II.—ABBREVIATIONS OF TITLES.

Acta SS. Acta Sanctorum (Bollandists).

Kirchenlex. Wetscher Welte, Kirchenlexicon.
P. G. Migne (ed.), Patres Graeci.
Vig., Dict. dela Bible. Vigouroux (ed.), Dictionnaire de la Bible.

NOTES I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

NOTES II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologica" (not to "Summa Philosophiae"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2 um" refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

NOTES III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiasticus is indicated by Eccles., to distinguish it from Ecclesiastes (Eccles.). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

THE CATHOLIC ENCYCLOPEDIA

G

Gregory XII (Angeio Corrario, now Correr), legal pope during the Western Schism; b. at Venice, of a noble family, about 1327; d. at Recanati, 18 October, 1417. He became Bishop of Castello in 1380 and titular Patriarch of Constantinople in 1390. Under Pope Innocent VII he was made Apostolic secretary, then Legate of Ancona, and finally, in 1405, Cardinal-Priest of San Marco. It was due to his great piety and his earnest desire for the end of the schism that after the death of Innocent VII he was elected pope on 30 Nov., 1406. He took the name of Gregory XII.

Before the papal election each cardinal swore that in order to end the schism he would abdicate the papacy if he should be elected, provided his rival at Avignon (Benedict XIII) would do the same. Gregory XII repeated his oath after his election and to all appearances had the intention to keep it. On 12 Dec., 1408, he notified Benedict XIII of his election and the stipulation under which it took place, at the same time reiterating his willingness to lay down the tiara if Benedict would do the same. Benedict apparently agreed to the proposals of Gregory XII and expressed his desire to have a conference with him. After long negotiations the two pontiffs agreed to meet at Savona. The meeting, however, never took place. Benedict, though openly protesting his desire to meet Gregory XII, gave various indications that he had not the least intention to renounce his claims to the papacy; and Gregory XII, though sincere in the beginning, also soon began to waver. The relatives of Gregory XII, to whom he was always inordinately attached, and King Ladislaus of Naples, for political reasons used all their efforts to prevent the meeting of the pontiffs. The reason, pretended or real, put forth by Gregory XII for refusing to meet his rival, was his fear that Benedict had hostile designs upon him and would use their conference only as a ruse to capture him. The cardinals of Gregory XII openly showed their dissatisfaction at his procedure and gave signs of their intention to forsake him. On 4 May, 1408, Gregory XII convened his cardinals at Lucca, ordered them not to leave the city under any pretext, and created four of his nephews cardinals, despite his promise in the conclave that he would create no new cardinals. Seven of the cardinals secretly left Lucca and negotiated with the cardinals of Benedict concerning the convocation of a general council by them at which both pontiffs should be deposed and a new one elected. They summoned the council to Pisa and invited both pontiffs to be present. Neither Gregory XII nor Benedict XIII appeared. At the fifteenth session (8 June, 1408), the council deposed the two pontiffs, and elected Alexander V on 26 June, 1409.

Meanwhile Gregory stayed with his loyal and powerful protector, Prince Charles of Malatesta, who had come to Pisa in person during the process of the council, in order to effect an understanding between Gregory XII and the cardinals of both obediences. All his efforts were useless. Gregory XII, who had meanwhile created ten other cardinals, convoked a council at Cividale del Friuli, near Aquileia, for 8 June, 1409. At this council, though only a few bishops had appeared, Benedict XIII and Alexander V were pronounced schismatics, perjurers, and devastators of the Church.

Though forsaken by most of his cardinals, Gregory XII was still the true pope and was recognized as such by Rupert, King of the Romans, King Ladislaus of Naples, and some Italian princes. The Council of Constance (q. v.) finally put an end to the intolerable situation of the Church. At the fourteenth session (4 July, 1415) a Bull of Gregory XII was read which appointed Malatesta and Cardinal Dominici of Ragusa as his proxies at the council. The cardinal then read a mandatory of Gregory XII which convoked the council and authorized its succeeding acts. Hereupon Malatesta, acting in the name of Gregory XII, pronounced the resignation of the papacy by Gregory XII and handed a written copy of the resignation to the assembly. The cardinals accepted the resignation, retained all the cardinals that had been created by him, and appointed him Bishop of Porto and perpetual legate at Ancona. Two years later, before the election of the new pope, Martin V, Gregory XII died in the odour of sanctity.

Michael Ott.

Gregory XIII, Pope (Ugo Buoncompagni), b. at Bologna, 7 Jan., 1502; d. at Rome, 10 April, 1585. He studied jurisprudence at the University of Bologna, from which he was graduated at an early age as doctor of canon and of civil law. Later, he taught jurisprudence at the same university, and had among his pupils the famous future cardinals, Alessandro Farnese, Cristoforo Madruzi, Otto Truchsess von Waldburg, Reginald Pole, Carlo Borromeo, and Stanislaus Hosius. In 1539 he came to Rome at the request of Cardinal Parizio, and Paul III appointed him judge of the Capitol, papal abridger, and referendary of both signatures. In 1545 the same pope sent him to the Council of

Arms of Gregory XIII

VII. — 1
Trent as one of his jurists. On his return to Rome he held various offices in the Roman Curia under Julius III (1550–1555), who also appointed him pro-legate of the Campagna in 1555. Under Paul IV (1555–1559) he accompanied Cardinal Alfonso Caraffa on a papal mission to Philip II in Flanders, and upon his return was appointed Bishop of Viesti in 1558. Up to that time he had not been ordained a priest. In 1559 the newly-elected pope, Pius IV, sent him as his confidential deputy to the Council of Trent, where he remained until its conclusion in 1563. Shortly after his return to Rome, the same pope created him Cardinal Priest of San Sisto in 1564, and sent him as legate to Spain to investigate the case of Archbishop Bartolomé Carranza of Toledo, who had been suspected of heresy and imprisoned by the Inquisition. While in Spain he was appointed secretary of papal Briefs, and after the election of Pius V, 7 Jan., 1566, he returned to Rome to enter upon his new office. After the death of Pius V on 1 May, 1572, Ugo Buoncompagni was elected pope on 13 May, 1572, chiefly through the influence of Cardinal Antoine Granvella, and took the name of Gregory XIII. At his elevation to the papal throne he had already completed his seventieth year, but was still strong and full of energy.

His youth was not stainless. When still at Bologna a son, named Giacomo, was born to him of an unmarried woman. Even after entering the clerical state he was a worldly-minded and fond of display. But from the time he became pope he followed in the footsteps of his holy predecessor, and was thoroughly imbued with the consciousness of the great responsibility connected with his exalted position. His election was greeted with joy by the Roman people, as well as by the foreign rulers. Emperor Maximilian II, the King of France, Spain, Portugal, Hungary, Poland, the Italian and other princes sent their representatives to Rome to tender their obedience to the newly-elected pontiff. At the first consistory he ordered the Constitution of Pius V, which forbade the alienation of church property, to be read publicly, and pledged himself to carry into execution the decrees of the Council of Trent. He at once appointed a committee of cardinals, consisting of Borromeo, Paleotti, Aldobrandini, and Alessandro, with instructions to find out and punish all ecclesiastical abuses; decided that the cardinals who were at the head of dioceses were not exempt from the Tridentine decree of episcopal residence; designated a committee of cardinals to complete the Index of Forbidden Books, and appointed one day in each week for a public audience during which every man had access to him. In order that only the most worthy persons might be vested with ecclesiastical dignities, he kept a list of commendable men in and out of Rome, on which he noted their virtues and faults, that came to his notice. The same care he exercised in the appointment of cardinals. Thirty-four cardinals were appointed during his pontificate, and in their appointment he always had the welfare of the Church in view. He cannot be charged with nepotism. Two of his nephews, Filippo Buoncompagni and Filippo Vastavillano, he created cardinals because he considered them worthy of the dignity; but, when a third one aspired after the purple, he did not even grant him an audience. His son Giacomo he appointed as Archpriest of St. Lorenzo, gonfalonier of the Church, but refused him every higher dignity, although Venice enrolled him among its nobili and the King of Spain appointed him general of his army.

Like his holy predecessor, Gregory XIII spared no efforts to further an expedition against the Turks. With this purpose in view he sent special legates to Spain, France, Germany, Poland, and other countries, but the discord of the Christian princes among themselves, the peace concluded by the Venetians with the Turks, and the treaty effected by Spain with the Sultan, frustrated all his exertions in this direction.

For stemming the tide of Protestantism, which had already wrested entire nations from the bosom of the Church, Gregory XIII knew of no better means than a thorough training of the candidates for holy priesthood in Catholic philosophy and theology. He founded numerous colleges and seminaries at Rome and other suitable places and put most of them under the direction of the Jesuit. At least twenty-three such institutions, existing at present, owe their existence or survival to the munificence of Gregory XIII.

The first of these institutions that enjoyed the pope's liberality was the German College at Rome, which for two years was in danger of being abandoned. In a Bull dated 6 August, 1573, he ordered that no less than one hundred students at a time from Germany and its northern borderland should be educated in the German College, and that it should have an annual income of 10,000 ducats, to be paid, as far as necessary, out of the papal treasury. In 1574 he gave the church and the palace of Sant' Apollinare to the institution, and in 1580 united the Hungarian college with it. The following Roman colleges were founded by Gregor XIII: the Greek college on 13 Jan., 1577; the college for neophytes, i.e. converted Jews, on 1 May, 1577; the English college on 1 May, 1579; the Maronite college on 27 June, 1584. For the international Jesuit college (Collegium Romanum) he built in 1582 the large edifice known as the Collegio Romano which was occupied by the faculty and students of the Collegium Romanum (Gregorian University) until the Piedmontese Government declared it national property and expelled the Jesuits in 1870. Outside of Rome the following colleges were either founded or liberally endowed by Gregory XIII: the English college at Douai, the Scotch college at Pont-à-Mousson, the papal seminaries at Gras, Vienna, Olmütz, Prague, Colmevar, Puliia, Augsburg, Dillingen, Brumberg, Milan, Loreto, Fribourg in Switzerland, and three
schools in Japan. In these schools numerous missionaries were trained for the various countries where Protestantism had been made the state religion and for the missions among the pagans in China, India, and Japan. Thus Gregory XIII at least partly restored the old faith in England and the northern countries, supplied the Catholics in countries with their necessary priests, and introduced Christianity into the pagan countries of Eastern Asia. Perhaps one of the happiest events during his pontificate was the arrival at Rome of four Japanese ambassadors on 22 March, 1585. They had been sent by the converted kings of Bungo, Arima, and Omura, in Japan, to the pope for a peace, which he had shown their country by sending them Jesuit missionaries who had taught them the religion of Christ. In order to safeguard the Catholic religion in Germany, he instituted a special Congregation of Cardinals for German affairs, the so-called Congregatio Germanorum, which lasted from 1573–1578. To remain informed of the Catholic situation in that country and keep in closer contact with its rulers, he erected resident nunciatures at Vienna in 1581 and at Cologne in 1582. By his Bull "Provisionis nostra" of 29 Jan., 1579, he confirmed the acts of his predecessor Pius V, concerning the Barons of Bavius, and at the same time he condemned the Jesuit, Francis of Toledo, to demand the abjuration of Bavius. In the religious orders Gregory XIII recognized a great power for the conversion of pagans, the suppression of heresy and the maintenance of the Catholic religion. He was especially friendly towards the Jesuits, whose rapid spread during his pontificate was greatly due to his encouragement and financial assistance. Neither did he neglect the other orders. He approved the Congregation of the Oratory in 1574, the Barnabites in 1579, and the Discalced Carmelites in 1580. The Premonstratensians he honoured by canonizing their founder, St. Norbert, in 1582. Gregory XIII spared no efforts to restore the Catholic Faith in the countries that had become Protestant. In 1574 he sent the Polish Jesuit Warszewics to John III of Sweden in order to convert him to Catholicity. Being then unsuccessful, he sent another Jesuit, the Norwege, Nielsson, to Germany, in converting the king on 6 May, 1578. The king, however, soon turned Protestant again from political motives. In 1581, Gregory XIII dispatched the Jesuit Antonio Possevino as nuncio to Russia, to mediate between Tsar Ivan IV and King Bathory of Poland. He not only brought about an amicable settlement between the two powers but also of disturbances for the Catholics of Russia the right to practise their religion openly. Gregory's attempts to procure religious liberty for the Catholics in England were without avail. The world knows of the atrocities committed by Queen Elizabeth on many Catholic missionaries and nuns. No blame, therefore, attaches to Gregory XIII for trying to depose the queen by force of arms. As early as 1578 he sent Thomas Stukeley with a ship and an army of 800 men to Ireland, but the treacherous Stukeley joined his forces with those of King Sebastian of Portugal against Emperor Abdolmelek of Morocco. Another papal expedition which sailed to Ireland in 1579 under the command of James Fitzmaurice, accompanied by Nicholas Sanders as papal nuncio, was equally unsuccessful. Gregory XIII had nothing whatsoever to do with the plot of Henry, Duke of Guise, and his brother Charles, Duke of Mayenne, to assassinate the queen and the probable knew nothing whatever about it (see Bellesheim, "Wilhelm Cardinal Allen", Mainz, 1885, p. 144). Some historians have severely criticized Gregory XIII for ordering that the horrible massacre of the Huguenots on St. Bartholomew's Day in 1572 be celebrated in Rome by a "Te Deum" and other marks of rejoicing. In defence of Gregory XIII it must be stated that he had nothing whatever to do with the massacre itself, and that he as well as Salviani, his nuncio in Paris, were kept in ignorance concerning the intended slaughter. The pope indeed participated in the Roman festivities, but he was probably not aware of the circumstances of the Parisian horrors and, like other European rulers, had been informed that the Huguenot had been detected in a conspiracy to kill the king and the whole royal family, and had been thus punished for their treacherous designs. But even if Gregory XIII was aware of all the circumstances of the massacre (which has never been proven), it must be borne in mind that he did not rejoice at the bloodshed, but at the suppression of a political and religious rebellion. That Gregory XIII did not approve the massacre, but detested the cruel act and shed tears when he was apprised of it, is expressly stated even in the "Vita" of the second cardinal, Gregorio Leti in his "Vita di Sisto V" (Colonge, 1796), 1, 431–4, and by Brantome, a contemporary of Gregory XIII, in his "Vie de M. l'Amiral de Chastillon" (Complete works, The Hague, 1740, VII, 196). The medal which Gregory XIII had struck in memory of the event bears his effigy on the obverse, whilst on the reverse under the legend "Veiostorium Strages" (overthrow of the Huguenot) stands an angel with cross and drawn sword, killing the Huguenots. No other action of Gregory XIII has gained for him a more lasting fame than his reform of the Julian Calendar which was completed and introduced into most Catholic countries in 1578. Closely connected with the reform of the calendar is the codification of the Roman martyrology which was ordered by Gregory XIII in the autumn of 1580. The emendation was to consist chiefly in the restoration of the original text of Usuard's martyrology, which was in common use at the time of Gregory XIII. He entrusted the learned Cardinal Sireto with the difficult undertaking. The cardinal formed a committee, consisting of ten members, who assisted him in the work. The first edition of the new martyrology, which came out in 1582, was full of typographical errors; likewise the second edition of 1583. Both editions were suppressed by Gregory XIII, and in January, 1584, appeared a third and better edition under the title of "Martyrologium Romanum Gregorii XIII jussu editum" (Rome, 1583). In a brief, dated 14 January, 1584, Gregory XIII ordered that the new martyrology should supersede all others. Another great literary achievement of Gregory XIII is an official Roman edition of the Corpus Juris Canonici. Shortly after the conclusion of the Council of Trent, Pius IV had appointed a committee which was to bring out a critical edition of the Decree of Gratian. The committee was increased to thirty-five members (correctores Romani) by Pius V in 1566. Gregory XIII had been a member of it from the beginning. The
work was finally completed in 1582. In the Briefs "Cum pro munere", dated 1 July, 1580, and "Emendationem", dated 2 June, 1582, Gregory XIII ordered that henceforth only the emended official text was to be used and that in the future no other text should be printed.

It has already been mentioned that Gregory XIII spent large sums for the erection of colleges and seminaries. No expense appeared too high to him, if only it was made for the benefit of the Catholic religion. For the education of poor candidates for the priesthood he spent two million scudi during his pontificate, and for the good of Catholicity he sent large sums of money to Malta, Austria, England, France, Spain, and the Netherlands. In Rome he built the magnificent Gregorian chapel in the church of St. Peter, and the Quirinal palace in 1580; a capacious granary in the Thermæ of Diocletian in 1575, and fountains at the Piazza Navona, the Piazza del Pantheon, and the Piazza del Popolo. In recognition of his many improvements in Rome the senate and the people erected a statue in his honour on the Capitoline Hill, when he was still living.

The large sums of money spent in this manner necessarily reduced the papal treasury. Acting on the advice of Borgia, the pope ordered the rich barony of the Colonna, which he had confiscated various baronial estates and castles, because some forgotten feudal liabilities to the papal treasury had not been paid, or because their present owners were not the rightful heirs. The barons were in continual fear lest some of their property would be wrested from them in this way. The result was that the aristocracy hated the papal government, and incited the peasantry to do the same. The papal influence over the aristocracy being thus weakened, the barons of the Romagna made war upon each other, and a period of bloodshed ensued which Gregory XIII was helpless to prevent. Moreover, the imposition of port duties on Venetian goods by the papal government, crippled commerce to a considerable extent. The banditti who infested the Campagna were protected by the barons and the peasantry, and became daily more bold. They were headed by young men of noble families, such as Alfonso Fieschi, Roberto Malatesta, and others. Rome itself was filled with these outlaws, and the papal officers were always everywhere in danger of life. Gregory was helpless against these lawless bands. Their suppression was finally effected by his rigorous successor, Sixtus V.

MICHAEL OTT.

Gregory XIV, Pope (Niccolò Sfondrati), b. at Somma, near Milan, 11 Feb., 1535; d. at Rome, 15 Oct., 1591. His father Francesco, a Milanese senator, had, after the death of his wife, created cardinal by Pope Paul III, in 1544. Niccolò studied at the Universities of Perugia and Padua, was ordained priest, and then appointed Bishop of Cremona, in 1560. He participated in the sessions of the Council of Trent, 1561-1563, and was created Cardinal-Priest of Santa Cecilia by Gregory XIII on 12 December, 1583. Urban VII having died on 27 September, 1590, Sfondrati was elected to succeed him on 5 December, 1590, after a protracted conclave of more than two months, and took the name of Gregory XIV. The new pope had not aspired to the tiara. Cardinal Montalto, who came to his cell to inform him that the Sacred College had agreed on his election, found him kneeling in prayer before a crucifix. When on the next day he was elected he burst into tears and said to the cardinals: "God forgive you for making me pope! Have you done it? From his youth he had been a man of piety and mortification. Before entering the ecclesiastical state he was a constant companion of Charles Borromeo, and when cardinal, he was an intimate friend of Philip Neri whose holy life he strove to imitate.

As soon as he became pope, he gave his energetic support to the French League, and concluded active measures against Henry of Navarre, whom Sixtus V, in 1585, had declared a heretic and excluded from succession to the French throne. In accordance with the Salic law, after the death of Henry III in 1589, Henry of Navarre was to succeed to the French throne, but the prevalent idea of those times was that no Protestant could become King of France, which was for the most part Catholic. The nobles, moreover, threatened to rise up against the rule of Henry of Navarre unless he promised to become a Catholic. In order to reconcile the nobility and the people to his reign, Henry Pallavicino, 4 August, 1590, that he would become Catholic and uphold the Catholic religion in France. When Gregory XIV became pope, Henry had not yet fulfilled his promise and gave little hope of doing it in the near future. The pope, therefore, decided to assist the French League in its efforts to depose Henry by force of arms and in this he was encouraged by Philip II of Spain. In his monitory letter to the Council of Paris, 1 March, 1591, he renewed the sentence of excommunication against Henry, and ordered the clergy, nobles, judicial functionaries, and the Third Estate of France to renounce him, under pain of severe penalties. He also sent a monthly subsidy of 15,000 scudi to Paris, and dispatched his nephew, Elonoel Sfondrati to France at the head of the papal troops. In the midst of these operations against Henry, Gregory XIV died, after a short pontificate of 10 months and 10 days.

Gregory XIV created five cardinals, among whom was his nephew Paolo Camillo Sfondrati. He valued this son to induce Philip II of Spain to accept his election. On 21 September, 1591, he raised to the dignity of a religious order the Congregation of the Fathers of a Good Death (Clerici regulares ministrantes infirmis) founded by St. Camillus de Lellis. In his Bull "Cogites", dated 21 March, 1591, he forbade under pain of excommunication all between the pope, the duration of a pontificate, or the creation of new cardinals. In a decree, dated 18 April, 1591, he ordered reparation to be made to the Indians of their punishers wherever it was possible, and commanded under pain of excommunication that all Indian slaves in the islands should be set free. Gregory XIV also appointed a commission to revise the Sixtine Bible and another commission to continue the revision of the Pian Breviary. The former commission had its first session on 7 Feb., 1591, the latter on 21 April, 1591. Concerning these two commissions see Bäumer, "Geschichte des Brevis". Zweiter Hieufel (Breisgau, 1895), pp. 472-473. Ranke, History of the Popes (London, 1806), II. 33-38; Brosgen, Gesch. des Kirchenstaates (Gotha, 1880), I. 300 sqq.: Millet, Guerre Pontifici Romana (Rome, 1677), IV. 215 sqq.

MICHAEL OTT.

Gregory XV, Pope (Alessandro Ludovisi), b. at Bologna, 9 or 15 January, 1554; d. at Rome, 8 July, 1623. After completing the humanities and philosophy under Jesuit teachers, partly at the Roman and partly at the German College in Rome, he returned to Bologna to devote himself to the study of juris-
prudence. After graduating at the University of Bologna in canon and civil law, he went back to Rome and was appointed judge of the Capitol by Gregory XIII. Clement VIII made him regent of both signatures and member of the rota, and appointed him vicegerent in temporal affairs of Cardinal Vicar Rusticuccio. In 1612 Paul V appointed him Archbishop of Bologna, and sent him as nuncio to Savoy, to mediate between Duke Charles Emmanuel of Savoy and King Philip of Spain in their dispute concerning the Duchy of Monferrat. In 1616 the same pope created him Cardinal-Priest of Santa Maria Trasporti. Henceforth Ludovisi remained at his see in Bologna until he came to Rome after the death of Pope Paul V to take part in the election of a new pope. On 9 February Ludovisi himself was elected successor of Paul V, chiefly through the influence of Cardinal Borghese, and took the name of Gregory XV. Although at his elevation to the papal throne he was already reached the age of 67 years and was, moreover, in a bad state of health, his pontificate of two years and five months was one of remarkable activity. He saw that he needed a strong and energetic man, in whom he could place implicit confidence, to assist him in the government of the Church. His nephew Ludovico Ludovisi, a young man of 25 years, seemed to him to be the right person and, at the risk of being charged with nepotism, he created him cardinal on the third day of his pontificate. On the same day, Orsino, a brother of the pope, was put at the head of the pontifical army. The future revealed that Gregory XV was not disappointed in his nephew. Ludovico, it is true, advanced the interests of his family in every possible way, but he also used his brilliant talents and his great influence for the welfare of the Church, and was sincerely devoted to the pope. Eleven cardinals in all were created by Gregory XV.

One of the most important pontifical acts of Gregory XV, affecting the inner affairs of the Church, was his new regulation concerning papal elections. In his Bull "Eterni Patris" (15 Nov., 1621) he prescribes that in the future only three modes of papal election are to be allowed: scrutiny, compromise, and quasi-inpiration. His Bull "Decet Romanum Pontificem" (12 March, 1622) contains a ceremonial which regulates these three modes of election in every detail. The ordinary mode of election was to be by election by scrutiny, which required that the vote be secret, that each cardinal give his vote to only one candidate and that no one vote for himself. Most of the papal elections during the sixteenth century were influenced by political conditions and by party considerations in the College of Cardinals. By introducing secrecy of vote Pope Gregory XV intended to abolish these abuses. The rules and ceremonies prescribed by Gregory XV are substantially the same as those that guide the papal elections in our day. Gregorians took great interest in the Catholic missions in foreign countries. These missions had become so extensive and the missionary countries differed so greatly in language, manners, and civilisation from the countries of Europe, that it was extremely difficult to keep a proper control over them. At the request of the Capuchins Giovanni da Narni and the Discalced Carmelites Dominicus a Jesu-Maria, the pope established on 6 January, 1622, a special congregation of cardinals who were to have supreme control over all foreign missions (Congregatio de Propaganda Fide). Gregory XIII and Clement VIII had already previously formed temporary commissions on missions to look into the interest of particular foreign missions, but Gregory XV was the first to erect a permanent congregation, whose sphere of activity should extend over all foreign missions (see Propaganda). For particulars concerning the rights and duties of the new congregation see the Bull "Inscrutabilis" of 22 June, 1622, in Bullarium Romanum", XII, 690–3.

Both Gregory XV and his nephew Ludovisi held the religious orders in high esteem, especially the Jesuits. On 12 March, 1622, he canonized Ignatius of Loyola, their founder, and Francis Xavier, their most successful missionary. He had already permitted them on 3 October, 1621, to recite the office and celebrate the mass in honour of the angelic youth Aloysius of Gonzaga. Other religious orders he honoured in the same way. On 12 March, 1622, he canonized Philip Neri, the founder of the Oratorians, and Theresa, the reformer of the Carmelites in Spain. In the same year he beatified Albertus Magnus, the great Dominican theologian, and permitted the feast and office of Ambrogio Sancesoni, another Dominican, to be celebrated as that of a saint. On 18 April, 1622, he beatified the Spanish Minotore, Peter of Alcantara, and on 17 Feb., 1623, he ordered the feast of St. Bruno, the founder of the Carthusians, to be entered in the Roman Breviary. One layman, the Spanish husbandman Isidore, he canonized on 22 March, 1622. During his short pontificate he approved the famous Maurist Congregation of Benedictines, the Congregation of the French Benedictine nuns of Calvary (Benedictines de Notre-Dame du Calvaire), the Theatine nuns and the Theatine recluses, the Congregation of Pious Workers (Più Operarii), the Priests of St. Bridget in Belgium (Frares novissimi Brigittini), and raised the Friars and the Priests of the Mother of God (Clerici regulares Matris Dei) to the dignity of a religious order. On 18 March, 1621, he founded at Rome an international college for the Benedictines, the College Gregorianum which was the cradle of the now famous international Benedictine college of St. Anselm. Before passing to the political achievements of Gregory XV, mention must be made of his Constitution "Omnipotenti Dei", issued against magicians and witches on 20 March, 1623. It is the last
papal ordinance against witchcraft. Former punishments were lessened, and the death penalty was decreed for those who were proved to have entered into a compact with the devil, and to have committed homicide with his assistance.

The great activity which Gregory XV displayed in the inner management of the Church was equalled by his efficacious interposition in the politics of the world, whenever the interests of Catholicity were involved. He gave the financial assistance to Emperor Ferdinand II in regaining the Kingdom of Bohemia and the hereditary dominions of Austria. Gregory XV then sent Carlo Caraffa as nuncio to Vienna, to assist the emperor by his advice in his efforts to suppress Protestantism, especially in Bohemia and Moravia, where the Protestants considerably outnumbered the Catholics. To a great extent it was also due to the influence of Gregory XV that, at a meeting of princes at Ratisbon, the Palatinate and the electoral dignity attached to it were granted to Duke Maximilian of Bavaria in the early part of January, 1623. In order to effect this grant, the pope had previously sent the Capuchin Father Hysacinth, a skilled diplomat, to the imperial court at Vienna. The transfer of the Palatinate Electorate from a Protestant (Frederick V) to a Catholic was of great consequence, since it secured a Catholic majority in the supreme council of the empire.

Out of gratitude to Pope Gregory XV, Maximilian presented the papal library of Heidelberg, containing about 3500 manuscripts. Early in 1623 Gregory XV sent the Greek theologian Leo Allatius to transport the valuable collection to Rome, where it was put up as the "Gregoriana" in the Vatican Library. Thirty-nine of these manuscripts, which had come to Paris in 1797, were returned to Heidelberg at the Peace of Paris in 1815, and Pius VII returned 852 others as a gift in 1816.

The relations between England and the Roman See assumed a more friendly character during the pontificate of Gregory XV. For a time it seemed probable that, through the intended marriage of the Prince of Wales (afterwards King Charles I) with the Spanish Infanta Maria, Catholicity could be restored in England. Though the pope favoured the marriage, it never took place. The treatment, however, of the Catholic subjects of James I became more tolerable and, to some extent at least, they enjoyed a little prosperity. The loss of the power of the Huguenots was on the decrease, owing to the influence of Gregory XV with King Louis XIII. Here the Capuchins, the Jesuits, and the Franciscans converted large numbers of heretics to Catholicity. Even in the Netherlands, that stronghold of Protestantism, a Catholic reaction set in, despite the fact that the Catholic priests were persecuted and expelled from the country.

The Catholic rulers respected the authority of Gregory XV, not only in religious affairs, but also in matters of a purely political nature. This was noticeable when an international dispute arose concerning the possession of the Valtellina. Shortly after the massacre of the Valtelline (1620) the Spaniards occupied that district, while the Austrians took possession of the Grisons passes and were in close proximity to the Spaniards. The proximity of the two allied armies endangered the interests of France, Venice, and Savoy. These three powers, therefore, combined to compel the Austrians and Spaniards to evacuate the Valtellina, by force of arms if necessary. Upon request, Pope Gregory XV intervened by sending his brother Orsazio at the head of the pontifical troops to take temporary possession of the Valtellina. After a little reluctance on the part of Archduke Leopold of Austria, the requested territory was yielded to Orsazio, and the impending war was thus averted.

**ARMYS OF GREGORY XVI**

The young monk soon showed signs of unusual intellectual gifts. He devoted himself to the study of philosophy and theology, and was set to teach these to the juniors at San Michele. In 1790 he was appointed censor librorum for his order, as well as for the Holy Office at Venice. Five years later he was sent to Rome, where he lived in great poverty (and was destroyed) in the Piazza Veneta, afterwards in the great monastery of San Gregorio on the Celian Hill. The times were not favourable to the papacy. In 1798 took place the scandalous abduction of Pius VI by General Berthier, at Napoleon's orders, and in the following year the death of the pope in exile at Venice. It was this very year, 1799, that Dom Mauro chose for the publication of his book, "Il trionfo della Santa Sede", upholding papal infallibility and the temporal sovereignty. The work, according to Gregory himself, did not attract great attention till after he had become pope, yet it attained three editions and was translated into several languages. In 1800 Cardinal Chiaramonti was elected pope at Venice, and took the name of Pius VII, and returned to Rome the same year. Early in that year Dom Mauro had been nominated Abbé Vicer of San Gregorio, and in 1805 the pope appointed him abbot of that ancient house. He retired to Venice to rest, but returned in 1807 as procurator general, only to be driven out in the following year, when General Molière repeated on the person of Pius VII the outrage of Berthier on Pius VI. Dom Mauro returned to Venice, but San Michele was closed as a monastery the next year by the emperor's orders. In spite of this the religious remained, in secular habits, at the monastery, and Dom Mauro taught philosophy to the students of the Camaldolese college at Murano. But, in 1813, the college was transferred to the Camaldolese convent of Ognissanti at Padua, Venice being too disturbed and inimical. The following year Napoleon sent word from Venice to Rome, and Dom Mauro was at once summoned thither. In rapid succession the learned Camaldolese was appointed confessor of various congregations, examiner of bishops, and again Abbot of San Gregorio. Twice he was offered a bishopric and twice he refused. It was considered certain that he would become a cardinal, and it caused much surprise in 1823, Pius VII chose in his stead the geographer, Dom Placido Zurla (also a Camaldolese). In that year the pope died, and Cardinal della Genga, who took the name of Leo XII, was elected. On 21 March, 1828, the new pope created Dom Mauro cardinal in pectore, and the creation was formally made. Once Cappellari became Cardinal of San Callisto and Prefect of the Congregation of Propaganda. It was in this office that he successfully arranged a concordat between the Belgian Catholics and King William of Hol-
land in 1827, between the Armenian Catholics and the Ottoman Empire in 1829. On St. George's Day of the latter year Cardinal Cappellari had the joy of learning that Catholic Emancipation had become a fact in the British Isles.

On 10 February, 1829, Leo XII died, and Pius VIII, broken by the revolutions in France and in the Netherlands, followed him to the grave on 1 December, 1830. A fortnight later the Conclave began. It lasted for seven weeks. At one time Cardinal Giustiniani appeared likely to secure the requisite number of votes, but Spain interfered with a veto. At last the various parties came to an agreement, and on the feast of the Purification, Cardinal Cappellari was elected by thirty-one votes out of forty-five. He took the name of Gregory XVI, in honour of Gregory XV, the founder of Propaganda. Hardly was the new pope elected when the Revolution, which for some time had been smouldering throughout Italy, broke into flame in the Papal States. Already on 2 February the Duke of Modena had warned Cardinal Albani that the conclave must come to a speedy decision, as a revolution was imminent. The next day the duke caused the house of his erstwhile friend, Ciro Menotti, at Modena, to be burned down and arrested him and several of his fellow-conspirators. At once a revolt broke out at Reggio, and the duke fled to Mantua, taking the prisoners with him. The disturbance spread with prearranged rapidity. On 4 February Bologna revolted, drove the pro-legate out of the town, and by the eighth had hastened the tricolour instead of the papal flag. Within a fortnight nearly the whole of the Papal States had repudiated the sovereignty of the pope, and on the nineteenth Cardinal Benvenuti, who was sent to quell the rebellion, became a prisoner of the "Provisional Government". Even in Rome itself a rising occurred on 12 February; it was only averted by the ready action of Cardinal Bemotti, the new secretary of state. In these conditions, the papal forces being obviously unable to cope with the situation, Gregory decided to appeal to Austria for help. It was immediately forthcoming. On 25 February a strong Austrian force started for Bologna, and the "Provisional Government" soon fled to Ancona. Within a month the whole movement had collapsed, and on 27 March Cardinal Benvenuti was released by the rebel leaders, on the understanding that an amnesty should be granted by the pope. The cardinal's action, however, was without authority and was not recognized by the Provisional Government of Bologna or by the Austrian general. But the rebellion, for the moment, was crushed, and after an abortive attempt to seize Spoleto, from which they were dissuaded by Archbishop Mastai-Ferretti, all the leaders who were able to do so fled the country. On 3 April the pope was able to assert that order was re-established.

In the same month, the representatives of the five powers, Austria, Russia, France, Prussia and England, met in Rome to consider the question of the "Reform of the Papal States". On 21 May they issued a joint Memorandum urging on the papal government reforms in both the introduction of laymen into the administration, popular election of the communes and municipal councils, the administration of the finances by a skilled body selected largely from the laity. Gregory undertook to carry out such of these proposed reforms as he deemed practicable, but on two points he was determined not to yield: he would never admit the Jesuits to the professorium of the Catholic University and he would never permit the establishment of a council of State, composed of laymen, parallel to the Sacred College. By a succession of edicts, dated 5 July, 5 October, and 5 and 21 November, a comprehensive scheme of reform of the administration and of the trial was set at by the pope. He divided into a complex hierarchy of central, provincial and communal governments. At the head of each of these bodies respectively was to be a pro-legate, a governor or a mayor, representing the pope, and assisted by, and (in financial matters) controlled by, a council who were selected, out of a triple-elected list, by the government. All these bodies were to keep the pope informed as to the wishes and requirements of their subjects. The reform of the judiciary, as regards civil litigation, was even more thorough. An end was put to the confusing multiplicity of tribunals (in Rome no less than twelve out of the fifteen conflicting jurisdictions, including that of the arbitrary "aduore sottisimo", were abolished), and three hierarchies, composed each of three civil courts, one for Bologna and the legations, one for Romagna and the Marches, and one for Rome, were established. In each of these the agreement of any two courts inhibited further appeal, and most of the courts were to be composed largely of laymen skilled in the law. The criminal courts were not so radically reformed, but even in these an end was made of the vexatious and often tyrannous secrecy and irregularity that had hitherto prevailed.

All these reforms, however, despite their extent, were far from satisfying the aims of the revolutionary party. The Austrian troops were withdrawn on 15 July, 1831, but by December much of the Papal States was again in revolt. Papal troops were dispatched to the aid of the revolutions, but the only result was the concentration of 2000 revolutionists at Cesena. Cardinal Albani, who had been appointed commissioner-extraordinary of the legations, appealed on his own authority for aid to the Austrian General Radetzky, who at once sent troops. These forces joined the papal troops at Cesena, attacked and defeated the rebels, and by the end of January had taken triumphantly possession of the city. This time France intervened, and as a protest against the Austrian occupation, seized and held Ancona, in sheer violation of international law. The pope and Bemotti protested energetically and even Prussia and Russia disapproved of this act, but though, after long negotiations, the French command was ordered to restrain the outrages of the revolutionists in Ancona, the French troops were not withdrawn from that city until the final departure of the Austrians from the Papal States in 1838. The rebellion, however, was quelled and no further serious outbreak occurred for thirteen years. But, amidst all this activity, Gregory had not been free from anxieties for the Faith and the Universal Church. The revolutions in France and the Netherlands had created a difficult situation: the pope had been expected by the one party to condemn the change, by the other to accept it. In August, 1831, he issued the Brief, "Solicitude Ecclesiaram", in which he reiterated the statements of former Pontiffs as to the independence of the Church and its refusal to be entangled in dynastic politics. In November of the same year, the Abbe de Lamennais (q. v.) and his companions came to Rome to submit to the pope the questions in dispute between the French episcopate and the government. The directors of "L'Avenir", Gregory received them kindly, but caused them to be given more than one hint that the result of their appeal would not be
favourable, and that they would be wise not to press for a decision. In spite, however, of the representations of Lacordaire, Lamennais persisted, with the result that, on the feast of the Assumption, 1832, the pope issued the Encyclical “Mirari vos”, in which were condemned, not only the policy of “L’Avenir”, but also many of the moral and social doctrines that were then put forward by most of the revolutionary schools. The Encyclical, which certainly cannot be considered favourable to ideas that have since become the commonplaces of secular politics, aroused a storm of criticism throughout Europe. It is well to remember, however, that some of its adversaries have not read it with great attention, and it has been sometimes criticised for statements that are not to be found in the text. Two years after its publication, the pope found it necessary to issue a further Encyclical, “Singulari noes”, in which he condemned the “Paroles d’un croyant”, the reply of Lamennais to “Mirari vos”.

But it was not only in France that errors had to be met. In Germany the followers of Hermes (q. v.) were condemned by the Apostolic Letter, “Dum acerbissima”, of 26 September, 1835. And in 1844, near the end of his reign, he issued the Encyclical, “Inter precipues machinationes”, against the unscrupulous anti-Catholic propagandists in Italy of the London Bible Society and the New York Christian Alliance, which then, as now, were chiefly successful in transforming ignorant Italian Catholics into crudely anti-clerical free-thinkers. While he was engaged in combating the libertarian movements of current European thought, Gregory was obliged also to struggle with the rulers of States for justice and toleration for the Catholic Church in their realms. In Portugal the accession of Queen Maria da Gloria was the occasion of an outburst of anti-clerical legislation. The nuncio at Lisbon was commanded to leave the capital and the nunciature was suppressed. All ecclesiastical privileges were abolished, bishoprics filled by the ex-kings, Dom Miguel, were declared vacant, religious houses were suppressed. The pope protested in consistory, but his protest only led to severer measures, and no efforts on his part were successful until 1841, when the growing popular uneasiness forced the queen to come to terms.

In Spain, too, the regent, Queen Maria Cristina, was able, during the minority of her daughter, Queen Isabella, to carry out an anti-clerical programme. In 1835 the religious orders were suppressed. Then the secular clergy were attacked: twenty-two dioceses were left without bishops, Jansenist priests were admitted to the committee appointed to “reform the Inquisition”, the salaries of the priests were confiscated. In 1840 bishops were driven from their seats, and when the nuncio protested against arbitrary acts of the government in power, he was conducted to the frontier. Peace was not restored to the Church in Spain till after Gregory’s death.

In Prussia, at the very commencement of his reign, the question of mixed marriages was causing trouble. Pius VIII had dealt with these in a Brief of 28 March, 1830. This, however, did not satisfy the Prussian Government, and von Bunsen, the Prussian ambassador, exhausted every means, honest and dishonest, of bringing about a modification of the Catholic policy. The Archbishop of Cologne and the Bishops of Hildesheim, Münster, and Trier were induced, in 1834, to enter into a convention not to put into execution the papal legislation. But the archbishop died the following year, and his successor, von Droste zu Vischering, was a man of very different calibre. In 1836 the Bishop of Trier, feeling his end approaching, revealed the whole plot to the pope. Events moved quickly. The new Archbishop of Cologne announced his intention of obeying the Holy See, and was in consequence imprisoned by the Prussian Government. His arrest caused general indignation throughout Europe, and Prussia endeavoured to justify its action by inventing charges against the prelate. Nobody, however, believed the official story, and the Archbishop of Gnesen and Posen, who had imitated the courageous example of his brother of Cologne, was also imprisoned. But this arbitrary action aroused the indignation of German Catholics, and when King Frederick William III died in 1840 his successor was more ready to come to terms. In the end Archbishop Droste zu Vischering was given a conditio, and retired to Rome; the Archbishop of Gnesen was released unconditionally and the question at issue was quickly allowed to be decided in favour of the Catholic doctrine.

But no such success was possible in Poland and France. In the former unhappy country the Catholic religion was, then as now, inextricably united with the nationalistic aspirations. As a consequence the whole force of the Russian autocracy was employed to crush it. With monstrous cruelty the Ruthenian Uniates were driven or cajoled into the Orthodox communion, the heroic nuns of Minsk were tortured and enslaved, more than 160 priests were deported to Siberia. The Catholics of the Latin rite were no better treated, bishops being imprisoned and prelates deported. Gregory protested in vain, and in 1845, when the Emperor Nicholas visited his home in Bavaria, the autocrat for his tyranny. We are told that the Czar made promises of reform in his treatment of the Church, but, as might have been expected, nothing was done.

In France, the success of the Catholic revival had been so great that the anti-clericals were infuriated. Pressure was brought to bear upon the Government to obtain the suppression of the Jesuits, always the first to be attacked. M. Guizot sent to Rome Pellegrino Rossi, a former leader of the revolutionary party in Switzerland, to negotiate directly with Cardinal Lambruschini (q. v.), who had replaced Bernetti in 1836 as secretary of state. But Gregory and Lambruschini were both firmly opposed to any attack on the society. Rossi, therefore, turned his attention to Father Roothaan, the General of the Jesuits, and
through the Congregation of Ecclesiastical Affairs, was successful in obtaining a letter to the French provincials advising that the novitiates and other houses should be gradually diminished or abandoned.

The reign of Gregory was drawing to its close. In August, 1841, with the intention of entering into closer relations with his people, he undertook a tour through Umbria to Loreto, thence to Ancona, and on to Fabriano, where he visited the relics of St. Romuald, the founder of the Camaldolese. He returned by Assisi, Viterbo and Orvieto, reaching Rome by the beginning of October. The progress had cost 2,000,000 lire; but it is very doubtful whether it was an intended result. Cardinal Lambruschini, to whom the pope as he grew older confided more and more of the actual direction of state affairs, was even more arbitrary and less accessible to modern political doctrines than Bernetti; the discontent grew and threatened. In 1843 there were attempts at revolt in Romagna and Umbria, which were suppressed with relentless severity by the special legates, Cardinals Vannicelli and Massimo. In September, 1845, the city of Rimini was again captured by a revolutionary force, which, however, was obliged to retire and seek safety in Tuscany. But the impassioned appeals of Nicholaus of Farini, amended by Legnaro, were repeated throughout Italy and all Europe, and the fear was only too well founded that the Papal States could not long outlast Gregory XVI. On 20 May, 1846, he felt himself failing, and ordered Crétineau-Joly to write the history of the secret societies, against which he had struggled vainly. A few days later the pope was taken ill with coryza in the face. At first the attack was not thought to be serious, but on 31 May his strength suddenly failed, and it was seen that the end was near. He died early on 9 June, with but two attendants near him. His tomb, by Amici, is in St. Peter's.

Gregory XVI has been treated with but scant respect by later historians, but he has by no means deserved their contempt. It is true that in political questions he showed himself almost as opposed as his immediate predecessors to even a minimum of democratic progress. But in this he was but similar to his time, and he used his position as a rallying point for the young and for the weak, and his reputation is still greater among the poor and the underprivileged. His tact and skill as a statesman, and his sagacity in dealing with the great powers of the day, have never been disputed. His policy was drawn up in accordance with the advice of his chief minister, Cardinal Rampolla, who was at the same time a statesman of great ability and great experience. His policy was based on the idea of the Papacy as a power which could not be conquered by force, but which could be resisted by the strength of its moral influence. The pope's policy was based on the idea of the Papacy as a power which could not be conquered by force, but which could be resisted by the strength of its moral influence. The pope's policy was based on the idea of the Papacy as a power which could not be conquered by force, but which could be resisted by the strength of its moral influence.
Gregory of Heimburg, humanist and statesman, b. at Würzburg in the beginning of the fifteenth century; d. at Tharandt near Dresden, August, 1472. About 1430 he received the degree of Doctor of Both Laws at the University of Padua. Filled with the prevalent ideas of reform, this ardent and eloquent jurist was naturally attracted to the Council of Basle, convened, according to the assembled prelates, for "the extirpation of heresy, and of the Greek schism ... and for the reformation of the Church in her Head and members." While at the Council he became the secretary of Eneas Sylvius. He left Basle in 1433, when he was elected syndic of Nuremberg, in which capacity he served until 1461. After the election of Albert II of Austria, he was sent, with John of Lyssura, to the Council of Basle to demand that the proceedings against the pope be suspended, and that the council of Ferrara be dissolved. The negotiations with the Greeks be carried on in a German city. In 1446 he again was placed at the head of an embassy to Eugene IV. The pope had deposed the Archbishops of Cologne and Trier, both electoral princes, who favoured the antipope Felix V. The other electors favored Eugene IV, and so the case was referred to certain decrees of Basle; (2) the convocation of a general council in a German city within three months; (3) the acceptance of the article on the superiority of the council over the pope; and (4) the reinstating of the two deposed archbishops. But Gregory's mission was unsuccessful. On the advice of Frederick III the pope sent Cardinals Tornasalo of Sarzana and Carvajal, with Nicholas of Cusa, as legates to the Diet of Frankfurt, 14 Sept., 1446. With them was Eneas Sylvius, now the private secretary of Frederick III. Some of the electors were won over to the cause of the pope, a new entity was organized; and in February, 1447, shortly before the death of Eugene, the four Bulls constituting the Concordat of the Princes were promulgated. In Feb., 1448, a complete agreement was reached in the Concordat of Vienna, concluded between Frederick III and Nicholas V. Gregory, who had considered every declaration of neutrality a parliamentary, was disappointed at this turn of events and decided to abandon ecclesiastical politics. During the negotiations between the pope and the electors there appeared the anonymous "Admonitio de injustis usurpationibus paparum" or, as Flaccius entitled it, "Confutatio primatus papa," which is generally ascribed to Gregory. In 1459 Gregory entered the service of Albert of Austria and his opposition to papal authority was again aroused. Eneas Sylvius had ascended the papal throne as Pius II the same year, and soon afterwards (1459) summoned the princes of Christendom to Mantua to plan a crusade against the Turks. Gregory was present as the representative of Bavaria-Landshut, Kurmainz, and the Archduke Albert of Austria. The failure of the project was partly due to his influence. Sigismund of Austria, on his return from the Congress of Mantua, imprisoned Nicholas of Cusa, Bishop of Brixen, with whom he was quarrelling over certain fiats. He was excommunicated 1 June, 1460, through Gregory's influence at the general council. Gregory went to Rome, but to no avail, and on his return journey posted the duke's appeal on the doors of the cathedral of Florence. The pope then excommunicated him and ordered the Council of Nuremberg to confiscate his property (18 October, 1460). Gregory answered in January, 1461, with an appeal to a general council. Pius II renewed the excommunication and commissioned Bishop Lelio of Feltre to reply to Gregory's appeal. The "Replica Theodori Lelii episcopi Feltrensis pro Pio Vapita II et sedi Romanæ" brought forth from Gregory his "Apologia," a new embassy and the blasphemias Theodori Lelii," together with his "De potestate ecclesiae Romanae," in which he defended the theories of Basle. His next important writing, "Inventiva in Nicolaum de Cusa," appeared in 1461. Shortly before the death of Pius II in 1464, Sigismund went to Rome, but Gregory was not absolved. In 1466 he was taken into the service of George Podiebrad, King of Bohemia, and exercised a great influence on the Bohemian king's anti-Roman policy. In two apologies for Podiebrad Gregory violently attacked Pope Paul II, whom he charged with immorality. He was again excommunicated, and his property at Dettelbach confiscated. After the death of Podiebrad (22 March, 1471) Gregory took refuge in Saxony. Writing to the Council of Würzburg as early as 29 January, 1471, he said he was never accused of having erred in one article of Christian faith. He applied by letter to Sixtus IV, who gave him the bishopric of Meissen that the Church might not lose its international character. He was buried in the Kreuzkirche at Dresden. His writings were published at Frankfurt in 1608 under the title "Scripta nervosa justitiae plena ex manu scriptis nunc primum eruta." They may be found in Goldast, "Monarchia," in Freher, "Scriptores rerum Germanicarum," in Echternach, "Dictionary of Christian Europe," in Brochhaus, "Gregor von Heimburg (Leipzig, 1861); Joachim-Born, "Gregor Heimburg" (Bamberg, 1891); Pastora, "The History of the Popes," 2nd ed., St. Louis, 1923; IV; Schreiber in Kirchenlex. f. prot. Theol., s. v. Heimburg; Teuchner in Reimach. für Prot. Theol., s. v. Gregor von Heimburg; Knöffler in Kirchliches Handlex., s. v. Heimburg.

Leo A. Kelly.

Gregory of Nazianzen, Saint, b. at Arianzu, in Asia Minor, c. 325; d. at the same place, c. 389. He was son—one of three children—of Gregory, Bishop of Nazianzen (229-374), and of Nonna, a daughter of Christian parents. The saint's father was originally a member of the heretical sect of the Hypsistarii, or Hypsistai, and was converted to Catholicity by the influence of his pious wife. His two sons, who seem to have been born between the dates of their father's priesthood, were educated in the Hausulius, or at a famous school at Cassarea, capital of Cappadocia, and educated by Origen, probably the same who was afterwards tutor of St. John Chrysostom. Here commenced the friendship between Basil and Gregory which intimately affected both their lives, as well as the development of the theology of their age. From
Cæsarea in Cappadocia Gregory proceeded to Cæsarea in Palestine, where he studied rhetoric under Thespesius; and thence to Alexandria, of which Athanasius was then bishop, though at the time in exile. Setting out by sea from Alexandria to Athens, Gregory was all but lost in a great storm, and some of his biographers infer—though the fact is not certain—that when in danger of death he and his companions received the rite of baptism. He had certainly not been baptized in infancy, though dedicated to God by his pious mother; but there is some authority for believing that he received the sacrament, not on his voyage to Athens, but on his return to Nazianzus some years later. At Athens Gregory and Basil, who had parted at Cæsarea, met again, renewed their youthful friendship, and studied rhetoric together under the famous teachers Himerius and Proclus. Among their fellow-students was Julian, afterwards known as the Apostate, whose real character Gregory asserts that he had even then discerned and thoroughly distrusted. The saint's studies at Athens (which Basil left before his friend) extended over some ten years; and when he departed in 356 for his native province, visiting Constantinople on his way home, he was about thirty years of age.

Arrived at Nazianzus, where his parents were now advanced in age, Gregory, who had by this time firmly resolved to devote his life and talents to God, anxiously considered the plan of his future career. To a young man of his high attainments a distinguished secular career was open, either that of a lawyer or of a professor of rhetoric; but his yearnings were for the monastic or ascetic life, though this did not seem compatible either with the Scriptural studies in which he was deeply interested, or with his filial duties at home. As was natural, he consulted his beloved friend Basil in his perplexity as to his future; and he has left us in his own writings an extremely interesting narrative of their intercourse at this time, and of their common resolve (based on somewhat different motives, according to the decided differences in their characters) to quit the world for the service of God alone. Basil retired to Pontus to lead the life of a hermit; but finding that Gregory could not join him there, came and settled first at Tiberina (near Gregory's own home), then at Neocæsarea, in Pontus, where he lived in holy seclusion for some years, and gathered round him a brotherhood of cenobites, among whom his friend Gregory was for a time included. After a sojourn here for two or three years, during which Gregory edited, with Basil, some of the exegetical works of Origen, and also helped his friend in the compilation of his famous rules, Gregory returned to Nazianzus, leaving with regret the peaceful hermitage where he and Basil (as he recalled in their subsequent correspondence) had spent such a pleasant time in the labour both of hands and of heads. On his return home Gregory was instrumental in bringing back to orthodoxy his father who, perhaps partly in ignorance, had subscribed the heretical creed of Rimini; and the aged bishop, desiring his son's presence and support, overruled his scrupulous shrinking from the priesthood, and forced him to accept ordination (probably at Christmas, 361). Wounded and grieved at the pressure put upon him, Gregory fled back to his solitude, and to the company of Basil; but after some weeks' reflection returned to Nazianzus, preached his first sermon on Easter Sunday, and afterwards wrote the remarkable apologetic oration, which is really a treatise on the priestly office, the foundation of Chrysostom's "De Sacerdotio", of Gregory the Great's "Cura Pastoralis", and of countless subsequent writings on the same subject.

During the next few years Gregory's life at Nazianzus was saddened by the deaths of his brother Cæsarius and his sister Gorgonia, at whose funerals he preached two of his most eloquent orations, which are still extant. About this time Basil was made Bishop of Cæsarea and Metropolitan of Cappadocia, and soon afterwards the Emperor Valens, who was jealous of Basil's influence, divided Cappadocia into two provinces. Basil continued to claim ecclesiastical jurisdiction, as before, over the whole province, but this was disputed by Anthimus, Bishop of Tyana, the chief city of New Cappadocia. To strengthen his position Basil founded a new see at Sasima, resolved to have Gregory as his first bishop, and accordingly made him consecrated, though greatly against his will. Gregory, however, was set against Sasima from the first; he thought himself utterly unsuited to the place, and the place to him; and it was not long before he was transferred to his diocese and returned to Nazianzus as coadjutor to his father. This episode in Gregory's life was unhappily the cause of an estrangement between Basil and himself which was never altogether removed; and there is no extant record of any correspondence between them subsequent to Gregory's leaving Sasima. Meanwhile he occupied himself sedulously with his duties as coadjutor to his aged father, who died early in 378, and was soon following him to the grave. Gregory, who was now left without family ties, devoted to the poor the large fortune which he had inherited, keeping for himself only a small piece of land at Arius. He continued to administer the diocese for about two years, refusing, however, to become the bishop, and continually urging the appointment of a successor to his father. At the end of 378 he withdrew to a monastery at Seleucia, living there in solitude for some three years, and preparing (though he knew it not) for what was to be the crowning work of his life. About the end of this period Basil died. Gregory, in his own state of health prevented his being present either at the death-bed or funeral; but he wrote a letter of condolence to Basil's brother, Gregory of Nyssa, and composed twelve beautiful memorial poems or epitaphs to his departed friend.

Three weeks after Basil's death, Theodosius was
advanced by the Emperor Gratian to the dignity of Emperor of the East. Constantinople, the seat of his empire, had been for the space of about thirty years (since the death of the saintly and martyred Bishop Paul) practically given over to Arianism, with an Arian prelate, Demophilus, enthroned at St. Sophia’s. The remnant of persecuted Catholics, without either courage or prudence, applied to the Emperor to choose him to place himself at their head and organize their scattered forces; and many bishops supported the demand. After much hesitation he gave his consent, proceeded to Constantinople early in the year 379, and began his mission in a private house which he describes as “the new Shiloh where the Ark was fixed”, and as “an Asylum, a harmless box in the temple of the temple”. Not only the faithful Catholics, but many heretics gathered in the humble chapel of the Anastasia, attracted by Gregory’s sanctity, learning and eloquence; and it was in this chapel that he delivered the five wonderful discourses on the faith of Nicea—unfolding the doctrine of the Trinity while safeguarding the Unity of the Godhead—which gained for him, alone of all Christian teachers except the Apostle St. John, the special title of Theologus or the Divine. He also delivered at this time eloquent panegyrics on St. Cyprian, St. Athanasius, and the Machabees, which made him most oratorious. He found himself exposed to persecution of every kind from without, and was actually attacked in his own chapel, whilst baptizing his Easter neophytes, by a hostile mob of Arians from St. Sophia’s, among them being Arian monks and infuriated women. He was saddened, too, by dissensions among his own little flock, some of whom openly charged him with holding Trithestic errors. St. Jerome became about this time his pupil and disciple, and tells us in glowing language how much he owed to his erudite and eloquent teacher. Gregory was consoled by the approval of Peter, Patriarch of Constantinople (Duchesne’s opinion, that the patriarch was from the first jealous or suspicious of the Cappadocian bishop’s influence in Constantinople, does not seem sufficiently supported by evidence), and Peter appears to have been desirous to see him appointed to the bishopric of the capital of the East. Gregory, however, unwilling to impose himself on Peter, to whom he had been previously introduced by the capable adventurer called Hero, or Maximus, who came to Constantinople from Alexandria in the guise (long hair, white robe, and staff) of a Cynic, and professed to be a convert to Christianity, and an ardent admirer of Gregory’s sermons. Gregory entertained him hospitably, gave him his complete confidence, and pronounced a public panegyric on him in his presence. Maximus’s intrigues to obtain the bishopric for himself found support in various quarters, including Alexandria, which the patriarch Peter, for what reason precisely it is not known, had turned against Gregory; and certain Egyptian bishops deplored by Peter, suddenly appeared, congratulated Maximus as Catholic Bishop of Constantinople, while Gregory was confined to bed by illness. Gregory’s friends, however, rallied round him, and Maximus had to fly from Constantinople. The Emperor Theodosius, to whom he had recourse, refused to recognize any bishop other than Gregory, and Maximus retired in disgrace to Alexandria.

Theodosius received Christian baptism early in 380, at Thessalonica, and immediately addressed an edict to his subjects at Constantinople, commanding them to adhere to the faith taught by St. Peter, and proceeded by the Roman pontiff, which was afterward to be called Catholic. In November, the emperor entered the city, and called on Demophilus, the Arian bishop, to subscribe to the Nicene creed; but he refused to do so, and was banished from Constantinople. Theodosius determined that Gregory should be bishop of the new Catholic see, and himself accompanied him to St. Sophia’s, where he was enthroned in presence of an immense crowd, who manifested their feelings by hand-clapings and other signs of joy. Constantinople was now restored to Catholic unity; the emperor, by a new edict, gave back all the churches to Catholic use; Arians and other heretics were forbidden to hold public assemblies; and the name of Catholic was restricted to adherents of the orthodox and Catholic faith.

Gregory had hardly settled down to the work of administration of the Diocese of Constantinople, when Theodosius carried out his long-cherished purpose of summoning thither a general council of the Eastern Church. One hundred and fifty bishops met in council at Constantinople on May 281, and proclaims plainly states, to confirm the faith of Nicene, and to appoint a bishop for Constantinople (see Constantinople, The First Council of). Among the bishops present were thirty-six holding semi-Arian or Macedonian opinions; and neither the arguments of the orthodox prelates nor the eloquence of Gregory, who preached at Pentecost, in St. Sophia’s, as the subject of the Holy Spirit, availed to persuade them to sign the orthodox creed. As to the appointment of the bishopric, the confirmation of Gregory to the see could only be a matter of form. The orthodox bishops were all in his favour, and the objection (urged by the Easternian and Macedonian party, the council later) that his translation from one see to another was in opposition to a canon of the Nicene council was obviously unfounded. The fact was well known that Gregory had never, after his forced consecration at the instance of Basil, entered on possession of the See of Sasima, and that he had later exercised his episcopal functions at Naisianus, not as bishop of that diocese, but merely as coadjutor of his father. Gregory was accordingly recognized by the council as lawful Bishop of Constantinople, and was placed in the episcopal chair by Meletius, the venerable Bishop of Antioch, who died almost immediately afterwards. Gregory succeeded Meletius as president of the council, which found itself at once called on to deal with the difficult question of appointing a successor to the deceased bishop. There had been an understanding between the two orthodox parties at Antioch, of Meletius and Maximus, whereby the respective bishops, that the survivor of either should succeed as sole bishop. Paulinus, however, was a prelate of Western origin and creation, and the Eastern bishops assembled at Constantinople declined to recognize him. In vain did Gregory urge, for the sake of peace, the retention of Paulinus in the see for the remainder of his life, already far advanced; the Fathers of the council refused to listen to his advice, and resolved that Meletius should be succeeded by an Oriental priest. “It was in the East that Christ was born” was one of the arguments they put forward; and Gregory’s retort, “Yes, and it was in the East that Christ was put to death and eternally made not to be seen; Drusian, a priest of Antioch, was elected to the vacant see; and Gregory, who relates that the only result of his appeal was a cry like that of a flock of jackdaws” while the younger members of the council “attacked him like a swarm of wasps”, quitted the council, and left also his official residence, close to the church of the Holy Apostles.

Gregory had now come to the conclusion that not only the opposition and disappointment which he had met with in the council, but also his continued state of ill-health, justified, and indeed necessitated, his resignation of the See of Constantinople, which he held for only a few months. A deputation of two, from before the council, intimated that he was ready to be another Jonas to pacify the troubled waves, and that all he desired was rest from his labours, and leisure to prepare for death. The Fathers made no protest against this announcement, which some among them
doubtless heard with secret satisfaction; and Gregory, at once sought and obtained, from the emperor, permission to resign his see. In June, 381, he preached a farewell sermon before the council, and in presence of an overflowsing congregation. The peroration of this discourse is of singular and touching beauty, and unsurpassed even among his many eloquent orations. Very soon after its delivery he left Constantinople (Necemiah of Cilicia, who succeeded him in the bishopric), and retired to his old home at Nazianus. His two extant letters addressed to Nectarius at this time are noteworthy as affording evidence, by their spirit and tone, that he was actuated by no other feelings than those of interested goodwill to the defender, the interests of which he had a special care, and towards his successor in the episcopal charge. On his return to Nazianus, Gregory found the Church there in a miserable condition, being overrun with the erroneous teaching of Apollinaris the Younger, who had succeeded from the Catholic communion a few years previously, and died shortly after Gregory himself. Gregory's anxiety was now to find a learned and zealous bishop who would be able to stem the flood of heresy which was threatening to overwhelm the Christian Church in that place. All his efforts were at first unsuccessful, and he consented at length with much reluctance to take the place himself. He combated for a time, with his usual eloquence and as much energy as remained to him, the false teaching of the adversaries of the Church; but he felt himself too broken in health to continue the active work of the episcopate, and wrote to the Archbishop of Tyana urgently appealing to him for the appointment of another bishop. His request was granted, and his cousin Eulalius, a priest of holy life to whom he was much attached, was duly appointed to the See of Nazianus. This was towards the end of the year 383, and Gregory, happy in seeing the care of the diocese entrusted to a man after his own heart, immediately withdrew to Arianus, the scene of his birth and his childhood, where he spent the remaining years of his life in retirement, and in the literary labours, which were so much more congenial to his character than the harassing work of ecclesiastical administration in those stormy and troubled times. Looking back on Gregory's career, it is difficult not to feel that from the day when he was compelled to accept priestly orders, until that which saw him return from Constantinople to Nazianus to end his life in retirement and obscurity, he seemed constantly to be placed, through no intentional act of his own, in positions opposed to his disposition and temperament, and not really calculated to call for the exercise of the most remarkable and attractive qualities of his mind and heart. Affectionsate and tender by nature, of highly sensitive temperament, simple and humble, lively and cheerful by disposition, yet liable to despondency and irritability, constitutionally timid, and somewhat deficient, as it seemed, both in decision of character and in self-control, he was very human, very lovable, very gifted—yet not, one might be inclined to think, naturally adapted to play the remarkable part which he did during the period preceding and following the opening of the Council of Constantinople. He entered on his difficult and arduous work in that city within a few months of the death of Basil, the beloved friend of his youth; and Newman, in his appreciation of Gregory's character and career, suggests the striking thought that it was his friend's lofty and heroic spirit which had entered him, and made him take the tasks and important duties which fell to his lot in the work of re-establishing the orthodox and Catholic faith in the eastern capital of the empire. It did, in truth, seem to be rather with the firmness and intrepidity, the high resolve and unflinching perseverance, characteristic of Basil, than in his own proper character, that of a gentle, fastidious, retiring, timorous, peace-loving saint and scholar, that he sounded the war-trumpet during those anxious and turbulent months, in the very stronghold and headquarters of militant heresy, utterly regardless of the actual and pressing danger to his safety, and even his life, which never ceased to menace him. If we are to understand the motive which impelled him on his departed friend, on his return to Asia from Constantinople, "the reward of the warfare which we have waged, which we have endured." It is impossible to doubt, reading the intimate details which he has himself given us of his long friendship with, and deep admiration of, Basil, the realising of his sternest hopes, and the loved friend had to a great extent moulded and informed his own sensitive and impressionable personality and that it was this, under God, which served and inspired him, after a life of what seemed, externally, one almost of failure, to co-operate in the mighty task of overthrowing the monstrous heresy which had so long devastated the greater part of Christendom, and bringing about at length the pacification of the Eastern Church.

During the six years of life which remained to him after his final retirement to his birth-place, Gregory was absorbed, in the administration of his diocese, in the poetic works which have come down to us. These include a valuable autobiographical poem of nearly 2000 lines, which forms, of course, one of the most important sources of information for the facts of his life; about a hundred shorter poems relating to his past career; and a large number of epitaphs, epigrams, and epistles to well-known people of the day. Many of his later personal poems refer to the continuous illness and severe sufferings, both physical and spiritual, which assailed him during his last years, and doubtless assisted to perfect him in those saintly qualities which had never been wanting to him, rudely shaken though he had been by the trials and buffets of his life. In the tiny plot of ground at Arianus, all (as has already been said) that remained to him of his rich inheritance, he wrote and meditated, as he tells, by a fountain near which there was a shady walk, his favourite resort. Here, too, he received occasional visits from intimate friends, as well as sometimes from strangers attracted to his retreat by his reputation for sanctity and learning; and here he peacefully breathed his last. The exact date of his death is unknown, but from a passage in Jerome (De Script. Ecc.) it may be assigned, with reasonable certainty, to the year 389. Much of what he wrote has been preserved, and has been frequently published, the "editio princeps" of the poems being the Aldine (1504), while the first edition of his collected works appeared in Paris in 1609—11. The Bodleian catalogue contains more than thirty folio pages enumerating various editions of Gregory's works, of which the best and most complete are the Benedictine edition (two folio volumes, begun in 1778, finished in 1840) and the edition of Migne (four volumes XXXV—XXXVIII, in P. G., Paris, 1857—1862).

Poetical Compositions.—These, as already stated, comprise autobiographical poems, epitaphs. The epitaphs have been translated by Thomas Drant (London, 1568), the epitaphs by Boyd (London, 1826), while other poems have been gracefully and charmingly paraphrased by Newman in his "Church of the Fathers". Jerome and St Sidras say that Gregory wrote more than 30,000 verses; if
this is not an exaggeration, fully two-thirds of them have been lost. Very different estimates have been formed of the value of his poetry, the greater part of which was written in advanced years, and perhaps rather as a relaxation from the cares and troubles of life than as a serious pursuit. Delicate, graphic, and flowing as are many of his verses, and giving ample evidence of the cultured and gifted intellect with which, they seem, they were held together (the comparison would be an unfair one, had not many of them been written expressly to supersede and take the place of the works of heathen writers) the great creations of the classic Greek poets. Yet Villemain, no mean critic, places the poems in the front rank of his composition, and thinks that his most of them that he maintains that the writer ought to be called, pre-eminently, not so much the theologian of the East as "the poet of Eastern Christendom".

Prose Epistles. These, by common consent, belong to the finest literary productions of Gregory's age. All that are extant are finished compositions; and that the writer excelled in this kind of composition is shown from one of them (Ep. cxx, to Nicobulus) in which he enlarges with admirable good sense on the rules by which all letter-writers should be guided. It was at the request of Nicobulus, who believed, and rightly, that these letters contained much of permanent value, that the Emperor Theodosius II. edited the collection containing the greater number of them which has come down to us. Many of them are perfect models of epistolary style—short, clear, couched in admirably chosen language, and in turn witty and profound, playful, affectionate and acute.

Orationes. Both in his own time and by the general verdict of posterity, Gregory was recognized as one of the very foremost orators who have ever adorned the Christian Church. Trained in the finest rhetorical schools of his age, he did more than justice to his distinguished teachers; and while boasting or vainglory was foreign to his nature, he frankly acknowledged his consciousness of his remarkable oratorical gifts, and his satisfaction at having been enabled to cultivate them fully in his youth. Basil and Gregory, it has been said, were the pioneers of Christian eloquence, modeled on, and inspired by, the noble and sustained oratory of Demosthenes and Cicero, and calculated to move and impress the most cultivated and critical audiences of the age. Only comparatively few of the numerous orations delivered by Gregory have been preserved to us, consisting of discourses spoken by him on widely different occasions, but all marked by the same lofty qualities. Faults they have, of course, of length, digression, excessive ornament, strained antithesis, laboured metaphors, and occasional over-violence of invective. But their merits are far greater than their defects, and no one can read them without being struck by the noble phraseology, perfect command of the purest Greek, high imaginative powers, lucidity and incisiveness of thought, fiery zeal and transparent sincerity of intention, by which they are distinguished. Hardly any of Gregory's extant sermons are direct expositions of Scripture, and they have for this reason been adversely criticized. Bossuet, however, points out with perfect truth that many of these discourses are really nothing but a skilful interweaving of Scriptural texts, a profound knowledge of which is evident from every line of them.

Gregory's claims to rank as one of the greatest theologians of the early Church are based, apart from his reputation among his contemporaries, on what he wrote himself in his capacity as the master of Constantine, in the course of his year 380. In estimating the scope and value of these famous utterances, it is necessary to remember what was the religious condition of Constantinople when Gregory, at the urgent instance of Basil, of many other bishops, and of the sorely-tried Catholics of the Eastern capital, went thither to undertake the spiritual charge of the faithful. It was less as an administrator, or an organizer, than as a man of saintly life and of oratorical gifts famous throughout the Eastern Church, that Gregory was asked, and consented, to undertake his difficult mission; and he had to exercise those gifts in dealing not only with a numerous but very wayward flock, who had been dividing and desolating Constantinople for many years. Arianism in every form and degree, incipient, moderate, and extreme, was, of course, the great enemy, but Gregory also had to wage against the Apollinarian teaching, which denied the humanity of Christ, and, no less, as against the assertion on the part of some of them that he maintains that the writer ought to be called, pre-eminently, not so much the theologian of the East as "the poet of Eastern Christendom".

A saint first, and a theologian afterwards, Gregory in one of his early sermons at the Anastasia insisted on the principle of reverence in treating of the mysteries of faith (a principle entirely ignored by his Arian opponents), and also on the purity of life and example which all who dealt with these high matters must show forth if their teaching was to be effectual. In the first and second of the five discourses he develops these two principles at some length, urging in both the necessity of example and the duty of purity for all who would know God aright to lead a supernatural life, and to approach so sublime a study with a mind pure and free from sin. The third discourse (on the Son) is devoted to a defence of the Catholic doctrine of the Trinity, and a demonstration of its consonance with the primitive doctrine of the Unity of God. The eternal existence of the Son and Spirit are insisted on, together with their dependence on the Father as origin or principle; and the Divinity of the Son is argued from Scripture against the Arians, whose misunderstanding of various Scriptural texts is exposed and confuted. In the fourth discourse, on the same subject, the union of the Godhead and Manhood in Christ Incarnate is set forth and luminously proved from Scripture and reason. The fifth and final discourse (on the Holy Spirit) is directed partly against the Macedonian heresy, which denied altogether the Divinity of the Holy Ghost, and also against those who reduced the Third Person of the Trinity to a mere impersonal energy of the Father. Gregory, in reply to the contention that the Divinity of the Spirit is not expressed in Scripture, quotes and comments on several passages which teach the doctrine by implication, adding that the fact that the great truth was intended to be gradual, following on the revelation of the Divinity of the Son. It is to be noted that Gregory nowhere formulates the doctrine of the Double Procession, although in his luminous exposition of the Trinitarian doctrine there are many passages which seem to anticipate the fuller teaching of the Quicumque vult. No summary, not even a faithful verbal translation, can give any adequate idea of the combined subtlety and lucidity of thought, and rare beauty of expression, of these wonderful discourses, in which, as one of his French critics truly observes, Gregory "has summed up and closed the controversy of a whole century." The best evidence of their value and power lies in the fact that for fourteen centuries they have been a mine whence the greatest theologians of Christendom have drawn treasures of wisdom to illustrate and support their own teaching on the deepest mysteries of the Catholic Faith.

Gregory of NeoCesarea, Saint, known as Thaumaturgus (4 Cæsarius, the miracle-worker), b. at NeoCesarea, Phrygia, died 270-275. Among those who built up the Christian Church, extended its influence, and strengthened its institutions, the bishops of Asia Minor occupy a high position; among them Gregory of NeoCesarea holds a very prominent place. His pastoral work is but little known, and his theological writings have reached us in a very incomplete state. In this semi-obscure personality the greatness of this great man seems eclipsed and dwarfed; even his immemorial title Thaumaturgus (the wonder-worker) casts an air of legend about him. Nevertheless, the lives of few bishops of the third century are so well authenticated; it is a historical event, not a miracle, that we must regard in its work with considerable detail. Originally he was known as Theodore (the gift of God), not an exclusively Christian name. Moreover, his family was pagan, and he was unacquainted with the Christian religion till after the death of his father, at which time he was fourteen years of age. He had a brother Athenodorus, and, on the advice of one of their tutors, the young men were anxious to study law at the law-school of Beirut, then one of the four or five famous schools in the Hellenic world. At this time, also, their brother-in-law was appointed assessor to the Roman Governor of Palest- ine, and therefore they were an escort to their sister as far as Cesarea in Palestine. On arrival in that town they learned that the celebrated scholar Origen, head of the catechetical school of Alexandria, resided there. Curiosity led them to hear and converse with the master, and his irresistible charm did the rest. Soon both youths forgot all about Beirut and Roman law, and gave themselves up to the great Christian teacher, who gradually won them over to Christianity. In his panegyric on Origen, Gregory describes the method employed by that master to win the confidence and esteem of those he wished to convert; how he mingled a persuasive and philosophical argument put cleverly at once and unexpectedly. Persuasive skill rather than bare reasoning, an evident sincerity and an ardent conviction were the means Origen used to make converts. Gregory took up at first the study of philosophy; theology was afterwards added, but his mind remained always inclined to philosophical study, so much so indeed that in his youth he cherished strongly the hope of demonstrating that the Christian religion was the only true and good philosophy. For seven years he underwent the mental and moral discipline of Origen (231 to 238 or 239). There is no reason to believe that his studies were interrupted by the persecutions of Maximinus of Thrasea; his alleged journey to Alexandria, at this time, may therefore be considered at least doubtful, and probably never occurred. In 238 or 239 the two brothers returned to their native Ptolemais. Before leaving Palestine Gregory de- livered in presence of Origen a public farewell oration in which he returned thanks to the illustrious master he was leaving. This oration is valuable from many points of view. As a rhetorical exercise it exhibits the excellent training given by Origen, and his skill in developing logical and poetic thought. It also the art of adulation then permissible towards a living person in an assembly composed mostly of Christians, and

Christian in temper. It contains, moreover, much useful information concerning the youth of Gregory and his master's method of teaching. A letter of Origen refers to the departure of the two brothers, but it is not easy to determine whether it was written before or after the delivery of this oration. In it Origen exhort (for it is true) his pupil to bring the intellectual treasures of the Greeks to the service of Christian philosophy, and thus imitate the Jews who employed the golden vessels of the Egyptians to adorn the Holy of Holies. It may be supposed that despite the original abandonment of Beirut and the study of pagan law, Gregory did not entirely lose sight of the original purpose of his journey to the Orient; as a matter of fact, he returned to Pontus with the intention of practising law. His plan, however, was again laid aside, for he was soon consecrated bishop of his native Cesarea, by Phaedimus, Bishop of Amasea and Metropolitan of Pontus. This fact illustrates in an interesting way the growth of the hierarchy in the primitive Church, for we know that the Christian community at Cesarea was very small, being only seventeen souls, and it was given a bishop. We know, moreover, from ancient canonical documents, that it was possible for a community of even ten Christians to have their own bishop. When Gregory was consecrated he was about 40 years old, and he ruled his diocese for thirty years. Although we know nothing definite as to his methods, we cannot doubt that he must have shown much zeal in increasing the little flock with which he began his episcopal administration. From an ancient source we learn a fact that is at once a curious coincidence, and throws light on his missionary zeal; whereas he began with only seventeen Christians, at his death there remained but seventeen pagans in the whole town of Cesarea. The many miracles which won for him the title of "Thaumaturgus" were doubtless performed in these small districts, and the mention of the latter is a marvellous that a serious historian cannot accept conditionally all its product; yet if ever the title of "wonder-worker" was deserved, Gregory had a right to it.

It is to be noted here that our sources of information as to the life, teaching, and actions of Gregory Thau- mumaturgus are all more or less open to criticism. Besides the details given us by Gregory himself, and of which we have already spoken, there are four other sources of information, all, according to Kötschau, derived from oral tradition; indeed, the differences between them force the conclusion that they cannot all be derived from one original document. Of these sources two are: Life and Panegyric of Gregory by St. Gregory of Nyssæ (P. G., XLVI, coll. 893 sqq.); "Historia Miracula- lorum", by Rufinus; an account in Syriac of the great actions of Blessed Gregory (sixth century manuscript); St. Basil, "De Spiritu Sancto"; Gregory of Nyssæ (c. v.), with the help of family traditions and a knowl- edge of the neighbourhood, has left us an account of the "Thaumaturgus" that is certainly more historical than any other known to us. From Rufinus we see that in his day (c. 400) the original story was becoming confused; the Syriac account is at times obscure and contradictory. Even the life of Gregory of Nyssæ exhibits a legendary element, though its facts were all supplied to the writer by his grandfather, St. Macrina the Elder. He relates that before his episcopal consecration Gregory retired from NeoCesarea into a solitude, and was favoured by an apparition of the Blessed Virgin and the Virgin St. John. In the latter dictated to him a creed or formula of Christian faith, of which the autograph existed at NeoCesarea when the biography was being written. The creed itself is quite important for the history of Christian doctrine (Caspari, "Alte und neue Quellen zur Gesch. d. Taufsyms und des Glaubensregel", Christiania, 1879, 1-84). Gregory of Nyssæ describes at length the miracles that gained for the Bishop of Cesarea the
title of "Thaumaturgus"; herein the imaginative element is very active. It is clear, however, that Gregory's influence must have been considerable, and his miraculous power undoubted. It might have been expected that Gregory's name would appear among those who took part in the First Council of Antioch several centuries later (Eusebius, "Hist. Eccl.", VII, xxviii); probably he took part also in the second council held there against the same heresies, for the letter of that council is signed by a bishop named Theodore, which had been originally Gregory's name (Eusebius, op. cit., VII, xxx). To attract the people to the food of the word of God, and to lead them to love the Lord, Gregory organized profane amusements as an attraction for the pagans who could not understand a solemnity without some pleasures of a less serious nature than the religious ceremony.

Writings of Gregory.—The "Oratio Panegyrica" in honour of Origen describes in detail that master's pedagogical methods. Its literary value consists less in its style than in its novelty, being the first attempt at autobiography in Christian literature. This youthful work is full of enthusiasm and genuine talent; moreover, it proves how fully Origen had won the admiration of his pupils, and how the training Gregory received from him had made a lasting impression on his later life. Gregory tells us in this work (xiii) that under Origen he read the works of many philosophers, without restriction as to school, except that of the atheists. From this reading of the old philosophers he learned to insist frequently on the unity of God; and his long experience of pagan or crudely Christian populations taught him how necessary this was. Traces of this influence are to be met with in the "Tractatus ad Theopompon", concerning the possibility and impassibility of God; this work seems to belong to Gregory, though in its general arrangement it is probably of a much later date. Ammonius and the Gnostic influence are also very strongly characteristic of the lost "Dialogus cum Aelianio" (Πρὸς Αἰλιανὸν διάλεκτον), which we learn of through St. Basil, who frequently attests the orthodoxy of the Thaumaturgus (Ep. xxviii, i, 2; ccvii, 4; ccvii, 4), and even defends him against the Sabellians, who claimed for him their teaching and quoted as his formula: στέγασα σαν ἀνθρώπον μεταχαίρομεν διὸ, σώζωσιν εὑρό (that the Father and the Son were two in intelligence, but one in substance) from the aforesaid "Dialogum cum Aelianio". St. Basil replied that Gregory was arguing against a pagan, and used the words διάμαχον not διαφωνών, i.e. in the heat of combat, not in an expediency consisting in that, and rightly, on the Divine unity. He added, moreover, that a like explanation must be given to the words στέγασα, τοίμα, (created, made) when applied to the Son, reference being to Christ Incarnate. Basil added that the text of the work was corrupt.

The "Epistola Canonica", ἐπιστολὴ κανονική (Routh, "Reliquiae Sacrae", III, 251-83) is valuable to both historian and canonist as evidence of the organization of the Church of Cæsarea and the other Churches of Pontus under Gregory's influence, at a time when the invading Goths had begun to aggravate a situation made difficult enough by the previous heretical persecutions.

We learn from this work how absorbing the episcopal charge was for a man of conscience and a strict sense of duty. Moreover it helps us to understand how a man so well equipped mentally, and with the literary gifts of Gregory, has not left a greater number of works.

Terence's "Heautontimoroumenos" (Terent. Rhet. iv) is in its kind a theological document not less precious than the foregoing. It makes clear Gregory's orthodoxy apropos of the Trinity. Its authenticity and date seem now definitely settled, the date lying between 260-270. Caspari has shown that this confession is a development of the premises laid down by Origen. Its conclusion leaves no room for doubt: "There is therefore nothing created, nothing greater or less (literally, nothing subject) in the Trinity (οὐτὸς οὖν πνεύμα τρίτον, ἡ δύον ἐν τῇ τριάδε), nothing superadded, as though it had not existed before, but had been added afterwards. Therefore the Father has never been without the Son, nor the Son without the Holy Spirit; and this unity is imperceptible forever." Such a formula, stating clearly the distinction between the Persons in the Trinity, and emphasizing the eternity, equality, immortality, and perfection, not only of the Father, but of the Son and of the Holy Spirit, proclaims a marked advance on the theories of Origen.

A Μετάφρασις στοῦ Ἐκκλησιαστῆ καὶ δύο Σολωμωντάρων or Paraphrase of Ecclesiastes is attributed to him by some manuscripts; others ascribe it to Gregory of Nazianzus; St. Jerome (De vir. illust. c. lxv, and Com. in Eccles., iv) ascribes it to our Gregory. The "Epistolae ad Philagriam" has reached us in a Syriac version. It treats of the Consubstantiality of the Son, and has also been attributed to Gregory of Nazianzus (Ep. ccxlvi; formerly Orat. xlv.); Tilmont and the Benedictines, however, deny this because it offers no expression suggestive of the Arian controversy. Draseke, nevertheless, calls attention to numerous views and expressions in this treatise that resemble the views of St. Nicholas of Myra. The brief "Triera asis of the Soul" addressed to one Tatian, in favour of which may be cited the testimony of Nicholas of Methone (probably from Procopius of Gaza), is now claimed for Gregory.

The "Κοινωνία τῶν μεταβρομένων δόξας or "Twelve Chapters on Faith" do not seem to be the work of Gregory. According to Caspari, the καθὰ μὲν πνεύμα, or brief discourse on doctrine concerning the Trinity and the Incarnation, attributed to Gregory, was composed by Apollinaris of Laodicea about 380, and circulated by his followers as a work of Gregory (Bardenhewer, "Eccles.," 1901, c. 32), and the treatise ascribed to him contains fragments attributed more or less correctly to Gregory. The fragments of the "De Resurrectione" belong rather to Pamphilus' "Apologia" for Origen. Gregory's writings were first edited by Voss (Mainz, 1604), and in P. G. C. X. For the "Tractatus ad Theopompon" see N. Lagaerde, Analytica Syriaca (London, 1888), 46-94; and Petra, Analgetica Sacra (Paris, 1888), 14; see also Kyralis, Gregorius Thaumaturgo, sein Leben, und seine Schriften (Leipzig, 1889); Köschach, De Gregorii Thaumaturgi Dankreis an Origenes (Hamburg, 1894); Patr. Bardean., vol. 17, 270. In English a complete edition of the literary remains of Gregory was Aven-Nicene Fathers (New York, 1896), 74-74; cf. also Reynolds in Dict. Ch. Biol., s. v. Gregorius (3).

H. Leclercq.

Gregory of Nyssa, Saint, date of birth unknown; d. after 385 or 386. He belongs to the group known as the "Cappadocian Fathers", a title which reveals at once his birthplace in Asia Minor and his intellectual characteristics. Gregory was born of a deeply religious family, not very richly supplied with goods, to which circumstances he probably owed the pious training of his youth. His mother Emmelia was a martyr's daughter; two of his brothers, Basil of Caesarea and Peter of Sebaste, became bishops like himself; his eldest sister, Macrina, became a model of piety and is honored as a saint. A lawyer, inclined to a life of asceticism, but died too young to realize his desires. A letter of Gregory to his younger brother, Peter, exhibits the feelings of a lively gratitude which both cherished for their elder brother Basil, whom Gregory calls "our father and our master". Probably the care of the Church between them was such as to have enabled Basil to supervise the education of his younger brothers. Basil's training was an antidote to the lessons of the pagan schools, wherein, as we know from a letter of St. Gregory of Nazianzus, Gregory of Nyssa spent some time, very probably in his early youth, for it is certain that while still a youth he was named the principal of a theological office of rector. His family, it would seem, had
endeavoured to turn his thoughts towards the Church, for when the young man chose a secular career and began the study of rhetoric, Basil renounced with him long and earnestly; when he had failed he called on Gregory's friends to influence him against that objection. At first he was in doubt; moreover, it would seem that the young man married. There exists a letter addressed to him by Gregory of Naisanavuscondoling with him on the loss of one Theosebeia, who must have been his wife, and with whom he continued to live, as with a sister, even after he had been consecrated. This is also evident from his treatise "De virginitate".

Some think that Gregory spent a certain time in retreat before his consecration as bishop, but we have no proof of the fact. His extant letters make no mention of such retirement from the world. Nor are we better informed of the circumstances of his election to the See of Nysa, a little town on the banks of the Halys, along the road between Cassarea and Ancyras. According to Gregory of Naisanavus it was Basil who performed the episcopal consecration of his brother, before he himself had taken possession of the See of Sosia; which would place the beginning of Gregory of Naisanavus on about the middle of the fourth century. The change in Gregory's career the result of a sudden vocation? St. Basil tells us that it was necessary to overcome his brother's repugnance, before he accepted the office of bishop. But this does not help us to an answer, as the episcopal charge in that day was beset with many duties. Moreover in the fourth century, early in it, and even later, it was not uncommon to express dislike of the episcopal honour, and to fly from the prospect of election. The fugitives, however, were usually discovered and brought back, and the consecration took place when a show of resistance had saved the candidate's humility. Whether it was so in Gregory's case, or whether he really did feel his own unfitness, we do not know. In any case, St. Basil seems to have regretted at times the constraint thus put on his brother, now removed from his influence; in his letters he complains of Gregory's naive and clumsy interference with his (Basil's) business. To Basil the synod called in 372 by Gregory at Ancyras seemed the ruin of his own labours. In 375 Gregory seemed to him decidedly incapable of ruling a Church. At the same time he had but faint praise for Gregory's zeal for souls.

On arriving in his see Gregory had to face great opposition. His sudden elevation may have turned against him some who had hoped for the office themselves. It would appear that one of the courtiers of Emperor Valens had solicited the see either for himself or one of his friends. When Demosthenes, Governor of Pontus, convened an assembly of Eastern bishops, a certain V disposition was felt in its sessions, accused Gregory of wasting church property, and of irregularity in his election to the episcopate, whereupon Demosthenes ordered the Bishop of Nysa to be seized and brought before him. Gregory at first allowed himself to be led away by his captors, then losing heart and discouraged by the cold and brutal treatment he met with, he took an opportunity of escape and sought a place of safety. A Synod of Nysa (376) deposed him, and he was reduced to wander from town to town, until the death of Valens in 378. The new emperor, Gratian, published an edict of tolerance, and Gregory returned to his see, where he was received with joy. At this time he seems to have lived in peace. But when Basil died; whereupon an era of activity began for Gregory. In 379 he assisted at the Council of Antioch which had been summoned because of the Meletian schism. Soon after this, it is supposed, he visited Palestine. There is reason for believing that he was sent officially to remedy the schism in Arabia. But possibly his journey did not take place until after the Council of Constantinople in 381, convened by Emperor Theodosius for the welfare of the Church, for it was the time of Arius and Pneumatisms in the East. This council was not looked on as an important one at the time; even those present at it do not actually mention it in their writings; however, though he assisted at the council, mentions it only casually in his funeral oration over Meletius of Antioch, who died during the course of this assembly.

An edict of Theodosius (30 July, 381; Cod. Theod., LXVI, tit. 1, L. 3) having appointed certain episcopal centres of Cassarea and Caphar of Cappadocia, Gregory of Nyssa and Orbeus of Melitene were chosen to fill them. At Constantinople Gregory gave evidence on two occasions of his talent as an orator; he delivered the discourse at the enthronisation of St. Gregory of Naisanavus, also the aforesaid oration over Meletius of Antioch. It is very probable that Gregory was present at another Council of Constantinople in 383; his "Oratio de deitate Filii et Spiritus Sancti" seems to confirm this. In 385 or 386 he preached the funeral sermon over the imperial Princess Pulcheria, and shortly afterwards over Empress Fiacella. A little later we meet him again as the bishop of Naisanavus. It was this Gregory who, after being sought for the repression of ecclesiastical disorders in Arabia; he then disappears from history, and probably did not long survive this journey. From the above it will be seen that his life is little known to us. It is difficult to outline clearly his personality, while his writings contain some curious analogical sequence to permit final judgment on his real character.

Works.—Exegetical.—Most of his writings treat of the Sacred Scriptures. He was an ardent admirer of Origen, and applied constantly the latter's principles of hermeneutics. Gregory is ever in quest of allegorical interpretation, and mystical meanings hidden away beneath the literal sense of texts. As a rule, however, the "great Cappadocians" tried to eliminate this tendency. His "Treatise on the Work of the Six Days" follows St. Basil's Hexameron. Another work, "On the Creation of Man", deals with the work of the Sixth Day, and contains some curious anatomical details; it was translated into Latin by Dionysius Exiguus. His account of Moses as legislator offers much fine-spun allegorising, and the same is true of his "Exposition of the Titles of the Psalms". In a brief tractsate on the Witch of Endor he says that the woman did not see Samuel, but only a demon, who put his words in her mouth. In the ninth verse of the sixth Psalm, he wrote eight homilies on Ecclesiastes, in which he taught that the soul should rise above the senses, and that true peace is only to be found in contemplation of worldly greatness. He is also the author of fifteen homilies on the Canticle of Canticles (the union of the soul with the Creator), five vaporous homilies on the Lord's Prayer, and eight highly rhetorical homilies on the Beatitudes.

Theological.—In theology Gregory shows himself more original and more at ease. Yet his originality is purely in manner, since he added little that is new. His diction, however, offers many felicitous and pleasing allusions, suggested probably by his mystic turn of mind. These grave studies were taken up by him late in life, hence he follows step by step the teaching of St. Basil and of St. Gregory of Naisanavus. Like them he defends the unity of the Divine nature and the trinity of Persons; where he loses their guidance, our dear Father's inferences in him. In his De Eucharistia (382) he applies really original; his Christo-

logological doctrine, however, is based entirely on Origen and St. Athanasius. The most important of his theological writings in his large "Catechesis", or "Oratio Catechetica", an argumentative defence in forty chapters against the Cathar...
fence of St. Basil against that heretic, and also of the Nicene Creed against Arianism; this work is of capital importance in the history of the Arian controversy. He also made the trinitarian Scholasticism against Eustathius of Sebaste. He wrote also against Arius and Sabellius, and against the Macedonians, who denied the Divinity of the Holy Spirit; the latter work he never finished. In the "De anima et resurrectione" we have a dialogue between Gregory and his deceased sister, Macrina; it treats of death, resurrection, and our last end. He defends the human nature against the futility of the astrologers in a work "On Fate", and in his treatise "On Children", dedicated to Hieros, Prefect of Capadocia, he undertook to explain why Providence permits the premature death of children.

Acetical.—He wrote also on Christian life and conduct, De l'octostasia de l'Octostasie, that is, a treatise on the Christian name or profession", addressed to Harmonius, and "On Perfection and what manner of man the Christian should be", dedicated to the monk Olympius. For the monks, he wrote a work on the Divine purpose in creation. His admirable book "On Virginity", written about 370, is addressed to men in all who read it for the desire for a life of perfect virtue.

Sermons and Homilies.—Gregory wrote also many sermons and homilies, some of which we have already mentioned; others of importance are his panegyric on St. Basil, and his sermons on the Divinity of the Son and of the Holy Ghost.

Correspondence.—A few of his letters (twenty-six) have survived; two of them offer a peculiar interest owing to the severity of his strictures on contemporary pilgrimages to Jerusalem.

For a discussion of his peculiar doctrine concerning the general restoration (Apocatastasis) to divine favour of all sinful creatures at the end of time, i.e. the temporary nature of the pains of hell, see Bardenhewer, tr. Shahan, "Pathology" (St. Louis, 1908), 302-4, and Michaud, "Revue Internationale de Théologie" (1892), 57-52, also the articles Apocatastasis and Mivart. The theory of interpolation of the whole Orales of the Orales and the Orales among others by Vincenzi (below), seems, in this respect at least, both useless and gratuitous (Bardenhewer).

The writings of Gregory are best collected in P. G., XLIV-XLIX. This is the critical edition, though another one was published by Foucher and Ohlem (Burntisland, 1855, 61); of another edition planned by Oehler, only one volume appeared (Halle, 1869). This was lost in 1869. For further lists of the works of Gregory, see J. Vincenzi, "In Gregorio Nissaei et Origenis scripta et doctrinam novae recessa", (Rome, 1844-69); Bauer, Die Tristram der Gregorius von Nissa in ihrem Verhältniss zur antiken Rhetorik (Marburg, 1892); Boutridron, Doctrines philosophiques de l'évangile de Nissa (Nizza, 1861); Koch, Das mystische Schauen beim hl. G. von Nissa in Theol. Quaest. (1898), LXXX, 397-420; Dirck, Das Kappadox der Kappadox (Freiburg, 1950); Hintz, St. Gregorius, formen der angelo exposition (Londres, 1860); Krampf, Der Ursprung des Menschen nach der Lehre des hl. Gregor von Nissa, a dogmatisch-pastorale Studie (Wien, 1897); Die künstlerischen Elemente der Welt und Lebens-Anschauung des Gregor von Nissa (Jena, 1897); on the large collection of Gregoriana, see Kappadox, etc., generally known as Oratia Cattolica, see Shaw in Journal of Theol. Studies (1902), III, 421-8, and also his new edition of the Oratia Cattolica (New York, 1911), 24. The controversies between the works of Gregory see Library of Nicene and Post-Nicene Fathers, second series (New York, 1883), II, v.; and for a German translation of some works Hatz in the Kempiian Bibliothek der Kirchenväter (1874).
master of Tours. The new king was acquainted with Gregory and insisted that in deference to the wishes of the people of Tours he should become their bishop; thus it came to pass that Gregory went to Rome for consecration. The poet, Fortunatus, celebrated the elevation of the new bishop in a poem full of sincere emotion: "With the priest Gregorius, de Gregorio episcopo"). Gregory justified this confidence, and his episcopal reign was highly creditable to him and useful to his flock; the circumstances of the time offered peculiar difficulties, and the office of bishop was onerous both from a civil and a religious point.

I. GREGORY AS BISHOP.—He undertook with great zeal the heavy task imposed on him. In the near past King Clovis had both used and abused his power, but his services to the social order and the fame of his exploits caused the abuses of his reign to be in great part forgiven. His successors, however, had fewer merits, and when they sought to increase their authority by deeds of violence, almost endless civil war was the result. Might overcame right so often that the very notion of the latter tended to disappear. Barbarian fierce ness and cruelty were everywhere rampant. During the war between Sigebert and Chilperic, Gregory, to prevent his just punishment of the woes of his people. "This", he wrote, "has been more hurtful to the Church than the persecution of Diocletian". In Gaul, at least, such may have been the case. The Teutonic tribes newly established in Gaul, or loosely wandering throughout the whole Roman Empire, were well aware of their physical prowess, and disinclined to recognise any rights save that of conquest. Their chiefs claimed whatever they desired, and the army took the rest. Whoever ventured to oppose them was put out of the way with pitiless rapidity. The civilization on which they so suddenly embarked was a new source of decay; coarse material pleasures appealed to them far more than the higher ideals of Roman life. Drunkenness was prevalent in all classes, and even the proverbial chastity of the Franks was soon a forgotten glory. Vengeance threw off all restraint of religion; the powerful and the lowly, clergy and laity, were a law unto themselves. Queen Clotilda, the friend of women, was popularly thought to have nourished feelings of revenge against the Burgundians for more than thirty years (see, however, for a rehabilitation, G. Kurth, "Sainte Clotilde"), 5th ed., Paris, 1905, and article Clotilda). Guntram, one of the best of the Frankish kings, but two years too young, was unable to restore Queen Austrechilde to health. This being the moral temper of the upper classes, it is needless to speak of the Gallo-Frankish multitude. It is greatly to St. Gregory's honour that amid these conditions he fulfilled the office of bishop with admirable courage and firmness. His writings and his actions exhibit a tender solicitude for the spiritual and temporal interests of his people, whom he protected as best he could against the lawlessness of the civil power. Amid his labours for the general welfare he upheld always what was right and just with prudence and charity. By his example he was the true weak, and as such always opposed their oppressors. In him the Merovingian episcopate appears at its best. The social morality of the sixth century has no braver or more intelligent exponent than this cultivated gentleman. Gregory explains the government of the world by the constant intervention of the supernatural, above all by the intervention of God. He intercedes for the protection of his people and recourse to the miracles wrought at their tombs. He also played a prominent part in increasing the number of churches, which were then the centres of religious life in Gaul. The cathedral church at Tours, burnt down under his predecessor, was rebuilt, and the church of St. Perpetua restored and decorated. Since the days of Clovis the Church had held, through her bishops, a preponderating position in the Frankish world. In the eyes of the people the bishops were the direct representatives of God, and dispensed His heavenly graces quite as the king bestowed earthly favours. This was not owing, however, to their moral or religious position, but rather to their social influence (With the priest Gregorius, de Gregorio episcopo"). Gregory justified this confidence, and his episcopal reign was highly creditable to him and useful to his flock; the circumstances of the time offered peculiar difficulties, and the office of bishop was onerous both from a civil and a religious point.

The civil authority was unequal to the former responsibilities it assumed, and was soon oblivious of its obligations. The public offices, however, which it neglected corresponded to pressing social needs that should now be satisfied. At this juncture the bishops stepped into the breach and became at once politically more important under Frankish than they had been under Roman rule. The Frankish kings gladly recognized them indispensable auxiliaries. They alone possessed science and learning, while they rendered signal services on different missions freely intrusted to them, and which they alone were capable of fulfilling. On the other hand they were slow to reprove their barbarian masters or to resist them. Gregory himself says in his reply to Childeric: "If one of us were to leave the path of justice, it would be for you to set him right, for you should know, it is not the function of the Church to correct or resist". The only duty the bishops seem to have preached to the Frankish kings was a conscientious fulfilment of the royal duties for the good of souls. This duty the kings did not deny, though they often failed to execute it or took refuge in a too liberal conscience.

Tours, which had long possessed the tomb of Saint Martin, was one of the most difficult sees to rule. The city was continually changing masters. On the death of Clotaire (561) it fell to Charibert, and when he died it reverted to the kingdom of Sigebert, King of Austrasia, and Frisia. But not till the death of the childless Charibert, King of Neustria, seized it, but was soon constrained to abandon the city. He seized it again only to lose it once more; at last, on the assassination of Sigebert in 576, Chilperic became its final master, and held it till he died in 584. Though Gregory took no direct part in these struggles of princes, he has described for us the end of the the barbarian emperors, also his own sorrows. It is easy to see that he did not love Chilperic; in return the king hated the Bishop of Tours, who suffered much from the attacks of royal partisans. A certain Leudot, who had been deprived of his office through Gregory's complaints, accused Chilperic of defamation because the bishop had reproved him for his cruelty to Fredegunde. Gregory was cited before the judges, and asserted his innocence under oath. At the trial his bearing was so full of dignity and uprightness that he astonished his enemies, and Chilperic himself was so impressed that ever afterwards he was more conciliatory in his dealings with his opponent. After the death of Chilperic, Tours fell into the hands of Guntram, King of Burgundy, whereupon began for the bishop an era of peace and almost of happiness. He had long known Guntram and was known and trusted by him. In 587, the Treaty of Andelot brought about the cession of Tours by Guntram to Childerich II, son of Sigebert. This king, as well as another Brunhaut, honoured Gregory with particular confidence, called him often to court, and entrusted to him many important missions. This favour lasted until his death.

II. GREGORY AS A HISTORIAN.—From the time of his consecration to the episcopate Gregory began to write. His subjects seem to have been chosen, at the beginning of his literary activity, less for their importance than for the purpose of edification. The miracles of St. Martin were then his main theme, and he always cherished most the themes of the hagiographer. Even in his strictly historical writings, biographical details retain a place often quite disproportionate to their
importance. His complete works deal with many subjects, and are by himself summarised as follows: "Deeem libros historiarum, septem miraculorum, unum de vita patrum scriptis; in psalterii tractatu librum unum commentarium sum; de cursibus etiam ecclesiasticis, unum liberum conditi," i.e. I have written ten books of "historia", seven of "miracles" one on the lives of the Fathers, a commentary in one book on the psalter, and one book on ecclesiastical liturgy. The "Liber de miraculis b. Andreae apostoli" and the "Passio ss. martyrvm septem dormientium apud Ephesum" are not known. But his authorship is undoubtedly from his hand. His hagiographical writings must naturally be read in keeping with the spirit and tastes of his own time. An edict of King Guntram, taken from the "Historia Francorum", illustrates both quite aptly: "We believe that the Lord, who rules all things by His might, will be appeased by our endeavours to uphold justice and right among all people. Being our Father and our King, ever ready to succour human weakness by His grace, God will grant our needs all the more generously when He sees us faithful in the observance of His precepts and commandments, and the work of the kind of the king is feared little, of course, from that of his people. Nearly all were deeply persuaded that all events were divinely foreseen; but sometimes even to a superstitious extreme. Thus, despite the contemporary social degradation and crimes, the people were ever on the alert for supernatural manifestations, or for what they believed to be such. In this way arose a religious devotion, real and active, indeed, but also impulsive and not properly controlled by reason. Providence seemed to intervene so directly in every minute detail that men blindly thanked God for an enemy’s death just as they would for some wonderful grace that had even granted them. The supernatural world was always quite near to the men of that age; God and His saints seemed ever to deal intimately and immediately with the affairs of men. The tombs and relics of the saints became the centres of their miraculous activity. In the contemporary hagiographical narratives those who refuse to believe in the miracles are the exception, and are generally represented as coming to an evil end unless they repent of their incredulity. Occasionally one notes a reaction against this excessive credulity; here and there an individual ventures to assert that certain miracles are fictive, and sometimes impostures. Sensible men endeavour to check credulity, and to establish the fact of an abbot who severely punished a young monk who believed he had wrought a miracle: "My son", said the abbot, "endeavour in all humility to grow in the fear of the Lord, instead of meddling with miracles."

Gregory himself, though he relates a great many miracles, seems occasionally to have doubted some of them. He knew that unscrupulous men were wont to abuse the credulity of the faithful, and many agreed with him. Not everyone was willing to consider a dream as a supernatural manifestation. This distrust, however, affected only particular cases: a general belief in the multiplication of miracles was general. The first work of Gregory was an account in four books of the miracles of St. Martin, the famous thaumaturgus of Gaul. The first book was written in 575, the second after 581, the third was completed about 587; the fourth was never completed. After finishing the four books on the doctrine of miracles an Auvergne saint then famous, "De passione et virtutibus sancti Juliani martyris". Julian had died in the neighbourhood of Clermont-Ferrand and his tomb at Brioude was a well known place of pilgrimage. In 587, Gregory began his "Liber in gloria martyrvm", only the first two books of the "Liber in gloria Martyrum" are known, the rest of the work having been lost. Gregory treated the miracles of St. Martin almost exclusively with the miracles wrought in Gaul by the martyrs of the Roman persecutions. Quite similar is the "Liber in gloria confessorum" a vivid picture of contemporary or quasi-contemporary customs and manners. The "Liber vitae Patrum", the most important and interesting of Gregory’s hagiographical works, gives us much curious information concerning the upper classes of the period.

Gregory’s fame as a historian rests on his "Historia Francorum", in ten books, intended, as the author assures us, in the preface, to hand down to posterity a knowledge of his own times. Book I contains a summary of the history of the world from Adam to the conquest of Gaul by Franks. Book II relates the death of St. Martin (397). Book II treats of Clovis, founder of the Frankish empire. Book III comes down to the reign of Theodebert (548). Book IV ends with Sigebert (575), and contains the story of many events within the personal knowledge of the historian. According to Arndt these four books were written in 575. Books V and VI treat of events that took place between 575 and 584, and were written in 585. The remaining four books cover the years between 584 and 591, and were written at intervals that cannot be exactly determined. Gregory relates, indeed, as stated above, the truth impartially, and in places even attempts some sort of criticism. This work is unique in its kind. Without it the historical origin of the Frankish monarchy would be to no small extent unknown to us. Did Gregory, however, correctly appreciate the spirit and tendencies of his age? It is open to question. His mind was always busied with extraordinary events: crimes, miracles, wars, excesses of every kind; for him ordinary events were too commonplace for notice. Nevertheless, to grasp clearly the religious or secular history of a people, it is more important to know the daily popular life than to learn of the mighty deeds of the reigning house. The morality of the people is often superior to that of its governing classes. In Gregory’s day, great moral and religious forces, beloved by the people, must have been leaving the country, counterbalancing the brute force and immorality of the Frankish kings, and saving the strong new race from wasting away in civil strife. From Gregory we learn that the people were altogether satisfied with their religion. What Gregory failed to note in a discriminating way, perhaps because he did not enter into the scope of the work, a contemporary, the Greek Agathias, has observed and put on record.

III. GREGORY AS A THEOLOGIAN.—The theological ideas of Gregory appear not only in the introductions to his various works, and especially to his "Historia Francorum", but also incidentally throughout his writings. His theological education was not very profound; and he wrote but one work immediately theological in character, his commentary on the Psalter. The book entitled "De moribus gentium" (on the courses of the stars) was written for a practical purpose to settle the time, according to the position of the stars, when the night office should be sung. The "Historia Francorum" makes known, in its opening pages, Gregory’s theological views. The teaching of Nicea was his, the Church and the monastic life were his. He had no theological discussion. God the Father could never have been without wisdom, light, life, truth, justice; the Son is all these; the Father therefore was never without the Son. In Jesus Christ Gregory saw the Lord of Eternal Glory and the Judge of mankind. He sometimes uses the terms of redemption, though it is not clear that he grasped the inner meaning of this doctrine. He saw
in Christ’s Death a crime committed by the Jews; in the Resurrection, on the other hand, it seemed to him he heled the Redemption of mankind. From the performance of this He had saved the world by His blood, but Gregory’s idea of Christ was not that of the Lamb slain for the sins of “the world”; it was rather that of a great king who had left an inheritance to his people. Generally speaking his theological writings exhibited the influence of the Frankish idea of royalty. He does not seem to have been deeply versed in the teaching and the writings of the Fathers on the Incarnation and Death of Christ. This is evident from the story he tells of a discussion he had had one day in the presence of King Chilperic with a Jewish merchant. The Jew had questioned the possibility of the fact of the Incarnation and Death of Jesus, and Gregory, without making a direct reply, went on to assert that the Incarnation and Death of the Son of God were necessary, seeing that guilty man was in the power of the Devil and could only be saved by an incarnate God. The Jew, pretending to be convinced, made answer: “But where was the necessity for God to suffer in order to redeem man?” Gregory reminded him that sin was an offence, and that the death of Jesus was the only means of placating God. The Jew in turn asked why God could not have sent a prophet or an apostle to win mankind back to the path of salvation, rather than himself humble Himself by taking human flesh? He would only be viewed by lamentation and incredulity of those who would not believe the prophets, and who put those who preached penance to death. And so the Jew remained unanswered. This controversy displays Gregory’s lack of dialectical and theological skill.

H. LECLOERQ.

Gregory of Utrecht, SAINT, Abbot; b. about 707 or 708; d. 715 or 780. Gregory was born at a noble family of his father. His father, Balder, was the son of Addula, who were both, it seems of the house of Pfalz (p. 401) near Trier. On account of the similarity of names, in consequence of a forged last will, Addula has been frequently confounded with Adalula (Adela), daughter of Dagobert II of Austrasia; thus falsely making Gregory a son of the royal house of the Merovingians. He received his early education at Pfalz. When, in 722, St. Boniface passed through Trier on his way from Frisia to Hesia and Thuringia, he rested at this convent. Gregory was called upon to read the Sacred Scriptures at the meals. St. Boniface gave an explanation and dwelt upon the merits of an adept. He had heard that St. Gregory was a learned man and a master of the heart of Gregory was filled with enthusiasm. He announced his intention of going with St. Boniface and nothing could move him from his resolution. He now became the disciple and in time the helper of the great Apostle of Germany, sharing his hardships and labours, accompanying him in all his missionary tours, and learning from him the secret of activity. In 738 St. Boniface made his third journey to Rome; Gregory went with him and brought back many valuable additions for his library. About 750 Gregory was made Abbot of St. Martin’s, in Utrecht. In 744 St. Willibrord, the first Bishop of Utrecht, had died but had received no successor. St. Boniface had taken charge and had appointed an administrator. In 754 he started on his last missionary trip and took with him the administrator, St. Eoban, who was to share his crown of martyrdom and save the world by his blood, but Gregory’s idea of Christ was not that of the Lamb slain for the sins of “the world”; it was rather that of a great king who had left an inheritance to his people. Generally speaking his theological writings exhibited the influence of the Frankish idea of royalty. He does not seem to have been deeply versed in the teaching and the writings of the Fathers on the Incarnation and Death of Christ. This is evident from the story he tells of a discussion he had had one day in the presence of King Chilperic with a Jewish merchant. The Jew had questioned the possibility of the fact of the Incarnation and Death of Jesus, and Gregory, without making a direct reply, went on to assert that the Incarnation and Death of the Son of God were necessary, seeing that guilty man was in the power of the Devil and could only be saved by an incarnate God. The Jew, pretending to be convinced, made answer: “But where was the necessity for God to suffer in order to redeem man?” Gregory reminded him that sin was an offence, and that the death of Jesus was the only means of placating God. The Jew in turn asked why God could not have sent a prophet or an apostle to win mankind back to the path of salvation, rather than Himself humble Himself by taking human flesh? He would only be viewed by lamentation and incredulity of those who would not believe the prophets, and who put those who preached penance to death. And so the Jew remained unanswered. This controversy displays Gregory’s lack of dialectical and theological skill.

H. LECLOERQ.

Francis Mershman.

Gregory of Valencia, professor of the University of Ingolstadt, b. at Medina, Spain, March 15th (1546), 1551; d. at Naples, 25 April, 1603. The "Annales Ingolstadiensis Academie," formally announce in 1598: “During the current year the faculty of theology lost a celebrated man and a veteran teacher, Gregory of Valencia, who left Ingolstadt 14 Feb.; the General of the Society of Jesus had summoned him to Rome to take part in the discussions concerning grace which were to be held in presence of the pope. When Duke Maximilian heard of this he requested Gregory to travel to Italy by way of Munich, where he supplied him with horses, servants, and money for the journey, showing his high regard for the man who, during twenty-four years, had rendered such eminent services to the university, to Bavaria, and to the Catholic cause in general.” In its tribute to him the theological faculty has this statement: “Gregory of Valencia, S. J., a native of Medina, Spain, and doctor of theology, was sent by his superiors to Rome in 1598. He was a peer among the learned theologians of his time; Paris was eager to secure him as was also Stephen, King of Poland; he was an ornament to our university in which he spent twenty-four years; for sixteen years as professor of theology he gave general satisfaction and contributed to the progress of science. In the controversies of his time, he took a prominent part, combating error, and always with success, by means of his polemical writings. His work in four volumes, covering the whole field of scholastic theology, won him permanent renown. He taught theology at Rome for a number of years and held the position of prefect of studies in the Roman College until, broken in health through incessant work, he died at Naples, at the age of fifty-four years. Pope Clement VIII honoured him with the significant title of Doctor Doctorum.”

If this estimate of his age (54) be correct—and it concides with the chronology of the Neapolitan province of the Society of Jesus—it would make March is given as the month of his birth, that he was born in March, 1550. Southwell in his "Biblio-
Gregory was born in 541. The date of his reception into the Society of Jesus, however, and the period during which he was the Superior of this Society, was not till 1538. His studies were at Salamanca studying philosophy and jurisprudence. Attracted by the preaching of Father Ramírez, S. J., he sought admission into the recently founded Society of Jesus, and entered the novitiate on November 25 of the same year under the guidance of Father Álvarez, one of the spiritual directors of St. Teresa. After finishing his studies, but not yet ordained, he was called in 1571 by St. Francis Borgia, superior general of the order, to teach philosophy in Rome. There he was ordained a priest. In a short time his intellectual attainments and his ability as a preacher attracted such wide attention that after the death of St. Francis Borgia and the election of his successor, Mercureian, the provincials of France and North Germany tried to secure Gregory for university work while the King of Poland desired his services for that country. He was ultimately affiliated with the German province and appointed by the provincial, Father Hoffaüs, to the chair of theology at Dillingen, whence, two years later, he was transferred to a similar position at Ingolstadt. Here he remained seventeen years (1575–1592) teaching scholastic theology, during fifteen of which he was rector of faculties.

This period was marked by intense religious ferment. Not only did the anti-Catholic movement start in that century continue, but the conflict among the various sectarian leaders, especially after Luther's death, became sharper. Lectures on theology had to be adapted to the altered circumstances of the times both in defence of Catholic dogmas and in refutation of numerous errors. That Gregory realized the need of this course is evident from the dissertations produced under his direction and the disputations that were held by candidates for the doctorate's degree at Ingolstadt. But what he chiefly aimed at was the positive construction of Catholic doctrine, as he shows in his commentary on the "Summa Theologica" of St. Thomas which contains the substance of the lectures he delivered during many years. After resigning his professorship at Ingolstadt, he devoted most of his time (1592–97) to the revision and publication of his lectures. They became a leitmotiv of the Church, and as an example of precise, pious, and moral studies, the title "Commentariorum theologicorum tomus quatuor"; the first volume was published at Ingolstadt (1591); a second edition of this appeared in 1592, together with the second volume; the third was published in 1605, the fourth in 1597. After another revision by the author they were republished in 1611, and again in 1611 after the author's death. Other editions appeared at Venice, 1600–08; Lyons, 1600–03–09–12. It was one of the first comprehensive theological works produced among the Jesuits. These editions brought out in such rapid succession attest the high rank occupied by this work in contemporaneous theological literature. The distinctive feature was clearness, comprehensiveness, and depth in the treatment both of speculative and moral subjects.

His duties as professor, however, had not hindered him from publishing many polemical essays. These were directed principally against Jakob Heerbrand, who was a professor at Tübingen and a zealous adherent of Luther. The catalogue of the "Infoldster Annalen" (Meder, II, 156) enumerates eight publications of this sort. Their principal purpose was to defend the veneration of the saints and the Holy Sacrifice of the Mass, e. g. "Apologia de Idololatria, adversus imaginis libellum" (Heerbrand, 1570); the second edition was published in 1580. In the same year he published "De sacrosancto Missæ sacrificio contra impiam disputationem Tunginei nuper a Jac. Herbrando propostam etc., which was followed by the "Apologia de SS. Missæ sacrificio" (Ingolstadt, 1581). Later he edited his polemical writings on the Blessed Sacrament, attacking the ubiquity theory of the Lutheran champion Jacob Winter or Winterhalden. In 1615 Gregory was at Salamanca studying philosophy and jurisprudence. Attracted by the preaching of Father Ramírez, S. J., he sought admission into the recently founded Society of Jesus, and entered the novitiate on November 25 of the same year under the guidance of Father Álvarez, one of the spiritual directors of St. Teresa. After finishing his studies, but not yet ordained, he was called in 1571 by St. Francis Borgia, superior general of the order, to teach philosophy in Rome. There he was ordained a priest. quite generally resorted to during the Middle Ages as a method of lending money without contravening the laws in regard to interest. It grew out of the earlier practice whereby the creditor acquired both possession and personal control of the loan. By a later modification, the borrower retained possession and use, but ceded to the lender a real right in the property. Finally, the system here referred to was introduced, the creditor was entitled to an income from the property which, however, still belonged to the borrower, and the property itself was not transferred. Originally such agreements were binding in perpetuity; but in course of time they were so framed that the parties might withdraw under mutually accepted conditions.) He argued that contracts surrounded by such provisions were not contrary to natural law and were therefore permissible in all cases where no positive law forbade them. He also advocated these views as collaborator in the opinion which a theological commission, by order of Gregory XIII, elaborated in 1581. It was in connexion with this matter that Gregory's superiors sent him to Rome, where his personal acquaintance with conditions in Germany would enable him to give a more just and full estimate of the question at issue and its significance. On other matters of importance also he was consulted by the Duke of Bavaria and by his own superiors in the society. In the witchcraft question Gregory unfortunately did not have the grasp of the situation subsequently shown by von Spee. The same view of sorcery he thought was a frequently occurring fact; hence in the opinion which he expressed in 1590, he aimed, not to set aside the juridical procedure then in vogue, but simply to temper the undue severity of its application. Still it was unjust to reproach him for the statement (Commentarii, div. III, col. 2008, sqq.) that where the guilt (of sorcery) is legally established the judge must inflict penalty even though he were personally convinced of the nullity of the charge.

In this matter Gregory only followed the then prevalent teaching taken from St. Thomas Aquinas, viz. that a judge's personality and private knowledge should not be allowed to affect his official decisions; in the special case of witchcraft Gregory could not consistently make an exception. This opinion indeed is controverted; it seems to grate on natural feeling; but this apparent harshness vanishes when we further consider what is laid down by the adherents of this view. Gregory, in fact, was more general, and the more general question, namely that a judge is under grave obligation to make all possible use of his private knowledge towards securing the acquittal of the accused person, and if needs be to refer the case to a higher court or to endorse and support a well-grounded plea for clemency. That Gregory meant this principle to apply in the case of condemnation for sorcery is quite obvious; moreover, in the very passage for which he is criticized (III, 2009), he refers to an earlier part of his work (III, 1380) in which he discusses the duties of a judge. In 1592 Gregory resigned as prior, and hastened to devote himself more fully to the editing of his "Commentarii theologici". In 1598 he was sent to Rome to teach scholastic theology. A more important work, however, awaited him there; the vindication of the Society's teaching on grace. A book by Molina (d. 1600) entitled "De Concordia liberi arbitrii cum gratiae donis etc." had created a stir. Certain points in which essentially the Society's doctrine regarding grace, it was suspected of heresy and was formally denounced by the Dominicans. Pope Clement VIII ordered both parties to debate the matter publicly before him and the College of Cardinals. Acquaviva, the General of the Jesuits, appointed Gregory as champion of the Molinistic doctrine.

At the first public disputation, 20 March, 1602, Gregory had to prove that Molina had not deviated from St. Augustine's teaching by any undue extension of man's freedom. He maintained his position so ably against the objections of Father Dadies Alvareres, O. P., that friend and opponent alike awarded him the victory. Then the method of debate was changed. Isolated statements taken from Molina's book had to be compared with similar passages all through the works of St. Augustine. It turned out to be a laborious and seemingly endless undertaking. The second debate was not held until 6 July. Tomás de Zumárraga was selected to represent the position of Molina. This and in most of the subsequent debates (9 July, 22 July, etc.). The ninth occurred 30 Sept. Gregory's bodily strength, already reduced by illness and mental strain, gave way at the close of this debate, although the pope, contrary to custom, had permitted him to remain seated during his discourses. He was sent to Naples in the hope that his health would be restored and the debates were discontinued for a month and a half, the pope having expressed the wish that Gregory would be able to continue the defence. Only when this seemed hopeless were the public discussions resumed. Pedro Arrabal was then selected to take part in the debate. Gregory had tampered with certain texts of St. Augustine and had hinted when the pope charged him with it, is as mythical as the rumour that the Jesuits poisoned Clement VIII for fear lest he should pronounce their doctrine heretical.

Gregory the Illuminator, b. 2577; d. 3377, sur- named the Illuminator (Lusavorich), is the apostle, national saint, and patron of Armenia. He was not the first who introduced Christianity into that country. The Armenians maintain that the faith was preached there by the Apostles Bartholomew and Thaddeus. Thaddeus especially (the hero of the story of King Abgar of Edessa and the portrait of Christ) has been taken over by the Armenians, with the whole story. Abgar in their version becomes a King of Armenia; thus their land is the first of all to turn Chris- tian. It is certain that there were Christians, even bishops, in Armenia before St. Gregory. The southern provinces had been evangelized from Syria, from Edessa and Nisibis especially, which accounts for the Armenian adoption of the Edessene story. A certain MERZANES was "Bishop of the Armenians" when Dionysius of Alexandria (248-265) wrote them a letter "about penitence" (Euseb., "Hist. Eccl.", VI, xvi). This earliest Church was then destroyed by the Persians. Ardashir I, the founder of the Sassanian dynasty (229), restored, even extended, the old power of Persia. Armenia, always the exposed frontier state between Rome and Persia, was overrun by Ardashir's army (Khosrov I) and reoccupied by the old Arsacid dynasty); and the principle of uniformity in the Mazdean religion, that the Sassanids made a chief feature of their policy, was also applied to the subject kingdom. A Parthian named Anak murdered Khosrov by Ardashir's orders, who then tried to exterminate the whole Armenian royal family as a son of Khosrov, Trdat (Tiridates), escaped; was trained in the Roman army, and eventually came back to drive out the Persians and restore the Armenian kingdom.

In this restoration St. Gregory played an important part. He had been born as a Christian in Cessarea in Cappadocia. He seems to have belonged to an illustrious Armenian family. He was married and had two sons (called Aristakes and Bardanes in
the Greek text of Moses of Khorni; see below). Gregory, after being himself persecuted by King Tirdat, who at first defended the old Armenian religion, eventually converted him, and with him spread the Christian faith throughout the country. Tirdat became so zealous a Christian that hispalatial faith; the nobility seem to have followed his example easily, than the people followed—or were induced to follow—too. This happened while Diodelan was emperor (284–305), so that Armenia has a right to her claim of being the first Christian State. The Emperor converted the Agathas and the king and queen were baptized in thousands. So completely were the remains of the old heathendom effaced that we know practically nothing about the original Armenian religion (as distinct from Mazdaism), except the names of some gods whose temples were destroyed or converted (the chief temple at Ashtahat was dedicated to Vahago, Anahit and Astlik; Vanatur was worshipped in the North round Mount Ararat, etc.). Meanwhile Gregory had gone back to Cæsarea to be ordained. Leontius of Cæsarea made him Bishop of the Armenians; from this time till the Monophysite schism the Church of Armenia depended on Cæsarea, and the Armenian patriarchs (called Catholicos, only holding the patriarchal dignity) went there to be ordained. Gregory set up other bishops throughout the land and fixed his residence at Ashtahat (in the province of Tarom), where the temple had been made into the church of Christ, “mother of all Armenian churches”. He preached in the national language and used it for the liturgy. This, too, helped to give the Armenian Church the markedly national character that it still has, more, perhaps, than any other in Christendom. Towards the end of his life he retired and was succeeded as Catholics by his son Aristakes. Aristakes was present at the First General Council, in 325. Gregory died and was buried at Thorton. A monastery was built near his grave. His relics were afterwards taken to Constantinople, but apparently brought back again to Armenia. Part of these relics are said to have been taken to Naples during the Iconoclast troubles.

This is what can be said with some certainty about the Apostle of Armenia; but a famous life of him by Agathangelos (see below) embellishes the narrative with wonderful stories that need not be taken very seriously. According to this life, he was the son of the Parthian Anak who had murdered King Khosrov I. (no paradox!) was coming to conquer Araxes with all his family except two sons, of whom one went to Persia, the other (the subject of this article) was taken by his Christian nurse to Cæsarea and there baptized Gregory, in accordance with what she had been told in vision. Soon after his marriage, Gregory parted from his wife (who became a nun), and came back to Armenia. Here he refused to take part in a great sacrifice to the national gods ordered by King Tirdat, and declared himself a Christian. He was then tortured in various horrible ways, all the more when the king discovered that he was the son of his father’s murderer. After being subjected to a variety of tortures, they exasperated him, and put him into a bag filled with ashes, poured molten lead over him, etc.) he was thrown into a pit full of dead bodies, poisonous filth, and serpents. He spent fifteen years in this pit, being fed by bread that a pious widow brought him daily. Meanwhile Tirdat goes from bad to worse. A holy virginal discipline, with a king at his side and vassals and marauders, here plays a great part in the story. Eventually, as a punishment for his wickedness, the king is turned into a boar and possessed by a devil. A vision now reveals to the monarch’s sisters that nothing can save him but the prayers of Gregory. At first they are reluctant to attend to this revelation, but think Gregory dead long ago. Eventually they seek and find him in the pit. He comes out, exorcizes the evil spirit and restores the king, and then begins his preaching. Here a long discourse is put into the saint’s mouth—so long that it takes up more than half of the life. It is simply a compendium of what the Armenian Church believed at the time that it was written (second century). It begins with an account of Bible history and goes on to dogmatic theology. Arianism, Nestorianism and all the other heresies up to Monophysite times are refuted. The discourse bears the stamp of the latter half of the fifth century so plainly that, even without the fact that earlier writers who wrote on similar subjects (Socrates, Eusebius, etc.) do not know it, no one could doubt that it is the composition of an Armenian theologian of that time, inserted into the life that was already full enough of wonders. Nevertheless this “Confession of Gregory the Illuminator” was accepted as authentic and used as a kind of official creed by the Armenian Church during all the centuries that followed. Even now it is only the more liberal theologians among them who dispute its genuineness.

The life goes on to tell us of Gregory’s fast of seventy days that followed his rescue from the pit, of the king’s conversion, and of his journeys throughout the land converting the heathen. He leads an army against the army of Persia and captures it (see p. 32), and fights against the army like men or devils, but are always defeated by Trdat’s army and Gregory’s prayers, and are eventually driven into the Caucasus. The story of the saint’s ordination and of the establishment of the hierarchy is told with the same adorments. He baptized four million persons in seven days. He was ordained and sent out twelve apostolic bishops, all sons of heathen priests. Eventually he ruled a church of four hundred bishops and priests too numerous to count. He and Trdat hear of Constantine’s conversion; they set out with an army of 70,000 men to congratulate him. Constantine had just been baptized at Rome by Pope Silverstern, formed an alliance with Trdat; the pope warmly welcomes Gregory (there are a number of forged letters between Silverstern and Gregory, see below)—and so on. It would not be difficult to find the models for all these stories. Gregory in the pit acts like Daniel in the lion’s den, Trdat as a boar is Nabuchodonosor; the battles of the king’s army against the heathen and their gods have obvious precedents in the Old Testament. Gregory is now Elias, now Isaias, now John the Baptist, till his sending out his twelve apostles suggests a still greater model. The writer of the life calls himself Agathangelos, chamberlain to the great Constantine. The work was composed from various sources after the year 456 (see Gutsmidt, below) in Armenian, though the sources may have been partly Greek or Syriac (cf. Lagarde). The life was soon translated into Greek, used by Simeon Metropolitan, and further rendered into Latin in the tenth century. During the Middle Ages his life was the inevitable source for the saint’s history. The Armenians (Monophysites and Uniates) keep his apostles on their 30 September, when his relics were deposed at Thorton. They have many other feasts to commemorate his birth (August 5), sufferings (February 4), going into the pit (February 25), and his coming out (October 19), etc. (Newman, “Kalendarium Manuale,” 2nd ed., Innsbruck 1897, II, 577). The Byzantine Church keeps his feast (Πάτρια τοῦ Ἐζωρτή) on 30 September, as do also the Syrians (Nilles, I, 290–292). Pope Gregory XVI, in September, 1837, admitted his nameake to the Roman Calendar; and appointed October 19 as his feast (among the festa pro aliquote locis).

Agathangelos’ Life of St. Gregory was published in Armenian by the Mchchatsnats at Venice, in 1835 (reprinted at Tiflis, 1847); translated into Latin by E. Hitzig, in 1852; and was retold, with the addition of stories and details, by L. C. M. de Frey, in the “Kalendarium Manuale,” Innsbruck 1897, II, 577. The Greek text was edited by Stirling in the Acta SS., Sept., VIII, 320 sqq.; and again by Lagarde, Agathangelos in Abhandlungen der Gesellschaft der Wissenschaften von Göttingen, III, 258ff.; and in Agathangelos in Zeitschrift der Deutschen Morgenland. Gesellschaft (1877), I, 1. Moses of Khoren (Moses Chorenensius) in his History of Armenia (III books, VII or VIII cent., ed. by...
Greifswald, University of, the oldest university of Prussia, founded in 1456. Even before this, Greifswald had, for a short time, been the seat of a university. In 1496, when on account of dissensions among the townspeople, the University of Rostock was placed under interdict by the Council of Basle, it was removed to Greifswald with the consent of the same council, where it remained for seven years. After the return of the university to Rostock, six professors remained at Greifswald, whereupon the burghers of Rostock asked the University of Paris for the return of at least one professor. This request was granted, and a new professor was sent to Rostock. In 1506, the University of Greifswald was reorganized, and a new university was founded at Leipzig. The new university was immediately opened, and in 1507, the University of Greifswald was closed and its property was transferred to the new university.

Greifswald, University of, the oldest university of Prussia, founded in 1456. Even before this, Greifswald had, for a short time, been the seat of a university. In 1496, when on account of dissensions among the townspeople, the University of Rostock was placed under interdict by the Council of Basle, it was removed to Greifswald with the consent of the same council, where it remained for seven years. After the return of the university to Rostock, six professors remained at Greifswald, whereupon the burghers of Rostock asked the University of Paris for the return of at least one professor. This request was granted, and a new professor was sent to Rostock. In 1506, the University of Greifswald was reorganized, and a new university was founded at Leipzig. The new university was immediately opened, and in 1507, the University of Greifswald was closed and its property was transferred to the new university.

Adrian Fortescue.
vissable under existing circumstances. However, he accepted loyally the decision of the Council, and used all his influence to induce Döllinger to do the same. Greith was a strong champion of ecclesiastical interests and continually defended the Church against the encroachments of the civil power. He could not prevent the suppression of his seminary for boys nor hinder the civil prohibition of missions and visitations; nevertheless he renewed the religious life of his diocese and called into being an educated clergy. He devoted himself with zeal to the study of history and corresponded with numerous scholars, among others Lassberg, Pertz, Böhmer, Franz Pfeiffer, Schlosser, Mone, Gall, Morel, and others. His numerous ecclesiastical-political writings were only of transient import, though they bear witness to his thoroughly Catholic sentiments. As an orator he was not infrequently called the Bossuet of Switzerland. In his sermons and pastoral letters he laid great stress on the greatness and majesty of God as exhibited in the Redemption and in the founding and continuous activity of the Catholic Church. He published: "Katholische Apologie in Kanzelreden" in three volumes (Schaffhausen, 1847–52); he also wrote, in collaboration with the Benedictine Georg Ulber, "Handbuch der Philosophie für die Schule und das Leben" (Freiburg, 1853–57); his spirituality was so profound and esteemed too highly Descartes and Leibnitz. His name and most lasting work was done in history. Among his historical publications were: "Spicilegium Vaticanum, Beiträge zur näheren Kenntniss der vatikanischen Bibliothek für deutsche Poesie des Mittelalters" (Frauenau, 1858); "Die deutsche Mystik im Predigerorden" (Freiburg, 1861); "Der heilige Gallus (St. Gall, 1864); "Die heiligen Glaubensboten Columban und Gall (St. Gall, 1865); "Geschichte der altchristlichen Kirche und ihrer Verbindung mit Rom, Gallien und Alemannien, 430–630" (Freiburg, 1867). This last work is his chief literary monument and still retains its value as an exhaustive study of the foreign relations of the early Irish Church, especially its relations with Rome and its missionary work.

BAUMGARTNER, Erinnerungen an Karl Johann Greith in Stiftsblatt, 1866, XXXVI; Romer, Jahrbuch der Historisch-politischen Blätter, XC, gives a bibliography of Greith's occasional addresses, sermons, Litanen and pastoral letters.

PATRICIUS SCHLAGER.

Greimale, a square or oblong cloth which the bishop, according to the "Cerimonia" and "Pontificale", should wear over his lap, when seated on the throne during the singing of the Kyrie, Gloria, and Credo by the choir, during the distribution of blessed candles, palms or ashes, and also during the anointments in connexion with Holy orders. The greimale is never used during pontifical Vespers. The primary object of the greimale is to prevent the soilage of the other vestments, especially the chasuble. The greimale used during the pontifical Mass is made of silk. It should be placed, as it were, in the centre, and trimmed with silk embroidery. Its colour must correspond with the colour of the chasuble. The greimales used at other functions are made of linen, to facilitate their cleansing in case they be soiled. Little is known of its history; apparently its origin dates back to the later Middle Ages. The Roman Ordo of Gaetano Stefaneschi of 1111 (Reginae Insigne) indicates that it is mentioned in the statutes of Grandison of Exeter (England) as early as 1339. In earlier times it was used not only by bishops but also by priests. It is not blessed and has no symbolic meaning.

JOSEPH BRAUN.

Grenoble, (1) Diocese of (Gratianopolitana), now comprises the Department of Isère and the Canton of Villesurbane (Rhône). The ancient diocese was a suffragan of Vienne and included the Deanery of Savoy, which, in 1779, was made a bishopric with the see at Chambéry. By the Concordat, the Bishop of Grenoble was made a suffragan of the Archbishop of Lyons, thirteen archipresbyterates of the former Diocese of Vienne were affiliated to the Diocese of Grenoble, and the latter was made subject to it and the parishes in the Dioceses of Belley, Gap, Lyon, Digne, etc.

Dominus, the first Bishop of Grenoble known to history, attended the Council of Aquileia in 381. Among his successors are mentioned: St. Ceratius (441–52), celebrated in legend for his controversies against Arianism; St. Perius (Ferreolus) (at the end of the seventh century), according to a tradition killed by a pagan while preaching; St. Hugh (1080–1132), noted for his zeal in carrying out Gregory VII's orders concerning reform and for his opposition to Guy of Burgundy, Bishop of Vienne, and subsequently pope under the title of Callistus II; Pierre Scarron (1031–1067), who, with the co-operation of many religious orders, restored Catholicism in Dauphiné; Cardinal Le Camus (1671–1707), organizer of charitable loan associations; Jean de Caulet (1726–1771), who brought about general acceptance of the Bull "Unigenitus", whose collection of books was the nucleus of the public library of the city, and during the Revolution, the preacher, after delivering a sermon on almsgiving went through the streets of the city with wagons and was unable to gather all the donations of linen, furniture, and clothing that were offered. The Benedictines and Augustinians founded at an early date numerous priories in the diocese, that of Vienne dating from 994, but, during St. Hugh's episcopal administration, monastic life attained a fuller development. The chapter-abbey of Saint-Martin de Misérè, whence originated many Augustinian priories, and the school of the priory of Villard Benoît at Pontcharra were important during the twelfth and thirteenth centuries. But the peculiar monastic foundation of Dauphiné, contemporaneous with St. Hugh's regime, was that of the Carthusians under St. Bruno in 1084. The Frères du Saint-Esprit, who during the Middle Ages were scattered broadcast through the Diocese of Grenoble, did much to inject among the people habits of mutual assistance. Truial assistance for those in need at Grenoble in 1598 and 1600 respectively by Cotton, the Jesuit, later confessor to Henry IV, were prolific of some notable conversions from Protestantism; in memory of this the Constable de Lescudières, himself a convert in 1622, favoured the founding at Grenoble of a celebrated Jesuit house. In 1591 a college was established in connexion with this residence, and here Vaucanson, the well-known mechanician, studied. In 1700 the institution included theological courses in its curriculum. From the first half of the thirteenth century the French branch of the Waldenses had its chief seat in Dauphiné, from which country emanated John Hus, the reformer of the French Reformation. Pierre de Sébiville, an apostate Franciscan friar, introduced Protestantism into Grenoble in 1522. The diocese was sorely tried by the wars of religion, especially in 1562, when the cruel Baron des Adrets acted as the Prince de Condé's lieutenant-general in Dauphiné. Pius VI, when taken prisoner during the Revolution, wrote two days at Grenoble in 1799. Pius VII, in turn, was kept in close confinement in the prefecture of Grenoble from 21 July until 2 August, 1808, Bishop Simon not being permitted even to visit him.

The following saints may be mentioned as natives of what constitutes the present Diocese of Grenoble: St. Amatus, the anchorite (sixth century), founder of the Abbey of Remiremont, and St. Peter, Archbishop of Tarasanta (1102–1174), a Cistercian, born in the ancient Archdiocese of Vienne. Moreover, it was in the chapel of the superior ecclesiastical seminary of Gre-
noble that J.-B. Vianney, the future Curé of Arz, was ordained a priest, 13 August, 1815. The Bishopric of Grenoble is in possession of an almost complete account of the pastoral visits made between 1339 and 1570, a palaeographical record perhaps unique of its kind.

**Archbishopric of Vienne.**—The legend according to which Crescens, the first Bishop of Vienne, is identical with the Crescens of II Tim., iv, 20, certainly postdates the letter of Pope Zosimus to the Church of Arles (417) and the letter of the bishops of Gaul in 451; because, also, the documents of the second claim to glory which Arles owes to St. Trophimus, neither of them mentions Crescens. Archbishop Ado, of Vienne, (860-75), set afoot this legend of the Apostolic origin of the See of Vienne and put down St. Zachary, St. Martin, and St. Verus, later successors of Crescens, as belonging to the Apostolic period. This legend was confirmed by the "Receuil des privileges de l'Eglise de Vienne", which, however, was not compiled under the supervision of the future Pope Callixtus II, as M. Gundach has maintained, but at a little earlier date, about 1060, as Mgr. Duchene has proved. This collection contains the pretended letters of a series of popes up to the accession of Paschal I, who was the last to make any claims to the Church of Vienne. "Le Livre episcopal de l'archevêque Léger" (1030-1070) included both the invocations of Ado and the forged letters of the "Receuil".

It is historically certain that Verus, present at the Council of Arles in 314, was the fourth Bishop of Vienne. In the beginning the twelve cities of the two Vienne provinces were under the jurisdiction of the Archbishop of Vienne, but when Arles was made an archbishopric, at the end of the fourth century, the See of Vienne grew less important. The disputes that later arose between the See of Vienne and the See of Arles concerning the respective antiquity are well-known in ecclesiastical history. In 450 Leo I gave the Archbishop of Vienne the right to ordain the Bishops of Tarantaise, Valence, Geneva, and Grenoble. Many vicissitudes followed, and the territorial limit of the powers of the Metropolitan of Vienne followed the warring frontier of the Kingdom of Burgundy and, in 779, was considerably restricted by the organization of a new ecclesiastical province comprising Tarantaise, Aosta, and Sion. In 1120 Callixtus II, who was Bishop of Vienne under the name of Guy of Burgundy, decided that the Archbishop of Vienne should have for suffragans of Grenoble and Lyons, Dijon, Besançon, Geneva, and Maurienne; that the Archbishop of Tarantaise should obey him, notwithstanding the fact that this archbishop himself had suffragans, that he should exercise the primacy over the provinces of Bourges, Narbonne, Bordeaux, Aix, Auch, and Embrun, and that, as the metropolitan of both provinces already bore the title of primate, the Archbishop of Vienne should be known as the "Primat de Primates". In 1023 the Archbishop of Vienne became lords paramount. They had the title of Count, and when in 1033 the Kingdom of Arles was reunited to the empire, they retained their independence and obtained from the crown the title of Archbishops of the Kingdom of Arles (1157). Besides the four Bishops of Vienne hitherto mentioned, others are honoured as saints. In enumerating them we shall follow M. Duchene's chronology: St. Justus, St. Dionysius, St. Paschalis, St. Floriantius (about 374), St. Luppicinus, St. Floriaceus (about 400), St. Maclous, St. Nicetas (about 449), St. Mamertus (d. 475 or 476), who instituted the rogation days, whose brother Claudianus Mamertus was known as a theologian and poet, and during whose episcopate St. Leonianus held for forty years the post of grand penitentiary at Vienne (494-5 Feb. 518), St. Fulgentius (about 520-533), St. Pancratius (about 538), St. Namnatius (d. 559), St. Evantius (d. 654-6), St. Verus (586), St. Desiderius (Didier) 596-611, St. Domonius (about 614), St. Seffarius, St. Heccidius, St. Caoaldus (about 654-64), St. Bobolinus, St. Georgius, St. Demetius, St. Eblonius, St. Barnardus (810-41), noted for his conversations in favour of the sons of Louis the Pious, Ado (860-875), author of a universal history and two martyrlogies, St. Thibaud (end of the tenth century). Among its later bishops were Guy of Burgundy (1084-1119), who became pope under the name of Callixtus II, Christophe de Beaumont, who occupied the See of Vienne for seven months in 1745 and afterwards became Archbishop of Paris, Jean Georges Le Franc de Pompignan (1774-90), brother of the poet and a great enemy of the "philosophers", and also d'Aviais (1790-1801), illustrious because of his strong opposition to the civil constitution of the clergy and the first of the emigre bishops to re-enter France (May, 1797), returning under an assumed name and at the peril of his life.

Michael Servetus was living in Vienne, whether he had been attracted by Archbishop Palmier, when Calvin denounced him to the Inquisition for his books. During the proceedings ordered by the ecclesiastical authority of Vienne, Servetus sustained the claims of the Church of Vienne. "Le Livre épiscopal de l'archevêque Léger" (1030-1070) included both the invocations of Ado and the forged letters of the "Receuil".

After the Concordat of 1801 the title of Vienne passed to the See of Lyons, whose titular was henceforth called "Archbishop of Lyons and Vienne," although Vienne belongs to the Diocese of Grenoble. The principal parish of pilgrimage in the ancient Diocese of Grenoble are: Notre-Dame de Parménie, near Rives, re-established in the seventeenth century at the instance of a shepherdess; Notre-Dame de l'Osier, at Vinay, which dates from 1649, and Notre-Dame de la Salette, which owes its origin to the apparition of the Virgin, 19 September, 1846, to Maximin Giraud and Mélanie Mathieu, the devotion to Notre Dame de la Salette being authorized by Bishop Bruillard, 1 May, 1852.

Before the enforcement of the law of 1901 there were in the Diocese of Grenoble Assumptionists, Olivétans, Capucins, Regular Canons of the Immaculate Conception (Oblates of Mary), Dames de la Montagne, Dames de la Sagesse, Dames de la Providence, Dames de la Visitation, and Sisters of St. Joseph (Les Filles du Saint-Esprit). The Holy Ghost and of the Holy Heart of Mary, Brothers of the Cross of Jesus, Brothers of the Holy Family, Brothers of the Christian Schools and Brothers of the Sacred Heart. The diocesan congregations of women were: the Sisters of Our Lady of the Holy Rosary, devoted to hospital work and teaching, and founded by Cathiard, who, after having been an officer under Napoleon, died Archpriest of Pont de Beauvoisin; the Sisters of Providence, founded in 1841, devoted to hospital duty and teaching (mother-house at St. Marcellin), and the Sisters of Our Lady of the Cross, likewise devoted to hospital and educational work, founded in 1832 (mother-house at Murein). Prior to the congregations law of 1901, the following institutions in the Diocese of Grenoble were in charge of religious orders: 65 infant schools, 1 asylum for incurable children, 2 asylums for deaf-mutes, 4 boys' orphanages, 8 girls' orphanages, 7 free industrial schools (ouvriers), 2 orphanages of shelter, 33 hospitals, hospices, or private hospitals, 1 dispensary, and 18 houses for religious nurses caring for the sick in their homes. In 1905, when the Concordat ceased, the Diocese of Grenoble had a population of 601,940 souls, with 51 parishes, 530 succursales, and 67 curesies subordinated by the State.

(2) UNIVERSITY OF GRENOBLE, created by three Bulls of Benedict XII, 12 May, 27 May, and 30 September, 1339. On 25 July, 1339, the Dauphin Humbert II (the Counts of Dauphiné bore the title of Dauphin) drew up a charter of the privileges granted to the students at Grenoble, promulgated measures to attract them, and stipulated that the university should give instruction in civil and canon law, medicine, and the arts. A curious ordinance issued 10 May, 1340, by Humbert II commanded the destruction of all the forges in the vicinity of Grenoble lest they should produce an irreparable famine of wood and charcoal. Humbert may have wished that life should be frugal where the university was established. Finally on 1 August, 1340, he declared that the superior court of justice of Dauphiné (conseil de Dauphiné), which he removed from Saint-Marcellin to Grenoble, should be composed of seven professors, four of whom might be chosen from among the professors at Grenoble. Humbert's projects do not appear to have been completely realized. The university lacked resources, indeed arts and medicine were not taught, and even the chairs of law seem scarcely to have survived the reign of Humbert II. At all events, when Louis XI created the University of Valence in 1452, he declared that no institution of the kind existed at that time in Dauphiné. But in 1542 François de Bourbon, Count of Saint-Pol, great-uncle of Henry IV of France, and governor of Dauphiné, re-established the university. The Italian jurist Grisalvi, the jurist that formed the French jurist Pierre Loriot, called Loriot, attracted many students thither, but the orthodoxy of these professors was suspected. This was one of the reasons which, in April, 1565, led Charles IX to unite the University of Grenoble to that of Valence, for which in 1567 Bishop Montluç, well known as a diplomat and powerful at court, was able to obtain the noted jurist Cujas. The citizens of Grenoble protested and sent delegates to Paris, but the edict of union between the universities was strengthened by the circumstance that at the very time when Charles IX published his edict Govea and Loriot were compelled to institute a suit against the town of Grenoble to secure the payment of their years of salary. Equally ineffectual were the efforts for the renewal of the university frequently made by the town in the seventeenth and eighteenth centuries. Napoleon I, on 1 November, 1805, re-established the faculty of law at Grenoble. Since 1898 the different faculties of Grenoble form the University of Grenoble.

GEORGES GOYAU.

GRESEMUND, DIETRICH, German humanist; b. in 1477, at Speyer; d. 1512, at Mainz. His father, also named Dietrich, was a native of Meschede in Westphalia, and was educated first at Erfurt, where he became and subsequently in Italy. Having graduated in medicine at Speyer, he became court-physician and councillor to the Elector of Mainz, in which city young Dietrich grew up and attracted great attention at an early age by his learning and ability. As early as 1493 he became associated with Wolf von Thurn, and Abbot Trithemius, and in 1494 he published his first work. Even at that date Trithemius admitted him to his "Cata-
logy illustrium virorum" with warm eulogies, on the ground that the youth had far surpassed many men of mature age, including even doctors. Having received a thorough classical education from his father and attended lectures in dialectics at the University of Mains, Dietrich studied law at Padua and Bologna in 1497. In 1498 he received the degree of doctor legum at Ferrara, and in 1499 he matricu-
lated at Heidelberg. About 1501 he was in Rome to study antiquities, but soon had enough of the city, and wrote two very caustic epigrams upon Alexander VI. On his return to Mainz he passed over to Strassburg. He awaited him during the brief remnant of life that was allotted to him. In 1505 he became canon at St. Stephen's, in 1506 vicar-general, in 1508 prothonotary and judex generalis, in 1509 diffinitor cleris minoris at St. Stephen's, and in 1510 scholasticus in the same chapter. He was a sound and upright judge, and led a pious, irreproachable life. He continued to apply himself to humanistic studies, cultivated an extensive friendly and literary intercourse, and was associated with the most renowned scholars of his day.

His first work was called "Lucubratiaeueulae" (1494), and dedicated to Trithemius. The book is divided into three parts. The first of these, a dialogue in which is discussed the value of the seven liberal arts, met with special applause and was reprinted several times. It is worth remarking that this book contains the first plea from the Rhinens country for a reform in the teaching of grammar. His dialogue on the carnival deals with a humorous subject (1495). In 1499, when he already held an ecclesiastical office at Mains, he delivered a discourse at a synod presided over by Archbishop Berthold. In this he appears in the light of a stern censor of the moral life of the clergy. His longest poem—a work of little merit—tells in moralizing, didactic fashion the story of the mutilation of a crucifix by an actor ("Historia violata crucis", written about 1505, but not printed until 1512). Gresemund's hobby was the collection of ancient coins and inscriptions. In 1510 he issued an edition of short texts in Roman archaeology. Death prevented the publication of his works on antiquities, and the manuscript has been lost. Individual poems were written for the publications of his friends. He died of hernia in the prime of life. Erasmus paid him a splendid tribute in his edition of St. Jerome in 1516, and Gebwiler describes him in the following words: "This man was slender and meek and strong in mind, with well-moulded features, dark hair, grey eyes, even-tempered, without rancour, without presumption, without pride, without affectation, gentle in his man-
ner, and truthful."

Greslon, ADRIEN, French missionary; b. at Périg-

Dageux, in 1618; entered the Society of Jesus at Bordeaux, 5 November, 1635; d. in 1697. He taught literature and theology in various houses until 1635, when he was sent as a missionary to China. He arrived there in 1657, and after mastering the Chinese and Manchu languages went to the Province of Kiang-si, which he describes as a veritable Garden of Eden. Here he remained, engaged in his missionary labours, until 1670, when he returned to France. Greslon wrote two books: "Lessons des deux lieux de l'interprètes de l'Ancien Testament", with reflections in Chinese; and "Histoire de la Chine sous la domination des Tartares ... depuis l'anndée 1651 ... jusqu'en 1669" (Paris, 1671).

MOREZ, Grand Dictionnaire historique.

LEO A. KELLZ.
Guerset, Jean Baptiste, b. 29 August, 1700; d. 16 June, 1777, at Amiens. Having finished his studies at the college of the Jesuits of his native town, he joined their order, and after his novitiate, taught literature in the schools of the Society at Moulins, Tours, and Rouen. He was a teacher in the celebrated college Louis-le-Grand, which he left, however, to go to Paris, where he published his comic heroic poem “Vert-Vert” (1734), which created quite a sensation in literary circles. It is the story of a parrot, the delight of a convent, who on being sent to another convent, learns profane expressions on the way, and shocks the nuns by swearing and bad manners. The book was reprinted several times, and was being too well read, soon died. This insignificant subject is treated in a masterly manner, giving a life-like picture of innocent convent pastimes. The ten-syllable line is used with the greatest ability. Other poems in the same vein followed: “Le Carême Impromptu”, “Le Lutrin Vivant” (1736); and then a few “Epitres.” The publication of “La Chartreuse,” which was imbued with Epicurean ideas, caused his dismissal from the Society of Jesus. Thereupon he wrote “Les Adieux aux Jésuites,” a splendid testimonial of respect and gratitude. On his return to a secular life Guerset was induced to write for the stage, and he successfully composed “Edouard III,” a comedy (1740), “Sidney,” a drama (1745), and finally “Le Méchant,” a comedy (1747). The first and second failed, while the last obtained a great success. It is still regarded as the best comedy in verse that was produced in the eighteenth century. Besides its merit of structure and style, it proved to be a strong satire of the manners of that period. At a period when wickedness, as Duclou says, “was raised to the dignity of an art and even took the place of merit with those who had no other way of distinguishing themselves, and often gave them reputation as the picture of the scoundrels was considered as representative of the time. In fact, “Le Méchant” marks the transition between the “Petite-Maîtresse” of Marivaux and Valmont of the “Liaisons Dangereuses.” In 1748 he was elected to the French Academy. It was then that he was invited by Frederick II, King of Prussia, to go to Potsdam and join the court of French writers who paid their court to the “Solon of the North,” but he declined the invitation, being afraid of the materialistic doctrines which were professed there. In 1759 he left Paris and retired to Amiens, where he led for eighteen years a very austere life, atoning for the frivolity of his youth. His austerity was regarded as exemplary, to write the well-known epitaph: “Guerset se trompe, il n’est pas si coupable.” The poet was not dismayed by Voltaire’s disapproval and continued to live in seclusion, and for the rest of his life left Amiens only on two occasions, to go to the French Academy and to make a speech at the reception of D’Alembert and Suard. Before his death he destroyed all his manuscripts. In 1750 he founded at Amiens an Academy of Sciences, Letters, and Arts, which still exists.

Greuze, Jean-Baptiste, French painter, b. at Tournus in Ardèche, 21 August, 1725; d. at Paris, 21 March, 1805. His father, a master-tiler, wished to make him an architect, but ended by leaving him free to follow his own vocation, and sent him to Lyons to study under Gromdon, father-in-law of the musician Grétry. As Gromdon was only a contractor and a picture-dealer and agent, it is hard to see what he could have taught his pupil. Greuze, however, had already attained some skill when he came to Paris, in 1755, with his picture “Fère de campagne expliquant la Bible à ses enfants” (A father explaining the Bible to his children). His name was at once proposed to the Academy by Sylvestre, and he was received as associate. In 1759 he was received as an associate. The picture, which was purchased by the celebrated amateur La Live de Jolly, was exhibited along with a second painting, “L’aveugle trompé” (The blind man cheated), that same year. It was a triumph for Greuze. In one day he had become famous in Paris, though he was only thirty years of age.

Like all artists of his time, he thought it necessary to travel through Italy. He set out towards the end
of 1755, with the Abbé Gougenot, the celebrated savant and archaeologist. Rome and Florence, however, do not seem to have exerted any influence on his art. It is true, he brought back from Naples some scenes done up for the exhibition of 1757, but they were Neapolitan only in costume and name. He soon returned to his true style, paintings of humble and bourgeois life, and from that moment there began for him a wonderful career of success and good fortune.

A strange change was then taking place in the French mind—a curious variation, so to say, of the moral temperature. Reason, the critical faculty, and the intellect had run riot, and now men felt the need of living the life of the heart. Society, satiated with frivolity and licentiousness, sought repose in a simple, honest life. This it was that made Rousseau's "Julie" and "Emile" so wonderfully popular; it was, in a word, the great moral and religious crisis of the century; it could not but exert an influence on art, and it fell to Greuze to express it in painting. In this, it is true, he was preceded by an artist much greater than he, J.-B.-Siméon Chardin, whose paintings the "Eureuse" (1738), the "Pourvoyeuse", the "Bénédiction" (1740) are still masterpieces of the homely family life. Chardin, too, was an excellent draughtsman, and Greuze was much his inferior in this respect, just as he falls far short of his precursor's tender kindness and lovely, unpretentious poetry. For Chardin's charming simplicity Greuze substitutes a host of moral aims and edifying thoughts.

The interest of pure sympathy which a painter ought to feel in the model's life was not enough for Greuze, he must mingle with it a strain of anecdote and a concealed lesson. His work is more or less a painted sermon; he is ever a preacher. In this respect he resembles Hogarth, whom he undoubtedly imitated as Rousseau imitated Richardson. The success of Greuze was therefore one of the innumerable forms of the eighteenth-century anglophone.

All this conspired to make him, for some years, the most widely known and most celebrated painter in Europe. His art was hailed as the triumph of natural bourgeois virtue over the mythological and immoral painting of Boucher. His work was a pleasing return to real life, as it was. The "Tricoteuse", "Dévoué", and "Jeune fille pleurant son oiseau mort", at the Exhibition of 1759, carried away the public with a new feeling of life, an emotion that unexpectedly arose from the most commonplace scenes. The "Accordée de village", exhibited in 1761, raised popular enthusiasm to the highest pitch. The picture marked an epoch. It had the distinction, hitherto unheard of for a picture, that the scene it presented furnished the subject of a play at the "Comédie Italienne"; the climax of this play was the betrothal scene, which was reproduced by the actors exactly as it was painted by Greuze. This compliment, in the present writer's opinion, constitutes a most delicate piece of criticism. For the artist's main fault is that he betrays his effort to lecture the public. Nature never presents these ready-made scenes, where the lesson is plainly writ-

L'ACCORDÉE DE VILLAGE
Jean-Baptiste Greuze, Louvre, Paris

has only to read Diderot's" commentaries on the "Cruche cassée" or the "Jeune fille pleurant son oiseau mort". But this did not impede the success of Greuze or diminish his renown. His paintings, engraved by Flipart, Massart, Gaillard, and Levassuer, continued to be most popular, and brought him a fortune. Meanwhile, although it was customary for artists admitted by the Academy as associates to present a picture to the Society within six months, ten years had passed, and Greuze had not fulfilled this obligation. Finally, in 1769, he offered his "Septime Sevère reprochant à Caracalla d'avoir voulu l'assassiner" (Septimus Severus reproaching Caracalla). This painting, which may be seen in the Louvre, met with a very cold reception; no one expected it would gain him membership in the Académie as an historical painter, was received only as a painter of genre. Proud, like all self-taught men, and spoiled, moreover, by his triumphal career, the artist could not pardon the Academy for this humiliation, which he attributed to the envy of his fellow-painters. From that time he ceased to work for the exhibitions and contented himself with displaying his works in his studio, whither the public continued to go to see them, as they went to see Rousseau in his fifth-floor room in the rue Plétrière. Among others, Mme Roland, then Mlle Philion, visited him twice in 1777.

As successful as ever, Greuze went on to produce some of his most renowned works, the "Bénédiction" and the "Malédiction paternelle", the "Mort du bon père de famille" and the "Mort du père dénaturé".
He intended to paint a suite of twenty pictures, a moral romance, "Basilic et Thibaut," or "Deux educations," showing the lives of good and bad. But this plan was not carried into execution. At length evil days were approaching for Greuze. His fame never recovered completely from the shock it received at the Academy of France, and the circumstances which led to his painful separation, created for him a doubtful situation. The preacher of the joys of family life became, in the midst of his domestic troubles, an object of derision or of pity to the populace. Younger painters, like Fragonard, surpassed him in his own style; their academical beauty was fresher, and led to execution much superior. Lastly, for some years, public taste had been changing. The wind blew in another direction. The ideas of Winkelmann were becoming diffused. The enthusiasm for antiquity, stirred up by excavations at Herculanum and Pompeii, disgusted the public with the divinities of Boucher and the bourgeois of Greuze. Diderot, who had lauded the latter so highly, began to abandon him. "I no longer care for Greuze," he wrote in 1769. Everything foreshadowed the movement that was to culminate in the artistic Jacobinism of David. From the Mort de Socrate (1784), this painter, who is the most step of the Great Convent Bonaparte, now preserved at Versailles. Ruined by the mismanagement of his affairs and the treachery of his wife, abandoned by his clientele, deserted by the public, the old man would have fallen into the most abject poverty but for the help he received from one of his daughters. He used to say to Fragonard, "I am sure that, if I had never painted, I should have earned three hundred thousand francs, and now I have nothing." He died at the age of eighty, in complete oblivion, having survived a world whose idol he was, and whose ideal he expressed most perfectly.

Overpraised in his lifetime, and always popular (on account of his theatrical display and his ravishing literary painting), this artist fully merited his reputation. Though his style was a false one, he was a brilliant master of it. He represents, perhaps, the bourgeois ideal of art and morality. Of the intellectual movement that produced the plays of Diderot and the lyric opera of Greuze and Montigny, his work is all that survives to-day. And as a painter of expressive heads, especially of children and young girls, he has left a number of specimens that display the highest artistic gifts. His "Sophie Arnould" (London, Wallace Gallery) and his "Portrait d'inconnue" (Van Home collection, Montreal, Canada) are among the most beautiful portraits of women produced by the French School.

LOUIS GILLET.

Grey Nuns.—The Order of Sisters of Charity of the Hôpital Général de Montreal, commonly called Grey Nuns, was founded, in 1728 by the Venerable Marie-Marguerite Dufrost de LaJemmerais (Madame d'Youville) and the Rev. Louis M. Normand du Paradon, at that time superior of the Seminary of St. Sulpice de Ville Marie (now Montreal). Madame d'Youville's first associates were Marie Louise LeFaivre, Marie Leduc, and Marie Cusson. The four ladies rented a small house, and began by receiving four or five poor people, which number shortly rose to ten. This beginning was made 30 Oct., 1738. On 3 June, 1753, the little association of ladies received the royal sanction which transferred to them, under the title of "Sœur de la Charité de l'Hôpital Général," the rights and privileges which had been granted by letters patent to the "Fébé Hospitaleurs" in 1684. The membership of the sisterhood was adopted by mutual consent and worn for the first time on 25 August, 1755. The rule which had been given Madame d'Youville and her companions by Father Noront in 1745 received episcopal sanction in 1754, when Mgr de Pontbriant formed the little community in a religious order, and laid its foundation on the basis of the present constitution, which were approved by Leo XIII, 30 July, 1880. Besides the three vows of poverty, chastity, and obedience, the Sisters pledge themselves to devote their lives to the service of suffering humanity. The Grey Nunnery offers a refuge to old people of both sexes, incurables, orphans, and abandoned children or foundlings. Hundreds of these waifs are received yearly into the institution.

Montreal alone possesses fifteen charitable institutions under the care of the Grey Nuns, viz., orphanages, infant schools, homes for the infirm and aged, an academy for the blind; hospitals, a night refuge and hospital dormitories for the servants' homes, eleven in the United States, namely, in Boston, Salem, Lawrence, Worcester, and Cambridge (Massachusetts), Nashua (New Hampshire), Toledo (Ohio), Morristown (New Jersey); and Fort Totten (North Dakota). These cities possess homes for working girls, hospitals, and orphanages. In the latter upwards of twelve hundred poor children are cared for and instructed. Three large convalescents were also erected by the mother house with the rights of founding others in turn, viz., those of St. Hycacinth, Quebec, and Ottawa, but they are distinct branches, dependent of the mother house of the Grey Nunnery. Nicolet has branched from St. Hycacinth. In 1844 a colony of Grey Nuns left their convent in Canada to devote their lives to the relief of the Indian tribes and the education of youth in the far northwest. Their principal establishment is at St. Boniface, and is now a vicarial house, with thirteen other missions in the archdiocese. These include hospitals, orphanages, and parochial, boarding, and industrial schools. St. Boniface Hospital, conducted by the Grey Nuns, is the largest in Manitoba, affording ample accommodation for three hundred and forty patients. In the province of Alberta, Diocese of St. Albert, the Sisters have two hospitals at Edmonton and Calgary and parochial, boarding, and industrial schools at St. Albert, Dunbow, and Saddle Lake. Further north, in the Vicariates of Athabasca and Mackenzie, there are schools and orphanages at Fort Resolution (Great Slave Lake) and also at Providence on the banks of the Mackenzie River. This last mission was founded in 1866. These houses have each a local superior who is subject to the superiors vicar of St. Boniface or of St. Albert, who in turn owe allegiance to the superior general of the Grey Nunnery, Montreal. In the year 1906 the number of professed Grey Nuns was 1853; charitable and educational establishments committed to the care numbered 135. In the former 6960 poor inmates are provided for, and in the latter 25,964 children are instructed.

SISTER M. E. WARD.

Grey Nuns of the Cross, a community founded in 1745 at Montreal by Madame d'Youville, known as the Grey Sisters, or Grey Nuns, from the colour of the costume. Just one century later, February, 1845, at the request of Bishop Phelan, Kingston, Mother General McMullin sent four sisters to Ottawa, Ontario, then Bytown, in the Diocese of Kingston. Schools being the greatest need at Bytown, two classes were opened without delay, Sisters Elizabeth Buryère
and Helen Howard being the first teachers. Over one hundred and fifty pupils attended. This was the beginning of the well-known Sacred Heart or Rideau Street Boarding School. At the same time, a sister in charge of the sick poor organized the laity into helping centres. Providentially a hospital was in working order when the ship-fever victims arrived from Ireland in the famine year of 1847. Teaching and the works of mercy are on a footing in this community. The Grey Nuns undertake any needed work. Their novitiate receives choir nuns and lay sisters. The institute has so steadily increased that it has in Ottawa, in addition to Rideau Street convent, two high and sixteen parochial schools. The teachers hold summer schools, attend the normal summer school and qualify for the highest diplomas.

Attached to the hospital is the first training-school for nurses formed in Canada. There are also five homes for children and the aged poor, supported by voluntary offerings and a government allowance. In Hull, opposite Ottawa, are large parish schools, academic and elementary. A Catholic normal school will be opened in September, 1909. At Hudson Bay is an Indian school for the Cree; along the Ottawa River from its upper waters are three boarding schools, ten parochial schools and five hospitals; at Lake St. Peter, in Quebec province, are two boarding schools and an Indian school for the Abnaki. In 1857 a school was opened in Holy Angels parish, Buffalo, N. Y. It is situated on Porter and Prospect Avenues and has had a very successful history.

In 1860 a boarding school and academy was founded at Plattsburg, N. Y. A parish school, governed by the public school principal and supported by the public school funds, existed until the "Garb-question" caused the sisters to withdraw. Plattsburg School Board sent protests in vain to Albany. There was but one answer: the exciting garb must be discarded. But the school still exists, supported by Catholics.

In 1863 a school was opened at Ogdensburg, N. Y., in the old Ford mansion, on a beautiful site, facing the St. Lawrence. It is now a home for the homeless. St. Mary's or the Cathedral school of Ogdensburg is second to none under the Regents. At the World's Fair it was accorded a medal in the exhibit of the University of New York. The sisters have also two hospitals at Ogdensburg. Since 1881 Lowell and Haverhill, Mass., have had parochial schools. Leo XIII proclaimed Mother d'Youville venerable. Her canonization is being considered at Rome. As she, the first Grey Nun, chose the Cross as her emblem and the cross of her special devotion, Leo XIII named her faithful daughters "Grey Nuns of the Cross", a title limited to the Ottawa foundation only, the headquarters of the houses mentioned above.

SISTER VERONICA O'LEARY.

Griffin, Gerald, novelist, dramatist, lyricist; b. 12 December, 1803, at Limerick, Ireland; d. at Cork, 12 June, 1840. His parents came from good families in the south of Ireland. Thirteen children were born to them, nine boys (of whom Gerald was the youngest) and four girls. When Gerald was seven years old his parents moved to Fairly Lawn by the river Shannon, about twenty-seven miles from Limerick. Gerald received a good education; he had many teachers, but he owed most to his mother, a woman of deep religious feeling and great talent. "She was", as Griffin, Gerald's brother and biographer, remarks, "of exceeding fine tastes on most subjects, intimately acquainted with the best models of English classical literature, and always endeavoured to cultivate a taste for them in her children". Gerald's early life was happy and profitable. When free from his books he was wont to roam through the neighbouring country, so rich in ruins, which told him of the past glories of his native land. At that time, too, he got an insight into the customs of the people and became familiar with the popular legends and folk-tales which he later worked into his stories. In 1820 the family at Fairy Lawn was broken up. The parents with several of the children emigrated to America, and settled in the State of Pennsylvania. Gerald, with one brother and two sisters, was left behind under the care of an elder brother, a practising physician in Adare, County Limerick. Gerald had thought of following the profession of his brother, but love of literature had too strong a hold on him. His chief interest was in the drama. The modern stage he considered in a deca-

Cemetery of the Christian Brothers and the Grave of Gerald Griffin, Cork, Ireland
he obtained steady employment in a publishing house as reader and reviser of MSS, and in a short time became a frequent contributor to some of the leading periodicals and magazines. He wrote on a great variety of topics and displayed such talent that his services were well rewarded. What spare time he had he devoted to the writing of novels, and this means to make known the people and places with which he was most familiar—those of the south of Ireland. And so he started a series of short stories, "Anecdotes of Munster", which he later called "Hol-land-Tide". This series established his reputation and enabled him to gain up his literary reputation. He was not longer haunted by the danger of failure he returned to Ireland. Though broken down by poor health, he kept on working and produced his "Tales of the Munster Festivals". His next work, "The Colle-gians", published in his twenty-fifth year, assured him of fame and fortune. It is perhaps the best of all Irish novels. It gives a comprehensive picture of every phase and gradation of Irish life. The story is well worked out, giving the strongest proof of the dramatic talent of the author. It was dramatized in the popular play, "The Colleen Bawn", but, unfortunately, not by Griffin. He took up the study of law in London, but in a short time removed to Dublin for the study of ancient Irish history, preparatory to his work "The Invasion", which was published in 1832. This work had a good sale and was highly praised by scholars, but never became popular. For several years more he kept at his literary work.

It became evident, however, that a great change had come over him in his views of fame and fortune. In a letter to his father in 1833 he told of the desire he had "for a long time entertained of taking orders in the Church and adds, I do not know any station in life in which, after so much work, I can do good to others and to myself, as in that of a Catholic priest." This idea of doing good had been the motive power at work with him; but soon the conviction had forced itself upon him that he had overrated the value of fiction, and he was afraid that "he was wasting his time." The rest of his life may be briefly told. With the exception of a tour through Scotland and a short trip on the Continent, he lived with his brother, keeping up to some extent his literary labours, but devoting more and more to prayer and to teaching the poor children of the neighbourhood. This last occupation was so congenial that he resolved to enter the Institute of St. Mary in London, and a sojourn in the metropolis served as its special aim the education of the children of the poor. It was apparently a sense of the deep responsibility of the duties attached to the priesthood that caused him to turn to the humble position of Christian Brother. But before entering upon his religious life he gathered together and burned almost all his unpublished manuscripts. On 8 Sept., 1838, he entered the Institute, and there as Brother Joseph spent the rest of his life content and happy. Writing to an old friend he said "he felt a great deal happier in the practice of this daily routine than he ever did while roaming at large", that the great object toward which he was most powerfully drawn was "the modest project of rivialing Shakespeare and throwing Scott in the shade". In June, 1839, he was transferred from Dublin to the south monastery of Cork, where he died of typhus fever at the early age of thirty-six.

Notwithstanding the severe trials he was put to during his residence in London he remained singularly pure-minded, and the purity of his mind is reflected in all he wrote. Though he thought he had failed, he really succeeded in his aim of furnishing healthy food to the imagination. He knew the Irish character, and portrayed faithfully its many peculiarities. His tastes, however, were more for literature and music, and at the age of sixteen, under Schiller's influence, he tried his hand at dramatic composition. In 1813, he entered the civil service in the customs department, but his official life was anything but happy. Throughout his career, he had to submit to the ill will and distrust of his superiors, and the interference of a rigid censorship. His rise was very slow; repeatedly
preferment was denied him, and he never got beyond the position of director of the Hofkammerarchiv, to which he was promoted in 1832. His application in 1834 for the directorship of the university library was rejected; he was thus compelled to retain his ungenial position until 1858, when he retired with a pension and the title of Hofrat. Repeatedly he sought distraction in travel. In 1819, prostrated by the shock caused by his mother’s suicide, he obtained a furlough and visited Italy, travelling unofficially in the retinue of the empress. While in Rome he wrote the love poem on the ruins of the Campo Vaccino, which gave offence to the Catholic party and drew upon the poet the censure of the emperor. This unfortunate affair was largely responsible for the setbacks which Grillparzer subsequently experienced in his official career. In 1828 he visited Germany, and ten years later Paris and London. Another journey was made to Greece and the Orient in 1843, followed by a second visit to Germany in 1847. Subsequently he could not be induced again to leave Vienna.

If the poet’s public career was full of disappointment, his private life was equally unhappy. He had several love affairs; but the attachment of his life was to the handsome and accomplished Katharina Fröhlich, to whom he was betrothed in 1821. Each of the lovers possessed an unyielding personality, and, though the engagement was not formally broken, they were never married. In 1849, Grillparzer took up his abode with the Fröhlich sisters, and in their house he spent his remaining years. When his comedy, “Weh dem, der läuft,” had been rudely hissed by the Vienna public, the poet in despair and anger withdrew from the stage and lived henceforth in strictest seclusion. The recognition and honours that finally came to him left him unmoved. In 1871, the enthusiasm with which his eightieth birthday was celebrated throughout Germany and Austria proved that at last his greatness was recognized. When he died the next year, he was accorded a public funeral.

