 students; Third Order of St. Dominic, 4 houses with 81 religious; Sisters of St. Paul of Chartres, 2 houses with 23 religious; 264 churches and chapels; 104 schools; 4 orphanages with 352 inmates; 7 hospitals;
(12) Northern Tong-king: vicar, Mgr. Velaseo, titular Bishop of Amorium; population, 2,500,000; Catholics, 31,016; 46 priests (20 European); 65 catechists; 2 seminaries with 46 students; Third Order of St. Dominic, 2 houses with 45 religious; Sisters of St. Paul of Chartres, 3 houses with 12 religious; 162 churches and chapels; 167 schools; 3 orphanages with 43 inmates; 1 hospital.
Total for the twelve vicariates (an asterisk signifies the data are incomplete); population (estimated), 27,266,000; Catholics, 940,703; catechumens, 24,351*; bishops, 12; priests, 1046 (443 European); catechists, 1662; 21 seminaries with 1775 students; 109* converts with 3122* sisters; 3618 churches and chapels; 80* Brothers of the Christian Schools; 2561 schools with 50,999* pupils; 97 orphanages with 10,808 inmates; 70* hospitals; 50* pharmacies.
Training of the Native Clergy, Religious Institutions, etc.—The native clergy are more numerous in Indo-China than in any other missionary country in the world. Their intimate acquaintance with the feelings and superstitions of their compatriots, whose mentality differs so widely from that of Western races, enables them to better understand and serve them. Of the solidity of their faith they have given abundant testimony during times of persecution, when their constancy rivalled that of their European apostles. Twenty-six of their number have been already declared venerable. In accordance with the regulations of the Synod of 1775 in Cochin, the recent vicariate has the number of the most promising boys from the leading Catholic families of his district: as the choice is considered universally among the Christian flock to confer a great honour on the family, the priest finds no difficulty in recruiting a sufficient number of neophytes. Their training is devoted to the formation of ten and twelve; they serve the priest, study the Chinese characters, and learn a little elementary Latin. At the age of seventeen or eighteen, those who have given evidence of a true vocation are sent to the seminary to follow the course of studies proper to the priesthood: 8 years' course until the age of twenty or twenty-two, when they are sent to the school of catechists. Each priest is expected to supply at least one candidate for the priesthood annually, but so healthy is the Christian sentiment of the people that the seminaries are unable to accommodate all who seek admission. After a course of six years of this valuable training, the catechists, who have been especially conspicuous for their exemplarity, are conducted at an incense and solemn liturgical seminary, where after three years' further study they are admitted to the priesthood—usually between the ages of thirty-five and forty.
The principal religious institute for women in Indo-China is the (native) Congregation of Amantes de la Croix, who, having been recognized and approved by the Holy See, have adopted their regulations and adopted the title of Filles de Marie. Founded more than two centuries ago, they evinced, like the native priests, an unflinching faith during all the persecutions, sheltering the fugitives, nursing the sick and wounded, carrying food to the conscription of St. Paul, standing bearing the Vaticum to those who were about to seal their Faith with their blood. The aims of the congregation are personal sanctification, the performance of works of charity, and the instruction of the catechumens. They are often called upon—their priests and catechists are frequently unable to fill all the duties of the rapidly growing missions—to proceed to remote villages and instruct rude and uncultured neophytes in the truths of Christianity. This apostolate has been blessed with wonderful results: to the activity of a single religious (Sister Marie), Father Gernot, a recent arrival in Saigon, declared he bowed 1200 converts. The order has itself been the first vindication of womanhood in Indo-China. Living in the midst of a pagan society, which regards women as creatures of a lower order and their education as nugatory, these sisters
have been a conspicuous illustration of the Catholic ideal of the dignity of woman. To Catholicism belongs the credit, in Indo-China as in so many other countries, of having first undertaken the education of the native women—a task with which it alone concerned itself in the time of the old-day (1916).

The Brothers of the Christian Schools first appeared in Indo-China in 1867, but their numerous and flourishing schools were closed in 1881-82 by order of the colonial administration, which has seldom shown a proper appreciation of the great work of civilization performed by the religious since their recall in 1895 they have been taking an even more prominent part in the education of the natives, and now direct many prosperous schools.

The Sisters of St. Paul of Chartres and the Sisters of Providence also render important services to the missions. In addition to the military hospital at Saigon, the former have opened numerous orphanages and hospitals for lepers (e.g. at Hue); the latter have been entrusted with the principal schools of the missions in many districts, with the Orphanages of the Holy Childhood, and various native hospitals.

The French state justice to the services which the Society of Foreign Missions, the Order of St. Dominic, and, in earlier days, the Society of Jesus have performed throughout the peninsula in the name of Christianity and civilization. The value of their services to the cause of religion and the advancement of health and the vitality of the Church in Indo-China, while, as the pioneers of civilization, they have laboured unaided for centuries to raise the lot of the natives, and are even to-day practically the sole civilizing agents throughout these vast territories. The widespread respect which the inhabitants feel for the Western races was won by the French missionaries, who, deserted by their fellow-countrymen, remained to face torture and death with their flock, when every dictate of prudence seemed to urge them to take flight. Judging France not by her breaches of faith in the past, nor by her unsympathetic administration (see Ajalbert, op. cit. infra, passim), but by her noble sons, who sacrificed everything at the call of duty, the native Christians have given a ready acquiescence to the French domination. To the missionaries we are primarily indebted for our present knowledge concerning the languages, history, and customs of the inhabitants. It is the mission system (quasi-organisme) which, with the aid of certain accents and signs, we can represent the Annamites sounds in our letters, we owe to the Jesuits. This system, which has spared both Annamite and Western the infinite pains necessary to master the complicated Annamite ideographic system, is at present taught in all the Christian and government schools. The Society of Foreign Missions was the first to issue dictionaries of the various Indo-Chinese languages and dialects; it has regularly supplied interpreters to the French Government, and has laboured earnestly to foster among the natives a taste for education. From this system it follows that few untrained students of the history of Indo-China will declare have been yet repaid.

Induction, the conscious mental process by which we pass from the perception of particular phenomena (things and events) to the knowledge of general truths. The sense perception is expressed logically in the singular or particular judgment (symbolically: "S is P"), "Something is S"; or "It is true that S is P"); the general truth, in the universal judgment ("All S is P"; "S as such is P"; "If S is M it may be P"); the general truth, in the universal judgment ("All S is P"; "S as such is P"; "If S is M it may be P").

I. INDUCTION AND DEDUCTION.—Deductive reasoning always starts from at least one universal premise (see DEDUCTION), bringing under the principle embodied therein all the applications of the latter; hence it is called synthetic reasoning. But of greater importance than this is the process by which, starting as we do from the individual, disconnected data of sense-experience, we attain to a certain knowledge of judgments that are necessarily true and therefore universally valid in reference to those data. Universal judgments are not, as might be supposed, a priori obvious; they are intuitively to be necessarily true as soon as the mind has grasped the meaning of the ideas involved in them (called "analytic", "verbal", "explicative", "essential", "in materiāl contingēntiā", etc.), or are inferred deductively from such judgments (as in the pure mathematical science of geometry). Only premises are seen to be true only by and through experience (called "synthetic", "real", "ampliative", "accidental", "in materiāl contingēntiā", etc.). We reach the former (e.g. "The whole is greater than its part") by merely abstracting the concepts ("whole", "greater", "greater") from sense-experience, seeing immediately the necessary connexion between the concepts and forthwith generalizing this relation. This process may be called induction in a wide and improper sense of the word, but it is with the second
class of universal judgments only, generalizations based on experience, that induction proper has to deal.

II. SCIENTIFIC INDUCTION.—Although induction is equally applicable in all departments of generalization from experience, in the historical and anthropological no less than in the physical sciences, still it is in its application to the discovery of the causes and laws of physical phenomena, animate and inanimate, that it lends itself most readily to logical analysis. Hence it is the logical textbook ordinary with knapsack of physical induction. The process is often described as a ratiocinative or inferential process, and from this standpoint is contrasted with deductive reasoning. But if by logical inference we are to understand the conscious passage of the mind from one or more judgments as premises to another new judgment involved in them as conclusion, then this is certainly not the essence of the inductive process, although there are indeed ratiocinative steps involved in the latter, subsidiary to its essential function which is the discovery and proof of some universal truth or causal law of phenomena. Induction is really a logical method involving many stages and processes besides the central step of generalization itself; and it is opposed to deduction only in the sense that it approaches reality from the side of the concrete and individual, while deduction does so from that of the abstract and general.

The first of these steps is the observation of some fact or facts of sense-experience, usually a repeated coexistence in space or sequence in time of certain things or events. This naturally prompts us to seek its explanation, i.e., its causes, the total combination of proximate agencies to which it is due, the law according to which these causes secure its regular recurrence, on the assumption that the causes operative in the physical universe are such that acting in similar circumstances they will always produce similar results. Logic prescribes practical directions to guide us in observing, in finding out accurately what accompanies or follows what, in eliminating all the merely accidental concomitant circumstances of a phenomenon, so as to retain for analysis only those that are likely to be causally, as distinct from casually, connected with the event under investigation.

It is at this point that comes the stage at which the tentative, empirical generalization is made; the suggestion occurs that the observed connexion (between S and P) may be universal in space and time, may be a natural causal connexion the ground of which lies in a suspected agency or group of agencies operative in the total experience that gives us the second under investigation (S and P). This is the formation of a scientific hypothesis. All discovery of laws of physical nature is by way of hypothesis; and discovery precedes proof; we must suspect and guess the causal law that explains the phenomenon before we can verify or establish it. Hence the necessity of forming a hypothesis; it must be the abstract judgment: "If S is M it is P", which we—relying on the uniformity of nature—furthermore generalize: "Whenever and wherever S is M it is P", a generalization which has next to be tested to see whether it is also materially accurate. A hypothesis is therefore a provisional supposition as to the cause of a phenomenon, made with the object of ascertaining the real cause of the latter. Logic cannot, of course, suggest to us what particular supposition we ought to make in a given case. This is for the investigator himself. This is where the scientific imagination, originality, and genius come into play. But logic does indicate in a general way the sources from which hypotheses are usually drawn, and, more especially, it lays down conditions to which a hypothesis must conform if it is to be of any scientific value. The most fertile source of hypotheses is the observation of analogies, i.e., resemblances between the phenomena under investigation and other phenomena whose causes are already partially or fully known. When the state of our knowledge does not enable us to make any assumption as to what the phenomenon is, we must content with a working hypothesis which will be perhaps merely a description of the events observed. A hypothesis that purports to be explanatory must be consistent with itself throughout, free from evident and irreconcilable contradictions, and capable of verification. This latter condition will be fulfilled only when the hypothesis is based on some analogy with known causes. Were the supposed cause totally unique and sui generis, we could form no conjecture as to how it would work in any given or conceivable set of circumstances, and we could therefore never detect whether it was really there or not. A hypothesis may be legitimate and useful in science even though it may turn out to be inaccurate; few hypotheses are altogether accurate at first. It may even have to be rejected altogether as disproved after a time and yet have served to lead to other discoveries or have put investigators on the right track. Or, as is more usually the case, it may have to be moulded, modified, limited, or extended in the course of verifying it by further observation and experiment.

It is to help the investigator in this work of analyzing the facts of sense-experience, and prove causal connexions or natural laws by the formation and verification of hypotheses, that modern logicians have dealt so exhaustively with the "canons of inductive inquiry", or "experimental methods", first outlined by Herschel in his "Preliminary Discourse on the Study of Natural Philosophy," and first popularized by John Stuart Mill in his "System of Logic". These canons—of agreement, difference, concomitant variations, residues, positive and negative agreement, combined agreement and difference—merely formulate various ways of applying to the analysis of phenomena the principle of eliminating what is casual or accidental so as to leave behind what is causal or essential; they are all based upon the principle that whatever can be eliminated from a set of things or events without thereby eliminating the phenomenon under investigation, is not causally connected with the latter, and whatever cannot be so eliminated without the phenomenon being causally connected with it. Stating a hypothesis in the symbols, "If S is M it is P", we have in M the supposed real or objective cause of P, and also the mental or logical ground for predicating P of S. We test or verify such a hypothesis by endeavouring to establish, through the actual series of observations, that whenever and wherever M occurs so does P; that M necessitates P; and, secondly, through a series of negative experiments or observations, that wherever and whenever M is absent so is P, that M is indispensable to P, that it is the only cause. If both these efforts are successful, the hypothesis is fully verified. The supposed cause of the phenomenon is certainly the real one if it can be shown to be indispensable, in the sense that the phenomenon cannot occur in its absence, and necessitating, in the sense that the phenomenon must occur when it is present and operative. This sort of verification (often only very imperfectly and sometimes not at all attainable) is what the scientist aims at. It establishes the two propositions "If S is M it is P", and "If S is not M it is not P"—the latter being equivalent to the reciprocal of the former (to "If S is F it is M"). Whenever we attach to this ideal (often too idealized a hypothesis) we can infer from consequent to antecedent, from effect to cause, just as reliably as vice versa. But over what range of phenomena are we to carry on our negative observations and experiments in order to
make sure that our hypothesis offers the only possible explanation of the phenomenon, that M is the only cause in the universe capable of producing F—that, for instance, the necessity which beset the early Christians of securing a place of refuge for themselves and of burial for their dead could alone account for the formation of the Roman church. This is obvious a matter for the prudence of the investigator, and, incidentally, it indicates one limitation of the certitude we can reach by induction. What is known as a crucial instance or experiment will, if it occur, enable us summarily to dismiss one of two conflicting hypotheses as erroneous, thus estab-
lishing, provisionally, precisely the only conceivable one in the circumstances—that is to say, the only one reasonably suggested by the facts; for there is scarcely any hypothesis to which some fanatical alternative might not be imagined; and here again prudence must guide the investigator in forming his conviction. Is he, for instance, to suspend his assent to the physical hypothesis of a universal ether because the alternative of *actio in distans* is at any rate not evidently an intrinsic impossibility?

When a hypothesis cannot be rigorously verified by establishing the reciprocal universal judgment, it may nevertheless stand; provided we ascribe to the number and importance of other cognate phenomena the certainty of being capable of accounting for, in addition to the one it was invented to explain. A hypothesis is rendered highly probable if it foretells or explains cognate phenomena; this is called by Whewell, *consequence of induction* (Novum Organum Revisatum, pp. 86, 95, 96). This process of verification runs somewhat on these lines: "If M be a really operative cause, then in such and such circumstances it ought to produce or account for the effect X, and in such others for Y and so on; but (by observation or experience) also find these circumstances these effects are produced or explained by it, therefore probably they are due to M." They are probably attributable only, because the argument does not formally yield a certain conclusion; but the more we extend our hypothesis, and the larger the groups of phenomena it is found competent to ex-
plain, the firmer does our conviction naturally grow, until it reaches practical or moral certitude that we have hit on the true law of the phenomena examined. Thus, for instance, was Newton's gravitation hypothesis gradually extended by him so as to explain the motion of the planets and the tides, the satellites around the planets and of these around the sun, until finally it came to be regarded as applicable throughout the whole material universe. The aim of the inductive process is to explain isolated facts by bringing them under some law, i.e. by discovering all the causes to the co-operation of which they are due and laying down those general propositions called *laws of nature* which embody and express the constant mode of operation of those causes. It is thus that we transform the observed sequences of sense-experience into understood or intellectually explained cause and effect. Scientific explanation also aims at reducing these separate and narrower laws themselves to higher and wider laws by showing them to be partial applications of the latter, thus obeying the innate tendency of the human mind to synthesize and unify, as far as may be, the manifold and chaotic data of sense experience.

The foundation of Induction.

---The inductive generalization by which, after examining a limited number of instances of some connexion or mode of happening of phenomena, we assert that this connexion, being natural, will always recur in the same way, is a mental passage from particular to general. In its fullness it is within experience to what is beyond experience. Its legitimacy needs justification. It rests on the assumption of a few important metaphysical principles. One of these is the principle of causality: "Whatever happens has a cause." Since by the cause of a thing or event we mean whatever contributes positively to its being or happening, the principle of causality is clearly a self-evident, necessary, analytic principle. And it is obviously impossible to seek for the causes of phenomena did we believe it possible that they could be or happen without causes. A somewhat wider objective principle than this is the principle of sufficient reason: "Nothing real can be as it is without a sufficient reason why it is so"; and, applied to the subjective, mental, or logical sphere, the principle states: "Nothing believeable is true without a sufficient reason for its truth". This principle, too, is presupposed in induction; we should not seek for general truths as an explanation or reason for the individual judgments that embody our sense-experience did we not believe it possible to find in the former a rational explanation of the latter. But there is yet another principle, more directly assumed, involved in the inductive generalization, viz. the principle of the uniformity of nature: "Natural or non-fatal causes, i.e. the causes operative in the physical universe apart from the free will of man, appear to us in nature's manifestations always everywhere produce similar results"; "Physical causes act uniformly." Since human free will is excluded from the scope of this principle, it follows that the phenomena which issue directly from the free activity of man do not furnish data for strict induction. It would, however, be a mistake to conclude that the influence of free will renders all science of human and social phenomena impossible. Such is not the case. For even those phenomena have a very large measure of uniformity, depending largely, as they do, on a whole group of influences other than the social or racial and national character, social habits and surroundings, education, climate, etc. They are, therefore, manifestations of stable causes and laws, though not of mechanical or physical laws, and form a suitable, though difficult domain, for inductive inquiry—difficult, because the operative influences are hidden under a mass of chaotic data which must be prepared by statistics and averages based on pains-taking and long-continued observations and comparisons.

In the domain of physical induction proper we have to do with causes only, i.e. with material or non-fatal causes. Above these, therefore, the question next arises: by what right do we assume the universal truth of the principle of uniformity as just stated, or what kind or degree of certitude does it guarantee to our inductive generalizations? Obviously it can give us no higher degree of certitude about the latter than we have about the principle itself. And this latter certitude will be determined by the grounds and origin of our belief in the principle. How, then, do we come to formulate consciously for ourselves, and give our assent to, the general proposition that the causes operative in the physical universe around us are of such a kind that they are determined each to one line of action, that they will not act capriciously, but regularly, uniformly, always in the same way in similar circumstances? The answer is that by our continued experience of the order and regularity and uniformity of the ordinary course of nature we gradually come to believe that these their natural line of action, and to expect that unless something unforeseen and extraordinary interfere with them, they act beyond our experience as they do within it. Mill is right in saying that the principle is a gradual generalization from experience, and, furthermore, that it need not be consciously grasped in all its fullness anterior to any particular act of inductive generalization. But this is not enough; for, whether
we take it partially or fully in a given case, the question still remains: What is our ultimate rational justification for extending it at all beyond the limits of our actual personal experience? The answers given to this question by logicians, as indeed their entire expositions of the inductive process, are as divergent and as vague as they are clear and precise. But the scope of our present inquiry, regarding the ultimate nature of the universe and of all reality. The fact to be explained and justified is that we believe the world outside our personal experience to be of a piece with the world within our experience. But the Empirical or Positivist philosophy of the eighteenth century, by holding forth the mere rationalization of this belief impossible; for it there is no world outside experience; it reduces all reality in ultimate analysis to the present actual sensations of the individual's consciousness; and the alleging of mere custom, mere actual experience of uniformity, as a reason for belief in unexperienced uniformity, it regards not as a rational expectation based on a reasoned view about the nature of reality, but simply a blind leap in the dark. The explanation of the current Monistic Idealism, which would identify the laws of physical phenomena with the laws of thought, and all reality with a system of intellectually necessary thought-relations, is, in no less unsatisfactory, for it confines the phenomena of existing, contingent being with the metaphysical relations between abstract, possible essences—relations which have their ultimate basis only in the nature of the Necessary Being, God Himself. The answer of scholastic philosophy is that the ultimate rational justification for our belief in the uniformity of nature is our reasoned conviction that nature is the work of an All-Wise Creator and Conserver, Who has endowed physical agencies with regular constant modes of activity which can not interfere unless by way of miracle for motives of the higher or moral order. The certitude of our belief in the principle and its applications is thus hypothetical, physical, not absolute, not metaphysical: If God continues to conserve and concur with created physical agencies, if He does not miraculously interfere with them, if no other unknown cause intervene, then those agencies will continue to act uniformly."

Physical induction sometimes inquires into the constitutive ("formal" and "material") causes of phenomena (as, for instance, in chemical and physical research, into the constitution of molecules). It then inquires into their purpose (or "final" causes, as in the biological sciences); but mainly into their proximate efficient causes, i.e. the total group of proximate agencies sufficient and indispensable for the production of any given phenomenon. To these primarily inductive research is restricted, for the agencies operative in the physical universe are so intimately interwoven and interdependent that, were we to trace the chains of causality outward and backward from any effect indefinitely, we should see that in a sense all the agencies in the universe are in some remote way operant in the production of every effect. Much controversy has been needlessly imported into Logic regarding the concept of cause. The rejection of "efficiency" or "positive influence" from this concept and the substitution of "invariable and unconditional sequence" is a feature of Empiricism. But it can have no place in inductive generalization about the conduct of phenomena in space and time. For reliable generalization about the latter the only objective condition needed is uniformity or regularity of occurrence. The scope of induction will, however, be unduly and unjustifiably narrowed if by physical cause we are always to understand something which is itself a phenomenon, perceptible by the senses, and if we are to eschew all inquiry into causes which are not themselves sense-phenomena but active qualities rooted in the natures of things and discernible only by intellectual reasoning. No doubt it is to inductive research for mere phenomenal antecedents—for material masses and energies—and to their exact mathematical measurement in terms of mechanical work that the applied sciences owe their greatest results; but the true work of the engineer is to know how to secure useful coexistences and sequences of material masses and motions, yet the man of thought, be he physical scientist or philosopher, will rightly resent being prohibited by Positivism from prosecuting a further investigation into the natures of the phenomena, into the natures and properties which reason alone can discover through those phenomena. Men will ever and rightly insist on inquiring inductively after vera causa, which, though they produce effects perceptible by the senses, are not themselves phenomena. However, when we push back our inquiry into the more remote conditions, causes, origin, and constitution of wider and wider fields of phenomena, analogies from known proximate causes—which aided us in our more specialised researches—begin to fail us; and so our wider theoretical conceptions—about atoms, about infinitesimal quantities, about internal mechanisms, or less probable hypotheses, never fully verified. What, finally, we inquire into the absolutely ultimate origin, nature, and destiny of the universe, where analogies fail us altogether, we must abandon induction proper, which seeks to compare and classify the causes it discovers, and have recourse to the a posteriori argument, which simply infers, from the existence of an effect, that there must exist a cause capable of producing it, but gives us no further information about the nature of this cause than that it must have higher perfection, excellence, being, than the effect produced by it. See, for instance, the arguments by which we prove the existence of God.

IV. Historical.—Scientific induction, as just set forth, was not unknown to Aristotle and the medieval scholastics. It is not, however, the process referred to by Aristotle as "induction" (Anal. Prior., II, 23); and usually described as the "inductive syllogism", or "enumerative induction". This is simply the process of inferring that what can be predicated of each member of a class separately can be predicated about the whole class. It is of no scientific value; for, when the enumeration of instances is perfect, or complete, the conclusion is not a scientific universal, a general proposition is not a mere collection of separate instances; the enumeration of individuals is imperfect, or incomplete, the collective conclusion is hazardous, more or less probable, but not certain. Aristotle was, however, well aware of the possibility of reaching a certain conclusion after an incomplete enumeration of instances, by abandoning mere enumeration and undertaking an analysis of the nature of the instances as in modern induction. He refers to this process repeatedly under the name of "enumeratio" in the "Posterior Analytics" (c. xix; xxxii; i, § 4; cf. Rhet. II: 390b9-10), though he did not investigate the conclusions under single effect; he was much more uncertain. The prevalent belief that the medieval scholastics treated only "enumerative induction" is erroneous. They were also familiar with scientific induction, using the terms experimentum, experientia, to translate Aristotle's "enumeratio". Albertus Magnus (In An. Post. I, xvi, 1, c. ii; dist. iii, q. iv, n. 9), and St. Thomas Aquinas (In An. Post. II, lect. xx) examined it, without, however, attempting to treat of the conditions of its application, for the very good reason that the apparatus for scientific research did not exist in their day. But the tendency to think of experimentation with the methods of the sixteenth and the seventeenth centuries, in this direction, is perhaps sounder than that of his better known namesake, Francis Bacon, of the sixteenth and seventeenth.
With the progress of the physical sciences in the eighteenth and nineteenth centuries the attention of logicians was concentrated almost exclusively on the application of the inductive method to the discovery and proof of the laws of nature; and at the present time its philosophical foundations are giving rise to considerable discussion.

P. Coffey.

Indulgences.—The word indulgence (Lat. indulgentia, from indulgeo, to be kind or tender) originally meant kindness or favour; in post-classic Latin it came to mean the remission of a tax or debt. In Roman law and in the Vulgate of the Old Testament (Is., xxi, 1) it was used to express release from captivity or punishment. Not only in theological but also in the legal sense it is sometimes employed in its primary sense to signify the kindness and mercy of God. But in the special sense in which it is here considered, an indulgence is a remission of the temporal punishment due to sin, the guilt of which has been forgiven. Among the equivalent terms used in antiquity were parem, remission, dispensation, remissio, dispensatio.

What an Indulgence is Not.—To facilitate explanation, it may be well to state what an indulgence is not. It is not a permission to commit sin, nor a pardon of future sin; neither could be granted by any power. It is not the forgiveness of the guilt of sin; it supposes that the sin has already been forgiven. It is not an exemption from any law or duty, and much less from the obligation consequent on certain kinds of sin, e.g., restitution; on the contrary, it means a more complete payment of the debt which the sinner owes to God. It does not confer immunity from temptation or remove the possibility of subsequent lapses into sin. Least of all is an indulgence the purchase of a pardon which secures the buyer's salvation or releases the soul of another from Purgatory. The absurdity of such notions must be obvious to any one who forms a correct idea of what the Catholic Church regards in this subject.

What an Indulgence is.—An indulgence is the extra-sacramental remission of the temporal punishment due, in God's justice, to sin that has been forgiven, which remission is granted by the Church in the exercise of the power of the keys, through the application of the superabundant merits of Christ and of the saints, and for some just and reasonable motive. Regarding this definition, the following points are to be noted: (1) In the Sacrament of Baptism not only is the guilt of sin remitted, but also all the penalties attached to sin. In the Sacrament of Penance the guilt of sin is removed, and with it the eternal penalty due to mortal sin, as well as the temporal punishment required by Divine justice, and this requirement must be fulfilled either in the present life or in the world to come, i.e., in Purgatory (q. v.). An indulgence offers the penitent sinner the means of discharging this debt during his life on earth. (2) Some limits of indulgence—none of them, however, issued by any pope or council (Pesch, Tr. Dogm., VII, 196, §464)—contain the expression, "indulgentia a culpæ et a poena," i.e., release from guilt and from punishment; and this has occasioned considerable misunderstanding (cf. Lea, "History," III, 34 sqq.). The real meaning of the formula is that, indulgences presupposing the Sacrament of Penance, the penitent, after receiving sacramental absolution from the guilt of sin, is afterwards freed from the temporal penalty by the indulgence (Bellarmine, "De Indulgl," I, 7). In other words, sin is fully pardoned, i.e., its effects entirely obliterated, only when complete reparation, and consequently release from penalty as well as from guilt, has been made. Hence Clement V (1305-1314) condemned the practice of those purveyors of indulgences who pretended to absolve "a culpæ et a poena" (Clement, I, v, tit. 9, c. ii); the Council of Constance (1418) revoked (Sess. XLII, n. 14) all indulgences containing the said formula; Benedict XIV (1740-1758) treats them as heretical doctrines. An indulgence in this form, which he ascribes to the illicit practices of the "questores" or purveyors (De Syn. dioec., VIII, viii. 7). (3) The satisfaction, usually called the "penance," imposed by the confessor when he gives absolution is an integral part of the Sacrament of Penance; an indulgence is extra-sacramental; it presupposes the effects obtained by confession, contrition, and sacramental satisfaction. It differs also from the penitential works undertaken by his own accord by the repentant sinner—prayer, fasting, alms-giving—in that these are personal and get their value from the free will of the agent. On the other hand, indulgence places at the penitent's disposal the merits of Christ and of the saints, which form the "Treasury" of the Church. (4) An indulgence is valid both in the tribunal of the Church and in the tribunal of God. This means that it not only releases the penitent from the debt owed to the Church or from the obligations of performing canonical penance, but also from the temporal punishment which he has incurred in the sight of God and which, without the indulgence, he would have to undergo in order to satisfy Divine justice. This, however, does not imply that the Church pretends to set aside the claim of God's justice or that she allows the sinner to repudiate his debt. As St. Thomas says (Suppl., xxv. a. 1 ad 2um), "He who gains indulgences is not thereby released outright from what he owes as penalty, but is provided with the means of paying it." The Church therefore neither leaves the penitent helpless in debt nor acquits him of all further accounting; she enables him to meet his obligations. (5) In granting an indulgence, the grantor (pope or bishop) does not offer his personal merits in lieu of what God demands from the sinner. He acts in his official capacity as having jurisdiction in the Church, from whose spiritual treasury he draws the means with which he grants indulgence made. The Church herself is not the absolute owner, but simply the administratrix, of the superabundant merits which that treasury contains. In applying them, she keeps in view both the design of God's mercy and the demands of God's justice. She therefore determines the amount of each concession, as well as the conditions which the penitent must fulfill if he would gain the indulgence.