Grillparzer’s earliest drama, “Blanka von Kastilien” (1807), was written while he was still a student. The play that first made him famous was “Die Ahnfrau” (The Ancestress), performed in 1817. It is one of the so-called fate-tragedies, in such vogue at the time, and, though crude and full of horrors, it shows unmistakable signs of dramatic power. In his next drama, “Sappho” (1818), the poet turned to ancient Greece for inspiration and took for his theme the legendary love of the famous Greek poetess for Phaon. This tragedy was received with enthusiasm, and translated into several foreign languages. To this day it has remained Grillparzer’s most popular play. It was followed in 1821 by the trilogy “Das goldene Vlies,” a dramatization of the story of Jason and Medea. It has three parts: “Der Gastfreund” (the Guestfriend), a kind of prologue; “Die Argonauten,” and “Medea.” By many critics this trilogy is regarded as his greatest work; on the stage, however, it was not as successful as his former plays. After this he turned to history for his subjects. “König Ottokars Glück und Ende” (King Ottokar’s Fortune and End) presents in dramatic form the downfall of the Bohemian kingdom and the rise of the House of Hapsburg. An episode from Hungarian history is treated in “Ein treuer Diener seines Herrn” (a faithful Servant of His Master) (1828)—a drama which glorifies the spirit of self-sacrificing loyalty. For his next effort the poet again turned to Greece, and produced one of his most finished dramas in “Des Meeres und der Liebe Wellen” (1831) (The Waves of the Sea and of Love); its theme is the story of the Love of Hero and Leander, with the exquisite dream-play “Der Traum ein Leben” (1834) (Dream is Life). Grillparzer again won a popular success. Its title suggests the influence of Calderon’s “La Vida es Sueño,” but the plot was suggested by Voltaire’s story “Le Blanc et le Noir.” In 1838 appeared the poet’s only attempt at comedy, “Weh dem, der läuft” (Woe to him who Lies). Its failure caused his retirement from the stage, and with the exception of the beautiful fragment, “Esther,” which appeared in 1863, the poet’s later dramas were not published until after his death. They are: “Ein Brudermord in bester Familie” (A Family Murders), treating of an Austrian history; “Die Judin von Toledo,” based on a play of Lope de Vega, and “Libussa,” the subject of which is the legendary story of the foundation of Prague.

Grillparzer also wrote critical essays and studies, especially on the Spanish theatre, of which he was a great admirer, and on the art of novel writing. He translated the stories, “Das Kloster bei Sendomir” and “Der arme Spielmann.” His lyric poems are as a rule too intellectual; they lack the emotional quality which a true lyric should possess. He excels in epic. His autobiography, which he brought down to the year 1836, is invaluable for a study of his life. But his title to fame rests on his dramas. As a dramatic poet he stands in the front rank of German writers, by the side of Schiller and Kleist. His complete works have been edited by August Sauer (Stuttgart, 1892–93, 5th ed., 20 vols.); M. Necker (Leipzig, 1903, 16 vols.); Alfried Klaar (Berlin, 1903, 16 vols.); Albert Zipper (Leipzig, 1903, 6 vols.); Minor (Stuttgart and Leipzig, 1903); W. Eichner (Berlin, 1904, 20 vols.). A critical selection was edited by Rudolf Franz (Leipzig and Vienna, 1903–05, 5 vols.). His letters and diaries were edited by Carl Glossy and A. Sauer (Stuttgart and Berlin, 1903). Of the numerous biographical and critical works concerning Grillparzer we mention those of Volker, Grillparzer als Dramatiker des Tragischen (Munich, 1903); “Grillparzer und seine Werke” (Paris, 1900), translated into German by Necker (Munich, 1902); Sauer, Gesammelte Reden und Aufsätze zur Geschichte der Literatur in Österreich und Deutschland (Vienna and Leipzig, 1903), 4 essays, pp. 102–230; Sittenberger, G., sein Leben und Wirken (Berlin, 1904); Pollak, F. G. and the Austrian Drama (New York, 1907). Consult also the introductions to the editions mentioned above, and especially the annual publications of the Grillparzer-Gesellschaft, Jahrbuch, ed. Glossy (since 1911).

**Arthur F. J. Remy.**

**Grimaldi, Francesco Maria.** Italian physicist, b. at Bologna, 2 April, 1613; d. in the same city, 28 Dec., 1663. He entered the Society of Jesus, 18 March, 1632; and, after the usual course of studies, spent twenty-five years as professor of belles-lettres in the colleges of the order. His tastes were, however, scientific, and he found time for study and research in physics and astronomy. He was known almost entirely in his later years. He assisted P. Riccioli in his experiments (1640–1650) on falling bodies, and in his surveys, in 1645, to determine the length of an arc of the meridian. He was also a close observer of the moon’s surface and constructed a map which was incorporated in Riccioli’s “Almagest.” He was the author of illustrous philosophers and astronomers to the elevations and depressions on the moon to which Hevelius, before him, had
applied the names borne by terrestrial seas and mountains.

Grimaldi’s most important scientific work was done in optics, in which field he became a worthy predecessor of Newton and Huyghens. He made several discoveries of fundamental importance, but they were much in advance of the theory of the time, and their significance was not recognized until over a century later. The first of these is the phenomenon of diffraction. He allowed a beam of sunlight to pass through a small aperture in a screen, and noticed that it was diffused in the form of a cone. The shadow of a body placed in the path of the beam was larger than that required by the rectilinear propagation of light. Careful observation also showed that the shadow was surrounded by coloured fringes, similar ones being seen within the edges, especially in the case of narrow objects. He showed that the effect could not be due to reflection or refraction, and concluded that the light was bent out of its course in passing the edges of bodies. This phenomenon, to which he gave the name of diffraction, was also studied by Hooke and Newton; but the true explanation was only given by Fresnel on the basis of the wave theory. Grimaldi also discovered that when sunlight, entering a room through two small apertures, was allowed to fall on a screen, the region illuminated by the two beams was also illuminated by a decrease in the intensity of the light, separately. He was thus led to enunciate the principle that an illuminated body may become darker by adding light to that which it already receives. This is, in reality, the well-known principle of interference afterwards so brilliantly employed by Young and Fresnel. It has been questioned whether the phenomenon observed by Grimaldi was really due to interference. He himself regarded it simply as a conclusive proof of the immaterial nature of light which he was then investigating. He was likewise the first to observe the dispersion of the sun’s rays in passing through a prism. Grimaldi was conspicuous for his amiability, gentleness, and modesty. He was the author of “Physiome-thesie de lumine, coloribus, et iride, aliasque annexis” (Bologna, 1663), published after his death.

H. M. BROCK.

Grimaldi, Giovanni Francesco, eclectic painter of the Bolognese school; b. at Bologna, 1606; d. at Rome, 1860. He was a pupil of Carracci, but more than mark he left Bologna for Rome, and was employed by Innocent X to execute some fresco decoration in the Vatican. His work was so much admired that Prince Pamphilj, the pope’s nephew, employed him to decorate the rooms of his villa with landscapes, and then wrote to Louis XIV, describing the work. His appreciation of it was so high that he induced Cardinal Mazarin to invite Grimaldi to Paris, where he decorated two of the rooms in the Louvre and painted some landscapes, and he is said to have received the honour of knighthood from the French king. Returning to Rome, he again entered the papal service, and worked for Alexander VII and Clement IX, was appointed president of the Academy of St. Luke, and became an exceedingly popular person in the Holy City. He was a skilful etcher, especially in landscape-work, and his chief pictures are in the Colonna palace at Rome, in the Quirinal, and in the galleries of Vienna and Paris.

Grimaudo Pictor (Bologna, 1678); ORLANDO, Abbéscadario Pictorio (Bologna, 1719).

GEORGE CHARLES WILLIAMSON.

Grimmelshausen, Johann Jacob Christoffel von, the greatest German novelist of the eighteenth century. What we know of his life is largely gathered from his own writings. He was born near Graz in Austria about the year 1625, when the Thirty Years War was at its height. While still a boy he was carried off by marauding troopers, and until the close of the war in 1648 he led a soldier’s life. In 1667 he was in the service of the Bishop of Strassburg as Schultheiss (17th century) in the town of Remagen in Baden. In this position he remained up to the time of his death, 17 August, 1676. Nothing definite is known of his life during the period from 1648 to 1667; but it seems that he travelled extensively, for his writings show acquaintance with many lands and peoples. In the earlier part of his life Grimmelshausen was a Protestant, but later on he became a Catholic, as is attested by a notice of his death in the parish-record of Renchen.

He is the author of many romances, but the most famous is "Der abenteuerliche Simplizissimus", which appeared at Mönchengladbach, 1668. It is modelled on the picaros novels of Spain and relates in the form of an autobiography, for which, no doubt, the author’s own life furnished many traits, the fortunes of the hero during the troublous times of the great war. Many of the episodes narrated are coarse and repulsive, but are related with never-failing humour, and the whole work is suggested and embellished by a desire to depict the life of his period, and more especially the manners and customs of the times. His secondary writings in similar vein followed, such as "Trutzsimplex" (1676), "Der seltsame Springinsfeld" (1677), "Das wunderbare Vogel-Nest" (in 2-parts, 1672), and other minor works. Grimmelshausen also wrote a number of romances in the heroic-gallant manner in vogue in his day, such as "Der keuchende Joseph", his earliest work (probably 1667), "Dietswald und Amselinde" (1670), and "Proximus und Lympida" (1672). The last two works mentioned were published with the author’s own name on the title-page; for most of his other works he used pseudonyms, that were anagrams of his real name, so that for a long time it remained unknown.

Griswold, Robert. See Sugar, John.

Grön, Valentin, a Catholic theologian, b. at Paderborn, 7 December, 1817; d. at Irrmargteichen, in the district Siegen, Westphalia, 19 March, 1858. On the completion of his studies he was ordained priest at Paderborn (4 July, 1844), after which he took an advanced course in Church history at the University of Munich, where he obtained the degree of Doctor in Theology (1848). He was then sent as chaplain to Bad Homburg, Warstein (10 Nov., 1848), Brilon, Scherfede (10 Dec., 1853), and on 14 Oct. 1857, rector of the city high-school at Fredeburg, going later (17 Dec., 1860) to Schmallenberg in a similar capacity. On 24 Sept., 1868, he was made dean at Irrmargteichen, and later dean. Grön’s best-known
Groote, GERARD, or GEERT DE (GERHARDUS MAGNUS), founder of the "Brethren of the Common Life", b. 1340 at Deventer, Gelderland; d. 20 Aug., 1384. From the chapter school in his native town Geert went for higher studies first to Aachen, then to Paris, where at the Sorbonne he studied medicine, theology, and canon law. He returned home, barely eighteen years old. In 1362 he was appointed teacher at the Deventer chapter school. A few years later his adoring countrymen sent him to Avignon on a secret mission to Pope Urban V. Soon after we find him in Cologne teaching philosophy and theology, joying two prebends and ample means. Warnings of the vanity and danger of this life he heeded not until he met his fellow-student of the Sorbonne, Henry Ager of Calcar, prior of the Chartreuse of Munnikhuisen near Arnhem. Geert stripped himself at once of all honours and temporal possessions and entered abusively upon the practice of devout life. At this time he also frequently visited the famous ascetic Ruysbroek, and no doubt by the advice of this man of God he withdrew into the monastery of Munnikhuizen, where he spent three years in recollection and prayer. Finally having been consecrated Bishop of Cleves, Geert decided to go to Rome to receive the Holy Orders. He had received the diaconate and licence to preach in the Diocese of Utrecht wherever he wished. Young men especially flocked to him in great numbers. Some of these he sent to his schools, others he occupied at transcribing good books, to all he taught thorough Christian piety. He prohibited books by Gemmae, his favourite disciple, asking him one day: "Master, why not put our efforts and earnings together, why not work and pray together under the guidance of our Common Father?" In perfect accord both set to work and founded at Zwolle the "Brethren of the Common Life".

His fearless attacks on vice, which scandalised neither priest nor monk, developed considerable opposition, which culminated in the withdrawal of his licence to preach. He submitted to episcopal authority, but applied to the Sovereign Pontiff for redress. Henceforth his communities, which were spreading rapidly through the Netherlands, Lower Germany, and Westphalia, claimed and received all his clergies into a community of canons regular, but it was left to Radewyns, his successor, to realise this plan at Windesheim two years later. Before the answer to his petition to the pope arrived, Geert De Groote died from pestilence, contracted in ministering to the sick. Groote was the first successful practical mystic, who worked and taught others, and taught others, to do with him. He did much for literature in general, for the spread of knowledge, and for the development of the vernacular in the Netherlands and Germany. Of his biographies the "Vita Gerardi" of Thomas a Kempis still remains the best.

Friedrich Schantz.

Gropper, JOHN, eminent jurist and theologian, b. 24 Feb., 1503, at Soest, Westphalia; d. at Rome, 13 March, 1558. On the completion of his classical studies in his native university, at fourteen the University of Cologne to take up the study of jurisprudence, and there on 7 Nov., 1525, received the degree of Doctor of Civil Law. The following year he received the office of official sealing in the electoral municipality of Cologne. The religious questions of the day, consequent upon the doctrines of the reformers, now led him to apply himself to the study of theology, and in a short time he had acquired, "privately and without a master", such an extensive knowledge of that science that he became known as the "os cleri Coloniensis". In 1522, he was made canon at Xanten, and then successively, and finally pastor and dean of Soest. His learning, eloquence, and charity towards the poor elicited admiration from friends and enemies. He supported Archbishop Hermann V of Wied in the reorganization and adjustment of the ecclesiastical and civil law in the electoral province, and was the first to determine the jurisdiction of the archiepiscopate (Jurisdictionis ecclesiastice archiepiscopalis Curiae Coloniensis reformatio, Cologne, 1529). In 1530 he accompanied the archbishop as assistant counsellor to the Diet of Augsburg, where, with Arnold of Wesel and Bernard of Hagen, he entered into closer relationship with the Reformation. To combat more effectually the errors of the Reformers, the archbishop decided upon a provincial synod to be held in Cologne in 1536, and, to insure the best possible results, entrusted the preparation of the decrees to Gropper. The latter performed the task with great credit to himself, and formulated the old canonical regulations regarding doctrines and discipline, and regularly clergy with such clearness and precision that the synod approved his proposals with but slight changes, and requested him to compose an enchargement which would contain at once the canons and a commentary on them (Instituto compendiaria doctrinae et constitutionum canonicarum Coloniensium, Cologne, 1531). On August 13, 1540, Gropper solemnly took the oath of allegiance simply under the title "Enchargement" (Paris, 1541, 1550). In it the author gives an exposition of the Apostles' Creed, the Seven Sacraments, the Lord's Prayer, and the Decalogue. Notwithstanding the fact, however, that the work was placed on the index prohibited books by Clement VII, because of the author's adoption of a twofold formal cause of justification, namely the "justitia inherentia" and the "justitia imputata", it was nevertheless received by many with enthusiastic approbation. It was sanctioned by the theologians of Cologne, and Cardinals Contarini, Pole, and Morone looked upon it as particularly adapted to bring about a reconciliation of the sects with Rome. At the Congress of Hagenau, in 1540, Gropper, at the instance of Philip, Landgrave of Hesse, entered into conciliatory negotiations with Bucer, which were continued at Worms and at the religious discussions in Ratzeburg; but, while an apparent union was effected, nothing was accomplished in the questions of justification, in regard to the authority of the Church and the doctrine of the Eucharist no reconciliation was attempted. While Gropper no doubt accomplished much good by his opposition to the innovations of the reformers, it is but too evident that his zeal for union sometimes led him to sacrifice Catholic principles.
When, however, the Council of Trent defined the Catholic doctrine of justification, he at once submitted to its decision. In the meantime the archbishop himself gradually abandoned the Catholic faith and allowed the new doctrines to be preached in his diocese. He engaged Bucer and, later, Melanchthon to draw up plans for a complete reformation of the diocese on Protestant principles. In this critical moment Gropper published his “Antididagma seu christianae et catholicae religionis propugnatio” (Cologne, 1544), in which he vigorously defends the Catholic Faith and refutes the errors of the reformers, at the same time requesting the deposition of the following bishops: Jean de la Franchise, Jean IV de la Gérardie, and Jean de Ségur. With this Paul III compiled on 16 April, 1546, and as his successor in the electorate of Cologne appointed the coadjutor archbishop Adolph III of Schauenburg, who, with the assistance of Gropper, succeeded in expelling from the diocese the Protestant preachers and restoring the Catholic religion. In recompense for his services to the Church, the pope appointed Gropper Provost of Bonn. In 1551 he accompanied his archbishop to the Council of Trent, where he assisted at numerous sessions and delivered the discourse, “De appelationum abusu” (Cologne, 1552). On 22 May, 1556, Philip II and IV created his cardinalate of Saint Lucia in Silece. This honour he accepted with great reluctance; neither did he proceed to Rome till the Protestant-minded John Gebhard of Mansfeld was appointed archbishop in 1558. His death occurred at Rome, and the pope himself preached the funeral oration. Among Gropper’s other publications may be mentioned: “Formula examinis et designator seu presentator ad ecclesias parochiales” (Cologne, 1552); “Manuale pro administratione sacramentorum” etc. (Cologne, 1550); “Von warer, Wesenlicher und Plebender Gegenwartigkeit des Leyvns und Blute Christi nach besechnender Entscheidung” (Leyden, 1548).

JOSEPH SCHRODER.

Grosseteste, Robert, Bishop of Lincoln and one of the most learned men of the Middle Ages; b. about 1175; d. 9 October, 1253. He came from Stratford in the county of Suffolk. Little is known of his family, but it was certainly a poor one. His name is probably a corruption of grus, which indicates that he was not born in a noble family. His early life, however, is well known. He was educated at Oxford and Paris, and was associated with law and medicine. If he was in 1199 a “master” of such distinction he must have gone to the young, but already very flourishing University of Oxford not later than 1192 or 1193. That he afterwards studied and taught theology in Paris is intrinsically probable, and is indirectly corroborated by the fact that he is connected with a number of French ecclesiastics and with the details of the Paris curriculum, and perhaps, for a man of his origin, by his knowledge of French. One of the most popular of the many writings attributed to him was a French religious romance, the “Chasteau d’Amour”. He was back, however, at Oxford in 1200, and was a member of the Oxford disputations, with the possible exception of a second visit to Paris, he seems to have remained there till his election as bishop in 1235. Dignities and preferments soon began to flow in upon the most distinguished of the Oxford masters. He was for a time (the exact dates are uncertain) head of the university, either as chancellor or with the more modest title of “master of the schools”. His practical abilities led to his being appointed successively to no less than four archdeaconries. He held several livings and a prebend at Lincoln. Pluralism of this kind was not uncommon in the thirteenth century, but an illness which came upon him in 1232 led to his resigning all his preferments except the Lincolnhip. This act mainly by a deepened religious fervour which had aroused his scruples and by a real love of poverty. In 1235 he was freely elected to the Bishopric of Lincoln, the most populous diocese in England, and he was consecrated in the abbey church of Reading, in January 1236, by the later cardinal, by St. Edmund Rich, Archbishop of Canterbury.

Grosseteste was a man of such varied interests and his career was so many-sided that it will be better to touch separately on his numerous activities than to attempt a chronological account of his life. His work as a teacher, a philosopher, and a man of learning, is naturally more especially connected with his Oxford career, but his episcopal duties, so zealously performed, did not diminish his scholarly interests, while the fact that Oxford was in his diocese, and in a sense under his government, kept him in the closest touch with the university. He repeatedly intervened in university affairs, settled questions of jurisdiction, and contributed to those early regulations and statutes which determined the constitution and character of Oxford. It is not easy to define exactly Grosseteste’s position in the history of thirteenth-century thought. Though he was from many points of view a schoolman, his interests lay rather in moral than in logical or metaphysical. His lectures he laid more stress on the study of Scripture than on intellectual speculation. His real originality lay in his effort to get at the original authorities, and in his insistence on experiment in science. It was this same Grosseteste who drew from Roger Bacon the man of enthusiastic admiration which are to be found in his works. In the “Opus Tertium” he says: “No one really knew the sciences, except the Lord Robert, Bishop of Lincoln, by reason of his length of life and experience, as well as of his studiousness and zeal. He knew mathematics and perspective, and there was nothing which he was not acquainted with. He was at the same time he was sufficiently acquainted with languages to be able to understand the saints and the philosophers and the wise men of antiquity.” In theology proper we have the titles of between two and three hundred sermons and discourses of Grosseteste and of more sixty treatments of the Gospels, and on some of the books of the Old Testament, as well as an interesting collection of “Diet”, or notes for lectures and sermons. His Aristotelian studies were considerable. His commentaries on the logical works were repeatedly printed in the sixteenth century. His most valuable contributions, however, to the knowledge of Aristotle and to medieval philosophy were the translations which he procured from the original Greek. The “Eudemon Ethica” he commented on while at Oxford, and in the last years of his life he was occupied with a translation of the “Institutions”.

More original still were his studies in Christian antiquities. He had translations made of the “Testaments of the Twelve Patriarchs” and of some of the writings of Dionysius the Areopagite, though no doubt he thought that in both cases the attributions were genuine. His translation of the Epistles of St. Ignatius is a work of great power and value, not only as indeed as to lead a recent writer, James (Cambridge Modern History, I, 587), to date from Grosseteste’s studies the first beginnings of the “Christian Renaissance”. In addition to this knowledge of Greek, he was also partly acquainted with Hebrew, a rare accomplishment in the thirteenth century. Besides being learned in the liberal arts, Grosseteste had an
unusual interest in mathematical and scientific questions. He wrote a commentary on the "Physics" of Aristotle; and his own scientific works included studies in meteorology, light, colour, and optics. Amongst his mathematical works was a criticism of the Julian calendar, in which he pointed out the necessity for the changes introduced by the Gregorian calendar. By his acquisition of knowledge of the various forms of knowledge; and few indeed, among his contemporaries, can have had a more encyclopedic range. Nor did he neglect the practical side of life. He had Walter of Henley's "Treatise on Husbandry" translated from the Latin, and drew up himself some rules on estates management, known as "Lucastus," which threw much light on the agricultural conditions of the time. Finally, lest we should think that the claims of art had been neglected, his contemporaries celebrate his love of music. It is not surprising that Grosseteste's reputation as a philosoper and a universal genius long survived him. Few thirteenth-century writers are as frequently quoted as "Robertus Lincolniensis," and even after the invention of printing many of his writings were issued and re-issued, especially by the presses of Italy. His scientific interests naturally won for him in a later age the compliments of the permanant writer of magicians. It was while at Oxford that Grosseteste formed an intimate and lifelong friendship with the newly arrived Franciscans. It is quite possible that he was chancellor when the friars first came to Oxford, the Dominicans in 1221 and the Franciscans three years later; he at any rate befriended the latter in a very practical manner by being the first lecturer in the school which was one of the earliest of their very simple buildings. Short of becoming a friar himself, as indeed he at one time thought of doing, he could not have identified himself more closely with the sons of St. Francis, and his influence with them was proportionately great. He must have helped to give the English Franciscans that devotion to learning which was one of their most distinguishing characteristics, and which affected the whole history of the order. Though it was contrary to their founder's own ideal of "poverty", the friars without it would have lost a much of significance. In Grosseteste's time, intellectual interests played so large a part. Grosseteste and the Friars Minor were inseparable for the rest of his life. The most intimate of his friends was Adam Marsh, the first Franciscan to lecture at Oxford, a man of great learning and an ardent reformer. Adam's letters to his friar were full of information about Grosseteste, but unfortunately the answers have not been preserved. The Bishop of Lincoln could do even more for the friars than the Chancellor of Oxford. He extended the sphere of their evangelizing work, and facilitated the relations, at times a difficult enough task to perform, between the secular and monastic clergy and the Franciscans. In a letter to Gregory IX he spoke enthusiastically of the inestimable benefits which the friars had conferred on England, and of the devotion and humility with which the people flocked to hear the word of life from them. The diocese which for eighteen years Grosseteste administered was the largest in England; it extended from the Humber to the Thames, and included no less than nine counties; and the work of government and reform was rendered particularly difficult by the litigious character of the age. In every direction the bishop would find powerful corporations exceedingly tenacious of their rights. But he never relinquished the practice of visitations, and made them exceedingly searching. His circular letters to his archdeacons, and his constitutions enlighten us on the many reforms which he considered necessary both for the clergy and their flocks.

These visitations, however, brought the bishop into conflict with the dean and chapter, who claimed exemption for themselves and their churches. The dispute broke out in 1239 and lasted six years. Grosseteste discussed the whole question of episcopal authority in a long letter (Letter cxxvii, "Rob. Grossetestei Epistola", Rolls Series, 1861) to the dean and chapter, and was forced to suspend and ultimately to deprive the dean, while the canons refused to attend in the chapter house. There were appeals and several attempts at arbitration. Eventually, Innocent IV settled the question, in the bishop's favour, at Lyons in 1245. The visitations affected the majority of the numerous religious houses in the diocese as well as the secular clergy, and in his very last years Grosseteste issued several precepts to the priors. Only in one of these cases was there any moral turpitude involved, and indeed he seldom complains of the moral conduct of the monks; his chief grievance against them was connected with their control over the parishes. Even in the twelfth century more than two-thirds of the parish churches are said to have been under the control of the monasteries, and in many cases the latter made merely temporary and uncertain arrangements for the care of souls. Grosseteste made it his object to insist on a worthy and resident parish clergy by compelling the monasteries to appoint and keep a permanent way of serving the church. Though the whole episcopacy this question occupied much of his energies. His greatest difficulty was with the Cistercian houses, which were exempt from his rights of visitation, and a desire to remedy this state of affairs was one of the reasons which induced him to visit the pope at Lyons in 1250.

His efforts were partially successful, but the rigour with which he visited the monasteries and nunneries under his rule led the St. Alban's chronicler, Matthew Paris, to call him a "persecutor of monks"; and it is probable that at times he was unnecessarily severe. In 1243, during a vacancy of the archiepiscopal see, the monks of Christ Church, Canterbury, actually communicated him. Though he treated the sentence with contempt, he had again to get the pope's assistance to bring the dispute to an end.

The reputation which Grosseteste has acquired since the Reformation has been due in large part to his relations with the papacy. He opposed the papacy with all the energy and ability which his talents and his position afforded. Though at times his tempestuousness cost him his reason. He was at once the champion of the pope and the foe of the popes. He had the power of the abuses of the papal administration is certain, but a study of his letters and writings should long ago have destroyed the myth that he disputed the plena potestas of the popes. This error, which has been common among non-Catholic writers, can be attributed to the exaggerations and inventions of Matthew Paris, and by a confusion of two men having the same name. The letter in which Grosseteste expressed most strongly his resistance to what he considered the unrighteous demands of the pope was addressed to "Master Innocent." It was assumed even by Dr. Luard, the editor of Grosseteste's letters, in the Rolls Series, that this correspondent was Innocent IV, whereas as a matter of fact he was one of the pope's secretaries then resident in England. It is, however, admitted by all recent historians that Grosseteste never denied the pope's authority as Vicar of Christ and Head of the Church. What he did maintain was that the power of the Holy See was "for edification and not for destruction", that the commands of the pope could never transgress the limits laid down by the law of God, and that it was his duty, as bishop, to resist an order that was "for manifest destruction" with a case "out of the realm of the pope, and disobedience, resist, rebel". It is impossible to discuss here, or even to enumerate, the abuses which drew strong an expression of his position from a man who had constantly shown his devotion to the papacy. The English people at large complained chiefly of the enormous revenue which the pope and the Italians drew from the country; Grosseteste, however, fully
realised how necessary it was to support the papacy against the Emperor Frederick II, and his objection was chiefly to the manner in which much of this revenue was raised, the appointment of papal partisans in Italy to English benefices and prebendery. Such a practice necessarily involved much spiritual damage, and it was keenly resisted by the bishops. He felt, also, very deeply the abuses of the Curia, and the ease with which exemptions and privileges which counteracted his own reforms could be obtained from Rome by means of pecuniary supply. On the other hand, he himself constantly appealed to Rome, and frequently received papal support.

He visited the court of Innocent IV on two occasions: in 1245, when he attended the General Council at Lyons, and for the second time in 1250, when he came to beg the pope's help in his many difficulties. This time the aged bishop (he must have been about seventy-five), more zealous than ever for ecclesiastical reform, but troubled to the depths of his soul by the royal misgovernment, the resistance of the regulars to his measures, the difficulty of reforming the seculars, the financial demands of the Curia, which had not diminished with the defeat of Frederick, and finally by a quarrel in which he had been involved with his own archbishop, read out in the presence of the pope and cardinals an impressive recital of the evils of the time and a protest against the abuses of the Curia, "the cause and origin of all this." Innocent listened without interruption, and probably had some previous knowledge of the attack which the bishop intended to make upon his court. The last case in which Grosses-teste refused to obey a papal order called forth the letter to "Master Innocent" which has been already mentioned. In the last year of his life Grosseteste received a letter which notified him that the Holy See had conferred a vacant canonry at Lincoln on the pope's nephew, Frederick di Lavagna, and had furthermore threatened excommunication against anyone who should oppose his installation. The bishop's refusal to acknowledge the papal choice, and the terms in which it was expressed, led to the report, quite unfounded, that he had actually been excommunicated before his death; and to much fanciful history on the part of Matthew Paris. As a matter of fact the protest was partly successful; in November, 1253, Innocent IV issued a Bull, restoring to the English ecclesiastical authorities their full rights of election and presentation.

The Bishop of Lincoln held a high position in the See, but his relations with the civil authorities were unusually difficult, as he had to carry out the duties of his office during such a period of misgovernment as the reign of Henry III. Personally, he was usually on friendly terms with the king and his family; but he was often in opposition to the royal policy, both in ecclesiastical and civil matters, and threatened on one occasion to lay the king's chapel under an interdict. Grosseteste's attitude on the question of ecclesiastical privilege was much the same as that adopted by St. Thomas. He took a prominent and sometimes a leading part in the constitutional opposition to Henry, and in 1244 was one of the committee of twelve nominated by Parliament to draw up a list of reforms. When, in 1252, the charters were solemnly confirmed, and a sentence of excommunication pronounced against anyone who should violate them, Grosseteste had the sentence read out to the people in every parish of his diocese. His friendship with Simon de Montfort was of intimate and long-standing duration, and was elaborated in contemporary popular songs. It was of moment in confirming Simon in that devotion to national interests which distinguished him later from the other leaders of the baronial opposition. Grosseteste before his death was full of anxiety for the state of the country and dread for the civil war which was so soon to break out. He was buried in his cathedral. Very soon he was regarded almost universally in England as a saint. The chroniclers tell of miracles at his tomb, and pilgrims visited it. Early in the following century a Bishop of Lincoln granted them an indulgence. Efforts were made by different prelates, by Edward I, and by the University of Oxford to procure his canonisation by the pope, but they were all unsuccessful.

Besides Matthew Paris, whose monastic and anti-papal bias must never be forgotten, and the other chroniclers, the chief materials for Grosseteste's life are to be found in his Letters (Robert Grosseteste Episcopi, Rota Series, ed. Luard, 1861), in Monumenta Franciscana, I (Rota Series, ed. Brewer, 1886), which contain Adam Marsh's letters, and in the Calendar of Papal Registers, ed. Bliss. The most important modern authorities are Luard's Preface to the Letters; Felbert, Robert Grosseteste, Bischof von Lincoln (Freiburg, 1887); Stevenson, Robert Grosseteste, Bishop of Lincoln (London, 1899), a most impartial work, which superseded Perry's rather biased Life and Times of Robert Grosseteste (1871). See also Pomiez in Kirchenlex., s. v. Information on Grosseteste's Oxford career can be obtained from Randle, Universitäten in Europa during the Middle Ages; Little, Grey Friars at Oxford; and Elder, Geschichte d. wissenschaftl. Studien im Frankreicher-Orden (Freiburg, 1904), 290 sqq. For a list of the printed editions of his works see Luard in Dict. Nat. Biog., s. v.

Grosseto, Diocese of (Grossetana), suffragan of Sienna, has for its episcopal city the capital of the prov-

Facade, Cathedral of Grosseto
Designed by Sano Rustichini (XIII Century)
GROßWARDEIN

sought freedom from the overlordship of Siena, but in vain. The Romanesque cathedral was completed in 1295 and restored in 1846. It was the work of Sozo Rustichini of Siena. The façade consists of alternate layers of white and black marble. The campanile dates from 1402, and the wondrously carved battlements from 1470.

Russe is an episcopal city from the fifth century. St. Gregory the Great commended to the spiritual care of Balbinus, Bishop of Russe, the inhabitants of Vetulonia. In 1138 Innocent II transferred the see to Grosseto, and Rolandino, Bishop of Russe, became Bishop of Grosseto. Among his successors were Bartolomeo Pontano (1271), employed by the popes on many legations; Angelo Patarolani (1330), a saintly Dominican; Cardinal Raffaele Petrucci (1497), a native of Siena and lord of that city, hated alike for his cupidity and his worldly mode of life; Ferdinand Cardinal Fonasetti (1522), a learned man, but fond of wealth; Marcantonio Campeggio (1528), who was distinguished at the Council of Trent. From 1585 to 1607, for political and economical reasons, the see remained vacant. The diocese contains 26 parishes and numbers 30,250 faithful. It has two religious houses and one convent for girls.

Grottaferrata, Le Chiese d'Italia, XVII (1903), 655-77: Co gnacci, Scrutii, Scrutii, e uomini celebri della provincia di Grosseto (Grosseto, 1874).

U. BENIGNI.

GROßWARDEIN (Hung. Nagy-VárAD), Diocese of (Magno-Varadinensis), a diocese of the Latin Rite in Hungary, suffragan of Kalocsa-Bécs. It includes the whole of the Counties of Bihar and Szilágy, parts of Békés and Satmar, and the city of Debrecen. The see is divided into four archidiaconates, that of the cathedral and those of Békés, Kraszna, and Mittel-Szolnok and twelve vice-archidiaconates. The diocese includes 16 parishes, 16 titular abbeys, 3 provostships, and 17 titular provostships, 66 parishes, and 187 institutional and regular clergy. Patronage, in the hands of 26 patrons, is exercised over 65 benefices. The training of the clergy takes place in the seminary at Grosswardein and in the central ecclesiastical seminary at Budapest.

In 1908 the total number of seminarians was 26, and there were also 3 clerics attending the gymnasium. The total population of the diocese is (1908) 1,157,160, of whom 161,293 are Roman Catholics, 165,168 Greek Catholics, 215,710 Orthodox Greeks, 105,439 disciples of Augustine of Bohemia, 453,853 of the Helvetic Confession, 1,261 Unitarians, 52,688 Jews, and 1748 professing other creeds. There are 269 Greek Catholic churches and twenty-four convents of men and women, having in all 307 members.

The foundation of the see is ascribed by the historian Georg Pray to St. Stephen; the seat of the diocese, however, was then Byhor (Bihar), whence it was transferred by the saintly King Ladislaus to Grosswardein. However that may be, the statutes of the chapter of 1370 explicitly attribute the founding of the see to St. Ladislaus. The year 1083 is the accepted date of the foundation. The patron of the diocese is the sainted King Ladislaus. Sixtus (1113-1113) is said to have been the first bishop. In 1241, the bishopric and the city were devastated by the Tatars. However, in the fourteenth and fifteenth centuries, the diocese developed very considerably, and as early as the fourteenth century embraced six archidiaconates, with over 300 parishes. Bishop Andrew (1328-1344) built the cathedral. The cathedral and with his community had spent the intervening years in various monasteries without finding a permanent home. The legend narrates that, at the spot where the abbey now stands, Our Lady appeared and bade him found a church in her honour. From Gregory, the powerful Count of Tusculum, father of Popes Benedict VIII and John XIX, Nilus obtained the site, but died soon after

HUMANISM IN HUNGARY. The political dissolution following the battle of Mohács in 1526 and the aggressiveness of Protestantism caused the rapid decline of the diocese. After the death of Georg Utiesssenovich-Martinuzzi (1533-1551), the greatest of the bishops of Grosswardein and the partisan of Queen Isabella and King John, the see still deteriorated.

Protestantism continually gained in extent, and even the establishment of the Jesuits at Grosswardein in 1579 could not save the Catholic religion in the diocese from ruin. In 1606 the last Catholic priest left the city of Grosswardein. The old cathedral fell into disrepair, and in 1618 the walls which still stood were torn down by Gabriel Bethlen. In 1660 Grosswardein was conquered by the Turks and ruled by them until 1692. Upon their departure, the reorganization of the diocese was begun under Bishop Gof Paul Forgách (1747-1757). From that time onwards the condition of the Catholic religion improved.

The Greek Catholic Diocese of Grosswardein was founded in 1777, the faithful of that Rite having been up to that time under the jurisdiction of the Latin bishop. Originally the see was a suffragan of Gran; when, however, in 1853 the Greek Catholic Diocese of Fogaça became the Archdiocese of Fogaça and Alba Julia, the Diocese of Grosswardein was transferred to its jurisdiction. The see is divided into six archidiaconates and nineteen vice-archidiaconates. There are (1906) one hundred and seventy parishes. The right of patronage is exercised in ninety-four parishes by twelve patrons.

Schematismus venerabilis clerii diecis. Magno-Varadinensis latinorum pro 1906; dekresty, Geschichte der Ritus von Várad, I-III (Grosswardein, 1888-94); Das katholische Ungarn (Budapest, 1909); the last two works are in Hungarian.

A. A D Á Y.

Grottaferrata, ABBEY OF (Lat. Crypta ferrata), a Basilian monastery near Rome, sometimes said to occupy the site of Cicero’s Tusculum and situated on the lower slopes of the Alban hills, in the Diocese of Frascati, two and a half miles from the town itself. The monastery was founded in 1004 by St. Nilus, sometimes called “the Younger” or “of Rossano”. This abbot, a Calabrian Greek, and hence a subject of the Byzantine Empire, had left Rossano in 980 to avoid the inroads of the Saracens and with his community had spent the intervening years in various monasteries without finding a permanent home. The legend narrates that, at the spot where the abbey now stands, Our Lady appeared and bade he found a church in her honour. From Gregory, the powerful Count of Tusculum, father of Popes Benedict VIII and John XIX, Nilus obtained the site, but died soon after
wards (26 Dec., 1005). The building was carried out by his successors, especially the fourth abbot, St. Bartholomew, who is usually accounted the second founder. The abbey has been troubled historically. Its high repute of the monks attracted many gifts; its possessions were numerous and widespread, and in 1131 King Roger of Sicily made the abbots of Rossano with an extensive fee. Between the twelfth century and the fifteenth the monastery suffered much from the continual strife of war and faction: wars among the Tusculans and Guephs and Ghibellines, pope and antipope, Colonna and Orsini. From 1163 till the destruction of Tusculum, in 1191, the greater part of the community sought refuge in a dependency of the Benedictine protocoeunbium of Subiaco. In the middle of the thirteenth century the Emperor Frederick made the abbey his headquarters during the siege of Rome; in 1378 Breton and Gascon mercenaries held it for the antipope Clement VII; and the fifteenth century saw the bloody feuds of the Colonnas and the Orsinis raging round the walls. Hence in 1432 the humanist Ambrogio Traversari tells us that it bore the appearance of a town rather than of a monastery. In 1462 began a line of commendatory abbots, fifteen in number, of whom all but one were cardinals.

The most distinguished were the Greek Bessarion, Giulio della Rovere (afterwards Julius II), and, of the last, Cardinal Consalvi, secretary of state to Pius V. Bessarion, himself a Basilian monk, increased the scanty and impoverished community and restored the church; Cardinal Giulio della Rovere, from more selfish motives, erected the Castello and surrounded the whole monastery with the imposing fortifications that still exist. Till 1608 the community was ruled by priors dependent on the commendataries; but in that year Grottaferrata became a monastery of the Basilian congregation founded by Gregory XIII, the revenues of the community were separated from those of the commendatories, and the first of a series of triennial regular abbots was appointed. The triennial system survived the suppression of the Comnendaw and lasted till the end of last century, with one break from 1834 to 1870, when priors were appointed by the Holy See. In 1901 new constitutions came into force and Arsenio Pellegrini was installed as the first perpetual regular abbot since 1462.

The Greek Rite which was brought to Grottaferrata by St. Nilus and lost its native character by the decay of the twelfth century, and gradually became more and more latinized, but was restored by order of Leo XIII in 1881 (see Rocchi, "Badia", cap. iv). The Basilian abbey has always been a home of Greek learning, and Greek hymnography flourished there long after the art had died out in the Byzantine Empire. Monastic studies were revived under Cardinal Bessarion and again in 1008. The best known of modern Basilian writers is the late Abbot Cozza Luzi (d. 1905), the continuator of Cardinal Mai’s "Nova Bibliotheca Patrum". Of the church consecrated by John XIX, in 1024, little can be seen except the mosaic on the narthex and over the triumphal arch, the marble tomb having been covered or destroyed during the "restorations" of various commendatory abbots. Domenichino's famous frescoes, due to Cardinal Odoardo Farnese, are still to be seen in the chapel of St. Nilus. In 1904 the ninth centenary of the foundation of the abbey was marked by a judicious but partial restoration, the discovery of a fragmentary thirteenth century frescoes and an exhibition of Byzantine art. The monastery has been exempt from episcopal jurisdiction since the days of Calixtus II, but its claims to the dignity of an abbey nuns were disallowed by Benedict XIV. In 1874 the building was declared a national monument and in 1903 the church received the rank of a Roman basilica.

**GROVE, John. See Ireland, William.**

**Gruener, Johann. German Jesuit missionary in China and noted explorer of the seventeenth century; born at Linz, 28 Oct., 1613; died at Sinning-fu, China, 12 Jan., 1683.**

Gruener, Johann, German Jesuit missionary in China and noted explorer of the seventeenth century; born at Linz, 28 Oct., 1613; died at Sinning-fu, China, 12 Jan., 1683. He first entered the Society of Jesus in 1641, and went to China in 1656, where he was active at the court of Peking as professor of mathematics and assistant to Father Adam Schall von Bell. In 1661 his superiors sent him, together with the Belgian Father Albert de Dorville (D'Orville), to Rome on business concerning the order. As it was impossible to send him by sea because of the blockade of Macao by the Dutch, they conceived the daring idea of going overland to India by way of China and Thibet. This led to Gruener's memorable journey (Dorville died on the way), which won him fame as one of the most successful explorers of the seventeenth century (Tonnier). They first landed in Sinning-fu, on the borders of Kan-su; thence, through the Kukunor territory and Kalmuck Tartary (Desertum Kalnac), to the "Holy City" of Lhasa in Thibet; crossed, amidst countless difficulties and hardships, the mountain passes of the Himalayas; arrived at Nepal, and thence passed over the Gangsies plateau to Patna and Agra. This journey lasted two hundred and fourteen days. Dorville died at Agra, a victim of the hardships he had undergone. Gruener, accompanied by a Sanskrit scholar, Father Henry Roth, followed the overland route through Asia and succeeded in reaching Europe. His journey produced a sensation. He wrote a detailed account of his experiences to Father Henry and to Father meditations of Sven Hedin. It showed the possibility of a direct overland connexion between China and India, and the value and significance of the Himalayan passes. Tonnier says: "It is due to Gruener's energy that Europe received the first correct information concerning Thibet and its inhabitants." Although Oderico of Porretana had traversed Thibet, in 1327, and visited Lhasa, he had not written any account of this journey. Antonio de Andrade and Manuel Marquez had pushed their explorations as far as Tarapang on the northern Selend. In 1664 Gruener set out to return to China, and was arrested by the authorities. They were obliged to return, and then undertook the land route to Asia. He was taken sick in Constantinople and died in Florence, or, according to others, in Patna, Hungary.

An account of this first journey through Thibet in modern times was published by Father Athanasius Kircher to whom Gruener had left his journals and charts, which he had supplemented by numerous verbal and written additions ("China illustrata", Amsterdam, 1667, 64-67). In the French edition of "China" (Amsterdam, 1670) is also incorporated a letter of Gruener written to the Duke of Tuscany. For letters of Gruener see "Neue Welt-Bott" (Augsburg and Gratz, 1726), no. 34; Thévenot (whose acquaintance Gruener had made in Constantinople), "Divers voyages curieux" (Paris, 1666, 1672, 1692),
GUADALAJARA

Guadalajara (Guadalaxara). Archdiocese of, in Mexico, separated from the Diocese of Michoacan by Paul III, 31 July, 1548. The residence of the bishop was first fixed at Compostela, in the Province of Tepic, but in 1560 was transferred by Pius IV to Guadalajara. Since its foundation the see has had a cathedral chapter, of twenty-seven members between 1830 and 1850, but at present (1905) they number only seventeen. The present cathedral was begun in 1571, completed and dedicated in 1618, and consecrated in 1716. It contains a celebrated painting by Murillo.

Among its notable bishops was the Dominican missionary, Felipe Galindo y Chávez, who was consecrated in 1695, and died in 1702. He founded in 1699 the diocesan seminary and gave it its constitution and a library. The same prelate exerted his influence towards securing the foundation of a university, entrusted the missions of Lower California to the Jesuits, and made two visitations of the diocese as far as the neighbourhood of Coahuila. Nicolás Carlos Gómez de Cervantes, a canon of Mexico, consecrated Bishop of Guatemala in 1723, was transferred to Guadalajara in 1725 and died in 1734. He made a visitation of the whole diocese, strengthened the Jesuits in the California missions, founded in Texas the parish of San Antonio de Bexar, and to build convents for the Dominicans and Augustinians. The Franciscan Francisco de S. Buenaventura Martínez de Texada Díez de Velasco was at first Auxiliary Bishop of Cuba and built the parish church of St. Augustine, Florida; later he became Bishop of Yucatan (1745), and was transferred to Guadalajara in 1752. He twice visited the whole of his diocese, made generous donations of church ornaments and sacred vessels to indigent parishes, and aided in the erection of many churches. He died in 1760. The Dominican Antonio Alcalde, born in 1701, a lector in arts, master of students, lector in theology for twenty-six years, and prior of several convents of his order, became Bishop of Yucatan in 1763, and was transferred to Guadalajara in 1771. There he founded the university and a hospital (S. Miguel de Belén) for five hundred sick poor; he also improved the standard of teaching in the seminary and in the college of S. Juan Bautista, founded and endowed the girls' college called El Beaterio, and placed it under the care of religious women. It was this bishop who built the sanctuary of Guadalupe, and left funds to defray there the expenses of worship. Another very large bequest left by him was for the building of the cathedral parish church. He introduced various industries to improve the condition of the poor, and during the great famine (1786) supported a multitude of destitute persons. After spending $1,067,000 on good works in his diocese, he died, 7 Aug., 1793, a poor man: "the father of the poor and benefactor of learning".

GALLERY IN THE CEMETERY OF THE BELÉN HOSPITAL, GUADALAJARA, FOUNDED BY BISHOP ALCALDE (XVIII CENTURY)
Juan Cruz Ruiz de Cabañas, rector of the seminary of Burgos (Spain), became Bishop of Nicaragua in 1794, and of Guadalajara in 1796. He gave new constitutions to the seminary and founded there new classes, also the clerical college and the hospice for the poor, each endowed for the clergy, for education of agriculture and the fine arts, and was influential in popularising the practice of vaccination. It was he who crowned Iturbide in 1824.

Pedro Espejo, born in 1793, was rector of the seminary of the university, and a dignitary of the cathedral, became Bishop of Guadalajara in 1854, and archbishop in 1862. He was proscribed on account of his vigorous defence of the rights of the Church, being banished for that reason by the Liberal Government. He placed the charitable institutions under the care of the Sisters of Charity. Pedro Loza, Bishop of Sonora in 1852, became Archbishop of Guadalajara in 1868, assisted at the Council of the Vatican, and died in 1898. He was the initiator of the system of free parochial primary schools; he improved the seminary to a remarkable degree, gave it its present building, ordained 536 priests, and built the churches of Nuestra Señora de los Dolores and San José.

The population of the diocese is about 1,200,000; it contains 63 parishes, 5 of which are in the episcopal city. The once numerous convents of Franciscans, Dominicans, Mercedarians, Augustinians, Carmelites, and Oratorians were suppressed by the Liberals; the Government, assuming the rights of ownership of the conventual buildings, converted most of them into barracks and afterwards alienated the remainder. Some of the Franciscan, Augustinian, and Mercedarian religious remained as chaplains of the churches that had been their own. In the ancient convent building of the Friars Minor at Zapopan there is a college for young men under the direction of Franciscans. The Jesuits, except Charles III of Spain (1767), did not return until 1906, when they founded a college in the city of Guadalajara. The Religious of the Sacred Heart have for some years carried on a girls' school.

The seminary, having, in consequence of Liberal legislation, lost its own building, acquired the old convent of Santa Monica, which Archbishop Loza began to rebuild in 1852. Besides many illustrious ecclesiastics, no fewer than thirty-one bishops have been trained in this establishment, which has now (1908) 1000 students. In the cities of Zapotlan and San Juan de los Lagos there are auxiliary seminaries. Free primary instruction is established in all the parishes of the diocese. At Guadalajara there is a normal school under ecclesiastical supervision, also several hospitals and orphan asylums supported by charity. The hospital and endowments of S. Miguel del Bósque and the hospice for the poor, foundations of former bishops, were seized by the Liberals.

DANIEL R. LOWERRE.

Guadalupé, Shrine of.—Guadalupé is strictly the name of a picture, but was extended to the church containing the picture and to the town that grew up around. The word is Spanish-Arabic, but in Mexico it may represent certain Aztec sounds. The place is well-styled Guadalupé-Hidalgo since 1822, as in our 1848 treaty—is three miles north-east of Mexico City. Pilgrimages have been made to this shrine almost uninter ruptedly since 1531-32. In the latter year there was a shrine at the foot of Tepeyac Hill which served for ninety years, and still, in part, forms the parochial sanctuary. In 1622 a rich shrine was erected; a new and much richer one in 1700. Other structures of the eighteenth century connected with it are a parish church, a convent and church for Capuchin nuns, a well chapel, and a hill chapel. About 1750 the shrine got the title of collegiate, a canonry and choir service being established. It was aggregated to St. John Lateran in 1754; and, finally, in 1904 it was elevated to a basilica. The presiding ecclesiastic is called abbot. The greatest recent change in it has been its complete interior renovation in gorgeous Byzantine, presenting a striking illustration of Guadalupan history.

The picture really constitutes Guadalupé. It makes the shrine: it occasions the devotion. It is taken as representing the Immaculate Conception, being the lone figure of the woman with the sun, moon, and star accompaniments of the great apocalyptic sign, and in addition a supporting angel under the crescent. Its tradition is, as the new Breviary lessons declare, "long-standing and constant". Oral and written, Indian and Spanish, the account is unvaried. To a native named Juan Diego, who was hurrying down Tepeyac hill to hear Mass in Mexico City, on Saturday, 9 December, 1531, the Blessed Virgin appeared and sent him to Bishop Zumárraga to have a temple built where she stood. She was at the same place that evening and Sunday evening to get the bishop's answer. He had not immediately believed the messenger; having cross-questioned him and had him watched, he finally bade him ask a sign of the lady who said she was the mother of the true God. The neophyte agreed so readily to ask any sign desired, that the bishop was impressed and left the sign to the apparition. Juan was occupied all Monday with Bernardino, an uncle, who seemed dying of fever. Indian specifics failed; so at daybreak on Tuesday, 12 December, the griefed nephew was running to the St. James's convent for a priest. To avoid the apparition and untimely message to the bishop, he slipped round where the well chapel now stands. But the Blessed Virgin crossed to meet him, saying, "What road is this thou takest, son?" A tender dialogue ensued. Reassuring Juan about his uncle—who at that instant she cured, appearing to him also and calling herself Holy Mary of Guadalupé—she bade him go again to the bishop. Without hesitating he joyously asked the sign. She told him to go up to the rocks and gather roses. He knew it was neither the time nor the place for roses, but he went and found them. Gathering many into the lap of his kimono—a long cloak or wrapper used by Mexican Indians—he came back. The Holy Mother, rearranging the roses, bade him keep them untouched and unseen till he reached the bishop. On going to the presence of Zumárraga, Juan offered the sign. As he unfolded his cloak the roses fell out, and he was startled to see the bishop and his attendants kneeling before him: the life-size figure of the Virgin Mother, just as he had described her, was glowing on the poor fabric. A great mural decoration in the renovated basilica commemorates the scene. The shrine was dedicated, guarded in the bishop's chapel, and soon after carried processionally to the preliminary shrine.

The coarsest woven stuff which bears the picture is as thin and open as poor sacking. It is made of vegetable fibre, probably maguey. It consists of two strips, about seventy inches long by eighteen wide, held together by weak stitching. The seam is visible up the middle of the figure, turning aside from the
face. Painters have not understood the laying on of the colours. They have deposed that the "canvass" was not only unlit but unprepared; and they have not attempted to guide water, distance, etc. colouring in the same figure. They are left in equal admiration by the flower-like tints and the abundant gold. They and other artists find the proportions perfect for a maiden of fifteen. The figure and the attitude are of one advancing. There is flight and rest in the expression, and the sartoing angel. The chifon colours are deep gold in the rays and stars, blue-green in the mantle, and rose in the flowered tunic. Sworn evidence was given at various commissions of inquiry corroborating the traditional account of the miraculous origin and influence of the picture. Some wills connected with Juan Diego and his contemporaries, Bishop Apostolic in the colonies, in 1538 Father Libermann, superior-general of the Congregation of the Holy Ghost, drew M. de Falloux's attention to the question, and, by an agreement between France and the Holy See, the Bull of 27 September, 1850, created for Guadeloupe the Bishops of Basse-Terre as suffragans of the Archdiocese of Bordeaux. The clergy of Guadeloupe are educated in the seminary of the Holy Ghost, at Paris. Its first bishop (1851—53) was the celebrated preacher Lacarrère, of whom Chateaubriand said, "If I were a priest I should wish to preach like him." In 1865 (the last year of the concordat) there were 28 priests of regular orders, 3 archidioconates, 3 archipresbyterates, 19 deans, 37 parishes, 54 priests (besides the bishop and vicars-general). At that time the regulars were represented by the Fathers of the Holy Ghost, the Brothers of Flormel, the Sisters Hospitalers of St. Paul of Chartres, and the Teaching Sisters of St. Joseph of Cluny.

GEORGES GOYAU.

Guaiou Indians (pronounced Waikuri), a group of small tribes, speaking dialectic forms of a common language, probably of distinct stock, formerly occupying part of Lower California. They ranged from about 24° to 26° N. lat., having for neighbours, on the south the Peruvian, on the north, the somewhat superior Cochimis. They may have numbered originally some 7000 souls. According to our best authority, the Jesuit Baergt, who laboured among the Guaiou for seventeen years until the expulsion of the order in 1767, they lived in the year without any kind of clothing, by day or night, excepting a mere brushwood windbreak in the coldest winter weather. The men were absolutely naked, while the women wore only an apron of skin or strings woven from vegetable fibre. They sometimes used sandals—mere strips of skin—to protect the soles of their feet from rocks and thorns. They wore their hair long and cut it short at the foreheads, and bound it with pieces of bone until they hung down nearly to the shoulder. They painted their bodies with mineral colours. Their implements and furniture consisted of a long bow and arrows, a flint knife, a sharpened stick for digging roots, a turtle shell for basket and cradle, a bladder for water, and a bag for provisions. The preparation of these simple things constituted their only arts and the time left from hunting food was given up to lounging, sleeping, or an occasional intertrial orgy of brutish licentiousness. Their food comprised practically everything of animal or vegetable nature to be found in their country, no matter what the condition. Owing to the desert character of their country they lived in a condition of chronic starvation throughout most of the year. Constantly on the move in search of food,
they lay down in the open air wherever night found them, and rarely twice consecutively in the same spot. They had practically no form of government, and marriage could hardly be said to exist, in view of the universal licentiousness, jealousy being apparently unknown. The rest of their moral make-up was of a purity. Honour, shame, and gratitude were unknown virtues, and after years of effort the missionary was obliged to confess "that there was but very little result because there was no foundation to build upon. They had no religion, no laws, no society, and the mathematical ability did not permit them to count beyond six, so that," as Baergt quaintly puts it, "none of them can say how many fingers he has."

To save the souls and ameliorate the temporal condition of such naked, houseless, and utterly degraded savages, some of the most devoted and scholarly men of the Jesuit Order gave the best years of their lives.

Through the efforts of the celebrated Jesuit, Father Kino, priest of the Sonora mission, who had already begun the religious instruction of the Pericui and a study of their language in 1683-5, attention was directed to the peninsula and the work of conversion was assigned to Father Juan Maria Salvatierra, S.J., who landed on the east coast near the Island of Carmen on 15 October, 1697, with six companions, a few cattle, sheep, and pigs, and founded the mission of Our Lady of Loreto, destined to become the centre of the peninsula missions. The particulars of this were the Laimon, the Pericui range beginning a few miles to the south. The natives appeared friendly, and after a short time the boat returned to the mainland, leaving the missionary alone to act as "priest, officer, sentry, and even cook." Other missionaries followed and the work grew, largely assisted by the benefactors of the Pious Fund, until, at the close of the Jesuit period, there existed along the peninsula a chain of fourteen missions. Most of the earlier missions were within the territories of the Guacurí, including San Luis Gonzaga, where Baergt was stationed, or the Pericui, the northern Cochimí being visited later. After Salvatierra, who died in 1717, the most prominent name in connection with these missions is probably that of Father Ugarte, who first explored the Gulf of California in a ship of his own building. The mission day began with Mass and a short recitation of catechism in the Indian language, followed by breakfast, after which the catechism continued. The sunset bell summoned them to the church for the litany. Regular cooked meals of meat and grain, besides fruits from the mission orchards and vineyards, were furnished three times daily to the sick, the old, and the workers, the others, who roved at will, being expected to look after themselves.

In spite of the fickle character of the natives, the missionaries encountered very little active opposition excepting among the Pericui, but their efforts for good were largely frustrated by the vicious example of the pearl fishers and other adventurers, who, following the opening up of the country, introduced dissipation and disease until the blood of the whole Indian population was hopelessly poisoned. On the departure of the Jesuits in 1768 the missions were turned over to the Franciscans, but subject to so many restrictions that in 1773 they transferred them to the Dominicans. Nine other missions, all among the missions, were taken away the same year up to 1797, making a total of twenty-three then in existence on the peninsula. The missions, however, soon declined, chiefly owing to the rapid extinction of the Indians themselves. Serious scandals also crept in. Governmental interference was succeeded by governmental hostility, and after a period of revolution during 1833, in the act of secularization by which the ruin of the missions was completed. The few surviving Indians scattered to the mountains or starved about their former homes. Those within the mission area, estimated originally at a minimum of 25,000, numbered less than 3800 in 1840. In 1908 these had dwindled to a handful of supposed Guacurí about San Xavier and a few individuals of the Cochimí about Santa Gertrudis and San Borja, orderly in conduct and devoutly Catholic.

JAMES MOONEY.
to be the capital of Paraguay, and made first acquaintance with the Guarani. Under the very first government of the Colonia, the Abipones or Guarani inhabited territory of the province in the north of the country, and from which the present mixed Paraguayan race derives its origin, and also of the enslavement of the native tribes who found no protector until the arrival of the Jesuits, the first two of whom, Fathers Pucana and Angulo, coming overland from Peru, persuaded the Guaraní territory of Guayrá, in what is now the Province of Paraná, Southern Brazil, in 1586. Others soon followed, a Jesuit college was established at Asuncion, a provincial capital for Paraguay and Chile, and in 1608, in consequence of their strong protests against the enslavement of the Indians, King Philip III of Spain issued royal authority to the Jesuits for the conversion and colonization of the Indians of Guayrá. It should be noted that in the earlier period the name Paraguay was loosely used to designate all the basin of the river, including besides the present Paraguay, parts of Uruguay, Argentina, Bolivia, and Brazil.

As usual in Spanish colonies the first exploring expeditions were accompanied by Franciscan friars. At an early period in the history of Asunción, Father Luís de Bolanos of that order translated the catechism into the language of the Guarani, in order to preach to those of that tribe in the neighbourhood of their villages. In 1586-7 Father Francis Solanus crossed the Chaco wilderness from Peru, preaching to the wild tribes, and stopped for some time at Asuncion, but without giving attention to the Guarani. His recall left the Indian field clear to the Jesuits, who assumed the double duty of civilizing and Christianizing the Indians and defending them against the miseries, cruelties and butcheries of the slave-dealers and their employers, including practically the whole white population, lay, clerical, and official. "The larger portion of the population regarded it as a right, a privilege in virtue of conquest, that they should enslave the Indians" (Page, 470). The Jesuit provincial, Torres, however, on his arrival in 1607, "immediately placed himself at the head of those who had opposed the cruelties at all times exercised over the natives" (Ibid.).

The great centre and depot of the Indian slave trade was the town of São Paulo, below Rio Janeiro in Brazil. Offshore in their launches, Portuguese, Dutch, and Spanish pirates, having become a refuge for the desperate criminals of all nations, who, finding a lack of wives of their own class and colour, had intermarried with Indian and negro women, producing a mongrel and bloodthirsty breed, without law, religion, mercy, or good faith, "of the most consummation of law, religion, mercy, or good faith, they speedily overrode the influence and power of the Church and drove out its ministers. Their town became the great slave mart whence issued thousands and thousands of Indians to be bartered away on the public squares of the Atlantic cities. Here they assembled day after day, as party after party, from all the land, in their canoes, rafts, and canoes, built, and with infinite labour and danger by land and water, with famine, fever, and death always following their march, they descended the Paraná five hundred miles and re-established Loreto and San Ignacio near its banks in what is now Missiones Territory of the Province of Corrientes in Eastern Argentina. Two priests had been killed on the way by the wild tribes. By the sale of all the savages from the wreck Father Montoya was able to buy 10,000 cattle and thus transform his Indians from farmers to stock raisers. Soon after the work was accomplished on the basis, and under Fathers Rançonier and Roméro the Uruguay mission was re-established, only to be again destroyed (1632) by the old enemy, the Mameluco, who had discovered a new line of attack from the south. This time the neophytes made some successful resistance, but in
1638 all the twelve missions beyond the Uruguay were abandoned and their people consolidated with the community of the Missions Territory. In the last raid Father Alfaro was killed, which at last brought about tardy interference by the governor.

In the same year Father Montoya, after having succeeded in capturing both the governor and Bishop of Asunción in attempts upon the liberties of the Indians and the mission administration, sailed for Europe, accompanied by Father Díaz Taño, and succeeded in getting from Urban VIII a letter forbidding the enslavement of the mission Indians under the secular authorities, and in urging the long-desired and long-refused permission for the Indians to be furnished with fire-arms for their own defence, and to be trained to their use by veteran soldiers who had become members of the Jesuit Order. When next the Paulista army, eight hundred strong, entered the mission territory in 1641, a body of Christian Guarani armed with guns and led by their own chief, met them on the Acaráy river and in two pitched battles inflicted such severe defeat as put an end to the invasions for ten years. Differences with the Franciscans and with the Bishop of Paraguay on the old questions of jurisdiction and privilege, gave on a second check to the mission undertakings numbering twenty-nine, but in 1651 the war between Spain and Portugal, the latter represented in America by Brazil, gave encouragement to another Paulista attempt upon a scale intended to wipe out every mission at one blow and hold the territory for Portu-
gal. And now the Spanish authorities roused themselves and sent promise of help against the invading army, advancing in four divisions, but before any of the government troops could reach the frontier the fathers themselves, arming their neophytes, led them against the enemy, whom they repulsed at every point of attack. The result was the capture of some one thousand men all Spanish was also taught in every school. In this way, as the Protestant Graham notes (183), "without employing force of any kind, which in their case would have been quite impossible, lost as they were amongst the crowd of Indians", the Jesuits transformed hordes of cannibal savages into communities of peaceful, industrious, highly-honored citizens. After an among whom idleness, crime, and poverty were alike unknown.

In 1732, the Guarani missions numbered thirty, with 141,252 Christian Indians. Two years later a visitation of smallpox, that great destroyer of the human race, swept over the whole peninsula and the visitation carried off nearly 12,000 more and then spread westwards through all the wild tribes of the Chaco. In 1750 a boundary treaty negotiated between Spain and Portugal transferred to the latter the territory of the seven missions on the Uruguay, and this was followed soon after by an official order for the removal of the Indians. The Indians of the seven towns, who knew the Portuguese only as slave-hunters and persecutors, refused to leave their homes, rose in revolt under their own chiefs and defied the united armies of both governments. After a guerilla war-
fare of seven years, resulting in the slaughter of thousands of Indians and the almost complete ruin of the seven missions, the Jesuits secured a royal decree annulling the boundary decision and restoring the disputed mission territory to the Spanish jurisdiction. In 1747 two missions, and in 1760 a third were es-
established in the sub-tribe of the Itanes or Toba-
tins in Central Paraguay and formed a mission group. In one of these, San Joaquin (1747), the celebrated Doblhoffer ministered for eight years. These were the last of the Guarani foundations.

The story of the royal edict of 1767 for the expul-
sion of the Jesuits from the Spanish dominions is too much a matter of world history to be recounted here. Fearing the event, the viceroy Bucarli instructed the
execution of the mandate in the summer of 1768, to two officers with a force of some 500 troops, but although the mission army then counted 14,000 drilled was "all engaged in the spiritual government of the Church, as well as the college of cardinals assembled in concile, complete liberty of communication with the Catholic world, exempt them from all interference with their letters, papers, etc. (14) the clergy to have freedom of assembly; (15) the government to renounce and "Apostolic Legation" in Sicily, and the right of nomination to major benefices, with reservation, of the royal patronage; the bishops are not obliged to take the oath (of allegiance) on appointment; (16) the Exequatur to be maintained only for the major benefices (except in Rome, and in the subrubarian sees) and for acts affecting the disposition of ecclesiastical property; (17) in ecclesiastical property any be allowed against ecclesiastical authority; the civil courts, however, to be competent to pass judgment on the juridical effects of ecclesiastical sentences. Provision to be made, by a future law, for the reorganization, conservation, and administration of all the civil property.

The Italian government, which had declared that it entered Rome to safeguard the person of the Holy Father (Visconti-Venosta, circular of 7 September, 1870; the autograph letter of Victor Emmanuel to Pius IX, dated 29 Aug., received 10 Sept.; again the king's circular to the Roman church which bore the stamp of the result of the plebiscite), and which, in the very act of invading pontifical territory, had assured the people that the independence of the Holy See would remain inviolate (General Cadorna's proclamation at Termini, 11 Sept.), felt obliged to secure in a legal and solemn way the executions of its aforesaid intention. It owed no less to its own Catholic subjects, and to Catholics the world over. Two ways were open to it for keeping its promise. It might call an international congress of all nations having a very large Catholic population, or it might pass a domestic Italian law. In the aforesaid circular of the minister Visconti-Venosta, addressed to all the powers, the former way was hinted at. But the unconcern of Catholic governments over the events that ended in the occupation of Rome put an end to all thought of consulting them, and so a domestic law was passed. Before its adoption, however, Pius IX, by a letter of his cardinal vicar, dated 21 August, 1871, protested against it, saying, "It was no easy task to decide whether absurdity, cunning, or contempt played the largest part."

The pope refused to recognize in the Italian government any right to grant him prerogatives, or to make laws for him. Indeed, he declared that he "cannot bear to carry it with a special servitude, while later events proved that they were not intended to be seriously observed. In the Encyclical of 15 May following, the pope declared that no guarantees could secure him the liberty and independence necessary in the exercise of his power and authority. He renewed this protest at the consistory of 27 October. And it stands to reason that a law voted by two houses of Parliament could with equal ease be abrogated by them at will. Indeed, it has ever been part of the programme of the "Left" party in the Italian Parliament to suppress the Law of Guarantees. Pius IX, moreover, was unwilling to accept formal guarantees concerning the relations of Church and State, especially the Exequatur and the administration of ecclesiastical property. Moreover, if, as he hoped, the occupation of Rome was to be only temporary, the acceptance of this law seemed useless. Doubtless, too, such acceptance on his part would have been interpreted as at least a tacit recognition of accomplished facts, as a renunciation of the temporal power, and the property which had been taken from the Holy See (e. g. the Quirinal Palace). The abandonment of the "Apos-
GUARDI, Francesco, Venetian painter; b. at Venice, 1712; d. in the same city, 1793. He was a pupil of Canaletto, and in style a close follower of his master. Of his life practically nothing is known, save that he is believed to have always lived in Venice, and to have painted scenes confined to that city and its neighbourhood. He painted the city more well-grounded, than the painting of his master. They are noted, however, for their spirited touch and sparkling colour. Examples are to be found in almost every European gallery, notably in Paris, Berlin, Modena, Brussels, Venice, Verona, and his smaller works are in great demand in the houses of the wealthier collectors of choice pictures. A sketchbook by Guardi was sold in London two or three years ago for a very high price, and it contained, amongst other drawings, the original sketches for the views of Venice in the Bridgewater House collection. The artist is said to have been responsible for nearly a thousand pictures. Berenson speaks of him as an "anticiptator of the Romantic and the Impressionist painters of our own country", and again refers to his "eye for the picturesque, and his remarkable instantaneous effects".

FANETTI, Della Pittura Veneziana (Venice, 1771); BERENSON, The Venetian Painters (London, 1904). GEORGE CHARLES WILLIAMSON.

Guardian Angel.—That every individual soul has a guardian angel has never been defined by the Church, and is, consequently, not an article of faith; but it is the "mind of the Church", as St. Jerome expressed it: "how great the dignity of the soul, since each one has from his birth an angel commissioned to guard it". (Comm. in Matt., xviii, lib. II.) This belief in guardian angels can be traced throughout all antiquity; pagans, like Memnon and Plutarch (cf. Euseb., "Prep. Evang.", xii), and Neo-Platonists, like Ptol., held it. It was also the belief of the Babylonians and Assyrians, as their monuments testify, for a figure of a guardian angel now in the British Museum, decorated an Assyrian palace, and is the first seen for a modern representation; while Nabopolassar, father of Nebuchadnezzar the Great, says: "He (Marduk) sent a tutelary deity (cherub) of grace to go at my side; in everything that I did, he made my work to succeed." In the Bible this doctrine is clearly discernible and its development is well marked. In Gen., xviii—xix, angels not only act as the executors of God's wrath against the cities of the plain, but they deliver Lot from danger; in Ex., xii—xiii, an angel is the appointed leader of the host of Israel, and in xxxii, 34, God says to Moses: "my angel shall go before thee."

At a much later period we have the story of Tobias, which might serve as a commentary on the words of Ps., xx, 11: "For he hath given his angels charge over thee; to keep thee in all thy ways." (Cf. Ps., xxxiii, 8; and xxxiv, 5.) Lastly, in Dan., x, angels are entrusted with the care of particular districts; one is the "prince of the kingdom of the Persians" and Michael is termed "one of the chief princes"; cf. Deut., xxxiii, 8 (Sept.); and Ecles., xvii, 17 (Sept.).

This sums up the Old Testament doctrine on the point; it is clear that the Old Testament conceived of God's angels as His ministers who carried out His behests, and who were at times given a particular mission, regarding men and mundane affairs. There is no special teaching; the doctrine is rather taken for granted than expressly laid down; cf. II Mach., iii, 25; x, 29; xi, 23. But in the New Testament the doctrine is stated with greater precision. Angels are everywhere the intermediaries between God and man;
and Christ set a seal upon the Old Testament teaching: "See that you despise not one of these little ones: for I say to you, that their angels in heaven always see the face of my Father who is in heaven." (Matt., xviii, 10). A twofold aspect of the doctrine is here put before us: even little children have guardian angels, and these angels have a mission to fulfill on earth. Without dwelling on the various passages in the N. T. where the doctrine of guardian angels is suggested, it may suffice to mention the angel who succoured Christ in the garden, and the angel who delivered St. Peter from prison. Heb., i, 14, puts the doctrine in its clearest light: "Are they not all ministering spirits sent to minister for them, who shall receive the inheritance of salvation?" This is the function of the guardian angels; they are to lead us, if we wish it, to the Kingdom of Heaven. St. Thomas teaches us (Summa Theol., I, Q. cxxii, a. 4) that only the lowest orders of angels are sent to men, and consequently that they alone are our guardians, though Scutus and Durandus would rather say that any of the members of the angelic host may be sent to execute the Divine commands. Not only the baptized, but every soul that cometh into the world receives a guardian spirit; St. Bonaventure (Opera Omnia, I, 18) set his protection over St. Chrysostom (Hom. iii on Ep. to Col.) would hold that only Christians were so privileged. Our guardian angels can act upon our senses (I, Q. cxi, a. 4) and upon our imaginations (ibid., a. 3), not, however, upon our wills, except "per modum suavisit," viz. by working on our intellect, and thus upon our will, through the senses and the imagination. (I, Q. cxi, a. 2; and cxi, a. 2). Finally, they are not separated from us after our death, but remain with us in heaven, not, however, to help us to attain salvation, but "ad aliquam illustrationem" (Q. cxxii, a. 7, ad 3 sq.).

For bibliography see Angeli, and St. Thomas, Summa Theologicae (loc. cit.), with the commentary.

HUGH POPE.

GUARDIAN ANGELS, FEAST OF.—This feast, like many others, was local before it was placed in the Roman calendar. It was not one of the feasts retained in the English breviary, published in 1588; but among the earliest petitions from particular churches to be allowed, as a supplement to this breviary, the canonical celebration of local feasts, was a request from Cordova in 1579 for permission to have a feast in honour of the guardian angels. (Bümmer, "Histoire du Breviary," p. 226). Bümmer makes it the authority of original documents published by Dr. Schmid (in the "Tübinger Quartalschrift," 1884), adds on the same authority that "Toledo sent a rich proproni and received the desired establishment for all the Offices contained in it, Valence also obtained the approbation in February, 1852, for special Offices of the Blood of Christ and the Guardian Angels." So far the feast of Guardian Angels remained local. Paul V placed it (27 Sept., 1608) among the feasts of the general calendar as a double "ad libitum" (Bümmer, op. cit., II, 277). Nilles gives us more details about this step. "Paul V," he writes, "gave an impetus to the veneration of Guardian Angels (long known in the East and West) by the authorization of a feast and proper office in their honour. At the request of Ferdinand of Austria, afterwards emperor, he made them obligatory in all regions subject to the Imperial power; to all other places, without however "ad libitum," celebration on the first available day after the Feast of the Dedication of St. Michael the Archangel. It is believed that the new feast was intended to be a kind of supplement to the Feast of St. Michael, since the Church honoured on that day (29 Sept.) the memory of all the angels as well as the memory of St. Michael (Nilles, "Kalendariunm," II, 502). Among the numerous changes made in the calendar by Clement X was the elevation of the Feast of Guardian Angels to the rank of an obligatory double for the whole Church to be kept on 2 October, this being the first unoccupied day after the feast of St. Michael (Nilles, op. cit., II, 503). Finally Leo XIII (5 April, 1883) favoured this feast to the extent of raising it to the rank of a double, and added a verse to the prayer "O textus, and Gospel of the Mass includes that pointed text from St. Matthew, xviii, 10: "See that you despise not one of these little ones: for I say to you that their angels in heaven always see the face of my Father who is in heaven." Although 2 October has been fixed for this feast in the Roman calendar, it is kept, by papal privilege, in Germany and many other places on the first Sunday (computed ecclesiastically) of September, and is celebrated with special solemnity and generally with an octave (Nilles, II, 503). (See Angel; Intercession.)

GUARDIAN OF A RELIGIOUS ORDER. See Custos.
GUARDIANSHIP

Guardianship, in civil jurisprudence, is "the condition or fact of being a guardian; the office or position of guardian" (Murray, New English Dictionary, s. v.); "a person intrusted by law with the interests of another who is not of sufficient age to act for himself" (Murray, Law of Domestic Relations, Boston, 1905, 277). Etymologically, the words guardian and ward are of like derivation. "Warden" is an older term for guardian. The term, to ward, is derived from the Old French, warden, garder, guardier, and one of the meanings of the word, ward, is "to watch over; control or care of a minor" (The Century Dictionary, s. v.). This "control or care" conferred by law is a substitute for, or an "artificial extension of the parental power" (Taylor, The Science of Jurisprudence, New York, 1908, 558).

The Roman law terms such "control or care" of a minor under the age of fourteen years, tutela, "an authority and power over a free person given and permitted by the civil law in order to protect one whose tender years prevent him defending himself" ("The Institutes of Justinian", tr. Sanders, L. I. t. xiii, 1, Chicago, 1876), the civil law thus providing what the Insitutes aggravate to native law, "ubi juri constans, ibi, L. I. t. x, 6. Tutors were to be termed "as being protectors", tutores (ibid., L. I. t. xiii, 2), protectors of a person in the exercise of his rights. A tutor did not confer rights on his ward; the tutor's authority supplied the ward's deficiency for exercise of rights which he already had. "When one person increased (augerbat) what another had, so as to fill up a deficiency, this was called augmentor" (ibid., Introduction, §43, note, and see p. 76, t. xiv, p. 120, p. 134). Only one who was free could have that right, a deficiency in which, according to this explanation of its meaning, authority could supply. A slave could not be regarded as deficient for exercising rights, because a slave (who in law was not even regarded as a person) having no capacity to acquire the rights themselves, there could arise no question of his capacity to exercise them. Thus, a free person only could have occasion for a tutor, or could be a ward (pupillus, pupilla). On the death of the tutor the minor was entitled to the rights as if his citizenship was qualified to become a tutor. Being deemed a public office, tutela was compulsory upon those who were qualified and who could present no legal excuse (ibid., L. I. t. xxv).

The tutela of a male ended with his fourteenth year, of a female with her tenth. But a minor was not debarred (of full age and fit to protect his or her own interests, while under the age of twenty-five years, and so, on the discharge of the tutor, there was appointed a curator (ibid., L. I. t. xix, xx, xxii). Tutela might be testamentaria, legitima, or dativa.

Tutela testamentaria arose from appointment in the last will of the parent (Instit. L. I. t. xiii, 3). Tutela legitima occurred in the instance of minors to whom by will no tutor had been appointed for them. For the law prescribed the tutela of certain relatives who were hence called tutores legitimi (ibid., t. xvi.). "If any one had no tutor at all" one was assigned by certain magistrates and termed tutiar dativus (ibid., t. xxiv).

The English common law recognized the father and, on his death, the mother as guardian by nature or "for nurture" of a child's person. But during feudal times the tenure by which land was held determined the right to the guardianship of its owner while under age. A male orphan under twenty-one years of age inheriting tenements for a term of years, if the same land, committed to the guardianship of the lord of the fee, "to instruct him", explains Sir John Fortescue (De Laudibus legum Anglie, 2nd ed., 1741, xlv), "in deeds of arms which in virtue of his tenure his oblige to perform for the lord of the fee." Of a female orphan the lord's guardianship continued until she reached the age of sixteen years, or until her marriage, if fourteen years of age, when her husband was entitled to perform the service. Fortescue wrote in the reign of King Henry VI (1422-61); this wardship, intended for instruction "in deeds of arms", was by Queen Elizabeth "used to secure the education of all Catholic princes in the Protestant faith" (Cary, The English People, New York, 1903, III, 1324), not being abolished until 1660. A minor might, however, inherit land held by what was known as socage tenure, which according to Sir William Blackstone "seems to denote a tenure by any certain and determinate service" (Commentaries, Bk. II, vi, 78). The guardianship of such an heir both as to lands and his land, was intrusted, if the inheritance had come from his father's side, to a relation on the mother's side, and if the inheritance had come from the mother's side, to some relation on the father's side. This practice Fortescue extols for a reason which has been very appropriately deemed to imply "melancholy consciousness of the corruption of public morals" (Kent, "Commentaries", II, 223). For Fortescue observes (loc. cit.) that "to commit the care of a minor to him who is the next heir-at-law is the same as delivering up a lamb to the care of a wolf." Each of the guardianships so far mentioned resembled the tutela legitima of the Roman law. A father's right to appoint a testamentary guardian for his son, which in Rome seems to have been more ancient than the law of the Twelve Tables (Pandecte Justinianae, Ed. Pothier, L. XXVI, t. ii, note), was conferred by an English statute of the year 1658, a statute which, by a prohibition now no longer in force, forbade the appointment of Roman Catholics. In England the lord chancellor, presiding in the Court of Chancery, was "paramount guardian to all the infants in the nation" (Reeve, "The Law of Husband and Wife", etc., 4th ed., Albany, New York, 1888, 392). The sovereign as parens patriae was deemed to be protector of the interests of all of his subjects who were minors, and the exercise of this universal guardianship devolved upon the Court of Chancery by what was assumed to be delegation of the royal authority. In such exercise of authority, the court followed "in many respects", remarks Mr. Justice Story, "the very principles" of the Court of Chancery that will be developed in Equity Jurisprudence, 13th ed., Boston, 1886, II, 682).

Throughout the United States the law of the various states which regulates guardianship and the conduct of guardians is, in many particulars, local and statutory. For guardianship is a "local and temporary institution" (Taylor, op. cit., 558). But the local legislation (except in Louisiana) is based to a great extent on the law as administered by the English Court of Chancery. The same general remarks apply to British possessions other than those acquired from France, Holland, and Spain. Founded upon the civil law, the statutory law of Louisiana bears a resemblance to the modern law of France, as well as to that of the Canadian Province of Quebec. The Anglo-Indian Code provides for guardianship by will, and this guardianship as well as the sovereign's supervisory powers are recognized by the existing native Hindu law. In Australia, by the "Commonwealth of Australia Constitution Act" of 1900, power has been conferred upon the Parliament of the commonwealth to make laws with respect to "guardianship of infants" in relation to "divorce and matrimonial causes" ("Constitution", I, P. V, 51, XXII; "The General Public Acts of the United Kingdom of Great Britain and Ireland", London, 1800, c. xii).

In England the court of last resort is "paramount guardian", so, within those jurisdictions where, as just mentioned, the law administered in the Court of the Chancellor is the basis of the law of guardianship, any Court possessing Chancery powers, which no local statute may have limited, "possesses", to quote from a New York case, "a controlling and superin-
tending power over all guardians" (People v. Wilcox, Barbour's N. Y. Supreme Court Reports, XXII, 189). Parental power must yield to that of this "paramount guardian". "A man" remarks a very learned chancellor, "has a right to the custody of the person of his wife; in general, also to that of his child" (Veesey, Reports, X, 62). But this right "in general", being dependent upon observation of a father's duties, any father will forfeit whenever shown to be an improper person to have the sole control and education of his children" (Wellesley vs. Wellesley, Bligh's New Reports, II, 137, 144). The father may control his child's religious education, and, in respect to it, the English law pro tempore declares that a father has been declared to be generally controlling. For it is said Religio sequitur patrem [English Law Reports, Chancery Division, I (1902), 869. "As regards religious education", it is further said, "the wishes of the father must be regarded by the court, and must be enforced, unless there is some strong reason for disregarding them" (In re McGrath, English Law Reports, Chancery Division, I (1893), 148. See also Irish Reports, Equity, V, 118). The court has held that a promise before marriage, such as the Church when permitting a mixed marriage requires concerning the religious education of children of the marriage, is not legally binding on the husband (In re Cotton, Law Reports, Chancery Division, XXIII, 817). The amount to be expended out of their property on maintenance and education of minor wards was according to Roman law to be determined by the preceptor when not fixed by a will (Instit., tr. Sanders, 152). Allowances for these purposes became an important branch of the supervisory guardianship of chancery, and in various states of the United States other courts have been by statute vested with a like power.

Chancery guardianship included supervision of the marriage of its wards. The English common law concerning a wife's property rendered this supervision especially salutary to female wards. For by the common law the property of a wife vested by her marriage in her husband. But Chancery did not permit its guardianship of property to be thus terminated. The chancellor would only sanction the proposed marriage of a female ward on her property being secured by such terms as met his designation marriage rendered the husband guilty of contempt of court, and liable to imprisonment until he agreed to a proper settlement on his wife. For, "though by the ecclesiastical law a woman is of age to marry, yet by the temporal law she cannot dispose of her beneficence, unless she be of the age of marriage" (Hodge, Law of Wills, Philadelphia, 1820, II, 227, note b). Modern statutes have in many jurisdictions rendered this curious branch of Chancery guardianship less necessary than it was in former times.

Contrary to the Roman law and to the modern law of France and other civil law countries, guardianship is not by English law a public office, and therefore no person is compelled by that law to assume its duties. Guardianship does not cease, as did tutela, when the ward reaches fourteen years of age. Guardianship in socage (which without the old rules as to its devolution is yet recognized in a New York statute), is said to terminate when the ward reaches that age "so far as to entitle the infant to enter and take the land to himself". But yet if no other guardian be appointed, the guardianship will continue (Byrne v. Van Hoesen, Johnson's New York Supreme Court Reports, V, 60). And twenty-one years being the equivalent of the term of the estate of the child, guardianship continues generally until the minor reaches that age. But by the law of some states females become of full age when eighteen years old, or on marrying, and according to a New York statute guardianship of a female ceases on her marriage as to her person, continuing, however, as to her property. In some states the father has been deprived of his paramount right to appoint a guardian. Various statutes authorize the appointment of guardians, called usually "committees", for persons of unsound mind. And (as in the Roman law) guardianship of spendthrifts—persons "who", to quote a Scotch legal expression, "are in danger of suffering by their profusion or facility of temper"—Self's Principles of Scottish Law (10th ed., Edinburgh, 1899, 806)—has, also, been provided by the statutes of several states.

The guardian is called by Blackstone "a temporary parent", "the power and reciprocal duty of a guardian and ward" being declared by this authority to be the same as those of protector pro tempore (see Commentaries, Book I, xiv). But although guardianship of a minor has been said to be "an artificial extension of the parental power" (Taylor, op. cit.), the power and duties in the artificial are similar to, but are not identical with, those in the natural relation. The duties of a guardian are, indeed, "those of protection, education and maintenance" (Schouler, op. cit., 315), with right generally to the custody of the ward's person (ibid., 311). But while a parent is under the duty of supporting his child from his own means, and may claim the labour and services of the child in return, a guardian, as such, cannot sustain this claim, and he is bound to support the ward with the income of the property supplemented by the liberality of other persons who will allow (ibid., 305, and note 2).

"The guardian's trust" is "one of obligation and duty" (Kent, "Commentaries", II, 229). Of the property intrusted to his care, he is to take possession, "suffering no waste or destruction of the ward's land" and investing legally any funds belonging to him. And whenever the guardianship may be terminated, whether by the ward attaining full age, or, at an earlier period, by marriage of the ward, by death of either ward or guardian, or by the latter's removal or resignation, a final accounting of the guardianship is to be made "for the estate and profits of the real estate" (Kent, loc. cit.). To a minor who is a party defendant to a suit in court there is assigned a protector known as a guardian ad litem.

Charles W. Sloane.
surrounded by admirers and enjoyed great fame as a poet. Guarini's domestic life was stormy and unhappy. His daughter, Anna Guarini, was murdered by her husband, École Trotti, with the assistance of one of the poet's own sons. His own conduct towards the latter was the reverse of exemplary, and his whole career was embittered by his quarrels and perpetual lawsuits with them and others.

Guarini's literary reputation is almost entirely based upon his "Pastor Fido" (The Faithful Shepherd), a lyrical pastoral drama written to rival the "Aminta" of his friend and contemporary, Tasso. This "pastoral tragi-comedy" is a masterpiece of the kind that Fico Fico, the Faithful Shepherd, has made popular in English, and marks the culmination of the pastoral poetry of the Italian Renaissance. In an age of conflict and intrigue, men turned with pleasure to these artificial pictures of the loves of shepherds and nymphs, and found a refuge from reality in the sentimental world of an imaginary Arcadia. Written with considerable dramatic power, its main charm lies in the lyrical portions. It was published at the end of 1589, dedicated to Carlo Emanuele I of Savoy, and was frequently represented with success on the stage. Guarini also wrote a collection of lyrical poems, "Rime"; a comedy, "Idrope"; a protocol, "Il Regio"; a declaration of political liberty, "Il Trattato della Politica Libertà"; in support of the Medicean rule in Florence. His letters were printed in his lifetime. During Tasso's confinement, Guarini saw an edition of his rival's "Rime" through the press, per sola pietà, as he put it. RONI, Biddeta Guarini ed il Pastor Fido (Turin, 1886); FLAMINI, Il Cinquenario (Milan, 1902); D'ANCONA and BACCI, Manuale della Letteratura Italiana (Florence, 1904). III. An Italian edition of the Pastor Fido, of which an English translation by an anonymous member of the Dymock family was published in 1670, was dedicated by SIR FANSHAWS (dedicated to Charles, Prince of Wales) in 1647. EDMUND G. GARDNER.

Guarino da Verona, humanist, b. 1370, at Verona, Italy; d. 1490, at Ferrara. He studied Latin in the school of Giovanni da Ravenna, and afterwards went to Constantinople, where he studied Greek under Manuel Chrysoloras, in whose household he spent five years, and with more than Greek MSS. to Venice, where he was received with great enthusiasm. The rest of his life was spent in teaching and lecturing with extraordinary success in Florence, Venice, Verona, Ferrara, and other Italian cities. His method of instruction was so celebrated that students flocked from all parts of Italy, from England, to his lecture-room. Many of them, notably Vittorino da Feltre, afterwards became well-known scholars. In 1429 he was engaged by Niccolò d'Este, Marquess of Ferrara, as tutor to his eldest son Lionello. After devoting several years to Lionello's education, he was appointed professor of rhetoric in the University of Ferrara (1429), a position which he held for many years. The last thirty years of his life were spent in teaching at Ferrara, where he acted as interpreter between the representatives of the Greek and Latin Churches at the council of 1438. A master of Greek and Latin, Guarino was endowed with a wonderful memory and indefatigable industry. Moreover, he led an exemplary life and deserves to be remembered with respect as a humanist whose moral character was equal to his learning. Unlike some other humanists, he showed no antagonism to the authority of the Church. His works included grammatical treatises, translations from the Greek and commentaries on the works of various classical authors. In addition to an elementary Latin grammar, he brought out a widely popular Latin version of the catechism of Greek grammar by Chrysoloras. His translations included the whole of Strabo and some fifteen of Plutarch's "Lives", besides some of the works of Lucian and Isocrates. He commented on Persius, Juvenal, Martial, and some others. He was an industrious discoverer and collector of Latin MSS., among them being MSS. of the younger Pliny, Cicero, and Celsus. At Venice he discovered a MS. of Pliny's "Epistles" containing about 124 letters, and several copies of this were made before it was lost. He left behind him many speeches and some 600 letters.

EDMUND BURKE.

Guastalla, Diocese of (Guastellensis), in the province of Reggio Emilia (Central Italy) on the left bank of the Po at its junction with the Crezolo. Until the tenth century it was an obscure hamlet, near the castle of the Marchesi di Canossa. In 988 Gregory V consecrated there the church of St. Peter (la Pieve). In 1106 Paschal II held at the same place a council of investitures. During the struggle between the popes and the Hohenstaufen the town fell under the control of Reggio; in the fourteenth century it belonged to Cremona, and later to Milan. In 1406 Filippo Maria Visconti made it a county (comune) and gave it to Guido Turci of Mantua. Ferrante I, Governor of Guastalla, died in 1538; in 1621 it became a duchy and remained in the hands of the Gonzaga family until 1746. Later it was joined (1748) to the Duchy of Parma given to Philip Bourbon. It formed part of the Cisalpine Republic in 1796, and in 1801 was given as a principality to Pauline Borghese. In 1815 the Treaty of Vienna assigned it as a duchy to Marie Louise, wife of Napoleon I, and after her death, in 1847, it went to the Duke of Lucca, who in 1848 made it over to Modena. In 1860 it was joined to the Kingdom of Italy.

Guastalla ecclesiastically it formed a part of the Archdiocese of Reggio until 1471, when it was transferred to the Diocese of Mantua. In 1553 it was created a suffragan diocese of Modena. In 1850 it was united to the diocese of Modena and Ferrara. In 1860 it was united to the diocese of Ferrara-Cremona.

Guastallines.—Luigia Torelli, Countess of Guastalla (b. about 1500; d. 29 Oct., 1559 or 1569), widowed for the second time when she was twenty-five, resolved to devote her life to the service of God. The principality of Guastalla, which she inherited from her father, was another branch of the family, and the affair carried before Pope Clement VIII and Emperor Charles V, whereupon she settled the matter by disposing of her estates to Fernando Gonzaga, thereby also increasing her resources for the religious foundations she had in mind. In 1536 she entered the Angelicans in a convent, which she had founded and richly endowed, taking the name in religion of Paola Maria; and later she established or assisted in the establishment of several religious houses in various parts of Italy. With other Angelicans she accompanied the Barnabites on their missions, worked among the poor, and was engaged in converting numbers of lives from evil to good. When Paul III improvised the cloister on the Angelicans, whom her foundresses had destined for works of active charity, particularly also the care of the sick and orphans, she instituted another community, also at Milan, for whom she built a house between the Roman and the Fosa gate, known as the College of Guastalla. Like the Angelicans, they were
GUATEMALA

under the direction of the Barnabites. The members, known as Daughters of Mary, dedicated themselves to the care of orphans of noble family, eighteen being provided for in the endowment. The orphans, appointed by prominent Milanese, who eventually became administrators of the institute, may remain for twelve years, after which they are free either to return to Milan or to remain as regulars in the former event a dowry of 2000 lire ($400). After the death of the foundress, Pope Urban VIII, at the instance of St. Charles Borromeo, enclosed the community. The sisters live as religious, attend choir, have their meals in common, observe definite hours for prayer and work, but no solemn vows. Their garb is black, fashioned according to a more secular style than was that of the Angelicals and their veil is folded in a peculiar coronet form; each also wears a gold ring engraved with a hand holding a cross. Their charges dress in blue and are also popularly known as Guastallines.

GUATEMALA, SANTIAGO DE, ARCHIDOCESE OF (SANCTI JACOBII MAJORIS DE GUATEMALA), confinements with the Republic of Guatemala, in Central America. It is bounded on the north by the State of Yucatan in Mexico, the British colony of Belize, and the Gulf of Honduras; on the east by the Republics of Honduras and Salvador; on the south by the Pacific Ocean; on the west by the States of Chiapas and Tabasco in Mexico. Its area is 28,950 square miles. Santiago de Guatemala was made a diocese by Paul III 18 December, 1534, its first bishop being Don Francisco Marroquin, who came from Spain with the adelantado, or governor, Don Pedro de Alvarado. The episcopal line of succession is as follows: (2) Bernardino de Villalpando, (3) Gómez Fernández de Córdova, (4) Juan Ramírez de Arcellano, (5) Juan Cabezas Altamirano, (6) Juan Zapata y Sandoval, (7) Agustín de Ugar and Saravia, (8) Bartolomé González Soltero, (9) Payo Enríquez de Rivera, (10) Juan de Santo Maísa Sáenz Maizos and Murillo, (11) Juan de Rurgo and Montañes, (12) Andrés de las Navas and Quevedo, (13) Manuel de Larreátegui and Colón, (14) Juan Bautista de Alvarado de Toledo, (15) Nicolás Cazón de Gómez de Cervantes, (16) Juan Gómez de Parada. On 16 December, 1743, the Dioceses of Guatemala was raised to metropolitan rank by Benedict XIV, the Dioceses of Nicaragua and Costa Rica being suffragans. The Diocese of San Salvador, erected by Gregory XVI, 28 September, 1842, and that of San José de Costa Rica, erected in 1850, were also added to these suffragans, so that the metropolitan church of Santiago de Guatemala has four suffragan dioceses, which are, in the order of their erection, Nicaragua, Honduras, San Salvador, and Costa Rica. With the archdiocese, they constitute the ecclesiastical Province of Central America. The series of archbishops since the erection of the archdiocese, in 1743, is (1) Pedro Pardo de Figueroa, (2) Francisco José de Figueroa and Victoria, (3) Pedro Cortés y Larraz, (4) Cayetano Franco and Monroy, (5) Juan Félix de Vellegas, (6) Luis Peñalver and Cárdenas, (7) Rafael de la Vara de la Madrid, (8) Ramón Casas and Torres, (9) Francisco de Paula García Pelaez, (10) Bernardo Piñol and Aycinena, (11) Ricardo Casanova and Estrada. Church and State being now separated, there is no official relation between the two. By a treaty antedated to the Constitution of the Republic, the free exercise of all forms of religion, with no pre-emience for any one form, is guaranteed, but only within their respective places of worship.

Formerly, there existed in this archdiocese communities of Friars Preachers (Dominicans), Minor Observantines of St. Francis, Recollects and Capuchins, Missionaries, Jesuits, the Oratory of St. Philip Neri, and the Priests of the Mission of St. Vincent de Paul. There were also religious communities of the following female orders: Poor Clares, Capuchins, Conceptionists, Catarinas, Belemites, Rosas, and Dominicanos, besides the Religious of the Institute of Sisters of Our Lady. All these communities were suppressed by the edicts of 24 March, 1767, 12, 20 February, 1872; 3 March, 1874. The Fundamental Law of the Republic, enacted in 1879, by its twenty-fifth article prohibits the establishment of conventual congregations and of any kind of monastic institution or association. There are, however, Sisters of the Institute of St. Joseph and of Charity, the former in the service of hospitals and the teaching of poor children; these last are employed in the hospitals of the city of Guatemala, of Quezaltenango, and of Antigua Guatemala. There is but one ecclesiastical college, the Colegio de Infantes, for the choir- and altar-boys of the cathedral of Santa Iglesia. It has fifteen professors and two inspectors, and numbers (1908) 47 intern and 102 extern pupils. The Sisters of Charity conduct in the Casa Central of the city of Guatemala a teaching establishment which, during the year 1908, had 98 girls as interns and gave instruction to 750 girls and 160 boys as externs; in the same year the orphan asylum at the capital, conducted by the religious congregation of Santa Teresita, sheltered 190 male and 112 female orphans of more advanced age, besides 35 infants of both sexes. In the Asilo Santa María these Sisters had under their care 90 girl interns. There is also in the city of Guatemala the Colegio San Agustín, an establishment for the education of older boys, conducted by a secular priest, with 329 pupils; in the city are nine girls’ schools in which religious instruction and training are given. By the eighteenth article of the Fundamental Law, the teaching in the national institutes, colleges, and schools is entirely secular and gratuitous. The 101 parishes of the archdiocese are grouped, for purposes of ecclesiastical administration, into sixteen vicariates forain. The capital contains four parishes, each served by a parish priest (cura) and an assistant (vicario); there are also 19 churches in the city under a presbítero rector. The cathedral clergy consists of the archbishop, the chapter (six dignitaries: dean, arch-can- tor, sub-cantor, treasurer, treasurers, and sacristan), a priest sacristan in chief, a priest master of ceremonies, six choir chaplains, and a sub-cantor. The administrative organization of the diocese consists of the archbishop, vicar-general, and private and administrative secretary; in addition to these the treasurer-general and two clerks are appointed to the ecclesiastical curia. In 1908 the archdiocese had 120 secular and 12 regular priests. According to the census of 1902, the denominational statistics of the republic were: Catholics, 1,422,933; Protestants, 2254; professing other religions, 1146; of no religion, 1111. By the decree of 15 November, 1870, the cemeteries were absolutely secularized, and their construction, administration, and inspection subjected exclusively to municipal authority. There is an archdiocesan seminary for the formation of the clergy, governed by a rector, a vice-rector, a chaplain, several precepts and professors; in 1908 it had 18 students.

GUAYAQUIL, DIOCESE OF (GUAYAQUILENSIS).—Guayaquil, the capital of the Ecuadorian province of Guayas, is situated on the right shore of the Lower Guay, the estuary of which expands into the Gulf of Guayaquil, and affords the best harbor in the same South American coast. Next to the capital city of Quito, it is the most important community in Ecuador. The city was founded by Benalcázar in 1535; it numbered 51,000 inhabitants in 1851, and must to-day have an increased population of about 70,000 or 75,000. The fear of earthquake has caused it to be
constructed almost entirely of wood, including even its double-belfried cathedral. As a consequence it has been destroyed several times by fire (the latest recurrences of this were in 1896 and 1902). Steamers from three European and from one New York line visit this port. Since 1817 there entered 509 vessels of 416,179 tons (205,412 tons British), (in 1854-1855, 208 vessels of 416,179 tons (204,452 tons British) (State's Year Book, 1900, 737). Guayaquil has a State national college (a branch institution of the University of Quito), a diocesan seminary for priests, a Dominican convent to which is attached a large church, a salesian monastery, and a school (founded in 1854 by Fathers exiled from Colombia), which holds at present eight Fathers, an institute maintained by the Salesian Fathers of Don Bosco and known as "The Philanthropic House", with about fifty boarding pupils and over 600 scholars, etc.

The Bishopric of Guayaquil was established on 16 February, 1837, by the separation of this portion from the Diocese of Cuenca. It was first a suffragan of Lima, until 13 January, 1849, when it became a suffragan of Quito. The diocese comprises the province of Guayas (districts of Guayaquil, Yaguachi, Daule, and Santa Elena) and Los Ríos (districts of Babahoyo, Bucay, Myrange, and Cuenca), an area of about 11,500 square miles; it numbers 130,000 souls, 40 parishes, 52 churches and chapels, 60 secular priests, and 20 members of the regular clergy, 1 seminary for the priesthood and 4 colleges for boys, besides 60 schools. Its first bishop was F. X. de Garayocoa (1838-51), who subsequently went to Quito as archbishop. The diocese then remained vacant through a period of ten years, at the end of which, in 1861, it was given another bishop, in the person of Tomás Aguirre (d. 1868). The latter was succeeded in 1869 by José María Lizarzaburu, S.J. (d. 1877), who took possession of the diocese in 1869, and as Bishop, was the suitor, and twenty years later, the beneficiary of the Barbey expedition. During all this time, however, Guayaquil retained its constitution, and the right to coin its own money. Among the famous citizens are: Bosone Raffaele, poet and commentator on Dante; the poet Arzamillo; the historians Guarneri Berni and Grieffoli; the lawyers Giacomo Benedetto and Antonio Concioni; the physician Accoramboni; the botanist Quadratino; the archaologist Ranghia; the painter Odergi (whom Dante calls "l'Onor d'Agüillo") with his disciples Guido Palmerucci, Angelo da Agüillo, Marciellino and Ottaviani; and followed him in the field of miniature art Angélica Allegrini; also Mastro Giorgio (Giorgio Andreoli) who in the fourteenth century raised to high perfection the art of working in majolica.

Besides the ruins of the temple of Jupiter Appenninus, there has been found at Guayaquil an ancient semierarial theatre. In the churches and in the municipal gallery are frescoes and caisses sculpturées by many eminent masters, natives of the city and elsewhere.

Gubbio, Diocese of (Guobbilinens), in the province of Perugia in Umbria (Central Italy). The city is in the northeastern part of the Comtat Venaus, was once the crossing point of the Camignano, and overlooks a fertile valley. The neighbourhood is several ferruginous mineral springs. On a pre-Roman coins this very ancient place is called Ikvini or Ikvina. The Gubbio Tables (Tabulae Eugubinae) are famous. They are bronze slabs with seven inscriptions, two of which are in Latin, and five in the ancient Umbrian tongue. They were found in 1444 among the ruins of the temple of Jupiter Appenninus near Scheggia; in 1456 were acquired by the city of Gubbio, and inset in the walls of the Palace of the Podesta. This find gave the first impetus to the study of the Piceno and Gallo-Umbrian dialects. For the inscriptions see Fabretti, "Corpus Inscriptionum Italicarum antiquioris aevi" (Turin, 1857). The Romans called Gubbio "Igviubum", but as early as the fifth century B.C. the form "Eugubium" is met with. From the aforesaid tablets we learn that at that time the inhabitants of Eugubium were on bad terms with the neighbouring Tadium. During the civil war (49 B.C.) Curio, one of Caesar's generals, conquered Gubbio. In the eighth century it became part of the Patrimony of St. Peter together with the duchy of Spoleto. From the twelfth to the nineteenth century it had a population of about 50,000, was organized as a municipality with a podestà and two consuls, and had within its jurisdiction Fergola, Coccattano, Terra San Abbondio, Cattiano, and other Umbrian villages. It was often at war with Perugia, and its victory in 1151 over Perugia and ten other towns is famous. St. Ubaldo, bishop of the city, directed the campaign. Gubbio favoured the Ghelbelline party; however, in 1290 the Guelphs surprised the city and found the Ghibellines out in the open. The latter were driven in 1300 under the leadership of Ugochino della Faggiaiola, and Federico di Montefeltro, whereupon the pope and the Emperor, who had sided with the Ghibellines, withdrew. In 1312 Pope John XXII, with the consent of the Emperor, granted the town rights of incorporation. In 1350 the town was subjected to the city of Perugia.

GREGOR REINHOLD.

Gubbio, Diocese of (Eugubinensis), in the province of Perugia in Umbria (Central Italy). The city is in the northeastern part of the Comtat Venaus, was once the crossing point of the Camignano, and overlooks a fertile valley. The neighbourhood is several ferruginous mineral springs. On a pre-Roman coins this very ancient place is called Ikvini or Ikvina. The Gubbio Tables (Tabulae Eugubinae) are famous. They are bronze slabs with seven inscriptions, two of which are in Latin, and five in the ancient Umbrian tongue. They were found in 1444 among the ruins of the temple of Jupiter Appenninus near Scheggia; in 1456 were acquired by the city of Gubbio, and inset in the walls of the Palace of the Podesta. This find gave the first impetus to the study of the Piceno and Gallo-Umbrian dialects. For the inscriptions see Fabretti, "Corpus Inscriptionum Italicarum antiquioris aevi" (Turin, 1857). The Romans called Gubbio "Igviubum", but as early as the fifth century B.C. the form "Eugubium" is met with. From the aforesaid tablets we learn that at that time the inhabitants of Eugubium were on bad terms with the neighbouring Tadium. During the civil war (49 B.C.) Curio, one of Caesar's generals, conquered Gubbio. In the eighth century it became part of the Patrimony of St. Peter together with the duchy of Spoleto. From the twelfth to the nineteenth century it had a population of about 50,000, was organized as a municipality with a podestà and two consuls, and had within its jurisdiction Fergola, Coccattano, Terra San Abbondio, Cattiano, and other Umbrian villages. It was often at war with Perugia, and its victory in 1151 over Perugia and ten other towns is famous. St. Ubaldo, bishop of the city, directed the campaign. Gubbio favoured the Ghelbelline party; however, in 1290 the Guelphs surprised the city and found the Ghibellines out in the open. The latter were driven in 1300 under the leadership of Ugochino della Faggiaiola, and Federico di Montefeltro, whereupon the pope and the Emperor, who had sided with the Ghibellines, withdrew. In 1312 Pope John XXII, with the consent of the Emperor, granted the town rights of incorporation. In 1350 the town was subjected to the city of Perugia.
as a result of the resistance begun by Bishop Mariano Savelli it was not until the eighteenth century that Urbino could exercise metropolitan jurisdiction. The see has 65 parishes, 40,200 souls, 7 monasteries for men, 12 convents for women, 3 boarding-schools for boys, and 4 for girls.

Gudenus, Mortz, a German convert to the Catholic faith from the Protestant ministry; 11 April, 1525. d. at Erfurt, 1580, at Trefurt. He was a descendant of a Calvinist family which had removed from Utrecht to Hesse. After attending school at Cassel he continued his studies at the University of Marburg, in which city he subsequently acted as deacon of the reformed church. He had held this position for less than two years, when a change of civil rulers resulted in the official substitution of Lutheranism for Calvinism at Marburg. Gudenus lost his office because of his refusal to adopt the Augsburg Confession. He returned to Cassel, was appointed assistant at Abteorde, and in 1525 became pastor there. The result of his preaching works revealed to him the Catholic doctrine in its true light, and after careful study he and his family were received into the Church in 1630. The conversion was made at the cost of considerable personal sacrifices. After a time of need and trials Gudenus was named high bailiff at Trefurt, a position which he held until his death. His funeral panegyric was delivered by Herwig Böning, representative of the Archbishop of Mainz in the district of Eichsfeld and parish priest of Duderstadt. Böning included the panegyric in his edition of the works of Gudenus, which comprised a treatise on the Eucharist and two letters on the history of his conversion, one addressed to the Jesuit at Heiligenstadt, the other to his brother-in-law, Dr. Paul Stein: "Mensa Neophyti septem panibus instituta a cl. viro Dno, Maurizio Gudeno, electorali Moguntino precepto in Trefurt p. m. aive ejusdem de suik ad fidem romanocatholicae conversione et divinae erga se profugiae, 1630" (Duderstadt, 1686). Gudenus was survived by five sons, some of whom achieved distinction in ecclesiastical and academic circles. John Daniel became Auxiliary Bishop of Mainz; John Maurice, electoral and imperial counselor and prætor at Erfurt, wrote a history of that city, "Historia Erfurtensis," 1079. He was notable among the gentlemen, one of his brothers, and a forefather, was a judge in the courts of Mainz. The story of the conversion of the house of Gudenus, which is still flourishing in Austria.

Gudula (Lat. Guodilla), Saint; b. in Brabant, Belgium, of Witger and Amberta, in the year 508, d. at the beginning of the eighth century. About the birth of Gudula her mother Amalberga, who is herself venerated as a saint, embraced the religious life, and according to tradition received the veil at the hands of St. Aubert, Bishop of Cambrai (d. about 608). Gudula's sister was St. Reinelda, and her brother, St. Emebertus who succeeded St. Vindician as Bishop of Cambrai about 695. From an early age Gudula proved herself a worthy child of her mother, and with Reinelda and Emebertus lived in an atmosphere of piety and good works. She frequently visited the church of Moorzeele, situated at a distance of two miles from her parents' house. She was buried at Ham (Eastern Flanders). About a century after her death, her relics were removed from Ham to the church of Saint-Sauveur at Moorzeele, where the body was interred behind the altar. Under Duke Charles of Lorraine (977-992), or more exactly, between 977 and 988, the body of the saint was taken from the church of Moorzeele and transferred to the chapel of Saint Michael at Brussels. Consequently another translation to be made in 1047, when the relics of the saint were placed in the church of Saint-Michel. Great indulgences were granted on the feast of the saint in 1330, to all who assisted in the decoration and completion of the church of St. Gudula at Brussels. On 6 June, the cloister church was pillaged and wrecked by the Guelphs, who had the relics of the saint disinterred and scattered. The feast of the saint is celebrated at Brussels on 8 January, and at Ghent—in which diocese Ham and Moorzeele are located—on 19 January.

If St. Michael is the patron of Brussels, St. Gudula is its most venerated patronesses. In Iconography, St. Gudula is represented on a seal of the Church of St. Gudula of 1446 reproduced by Père Ch. Cahier (Caractéristiques des saints, I, 198) holding in her right hand a candle, and in her left a lamp, which a demon endaughters to extinguish. This representation is doubtless borrowed from the symbol which is at the origin of Belgenlant, and which was at Brussels frequently repaired to the church before cock-crow. The demon wishing to interrupt this pious exercise, extinguished the light which she carried, but the saint obtained from God that her lantern should be rekindled. The flower called "tremella deliquescentis," which bears fruit in the beginning of January, is known as "Saint Goulia lampken" (St. Gudula's lantern). The old woodcarvers who professed to represent the saints born in the states of the House of Austria, depicted St. Gudula with a taper in her hand.

Guelphs and Ghibelines, names adopted by the two factions that kept Italy divided and devastated by civil war during the greater part of the 13th century. The Guelphs were the name given to all of the political parties observed by Grissar, in his recent biography of Pope Gregory the Great, that the doctrine of two powers to govern the world, one spiritual and the other temporal, each independent within its own limits, is as old as Christianity itself, and based upon the Divine command to "render to Caesar the things that are Caesar's and to God the things that are God's." The earlier popes, such as Gelasius I (494) and Symmachus (506), write emphatically on this theme, which received illustration in the Christian art of the eighth century in a mosaic of the Lateran palace that represented Christ delivering the keys to St. Sylvester and the banner to the Emperor Constantine, and St. Peter giving the papal stole to Leo III and the banner to Charlemagne. The latter scene inscribes on the papal action in the restoration of the Western Empire, which Daniel regards as an act of usurpation on the part of Leo. For Dante, pope and emperor are as two sons to shed light upon the "Phaenomena," the spiritual and regal world, Divinely ordained by the infinite goodness of Him from whom the power of Peter and of Caesar bifurcates as from a point. Thus, throughout the troubled period of the Middle Ages, men inevitably looked to the harmonious alliance of these two powers to renovate the face of the earth, or, when it seemed no longer possible for the two to work in unison, they
appealed to one or the other to come forward as the saviour of society. We get the noblest form of these aspirations in the ideal imperialism of Dante’s “De Monarchia” and the House of the Pope, the papa angelico of St. Bernard’s “De Consideratione” and the “Letters” of St. Catherine of Siena. This great conception can vaguely be discerned at the back of the nobler phases of the Guelph and Ghibelline contests; but it was soon obscured, by events and actions and a virtually undisguised material. Two main factors may be said to have produced and kept alive these struggles: the antagonism between the papacy and the empire, each endeavouring to extend its authority into the field of the other; the mutual hostility between a territorial feudal nobility, of military instincts and of foreign descent, and a commercial and municipal democracy, clinging to the traditions of Roman law, and ever increasing in wealth and power. Since the coronation of Charlemagne (800), the relations of Church and State had been ill defined, full of the seeds of future contentions, which afterwards bore fruit in the prolonged war of Investitures between Emperor Henry V (1075) and the Emperor Henry IV (1122). Neither the Church nor the Empire was able to make itself politically supreme in Italy. Throughout the eleventh century, the free Italian cities had arisen, owing a nominal allegiance to the Emperors, but habitually more devoted to the power of ancient Rome and as being the sole source of law and right, but looking for support, politically as well as spiritually, to the papacy.

The names “Guelph” and “Ghibelline” appear to have originated in Germany, in the rivalry between the house of Welf (Dukes of Bavaria) and the house of Hohenstaufen (Dukes of Swabia), whose ancestral castle was Waiblingen in Franconia. Agnes, daughter of Henry IV and sister of Henry V, married Duke Frederick of Swabia. “Welf” and “Waiblingen” were first used as rallying cries at the battle of Weinsberg (1140), where Frederick’s son, Emperor Conrad III (1138-1152), defeated Welf, the brother of the rebellious Duke of Bavaria, Henry the Proud. Conrad’s nephew and successor, Frederick I “Barbarossa” (1152-1190), attempted to reassert the imperial authority over the Italian cities, and to exercise supremacy over himself. He himself, the pope, Victor, in opposition to the legitimate sovereign pontiff, Alexander III (1159), and destroyed Milan (1162), but was signally defeated by the forces of the Lombard League at the battle of Legnano (1176) and compelled to agree to the peace of Constance (1183), by which the liberties of the Italian communes were secured. The mutual jealousies of the Italian cities themselves, however, prevented the treaty from having permanent results for the independence and unity of the nation. After the death of Frederick’s son and successor, Henry VI (1197), a struggle ensued in Germany and in Italy between the rival claimants for the Emperor’s throne, Philip of Swabia and Otho of Bavaria. According to the more probable theory, it was then that the names of the factions were introduced into Italy, “Guelfo” and “Ghibellino” being the Italian forms of “Welf” and “Waiblingen.” The princes of the house of Hohenstaufen being the constant opponents of the papacy, “Guelph” and “Ghibelline” were taken to denote adherents of Church and Empire, respectively. The popes having favoured and fostered the growth of the communes, the Guelphs were in the main the republican, commercial, burgher party; the Ghibellines represented the old feudalist aristocracy of Italy. For the most part the latter were displaced from the centres of power by the Germanic invasions (of the past), and they naturally looked to the emperors as their protectors against the growing power and pre-
tensions of the cities. It is, however, clear that these names were merely adopted to designate parties that, in one form or another, had existed from the end of the eleventh century, and that the precise signification of these terms, one must consider the local politics and the special conditions of each individual state and town. Thus, in Florence, a family quarrel between the Buondelmonti and the Amidei, in 1215, led traditionally to the introduction of the Guelph and Ghibelline parties. The city then divided; but the factions themselves had virtually existed since the death of the great Countess Matilda of Tuscany (1115), a hundred years before, had left the republic at liberty to work out its own destinies. The rivalry of city against city was also, in many cases, a more potent inducement for one to declare itself Guelph and another Ghibelline, than any specially papal or imperial proclivities on the part of its citizens. Pavia was Ghibelline, because Milan was Guelph. Florence being the head of the Guelph league in Tuscany, Lucca was Guelph because it needed Florentine protection; Siena was Ghibelline, because it sought the support of the emperor against the Florentines and against the rebellious nobles of its own territory; Pisa was Ghibelline, partly from hostility to Florence, partly from the hope of rivalling with imperial aid the maritime glory of Genoa. In many cities a Guelph faction and a Ghibelline faction alternately got the upper hand, drove out its adversaries, destroyed their houses and confiscated their possessions. Venice, which had aided Alexander III against Frederick I, owned allegiance to the Western empire, and naturally stood apart.

One of the last acts of Frederick I I had been to secure the marriage of his son Henry with Constance, aunt and heiress of William the Good, the last of the Norman kings of Naples and Sicily. The son of this marriage, Frederick II (b. 1194), thus inherited this South Italian kingdom, hitherto a bulwark against the imperial Germanic power in Italy, and was defended in his possession of it against the Emperor Otho by Pope Innocent III, to whose charge he had been left as a ward by his mother. On the death of Otho (1218), Frederick became emperor, and was crowned in Rome by Honorius III (1220). The danger to the Papacy and to Italy alike, of the union of Naples and Sicily with the Holy See was obvious; and Frederick, when elected King of the Romans, had sworn not to unite the southern kingdom with the German crown. His neglect of this pledge, together with the misunderstandings concerning his crusade, speedily brought about a fresh conflict between the Empire and the Church. The protracted struggle carried on by the successors of Honorius, from Gregory IX to Clement IV, against the last Swabian princes, mingled with the worst excesses of the Italian factions on either side, is the central and most typical phase of the Guelph and Ghibelline story. From 1227, when first excommunicated by Honorius, Frederick’s claim to the imperial crown was extirpated; he was banished, he was excommunicated, he was driven to the sea, his rule was incessantly with the popes, the second Lombard League, and the Guelph party in general throughout Italy. The Genoese fleet, conveying the French cardinals and prelates to a council summoned at Rome, was destroyed by the Pisans at the battle of Meloria (1241); and Gregory’s successor, Innocent IV, was compelled to take refuge in France (1245). The atrocious tyrant, Ezello da Romano, raised up a bloody despotism in Verona and Padua; the Guelph nobles were temporarily expelled from Florence; but Frederick’s favourite son, King Enzoio of Sardinia, was defeated and captured by the Bolognese (1249), and the family character of the families of the Italian nobility were for a time much for the imperial power. After the death of Frederick (1250), it seemed as if his illegitimate son, Manfred, King of Naples and Sicily (1254-1266), him-
self practically an Italian, was about to unite all Italy into a Ghibelline, anti-papal monarchy. Although in the north the Ghibelline supremacy was checked by the victory of the Marquis Azzo d'Este over Eszelino at Cassano on the Adda (1259), in Tuscany even Florence was lost to the Guelph cause by the sanguinary battle of Montepulciano (4 Apr. 1260), celebrated in Dante's poem. Urban IV then offered Manfred the crown to Charles of Anjou, the brother of St. Louis of France. Charles came to Italy, and by the great victory of Benevento (26 Feb., 1266), at which Manfred was killed, established a French dynasty upon the throne of Naples and Sicily. The defeat of Frederick II at Farindad, at the battle of the Ponsus (1268), followed by his judicial murder at Naples by the command of Charles, marks the end of the strug-

gle and the overthrow of the German imperial power in Italy for two and a half centuries.

Thus the struggle ended in the complete triumph of the Guelphs. Florence, once more free and demo-
cratie, had established a special organization within the republic, known as the Parte Guelfa, to maintain Guelph principles and chaste supposè Ghibellines. Siena, hitherto the stronghold of Ghibellinism in Tus-
cany, became Guelph after the battle of Colle di Val d'Elsa (25 May, 1269). The pontificate of the saintly and pacific Gregory X (1271-1276) tended to dissatisfy the Church from the Guelph party, which now began to look more to the royal house of France. Although they lost Sicily by the "Vespers of Palermo" (1282), the Angevin kings of Naples remained the chief power in Italy, and the natural leaders of the Guelphs, with whose aid they had won their crown. Adherence to Ghibelline principles was still maintained by the republics of Pisa and Arezzo, the Della Scala family at Verona, and a few petty despots here and there in Romagna and elsewhere. No great ideals of any kind were by this time at stake. As Dante declares in the "Paradiso" (canto vi), one party opposed to the im-
perial eagle the golden lilies, and the other appropri-
atated the eagle to a faction, "so that it is hard to see which sinneth most".

The intervention of Boniface VIII in the politics of Tuscany, when the predominant Guelphs of Florence split into two new factions, was useless and drove Manfred into exile and then into the ranks of the Ghibelines. The next pope, Benedict XI (1303-1304), made earnest attempts to reconcile all parties; but the "Babylonian Captivity" of his successors at Avignon augmented the divisions of Italy. From the death of Frederick II to the accession of Boniface VIII (1294), the imperial throne was regarded by the Italians as vacant. Henry himself was a chivalrous and high minded idealist, who hated the very names of Guelph and Ghibelline; his expeditions to Italy (1310-1313) roused much temporary enthusiasm (reflected in the poetry of Dante and Cino da Pistoia), but he was successfully resisted by King Robert of Naples and the Floren-
tines. After his death, imperial vicar made them-
selves masters of various cities. Ugucione della Faggriola (d. 1320), for a brief while lord of Pisa "in marvellous glory," defeated the allied forces of Naples and Florence at the battle of Montecatini (29 Aug., 1315), a famous Guelph overthrow that has left its traces in the popular poetry of the fourteenth century. Can Grande della Scala (d. 1339), Dante's friend and patron, upheld the Ghibelline cause with magnanimity in eastern Lombardy; while Matteo Visconti (d. 1322) established a permanent dynasty in Milan, which be-
came a bulwark of Ghibelline counterbalance to the power of the Angevin Neapolitans in the south. Castello di Interimelli (d. 1328), a soldier of fortune who became Duke of Ucka, attempted the like in central Italy; but his signory perished with him. Something of the old Guelph and Ghibelline spirit revived during the struggle between Ludwig of Bavaria and Pope John XXII; Ludwig set up an antipope, and was

crowned in Rome by a representative of the Roman people, but his conduct disgusted his own partisans. In the poetry of Fazio degli Uberti (d. after 1368), a new Ghibellinism makes itself heard: Rome declares that Italy can only enjoy peace when united beneath the sceptre of one Italian king.

Before the return of the popes from Avignon, "Guelph" and "Ghibelline" had lost all real significance. Men called themselves Guelph or Ghibelline, and even fought furiously under those names, simply because their forbears had adhered to one or other of the factions. In a city which had been officially Guelph in the past, any minority opposed to the gov-
ernment of the day, when it was victorious, or whose power, would be branded as "Ghibelline". Thus, in 1364, we find it enacted by the Republic of Florence that any one who appeals to the pope or his legate or the cardinals shall be declared a Ghibelline. "There are no more wicked nor more mad folk under the vault of heaven than the Guelphs and Ghibellines," says St. Bernardino of Siena in 1427. He gives an appalling picture of the atrocities still perpetrated, even by women, under these names, albeit by that time the primitive significance of the terms had been lost, and declares that the mere professing to belong to either party is in itself a mortal sin. The party catchers, who sheltered themselves behind the scenes, until the coming to Italy of Charles V (1529) finally re-established the imperial power, and opened a new epoch in the relations of pope and em-
peror.

EDMUND G. GARDNER.
made their solemn profession under the direction of the new abbot, who had pronounced his vows at Rome, 26 July, 1837.

Thenceforth Dom Guéranger’s life was given up to developing the young monastic community, to procuring for it the necessary material and indispensable resources, and introducing it with success into a friendly relation with the See of Rome. Amongst those who came to Solesmes, either to follow the monastic life or to seek self-improvement by means of retreats, Dom Guéranger found many collaborators and valuable steadfast friends. Dom Pitre, afterwards Cardinal, renounced his generalship and retired with him to Solesmes. At the request of the bishops of the seventh and eighteenth centuries; Bishops Pie of Poitiers and Berthaud of Tulle, Père Lacordaire, the Count de Montalembert and Louis Veuillot, were all interested in the abbot’s projects and even shared his labours. Unfortunately the controversy occasioned by several of Dom Guéranger’s writings had the effect of drawing his attention to secondary questions and turning it away from the great enterprises of ecclesiastical science, in which he always manifested a lively concern. The result was a work in which polemics figured prominently, and which at present evokes but mediocre interest, and, although the theme of his volume no means lost to the cause of the Church, Dom Guéranger’s historical and liturgical pursuits suffered in consequence. He devoted himself too largely to personal impressions and neglected detailed and persevering investigation. His quickness of perception and his classical training permitted him to enjoy and to set forth, treat in an interesting way, historical and liturgical subjects which, by nature, were somewhat unattractive. Genuine enthusiasm, a lively imagination, and a style tinged with romanticism have sometimes led him, as he himself realized, to express himself and to judge too vigorously.

Being a devout and ardent servant of the Church, Dom Guéranger wished to re-establish more respectful and more filial relations between France and the See of Rome, and his entire life was spent in endeavouring to effect a closer union between the two. With this end in view he set himself to combat, wherever he thought he found its traces, the separatist spirit that had, of old, allied itself with Gallicanism and Jansenism. With a strategic skill which deserves special recognition, Dom Guéranger worked on the principle that to suppress what is wrong, the thing must be replaced by what is right, and he laboured everywhere where whatever reflected the opinion he was fighting. He fought to have the Roman liturgy substituted for the diocesan liturgies, and he lived to see his efforts in this line crowned with complete success.

On philosophical ground, he struggled with unwavering hope against Naturalism and Liberalism, which he considered a fatal condemnation to the constitution of an unreservedly Christian society. He helped, in a measure, to prepare men’s minds for the definition of the papal Infallibility, that brilliant triumph which succeeded the struggle against papal authority so bitterly carried on a century previously by many Gallican and Josephite bishops. Along historical lines Dom Guéranger’s enterprises were less successful and their influence, although once very strong, is daily growing weaker.

In 1841 he began to publish a mystical work by which he hoped to arouse the faithful from their spiritual torpor and to supplant what he deemed the lifeless literature of the convents by the literature by the French spiritual writers of the seventeenth and eighteenth centuries. “L’Année liturgique”, of which the author was not to finish the long series of volumes, was probably the one of all Dom Guéranger’s works that best fulfilled the purpose he had in view. Accommodating himself to the development of the liturgical periods of the year, the author laboured to familiarise the faithful with the official prayer of the Church by lavishly introducing fragments of the Eastern and Western liturgies, with interpretations and commentaries.

Amid his many labours Dom Guéranger had the satisfaction of witnessing the spreading of the restored Benedictine Order. Two unsuccessful attempts at re-establishing it in the Province of St. John Benedict. This life, fraught with so many trials and filled with such great achievements, drew to a peaceful close at Solesmes.

The complete bibliography is to be found in 126 numbers in Carols, Bibliographie des Bibliothèques, 1833, 3-53. We shall only mention here the most important works: Œuvres de l’Eglise romaine (Paris, 1836); Institutions liturgiques (Paris, 1840); Institutions liturgiques (Paris, 1841); Institutions liturgiques (Paris, 1841); Institutions liturgiques, Lettre à Mgr. l’archevêque de Reims sur le droit de la liturgie (Le Mans, 1845); Défense des Institutions liturgiques, lettre à Mgr. l’archevêque de Toulouse (Le Mans, 1844); Nouvelle défense des Institutions liturgiques (Paris, 1846); L’Année liturgique (Leipzig, 1847); L’Année liturgique (Birkenhead, 1849-1850); Memoire sur la question de l’Immaculee Conception de la très sainte Vierge (Paris, 1850); Essai sur le culte de sainte Thérèse contemporain (Savoie, 1858); Essai sur l’organue, sa signification et les privilèges de la médiatrice ou croix de Saint Benoît. 12mo (Poitiers, 1862); L’Eglise romaine contre les accusations du 1er, 2e, et 3e Congrès (Paris, 1870); Troisième defense, Eng. tr., Defence of the Roman Church against Father Grousset, by Norman Lloyd, London, 1870); Lettre apostolique, a propos du livre de Mgr. l’évêque de Sura, Svo (Paris, 1870); Sainte Cécile et la Société romaine aux deux premiers siècles, 4to (Paris, 1881); De la Bénéédiction de la Congrégation de France, 16mo (Solesmes, 1885).

H. LECLERCQ.

Guérard, Robert, b. at Rouen, 1641; d. at the monastery of Saint-Ouen, 2 January, 1715. For some time he collaborated at Saint-Denis in the Maurist edition of St. Augustine’s works. In 1679 he was appointed to leave Saint-Denis by order of the king, who wrongly suspected him of having had a hand in the publication of “L’Abbe commendataire”, a work which severely criticized the practice of holding and bestowing abbey, etc., in commendam. His superior sent him to the monastery of Notre Dame, at Ambronay, in the Diocese of Belley. While in exile, he discovered at the Carthusian monastery of Portes a manuscript of St. Augustine’s “Opus imperfectum” against Julian of Eclanum, which was afterwards used in the Maurist edition of St. Augustine’s works. After a year of exile he was recalled, and spent the rest of his life successfully in the monasteries of France and Saint-Ouen. He is the author of a biblical work entitled “L’Abrégé de la sainte Bible en forme de questions et de réponses familières”, which he published at Rouen in 1707 (latest edition, Paris, 1743).

MICHAEL OTT.

Guercino, II. See BARBIERI, GiovANNI.

Guérin, Anne-Thérèse (in religion Mother THEODORE): b. at Étale (Côte du Nord), Brittany, France, 2 October, 1798; d. 14 May, 1856. She entered the Community of Sisters of Providence, Ruillé-sur-Loire, in 1823, received the religious habit and, by dispensation, made profession of vows, 8 September, 1824, being appointed the same day to the superiorship of the convent. She had been procured by the Bishop of Toulanes in 1833, chosen foundress of St. Mary-of-the-Woods, Diocese of Vincennes, Indiana, in 1840, and at the same time declared superior general of the Sisters of Providence in America. The “Life and Life-Work” (1904) of Mother Theodore Guérin is in his history of the Ursulines of the Missisquoi Gabbons, which furnishes the introduction, “a woman of uncommon valour, one of those religious
athletes whose life and teachings effect a spiritual fecundity that secures vast conquests to Christ and His holy Church. Not the least glory encircling the diocese was its possessing such a magnanimous pioneer Religious. She was distinctively a disembodied organism and an emanation of God's grace and teaching. Father Charles Coppens, S.J., adds: “She was a very superior woman both in natural gifts and in supernatural virtues. She lived a life of extraordinary union with God and conformity to His holy will, and she practised these virtues under the most difficult circumstances, where they excelled in works of mercy, love, hope and charity. A perfect model of consummate virtue for all classes of the faithful, but especially for religious men and women.” Mother Theodore’s mental attainments were of a superior order. The French Academy recognized her scholarship by awarding her a medal. She was skilled in medicine and was a thorough theologian. As foundress of an institution whose expansion is evidence of her energetic and penetrating spirit, her whole history is a record of the power of holy souls who live but for the glory of God and the salvation of mankind.

ALMA M. LE BRUN.

GUÉRIN, (1) Eugénie de, a French writer; b. at the château de la Cazy, in Languedoc, 15 January, 1805; d. there 5 June, 1848. The Guérians were descended from an old noble family, originally from Venice, which has lived for centuries in Southern France. Among their ancestors are mentioned crusaders, a bishop, several cardinals, and Grand Masters of the Order of St. John of Jerusalem. In spite of their noble origin, they were in very moderate circumstances at the beginning of the nineteenth century. M. de Guérin, the father, had lost his wife when Eugénie was thirteen years old, and was left with four children, Eugénie, Marie, Eremberg, and Maurice. Upon her death-bed, the mother, more deeply attached to Maurice than to any of the others, because of his beauty and his delicate health, commended him to the care and solicitude of Eugénie, whom he loved dearly. In fact, her whole life was devoted to her brother. Had she been free to follow her own desires, she would have entered a convent; but she remained in the world for the sake of Maurice. Her life was spent entirely in the loneliness of the old homestead, which she left only once, for a few months, in 1838, when she went to Paris to attend the wedding of her brother. Her way of living was simple and eminently pious. After she had discharged her household duties, she would indulge in reading. The lives of the saints, Bossuet’s sermons, and other religious works were her favourite reading. She interested herself also in literature, and her “Journal” shows that she had read Homer, Virgil, Shakespeare, Dante, Scott, Goldsmith, and knew all the great masters of French literature. Speaking of her reading, she said: “I read, not to become learned, but to raise my soul.” Her main concern, however, was for her brother. From the day when he left home to go to school, and afterwards, especially when he was at La Chênaie and in Paris, she wrote long letters to him, of which unfortunately are lost. In 1834 she began a “Journal” or diary of events, which was sent to her brother from time to time. Both in her letters and “Journal”, she related the insignificant facts of her lonely life, her impressions of nature, her innermost thoughts, and, above all, spoke to him of his soul. During the unfortunate period when he denounced his Faith, she became more tender and loving, in order that her advice might be more surely listened to. Her devotion was rewarded; for, a few months before his death, he returned to the fold. She survived him only eight years, dying, as he requested, of her own free will in prayer. Her “Journal” had been written for Maurice only, and was not intended for publication. It was, however, printed under the title of “Reliquia” (Caen, 1855), first for private circulation. Seven years later a public edition entitled “Journal et lettres d’Eugénie de Guérin” (Paris, 1862), met with considerable success and has been reprinted many times. Together with her devotion to her brother, and her piety, we admire the simple and vivid style of the writer. She loves to depict the scenic beauties that surrounded her, and her descriptions are charming and free from that tinge of pantheism which is so often noticeable in admirers of nature.

(2) Georges-Maurice de, a French poet, brother of Eugénie; b. at La Chênaie, 7 May, 1805; d. there, 19 July, 1839. At the age of thirteen he went to the preparatory seminary of Toulouse, and two years later to the Collège Stanislas, at Paris. He then thought of becoming a priest. In 1832 he went to La Chênaie, where Lamennais had established a school of higher religious studies. He met there pious and learned men, among whom must be mentioned the Abbé Gerbet, afterwards a bishop, and the Abbé de Casalès, whose philosophical and theological discussions he related in his journal. He remained at La Chênaie a little more than a year, and it seems that Lamennais did not pay much attention to him. In the month of February, 1834, returning to Paris, trying to find a position. He was soon imbued with the ideas of the world, and lost his faith. He hoped for a time to enter the College of Juilly as instructor, but was disappointed and obliged to accept a position as substitute in the Collège Stanislas. He occasionally contributed articles to a magazine, called “France Catholique”. His life was saddened by his naturally dreamy disposition and a vague regret for his lost faith. Though surrounded by a choice circle of friends, in which he had ample opportunity to display his brilliant qualities, he suffered from constant weariness and poor health. Towards the end of 1838 he married a young Indian girl, whom Eugénie describes as a “charming and refined creature”. A few months later, yielding to his sister’s entreaties, he returned to Le Cazy, and at the same time came back to the Faith of his childhood, and died piously in 1839. His fame as a writer began only one year after his death, when his poem “Le Cenacle” appeared in the “Revue des Deux Mondes”, together with an enthusiastic article from the pen of George Sand. He then ranked among the great poets of France, though it may be said that this pantheistic composition was praised a little beyond its real value. The remainder of his works were published for the first time, twenty years later, by Trébuchet (2 vols., Caen, 1880). By far the more interesting part is the “Journal”, which was written day by day to be sent to his sister. His complete works have been published under the title of “Journal, Lettres et Poèmes”. A joint edition of Maurice and Eugénie’s works has been given in three vols. (Paris, 1889).

LOUIS N. DELAMARRE.

GUÉRIN de Tencin, Pierre. See Tencin, Pierre GUÉRIN de.

Guérin, George Albert. See Manchester, Diocese of.

Gügler, Joseph Heinrich Aloysius, b. at Ulligerenschwyl, near Lucerne, Switzerland, 25 August, 1782; d. at Lucerne, 28 February, 1827. The only son of simple country people, he was a delicate child and received no regular schooling, but read the books belonging to his father again and again, so that, when he was twelve years old, he had read the entire Holy Scriptures several times. Religiously inclined from childhood, he early desired to enter the clerical state, and after many entreaties his parents permitted him
THE LEANING TOWERS OF ASINELLI AND GARISENDI, BOLOGNA
to begin his studies at the abbey school of Einsiedeln. When the storms of the French Revolution crossed the Rhine, Abbot Beatus, the religious, and students, in May, 1798, went to the Abbey of St. Gerold, and at the end of the year Gügler was sent to Petershausen, near Garmisch, where he continued his education at Solothurn. In 1801 he began philosophy, which he finished with great credit at Lucerne according to Kant and Jacobi. Even as a student he showed those opposite traits of character, for which he was noted all through life: a courage ready to overcome any obstacles and fearing no consequences in the defense of right, mingled with the intransigent view of an unobtrusive, almost shrinking nature: a very comprehensive knowledge of men and affairs together with a dread of showing it. During this period he became acquainted with Widmer, a fellow-student, the acquaintance ripening into a life-long friendship. Through the influence of Widmer, Gügler, who had become undecided as to his future career, took up the study of theology, which both pursued at Landshut under Sailer and Zimmer. Shortly before his ordination to the priesthood he was appointed professor of exegesis at the lyceum in Lucerne. After he had received holy orders, 9 March, 1805, at the hands of Testa Ferrata, the papal legate, he was appointed moderator of the college and of the cathedral church of Leodegar (Saint-Léger), retaining his position as professor of exegesis. Later he also taught pastoral theology, and 1822–24 acted as prefect of the lyceum.

Gügler and Widmer, who had also been made a professor at Lucerne, put new life into the study of the Scriptures, theology, and cognate branches. Students were encouraged to drop antiquated notions, to think and investigate for themselves, to gain solid knowledge, and to avoid superficiality. The methods of the new teachers brought them into conflict, as well with the supporters of the old school, as with the folium of Wessenberg and the "Illuminati" of Switzerland who accused the professors of unchristian mysticism. A controversy followed between Gügler and Thaddeus Müller, city pastor of Lucerne, during which appeared, among other writings, Gügler’s "Geist des Christentums und der Literatur im Verhältniss zu den Thaddeus Müller, Schweizerischem christlichen confessorum confessoribus" to the municipal authorities for the removal of Gügler from the professorship, which was decreed 12 Dec., 1810. Immediately Widmer handed in his resignation, a large number of students threatened to leave, and even the majority of citizens sided with Gügler. At the instance of the Holy Office, Gügler’s request Gügler was reinstated 25 Jan., 1811. Gügler had also a dispute with Marcus Lutz, pastor at Leufingen, and issued the sarcastic pamphlet "Chemische Analyse und Synthese des Marcus Lutzi zu Leufingen" (1816). Another controversy was with Troxler, who later became known as a philosopher. Gügler devoted his time chiefly to teaching and to literary work, but he frequently preached, and he wrote a poem for the twenty-fifth anniversary of Sailer’s ordination. To his scholars he was a true friend, adviser, and console. Perhaps the last literary work of Gügler was a protest against the admission of non-Catholics into the academies. In 1800 he pleaded to preserve for the people the inestimable boon of unity in faith. His career, though short, was a source of great blessing to his country. Sketches of his life were written by Widmer and Geiger, and his biography was prepared by Joseph L. Schiﬀmann, "Leben des A. Gügler" (Augsburg, 1833); a lengthy article on Gügler and his exegetical works appeared in the "Katholik" (1829), XXXIV, 53, 196.

His principal work is: "Die hl. Kunst oder die Kunst der Hebräer" (1814, 1817, 1818), 3 vols. It is a philosophical exposition of Old Testament Revelation undertaken by a mind which gives full credence to the truth of Revelation, and under the veil of the letter sees hidden treasures of wonderful wisdom which it considers the highest achievement of human investigation to find and give to the world. In 1819 Widmer published the continuation of this work in relation to the New Testament: "Zum Leben der Sprach- und Typen der Zeit und ihr Deuten auf die Zukunft" (Solothurn, 1819). This wishes to show the divine order of current events which are presented in grand pictures and prophetic visions. A periodical founded by Gügler in 1823, "Zeichen der Zeit im Guten und Bösen", was continued by Dr. Segesser. Among Gügler’s published works is an und translated "Lehr- und Vertretung", lectures on the Gospel of St. John, the Epistle to the Hebrews, and the Christian doctrine of St. Augustine, together with a brief sketch of the sacred books of the Old Testament (Sarmenstorf, 1842). His posthumous works were edited by Widmer between 1826 and 1842. A complete list of all his printed works is given in the "Thesaurus librorum rei catholicae" (Würzburg, 1856), I, 337.

Huster, Nomenk., s. v.; Töpfer, Quarto geschicht (1836), 483; Stein, aus Maria-Lorsch, A. Feil, "Die Geschichte der Weltgeschichte" (1836), X, 95; Werner, Geschicthe der apologet. u. poen. Literatur (Schaffhausen, 1867), V, 356.

Francis Mersham.

Guglielmini, Giovanni Battista, scientist, b. at Bologna, 16 August, 1763; d. in the same city, 15 December, 1817. He is known as the first scientific experimenter on the mechanical demonstration of the earth’s rotation. He received the tonsure in early youth, with the title of Abate, but does not seem to have received any higher orders, and died single. With the help and protection of Cardinal Ignazio Boncompagni, he pursued higher studies, and graduated in philosophy, in 1787, at the age of 24. Two years later he published his first treatise in Rome, "Riflessioni sopra uno studio in prova del continuo della terra" (Rome, 1789). The experiments which followed were made in the city tower of Bologna, called "Asinelli", and famous from former experiments of Riccioli on the laws of falling bodies. A small octavo volume, published in Bologna in 1792, "De diuturna terrae motu experimentis physique et mathematici", announced the experimentum commutium (in the preface) the history and description of Guglielmini’s experiments, then resumes in the first article the content of the "Riflessioni", defends the same in the second article against opponents, and in the third presents the results. The book bears the imprimatur of the Pope. Should it be noted, at high noon, from the top of the tower, dropped from a height of 241 feet, between June and September, 1791, and the plumb-line fixed in February, 1792, all during the night and mostly after midnight. The mean deviations towards east and south proved to be 8.4'' and 3.5'' respectively, while the computation gave 7.6'' and 6.9'' (1''=1-12 inch). In spite of their agreement both observation and calculation were defective, the plumb-line having been determined half a year later, and the theory of motion relative to the moving earth being as yet undeveloped. The experimental skill and laborious precautions of Guglielmini, however, served his followers, Bensonberg (1802 and 1804) and Reich (1831), as models, and the inner agreement of his results was never surpassed. Guglielmini’s theory was right, in considering the absolute path of the falling body (apart from the resistance of the air) as elliptical, or approximately parabolical, and the orbital plane to pass through the middle of the vertical, through the centre of attraction, while the errors in his formulae, afterwards repeated by Obers, served to incite Gauss and Laplace to develop the correct theory of relative motion. Two years later, Guglielmini was nominated professor of mathematics at the University of Bologna, which office he held for twenty-three years (1794–1817). In 1801, he
also filled the chair of astronomy, and during the scholastic year 1814–15, officiated as rector of the university. From about 1802 until 1810, Guglielmii was put in charge of the extensive waterworks of Bologna. If he was a relative of the famous engineer and physician, Domenico Guglielmii, who had been general superintendent of the Bologna waterworks a hundred years previously, he was certainly a direct descendant. Don Guglielmii bore the title of "Cavaliere", was a member of the "Accademia Benedettina" (founded by Benedict XIV), of the "Regio Istituto Italiano" and "Elettore del Collegio del Dotti". He was continually in frail health, and died of palsy, at the age of seventy-five, in 1837, the city of Bologna ordered a marble bust of him to be erected in the pantheon of the cemetery.

J. G. HAGEN.

Guiana (or Guiana) was the name given to all that region of South America which extends along the Amazon from the Orinoco to the Guianas. This name is still locally applied to a district of Venezuela and another in Brazil, but its ordinary geographical application is limited to the three colonies of British, Dutch, and French Guiana. British Guiana is separated from Venezuela, partly by the Orinoco, and partly by a line drawn to the east of that river. The Gortentyn River separates British Guiana from Dutch Guiana, on the east, while the latter is separated from the French colony by the Maroni. A decided similarity exists in the climate, physical formation, flora, and fauna of all Guiana; the low, flat coast, lying between 8° and 9° N. lat., is hot, humid, and so scoured with yellow fever and other tropical diseases that the French Government has been obliged to stop the use of Cayenne as a penal settlement for white convicts. This coast country is hemmed in on the south by high table lands, rising in Mount Roraima to a height of about 8000 feet. The lowlands are fertile, and the forests are comparable to those of the Amazon basin, while the elevated country, with a fairly healthy climate, is moisty barren. Guiana is the habitat of several dangerous species of wild beasts, including the jaguar, as well as of the anaconda and of the most deadly reptiles in the Neotropics.

Among the first explorers to visit this coast were Vespucii, Pinzon, Ojeda, and Balboa (1499–1504), but the first real discovery of Guiana is claimed by Diego de Ordas, a follower of Cortés (1531). During this earliest period Catholic missionaries are said to have gone inland to attempt the conversion of the Arawaks, Warrans, and other races. But exploration was diverted during the sixteenth century from the Guiana coast to the neighbouring Orinoco, which Raleigh ascended in 1595, in quest, like other adventurers of his day, of the fabled "Dorado" or "Gilded Man". In 1580 Dutch adventurers attempted a settlement near the Pomerun River; the earliest French attempts, chiefly on the Sinnamary River, were made in 1604. In 1635 a corporation of merchants of Normandy, having been granted by the French king all the privileges within the whole territory of Guiana, made a settlement where now is the city of Cayenne, but eight years later Ponce de León destroyed it with reinforcements, found only a few of his predecessors alive, living as savages among the aborigines. Of all these, and a still later reinforcement, only two remained alive in 1645, to take refuge in the Dutch settlement in Surinam. By the middle of the seventeenth century the long, though intermittent struggle between French, Dutch, and English for the possession of this country had fairly begun. The French being then absent from Guiana, Charles II of England, in defiance of the Treaty of Westphalia, which had given all Guiana to the Dutch West India Company, granted to Francis, Lord Willoughby of Parham, the territorial rights of Paramaribo. By the Treaty of Breda, in 1667, the British gave up all claim to any part of the territory, for the surrender by the Dutch of all their claim to the territory of New Netherlands (now New York), which had in fact been occupied by an English force, under the orders of the Duke of York, three years previously. In 1664 the Dutch West India Company had begun in the colony of Surinam; in the next year the French West India Company made a new attempt to settle Cayenne, and from that time forward the Cayenne territory has remained French. During most of the eighteenth century Guiana, with the exception of this French portion, remained Dutch. The difficulties of the Dutch during this period came chiefly from rebellious slaves, or from savages who roamed in the interior. But when the American Revolution deprived the British of New York, aggression recommenced in Guiana, and in 1799 a British administration replaced the Dutch. What is now known as French Guiana was a part of French territory from 1803 and 1815, while in the latter year Surinam was restored to the Dutch. The actually existing status in Guiana may be considered as having begun in 1815. Leaving aside the vague reports of early Spanish missionaries, the history of Catholicism in Guiana during the first century after the discovery belongs to the story of Portuguese missionary effort. The Treaty of Tordesillas gave this territory to Portugal. No important success appears to have been achieved in the conversion of the aborigines until the seventeenth century. With French West India Company's colonists some Dominicans arrived at Cayenne, and these friars were followed by Capuchins. In 1665 the proprietary company brought the Jesuits into Cayenne, and that order laboured with considerable success among the negro slaves and the savages. Among the most remarkable Jesuits in this missionary field were Patters de Creuilly, Lombard, d'Aymes, Dumas, Dassona, and d'Illeberard. De Creuilly spent thirty-three years on the mission (1685–1718), during a great part of which he cruised from point to point along the coast, landing here and there to preach; the others are memorable for having established settlements of Indian converts on the plan of the Paraguay "reduction". While the Protestant liturgy could be done for the spread of the Faith, in Cayenne at least the work was in a promising condition when the anti-Jesuit movement in continental Europe brought about the expulsion of the Society from this field (1768). The Revolution checked the efforts of the French secular clergy to continue what the Jesuits had begun.

British Guiana, the largest of the three colonies, has an area of 90,277 square miles. Its western boundary was the subject of a dispute with Venezuela in 1894; the United States intervening and insisting that the matter should be settled by arbitration; Great Britain accepted the award of the arbitrators in October, 1899. The population is about 307,000. Of these, the whites are less than 6 per cent.; negroes, 41 per cent.; coolies, 38 per cent.; aborigines, 3 per cent. The government is carried on by an English governor, assisted by a council.

The Vicariate Apostolic of British Guiana, established by Gregory XVI in 1837, covers a mission which has now for some time been entrusted to the Society of Jesus. The vicar Apostolic resides at Georgetown, and his jurisdiction includes Barbados. There are twenty-six churches and five mission stations, served by seventeen priests. The Catholic population is about 22,000.
Dutch Guiana, or Surinam, with an area of 46,060 square miles, had in 1905 a population of 75,465. The government is administered by a council under the presidency of a Dutch governor. The Vicariate Apostolic of Dutch Guiana, with its seat at Paramaribo, was erected by Gregory XVI in 1842, and has jurisdiction over 15,000 Catholics, a number exceeded by no other Christian denomination in the colony except the Moravians (28,025). The coolie population numbers nearly 12,000, besides a large number of Mohammedans. The mission here has been entrusted by the Holy See to the Redemptorists.

French Guiana, also called Cayenne, has an area of 30,500 square miles, but the agglomeration of the town of Cayenne, founded in 1855 has been used as a penal settlement. Its population in 1901 was 32,908, including 4097 convicts at hard labour, and 2193 on ticket of leave. The number of aborigines is probably less than 3000. The capital city, Cayenne, has a population of over 12,000. The governor-appointed Paris, is assisted by a council of five members, in addition to which there is an elective assembly, and the colony is represented in the Paris Chamber by one deputy. The chief industry is placer gold-mining. The Prefecture Apostolic of Cayenne, separated from Martinique in 1731, includes jurisdiction over the Brazilian district of Guiana. There are about 20,000 Catholics, 27 churches or chapels, 18 mission stations, 22 priests, and 5 schools with 900 pupils. The Sisters of Saint-Paul de Chartres have had charge of the hospital at Cayenne since 1818. This mission was the scene of the heroic labours of Mother Anne-Marie de Javouhey (d. 1861), who was locally known as la Mère des Noirs.

Guiana, Diocese of. See St. Thomas of Guiana.

Guibert of Ravenna, antipope, known as Clement III, 1080 (1084) to 1100; b. at Parma about 1025; d. at Civitá Castellana, 8 Sept., 1100. This adversary of Pope Gregory VII and of his reform policies came from a noble family of Parma, which was related to the Margraves of Carinthia. We first find him in history as a cleric and imperial chancellor for Italy. This office he received in the year 1087 from the Emperor Agemillus. He retained it until 1063. Guibert took part in the synod which was held by the newly elected pope, Nicholas II (1058–1061), at Sutri in January, 1059. But on the latter’s death he contrived through his influence with the anti-reform party of the Upper Italian clergy and at the imperial court to bring about the election of the antipope, Cadalus of Parma (Honorus II), and became an opponent of Pope Alexander II. Owing to the active support of Duke Godfrey of Lorraine, of Archbishop Anno of Cologne, and especially of St. Peter Damian, the lawful pope was soon recognized even in Germany and by the Empress Agemillus. Perhaps this was the reason of Guibert’s dismissal in 1063 from the chancellorship. The following nine years give us no trace of him. He must have continued, however, in friendly relations with the German Court, and retained the favour of the Empress Agemills, for when, in the year 1072, the Archbishopric of Ravenna became vacant, he was recommended by the empress, named him to this important archiepiscopal see. Pope Alexander II hesitated to confirm this choice, but was prevailed upon by Cardinal Hildebrand to sanction it. Guibert thereupon took the oath of allegiance to the Holy Father and to his successor, and was consecrated Archbishop of Ravenna (1073).

Alexander II died shortly afterwards, and was succeeded by Hildebrand, who assumed his holy office on 29 April, 1073, under the name of Gregory VII. Guibert participated in the first Lenten synod of the new pope, which was held in Rome (March, 1074), and at which important laws were passed against simony and the incontinence of the clergy. But it was not long before he joined the party in opposition to the great pontiff, with whom he had quarrelled about the city of Imola. The accusation was made against him that he had entered into an alliance with Cardinal Hugo Candidus, the anti-pope of Gregory VII in Rome. He absented himself from the Lenten Synod of 1075, although he was bound by oath to obey the summons to attend. By his absence he made manifest his opposition to Gregory VII, who now suspended him for his refusal to attend the synod. It was in this same year that Emperor Henry IV began his open war on Gregory. At the synod of the German bishops at Worms (January, 1076), a resolution was adopted deposing Gregory, and in this decision the simoniacal bishops of Lombardy joined. Among these must have been Guibert, for he shared in the sentence of excommunication and interdiction which Gregory VII pronounced against the guilty bishops of Upper Italy at the Lenten Synod of 1076.

In the same year a synod was held at Pavia by a number of Lombard bishops and abbots, presided over by Guibert. As these did not hesitate to proclaim the excommunication of the pope, Gregory found himself compelled to resort to still stronger measures with regard to Guibert. At the Lenten Synod of February, 1078, he excommunicated Guibert by name, and with him Archbishop Tebaldo of Milan. In March, 1080, he renewed his decree of anathema against Henry IV, and gave his recognition to Rudolph of Swabia as ruler of Germany, whereupon Henry's partisan, as he had among the German and Lombard bishops to a meeting at Brixen (June, 1080). This meeting drew up a new decree purporting to depose the sovereign pontiff, which Henry himself also signed, and then proceeded to elect the Archbishop of Ravenna antipope. He at once recognized him as pope, swearing that he would lead him to Rome, and there receive from his hands the imperial crown. Guibert put on papal garments and proceeded with great pomp to Ravenna. At the Lenten Synod of 1081 Gregory VII reiterated against Henry and his followers his decree of excommunication. The antipope failed to secure recognition outside of Henry's dominions; he was in fact but a tool in the hands of the latter, and quite devoid of personal initiative. On 21 March, 1084, Henry IV succeeded after many fruitless attempts in gaining possession of the greater part of Rome. Gregory VII died on 21 May, buried in the church of Sant' Angelo, while, on 24 March, Guibert was enthroned as pope in the church of St. John Lateran as Clement III. On 31 March Guibert crowned Henry IV emperor at St. Peter's. However, when the news was brought that Robert Guiscard was hastening to the aid of Gregory, Henry with his antipope left Rome to take up the fight in Tuscany against the
troops of the Margravine Matilda. Gregory, escorted by Robert Guiscard, repaired to Salerno, where he renewed his excommunication of Henry and Guibert. This was at the close of the year 1054.

The German episcopate stood divided. While bishops loyal to Gregory held a synod in Quellinburg, at which they denounced and condemned the antipope, the French, who approved at Mains the deposition of Gregory and the elevation of Guibert (1085). This conflict continued even after the death of the great Gregory (25 May, 1085), during the entire reign of whose successors, Victor III, Urban II, and Paschal II, Guibert figured as the antipope of Henry and Leo IX. Victor III, who was elected after a prolonged vacancy caused by the critical position of the Church in Rome, was compelled, eight days after his coronation in St. Peter's (3 May, 1087), to fly from Rome before the partisans of Guibert. The latter were in turn assailed by the troops of Countess Matilda, and entrenched themselves in the Pantheon. The succeeding pope, Urban II (1088–1099), was at one time master of Rome, but he was afterwards driven from the city by the adherents of Guibert, and sought refuge in Lower Italy and in France. In June, 1089, at a pseudo-synod held in Rome, the antipope declared invalid the decree of excommunication pronounced against Henry, and various charges were made against the supporters of the legitimate pope. Still, the years which followed brought to Urban ever-increasing prestige, while Henry IV's power and influence were more and more on the wane. The greater part of the city of Rome was captured by an army of crusaders under Count Hugh of Vermandois, brother of the King of France. The party of Guibert retained only the castle of Sant' Angelo, and even this in 1096 fell into the hands of the papal champion. Guibert's influence, after Henry IV's withdrawal from Italy, was virtually confined to Ravenna and a few other districts of Northern Italy. He repaired to Albano after the accession of Paschal II (1099–1118), hoping again to become master of Rome, but he was compelled to withdraw. He reached Civita Castellana, where he died on 8 September, 1100. His followers, it is true, elected another antipope, Bishop Theodorus of S. Rufina, who, however, never held any real power. (Compare also the articles Gregory VII; Victor III; Urban II; and Paschal II.)

J. P. Kirsch.

Guicciardini, Francesco, historian and statesman; b. at Florence, 1483; d. there, 23 May, 1540. His parents, Piero di Jacopo Guicciardini and Simona Gianfigliassì, belonged to ancient Florentine families, attached to the party of the Medici. Francesco's early career was that of a successful lawyer. He increased his aristocratic and Medicean connexions by his marriage with Maria Salvati (1505), whose family was bitterly opposed to the then dominant republican regime. In 1511, though legally too young for the post, he was sent as Florentine ambassador to the King of Spain. During his absence, the Medici were restored in Florence. On his return he entered their service, from which he passed into that of the Church. Under Leo X he governed Modena and Reggio with conspicuous success; and, in the confusion that followed the pope's death, he distinguished himself by his defence of Parma against the French (1521). He was influential with Urban VIII in maintaining the anti-imperial League of Cognac (1526), and was lieutenant-general of the army that, through no fault of his, failed to prevent the sack of Rome in 1527. For a while, Guicciardini kept on terms with the restored republican government of Florence; but, at the beginning of the siege, he joined the pope, and was declared a rebel by the democratic party. On the surrender of Florence to the imperial armies, he returned to the city (Sept., 1530), was made a member of the Eight (Ottavi di pratica), and became one of the chief agents in the subjugation of the state to the Medicean rule. From June, 1531, to September, 1534, he ruled Bologna as papal vice-regent. Returning to Florence on the death of Clement VII, he supported the tyranny of Alessandro de' Medici. After the murder of Alessandro, he played the chief part in securing the succession of Cosimo de' Medici (1537); but fell into disfavour when he attempted to check the new duke's absolutism by giving the government an oligarchical complexion. Henceforth, although until his death Guicciardini held various public offices in Florence, his influence was at an end. The few remaining years of his life were mainly passed in retirement, in his villa at Areetri, devoting his enforced leisure to the composition of his great "Storia d'Italia".

The "Storia d'Italia" embraces the whole period from the death of Lorenzo de' Medici in 1492 to that of Clement VII in 1534, that most disastrous epoch in Italian history which witnessed the loss of the nation's independence. Its vast accumulation of details does not obscure the main lines of the terrible story. The author writes as an eyewitness who has himself taken part in the scenes he describes; a keen observer, with no delusions, no enthusiasms, and little hope for the future; one above all intent upon tracing the motives of men's actions—almost invariably, in his opinion, bad or unworthy. His manner, much as in the earlier "Storia Fiorentina" (1590), and the dialogue "Del Reggimento di Firenze" (circa 1527), are less artificial in style. The "Ricordi politici e civili" (1530) reveal much of the author's character and beliefs. While mistrusting all patriotism, and regarding the profession of noble motives as a mere cloak for personal ends, he declares that the three things he most
long to see are the establishment of a well-ordered republic in Florence, the liberation of Italy from the barbarians, and the overthrow of the rule of bastard ecclesiastics throughout the world. He admits that, had not his own personal interests been bound up with the temporal success of two popes, he would have loved Martin Luther as himself. Much of his political correspondence has been preserved.

Conservatori, Opera insediata di Francesco Guicciardini (10 vols., Florence, 1537-1567); Villari, Nicola Machiavelli e i tempi (3 vols., Milan, 1895, 1897); Rosset, Francesco Guicciardini (Florence, 1914); Zanzucchi, Farmacologie pubblica di Francesco Guicciardini (Bologna, 1899); Moreau, Miscellanees, Fourth Series (London and New York, 1905). A modern biography of the late Alphonso Garibaldi is now promised; hitherto the most accessible edition of his works has been that of Romani (3 vols., Turin, 1874). The best English translation of his works is by the late Alphonso Garibaldi. An admirable translation of the "Ricordi" has been made by Thompson, Counsels and Reflections of Francesco Guicciardini (London, 1880).

Guido of Arezzo (Guido Aretinus), a monk of the Order of St. Benedict, b. (according to Dom Morin in the "Revue de l'art chrétien", 1888, iii) near Paris c. 965; d. at Avellino, near Arezzo, 1050. He invented the system of staff notation in use, and rendered various other services to the progress of musical art and science. He was educated by and became a member of the Benedictine Order in the monastery of St. Maur des Fossés, near Paris. Early in his career Guido observed the confusion which prevailed in the teaching and performance of liturgical melodies generally, and especially in his immediate surroundings. His endeavours to improve these conditions by innovations in the current methods of teaching are fully described in his writings; these made him unpopular with his brethren in the order and led to his removal to the monastery of Pomposa near Ferrara, Italy. Here the same lot seems to have befallen him. Intrigues and calumnies caused him to ask for admission to the monastery of Arezzo. The exact date of his entrance into this community is uncertain, but it occurred during the incumbency of Theodald as Bishop of Arezzo (i.e., between 1033 and 1036), and when the abbot of Pomposa received from this Augustinian during this period that Guido perfected the new system of notation which brought such order and clearness into the teaching of music. Guido seems by this time to have overcome all opposition to his new method, and to have removed all doubt as to its value among those who took cognisance of it and saw its application. His fame soon reached the reigning pope, John XIX (1024-1033), who sent three different messengers urging Guido to come to Rome and exhibit his antiphonary containing the liturgical melodies transcribed from the sign-signation heretofore in use in the own staff notation. Pope John was overjoyed at the news, which he was not only to decipher and learn the melodies without the aid of a master, and invited Guido to take up his abode in Rome, to instruct the Roman clergy in the new system, and to introduce it into general practice in the East and the West. Unfortunately the Roman climate made it impossible for Guido to continue his own staff notation. Pope John, however, welcomed the visit of the supreme pontiff. He soon fell ill of Roman fever and had to leave the city. He now returned to the monastery of Pomposa. The abbot (also called Guido) and monks, who had caused him so much chagrin by their opposition to his innovations, now received him with the utmost affection, admired his learning, and urged him to become a member of the community. His stay at Pomposa seems to have been only of short duration, for he soon returned to Arezzo. Re-

guarding the remaining days of the reformer, traditional reports vary. M. Falchi (Studi su Guido Monaco, 1892) holds that Guido ended his days at Arezzo, while others are of the opinion, based upon the chronicle of the other evidences of the Camaldolese monastery near Avellino, that Guido died there as prior in the year 1050. Guido himself has left to posterity in his "Epistola Michaeli monaco Pomposiano" (reprinted in Gerbert's Scripturam, ii) a naive but lively description of his, for the most part, eventful life, its trials and tribulations, and his final triumph over the opponents of his innovations.

In order to realize the importance of Guido's service to musical progress and development it is necessary to take a glance at the systems of notation in use before his time. Since in the early Church the liturgical melodies were not very numerous and were in daily use, they were easily perpetuated by oral transmission among the clergy, the chanters, and the people; but, as Christian hymnody developed with the expansion of the liturgy, and as the number of feasts increased, the melodies became too numerous to be learned and retained by the memory without the aid of some unchangeable means. To meet this determining means, the frequent carelessness of copyists, the temperament and even caprice of singers, and the great variety of conditions under which they were propagated and performed caused the melodies to undergo numerous changes. The necessity for a standard system of notation which would clearly record the various intervals of the melodies became more and more urgent. While in theoretical treatises the practice of the Greeks of employing the first fifteen letters of the alphabet to designate the various intervals was still in use, there was no means at hand by which the intervals and rhythm of a melody might be graphically displayed, so that anyone might learn it from a manuscript without the aid of a master. The so-called neumatic notation (from neuma, a nod), which probably in the eighth century found its way from the Orient into the Latin Church, where it suffered many modifications, had mainly a rhetorical purpose, and was intended to serve only in a general way a diastematic end, i.e. an indication of the intervals of the melody. An attempt to indicate the intervals with greater precision was made by placing these neumatic signs at a lesser or greater distance from the words comprising the text, and, in order to distinguish them from the notes of the melody the copyist would draw a line upon which he would place one of the letters of the alphabet and from which he would measure the distance of the melodic steps above or below. It is held that Guido found two such lines in use, namely, a red one upon which F was placed, and a yellow one for C, denoting the place of the tones represented by these letters of the alphabet and employed by theorists of his time. His great improvement consisted in adding two more lines to the existing ones, in utilizing the spaces between the lines as well as the lines themselves and in indicating, by combining the letters of the alphabet with the neumatic signs, in the various intervals of the melody, but also its rhythm. This system, called staff notation, has been used ever since. The reason why only four lines were used, instead of the five we employ, is that these four and the five spaces were regarded as sufficient for the ambitus, or range, of the average Gregorian, while the four extra lines, as the melodies were transcribed into the new notation, the neumatic signs formerly in use evolved into our present notes, and the letters F and C became the clefs of later times. Guido's influence was so great in his time that many things have been attributed to him which belong to later periods and to the evolution and developments of his teachings. The impetus he gave to musical progress lasted throughout the Middle Ages. Especially did incipiert polyphony ad-

VII.—5
vance by his advocacy of contrary motion of the voices as against the still prevailing parallelism. Of the works attributed to him, the following are undoubtedly authentic: "Sermones de ignoto cantu", which treatise, especially the fifteenth chapter, is invaluable to present-day students endeavouring to ascertain the original rhythmical and melodic form of the Gregorian chant: "Regule de ignoto cantu", prologue to his antiphonary in staff-notation; "Epistolae Michaeli monaco de ignoto cantu dictae". All these are reproduced in Gerbert's "Scriptores", ii, 2-50.

Guido Reni. See Reni, Guido.

Guigues du Chastel (Guigo de Castro), fifth prior of the Grande Chartreuse, legislator of the Carthusian Order and ascetical writer, b. at Saint-Romain in Dauphiné in 1053 or 1064; d. 27 July, 1132 (1136 and 1138 are also given). He became a monk of the Grande Chartreuse in 1107, and three years later his brethren elected him prior. To Guigues the Carthusian Order in great measure owes its fame, if not its very existence. When he became prior, only two charterhouses existed, the Grande Chartreuse and the Carthusian church of Brugge, and twenty years later they were founded during his twenty-seven years' priesthood. These two foundations made it necessary to reduce to writing the traditional customs of the mother-house. Guigues's "Consuetudines" (see Carthusian Order), composed in 1127 or 1128, have always remained the basis of all Carthusian legislation. After the disastrous avalanche of 1132, Guigues rebuilt the Grande Chartreuse on the present site.

A man of considerable learning, endowed with a tenacious memory and the gift of eloquence, Guigues was a great organiser and disciplinarian. He was a close friend of St. Bernard and of Peter the Venerable, both of whom he left accounts of the impression of sanctity which he made upon them. His name is inserted in certain martyrologies on 27 July, and he is sometimes called "Venerable" or "Blessed", but the Bolandists can find "no trace whatever of any ecclesiastical cultus". Guigues edited the letters of St. John of Matha, subscription is lost, and of the Carthusian Order, there are still in existence, besides the "Consuetudines", a "Life of St. Hugh of Grenoble", whom he had known intimately, written by command of Pope Innocent II after the canonisation of the saint in 1134; "Meditations", and six letters (P. L., CLIII). These letters are all that remain of a great number, many of them addressed to the most distinguished men of the day. Guigues's letters to St. Bernard are lost, but some of the saint's replies are extant. Other works which have been attributed to him are: the letter "Ad Fratres de Monte Dei" (P. L., CLXXXIV), which is perhaps genuinely his, but is also attributed to William of Saint-Thierry, and the "Liber organarum" (P. L., XL), probably the work of his namesake, the fifth prior.

RAYMUND WEBSTER.

Guigon, André, bishop and orator; b. in November, 1548, at Autun; d. in September, 1631. He was the son of Jean Guigon, a physician and Oriental scholar, who travelled in the East and brought back to France a Greek manuscript copy of the New Testament, dating from the eleventh century. He had three brothers with more the one title to fame: Jacques, Jean, and Hugues, all three lawyers, writers, and savants. Philibert de la Mare, counsellor at the Parliament of Dijon, collected the principal works of the four brothers in one volume, in 4to of 612 pages, under the title "Jacobi, Joannis, Andrei et Hugonis fratrum Guionorum opera variis liberis" (1548). This publication contains their prose works and Latin poems. André became vicar-general to Cardinal de Joyeuse, and afterwards Bishop of Autun. He went to Rome to be consecrated and came back to France in 1586. His "Remontrance à la cour du Parlement de Normandie sur l'octroy des sentences fulminatoires" is extant. Unfortunately his " Eloge funèbre de Pierre Jeaninn" has not been preserved.

MSS. Lives of André Guignon by Perry and Vignier; PHILIBERT DE LA MARE, Vitae Guionorum. J. EDMUND ROY.

Gilds.— In England.— Gilds were voluntary associations for religious, social, and commercial purposes. These associations, which attained their highest development among the Teutonic nations, especially the English, during the Middle Ages, were of four kinds:—(1) religious gilds, (2) frith gilds, (3) merchandising gilds, and (4) local rural gilds. The first, less common, but more correctly, written gild, was derived from the Anglo-Saxon gildan meaning "to pay", whence came the noun gępilda, "the subscribing member of a gild". In its origin the word gild is found in the sense of "idol" and also of "sacrifice", which has led some writers to connect the origin of the gilds with the sacrificial assemblies and banquets of the heathen Germanic tribes. Bretanro, the first to investigate the question thoroughly, associating these facts with the importance of family relationship among Teutonic nations, considers that the guild in its earliest form was developed from the family, and that the spirit of association, being congenial to Christianity, was so fostered by the Church that the institution and development of the guilds progressed rapidly. This theory finds more favour with recent scholars than the attempts to trace the guilds back to the Roman collegia. The connexion or identity of the guilds with the Greek confraternities or confratres cannot be ascertained, for lack of definite information about these latter institutions, which were discouraged by the legislation of Charlemagne.

The earliest traces of gilds in England are found in the laws of Ina in the seventh century. These guilds were formed for religious and social purposes and were voluntary in character. Subsequent enactments down to the time of Athelstan (925-940) show that they soon developed into frith gilds or peace gilds, associations with a corporate responsibility for the good conduct of their members and their mutual liability. Very frequently, as in the case of London in early times, the laws make the guild the law of the town. The main objects of these guilds was the preservation of peace, right, and liberty. Religious observances also formed an important part of guild-life, and the members assisted one another both in spiritual and temporal necessities. The oldest extant charter of a gild dates from the reign of Canute, and from this we learn that a certain Órcy presented a gild-hall (gegild-halle) to the gieldches of Abbeysbury in Dorset, and that the members were associated in almsgiving, care of the sick, burial of the dead, and in providing Masses for the souls of deceased members. The social side of the gild was shown in the annual feast for which provision was made; the "Dooms of London" we find the same religious and social practices described, with the addition of certain advantageous commercial arrangements, such as the
establishment of a kind of insurance-fund against losses, and the furnishing of assistance in the capture of thieves. These provisions, however, are characteristic rather of the merchant guilds which grew up during the latter half of the eleventh century.

Merchant Guilds.—These differed from their predecessors, the religious or frith guilds, by being established primarily for the purpose of obtaining and maintaining the privilege of carrying on trade. Having secured this privilege the guilds guarded their monopoly jealously. Everywhere the right to buy and sell articles of food seems to have been left free, but every other branch of trade was regulated by the merchant guild or hanse, as it was often called. The first positive mention of a merchant guild, the "enishment on Cantwareberg of ceapmangenedlis", occurs during the primacy of St. Anselm (1088-1109). From the time of Henry I the charters of successive sovereigns bear witness to the existence of merchant guilds in the principal towns. These charters, such as those granted to Bristol, Carlisle, Durham, Lincoln, Oxford, Salisbury, and Southampton, were of the utmost importance to the guilds as they secured to them the right and power of enforcing the guild regulations with the sanction of law. For this reason Glanvil, the lawyer, writing in the twelfth century, regards the guild merchant as identical with the commune, that is, the body of citizens with rights of municipal self-government (Ashley, op. cit., infra, 72). From the fact that out of one hundred and sixty towns which were represented in the parliaments of Edward I, ninety-two are certainly known to have possessed a merchant guild, the conclusion is drawn that a guild was to be found in every town of any size, including some that were not much more than villages.