Various Kinds of Indulgences.—An indulgence that may be gained in any part of the world is universal, while one that can be gained only in a specified place (Rome, Jerusalem, etc.) is local. A further distinction is that between plenary indulgence, the guilt and penalty of which can be gained at any time, and temporary, which are available on certain days only, or within certain periods. Real indulgences are attached to the use of certain objects (crucifix, rosary, medal); personal are those which do not require the use of such material thing, or which are granted only to a certain class of individuals, e.g., members of an order or fraternity. The most important distinction, however, is that between plenary indulgences and partial. By a plenary indulgence is meant the remission of the entire temporal punishment due to sin so that no further expiation is required in Purgatory. A partial indulgence commutes a remnant of the penalty; and this portion is determined in accordance with the penitential discipline of the early Church. To say that an indulgence of so many days or years is
granted means that it cancels an amount of purgatorial punishment equivalent to that which would have been remitted, in the sight of God, by the performance of many days of the most rigorous canonical penance. Here, evidently, the reckoning makes no claim to absolute exactness; it has only a relative value. God alone knows what penalty remains to be paid and what its precise amount is in severity and duration. Finally, some indulgences are attached to the person, and it will be observed that they may be applied in behalf of the souls departed. It should be noted, however, that the application has not the same significance in both cases. The Church in granting an indulgence to the living exercises her jurisdiction; over the dead she has no jurisdiction and therefore makes the indulgences available for them by way of suffrage (per modum suffragii), i.e., she petitions God to accept these works of satisfaction in and in consideration thereof to mitigate or shorten the sufferings of the souls in Purgatory (see PURGATORY).

Who Can Grant Indulgences.—The distribution of the merits contained in the treasury of the Church is an exercise of authority (potestas jurisdictionis), not of the power conferred by Holy orders (potestas ordinis). Hence the pope, as supreme head of the Church on earth, can grant all kinds of indulgences to any and all of the faithful; and he alone can grant plenary indulgences. The powers of the Bishop, granted to him by the Church, are limited by Innocent III (1215) to the granting of one year's indulgence at the dedication of a church and of forty days on other occasions. Leo XIII (Rescript of 4 July, 1899) authorized the archbishops of South America to grant eighty days (Acta S. Sedis, XXXI, 768). Pius X (28 Aug., 1903) allowed the cardinals in their titular churches and dioceses to grant 200 days; archbishops, 100; bishops, 50. These indulgences are not applicable to the souls departed. They can be gained by persons not belonging to the church, but temporarily within its limits; and by the subjects of the granting bishop, whether these are within the church or outside—except when the indulgence is local. Priests, vicars, general, abbots, and generals of religious orders cannot grant indulgences unless specifically authorised to do so. On the other hand, the pope can empower a cleric who is not a priest to give an indulgence (St. Thomas, I, 7, q. 18, a. 8).

Dispositions Necessary to Gain an Indulgence.—The mere fact that the Church proclaims an indulgence does not imply that it can be gained without effort on the part of the faithful. From what has been said above, it is clear that the recipient must do his share in the work of the grace received. An indulgence cannot be gained for itself; therefore, for plenary indulgences, confession and Communion are usually required, while for partial indulgences, though confession is not obligatory, the formula corde sallem contrito, i.e., "at least with a contrite heart," is the customary prescription. Regarding the question discussed by theologians whether a particular mortal sin can gain an indulgence for the dead, see PURGATORY. It is also necessary to have the intention, at least habitual, of gaining the indulgence. Finally, from the nature of the case, it is obvious that one must perform the good works—prayers, alms deeds, visits to a church, etc.—which are prescribed in the granting of an indulgence. For details see "Raccolta."

Authoritative Teaching of the Church.—The Council of Constance condemned among the errors of Wyclif the proposition: "It is foolish to believe in the indulgences granted by the pope and the bishops" (Sess. VII, 4 May, 1416; see Denzinger-Bannwart, "Enchiridion," 622). In the Bull "Exsurge Domine," 15 June, 1520, Leo X condemned Luther's assertions that "Indulgences are pious frauds of the faithful"; and that "Indulgences do not avail those who really gain them for the remission of the penalty due to actual sin in the sight of God's justice" (Pachiridion, 758, 759). The Council of Trent (Sess. XXV, 3-4, Dec., 1563) declared: "Since the power of granting indulgences is itself divinely given, the holy synod teaches and ordains that the use of indulgences, as most salutary to Christians and as approved by the authority of the councils, shall be retained in the Church; and it furthers the Church to anathema against those who either declare that indulgences are useless or deny that the Church has the power to grant them" (Enchiridion, 989). It is therefore of faith (1) that the Church has received from Christ the power to grant indulgences, and (2) that the use of indulgences is salutary for the faithful.

Basis of the Doctrine.—An essential element in indulgences is the application to one person of the satisfaction performed by others. This transfer is based on: (1) The Communion of Saints.—"We being many, are one body in Christ, and every one members one of another" (Rom., xii, 5). As each organ shares in the life of the whole body, so does each of the faithful benefit not only from the prayers and good works of all the rest—a benefit which accrues, in the first instance, to those who are in the state of grace, but also, though less fully, to the sinful members. (2) The Vicarious Satisfaction.—Each good action of the just makes possible a double value: that of merit and that of satisfaction, or expiation. Merit is personal, and therefore it cannot be transferred; but satisfaction can be applied to others, as St. Paul writes to the Colossians (l, 24) of his own works, "Who now rejoices in my sufferings for you, and fills up those things that are wanting of the sufferings of Christ, in my flesh, for his body, which is the Church." (See SATISFACTION.) (3) The Treasury of the Church.—Christ, as St. John declares in his First Epistle (ii, 2), "is the propitiation for our sins: and not for ours only, but also for those of the whole world." Since the satisfaction of Christ is infinite, it constitutes an inexhaustible fund which is more than sufficient to cover the indebtedness contracted by sin. Besides, there are the satisfactory works of the Blessed Virgin Mary undiminished by any penalty due to sin, and the virtues, penances, and sufferings of the saints variously bestowed for the satisfaction which these servants of God might have incurred. These are added to the treasury of the Church as a secondary deposit, not independent of, but rather acquired through, the merits of Christ. The development of this doctrine in explicit form was begun by St. Bonaventure (sermon xiv in Epist.), and completed by Hales (Summa, IV, q. xxiii, m. 3, n. 6), Albertus Magnus (In IV Sentent., dist. xx, art. 16), and St. Thomas (In IV Sentent., dist. xx, q. i, art. 3, sol. 1). As Aquinas declares (Quodlib., II, q. vii, art. 16): "All the saints intended that whatever they did or suffered for God's sake should be productive not only to themselves but to the whole Church." And further points out (Contra Gent., III, 158) that what one endures for another, being a work of love, is more acceptable as satisfaction in God's sight than what one suffers on one's own account, since this is a matter of necessity. The existence of an infinite treasury of merits in the Church is dogmatically set forth in the Bull "Unigenitus," published by Clement VI, 27 Jan., 1343, and later inserted in the "Corpus Juris" (Extrav. Com., lib. V, tit. ix, c. ii).: "Upon the altar of the Cross," says the pope, "Christ shed of His blood not merely a drop, though this would have sufficed, by reason of the union with the Word, to redeem the whole human race, but a copious torrent thereby laying up an infinite treasure for mankind. This treasure He neither wrapped up in a napkin nor hid in a field, but entrusted to Blessed Peter, the key-bearer, and his successors, that they
might, for just and reasonable causes, distribute it to the faithful in full or in partial remission of the temporal punishment due to sin." Hence the condemnation by Leo X of Luther's assertion that "the treasures of the Church from which the pope grants indulgences are at the mercy of Christ and the saints" (Enchiridion, 787). For the same reason, Pius VI (1794) branded as false, temerarious, and injurious to the merits of Christ and the saints, the error of the synod of Pistoia that the treasury of the Church was an invention of scholastic subtlety (Enchiridion, 151).

According to Catholic doctrine, therefore, the source of indulgences is constituted by the merits of Christ and the saints. This treasury is left to the keeping, not of the individual Christian, but of the Church. Consequently, to make it available for the faithful, there is required an exercise of authority, which alone can determine in what way, on what terms, and to what extent, indulgences may be granted.

The Power to Grant Indulgences.—Once it is admitted that Christ left the Church the power to forgive sins (Psalms), the spiritual power of granting indulgences is logically inferred. Since the same mental forgiveness of sins extends both to the guilt and to the eternal punishment, it plainly follows that the Church can also free the penitent from the lesser or temporal penalty. This becomes clearer, however, when we see the amplification of the power granted to Peter (Matt. xvi, 19): "I will give unto thee the keys of the kingdom of heaven. And whatsoever thou shalt bind upon earth, it shall be bound in heaven: and whatsoever thou shalt loose upon earth, it shall be loosed in heaven." (Cf. Matt. xviii, 18, where like power is conferred on all the apostles.) No line is placed upon this power with saying "the powers of the keys," as it is called; it must, therefore, extend to any and all bonds contracted by sin, including the penalty no less than the guilt. When the Church, therefore, by an indulgence, remits this penalty, her action, according to the declaration of Christ, is ratified in heaven. That this power, as the Council of Trent affirms, was exercised from the earliest times, is shown by St. Paul's words (II Cor., ii, 5-10) in which he deals with the case of the incestuous man of Corinth. The sinner had been excluded by St. Paul's order from the company of the faithful, but had truly repented. After the Apostles, St. Paul 'sent one'--this rebuke is sufficient that is given by many", and adds: "To whom you have pardoned any thing, I also. For what I have pardoned, if I have pardoned anything, for your sakes have I done it in the person of Christ." St. Paul had bound the guilty one in the fetters of excommunication; he now releases the penitent from this punishment by an exercise of his authority--"in the person of Christ." Here we have all the essentials of an indulgence.

These essentials persist in the subsequent practice of the Church, though the accidental features vary according to conditions. The persecutions, those Christians who had fallen away but desired to be restored to the communion of the Church often obtained from the martyrs a memorial (libellus pacie) to be presented to the bishop, that he, in consideration of the martyrs' sufferings, might admit the penitent to absolution, thereby releasing him from the punishment they had incurred. Tertullian refers to this when he says (Ad martyres, c. i, P. L., i, 621): "Which peace some, not having it in the Church, are accustomed to beg from the martyrs in prison; and therefore you should possess and cherish and preserve it in you that so you persevere may be excused in others." Additional light is thrown on this subject by the vigorous attack which the same Tertullian made after he had become a Montanist. In the first part of his treatise "De pudiicitia," he attacks the pope for his alleged laxity in admitting adulterers to penance and pardon, and flouts the peremptory edict of the "pontifex maximus episcopos episcoporum." At the close he complains that the same power of remission is now applied also to the merits of Christ and the saints--"it is not enough for them to purge their own sins"--"Sufficit martyri propria delicta purgasse." And, again, "How can the oil of thy little lamp suffice both for thee and me?" (c. xxii). It is sufficient to note that many of his arguments would apply with as much and as little force to the indulgence of 1390.

During St. Cyprian's time (d. 258), the heretic Novatian claimed that none of the lapsae should be readmitted to the Church; others, like Feliciassimus, held that such sinners should be received without any penance. Between these extremes, St. Cyprian holds the middle course, insisting that such penitents should be reconciled on the fulfillment of the proper conditions. On the one hand, he condemns the abuses connected with the libellus, in particular the custom of having it made out in blank by the martyrs and filled in by any one who needed it. To this you would diligently answer: "Of the martyrs (Ep. xv), "that you designate by name those to whom you wish peace to be given." On the other hand, he recognizes the value of these memphialis: "Those who have received a libellus from the martyrs and with their help can, before the Lord, get relief in their sins, let such, if they be ill and in danger, after confession and the imposition of the hands on them, be brought unto the Lord with the peace promised them by the martyrs" (Ep. xiii, p. l., iv, 261). St. Cyprian, therefore, believed that the merits of the martyrs could be applied to less worthy Christians by way of vicarious satisfaction, and that such satisfaction was acceptable in the eyes of God as well as of the Church.

After the persecutions had ceased, the penitential discipline remained in force, but greater leniency was shown in applying it. St. Cyprian himself was reproached for mitigating the "Evangelical severity" on which he at first insisted; to this he replied (Ep. lii) that such strictness was needful during the time of persecution not only to stimulate the faithful in the performance of penance, but also to quicken them for the glory of martyrdom; when, on the contrary, peace was secured to the Church, relaxation was necessary in order to prevent sinners from falling into their old habits and least they should again be rebuked. Gregory of Nyssa (Ep. ad Letojum) declares that the penance should be shortened in the case of those who showed sincerity and zeal in performing it--"ut spatium canonibus praeuentum positum contrahere" (can. xvii; cf. can. ix, viii, xii, xiii, xix). In the same spirit, St. Basil (370), after prescribing more lenient treatment for various crimes, lays down the general principle that in all such cases it is not merely the duration of the penance that must be considered, but the way in which it is performed (Ep. ad Amphilo- chium, i. lxxiv). Similar leniency is shown by vari- ous patricians. During the reign of Constantine (314), Lactantius (320), Nicetas (325), Artes (330). It became quite customary during this period to favour those who were ill, and especially those who were in danger of death (see Amort, "Historia," 28 sq.). The ancient penitentials of Ireland and England, though exacting in regard to discipline, provide for relaxation in certain cases. St. Columban, e. g., in his Penitential (seventh century) treating (cap. v) of the sin of robbery, prescribed that he who has often committed theft shall do penance for seven years or for so long as the priest may judge fit, must always be reconciled with him whom he has wronged, and make restitution proportioned to the injury, and thereby his penance shall be considerably shortened (multum brevioribus penitentiis ejus). But should he be unwilling or unable (to comply with these conditions), he must do penance for
the whole time prescribed and in all its details. (Cf. Moran, "Essays on the Early Irish Church", Dublin, 1864, p. 258.)

Another practice which shows quite clearly the difference between sacramental absolution and the granting of indulgences was the solemn reconciliation of penitents. These, at the beginning of Lent, had received from the priest absolution from their sins and the penance enjoined by the canons; on Maundy Thursday they presented themselves before the bishop and hands down their record of their penance to the Church, and admitted them to communion. This reconciliation was reserved to the bishop, as is expressly declared in the Penitential of Theodore, Archbishop of Canterbury; though in case of necessity the bishop could delegate a priest for the purpose (lib. II, c. xlii). Since the bishop did not hear their confession, the "absolution" which he pronounced must have been a release from some penalty they had incurred. The effect, moreover, of this reconciliation was to restore the penitent to the state of baptismal innocence and consequently of freedom from all penalties, as appears from the so-called Apostolic Constitutions (lib. II, c. xlii) where it is said: "Eritque in loco baptismi imposito manuum"—i.e. the imposition of hands has the same effect as baptism (cf. Palmieri, "De Penitentia", Rome, 1879, 459 sq.).