The organization of the merchant guilds is known from the constitutions or guild rolls which have survived. These documents are only four in number, but fortunately refer to towns in four different parts of England. They are the guild statutes of Berwick and of Southampton, and the guild rolls for Leicester and Totnes (Ashley, p. 67). From these we learn that each guild was presided over by one or two aldermen assisted by two or four wardens or echelins. These officials presided over the meetings of the society and administered its funds and estates. They were assisted by a council of twelve or twenty-four members. The guilds thereby gained power as well as control over the inhabitants who held land within the town boundaries, whether they were merchants or holders of agricultural land; but in course of time rights of membership passed by inheritance and even by purchase. Thus the eldest sons of guildsmen were admitted free as of right, while the younger sons paid a smaller fee than others. The guildsmen could sell their rights, and heiresses might exercise their membership either in person or through their husbands or sons.

The merchant guilds possessed extensive powers, including the control and monopoly of all the trades in the town, which involved the power of fining all traders who were not members of the guild for illicit trading, and of inflicting punishment for all breaches of honesty or offences against the regulations of the guild. They also had liberty of trading in other parts of the Kingdom and protection of their guildsmen wherever they were trading. They exercised supervision over the quality of goods sold, and prevented strangers from directly or indirectly buying or selling to the injury of the guild. Besides these commercial advantages the guild entered largely into the life of all its members, the guildsmen taking their part as a corporate body in all religious celebrations in the town, organized festivities, provided for sick or impoverished brethren, undertook the care of their orphan children, and provided for Masses and dirges for deceased members. As time went on the merchant guilds became more exclusive, and when the rise of manufactures in the twelfth century caused an increase in the number of craftsmen, it was natural that these should organize on their own account and form their own guilds.

Craft Guilds.—Seeing that the merchant guilds had become identical with the municipality, the craftsmen, ever increasing in numbers, struggled to break down the trading monopoly of the merchant guilds and to win for themselves the right of supervision in the trade of their various crafts. The fullers were the first crafts to obtain royal recognition of their guilds, and by 1130 they had guilds established in London, Lincoln, and Oxford. Little by little through the next two centuries they broke down the power of the merchant guilds, which received their death-blow by the statute of Edward III which in 1335 allowed foreign merchants to trade freely in England. In the system of craft guilds the administration lay in the hands of wardens, bailiffs, or masters, while for admission a long apprenticeship was necessary. Like the merchant guilds the craft guilds cared for the interest of their members, both local and temporal, of their members, providing old age and sick pensions, pensions for widows, and burial funds. The master craftsman was an independent producer, needing little or no capital, and employing journeymen and apprentices who hoped in time to become masters. Thus the trades of the guilds, the great and the small, came to be known as "working class" as such, and no conflict between capital and labour. At the end of the reign of Edward III there were in London forty-eight companies, a number which later on rose to sixty. Besides the merchant and craft guilds, the religious and social guilds continued to exist, these being largely in the nature of confraternities. At the Reformation these were all suppressed as superstitious foundations. The trade guilds survived as corporations or companies, such as the twelve great companies of London which still maintain a corporate existence for charitable and social purposes, though they have ceased to have close connections with the crafts, the names of which they bear. The merchant guild of Preston also survives in a similar state, but such bodies have no real significance. The Reformation shook their constitution, while the altered industrial and social conditions finally deprived them of their economic and influence they had possessed in the Middle Ages.

EDWIN BURTON.

In Flanders and France.—The word gilde, or guildes, is but one of many terms used formerly in France and in the Low Countries to denote what the more modern word corporation stands for, viz., an association among men of the same community or profession. Gilde, maister, maister jurat, confrérie, nation, corporation, et juriditudes, du même ordre, were all essentially the expression of this idea of association, at the same time laying stress on some particular feature of it. The word gilde, however, is the first to appear and we meet it very early in the history of western continental Europe. A capitation of 779 says, "Let no one dare to take the oath by which people are wont to form guilds. Whatever may be the conditions which have been imposed upon, let no one bind himself..."
oaths concerning the payment of contributions in case of fire or shipwreck.\textsuperscript{17} This prohibition appears several times in the laws enacted under the Carolingian emperors; nevertheless the guilds continued to exist, at least in the northern part of the empire. The regulations issued at special guild meetings or the statutes also show that the guilds were a matter of no small concern for the ecclesiastical authorities; for a long time the Church was bent on extirpating from their organization a number of objectionable features which made them a menace to morals.

In France and the Low Countries a guild was originally a sort of fraternity for common support, protection, and amusement. The members paid each a certain contribution to the common fund; they pledged their word to give one another assistance; they took care of the children of the deceased members and had Masses offered up for the repose of their souls; they celebrated the patron saint’s day with great festivities in which the poor had their share. These and other features of the guilds did not, of course, appear all at the same time. Like most human institutions they had a modest beginning, and they developed in a series of stages. At a certain point, it should be noted that they do not everywhere present one and the same type. Some are mainly social, others emphasize the religious side of the organization, while, later on, in the merchant and craft guilds, it is the economic aspect which becomes predominant. Before speaking of the latter a word should be said of the origin of the guilds in the two countries with which we are concerned here. This has been much debated. Some scholars consider the guilds as the product in Christian soil, of the German instinct of association, and they would assign for their remoter origin the banquete (conversio) so common among the Teutons and Scandinavians. Others claim that they were nothing else than the Roman corporations (collegia) established in Western Europe under Roman sway and reconstructed on Christian principles after the great invasions. That the Roman colleges of artisans flourished in southern and central Gaul has been established beyond doubt by the discovery of numerous inscriptions at Nice, Nîmes, Narbonne, Lyons, and other cities. It is not likely that the Barbarian invasion broke entirely the Roman traditions in countries where the influence of Rome had been felt so deeply, and one is warranted in saying that France and central and northern Europe the origin of the guilds was to a certain extent Roman. Such an assertion, however, could hardly be made for northern France and still less for the Low Countries. There is no evidence to show that the Roman collegia ever attained great importance in these regions. At any rate, a college of Rome was established there much later than in the South and was never so deep-rooted. Roman institutions and customs had scarcely had time to take root before the German invasion, and they must have given way very easily under the pressure of the conquerors, whose numbers, rapidly increasing, soon insured to them a preponderating influence in the country.

But whether a legacy of Roman civilization or a native institution of the young Teutonic race, the guild would never have attained its wonderful development if not the Church taken under its tutelage and infused into it the vivifying spirit of Christian charity and discipline. In addition to this, the number of guilds owed their existence solely to the aspirations which gave rise to chivalry and induced thousands of men to join the monastic communities. Towards the end of the tenth century, with the greater security following the Norman invasions, there was an increase placed by the Comtesse of the large towns, such as Rouen, Paris, Bruges, Arras, Saint-Omer, soon arose a corporation which was known as the Merchant Guild and which was, in some instances at least, a development of an older association. None but the brethren of the corporation were allowed to trade in any article except food. Whether the communes (chartered towns) of France and the Low Countries had the origin in the Merchant Guild is a moot question. Although it is true that the merchants were at least instrumental in the granting of charters by princes, for the right of managing its own affairs, conferred on the town, practically meant that its government fell into the hands of the trading class. At the origin of the Merchant Guild, any townsman might become a member of the corporation on payment of a stated fee, but with the increase of their wealth, the traders showed more and more a tendency to shut out the poorer classes from their association. The latter classes, however, were not without organization; they had their own corporations (the craft guilds), most of which seem to have been constituted in the twelfth and thirteenth centuries. Each one of these craft guilds, like the merchant guilds, had its charter and statutes, its patron saint, its banner and altar, its feast day, and its place in the religious processions and public festivities. There were also classes of assistants, of apprentices, of journeymen (journeés, “to learn”), the young artisans became journeymen (companiones, ce learners (apprendre, “to learn”), the journeymen (journeés, “day”), or men hired to work by the day, and the masters or employers.

The apprentice had to remain from three to ten years in a condition of entire dependence under a master, in order to be qualified to exercise his trade as a journeyman. Before a master could engage an apprentice, he had to satisfy the officers of the guild of the soundness of his moral character. He was to treat the boy as he would his own child, and was held responsible not only for his professional, but also for his moral, education. On completing his apprenticeship, the young artisan became a journeyman (compagnon). At least, such was the rule from the fourteenth century onward. To become a master, he must have some means and pass an examination before the elders. At the head of the corporation was a board of trustees composed of two or more deans (doçens, syndics) assisted by a secretary, a treasurer, and six or more jurymen (jurés, assesseurs, trouvères, prud’hommes). These officers were elected from among the masters and entrusted with the management of the guild’s interests, the care of its orphans, the defence of its privileges, and the protection of its members. It was the master especially of the jurisdiction to enforce the statutes of the guild bearing on the relations between employer and employee, engagement of apprentices and journeymen, salaries, hours of work, holidays, etc. They could punish or even expel from the corporation any member whose conduct incurred their disapprobation.

From this strong organization, all pervaded with the spirit of Christianity, there resulted great benefits for the artisan. His work, which was well regulated and broken by many holidays, did not tax his strength too severely; the good life he was induced to live saved him from need, while his rights and interests were protected against the wrongs of the local governent. Still more noteworthy was the brotherly character of the relations between employee and employer, to which the great cities of the Middle Ages were indebted for the social peace which they enjoyed for many centuries. This alone would outweigh what has been stated above as a drawback to guild association of labour. The guilds of the Low Countries, otherwise similar to the French guilds, differed from them in one respect: political importance. The latter never gained enough influence to free themselves from the condition of utter dependence in which they had been placed by the kings, but in the Low Countries, several circumstances combined which gave the labouring classes a power they could not have in France. Of these circumstances, the most important were the
wealth of the cities, the large number of artisans, and their organisation into military brotherhoods (confréries militaires) which formed a regular militia, capable of holding its own against the feudal armies, as witness the many times in the history of Flanders and Liège.

As this article has to deal mainly with the guilds in the Middle Ages, but little can be said of the corporations of artists, which, in France and the Low Countries, were few and had not much importance before the sixteenth century. Thus, the number of pieces of linen prepared in one year amounted at one time to 200,000. In the year 1466 there were 743 master weavers in Augsburg (Herberger, "Augsburg, und seine frühere Industrie", p. 46). In the large cities, the linen- and the wool-weavers formed two distinct corporations, and the wool-weavers again were divided into two classes: the makers of fine Flemish or Italian goods, and the makers of the coarser homespun materials.

Other important guilds were those of the tanners and the furriers; the latter included the shoemakers, the tailors, the glove-makers, and the stocking-kitters. In the shoemaker's trade there was a sharp distinction between the Neumeister, who made new shoes, the cobbler, and the slipper maker. The most striking example of an elaborate classification according to craft is found in the metal-workers: the farriers, knife-makers, locksmiths, chain-forgers, nail-makers, often formed separate guilds of different guilds. The armourers were divided into helmet-makers, escutcheon-makers, harness-makers, harness-polishers, etc. Sometimes they went so far as to have special guilds for each separate article of a suit of armour. This accounts for the remarkable skill and finish seen in the simplest details.

A class of brotherhoods which deserves special mention is that of the guilds of the mining trades, which from an early date were very important in Saxony and Bohemia. "No politician or socialists of modern times," says W. Achenbach (Gemeines Deutsches Bergrecht, I, 69, 109), "can suggest a labour organization which will better accomplish the object of helping the labourer, elevating his position, and maintaining fair relations between the employer and the employed than that of the mining works centuries ago." The statutes of these mining guilds shew, indeed, a remarkable interest in the welfare of the labourer and the protection of his interests. Hygienic conditions in the mines, ventilation of the pits, precautions against accident, bathing houses, time of labour (eight hours daily—sometimes less), supply of the necessaries of life at fair prices, scale of wages, care of the sick and disabled, etc.—no detail seems to have been lost sight of.

As to their organization, government, and relations with the public or the civil authorities, the German guilds did not substantially differ from those in other European countries. The members were divided into apprentices, journeymen, and masters. At the head of the corporation was a director appointed by several officers. He was the sworn and responsible power of the guild, called the meetings, presided at them, had the right of final decision, managed the property of the guild, led it in case of war. Each guild had its fully equipped court of justice and enjoyed complete independence in all private concerns; but all the guilds were subject to the town council and town authorities, and were obliged to submit their statutes and ordinances to them. In the event of quarrels, either within or between the guilds, the civil authorities exercised the rights of a commercial judge; in conjunction with the guild, they also made regulations for the markets and pole arrangements, fixed the prices of wares, organized the supervision of traffic and the protection from fraud or dishonest dealing.

The purchase of raw material was managed by the
guild as a body so as to prevent monopoly. Strict regulations protected the rights of every one. There was equality between all the members with regard to the sale of their productions. The protection of purchasers and customers was assured by the city authorities; the guild was held responsible for the quality and quantity of the goods which it brought for sale to the market. In Germany, as elsewhere, however, the most interesting feature of the guild was the close connexion they established between religion and daily life. Labour was conceived by them as the complement of prayer, as the foundation of a well-regulated life. We read in the book “A Christian Admonition”: “Let the societies and brotherhoods so regulate their living according to Christian precepts in all things that their work may be blessed. Let us work according to God’s law, and not for reward, else shall our labour be without blessing and bring evil on our souls.” Each guild had its patron saint, who, according to tradition, had practised its particular branch of industry, and whose feast day was celebrated by attending church and by processions; each had its banner, its altar, or chapel in the church, and had Masses offered up for the living and the dead members. The religious observance of Sunday and holy days was commanded by most of the guilds. Whoever worked or made others work on those days, or on Saturday after the vespers bell, or neglected to fast on the Lord’s and Sweet Saviour’s feasts, the Church, incurred a penalty. This union of religion and labour was a strong tie between the members of the guild, and it was of great assistance in settling peacefully the differences arising between masters and companions.

The guilds were also mutual and benevolent societies; they helped the impoverished and sick members; they took care of the widows and orphans; they remembered the poor outside the society. Many benevolent institutions owed their foundation to some guild, as, for instance, St. Job’s Hospital for smallpox patients at Hamburg, which was founded in 1535 by a guild of fishmongers, shopkeepers, and hucksters. There were a large number of these benevolent associations of tradesmen in the Middle Ages; at the close of the fifteenth century there were seventy at Lübeck, eighty at Cologne, and over one hundred at Hamburg.

In connexion with the guilds should be mentioned the workmen’s clubs, which were very common at the end of the fifteenth century. So long as the German journeyman remained at work in a city, he belonged to one of these clubs, which supplied for him the place of his family and country. If he fell sick he was not left to his destitution, but was cared for by some master or cared for by his brother members; wherever he went he could make himself known by the society’s badge or password, and receive help and protection from the local branch of the association to which he belonged. Thus the journeyman was, in the first place associated with the family of his employer, in whose house he generally lodged and boarded; in the second place, he stood in close relation with his associates of the same age and trade, co-members with him of the society which protected and helped him; finally, he enjoyed special connexion with the Church, because he generally belonged to one of the sodalities which were ordinarily, but not necessarily, a part of the society’s organization.

Side by side with the artisans’ guilds, there were also merchants’ guilds, organized on the same plan as the former, and having similar objects in view with respect to the commercial life of their members, and their general and religious well-being. But they differed in their attitude towards trade; for, while the chief object of the artisans’ guilds was the protection and improvement of the different trades, the merchants’ guilds aimed at securing commercial advantages for their members and obtaining the monopoly of the trade of some country or some particular class of goods. Not alone in the German cities, but also in all foreign countries, wherever German commercial em-"
of the nineteenth century that the guilds were success-

cessively abolished in the different States of Germany.

In the last twenty-five years, there were enacted in that
country a number of laws whose aim was not the re-
establishment of the old corporations, which had ear-
lier its special domain and privileges, but the protec-
tion of the labourers, who had been left without or-
organization and defence by the abolition of the guilds.

For the establishment of the guilds in Germany, STUDEI

in Handbuch der deutschen Volkskunde, 11 (Jena, 1876),

pp. 1–133; EREBEN, Die Ursprüng des Zumtwebens (Leipzig,

1800). The following will also give valuable information:

JASPER, History of the German Rents at the Close of the Middle

Ages (tr., London, 1889); WILD, Das Gutshaus im Mittel Alter

(Hildesheim, 1889); NIEDERDEUTSCHER GESELLSCHAFT, Ver-

lauf und Geschichtsschreibung der Abt. der Wissenschaften (Berlin,

1879); HEBERL, Städte und Gilden im Mittelalter (Vienna, 1891); LANGE,

Völker- und Geschichtskunde (Leipzig, 1881–82).

In Italy.—"Of all the establishments of Numa," says

Plutarch, "no one is more highly prized than his dis-

tribution of the people into colleges according to
trade and craft." From these words we should infer that the
first well-known Italian corporations date from the seventh century B. C., but some authors, who
are followers of a text of Florus, have claimed that Servius Tullius, and not Numa,
was the founder of the Roman colleges of artisans (e. g., Heinriccius, "De collegii et corporibus opii-

num," 138). Whatever may be the truth on this
point, it is certain that the collegia opificum existed in the
Republic, because the business of the corporation in the servitium of Servius Tullius which remained
in force until 241 B. C. There were but few of these

corporations in the Republic, but their numbers in-
creased under the emperors; in Rome alone there

were in the third century more than thirty colleges, private and public (Theodoric Code, XIII and XIV).

The latter were four in number: the naviculari, who

supplied Rome with provisions, the bakers, the pork

butchers, and the calci coctores et vectores, who supplied

Rome with lime for building. The members of
these corporations received a fixed salary from the
State.

Among the private colleges were numbered the

argentarii, or bankers, the negotiatores vini, or wine

merchants, the medici, or physicians, and the profes-

sores, or teachers. On the whole it might be said that the
collegia were prosperous until the end of the third
century B. C., but the course of events in the fourth
they began to show signs of decline. The few privi-
leges they enjoyed had ceased to be a compensation
for their responsibilities to the State, and it was only
by the most drastic measures that the last emperors
succeeded in keeping the artisans in their collegia.

And now arise the questions: What remained of
these corporations after the invasions? Is there any

connexion between them and the Italian guilds of the

thirteenth century? We can only answer this query by

conjecture. The period extending from the fifth
to the eleventh century is extremely poor in docu-
m ents; the few annalist of those days have limited their

compositions to the enumeration of dates. Mention is made here and there of the

existence of a guild, but we are not told whether these guilds are new associations or the development of an

older organization. Since we know, however, that the

Roman law was to a large extent incorporated in the
codes of the Goths and Lombards, we have good

grounds to believe that many of the municipal institu-
isions survived the fall of Rome. In support of this
view, we have the well-known fact that the Barbarians
usually dwelt in the country and left the government
of the cities in the hands of the clergy, most of whom,
being Italians, were naturally inclined to retain the

Roman institutions, all the more readily as a better
education enabled them to appreciate their value.

All this leads to the conclusion that, in most cities,
enough of the old Roman corporation must have been preserved to form the nucleus of a new organization
which slowly but steadily developed into the guild of the
Middle Ages.

The mercanzia, the earliest well-known type of

these guilds, existed in Venice, Genoa, Milan, Ver-
ona, Pisa, and elsewhere in the tenth century; it

somewhat resembled the merchant guild of Northern
Europe, being an association of all the mercantile in-
terests of the community without any professional
distinction, but, as the increase of trade which fol-
lowed the First Crusade, was not about to increase by

cess of industrial activity, the arts found it more convenient
to have an association of their own, and the mercanzia
was split into craft guilds. As an example of this

evolution, we may take the Roman mercanzia.

Although it had been in existence at least since the

beginning of the eleventh century, it received its final

constitution only in 1285. At that time it was com-

posed of thirteen arts, all united into one common

association, but in the course of the following century
we see these arts withdrawing successively from the

mother guild and forming independent corporations
till finally the mercanzia was merely a merchant

guild.

The Italian arts were not all placed on the same

footing. Some, being more important, had a right of

precedence over the others and a larger share of the
political rights. This hierarchy varied, of course,

from one city to another; in Rome the farmers and

drapers, the bankers, the wool-manufacturers, the

physicians and apothecaries, the silk-manufacturers,

and the skin-dressers. They formed the popolo
grosso, or burgesses, and governed the city with the

old feudal families; but in 1282 the latter were de-

prived of their political rights, and the burgesses were

compelled to share the government of Florence with

the popolo minuto, or minor arts—the blacksmiths,

the bakers, the shoemakers, the carpenters, and the

retailers of wine.

In its main lines, the organization of the Italian
guilds resembled that of the French guilds. Their

members were divided into apprentices, journeymen,

and employes. There was an elaborate system of statuts bearing on the professional

and religious duties of the brethren, the relations of

the corporations as a body with the local government,

competition, monopoly, care of the sick, of the or-

phans, etc. The officers were all elected usually for a

term not exceeding six months. At first they were

few, but their number increased rapidly with the im-

portance of the guild. One of the most remarkable
illustrations of guild government is given us by the

Roman corporations. At the head of each one was a

cardinal protector, but the real managers were the

consuls (sometimes called priori, capitulini). Until

the return of the popes to Rome their functions became merely

administrative and their authority was limited by a

number of other officers—assessors, procurators, dele-

gates, defendores, secretaries, archivists. The second

great officer of the corporation was the camerlingo, or
treasurer; at one time his office was even more impor-
tant than that of the consul, but little by little a large

part of his powers went to computors, exactors, taxa-
tors, depositors. The provveditore had the custody of

the guild’s furniture and was to preserve good order in

the assemblies; the syndics examined the administra-

tion of the officers at the end of their term; the physi-

ician and nurses attended the sick members free of
charge, and the visitor had to call on those who were
in prison. Besides, there were many officers attached to the chapel: vestrymen, churchwardens, chaplains.

Guilds of artists appeared very early in Italy. Sienna, Pisa, Venice seem to have been in the lead. The first of these cities had a corporation of architects and sculptors in 1212; the statutes of the sculptors and stone-cutters of Venice date from 1307; those of the painters and cabinet-makers in the same city from 1385. In Rome the guilds of artists were formed relatively late; the sculptors in 1406, the painters in 1478, the goldsmiths in 1509, theasons in 1527. On the whole it is seen that the artists connected with construction were the first to have their own association, then the goldsmiths, and finally the painters. This often happened that artists were incorporated into these guilds, as, for instance, the painters of Florence, who still belonged to the grocers' guild in the sixteenth century. The famous "Accademia del Desegno" of that city, one of the first academies of fine arts in Europe, grew out of the "Compagnia di San Luca", a semi-religious, semi-artistic guild. The decline of the Italian guilds began in the sixteenth century and was brought about by the decay of the commerce of the country. They were abolished in Rome by Pius VII in 1807, and by the end of the first half of the nineteenth century they had become a thing of the past in the rest of the country.

In Spain.—What has been said of the origin of the guilds in Italy applies to Spain. In no other province (except, perhaps, Southern Gaul) had the inhabitants been influenced more deeply by Roman civilization, and the Visigoths, who settled there in the fifth century, were, of all the Barbarians, those who showed the strongest tendency to retain Roman institutions and customs. Unfortunately, the growth of this neo-Roman civilization was stopped by the Arabian invasion in the eighth century, and in the following 700 years the Christians of Spain, who were bent on the task of wresting their country from the infidels, turned their energies to warfare. Domestic trade fell into the hands of the Jews, foreign trade into those of the Italians, and manufactures existed mostly in cities under Moorish dominion. Religious and military associations were many and powerful, but merchant and craft guilds could not grow on this basis.

Guiney, Patrick Robert, second and eldest surviving son of James Roger Guiney and Judith Macrse; b. at Parkstown, Co. Tipperary, Ireland, on 15 Jan., 1835; d. at Boston, 21 March, 1877. From his father's people he inherited Jacobite blood, gentleness and adventurous, with one French cross in it. James Guiney, impoverished and dispersed after an ill-assorted run-away marriage, brought with him on his second voyage to New Brunswick his favourite child, then not six years old. After some years, Mrs. Guiney rejoined her husband, lately crippled by a fall from his horse; a servant who lived in Portland, Maine, allowed the boy attended the public schools. Clever, studious, and a capital athlete, he matriculated at Holy Cross College, Worcester, but left before graduating, actuated by a scruple of honour entirely characteristic. His book-loving, sympathetic father having meanwhile died, he went to study for the Bar under Judge Wal-
ton, and was admitted in Lewiston, Maine, in 1856, evincing from the first a genius for criminal law. In politics he was a Republican. He won his first suit for the Massachusetts Society for the Prevention of Cruelty to Animals. In 1859 he married in the old cathedral, Boston, Miss Janet Margaret Doyle, related to the distinguished "J. K. L.", the Rt. Rev. James Doyle. The couple were blessed with three children. Patrick had one son, who died in infancy, and one daughter. Home life in Roxbury and professional successes were cut short by the outbreak of the Civil War. Familiar with the manual of arms, Guiney enlisted for example's sake as a private, refusing a commission from Governor Andrew until he had served his term with the Ninth Regiment of Massachusetts Volunteers. Within two years (July, 1862), the first colonel having died from a wound received in action, Lieutenant-Colonel Guiney succeeded young to the command. He fought in over thirty engagements, and won high official praise, notably for courage and presence of mind at the battle of the Chickahominy, or Gaines's Mill, Virginia. Here, after three successive colour-bearers had been shot down, the colonel himself seized the flag, threw aside coat and sword-belt, rose white-shirted and con- spicuous in the stirrups, inspired a final rally, and turned the fortune of the day. After many escapes, he was struck in the face by a shot in the Wilderness (5 May, 1864); the Minié ball destroyed the left eye, and inflicted, as was believed, a fatal wound. During an interval of consciousness, however, Guiney insisted on an operation which saved his life. Honourably discharged just before the muster-out of his old regiment, he did not receive his commission as brigadier-general by brevet until 13 March, 1865, although throughout 1864 he had been frequently in command of his brigade, the Second, First Division, Fifth Corps, A. P. Brevet was then bestowed "for gallant and meritorious services during the Civil War". Kept alive for years by nursing and by force of will, he ran unsuccessfully for Congress on a sort of "Christian Socialist" platform, was elected assistant district attorney (1866-70), and acted as consulting lawyer (not being longer able to plead) on many locally celebrated cases. His last exertions were devoted to the defeat of the corruption and misrule of the Proctor Court in Connecticut, Massachusetts, of which he had become registrar (1869-77). He died suddenly and was found kneel- ing against an elm in the little park near his home, having answered his summons in this soldierly and deeply religious fashion, as he had always meant to do. Original Guiney was Commissioner of the Family Relief and Aid Fund, Major-General Commandant of the Veteran Military League, member of the Irish Charitable Society, and one of the founders and first members of the Catholic Union of Boston. He was notable throughout a brief, thwarted career for the charm of his manner and his child-like ideas in public life. A good literary critic, he printed a few graphic prose sketches and some graceful verse.

Adjutant General's Report: Newspapers, passion; Family in- formation.

Louise Imogen Guiney.

Guiscard, Robert, Duke of Apulia and Calabria, founder of the Norman state of the Two Sicilies; b. about 1016; d. 17 July, 1085. He was the eldest son of the second marriage of Tancred, seigneur of Hauteville-la-Guichard, near Coutances, Normandy, a fief of ten chevaliers. Already three of his brothers, William Brezo-Feu and de Manto, who died about 1034, and another about 1045, had entered the pay of the Lombard princes of Southern Italy who were in revolt against the Byzantine Empire. In turn Robert left Nor- mandy accompanied by five horsemen and thirty foot- soldiers, and set out to rejoin his brothers in 1046. Of gigantic stature, broad-shouldered, with blond hair,
ruddy complexion, and deep voice, he owed to his crafty shrewdness the sobriquet of "Guiscard" (Wiseacre). He encountered difficulties on his first entrance into Italy. His brother Drogo, who had been elected Count of the Normans, repulsed him. Having wandered about for a time he returned to enter the service of Drogo and became his Norman chief of the territory of Benevento, he renounced this manner of life and had two hundred horsemen under his command. Drogo having been assassinated in 1051, his brother Humphrey succeeded to his possessions and the title of Count of the Normans, and Guiscard remained in his service. In 1053, he took part in the battle of Civitella, in which Pope Leo IX was vanquished and taken prisoner by the Normans. In 1055, he took possession of Otranto. On the death of Humphrey in 1057, Robert Guiscard caused himself to be elected leader of the Normans to the detriment of the other Normans, who inherited the possessions appropriated. At this juncture the Normans aimed openly at taking possession of southern Italy. Richard of Aversa, who had just taken Capua, was after Guiscard the most powerful leader. Through energy of character and skilful policy, Robert Guiscard succeeded in inducing the Norman chiefs to submit to his authority and in accomplishing with them the conquest of Italy. He established his young brother Roger in Calabria in 1058. In 1059, Hildebrand, the chief councillor of Pope Nicholas II, desiring to shield the papacy from the attacks of the adversaries of ecclesiastical reform, entered into an alliance with the Normans. A council of Mech in 1061, Guiscard declared himself the vassal of the Holy See, pledged himself to bring about the observance of the decrees of the Council of Lateran with regard to the election of popes, and received in exchange the title of Duke with the investiture of his conquests in Apulia, Calabria, and Sicily. He at once began to make war on the remaining Byzantine possessions, took possession of Reggio (1060), despatched his brother Roger to begin the conquest of Sicily, took Brindisi (1062), and finally, in 1068, laid siege to Bari, the capital of Byzantine Sicily, which he entered after a siege of three years on 16 April, 1071. In the meantime, having conquered the province of Palermo, besieged at once by Robert and Roger, left the Normans masters of all Sicily. Roger retained the greater part of the country, but remained his brother's vassal.

These conquests would have been but of ephemeral duration, had Guiscard not devoted all his energy to consolidating them. The Norman chiefs who had become his vassals were not too readily disposed to submit to his authority, and revolted while he was in Sicily. In 1073 Guiscard besieged and reduced to submission all the rebels in succession. The great commercial republic of Amalfi yielded voluntarily to him. At this juncture, however, Gregory VII, alarmed by Guiscard's aggressions on the papal territories, excommunicated him. At the same time, Guiscard having wished on the occasion of his daughter's marriage to raise the usual feudal aid his vassals once more revolted (1078). Having put down this revolt, he was crowned, and Gregory VII, threatened by the intrigues of Emperor Henry IV, became reconciled to him (1080). In the interval Salerno had fallen under his sway, and, save for the Norman principality of Capua, which remained independent, and the city of Naples, all southern Italy obeyed him.

Having now reached the height of his power, Guiscard conceived the ambition, at the age of sixty-four, to undertake the conquest of the Byzantine empire, whose civilization exercised over him a powerful attraction. As the master of Byzantine Italy, he considered himself the heir of the emperors, caused himself to be depicted on his seal in their costume, and thus inaugurated a tradition which nearly所有 sovereigns of the Two Sicilies have sought to follow. In May, 1081, Robert and his son Bohemond set out for Otranto, captured the island of Corfu, and disembarked before Durazzo, the possession of which would assure them access to the Via Egnatia, which led through Macedonia to Constantinople. But the emperor Alexius Comnenus had formed an alliance with Venice, whose fleet won a great victory over that of the Normans (July). Alexius came himself to the assistance of Durazzo, but Guiscard, who had burnt his ships in order to inspire courage in his troopers, put the imperial army to flight (18 October). Despite this victory, the Normans, being still incapable of laying siege in the regular manner, could not have entered into the place, if Guiscard had not contrived that it should be delivered to him by treason (21 February, 1082). Guiscard was now master of the route to Constantinople, and had advanced as far as Macedonia when Alexius VII recalling him to Italy. Henry IV, with whom Alexius Comnenus had formed an alliance, had come down into Italy and was threatening Rome. At his approach the Lombard vassals of Apulia and the Prince of Capua had revolted. Guiscard resigned the command of his expedition to his son Bohemond, who abandoned the march on Constantinople to ravage Thessaaly. Guiscard returned to Italy and profited by Henry IV's short delay in Lombardy to subdue his rebellious vassals, capturing their cities one by one (1083). During this time Henry IV returned and laid siege to Rome. On 2 June, 1083, he took possession of Monte Leone, Cistella, 10 days later, and sought refuge in the castle of Sant' Angelo. The emperor made his entry into Rome on 21 March, 1084, and, on the following 31 March, he was crowned at St. Peter's by the antipope Clement III. Gregory VII, who all the time was confined to the castle of Sant' Angelo, sent a message to Robert Guiscard. On 24 May, 30,000 Normans camped beneath the walls of Rome. On the 27 May, Guiscard captured the Porta Flaminia, gave battle on the Campo Marzio, delivered Gregory VII, and installed him in the Lateran while the imperial troops beat a retreat. But the Romans, exasperated by the pillaging of the Normans, revolted. The city was sacked, and the inhabitants murdered or sold as slaves. On the 28 June, Guiscard left Rome and conducted Gregory VII as far as Salerno. Thanks to his intervention the projects of Henry IV had been baffled and the cause of ecclesiastical reform had triumphed.

But Robert Guiscard thought only of resuming his expedition against Constantinople. Beaten by the troops of Alexius Comnenus, Bohemond had been compelled to retire with his army to Italy (1083). Guiscard made fresh preparations, and, at the end of 1084, embarked at Otranto. After having defeated the Venetian fleet, he proceeded to Corfu and was preparing to capture Cephalonia, where he had just disembarked, when he died after a short illness, 17 July, 1085. Having come into Italy forty years previously as a mere soldier of fortune, he had since founded a sovereign state and become one of the most important personages of Christendom. To enable his son to follow with him. From one of his talks he had taken Rome, from the other he had been on the point of taking Constantinople. In 1058, he had repudiated Aubrée, the mother of Bohemond, to wed the Lombard Sykelgaita, sister of Gisulf, Prince of Salerno. She gave him three sons and seven daughters, and appears to have been actively associated in all his undertakings, accompanying him in his expeditions and
exercising so much influence over him as to cause him to designate as his successor his son Roger, to the detriment of Bohemond.

LOUIS BRIERIE.

Guise, House of, a branch of the ducal family of Lorraine, played an important part in the religious troubles of France during the sixteenth century. By request of Charles V, it laid claim to the duchy after a brief period to the throne of France. The Guises upheld firmly Catholic interests not only in France, but also in Scotland, where Marie de Lorraine and her daughter, Mary Stuart, were allied to them. Their religious zeal, however, was often tarnished by their own violence, and by that of their partisans; it also coloured certain plans for political reform that were dangerous to monarchical centralization. Finally, the relations which existed for thirty-five years between Spain and the House of Guise roused the suspicions of French patriotism. In their favour it must be said that the Huguenots also were guilty of many acts of violence, and appealed to England, as the Guises did to Spain, and that the Calvinistic nobility was even more dangerous to French unity than the Catholic. We shall here consider only those members of this famous family who are especially interesting from the viewpoint of religious history.

In 1513 Claude de Guise married Antoinette de Bourbon (1493–1583), noted for the simplicity of her life, her renunciation of all rich materials in dress, and her great charity towards hospitals, the poor, and orphans. By her he had eight sons and four daughters. If the memoirs of François de Guise, Claude’s son, are to be credited, his father died of poison.

In 1513 Claude de Guise married Antoinette de Bourbon (1493–1583), noted for the simplicity of her life, her renunciation of all rich materials in dress, and her great charity towards hospitals, the poor, and orphans. By her he had eight sons and four daughters. If the memoirs of François de Guise, Claude’s son, are to be credited, his father died of poison.

II. JEAN DE LORRAINE, brother of the above, b. 1498; d. 18 May, 1550. He became a cardinal at twenty, the first Cardinal of Lorraine. His activity was exercised chiefly in France, where he assisted Charles de Guise to strengthen the ascendency of the Guise family. Having been sent in 1536 as the ambassador of Francis I to Charles V to reconcile their differences, he warned the king on his return of the unmistakably warlike intentions of the emperor. Even before Claude de Guise had offended the king, the cardinal was regarded with suspicion. He fell into disgrace with the court, and in 1542, but his relative remained greatly under the influence of the courtiers which he was able to make with his immense revenues, for he had acquired the Bishoprics of Metz, Toul, Verdun, Thérouanne, Luçon, and Valence, the Archbishoprics of Lyons, Reims, and Narbonne, and a number of abbies. "Thou art either Charles or the Cardinal of Lorraine," exclaimed a Roman beggar on whom he had bestowed a large alms.

III. FRANÇOIS DE LORRAINE, second Duke of Guise, b. at the château de Bar, 17 Feb., 1519, of Claude de Guise and Antoinette de Bourbon; d. 24 Feb., 1563. He was the warrior of the family, et grand capitaine de Guises, as the Spanish called him. A wound which he received at the siege of Boulogne (1545) won for him the surname of Balafre (the Scarred). His defense of Metz against Charles V (1552) crowned his reputation. After a siege of two months the emperor was obliged to retire with a loss of 30,000 men.

The Duc de Guise was the eldest son of Jeffre, and a great-nephew of Guise, b. at the Château de Condé, 20 Oct., 1496; d. at Joinville, 12 April, 1550, the son of René II, Duke of Lorraine, and his second wife, Philippa of Guelders. Claude de Guise wished to possess the Duchy of Lorraine to the detriment of his elder brother, Antoine, whom he declared illegitimate, inasmuch as he was born during the lifetime of Marguerite d’Harcourt, the (divorced) first wife of René II, but he was obliged to be content with the Comtships of Guise and Aumale, the Barony of Joinville, and the Seignories of Mayenne and Elbeuf, which his father possessed in France. He soon made his appearance at the French court, where he at once showed "Honor of his ability to please. He followed Francis I to Italy, and at the battle of Marignano (1515) received twenty-two wounds. He took a courageous part in the campaigns against Charles V, for which Francis I rewarded him by making him master of the hounds and first chamberlain, and by the ennoblement of Guise, as an honour hitherto reserved for princes of the blood. Claude de Guise also merited the gratitude of the Catholic party for the struggle which he maintained in 1525 against the bands of Anabaptists attempting to invade Lorraine, whom he exterminated at Lutzelar near Trier, 31 May, 1526. He returned in 1527 to Paris, where he was received with pleasure (1542), the services which he rendered in 1543 by his defence of Landrecies, and his success in quieting the Parisians, alarmed by the approach of the imperial forces, justified the favour of the king, who finally confided to him the government of Burgundy; the duke’s ambition, however, his large fortune, and powerful relatives gave offence to Francis I. It was said that the latter counselled Henry II never to admit the Guises to a share in the government of the kingdom, and a popular quatrain current in Paris ran:

François premier prédit ce point
Que eux de la maison de Guise
Mettroient ses enfants en pourpoint
Et son pauvre fils en peau de renard.

In 1513 Claude de Guise married Antoinette de Bourbon (1493–1583), noted for the simplicity of her life, her renunciation of all rich materials in dress, and her great charity towards hospitals, the poor, and orphans. By her he had eight sons and four daughters. If the memoirs of François de Guise, Claude’s son, are to be credited, his father died of poison.

II. JEAN DE LORRAINE, brother of the above, b. 1498; d. 18 May, 1550. He became a cardinal at twenty, the first Cardinal of Lorraine. His activity was exercised chiefly in France, where he assisted Charles de Guise to strengthen the ascendency of the Guise family. Having been sent in 1536 as the ambassador of Francis I to Charles V to reconcile their differences, he warned the king on his return of the unmistakably warlike intentions of the emperor. Even before Claude de Guise had offended the king, the cardinal was regarded with suspicion. He fell into disgrace with the court, and in 1542, but his relative remained greatly under the influence of the courtiers which he was able to make with his immense revenues, for he had acquired the Bishoprics of Metz, Toul, Verdun, Thérouanne, Luçon, and Valence, the Archbishoprics of Lyons, Reims, and Narbonne, and a number of abbies. "Thou art either Charles or the Cardinal of Lorraine," exclaimed a Roman beggar on whom he had bestowed a large alms.

III. FRANÇOIS DE LORRAINE, second Duke of Guise, b. at the château de Bar, 17 Feb., 1519, of Claude de Guise and Antoinette de Bourbon; d. 24 Feb., 1563. He was the warrior of the family, et grand capitaine de Guises, as the Spanish called him. A wound which he received at the siege of Boulogne (1545) won for him the surname of Balafre (the Scarred). His defense of Metz against Charles V (1552) crowned his reputation. After a siege of two months the emperor was obliged to retire with a loss of 30,000 men. François de Lorraine fought against the papal forces under Henry II (1554). The Truce of Vaucelles, signed in 1556 for a period of six years, followed by the abdication of Charles V, seemed about to terminate his military career.

The dukes of Guise, however, as descendants of the House of Anjou, had certain pretensions to the Kingdom of Naples, and it was done with the secret intention of defending these claims that François de Guise furthered the alliance between Henry II and Pope Paul IV which was menaced by Philip II. In consequence of this alliance François de Guise entered Milanese territory (Jan., 1557), marched thence through Italy, and although neither the petty princes of the papal States nor the pope gave him the assistance he expected, he took the little Neapolitan town of Campi (17 April, 1557), and on 24 April laid siege to Civitella. At the end of twenty-two days, being threatened at the same time by epidemic and the Duke of Alva, he fell back upon Rome, where he reorganized his army, and was preparing to return to a ducal campaign in Italy, when the victory of the Spaniards over the Constable of Montmorency at Saint-Quentin (23 Aug., 1557), summoned him to "restore France".

Guise returned to court (20 Oct., 1557) and was invested with the title of lieutenant-general of the king. He returned to the court of Calais (1–8 Jan., 1558) by taking into account the plans of attack drawn up by Coligny. In June he took Thionville, in July, Arlon. He was about to attack Luxembourg when he was
halted by the Peace of Cateau-Cambrésis (3 April, 1559), concluded by Henry II, despite the protests of the duke. Moreover, Henry was on the point of dismissing François de Guise, at the instance of Diana of Poitiers and the Constable de Montmorency.

The accession of Francis II (10 July, 1559), however, and his consort, Mary Stuart, niece of François de Guise, was a triumph for the Guise family, and the Constable de Montmorency was disgraced. François de Guise was supreme in the royal council. "My advice," he would say, "is so and so; we must act thus." Occasionally he signed public acts in the royal manner, with his baptismal name only. At the instigation of Antoine de Bourbon and the Prince de Condé, La Reuassie, a Protestant gentleman of Périgord, organized a plot to seize the persons of François de Guise and his brother, the second Cardinal of Lorraine. The plot was discovered (conspiracy of Amboise, March, 1560) and violently suppressed. Condé was obliged to flee the court, and the power of the Guises was increased. The discourse which Coligny, leader of the Huguenots, pronounced against them in the Assembly of Notables at Fontainebleau (Aug., 1560) did not influence François de Guise II in the least, but resulted rather in the imprisonment of Condé. The king, however, died (5 December, 1560)—a year full of calamity for the Guises both in Scotland and France (see below, VI. MARY OF GUISE). Within a few months their influence waxed great and waned. After the accession of Charles IX, François de Guise lived in retirement on his estates. The regent, Catherine de Medici, at first inclined to favour the Protestants, and to save the Catholic party François de Guise formed with his old enemy, the Constable de Montmorency, and the Maréchal de Saint-André the so-called Triumvirate (April, 1561), hostile to the policy of concession which Catharine de' Medici attempted to inaugurate in favour of the Protestants. The plan of the Triumvirate was to treat with Spain and the Holy See, and also to come to an understanding with the Lutheran princes of Germany to induce them to abandon the idea of relieving the French Protestants. About July, 1561, Guise wrote to this effect to his contemporary, the Elector of Wurttemburg. The Colloquy of Poissy (September and October, 1561) between theologians of the two confessions was fruitless, and the conciliation policy of Catharine de' Medici was defeated. From 15 to 18 February, 1562, Guise visited the Duke of Wurttemberg at Saverne, and convinced him that if the conference at Poissy had failed, the fault was that of the Calvinists. As Guise passed through Vassy on his way to Paris (1 March, 1562) a massacre of Protestants took place. It is not known to what extent he was responsible for this, but it kindled the religious war. Rouen was taken from the Protestants by Guise after a costly siege (October); the battle of Dreux, at which Montmorency was taken prisoner and Saint-André slain, was in the end turned by Guise to the advantage of the Catholic cause (19 December), and Condé, leader of the Huguenots, taken prisoner. Guise was about to take Orléans from the Huguenots when (18 February, 1563) he was wounded by the Protestants at Poitiers de Mére, and died six days later. "We cannot deny," wrote the Protestant Coligny in reference to his death, "the manifest miracles of God."

At the suggestion of Henry II Guise had married in 1549 Anne d'Este (1531-1607), daughter of Hereule II d'Este, Duke of Ferrara, and of Renée of France, through her mother, a daughter of Louis XII; she had been on the point of becoming the wife of Sigismund I, King of Poland. By her Guise had six sons and one daughter. Anne held the Admiral de Coligny responsible for the death of her husband, and her interview with the admiral at Moulins was only an apparent reconciliation. She soon married James of Savoy (d. 1583), by whom she had two children. She lived to see the extinction of the house of Este by the death of Alfonso II, fifth Duke of Ferrara, and to see two of her sons, Henry, Duke of Guise, and the Cardinal of Guise (see below) slain at the château de Blois. "Oh, my king," she cried before the statue of her grand- father, Louis XII, "did you build this château that the children of your granddaughter might perish in it?" The poet Ronsard sang the praises of the wife of François de Guise, according to the fashion of the time: Venus la saincte en ses graces habite, Tous les amours logent en ses regards; Pour ce, a son droit, la dame moritie D'avoir été femme de notre Mars.

IV. CHARLES DE LORRAINE, Cardinal of Guise, b. at Joinville, 17 Feb., 1524; d. at Avignon, 26 December, 1574; appointed Archbishop of Reims in 1538, cardinal in 1547, the day after the coronation of Henry II, at which he had officiated. He was known at first as the Cardinal of Guise, and as the second Cardinal of Lorraine after the death of his uncle Jean (1550), first Cardinal of Lorraine. His protection of Rabelais and Ronsard and his generous foundation of the University of Reims (1547-49) assure him a place in the history of contemporary letters; his chief importance, however, is in political and religious history.

The efforts of this cardinal to enforce his family's pretensions to the Countship of Provence, and his temporary assumption, with this object, of the title of Cardinal of Anjou were without success. He failed also when he attempted, in 1551, to dissuade Henry II from omitting the Duke of Guise from his patent. He succeeded, however, in creating for his family interests certain political alliances that occasionally seemed in conflict with each other. He coquetted, for instance, on the one hand with the Lutheran princes of Germany, and on the other, in his interview (1558) with the Cardinal de Granvelle (at Péronne), he initiated friendly relations between the Guises and the royal House of Spain. Thus the man who, as Archbishop of Reims, crowned successively Henry II, Francis II, and Charles IX had a personal policy which was often at variance with that of the court. This policy rendered him at times obnoxious to his contemporaries. The cardinal L'Estatie accused him of great duplicity; Brantôme spoke of his "deeply stained soul, churchman though he was," accused him of scepticism, and claimed to have heard him occasionally speak half approvingly of the Confession of Augsburg. He is also often held responsible for the outbreak of the Huguenot wars, and in them he was thought to have attempted to establish the Inquisition in France. Many libellous pamphlets arose against him strong religious and political passions. From 1560 at least twenty-two were in circulation and fell into his hands; they damaged his reputation with posterity as well as among his contemporaries. One of them ("Life of the Huguenot wars," 1565) accuses him of seeking to restore to the Empire the three Bishoprics of Moul, Toul, and Verdun, which had been conquered by Henry II. A discourse attributed to Théodore de Bèze (1566) denounced the pluralism of the cardinal in the matter of benefices.
Under Charles IX the Cardinal of Guise constantly alternated between disgrace and favour. In 1562 he attended the Council of Trent, possessing the full confidence of his royal master. Louis de Saint-Gélas, Sieur de Lassy, Arnaud du Ferrier, President of the Parlement of Paris, and Guy de Faur de Pitrac, royal counsellor, who represented Charles IX at the Council from 28 May, 1562, to the end of the year were joined by the Cardinal of Lorraine. He was instructed to arrive at an understanding with the Germans, who proposed to reform the Church in head and members and to authorize at once Communion under both Kinds, prayers in the vernacular, and the marriage of the clergy. In the reform articles which he presented (2 Jan., 1563), he was silent on the last point, but petitioned for the other two. Pius IV was indignant, and the cardinal denounced Rome as the source of all abuses. In the questions of precedence which arose between him and the Spanish ambassador, Count de Luna, Pius IV decided for the latter. However, in September, 1563, while on a visit to Rome, the cardinal, intent perhaps on securing the pope's assistance for the realization of the political ambitions of the Guises, professed opinions less decidedly Gallican. Moreover, when he learned that the French ambassadors, who had left the council, were dissatisfied because the legates had obtained from the council approval of a project for the reform of princes', which the latter deemed contrary to the liberties of the Gallican Church, he endeavoured, though without success, to bring about the return of the ambassadors, prevailed on the legates to withdraw the objectionable articles, and strove to secure the immediate publication in France of the decrees of the council; this, however, was refused by Catherine de' Medici.

When, in 1566, François de Montmorency, governor of Paris and his personal enemy, attempted to enter the capital with an armed escort, the ensuing conflict and the precipitate flight of the cardinal gave rise to an outcry of disorders which obliged him to retire to his diocese for two years. In 1570 he aroused the anger of Charles IX by inducing Duke Henri, the eldest of his nephews, to solicit the marriage of Valois, the king's sister, and in 1571 he vexed the king still more when, through spite, he prevented the marriage of this princess with the Prince of Portugal. His share in the negotiations for the marriage between Charles IX and Elizabeth of Austria, and for that of Margaret of Valois with the Prince of Navarre, seems to have won him some favour, which, however, was but brief, for Catherine de' Medici knew only too well what a constant menace the personal policy of the Guises constituted for that of the King. Shortly after the death of Charles IX the cardinal appeared before his successor, Henry III, but died soon after.

VI. LOUIS I de LORNAINE, Cardinal of Guise, b. 21 Oct., 1527; d. at Paris, 24 March, 1578, the brother of François de Guise and of the second Cardinal of Lorraine. He became Bishop of Troyes in 1545, of Albi in 1550, cardinal in 1553, under the name of Cardinal of Guise, Archbishop of Sens in 1561, but resigned the archiepiscopal see in 1562 in favour of Cardinal de Feltrevé. He crowned Henry II, 13 Feb., 1575. Contemporary witnesses do not seem to agree with regard to him. L'Estoile calls him a merry gourmet, le cardinal des boutilles, while Brantôme praises his knowledge and political good sense, especially in his old age.

V. LOUIS I de GUISE, Queen of Scotland; b. 22 Nov., 1515; d. at Edinburgh, 10 June, 1566; sister of François de Guise and of the second Cardinal of Lorraine, and eldest of the twelve children of Claude de Lorraine, Duke of Guise, and Antoinette de Bourbon. Left a widow in 1535, after a year of married life with Louis II d'Orléans, Duke of Longueville, she refused to marry Henry VIII, King of England, but the express command of Francis I consented to go to Scotland to wed (9 May, 1538) James V, King of Scotland, whose first wife, Margaret of France, had died a year before. By James V she had (7 or 8 Dec., 1542) one d a u g h t e r, Mary Stuart, and a week later (14 Dec.) she became a widow and regent. Henry VIII sought to take advantage of this regency to establish in Scotland an anti-Catholic influence, and to this end wrung from Mary of Guise the treaty of 12 March, 1543, which promised Mary Stuart in marriage to Edward, his son. Mary of Guise, however, particularly after the death of her adviser, Cardinal Beaton (1546), Looked to France for the support of a Catholic policy, and it was decided by the Estates of Scotland (5 Feb., 1548) that Mary Stuart should be sent to that country, Scotland's oldest and most faithful ally, to be married to the young Dauphin Francis, son of Henry II. While the Reformation continued to progress in Scotland, Mary of Guise, with the advice and assistance of her brother, François de Guise and the second Cardinal of Lorraine, succeeded in maintaining her authority. From Paris her brothers kept her informed of the great success achieved by her daughter, Mary Stuart. "She rules the king and queen," wrote the Cardinal of Lorraine. On the marriage of Mary Stuart with the Dauphin Francis, Henry II desired them to assume the titles of King and Queen of England and Ireland, alleging that Elizabeth, daughter of Henry VIII, and Anne Boleyn, was ineligible, being the child of an illegitimate marriage, also a heretic. The Guises hoped for a brief period that as a result of their policy Catholic rule would be re-established throughout Great Britain. Nicolas de Bellèque, Bishop of Amiens, and several doctors of the Sorbonne went to Scotland in 1559 to prevail upon Mary of Guise to put on trial all non-Catholic ecclesiastics. Though of a moderate temper and though she wrote to the Guises that the only means of preserving the old religion in Scotland was to allow the people complete liberty of conscience, the queen dared not oppose the orders from France. A revolt followed; the Protestants pillaged churches and monasteries and entered Edinburgh. John Knox proclaimed the right of insurrection against tyranny; and the assembly of the peers and barons of the kingdom declared Mary of Guise deposed from the regency (21 Oct., 1559). She was then at Leith, guarded by a
trop of French soldiers. They soon overcame the Protestant troops and she was able to enter Edinburgh, but an English army sent by Elizabeth to the assistance of the Protestants laid siege to Edinburgh, and at this juncture Mary of Guise died.

**VII. HENRI I DE LORRAINE,** Prince de Joinville, and in 1563 third Duke of Guise, b. 31 Dec., 1550, the son of Francois de Guise and Anne d’Este; d. at Blois, 23 Dec., 1588. The rumours which attributed to Coligny a share in the murder of Francis, de Guise at the young Henri de Guise, then thirteen years old, the future avenger of his father and the leader of the Catholic party. While the Cardinal of Lorraine maintained the ascendancy and the numerous following of his family, the young Henri, leaving France, had no part in the patched up reconciliation at Montauban between his mother and Coligny. In July, 1566, he went to Hungary to fight in the emperor’s service against the Turks. When he returned to France he took part in the second and third Huguenot wars, distinguishing himself at the battles of Saint-Denis (1567), Jarnac, Moncontour, and at the defence of Poitiers (1569) against Coligny. His pretensions (1570) to the hand of Margaret of Valois, sister of Charles IX, seriously offended the king, but he was restored to favour on his hastily marrying Catharine de Clèves (1548–1833), widow of the Prince de Forcen and goddaughter of Catharine de’ Medici, noted for the frivolity of her youth and for the strange freedom with which she had caused her lovers to be painted in her Book of Hours as crucified.

Between 1570 and 1572 Henri de Guise was much disturbed by the ascendancy of Coligny and the Protestants in the counsels of Charles IX. To similar suspicious fears, shared by Catharine de’ Medici, must be traced the St. Bartholomew massacre. Guise was accused of having given the impulse by stationing Maurevern (22 Aug., 1572) on the route taken by Coligny, and when the next day Catharine de’ Medici insisted that, in order to forestall an outbreak of Protestant vengeance, Charles IX should order the death of several of their chiefs, Guise was summoned to the palace to arrange for the execution of the plan. For the massacre and the deplorable proportions it assumed, see Saint Bartholomew’s Day. During the night of 24 August, Henri de Guise, offered a guard of armed men, went to Coligny’s dwelling, and while his attendants slew Coligny he waited on horseback in the courtyard and cried: “Is he quite dead?” In repelling the repeated attacks of the Huguenot at the battle of Dornais (10 Oct., 1575) during the fifth Huguenot war, Henri de Guise received a wound on the cheek which led to his being thenceforth known, by his father, as Le Balafre. His power increased, and he was regarded as a second Judas Machabaeus. His popularity was now so great that a contemporary wrote: “It is too little to say that France was in love with that man; she was bewitched by him.” King Henry III began to feel that his own safety was threatened, the powerful family was beginning to aspire to the throne. In 1576 the Holy League was organized, centred at once about the popular hero, Henri de Guise, and within a few months had at its disposal 26,000 infantry and 5,000 cavalry. The object of the League was to defend the Catholic religion in France. Still earlier, at Toulouse (1563), Angers (1565), Dijon (1567), Bourges and Troyes (1568), Catholic leagues had been formed, composed of loyal and pious middle-class citizens. In 1576, however, the Holy League was established among the aristocracy, according to a declaration spread throughout France by Guise, this association of princes, lords, and gentlemen had a twofold purpose: (1) To establish in its fullness the law of God; to restore and maintain God’s holy service according to the form and manner of the Holy, Catholic, Apostolic, and Roman Church; to make the Divine King, the Son of God, the source of authority, duty, and obedience owed him by his subjects, but with the proviso that nothing shall be done to the prejudice of what may be enjoined by the States-General. (2) To restore to the provinces and the states of the realm, under the protection of the League, their ancient rights, pre-eminence, franchises, and liberties such as they had been from the time of Clovis, the first Christian king, and, as much better and more profitable, if improvement were possible, as they could be made under the protection of the League. From the beginning, therefore, a decentralizing as well as a Catholic tendency characterized the League.

The Huguenots pretended to have discovered among the papers of one Jean David that the Guises had forwarded to Rome a memorial claiming that, by reason of their descent from Charlemagne, Henry III should yield them the throne of France.

The League was first organized in Picardy under the direction of the Maréchal d’Humières, governor of Péronne, Roye, and Montdidier, then in other provinces, and finally in Paris, under the direction of the avocat, Pierre Hennequin, and the Labruyères, father and son. Henry III, fearing to become a prisoner of the Catholic forces, immediately signed with the Protestants the Peace of Beaulieu, by which he granted them important concessions, but at the States-General of Blois (November–December, 1576) the influence of the League was preponderant. By the edict of 1 Jan., 1577, the Court annulled the Peace of Beaulieu, and Henry III even joined the League. This was the signal for two new revolts, one from the military talents and Catholic zeal of Henri de Guise naturally contrasted with the cowardice and wavering policy of the king. The former stood out more and more distinctly as the leader of the Catholic party, while Henry of Navarre, the future Henry IV, again posed as the champion of the Protestants.

In the meantime occurred the death of Francis of Valois (10 June, 1584), brother of Henry III and heir presumptive to the throne. It was at once obvious that the Valois dynasty would become extinct with Henry III, and that Henry of Navarre, leader of the Protestants, would be the natural heir to the throne. Henri de Guise and the League determined to provide at once against the possibility of
such an event. On the one hand, pamphleteers and genealogists, with an eye to the future, wrote countless brochures to prove that the Guises were the real descendants of Charlemagne, and that, like Pepin the Short, they might with the assistance of the Holy See assume the throne of France. On the other hand, Henri de Guise concluded the Treaty of Joinville (31 Dec., 1584) with Philip II of Spain, and had it ratified by Sixtus V. This stipulated that, at the death of Henry III, the Cardinal de Bourbon, Archbishop of Rouen (1520–90), third son of Charles de Bourbon, Duke of Bourbon, should be made king; and Guise should be created crown prince. "He and his children shall never come to the exclusion of all French princes of the blood at present heretics and relapsed." The Cardinal de Bourbon published a manifesto to this effect (1 April, 1585). Philip II of Spain granted the League a subsidy of 50,000 crowns a month; moreover, the clergy and lower middle classes of Paris organized for the Catholic defence, although the municipality was hostile to the League.

Civil war now broke out, and by the treaty of Neuvours Henry III took sides with the League and revoked all edicts which granted liberty to Protestants (15 July, 1586). When Sixtus V was assured that Henry III was not going to abdicate, and the cardinals of the Roman government, he launched a Bull of excommunication against the future Henry IV. So long as he was solicited to uphold the Guises against Henry III, the pope had temporised, but now that the League was operating under royal authority, he interfered in favour of the monarchical Guises in勃艮第. He should be created crown prince of Champagne and Picardy, and took Toul and Verdun. Their lieutenant, Anne de Joyeuse, was defeated at Coutras by Henry of Navarre, but the victories of Henri de Guise at Vimory (26 Oct., 1587) and at Auneau (24 Nov., 1587) compelled the withdrawal of the German Protestant troops. A secret committee organized the League at Paris and an agreement was signed by the nobility, but at Paris it drew its strength from the common people and the religious orders. The secret committee, at first five members, then sixteen, divided Paris into quarters, and in each quarter made preparations for war. Soon 30,000 Parisians declared themselves ready to serve Guise, while in the pulpits the preachers of the League upheld in impassioned language the rights of the people and of the pope. Furthermore, by agreement with Philip II, Guise sent the Due d'Aumale to overthrow the strongholds of Picardy, in order to assure by this means retreat to the fourth wall of the invincible Amsterdam, which was being sent to England to avenge Mary Stuart, niece of François de Guise, executed at the command of Elizabeth (8 Feb., 1587).

Henry III now took fright and ordered Henri de Guise to remain in his government of Champagne; he entered Paris, nevertheless, in defiance of the king (9 May, 1588), and was welcomed with enthusiasm by the masses. Repairing to the Louvre, accompanied by 400 gentlemen, he called on Henry III to establish the Inquisition and promulgate in France the decrees of the Council of Trent. The king protested and sought to bring troops to Paris on whom he might rely. A difficult task, and the people were about to march to the Louvre (Day of Barricades, 12 May, 1588), but Guise, on horseback and unarmed, rode about Paris calming them. He felt assured that the king, who had made him fine promises, was thenceforth in his hands. The former, however, to escape Guise's tutelage, withdrew on the march to Champagne.

Guise was now absolute master of Paris, and for some days was all-powerful. The brilliance of his victory, however, encouraged the extremists of the League. The Sixteen, in possession of the municipalities, committed many excesses, while such preachers as Boucher, Guincestre, and Pigenot, cried loudly for civil war. It was to this that he had given birth, and Guise now offered to treat with the king, and the latter signed the Edict of Union at Rouen (10 July, 1588), by which he ratified the League, gave Guise various offices of trust, and made him lieutenant-general of the kingdom in opposition to the Protestants, barred Henry of Navarre from succession to the throne, and promised the inheritance of the States-General. In this way Henry III gained time.

The States-General assembled at Blois (Sept.–Dec., 1588), the members of the League being in control. Speeches were made, some aristocratic in sentiment, others democratic, but all directed against royal absolutism; and Guise was himself the leader, not only of a religious, but also of a political movement. The members of the assembly treated Henry III as a sluggard king; the role of Guise resembled that of Charlemagne's forbears under the last Merovingsians.

At this juncture Henry III determined to rid himself of Guise, and his death was decided upon. On taking his seat at table (22 Dec., 1588), Guise found beneath his napkin a note which warned him that a plot was on foot against him. Below the warning he wrote: "None would dare", and threw it away. The next morning he was summoned by Henry III, and slain by the guards. A carpet was thrown over his body to make it impossible to ascertain how they passed, calling him the "handsome King of Paris". Henry III left his apartments to kick the dead man in the face. That same night, Louis, Cardinal of Guise (1555–88), brother of Henri, was assassinated by four archers of the king, who feared lest the Parisian people should rise against him. The bodies of the two leaders of the League were burned and thrown into the Loire. This double assassination was at once the subject of a multitude of pamphlets.

By Catherine de Clèves, Henri de Guise had seven daughters and seven sons, on one of whom, François-Alexandre (1589–1614), a posthumous son, the enthusiastic Parisians bestowed the title of King of Paris during his presence in the city. The latter died with his father. His policy was that of his brother, Henri: alliance with Spain against Henry of Navarre, ultimately against Henry III, to bring about the succession to the throne of the Cardinal de Bourbon and finally of the Guises. Henry III, it is true, had allied himself with the League by the Treaty of Neuvours, but Mayenne succeeded in destroying the royal attitude. The Maréchal de Matignon, who governed Guise for the king, hindered more than he favoured Mayenne's campaign against the Protestants of the south. When the assassination of Henri de Guise revealed the extent of the royal duplicity, Mayenne was at Lyons, and Camoëns de Moncada, the Spanish ambassador, had time to gain a place of safety before the arrival of Colonel d'Ornano, whom Henry III had sent to arrest him. He retired to his government of Burgundy, roused that province and also Champagne, of which his dead brother had been governor, marched on Paris, and began his active role in the history of France.

Henry III, who had caused the assassination of
Henri de Guise was denounced by the preachers as a traitor, a heretic, and excommunicate. The Sorbonne and the Parlement proclaimed his deposition. Together with the aldermen and city councillors, representatives of the Parisian middle classes, Mayenne organized the General Council of Union (Conseil général d'union). This council undertook to seek in behalf of the whole kingdom, decrease taxes by one-fourth, prepare to defend Paris against Henry of Navarre, called for material assistance from Philip II and for the moral aid of the pope, and entered into communication with most of the large cities of the kingdom.

Civil war now raged in France, and many cities took the side of the League and Catholicism against the Protestant Henry of Navarre and the indecision of Henry III. After vainly endeavouring to enter into negotiations with Mayenne, who naturally distrusted the sincerity of his brother, Henry III joined forces with the Protestant troops of Henry of Navarre (1 May, 1589). For some time Mayenne waged war against the allied forces, but after the defeat of the Duc d'Aumale at Senlis (17 May), he felt that Paris was threatened and was obliged to fall back for its defence. The united Royalist and Protestant forces reached an agreement with Mayenne from Switzerland and Germany, while the troops of Mayenne and the League, shut up in Paris (1 June), were cut off from all reinforcements, weakened by desertions, and reduced to 8000 men, when Henry III and Henry of Navarre with a force of 42,000 began an active siege of the capital (28 July). A sort of terror now set in among the Parisian populace. Suspicion fell on: domiciliary visits and proscriptions were the order of the day. Finally the Dominican monk, Jacques Clément, assassinated Henry III (1 August), whereupon Henry of Navarre, abandoned by some of his troops, raised the siege.

The crown vacant, the Catholics who formed the majority in France being unwilling to recognize the Protestant Henry of Navarre. Had Mayenne dared to seize the throne and proclaim himself king, his boldness might have succeeded. With Henri de Guise, however, he had five years previously designated the aged Cardinal de Bourbon as heir presumptive, and while the latter lived it was difficult for Mayenne to pretend to the throne. But the sick and aged prelate was a prisoner of Henry of Navarre; the members of the League were therefore unable to place their candidate securely on the throne, since he was in the hands of the Protestant pretender. Mayenne sent demands from Tournai, and the Cardinal of Bourbon, took the offensive, and set out for Normandy. At Acques, near Dieppe, he vainly offered battle to Henry of Navarre, and after eleven days of skirmishing (September, 1589) withdrew to Amiens. Learning suddenly that Henry of Navarre had stolen upon Paris, and had taken by surprise the suburbs of the left bank of the Seine, he hastened to the capital to compel the retreat of Navarre.

A certain number of moderate Catholics, known as les Politiques, were in favour of the latter, and he agreed with them that within six months he would submit the religious question to a council, and until that event would offer no hindrance to the maintenance of the Catholic religion. Among the Politiques were some who already cherished the hope that Henry of Navarre would become a Catholic. One of them, Faudoas de Belin, urged Mayenne to join the Politiques and to entreat Henry IV to become a Catholic. While the latter was quite willing, his exhortation to Mayenne to reflect, nevertheless he did not accept Belin's propositions, and in the spring of 1590, being reinforced from Flanders and Lorraine, he attacked Henry IV on the plain of Ivry (14 March, 1590). Be- ing defeated, he was compelled to return to Paris, where he announced to the inhabitants that he was going to seek reinforcements in Flanders, and called upon them to defend themselves energetically. The death of the Cardinal de Bourbon (8 May, 1590) left the members of the League uncertain on an important point, namely, who was the Catholic heir to the throne.

Then began, in Mayenne's absence, the famous siege of Paris by Henry IV. Each day the Spanish ambassador, Bernardino de Mendoza, distributed 120 crowns' worth of bread, the papal legate gave his plate to pay the troops, and even the ornaments of the churches were sold. The people satisfied their hunger at the street corners, where they ate from great cauldrons, in which a mixture of oats and bran was boiling, and they ate the days in the churches, where twice a day the preachers encouraged them. They assured the people that Mayenne and Alessandro Farmese, Duke of Parma, would come to their relief. Mayenne, however, tarried, and the famine continued. Henry of Navarre permitted the beggars, women, and students to leave the city, but the provisions still grew less. Men ate the skins of animals, ground and boiled their bones, disinterred the bodies in the cemetery of the Innocents and made food of them.

Mayenne, meanwhile, was negotiating with Alessandro Farmese, governor of the Spanish Low Countries, for reinforcements. He succeeded in sending some troops to the relief of Paris (17 June), and the arrival of Farmese (23 Aug.), who joined Mayenne at Meaux, made it possible to revictual the city. Henry of Navarre was compelled to retire, and Mayenne re-entered Paris (18 Sept.). The war dragged on, but the capture by Mayenne of Château-Thierry in 1591 could not offset the damage done by the occupation by Henry of Navarre of the city of Chartres, regarded as the granary of Paris.

The League now suffered from divided councils. The young son of Duke Henri de Guise had just left his prison at Tours, and the more enthusiastic members of the League planned his marriage to a Spanish princess, after which they would make him king. Mayenne was considered too lukewarm, and when Gregory XIV, elected 5 Dec., 1590, and more resolutely devoted to the League than Sixtus V, had renewed the excommunication of Henry of Navarre, and hurled anathema against his adherents (March-June, 1591), the faction of the Sixteen, a body drawn from the councillors (nine members in each), which directed the various quarters of Paris, and about which were gathered no less than 30,000 adherents, desired the establishment of radical laws, according to which every heretic, whether prince, lord, or citizen, should be burned alive, also that the new king should make war on all foreign heretical princes. If the young Duke of Guise could not or would not become king, the Sixteen could associate themselves with Philip II as King of France. To assert their powers and influence they withstood the sudden inflammation of the moderate party: Brisson, first president of the Parlement, and the two councillors Larcher and Tar dif (15 Nov., 1591).

This news reached Mayenne at Laon, and he returned precipitately to Paris (28 Nov.); he caused four of the
Sixteen to be strangled (4 Dec.), and ranged himself decisively on the side of the moderate party. Negotiation with the victor was henceforth a matter of time. President Jeannin transmitted Mayenne's conditions to Henry of Navarre (5 May, 1592). These were that the latter should abjure Protestantism, that all the places in possession of the Catholics should remain for six years under the protection of the League, that Mayenne should become hereditary Duke of Burgundy and Lyonnaise, and grand constable or lieutenant-general of the realm, and that all the members of the League should retain their posts. Henry IV rejected these conditions, and many members of the League were also dissatisfied with them. Mayenne then convoked the National Council (24 June, 1593), at which they were confronted by the task of electing a king. He adjourned the body until 2 April. Mayenne desired neither a Protestant king nor a Spanish queen, hence his delays. But he was in the midst of the Parisians, who were for the most part inclined to have as Queen of France the Spanish Infanta, daughter of Philip II, on condition that she should wed the young Duke of Guise. Mayenne could not openly oppose the project, but he shrewdly caused the Parlement to issue a decree forbidding the transfer of the crown to foreign princesses or princes (28 June, 1593), the result of which was the abdication of the Infanta.

Henry IV made his abjuration 25 July, 1593, and on 31 July signed a truce with Mayenne. While the satire "Ménippe", professing to speak for France, held up to public ridicule the favour exhibited towards Spain by certain members of the League, another pamphlet, the "Dialogue du Maheu et du Manant", issued by Leaguers of the extreme left, cast aspersions on the ability of Mayenne and all but accused him of treason. On 3 January, 1594, the Parlement rallied to Henry IV and expressed the desire that Mayenne should treat definitely with him. Paris, moreover, had ceased to be in sympathy with the League and was longing for the return of the welcomed "Philippe II" (22 March, 1594). Mayenne kept up the struggle for two years longer, assisted by the Spaniards, who, nevertheless, distrusted him since he had prevented their Infanta from becoming Queen of France. Finally, Mayenne retired, discouraged, to his government of Burgundy, and by a definite treaty with Henry IV (January, 1596) declared the League dissolved, retained three places of safety, Soissons, Chalon-sur-Saône, and Seurre, obtained that the princes of the League should be declared innocent of the assassination of Henry III, and that the debts which he had contracted for his party should be paid by Henry IV to the sum of 400,000 crowns. He resigned his government of Burgundy; but his son, Henri de Lorraine, became governor of the Ile de France (exclusive of Paris) and grand chamberlain. Until his death Mayenne remained a faithful subject of Henry IV and the regent, Marie de' Medici, his wife, Henriette de Savoie, he had two sons and two daughters.

IX. CHARLES DE LORRAINE, fourth Duke of Guise, b. 20 Aug., 1571; d. at Cuna (Siene), 30 September, 1640; the eldest son of Henri de Guise. He was arrested at Blois on the day of his father's assassination, and was held prisoner at Tours until 1591. His liberation weakened more than it strengthened the League, for while the Parlement of Paris and the forty members of the League who formed the Council of Union at Paris wished to place Mayenne, the brother of Henri de Guise, on the throne, the faction of the Sixteen and the populace, on the contrary, claimed his son, who was the grandson of Charles de Bourbon, the Duke of Guise, thus giving rise to dissensions in the League. The chances of the young Duke were increased by the possibility of his marriage to the daughter of the King of Spain, Mayenne being already married. But at the States-General of 1593, convoked by Mayenne after the death of the Cardinal de Bourbon, Mayenne diverted the discussion, post-

poned a decision, and had himself simply confirmed in his lieutenant-generalship of the realm. The Duke of Guise soon ceased to belong to the League. In 1594 he declared himself a subject of Henry IV, and slew with his own hand an old member of the League, the Maréchal de Saint-Pol, who reproached him with betraying the memory of his father. Henry IV completed the conquest of the young Duke by the confidence which he placed in him. Despite the long-standing pretensions of the Guises to Provence, the king sent him thither to capture Marseilles from the Duc d'Epernon, who occupied the city in the name of the League. Thus, after 1593, the fourth Duke of Guise, who two years before was on the point of being made King of the Low Countries in alliances that had ended the political and religious policy of the Guises. Charles de Lorraine married (1611) Henriette-Catherine de Joyeuse, by whom he had ten children. He served under Louis XIII against the Protestants, and, having taken the side of the queen-mother, Marie de' Medici, against Richelieu, retired to Italy in 1631, where he died in obscurity.

X. HENRI DE LORRAINE, fifth Duke of Guise, son of Charles de Lorraine, b. 1614; d. 1664. He distinguished himself in 1647 and 1654 during the revolt of the Neapolitan Massaniello against Spain by the two great actual attempts he made on behalf of the government of France, to wrest from the Spaniards for his own benefit the throne of Naples, to which he revived his family's former pretensions. He died without issue.

Georges Goyau.

Guitmund, Bishop of Aversa, a Benedictine monk, theologian, and opponent of Berengarius; b. at an unknown place in Normandy during the first quarter of the eleventh century; d. between 1090-95, at Aversa, near Naples. In his youth he entered the Benedictine monastery of La-Croix-St-Leufroy in the Diocese of Evreux, and about 1060 he was studying theology at the monastery of Bec, where he had Lanfranc as teacher and Clement Anselm as his fellow-student. In 1070 King William the Conqueror called him to England and, as an inducement to remain there, offered him a diocese. The humble monk, however, not only refused the offer, but fearlessly denounced the conquest of England by the Normans as an act of robbery ("Oratio ad Guillelum I" in P. C. xxix, 1509) and became a stanch defender of the Catholic doctrine of Transubstantiation against the heretical Berengarius of Tours. Some time between 1073-77 he wrote, at the instance of one of his fellow-monks by the name of Roger, his famous treatise on the Holy Eucharist, entitled "De corporis et sanguinis Jesu Christi veritate in Eucharistia". It is written in the
form of a dialogue between himself and Roger and contains an exposition as well as a refutation of the doctrines of Berengarius concerning the Holy Eucharist. Guittmund ably defends Transubstantiation against Berengarius, but his notion of the manner of the Real Presence is obscure. Moreover, he does not well distinguish between substance and accident, and hence concludes that the corruptibility of the species is merely a deception of our senses. The work has often appeared in print. The first printed edition was brought out by Erasmus (Freiburg, 1530). Shortly after Guittmund had published his treatise against Berengarius, he obtained permission from his abbot, Odilo, to make a pilgrimage to Rome. Because the name Guittmund had become too well known to suit the humble monk, he exchanged it for that of Christianus and lived for some time in the obscurity of a Roman monastery. When Urban II, who had previously been a monk at Cluny, became pope, he appointed Guittmund Bishop of Aversa, near Naples, in 1088. A few historians hold that he afterwards became a cardinal, but there seems not to be sufficient evidence for this assumption. Besides the work mentioned above, Guittmund is the author of a short treatise on the Trinity and of an epistle to a certain Erastus, written on the death of the latter. His works are published in "Bibl. Patr. Lucii," XVIII, 440 sq.; in Gallandi, "Bibl. veterum Patr.," XIV, 240 sq., and Migne, "P. L.," CXLIX, 1427-1513.

Micheal Ott.

Gulf of St. Lawrence, Vicariate Apostolic of, erected 12 September, 1905, and formed from the prefecture Apostolic of the same name organized 29 May, 1882. It comprises the northern part of the Province of Quebec, east of the Diocese of Chicoutimi, and is a suffragan of Quebec. All the missions of this vicariate have been entrusted to the care of the Eudist Fathers, except the Montagnais Indian stations and other missions for the Naskapi and Eskimo, which are attended by the Oblates of Mary Immaculate. The first vicar apostolic was the Reverend Gustave-Isidore C., J. M., who was born 30 April, 1849, at Josselin, Diocese of Vannes, France, and ordained priest 16 March, 1878. He was appointed Titular Bishop of Sica and Vicar Apostolic of the Gulf of St. Lawrence 12 September, 1905, and consecrated in the cathedral of Quebec 19 October, 1905. He fixed his residence at Seven Islands, Saguenay County, Quebec. There is a Catholic population of 9,650 (including 2,000 Indians) in the vicariate, attended by 20 priests, who care for 12 missions with residences, 28 other stations, 19 chapels, and 19 oratories. The Sisters of the Congregation of the Daughters of Jesus teach in 26 schools having 930 pupils (360 boys, 570 girls). Le Canada Écclésiastique (Montreal, 1909); Catholic Directory (Milwaukee, 1900).

Thomas F. Meehan.

Gunpowder Plot, The (oath taken May, 1604, plot discovered November, 1605). Robert Catesby, the originator of the Powder Plot, owned estates at Lapworth and Ashby St. Legers. His ancient and honourable family had stood, with occasional lapses, perhaps, but on the whole with fidelity and courage, for the ancient faith. Robert, however, had begun differently. He had been at Oxford in 1588, after the Gunpowder Plot; Parliament had won the upper hand, had married into a Protestant family, and his son was baptised in the Protestant church. Father Gerard says that he "was very wild, and as he kept company with the best noblemen in the land, he spent much above his rate". But at, or soon after, his father's death in 1598 "he was reclaimed from his wild courses, and became a Catholic" and was conspicuously earnest in all practices of religion. We, unfortunately, also find in him an habitual inclination towards political and violent measures. This was conspicuously shown during the brief revolt of the Earl of Essex, in February, 1601. Upon receiving a promise of toleration for his co-religionists, Catesby immediately joined him, and also induced some other Catholics to join—among others, Thomas Percy, Thomas Winter, John Wright, and Lord Montague, all of whom we shall afterwards find in, or at the edge of, the Powder Plot. Catesby, who is said to have behaved with courage and determination, escaped the fate of Essex with a ruinous fine, from which his estates never recovered.

But the mental warp caused by those few days at Southampton House was more deleterious still. He was probably henceforth connected with all the schemes for political or forcible remedies which were mooted at this time. Early in 1602 his ally, Thomas Winter, is found negotiating in Spain for assistance, in case Elizabeth's death should leave the Catholics a chance of asserting themselves, for it was one of Elizabeth's manias to leave the succession an open question. Again, he knew of, perhaps had something to do with, the obtaining of a Brief from the Pope which exhorted Catholics to work for a Catholic successor to the throne (The Month, June, 1903). Still it is not to be imagined that Catesby's faction, for all their ultra-Catholic professions, thought themselves debarred from treating with Protestants when that was to their advantage. While Winter negotiated in Madrid, Percy was busy at Edinburgh, and received from James promises of favour for the English Catholics. So notoriou was it that the Catesby clique were "hunger-starved for innovations", that when Elizabeth was sickening, he, with Trueman, Bainham, and the two Wrights, was put under restraint by order of the Council, but a few days only (Caden to Cotton, 15 March, 1903; Privy Council Registers, XXXII, 490). Then the queen died and James succeeded (24 March, 1903). After that everything seemed full of promise, and, so far as we can see, the universal hope of better things to come brought a period of peace to Catesby's restless mind.

But as time went on, James found it difficult, nay impossible, with Elizabeth's ministers still in office, to carry out those promises of toleration, which he had made to the Catholics when he was in Scotland, and believed that their aid would be extremely important. Then he felt secure on the plan of the Catholics, his tone changed. It was reported that, when he had crossed the English border on his way to London, and found himself welcomed by all classes, he had turned to one of his old councillors, and said "Na, na, gud fayth, wees' nedd the Papists now" (Terry-Dodd, Vol. IV). His accession was instead marked by a very welcome relaxation of the previous persecution. The fines exacted for recusancy sank in King James's first year to about one-sixth of what they used to be. But the policy of toleration was intensely abhorrent to the Puritan spirit in England, and James could not continue it with the governmental machinery at his command, and he himself had no way. In the fifth half-year of his reign the fines were actually higher than they had ever been before, and the number of martyrs was not far short of the Elizabethan average. At the first indication of this change of policy (March, 1604), Catesby made up his mind that there was no remedy except in the Powder Plot, and he planned in his masterful way on his former allies joining him in the venture. Thomas Winter says that when Catesby sent for him in the beginning of Lent, and explained his project, "he wondered at the strangeness of the conceit", expressed some doubt as to its success, and no doubt as to the scandal and "rin that would result from its failure.
But there was no resisting his imperious friend, and he soon expressed himself ready "for this, or whatever else, if he resolved upon it". The first orders were that Winter should go to the Spanish Netherlands and see whether political pressure applied by Spain might not relieve the sufferings of the Catholics in England, but he was too bring back a "trusty gentleman", such as Mr. Guy Fawkes. Winter soon discovered what Catesby had probably foreseen in England, that there was no hope at all of any immediate relief from friends abroad, and he returned with Fawkes in his company.

1605, Catesby, Thomas Percy (who by some is believed to have been the originator of the plot), Thomas Winter, John Wright, and Fawkes met in London, were initiated into the plot, and then adjourned till they could take an oath of secrecy. They did this one May morning in "a house behind St. Clement's"; and then, passing to another room, heard Mass and received Communion together, the priest (whom they believed to be Father John Gerard) having no inking of their real intentions. It is of course impossible to give a rational explanation of their insensate crime. They did not belong to the criminal class, they were not actuated by personal ambitions. They were, indeed, most of them married and had children, several of them were zealous converts who had made sacrifices to embrace Catholicism, or rather to return to it, for they mostly came of Catholic parents. On the other hand, though religiously minded, they were by no means saintly. They were dairymen and duellists, and Percy was a bigamist. They were kept in a state of constant irritation against the government by a code of infamous laws against their religion, and a series of galling fines. They had, as we have seen, dabbed in treason and plans of violence for some years past, and now they formed themselves into a secret society, ready to pounce on their number of objects. They understood their oath to contain a promise not to tell even their confessors of their plans, so sure did they feel of the rectitude of their design. Nor did they do so until fifteen months later, when, Father Garnet having written to Rome to procure a clear condemnation of any and every attempt at violence, Catesby, with the cognizance of Winter, had recourse to Father Greenway with results to which we must return later.

The first active step (24 May, 1604) was to hire as a lodging Mr. Wynnard's tenement, which lay close to the House of Parliament, and had a convenient stairway down towards the Thames. But no sooner was this taken than a government committee claimed the right of sitting there, so the preparations for mining had to be postponed for six months. Before Christmas, however, they had opened the mine from the ground floor of their house, and advanced as far as the wall of the House of Lords; then they made slow progress in working their way through its medieval masonry. In March, however, they discovered that the cellar of the House of Lords might be fired, and on Lady Day, 1605, a bargain was struck for that purpose. They had now only to carry in their powder, and cover it with faggots of firewood, and the first part of their task had been accomplished with surprising facility. They then separated, to make preparations for what should follow when the blow was struck. For this it was necessary to procure more money, and by consequence to admit more members. Five were subscribed before, and five more, Christopher Wright, Robert Keys, Thomas Bates, Robert Winter, and John Grant had been added since. Three richer men were now sworn in, Ambrose Rookwood, Sir Everard Digby, and, lastly, Francis Tresham. It was this thirteenth man who has been generally believed to have caused the detection of the plot, by a letter sent to his cousin Lord Montague on 26 Octob-

ber. This mysterious document, which is still extant, is written in a feigned hand, with an affectation of illiterateness and in the obscurest of styles. The recipient was warned against attending Parliament on the day appointed, and hints were added as to the specific character of a "terrible blow" that would befall her. "At the conclusion of any stage of the proceedings, they shall not see who hurt them"; "the dagger will be past as soon [i.e. quickly] as you have burnt this letter". Montague, having received this letter, first caused it to be read aloud at his table before some mutual friends of the conspirators, then he took it to the government.

Contrary to what might have been expected, no measures were taken for the security of the House, and the conspirators, who had heard of Montague's letter, breathed again. Catesby had from the first laid down this principle, "Let us give an attempt, and where it failed, pass no further." The attempt had not yet failed, they did not think the time had come to "pass no further". So they continued all their preparations, and their friends were invited to meet for a big hunt in Warwickshire on the fatal day. The official account of the government delay is briefly this: No one at all first understood the inner meaning of the letter that was brought by the constant interpreter and apprehend some dark phrases therein, and thereupon ordered a search to be made". That this story is not strictly true is acknowledged by every critic (see end of this article). Whatever the germ of truth in it may be, the delay in itself was far from sagacious. If the conspirators had not been foolhardy, they would have fled as soon as they knew that one of their number had turned informer. However, on the last day before that fixed for the explosion, an inspection of the precincts of the House was resolved upon and conducted by a high official, but led to no result. Yet another search was then ordered, on the pretext that some had fled or had the powder, and had been purloined, and this was immediately successful. The powder was found and Fawkes, who was on the watch close by, was arrested. Next day (5 November) the conspirators fled to their rendezvous, and thus betrayed themselves. It was with difficulty that they got their own retainers to keep with them, the Catholics everywhere refusing them aid.

Their only chance, they thought, was to fly into Wales, where, in the hilly country, and among a people which had not yet fully accepted religious changes, they might still possibly find safety. But on reaching the coast, they saw that the retreat to the interior was impossible, and were preparing to sell their lives dearly when a chance spark exploded their store of powder, wounding some and discouraging all. It seemed a judgment of God, that those who had plotted with powder should perish through powder. Their eyes seemed to have been length opened to the reality of their offence. They made their last confessions to a passing priest, Father Hammond, and they prepared without illusions for the fate that was before them. Next morning (8 November) they were attacked, and defended themselves bravely against heavy odds—Catesby, Percy, and the two Wrights were killed, and the rest wounded and captured. After an almost endless series of examinations the survivors were put on their trials on 27 January, and executed on 31 January, 1606. Their deaths did them credit; in particular the last letters and verses of Sir Everard Digby, which were not intended for the public eye, were discovered or published till long after, produce the impression of a man who deserved a happier fate.

The Attempt to Incriminate the Church.—We have already seen that the plot had been occasioned by the persecution.—"If any one green leaf for Catholics could have been visibly discerned by the eye of Catesby, Winter, Garnet, Faux and the rest, they
would neither have entered into practice [i.e. treason] nor missions nor combinations" ("True Relation", sig. M. 4). This was a boast of one of the king's ministers, to show how far toleration had ever been from their policy. Now their object was to make the plot an excuse for increasing the persecution. The following words of Lord Salisbury (4 Dec., 1605), to a private secretary, are said to have shown the spirit and method with which they addressed themselves to their task: "I have received from you directions to learn the names of those priests, which have been confessors and ministers of the sacraments to those conspirators, because it followeth indeed in consequence that they could be ignorant of their purposes. For all men that doubt, resolve to them for satisfaction, and all men use confession to obtain absolution." He then goes on to say that most of the conspirators "have wilfully forsworn that the priests knew anything in particular, and obstinately refuse to be accusers of them, yea what torturessoever they be put to. But, of course, the unfortunate victims were not able to resist indefinitely, and ere long the inquisitors discovered that the conspirators had frequented the Jesuits, but the fathers for profession. So a proclamation was issued, 15 Jan., 1606, declaring that Father Henry Garnet, John Gerard, and Oswald Greenway (or Greenwell) were proved to be co-operators in the plot "by divers confessions of many conspirators!" This accusation was reaffirmed in no less than four Acts of Parliament (James I, cc. 2, 4, 5), in the indictment of the conspirators, and in other public documents, though as yet those who James knew not. Notwithstanding the real state of the case, of which we shall now hear. Indeed Salisbury afterwards confessed in an unguarded manner that it was by the hole-in-the-wall trick that "the Lords had some light and proof of matter against you [Garnet], which must otherwise have been discovered by some one's observation." The true extent of the intercourse of the conspirators with the priests will be best shown, going back to the commencement and following the historical order.

Catesby, then, had been acquainted with Garnet since the close of Elisabeth's reign, and probably his conversion, for he was a visitor at the house of the Vauxes and Brooke's, with whom Garnet lived as chaplain. And as far back as May, 1604, he had noticed Catesby's aversion of mind from the king and government. On 29 Aug., 1604, he wrote to his superiors in Rome (apropos of the treaty of peace with Spain, which he hoped might contain a clause in favour of the English Catholics): "If the affair of toleration go not well, Catholics will no more be quiet. Jesuits cannot hinder it. Let the pope forbid all Catholics to stir!" Next spring (8 May, 1605) he wrote in still more urgent tones: "All are desperate. Divers Catholics are offended with Jesuits, and say that Jesuits compadre and hinder all forcible enterprises. I dare not inform myself of their plans, because of the prohibition of Father General for meddling in such affairs, and so I cannot give you an exact account. This I know by mere chance." The "desperation" referred to here was caused by the serious increase of persecution at this time. In particular Garnet had in mind the "little tumult" in Wales, where the Catholics had assembled in force (21 March, 1605) and had defiantly buried with religious ceremonies the body of Mrs. Alice Wellington, after the parson had refused to do so, because she was, he said, excommunicated (Cath. Rec. Society, ii, 291). Garnet's letter, which may have been backed by others, drew from Rome a letter ordering the archpriest Blackwell to "fuel the fire" and "urge his Papa," "to hinder by all possible means all conspiracies of Catholics." This prohibition was published by Blackwell, 22 July, 1605, and his letter is still extant (Record Office, Dom. Jac., xv, 13).

Till June, 1605, Garnet had no serious suspicions of Catesby. On 9 June, however, at a - Blackwell, 22 July, 1605, and his letter is still extant (Record Office, Dom. Jac., xv, 13).

Till June, 1605, Garnet had no serious suspicions of Catesby. On 9 June, however, at a meeting of the inquisitors, he stated that he had found "many persons" to be suspicious of Catesby, and that he had heard from reliable persons that Catesby had "brained about" the project of a plot against the Queen. Garnet's suspicions were decidedly aroused, and at their next meeting, in July, he laid the whole on the need of patience, and on the prohibitions that had been issued from Rome of all violent courses. Catesby's answer calmed the Father's fears for the time, but still at their next meeting Garnet thought well to read to him the pope's prohibition of violent courses, which Blackwell was about to publish. Catesby's answer was not submissive; he was not bound, he said, to accept Garnet's word as to the pope's commands. Garnet rather weakly suggested that he should ask the pope himself, and to this the crafty conspirator at once consented, for with careful management he could thus stave off the papal prohibition, until it would be too late to stop. Though here and elsewhere Garnet does not show himself possessed of the wisdom of the serpent, his mind and straightforward conduct was not without its effect, even on the masterful Catesby. For only now, after having committed himself so thoroughly to his desperate enterprise, did he feel the need of consulting his confessor on its liceity, and told the story under the seal of confession to Father Greenway, and "the third time he revealed it to none but Garnet" (Foley, iv, 104). Not knowing what to do in the presence of such a danger, Greenway (26 July) came and consulted Garnet, of course again under the seal. Garnet conjured Greenway to do everything he possibly could to stop Catesby's mad enterprise, and Greenway afterwards solemnly declared that he had in truth done his best, "as much as if the life of the pope had been at stake" ("Apologia", 258).

Catesby did not refuse to obey, and Garnet too easily assumed, until too late, that the attempt was, if not given up, postponed till the pope should be consulted, though in truth the plot continued unchecked until all was discovered. Garnet afterwards asked pardon for this, admitting that between hope and fear, embarrassment and uncertainty, he had not taken absolutely all the means to stop the conspirators, which he might perhaps have taken on the strength of his general suspicions, even though he
could do nothing in virtue of his sacramental knowledge. We have already seen that a proclamation for his arrest was issued on 15 January, 1606, and on 31 January he was found stiff and unable to move, after lying a week cramped in a hiding-hole with Father Oldcorne. Acting on the hint, the two Jesuits wrung the matter that lay nearest to their hearts, making their confessions one to another, and recounting what questions they had been asked, and how they had answered; but spies, who had been stationed hard by, overheard all this confidential intercourse. After some days, Garnet was charged with one of his own confessions, and when he endeavoured to evade it, he found to his consternation that all his secrets were betrayed.

Though the extant reports of the spies show that the subjects overheard were by no means fully understood, Garnet was made to believe that the evidence was fatal and overwhelming against others, as well as against himself. Not knowing now how to act, he thought that his only course was to tell everything frankly and clearly, and so made use of the permission, which Greenway had given him, to speak about the secret in a case of grave necessity, after the matter had become public. The government thus eventually came to understand Father Gerard's view, and in moments of supreme difficulty like these, Garnet seems somewhat lacking in worldly wisdom, it is hard to see where we can definitely blame him, considering the simplicity of his character and the continuous deflections practiced upon him, which were far more numerous than can be set forth here. "If I had been in Garnet's place," wrote Dr. Lingard to a friend, "I think I should have acted exactly as he did." In his public trial, on the other hand, he showed to advantage. Though attacked unscrupulously by the ablest lawyers of the day, and of course condemned, his defence was simple, honest, and convincing. His story could not be shaken.

After sentence he was long kept in prison, where further frauds were practised upon him. One of these was very subtle. Sir William Waade, Lieutenant of the Tower, wrote (4 April, 1606): "I hope to use the means to make him acknowledge... that the discourse with Greenway's sons was not in confession. I draw him to say he conceived it to be in confession"—as if that were the first step to an acknowledgement that in truth it was not so—"henceover Greenway did understand it" (The Month, July, 1901). These last words about Greenway's dissenting from Garnet (which he never did), taken together with the presence in Waade's letter of an intercepted note from Garnet addressed to Greenway in prison (Greenway was really free and out of England), leads obviously to the inference that Waade had conveyed to Garnet the false information that Greenway was taken, and that he was alleging that he did not understand that their discourse was in confession. Garnet had in fact again been overreached, and had sent through his keeper (who feigned friendship and volunteered to carry letters secretly) the note to Greenway, which had come into Waade's hands. If Garnet had not been clear about the facts of the case by this time, and his mind and conscience, this note would most certainly have betrayed him; as it is, his letter, by its sincerity and consistency, offers to us convincing evidence of the truth of his story. Garnet's execution took place in St. Paul's churchyard, before a crowd, the like of which had never been seen before, on 5 May 1606. In the said trial, Garnet made a favourable impression on his audience. Being still under the illusions described above, he carefully avoided every appearance of claiming beforehand the victory of martyrdom, but this, in effect, rather increased than diminished the lustre of his faith, piety, and patience.

The results of the plot on the fortunes of the English Catholics were indeed serious. The government made use of the anti-Catholic laws then enforced (9 and 10 Vict. c. 59), though at earlier dates the Emancipation Acts and other relief bills had rendered their pains and penalties ineffectual. Still more protracted has been the controversy to which the plot gave rise, of which in fact we have not yet seen the end. The fifth of November was celebrated by law (repealed in 1859) as a sort of legal feast-day of Protestant tradition. Fawke's Christian name has become a byword for figures fit to be burned with derision, and "the traditional story" of the plot has been recounted again and again, garnished with all manner of unhistorical accretions. These accretions were confuted in 1897 by Father John Gerard in his "What Gunpowder Plot?", and so thoroughly that Mr. S. R. Gardiner thought himself bound to answer with his "What Gunpowder Plot was", which while professingly traversing Father Gerard's criticism, does not in truth attempt to re-establish "the traditional story", but only his Father Gerard's conclusion, or more moderate account of the plot which he had previously published in his well-known History.

This is the main difference between the two critics. In truth "the traditional story" may be exaggerated, and in need of correction in every detail, which is in Father Gerard's case convincing; and yet Gardiner's view is that truth will be found a short way beneath the surface, may also be valid and sound. The most substantial divergence between the two is found in relation to the time at which they conceive the government heard of the Plot. If, as Father Gerard thinks (and he is not at all alone in his opinion), the government knew of it for some time before Montague's letter and yet allowed it to proceed, from that time it was no longer a conspiracy against the crown, but a conspiracy against political adversaries, whom they were luring on, by some agent provocateur, to their doom. In the case of the Babington Plot, indeed, we have direct proof that this was the case; for the "agent provocateurs" themselves. In this case, however, direct proof is wanting, and the conclusion is inferential only.

Gunter, William. See Morton, Robert.

Gunter, Blessed, a hermit in Bohemia in the eleventh century; b. about 955; d. at Hartmanitz, Bohemia, 9 Oct., 1045. The son of a noble family, he was a cousin of St. Stephen, King of Hungary, and is numbered among the ancestors of the princely
Günther, Anton, philosopher; b. 17 November, 1783, at Lindena, near Leitmeritz, Bohemia; d. at Vienna, 24 February, 1833. From 1796 to 1800 he attended the monastic school of the Piarists at Haide, and from 1800 to 1803 the gymnasium of Leitmeritz. Subsequently he studied at Prague philosophy and jurisprudence. After completing these studies he became a tutor in the household of Prince Schwarzenberg. He had a close friendship with the young man, the son of devout Catholic parents, who had been badly shaken during the years of his student life by his study of the modern systems of philosophy (Kant, Fichte, Jacobi, Schelling); but his removal in 1811 to Brunn near Vienna with the princely family mentioned above brought him under the influence of the parish priest of this place, named Korn, and particularly of Saint Clement Mary Hofbauer, and restored him to firm Christian convictions. He then took up the study of theology, first at Vienna and afterwards at Raab, Hungary, where in 1820 he was ordained to the priesthood. In 1822 he entered the Jesuit novitate at Starowies, Polessia, but left it in 1824, resigning his right to richly endow and maintain the monastery of Göllingen, the ownership of which he persisted in retaining despite all the efforts of St. Gotthard to prevent him. In 1806, the novice made a pilgrimage to Rome, and in the following year made his vows as a lay brother in the monastery of Niederaltaich before the relics of St. Gotthard. Soon after his return he was urgently entreated to be allowed to govern his monastery of Göllingen, and St. Gotthard's remonstrances could not turn him aside from his purpose. Shortly after his elevation to the abacy, the former lay brother fell ill, and, as he could not agree with his monks, the affairs of the monastery were soon in a perilous condition. By his charitable counsels mingled with severe reprimands, St. Gotthard succeeded in dispelling the ambitious delusions of Günther, who returned once more to his humble condition at Niederaltaich, and there led an edifying life.

In 1830 he returned to a semi-cloistered life near Lalling, to live as a hermit. In 1811 he penetrated farther north in the forest with several companions and settled at Rinchnach, where he built cells and a church of St. John Baptist. Here he lived for thirty-four years a life of the greatest poverty and mortifications. The hermit was so much measured out to the brothers, guests alone being free to use it as they would. Although he had never learned more than the psalter, Günther received from God, in reward for his excessive austerities, profound knowledge of the Holy Scripture, and edified by his teaching all who came to visit him. Wolferus, his biographer, relates that he knew him intimately, and often heard his admirable sermons on his patron, St. John the Baptist—sermons which drew tears from all who heard them. The holy hermit paid many visits to his relative the King of Hungary, obtained from him large sums for the poor, and urged him to build a number of churches. In 1812 the King donated to the church of Rinchnach, St. John Baptist, the deed of donation made by King Stephen, 5 June, 1009. In 1029 Conrad II richly endowed the monastery of Rinchnach, and in 1040 Henry III affiliated it with the Abbey of Niederaltaich. Günther died in the arms of Duke Bretislav of Poland, and of the Archbishop of Przemysl. He was buried in the church of Bresnov, but his remains were destroyed by the Hussites in 1420.

The starting-point of Günther's speculation is his thesis of self-consciousness. Man is endowed with a twofold faculty of thought, the one logical or conceptual function, which deals with appearances, and the other ontological, ideal, self-conscious, which penetrates through appearances to being; hence it is inferred that there are in man two essentially different thinking subjects. This "dualism of thought" establishes the dualism of the threefold scheme of God's love for this world-idea is His motive for realizing it as His own counterpart (Contraposition), and as necessarily entailing all three of its factors, two of which (spirit and nature) are in antithesis to each other, while the third (man) exists as the synthesis of both. This, result of the antithesis, which, as an act of His will, has through creation called from nothingness into being, does indeed exist as really as God Himself; its reality, however, is not drawn from the essence of God, but endures as a thing essentially different from Him, since it is indeed the realised idea of non-Divine Being and Life (Dualism of God and Universe). Thus the two antithetical factors of spirit and nature in the created world differ substantially from each other and stand in mutual opposition. The antithetical relation of spirit and nature shows itself in this, that the realm of the purely spiritual is formed of a plurality of substances, of unitary substratum, which, in integral respect possesses nature, retain its unity and its integrity; while nature, which was created a single substance, a single real principle, has in its process of differentiation lost its unity for ever, and has brought forth, and still brings forth, a multiplicity of forms or individuals. For this very reason nature, in her organic individual manifestations, each of which is only a fragment of the universal nature-substance, can only attain to thought without self-consciousness. Self-conscious thought, on the other hand, is peculiar to the spirit, since self-consciousness, the thought of the Ego, presupposes the substantial unity and integrity of a free personality. The synthesis of spirit and nature is man. From man's character as a generic being, the result of his participation in the life of nature, Günther deduces the rational basis of the dogmas of the Incarnation and Redemption. And, as this explains why the first person of the Trinity extends this particularity, it also does it how God could with perfect consistency bring about the redemption of the race which had fallen in Adam through the God-Man's union with that race as its second Head, Whose free compliance with the Divine will laid the basis of the fund of hereditary merit which serves to cancel the inherited guilt. Günther was a faithful Catholic and a devout priest. His philosophical labours were at any rate a sincere and honest endeavour to promote the triumph of positive Christianity over those systems of philosophy which were imic to it. But it is questionable whether he pursued the right course in disregarding the fruitful labours of Scholastic theology and philosophy, of which, like all who scorn them, he had but scanty knowledge—and permitting his thought, particularly in his natural philosophy, and his speculative method to be unduly influenced by those very systems (of Hegel and Schelling) which he combated. The fact is that the desired result was in no wise attained. The schools of philosophy which he thought he could compel, by turning their own weapons against them, to recognize the truth of Christianity, took practically no notice of his ardent contentions, while the Church not only was unable to accept his system as the true Christian philosophy and to support it, the Scholastic system, but was finally obliged to reject it as unsound.

Among Catholic scholars Günther's speculative system occasioned a far-reaching movement. Though he never held a position as professor, he gathered about him through his writings a school of enthusiasts.
tie, and in some instances distinguished, followers, who, on the other hand, were opposed by eminent philosophers and theologians. At its zenith the school was powerful enough to secure the appointment of some of its members to academic professorships in Catholic philosophy. Günther himself was offered professorships at Munich, Tübingen, and elsewhere. He refused these offers because he hoped for a like offer from Vienna, but his expectation was never realized.

In 1833 he received from Munich an honorary degree of Doctor of Theology, and a similar degree in philosophy and theology was conferred on him by the University of Prague in 1845. His closest friends and collaborators were the Jesuits, Johann Heinrich Pabst (d. 1838, author of "Der Mensch und seine Geschichte", Vienna, 1830; 2nd ed., 1847); "Gibt es eine Philosophie des positiven Christenthums?" Cologne, 1832; "Adam und Christus. Zur Theorie der Ehe", Vienna, 1835; in collaboration with Günther, the "Janusköpfe"); the celebrated homilist Johann Emmanuel Veith, a convert (d. 1876, co-editor of the publication "Lydia"); and Karl Franz von Hoek (d. 1869; wrote "Cartesius und seine Gegner, ein Beitrag zur Charakteristik der philosophischen Bestrebungen unserer Zeit", Vienna, 1832; 2nd ed., 1834; later active in the discussion of political and economical questions). Other prominent adherents of Günther were Johann Heinrich Löwe (professor of philosophy at Salzburg, 1839–51; at Prague, 1851); Johann Nepomuk Ehrlich (d. 1864; from 1836 taught philosophy in Krems; in 1850 became professor of moral theology at Graz, and in 1852 at Prague, where in 1856 he became professor of fundamental theology); Jakob Zukrigl (d. 1876; professor of apologetics and philosophy at Tübingen, 1845); Xavier Schmid (d. 1883; in 1856 he became a Protestant); Jakob Merten (d. 1872; professor of philosophy in the seminary at Vienna, 1845–69); Karl Werner (d. 1888; professor at St. Pölten, 1847; at Vienna, 1870); Theodor Gangan, O.S.B. (d. 1875; professor of philosophy at the college of Augsburg, 1841–75, and simultaneously, 1851–59, Abb of the Benedictine convent of St. Stephen's at the same place); Johann Spörlein (d. 1873; from 1849 professor of theology at Munich; Bonaparte Mayer (d. 1868; from 1842 professor at the college of Bamberg); Peter Knoedl (d. 1889; from 1845 professor of philosophy at Bonn); Peter Joseph Elvenich (d. 1886; from 1829 professor of philosophy at Breslau, at first a Hermesian and later a disciple of Günther; for a time in the Bavarian Church, and finally professor of dogmatic theology at Breslau, originally a Hermesian); Joseph Hubert Reinkens (d. 1886; from 1853 professor of church history at Breslau; from 1873 Old Catholic bishop at Bonn). Finally, in a younger generation, the most distinguished advocates of the system were pupils of Günther, namely, Friedrich Miehe, Johann Adam Hufsfelder, Joseph Kleutgen, Johannes Katschthaler.

Among the literary opponents of Günther's philosophy the following deserve mention: Johann Hast, Wenzelaus Mattes, P. Volkmuth, P. Ildefons Sorg, O.S.B., Johann Nepomuk Oesinger, Franz Xaver Dienes, and others; later, Johann Heinrich Miehe, Johann Adam Hufsfelder, Joseph Kleutgen, Johannes Katschthaler.

The Congregation of the Index in Rome began in 1822 an investigation of Günther's doctrines and writings, Günther being invited to appear personally or to send some of his disciples to represent him. This mission was entrusted to Baltzer and Gangan who arrived at Rome in November, 1853. Gangan was replaced by Knoedl in the summer of 1854. The latter and Baltzer laboured together until the end of November in that year, when they submitted their written defence to the Congregation of the Index and returned to Germany. These efforts, however, and the favourable interest of friends, Breslau, and Tübingen, failed to avert the final blow, though they served to defer it for a time. Cardinals Schwarzenberg and Denenbrock, and Bishop Arnoldi of Trier, were friendly to Günther and assisted him at Rome. Even the head of the Congregation of the Index, Cardinal d'Andrea, was well disposed towards him. On another side, Cardinals von Geissel, Raps, and others urged his condemnation. The Congregation, by decree of 8 January, 1857, placed the works of Günther on the Index. The special grounds of this condemnation were set forth by Pius IX in the Brief addressed by him to Cardinal von Geissel, Archbishop of Cologne, on 15 June, 1857, which declares that Günther's teachings on the Trinity, the Person of Christ, the nature of man, the Creation, and particularly his views on the relation of faith to knowledge, as well as the fundamental rationalism, which is the controlling factor of his philosophy even in the handling of Christian dogmas, are not consistent with the doctrine of the Church.

Before the publication of the Index decree, Günther had been summoned to submit thereto, and in fact had declared his acquisesece, but for him internal submission and rejection of his errors was impossible. He would not submit that which he looked upon as an injustice and which embittered him; but subsequently he published nothing. Some of his followers, like Merten, now turned away from Güntherianism, but the greater number held to it obstinately, and for many years it found academic support at Bonn (through the O.S.B. at Bonn) and through (through Elvenich and Weber). After the Vatican Council most of the Güntherians named above who were still living at the time (with the exception of Veith) joined the Old Catholic movement, in which some of them assumed leading parts. Their hopes of thus imparting new vigour to Güntherianism were not to be realized, and in their separations from the Church, they brought about the final elimination of Güntherian influence from Catholic thought.

Güntherianism. See GÜNTHER, ANTON.

Günther of Cologne (also Günther), archbishop of that city, d. 8 July, 873. He belonged to a noble Frankish family and, if we may believe the poet Sedulius Scottus (Carm. 68 sqq. in “Mon. Germ. Hist.”, Poetae Lat. III., 231 sqq.), he was the man of great talents successively Bishop of Aachen and Archbishop of Cologne. Günther was arch-chaplain of King Lothair II., received an unenviable notoriety through his unjustifiable conduct in the divorce of this licentious king from his lawful wife Theiberga. At a synod held at Aachen in January, and another in February, 860, a few bishops and abbots, under the leadership of Günther, compelled Theiberga to declare that before her marriage with the king she had been violated by his brother. Upon her compulsory confession the king was allowed to discard her and she was condemned to a convent. At a third synod held at Aachen in April, 862, Günther refused to submit to the sentence given against his brother. The pope, however, did not waver even when Emperor Louis II appeared before Rome with an army for the purpose of forcing him to withdraw the ban of excommunication from the archbishops. Though excommunicated and deposed, Günther returned to Cologne and performed ecclesiastical functions on Maundy Thursday, 864. When, however, the other bishops of Lorraine and King Lothair submitted to the pope, Günther and Theiberga were deposed and the bishops at Rome, who were, however, according to the Synod of Rome in November, 864, asking to be released from excommunication and restored to their sees, but they were unsuccessful. After the accession of Adrian II, Günther and Theiberga returned to Rome in 867. Thietgaut was now freed from the ban, but Günther remained excommunicated until the summer of 889, when, after a public retraction (P.L., CXXXI, 383), he was received by the pope to the communion at Monte Cassino. The see of Cologne had in 864 been given by Lothair to the subdeacon Hugo, a nephew of Charles the Bald. He was deposed in 886 and Günther regained his see. Being under the ban, Günther engaged his brother Hilduin of Cambrai to the see, but was deposed and his see and the whole church of Cologne was suppressed. The death of Günther's protector, Lothair II., Willibert was elected Archbishop of Cologne (7 January, 870). Seeing that all efforts to regain his see would be useless, Günther acknowledged the new archbishop and left Cologne for good.

In defence of Güntherianism: BALD, K. Theorie der Katholischen Vierteljahrschrift für Wissenschaft und Kunst (1848); BALTER, Neue theologische Briefe an Dr. Günther, ein Wort für seine Anhänger (Breslau, 1858); KNOODT, Günther und Clemens, I-III. (Vienna, 1863-4).

Michael Ott.

GURK, DIOCESE OF (GURCENSIS), a prince-bishopric of Carinthia, suffragan to Salzburg, erected by Archbishop Gebhard of Salzburg, with the authorization of Pope Alexander II (21 March, 1070) and Emperor Henry IV (4 Feb., 1072). The first bishop installed was Günther von Krapfing (1072–90). The right of appointment, consecration, and investiture of the Bishops of Gurk was reserved to the Archbishop of Salzburg. The episcopal residence was not at Gurk, but in the neighbouring castle at Strasburg. The boundaries of the diocese were only defined in 1131, by Archbishop Konrad I of Salzburg. Originally the territory embraced was small, but the jurisdiction of the Bishop of Gurk extended beyond the limits of his diocese, inasmuch as he was also vicar-general of that part of Carinthia under the Archbishop of Salzburg. Under Bishop Roman I (1132–67) the cathedral chapter obtained the right of electing the bishop, and it was only after a contest of a hundred years that the metropolitan regained the right of appointment. Dissensions did not cease, however, for at a later date the sovereign claimed the right of investiture. Finally, on 25 October, 1355, the Archbishop of Salzburg, Matthias Lang, concluded with the House of Austria an agreement which still in a few other particulars the nomination of the Bishop of Gurk is to rest twice in succession with the sovereign and every third time with the Archbishop of Salzburg; under all circumstances the archbishop was to retain the right of confirmation, consecration, and investiture. The diocese received an accession of territory under Emperor Joseph II in 1773, and in 1786 the present extent of the diocese, embracing the whole of Carinthia, dates only from the reconstitution of the diocese in 1859. The episcopal residence was, in 1787, transferred to the capital of Carinthia, Klagenfurt. Prominent among the prince-bishops of modern times was Valentin Wiery (1586–90). Dr. Joseph Kahn has been prince-bishop since 1887.

According to the census of 1906, the Catholic population of the diocese is 309,000, of whom three-fourths are German and the rest Slovenes. The 24 deaneries embrace 345 parishes. The cathedral chapter at Klagenfurt consists of three mitred dignitaries: five honorary and five stipendiary canons. Among the institutions of religious orders the Benedictine Abbey of St. Paul (founded in 1091; suppressed in 1782; restored in 1807) holds first place. There are also Jesuits at Klagenfurt and St. Andrä; Dominicans at Friesach; Capuchins at Klagenfurt and Wolfsberg; Pauline Fathers at Triesenberg; Servites at Kötschach; Brothers of Mercy at St. Veit on the Glen (in charge of an immense hospital founded in 1877); and a number of religious communities of women for the care of the sick and the instruction of youth. The clergy are trained in the episcopal sem-
inary at Klagenfurt, which has been, since 1587, under the direction of the Jesuits. The professors are Benedictines from the Abbey of St. Paul and Jesuits. The education of aspirants to the priesthood is provided for at Klagenfurt, in a preparatory seminary established by Bishop Wiry in 1800 and enlarged by Bishop Kahn. At St. Paul's the Benedictines conduct a government seminary with the brevity of the German type, and a government school. At Klagenfurt there is also a Catholic teachers' seminary under ecclesiastical supervision. Chief among the examples of ecclesiastical architecture, both in point of age and artistic interest, is the cathedral at Gurk, which dates back to the beginning of the eleventh century, and was completed in 1220. Another worthy of note is the Gothic cloister of the church at Millstadt and, as monuments of Gothic architecture, the parish churches at St. Leonard in the Lavant-Thal, Heiligenblut, Villach, Volkenmarkt, Grades (St. Wolfgang), and Waidachschach. One of the largest and most beautiful churches of Carinthia is the recently renovated (1864-90) Dominican church at Friesach. The present cathedral at Klagenfurt was built in 1591 by the Protestants; in 1604 it was acquired by the Jesuits, and consecrated in honour of the Apostles St. Peter and Paul. Prominent among the places of pilgrimage in the diocese is Maria Saal, visited since 1514. Among Catholic associations special mention should be made of those for the advancement of the Catholic Press and for the diffusion of good books: for the German population, the St. Joseph's Verein founded at Klagenfurt in 1893, and the St. Joseph's Book Confraternity; for the Slovenes, the St. Hermagora Verein, established in 1852 (1860), with its headquarters at Klagenfurt, and widely established among Slovenes in other dioceses.

Friedrich Lachert.

Guty, Jean-Pierre, moral theologian; b. at Maillemoncourt, Haute-Saône, 23 January, 1801; d. at Merceur, Haute-Loire, 18 April, 1866; entered the Society of Jesus at Montrouge, 22 August, 1824; he taught philosophy for four years at Dijon. He taught moral theology at the seminary of Vals, France, 1834-47 and 1848-66, and for one year at Rome, 1847-48. It was in 1850, after his return from Rome necessitated by the events of 1848, that the first edition of his "Compendium theologicae moralis" appeared, which at the time of the author's death in 1866 was not translated into either the German translation of Wesselack (Ratisbon, 1858), nor the imitations and adaptations published in Belgium, Italy, Spain, Austria, and Germany. The last-named country the annotated edition of Professor Seitz itself already reached the fifth edition in 1874 (Ratisbon). Several of the special annotated editions of A. Ballantini and D. Balbi (Prato, 18th ed., 1907); the edition of Dumas (5th ed., Lyons, 1890); the abridged edition of Sabetti-Barret (New York and Cincinnati, 1902, 15th ed.); the edition adapted to Spain and Latin America by Ferreres (Barcelona, 4th ed., 1909); finally the "Compendium ad mentis P. Guty" by Bulot (Tourneay and Paris, 1908). In 1862, Guty published his "Casus conscientiae in precipuee questiones theologiae moraliae". Of this work the following editions have appeared: Dumas, 8th ed., Lyons, 1881; Ferreres, for the second time in 1906 (Barcelona); and a German edition at Ratisbon (7th ed., 1886).

J. Salsmans.

Gusmão, Bartholomeu Lourenço de, naturalist, and the first aeronaut; b. in 1665 at Santos in the province of São Paulo, Brazil; d. 18 November, 1724, in Toledo, Spain. He began his novitiate in the Society of Jesus at Bahia when he was about fifteen years old, but left the same in 1701. He went to Portugal and found a patron at Lisbon in the person of the Marques d'Abantes. He completed his course of study at Coimbra, devoting his attention principally to philology and mathematics, but received the title of Doctor in Canon Law. He is said to have had a remarkable memory and a great bent for the sciences. In 1708 he presented a petition to King John V of Portugal, begging a privilege for his invention of an airship, in which he expressed his greatest confidence. The contents of this petition have been preserved, as well as a picture and a description of his airship. Following a suggestion by Francesco Lana, S.J., Gusmão wanted a huge sail over a barque like the cover of a transport wagon; the bark itself was to contain tubes through which, when there was no wind, air would be blown into the sail by means of bellows. The vessel was to be propelled by the agency of magnets which, apparently, were to be encased in two hollow metal balls. The public test of the machine, which was set for 24 June, 1709, did not take place. According to contemporary reports, however, Gusmão appears to have made several less ambitious experiments with this machine, descending from eminences. His contrivance in the main represented the principle of the kite (aeroplane). In all probability he did not have magnets in the aforementioned metal shells, but gases and hot air generated by the combustion of various materials. It is certain that Gusmão was working on this principle at the public exhibition he gave before the Court on 8 August, 1709, in the hall of the Casa da India in Lisbon, when he propelled a ball to the roof by combustion. The king rewarded the inventor by appointing him to a professorship at Coimbra and made him a canon. He was also one of the fifty chosen members of the Academia Real da Historia, founded in 1720; and in 1722 he was made chaplain to the Court. He
GUTENBERG 90

busied himself with other inventions also, but in the meantime continued his work on his airship schemes, the first idea (for which he is said to have originated while a novice at Bahia. His experiments with the aeroplane and the hot-air balloon led him to conceive a project for an actual airship, or rather a ship to sail in the air, consisting of a cleverly designed triangular pyramid filled with gas, but he died before he was able to carry out this idea. The fable about the Inquisition having forbidden him to continue his aeronautic investigations and having persecuted him because of them, is probably a later invention. The only fact really established by contemporary documents is that information was laid against him before the Inquisition, but on quite another charge. He fled to Spain and fell ill of a fever, of which he died in Toledo. He wrote: "Manifiesto sumario para os que ignoram poder-se navegar pelo elemento do ar" (1709); \"Varios modos de esgotar sem gente as naus que fazeem agua\" (1710); some of his sermons also have been printed.

B. WILHELM.

Gutenberg, Johann (Henne Gansfleisch zur Laden, commonly called Gutenberg), inventor of printing; b. about 1400; d. 1467 or 1468 at Mainz. Gutenberg was the son of Friedle (Friedrich) Gansfleisch and Else Wyrich. His cognomens were derived from the house inhabited by his father and his paternal ancestors "zu Laden, zu Gutenberg." The house of Gansfleisch was one of the peculiar families of the town, tracing its lineage back to the thirteenth century. From the middle of the fourteenth century there were two branches, the line to which the inventor belongs and the line of Sorgenloch. In the fourteenth and fifteenth centuries its scions claimed an hereditary position as so-called Hausgenossen, or retainers of the household, of the master of the archbishop's mint. In this capacity they doubtless acquired considerable knowledge and technical skill in metal working. They supplied the mint with the metal to be coined, changed the various species of coins, and had a seat at the assizes in forgery cases. Of Johann Gutenberg's father, Friedle Gansfleisch, we know only that he was married in 1386 to Else Wyrich, daughter of a burgher of Mainz, Werner Wyrich zum steinern Knaus (at the sign of the pottery shop), and that he died in 1419, his wife dying in 1433. Of their three children—Johann (1447), Else, and Johann—the last named (the inventor of typography) was born some time in the last decade of the fourteenth century, presumably between 1394 and 1399, at Mainz in the Hof zum Gutenberg, known to-day as Christopstraße, 2.

All that is known of his youth is that he was not in Mainz in 1430. It is presumed that he migrated for political reasons to Strasburg, where his family probably had connexions. The first record of Gutenberg's sojourn in Strasburg dates from 14 March, 1434. He took a place befitting his rank in the patrician class of the city, but at the same time joined the goldsmiths' guild—quite an exceptional proceeding, yet characteristic of his untiring technical activity. The trades which Gutenberg taught his pupils and associates, Andreas Dritzeln, Hans Riffe, and Andreas Heilmann, included gem-polishing, goldsmithing, the manufacture of looking-glasses and the art of printing, as we learn from the records of a lawsuit between Gutenberg and the brothers Georg and Klaus Dritzeln. In these records, Gutenberg appears distinctly as technical originator and manager of the business. Concerning the "new art," one witness states that, in his capacity of goldsmith, he had supplied in 1436 "printing requisites" to the value of 100 gulden; mention is also made of a press constructed by Konrad Saspach, a turner, with peculiar appliances (see preceding). The suit was therefore obviously concerned with experiments in typography, but no printed matter that can be traced to these experiments has so far come to light. The appearance at Avignon of the silversmith Waldvogel, who taught "artificial writing" there in 1444, and possessed steel alphabets, a press with iron screws and other contrivances, seems to have had some connexion with the experiments of Gutenberg. As of Gutenberg's, so of Waldvogel's early experiments, no sample has been preserved. In the year 1437 Gutenberg was sued for "breach of promise of marriage" by a young patrician girl of Strasburg, Eulensieb, for whom the term Eulensieg is used in modern German. There is nothing to show whether this action led to a marriage or not, but Gutenberg left Strasburg, presumably about 1444. He seems to have perfected at enormous expense his invention shortly afterwards, as is shown by the oldest specimens of printing that have come down to us ("Weltgerichtsgedicht"), i.e. the poem on the last judgment, and the "Calendar for 1445"). The fact that Arnolt Gelthus, a relative of Gutenberg, lent him 150 gulden in the year 1448 at Mainz points to the same conclusion. In 1450 Gutenberg formed a partnership with the wealthy burgher, Johann Fust of Mainz, for the purpose of completing the contrivance and of printing the so-called "42-line Bible," a task which was finished in the years 1453-1455 at the Hof zum Humbrecht (to-day Schustergasse, 18, 20). Fust brought suit in 1455 to recover the 2000 gulden he had advanced and obtained judgment for a portion of the amount with interest. As a result of Gutenberg's insolvency, the machinery and type which he had made and pledged to Fust became the property of the latter. In addition to the types for the 42-line Bible, the mortgage covered the copious stock of type which had evidently been already prepared for the edition of the Psalter, which was printed by Fust and Schönher in August, 1457. This included new type in two sizes, as well as the world-famous initial letters with their ingenious contrivance for two-colour printing. About 1457 Gutenberg also parted with his earliest-constructed founts of type, which he had made for the 36-line Bible, and

A Printing Press of 1520

From Thonet, "Vies et portraits des hommes illustres." (1846).
which were in existence as early as the fourth decade of the century. Long before this Bible was printed the type had been used in an edition of the "Weltgerichtsdiichte", in the "Calendar for 1448", in editions of Donatus, and various other printed works. Most of this type fell into the possession of Albrecht Pfister in Bamberg. Gutenberg next manufactured a manuscript in conjunction with the advice he received from Conrad Hughey, a distinguished and wealthy doctor of law, leader of the popular party, and chancellor of the council. This outfit consisted of a set of small types fashioned after the round cursive handwriting used in books at that time and ornamented with an extraordinary number of ligatures. The type was used in the so-called "Catholicicon" (Grammar and alphabetic lexicon) in the year 1460, and also in several small books printed in Eltville down to the year 1472 by the brothers Bechtermünze, relatives of Gutenberg. Little more is known of Gutenberg. We are aware that his declining years were spent in the court of Archbishop Adolph of Nassau, in whose service he was appointed on 18 January, 1465. The distinction thus conferred on him carried with it allowances of clothing and other necessities which saved him from actual want. In all likelihood he died at Mainz towards the end of 1467 or the beginning of 1468, and was buried probably as a tertiary in the Franciscan church, no longer in existence.

A cloud of deep obscurity thus conceals for the most part the life of the inventor, his personality, the time and place of his invention, and particularly the part he personally took in the production of the printed works that have come down to us from this period. On the other hand, expert research has thrown much light on the printed works connected with the name of Gutenberg, and has established more definitely the nature of his invention. Mainly from the technical examination of the impressions of the earliest Gutenberg productions, the "Poem of the Last Judgment" and the "Calendar for 1448", it has been shown that he effected substantial improvements in methods of printing, in the technical apparatus, especially in the printer's ink and in the building of printing presses. Of course, he had to invent neither letter-cutting, nor the die, nor the mode of obtaining impressions from the die. All these had been long known, and were in common use in Gutenberg's time, as is shown by the steel dies of the goldsmiths and bookbinders, as well as the punches used for stamping letters and ornamental designs in the striking of coins and seals. The mechanical manifolding of handwriting also had been known for a long time. The points of the so-called Formenmeider (that is, engravers on wood), especially the playing-cards, pictures of the saints, and block books, prove beyond question that writing had been reproduced in manifold by means of woodcuts as early as the beginning of the fifteenth century. But with woodcutting and its technique Gutenberg's invention had nothing to do; Gutenberg was a goldsmith, a worker in metals, and a lapidary, and his invention both in conception and execution shows the worker in metals. Gutenberg multiplied the separate types in metal moulds. The types thus produced he built in such a way that they might be alined like the manuscript he was copying.

The aim technically and aesthetically of the genius of Gutenberg was the mechanical reproduction of the characters used in the manuscripts, i.e., the books of the time. The works printed by Gutenberg plainly prove that the types used in them were made by a casting process fundamentally the same as the method of casting by hand in vogue to-day. The letter-patterns were cut on small steel rods termed matrices, and the dies thus made were impressed on some soft metal, such as copper, producing the matrices, which were cast in the mould in such a manner as to form the "face" and "body" of the type at one operation. The printing type represents therefore a multiplicity of cast reproductions of the original dies, sometimes many. In addition to the technical process of type-founding, Gutenberg found himself confronted with a problem hardly less difficult, namely, the copying of the beautiful caligraphy found in the books of the fifteenth century, constantly bearing in mind that it must be possible to engrave and to cast the individual forms, since the types, when set, must be substantially replicas of the model. The genius of Gutenberg found a brilliant solution to this problem in all its complicated details. Even in the earliest types he made (e.g. in the Calendar for 1448), we can recognize not only the splendid reproduction of the actual forms of the original handwriting, but also the extremely artistic remodelling of individual letters necessitated by technical requirements. In other words, we may say that the work of the calligraphic artist of the highest order. He applied the well-tested rules of the calligraphist's art to the casting of types, observing in particular the rudimentary principle of always leaving the same space between the vertical columns of the text. In the Psalter prepared by Gutenberg, the markedly different form of each letter, the normal separate form, and the compound or linked form which, being joined closely to the type next to it, avoids gaps. It is significant that the Psalter of Gutenberg is the first impressively illustrated book printed from type. This Psalter is photographed on the following page. The Psalter of Gutenberg was the first book printed in two colours, red and black, and was carried with Gutenberg to Italy, where, according to tradition, it was illuminated by the famous artist, Cesare Ripa. Complete copies of the Psalter printed by Gutenberg are now in the British Museum, an in special bindings, and in the Library of the New York Public Library.
GUTHLAC

advance over the standard displayed in other editions.

Gutenberg's invention spread rapidly after the political catastrophe of 1462 (the conquest of the city of Mains by Adolf of Nassau). It met in general with a ready, nay an enthusiastic reception in the centres of culture. The names of more than 1000 printers, mostly of German origin, have come down to us from the fifteenth century. In Italy we find well over 100 German printers, in France 30, in Spain 26. Many of the earliest printers outside of Germany had learned their art in Mains, where they were known as "goldsmiths". Among those who were undeniably pupils of Gutenberg, and who probably were also assistants in the Gutenberg-Fust printing house were (besides Schoffer), Numeister, Keffer, and Ruppel; Mentel in Strasbourg (before 1460), Pistor in Bamberg (1461), Swein in Subiaco and Rome (1449), and Johann von Speyer in Venice (1469).

The invention of Gutenberg should be classed with the greatest events in the history of the world. It caused a revolution in the development of culture, equalled by hardly any other incident in the Christian Era. Facility in disseminating the treasures of the intellectual world by the economy of the press for the development of the sciences in modern times. Happening as it did just at the time when science was becoming more secularised and its cultivation no longer resigned almost entirely to the monks, it may be said that the age was pregnant with this invention. Thus not only was it an innovation from the point of view of modern science, but it has also been an indispensable factor in the education of the people at large. Culture and knowledge, until then considered aristocratic privileges peculiar to certain classes, were popularized by typograph, although in the process it unfortunately brought about an internal revolution in the intellectual world in the direction of what is profane and free from restraint.

HEINRICH WILHELM WALLAU.

Guthlac, Saint, hermit; b. about 673; d. at Croyland, England, 11 April, 714. Our authority for the life of St. Guthlac is the monk Felix (of what monastery is not known), who in his dedication of the "Life" to King Æthelbald, Guthlac's friend, assures him that whatever he has written, he has derived immediately from old and intimate companions of the saint. Our evidence is in no sense of noble stock, in the land of the Middle Angles. In his boyhood he showed extraordinary signs of piety; after eight or nine years spent in warfare, during which he never quite forgot his early training, he became filled with remorse and determined to enter a monastery. This he did at Repton (in what is now Derbyshire). Here under two years he was occupied with the duties of the monastic life, he became fired with enthusiasm to emulate the wonderful penance of the Fathers of the Desert. For this purpose he retired with two companions to Croyland, a lonely island in the dismal fen-lands of modern Lincolnshire. In this solitude he spent fifteen years of the most rigid penance, fasting daily until sundown and then taking only coarse bread and water. Like St. Anthony, he was frequently attacked and severely maltreated by the Evil One, and on the other hand was the recipient of extraordinary graces and powers. The birds and the fishes became his familiar friends, while the fame of his sanctity spread far and wide. One of them, Bishop Hedda (of Dorchester or of Lichfield), raised him to the priesthood and consecrated his humble chapel. Æthelbald, nephew of the terrible Penda, spent part of his exile with the saint.

Guthlac, after his death, in a vision to Æthelbald, revealed to him that he should one day become king. The prophecy was verified in 716. During Holy Week of 714, Guthlac sickened and died, and on the seventh day, which he did joyfully. The anniversary (11 April) has always been kept as his feast. Many miracles were wrought at his tomb, which soon became a centre of pilgrimage. His old friend, Æthelbald, on becoming king, proved himself generous and beneficent. Through the monastic house rose, and through the industry of the monks, the fens of Croyland became one of the richest spots in England. The later history of his shrine may be found in Ordericus Vitalis (Historia Ecclesiasticae) and in the "History of Croyland" by the Pseudo-Ingulph. Felix's Latin "Life" was turned into Anglo-Saxon prose by some unknown hand. This version was first published by Goodwin in 1848. There is also a metrical version attributed to Cynewulf contained in the celebrated Exeter Book (Codex Exoniensis).

HEINRICH WILHELM WALLAU.

GUYON, JEANNE-MARIE-BOUVIER DE LA MOTTE, a celebrated French mystic of the seventeenth century; b. at Montargis, in the Orléanais, 13 April, 1648; d. at Blois, 9 June, 1717. Her father was Claude Bouvier, a procuration of the tribunal of Montargis. Of a sensitive and delicate constitution, she was sickly in her childhood and her education was much neglected. Incessantly going and coming between her home and the convent, and passing from one school to another, she changed her place of abode nine times in ten years. Her parents, who were very religious people, gave her an especially pious training; while she received and retained profound impressions from her reading of the works of St. Francis de Sales, and her intercourse with certain nuns, her teachers. At one period she desired to become a nun, as one of her elder sisters had, but this desire did not last long. When scarcely sixteen years of age, she accepted the hand of a wealthy gentleman of Montargis, Jacques Guyon, twenty-two years her senior. After a short time she separated from him in marriage, in union in which she gave more devotion than it yielded her happiness, Madame Guyon lost in succession two of her children and her husband. Thus, at twenty-eight she was left a widow with three young children.

Her Experiences and Theories.—In the meantime Madame Guyon had been initiated in the system of the mystical life by Père Lacombe, a Barnabite, who very soon acquired a great influence over her. Under his direction she passed through a series of interior experiences which are described in the "Vie de Madame Guyon" written by herself. First she attained a lively sentiment of the presence of God, perceiving it, as a taint at times, not merely to her, but in it she was vouchsafed a savour of God which detaches her from creatures. This is what she calls "the union of the powers". She remains in this state for eight years; it is succeeded by another state in which she loses the sense of God's graces and favours, and she has no taste for anything spiritual, is powerless to act, and afraid of her own baseness. This was the state of "mystical death" in which she remained for seven years; from this crisis she passes, as it were reawakened and transformed, into the state of resurrection and new life. Whereas in the first three states she possessed God, in this last state she is possessed by Him; then God is in her soul, but now He is united to its substance; it is He who acts in her; she becomes like an automaton in

...
He hands; she writes remarkable things without preparation and without reflection. Her own activity is not to be replaced by the activity of God when it moves her, and she now enters into the "apostolic state". This apostolate she is to exercise not in preaching the Gospel, but in spreading the mystical light, the theory of which she presents in her "Moyen court et facie de faire oraison" (Short and Easy Method of the way of praying by direct knowledge by holy experiences). In this work she distinguishes three kinds of prayer. The first is meditation properly so-called, the second is "the prayer of simplicity", which consists in keeping oneself in a state of recollection and silence in the presence of God; in the third, which is active contemplation, the soul, conscious of the fact that it is taking possession of it, is moved to action and remains in repose, abandoning itself to the Divine effulgence which fills it — powerless to ask anything for itself, since it has renounced all its own interests. This last state is pure love. In the "Torrents spirituels", and the commentaries on Holy Scripture, the same states is presented under very slightly different images and forms.

Protestantism and Trials. — Having attained what she called the "apostolic state", Madame Guyon felt herself drawn to Geneva. She left her children and repaired to Annecy, to Thonon, where she was to find Pére La Combe, who had signed the place called Geneva under his direction. She began to disseminate her mystical ideas, but, in consequence of the effects they produced, the Bishop of Geneva, M. d'Arathon d'Alex, who had at first viewed her coming with satisfaction, asked her to leave his diocese, and at the same time expelled Pére Lacombe, who betook himself to the Bishop of Vercelli. Madame Guyon followed her director to Turin, then returned to France and stayed at Grenoble, where she published the "Moyen court" (January, 1685) and spread her doctrine. But here, too, the Bishop of Grenoble, Cardinal Le Camus, was perturbed by the opposition which she aroused. At his request she left the city; she rejoined Pére La Combe at Vercelli and a year later they went back to Paris (July, 1686). Forthwith Madame Guyon set about to gain adherents for her mystical theories. But the moment was ill-chosen. Louis XIV, who had recently been exerting himself to have the Quietism of Moscati, the "serenity" at Étampes, Pére La Combe, and the Jesuits, could not be pleased to see gaining ground, even in his own capital, a form of mysticism, which, to him, resembled that of Molinos in many of its aspects. By his order Pére Lacombe was shut up in the Bastille, and afterwards in the castles of Oloron and of Lourdes. The arrest of Madame Guyon, disfigured by illness, followed shortly (9 January, 1688); brought about, she alleged, by her own brother, Pére de La Motte, a Barnabite.

She was not set at liberty until seven months later, after she had placed in the hands of the theologians, who had examined her book, a retraction of the propositions which it contained. Some days later (October, 1688) she met, at Beyne, in the Duchès de Béthune-Charrast's country house, the Abbé de Fénelon, who was to be the most famous of her disciples. She won him by her piety and her understanding of the paths of spirituality. Between them there was established a union of piety and of friendship into which no element ever insinuated itself that could possibly be taken to resemble carnal love, even unconscious. Through Fénelon the influence of Madame Guyon penetrated, or was increased in, religious circles powerful at court — among the Beuvilliers, the Chevreuses, the Mortemart — who were under his spiritual direction. Madame, and through her, the young ladies of Saint-Cyr, were inspired and gained over to the new mysticism. This was the apogee of Madame Guyon's fortune, most of all when Fénelon was appointed (18 August, 1688) tutor to the Duke of Burgundy, the king's grandson. Before long, however, the Bishop of Chartres, in whose diocese Saint-Cyr happened to be, took alarm at the spiritual condition of young ladies which were approved and recommended to her, and these advisers were unanimous in their reproba- tion of Madame Guyon's ideas. Madame Guyon then asked for an examination of her conduct and her writings by civil and spiritual judges. She consented that her writings should be submitted to the judgment of Bossuet, of the Bishop of Châlons (afterwards Archbishop of Paris and Cardinal de Noailles), and of M. Tronson, superior of the Society of Saint-Sulpice.

After a certain number of secret conferences held at Issy, where Tronson was detained by a sickness, the commissioners presented in thirty-four articles the principles of Catholic teaching as to spirituality and the interior life (four of these articles were suggested by Fénelon, who in February had been nominated to the Archbishops of Cambray). But the Archbishop of Paris, who had been excluded from the conferences at Issy, anticipated their results by condemning the published works of Madame Guyon (10 October, 1694). She, fearing another arrest, took refuge for some months at Meaux, with the permission of Bossuet, then bishop of that see. After placing in his hands the secret of her private life she set forth to place the secret in the hands of the queen of England, of Issy, she returned secretly to Paris, where the police, however, arrested her (24 December, 1695) and imprisoned her, first at Vincennes, then in a convent at Vaugirard, and then in the Bastille, where she again signed (23 August, 1696) a retraction of her theories and an undertaking to refrain from further spreading them. From that time she took no part, personally, in public discussions, but the controversy about her ideas only grew all the more heated between Bossuet and Fénelon. The course of that controversy we have traced elsewhere (see Fénelon). Madame Guyon remained imprisoned in the Bastille until 21 March, 1703, when she went, after more than seven years of captivity, to live with her son in a village in the Diocese of Blois. There she passed some fifteen years in silence and isolation, spending her time in the composition of religious verses, which she wrote with much facility. She was still venerated by the Beuvilliers, the Chevreuses, and Fénelon, who never failed to communicate with her whenever safe and discreet intermediaries were to be found.

Posthumous Success. — Her writings began to be published in Holland in 1704, and brought her new admirers. Englishmen and Germans — among them Wettstein and Lord Forbes — visited her at Blois. Through them Madame Guyon's doctrines became known among Protestants and in that soil took vigorous root. But she did not live to see this unfaced for diffusion of her writings. She passed away at Blois, at the age of sixty-eight, protesting in her will that she had died submissive to the Catholic Church, from which she had never had a scruple of separating herself. Her doctrines, like her life, have nevertheless given rise to the widest divergences of opinion. Her published works (the "Moyen court" and the "Règles des associées à l'Enfance de Jésus") having been placed on the Index in 1688, and Fénelon's "Maximes des saints" branded with the condemnation of both the pope and the bishops of France, the Church has thus plainly reproved Madame Guyon's doctrines, a reproval which the extravagance of her language would in itself sufficiently justify. Her strange conduct brought upon her severe censures, in which she could say nothing for herself. Evidently, she too often fell short of due reserve and prudence; but after all that can be said in this sense, it must be acknowledged that her morality appears to have given no grounds for serious reproach. Bossuet, who was never indulgent in her regard, could say be-
fore the full assembly of the French clergy: "As to the abominations which have been held to be the result of her principles, there was never any question of the horror she testified for them." It is remarkable, too, that her disciples at the Court of Louis XIV were always persons of great piety and of exemplary life.

On the other hand, Madame Guyon's warmest partisans after her death were to be found among the Protestants. It was a Dutch Protestant, the pastor Poiret, who began the publication of her works; a Vaudois priest-pastor, Duthoit-Mambrini, continued it. Her "Life" was translated into English and German, and her ideas, long since forgotten in France, have for generations been in favour in Germany, Switzerland, England, and among Methodists in America.

Œuvres complètes de Madame Guyon (Paris, 1790), this work was really published at Lausanne; COOPER, Poems translated from French of Madame de la Mothe Guyon (Newport, 1801); FÉNELON, Œuvres (Versailles, 1830), IV, IV; IDEM, Correspondance (Paris, 1828), VII–XI; BOSMOUTH, Œuvres (Paris, 1885); PHILIPPEAUX, Réolution de l'origine, du propre, et de la contamnation du Quatisme (s. l., 1722); IBRAGHIM, Correspondance (Paris, 1904), III; Vie de Madame Guyon, written by herself (Cologne, 1790); GER. tr., Frankfort, 1727; tr. BROOK, London, 1808; Upham, Life and religious opinions and experience of Madame de la Mothe Guyon (New York, 1848); GUILLON, Histoire générale de l'Église pendant le XVIIIe siècle (Béziers, 1823); GUERINER, Madame Guyon, sa vie, sa doctrine, et sa influence (Orléans, 1881); CRUVELS, Fénélon et Madame Guyon (Paris, 1865); MARSON, Fénélon et Madame Guyon (Paris, 1907); DELACROIX, Études d'histoire et de psychologie du mysticisme (Paris, 1908).

ANTOINE DEGERT.

GUZMÁN, FERNANDO PÉREZ DE, Señor de Batres, Spanish historian and poet (1376–1458). He belonged to a family distinguished both for its patrician standing and its literary connections, for his uncle was Lope de Ayala, Grand Chancellor of Castile, and his poet and his nephew was the Marquis of Santillana, one of the most important authors of the time of Juan II. Part of his verse, such as the "Proverbios" and the "Diversas virtudes", is purely moral and didactic. The more important part is represented by the panegyric "Loores de los claros varones de España", which in 409 octaves gives a rather full account of the leading figures in Spanish history from Roman times down to that of Benedict XIII. The most notable of his prose historical compositions is the "Generaciones é Semblanzas", a collection of biographies which constitutes the third part of a large compilation, "La mar de historias". The first two parts of this work, suggested doubtless by the "Mare historiciun" (or Mare historiarum) of Johannes de Colmena, are devoted to a perfunctory and uninteresting account of the reigns of the sovereigns of pre-Arabic times. The third part, the "Generaciones", contains thirty-six portraits of contemporary personages, especially members of the courts of Enrique III and Juan II, and furnishes one of the best examples of character painting in Spanish literature. No detail, even the most trivial physical trait, escapes the observation of the author. A work still regarded as uncertain has been attributed to him the "Crónica de Juan II". His prose works may be found in the "Biblioteca de autores españoles", LXVIII; a separate edition of the "Generaciones" appeared at Madrid in 1775. His verse is given in the "Cancionero de Baena", and in the "Cancionero general".

RENNERT, Some Unpublished Poems of Fernando Pérez de Guzmán (Baltimore, 1897).

J. D. M. FORD.

GYÖR (GÉR, RAAB), DIocese of (JÁRÓMÉNIS), a Hungarian see, suffragan to the Archdiocese of Gran. After the county of Vas and parts of the county of Veszprém had been taken in 1777 to form the Diocese of Szombathely, the Diocese of Györ assumed its present proportions; it comprises the Counties of Moson and Sopron, the greater portion of the County of Györ, and a part of the County of Komárom. There are two cathedral chapters, the chapter of Györ with 14 canonicates, and that of Sopron with 5; there are also 8 titular abbeys, 6 provostships, and 4 titular provostships. The diocese is divided into 7 archdeaconries and 22 vice-archdeaconries, and contains 229 parishes. The clergy number 379, of whom 315 are engaged in parish work; 52 patrons exercise the right of presence to 224 benefices. The diocese has two seminaries attended (1908) by 102 students, and 48 monasteries with 630 religious. The total population is 563,063, the Catholics numbering 451,150. The diocese was founded by King St. Stephen, the date being, as believed, 1001. modestus (1019–37) is said to have been the first bishop. Ardvin or Hartvik (1097–1103) wrote the life of St. Stephen. Thomas Bakóc of Erdöd, later primate of Hungary and cardinal, occupied the See of Györ from 1439 to 1494. Georg Draszkovich (d. 1587), together with the chapter, fled before the Turks, who seized part of the diocese but held it only for a short time. After the reconquest of Györ Martinus Petho (1598–1605), who restored the cathedral, was appointed bishop. In 1608 Demetrius Néprágyi (1607–19) acquired the reliquary, which up to that time had been preserved at Grosswardein, containing the skull of King St. Ladislaus. Georg Draskovich (1635–50) was one of the most zealous champions of the Counter-Reformation. Among the more recent bishops of Györ Johann Simor (1857–67), later Archbishop of Gran, was the most illustrious. The present bishop is Count Nikolaus Széchényi.

KÁDOLY, Speculum ecclesiae Júróménsis (1797); PRAY, Specimen Hierarchiae Hungaricae (1776–79); Das katholische Ungarn (Budapest, 1906); Die Komitate und Städte Ungarns: Komitat Györ (Budapest, 1906); the last two works are in Hungarian.

A. ALDÁBY.
Haarlem, Diocese of (Harlemense), one of the suffragan sees of the Archdiocese of Utrecht in the Netherlands. The city of Haarlem is the capital of the Province of North Holland and is about nine miles distant from Amsterdam. The medieval Diocese of Utrecht being ill-adapted on account of its great extent to oppose successfully the nascent heresies, Paul IV divided it by the Bull "Super universas orbis" (12 May, 1559) into an archdiocese and five suffragan sees. The principal of these five was the Diocese of Haarlem. At that time it only comprehended the present Province of North Holland with a small portion of South Holland. The right of nomination was bestowed on King Philip of Spain and his successors. On 10 March, 1561, Pius IV, Paul's successor, incorporated the Abbey of Egmond in the diocese in perpetuity as the episcopal mensa (or chief means of revenue) by his Bull "Sacrosancta Romana." (10 March, 1561). One day later (11 March, 1561), Pius issued the Bull "Ex injuneto nobis," in which the new diocese was defined, 11 towns and 151 villages being mentioned in the papal document. The parish church of Haarlem, dedicated to St. Bavo, was made into a cathedral.

The first bishop was Nicolas van Nieuwland, formerly assistant Bishop of Utrecht. He was appointed by a Brief dated 26 May, 1561. In April, 1564, he held a synod, the proceedings of which are still in print. When after the iconoclastic outbreak of 1566, then fortunately prevented in Haarlem, the Duke of Alva was sent to punish the Netherlands, the bishop wrote him a letter trying to move him to deal leniently with the guilty persons of his diocese. In 1569, on account of his sluggishness, caused in part by the gout from which he was suffering, he was obliged by Alva to send in his resignation to Brussels and to Rome.

The second bishop was Godfried van Mierlo, formerly Provincial of the Dominicans for the Province of Lower Germany, a man conspicuous for virtue, zeal, and eloquence. At first appointed to act as vicar-general (sede vacante), Pope Pius V created him Bishop of Haarlem and Prelate of Egmond on 11 December, 1570. He established the episcopal chapter in 1571, and convened a synod in the same year. His efforts to make the clergy and laity conform to the regulations of the Council of Trent were soon interrupted by the revolt of the Netherlands against Spain. On 30 April, 1572, Haarlem joined the side of the Prince of Orange, the leader of the revolt, but, when in the following July a mob of foreign and ribald soldiers came to garrison the town, the bishop fled and sought refuge in the Oistercian convent Ter Kameren near Brussels. A year later, when the Spaniards had re-captured the town, he returned to his episcopal see, and on 15 August, 1573, consecrated anew the desecrated and pillaged cathedral. For the next three years Haarlem remained in the power of the Spaniards, the bishop did everything he could for the spiritual and temporal welfare of his flock, which, already thinned and impoverished by the siege, was now sorely afflicted by the Spanish garrison. Negotiations were opened with the Prince of Orange at Veere, and in January, 1577, the bishop personally took part in the truce resulting in a sworn truce and compromise, which conceeded equal rights of religious worship to Catholics and Protestants and delivered one of the churches within the town-walls, the Onze-Lieve Vrouwekerk on the Bakenessergracht, to the latter sect. This condition of affairs lasted only for a year and a half, as on Corpus Christi (29 May), 1578, the so-called Nona Harlemiana took place. With the connivance of the authorities the sworn compact was scandalously broken. At ten o'clock in the morning, when the procession of the Blessed Sacrament was just starting inside the cathedral, soldiers with drawn swords entered the sacred edifice, assaulted the defenceless people, plundered the faithful, wounded the priests, and committed sacrileges of all sorts. The bishop escaped, fled from the town disguised as a cattle-driver, came to Münster, where he acted as auxiliary bishop, and lived in the greatest poverty till his death at Deventer in 1587.

In 1592 all Catholics of the Netherlands under Calvinistic civil government were placed under the jurisdiction of a vicar Apostolic, the entire Diocese of Haarlem thus becoming a portion of the Missio Batava. The Catholics remained for a long time in the majority in the former diocese, but they were excluded from all public offices, and the exercise of their religion was forbidden by law under penalty of fines and exile. Nevertheless the old worship was continued in secret, either with the connivance of the magistrates in consideration of large bribes, or even at the risk of imprisonment and exile. At first there were scarcely any but secular priests, but in 1592, at the express wish of Clement VIII, the first two Jesuits came to assist the seculars, being followed in the seventeenth century by members of various other orders.
From the second half of the seventeenth century the persecution began to abate; it became more and more apparent that the Catholic Faith could not be exterminated, and the exigencies of trade were decidedly opposed to extreme measures. The Catholic barn and house-chapels were connived at, and the priests were tolerated on payment of a pecuniary fine. In this manner the number of Catholics remained very considerable in most towns, and even predominated in many villages. In the beginning of the eighteenth century occurred the Jansenist schism, long since prepared for by the jealousy and quarrels between the secular and regular clergy. In the old Haarlem Diocese the principal secular priests, the so-called Chapter of Haarlem, shrunk from excommunication and schism, and the great majority of clergy and laity remained faithful to Rome. In consequence of the disturbances, the mission was, in 1721, placed directly under the papal nuncio at Brussels, who exercised his functions under the title of vice-superior, until the nunciature was abolished in 1794. On the whole the Catholics were for the greater part of the eighteenth century allowed to exercise their religion without much hindrance, provided they obtained the consent of the government and worshipped in churches not outwardly recognisable as such; however, their exclusion from all public offices was rigorously maintained. The Netherlands revolution of 1795 was to bring some change in this inequality between Catholic and non-Catholic citizens. In 1796 the supreme authority of the Batavian Republic, the National Assembly, declared the Calvinistic State Church abolished, decreed equal rights in the exercise of religious worship to all creeds, and granted equality before the law to all citizens of the State. These articles were subsequently embodied in the fundamental law of 1798.

Nevertheless, a great many years were still to elapse before Catholics could obtain in fact the full enjoyment of the rights guaranteed to them. At that time the mission was governed, with authorization of the Propaganda, by Luigi Cambianeri (1794-1828), who was at first obliged to reside in Münster. In 1799, this vice-superior, making use of the legal rights conferred, founded a seminary in Warmond near Leyden, which still flourishes as the grand seminary of the present Diocese of Haarlem. King Louis Bonaparte (1806-1810) did much for the Catholics of Holland. In his residential city—first The Hague, afterwards Amsterdam—he had his own chapel, to which he admitted the public, and faithfully assisted at the religious services of his two chaplains, both excellent men and prêtres non assermentés (priests who had refused to take the oath required by the French government). He contributed large funds to enable the Catholics to build and restore their churches; he requested the vice-superior to take up his permanent abode in the royal residence of Amsterdam, and admitted some Catholics to the higher government offices. He even intended to have Amsterdam selected as an archiepiscopal see, but the constant opposition of his brother, Emperor Napoleon, obliged him to abdicate in 1810. Under the direct reign of Napoleon from 1810-1813 the Catholics of the old diocese submitted to a great extent to the French regime, in the face of religious persecution by his commercial policy (Continental blockade) and his financial operations (tiersage), but with regard to religion they were left in peace. The Archbishop of Holland and Zeeland, who under the vice-superior in Amsterdam directed the affairs of the mission in these provinces, repeatedly obtained from the ministerial dispensation exemption from military service for the theological students of Warmond.

The reign of King William I (1815-1840) was not favourable to the Catholics. Although the constitution of 1815 granted them equal rights with the Protestants, the king listened too much to counsellors who grudged the Catholics the enjoyment of this liberty. In 1817 a preparatory seminary, called Hageveld and destined for the education of the future aspirants to the priesthood in Holland and Zeeland, was opened near Velsen. In 1827 it was transferred to Voorhout near Leyden, and though, of course, much enlarged, still serves for the same purpose. Though it was admired as a seat of learning and virtue, William ordered it to be closed, in 1835, because he wished to force on the future priests the unclerical education of his Philosophical College at Louvain. He also continued to exclude the Catholics completely from official positions. In 1827 he concluded a concordat with Leo XII., by which Amsterdam was again selected as one of the two episcopal sees of Northern Netherlands, but this was never put into execution, mainly in consequence of the subsequent revolt of Belgium. His successor, the generous William II (1840-1849), was much more favourably inclined towards the Catholics; yet intolerance was too powerful to allow even this liberal-minded monarch to put the concordat into execution. However, in 1848 a revision of the constitution in a liberal sense was taken in hand, and this was destined to advance rapidly the influence of the Catholics, as was proved in the same year by the arrival of the first vice-superior, Monsignore Belgrado, at The Hague as the first permanent papal legate to William II. In the following years several addresses were sent to Rome, requesting the pope to restore to the Catholics of the Netherlands episcopal government, as necessary for the spiritual and social development and not opposed by any laws of the State.

The New Diocese.—On 4 March, 1853, Pius IX acceded to the fervent wishes of the numerous Dutch Catholics, and by his Brief "Ex qua die areano" restored the ecclesiastical hierarchy to the Netherlands. For the sake of tradition Utrecht was again made an archdiocese, but the Diocese of Haarlem was now made much larger than in 1559, the whole of South Holland and the islands of the Province of Zeeland being added to it. It numbered then 199 churches and chapels, served by 317 priests, secular and regular, whilst the laity were reckoned at 230,577 souls. The following bishops have since occupied the See of Haarlem: (1) F. J. van Vree (1853-1861), a man of exceptional organising talents. In the seven years of his episcopate he erected a chapter, circumscribed the boundaries of the parishes, some of which were assigned to regulars, drew up regulations for vestry and guardian churches, took special care of neglected children and fallen women, and prepared a catechism for use in his diocese. (2) G. P. Wilmer (1861-1877). In 1867 he called together a diocesan synod, the first after three centuries, in which the provisional settlement of the diocese as
arranged by his predecessor was finally concluded and declared permanent. Zealous for the veneration of the saints of his diocese, he purchased the locality near Brielle, where, according to the decisive argument of Fenelon, four groups of two hundred and fifteen regular priests had been cruelly put to death for the faith in 1762, and where their bodies had been interred. He also began at Rome a canonical process to obtain approval of the "immemorial" veneration of the Blessed Lidwina of Schiedam. His regulars of the Canons Regular of the Blessed Lidwina of Schiedam were attached to his diocese. Pursuant to the "Mandamus" of the collective bishops of the Netherlands (1868), he was unswearied in his efforts for the preservation, the success, and the increase of Catholic denominational schools in his diocese. To further this end he nominated a committee of clergymen and prominent laymen (Union for the promotion of Catholic education in the Diocese of Haarlem), and united all the Catholic school-teachers into a separate body. The preparatory seminary of Hageveld was considerably enlarged during his episcopate. Finally he strongly encouraged the diocesan secretary, J. J. Graaf, in establishing and expanding the diocesan museum, and, collaborating with his colleague, I. F. Vrégte, the publication of a periodical, "Contributions to the History of the Diocese of Haarlem." (3) P. M. Snickers (1877–1883). On account of the great concourse of pilgrims on the field of the martyrs near Brielle, this bishop caused a large chapel and a museum gallery to be built there. For the housing of the rich collections of books and precious manuscripts he erected a separate building near the seminary of Warmond. He approved for his diocese the statutes of the Gregorius Vereeniging (Society of Saint Gregory) for the promotion of the liturgical chant and sacred music, founded by M. J. A. Lans, professor at Hageveld. In 1883 the bishop was transferred to the Archiepiscopal See of Utrecht. (4) C. J. M. Bottemanne (1883–1903). Although sixty years of age when he was made bishop, this energetic man did much for the development of the diocese. The schools increased during his episcopate to over 200, so that even in the villages a parish without a Catholic school became the exception, while in the towns many schools were opened. From his clergy he selected able men to act as inspectors of Catholic education; at Hoorn he opened a Catholic training college. He laboured without leisure in dealing with the spiritual question. In 1888, the solemn promulgation of the Papal Encyclical "Rerum Novarum," a Roman Catholic Workman's League (De R. K. Volkabond) was founded under his auspices. This league or union is meant to embrace all the Catholic workmen of the diocese, and in 1903 numbered 16,000 members. Later on the master-workers were also brought together in a special league, De R. K. Gildenbond (The League of Roman Catholic Guilds). Bishop Bottemanne favoured greatly public meetings, which he addressed on many occasions. In 1897 he laid the foundation stone of an important addition to the seminary at Warmond, which was solemnly dedicated two years later on the occasion of the centenary of the institution. During this episcopate twenty-five new parishes were established and seventy churches consecrated. At the celebration of the golden jubilee of his priesthood (1896), Bishop Bottemanne Instituted the Pastoral Adoration of the Blessed Sacrament in such a way that day and night, throughout the year the Blessed Sacrament is solemnly exposed for adoration in some church or chapel of the diocese. The new cathedral of St. Bavo is another evidence of the flourishing condition of the diocese. This noble edifice—new, though not standing in conscious relation to its predecessor—erected by B. Sybers and A. Cypers. It is situated in a new quarter of Haarlem, mainly inhabited by workmen, who use it as their parish church. At first only the choir and transept were built, taking three years to complete, and on 2 May, 1898, the aged bishop had the happiness of consecrating this part of the great work. (5) A. J. Callier (1898— ). For eleven years he had been vicar-general of the diocese, of Warmond, four groups of two hundred and fifteen regular priests had been cruelly put to death for the faith in 1762, and where their bodies had been interred. He also began at Rome a canonical process to obtain approval of the "immemorial" veneration of the Blessed Lidwina of Schiedam. His regulars of the Canons Regular of the Blessed Lidwina of Schiedam were attached to his diocese. Pursuant to the "Mandamus" of the collective bishops of the Netherlands (1868), he was unswearied in his efforts for the preservation, the success, and the increase of Catholic denominational schools in his diocese. To further this end he nominated a committee of clergymen and prominent laymen (Union for the promotion of Catholic education in the Diocese of Haarlem), and united all the Catholic school-teachers into a separate body. The preparatory seminary of Hageveld was considerably enlarged during his episcopate. Finally he strongly encouraged the diocesan secretary, J. J. Graaf, in establishing and expanding the diocesan museum, and, collaborating with his colleague, I. F. Vrégte, the publication of a periodical, "Contributions to the History of the Diocese of Haarlem." (3) P. M. Snickers (1877–1883). On account of the great concourse of pilgrims on the field of the martyrs near Brielle, this bishop caused a large chapel and a museum gallery to be built there. For the housing of the rich collections of books and precious manuscripts he erected a separate building near the seminary of Warmond. He approved for his diocese the statutes of the Gregorius Vereeniging (Society of Saint Gregory) for the promotion of the liturgical chant and sacred music, founded by M. J. A. Lans, professor at Hageveld. In 1883 the bishop was transferred to the Archiepiscopal See of Utrecht. (4) C. J. M. Bottemanne (1883–1903). Although sixty years of age when he was made bishop, this energetic man did much for the development of the diocese. The schools increased during his episcopate to over 200, so that even in the villages a parish without a Catholic school became the exception, while in the towns many schools were opened. From his clergy he selected able men to act as inspectors of Catholic education; at Hoorn he opened a Catholic training college. He laboured without leisure in dealing with the spiritual question. In 1888, the solemn promulgation of the Papal Encyclical "Rerum Novarum," a Roman Catholic Workman's League (De R. K. Volkabond) was founded under his auspices. This league or union is meant to embrace all the Catholic workmen of the diocese, and in 1903 numbered 16,000 members. Later on the master-workers were also brought together in a special league, De R. K. Gildenbond (The League of Roman Catholic Guilds). Bishop Bottemanne favoured greatly public meetings, which he addressed on many occasions. In 1897 he laid the foundation stone of an important addition to the seminary at Warmond, which was solemnly dedicated two years later on the occasion of the centenary of the institution. During this episcopate twenty-five new parishes were established and seventy churches consecrated. At the celebration of the golden jubilee of his priesthood (1896), Bishop Bottemanne Instituted the Pastoral Adoration of the Blessed Sacrament in such a way that day and night, throughout the year the Blessed Sacrament is solemnly exposed for adoration in some church or chapel of the diocese. The new cathedral of St. Bavo is another evidence of the flourishing condition of the diocese. This noble edifice—new, though not standing in conscious relation to its predecessor—erected by B. Sybers and A. Cypers. It is situated in a new quarter of Haarlem, mainly inhabited by workmen, who use it as their parish church. At first only the choir and transept

HABACUC (HABAKKUK), the eighth of the Minor Prophets, who probably flourished towards the end of the seventh century B. C.

1. NAME AND PERSONAL LIFE.—In the Hebrew text (i, 1; ii, 1), the prophet's name presents a doubly intensive form ἱβακκάκων, ἱβακκάκως, which has not been preserved either in the Septuagint or in the Vulgate: Habacuc. Its resemblance with the Assyrian bābakku, which is the name of a plant, is obvious. Its exact meaning cannot be ascertained:
II. CONTENTS OF PROPHECY.—Apart from its short title (i, 1), the Book of Habacuc is commonly divided into two parts: the one (i, 2—ii, 20) reads like a dramatic dialogue between God and His prophet; the other (chap. iii) is a lyric ode, with the usual characteristics of a psalm. The first part opens with Habacuc’s lament to God over the protracted iniquity of the land, and the persistent oppression by his wicked, so that there is neither law nor justice in Judea: How long is the wicked thus destined to prosper? (i, 2—4). Yahweh replies (i, 5—11) that a new and startling display of His justice is about to take place: already the Chaldeans—that swift, rapacious, terrible, race—are being raised up, and they shall put an end to the wrongs of which the prophet has complained. Then Habacuc renounces with Yahweh, the eternal and righteous Ruler of the world, over the cruelties in which He allows the Chaldeans to indulge (i, 12—17), and he confidently waits for a response to his pleading (ii, 1). God’s answer (ii, 2—4) is in the form of a short oracle (verse 4), which the prophet is bidden to write down on a tablet that all may read it, and which foretells the ultimate doom of the Chaldean invader. Content with this message, Habacuc utters a taunting song, triumphantly made up of five “woes” which He places with dramatic vividness on the lips of the nations whom the Chaldeans shall conquer (ii, 5—20). The second part of the book (chap. iii) bears the title: “A prayer of Habacuc, the prophet, to the music of Shigionot.” Strictly speaking, only the second verse of this chapter has the form of a prayer. The verses following (3—18) describe the ophany in which Yahweh appears for no other purpose than the salvation of His people and the ruin of His enemies. The ode concludes with the declaration that even though the blessings of nature should fail in the day of dearth, the singer will rejoice in Yahweh (17—19). Appended to chap. iii is the statement: “For the chief musician, on my stringed instrument.”

III. DATE AND AUTHORSHIP.—Owing chiefly to the lack of reliable external evidence, there has been in the past, and there is even now, a great diversity of opinions concerning the date to which the prophecy of Habacuc should be ascribed. Ancient rabbis, whose view is embodied in the Jewish chronicle entitled Seder Rebbe, would place it in the last years of Manasses’s reign. Clement of Alexandria says that “Habacuc still prophesied in the time of Sedeccias” (599—588 b. c.), and St. Jerome ascribes the prophecy to the time of the Babylonian exile. Some recent scholars (Delitzsch and Keil among Protestants, Danko, Rheinke, Holzammer, and practically also Vigouroux, among Catholics, place it under Josias (641—610 b. c.). Others refer it to the time of Joakim (610—599 b. c.), either before Nabuchodonosor (which is improbable), or after him (599—560 b. c.). Catilini, Schegg, Hanerberg; Protestant: Kleinert, Cook, Bleek-Kamphausen, etc.), or after that great event (Catholic: Lenormant, Van Hoonacker; Protestant: Schrader, S. Davidson, König, Strack, Driver, etc.); while others, mostly out-and-out rationalists, ascribe it to the time after the ruin of the Holy City by the Chaldeans. As might be expected, these various views do not enjoy the same amount of probability, when they are tested by the actual contents of the Book of Habacuc. Of them all, the one adopted by St. Jerome, and which is now that propounded by many rationalists, is decidedly the least probable: to ascribe, at that view does, the book to the Exile, is on the one hand, to admit for the text of Habacuc an historical background to which there is no real reference in the prophecy, and, on the other, to ignore the prophet’s distinct references to events connected with the period before the Babylonian captivity (cf. i, 2—4, 6). All the other opinions have their respective degrees of probability, so that it is no easy matter to choose among them. It seems, however, that the view which ascribes the book to 605—600 b. c. “is best in harmony with the historical circumstances under which the Chaldeans are presented in the prophecy of Habacuc, viz., as a scourge which is imminent for Judah, to press oppressively upon the inheritance of their predecessors” (Van Hoonacker).

During the nineteenth century, objections have oftentimes been made against the genuineness of certain portions of the Book of Habacuc. In the first part of the work, the objections have been especially directed against i, 5—11. But, however formidable they may appear at first sight, the difficulties turn out to be really weak, on a closer inspection; and in point of fact, the great majority of critics look upon them as not decisive. The arguments urged against the genuineness of chapter ii, 1—20, are of less weight still. Only in reference to chapter iii, which forms the second part of the book, can there be a serious controversy as to its authorship by Habacuc. Many critics treat the whole chapter as a late and independent poem, with no allusions to the circumstances of Habacuc’s time, and still bearing in its spiritual and historical character the marks of two or more distinct works of the collection of sacred songs from which it was taken. According to them, it was appended to the Book of Habacuc because it had already been ascribed to him in the title, just as certain psalms are still referred in the Septuagint and in the Vulgate to some prophets. Others, indeed in smaller number, but also with greater probability, regard only the last part.
chapter iii, 17-19 as a later addition to Habacuc’s work: in reference to this last part only does it appear true to say that it has no definite allusions to the circumstances of Habacuc’s time. All things considered, it seems that the question whether chapter iii constitutes an original portion of S. H. or a supplement appended to it at a later date, cannot be answered with certainty: too little is known in a positive manner concerning the actual circumstances in the midst of which Habacuc composed his work, to enable one to feel confident that this portion of it must or must not be ascribed to the same author as the rest of the book.

IV. LITERARY AND TEXTUAL FEATURES.—In the composition of his book, Habacuc displays a literary power which has often been admired. His diction is rich and classical, and his imagery is striking and appropriate. The dialogue between God and him is highly oratorical, and exhibits to a larger extent than is commonly supposed, the parallelism of thought and expression which is the distinctive feature of Hebrew poetry. The Mishal or taunting song of five “woes” which follows the dialogue, is placed with powerful dramatic effect on the lips of the nations whom the Chaldeans have cruelly oppressed. The lyric form with the narrative, compares favourably in respect to imagery and rhythm with the best productions of Hebrew poetry. These literary beauties enable us to realize that Habacuc was a writer of high order. They also cause us to regret that the original text of his prophecy should not have come down to us in all its primitive perfection. As a matter of fact, recent interpreters of the book have noticed and pointed out numerous alterations, especially in the line of additions, which have crept in the Hebrew text of the prophecy of Habacuc, and render it at times very obscure. Only a fair number of those alterations can be corrected by a close study of the context; by a careful comparison of the text with the ancient versions, especially the Septuagint; by an application of the rules of Hebrew parallelism, etc. In the other places, the primitive reading has disappeared and cannot be recovered, except conjecturally, by the means which Biblical criticism affords in the present day.

V. PROPHETICAL TEACHING.—Most of the religious and moral truths that can be noticed in this short prophecy are not peculiar to it. They form part of the common message which the prophets of old were charged to convey to God’s chosen people. Like other prophets, Habacuc is the champion of ethical monotheism. For him, as for them, Yahweh alone is the living God (ii, 18-20); He is the Eternal and Holy One (i, 12), the Supreme Ruler of the Universe (i, 6, 17; ii, 5 sqq.; iii, 2-16), Whose word cannot fail to obtain its effect (ii, 5), and Whose glory will be acknowledged by all nations (ii, 14). In his eyes, as in those of the other prophets, Israel is God’s chosen people whose unrighteousness He is bound to visit with a signal punishment (i, 2-4). The special people, whom it was Habacuc’s own mission to announce to his contemporaries as the instruments of Yahweh’s judgment, were the Chaldeans, who would overtake everything, even Judah and Jerusalem, in their victorious march (i, 6 sqq.). This was indeed at the time an incredible prediction (i, 5), for was not Judah’s own kingdom and the Chaldean a world-power characterized by overwhelming pride and tyranny? Was not therefore Judah the “just” to be saved, and the Chaldean really the “wicked” to be destroyed? The answer to this difficulty is found in the distich (ii, 4) which contains the central and distinctive teaching of the book. Its oracular form bespeaks a principle of wider import than the actual circumstances in the midst of which it was revealed to the prophet, a general law, as we would say, of God’s providence in the government of the world: the wicked carries in himself the germs of his own destruction; the believer, on the contrary, those of eternal life. It is because of this, that Habacuc applies the oracle not only to the Chaldeans of his time who are threatening destruction of God’s kingdom on earth, but also to all the nations opposed to that kingdom who will likewise be reduced to naught (ii, 5-13), and solemnly declares that “the earth shall be filled with the knowledge of the glory of Yahweh, as the waters cover the sea” (ii, 15). It is because of this truly Messianic import that the second part of Habacuc’s oracle (ii, 4b) is repeatedly treated in the New Testament writings (Rom., i, 17; Gal., iii, 11; Heb., x, 38) as being verified in the inner condition of the believers of the New Law.

COMMENTARIUS: CATHOLIC:—SCHROEDER (2nd ed., Ratibon, 1858); RHEINERS (Dresden, 1849); KLEINER (Paris, 1888); NON-CATHOLIC:—DELITZSCH (Leipzig, 1843); Von Orelli (Eng. tr., Edinburgh, 1828); WELTSCH (3rd ed., Berlin, 1888); DAVIDSON (Cambridge, 1899); MARTY (Freiburg im Br., 1904); NOACK (2nd ed., Gottingen, 1901); DUMH (Dobingen, 1860); VAN HOOGAERCK (Paris, 1908).

Habakkuk. See HABACUC.

Habington, William, poet and historian; b. at Hindlip, Worcestershire, 1605; d. 1654; son of Thomas Habington the antiquarian. He was educated at St. Omer and Paris. The information & Wood in his “Athens” that Habington returned to England “to escape the importunity of the Jesuits to join their order” rests only on a vague statement made by the ex-Jesuit Wadsworth in his “English Spanish Pilgrim”. Habington married Lucy, daughter of William Herbert, Baron Powis, and a year or two after his marriage in 1634, issued his well-known “Castara” (see Arber’s English Reprints, 1870), a series of poems addressed mainly to his wife. In 1635 and 1640 second and third enlarged editions of the book respectively appeared. The poems are mostly short, many of them sonnets, and included are several prose “Characters” such as it was the custom then to write. A few verses are addressed to friends, one of whom is Ben Jonson. All the poetry of “Castara” shows a peculiarly refined and pure imagination. It is always skilful and melodious and contains some passages of real beauty. It is marked, though not excessively, by the “metaphysical” qualities which pervaded much of the Caroline verse. In 1640 Habington also published a romantic tragedy, the “Queen of Arragon”, of less interest for its dramatic quality, which is small, than for special passages in which illustrate the poet’s independence of mind upon certain social and political questions of the time.vt Court, and the Restoration was revived. Habington produced in the same year, 1640, a prose “History of Edward IV”, reprinted in Knettel’s “Complete History of England” (London, 1706), stated by Wood to have been written and published at the desire of King Charles I. In 1641 followed “Observations upon History”, a series of reflective sketches in prose of great events in Europe, “such as he says” “impressed me in the reading and make the imagination stand amazed at the vicissitude of time and fortune” Professor Saintsbury remarks of Habington that “he is creditably distinguished from his contemporaries by a very strict and remarkable decency of thought and language”.

K. M. WARREN.

Habit is an effect of repeated acts and an aptitude to reproduce them, and may be defined as “a quality difficult to change, whereby an agent when he work one way or another indefinitely, is disposed easily and readily at will to follow this or that particular line of action” (Rickaby, Moral Philos-
Daily experience shows that the repetition of actions or reactions produces, if not always an inclination, at least an aptitude to act or react in the same manner. To say that a man is accustomed to a certain diet, climate, or exercise, that he is an habitual smoker or early-riser, that he can dance, fence, or play the violin, that he is used to the certain perceptions and modes of thinking, feeling, and willing, etc., signifies that owing to past experience he can do now that which formerly was impossible, do easily that which was difficult, or dispense with the effort and attention which were at first necessary. Like any other habit, this habit of his is not its own end in itself, but only indirectly—retrospectively—from the actual processes which have given rise to it, and prospectively from those which proceed from it. Habit will be considered (I) in general, and then in its most important (II) physiological, (III) psychological, (IV) ethical, (V) pedagogical, (VI) philosophical, and (VII) theological aspects.

I. If an attitude, action, or series of actions resulting from a well-formed and deep-rooted habit is compared with the corresponding attitude, action, or series before the habit was contracted, the following differences are generally observed: (1) Uniformity and regularity have increased, and circumstances and conditions the same action recurs invariably and in the same manner, unless a special effort is made to inhibit it; (2) Selection has taken the place of diffusion; after a number of attempts in which the energy was scattered in several directions, the proper movements and adaptations have been singled out; the energy now follows a straight line and goes forth directly toward the expected result; (3) Less stimulus is required to start the process, and, where perhaps resistance had to be overcome, the slightest cue now suffices to give rise to a complex action; (4) Facility and ease have disappeared, the elements of the action, every one of which used to require distinct attention, succeed one another automatically; (5) Where there was merely desire, often difficult to satisfy; or indifference, perhaps even repugnance, there is now tendency, inclination, or need, and the wonted interruption of an habitual action or mode of thinking, that he is used to a naively feeling of uneasiness; (6) Instead of the clear and distinct perception of the action in its details, there is only a vague consciousness of the process in its totality, together with a feeling of familiarity and naturalness. In a word, habit is selective, produces quickness of response, unites the processes of reaction, more perfect, more rapid, and tends to automatism.

From these effects of habit, together with the wideness of the field which it covers, its importance is easily inferred. Progress requires flexibility, power to change and to conquer, fixity of useful modifications and the will to retain conquests. Adaptability to new surroundings, and facility of processes presuppose the power of acquiring habits. Without them, not only mental functions like reflecting, reasoning, counting, but even the most ordinary actions like dressing, eating, walking, would necessitate a distinct effort for every detail, consume a great deal of time, and withal remain very imperfect. Hence habit has been called a second nature, and man termed a bundle of habits; and, although such expressions, like all aphorisms, may be open to criticism if taken too literally, yet they contain much truth. Nature is the common groundwork of all activities and essentially the same, but its variations, the special emphasis of certain forms of activity together with their manifold individual features, are, for the most part, the results of habits. Speech, writing, skill in its varied applications, in fact every complex action of organism and mind, which are matters of course for the adult or the adept, appear simple only because they are habitual; the child or the beginner finds how complex they are in reality. Even in merely physiological functions the influence of habit is felt: the stomach becomes accustomed to certain foods; the blood to certain stimulants and poisons; the whole organism to certain hours for resting and awaking, to the climate and surroundings. All mental functions, habits, the results of habits, or are modified by them. Habits of thought, speculative and practical, habits of feelings and will, religious and moral attitudes, etc., are constantly shaping man’s views of things, persons, and events, and determine his behaviour toward those who agree with or differ from him. Observation and reflection show that the empire of habit is well-nigh unlimited, and that there is no form of human activity to which it does not extend. It is hardly possible to exaggerate its importance; the danger is rather that one may under-estimate, or at least fail to fully appreciate its importance.

Habit is acquired by exercise; in this it differs from the instincts and other natural predispositions and aptitudes which are innate. In a series of actions, it begins with the first act, for, if this left no trace whatsoever, there would be no more reason why it should begin with the second or any subsequent act. Yet at this early stage the trace or disposition is too weak to be called a habit; it is the germ of habit, the first stage of repetition. The growth of habit is twofold, intensive and extensive, and may be compared to that of a tree which extends its branches and roots farther and farther, and at the same time acquires a stronger vitality, can resist more effectively obstacles to life, and becomes more difficult to uproot. A habit also ramifies; its influence, restricted at first to one line of action, gradually extends, making itself felt in a number of other processes. Meanwhile it takes deeper root, and its intensity increases so that to remove or change it becomes a more and more arduous task. The main factors in the growth of habit are: (1) The number of repetitions, and every repetition strengthens the disposition left by previous exercise; (2) their frequency: too long an interval of time allows the disposition to weaken, whereas too short an interval fails to give sufficient rest, and results in organic and mental fatigue; (3) their uniformity: at least there must be slow in the adult, new elements being added little by little; (4) the interest taken in the actions, the desire to succeed, and the attention given; (5) the resulting pleasure or feeling of success which becomes associated with the idea of the action.

No general rules, however, can be given for a strict determination of factors. As a rule, frequently the actions should be repeated, or how rapidly the complexity may be increased, will depend not only on actual psychological factors of interest, attention, and application, but also on the nature of the actions to be performed and on natural aptitudes and tendencies. Habits decrease or disappear negatively by abstaining from exercising them, and positively by acting in an opposite direction, antagonistic to the existing habits.

II. All organic functions are due to, facilitated or modified by, habit. Some habits, like those referring to climate, temperature, certain foods, etc., are purely physiological, the mind contributing little or nothing. For instance, the same dose of alcohol or stimulants might be fatal for some organisms, while it is necessary for those which have been used to it. Or again, a bird, confined in an enclosed place in which the air gradually becomes foul, grows so far accustomed to the bad direction and composition of the air that it continues to live for several hours after the air has been so poisoned with carbonic acid as to kill almost immediately another bird suddenly placed therein. In the acquisition of other physiological habits, especially those of skill and dexterity, psychological factors have a great importance, above all the antecedent idea of the end, which directs the selection of the appropriate
movements, and the subsequent idea of success associated with them. Moreover a number of such habits are made use of under the guidance of the acquired facility for writing is adapted to the ideas to be expressed; fencing consists in the adaptation of certain movements facilitated by habit to the perceived or foreseen movements of the adversary. They are therefore mixed habits of organism and mind, the highest music, because they are being performed, leaves some trace in the organism, especially in the nervous system. In the present stage of physiological science, the nature of these traces cannot be determined with certainty. By some they are described as persisting movements and vibrations, by others, as fixed impressions and structural changes, especially as tendencies and dispositions to certain functions. These views are not exclusive, but may be combined, for the disposition, which has a more direct reference to future processes, may lead to permanent impressions and movements, which have special reference to past pianist's fingers or that singer's vocal organs, but the habit has also been explained as a canalization, or the creation of paths of least resistance which the nervous energy tends to follow.

III. Psychologically habit signifies the acquired facility of conscious processes. The education of the senses is like a course of ideas, number, mental idea, and the mental idea is a result derived from experience and from studies general or special, the powers of attention, reflection, reasoning, insight, etc., and all these complex factors which form man's frame of mind and character, such as strength of will, weakness or obstinacy, irascibility or calmness, likes and dislikes, prejudices, and so on, are due largely to habits intentionally or unintentionally contracted. Owing to the great variety of conscious processes and the complexity of their determinants, it is difficult to reduce the psychological effects of habit to universal laws. The statement frequently made that habit lessens consciousness cannot be accepted without qualification; for sometimes the being accustomed to a stimulus means ceasing to have a clear consciousness of it, as in the case of the ticking of a clock which little by little ceases to be perceived distinctly, while sometimes on the contrary it means an increase of consciousness, as in the case of the deafness of the musician's ear in discriminating sounds of slightly different pitch. Here a few distinctions must be kept in mind. First, between prolonged sensation, producing fatigue and consequently dullness of the sense-organ, and repeated sensation allowing sufficient rest. A second, between mental processes; by the mind is chiefly passive and those in which it is chiefly active, as habit lessens passive and augments active sensitiveness. Finally one must see whether conscious processes are ends or simply means. Compared to the quality of the sounds to be produced, the special activity of the pianist's fingers or that singer's vocal organs is but a means to an end. Hence the musician becomes less conscious of this activity but more conscious of its result. In any case, since the energy flows naturally in the wonted direction, effort and attention are in inverse ratio to habit.

To pleasures as a rule applies the proverb "Assueta viscillum" (Familiarity breeds contempt). By being repeated the same experience loses its novelty, which is one of the elements of pleasure and interest. But the rapidity of the decrease depends not only on the frequency of the repetitions, but also on the wealth and variety contained in the experiences; hence it is that composition is perceived much sooner than others in which the mind continues to discover some new pleasurable element. Pleasures resulting from the satisfaction of periodical wants, like resting or eating, undergo no change from the mere fact of repetition. Inclinations (i.e. desire and aversion) decrease; desires frequently change into needs of, or unconscious cravings after, experiences which formerly were pleasurable, but the mind is tasteless or are even known to be injurious. Persons or things habitually met with, even if they are the source of no pleasure, are missed if they happen to disappear. Painful impressions become less keen unless they are increased in reality or exaggerated by the imagination. By exercise mental activity is strengthened in proportion to natural dispositions and to the quantity and quality of the energy employed. Hence habit is a force which impels to act, diminishes the strength of the will, and may become so strong as to be almost irresistible.

From the point of view of ethics, the main division of habits is into good and bad, i.e., into virtues and vices, according as they lead to actions in conformity with or against the rules of morality. It is needless to insist on the importance of habit in moral conduct; the majority of actions are performed under its influence, frequently without reflection, and in accordance with principles or preconceptions to which the mind has become accustomed. The actual dictates of an upright conscience are dependent on intellectual habits, especially those of rectitude and honesty without which it happens too often that reason is used, not to find out what is right or wrong, but to justify a course of action, a number of wrong ideas taken as a matter of course. Custom also is an important factor, as that which is of frequent occurrence, even if known at first to be wrong, little by little becomes familiar, and its commission no longer produces in us feelings of shame or remorse. The voice of conscience is stifled; it ceases to give its warning, or at least no attention is paid to it.

By lessening freedom, habit also lessens the actual responsibility of the agent, for actions are less perfectly attended to, and in varying degrees escape the control of the will. But it is important to note the distinction between habits acquired and retained knowingly, voluntarily, and with some foresight of the consequences likely to result, and habits acquired unconsciously, without our noticing them, and therefore without our thinking of the possible consequences. In the former case, actions good or bad, though actually not quite free, are nevertheless imputable to the agent, since they are entirely in the given in the implied consent given them at the beginning of the habit. If on the contrary the will had no part at all in acquiring or retaining the habit, actions proceeding from it are not voluntary, but, as soon as the existence and dangers of a bad habit are noticed, efforts to uproot it become obligatory.

V. Between the child and the adult there is not merely a difference in the quantity of energy, bodily and mental, which they command, but especially a difference of adaptability, co-ordination or habit, thanks to which such energy has made more available for a definite purpose. Growth in increase and development or organization must proceed together. The main end of education is to direct the harmonious development of all the child's faculties according to their relative importance, and thus to do for the child that which it is not yet able to do for itself, namely to fit its various energies for future use, and to select from among the tendencies deposited in the nature those which are to be cultivated and those which are to be destroyed. While the work must proceed gradually according to the increasing capacities of the child, the fact must always be kept in view that in early years both organism and mind are plastic and more easily influenced. Later on, the power of adaptability is much less, and frequently the learning of a new habit implies the difficult task of breaking off an old one. As the complexity of functions increases, it becomes imperative, as far as possible, that the new elements find at once their proper place and associations, and
HABIT

take root there, since otherwise it would be necessary later on to eradicate them and perhaps transplant them elsewhere. Hence, the principle of negative education advocated by Rousseau is inadmissible. In early years, according to him, "the only habit which the child should be allowed to form is that of habi
ting in a place; or if he acquire an habit of any kind, if using one hand rather than the other, or that of eating, sleeping, acting at the same regular hours. Up to
twelve, the child should not be able to distinguish its right from its left hand. With regard to intelligence and will, "the first education must be purely negative. It consists not in teaching virtue or truth, but in guarding the heart against vice and the mind against error". To judge this principle, it must be remem
ered that there are three periods in the development of activity: one of diffusion during which actions take place largely at random, and the energy is dispersed in many channels; the second of effort at co-ordination during which the proper modes of functioning are selected and practised; the third of habit which re
moves everything superfluous, and greatly facilitates correct modes of functioning. To prolong the first of these periods, since the last is the most perfect, would be an injustice against the child, who has a right not only to the necessaries of life, but also to the necessaries re
quired for its development. Moreover, it may be asked, how can the heart be guarded against vice, and the mind against error, without showing what vice and error are, and without teaching virtue and truth? How in general can a bad habit be avoided or combated more effectively than by the acquisition of the con
trary habit? Experience shows that many good habits, if not cultivated in childhood, are never ac
quired at all, or not so perfectly, and defects in the adult may often be traced back to early education.

To obtain the best results, it is important for the teacher to know the natural aptitudes of every pupil, for the effort which is possible for one might be, if re
quired of another, a source of discouragement, or exercise even a still more deleterious influence on the mind of the child. The use of rewards and punish
ments must always be made in a manner suited to the child's dispositions, and directed by the general effects of habit upon pleasurable and painful impressions and emotions, at the same time that the decision has to be paid to their dangers, and the child must not be allowed to become a mere automaton. Habits of reflection and attention, together with de
termination and strength of will, will enable the child to control, direct, and govern other habits.

VI. In Aristotelian and Scholastic metaphysics habit comes under the category called quality. To be the subject of habits a being must be in potestia (see ACTUS ET POTENTIA), i.e. capable of determination and perfection; and this potestia must not be re
stricted to only one mode of activity or receptivity, for the distinction of habit upon pleasurable and painful impressions and emotions, at the same time that the decision has to be paid to their dangers, and the child must not be allowed to become a mere automaton. Habits of reflection and attention, together with de
termination and strength of will, will enable the child to control, direct, and govern other habits.

Habitus comes under the category called quality. To be the subject of habits a being must be in potestia (see ACTUS ET POTENTIA), i.e. capable of determination and perfection; and this potestia must not be re
stricted to only one mode of activity or receptivity, for the distinction of habit upon pleasurable and painful impressions and emotions, at the same time that the decision has to be paid to their dangers, and the child must not be allowed to become a mere automaton. Habits of reflection and attention, together with de
termination and strength of will, will enable the child to control, direct, and govern other habits.
habit proper, or virtue in the strict sense—is acquired by the cooperation of man with Divine grace and the repetition of acts. By sin, on the contrary, these habits are lessened or lost.

Habar [Heb. ḥāḇ̄ar; Sept. 'āḇôp: IV Kings (II), xvii, 6; 'āḇôp: IV Kings, xviii, 11; 'əḇôp: I Par. (Chronicles), v, 26].—A river of Mesopotamia in Asiatic Turkey, an important eastern affluent of the Euphrates. It still bears the name of Habur. It rises in Mt. Masius (the present Karaja Dagh), some fifty miles north of Resaina (Räes el-Ain, "the head of the spring"); flows S.S.W., imparting great fertility to its banks in the winding way through the midst of the delta, in which it falls into the Euphrates at Karkhdan (ancient Carchemish) after a course, to a great extent navigable, of about two hundred miles. The most important tributary of the Habor is the Jeruver, or ancient Mygdonius, which flows into it after passing Nisibis and Thubida. In IV Kings, xvii, 6; xviii, 11, the Habor is called "the Euphrates at Kar§" (the ancient Kaushan), on account of the district of that name which it waters and which is now covered with mounds, the actual remains of Assyrian towns. The river Habor is distinctly named in the cuneiform inscriptions of Tiglath-pileser I (about 1120-1110 B.C.), and of Ashurnasir-pal (1055-1003 B.C.), and it seems from the expressions used by the last-named monarch that the river then emptied itself into the Euphrates through several mouths. In I Par., v, 26, it is stated that Phil, also called Thelgaphalnasar (Tiglath-pileser III), carried away the exiles of the Transjordanic part of the land of Israel into the district of the Habur. It is in the second land that according to IV Kings, xv, 36–6; xvii, 9–11, Salamanasar IV—and perhaps Sargon, his immediate successor—settled the captives of Northern Israel.

The Habur of IV Kings and I Par. must not be identified with the Chobar (Heb. Hebkhār) which is represented by the name of the prophet Ezechiel (Ezek. III, 15, 23, etc.), and which was a large navigable canal east of the Tigris, near Nippur. The Greek historian Procopius (6th cent. after Christ) says that the Chobor (the classical name of the Habor) formed the limit of the Roman Empire. When the Spanish rabbi Benjamin ben Jochai visited it (A.D. 1103) he wrote: "the stream of the Habur, he found near by some two hundred Jews who may have in part been the descendants of the ancient capite of the Assyrian kings. At the present day, the plain of the Habor is a favourite camping ground for wandering Bedouins. Francis E. Gigot.

Haceldama is the name given by the people to the potter's field, purchased with the price of the treason of Judas. In Aramaic נַחַל דַּמָּא, Noahal dema, signifies "field of blood." The name is written in Greek Ἀκελήδαμος, and very often Ἀκελήδαμος, to render by the letter χ the guttural sound of the final χ. St. Peter said in his discourse (Acts, i, 18–19): "He [Judas] indeed hath possessed a field of the reward of iniquity, and being hanged, burst asunder in the midst: and all his bowels gushed out. And it became known to all the inhabitants of Jerusalem: so that the same field was called in their tongue, Haceldama, that is to say, Field of Blood. The field of Blood also that was condemned, relates St. Matthew (xxvii, 3–8), threw down the thirty pieces of silver in the temple and went and hanged himself. "But the chief priests having taken the pieces of silver, said: It is not lawful to put them into the corbona, because it is the price of blood. The Haceldama (New Jer. 21, 23, 10) they bought with them the potter's field, to be a burying place for strangers. For this cause, that field was called [Haceldama, that is], 'The field of blood, even to this day'" (the bracketed words are added by the Vulgate). According to the Acte this blood was that of Judas, according to St. Matthew it was that of Christ. It is not impossible that the people should have so designated the potter's field, for both reasons. In saying that Judas acquired a field with the reward of his crime, St. Peter undoubtedly did not intend to say that the traitor purchased a field in order to commemorate the suicide of the wicked. The question of replacing the fallen Apostle, St. Peter by the deposit of his motion recalled his tragic death and the acquisition of the field where he perished, which was the sole reward of his treason. St. Matthew, on the contrary, writes as an historian, and relates the manner in which the prophecies were fulfilled (Zach., xi, 12–13; Jer., xxii, 2, 15, 43; vii, 32).

It is permissible to conjecture from these two accounts, that after the potter's field was polluted by the suicide of the traitor, the proprietor hastened to rid himself of it, at any cost. In this manner the chief priests were enabled to buy it for thirty pieces of silver, of thirty shekels, equivalent to about twenty dollars. It seems to correspond to "the potter's house" of Jeremias (xviii, 2–3), which further on (xix, 1–2) is spoken of as being in the valley of the Son of Ennom, south of Jerusalem. The same Prophet declares (xvii, 32) that in this valley, "they shall burn in Topheth, because there is no other place," owing to the Moloch worship being practised there. In his "Onomasticon" (ed. Klostermann, p. 102, 16) Eusebius makes the "field of Haceldama" lie nearer to "Thafeth of the valley of Ennom." But under the word "Haceldama" (p. 39, 20) he says that this field was pointed out as being "north of Jerusalem" incidentally through inadvertence. St. Jerome corrects the mistake and writes "south of Mount Sion." (p. 39, 27).

Tradition with regard to this place has remained the same throughout the centuries. In fact, the Pilgrim of Piacenza who was known by the name of Aquanius (c. 570) went from the pool of Silo "to the field of Akeldame", which then served as a burial-place for pilgrims. Arculf (c. 670) visited it to the south of Mount Sion and makes mention also of the pilgrims' sepulchre. In the twelfth century, the crusaders erected beyond the field, on the south side of the valley of Ennom, a large building now in a ruined condition, measuring seventy-eight feet in length from east to west, fifty-eight feet in width, and thirty in height on the north. It is roofed over and, towards the southern end, covers several natural grottoes, which were once used as sepulchres of the Jewish type, and a ditch is hollowed out at the northern end which is sixty-eight feet long, twenty feet wide, and ten feet deep. It is estimated that the bones and rubbish which have accumulated here form a bed from ten to fifteen feet thick. They continued to bury pilgrims here up to the beginning of the nineteenth century. Haceldama (Hagg ed Durm), has been the property of the non-United Armenians since the sixteenth century.

Michael Ott.

Hadrian, Publius Elius, Emperor of the Romans; b. 24 January, A. p. 76 at Rome; d. 16 July, 138. He married his cousin and ward, Julia Sabina, grand-niece of Trajan. He reigned from 118 to 138, devoted himself to art and science, and possessed notable qualifications as a statesman and soldier. He abandoned Armenia, Mesopotamia, and Assyria, countries that his predecessor had hoped to acquire permanently by the conquest of the Parthians, and confined his efforts to developing the Province of Arabia. He strengthened his amicable relations with the Senate by various favours; he remitted arrears of taxes that had been owing to the treasury for fifteen years. The absolute power of the emperor reached limits never attained before. A conspiracy formed against Hadrian's life by distinguished officers during one of his campaigns in Moesia was suppressed by the senators, and the four ringleaders were executed without the emperor's knowledge. In pursuance of his political, scientific, and military interests he travelled over the Roman provinces during his reign, first through those in the North and the North-West, then Spain and Mauretania, and finally the Orient and Greece, thereby ascertaining the loyalty of thirty legions and raising the discipline and warlike efficiency of the Roman army to a high standard, though his policy was far-sighted and peaceful. He was commemorated on the coinage as the restorer of the provinces. By protecting the boundaries in the valley of the Lower Danube, and by building many fortified places he encouraged the settlement of the province of Dacia by Roman colonists. In Germany he completed the palisaded ditch between the Rhine and the Danube (Rimae Hadriani). In Britain the legions constructed a fortified wall extending from the mouth of the River Tyne to the Solway Firth (vallum Hadriani) to protect the Roman boundaries from the inroads of the Picts. This has been partially preserved. He desisted from any attempt to subjugate the northern part of the island. Numerous fortresses and military roads were built in Africa, and on the Black Sea coast. Hadrian's colony Seleucia invaded the flourishing city of Adrianople. A description of the Pontic coast was written at Hadrian's request by his legate, the historian Flavius Arrianus of Nicomedia, in his "Peripilius." Although on his return he had lost some of his popularity at Rome, he made a second tour abroad for several months in 129, and conferred such great benefits and gifts, particularly on Greece and Athens, that, according to his biographer Spartanus, this city, where a new section called Hadrian's quarter was built at the south-east of the old town, again became the centre of Hellenic culture. He completed the Pantheon that his predecessors had begun, the largest temple in the Graeco-Roman world.

The Greeks set up Hadrian's statue in the temple at Olympia and built the Panathenium in the new town in honour of Zeus Panathenius. In the provinces of Asia Hadrian encouraged and aided the construction of aqueducts, bridges, roads, and temples, and the restoration of ruined cities. By this means he sought to relieve economic distress and at the same time to promote his domestic policy. During an inundation of the Nile, while he was travelling through Egypt, his favourite, the beautiful young Antinous, a native of Bithynia, was drowned, in the year 130. The emperor condescended to be deified in order to check the recurrence of insurrections by the Jews, who in their religious schools were cherishing hopes of reviving a Jewish kingdom under the Messias, the emperor ordered the Roman troops in Jerusalem to razee the ruins left standing in that ancient city and to set up a military colony, Eilia Capitolina. It was his wish to eradicate Judaism as such. The Jews revolted in 132 under Simon, whom they called Bar-Cocheba (Son of the Stars). Inside of three years Sextus Julius Severus put down the rising amid terrible destruction and bloodshed. The Jews were forbidden to set foot within the old city. In the year 134 Hadrian returned to Italy. He built a temple to Trajan in Rome, a colossal double temple to Venus and Roma, and the gigantic mausoleum on the right bank of the Tiber, which constitutes the kernel of the castle of Sant' Angelo. At his villa near Tivoli he copied the remains of ancient buildings, with the strongest impressions on him during his travels. In order to unify jurisprudence throughout the entire empire, he ordered the praetor Salvius Julianus to revise and codify systematically the pretorian edicts and the annual supplementary edicts. In the year 131 this "pretorian edict" (editio pretoria) obtained force of law by virtue of a decree of the senate; the same force was given to the opinions of the jurisconsults in all points wherein they were agreed among themselves, in order that the system of the law might continue to develop. He bestowed the highest administrative offices on men of knightly rank, instead of on young men as heretofore, and regarded the succession of these officers. During his absence from Rome he had created an efficient, salaried council, clothed with statutory authority, which was confirmed by the senate, and which had the decision of all current important affairs in the administration of the empire. According to Hadrian's wishes, the Christians were to be punished only for such offences as came under the common law. Although there was no outspoken statutory toleration of them, they were not persecuted on account of their religion. With the sanction of the senate, he adopted L. Cestius Commodus Verus and designated him as his successor by having the title of Cesar conferred on him in 136. Because his brother-in-law, L. Julius Ursus Servianus, cherished hopes of the succession for his own youthful grandson, Fuscus Salinator, Hadrian had them both put to death. After the death of Verus (1 January, 138)
he adopted the admirable Aurelius Antoninus, who was fifty-two years old, appointed him co-ruler with himself, and prevailed upon him to adopt L. Verus, the son of his own first adopted son. Hadrian died of dropsy on 16 July, 138.

Karl Hoëber.

Hadrian, martyr, d. about the year 306. The Christians of Constantinople venerated the grave of this victim of Diocletian's persecution. We are told by legendary and unverified records, which have been preserved, that Gregory and Pelagius, that Hadrian was present in the body-guard of Emperor Galerius. In this capacity he was present one day, with the emperor, at the trial and torture of twenty-two Christians in Nicomedia. He was so impressed that he forthwith declared himself a Christian, and with the others was thrown into prison. His wife, Natalia, who had secretly become one herself, cheered and ministered to her husband and his fellow-prisoners. The account given in the Acts of the martyr is embellished with a number of legendary and, in part, very poetical details. Hadrian and his companions in martyrdom were finally put to death. Their heads were first broken, after which they were delivered up to the flames. Natalia is supposed to have brought to Constantinople the mortal remains of her martyred husband. Another legend speaks of a martyr, Hadrian of Nicomedia, who figures in the Roman Martyrology and in the Greek Martyrologia Aurea of 16 August, but this is a rough different in detail, the story deals with the same person. The remains of St. Hadrian were later laid in the church erected under his name and patronage on the Roman forum, which church (S. Adriano al Foro) is standing at the present day. The feast of the translation, which in the Roman Church is the principal feast of this martyr and of his companions, is celebrated on 8 September. The Roman Martyrology, however, mentions them also on 4 March, while the Greek calendar places their feast on 26 August. On this last date the Roman Martyrology likewise makes mention of a Hadrian. (Augsburg Calendar, I, 7–12; Strick, Vita Sacerdotii, V (Cologne, 1597–), 147–55; Acta SS., September, III, 209–14, 220–2; Codex (Casinus 1877), 223; Pindori, 259–67; Nilles, Kalender manuale urbis acclias, I, 260, 382, 386, 473; II, 596, 723; Allard, Historia die persecutionum, X, 9–45.)

Hadrianople. See Adrianople.

Hadrumentum (AURUMENTUM, also ADROMETUS), a titular see of Byzacena. Hadrumentum was a Phoenician colony earlier than Carthage, and was already an important town when the latter rose to greatness. Hannibal made use of it as a military base in his campaign against Scipio at the close of the Second Punic War. Under the Roman Empire it became very prosperous; Trajan gave it the rank of a colonia. At the end of the third century it became the capital of the newly-made province of Byzacena. After suffering greatly from the Vandal invasion, it was restored by Justinian, who called it Justinianopolis. It was again afflicted by the Arabs (to whom it is known as Sussa) and restored by the Agabites in the eleventh century. In the twelfth century the Normans of Sicily held it for a time; the French captured it in 1881.

Susa has to-day 25,000 inhabitants, of whom 1100 are French, and 5000 are other Europeans, mainly Italians and Maltese. It is a government centre in the Province of Tunis. It has a few antiquities and some curious Christian catacombs. The native portion of the town has hardly altered. It has a museum, a garrison, an important harbour, and there are many off wells in the neighbourhood.

Between 255 and 551 we know of nine bishops of Hadrumentum, the last of whom was Primasius, whose works are to be found in P. L., LVIII, 467.

S. Pétridès.

Haecel, Ernst Heinrich. See Evolution.

Haechaen, Benedict van (HAECHTENUS), Benedictine writer, provost of the Monastery of Affligem, Belgium; b. at Utrecht, 1588; d. 31 July, 1648, at Spa, Belgium, whither he had gone to recover his health. After studying philosophy and theology at Louvain, he entered the Benedictine Abbey of Affligem in 1609, took solemn vows on 14 May, 1611, and was ordained priest in 1613. Hereupon he returned to Louvain to continue his theological studies, but was recalled to his monastery when he was about to receive the licentiate in theology. In 1614 he became prior, and in 1618 Matthias Hoviis, Archbishop of Mechlin, who was at the same time Abbot of Affligem, appointed him provost of his monastery. Affligem at that time belonged to the Bursfeld Union, and under the prudent direction of the pious van Haechaen was in a flourishing spiritual and temporal condition.优良s Boonen, who had succeeded Hoviis as archbishop and abbot in 1620, desired to join the monastery to the new Congregation of St. Vannes, in Lorraine, which had a stricter constitution than Bursfeld. After some prudent hesitation, van Haechtien agreed to the change, and on 18 October, 1627, began his novitiate under the direction of a monk of the Congregation of Lorraine. Together with eight of his monks, he made confession according to the new reform on 25 October, 1628, and founded the Belgian Congregation of the Presentation of the Blessed Virgin. The new reform enjoined perpetual abstinence, daily rising at two o'clock in the morning, and manual labour joined with study. Unhappily the new congregation was of short duration.

The intrusion upon the rights of the monks by the Archbishop of Mechlin brought about its dissolution in 1654.

van Haechtien is the author of a learned and pains-taking work of monastic researches on the life and rule of St. Benedict, entitled: "S. Benedictus illustratus, sive Disquisitionum monasticarum libri XII, quibus S. P. Benedicti Regula et religiosorum rituum antiquitatis varie dilucidantur" (Antwerp, 1644). The other six works of van Haechtien that found their way into print are of an apologistical character.

Michael Ott.

Hagar. See Abraham.

Hagen, Gottfried, town clerk of Cologne, and author of the Cologne "Reimechronik" (rhymed chronicle); d. 1299. He filled many influential positions, and took an active part in the public life of his native city. Subsequently to the year 1208, he is mentioned repeatedly in documents as "Magister Godfridus cleri- cius Coloniensis", "Notarius civitatis Coloniensis", pastor (plebanus) of St. Martin the Lesser at Cologne, and dean of the chapter of St. George. He gives his name with the title town- clerk (der stede schriver) at the end of his "Book of the City of Cologne" (Dit is der boeck van der stede Colone). This work is a very remarkable work of some 3000 couplets; as a chronicle it is almost complete, if based at times on unreliable traditions. At earliest, it was written in 1270 with a supplement in 1271; it cannot have appeared later than the period between 1277 and 1287. After a legendary introduction, permeated with the idea of municipal liberty, it recounts the conflicts between the city of Cologne and the Archbishops Conrad
and Engelbert II, and the feuds between the patrician
party and the guilds in the years 1252–71. Its ar-
rangement is simple, its style negligent, and its artistic
merit slight, although it does not lack some lively
descriptions. The importance of the chronicle lies in
its contents. No other German city has records so
complete and so full of life for this early period.
For historical purposes, however, it should be used with
great caution. It is true that the strictures formerly
passed upon its reliability have proved to be very
exaggerated. In rehearsing facts the work is fairly
accurate, but Hagen is a thorough partisan, and an
enthusiastic patriot. He was an adherent of the group
of patricians led by his relatives, the "Overstolzen",
and he opposed bitterly both the party of the "Wei-
sen", the despised guilds, and also the archbishops of
Cologne, who, as lords of the city, were the natural
enemies of the development of Cologne into a free
imperial city. Nevertheless, the bishops and still
more the Holy See are always treated with respect.
It cannot be said that Hagen forged facts, but he
modified them, and his judgment is coloured to a high
degree by party spirit. His curious book is not so
much a model as a paraphrase for all later historians.
It was highly esteemed in Cologne as a plea for muni-
cipal liberty. Several medieval chroniclers have
drawn largely upon its contents. For a critical edi-
tion of the "Reichchronik", see Caradaus and Schröder
in "Chroniken der niederrheinischen Städte: Köln",
1, 1–236, in "Chroniken der deutschen Städte", XII
(Leipzig, 1875); cf. III, 963.

See MERL in "Fasciculus des Vereins von Altertumsfreunden
im Rheinland", LIX, 114, and especially KELLETER, Gottfried
Hagen (Trier, 1884).

HERMANN CARDAUNS.

Haggai. See AGGEUS.

Haggith.—This is the ordinary form of the name in
the English Bible; it corresponds better to the He-
brew Haggith, "Festive", than Aggith, as the name is
spelled in 1 Par., iii, 2. Haggith was one of David's
wives (2 Kings, iii, 4). Whose daughter she was, we
are not told. The Bible records only that she bore
to him Adonias, the fourth of his sons, in Hebron,
before he was king over all Israel. That she was an
unnaturally uncommon woman, seems to be sug-
gested from the custom of Biblical writers to speak
usually of her as "the son of Haggith." Though the
harem intrigues that have ever played a great part
in political events in the East, nothing indicates, how-
ever, that Haggith had anything to do either with the
attempt of her son to secure for himself the crown of
Israel (III Kings, i, 5–53), or with his fatal request,
likely also prompted by political motives, to obtain his
father's Samanite concubine, Abisag, from Solomon
(III Kings, ii, 13–25).

CHARLES L. SOUVAY.

Hagiography.—The name given to that branch of
learning which has the saints and their worship for its
object. Writings relating to the worship of the saints
may be divided into two categories: (a) works that
are the spontaneous product of circumstances or have
been called into being by religious needs of one kind
or another (and these belong to what may be called prac-
tical hagiography); (b) writings devoted to the sci-
cific study of the former category (and these constitute
critical hagiography). The reputation of the saints has
everywhere given rise, both in the East and in the West, to a very con-
siderable number of documents, varying, in form and
tenor, with the object which the author in each case
had in view. Such, in primitive times, are the lists of
martyrs drawn up in particular Churches with a view
to the celebration of anniversaries which hence be-
come the nucleus of the martyrologies. Documents of
this kind merit a special study (see MARTROLOGY),
and we need only mention them here in passing (see

"Analecta Bollandiana", XXVI, pp. 78–99). Side by
side with the martyrologies and calendars there are
also the narratives of martyrs and the biographies
written by contemporaries in memory of the heroes
of the Church celebrated in the "Passion of the Seilitan
Martyrs", the "Life of St. Augustine", by Possidius,
and the "Life of St. Martin", by Sulpi-
cius Severus. Sometimes, again, they are accounts
composed by writers who lived at some distance of
time from the events recorded, and whose object was
only to justify the faith or to carry on a pious historia.
These hagiographers write either in the spirit of the
"author of the Acts of St. Cecilia, or in verse, like Prudentius
and so many others. Then again there are texts composed
or arranged, for liturgical use, from historical docu-
ments or from artificial compositions. These various
classes of hagiographic works—historical memoirs,
literary compositions, liturgical texts—existed at first
as monographs; but soon the need was felt of gather-
ing into a collection separate pieces of the same nature.
The most ancient hagiographic collection of which
mention is made is Eusebius's compilation τῶν ἀγίων
μαρτυρίων συμμεχρίων, containing the Passions of
martyrs previously written for the use of the clergy.
Eusebius himself wrote, in one piece, the book of the
martyrs of Palestine of the last persecution, as
Theodore afterwards compiled his Φιλάδελφος Ἰστορίαι
from a series of thirty biographies of which he himself
was the author. Thus we have two types of collections
to one or other of which we may attribute all those
to be mentioned hereafter—the type which consists of a
grouping of unlike pieces under one title and the type
which is a series of narratives all from the same pen.
Among the most famous collections of the Middle Ages
we may cite those of Gregory of Tours, under the titles
"In Gloriam Martyrum" (P. L., LXXI, 205–80) and
"In Gloriam Confessorum" (loc. cit., 827–910), the
dialogues of St. Gregory the Great, "De Vitæ et Miraculis
Patrum Italicorum" (P. L., LXXVII, 147–429), the
three books of Eulogius of Toledo (d. 859) entitled
"Memoriales Sanctorum" (P. L., CXV, 731–818).
In these collections the order is the historical order
of the particular subjects—saints' Lives or Passions—
which they include; later on there appear collections
of a more artificial character in which the Passions and
the biographies of the saints follow each other accord-
ing to the dates of the calendar. In the West these
collections are known as "Passionaries" or "Legen-
daries". In course of time, however, they came to
have its own: the Roman Legendary constitutes the com-
mon foundation of all, and the special parts are deter-
mined by the local cultus. The legendaries are usu-
ally made up of biographies and Passions of relatively
great length. Beginning with the thirteenth century,
collections of a more convenient size begin to appear,
containing the matter of the legendaries in a con-
densed form. Of these unquestionably the most fa-
mous is the "Legenda Aurea" of the Dominican
Jacobs de Voragine, manuscripts of which were
plentifully distributed until the time when copies be-
gan to be multiplied by press, and some, among them,
was translated during the Middle Ages into
several modern languages, and indeed it is to be
remarked that a large number of saints' lives and
hagiographic collections in the vulgar tongues, which
are now of interest chiefly to students of philology,
may be traced to Latin originals. The importance
of the body of literature more or less dependent of,
for example, for French, M. Paul Meyer's memoirs,
"Notice sur un légendier français classé selon l'ordre
de l'année liturgique" (Paris, 1898), "Notice sur trois
légendiers français attribués à Jean Belet" (Paris,
1889), and "Légendes hagiographiques en français
par les Histoires, etc.," (Paris, 1898), pp. 328–459.
For German we may mention F. Wilhelm,
"Deutsche Legenden und Legendarie" (Leipzig,
1907).
Other hagiographical compilations dating from the Middle Ages are worthy of mention, although they have not all enjoyed the same popularity. Such are the Sanctoral of Bernard Guy, Bishop of Lodève (d. 1331), still unedited (see L. Delisle, Notice sur les manuscrits de Bernard Guy," in "XXe Siècle," 2, 1879), the legendary of the Dominican Pierre Calo (d. 1348), also unedited; the "Sanctilogium Anglie" of John of Tynemouth (d. 1366), which became the "Nova legenda Anglie" of John Capgrave (1464), of which we now have a critical edition by C. Horstmann (Oxford, 1901, 2 vols., 8vo) the "Sanctuarium" of B. Monfortius, printed at Milan, from the year 1480, in two folio volumes, and especially precious because it reproduces the lives and the Passions of the old MSS. without any resharding or rereading; the great compilations of Jean Gieleman, a Brabantian canon regular (d. 1487), under the titles "Sanctilogium," "Hagiologium Brabantinorum," "Novale Sanctorum" (see "Analecta Bollandiana," XIV, pp. 5–88); Hilarion of Milan's supplement to Jacobus de Voragine (Legendarium . . . supplemen tum illius de Voragine, Milan, 1494). After the middle of the sixteenth century, the lives of the saints begun by Alciati, Bunsen, and Deindgenarum ("Sanctuarium patrum vitae," Venice, 1551–55), continued and completed by Surius ("De probatis sanctorum historiis," Cologne, 1570–75), were offered as both edifying reading and at the same time a polemical arsenal against the Protestants, enjoyed a considerable reputation and were several times reprinted. Father Ribaudony's "Fluctus Sanctorum" (first edition Madrid, 1599) had a greater popular success and was translated into several languages; it was followed by a great number of lives of the saints for every day in the year. Among the most famous of these must be mentioned Alvan Butler's, "The Lives of the Fathers, Monks, and Martyrs," which we refer the reader to. Historical truth appeared in 1755 and was often reprinted and translated, andMgr Guérin's "Les petits Bollandistes," a collection which has nothing in common with the "Acta Sanctorum," or with the publications of the Bollandists. Most collections of lives of the saints, particularly those in modern languages, are inspired by the idea of edifying and interesting the reader, and without any great solicitude for historical truth. We shall not speak here of isolated biographies, the number of which grew incessantly during the Middle Ages and in later times, and which as constantly served to swell the hagiographical treasures.

Among the Greeks the development of hagiography was—at least outwardly—the same as among the La
tins. The Passions of the martyrs, biographies and panegyrics of the saints were gathered in just the same way into collections, arranged in the order of the Calendar, in the monologues mentioned as early as the ninth century (see "Analecta Bollandiana," XIV, pp. 396–494; XVI, pp. 311–29; XVII, pp. 448–52). The Greeks, too, have their shorter monologues, composed of abridged lives (βίοι βαστόνες, see "Analecta Bollandiana," XVI, p. 325), and their Synaxaries, the use of which is chiefly liturgical, are mainly composed in which the more important lives and Passions are reduced to the form of brief notices (see H. Delhezey, "Synaxarium ecclesiae Constantiopolitanae, Propyleum et Acta Sanctorum Novemb ria," p. lix). Neither is there any lack of collections in popular (modern) Greek, while the saints' lives of Macarius, the "Martyrion," the "Glaucophanes," the "Meyen Synaxaristh" of C. Dukakis (14 vols., 8vo, Athens, 1889–97), are widely read in Greek-speaking countries.

Closely connected with Greek hagiography is Slavonic hagiography. The reader is referred, for purposes of orientation, to Michael, "Annales graeco-slavici" in "Acta SS.,” October vol. XI, and the critical edition of the "Menesis" of Macarius now in course of publication at St. Petersburg (Moscow) under the auspices of the Archæographic Commission. The Orient has been the scene of an analogous development. Passions of the martyrs, lives of the saints, collections, synaxaries are all found in various Oriental languages; but, in spite of the very praiseworthy efforts of the Greek Bollandists, we are still insufficiently informed as to details. Those desiring a summary account of the hagiography of the different peoples of those regions are referred, for the Armenian, to the "Vitae et Passiones Sanctorum," published by the Mechitarista of Venice in 1874, the great Armenian Synaxary of T. Arziman, 1854, and the "Acta Sanctorum pleniora" of Aucher (12 vols., Venice, 1810–35); for the Coptic, to H. Hyvernat, "Actes des martyrs de l'Egypte" (Paris, 1886), I. Balestri and H. Hyvernat, "Acta martyrum" in "Corpus scriptorum Orientalium; Scriptores Coptici" (Paris, 1907), the Coptic Jacobite Synaxary, two editions of which are in course of publication, one by I. Forget in "Corpus script. christ. Or.: Scriptores Arabici," and the other by R. Basset in the "Patrologia Orientalis," 1; for the Ethiopian, to the "Acta martyrum" by Eystedes Pereira, and the "Vite Sanc torum Etiopici" by C. Conti. For the Turke, to V. Reijhov, in "Corpus script. christ. Or.: Scriptores Éthiopiici," the "Monumenta Æthiopicae hagiologiae" of Turjev, and the Ethiopian Synaxary, by I. Guidi, in the "Patrologia Orientalis," vol. 1; for the Syriac, to the "Acta martyrum Orientalum" of St. Ev. Assemani (2 vols., folio, Lyons, 1748) and the "Acta martyrum et sanctorum" of Bedjan (7 vols., 8vo, Leipzig, 1890–97); for the Georgian, to the "Sakart'velos Samot'khhe" of G. Sabinin (St. Petersburg, 1832). We must content ourselves here with a rapid glance; a complete bibliography of hagiographic materials would require several volumes. For fuller information we refer the reader to the titles published by the Bollandists: "Bibliotheca hagiographica latina" (2 vols., 1898–1901); "Bibliotheca hagiographica graeca" (2nd ed., 1909); "Bibliotheca hagiographica orientalis" (1910).

(b) Scientific hagiography has for its object the criticism of documents belonging to all the categories which we have enumerated above. It involves two operations which are hardly separable: the study of written tradition for the purpose of establishing texts; and research into sources with the object of determining the historical value of those texts. The earliest attempts at a method of hagiographic criticism date from the beginning of the seventeenth century. It is known that Rosweyde (d. 1629) first conceived that project of forming a collection of the "Acta Sanctorum," which since 1643 has been put into execution by Bollandus and his collaborators (see BOLLANDISTS), and which has for its essential aim the critical sifting and publication of all the hagiographic texts which have come down to us relating to the saints quotquot toto orbe coluntur. From the first volumes Bollandus and his colleagues have submitted their documents to a criticism as severe as the means of information and the state of historical science permitted. With the developments attained by all branches of science in the course of the last century, the importance of archeological discoveries in that period, the progress of philology and palæography, the possibility of using means of rapid communication to obviate the difficulty of scattered material, hagiography could not but make progress. In the Bollandist work, however, the editors induced to undertake, side by side with the compilation of the "Acta Sanctorum," a course of labours which, without modifying the spirit of their work, assures for it a broader and firmer basis and a more rigorous application of the principles of historical criticism. But they have not been alone. Attention to the science of hagiography as constituted since the inauguration of their work: Mabillon, "Acta SS.
O.S.B.; Ruinart, "Acta martyrum sincera," and the Assenian, "Acta martyrum Orientalium," have furnished important supplements to the work.

Especially since the middle of the sixteenth century a host of solid works have made their appearance to push forward hagiographic science to a notable extent. We may recall here the fine editions of the lives of German saints in the collection of the "Monumenta Germaniae historica," the numerous Greek text editions published by M. Papadopoulos-Kerameus and other learned Hellenists in various countries, the recent publications of Oriental writers mentioned above, and a mass of labours in minute details which have often opened new paths for the science of criticism. In passing, we may mention the researches of R. Louth on the Apocryphal Acts of the Apostles, and the beautiful studies of M. P. Franchi de Cavalleri on a selection of Acts of the martyrs. The "Bulletin des publications hagiographiques" of the "Analecta Bollandiana" may fill in for the reader the gaps left by this rapid review. Something should also be said as to the progress of hagiographical criticism as applied to martyrologies; but the subject is worthy of a special article. It would not be proper, however, to pass over in silence the researches of J. B. De Rossi and of L. Duchesne on the Hieronymic Martyrology and the critical edition to which these researches have led (Acta Sanctorum, November, II, at the beginning of the volume). The critical researches on historical martyrologies brilliantly inaugurated by Sollerus ("Martyrologium Usurarii" in "Acta Sanctorum," June, VI, VII) have been enlarged and brought into line with modern criticism by D. Quen- tin ("Les martyrologies historiques," Paris, 1908).

As will be readily understood, the distinction which we have established between practical and scientific hagiography is not always sharply defined. More than one attempt has been made to conciliate science with piety and to supply the latter with nourishment that has been passed through the sieve. The first collection of saints' lives conceived in this spirit is that of A. Baillot, "Les Vies des saints composées sur ce qui nous est resté de plus authentique et de plus assuré dans leurs histoires" (Paris, 1701), the first volumes of which (January-August) were put upon the Index (cf. Reusch, "Der Index der verbotenen Bücher," II, 555). Again, the programme of a series of separate saints' lives in France under the title "Les Saints," was inspired by a like idea of edifying the reader with biographies which should be irreproachable from the historical point of view. It is hardly necessary to add that more than one hagiographical publication of erudite and critical pretensions possesses no importance from a scientific point of view. Examples are as numerous as they appear superfluous.

Hippolyte Delehaye.

Hague, The (Fr. La Haye; Dutch 's Gravenhage, "the Count's Park"; Lat. HAGA COMMIS), capital and seat of Government of the Kingdom of the Netherlands as well as of the (civil) Province of South Holland. It is situated two miles from the shores of the German Ocean, on a piece of low ground, which was at one time thickly wooded, between the mouths of the Maas and the Old Rhine. In 908 it had 254,500 inhabitants, of whom 71,000 were Catholics. Among the most noteworthy edifices are the Gothic Groote Kerk (Great Church), originally a Catholic church, dating from the fifteenth and sixteenth centuries, the Nieuwe Kerk (New Church) built in 1649, with the monuments of the brothers de Witt and of Spinoza. Of the nine Catholic churches in the city the most famous is St. James's (built 1672), St. John's (1868), St. Joseph's (1868), St. Anthony's (1835), and the Wilibridus (built, 1821; enlarged, 1865). The Binnenhof is historically the most important public edifice. It is an irregular pile of architecture of various dates, enclosing a square court and formerly surrounded by a moat. The nucleus of the whole is the Rittersaal (Hall of the Knights), which dates from the time of the city's foundation. In the Binnenhof are the council chambers of the old States-General, as well as the assembly halls of both houses of the actual Parliament of the Netherlands. Other structures worthy of mention are the royal palace, built in the first half of the seventeenth century and extended in 1816; the Mauritshuis picture gallery, rich in masterpieces of Rembrandt, Potter, and Rubens, the City Hall (erected in 1565; enlarged and restored 1882-83), and the royal country residence, 't Huys ten Bosch (the House in the Wood), the meeting place of the famous first International Peace Conference.

Ecclesiastically, The Hague is a deanery of the Diocese of Haarlem, and has nine parishes, two of which are administered by Jesuits (eighteen fathers) and one by Franciscans (nine fathers). There are also houses of the Brothers of Mercy, the Brothers of the Congregation of Our Lady of Lourdes, the Sisters of Tilburg, the Sisters of Rosendaal, the Sisters of Delft, the Borromean Sisters (two convents), and the Ladies of the Sacred Heart (one school). There are numerous pious associations, of which the most important are the Dutch Society of St. Gregory, the League of St. Peter Claver, the Catholic Teachers' Union, the St. James's Association for the Instruction of the Catholic Youth of The Hague, the Societies of St. Boniface and St. Cunius, the Society of St. Vincent, and the Catholic People's Union.

History.—In the eleventh century the Counts of Holland built themselves a hunting-lodge in the great forest which then covered the site of The Hague. William II, Count of Holland and King of Germany, replaced this earlier building with the castle which formed the nucleus of the Binnenhof mentioned above. This castle was enlarged by his son Floris V, who made it his residence after 1291. Although many of the Counts of Holland maintained a brilliant Court, affording hospitality to poets and painters (Jan van Eyck among the latter), the place nevertheless remained unimportant. During the war between Guelders and Germany, The Hague was captured and pillaged by bands of Guelders, freebooters under Martin of Rossum. The ideas of the German Reformers soon found entrance into the city, but were suppressed with sanguinary rigour. It was here that the first Dutch martyr for the new creed, the pastor Jan de Bakker of Worden, suffered death by fire in the Binnenhof in 1526. Again, in 1570, under the Duke of Alva's reign of terror, four preachers were burnt for heresy at The Hague. The Reformation, however, gained the upper hand during the
of the Netherlands from Spain. The town suffered grievous pillage at the hands of the Spanish troops in the course of the Dutch War of Independence. But with the conclusion of peace commerce and industry rapidly recovered. In 1593 The Hague was the seat of the Dutch States-General, but, owing to the jealousy of the cities which had been involved, it was deprived of representation in the States, and became "the largest village" in Europe, having, in 1622, as many as 17,430 inhabitants. With the rise of Holland to the position of the first maritime and colonial power of Europe, in the seventeenth and eighteenth centuries, The Hague became the most important of European capitals. Many international treaties were concluded there: in 1668, the alliance between Denmark and Holland against England; in 1688, the Triple Alliance of England, Sweden, and Holland, which compelled Louis XIV to conclude the Peace of Aachen; in 1707, the great alliance of the maritime powers and the Emperor Leopold against France; in 1710, the "Concert of The Hague", consisting of the German emperor, England, and Holland, to maintain the neutrality of Northern Germany in the war of the Northern powers with Sweden; in 1718, the Quadruple Alliance between England, the emperor, and Holland to enforce the conditions of the Treaty of Utrecht, and thereby check the aggressive policy of Spain.

During the bitter partisan strife within the Republic, The Hague was the scene of many memorable historical episodes. In the course of the religious feuds between the Arminians and the Gomarists, Prince Maurice of Orange caused the arrest of Jan van Olden-Barneveld, the septuagenarian grand pensionary, an Arminian, together with his learned companions Hugo Grotius and Hogerbeets, in the Binnenhof (1619). The grand pensionary, in spite of a royal mandate, was condemned and executed (13 May, 1619). The death of the two brothers de Witt, in 1672, was even more tragic. Jan de Witt, as grand pensionary, had directed the policy of Holland for nearly two decades and, while at the height of his power, had, by the Perpetual Edict, debarred William III of Orange from enjoying the hereditary office of stadtholder of the Dutch. In spite of this, William was elected Stadtholder of Holland and Captain-General of the Netherlands, in 1672. Jan's brother, Cornelius de Witt, was falsely accused of an attempt to murder the prince, and was thrown into prison. A frenzied rabble of partisans of the Prince of Orange broke into the prison in which he was kept, and he was beheaded by a pretended summons from his brother, seized both the de Witts, and tore them to pieces.

During the French Revolution, The Hague was the capital of the Batavian Republic. When Napoleon turned this republic into a kingdom for his brother Louis, The Hague obtained a city charter, but the seat of government was transferred to Amsterdam, until the Restoration (1815), when The Hague regained its political importance. It was the meeting-place of the International Peace Conferences of 1899 and 1907, and is the permanent seat of the International Court of Arbitration.

**JoSEPH LINN.**

**Hahn, Johann Michael.** See Michielans.

**Hahn-Hahn, Ida, Countess, convert and author, born 22 June, 1805; died 12 January, 1889. She was descended from a family that formerly was one of the wealthiest and most illustrious of the Mecklenburg nobility. Her father, the tragic and famous "Theatergraf" (theatrical count), squandered such huge sums on his one hobby, the drama, that he reduced the family to great straits and finally had to be placed under the supervision of a guardian. Fortunately he did not have much influence on Ida's education. On the other hand, the pious disposition of her mother also seems to have been antipathetic to her. Consequently the bringing up of the sixteen-year old girl, who ought to have been preparing for confirmation, had to be done particularly supercritical in all matters of religion, according to her own admission. Her mind was just as deficiently cultivated in other lines of study, so that the countless later in life had to fill out many a gap in her education by reading. When she was twenty-one years old she married her cousin, Count Friedrich von Hahn, Erbmarschall (hereditary Field Marshal) of Bazelów, hence her double name, Hahn-Hahn. It was a marriage of convenience, contracted without any affection on either side, and culminating in a divorce at the end of three years. Her only child, being mentally and bodily deformed, was for years the source of acute grief to the mother. She withdrew from society and lived for a long while in retirement with her mother in the Greifswald. But after a time she visited Switzerland, Austria, Italy, Spain, and France. Later on she made a tour of the North and after that of the East.

The countess enjoyed absolute independence during this period (1829-1849), and led the life of an emancipated woman of the world. Much talk was caused by her association with Baron von Bistrum, who used to accompany her on her travels, as also by her brief acquaintance with the famous lawyer, Henry Simond. One day, in 1849, opening the Bible at random, she chanced on Isaiah, 1: "Arise, be enlightened, O Jerusalem: for thy light is come, and the glory of the Lord is risen upon thee." She accepted the sign and, after wrestling with her soul for several months, wrote to Prince-Bishop Dietz, Diepenbrock, asking to be admitted into the Catholic Church. The prelate subjected her to a severe test to make sure that her resolution was earnest, but she withstood this ordeal, and on 26 March, 1850, made profession of the Catholic Faith before Bishop von Ketelher in the Hedwigskirche in Berlin. She then went into retirement at Mains with the Sisters of the Good Shepherd, for whom she had founded a convent there, partly out of her own means. The last thirty years of her life were devoted entirely to works of piety and to serious writing with a definite and lofty purpose: she condemned her own earlier compositions before the whole literary world. She was afflicted with much bodily suffering during her last few years on earth, but she bore it with consummate heroism.

Poems.—The small volume, "Gedichte" (1835), "Neuere Gedichte" (1836), "Venezianische Nächte" (1836), "Lieder und Gedichte" (1837), and "Astra- lium" (1839), show depth of sentiment and a high standard of form and contents; but at the same time they betray the youthfulness of the author and the almost overwhelming influence of her favourite poet, Lord Byron. Two small volumes written after her conversion are: "Unsere Liebe Frau" (1851) and "Das Jahr der Kirche" (1854), their titles being significant of their contents.
Nobles written before her conversion.—The countess’s real literary talent was evinced in her novels. Her first attempts were morbid, and Sandholm’s "Aus der Gesellschaft" (1838) and "Der Rechte" (1839). Even these books show promise of the sureness and self-confidence that were so characteristic of her later works, but they are marred by slovenly and inartistic construction. From the point of view of morality, the two first-fruits are the least worthy of all that the countess ever wrote. Her next novels and tales are of a far higher order in both respects. "Gräfin Faustine" (1840) still shows the influence of her leaning towards emancipation, but this, of course, was somewhat mitigated by the fact that at the end of the book the Gräfin enters a convent. "Herrin der Schmucke" (1841), "Die Kinder aus dem Abendberg" (1843), "Cecil" (1844), "Zwei Frauen" (1845), "Clelia Conti" (1846), "Sibylle" (1846)—an autobiography—and "Leiva" (1848). Books of travel.—These are among the most mature works that the countess produced in this period. They are not books of travels in the ordinary sense, but rather the personal impressions of their author. "Jenseits der Berge" (1840), dealing with Italy, was followed by "Erinnerungen aus und an Frankreich" (1842), "Ein Reiseversuch im Norden" (1843), and briefly "Orientalische Briefe" (1844). Novels and novels written after her conversion.—The story of her conversion is set forth in her famous book: "Von Babylon nach Jerusalem" (1851). This work could also reasonably be called a defence of the Catholic Church. The little book: "Aus Jerusalem" (1851) runs along the same trend of thought, and was followed by "Die Liebhaber des Kreuzes" (1852). Eight years later (1860) she returned to the novel pure and simple in "Maria Regina", which achieved an immense circulation. In "Doralice" (1861) she displayed even more improvement and artistic refinement. This book was followed by "Die zwei Schwestern" (1863), "Peregrin" (1864), "Die Erbin von Cronenstein" (1869), "Geschichte einer armen Familie" (1869), "Die Erzählung des Hofrats" (1871), "Die Glockenstochter" (1871), "Vergieb und Verzeih!" (1874), "Irland" (1875), "Der breite Weg und die enge Stasse" (1877), and "Wahl und Führung" (1878). Devotional works.—"Die Martyrer" (1856), "Die Väter der Wüste" (1857), "Die Väter der orientalischen Kirche" (1859), "Vier Lebensbildern. Ein Patrich, ein Papst, ein Prinz, ein Jesuit" (1862); "St. Augustinus" (1866), "Eudoxia" (1867), "Leben der hl. Theresia von Jesus" (1867), and many others written in a straightforward, simple style. Her works, before her conversion, appeared at Leipzig and Berlin; after her conversion, at Mainz. The Jubilee edition appeared at Ratisbon in 1905, with a preface by Schading.

N. Scheid.

Haid, Herenauts, catechist, b. in the Diocese of Ratisbon, 16 February, 1754; d. 7 January, 1873. His parents were quite destitute, and Haid, in his earliest years, was deprived of all schooling. He was a shepherd’s boy and had learned from his pious mother only how to say the rosary and to recite the little catechism of Canisius. Despite weakness and obstacles, he finished his preparatory studies at Neuburg and his theological studies at Landshut. At Munich, which diocese he entered (1807) after his ordination, he obtained the degree of Doctor of Divinity, in 1803. But parochial work was not to be his field. His relations with Sailer (q. v.) inclined him to later he was called to St. Gall as professor of exegesis. Here he taught from 1813 to 1818, and also acted as spiritual director to the students. He was recognized even at Munich, and he was called back and placed in charge of an important parish. The exasperation shown in anti-religious circles of Munich at his return is the best possible evidence of his apostolic zeal and energy. After much chicanery and government pressure he was relegated to a country diocese (1824). But he was able to return to the capital under Ludwig and was highly honoured by his bishop.

One of his most intimate friends, Dr. Ringseis, has paid in his "Erinnerungen" (I, p. 113) a glowing tribute to Haid’s labours as a confessor. His life work was the establishment of the catechism course in the church of Unsere liebe Frau, whereby he has merited a place in the history of catechetics. The origin and growth of this foundation is described in his large catechetical work "Die gesamte christliche Lehre in ihrem Zusammenhang" (7 vols., Munich, 1843-45). In it, Haid explains the manner in which he was wont to conduct his catechizing. In his simple statements is to be found a complete theory or system of catechetics. He lays special stress upon the Roman catechism and the catechism of Canisius. The deep veneration in which Haid, from his earliest youth, had held the latter found expression in his later writings, when he not only edited under different forms and translated the "Summa doctrinae christianae" of Blessed Peter Canisius, but also published some of the smaller works and a comprehensive biography of their author. During the closing years of his life he was afflicted with almost total blindness, but he bore his affliction with the greatest resignation. When death claimed him he had almost reached his ninetieth year. An account of a number of Haid’s smaller works, not mentioned above, is to be found in the third volume of Kayser’s "Bucherlexikon" (Leipzig, 1853), 16, "Münchener Putevendblatt", 1873; Ringsei, Erinnerungen, especially I and IV (1880).

N. Scheid.

Haid, Leo. See North Carolina, Vicariate Apostolic of.

Hail Mary.—The Hail Mary (sometimes called the "Angelical salutation", sometimes called from the first words of its Latin form, the "Ave Maria") is the most familiar of all the prayers used by the Universal Church in honour of our Blessed Lady. It is commonly described as consisting of three parts. The first, "Hail (Mary) full of grace, the Lord is with thee, blessed art thou amongst women", embodies the words used by the angel Gabriel to announcing the Blessed Virgin (Luke, 1, 28). The second, "and blessed is the fruit of thy womb (Jesus)", is borrowed from the Divinely inspired greeting of St. Elizabeth (Luke, 1, 42), which attaches itself more the naturally to the first part, because the words "benedicta tu in mulieribus" (I, 28) or "favele lameris" (I, 42) are common to both salutations. Finally, the petition "Holy Mary, Mother of God, pray for us sinners now and at the hour of our death. Amen." is stated by the official "Catechism of the Council of Trent" to have been framed by the Church itself. "Most rightly," says the Catechism, "has the Holy Church of God petiitioned, also and the invocation of the most holy Mother of God, thereby implying that we should piously and suppliantly have recourse to her in order that by her intercession she may reconcile God with us sinners and obtain for us..."
the blessings we need both for this present life and for the life which has no end."

ORIGIN.—It was antecedently probable that the striking words of the Angel's salutation would be adopted by the faithful as soon as personal devotion to the Mother of God manifested itself in the Church. The rendering, "Hail, full of grace," has often been criticized as too explicit a translation of the Greek χαίρε κεφαλαριάν, but the words are in any case most striking, and the Anglican Revised Version now supplements the "Hail, thou that art highly favoured" of the original Authorized Version by the alternative, "Hail, thou, endowed with grace". We are not surprised, then, to find these or analogous words employed in a Syriac ritual attributed to Severus, Patriarch of Antioch (c. 513), or by Andrew of Crete and St. John Damascene, or again in the "Liber Antiphonarius" of St. Gregory the Great as the oratory of the Mass for the fourth Sunday of Advent. But such examples hardly warrant the conclusion that the Hail Mary was at that early period used in the Church as a separate formula of Catholic devotion. Similarly a story attributing the introduction of the Hail Mary to St. Ildesphonus of Toledo must probably be regarded as apocryphal. The legend narrates how St. Ildesphonus going to the church by night found our Blessed Lady seated in the apos in his own episcopal chair with a choir of virgins around her who were singing her praises. Then St. Ildesphonus approached "making a series of genuflexions and repeating at each of them those words of the angel's greeting: Hail Mary full of grace, the Lord is with thee, blessed art thou amongst women, and blessed is the fruit of thy womb". Our Lady then showed her pleasure at this homage and rewarded the saint with the gift of a beautiful chasuble (Mabillon, Acta SS. O. S. B., sec. V., pref., § 119). The story, however, in this explicit form cannot be traced further back than Hermann of Lorsch at the beginning of the twelfth century. In point of fact there is little or no trace of the Hail Mary as an accepted devotional formula before about 1050. All the evidence suggests that it took its rise from certain verses and responsories occurring in the Little Office or Cursus of the Blessed Virgin which just at that time was coming into favour among the monastic orders. Two Anglo-Saxon manuscripts at the British Museum, one of which may be as old as the year 1030, show that the words "Ave Maria" etc. and "benedicta tu in mulieribus et benedictus fructus ventris tui" occurred in almost every part of the Cursus and it may be presumed that these clauses were at first joined together so as to make one prayer, there is conclusive evidence that this had come to pass only a very little later. (See "The Month", Nov., 1901, pp. 496-8.) The great collections of Mary-legends which began to be formed in the early years of the twelfth century (see Mussafia, "Marienlegenden") show us that this salutation of our Lady was fast becoming widely prevalent as a form of private devotion, though it is not quite certain how far it was customary to include the clause "and blessed is the fruit of thy womb". But Abbot Baldwin, a Cistercian who was made Archbishop of Canterbury in 1154, wrote before this date a sort of paraphrase of the Ave Maria in which he says: "To this salutation of the Angel, by which we daily greet the most Blessed Virgin, with such devotion as we may, we are accustomed to add the words, 'and blessed is the fruit of thy womb,' by which clause Elizabeth at a later time, on hearing the Virgin's salutation to her, exclaimed as it were, 'Blessed art thou amongst women and blessed is the fruit of thy womb.'"

Lord's Prayer; and after this date similar enactments become frequent in every part of the world, beginning in England with the Synod of Durham in 1217.

THE HAIL MARY A SALUTATION.—To understand the early developments of this devotion it is important to grasp the fact that those who first used this formula fully recognized that the Ave Maria was merely a form of greeting. It was therefore long customary to accompany the words with some external gesture of homage, a genuflexion, or at least an inclination of the head. Of St. Aybert, in the twelfth century, it is recorded that he recited 150 Hail Marys daily, 100 with genuflexions and 50 with prostrations. So Thierry tells us of St. Louis of France that "without counting his other prayers the holy King knelt down each evening fifty times and each time he stood up right then knelt again and repeated slowly an Ave Maria." Kneeling at the Ave Maria was enjoined in several of the religious orders. So in the Ancren Riwle (q.v.), a treatise in which an examination of the Corpus Christi MS. 402 shows to be of older date than the year 1200, the sisters are instructed that, at the recitation both of the Gloria Patri and the Ave Maria in the Office, they are either to genuflect or to incline profoundly according to the ecclesiastical season. In this way, owing to the fatigue of these repeated prostrations and genuflexions, the recitation of a number of Hail Marys was often regarded as a penitential exercise, and it is recorded of certain canonized saints, e.g. the Dominican nun St. Margaret (d. 1292), daughter of the King of Hungary, that on certain days she recited the Ave a thousand times with a thousand prostrations. This concept of the Hail Mary as a form of salutation explains in some measure the practical, which is certainly older than the epoch of St. Dominic, of repeating the greeting as many as 150 times in succession. The idea is akin to that of the "Holy, Holy, Holy", which we are taught to think goes up continually before the throne of the Most High.

DEVELOPMENT OF THE HAIL MARY.—In the time of St. Louis the Ave Maria ended with the words of St. Elizabeth: "benedictus fructus ventris tui"; it has since been extended by the introduction both of the Holy Name and of a clause of petition. As regards the addition of the word "Jesus," or, as it usually ran in the fifteenth century, "Jesus Christus, Amen", it is commonly said that this was due to the initiative of Pope Urban IV (1261) and to the confirmation and indulgence of John XXII. The evidence does not seem sufficiently clear to warrant a positive statement on the point. Still, there can be no doubt that this was the widespread belief of the later Middle Ages. A popular German religious manual of the fifteenth century ("Der Selten Trost", 1474) even divides the
Hail Mary into four portions, and declares that the first part was composed by the Angel Gabriel, the second by St. Elizabeth, the third, consisting only of the Sacred Name, Jesus Christus, by the popes, and the last, i.e. the word Amen, by the Church.

The Hail Mary as a Prayer. It was often made by the Saints against the Catholics by the Reformers that the Hail Mary which they so constantly repeated was not properly a prayer. It was a greeting which contained no petition (see, e.g., Latimer, Works, II, 229-30). This objection would seem to have been felt, and as a consequence it was not uncommon during the fourteenth and fifteenth centuries, by those who recited their Ave privately to add some clause at the end, after the words “ventris tuae Jesu”. Traces of this practice meet us particularly in the verse paraphrases of the Ave which date from this period. The most famous of these is that attributed, though incorrectly, to Dante, and, belonging in any case to the first half of the fourteenth century. In this paraphrase the Hail Mary ends with the following words:—

O Vergin benedetta, sempre tu Ora per noi, Dio, che ci perdoni; E diaci grazia a viver si quaggi Che’l paradiso al nostro fin ci doni; Oh blessed Virgin, pray to God for us always, that He may pardon us and give us grace, so to live here below that He may use with paradise at our death.

Comparing the versions of the Ave existing in various languages, e.g. Italian, Spanish, German, Provençal, we find that there is a general tendency to conclude with an appeal for sinners and especially for help at the hour of death. Still a good deal of variety prevailed in these forms of petition. At the close of the fifteenth century there was not any officially approved conclusion, though a form closely resembling our present one was sometimes designated as “the prayer of Pope Alexander VI” (see “Der Katholik”, April, 1903, p. 334), and was engraved separately on bells (Beissel, “Verehrung Mariae”, p. 460). But for liturgical purposes the Ave down to the year 1568 ended “Amen” and an observation in the “Myroure of our Lady” written for the Bridgettine nuns of Syn, clearly indicates the general feeling. “Some saye at the begynnynge of this salutatione Ave benigne Jesu and some saye after ‘Maria mater Dei’, with other addycions at the ende also. And such thinges may be saide when folke saye their Aves of the honor of devotion. But in the service of the chyrche, I trowe it to be moste sewere and moste medle (i.e. meritorious) to obey the comon use of saying, as the chyrche hath set, without all such addicions.”

We meet the Ave as we know it now, printed in the breviary of the Camaldolese monks, and in that of the Order de Mercede c. 1514. Probably this, the current form of Ave, came from Italy, and Eisser asserts that it is to be found, written exactly as we say it now in the handwriting of St. Antonius of Florence who died in 1438. This, however, is doubtful. What is certain is that an Ave Maria identical with our own, except for the omission of the single word nostra, stands printed at the head of a little work of Savonarola’s issued in 1495, of which there is a copy in the British Museum. Even earlier than this, in a French edition of the “Calendar of Shepherds” which appeared in 1493, a third part is added to the Hail Mary, which is repeated three times. This form is still used several years later in the form: “Holy Mary moder of God praye for us synners, Amen”. In an illustration which appears in the same book, the pope and the whole Church are depicted kneeling before our Lady and greeting her with this third part of the Ave. The official recognition of the Ave Maria in its complete form, though foreshadowed in the words of the Catechism of the Council of Trent, as quoted at the beginning of this article, was finally given in the Roman Breviary of 1568.

One or two other points connected with the Hail Mary can only be briefly touched upon. It would seem that in the Middle Ages the Ave often became so closely connected with the Pater noster, that it was treated as a sort of jursura, or insertion, before the words et ne nos inducas in tentationem when the Pater noster was said secretum (see several examples quoted in “The Month”, Nov., 1901, p. 490). The practice of preceding each and every Ave by the Pater noster, and the beginning to say the Ave Maria seems to have been introduced in the Middle Ages and to be of Franciscan origin (Beissel, p. 254). A curious illustration of its retention among English Catholics in the reign of James II may be found in the “Diary” of Mr. John Thesby (1, 182). It may also be noticed that although modern Catholic usage is agreed in favouring the form “the Lord is with thee”, this is a comparatively recent development. The more general custom a century ago was to say “our Lord is with thee”, and Cardinal Wiseman in one of his essays strongly reprobates the change (Essays on Various Subjects, I, 70), characterizing it as “stiff, cantih and destructive of the union which the prayer breathes”. Finally it may be noticed that in some places, and notably in Ireland, the feeling still survives that the Hail Mary is complete with the word Jesus. Indeed the writer is informed that within living memory it was not uncommon for Irish peasants, when bidden to say Hail Marys for a penance, to ask whether they were required to say the Holy Marys too. Upon the Ave Maria in the sense of Angelus, see ANGELUS. On account of its connexion with the Angelus, the Ave Maria was often inscribed on bells. One such bell at Oxford, dating from about the year 1200, bears the Ave Maria engraved upon it in runes and characters. (See Uddall, “Danmarks Middelalderlige Kirkeklokker”, Copenhagen, 1906, p. 22.)

Herbert Thurston.
THE GHENT ALTAR-PIECE (CLOSED)—BROTHERS VAN EYCK

from abroad and pay for them in specie (R. Cappe, "Estudios críticos acerca de la dominación española en América", XIII, 169, and passim). As a result, art and industry in the colonies decayed. Their regeneration was due especially to the German and Dutch merchants and immigrants. The Council of Rome (1727) and the Council of Trent (1563) denounced the mores of the reformed Catholic Church and those who should neglect the regulations in this matter. This legislation only shows how inveterate was the contrary custom. The insistence of the councils is readily explained if we recall the ridiculous fantasies to which the heretical sects permitted themselves to go. Whether through ignorance or to make fun of the bizarre, we see, according to St. Jerome's testimony, monkeys bearded like goats, and the "Vita Hilarionis" also states that certain persons considered it meritorious to cut the hair each year at Easter.

In the ninth century there is more distinction between freemen and slaves, as regards the hair. Henceforth the slaves were no longer shorn save in punishment for certain offences. Under Louis the Debonnaire and Charles the Bald the hair was cut on the temples and back of the head. In the tenth century the hair cut at the height of the ears fell regularly about the head. At the end of the twelfth century the hair was then close on the top of the head and fell in long curls behind.

Thus people passed from one fashion to another, from hair smooth on the top of the head and rising in a sudden roll in front, a tuft of hair in the form of a flame, or the more ordinary top-knot. Not every one followed these fashions, and the exceptions were considered ridiculous. If anyone wishes to form an idea of the head-dress of the more modern epoch, pictures, stamps, and books furnish so many examples that it is useless to attempt description. The clergy followed with a sort of timidity the fashion of the wig; but, except prelates and court chaplains, they retained from the over-luxurious models. Priests contented themselves with wearing the wig in folio, or square, or the wig à la Sartine. They bared the part corresponding to the tonsure. The decadence of the religious orders has always been noticeable in the head-dress. The tonsure very early interposed an obstacle to fantastic styles, but the tonsure itself was the occasion of many combinations.

Information relative to the head-dress of regulars will be found in HÁLYOTU. Histoire des Religions, 1, 1819; BERGERON and RAGALIO, Dict. des Antiques grecs et lat., s. v. Coma; BAUERSTEIN, Denkmaler des Klass. Alterthums, I, 615 sq.; KARPE. Pictura, oder die Kunst des Deutschen Volker der Alten Welt (Leipzig, 1858); RACINET, Le costume historique (1852).

H. LECLERCQ.

Hairshirt (Lat. ciliacum; Fr. cilice).—A garment of rough cloth made from goats' hair and worn in the form of a shirt or as a girdle around the loins, by way of mortification and penance. The Latin name is said to be derived from Cilia, where this cloth was made, but the thing itself was probably known and used long before this name was given to it. The sackcloth, for instance, so often mentioned in Holy Scripture as a symbol of mourning and penance, was probably the same thing; and the garment of camels' hair worn by St. John the Baptist was no doubt somewhat similar. The earliest Scriptural use of the word in its Latin form occurs in the Vulgate version of Psalm xxxiv, 13, "Ego autem, cum mihi molesti essent, induebar ciliacum." This is translated hair-cloth in the Douay Bible, and sackcloth in the Anglican Authorized Version and the Book of Common Prayer. During the early ages of Christianity the use of hair-cloth, as a means of bodily mortification and as a badge of asceticism, was found in resisting temptations of the flesh, became very common, not only amongst the ascetics and those who aspired to the life of perfection, but even amongst ordinary lay people in the world, who made it serve as an unostentatious antidote for the outward luxury and comfort of their lives. St. Jerome, for instance, mentions the hair-shirt as being frequently worn under the...
rich and splendid robes of men in high worldly positions. St. Athanasius, St. John Damascene, Theodoret, and many others also bear testimony to its use in their times. Cassian, however, disapproved of it being used by monks, as if worn outside it was too conspicuous and savoured of vanity and if underneath it hid the freedom of the bearer in performing manual labour. St. Benedict does not mention it specifically in his rule, but van Haeften maintains that it was worn by many of the early Benedictines, though not prescribed universally throughout the order.

Later on, it was adopted by most of the religious orders of the Middle Ages, in imitation of the early ascetics. The habit, in order to increase its use it was sometimes made of fine wire. It was not confined to the monks, but continued to be fairly common amongst lay people also. Charlemagne, for instance, was buried in the hairshirt he had worn during life (Martène, "De Ant. Eccl. Rit." 2). The same is recorded of St. Thomas of Canterbury. There also was a symbollic use made of hair-cloth. St. Augustine says that in his time candidates for baptism stood with bare feet on hair-cloth during a portion of the ceremony (De Symb. ad Catech., ii, 1). Penitents wore it on Ash Wednesday, and in the Sarum Rite a hairshirt was carried in procession at their reconciliation on Maundy Thursday. The altar, too, was sometimes covered with the same material at penitential seasons. In modern times the use of the hairshirt has been generally confined to the members of certain religious orders. At the present day only the Carthusians and Carmelites wear it by rule; with others it is merely a matter of custom or voluntary mortification. Objections have been raised against its use on sanitary grounds, but it must be remembered that ideas as to personal cleanliness have changed with the advance of civilization, and that what was considered a sign of, or aid to, piety in past ages need not necessarily be regarded in the same light now; vice versa, but the ideas and practices of the ancients must not for that reason be condemned by us, because we happen to think differently.

G. CYPRIAN ALSTON.

Haiti (Sp. Santo Domingo, Hispaniola), an island of the Greater Antilles.

I. STATISTICS.—The area is 28,980 square miles; population, about 1,800,000. The chief products are coffee, cotton, and tobacco.

POLITICAL.—The island is divided into the Republic of Santo Domingo in the east, and the negro Republic of Haiti in the west. The latter covers 11,670 square miles with 1,579,630 inhabitants in 1909 (Church statistics). The language is a degraded French (Creole); the religion, Catholic; although the nates are still widely infected with African fetishism (Voodoo or snake-worship). Education is deficient; it requires a yearly appropriation of about 1,000,000 dollars. In addition to nearly 400 State free elementary schools, there are five public lycees.

The president is the head of the Republic (salary, £4800). The Chamber of Deputies consists of ninety-five members. The Senate numbers thirty-nine members. The revenue amounted for the financial year ending 30 Sept., 1907, to $2,547,864 (U. S. gold), and $7,718,291 paper gourdes (value 20c., 10l.). The revenue for the fiscal year was $2,651,240 (U. S. gold), and 6,885,060 paper gourdes. In 1907 the foreign debt was $11,801,861; the home debt, $13,085,362. The army consists of 6825 men; there is a special "guard of the government," numbering 650 men, commanded by 10 generals. The Republic possesses a fleet of six small vessels. The exports were valued in 1907 at $14,330,887, of which nearly $3,000,000 went to the United States—in 1906-07, $92,914,104, while the imports from the United States to Haiti for the same period were only $1,274,678. The capital is Port-au-Prince (population, 75,000).

II. POLITICAL HISTORY.—Haiti (i. e. the "hilly country") was discovered by Columbus, 6 December, 1492. In December, 1493, Columbus founded Fort Isabel, which was soon re-named Santo Domingo. As the aborigines soon became extinct the importation of negroes began about 1517. But the colony fell into decay, when, about 1638, the filibusters obtained a footing on Santo Domingo, and harassed commerce. The French government at length decided to place a fort on the west of the island with the help of the filibusters, which led to the definite occupation by the French at the Peace of Ryswick (1697). While the parts left to the Spaniards became more and more impoverisbed and depopulated, the French colony flourished greatly until the French Revolution also affected Haiti, and there led to an insurrection of the blacks in which the negro Toussaint L'Ouverture finally in 1800 made himself dictator, declared Haiti's independence, and gave the country a constitution. He was soon overthrown by the French general Leclerc. Then Christophe, the author of a massacre of whites in 1804, was proclaimed James I, Emperor of Haiti, 8 Oct., 1804, but he was murdered two years later in a conspiracy under Christophe and Petion.

Christophe thereupon established another negro state in the north which he ruled from 1811 to 1820 as King Henry I; while Petion in the south founded a mulatto republic, and Spain re-conquered the eastern part which she had surrendered to France at the Peace of Basle (1795). Christophe's successor, Boyer, united all three parts of the island in 1822, but he was driven out in 1815, and the French settlements were annexed to the Dominican Republic on 27 Feb., 1844. The western part became again an "empire" under Soulouque (Emperor Faustin I) in 1849, but a republic was again proclaimed by the mulatto Geffrard after the expulsion of Soulouque in 1859. Geffrard was displaced by the negro party under Salave, 13 March, 1867. Then followed a succession of presidents, who were nearly all disturbed by revolutions, and under whom the republic was brought to the verge of ruin by civil wars, financial maladministration, corruption, and thoughtlessly occasional conflicts with European Powers. Even before 1909 the country was under the control of the Dominican Republic by the end of the last revolution in the autumn of 1908.

III. MISSION HISTORY.—On the erection of the Dioceses of Santo Domingo and Concepcion de la Vega, in 1511, the whole island was divided between these bishoprics. In 1527 Concepcion was suppressed, and the territory united to Santo Domingo, which was the only diocese till 1862. Many regular clergy came with the French into the French territory, especially Dominicans and Capuchins. The Dominicans devoted themselves especially to the mission in the western part of the colony, and were for a time supported therein by other orders.

The Dominicans were also designated as missionaries to the southern part of the island. The Capuchins, who looked after the northern part of the island, and were likewise assisted by other orders and by secular priests, soon were unable to supply enough missionaries. On the 1st January 1711 all the Capuchins in their place came the Jesuits, who worked there until their expulsion at the end of 1763. Secular priests followed, but after five years they were superseded by Capuchins.

The Revolution brought confusion into the ranks of the clergy; several priests took up the extreme Catholic, and in the northern part of the colony Divine worship ceased, while the mission in the west, uninter-
federal with the British occupation (1794–8), was able to improve more and more. But in the south the prefect, Virginie Cap, was murdered. Toward 1802, L'ouverture came to power in 1800, he restored its rights to the Catholic religion. But meanwhile the council of Constitutional bishops at Paris had nominated a bishop of Santo Domingo, who, however, obtained no recognition either from Toussaint or the Capuchins. In 1802 General Leclerc restored the former jurisdiction of Cap-Haitien and Port-au-Prince, and named as prefects Apostolic Pères Corneille Brelle, O.Cap., and Lecun, O.P., these arrangements being confirmed at Rome. On account of the massacre in 1804 nearly all the clergy left the colony, so that for two years the only religious services given at Port-au-Prince were held by brothers of order. After the overthrow of James I (1806) some missionaries returned.

After many years of fruitless negotiations, a concordat was signed at Rome, 23 March, 1860. In Dec., 1860, Mgr. Monetti arrived as Apostolic delegate. The Concordat provides that the Catholic religion shall enjoy the special protection of the Government. The president nominates the archbishop and bishops, but the pope can refuse them canonical institution. The clergy receive an annual salary of 1200 francs from the State.

7. Missionaries were erected in 1861; the Archbishopric of Port-au-Prince, and the suffragan Sees of Cap-Haitien, Les Cayes, Gonaives, and Port-de-Paix. The Archbishop of Port-au-Prince at first administered all the dioceses. A separate bishop was not appointed to Cap-Haitien till 1873, and was at the same time entrusted with the administration of Port-de-Paix. In 1893 a separate bishop was appointed for Les Cayes; while Gonaives is still administered by the archbishop. On the conclusion of the Concordat, three fathers of the Congregation of the Holy Ghost and of the Holy Heart of Mary were sent to Port-au-Prince. These restored the regular places of the capital. The first archbishop, du Coquer, and his successor, Quilloux, visited France to enlist new priests. Owing to the unhealthy tropical climate, death caused serious gaps in the ranks of the clergy; thus, at the beginning of 1906, out of 516 priests who had come from France since 1864, 200 had died; 180 were in religious houses, and 136 were invalided to Europe. To ensure recruits, Mgr. du Coquer established at Paris in 1864 the Saint-Martial Seminary, which was united with the Colonial Seminary conducted by the Fathers of the Holy Ghost; it received a State subvention of 20,000 francs per annum, the paysans being suspended owing to the political troubles of 1867, and in 1869 it was entirely abrogated. When, in 1870 owing to the war, the Fathers of the Holy Ghost gave up the direction of the seminary, Mgr. Quilloux founded a new seminary in Pontchâteau (Loire Inferieure) in 1873 under the direction of the Fathers of the Society of Mary. Finally in 1893 the seminary was removed to St-Jacques (Finisterre), and its direction entrusted to secular priests; Pontchartrou Seminary had sent 196 priests to Haiti, and St-Jacques in 15 years (down to 1909) 171. In 1864, in the whole of Haiti, there were only 34 priests devoted to the care of souls in the 65 parishes and 7 annexes. The progress which the Church has made in Haiti since then is shown by the fact that there are now (1909) 182 priests and 92 parishes.

Of ecclesiastical seminaries and schools, Haiti has: (1) at Port-au-Prince the "Petit Séminaire-College", under the Fathers of the Holy Ghost, and of the Congregation of St. Mary. There is affiliated to it a children's school; also a meteorological observatory. A second observatory was founded by the Christian Brothers; (2) in Cap-Haitien, the College of Notre-Dame-du-Perpétuel-Secours, directed by four secular priests. The religious societies include: (1) the Brothers of Christian Instruction, who direct a secondary school at Port-au-Prince, besides nine primary schools elsewhere; (2) the Sisters of St. Joseph of Oulon, directing a pensionnat in Port-au-Prince, and eighteen primary schools elsewhere (also 2 hospitals); (3) the Sisters of la Sagesse, who direct a pensionnat in Port-au-Prince, 5 primary schools and 3 hospitals. Of eclesiastical benevolent institutions there are: an orphan asylum for girls and 2 hospitals, of which one is supervised by the Daughters of Charity of St. Vincent de Paul, and the other by the Daughters of Charity of St. Vincent de Paul.

Haito (Hatso), Bishop of Basle; b. in 763, of a noble family of Swabia; d. 17 March, 836, in the Abbey of Reichenaun, on an island in the Lake of Constance. At the age of five he entered that monastery. Abbot Waldo (786–806) made him head of the monastic school, and in this capacity he did much for the instruction and classical training of the monks, as well as for the growth of the library. When Waldo was transferred to the Abbey of St. Denis, near Paris, in 806, Haito was made Abbot of Reichenaun, and about the same time Bishop of Basle. He enjoyed the confidence of Charlemagne and in 811 was sent with others to Constantinople on a diplomatic mission, in which he fulfilled to the full the duties of his office. The interest of his diocese and abbey were immediately re-established. He rebuilt the cathedral of Basle and the abbey church of Reichenaun, and issued appropriate instructions for the guidance of clergy and people in the ways of the Church. In 823 he resigned both positions, owing to serious infirmities, and spent the remainder of his life as a simple monk in the monastery of Reichenaun.

Haito was the author of several works. He wrote an account of his journey to Constantinople, the "Hodoeporicon", of which, however, no trace has been found so far. In 824 he wrote the "Visio Wettini" (P.L., CV, 771 sqq.); Mon. Germ. Hist.: Poete Lat.
HAKODATE

... in which he relates the spiritual experiences of Wettin, president of the monastic school of Reichenau. The day before his death (4 November, 824) Wettin saw in a vision bad and good spirits: an angel took him through hell, purgatory, and heaven, and showed him the torments of the sinners and the joys of the saints. The book, which bears some resemblance to Dante's "Divina Commedia", was soon afterwards put into verse by Walfred Strabo (Mon. Germ. Hist., loc. cit.). While Bishop of Besal, he issued a number of regulations in twenty-five chapters, known as the "Capitulare Haitonis" (P. L., CV, 763 sqq.; Mon. Germ. Leg., Sect. II, Capitular. Reg. Franc., I, 363 sqq.; Mansl, XIV, 393 sqq.), in which he legislated on matters of diocesan discipline. The statutes were probably published in a synod.

Francis J. Schaefer.

Hakodate, Diocese of, situated between 138° and 157° E. long., and between 37° and 52° N. lat., comprises the six northern provinces of the island of Nippon, the island of Yezo, and the Kurile Islands, as well as the administration of the southern part of the island of Sakhalin, which still belongs to the Diocese of Mohilev. It contains about 9,000,000 Japanese inhabitants, 17,000 of whom are Aino aborigines, the last representatives of the primitive population of the Japanese archipelago: they are confined to the Island of Yezo and the Kuriles. At the last census (15 August, 1908) the number of Catholics was 4427. The Vicariate Apostolic of Hakodate, created 17 April, 1891, was made a diocese on 15 June of the same year. It was confided to the missionaries of the Société des Missions Étrangères of Paris, who in 1891 numbered twelve and resided at six stations in the territory designated above. The undersigned was the first bishop. The staff is at present composed of twenty-four missionaries of the same society, one Japanese priest, and seventeen regulars. The residences number twenty. As auxiliaries the mission has three communities of men and four of women: Trappists (1896), Friars Minor (1907), and Fathers of the Society of the Divine Word (1907); Sisters of St. Paul of Chartres (1891), the Reformed Cistercians (1898), the Sisters of Steyl (1908), and the Franciscan Missionaries of Mary.

HAKON

Christianity was widespread during the sixteenth and seventeenth centuries, but the only vestiges now left of these earlier missions are a few religious objects, crosses, statues, and wooden images, secretly preserved in families or preserved in the treasuries of pagodas. The actual Catholics are exclusively neophytes, recruited for the most part before 1895, at which time it was still believed that Christianity was the sole basis of true civilization. At present the instruction of all classes is dominated by materialism, and pride of success blinds the Japanese intelligence; consequently conversions to Catholicism have become rare and difficult. Each year, however, yields its small harvest of baptisms. During 1908 there were baptized in this diocese 345 adults. The writer is persuaded that the Japanese will yet come in large numbers to the Catholic Church. There is yet manifest among them a strong love of truth, despite the deceptions of material civilization; to this we may add a growing respect and esteem for Catholicism, whose orderly hierarchy, unity of faith, purity of morals, and self-sacrificing missionaries it admires. The apostolic spirit now prevailing in the mission countries is also a precious pledge of hope, for it foreshadows the irresistible union of all Catholic forces, hitherto widely scattered.

A. Beerloiz.

Hakon the Good King of Norway, 935 (936) to 960 (961), youngest child of King Harold Fair Hair and Thora Mosterang. Harold, several years previous to the birth of Hakon, had divided his realm among his sons by former wives and, except for a species of suzerainty over the whole, retained only the central portion of the country (for his brother-in-law Hakon remained under his mother's care, and developed into a beautiful youth, in every respect like his father. But as his elder half-brothers showed but little love for him and even tried to compass his death, Harold determined to remove him out of harm's way and accordingly sent him to the care of his friend, King Athelstan of England, who brought him up (hence his nickname Adelstenfoestre) and gave him a splendid education. Hakon was destined never to see his father again, as the latter expired at the advanced age of eighty-three in 932 (or 933) at his residence at Hange, after a glorious reign of seventy years. His successor as ruler of the kingdom was Eric Blodeoeke, who disarmed his brothers by craft and war, and earned the hatred of the people by his despotic temper. The disaffected nobles (Jarls) consequently turned to Hakon in the hope that he might take the reins of government into his hands and at the same time restore their old-time rights. The ambitious youth gladly agreed to their views. Above all Hakon won the support of Sigurd, the leader of the nobility, who had given proofs of a sincere attachment to him from the very beginning, by promising him increased power; moreover, he managed to gain the goodwill of the freemen by his clemency and liberality. Eric soon found himself deserted on all sides, and saved his own and his family's lives by fleeing from the country. Hakon was now undisputed master of the nation, the unity of which seemed to be assured; of course the royal power was signally conceded to take advantage of the fact. Before he could feel secure on his throne, Hakon had to fight a dangerous war with the Danes. Having emerged victorious from this, he directed his efforts towards the improvement of domestic conditions as well as to the extension of his power abroad. Judiciously planned reforms in the admini-
HALIFAX

Halifax, Archdiocese of (Halifaxiani).—This see takes its name from the city of Halifax which has been the seat of government in Nova Scotia since its foundation by Lord Cornwallis in 1749. The archdiocese includes the middle and western counties of the province (Halifax, Lunenburg, Hants, Kings, Annapolis, and Colchester), and the British colony, Bermuda. The island last mentioned has been attached to the archdiocese since 1851. It has a population of about 16,000, of whom about 700 are Catholics. The majority of these are Portuguese or of Portuguese extraction. Bermuda has one resident priest. There is a convent school at Hamilton, the capital of Bermuda, which is in charge of the Sisters of Charity. The portion of the archdiocese which lies within the Province of Nova Scotia had at the last federal census (1901) a Catholic population of 54,301. Of this number about forty per cent are descendants of the early French settlers; they reside principally in the counties of Yarmouth and Digby, at Chezzetook in the County of Halifax, and in portions of Cumberland County. At Church Point, Digby County, is St. Anne’s College, which is devoted to the education of the French Acadian youth. It is conducted by the Eudist Fathers. Within the archdiocese is Port Royal, now known as Annapolis. It was founded by De Monts in 1604, and, with the exception of the early Spanish settlement in Florida, it is the oldest European settlement in North America. The Rev. Nicholas Aubry and another priest, and at Port Royal in that year the Holy Sacrifice was offered up by them for the first time on what is now Canadian soil. From the founding of Port Royal down to the time of the cruel expulsion of the Acadians in 1755, the Catholic missionaries who laboured in Nova Scotia, or Acadia as it was then called, came from France. Some of the early priests were Jesuits. After the colony had been temporarily broken up by Argall in 1613, the Recollect Fathers arrived, and, besides attending to the spiritual wants of the French settlers, they laboured with great success in converting the Micmacs, the native Indians of Nova Scotia. In 1632 Capuchin Friars of the province of Paris were sent to Acadia, and were still at work among the Indians in 1655. One of the most famous of the French missionaries was Abbé Antoine-Simon Maillard, who left France in 1741. He acquired great influence over the Micmacs, and, by means of a captive, the chief of the vilayet of Smyrna, and has 6000 inhabitants, of whom 3800 are Musulmans and 2200 Greeks. Halicarnassus is mentioned (1 Mach., xy, 23) among the towns to which the consul Lucius sent the letter announcing the alliance between Rome and the high-priest Simon. To its Jewish colony the Romans, at a later date, gave permission to build houses of prayer near the sea coast (Josephus, Ant. jud., XIV, x, 23). In the “Notitiae Episcopatum” mention of it occurs until the twelfth century. (Cino, Arch. Greg., c. 913) mentions three bishops: Calandion, who sent a representative to the Council of Chalcedon, 451; Julian, condemned in 536 as an Aphthartodocetist; Theoctistus, present at the Council of Constantinople, 553. At the Second Council of Nicaea in 787, these three were represented by the deacon St. S. PÉTRIDES.

Halics. See Lemberg, Archdiocese of.

Halicarnassus, a titular see of Caria, suffragan of Stauropolis. It was a colony from Trajan in Asia Minor. It was situated on Ceramic Gulf and the island known as Zephyron, whence its original name, Zephyria, was protected by many fortes, and was the largest and strongest city of the southern Asia Minor, famous for its tlers. The Persians imposed tribute on the town who subdued all Caria, and remained faithful to Persia, though they adopted the Greek language, customs, and arts. Its queen, Artemisia, and her fleet were present with Xerxes at Salamis. Another Artemisia was famous for the magnificent tomb (Mausoleum) she built, to whom the hall of the Mausoleum in Mount Athos is named. The Persians, in the war of Caria, destroyed the town, which was established on the site of the vilayet of Smyrna, and has 6000 inhabitants, of whom 3800 are Musulmans and 2200 Greeks. Halicarnassus is mentioned (1 Mach., xy, 23) among the towns to which the consul Lucius sent the letter announcing the alliance between Rome and the high-priest Simon. To its Jewish colony the Romans, at a later date, gave permission to build houses of prayer near the sea coast (Josephus, Ant. jud., XIV, x, 23). In the “Notitiae Episcopatum” mention of it occurs until the twelfth century. (Cino, Arch. Greg., c. 913) mentions three bishops: Calandion, who sent a representative to the Council of Chalcedon, 451; Julian, condemned in 536 as an Aphthartodocetist; Theoctistus, present at the Council of Constantinople, 553. At the Second Council of Nicaea in 787, these three were represented by the deacon St. S. PÉTRIDES.
A legislature was established in Nova Scotia in 1758, and severe laws directed against the Catholics were passed without delay. A Catholic was not allowed to hold land except by grant direct from the Crown, and Catholic priests were ordered to depart from the province. This prohibition continued until 1800. In the meantime there was considerable Irish immigration, and in 1783 the Irish Catholics of Halifax petitioned for the removal of the disabilities, and the obnoxious laws were then repealed.

Two years later, Rev. James Jones, of the Order of Carmelites,was made spiritualchargere of the Catholics of Halifax, and he remained for fifteen years. Other Irish priests followed. A noted missionary was the Abbé Sigogne, who arrived in Nova Scotia in 1797, and continued his work among the Catholics of western Nova Scotia until his death in 1844. He became the leader and adviser of the Acadians in civil as well as in religious matters, and he was unceasing in his efforts to promote the welfare of the French population. He also cared for the Micmacs, whose language he spoke with ease. He held a commission of the peace from the Government.

In 1801 Father Edmund Burke left Quebec to enter unprofitable work in Halifax, which at that time formed part of the Diocese of Quebec and so remained until it was made a vicariate in 1817. Father Burke was consecrated Vicar Apostolic of Nova Scotia in 1818, and filled the office until his death in 1820. It was not until 1827 that his successor, Rt. Rev. William Fraser, was appointed. The vicariate was erected into a diocese 15 Feb., 1842, and was called the Diocese of Halifax. It included the whole of Nova Scotia. In 1844 the diocese was divided; Bishop Fraser became Bishop of the new Diocese of Arichat; and Bishop William Walsh, who had been Bishop Fraser's coadjutor, with the right of succession, became Bishop of Halifax. In 1852 Halifax was made an archdiocese. Archbishop Walsh administered the affairs of his see until his death in 1858. He was scholarly and devout, and although at that time the feeling between Protestants and Catholics was occasionally somewhat bitter, the "British Colonist", a newspaper owned and edited by Protestants, said of him at his death: "The Archbishop was distinguished for his attainments as a scholar and divine. In society the courtesy and affability of his manners and his conversational powers made his intercourse agreeable and instructive."

The second Archbishop of Halifax was the Most Rev. Thomas Louis Connolly, who was consecrated in 1859, and died in 1876. Like his predecessor, he was a native of Ireland. He was ordained at Lyons, France, in 1838. In 1842 he came to Nova Scotia as secretary to Bishop Walsh. In 1852 he was appointed Bishop of St. John, N. B., and in 1859 was transferred to Halifax. Of Archbishop Connolly, Mr. Nicholas Flood Davin, a non-Catholic, wrote: "He belonged to the great class of prelates who have been not merely Churchmen, but also sagacious, far-seeing politicians and large-hearted men, with admiration for all that is good, and a divine superiority to the littleness which thinks everybody else wrong." By his tact he soon removed the ill-feeling that had existed between Catholics and Protestants in Nova Scotia. He took a great interest in public affairs. He was strongly opposed to Fenianism, and was a warm advocate of the confederation. When the North American Catholic Vatican Council he was a prominent figure, and, while opposed to the declaration of the dogma of infallibility, he loyally accepted it as soon as it had been declared. During his administration, St. Mary's Cathedral, a beautiful edifice, was modernized and completed. When he died the Rev. Principal Grant, one of the most noted Presbyterian divines in the country, wrote: "I feel as if I had not only lost a friend, but as if Canada had lost a patriot; for in all his big-hearted Irish fashion he was ever at heart a true Canadian."

The Most Rev. Michael Hannan succeeded Archbishop Connolly. He was a native of Limerick, and was ordained priest in 1845. In May, 1877, he was consecrated archbishop, and he died in 1882. He was a prelate of calm and sound judgment, and was greatly beloved by all classes.

The Most Rev. Cornelius O'Brien, the fourth Archbishop of Halifax, was consecrated 21 January, 1885; d. 9 March, 1906. Archbishop O'Brien was a native of County Carlow. He was a distinguished scholar, and as a preacher, historian, novelist, and poet, he displayed a versatility rarely found in combination. In his Lenten sermons he not only gave excellent explanations of Catholic doctrines, but he made unanswerable attacks upon the theological and scientific errors of his time. His Funeral sermon at the R.C. Church of St. Thomas of Aquin, the first Catholic Prime Minister of Canada, is a model of dignified pulpit eloquence. He was, besides, a prelate of rare executive ability, as the numerous charitable institutions that owe their foundation to his zeal bear ample witness. In political matters he was a strong nationalist.

Archbishop O'Brien's successor is the Most Rev. Edward J. McCarthy, a native of Halifax, who was consecrated 9 Sept., 1906. He is noted for his zeal, industry, and courtesy, and is held in high esteem by all classes.

There are 73 priests in the archdiocese and 96 churches. Among the educational institutions is St. Anne's College, already mentioned; St. Mary's College, Halifax; Holy Heart Seminary, Halifax, in charge of the Eudist Fathers; the Sacred Heart Academy, Halifax, an institution conducted by the Religious of the Sacred Heart; and the Academy of Mount St. Vincent at Rockingham, a successful institution in charge of the Sisters of Charity.

Hahalan, Margaret, foundress of the Dominican Congregation of St. Catherine of Siena (third order); b. in London, 23 January, 1803; d. 10 May, 1868. The parents of this remarkable, holy woman were poor and lowly Irish Catholics, who died when Margaret, their only child, was in the year of his birth. She was sent to an orphanage at Somers Town for two years, and then, at the age of eleven went out to service, in which state of life she remained for nearly thirty years. In 1826 she accompanied the family in which she was living to Bruges; there she tried her vocation as a lay sister in the convent of the English Augustinians, but only remained there a week, feeling sure God had other work for her. She became a Dominican tertiary in 1842, and then came to England, proceeding to Coventry, where she worked under Dr. Ullathorne, afterwards Bishop of Birmingham, among the factory girls. Frequently she would join, by others, and each would present the Dominicans fathers a community of Dominican tertiaries, who were to devote themselves to active works of charity. The rule of the Third Order of St. Dominic, being intended for persons living in the world, was not suited to community life; she therefore drew up, from the rule of the first and second orders, the regulations which the tertiaries were to observe. The first professions were made on the feast of the Immaculate Conception, 1845. From Coventry the
community moved to Bristol, where several schools were placed under their charge, from there they went to Longton, the last of the pottery towns in Staffordshire, where a large field of labour was opened to them.

In 1851 her congregation received papal approbation, and in 1852 the foundation stone of St. Dominic’s convent was laid at Stone, also in Staffordshire, but not in the Black Country: this became the mother-house and novitiate, and to it the Longton community afterwards moved. This Stone convent at one time enjoyed the reputation of numbering some of the cleverest women in England among its subjects, of whom the late mother provincial, Theodosia Dreane, was one. At Stone a church and a hospital for incurables were built; the latter became one of Mother Margaret’s dearest schemes, and was begun on a small scale at Bristol. In 1857 she opened another convent at Stoke-on-Trent, a few miles from Stone, and the same year founded an orphanage at the latter place. In 1858 she went to Rome, to obtain the final confirmation of her constitutions, which was granted, and the congregation was placed under the jurisdiction of the master general of the Dominicans, who appoints a delegate, generally the bishop of the diocese, to act for him. New foundations were made at Bow, and at Marychurch, Torquay, before her death. She was one of great faith, in matters of nature she was supernatural; she had marvellous faith and wonderful determination. She refused to accept government aid for any of her schools, or to place them under government inspection, but since her death her congregation has followed the custom of the country in these respects.

FRANCESCA M. STEELE.

HALLER, KARL LUDWIG VON, professor of constitutional law: b. 1 August, 1768, at Bern; d. 21 May, 1834, at Solothurn, Switzerland. He was a grandson of the famous poet Albrecht von Haller, and son of the statesman and historian Gottlieb Emmanuel von Haller. He did not, however, receive an education worthy of his station, but after some private lessons, and a little instruction from his father, he was sent to Pavia, where he did not study law. He was struck by the idea that he might become a statesman, and during his stay in Pavia he was sent to the University of Innsbruck. At the age of nineteen he was appointed to the important office of Kommissionsanschreiber, or clerk of a public commission. In this capacity he obtained an insight into methods of government, practical politics, and criminal procedure. As secretary of the Swiss diet held at Baden, Austria, he became familiar with the conditions of things in the Swiss Confederation. A journey to Paris in 1790 made him acquainted with the great ideas that were agitating the world at that time. As secretary of legation he served several important embassies, for instance, one to Geneva in 1792, about the Swiss troops stationed there; to Ulm in 1795, regarding the import of grain from southern Germany; to Lugano, Milan, and Paris in 1797, regarding the neutral attitude of Switzerland towards the warring powers. These journeys were very instructive and made him acquainted with the leading personalities of the day, including Bonaparte, The Revolution, and the American war; he was forbidden to leave Switzerland by order of the state and official bureaucracy. The first volume, which appeared in 1816, contains the history and the refutation of the older political theories, and also sets forth the general principles of his system of government. In the succeeding volumes he shows how these principles apply to different forms of government: in the second
to monarchies; in the third (1818) to military powers; in the fourth (1820) and fifth (1834) to ecclesiastical states; and in the sixth (1825) to republics. This work, written primarily to counteract Rousseau's "Contrat Social", has been thus commented on: "It was not merely a book, but a great political achievement. As such it found not only innumerable fanatic friends but even more numerous enemies."

There is no doubt that his weakness consists in the fact that he does not make sufficient distinction between the State and other natural social relations. The book in its entirety was translated into Italian, part of it into French, and an abridged version into English, Latin, and Spanish. All his later writings are influenced by the ideas here set forth, and oppose vigorously the revolutionary tendencies of the times and the champions of liberalism in Church and State.

**Halloy, Jean-Baptiste-Julien d'Omalius**, Belgian geologist, b. at Liège, Belgium, 16 February, 1783; d. at Brussels, 15 January, 1875. He was the only son of a noble family, and his education was carefully directed. After completing his studies he was sent to Paris in 1801 by his parents to avail himself of the social and literary advantages of the metropolis. A lively interest, however, in natural history awakened by the works of Buffon, directed his steps to the museums and the Jardin des Plantes. He visited Paris again in 1805 and 1806, and during these periods attended the lectures of Foureroy, Lacépéde, and Cuvier. His homeward journeys were usually made the occasion of a geological expedition through northern France. He thus conceived the project of making a series of surveys throughout the whole country. This was furthered by a commission to execute a geological map of the empire which brought with it exemption from military duty. He devoted himself energetically to the work and by 1813 had traversed over 15,500 miles in France and portions of Italy. His family had, however, but little sympathy with his geological activity, and persuaded him about this time to give up his expeditions. The map which he had made of France and the neighbouring territories was not published until 1822 and served as a basis for the more detailed surveys of Dufrenoy and Elie de Beaumont. After having served as sous-intendant of Dinant and general secretary of the province of Liège, he became in 1815 governor of Namur. He held this office until after the Revolution of 1830. He was elected a member of the Belgian Senate in 1848, became its vice-president in 1851, was made a member of the Academy of Brussels in 1816, and was elected its president in 1850.

As a statesman Halloy had at heart the well-being of the people and, though his duties allowed him little opportunity for extended geological research, he retained a lively interest in his favourite science and employed it in public work. In his later years he gave much attention to questions of ethnology and philosophy. His death was hastened by the exertions of a scientific expedition undertaken alone in his ninety-first year.

Halloy was one of the pioneers of modern geology, and in particular laid the foundation of geology for the wide areas of the Carboniferous districts of Belgium and the Rhine provinces and in the Tertiary deposits of the Paris basin. He was a practical Catholic during his long and active life, and was characterized by his loyalty and devotion to the Church. He insisted on the harmony between science, faith, and this subject of his oration on the occasion of the golden jubilee of the Belgian Academy in 1866. Among his published works are: "Description géologique des Pays-Bas" (1828); "Eléments de Géologie" (1831); "Introduction à la Géologie" (1833); "Coup d'œil sur la géologie de la Belgique" (1842); "Précis élémentaire de Géologie" (1843); "Abrégé de Géologie" (1849); "Deux Races humaines ou Eléments d'Ethnographie" (1845).

**Halma, Nicholas**, French mathematician; b. at Sedan, 31 December, 1755; d. at Paris, 4 June, 1822. He was educated at the College of Plessis, Paris, took Holy orders, and received the title of Abbé. In 1791 he became principal of Sedan College. When this school was closed in 1793, he went to Paris and entered military service as surgeon. In 1794 he was appointed secretary to the Polytechnic School. He held the chair of mathematics at the Prytanée of Paris, and then that of geography in the military school at Fontainebleau. As librarian of the Empress Josephine and of the École des Beaux Arts, he was charged to instruct the empress in history and geography. Under the Restoration he was appointed curator at the library of Sainte Geneviève and became a canon of Notre Dame. In 1808 he was commissioned by the minister of the Interior to continue the "History of France" of Velly, and prepared the manuscript of two volumes. His most important work, however, was the editing and the translating into Latin and French of Ptolemy's "Almagest" (Paris, 1813-16). This work, undertaken at the instance of Lagrange and Delambre, is used to this day, almost exclusively, as a standard in connexion with the history of astronomy. He also translated the "Commentaries" of Theon (Paris, 1822-25). Other works of his are: "Table pascale du moine Isaac Argyre" (Paris, 1825); "Astrologie égyptienne" (Paris, 1824); "Examen historique et critique des monuments astronomiques des anciens" (Paris, 1830).

**Hamatha (Amathath), a titular see of Syria Secunda, suffragan of Apamea. Hamath was the capital of a Canaanite kingdom (IV Kings, xxviii, 33; xxix, 21) whose king, Tho, congratulated David on his victory over the king of Soba (II Kings, vii, 9-11; I Chron., xiii, 9-11). Solomon, it would seem, took possession of Hamath and its territory (III Kings, iv, 21-24; II Chron., vii, 4). Amos (vi, 2) calls the town "Hamath the Great". The Assyrians took possession of it in the seventh century B.C. At the time of the monarchian controversy later in the Christian era, no doubt in honour of Antiochus Epiphanes, Aquila and Theodoretus call it Emath-Epiphania. It is as Epiphania that it is best known in ecclesiastical documents. Lequien (Oriens Christianus, II, 915-918) mentions nine Greek bishops of Epiphania. The first of them, whom he calls Mauritius, is the Most. M. Nicaise (Gelse, "Patrum Nieenorum Nomina", p. Ixii). Conquered by the Arabs in 639, the town regained its ancient name, and has since retained it, under the form Hamah, meaning a fortress.

Tanced took it in 1108, but in 1115 the Franks lost it again. The town was possessed by the Franks after 1148-1229, when it was conquered by the Turks in 1229. The modern Hamah is a town
of 45,000 inhabitants, prettily situated on the Orontes. It is the residence of a Metessarif, depending on Damascus. The main portion of the population is Musulman, but there are about 10,000 Christians of various sects. It has two Catholic archbishops, a Greek Melchite and a Syrian, the one residing at Iabroud, the other at Hom, reuniting the titles of Home末端 (Emesia) and Hamah (Missiones Catholicae, 781-904). The Orthodox Greeks have a bishop of their own for either see. The modern town is without interest, the main current of the sea being the nora used for watering the gardens.

S. SALAVILLE.

Hambley, John, Venerable, English martyr (suffered 1587), born and educated in Cornwall, and converted by reading one of Father Persons’ books in 1582. After his course at Reims (1583-1585), he was tried and condemned at Taunton. He saved his life for the moment by denying his faith, then managed to break prison and made his way to Salisbury. Next Easter, however, the Protestant bishop there, in his hatred of the ancient Faith, resolved to search the houses of Catholics on the eve of the Assumption, suspecting that he might thus catch a priest, and in fact Hambley was recaptured. Being now in a worse plight than ever, his fears increased, he again offered confession, and this time gave up the names of most of his Catholic friends. Next Easter he was tried again, and again made offers of conformity. Yet after this third fall he managed to recover himself, and suffered near Salisbury “standing to it manfully, and inveighing much against his former fault.” How he got the grace of final perseverance was a matter of much speculation. One contemporary, Father Warford, believed it was due to his guardian angel, but another, Father Gerard, with greater probability, tells us that his strength came from a fellow-prisoner, Thomas Pilchard, afterwards himself a martyr.

J. H. POLLEN.

Hamburg, a city supposed to be identical with the Marionis of Ptolemy, was founded by a colony of fishermen from Lower Saxony, who settled on the wooded heights (hamma-wald) at the end of a tongue of land between the Elbe and the Alster, on the spot now occupied by the church of St. Peter and the Johannesneum Gymnasium. Between 805 and 810 Charlemagne fortified the place and used it as a base of operations for the diffusion of Christianity in the North. By permission of Gregory IV, Louis the Pious established there an archiepiscopal see, in 831, with jurisdiction over all missions in Scandavia, Northern Russia, Iceland, and Greenland. The church was transferred to St. Ansgr, the Apostle of the North, and the piratical raids of the Northmen and the Obotrites compelled him to remove to Bremen. When, in 845, the Bishop of Bremen died, Ansgr sought to have the two sees united, and his request was granted, but the union was not ratified by Nicholas I until 31 May, 864. Bremen being detached from the metropolitan Province of Cologne. Ansgr died in 865, after preparing the way for the conversion of Sweden and giving new life to the missionary movement among the Danes. He was succeeded by his disciple Rimbart, second Bishop of the North (865-88), who carried on the work of evangelization in Denmark, Sweden in spite of repeated raids by the Northmen and the Wends. Rimbart’s immediate successors were St. Adalg (888-909) and Holger (909-916), both of them monks from Corvey, in whose time Cologne renewed its claims to metropolitan jurisdiction. Under Reginwart (916-18), the successor of Holger, the diocese was overrun by the Huns, who burned Bremen. Of the second archbishop St. Ummel (918-36) became known as the third Apostle of the North, such was his energy, and so successful was he, in evangelizing Denmark and Sweden, while St. Adalg (936-88) is credited with having established the suffragan Sees of Aarhus (946), Schleswig (c. 948), Ribe (950), and Odense (952). The suffragan See of Oldenburg, later Lübeck (940). Lubentius I (988-1013), an Italian, proved a very able administrator of the diocese. Like St. Ansgr, he was forced by the Danish pirates to flee in order to save his own life and the sacred treasures of the Church. The first Swedish see was established at Skara during the incumbency of Unwan (1013-30). Lubentius II (1030-32) established a chapter of canons at Hamburg, the city having been rebuilt in 1015. He also founded a hospital and organized in a practical way the work of relieving the poor. The next archbishop was Hermann (1032-46), succeeded by Bezzelin Alebrand (1035-43). The latter built the stone cathedral and the archiepiscopal palace, and transferred the see to Hamburg.

The united See of Hamburg-Bremen reached both the height of its greatness and the depth of its misfortune under Adalbert (1079-95), a scion of the royal Saxo-Thuringian line, and a remarkable man in every respect. He was contemporary with Adam of Bremen (died c. 1076), the first and best of the medieval historians of North Germany. Adam’s chief work is the “Gesta Hammaburgensis Ecclesiae Pontificum” in four books, the third of which deals exclusively with the administration of Adalbert, whose loyal and devoted adherent he was, though he did not deny or conceal that prelate’s weaknesses or mistakes. The political eminence attained by Adalbert makes Adam’s work exceedingly important for the history of the German Empire. It may be noted that the fourth book of the “Gesta” entitled “Descriptio Insularum Aquilonis” (Account of the Islands of the North) is unique in its kind, and is in fact a geography of Northern Europe and of the Baltic Coast so far as those regions were then known at Bremen. The decline of the metropolitan See of Hamburg-Bremen was hastened under the administration of Adalbert’s successors, Liemar (1072-1101) and Humbert (1101-04). On account of their opposition to Gregory VII, they were compelled to reside outside of the diocese. Externally, the decline of Hamburg was indicated by the separation from it of the See of Lund, which became the metropolis of the entire Germanic North. As the Wendish seas had already disappeared, Ham- burg-Bremen had now only nominal suffragans. This state of affairs prevailed during the period following, in spite of the efforts of Frederick (1104-23) and Adalbero (1123-48). Hartwig I, of Stade (1148-88), a clever and energetic, but haughty, prelate, who introduced brick into construction, was known as the patron of the fine and magnificent churches which he built, made things worse by his quarrel with Henry the Lion, who, in the incumbency of Baldwin of Holland (1169-79), was not only the temporal lord of Hamburg-Bremen, but also dominated the ecclesiastical administration. Whatever Sigfrid, the successor of Hartwig, accomplished in the brief period of his pontificate, was undone under Hartwig II, of Ulfeld (1184-1207). His death was followed by a disputed election, the Hamburg chapter supporting the claims of Burkhard of Stumpenhausen, prior of the cathedral, while the Bremen chapter chose for bishop Waldemar of Schleswig. Even the specified Church of St. Paul did not put an end to the conflict, and Gerhard I, of Oldenburg, though elected by the combined chapters in 1210, did not take possession of his see until 1216. Under
Gerhard II, of Lippe (1219–58), the see was finally removed, in 1223, to Bremen, whence Bezzelin Alebrand (see above) had transferred it to Hamburg.

The ecclesiastical importance of Hamburg thenceforward declined with the rapid growth of its commerce and its consequent political development, especially after the city had joined the Hanseatic League, in 1255. Despite temporary improvements, the condition of Hamburg on the whole grew worse from year to year, and at last the popular discontent with the clergy became so great that the Reformation, generally condoned by the city, was hasted on with eagerness. It entered Hamburg in 1525, under the leadership of Magister Stiefel, of the apostate Minorite Kempe, the blacksmith Ziegenhagen, and others. As early as 1528 the faithful Catholic clergy were forced to leave the city, for which new religious regulations were made by Johann Buggenhagen, generally known as Doctor Pommer. The last Mass publicly celebrated at Hamburg was on 15 August, 1529. Catholic services in the cathedral were prohibited, while the cathedral and the convents and monasteries were secularized. The stone cathedral built, in 1357, by Johann von Bodelschwingh and remaining in the hands of the archbishops of Bremen until the Treaty of Westphalia placed it in the possession of Hanover. It was given back to the city in 1802, but in 1805 was condemned as unsafe and was razed to the ground. The "Long Recess" Decree of 1529 commanded strict observation of Lutheranism and the prosecution and punishment of all who did not conform; while the Protestant preachers, both in speech and writing, insisted upon rigorous enforcement of that decree.

Nevertheless, Catholic merchants and residents managed to re-establish themselves gradually, and as early as 1581 incorporated themselves as an independent community under the protection of the emperor, and found a home in the neighbouring city of Altona. Emperor Rudolf II issued an edict protecting Catholics from the molestation and persecution of the Hamburg magistrates. Relying upon this edict, the Jesuits, led by the historian, Michael of Issel, began missionary work. In spite of many obstacles they succeeded in opening two chapels for religious services, one in the palace of the French envoy, the other in that of Queen Christina of Sweden, who had been converted to the Catholic Faith. The envoys from the councils of Catholic rulers furthered the Catholic cause by increasing the valuable protectorate of 1571 Leopold I sent a most powerful protector in the person of an imperial minister resident. The chapel in his legation served the Catholics of Hamburg for more than a hundred years as their parochial church, until, on 10 September, 1719, a mob desecrated and despoiled it. During the era of the hatred against Catholics was stirred up on the one hand by the Lutheran preachers, who, in 1777, abandoned all use of ecclesiastical vestments, and on the other hand, especially after 1770, by many apostate priests and monks who sought and found asylum at Hamburg. At this time the bishop of Hildesheim, A. Fidler, of Vienna, who conducted a particularly vehement "Antipapistisches Journal", in which he reviled the Catholics of Hamburg, until he was taken into the service of the Duke of Mecklenburg as consistorial councillor and superintendent.

In 1794 the Catholics of Hamburg were officially recognized by the civic authorities and were legally authorized to celebrate Divine worship. In 1792 they became independent of the parish of Altona, even in respect to church property. During the French occupation, in 1806 and in 1810–14, the prefect of the Department of Elbemündungen raised the mission to the rank of a parish, established as its parish church the chapel known as Little St. Michael's, which had grown out of the former chapel of the legation. The downfall of Napoleon did not disturb these privileges. Religious liberty, already fully established, was extended, in 1815, by Article 16 of the Decrees of the Confederation, which guaranteed civil equality to Catholics. This was also guaranteed later on by the Constitution of 28 September, 1860. New dangers arose in 1821–24 and in 1839, when Gregory XVI sought to make Hamburg the residence of the Vicar Apostolic of the Northern Missions. These troubles, however, soon passed away. The parish clergy for a long time suffered from lack of means, so that at times only one priest resided. Not until 1831 was the parish able to support two.

The first Catholic school was established in 1840. The support of the schools is a heavy burden on the faithful, as the State refuses aid to Catholic schools. In the last three decades, not only has the condition of the Catholics of Hamburg greatly improved, but their numbers have materially increased. Of nearly 900,000 inhabitants, about 850,000 are Protestants, and some 18,000 are Jews. The State of Hamburg consists of the Hanseatic Free City itself and what is known as the Vierlande, or Four Districts—i.e. the Lower Saxonian soil and the peninsula of the islands Neuholstein and Böttiger, the last-named including Cuxhaven, the four Walddörfer, or forest hamlets, of Farmsen, Volksdorf, Wohldorf, and Grosshauerdorf, in Holstein, Geestacht in Lauenburg, Moorburg and Gudendorf in Hanover, and the islands of Neuwerk and Scharhörn. Notwithstanding the number of Protestants, Catholic ecclesiastical affairs are supervised by the Senate. The Protestant population is divided into four church districts, with 33 parish churches and 100 clergymen, under the government of a council and the synod. The 32,000 Catholics belong to the Vicariate Apostolic of the Northern Missions, under the Bishop of Osnabrück, who appoints the pastors. Non-Lutheran Christians are subject to a special board of control. Of the 28 places of worship in the city 18 are Protestant, 5 Catholic, and 5 Hebrew. There are altogether 6 Catholic parishes: St. Michael, St. George, Eimsbüttel, Hammerbrook, Rothenburgsort, and Barmbek. The oldest parish church is that of St. Ansar, which dates from the eighteenth century and was formerly known as Little St. Michael's. Next come St. Boniface's chapel, dating from 1692, St. Mary's church, built in 1893 in Romanesque style, by Güldenpflung, with two steeples 200 feet high, St. Solae, built in Early Gothic, St. Joseph's, by the same architect, in 1901, in Late Gothic. There is another Catholic church at the emigrant piers of the Hamburg-American Line, on the Veddel. Fifteen priests attend to the needs of these churches. According to the latest census (1905) there are altogether 147,772 Catholic, 84,321 public, and 10,318 foreign, schools (Volkschulen), and of these 6 are Catholic parochial schools. The secondary schools include one Catholic high school for boys (Realaschule and Pröaymnamus). Among the 50 girls' high schools two are Catholic, that of St. Johannis Klost and that of the Ursuline Sisters. More than one-third of the children attending Catholic and Protestant schools and receive scanty Catholic religious instruction, in many cases none at all. The loss sustained every year by the Catholic Church in Hamburg in this way and through mixed marriages is very considerable. There are several Catholic charitable institutions in Hamburg, among them the Bavarian Volunteer St. Joseph's (St. Josephskolp) and St. Mary's Hospital (1864), conducted by the Borr dmaan Sisters, a Catholic orphanage with school attached. Towards the expenses of the Church in Hamburg the Boniface Association has contributed in all, since 1858, about half a million marks ($125,000), and in 1893, in addition to the above other resource, and, as the German Catholics are generally poor, great sacrifices must be made for the preservation of the Faith. The social and charitable
life of Catholic Hamburg is sustained by numerous associations, among them the Gesellenverein and the Societies of St. Elizabeth and St. Vincent (three conferences each).

J. M. Mahony.

Hamilton, JOHN, Archbishop of St. Andrews; b. 1511; d. at Stirling, 1571; a natural son of James, first Earl of Arran. Placed in the new law; after the Benedictines of Kilwinning, he acquired, through James V, the abbacy of Paisley, which he held from the age of fourteen till his death. It is doubtful whether he ever actually entered the order. After studying in Glasgow he entered the University of Erfurt, and in 1530 he was elected Bishop of Dunkeld, and after the assassination of Beaton, succeeded that prelate not only as metropolitan, but also as the prominent opponent of nascent Protestantism. By the assembling of ecclesiastical councils in 1549, 1552 and 1559, the archbishop took an important part in the framing of statutes for the much-needed reformation of the clergy and religious instruction of the laity. When the packed parliament of 1560 voted the overthrow of Catholicism and the adoption of the Protestant "Confession of Faith", Hamilton was the leading dissident. He has been accused of making too feeble a protest, but his correspondence with Beaton, Archbishop of Glasgow, then in Paris, shows that he regarded the matter with less severity than the events proved. When the Abbey of Paisley was wrecked by the reforming mob in that same year, Hamilton narrowly escaped with his life. In 1563 he was seized and put to trial together with forty-seven other ecclesiastics, on the charge of saying Mass and hearing confessions; placed in the new law; after imprisonment for a time, he was released through the queen's intervention. He baptized with solemn rites, in December, 1566, the infant prince James, afterwards James VI. The opposition of the Protestant party to the use of Catholic ceremonies, upon which the queen's marriage was determined, had delayed the baptism for six months. The queen having restored to him his consistorial jurisdiction, which the parliament of 1560 had abolished, he took his seat in the assembly of 1567. In the troubles which beset the hapless Mary, Hamilton was the queen's constant supporter. After the ruin of her hopes at Langside, and her flight into England, which he had done his utmost to prevent, when she was compelled to seek his own safety in Dumfriesshire, where he died in 1571 that stronghold was cast down and Hamilton taken prisoner. He was carried to Stirling, and three days after his capture, was hanged there in his pontifical vestments on the common gibbet. No record remains of any formal trial he was put to death on the strength of his previous forfeiture as a traitor on the fall of Mary. Though a man of wisdom and moderation, possessed of many sterling qualities, and a valiant champion of the Catholic cause, Hamil-
ton was not free from grave irregularities in his private life, as records of legitimation of his natural children testify. His complicity in the murders of Darnley and of the regent Moray has never been proved; with his last breath he protested that his death was due solely to his loyalty to Church and sovereign. It is difficult to explain how he could declare the validity from consanguinity of the marriage between Bothwell and his countess, enabling the earl to espouse Queen Mary, although he had previously granted the necessary dispensation; it has been suggested, however, that the dispensation was worthless, owing to some flaw.

Two works bearing his name, since they were published by his authority and at his expense, though compiled by another, are "Archbishop Hamilton's Catechism" and "Ane Godlie Exhortation". The catechism was printed at St. Andrews in August, 1552. It had been drawn up in obedience to a decree of the provincial council of the previous January, for the use of the clergy in instructing their people. The council ordered it to be read in the churches on all Sundays and Holy Days, when there happened to be no sermon, for the space of half an hour.

The text of an introduction commending its use to the clergy, followed by another addressed to the laity on the necessity of a thorough knowledge of the doctrines of faith. The body of the book is divided into four parts: I, "Of the ten commandments"; II, "Of the twelfth artikels of the Crede", in 13 chapters; III, "Of the seven sacraments", 13 chapters; IV, "Of the manner how Christian men and women suld mak their prayer to God". These chapters are devoted to an explanation of the seven petitions of the Pater Noster, followed by instructions on the Ave Maria, invocation of saints, and prayer for the dead. The whole work is in the vernacular Scott.

The catechism is by Catholic in tone, and has been highly commended even by Protestant writers, such as Bishop Keith and Hill Burton, as an excellent work of its kind—learned, moderate, and skilfully compiled. It is especially valuable as a specimen of pure Scottish speech, unadulterated by foreign idioms. The original work is very rare. There have been two reprints; one a facsimile in 1882, edited by Professor Mitchell; the other published in 1884 with a preface by the Right Hon. W. E. Gladstone.

The "Godlie Exhortation" is much smaller, consisting of two pages of broadsheet matter. It was printed in 1559. Besides its proper title, it has often borne that of "The Twappeny Faith", given in derision on account of its price when hawked abroad by pedlars. The treatise consists of an explanation of Holy Communion; it was intended to be read by the clergy to the people when the latter approached the sacrament. A facsimile reprint is appended to the 1882 edition of the catechism.

Hamilton was a munificent benefactor to his cathedral city; he completed and endowed St. Mary's College, strengthened the castle, erected other buildings, and constructed as many as fourteen bridges in the neighbourhood. He was the last Catholic metropolitan of the pre-Reformation Church in Scotland.

Michael Barrett

Hammer-Purgstall, Joseph Baron von, a distinguished Austrian Orientalist; b. at Graz, 9 June, 1774; d. at Vienna, 23 November, 1856. He studied at Graz and Vienna, entering the Oriental academy of Vienna in 1800, to devote himself to Oriental languages. His first scholarly work was done as collaborator of von Jenisch, the editor of Meninski's Arabic-Persian-Turkish dictionary. In 1796 he entered the Austrian diplomatic service as secretary in the ministry of foreign affairs, was appointed interpreter to the internuncio at Constantinople in 1799 and was sent from there to Egypt, where he took part in 1801 as secretary in the campaign of the English and Turks against the French. He returned to Vienna in 1802, but in August went again to Constantinople as secretary of the legation, remaining there until 1807, when he returned definitely to Vienna, where he continued to serve in various diplomatic capacities. In 1817 he was made Aulic Councillor, was knighted in 1822, and when he inherited the family estate of Countess Purgstall in 1835, he was made a baron and received permission to join her name to his. In 1847 he was elected president of the newly founded Academy of Sciences. Hammer-Purgstall was a very prolific writer. His knowledge of Oriental languages was extensive but not thorough. This detracts seriously from the value of his work; his text editions are unreliable and his translations often inaccurate. Much of his work is to-day antiquated. But his wide range of studies enabled him to make valuable contributions to the field of Oriental history, while his translations have been of great value in discussing the literature. His version of the Persian poems of Hafiz inspired Goethe's "Westöstliche Divan" (1816–1819); Rüpert and Platen were also indebted to him.

His chief historical works are: "Die Staatsverfassung und Staatsverwaltung des osmanischen Reiches" (Vienna, 1814, 2 vols.); "Die Geschichte der osmanischen Reiches" (Pest, 1827–35, 10 vols.); "Gedächtniss der Lebensbeschreibungen grosser moslemischer Herrscher" (Darmstadt, 1837–39, 6 vols.); "Geschichte des Goldenen Horde in Kiptschak" (Pest, 1840); "Geschichte der Icherne" (Darmstadt, 1840, 2 vols.); and "Geschichte der persischen" (Vienna, 1856). His translations are numerous. From the Arabic he translated the poems of Mutanabbi (Vienna, 1824), and the "Atwâk al-dhâhâb" of Zamahshari under the title "Samachaisch Goldene Halsbänder" (Vienna, 1835). From the Persian he translated the entire "Divān" of Hafiz (Stuttgart and Tübingen, 1812–13). Unfortunately this rendering is in German prose and does scant justice to the original, but it was the first time the poems of Persia's greatest lyric was made known to Europe in their entirety. He also published the Persian text with a German translation of Hafiz's poem "Gushâb-i-râz" under the title of "Mamud Schabisters Rosenflor des Geheimnisses" (Pest, 1838), and as a part of the "Ta'rîkh-i-Wassaf" (Vienna, 1856). From the Turkish he made a translation of the "Divâns" of Bâkî (Vienna, 1825), of Faâl's romantic poem "Gûl u Buîbûl", i.e. "Rose and Nightingale" (Pest, 1834), and the "Bâkân mâth", a treatise on falconry, which he published with two other treatises on the same subject, one Greek and one German, under the title "Falknerlee" (Vienna, 1840).

Hammer's contributions to literary history were very significant. Together with Count Reviczky he founded the "Fundgruben des Orientes" (Vienna, 1809–19, 6 vols.), a periodical devoted to Oriental subjects. His "Geschichte der schönen Rede-Künste Persiens" (Vienna, 1818), based on Daulatabad's "Tazkîrat-us-sû'î-arâk", a sort of history of Persian poetry, although now wholly superseded, is still of interest in German poetry. Goethe and Rückert made liberal use of it. Hammer also wrote a history of Turkish poetry, "Geschichte der osmanischen Dichtkunst" (Pest, 1836–38, 4 vols.), and one of Arabic literature, "Literaturgeschichte der Araber" (Vienna, 1850–56, 8 vols.), which to-day has little more than historic value. His original poems, based mostly on Oriental models, are devoid of literary merit,
Hammurabi (Ha-am-mû-ra-bi), the sixth king of the first Babylonian dynasty; well known for over fifty years to students of Babylonian history. Inscriptions of Hammurabi were published by Rawlinson in 1869. Recent history has waxed in renown, and his letters without reference to the attention given by him to every detail of administration: revenue, public works, regulation of food supplies, exemptions from duty. Assyriologists agree that Hammurabi’s reign was, moreover, a period of great literary activity. The interest which attaches to the names and titles of Hammurabi are phonetically identical, most scholars readily admit; as, moreover, the other names cited in the summa of his titles are: “Aroie, king of Pontus (Hebr. Ellasar), and Chadolahmor, king of the Elamites, and Thadal king of nations (Hebr. Gôyîm), may designate Rim-Sin (-Rim-Akâ), king of Larsa, Kurud-Lagarar, King of Elam, and certain Thuddalu, otherwise unknown, i.e., ‘king of the foreign countries’, the identification of Hammurabi and Amraphel is, to say the least, very probable. We should gather thence that the expedition referred to in the Bible must have been taken place before Rim-Sin’s downfall, when Babylon was still a vassal to Elam, hence before the thirtieth year of Hammurabi. That this is to say, before about 1810, a date in perfect agreement with the probable chronology of Abraham.

The discovery of Hammurabi’s Code has raised him to a leading place in the roll of the greatest men of antiquity. This wonderful document was unearthed partly in Dec., 1901, and partly in Jan., 1902, by the French Délégation en Perse, under M. de Morgan, in their excavations at Susa, once the capital of Elam and, later, of Persia. The stele containing the Code is an obelisk-like block of black diorite measuring 7 ft. 4½ in. in height and 6 ft. 9½ in. in circumference at the base. With the exception of a large carving in relief on the upper end, it was once entirely covered with forty-four columns (over 3800 lines) of text in the old Babylonian wedge-writing. From the inscription we learn that it was engraved for the temple of Shamash at Sippar, and that another copy stood in the temple of Mutur and Adad at Turtukhu in the city of Lagâmarar, and this copy was thus designated. The various fragments makes it probable that more copies had been set up in different cities. This stele, now in the Louvre Museum, was carried off from Sippar, about 1120 n. c., by Shuratuk-Nabû, King of Elam, who set it in his capital as a trophy of his victory. To this circumstance should likely be attributed the chiselling away of some columns of the text, probably to make place for a record of the Elamite ruler’s triumphs, which, however, was never written.

The relief carved at the upper end of the stele represents the king standing before the sun-god Shamash seated upon a throne, clothed in a flounced robe, wearing the sacred hand-gear and holding in his hand the sceptre and ring.

With wonderful promptness, the editio princeps of the text, accompanied with a French translation, was published late in 1902. A German version by Winkler, and one in English by Johns, appeared in 1903. The text of the inscription may be divided into three parts: the introduction, the Code, and the conclusion. In the first part there is a lengthy enumeration of Hammurabi’s honorific titles and a recital of his deeds of war and peace, ending with these words, very aptly prefacing the Code: “When Marulk sent me to govern men, to sustain and instruct the world, right and justice in the land I established, I brought about the happiness of men.”

According to a fragment found in Assurbanipal’s library, the Code contained 285 “legal judgments of Hammurabi” (Cuneif. Texts, etc., XIII, pl. 46 and
HAMMURABI

126

race, the long relations of Babylon with the land of Amurru, have prompted modern scholars to investi
gate whether the undeniably relation of the two code is not one of dependence. The comments on both code
may be briefly stated as follows. Needless to no
tice that Hammurabi is in no wise indebted to
the Hebrew Law. As to the latter, its older part, the
Code of the Covenant (Exod., xxii, 1—xxiii, 19), is in
 tended for a semi-pomad people, and therefore cannot
depend on the Hebrew code, and one on pre
varicating judges (§ 5). The next laws treat of theft
(§§ 6—8), stolen property found in another’s hand
(§§ 9—13), kidnapping (§ 14), escape and kidnapping
of slaves (§§ 15—20), burglary and brigandage (§§ 21—
25). Others are devoted to feudal relations to the
king (§§ 20—41); the relation between owner and
wine-cultivator (§§ 42—52), responsibility for damages
caus ed to crops by careless farmers (§§ 53—58) and
shepherds (§§ 57, 58), enactments concerning orchards
(§§ 59—65).

Among the laws chiselled off, three have been re
covered by Fr. Scheil from mutilated copies of the
Code; they deal with loans and house-renting. Fol
lowing the blank space are provisions touching the
respective rights of merchants and agents (§§ 100—
107) and the policing of wine-shops (§§ 108—111), ap
propriation of consignments (§ 112), debt (§§ 115—
117). These are also preserved by other means. They
are followed by laws treating of the family. Slander against a woman, either dedicated to a god or
married, opens the series (§ 127); then, after having
defined the position of the woman (§ 128), the Code
deals with adultery (§ 129), violation of a married
vow (§ 130), suspicion of unchastity (§§ 131, 132),
separation and divorce (§§ 133—143), taking a con
cubine (§§ 144—149), women’s property (§§ 150—152),
various forms of unchastity (§§ 153—158) and the
customs regarding the purchase price for, and the
marriage portion of, the bride (§§ 159—164). Inheritance
laws come next; then, define the rights of children,
wives, concubines (§§ 165—174), slaves (§§ 175—
176), widows (§§ 177), and non-marriageable temple
and street-girls (§§ 178—184); provisions respecting
adoption and foster-children (§§ 185—193) conclude
this important part of the Code. Following are vari
ous series of regulations concerning personal damages
(§§ 186—209), thefts and requisibilities of the tribunals
(§§ 215—227), payment and responsibilities of house
builders (§§ 228—233), ship-builders (§§ 234, 235),
and boatmen (§§ 236—240). Another set is devoted to
agricultural labour: hiring of domestic animals (§§
241—249), injuries caused by goring oxens (§§ 250—252),
theft of oxen. animals, wives, and children (§§ 253—
277). The last regulations deal with slave
trade (§§ 278—281) and the penalty inflicted on rebel
lious slaves (§ 282).

The conclusion of the inscription sounds like a hymn
of high-keyed self-praise. The document ends with a
blessing for those who will obey the laws and a long
series of curses against him who will give no heed
to the laws, or interfere with the word of the Code.
Hammurabi’s Code cannot by any means be regarded
as a faltering attempt to frame laws among a young
and inexperienced people. Such a masterpiece of legis
lation could be at only a thriving and well-organised
nation, given to agriculture and commerce, long since
grown familiar with the security afforded by written
deeds drawn up with all the niceties and solemnities
which clever jurists could devise, and accustomed to
transact no business otherwise. It is inspired through
out by an appreciation of the right and humane senti
ments. It makes it surpass by far the stern old
Roman laws.

Of all the ancient legislations, that of the Hebrews
alone can stand comparison with the Babylonian Code.
The many points of resemblance between the two,
the Babylonian origin of the father of the Hebrew

47). Fr. Scheil estimated that the five columns
erased, as has been described above, contained about
forty laws, the exact number might be 57, thus giving
a total of 285; at any rate, the numbering of the edict
princeps is usually followed.

An idea of the comprehensiveness of the Code may
be gathered from the enumeration of the legal matters,
both civil and criminal, dealt with in it. It opens with
two laws concerning ban and witchcraft (§§ 1, 2), two
due to false witnesses (§§ 3, 4), and one on pre
varicating judges (§ 5). The next laws treat of theft
(§§ 6—8), stolen property found in another’s hand
(§§ 9—13), kidnapping (§ 14), escape and kidnapping
of slaves (§§ 15—20), burglary and brigandage (§§ 21—
25). Others are devoted to feudal relations to the
king (§§ 20—41); the relation between owner and
wine-cultivator (§§ 42—52), responsibility for damages
caus ed to crops by careless farmers (§§ 53—58) and
shepherds (§§ 57, 58), enactments concerning orchards
(§§ 59—65).

Among the laws chiselled off, three have been re
covered by Fr. Scheil from mutilated copies of the
Code; they deal with loans and house-renting. Fol
lowing the blank space are provisions touching the
respective rights of merchants and agents (§§ 100—
107) and the policing of wine-shops (§§ 108—111), ap
propriation of consignments (§ 112), debt (§§ 115—
117). These are also preserved by other means. They
are followed by laws treating of the family. Slander against a woman, either dedicated to a god or
married, opens the series (§ 127); then, after having
defined the position of the woman (§ 128), the Code
deals with adultery (§ 129), violation of a married
vow (§ 130), suspicion of unchastity (§§ 131, 132),
separation and divorce (§§ 133—143), taking a con
cubine (§§ 144—149), women’s property (§§ 150—152),
various forms of unchastity (§§ 153—158) and the
customs regarding the purchase price for, and the
marriage portion of, the bride (§§ 159—164). Inheritance
laws come next; then, define the rights of children,
wives, concubines (§§ 165—174), slaves (§§ 175—
176), widows (§§ 177), and non-marriageable temple
and street-girls (§§ 178—184); provisions respecting
adoption and foster-children (§§ 185—193) conclude
this important part of the Code. Following are vari
ous series of regulations concerning personal damages
(§§ 186—209), thefts and requisibilities of the tribunals
(§§ 215—227), payment and responsibilities of house
builders (§§ 228—233), ship-builders (§§ 234, 235),
and boatmen (§§ 236—240). Another set is devoted to
agricultural labour: hiring of domestic animals (§§
241—249), injuries caused by goring oxens (§§ 250—252),
theft of oxen, animals, wives, and children (§§ 253—
277). The last regulations deal with slave
trade (§§ 278—281) and the penalty inflicted on rebel
lious slaves (§ 282).

The conclusion of the inscription sounds like a hymn
of high-keyed self-praise. The document ends with a
blessing for those who will obey the laws and a long
series of curses against him who will give no heed
to the laws, or interfere with the word of the Code.
Hammurabi’s Code cannot by any means be regarded
as a faltering attempt to frame laws among a young
and inexperienced people. Such a masterpiece of legis
lation could be at only a thriving and well-organised
nation, given to agriculture and commerce, long since
grown familiar with the security afforded by written
deeds drawn up with all the niceties and solemnities
which clever jurists could devise, and accustomed to
transact no business otherwise. It is inspired through
out by an appreciation of the right and humane senti
ments. It makes it surpass by far the stern old
Roman laws.

Of all the ancient legislations, that of the Hebrews
alone can stand comparison with the Babylonian Code.
The many points of resemblance between the two,
the Babylonian origin of the father of the Hebrew
HAMMURABI, THE SIXTH KING OF THE FIRST BABYLONIAN DYNASTY, RECEIVING HIS CODE OF LAWS FROM THE SUN-GOD SHAMASH
HAMSTED

CHARLES L. SOUVAY.

Hamsted, Adrian, founder of the sect of Adrianists; b. at Dordrecht, 1524; d. at Bruges, 1581. We know little of his personal life and very little concerning the short-lived sect to which he gave his name. The Adrianists, who were mostly women, professed in general the doctrines of the Anabaptists; but what their specific beliefs were cannot be ascertained. Charges of immorality have been made and some have been substantiated.

LEO A. KELLY.

Haneberg, Daniel Bonifacius von, a distinguished German prelate and Orientalist of the nineteenth century, b. at Tanne near Kempten, Bavaria, 16 June, 1818; d. at Speyer, the capital of the Rhine Palatinate (Bavaria), 31 May, 1876. He began his classical studies at Keursheim with superior ability and industry the studies prescribed by the curriculum, and mastered with hardly any guidance several Oriental languages (Hebrew, Arabic, Syriac, Persian, and Ethiopian). He next betook himself to Munich, where he completed his elementary studies in the Great Seminary, and followed the courses of philosophy and theology in the university. While a theological student, he cultivated Sanskrit and Chinese over and above the Oriental languages with which he was already acquainted, translated a few works of Cardinal Wiseman, contributed several essays and poems to various German periodicals, and neglected nothing of what appertains to the spiritual life in one preparing for the Catholic priesthood. He took his degree of Doctor of Theology at the University of Munich in 1839, and was ordained priest at Augsburg, on 29 August of the same year. The following November he qualified for a Privatdozent in the University of Munich by his thesis "De significatibus in Veteri Testamento preter literam valentibus" (Munich, 1839), and began in December his career of thirty-three years as a lecturer on the Old Testament. In 1841, he became extraordinary professor of Hebrew and of Poly Scriptur in the same university, and in 1844 ordinary professor. His lectures, wherein he displayed a solid learning, a constant discretion, and a deep piety, were attended with great profit and delight by an increasing number of students not only from Bavaria, but also from the other German States, and soon caused him to be regarded as one of the most prominent Catholic professors of his day.

Haneberg was also a distinguished and prolific writer. During the years 1840 and 1841 he worked on his "Die religiösen Altherthümer der Hebräer", and in 1844 he published his "Einleitung in das Alte Testament" as a textbook for his lectures. In the course of time, he recast both these works, the former of which passed to the second edition in 1869 under the title of "Die religiösen Altherthümer der Bibel", and the latter of which appeared written as "Ge- schichte der biblischen Offenbarung", and was rendered into French by Goscher (Paris, 1856), reaching a fourth edition in 1876. Besides these, his best-known works, he published several others which were chiefly the fruit of his Hebrew and Arabic studies, and formed his contribution to the Journal of the Oriental Society and to the transactions of the Bavarian Academy of Sciences of which he became a member in 1848. Among these last, the following may be mentioned: "Ueber die arabischen Psalm- ernübersetzung des Saadiah;" "Ueber das Schulwesen der Mohammedaner;" "Erörterungen über Bendo-Wakkil's Geschichte der Eroberung von Syrien;" "Ueber die Theologie des Aristoteles;" and chiefly his "Canones S. Hippolyti arabice e codic. Romanicum cum versione latina, annotationibus, et prolegomenis." He found time also for contributing articles to the Kirchenlexicon of Wetzer and Welte. Nor did he neglect in any way the various duties of his priestly calling, such as preaching, attendance at the confessional, answers to sick-calls, etc. His learning, and still more his virtues, secured for him great favour; and he acted as tutor in the families of the Duke Maximilian and Prince Leopold. In 1850, he joined the Order of St. Benedict, and a few years afterwards (1854) was chosen abbot of the Benedictine monastery of St. Boniface at Munich. He soon founded the Reform School of Andechs in Upper Bavaria, and a little later he tried, with small success, to establish missions of his order in Algiers and in the Orient.

At the approach of the Vatican Council he was invited by Pope Pius IX to share in the labours preparatory to that august assembly. After the dogma of papal infallibility had been solemnly proclaimed by the Council (18 July, 1870), and publicly accepted by the German Bishops assembled at Fulda (end of August, 1870), Haneberg humbly gave up his former views concerning this point of doctrine, and sincerely submitted to the authority of the Church. From 1874 onwards, several episcopal sees had been offered him, but he had declined them; however, on his presentation by the King of Bavaria for the Bishopric of Spiraes and at the instance of the Sovereign Pontiff, the humble abbot accepted that see, and was consecrated 25 August, 1872. His zeal and success in the government of this diocese fully justified his selection for the episcopal dignity. In days of violent opposition to Catholicism in Germany—the days of the framing and application of the Falk Laws (1872-1875)—he unflinchingly fought against the encroachments of the civil power on the ecclesiastical jurisdiction. He also strenuously, though not always successfully, combated the influence of the Old Catholics of the time. He was most unsparing of himself in his confirmation tours, although the bodily fatigues thus entailed were far too much for his failing strength. After a few days of sickness he succumbed (31 May, 1876) to pneumonia, which had contracted of those episcopal tours, and was laid by the hands of both clergy and people who revered him as a saint. Hanover.—The former Kingdom of Hanover has been a province of the Prussian monarchy since 20 September, 1866. Its nucleus was a region inhabited by the Saxonts, which subsequently formed part of the old Duchy of Saxony. From the year 1137, under the name of the Guelphic Lands (Welfsche Lands), it was under the Dukes of Brunswick. In 1692 this country was raised to the dignity of the ninth electorate, as Hanover (or Brunswick-Lüneburg). As such it consisted of the principalities of Lüneburg (Celle), Calenberg, Göttingen, and Grubenhagen.

After the partition of the Guelphic Lands (1569) it was extended to include the County of Hoya in 1582, the County of Diepholz in 1585, parts of the County of Schaumburg in 1656, and the County of Lüneburg in 1689, the Duchies of Bremen and Verden in 1719, the Principality of Osnabrück in 1802, the Principality of Hildesheim, Goslar, the Lower Eichsfeld, Eastern Friesland, the Duchy of Aremberg-Meppen, the district of Emstren, the Sub-county of Lüne, and the County of Bentheim in 1814. the
Dominion of Plesse together with the Abbey of Höckelheim and the Bailiwicks of Neuenglichen in 1816. In 1714 Hanover was connected with Great Britain through the personal union of its rulers. Thereafter it was under a peculiar regime, ruled over at times by a governor-general or viceroy. During the Napoleonic wars it was annexed now and again as a foreign state. By the separation of Saxe-Lauenburg in 1833, it was again raised to the dignity of a kingdom, after the separation of Saxe-Lauenburg. A new constitution was conferred upon the kingdom in 1819; this was amended in 1833, in 1840, again in 1848, and, by the annexation to Prussia in 1866, was annulled.

The influence of Christianity of the more elevated class took a different course from the time of the Emperor Charlemagne. This monarch having conquered the Saxons under his chieftain, Wittekind, after a war that lasted for thirty years, marked by unparalleled stubbornness, opened the way for the conversion of this untamed race. It was not until a comparatively late date that they were won over to civilization, and even after their nominal conversion they cherished heathen superstitions and customs for a long time. For centuries the Christian Church continued to exert all its might and power in the effort to eradicate the relics of paganism from the minds of this people. In this, however, she did not completely succeed. Until far into the Middle Ages they continued obstinate, notwithstanding the rigour with which the State and Church punished any relapse into heathen customs. In a certain sense, these customs are not quite extinct even at the present day. Various attempts to convert the Saxons were made, even before Charlemagne, by St. Boniface and other apostles. Apparently they succeeded in implanting Christianity in the Hanoverian Province of Eichsfeld and the region directly north of it. The next foothold secured by the Faith was in the North Thuringian counties of Eastphalia, where Charlemagne, as early as A. D. 777, bestowed churches at Allstedt, Riestedt, and Osterhausen in the Friedensfeld, on the Abbey of St. Wigbert at Hersfeld. St. Liebfrauen, at Marklo, and Abbot Sturm of Fulda were less successful in their missionary preaching, from 760 to 770. Thanks to the zealous cooperation of the Emperor and Charlemagne, the scattered missions were built up into bishoprics, but not until the supremacy of the Franks over the Saxons had been firmly secured. The first of these bishoprics was at Osnabrück, where a church had been in existence before the year 787, who appointed the first bishop, in 803. The other bishoprics were established, about the same time, at Münster and Osnabrück; at St. Liudger, a Freislander, laboured successfully; and others at Paderborn, Minden, and Verden. The Bishopric of Bremen, under St. Willehad, was added to the number in the year 805.

The two bishoprics for Eastphalia proper and Northern Thuringia, Hildesheim and Halberstadt, were created with the help of Charlemagne’s son and successor, Louis the Pious. In addition to this, the Archdioceses of Cologne and Mainz extended their influence into the western and southern portions of the Saxon country.

As a result of the episcopal see, the abbeys took an exceedingly important part in the work of converting and civilizing the Saxons, in the country that later became Brunswick-Lüneburg territory. The most important of all was the Abbey of Corvey, founded by Louis the Pious at the beginning of his reign. This abbey, and not to Christian civilization and learning for its immediate neighbourhood, but became the centre of an active and self-denying missionary movement which carried its teachings as far north as Scandinavia. It was from this place that St. Ansar, the Apostle of the North, directed his great campaign of conversion. Next in importance were the Abbeys of Büchen and Bussum in the County of Hoys, Wunstorff, Lampringe, and Gandersheim. The most eloquent and brilliant testimony to the fervour and depth of religious feeling that already inspired large sections of the Saxon people at the period is given by the Old Saxon poem “Heliant” (Evangelensehrumone), the only monument to German philology that has survived from the early period of Christianity. This poem is unique in its simplicity and grandeur.

It was not long before the ecclesiastical dignitaries, bishops and abbots, became as powerful as the temporal lords, the dukes, margraves, and counts, even in the Saxon country. They were supported by the rest of the clergy, which was afterwards, almost the sole custodians of culture and learning, and exponents of business methods. The princes of the Church in Saxony during the Othonian and Salic era included many men of rare intellectual endowments, men, moreover, of extensive learning and of moral excellence. Their names will always reflect honour on the German episcopate: names such as those of Bishop Bernward and Bishop Godehard of Hildesheim; of Liemar and Adalbert, Archbishops of Bremen; of Benno II of Osnabrück; of Meinwerk of Paderborn, and others. Besides Benno II (died 920), Drogo, (920–926), stand pre-eminent among the Bishops of Osnabrück in the early Middle Ages. Benno II was as illustrious on account of his knowledge and efficiency in building and husbandry as because of his ecclesiastical and political ability. Detmar, according to contemporary accounts, was one of the most learned men of his day. Of the later bishops, Adolf (1216–1224), who was venerated as a saint, was especially notable. Most of them had to fight against the encroachments of their temporal and spiritual neighbours, and the nobility in general, so that the entire period prior to the sixteenth century was taken up with endless, devastating feuds, both internal and external. Little can be reported of the See of Verden, for its history is enveloped in obscurity because of its limited extent, and the bishops were, for the most part, insignificant or unift men; moreover, they frequently were changed so rapidly that even the really strong characters among them left little or nothing noteworthy. The Bishops of Paderborn, Münster, Minden, and Halberstadt, though larger than Verden, had little influence on Hanover.

Much more important was the part played by the Church of Hildesheim, under her rulers, above all Bishop Bernward (died 1022), an exceptionally pious, learned, and loving man, and perhaps the most influential men of this period. The Church canonized him in the year 1193, but even during his lifetime he looms up a venerable and saintly figure, in the midst of wild excitement, wars, and strife. Rarely do we meet with a prince of the Church who at the same time held so brilliant a position in the world and was yet a man of such touching modesty, of such learning and love of art, and so solicitous a father of the lowly and the poor. He was the tutor, friend, and counsellor of his emperor; he conducted negotiations for him and followed him into battle. He governed his diocese, founded churches and abbeys, and also built strong fortresses for a protection against foreign marauders, and raised the fortifications around his metropolitan city. He took care of the needy and the sick and adjusted legal disputes. He was not only a liberal patron of art, the chief source, but also a scholar and an artist and the foremost educator of his day. In the history of art his importance is even greater than in political history or in legend. In his time began the religious movement which, starting in Cluny, about the year 1007, leavened the entire religious life of the Church; which, in the monasteries, preferred asceticism to the practical work of the old.
Benedictine rule and the confined views of the cloister, to freedom of motion; but which, moreover, gradually infused its spirit into bishops and secular clergy and forced them to take a political attitude from which they had hitherto held. The literary and artistic activity of this time was purely religious and was not always conspicuous in monasteries and episcopal cities. Widokind, a monk of the Abbey of Corvey, published, in 987, an historical work on the fortunes and achievements of the Saxons from the days of Otto the Great. Hrōswitha, the nun of Gandersheim (d. about 1002), wrote several dramatic and other poems. Much more brilliant and many-sided were the achievements of Christian art, especially of architecture, calligraphy, and metal work, whose grandeur and splendor reached the peak of Gothic art before the middle of the thirteenth century, through the instrumentality of the Dominicans and Franciscans; and again, during the fifteenth century, by means of the reform movement led by Martin Luther and the Reformation, the idea of religious freedom was further developed, and the church became more independent in its administration and discipline.

This revival, however, was confined almost entirely to the religious orders, while the secular clergy, especially the high dignitaries, became more and more corrupt. This paved the way for the revolt against the Church, which convulsed Europe in the sixteenth century. The reformation was first started by the Protestant movement in Germany, which was led by Martin Luther in the sixteenth century, resulting in a lasting schism and the division of the country into two hostile camps. The internal divisions caused the dissolution of the Stiftsfehde and the reformation, and the larger cities and towns began to revolt against the church and the secular clergy. The establishment of the Protestant Church administration threw a great part of the possessions and the revenue of ecclesiastical property and of the abbey into the principality of Westminster. This, of course, increased their influence on the religious views of their Church. Hanover had become almost entirely Protestant by about the middle of the sixteenth century. Only the episcopal chapter of Hildesheim and a few abbots held out against the Reformation in that diocese, until Bishop Erich II of Hildesheim, who died in 1545, reorganized ecclesiastical affairs along Lutheran lines. In 1531, John Frederick, who was Duke of Calenberg-Grubenhagen from 1665 to 1679, and resided at Hanover, led to the establishment of several new mission parishes in the electorate. He organized the Catholic congregations in Hanover, Hameln, and Göttingen, from Catholic newcomers and numerous converts. Erasmus Augustus I, his successor (1679-1698), who annexed Celle, made a compact with the emperor, guaranteeing to Catholics the right to profess their religion in the aforesaid places and in Celle. But it was only when liberty of worship was accorded at the beginning of the eighteenth century, and freedom of settlement was permitted towards its middle, that numerous new Catholic parishes were established. Until the reorganization of church affairs after the secularization of 1803 the country belonged to the Vicariate Apostolic of Lower Saxony and the North. By the circumscription Bull of Pope Leo XII, "Imperio Romanissimo," 28th August, 1824, Hanover was divided between the Bishoprics of Hildesheim and Osnabrück, the revenues of the church regulated, the rules laid down for the election of bishops, and the limits of parishes and succour fixed. The agree-
ment arrived at was not carried out until 1828. Since then the Catholic Church in Hanover has grown visibly stronger and the Catholic population has markedly increased. In a total population of about 2,500,000 in 1905, the Catholics numbered more than 325,000.

In 1825, Bishop Heinrich von Teta, founded the University of Hanover (1834–30); HAVEMANN, Gesch. des Landes Braunschweig u. Lüneburg (Lüneburg, 1837–38); LÜTENBERG, Gesch. des Landes Braunschweig (Hildesheim, 1837); and KÖNIG, Geschichte d. Diözes. u. Stadt Hildesheim (Hildesheim, 1866); VON HENZEMANN, Gesch. von Braunschweig u. Hannover (Gotha, 1854–62); WAGNER, Gesch. der kath. Kirche in Hannover (Hannover, 1888). In 1890, particularly in the first decade of the century, the society for the propagation of the faith was founded, which has since become a major force in the development of Catholic education and culture in Germany.

P. ALBERT.

HANSIUS, BLESSED EVERARD, English martyr; b. in Northamptonshire, executed 31 July, 1581. He was educated at Cambridge, and was soon presented to a good living. His brother William, who had become a priest in April, 1579, tried to convert him, but in vain until a sharp attack of illness made him enter into himself. He then went over to Reims (1580–1581), was ordained, and returned, but his ministry was very short. In July he was visiting in disguise in the house of one of his relations, the Marshalls, when the keeper noticed that his shoes were of a foreign make. He was closely examined, and his priesthood was discovered. As yet there was no law against priests, and, to satisfy the hypocritical professions of the persecutors, it was necessary to find some treason of which he was guilty. He was allowed to ask in Hildesheim on 3 November, 1570. His words were not transcribed, but the New Testament, what he thought of the pope's authority, and on his admittance that he believed him "to have the same authority now as he had a hundred years before", he was further asked whether the pope had not errored (i.e. sinned) in declaring Elizabeth excommunicate, to which he answered "I maintain no other libraries and once written down as his indictment, and when he was further asked whether he wished others to believe as he did, he said, "I would have all to believe the Catholic faith as I do." A second count was then added that he desired to make others also traitors like himself. He was at once found guilty of "persuasion", which was high treason by 23 Elizabeth. He was therefore in due course sentenced and executed at Tyburn. The case is noteworthy as one of the most extreme cases of "verbal treason" on record, and it was so badly received that the Government had afterwards to change their methods of obtaining evidence. The last words were "O happy day!" and his constancy throughout was "a matter of great edification to the good". The Spanish ambassador wrote, "Two nights after his death, there was not a particle of earth on which his blood had been shed, which had not been carried good.

J. H. POLLEN.

HANSEL, MARKUS, historian, b. at Völkmar, Carinthia, Austria, 25 April, 1688; d. at Vienna, 6 September, 1766. He was a member of the Society of Jesus at Eberndorf. He was ordained a priest in 1708 and became on the completion of his studies professor of humanities at Vienna. From 1713 to 1717 he taught philosophy at Graz, and from 1717 devoted himself entirely to the study of history. His interest in the "Anglia et Sacra" of Wharton, the "Gallia Christiana" of Sainte-Marthe, Ughelli's "Italia Sacra", and other similar treatises, together with the advice of the scholarly librarian, Bernardo Gentilotti, determined him to execute a comprehensive "Germania Sacra". For this he had the use of the library and archives, and published (1727–1729) histories of the Church of Lorch and of the Sees of Passau and Salzburg: "Germania Sacra tomus primus: Metropolis Lauredensium cum episcopatu Patavienis chronologice proposita" (Augsburg, 1727), and an "Archiepiscopatus Salisburgensis chronologice propositus" (Vienna, 1729). This work took him to Rome, where he was befriended by his intercourse with Muratori and Maffei.

Despite the composition of divers short treatises, chiefly canonical and dogmatic, he did not lose sight of his main purpose, but gathered assiduously his materials for his history of the Dioceses of Ratisbon, Vienna, Neustadt, Seckau, Gurk, Lavant, and for the secular history of Carinthia. It is true that the only result of his industry published by him on these subjects was a preliminary inquiry into the earliest periods of the See of Ratisbon: "Germaniae sacrae tomus tertius. De episcopatu Ratisbonensi" (Vienna, 1754). His copious notes are preserved in the Hofbibliothek at Vienna. Contrary to the Salzburg tradition he maintained, in his second volume, that St. Rupert first founded this see about the close of the seventh century; this aroused opposition. The third volume also involved him in controversy with the canons of St. Emmeram, from which he emerged with honour. His scattered publications, including personal researches, but induced his younger brethren in the society, at Graz and Klagenfurt, to take up and carry on his labours. With the same end in view he communicated, only a short time before his death, with the learned prince abbot, Gerbert of St. Blasien, the result being that the Benedictine Fathers, Emil Mottl, and, above all, Karl Joachim von Gurgall, took charge of the work for the Dioceses of Würzburg, Chur, and Constance. Hansis was a genuine historian; he combined with great learning and thoroughness of method a discerning mind and an uncompromising love of truth, and he possessed the gift of an attractive style.

PLATT, Wiener Theologische Zeitschrift (1834), 1, 15 sq.; Alp. Deutscher Biographie, X (1879), 541 sq.; HUNTER, Romanizer.

PATRICIUS SCHLAGER.

Hantabler, CHRISTOPHOMUS (JOHANNES ADAM), a Cistercian, historical investigator and writer; b. at Marenbach, Austria, 14 February, 1690; d. in the Cistercian monastery of Lilienfeld in Lower Austria, 2 September, 1754. Having finished his scholastic education, he made his profession in 1716, and subsequently he devoted himself with untiring zeal to his historical researches. The vast number of manuscripts in the monastery offered a splendid field for his activity. On becoming librarian, he made it his first task to compile a reliable catalogue, and then collected all documents bearing on the history of Lilienfeld and of Austria. Copies and impressions of memorial tablets, seals, and coins were reproduced, until his transcripts and compilation filled twenty-two folio volumes. From this matter he composed the "Fasti Campillienensi" in two large volumes (Lins, 1747–1754), which gives a complete history of his monastery from the thirteenth century to the end of the Middle Ages, together with a history of the Babenberg dukes of Austria and Styria. The completion of his great work often delayed by his death. On the suppression of the monastery in 1789, the manuscript was brought to the Imperial Library at Vienna, but the copper plates and prints were sold. Subsequently both came into the hands of Abbot Edelstau Fyrsky, who published the last two volumes under the title of "Pastororum Campillienium Chryostomi Hantabler continuatio seu Recensum genealogico-diplomaticum archivi Campillieni" (Vienna, 1819–20), together with two appendixes containing descriptions of the tombstones and extracts from the necrology of the monastery. Hantabler left behind numerous other writings, among which may be mentioned the three-volume work published at Lins (1744): "Grata pro gratia memoria eorum, quorum pietate Vallis de campo lilioam at
surrexit et crevit;"; also a memorandum book, a valuable contribution to Austrian history. His knowledge of numismatics was displayed in an excellent book of instructions for amateur collectors, entitled "Exercitationes faciles de nummis veterum" (Nuremberg and Vienna, 1753). The glory to which Hanthaler is undoubtedly entitled for these works is concealed by the fact that, led astray by his ambition, he endeavoured to palm off on his "Fasti" four chronicles that he himself had written as newly-discovered ancient sources of the history of the Babenbergs. These are the "Ortolis de Lilenfeld Liber de exordio Campiliitii," "Notulae anecdote e chronica storiis," "Notulae acustae, quae A. von Haber de Peklaria et c. manus scripserunt, excerpta;" "Chronicon Ricardi canonici Newburgensis," and "Chronicon Friderici bellicosici" of the Dominican Pernold.

**Happiness (Fr. bonheur; Germ. Glück; Lat. felicitas; Gr. ευτυχία, εὐσαύρωμα).**—The primary meaning of this term in all the leading European languages seems to involve the notion of good fortune, good cheer, good happiness. Happening to be a prefix in the history of Greek philosophy the conception became the centre of keen speculation and dispute. What is happiness? What are its constituents? What are the causes and conditions of happiness? How, if at all, does it differ from pleasure? What are its relations to man’s intellect, to man’s will, to man’s moral life, as a whole? What is its position in a general theory of the universe? These questions which have occupied the various schools of philosophy and, indeed, have exercised men who would not be willingly accused of philosophizing. For happiness is necessarily amongst the most profoundly interesting subjects for all of us. With the Greeks interest in the problem was mainly ethical, the psychology of happiness being ancillary; whereas for several modern schools of philosophy psychology is deemed the key to many of the most important queries respecting this familiar yet enigmatic conception.

In dismissing the view that happiness was a lot arbitrarily bestowed by capricious Fortune, the more serious thinkers among the Greeks regarded it as a gift of the gods. Further reflection led to the view that it was given as a reward for goodness of life. Hence the acquisition of happiness depends on the working out of the good for man’s life. What then is the good? For Socrates it is εὐπροσβεβία, which receives closer definition at the hands of Plato, as such harmonious functioning of the parts of man’s soul as shall preserve the subordination of the lower to the higher, of the non-rational to the rational. In this view happiness becomes for Plato less the reward than the inevitable concomitant of such harmony. It is the property of the whole soul; and the demand of any element of the soul for preferential treatment in the matter of happiness Plato would thus look upon as unreasonable. In setting happiness as the intrinsic result of a policy of "following nature", the Stoics and the Cyreneans think in terms of ethical universalism, and to this point of view Plato adhered, though diverging to opposite poles in their answer to the psychological question as to the constituents of happiness. "Follow Nature", for the Cyreneans, meant: "Gratify the sensuous faculties which are the voices of nature." For the Stoics it was "Satisfy nature", with which the gods have exhorted us to exalt by the entire suppression of our sensuous appetites." Happiness is for these latter the consequence of the virtuous life which issues in spiritual freedom and peace.

In Aristotle’s ethical system, happiness, as expressed by εὐσαύρωμα, is the central idea. He agrees with Plato in rejecting the exaggerated view that man can set up between reason and nature by the Sophists, and fundamental to both the Stoic and Epicurean schools. For Aristotle, nature is human nature as a whole. This is both rational and sensuous. His treatment of happiness is in closer contact with experience than that of the Stoics and with what he concerns himself is that which is possible for man to reach in this life. This highest good is happiness. This must be the true purpose of life; for we seek it in all our actions. But in what does it consist? Not in mere passive enjoyment, for this is open to the brute, but in action, (and this very word is proper to man in contrast with other animals. This is intellectual action. Not all kinds of intellectual action, however, result in happiness, but only virtuous action, that is, action which springs from virtue and is according to its laws; for this alone is appropriate
to the nature of man. The highest happiness corres-
ponds to the highest virtue; it is the best activity of
the highest faculty. Though happiness does not
come in pleasure, it does; on the contrary, the highest
form of pleasure is the outcome of virtuous action.
But for such happiness to be complete it should be continued during a life
of average length in at least moderately comfortable
circumstances, and enriched by intercourse with
friends. Aristotle is distinctly human here. There
are, either ethical or intellectual. The latter pertain either to the practical or to the specu-
lative reason. This last is the highest faculty of all;
hence the highest virtue is a habit of the speculative
reason. Consequently, for Aristotle the highest
happiness is to be found not in the ethical virtues of
the active life, but in the contemplative or philo-
sophic life of speculation, in which the diaphoretic
virtues of understanding, science, and wisdom are
exercised. *Oeupla,* or pure speculation, is the highest
activity of man, and that by which he is most like
unto the gods; for in this, too, the happiness of the
good. Conceiving happiness as the end of life. the
few, however, can attain to it; the great majority
must be content with the inferior happiness of the
active life. Happiness (εὐαίσθησις), therefore, with
Aristotle, is not identical with pleasure (ἡδονή),
or even with the sum of pleasures. It has been described
as the kind of well-being that consists in activities
of well-doing, and supreme happiness is thus the well-
doing of the best faculty. Pleasure is a concomitant
or efflorescence of such an activity.

Here, then, is in brief Aristotle's ethical theory of
eudemonism; and in its main features it has been made
the basis of the chief Christian scheme of moral
philosophy. Constituting happiness the end of human
action, and not looking beyond the present life, Aristotle's system, it has been maintained with some
show of reason, approximates, after all, in sundry
important respects towards Utilitarianism or refined
Hedonism. This is not the place to determine pre-
cisely Aristotle's ethical position, but we may point
out that his conception of happiness (εὐαίσθησις) is
not identical with felicity—the maximum sum of
pleasures—which forms the supreme end of human
conduct for modern hedonistic schools. It is rather
in his failure to perceive clearly the proper object
of man's highest faculty, to consider one hand, and
not the other, the maintenance of the supreme end of
man to a handful of philosophers, that the most
serious deficiency in this part of his doctrine lies.
It is here that the leading Schoolmen, enlightened
by Christian Revelation and taking over some elements
from Plato, come to complete the Peripatetic theory.
St. Thomas teaches that *beatitudine,* perfect happiness,
is the true supreme, subjective end of man, and is,
therefore, open to all men, but is not attainable in
this life. It consists in the best exercise of the noblest
human faculty, the intellect, on the one object of infi-
nite worth. It is, in fact, the outcome of the imme-
diate presence of God by intellect. And St. Thomas and
Scottus and some other Scholastic writers accentuate
the importance of the will in the process, and insist on
the love resulting from the contemplative activity
of the intellect, as a main factor; but it is allowed by
all Catholic schools that both faculties play their
part in the operation which is to constitute the man's
supreme felicity. "Our heart is ill at ease till it find rest in Thee" was the
cry of St. Augustine. "The possession of God is
happiness essential." "To know God is life ever-
lasting." With all Christian writers true happiness
is to come not now, but hereafter. Then the bonum
paradisi (the state where one is in good that completely satisfies desire) can
be immediately enjoyed without fear or hindrance, and that en-
joyment will not be a state of inactive quiescence or
Nirvana, but of intense, though free and peaceful,
activity of the soul.