In a later period (eighteenth century to twelfth) it became customary to permit the substitution of some lighter penance for the more severe one imposed. Thus the Penitential of Egbert, Archbishop of York, declares (XIII., 11): "For him who can comply with what the penitential prescribes, well and good; for him who cannot, we give counsel of God's mercy. Instead of one day on bread and water let him sing fifty psalms or kneel on seventy psalms without genuflecting. But if he does not know the psalms and cannot fast, let him, instead of one year on bread and water, give twenty-six 

solidi in alms, fast till None on one day of each week and till Vespers on another, and in the three Lents bestow in alms half of what he receives." The practice of substituting the recitation of psalms or the giving of alms for a portion of the fast is also sanctioned in the Irish Synod of 807, which says (c. xxiv) that the fast of the second day of the week may be "redeemed" by singing one psalter or by giving one 

denarius to a poor person. Here we have the forerunner of the so-called simplicissimus, which soon passed into general usage. Among other forms of commutation were pilgrimages to well-known shrines such as that at St. Albans in England or at Compostella in Spain. But the most important place of pilgrimage was Rome. According to Bede (674-735) the limitum of the Apostles, was even then regarded as a good work of great efficacy (Hist. Eccl., IV, 23). At first the pilgrims came simply to venerate the relics of the Apostles and martyrs; but in course of time their chief purpose was to gain the indulgences granted by the popes and attached especially to the Stations. Jerusalem, too, long had been one of these journeys, and the reports which the pilgrims gave of their treatment by the infidels finally brought about the Crusades (q. v.). At the Council of Clermont (1095) the First Crusade was organized, and it was decreed (can. ii): "Whoever, out of pure devotion and not for the purpose of gaining honour or money, shall go to Jerusalem to liberate the Church of God, let that journey be counted in lieu of all penance".

Similar indulgences were granted throughout the five centuries following (Amort, op. cit., 46 sq.), the object being to encourage these expeditions which involved so much hardship and yet were of such great importance for Christendom and civilization. The spirit in which these grants were made is expressed by St. Bernard, the preacher of the Second Crusade (1146): "Receive the sign of the Cross, and thou shalt like-wise obtain the indulgence of all thou hast confessed with a 'contrite heart'" (ep. ccxxii; al. eccl. iii).

Similar concessions were frequently made on special occasions, such as the dedication of churches, e.g., that of the Old Temple Church in London, which was consecrated in honour of the Blessed Virgin Mary, 10 Feb., 1185, by the Lord Heraclius, who to those yearly visiting it indulged sixty days of the penance enjoined them—as the inscription over the main entrance attests. The canonization of saints was often marked by the granting of indulgences, as in the coronation of St. Laurence O'Toole by Honorius III (1226), in honour of St. Edmund of Canterbury by Innocent IV (1248), and in honour of St. Thomas of Hereford by John XXII (1320). A famous indulgence is that of the Fortunellus (q. v.), obtained by St. Francis in 1221 from Honorius III. But the most important largess of this period was the plenary indulgence granted in 1300 by Boniface VIII to those who, being truly contrite and having confessed their sins, should visit the basilicas of Sts. Peter and Paul (see Jubilee).

Among the works of charity which were furthered by indulgences, the hospital held a prominent place. Lea in his "History of Confessions and Indulgences," (III, 189) mentions only the hospital of Santo Spirito in Rome, while another Protestant writer, Ulhorn (Gesch. d. Christliche Liebesthätigkeit, Stuttgart, 1884, II, 244) states that "one cannot go through the hospitals of any hospitals without finding numerous letters of indulgence." The hospital of Raben, which in 1284 had no less than fourteen such grants, each giving an indulgence of forty days. The hospitals at Lucerne, Rothenberg, Rostock, and Augsburg enjoyed similar privileges (see also the list of concessions in Lallemand, "Hist. de la Charité", Paris, 1860, III, 99).

Abuses.—It may seem strange that the doctrine of indulgences should have proved such a stumbling-block, and excited so much prejudice and opposition. But the explanation of this may be found in the abuses which unhappily have been associated with what is in itself a salutary practice. In this respect of course indulgences are not exceptional: no institution, however holy, has entirely escaped abuse through the malice or unworthiness of man. Even the Eucharist, as St. Paul declares, means an eating and drinking of judgment to the recipient who discards not the body of Our Lord and the cup of salvation (I Corinthians xi). The practice of extending indulgences is constantly abused by those who relapse into sin, not realizing that it is the offering of pardon in the form of an indulgence should have led to evil practices. These again have been in a special way the object of attack because, doubtless, of their connexion with Luther's revolt (sacrilege). But it should not be forgotten that the Church, while holding fast to the principle and intrinsic value of indulgences, has repeatedly condemned their misuse: in fact, it is often from the severity of her condemnation that we learn how grave the abuses were.

Even in the age of the martyrs, as stated above, there were practical cases in which St. Cyril was obliged to reprehend, yet he did not forbid the martyrs to give the libelli. In later times abuses were met by repressive measures on the part of the Church. Thus the Council of Clovesho in England (747) condemned those who imagine that they might atone for their crimes by substituting, in place of their own, the austerities of mercenary penitents (Haddan and Stubbs, "Councile", III, 373; cf. Lingard, "History and Antiquities of the Anglo-Saxon Church", 2nd. ed. London, 1838, I, 311). Against the excessive indulgences granted by some prelates, the Fourth Council of Lateran (1215) decreed that at the dedication of a church the indulgence should not be for more than a year, and, for the anniversary of the dedication or any other case, it should not exceed forty days, this being the limit observed by the pope himself on such occas-
sions. The same restriction was enacted by the Council of Ravenna in 1317. In answer to the complaint of the Dominican of France, of that certain prelates had put their own construction on the indulgences granted to these Orders, Clement IV in 1268 forbade any such interpretation, declaring that, when it was needed, it would be given by the Holy See. In 1330 the brothers of the hospital of Haut-Pas falsely asserted that they did not retain the power to collect the tithes and that by this means they had obtained an indulgence for all sinners, and sought to make the people more extensive than what the documents allowed: John XXII had all these brothers in France seised and imprisoned. Boniface IX, writing to the Bishop of Ferrara in 1392, condemns the practice of certain religious who falsely claimed that they were authorized by the Church to forgive all sins, and sends them to the forms to be crucified. The Council desires that this practice be observed in accordance with the ancient approved custom of the Church, lest through excessive ease ecclesiastical discipline be weakened; and further, seeking to correct the abuses that have crept in . . . it decrees that all criminal gain therewith connected shall be entirely done away with as a source of grievous abuse among the Christian people; and as to other disorders arising from superstition, ignorance, irreligion, or any cause whatsoever—since these, on account of the widespread corruption, cannot be removed by special provisions—the Council lays upon each of the cities the duty of examining and at the request of the Bishop, of bringing them before the next provincial synod, and of reporting them, with the consent of the other bishops, to the Roman Pontiff, by whose authority and prudence measures will be taken for the welfare of the Church at large, so that the benefit of indulgences may be bestowed on all the faithful by means at once pious, holy, and free from corruption.

Traffic in Indulgences. These measures show plainly that the Church long before the Reformation, not only recognized the existence of abuses, but also used her authority to correct them. In spite of all this, disorders continued and furnished the pretext for attacks directed against the doctrine itself, no less than against the practice of indulgences. Here, as in so many other matters, the love of money was the chief root of the evil; indulgences were employed by mercenary ecclesiastics as a means of pecuniary gain. Leaving the details concerning this traffic to a subsequent article (see Extrav. Com., tit. de poen. et remiss.), let us note that the doctrine itself has no natural or necessary connexion with pecuniary profit, as is evident from the fact that the abundant indulgences of the present day are free from this evil association: the only conditions required are the saying of certain prayers or the performance of some pious act by the person who obtains the indulgence; and this might also be done gratuitously. But it is easy to see how abuses crept in. Among the good works which might be encouraged by being made the condition of an indulgence, almsgiving would naturally hold a conspicuous place, while men would be induced by the same means to contribute to some pious cause such as the building of churches, the endowment of hospitals, or the organization of a crusade. It is well to observe that in these purposes there is nothing essentially evil. To give money to God or to the poor is a pious and thoughtful act, and, when it is done from right motives, it will surely not go unrewarded. Looked at in this light, it might well seem a suitable condition for gaining the spiritual benefit of an indulgence. Yet, however innocent in itself, this practice was fraught with grave danger, and soon became a fruitful source of evil. On the one hand there was the danger that the payment might be regarded as the price of the indulgence, and that those who sought to make a profit out of it might lose sight of its spiritual object. On the other hand, those who granted indulgences might be tempted to make them a means of raising money: and even, where the rulers of the Church were free from blame in this matter, there was room for corruption in their officials and agents, or among the popular preachers of indulgences. This class has happily disappeared, but the type has been preserved in Chaucer’s “Fardon”, with his bogus messrs., and indulgences.

While it cannot be denied that these abuses were widespread, it should also be noted, even when corruption was at its worst, these spiritual grants were being properly used by sincere Christians, who sought them in the right spirit, and by priests and preachers, who sought to limit the need for them. It is therefore not difficult to understand why the Church, instead of abolishing the practice of indulgences, aimed rather at strengthening it by eliminating the evil elements. The Council of Trent in its decree “On Indulgences” (Sess. XXV) declares: “In its view the Council desires that moderation be observed in accordance with the ancient approved custom of the Church, lest through excessive ease ecclesiastical discipline be weakened; and further, seeking to correct the abuses that have crept in . . . it decrees that all criminal gain therewith connected shall be entirely done away with as a source of grievous abuse among the Christian people; and as to other disorders arising from superstition, ignorance, irreligion, or any cause whatsoever—since these, on account of the widespread corruption, cannot be removed by special provisions—the Council lays upon each of the cities the duty of examining and at the request of the Bishop, of bringing them before the next provincial synod, and of reporting them, with the consent of the other bishops, to the Roman Pontiff, by whose authority and prudence measures will be taken for the welfare of the Church at large, so that the benefit of indulgences may be bestowed on all the faithful by means at once pious, holy, and free from corruption.”

Apocryphal Indulgences. One of the worst abuses was that of inventing or falsifying grants of indulgence. Previous to the Reformation, such practices abounded and called out severe pronouncements by ecclesiastical authority. Some pseudo-authorities, such as the Council of the Lateran (1215) and that of Vienne (1311). After the Council of Trent the most important measure taken to prevent such frauds was the establishment of the Congregation of Indulgences. A special commission of cardinals served under Clement VIII, and their regulations governed all grants of indulgences. The Congregation of Indulgences was definitively established by Clement IX in 1669 and reorganized by Clement XI in 1710. It has rendered efficient service by deciding various questions relative to the granting of indulgences and by its publications. The “Raccolta” (q. v.) was first issued by one of its consultants, Teodoro Galli, in 1807; the last three editions 1877, 1886, and 1898 were published by the Congregation. The other official publication is the “Decreta authenticata”, containing the decisions of the Congregation from 1688 to 1882. This was published in 1883 by order of Leo XIII. See also “Responsa” by Joseph Francis, and “Responsa” by the Most Reverend Raffaelo Fessi, with a Motu Proprio of Pius X, dated 28 January, 1904, the Congregation of Indulgences was united to the Congregation of Rites, without any diminution, however, of its prerogatives.

Salutary Effects of Indulgences.—See also “History, etc., III, 440” somewhat reluctantly acknowledges
that "with the decline in the financial possibilities of the system, indulgences have greatly multiplied as an incentive to spiritual exercises, and they can thus be so easily obtained that there is no danger of the recurrence of the old abuses, even if the finer sense of fi

mness and devotion of the times, on the one hand, and of both prelates and people, did not deter the attempt." The full significance, however, of this "multiplication" lies in the fact that the Church, by rooting out abuses, has shown the vigour of her spiritual life. She has maintained the practice of indulgences, because, when these are used in accord with what she prescribes, they strengthen the spiritual life by inducing the faithful to approach the sacraments and to purify their consciences of sin. And further, they encourage the performance, in a truly religious spirit, of works that redound, not alone to the welfare of the individual, but also to God's glory and to the service of the neighbour.

Indulgences, Apostolic—The indulgences known as Apostolic or Apostolical are those which the Roman pontiff, the successor of the Prince of the Apostles, attaches to the crosses, crucifixes, chaplets, rosaries, images, and medals which he blesses, either with his own hand or by those to whom he has delegated this faculty. The principles set forth in the general article on indulgences apply here also. But since these Apostolic indulgences are among the most frequent and abundant of those now in use throughout the Church, they seem to require a separate and more detailed treatment. As the name implies, they are indulgences granted by the pope himself. Some of them will be seen from the subjoined list of plenary, and others are partial indulgences. It may be observed that the possession of the cross or medal or other indulged object is not the sole or immediate condition for gaining the indulgences attached thereby to the blessing of the Holy Father or his delegate. But the possession enables the recipient to gain the various indulgences on the performance of certain prescribed good works or acts of piety. In this respect the possession of the object may be regarded as analogous to the local or personal limitation of other indulgences. For in blessing the objects presented to him, the Holy Father thereby grants the indulgences to all the faithful in the diocese. A plenary indulgence, however, to certain persons, to wit, the actual or prospective possessors of these crosses, medals, etc., may thus be regarded as the marks or tokens distinguishing those persons to whom this special privilege is given. At the same time, since it is open to all the faithful to obtain these blessings, it is certain that all those who devoutly invoke the Holy Name of Jesus at the hour of death (in mortis articulo). But, on the other hand, the plenary indulgence for confession and Communion which the possessors of the Lateran coins could apparently gain on every day can only be gained by holding these coins or indulged objects at certain festivals, newly that on the fixed condition of reciting certain prayers. In like manner the partial indulgences granted in the Sixtine Bull are in some cases as much as two or three hundred years; none of these in the modern lists are higher than seven years and seven quarantines (or spaces of forty days); and others are no more than one hundred days or fifty days.