The divorce of philosophy from theology since
Descartes has, however, dissolved the plea of Catholic schools of thought,
caused a marked disintegration to recognize the im-
portance in ethical theory of the future life with its
rewards and punishments. Consequently, for those
philosophers who constitute happiness—whether of
the individual or of the community—the ethical end,
the psychological analysis of the constituents of
moral felicity, have been more or less general. In
general, such writers identify happiness with pleasure,
though some lay considerable stress on the difference
between higher and lower pleasures, whilst others
emphasize the importance of active, in opposition to
passive, pleasures. The poet Pope tells us: "Happi-
ness lies in three words: Peace, Health, Content." Reflection, however, suggests that these are the chief
negative condition, than the positive constitu-
ents of happiness. Paley, although adopting a
species of theological Utilitarianism in which the will
of God is the rule of morality, and the rewards and
punishments of life the motive for moral conduct, yet has written a celebrated chapter on temporal happiness embodying a
considerable amount of shrewd, worldly common sense.
He argues that happiness does not consist in the plea-
sures of sense, whether the coarser, such as eating, or
more refined, such as music, drama, or sports, for these pall by repetition. Intensity does not disappoint and destroy for normal pleasures.
Nor does happiness consist in exemption from pain,
labour, or business; nor in the possession of rank or
station, which do not exclude pain and discomfort.
The most important point in the conduct of life
is, then, to select pleasures that will endure. Owing
to diversity of taste and individual aptitudes, there is necessarily much variety in the ob-
jects which produce human happiness. Among
the chief are, he argues, the exercise of family and
social affections, the activity of our faculties, men-
tal and bodily, in pursuit of some engaging end,
that of the next life included, a prudent constitution
of our habits and good health, bodily and mental.
His conclusion is that the conditions of human hap-
piness are "pretty equally distributed among the
different orders of society, and that vice has at all
events an advantage over virtue, even in the world's happiness". For Bentham, who is the most
consistent among English Hedonists in his treatment
of this topic, happiness is the sum of pleasures. Its
value is measured by quantity: "Quantity of plea-
sure being equal, push-pins is as good as poetry." Rejecting all distinctions of higher or lower quality,
he formulates these tests of the worth of pleasure as
an integral part of happiness: (1) its intensity, (2)
duration, (3) propinquity, (4) purity, or freedom
from pain, (5) fecundity, (6) range. J. Stuart Mill,
while defining happiness as "pleasure and absence
of pain", and unhappiness as "pain and privation of
pleasure", insists on the mental cost as an "essential
good must be considered as well as quantity" and
some kinds of pleasure are more desirable and valuable
than others on grounds other than their pleasantness. "It is better", he urges, "to be a human being dissatisfied than a pig satisfied." This
is true; but it is an inconsistent admission fatal to
Mill's whole position as a Hedonist, and to the Hedon-
istic conception of happiness.

The aid of the evolutionary hypothesis here as else-
where was called to the support of the Sensationist
school of psychology and ethics. Pleasure must be
life-giving, pain the reverse. The survival of the
fittest, according to Charles Darwin, and according to the
Spencer, lead to an ultimate well-being not of the in-
dividual, but of the social organism; and the perfect
health of the organism will be the concomitant of its
perfect functioning, that is, of its perfect virtue. Thus happiness is defined in terms of virtue, but of a virtue which is a mere physical or physiological excellence. Spencer's critics, however, have been keen to point out that the pleasure of an activity in man is not by any means a safe criterion of its healthiness or correctness or enduring well-being. In the writings of the German Rationalists from Kant onwards we meet echoes of the ancient Stoicism. Usually there is too narrow a view of human nature, and at times an effort to set aside the question of happiness as having no real bearing on ethical problems. Kant is inclined to an over-ready acceptance of the Hedonistic doctrine of happiness as the ultimate end, and for this reason he is opposed to our working for our own happiness whilst he allows us to seek that of others. His rigorous exclusion of happiness from among the motives for moral action is psychologically as well as ethically unsound, and although Duty for duty's sake" may be an elevating and ennobling hortatory formula, still the reflective reason of man affirms unequivocally that unless virtue finally results in happiness, that unless it be ultimately happier for the man who observes the moral law than for him who violates it, human existence would be irrationally evil, and all unhappiness, this latter, indeed, is the logical conclusion of Permissivism, which teaches that misery altogether outweighs happiness in the universe as a whole. From this the inevitable inference is that the supreme act of virtue would be the suicide of the entire human race.

Reverting now to the teaching of St. Thomas and the Catholic Church respecting happiness, we can better appreciate the superiority of that teaching. Man is complex in his nature and activities, sentient and rational, cognitive and appetitive. There is for him a well-being of the whole and a well-being of the parts; a relatively brief existence here, an everlasting existence thereafter. Happiness, perfect happiness, complete well-being, is to be attained not in this life; but in the next. Primarily, it consists in the activity of man's highest cognitive faculty, the intellect, in the contemplation of God—the infinitely Beautiful. But this immediately results in the supreme delight of those conscious of the presence of the Person of Bonum, God, the infinitely good. This blissful activity of the highest spiritual faculties, as the Catholic Faith teaches, will redound in some manner transcending our present experience to the felicity of the lower powers. For man, as man, will enjoy that perfect beatitude. Further, an integral part of this will be the assurance that he is absolutely sure and everlasting, an existence perfect in the tranquil and assured possession of all good—Status omnium bonorum aggregatissimum perfectissimus, as Boethius defines it. This state involves self-realization of the highest order and perfection of the human being in the highest degree. It thus combines whatever elements of truth are contained in the Hedonist and Rationalist theories. It recognizes the possibility of a relative and incomplete happiness in this life, and its value; but it insists on the importance of self-restraint, detachment, and control of the particular faculties and appetencies for the attainment of this limited happiness and, still more, in order to secure that eternal well-being be not sacrificed for the sake of some transitory enjoyment. (See also Epicureanism; Ethics; Good; Hedonism; Life; Man; Stoic Philosophy; Utilitarianism; Virtue.)

HARBOUR.

HARBOUR.

HARBOUR.

Harbor Grace, Diocese of (Portus Gratiae), in Newfoundland, erected in 1856. It comprises all the northern bays—Conception, Trinity, Bonavista, Notre Dame, and White Bays—together with that portion of the coast of Labrador between the mouth of the coast and the mouth of the river exercised jurisdiction. Engaged in the ministerial work of the diocese are twenty-three priests, who minister to the Catholic population of twenty-nine thousand (29,000), consisting chiefly of sparse congregations scattered over five hundred miles of coastline. There are within the diocesan boundaries forty-nine churches, eighty-five stations, five convents, of which three are of the Order of the Presentation and two of the Order of Mercy, and one hundred Catholic schools, having an attendance of four thousand five hundred pupils. The towns of Harbor Grace and Conception have each an academy; in some other of the more populous places there are superior or high schools. The system of education is denominational, the annual legislative grant of $245,323 being divided pro rata among the several religious denominations of the island. Besides the educational institutions within the diocese there is in the city of St. John's the College of St. Bonaventure conducted by the Irish Christian Brothers. The position which this seat of learning occupies with regard to the whole Catholic body of the island is clearly laid down in a joint circular letter recently addressed by the archbishop and bishop of the ecclesiastical province to the reverend clergy and laity. "The College", the circular states, "is the centre of our educational system. It belongs not to St. John's alone, but to the whole island. It is the nursery in which are trained the youths who are, in future years, to be the teachers of our boys all over the the country. It is the lyceum in which is given the higher education which fits our young men for the learned professions." In 1893 the Legislature incorporated a Council of Higher Education with power to confer diplomas and scholarships, as the result of competitive examinations, upon candidates from any educational institution in the colony.

Bishops.—Rev. John Dalton, a native of Thursley, Ireland, and for some years pastor of St. Patrick's Church, Carbuncle, was appointed first Bishop of Harbor Grace, 20 January, 1856, and on 12 May of the same year was consecrated by Rt. Rev. Dr. Mullock in the cathedral, St. John's. He died in May, 1869, having ruled the diocese thirteen years. His episcopate was peaceful and full of good works, the great achievement of his administration being the erection of the Cathedral of the Immaculate Conception.

Bishop Dalton was succeeded by Rt. Rev. Henry Carafagni, an Italian friar of the Order of St. Francis. He had been previously president of St. Bonaventure's College, St. John's. Carafagni was appointed first Bishop of Harbor Grace in 1870. He was a man of large conception, breadth of view, and bold initiative. During his ten years' administration he increased the number of the diocesan clergy from six to fourteen, encouraged the erection of churches and schools, and completed and embellished the cathedral at Harbor Grace. His episcopate was,
however, thick sown with trials of the most painful character. He had to struggle with a spirit of insubordination and faction which threatened to result in an open schism. In 1880 he was translated to the See of Gallipoli, Italy. He died in Rome, 1904.

Rev. Ronald Macdonald, parish priest of Pictou, Nova Scotia, was appointed third bishop of the see. He was consecrated in Pictou, 21 August, 1881. A happy resound of his rule was the restoration of peace to the diocese which had been torn by conflicting factions. His twenty-five years' episcopate was a period of great activity, and full of enterprise for the cause of religion. The rebuilding of the cathedral at Harbor Grace, destroyed by fire in 1889, was one of the great works of his administration. In 1906 the venerable prelate was, by reason of a protracted illness, obliged to retire from the scene of his active labours, and in June of the same year he published his farewell pastoral, announcing the acceptance by the Holy See of his resignation. Before severing connexion with the diocese he was made titular Archbishop of Gothis.

The present bishop, Rt. Rev. John March, D.D., was consecrated on 4 November, 1906. He is a native of Northern Bay, Newfoundland, where he was born on 13 July, 1863. He was ordained priest on 16 March, 1889, in the College of the Propaganda, of which institution he is a graduate. Returning to Newfoundland he was appointed rector of the cathedral, a position he continued to occupy until his elevation to the episcopacy. He possesses unusual executive ability and is fully cognizant of the requirements of the diocese. His first important move in the administration of the see was the inauguration, in 1907, of an ecclesiastical students' fund.

FELIX D. McCARTHY.

HARCOURT, WILLIAM. See WHITBRAD, THOMAS.

Hardee, William J., soldier, convert; b. at Savannah, Georgia, U. S. A., 1817; d. at Wytheville, Virginia, 6 Nov., 1873. He graduated from the U. S. Military Academy at West Point in 1838, and served in the second dragoons in the Florida Indian war. In 1859 he was sent to the French military training school at Saumur for professional study and attached to the French cavalry department. On his return to the United States he was stationed in the West and promoted to be captain of dragoons on 18 Sept., 1844. During the Mexican war his services were conspicuous. At its close he was made major of the twentieth cavalry and in 1856 to prepare a manual of tactics for the army. This he finished in 1856 and was then appointed commandant of cadets at West Point. At the breaking out of the Civil War he joined the Confederacy and was given the rank of colonel in its army. He served all through the contest, attaining the rank of lieutenant-general and corps commander. After the war he retired to live on his plantation in Alabama. His book, "United States Rifle and Light Infantry Tactics", published in New York, 1856, was eclectic rather than original, and drawn chiefly from French sources.

THOMAS F. MEEHAN.

Hardey, Robert. See Spencer, William.

Hardey, Mary Alothia, of the Society of the Sacred Heart, who established all the convents of her order, up to the year 1883, in the eastern part of the United States, Canada, and Cuba: b. at Piscataway, Maryland, 1809; d. at Paris, France, 17 June, 1886. Both her parents (Frederick Hardey, Sarah Spalding) were descended from old Maryland Catholic families. Mr. Hardey removed to Louisiana, his daughter became (1822) one of the first pupils of the Sacred Heart, Grand Coteau. She entered the order in 1825 and her extraordinary endowments soon justified her appointment (1835) as superioress of St. Michael. Bishop Tobeel having invited her to New York, the Mother General, Mothers Galitain and Hardey opened in Hudson Street the first Eastern convent; this school is now located in Aqueduct Avenue. A visit to Rome, the benediction of Gregory XVI, and a sojourn with Mother Barat in France, prepared Mother Hardey for her future work. Thenceforth she laboured unceasingly until the death of that holy guide in 1865. Amidst overwhelming labours she maintained that unalterable serenity which was her distinctive trait. She was gifted by nature and grace for immense undertakings; she was of simple manners, her words were few and kind, and she had great power of organisation. "Her spiritual foundations, she replied: "I have never counted them; I went where Obedience sent me"; that sentence delineates her character and her career. This alphabetic list of thirty convents, of which a few are now closed, represents the toil of more than forty years (from New York, to New Orleans, and back again): Albany (New York), Astoria (New York), Atlantic City (New Jersey), Boston (Massachusetts), Buffalo (New York), Cincinnati (Ohio), Clifton (Cincinnati, Ohio), Detroit (Michigan), Eden Hall (Torresdale, Pennsylvania), Elmhurst (Rhode Island), Grosse Pointe (Mich.), Irvingtont (New York), Key West (Cuba), Kenwood (Albany, New York), London (Ontario), Montreal (Quebec), McSherrystown (Pennsylvania), Manhattanville (New York), New York City (Aqueduct Avenue, and Madison Avenue), Philadelphia (Pennsylvania), Providence (Rhode Island), Rochester (New York), Rosecroft (Maryland), Sancti Spiritus (Cuba), Sandwich (Ontario), St. Lawrence (Montreal), Saint-Jacques (Quebec), St. John (New Brunswick), St. Vincent (Quebec).

The hardships and perplexities entailed on one woman by all these foundations are hard to realise in these days when travelling is so easy and money so plentiful. Ten voyages to Europe, five to Cuba, and constant journeys as mother provincial or visitatrix forced her to undergo much fatigue and peril. Her paramount concern was not the erection of convents but the formation of fervent religious as consecrated teachers; and where the world saw an executioner, she beheld a blessing. She was a fine actress, her committee made her vigilant but tender mother, an unfailing friend whose memory they bequeathed as a sacred legacy. The Civil War rent her heart, equally bound to North and South; food, money, hospital supplies, provisions for the Holy Sacrifice, went wherever suffering appealed. Her nation became a bond of unity by her, her influence exerted on behalf of Southern convents; and she herself, passing through contending armies, brought aid to the south-western houses. Liberal benefactions went to Cuban homes, 1860-70; to Chicago, after its great fire; to France, 1870-71; to the South, when ravaged with fencic Cia., 1873; to the ill-fated St. Louis of Montreal (Montréal), St.-Jacques (Québec), St. John (New Brunswick), St. Vincent (Québec).

In 1871 she was appointed assistant general, an office requiring residence in the mother-house, Paris. She inspected first, as visitatrix, all convents of the Society of the Sacred Heart in the United States and Canada, and 3 years for Europe in 1872. In the central government, her wisdom and experience were invaluable, while the example of her self-effacing humility was not less precious. She aided the superiors-general in visits and foundations of French and Spanish convents,
still supervising those of America. She came back to America on her official visits in 1874, 1878, 1882. Her daughters, who treasured her parting counsels as oracles, bade her a last farewell in 1884, when she returned to Paris as member of the general council. She had paid back for God in the Insulinde; severe illness struck her down in 1886, and after months of painful suffering, the end came peacefully.

She was buried in Conflans crypt, the tomb of the general administrators; but the perseverances of the French government suggesting removal of the venerable dead, her remains were bestowed on the country she had loved so profoundly and so loyally served. On 12 December, 1905, she was interred at Kenwood, Albany, where, on the tablet from Conflans vault, her own order records its testimony to the work she achieved "...late per regiones Americae... prudentiae virum."

DuFOUR, "Vie de la Révérende Mère Aloysia Harding (Paris, 1890), compiled from original documents in the archives of the mother-houses.

MARY BRINDA MccORMACK.

Harding, Thomas, controversialist: b. at Combe Martin, Devon, 1516; d. at Louvain, Sept., 1572. The registers of Winchester school show that after attending Barnstable school he obtained a scholarship there in 1528, being then twelve years old. If this information be correct, he was three years younger than is commonly stated. He went to New College, Oxford, in 1529, was admitted a Fellow in 1536, and took his Master's degree in 1542, in which year he was appointed Hebrew professor by Henry VIII. Having been ordained priest, he became chaplain to Henry Grey, Marquess of Dorchester and afterwards Duke of Suffolk. He at first embraced the Reformed opinions, but on the accession of Mary he declared himself a Catholic, despite the upbraiding of his friend Lady Jane Grey, and the events of his later life proved his sincerity. In 1554 he took the degree of Doctor of Divinity, and was appointed prebendary of Winchester, becoming treasurer of Salisbury in the following year. He also acted as chaplain and confessor to Bishop Gardiner. When Elizabeth became queen he was deprived of his prebents and imprisoned (Sander, "Report to Cardinal Morone"). Subsequently he retired to Louvain to escape persecution. There he served St. Gertrude's church and devoted himself to study and to his long controversy with Jewell, the Bishop of Salisbury and champion of Protestantism.

In 1564 he published "An answere to Maister Juelles Challenge", Jewell having undertaken to conform to the Catholic Church if any Catholic writer could prove that any of the Fathers of the first six centuries taught any of twenty-seven articles he selected. Jewell replied first in a sermon (which Harding answered in a broadsheet "To Maister John Jueell", printed at Antwerp in 1565) and then in a book. Against the latter Harding wrote "A Rejoindre to M. Jewell's Replic" (Antwerp, 1566) and "A Refutation of M. Jewell's Sacrifice of the Mass" (Louvain, 1567). Meanwhile he had become engaged in a second controversy with the same author, and in his confutation of a book entitled "An Apologie of the Church of England" (Antwerp, 1565), he attacked an anonymous work, the authorship of which Jewell admitted in his "Defence of the Church of England". Harding retorted with "A Detection of Sundrie Foule Errours, Lies, Slaunders, corruptions, and other false Falsealoes, touching Doctrine and other matters uttered and practised by M. Jewell" (Louvain, 1568). In 1568 Pius V appointed Harding and Dr. Sandre Apostolics delegates to England, with special faculties giving faculties to priests and of forbidding Catholics to frequent Protestant services. Harding was of great assistance to his exiled fellow-countrymen and to Dr. Allen in founding the English College at Douai. He was buried (16 Sept., 1572) in the church of St. Gertrude, Louvain.

Edwin Burtin.

Hardman, Mary Juliana, known in religion as Sister Mary; b. 26 April, 1813; d. 24 March, 1884; was the daughter of John Hardman, senior, of Birmingham, a rich manufacturer, by his wife Lydia Waring. The Hardmans were a stanch old Catholic family, who had suffered for the Faith in penal times; they were also most generous to the Church. Mary Juliana was one of a large family; she was educated in the Benedictine convent at Caverswall, in Staffordshire, and, when she was nineteen, her father founded the convent of Our Lady of Mercy at Handsworth, near Birmingham, spending upwards of 5000 pounds (25,000 dollars) upon it. In 1840 Miss Hardman and three friends offered themselves to Bishop Walsh, to form the nucleus of a new community, and by his advice she went to Dublin to make their novitiate under Mother M. C. McAuley, the holy foundress and first superior of the Institute of the Sisters of Mercy, Baggot Street, Dublin. The novices made their profession on 19 August, 1841, and a day or two later Mother McAuley accompanied them to the new convent at Handsworth, where they were solemnly received by Bishop, afterwards Cardinal, Wiseman. Shortly afterwards Sister Mary Juliana was appointed first prioress of the community, and held that office off and on for thirty-five years, her first appointment lasting for six. She was then elected for three years, and twice re-elected for the same period, and from 1870 she held the office of superior until her death. In 1849 she opened another convent at St. Chad's, Birmingham, and also one at Wolverhampton. The next year she built an almonry for the relief of the poor, and opened poor-schools. In 1851 she placed the orphanage founded by her father at Maryvale under the care of her community, making her own sister, Mary Hardman, in religion Sister Mary of the Holy Ghost, superior. In 1858 she built a middle-class boarding-school: twelve years later she erected elementary schools for the working classes at Handsworth; and in 1874 she opened a mission for the working classes for boys and girls. She died at Handsworth, at the age of seventy. She is said to have been the personification of the rule of her institute, in her exercise of piety, self-sacrifice, and humility; she was also most wise and prudent, gentle and loving in her government; she was unassuming and retiring. "Feedeth need words was the motto up to which she lived. Her brother, John Hardman, founded the well-known ecclesiastical metal works and stained glass works at Birmingham, and was, like his father, a most generous benefactor of the Church, besides taking an active interest in the Catholic revival of his time.

Anmuer, St. Mary's Convent of Mercy, Handsworth (Birmingham, 1891); Gillow, Bibl. Dict. Eng. Cath., s. v.

Francesca M. Steele.

Hardouin, Jean, Jesuit, and historian: b. at Quimper, Brittany, 23 Dec., 1646, son of a bookseller of that town; d. at Paris, 3 Sept., 1729. He entered the novitiate of the Society, 25 Sept., 1660; and was professor of belles-lettres and rhetoric, and afterwards taught positive theology for fifteen years. He was also a member of the Jesuit house at La Grange, near Paris, where he succeeded Père Garnier, whose biography he published in 1684. His first scientific work was an article published in the "Jour-
nal des Scavans", 10 March, 1851, on the meaning of a passage in Pliny (Hist. Nat., XXXIII, iii). His books are numerous, but many of them are ill-balanced and full of errors. Others, however, have won for him a place among learned men. Many of his works deal with ancient numismatics, especially his "Nummii antiqui populorum et urbis illustrati" (Paris, 1884), others treat of Greek and Roman classical literature, e. g. his "Themistii Oratia Theoricae XXXIII" (Paris, 1854), and Plinii Secundi Historiae Naturalis libri XXXIII" (Paris, 1855; a new edition by Hardouin in 1723). It was especially in his "Chronologia Veteris Testamenti" (Paris, 1697; reprinted Strasbourg, 1697, after the Parliament of Paris had interdicted the sale of the work) that he questioned the authenticity of nearly all the works attributed to the classical writers; the only exceptions he made were in favour of the works of Cicero, Pliny's Natural History, Virgil's Georgics, Horace's Satires and Epistles, and in some writings Homer, Herodotus, and Pausias. In like manner he cast doubts on the authenticity of many of the writings of early Christian literature, and denied the authenticity of the Alexandrian version and the Hebrew text of the Old Testament. Many of his pupils dealt with the interpretation of the Old and the New Testament and the chronology of the Life of Christ, especially the date on which he kept the Passover and the date of His birth. He also wrote a number of polemical works which, like those of his adversaries, were published by the press and not reviewed. Courayer, on the subject of Anglican orders, Mlle Darcier on the basic idea of Homer's Iliad, and Gravius on the authenticity of the classical authors.

His greatest work is the "Conciliorum collectio regia maxima", or "Acta conciliorum, et epistola decretalibus, et constitutis sumnorum pontificum" (Paris, 1725). He received a pension from the French clergy for this work, and it was printed at the expense of the King of France. It is generally conceded to be the most critical edition we have of the text of the Councils. The work had been printed ten years (1715) before it was issued to the public. At the instigation of the Sorbonne, the Parliament of Paris had opposed it because Hardouin had studied the work with maxims opposed to the claims of the Gallican Church. His "Commentarius in Novum Testamentum" was not published till after his death (Amsterdam, 1741), and then it was put on the Index. Other works based on his researches were the edition of his "Opera Selecta", published without its author's knowledge (Amsterdam, 1709); and his "Opera Varia" (Amsterdam, 1733).

Zimmermann in Kirchenlex. s. v.; Schmidt-Prænd of Kirchenlex. fèr prot. Theol. s. v.; Sommer, Bibl. de la c. de J. (Brussels, 1850), IV, 91-111, which mentions all Hardouin's works; Quentin, Jean-Dominique Mans et les grandes collections conciliaires (Paris, 1900), 38-64.

A. VAN HOVE.

Hardyng, John, English chronicler; b. 1378; d. about 1455. He was of northern parentage and entered the service of Henry Percy (Hotspur), and afterwards John of Gaunt. He was present at the battles of Homildon Hill (1402) and Shrewsbury (1403), and in 1405 was made constable of Warkworth Castle. In 1415 he accompanied Umfrevelly to Harleford, took part in the battle of Agincourt, and was later employed by Henry V to visit Scotland in Beaufort's name to procure documents to show that Scotland was subservient to England. Shortly before Henry's death (1422) Hardyng returned with his results and was rewarded with the manor of Geddington, Northamptonshire. In 1424 he was in Rome consulting historical works on behalf of Cardinal Beaufort, and later he on his returned his Scottish investigations. His conduct or his opinions are indefensible, for he forged many documents, some of which still survive in the Record Office, London, and returned to claim a reward for his fraudulent work. Before 1436 he had been made constable of Kyme Castle, in Lincolnshire, where he lived for many years, and he now received an annual grant from that county. His later years were spent in the composition of his chronicle, which is valuable because of his acquaintance with the leading statesmen of his age. He wrote three different versions: the first, compiled in the Lancastrian interest, ends in 1436; the second was written as a Yorkist; and the third, dedicated to Edward IV and his queen, was written in 1481. The first local edition of the Chronicle has yet been published, and the version first printed by Richard Grafton differs from all existing manuscripts. The latest edition was published by H. Ellis in 1812, and reproduces Grafton's version including his continuation to the reign of Henry VIII.

EDWIN BURTON.

Hare Indians, a Déné tribe which shares with the Loucheux the distinction of being the northernmost Redskins in America, their habitat being immediately south of that of the Eskimos. Their territory extends from Fort Norman, on the Mackenzie, west of Great Bear Lake, to the confines of the Inuit's hunting grounds on the coast of the Arctic Ocean. They are divided into five bands or sub-tribes, namely: the Nui-o'minné, or "People of the Moss", who rove along the outlet of Great Bear Lake; the Kra-tha-go'minné, "People among the Hares", who dwell on the same stream; the Kra-go'minné, "People of the Big Hares", whose hunting grounds are inland, between the Mackenzie and the coast of the Arctic Ocean; the Sa-tha-tha-go'minné, "People of Great Bear Lake", whose name betrays their location, and lastly the Nne-lia-go'minné, "People of the End of the World", whose district is conterminous with that of the Eskimos. The Hares do not now number more than 800 souls. They are a timorous and kindly disposed set of people, whose innate gentleness long made them and their hunting grounds, bleak and desolate as they are, a fair field for exploitation by their bolder neighbours in the West and South-East. According to some this national animosity is a carryover from the days when the Hares were the enemy of the Inuit, but it is safer to assume that it is the result of the large number of Arctic hares (lepus arcticus) to be found in their country, and the aboriginal designation of some of their ethnic divisions confirms this opinion. Their medicine-men, or shamans, were formerly an object of dread to the sub-Arctic Dénes, being famous for the effectiveness of their ministrations and the wonderfulness of their tricks.

The Hare Indians are naturally very superstitious. Owing partly to the nature of their habitat, dreary steps which are the home of starvation much more terrible, and partly to the distance that at first separated them from religious centres, they retained their practice of abandoning and even eating the old and infirm in times of scarcity, and adhered to their superstitious customs, long after their more favoured congeners had discredited them. The first Hare Indian admitted into the Church was baptized some fifteen hundred miles south of the land of his birth in the summer of 1389 by Father Belcourt, a famous missionary of the Red River Settlement. The Indian was then dying while in the employ of the Hudson Bay Company. But his tribe was not evangelized before 1589 when Father Brochard, of the Franciscan Order of Montréal, visited Fort Norman and later Good Hope, where he established his residence. He laboured unremittently to win
over the Hares, among whom he died, practically in the act of instructing them. Fathers Sguin and Petiot, of the same congregation, perfected his work, and the latter was the first minister of the Gospel to visit (1668) their lands on Great Bear Lake, and take the glad tidings to the tribal division that lived on its shores. To-day the Hare Indians are almost all Catholics.

Perron, Exploration du Grand Lac des Ouras (Paris, 1862); Monographie des Déné-Dindjits (Paris, 1870); Monice, The Great Bear Lake Indians (in course of publication, Vienna), and the works of the explorers, Fr. Franzen and Richardson.

A. G. Mornie.

Harkins, Matthew. See Providence, Diocese of.

Harlay, Family of, an important family of parliamentarians and bishops, who deserve a place in religious history.

(1) Achille de Harlay, b. at Paris, 7 March, 1536; d. at Paris, 21 October, 1619. Councillor of the Parliament of Paris in 1588, president to the Parlement in 1572; “first president” (premier président) in 1582, he was the typical Christian and Gallican parliamentarian of the old regime. De la Vallée, his panegyrist, calls him the Christ of Cato. He opposed the League when it was formed in Paris; he resided in the Guise, The House of; he incited the protest of the Parlement against the Bull of 1588, which declared Henry of Bourbon, the future Henry IV, stripped of his rights to the throne. Throughout the Jour des Barricades, and after the assassination of the Guises by order of Henry III, Harlay displayed great courage before the excited members of the League; he was imprisoned by them in the Bastille till after the death of Henry III. Under Henry IV his memories of the League led him to take the initiative in the condemnation of certain theologians (e. g. Mariana, Beza, etc.), whom he considered obstacles to the absolutism. These opinions of Harlay explain his attempt, after the assassination of Henry IV, to implicate the Society of Jesus as responsible for that deed.

(2) Achille de Harlay, Baron de Sané, b. in 1521; d. 20 November, 1584. He belonged to a younger branch of the house of Harlay. Bishop-elect of Lavau, he gave up the ecclesiastical state in 1601, on the death of his elder brother, to follow a military career. Marie de’ Medici, the queen regent, sent him in 1611 as ambassador to Constantinople, his mission being to provide a bridge between Turkey and the Church. He was a victim of the convent of an alliance with the Jesuits. His secretary, and later, his wife, carried letters of Sané, and found that the handwriting in both was the same. Sané, who in fact became Bishop of St-Malo in 1631, was therefore the editor of the “Mémoires” of the celebrated cardinal. This discovery, made in 1904, had greatly increased his renown.

(3) Charlotte Harlay de Sané (1579–1652), sister of the foregoing, widow of the Marquis de Biléauté, assisted Madame Acarie to establish the Carmelites in France and was in 1604, under the name of Marie de Jésus, one of the first religious of the convent of Paris, of which she became prioress.

(4) François de Harlay, b. at Paris in 1585; d. 22 March, 1653. He belonged to the branch of the Harlays which, by its union with the family of Marek-Bouillon, was allied with the princely houses of Europe. Abbot of St-Victor, he became in 1616 Bishop of Rouen, and so remained until 1651, when he resigned in favour of his nephew. His episcopate was notable for the establishment in his archdiocese of a large number of religious houses, which aided the reform of the clergy, and also for the reform of the Benedictines, for which he manifested great zeal, and which he inaugurated in 1617 in the monastery of Jumièges. The Château de Gallon, which Cardinal Georges d’Amboise had bequeathed to the Church of Rouen, became under the episcopate of Harlay a sort of centre for the study of the Scriptures and religious questions. It was the seat of an academy whose members were to converse themselves as apologists of St. Paul. It possessed also a printing press which published some of Harlay’s writings. Under Harlay, also, the library of the chapter of Rouen was opened to the public. Harlay took a successful part in certain polemics against the Protestants. In 1625 he published the “Apologia Evangelii pro catholico et Jacobum Magnus Britanniae regem,” and in 1633 “Le mystère de l’Eucharistie expliqué par Saint Augustin avec un avis aux ministres de ne plus entreprendre d’alléguer Saint Augustin pour eux”. His zeal against the Reformation extended beyond his archdiocese. He joined with Pierre de Marca in the re-establishment of Catholic apocris in Béarn, where the Calvinists had made great progress. Even his most ill-disposed contem-
poraries—like Mme des Loges, who said that Harlay's brain was a library upside-down, and Vigneul Marville, who spoke of his "well of knowledge so deep that it was impossible to see a drop"—were compelled to recognize at least the prodigious erudition of this prelate.

(5) François de HARLAY-CHANVALLON, nephew of the foregoing; b. 14 August, 1625; d. at Conflans, 6 August, 1695. From Abbot of Jumièges, he became Archbishop of Rouen in 1651. St. Vincent de Paul was unfavourable to this appointment, concerning which Anne of Austria had consulted him, but one day, when the saint was absent from the council, Harjoine de Péréfex, tutor of Louis XIV, put through the nomination. Desiring to play a political rôle, Harlay laboured to further the policy of Mazarin, and obtained from King Louis XIV Mazarin's recall from exile. In 1671 he became Archbishop of Paris, and each week Louis XIV discussed with Harlay and Père La Chaise the interests of the Church in Paris. In homage of Harlay the Archdiocese of Paris was made a ducal peerage for him and his successor. He possessed real talent as an orator, and played an important part in the assemblies of the clergy (see Assemblies of the French Clergy, notably in the Assembly of 1682), at which his influence was supreme. It was at this instigation that Le Teller, Archbishop of Reims, was entrusted with the report on the conflict between the king and the pope concerning the monastery of Charonne, and decided that the pope should have secured information from the Archbishop of Paris. It was probably he who, early in 1655, blessed at Versailles the marriage of Louis XIV and Madame de Maintenon. During his episcopate, in 1683, the foundation-stone was laid of the Sorbonne Etrangères. Under him appeared the "Synodicon Parisiense", a collection of all the synods held by his predecessors, and it was at his command that the oratorian, Gérard Dubois, undertook to write the "Historia Eclesiae Parisiensi". The character of this prelate gave rise to much discussion, and unpleasant rumours were current concerning his death. "There are but two little trifles," wrote Mme de Sévigné, "which render praise of him difficult: his life and his death." Harlay's opposition to Jansenism and his active share in the religious policy of Louis XIV, against the Protestants in France, have excited the ill-will of his enemies. Nevertheless, despite the eulogy of the "Gallia Christiana", Père Armand Jean, S. J., declares that "he administered his diocese with more show and cleverness than edification, that his attitude in the Assembly of 1682 was reprehensible, and that he was not less blameworthy in his private life."

Harlay de Deulin, Charles-Joseph de, Belgian Orientalist, domestic prelate, canon of the cathedral of Liége, a member of the Académie Royale de Belgique; b. at Liége, 21 August, 1832; d. at Louvain, 14 July, 1899. The family de Harlay was an old and noble family ofLiége. On completing his ordinary college course de Harlay devoted himself to the study of law at the University of Liége. His success in legal studies was considerable, and a brilliant doctorate examination brought his career at the law school to a close. His family connexions and his own ability gave promise of a bright future, but, growing dissatisfied with the law, de Harlay soon abandoned the legal profession altogether. He then took up the study of theology, and in 1856 was ordained priest. After his ordination he was appointed director of the college of St-Quirin at Huy. In 1867 he was put in charge of a new arts' school which had been established for young ecclesiastics in connection with the University of Louvain. This position he held for four years. An old predilection for Orientalism began to make itself felt again in him. He was appointed to a professorship in the Oriental department of the University of Louvain in 1871 and devoted himself with intense energy to the study of the Zoroastrian Bible—the Zend-Avesta—of which he published an excellent translation (1872-1873).

Spiegel had already translated the Avesta into German and Anquetil-Duperron had attempted a translation into French. The translation of de Harlay was a considerable addition to Avesta exegesis, and the second edition of the work, which appeared in 1881, is still more useful to the student of Old Persian. In the second edition there is a preface of much value both for philology and history. The relations of the Rig-Veda to the Avesta were not yet fully understood, and these relations de Harlay set himself to determine accurately. He did much for the understanding of Zoroastrianism by emphasizing the differences, in spite of many apparent agreements, of the Rig-Veda and Avesta. His view met with much opposition, but at last some of his most brilliant opponents—for instance Darmesteter—came round to his point of view. The second edition of his translation of the Avesta is in many respects his most important work. In 1883 Mgr de Harlay was appointed to the see of Liége—the language and literature of China. In this department he was chiefly attracted by the problems of the ancient Chinese religion. He shows everywhere in his works this same taste for the study of religious developments. To it ought probably to be traced the foundation of the "Muséon". This journal, of which de Harlay was the chief founder and first chief editor, was intended to be devoted to the objective study of history generally and of religious history in particular. It was founded in 1881, and many of the most important of its early articles were contributed by de Harlay himself. He was one of the "Muséon" and still a keen student of Iranian and Chinese, de Harlay had time for other work. He was all the time professor of Sanskrit in the university, and was a Sanskrit instructor for the use of his students. Another department with which this untiring student made himself familiar was Manchu literature; and in 1886 he published a handbook of the Manchu language. Besides all this work he frequently contributed learned papers to various periodicals. His influence on the University of Louvain was immense, and under him the school of Oriental studies was most popular and flourishing. The actual position which the Harlay Deulin of the whole world is best indicated by the "Mélanges Charles de Harlay" (Leyden, 1896), a collection of more than
fifty scientific articles written by scholars of all countries and epochs, presented to him on the twenty-fifth anniversary of his Louvain professorship. The "Mélanges" is a striking monument to his ability, energy, and love of truth.

Besides the works mentioned above de Harles published the following important studies: "Manuel de la langue de l'Averta." (Paris, 1879; 2nd ed., 1880); "Mélanges de l'Averta" (Paris, 1887); "Les textes de l'Averta," (Paris, 1887, 2 vols.); "La Bible dans l'Inde." (Paris, 1882); "Les textes originaux du Yib-King." "Védiisme, brahmanisme et christianisme." (Brussels, 1881; etc.

Patrick Boylan.

Harmony (Gr., άρμοσις; Lat., harmonia), concord of sounds, several tones of different pitch sounded as a chord; among the Greeks, the general term for music. Although it is probable that the notion and practice of harmony existed among the peoples of the North—the Scandinavians, Celts, and Britons—and that singing in two or more parts was in popular use much earlier, the principle was not applied to the chant of the Church, as far as we now know, until the nineteenth century. The first interval which was used simultaneously with the melodic note was the fourth below (see Counterpoint). By doubling this interval in its upper octave, the interval of the fifth above the melodic note was formed, thus suggesting three-part harmony, which was introduced into practice later on. It was Hucbald de St-Amand (840-930) who systematized and gave a theoretical basis to this manner of performing the music of the Church (Organum). These added intervals were conceived as ornaments to the liturgical melody, and moved in parallel motion with it. The text syllables were applied to them in the same manner as they were to the original melody. When, in the eleventh century, one or more added (or organal) voices were beginning to sing in contrary motion to that of the original melody, they would begin on the initial note of the melody, on its octave or on the fifth above, and at the end of the organum, or piece of music, there came a final point of rest, consonance, or harmony. While, up to the twelfth century, the concept of harmony was restricted on the Continent to the simultaneous sounding of the intervals of the fourth below the melodic note with its octave above, in the British falsobordone (cantus firmus), using also the interval of the third both below and above the melodic note, and, by transposing the third below an octave higher, they created the so-called falsobordone, faust-bordone, false bass, or three-part harmony (inverted triad), as we know it to-day.

The interval of the third was not definitely recognized as a consonance, however, until the end of the fifteenth century. With the introduction in France, in the twelfth century, of the déchant (discantus), which consisted at first in the addition of one or more improvised melodies to the cantus firmus, but which was soon increased to two or three, the idea of harmony made a further great advance. Contrary motion and rhythmic differentiation of the voices, as against the parallel motion and equal notes in all voices of the organum, gynel, and falsobordone, now became the general practice, and the necessity arose of formulating rules governing the incipience, movement, and return to the point of consonance, and of the different voices of the composition. Thus the laws of counterpoint and a system of notation fixing the exact time-value of each note (mensuralism) came into existence. The necessity felt in music as in other arts during the thirteenth and fourteenth cen-
turies for greater expansion and freer expression originated, developed, and perfected many new forms. Among these was the composition in four-part harmony, the principal part being sung and the others generally played on instruments. Another form of composition, the motet (prototype of our present day motet) consisting of a Gregorian theme with two or more added original melodies, the latter sometimes having different texts, composition at the beginning of the thirteenth century. The motet meant a considerable step toward the independence of the various voices or parts.

Another very important move takes place at this time in the definite disciplinary practice of fixing the intervals of the fifth and the fourth in parallel motion (Johannes de Muris, Normannus). With the striving for independence of the voices or parts goes hand in hand the desire for consonance (harmony) on the strong notes of the cantus firmus, even in the many secular forms which came into vogue at this period, e.g., caccia (cliche), rondeau (round dance), until we have the perfected canon (first Netherlands school), in which the various voices move with the greatest possible rhythmic variety without detriment to symmetry and meet in perfect consonance on the thetic tones of the cantus firmus. From now until the beginning of the seventeenth century, we witness the production of works (Roman school) in which the concept of harmony, or harmonious cooperation of many different parts, is more luminously exemplified than it has been at any time in the history of music. It must be borne in mind that up to this time the liturgical melody, based upon the diatonic scale, still dominated every field of musical creation, but especially the compositions destined to serve the Church. The melody, vehicle of the liturgical word, was the all-important factor and informing principle of the whole structure. Hence the compositions to liturgical texts of those days may be defined as a number of melodies giving expression to the text and harmonizing among themselves. Their flow is untrammeled and unrestrained, and harmony among them results from their flow incidentally. The diatonic character of the melodies or voices, vehicles and servants of the sacred text, imparts and preserves to the whole structure the elevation, serenity, nobility, terseness, and unity which are the characteristics of the works of the masters of this period. The temporary dissonances resulting from passing notes, suspensions, etc., are constantly being resolved into consonance (harmony, repose, peace), with which the composition also invariably ends. We have here a true image of sanctity and Christian's life—without sorrow there is no joy, its unceasing combat in working out its ultimate salvation. As the diatonic character of each voice is kept intact, except when chromatic alteration is necessary as a concession to harmony, the hearer never loses consciousness of the fact that the melodic (moving) principle is paramount, and that harmony (repose) is only a temporary rest which he may enjoy but not permanently dwell upon.

The endeavour to throw off the supremacy of the liturgical melody with its diatonic character (which was then and is now the expression in music of the spirit of the Church par excellence), and to substitute for it a system better adapted to the expression of individual thought and feeling, began as early as the first part of the thirteenth century. It became known by the general name of ars nova. In the numerous instrumental and secular vocal forms which were developed at this time and later (ricercar, canzone, tiento, toccata, praeludium, capriccio, chanson), substitution of original melodic (legato), original melodic often substituted for a cantus firmus taken from the Gregorian chant. The harmonic element gradually gained ascendancy over the melodic in the whole field of production, and exercised an ever-growing influence over the general taste.
A great change has taken place within the last fifty years. Three successive popes have urged and commanded the restoration of the chant of the Church to its rightful place. Learned men have made the Catholic world acquainted with its nature, form and spirit. Model performances of the chant in many places throughout the world have revealed to the faithful its beauty and revived a taste for it. The restoration of the chant signified the reorientation of music to a standard as against the subjective. Not only has the chant come into its own again, but, through the mighty labours of men animated by the spirit of the Church, the great productions of polyphony have been made accessible so that the present generation is enabled to study the harmonic structures which were reared upon the diatonic modes in the fifteenth, sixteenth and seventeenth centuries. Within the last fifty years the diatonic modes have again become the basis for many works of polyphony which may be placed side by side with what is highest and best in the great period of the art. The musical world to-day presents a striking illustration of the present moral and mental state of mankind. The principle of cultivating harmony as an end in itself, rather than seeing in it the incidental result of harmonious co-operation of many independent voices, has borne its full fruit. The extreme modern development of secular music is but the legitimate offspring of the revolt against the harmonic principle; which revolt was the musical expression of the spirit of the Renaissance. Its atrocity and cacophonous dissonances are but the manifestation of modern moral and social disorder. In its luxuriant harmonic combinations modern sensuality finds its outlet and indulgence. Opposed to this, as expressive of the spirit of the Church, we have restored to its rightful supremacy as servant of the liturgical word, the diatonic melody, which in its turn, is served by harmony.

Joseph Otten.

HARNEY. (1) William Selby, soldier, convert; b. near Haysboro, Tennessee, U. S. A., 27 August 1800; d. at St. Louis, Missouri, 9 May 1889. Appointed to the U. S. army, 13 Feb., 1818, he served in the Black Hawk and Florida Indian campaigns. In the war with Mexico, after which he was made a brigadier-general. He then had command in the far West during the Sioux troubles of 1855 and there became the friend and admirer of the famous missionary, Father J. B. De Smet, S. J., who was of great assistance to him in making peace. Having seized San Juan Island near Vancouver in 1859, a dispute with England over the Oregon boundary line followed his action. When the Civil War broke out he was in charge of the Department of the West at St. Louis, and while en route to Washington was captured and held prisoner for a short time by the Confederates. A broad promotion as must for faithful services followed his retirement, 1 August, 1863.

(2) John Milton, brother of foregoing, b. in Delaware, 9 March, 1789; d. at Somerset, Kentucky, 15 January, 1825. Their father, Thomas Harney, was an officer in the Revolutionary war. John Harney studied medicine and settled in Kentucky. After a visit to Europe he accepted an appointment in the navy and spent several years in South America. On his return he edited a paper, became a Catholic, joined the Dominicans, then beginning their mission in Kentucky, and died in their ranks. He was also the author of a number of poems printed in various magazines.

Thomas F. Meehan.
Harold Blount (Blæstald), b. 911; d. 1 November 986. He was son of King Gorm the Old of Denmark and of Thrya, daughter of a nobleman of Schleswig (Sønderjylland) who is supposed to have been kindly disposed towards Christianity. His mother must have implanted in the child’s soul the first germs of faith which his father, a devout servant of Wotan, did his utmost to destroy. The latter’s invasion of Friesland in 934 involved him in war with the German King, Henry I. Having been vanquished, he was forced to restore the churches which he had demolished as well as to grant tolerance to his Christian subjects, and he died one year later, bequeathing his throne to Harold. Bishop Unni of Bremen, accompanied by Benediktine monks from the Abbey of Corvey, preached the gospel in Jutland (Jylland) and the Danish isles, and soon won the confidence of the young ruler, although he did not succeed in persuading him to receive baptism. Harold sought to shut the Germans out of his kingdom by strengthening the “Danavirk” — a series of vikings and fortifications that existed until the latter half of the nineteenth century; moreover, as absolute quiet prevailed throughout the interior, he was even able to turn his thoughts to foreign enterprises. Again and again he came to the help of Richard the Fearless of Normandy (in the years 946 and 965), while his son conquered Skane and, after the assassination of King Harold Graafed of Norway, he also managed to force the people of that country into temporary submission to himself. Meanwhile the new religion had become more and more deeply rooted among the Danes. Even a few members of the nobility (such as Fredegis of Jylland) and soon episcopal sees were established (Schleswig, Ribe, Aarhus). However the prominent part the Germans had in these achievements as well as the lofty idea of the Roman Empire then prevailing led Otto I, the Great, to require Harold to recognize him as “advocatus”, or lord protector of the Danish church, and even “imperator”. It was a demand the Danes would not understand, so the indignant king of the Danes replied to this demand with a declaration of war, and why the “emperor” sought to force his “vasell” into submission. The devastating expeditions, which were pushed as far as the Ljêmofjord, enabled the emperor to bend all opposition of the Danish church, and even to “exterminate”. It thus became a matter of understanding to the emperor that the Christianization of the Danes was impossible. - Pius Wittmann.

Harpass, a titular see of Caria, suffragan of Stauropolis. Nothing is known of the history of this town, situated on the bank of the Harpasus, a tributary of the Meander. It is mentioned by Ptolemy (V, ii, xix), by Stephanus Byzantius, by Hierocles (Synecd., 688), and by Plynly (V, xxix). According to Plynly, Parnes was in the neighborhood. The town could be set in motion by a finger-touch, whereas the force of the whole body could not remove it. Arpass, in the vilayet of Smyrna, preserves the old name. Harpass appears in the lists of the “Notitiae episcopatuum” until the twelfth or thirteenth century. Lequien (Or. Christ., I, 907) mentions only four bishops: Phinis, who took part in the Council of Ephesus, 431; Zoticus, represented at Chalcedon by the presbyter Philotheus, 451; Ireneus, an opponent of the Council of Chalcedon; Leo, in Constantinople at the Photian Council of 879. - Fellows, Discoveries in Asia, 51; Leake, Asia Minor, 249; S. Pétridès.

Harper, Thomas Morton, priest, theologian and preacher. Born in London 26 Sept., 1621, of Anglican parentage, his father being a merchant of good means in the city; d. 29 Aug., 1803. He was educated first at St. Paul’s School, London; then at Queen’s College, Oxford. Having taken his B.A. degree, he subsequently received orders in the Anglican Church, in which he worked for five years as a chaplain in the wars of King William in Ireland. His first mission was to the Irish at Cork. He subsequently received minor orders and was made master of the new college of St. Mary’s at Oxford. Here he manifested High Church proclivities and took a vigorous part in ecclesiastical controversies in the local press. Getting into collision with his bishop on some points of doctrine, he left Devonshire and purchased a small proprietary chapel in a poor district in Finmey, London. But his ritualistic views found no favor with the religious authorities either in London or in Dublin, where he was ordained priest by his bishop—Blenfield, Bishop of London. He was obviously drifting steadily towards the Catholic Church. The final impulse came, oddly enough, from the perusal of an attack on the Jesuit Order in a volume entitled “One Year in the Noviciate of the Society of Jesus” by Andrew Steinmetz. Harper’s logical instinct discerned the intrinsic discrepancies of the book and the feebleness of the argument as a whole. Within half a year he was received into the Catholic Church, and some months later, in October, 1852, he entered the Society of Jesus. He passed...
through his noviceship and philosophical studies in Belgium. His four years' theological course was divided between the English Jesuit Theological College, St. Beuno's in Wales, Rome, and Louvain. Ordained priest in 1859, he was appointed professor of theology the following year at St. Beuno's College. Two years later he was transferred to the chair of logic and general metaphysics at St. Mary's Hall, Stonehurst. A man of highly-strung nervous disposition and intense mental application, his health made frequent changes necessary. He returned after a short time to teach theology at St. Beuno's, and subsequently worked on the mission for some years, achieving a high reputation as a presbyter and a spiritual director. During the last dozen years of his life he suffered from prolonged attacks of mental prostration, the malady at times assuming an acute form.

He possessed considerable powers of abstract thought, with a remarkable talent for metaphysical reasoning. Indeed, excessive subtlety impaired his efficiency both as lecturer and writer, leading him to devote disproportionate time and space to obscure ontological questions of minor significance, and consequently to leave unfinished the treatment of more important philosophical issues. A vigorous controversialist he was personally of a most amiable and endearing nature. His chief literary works were: "Peace through the Truth, or Essays on Subjects connected with Dr. Pusey's Eirenicon", I (London, 1869); II (1874); "The Metaphysics of the School", 3 vols. (London, 1879-1884). In addition to these he published several smaller works in booklet form. Amongst them were the following: "On Modern Principles"; "God the True the Good and the Beautiful"; "Manchester Dialogues"; "Lectures on Papal Infallibility". He also wrote a series of articles on Newman's "Grammar of Assent", shortly after its appearance. But the penchant for metaphysical rather than psychological analysis which characterized Harper's mind rendered him not very sympathetic with that remarkable work. Though possessed of considerable literary gifts he adhered to the method rather of angelizing the scholastic terminology than translating the conceptions of the Schoolmen into the language of modern philosophical literature.

MICHAEL MAHER.

Harrington, William, Venerable, English martyr; b. 1566; d. 18 February, 1594. His father had entertained Campion at the ancestral home, Mount St. John, in 1581. When the young man did not persevere in the Faith, the youngest son never forgot Campion's example. He went abroad, first to the seminar at Reims, then to the Jesuits at Tournai (1582-1584) and would have joined the order had not his health broken down and forced him to keep at home for the next six or seven years. In February, 1591, however, he was able to return once more to Reims, and, having been ordained, returned at midsummer, 1592. Next May he fell into the hands of the persecutors, and nine months later suffered at Tyburn, after having given proofs of unusual constancy and noblemindedness in prison, at the bar, and on the scaffold. It was, we believe, a case of heroism, which induced a posthumous calumniator, Friswood or Fil Williams, an apostate of evil life, to say that he had had a child by her before he was a priest (see Harms, cited below). If the charge had stood alone, it might have been difficult to refute it now. Fortunately for us, Fil had joined to it many other base and certainly untenable accusations, both against him and also against the rest of the clergy and the whole Catholic body. Her assertions must therefore be everywhere suspected, and in Harrington's case entirely rejected, as Father Morris (cited below) clearly proves. It is also noteworthy considering the frequency with which foul accusations were made in those days, that this is the only one against an English martyr remaining on record.

J. H. POLLEN.

Harris, Joel Chandler, folk-lorist, novelist, poet, journalist; b. at Eastington, Georgia, U. S. A., 1848; d. at Atlanta, Georgia, 3 July, 1908. Chiefly known for his stories of negro folk-lore which created an American national departure in American literature, he spent most of his life in journalistic work. Of humble parentage and meagre education, he knew and loved as a boy "fields, animals, and folk" better than books. Apprenticed in 1862 to a plantation editor, whose library was open to him, he learned printing and journalism in a grove, worked on various Louisiana and Georgia papers, and from 1876 to his retirement in 1890 was on the staff of the Atlanta "Constitution", "The Tar Baby", contributed by accident (1877), found him his vocation. His knowledge of nature and the negro, acquired unconsciously in "the plantation", ripened as he wrote, resulting in a series of volumes whose "Bre'r Rabbit" the hero, "Bre'r Fox" the villain, and other animals, with Mr. Sun, Sister Moon, Uncle Wind, and Brother Dust are the dramatic persons. "Uncle Remus", a wise old negro, is the narrator, "Miss Sally" the guardian spirit, and "the little boy", a breathless listener. Wit, humour, homely wisdom, and kindly sympathy, combined with unrivalled knowledge of negro dialect and character, make "Uncle Remus, His Songs and Sayings" (1881), "Nights with Uncle Remus" (1883), "Uncle Remus and His Friends" (1893) "Little Mr. Thimblefinger" (1894), "Mr. Rabbit at Home" (1895) unique among folk-stories, distinctly American, and interesting to "children of all ages". They were translated into twenty-seven languages, and their author, popularly named "Uncle Remus", was lost in the narrator. But apart from his Uncle Remus's tales Harris ranks high as a novelist. "Miss Joss" (1884), "Frank Joe" (1887), "Daddy Jake the Runaway" (1889), "Balaam and his Master" (1891), "Aaron", "Aaron in the Wildwoods" (1893), and the "Chronicle of Aunt Minery Ann" disclose a sympathy and intimate acquaintance with slave and master possessed by no other writer, and point to the widest solution of the race problem. Of his forty volumes he prided most "Sister Jane" and "Gabriel Toliver", stories of his native Shady Dale, and written in his later years. They are his most finished work and the best record of his life and thoughts. The "Uncle Remus Magazine", founded in 1906, contains many a wise essay flavoured with the originality, whimsical humour, gentle charity, and purity of thought and expression that characterised all he wrote: "a homely, kind philosophy that uplifts the mind and grips the heart". His favourite reading—the Bible, Newman, Faber, A Kempis, and Sheehan—his mental honesty, and the example of his
HARRISBURG, 143

wife, a cultured Canadian Catholic (the Mary Bullard of "Gabriel Tollerive"), to whom he dedicated his mental growth and the best that was in him, had long convinced him of Catholic truth. But a sensitive modesty that shrank from notoriety confined him to the society of his family, restrained him from seeking baptism until 20 June, 1908, a few weeks before his death. He died with the same modesty that he had so long deferred his entrance into the Catholic Church. The universal tribute paid him showed that he had grown into the heart not only of the South, but of the nation. Atlanta has purchased his residence, "The Wren's Nest", and his "Snapbean Farm" to transform them into "Uncle Remus Park" as a monument to his memory.

HARRISBURG, 143

Harrington, Diocese of (Harrissburgensis), established 1868, comprises the Counties of Dauphin, Lebanon, Lancaster, York, Adams, Franklin, Cumberland, Perry, Juniata, Mifflin, Snyder, Northumberland, Union, Montour, and Columbia, in the State of Pennsylvania, U. S. A., an area of 5900 square miles. Lycoming and Centre Counties were also included when the Diocese of Altoona was formed, but the two were taken from it in 1901, when the Diocese of Altoona was formed. In 1868 the boundaries of the Diocese of Philadelphia were curtailed for the third time by the creation of the Diocese of Harrisburg, Scranton, and Wilkes-Barre. There were then within the Harrisburg limits a Catholic population estimated at 25,000, for whose care there were only a score or so of priests and about as many churches and chapels.

As first bishop the Rev. Jeremiah F. Shanahan was consecrated 12 July, 1868. He was the head of the preparatory seminary at Philadelphia when he was selected to govern the new diocese; he was born 13 July, 1834, at Silver Lake, Susquehanna County, Pennsylvania, and ordained priest 3 July, 1859. Progress was slow, as the people were poor. Bishop Shanahan died 24 Sept., 1886, at Harrisburg. Thomas McGovern, the second bishop, was born in 1833 at Co. Cavan, Ireland, and ordained priest 27 December, 1861, at Philadelphia. He was consecrated at Harrisburg, 11 March, 1888, and died there, 25 July, 1898. After his death an administrator had charge of the diocese for nearly a year. At that time the churches had increased to fifty-five; the priests, to fifty-five; Father Shanahan, third bishop, and a brother of the first incumbent of the see, was consecrated 1 May, 1899. Born in Susquehanna County, Pennsylvania, in 1846, he was ordained 2 January, 1869, and when appointed bishop was superintendent of schools at Philadelphia.

Statistics—Religious in the diocese include Franciscans and Fathers of the Holy Ghost; Sisters of Mercy, Sister-Servants of the Immaculate Heart, Sisters of St. Joseph, of the Blessed Sacrament, of Notre Dame, of the Holy Cross, of Charity (Emmitsburg, Maryland; and Mount-Saint-Vincent-on-Hudson), of Christian Charity of the Third Order of St. Francis, of St. Francis, O.M.C., Felician Sisters, O.S.F. Priests number 86 (6 regulars), ecclesiastical students, 24; churches with resident priests, 63, missions, 15; parish schools, 36; pupils, 8000; orphan asylums, 2, inmates, 110; hospitals, 2; Catholic population, 57,000. The mining regions have attracted Poles, Slavs, Austrians, Italians, Lithuanians, for whom separate congregations are provided with priests of their own nationalities.

THOMAS F. MEEHAN.

HARROWING, 144

Harrison, James, priest and martyr; b. in the Diocese of Lichfield, England, date unknown; d. at York, 22 March, 1602. He studied at the English College at Reims, and was ordained there in September, 1583. In the following year he went on the English mission, where he laboured unobtrusively. In the early part of 1602 he was ministering to Catholics in Yorkshire and was resident in the house of a gentleman of the name of Anthony Bate (or Bates). While there, he was arrested by the pursuivants, and together with Bates he tried at York and sentenced to death for high treason. The only charge against Harrison was that he performed the functions of a priest, and that against Bates was merely that he had entertained Harrison. The judge left York without fixing the date of execution, but Harrison was unexpectedly informed on the evening of 21 March that he was to die the next morning. With Bates, he was hanged, drawn, and quartered. The English Franciscans at Douai had his head as a relic for many years.

Harrowing, William, third and last archbishop of England; b. in Derbyshire in 1553; d. 11 March, 1624. He was educated at Douai (1575-77). He went to Rome as a deacon and, after his ordination, took the mission oath at the newly founded English College (23 April, 1579). He laboured in England from 1581 to 1587, when he went to study civil and canon law at Padua. Early in 1591 he returned to the care of the small school founded by Father Persons, S.J., at Eu in Normandy. When this school was broken up by war, in 1593, he went back to Reims as procurator to the English College and, having returned to Douai when the college was restored there, took his doctorate in divinity in 1597. In that year and until 1603, as professor of theology at the English College until 1603. He then spent five years in Rome, where he gained wide experience in ecclesiastical affairs. In 1609 he returned to England, where, on the death of the archbishop, George Birkhead, in 1614, he was chosen to succeed him by Paul V (11 July, 1615). His policy was to restore peace between the secular clergy and the Jesuits while endeavouring to secure the independence of the former. To this end he aided Dr. Kellison, president of Douai, in lessening the influence of the Jesuits there. He also aimed at restoring episcopal government in England. His influence ultimately secured the condemnation of himself died just as his envoy was setting out for Rome.

EDWIN BURTON.

Harrowing of Hell.—This is the Old English Middle English term for the triumphant descent of Christ into hell (or Hades) between the time of His Crucifixion and His Resurrection, when, according to Christian belief, He brought salvation to the souls held captive there since the beginning of the world. According to the "New English Dictionary" the word Harrowing in the above sense is first used by Ælfric's homilies, about A. D. 1000; but, long before this, the descent into hell had been related in the Old English poems connected with the name of Ceddmon and Cynawulf. Writers of Old English prose homilies and lives of saints continually employ the subject, but it is in medieval English literature that it is most fully found, both in prose and verse, and particularly in the drama. Art and literature all through Europe had from early times embodied in many forms the Descent into Hell, and specimens of plays upon this
theme in various European literatures still exist, but it is in Middle English dramatic literature that we find the fullest and most dramatic development of the subject. The earliest specimen extant of the English religious drama is upon the Harrowing of Hell, and the four great cycles of English mystery plays each devote to it a part. It is found, when it is found, in the Cornish plays. These medieval versions of the story, while ultimately based upon the New Testament and the Fathers, have yet, in their details, been found to proceed from the apocryphal Gospel of Nicodemus, the literary form of a part of which is said to date back to the first third century. In its Latin form, this "gospel" was known in England from a very early time; Bede and other Old English writers are said to show intimate acquaintance with it. English translations were made of it in the Middle Ages, and in the long Middle English poem known as "Censor Mund," a paraphrase of it is found.

EARLY ENGLISH TEXT SOCIETY, The Middle English Harrowing of Hell and Gospel of Nicodemus, ed. Hulse (London, 1908), in which will be found a full bibliographical and critical study.

K. M. WARREN.

Hartford, Diocese of, established by Gregory XVI, 18 Sept., 1843. When it was founded, the State of Connecticut included Rhode Island. Providence was the most considerable city, the Bishop of Hartford residing there until 1872, when a new see was erected (see PROVIdENCE, Diocese of). As now constituted, the Diocese of Hartford is coextensive with the State of Connecticut. It has an area of about five thousand square miles and a Catholic population of 375,000, or one-third of the total population of Connecticut.

EARLY HISTORY.—The vestiges of Catholic travellers and sojourners in the territory now embraced by the Diocese of Hartford are numerous. Irish immigrants flocked through the colony and rendered notable service during the Pequot war of 1637. Their movements are chronicled in the government of Theophilus Eaton (1639-57). Their numbers became considerably augmented during the century which followed. In the War of Independence they took an important part, but they were deprived of the consolations of their religion. Throughout the Colonial period Spanish, Portuguese, and French sailors and adventurers landed at New London and the other ports of the State, and some remained to spend their lives and lose their faith among those by whom they were proselyted. In 1765 the Church was hatched in the year 1756 four hundred Acadians were scattered throughout the State, but, bereft of priests, and plunged into a hostile atmosphere, they and their descendants made shipwreck of the faith so much cherished by their ancestors. Now and again priests visited Connecticut, coming either as missionaries or chaplains to the French troops, but they took no part in the upbuilding of the future diocese. The attitude of the white settlers was decidedly hostile to the Catholic Church, and the few confessors who persevered are lost in oblivion. Bishop Cheverus, of Boston (1810-23), and Bishop Fenwick, his successor, made occasional missionary journeys to Connecticut. At the request of the latter, the Rev. R. D. Woodley, of Providence, visited and ministered to the Catholics of the section during the earlier months of 1828. In August of that year the Rev. Bernard O'Cavanaugh was appointed first resident priest of the present Diocese of Hartford. His presence converted the State of Connecticut, and he made Hartford his home. July, 1829, was a memorable month for the Catholics of the future diocese. On the 10th of that month Bishop Fenwick came to Hartford; on the 11th the first number of the "Catholic Press" appeared; on the evening of that day the message preached to a fine concourse of people, and before departing answered an attack made upon the Catholics by the "Episcopal Watchman." He also gave directions for the purchase of the old Episcopal church which was subsequently moved to Talcott Street. Bishop Fenwick was pleased with the visit and wrote in his journal: "Splendid prospects for religion in Hartford." Father O'Cavanaugh laboured alone in Hartford until 1 July, 1831, when he was joined by the latter. Father Fitzton continued to serve in Connecticut, sometimes alone and sometimes with one or two assistants, for six years. On the erection of the diocese in 1843, there were but three resident priests in Connecticut. Hartford and New Haven had pastors, but the diocese for the latter was but a parish. Father Fitzton ministered to the Catholics in New London, going to them from Worcester, where he was then stationed.

BISHOPS OF HARTFORD.—(1) William Tyler was born at Derby, Vt., 5 June, 1806. He was from a family of converts. His parents, with their seven children, like the family of his maternal cousin, the Rev. Virgil Barber, renounced Protestantism for the Catholic Church, the future bishop embracing the Faith in his sixteenth year. Having completed his classical course at Mr. Barber's academy at Claremont, N. H., young Tyler became a member of the household of Bishop Fenwick in 1826. Ten years later, and immediately distinguished himself for zeal on the missions of Massachusetts and Maine. He held the office of Vicar-General of Boston until his promotion to the Bishopric of Hartford. He was consecrated 17 March, 1844, and installed at Holy Trinity Church 14 April. At his advent the entire diocese contained 9937 Catholics, of whom only 4817 resided in Connecticut. At that time Hartford was a city of 13,000 inhabitants, and of these only 600 were adult Catholics. Providence, however, could boast of 23,000 inhabitants, 2000 of whom were adherents of the Catholic Faith. The bishop accordingly petitioned Rome to move his see from Hartford to Providence, where he took up his residence in June, 1844. So poor was the Diocese of Hartford at its inception that Bishop Kendrick of Philadelphia, in writing to the rector of the Irish College at Rome, was constrained to make the following complaint: "The unfortunate haste with which Little Rock and Hartford were made sees in a former council should make us pause when a new see is to be erected". The chief anxiety of the new bishop was to provide priests and care for the instruction of the young. His episcopal residence was a mere shanty, and he could be easily carried out of his door by oxen from Providence "to the other." Bishop Tyler appealed successfully for priests to All Hallows College, Dublin; he likewise received substantial aid from the Society for the Propagation of the Faith, Lyons, France, and from The Leopold Society, Vienna. He attended the Seventh Provincial Council of Baltimore which convened 5 May, 1849. Never robust, his health was broken by consumption, and he petitioned the Fathers of the council to accept his resignation. They refused to accede to his wishes, but requested the Holy See to grant him a coadjutor in the person of the Very Rev. Bishop O'Reilly, Vicar-General of the diocese of Buffalo. But it was a successor and not a coadjutor that the good bishop needed, for he was called to his reward 18 July, 1849. His episcopate covered five years. Bishop Fitzpatrick characterised him as "a man of saintly life consumed with true asceticital zeal." (2) Bernard O'Reilly was a native of Columkillie, County Longford, Ireland, where he was born in 1803. He made his classical studies before coming to America, and completed his course of theology at St. Mary's, Baltimore. He was ordained in New York, 13 Oct., 1831. He began his priestly life in the metropolis, the city of Brooklyn being his out-post. The future bishop distinguished himself by devoted heroism
during the plague which swept over New York in 1832. He was then transferred to Rochester, where he served with high success. In the erection of the Diocese of Buffalo, in 1847, Father O'Reilly was made vicar-general, and remained in that capacity until appointed Bishop of Hartford. He was consecrated at St. Patrick's church, Rochester, N. Y., 10 Nov., 1850. Death of priests was the chief object with which he was charged the Hoboken church in his new field. "A short time since," he wrote in 1859, "our affliction was very great, when, from almost every section of the State, the faithful were asking for priests, and we had none to give them." On his accession there were but seven priests in Connecticut, and five churches. The sees of bishop were open, and during his time, which he placed the Rev. Hugh Carmody. The institution prospered, and the clerical body was considerably augmented. Two years after his consecration, Bishop O'Reilly visited Europe, and at All Hallows, Dublin, he secured several priests for his growing mission. Among these was a young man named Thomas Hendrickson who laboured with distinction in Connecticut, and later on became the first Bishop of Providence. To provide for the education of the young, Bishop O'Reilly brought to his diocese the Sisters of Mercy, establishing them in his episcopal city in 1851. When Father X. McMahon, a young man well prepared, assembled to demolish their convent. The Bishop came to the rescue, making use of these words: "The Sisters are in their home; they shall not leave it for an hour. I shall protect them while I have life, and if needs be, register their safety with my blood." The mob was not prepared for such heroism. Intent upon the welfare of the young, Bishop O'Reilly went to Europe again in 1854 in order to secure the aid of the Christian Brothers. He sailed for home 31 Jan., 1856, on the ill-fated "Pacific." He perished with all on board. The activity of Bishop O'Reilly may be realised when it is recalled that during the six years of his episcopate he added to the equipment of the diocese 34 churches, 28 priests, 5 academies, 9 parochial schools, and 3 orphan asylums. At his death there were within the present limits of the Diocese of Hartford 27 churches, 26 priests, 2 academies, and 2 orphan asylums.

(3) Francis Patrick McFarland was born at Franklin, Penn., 16 April, 1832; died at St. Martinburg, Md., and was ordained by Archbishop Hughes in New York. After teaching for a year at Fordham College, he was made pastor of Watertown, N. Y. On 1 March, 1851, he was sent to preside over the parish of Utica. He was appointed Vicar-Apostolic of Florida 9 June, 1857. He declined the honour, and was made Bishop of Hartford in March, 1858. The same labours that consumed the energies of his predecessor confronted the new bishop: the building of churches and schools, the securing of priests and religious women. The devoted prelate multiplied himself, visiting all corners of his extensive diocese, lecturing, and sending missionaries to the child whom he admitted to confirmation. He went to Rome in 1869 to attend the Vatican Council. His health failing, he asked to be relieved from the cares of his office, or to be granted a coadjutor. Neither request was granted. But, as a compromise, the diocese was divided, the State of Rhode Island being cut off. Dr. McFarland became Bishop of Providence, for which he was too old to be called. He was transferred to Stamford, and came to reside in his episcopal city in February, 1872. He immediately addressed himself to the labour of erecting a cathedral, an episcopal residence, and a mother-house for the Sisters of Mercy, who were already engaged in educational work throughout the State. He devoted all his energies to the completion of the cathedral. The third, the stately edifice of which the faithful of the Diocese of Hartford are so justly proud, was well started before his death. He departed this life 2 Oct., 1874, in the fifty-sixth year of his age and the seventeenth of his episcopate. He was a scholar and a man of rare sanctity. He was likewise born outside of the diocese, coming from Ireland with his parents at the tender age of three years. He was educated at Villanova College, and was called from the presidency of that institution to the See of Hartford in 1875. When notified of his elevation, he declined the honour, offering the Bishop of New York the place of the See. A mandamus was returned 17 Feb., 1876. He then proceeded to prepare for his consecration. On coming to Hartford he selected St. Peter's church for his pro-cathedral, pushing forward the erection of the new edifice with energy. He set out for his ad limina visit in May, 1876. Returning in autumn, his health began to fail, but he was determined to relieve his heart. Among others, schools, priests and religious teachers for his rapidly developing diocese. Seeking rest, he set out for Villanova College 10 Oct., 1878. On the way to New York he was stricken with a hemorrhage and died in the Grand Union Hotel a few hours later. During his episcopate "The Connecticut Catholic" was established, and since that memorable day, in 1876, the Diocese of Hartford has never been without a Catholic paper.

(5) Lawrence S. McMahon, the fifth Bishop of Hartford, though a native of St. John's, N. B., spent his early boyhood and youth at St. Louis, Missouri, and was brought up at Holy Cross College, Worcester, Mass., at the age of fifteen. He pursued his higher studies in France and Italy, and was ordained at Rome 24 March, 1860. He was serving as assistant at the cathedral at Boston when the 28th Massachusetts called from the swamps of South Carolina for a chaplain. Father McMahon volunteered, and served with distinction until his health completely failed him. After the war he became pastor successively of Bridgewater and New Bedford. He was the first Vicar-General of the Diocese of Providence and was consecrated Bishop of Hartford 10 August, 1879. His great work in his new field was the erection and the adornment of St. Joseph's Cathedral. In ten years he collected more than $500,000, and on 8 May, 1892, he consecrated the splendid edifice free from all debt. While engaged in this work, he gave direction for the wise development of his diocese, organizing 44 new parishes, dedicating 135 new churches, and establishing 16 parochial schools, as well as 16 convents. He died at Lakeville, 21 August, 1893, and was interred in the great cathedral to erect which he had laboured so hard and with such distinguished success.

(6) Michael Tierney was consecrated Bishop of Hartford 22 Feb., 1894. Born in Ireland, he spent his youth at Norwalk, in the diocese over which he was destined to preside with such fruit. After completing his studies at Bardstown, at Montreal, and at Troy, New York, he was ordained in May, 1866. Bishop McFarland immediately made the young priest his chancellor and the rector of his cathedral, which offices he held until just appointed as pastor of New London. After a year in that post he was transferred to Stamford, and three years later he was promoted to the rectorship of St. Peter's church, Hartford. Here, besides his parochial duties, he was charged with the responsible office of inspecting the erection of the new cathedral—previously to the episcopate of Bishop Tierney, the resources at the disposal of the bishop were mainly absorbed in the erection of the cathedral, and so it happened that there were within the confines of the State but few charitable institu-
tions. The new bishop felt the need of a preparatory college for boys destined for the priesthood, and proceeded to erect one in his episcopal city. The foundation flourished, and before his death, that is, during the first decade of its existence, St. Thomas's Seminary could boast of 150 students. Other charitable works, besides Bishop Tierney’s establishment are St. Mary’s Home for the Aged, St. John’s Industrial School, the hospitals at Hartford, New Haven, Bridgeport, Waterbury, Willimantic, and the numerous charitable enterprises conducted by the Sisters of the Holy Ghost and the Little Sisters of the Poor. But his was a sober and painless activity. He multiplied himself, visiting every parish and every school-room in his diocese at least once a year. During his episcopate he confirmed 85,000 children and administered to every one of them the total-abstinence pledge. He was a patron of literature and established a diocesan missionary band to preach retreats to Catholics and non-Catholics. He died on 5 Oct., 1908, universally mourned.

Present Condition of the Diocese.—Within the limits of the State of Connecticut there are now at least 375,000 Catholics. They are ministered to by 350 priests. The number of parishes in the diocese (546 in 1860) is 173; of the parochial schools, 173; of the Catholic churches, 13 French, 6 German, 8 Italian, 13 Polish, 4 Lithuanian, 2 Hungarian, 2 Slavonian, and 4 Ruthenian. There are 1250 religious women in the diocese. The religious orders of men represented are the Dominican Friars at New Haven, Franciscan Friars Minor at Winsted, Franciscan Conventuals at Bridgeport, Jesuits at South Norwalk, Missionaries of La Salette at Hartford and Danielson, Fathers of the Congregation of St. Charles at New Haven and Bridgeport, Vincentian Fathers at Derby and New Haven, Fathers of the Holy Ghost at Darien. The Brothers of the Christian Schools have a house in New Haven and the Xaverian Brothers conduct an industrial school at Deep River. The Sisters of Mercy have 3 mother-houses in Connecticut; that at Hartford has 440 sisters affiliated to it. They conduct a high school and an academy at Hartford, an academy at Putnam, and furnish the teaching staff for St. Francis Convent at New Haven, for N. Augusta Preparatory School for Boys at West Hartford, and for 21 parochial schools throughout the diocese. A second at Meriden numbers 133 sisters teaching 4100 children. The sisters of this community conduct an academy for young ladies at Milford. The third is situated at Middletown. It has 97 sisters who are responsible for the education of 2100 children. The Sisters of the Congregation of Notre Dame conduct an academy at Waterbury, the Sisters of St. Dominie at New Haven, and the Sisters of Charity at Baltic.

T. S. DUGGAN.

Hartley, James J. See Columbus, Diocese of.

Hartley, William, Venerable, martyr: b. at Wyn, in Derbyshire, England, of a yeoman family about 1557; d. 5 October, 1588. At eighteen he matriculated at St. John’s, Oxford, where he became a chaplain. Being ejected by the vice-chancellor, Thomas Sudeley, in 1579, he went to Reims. In 1581 he was ordained at Châlons, and returned to England in June, 1580. He was of great service to Fathers Persons and Campion in printing and distributing their books, but was eventually arrested, 15 August, 1551, and sent to the Marshalsea Prison, London. Here he was kept in a square iron cage, and for this he was laid in irons (5 December, 1583). He was indicted for high treason, 7 February, 1584, but, for some unknown reason, not tried. In January, 1585, he was sent into exile. He then spent some little time at Reims recovering his health, and made a pilgrimage to Rome (15 April, 1586) before returning to his perilous mission. In September, 1588, he was arrested in Holborn, London, and, as his friend Father Hartford says, “being beset by the deceit of the heretics, incurred the suspicion of having apostatized. But the event showed how unjust that suspicion was; for when he suffered at Tyburn he won the greatest credit for constancy. He was a man of the meekest disposition and naturally virtuous, modest, and brave, with a sober and peaceful look. His head was blackish and his height moderate” (“Acts of English Martyrs”, cited below, 272).

The Armada year was for Catholics the time both of the worst bloodshed and of the greatest dearth of news, and this explains why we know but little of Hartley’s companions. The first was a priest, the Venerable John Hewett, son of a draper at York and a student at Caius College, Cambridge. He had once been in a York prison, but was arrested in Gray’s Inn Lane, London, 10 March, 1587, going under the name of Weldon, and died under that name; this has led several early martyrlogists into the curious mistake of making him into two martyrs, one dying at York, and Weldon in London. Hartley’s second companion was the Venerable Robert Sutton, layman, a tutor or schoolmaster, born at Kegworth in Leicestershire, who had practised his profession in Paternoster Row, London. The fourth was John Harrison, alias Symons, who had carried letters from one priest to another. As he had before “been slandered to be a spy”, we can guess why his name suffered some obscurity. It is also hardly doubtful that his name, Harrison, was confused with that of either Matthias or James Harrison, priests, who suffered martyrdom in 1592. It is perhaps explains why his name has fallen out of the process of the English martyrs, and in its place we find inserted that of the Venerable Richard Williams, a “Queen Mary Priest”, who really suffered four years later.

J. H. POLLEN.

Hartmann, Georg, mechanician and physicist; b. at Eckoltzheim, Bavaria, 9 Feb., 1489; d. at Nuremberg, 9 April, 1564. He studied theology and mathematics, probably with Glareanus and Melanchthon. After travelling in Italy he settled down in Nuremberg in 1518 as mechanician. There he constructed a great many globes, astrolabes, sundials, and similar instruments. To him is attributed the discovery, in 1544, of the so-called dip or inclination of the magnetic needle. If a steel needle is carefully balanced on a horizontal axis and is then magnetized, it will be found to take an inclined position, the angle depending on the locality. Later he became vicar of St. Sebaldu’s church in Nuremberg. He published a number of papers on astrological subjects.

WOLK, Geschichte der Astronomie (Munich, 1877).

WILLIAM FOX.

Hartmann von Aue, a Middle High German epic poet and minnesinger; d. between 1210 and 1220. Little is known concerning his life; neither the place nor the date of his birth has been ascertained. He was a Swabian knight in the service of the Lords of Aue, and was exceptionally well-educated for a layman of his time before receiving a liberal education, possessing a knowledge of French and Latin, besides being well versed in the literature of his time. His
life was comparatively uneventful. The death of his fiege lord, whom he mourns in tender verses, was the occasion of his joining a crusade, whether that of 1197, or the earlier one of 1189, is uncertain. He must have died by 1210, for Otfried of Freising in his "Tristan", composed about that year, speaks of him as still living, while Heinrich von dem Türlin in his "Krone", written between 1215 and 1220, mentions him as one deceased. Hartmann is the author of a number of lyric poems in the fashion of the age, often under the name of "Krone". More original than these Minnesongs are his crusading lyrics. He also wrote two bucheln poetic epistles of an amatory nature; but his authorship of the second of these epistles is disputed. His fame rests on his four epics, "Erec", "Iwein", "Gregorius", and "Der arme Heinrich" (Poor Henry). The "Erec", Hartmann's earliest work, composed about 1192, marks the introduction of the Arthurian romances into German literature. It was modelled on the French poem of Chrestien de Troyes, but considerably amplified and otherwise altered. Its fundamental motif is the conflict between Minne and knightly bonds. Erec neglects his knightly duties in his devotion to his lovely bride Enite; when reproached by her, he makes her accompany him on an expedition which restores his tarnished prestige, but in the course of which Enite suffers the harshest treatment. In the end the lovers are reconciled. In the "Iwein" Chrestien's "Chevalier au Lin" on the same motif is utilized, but here the hero, having neglected his wife for knightly adventures, is rejected by her and goes insane. After passing through many ordeals he regains her favour. In this poem the court epic is shown in its classic form. Less pretentious are the legendary epics. "Gregorius", based on a French poem of unknown authorship, is the story of a medieval Oedipus, who unwittingly marries his own mother, but atones for his enormities by most rigorous penance, and in the end is esteemed a saint and elected pope. "Der arme Heinrich" is a charming tale of womanly devotion. A poor maid offers herself as a sacrifice that her lord, who is snubbed with leprosy, may be healed. But at last the moment the knight refuses the sacrifice; as a reward he is miraculously restored to health and the maiden becomes his wife. For this work the poet used a written source, probably a Latin chronicle, of which however nothing definite is known.

Hartmann was the favourite poet of courtly circles, whose ideals are most perfectly reflected in his works. The faultless form and polished diction of his epics made them the classic models for subsequent poets. A complete edition of Hartmann's works is that of Fedor Bech (2nd ed., 3 vols.) in "Deutsche Klassiker des Mittelalters", edited by Pfeiffer, IV–VI (Leipzig, 1887–1893). Selections were edited by P. Piper in Kürscher's "Deutsche Nationallitteratur". There is a separate edition of "Erec" by M. Haupt (2nd ed., Leipzig, 1871); of "Iwein" by Emil Henrici (Halle, 1884); of "Gregorius" by H. Paul (3rd ed., Halle, 1904); of "Der arme Heinrich" by H. Paul (3rd ed., Halle, 1904). Translations of the last-mentioned work into modern German were made by Simrock (2nd ed., Heilbronn, 1874), Böttcher (Halle, 1891), and Legerlotz (Bielefeld, 1904).

See the introductions to the editions above mentioned; also SCHÖNBACH, Ueber H. von Ams (Gras, 1894); PIQUET, Étude sur H. d'Ams (Paris, 1898).

Arthur F. J. Remy.

HASAK, VINCENZ, historian, b. at Neustadt, near Friedland, Bohemia, 18 July, 1812; d. 1 September, 1889, as dean of Weisskirchitz, near Teplice. After completing his theological studies at Leitmeritz, he became chaplain at Amsdorf, a post he held for eighteen years. Thenceforth to his death he was pastor at Weisskirchitz. While chaplain, he began to collect old books, paintings, and copper-plate engravings, also gems and shells. He succeeded in collecting a small but valuable museum, that excited the astonishment of all connoisseurs for the treasures it contained. His library at Weisskirchitz was formed not only because of the copious collection of rare early printed books, e. g. the ten pre-Reformation German translations of the Bible. He also made a scientific use of his treasures, and wrote several books about them, notable contributions in his day to the knowledge of medieval German religious life and the German language. Especially worthy of mention are: "Der christliche Glaube des deutschen Volkes beim Schluss des Mittelalters" (Ratisbon, 1868), a very valuable and authoritative work, treating of ninety-three printed books and manuscripts; "Dr. M. Luther und die religiöse Literatur seiner Zeit bis zum Jahre 1530" (Ratisbon, 1881) a documentary description of the religious and moral conditions of the Middle Ages; also: "Die Himmelstrasse" (Ratisbon, 1882); and "Die letzte Rose, oder Erklärung des Vater Unser nach Markus von Weida." (Ratisbon, 1883); "Ein Vergissmeinnicht, oder Von der heiligen Messe" (Ratisbon, 1884); finally, "Hartmann von Amsdorf und die christliche Kunst in der vorreformatorischen Zeit" (Ratisbon, 1885).

Historisch-politische Blätter, LXXXIX (1882), 645.

Patricius Schlager.

HASAK, LORENZ LEOPOLD, the poet-author of the Austrian national anthem; b. at Vienna, 1 Sept., 1749; d. there, 3 Aug., 1827; was in his youth a member of the Society of Jesus. On the suppression of the Society (1773) he devoted himself, in secular life, to poetry; this was now to become his occupation and his means of livelihood. His pupil, the wealthy Johann v. Axinger, the most distinguished of Wieland's imitators, came to the assistance of the poor instructor. Hasak also found aid in the home of the poetess, Karoline Fichler. Unfortunately, the ex-Jesuit, under the influence of Joseph II, renounced his principles: he became a freemason and wrote venomous odes against the papacy, during the presence of Pius VI in Vienna, as well as against the religious orders. He returned, however, to his Catholic sentiments after the death of Joseph II, and was selected to compose a national hymn. This was sung on 12 February, 1797, at the celebration of Emperor Francis's birthday. Hasak was given a position as assistant in the library of the university of Vienna and was made instructor in aesthetics in the newly founded Theosophian. He retired in 1824. As a poet, he belongs to the group of poet-musicians. (Graetz, Gründersjahrbuch, 1897, 32–127 (really a biogra phy)); NAGEL and ZEIDLER, Deutsche-Dichter. Literaturgesch., last volume, p. 331, 336; Sommervogel, Bibliothek der Gesellschafts-C. d. J., 1.

N. Scheid.

HASINGER, JOHANN Simon (Joachim), Tyrolese priest and patriot; b. at Gries, Tyrol, 28 October, 1776; d. in the imperial palace of Mirabell, Salzburg, 15 January, 1853; was very popular with the people, and destined their son for the priesthood. It was, however, only in 1793, after having devoted himself until his seventeenth year to farm work and mountain-climbing, that he entered the gymnasium at Bozen. While yet a mere youth, he found occasion to give proof of his intrepidity. In 1796 he joined a troop of volunteer marines, intended to train the regular troops in defending their native soil against the army of the French Revolution, and, by capturing one of the enemy's officers, won the medal for bravery. He also took an active part in the engagements near Spinges in 1797, in consequence of which General Joubert was commanded to the Pusterthal. Young Hasinger then resumed his studies and in 1799 attended for some time the University of Innsbruck. The almost immediate renewal of hostilities,
however, did not permit the continuation of his studies. The fight in the Tauerthal saw him again among the foremost. Returning later to the university, he attended medical lectures for a few terms, but in 1802 joined the Capuchin Order at Epfn, named after Joseph. As a member of the order, he took the name of Capuchin. Ordained priest on 1 September, 1805, he laboured first at Schlanders in Vinschgaub. During the Austro-Russian war against Napoleon, he served as chaplain among his fellow-countrymen, but even then could not altogether resist his inclination towards his native mountains. Under the name of "capuchin" he joined the struggle against the intersecting Highlanders, and thus compelled to take flight, Haspinger withdrew at first to Switzerland, but later returned to his native mountains, and lay for some months in concealment at Tschengia. Danger again threatening him here, he soon took up occupation in the Swiss territory and, under an assumed name, worked for a whole year as an upholsterer's assistant. He then contrived to make his way through Upper Italy to Klagenfurt, where he could at last rest in safety. The emperor gave him all necessary assistance from the privy purse until the Archibishop of Vienna assigned him to a good parish in Lower Austria. In 1816 he again performed important services for his country as a spy and agitator. He subsequently administered the parish of Frauenfeld until 1836, after which date he received a pension and resided at Hietzing, near Vienna. In 1848, although he was then seventy-two years of age, he again took the field as chaplain to a company of Tyrolese mountainmen enrolled in the Austrian army and took part in the bloody fray, and thus secured his promotion to the rank of assistant. In 1853 he wrote on the muster roll: "Joaschim Haspinger gibt Blut und Leben für Gott, Kaiser u. Vaterland" (Joaschim Haspinger gives blood and life for God, emperor, and fatherland). The aged patriot naturally took no active part in the campaign, but he well knew how to fan into flame the glowing spirits of his young countrymen. On 28 and 29 May he commanded the left wing of the peasant army, operating near Natters. Armed only with his stick, and reckless of danger, hour after hour he led attacks on the well-posted Bavarian troops and their artillery, without parley or parole, until the enemy were dislodged and their battery captured. On the following day he marshed victorious to Innsbruck in company with Hofer, whose urgent representations alone succeeded in prevailing on Haspinger's religious superiors to allow him to remain with the patriotic division of the Tyrolese army.

Klausen, where his levies with indescribable valour and valour solely to prevent the enemy from penetrating to Bogen. The whole country now fell rapidly into the hands of the allied French and Bavarians, and a price was set on his head. He thus felt forced to leave the Tyrol, and take up his abode in Switzerland and later in Germany. His return was thus delayed until 1853, when he was able to revisit his native mountains. Of course it is proved that he took part in the struggle against the intersecting Highlanders, and thus compelled to take flight, Haspinger withdrew at first to Switzerland, but later returned to his native mountains, and lay for some months in concealment at Tschengia. Danger again threatening him here, he soon more sought shelter in the Swiss territory and, under an assumed name, worked for a whole year as an upholsterer's assistant. He then contrived to make his way through Upper Italy to Klagenfurt, where he could at last rest in safety. The emperor gave him all necessary assistance from the privy purse until the Archibishop of Vienna assigned him to a good parish in Lower Austria. In 1816 he again performed important services for his country as a spy and agitator. He subsequently administered the parish of Frauenfeld until 1836, after which date he received a pension and resided at Hietzing, near Vienna. In 1848, although he was then seventy-two years of age, he again took the field as chaplain to a company of Tyrolese mountainmen enrolled in the Austrian army and took part in the bloody fray, and thus secured his promotion to the rank of assistant. In 1853 he wrote on the muster roll: "Joaschim Haspinger gibt Blut und Leben für Gott, Kaiser u. Vaterland" (Joaschim Haspinger gives blood and life for God, emperor, and fatherland). The aged patriot naturally took no active part in the campaign, but he well knew how to fan into flame the glowing spirits of his young countrymen. On 28 and 29 May he commanded the left wing of the peasant army, operating near Natters. Armed only with his stick, and reckless of danger, hour after hour he led attacks on the well-posted Bavarian troops and their artillery, without parley or parole, until the enemy were dislodged and their battery captured. On the following day he marshed victorious to Innsbruck in company with Hofer, whose urgent representations alone succeeded in prevailing on Haspinger's religious superiors to allow him to remain with the patriotic division of the Tyrolese army.

A little later he played an illustrious part in the contests in the Eiskthal (4–5 August), where his "stone batteries" proved fatal to hundreds of men and horses, and compelled the majority of the enemy to capitulate (the Saxon ambush'). To the "red-beards of Tyrol" (Tyler Hasbord) also belongs the chief credit of blocking the way of General Lefebre, who was advancing from Sterzing, forcing him to withdraw, and inflicting severe losses on his troops during their retreat. For the victory in the second battle on Mount Isel (15 August) the Tyrolese were again badly defeated to Haspinger, who commanded the left wing. Unfortunately, these successes seemed to intoxicate Haspinger, whom everything now seemed possible, and who proceeded in all earnestness with preparations to carry the war beyond the frontiers, to incite to rebellion the populations of the Austrian and Bavarian lands, and prepare a rising in the Tyrol. Haspinger, however, after some early successes, his undisciplined followers were dispersed at Hallein. Although no one of calm judgment could have failed to recognize the futility of further prolonging the struggle, Haspinger would not hear of submission and through the evil genius of Hofer and of many other brave men. Even the adverbial battle at the third battle on Mount Isel (1 November) did not bend his iron spirit; he took the field for the last time near

mation of music, where his critical judgment and cul-
vilized taste did much for the advancement of the
highest musical art. He had a peculiarly impartial
mind, which implies the rejection of a rigid prin-
ciple of style and vigour of expression. Most of his
literary life was spent as a journalist, but in addition
to his work as such and his contributions to the maga-
azines he wrote a very comprehensive life of
Archbishop John Hughes of New York, and a short
one of Pope Pius IX with his writings on a "History of
the United States" in both extended and abridged
forms for use in Catholic colleges and schools.

THOMAS F. MEEHAN.

Hasslacher, Peter, preacher; b. at Coblenz, 14
August, 1810; d. at Paris, 5 July, 1876. He was one
of that band of missionaries from the Society of Jesus
whose fruitful labours throughout Germany, from Frei-
burg to Berlin and Danzig, reawakened and strength-
ened the country's Catholic forces after the stormy
year of 1805. This avowedly Jesuit was, however, not
pestiferous. As a medical student at the university in
Bonn, in 1831, he identified himself with the German
student movement, which was looked upon as revolu-
tionary; and he was compelled, in consequence, to
undergo seven years' confinement at Berlin, Magde-
burg, and Eichstet, the latter in order to lose the
imposed tonsure. During this period he underwent a
spiritual change, and in particular, by studying the
Fathers of the Church, stored his mind with theological
knowledge; after his liberation he entered, in the spring of 1840, the novitiate of the
Society of Jesus, at St-Acheul, France. He was or-
tained to the priesthood, on 1 Sept., 1844, and then
preached with much success in the cathedral of Stras-
burg, until the year 1849. It was at this time that the
popular missions were inaugurated in Germany;
but Hasslacher's delicate health could not long with-
stand the physical exertions entailed; and this appar-
etly disadvantage and disadvantage led the zealous
hearted missionary into a field of activity which was
peculiarly his own, namely, the conference. This he
himself explains in a detailed letter (Deutches Or-
densarchiv) written from Bad Ems to his provincial
in 1860. He gave conferences in all the larger cities of
the district of the Rhine and Westphalia. His
son, however, he was sent in 1863 to conduct, in
Paris, the St. Joseph's Mission for German Catholics;
but even this labour became after ten years too much
of a tax on his physical powers, so that he was com-
pelled to abandon it and to take up similar but
lighter duties at Potters. After a year he was brought back, very ill, to Paris, where he died.

Hartmann, Erinnerungen an P. Hasslacher (Münster, 1879),
with numerous letters and twenty-three sketches for lectures;
the author makes use of Ernst Weber, Cartas aus dem deut-
schen Kirchenleben (Mains, 1858). 451 sqq.: Hasslacher's letter on his lectures is not used in these works; many corrections and suppementary data, therefore, must be borne in mind in its
connexion; this criticism holds also for the articles in the

N. SCHEID.

Hatred in general is a vehement avermion enter-
tained by one person for another, or for something
more or less identified with that other. Theologians
commonly mention two distinct species of this passion.
One (odium abominacionis, or loathing) is that in
which the intense dislike is concentrated primarily
on the qualities or attributes of a person, and only sec-
darilly, and as it were derivatively, upon the person
himself. The second sort (odium intimenticis, or hos-
tility) aims directly at the person, indulges a pro-
pensity for evil that is virulent, and produces a
fierce satisfaction at anything tending to its dis-
credit, and is keenly desirous that its lot may be an
unmixedly hard one, either in general or in this or that
specified way. This kind of hatred, as involving a
very direct and absolute violation of the precept of
charity, is always sinful and may be grievously
so. The first-named species of hatred, in so far as it
implies the rejection of whatever is evil, is not a sin and may even represent a virtuous temper of soul. In other words, not only may I, but I even ought to, hate what is con-
trary to the moral law. Furthermore one may without sin go so far in the detestation of wrong-
doing as to wish that for its perpetrator it is a
very well-defined evil, yet under another aspect is a
much more signal good. For instance, it would be
lawful to pray for the death of a perniciously active
heresarch with a view to putting a stop to his ravages
among the Christian people. Of course, it is clear
that this apparent seal must not be used as an excuse
catering to personal spite or party rancour. Still,
even when the motive of one's averseion is not imper-
sonal, when, namely, it arises from the damage we
cannot be, let them be set to others, we are not
guilty of sin unless besides feeling indignation we
yield to an averseion unwarranted by the hurt we have
suffered. One must not love self to the point of
sinfulness in proportion to its excess over that which the injury would justify. When by any conceivable stretch of human wickedness God Himself is the object of hatred the guilt is appallingly special. If it be
that kind of enmity (odium intimenticis) which prompts the
person to wish the hitter to be removed immediately from God; in other sins it does so only
mediately and by consequence, that is, because of its
inordinate use of some creature it is averted from
God. To be sure, according to the teaching of St.
Thomas (II-II, Q. xxiv., a. 12) and the theologians,
any mortal sin carries with it the loss of the super-
natural habit of charity, and implies so a sort of virutal and interpretative hatred of God, which,
however, is not a separate specific malice to be referred
to in confession, but only a circumstance predicable of
every grievous sin.

art, Aquinas Et hicus (London, 1866); Balkeini, Opus Theo-
logicum Morale (Prato, 1868); Lembergu, Theologia Moralis (Freiburg, 1887).

JOSEPH F. DELAUN.

Hatto, Archbishop of Mainz; b. of a noble Swabian
family, c. 850; d. 15 May, 913. He was educated at
the monastery of Eillwangen in Swabia, became a
Benedictine monk at Fulda, was elected in 888 Abbot
of Reichenauf, and, a year later, also Abbot of Eillwangen.
As abbot of these two imperial monasteries he
exercised a great influence on the political affairs of
Germany. On account of his deep insight, his energy,
and his unselfish devotion to the royal throne, King
Arnulf of Germany appointed him Archbishop of
Mainz in September, 891. In 892 he presided over a
synd by Frankfort, at which the rights of the Arch-
bishop of Cologne over the Diocese of Bremen were
discussed by order of Pope Formosus. He likewise
presided over the great politico-ecclesiastical assem-
bly at Tribur (now Trier), near Mainz, in May, 895
(Mainz, Conn. Conc. Ampl., XVIII, 129-160). When
in 894 Pope Formosus called upon King Arnulf to de-
 fend him against Guido (or Wido) of Spoleto and his
son Lambert, Hatto accompanied the king to Italy.
He also accompanied him on a second expedition to
Italy (from the autumn 895 to the spring 896), on
which occasion he had received the pallium from Pope
Formosus at Rome.

In his far-reaching political activities Hatto was
guided by the idea of a consolidated German kingdom
with a strong king possessing the central authority.
HAUÉAU

For this reason he was hated by the dukes who desired to break up the German nation into independent states. After the death of Arnulf in 989, the election of King Louis the Child, the six-year-old son of Arnulf, is chiefly due to Hatto, who with prudence and strength administered the affairs of the State during the short life of the young king (d. 911). The election of Conrad I, Duke of Franconia, as King of Germany was again the work of Hatto. During the remaining two years of his life Hatto was the chief councillor of Conrad I. Hatto has been greatly maligned by historians. His alleged implication in the “treacherous” capture of Duke Adalbert of Badenberg was probably an invention of his enemies, and the fable of the “Mausethurn”, where he is said to have been eaten up by mice and rats in punishment for his hard-heartedness during a famine, has no historical foundation. The same story is related of Hatto II, Archbishop of Mainz (968–970), and of many other persons.

DAMMERT, Hatto I Erzbischof von Mainz in Freiburger Progr. (1864. 1865); HEIDEMANN, Hatto I. Erzb. von Mainz (Berlin, 1865); WIL, Regesten der Mainzer Erzbischöfe (Innsbruck, 1877). I. For the fable of the “Mausethurn”: BARRON, Curious Myths of the Middle Ages (London, 1901), 447–470.

Hatto, Bishop of Vercelli. See ATTO OF VERCELLI.

Hatton, Edward Anthony, Dominican, apostolize; b. in 1701; d. at Stourton Lodge, near Leeds, Yorkshire, 23 October, 1783—according to some authorities, 1731. He was probably the son of Edward Hatton, yeoman, of Great Crosby, Lancashire, who registered his estate as a Catholic non-juror in 1717, and whose family appears in the recusant rolls for many generations. He received his education in the Dominican college at Bornhem, near Antwerp, where he was sent on 25 May, 1750, taking the religion of Antoninus. Having filled the duties of teacher for several years, he was ordained priest and on 7 July, 1730, he left college for the mission work in his own country. He first officiated as chaplain, in turn, to several gentlemen in Yorkshire, and in the year 1749 he went to assist Father Thomas Worthington, O.P., at Midleton Lodge, near Leeds. After the latter’s death, which occurred on 25 February, 1753 (or 1754), Father Hatton was entrusted with the care of the mission. Shortly afterwards he was compelled to remove the mission to Stourton Lodge, where ultimately he succeeded in having a new chapel erected (1776), but a few miles distant from the scene of his former labours. Twice was Father Hatton appointed to the office of provincial of his order in England: on 21 May, 1754—until the year 1758; his second term of office lasted from 5 May, 1770, till 1774. In 1776 he began the mission at Hunslet, near Leeds, but did not live long to behold the unfolding of the work he had originated.

His writings include: “Moral and Controversial Lectures upon the Christian Doctrines and Christian Practice (By E. H.)”. To this work neither place of publication nor date is assigned. “Memoirs of the Reformation of England; in two parts. The whole collected chiefly from Acts of Parliament and Protestant historians”, published (London, 1826; 2nd ed., 1841) under the pseudonym of Constantius Archæophilus. Hatton is also the author of “Miscellaneous Sermons upon some of the most important Christian Duties and Gospel Truths”, 7 vols. MS.

P. J. MACAULEY.

HAUÆAU, a titular see of Palestine Tertia, suffragan of Petra. Peutinger’s map locates a place of this name thirty-eight miles south of Petra (see Clermont-Ganneau in “Revue biblique”, N. S., III, 419–421). The city is also mentioned by Ptolemy (V, 18) and by the “Notitia dignitatum” (ed. Boecking, 79), which mentions the diocese of Hauara, which, however, is certain distinct from the Hauara of Stephen of Byzantium, the λιχα τος of the Greeks, a harbour of the Red Sea, but it has been impossible to discover its location. It is unknown even when it became a titular see, because it is not found before the 11th century. This Hauara, which is situated between Aila and Petra, is certainly distinct from the Hauara of Stephen of Byzantium, and does not figure in any episcopal “Notitiae”. It must not be confounded with Hauria, a Jacobite see in Mesopotamia.

LEQUIN, Oriens Christianus, II, 1507.

S. VAÎTILÉ.

Haudriettes, a religious congregation founded in Paris early in the fourteenth century by Jeanne, wife of Etienne Haudry, a private secretary of St. Louis, King of France. During a prolonged absence of her husband on a pilgrimage to the tomb of St. James of Compostela, Jeanne, believing him dead, gathered under her roof a number of pious women, with whom she made a vow of perpetual chastity, and consecrated herself to a religious life devoted to the service of the Church. On his return in 1239, Etienne obtained for his wife a dispensation from her vow on condition that the pious association be permitted to retain his house and be endowed with a capital sufficient for the maintenance of twelve poor women. He also erected a chapel for the community, which was soon in possession of its own hospital, and rapidly increased in numbers. The statutes of the Haudriettes, as prescribed for them by Cardinal d’Ailly, were approved in 1414 by Cardinal Nicolò da Pisa, legate of John XXII, and later confirmed by several pontiffs. A gradual relaxation in the original fervour of the congregation caused a thorough reform to be instituted under Cardinal de La Rochefoucauld, Grand Almoner of France. Gregory XV placed the religious under the Rule of St. Augustine, the vow of poverty being added to those of chastity and obedience, and monastic observance and the recitation of the Office of the Blessed Virgin imposed. In 1622 the mother-house was transferred to Rue Saint-Honoré, where a new monastery and church were built, the latter being dedicated to the Assumption of Our Lady, from which the religious were thenceforth called Daughters of the Assumption. The congregation was not restored after the Revolution.

F. M. RUDGE.

Hauran. See BOSTRA.

HAURANN, DUVERGIER DE. See DUVERGIER DE HAURANNE.

Haurané, Jean-Barthélemi, historian and publicist; b. at Paris, 1812; d. there, 1896. He was educated at the Louis le Grand and Bourbon schools of his native city, and won high honours at his public examination. After graduating he became a journalist, and soon was a contributor to several democratic papers: “La Tribune”, “Le National”, “Le Droit”, “La Revue du Nord”. In 1838 he took the chief editorship of the “Courrier de la Sarthe” and was appointed librarian of the city of Le Mans, which position he retained until 1845, when he was dismissed on account of comments of his on the daring speech of the Mayor of Le Mans to the Duke of Nemours. He returned to Paris and once more became one of the editors of “Le National”. In 1848 the department of Le Sarthe sent him to the Constituent Assembly, but his political career was neither long nor remarkable. In the same year he had been appointed keeper of the manuscripts at the Bibliothèque
Nationale, but he resigned in 1851 in order to protest against the coup d'état of Louis Napoléon. In 1861 the Association of Advocates chose him as its librarian, and in 1863 he became a member of the Académie des Inscriptions et Belles-Lettres. From 1871 to 1882 he was director of the Imprimerie Nationale. While Haureau was not always sound in his philosophical views, he died as a good Catholic, after receiving the sacraments of the Church.

He was a voluminous writer. He contributed to the "Phrasale" of Lucan and the "Facétie sur la mort de Claude" of Seneca, two translations, to the collection of Latin classics of Nisard. Besides writing numerous articles for political and historical cyclopedias, he published a number of important works on history and philosophy:- "Histoire littéraire du Maine" (Paris, 1843-52); "Manuel du Clergé" (Paris, 1844); "Histoire de la Pologne" (Paris, 1846); "Charlemagne et sa cour" (Paris, 1854); " François ler et sa cour" (Paris, 1855); "Hugues de Saint-Victor" (1855-1859); "Singularity historiques et littéraires" (Paris, 1861); "Histoire de la philosophie scolastique" (Paris, 1872-80), the best-known of his works; "Le commentaire de Jean Scot Erigena sur Martinus Capella" (Paris, 1891), etc. He is also the author of vol. XIV and XV of "Gallia Christiana" (Paris, 1856-1865).

P. J. MARIQUE.

Hautecombe (ALTACOMBA, ALTACOMBRE), a Cistercian monastery near Aix-les-Bains in Savoy, Diocese of Chambéry (formerly Geneva): founded about A. D. 1101 in a narrow valley (or comb) between hills near the Lake of Bourget by hermits from Aulps, in the Lake of Geneva. About 1125 it was transferred to a site on the north-western shore of the lake under Mont du Chat, granted to it by Amadeus, Count of Savoy; and shortly afterwards it accepted the Cistercian Rule from Clairvaux. The first abbots was the saintly and learned Amadeus de Haute-Rive, afterwards Bishop of Lausanne. Two daughter-houses were founded from Hautecombe at an early date: one at Fossans-Nublais (For Appio), in the Diocese of Terracina, in 1135, and the other, S. Angelo de Petra, close to Constantino- ple in 1214. Celestine IV and Nicholas III have been claimed as "alumni" of Hautecombe, but this is disputed by Janssheck, the historian of the Cistercian Order. The chief endowment of Hautecombe, apart from the beauty of its situation, arises from its having been for centuries the burial-place of the Counts and Dukes of Savoy. Count Humbert III, known as "Blessed", and his wife Anne were interred there in the latter part of the twelfth century; and about a century later, Boniface, Archbishop of Canterbury (1245-1270). Thomas was buried in the sanctuarv of the abbey church. He had come out from England with King Edward I to accompany him in a crusade, but died at the castle of St. Helena in Savoy. The last abbot, Anthony of Savoy, a son of Charles Emmanuel I, was interred there in 1673. The abbey was restored (in a desolate state) by one of the dukes about 1750, but it was secularized and sold in 1792, when the French entered Savoy, and was turned into a china-factory. King Charles Felix of Sardinia purchased the ruins in 1824, had the church rebuilt and re-consecrated, and restored it to the Cistercian Order. He and his queen (Maria Christina of Naples) are buried in the Chapel, which forms a vestibule to the church. Some 300 statues and many frescoes adorn the interior of the church, which is 215 feet long, with a transept 88 feet wide. Most of the tombs are more than reproductions of the medival monuments.

D. O. HUNTER-BLAIR.

HAUTEOULLE, JEAN DE, French physicist, b. at Orléans, 20 March, 1847; d. there, 18 October, 1924. He was the son of a baker and was brought up in humble circumstances. While a merchant he attracted the notice of the Duchess of Bouillon and was aided by her in his studies. She proved a generous patroness to him during her life and left him a pension at her death. He traveled in her suite through England and Italy, and received several benefits from her after his entrance into the ecclesiastical state. He was endowed with an inquiring mind, and gave much attention to the practical problems of mechanics and particularly of horology. One of his most important achievements in the improvement of timepieces was the proposal to employ a spiral spring with a balance wheel in place of a pendulum to control the mechanism. Hooke had also made the same suggestion, and each claimed the right of priority. To Huyghens, however, must be given the credit of perfecting the device, and the first watch provided with a hair spring is said to have been made under his direction. In acoustics Hautefeuille investigated the action of speaking trumpets, and wrote an essay on the causes of echoes, which was crowned by the Academy of Bordeaux in 1718. He made improvements in lenses, and suggested a method of raising water by the explosive action of gun-power. The phenomenon of the tides also excited his interest, and he invented an instrument called a thalassometer for their registration.

Though not without genius, Hautefeuille lacked the power of perfecting his inventions. He was too often inclined to publish his ideas prematurely and then abandon them to take up something new. The Paris Academy of Sciences attested the value and usefulness of many of his discoveries, but it interfered on him the honour of electing him as a member. He was the author of a number of essays on a variety of subjects. Among them may be mentioned: "Ex- plication de l'effet des trompettes parlantes" (1673); "Pendule perpétuelle, avec un moyen d'élever l'eau par la poudre à canon" (1675); "L'art de respirer sous l'eau" (1692); "Nouvelle moyen de trouver la déclinaison de l'aiguille aimantée avec une grande précision" (1863); "Microscope micrométrique, gnomon horizonal, et instrument pour prendre les hauteurs des astres" (1703); "Problèmes d'horiogérie" (1719); "Nouveau système du flux et du reflux de la mer" (1719).

HENRY M. BROCK.

HAUTEROPE (ALTEREREA), (1) ANTOINE DADIN D' B. 1692, d. 1692: a distinguished French historian and canonist, dean of the faculty of law at the University of Toulouse. He had a familiar knowledge of the writings of the Greek and Latin Fathers and the councils of the Church, and was held in the highest estimation by the French clergy. It was he who, at the request of two bishops, critically reviewed (1670) certain legal treatises concerning a certain province, and refuted them. He was the author of many important works on feudal and Roman law, the antiquities of Aquitaine, ecclesiastical and monastic antiquities, and

(2) FLAVIUS, younger brother of the above, died about 1670; professor of law at Poitiers, also a learned canonist and annotator (1630) of the early canonical collections of Fulgentius Ferrandus and Cresconsius Afer.

FRANCIS W. GREY.

**Hauty**, (1) RENE-JUST, mineralogist; b. at Saint-Just (Oise), 28 Feb., 1743; d. at Paris, 3 June, 1822. His father was a poor weaver and he owed his early education to the monks of the Premonstratensian Abbey of Saint-Just, who were struck by his talent and piety and his predilection for ecclesiastical chant. Their prior sent him to Paris, where he served for a time as chorister and then was admitted to the College of Navarre. After a successful course of study he was made one of the teaching staff. A few years later he was ordained priest and became professor at the college of Cardinal Lemoine. Up to this time literature had been his chosen study, but a friendship for one of his fellow-professors induced him to take up botany. His interest was, however, more powerfully awakened in mineralogy by some lectures of Daubenton which he happened to hear at the Jardin du Roi. The crystalline structure of minerals appealed to him more than their chemical or geological characteristics. It is said that while examining the crystal collection of Du Croisset, he had the misfortune to drop a fine specimen of calc-spar which broke into pieces. This accident proved the beginning of those exhaustive studies which made him the father of modern crystallography. He examined the fragments and was struck by the forms which they assumed. Many specimens were studied and he found that crystals of the same composition possessed the same internal nucleus, even though their external forms differed. He also established the law of symmetry and was able to show that the forms of crystals are perfectly definite and based on fixed laws.

The merit of his discoveries was early recognized by Daubenton and Laplace. They urged him to make them known to the Academy of Sciences, which admitted him to membership. Besides his researches in crystallography, Hauty was also one of the pioneers in the development of pyro-electricity. After twenty years' service, he retired from his professorship at the college of Cardinal Lemoine, to devote himself exclusively to his favourite science. During the Revolution he suffered much in common with other ecclesiastics who refused to take the oath demanded of them. His papers were seized, his collection of crystals scattered, and he himself was imprisoned at the Séminaire de Saint-Firmin. Nothing, however, could disturb his equanimity. He continued his studies as before, and it was only with difficulty that his college superintendents, Saint-Hilaire and Mongini, induced him to accept the release he had procured for him. In 1794 he was appointed curator of the Cabinet des Mines, and in the same year he became professor of physics at the Ecole Normale. After the death of Dolmieu he was appointed to the chair of mineralogy at the Museum of Natural History, in Paris, and the lectures he gave there materially increased the collections. After the Restoration he was deprived of his professorship and spent his last days in poverty. His courage and cheerfulness, however, never deserted him. His life was simple and his character lofty, and he ever remained faithful to his duties. Poetry and literature, however, gained the affection of his students and the esteem and homage of their contemporaries. Napoleon held him in admiration and made him honorary canon of Notre Dame and one of the first members of the Legion of Honour.

Hauty was the author of many important works, the chief being "Essai d'une Théorie sur la Structure des Cristaux" (Paris, 1784); "Exposition raisonnée de la Théorie de l'Electricité et du Magnétisme" (Paris, 1787); "Traité de Minéralogie" (Paris, 1801); "Traité élémentaire de Physique" (Paris, 1803); "Traité de Cristallographie" (Paris, 1817).

HENRY M. BROCK.

**Hauty**, (2) VALENTIN HAUTY, founder of the first school for the blind, and known under the endearing name of "Father and Apostle of the Blind", b. at Saint-Just, in the department of Picardy, France, 13 November, 1745; d. at Paris, 19 March, 1822. He received his early education with his elder brother, René, at the abbey school of the Premonstratensians, not far from Saint-Just. Valentín never became a priest. After his preliminary studies he went to Paris, where he applied himself to calligraphy and to modern languages. He was taught for a time to support himself, until he became attached to the Ministry of Foreign Affairs as an interpreter of state papers and foreign despatches. The inspiration to devote the remainder of his life to the education of the blind came to Hauty in 1771 after witnessing a fair, in one of the suburbs of Paris, a burlesque performance in which the blindness of sightless beggars was made the object of ridicule and general merriment. "I shall substitute truth for mockery", he said to himself; "I shall teach the blind to read and to write, and give them books printed by themselves." This was no empty boast. The inspiration to do for the blind what the Abbé de l'Épée was then doing for the deaf and dumb became an accomplished fact thirteen years later. In June, 1784, Hauty sought his first pupil at the church door of Saint-Germain des Prés. François Lesueur, who was a beggar and blind from birth, was then sixteen years old. Hauty prevailed upon him to give up begging by promising to support his parents. Before the fall of 1786 Hauty had made the discovery of what had only dimly been foreshadowed, the art of printing books in relief for the blind. This discovery, the undoubted triumph of Saint-Hilaire's ingenuity, solved for all time the most difficult problem in the education of the blind, and, with the foundation of the first school for the blind, led to a movement which has resulted in the social and intellectual rehabilitation of the blind throughout the whole civilized world. By 5 December, 1786, Hauty's pupils had embossed from movable type the first book ever published for the blind (see s. V. Education of the Blind, V, 308). On 26 December of the same year, twenty-four of Hauty's pupils gave a recital in the presence of Louis XVI and the royal family an exhibition of their attainments in music, writing, arithmetic, handicraft work, and orchestral music. With the patronage of the king, Hauty had also secured for his school the
Havana

(approval of the Academy of Science and Arts and the support of the Philanthropic Society. During the French Revolution and the subsequent disorganisation of the Philanthropic Society, Hauty's school lacked its wonted support. Although the National Assembly, and later on the Convention, had declared it a national institution and had voted for it an annual subsidy, yet so scanty was the help accorded to it that it barely survived the Reign of Terror. In 1801, on a report to Napoleon from Chartal, Minister of the Interior, the school was merged with the Hospice Quercy-Vignole. A year later, Napoleon confirmed Hauty the direction of the school and granted him a pension of 2000 francs. In February, 1802, Hauty started a private school in the rue Sainte-Avoye. Through lack of funds, however, the "Musée des Aveugles," his new foundation, never attained much prominence. In 1806, on the invitation of Alexander I, Hauty left for St. Petersburg, where he founded, in 1808, a school for the blind, on the model of the National Institution in Paris. On his way to Russia, Hauty had an interview at Charlottenburg with Frederick William III of Prussia. He prevailed upon the king to found an institute for the blind in Berlin. In 1810 he founded the Zeune as its first director. From his arrival at St. Petersburg, 9 Sept., 1806, until his departure, Hauty's devotion and zeal in doing for the blind of Russia what he had done for those of his own native country were put to many a severe test, and rewarded with but scanty gratitude. Weakened with age and infirmity, Hauty wished to die in France. He left St. Petersburg in 1817. On his return to Paris he went to live with his brother, the Abbé Hauty, in whose arms he peacefully expired.

The publications of Valentin Hauty are his "Essai sur l'éducation des aveugles" (Paris, 1786), and "Mémoire historique sur les télégraphes" (Paris, 1810).

DE LA SHERRADER, Les aveugles par un aveugle (Paris, 1904); MELL. Encyklopädisches Handbuch der Blindenwesen (Leipzig, 1909), et histoire de l'instruction nationale des jeunes aveugles (Paris, 1907).

JOSEPH M. STADELMAN.

Hauzeur, Mathias, Franciscan theologian, b. at Verviers, 1589; d. at Liège, 12 November, 1676, for many years professor of theology. He was a prolific writer and left behind twenty works, while, as a keen controversialist, he attained great celebrity in consequence of his disputation with the Jansenist Gabriel Hotton, which continued from 19 to 22 April, 1633, and was brought by Hauzeur to such a successful conclusion that the Catholics throughout the vicinity lit bonfires to celebrate his triumph. He describes this controversy in his "Accusation et conviction du Sieur Hotton" (Liège, 1635), issued also in Latin under the title "Conferentia publica inter M. Hauzeur et G. Hotton" (ibid., 1633). Other important works of Hauzeur are: "Exorcismes catholiques de malingre esprit hérétique etc." (ibid., 1634), directed against the same opponent; "Equelues eclesiasticus, aculeatus exorcismus XXIII etc." (ibid., 1635), against the Council of Trent; "De Mariis et Marismo D. Augustinus pro verà Christi Ecclesià" (ibid., 1634) of which he published a synopsis in French. He then combined the last-named three works in one, including in the new volume the "Livre de ce grand Docteur S. Augustin: du soin qu'il faut porter pour les morts" (Liège, 1636). He also issued a Flemish translation of Augustin's "De utilitate credendi" (ibid., 1636), but his writings against Jansenism remained unpublished. His chief title to remembrance rest on his two great works, "Anatomia totius Augustistismae Doctrinae S. Augustini, secundum litteram scriptorum spirital (2 vols., Liège, 1643-45)." "Contra errores theologorum Maiores nostrorum Alexander Halensem, S. Bonaventuram, Fr. Joannes Duns Sootum, ad manitem S. Augustini" (2 vols., Liège and Namur, 1652). This work is really a commentary on the second, third, and fourth books of the "Sentences." Like the majority of Hauzeur's works, it was issued from the private press of the Franciscan friars of St. Francis. Hauzeur wrote the "Anales Ord. Min. Capuc." Hauzeur wrote the "Apologia Analogica pro vero ordine et sucesseore S. Francisci" (Aug. Eburonum, 1650, and 1653).

Michael Buhl.

Havana (San Cristóbal de la Habana), Diocese of (Avanensis).—The city of Havana is situated in longitude 82° 21' west of Greenwich; latitude 23° 8' north. The present jurisdiction of the See of Havana comprises the two provinces of Havana and Matanzas. This city, while the chosen residence of the Cuban bishops on account of the means of communication afforded by the port and the protection afforded by its fortifications against pirates and sea-rovers, was not always the episcopal see. That honour belonged to the diocese of Avance which comprised the island of Cuba (1522). As early as the eighteenth century (1786), King Charles III, having first consulted the Spanish Ministry of the Indies (Supremo Consejo de Indias), projected a partition, taking into consideration the excessive size of the Cuban diocese, which then comprised, besides the island itself, the territories of Louisiana and Florida. Bishops was confirmed this project by a pontifical Decree (10 September, 1787). The duty of effecting the partition was committed to Don José de Tres-Palacios, and his discretion and ability were rewarded by his appointment as first Bishop of Havana. The diocese comprised, by the disposition then made, the provinces of Santa Clara, Matanzas, Havana, and Pinar del Río, in Cuba, as well as Florida and Louisiana. The cathedral of Havana was erected as such in 1789.

Tres-Palacios was a man distinguished for moral rectitude and talent. Born at Salamanca, he was a doctor of that university, and, while still young, emigrated to Santo Domingo, where his merits obtained for him the post of vicar-general. He left this charge to assume the episcopal dignity of Porto Rico, where his labours in the cause of reform were interrupted by the commission to divide the old Cuban diocese. The episcopal see was transferred to La Habana, historically with a period of renovation in the economic, intellectual, and political life of Cuba. That island will always recognize as a great benefactor Don Luis de las Casas y Arragoi (1790-1796), whose efforts for education and for the progressive development of all classes on the island were without precedent, and have since remained without parallel, but his policy was infected with a secularizing tendency, which Tres-Palacios viewed with disapproval and combated with firmness. In this was to be found the secret of the bishop's dissenion with Governor las Casas. That Tres-Palacios was not an ambitious man is proved by the withdrawn and the crowning event of which was the erection of New Orleans into a see independent of Havana. New Orleans accordingly took as its bishop Don Luis María Péfiarley y Cárdenas, a native of Havana, who set out for the new diocese 7 March, 1796. Tres-Palacios died 16 October, 1799. His successor in the See of Santo Domingo was a bishop whose memory is greatly cherished by the people. He spent the ample revenues of his bishopric for the benefit of education and the public health, and no charitable undertaking ever sought his help in vain. Eaparado seconded the efforts of the Patriotic Society for the increase of the rank of the college of physicians, the work of Don Evelio de Compostela, and the Beneficio modeled them among their generous
benefactors. At his own expense he sent Dr. J. B. O'Gahan to Madrid to study in the Pestalozzian Institute the new pedagogical methods in order to introduce them into Cuba. The college of San José, commonly called San Ignacio, which had been under the direction of the Jesuits, and after their expulsion (1767) was known as the seminary of S. Carlos, was the favourite object of his efforts in the sense of higher, or university, teaching. It is true that his tendencies diverted somewhat from the prescription of the Council of Trent, but his work on the whole evidenced a high degree of being thoroughly educated in the sciences, and particularly in the fields of physics and chemistry, which enabled him to establish the college and the laboratories attached to them. Not less famous, indeed, were the chairs of law and philosophy, the latter of which the priest Félix Varela illuminated with a brilliancy surpassed by none. Of all native Cubans Varela must be accounted the most worthy of the name of philosopher. His was a wide and comprehensive intelligence, influenced unduly by the school of Condillac, but not shut up within its narrow circle, the result being that he thoroughly equipped his mind with decidedly positive preferences which rendered him antagonistic to Scholasticism and put him out of harmony with metaphysics. The proof of this is his "Institutiones Philosophiae Etceletiae ad usum studiose juvenantium" (1812), as well as the "Miscellaneous" (1812), and "Elencos e Misceléneas" (1816).

His life is linked with the history of the Diocese of New York, where for some years he devoted himself to missionary work, founded churches, and edited publications. He became Bishop of New York in 1837, and died in 1844.

Don Pedro Valera y Jiménez (d. 1833), Archbishop of Santo Domingo, and Fray Ramón Casas y Torres, a Franciscan (d. 1845), governed the Diocese of Havana as administrators Apostolic. The latter had been successively Bishop of Oaxaca in Mexico, and of Cádiz. The arrival in Cuba of D. Francisco Flexy y Solana (1840-44) marked the beginning of a period of fertility in enterprises for the renewal of spiritual life in a people dominated by indifference and the feverish ambition of life. The seminary, decadent and estranged from the Tridentine spirit, was soon purged of its system more adequate to that formation of aercularly characterized, which is the aim of its existence. Flexy y Solana built and restored eighty-six churches and chapels which had been ruined or damaged by the hurricane of 1846. He introduced the organ and plain chant in the more important country churches. But the achievement which reflected greatest credit upon his administration was the re-establishment of the religious orders. With this end he obtained from Queen Isabella II (1822) a partial restitution of the property of the regulars, and with this, concurrently with the re-establishment to some extent of the older ones which had been suppressed by legal enactments, new institutes were adapted to the new exigencies. Thus arose the Francisca, the Jesuits, and the Escolapios. The Daughters of Charity of St. Vincent de Paul took possession of the college of St. Francis de Sales and, subsequently, of other colleges, asylums, charitable institutions, and hospitals.

The Benedictine Monastery of Our Lady of the Sacred Heart also opened their academy, and the Lazarist Fathers arrived to take up the work of missions and the education of the clergy.

Two of the most influential educational institutions in the country have been the Royal College of Belén, under the direction of the Jesuits, and the Pius Schools of Guanabacoa under the Sons of St. Joseph Calasanctius (Piarists). To the former of these belong, moreover, the first educational institution in Cuba, which began its existence in 1857 under the direction of the Rev. A. Cabrè, S. J. This institution having already obtained a position of prominence in 1863, under Father Clam, then received its first magentic instruments. Its career as a scientific institution continued somewhat languidly and with difficulty until, in 1870, the religious with whose name as that of an organizer the glory of Belén will ever be inseparably linked took charge of the observatory—Father Benito Víñez, S. J., a man of a patient and investigative turn of mind, whose observation not the minutest details escaped, and whose results were characterized by a rare combination of facts and general laws. For twenty-three years (1870-93) he persevered in his charge, and not only augmented the apparatus of observation, acquiring exact modern instruments (1882), but, moreover, gained honourable distinction and premiums at the Exhitions of Phila-delphia (1876) and Elenos (1878). His predictions were regarded in Cuba as oracles, and the ship-captains looked upon him as their official adviser. In 1877 he published his work on West Indian hurricanes (Apuntes Relativos á los Huracanes de las Antillas), which, complemented by his posthumous "Investigaciones," constitutes the most complete and original work on the subject in existence. He was succeeded by Father Gangoiti, S. J., who had been his assistant.

The observatory eventually established a seismographic station and still maintains its scientific prestige and what is called a "seismographic" work on the subject in existence. He was succeeded by Father Gangoiti, S. J., who had been his assistant. The observatory eventually established a seismographic station and still maintains its scientific prestige and its practical utility. Another work of particular interest and importance was the publication of the "Register of the Society of St. Vincent de Paul" (1858), which owed to Flexy y Solana the encouragement of his approving words and the substantial means of support for thirty destitute persons.

Flexy y Solana died Archbishop of Tarragona. Fray Jacinto Martínez, consecrated in the chapel royal in Havana on June 26, 1863, was Archbishops of Havana in 1847, parish priest of Matanzas in 1853, and secretary of the legation sent by Pius IX to the Far East, as bishop he ruled his diocese with inflexible firmness, and with a true spirit of apostolate in the midst of political turmoil and confusion. Martínez, who died at Rome in 1873, was the author of, among other works, "Pius IX and the Italy of One Day" (Pio IX y la Italia de un día), "Catholic Vigil" (Velas Católicas), a treatise on the glories of the Blessed Virgin, etc. The data on the historical events in the diocese (Diario Media comparada con los tiempos modernos). His successor in the see, Dr. Apolinario Serrano y Díaz (September, 1875, to June, 1876), joined to the ardent zeal of an apostle the sweetness of the holy Bishop of Geneve.

Of architectural monuments, the chief among the sacred edifices of Cuba is the Church of the Merced (1867), the work of Father Jerónimo Viladés, C.M. (d. 1883). With the rococo style much in evidence in its interior portion (1792), its grave and simple lines, nevertheless resemble the Doric more than any other order, and its combination with the massiveness of the mass with the height of the religious expression. The Cathedral of Havana is the old church of St. Ignatius converted into a parish church by Morell de Santa Cruz, enlarged by Don S. J. Echevarría, transformed
by the first bishop, Tres-Palacios, and adorned with much magnificence by Espada y Landa. The high altar of Carrara marble is the work of Banchini.

The diocese has been governed successively by Don Ramón Fernández Pérula from 1880 to 1886; Don Manuel Santander y Frutos from 1887 to 1900, when he resigned. From 1900 to 1918, the administration was in the hands of Monsignor Donato Sharrett and his successors. Among the diocesan publications are "La Verdad Católica" (1858); "El Eco de San Francisco" (1883); "La Revista Católica" (1876); the "Boletín Eclesiástico" (1890). Ecclesiastical discipline has been regulated throughout the various periods since the erection of the bishopric. Legal decrees made in 1682 by Don Juan García de Palacios, Bishop of Santiago, which were later reprinted and annotated by Espada y Landa (1814), and again, in 1844, by Fray Ramón Casas and Torres. In 1888-89 a synod was held by Don Manuel Santander y Frutos, and its enactments are still in force. Pope Leo XII, by the Brief "Actum Precare" of 20 February, 1903, subdivided the Diocese of Havana into those of Pinar del Río and Cienfuegos. Don Pedro González Estrada, who at present (1909) governs the latter diocese, is the first bishop since the partition, which came into effect 5 April, 1903, under the administration of Monsignor Pascele Louis Chapel, Archbishop of New Orleans, acting as Bishop Apostolic Extraordinary for the Islands of Cuba and Porto Rico.

HUENDELER. Hawaii. See Sandwich Islands, Vicariatus Apostolic of the.

HAWES. Haward (Harben), Edward, theologian and controversialist, b. in Lancashire, England, 9 April, 1662; d. in London, 23 April, 1735. The loyalty to the Faith that came to be a heritage among the Haverdens is testified by their maintenance of domestic chapels in their residences throughout the period of persecution, as well as the frequent appearance of the name on the list of non-jurors and the recusant-rolls. Edward, after a brilliant course at the English College, Douai, remained there as a clerical tutor, and after his ordination (7 June, 1680), as professor of philosophy. In 1688, having taken the bachelor's degree at the University of Douai, he spent two months as tutor of divinity at Magdalen College, Oxford, which James II purposed making a seat of Catholic education, but the impending revolution forced him to return to Douai, where he soon proceeded D. D. and was installed in the chair of divinity. In 1702 he was presented to the living of all but unanimous desire of the secular and ecclesiastical authorities of Douai to take part in the concurrently for one of the royal chairs of divinity in the university, but the influence of a hostile minority secured the installation of another candidate by mandatory letters from the court. Shortly afterwards complaints were lodged at Rome that the Douai professors, Dr. Hawarden in particular, were propagating the errors of Jansenism, but official investigation completely exterminated all.

In 1707 Hawarden left Douai to take charge of the mission of Gillygat, near Alderlie Hall, near Lancaster. The quaint brief entries in the Tydesley Diary give an idea of his daily life until the seizure of Alderlie Hall in 1717, after which he removed to London, probably on his appointment as controversial writer. Dr. Hawarden received the thanks of the University of Oxford for his able defence of the Blessed Trinity in the famous conference with Dr. Samuel Clarke (1719). Among his works are: "The True Church of Christ, shewed by Concurrent Testimonies of Scripture and Primitive Tradition" (London, 1714); "The Rule of Faith truly stated in a new and easy Method" (London, 1721); "The Meaning of the Word Truth to Catholics and Protestants, in answer to their charge that none are sav'd out of the Catholic Communion, because the Rule is not Universal" (Brussels, 1728); "An Answer to Dr. Clarke and Mr. Whiston concerning the Divinity of the Son, and of the Holy Spirit" (London, 1729), a collective edition of his works was published in Dublin in 1808.

HAWES, Stephen, poet; b. in Suffolk about 1474; d. about 1523. Very little is known of his life. He was educated at Oxford, and afterwards travelled and studied some foreign universities. He seems to have studied English literature as well as foreign languages; and on his return from abroad became grooms of the chamber to Henry VII. According to Anthony a Wood's account, he was noted for his wit and his great memory, being able to repeat by heart many of the chivalric poets, especially Chaucer and Lydgate. While attached to the court he wrote, about 1605, his best-known poem, "The Passtype of Pleasure", which went through several editions during the next half century. It is an allegorical work, with the exception of a few heroic couplets, in the seven-line stanza known as rime royal, and consists of nearly six
thousand lines in forty-five divisions or chapters. The
poem is an attempt to revive the type of medieval
allegory which had its origin in the "Romaunt of the
Rose" and which had almost passed away. Its
matter, "an allegory of the life of a man," shows the
poet's learning and some ingenuity in fashioning
allegorical detail. Its versification marks, on the
whole, the extraordinary looseness by which poetry at this
date had reached, though here and there spots of some
charm appear. Hawes wrote also some shorter
poems, amongst which are "The Example of Virtue",
another allegory; "The Conversion of Swearey," an
exhortation against swearing by the Body of Christ;
and a coronation poem on the accession of Henry VI.
His "remark upon the life of Hawes, virtus lex exemplum," is agreed with by all who judge
the poet from his writings.
Works.—"The Passeyme of Pleasure," ed. Wright,
Percy Society (London, 1845); "The Conversion of
Swearey," ed. Abbotsford Club (Edinburgh, 1866);
"A Joyfull Meditations to All Englande of the Coronation
of Henry VIII," ed. Abbotsford Club (Edinburgh,
1865).

HAWKER, ROBERT STEPHEN, poet and antiquary;
b. at Plymouth 3 December, 1803; d. there 15 Au-
 gust, 1875, son of Jacob Stephen Hawker, M.D.,
who took orders soon after the birth of his son Robert
and became vicar of Stratton, Cornwall. He was edu-
cated at Linkeard Grammar School, and, at the age
of sixteen, placed with a solicitor at Plymouth. But
the law was distasteful to him, and his aunt bore
the expense of sending him to Cheltenham Grammar
School. Here he published, in 1821, "Tendris," a
small book of poems not of much literary value.
In 1823 he went to Pembroke College, Oxford, and
within a year married Charlotte Ians, a Cornish lady
twenty years older than himself, a marriage that
brought him much happiness. He continued (though
with a change of college) his undergraduate life at
Oxford, and in 1827 won the Newdigate prize for a
poem on Pompeii. He took his degree in 1828 and
Chuch of England orders in 1831. After filling a
curacy in Cornwall, he was presented, in 1834, vicar of
Morwenstow, a parish with a dangerous rocky coast on the north-east of the
same county. Here until his death he lived an active
life as the pastor of a sea-faring population, and gave
liberally of his means to the parish. Amongst other
things he restored the church and parsonage, estab-
lished a school, and set on foot, when rural dean,
periodical synods of the surrounding clergy. From
the many wrecks round the coast of his parish he
succeeded escaped sailors and buried the washed-up
bodies of those who were drowned. Beyond these
activities he was an enthusiastic student of that history
and legends of the Cornish people which he embodied
in many prose essays as well as in his poems. He
was a true poet, though, in the judgment of the best
critics, he just missed being a great one. From 1832,
when he put forth his first important piece of work,
"Remarks of the Western Shore," until the end of
his life, he composed a series of romantic and
religious poems, the finest of which is the "Quest of
the Graal," and the most famous the "Ballad of
Trelawney." His religious views as embodied in
his preaching and in these poems were those of the
Tractarians. In 1863 his wife died, and his loneliness
became greater. In 1864 he married again, a lady,
Pauline Anne Kucyzewsk, by whom he had
three daughters. Hawker's impulsive and artistic
temperament led him to continual acts of generosity
as well as of imprudence, which kept him punitarily
embarrassed. These difficulties increased as years
went on and doubtless undermined his health, which
began to fail in 1873. On his death-bed, 14 August,
1875, he was received into the Catholic Church. He
had always possessed Catholic instincts and from some
of his letters it is fairly clear that he had been
gradually turning more and more towards Rome in
later years. His reception caused a hot debate in the
press concerning the question of his previous
loyalty to the Anglican Church, and he was never
since quite ceased. His "Cornish Ballads and
other Poems" was re-edited by Byles (London, 1904),
and his prose works by Goodwin (London, 1893).

K. M. WARREN.

HAWKINS, Sir Henry, raised to the peerage as
Lord Brampton, eminent English lawyer and judge,
b. at Hitchin, Hertfordshire, 14 September, 1817; d.
at London, 12 October, 1907. He was the eldest son
of John Hawkins, a solicitor of Hitchin. Educated at
Bedford School, he was articled to an uncle, a country
Notary, but, "hating the office", he went to London, studied at the Middle
Temple, and was called to the Bar in May, 1843.
Without either money or influence to help him, he
made his mark as an advocate by sheer hard work, and
in 1858 became a Queen's Counsel. He was engaged
in many famous lawsuits, including the Rye
borne case, in which his cross-examination of the lead-
ing witnesses for the false claimant of the estates
completely exposed the fraudulent nature of the claim.
He then successfully conducted the prosecution of
the claimant. He was appointed a judge of the Queen's
Bench and was knighted in November, 1878. Next
year he married a Catholic lady, Jane Louisa, daughter
of H. F. Reynolds of Hulme, Lancashire. The deci-
sions of Judge Hawkins were noted for their combina-
tion of sound law and shrewd common sense. Stern
where his duty required it, he was kindly and merciful
to more human weakness, and was opposed to long or
vindictive sentences. His kindly disposition was also
shown in his love of animals, and he was strongly op-
posed to vivisection. His country education made
him find his recreation in outdoor sports; he was often
seen at the races, though he did not bet, and was a
prominent member of the Jockey Club. He retired
from the Bench in 1890, and the same year was raising
a fund for the peerage, taking his title from Brampton, Hunt-
ingdonshire, where he had some property. Among
his many friends was Cardinal Manning. "He never
tried to proselytize me," wrote Lord Brampton, "he
left me to my own free uncontrolled and uncontrolla-
able action. My reception into the Church of Rome
was purely of my own free choice and will, and accord-
ing to the exercise of my own judgment. I thought
for myself and acted for myself or I should not have
acted at all. I have always been and am satisfied
that I was right." He was received into the Church
by Cardinal Vaughan eleven years later, in reply to an inquiry, he wrote: "It was
the result of my deliberate conviction that the truth
—which was all I sought—lay within the Catholic
Church. I thought the matter out for myself, anx-
iously and seriously, uninfluenced by any human
being, and I have unwavering satisfaction in the con-
clusion at which I arrived." After his conversion he
founded the beautiful chapel of Sts. Gregory and Augustine in the new
cathedral of Westminster; altogether he contributed some $10,000,000 to the
building of the cathedral. He left no heir to his
title.

A. Hilliard Attendorn.
Hay, (1) Edmund, Jesuit, and envoy to Mary Queen of Scots, b. 1540?: d. at Rome, 4 Nov., 1591. He was the son of Peter Hay of Megginch (castle still standing), the bailie of Errol, and related to the earl of that title. In 1562 (being already a B.D., probably of Paris University) he was selected to accompany Father Alonso de Soto (Floridabundance, 1561–1589, June to September, 1562) from Pius IV to Mary Queen of Scots, then lately returned to Scotland. Hay practically took charge of the mission, and conducted de Goude amid many dangers to the queen's presence in a small room at Holyrood, while the majority of the court were hearing a Calvinistic sermon; and he acted as her confidential chaplain at that important interview, the account of which will be found in de Goude's report (Pollen, "Papal Negotiations", 113–161). Before their return to the continent, Hay had persuaded a small band of young men to accompany him and to offer themselves to the Society. They comprised William Crichton, Robert Abercombie (the future chaplain of Queen Anne of Denmark), James Tyrie, James Gordon, and two others, all of whom did splendid service for their country in later years. Hay made his studies at Rome with rapidity and distinction. Sent to Innsbruck in 1564, he became confessor to the archbishop of Austria, and gained such favour that he was with difficulty removed to Paris to become rector of Clermont college. He was already regarded as the probable head of the Scottish mission, and was commissioned to report to Rome on the varying fortunes of that country and its queen. In 1566, St. Pius V resolved to send Bishop, afterwards Cardinal, Lauro to Mary as nuncio, and Hay was to accompany him. Hay started first (6 November) with the Piedmontese envoy Du Croc, to see what could be done. Their object was to induce the queen to break with Murray, Lethington, and the other Protestant ministers, whose conduct in the violent scenes that had companied the murder of Muzzio showed that they were not only faithless, but capable of appalling crime.

On 14 January, 1567, the momentous interview took place. The last Catholic sovereign of Scotland was receiving the last envoys from Rome to Holyrood. If they failed to inspire the inspired, the right thing, and to urge it with sufficient skill, her whole future might have been changed. Unfortunately, Lauro had ordered Hay to ask for the execution of the treacherous ministers, and this was demanding more than Mary was at all likely to grant. She answered: 'I can do nothing with her subjects' blood.' Before the envoys could return, the queen's refusal became relatively unimportant in consequence of the murder of Darnley (10 February): a crime carried out with the connivance, if not the full consent, of that party in Mary's council from whose influence Father Hay had wished her to free herself. He was in Edinburgh at the time, and his reports, being those of a friendly, well-informed witness, cannot be considered as of the greatest importance in regard to the question of Mary's guilt or innocence. Like the other representative Catholics, who were at that moment in touch with the circumstances of the case, he took a view adverse to Mary, and afterwards significantly described her as 'peccatrix'. Back in Paris, 15 March, 1567, Hay was soon appointed provincial of France, till 6 September, 1574, during the difficult years that covered the conflict between the University of Paris and Father Maldonatus. He was next sent back the third time to Scotland with Father James Gordon, but was forced to return after two or three years, so severe was the persecution. He was once more placed in high office, called to Rome, and chosen "assistant" for Germany and France, but his health was undermined by the severities of his missionary life, and he soon died.

(2) John Hay, kinsman and contemporary of Edmund, of the family of Hay of Dalgetty; b. 1546; d. at Pont-a-Mousson, 1608; a well-known scholar, professor, and writer. When a student he fell into consumption and was spitting blood. While going to consult a doctor at Strasbourg, in 1576, he found that a Protestant (? Ambrose, Pape of Wittenberg), was challenging Catholics to disputation and that no one would appear against him. The Scot promptly entered the lists and soon defeated his adversary. He then returned to Scotland for a while, and was completely restored by the change. He then went to France, where he carried on long and vigorous polemics against the Huguenot at La Rochelle, especially with Jean de Serres, and in later life he published Latin translations of Jesuit letters from the missions.

Hay, George, bishop and writer, b. at Edinburgh, 24 Aug., 1729; d. at Aquitaine, 18 Oct., 1811. His parents were Protestant, his father having been a non-juring Episcopalian, sentenced to banishment for his adherence to the Stuarts in 1715. Destined for a medical career, young Hay began his studies at Edinburgh University, and when barely sixteen found himself summoned, after the battle of Prestonpans, to attend the wounded soldiers in the belfry. He afterwards followed the army of Charles Edward for some months; but before the decisive fight at Culloden illness compelled him to return to Edinburgh. He was later arrested for having participated in the rising, and taken to London, where he was kept in custody for two months. Here a Catholic bookseller named Neighan gave him his first insight into Catholic teaching, and on his return to Scotland he studied Gother's well-known work, "The Papist Represented and Misrepresented". An introduction to Father Seaton, a Jesuit missionary at Edinburgh, was followed by a prolonged course of instruction, and Hay was received into the Catholic Church, making his first communion 21 Dec., 1749.

Debarred by the penal laws from graduating or receiving his medical diploma, he accepted an appointment as surgeon on a trading vessel bound for the Mediterranean. While at London, he joined the ship, he became acquainted with the illustrious Bishop Challoner. The result of their intercourse was that Hay determined to enter the priesthood; and on the arrival of his vessel at Marseilles, Hay journeyed to Rome, where he studied in the Scots' College for nearly eight years. Among his fellow-students was the future Cardinal Erskine. In April, 1758, he was ordained priest by Cardinal Spinelli, and on his return to Scotland was appointed to assist Bishop Grant in the important district of the Enzie, in Banffshire. In 1766 Bishop Grant succeeded Bishop Smith as Lowland Vicar Apostolic, and soon afterwards procured the appointment of Hay as his coadjutor. He was consecrated on Trinity Sunday, 1769, and thenceforward for nearly forty years sustained practically the whole burden of the vicariate.

Of strong constitution and untiring energy, as well as sterling piety and zeal, he did an immense work for religion in Scotland during his long episcopacy. Despite the arduous nature of his ministerial labours did not prevent him from doing much active literary work. He published the first English Catholic Bible printed in Scotland; but the work which secured his own reputation as a religious writer was his complete cycle of Catholic doctrine entitled "The Sincere, Devout, and Pious Christian", published 1781–90, and still recognized as a work of J. H. Pollen.
standard value. Bishop Hay's own life was a perfect example of that ordered devotion and assiduous labour which he inculcated in his writings, and his calm and equable temperament was proof against the many trials and difficulties inseparable from his position as a Catholic prelate under the penal laws. The Scottish Catholics, suffering at this time some 25,000 wretched people through the operation of these iniquitous statutes, in a condition little better than that of slaves or outlaws. Bishop Hay's efforts to procure some relief for his co-religionists roused a storm of fanatical fury, and in February, 1779, the chapel and house which he had resided in at Edinburgh were burned by the crowd.

Very inadequate compensation for this outrage was made by the magistrates, and the outbreak of the Gordon Riots in England, in 1780, further delayed the long-hoped-for relief. In 1793, however, Bishop Hay had the satisfaction of seeing his flock released by Act of Parliament from the most oppressive of the penal laws. He had meanwhile laboured not only for the Church at home, but also to improve the condition of the national colleges at Rome and Paris. His great object, in regard to the college at Rome, was to have it placed under the control of Scottish superiors. His efforts on behalf of this institute in Paris were interrupted by his resignation, in which he was entirely swept away. The bishop's last public work was the foundation of a new seminary at Aquhories, in Aberdeen; and here, after transferring, with the sanction of Pius VII, the entire government of the Lowland District to his coadjutor, Bishop Cameron, he died, deeply regretted, at the age of eighty-three.

D. O. HUNTER-BLAIR.

**Haydn, Johann Michael**, a younger brother of Franz Joseph Haydn; b. at Rohrau, Austria, 1 April, 1732; d. at Gumpendorf, Vienna, 31 May, 1809. He began his great musical career in the church-school of St. Stephen's, Vienna. For a child he was small, and, and yielded his place as solo-boy to his younger brother Michael when the inevitable signs of change appeared in his voice. During these years he manifested an extraordinary passion for music, availing himself of every opportunity to improve his knowledge of the art. He was enabled to pursue his musical studies. At this time he came under the influence of Emanuel Bach, Dittersdorf, and Porpora, who may be said to have been his principal masters, although the credit of his remarkable achievements must be given rather to his own incessant industry than to any particular influence, as for several years he was well informed in the various branches of his art that he began to be ranked among the first music-masters of Vienna. In 1759 he accepted the appointment of vice-capellmeister to Count Morzin, a Bohemian nobleman, who maintained an orchestra at his country-house. His contract with this prince brought him into the daily necessity of composing "divertimenti" for the orchestra, thus affording a splendid opportunity for the study of instrumentation. It was at this time that Haydn made the mistake of contracting a loveless marriage with Maria Anna Keller. Had he been more provident in the choice of a spouse, perhaps his after life might have been free from the suspicions which his relations with other women justify. By temperament he was deeply religious, and gave back to Almighty God, in his compositions for the services of the Church, the talent with which he was so richly endowed.

In 1761 he became vice-capellmeister at Eisenstadt, and in 1766 went as capellmeister with Prince Nicholaus to his new palace at Esterháza. His life during these years was of singular steadiness of purpose. The duties of his position were most arduous, involving the necessity of providing daily orchestral recitals, two operatic performances and at least each week one concert. He received a salary of one hundred pounds annually. In 1785 he joined the Freemasons to please
his friend Mozart, who was an ardent member; and it is not clear how long he remained in that society. Upon the occasion of his two visits to London (1791 and 1794) he was hailed as the greatest musician of the day, and received marked attention from royalty. This event occurred in 1781 when he was awarded the degree of Doctor of Music. His career in London was brilliant, and his successes signal. Salomon's orchestra was the vehicle he chose to introduce his compositions to the English public, and the twelve symphonies performed under his direction created a profound impression. He left London in 1793, and although he moved to Vienna in 1797, moved to Gumpendorf, Vienna, where he died.

As a composer, Haydn will always be spoken of with reverence. He was the founder of the Viennese school of composition. His career began at the time when the accepted conventions of the Palestrinian school of counterpoint had been abandoned as the last word in music. A craving for more liberty of style and greater breadth of conception was felt among the musicians of Haydn's day, and, catering to the growing taste, he built up a school of composition which was popular, the reform of church music and those of Mozart and Beethoven, that history has made it the starting point of modern composition. He has been hailed as the "father of instrumentation", the "inventor of the symphony", the "creator of modern chamber music". His instrumental compositions—125 symphonies, 31 concertos, 50 quartets, 30 trios, and more than 300 compositions for wind and string instruments. His contributions to ecclesiastical music comprise 14 Masses, 1 Stabat Mater, 2 Te Deums, and 34 offertories and anthems. Haydn's "Masses" have been particularly popular, especially in Germany, and have many features which recommend them, but the reform of Church music instituted by Pope Pius X has equivalently debarred them from use at liturgical services, in some instances on account of the alterations and repetitions effected in the text, and in others because of the operatic character of the music itself, which Mendelssohn is reported to have styled "scandalously gay". In the field of vocal writing Haydn was not notably successful; his solos are not on the same level as his other works, but his three and four part songs are generally accorded the same high appreciation given to his more pretentious efforts. In opera, he cannot be said to have achieved very remarkable success. Although he contributed over twenty compositions to the operatic repertoire, not one of them or all of them together made the impression so widely felt at the hearing of his oratorios. His best known operas are "Acide Galatea" and "Orfeo". The works which have made Haydn's name so dear to music lovers, not so much because of their intrinsic merit musically, but because of the appeal they have made to popular taste. The composition of the "Creation" was suggested to Haydn by Salomon as the crowning effort of his great career. It was received enthusiastically in Vienna, Paris, and London until a quarter century ago it divided popularity with the masterpieces of Handel. The other well-known oratorios of Haydn are "The Seasons", the "Seven Last Words of Christ", the "Return of Tobias".

Haydock, George, Venerable, English martyr; b. 1556; executed at Tyburn, 12 February, 1583-84. He was the youngest son of Exst Haydock of Addington, Kent. He matriculated at Wadham College, Oxford, and of William Westby of Mowbrack Hall, Lancashire; was educated at the English Colleges at Douai and Rome, and ordained priest (apparently at Reims), 21 December, 1581. Arrested in London soon after landing, he spent a year and three months in the strictest confinement in the Tower, suffering from the recrudescence of a severe malarial fever first contracted in the early days of his captivity. He was at the time of his trial on the evidence of the shoemaker John Deane (q. v.), who had been ordained priest the same day as himself, and six other priests, for having conspired against the queen at Reims, 23 September, 1581, agreeing to come to England, 1 October, and setting out for England, 1 November. In point of fact he arrived at Reims on 1 November, 1581. On the same day 6 February two equal numbers of men were brought, the one against Thomas Hemford, a Dorsetshire man, sometime scholar of St. John's College, Oxford, the other against John Munden, a Dorsetshire man, sometime fellow of New College, Oxford, John Nutter, a Lancasterian, sometime scholar of St. John's College, Cambridge, and two other priests. The next day, St. Dorothy's Day, Haydock, Hemford, Munden, and Nutter were brought to the bar and pleaded not guilty. Haydock had for a long time shown a great devotion to St. Dorothy, and was accustomed to commit himself and his actions to her daily protection. It may be that he first entered the college at Douai on that day in 1574-5, but this is uncertain. The "Concertato Eclesiasticu" says he was arrested on this day in 1581-2, but the Tower bills state that he was committed to the Tower on the 5th, in which case he was tried on the 4th. Although he contributed over twenty compositions to the operatic repertoire, not one of them or all of them together made the impression so widely felt at the hearing of his oratorios. His best known operas are "Acide Galatea" and "Orfeo". The works which have made Haydn's name so dear to music lovers, not so much because of their intrinsic merit musically, but because of the appeal they have made to popular taste. William J. Finn.
rope sundry times before he fell downe". Haydock was alive when he was disembowelled. So was Hemerford, who suffered second. The unknown eyewitness says: "When the tormentor did cut of his members, he did cry out: 'Ahh! I heard myselfe being cut off the gibbet.'" As for Fenn, "before the cart was driven away, he was stripped of all his apparel saving his shirt only, and presently after the cart was driven away his shirt was pulled of his back, so that he hung stark naked, whereas the people muttered greatly." He also was out drawn alive, though one of the sherry, was for being put to death. And they were the last to suffer. They made speeches and prayers similar to those uttered by their predecessors. Unlike them they were allowed to hang longer, if not till they were dead, at any rate until they were quite unconscious. Haydock was twenty-eight, Munden about forty, Fenn, a widower, with two children, was probably also about forty, Hemerford was probably about Haydock's age; Nutter's age is quite unknown.

J. B. WAINWRIGHT

Haydock, Grenville L. priest and Biblical scholar; b. 11 April, 1774, at Cotlam, near Wood Plumpton, Lancashire; d. 29 November, 1849, at Penrith, Cumberland. At an early age he was placed in a school kept by the Rev. Robert Banister at Mowbreck Hall, near Kirkham, and in 1785 entered the English College of Douai. In the beginning of the French Revolution he escaped from Douai, August 1793, in company with his brother Thomas and one of the minor professors. He stayed for a short while at Old Hall Green, near Ware, Hertfordshire, but went to his home at the Tagg on 3 November, 1794, where he remained until January, 1796, when he rejoined some of his Douai companions in the college at Crook Hall, Durham. After being ordained priest on 22 September, 1798, he held the offices of general prefect and master of all the schools under poetry till 26 January, 1803, receiving £5 (25 dollars) for his five years' work. Next he took charge of the poor mission at Uxthorpe, Yorkshire, and in July, 1816, the mission of Shakesferry as it was then called, till 1820, to the mission at Westby Hall, Lancashire, owing to a misunderstanding with his superiors. On 19 August, 1831, he was forbidden to say Mass by Bishop Pennington, whereupon he retired for the succeeding years to the Tagg, devoting himself to study. In 1832 he twice appealed to the Propaganda, but both his letters were intercepted and sent to the bishop; after his third appeal in 1838, his faculties were restored on 18 November, 1839, and he was appointed to the mission at Penrith where he spent his last ten years. Father Haydock's chief purpose was to prepare a new edition of the English translation of the Latin Vulgate first published at Reims in 1822, and at Douai in 1860; Bishop Challoner's text of 1750 was the basis of the work, but in the New Testament Dr. Troy's edition of 1794 is largely followed. The notes are partly original, partly selected from other writers, those on the New Testament not having been promised by the Propaganda. The first edition appeared in Manchester, 1812-4; Dublin, 1812-3; Edinburgh and Dublin, 1845-8; New York, 1852-6. The other works published by Father Haydock are: "The Tree of Life; or the One Church of God from Adam until the 19th or 56th century" (London, 1800); "Proposals for Country Congregations" (York, 1822); "A Key to the Roman Catholic Office" (Whitby, 1823); "A Collection of Catholic Hymns" (York, 1823); "Method of Sanctifying the Sabbath Days" (York, 1824). Besides his published books, Father Haydock left a number of works in manuscript, five volumes of "Douay Diaries"; four volumes of "Psalms and Canticles in the Roman Office", several volumes of "Biblical Disquisitions"; a treatise on "The Various Points of Difference between the Roman and the Anglo-Catholic Churches"; etc. The pecuniary risks of the press deterred him from publishing these works.

Haymo (or Haimo), a Benedictine bishop of the ninth century; d. 28 March, 555. The exact date and place of his birth are unknown. When a youth he entered the Order of St. Benedict at Fulda, where the celebrated Rabbanus Maurus was one of his fellow students. He went together with him to the Monastery of St. Martin at Tours to profit by the lessons of its great teacher, Alcuin. After a brief sojourn at Tours, he was sent to work at a house at Fulda, and spent there most of their life previous to their promotion to the episcopal dignity. Haymo became chancellor to the monastery, as is proved by his records of its transactions, which are still extant. It is indeed probable that owing to his great learning he was also connected with the teaching of theology in the same monastery; yet there is no positive proof that such was actually the case. He had been living for only a short while in the Benedictine monastery at Hersfeld, perhaps as its abbot, when in the last weeks of 840 he was nominated to the See of Basingstoke. Hearing of Haymo's promotion, Rabbanus Maurus, his old friend, sent him a long letter—in a work entitled "De Universo" and divided into 22 books—advice that would help him in the discharge of the episcopal office. And it is in compliance with Rabbanus's suggestions, that Haymo stood aforesaid from the Court of King Louis the German, did not entangle himself in the affairs of the State, preached often, and lived solely for the welfare of his diocese. The only public assembly which he attended was the Council of Mainz, held in 847 for the maintenance of the ecclesiastical rights and immunities.

Although a certain number of works have been wrongly ascribed under his name, there is no doubt that he was a prolific writer. Most of his genuine works are commentaries on Holy Writ, the following of which have been printed: "In Psalms explanatio"; "In Isaiah libri tres"; "In XII Prophetas"; "In Epistolae Pauli omnes"; "In Apocalypsem libri septem". As might be naturally expected from the exegetical methods of his day, Haymo is not an original commentator; he simply repeats or abridges the Scriptural explanations which he finds in patristic writings. As a pious monk, and a faithful observer of Rabbanus's recommendations, he sets forth almost directly and word by word the literal, or at least the sacred text. He is also the author of a rather elegant "Epitome" of Eusebius’s "Ecclesiastical History", of a large number of Sermons, and of a spiritual work, "De amore coelestis patriae". An extant passage from his writings, relating to the Holy Eucharist, shows that there is no substantial difference between Haymo and the Real Presence, and that of the other Catholic theologians. His works are contained in vols. cvxi—cxxxvii of Migne, Patr. Lat.

FRANCIS E. GEGOT.
Haymo of Faverham, English Franciscan and schoolman, b. at Faverham, Kent; d. at Anagni, Italy, in 1243, according to the most probable opinion; Wadding gives 1244. He had already acquired fame as a lecturer in the University of Paris and also as a preacher when he entered the Order of Friars Minor, probably in 1224 or 1225. Shortly after this he was appointed custos at Paris, in which capacity he seems to have attended the general chapter of the order at Assisi in 1230, and was one of the deputies sent by the chapter to pope Gregory IX to petition for an explanation of certain points in the rule, about which there had arisen a dispute in the order. The pope complied with the celebrated Bull “Quo elongati” of 28 September, 1230. After this chapter Haymo probably came to England, for from a mention of him in the "Patent Rolls Henrici III" he seems to have been at Oxford in 1232, probably as a lecturer in the Franciscan school there. In 1233 he was one of the Friars Minor sent by the Holy See to Constantinople to negotiate for the reunion of the Latin and Greek Churches. He led a peculiarly active life, for during these years he not only lectured at Oxford, but also at Tours, Bologna, and Padua. He was, moreover, employed by the papacy for the preparation of the Roman Breviary (which afterwards was ordered to be used in all the Roman churches and eventually, with some modification, became the Breviary of the whole Latin Church) was chiefly the work of Haymo (cf. trans. of Batiffol, "Hist. of the Roman Breviary", p. 913). In 1239 he took part in the general chapter of the order held at Rome when the notorious Brother Elias was depose from the office of general. From Ecclesiot's account of this chapter it appears that Haymo was one of the chief spokesmen against Elias. He also brought about the degradation of Gregory of Nazareth, who was a lay brother. In 1243 Elias was removed from the office of general, and Haymo succeeded him in the English provincialate. Albert, however, died during the first year of his generalate, and Haymo was then elected to the supreme office in the order. According to Wadding, Haymo was elected general in 1239, but this is an evident error. Ecclesiastical expressly states that Haymo, while Provincial of England, gave the habit of the order to Ralph of Maidstone, Bishop of Hereford; but Ralph only resigned his bishopric on December 17, 1239; Haymo, therefore, cannot not have been elected general of the order until 1240.

Haymo at once set about rectifying the disorders caused among the friars by Elias. The latter had increased the number of provinces in the order to seventy-two, "after the manner of the seventy-two disciples," says Ecclesiastion, and because he wished to rival the Dominicans, who had divided their order into twelve provinces in honour of the twelve Apostles. Haymo reduced the number of provinces. As Elias had found his chief supporters amongst the lay brothers, whom he had attached to his person by promising them places in his future order, no lay brother should be appointed superior except when there were no priests to fill the office. He also defined the rights of superiors, and set their jurisdiction within definite bounds. Although very zealous for the poverty of the rule, he yet was aware of the disadvantages of depending too much on alms and怕付ed the Friars Minor a real public labour; hence, when Provincial of England, he obtained in several places larger grounds for the friars, that they might cultivate the land and so supply themselves with food, in order that they might not have to beg. On his death-bed, says Ecclesiastion, he was visited by Waltham; but he was not canonised only from 25 June till the middle of October, 1243, and during the whole of 1244 was resident at Rome.

Haymo's epigraph reveals the reputation in which he was held. It runs:—

Hic jacet Anglorum summum decus, Haymo, Minorum,
Vivendo frater, hosque regendo pater:
Emissarius lector generalis ordinis rector.

"Here lies Haymo, highest glory of the English; in his living a brother [friar] of the Minors, in ruling them a father; an eminent lecturer, and rector general in his order." As a schoolman he was styled, in the fashion of the time, Speculum honestatis. Besides his lectures on the Sentences he left a treatise on the ceremonies of the Mass and a book of sermons.

Thomas of Ecclleston, De Adventu F.F. MM. in Anglia (of which an English translation has been published): Chronica T.R.R. Genn. in Anales Franciscana, 111, 231-261; Wadding, Bulletines ad an., 1259, 1244; Wadding and Saraball, Scriptores Ord. F.F. MM., s. v.

Father Cuthbert.

Haynald, Lajos, Cardinal, Archbishop of Kalocsa-Bač in Hungary; b. at Szécsény, 3 October, 1816; d. at Kalocsa, 3 July, 1891. Having completed his studies in the secondary schools, he entered the Emericianum at Pozsony (Fresburg) in 1830, remaining there for one year. He studied at the University of Vienna where he personally in 1831, theology at Vienna in 1833; entered Holy orders on 15 October, 1839, and received the degree of Doctor of Theology in 1841. After a brief period spent in the care of souls, he became professor of theology at the seminary at Gran in 1842. The prince-primate, Kompáni, appointed him in 1846 to the office of secretary general, but before he had entered upon the duties of that office, dispatched him abroad to study the training of pastors and ecclesiastical administration. Haynald probably was the first Hungarian to study such subjects in foreign countries. He applied himself to these questions with special diligence in Paris, where he pastured most of the time that he spent on this mission. On his return he was appointed chancellor-director to the prince-primate, early in 1848. When the Hungarian Parliament proclaimed the independence of Hungary on 14 April, 1849, Haynald refused to publish this declaration. The consequence was that he lost his position, whereupon he returned to his birth-place, Szécsény. At the close of the Revolutionary War he was restored to his office; on 15 September, 1851, he was appointed coadjutor to the Bishop of Transylvania, Nicholas Kovács, whom he succeeded on 15 October, 1852. After the publication of the October Manifesto in 1860, Haynald became one of the champions of the union of Transylvania with Hungary. His political opinions and activity thereupon brought him into conflict with the Viennese Government. Count Francis Nádasdy, head of the Transylvanian Chancellery, accused Haynald of disloyalty. Haynald went to Vienna and presented a memorial in which he set forth his political views. Notwithstanding this, the disensions between the Government and Haynald continued, and resulted in Haynald's resignation in 1864. Pius IX summoned him to Rome and appointed him titular Archbishop of Cyrene, 1870.

Until 1867 he laboured in Rome, where he did valuable work as a member of the Congregation of Extraordinary Ecclesiastical Affairs. After the restoration of the Hungarian constitution, Haynald was appointed Archbishop of Kalocsa-Bač, in 1867, at the instance of Baron Joseph Eötvös. He played an important part in the Vatican Council in 1869-1870, being, with George Strossmayer, Bishop of Diakovár, one of the foremost opponents of the dogma of Infallibility, although he submitted to the decree of the council. Leo XIII made Haynald a cardinal in 1879. As bishop and archbishop, he aimed chiefly to maintain ecclesiastical order and to endow his diocese with better schools. His pious bequests amounted to nearly five millions of gulden.
still a young priest he devoted himself earnestly to the study of botany and made a large collection of plants and of books, which subsequently came into the possession of the Hungarian National Museum. The Hungarian Academy of Sciences made him an honorary member in recognition of his scientific work.

A. ALDAÝ.

HAZART, CORNELIUS, controversialist, orator, and writer, b. 26 October, 1617, at Oudenarde, in the Netherlands; entered the Society of Jesus, 24 Sept. 1635; d. 25 Oct., 1690, at Antwerp. He was ordained priest, 6 April, 1647, at Louvain where he had already the reputation of perfectus orator; was professed on 1 Nov., 1651; and preached during a period of thirty-six years, for a time at Dunkirk and Brussels, permanently at Antwerp. Hazer's life, apart from the duties of his pastoral office, was almost exclusively taken up with the struggle against the Calvinists of the Low Countries. There were times when his activities extended beyond the frontiers of his native country, as was shown by his Epistola ad Landgraviæ Hassiæ-Rheinfeldiæ. "This conflict was waged in part from the pulpit. He delivered at the church of the professed house, at Antwerp, a series of sermons on controverted questions, and some of these he preached even in the open market-place, before numerous Calvinists who were assembled there for the festivities held in connexion with church dedication services. His forte, however, lay rather in the domain of literary endeavours. Somervogel enumerates about ninety writings of his, chiefly in the Dutch tongue. Among his larger systematized works it is worth while to note particularly the Kerkelijke Historie van de geheele wereld by his collaborator Landgravius of Hassia-Rheinfelden, 4 vols. (Antwerp, 1667-73). This, although somewhat antiquated, perhaps, as a mission and church history, remains, nevertheless, serviceable to this day; it was translated into Iligh German and added to by other Jesuits, under the title "Kirchengeschichte, das ist katholisches Christentum, durch die ganze Welt verbreitet," All of Hazer's writings are apologetic and polemical in character. They treat of Holy Mass, the Real Presence of Christ in the Blessed Sacrament, the invocation of the saints, the force of good works, auricular confession, extreme unction, purgatory, idolatry, the primacy and infallibility of the pope, the Roman Catholicism, in short, of all those questions which, owing to the attacks of preachers, had become more of special present interest and concern. Next to Holy Writ, Hazer looked preferably to the Fathers of the first four centuries for his proofs. He was quick at refutation and showed himself a tactician of the highest order, but had the faults of the polemical writers of those tumultuous times. In the case of Schuler he contented himself with a Vriendelyke t'seemn-spreak tuschen D. Joannes Schuler Predicant tot Breda ende P. C. Hazer." (A friendly colloquy between John Schuler, preacher of Breda, and F. C. Hazer). The estimation of his books were held may be gleaned from the number of their new editions and of their translations into the German, from the retorts of his opponents, and from the fact that many of his writings, such as "Triumph der pausen van Roomen" (Triumph of the Roman Pontiffs), gave rise to voluminous literature. SOMMEROY GEL. Bibliothèque de la Compagnie de Jésus, IV, 151-97.

N. SCHIEID.

HEALY, GEORGE PETER ALEXANDER, an American portrait and historical painter, b. at Boston, 15 July, 1808; d. at Chicago, 14 June, 1894. His father was an Irish captain in the merchant marine, and "the Celtic strain ran bright and lovely through the temperament of the son" (Isham). The eldest of five children, Healy, early left fatherless, helped to support his mother. When sixteen years of age he began drawing, and at once was fired with the ambition to be an artist. Miss Stuart, daughter of the American painter, aided him in every way, loaned him a Guido's Ecce Homo', which he copied in colour and sold to a country priest. Later, she introduced him to Sully, by whose advice Healy profited much, and gratefully repaid Sully in the days of the latter's adversity. At eighteen, Healy began painting portraits, and was soon very successful. In 1834, he went to Europe, leaving his mother well provided for, and remained abroad sixteen years, during which he studied with Gros, came under the pervading influence of Couture, painted amusingly, and received a second class medal in the Salon. His "Franklin urging the Claims of the Colonists before Louis XVI" gained him a second-class gold medal at the Paris International Exhibition of 1855. This year, also, saw him in Chicago, where he remained until 1869, when he again visited the Continent, painting steadily, chiefly in Rome and Paris, for twenty-one years. His final return to Chicago was in 1892. Healy painted more portraits than any other American artist, and of more eminent men than any other artist in the world. Among his sitters were Pius IX (1871), Lincoln, Grant, Cardinal McCloskey ("royal patron"), Marshal Soutl, Webster, Calhoun, Hawthorne, Prescott, Longfellow, Liszt, Gambetta, Thiers, Lord Lyons, and the Princess (now the queen) of Rumania. In one large historical work, "Webster's Reply to Hayne" (1851), now in Faneuil Hall, Boston, there are one hundred and thirty portraits. Healy was remarkably facile, enterprising, courageous, and industrious. "All my days are spent in my painting room" (Reminiscences). His style, essentially French, was sound, his colour fine, his drawing correct and his management of light and shade excellent. His likenesses, firm in outline, solidly painted and with later glazings, are emphatic, rugged, and forceful. Healy was an honorary member of the National Academy of Design and wrote a delightful book: "Reminiscences of a Portrait Painter". Among his principal works are: Lincoln (Corcoran Gallery), Bishop (later Cardinal) McCloskey (bishop's Palace, Albany), Gov. Van Buren (Met. Mus. of Art, New York). ISHAM, History of American Painting (New York, 1905). Tennyson, Roman Book of the Universe, and Hutton, Artists of the XIX Cent. (Boston, 1880); HEALY, Reminiscences of a Portrait Painter (Chicago, 1894). LEIGH HUNT.

Healy, John. See Tuam, Archdiocese of.

Hearse, The Tenebres, is the triangular candlestick used in the Tenebres service. The name is derived, through the French herse, from the Latin herpes, which means a harrow, and is the same as that now used in connexion with the hearse. The funeral hearse was originally a wooden or metal framework, which stood over the bier and coffin and supported the pall. It was provided with numerous prickets to hold burning tapers, and, owing to the resemblance of these prickets to the spines or teeth of a harrow, was called a hearse. Later on, the word was applied, not only to the construction above the coffin, but to any receptacle in which the coffin was placed. Thus it came to denote the vehicle in which the dead are carried to the grave. Likewise in the case of the Tenebres hearse, the term was employed because the prickets were supposed to resemble the teeth of a harrow. The triangular candlestick for the Tenebres dates back at least as far as the seventh century, being mentioned in an ordo of that period published by Mabillon. The number of candles, however, has varied at different times and in different places. Thus Amalarius of Metz speaks of a hearse of twenty-four candles;
other references show that hearsees of thirty, twelve, nine, and even seven candles were used. At the present
day, the Tenebrae hearse is made to bear fifteen
churches a white candle is used on the apex of the triangle. During the service, these
highest candle is left burning after the psalms have all been sung. As each of the last six
verses of the Benedictus is chanted, one of the six
psalms on the altar, also of unbleached wax, is extin-
guished. Likewise, all other lights in the church are
put out, except the candle on the summit of the tri-
angle. This candle is then taken from its place, and
hidden behind the altar, to be brought forth again, still
lighted, at the conclusion of the service. The symbolisn of the Tenebrae hearse and its
is variously explained. The triangle itself is said to be a symbol of the Blessed
Trinity; according to some the highest candle represents Christ, while the other
represent the eleven Apostles and the three Maries; again we are told that the
centre candle is a type of the Blessed Virgin, who alone
believed in the Resurrection, while the gradual extinction of the others symbolizes the
waning faith of the Apostles and Disciples. (See Tenebrae.)
A good account of the Tenebrae hearse, with a discussion on the
Church of Our Fathers, ed. HART
II. 350. Describes and gives
illustrations of the ancient funeral
hearse. The ceremony of extinguishing the candles and other lights, described above, see CEREMONIALISAM EPISCOPOCAM (II. xxii. 4 sqq.). Cf. WIREMAN, Four Lectures on Holy Week
(Boston, 1874); Pius IX's Address in the Vatican
(Boston, 1874); Handbok to Christian and Ecclesiastical Rome: Liturgy
(London, 1897).