The following list gives the indulgences now attached to chaplets, crosses, and medals blessed by the Holy Father or by any priest holding the delegated facultas bendicendi coronas, cruces et auram undam. (1) A plenary indulgence by all who shall recite at least once a week the chaplet of Our Lord, or that of the Blessed Virgin, or the rosary, or the third part thereof, or the Divine Office, or the Little Office of the Blessed Virgin, or the Office of the Dead, or the Seven Penitential Psalms, or the Gradual Psalms; or who shall teach the rudiments of the Faith, or visit those who are in prison or in a hospital, or succour the poor, or hear or say Mass, if being truly contrite and having confessed to a priest approved by the bishop, they receive the Holy Eucharist on any one of the following days, to wit: Christmas, Easter, Ascension, Whitsunday, Trinity Sunday, Corpus Christi, the Purification, Annunciation, Assumption, Nativity, and Immaculate Conception of the Blessed Virgin, the feast of St. John the Baptist and the Apostles Peter and Paul.
Indult,Pontifical (Lat. Indulment, found in Roman Law, bk. 1, Cod. Theod. 3, 10, and 4, 15; V, 15, 2; concession, privilege). Indulges are general faculties (q. v.), granted by the Holy See to bishops and others, of doing something not permitted by the common law. General needs, peculiar local condition, the impossibility of applying to Rome in individual cases, etc., are sufficient reasons for making these concessions. They are granted for a definite term, three, five, ten years, or for a specific number of cases; they are ordinary or extraordinary, contained in certain formulae, and are of the nature of privileges or quasi-privileges. Indulges are personal in so much as they must be used by the bishop himself (or his vicar-general), unless he be allowed to communicate them to others. Permission to communicate indulges is conceded in some formulae, denied in others, while in others it is granted conditionally. The one to whom these faculties are communicated is the agent or the commissioner of the Holy See, whom the Holy See seeks to deleg. Indulges are communicated as they are received; are possessed and exercised not in the name of the one communicating them, but in the name of him to whom they have been communicated: consequently they do not cease with the death or loss of jurisprudence of the ordinary through whom they were communicated. Facilities that are subdelegated may be restricted in regard to persons, number of cases, etc., and are exercised not in one's own name, but in the name of another: the power of the subdeleg. cases on the death of the deleg. It is to be noted that the word indul, employed in a less restricted sense, is synonymous with privilege, grace, favour, concession, etc. (Decretais, L. V., tit. 33, c. 17, 19, tit. 40, c. 21; Conc. Trid., VI, c. 2, De Ref.). Hence we speak of the Lenten indul, an indul of secrilization granted to a religious, an indul to a person (from the recitation of the Divine Office in choir, an indul permitting the celebration of Mass at sea, the indul of a private oratory, a privileged altar, and so on. An indul or privilege differs from a dispensation, since the former grants a permanent (not necessarily perpetual) concession, while the latter is given for a particular case, outside which the obligation of observing the law remains. (See Facultas, Canonical.)

Indulgence (In int. Ina), Saint, King of the West Saxons. d. 728. He was a son of the underking Cenred and ascended the West-Saxon throne in 688, a year before the death of his predecessor Cædwalla. For thirty-seven years he ruled over a turbulent and warlike people, and by virtue of a varied genius was equally successful as a warrior and legislator. His first efforts were directed towards establishing national peace, and in the fifth year of his reign he drew up a set of laws which regulated the administration of justice and fixed the legal status of the various classes of his subjects. With the exception of the Kentish code the earliest extant specimen of Anglo-Saxon legislation, and one that is of particular interest. When matters in his own realm had been adjusted, Ine turned his attention to Withred, King of Kent, and at the head of a formidable army demanded æreposil for the death of Muli (or Molio), brother of Cædwalla. Withred paid the full compensation—thirty thousand pounds of silver—

Andrew, James, John, Thomas, Philip and James, Bartholomew, Matthew, Simon and Jude, Matthias and Lebʹ, and in the same manner as the other needs of the Church.

(2) An indulgence of seven years and seven quarantines to be gained on the same conditions on any other feast of Christ or of the Blessed Virgin.

(3) An indulgence of five years and five quarantines to be gained on the same conditions on any Sunday or feast of the year.

(4) An indulgence of one hundred days, to be gained on the same conditions on any other day in the year.

(5) All who are accustomed to recite at least once a week the chaplet, or the rosary, or the Office of the Blessed Virgin, or of the Dead, or Vespers, or at least one Nocturn with Lauds, or the Seven Penitential Psalms with their litanies and prayers, shall gain an indulgence of one hundred days every time they do so.

(6) Whosoever in articulo mortis devoutly commends his soul to God, and being ready to accept death peacefully and willingly from the hands of God, and truly penitent, and having confessed and been refreshed with Holy Communion, or if this be not possible, at least contrite, shall invoke the Name of Jesus with the lips if possible, or, if not, at least with the heart, shall receive the fruit of a plenary indulgence.

(7) Whosoever shall make a devout preparation before saying Mass, or receiving the Holy Eucharist or reciting the Divine Office or the Little Office of the Blessed Virgin, shall receive an indulgence of fifty days every time he does this.

(8) All who visit those in prison or the sick in the hospitals, helping them by some good work, or teach Christian doctrine in a church, or at home to their children, kindred, or servants, shall gain an indulgence of one hundred days.

(9) Whosoever at the sound of a church bell shall say the Angelus morning, noon, or evening, or, not knowing it, shall say once an Our Father and Hail Mary, or at the evening signal for praying for the dead shall recite the psalm De Profundis, or if he know it not an Our Father and Hail Mary shall gain an indulgence of one hundred days.

(10) All who on Friday shall devoutly meditate on the Passion and Death of Christ and say three Our Fathers and Hail Marys shall gain one hundred days indulgence.

(11) Whosoever, being truly penitent, and firmly purposing to amend his life, shall examine his conscience, and devoutly repeat the Our Father and Hail Mary thrice in honour of the Blessed Trinity, or five times in reverence for the Five Wounds of Christ, shall likewise gain one hundred days' indulgence.

(12) Whosoever prays with devotion for those in their agony, or says for them at least an Our Father and Hail Mary, shall gain an indulgence of fifty days.

In order to gain any of these indulgences the person must have the blessed medal, etc. with him at the time, or else have it kept in his room in some seemly place and say the prescribed prayers there. It is expressly declared in the instruction annexed to the faculty that this blessing and indulgence is not given to painted or printed images or to crosses etc. made of iron, pewter, lead, or any fragile material. The images, moreover, must represent canonized saints or those who are in the clergy. The indulgence is confined to the person to whom the object is first given and it is lost if the object be given or lent for the purpose of transferring the indulgence; it is not lost, however, when lent for another purpose, e. g. for use in reciting the rosary. And when medals etc. have been enriched with these indulgences, it is strictly forbidden to sell them.
and admitted the supremacy of the West Saxons over all the country held by the English south of the Thames. By successive conquests, Ine added several districts to the western provinces of his domain, and after a bitter war conquered Geraint, King of Cornwall, and built a fortress on the Tone, at the site of the present Taunton. Throughout his entire reign Ine was particularly solicitous for the welfare of religion and religious establishment, founding many monasteries and endowing those already in existence. The Abbey of Glastonbury was erected by him, with the funds, it is thought, which came from the wreath collected from Withred. Other monastic establishments which were recipients of his bounty were those at Malmsbury, Wimborne, Nursling, Tisbury, Waltham, and Sherborne.

Worn out by his long rule, Ine determined to abdicate in favour of Æthelheard and Oswald, and to make his peace with God. In pursuance of this project, he convened the Witenagemot and formally announced his abdication. With his wife he proceeded to Rome, to watch and pray at the tomb of the Apostles in the guise of a poor and pious pilgrim. While there he founded a hospice or home for English pilgrims, in the district known as Burgus Saxonum, the modern Borgo. Some historians trace the foundation of the English College to Pope Adrian I and Jutfrid, the sister of Ine, who may be the author of the many inscriptions on the tombstone of Ine in the Church of St. Peter's. The church they built was destroyed by the Danes in the 10th century.

**STANLEY QUINN.**

**Infallibility.** (In general) exemption or immunity from liability to error, or failure; (in particular) in theological usage, the supernatural prerogative by which the Church of Christ is, by a special Divine assistance, preserved from liability to error in her definitive dogmatic teaching regarding matters of faith and morals. In this article the subject will be treated under the following heads: I. True Meaning of Infallibility; II. Proof of the Church's Infallibility; III. Organs of Infallibility.—(A) Ecumenical Councils; (B) The Pope; IV. Scope and Object of Infallibility; V. Why is Infallibility Immortal?

I. True Meaning of Infallibility.—It is well to begin by stating the ecclesiastical truths that are assumed to be established before the question of infallibility arises. It is assumed (a) that Christ founded His Church as a visible and perfect society; (b) that He intended it to be absolutely universal and imposed upon all men a sacred obligation; (c) that it is called to tend to God, unless inculpable ignorance should excuse them; (d) that He wished this Church to be one, with a visible corporate unity of faith, government, and worship; (e) and that in order to secure this threold unity, He bestowed on the Apostles and their legitimate successors in the hierarchy—and on them exclusively—the plentitude of teaching, governing, and liturgical powers with which He wished this Church to be endowed. And this being assumed, the question that concerns us is whether, and in what way, and to what extent, Christ has made His Church to be infallible in the exercise of these authority as such as theologically speaking, this question of infallibility arises: that is to say, when we speak of the Church's infallibility we mean, at least primarily and principally, what is sometimes called active as distinguished from passive infallibility. We mean in other words that the Church is infallible in her objective definitive teaching regarding faith and morals, not that believers are infallible in their subjective interpretation of her teaching. This is obvious in the case of individuals, as when a man may err in his understanding of the Church's teaching; nor is the general or even unanimous consent of the faithful in believing a distinct and independent organ of infallibility. Such a consent, indeed, when it can be verified as at all, is of the highest value as a proof of what has been, or may be, defined by the teaching authority, but, except in so far as it is the subjective counterpart and complement of objective authoritative teaching, it cannot be said to possess an absolutely decisive dogmatic value. It will be best therefore to confine our attention to active infallibility as such, as we are doing, and to leave the consideration of the whole basis of many of the objections that are most persistently and most plausibly urged against the doctrine of ecclesiastical infallibility. (See below II, C.)

Infallibility must be carefully distinguished both from Inspiration (q. v.) and from Revelation (q. v.). Inspiration signifies a special positive Divine influence and assistance by reason of which the human agent is not merely preserved from liability to error but is so guided and controlled that what he says or writes is truly the word of God, that God Himself is the principal author of the inspired utterance; but infallibility merely implies that the teaching of the Church is not the author of a merely infallible, as He is of an inspired, utterance; the former remains a merely human document. Revelation, on the other hand, means the making known by God, supernaturally, of some truth hitherto unknown, or at least not vouchsafed for by Divine authority; whereas infallibility is concerned with the interpretation and effective safeguarding of truths already revealed. Hence when we say, for example, that some doctrine defined by the pope or by an ecumenical council is infallible, we mean merely that its inerrancy is Divinely guaranteed according to the terms of Christ to the Church, not that either the pope or the Fathers of the Council are inspired as were the writers of the Bible or that any new revelation is embodied in their teaching. It is well further to explain (a) that infallibility means more than exemption from actual error; it means exemption from the possibility of error; (b) that it does not require holiness of life, much less imply impeccability in its organs; sinful and wicked men may be God's agents in defining infallibly; (c) and finally that the validity of the Divine guarantee is independent of the fallible arguments upon which a definite decision may be based, and of the divinely unvarying human motives that informed at least most of the papal decisions which have been assumed from the very beginning, without question down to the time of the Protestant ref-
The teaching of the Vatican Council is to be found in Sess. III, cap. iv (Denzinger-Bannwart, "Enchiridion", 1890), where it is declared that the dogma of the Church’s infallibility, having been proposed as a philosophical discovery to be improved upon by human talent, but has been committed as a Divine deposit to the spouse of Christ, to be faithfully guarded and infallibly interpreted by her; and in Sess. IV, cap. iv (Enchiridion, 1890), where it is defined that the papal teaching in the cathedra "enjoys, by reason of the Divine assistance promised to him in blessed Peter, that infallibility with which the Divine Redeemer wished His Church to be endowed in defining doctrine regarding faith and morals". Even the Vatican Council, it will be seen, only introduces the general dogma of the Church’s infallibility as distinct from that of the pope obliquely and indirectly, following in this respect the traditional usage according to which the dogma is assumed as an implicate of ocumenical magisterial authority. Instances of this will be given below and from these it will appear that, though the word infallibility as a technical term hardly occurs at all in the early councils or in the Fathers, the thing signified by it was understood and believed in and acted upon from the beginning. We shall confine our attention in this section to the general question, reserving the doctrine of papal infallibility for special treatment (see III, B.). This article is not the most logical, but because it enables us to travel a certain distance in the friendly company of those who cling to the general doctrine of ecclesiastical infallibility while rejecting the papal claims. Taking the evidence both scriptural and traditional as it actually stands, one may fairly maintain in the main that it proves papal infallibility in a simpler, more direct, and more cogent way than it proves the general doctrine independently; and there can be no doubt but that this is so if we accept as the alternative to papal infallibility the vague and unworkable theory of ocumenical infallibility which most High-Church Anglicans would substitute for Catholic teaching. Nor are the Eastern schismatical Churches much better off than the Anglican in this respect, except that each has retained a sort of virtual belief in its own infallibility, and that in practice they have been more faithful in guarding the doctrines infallibly by the teaching of the Church. Yet certain Anglicans and all the Eastern Orthodox agree with Catholics in maintaining that Christ promised infallibility to the true Church, and we welcome their support as against the general Protestant denial of this truth.

From Scripture.—(1) In order to prevent misconception and thereby to anticipate a common popular objection which is wholly based on a misconception, it should be premised that when we appeal to the Scriptures for proof of the Church’s infallible authority we appeal to them merely as reliable historical sources, and abstract altogether from their inspiration. Even considered as purely human documents they furnish us, we maintain, with a trustworthy report of Christ’s sayings and promises; and, taking it to be a fact that Christ said what is attributed to Him in the Gospels, we further maintain that Christ’s promises to the Apostles and their successors in the teaching office include the promise of such guidance and assistance as clearly implies infallibility. Having thus used the Scriptures as mere historical sources to prove that Christ endowed the Church with infallible teaching authority, it is no vicious circle, but a perfectly legitimate logical procedure, to rely on the Church’s infallibility for proving that the promises were inspired. (2) Merely remarking for the present that the texts in which Christ promised infallible guidance especially to Peter and his successors in the primacy might be appealed to here as possessing an a fortiori value, it will suffice to consider the classical texts usually employed in the general proof of the Church’s infallibility; and of these the principal are: Matt., xxvii, 18–20, and xvi, 18; John, xiv, xv, and xvi; I Thess. iii, 14–15, and 1 Tim. iii, 16. (a) In Matt., xxvii, 18–20, we have Christ’s solemn commission to the Apostles delivered shortly before His Ascension: "All power is given to me in heaven and in earth. Going therefore, teach ye all nations; baptizing them in the name of the Father, and of the Son, and of the Holy Ghost; teaching them to observe all things whatsoever I have commanded you: and behold I am with you always, even to the consummation of the world." In Mark, xvi, 15–16, the same commission is given more briefly with the added promise of salvation to believers and the threat of damnation for unbelievers. "Go ye into all the world, and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be condemned." Now it cannot be denied by anyone who admits that Christ established a visible Church at all, and endowed it with any kind of effective teaching authority, that this commission, with all it implies, was given not only to the Apostles personally for their own lifetime, but to their successors to the end of time, "even to the consummation of the world." And assuming that it was the omniscient Son of God who spoke these words, with a full and clear revelation of the import which, in conjunction with His commission to the Apostles, it is expected to convey to the Apostles and to all simple and sincere believers to the end of time, the only reasonable interpretation to put upon them is that they contain the promise of infallible guidance in doctrinal teaching made to the Apostolic College in the first instance and then to the hierarchal college that was to succeed it. In the first place it was not without reason that Christ prefaced His commission by appealing to the fullness of power He Himself had received: "All power is given to me", etc. This is evidently intended to emphasize the extraordinary character and extent of the authority He is communicating to His Church—an authority, it is implied, which He could not personally communicate were not He Himself omnipotent. Hence the promise that follows cannot reasonably be understood of ordinary natural providential guidance, but must refer to a very special supernatural assistance. There is, moreover, in the passage of doctrinal authority—of authority to teach the Gospel to all men—if Christ’s promise to be with the Apostles and their successors to the end of time in carrying out this commission means that those whom they are to teach in His name and according to the Ten Commandments the people of the world are bound to receive that teaching as if it were His own; in other words they are bound to accept it as infallible. Otherwise the perennial assistance promised would not really be efficacious for its purpose, and efficacious Divine assistance is what the expression used is clearly intended to signify (see Murray, "Doxology", vol. II, p. 199 sqq., where a long catalogue of parallel texts illustrating this point will be found). Supposing, as we do, that Christ actually delivered a definite body of revealed truth, to be taught to all men in all ages, and to be guarded from change or corruption by the living voice of His visible Church, it is idle to contend that this result could be accomplished effectively—in other words that His promise could be effectively fulfilled—unless that living voice can speak infallibly to every generation on any question that may arise affecting the substance of Christ’s teaching.

Without infallibility there could be no fidelity regarding any one of the truths which have been identified historically with the very essence of Christianity; and it is only with those who believe in historical Christianity that the question need be discussed. Take, for instance, the mysteries of the Trinity and Incarnation. If the early Church was
not infallible in her definitions regarding these truths, what compelling reason can be alleged to-day against the right to revive the Sabellian, or the Ariar, or the Macedonian, or the Apollinarian, or the Nestorian, or the Eutychian controversies, and to defend some interpretation of these mysteries which the Church has condemned as heretical? One may not appeal to the inspiration of the Church as being a sufficient warrant for the choice of their inspiration the authority of the Church must be invoked, and unless she be infallible in deciding this one would be free to question the inspiration of any of the New Testament writings. Nor, abstracting from the question of inspiration, can it be fairly maintained, in the name of the faith as a history, that the network of interpreting scriptural teaching regarding these mysteries and several other points of doctrine that have been identified with the substance of historical Christianity is so easy as to do away with the need of a living voice to which, as to the voice of Christ Himself, all are bound to submit.

Unity of Faith was intended by Christ to be one of the distinctive notes of His Church, and the doctrinal authority He set up was intended by His Divine guidance and assistance to be really effective in maintaining this unity; but the history of the early heresies and apostasies of the Church shows that it emerged that it might indeed have been anticipated a priori, that nothing less than an infallible public authority, capable of acting decisively whenever the need should arise and pronouncing an absolutely final and irrefutable judgment, is really efficient for this purpose. Practically speaking the only alternative to infallibility in private judgment, and this after some centuries of trial has been found to lead inevitably to utter rationalism. If the early definitions of the Church were fallible, and therefore reformable, perhaps those are right who say to-day that they ought to be discarded as being actually erroneous or even pernicious, or at least amended so as to be applied. At least if ever we have to proceed from a method in which is essentially a personal and individual affair, it does not mean that every member of the Church or of her hierarchy is necessarily a saint, but merely that the Church, as a whole, will be conspicuous among other things for the holiness of her members. As applied to doctrine, however—the word remains applicable to Christ—Christ delivered a body of doctrine the preservation of which in its literal truth was to be one of the chief duties of the Church—it would be a mockery to contend that such a promise is compatible with the supposition that the Church is necessarily and absolutely fallible, or that the matter of definitions, and that throughout the whole of her history she has been threatening men with eternal damnation in Christ's name for refusing to believe doctrines that are probably false and were never taught by Christ Himself. Could this be the case, it would not be clear that the gates of hell can prevail and probably have prevailed most signally against the Church?

(c) In Christ's discourse to the Apostles at the Last Supper several passages occur which clearly imply the promise of infallibility. "I will ask the Father, and he shall give you another Paraclete whom the me abide with you for ever. The spirit of truth be shall abide with you, and shall be in you" (John, xiv, 16, 17). "But the Paraclete, the Holy Ghost, whom the Father will send in my name, he will teach you all things, and bring all things to your mind, whatever I shall have said to you" (ibid., 16). "But when he, the Spirit of truth, is come, he will guide you into all truth" (John, xvi, 13). And the same promise is renewed immediately before the Ascension (Acts, i, 8). Now what does the promise of this perennial and efficacious presence and assistance of the Holy Ghost, the Spirit of truth, mean in connexion with doctrinal authority, except that the Third Person of the Blessed Trinity is made responsible for what the Apostles and
their successors may define to be part of Christ's teaching. But in so far as the Holy Ghost is responsible for the Church's teaching, that teaching is necessarily infallible: what the Spirit of truth guarantees cannot be false.

(d) In I Tim., iii, 15, St. Paul speaks of "the house of God, which is the church of the living God, the pillar and ground of the truth"; and this description would be something worse than mere exaggeration if it had been intended to apply to a fallible Church; it would be a false and misleading description. That St. Paul, however, meant it to be taken for sober and literal truth is abundantly proved by what he insists upon so strongly elsewhere, viz., the strictly Divine authenticity of the Gospel which St. Irenaeus, and the Apostles preached, and which it was the mission of their successors to go on preaching without change or corruption to the end of time. "When you had received of us," he writes to the Thessalonians, "the word of the hearing of God, you received it not as the word of men, but (as it is indeed) the word of God, who worketh in you that have believed" (I Thess., ii, 13). The Gospel, he tells the Corinthians, is intended to bring "into captivity every understanding unto the obedience of Christ" (II Cor., x, 5). Indeed, so fixed and irreforlmable is the doctrine that has been taught that the Galatians (v, 19) are warned to have no one, even an angel from heaven, who should preach to them a Gospel other than that which St. Paul had preached. Nor was this attitude—which is intelligible only on the supposition that the Apostolic College was infallible—peculiar to St. Paul. The other Apostles and Apostolic writers were equally strong in anathematising those who preached any other Christianity than that which the Apostles had preached (cf. II Peter, ii, 1 sqq.; I John, iv, 1 sqq.; II John, 7 sqq.; Jude, 4); and St. Paul makes it clear that it was not to any personal or private views of history that the claim to miraculous authority underlay the Gospel, but to the Gospel which Christ had delivered to the Apostolic body. When his own authority as an Apostle was challenged, his defence was that he had seen the risen Saviour and received his mission directly from Him, and that his Gospel was in complete agreement with that of the other Apostles (see, v. e.g., Gal., ii, 2-9). Finally, the consciousness of corporate infallibility is clearly signified in the expression used by the assembled Apostles in the decree of the Council of Jerusalem: "It hath seemed good to the Holy Ghost and to us, to lay no further burden upon you. Only conform yourselves to the words which were spoken of the Lord Jesus, (Acts, xx, 43). It is true that the specific points here dealt with are chiefly disciplinary rather than dogmatic, and that no claim to infallibility is made in regard to purely disciplinary questions as such; but behind, and independent of, disciplinary details there was the broad and most important dogmatic question to be decided, whether Christians, according to Christ's teaching, were bound to observe the Old Law in its integrity, as orthodox Jews of the time observed it. This was the main issue at stake, and in deciding it the Apostles claimed to speak in the name and with the authority of the Holy Ghost. Would men who did not believe that Christ's promises assured them of an infallible, Divine guidance have presumed to speak in this way?—And could they, in so believing, have misunderstood the Master's meaning?

**B. Proof from Tradition.**—If, during the early centuries, there was no explicit and formal discussion of the infallibility of the Church, in her corporate capacity, after the example of the Apostles at Jerusalem, always acted on the assumption that she was infallible in doctrinal matters and all the great orthodox teachers believed that she was so. Those who presumed, on whatever grounds, to contradict the Church's teaching were treated as representatives of Antichrist (cf. I John, ii, 18 sqq.), and were excommunicated and anathematised. It is clear from the letters of St. Ignatius of Antioch how important he was of error, and how firmly convinced that the episcopal body was the Divinely ordained and Divinely guided organ of truth; nor can any student of early Christian literature deny that, where Divine guidance is claimed in doctrinal matters, infallibility is implied. So intolérant was this is the case when he met Marcion on the street in Rome, he did not hesitate to denounce the heretic to face as "the firstborn of Satan". This incident, whether it be true or not, is at any rate thoroughly in keeping with the spirit of the age, and such a spirit is incompatible with belief in a fallible Church. St. Irenaeus' and the Apostolic question favoured compromise for the sake of peace took an altogether different attitude in the doctrinal controversy with the Gnostics; and the great principle on which he mainly relies in refuting the heretics is the principle of a living ecclesiastical authority, for which he virtually claims infallibility. For example he says: "Where the Church is, there also is the Spirit of God, and where the Spirit of God is there is the Church, and every grace: for the Spirit is truth" (Adv. Haer., III, xxxi, 1); and again, "Where the charismata of the Lord are given, there must we seek the right teaching, because to whom also sheweth himself the mystical succession from the Apostles, and the unadulterated and incorruptible word. It is they who ... are the guardians of our faith ... and securely [sine periculo] expound the Scriptures to us" (op. cit., IV, xxvi, 5). Tertullian, writing from the Catholic standpoint, ridicules the suggestion that the universal teaching of the Church can be wrong: "Suppose now that all [the Churches] have erred ... [This would mean that] the Holy Spirit has not watched over any of them so as to guide it into the truth, although He was sent by Christ, and asked from the Father for His holy purpose: He might be the spirit of truth" (doctor sanctus—De Praep., xxvi, in P. L., II, 49). St. Cyprian compares the Church to an incorruptible virgin: "Adulterari non potest sponsa Christi, incorrupta est et pudica" (De unitate eccles.). It is needless to go on multiplying citations, since the broad fact is indisputable that in the ante-Nicene Church, and in the Church of the Western Empire, the first four centuries, all orthodox Christians attributed to the corporate voice of the Church, speaking through the body of bishops in union with their head and centre, all the fullness of doctrinal authority which the Apostles themselves had possessed; and to question the infallibility of that authority would be to question the validity of heretics, questioning God's veracity and fidelity. It was for this reason that during the first three centuries the concurrent action of the bishops dispersed throughout the whole world proved to be effective in securing the condemnation and exclusion of certain heresies and maintaining Gospel truth. In the second half of the fourth century onwards it was found expedient to assemble ecumenical councils, after the example of the Apostles at Jerusalem, it was for the same reason that the doctrinal decision of these councils were held to be absolutely final and irrefordable. Even the heretics, for the most part, recognized this principle in theory; and if in fact they often refused to submit, they did so as a rule on the ground that this or that council was not really ecumenical, that it did not truly express the corporate voice of the Church, and was not, therefore, infallible. This will not be denied by the modern Church, which is in union with the triumphant Church, in the face of the doctrines and dogmas of the fourth and fifth centuries, and within the limits of this article we cannot do more than call attention to the broad conclusion in proof of which it would be easy to cite a great number of particular facts and testimonies.

**C. Objections Alleged.**—Several of the objections usually urged against ecclesiastical infallibility have
be evidenced in the preceding sections; but some others deserve a passing notice here. (1) It has been urged (v. g. Martineau, "Seal of Authority in Religion", pp. 66-68) that neither a fallible individual nor a collection of fallible individuals can constitute an infallible organ. This is quite true in reference to the Church; and it would also be true if applied to Church authority if Christianity were assumed to be a mere product of natural reason. But we set out from an entirely different standpoint. We assume as antecedently and independently established that God can supernaturally guide and enlighten men, individual men, and corporate bodies, in such a way that, notwithstanding the natural fallibility of human intelligence, they may speak and may be known with certainty to speak in His name and with His authority, so that their utterance may be not merely infallible but inspired. And it is only with those who accept this standpoint that the question of the Church's infallibility can be profitably discussed.

(2) Again, it is said that those who accept the supernatural view-point must ultimately fall back on fallible human reasoning in attempting to prove infallibility; that behind any conclusion that is proposed on so-called infallible authority there always lies a human judgment which can be more than a merely human and fallible certainty; and that, since the strength of a conclusion is no greater than that of its weaker premise, the principle of infallibility is a useless as well as an illogical importation into Christian theology. This is a line of argument frequently used by Salmon (Infallibility, pp. 47-48, 57 sq., 76, 270, etc.), one of the subtlest of the recent opponents of infallibility who have written from what might be described as the orthodox Protestant standpoint. In reply it is to be observed that this argument, if valid, would prove very much more than it purports to prove; and it would indeed undermine the very foundations of Christian faith. For example, on purely rational grounds I have only moral certainty that God Himself is infallible or that Christ was the infallible mediator of a Divine Revelation; yet if I am to give a rational defence of my faith, even in mysteries which I do not comprehend, I must do so by appealing to the infallibility of God and of Christ. But according to the logic of the objection this appeal would be futile and the assent of faith considered as a rational act would be no firmer or more secure than natural human knowledge. The truth is that the formal process of ecclesiastical infallibility transcends the rule of formal logic that is alleged. Assent is given not to the logical force of the syllogism, but directly to the authority which the inference serves to introduce; and this holds good in a measure even when there is question of mere fallible authority. Once we come to believe in and rely upon authority we can afford to overlook the means by which we were brought to accept it, just as a man who has reached a solid standing place where he wishes to remain no longer relies on the frail ladder by which he mounted. It cannot be said that there is any necessary formal process in this sense of the word and ecclesiastical infallibility. The latter of course is only a means by which we are put under subjection to the former in regard to a body of truth once revealed and to be believed by all men to the end of time, and no one can fairly deny that it is useful, not to say necessary, for that purpose. Its alternative is precisely that which we believe is irremediable, and has been to what results this alternative inevitably leads.

(3) Again, it is urged that the kind of submission demanded by infallible authority is incompatible with the rights of reason and of legitimate inquiry and speculation, and tends to give to one's faith in Christ a vague, indistinct kind of character which contrasts unfavourably with the warm-hearted, humble, and tolerant faith of the man who believes on conviction after free personal inquiry. In reply it is sufficient to say that submission to infallible authority implies no abridgment of reason, nor does it impose any undue check on the believer's freedom to pursue inquiry and speculation. Were it so, how could one believe in revealed doctrine at all without being accused, as unbelievers do accuse Christians, of committing an intellectual suicide? For believing in the Christian revelation at all one does so in deference to God's authority, an authority that is surely infallible; and so far as the principle of the objection is concerned there is no difference between ecclesiastical and Divine in- fallibility. It is therefore not surprising, therefore, that professing Christians should recur to some argument, which, if consistently urged, would be fatal to their own position. And as regards freedom of inquiry and speculation in reference to revealed doctrines themselves, it should be observed that true freedom in this as in other matters does not mean unbridled licence. Really effective authoritative control is always necessary to prevent liberty from degenerating into anarchy, and in the sphere of Christian doctrine—we are arguing only with those who admit that Christ delivered a body of doctrine that was to be held as eternally true—from the very nature of human nature there is an almost ineradicable tendency to anarchy—the equivalent of political anarchy—is an infallible ecclesiastical authority. This authority, therefore, by its decisions merely curtails personal freedom of inquiry in religious matters in the same way, and by an equally valid title, as the supreme authority in the State, restricts the liberty of private citizens.