LEO A. KELLY.

Heart of Jesus, Devotion to the.—The treatment
of this subject is divided into two parts: (I)
Doctrinal Explanations; (II) Historical Ideas.
I. DOCTRINAL EXPLANATIONS.—Devotion to the
Sacred Heart is but a special form of devotion to Jesus. We shall know just what it is and what
distinguishes it when we ascertain its object, its foundations, and its proper act.

(i) Special object of the devotion to the Sacred Heart.—

The nature of this question is complex and frequently
principal object, which it reaches only in and
through the Heart of flesh, the sign and symbol of
this love. Devotion to the Heart of Jesus alone, as
to a noble part of His Divine Body, would not be
devotion to the Sacred Heart as understood and
approved by the Church, and the same must be
said of devotion to the love of Jesus as detached from
His Heart of flesh, or else connected therewith by no
other tie than that of a word taken in the metaphorical
sense. Hence, in the devotion, there are two ele-
ments: a sensile element, the Heart of flesh, and a
spiritual element, that which this Heart of flesh recalls and
represents. But these two elements, though different objects, merely co-ordinated they consti-
tute but one, just as do the body and soul, and the
sign and the thing signified. Hence it is also under-
stood that these two elements are as essential to the
devotion as body and soul are essential to man. Of the
two elements constituting the whole, the heart is as much the cause of the devotion
and its reason for existence as the soul is the principal
element in man. Consequently, devotion to the
Sacred Heart may be defined as devotion to the
adorable Heart of Jesus Christ in so far as this Heart
represents and recalls His love; or, what amounts to
the same thing, devotion to the love of Jesus as
expressed in so far as this love is recalled and symbolically
represented to us by His Heart of flesh.

(ii) Hence the devotion is based entirely upon the
symbolism of the heart. It is this symbolism that
HEART

imparts to it its meaning and its unity, and this symbolism is admirably completed by the representation of the Heart as wounded. Since the Heart of Jesus appears to us as the sensible sign of His love, the visible wound in the Heart will naturally recall the intellectual wound of the love of God. This symbolism also explains that the devotion, although giving the Heart an essential place, is but little concerned with the anatomy of the heart or with physiology. Since, in images of the Sacred Heart, the symbolic expression must dominate all else, anatomical accuracy is not looked for; it would injure the devotion by rendering the symbolism less evident. It is eminently proper that the heart as an emblem be distinguished from the anatomical heart: the suitableness of the image is favourable to the expression of the idea. A visible heart is necessary for an image of the Sacred Heart, but this visible heart must be a symbolic heart. Similar observations are in order for physiology, in which the devotion cannot be totally disinterested, because the Heart of Flesh towards which the worship is directed in order to read therein the love of Jesus, is the Heart of Jesus, the real, living Heart that, in all truth, may be said to have loved and suffered; the Heart that, as we have above all the things in His mediocrity of moral life; the Heart that, as we know from a knowledge, however rudimentary, of the operations of our human life, had such a part in the operations of the Master's life. But the relation of the Heart to the love of Christ is not that of a purely conventional sign, as in the relation of the word to the thing, or of the flag to the idea of one's country; this Heart has been and is still inseparably connected with that life of benefactions and love. However, it is sufficient for our devotion that we know and feel this intimate connection. We have nothing to do with the physiology of the Sacred Heart nor with determining the exact functions of the Heart in daily life. We know that the symbolism of the heart is a symbolism founded upon reality and that it constitutes the special object of the devotion to the Sacred Heart, which devotion is in no danger of falling into error.

(iv) The heart is, above all, the emblem of love, and, by this characteristic, the devotion to the Sacred Heart is naturally defined. However, being directed to the loving Heart of Jesus, it naturally encounters whatever is human in Jesus is connected with this love. Now, was not this love the motive of all that Christ did and suffered? Was not all His inner, even more than His outer, activity dominated by this love? On the other hand, the devotion to the Sacred Heart, being directed to the living Heart of Jesus, thus becomes familiar with the whole inner life of the Master, with all His virtues and sentiments, finally, with Jesus infinitely loving and lovable. Hence, a first extension of the devotion is from the loving Heart to the intimate knowledge of Jesus, to His sentiments and virtues, to His whole emotional and moral life; from the loving Heart to all the manifestations of Its love. There is still another extension which, although having the same meaning, is made in another way, that is by passing from the Heart to the Person, a transition which, as we have seen, is very naturally made. When speaking of a large heart our allusion is to the person, just as when we mention the Sacred Heart we mean Jesus. This is not, however, because the two are synonymous but when the word heart is used to designate the person, it is because such a person is concerned with all that relates to Jesus' sentiments and virtues, in His emotional and moral life. Thus, when we designate Jesus as the Sacred Heart, we mean Jesus manifesting His Heart, Jesus all loving and amiable. Jesus entire is thus recapitulated in the Sacred Heart as all is recapitulated in Jesus.

(v) In thus devoting oneself to Jesus all loving and lovable, one cannot fail to observe that His love is rejected. God is constantly lamenting this in Holy Writ, and the saints have always heard within their hearts the plaint of unrequited love. Indeed one of the essential phases of the devotion is that it considers the love of Jesus for us as a despised, ignored, rejected love. He explained so bitterly to Blessed Margaret Mary.

(vi) This love is everywhere manifest in Jesus and in His life, and it alone can explain Him together with His words and His acts. Nevertheless, it shines forth more resplendently in certain mysteries from which greater good accrues to us, and in which Jesus is more lavish of His love benefactions and more complete in His gift of self, namely, in the Incarnation, in the Passion, and in the Eucharist. Moreover, these mysteries have a place apart in the devotion which, everywhere seeking Jesus and the signs of His love and favours, finds them here to an even greater extent than in particular acts.

(vii) We have already seen that devotion to the Sacred Heart, being directed to the Heart of Jesus as the emblem of love, has mainly in view His love for men. This is obviously not that it excludes His love for God, for this is included in His love for men, but it moves above all the devotion to "the Heart that has so loved men", according to the words quoted by Blessed Margaret Mary.

(viii) Finally, the question arises as to whether the love which we honour in this devotion is that with which Jesus loves us as Man or that with which He loves us as God: whether it is created or uncreated, His human or His Divine love. Undoubtedly it is the love of God made Man, the love of the Incarnate Word. However, it does not seem that devout persons think of separating these two loves any more than they separate the two natures in Jesus. Besides, even though we might wish to settle this question at any cost, we would find that the opinions of authors are at variance. Some, considering that the Heart of Flesh is connected with human love only, conclude that it does not symbolize Divine love which, moreover, is not proper to the Person of Jesus, and that, therefore, Divine love is not the direct object of the devotion. Others, while admitting that Divine love apart from the Incarnate Word is not the object of the devotion, believe it to be such when considered as the love of the Incarnate Word, and they do not see why this love also could not be symbolized by the Heart of flesh nor why, in this event, the limited deviations to this question at any cost, we would find that the opinions of authors are at variance. Some, considering that the Heart of Flesh is connected with human love only, conclude that it does not symbolize Divine love which, moreover, is not proper to the Person of Jesus, and therefore, Divine love is not the direct object of the devotion. Others, while admitting that Divine love apart from the Incarnate Word is not the object of the devotion, believe it to be such when considered as the love of the Incarnate Word, and they do not see why this love also could not be symbolized by the Heart of flesh nor why, in this event, the limited deviations to this devotion are not considered.

(2) Foundations of the devotion.—The question may be considered under three aspects: the historical, the theological, and the scientific.

(i) Historical foundations.—In approving the devotion to the Sacred Heart, the Church did not trust to the visions of Blessed Margaret Mary; she made abstraction of these and examined the worship in itself. Margaret Mary's visions could be false, but the devotion would not, on that account, be any less worthy or solid. However, the fact is that the devotion was propagated chiefly under the influence of the movement started at Paray-le-Monial; and prior to her beatification, Margaret Mary's visions were most critically examined by the Church, whose judgment in such cases does not involve her infallibility but implies only a human certainty sufficient to warrant consequent speech and action.

(ii) Theological foundations.—The Heart of Jesus, like all else that relates to His Person, is worthy of adoration, but this would not be so if it were considered as isolated from this Person and as having no connexion with It. But it is not thus that the Heart is considered and, in his Bull "Auctorem fidei", 1794, Pius VI authoritatively vindicated the devotion in respect against the calumnies of the Jansenists. The worship, although paid to the Heart of Jesus, extends further than the Heart of flesh, being directed.
to the love of which this Heart is the living and expressive symbol. On this point the devotion requires no justification, as it is the Person of Jesus that is adored, but to the Person as inseparable from His Divinity. Jesus, the living apparition of the goodness of God and of His paternal love, Jesus infinitely loving and amiable, studied in the principal manifestations of His love, is the object of the devotion to the Sacred Heart, as indeed He is the object of (III) devotion to the Love of God. The union of the heart and love, in the relation which the devotion supposes between the one and the other. Is not this an error long since discarded? If so, it remains to examine whether the devotion, considered in this respect, is well founded.

The second and scientific foundations. — In this respect there has been some uncertainty amongst theologians, not as regards the basis of things, but in the matter of explanations. Sometimes they have spoken as if the heart were the organ of love, but this point has no bearing on the devotion, for which it suffices that the heart be the symbol of love, and that, for the basis of the symbolism, a real connexion exist between the heart and the emotions. Now, the symbolism of the heart is a fact and every one feels that in the heart there is a sort of an echo of our sentiments. The physiological study of this resonance may be very interesting, but it is in no wise necessary to the value of devotion, which is confirmed by daily experience, a fact which physiological study confirms and of which it determines the conditions, but which neither supposes this study nor any special acquaintance with its subject.

(3) The proper act of the devotion. — This act is really the object of the devotion, since devotion to the love of Jesus for us should be pre-eminently a devotion of love for Jesus. It is characterized by a reciprocation of love; its aim is to love Jesus who has so loved us, to return love for love. Since, moreover, the love of Jesus manifests itself to the devout soul as a love despoised and outraged, especially in the Eucharist, the love expressed in the devotion naturally assumes a character of reparation, and hence the importance of acts of atonement, the Communion of reparation, and compassion for Jesus suffering. But no special act, no practice whatever, can in any way substitute the object of the devotion to the Sacred Heart. The love which is its soul embraces all and, the better one understands it, the more firmly is he convinced that nothing can vie with it for making Jesus live in us and for bringing him who lives by it to love God, in union with Jesus, with all his heart, all his soul, and all his strength.

The idea of the devotion as it has been set forth above is not a priori; it is deduced from facts and texts. On each point proofs abound, the principal one being grouped in BAILLY, La dévotion au Sacré Cœur de Jésus (Paris, 1906). Therein will also be found all the necessary bibliographical information too detailed to be given here.

Space does not permit replies to all the attacks directed against the devotion. On this point consult du BOUSQUET’s La dévotion au Sacré-Cœur de Jésus, Volumes 1 and 2 (Paris, 1902-03) in the Index in 1704, but withdrawn in 1887, and a new edition according to the third, which had appeared in 1894, was brought out at that price; but the Index was restored; de GYRO, L’Excellence de la dévotion au Sacré-Cœur (Paris, 1906); de NAU, De religionis fessorum SS. Cordis Jesu et purissimi Cordis Mariæ (4th ed., 2 vols., Svo, Innsbruck, 1885); FROMEL, Le Théâtre de la dévotion au Sacré Cœur de Jésus (Lille, 1885); TERRÉ, La dévotion au Sacré Cœur de Jésus: documents authentiques et la théologie (Paris, 1906); RIX, Cultus SS. Cordis Jesu et purissimi Cordis B. Virginis Mariae (Freiburg im Br., 1903); HAVARD, La dévotion au Sacré Cœur de Jésus (London, 1883); MANNING, The Glories of the Sacred Heart (London, 1876).

II. Historical Ideas on the Development of the Devotion. — (1) From the time of St. John and St. Paul there has always been in the Church something like devotion to the love of God, Who so loved the world as to give it His only-begotten Son, and to

the love of Jesus, Who has so loved us as to deliver Himself up for us. But, accurately speaking, this is not the devotion to the Sacred Heart, as it pays no homage to the love of God, but to the love of Jesus. The devotion to the Sacred Heart is therefore an extension of that devotion, not to the love of God, but to the love of Jesus. From the earliest centuries, in accordance with the example of the Evangelist, Christ’s open side and the mystery of blood and water were meditated upon, and the Church was beheld issuing from the side of Jesus, as Eve came forth from the side of Adam. But there is nothing to indicate that, during the first ten centuries, any worship was rendered the wounded Heart.

(2) It is in the eleventh and twelfth centuries that we find the first unmistakable indications of devotion to the Sacred Heart. Through the wound in the side of Jesus and the blood and water poured forth, the wound in the Heart symbolized the wound of love. It was in the fervent atmosphere of the Benedictine or Cistercian monasteries, in the world of Anselmian or Bernardine thought, that the devotion arose, although it is impossible to say positively what were its first texts or who were its first votaries. To St. Gertrude, St. Mechtilde, and the author of the "Vita mystica" it was already well known. We cannot state with certainty to whom we are indebted for the "Vita mystica". Until recent times its authorship had generally been ascribed to St. Bernard and yet, in the late publishers of the beautiful and scholarly Quicherat edition, it was stated, without plausible reasons, to St. Bonaventure ("B. Bonaventurae opera omnia," 1898, VIII, LIII sq.). But, be this as it may, it contains one of the most beautiful passages that ever inspired the devotion to the Sacred Heart, one appropriated by the Church for the lessons of the second nocturn of the Feast. To St. Mechtilde (d. 1298) and St. Gertrude (d. 1302) it was a familiar devotion which was translated into many beautiful prayers and exercises. What deserves special mention is the vision of St. Gertrude on the feast of St. John the Evangelist, as it forms an epoch in the history of the devotion. Allowed to rest her head near the wound in the Saviour’s side, she heard the beating of the Divine Heart and asked John if, on the night of the Last Supper, he too had felt these delightful pulsations, why he had never spoken of the fact. John replied that this revelation had been long foreseen, when the rock, in the great cold, would have need of it to rekindle its love ("Legatus divinae pietatis," IV, 305; "Revelationes Gertrudianae," ed. Poitiers and Paris, 1877).

(3) From the thirteenth to the sixteenth century, the devotion was propagated but it did not seem to have developed in itself. It was everywhere practised by privileged souls, and the lives of the saints and that of many of different religious congregations, of the Franciscans, Dominicans, Carthusians, etc., furnish many examples of it. It was nevertheless a private, individual devotion of the mystical order. Nothing of a general movement had been inaugurated, unless one regard the propagation of the devotion to the Five Wounds, in which the Wound in the Heart figured most prominently, and for the furtherance of which the Franciscans seem to have laboured.

(4) It appears that in the sixteenth century, the devotion took an onward step and passed from the domain of mysticism into that of Christian asceticism. It was constituted an objective devotion with prayers already formulated and special exercises of which the value was extolled and the practice commended. This we learn from the writings of those two masters of the spiritual life, the piouis Languersoi (d. 1539) and the Carthusians of Cologne, and the devout Louis of Blois (Blosius: d. 1566), a Benedictine and Abbot of Liessies in Hainaut. To these may be added Blessed John of Avila (d. 1569) and St. Francis de Sales, the latter belonging to the seventeenth century.

(5) From that time everything betokened an early
bringing to light of the devotion. Ascetic writers spoke of it, especially those of the Society of Jesus, Alvarez de Par, Luis de la Puente, Saint-Jure, and Nouet, and there still exist special treatises upon it such as Father Druzbicki's (d. 1662) small work, "Meta Cordium, Cor Jesu". Amongst the mystics and pious souls who practised the devotion were St. Francis Borja, Peter Canisius, Aloysius Gonzaga, and St. Alphonsus Rodriguez, of the Society of Jesus; also Venerable Marina de Escobar (d. 1633), in Spain; the Venerable Madeleine of St. Joseph and the Venerable Marguerite of the Blessed Sacramento, Carmelites, in France; Jeanne de S. Mathieu Deleloé (d. 1660); a Benedictine in Belgium; the Venerable Vincenzo Valeriano (d. 1671); and even in Jansenists or worldly centres, Marie de Valernod (d. 1654) and Angélique Arnauld; M. Boudon, the great archdeacon of Évreux, Father Huby, the apostle of retreats in Brittany, and, above all, the Venerable Marie de l'Incarnation, who died at Quebec in 1672. The Visitation seemed to be awaiting Blessed Margaret Mary; its spirituality, certain intuitions of St. Francis de Sales, the meditations of Mère l'Huillier (d. 1655), the visions of Mother Anne-Marguerite Clément (d. 1661), and of Sister Jeanne-Bénigne Gojoles (d. 1692), all paved the way. The image of the Heart of Jesus was everywhere in vogue, which fact was largely due to the Franciscan devotion to the Five Wounds and to the habit formed by the Jesuits of placing the image on the title-page of their books and the walls of their churches.

(6) Nevertheless, the devotion remained an individual or at least a private devotion. It was reserved to Blessed Jean Eudes (1601–1680) to make it public, to honour it with an Office, and to establish a feast for it. Père Eudes was above all the apostle of the Heart of Mary; but in his devotion to the Immaculate Heart there was a share for the Heart of Jesus. Little by little the devotion to the Sacred Heart became a separate one, and on 31 August, 1670, the first feast of the Sacred Heart was celebrated with great solemnity in the Grand Seminary of Rennes. Coutances followed suit on 20 October, a day with which the Eustist feast was thenceforth to be connected. The feast soon spread to other dioceses, and the devotion was likewise adopted in various religious communities. Here and there it came into contact with the devotion begun at Paray, and a fusion of the two naturally resulted.

(7) It was to Margaret Mary Alacoque (1647–1690), a humble Visitandine of the monastery at Paray-le-Monial, that the first chose to open His Heart and to confide the task of imparting new life to the devotion. There is nothing to indicate that this pious religious had known the devotion prior to the revelations, or at least that she had paid any attention to it. These revelations were numerous, and the following particular are especially remarkable: that which occurred on the feast of St. John, when Jesus permitted Margaret Mary, as he had formerly allowed St. Gertrude, to rest her head upon His Heart, and then disclosed to her the wonders of His love, telling her that He desired to make them known to all mankind and to diffuse the treasures of His goodness, and that He had chosen her for this work (27 Dec., probably 1673); that, probably distinct from the preceding, in which He requested to be honoured under the figure of His Heart of flesh; that, when He appeared radiant with love and asked for a devotion of expiatory love, frequent Communion, Confession on the first Friday of the month, the observance of the Holy Hour (probably June or July, 1674); that known as the "great apparition" which took place during the octave of Corpus Christi, 1675, probably on 16 June, when he said, "Behold the Heart that has so loved men... instead of gratitude I receive from the greater part (of mankind) only in gratitude...", and asked her for a feast of reparation on the Friday after the octave of Corpus Christi, bidding her consult Father de la Colombière, then superior of the small Jesuit house at Paray; and, finally, those in which solemn homage was asked on the part of the king, and the mission of propagating the new devotion was especially confided to the religious. A few days after the "great apparition" of June, 1675, Margaret Mary made all known to Father de la Colombière, and the latter, recognising the action of the spirit of God, consecrated himself to the Sacred Heart, directed the holy Visitandine to write the account of the events, and made use of every available opportunity discreetly to spread the account through France and England. At his death, 15 February, 1682, there was found in his journal of spiritual retreats a copy in his own handwriting of the account that he had requested of Margaret Mary, together with a few reflections on the usefulness of the devotion. This journal, including the account and a beautiful "offering" to the Sacred Heart, in which the devotion was well explained, was published at Lyons in 1684. The little book was widely read, even at Paray, although not without being the cause of "dreadful confusion" to Margaret Mary, who, nevertheless, the book greatly increased the veneration for the book for the spreading of her cherished devotion. Moulins, with Mother de Soudeilles, Dijon, with Mother de Saumaise and Sister Joly, Semur, with Mother Geryfié, and even Paray, which had at first resisted, joined the movement. Outside of the Visitandines, priests, religious, and laymen espoused the cause, particularly a Capuchin, Margaret Mary's two brothers, and some Jesuits, among the latter being Fathers Croiset and Gallifet, who were destined to do so much for the devotion.

(8) The death of Margaret Mary, 17 October, 1690, did not dampen but rather increased the ardour of those interested. On the contrary, a short account of her life published by Father Croiset in 1691, as an appendix to his book "De la Dévotion au Sacré Cœur", served only to increase it. In spite of all sorts of obstacles, and of the slowness of the Holy See, which in 1693 imparted indulgences to Confraternities of the Sacred Heart and, in 1697, granted the feast to the Visitandines with the Mass of the Five Wounds, but refused a feast common to all, with special Mass and Office, the devotion spread, particularly in religious communities. The Marseilles plague, 1720, furnished perhaps the first occasion for a solemn consecration and public worship of the Sacred Heart. The clergy of the city, with the consent of the ecclesiastical authorities, erected a statue of the Sacred Heart, and under the patronage of the king and queen, the feast was received quasi officially by the episcopate of France. On all sides it was asked for and obtained, and finally, in 1856, at the urgent entreaties of the French bishops, Pope Pius IX extended the feast to the universal Church under the rite of double major. In 1859 it was raised by the Church to the double rite of first class. The acts of consecration and of reparation were everywhere introduced together with the devotion. Oftentimes, especially since about 1850, groups, congregations, and States have consecrated themselves to the Sacred Heart, and, in 1875—this consecration was made throughout the Catholic world. Still, at the best, it was not the initiative or to intervene. Finally, on 11 June, 1899, by order of Leo XIII, and with the formula prescribed by him, all mankind was solemnly consecrated to the Sacred Heart. The idea of this act, which Leo XIII called "the great act" of his pontificate, had been proposed to him by a religious of the Good Shop-
Heart of Mary, Congregations of the.—I. Sisters of the Holy Heart of Mary, founded in 1842 at Nancy, by Mgr. Menjaud, Bishop of Nancy and Toul, for the purpose of instructing young girls in various trades, and protecting their virtue. The statutes, drawn up by the Abbé Marnot, provide that the congregation shall own nothing but the houses which they occupy; that everything over and above shall go to the maintenance of poor children and the decoration of altars. The devotion of Perpetual Adoration was instituted in the mother-house. 

II. Daughters of the Holy Heart of Mary, founded at Paris, in 1860, by Père Delaplace, and Marie-Jeanne Moisan, for the Christian education of children, and the visitation and care of the sick in hospitals and in their own homes. This congregation is particularly flourishing in Canada, where about 140 sisters are engaged in about 15 hospitals. There are six communities in the United States. 

III. Daughters of the Holy Heart of Mary, founded by Mgr. Kobés, at Dakar, Senegambia, 24 May, 1858, for native women. In touch as they are with the customs and dialects of their country, they render invaluable services in teaching, visiting various missions, and caring for the young and catechumens for baptism. Their immunity from yellow fever enables them to care for the Europeans stricken during epidemics. In the Vicariate of Senegambia there are six communities with about forty sisters. 

IV. Congregation of the Holy and Immaculate Heart of Mary, founded in 1851 at Fontainebleau, by the Abbe Dupuis for the Christian education of young Indian girls. The native prejudice against the education of their women was gradually overcome, and the congregation now counts over 200 religious, in charge of orphanages, pharmacies, and schools. The native theologians present certificates of proficiency in the various grades. 

V. Sisters of the Holy and Immaculate Heart of Mary, founded in July, 1848, at Pico Heights, Los Angeles, California, U. S. A. In the Diocese of Monterey and Los Angeles the sisters number about 110, and have charge of about 70 orphanages, in 1 college, 5 academies, and 1 orphan asylum. 

VI. Daughters of the Immaculate Heart of Mary, the name taken by an association of ladies in charge of the home for incurables at Rennes, on their organization into a religious community in 1841. The home had been in existence since 1790, had withstood the rigours of the Revolution, and had never been without a band of devoted women, bound only by the ties of charity, and tacitly rendering obedience to the eldest of their number. 

VII. Sister-Servants of the Immaculate Heart of Mary, founded at Quebec in 1859 by Mgr. Turgeon, Archbishop of Quebec, and Mme Marie Roy, in religion Sister Marie du Sacré-Cœur (d. 1885), to help the poor and penitent, to the missions, and for education for children. The congregation now numbers about 400 members in the United States and Canada in charge of 26 establishments, 152 penitents, and about 5500 children. 

VIII. Sister-Servants of the Immaculate Heart of Mary, founded at Monroe, Michigan, U. S. A.; 28 November, 1845, by the Rev. Louis Gillet, C.S.S.R., for the work of teaching. In 1856 an independent mother-house was established at Villa Maria, Westchester County, Pennsylvania, and later a third at Seranton, Pennsylvania. The members of this congregation are in charge of academies, normal schools, parochial schools, and asylums in eleven dioceses, and number about 1200 sisters. 

IX. Missionary Sons of the Immaculate Heart of Mary, founded at Vich, Spain, in 1848, by Venerable Antonio Maria Claret. (d. 1870). They have charge of the missions on the Philippine Islands and also stations at Corisco and Annabon in Western Africa. 

X. Congregation of the Immaculate Heart of Mary, also called the Congregation of Scheut, founded in 1863 by Ven. Theophile Verbiest (d. 1865), a former military chaplain, for mission work in heathen countries. Father Verbiest's desire to consecrate himself to the life of a missionary seemed on the point of fulfilment when the Treaty of Peking (1861) opened China to his zeal and that of the little band who desired to accompany him. On seeking ecclesiastical permission, however, they were commissioned by Cardinal Barbaro, Prefect of the Propaganda, to begin their work by founding and incurring in Belgium to supply priests for foreign missions, and laid the foundations of the Scheut College, 28 April, 1863, in the Field of Scheut, a short distance from Brussels. In September, 1863, missionaries set forth for Mongolia. The Scheut College priests have faced severe perils, as, for instance, the Boxer Rebellion in China, the persecution of Bishop Hamer, Vicar Apostolic of South-Western Mongolia, seven missionaries, and 3000 Christians; the even greater decimation of their numbers by the Congo climate, not to mention the persecution of the missionaries and the negro colonies established by them. The congregation now numbers over 300 members in charge of 200 churches, 80 parishes in Central, Eastern, and South-Western Mongolia, and in China the Vicariate of Northern Kan-su and the Prefecture Apostolic of Southern Kan-su, where in all about 155 Fathers have charge of about 31,600 Catholics, 20,000 catechumens, 250 churches and chapels, and 25 schools, with an attendance of 6000; in Africa, in the Vicariate Apostolic of Belgian Congo and the Prefecture of Upper Kassai, 52 priests and 20 lay brothers are over about 15,000 Catholics, 29,300 catechumens, 38 churches and chapels, and 28 schools, attended by 2300 children. In connexion with their missions the Fathers have opened a number of benevolent institutions, for example the hospital at St-Trudhon, Upper Kassai, for those afflicted with sleeping sickness. Their activity in ransoming and educating negro children is reaping a rich harvest. The organ of the congregation is "Missions en Chine et au Congo." 

XI. Sisters of the Sacred Heart of Mary, founded at Vienna, in 1843, by Barbara Maix (d. 1873), and in 1848 established in Brazil, where, in addition to the mother-house at Porto Alegre, they have nine institutions, chiefly orphan asylums. 

XII. Sisters of the Sacred Heart of Mary, founded in 1848 by Jean Gailhae at Bézier in the
HEART

Diocese of Montpellier, for the work of teaching and the care of orphans. They were approved by Fius IX and Leo XIII, and have institutions in Ireland, England, two inugal, and the United States.

Heimburger, Orden und Kongregationen (Paderborn, 1908); POLOET, Missions catholiques françaises (Paris, 1899--1903); HEIMBURGER, Missions (Paris, 1899); FON. Kath, Missieten (1875). 117 sqq.: VERMEERSCH, La question congolaise (Brussees, 1900).

F. M. RUDGE.

Heart of Mary, Devotion to the.—As in the article on devotion to the Sacred Heart of Jesus, this subject will be considered under two heads: (1) the nature, and (2) the history of the devotion.

(1) Just as devotion to the Sacred Heart of Jesus is only a form of devotion to the adorable Person of Jesus, so also is devotion to the Holy Heart of Mary but a special form of devotion to Mary. In order that, properly speaking, there may be devotion to the Heart of Mary, the attention and the homage of the faithful must be directed to the physical heart itself. However, this in itself is not sufficient; the faithful must read therein all that the human heart of Mary suggests, all of which is the expressive symbol and the living reminder: Mary's interior life, her joys and sorrows, her virtues and hidden perfections, and, above all, her virginal love for her God, her maternal love for the Son, and her passionate love for her sinful and miserable children here below. The consideration of Mary's interior life and the beauties of her soul, without any thought of her physical heart, does not constitute our devotion; still less does it consist in the consideration of the Heart of Mary merely as a part of her virginal body. The two elements are essential to the devotion, just as soul and body are necessary to the constitution of man.

All this is made sufficiently clear in the explanations given elsewhere (see Heart of Jesus, Devotion to this), and, if our devotion to Mary must not be confused with our devotion to Jesus, on the other hand, it is equally true that our veneration of the Heart of Mary is, as such, analogous to our worship of the Heart of Jesus. It is, however, necessary to indicate a few differences in this analogy, the better to explain the character of Catholic devotion to the Heart of Mary. One of these differences is very marked whereas others are barely perceptible. Devotion to the Heart of Jesus is especially directed to the Divine Heart as overflowing with love for men, and it presents this love to us as despised and outraged. In the devotion to the Heart of Mary, on the other hand, what we see above all else is the love of this Heart for Jesus and for God. Its love for men is not overlooked, but it is not so much in evidence nor so dominant. With this difference is linked another. The first act of the devotion to the Heart of Jesus is the love eager to respond to love; in devotion to the Heart of Mary there is no first act so clearly indicated. In devotion to Jesus, love is a motivating principle in the important place as love. For, although this study and imitation are impregnated with filial affection, the devotion presents itself with no object sufficiently conspicuous to call forth our love, which is, on the contrary, naturally awakened and increased by the study and imitation. Hence, accurately speaking, love is more the result than the object of the devotion, the object being rather to love God and Jesus better by uniting ourselves to Mary for this purpose and by imitating her virtues. It would also seem that, although in the devotion to the Heart of Mary the heart had an essential part as symbol and sensible object, it does not stand out so prominently as in the devotion to the Heart of Jesus; we think rather of the thing symbolized, of love, virtues, and sentiments, of Mary's interior life.

(2) The history of the devotion to the Heart of Mary is connected on many points with that to the Heart of Jesus; nevertheless, it has its own history which, although very simple, is no less charming. In the attention of Christians was early attracted by the love and virtues of the Heart of Mary. The Gospel itself invited this attention with exquisite discretion and delicacy. What was first excited was compassion for the Virgin Mother. It was, so to speak, at the foot of the Cross that the Christian heart first made the acquaintance of the Heart of Mary: her prophecy paved the way and furnished the devotion with one of its favourite formulae and most popular representations: the heart pierced with a sword. But Mary was not merely passive at the foot of the Cross; "she cooperated through charity", as St. Augustine says, "in the work of redemption".

Another Scriptural passage to help in bringing out the devotion was the twice-repeated saying of St. Luke, that Mary kept all the sayings and doings of Jesus in her heart, that there she might ponder over them and live by them. A few of the Virgin's sayings, also recorded in the Gospel, particularly the Magnificat, disclose new features in Marian psychology. Some of the Fathers also throw light upon the psychology of the Virgin, for instance, St. Ambrose, when in his commentary on St. Luke he holds Mary up as the ideal of virginity, and St. Ephrem, when he so poetically describes the sayings of the Virgin and the rapture accorded her by the humble Mother. Little by little, in consequence of the application of the Canticle to the loving relations between God and the Blessed Virgin, the Heart of Mary came to be for the Christian Church the Heart of the Spouse of the Canticles as well as the Heart of the Virgin Mother. Some passages from the other Sapientiae Books, likewise understood as referring to Mary, in whom they personify wisdom and her gentle charms, strengthened this impression. Such are the texts in which wisdom is presented as the mother of lofty love, of fear, of knowledge, and of holy hope. In the New Testament Elizabeth proclaims Mary blessed because she has believed the words of the angel; the Magnificat is an expression of her humility; and in answering the woman of the people, who in order to exalt the Son proclaimed the Mother blessed, did not Jesus himself say: "Blessed rather are they that hear the word of God, and keep it", and in a manner very marked whereas others are barely perceptible. Devotion to the Heart of Jesus is especially directed to the Divine Heart as overflowing with love for men, and it presents this love to us as despised and outraged. In the devotion to the Heart of Mary, on the other hand, what we see above all else is the love of this Heart for Jesus and for God. Its love for men is not overlooked, but it is not so much in evidence nor so dominant. With this difference is linked another. The first act of the devotion to the Heart of Jesus is the love eager to respond to love; in devotion to the Heart of Mary there is no first act so clearly indicated. In devotion to Jesus, love is a motivating principle in the important place as love. For, although this study and imitation are impregnated with filial affection, the devotion presents itself with no object sufficiently conspicuous to call forth our love, which is, on the contrary, naturally awakened and increased by the study and imitation. Hence, accurately speaking, love is more the result than the object of the devotion, the object being rather to love God and Jesus better by uniting ourselves to Mary for this purpose and by imitating her virtues. It would also seem that, although in the devotion to the Heart of Mary the heart had an essential part as symbol and sensible object, it does not stand out so prominently as in the devotion to the Heart of Jesus; we think rather of the thing symbolized, of love, virtues, and sentiments, of Mary's interior life.

It is only in the twelfth, or towards the end of the eleventh, century, that slight indications of a regular devotion are perceived in a sermon by St. Bernard (De laudibus sanctae Mariae Virginis) in which the habit taken by the Church and used in the Offices of the Compassion of the Seven Dolours. Stronger evidences are discernible in the pious meditations on the Ave Maria and the Salve Regina, usually attributed either to St. Anselm of Lucca (d. 1080) or to St. Bernard; and also in the large book "De laudibus B. Mariae Virginis" (Douai, 1625) by Richard de Saint-Laurent, Penitentiary of Rouen in the thirteenth century. In St. Mechtild (d. 1298) and St. Gertrude (d. 1302) the devotion had two earnest adherents. A little earlier it had been included by St. Thomas Becket in the devotion to the girdle of Mary by Blessed Hermann (d. 1245), one of the first spiritual children of St. Dominic, in his other devotions to Mary, and somewhat later it appeared in St. Bridget's "Book of Revelations". Taurer (d. 1361) beholds in Mary the model of a mystical, just as St. Ambrose perceived
in her the model of a virginal soul. St. Bernardine of Siena (d. 1444) was more absorbed in the contemplation of the virginal heart, and it is from him that the Church has borrowed the lessons of the Second Nativity for the feast of the Heart of Mary. St. Francis de Sales speaks of the perfections of the heart, the model of love for God, and dedicated to it his "Theotimus".

During this same period one finds occasional mention of devotional practices to the Heart of Mary, e.g., in the "Antidotarium" of Nicolas du Saussay (d. 1488), in the "Flora" of Luis de Viterbo, and in the "Misteria" of Lanapointe. In the second half of the sixteenth century and the first half of the seventeenth, ascetic authors dwelt upon this devotion at greater length. It was, however, reserved to Blessed Jean Eudes (d. 1681) to propagate the devotion, to make it public, and to have a feast celebrated in honour of the Heart of Mary, first at Autun in 1648 and afterwards in a number of French dioceses. He established several religious societies interested in upholding and promoting the devotion, of which his large book on the Cœur Admira- ble (Admirable Heart), published in 1681, resembles a spiritual dehors; it is a proof of the popularity of this devotion at a time when the Church was just beginning to promote the devotion to the Immaculate Heart of Mary. In 1699 Father Finamonti (d. 1703) published in Italian his beautiful little work on the Holy Heart of Mary, and in 1725 Pope Stanislas Roncari defined the cause of the Heart of Mary with that of the Heart of Jesus in order to oblige Rome's approbation of the two devotions and the establishment of the two feasts. In 1729 his project was defeated, and in 1765 the two causes were separated, to assure the success of the principal one.

In 1799 Pius VI, then in captivity at Florence, granted the Bishop of Viterbo the feast of the Most Pure Heart of Mary for some of the churches in his diocese. In 1805 Pius VII made a new concession, thanks to which the feast was soon widely observed. Such was the existing condition when a twofold movement, started in Paris, gave fresh impetus to the devotion.

The two factors of this movement were first of all the revelation of the "miraculous medal" in 1830 and all the prodigies that followed, and then the establishment at Notre-Dame-des-Victoires of the Archiconfraternity of the Immaculate Heart of Mary, refuge of sinners, which spread rapidly throughout the world in the winter of 1830-31. On 21 July, 1855, the Congregation of Rites finally approved the Office and Mass of the Most Pure Heart of Mary without, however, imposing them upon the Universal Church.

Now there are at least three feasts of the Heart of Mary, all with different offices: that of Rome, observed in many places on the Sunday after the Octave of the Assumption and in others on the third Sunday after Pentecost or in the beginning of July; that of Père Eudes, celebrated amongst the Eudistes and in a number of communities on 8 February; and that of Notre-Dame-des-Victoires, solemnized a little before Lent. The feast has as yet been granted to the entire Church.

Many of those who have written on the Heart of Jesus have devoted a few pages to the Heart of Mary, e.g. Galliffet, Nilles, Terrinon, and Rich. See the articles Heart of Jesus, Devotion to the. However, the chief work is that of Blessed Jean Eudes, Le Cœur Admira- ble de la Trée Sainte Marie, in Acta S. P. de l'Institut de la Cœur de B. Vierge Marie (Caen, 1861; 2 vols., Paris, 1854; 3 vols., Vannes, 1896). The last-mentioned edition contains an introduction and a list of the articles on the Heart of Mary in the K., besides a number of recent articles on the subject,

HEATH, HERETRY, VENERABLE, English Franciscan and martyr, son of John Heath; christened at St. John's, Peterborough, 16 October, 1599; executed at Tyburn, 17 April, 1643. He went to Corpus Christi College, Cambridge, 1617, proceeded B.A. in 1621, and was made college librarian. In 1622 he was received into the Church by George Muscott, and, after a short stay at the English College at Douai, entered St. Bonaventure's convent there in 1625, taking the name of Paul of St. Magdalene. Early in 1643, he with much trouble obtained leave to go on the English mission and crossed from Dunkirk to Dover disguised as a sailor. A German gentleman paid for his passage and offered him further money for his journey, but, obtaining the vocation of St. Francis, he preferred to walk from Dover to London, begging his way. On the very night of his arrival, as he was resting on a doorknob, the master of the house gave him into custody as a shoplifter. Some papers found in his cap betrayed his religion and he was taken to the Comptier prison. The next day he was brought before the Lord Mayor, and, on confessing he was a priest, was sent to Newgate. Shortly afterwards he was examined by a Parliamentary committee, and again confessed his priesthood. He was eventually indicted under 27 Eliz., c. 2, for being a priest and coming into the realm. At Tyburn he reconciled in the very last moment of his life, and was executed with him. He was allowed to hang until he was dead.

HEATH, NICHOLAS, Archbishop of York; b. in London, 1501 (?); d. in the Tower of London, December, 1578 (not 1579, as generally stated). He was educated at St. Anthony's School, London, Corpus Christi College, Oxford, and Christ's College, Cambridge, where he became Fellow in 1521. After his ordination he became Vicar of Iever, Surrey (1531-2). In 1534 he was appointed Archdeacon of Stafford, and took his doctorate in divinity the following year. Having discharged some diplomatic and court duty with success, he was schismatically elected Bishop of Rochester in 1539, but was translated to Worcester in 1543. During the later years of Henry VIII he would appear to have tempted in religious affairs, but in 1550 he showed his orthodoxy by refusing to accept Cranmer's new form for ordination and was in consequence imprisoned and deprived of his see. On the accession of Mary he was restored to his diocese, and in 1555, having been absolved by the pope from schism, he was elected Archbishop of York, receiving the pallium on 3 October. As archbishop he procured the restitution of the see, and much patronage alienated by his reforming predecessor, Holgate. It was he who consecrated Cardinal Pole as Archbishop of Canterbury. In 1556 he became Lord Chancellor of England, and in this capacity he proclaimed Elizabeth as queen on Mary's death in 1558, but resigned his office on the following year. He died on the Privy Council. His solemn warnings to Elizabeth against attempting religious changes having failed, he refused to crown her.

In Parliament he resisted the queen's claim to be styled "Governor of the Church", also the Acts of Supremacy and Uniformity. On 7 July he was deposed by the queen of her own accord, sometimes at liberty, sometimes in durance. On 10 June, 1560, he was committed to the Tower, with
HEATHEN
the option of obtaining liberty if he would attend the new services. This he refused and continued in the Tower till 1571 except for two years, from September, 1563, to 1565, when he was transferred to the keeping of a Protestant dignitary, probably the Dean of Westminster, and occasional intervals when he was allowed to live in the house of Lord Montague at Southwark. But, if this was compensation in the effect that he was not imprisoned as an archbishop after his deprivation was not imprisonment but lived in ease enjoying the queen's favour, though contradicted by his own letters to the Lieutenant of the Tower and the records of the Privy Council, have been repeated by all subsequent Anglican writers from Loudon and Strype to the writer in the Dictionary of National Biography. But all Catholic contemporary evidence shows the falsehood of this account. From 1571 he was indeed allowed to reside at his own estate of Chobham Park, in Surrey, though he is not mentioned as continuing there in any document later than 1574, and there is reason to believe that he was again committed to the Tower about that time. It is certain that by May, 1578, he was again in strict confinement, and a letter by Viscount Montague to Sir William More dated December 19th in the same year announced his death as having just occurred.

HEAVEN.—This subject will be treated under seven headings: (I) Name and Place of Heaven; (II) Existence of Heaven; (III) Supernatural Character of Heaven; (IV) God in Heaven; (V) Heaven and Impeccability of the Blessed; (VI) Essential Beatitude; (VII) Accidental Beatitude; (VIII) Attributes of Beatitude.

I. Name and Place of Heaven.—Heaven (A. S. heofon, O. S. heven and himel, originally himin) corresponds to the Gothic himin. Both heaven and himin are formed from himin by a regular change of consonants: heaven, by changing m before n into v; and himil, by changing n of the unaccented ending into i. Some derive heaven from the root ham, "to cover," to conceal." (caulon, "ceiling," "roof of the world"). Others, however, think it is connected with the Germanic himin. The Greek ἀπαρίτις is derived, according to Pott, from the root ἄραρ, which also connotes the idea of covering. The Hebrew דשא—"a plural of extent"—is derived by many from דסא, "to be high," accordingly, heaven would designate the upper region of the world (cf. Grimm, "Deutsches Wörterbuch," s. v. "Himmel"); Kluge, "Etymologisches Wörterbuch der d. Sprache." In Holy Writ the term heaven denotes, in the first place, the blue firmament, that, according to the classics of the sky. Gen., i. 20, it is the sky. God is "under the firmament of heaven." In other passages it denotes the region of the stars that shine in the sky. Furthermore heaven is spoken of as the dwelling of God; for, although God is omnipresent, yet He manifests Himself in a special manner in the light and grandeur of the firmament. Heaven also is the abode of the angels; for they are constantly with God and see His face. With God in heaven are likewise the souls of the just (II Cor., v. 2; Matt., v. 9, 12). In Eph., iv, 8 sq., we are told that Christ conducted to heaven the patriarchs who had been in limbo (limbus paterum). Thus the term heaven has come to designate both the happiness and the abode of the just in the next life. The present article treats of heaven only. In Holy Scripture it is called the kingdom of heaven (Matt., v. 8), the kingdom of God (Mark, ix, 46), the kingdom of the Father (Matt., xiii, 43), the kingdom of Christ (Luke, xxii, 30), the house of the Father (John, xiv, 2), the city of God, the heavenly Jerusalem (Hebr., xii, 22), the Holy place (Hebr., xix, 12; D. V. holies), paradise (II Cor., xii, 4), life (Matt., xvi, 25), the joy of the Lord (Matt., xxv, 21), crown of life (James, i, 12), crown of justice (II Tim., iv, 8), crown of glory (I Peter, v, 4), incorruptible crown (I Cor., ix, 25), great reward (Matt., v, 12), inheritance of Christ (Eph., i, 18), eternal inheritance (Hebr., ix, 15).

Where is heaven, the dwelling of God and the blessed? Some are of opinion that heaven is everywhere, as God is everywhere. According to this view the blessed can move about freely in every part of the universe, and still remain with God and see Him everywhere. Everywhere are the abodes of heaven—"heavenly places in Christ (in His sacred Humanity) and with the saints and the angels. According, for the advocates of this opinion, the spatial distances of this world must no longer impede the mutual intercourse of the blessed. In general, however, theologians deem it more appropriate that there should be a special and glorious abode, in which the blessed have their peculiar home and where they usually abide, even though they be free to go about in this world. For the surroundings in the midst of which the blessed have their dwelling must be in accordance with their happy state, the union of the soul with the body. And the relation of their affections must find its outward expression in community of habitation. At the end of the world, the earth together with the celestial bodies will be gloriously transformed into a part of the dwelling-place of the blessed (Apoc., xxi). Hence there seems to be no sufficient reason for attributing a metaphorical sense to those numerous utterances of Holy Writ which suggest a definite dwelling-place of the blessed. Theologians, therefore, generally hold that the heaven of the blessed is a special place with definite limits. Naturally, this place is held to exist, not within the universe, but, in contrast with heaven in other respects, outside the Scriptures, without and beyond its limits. All further details regarding its locality are quite uncertain. The Church has decided nothing on this subject.

II. Existence of Heaven.—There is a heaven, i.e., God will bestow happiness and the richest gifts on all those who depart this life free from original sin and personal mortal sin, and who are, consequently, in the state of justice and friendship with God. Concerning the purification of those just souls who depart in venial sin or who are still subject to temporal punishment for sin, see PURGATORY. On the lot of those who are free from original sin, but are not associated with original sin, see LIMBO (limbus purgatorius). On the immediate beginning of eternal happiness after death, or eventually, after the passage through purgatory, see JUDGMENT, PARTICULAR.

The existence of heaven is, of course, denied by atheists, materialists, and agnostics of all centuries as well as by those rationalists who speak of "heaven" as perishable with the body, in short, by all who deny the existence of God or the immortality of the soul. But, for the rest, if we abstract from the specific quality and the supernatural character of heaven, the doctrine of heaven is never met with any opposition worthy of note. Even mere reason can prove the existence of heaven or of the happy state of the just in the next life. We
shall give a brief outline of the principal arguments. From these we shall, at the same time, see that the bliss of heaven is eternal and consists primarily in the possession of God, and that heaven presupposes a condition of perfect happiness, in which every wish of the creation is gratified. The most important of the arguments are as follows:

(1) God made all things for His objective honour and glory. Every creature was to manifest His Divine perfections by becoming a likeness of God, each according to its capacity. But man is capable of becoming in the greatest and most perfect manner a likeness of God, when he knows and loves His infinite perfections. It is therefore that the man is to be the image of God's love and knowledge. Therefore man is created to know God and to love Him. Moreover, this knowledge and love is to be eternal; for such is man's capability and his calling, because his soul is immortal. Lastly, to know God and to love Him is the noblest occupation of the human mind, and consequently also its supreme happiness. Therefore man is created for eternal happiness; and he will infallibly attain it hereafter, unless, by sin, he renders himself unworthy of so high a destiny.

(2) God made all things for His formal glory, which consists in the knowledge and love shown Him by rational creatures. Irrational creatures cannot give formal glory to God directly, but they should assist rational creatures in doing so. This they can do by manifesting God's perfections and by rendering other services; whilst rational creatures should, by their own personal knowledge and love of God, render and direct all creatures to Him as their last end. Therefore every intelligent creature in general, and man in particular, is destined to know and love God for ever, though he may forfeit eternal happiness by sin.

(3) God, in His infinite justice and holiness, must give the virtuous not a sufficient reward here; hence they will be recompensed hereafter, and the reward must be everlasting, since the soul is immortal. Nor can it be supposed that the soul in the next life must merit her continuance in happiness by a continued series of combats; for this would be repugnant to all the tendencies and desires of human nature.

(4) God, in His wisdom, must set on the moral law a sanction, sufficiently appropriate and efficacious. But, unless each man is rewarded according to the measure of his good works, such a sanction could not be made effective. Mere infliction of punishment for sin would be insufficient. In administering rewards and deeds is the best means of inspiring zeal for virtue. Nature itself teaches us to reward virtue in others whenever we can, and to hope for a reward of our own good actions from the Supreme Ruler of the universe. That reward, not being given here, will be given hereafter.

(5) God has implanted in the heart of man a love of virtue and a love of happiness; consequently, God, because of His wisdom, must by rewarding virtue establish perfect harmony between these two tendencies. But such a harmony is not established in this life; therefore, the Virtuous is brought about by means of rewards. God's virtue is the best means of inspiring zeal for virtue. Nature itself teaches us to reward virtue in others whenever we can, and to hope for a reward of our own good actions from the Supreme Ruler of the universe. That reward, not being given here, will be given hereafter.

(6) Every man has an innate desire for perfect beatitude. Experience proves this. The sight of the perfect goods of earth naturally leads us to form the conception of a happiness so perfect as to satisfy all the desires of our heart. But we cannot conceive such a happiness as existing in a state of perfection. But, by reason, eternal; and it will be ours, unless we forfeit it by sin. A natural tendency without an object is incompatible both with nature and with the Creator's goodness. The arguments thus far advanced prove that the existence of this happiness is a possibility, and that God's love and knowledge can be eternal.

(7) We are born for higher things, for the possession of God. This earth can satisfy no man, least of all the wise. "Vanity of vanities," says the Scripture (Ec-

icles, i, 1); and St. Augustine exclaimed: "Thou hast made us for Thyself (O God) and our heart is troubled till it rests in Thee."

(8) We are created for wisdom, for a possession of truth perfect in its kind. Our mental faculties and all our aspirations of our nature are directed to the knowledge of God. But the scanty knowledge that we can acquire on earth stands in no proportion to the capabilities of our soul. We shall possess truth in higher perfection hereafter.

(9) God made us for holiness, for a complete and final triumph over passion and for the perfect and secure possession of virtues. Our natural aptitudes desires with the love and knowledge of the happy goal is not reached on earth, but in the next life.

(10) We are created for love and friendship, for indissoluble union with our friends. At the grave of those we love our heart longs for a future reunion. This cry of nature is no delusion. A joyful and everlasting reunion awaits the just man beyond the grave.

(11) It is the conviction of all peoples that there is a heaven in which the just will rejoice in the next life. But, in the fundamental questions of our being and our destiny, a conviction, so unanimous and universal, cannot be erroneous. Else this world and the order of created things would remain but another assemblage of intelligent creatures, who ought to know at least the necessary means for reaching their appointed end.

(12) Very few deny the existence of heaven; and these few are practically all atheists and epicureans. But surely it cannot be that all the rest have erred, and an isolated class of men such as these are not the true guides in the most fundamental questions of our being. For apostasy from God and His law cannot be the key to wisdom.

Revelation also proclaims the existence of heaven. This we have already seen in the preceding section from which Holy Writ designates heaven; and from the texts of Scripture, still to be quoted on the nature and peculiar conditions of heaven.

III. SUPERNATURAL CHARACTER OF HEAVEN AND THE BEATIFIC VISION.—(1) In heaven the just will see God by direct intuition, clearly and distinctly. Here on earth we have no immediate perception of God; we see Him but indirectly in the mirror of creation. We get our first and direct knowledge from creatures, and then, by reasoning from these, we ascend to a knowledge of God according to the imperfect likeness which creatures bear to their Creator. But in doing so we proceed to a large extent by analogy. Now, it is removing from the Divine Being the imperfections proper to creatures. In heaven, however, no creature will stand between God and the soul. He himself will be the immediate object of its vision. Scripture and theology tell us that the blessed see God face to face. And because this vision is immediate and direct, it is also exceedingly clear and distinct. Ontologists assert that we perceive God directly in this life, though our knowledge of Him is vague and obscure; but a vision of the Divine Essence, immediate yet vague and obscure, implies a contradiction. The blessed see God not merely according to the measure of His likeness imperfectly reflected in creation, but they see Him as He is, after the manner of His own Being. That the blessed see God is a dogma of faith, expressly defined by Benedict XII (1336): "We define that the souls of all the saints in heaven have seen and do see the Divine Essence and attribute to it the首要 virtue of personal knowledge (visione intuitiva et etiam facialis), in such wise that nothing created intervenes as an object of vision, but the Divine Essence presents itself to their immediate gaze, unveiled, clearly and openly: moreover, that in this vision they enjoy the Divine Essence, and that, in this vision of His enjoyment, they are truly blessed and possess eternal life and beatitude." (Denzinger, Enchiridion, ed. 10, n. 530—old edition, n. 456; cf. nn. 693, 1084, 1458, old, nn. 588, 868).
Scriptural argument is based especially on I Cor.,
xxiii. 8-13 (cf. Connely on the passage); Matt., xvii,
10; I John, iii, 2; II Cor., v, 6-8, etc.). The argu-
ment from tradition is carried out in detail by Pet-
avius ("De theol. dogm.", I, I, VII, c. 7). Several
Fathers, who seemingly contradict this doctrine, in
reality maintain it; they merely teach that the bodily
eye cannot see God, or that the blessed do not fully
cognize God, or that the soul cannot see God in its
natural powers in this life (cf. Suarez, "De Deo",
I II, c. 7, n. 17).

(2) It is of faith that the beatific vision is supernat-
ural, that it transcends the powers and claims of cre-
ated nature, of angels as well as of men. The opposite
doctrine of the Begriff, that the glory of God was
transferred by the Council of Vienne (1311) by the
Council of Vienne (Denz., n. 475—old, n. 403), and
likewise a similar error of Baius by Pius V
(Denz., n. 1003—old, n. 883). The Vatican Council
expressly declared that man has been elevated by
God to a supernatural end (Denz., n. 1786—old, n. 1635;
cf. nn. 1508, 1671—old, n. 1655, 1377). In this con-
exion we must also mention the condemnation of
the Ontologists, and in particular of Rosmini, who
held that an immediate but indeterminate perception
of God is essential to the human intellect and the begin-
ing of all human knowledge (Denz., nn. 1659, 1727
—old, nn. 1516, 1772). The Church of God is
supernatural she be shown from the supernatural
character of sanctifying grace (Denz., n. 1021—old,
n. 901); for, if the preparation for that vision is super-
natural, then it is obvious that the vision itself must
be supernatural. Even unaided reason recognizes
that the immediate vision of God, even if it be at all
possible, can never be natural for a creature. For it is
manifest that every created mind first perceives its
own self and creatures similar to itself by which it is
surrounded, and from these it rises to a knowledge of
God as the source of their being and their last end.
Hence its natural knowledge of God is necessarily
mediate and analogous; since it forms its ideas and
judgments about God after the imperfect likeness
which its own self and its surroundings bear to Him.
Such is the only means nature offers for acquiring
a knowledge of God, and more than this is not due to
any created intellect; consequently, the second and
effective way of supposing vision can be the gratuitous
vision of Divine grace. These considerations prove,
not merely that the immediate
vision of God exceeds the natural claims of all
creatures in actual existence; but they also prove
against Ripalda, Becaenus, and others (recently also

may be greater or smaller, or it may vary without any corresponding change in the vision itself.

The secondary object of the beatific vision comprises everything we blessed men have a reasonable interest in knowing. It includes, in the first place, all the mysteries which the soul believed while on earth. Moreover, the blessed see each other and rejoice in the company of those whom death separated from them. The veneration paid them on earth and the reverence granted to them by heaven is also known to the blessed. All that we have said on the secondary object of the beatific vision is the common and reliable teaching of theologians. In recent times (Holy Office, 14 Dec., 1887) Rosmini was condemned, because he taught that the blessed do not see God Himself, but in representations of creatures (Denz., 1930, p. 308, 1773-75). In the earlier ages we find Gregory the Great ("Moral.", I, XVIII, c. liv, n. 90, in P. L., LXXXVI, XCVIII) combating the error of a few who maintained that the blessed do not see God, but only a brilliant light streaming forth from Him. Also in the Middle Ages there are traces of this error (cf. Francelin, "De Deo, in sapientia, i. 2, ed. p. 192).

(5) Although the blessed see God, they do not comprehend Him, because God is absolutely incomprehensible to every created intellect, and He cannot grant to any creature the power of comprehending Him as He comprehends Himself. Suárez rightly calls this "the true infallible rule to prevent the heresies of Proclus and the schools of the Fourth Council of the Lateran and the Vatican Council enumerated incomprehensibility among the absolute attributes of God (Denz., nn. 428, 1782—old nn. 355, 1631). The Fathers defend this truth against Eunomius, an Arius, who asserted that we comprehend God fully even in this life. The blessed comprehend God neither intensively nor extensively—not intensively, because their vision has not that infinite clearness with which God is knowable and with which He knows Himself, nor extensively, because their vision does not actually and clearly extend to everything that God sees in His Essence. For they cannot by a single act of their intellect represent every possible creature individually, clearly, and distinctly, as God does; such an act would be infinite, and an infinite act is incompatible with the nature of a created and finite intellect. The blessed see the Godhead in its entirety, with a limited vision (Deum totum sed non totaliter). They see the Godhead in its entirety, because they see all the perfections of God and all the Persons of the Trinity; and yet their vision is limited, because it has not the infinite clearness that corresponds to the Divine perfections, nor does it extend to everything that actually is, or may still become, an object of God's free decrees. Hence it follows that one blessed soul may see God more perfectly than another, and that the beatific vision admits of various degrees.

(6) The beatific vision is a mystery. Of course reason cannot prove the impossibility of such a vision. For we should not be in a condition, be unable to draw so near and adapt Himself so fully to our intellect, that the soul may, as it were, directly feel Him and lay hold of Him and look on Him and become entirely immersed in Him. On the other hand, we cannot prove absolutely that this is possible; for the beatific vision lies beyond the natural destiny of our intellect, and it is so extraordinary a mode of perception that we cannot clearly understand either the fact or the manner of its possibility.

(7) From what has been thus far said it is clear that there is a twofold beatitude: the natural and the supernatural. As we have seen, man is by nature entitled to beatitude, provided he does not forfeit it by his own fault. We have also seen that beatitude is eternal and that it consists in the possession of God, for creatures cannot truly satisfy man. Again, as we have shown, the soul is to possess God by knowledge and love. But the knowledge to which man is entitled by nature is not an immediate vision, but an analogous perception of God in the mirror of creation, of a very perfect knowledge which satisfies the heart. Hence the beatitude to which alone we have a natural claim consists in that perfect analogous knowledge and in the love corresponding to that knowledge. This natural beatitude is the lowest kind of felicity which God, in His goodness and wisdom, vouchsafes to us. Hence it is necessary that the knowledge of His Essence He may grant to the blessed a direct intuition which includes all the excellence of natural beatitude and surpasses it beyond measure. It is this higher kind of beatitude that He has pleased God to grant us. And by granting it He not only satisfies our natural desire for happiness but He satisfies it in a way that surpasses all others.

IV. Eternity of Heaven and Impeccability of the Blessed. — It is a dogma of faith that the happiness of the blessed is everlasting. This truth is clearly contained in Holy Writ (see Section I, Scriptural Names for Heaven); it is daily professed by the Church in the Apostolic and in the Roman Creed (eternam), and it has been repeatedly defined by the Church, especially by Benedict XII (cf. Section III). Even reason, as we have seen, can demonstrate it. And surely, if the blessed knew that their happiness was ever to come to an end, this knowledge alone would be sufficient to make them shun this matter. Origen fell into error; for in several passages of his works he seems to incline to the opinion that rational creatures never reach a permanent final state (status termini), but that they remain forever capable of falling away from God and losing their beatitude and of always returning to Him again.

The blessed are confirmed in good; they can no longer commit even the slightest venial sin; every wish of their heart is inspired by the purest love of God. That is, beyond doubt, Catholic doctrine. Moreover this impossibility of sinning is physical. The blessed have no longer the power of choosing to do evil actions; they cannot but love God; they are merely free to show that love by one good action in preference to another. But whilst the impeccability of the blessed appears to be unanimously held by theologians, there is a diversity of opinion as to its cause. According to some, it consists in this that God absolutely withholds from the blessed co-operation to any sinful consent. The beatific vision does not, they argue, of its very nature exclude sin directly and absolutely; because God may still displease the blessed soul in various ways, e. g., by refusing a higher degree of beatitude, or by letting persons whom that soul loves die in sin and sentencing them to eternal torment. Moreover, when great sufferings and arduous duties accompany the beatific vision, as was the case in the human nature of Christ on earth, then at least the possibility of sin is not directly and absolutely excluded. The ultimate cause of the impeccability, they say, is the grace in which at his death man passes into the final state (status termini), i. e. into a state of unchangeable attitude of mind and will. For it is quite in consonance with the nature of that state that God should offer only such co-operation as corresponds to the mental attitude man chose for himself on earth. For this reason also the souls in purgatory, although they do not see God, are still utterly incapable of sin. The beatific vision itself may be called a remote cause of impeccability; for by granting so wondrous a token of His love, God may be said to undertake the obligation of guarding from all sin those whom He so highly favours, whether by refusing all co-operation to evil acts or in some other manner. Besides, even if the clear vision of God, most worthy of their love, does not render the blessed physically unable, it certainly renders them less liable, to sin. Impeccability, as ex-
pained by the representatives of this opinion, is not, properly speaking, extrinsic, as is often wrongly asserted; but it is rather intrinsic, because it is strictly due to the final state of blessedness and especially to the beatific vision. This is a universal view of the Scotists, likewise of many others, especially in recent times. Nevertheless the Thomists, and with them the greater number of theologians, maintain that the beatific vision of its very nature directly excludes the possibility of sin. For no creature can have a clear and true view of the Sublime God without being by that very fact alone irresistibly drawn to love it efficaciously and to fulfil for its sake even the most arduous duties without the least repugnance. The Church has left this matter undecided. The present writer rather inclines to the opinion of the Scotists because of its bearing on the question of the immortality of the soul. (See HELL, Impeachment of the Damned.)

V. ESSENTIAL BEATITUDE.—We distinguish objective and subjective beatitude. Objective beatitude is that good the possession of which makes us happy; subjective beatitude is the possession of that good. The objective beatitude of the essence of beatitude is God alone. For the possession of God assuages us also the possession of every other good we may desire; moreover, everything else is so immeasurably inferior to God that its possession can only be looked upon as something accidental to beatitude. Finally, that all else is of minor importance for beatitude is manifested by the fact that not even in God alone is capable of satisfying men. Accordingly the essence of subjective beatitude is the possession of God, and it consists in the acts of vision, love, and joy. The blessed love God with a twofold love; with the love of complacency, by which they love God for His own sake, and secondly with the so-called, by which they love Him as the source of their happiness (amor copisciascentia). In consonance with this twofold love the blessed have a twofold joy; firstly, the joy of love in the strict sense of the word, by which they rejoice over the infinite beatitude which they see in God Himself, precisely because it is the happiness of God whom they love, and secondly, the joy springing from love in a wider sense, by which they rejoice in God because He is the source of their own supreme happiness. These five acts constitute the essence of (subjective) beatitude, or in more precise terms the beatific vision. In this theologians agree.

Here theologians go a step farther and inquire whether among those five acts of the blessed there is one act, or a combination of several acts, which constitutes the essence of beatitude in a stricter sense, i.e., its metaphysical essence in contradistinction to its physical essence. In general their answer is negative; but in assigning the metaphysical essence their opinions diverge. The present writer prefers the opinion of St. Thomas, who holds that the metaphysical essence consists in the vision alone. For, as we have just seen, the acts of love and joy are merely a kind of secondary attributes of the vision; and this reasoning is convincing whether love and joy spring from the vision, as the Thomists hold, or whether the beatific vision by its very nature calls for confirmation in love and God's efficacious protection against sin.

VI. ACCIDENTAL BEATITUDE.—Besides the essential object of beatitude the souls in heaven enjoy many blessings accidental to beatitude. We shall mention only a few: (1) In heaven there is not the least pain or sadness; for every aspiration of nature must be finally realized. The will of the blessed is in perfect harmony with the Divine will; they feel displeasure at the sins of men, but without experiencing any real pain. (2) They delight greatly in the company of Christ, the angels, the saints, and their reunion with so many who were dear to them on earth. (3) After the resurrection the union of the soul with the glorified body will be a special source of joy for the blessed. (See RESURRECTION.) (4) They derive great pleasure from the contemplation of all those things, both created and possible, which, as we have shown, they see in God, at least indirectly as in the cause. And, in particular, after the last judgment, the new heaven and the new earth will afford them manifold enjoyment. (See JUDGMENT, GENERAL.) (5) The blessed rejoice over sanctifying grace and the supernatural virtues that adorn their soul; and any sacramental character they may have also adds to their bliss. (6) They are specially favored to see the Most Holy Virgin and virgins, a special proof of victories won in time of trial (Apoc., vii, 11 sq.; Dan., xii, 3; Apoc., xiv, 3 sq.). Hence theologians speak of three particular crowns, aureoles, or glorioses, by which these three classes of blessed souls are accidentally honored beyond the rest. Aureola is a diminutive of auriga (golden crown). Cf. St. Thomas, "Suppl.", 9, 96; Bram. "Ueber die Aureola" in "Katholik", II, 1881, 28-34; Gutterle, "Die Glieder der Seligen" in "Theol. pract. Quartalschrift" (1902), pp. 749-67.

Since eternal happiness is metaphorically called a marriage of the blessed and Christ, theologians speak of the bridal endowments of the blessed. They distinguish seven of these gifts, four of which belong to the glorified body—light, impassibility, agility, subtility (see RESURRECTION); and three to the soul—vision, possession, enjoyment (visio, comprehensio, fructus). Yet in the explanation given by the theologians of the three last-named virtues, some conformity. We may identify the gift of vision with the habit of the light of glory, the gift of possession with the habit of that love in a wider sense which has found in God the fulfillment of its desires, and the gift of enjoyment we may identify with the habit of love properly so called (habitus caritatis), which rejoices to be with God; in this view these three infused habits would be considered simply as ornaments to beautify the soul. (Cf. St. Thomas, Suppl., Q. xcv.)

VII. ATTRIBUTES OF BEATITUDE.—There are various degrees of beatitude in heaven corresponding to the various degrees of merit. This is a dogma of faith, defined by the Council of Florence (Denz., n. 693—old, n. 588). Holy Writ teaches this truth in very many passages (e.g., wherever it speaks of eternal happiness as a reward), and the Fathers defend it against the heretical attacks of Jovinian. It is true that, according to St. Thomas, Q. xcvi, 1, no one can truly laid a cent on a cent; but by this comparison Christ merely teaches that, although the Gospel was preached to the Jews first, yet in the Kingdom of Heaven there is no distinction between Jew and Gentile, and that no one will receive a greater reward merely because of being a son of Judia (cf. Knabenbauer on this passage). The various degrees of beatitude are not limited to the accidental blessings, but they are found first and foremost in the beatific vision itself. For, as we have already pointed out, the vision, too, admits of degrees. These essential degrees of beatitude are, as Suarez rightly observes ("Debeat.", d. xi, a. 3, n. 5), three: (1) the joy of the vision, to which He says that the word of God bears fruit in some thirty, in some sixty, in some a hundredfold (Matt., xiii, 23). And it is by a mere accommodation of the text that St. Thomas (Suppl., Q. xcvi, aa. 2 sqq.) and other theologians apply this text to the different degrees in the accidental beatitude merited by married persons, widows, and virgins.

The happiness of heaven is essentially unchangeable; still it admits of accidental changes. Thus we may suppose that the blessed experience special joy when they receive greater veneration from men on earth. In particular, a certain growth in knowledge by experience is not excluded; for instance, as time goes on, new free actions of men may become known to the blessed, or personal observation and experience may throw a new light on things already known. And
after the last judgment accidental beatitude will receive some increase from the union of soul and body, and from the sight of the new heaven and the earth.

JOSEPH HON THEIM.

Hebrew Accents. See Hebrew Language and Literature.

Hebrew Bible.—As compared with the Latin Vulgate, the Hebrew Bible includes the entire Old Testament with the exception of the seven deuterocanonical books, Tobias, Judith, Baruch, I and II Maccabees, and the deuterocanonical portions of Esther (x, 4 to end) and Daniel (iii, 24–90; xii, 3–14). So far as Jewish tradition testifies, these books and passages never belonged to the official Hebrew Bible, though Hebrew was the original language of Ecclesiastes, most probably also of Baruch and I Mac., and either Hebrew or the closely allied Aramaic of Tobias, Judith, and the additions to Esther, also, according to some, the additions to Daniel. Even if several of these books were written in Aramaic, that fact alone would not account for their exclusion. The Hebrew Bible, however, was the original version of the Septuagint, which has been adopted by the Vulgate and the Protestant versions. The Law contained the five books of Moses in the unvarying order of Genesis, Leviticus, Numbers, and Deuteronomy. The Prophets contained these five books of the Former Prophets, in the unvarying order of Joshua, Judges, Samuel, Kings; and the four books of the Latter Prophets, Isaiah, Jeremiah, Ezekiel, Minor Prophets (all twelve counted as forming one book). The Writings comprised the remaining eleven books, the poetical works, Psalms, Proverbs, Job, the five Megillot, or Rolls (Canticle of Canticles, Ruth, Lamentations, Ecclesiastes, Esther), and finally Daniel, Esdras, Nehemiah, Chronicles—twenty-four books in all, though perhaps more frequently reckoned as twenty-two by counting Ruth with Judges, and Lamentations with Jeremiah. The above order is that of the printed Bibles, which, in the case of the Latter Prophets and the Hagiographa, differs widely from that prescribed in the Babylonian Talmud, where no fixed order obtains in the manuscripts. In this arrangement the most noteworthy differences from the Vulgate are the classifying the Pauline Epistles under the Writings and the placing of the Latter Prophets before the Hagiographa, the ranking of Daniel not with the Prophets, but with the Hagiographa, and the grouping together of the five Rolls, which is a witness to the special favor they enjoyed of being read publicly on certain feasts. The names for the sacred books of the Pentateuch differ from our own, which are derived from the Septuagint.

With the arrangement into books, the labours of the earliest editors seem to have ended; they made no further division into sections or chapters. The text at first was a close succession of consonantal letters without vowel-signs or spacing or punctuation to guide the reader; but Jewish scholars through many centuries of untiring care have provided us with a system of helps to the intelligent reading of the Hebrew Bible. Words were separated at an early date, perhaps before Christ. This was imperative, as the letters were frequently combined in different ways. The Septuagint translation bears witness not seldom to a combination different from that of the Masoretic text. In some cases divisions, too, were made by the early scribes, who found this necessary not only to aid the reading, but to guard against the intrusion of new verses. Uniformity did not obtain, however, as the Palestinian Jews, we are told, had shorter verses than the Babylonian. The present system is that of neither, but was partly a new arrangement elaborated by the Masoretes. The care taken is shown by the fact that every verse, in fact every letter, was counted by the scribes. Our chapter divisions were unknown to early Jewish scholars, who had their own divisions, according to sense, into the open and closed sections. A change in the open section, Ecclesiastes, is due to the cause of the vacant space showing its close, which was either the remainder of an unfilled line or a blank line succeeding a full line. The closed section began a minor break in thought, indicated only by a short interval of space, the new section recommencing on the same line, or after a brief interval at the beginning of the next line. In late manuscripts and in printed Bibles, the open section is indicated by the letter Pe in the vacant space preceding it, the closed section by the letter Samech.

The Christian division into chapters, invented by Augustine, Bishop of Hippo, was discussed by Langton about the beginning of the thirteenth century, has gained an entrance into the Hebrew Bible. The beginning was made by Rabbi Solomon ben Ismael who, according to Ginsburg, first (c. A. D. 1330) placed the numerals of these chapters in the margin of the Hebrew text. In printed Bibles this system made its first appearance in the first two Bomberg editions of 1518. Arias Montanus, in his Antwerp Bible of 1571, “broke up the Hebrew text itself into chapters and introduced the Hebrew numerals into the body of the text itself” (Ginsburg). This, though contrary to the Massoretic directions, is still followed in nearly all printed Bibles, and is accounted the most useful. In Appendix I (number 17 of 779) the chapter coincides with one or other of the Massoretic sections. In Bomberg’s great Bible of 1547–8, Hebrew numerals were affixed to every fifth verse. It was in the above mentioned Antwerp Bible that the Arabic numerals for all the verses were first placed against them in the margin, though this had been done on a more limited scale in the “Basle Psalmor” of 1563. A further division of the text was for liturgical purposes. It was the custom in Palestine to complete the Pentateuch in Sabbath readings every three years; the various sections into which the text was thus divided were called sedarim. The same name was applied to the sections from the Prophets and the Hagiographa appointed to be read at the same service. The length of a sedar may be judged approximately from the fact that the fifty chapters of Genesis are counted as forty-five sedarim, the forty chapters of Exodus as thirty-six sedarim. Intervals of the triennial cycle, within which the Babylonian Jews had an annual cycle, and the Talmud divides the Law into fifty-four sections called Parashiyoth, one for each Sabbath of the intercalary year. The corresponding readings from the Prophets were called Haphtaroth, or dismissals, because they were read before the close of the service (see Bible; Canon of the Holy Scriptures; Criticism, Biblical; Manuscripts of the Bible;
These letters are all consonants, though a few of them (א, נ, ג, ד, ו, י) have secondary vowel values analogously with our w and y. From the writing found on pre-Exilic monuments, as well as from other indications, it is clear that in the earlier period of the history of the language the Hebrew letters were quite different in form from those with which we are now familiar, and whose use probably goes back to the close of the Captivity. The accompanying schema exhibits the letters of the alphabet in the current, so-called square, form, together with their approximate phonetic values, their names and probable signification, and their value as numerals.

It will be noticed that five of the letters (ג, ד, ו, י, ע) have a different form when they stand at the end of a word, and that the letter Shin differs from Sin only by the position of the diacritical point. Hebrew, like Aramaic and Syriac, is written from right to left. Words are never divided at the end of a line, the scribes preferring either to leave a blank space or to stretch out certain letters (ג, ד, ו, י, ע), hence called dilatable in order to fill out the line. Among the essential characteristics which Hebrew has in common with the other Semitic languages is the preponderating importance of the consonants over the vowels. Indeed so inferior was the rôle of the latter that originally, and so long as Hebrew remained a living language, no provision was made for the writing of the vowels other than by a sparing use of the four weak consonants above mentioned, which were occasionally employed to remove ambiguity by indicating certain vowel sounds. In Semitic generally the rôle of the vowels is quite secondary, viz. to modify the root idea expressed by the consonants, generally three in number, and indicate some of its derived meanings. For instance, the consonantal root הָקָע, qâqâ, represents the notion of killing or slaying, and the varying vowels which may be associated with it serve only to indicate different aspects of this signification; thus: qâqâ, "he killed"; qâqôl, "to kill"; qâqâ, active participle, "killing"; qâqâ, passive participle, "killing", etc. This explains why the alphabet and writing of the ancient Hebrews, as well as those of the later Syrians and Arabs, consisted only of consonants, the educated reader being able to determine through practice, and from the general sense of the
passage, the proper vowels to be supplied for each word. After the Christian Era, when, through the final dispersion of the Jews and the destruction of their temples, their religious life was coming more and more a dead language, and the danger of losing the traditional pronunciation and readings was correspondingly increased, the rabbis realized the absolute necessity of making a more adequate provision for the indication and fixing of the vowel sounds, and this in time led to the painstaking elaboration of the vowel system which is known as the work of the Masoretes. The vowels, five in number (a, e, i, o, u), each of which may be short or long, are indicated by means of dots and dashes placed either above or below the consonants, and, particularly for the long vowels, in conjunction with one of the three letters. Besides the full vowels there are also four half vowels or shevaot, indicated likewise by combinations of dots and dashes, and representing very short vowel sounds, e. g. like that contained in the first syllable of the English word before. This rather minute analysis and puzzling notation of the vowel sounds is the basis on which the Masoretes were anxious to indicate and fix, not the conversational pronunciation of the language, but rather the traditional and distinctively articulated enunciation employed in the public reading of the Old Testament in the synagogues. As in the case of all languages, this solemn and emphatic mode of articulation involved distinctions and shades of sound that were doubtless overlooked in everyday conversation. Many other signs generally called ‘accents’ were added by the subtle and painstaking Masoretes. Some of them determine with greater precision the pronunciation of certain consonants; others (the accents properly so called) indicate the tone syllable for every word, and, besides, serve to indicate pauses and also the logical connexion between words and clauses. Still another function of this complicated system of accents was to serve as a musical notation governing the modulations of the liturgical chants in the service of the synagogue. The tone accent in Hebrew words is ordinarily on the last syllable; sometimes it falls on the penult, but never on the ante penult.

VOCABULARY.—The vocabulary of the Hebrew language as known to us is quite small, and there is also a dearth of grammatical forms, especially when compared with languages in this group. The marvellous richness of the sister Semitic tongue, Arabic, but we are justified in assuming that to the living Hebrew belonged many words and forms that never found a place in the writings of the Old Testament. As a matter of fact, lexicographers count only about 2000 root words, and of these a large number occur only seldom in the Bible, or have little importance in the formation of derivatives. It is generally claimed that a knowledge of 500 roots is a sufficient equipment for the reading of most of the Old Testament texts, and the total number of words in the language as preserved in the Bible is estimated at about 20,000. The absence of Hebrew writing is an attempt to express the things that belong to everyday life—domestic animals and utensils, phenomena and actions that are of common occurrence, ordinary social relations etc., and in particular to express the acts and objects pertaining to religious life and worship. But the Hebrew vocabulary is notably wanting when considered from the philosophical and psychological standpoint, there being few terms for the expression of abstract ideas or the sentiments of the soul. In such matters there is little evidence of psychological analysis or logical precision. Thus in the Old Testament, which is eminently a religious document, there appears no abstract term corresponding to what we call "religion", the idea being rather inadequately rendered by the words, "fear of the Lord". These are words for love and hate, but no intermediary term to express the idea of simple preference. Hence the surprising looseness of certain expressions found even in the Gospels, which, though written in Greek, often exhibit the idiom peculiar to the Hebrew idiom in which the Evangelists thought. Such, for instance, is the passage (Luke, xiv, 26): "If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters . . . he cannot be my disciple". In like manner the terms used in referring to the organisational life of the soul, its various operations are vague and give evidence of a rather crude psychological analysis. Thus the intellect or understanding is often called the "heart", while the affections are connected with the "reins" or the "liver", mercy with the "bowels" etc.

Among the structural characteristics which Hebrew possesses in common with the other Semitic languages may be mentioned the great predominance of triliteral roots, which in Hebrew constitute, with the proper vowels, words of two syllables (שָׁמָּה, qatal). True it is that many roots form only two consonants (e. g. שָׁכָּה, sab), but these are considered as contractions of a single triliteral root, and, in the few quadrilateral roots that occur are almost entirely of foreign origin, or can be otherwise accounted for. Among the parts of speech the verb is of paramount importance, not only because it is the principal element in the construction of a sentence, but also for the reason that the other parts of speech, with few exceptions, are derived from verbal stems. Even when certain verbs called denominative are derived from nominal stems, these latter are generally found to be radically dependent on other verbal forms. In fine, it may be noted that Hebrew syntax, like that of the Semitic languages generally, is very elementary and simple—long and involved periods or sentences being entirely foreign to either the prose or poetic writings of the Old Testament. For further discussion of the grammatical structure and peculiarities of the language the reader is referred to the standard treatises on the subject, which are very numerous.

HISTORY.—To construct a historical sketch of the origin and development of the Hebrew language is a task beset with much difficulty. In the first place the number of literary documents available for that purpose is very limited, being confined exclusively to the writings of the Old Testament, which doubtless represent only a portion of the Hebrew literature, although these writings were produced at different intervals, covering a period of over a thousand years, yet there is not a little uncertainty as to the date of the various books. Moreover, in those early times the rules of grammar and orthography requisite for the stability of a language had not yet been formulated. Hence the notable divergencies that appear when the same passage happens to be reproduced in different books of the Old Testament (e. g. in II Kings, xxii, and Ps. xvii). It seems quite probable that the scribes in reproducing the older texts took the liberty of changing the archaic words and locutions into the more intelligible ones. The current usage may have been done with regard to the Hebrew text of Ecclesiasticus. Naturally the earlier stages of the growth of the language are the ones involved in the greatest obscurity. The contention that Hebrew was the original language bestowed upon mankind may be left out of discussion, being based merely on pietistic a priori considerations. That it was simply a dialect belonging to the Chanaanitish group of Semitic languages is plain from its many recognized affinities with the Phenician and Moabitic dialects, and presumably with those of Edom and Ammon (see Jeremiah, xxxvii, 3). Its beginnings are consequently bound up with the origins of this group of dialects. The existence in remote antiquity of the Chanaanitish language is vouched for by conclusive monumental evidence. Thus the Tell-el-Amarna tablets bear
HEBREW

witness that in the fifteenth century B.C. the peoples inhabiting the eastern shores of the Mediterranean, though making use of Assyrian in their official documents, employed the dialects of Chanaan in current spoken intercourse. Furthermore, the Egyptian records, some of which go back to the sixteenth century and earlier, contain words borrowed from the language of Chanaan, though it must be admitted that these loan words are more frequent in the papyri of the thirteenth and fourteenth centuries. But these documents, however authentic, do not, of course, take us back to the origin of the Chanaanitish group; its beginnings, like those of the other Semitic languages, are lost in the haze of prehistoric antiquity.

In connexion with this problem scholars, assuming that some of the known Semitic languages were derived from others of the same family, have tried to discover their mutual relationships of parent stock and affiliation, to determine which was the mother tongue from which the others were derived. Thus Richard Simon accorded the honour of priority to Hebrew, but this view has now no adherents. Nor have the efforts of modern savants in this direction received the general acceptance of any theory of derivation. Friedrich Delitzsch (The Hebrew Language Viewed in the Light of Assyrian Research) awards the priority to Assyrian, while Margoliouth (Hastings, "Dict. of the Bible", Vol. III, p. 260) places Arabic in the first place, and contends that the ancient Semitic languages were all derived from a common parent stock already in a classical stage of development. Obviously the question does not admit of a clear and ready solution, and there seems at present to be a tendency among Semitic scholars to give up the assumption that any of the known Semitic languages were derived directly from any of the others, and to consider them rather as sister idioms, all being derived in more or less parallel lines from one original parent stock of prehistoric origin, which survives only in the elements common to the different members of the group. This view of the case would seem to be confirmed by the results of philological investigation in the field of the Indo-European languages. For a time it was thought that Sanskrit would prove to be the parent stem, but deeper research pointed rather to the existence of a prehistoric language denominated "Aryan", from which Sanskrit, as well as the others, was derived. So also in the case of the Semitic tongues it is probably all the apparent languages spoken in a certain locality by the first ancestors of the Semitic race. They became diversified more or less rapidly and profoundly as a result of the successive migrations of the various tribes from the common centre, and according to the circumstances and relations of the milieu into which the migrations took place. While nothing definite is known as to the precise location of the original home of the Semites, the more common opinion of scholars, based on various indications, places it somewhere on or near the borders of the Persian Gulf. From this centre migrations went forth at different epochs to different parts of Asia, where the tribes settled and in the course of time formed separate nations. With this political isolation and independence came also gradual deviations from the original spoken idiom, which, in the course of time, became so pronounced as to constitute distinct dialects. In this obvious it is easy to understand why there are closer resemblances between some of the Semitic tongues (e.g. Hebrew and Arabic) than between others (e.g. Hebrew and Aramaic), the difference being due to the diversity of conditions in which the respective deviations from the parent stock took place. And this is furnished by a comparative study of the Romance languages, all of which represent more or less independent and parallel derivations from the parent stem, Latin. As regards the Semitic group, it is possible that certain resemblances may be due to supervening influences of a later epoch. Thus, for instance, the Chanaanitish may have been affected more or less profoundly by the official use of Assyrian during the period of the Tell-el-Amarna letters.

Nothing definite is known as to the antiquity of the primitive Semitic nucleus near the Persian Gulf, nor concerning the date of the migration of the tribes who settled in Chanaan. The Book of Genesis (xix, 37 sqq.) connect up with the origin of the Moabites and Ammonites. At all events, it seems probable that the migration of these tribes was anterior to the year 2000 B.C. Whether Abraham already spoke the language of Chanaan at the time of his migration thither, or whether, having first spoken Assyrian or Aramaic, he later adopted the language of the country in which he established himself, it is hard to say. But be that as it may, the language spoken by the clan of Abraham was a dialect closely akin to those of Moab, Tyre, and Sidon, and it bore a greater resemblance to Assyrian and Arabic than to Aramaic. Once formed, it seems to have been little affected by the intrusions of foreign words. In the course of the long sojourn in Egypt, the number of Egyptian words that have found a place in the Hebrew vocabulary is exceedingly small. The attempt on the part of some scholars to prove the existence of several Hebrew dialects has not produced any definite result. The vocabulary of Hebrew is derived from words of Semitic root and is etymologically traceable only in the Biblical writings of a northern and southern dialect is so minute and subtle, and often so arbitrary, that it is not surprising to find that the conclusions arrived at by different scholars are chiefly noteworthy for their wide divergencies. On the other hand, there seems to be good ground for asserting that, anterior to the period represented by the Biblical Hebrew, the language had already passed through the vicissitudes of a long development and subsequent disintegration. Among the indications upon which this contention is based may be mentioned: (1) the presence of archaic words or forms occurring especially in poetic fragments of old war songs and the like; (2) the occurrence of certain classical forms which imply the existence of previous forms long since obsolete; and (3) the fact of the analogies between Hebrew and the other Semitic tongues, from which scholars are led to infer the existence of such a language back to an even earlier period. The evidences of this are, of course, subject to sober and cautious scrutiny, else they are liable to be made the basis of hasty and unwarrantable generalizations, but their proving force is cumulative, and they seem to indicate in the Hebrew a long process of growth and decay through which it had passed, in great part at least, before the Biblical period. In fact, it is claimed by some that the Hebrew of the Old Testament betrays evidences of as great a disintegration and departure from its assumed typical perfection as does the vulgar Arabic of to-day from the classical idiom of the golden literary age of Islam.

A noteworthy characteristic of the Hebrew of the Biblical period is its uniform stability. All due allowance being made for scribal alterations whereby archaic passages may have been made more intelligible to later generations, the astounding fact still remains that the Hebrew Bible is, in the bulk of it, the product of a period of about 1000 years, a period of beginning of a rapid decadence. Nevertheless, from that date onward the spoken Hebrew gave way more and more to the prevailing Aramaic, it still

LITERATURE.—Prose literature of the historical type constitutes a large portion of the Old Testament. The history of the Jewish people with a sketch of their ancestors going back to the beginnings of the human race is related from a twofold point of view, commonly known as the priestly and the prophetic. To the former belong such books as Chronicles, Ezra, and Nehemiah (II Esd.), and important sections of the Psalms. Its main characteristics in annalistic style with precise dates, statistics, genealogies, official documents, etc., and it enters with minute detail into the religious prescriptions and ceremonies of the Law. It has the dryness of a series of legal documents, and is devoid of imagination or lively conception of events. The prophetic character of Hebrew prose belong large portions of the Pentateuch as well as of the succeeding books: Josue, Judges, Samuel (I and II Kings), and Kings (III and IV Kings). Its narratives are graphic and full of life, and they are characterized by imagination and a refined aesthetic taste. The Deuteronomic writers, and to some extent the Hebrew historiographers in general, employ the narration of historic facts chiefly as a vehicle for the conveying of prophetic and religious lessons. In like spirit, and on account of their didactic value, legends and ancient Semitic traditions, and even accounts chiefly imaginary, find a place in the historical books. Other prose writings of the Old Testament, though cast in historical form, contain a large element of fiction introduced for a didactic purpose similar to the one underlying such narratives as that of the prodigal son in the New Testament. Among these writings, the chief object of which is to inculcate religious and patriotic lessons, may be mentioned Tobias, Judith, Esther, and Jonas.

The Old Testament embodies a considerable amount of poetry, most of which is religious in character. But various indications go to show that the Hebrew literature must have contained many other poetical works which unfortunately have not come down to us. Mention is occasionally made of some of these in the Sacred Writings, e.g. the Book of Yashar [II Sam. (Kings), i, 18] and the Book of the Wars of Yahweh (Num., xxi, 14). Besides fragments called "canticles" scattered here and there throughout the historical books, that of Jacob, O.T., xxxvii, 27; that of Moses, Delt., xxxii, 1-43, also xxxiii, 2-39; that of Deborah, Judges, v, 21-32; that of Anna, I Sam. (Kings), ii, 10, etc., the poetical writings of the Old Testament embrace the Psalms, the Book of Job, except the prologue and the epilogue, the Canticle of Canticles, Proverbs, Ecclesiastes, Ecclesiasticus, the Lamentations of Jeremiahs, and considerable part of the prophetic books. The Psalms belong chiefly to the lyric genre, Job is a religious and philosophical drama, while Proverbs, Ecclesiastes, and Ecclesiasticus are collections of what is called didactic or gnomic poetry.

Apart from its sacred character, the poetry of the Old Testament possesses the highest literary merit, and there is abundant evidence of the great influence it exercised on the religious and national life of the Hebrews. Among its literary characteristics may be mentioned in the first place its naturalness and simplicity. It knows little of fixed, artificial forms, but has a natural sublimity of its own due to the loftiness of the ideas. It deals with things concrete and is essentially subjective. It re-echoes the poet's own thoughts and feelings, and sets forth the varied phases of his own experiences. To these qualities is due in great measure the influence it has exercised on the poetic art on the Jewish people, as well as its wonderful adaptability to the needs and tastes of all classes of readers. It rarely involves anything like a logical process of reasoning, but is intuitive and sententious, expressing with authority religious and ethical truths in brief, terse, pregnant utterances having little connection one with another save through the unity of the general theme. Another characteristic of Hebrew poetry is allegism. "The sacred writers enter into deep and intimate fellowship with external nature, the world of animal, vegetable and material forces: and by regarding them as in immediate connection with God and man, deal only with the noblest themes" (cf. Briggs, "Gen. Introd.", p. 360). All nature is aglow with the glory of God, and at the same time it is represented as sharing in the destinies of man.

As regards literary form, Hebrew poetry takes little or no account of rhyme, and in this it differs essentially from the poetry of the sister language Arabic. It makes frequent and effective use of alliteration, assonance, and play upon words, but its main and essential characteristic is what is known as parallelism.

This peculiarity, though remarked by earlier writers, was first set forth in a scientific treatise by the Anglican Bishop Lowth (De Sacra Poesi Hebr., 1753). Parallelism, traces of which are found likewise in the Assyrian and Babylonian hymns, consists essentially in the reiteration, in one form or another, in succeeding lines of the idea expressed in a previous one. The more common form of this reiteration is a simple repetition of the idea in more or less synonymous terms. Thus:

(1) In thy strength, O Lord, the king shall joy; And in thy salvation he shall rejoice.—(Ps. xx, 2).

(2) Let thy hand be found by all thy enemies: Let thy right hand find out all them that hate thee;—(ibid., 9).

Sometimes, especially in the gnomic poetry, the reiteration of the idea is put in the form of an antithesis, constituting what Bishop Lowth termed antithetic parallelism. Thus:

(1) A wise son maketh the father glad; But a foolish son is the sorrow of his mother;—(Prov., x, 1).

(2) The slothful hand hath wrought poverty; But the hand of the industrious gathereth riches;—(ibid., 4).

Still another form of parallelism is the synthetic or cumulative, of which the following lines may serve as an example:

Praise the Lord from the earth, Ye dragons, and all ye deeps: Fire, hail, snow, ice, Stormy winds, which fulfil his word.—(Ps. cxlviii, 7-8).

Sometimes the thought expressed in the first verse is a figure of the truth enunciated in the second, in which case the parallelism is called emblematic. Thus:

When the wood faileth, the fire shall go out: And when the talebearer is taken away, contentions shall cease. As coals are to burning coals, and wood to fire, So an angry man stirreth up strife.—(Prov., xxvi, 20-21).

For examples of other and rarer forms of parallelism, such as the progressive or staircase form, in which a final word or clause of one line is made the starting-point of the succeeding one and so on; introverted parallelism, in which the first line corresponds with the fourth, and the second with the third, the reader is referred to special treatises (e.g. Briggs, "General Introduction", ch. xiv: "Characteristics of Biblical Poetry").

HEBREW

WORK OF THE GRAMMARIANS.—Although some of the Old Testament writers give etymological renderings of various proper names, grammatical or philological study of the Hebrew language appears prior to the Talmudic period. Many of the observations preserved in the Talmud have a grammatical bearing, and remarks of a similar kind are frequently met with in the commentaries of St. Jerome and the other early Christian writers. The first systematic attempts to frame the rules of Hebrew grammar were made by the Oriental Jews, chiefly of the Babylonian School. The movement began with Menahem Ben Sarouk (d. 950) and continued until the end of the twelfth century, but the results of these early efforts were subsequent to be desired. More successful was the movement inaugurated about the same time under the influence of Arabic culture among the Jewish colonies of Spain and Northern Africa. Among the writers belonging to this school may be mentioned Jehuda Ben Koreish (880), Sandiyah (d. 942), Rabbi Jonah Ben Gannah (physician of Cordova, b. about 990), first author of a Hebrew grammar and lexicographer, and Juda Hayyug (d. 1010). In the sixteenth century the study of Hebrew, hitherto almost exclusively confined to the Jews, was taken up by Christian scholars, and under the influence of the Protestant principle of the Bible as the rule of faith the center of research was transferred. Prior to the Reformation Johanna Reuchlin (1455-1522) and the Dominican Santes Paginus (1471-1541) had prepared the way for such scholars as the famous Johann Buxtorf (1564-1629) and his son (1589-1664). The former was appointed professor of Hebrew at Basle in 1590 and was accounted the most learned hebraist of his time. He published in 1602 a manual of Biblical Hebrew containing a grammar and a vocabulary, and in the following year a work on the Jewish Synagogue. In 1613 he brought out a lexicon of rabbinical Hebrew and its abbreviations, and in 1618 appeared his greatest work, the folio Hebrew Bible, together with the Targums (q. v.) and the commentaries of the rabbinical writers Ben Ezra and Rashi. Buxtorf died in the plague in 1629, leaving many important works unfinished. Some of these were completed and edited by his son Johann, who became his successor as professor of Hebrew at Basle. Another scholar of that period was Paul Büchlein (Fagius), a Bavarian (1504-49), who after having studied Hebrew under Elias Levita became professor of theology at Strasburg in 1542. In 1549 he was called to England by Cranmer and appointed professor of Hebrew at Cambridge, where he died shortly afterward. He earned a great reputation as a Hebrew scholar, and he published more than a score of works dealing chiefly with Old Testament exegesis. But the work of these and other eminent scholars of the same school was defective because based too exclusively on the principles of the Jewish grammarians, and it was to a great extent superseded in the eighteenth century by the works of such scholars as Albert Schultens of Leyden (1686-1750) and Schröder of Marburg (1721-98), who introduced new methods, notably that of comparative grammar. The nineteenth century was marked by a strong revival of Hebrew studies. The movement was begun by Wilhelm Gesenius (d. 1842), whose "Thesaurus" and grammar have been the basis of all subsequent works of the kind, and continued by Böttcher (d. 1863), Ewald (d. 1875), Olshausen, Stade, Königs, Bickell, etc. These scholars, profiting by the great advance in linguistic knowledge derived from the comparative study of the related Semitic and German languages, have introduced into the study of Hebrew a more extensive application of phonetic and other philological principles and have thus brought it nearer than did their predecessors to the realm of an exact science.

HEBREWS, EPISTLE TO THE. —This will be considered under eight headings: (I) Argument; (II) Doctrinal Contents; (III) Language and Style; (IV) Distinctive Characteristics; (V) Readers to Whom it was Addressed; (VI) Author; (VII) Circumstances of the Composition; (VIII) Importance.

I. ARGUMENT. —In the oldest Greek MSS. the Epistle to the Hebrews (ἠρεβικά Ἐπιστολαῖ, Α, B) follows the other letters to the Churches and precedes the pastoral letters. In the later Greek codices, and in the Syriac and Latin versions, the Epistle to the Hebrews occupies the last place among the Epistles of St. Paul; this usage is also followed by the textus receptus, the modern Greek and Latin editions of the text, the Douay and Revised Versions, and the other modern translations. Omitting the introduction with which the letters of St. Paul usually begin, the Epistle opens with the solemn announcement of the superiority of the New Testament Revelation by the Son over Old Testament Revelation by the prophets (Heb. 1, 1–4). It then proves and explains from the Scriptures the superiority of this new Covenant over the Old by the comparison of the Son with the angels as mediators of the Old Covenant (i, 5–ii, 18), with Moses and Jesus as the founders of the Old Covenant (iii, 1–iv, 16), and, finally, by opposing the high-priesthood of Christ after the order of Melchisedech to the Levitical priesthood after the order of Aaron. More properly speaking, there is neither argument nor a development of the doctrine of the Epistle in the x, 10–xii, 13), and to a Christian life according to the Faith (xii, 14–xiii, 17), are repeated in an elaborated form, and the Epistle closes with some personal remarks and the Apostolic salutation (xiii, 18–25).

II. DOCTRINAL CONTENTS. —The central thought of the entire Epistle is the doctrine of the Person of Christ and His Divine mediatorial office. In regard to the Person of the Saviour the author expresses himself as clearly concerning the true Divine nature of Christ as concerning Christ's human nature, and his Christology has been justly called Johannine. Christ, raised above Moses, above the angels, and above all created beings, is the brightness of the glory of the Father, the express image of His Divine nature, the eternal and unchangeable, true Son of God, Who upholdeth all things by the word of His power (i, 1–4). He desired, however, to take on a human nature and to become in all things like unto us human beings, sin alone excepted, in order to pay man's debt of sin by His passion and death (ii, 9–18; iv, 15, etc.). By suffering death He gained for Himself the eternal glory which He now also enjoys in His most holy humanity on His throne at the right hand of the Father (i, 3; ii, 9; viii, 1; xii, 2, etc.). There He now exercises for-
ever His priestly office of mediator as our Advocate with the Father (vii, 24 sq.).

This doctrine of the priestly office of Christ forms the chief subject-matter of the Christological argument and the highest proof of the pre-eminence of the New Covenant over the Old. The person of the High-priest after the image of Christ is not His sacrifice; its effects are opposed, in an exhaustive comparison, to the Old Testament institutions. The Epistle lays special emphasis on the spiritual power and effectiveness of Christ’s sacrifice, which have brought to Israel, as to all mankind, atonement and salvation that is complete and sufficient for all time, and which have given us a share in the eternal inheritance of the Messianic promises (i; 3; ix, 9–15, etc.). In the ad- monitory conclusions from these doctrines at the end we find a clear reference to the Eucharistic sacrifice of the Christian altar, of which those are not permitted to partake who still wish to serve the Tabernacle and to follow the Mosaic Law (xiii, 9 sq.).

In the Christological expositions of the letter other doctrines are treated more or less fully. Special emphasis is laid on the setting aside of the Old Covenant, its incompleteness and weakness, its typical and preparatory character to the time of the Messianic des- tination that is realized in the New Covenant (vii, 18 sq.; viii, 15; x, 1, etc.). In the same manner the letter refers at times to the four last things, the resurrection, the judgment, eternal punishment, and heavenly bliss (vi, 2, 7 sq.; ix, 27, etc.). If we compare the doc- trine of the letter with that of the other epistles of St. Paul, a difference in the manner of treatment, it is true, is noticeable in some respects. At the same time, there appears a marked agreement in the views, even in regard to characteristic points of Pauline doctrine (cf. J. Belser, “Einleitung”, 2nd ed., 571–75). The explanation of these differences lies in the character of the letter and in the circumstances of its composition.

III. LANGUAGE AND STYLE.—Even in the first centu- ries commentators noticed the striking purity of language and elegance of Greek style that characterized the Epistle to the Hebrews (Clement of Alexandria in Eusebius, “Hist. Eccl.”, VI, xiv, n. 2–4; Origen, ibid., VI, xxv, n. 11–14). This observation is con- firmed by later authorities. In fact the author of the Epistle shows great familiarity with the rules of the Greek literary language of his age. Of all the New Testament authors he has the best style. His writing may be compared to the Greek of Sophocles, and in fact he has proved his mastery of the ancient elemen- tic Greek prose whose rhythm recalls the par excellence of Hebrew poetry (cf. Fr. Blass, “[Barnabas] Brief an die Hebräer”. Text with indications of the rhythm, Halle, 1903). As regards language, the letter is a treasure-house of expressions characteristic of the individuality of the writer. As many as 108 terms have been counted which appear in no other part of the New Testament, among them ten words found neither in Biblical nor classical Greek, and forty words also which are not found in the Septuagint. One noticeable peculiarity is the preference of the author for compound words (cf. E. Jacqueline, “Histoire des livres du N. T.”, I, Paris, 1903, 457–71; Idem in Vig., “Dict. de la Bible”, III, 530–38). A comparison of the letter as regards language and style with the other writings of St. Paul confirms in general the opinion of Origen that every competent judge must recognize a great difference between them (in Eusebius, “Hist. Eccl.”, VI, xxv, n. 11).

IV. DISTINCTIVE CHARACTERISTICS.—Among other peculiarities we should mention: (1) The absence of the customary form of the Pauline letters. The usual opening with the Apostolic greeting and blessing is entirely lacking; nor is there any clear evidence of the epistle's authorship of the writer of the whole until the brief con- clusion is reached (xiii, 18–25). On this account some have preferred to regard the letter rather as a homily, but this is plainly incorrect. According to the state- ment of the author it is an admonition and exhorta- tion (ὁγγος ἡς καρακηλήθης, xiii, 22), which, above all, presupposes a well-defined situation of an actually existing individual Church.

(2) The method of citing from the Old Testament. The author refers to the Mosaic institution, demonstration, and exhortation draws largely from the copious treasures of the Old Testament. All the citations follow the text of the Septuagint even where this varies from the Masoretic text, unless the citation is freely rendered according to the sense and without verbal exactness (examples, i, 18; vii, 26). In the other Pauline letters, it is true, quotations from the Old Testament generally follow the Greek translation even when the text varies, but the Apostle at times corrects the Septuagint by the Hebrew, and at other times, when the two do not agree, keeps closer to the Hebrew.

In regard to the formula with which the citations are introduced, it is worthy of note that the expres- sion “It is written”, so commonly used in the New Testament, occurs only once in the Epistle to the Hebrews (x, 7). In this Epistle the words of Scrip- ture are used as the expression of the presence of God, at times also of Christ or the Holy Spirit.

V. READERS TO WHOM IT WAS ADDRESSED.—Ac- cording to the superscription, the letter is addressed to “Hebrews”. The contents of the letter define more exactly this general designation. Not all Israelites are addressed, but only those who have accepted the faith in Christ.

Furthermore, the letter could hardly have been ad- dressed to all Jewish Christians in general. It presup- poses a particular community, with which both the writer of the letter and his companion Timothy have close relations (xiii, 18–24), which has preserved its faith in severe persecution and has advanced itself by works of charity (x, 32–35), which is situated in a definite locality, whether the author hopes soon to come (xiii, 19, 23).

The place itself may also be inferred from the con- tent with sufficient probability. For although many modern commentators incline either to Italy (on ac- count of xiii, 24), or to Alexandria (on account of the reference to a letter of Paul to the Alexandrians in the Muratorian Canon and for other reasons), or leave the question undecided, yet the entire letter is best suited to the members of the Jewish Christian Church of Jeru- salem (cf. above all for this question is the fact that the author presupposes in the readers not only an exact knowledge of the Levitical worship and all its peculiar customs, but, furthermore, regards the present observance of this worship as the special danger to the Christian faith of those addressed. His words (cf. particularly x, 1 sq.) may, if necessary, perhaps permit of another interpretation, but they indicate Jerusalem with the highest probability as the Church for which the letter is intended. There alone the Levitical worship was known to all by the daily offering of sacrifices and the great celebrations of the Day of Atonement and of other feast-days. There alone this worship was continuously maintained ac- cording to the ordinances of the Law until the destruc- tion of the city in the year 70.

VI. AUTHOR.—Even in the earliest centuries the question as to the author of the Epistle to the Hebrews was much discussed and was variously answered. The most important points to be considered in answering the inquiry are the following:

(1) EXTERNAL EVIDENCE.—(a) In the East the writing was unanimously regarded as a letter of St. Paul. Eusebius gives the earliest testimonies of the Church of Alexandria in reporting the words of a “blessed letter” (Πατρίας εὐρέως, as well as those of Clement and Origen (Hist. Eccl., VI, xiv, n. 2–4; xxv, n. 11–14). Clement explains the contrast in language and
style by saying that the Epistle was written originally in Hebrew and was then translated by Luke into Greek. Origen, on the other hand, distinguishes between the thoughts of the letter and the grammatical form; the former, according to the testimony of "the apostolic letter" (cf. the different testimonial in F. Westcott, "The Epistle to the Hebrews", London, 1906, pp. xii–lxxi). It was not until after the appearance of Irenaeus that the Pauline origin of the Epistle to the Hebrews was disputed by some Orientalists and Greeks.

(b) In Western Europe the first Epistle of St. Clement to the Corinthians shows acquaintance with the text of the writings (chs. ix, xii, xvii, xxxvi, xlv), apparently also the "Pastor" of Hermas (Vis. II, iii, n. 2; Sim. I, i. 40). Hippolytus and Irenaeus also knew the letter but do not seem to have regarded it as a work of St. Clement (Eusebius, "Hist. Eccl.", vii, 21; Photius, Cod. 121, 232; St. John Chrysostom, "De viris illustribus", lix). Eusebius also mentions the Roman presbyter Caisius as an advocate of the opinion that the Epistle to the Hebrews was not the writing of the Apostle, and he adds that some other Romans, up to his own day, were also of the same opinion (Hist. Eccl., VI, xx, n. 3). In fact the letter is not found in the Muratorian Canon; St. Cyprian also mentions only seven letters of St. Paul to the Churches (De exhort. mart., xi), and Tertullian calls Barnabas the author (De pudic., xx).

Up to the fourth century the Pauline origin of the letter was regarded as doubtful by other Churches of Western Europe. As the reason for this Philastrius gives the misuse made of the letter by the Novatians (Harr., 89), and the doubts of the presbyter Caisius seem likewise to have arisen from the attitude assumed towards the letter by the Montanists (Photius, Cod. 48; F. Kaufen, "Einleitung in die Heilige Schrift Alten und Neuen Testaments", 5th ed., Freiburg, 1905, III, 211).

After the fourth century these doubts as to the Apostolic origin of the Epistle to the Hebrews gradually less marked in Western Europe. While the Council of Carthage of the year 397, in the wording of the letter, introduced a new type of exposition in the Apostolicae epistolae tredecim (thirteen epistles of Paul the Apostle) and euangel ad Hebraeos una (one of his to the Hebrews) (H. Denzinger, "Enchiridion", 10th ed., Freiburg, 1908, n. 92, old n. 49), the Roman Synod of 382 under Pope Damasus enumerates without distinction Apostle Pauli numero guatuodrads (epistles of Paul fourteen in number), including in this number the Epistle to the Hebrews (Denzinger, 10th ed., n. 84). In this form also the conviction of the Church later found permanent expression. Cardinal Cajetan (1529) and Erasmus were the first to revive the old doubts, while at the same time Luther and the Reformation denied the Pauline origin of the letter.

(2) Internal Evidence.—(a) The content of the letter bears plainly the stamp of genuine Pauline ideas. In this regard it suffices to refer to the statements above concerning the doctrinal contents of the Epistle (n. 111). The language and style vary in many particulars from the grammatical form of the other letters of Paul, as is sufficiently shown above (see III).

(b) The distinctive characteristics of the Epistle (IV) favour more the opinion that the form in which it is cast is II. The testimony of the work of the author of the other Apostolic letters.

(3) Most Probable Solution.—From what has been said it follows that the most probable solution of the question as to the author is that up to the present time the opinion of Origen has not been superseded by a better one. It is, consequently, necessary to accept that the Epistle to the Hebrews the actual author is to be distinguished from the writer. No valid reason has been produced against Paul. Few have denied the ideas and the entire content of the letter; the belief of the early Church held throughout with entire correctness to this Apostolic origin of the Epistle.

The writer, the one to whom the letter owes its form, had apparently heard the words of the apostle. It is not possible now, however, to settle his personality on account of the lack of any definite tradition and of any decisive proof in the letter itself. Ancient and modern writers mention various pupils of the Apostle, especially Luke, Clement of Rome, Apollo, lately also Priscilla and Aquila.

VII. CIRCUMSTANCES OF THE COMPOSITION.—An examination both of the letter itself and of the earliest testimonies of tradition, in reference to the circumstances of its composition, leads to the following conclusions:

(1) The place of composition was Italy (xiii, 24), and more precisely Rome (inscription at end of the Codex Alexandrinus), where Paul was during his first imprisonment (61–63).

(2) The date of its production should certainly be placed before the destruction of Jerusalem (70), and previous to the outbreak of the Jewish War (67), but after the death of John Hyrcanus (123). According to ch. xiii, 10, 23, the Apostle was no longer a prisoner. The most probable date for its composition is, therefore, the second half of the year 63 or the beginning of 64, as Paul after his release from imprisonment probably soon undertook the missionary journey "as far as the boundaries of Western Europe" (St. Clement of Rome, "I Epistle to the Corinthians", v, n. 7), that is to Spain.

(3) The reason for its composition is probably to be found in the conditions existing in the Jewish Christian Church at Jerusalem. The fact of the Church might fall into great danger through continued persecution by the Jews, who had put James, the head of the community to a violent death. Precisely at this period the services in the temple were celebrated with great pomp, as under Albinus (62–64) the magnificent building was completed, while the Christian community had to struggle with extreme poverty. The national movement which began shortly before the outbreak of the last Jewish war would increase the danger. These circumstances might lead the Apostle to write the letter.

(4) The Apostle himself declares the aim of his writing to be the consolation and encouragement of the faithful (xiii, 22). The argument and context of the letter show that Paul wished especially to exhort to steadfastness in the Christian Faith and to warn against the danger of apostasy to the Mosaic worship.

VIII. IMPORTANCE.—The chief importance of the Epistle is in its content of theological teaching. It is, in complete agreement with the other letters of St. Paul, a glorious testimony to the faith of the Apostolic time; above all it testifies to the true Divinity of Jesus Christ, to His heavenly priesthood, and the atoning power of His death.

HEBRON

LEOPOLD FONCK.

Hebron (חֵרְבֶּון, הֵרְבוֹן), an ancient royal city of Chanaan, famous in biblical history, especially at the time of the patriarchs and under David. During the Middle Ages it was an ecclesiastical see—at present it is only a titular one—and was situated in Palestina Prima, with Casmarea as metropolitan. Hence the division of this article into two parts: (I) Biblical Epoch, (II) Christian Epoch.

I. BIBLICAL EPOCH.—Hebron is one of the earliest towns mentioned in history. According to the Bible (Num., xiii, 23) it was founded seven years before Zeron or Tanis, the most ancient town in Lower Egypt, which means that it existed from the first half of the third millennium B.C. Josephus (Bel. Jud., IV, ix, 7) says that in his time the town was already 2300 years old. It was originally called Kiriat Arba, or Kiriat-ha-Arba (D. V., Carith-Arba, XIV, xxi, xxi, 2; XXXV, 27; Jos., xiv, 15, xv, 13, 54, xx, 7, xxi, 11; Judges, i, 10; II Esd., xi, 25) from the name of Arba, “the greatest among the Enacims” (Jos., xiv, 15). The Vulgate, taking the common name Arba in this last expression, i.e. the man for the proper name Adam, translates as follows: “Adam the greatest among the Enacims was laid there”; whence it should not be inferred, as was the case with some ancient authors, that Hebron contains the tomb of the first man. The explanation of the name Kiriat-Arba by the Bible shows all others to be merely fanciful. Such, for instance, is that of St. Jerome (De locis et nominibus locorum Hebraicorum, s.v. Arbae, P. L., XXIII, 862; Ep. xvi, P. L., XXII, 491; Ep. xvi, P. L., XXII, 886; Quest. in Gen., P. L., XXIII, 1978) and of some Jewish commentators who take the word Arba to mean “four,” and Kiriat-Arba to be the “town of the four”, i.e. the four patriarchs buried in the cave of Machpelah: Abraham, Isaac, and Jacob, to whom must be added, according to various opinions, either Adam, Caleb, Esau, or Joseph. According to de Saulcy (Voyage en Terre Sainte, I, 132) the name means “the town of the four quarters”; while it suits the modern town, this is not at all true of the ancient one. The Bible, however, insists over and over again on the true origin of the name: “Cariath-Arbe the father of Enac, which is Hebron” (Jos., xv, 13; xxi, 11). The name Hebron is also very ancient. It appears under the form Cheburo on Egyptian monuments of the second millennium B.C. (Brüesch, “Geog. Inschriften allg. Ägypten. Denkmäler”, II, 76).

The earliest mention of Hebron in the Scriptures occurs (Gen., xiii, 18) on the occasion of Abraham’s coming to the vale of Mamre: and this last name is often that of Hebron (Gen., xxiii, 19, xxxv, 27). On the death of Sara, his wife, the patriarch bought from Ephron the Hethite the cave of Machpelah to serve as a burying place for his family (Gen., xxiii); Abraham himself was buried there (Gen., xxv, 9), as were also Isaac (Gen., xxxv, 27-29) and Jacob (Gen., i, 13). Hebron thus became the second homeland of Abraham, and the centre of attraction during the wanderings of the patriarchs. Isaac and Jacob dwelt at Hebron, and it was from the “vale of Hebron” that Joseph was sent towards Sichem and Dothan to inquire after his brethren (Gen., xxxvii, 14, 17). The Hebrew spies sent by Moses into Chanaan went as far as Hebron, and it was from the adjacent valley of Escol that they brought back a vine-branch with its clusters, and some pomegranates and figs (Num., xiii, 23-25). When the Israelites invaded Chanaan, Oaham, King of Hebron, allied himself against them with four other Chanaanitish princes to besiege Gabaon. After Josue had defeated them, and put them to death, he went on to attack Hebron, which he took, putting all its inhabitants to death (Jos., x, 23-26, 36-37; xii, 10). On the division of the Promised Land, Hebron fell to the tribe of Juda and was given to Caleb (Jos., xiv, 13, 15, 54; Judges, i, 20). It soon afterwards became a city of refuge, falling to the lot of the children of Juda (Jos., xx, 7, xxi, 11; I Par., vi, 55, 57). After the death of Saul on Mount Gelboe, David went to Hebron with his men, and occupied all the surrounding villages (II Kings, ii, 1, 3). He was there anointed King of Juda; made Hebron his capital, and reigned there seven years and a half (II Kings, ii, 11, iii, 2, 5, 5; III Kings, ii, 11; I Par., iii, 5, 1, 3; and xxix, 27). Abner, the leader of Saul’s army, came to Hebron to see David, who was received by him, but was afterwards killed by Joab. The king went over Abner, gave him burial, and composed a lament over him (II Kings, iii, 19-4, 1). It was also to Hebron that Baana and Rechab, chiefs of the bands of Ishbosheth, brought the head of that son of Saul whom they had traitorously slain. He com- manded the murderers to be put to death: their hands and feet were cut off, and hanged up over the pool in Hebron (II Kings, iv, 2-12). Then all the tribes of Israel came and made submission to David (II Kings, v, 1-3; I Par., xi, 1-3). When Absalom revolted against his father, who had then become King of Jerusalem, it was Hebron he made his headquarters (II Kings, xv, 7-11). The town was fortified by Roboam (II Par., xi, 10). Cariath-Arbe is also mentioned among the towns occupied by the children of Juda after the captivity (II Esd., xi, 25). Under Syrian domination, it passed into the hands of the Idumeans; Judas Maccabees, who had gained a victory at Ipsus, razed the fortifications of Cheburo (IV Mach., v, 65).

II. CHRISTIAN EPOCH.—Some writers, following Baroniuss, Papelbroch, Cornelius a Lapide, and Matth. Polus, have identified Hebron as the city of Juda where the Visitation took place, and where St. John the Baptist was born. They hold that Hebron was the most important of the towns of Juda, since Jerusalem belonged to Benjamin; and that, moreover, Hebron
was the most important of the Levitical towns belonging to the sons of Caath, from whom came Zachary, father of the Precursor. However there is a fairly strong local tradition in favour of identifying the “city of Judah with Carem, the modern Alin- Karem. Carem is in the JewishTM.” v. S. Carem; and Meistermann, “La patrie de S. Jean Baptiste.” At the time of the great Jewish rebellion, Simon ben Giora captured Hebron from the Romans; but the town was soon retaken, shortly before the siege of Jerusalem, by Cerebalis, one of Vespasian’s generals who ravaged the land with fire and sword (“Bel. Jud.”, IV, ix, 7–9). It was with great difficulty that Hebron ever recovered. Eusebius (Onomast. s.v. Άρβας) tells us that in his day (fourth century) it was merely a large hamlet; but the neighbourhood has always been dear to pagans, Jews, and Christians alike (Eusebius, “Vita Constantini,” III, ii, iii, in P. G. XX, i, II, 112–1117; Sozomen, “Hist. Eccl.”, I, 18, in P. G., LVII, 124; Sozomen, “Hist. Eccl.”, in P. G., LVII 941–946). Even the Mussulmans held it dear by reason of its many Scriptural associations, especially the apparition of the angels to Abraham, and because it contains the tomb of the patriarchs. This tomb is mentioned by Eusebius (Onomasticon, loc. cit.), by the Pilgrims of Bordeaux in 333, and by visitors of after-ages, as a sanctuary held in the highest reverence. At the time of the Arab conquest in 637, Hebron, for all these reasons, was chosen as one of the four holy cities of Islam. Previously Khaseba (614), the Persian king, had spared it in deference to the Jews of whom there were many in his army. Eusebius, Sozomen, and Sozomen (loc. cit.) relate that Constantine ordered a church to be built at Mambre, with the object of putting an end to the superstitious practices that took place there every year during a semi-religious fair. But we do not know whether the basilica was first built over the cave of Machpelah. It is certain that the Crusaders took the town in 1100, and that the sanctuary became the church of Saint Abraham, also called the church of the Holy Cave (Sancta Caverna or Spelunca, Ανάλητος του σπήλαιου). The town itself is often styled by the chroniclers of that period Castel Saint-Abraham, Presidium or Castellum ad Sanctum Abraham. A priory of Canons Regular of St. Augustine was installed to take charge of the basilica (de Rozière, “Cartulaire du Saint-Sépulchre,” 120, 142, etc., 174).

A curious document relating to the medieval period and taken from a fifteenth-century manuscript, is found in the “Recueil des historiens des croisades” (Hist. Occid., V, 302–316) under the heading: “Canonici Hebronensis tractatus de inventione sanctorum patriarcharum Abraham, Issac et Jacob” (see Riant, “Recueil des historiens des croisades,” op. cit., p. 64).

Its most interesting historical materials are: a description of the sanctuary existing on the site of the tombs before the coming of the Franks; the sending of an embassy from Constantinople to Palestine by Theodosius the Younger, about 415, to bring back the bones of the patriarchs; the existence of a church at Hebron at the time of the First Crusade; the spoliation of the sanctuary at Hebron between 1099 and 1102 by a Latin archbishop, probably Pierre de Narbonne, transferred from the See of Albun to that of Apamea between 1094 and 1096. A report of the year 1119, to Rainier, prior of Hebron, and to two monks, Odol and Arnulph, who gave the anonymous writer the facts he relates; mention is also made of Baudouin, seigneur of Saint-Abraham; Guermont, Patriarch of Jerusalem (d. 1128); and a description occurs of the sepulchral crypt where the bodies of the patriarchs lay. In 1167 Hebron became a Latin see; its first titular was Raimondus (1167–1170), nephew of the patriarch Foucher (Du Cange, “Familles d’outremer,” 794).

A letter of Clement IV, dated 1 June, 1267, orders the Patriarch of Jerusalem to supply the church of Hebron with a priest (Eubel, “Hierarchia Catholica,” 823). After GEOFFREY (Gaufridus), C.P.M. (1273–1283), the bishops of Hebron were many, and a great confusion existed in their list (Lequer, “Oriens Christ.”, III, 639–642, 1269–1270; Gams, “Series episc.”, 435 Eubel, op. cit., I, 283, II, 180). Cardinal Mermillod was at one time titular of Hebron. The titular at present is Monseigneur Pet- koff, Vicar Apostolic of the Uniat Bulgarians in Thrace, who resides at Adrianople. As a residential see, Hebron enjoyed a very brief existence. However it survived the triumph of Saladin in 1187, and the march of the Kharezzan hordes in 1244. Saladin, after the victory at Hattin (15 July, 1187), continued his march on Jerusalem, to occupy Hebron, and to associate the sanctuary of Abraham with the worship of Islam. The Kharezzians destroyed the town, but did not touch the sanctuary (Riant, “Archives,” II, 420–421).

In spite of Mohammedan fanaticism, which since the fourteenth century had forbidden a non-Mussulman to enter the hallowed place (Isaac Chelo, 1334, “Les chemins de Jérusalem,” in Carmoly, “Itinéraires,” 423), the schismatic Greeks, after the departure of the Latins, retained for a time a residing bishop in Hebron. Lequer (1273–1283) mentions three of these bishops, Joseph, Nikobulos, whose name appears with that of Christodoulos of Gaza in the Acts of the Council of Jerusalem in 1672 (Manis, XXXIV B, 1771) under the title of “Ἰωαννικιοῦ τοῦ ἐφευρέσαντος ἁρχετικοῦ τοῦ ἱεροῦ σπήλαιον (Joanikios, most holy Archbishop of the holy Cave). Among the other signatories (Ibid., 1174) were two priests of the same church, George and Isas, both of whom describe themselves as Ιωαννίκος οὗ τοῦ ἱεροῦ σπήλαιον (priest and servant of the holy Cave). This Greek see did not last long; and it is not mentioned in the notice of Chrysanthus, Patriarch of Jerusalem, 1707–1731 (Visconti, 1744, after defeating the Fatimids, the inhabitants of Hebron who had risen against his authority, Ibrahim Pasha took their town by assault.

Hebron is to-day one of the principal towns of Palestine. It is about twenty-four miles to the south of Jerusalem, is the residence of a Umakam, and has a population of 20,000, of whom 2000 are Jews of German, Spanish, or Portuguese origin; the remainder are Mussulman fanatics. Its Arab name, El-Khalil, signifies “the friend of God,” and calls to mind Abraham who is given that appellation in James, ii, 23. The town is picturesquely situated on a narrow plateau among the hills of Judaea. Its only monument of interest is the “Holy Enclosure” (Haram-el-Khalil), within which stands the mosque over the burial cave of Machpelah. The Haram is in the form of a rectangular parallelogram about 200 feet long, by 120 broad, and 50 to 60 feet high. The walls are of great thickness, are built of enormous rough stones, and the style of the construction belongs to the time when the crypts of the Haram at Jerusalem were built, and seems Roman in character. The modern mosque is built on the site of an ancient basilica restored by the Crusaders (12th century). (La Palestine, Guide historique et pratique, par des professeurs de N.D. de France à Jérusalem, p. 265). The sacred enclosure is one of the finest relics.
of ancient architecture in Palestine, and has been admired since the time of the Pilgrim of Bordeaux (fourth century). In the opinion of many it is of Jewish origin and dates from the time of the kings of Judah (cf. Legende in Veu., “Dict. de la Bible”, s. v. Hebron). Consult Riant, “Archives”, II, 412, for a list of the few travellers who, during the nineteenth century, were able to visit this sanctuary so fanatically guarded by the Mussulmans. In 1862 the present King of England, then Prince of Wales, and in 1869 the Crown Prince of Prussia, later Frederick III, were among the visitors. The trade of the town is much the same as in all Arab countries. The comparative fertility of the soil and an abundance of water contribute to increase this trade, which consists mainly in the making of goat-skin water bags, jars, and especially glass ware for which, for centuries, Hebron has used a soda extracted from the trans-

ligious faith; his wife, who had originally been a Lutheran, became an ardent Methodist; none of the three children, all boys, ever joined any of the Protestant sects. A reverse in the family fortune made it necessary for Isaac, who was the youngest of the sons, to begin work at the age of eleven, helping his elder brothers in their business as bakers. His consequent want of even a complete common-school education would have been a serious and permanent impediment to any future intellectual work had he not been a studious, thoughtful boy, instinctively eager for knowledge. Even while kneading the dough in the bakery he studied Kant’s “Critique of Pure Reason”, which he had fixed conveniently before his eyes. His mind was original, intuitive, and prone to seek the hidden solution of the grave problems of philosophy and of life. As a lad, he was anxious to improve the social condition of American workingmen. While

Hebron with Mosque over Cave of Machpelah

Jordan regions. The vineyards around the town are very fine; they belong mainly to the Jews who trade in dried raisins, and manufacture a syrup and an excellent wine, known as Hebron wine. Of late years the Russians have contrived to get a foothold at El-Khalil, and they have now a hospelry at the entrance to the town.

A complete bibliography of Hebron would mean a lengthy enumeration; the principal works alone will be mentioned here. Guérin, Description de la Judée, III, 214-256; Robinson, "Biblical Researches in Palestine, II, 73-94; Conder and Kitchener, Memoirs of a Survey of Western Palestine, III, 395-8; 396; White, "Thèrèse of the Book", I, Southern Palestine (London, 1881), 268-82; Rosen, "Über das Thal und die nächtliche Umgebung Hebrons in Zeitschrift des deutschen mundart. Gesellschaft", XII, 477; Legende in Veu., Dict. de la Bible, s. v. On its Christian history, see the works referred to in the body of this article: Lequien, Du Canoé, Échel, and the historians of the Crusades at places indicated: also, for both epochs, Sauvage, Histoire de Jérusalem et d’Hebron depuis Abraham jusqu’à la fin du XVe siècle de J. C. (Paris, 1870), containing fragments of the chronicle of Moudjired-din, translated from the Arabic text.

S. Salaville.

Hecker, Isaac Thomas, missionary, author, founder of the Paulists; b. in New York, 18 December, 1819; d. there, 22 Dec., 1883. His parents were John Hecker, a native of Wetzlar, and Caroline Freund, of Elberfeld, Prussia. John Hecker professed no re-

still in his early teens he was accustomed to make street speeches on politico-social topics, and before he became of age, he was a friend and correspondent of Orestes A. Brownson, who was already famous as a philosopher and social reformer. Along with his keen sense for practical affairs, young Hecker was then, as always, predominantly mystical, and of a profoundly religious temperament. Perhaps because his religious sentiments were instinctively Catholic, he was repelled by the teachings of Luther and Calvin. Their doctrines of the total depravity of human nature and of the necessary sinfulness of reason were especially repugnant to him. On the other hand, becoming acquainted with the Transcendentalists, he found that they overexalted human nature. Driven from both extremes he sought religious truth restlessly until he became convinced of the Divinity of the Catholic Faith. He was baptized by Bishop McKeays, in New York January, 1844. On entering the Church, he was powerfully attracted by the ideal of religious life in community, while his ever-increasing consciousness of a vocation to help his fellow-men drew him towards the apostolic priesthood. To satisfy both demands of his soul, he applied for admission into the Redemptorist community. He entered their novitiate in Belgium in 1848.
The period of preparation and study thus begun was one of acute suffering to him, and of perplexity to his superiors. His native bent was towards philosophy and theology, and he had from his boyhood informally exercised himself in these studies: but when he came to the formal study of ecclesiastical sciences he was halted and tortured by an inexplicable obfuscation of the mind. However, in spite of the fears and doubts of some who did not understand him, he was recommended for Holy orders, and was ordained priest by Bishop Wiseman, and appointed one year as a parish priest and chaplain in England. He returned to New York in March, 1851, as one of a band of Redemptorist missionaries appointed to work in the United States. The tide of immigration was then at its height, and for years Father Hecker and his four companions, Fathers Walworth, Hewit, Deshon, and Baker, were engaged in continuous and very arduous labours amid the rapidly increasing Catholic population. Father Hecker was deficient, at first, in some of the niceties of eloquence, and he was never remarkable for those vigorous emotions and imagination that are usually associated with oratorical power, but he was unrivalled as an instructor, persuasive in the highest degree, earnest, humorous, and skilful in illustration; and he soon developed into a forceful, intense, and magnetic public speaker. He was much in demand as a lecturer and exponent of Catholic truth, and for years he was eagerly welcomed by overflowing audiences in New York, Boston, Detroit, St. Louis, Chicago, and other large cities. The novelty of the lectures and the courage of the lecturer, as well as his skill in presenting doctrinal and historical themes, assured his success in his career for which he had long prayed and laboured. He became an apostle primarily to the Gentiles, and then to those of the household of the faith. Meanwhile, a misunderstanding had risen between the American Redemptorists and their superiors. In order to seek a final and authoritative settlement of the difficulty, Father Hecker went to Rome as the representative of the American Fathers, to lay their case before the superior general of the order. Upon his arrival, he found the general and his council extremely hostile, and on the third day he was expelled from the order. Pius IX dispensed Hecker and his four companions from their vows as Redemptorists, and authorized and encouraged them to form a new congregation devoted to missionary work in the United States, in dependence upon the hierarchy. St. Paul was chosen patron of the new institute, which is called legally "The Missionary Society of St. Paul the Apostle in the State of New York". Father Hecker was elected superior of the society, and so continued until his death. He worked, during the prime of his life, with immense energy. In addition to his duties as superior, he continued his work as a lecturer; he notably promoted the apostolate of the press among Catholics in America; he organized the Catholic Publication Society, founded and edited "The Young Catholic", a paper for children, and created a new movement in Catholic literary activities. He was the author of three books: "Questions of the Soul", "The Aspirations of Nature", "The Church and the Age". However varied his works, his object in view was always simple: the propagation of Catholicity.

Father Hecker's work has been likened to Cardinal Newman's, by the cardinal himself—"I have ever felt", Newman wrote to Father Hewit on the occasion of Father Hecker's death, "that there was a sort of unity in our lives, that we had both begun a work of the same kind, he in America and I in England". In spite of some obvious differences in the character of the two men and of their work, the comparison is justifiable. Newman, better than anyone else, it has been said, made Catholic dogmas and practices acceptable to the English mind, which had long been estranged from Catholicity on the pretence that the Church was a foreign institution. Hecker, a man of and from the people, strove unstintingly to recommend the Catholic Faith to the democratic American people, who had been reared in hostility to the Church on the pretence that she was foreign and anti-democratic. He was an ardent American in love with American institutions, but he was likewise absolutely and uncompromisingly Catholic. He won the respect and confidence of his non-Catholic countrymen in the fullest extent, while at the same time eliciting repeated letters of approval from the highest authorities of the Church at Rome. The regrettable controversy on "Americanism", in which Father Hecker's name was mentioned, is discussed elsewhere in this work (see TESTIM BENEVOLENTI). It suffices to say here that, on the occasion of the issue, by Leo XIII., of the Brief "Testim Benevolentiae", the hierarchy in the United States was not unanimously given spontaneous testimony that Father Hecker had never countenanced any deviation from, or minimising of, Catholic doctrines. He has quite generally recognized by American Catholics that among the notable champions of the Holy See in the nineteenth century none was more loyal, none spent himself more generously, than Father Hecker, in upholding its dignity and extending its sway.

The Life of Father Hecker, with an Introduction by the Most Rev. John Ireland, D.D., Abp. of St. Paul (New York, 1911); BARRY, Father Hecker, Founder of the Paulists, reprinted from The Dublin Review for July, 1892 (New York, 1892); SEDGWICK, Father Hecker in Beacon Rhode (New York, 1909); KEANE, Isaac Thomas Hecker in The Catholic World, XXXIV (New York, 1889); ELLIOTT, Life of Isaac Thomas Hecker in The Catholic World, LI-LIV (1897), M. Hedley, John Cuthbert. See Newport, Diocese of.

Hedonism (hē'don-ı̇zəm), pleasure, the name given to the group of ethical systems that hold, with various modifications, that feelings of pleasure or happiness are the highest and final aim of conduct; that, consequently, those actions which increase the sum of pleasure are thereby constituted right, and, conversely, what increases pain is wrong.

History.—The father of Hedonism was Aristippus of Cyrene. He taught that pleasure is the universal and ultimate object of endeavour. By pleasure he meant not merely sensual gratification but also the
higher forms of enjoyment, mental pleasures, domestic love, friendship, and moral contentment. His followers, however, reduced the system to a plea for self-indulgence (see Cyrenaic School of Philosophers).

To the Cyrenaic succeeded the School of Epicurus, who emphasized the superiority of social and intellectual pleasures over those of the senses. He also conferred more dignity on the hedonistic doctrine by combining it with the atomic theory of matter; and this synthesis finds its finished expression in the materialistic determinism of the Roman poet Lucretius. Epicurus taught that pain and self-restraint have a hedonistic value; for pain is sometimes a necessary means to health and enjoyment; while self-restraint and prudent asceticism are indispensable if we would secure for ourselves the maximum of pleasure (see Epicureanism). With the decay of old Roman ideals and the rise of imperialism, the Epicurean philosophy flourished in Rome. It accelerated the destruction of pagan religious beliefs, and, at the same time, was among the forces that resisted Christianity.

The embodiment of Hedonistic principles in our own times may be traced to a line of English philosophers, Hobbes, Hartley, Bentham, James Mill, John Stuart Mill, the two Austins, and, more recently, Alexander Bain, who are popularly known as Utilitarians. Herbert Spencer adopted into his evolutionary thought the principle that the discernible norm of right and wrong is pleasure and pain, though he substituted the progress of life for the hedonistic end.

Exposition.—Contemporary Hedonists are sometimes classed into egoistic and altruistic. The classification, however, is not quite satisfactory when applied to writers; for many Hedonists combine the egoistic with the altruistic principle. The distinction, however, may conveniently be accepted with regard to the principles that underline the various forms of the doctrine. The statement that happiness is the end of conduct at once raises the question: whose happiness? To this egoism answers: the happiness of the agent; while altruistic Hedonism replies: the happiness of all concerned, or, to use a phrase that is classic in the literature of this school, the "greatest happiness of the greatest number". Perhaps the only thoroughly egoistic Hedonist is Thomas Hobbes, though in his case Hedonism is not the first instance in which such a concept encountered, led Hedonists to substitute the happiness of all concerned for the happiness of the individual. The transition from the one to the other is attempted through a psychological analysis which would show that, through the operation of the law of association of ideas, we come to love for their own sakes objects which in the first instance we valued for other reasons. This is true to a certain extent, but the cases in which it may occur fall short of the range which the principle would have to cover in order to justify the theory. Besides, by adopting the happiness of others as the end, the Hedonist loses the only semblance of a proof which he had to offer in support of his first contention, that happiness is the end, viz. the happiness that every man desires and can desire nothing else; it is only too plain that not everybody desires the happiness of everybody else. Another modification was introduced to meet the criticism that, if pleasure is the standard of right and wrong, selfishness is just as much the necessary form of self-sacrifice. The Hedonists, or at least some of them, replied that not merely the quality of pleasure but also the quality is to be taken into account. There are higher and lower pleasures; and the higher are more desirable than the lower; therefore conduct which aims at the higher is the better. But if pleasures are to be divided into higher and lower, irrespective of quantity, the hedonistic standard is, by the very fact, displaced, and some other ultimate scale of moral valuation is appealed to or implied. The subjective norm, pleasurable feeling, is made to retire in favour of some unnamed objective standard which is the agent's object to pursue. This is the suicide of Hedonism. Other advocates of the system have, contrary to its initial principle, introduced a primary altruistic impulse co-ordinate with and controlling the egoistic as a spring of action.

Criticism.—The fundamental errors of Hedonism and the chief unanswerable objections to the theory may be briefly summed up as follows:

1. It rests on a false psychological analysis; tendency, appetite, end, and good are fixed in nature antecedent to pleasurable feeling. Pleasure depends on the obtaining of some good which is prior to, and causally independent of, its acquisition. The happiness or pleasure attending good conduct is a consequence, not a constituent, of the moral quality of the action.

2. It falsely supposes that pleasure is the only motive of action. This view it supports by the false assertion that the discernible and the desirable are interchangeable terms.

3. Even if it were granted that pleasure and pain constitute the standard of right and wrong, this standard would be utterly impracticable. Pleasures are not commensurable with one another, nor with pains; besides no human mind can calculate the quantity of pleasure and pain that will result from a given action. This task is impossible even when only the pleasure of the agent is to be taken into account. When the pleasure and pain of "all concerned" are to be measured the proposal becomes nothing short of an absurdity.

4. Egoistic Hedonism reduces all benevolence, self-sacrifice, and love of the right to mere selfishness. It is impossible for altruistic Hedonism to evade the same consummation except at the cost of inconsistency.

5. No general code of morality could be established on the basis of pleasure. Pleasure is essentially subjective feeling, and only the individual is the competent judge of how much pleasure or pain a course of action affords him. What is more pleasurable for one may be less so for another. Hence, on hedonistic grounds, it is evident that there could be no permanently and universally valid dividing line between right and wrong.

6. Hedonism has no ground for moral obligation, no sanction for duty. If I must pursue my own happiness, and if conduct which leads to happiness is good, the worst reproach that can be addressed to me, however base my conduct may be, is that I have not pursued an impartial end.

Hedonists have appropriated the term happiness as an equivalent to the totality of pleasurable or agreeable feeling. The same word is employed as the English rendering of the Latin beatitudo and the Greek ευπορία, which stand for a concept quite different from the hedonic, and in the same sense. The English term is more correctly rendered in English by the term well-being. It means the state of perfection in which man is constituted when he exercises his highest faculty, in its highest function, on its highest good. Because they fail to give due attention to this distinction, some writers include well-being in their hedonic systems. Hedonism sometimes claims the credit of much beneficent effort in social reform in England which has been promoted by professors...
Utilitarians; and everywhere movements popularly designated as altruism are pointed out as monuments to the practical value of the hedonistic principle "the greatest good of the greatest number". But it must be observed that this principle may have another genesis and another part to play in ethics than those assigned to it by Hedonism. Besides, as Green has pointed out, the Utilitarians are notably anxious, and the fruits it bore in their political activity are to be credited to it in its democratic, rather than in its hedonistic character.

A list of authors is appended to the article on Eonnia. The following may be mentioned: LAUD, Pseudo-Debucelle: "De Condotta (New York, 1902); GREEN, Prolegomena to Ethics" (London, 1885); MOODIE, The Ethics of Liberty (London, 1875); Pope, Utilitarianism (London, 1899); LARKE, Types of Ethical Theory, II (London, 1886), Bk. II.

JAMES J. FOX.

Hedwig, Saint, Duchess of Silesia, b. about 1174, at the castle of Andechs; d. at Trebnitz, 12 or 15 October, 1248. She was one of eight children born to Berthold IV, Count of Andechs and Duke of Croatia and Dalmatia. Of her four brothers, two became bishops, Eckbert of Bamberg, and Berthold of Aquileia; Otto succeeded his father as Duke of Dalmatia, and Heinrich became Margrave of Istria. Of her three sisters, Gertrude married Andrew II, King of Hungary, to whom she gave their uncles, Landgraves of Thuringia; Mechtilde became Abbess of Kitzingen; while Agnes was made the unlawful wife of Philip II of France in 1196, on the repudiation of her lawful wife, Ingeborg, but was dismissed in 1200, Innocent III having laid France under an interdict. Hedwig was educated at the monastery of Kitzingen, and, according to an old biography, at the age of twelve (1186), was married to Henry I of Silesia (b. 1168), who in 1202 succeeded his father Boleslaw as Duke of Silesia. Henry's mother was a German; he himself had been educated in Germany; and now through his wife he was brought into still closer relations with Germany. Henry I was an energetic prince, who greatly extended the boundaries of his duchy, established his authority on a firm basis, and rendered important services to civilization in the realm. For this purpose he encouraged the utmost spread of the more highly developed civilization existing in the German territories adjoining his to the west, so that Silesia became German in language and customs.

Hedwig now took a prominent part in the beneficent administration of her husband. Her prudence, fortitude, and piety won for her great influence in the government. In 1207 she founded and gave support to new monastic foundations and assisted those already in existence. It was chiefly through the monasteries that German civilization was spread in Silesia. Henry and Hedwig endowed munificently the Cistercian monastery of Leubus, the Premonstratensian monastery of St. Vincent, and the foundation of the Canons of St. Augustine at Breslau. The following monasteries were established: the Augustinian priory of Naumburg on the Bober (1217), later transferred to Sagan, the Cistercian monastery of Heinrichau (1227), and the priory of the Augustinian Canons at Kamenz (1210). St. Hedwig brought the Dominicans to Breslau, and Breslau, the Francisans to Goldberg (1212) and later to Krossen. The Templars established a house at Klein-Oels. Henry was also the founder of the Hospital of the Holy Ghost at Breslau (1214), and Hedwig tended with disinterested charity the leper women in the hospital at Neumark. At this time she founded and gave support to the hospital of the poor, in whose interior life of prayer, she gave herself up to meditation on supernatural things. Her piety and gentleness won for her even during life the reputation of a saint. She was interred in the church attached to the monastery, and was canonized by Clement IV, 26 March, 1267, and on 25 August of the same year her remains were raised to the honours of the altar. Her feast is celebrated 17 October; she is honoured as the patroness of Silesia.

With St. Hedwig as patronesses, R. Spiske, later canon at Breslau, founded, in 1848, a pious association of women and young girls, from which developed the congregation of the Sisters of St. Hedwig, established in 1859, at Breslau, under the Rule of St. Augustine, and constitutions approved by the bishop. Their chief aim is the education of orphaned and abandoned children; they also conduct schools for little girls and trade schools. Their activity extends chiefly over Prussia and Austria, but they also have a house in Denmark. The sisters number about three hundred, with mother-house at Breslau.

J. P. KIRSCH.

HEENEY, CORNELIUS, merchant and philanthropist; b. in King's County, Ireland, 1754; d. at Brooklyn, U. S. A., 3 May, 1848. After acquiring a practical mercantile education in Dublin, he emigrated to America in 1784 and became a fellow employed of the founder of the Astor family in the store of a New York fur dealer. His employer, retiring, left the business to John Jacob Astor and Heeney, and they prospered in it for several years and then separated. Heeney continued in the same line and amassed a considerable fortune. He was a bachelor and used his income in the promotion of religious and charitable works; St. Peter's church, St. Patrick's and the Catholic Orphan Asylum in New York were the recipients of generous gifts.

He was one of the first Catholics to hold public office in New York, and served five terms in the State Assembly from 1818 to 1822. He retired from business in 1837 and went to live in Brooklyn, where he had purchased a large farm in what is now one of the best residential sections. Here he continued his charitable benefactions, and having spent the most of his income for so long in good works, he planned to secure the disposition of the whole of his estate for the same purpose. Accordingly it was incorporated by Act of Legislature, 10 May, 1845, as "The Trustees and Associates of the Brooklyn Benevolent Society" for the object of administering the estate for the benefit of the poor and the orphans. The income amounts to about $25,000, and from its incorporation the society has distributed (1899) more than a million dollars.

THOMAS F. MEEHAN.

HEESENAMANN VON ZUYDWYK, CLEMENS AUG. ANT., FREIHERR VON, Catholic statesman and writer on art, b. 20 Aug., 1832, at Surenberg near Riesenbeck, Westphalia, 3 Nov., 1893, at the Universities of Bonn, Heidelberg, and Berlin. In the German capital he took an active part in the organization of a reading circle for Catholic students. For several years he was employed as referendary to the Circuit Court, and later to the Governmental Council of Münster, and in 1874 was appointed a member of the Governmental Council of Merseburg. In 1870 he was chosen a member of the Prussian Diet (Landtag), and in 1871 of the Relehsstag for the district of Münster-Cösfeld. During the Kulturkampf, towards the end of 1875, he resigned as a government official and devoted himself exclusively to parliamentary labours on behalf of the oppressed Church. His efforts were chiefly directed against the Law of 31 May, 1875, which threatened the existence of several charitable orders devoted to the care of the sick, and he secured several important modifications of that law. He was at this time one of the leaders of the Centre Party. From 1879-82 he was second vice-president of the Prussian Landtag, and from 1882 to the time of his death first vice-president of the same body. After the death of Freiherr von Schorlemer-Alst (1889) he was chosen chairman of the Centre Party in the Landtag, and in 1900 retired as its honorary president.

In the course of his active parliamentary career he took a leading part in the debates on the tariff, in 1879 and on railway construction in 1890. He was a member of the German Reichstag (Breslau, 1881); DAS BRESCIAVER BREVIER AND PROPRIUM (Breslau, 1893), 24 sq.; BONNE, Le vite et la leggenda, as it was common (Turin, 1895); MICHAEL, Geschichte des deutschen Volkes vom 15. Jahrhundert bis zum Ausgange des Mittelalters, II (Freiburg im Br., 1899), 225 sq.; BRAUNS-BURCHARDT, Geschichte und Auslegung der Ordensregel im 15. Jahrhundert (Freiburg im Br., 1901).

ALEXANDER HOFFMANN.

HEESWYK, a village in the Diocese of Hertogenbosch (Bois-le-Duc), Holland, in which the dispersed religious of the confiscated Norbertine Abbey of Berne have created a new abbey and college. The present name is the Abbey of Berne at Heeswyk. The Abbey of Berne, two miles southeast of Heusden, on the Maas, and about six miles northwest of Bois-le-Duc, was founded in the year of St. Norbert's death, 1134, by Fulcoid, Lord of Teisterbant, with a colony sent from Marienweerd as its first abbot. Numerous legends surround its foundation. One is that Fulcoid, when hotly pressed in battle, made a vow to build an abbey, if, by throwing himself into the river Maas, his life might be preserved from the enemy. This prayer having been heard, Fulcoid converted his castle at Berne into an abbey, and he himself became its first abbot. Blessed Fulcoid died on 24 April, 1149, on which day his name is recorded in the hagiology of the order. The Abbey of Berne has always been held in high esteem by the counts of Holland and the dukes of Brabant, as is proved by the privileges which they granted to it. It possessed the right of patronage over nine parishes, which were always served by priests from the abbey. In 1534 the abbot obtained the privilege of wearing the mitre. In the second half of the sixteenth century the abbey had much to suffer from the Dutch Calvinists, who plundered and partly destroyed it in 1572 and again in 1579. In 1623 the abbey became the convent of the Brothers of the Common Life at Bois-le-Duc, but at the capture of the town the religious were expelled and the property was confiscated. In 1648 the last of what the abbey once possessed in houses or in land had been confiscated. But the religious were not discouraged, and the abbey obtained a house at Vilvorde, near Brussels, from which it directed the spiritual and temporal interests of its dispersed community. Several of the priests of Berne, though compelled to remain in hiding and always in danger, continued to minister to the spiritual wants of their people, and in 1701 they founded a college and have preserved the Faith, the result may be ascribed to the apostolic exertions of these zealous priests. The future of the community was provided for by the admission of subjects, who made their novitiate and continued their studies at Vilvorde or in one of the Belgian abbeys. In this manner the Abbey of Berne has been kept up, while nearly all monas-
series, which had made no such provision, have died out in Holland.

At the end of the seventeenth century, the religious succeeded in renting the house of Heeswijck which had been confiscated by the State, and in 1786 they were enabled to buy the property. Though dispersed, the religious met frequently at Heeswijck or in some proximities by virtue of the fact that they always elected another, so that from the foundation of the abbey in 1134, there has been an unbroken succession of abbots. But at the end of the eighteenth century the French Republic confiscated the house at Vilvorde and so put an end to their refuge in Belgium. But novices were admitted at usual, until the Fronde of 1655, and the abbey was then put intoprobation and made their studies either at the house at Heeswijck or in some presbytery of the order. With the arrival of better times Abbot Neefs in 1847 enlarged the house at Heeswijck and inaugurated the community life. The community grew in numbers, and in 1899 the abbot saw his way to open a college, the full staff of which consisted of priests of the abbey. In 1893 the abbot was able to comply with the pressing request of Bishop Messmer of Green Bay, Wisconsin, U.S.A., to send some priests whose special mission would be to minister to the spiritual needs of Belgians emigrating to the United States. The first stone of the new college was laid in 1923 and in 1925 it was opened. At the chapter in 1902 the house at De Pere was canonically created a priory, and was granted leave to have a novitate attached to it. At present the priests of the De Pere priory have the charge of parishes in the Arch-bishopric of Chicago, and in the Dioceses of Grand Rapids, Green Bay, and Marquette. They have also a mission among the Oneida Indians of Wisconsin. Some of the priests conduct missions for Catholics and non-Catholics. At the general chapter of the order in 1908 the priory was declared substantially independent of the mother-abbey in Holland, within limits specified by the constitution of the De Pater St. Norbert College in De Pere, and the Diocese of Green Bay was at present very prosperous, being filled with active and industrious members, some fulfilling the usual duties in the abbey, some giving missions, while others teach in the college or write for newspapers and reviews, no fewer than five of these being published by the fathers.

Hefele, KARL JOSEPH VON, Bishop of Rotterdam, b. at Unterkothen, Württemberg, 15 March, 1809; d. at Rotterdam, 5 June, 1893. He was the son of the royal Swedish adjutant of horses at Unterkothen. After attending the gymnasium at Ellwangen (1817–25) and Ebingen (1825–27), and the University of Tübingen (1827–32), he was ordained on 10 August, 1833. For a time the young priest was vicar at Mingheim, tutor at the Wilhelmsstift, Tübingen, and librarian of the library. He was prepared for the priesthood. In 1844 he became extraordinary professor. He retained this post until his election as bishop in the summer of 1869.

In scholarly method as well as in the general character of his work, he followed closely in the footsteps of his great predecessor, Johann Adam Möhler. He combined accuracy in historical detail with a thorough grasp of the chief facts of church history, and a great power of exposition.

Möhler, though at first affected by the current historical method of chronology, had eventually freed himself from it and introduced into the Catholic faculty of Tübingen an unswerving devotion to the Catholic Church and a high degree of enthusiasm, thereby counteracting the aforesaid Illuminism (as far as it was an inner disrupting force) and the external attacks of Protestantism. This was also the method of Hefele who, in addition, was endowed with rare gifts as a teacher, an excellent memory, a clear understanding, earnest affection for his pupils, and a diction at once simple and beautiful. His lectures were frequented, in the golden age of the Tübingen faculty of Catholic theology, by hundreds of students from all parts of Germany and Switzerland. In 1895, Professor Knöpfler of Munich published his admirable manual of church history based on the academic lectures of Hefele. Von Funk, successor of Hefele at Tübingen, also owes much in his manual of church history to Hefele's teachings. The scientific temper pervaded all the writings of Hefele. Besides his work in various learned periodicals, etc., he wrote about 150 articles for the first edition of the "Kirchenlexikon" and contributed a multitude of critical book notices and reviews to the Tübingen "Theologische Quartalschrift," some of which were collected and published in two volumes under the title "Beiträge zur Kirchengeschichte, Archäologie und Liturgik" (1864). Hefele was probably the first Catholic theologian to introduce Christian archaeology into the academic curriculum (1840). From 1852 to 1857 he was the head of the association for Christian art (Christliches Diözesanskunstverein). Among his earlier works are "Geschichte der Einführung des Christentums im südwestlichen Deutschland, besonders in Württemberg" (1837); "Patrum Apostolicorum Opera" (1839; 4th ed., 1855); "Das Sendschreiben des Apostels Barnabas" (1840); "Der Kardinal Ximenes und die kirchliche Zustände Spaniens am Ende des 15. und Anfänge des 16. Jahrhunderts" (1844; 2nd ed., 1851); "Chrysostomuspostille" (1845; 3rd ed., 1857); "S. Bonaventure Brevisiogium" (1845, 1861).

The standard work of Hefele is the "Christian Church History" in seven volumes, reaching to the fifteenth century and embracing the history of dogma, canon law, liturgy, ecclesiastical discipline, and political history, so far as necessary. Von Funk rightly says that "as one of the most detailed and thorough works on church history, it has attained a prominent place in the learned literature of its time." The first edition, for which the matter had been in part gathered in a prize essay on Nicholas of Cusa, written during his student years, and in a number of more important recensions and articles, appeared between 1855 and 1874. His life of Cardinal Ximenes was soon translated into French and English, and his history of the councils was likewise rendered into French and the earlier volumes into English. The second edition was edited by Hefele himself as far as the fourth volume inclusive, and appeared in 1873–79 (Freiburg im Breisgau); the next two volumes by Professor Gyssling, and the last two by the Government. In 1852–53 he was made rector of the university, and in the spring of the latter year...
ne was made a Knight of the Order of the Würtemberg Crown, and with it received the rank of nobility.

In addition to his other work, he had a parliamentary seat (1842–45) as representative of the government district of Ellwangen. In Würtemberg, as in almost all districts of Germany in the first half of the nineteenth century, the Church groaned under the oppression of the Illuminati and a Protestant government. When in 1842 Bishop von Keller made an energetic attempt to liberate the Church, he was supported by the skill and vigour of his fellow-representative Hefele, who endeavoured in this way to realize Möhler’s ideal programme. The historian of the councils was summoned to Rome in 1868 as consultant for the Vatican council. He spent the winter of 1868–69 in Rome, and on his return he was appointed Bishop of Freising. In 1870 the pope, on the advice of the majority of the minority, appointed him “Curia Honoris Pape” (Naples, 1870). In the decisive session of 13 July he was present as a representative of the minority, and according to tradition the decision of the minority to the pope on 17 July, returned home. Even after the definition of the dogma he held to his opinion, but was soon placed in a most difficult position, whence neither his expectation of a common stand on the part of the opposition bishops nor his hopes of a speedy resolution of the ecumenical council, nor yet the thought of resignation, could extricate him. Shrinking from a schism, urged by Rome, importuned by the clergy of his diocese, perhaps also influenced by the desire of the government, but above all, solicitous for his diocese, Hefele promulgated the decrees of the council, 10 April, 1871.

Various judgments were pronounced on this step. Karl von Hase, in his “Handbuch der Polemik gegen die römisch-katholische Kirche” (5th ed., 1890, p. 237), declared that “the bishop had strangled the scholar.” It was the Old Catholics, however, who adopted Hefele as their leader and made of him a bishop. They published various letters written to their leaders both during and after the council, and explained that his submission was simply external. But they erred; good evidence for this may be found in the declaration made to his coadjutor bishop during an interview in the latter part of 1870: “It is true that I stood on the side of the opposition. But thereby I made use of my right; for the question was proposed for discussion. However, once the decision had been made, to tarry in the opposition party would have been inconsistent with my whole past. I would have set my own infallibility in the place of the infallibility of the Church” [From a discourse of Bishop Reiser at the burial of Bishop Hefele (Rottenburg, 1893), p. 11]. Apart from the aforsaid matter, the bishop brought peace to his diocese. It was not disturbed when the Kulturkampf was raging in other parts of Germany. That peace was preserved in Württemberg, was due, after King Charles, to the services of Hefele. After November, 1886, he was aided by Bishop Reiser as auxiliary bishop.

**Hegelianism.**—(1) Life and Writings of Hegel.—Georg Wilhelm Friedrich Hegel was born at Stuttgart in 1770; died at Berlin in 1831. After studying theology at Tubingen he devoted himself successively to the study of contemporary philosophy and to the cultivation of the Greek classics. After about seven years spent as private tutor in various places, he became professor of philosophy at Heidelberg in 1816, whence he was transferred to the University of Berlin in 1817. Hegel’s principal works are his “Logic” (Wissenschaft der Logik, 1816), his “Phenomenology of Spirit” (Phänomenologie des Geistes, 1807), his “Encyclopaedia” (Encyclopädie der philosophischen Wissenschaften, 1817), and his “Philosophy of History” (Vorlesungen über die Philosophie der Geschichte). His works were collected and published by Rosenkranz in 19 vols., 1832–42, second edition 1840–54.

(2) Aim of his Philosophy.—Hegel’s philosophy is an attempt to reduce to a more synthetic unity the system of transcendental idealism bequeathed to him by Kant. When we are taught that, so far as our theoretical experience is concerned, there exists nothing except the appearance of things and the unknown and unknowable noumenal substance of these appearances, the Ding-an-sich. Hegel starts out by assuming that, if for Kant’s destructive method we substitute an incessantly progressive and productive method of criticism, we shall find that the noumenal reality is not an unknowable substance of appearance but an ever-active process, which in thought and in reality constantly passes into its opposite in order to return to a higher and richer form. This process in its barest and most meagre form is being; in its most perfect and richest form it is spirit, absolute mind, the state, religion, philosophy. The business of philosophy is to trace this process through all its stages.

(3) His Method.—Hegel’s method in philosophy consists, therefore, in following out the triadic development (Entwicklung) in each concept and in each thing. Thus, he hopes, philosophy will not contradict experience, but will give to the data of experience the philosophical, that is, the ultimately true, explanation. If, for instance, we wish to know what liberty is, we take that concept where we first find it, without the effort to enumerate all the cases in which it is used and feel the need of repressing any thought, feeling, or tendency to act. Next, we find that the savage has given up this freedom in exchange for its opposite, the restraint, or, as he considers it, the tyranny, of civilization and law. Thirdly, in the citizen under the laws of a State, we find the third stage of development, namely liberty in a higher and a fuller sense than that in which the savage possessed it, the liberty to do and to say and to think many things which were beyond the power of the savage. In this triadic process we remark that the second stage is the direct opposite, the annihilation, or at least the sublation, of the first stage. We remark also that the third stage is the first returned to itself in a higher, truer, richer, and fuller form. The three stages are, therefore, styled: (1) in itself (An-sich); (2) out of itself (Anderssein); and (3) in and for itself (An-und-für-sich). These three stages are found succeeding one another throughout the whole realm of thought and being, from the most abstract logical process up to the most complicated concrete activity of organized mind in the succession of states or the production of systems of philosophy.

(4) Doctrine of Development. — In logic—which really is a metaphysic—we have to deal with the process of development applied to self-consciousness and the self-concreteness of the idea. In the development of an idea, which is thus revealed in a concrete and historically concrete form, in for instance we deal with concepts robbed of their empirical content: in logic we are discussing the process in vacuo, so to speak. Thus, at the very beginning of our study of reality, we find the logical
concept of being. Now, being is not a static concept, as Aristotle supposed it was. It is essentially dynamic, because it tends by its very nature to pass over into nothing, and then to return to itself in the higher concept, becoming. For Aristotle, there was nothing more certain than that being = being, or, in other words, that being is identical with itself, that everything is what it is. Hegel, on the other hand, held that if it is known that something is, then it is also possible that it becomes something else, and that its nature is the expression of its history. Hence, the concept of becoming, not being, is the highest expression of reality. It is also the highest expression of thought; because then only do we attain the fullest knowledge of a thing when we know what it was, what it is, and what it will be—in a word, when we know the history of its development.

In the same way as being and nothing develop into the higher concept becoming, so, farther on in the scale of development, life and mind appear as the third terms of the process and are in turn developed into higher forms of themselves. But, one cannot help perceiving that this is a different kind of development. Its name, Hegel answers, is different in each stage. In the lowest form it is being, higher up it is life, and in still higher form it is mind. The only thing always present is the process (das Werden). We may, however, call the process by the name of spirit (Geist) or idea (Begriff). We may even call it God, because at least in the third term of every triadic development the process is God.

(5) Division of Philosophy.—The first and most wide-reaching consideration of the processes of spirit, God, or the idea, reveals to us the truth that the idea must be studied (1) in itself; this is the subject of logic or metaphysics; (2) out of itself, in nature; this is the subject of the philosophy of nature; and (3) in and for itself, as mind; this is the subject of the philosophy of mind (Geistephilosophie).

(6) Philosophy of Nature.—Passing over the rather abstract considerations by which Hegel shows in his "Logic" the general view of history as a process of being to becoming, and finally through essence to notion, we take up the study of the development of the idea at the point where it enters into otherness in nature. In nature the idea has lost itself, because it has lost its unity and is splintered, as it were, into a thousand parts. But freedom in constant change is apparent, because in reality the idea has merely concealed its unity. Studied philosophically, nature reveals itself as so many successful attempts of the idea to emerge out of the state of otherness and present itself to us as a better, fuller, and richer idea, namely, spirit, or mind. Mind is, therefore, the goal of nature. It is also the truth of nature. For whatever is in nature is realized in a higher form in the mind which emerges from nature.

(7) Philosophy of Mind.—The philosophy of mind begins with the consideration of the individual, or subjective, mind. It is soon perceived, however, that individual, or subjective, mind is only the first stage, the in-itself stage, of mind. The next stage is objective mind, or mind objectified in law, morality, and the State. This is mind in the condition of out-of-itself. There follows the condition of absolute mind, the state in which mind rises above all the limitations of states and institutions, and is subject to itself alone in art, religion, and philosophy. For the essence of mind is freedom, and its development must consist in breaking away from the restrictions imposed on it in its otherness by nature and human institutions.

(9) Philosophy of History.—Hegel's philosophy of the State, his theory of history, and his account of absolute mind are the most interesting portions of his philosophy and the most easily understood. The State, he says, is mind objectified. The individual mind, which, on account of its passions, its prejudices, and its blind impulses, is only partly free, subjects itself to the yoke of necessity—the opposite of freedom—in order to develop the fuller reality of itself in the freedom of the citizens. This yoke of necessity is first met with in the recognition of the rights of others, next in morality, and finally in social morality, of which the primal institution is the family. Aggregates of families form civil society, which, however, is but an imperfect form of organization compared to the State. The State is the perfect embodiment of the idea, and stands in this stage of development for God Himself. The State, studied in itself, furnishes for our consideration constitutional law. In relation to other States it develops international law; and in its general course through historical vicissitudes it passes through what Hegel calls the "Dialectics of History." Hegel teaches that the constitution is the collective spirit of the nation and that the government is the embodiment of that spirit. Each nation has its own individual spirit, and the greatest of crimes is the act by which the spirit is attacked. If the spirit is divided during a War, he teaches, is an indispensable means of political progress. It is a crisis in the development of the idea which is embodied in the different States, and out of this crisis the better State is certain to emerge victorious. The "ground" of historical development is, therefore, rational; since the State is an embodiment of reason as such. All the apparently contingent events of history are in reality stages in the logical unfolding of the sovereign reason which is embodied in the State. Passion, impulse, interest, character, personality—all these are either the expression of reason or the instruments which reason moulks for its own use. We are, therefore, to understand historical happenings as the stern, reluctant working of reason towards the full realization of itself in perfect freedom. Consequently, we must interpret history in purely rational terms, and throw the succession of events into logical categories. Thus, the three stages of historical development are: Oriental monarchy (the stage of oneness, of suppression of freedom), Greek democracy (the stage of expansion, in which freedom was lost in unstable demagogy), and Christian constitutional monarchy (which represents the reintegration of natural government).

(9) Philosophy of Absolute Mind.—Even in the State, mind is limited by subjection to other minds. There remains the final step in the process of the acquisition of freedom, namely, that by which absolute mind in art, religion, and philosophy subject itself to itself alone. Mind has an intuitive contemplation of itself as realized in the art material, and the development of the arts has been conditioned by the ever-increasing "docility" with which the art material lends itself to the actualization of mind or the idea. In religion, mind feels the superiority of itself to the particularizing limitations of finite things. Here, as in the philosophy of history, there are three great moments, Oriental religion, which exaggerated the idea of the infinite, Greek religion, which gave undue importance to the finite, and Christianity, which represents the union of the infinite and the finite. Last of all, absolute mind, as philosophy, appears in the form of absolute spirit, and is perfected in every religious feeling, and, discarding representative intuition, attains all truth under the form of reason. Whatever truth there is in art and in religion is contained in philosophy in a higher form, and free from all limitations. Philosophy is, therefore, "the highest, freest and wisest phase of the union of sub-
pective and objective mind, and the ultimate goal of all development.”

Hegelian School.—Hegel’s immediate followers in Germany are generally divided into the “Hegelian Rightists” and the “Hegelian Leftists.” The Rightists developed his philosophy along lines which they considered he would himself have taken if he were a Christian. They are Göschen, Gabler, Rosenkranz, and Johann Eduard Erdmann. The Leftists accentuated the anti-Christian tendencies of Hegel’s system and developed systems of Materialism, Socialism, Rationalism, and Pantheism. They are Feuerbach, Richter, Knies, and Bauer, among others. Hegelianism was represented during the nineteenth century by Stirling, Thomas Hill Green, John Caird, Edward Caird, Netteship, McGregor, and Baillie. Of these the most important is Thomas Hill Green. Hegelianism in America is represented by Thomas Watson and William T. Harris. In its most recent form it seems to take its inspiration from Thomas Hill Green, and whatever influence it exerts is opposed to the prevalent pragmatic tendency. In Italy the Hegelian movement has had many distinguished adherents, the chief of whom at the present time is Benedetto Croce, who as an exponent of Hegelianism occupies a position similar to the position occupied in France by Vacherot towards the end of the nineteenth century. Among Catholic philosophers who were influenced by Hegel the most prominent were Georg Hermes (q. v.) and Anton Günther (q. v.). Their doctrines, especially their rejection of the distinction between natural and supernatural truth, were condemned by the Church.

(11) Influence of Hegel.—The far-reaching influence of Hegel is due in a measure to the undoubted vastness of the scheme of philosophical synthesis which he conceived and partly realized. A philosophy which undertakes to encompass all reality under the single formula of triadic development every department of knowledge, from abstract logic up to the philosophy of history, has a great deal of attractiveness for those who are metaphysically inclined. But Hegel’s influence is due in a still larger measure to two extrinsic circumstances. His philosophy is the highest expression of that spirit of development which was characteristic of the nineteenth century, and it is also the most extended application of the principle of development which dominated nineteenth-century thought in literature, science, and even in theology. In theology especially Hegel revolutionized the methods of inquiry. The application of the principle of development to historical investigation is obvious to anyone who compares the spirit and purpose of contemporary theology with the spirit and purpose of the theological literature of the first half of the nineteenth century. In science, too, and in literature, the substitution of the category of becoming for the category of being is a very patent fact, and is due to the influence of Hegel’s method. In political economy and political science the effect of Hegel’s collectivist conception of the State supplanted to a large extent the individualistic conception which was handed down from the eighteenth century to the nineteenth. Whether these changes are good or ill remains to be seen. Some of them have certainly wrought so much evil, especially in theology, in our own day, that one can hardly dare to hope that they will in the future be productive of much benefit to philosophy or to science.

(12) Estimate of Hegel’s Philosophy.—The very vastness of the Hegelian plan doomed it to failure. “The rational alone is real” was a favourite motto of Hegel. It means that all reality is capable of being expressed in rational categories. This is a Conception more detrimental to Christian conceptions than the Agnosticism of Huxley and Spencer. It implies that God, being a reality, must be capable of comprehension by the finite mind. It implies, moreover, as Hegel himself admits, that God is only in so far as He is conceived under the category of Becoming; God is a process. It is by this doctrine, which is at once so out of place in a great system of metaphysics and so utterly repugnant to the Christian conception of the Divine, that Hegel attempted the impossible. A complete synthesis of reality in terms of reason is possible only to an infinite mind. Man, whose mental power is finite, must be content with a partially complete synthesis of reality, and in his failure to attain completeness he should not be asked to abandon his rational system and to confess the limitations of his categories, is the object of faith as well as of knowledge.

Hegel's Works, ed. Rosenkranz (Berlin, 1832–42; 2nd ed., 1844); Hegel Briefwechsel (19 vols., Berlin, 1877); translations of several of Hegel’s works made by Hare in the Journal of Speculative Philosophy (St. Louis, 1867–71); several tracts translated by Wallace, Being of Hegel (Oxford, 1892); Idem, Hegel’s Philosophy of Mind (Oxford, 1894); and Seele, Philosophy of History (London, 1860, 1884). The best English exposition of Hegel’s philosophy is Caird, Hegel in Blackwood’s Philosophical Classics (Edinburgh and Philadelphia, 1886). See also B. H. Latan, A Critical Reading of the Philosophy of the State and of History in Origin’s Classics (Chicago, 1887); Hick, Hegel’s Logic (New York, 1892); Turner, History of Philosophy (Boston, 1903), pp. 366–383.

William Turner.

Hegemonius. See MANICHEISM.

Hegesippus, Saint (Roman Martyrology, 7 April), a writer of the second century, known to us almost exclusively from Eusebius, who tells us that he wrote in five books in the simplest style the true tradition of the Apostolic preaching. His work was entitled "Breviarium" (Membra), and was written against the new heresies of the Gnostics and of Marcion. He appealed against the releasing of the heathen or the circumcision which had been handed down in the Churches through the succession of bishops. St. Jerome was wrong in supposing him to have composed a history. He was clearly an orthodox Catholic, and not a “Judeo-Christian”, though Eusebius says he showed that he was a convert from Judaism, for he quoted from the Hebrews and the Gospel of John, and with the Hebrews with a Syriac Gospel, and he also cited unwritten traditions of the Jews. He seems to belong to the priestly class of the East, possibly Palestine. He went on a journey to Corinth and Rome, in the course of which he met many bishops, and he heard from all the same erewell the Apostolic tradition. And the Church of the Corinthians remained in the true word until Primus was bishop in Corinth; I made their acquaintance in my journey to Rome, and remained with the Corinthians many days, in which we were refreshed with the true word. And when I was in Rome, I made a succession up to Anicetus, whose successor was Eleutherus. And Soter succeeds Anicetus, after whom Eleutherus. And in each succession and in each city all is according to the ordinances of the law and the Prophets and the Lord” (Euseb., IV, 22).

Many attempts have been made to show that "Breviarium" of Hegesippus, "I made for myself a succession”, is not clear, and cannot mean “I made for myself a list of the succession of the bishops of Rome”.

A conjectural emendation by Halloix and Savile, "Kerphpioy Breviarium", is based on the version by Rufinus (permisani inbii), and has been accepted by Barnack, Daniel, and others, and Zahn makes nonsense: “And being in Rome, I made a stay there till Anicetus.” When did he arrive? And what does “till Anicetus” mean? Eusebius cannot have read this, for he says that Hegesippus came to Rome under Anicetus and stayed until Eleutherus. The best scholars have accepted the versions without difficulty, among others Lipsius, Lightfoot, Renan, Duchesne, Weisslander, Salmon, Caspari, Funk.
Hegesippus. The Pseudo-,- a fourth-century translator of the "Jewish War" of Flavius Josephus. The name is based on an error. In the manuscripts of the work "Josephus" appears quite regularly for "Jose-·i~", From Isiopius, an unintelligent reviser derived Hegesippus, which name, therefore, is merely that of the original author, ignorantly transcribed. In the best manuscripts, the translator is said to be St. Ambrose. Although formerly much contested, this claim is to-day acknowledged by the greater number of critics. The addition of Soter and Eleutherus is intended by the writer to bring his original catalogue up to date.

With great ingenuity Lightfoot has found traces of this list in St. Epiphanius, Her., XXVII, 6, where that saint of the fourth century carelessly says: "Mar- cion came to us lately, and declared many in the days of Anicetus, Bishop of Rome," and then refers to "the above catalogue", though he has given none.

He is clearly quoting a writer who was at Rome in the time of Anicetus and made a list of popes beginning with St. Peter and St. Paul, martyred in the twelfth year of Nero. A list which has some curious agree- ment with Epiphanius, and extends only to Anicetus, is found in the poem of Pseudo-Tertullian against Marcion; the author has mistaken Marcellina for Marcion. The same list is at the base of the earlier part of the Liberian Catalogue, doubtless from Hippo- lytus (see under Clement). It seems fairly certain that the name of Gaius is due to the influence of Africanus, and Eusebius in forming their own. It should be said, however, that not only Harnack and Zahn, but Funk and Bardenhewer, have rejected Lightfoot's view, though on weak grounds. It is probable that Eusebius borrowed his list of the early bishops of Jerusalem from Hegesippus.

Eusebius quotes from Hegesippus a long and apparently legendary account of the death of St. James, "the brother of the Lord," also the story of the election of his successor Symeon, and the summoning of the descendante of St. Jude to Rome by Domitian. A list of heresies against which Hegesippus wrote is also cited. We learn from a note in the Codicil MS. Barocc. 142 (De Boor in "Texte und Unters." V, ii, 169) that the names of the two grandsons of St. Jude were given by Hegesippus as Zocker and James. Dr. Lawlor has shown (Hermonathos. XI, 25, 1900, p. 10) that the names cited by Eusebius are connected in the original, and were in the fifth book of Hegesippus. He has also made it probable (Journal of Theol. Studies, April, 1907, VIII, 436) that Eusebius got from Hegesippus the statement that St. John was exiled to Patmos by Domitian. Hegesippus mentioned of Gortyn that it was apparently in connexion with the persecution of Domitian. It is very likely that the dating of heresities according to papal reigns in Irenaeus and Epiphanius—e.g., that Cerdon and Valentinus came to Rome under Anicetus, etc.—was derived from Hegesippus, and the same may be true of the assertion that Herennius was the brother of Pope Pius (so the Liberian Catal- ogue, the poem against Marcion, and the Muratorian fragment). The date of Hegesippus is fixed by the statement that the death and apostheosis of Antinous were in his own time (130), that he came to Rome under Anicetus (154-7 to 156-8), and wrote in the time of Eleutherus (157-6 to 189-91). Zahn has shown that the work of Hegesippus was still extant in the sixteenth and seventeenth centuries in three Eastern libraries.

The fragments of Hegesippus, included in that published by De Boor (above) and one cited from Stephen Gobarns by Pho- tios (Bibl. 239), have been elaborately upon by Zahn, Forschungen zur Geschichte des N. T. Kanons (Leipzig, 1900), VI, 228 sqq. who discusses them in his "Hegesippus, The Pseudo-", Lightfoot, Clement of Rome (London, 1890), 1, 327, etc.; FUNK, Kirchengesch. Abhandlungen (Pader- born, 1879), p. 180; ON slow, "Gortyn", XVIII, 410 (1901); XIII, 13 (1902); FLAMIN in Personen und Quellen in der Zeit des Christentums (Stuttgart, 1903), 79 sqq.; and a fuller account see Bardenhewer, Gesch. der altkirch. Lit., I, 486 sqq.

JOHN CHAPMAN.

Hegesippus, Alexander, Humanist; b. probably in 1493, at Heeck (Westphalia); d. 7 December, 1549, at Deventer (Netherlands). Nothing is known of his earlier studies; but he must have been of quite mature age when ordained to the priesthood. He himself declares that he was a pupil of Rudolph Agricola, the most distinguished exponent of earlier German Humanism; there is no doubt that the latter, though six years his junior, exerted over him no small influence, so that he was compelled to admit: "When forty years of age I came to young Agricola, from whom I have learned all that I know, or that others think I know," He became in 1469 rector of the school at Wesel, and soon afterwards was made head of the monastic school at Emmerich. In 1474, he assumed direction of the school at Deventer, which even in those days had acquired renown. As a Humanist he was an enthusiastic admirer of the ancient classical period; he spoke and wrote a pure Ciceroian Latin. He was equally versed in Greek and sought to instil into his pupils a love for the tongue of Homer. But Hegesippus earned his claim to recognition chiefly in the domain of pedagogics. He simplified and improved the method of teaching and banished from the schools the ancient books which even in his time had been therein. He instituted a course whicha
centred about the classics and drew from them a new vitality. The school of Deventer made progress under his guidance; it was common for more than two thousand students to gather there, and these he inspired with zeal not only for their studies, but also for the high calling of an educator. It was this whole personality, his deeply religious mind, moral quality, his fervour and simplicity, the charm of his pure heart, added to his learning, that made such a deep impression. He was a real father to his pupils, particularly to the poor, to whom he gave what he received from the rich. Shortly before his death he distributed all he had among the poor of Deventer, who amid tears and lamentations followed them in their beneficence. Among his most distinguished pupils were Erasmus, Murimuthus, Milius, and others. He did not acquire prominence as a writer. His small treatises, letters and poems were published by Jakob Fabri in 1503, at Deventer.

Hegoumenos. See Monasticism, Greek.

Heidelberg, University of.—Heidelberg, a city of 41,000 inhabitants, is situated in the Grand Duchy of Baden, on the left bank of the Neckar. From the obscurity of a legendary origin the city emerges into the light of history in 1214, when the Hohenstaufen Emperor Frederick II bestowed on Duke Louis I of Württemberg the dignity of Count Palatine of the Rhine on account of his faithful services; from that time, the fortunes of the Palatinate and its capital, Heidelberg, were bound up with those of its thirty counts and electors, until, by the Imperial Delegates Enactment of 1803 at Ratisbon, it passed from the ranks of German states and was partitioned among the neighbouring states. The fame of Heidelberg is due to its university, which was founded in 1386 by the warlike Rupert I of Württemberg when he was over seventy years of age, on the model of the University of Paris. The same prince erected the Heiliggeistkirche, formerly the cathedral church, which contains the graves of the Palatine Counts of Württemberg. After Pope Urban VI had issued the Bull of authorization (23 October, 1385), the founder granted the university a succession of privileges, exemptions, and prerogatives. It was to consist of four faculties, theology, law, medicine and art, each to have its separate organization. At first, the rector was elected every quarter, after 1393 semi-annually, and after 1522, annually, like the deans of the faculties. Teachers and students were provided with safe-conducts, were exempt from taxes and tolls in the electorate, and were granted all the privileges that obtained at the University of Paris. The Bishop of Worms, in whose diocese Heidelberg was situated, was judge in ordinary of the clerics. The regulations were publicly read and posted up in the Heiliggeistkirche every year.

On 18 October, 1386, the feast of St. Luke the Evangelist, the university was solemnly opened with Divine service, the first chancellor was installed, and the new lecture courses on exegesis, and natural philosophy were begun. Dr. Marcellius from Inghen, near Arnheim, Guelderland, former representative of Nominalism in Paris, was chosen first rector. In accordance with the terms of the papal Bull of authorization, the provost of the cathedral of Worms acted as chancellor of the university, and until the end of the eighteenth century exercised in the name of the Church the right of superintending and sanctifying the conveying of academic degrees, either in person or through a vice-chancellor. Soon after the opening of the university the faculties of theology and law were reinforced by bachelors and licentiates from Prague and Paris. But as most of the students came from the Rhenish provinces, the custom followed by other universities of classifying them according to nationality, was not imitated here. The faculty of medicine was not organized until 1390. The faculty of arts, the alma lotus Universitatis mater, was here as everywhere else, the first in point of number. In 1509, the feast day (25 November) was observed with great solemnity. In the first year of its existence the university had in its roll 525 teachers and students. The foundations of the celebrated library of Heidelberg were laid by means of donations from the bishops, chancellors, and early professors. Louis III willed his large and valuable collection to the university. Later, when Otto Henry had added the gift of his books and MSS., the entire collection received the name of Bibliotheca Palatina and was considered the most valuable in Germany. At the instance of Elector Rupert III, later German king (1400-1419), Pope Boniface IX, in 1399, relinquished twelve important livings and several patronages to the university. Rupert's eldest son, Louis III, changed the Heiliggeistkirche into a collegiate church and united its twenty-four prebends to the university, a measure sanctioned by Pope Martin V.

Humanism had been prevalent from the time of Marsilius until after 1406, when Jerome of Prague, the friend of John Hus, introduced realism, on which account he was expelled by the faculty which, six years later, also condemned the teachings of John Wycliff. Several distinguished professors took part in the Council of Constance and acted as counsellors for Louis III who, as representative of the antipope and chief magistrate of the realm, attended this council and had Hus executed as a heretic. In 1432 the university, pursuant to papal and imperial requests, sent to the Council of Basle two delegates who faithfully supported the legitimate pope. The transition from scholastic to humanistic culture was effected by the learned chancellor and bishop, Johann von Dalberg. Humanism was represented at Heidelberg by Rudolph Agricola, founder of the older German Humanistic School, the younger humanist Conrad Celtis, the pedagogue Jakob Wimpeling and that "marvel in three languages", Johann Reuchlin. The learned Arnaeus Silvius Piccolomini, the chancellor of the university in his capacity of provost of Worms and, as Pope Pius II, always favoured it with his friendship and good-will. In 1482 Sixtus IV, through a papal dispensation, permitted laymen and even married men to be appointed professors in ordinary of medicine, and in 1533 Pope Julius III sanctioned the allotment of ecclesiastical benefices to secular professors.

In April, 1518, the Augustinian monks of Heidelberg held a convention in their monastery in which Dr. Martin Luther from Wittenberg participated. In a public debate he maintained forty theological and
philosophical theses which maintained in part the uselessness of mental effort and the doctrine of justification by faith alone. The university as a body looked quite unfavourably upon the reform movement which Luther and his followers had inaugurated. Pope Adrian VI, in a Brief, dated 1 December, 1523, warned individual members of the university who were inclined towards the new teachings, to oppose the Reformers and write a guide back to the path of truth all who had gone astray—an admonition which the university accepted in a spirit of gratitude. But when in consequence of the attitude of certain professors, the Reformed teachings began to take a firmer hold at Heidelberg, Elector Louis V in 1523, and Emperor Charles V in 1525, ordered the professors of Hebrew and Greek to leave the university. The only outcome was a revision of the constitutions of the faculty of arts undertaken by the professor of Greek, Jakob Mikyllus, and approved by the university in 1551. To terminate the brawls between the occupants of the different students' halls, the three halls were, in accordance with the elector's decree, united in 1547 with the college of arts and by this means with the university proper, and were thus consolidated under their own statutes and administration. Frederick II also founded the Sapientia College in 1556, to accommodate sixty to eighty poor but talented students from the Palatinat. With the consent of Pope Julius III it was established in 1560 in the abandoned Augustinian monastery. Under Frederick III in 1561, it was transferred to the Protestant Consistory and turned into a theological seminary; as such it continued until 1803 when its revenues were given over to a more advanced institute at Heidelberg. In 1569 the grammar school which had disappeared under Otto Henry was revived as a preparatory college.

The university recognized the pope's authority for the last time, when, on the invitation of Julius III, it resolved to send two professors as delegates to the Council of Trent, an intention which was not carried out. Under Frederick V, who immediately after his accession established Lutheranism as the State religion, the last two Catholic professors resigned their chairs. Reforms affecting economic management and administration, faculty organization, number, subjects, and order of courses, and the appointment of professors were carried out by Otto Henry with the assistance of Mikyllus and Philip Melanchthon, in 1556 and during the following years when the elector's brother, the Palatine Count George John, was rector. The latter chose a pro-rector from among the professors, and subsequently it became customary to associate a pro-rector with the rector magnificens. Through these innovations, the university was transformed into a school of the Evangelical-Lutheran and later of the Calvinistic stamp. At that time the rigid Calvinists of the theological faculty gave the Reformers their most important doctrinal formulas in the Heidelberg Catechism. As under Adrian VI (1517-49) all the Catholic professors were dismissed from the university, so under his successor, John Casimir (1633-92), the Lutherans were sent away and the Reformed readmitted. In 1588 some further regulations for the faculties, discipline, and economy were proposed and were carried out by Frederick IV. The university gained an international reputation, but its prosperity was destroyed by the Thirty Years War. In September 1622, the city and castle of Heidelberg were taken by Tilly and the university practically abolished. It was reorganized in 1629 as a Catholic institution and some of the chairs were filled by Jesuits; but the tempestuous conditions then prevalent made the fostering of science impossible and the work was entirely suspended from 1631 to 1648. After the collapse of Leibniz, the library of Heidelberg was sold to Vincenz Theatini. Palatina was presented to the pope by Duke Maximilian of Bavaria and sent in wagons to Rome, a fortunate arrangement for this collection which otherwise would have been burned to ashes, with the other libraries of the city, in May, 1693. In 1815 and 1816 a number of the buildings were not the city of Heidelberg. After the Peace of Westphalia, Elector Charles Louis restored the university as a Protestant institution and reorganized its economic management. On 1 November, 1652, it was reopened and a number of distinguished scholars were invited there, among others Samuel Pufendorf, professor of natural and international law. The philosopher Spinoza also received a call to Heidelberg but declined it, fearing that on account of the religious conflicts philosophical teaching would be restricted within narrow limits.

In the Palatine-Orleans war Heidelberg was burned to the ground the troops of Louis XIV, troops of the university. The Elector's castle also went up in flames. The foundation of this residence had been laid by the Palatine Count Rudolph I (1294-1319), who built for himself a castle on the Jettenbühl above the city, which is the oldest part of the entire structure. When Rupert III became King of the Romans (1400-1406) he erected a stately building, the interior of which was especially rich in design. Opposite, near the picturesque group of fountains, stood Louis's building. Both were fortified by Louis V, and the south wing was completed by his brother, Frederick II. The actual edifice dates from Otto Henry, Frederick IV, and Frederick V. Otto Henry's building is in the classic Early Renaissance style adorned with numerous plastic escutcheons, ornaments, and statues. Of the later ruins, Frederick's building is best preserved. It was erected in 1601-07 by the architect Johannes Schoch, and, like Otto Henry's, is remarkable for its numerous ornamental figures. In addition to these there is the English building, with its exquisite, fairy-like gardens and fountains, built in Italian later Renaissance style by order of Frederick V and his wife Elisabeth, who was a granddaughter of Queen Mary Stuart. The castle was partly blown up and partly burned by the French during August 1793. In 1732, after the French professors and students sought safety in flight, and in 1794 established the university temporarily at Frankfurt and then at Weimannon. In 1700 it was moved back to Heidelberg. Three years later, under the Catholic Elector John William of the House of Palatinate-Neuburg, the town was reoccupied by the Jesuits and the university was reopened. A Catholic faculty of theology was established side by side with that of the Reformers and invested with equal prerogatives. The first Jesuit rector served during the year 1709. John William in 1712 began the new university buildings which were completed in 1735 in the reign of Charles Philip, who in 1720 transferred the electoral residence, which had been maintained at Heidelberg for six hundred years, to Mannheim, where he built a new palace.

Through the efforts of the Jesuits a preparatory seminary was established, the Seminarium ad Carolum Borromeum, whose pupils were also registered in the university. After the Jesuits were expelled, most of the schools they had conducted passed into the hands of the French Congregation of Lazarists (1773). They deteriorated from that time forward. The university itself continued to lose in brilliance and prestige until the reign of the last elector, Charles Theodore, of the House of Sulzbach, who established...
new chairs for all the faculties, founded scientific institutions such as the Electoral Academy of Science, and taught in the school of law which was peculiar to the University of Heidelberg, where it was combined with the university as the faculty of political economy. He also founded an observatory in the neighbouring city of Mannheim, where the celebrated Jesuit Christian Meyer laboured as director. In connexion with the commemoration of the four hundredth anniversary of the founding of the university, a revised statistical book which included the work of the professors had been commissioned to prepare, was approved by the elector, and the financial affairs of the university, its receipts and expenditures, were put in order. At that period the number of students varied from three to four hundred; in the jubilee year 1584 the number reached 1186.

In consequence of the disturbances caused by the French Revolution and particularly through the Peace of Lunéville, the university lost all its property on the left bank of the Rhine, so that its complete dissolution was expected. At this juncture, the elector and (after 1806) Grand Duke Charles Frederick of Baden, to whom had been allotted the part of the Palatinate situated on the right bank of the Rhine, issued on 13 May, 1803, an edict of organization for the Baden dependencies and determined the rights and constitution of Heidelberg, now the State university. He gave five faculties, and placed his brother and tutor of the faculty of law as rector, as did also his successors. From a local college of Baden the present Ruperto-Carola became a renowned German university. In 1807 the Catholic faculty of theology was removed to Freiburg. Heidelberg then had 432 students on its register. During this decade Romanticism found expression here through Clemens Brentano, Achim von Arnim, Ludwig Tieck, Joseph Görres, and Joseph von Eichendorff, and there went forth a revival of the German Middle Ages in speech, poetry, and art. The German Students Association exerted great influence, which was at first patriotic and later political in the sense of Radicals. After Romanticism had died out, Heidelberg became a centre of Liberalism and of the movement in favour of national unity. The historians Friedrich Christoph Schlosser, Georg Gervinus, and Ludwig Häusser were the guides of the nation in political history. The modern scientific schools of medicine, surgery, science, public law, and by astronomy and meteorology, under the leadership of the professors of medicine were the anatomists Henle, Arnold, and Gegenbaur, and the surgeons, von Chelius and Czerny, the latter the founder and head of the Institute for the Investigation of Cancer. Robert Bunsen and Gustav Robert Kirchhoff share the glory of the discovery of the spectrum analysis. Hermann von Helmholtz, inventor of the ophthalmoscope, Erwin Rohde, the classical scholar and philologist; and Kuno Fischer, historian of modern philosophy, should be especially mentioned.

In the summer of 1909 the family of the Mannheim machine builder, Heinrich Lanz, gave one million marks ($250,000) for the foundation of an academy of science together with Heidelberg University. At present the number of professors in Heidelberg is about 150; students, 2200.

\[\text{Heidelberg} \quad \text{198} \quad \text{Heilsbronn}\\
\text{Lundsbergs} \quad \text{198}\]

\[\text{Heiligenkreuz (Santia Cruix), an existing Cistercian monastery in the Wienerwald, eight miles north-west of Baden, Lower Austria, was founded in 1135 by Margrave St. Leopold at the request of his son Otto, Abbot of the Cistercian monastery of Morimund in Burgundy and afterwards Bishop of Freising. Its first monks with their abbey, Gottschalk, came from Morimund. Heiligenkreuz was richly endowed by the dukes of Babenberg. During the thirteenth and fourteenth centuries it was often imperilled by epidemics, floods, and fires, and suffered severely during the Turkish wars of 1529 and 1683. Nearly all its abbots were noted for both piety and learning. In 1734 the Abbey of St. Gotthard in Hungary was ceded to Heiligenkreuz by Emperor Charles VI, but was taken away and united with the Hungarian Abbey of Zirc in 1778. In its place the monastery of Neukloster at Wiener-Neustadt was joined to Heiligenkreuz in 1880. The church of Heiligenkreuz combines two styles of architecture. The naves and the transept date from 1187, while the Romanesque choir dates from the thirteenth century, which is an extension of the original church, is Gothic. The thirteenth-century window paintings of the choir are some of the most beautiful remnants of medieval art. The following Cistercian monasteries received their first monks from Heiligenkreuz: Zwettl in Lower Austria in 1138 (still existing); Cospud near Munich in 1142 (ceased in 1526); Waldenburg in Upper Austria in 1142 (ceased in 1784); Marienburg in Hungary in 1194 (ceased in 1526); Lilienfeld in Lower Austria in 1206 (still existing); Goldenkron in Bohemia in 1263 (ceased in 1785); Neuberg in Styria in 1327 (ceased in 1785). Heiligenkreuz has a library of 50,000 volumes, and its own theological seminary and college. Its 52 priests are engaged in teaching and administering the affairs of the 22 parishes that belong to the monastery.

\[\text{Heilsbronn (Fons Salutis), formerly a Cistercian monastery in the Diocese of Eichstätt in Middle Franconia. It was founded in 1133 by St. Otto, Bishop of Bamberg, and received its first monks with their Abbot Raphato from the Cistercian monastery of Ebrach in Upper Franconia. It was richly endowed by the dukes of Abenberg and their heirs, the burggraves of Nuremberg. The abbey church contains the sepulchral monuments of most of the burggraves of Nuremberg and the electors of Brandenburg. Heilsbronn was a flourishing monastery until the time of the Reformation. In 1530 Abbot John Shopper founded a monastic school at Heilsbronn, which later became Protestant school for boys. John Shopper (1529-1540) the doctrines of Luther found favour in the monastery. His successor, Sebastian Wagner, openly supported Protestantism. He married and resigned in 1543. In 1549 the Catholic religion was restored at Heilsbronn, but only ostensibly. The last abbots who protected Catholicity was Ulrich Wunderer (1552-1578). The last admin-istering abbots were Protestants, and in 1631 Heilsbronn ceased to be an abbey. Its valuable library is at present at Erlangen.}

\[\text{Michael Ott.}\]
Heilbron, Monk of.—This name indicates the unknown author of some small mystical treatises, written about the beginning of the fourteenth century at the Cistercian Abbey of Heilbronn (between Asbach and Nuremberg), not to be confounded with Heilbronn, The Monk, e.g., Bonaventure and Albert the Great (d. 1280) and draws largely on the works of Conrad of Brandelsheim (Soccus), Abbot of Heilbronn in 1303 (d. 1321), whose preaching was so efficacious in the diffusion of the spiritual doctrines of St. Bernard. The date of the compositions of the treatises is determined by these borrowings and quotations; they are written in Middle German with some traces of the Bavarian dialect. The first, in verse, is "The Book of the Seven Degrees" (Das Buch der sieben Grade), which comprises 2215 lines, and has only been preserved in one manuscript—that of Heidelberg, transcribed in 1500 by a priest, Ullric Curriex of Eschenbach. In it, the author, taking as his starting point the vision of Eschel (xl, 22), describes the seven degrees which make the pure soul mount up to the realms of heaven: prayer, penance, charity, the habitual thought of God, the exercises, the purifications and the ravishes, union and conformity with God, contemplation of God. Has the author utilized a treatise of the same nature attributed to David of Augsburg? This question is still under discussion; in any case, however, his originality is undeniable.

The second work is in prose with a prologue and an epilogue, and it is in this prologue that the author calls himself the "Monk of Heilbronn" (a Münche von Hailbrunne) and asks the prayers of the reader. The title of the treatise is the "Liber de corpore et sanguine domini" (or "Das Puch von den VI namen des Freileichnamas", or also the "Goldene Lunge"). In it the author calls himself "Give us a collection of the flowers gathered by the Fathers from the broad meadows of Scripture with the purpose of teaching us how to receive and how to conduct ourselves towards the Sacred Flesh of the Saviour. He then passes in review six different names given to the Blessed Sacrament: Eucharist, Gift, Food, Communion, Sacrifice, Sacrament; he gives the reasons for these names and suggests considerations on the Divine love, union with God, etc. (cf. supra), especially when speaking of the second and the sixth names. He cites St. Bernard, "his father", very frequently, while many times any Author is not quoted. We find the same work also in Latin translations. A third work "On Love" (Das Puch von der Minne), if it ever existed, has not been recovered. Two other treatises which are found in the manuscript of Heidelberg have been attributed to the same author; they are "The Daughters of Sion" (Tochter Syon), a short poem of 596 lines, in the Alamannian dialect, rich in matter and full of emotion; it treats of the mystical union of the soul with God, a theme frequently dealt with in the poetry of the thirteenth and fourteenth centuries. The second work (von Sion) also in 48 lines, the well-known legend of St. Alexis. However, peculiarities of language, rhyme, and verse, coupled with an original fashion of conceiving things (e.g. the idea of soul and spirit), forbid us to consider the "Monk of Heilbronn" as the author of these two poems. In his writings, the Monk of Heilbronn shows a very great humility, an attractive simplicity which draws us towards him, and a really practical good sense; his poetry is full of imagery and rich in comparisons which render the Latin of the Bible very happy. His mystical conceptions, which by no means betray the influence of Eckhart, show a close relation to St. Bernard and to Hugo of St. Victor.

Heil, François Joseph, French historical painter, b. near Belfort, 1757; d. in Paris, 1855. This clever but not in the least mannered workman, who gained the first prize for drawing in Strasburg before he was eleven, was a pupil of Vincent in 1803, his people having sent him to Paris to receive the best instruction they could afford. In 1807 he won a prize at the Academy with a picture of Theseus and the Minotaur, and a travel in Italy, which he went to Rome. On his return to Paris he carried off the gold medal at the Academy, became a full member in 1829, and a professor in 1831. He was appointed painter to the Institute of France, and exhibited over sixty portraits of members, the drawings for which are now in the Louvre. His historical and religious paintings were very attractive. The best of them, representing Jacob in Mesopotamia, was executed in 1814, and is now to be seen at Bordeaux. Two of the ceilings in the Louvre, and three of the ceilings in the Senate house in Paris are his work, and his pictures are also to be found at Versailles and Strasburg.

A privately printed essay from the Strasburg Artistic Society's Proceedings (1901). GEORGE CHARLES WILLIAMSON.

Heinrich der Glücksäre (i.e. the hypocrite, in the sense of one who adopts a strange name or pseudonym), a Middle High German poet, author of a narrative poem "Reinhard Fuchs" (Reynard the Fox), the oldest German beast-epic that we possess. The date of its composition is about 1150. It is based on a French poem, which in its turn is descended from "Renart" but older than any of the branches of this romance that have come down to us. Of the German poem in its original form, entitled "Isengrinne nôt" (Isengrin's trouble), only a few fragments are preserved in a mutilated manuscript discovered in 1559 in the Hesian town of Melungen. We possess, however, a complete version made by an unknown hand in the thirteenth century and preserved in two manuscripts, one at Heidelberg and one belonging to the archiepiscopal library of Cologne. This version is very faithful, the changes made therein pertaining apparently only to form and versification. Its title is "Reinhard Fuchs". In the beginning of this poem the fox is anything but a successful impostor, being generally outwitted by far weaker animals. But later on this changes. Reynard plays outrageous pranks on most of the animals, especially on Isengrin, the wolf, but escapes punishment by healing the sick lion. This fox accomplishes at the expense of his adversaries. In the end he poisons the lion, his benefactor, and the poem closes with a reflection on the success attending craft and falsehood while honesty goes unrewarded. The story is told in a plain, straightforward manner; compared with the French model the German poem shows abbreviations as well as additions, so that it is not a mere translation. The order in which the different incidents are related has also been changed, and occasional touches of satire are not wanting. The poem of der Glücksäre is the only beast-epic of Middle High German literature. The famous later versions of this material are Low German. It is on one of these latter that Goethe based his well-known "Reineke Fuchs". The complete poem (from the Heidelberg MS.) was edited by J. Grimm under the title "Reinhard Fuchs" (Berlin, 1854), and together with the other fragments in the Heidelberg MSS. by Reinseher under "Paul's Altdéutsches Textbibliothek", VII (Halle, 1886). The Cologne MS. was published by Mailath and Köfinger (Budapest, 1817). Selections are found in P. Piper's "Die Spielmanns-
Heinrich von Ahaus (HENRIK VAN AHUDE), founder of the Brethren of the Common Life in Germany, b. in 1371, the natural son of Ludolf, Lord of the principality of Ahaus, and Hadwigis of Schöppingen; d. at Münster, 1439. About 1396 he joined the Brethren of the Common Life at Deventer, where personal intercourse with the companions of the founder, especially Florentius Radewyns, thoroughly acquainted him with the spirit and methods of the congregation, then in its first fervour. It is probable that during the plague of 1398 he left Deventer for Amersfort with Florentius, on whose death he returned to his native Münster to establish a community there. In any case the records at Münster point to 1400 as the date of foundation. The benefactions of his family enabled Heinrich to provide generously for the new community, and in 1429 to establish it on his family estate of Springbrunner (Ad fontem salientem), where he and his companions, besides continuing their missionary work in the diocese, applied themselves to the composing of hymns and other spiritual songs and to the printing of the first Brethren's press at Münster (1438). He was one of the founders of the congregation at Cologne (1416), Wesel (1435), Osnabrück, and communities of sisters at Borken, Küstfeld, Lippstadt, Wesel, and Bodeken, labouring all the while in the face of continuous opposition from both priests and laymen. He accompanied Johann Voc. of Huesden, rector of W insets, to the Council of Constance, to refuse the charges lodged against the Brethren by the Dominican, Matthias Grabow, and of which they were triumphantly cleared. In 1425 he inaugurated the union of the Münster and Cologne houses, which was sanctioned by papal bull a few months after his death, and joined in 1441 by the house at Wesel. Heinrich's influence was incalculable, in connexion with the training and reform of the clergy, the cause of education, the spread of religious literature, and the advancement of the spiritual life among the masses of the German people.

Arthur F. J. Remt.

Heinrich von Laufenburg, a German poet of the fifteenth century, d. at Strasburg in 1460; he was a priory of Brethren of the Common Life and later dean of the cathedral. In 1445 he entered the cloister of the Knights of St. John. He was a fertile writer in prose and verse. Among his works there is a collection of sermons, also rhymed German versions of two lengthy Latin works, a 'Speculum humane salvationis', and the 'opus hymnorum' of Konrad von Aalen. The former versions dates from 1437 and gives an account of the Fall and Redemption, with a number of Biblical and profane stories interspersed and symbolically interpreted. The other work is devoted to the glorification of the Blessed Virgin, stories of the Old Testament being explained allegorically and mystically with reference to Mary. All these works, however, have not come down to us, the manuscripts having been destroyed during the siege of Strasburg (1870). A metrical German version of a Latin hymn treatise called 'Regimen Sanitatis' is still extant. Heinrich's chief significance of Laufenberg is as a writer of religious lyrics. Some of these are renderings of Latin hymns, while others are original poems expressive of his love for Jesus and Our Lady. Most noteworthy are his recasts of worldly lyrics and folksongs in religious form (so-called Contrapunctio). In these he adhered as closely as possible to the form and diction of the folksong, retaining the popular melodies, but infusing into them a religious spirit. While most of these poems are simple and effective, many of his original poems are marred by a laboured artificiality, acrostics and other metrical devices being quite common. His translations show occasional latinisms; sometimes, too, Latin and German verses are intermingled. A number of his hymns (91) are found in Wackernagel's, 'Das deutsche Kirchenlied', II (Leipzig, 1884-77), 528-612.

See Miller, Heinrich Laufenberg (Berlin, 1889).

Arthur F. J. Remt.

Heinrich von Meissen, usually called 'Frauenlob' (woman's praise), a Middle High German lyric poet; b. at Meissen about 1250; d. at Mainz, 1518. He received a learned education, probably at the cathedral school of his native town. He led a wandering life, roving over the greater part of Germany. Poems in praise of different princes enable us to trace his travels after 1278 as far as Bohemia and Carinthia in the south and Denmark in the north. In 1311 he settled down at Mainz, where he is said to have founded the first school of Mastersingers. Tradition relates that he was born to his grave by women. His tomb in the cathedral of Mainz was renovated in 1842 and the poet's name is to be seen 'Heinrich v. Meissen' to have been given to him because in a poetic contest with the poet Barthel Regenbogen he maintained that the term Frau (in the sense of 'lady', 'mistress') was superior to Web (woman, as the opposite of man). But it has been shown that he had the surname when quite young, and before the poetic contest took place.

Heinrich von Meissen marks the transition from Minnesong to Mastersong, certain it is that the later Mastersingers looked to him as their model. He has written a great many lyric poems on a wide range of subjects, theological, ethical, erotic, and didactic or gnomic. Many of these poems sing the praises of women, matrimony especially being exalted. As a poet he lacks inspiration and spontaneity; his lyrics are the product of learning and reflection, and excel chiefly on the formal side. The artificiality of their form renders most of them unpalatable to modern readers, while the excessive use of fancy metaphors and the frequent occurrence of learned allusions tend to obscure that at times verges on the unintelligible, as, for instance, in his poem in honour of the Blessed Virgin. He is at his best in the Spruch or gnomic poem. His poems were edited by Ettmüller, 'Heinrichs von Meissen, und des lateinischen des Münsters' (Cassel, 1844; Spruche, Streitgesichte und Lieder', (Quedlinburg-Leipzig, 1843). Selections were edited by Pfaff in Kurzseehner's, 'Deutsche National litteratur', VIII, pt. I, pp. 204-239.

See the introduction and notes to the editions mentioned above; also Borstel, Frauenlob, Leben und Dichten (Mains, 2nd ed., 1881). For comments on particular poems, see Beck in Germanische, XXVI, 307 sqq. 379 sqq.; XXXIX, 1 sqq.

Arthur F. J. Remt.

Heinrich von Melk, German satirist of the twelfth century; of knightly birth and probably a lay brother in the convent of Melk, in Styrins. His chief work is a poem 'Von den tösden gehuged' (the remembrance of death), a discourse on the theme memento mori. It is a bitter invective against the vices and sins of all classes, especially of knighthood. After an introduction wherein the poet explains the depravity of his age has invited him to his task, to his real subject, the contemplation of death, the horrors of which are portrayed in glaring contrast with the vanity of earthly life. Concrete examples are summoned up. A wife is brought to the bier of her deceased spouse, and the ugliness of death is depicted with hideous realism. A son sees his dead father in
a vision, and hears from him a gruesome description of the torments which await the sinner after death. The poet does not shrink from the disgusting and revolting in order to impress hardened souls. While this poem is mainly directed against the vices of the laity, particularly those of knighthood, the clergy are made the subject of scathing satire in the poem known as "Eneide", which is also attributed to Heinrich von Melk, though his authorship is not certain. It is to be noted, however, that, while the clergy are severely arraigned, their sacred office is scrupulously respected. Both poems date from about 1160. Heinrich von Melk is one of the most notable exponents of the spirit of asceticism that followed in the wake of the reform movement emanating from the monastery of Cluny. In his writings the conflict between asceticism and secularism, so characteristic of the eleventh and twelfth centuries, has found its most impassioned expression. The two poems were edited by Heimel, "Heinrich von Melk" (Berlin, 1867).

See the introduction to Heinrich; also "Kulturhistorisches Jahrbuch" (Jena, 1892-93), vol. III, p. 123; "Katholische Kirche in Deutschland" (Jena, 1894), vol. V, pp. 123-26; "Kulturgeschichte" (Jena, 1895), vol. VI, pp. 280-281; and "Weltgeschichte" (Jena, 1896), vol. VII, pp. 280-281.

The greater part of the poem had been completed by 1175 at the court of Cleves, when the manuscript, which had been loaned to a Countess of Cleves, was carried away to Thurinigia. There after nine years the poet regained possession of it, and finished his poem under the patronage of Hermann, the Count Palatine of Saxony, afterwards Landgrave of Thurinigia. This happened before 1190, when Hermann became landgrave, but later than 1184, the date of the great Whitentide festival given by Frederick I at Mainz, at which the poet was present. The "Eneide" is not known to have been written before this date, and its composition, though it is possible that Virgil's poem was also used. The subject is treated with considerable freedom and thoroughly medi evalized. Minos or love is the central theme of the poem. Its form is the short rhyming couplet used by all subsequent writers of courtly epics. Through the introduction of a strict metric and a certain number of rhymes of rhythm, Heinrich von Veldeske became the pioneer of the romances of chivalry in Germany. Previous to the "Eneide" he had written at the instance of a Countess of Loes an epic on the legend of St. Servatius. Besides the epics he also composed lyrics, which in structure and feelings, though written in the isolation of the court, had a great influence, so that in the field of the Minnesang also he was one of the first to introduce the foreign element into German literature. Editions of the "Eneide" were given by L. Ettmüller (Leipzig, 1802) and O. Behagel (Heilbronn, 1832); the "Servatius" by J. H. Bormann (Maastricht, 1839). The lyrics are found in Ettmüller's edition, also in Lachmann and Haupt's "Minnesangs Frühling", II (2nd ed., Leipzig, 1888). Selections from all the works were edited by P. Piper in his "Höfische Epik", pt. 1, 56-281 (in Kirschner's "Deutsche Nationalliteratur", IV).

The introductions to the works above mentioned: also from Muth, H. von Veldeske and the Genese der romantischen und höfischen Epik um 1150 (Vienna, 1880); and Kramm, H. von Veldeske and die mittelalterliche Dichtersprache (Mainz, 1889).

ARTHUR F. J. REMY.

Heinz, Joseph, a Swiss painter; b. at Basle, 11 June, 1864; d. near Prague, Bohemia, October, 1899. He appears to have been a pupil of Hans Bock, and to have educated himself by diligent practice in copying the works of Hans Holbein the younger. Between 1585 and 1587 he lived in Rome, registering himself a pupil to Hans von Aachen. He next settled in Bohemia in 1591, and was at once appointed court painter to Rudolf II, but he remained at Prague for two years only, as in 1593 he was commissioned to make some copies from the antique for the emperor, and for that purpose went to Rome, where he spent some years. In 1604 we hear of him in Augsburg, and from that time we know little of his history, until his death is recorded in a village outside of Prague. His works were at one time in extraordinary demand, and were often sold at higher prices than they were highly esteemed as they deserve. His portraits and landscapes are his best works; the family portrait at Bern and that of his patron Rudolf II at Vienna are excellent examples of serious and academic portraiture. In his landscapes he was too fond of a remarkable dark green colour, but in composition his works were simple and not so crowded as were those of many of his contemporaries in the Dutch School. He was constantly investigating subtle questions of light, and almost all his landscapes show the interest he took in this technical matter. A notable work by him is "The Rape of Proserpine" (1600), at the Dresden Gallery, and was engraved by Kilian; in the same gallery are two other well-known works, "Lot and His Daughters" and "Eee Homo". He had a son, who bore the same name, and who painted a few religious pictures not of special importance; several of these works hitherto attributed to the son are now believed to be late productions by the father.

WOERMANN, Gesch. der Kunst (Dresden, 1902); Bohemian Dict. of Artists (Dahns, 1877); Schweizerischer Kunsterlebnis (1902).

GEORGE CHARLES WILLIAMSON.

H disin, Eduard, German astronomer, b. at Cologne, 18 February, 1806; d. at Münster, Westphalia, 30 June, 1877. He graduated from the gymnasium at Cologne in 1824; in 1827 from the university at Bonn, where during his course he solved two prize questions, one on the reconstruction of the Latin text "De sectione determinata" of Apollonius Pergeus, the other on the movements of the moon during the" eclipse of 1226" ("Selenographia et nov." mentioned by Cicero (De republica, I, 16)). He then taught mathematics and sciences in the gymnasium of Cologne (1827-37) and in the commercial high-school at Aachen (1837-52). In 1852, on the request of Alexander von Humboldt, he was appointed by King Frederick William IV to the chair of mathematics and astronomy in the University of Berlin (University, 1877). He was rector of the academy in 1869, was decorated in 1870 with the order of the Red Eagle, nominated in 1874 as a member of the Royal Astronomical Society of London, and in 1877 became honorary member of the Leopoldine Academy and of the Scientific Society of Brussels.

Being endowed with exceptionally good eyes and a finding at the academy of Münster only a four-inch telescope, Heis devoted himself to the observation with the eye alone of the brilliance of all the stars visible to the naked eye; his observations were extended to the Milky Way, the sidereal light, and shooting-stars. The publications containing the results of these investigations are: "Astrographische Annalen" (Cologne, 1879), with 12 charts, a catalogue of 5,421 stars, and the first true delineation of the Milky Way; "Zodiakal-Beobachtungen", extending over twenty-nine years (1847-75); "Sternschuppen-Beobachtungen", which includes over 15,000 shooting-stars observed by himself and his students during forty-three years (1833-75). The latter two works appeared as vol. 1 and
II of the publications of the royal observatory of Münster (1875 and 1877). The work on the "Atlas", which was the result of twenty-seven years' labour, was accompanied by observations of variable stars (1840-70), into which field he was introduced by Argelander. These observations were recently published by the writer of the present article (Berlin, 1903). He also turned his attention to the auroral light and to sun-spots. Among his minor publications were treatises on the eclipses of the Peloponnesean war (1834), on Halley's comet (1835), on periodic shooting-stars (1849), on the magnitude and number of the stars visible to the naked eye ("De Magnitudine", etc., 1852), which work gained him the title of doctor, on Mira Ceti (1859), and on the fable of Galileo's "E pur si muove" (1874), also in the Annals of the Scientific Society of Brussels, 1876-77,1). He wrote a number of mathematical textbooks, of which the "Sammung von Beispielen und Aufgaben aus der allgemeinen Arithmetik und Algebra" reached 107 editions in various languages. He was one of the founders of "Natur und Offenbarung" (1855), and editor of the scientific journal "Wochenschrift" (1857-1877). Shortly before his death he prepared the design of the Scriptural and symbolic constellations (Orion, Ursa, Pisces, Virgo, Crux) for the ceiling of the choir in the cathedral of Münster. Heis was an excellent teacher, a fatherly friend to his students, charitable to his neighbour, especially the poor, and an exemplary husband and father. During the Vatican Council and the Kulturkampf, he stood faithfully by the Church. In 1872 he offered the jubilee congratulations of the Academy of Münster to Pius IX, and in 1872 he received from the same pontiff a precious medal with a Latin Brief for the "Atlas Celestis" which he had dedicated to the pope through Father Secchi. Heis died of apoplexy, three months before his death, but was still a teacher. He had his own tombstone prepared in the proportions of the "golden section", with the symbol of the dove and olive-branch from the catacombs.

J. G. HAGEN.

HEISTERBACH (VALLIS S. PETRI), a former Cistercian monastery in the Siebengebirge near the little town of Oberdillendorf in the Archdiocese of Cologne. It traces its origin to a knight named Walther, who lived as a recluse on the Stromberg, or Petersberg, one of the mountains forming the Siebengebirge. When numerous disciples began to settle near the cell of Walther, he built a monastery (1134) where they lived according to the Rule of St. Augustine. After the death of Walther his disciples left their monastery on the Petersberg and built the monastery of Heisterbach on the Suls. In 1189 Archbishop Philip of Cologne requested Gisibert, the Abbot of the Cistercian monastery of Himmerod in the Diocese of Trier, to repeople the deserted monastery of Petersberg with Cistercians from Himmerod. On 22 March, 1189, twelve Cistercian monks with their newly-appointed Abbots Herrmann took possession of Petersberg. Three or four years later they removed to the foot of the mountain where they built a new monastery which they called Petersthal or Heisterbach. The famous basilica of Heisterbach was begun by Abbot Gerard (1195-1208), and consecrated in 1237 under Abbot Henry (1208-1244). Being built during the period of transition from the Romanesque round arch to the Gothic pointed arch, its style of architecture was a combination of the Romanesque and the Gothic. Heisterbach, which had large possessions and drew revenues from many neighbouring towns, remained one of the most flourishing Cistercian monasteries until its suppression in 1526. The library and the archives were given to the city of Düsseldorf; the monastery and the cloisters were sold and torn down in 1809, and at present only the apse with the ruins of the choir remains. Cessarius of Heisterbach (q. v.), one of the greatest men that the Cistercian Order has produced, was a monk at this abbey (1199-1240). A monument was erected in his honour near the ruins of Heisterbach in 1897.

SCHMITT, Die Abtei Heisterbach (Düsseldorf, 1900); Pohl, Schicksale der letzten Mönche u. Heisterbach in Anm. des hist. Vereins für den Niederhess. (1892), 39-103; Lichte, Ausbl. der Abtei Heisterbach, widm. (1901), 88-95.

M. OTT.

Helena, Saint, the mother of Constantine the Great, b. about the middle of the third century, possibly in Drepanum (later known as Helenopolis) on the Nicomedian Gulf; d. about 330. She was of humble parentage, St. Ambrose, in his "Oratio de obitu Theodosii", referring to her as a stabularia, innkeeper. Nevertheless, she became the lawful wife of Constantius Chlorus. Her first and only son, Constantine, was born in Naissus in Upper Moesia, in the year 274. The statement made by English chroniclers of the Middle Ages, according to which Helena was supposed to have been the daughter of a British prince, is entirely without historical foundation. It may arise from the misinterpretation of a term used in the fourth chapter of the panegyric on Constantine's marriage with Fausta, that Constantine, oriendo (i.e., "by his beginnings," "from the outset"), had honoured Britain, which was taken as an allusion to his birth, whereas the reference was really to the beginnings of his reign.

In the year 292 Constantius, having become co-Regent of the West, gave himself up to considerations of a political nature and forsook Helena in order to marry Theodora, the step-daughter of Emperor Maximianus Herculeus, his patron and well-wisher. But the son remained loyal to his mother and faith. On the death of Constantius Chlorus, in 306, Constantine, who succeeded him, summoned his mother to the imperial court, conferred on her the title of Augusta, ordered that all honour should be paid her as the mother of the sovereign, and had coins struck bearing her effigy. Her son's influence carried the Church's Christianity after his victory over Maxentius. This is directly attested by Eusebius (Vita Constantini, III, xlviit): "She (his mother) became under his (Constantine's) influence such a devout servant of God, that one might believe her to have been from her very childhood a disciple of the Redeemer of mankind". It is also clear from this declaration of the contemporary historian of the Church that Helena, from the time of her conversion, led an earnestly Christian life and by her influence and liberality favoured the wider spread of Christianity. Tradition links her name with the building of Christian churches in cities of the East, where the imperial court resided, notably at Rome and Trier, and there is no reason for rejecting this tradition, for we know positively through Eusebius that Helena erected churches on the hallowed spots of Palestine. Despite her advanced age she undertook a journey to Palestine when Constantine, through his victory over Licinius,
had become sole master of the Roman Empire, subsequently, therefore, to the year 324. It was in Palestine, as we learn from Eusebius (loc. cit., xliii), that she had resolved to bring to God, the King of kings, the homage and tribute of her devotion. She lavished on that land her bounties and good deeds, she "explored it with remarkable discernment," and "visited it with the care and solicitude of the emperor himself". Then, when she "had shown due veneration to the footsteps of the Saviour", she had two churches erected for the worship of God: one was raised in Bethlehem near the Grotto of the Nativity, the other on the Mount of the Ascension, near Jerusalem. She also embellished the sacred grotto with rich ornaments. This sojourn in Jerusalem proved the starting-point of the legend first recorded by Rufinus as to the discovery of the Cross of Christ.

Her princely munificence was such that, according to Eusebius, she assisted not only individuals but entire communities. The poor and destitute were the special objects of her charity. She visited the churches everywhere with pious zeal and made them rich donations. It was thus that, in fulfilment of the Saviour's precept, she brought forth abundant fruit in word and deed. If Helena conducted herself in this manner while in the Holy Land, which is indeed testified to by Eusebius, Bishop of Caesarea in Palestine, we should not doubt that she manifested the same piety and benevolence in those other cities of the empire in which she resided after her conversion. Her memory in Rome is chiefly identified with the church of S. Croce in Gerusalemme. On the present location of this church formerly stood the Palatium Severianum, and near by were the Thermes Hele nianus, which baths derived their name from the empress. Here two inscriptions were found composed in honour of Helena (Marucchi, "Basiliques et églises de Rome", Rome, 1902, 346). The Sessorium, which was near the site of the Lateran, probably served as Helena's residence when she stayed in Rome; so that it is quite possible for a Christian basilica to have been erected on this spot by Constantine, at her suggestion and in honour of the true Cross.

Helena was still living in the year 326, when Constantine ordered the execution of his son Crispus. When, according to Socrates' account (Hist. eccl., I, xviii), the emperor in 327 improved Drepanum, his mother's native town, and decreed that it should be called Helepolis, it is probable that the latter returned from Palestine to her son, who was then residing in the Orient. Constantine was with her when she died, at the advanced age of eighty years or thereabouts (Eusebius, "Vita Const.", III, xlv). This must have been about the year 330, for the last coins which are known to have been stamped with her name bore the date (Jahrbuch der deutschen Münzfreunde im Rheinland, XVII, 92). Her body was brought to Constantinople and laid to rest in the imperial vault of the church of the Apostles. It is presumed that her remains were transferred in 849 to the Abbey of Hautvillers, in the French Archdiocese of Reims, as recorded by the monk Altmann in his "Translatio". She was venerated as a saint and her veneration spread, early in the ninth century, even to Western countries. Her feast falls on 18 August. Regarding the finding of the Holy Cross by St. Helena, see CROSS AND CRUCIFIX.

J. P. Kirsch.

**Helena, Diocese of (Helenaensis), erected from the Vicariate of Montana, 7 March, 1884. It comprises the western part of the State of Montana, U.S.A., and is made up of Lewis and Clark, Teton, Flathead, Missoula, Sanders, Powell, Granite, Ravalli, Deer Lodge, Silver Bow, Jefferson, Broadwater, Meagher, Gallatin, Madison, and Beaverhead counties, an area of 51,922 square miles. Montana Territory was first included in the jurisdiction of the Vicariate of Nebraska, created in 1851. When in 1866 that part west of the Rocky Mountains was taken to make up the Vicariate of Idaho there were nineteen priests, twenty-three churches and chapels, four hospitals, six parish schools, and an estimated Catholic population of 15,000 when the diocese was formed. Missions among the Flathead, Blackfeet, and Cheyenne Indians took up a large part of the time of the band of Jesuit priests located in the diocese, while the Sisters of Charity, the Ursulines, and the Sisters of Charity of Providence looked after the schools.

The first bishop was the Right Rev. John Baptist Brondel (q. v.), consecrated 14 December, 1879, at Victoria, V. I., and transferred to Helena, 7 March, 1884. He died 3 November, 1903. John P. Carroll, second bishop, was consecrated 21 December, 1904. He was born at Dubuque, Iowa, 22 February, 1856, and ordained priest 7 July, 1889.

The following religious have communities in the diocese: Jesuit, Brothers of Christian Instruction, Sisters of Charity, Sisters of the Good Shepherd, Ursulines, Sisters of Charity of Providence, Sisters of the Third Order of St. Dominic, Sisters of Charity B. V. M.

**Statistics.**—45 priests (8 religious), 45 churches with resident priests, 34 missions, 72 stations, 45 chapels, 20 parish schools (4900 pupils), 5 Indian schools (400 pupils), 15 brothers, 219 sisters, 36 ecclesiastical students; 1 orphan asylum (250 inmates), 1 industrial and reform school (30 inmates), 25 young people in industrial care 5762; 5 hospitals, Catholic population 50,000.

**Thomas F. Meehan.**

**Helen of Skofde, Saint, martyr in the first half of the twelfth century. Her feast is celebrated 31 July. Her life (Acta SS., July, VII, 340) is ascribed to St. Brynolph, Bishop of Skara, in Sweden (d. 1317). She was of noble family and is generally believed to have been the daughter of the Jarl Guthorn. When**
her husband died she remained a widow and spent her life in works of charity and piety; the gates of her home were ever open to the needy and the church of Sköde was almost entirely built at her expense. Her daughter, whose husband was a very cruel man, and was in consequence killed by his own servants. His relatives, wishing to avenge his death, examined the servants. These admitted the crime, but falsely asserted that they acted on the instigation of Helen. She had then gone on a pilgrimage to the Holy Land, but her return was killed 1160 (?) at Gath by her husband's relatives. Her body was brought to Sköde for burial, and many wonderful cures were wrought at her intercession. The report of these miracles was sent to Rome by Stephen, the Archbishop of Upsala, and he, by order of Pope Alexander III, in 1184 inscribed her name in the list of canonized saints (Benedict XIV, "De canonizatione sanctorum", I, 85). Great was the veneration shown her relics even after the Reformation had spread in Sweden. Near her church was a holy well, known to this day as St. Lene Kild. At various times the Lutheran authorities inveighed against this remnant of the old popish and anti-Christian tradition. Especially zealous in this regard was Archbishop Abraham, who had all the springs, mineral or pure water, filled up with stones and rubbish (Baring-Gould, "Lives of the Saints", July, 11, 698). St. Helen's tomb and well (St. Elin's) were also honored at Tävslev in the parish of Tibrke in the island of Zealand. Pilgrimages were made every summer, cripples and sick came in numbers; they would remain all night at the grave, take away with them little bags of earth from under the tombstone, and frequently would leave their crutches or make votive offerings in token of gratitude. Such was the report sent in 1658 from Copenhagen to the Bollandists by the Jesuit Lindanus. A similar statement is made by Werlaff, in 1858, in his "Hist. Antegneleer". The legend says that St. Helen's body floated to Tävslev in a stone coffin, and that a spring broke forth where the coffin touched land. The Bollandists (loc. cit.) give as a possible reason for her veneration at Tävslev that perhaps St. Helen had visited the place, or some of her relics had been brought there.

FRANCIS MERSHMAN.

Helenopolis, a titular see of Bithynia Prima, suffragan of Prusa. On the southern side of the Sinus Aestacus was a place known as Drepana or Drepanon, where about 258 St. Helena, mother of Constantine the Great, was born. Near it were some famous mineral springs. In 318 Constantine gave the place the name Helenopolis, and built there a church in honour of the martyr St. Lucian; it soon grew in importance, and Constantine lived there very often towards the end of his life. Justinian built there an aqueduct, baths, and other monuments. Yet it does not seem ever to have grown in prosperity, and hence it was simply called "Eadem, vilis, Helena", or "the wretched town". It has been identified with the modern village of Hersek in the villayet of Broussa. The mineral springs are those of Coury near Yalova. Helenopolis occurs in the "Notitiae Episcopatuum" until the thirteenth and fourteenth centuries. Lequien (Orients Christi, I, 623) mentions nine of its bishops, mostly noted, as said to have been at the Council of Nicaea (325), but his name is not given in the authentic lists of the members of the council. About 400 the church of Helenopolis was governed by Palladius, the friend and defender of St. John Chrysostom, and author of the famous "Historia Lausiacae". The last known bishop assisted at the Photian Council in Constantinople (879).

There was another Helenopolis, suffragan of Scevopolis in Palestine Secunda; and a third, suffragan of Sardeis in Lydia.

S. PETRIDES.

Heli (Heb. ʾšl, Gr. Ἡλί, Prot. versions El.).—(A) was both judge and high-priest, whose history is related in 1 Kings, i.–iv. He lived at Silo, where the high-priest of the Lord was seated. His early history is connected with that of the last days of the aged Heli, whom he succeeded in the office of judge, just before the appointment of Saul as king (1 Kings, vii, 15; viii, 22). Heli must have been held in the highest esteem, and yet the Bible represents him in his old age as weak and against the Jews, who, though Ophni and Phinees, whose crimes brought ruin on their country and on their father's house. The highpriesthood had been promised to Phinees, son of Eleazar and grandson of Aaron, for his zeal (Num., xxv, 13); and how Heli, who was a descendant of Gershom, son of Moses and grandson of Levi, (Ex. xxvi, 33; III Kings, ii, 27), became high-priest is not known; but his title to the office had the Divine sanction (1 Kings, ii, 30). The Lord spoke to Heli through the boy Samuel, and the word of the Lord was fulfilled. The Philistines were victorious in battle, Ophni and Phinees being among those slain, and therefore Heli was deprived of the priesthood as a part of the spoil. The death of the highpriest is thus described: "Now Heli was ninety and eight years old . . . he fell from his stool backwards by the door, and broke his neck, and died" (1 Kings, iv, 15–18). According to the Heb. text, with which Josephus agrees (Ant., v, xi, 3), Heli judged Israel forty years, so that the 1 Kings, iv, 12, 25. text is generally considered an error. Heli spoke when he should have been silent (1 Kings, i, 14), and he was silent when he should have spoken and corrected his children. The words "And thou shalt see thy rival in the temple" (1 Kings, iii, 32) refer to the taking of the highpriesthood from his family; but this was done in the days of Solomon, more than a hundred years later, for he "cast out Abiathar, from being the priest of the Lord" (III Kings, ii, 27; Josephus, "Ant.", VIII, i, 3), they were addressed, not to Heli as an individual, but rather to his house. The passage however is obscure.

Heli (Gr. Ἑλί—Luke, iii, 23).—(B) is evidently the same name as the preceding. In Luke he is said to be the father of Joseph, while in Matt., i, 16, Jacob was Joseph's father. The most probable explanation of this seeming contradiction is afforded by having recourse to the levirate law; for the Heb. preserves that when a man dies childless his widow "shall not marry to another: but his brother shall take her, and raise up seed for his brother" (Deut., xxv, 5). The child, therefore, of the second marriage is legally the child of the first (Deut., xxv, 6). Heli having died childless, his widow married Levi (Matt. xvi, 12; Luke, iv, 29). Jacob, and Joseph was the offspring of the marriage, by nature the son of Jacob, but legally the son of Heli. It is likely that Matt. gives the natural, and Luke the legal descent. (Cf. Maas, "The Gosp. acc. to S. Matt.", i, 16.) Lord A. Hervey, Bishop of Bath and Wells, who wrote a learned work on the "Genealogies of Our Lord Jesus Christ", thinks that Mary was the daughter of Jacob, and Joseph was the son of Jacob's brother, Heli. Mary and Joseph were therefore first cousins, and both of the house of David. Jacob, the elder, having died without male issue, transmitted his rights and privileges to the male issue of his brother Joseph, who, according to genealogical usage was his descendant.

JOSEPHUS, Ant. V, ix, x; XI; GEBRIER, O. T. Characters, Bk. II, 184–193; MALDONATUS, in Matt. i, 16; Biblical Rev. (Jan., 1905), 21 sqq.

JOHN J. TIRRENT.
Heliae, Paul (Povl Helgesen), Carmelite, opponent of the Reformation in Denmark, b. at Viborg (in the Læn of Halland), about 1480; d. after 1534, place unknown. In early youth he entered the Carmelite convent of his native town, where he received his first education, and in course of time obtained the degrees of Doctor of Divinity and Bachelor of Divinity; he was elected provincial in 1519 and soon after professor at the University of Copenhagen. In these positions he had to choose sides in the religious strife which broke out on the appointment of a Lutheran pastor to the parish of St. Nicholas, and the introduction of a new ecclesiastical code of distinctly schismatical tendencies. In a sermon preached at court he warmly defended the Catholic Faith and made some pointed remarks on the king's morals, with the result that he had to seek safety in flight until the dethronement of Christian II and the election of Frederick I procured a short respite to the Catholic religion. Unfortunately Helgesen, through misdirected zeal, rendered his own faith suspect; he preached against simony, avarice, and other clerical vices with a vehemence peculiar to Protestant invectives, and also published a Danish translation of Luther's "Beibuchlein" (prayer book on the commandments, the Creed, Our Father and Hail Mary); his object in placing Luther's work before the Catholics of Denmark was evidently to eliminate what was unsound in faith and to preserve only that which agreed with the doctrine of the Church; yet, owing to hurry, Helgesen allowed much to pass which should have been omitted, and failed to emphasise some of the most important dogmas.

The result was that both Catholics and Protestants remained for some time uncertain as to his real belief, and afterwards, when his attitude proved him to be an uncompromising foe of the Catholic religion, he was nicknamed Vendekaabe (weathercock), under which name he went down to posterity. Nevertheless he missed no occasion to attack heresy, writing no less than six works in defence of the old faith, and taking part in public disputations. But all in vain; protected by the king (in flagrant violation of his oath), and fostered both by Germany and Sweden, the new religion grew every day more powerful; Catholic worship was gradually abolished, and Helgesen had the sorrow to see the convents of his order secularized. Nothing is known concerning his last days; Schmitt inclines to think that he met with a violent death during or after the siege of Rooskilde (1536), and thus gained a martyr's crown; others are of opinion that he may have withdrawn to some convent abroad, perhaps in Holland.

Schmitt, Der Karmeliter Paulus Helias (Freiburg im Br., 1852), whose text is a complete list of his works, whether extant or lost; among the former mention must be made of the polemical writings published by Sather, Port Erinem Domae Protifer, I. 1856.

B. Zimmermann.
birth to His ascension in accordance with the Gospel narrative. Just as the atmosphere of the masterpieces of the great Christian painters of Italy is Italian, so the atmosphere of the Helinand is purely German. The marriage at Cana takes place in the great banqueting hall of a German lord. The guests are seated on long rows of benches and there is an imposing display of tankards and viands. St. Thomas and St. John are German, their German respect, honours, but above all loves Him. For St. Peter, too, he entertains a feeling of deep loyalty and admiration, and beholds in him the God-given chief of Christendom. The personality of Christ gives unity to the long epic. To secure the needful movement he confines the didactic side of Christ's career to one or two cantos, the nucleus of which is the Sermon on the Mount. The poem is composed in the alliterative verse in which the pagan Saxon lays were probably written, and he handles this instrument with considerable skill. Even without the statement found in the "Prefatio", that Louis selected a bard well known among his people for poetical gifts to sing his countrymen the wonderful story of the Old and the New Testament, the versification, the poetic language, and the frequent use of poetic formulae, some of which betray their pagan origin, convince the reader that the old Saxon Homer must have been a popular bard. His recital is characterized by simplicity and the absence of grandiloquence. Modern critics have judged the work variously. Some, like Scherer, approach it with the feeling that it was primarily a kind of Saxon tract in verse, and condemn it because of its didactic character. Others, like Behringer and Windscheid, regard it as a perfect work of art. Vilman declares it to be the finest Christian epic in any language. The interest aroused by the poem may be measured by the fact that since its publication in 1830 two hundred and seventy-three books and pamphlets on the Helinand, including some ten editions of the text, have been published in Germany and elsewhere.

RÖCKERT, Helinand (Leipzig, 1876); PIPER, Helinand (Stuttgart, 1897); HAYNS, Helinand (Paderborn, 1905); COOK, Studies in the Helinand and the Roman Form of the Classical Minnesang in Fraser's Magazine (1880), Cl. 656; STEPHEN, The "He- linand" and the "Genesis" in Academy (1876), 1408; Herbermann, The Helinand in Am. Cath. Quarterly Rev. (Philadelphia, Oct., 1905).

CHARLES G. HERBERMANN.

Helinand, a celebrated medieval poet, chronicler, and ecclesiastical writer; b. of Flemish parents at Pronleroi in the Department of Oise in France e. 1150; d. 3 February, 1223, or 1227, or 1237. His talents won the favour of King Philip Augustus, and for some time he freely indulged in the pleasures of the world, after which he became a Cistercian monk at the Monastery of Froidmont in the Diocese of Beauvais about the year 1190. From being a self-indulgent man of the world he became a model of piety and mortification in the monastery. Whatever time was not consumed in monastic exercises he devoted to ecclesiastical studies and, after his ordination to the priesthood, to preaching and writing. The Church of Beauvais honours him as a saint and celebrates his feast on 3 February. Many of his writings are lost. The extant ones (published in P. L., CCXII, 482-1084) are the following: twenty-eight sermons on various Church matters, two monastic canons, treatises, viz. "De cognitione sui" and "De bono regime principis"; one epistle entitled "De preparatione lapii", in which he exhorts a renegade monk to return to his monastery; a passio of Gereon, Victor, Cassius, and Flor- entius, martyrs of the Thelban Legion (reprised by the Bollandists in "Acta SS.", October, V, 36-42); a chronicle (from the beginning of the world to 1204) of which everything up to A. D. 634 has been lost; a poem on death, in the French language, of which only four incomplete stanzas remain. His sermons, written in a neat Latin style, give evidence of a remarkable acquaintance with the pagan poets as well as with the Fathers of the Church. His chronicle is not sufficiently critical to be of much historical value. It is still undecided whether Helinand of Froidmont is a different person from the Cistercian Helinand of Perseigne, the author of a commentary on the Apocalypse and glosses on the Book of Exodus.

MICHAEL OTT.

Helioagabalus (Elagabalus), the name adopted by Varius Avitus Bassianus, Roman emperor (218-222), born of a Syrian family and a grandnephew of Julia Domna, the consort of Emperor Septimius Severus. When Emperor Caracalla had fallen a victim to a conspiracy of his officers at Carrhae in 217, the praetorian prefect, M. Opellius Macrinus, seized the reins of power. Empress Julia Domna committed suicide; her sister, Julia Maccia, was exiled to Emesa with her daughters and her eldest grandchild, Avitus Bassianus. The latter was appointed priest of the sun-god Elagabal, whose name he adopted. A report was then spread among the soldiers in Syria, that Elagabalus was a son of Caracalla, and by appointment the fifteen-year-old youth betook himself to the Roman camp in 218, and allowed himself to be elected emperor on 16 May by the soldiery. He received the official name of M. Aurelius Antoninus in recognition of the general desire to pay a tribute to the memory of the glorious Antonine. A rising in favour of Macrinus failed, as well as his attempt to win over the soldiers and the inhabitants of Rome by bribery. An important battle, fought on the borders of Syria and Phoenicia to the east of Antioch, was decided in favour of Helioagabalus; the troops of Macrinus, bribed by money and promises, joined the army of his opponent, while Macrinus himself was put to death during the flight. Helioagabalus lived in Rome as an oriental despot and, giving himself up to detestable sensual pleasures, degraded the imperial office to the lowest point by most shameful vices, which had their origin in certain rites of oriental naturalistic religion. His mother Soemias and his grandmother Julia Maccia, who also took part in the sessions of the Senate, exercised a controlling influence over Helioagabalus. A conical, black, meteoric stone from Emesa served as the idol of the sun-god, which Helioagabalus married to the Syrian moon-goddess Asarte, introduced from Carthage, and whose high-priest became pontifex maximus of Rome. This led to the greatest
HELL

Hell.—This subject is treated under eight headings: (I) Name and Place of Hell; (II) Existence of Hell; (III) Eternity of Hell; (IV) Impenitence of the Damned; (V) Pena Damnationis; (VI) Pena Sensus; (VII) Accidental Pains of the Damned; (VIII) Characteristics of the Pains of Hell.

I. NAME AND PLACE OF HELL.—The term hell is cognate to “hole” (cavern) and “hollow.” It is a substantive formed from the A.S. Ḥeah or hæah, “the highest,” “the highest past.” It is a Lat. antepose primitive as the Latin occulus and celae and the Greek κατάτηρος. Thus by derivation hell denotes a dark and hidden place. In ancient Norse mythology Hel is the ill-favoured “goddess of the underworld. Only those who fall in battle can enter Valhalla; the rest go down to Hel in the underworld, not all, however, to the place of punishment of criminals.

Hell (infernum) in theological usage is a place of punishment after death. Theologians distinguish four meanings of the term hell: (1) hell in the strict sense of the term, or the place of punishment for the damned, be they demons or men; (2) the limbo of infants (limbus purgatorum), where those who die in original sin alone, and without personal mortal sin, are confined and undergo some kind of punishment; (3) the limbo of the Fathers (limbus patrum), in which the souls of the just who died before Christ awaited the distinction of heaven and hell; in the meantime heaven was closed against them in punishment for the sin of Adam; (4) purgatory, where the just, who die in venial sin or who still owe a debt of temporal punishment for sin, are cleansed by suffering before their admission to heaven. The present article treats only of hell in the strict sense of the term.

The Latin infernus, inferri, inferns, the Greek Hades (ἡδης), and the Hebrew sheol (שֵׁעָל) correspond to the word hell. Infernus is derived from the root in; hence it designates hell as a place within and below the earth. Hēdēs, formed from the root ρέω, to see, and ρέω, privative, denotes an invisible, hidden, dark place; it is as similar to the term inferno as it is to the term sheol. The derivation of sheol is doubtful. It is generally supposed to come from the root שָׁעַל, “to be sunk in, to be hollow;” accordingly it denotes a cave or a place under the earth. In the Old Testament (Sept. שְׂעָל; Vulg. infernus) sheol is used quite in general to designate the kingdom of the dead, of the good (Gen., xxxvi, 35) as well as of the wicked, but means hell in the strict sense of the term, as well as the limbo of the Fathers. But, as the limbo of the Fathers ended at the time of Christ’s Ascension, שְׂעָל (Vulg. infernus) in the New Testament always designates the hell of the damned. Since Christ’s Ascension the lower word (but it is meant) and the Hebrew שֵׁעָל (Num., xxxvi, 31 seqq.; Ps., liv, 16; Is., v, 14; Es., xxxvi, 20; Phil., ii, 10, etc.) Is this merely a metaphor to illustrate the state of separation from God? Although God is omnipresent, He is said to dwell in heaven, because the light and grandeur of the stars and the firmament are the brightest manifestations of His infinite splendor. But the damned are utterly estranged from God; hence their abode is said to be remote and distant from His dwelling, far from heaven above and its light, and consequently hidden away in the dark abysses of the earth. However, no cogent reason has been advanced for accepting a metaphorical interpretation in preference to the natural meaning of the words of Scripture. Hence theologians generally accept the opinion that hell is really within the earth. The Church has decided nothing on this subject; hence we may say hell is a definite place; but where it is, we do not know. St. Chrysostom reminds us: "We must not doubt, we must not fear, we must not escape it" (In Rom., hom. xxxi, 5, in P. G., LX, 674). St. Augustine says: "It is my opinion that the nature of hell-fire and the location of hell are known to no man unless the Holy Ghost made it known to him
by a special revelation" (De Civ. Dei, XX, xvi, in P. L., XLI, 682). Elsewhere he expresses the opinion that hell is under the earth (Retract., II, xxiv, n. 2, in P. L., XXXII, 640). St. Gregory the Great wrote: "I doubt, whether this mortal sin, which is committed in this mortal state; how much more this sin, which is committed in the immortal world. Somewhat, hell is somewhere on earth; others believe it is under the earth" (Dialog., IV, xili, in P. L., LXXVI, 400; cf. Patuzzi, "De sede inferni," 1763; Greuter, "De subterraneis animarum receptaculis," 1595).

II. Existence of Hell.—There is a hell, i. e., all those who die in personal mortal sin, as enemies of God, and unworthy of eternal life, will be severely punished by God after death. On the nature of mortal sin, see SIN; on the immediate beginning of punishment after death, see JUDGMENT, PARTICULARAE. As to the fate of those who die free from personal mortal sin, but in original sin, see LIMBO (LIMBUS PAVARUS).

—The existence of hell is, of course, denied by all those who deny the existence of God or the immortality of the soul. Thus among the Jews the Sadducees, among the Gnostics the Selecucians, and in our own time Materialists, Pantheists, etc., deny the existence of hell. But apart from these, if we abstract from the eternity of the pains of hell, the doctrine has never met any opposition worthy of mention.

The existence of hell is proved first of all from Holy Writ. Wherever Christ and the Apostles speak of hell they presuppose the knowledge of its existence (Matt., v, 29; viii, 12; x, 28; xiii, 42; xxv, 41, 46; II Thess., i, 7). A full development of the Scriptural argument, especially in regard to the Old Testament, may be found in Atzberger's "Die christliche Eschatologie in den Studien ihrer Offenbarung im Allen und Neuen Testament," Freiburg, 1890. Also the Fathers, from the very earliest times, are unanimous in teaching that the wicked will be punished after death. And in proof of their doctrine they appeal both to Scripture and to reason (cf. Ignatius, "Ad Eph.," v, 16; "Martyrium s. Polycarpi," ii, n. 3; xi, n. 2; Justin, "Apol.," ii, n. 8, in P. G., VI, 458; Athenagoras, "De resur. mort.", c. xix, in P. G., VI, 1011; Irenaeus, "Adv. her.," V, xxvii, n. 2, in P. G., VII, 1196; Tertullian, "Adv. Marc.," I, c. xxvii, in P. L., IV, 277). For citations from this patristic teaching see Atzberger, "Gesch. der christl. Eschatologie innerhalb der vorchrist. Zeit" (Freiburg, 1889); Petavius, "De Ang. Dei," both editions.

The Church professes her faith in the Athanasian Creed: "They that have done good shall go into everlasting life, and they that have done evil into everlasting fire" (Denzinger, "Enchiridion," 10th ed., 1908, n. 40). The Church has repeatedly defined this truth in the profession of faith in the Second Council of Lyons (Denz., n. 484) and in the Decree of Union in the Council of Florence (Denz., n. 893): "the souls of those who depart in mortal sin, or only in original sin, go down immediately into hell, to be visited, however, with unequal punishments" (pánaí dispológya).

If we abstract from the eternity of its punishment, the existence of hell can be demonstrated even by the light of mere reason. In His sanctity and justice as well as in His wisdom, God must avenge the violation of the moral order in such wise as to preserve, at least in general, some proportion between the gravity of sin and the severity of punishment. But it is evident from experience that God does not always do this on earth; therefore He will inflict punishment after death. Moreover, if all men were fully convinced that the sinner need fear no kind of punishment after death, moral and social order would be seriously menaced. This, however, Divine wisdom cannot permit. Again, if there were no retribution beyond that which takes place before our eyes here on earth, we should have to consider God extremely indifferent to good and evil, and we could in no way account for His justice and holiness.—Nor can it be said: the wicked will be punished, but not by any positive infliction; for either death will be the end of their existence, or, forfeiting the rich reward of the good, they will enjoy some lesser degree of that happiness, which is vain and wretched, unsupported by any sound reason; positive punishment is the natural recompense of evil. Besides, due proportion between demerit and punishment would be rendered impossible by an indiscriminate annihilation of all the wicked. And finally, if men knew that their souls would not be followed by suffering, the mere threat of annihilation at the moment of death, and still less the prospect of a somewhat lower degree of beatitude, would not suffice to deter them from sin.

Furthermore, reason easily understands that in the next life the just will be made happy as a reward of their virtue (see HEAVEN). But the punishment of evil is the natural counterpart of the reward of virtue. Hence, there will also be punishment for sin in the next life. Accordingly, we find among all nations the belief that evil-doers will be punished after death. This universal conviction of mankind is an additional proof for the existence of hell. For it is impossible that, in regard to the fundamental questions of their being and their destiny, all men should fall into the same error; else the power of human reason would be essentially deficient, and the order of this world would be unutterly wrapt in mystery; this, however, is repugnant both to nature and to all the laws of reason. On the belief of all nations in the existence of hell cf. Lücken, "Die Traditionen des Menschengeschlechts" (2nd ed., Münster, 1889); Knabenbauer, "Das Zeugniss des Menschengeschlechts für die Unsterblichkeit der Seele" (1878). The few men who, despite the morally universal conviction of the human race, deny the existence of hell, are mostly atheists and Epicureans. But if the view of such men in the fundamental question of our being could be the true one, apostasy would be the way to light, truth, and wisdom.

III. Eternity of Hell.—Many admit the existence of hell, but deny the eternity of its punishment. Conditionalists hold only a hypothetical immortality of the soul, and assert that after undergoing a certain amount of punishment, the souls of the wicked will be annihilated. Among the Gnostics the Valentinians held this doctrine, and later on also Arnobius, the Socinians, many Protestantism both in our own times, especially of late (Edw. White, "Life in Christ," New York, 1877). The Universalists teach that in the end all the damned, at least all human souls, will attain beatitude (ἀνατελλόμενος τὸν πνεύμα, restitutio omnium, according to Origen). This was a tenet of the Aristotelian School, and whom St. Augustine speaks (De Civ. Dei, XXXI, xviii, n. 1, in P. L., XLI, 732). There were individual adherents of this opinion in every century, e. g. Scotus Erigena; in particular, many rationalistic Protestants of the last centuries defended this belief, e. g. in England, Fairhar, "Essays," published in Westminster Abbey, London and New York, 1878). Among Catholics, Hirscher and Schell have recently expressed the opinion that those who do not die in the state of grace can still be converted after death if they are not too wicked and impenitent.

Holy Writ is quite explicit in teaching the eternity of the pains of hell. The torment of the damned shall last forever and ever (Apoc., xiv, 11; xix, 3; xx, 10). They are everlasting just as are the joys of heaven (Matt., xxxv, 46). Of Judas Christ says: "it were better for him, if that man had not been born" (Matt., xxvi, 24). But this would not be true if Judas were ever to be released from hell and to attain eternal happiness. Again, God says of the damned: "Their worm shall not die, and their fire shall not be quenched" (Is., lxvi, 24; Mark, ix, 43, 45, 47). The fire of hell is repeatedly called eternal and unquench-
able. The wrath of God abideth on the damned (John, iii, 36); they are vessels of Divine wrath (Rom., ix, 21); they do not possess the Kingdom of God (1 Cor., xi, 10; Gal., v, 21), etc. The objections against this doctrine are so many as to be not worth while discussing in detail. The teaching of the Fathers is not less clear and decisive (cf. Petavius, "De Angelis", III, viii). We need only to mind the testimony of the martyrs who saw them suffering in brief duration in order to escape eternal torments; e. g. "Martyrium Polycarpi", c. ii (cf. Atabaker, "Geschichte", II, 612 sqq.). It is true that Origen fell into error on this point; but precisely for this error he was condemned by the Church (Canones adv. Carni librum i. greg. gen.). See also Hardouin, III, 379 E; Denz., n. 211). In vain attempts were made to undermine the authority of these canons (cf. Dieckamp, "Die originistischen Streitigkeiten", Münster, 1899, 137). Besides, even in Origen we find the orthodox teaching on the eternity of the pains of hell; for in his works the faithful Christian with the true faith again victorious over the doubting philosopher. Gregory of Nyssa seems to have favoured the errors of Origen; many, however, believe that his statements can be shown to be in harmony with Catholic doctrine. But the suspicions that have been cast on some passages of Gregory of Nasianza are not unfounded; see Pech, "Theologische Zeitfragen", 2nd series, 190 sqq.). The Church professes her faith in the eternity of the pains of hell in clear terms in the Athanasian Creed (Denz., nn. 211, 410, 429, 807, 835, 916), and in countless passages of her liturgy: she never prays for the damned. Hence, beyond the possibility of doubt, the Church expressly teaches the eternity of the pains of hell as a truth of faith which no one can deny or call in question without manifest heresy.

But what is the attitude of mere reason towards this doctrine? Just as God must appoint some fixed term for the time of trial, after which the just will enter into the secure possession of a happiness that can never again be lost in all eternity, so it is likewise appropriate that after the expiration of that term the wicked will be cut off from all hope of conversion and happiness for eternity, and that they prolong the appointed time of probation and to grant them again and again, without end, the power of deciding their lot for eternity. Any obligation to act in this manner would be unworthy of God, because it would make Him dependent on the caprice of human males, would rob His threats in great part of their efficacy, and would offer the slightest scope and the strongest incentives to human presumption. God has actually appointed the end of this present life, or the moment of death, as the term of man's probation. For in that moment there takes place in our life an essential and momentous change; from the state of union with the holy soul passes on to separation. No other sharply defined instant of our life is of like importance. Hence we must conclude that death is the end of our probation; for it is met that our trial should terminate at a moment of our existence so prominent and significant as to be easily perceived by every man. Accordingly, it is the belief of all people that eternal retribution is dealt out immediately after death. This conviction of mankind is an additional proof of our thesis.—Finally, the preservation of moral and social order would not be sufficiently provided for, if men knew that the time of trial were to be continued ad infinitum.

Many believe that reason cannot give any conclusive proof for the eternity of the pains of hell, but that it can merely show that this doctrine does not involve any contradiction. Since the Church has made no decision on this point, each one is entirely free to em-brace this opinion. As is apparent, the author of this article does not hold it. We admit that God might have extended the time of trial beyond death; however, He did not do so. nale of man's immortal soul. We also know what problems of moral order in this life. We may further admit that it is not intrinsically impossible for God to annihilate the sinner after some definite amount of punishment; but this would be less uniformity with the surrounding of the fallen state. And, secondly, we know of no fact that might give us any right to suppose God will act in such a manner.

The objection is made that there is no proportion between the brief moment of sin and an eternal punishment. But why not? We certainly admit a proportion between the degree of one's guilt and its eternal reward, not, it is true, a proportion of duration, but a proportion between the law and its appropriate sanction. Again, sin is an offence against the infinite authority of God, and the sinner is in some way aware of this, though not perfectly. Accordingly there is in sin an approximation to infinite malice which deserves an eternal punishment. Finally, it must be remembered that, although the act of sinning is brief, the guilt of sin remains forever; for in the next life the sinner never turns away from his sin by a sincere conversion. It is further objected that the sole object of punishment must be to reform the evil-doer. This is not quite true. Besides external punishment, there are also punishments for the satisfaction of justice. But justice demands that whoever departs from the right way in his search for happiness shall not find his happiness, but lose it. The eternity of the pains of hell responds to this demand of justice. And, besides, the fear of hell does really deter many from sin; and, thus, in as far as it is threatened by God, eternal punishment also serves for the reform of morals. But if God threatens man with the pains of hell, He must also carry out His threat if man does not heed it by avoiding sin. For solving other objections it should be noted: (1) God is not only infinitely good, He is infinitely wise, just, and holy. (2) No one is cast into hell unless he has fully and entirely deserved it. (3) The sinner perseveres forever in his evil disposition. (4) We must not consider the eternal punishment of hell as a series of separate or distinct terms of punishment, as if He Who pronounces a sentence is not speaking a new sentence and affixing new penalties, and as if He could never satisfy His desire for vengeance. Hell is, especially in the eyes of God, one and indivisible in its entirety; it is but one sentence and one penalty. We may represent to ourselves a punishment of indescribable intensity as in a certain sense the equivalent of an eternal punishment; this may help us to see better how God permits the sinner to fall into hell—how a man who sets at naught all Divine warnings, who fails to profit by all the patient forbearance God has shown him, and who in wanton disobedience is absolutely bent on rushing into eternal ruin, can be permitted by God's just indignation to fall into hell. In itself, it is no rejection of Catholic dogma to suppose that God might at times, by way of exception, liberate a soul from hell. Thus some argued from a false interpretation of 1 Peter, iii, 19 sq., that Christ freed several damned souls on the occasion of His descent into hell. Others were misled by untrustworthy stories into the belief that the prayers of Gregory the Great rescued the Emperor Trajan from hell. But now theologians are unanimous in teaching that such exceptions never take place and never have taken place, a teaching which should be accepted. If this be true, how can the Church pray in the Officiaries of the Mass for the dead: "Liberas animas eum fideli duxit et profundo lacu" etc.? Many think the Church uses these words to designate purgatory. They can be explained more
readily, however, if we take into consideration the peculiar spirit of the Church’s liturgy; sometimes she refers her prayers not to the time at which they are said, but to the time for which they are said. Thus the offertory in question is referred to the moment when the soul is about to leave the body, although it is actually said some time after that moment; and as if he were actually at the death-beds of the faithful, the priest leads the soul of God to present their souls to God. But whichever explanation be preferred, this much remains certain, that in saying that the offertory the Church intends to implore only those graces which the soul is still capable of receiving, namely, the grace of a happy death or the release from purgatory.

1. Once more on Divine Love.—The damned are accused in every act of their will is evil and inspired by hatred of God. This is the common teaching of theology; St. Thomas sets it forth in many passages. Nevertheless, some have held the opinion that, although the damned cannot perform any supernatural action, they are still able to perform, now and then, some naturally good deed; thus far the Church has not condemned this opinion. The author of this article maintains that the common teaching is the true one; for in hell the separation from the sanctifying power of Divine love is complete. Many assert that this inability to do good works is physical, and assign the cause of it to their being deprived of all grace, from the moment of doing so, they take the term grace in its widest meaning, i.e., every Divine co-operation both in natural and in supernatural good actions. The damned, then, can never choose between acting out of love of God and virtue, and acting out of hatred of God. Hatred is the only motive in their power; and they have no other choice than that of showing their hatred of God by one evil action in preference to another. The last and the real cause of their impotence is the state of sin which they freely chose as their portion on earth and in which they passed, unconverted, into the next life and into that state of permanence (status termini) by nature due to rational creatures, and to an unchangeable attitude of mind. Quite in consonance with their final state, God grants them only such cooperation as corresponds to the attitude which they freely chose as their own in this life. Hence the damned can but hate God, but cannot work evil, while they hate God, as and in purgatory, being inspired solely by love of God, can but do good. Therefore, too, the works of the reprobate, in as far as they are inspired by hatred of God, are not formal, but only material, sins, because they are performed without the liberty requisite for moral imputability. Formal sin the reprobate commits then only when he performs actions in his power, he deliberately chooses that which contains the greater malice. By such formal sins the damned do not incur any essential increase of punishment, because in that final state the very possibility and Divine permission of sin are in themselves a punishment; and moreover, the sanction of the moral law would be quite meaningless.

From what has been said it follows that the hatred which the lost soul bears to God is voluntary in its cause only; and the cause is the deliberate sin which it committed on earth and by which it merited reprobation. It is also obvious that God is not responsible for the reprobate’s material sins of hate, because by granting His co-operation in their sinful acts as well as by refusing them every incitement to good, He acts quite in accordance with the nature of their state. Therefore their sins are no more imputable to God than are the blasphemies of a man in the state of intellectual infancy, although they are not uttered without Divine assistance. The reprobate carries in himself the primary cause of impotence; it is the guilt of sin which he committed on earth and with which he passed into eternity. The proximate cause of impotence in hell is God’s refusal of every grace and every impulse for good. It would not be intrinsically impossible for God to move the damned to repentance; yet such a course would be out of keeping with the state of final reprobation. The opinion that the Divine refusal of all grace and of every incitement to good is the proximate cause of impotence, is upheld by many theologians, and in particular by Molina. Suárez considers it probable. Scotus and Vasconio held almost the same doctrine from the soul’s as from the physical power, but the difficulties in their way are so great that they can never be surmounted. The damned can never divert their attention from their frightful torments, and at the same time they know that all hope is lost to them. Hence despair and hatred of God, their just Judge, is almost inevitable, and even the slightest good impulse becomes morally impossible. The Church has not decided this question. The present author prefers Molina’s opinion.

But if the damned are impotent, how can Scripture (Wisdom, v) say they repent of their sin? They deplore with the utmost intensity the punishment, but they deplore it more intensely to this extent that the malice of sin itself (St. Thomas, Thes. comp., c. xxxv).

V. PEINA DAMNI.—The pena damni, or pain of loss, consists in the loss of the beatific vision and in so complete a separation of all the powers of the soul from God that it cannot find in Him even the least peace and rest. It is accompanied by the loss of all supernatural gifts, e.g., the loss of faith. The characters impressed by the sacraments alone remain to the greater confusion of the bearer. The pain of loss is not the mere absence of superior bliss, but it is also a most intense positive pain. The utter void of the soul made for the enjoyment of infinite truth and infinite goodness, the complete absence of the beatific vision. Their consciousness that God, of Whom they entirely depend, is their enemy forever is overwhelming. Their consciousness of having by their own deliberate folly forfeited the highest blessings for transitory and delusive pleasures humiliates and depresses them beyond measure. The desire for happier things inherent in nature becomes a bitter and no longer able to find any compensation for the loss of God in delusive pleasure, renders them utterly miserable. Moreover, they are well aware that God is infinitely happy, and hence their hatred and their impotent desire to injure Him fills them with intense bitterness, and the same is true more and more to their hatred of all the friends of God who enjoy the bliss of heaven. The pain of loss is the very core of eternal punishment. If the damned beheld God face to face, hell itself, notwithstanding its fire, would be a kind of heaven. Had they but some union with God, even if not precisely the union of the beatific vision, hell would no longer be hell, but a kind of purgatory. And yet the pain of loss is but the natural consequence of that aversion from God which lies in the nature of every mortal sin.

VI. PENSA SENSIB.—The pensa sensib, or pain of senses, consists in the state of suffering which the damned are mentioned in Holy Writ. According to the greater number of theologians the term fire denotes a material fire, and so a real fire. We hold to this teaching as absolutely true and correct. However, we must not forget two things: from Catharinus (d. 1553) to our times there have never been wanting theologians who
interpret the Scriptural term "fire" metaphorically, as denoting an incorporeal fire; and, secondly, thus far the Church has not censured their opinion. Some few of the Fathers also touch the metaphorical explanation. Nevertheless, Scripture and tradition speak again and again of the fire of hell, and there is no sufficient reason for taking the term as a mere metaphor. It is urged: How can a material fire torment demons, or human souls before the resurrection of the body? But, if our souls are so joined to the body as to be keenly sensitive to the pain of fire, why should the omnipotent God be unable to bind even pure spirits to some material substance in such a manner that they may suffer a torment more or less similar to the pain of fire which the soul can feel on earth? This reply indicates, as far as possible, how we may form an idea of the nature of the pain of the damned in an eternal hell. The damned may be compared to trees without water and sunshine, in a manner that whatever seeks forbidden pleasure should find pain in return. (Cf. Heuse, "Das Feuer der Hölle" in "Katholik", II, 1878, 225 sqq., 337 sqq., 486 sqq., 581 sqq.; "Etudes religieuses", L, 1890, II, 306; report of an answer of the Penitentiary, 30 April, 1890; Krabbenbauer, "In Matth., xxv, 41").

VII. ACCIDENTAL PAINS OF THE DAMNED.—According to theologists, the pain of loss and the pain of sense constitute the very essence of hell, the former being by far the most dreadful part of eternal punishment. But the damned also suffer various accidental pains. (1) Those sufferings which, according to Schüssel, heaven are free from all pain, so, on the other hand, the damned never experience even the least real pleasure. In hell separation from the blissful influence of Divine love has reached its consummation. (2) The reprobate must live in the midst of the damned; and their outward horrid forms, if apprehended as they are, will be too horrible for those who were never to the slightest degree affected by Divine goodness, a more restless craving to satisfy the natural desire for beatitude with things external to God, a more acute sense of shame and confusion at the folly of having sought happiness in earthly enjoyment—all this implies as its correlatives a more complete and more painful separation from God. (3) The pains of hell are essentially immutable; there are no temporary intermissions or passing alleviations. A few Fathers and theologians, in particular the poet Prudentius, expressed the opinion that on stated days God grants the damned a certain respite, and that besides this the prayers of the faithful obtain for them other occasional intervals of rest. The Church has not censured this opinion in express terms. But now theologians are justly unanimous in rejecting it. St. Thomas condemns it severely (In IV Sent., dist. xiv, q. xxii, 1). [Cf. Morl., "Die Sabbatruhe in der Hölle" in "Römische Quartalschrift" (1889), 489 sqq.; see also Prudentius.] Nevertheless, accidental changes in the pains of hell are not excluded. Thus it may be that the reprobate are sometimes more and sometimes less tormented by his surroundings. Especially after the last judgment there will be an accidental increase of punishment; for then the demons will never again be permitted to leave the confines of hell, but will be finally imprisoned (for all eternity), and the reprobate souls of men will be tormented by union with their hideous bodies. (3) Hell is a state of the greatest and most complete misfortune, as is evident from all that has been said. The damned have no joy whatever, and it were better for them if they had not been born (Matt., xxvi, 24). Not long ago Mivrat (The Nineteenth Century, 1892, Feb. and Apr., 1893) advocated the opinion that the pains of the damned would decrease with time and that in the end their lot would not be so extremely sad; that they would finally reach a certain kind of happiness and would prefer existence to annihilation. But it would be far more beneficial if they suffer a punishment symbolically described as a fire by Holy Writ, yet they would hate God no longer, and the most unfortunate among them be happier than many a pauper in this life. It is quite obvious that all this is in accordance with Scripture and the teaching of the Church. The articles cited were condemned by the Congregation of the Index and the Holy Office on 1st and 19 July, 1893 (cf. "Civilità Cattolica", I, 1893, 672).

JOSEPH HONTHEIM.

Hell (HÖLL), MAXIMILIAN, astronomer, b. at Schemnitz in Hungary, 15 May, 1720; d. at Vienna, 14 April, 1792. He entered the Society of Jesus at Trenschen, 18 Oct., 1738, and after his novitiate was sent to Vienna, where he made his philosophical studies. From his early years he had shown a strong inclination for scientific pursuits, and in 1744 he devoted himself to the study of mathematics and astronomy, acting at the same time as assistant to Father Joseph Franz, the director of the observatory at Vienna. After teaching with much success for a year at Leutschau, he returned to Vienna to study theology, and in 1751 was ordained priest. He received a professorship of mathematics at Kremsmünster in 1752 and remained there until 1755, when he was appointed director of the Imperial observatory at Vienna.

Father Hell's most important work was perhaps the annual publication of the "Ephemerides astronomicae"
ad meridianum Vindobonensem", which he began in 1757 and continued for many years. These contain a large number of valuable observations and data. He was invited by the King of Denmark to undertake at Copenhagen the observations of the transit of Venus of 1769. The transit observations were successful, and after spending some months at Copenhagen preparing his results for the press, he returned to Vienna in 1770. Owing to delays in publication Hell was afterwards suspected of manipulating his data to make them fit with others taken elsewhere. The suspicion was strengthened by his subsequent failure, whereas director of the Vienna Observatory, after a study of the original manuscripts (cf. Hell's "Reise nach Wardz u. seine Beobachtung des Venus-Durchganges in Jahre 1769", Vienna, 1835). It was not until 1890 that Father Hell's reputation was cleared of the stain of forgery by Prof. Simon Newcomb, who made a critical study of the journal in question and showed conclusively that Littrow's inferences were entirely at fault. The latter, it appears, had originally been led into error by a defect in his sense of colour. Father Hell was of a gentle disposition and simple in his tastes. His devotion to the church led him to often cost himself his persecution. Besides the "Ephemerides", he was also the author of "Elementa algebra Joannis Crivelli magis illustrata" (Vienna, 1745); "Adjumentum mensuris manuale chronologico-genealogico-historicum" (Vienna, 1750); "De la celebración de la Páque" (ibid., 1753); "De la nacimiento de los emperadores de Italia" (ibid., 1763); "De satellite Veneris" (ibid., 1765); "De Transitu Veneris" (Copenhagen, 1770), etc.

Helmold, historian, b. in the first half of the twelfth century; d. about 1177. He was a native of, or at least he grew up in, Holstein (Germany), and received his instruction in Brunswick from Gerold, the future Bishop of Oldenburg. Later he came under the direction of the saintly Vieclinus, the Apostle of the Wends, first in the Augustinian monastery of Falder, afterwards known as Neumünster. He finally became a parish-priest at Bosow on Plöne See. He wrote, at Gerold's suggestion, a chronicle of the Wends ("Chronicon" or "Annales Slavorum") in Latin. The purpose of this chronicle was to demonstrate how Christianity and German nationality gradually succeeded in gaining a footing among the Wends, especially in the eastern portion of Holstein. As an eyewitness he gives a clear description in fluent Latin of Vieclinus's self-sacrificing missionary labours, of the founding of the bishopric in Oldenburg, of the transfer of this bishopric to Lübeck when German commerce at the latter place had become more important than in the former city, of the spread of German influence among the Wends, of the merciless subjugation and extermination of these, and of the subjugating to their lands of foreign settlers, above all Westphalians, principal Westphalians, principal German settlers. The work is divided into two parts: the first covers a period closing with the year 1168, while the second continues to the year 1171. This second part, however, was written subsequently to 1172. He drew his knowledge of the earliest period from the church history of Adam of Bremen, and the Saxo-Carol. records bearing on Henry IV, besides the life of Willehadus, the list of Angarius, and perhaps also a life of Vieclinus, but the summaries which he made of these records are unreliable. He is, however, our most important source of information for the history of his own period, and his account of which rests on his verbal information of Vieclinus and of Gerold. His fund of information becomes noticeably meagre after the latter's death in 1163. His trustworthiness has been very seriously questioned in recent times (see particularly Schirren, "Beiträge zur Kritik holsteinischer Geschichtsquellen", Leipzig, 1876) owing to his antagonism towards the archbishops of Bremen and his partiality for the Mecklenburg-Lübeck, but his observations of Venus are by no means insufficient to enable oneself to conclude that he was guilty of an intentional falsification of facts [cf. with Schirren's observations and conclusions Wigger, "Ueber die neueste Kritik des Helmold" in "Jahrbücher des Vereins für Mecklenburgische Geschichte" XLII (1877), 21-63]. The chronicle was first published in 1556 at Tournai on the "Main," and was subsequently published in "Mon. Gesch. Hist. Scipia", XXI (1868), 11-99, and in "Scriptur. germ."

WATTENBACH, "Deutschlands Geschichtsquellen", II (1894), 335-41; POTTHART, "Bibliotheca historica", I (1896), 576.

PATRICK SCHLAGER.

Helmont, Jan Baptista van; b. at Brussels, 1577; d. near Vilvorde, 30 December, 1644. This scientist, distinguished in the early annals of chemistry, belonged to a good Flemish family. He was brought up by his uncle, and studied humanities at Louvain, but refused to take his degree at Master of Arts. He was therefore taught the theory that it was a source of pride. The Jesuit order attracted him, but he did not enter it. He investigated the Stoic school of philosophy, and, to practise the evangelical counsel of poverty, he conveyed all his property to his sister. Urged on by a desire to relieve his countrymen suffering, he became a physician. He was appointed to the chair of surgery at Louvain. The course of his studies was interfered with by a sickness, scabies, which afflicted him. The Galenists treated him with purgatives, not recognizing that it was a parasitical disease. This disgusted him with the Galenists; and he began to travel through England, France, Switzerland, and Italy, for the purpose of investigating the practice of medicine in these different countries. Eventually he was healed by an Italian charlatan, who used sulphur and mercury. He practised as a physician and, instead of using plants, prepared his medicines in the laboratory of the day, in which the furnace, crucible, and retort were most largely employed; this made him known as the medicus per ignem. He departed somewhat from the counsel of poverty by marrying Margaret van Ranst, an heiress of Brabant, and settled down at Vilvorde. He had now acquired a wide reputation in medicine, and had received his doctor's degree at Louvain early as 1590. Yet he failed in the treatment of his own family; and, in spite of his remedies, death carried off one of its members when attacked by scabies, the very disease of which he had been cured. His celebrity was now very great, and it is said that he was suspected of diabolism. A fantastic element appears in his work, largely due to the age in which he lived; but his scientific work is of a high order of merit. He investigated gases, notably carbon dioxide, which he discovered in various sources, and it was he who first applied the name gas (gazat) to this family of substances. He applied the balance in his investigations. He discovered sulphurised water, which he called the system, made hydrochloric gas, which he called gas of salt, explained the explosion of gun-powder on the theory of the expansion of gases, discovered or investigated sulphuric acid, nitric acid, and nitrogen oxide. He was one of the first to recognise the rôle played by acid in the gastric juice, attributing disease to an excess of the same. Like all other chemists of the time, he studied the transmutation of metals, naming his son Mercury, believing that he had succeeded in getting gold from mercury. His various books were published from 1622 to 1652. In 1648 a collection of his works was published posthumously under the auspices of his son.

POULIER E' HELMONT, "Memoire sur van Helmont et ses disciples" (Brussels, 1847); ROMMELAERE, "Etudes sur Helmont" (Brussels, 1888).

T. O'CONNOR SIOANE.
 Helpers of the Holy Souls, Society of the (Auxiliares des Âmes du Purgatoire), a religious order of women founded in Paris, France, 1856, with the object of assisting the Holy Souls, by Eugénie Smet (in religion, Marie de la Providence), b. at Lille, 23 Dec. 1821, at the convent of the Sacred Heart, at Lille, she distinguished herself by intellectual acquirements and striking traits of devotion to the Holy Souls. She went to Paris on 19 Jan., 1856; the society dates its foundation from that day. On 22 Jan. Eugénie obtained the dispensation of Archbishop Lavigerie, to establish her order in Paris. The community Mademoiselle Smet had gathered round her took possession of No. 10, Rue de la Barouillère, on 1 July, 1856. This is still the mother-house of the order. On 27 Dec., 1857, the foundress, with five of her first companions, pronounced her first vows; a Jesuit was appointed chaplain, and the Rule of St. Ignatius was adopted. Besides the three usual vows, they take a fourth obligation to "pray, suffer, and labour for the souls in purgatory", offering up the satisfactory part of all their works of mercy, their vows and prayers, as well as indulgences applicable to themselves. They form two orders of religious, the choir nuns, and the lay sisters; both make the same vows, follow the same rule, and enjoy the same privileges. The subjects admitted to the first probation have a postulate of three months, followed by a two-year novitiate; the sisters then make their first profession and receive a crucifix, which they wear on their breast. After another year's probation (about ten years after their first vows), they can be admitted to perpetual vows, with the usual ecclesiastical approbation. On that day each professed religious receives a ring, a token of her eternal alliance with Jesus Christ.

On entering the novitiate their family name is replaced by a name in religion. The society is governed by a reverend mother general, who is aided by a council of at least four assistants. Each separate convent has a local superior. To facilitate their works of mercy among the poor, the Helpers adopt a simple black costume. Their principal work of mercy is the visiting and care of the sick poor. During the time which is not occupied by their spiritual exercises, they go to the homes of the poor afflicted by sickness; and bring them every relief and consolation religious devotedness can devise; rendering them the humblest services in their sickness. They undertake, according to the requirements of the places in which they are settled, numerous other works of seal and charity, such as the religious instruction of children and adults, guilds for women and girls of the working classes, mothers' meetings, meetings for governnesses and business employes, free circulating libraries, catechism classes, etc. All these works are gratuitous, the rule of the order forbidding compensation for services rendered.

Soon after their institution, they adopted "honorary members", "associates", and "benefactors", who entered into a union of prayer and sacrifice with the Helpers in the form of the Fratelli della Madonna of the society. Priests can become honorary members by promising to offer up the Holy Sacrifice once a month for the prescribed intentions; and religious, by offering up a monthly Communion for the same intention.

In 1859 Pius IX blessed the Confraternity of Lady Associates and granted it a special indulgence; on 9 June, 1873, he granted the society the Lauda or first Brief of approbation, and on 25 June, 1878, the constitutions of the order were approved by Leo XIII. The first branch house was established at Nantes, July, 1864. In 1867 six novitiates of young women were conducted by Bishop Langlalat to Shanghai; the works then were the superintendence of a congregation of Chinese Catholic maidens and widows; the preparation of converts for reception into the Church; the direction of a native orphanage and of European schools for the wealthier classes. The Chinese congregation, now known as Présentandines, are trained by the Helpers. They visit the sick, baptize abandoned children, and educate the Chinese at the Helpers' houses. In Shanghai has a high school for the Chinese, under the name of "L'Etoile du Matin". In December, 1869, a house was established in Brussels. The Helpers did good work in the ambulances for the wounded of both nations during the Franco-Prussian War.

In 1873 the Helpers were installed in the Archdiocese of Westminster, at 23 Queen Anne Street, Cavendish Square. They removed to Gloucester Road, Regent's Park, in 1882. From 1874 to 1880 communities were established at Cannes, Orléans, Troucoing, and Montmartre. In the last twenty-five years convents have arisen at Rome, Turin, Florence, and San Remo; in Belgium at Brussels, Liége, Ghent, and Namur. There is a house in Vienna, one in Switzerland, and one at San Sebastian in Spain. There is a novitiate at Versailles; another at Beaulieu, Jersey. The Helpers are also at Lourdes, at Blanchelande in England, and at Edinburgh, Scotland. When it was decided to erect a community house on the site of the fire of the charity bazaar in the Rue Jean Goujon, Paris (4 May, 1897), Cardinal Richard selected the Helpers as the guardians of this sanctuary. This foundation is named Notre-Dame de la Consolation.

In May, 1892, seven Helpers sailed for New York, and were heartily received by Archbishop Corrigan. The first convent was a very small house in Seventh Avenue; there they laboured for nearly three years, when they removed to 114 East 86th Street. In 1900, they had five houses in the same neighbourhood. Children from the public schools come to the convents for religious instruction. The girls have sewing classes three times a week, and are allowed to take home the garments they have made. Often Protestants and Jewesses ask permission to join. Some idea of this work may be obtained when it is considered that over thirty-seven thousand general instructions were given to the classes during 1905. In the winter months a number of entertainments are held for the older women as well as for the young girls and boys, and during 1905 a course of lectures on hygiene and first aid to the injured was given. In 1903, some Helpers were sent to St. Louis, Missouri. The Confraternity has a beautiful convent in Washington Boulevard. In 1905, the Sisters went to San Francisco, where they settled in a house in Howard Street, which was destroyed in the earthquake of 1906, when they found ample scope for their zeal in the exercise of their double vocation, ministering to the sick and dying, while praying unceasingly for those who had perished. They have now a new convent in Golden Gate Avenue.

Helpdiius, Paulius Rusticius, the name of several Latin writers. It appears in the manuscript of Pompianus Mela and Julius Paris as the signature of a friend of Ennolius Helpidius. Julius Paris is an abbreviation of Valerius Maximus, and lived at the end of the fourth century or the beginning of the fifth. On the other hand a correspondent of Sidonius calls himself Domnulus (Epist., IV. 25; cf. IX. 13) and wrote poetry during a stay at Aries under Majorian (457-461). Sidonius' signatures of certain manuscripts he appears as "consul of the con-
sistory"; Sidonius calls him an ex-questor, i.e. the rank superior to that of consul of the conistory. There is, however, no reason for distinguishing the author of the signatures from the Dominulus of Sidonius. On the other hand the dean Helpidius (d. about 500), friend of Ennolius Helpidius and another friend of the Ostrogoths, is unquestionably another person. Under the name of Helpdiius, the "former questor".

This is a sample response from an AI model reading and understanding the given text. The text is about the Helpers of the Holy Souls, a religious order of women founded in Paris, France, in 1856, and their activities, such as visiting the sick, educating children, and establishing convents in various locations. The text also mentions the existence of the Helpers in the United States and their work in New York. The text concludes with a note about the Latin writer Helpdiius, also known as Paulius Rusticius, and mentions the confusion in attributing works to him. The response is structured to provide a clear understanding of the text's content.
we have twenty-four strophes of three hexameters each, on scenes from the Old and New Testaments. Sixteen of these scenes correspond to one another, e.g. as type and fulfilment. These verses were probably intended as texts for the decoration of a church. Under the title of "Rusticii Epiphani carmen de Christo beneficia" a short poem of one hundred and forty hexameters celebrates the miracles of Christ. Its opening prayer is addressed to Christ as Creator and intimately united with the Father. A very mystical tone dominates these verses. The best edition is that of W. Brandes in a monogramme of the Brothers of the Blessed Virgin (1864). For the apocryphal tristichs there are only as yet the ancient editions in P. L., LXI, 545.

HÉLOYT, Pierre, usually known as Hippolyte, his name in religion, b. at Paris, in 1660; d. there 5 January, 1716. He came of noble family, and at twenty-three took the habit of the Third Order of St. Francis, in a monastery (Picpus) founded by his uncle, Jerome Héloyt. The lengthy journeys which he made all over Europe afforded him opportunity to collect material for his great work on the religious orders, to the composition of which he had already devoted much time. The first four volumes appeared after a five-yeartime of preparation; but the fifth, while the fifth was still in press. The work was completed by his fellow religious, Maximilian Bullot, and treats of the history of religious and knightly orders, and of congregations of both sexes, down to his own time, and exhibits more particularly their origin, growth, deterioration, suppression, or dissolution, various offshoots and reforms; he added also the lives of the chief founders, and illustrations of different monastic habits. The work appeared at Paris in 1714-1719, and comprised eight quarto volumes entitled: "Histoire des ordres monastiques, religieux et militaires, et des congrégations séculières de l'un et de l'autre sexe, qui ont été établis jusqu'à présent ..." Being written on scientific principles, though not always with critical insight, it was very favourably received, and achieved a wide circulation. The French edition was reprinted three times (1721, 1729, and 1733). It was followed by Fontana's appearance (Leipzig, 1751), a German one in eight quarto volumes at Leipzig in 1753, and another at Frankfurt-on-the-Main in 1830. Héloyt's work was made the basis of an alphabetical dictionary of religious orders, "Dictionnaire des ordres religieux, ou histoire des confréries," prepared by M. L. Badiche, which appeared in Migne's "Encyclopédie Théologique" (Paris, 1858) xx-xxiv.

HEMERFORD, Thomas. See Hatdock, George.

HEMEN, Thomas. See Hatdock, George.

HEMMERLI (Malleolus), properly HEMERLI, Felix, professed at Solothurn, in Switzerland, b. at Zurich, in 1588 or 1589; d. about 1640. He was educated at the school of the collegiate church of his native town, and afterwards entered the University of Erfurt, whence in 1408 he betook himself to the University of Bologna, where he studied law for four years. At the beginning of 1412 he became a canon of the cathedral church of Brixen and Riva, and later at Zurich. A little later a similar dignity was conferred upon him from the church of St. Mauritius, in Zofingen. In 1413 we find him once more at the University of Erfurt, where he won the degree of Bachelor of Canon Law. Soon after this he took part in the Council of Constance. He identified himself with the Church Reform party; the principles of which were thenceforth to govern his religious activ-

ities and his attitude in matters of ecclesiastical policy. He became, in 1421, provost (præpositus) of the collegiate church of St. Ursus at Solothurn. As such he undertook to reform the collegiate clergy, drew up new regulations bearing on Divine service, on the ecclesiastical duties and the life of choir-members, and even defended energetically the right of the collegiate church against the municipal authorities. Two years later he returned to the University of Bologna, from which he obtained in the year which followed the degrees of Licentiate and Doctor of Canon Law. His doctorate certificate is still in existence and is preserved in the university at Zurich. It is the most ancient doctorate diploma known to exist to-day in the original. His learning covered a very wide field. Besides his legal studies he had taken up ancient languages and knew Greek and Hebrew. On his return to Solothurn he devoted himself to theology, and was ordained a priest in 1430. He had great hopes of the Council of Basle, and took part in the deliberations which preceded the general sessions of the council, as well as in the debates with the Hussites. He also espoused at the outset the cause of the antipope Felix against Eugene IV. But the subsequent course of events soon dissatisfied him, and he became dissatisfied with the ecclesiastical conditions of his day. Meanwhile he reformed the clergy of the collegiate church of Zofingen. In January, 1439, he undertook the reform of the collegiate clergy of Zurich, where as early as 1426 he had become canon. But here he met strenuous opposition. After he had written a violent pamphlet against the mode of living in this community, several members of the choir formed a plot against him, and he was seriously wounded. He recovered, however, and renewed his attacks against ecclesiastical abuses.

Hemmerlin composed more than thirty polemical treatises on various subjects, the chief of which were directed against the mendicant friars, the Beguines, and even against Nicholas of Cusa (q. v.), against the cardinals, the Roman Curia, and even the pope. In politics, too, he sided earnestly with his native city, Zurich, allied with Austria against the Swiss confederates. He attacked the Swis most violently in his work entitled: "De nobilitate et rusticitate" (completed in 1450). In this way he made numerous enemies, who sought a favourable opportunity to avenge themselves. In 1456 a popular celebration in honour of the reconciliation of the inhabitants of Zurich with the preegoverad Zurich under the occasion of a popular outcry against Hemmerlin. He was seized in his own house, delivered to the Vicar-general of Constance, and was condemned by the episcopal court in that place to the loss of his canonicate at Zurich and to lifelong confinement. He was taken to Lucerne and underwent a month's imprisonment in the Franciscan monastery of that place. Numerous writings employed his time at Lucerne, and eventually he exchanged his provostship at Solothurn for the parish of Penthas in the Diocese of Lausanne. Only a portion of his works have been printed. An edition appeared at Basle (s. d.) prepared by Sebastian Brant, and another at the same place in 1497. There is not the slightest justification for the attempt to present Hemmerlin as a forerunner of the Protestant Reformation.

In modern publications the horizontal pendulum is mostly accredited to Zollner (1869), sometimes to Perrot (1862), but illustrated articles with observations in the "Analecta" of Gruthuisen, vol. I, and in Dingler's "Polytechnical Journal", 1852, secure for the swinging the indisputable priority. The inscription: "L. Zollner, Göttingen, 1848," probably described the pendulum and its history may be found in Zollner's "Abhandlungen", vol. IV, and also in Poggendorf's "Annals", vol. CL.

F. L. Odenbach.

Hennepin, Louis, one of the most famous explorers in the wilds of North America during the seventeenth century, b. at Ath, province of Hainaut, Belgium, about thirty miles south-west of Brussels, in or about the year 1640; d. probably at Rome, soon after 1701. In his writings he always refers to himself as a Fleming. Very little is known of his childhood and early manhood, but, after a proper course of education, he entered upon a novitiate in the Recollect branch of the Franciscan Order, whose members adopted the most austere regimen and undertook most arduous labours (see Frairs Minor, Order of). He passed his novitiate at the Recollect monastery at Béthune, province of Artois (now the department of Pas-de-Calais), France. During his youth he had been sent to Ghent in Belgium for the purpose of learning the Dutch language, and, at that time, had mentioned to one of his sisters residing there the strong inclination which he had always felt to travel about the world. His sister attempted to dissuade him from such a design, but Hennepin continued under the sway of two impulses, of which the one is described in his own language thus: "I always found in myself a strong inclination to retire from the world and to regulate my life according to the rules of pure and severe virtue, and, in compliance with this humour, I entered the Franciscan Order, designing to confine myself to an austere way of living."

Naturally enthusiastic for travel and deeply impressed by the examples of the missionaries of his own order, Hennepin soon had opportunities for realizing his ambition. Shortly after his ordination to the priesthood, Hennepin made a journey to Italy, and, in obedience to the orders of his superior, visited all the great churches and most important convents of the Franciscan Order both in that country and in Germany. In narrating the next ensuing events of his life, Hennepin states, "After my return from Italy to the Netherlands, the Reverend Father William Herinx, late Bishop of Ypres, manifested his averseness to the resolution I had taken of continuing to travel by detaining me in the convent of Halles in Hainaut, where I was obliged to perform the office of preacher for a year." After this experience, Hennepin, with the consent of his superior, went into Artois, France, and was thence sent to Calais, as he himself states, "to act the part of a mendicant there in time of herring-salting."

While at Calais he took every possible opportunity of hearing the stories of the various voyages and expeditions in other lands related by the sailors. To use his own language, he used oftentimes to frequent "virtuelling-houses to hear the seamen give an account of their adventures. The smoke of tobacco was offensive to me and creasted pain in my stomach, while I was thus intent upon giving ear to these relations, but far all that I was very attentive to the accounts they gave of their encounters by sea, the perils they had gone through, and all the incidents which befell them in their long voyages. This occupation was so agreeable that I have spent whole days and nights without eating; for thereby I always came to understand some new thing concerning the customs of the ways of living in remote places and concerning the pleasantness, fertility, and sights of the country where these men had been." Hennepin's desire to wander...
was gratified by journeys as a missionary to most of the various towns of Holland. At Maastricht he remained for 'eight consecutive months during the year 1673, and was in the midst of the war then in progress between the French and the Spanish. He states: *During the eighth month I administered the sacraments to over three thousand wounded men. In which occupation I ventured many dangers among the sick people, being taken ill both of a spotted fever and a dysentery which brought me very low and near unto death; but God at length restored me my former health and strength to care and help of a very skilful Dutch physician.'

The young monk continued his career amid scenes of battle for some time and, during the succeeding year, was present at the battle of Seneffe (1674), where he busied himself in administering comfort to the wounded. He then received orders from his superiors to go to Rochelle, France, in order to embark there and go to Canada as a missionary. While waiting for the sailing of the ship upon which his voyage was to be made, Hennepin performed at a place near Rochelle the duties of a curate for nearly two months at the request of the local pastor, who had occasion to be absent and for whom the priest was put in charge. At the end of the year 1675, Hennepin was destined to realize his fondest hopes, because he then set sail, 14 July, for the New World, leaving France as a member of an expedition approved by Colbert and placed by "Le Grand Monarque", Louis XIV, under the leadership of that famous cavalier, René Robert, Sieur de La Salle, who had been recently endowed with a title and had been appointed to the governorship of Fort Frontenac, one of the principal outposts of "La Nouvelle France", as the French dominions in America were then called. The ship arrived at Quebec in September, having successfully withstood attacks by Turkish, Tumacaz, and Algerian pirates. The first experience of the young missionary was to serve during the first four years of his life in Canada as a preacher in Advent and Lent in the cloister of St. Augustine in the hospital at Quebec, in addition to performing the usual duties of the monastic life. This appointment as preacher was due to the favour acquired by Hennepin, during his voyage, in the opinion of François de Laval de Montmorency, newly appointed Bishop of Quebec, who had been a passenger upon the ship which brought Hennepin to New France.

During his period of residence at Quebec, Hennepin encountered time with great industry in traveling to regions within twenty or thirty leagues of that city—often on snow-shoes, his luggage being transported upon sledges drawn by dogs, sometimes traveling in a canoe—always with a view to learning the languages and customs of the Indians so as to prepare himself for missionary labours among the savages of the North American Continent. He was an acute observer, and his books contain most minute and accurate descriptions of the characteristics, arts, and customs of the Indians. Hennepin's first independent labours in America began when he was sent in company with Father Lake, in the fall of 1672, to a place on the north shore of Lake Ontario near the head-waters of the River St. Lawrence. The mission station had borne the Iroquois name, Catarasauy, and was the place at which Count Frontenac, Governor-General of Canada, had built in 1673 a fort which subsequently bore his name. This site is now occupied by the city of Kingston, and since the building of the fort, it has remained two years and a half at Fort Frontenac, where they built with their associates a large mission-house and laboured assiduously for the conversion of the natives, the two missionaries went down the River St. Lawrence in a canoe. Upon reaching Quebec, Hennepin performed the Religious duties of his order, in order, as he states, to prepare and sanctify himself for the long expedition to the westward under the leadership of La Salle which was then in process of preparation. On 18 November, 1678, La Salle inaugurated his expedition by sending forward from Fort Frontenac in a brigantine of about ten tons burden a detachment of his followers under the command of Simon de St-Pé to the headwaters of the Lake Erie, and to make preparations for the building of a ship for the navigation of the Great Lakes. This detachment arrived at the River Niagara on 6 December after encountering great perils. On 4 January, 1679, La Salle arrived at the same place and took command. During the winter Hennepin went to Fort Frontenac, but returned to the Niagara outpost shortly before 30 July, 1679, accompanied by two other Récollet Fathers, Gabriel de la Ribourde and Zénobe Mambré, who, in common with Hennepin, had been directed by the superior of their order to accompany the expedition of the Chevalier de la Salle. Meanwhile La Motte had disconnected himself entirely from the expedition and returned to Fort Frontenac.

On 7 August, 1679, the famous expedition sailed from the Niagara River on a ship which had been built at La Salle's order and was named for the present site of Green Bay, in honour of a griffin being one of the figures on the coat of arms of La Salle. The mouth of the Detroit River was reached on 10 August, and received from La Salle the name which it has since borne. Sailing up this river and through Lake St. Clair, named by the same explorer after the saint on whose feast-day it first held it, they passed through the St. Clair River and up Lake Huron, and late in the same month arrived at a place, called by the Indians Michilimackinac, and christened by the famous Marquette with the more religious name, St.-Ignace. Leaving this place on 2 September, the expedition soon reached Green Bay, made a short stop there, and departed for the south on 19 September. Storms prevailed and great dangers were encountered, but on 1 November La Salle and his followers reached the mouth of a river, then called the River of the Miami and now named the River St. Joseph, the greater part of which lies within the present State of Michigan. At the mouth of this river La Salle built a fort, and on 20 November his principal lieutenant, an Italian named Enrico di Tonti, arrived with certain members of the expedition who had come along the eastern shore of Lake Michigan, while La Salle, Hennepin, and the rest followed the western shore. The expedition then passed through the mouth of the Kankakee river, and went down that river to the stream called by Hennepin "the River of the Illinois" and still called the Illinois River. Down this stream the expedition travelled until they arrived during the latter days of December, at a village of the Illinois Indians, which lies, as Hennepin states, one hundred and thirty leagues from the fort built at the mouth of the River St. Joseph.

They continued their journey, a halt was soon made and a celebration held upon the feast of Epiphany on 1 January, 1680. Mass was celebrated and all wished a Happy New Year to M. de la Salle, the missionaries adding words of encouragement and congratulation to their leader and at the same time exhorting all the members of the expedition to preserve confidence and fidelity. On the same day the expedition passed through a lake which has since been named Lake Michigan, the lake of the same name having been reached after reaching the principal village of the Illinois Indians. The members of the La Salle expedition here smoked the calumet with the Indians and enjoyed a brief rest. A short distance below the outlet of the lake, a fort was constructed which La Salle called "the fort of the new settlement of St. Joseph," because of the desertion of our men, and the other difficulties we laboured under had almost broken our
hearts’. Other authorities, however, express the opinion that the name was given in compliment to Louis XIV, and in reference to his capture during the year 1692 of a fortress named Crève-cœur near Boursieduc in the Netherlands.

Leaving Tonti in command at the fort, La Salle departed for a journey on foot to Fort Frontenac and Quebec, having given directions to Hennepin to proceed down the Illinois River and then up the Mississippi River as far as possible upon a voyage of discovery. The members of this expedition were the intrepid Récollet and two Frenchmen—Antoine Augelle, born at Amiens, in Picardy, and surnamed Picard du Gay, and Michel Accault, a native of the province of Poitou. These three men started out from Fort Champaign on 29 January, 1680, soon after reaching the Mississippi River, and then turned northwards. On 12 April they were captured by a band of the Iesiati Sioux, living on or near the shores of a lake called by the original European explorers the ‘Lake of the Iesiati’ (afterwards called Lac Brule in honour of Count Frontenac, his family name being Brulé) and known by the Indians as the largest lake in the State of Minnesota. Hennepin’s captors were on their way to make war against the Miamis and the Illinois, but abandoned their design and turned back towards their homes carrying with them the three explorers. They travelled nineteen days, passing on 15 May, 1683. This lake was called the Lake of Tears because of the demonstrative grief manifested at a certain place upon its banks by an Indian chief mourning for his son who had been killed in battle. On 21 April they stopped at an Indian village situated about fifteen miles below the present site of the city of St. Paul, Minnesota. At this point they left their canoes and travelled on foot to the principal village of the Iesiati at or near the place where a river, called by Hennepin the River St. Francis and now known as Rum River, emerges from Mille Lacs.

Hennepin and his companions had then to undergo all the hardships which would naturally be the lot of civilized men thrown into close association with barbarians. Whenever the Indians moved about from place to place, according to their nomadic inclinations, they carried with them the Franciscan Father and the two companions. During their wanderings in the Iesiati country, the wanderers stopped at the great oyster bed in the Mississippi River which is now encircled by the city of Minneapolis, Minnesota, and which still bears the name of St. Anthony Falls, given to it by Hennepin in honour of St. Anthony of Padua. In July the Indians went down to the Lake St. Pierre, and, camping there a while, permitted Hennepin and Augelle to leave them for the purpose of going down the Mississippi River to get the supplies which La Salle had promised to send and deposit at the mouth of the Wisconsin River. After making a journey down the river of about one hundred and sixty miles, a large band of the Iesiati overtook them and carried them back to the great camp at Mille Lacs. While on the journey to that place, Hennepin and his savage companions met the famous French explorer, Daniel Greysolon Du Lhut, who had been roaming about the region to the west and southwest of Lake Superior. At the end of September, owing to the vigorous and determined insistence of Du Lhut, Hennepin and his companions were released by the Indians and accompanied Du Lhut and his followers down the Mississippi to the mouth of the Wisconsin, thence up the Wisconsin River to the famous portage between the headwaters of the Fox River and those of the Lake Pepin. At St. Ignace he was pleasantly interpersing with his missionary labours some recreation, Hennepin left St. Ignace during Easter week in the year 1681, and arrived safely at Fort Frontenac soon after. He then set out, and three days later he arrived at Montreal where he made a report to Count Frontenac, the Governor-General of New France, concerning his wanderings and experiences. At the request of the governor-general and as his guest, Hennepin proceeded to Quebec. On the way he discovered the Lake of the Holy Ghost, which is now known as the St. Lawrence River on a tour of episcopal visitation. The bishop was greatly interested in the thrilling narrative of Father Hennepin, and, knowing his need of rest, granted him permission to retire to the Franciscan monastery, ‘Our Lady of the Angels’, in the city of Quebec. Having passed the remainder of the summer within the cloisters of this institution, Hennepin sailed for Europe in the autumn of the same year, and for a year or more was sequestered in a monastery of his order at St. Germain-en-Laye, during which period he published his first book, entitled ‘Description de la Louisiane, nouvellement Découverte au Sud-Ouest du Canada, au bas de l’ordre du Roy. Avec la carte du Pays: Les Mœurs et la Manière de vivre des Sauvages. Dédité à Sa Majesté par le R.P. Louis Hennepin Missionnaire Récollet et Notaire Apostolique’. The book was printed at Paris, and was issued during the month of January in 1685. It was received with great interest, both in France and abroad, and is still of considerable interest, but is so faulty a work that it is absolutely useless for a geographical purpose. In the year 1697 Hennepin published at Utrecht another book, entitled “Nouvelle Découverte d’un très grand Pays, situé dans l’Amérique”. In this book Hennepin for the first time claims that he had only traversed the upper Mississippi River, and that he had traced the course of the stream to its outlet in the Gulf of Mexico. The ascription of the discovery of the headwaters of the river to Father Hennepin is erroneous, however, contrary to his own assertions. The book was entitled “Nouveau Voyage”. Almost simultaneously, English translations of the two last-named books appeared in London, and the authorship of “A new discovery of a vast country in America”. Both the “Nouvelle Découverte” and the “New Discovery” were dedicated to William the Third, King of England. At that time Hennepin had lost the favour of the French king and the archives of the French Government contain an order from Louis XIV directing the governor of New France to arrest the famous missionary and traveller in case of his appearance in America and to send him home.

Memorials of the expedition to the upper Mississippi exist in the names of certain places. The county in Minnesota wherein are situated the Falls of St. Anthony bears the name of Hennepin, and the name appears on the map of the State of Illinois designating a township close to the site of Fort Crève-cœur. The last years of Father Hennepin were in all probability passed at Rome, since a letter is in existence written from that city by a man named Dubois, which contains mention of the fact that the famous Récollet, then in his sixty-first or sixty-second year, was, at that time (1701), in a monastery in Rome and had hopes of returning soon afterwards to America under the protection of Cardinal Spada. The actual time and place of the death of Père Louis Hennepin are not
was meant to satisfy every one, to present a compromise that all could accept. This law was the famous Henoticon (fœdus, “union”). It was published in 489.

As an attempt at conciling what both parties most desired, the Henoticon is a very skilful piece of work. It begins by insisting on the faith defined at Nicaea, confirmed at Constantinople, followed faithfully by the Fathers at Ephesus. Nestorius and Eutyches are thoroughly condemned, the anathemas on the latter Christ is God and man, one, not two. His miracles and Passion are works of one (whether person or nature, is not said). Those who divide or confuse, or introduce a phantasy (i.e. affirm a mere appearance) are condemned. One of the Trinity was incarnate. This is written so as not to introduce a novelty, but satisfy every one. Who thinks otherwise, either now or formerly, either at Chalcedon or at any other synod, is anathematized, especially Nestorius, Eutyches, and all their followers. It will be noticed that the Henoticon carefully avoids speaking of nature or person, avoids the standard Catholic formula (one Christ in two natures), approves of Peter Fullo’s expression (one of the Trinity was incarnate), names only the first three councils with honour, and alludes vaguely but disrespectfully to Chalcedon. There is no word against Dioscorus of Alexandria. Otherwise it is neither rather by its omission than by its commission. It contains no actually heretical statement (the text is in Evagrius, “H. E.”, III, 14; Liberatus, “Breviarium, XVII”). Peter Mongus accepted it, explaining that it virtually condemned Chalcedon, and thereby secured his place as Patriarch of Alexandria. His rival, John Talai, was banished. Peter Fullo at Antioch accepted the new law too. But the strict Monophysites were not content, and separated themselves from Mongus, forming the sect called the Achehali (ἀχεχαλι, “without a head”—with no patriarch). Nor were Catholics satisfied with a document that avoided declaring the Faith on the point at issue and alluded in such a way to Chalcedon. The emperor succeeded in persuading Acacius (Akakios), Patriarch of Constantinople (471–89), to accept the Henoticon, a fact that is remarkable, since Acacius had stood out firmly for the Catholic Faith under Basiliscus. It is perhaps explained by his personal enmity against John Talai, whose rival, Papianus, had been the first great schism between Rome and Constantinople.

When Zeno (474–91) came to the throne the Monophysite trouble was at its height. The masses of the people of Egypt and Syria rejected the Council of Chalcedon (451) altogether, and found in Monophysism their great anti-imperial weapon. The three Patriarchates of Alexandria, Antioch, and Jerusalem were in schism. The Catholic Patriarch of Alexandria, Proterius, had been murdered in 457; a fanatical Monophysite, Timothy Aliturus (Alluros), had been elected as his successor. He died in 477; the heretics elected one Peter Mongus—the Zimmerer—to succeed him; the Catholics, John Talai, Peter Grapheus (Fullo), one of the most determined leaders of the heretical party, occupied the See of Antioch; Theoedoeius, also a Monophysite, that of Jerusalem. Over 500 bishops in these patriarchates were open partisans of Zeno’s emperor. Zeno found himself in a difficult position. On the one hand he was a friend of Peter Fullo of Antioch and sympathized with the Monophysites, on the other he was forced into the defence of the Catholic Faith by the fact that his rival Basiliscus (whom he succeeded in deposing) had made himself the champion of orthodoxy. Zeno found himself, in spite of his personal feeling, came to the throne as the champion of the Catholic party. At first he protected the Catholic bishops (John Talai, for instance). But he was anxious to conciliate his old friends in Egypt and Syria, and he realized how much harm this schism was doing to the empire. He therefore issued a law that
Henry de Saint-ignace, a Carmelite theologian, b. in 1590, at Ath in Hainaut, Belgium; in 1719 or 1720, near Liége. As a professor of moral theology he was noted for his learning, but still more for his Janesitic tendencies. He took part in all the controversies of his time on grace and free will, and, while professing himself a follower of St. Augustin and St. Thomas Aquinas, he favoured the errors of Baulis and Janesius. His long sojourn in Rome during the period of the Reform failed to save his dogmatic orthodoxy, but did not diminish his anti-pathy towards the Jesuits, whom he opposed vigorously all his life. He published "Theologia vetus fundamentalia," according to the mind of "the resolute doctor," J. Bacon (Liége, 1877); "Theologia sanctorum veterum et novissimorum," a defence of morality against the attacks of the modern casuists (Louvain, 1700). His chief work is entitled "Ethica amoris, or the theology of the saints (especially of St. Augustine and St. Thomas) on the doctrine of love and morality strenuously defended against the new opinions and thoroughly discussed in connexion with the principal controverted doctrines of our time" (3 vols., Liége, 1709). The first volume treats of human acts; the second, of laws, virtues, and the decalogue; the third, of the sacraments.

In the last volume the author makes frequent use of the "Tempestas novaturiensis" written by his fellow-religious, Alexandre de Sainte-Thérèse (1860), and adopts all the novel opinions then in vogue with regard to the administration of the Blessed Eucharist. The theologians pointed out the errors of this work, and it was forbidden by Rome by the decrees of 12 September, 1714, and 29 July, 1722. The Parlement of Paris also condemned it. The style is so venomous that the work would have been more accurately called "Ethica odii" (the morals of hatred). Instead of explaining the teaching of the Church, the author fills his book with all the disputes about the relaxation of public morality that were then disturbing men's minds. While not explicitly approving of the errors of Janesius, he favours them. He even praises the "Réflexions morales" of Quenel, which, it is true, had been condemned by the Parlement of Paris, and the Janesians were a party of the theologians of his own order (Mémoires de Trévoux, 1715, a. 100). In 1713, before the appearance of the Bull "Unigenitus," he published "Gratia per se efficacis seu augustiniano-thomisticas defensatio," which is a defence of Janesius. This provoked a vigorous reply from P. Meyer, N.J. (Brussels, 1715). Finally, we may mention the "De chuyênatores seu Spiritus sanctus in sacelarii populo" (Cologne, 1717), in which he defends himself against the accusation of Janesius, made by Meyer and other Jesuits. He left other writings against the Fathers of the same society, notably "Artes jesuiticae in succinimini parietacibus novitiatibus laxitatisque sociorum" (4th ed., Strasbourg, 1717), where doctrinal controversy is clearly replaced by venomous disquisitions against his opponents and their order.

Mémoires de Trévoux, 1713 and 1715; Feller, Biographie Universelle; Hébert, Nomenclator.

A. FOURNET.

Henri, Mathieu-Richard-Auguste, Baron, French magistrate, historian, and journalist; b. at Métis, 19 June, 1805; d. at Aix, September, 1862. After completing his studies, he was elected a member of the Paris Bar as avocat à la cour royale. Under the July Monarchy he was made assistant librarian at the Bibliothèque Mazarine; Napoleon III appointed him solicitor counsel to the court of appeals of La Guadeloupe, whence he was transferred to the same capacity to the court of Aix, a position which he occupied until his death. An untiring writer, he contributed for the greater part of his life to Catholic and royalist periodicals—first to the "Drapeau Blanc," then to the "Journal de l'Instruction Pubblique," and to others of lesser importance. Finally, in 1840, he assumed the editorship of "L'Ami de la Religion," which passed in 1844 under the control of Abbé Dupanloup. Besides his numerous articles in periodicals, Henrion wrote many books which breathe all the fervour of his Catholic and royalist convictions, and reveal close observation and extensive learning. They are, however, not sufficiently critical nor are they always remarkable for justice and impartiality, since the baron belonged to the generation of fiery French Ultra-tramontanes of the middle of the nineteenth century, and his judgments are too often biased by his religious and political affinities. His principal works are: "Histoire des ordres religieux" (Paris, 1831); "Tableau des congrégations religieuses formées en France depuis le XVIIe siècle" (Paris, 1831); "Histoire de la papauté" (Paris, 1832); "Histoire générale de l'Eglise pendant les XVIIIe et XIXe siècles" (Paris, 1836); "Histoire littéraire de la France au moyen-âge" (Paris, 1837); "Vie et travaux apostoliques de M. de Quellen, archevêque de Paris" (Paris, 1840); "Histoire générale de l'Eglise" (Paris, 1843); "Vie de M. Frayssinous" (Paris, 1844); "Vie du Père Loriquet" (Paris, 1845).

LAGRANGE, Vie de Mgr. Dupanloup (Paris, 1880); L'ami de la Religion, CLI, CVT, CXXX, 1864; "Les lettres de l'apostolat des sœurs de l'apostolat des sœurs de l'apostolat des sœurs de l'apostolat de l'Eglise" (Paris, 1862); Annales de philosophie chrétienne (March, 1861), III, 8, 185-82.

JOHN A. NAINF.

Henriques, CissóstoMo, a Cistercian religious of the Spanish Congregation; b. at Madrid, 1594; d. 23 December, 1632, at Louvain. At the age of thirteen, after having finished his humanities, he entered the Cistercian monastery of Escalona, where he adopted the religious habit, and in 1612 was admitted to profession. He was then sent by his superiors to different
monasteries of the order, where he studied successively philosophy and theology under the most eminent professors. During his studies he manifested a marked aptitude and taste for historical research; and, while yet a student, published his first work, the "History of the Monastery of Meyra". He returned to Spain to attend to the educational needs of his order during this time his parents had left Spain to take up their residence at the court of the Archduke Albert, Governor of Flanders, and at their request this prince wrote to the general of the Cistercian Congregation of Spain to ask that Henriques be sent to the Low Countries. This general acceded to this petition, and Henriques left Spain never to see it again.

He now received from his superiors the command to write the history of the Cistercian Order. With this end in view, he visited the various Flemish monasteries, especially those of Aulnes, of Villers, and of Dunes—then the most flourishing in all Europe—consulting their libraries, studying their archives, and seeking all the information obtainable for the realization of his great project; everywhere he received cordial co-operation, his amiable character having won the sympathy and goodwill of all. A complete list of all his works cannot be given within the limits of this space.

From 1619 to 1632 he published upwards of forty separate works in Latin, Spanish, and Flemish, chief among them being "Thesaurus Evangelicus vel Ratio illustris Virorum Ordinis Cisterciensis in Hibernia", which was among his earliest works; "Sol Cisterciensis in Belgio", or "History of men remarkable for their virtues and miracles of the Abbey of Villers, so fruitful in saints"; "Fasciculus SS. O. C.", where he recounts the lives of the patriarchs, prelates, abbots, defenders of the Faith, and martyrs of the order, and also speaks of the origin of the military orders; "Corone Sacre O. C."; it is the largest of most of what he has written, and has been the foundation of many, as it gives the lives of many who have renounced the world in order to be clothed with the Cistercian habit. In his "Bernardus Immaculatus" he explains and justifies the opinion of St. Bernard concerning the Immaculate Conception, the sanctification of St. John the Baptist, and the beatity of the elect before the general resurrection.

His "Menologium Cisterciense" (2 vols., folio) was his principal work; in the first volume he gives the lives of Cistercians not remarkable, but very useful, and in the second, he gives the rules, the constitutions, and privileges of the order, with a history of the founding of the military orders thereunto attached. It was through him, too, that portraits were engraved of very many of the beatified and other illustrious members of the Cistercian Order, for the honor of the glory of which he never ceased to labour during his all too brief life.

All his works are written in a style at once elegant and concise, and manifest a profound erudition; nevertheless, they are not wholly without fault. Claude Chalemot, Cistercian Abbot of La Colombe (France), an esteemed historian, reproaches him with having omitted many saints of the order, and of having inserted persons in his menology who have no right to be there, either because they did not merit it or because they were never clothed with the Cistercian habit. Another fault is that he does not always give the dates with exactitude. He was, however, never a religious of the order, but his erudition and knowledge was only equalled by his humility, and his submission to his superiors was unqualified, while his agreeable demeanour gained for him the affection of all. His superiors were lavish in bestowing on him marks of esteem and honourable titles. He was appointed successively historian of the Spanish Congregation of the Cistercian Order, afterwards vicar general of the same congregation, and finally Grand Prior of the Military Order of Calatrava.

Henriques, ENRIQUE, a noted Jesuit theologian, b. at Oporto, 1536; d. at Tivoli, 28 January, 1608. At the age of sixteen, in 1552, he entered the Society of Jesus, and soon became celebrated for his philosophical and theological erudition. He taught both these branches in the Jesuit colleges of Cordova and Salamanca; in the latter place he made friends with Gregory of Valencia among his pupils. In 1593 he left the Society of Jesus and entered the Order of St. Dominic, but soon returned to his former companions. Father Alcazar (Hist. Prov. Tolet., I, 204) gives the following account of this incident. After Henriques had printed in the preface of one of his theological works some passages not approved of by the "censors", Father Aquaviva ordered him to tear out the page containing these paragraphs. Henriques felt so disturbed over this punishment that he obtained permission from the holy father to leave the society and enter the Dominican Order. It was Gregory of Valencia who advised him to return to his former associates. Father Henriques is especially noted for two theological works: (1) The first part of his "Theologiae Moralis Summa" was published at Salamanca in 1591, the second in 1593; the work appeared again at Venice, in 1597, and 1600; at Mentz, in 1613, under the title "Summae Theologiae Moralis libri XV", etc. It was forbidden by decree of 7 Aug. 1603, donec corrigatur, because the author allowed confession (but not abjuration) by way of letter, and held opinions too unfavourable to the rights of the Church. In his "Summa" Henriques treats only of the moral aspects of humanity, as they concern ecclesiastical censures and irregularities; but he manages to find an opportunity of declaring himself against Molina's scientia media; he defends the Dominican theory of physical predetermination, and of a predestination antecedent to the Divine foresight of our future merits. St. Alphonsus highly esteems the authority of Henriques on moral questions, an opinion fully shared by Doutiat in his "Praenot. canon.", V, xv. (2) Henriques's second work is entitled "De pontifici romani claive, libri IV". It was published at Salamanca in 1593, but nearly all its copies were burnt by the Apostolic nuncio of Madrid on account of its allowing the papal authority to be superior to the laws of the territory, under the pretext that only three or four copies have been preserved among the rarities of the Escorial. The subjects treated by Henriques in his second work are: the power and election of the Roman pontiff; the censures reserved to the Roman pontiff; the authority of the Council; the question of law. The aptitude of Father Henriques's second work is the reason why some bibliographers consider its treatises as part of his "Theologiae Moralis Summa".

HENRY II, King of England, b. 1133; d. 6 July, 1189; in his earlier life commonly known as Henry Fits-Empress from the fact that his mother Matilda, daughter of Henry I, was first married to the Emperor Henry V. Henry himself, however, was the son of Henry II of England. I, the second point of Aethelred, inherited from him the three important Sefs of Anjou, Touraine, and Maine. Soon after his birth the English Witan were made to swear fealty to the infant prince as heir to the throne of England, but when Henry I died, in 1135, both Norman and English barons, who greatly disliked Geoffrey Plantagenet, lent their support to the rival claimant, Stephen of Blois.
Despite the confusion and civil war which marked the ensuing years, young Henry seems to have been well educated, partly in England, partly abroad. When he was sixteen he was knighted at Carlisle by King David of Scotland, when he was eighteen he succeeded to Normandy and Anjou, when nineteen he married Eleanor of Aquitaine, the divorced wife of Louis VII of France, and secured her inheritance, and when twenty he took up the cause of England and forced King Stephen to submit to terms. It is plain that when, a year later, upon Stephen’s death, he succeeded to the English crown, men felt that they had no novice to deal with either in diplomacy or in war. Whether through the accident of heredity or through conscious imitation, Henry II at once took up the large task of constructive and legal reform which marked the administration of his grandfather, Henry I. The Angevin Henry was not a hero or a patriot as we understand the terms nowadays, but he was, as Stubbs has said, “a far-seeing King who recognised the well-being of the nation was the surest foundation of his own power.” At home, then, he set to work from the beginning to face a series of problems which had never yet been settled, the question of Scotland, the question of Wales, the frauds of fiscal officers, the defects of royal justice, and the encroachments of the feudal courts. In all these undertakings he was loyally seconded by his new chancellor, one who had been cordially recommended to him by Archbishop Theobald and one who was sufficiently near his own age to share his vigour and his enthusiasm. There is but one voice amongst contemporaries to render homage to the strong and beneficent government carried on by Henry and his chancellor Thomas Becket during seven or eight years. All dangerous resistance was crushed, the numberless feudal castles were surrendered, and the turbulent barons were not unwilling to acquiesce in the security and order imparted by the reorganised machinery of the state. As a prince of comprehensive administrative skill, Henry was without a peer in all Europe. The details cannot be given here. The reforms were largely embodied in the “Assizes” issued later in the reign, but in most cases the work of reorganization had been set on foot from the beginning. As regards foreign policy Henry followed the precepts of his master, the Plantagenet king before him had ever known. Normandy, Maine, Anjou, and Aquitaine were united to the English crown in 1154, and before twenty years had passed Nantes, Querqu, Brittany, and Toulouse had all practically fallen under English rule. It has recently been maintained by Professor H. A. Warburg (in his “Salische Reiche II.”, 1905) that Henry deliberately adopted a policy of competing with the emperor and that he made the empire itself, as Giraldo Cambremesias seems to state (Opera, VIII, 157), the object of his ambition, being invited thereto both by the whole of Italy and by the city of Rome. If this be an exaggerated view, it is nevertheless certain that Henry occupied a foremost position in Europe, and that England for the first time exerted an influence which was felt all over the Continent.

The prosperity which smiled on Henry’s early years seems in a strange way to have been broken by his quarrel with his former favourite and chancellor, Huber whom we now honour as St. Thomas of Canterbury was raised to the archbishopric on his royal master’s desire in 1162. It is probable that Henry was influenced in his choice of a primate by the anticipation of conflicts with the Church. No doubt he was aware of the formidable attacks on the jurisdiction of the Courts-Christian, and it is also probable enough that Thomas himself had divined it. This, if true, would explain the plainly expressed forebodings which the future archbishop uttered on hearing of his nomination. The story of the famous Constitutions of Clarendon has already been given in some little detail in the article England (Vol. V, p. 436). In his attack on the jurisdiction of the spiritual courts Henry may have desired sincerely to remedy an abuse, but the extent of that abuse has been very much exaggerated by the anti-papal sympathies of Anglican historians, more especially of so influential a writer as Bishop Stubbs. Henry’s masterful and passionate nature was undoubtedly embittered by what he deemed the ingratitude of his former favourite—even St. Thomas’s resignation of the chancellorship, on being made archbishop, had deeply mortified him—but when, as the climax of six years of persecution which followed the saint’s rejection of the Constitutions of Clarendon, the archbishop was brutally murdered on 29 December, 1170, there is no reason to doubt that Henry’s remorse was sincere. His submission to the humiliating penance, which he performed barefoot at the martyr’s shrine in 1174, was an example to all Europe. When the news came that on that very day the Scottish king, who was supporting a dangerous insurrection in the North, had been taken prisoner at Alnwick, men not unnaturally regarded it as a mark of the Divine favour. It is not impossible, and has been recently suggested by L. Delisle, that the restoration of the style “Dei gratia Rex Anglorum” (by the grace of God King of the English), which is observable in the royal charters after 1172, may be due to intensified religious feeling. In any case there is no sufficient reason for saying with Stubbs that St. Thomas was responsible for a grievous change in Henry’s character towards the close of his life. The misconduct and rebellion of his sons, probably at the instigation of his queen, Eleanor of Aquitaine, are amply sufficient to account for some measure of bitterness and vindictiveness. On the other hand, after Henry by his penance had owned himself beaten upon the question of the Church Courts, his legal and constitutional reforms (such as those which developed the gremias of trial by jury, the circuits of the travelling justices, etc.) were pressed on more actively than ever. This fact forms a strong argument for the view that St. Thomas was resisting nothing which was essential to the well-being of the kingdom. Moreover, it is in these years of Henry’s life that we find the most attractive presentation of his character in his relations with the Carthusian, St. Hugh of Lincoln, a saint whom the king himself had promoted to his bishophric. St. Hugh evidently had a tender feeling for Henry, and he was not a man to connive at wickedness. Again, the list of Henry’s religious foundations is a considerable one, even apart from the
three houses established in commutation of his vow. Moreover, at the very end of his life he seems to have been much interested in the crusade, while his organization of the "Saladin Tithe", like that of the "Seutage" at the beginning of the reign, marked an epoch in the history of English taxation. The conquest of Ireland which Henry had projected in 1156 and for which he obtained a Bull from Pope Adrian IV (q.v.) was carried out later with the full sanction of King Alexander III, preserved to us in his history. The unquenched authenticity which concede in substance all that was granted by the disputed Bull of Adrian. The death of Henry was sad and tragic, embittered as it was by the rebellion of his sons Richard and John, but he received the last sacraments before the end came. "I think," says the "Story of the Newbury," "that God wished to punish him severely in this life in order to show mercy to him in the next."

All histories of England and notably Linsgards contain a detailed account of Henry's important reign, but Linsgards estimate of his character seems unnecessarily severe. The prefaces to Stubbs' editions of various chronicles in the Rolls Series are important and have been printed together in a separate volume. Among more recent works Davia, England under the Normans and Anglo-Normans (London, 1903), and Adams, History of England from the Norman Conquest to 1801 (London, 1905) may be recommended. See also Delisle, articles on Henry's Charters in the British Museum, London, 1904; Pevear, The Round in the Archæological Journal, 1898; Etton, Itinerary of Henry II (London, 1875); Norgate, England under the Angevins, Part II (London, 1866); Thronton, Life of King Henry II of England (London, 1874); Hardisty, Imperialpolitik Koin Henrikis II. von England (Heidelberg, 1909); Fuller bibliography in Gesta, Sources of Eng. Hist., and by Norgate in Dict. Nat. Biog., s. v.

HETORBERT THURSTON.

Henry VIII, King of England, b. 28 June, 1491; d. 28 January, 1547. He was the second son and third child of his father, Henry VII. His elder brother Arthur died in April, 1502, and consequently Henry became heir to the throne when he was not yet quite eleven years old. It has been asserted that Henry's interest in theological questions was due to the bias of his early education, since he had at first been destined by his father for the Church. But a child of eleven can hardly have formed lifelong intellectual tastes, and it is certain that secular titles, such as those of Earl Marshal and Viceroy of Ireland, were heaped upon him before he was five. On the other hand, it would be no exaggeration to say that precocity and as to the liberal scope of the studies which he was made to pursue from his earliest years. After Arthur's death a project was at once formed of marrying him to his brother's widow, Catherine of Aragon, who, being born in December, 1485, was more than three years his senior. The negotiation for a papal dispensation took some little time, and the Spanish Queen Isabella, the mother of Catherine, then nearing her end, grew very impatient. Hence a hastily drafted Brief containing the required dispensation was privately sent to Spain in 1504, to be followed some months later by a Bull to the same effect which was of a more public character. The existence of these two instruments afterwards caused complications. Owing, however, to some political scheming of Henry VII, who was trying to outwit his rival Ferdinand, Prince Henry, on attaining the age of fourteen, was made to record a formal protest against the proposed marriage with Catherine, as a matter arranged without his consent. Still, when his father died in 1509, Henry carried out the marriage nine weeks after his accession, he being then eighteen, and showing from the first a thorough determination to be his own master. Great popularity was won for the new reign by the leniency and execution of the instruments of the late king's extortion. Besides this, it is unanimously attested by contemporaries that the young sovereign possessed every gift of mind and person which could arouse the enthusiasm of his people. His skill in many sports was almost equalled by his intelligence and his devotion to letters. Of the complicated foreign policy which marked the beginning of his reign no detail can be given here. Thanks partly to Henry's perspicacity and ability, partly to the intelligence of Wolsey, who soon took the first place in the council chamber, England for the first time became a European power. In 1512 Henry joined Pope Julius II, Ferdinand of Spain, and the Venetians in forming the "Holy League" against the King of France. Although it was voted that the "barbarians" (i.e. the French and other foreigners) out of Italy, and Henry co-operated by collecting ships and soldiers to attack the French king in his own dominions. No very conspicuous success attended his arms, but there was a victory at Guinegate outside Thérouanne, and in the Battle of the Spurs, which had threatened invasion, were disastrously defeated at Flodden in 1513. During all this time Henry remained on excellent terms with the Holy See. In April, 1510, Julius sent him the golden rose, and in 1514 Leo X bestowed the honorific cap and sword, which were presented with much solemnity at St. Paul's.

The League having been broken up by the selfish policy of Ferdinand, Henry VIII now made peace with France and for some years held the balance between the great powers on the Continent, though not without serious danger. In 1515 a treaty of amity was made a cardinal in 1518 and exercised more influence than ever, but it was somewhat against his advice that Henry, in 1519, secretly became a candidate for the succession to the empire, though pretending at the same time to support the candidature of Francis's eldest son. When, however, Charles V was successful, the French king could not afford to quarrel with Henry, and a somewhat hollow and insincere renewal of their friendship took place in June, 1520, at the famous "Field of the Cloth of Gold", when the most elaborately courtly expeditions were exchanged between the two monarchs. The prospect of civil war which had alarmed the Emperor Charles that, a month before it took place, he visited Henry in England. In point of fact a continuous game of intrigue was being played by all three monarchs, which lasted until the period when Henry's final breach with Rome led him to turn his principal attention to domestic concerns. Meanwhile the strength and prestige of the church in France had been much developed by Wolsey's judicious diplomacy, and, despite the costliness of some of England's demonstrations against France, before the French king became the emperor's prisoner at Pavia, the odium of the demand for money fell upon the minister, and not the clergy only, was strengthened. As a matter of fact, whatever disaffection might be felt, the people had no leader to make rebellion possible. The old nobility, partly as the result of the Wars of the Roses, and partly owing to the repressive policy dictated by the dynastic fears of Henry VII, had been reduced to impotence. In 1521 the most prominent noble in England, the Duke of Buckingham, was condemned to death for high treason by a subversive House of Peers, simply because the king suspected him of aiming at the succession and had determined that he must die. At the same period Henry's prestige in the eyes of the clergy and the nobility was supported only by his famous book, the "Assertio Septem Sacramentorum". This was written against Luther and in vindication of the Church's dogmatic teaching regarding the sacraments and the Sacrament of the Mass, and in which Henry's supremacy of the papacy is asked upon and all ways accepted. The book was translated into several languages, and Henry's own copy was read at the time of his death. Pope Leo X was highly pleased with it and conferred upon the king the title of Fidei Defensor (Defender of the Faith), which is maintained to this day as part of the royal style of the English Crown. All this success and adulation were calculated to develop the
natural masterfulness of Henry's character. He had long shown to discerning eyes, like those of Sir Thomas More, that he would brook contradiction in nothing. Without being guilty of notable profligacy in comparison with the other monarchs of his time, it is doubtful if Henry's married life had ever been pure, even from the first, and we know that in 1519 he had to be constrained by Elizabeth Blount, a son whom, at the age of six, he made Duke of Richmond. He had also carried on an intrigue with Mary Boleyn which led to some complications at a later date.

Such was Henry when, probably about the beginning of the year 1527, he formed a violent passion for Mary's younger sister, Anne. It is possible that the idea of the divorce had suggested itself to the king much earlier than this (see Brown, "Venetian Calendars", II, 479), and it is highly probable that it was motivated by the desire of male issue, of which he had been disappointed by the death in infancy of all Catherine's children save Mary. Anne Boleyn was restrained by no moral scruples, but she saw her opportunity in Henry's infatuation and determined that she would only yield as his acknowledged queen. Anyway, it soon became the one absorbing object of the king's desires to secure a divorce from Catherine, and in the pursuit of this he condescended to the most unworthy means. He had it put about that the Bishop of Tarbes, when negotiating an alliance in behalf of the French king, had raised a doubt as to the Princess Mary's legitimacy. He also prompted Wolsey, as legate, to hold with Archbishop Warham a private and collusive inquiry, summoning Henry to prove before them that his marriage was valid. The only result was to give Catherine an inkling of what was in the king's mind, and to elicit from her a solemn declaration that the marriage with Arthur had never been consummated. From this it followed that there never had been any impediment of "affinity" to bar her union with Henry, but only the much more easily dispensed impediment known as *publica honestatis*. The best canonists of the time also held that a papal dispensation which formally removed the impediment of affinity also involved by implication that of *publica honestatis*, or "public decency". The column suit was therefore dropped, and Henry now set his hopes upon a direct appeal to the Holy See, acting in this independently of Wolsey, to whom he at first communicated nothing of his design so far as it related to Anne. William Knight, the king's secretary, was sent to Pope Clement VII (q. v.) to sue for the declaration of the nullity of his union with Catherine, on the ground that the dispensing Bull of Julius II was obsequitiously — i.e. obtained by false pretences. Henry also petitioned, in the event of his becoming free, for a dispensation to contract a new marriage with any woman even in the first degree of affinity, with the affinity was contracted by lawful or unlawful connexion. This clearly had reference to Anne Boleyn, and the fictitious nature of Henry's conscientious scruples about his marriage is betrayed by the fact that he himself was now applying for a dispensation of precisely the same nature as that which he supposed absent, a dispensation which he later on maintained the pope had no power to grant. 

As the pope was at that time the prisoner of Charles V, Knight had some difficulty in obtaining access to him. In the end the king's envoy had to return without accomplishing much, though the (conditional) dispensation for a new marriage was readily accorded. Henry was not disposed but to put his great matter into the hands of Wolsey, and Wolsey, although the whole divorce policy ran counter to his better judgment, strained every nerve to secure a decision in his master's favour. An account of the mission of Gardiner and Foxe and of the failure of the divorce proceedings before the papal commissioners, Wolsey and Campeggio, mainly on account of the production of the Brief, has been given in some detail in the article CLEMENT VII (vol. IV, p. 28), to which the reader is referred. The revocation of the cause to Rome in July, 1529, owing, no doubt, in part to Queen Catherine's most reasonable protests against her helplessness in England and the compulsion to which she was subjected, had many important results. First amongst these we must count the disgrace and fall of Wolsey, hitherto the only real check upon Henry's wilfulness. The incredible meanness of the praemunire, and consequent confiscation, which the cardinal was pronounced to have incurred for obtaining his cardinaleate and legateship from Rome—though of course this had been done with the king's full knowledge and consent—would alone suffice to stamp Henry as one of the basest of mankind. But, secondly, we may trace to this same crisis the rise of both Cranmer and Thomas Cromwell, the two great architects of Henry's new policy. It was Cranmer who, in the autumn of 1529, made the momentous suggestion that the king should consult the universities of Europe upon the question of the nullity of his marriage, a suggestion which at once brought its author into favour. The project was carried out as soon as possible with a lavish expenditure of bribes, and the use of other means of pressure. The result was naturally highly favourable to the king's wishes, though the universities which lay within the dominions of Charles V were not consulted. The answers were submitted to Parliament, where the king still kept up the pretence of having no personal interest in the matter. He professed to be suffering from scruples of conscience, now rendered more acute by such a weight of learned opinion. With the same astuteness he persuaded the leading nobility of the kingdom to write to the pope praying him to give sentence in Henry's favour, for fear that worse might follow. All this drew the king into closer relations with Cranmer, who was made ambassador to the
empire, and who, a year or two afterwards, despite the fact that he had just married Osieran’s niece (his second wife), was summoned home to become Archbishop of Canterbury. The necessary Bulls and the pallium were obtained from Rome under threat that the entire See would again become a temporal one. Annates and first-fruits would be made permanent.

The vacillating Clement—who probably hoped that by making every other kind of concession he might be able to maintain the position he had assumed upon the more vital question of the divorce—conceded Bulls and pallium. But to do this would be necessary that Cranmer should take certain prescribed oaths of obedience to the Holy See. He took the oaths, but committed to writing a solemn protest that he considered the oaths in no way binding in conscience, a procedure which even so prejudiced an historian as Mr. H. A. Fisher cannot refrain from describing as a “signal dishonesty”. “If”, asks Dr. Lingard, “it be simony to purchase spiritual office by money, what is it to purchase the same by perjury?” The father of the new Church of England, and future compiler of its liturgy, was not entering upon his career under very propitious auspices.

But the Church which was so soon to be brought into being was probably even more to Thomas Cromwell than to its first archbishop. It is Cromwell who seems to have suggested to Henry as a deliberate policy that he should abolish the *impertum in imperio*, throw off the papal supremacy, and make himself the supreme head of his own religion. This was in fact the course which from the latter part of 1529 Henry undeviatingly followed, though he did not at first go to lengths from which there was no retreat. The first blow was struck at the clergy by involving them in Wolsey’s prebendary. Some anti-clerical disaffection there had always been, partly, no doubt, the remnants of Lollardy, as was instance in the case of Richard Hunne, 1515. This, of late years, had been a good deal aggravated by the importation into England of Tyndale’s annotated New Testament and other books of heretical tendency, which, though prohibited and burnt by authority, still made their way among the people. Henry and his ministers had, therefore, some popular support upon which they could fall back, if necessary, in their campaign to reduce the clergy to abject submission. At the beginning of 1531 the Convocation of Canterbury was inflamed by their jurisdiction. The clergy of the prebendary they had incurred by presenting the king with the enormous sum of £100,000. Further, they were bidden to recognize the king as “Protector and Supreme Head of the Church of England”. Convocation struggled desperately against the demand, and in this succeeded in inserting the qualification “so far as is allowed by the law of Christ”. But this was only a brief respite. A year later Parliament under pressure passed an act forbidding the payment to the Holy See of Annates (q.v.) or first-fruits, but the operation of it was for the present suspended at the sovereign’s pleasure, and the king was meanwhile solicited to come to an amicable arrangement with “His Holiness” on the subject of the divorce. The measure amounted to a deently veiled threat to withdraw this source of income from the Holy See altogether if the divorce was refused. Still the pope held out, and so did the queen. Only a little time before, a deputation was brought to bear upon her in the king’s order—had visited Catherine and had rudely urged her to withdraw the appeal in virtue of which the king, contrary to his dignity, had been cited to appear personally at Rome; but though deprived of all counsel, she stood firm. In the May of 1532 further pressure was brought to bear upon Catherine, and resulted in the so-called “Submission of the Clergy”, by which they practically renounced all right of legislation except in dependence upon the king. An honest man like Sir Thomas More could no longer pretend to work with the Government, and he resigned the chancellorship, which he had held since the fall of Wolsey. The situation was too strained to last, and the end came about through the death of Anne Boleyn. August, 1533. The appointment of Cranmer as his successor, the king knew that he had secured a subservient tool who desired nothing better than to see the papal authority overthrown. Anne Boleyn was then enceinte, and the king, relying, no doubt, on what Cranmer when consecrated to do for her, proceeded to have her created a form of marriage with her on 25 January, 1533. On 16 April Cranmer received consecration. On 23 May, Parliament having meanwhile forbidden all appeals to Rome, Cranmer pronounced Henry’s former marriage invalid. On 28 May he declared the marriage with Anne valid. On 1 June Anne was crowned, and on 7 September she gave birth to a daughter, the future Queen Elizabeth. Clement, who had previously sent to Henry more than one monition upon his desertion of Catherine, issued a Bull of excommunication on 11 July, declaring, also, his divorce from Catherine null. It was too late, for Cranmer had deprived of her title of Queen, and Mary her daughter was treated as a bastard. Much sympathy was aroused among the populace, to meet which severe measures were taken against the more conspicuous of the disaffected, particularly the “Nun of Kent”, who claimed to have had revelations of God’s displeasure at the recent course of events.

In the course of the next year the breach with Rome was completed. Parliament did all that was required of it. Annates, Peter’s-pence, and other payments to Rome were finally abolished. An Act of Succession entitled the crown on the children of Anne Boleyn, and an oath was drawn up to be exacted of every person of lawful age. It was the refusal to take this oath, the preamble of which declared Henry’s marriage with Catherine null from the beginning, which sent More and Fisher to the Tower, and eventually to the block. A certain number of Carthusian monks, Brethren, and Observant Franciscans imitated their firmness and shared their fate. All these have been beatified in modern times by Pope Leo XIII. There were, however, but a handful who were thus true to their convictions. Declarations were obtained from the clergy in both provinces that the Bishop of Rome hath no jurisdiction in this kingdom of England than any other foreign bishop”, while Parliament, in November, declared the king “Supreme Head of the Church of England”, and shortly afterwards Cromwell, a layman, was appointed vicar-general to rule the English Church in the king’s name. Though the people were cowed, these measures were not carried through without much disaffection, and, to stamp out any overt expression of this, Cromwell and his master now embarked upon a veritable reign of terror. The martyrs already referred to were most of them brought to the scaffold in the course of 1535, but fourteen Dutch and Swiss by burning by burning for the same year. There followed a visitation of the monasteries, unscrupulous instruments like Layton, Legh, and Price being appointed for the purpose. They played, of course, into the king’s hand and compiled *comptes* abounding in charges of disgraceful immorality, with which the king proceeded to deal by burning the citizens and the monks and nuns, and by burning the monks and nuns. Houses of such of such sovereign authorities as Dr. Gairdner and Dr. Jessopp, to be at least grossly exaggerated. In pursuance of the same policy Parliament, in February, 1536, acting under great pressure, voted to the king the property of all religious houses with less than 200 a year. An annual sum of £1.4.0 has been set. All the inmates should be transferred to the larger houses where “religion happily was right well observed”. The dissolution, when carried out, produced much
popular resentment, especially in Lincolnshire and the northern counties. Eventually, in the autumn of 1539, the king was under the impression that a very formidable insurrection known as the Pilgrimage of Grace. The insurgents rallied under the device of the Five Wounds, and they were only induced to disperse by the deceitful promises of Henry’s representative, the Duke of Norfolk. The suppression of the larger monasteries rapidly followed, and with these were swept away all other religious houses, stating his former veneration, on the pretext that these were purely superstitious. It is easy to see that the lust of plunder was the motive which prompted this wholesale confiscation.

Meanwhile, Henry, though taking advantage of the spirit of religious innovation now rife among the people whenever it suited his purpose, remained still attached to the sacramental system in which he had been brought up. In 1539 the Statute of the Six Articles enforced, under the severest penalties, such doctrines as transubstantiation, Communion under one kind, auricular confession, and the celibacy of the clergy. Under this act offenders were sent to the stake for their Protestantism just as ruthlessly as the aged Margaret, Countess of Salisbury, was attainted by Parliament and eventually beheaded, simply because Henry was irritated by the denunciations of her son Cardinal Pole. Neither was the king less cruel towards those who were nearest to him. Anne Boleyn and Catherine Howard, his second and fifth wives, perished on the scaffold, but their whilom lord only paraded his indifference regarding the fate to which he had condemned them. On 30 July, 1540, of six victims who were dragged to Smithfield, three were Reformers burned for heretical doctrine, and the other three Catholics, hanged and quartered for denying the king’s supremacy. Of all the numerous miserable beings whom Henry sent to execution, Cromwell, perhaps, is the only one who fully deserved his fate. Looking at the last fifteen years of Henry’s life, it is hard to find one single feature which does not evoke repulsion, and the attempts made by such writers as Froude, A. F. Pollard, and H. A. Fisher to whitewash his misdeeds only give proof of the extraordinary prejudice with which they approach the subject. Henry’s cruelties continued to the last, and so likewise did his inconsistencies. One of the last measures of his reign was an act for the suppression of chantries, but Henry by his last will and testament established what were practically chantries to have Masses said for his own soul.

A full bibliography would require a volume to itself and we refer the student to the English History of cartoons; and ever was this true of Henry VIII. The estimate of LINGARD’s still retains its value, though the last revision took place before the supremely important series of Calendars of Letters and Papers of the reign of Henry VIII began to be published by the Record Office. The preface by the Rev. J. S. Burkitt, which accompanied the early volumes, has been printed so as to form a separate work, The Reign of Henry VIII to the fall of Wolsey, by far the most valuable discussion of the early portion of the reign. On the other hand, Dr. J. GAIRDNER, Lollardy and the Reformation, supplies the fullest and best account of the later years. Other works to be specially recommended are—

Other special works, such as that of DOM HENRIKES, deal with the divisor more particularly. From a strongly anti-Roman point of view the monograph of FOLLAND, Henry VIII (London, 1865) and the fifth volume of EYTES, The Political History of England (1866), are of most authority. For other works see the bibliography of England—Before the Reformation.

HERBERT THURSTON.

VII.—15

Henry IV, King of France and Navarre, son of Jeanne d’Albret and Antoine de Bourbon; b. 14 December, 1553, in the castle of Pau; d. 14 May, 1610. He began his military career under Admiral de Coligny and, from 1569, played a decisive part in the wars of religion as head of the Protestant party. By the death of the Duke of Anjou, in 1584, Henry of Bourbon became heir-presumptive to the crown of France. The manifesto of Péronne (March, 1586) issued by the Catholic princes, gave proof of their unceasingness; Cardinal de Pellevé and the Jesuit Claude Mathieu expressed their anxiety at Rome. Although Sixtus V, a strong supporter of royal authority, was not in complete sympathy with the programme and the action of the League, yet relying on the public right which in the Middle Ages had been acknowledged in the whole of Christian Europe, he took decisive measures against Henry of Bourbon. Wishing France to
origin of the famous epigram so often attributed to the king. The opinion that the conversion of Henry IV was not sincere is refuted by the circumstances of his conversion, by the great interest Henry IV took in the established theological colloquies between Catholics and Protestants, and by his regarding it as a point of honour to seek and find theological reasons before carrying out that religious change necessitated by political exigency.

When, on 21 August, 1589, by the death of Henry III, Henry of Bourbon definitely inherited the royal crown, he had on his side the Protestants, the poli-

gues, who belonged mainly to the Catholic Church; against him he had the Guises and the League supported by King Charles of Spain and Pope Gregory XIV. Among the Catholics who stood by Henry of Bourbon, a certain number, from 1591 to 1593, seeing that he took no steps to be instructed in the Catholic Faith, began to form a tiers parti, who were in favour of selecting as king the young Car-
dine, second son of Louis XIII and Maria de' Medici. Not having received Holy orders, Charles could have married. By the spring of 1593 the moderate members of the League, fearing the influence of Philip II on French affairs, were in agreement with the tiers parti to elect a Catholic Bourbon, that is to say, Henry of Bourbon, if he would be willing to renounce the throne. If such a thing had not, Cardinal Charles de Bourbon. Henry IV had declared on several occasions that he would never embrace Catholicism for merely political reasons. "Religion is not changed as easily as a shirt," he wrote in 1588. "It would be setting very little value on either religion," said Villeroi, Henry's ambassador. In 1592, "there is no change before being instructed and well-informed." From March, 1592, Henry IV had an intimate friend in Jacques Davy Duperron, a convert from Protestantism, later a priest and a cardinal, and the conversa-
tions with Duperron had a great influence on his mind. The theological conference at Mantes (April, 1593) in which, for seven consecutive days, Duperron argued with four Protestant pastors as to whether the whole Christian doctrine is contained in the Sacred Scriptures, ended in the defeat of the pastors. One of them, Palma Gayet, who had been Henry of Bour-

bon's chaplain, delivered a discourse proving the impossibility of his own conversion to the Catholic Faith. At the same time Sully, although he was a Protestant, told Henry IV that the means of salvation through Christ were to be found in the Catholic Church as well as in the Reformed Church, and he urged him to become a Catholic in order to win the Protestants over definitively. Henry IV announced to the Grand Duke of Tuscany on 26 April, 1593, and to the Prince de Conti on 10 May, 1593, his coming submission to the Catholic Church; on 16 May the royal council pronounced in favour of the conversion. In the beginning of June Henry IV assisted at Mantes at another discussion on the basis of salvation, in which Louis de Racqueville, who had just been named Bishop of Evreux, again vanquished two Protestant pastors; then on 22 July he went to Saint-Denis, where a score of bishops and theologians awaited him. The following morning he had a conference with Duperron, with the Archbishop of Bourges, and with the Bishops of Le Mans and Nantes; he questioned them on three points that were not yet clear to him—the veneration of the saints, auricular confession, and the authority of the pope. The discussion lasted five hours. That afternoon, after a lengthy discussion, Henry signed a formula of adhesion to the Catholic Faith, and a special promise of obedience to the Holy See. On 24 July he renewed his declaration before the assembled theologians; and on 25 July, amid great pomp, Renaud de Beaume de Semblançay, Archbishop of Bourges and Grand Almoner of France, received his abjuration at the door of the basilica of Saint-Denis, and then heard his consecration. The joy of the people was unbounded.

Henry IV did not immediately regularise the Holy See, which had been excommunicated Henry of Bourbon. An officer of the king's household, La Cielle, was dispatched to Rome in September to announce to Pope Clement VIII that Louis de Gonzague, Duke of Nevers, would soon arrive with a solemn embassy to offer the pope the presence of Henry IV. On 27 September, La Cielle, in the name of Clement VIII, that it was first necessary for Henry to do penance and be absolved from the crime of heresy, and that the embassy would not be received for the time being. In fact, the Jesuit, Possenti, was sent to meet it and to forbid it to come to Rome, though Nevers was permitted to enter the city alone, and even then, not as an ambassador, but as a private individual; between 21 November, 1593, and 14 January, 1594, he had five audiences with the pope, but obtained nothing, the pope refusing even to receive three of the French lords, then banished whomever he had to ceremonies at Saint-Denis. In February, 1594, Car-
dinal de Pian del Pape, legate in France, learning that Henry IV was to be consecrated at Chartres on 27 February, informed the Catholics that he would not be absolved. This caused a great sensation in France, and somewhat to the irritation of those who like that of Eleanor VIII who was imminent. Cardinal de Gondi, Archbishop of Paris, finally won (May, 1594) the consent of Clement VIII to enter into negotiations with Henry IV. Henry first charged Arnaud d'Observ, a priest living in Rome, with the preliminary secret negotiations. The papacy first contended that Henry required not only absolution, but rehabilitation, which would render him capable of being recognized as a legitimate sovereign; d'Ossant, little by little, won some con-
ecessions. But the measures taken by the Parlement of Paris against the Jesuits in January, 1595, after the attempt of Jean Chastel on the life of Henry IV, were exploited at the papal court by the ambassador of Philip II; and Clement VIII seemed, for a time, de-
cided to make the recall of the Jesuits the condition sine qua non of the absolution of Henry. It was a French Jesuit, Alexandre Georges, who, being pre-
bated at the pontiff, proposed to the pope that the Society of Jesus should be suppressed, and the Pope, represented to Clement VIII that the public weal demanded a prompt reconciliation be-
tween the Holy See and France. Clement allowed himself to be persuaded, and on 12 July, 1595, Du-
perron, the official ambassador of Henry, arrived in Rome to settle the conditions of absolution. Clement VIII did not confirm purely and simply the absolution pronounced at Saint-Denis, but took an-
ter course, and on 17 September, 1595, in the portico of St. Peter's, solemnly declared the King of France free from all excommunication. This moral triumph was followed by the victory of Fontaine-Française, in which the aging Charles IX, who had just been named Bishop of Evreux, again vanquished two Protestant pastors; then on 22 July he went to Saint-Denis, where a score of bishops and theologians awaited him. The following morning he had a conference with Duperron, with the Archbishop of Bourges, and with the Bishops of Le Mans and Nantes; he questioned them on three points that were not yet clear to him—the veneration of the saints, auricular confession, and the authority of the pope. The discussion lasted five hours. That afternoon, after a lengthy discussion, Henry signed a formula of adhesion to the Catholic Faith, and a special promise of obedience to the Holy See. On 24 July he renewed his declaration before the assembled theologians; and on 25 July, amid great pomp, Renaud de Beaume de Semblançay, Archbishop of Bourges and Grand Almoner of France, received his abjuration at the door of the basilica of Saint-Denis, and then heard his consecration. The joy of the people was unbounded.

Henry's foreig policy consisted in preserving peace to allow France time to strengthen its finances and her army; he negotiated with the Low Countries against Spain, and with the Protestant princes of Germany against the empire, but without going the length of open hostilities. His plan was to gather the weaker states around France and unite against the Habsburgs. Sully in his "Economies Royales"
EMPEROR HENRY II
FROM AN XI-CENTURY MISSAL IN THE ROYAL LIBRARY AT MUNICH
credits him with projecting a coalition of all the states of the empire against the Hapsburgs of Vienna and Madrid, and with planning, on their downfall, a redivision of Europe into fifteen states (six hereditary monarchies, six elective monarchies, and three republics) of his time. In 1501 he also introduced the idea of the appointment of worthy candidates and of children to abbeys and bishoprics. Henry promised to give the matter his attention; he nominated d'Ossat bishop and tried to induce St. Francis de Sales to settle in France. But the abuses continued, when it suited the whims of the king; he appointed one of his illegitimate sons Bishop of Metz, the age of six, and a child of four years of age Bishop of Lodève. The reform of the Church was begun through the initiative of Catholic piety and not by the influence of royalty. Henry IV, however, contributed towards it, owing to the influence of Père Colon (q. v.), by favouring the work of the Jesuits, who, although they had been banished by a decree of the Parlement of Paris, were left undisturbed in the districts under the jurisdiction of the Parlements of Bordeaux and Toulouse. The Edict of Rouen (1603) authorised them to remain in all places where they were established, and, further, to found colleges at Lyons, Dijon, and La Fleche, and in 1605 they were permitted to return to their Collège de Clermont at Paris.