Moreover, as in a well ordered State there remains within the law a large margin for the exercise of personal freedom, so in the Church there is a very extensive domain which is given over to theological controversy; and there is also the great respect for the individualism—the equivalent of political anarchy—is an infallible ecclesiastical authority. This authority, therefore, by its decisions merely curtails personal freedom of inquiry in religious matters in the same way, and by an equally valid title, as the supreme authority in the State, restricts the liberty of private citizens.

For to this, in final analysis, the issue is reduced; and he who chooses to make himself, instead of the authority of God, his guide in matters of faith is far from possessing the true spirit of faith, which is the foundation of charity and of the whole supernatural life.

(4) Again, it is urged by our opponents that infallibility as exercised by the Catholic Church has shown itself to be a failure, since, in the first place, it has not prevented schisms and heresies; and, in the second place, it has not attempted to settle for Catholics themselves many important questions, the final settlement of which would be a great relief to believers by freeing them from anxious and distressing doubts. In reply to the first point it is enough to say that the purport of Catholic Church with infallibility was not to prevent the occurrence of schisms and heresies, which He forewarned and
toretold, but to take away all justification for their occurrence; men were left free to disrupt the unity of Faith inculcated by Christ in the same way as they were left free to disobey any other commandment, but hereby was intended to be no more justifiable objectively than homicide or adultery. In reply to the second point from the church, it is inconsistent for the same object to blame Catholics in one breath for having too much defined doctrine in their Creed and, in the next breath, to find fault with them for having too little. Either part of the accusation, in so far as it is founded, is a sufficient answer to the other, and as a result of the practical difficulty of satisfying that fact of moral unanonymity, once any considerable volume of dissent had to be faced. And while for subsequent ages down to our own day it continues to be theoretically true that the Church may, by the exercise of this ordinary teaching authority, arrive at a final and infallible decision regarding doctrinal questions, it is true at the same time that in practice it may be impossible to prove conclusively that such unanimity as may exist has a strictly definitive value in any particular case, unless it has been embodied in a decree of an ecumenical council, or in the ex cathedra teaching of the papal office. Even then the so-called "magisterium ordinarium" and confine our attention to ecumenical councils and the pope.

A. Ecumenical Councils.—(b) As ecclesiastical or general, as distinguished from a particular or provincial council, is an assembly of bishops which juridically represents the universal Church as hierarchically constituted by Christ; and, since the primacy of Peter and of his successor, the pope, is an essential feature in the hierarchical constitution of the Church, it follows that there can be no such thing as an ecumenical council independent of, or in opposition to, the pope. No body can perform a strictly corporate function validly without the consent and co-operation of its head. Hence (a) the right to summon an ecumenical council belongs properly to the pope alone, though by his express or presumed consent given ante or post factum, the summons may be issued, as in the case of most of the early councils, in the name of the civil authority. For oecumenicity in the adequate sense all the bishops of the world in communion with the Holy See should be summoned, but it is not required that all or even a majority of the faithful regard the conduct of the deliberations, the right of presidency, of course, belongs to the pope or his representative; while as regards the decisions arrived at unanimity is not required. (c) Fially, papal approbation is required to give oecumenical value and authority to conciliar actions, and this must be subsequent to conciliar action, unless the pope, by his personal presence and conscience, has already given his official ratification (for details see Counsels, General).

(2) That an ecumenical council which satisfies the conditions above stated is an organ of infallibility will not be denied by anyone who admits that the Church is endowed with infallible doctrinal authority. How, if not through such an organ, could infallible authority effectively express itself—unless indeed through the pope? If Christ promised to be present with even two or three of His disciples gathered together in His name (Matt., xviii, 20), so also should the church be efficaciously in a representative assembly of His authorized teachers; and the Paraclete whom He promised will be present, so that whatever the council defines may be preceded with the Apostolic formula, "It hath seemed good to the Holy Ghost and to us". And this is the view which the church has always had upon its own authority and upon which the defender of orthodoxy insisted. The councils insisted on their defini-
tions being accepted under pain of anathema, while St. Athanasius, for example, says that "the word of the Lord pronounced by the ecumenical synod of Nicaea stands for ever." (Ep. ad Afros, n. 2, in P. G., XXVI, 1301), and St. Leo the Great proves the unchangeable character of this teaching most clearly in his encyclical letter to the Romans. (Ep. cxx, i, in P. L., LIV, 1047).

(3) It remains to be observed, in opposition to the theory of conciliar infallibility usually defended by High church Anglicans, that once the requisite papal confirmation has been given the doctrinal decisions of an ecumenical council become infallible and irrefutable; there is no need to wait perhaps hundreds of years for the unanimous acceptance and approbation of the whole Christian world. Such a theory really amounts to a denial of conciliar infallibility, and sets up in the final court of appeal an altogether vague and ineffective tribunal. If the theory be true, were not the Arians perfectly justified in their prolonged struggle to reverse Nicaea, and has not the persistent refusal of the Nestorians down to our own day to accept the death of the Ebionites to which Chalcedon been sufficient to defeat the ratification of those councils? No workable rule can be given for deciding when such subsequent ratification as this theory requires becomes effective; and even if this could be done in the case of some of the earlier councils when consensuses are recovered by the Anglicans, it would still be true that since the Photian schism it has been practically impossible to secure any such consensus as is required—in other words that the working of infallible authority, the purpose of which is to teach every generation, has been suspended since the ninth century, and that Christ's promises to His Church have been falsified. It is temporal, no doubt, falling to the abstract doctrine of an infallible authority, but if one adopts a theory which represents that authority as unable to fulfill its appointed task during the greater part of the Church's life, it is not easy to see how this consolatory belief is anything more than a delusion.

B. The Pope.—(1) The Vatican Council has defined as "a divinely revealed dogma" that "the Roman Pontiff, when he speaks ex cathedra—that is, when in the exercise of his office as pastor and teacher of all Christians he defines, by virtue of his supreme Apostolic authority, a doctrine of faith or morals to be held by the faithful, as taught by the Church, is absolute and infallible, as that in which the Church as a whole possesses, nor does his ex cathedra teaching, in order to be infallible, require to be ratified by the Church's consent" (Denzinger, no. 1839—Apollinaris, no. 1880). For the correct understanding of this definition it is to be noted, in the first place, that what is claimed for the pope is infallibility merely, not impecuniosity or inspiration (see above under 1). In the next place the infallibility claimed for the pope is the infallibility of his ex cathedra teaching as that in which the Church as a whole possesses, nor does his ex cathedra teaching, in order to be infallible, require to be ratified by the Church's consent. The pope teaching ex cathedra is an independent organ of infallibility. In the third place, infallibility is not attributed to every doctrinal act of the pope, especially to his private capacity as a theologian, preacher or allocutio, nor in his capacity as a member of the Consistory of the Diocese of Rome. It must be clear that he speaks as spiritual head of the Church universal. (b) Then it is only when, in this capacity, he teaches some doctrine of faith or morals that he is infallible (see below, IV). (c) Further it must be sufficiently evident that he intends to teach with all the fullness and finality of his supreme Apostolic authority, in other words that he wishes to determine some point of doctrine in a definitively authoritative manner, or to define it in the technical sense (see DEFINITION). Therefore, the well-recognized formule by means of which the defining intention may be manifested. (d) Finally for an ex cathedra decision it must be clear that the pope intends to bind the whole Church, to demand internal assent to all the faithful to his teaching under pain of incurring spiritual shipwreck (sancare in lapis), according to the expression used by Pius IX in defining the Immaculate Conception of the Blessed Virgin. Theoretically, this intention might be made sufficiently clear in a papal decision which is addressed only to a particular Church; but in present day conditions, when it is so easy to communicate with the most distant parts of the earth and to secure a literally universal promulgation of papal acts, the presumption is that unless the pope formally addresses the whole Church in the recognized official way, he does not intend his doctrinal teaching to be held by all the faithful as ex cathedra and infallible. It should be observed in conclusion that papal infallibility is a personal and incommunicable charisma, which is not shared by any pontifical tribunal. It was promised directly to Peter, and to each of Peter's successors in the primacy, but not as a prerogative of the exercise of which could be delegated to others. Hence doctrinal decisions or instructions issued by the Roman congregations, even when approved by the pope in the ordinary way, have no claim to be considered infallible. To be infallible they must be issued by the pope himself in his own name according to the conditions already mentioned as requisite for ex cathedra teaching.

(2) Proof of Papal Infallibility.—(a) From Holy Scripture.—From Holy Scripture, as already stated, the special proof of the pope's infallibility is, if anything, stronger and clearer than the general proof of the infallibility of the Church as a whole, just as the proof of his primacy is stronger and clearer than any proof that can be advanced independently for the Apostolic authority of the episcopate. (b) "Now art thou Peter (Kepha)" said Christ, "and upon this rock (kepha) I will build my Church, and the gates of hell shall not prevail against it" (Matt., xvi, 18). Various attempts have been made by opponents of the papal claims to get rid of the only obvious and natural meaning of these words, according to which Peter is to be the rock-foundation of the Church, and the source of its indefectibility against the gates of hell. It has been suggested, for example, that "this rock" is Christ Himself, or that it is Peter's faith (typifying the faith of future believers), not his person and office, on which the Church is to be built. But these and similar interpretations simply destroy the logical coherence of Christ's statement and are excluded by the text: the construction of a kind of play upon the words ἡ πέτρα (Petra) and τρέπτω (petra) is clearly intended, and still more forcibly by the original Aramaic which Christ spoke, and in which the same word Képha must have been used in both clauses. And granting, as the best modern non-Catholic commentators grant, that this text of St. Matthew contains the meaning that Peter was to be the rock-foundation of the Church, it is impossible to deny that Peter's successors in the primacy are heirs to this promise—unless, indeed, one is willing to admit the principle, which would be altogether subversive of the hierarchial system, that the authority bestowed by Christ on the Apostles was not transmitted to their successors, and to abide in the Church permanently. Peter's headship was as much emphasized by Christ Himself, and was as clearly
recognised in the infant Church, as was the enduring authority of the episcopal body; and it is a puzzle which the Catholic finds it hard to solve, how those who knew that they were Peter's successors were not, at the same time, the infallible successors of Peter. And it is this failure to appreciate the idea of infallibility that makes the whole argument of the 16th century Church to its successors an essential factor in the constitution of the Church can consistently maintain the Divine authority of the episcopate. Now, as we have already seen, the doctrinal indefectibility is certainly implied in Christ's promise that the gates of hell shall not prevail against the Church, and even effectively secured without doctrinal infallibility; so that if Christ's promise means anything—if Peter's successor is in any true sense the foundation and source of the Church's indefectibility—he must by virtue of this office be also an organ of ecclesiastical infallibility. The metaphor used clearly implies that it was the rock-foundation which was to give stability to the superstructure, not the superstructure to the rock. Nor can it be said that this argument fails by proving too much—by proving, that is, that the pope should be impeccable, or at least that he should be a saint, since, if the Church must be holy in order to overawe the power of hell, then the same perfection of holiness ought to be given by him who is the visible foundation of the Church's indefectibility. From the very nature of the case a distinction must be made between sanctity or impeccability, and infallible doctrinal authority. Personal sanctity is essentially impossible for the human and can be obtained only by others except in fallible and indirect ways, as by prayer or example; but doctrinal teaching which is accepted as infallible is capable of securing that certainty and consequent unity of faith by which, as well as by other bonds, the members of Christ's visible Church were to be "compacted and fitted together" (Eph., iv, 16). It is true, of course, that infallible teaching, especially on moral questions, helps to promote sanctity among those who accept, but no one will seriously suggest that, if Christ had made the pope impeccable as well as infallible, He would thereby have provided for the personal sanctity of individual believers any more efficiently than, on Catholic principles, He has actually done.

(ii) Christ said to St. Peter—and to his successors in the primacy: "Simon, Simon, behold Satan hath desired to have you, that he may sift you as wheat. But I have prayed for thee, that thy faith fail not; and thou, being once converted, confirm thy brethren" (Luke, xxii, 31-32). This special prayer of Christ was for Peter alone in his capacity as head of the Church, as is clear from the text and context; and since we cannot doubt the efficacy of Christ's prayer, it follows that the Pope and his successors are personally committed of authoritative confirming the brethren—other bishops, and believers generally—in the faith; and this implies infallibility.

(iii) In John, xxii, 15-17, we have the record of Christ's thrice-repeated demand for a confession of Peter's love and the thrice-repeated commission to feed the lambs and the sheep: "When therefore they had dined, Jesus saith to Simon Peter: Simon, son of John, lovest thou me more than these? He saith to him: Yea, Lord, thou knowest that I love thee. He saith to him: Feed my lambs. He saith to him again: Simon, son of John, lovest thou me? He saith to him: Yea, Lord, thou knowest that I love thee. He saith to him: Feed my sheeps. He saith to him the third time: Simon, son of John, lovest thou me? Peter was grieved, because he had said to him the third time: Lovest thou me? And he said to him: Lord, thou knowest all things; thou knowest that I love thee. He said to him: Feed my sheep." Here the complete and supreme pastoral charge of the whole of Christ's flock—sheep as well as lambs—is given to St. Peter and his successors, and in this is undoubtedly comprised supreme doctrinal authority. But, as we have already seen, doctrinal authority in the Church cannot be really effective in securing the unity of faith intended by Christ, unless in the last resort it is infallible. It is futile to contend, as non-Catholics have done, that the Petrine restoration to his personal share in the collective Apostolic authority, which he had forfeited by his triple denial. It is quite probable that the reason why Christ demanded the triple confession of love was as a set-off to the triple denial; but if Christ's words are to be taken in the other passages quoted of anything, and if they are to be understood in the same obvious and natural way in which defenders of the Divine authority of the episcopate understand the words elsewhere addressed to the Apostles collectively, there is no denial that the Petrine and papal claims are more clearly supported by the Gospels than are those of a monarchical episcopate. It is equally futile to contend that these promises were made, and this power given, to Peter merely as the representative of the Apostolic college: in the texts of the Gospel, Peter is individually singled out and addressed with particular emphasis, so that, unless by a strange concatenation of circumstances, there is no logical escape from the Catholic position. Furthermore, it is clear from such evidence as the Acts of the Apostles supply, that Peter's supremacy was recognized in the infant Church (see PrIMACY), and if this supremacy was intended to be efficacious for the purpose for which it was made, it must have included the prerogative of doctrinal infallibility.

(b) Proof from Tradition.—One need not expect to find in the early centuries a formal and explicit recognition throughout the Church either of the primacy or of the infallibility of the pope in the terms in which these doctrines are defined by the Vatican Council. But the fact cannot be denied that from the beginning there was a wide-spread acknowledgment by other churches of some kind of supreme authority in the Roman pontiff in regard not only to disciplinary but also to doctrinal affairs. This is clear, for example, from Clement's Letter to the Corinthians at the end of the first century, from the way in which, shortly afterwards, Ignatius of Antioch addresses the Roman Church; from the conduct of Pope Victor in the latter half of the second century, in connexion with the debates of the council of 197; from the conduct of St. Irenæus, who lays it down as a practical rule that conformity with Rome is a sufficient proof of Apostolicity of doctrine against the heretics (Adv. Her., III, iii); from the correspondence between Pope Dionysius and his namesake at Alexandria in the second half of the third century; and from many other facts that might be mentioned (see PrIMACY). Even heretics recognized something special in the doctrinal authority of the pope, and some of them, like Marcion in the second century and Pelagius and Celestius in the first quarter of the fifth, appealed to Rome in the hope of obtaining a reversal of their condemnation by provincial bishops or synods. And in the age of the councils, from Nicaea onwards, there is a sufficiently explicit and formal acknowledgment of the doctrinal supremacy of the Bishop of Rome. St. Augustine, for example, voices the prevailing Catholic sentiment when in reference to the Pelagian affair he declares, in a sermon delivered at Carthage after the receipt of Pope Innocent's letter, confirming the decrees of the Council of Carthage: "Rome's reply has come: the case is closed" (Inde etiam rescripta veniunt: causa finita est. Serm. cxxx, c. x, in P. L., XXXVIII, 734); and he foresees, not that I love thee. He saith to him: Feed my lambs. He saith to him the third time: Simon, son of John, loveth thou me? Peter was grieved, because he had said to him the third time: Lovest thou me? And he said to him: Lord, thou knowest all things: thou knowest that I love thee. He said to him: Feed my sheeps. He said to him: Feed my sheep." Here the complete and supreme pastoral charge of the whole of Christ's flock—sheep as well as lambs—is given to St. Peter and his successors, and in this is undoubtedly comprised supreme doctrinal authority. But, as we have already seen, doctrinal authority in the Church cannot

"Inde etiam rescripta veniunt: causa finita est. Serm. cxxx, c. x, in P. L., XXXVIII, 734); and he foresees, not that I love thee. He saith to him: Feed my lambs. He saith to him the third time: Simon, son of John, loveth thou me? Peter was grieved, because he had said to him the third time: Lovest thou me? And he said to him: Lord, thou knowest all things: thou knowest that I love thee. He said to him: Feed my sheeps. He said to him: Feed my sheep." Here the complete and supreme pastoral charge of the whole of Christ's flock—sheep as well as lambs—is given to St. Peter and his successors, and in this is undoubtedly comprised supreme doctrinal authority. But, as we have already seen, doctrinal authority in the Church cannot
implication the infallibility of papal teaching. Thus the Fathers of Ephesus (431) declare that they "are compelled" to condemn the heresy of Nestorius "by the sacred canons and by the letter of our holy father and bishop Leo, and fail to imitate his faith" (Hardouin, I, 1471). Twenty years later (451) the Fathers of Chalcedon, after hearing Leo's letter read, make themselves responsible for the statement: "so do we all believe... Peter has spoken through Leo" (Hardouin, II, 306). More than two centuries later, at the Third Council of Constantinople (680-681), the same formula is repeated: "Peter has spoken through Agatho" (Hardouin, III, 1422).

After the lapse of still two other centuries, and shortly before the Photian schism, the profession of faith drawn up by Pope Hormisdas was accepted by the Fourth Council of the Council of Constantinople, in which it is stated, that by virtue of Christ's promise: "Thou art Peter, etc." "the Catholic religion is preserved inviolable in the Apostolic See" (Thiel, Epp. Rom. Pont., I, 553; Denzinger, 171—old no. 141).

Finally the reunion Council of Florence (1438-1445), repeating what had been substantially contained in the profession of faith of Michael Paleologus approved by the Second Council of Lyons (1274) (Denzinger, 466—old no. 389), defined "that the holy Apostolic see and the Roman pontiff holds the primacy over the whole world; and that the Roman pontiff has the right not only to affirm the truth but also to condemn heresy. The Pope, the Apostles and the true Vicar of Christ, and the head of the whole Church, and the father and teacher of all Christians, and that to him in blessed Peter the full power of feeding, ruling and governing the universal Church was given by our Lord Jesus Christ, and this is also recognized in the canons of the Sacramental censures and in the sacred canons (guemadmodum etiam... continetur—Denzinger, 694—old no. 587).

Thus it is clear that the Vatican Council introduced no new doctrine when it defined the infallibility of the pope, but merely re-asserted what had been implicitly admitted and acted upon from the beginning and had even been explicitly proclaimed and in equivalent terms by more than one of the early ecumenical councils. Until the Photian Schism in the East and the Gallican movement in the West (see GALICANISM) there was no formal denial of papal supremacy, or of papal infallibility as an adjunct of such supreme authority as being the institution of Christ.

The formal acknowledgment of these principles, however, is referred to in the early centuries are but a few out of the multitude that might be quoted.

(c) Objections alleged.—The only noteworthy objections against papal infallibility, as distinct from the infallibility of the Church as a whole, and, in a more general sense, to the Roman Church, were in the later centuries, and the Gallican affair at the beginning of the seventeenth century.

(i) Liberius, it is alleged, subscribed an Ariam or Semi-Arian creed drawn up by the Council of Sirmium and anathematized St. Athanasius, the great champion of Nicea, as a heretic. But even if this were an accurate statement of historical fact, it is a very inadequate statement. The all-important circumstance should be added that the pope so acted under pressure of a very cruel coercion, which at once deprived his action of any claim to be considered ex cathedra. It has been shown that he recovered his liberty, made amends for the moral weakness he had been guilty of. This is a quite satisfactory answer to the objection, but it ought to be added that there is no evidence whatever that Liberius ever anathematized St. Athanasius expressly as a heretic, and that it remains a moot point which of three or four Semirian creeds he subscribed, two of which contained no positive assertion of heretical doctrine and were defective merely for the negative reason that they failed to include the full definition of Nicene (see LIBERIUS, SAINT, POPE).

(ii) The charge against Pope Honorius is a double one: that, when appealed to in the Monothelite controversy, he actually taught the Monothelite heresy in his two letters to Sergius; and that he was condemned as a heretic by the Second Ecumenical Council, the decrees of which were approved by Leo II. But in the first place it is quite clear from the tone and terms of these letters that, so far from intending to give any final, or ex cathedra, decision on the doctrinal question at issue, Honorius merely tried to allay the rising bits, and to secure for the Church as the Church the peace of the pole.
cally speaking, at the present day, and for many centuries in the past, only the decisions of ecumenical councils and the ex cathedra teaching of the pope have been treated as strictly definitive in the canonical sense, and the function of the *magisterium ordinarius* has, who are in consequence of the pope the Divinely constituted head and centre of Christ's mystical body, the one true Church, who have any claim to share in the charismata by which the infallibility of their morally unanimous teaching is divinely guaranteed according to the terms of Christ's promises. And as the pope's supremacy is also an essential factor in the constitution of an ecumenical council—and has in fact been the formal and determining factor in deciding the ecumenicity of those very councils whose authority is recognized by Eastern schismatics and Anglicans—it naturally occurs to enquire how conciliar and papal infallibility are logically related to papal. Now this relation, in the Catholic view, may be explained briefly as follows: (a) Theories of conciliar and of papal infallibility do not logically stand or fall together, since in the Catholic view the co-operation and confirmation of the pope in his purely primatial capacity are necessary, supplementary to the Divine constitution of the Church for the ecumenicity and infallibility of a council. This has, de facto, been the formal test of ecumenicity; and it would be necessary even in the hypothesis that the pope himself were fallible. An infallible organ may be constituted by the head and members of a corporate body acting jointly, although neither taken separately is infallible. Hence the pope teaching ex cathedra and an ecumenical council subject to the approbation of the pope as its head are distinct organs of infallibility. (b) Hence, also, the Gallican contention is excluded, that an ecumenical council is superior, either in jurisdiction or in doctrinal authority, to a certain legitimate pope, and that one may appeal from the latter to the former. Nor is this conclusion contradicted by the fact that, for the purpose of putting an end to the Western Schism and securing a certain legitimate pope, the Council of Constance deposed John XXIII: he was considered doubtless legitimate, in the sense of probably legitimate claimants, Gregory XII., having resigned. This was what might be described as an extra-constitutional crisis; and, as the Church has a right in such circumstances to remove reasonable doubt and provide a pope whose claims would be indisputable, even an accephalous council, supported by the body of Christians throughout the world, was competent to meet this altogether exceptional emergency without thereby setting up a precedent that could be erected into a regular constitutional rule, as the Gallicans wrongly imagined. (c) A similar exceptional situation might arise were a pope to become a public heretic, or to be publicly deposed or deposed as some doctrine clearly opposed to what has been defined as de fide catholica. But in this case many theologians hold that no formal sentence of deposition would be required, as, by becoming a public heretic, the pope would ipso facto cease to be pope. This, however, is a hypothetical case which has never actually occurred; even the case of Honorius, were it proved that he taught the Monothelite heresy, would not be a case in point.

IV. Scope and Object of Infallibility.—(1) In the Vatican definition infallibility (whether of the Congregation of the Propaganda or of the pope) is referred to doctrines of faith or morals; but within the province of faith and morals its scope is not limited to doctrines that have been formally revealed. This, however, is clearly understood to be what theologians call the direct and primary object of infallible authority: it was for the maintenance and interpretation and legitimate development of Christ's teaching that the Church was endowed with this charisma. But if this primary function is to be adequately and effectively discharged, it would also be necessary that there must also be indirect and secondary objects to which infallibility extends, viz., doctrines and facts which, although they cannot strictly speaking be said to be revealed, are nevertheless so intimately connected with revealed truths that, were one free to deny the former, he would logically deny the latter, and that these are the primary purpose for which infallibility was promised by Christ to His Church. This principle is expressly affirmed by the Vatican Council when it says that "the Church, which, together with the Apostolic office of teaching received the command to guard the deposit of faith, possesses also by Divine authority (divinitus) the right to condemn science falsely so called, lest anyone should be cheated by philosophy and vain concile (cf. Col., ii, 8") (Denz., 1798, old no. 1045).

(2) Catholic theologians are agreed in recognising the general principle that has just been stated, but it cannot be said that they are uniformly in accord as to the concrete applications of this principle. Yet it is generally held, and may be said to be theologically certain, (a) that what are technically described as "theological conclusions", i.e. inferences deduced from two premises, one of which is revealed and the other verified by the operation of the Church's infallible authority. (b) It is also generally held, and rightly, that questions of dogmatic fact, in regard to which definite certainty is required for the safe custody and interpretation of revealed truth, may be determined infallibly by the Church. Such questions, for example, would be: whether a certain pope is legitimate, or a certain council ecumenical, or whether objective heresy or error is taught in a certain book or other published document. This last point in particular figured prominently in the Jansenist controversy, the heretics contending that, while the famous five propositions attributed to Jansenius were rightly condemned, they did not truly express the doctrine contained in his book "Augustinus". Clement XI., in condemning this subterfuge (see Denz., 1350, old no. 1317) merely reasserted the principle which had been followed by the fathers of Nicaea in condemning the "Thalia" of Arius, by the Council of Ephesus in condemning the "Sublima" of Nestorius, and by the Second Council of Constantinople in condemning the Three Chapters. (c) It is also commonly and rightly held that the Church is infallible in the canonization of saints, that is to say, when canonization takes place according to the solemn process that has been followed since the ninth century. Mere beatification, however, as distinguished from canonization, is not held to be infallible, and in canonization itself the only fact that is infallibly determined is that the soul of the canonized saint departed in the state of grace and already enjoys the beatific vision. Officially, or even canonically, it is impossible to issue a dogmatic pronouncement on the fact. Moral doctrine, infallibility goes no farther than to protect the Church against passing universal laws which in principle would be immoral. It would be out of place to speak of infallibility in connexion with the opportuneness or the administration of necessarily changing disciplinary laws, although, of course, Catholics believe that the Church receives appropriate Divine guidance in this and in similar matters where practical spiritual wishes is required.

V. What Teaching Is Infallible?—A word or two under this head, summarizing what has been already explained in the article just above. (a) As regards matter, only doctrines of faith and morals, and facts so intimately connected with these as to require infallible determination, fall under the scope of infallible ecclesiastical teaching.
These doctrines or facts need not necessarily be revealed; it is enough if the revealed deposit cannot be adequately and effectively guarded and explained, unless they are infallibly determined. (b) As to the organ of authority by which such doctrines or facts are determined, three possible organs exist. One of these, the magisterium ordinarii, is liable to be somewhat indefinite in its pronouncements and, as a consequence, practically ineffective as an organ. The other two, however, are adequately efficient organs, and when they definitively decide any question of faith or morals that may arise, no believer who pays due attention to Christ’s promises can consistently refuse to assent with absolute and irrevocable certainty to their teaching. (c) But before being bound to give such an assent, the believer has a right to be certain that the teaching in question is definitive (since only definitive teaching is infallible); and the means by which the definitive intention, whether of a council or of the pope, may be recognized have been stated above. It need only be added here that not everything in a conciliar or papal pronouncement, in which some doctrine is defined, is to be treated as definitive and infallible. For example, in the lengthy Bull of Pius IX defining the Immaculate Conception the strictly definitive and infallible portion is comprised in a sentence or two; and the same is true in many cases in regard to conciliar decisions. The merely argumentative and justificatory statements embodied in definitive judgments, however true and authoritative they may be, are not covered by the guarantee of infallibility which attaches to the strictly definitive sentences—unless, indeed, their infallibility has been previously or subsequently established by an independent decision.

Formal controversy on infallibility only began with the Reformation. Among early theologians see Stapleton, Principiorum fidei doctrinalium demonstratio methodica (Paris, 1579); and Bellarmine, De concilii et ecclesii Iib. De Romanii Pontificis (incorporated in De controversiis fidei). Among modern Catholic theologians, see Murray, De Ecclesia, II, 169 sq., III, 778 sq. (Dublin, 1866), and the pertinent sections in standard manuals like those of Perrone, Pecht, Tanquerey, etc. Among Catholic writers in English are Manning, Petri Privilegium; Gibbons, Faith of Our Fathers; Rivington, The Primitive Church and the Sex of Peter (London, 1884); Ryder, Catholic Controversy (a reply to Littledale, Plain Reasons); Chapman, Bishop Gore and the Catholic Claims (a reply to Gore, Roman Catholic Claims). Salmon, Infallibility, is the clearest modern attack on the Catholic position. Among High-Church Anglicans who defend the principle of infallibility, while denying papal claims, see Gore, Roman Catholic Claims, and Hall, Authority Ecclesiastical and Biblical (1898).