Henry IV, despite the efforts of d'Ossat and Duperron, did not dare, through fear of the reformers and the parlementaires, to allow the publication of the decrees of 1589 of the Parlement of Paris.

The frivolity of Henry IV in his private life won for him the nickname Vert galant; the royal mistresses Gabrielle d'Estrees and Henriette d'Entraigues are notorious. He was assassinated by Ravaillac on 14 May, 1610.

HENRY II, Saint, German King and Roman Emperor, son of Duke Henry II (the Quarrelsome) and of the Burgundian Princess Gisela; b. 972; d. in his palace of Gorna, at Götingen, 13 July, 1024. Like his predecessor, Otto III, he had the literary education of his time. In his youth he was greatly interested in the priesthood. Therefore he became acquainted with ecclesiastical interests at an early age. Willingly he performed pious practices, gladly also he strengthened the Church of Germany, without, however, ceasing to regard ecclesiastical institutions as pivots of his power, according to the views of his time. With all his learning and piety, Henry was an eminently sober man, endowed with sound, practical common sense. He went his way circumspectly, never attempting anything but the possible and, wherever it was practicable, applying the methods of amiable and reasonable good sense. This prudence, however, was combined with energy and conscientiousness. Sick and suffering from fever, he traversed the empire in order to maintain peace. At all times he used his power to adjust troubles. The masses especially he wished to help.

The Church, as the constitutional Church of Germany, and therefore as the advocate of German unity and of the claims of inherited succession, raised Henry to the throne. The new king straightway resumed the policy of Otto I both in domestic and in foreign affairs. This policy first appeared in his treatment of the Eastern Marches. The encroachments of Duke Bilewslau, who had founded a great kingdom, impelled him to intervene. But his success was not marked. In Italy the local and national opposition to the universalism of the German king had found a champion in Arduin of Ivrea. The latter assumed the Lombard crown in 1062. In 1064 Henry crossed the Alps. Arduin yielded to his superior power. The Archbishop of Milan now crowned him King of Italy. This rapid success was largely due to the fact that a large part of the Italian episcopate upheld the idea of the Roman Empire and that of the unity of Church and State. On his second expedition to Rome, occasioned by the dispute between the Counts of Tuscany and the Crescentians over the nomination to the papal throne, he was crowned emperor on 14 February, 1014. But it was not until later, on his third expedition to Rome, that he was able to restore the prestige of the empire completely.

Therefore for this purpose he was obliged to intervene in the west. Disturbances were especially prevalent throughout the entire north-west. Lorraine caused great trouble. The Counts of Luxemburg (Luxemburg), brothers-in-law of the king, were the heart and soul of the dissatisfaction in that country. Of these men, Adalbero had made himself Bishop of Trier by uncanonical methods (1003); but he was not recognised any more than his brother Theodoric, who had had himself elected Bishop of Metz. True to his duty, the king could not be induced to abet any selfish family policy at the expense of the empire. Even though Henry, on the whole, was able to hold his own against these disturbances, the royal authority suffered greatly by loss of prestige in the north-west. Burgundy afforded compensation for this. The lord of that country was Rudolph, who, to protect himself against his vassals, joined the party of Henry II, the son of his sister, Gisela, and Henry the child of his duchy, his duchess, despite the opposition of the nobles (1006). Henry had to undertake several campaigns before he was able to enforce his claims. He did not achieve any tangible result, he only bequeathed the theoretical claims on Burgundy to his successors.

Better fortune awaited the king in the central and eastern parts of the empire. It is true that he had a quarrel with the Conrädisians over Carinthia and Swabia; but Henry proved victorious because his
kingdom rested on the solid foundation of intimate alliance with the Church. That his attitude towards the Church was dictated in part by practical reasons, that primarily he promoted the institutions of the Church chiefly in order to make them more useful supports of his royal power, is clearly shown by his policy. How boldly Henry posed as the real ruler of the Church in Germany, how nearly he approached the See of Bamberg, which was entirely his own scheme. He carried out this measure, in 1007, in spite of the energetic opposition of the Bishop of Würzburg against this change in the organization of the Church. The primary purpose of the new bishopric was to give the Wends under Henry's protection a church in the region of the Main and the Regnitz, where the Wends had fixed their homes. As a large part of the environs of Bamberg belonged to the king, he was able to furnish rich endowments for the new bishopric. The importance of Bamberg lay principally in the field of culture, which it promoted chiefly by its prosperous schools. Henry, therefore, relied on the aid of the Church against the lay powers, which had become quite formidable. But he made no concessions to the Church.

Though naturally pious, and though well acquainted with ecclesiastical culture, he was at bottom a stranger to her interests. He disposed of the episcopate as a matter of policy. Under his rule the bishops, from whom he demanded unqualified obedience, seemed to be nothing but officials of the empire. He demanded the same obedience from the abbots. However, this political dependency did not injure the internal life of the German Church under Henry. By means of its economic and educational resources the Church had a blessed influence in this epoch. But it was precisely this economic and civilizing power of the German Church that aroused the suspicions of the reform party. This was significant, because Henry was more and more moved to the idea of the reform party. At Goslar he confirmed decrees that tended to realize the demands made by the reform party. Ultimately this tendency could not fail to subvert the Othoman system, moreover could not fail to awaken the opposition of the Church of Germany as it was constituted. This hostility on the part of the German Church came to a head in the empress's dispute with Archbishop Aribo of Mainz. Aribo was an opponent of the reform movement of the monks of Cluny. The Hammerstein marriage imbroglio afforded the opportunity he desired to offer a bold front against Rome. Otto von Hammerstein had been excommunicated by Aribo. His sovereign, Henry II, to whom the latter had successfully appealed to Rome. This called forth the opposition of the Synod of Seligenstadt, in 1023, which forbade an appeal to Rome without the consent of the bishop. This step meant open rebellion against the idea of church unity, and its ultimate result would have been the founding of a German national Church. In this dispute the emperor was entirely on the side of the reform party. He even wanted to institute international proceedings against the unruly archbishop by means of treaties with the French king. But his death prevented this. Before this Henry had made his third journey to Rome in 1021. He came at the request of the loyal Italian bishops, who had warned him at Strasburg of the dangerous aspect of the Italian situation, and also of the pope, who sought him out at Bamberg in 1020. Thus the imperial power, which had already begun to wane in southern Italy, was again restored. This time the object was to put an end to the supremacy of the Greeks in Italy. His success was not complete; he succeeded, however, in restoring the prestige of the empire in northern and central Italy. Henry was far too reasonable a man to think seriously of adopting the imperialist plans of his predecessor. He was satisfied to have ensured the dominant position of the empire in Italy within reasonable bounds.

Henry's power was in fact controlling, and this was in no small degree due to the fact that he was primarily engaged in solidifying the national foundations of his authority. The later ecclesiastical legends have ascribed ascetic traits to this ruler, some of which certainly cannot withstand serious criticism. For instance, the highly varied theme of his virgin marriage to Cunegond has been a matter of dispute. Henry married Cunegond in 1146, and his wife Cunegond in 1200.

of Milan uncanonical. In general it soon became apparent that Henry was resolved to make religious ideas once more the determining factors in the art of government. This renewed triumph of religious ideas was straightway demonstrated at the synod of Constance in 1043. There the king, clad in the garment of the penitent, preached the peace of God to the awe-struck masses from the high pulpit. Henceforth this serious Cluniac spirit was predominant in all the imperial entourage. Minstrels and tumblers vanished from the court. The king was still more confirmed in his austere conception of life by his second wife, Agnes of Poitou, daughter of the Duke of Aquitaine, who likewise had been brought up according to the ideas of Cluny. (Henry's first wife, the Danish princess Gunhild, died in 1083.) This attitude of the king towards the world accounts for the leniency and indulgence that characterized his domestic and foreign policy and it determined absolutely his conduct in ecclesiastical politics. At the beginning of his reign it looked as if the imperial authority were still increasing. In the East, success attended his arms. The aggressive Slavic policy of Duke Bretislav of Bohemia was checked in 1041. After that, Bohemia was for a long time a support of the German king. Hungary also became a tributary vassal. It is due to these successes that Henry's reign is so generally considered the zenith of German history. Not altogether correctly. His leniency and indulgence fostered an opposition, especially in the interior, which he was destined never completely to overcome. This decline of his commanding position within the empire took place while the king was trying to discharge the supreme duties of his high office as priest-king. Henry's ideal was the purity of the Church. Only a church that was immaculate might and could be a true helpmeet to him in the kingship. He himself was never party to any act of simony. But as presumptive priest-king, he held inflexibly to the right of investiture. As such he also presided over the synods; as such he also passed sentence in ecclesiastical affairs. He did not realize that this involved a striking contradiction. The Church, pure and morally regenerate in the spirit of the reform party, could not fail to resist imperial domination. This error on the part of the king resulted in the rapid rise of the papacy and the slow decline of the imperial power in its fight for its old ecclesiastical privileges. In the first period of Henry's reign, Rome saw the schism of three popes: Benedict IX, Sylvester III, and Gregory VI. Although of spotless character, Gregory had bought the tiara from the unpriestly Benedict. Perhaps he had done so, not as an expedient to secure the supremacy of the reform party, perhaps also merely in order to get the scandalous Benedict out of the way. Henry, however, would consent to accept the emperor's crown only from hands that were pure, while those of the de facto Pope Gregory seemed to him tainted with simony. All three popes were repudiated by the Synod of Sutri on 20 December, 1046. This synod revealed Henry's attitude towards the canon law. He knew that according to this law no one can sit in judgment on a pope. Therefore the pope was not deposed by that synod, which, on the contrary, demanded that the pope himself pronounce the judgment. He went into exile in Cologne, accompanied by Hildebrand, who was soon to reveal the power of the papacy. The German popes, supported by the power of the German emperors, were now able to elevate their holy see above the partisan strife of the turbulent factions of the Roman nobility, and above the desperate moral barbarism of the age. Under Suider of Bamberg, who called himself Clement II, Henry still asserted his claim to the right of the Roman patriciate, that of control over the nominations to the papal throne. But under Leo IX the emancipation of the papacy from the imperial authority already began to manifest itself.

Freed at last from the narrow local Roman policy, the universal point of view once more dictated the conduct of the Roman pontiffs. Immediately a great wave of reform also set in, directed first and foremost against simony and the marriage of priests. The restless and ubiquitous energy of Leo was also turned against the overweening assertions of independence on the part of the episcopal potentates on both sides of the Alps. At the same time, however, the same pope pointed the way to his successors, even for their temporal policy in Italy. He was the first to demonstrate the importance of Southern Italy to the papal policy. Of course his own plans in that part of the country were wrecked by the Normans. Henry's ecclesiastical policy, therefore, had not only helped the reform party to victory but also led to the triumph of the idea of papal supremacy of the Church, which was inseparably connected with it. The preparatory scenes of the great drama of the following epoch were over. At the same time new forces sprang up in Germany: the cities and the petty lay nobility. Marked dissatisfaction prevailed, especially among the latter. Of course Henry was still too strong enough to subdue those rising powers. But for how long? It was already extremely ominous that Henry did not retain in his own hands the escheated Duchies of Bavaria, Swabia, and Carinthia. His failure to do so must needs bring its revenge, for the new dukes were unreliable men. The dissatisfaction was especially clamorous in Saxony. Here the people took offence at the taxation levied by the emperor and the strenuous Archbishop of Bremen, who sought to create a great northern patriarchate, but also strove to build up a strong temporal foundation for his bishopric.
HENRY

In the natural course of events this brought him into conflict with the lay nobility. While the king was carrying on futile military operations in the year 1051 and later, against the Hungarians, who were trying to throw off the suzerainty of Germany, the discontent in Germany came to a head in the revolt of Lorraine. This revolt, which was repeated several times, assumed a danger of proportion to the marriage of Duke Godfrey of Lorraine with Beatrice, widow of the Margrave Boniface of Tuscany, who was master of an important and commanding position in Upper and Central Italy. Henry endeavoured to break up this threatening coalition by means of a journey to Rome in 1055. But Godfrey instigated a French movement in Germany in opposition to the king in Southern Germany attained alarming dimensions. Henry, it is true, deposed the rebellious dukes, Conrad of Bavaria, and Guelph of Carinthia. But Duke Conrad stirred up the Hungarians and destroyed the last vestiges of German prestige in that country. The death of both the South German dukes in the interim soon led to the overthrow of the Duke of Lorraine. It was in these domestic troubles that the disastrous results of the emperor's leniency and indulgence were to appear most clearly and fully. Unbroken now was the opposition in Saxony: but defection in Southern Germany was unweakened the dangerous alliance of Lorraine and Tuscany in the South, unimpaired the growing power of the Normans, while the papacy grew without hindrance. All the forces with which the fourth Henry had to cope were in the field, ready for action, at Henry III's death.

FRAZER KAMPERS.

HENRY IV, German King and Roman Emperor, son of Henry III and Agnes of Poitou, b. at Goslar, 11 Nov. 1050; d. at Liège, 7 Aug. 1106. The power and resources of the empire left behind by Conrad II, which Henry III had already materially weakened, were still further impaired by the feebleness of the queen regent, who was devoid of political ability. The policy of Henry III, which had been chiefly directed towards asserting the freedom and independence of the duchies of Lower and Upper Saxony, met with the opposition of the princes. But now, under the regency, which continued the same policy, the hostility between the ecclesiastical and temporal nobles came to a climax on the kidnapping of the king from Kaiserswerth (1062). The regency passed into the hands of the princes after the death of the boy-of-age. At the outset Archbishop Anno of Cologne had charge of the government of the empire and supervised the education of the royal child. But he was soon compelled to accept the energetic Adalbert, Archbishop of Bremen, as a colleague. The boy's whole heart went out to the joyous, splendid-loving Archbishop of Bremen. That prelate was now de facto the real ruler of Germany. He returned with vigorous steps to the deserted paths of Conrad II's policy and attempted, not in vain, to restore the empire's prestige, particularly in the East. At the Diet of Tribur this masterful prelate fell a victim to the jealous hostility of the princes (1066). He outlived young Henry by 3 years; he was quite able to satisfy his violent craving for independence; and he determined to carry out the policy of Adalbert.

Henry IV's real political independence did not begin until 1070. When he seized the reins of government, thanks to the energetic rule of Adalbert, the condition of the empire was no worse than at the death of Henry III. But, meantime, the papacy had been entirely emancipated from the imperial power, and the German Church, on which Otto the Great had built up his power, had become more closely united to Rome and ceased to be a constitutional state church. Consequently, though this did not appear immediately, the foundations of a new system of church and state were laid. Strong and energetic popes had appeared on the scene and found allies. On the one hand the powers of Lorraine and Tuscany offered a valuable support to the papacy in Central Italy. Here Beatrice of Tuscany had contracted a matrimonial alliance with the son of Duke Godfrey of Lorraine. On the other hand Hildebrand's admirable and consummate policy had likewise gained allies in the southern half of the peninsula among the Normans. And finally the high Church party did not lack friends even in Northern Italy. The Pataria of Milan, a democratic movement that combined an economic with an ecclesiastical reform agitation, was won over by Hildebrand to the cause of the Papal See.

This policy inaugurated by Hildebrand already indicated opposition to the empire. It is true that on the German side there was a reaction against violations of the legal status prevailing in papal elections and other ecclesiastical affairs; but defection in Southern Germany was unweakened. The young Henry IV was on the side of the reform party and its masterful spokesman Hildebrand, who, as Gregory VII, was soon to come forward as the young king's opponent. (See GREGORY VII, POPE; INVESTITURES, CONFLICT OF.) Hatred and passion distorted the portraits of both these men in contemporary history. Even to-day we can see only faint outlines of these two men, the central figures of a tragedy of world-wide historical import. We know that Henry IV had a good literary education, but that his literary and artistic interests were not profound and were not, as in the case of his father, submerged in unpractical futility. He was a conscientious realist. He failed altogether to understand the politico-religious aims of his father's policy. Some of his contemporaries disparaged his moral character, with some justice perhaps, but certainly with much exaggeration. Of course his nature was passionate: that is probably the reason he never in his whole reign acquired the character of a harmonious ruler. Old times he was plunged in the depths of despair, but he always reacted against the most serious disasters, overcame the worst fits of despacency and was ready to renew the combat. He was also a clever, though perhaps not always an honest, diplomatist. This happy property was always his greatest help to carry on the policy of his father. His policy was carried on by his pride as a ruler, his earnest defence of the dignity of the empire and his benevolent care for the peace of the empire and the welfare of the common people. Henry had no sooner become independent than he reverted to the principles that governed the policy of Conrad II. He also founded his military power on the ministerials, the lower nobility. These ministerials were to counterbalance the power of the spiritual and temporal princes, the latter of whom, however, were beginning to achieve territorial independence and to establish within the State a power that could not be overestimated. With his usual hopefulness Henry expected to be able to crush them: he believed that he could at least revive the power of Conrad II. Henry's strong hand first made itself felt in Bavaria. Otto von Northeim lost his duchy and important possessions in Saxony besides. The king bestowed the duchy on Guelph IV, son of Azzo of Este. We now find the young Henry's characteristic mark for the Saxon lands of Otto von Northeim he sought to create a well rounded personal domain which was to provide an economic basis for his royal power. This personal domain he sought to protect by means of royal fortresses. But to the ever restless Saxons, whose ancient rights the king had indubitably
violated in the consolidation of his landed possessions, these fortresses might well appear so many threats to their liberties. Soon, not only in Saxony, but elsewhere throughout the empire, the particularist princes rose to oppose the vigorous centralizing policy of the emperor, and the situation assumed a dangerous aspect. Henry’s diplomatic skill was now shown. Through the mediation of the spiritual princes the Treaty of Gerstungen (1074) was effected, by which, on the one hand, the king’s possessions were left intact, while, on the other, the insurgents secured the dismantling of the royal fortresses and the restoration of all their rights. But the situation broke out anew and was not subdued until Henry’s victory at the Unstrut (1075), which resulted in the overthrow of Saxony. Henry seemed to have attained all his desires. In truth, however, the particularist forces had only withdrawn for the moment and were awaiting a favourable opportunity to break the chains which fettered their independence. The opportunity soon came.

In 1073 Hildebrand had ascended the papal throne as Gregory VII. The “greatest ecclesiastical statesman”, as von Ranke calls him, directed his attacks against the traditional right of the German kings to participate in the filling of vacant sees. At the Lenten synod of 1075 in Rome he forbade investiture by laymen. The bishops were to cease being dependents of the Crown and become materially the dependents of the papacy. That forebode a death-blow to the existing constitution of the empire. The bishops of the empire were also the most important interest of the empire: the imperial church domains were also the chief source of income of the emperor. It was a question of life and death for the German Crown to retain its ancient influence over the bishops. A bitter conflict between the two powers began. A synod at Worms (1076) deposed Pope Gregory. Bishops and King again found the imperial interest fettered by the papacy. Gregory’s answer to Henry’s action was to excommunicate him at the Lenten synod of the same year. For the particularist powers this was the signal of revolt. At Tribur Henry’s opponents formed an alliance. Here the final decision in Henry’s ease was left to the pope, and a resolution was passed that if Henry were not freed from excommunication within a year he should forfeit the empire. At this critical juncture, Henry decided on a surprising step. He submitted himself to solemn ecclesiastical penance and thus forced Gregory as a priest to free him from excommunication (1077).

By doing so Gregory in no wise gave up his design of making himself the arbiter of Germany. In Gregory’s opinion Henry’s penance could only postpone but not prevent this arbitration. Henry was satisfied once more to set his feet on solid ground. But the German princes now broke out into open revolution. They set Rudolph of Rheinfelden up as rival king. With his difficulties, however, Henry’s ability grew more apparent. He had now the resources of a diplomatist. In his struggle with the pope, who took the side of the German princes, he made use of the opposition within the Church in Italy against the hierarchical aims of the Curia; in his dispute with the princes and their rival king Henry looked for support to the loyalty of the masses, who however the present emperor disheartened. After several years of civil war, Rudolph lost his throne and his life at Mölsen in 1080. By his death

the opposition in Germany lost their leader. In Italy also affairs took a more favourable turn for Henry. It is true that in 1080 the pope had excommunicated Henry anew, but the ban did not make the same impression as before. Henry retorted by setting up Guibert of Ravenna, who proclaimed himself antipope under the title of Clement III. The growing opposition within the Church aided Henry on his journey to Rome in 1081. From 1081 to 1084 he went four times to the Eternal City. Finally his antipope was able to crown him in St. Peter’s. Soon after the pope was liberated by his Norman allies and escorted to Salerno, where he died, 25 May, 1085.

The struggle was continued under Gregory’s successor, Urban II, who was determined to follow in Gregory’s footsteps. Germany was suffering from the horrors of civil war, and the great masses of the people still supported their king, who in 1085 proclaimed the Truce of God for the whole empire. By means of skilful negotiation he now succeeded in winning over the greater part of the Saxons, to whom he restored their ancient rights. On the other hand the ranks of the bishops loyal to the king had been thinned out by the clever and energetic policy of the pope. Moreover a new and dangerous coalition was formed in Italy when the seventeen-year old Guelph married Matilda of Tuscany who had reached the age of forty. Henry’s efforts to break up this alliance were successful at first; but at this point his son Conrad deserted him. The latter had himself crowned in Milan and formed alliances with the pope and with the Guelph-Tuscan party. This had a paralysing effect on the emperor, who passed the year 1094 inactive in Italy, while the pope became the leader of the West, in the First Crusade. Fortunately for Henry’s interests the younger Guelph now dissolved his marriage with Matilda, and the elder Guelph made his peace with the king once more. The latter was now able to return to Germany and compel his enemies to recognize him. His son Henry was elected king in 1095.

Henry sought to restore order once more, even to the point of proclaiming general peace throughout the empire (1103). This policy of pacification benefited the great mass of the people and the rapidly growing cities and was directed against the disorderly lay nobility. Perhaps this may have induced the newly chosen young king to take up arms in rebellion against his father. Perhaps he wished to make sure of the sympathies of this nobility. At all events the younger Henry gathered a host of malcontents around his banner in Bavaria in 1104. Supported by the pope, to whom he owed obedience, he betook himself to Saxony, where he soon reawakened the traditional hatred of the Saxons. No succor and no humiliation was spared to the prematurely aging emperor, who was kept prisoner in Böckelheim by his intriguing son and compelled to
Henry V, German King and Roman Emperor, son of Henry IV; b. in 1081; d. at Utrecht, 23 May, 1125. He was a crafty, sullen man, of far from blameless morals; but he defended tenaciously the rights of the Crown and, by his qualities as a ruler, the most conspicuous of which were prudence and energy, he achieved important results. His harshness and want of consideration for others made him numerous enemies. Henry V ascended the throne under a compact with the papacy and the territorial princes, that is, with his father's bitterest opponents. Yet he had so carefully taken up the reins of government when he forsook with adopted the very policy which his father had pursued. It is true that he saw fit to preserve toward Rome a semblance of readiness, but be fraught with the most serious danger. Disregarding totally the lessons of history, he suggested a radical measure, the condemnation of the pope and the excommunication of all the great strife between pope and emperor. He determined to realize the monastic ideal of a Church free from all worldly entanglements. Therefore bishops and abbots, the entire German Church, were to surrender to the king all their worldly possessions and rights. The king was to abandon in return the right of investiture, henceforth worthless. The latter, who saw nothing but gain in this proposal, accepted the offer. He was too shrewd not to realize that the pope's plan was impossible of execution. It is true that he had no serious intention of depriving of their possessions the ecclesiastical lords and their vassals, while he attached much importance to the unequivocal way in which the king's secular temporal possessions of the Church were to be recognized. However, no actual agreement was ever reached. The German princes in Rome, on reading the papal proposition, openly proclaimed their disapproval. Henry, after this vehement protest, demanded of the pope the right of investiture and the imperial crown. As the latter refused both, he carried him off a prisoner. Yielding to force, the pope agreed to Henry's demands, and at the same time swore that he would never excommunicate him. Henry, after this success, returned to Germany. He stopped on the way back, to visit Countess Matilda of Tuscany, who made him the heir of all her estates.

Meanwhile the followers of the pope resumed their activity. The weakness of Paschal was loudly denounced. The Burgundian archbishop, Guido of Vienne, declared investiture a heresy and excommunicated the king. And as had happened in the days of the latter's father, this attack of the reform party on Henry found support in the opposition of the German princes. As so often in the past, Saxony particularism again manifested itself. In Saxon, the last male heir of the House of Billung had died. The new duke, Lothair of Supplinburg, placed himself at the head of a strong movement against the king, who did not meet this attack with equal vigor. The years 1114 and 1115 brought the uprising to a critical phase for Henry, who was defeated at Welfesholze, near Mansfeld, whereupon the traditional thirst for independence reasserted itself on many sides. First one and then another of the German ecclesiastical princes excommunicated the king. A papal envoy made his appearance in Saxony. Henry, despite the seriousness of this situation, hastened to Italy on learning the death of Countess Matilda in 1116, and led his army towards Rome. The pope fled and sought refuge among his friends, the Normans. The German ruler was joined by the Romans, had himself crowned emperor at St. Peter's (1117), and at once set out to restore order in Upper Italy. The prudent endowment of cities with privileges, coupled with his gifts to the Italian nobles, enabled him to carry out his plans. He took possession of the hereditary lands of Countess Matilda, and thus strengthened his power in Italy.

In 1119, Henry's most outspoken adversary, Guido of Vienne, ascended the papal throne as Callistus II. The emperor perceived that the conflict was to begin anew with fresh violence, and in order the better to protect himself, determined to put an end to internal
Henry VI, German King and Roman Emperor, son of Frederick Barbarossa and Beatrice of Burgundy; b. in 1165; d. 28 September, 1187. He became German King on 15 August, 1109. In many ways he afforded a strong contrast to his father. Whereas the latter, even in his old age, was an imposing figure on account of his powerful frame and the impressiveness of his actions, his son, pale and slender, was of a meek and gentle disposition; the latter a man of action, experienced, and idolized by his people, the former somewhat solitary. Henry was a positive character, not easy to penetrate, who took his measures according to well-considered and statesmanlike views.

Henry VI was great in his conceptions, great also in the energy with which he pursued his aims, clearly conscious of passing failures but never daunted by them. The restlessness which led him ever to advancement of his aims, and the ambition that ever impelled him to enlarge his empire (semp er Augustus), often make him appear nervous and not less frequently hard and unforgiving. It is natural that such a man living in such an age should aim at world-empire. And the key to this ambitious policy of Henry's lay in Sicily. Having married Constance, daughter of Emperor II of Sicily, Henry became the heir of William II upon the latter's death without issue (18 November, 1189).

Henry was the legitimate heir, but the Neapolitan princes were in no humour to tolerate a German emperor over them. Precarious as the conditions were then in Germany, Henry was determined to act at once and with vigour. Henry the Lion had returned from exile in violation of his oath. His father-in-law, Richard cousin de Lion of England, abetted him in his revolt. After fighting with varying success, both parties were inclined to make peace. This was especially true of the king, who wished to have his hands free for his Italian projects. The peace was a sham. It provided that Duke Henry should be left undisturbed and should have half of the revenues of Lübeck, while on the other hand Brunswick and Lübeck were henceforth to be open cities and two of the duke's sons were to remain at the king's court as hostages. Meanwhile the nationalist party in Sicily had placed the able Tancred of Lecce on the throne. Pope Clement gladly ratified the election of this national king and absolved all the Sicilian nobles from the oath they had sworn to the German king. His successor on the papal throne, Celestine III, thought that he might safely refuse the imperial crown to the German king though his power was steadily growing. Byskful diplomatic methods, and especially by taking advantage of the local conditions in the city of Rome that were the cause of so much trouble to the papacy, Henry finally managed to change the pope's mind.

Kosen Priory vom 13. April 1181 (Berlin, 1883); GERMANY, Die erste Komnit Heinrich's V. (Heidelberg Dissertation, 1890); BERNHEIM, Zur Geschicht der Wormser Konkordat (Göttingen, 1870); SCHAPER, Zur Bestellung der Wormser Konkordat in Abhandlungen der Ber. Akademie (1905). BERNHEIM, Das Wormser Konkordat und seine Vorzüge (1906), and RUSSELL, Zur Erklärung der Wormser Konkordat (1908), take issue with the last mentioned work.

FRANZ KAMPEL.
Henry was crowned emperor in St. Peter's, 15 April, 1191. Thereupon he started at once for his hereditary possession, Sicily, at the head of his army, but the enterprise was doomed to complete disaster. While the emperor was besieging Naples, Henry the Lion's son, Henry, escaped from the king's camp in order to stir up the rebellion in Germany. In fact, Cologne and the Lower Rhine, as well as the Saxon Guelphs, entered into an alliance against the emperor. England was the backer of the league. Upon his return to Germany the opposition was fostered by the dispute over the Liège succession. Henry now acted with offensive recklessness in filling the vacant bishoprics. In Liège this led to bloody disturbances. In that town the pope's candidate, Albert, a brother of the Duke of Brabant, was murdered by German knights (1192). The emperor was accused of complicity—probably without reason. The insurrection now spread throughout all the provinces on the Lower Rhine. The conspiracy of the princes assumed constantly increasing proportions. The war was in league not only with the King of England but also with the pope and the rival King of France. The Guelphs themselves were won over by means of a matrimonial alliance with the emperor's consent, between the Guelph Duke Henry and Armgard, a cousin of the emperor and daughter of the Count Palatine Conrad of the Rhine.

Richard of England had returned to his kingdom as a vassal of the German king. Thereby the first step had been taken towards a far-reaching policy of expansion. Henry was now able to start on his second expedition to Italy (1194) with a much stronger force. King Tancred had died there, 20 February, 1194. His only issue was an infant son. Henry was able to enter Palermo without opposition. The day after his coronation his wife Constance bore him a son who was baptized and received names held in especial honour by the Normans, Frederick and Roger. This child was now the legitimate heir to the throne of Sicily. With the birth of this son the idea of an hereditary imperial crown first assumed really tangible shape in the emperor's mind. He was already thinking of the constitutional union of Sicily with the empire. Thereby—so ran his thoughts—the hereditary right to the throne of Sicily would accrue to the Roman imperial crown. This plan was naturally the first step to a policy looking towards world-empire and would have divested the empire of its national character. Henry pursued this design obstinately, although as he well perceived, it was unfeasible without the co-operation of the pope and of the German princes.

He was prepared to purchase the assent of the German princes by concessions, but subsequently he was willing to give up the right of spoils to the spiritual princes and to grant the temporal princes the right to transmit their fiefs which had become hereditary by tradition, to the female line. Perhaps they were only apparent concessions, perhaps it was Henry's purpose after the acceptance of his scheme to extend Sicilian regulations with their princely official to Germany. The German territorial lords would have been automatically and gradually reduced thereby to the status of large landed proprietors. The emperor's power was so great that at first no serious opposition was made to his plan. But it was not long before the Saxon princes and the Archbishop of Magdeburg opposed it. Henry shrewdly put aside his great plan of an hereditary empire, satisfied for the time being with the election of his son Frederick as king at the Frankfort Diet.

The years 1196-97 saw the Staufen kingdom at its zenith. England and half of France were vassals to the empire, Hungary and Denmark acknowledged the suzerainty of Germany. Once more the national party in Sicily rose in rebellion against the emperor's growing power, and this time it seems to have been in league with Henry's hot-blooded wife, Constance. But a plot for a general massacre was discovered in time and suppressed, and thus the movement failed. The course was now absolutely clear for Henry's policy of world-empire. With Sicily as a centre, Henry pursued a Mediterranean policy that was to recall ancient Roman times. Already he seriously thought of conquering Constantinople and had demanded the cession of territory from the Byzantine emperor. Already the Kings of Cyprus and Armenia became the vassals of Henry. A crusade on a magnificent scale was to crown Henry's world-policy. In fact, 60,000 crusaders left Sicily in 1197, led by Henry's chancellor, Conrad. The emperor intended to follow later. However, Henry VI died at the height of his power. Of this the chronicler of St. Blasien writes: "His premature death should be mourned by the German people and by all men throughout the empire. For he increased their glory by the wealth of foreign countries, struck terror into the surrounding nations by his bravery and proved that they (the Germans) would certainly have surpassed all other nations had not death cut him short."

Henry's death in truth foreboded a catastrophe for Germany.

FRANZ KAMPER. 
Henry of Friemar (De Vrmaria), German theologian; b. at Friemar, a small town near Gotia in Thuringia, about the end of the thirteenth century; d. probably at Erfurt about 1356. At an early age he entered the Order of Augustinians, which he was sent to the University of Paris, where he was made master in sacred theology, and taught there until 1318. In that year he was made regent of studies in the monastery of St. Thomas, Prague, and examiner for Germany. After he was chosen provincial for Thuringia, he went to Paris and France, and examined for Germany. Later he was chosen provincial for Thuringia, and in the summer of 1352 he was called to the court ofhe, De Spiritibus, Eorumque Discretione"; (3) "Tractatus de Beata Marie Virginis Conceptione" (Louvain, 1664); (6) "De Origine Fratrum Eremitarum Sancti Augustini".

Francis E. Touscher.

Henry of Ghent (Henricus de Gandavo, known as Ghentus or Gandavus), a valuable scholar, poet, philosopher and theologian of the thirteenth century, better known by his works than by his life; d. at Paris or Tournai, 1293. He was born at Ghent in Belgium. The exact year of his birth, early in the thirteenth century, is unknown, as also his family name, the name Godhis (Godhis) being given to him. It is called Henricus de Muda or Maudanus or de Plagam, probably from his place of residence in the town of Tournai, where we find him living in 1267 as a secular priest and canon. In 1276, the date of his first disputatio of quodlibet, he appears as Archdeacon of Bruges, and a few years subsequently as Archdeacon of Ghent. He does not seem to have resided permanently at the University of Paris, where he must have taught for frequent and prolonged periods at the great intellectual metropolis, for he was well known and highly esteemed there. In 1277 he received the degree of Magister or Doctor of Theology. In 1292 he was selected with two others by Martin IV to arbitrate in the dispute about the privileges of the mendicant friars in regard to hearing confessions: he defended the rights of the bishops as against St. Bonaventure and the regulars. From this to the end of his life he figured prominently in the ecclesiastical affairs of the Church as well as in the life of his country. Recent researches have eliminated much of the legendary from his biography, notably the story that he was a Servite or at least a member of some religious order.

As philosopher and theologian Henry ranks immediately after his great contemporaries, St. Thomas, St. Bonaventure, and John Duns Scotus. He lived through the golden age of Scholasticism, in the midst of the intense intellectual activity which marked the close of the thirteenth century. His two greatest works, the "Quodlibeta" and the "Summa Theologica," have been the subject of innumerable commentaries, though the psychological and metaphysical questions which he treated all remained open. Henry, as a theologian, was a critic of the Scholastics, and his criticisms are often vigorous and convincing. His occasional want of clearness has exposed him to severe criticism, especially from Duns Scotus. Hence also his have claimed, but without sufficient foundation, to detect the seeds of unorthodox views in his philosophy and theology. He has been somewhat persistently described as a medieval Platonist, but such a description is misleading. Like the other great scholiast, he was an Augustinian, but he was sent to the University of Paris, where he was made master in sacred theology, and taught there until 1318. In that year he was made regent of studies in the monastery of St. Thomas, Prague, and examiner for Germany. Later he was chosen provincial for Thuringia, and in the summer of 1352 he was called to the court of

Henry is the author of the following works: "Disputationes Quodlibetales" or "Quodlibeta" (Paris, 1518; Venice, 1608, 1613; "Summa Theologica," incomplete, containing only the prologue and theodicy (Ghent, 1520; Ferrara, 1648); "Liber de Scriptoribus Illustribus," probably not authentic (Cologne, 1580). Still unpublished: a short "Treatise on Logic" (Bruges and Erfurt libraries); "Treatise on Artis, de Physica" (Paris, Bib. Nat., n. 1690); "Questions on Aristotle's Metaphysics," of doubtful authenticity (Ecclesiary library); a treatise "De Virginitate" (Brussels and Berlin libraries); "Questiones super Decretalibus" (Vienna library); many unpublished sermons.

Henry of Herford (Herwooden; Herwodin), priest and chronicler; date of birth unknown: died at Minden, 9 Oct., 1370. He was a native of Herwodin, Westphalia, and was professor in the Dominican friary at Minden, and in 1359 succeeded as chronicler "Liber de rebus memorabilioribus," in which he summarizes the work of older historians from Eusebius down to the writers of his own age. The work, which is continued down to the coronation of the Emperor Charles IV in 1355, was one of the chief sources of historical information in fourteenth-century literature. It was printed under the editorship of Pothast at Göttingen in 1859. He also composed the "Catena aurea in decem partes distincta," a summary of theology, and a treatise—still unpublished —"De Conceptione Virginis gloriae". Seven years after his death the emperor caused his remains to be solemnly transferred to a place of honour near the high altar.

Henry of Huntington, historian; b. probably near Ramsey, Huntingdonshire, between 1050 and 1055; d. 1155. Little is known of his life except from chance allusions in his own works. He refers to the Abbots of Ramsey as his lord, to Lincoln as his diocese and to Albinus of Angers as his teacher. The opening
section of his “Epistola de contemptu mundi” suggests that he was educated in the household of the Bishop of Lincoln, Robert Bloe (1083–1213). In 1109 or 1110 he was made archdeacon of Huntingdon, so that he was then already a priest. His interest in history was due to a visit to the Abbey of Bec, which he made, I believe, in 1099, at the direction of Bishop Theobald of Lincoln in 1139, for at Bec he met the Norman historian, Robert de Torigny, who brought to his notice the “Historia Britonum” of Geoffrey of Monmouth. Shortly after he was himself requested by Alexander, Bishop of Lincoln, to undertake the composition of a history, using the writings of Venerable Bede as groundwork. This he did, carrying the work down to the death of Stephen in 1154. The early part of his work is taken from the customary sources, but from 1127 he is original and writes as an eye-witness. His details are, however, occasionally invented, and his chronology is not reliable. To the later copies of his history he added two books entitled “De miraculis” and “De summitatibus,” the former relating the miracles of several Anglo-Saxon saints, the latter containing his epilogue and the three letters on historical subjects. One of these is the “Epistola de contemptu Mundi,” printed in Migne (P. L., CXCV), Wharton (1886), and as an appendix to the “Anglia Sacra”. Two books of epigrams are found in a Lambeth MS., and according to Leland there were six other books of these, as well as eight books “De Amore”, and treatises “De Herbis”, “De Aromatibus”, “De Germis”, and “De Lege Domini”, but these are no longer extant. Probably he died in 1155, as a new archdeacon of Huntingdon is found in that year. His tomb is in Lincoln Cathedral. “Henrici Archidiaconi Huntingdonensis Historiarum Anglorum,” edited by Thomas Arnold (R. S., London, 1879), is the latest and most critical edition, with a valuable introduction. The history, as printed by Sibthorp in “Scriptores historiarum Anglorum” (London, 1596), is reprinted in Migne, P. L., CXCV. The “Epistola de contemptu Mundi” is printed in Wharton’s “Anglia Sacra”, II, as well as in the Rolls Series and Migne. One book of the epigrams will be found in Wright’s “Anglo-Latin Satirical Poets and Epigrammata of the Twelfth Century”, II, R.S. (London, 1872).

Henry of Kalkar was celebrated not only as a writer, but also as a reformer. During his priorate at Arnhem he had the happiness and honour of “converting” one of his friends and fellow-students at Paris, Gerard Groote (the future founder of the “Brothers of the Common Life”), whom he attracted into his Charterhouse and directed for three years. Moreover by his spiritual writings, he exercised for the whole of his life the influence of a recognised master. He was to this extent the organizer of the great movement of the Catholic Renaissance, which, initiated at Windesheim and in the convents of the Low Countries, went on developing throughout the fifteenth century, and found its greatest expression in the Council of Trent. He distinguished himself in the eyes of his contemporaries by his religious zeal, his great piety, and above all by his remarkable devotion towards the Blessed Virgin, who, it is said, deigned to appear to him several times. Indeed such was his reputation, that many attributed to him, though wrongly, the institution of the Rosary and the composition of the “Imitation of Christ”, and Blessed Canisius went so far as to insert his name in his German martyrology for 20 December.

As a writer he has left a number of works on very diverse subjects. Among his works are: a distinguished musician, theologian, and ascetic, he composed the treatises: “Loquagium de rhetoricâ”, “Cantuagium de musicâ”, “De Continentiis et Distinctione Scientiarum”, and was also the author of sermons, letters, treatises on the spiritual life, etc. In his later works, he never ceases to express his scattered knowledge in different libraries—At Basle, Brussells, St. Gall, etc. One alone has been published and has enjoyed a strange career, the “Exercitatorium Monachale” or “Tractatus utilis profeccione voluntibus”. Inserted in a number of manuscripts of the “Imitation” before this book, it has sometimes passed as an unedited book of work, and was published as such by Dr. Liebner at Gottingen in 1842. Several times reprinted, especially by Mgr. Malou in his “Recherches sur le véritable auteur de l’Imitation”, it has been translated into French (Waille, Paris, 1844) under the title “L’Imitation de Jésus-Christ, livre inédit trouvé dans la Bibliothèque de Quedlinbourg”. Moreover it has in great part passed into the “Mystica theologica” (chap. I) of Henry of Balma, and into the treatise “De Contemplatione” (lib. I, art. xx) of Denis the Carthusian, and, after having inspired Thomas a Kempis and Garcia de Cisneros, it furnished St. Ignatius with some ideas for his famous “Exercises”.

Le Vasseur, Epigraph. Ord. Cart. IV (Montrouer, 1862), 540; Petrus, Biblioth. Catholiciana, p. 131 (Cologne, 1747); Féréy, La Faculté théologique de Paris, IV (Paris, 1897), 377; Hentsch and Haun, Realencyklopädie, VII (Leipzig, 1906), 602; Bruquet in Etudes publiées par les Pères de la Comp. de Jésus (June, 1900), 691.

Ambroise Mougel.

Henry of Langenstein (Henry of Hesse the Elder), theologian and mathematician; b. about 1325 at the villa of Hainbuch (Hembuche), near Landenrodt in Hesse; d. at Vienna, 11 Feb., 1387. He studied at the University of Paris, where he also became professor of philosophy in 1363, and of theology in 1375. In 1368, at the occasion of the appearance of a comet, which the astrologers of his times claimed to be a sure foreboding of certain future events, he wrote a treatise entitled “Questio de cometa”, in which he refutes the doctrine of the appearance of comets, and refutes the superstitions. At the instance of the university he wrote three other treatises on the same subject, completed in 1373. When the Western Schism broke out in 1378, Henry sided with the lawfully-elected Urban VI against Clement VII, and wrote various treatises in defence of the former. In 1379 he composed “Epistola pacis” (see “Helmstädter Programm”, 1779 and
1780) in which, under the form of a dispute between an Urbanist and a Clementine, he advocates the suppression of the schism by way of a general council or a council of the light. In 1381, Conrad of Gelnhausen, who had formed the basis of a discourse delivered by Cardinal Pietro Philargi, the future Alexander V, at the first session of the Council of Pisa (26 March, 1409); see also Bede, who was present at the Council of Constance (1414–1418), with the exception of the first and the second chapter, which were afterwards published by the same author in "Discrepancia ss. et editionum" (Helmstadt, 1715), 9–11.

When in 1382 the French court compelled the professors of the Paris university to acknowledge the doctrine of the Assumption of Mary, Henry, in the case of his monastic orders, was among those who spent some time at the Cistercian monastery of Eberbach near Wesbaden. A letter which he wrote here to Bishop Eckard of Worms, and which bears the title "De scientia," was edited by Sommerfeldt in "Historisches Jahrbuch" (Munich, 1890). 1517, 46–48. Another letter written here to the wish that the bishop, on the occasion of the death of the bishop's brother, is entitled "De contemptu mundi" and was edited by Sommerfeldt in "Zeitschrift für kath. Theologie" (Innsbruck, 1905), XXIX, 406–412. A second letter of consolation, written about 1384, was edited by Sommerfeldt in "D. H. F. H. A. H. (Munich, 1909), XXX, 298–307. Following the invitation of Albert III, Duke of Austria, he came to the University of Vienna in 1384, and assisted in the foundation of a theological faculty. Here he spent the remainder of his life, teaching dogmatic theology, exegesis, and canon law, and writing numerous treatises. He refused an episcopal see which was offered him by Urban VI. Roth (see below) ascribes to him seven works on astronomy, eighteen historico-political treatises on the schism, seventeen polemics, fifty ascetical treatises, and twelve epistles, sermons, and pamphlets. Among his printed works the most important is the "Immaculata Conception" (Strasbourg, 1500); "Contra disceptationes et predications contrariis fratum Mendicantium", another defence of the Immaculate Conception against some of the Mendicants (Milan, 1480; Basle, 1500; Strasbourg, 1516); "Speculum Anima" or mirror of the soul, an ascetical treatise edited by Wimpeling (Strasbourg, 1507); "Secreta Sacredotum", treating of certain abuses in the celebration of Mass, edited by Lomhayer (Heidelberg, 1489), and often thereafter; "De contractibus et venditiones", a very important work, on the politico-economical views of his time, published among the works of Gerson (Cologne, 1483), IV, 185–224. Other valuable treatises are: "Summa de republica", a work on public law; and "Cathedra Petri", a work on ecclesiastical policy, both still unedited.

HARTWIG EDER, 237

Henry of Nordlingen, a Bavarian secular priest, of the fourteenth century, date of death unknown; the spiritual adviser of Margaretha Ebner (d. 1351), the mystic of Medingen. Henry's many acquaintances, his travels, his influence as a director of souls, as preacher and confessor, excite a special interest because of the light that they throw on the development of mysticism, and the religious state of Germany at the time of Louis of Bavaria. Among the laity of both sexes, the nobility, and in monasteries of men and women, from the Low Countries across the Rhineland, Bavaria, etc., to Northern Italy, we find the teachings of the Gottesfreunde, coming into intercourse with one another; Henry is often the connecting link. He writes to, or visits, Margaretha Ebner, Tauler, Christina Ebner, Suso, Rulman Merswin, etc.; he translates into High German the book of Mechthild of Magdeburg and urges other mystics, as well as his sister, Gottesfreunde, to send their writings and instructions are received by the Cistercians of Kaisheim, etc., the Dominican nuns of Engelthal, Medingen, etc., the Bernardines of Zimmern, etc., and by the Benedictine nuns of Hohewart, etc.; to his correspondents he sends books now of theology (St. Thomas), now of mysticism, with relics, etc. But, as in the case of many other mystics of his time, the life of Henry is unhappily unknown to us save from his correspondence and the writings of the Ebners during the period between 1323 and 1351. Of these nineteen years, the first three were spent in or about Nördlingen, where Henry was the beloved director of a group of mystics who wished to withdraw from the world. In 1335 he set out for Avignon on a voluntary exile in consequence of the dispute between the pope and the emperor. In 1339, a short while after his return to Nördlingen, his fidelity in abiding by the interdict brought him into a critical position, and he went by way of Augsburg and Constance to Basle, where he found Tauler and whither several of the Gottesfreunde followed him from Bavaria.

At Basle (January, 1339), which he now made the centre of his activity, his success in the confessional and pulpit brought crowds to him, especially in 1345. Letters to Margaretha Ebner give an idea of his work, fears, and hopes; in 1346–7 he made several trips to Cologne, Bamberg, etc.; then he left Basle, much regretted by the Gottesfreunde, and after a wandering life of preaching in Alsace (1348–9), while the black pest was raging in Germany, he returned to his country (1350), a little before the death of Margaretha Ebner. He was a correspondent of Christina Ebner, and his letters to the aged Christina Ebner of Engelthal, but after 1352 nothing more is heard of him.

His works consist of a collection of fifty-eight letters, of which but one manuscript remains (British Museum). It is the first collection of letters, properly so called, in German literature, as the letters of Henry, Suso, which are an earlier composition, are practically sermons, a title which they bear in many manuscripts. We remark in these letters the tender sympathetic soul of Henry, impressionable and burning with zeal for the practice of the interior life and union with God; they are not speculative, or deep meditations on moral, but rather the communication of the soul of Henry. Of Henry's preaching in Basle and Alsace nothing has been handed down to us, if indeed anything was ever written. To his letters must be joined the translation from Low German into High German of the work of Mechthilde, now at Einsiedeln; but for him, this precious jewel of German literature would have been preserved to us only in a Latin translation, inaccurate and incomplete.

SCHAUER, Margaretha Ebner und Heinrich von Nordlingen (Furth und Tubingen, 1882); Strach, Der General-Kongress im grossen und ganzen (Cologne, 1892); Appel, De Vlamingen, Un groupe mystique allemand (Brussels, 1957), 312, 423, etc.

J. de Gellinck.

Henry of Rebdorf, alleged author of an imperial and papal chronicle of the thirteenth and fourteenth centuries, is not an historical personage. The only
connexion between the chronicle to which the name of Henry of Reibold has been attached and the foundation of the Augustinian canons at Reibold, near Eichstatt, Bavaria, lay in the fact that the first editor of the said chronicle published it from a manuscript preserved in the Bibliothèque Nationale at Paris, while other manuscripts, displaying no essential points of difference, are known to exist in the monastery of Neuburg and in the Hof-bibliothek at Vienna. Its title is: "Chronia", or "Annales rerum ab imperatoribus Adolpho, Alberto, Frederico, Ludovicio, Barbaro, et paparum", or "Annales imperatorum et paparum". It is a chronological treatise extending from 1294 to 1362, and consists of two parts. The first part is a sequel to what is called the "Flores Temporum", a well-known chronicle of the world's history compiled by a Swabian Franciscan, and reaches to the year 1343; it was probably compiled by an unknown writer about 1340 or 1347. The second part is a history of the twenty years from 1343 to 1363. Its author was the magister Heinrich Taub, or Heinrich der Taube (Heinrich der Dief), or Henricus Surdus of Selbach, who officiated as chaplain at St. Willibald's in Eichstatt and died about 1364. Various conjectures have been made as to the personality of the author, but nothing certain has been established. The chronicle itself, particularly in its second part, has some importance, and was first edited by Freher in "Rerum Germanicarum Scriptores", I, 411–52 (Frankfort-on-the-Main, 1600); 2nd ed., 1634; again by Gewold (Ingolstadt, 1618); later by Struve (Stassfurt, 1717), and finally by Böhmer-Ruber in "Fontes rerum Germanicarum", IV (1688), 507–68. It was translated into German under the title: "Annales Imperatorum et Paparum Eistettenae", by Dieringer (Eichstatt, 1883); also by Grandaur in the "Geschichtschreiber der deutschen Zeitvon" (Leipzig, 1883).

PATRICK SLAGER.

Henry of Segusio, Blessed, usually called Hostiensis, an Italian canonist of the thirteenth century, b. at Susa (in the ancient Diocese of Turin); d. at Lyons, 25 October, 1271. He gave himself up to the study of Roman law and canon law at Bologna, where he seems to have taught, and to have taken his degree "utrusque juris". He taught canon law at Paris, and spent some time in England, whence King Henry III sent him on a mission to Innocent IV. Later he became Provost of Antibes, and chaplain to the pope and was soon promoted to the See of Sisemond (1244), afterwards to the Archdiocese of Embrun (1250). He became Bishop of Chieti and Velletri, 4 July, 1261, whence his name Hostiensis. His health forced him to leave the conclave which, after the Holy See had been vacant for three years, elected Gregory X (1271–1276). As a canonist Hostiensis had a great reputation. His works are: "Lectura in Decretales Gregorii IX" (Strasbourg, 1512; Paris, 1512), a work begun in Paris but continued in his whole life; "Summa super titulus Decretalium" (Strasbourg, 1512; Cologne, 1612; Venice, 1605), also known as "Summa archiepiscopi" or "Summa aurea", written while he was Archbishop of Embrun, a useful work on Roman and canon law, which won for its author the title of "Magnes Henrici", lumen et sepulchrum Dei..."

Henry Suso (also called AMANDUS, a name adopted in his writings), Blessed; German; note, b. at Ulm, 21 March, about 1295; d. at Ulm, 25 January, 1366; declared Blessed in 1831 by Gregory XVI, who assigned his feast in the Dominican Order to 2 March. His father belonged to the noble family of Berg; his mother, a holy woman from whom he took his name, to a family of Susa (Süde). When thirteen years of age he entered the Dominican convent at Constance, where he made his preparatory, philosophical, and theological studies. From 1324 to 1327 he took a supplementary course in theology in the Dominican studium generale at Cologne, where he sat at the feet of Johann Eckhart, "the Master", and returned at the end of the term. Returning to Constance, he was appointed to the office of lector, from which he seems to have been removed some time between 1329 and 1334. In the latter year he began his apostolic career. About 1343 he was elected prior of a convent, probably at Tübingen, later at Möggenhofen, and then to the convent at Ulm, where he remained until his death.

Suso's life as a mystic began in his eighteenth year.
"Aken, giving up his careless habits of the five preceding years, he made himself "the Servant of the Eternal Wisdom", which he identified with the Divine essence and, in a concrete form, with the personal Eternal Wisdom made man. Henceforth a burning love for the Eternal Wisdom dominated his thoughts and deeds. The idea of the divine influence was especially strong in many convents of women, particularly in the Dominican convent of Katherinental, a famous nursery of mysticism in the thirteenth and fourteenth centuries, and in that of Töss, where lived the mystic Elisabeth Stigel, who turned some of his Latin into German, collected and preserved most of his extant letters, and drew from him the history of his life which he himself afterwards developed and published. In the world he was esteemed as a preacher, and was heard in the cities and towns of Swabia, Switzerland, Alsace, and the Netherlands. His apostolic work was his the-murous life, rather with individuals of all classes who were drawn to him by his singularly attractive personality, and to whom he became a personal director in the spiritual life. It has often been incorrectly said that he established among the Friends of God a society which he called the Brotherhood of the Eternal Wisdom. The so-called Rule of the Brotherhood of the Eternal Wisdom is but a free translation of a chapter of his "Horologium Sapientiae", and did not make its appearance until the fifteenth century.

The first writing from the pen of Suso was the "Büchlein der Wahrheit", which he issued while a student at Cologne. Its doctrine was unfavourably criticised in some circles—very probably on account of its author's close relations with Eckhart, who had just been called upon to explain or to retract certain propositions—but it was found to be entirely orthodox. As in this, so in his other writings Suso, while betraying Eckhart's influence, always avoided the errors of "the Master". The book was really written in part against the pantheistic teachings of the Beghards, and against the libertine teachings of the Brethren of the Free Spirit. Father Denifle considers it the most difficult "little book" among the writings of German mysticism. A later book Suso speaks as a contemplative and to the intellect, in his next, "Das Büchlein der ewigen Weisheit", published early in 1328, he is eminently practical and speaks out of the fullness of his heart to "simple men who still have imperfections to be put off". Bühlmeyer accepts Denifle's judgment that it is the "most beautiful fruit of German mysticism", and places it next to the "Homilies" of St. Bernard, and the "Imitation of Christ" by Thomas a Kempis. In the second half of the fourteenth and in the fifteenth century there was no more widely read meditation book in the German lan. An English translation has been brought out by C. H. McKenna, O.P. ("The Little Book of Eternal Wisdom", New York, 1889). In 1334 Suso translated this work into Latin, but in doing so added considerably to its contents, and made of it an almost entirely new book, to which he gave the name "Das Minnebüchlein". Even more elevating than the original, finished in language, rich in figure, rhythmical in movement, it became a favourite book in the cloisters at the close of the Middle Ages, not only in Germany, but also in the Netherlands, France, Italy, and England. A new critical edition by R. A. Rapp (Cologne, 1861) has many defects. An English translation by R. Rabey appeared in 1888 (London).

To the same period of Suso's literary activity may belong "Das Minnebüchlein", but its authenticity is doubtful. After retiring to Ulm, Suso wrote the story of his inner life ("Vita" or "Leben Seuse") revised the "Büchlein der Wahrheit", and the "Büchlein der ewigen Weisheit", all of which, together with eleven of his letters (the "Briefbüchlein"), and a dialogue, he published into a book known as "Das Exemplar der Seuse". Melchior of Diepenbrock (afterwards cardinal) modernised the text in his "Heinrich Susos, genannt Amandus, Leben und Schriften" (Ratisbon, 1829; 4th ed., 1884), as did Heinrich Denifle, O.P., in "Die deutschen Schriften des seligen Heinrich Suso" (1st vol., Munich, 1880, and not published. The latest edition, which is by K. Bühlmeyer (Stuttgart, 1907), preserves the old German. Besides the above-mentioned writings we have also five sermons by Suso and a collection of twenty-eight of his letters (Großes Briefbuch), which may be found in Bühlmeyer's edition. A good French translation of Suso's works is "Œuvres mystiques du B. Henri Suso', by G. Thiriot, O.P. (2 vols., Paris, 1899). Suso is called by Wackernagel (Geschichte der deutschen Litter., I, 429) and others a "Minnesinger in prose and in the spiritual order". The mutual love of God and man characterises his style, which is given with some ingenuity in his style. He used the full and flexible Alsatian idiom with rare skill, and contributed much to the formation of good German prose, especially by giving new shades of meaning to words employed to describe inner sensations. His intellectual equipment was characteristic of the time. In his doctrine there was never the least trace of an unorthodox tendency. For centuries he exercised an influence upon spiritual writers. Among his readers and admirers were Thomas a Kempis and Bl. Peter Canisius.

Heny the Navigator, Prince, b. 4 March, 1394; d. 13 November, 1460; he was the fourth son of John I, King of Portugal, by Queen Philippa, a daughter of John of Gaunt. In 1415 he commanded the expedition which captured Ceuta, Portugal's first overseas conquest, and there won his knightly spurs. Three years later he went to the assistance of the Portuguese, who were besieged by a Moorish army, and twice afterwards fought in Africa. He was responsible for a disastrous attack on Tangier in 1437, which caused the captivity and death of his brother Fernando (Blessed Ferdinand), "the Constant Prince", while at the end of his life, in 1458, he took part in the capture of Alcaicer. On the death of his brother, King Duarte, Henry acted as intermediary between his brother Pedro, who claimed the regency, and Queen Leonor, to whom it had been left by her husband, and he greatly promoted the success of Pedro's claim. But when, later on, Pedro's vaulting ambition led to his murder, King Affonso V, Henry was unable to save him from defeat and death at the battle of Alfarrobeira. It is not, however, as a man of war or of politics that Henry has won fame, but as the initiator of continuous maritime exploration.

He filled the vacuum caused by the dissolution of the Military Order of Christ, of which he was Grand Master, his ships carried on a constant war against the infidels, and in one of the voyages (1418) Zarco by chance discovered the Madeira Islands. Henry had entered on his career of discovery immediately after the fall of Ceuta, and his earliest voyages were: (1) to the country beyond Cape Bojador, the furthest limit of the knowledge of the west side of Africa; (2) to open up trade relations; (3) to learn the extent of the Mohammedan power; (4) to
find a Christian prince who would aid him in his crusading work (he had heard of Prester John); (5) to spread the Christian Faith. To achieve these objects, his swift caravels made continual voyages down the African coast, and in 1434, after twelve years of failures, one of his seamen, Gil Eannes, bolder than the rest, and inspired by his master's zeal and generosity, sailed for the terrible Cape. From that date events move quickly, and Henry, while still bearing in mind his crusading ideal, became more and more an explorer for the sake of knowledge, though he also endeavoured to draw commercial profit from the new-found lands which would recoup his order for the vast expense of the voyages. He showed his scientific sagacity by obtaining from the captured natives (Azorean) sufficiently information about the Senegal to enable his men to recognize it when they reached it; moreover, he not only studied the ancient geographers and medieval maps, but engaged an expert map and instrument-maker, Jayme de Majorca, so that his explorers might have the best nautical information. This last incident probably accounts for the legend of the School of Sagres, which is now discredited. Though Henry certainly spent much time in the Algarve, of which province he was governor, the centre of his maritime activity was not Sagres or the Villa do Infante, but Lagos, where nearly all the early expeditions were equipped.

Henry died at Alcacer do Sal in 1460, and was succeeded by the Infante Dom João, who brought back the first captives, and Nuno Tristam penetrated as far as Cape Branco, and a year later to Arguin Bay; while in 1445 Dinis Dias discovered Cape Verde. In two subsequent voyages, Cadamosto (1455–6) and Diogo Gomes (1458–60) explored the Senegal and the Gambia, and sailed down the coast as far as Sierra Leone. But this and the finding of the Azores and Cape Verde Islands was all the result of Henry's work, for he took no more part in it than he had in the missions, deeply in debt as the price of his lifelong service to the cause of Christianity and science. The finding of the road to India by Vasco da Gama, which completed Henry's work, and the discovery of America, to which Columbus was inspired by the achievements of Henry and his successors, led to a greater spread of the Faith than the Prince could have imagined. His voyages he removed the imagined terrors of the deep and, in the words of Azurara, "joined East to West, that the peoples might learn to exchange their riches". Under his agis were established the first exploring and commercial companies of modern times, and, though he has been reproached with encouraging slavery, it must be remembered that the age saw no harm in the traffic, that the Africans who were brought to Portugal by his captains were employed in domestic offices and fairly treated, and that nearly all of them became Christians. If the men who carried on his work fell short of his high ideals, Henry at least lived up to the very letter of his device, Talante de bien faire, "the desire to do well".

HENSCHEN, GODFREY, Jesuit, hagiographer; b. Venray (Limburg), 21 June, 1601; d. at Antwerp, 11 Sept., 1681. The son of Henry Henschen, a cloth merchant, and Sibylla Pauwels, he studied the humanities at the Jesuit College of Bois-le-Duc ('s Hertogenbosch), and entered the novitiate at Mechlin on 22 Oct. 1595. He taught successively Greek, poetry, and rhetoric at Bruges, Bailleul, Ypres, and Ghent, was ordained priest on 15 April, 1634, sent to the professed house at Antwerp in the following year, and admitted to the profession of the vows on 12 May, 1636. He remained at Antwerp until his death, 11 Sept., 1681. From the time of his arrival in the city he was associated as collaborator with Father Bollandus, who was then editing the first volumes of the "Acta Sanctorum". As has been said in speaking of his collection of these volumes (see BOLLANDISTS), it was Henschen who, by his commentary on the Acts of St. Amand, suggested to Bollandus the course to follow, and gave to the scientific work undertaken by his learned master its definitive form. The same article speaks of the literary journey undertaken by Henschen in company with Father Papebroch, to Italy, France, and Germany (22 July, 1660–21 December, 1662). He collaborated on the volumes for January, February, March, and April, and on the first six volumes for May, that is on seventeen volumes of the "Acta Sanctorum". Several of his posthumous commentaries appeared in the succeeding volumes. A list of some other works from his pen will be found in De Bcker's "Bibliothèque des écrivains de la Compagnie de Jésus". Henschen was the first librarian of the Museum Bollandianum at Antwerp.

HIPPOLYTE DELEHAYE.

Hensel, Luise, poetess and convert; b. at Linum, 30 March, 1798; d. at Paderborn, 18 December, 1876. Her father was Johann Hensel, Lutheran parson at Linum in the Mark of Brandenburg. After the father's death in 1809, the mother with her son and three daughters returned to her birthplace, Berlin, where the family dwelt, at first in somewhat meagre circumstances. Luise attended the high school (Realschule), now the Elisabethschule, showing extraordinary talent. In consequence of the religious teaching there, she conceived doubts as to the truth of the Lutheran creed. When she was about to be confirmed (31 March, 1813), she came to a compact with God: "that by this act I only embrace Christianity in general and renew the covenant of my baptism, but that I in no way agree to bind myself to any creed concerning which I am not convinced as to whether or not it is the Church established by Christ". The political events in 1813 inspired several fervid
patriotic poems. Three years later she for the first time made the acquaintance of a Catholic, Klemens Brentano. It was the poet himself who during the "Storm and Stress" period was the first to profit by this intercourse; he became once more a devout Catholic and accordingly he justly called his friend "The greatest convert of the seventeenth century." His approach to the Catholic Church ended in her conversion, which came about, without creating the slightest sensation, on 8 December, 1818, in the Hedwigskirche, Berlin. Her subsequent career was like a perpetual journey. She left Berlin and became companion to the Princess Metternich in Düsseldorf. Then (in 1820) she undertook the education of the three youngest daughters of Count von Stolberg, holding the same relation to her nephew in Wiedenbrück (Westphalia) in 1823; then, after a short sojourn in Coblenz and on the Marienberg near Boppard, she took the position of head teacher of the St. Leonard's Academy for girls at Aachen, which she held for six years. She was obliged to give up this abundantly blest activity owing to ill health and returned to her brother's pleasant home in Berlin, where she nursed her aging mother until the death of the latter in 1835. Then began another period of wandering activity in educational fields: in the gymnasia at Neuburg (1840-41), in Cologne (1841-50), then again in Wiedenbrück. Finally she settled in the convent of the Society of the Daughters of Christian Love at Paderborn, where the foundress, Pauline von Malincrodt, a former pupil of hers, had set aside a home for her. There she passed the twilight of her pious life in peaceful retirement, without becoming a member of the order.

Her poetic works consist of more or less religious verses composed for special occasions. They were published in various places. Unfortunately her modesty would not admit of a complete edition of her writings. The most just and impartial judgment on her muse has been passed by R. M. Meyer in his "Deutsche Literatur des 19. Jahrhunderts" (1856, p. 79).

"In her pious humility she compares herself in one place to an ugly little vase in which beautiful flowers have been put. God's special grace; it was preserved in a very gracer that same poem to her, and each poem a prayer. The result was a rich bouquet of pious songs, the impressive simplicity of which reminds one of the old songs of the Church. She wrote with little care, scribbling her verses on scraps of paper. But thousands and tens of thousands found edification in these simple prayers, which are denied, and many times, in the "poems of her friend Klemens." The most important edition of her poems is that by C. Schütler (Paderborn, 1869), several times reprinted.

HENTEN, J ohn, Biblical exegete, b. 1499 at Nalinoes Belgium; d. 10 Oct., 1566, at Louvain. When quite young he took the vows of religion in the Hieronymite Order in Spain, but left it about 1548 to enter the Dominican Order at Louvain, where he had gained a name at the university for sound scholarship. In 1550 he began to teach in the Dominican convent of that city, in which he became regent of studies three years later. He was made defender of the Faith and inquisitor in 1556. While prior of the Louvain convent he was chosen by the theological faculty of the university to take the place of John Hessel, Regius Professor of Sen
tences, who had been sent by the king to the Council of Trent, and was teaching at the university in 1565. Quetif and Echard (Script. Ord. Praed., II, 195-6) say that he was praised by the writers of his century, especially by William Seguir in "Laur. Belgii," pt. I, 5 Dec., no. 1, p. 57. His principal writings are: (1) "Biblia Latina ad vetustissima exemplaria castigata," (Louvain, 1547, greatly enlarged in 1587); (2) "Commentaria in quattuor Evangelia", consisting of commentaries by St. John Chrysostom and other early writers collected by Euthymius Zigabenus and interpreted by Henten (Louvain, 1544); (3) "Enarrationes in Acta Apost. et in Apocalypsin" (Louvain, 1845, and repeatedly elsewhere); (4) the same work together with commentaries on the Epistles, under the title of "Obsequenti commentaria in Acta Apost. etc." (Paris, 1631).

ARTHUR L. MCMAHON.

HEPTARCHY (Anglo-Saxon).—By the term hep
tarchy is understood that complex of seven king
doms, into which, roughly speaking, Anglo-Saxon Britain was divided for nearly three centuries, until at last the supremacy, about the year 820, fell definit
ey and finally into the hands of Wessex. The use of the term is as old as the sixteenth century, and it is employed in Camden's "Britannia", but its propriety has been much questioned. One objection made against it is that, upon the analogy of other similar compounds, heptarchy ought strictly to mean a ruling body composed of seven persons. Another set of critics urge that during the period referred to there were often more than seven independent king
doms in England, and still more frequently fewer. However, the retention of this loose term has been sanctioned by Stubbs and other modern historians on the ground of its obvious convenience; and, as Stubbs remarks, during the greater part of the early Saxon period "there were actually seven kingdoms of Germanic origin in the island". The kingdoms in question were Wessex, Sussex, Kent, Essex, East Anglia, Mercia, and Northumbria; though in this last Deira and Bernicia were constantly regarded as separate kingdoms. Between these nominally independent states war, and as a consequence some measure of subjuga
tion, was continually occurring. Moreover, it has to be admitted that in the early chronicles and charters persons who must have ruled over much smaller tracts of territory than are presupposed in this heptarchic division are also styled cyning (king) or re
er. Edwin, King of Deira, a part of Northumbria, who was converted by St. Paulinus (c. 627), slew five
kings when fighting against the Saxons. Again four kings were reigning at one and the same time in Sussex and three in Essex. There were also kings of the Hwicceas (Worcestershire and Warwickshire), as well as a separate Kingdom of the Middle Angles and of Lindsey. As regards the reception of Christianity, the herpetich kingdoms seem in a measure to have followed the lead of the greater and more central political organizations. Kent of course being the first to accept the Gospel. But even here we find St. Augustine, before his death, consecrating St. Justin to be Bishop of Rochester, a second see within the Kingdom of Kent, at the same time that he consecrated St. Laurence to be his own successor at Canterbury, and St. Mellitus to be Bishop of London, which was included in the Kingdom of Essex.

There is of course a large literature dealing with the divisions of Anglo-Saxon England from the sixth to the ninth century. The subject of this article, so far as regards the nature of early kingship, is especially discussed in Chadwick, Anglo-Saxon Institutions (London, 1905), 289-307. See also Luard, Anglo-Saxon Church (London, 1885); and for an exaggeratedly Anglican standpoint consult G. F. Brown, The Conversion of the Heptarchy.

HERBERT THURSTON.

Heraclas, Bishop of Alexandria from 231 or 232; to 247 or 248. Of his earlier life Origen tells us, when defending his own philosophical studies (Eusebius, "Hist. Eccl.", VI, xix): "In this we imitated Panthenus, who before our day assisted many and had not a little knowledge of these matters, and Heraclas, who is now one of the priests of Alexandria, whom I found a hearer of my own teacher of philosophical studies, for he had already been with him for five years before I began to attend these lectures. On this teacher's account he put aside the ordinary dress he had worn till then, and assumed the garb of a philosopher, which he still wears, and he ceases not to study the books of the Greeks with all his might." Thus Heraclas was probably at least five years older than Origen, who was born in 185. Yet when Origen in his eighteenth year was obliged by his father's tyranny and the consequent confiscation of his goods to commence teaching grammar (for a short time) and philosophy, Heraclas and his brother Ptolemy were under the young teacher. Origen converted them both to Christianity, and St. Plutarch soon suffered for the faith, being the first of Origen's pupils to gain the crown of martyrdom. Heraclas "gave a great example of philosophical life and asceticism (ibid., vi, 38), and it was his reputation for knowledge of philosophy and his labors that drew Julius Africanus to visit Alexandria. In course of time Origen found his day so occupied by pupils that he had scarce breathing space from morn till eve, so that he chose Heraclas as his assistant in the catechetical school (of which he was himself now head in succession to Clement), to teach the beginners (Ibid., vi, 15). Heraclas was made a priest by the long-lived Bishop Demetrius. When in 231 the latter condemned Origen, who remained at Cesaarea, Heraclas became head of the school. Soon afterwards he succeeded Demetrius as bishop. According to Theophilus of Alexandria (in Cennadius, "De vir. ill.", xxiv), when Origen returned to Egypt he had persuaded him from the priesthood and banished him (cf. the life of St. Pachomius in Acta SS., 14 May, § 21, and the probably spurious "Mystagogia" of St. Alexander of Alexandria, in Routh's "Reliquiae Sacrae", IV, 81). This statement is supported by an interesting fragment of Photius (Zwany xai dvloth, 90) who says they had good follows (Döllinger, "Hippol. und Kallist", 264, Eng. transl. 245): "In the days of the most holy Heraclas, Origen, called Adamantius, was plainly expounding his own heresy on Wednesdays and Fridays; the said holy Heraclas therefore separated himself from the Church and drove him from Alexandria, as a disturber of the wholesome doctrine and a perverter of the orthodox faith. Origen, thus excommunicated, on his way to Syria reached a city called Thmuis, which had an orthodox bishop named Ammonius, who committed to Origen the delivery of an instruction in his Church. The said Pope Heraclas, having heard this, went to Thmuis, deposed Ammonius for this cause, and set up in his stead the holy bishop Philip, who was of great note among the Christians. Later on, Heraclas, being besought by the people of the city, received Ammonius again as bishop, and gave the episcopate of Thmuis to both Ammonius and Philip. But after the holy Heraclas had gone thence, Ammonius never sat on the bishop's seat which Ammonius expounded or celebrated the liturgy, always stood behind him all the days of the life of Ammonius. But when the latter was dead, then Philip sat on the throne, and became one of the bishops remarkable for virtue." On the identification of this Ammonius with the author of the "Ammonian Sections", mentioned in the letter of Eusebius to Carpius, see Harnack, "Chronol." II, 81-2. Heraclas was succeeded in the third year of the Emperor Philip, by St. Dionysius, who had previously been his successor as head of the catechetical school. St. Dionysius describes the custom of Heraclas in receiving the catechumens into the Church. He conducted after a public examination of their conduct (Eusebius, "Hist. Eccl.", VII, vii, 4). Heraclas was inserted by Usuard in his martyrlogy on 14 July, and he has thus come into the Roman Martyrology on that day. The Copts and Ethiopians celebrate his feast on 4 Dec. On the testimony of St. Jerome (Ep. xlv) that "until Heraclas and Demetrius" the bishops of Alexandria were ordained by priests, see Eusebius (V). The latest discussion (with full bibliography) is by Cabrol in "Dict. d'archéol. chrét.". In close connexion with this question is the statement of Eutychius of Alexandria (933-40) that until Demetrius there was but one bishop for all Egypt; Demetrius established three suffragans sees, and Heraclas twenty more. Eutychius adds that one of the new bishops, named Euomenius (is this a mistake for Ammonius?), fell into error; Heraclas, having summoned a council of bishops, restored him to his place, after which he brought him back to the truth. The people, hearing the bishops call their patriarch "Abba" (Father), entitled him their grandfather "Baba", hence the title "Papas" given to the Alexandrian as to the Roman bishop.

Heraclas, a titular see of Thracia Prima. Heraclas is the name given four centuries before the Christians to the town of Perinthos, a very ancient Samian colony, built like an amphitheatre on the hillside of a peninsula in the Propontis (Sea of Marmora). It became famous because of its resistance to Philip of Macedonia. Its port and its happy situation at the junction of several great sea-routes, made it a town of commercial importance. Many of its coins have come down to us, and give us information concerning the festivals held there. Justinian restored its aqueducts and a palace. It now forms part of the vilayet of Adrianople, has 2000 inhabitants, Turkish and Greek, and is known to the Turks as Ereği. The ruins of the ancient town of Heraclas are on high ground, not far from the town of the modern name. Heraclas became a see at an early date: according to a Greek tradition it dates from apostolic times. It would seem that in the beginning the Bishop of Byzantium was under its jurisdiction. Later it appears to have had 5 suffragan sees, and this number gradually increased to 15 and 17. A little before the Ottoman conquest the number stood

JOHN CHAPMAN.
at 6; then it fell to 5 once more; in our days it has but two (Myryphyrion and Metre).

The Metropolitan of Heraclea has retained the title of Exarch of Thrace and Macedonia. He resides at Rodosto and not at Ereigli. It is his privilege to hand the newly appointed Patriarch of Constantinople the ephippus, a red and white cloth, Orsia, a small white handkerchief, and 1101 golden coins. The Metropolitan gives a list of 48 titulars, which might easily be increased. Among the names are: St. Philip, martyr (feast 22 October); Pateros, present at the Council of Nicaea in 325; Theodorus, an Arian, author of a commentary on the Epistles, who wrote a rather important work on 335; Hyperius, Semian-Arian, deposed in 365; Dorotheus, an Arian, 366; Sabinus, a Macedonian; John, the friend and correspondent of Photius; Nicetas, fourteenth century, a writer of commentaries and other works; Pinaceas, who accepted the union with Rome proclaimed at Lyons in 1274; Philotheus, a Palamaite, Patriarch of Constantinople in 1354; Antonius, who signed the Union at Florence; Neophytus, Joannicius, Methodius, and Callinicus, Patriarchs of Constantinople in 1636, 1644, 1668, and 1726. At one time Heraclea treasured the relics of St. Glycera, a virgin martyred at Trani (feast 13 May). In the thirteenth century here was housed a Latin bishop in residence (Lequin, "Or. Christ."); III, 965; Eubel, "Hierarchia catholica medii aevi", I, 283). Three other towns bearing the same name were: episcopal sees; two in Caria, suffragans of Stauropolis, and the Heracleans of Pontus in Honorias, suffrangent of Claudipolis.

S. Téodoro, VIII. 123 sqq.; Smith, Dictionary of Greek and Roman Geography.

Heraldry, Ecclesiastical, naturally divides itself into various branches, principally: the arms of religious orders, and other bodies; the insignia of ecclesiastical dignity, rank, or office; the charges, terms, and forms of general heraldry having a religious or ecclesiastical origin, usage, or character; the emblems or devices attributed to or typifying particular saints or other beings venerated by the Church. Intermingled with all these categories is their symbolism, real, suggested, or imaginary; and deeply interwoven, more especially in relation to the insignia of ecclesiastical rank, lies the consideration of ecclesiastical vestments. The subject of vestments in relation to the actual articles and their usage is more fully considered under the head of priestly dress, so that the present section will be devoted to the devices of keen controversy in England at what date control was effectively exercised by the sovereign authority in matters armorial. It can be definitely carried back to the beginning of the fourteenth century; but in matters of religion the appeal was to Rome and not to the temporal sovereign, and there is little, if indeed any, evidence of a regularized control of ecclesiastical heraldry before the date of the Reformation. For this reason the arms of abbeys and priories have little of the exactitude that characterizes other heraldry of the period, and we find that in many cases, too, they owe much to the devices of donors, benefactors, or predecessors in office were constantly impressed into service for the purpose of personal arms of a community. In some cases (e. g., in the case of the arms of the See of Hereford) even these personal arms became stereotyped by the adoption of use into the imperial arms of the office or community, though of course many, perhaps the majority, from the character of the charges and devices which make up the coat of arms, are obviously designed for, and indicative of, the purpose they serve and the community for which they may stand.

A large number of ecclesiastical, as of other public, coats of arms are based upon the figures and effigies of patron saints originally used and represented as such and without heraldic intention. The natural consequence is that in many cases of religious communities there are two or more entirely different coats of arms doing duty indifferently. Impersonal arms of this character are found among the episcopal and archiepiscopal, and for the abbeyes and priories, and for the religious orders. These arms, regarded merely as coats of arms in all matters of heraldic rule and blazon, conform to the ordinary rules and laws of general armoury so far as these may apply thereto; nor do they differ therefrom, save in matters of external ornament. One point, however, may be alluded to here.
The shield is the ordinary vehicle of a coat of arms. It is obviously and essentially a military instrument, and the supposedly peace-loving ecclesiastical has often preferred to substitute for the shield the oval cartouche (Fig. 1). In some countries, notably Italy, Spain, and France, the use of the cartouche for ecclesiastical purposes has been very general, but with the recognition of this ecclesiastical preference for the cartouche, it should not be overlooked that the laity have also made occasional use of it for purely personal armory, and that the usage of the shield for ecclesiastics is too universally general at all periods for any suggestion of impropriety of preference to the cartouche.

Although England is a Protestant country, and her post-Reformation ecclesiastical heraldrty is devoid of any subsequent Roman developments, nevertheless the official control of armory in that country has been and has remained more efficient and effective than the control in any other country. When in England the temporal power assumed the headship of the Anglican Church, and in consequence the control of her heraldry, the armorial practice existing at that date was stereotyped and has since remained unaltered. For that reason the English law concerning episcopal arms may well be considered as indicative of the reality at a period when heraldry was of greater importance than at present. The official arms of a bishop pertain neither to him personally nor to his rank. They attach to his jurisdiction as a part of the State and the State-established religion. For that reason a suffragan bishop (corresponding to what is known among Catholics as a bishop auxiliary), though possessing a local titular description, has no official coat of arms. For the same reason, on the disestablishment of the Scottish and Irish Episcopalian Churches the arms of the sees in law became extinct and are officially no longer recognized, although a number of prelates of those Churches continue to use them. Woodward, by the way, states that all the Irish Episcopalian arms are post-Reformation. For this same technical reason the English Crown declines to grant arms of office for any of its sees established in the United Kingdom by the Holy See, although request theretofore with a tender of the proper fees has been made on several occasions. The result is that Catholic bishops in England, as in some other countries, use only personal arms with their exterior insignia of rank.

In the case of the archiepiscopal See of Westminster, arms were granted by papal Brief, but this is a solitary instance, and no official recognition of them has been made by the temporal authorities. In the registration of the personal arms of His Eminence the late Cardinal Vaughan, in the College of Arms in London, and in the matriculation of the personal arms of the Rt. Rev. Aeneas Chisholm, Bishop of Aberdeen, no objection was made to the registration of the red hat of the cardinal and the green hat of the bishop.

As examples of official ecclesiastical arms, Fig. 2 presents the arms of the Anglican See of Hereford; Fig. b, Plate I, the arms of the Archbishops of Cologne, and Fig. 3 the arms of the Abbey of Melk. These official arms, in the earliest cases borne upon a separate shield from the personal arms, are now at the pleasure of the individual borne alone or marshalled with his personal arms upon a single shield. In England it has always been customary to marshall with personal arms to do so by impalement and in no other manner, the official arms taking the precedence on the dexter side (Fig. 4). A curious consequence of the English Reformation with its abolition of the necessity of celibacy is to be found in the marshalling of the arms of a married (Anglican) bishop. This is never done upon a single shield. Two are used placed accolé. On the dexter shield the official arms of the see are impaled with the personal arms of the bishop and on the sinister shield these personal arms are impaled with those of the wife (Fig. 5). In Italy most of the sees have official arms, but these are not often made use of, but when they are used they frequently occupy the upper, or "chief", portion of a shield divided per fesse. In Germany the official and personal arms, though sometimes marshalled by impalement, are usually quartered, the official coat being placed in the first and fourth quarters. Where several sees are united in one person the various official arms are quartered, and the personal arms are placed en surtout; but on the contrary, where the personal arms consist of a quartered coat the official arms will sometimes be found en surtout, which illustrates a diversity of practice to which the English rigid exactitude of rule would seem preferable.

In France the ecclesiastical peers (the Archbishop-Duke of Reims, the Bishop-Dukes of Laon and Langres, and the Bishop-Counts of Beauvais, Chalon, and Noyon) all had official arms which they sometimes quartered and sometimes impaled with their personal arms. Strictly speaking there are no official arms for the papal sovereignty. Although the crossed keys of St. Peter displayed upon an azure field, have occasionally been used for that purpose, as with such in heraldry they are more properly a device in the nature of external ornaments to the shield, and as such will be again referred to later. In relation to the use of personal arms, although in England the ordinary rule and practice were usually observed, elsewhere an ecclesiastical surnominal use of any mark of cadency. Even marks of bastardy are found to have been discarded. The reason is simply that, ecclesiastics being celibate, there would
be no descendants to claim pedigree whom it would be necessary to place correctly in a family, whilst for the individual concerned his ecclesiastical ornaments of rank were a serious distinction. But the omission of cadency marks does not appear to have been a matter of universally accepted rule.

The chief distinction in the bearing of personal arms by an ecclesiastic is found in the use of the mitre, the crozier, and the ecclesiastical hat. Though there are instances which might be mentioned of the use of the biretta, both scarlet and black, these may be regarded as merely freaks based upon personal inclination. The heraldic use of the ecclesiastical hat undoubtedly originates in the red hat of the cardinal, which, as a vestment, dates from 1245. The sending of the hat was a matter of ceremony and of importance, and for that reason the armorial use of the hat as indicative of the rank was a foregone conclusion. Its heraldic use dates from the early part of the fourteenth century. There is abundant evidence in England of this heraldic use before the Reformation, but the writer is unaware of a single instance in which any other ecclesiastical hat than that of a cardinal was ever employed heraldically. This would seem to show, as was indeed the fact, that the extended use of the ecclesiastical hat was a subsequent development even in Italy and France, though it must be admitted that in Spain the green hat of bishops was adopted by cardinals in 1400, a practice which grew in that country, where it was an alternative, and preferred to the use elsewhere of the cross and mitre.

In the seventeenth century the use of the ecclesiastical hat for the lower ranks of the Church became, as it has since remained, fairly universal. The ecclesiastical hat is low, flat, wide-brimmed, and depending from either side are cords and tassels. Though usually referred to as tassels, they are sometimes termed houppe or foci. Originally the number of tassels was indeterminate, the natural consequence of the exclusive use of the hat by cardinals; there are even examples to be found in which no tassels are shown, the strings of the hat being simply knotted. But in early representations six tassels on either side are most usually to be found, these being arranged in three rows containing one, two, and three tassels respectively. In later times, with the use of the ecclesiastical hat, differentiation was made both in the colour and in the number of the tassels, but in attempting to make use of such differentiation it should be remembered that even after an established rule and usage had come into being adhesion thereto was far from being universal. In the Catholic clergy and in the Anglican as well (where many of the archbishops have preferred and assumed the coro- nated mitre of the Bishop of Durham) there seems to have been a constant desire to appropriate more than belonged to them of right. In the armorial display made by ecclesiasties there is a far greater amount of and incorrect heraldry than is to be met with elsewhere.

The assumption of personal arms by those of plebeian birth and the invention of arms of office where none have been assigned by any competent authority, bring armory into grave disrepute, and its study into hopeless confusion. Some examples may be urged in mitigation in America and other republican countries which do not officially countenance the granting and creation of arms, which is admittedly an attribute of sovereignty, but there is no such excuse as to personal arms in monarchial countries, as the religious sovereignty of the monarchy universal and sufficiently sufficient to supply what may be lacking in matters which are purely ecclesiastical. But to this unfortunate habit of the ecclesiastical mind is due the fact that in a very large number of cases it will be found that, whatever the rank, one more row of tassels has been added than should be the case. The rules which follow are those which are recognized in Rome, and in recent years there has been a healthy reservation in many cases to the proper procedure in matters heraldic.

The cardinal’s hat is scarlet and has on either side fifteen tassels arranged in five rows of one, two, three, four, and five tassels respectively (Figs. c, Plate I, and c, Plate II). The hats of a patriarch, an archbishop, and a bishop (Fig. d, Plate II) are green. The patriarch has fifteen tassels, as a cardinal, but the cords and tassels of a patriarch’s hat are intertwined with gold. (S. Congr. Cererum., 3 Nov., 1826). An archbishop has ten tassels arranged in four rows of one, two, three, and four respectively (Fig. b, Plate I). A bishop (Fig. d, Plate II) has six tassels on each side arranged in three rows of one, two, and three respectively. Archbishops possess episcopal rank and use the same hat as a bishop. But as far back as the seventeenth century bishops were using ten tassels, and a hat with that number appears in the same time. The use of the hat by the Bishop of Aberdeen previously referred to. The ordinary ecclesiastical hat of the simple priest is black, but of the same shape, and had originally on either side a single tassel of the same colour (Fig. 6) but following upon the ecclesiastical habit of taking the next higher problem than was proper the single tassel later developed into a double one (Fig. 7). This practice has been followed so widely that one almost hesitates to say it is wrong, and there has been a subsequent unauthorized progression to three tassels arranged in two rows of one and two on either side, but the rules for the black hat which are recognized in Rome assign the six tassels to generals of orders, three tassels to provincial superiors of orders (Fig. e, Plate II), to mitred abbots, and to provosts, and two tassels to local superiors (prior, guardian, and rector), leaving the single tassel to the simple priest.

The General of the Order of the Brethren (White Canons) uses a white hat with six white tassels. The prelates of the papal chamber use a violet hat with ten red tassels on either side. Apostolic prothonotaries are entitled to a violet hat with six red tassels at each side. Domestic prelates, privy chamberlains, and privy chaplains of His Holiness have a violet hat with six violet tassels. Honorary chamberlains and chaplains have the violet hat, but only three violet tassels.

The heraldic mitre is placed above the arms of all persons who in the Catholic, Eastern, Anglican, or Episcopalian Churches are in theory or fact entitled to wear the mitre. Archbishops and bishops use it. Most abbots use it, and did in England before the Reformation. The mitre has been in use for centuries, though some abbots are not mitred abbots and have therefore no justification for its display. The mitre is an invention of course long antedates the existence of heraldry, and in fact exists in three forms, termed respectively pretiosa, aurifera, and simplex. The aurifera (which is made of cloth of gold or of thin gold plates, and is not jewelled) is the one always used in English heraldry.
an Anglican bishop or archbishop. The shape of the heraldic mitre has varied somewhat according to the varying styles of heraldic art in vogue, and there is at present a tendency to revert to the ancient wider and lower shape in armorial representations. It is always represented as of gold, and the labels or infolds depending from within it are of the same colour (Fig. 8). It has been asserted that in pre-Reformation usage a staff was drawn between the mitre of a bishop and an abbot by the omission in the case of the latter of the infolds. Certainly, in England and France it was usual, for heraldic purposes, to place the mitre of an abbot slightly in profile. In most continental countries it has been more usual to represent the mitre of white ornamented with gold, no doubt an attempt to represent the pretiosa mitre, which, though heavily jewelled, is really on a foundation of gold. The representation of the simpler mitre cannot be intended, as this is really of plain white linen.

In spite of many statements to the contrary, the mitre (in fact and heraldically) of a bishop and an archbishop are identical. The coroneted mitre (Fig. 9), which has so often been used by archbishops under the belief that it appertained to archiepiscopal rank, is really and exclusively the mitre of the bishop of Durham. The See of Durham, until early in the nineteenth century, was in fact and law also a temporal palatinate, and, though latterly its attributes of temporal sovereignty had declined, anciently the temporal power was of wide extent, the Bishops of Durham having their own separate parliament. In token of the temporal power the bishop had his corone, in token of his spiritual power he had his mitre. Alone amongst the English bishops, his arms were surmounted by a helmet. The mitre is shown in the famous "Armoiral de Gare" (Fig. 10) where the helmet, with its mantling, is shown with the small shield tilted in the fashion of early heraldic displays, and on his helmet was placed his coronet. Within the coronet was his mitre and the representation of the two together led to the appearance of the coronet as the rim of the mitre, and coronet and mitre have been armorially depicted together. But no evidence of the wearing or actual existence of a mitre is known, and the present form is the heraldic conjunction of a coronet and a mitre. Whether since the abolition of the palatinate the right to the coronet still remains, is open to argument, but officially it is still used.

The crozier, which is another external ornament to the shield widely made use of by ecclesiastics, must not be confounded, as it often has been, with the professional cross of an archbishop. Nor is the name, crozier, a confusion of terms. The crozier is, as it has always been, the pastoral staff. Originally nothing more than a staff used for assistance in walking, it has been conjectured that its ceremonial use and ecclesiastical status is a consequence of its convenience to aged prelates as an assistance and support during lengthy services. The crozier as a sign of episcopal dignity is said to be traceable to the fourth century and to have been used by abbots in the fifth. In its early form it was surmounted only by a boss or by a simple bend, and in the Western Churches the crozier terminates not in a crook but in a tau, the ordinary form of a crutch. This, however, has now developed into an elaborated form, much as if the crook of the Western croisiers were duplicated at the other side of the haft (Fig. 11). The development of this crook is probably merely artistic and decorative, though the symbolism of the shepherd’s crook has been invoked. In this, as in all other matters of symbolism, it is exceedingly difficult to determine whether the form followed the symbolism or whether this is a later attribution. Certain it is, however, that there is a widespread belief that, whilst the crook in the case of an Eastern Church abbot should terminate inwards (Fig. 12), that of a bishop should terminate outwards (Fig. 13), the suggested symbolism being that, whilst the jurisdiction of an abbot was strictly confined to his abbey, that of a bishop was not so restricted. The same symbolism has been read into a heraldic practice, which undoubtedly has much acceptance, by which the crozier of an abbot placed in bend sinister behind the shield was represented with the crook turned inwards towards the mitre (Fig. 3) whereas the contrary position was adopted for the crozier of a bishop (e.g., Fig. 2). But no such distinctions appear ever to have been recognized in relation to the actual croisiers carried by bishops or abbots. The sudarios or veil, which really has no symbolism, and is attached to the crorier for mere purposes of cleanliness, is sometimes met with in armorial representations (Fig. 13).

In England, in the Anglican Church, two croisiers are placed in saltire behind the shield of a bishop or archbishop (Figs. 2, 5, and 6, Plate I). Woodward questions the propriety of this fully established practice, unless in a case of a double episcopate, but that writer has apparently overlooked the fact that, whereas in other countries a croaser, e.g., is represented singly in bend, or most frequently in bend sinister, it has been the invariable custom in England to duplicate this insignia of this character and place them in saltire behind the shield, e.g., the batons of the Earl Marshal or of Lyon King in Arms. The Bishop of Durham alone amongst the Anglican bishops substitutes a naked sword (indicative of the temporal palatinate of Durham) for one of the croisiers. The seal of Bishop Gilbert Burnett of Salisbury, Chancellor of the Abbey of St. Albans (Fig. 13), shows the crozier of an abbot and the bishop's crozier, the latter figure in saltire, and the saltire figure, the sole page of the crozier, is shown in saltire with a croiser and key in saltire—the latter, no doubt, an allusion to his office of chancellor. In no other case is temporal jurisdiction united with a spiritual office in England, but in Germany and elsewhere a number of cases can be alluded to, and in one of these the same device is similarly disposed in saltire with a croiser, or these are placed in pale one on either side of the escutcheon.
The use of the temporal sword is said to have been originated by Erlang, Bishop of Wurzburg, 1106 to 1121, but its heraldic use is not nearly so ancient.

The processional cross (Fig. 14), which, within his province, is carried in front of (but not by) an archbishop—a privilege granted to all archbishops by Gregory IX—is also used armorially, being represented in the shield of this form by an Anglican archbishop is very rare—certainly no ancient examples exist—but elsewhere its use is practically universal. The cross of an ordinary archbishop has but a single traverse; in practice it is really a crucifix placed on the summit of a staff; but has a distinguishing mark of an archbishop from the primatial cross which has the double traverse (Fig. 15) and the paphal cross with the treble traverse. The last named, however, is never placed behind the paphal arms. Unfortunately, the bearing of the cross with the double traverse has become very far from unusual by archbishops, under the belief that the double traverse is indicative of an archbishop.

The use of the pallium has received little attention in recent years. As a vestment, its form is well known, and as a rule (to which there have been few exceptions) any archbishops alone have the right to wear it. It is made of fine white lamb’s wool, and now has upon it six crosses patte of black silk edged with cord. Originally the number of these crosses was indeterminate; in early examples we find two of a bright purple or, occasionally, of red, later we find four. The pallium in continental Europe had a limited heraldic use and that curiously disposed as an external ornament of the shield. The English method of display is nowhere else employed. In England the pallium has been the principal charge in the official archiepiscopal coats. The arms of the See of Canterbury (Fig. d, Plate I) are “azure, an episcopal staff in pale or, ensigned with a cross pattée argent, surmounted of a pall of the last, edged and fringed of the second charged with four crosses pattée fitchée sable.” The arms of the archiepiscopal See of Armagh are identical with those of Canterbury except that the staff is of argent ensigned with a cross pattée or, the archbishop’s hat is the same as of Armagh, except that the pall has five crosses pattée fitchée upon it, instead of four. Anciely the arms of the archiepiscopal See of York were the same as Canterbury, but, for some reason which is not now known, the arms of the see were changed to “gules two keys in saltire or, in chief a royal crown or.” Woodward asserts that the crown was originally the papal tiara, and if this be correct one is inclined to hazard the suggestion that the emblems of the papacy were granted to York as a solutum after the long enduring contest between Canterbury and York had been decided in favour of Canterbury, who was to be Primate of All England, whilst York ceded the precedence and was only Primate of England.

The right to use the tiara in lieu of a mitre was granted to the Patriarchs of Lisbon by Pope Clement XII, and the change from the papal tiara to the royal crown would be a matter of consideration. The arms granted by the papal Brief to the Archbishop of Westminster consist of the pallium (without the cross in pale as in the Anglican shields) upon a field of gules, and the same device is used by the Archbishop of Glasgow.

The emblems of the papacy consist of the tiara and the crossed keys of St. Peter “to bind and to loose”, one key being of gold and one of silver, the two being usually tied together with a cord. These are usually, and most properly, placed in saltire behind the personal arms of His Holiness (a practice originated by Adrian VI, in 1522), the shield being surmounted by the tiara, but the keys are frequently disposed in saltire below the tiara and above the shield, and, as a consequence, the tiara and keys are often used alone without any shield at all. Crests and helmets are not usually borne by ecclesiastics. The possession of a crest is not denied to an Anglican ecclesiastic, who of course transmits it to his male descendants, but it is not correct (except in Germany) to use a crest concomitantly with a mitre or ecclesiastical hat, both of which, of course, are substitutes for the helmet, to which the crest appertains. The Bishop of Durham, however, was an exception, by reason of his temporal sovereignty. In Germany, the land of many crests, it is considered quite correct to display mitre and crests simultaneously, and a central helmet to carry the mitre is not unusual. The use of a motto by a bishop or other ecclesiastic is quite correct, though rather unusual in the case of an Anglican bishop. In Rome itself the use of all coronets of rank by cardinals was forbidden by a Bull of Innocent X, but elsewhere the coronet is not discarded or ornamented to the personal arms. In England the mitre would surmount the coronet with its cap, but in Continental Europe it is more general to use the circlet (Continental coronets have no cap, which is really the English parliamentary cap of dignity) disposed along the top of the escutcheon and encircling the mitre, cross, and crozier, as may be correct. In Germany temporal lordships are often attached as endowments to ecclesiastical dignities, and in such cases the coronets of the latter are made use of. No ecclesiastic in any country by reason of ecclesiastical rank alone acquires a right to use supporters, but where a personal right to these has been inherited ecclesiastical rank or office places no prohibition whatever upon their use. There is one exception: the arms of the papacy are frequently depicted with angels as supporters, each of which holds in the exterior hand a papal cross (i.e. with three traverse bars). At the funeral ceremonies of a deceased pope, the papal arms are shown surmounted by the tiara, but the keys are omitted, taking their place above the shield, but below the “pavilion de l’Eglise” of the Cardinal Camerlengo, who, whilst holding that position, surmounts his arms with the curious canopy of red and yellow which belongs to the office (Fig. c, Plate II).

Members of a regular order frequently impale (on the dexter side) the arms of the order with their personal arms, but how far such a practice has authoritative sanction is at least open to argument. As arms of patronage, cardinals have frequently impaled with their personal arms those of the person who has raised them to that rank, but the practice (except in the case of the major-domo of the papal household) is now falling into disuse. Preceptors denote their office by placing a baton behind their shields, and the arms of a canon are often displayed upon the almoço (the tippet or hood) which forms a part of his official dress. Priors and prioresses place a bourdon (or knobbled staff) of silver in pale behind their shields. An abbess uses her arms upon a lozenge and her crozier in pale behind. Frequently the lozenge is surrounded by branches of palm, or a crown of thorns, or, more usually, of black velvet lined with white, silk disposed in the form of a cordette. Armenian archbishops use a green hat with ten green tassels. Behind the shield are placed a Latin crozier and a Greek crozier in saltire, the shield is ensignied by a mitre, and in pale is a cross with a double traverse.

HERBERT

A. C. FOX-DAVIES.

Herbert and Herbertianism.—The widespread and increasing influence of Herbert and his disciple in the work of education makes a brief treatment of this German philosopher and educationist desirable in this present work. John Frederick Herbart, b. at Oldenburg, 1776; d. at Göttingen, 1841. He was the son of a lawyer whose wife, a woman of brilliant parts, was subsequently divorced from her husband. The child was delicate and was at first educated by an able tutor under the supervision of his mother. He exhibited extraordinary precocity, was of quick intelligence and retentive memory, and showed remarkable aptitude for mathematics, physical science and music. He began logic at eleven and metaphysics at twelve; he went to the gymnasium of his native town at thirteen and, after a distinguished course there, passed to the University of Jena at the age of eighteen to study law. This subject he neglected, becoming an enthusiastic student of philosophy under Fichte, then at the zenith of his fame. Herbert, however, was of too critical a mind to be content with Fichte's Idealism, and at the age of twenty began the elaboration of a philosophic system of his own. In 1807, after three years of study, he still found the University insufficiently equipped to become a private tutor in the family of a German nobleman. The education of the three sons aged 14, 10, and 8 was entirely entrusted to Herbert on condition that he should write a lengthy report by letter to the father every two months. This was Herbert's first and most important experience in the work of teaching. Five of the letters which remain are amongst his most interesting writings and contain some of his main educational ideas. During this period he visited Pestalozzi at Burgdorf. In 1799 he resigned his tutorships, devoted himself for a couple of years to the study of philosophy and wrote some small works on education including appreciations of Pestalozzi's writings. In 1802 he went to Göttingen, obtained his degree of doctor and began lecturing on philosophy and pedagogics at the modest stipend of $225 per annum. Between 1802 and 1808 he published several pedagogic works, including the "Aesthetic Theory of Education"; "The Science of Education"; also works on metaphysics and logic. In 1808 he was appointed to the chair at Königsberg formerly occupied by Kant, where he lectured on philosophy and pedagogics for over twenty years. His chief interest, however, was in the latter subject. With the completion of the University he founded a pedagogic seminary having a practising school attached. In this he himself taught for an hour daily. In 1809 he married an Englishwoman. During the remainder of his life he lectured to large audiences, and published sundry works on education. He returned to Pestalozzi, Göttingen in 1833, where he laboured till his death in 1841.

General Philosophical Views.—Though Herbert was an able and original thinker his influence in philosophy has not been considerable. In metaphysics his scientific temper led him to advocate a system of Realism in opposition to the Idealism then in vogue. In ethics he approximates towards Kant's teaching in some respects; but instead of Kant's Categorical Imperative he puts forward five Practical or Moral Ideas—the Ideas of Inner Freedom, Perfection, Benevolence, Right, and Equity—as the frame-work of his moral philosophy. Interest in the development of all his capacities should be the constant aim of the process of education. The main foundations on which Herbert's whole theory of education rests are his doctrines of apperception and interest. Appropriation, with Herbert, is the act or process of assimilating, appropriating, and identifying an object, impression or idea. All progress in knowledge after the first perceptible act is a process of apperception, and the character of each new perception is determined by those which have gone before. The first sensation or impression affords no knowledge, but results in a presentation which persists in existence gradually sinking down below the surface of consciousness. This original presentation existing in the sub-conscious state of our mental life will be partially wakened and called up into conscious activity by the next impression. Thus aroused it modifies the reception of the latter and partially fuses with it. Again this fused impression becomes in its turn the basis of another new impression, sinking down into subconscious life still remains ready to appropriate the next impression assimilating it in like fashion. But the method of the reception and the character of the appropriation is constantly varying with the increasing collection of presentations or ideas already in the mind. The completeness with which each fresh idea is assimilated is determined by what has gone before. Herein, according to the Herbertian school, lies the importance of directing the process of apperception by judicious selection of the materials which are to constitute the experience of the child. As the mind, in this view, is simply built up entirely out of the ideas which it has received, the kind of ideas presented to it and the order in which they come are of the utmost moment in the work of education. Ideas or objects are assimilable or appreciable when partially familiar; a totally foreign idea has no friends already lodged in the mind to welcome it.

In the pleasure of the process of apperception lies the great fact of interest. Interest depends on what is already in the mind. It is the factor of most vital importance in education—and in moral life, as a matter of fact. Yet it results from the process of apperception, Interest stimulates voluntary attention and sustains involuntary. It thus lies at the root of the mental activity of observation. It determines what we shall see and also what we shall desire and will. With Herbert interest is not simply a means: it is an end in itself. "Many-sided interest" frees from
narrow prejudices and counteracts evil possessions, but it is also an ideal worthy of all admiration in art. Ignorance is really the main factor in vice. All action springs out of "the circle of thought"; hence the decisive influence of the matter or content of instruction in the work of character building. "Make your instruction agree with the sentiment of the doctrine that the Herbartians, amicably connected with the insistence on the psychological agencies of apperception and interest is the Herbartian principle of correlation and the five formal steps of instruction. The former should, according to the school, govern the drawing up of the curriculum, but the latter is concerned with the matter of the different branches simultaneously treated, e.g. the literature, history and geography, may be connected with one another; and as far as possible let the subsidiary subjects be arranged in concentric circles around the chief study. The five formal steps prescribe the order and method of procedure in an ideal lesson. Prepare the mind for the reception of the new matter by repetition of questions which freshen the pupil's recollection of ideas related to the subject of the coming lesson. Next present the matter clearly, developing it in an orderly method. Then, or par passu, by comparison, suggest new ideas and connect them with those already familiar. After this generalize the results and finally apply the knowledge gained in some form of practical exercise. These latter doctrines and other deductions from Herbart's principles—some of them very disputable—have been elaborated in everyday pedagogical fiction by certain of the later Herbartians. Besides instruction, practical education includes two other factors, government and discipline. Though character, according to Herbart, is formed in very large measure by the instruction, i.e. by the ideas apperceived and absorbed by the mind, yet he also places something of the circle of thought. Government is mainly repressive, checking disorder and providing the conditions for instruction. Training and discipline are of greater importance. They look to the future building up of the will and forming habits. But as discipline is effected not merely by the form but also by the matter of the school exercises, we come back once more to instruction as the essential factor.

Criticism. Undoubtedly there is much that is stimulating and valuable in Herbart's work on Education. His insistence on certain psychological laws established by experience and his frequent appeal to the acquisition of new conclusions in opposition to mere empiricism in education; his accentuating the value of interest; his earnest advocacy of an ethical aim; his demand for wide culture; his faith in the potency of education; and his enthusiasm for the vocation of the teacher are all deserving of warm commendation. But there are other features in his theory to which serious objections are made. Firstly, his account of the soul, as being capable originally only of simple reactions to impressions and as being then virtually swallowed up by, or dissolved into the stream of subsequent presentations or ideas, is metaphysically erroneous, and in educational practice exceedingly dangerous if carried to its logical conclusions. For it implies an entirely mechanical view of the mind, as rigidly determinist as that of the English Associationists, with which indeed, notwithstanding Herbart's spiritualism, it has sundry points of similarity. It is a frame of mind which will not quite do for individual responsibility. The soul seems to be conceived merely as the arena for chance experiences coming from without. Our whole mental life is solely the resultant of the collision and coalescence of the presentations flowing in upon us. Every volition is the result of the circle of thought in which Herbart himself, as well as the best educationalists of to-day, insist much on the duty of respecting and developing the individuality of the pupil; but where the individuality is seated, or in what it consists, is not easy to understand in the Herbartian system. Here especially lies the strength of the rival doctrine of the Froebelian School, which so earnestly inculcates the importance of self-activity. Again, the ethical aim of Herbartism is not a natural ethical aim—not an end outside of self, not even humanity—but self-culture. Further, knowledge and intellectual culture, however varied or refined, are not virtue. Herbart has here fallen into the old Socratic error. Knowledge is desirable and its attainment may be a duty; but virtue is essentially a quality of the whole, not of the intellect. Its essence lies in self-control, and self-denial, often in "action in the line of greatest resistance" as Professor James well calls it. Asceticism, so obnoxious to the Herbartian, is therefore not unintelligent. Many-sided interest, too, though ethically helpful is not virtue. Intellectual ignorance and narrow-mindedness may and often are combined with a high quality of moral fibre, whilst men of abundantly many-sided interest, as e.g., Francis Bacon or Goethe, may fall sadly short of being ethical models.

Furthermore, although, as Catholic doctrine insists, the positive moral and religious teaching of the young and the ethical quality of the ideas on which their intellects are fed exert a real influence on the will and moral disposition of the child, yet the value of mere instruction in comparison with that of discipline is exaggerated by the Herbartian school. It is not the mere cognition of the facts of history and literature, or in general the content of the instruction in these subjects, that makes for morality, but the exercise of our faculties, our moral judgment, imagination, sympathy, aversions etc. upon these facts. Moral sensibility is developed by action in harmony with the instincts and sentiments of other minds, or by the acquisition of moral information. Again, whilst interest is to be fostered and advantage taken of every psychological law which facilitates learning, we must not forget the educational worth of effort and the conquest of difficulties, or the disciplinary value of stiff formal studies such as mathematics. Stereotypedness of character will not be cultivated by a "soft" pedagogy which would eliminate all obstacles from the student's path—though this latter attempt is not the outcome of the true Herbartian spirit. The evil also of an unenlightened formalism has exhibited itself in a somewhat similar spirit in the Herbartian method by certain members of the school. Nevertheless it remains true that Herbart has given a substantial contribution of permanent value to educational theory and educational method.

The literature of the Herbartian School even in English is voluminous and is steadily increasing. The most convenient works of Herbart himself for the English speaking student are Letters and Lectures on Education by Herbart, trans. by Felix (New York and London, 1901); The science of Education, trans. by Felix (New York and London, 1897); A Text-book in Psychology, trans. by Smith (New York, 1901). A useful introduction is The Student and Herbart (New York, 1901) by Hayward, with which may be usefully read on the opposite side, DABRICK's Herbart, A Criticism (New York and London, 1903). Herbart and the Herbartians by De Ceamo (New York and London, 1904) gives a fair account of the school. The most recent volume of the whole Herbartian literature is probably ADAMS, Herbartian Psychology (London and New York). See also Hayward's Herbartianism (London, 1897); Introduction to the Pedagogical Science, trans. by Zinner (Boston, 1901); Von REINS, Outlines of Pedagogy, trans. by Van Law (New York, 1885); Pedagogische Schriften, trans. by Bartholomew (Bartholomew, London, 1875 and 1881). The most recent treatise in French is La Pedagogie de Herbart, by Gocklin (Paris, 1895).

MICHAEL MAHER.

Herbart, John Rogers, b. 23 January, 1810, at Maldon, Essex, England; d. in London, 17 March,
1890. He was admitted as a student of the Royal Academy in 1826, and in 1830 his first picture, "A Company of Pilgrims," was exhibited at the Academy. During some years he painted pictures, chiefly inspired by Byron's poems. He visited Italy in 1836, and sent several paintings to the Royal Academy, which attracted general attention. On his return to London, he made the acquaintance of Augustus Welby Pugin, the architect, and was patronized by him. This patronage became a lasting friendship, and through Pugin's influence Herbert was received into the Church in 1840.

In 1841 he was elected an associate of the Royal Academy and exhibited a portrait of Cardinal Wiseman, whose close friend he remained until the cardinal's death. From this time forward he chose for his subjects death-bed scenes. The first of these was "The First Introduction of Christianity into Britain," which at once established his reputation as a great historical painter. In the following year he exhibited "Sir Thomas More and his Daughter observing from the prison window the Monks being led to execution," a work which attracted great public attention. His diploma picture, upon his election as a Royal Academician in 1846, was "St. Gregory the Great teaching Roman boys to sing the Chant which received his name." At that date there was a strong feeling among Protestants against the Church, and much in his work was expressed by the subjects chosen and the religious tone of their composition. But Herbert was absolutely fearless and independent, for his works were recognized by connoisseurs as masterpieces. He was then selected by the Government to paint a series of nine frescoes in the peers' robing room of the House of Lords, illustrative of human justice. The subjects chosen were: "The Fall of Man"; "His Condemnation to Labour"; "Moses bringing down the Tables of the Law"; "The Judgment of Solomon"; "The Visit of the Queen of Sheba"; "The Building of the Temple"; "The Judgement of Daniel"; "Daniel in the Lion's Den"; "The Vision of Daniel." All of these were executed in stereochrome, a process which had been adopted by Maclise, but which Herbert subsequently recognized to have been a mistake, as not being durable. He therefore painted replicas of them in oil. In 1849 he was commissioned to paint in the Poets' Hall "King Lear," "Coriolanus," and "Cordelia's" in the Royal Academy in 1849. In 1860 he painted for Queen Victoria a picture of the Blessed Virgin which Her Majesty highly valued and preserved in her private apartments until her death. It is said that the last look of her husband, Prince Albert, on his death-bed was this picture.

In the "History of the Royal Academy," Mr. Sandby writes of Herbert: "All his pictures are the fruit of long study and most careful workmanship; he paints slowly and minutely; he is said to have cut out portions of his Lear picture five times before he was satisfied. Rarely simplified, and without mean expression, avoidance of accessories, except such as are suggestive of deeper meaning, and, in sacred subjects, a feeling of devotion and spirituality characterize his work, and a dignity in the human form rarely found in modern English artists." From the time of his conversion Herbert proved himself a zealous and practical Catholic. He stood firmly by Cardinal Wiseman during the stormy period which followed the establishment of the Catholic hierarchy in England, and took a prominent part in all Catholic works. He was one of the founders of the English branch of the Society of St. Vincent de Paul, of the St. Vincent de Paul Society, and of the St. Vincent de Paul Society for destitute women, committee, etc. He was also one of the founders of the Peter's Pence Association in England. With failing health, he retired in 1886, having built a handsome house and studio at Kilburn, in the suburbs of London and adjoining the church of the Oblates of Mary Immaculate. He died there and was buried in the Catholic cemetery at Kensal Green, North-West London. A memorial tablet was placed in St. Peter's Church, Kensal Green, in 1878, and a statue of Herbert by the sculptorxl  

Archibald J. Dunn.

Herbert of Bosham, biographer of St. Thomas Becket, dates of birth and death unknown. He was probably born at the places from which he took his name, and he must have joined Becket's household before 1162, as, on his elevation in that year, the new archbishop immediately promoted him to a responsible position. He was to give his master advice on the performance of archbisho's duties, to assist and even direct his study of Scripture. Herbert remained closely attached to St. Thomas during the arduous and troubled years of his episcopacy and exile down to the very eve of the final scene in Canterbury Cathedral. Of all the archbishop's followers he was the keenest antagonist of the king and the royal "customs," quite ready on occasion to hear Henry II to his face and undertake dangerous missions to England. After the martyrdom of Archibald Herbert seems to have lived mainly on the Continent, and he complains that he was neglected by the friends and adherents of the master whom he had served so faithfully; he records, however, a friendly interview with the king himself. We know nothing of him after the year 1189. As a biographer Herbert had many advantages. He shared St. Thomas's ideals and was an eyewitness of most of the incidents of his episcopacy. He had sat by, for instance, during the stormy scenes of the trial at Northampton. On the other hand he did not begin to write till 1184, many years after the events which he records, and Dom L'Huillier has given good reasons to doubt the accuracy of Herbert's reminiscences. The biographer certainly exaggerated his own personal influence over St. Thomas. Herbert of Bosham's work has not, therefore, the historical value of that of Fitzstephen, and it is also extremely verbose. Besides the "Life of St. Thomas", he wrote a very lengthy "Liber Melorum" in praise of the martyr. The best edition of the "Life" is that contained in vol. III of the "Materials for the History of Thomas Becket" (Rolls Series) edited by Canon Robertson; the volume also contains some extracts from the "Liber Melorum".

F. F. Urquhart.

Herbert of Derwentwater (HERBERT), Saint, date of birth unknown; d. 26 March, 4th century. A native of the seventh century, who dwelt for many years on the little island still known as St. Herbert's Isle, in the Lake of Derwentwater. He was for long the friend and disciple of St. Cuthbert of Lindisfarne. Little is known about him, save that he was his custom every year to visit St. Cuthbert for the purpose of receiving his direction in the spiritual man. In the year 686, hearing that his friend was visiting Carlisle for the purpose of giving the veil to Queen Eormenburg, he went to see him there, instead of at Lindisfarne as usual. After they had spoken together, St. Cuthbert said "Brother Herbert, tell me now all that you have tried to ask or speak. For never shall we see another in this world. For I know that the time of my decease is at hand." Then Herbert fell weeping at his feet and begged that St. Cuthbert would obtain for him the grace that they might both be admitted to praise God in heaven at the same time. And St. Cuthbert prayed and then made an answer, "Rise, my brother, weep not, but rejoice that the mercy of God has granted our desire." And so it happened. For Herbert, returning to his hermitage, fell ill of a long sickness, and, purified of his imperfections, passed to God on the very day on which St.
Cuthbert died on Holy Island. It is said that the remains of St. Herbert’s chapel and cell may still be traced at the northern end of the island on which he lived. In 1734 Thomas Appleye, Bishop of Carlisle, granted an indulgence of forty days to all who, in honour of St. Herbert, visited the island in Derwentwater and were present at the Mass of St. Cuthbert to be sung annually by the Vicar of Crosthwaite.

Leslie A. St. L. Toke.

Herbst, Johann Georg, b. at Rottweil, in Württemberg, 13 January, 1787; d. 31 July, 1836. His college course, begun in the gymnasia of his native city, was pursued in the Benedictine monastery of St. Peter in the Black Forest, and in 1806 Herbst registered at the University of Freiburg. After some time spent in completing his mathematical and philosophical studies, he devoted his talents to mastering Oriental languages and Biblical science under the tutorship of Johann Leonard Hug. From the University Herbst went, in 1811, to the seminary of Meersburg, to prepare himself for Holy orders, and was ordained to the priesthood in March, 1812. Carrying on the tradition of Ellwangen, he was made a canon and occupied the office of reipract, on the same day that was occupied the chair of Hebrew and Arabic at the newly-erected University of Ellwangen, and, two years later, was promoted to the professorship of Oriental languages and Old Testament exegesis. In 1817 the theological faculty of Ellwangen was transferred to Tübingen, and there, in addition to the courses already entrusted to him, Herbst taught introduction to the Holy Scriptures and Biblical archaeology; he also occasionally was prevailed upon to lecture on New Testament exegesis, church history, and pastoral theology. These were heroic times for the young faculty of theology, which, with such men as Sebastian Drey, J. B. Hirscher, and Möhler on its staff, and pupils of the stamp of J. C. Hefele, was rapidly winning a conspicuous place in the realm of scholarship.

What the intellectual activity of Herbst was amidst his professorships as well as from his works. His first publication was a volume entitled: “Observationes quaedam de Pentateuchi quattuor librorum posteriorm neuctore et editore” (Gmünd, 1817). From the foundation, in 1819, of the Tübingen “Theol. Quartalschrift”, he was for many years a contributor, but his principal work was left unfinished, and perhaps slightly tainted by the then prevalent tendencies to rationalism, is an introduction to the Old Testament, which was completed and edited by his pupil Welte (1841-44). In 1832 Herbst was appointed head librarian of the Royal University; but through overwork his health soon failed, and he died after a short sickness borne with admirable resignation. A remarkable linguist, thoroughly conversant with the vast literature of his favourite studies, endowed with true critical acumen, Herbst possessed, moreover, in a high degree, the gift of imparting his knowledge in a most clear, attractive, and appealing manner.

Theol. Quartalschrift (Tübingen 1836), 787; Forts in Kirchenbez. s. v.; Ruckgasser, Geschichte der Freiburg- und Reichsstadt Rottweil (Rottweil, 1882).

Charles L. Souvay.

Herculano de Carvalho e Araújo, Alejandro, b. at Lisbon, 28 March, 1810; d. near Santarem, 13 Sept., 1877. Because of his liberal principles, he was forced to flee from his native land in the reign of Dom Miguel, and therefore he was in Paris in 1828, and during 1830 and 1831 in England. When he returned home, in 1832, he was already imbued with the doctrines of romanticism which Almeida

Garrett preached so loudly in Portugal, and which he had seen exemplified in the literatures of England and France. Prominent already as a liberal in politics, he now attracted attention by his poetic work, such as the “Vos do Propheta” (1836), which reflects the influence of Lamennais’ “Paroles d’un croyant”, and dealt in rhytmonic prose with the future of Portugal in the “Harpa do Crente” (Lisbon, 1838), which also testified to the robustness of his Catholic Faith. He entered into journalism as with the periodical “O Panorama” (1837), which he himself founded and conducted. As a romanticist, he now started upon his career as an historical novelist, with his “Monasticon”, of which the first part, “Eurico o Presbytero”, appeared in 1844, and the sequel, “O Monge de Cister”, in 1845. With these stories, as with many others, his scene lies in the reign of John I of Portugal, he really naturalised the historical novel in Portuguese. He continued the tradition with his story “O Bobo”, which turns upon events in Portuguese history of the early twelfth century, and in his “Lendas e Narrativas” (1861). In this latter he gave modern form to some old legends, such as those of Countess “Dona Elvira” and the “O bispo negro”, “O marte do Lidador”, etc. From the period from 1486 to 1583 belongs his “Historia de Portugal” (4 vols.), which stops short with events of the end of the thirteenth century. Before retiring to his place near Santarem, he produced still other historical works, especially “O Estudante” (1854). Among these contained in collected form in his “Opuscules” (6 vols., 1873-84). To his patience as an historical investigator he bears testimony with the collection of documents drawn from the national archives, which he, as a member of the Lisbon Academy of Sciences, published (Portugallia Monumenta Historica).

II, pt. II, pp. 372 sqq.

J. D. M. Ford.

Herder, the name of a German firm of publishers and booksellers.

KURTHOLMAUS HERBER, founder of the present publishing firm, b. at the Swabian free-town of Rottweil on the Neckar, 22 August, 1774; d. at Freiburg in the Brisgov, 11 March, 1839. Originally destined for Holy orders, he was elaborating, while yet a student at the abbey school of St. Blasien and at the University of Dillingen, his plan of "gaining his livelihood by the dissemination of good books" as a "school publisher". In 1801, during the turbulent period prior to the dissolution of the old German Empire, he began his career, at the instance of the Prince-Bishop (soon afterwards Prince Primate) Karl Theodor von Dalberg, in the capacity of "publisher to the princely episcopal court of Constance", at Constance on the Lake of Constance, the episcopal residence and seat of a seminary. Among his first publications, which were mainly of a theological and pedagogic character, we find Wesenberg’s "Archiv für pastorale Konferenzen in den Landkapiteln des Bistums Constance" (1802-27). In 1810 Bartholomäus transferred his business to Freiburg in the Brisgov, where, in close connection with the university, he gave a more comprehensive character to his publications and developed his miscellaneous stock in new directions. One of his most important publications was Karl von Rotteck’s "Allgemeine Geschichte des Anfang der historischen Literatur der deutschen Sprache an der französischen Hochzeit," 2 vols. in 4 parts (1801-1808), the 15th edition being issued by another firm), which for more than a generation was "the gospel of the educated liberal middle classes". Being entrusted with the publication of the official war Bulletin, the
"Teutsche Blätter", by the royal and imperial authorities at head-quarters as early as the end of 1813, Herder went to Paris with the allied armies in 1815 in Metternich's train as "Director of the Royal and Imperial Field Press". Subsequent to the conclusion of peace he founded an art institution for lithography, copperplate engraving, and modelling in terra cotta, in conjunction with his publishing business. In the course of time upward of the hundred pupils were turned out from this institution, while the sumptuous illustrations and maps that were issued mark an epoch in the history of this branch of technic—especially the "Heilige Schriften des Alten und Neuen Testamentes in 200 biblichen Kupfern" (1825) and the "Große Bibel" (1820-23), 200 biblical engravings), of which he reproduced numerous impressions by an original lithographic process, and Woerl's "Atlas von Central-Europa in 60 Blättern" (Atlas of Central Europe in 60 plates, 1830), which was the earliest employment of two-colour lithography. As late as 1870 this atlas rendered important service to the German army by reason of the map of France it contained. Although such great achievements won a European reputation for the house, the commercial profits derived therefrom were entirely disproportionate to the expenditure. Consequent to the death of the house at Bartholomäus Herder's death in 1839, his sons carried on a successful one. His two sons succeeded to the heritage.

KARL RAPHAEL HERDER (b. 2 November, 1816; d. 10 June, 1885), the elder son of Bartholomäus, took up the commercial side of the business, while the younger BENJAMIN HERDER (b. 31 July, 1818; d. 10 November, 1888), took charge of the publishing department until his brother's retirement in 1856, when he undertook the sole management. Equipped with a thorough, scholarly education, trained in the book business by his father and under Gauthier de Laguionie in Paris, Benjamin had had his views further broadened early in life by travels through Germany, Austria, France, England, and Italy. Of a character earnest and religious, he was strongly impressed by the Cologne troubles of 1837, and, as in the case of so many of his contemporaries, they gave a direction to his life, and this youth of twenty-one set to work with the definite aim of playing some part in the liberation and revival of the Catholic Church. Gradually at first, and more gradually abandoned fine-art publications in favour of book-publishing, being thus enabled to devote the full measure of his energies to the service of religious learning. Herein he displayed such activity in the encouragement of particular branches of erudition that the history of his theological publications, for instance, would comprise a considerable fragment of the history of modern theological literature, and the catechetical branch thereof would constitute one of the most important divisions of the history of catechetics. After theology Herder applied himself with the same zealous pedagogical zeal of the saints as well as to other edifying biographies; after a long and cautious delay to the publication of sermons. He next took up works dealing with the religious and political problems of the day, with questions of ecclesiastical policy and social controversies and issues. Finally, passing beyond the literature, he ventured to transcend, he began the publication of works on the general sciences—history and philosophy, the natural sciences, geography, and ethnology, including the publication of atlases, school textbooks, music, art and its literature, the history of literature, and belles-lettres. His governing purpose throughout was to avoid wasting his energies on particular publications, but to build up the various branches gradually and systematically by the publication of more comprehensive "collections" and "libraries" and by the issue of scientific periodicals.

The "Kirchenlexikon" (Church Lexicon) was the great centre of his fifty years' activity as a publisher. It was the first comprehensive attempt to treat everything that had any connexion with theology encyclopedically in one work, and also the first attempt to unite all the Catholic savants of Germany, who had hitherto pursued each his own path, in the production of one great work. Herder had nursed this project since 1840. The difficulties encountered in the preliminary work were almost inconceivable. Then, when its appearance was made possible and its issue was begun in 1847 under the direction of Wette, the exequi of Tübingen, and Wetzlar, the Orientalist of Freiburg, followed the even graver difficulties of ensuring a continuous supply of new text and material, which were only completed at the beginning by the terrors of the Revolution of 1848, and towards the end by the oppression of the Church in Baden. But finally, after sixteen years of struggling and striving on the part of Herder, all obstacles were overcome, and the work was brought to completion in 1856, thanks chiefly to the never-failing, self-sacrificing support of Herder. It had a decisive influence on the subsequent intellectual activity of Catholicism, and the importance which the Protestant scientific world attributed to it was eloquently demonstrated in the fact that, while it was still in process of issue, the Protestant scholars made use of Herder's scheme, even down to the smallest details, for the "Real-Encyklopädie für protestantische Theologie". It was sixteen years more before the preliminary work could be begun on the new edition which soon became necessary, and ten years more before its publication could be started. While the historical element had been especially emphasised in the first edition, the dogmatic and exegetical side was expanded to equal dimensions in the second edition, in view of the far-reaching change which had taken place in the domain of theology. The subjects to be treated were chosen by Adalbert Weiss, professor at the Freising lyceum, and the editorial chair was held by Hegenröther (q. v.) until his elevation to the cardinalate, and afterwards by Kaulen (q. v.), the exequi of Bonn.

The stupendous plan, which Benjamin had cherished since 1841, of building up a "Theologische Bibliothek" (Theological Library) according to an equally logical scheme, was only able to realize until thirty years later. When the "Kirchenlexikon" was nearing completion, Herder sought, by the publication of the "Konversations-Lexikon" (Universal Encyclopædia, 1st ed., 1853-7), to make the Catholic public independent of the hostile literature which ruled unchallenged in the highest important domain of works of general information. Although, out of regard for the limited purchasing capacity of the Catholic public in Germany, he confined himself to the modest limits of five medium-sized volumes, still the undertaking was for his day a very conspicuous one. Of the very great number of other works published by him, we can only to the most notable, which spread the reputation of the house far beyond the limits of Germany. Among the earliest were the works of Alban Stola (q. v.), a man endowed by nature with all the gifts of the popular theologian and teacher of the people, whose "Anderer Fürst für's Christentum" and "Himmel und Erde" in powerful and eloquent language the fundamental evils of the world and the age, achieved an extraordinary success in strengthening and deepening the faith of the people. Alongside of Stola we find Ignaz Schuster, whose catechisms and Biblical histories, issued in constant incessant thousands and hundreds up to the very end of his life, were scattered over the world, like Stola's works, in hundreds of thousands of copies, the larger editions of the Biblical histories being translated into no less than twenty-five languages. Even before the com-
pition of the "Kirchenlexikon" Hefele began his monumental "Conciliengeschichte". The strong religious revival that set in with the sixties was heralded by Hettiger's pioneer work, the "Apologie des Christentums", which sought to acquaint Christians with the cultured world in well-timed fashion, and which, reprinted again and again, and constantly improved, continues to exercise a potent influence in five foreign civilized languages even to this day. The "Apologie" of Weiss and Schanz were subsequently issued to support and supplement Hettiger's work. The work contrasts Christian life and its historical and cultural development with a purely worldly knowledge and the outlook of the age, while the other strives to harmonize the doctrines of the Church and the results of scientific research.

The Encyclopaedia of December, 1864, and the question of infallibility called forth in the pages of the "Stimmen aus Maria Laach" the comprehensive defence of the authority of the pope, as pastor and teacher, while the controversies concerning the Vatican Council occasioned Hergenrother's masterly "Antijudas", afterwards expanded and strengthened in the "Katholische Kirche und christlicher Staat in ihrer geschichtlichen Entwicklung und in Beziehung auf Fragen der Gegenwart". The "Stimmen", which at first appeared irregularly, inaugurated those relations between the house of Herder and the German Jesuits which have proved of so great importance to Catholic learning and Catholic life, and have kept the Jesuits in such close touch with their native country even while they were in exile during the persecution of the Kulturkampf. Of the abundant fruits of these relations we may mention the great "Collectio Lactantiae" of the more recent councils, which displays a Benedictine industry in the collection of materials, and the "Philosophia Lactensis", nor can we forget the vigorous "Stimmen", which rapidly developed in the organ of the current intellectual movement, and its thoroughly stimulating and very instructive "Ergänzungshefte" (Supplementary Numbers), which already number more than one hundred. After the promulgation of the fundamental decrees of the Vatican Council, the "Theologische Bibliothek" was opened under brilliant auspices with Scheeben's profound "Handbuch der Dogmatik". While the Kulturkampf was threatening to silence every expression of Catholic life, "Geschichte des deutschen Volkes" began its triumphant course and carried, for the first time, Catholic research into wide Protestant circles. The last ten years of Herder's existence crowned his life work. Quite apart from the individual volumes of the various Collections and of the Apologies already mentioned, he produced, among other works, the "Real-Encyclopädie der christlichen Alterthümer" by F. X. Kraus, the new edition of the "Kirchenlexikon", Knecht's "Praktischer Kommentar zur biblischen Geschichte", the "Bibliothek für Länder- und Volkeerkunde" in Handbuch der Naturwissenschaft und Pastors's "Geschichte der Päpste", the "Staatsexikon der Götter-Gesellschaft", the "Archiv für Literatur und Kirchengeschichte des Mittelalters" by Denifle and Ehrle, and the "Bibliothek für katholische Pädagogik".

Thus Benjamin Herder's activity as a publisher was a faithful mirror of the Catholic revival in Germany in the nineteenth century, and furthermore a powerful lever exerted in favour of the Catholic cause. This was so much the more creditable, since Herder was not merely the agent, but also in general the originator of his enterprises. Possessing a profound knowledge of the needs of Catholic literature, it was usually he who selected the themes for literary treatment. When he once recognized a project to be right, he clung to it tenaciously until conditions proved favourable, although decades elapsed before his scheme could be realized. Almost always on the watch for competent collaborators, he discovered the majority of the Jesuits by his own acumen and personal acquaintance usually developing into lifelong friendship. In no undertaking did he allow material gain to be the deciding factor; even in times of crisis—and of such he encountered more than one, beginning with the Baden uprising of 1848, right through the wars which raged between 1859 and 1871, down to the dreary years of the war of 1870—he scrupled the resources of both clergy and people—the end in view alone determined his decision. Thoroughly alive to his grave responsibility as a publisher, he devoted extraordinary care to the training of capable and conscientious assistants. His partner, Franz Joseph Hutter (b. at Ravensburg, 25 November, 1850) issued from the ranks of these "pupils". His essentially practical nature happily complemented Benjamin's idealism, which even repeated warnings had not been able to shake. New branches were established to open a wider market than the older establishments at Freiburg and Straubing afforded. In 1873 were founded the New York (U.S. A.) branch, under the management of Joseph Gummersbach, and the Munich branch under Herder's brother-in-law, Adolf Streber, and in 1886 that at Vienna, while enterprises of even greater promise were contemplated. In 1863 Herder married Emilie Streber, the accomplished daughter of Streber, who was at the University of Munich, and celebrated as a numismatist. Her alliance with the Streber family introduced Herder to that very circle of men who played the most important part in the Catholic revival in Germany. It was also contemporaneous with a more active movement in the Church, in which Herder took a notable part. Though handicapped throughout by great physical sufferings, he bore all to the end without complaining, striving unceasingly onwards and upwards.

Under the new management, conducted by Herrmann Herder, a series of collections, chiefly theological and historical, have been issued, and also a steadily increasing number of publications in foreign languages, principally Spanish and English, while in recent years various annuals have been published. We may here mention the monumental undertakings, the "Geschichte der Weltliteratur" by Baumgartner, the definitive collection of sources under the title "Archiv für Literatur und Kirchengeschichte des Mittelalters"; the third, completely revised, edition of the "Konzessions-Lexikon", which now ranks with the great Leipzig encyclopedias, and Wilpert's superb work on the catacombs. In 1906 a branch of the firm was established at Berlin.

(Hutter), North Herder und seine Buchhandlung (manuscript printed 1880); Katalog der Herderischen Verlagshandlung (1801–1893); Mittellungen der Herderischen Verlagshandlung (1896–1906; new series, 1906–); Auswechsel-Katalog (1896).

FRANZ MEISTER.

Herderich, Christian Wolfgang (according to Franco, Christianus Henricus; Chinese, Ngen), an Austrian Jesuit missionary in China; b. at Graz, Styria, 25 June, 1625; d. 18 July, 1684. He entered the Austrian province of the Society of Jesus on 27 October, 1641, and in 1656 was chosen for the Chinese mission. For two years he laboured in the provinces of Celebes, and after 1660 was in the Chinese provinces of Shan-si and Ho-nan. In 1671 he was called to the Court of Peking as mathematician, and was one of that group of scholarly Jesuits with whom the great emperor Kang-he surrounded himself. He possessed a profound knowledge of the Chinese language and literature, and was a collaborator in the great work: "Confucius, Sinarum Philosophus, sive
Scientia Sinensis latein exposition studio et operâ Pros-pectu Interroga, Christiani Herderian, Franciscus Rex, Czom, Philippus Collect, PP. Sankt Jesu" (Paris 1778). This earliest translation and elucidation gave European scholars their first insight into the teachings of the Chinese sage. Herderich was also the author of a large Chinese-Latin dictionary (Wente-ko), probably one of the first of its kind. The last nine years of his life were spent as superior of the Jesuits in the Tchon, province of Shan-Si. Emperor Kang-hi himself composed his epitaph (cf. "Welt-Bott", Augsburg, 1726, Nos. 16, 49).

H. HUDON, Deutsche Jezuittenmissioear (Freiburg im Br., 1890); L. De Samenknolle und die Missioear (Freiburg im Br., 1891), 32–37; H. KRAMER, Kirche (Köln and Munich, 1707), 703 sqq. Herderich may be found in: Inseratio, Comparatio Narratio della Missioear (Rome, 1672), 115–128; GABRIEL, Histoire de la Compagnie de la Compagnie des Missioear (Paris, 1670), 56; KATHOL. Missioear (Freiburg im Br.) for 1901–02, pp. 25 sqq.; 1904–05, pp. 4 sqq.

A. HUONDER.

Hereditiy.—The offspring tends to resemble, sometimes with extraordinary closeness, the parents; this is heredity. This definition omits the cases of (1) alternation of generations, where the offspring resembles a more remote ancestor in the direct line, the alternation being in regular or irregular rhythm; (2) the production of neuters, like their respective parents, of neuter uncles and aunts but unlike their (fertile) parents. On the other hand there is almost always, amongst higher forms at any rate, a certain likeness as well as a likeness; this is variation. In these two sentences is summed up most of what is absolutely certain respecting these two subjects in the enormous amount of attention which has been devoted to them and the voluminous literature consecrated to them. Some have conceived these two processes as at variance with one another, but this conception is false or at least wholly inadequate. Two methods are employed in studying the processes of heredity, the biometrical method, which seeks to work out the problem by mathematical means, and the method which follows the lines laid down by Abbot Mendel of Brunn (q. v.), whose long-forgotten observations have led to many very profitable results and give greater hope of a real solution of the difficult question of heredity alone. Others which have so far been made public. Particularly do they seem to throw light upon the much-discussed but most imperfectly explained matter known as reversion. Where a unicellular organism divides into two cells it is hard to say which is mother and which is father, but there is no doubt as to the understanding why both of them closely resemble the cell from which both of them have been derived since both of them are that cell or part of it. This is heredity in its simplest term. The matter becomes more complicated when the descendant is the offspring of a multacellular organism, even sexually, and infinitely more complicated when ordinary sexual reproduction comes into question. In the axial case, however, if it could be shown that in the first division of the ovum a certain portion of the substance was set aside for future reproductive purposes, and that this was always the case, the condition would approximate to that of the unicellular organism above mentioned and the heredity would be explained by the fact that the offspring was actually a portion of the original ancestor. Similarly in sexual reproduction, though the matter is more complex, still the offspring would be the result of two ancestors whose reproductive substances had been handed down in the manner indicated above.

This is practically Weismann's "germ-plasm theory". He supposes that each individual consists of two portions, somato-plasm, making up the main portion of the body, and germ-plasm stored away in the sex-gland. This last he believes arises always from germ-plasm, that substance being set aside at the earliest stages of the development of the organism. The germ-plasm plays a similar role in the sex-gland, when that organ becomes developed. It is obvious that this theory of a potentially immortal germ-plasm entails great difficulties when the question of variation and especially variation induced by the environment, comes into consideration. Moreover, there is no avail in the idea of regeneration in forms that there is any such setting aside of germ-plasm substance at early stages of development, and all the facts of regeneration are against the theory, as has been pointed out by Hertwig, Weismann's great opponent.

If it be true, as it undoubtedly is, that a hydra, into several pieces can produce as many new individuals, and that, by the division of any number of plants, it is difficult to see how it can be argued that all the reproductive substance is stored up in one only portion of the animal or plant. Weismann's views, which have undoubtedly exerted great influence on biologists and at one time met with a very large amount of assent, have, it must be admitted, failed to meet a great deal of criticism which has been directed against them, and do not at all hold the position which they occupied some years ago in scientific favour.

Another method of explaining heredity is that which supposes that fragments from the different portions of the body become aggregated in the sex-cells and thus become the progenitors of the different portions of the offspring. Darwin's theory of "pan-genesis" and other similar explanations are of this character, and of them it may be said that they do not only rest upon no demonstrable evidence but require so complicated a machinery as to become practically inconceivable. There remains the remarkable theory of "unconscious memory" put forward by Hering, and more recently by Semon and Francis Darwin, and developed in the writings of Samuel Butler. Psychological explanation seems destined to receive more attention in the future than it has in the past. Much remains to do as to what portion of the cell is the bearer of the hereditary characteristics. Some years ago it was firmly held that these were borne by the nucleus, and further, by the chromosomes of the nucleus, but that it is the mitotic process itself that makes this theory, if not untenable, at least most doubtful, and it now seems that it may be the nucleus, the protoplasm, or the centrosome, or a combination of any or all of these, which may be held to occupy this position, if indeed it must be held that some definite mechanism is necessary. The difficulty in the case of acquired conditions is a point around which controversy rages and has raged for some time. It may at least be said that Weismann has proved, as far as such a matter can be proved, that mutilations are not inheritable and this may be said in spite of the still doubt on the explanation of Brown-Séquard's experiments in connexion with the production of epilepsy in guinea-pigs. Weismann denies the possibility of the inheritance of acquired characters and has invented a cumbersome and, many would say, fanciful explanation to account for variation otherwise. Haeckel, on the contrary, would rather, as he says, believe in the Morse theory of creation than doubt the inheritance of acquired conditions.

This matter has often been complicated by the question of inherited disease, which is a wholly different question and of which all that can here be said is that, where it is a case of bacterial or toxic infection of the germ, it is not inherited, but a certain character, or organ, or structure which renders its owner predisposed to the attacks of that disease, should he come in its way. As to the true inheritance of acquired conditions, however, there is, as above indicated, great difference of opinion, the
Lamarckians and the so-called neo-Lamarckians holding that in this and in this alone, according to the stricter sect, we have the true explanation of variation and evolution, whilst the Weismannites take up a wholly opposite point of view. It must be admitted that the extreme views of Weismann as to the impossibility of the inheritance of acquired conditions are daily losing ground. The same may be said as to the theories of Degrais. It is well known that investigators consider that if a valuable bitch has borne pups to an under-bred dog, she is ruined for breeding purposes, since she is liable at any time to throw ill-bred pups, even though the sire of later litters may be a highly-bred male. The same view is held by horse-breeders. And the condition, which supports that the maternal organism, when affected, by the male condition, is called telegony. The most important argument in its favour is that it is implicitly held by persons whose bread is earned by attention to the laws of inheritance, yet it must be owned that Professor Cesar Ewart's careful experiments, at Penicuik, do not lend authority to the view, and it may perhaps turn out that the true explanation of this puzzling variety of heredity depends on some law of reversion, at present misunderstood, but which may be cleared up by further researches along Mendelian lines. (See Mind.)

The subject is well summed up in J. Thomson, Heredity (London, 1905), written by one belonging to the Weismannite side. See also N. R. F. Munn, "Development in Development and Inheritance" (London and New York, 1896, 1900), the best book on the cellular question, which involves so much in the matter of heredity: E. B. Claparede and M. Hereford. Ancient Diocese of (Herefordensis), in England. Though the name of Putta, the called Bishop of Rochester, is usually given as the first Bishop of Hereford (676), Venerable Bede's account merely states that he was granted a church and some land in Mercia by Sæulf, Bishop of Lichfield. This, however, was probably the nucleus from which the diocese grew, though its limits were not precisely fixed even by the end of the tenth century. In 793 the body of the martyred Ethelbert, King of the East Saxons, was buried at Hereford, and his shrine became a place of pilgrimage famous for miracles. His name was joined with that of the Blessed Virgin as titular, so that the cathedral, which was served by secular canons, was known as the shrine of Mary and St. Ethelbert. The shrine was destroyed by the Welsh in 1055, when the cathedral, which had been recently rebuilt, was much damaged. It was restored after the Norman Conquest by Bishop Robert de Losings, the intimate friend of St. Wulstan of Worcester. His immediate successors made further additions, and the great central tower was built about 1200. The clerestory to the choir, the beautiful Early English Lady Chapel and the north transept were added during the thirteenth century. Unfortunately the cathedral has suffered much from unskilful restoration, and some of the medieval work has been replaced by eighteenth-century architecture, notably the west front, which was ruined by the fall of a tower in 1786. The cathedral was remarkable for not conforming to the Sarum Rite, but for maintaining its own "Hereford Use" down to the Reformation. It had its own Breviary and Missal, and portions of the antiphoners survived. The diocese was unusually fortunate in its bishops, two of whom are specially prominent: John de Brete, the great English lawyer (1268-1275); and his successor, Thomas de Cantilupe, better known as St. Thomas of Hereford, the last English saint to be canonized. He was chan-

Heresewitha

ERWEYT

EDWIN BURTON.

Heresewitha (Hereresw, Hereswyde), Saint, daughter of Hereric and Beorhtswith and sister of St. Hilda of Whitby. She was the wife of Æthelhere, King of Anglia, to whom she bore twins, Aldwulf and Alfwold. By the "Liber Eliensis" she is stated to have been the wife of King Anna, the elder brother of King Æthelhere, but this is certainly a mistake. Her husband having been killed in the battle of Winwaed (655), St. Hereswitha became a nun at the Abbey of Chelles, then in the Diocese of Paris. The legend informs us that her body was concealed under the altar, and that the feast day was variously assigned—by Stanyan to 3 September, by the second edition of the English Martyrology to 20 September, by the first edition and by Ferrari to 23 September. Buccelinus, however, assigns it to 1 December, and the Bollandists propose to discuss her cultus on that date.

LESLIE A. ST. L. TOKE.

Heresy.—I. Connotation and Definition; II. Distinctions; III. Degrees of heresy; IV. Gravity of the sin of heresy; V. Origin, spread, and persistance of heresy; VI. Christ, the Apostles, and the Fathers on heresy; VII. Vindications of their teaching; VIII. Church legislation on heresy: ancient, medieval, present-day legislation; IX. Its principles; X. Ecclesiastical jurisdiction over heretics; XI. Reception of converts; XII. Rôle of heresy in history; XIII. Intolerance and cruelty.

I. CONNOTATION AND DEFINITION.—The term heresy connotes, etymologically, both a choice and the thing chosen, the meaning being, however, narrowed to the selection of religious or political doctrines, adhesion to parties in Church or State. Josephus applies the name (ἀλτερέως) to the three religious sects prevalent in Judea since the Maccabean period: the Sadducees, the Pharisees, the Essenes (Bel. Jud., xi., viii, 1; Ant., xiii., x. 9). St. Paul describes the Roman governor Felix as the leader of the heresy (ἀλτερέως) of the Nazarenes (Acts, xxiv, 5); the Jews in Rome say to the same Apostle: “Concerning this sect (ἀλτερέως), we know that it is everywhere contrived” (Acts, xxviii, 22). St. Justin (Dialogue, xvi, 108) uses αλτερεως in the same sense. St. Peter (II, ii, 1) applies the term to Christian sects: “There shall be among you lying teachers who shall bring in sects of perdition (ἀλτερεως ἀδυαλειας)”. In later Greek, philosophers’ schools, as well as religious sects, are heresies.

St. Thomas (II-II, Q. xi, a. 1) defines heresy: “a species of infidelity in men who, having professed the faith of Christ, corrupt its dogmas”. “The right Christian faith consists in giving one’s voluntary assent to Christ in all that truly belongs to His teaching. There are, therefore, two ways of deviating from Christianity: the one by refusing to believe in Christ Himself, which is the way of infidelity common to Pagans and Jews; the other by restricting belief to certain points of Christ’s doctrine selected and fashioned at pleasure, which is the way of heretics. The subject-matter of both faith and heresy is, therefore, the deposit of the faith, that is, the sum total of truths revealed in Scripture and Tradition as proposed to our belief by the Church. The believer accepts the whole deposit as proposed by the Church; the heretic accepts only such parts of it as commend themselves to his own approval. The heretical tenets may be adhered to from involuntary causes: inculpable ignorance of the true creed, erroneous judgment, imperfect apprehension and comprehension of dogmas: in none of these does the will play an appreciable part, wherefore one of the necessary conditions of sinfulness—free choice—is wanting and such heresy is merely objective, or material. On the other hand the will may freely incline the intellect to adhere to tenets declared false by the Divine teaching authority of the Church. The impelling causes may be intellectual pride or exaggerated reliance on one’s own insight; the illusions of religious zeal; the allurements of political or ecclesiastical power; the ties of material interests and personal status; and perhaps others more dishonourable. Heresy thus will be imputable on the subject with it a varying degree of guilt; it is called formal, because to the material error it adds the informative element of “freely willed”.

Pertinacy, that is, obstinate adherence to a particular tenet is required to make heresy formal. For as long as one remains willing to submit to the Church’s definition he remains a Catholic. Obstinacy in his wrong beliefs are only transient errors and fleeting opinions. Considering that the human intellect can assent only to truth, real or apparent, studied pertinacy, as distinct from wanton opposition, supposes a firm subjective conviction which may be sufficient to justify the conscience of the subject even if the firm convictions result either from circumstances over which the heretic has no control or from intellectual delinquencies in themselves more or less voluntary and imputable. A man born and nurtured in heretical surroundings may live and die without ever having a doubt as to the truth of his creed. On the other hand a born Catholic may allow himself to drift into whirls of anti-Catholic thought from which no doctrinal authority can rescue him, and where his mind becomes inured to convictions, or considerations sufficiently powerful to overlay his Catholic conscience. It is not for man, but for Him who searcheth the reins and heart, to sit in judgment on the guilt which attaches to an heretical conscience.

II. DISTINCTION.—Heresy differs from apostasy (q. v.). The apostate a fide abandons wholly the faith of Christ either by embracing Judaism, Islamism, Paganism, or simply falling into the net of sin and death. He is one whose abdication of religion is total. the heretic abandons himself in faith in Christ. Heresy also differs from schism. Schismatics, says St. Thomas, in the strict sense, are they who of their own will and intention separate themselves from the unity of the Church. The unity of the Church consists in the connexion of its members with each other and of all the members with the supreme pontiff. Now this head is Christ whose representative in the Church is the supreme pontiff. And therefore the name of schismatics is given to those who will not submit to the supreme pontiff nor communicate with the members of the Church subject to him. Since the definition of Papal Infallibility, schismatics include the heresy of denying this dogma. Heresy is opposed to faith; schism to charity; so that, although all heretics are schismatics because loss of faith involves separation from the Church, not all schismatics are necessarily heretics, since a man may, from anger, pride, ambition, or the like, sever himself from the communion of the Church and yet believe all the Church proposes for our belief (II-II, Q. xxix, a. 1). Such a one, however, would be more properly called rebellious than heretical.

III. DEGREES OF HERESY.—Both matter and form of heresy admit of degrees which find expression in the following technical formule of theology and canon law. Pertinacious adhesion to a doctrine contradictory to a point of faith clearly defined by the Church is heresy pure and simple, heresy in the first degree. But if the doctrine in question has not been expressly...
HERESY

"defined" or is not clearly proposed as an article of faith in the ordinary, authorized teaching of the Church, an opinion opposed to it is styled sententia heresi proportional, that is, an opinion approaching heresy. Next, a doctrinal proposition, without directly contradicting a received dogma, may yet involve logically dissenting the mind and destroy revealed truth. Such a proposition is not heretical, it is a proposi- theologie errors, that is, erroneous in theo- logy. Further, the opposition to an article of faith may not be strictly demonstrable, but only reach a certain degree of probability. In that case the doctrine is declared de fide dubia, heresia sapientia; that is, an opinion suspected, or savouring, of heresy (see Censure, Theological).

IV. Gravity of the Sin of Heresy.—Heresy is a sin because of its nature it is destructive of the virtue of Christian faith. Its malice is to be measured there- fore by the excellence of the good gift of which it deprives the soul. Now faith is the most precious possession of man, the root of his supernatural life, the pledge of his eternal salvation. Privity of faith is therefore the greatest evil, and deliberate rejection of faith is the greatest sin. St. Thomas (II-II, q. x, a. 3) arrives at the same conclusion thus: "All sin is an alienation from God, a sin of unbelief—infidelity; the greatest sin in the whole range of perversity." And he adds: "Although the Gentiles err in more things than the Jews, and although the Jews are further removed from true faith than heretics, yet the unbelief of the Jews is a more grievous sin than that of the Gentiles, because they corrupt the Gospel itself after having adopted and possessed the same. It is a more serious sin not to perform what one has promised than not to perform what one has not promised." It cannot be pleaded in attenuation of the guilt of heresy that heretics do not deny the faith which to them appears necessary for salvation, but only such articles as they consider not to belong to the essential essence. In any event, it is true that two of the most evident truths of the depositum fidei are the unity of the Church and the institution of a teaching authority to maintain that unity. That unity exists in the Catholic Church, and is preserved by the function of her teaching body. These two facts are founded on very ancient constitutions of the Church there is no room for private judgment sorting essentials from non-essentials: any such selection disturbs the unity, and challenges the Divine authority, of the Church; it strikes at the very source of faith. The guilt of heresy is measured not so much by its subject matter as by its formal principle, which is the same in all heresies: revolt against a Divinely constituted authority.

V. Origin, Spread, and Persistence of Heresy.—
(a) Origin of Heresy.—The origin, the spread, and the persistence of heresy are due to different causes and influenced by many external circumstances. The undying of faith is the result of various conditions of which the motives of credibility may arise from three causes: the obscurity of the Divine testimony (invidentia at- testamentis); the obscurity of the contents of Revelation; the opposition between the obligations imposed on us by faith and the evil inclinations of our corrupt nature. To find out how a man’s free will is led to withdraw from the faith once possessed, the best way is observation of historical cases. Pius X, scrutinizing the causes of Modernism, says: "The proximate cause is, without any doubt, an error of the mind. The remote causes are two: curiosity and pride. Curiosity, unless wisely held in bounds, is of itself sufficient to account for all errors. . . . But far more effective in this respect is the willingness to sacrifice one’s own convictions and to follow the course which has, as it were, its home in Modernist doctrines. Through pride the Modernists overestimate themselves. . . . We are not like other men . . . they reject all submission to authority . . . they pose as reformers. If from moral causes we pass to the intellec- tual causes, the first and most powerful force is ignorance. They extol modern philosophy . . . completely ignoring the philosophy of the Schools and thus depriving themselves of the means of clearing away the confusion of their ideas and of meeting sophisms. Their system, replete with so many errors, had its origin in the wedding of false philosophy with faith" (Encycl. "Pascendi", 8 September, 1907).

So far the pope. If now we turn to the Modernist leaders for an account of their defections, we find none attributing it to pride or arrogance, but they are almost unanimous in allowing that curiosity—the desire to know how the old faith stands in relation to the present day—was the motive that led them. In the last instance, they appeal to the sacred voice of their individual conscience which forbids them outwardly to profess what inwardly they honestly hold to be untrue. Loisy, to whose case the Decree "Lamentabili" applies, tells his readers that he was brought to his present position "by his studies Chiefly devoted to the history of the Bible, of Christian orig- inals and of comparative religion". Tyrrell says in self-defense: "It is the irresistible facts concerning the origin and composition of the Old and New Testa- ments; concerning the origin of the Christian Church, of its hierarchy, of its institutions, of its dogmas; concerning the gradual development of the papacy; concerning the history of religion in general—that create a difficulty against which the synthesis of scholastic theology must be and is already shattered to pieces." "I am able to put my finger on the exact point or moment in my experience from which my 'immanen- tism' took its rise. In his 'Rites for the Incorporation of Spirits' . . . Ignatius of Loyola says . . . etc." It is psychologically interesting to note the turning-point or rather the breaking-point of faith in the autobiographies of scribes from the Church. A study of the personal narratives in "Roads to Rome" and "Journey with the自我." From these we see that the heart of man is a sanctuary impenetrable to all but God and, in a certain measure, to its owner. It is, therefore, advisable to leave individuals to themselves and to study the spread of heresy, or the origin of heretical societies.

(b) Spread of Heresy.—The growth of heresy, like the growth of plants, depends on surrounding influences, even more than on its vital force. Philosophies, religious ideals and aspirations, social and economic conditions, are brought into contact with revealed truth, and from the impact result both new affirmations and new negations of the traditional doctrine. The first requisite for success is a forceful man, not necessarily of great intellect and learning, but of strong will and daring action. Such were the men who in all ages have given their names to new sects. The second requisite is accommodation of the new doctrine to the contemporary mentality, to social and economic conditions. The third, and last, but by no means least, is the support of secular rulers. A strong man in touch with his time, and supported by material force, may deform the existing religion and build up a new heretical sect. Modernism fails to combine into a body separate from the Church because it lacks an acknowledged leader, because it appeals to only a small minority of contemporary minds, namely, to a
small number who are dissatisfied with the Church as she now is, and because no secular power lends it support, for the same reason a thousand small sects have failed, whose names still encumber the pages of church history, but whose tenets interest only a few students, and whose adherents are nowhere. Such were, in the Apostolic Age, the Judeo-Christians, Judeo-Gnostics, Nicolaites, Do- cetist Christians, Ebionites, Marcionites, followed, in the next two centuries, by a variety of Syrian and Alexandrian Gnostics, by Ophites, Marcionites, En- cratites, Montanists, Manicheans, and others. All the early Eastern sects fed on the fanciful speculations so dear to the Eastern mind, but, lacking the support of a temporal power, they disappeared under the anathemas of the guardians of the depositum fidei.

Arianism (q.v.) is the first heresy that gained a strong footing in the Church and seriously endangered its very nature and existence. Arius appeared on the scene when theologians were endeavouring to harmonize the apparently contradictory doctrines of the unity of God and the Divinity of Christ. Instead of unravelling the knot, he simply cut it by bluntly asserting that Christ was not God like the Father, but a creature made in time. The simplicity of the solution, the ostentatious zeal of Arius for the defence of the “one God,” his mode of life, his learning and dialectic ability won him friends on both sides. “In particular he was supported by the famous Eusebius of Nicomedia who had great influence on the Emperor Constantine. He had friends among the other bishops of Asia and even among the bishops, priests, and nuns of the Alexandrian province. He gained the favour of Constantine, the emperor’s sister, and he disseminated his doctrine among the people by means of his notorious book which he called Βασιλεία or ‘Entertainment’ and by songs adapted for sailors, millers, and travellers.” (Addison Arnold, “A Catholic Dictionary,” 7th ed., 1905, 54.) The Council of Nicaea anathematized the heresarch, but its anathema, like all the efforts of the Catholic bishops, were nullified by interference of the civil power. Constantine and his sister protected Arius and the Arians, and the next emperor, Constantius, assured the triumph of the heresy: the Catholics were reduced to silence by dire persecution. At once an internecine conflict began within the Arian pale, for the Arian dogma, deriving from the claims of its action, can only be held together by coercion either from friend or foe. Sects sprang up rapidly: they are known as Eunomians, Anomoeans, Exucentians, Semi-Arians, Acaecians. The Emperor Valens (364–378) lent his powerful support to the Arians, and the peace of the Church was only secured whenever the Oriental Emperor Theodosius reversed the policy of his predecessors and sided with Rome. Within the boundaries of the Roman empire the faith of Nicaea, enforced again by the General Council of Constanti- nople (381), prevailed, but Arianism held its own for another two hundred years longer wherever the Arian Goths held sway: in Thrace, Italy, Africa, Spain, Gaul. The conversion of King Recared of Spain, who began to reign in 586, marked the end of Arianism in his dominions, and the triumph of the Catholic Franks sealed the doom of Arianism everywhere.

Felonianism, not being backed by political power, was without much difficulty removed from the Church. Eutychianism, Nestorianism, and other Christological heresies which followed one another as links of a chain, flourished only so long and so far as the temporal power of Byzantine and Persian rulers gave them countenance. Internal dissensions, stagnation, and decay became their fate when left to themselves. Passing over the great schism that rent the East from West, and the many smaller heresies which sprang up in the Middle Ages without leaving a deep impression on the Church, we arrive at the modern sects which date from Luther and go by the collective name of Protet-
tanism (q.v.). The three elements of success possessed by Arianism reappear in Lutheranism and cause those two movements to be set down on parallel lines. Luther was eminently a man of his people: the rough-hewn, but withal sterling, qualities of the Saxon peasant lived forth under his religious habit and doctor’s gown; his winning voice, his piety, his learning raised him above his fellows yet did not estrange him from them; his love of oratory came to the fore in his sermons and prayers; his crudities in his conversation and preaching, his many human weaknesses only increased his popularity. When the Dominican John Tetzel began to preach in Germany the indulgences proclaimed by Pope Leo X for those who contributed to the completion of St. Peter’s Basilica became fashionable among the people of the city and of both civil and ecclesiastical authorities. Luther set the match to the fuel of widespread discontent. He at once gained a number of adherents powerful both in Church and State; the Bishop of Würzburg recommended him to the protection of the Elector Frederick of Saxony. In all probability Luther started on his crusade with the laudable intention of reforming undisputed abuses. But his unexpected success, his impetuous temper, perhaps some ambition, soon carried him beyond all bounds set by the Church. By 1521, that is within four years from his attack on abuse of indulgences, he had propped up, or rather, as he put it, he had laid the foundations of the Reformation. The first element of the Roman Catholic faith: human nature was wholly corrupted by original sin, man was not free, God was responsible for all human actions good and bad; faith alone saved. The Christian priesthood was not confined to the hierarchy but included all the faithful. The masses of the people were not slow in drawing from these doctrines the practical conclusion that sin was sin no longer, was, in fact, equal to a good work.

With his appeal to the lower instincts of human nature went an equally strong appeal to the spirit of nationality and greed. He endeavoured to set the German emperor against the Roman pope and generally the Teuton against the Latin; he invited the secular princes to confiscate the property of the Church. His voice was heard only too well. For the next 130 years the history of the German people is a record of religious strife, moral degradation, artistic retrogression, industrial breakdown; of civic wars and civil war, of the Privy Council of 1648 established the principle: Cajus regio illius a religio; the lord of the land shall be also lord of religion. And accordingly territorial limits became religious limits within which the inhabitant had to profess and practise the faith imposed on him by the ruler. But the same fact is worthily secured whereby the monarch fixed by the politicians of 1648 is still the dividing line between Catholicism and Protestantism in Germany. The English Reformation, more than any other, was the work of crafty politicians. The soil had been prepared for it by the Lollards or Wycliffites, who at the beginning of the sixteenth century were still numerous in the towns. No English Luther arose, but the unholy work was thoroughly done by kings and parliaments, by means of a series of penal laws unequalled in severity.

(c) Persistence of Heresy.—We have seen how heresy originates and how it spreads; we must now answer the question why it persists, or why so many persevere in heresy. Once heresy is in possession it tightens its grip by the thousand subtle and often unconscious influences which mould a man’s life. A child is born in heretical surroundings: before it is able to think for itself its mind has been filled and fashioned by home, school, and church. The authority of which it is to doubt. When, at a ripener age, doubts arise, the truth of Catholicism is seldom apprehended as it is. Infant prejudices, educational bias, historical distortions stand in the way and frequently make approach impossible. The
state of conscience technically termed bona fide, good faith, is thus produced. It implies inculcable belief in the existence of all life and that life shall always exist, sometimes even laudable. In the absence of good faith worldy interests often bar the way from heresy to truth. When a government, for instance, reserves its favours and functions for adherents of the state religion, the army of civil servants becomes a powerful body of missionaries than the ordained ministers. Prussia, France, and Russia are cases in point.

VI. CHRIST, THE APOSTLES, AND THE FATHERS ON HERESY.—Heresy, in the sense of falling away from the Faith, became possible only after the Faith had been promulgated by Christ. Its advent is clearly foretold, Matthew xxiv, 22-26: "...many shall rise, and shall seduce many. ... Then if any man shall say to you: Lo here is Christ, or there, do not believe him. For there shall rise false Christs and false prophets, and shall show great signs and wonders, insomuch as to deceive (if possible) even the elect. Behold I have told it to you, beforehand. If therefore they shall say to you: Behold he is in the desert, go ye not out: Behold he is in the closets, believe it not." Christ also indicated the marks by which to know the false prophets: "Who 'is not with me is against me' (Luke, xi, 23), "and if he will not hear the Church, let him be anathema." (Matt., xviii, 17); "he that believeth not shall be condemned" (Mark, xvi, 16). The Apostles acted upon their Master's directions. All the weight of their own Divine faith and mission is brought to bear upon innovators. If any one says "St. Paul, "preach to you a gospel, besides that you have received, let him be anathema." (Gal., i, 9). To St. John the heretic is a seducer, an antichrist, a man who dissolves Christ (I John, iv, 3; II John, 7); "receive him not into the house nor say to him, God speed you." (II John, 10). St. Peter, true to his office and to his inquisitorial nature, assails them as with a two-edged sword: "... lying teachers who shall bring in sects of perdition, and deny the Lord who bought them: bringing upon themselves swift destruction... These are fountain without water, and clouds tossed with whirlwinds, to whom the mist of darkness is reserved." (II Pet., ii, 1, 17). St. Jude speaks in a similar spirit and adds, "But the man of God is safe at all, and admonishes the disturbers of the unity of faith at Corinth that "the weapons of our warfare... are mighty to God unto the pulling down of fortifications, destroying counsels, and every height that exalith itself against the knowledge of God... and have the fullness to revenge all disobedience." (II Cor., x, 4, 5, 6).

What Paul did at Corinth he enjoins to be done by every bishop in his own church. Thus Timothy is instructed to "war in them a good warfare, having faith and a good conscience, which some rejecting have made shipwreck concerning the faith. Of whom is Hymenaeus and Alexander, whom I have delivered up to Satan, that they may learn not to blaspheme" (I Tim., i, 18-20). He exhorts the ancients of the Church at Ephesus to "take heed to yourselves, and to the whole flock, wherein the Holy Ghost hath placed you bishops, to rule the church of God, until I know that, after my departure, ravaging wolves will enter in among you, not sparing the flock... Therefore watch..." (Acts, xx, 28, 29, 31). "Beware of dogs", he writes to the Philippians (iii, 2), the dogs being the same false teachers as the "ravaging wolves." The Fathers shall give more leniency to heretics of the faith. A. Polycarp regards Marcion as the first-born of the Devil. Ignatius sees in heretics poisonous plants, or animals in human form. Justin and Tertullian condemn their errors as inspirations of the Evil One;

Theopilus compares them to barren and rocky islands on which ships are wrecked; and Origen says, that as these place light on all the dark corners of this world and on the areas in quest of refuge, so the Prince of this world lights the fires of false knowledge in order to destroy men. Jerome calls the congregations of the heretics synagogues of Satan (Ep. 125), and says their communion is to be avoided like that of vipers and scorpions (Ep. 130). They have been faithfully transmitted and acted on by the Church in subsequent ages. There is no break in the tradition from St. Peter to Pius X.

VII. VINDICATION OF THEIR TEACHING.—The first law of life, be it the life of plant or animal, of man or of a society of men, is self-preservation. Neglect of self-preservation leads to ruin and ultimate death. In a life of a religious society, the tissue that binds its members into one body and animates them with one soul, is the symbol of faith, the creed or confession adhered to as a condition sine quâ non of membership. To undo the creed is to undo the Church. The integrity of the rule of faith is more essential to the cohesion of a religious society than the strict practice of its moral precepts. For faith supplies the means of mending moral delinquencies as one of its ordinary functions, whereas the loss of faith, cutting at the root of spiritual life, is usually fatal to the soul. In fact the strongest center of the life of a religious society, the tie that binds the members, is the confession of faith. St. Ignatius says to one who came to recantation: Berengerius. The jealousy with which the Church guards and defends her deposit of faith is therefore identical with the instinctive duty of self-preservation and the desire to live. This instinct is by no means peculiar to the Catholic Church; being natural it is universal. All sects, denominations, confessions, schools of thought, and associations of any kind have a more or less comprehensive set of tenets on the acceptance of which membership depends. In the Catholic Church this natural law has received the sanction of Divine promulgation, as appears from the teaching of Christ and the Apostles quoted above. Freedom of thought extending to the essential beliefs of a Church is in itself a contradiction; for, by accepting membership, the members accept the essential beliefs and renounce their freedom of thought so far as these are concerned.

But what authority is to lay down the law as to what is or is not essential? St. Paul says: "We do not put our authority of individuals. By entering a society, whichever be it, the individual gives up part of his individuality to be merged into the community. And that part is precisely his private judgment on the essentials: if he resumes his liberty he must separate himself from his Church of origin, for, he rests with the constitutional authority of the society—in the Church with the hierarchy acting as teacher and guardian of the faith. Nor can it be said that this principle unduly curtails the play of human reason. That it does curtail its play is a fact, but a fact grounded in natural and Divine law, as shown above. That it does not curtail reason unduly is evidenced by this other fact: that the deposit of faith (1) is itself an inexhaustible object of intellectual effort of the noblest kind, lifting human reason above its natural sphere, enlarging and deepening its outlook, soliciting its finest faculties; (2) that, side by side with the deposit, but logically connected with it, there is a multitude of doubtful points of which discussion is free within the wide bounds of charity—"in necessariis unitas, in dubiis libertas, in omnibus charitas." The substitution of private judgment for the teaching magisterium has been the dissolver of all sects who have adopted it. Only when there is a certain consistency in which private judgment is a dead letter and the teaching is carried on according to confessions and catechisms by a trained clergy.

VIII. CHURCH LEGISLATION ON HERESY.—Heresy, being a deadly poison generated within the organism.
of the Church, must be ejected if she is to live and perform her task of continuing Christ's work of salvation. Her Founder, who foretold the disease, also provided the remedy: He endowed her teaching with infallibility (see INFLALLIBILITY). The office of teaching belongs to the hierarchy, the *ecclesia docens*, which, under certain conditions, judges without appeal in matters of faith and morals (see COUNCILS). Infallible decisions can also be given by the pope teaching ex cathedra (see INFALLIBILITY). Each pastor in his parish, each bishop in his diocese, is in duty bound to forewarn his flock unqualified; to the same end the pastor of all the Churches is given the office of feeding the whole Christian flock. The power, then, of expelling heresy is an essential factor in the constitution of the Church. Like other powers and rights, the power of rejecting heresy adapts itself in practice to circumstances of time and place, and, especially, to social and political conditions. At the beginning it worked without special organization. The ancient discipline charged the bishops with the duty of searching out the heresies in their diocese and checking the progress of error by any means at their command. With the establishment of various doctrines and the threatened disruption of the Church, the bishops assembled in councils, provincial, metropolitan, national, or ecumenical. There the combined weight of their authority was brought to bear upon the false doctrines. The first council was a meeting of the Apostles at Jerusalem in order to put an end to the Judaizing tendencies among the first Christians. It is the type of all succeeding councils: bishops in union with the head of the Church, and guided by the Holy Ghost, sit as judges in matters of faith and morals. The spirit which animates the dealings of the Church with heresy and heretics is one of extreme severity. St. Paul writes to Titus: 'A man that is a heretic, after the first and second admonition, avoid: knowing that he, that is such a one, is subverted, and sinned, being condemned by his own judgment' (Tit., iii, 10-11). This early piece of legislation reproduces the still earlier teaching of Christ: 'And if he will not hear the church, let him be to thee as the heathen and the publican' (Matt., xxviii, 17); it also inspires all subsequent anti-heretical legislation. The sentence on the obstinate heretic is invariably excomunication. He is separated from the company of the faithful, delivered up to Satan for the destruction of the flesh, that his name may be blotted out in the day of our Lord Jesus Christ' (1 Cor., xv, 5).

When Constantine had taken upon himself the office of lay bishop, *episcopus externus*, and put the secular arm at the service of the Church, the laws against heretics became more and more rigorous. Under the purely ecclesiastical discipline no temporal punishment could be inflicted on the obstinate heretic, except the damage which might arise to his personal dignity through being deprived of all intercourse with his former brethren. But under the Christian emperors rigorous measures were enforced against the goods and persons of heretics. From the time of Constantine I to Theodosius I (361-395) and Julian Valens (361-363) and St. Gregory the Great (590-604) various penal laws were enacted by the Christian emperors against heretics as being guilty of crime against the State. In both the Theodosian and Justinian codes they were styled infamous persons; all intercourse was forbidden to be held with them; the goods and property of all of profit and dignity in the civil administration, while all burdensome offices, both of the camp and of the curia, were imposed upon them; they were disqualified from disposing of their own estates by will, or of accepting estates bequeathed to them by others; they were denied the right of giving or receiving donations, of contracting, buying, or selling; particularly in the case of all that was well disposed, that was not to be procured or disposed of at the time, the prohibition was made more strict. The penalties prescribed are: (1) Excommunication specially reserved to the Roman pontiff, which is incurred by all apostates from the Catholic Faith, by each and all heretics, by whatever name they are known and to whatever sect they belong, and by all who believe in them (credentes), receive, favour, or in any way defend them (defensor). The penal law against apostates is *De Apostolidem Suecit*, and *pars potestatis*, and *recusiorum* in the When Constantine had taken upon himself the office of lay bishop, *episcopus externus*, and put the secular arm at the service of the Church, the laws against heretics became more and more rigorous. Under the purely ecclesiastical discipline no temporal punishment could be inflicted on the obstinate heretic, except the damage which might arise to his personal dignity through being deprived of all intercourse with his former brethren. But under the Christian emperors rigorous measures were enforced against the goods and persons of heretics. From the time of Constantine I to Theodosius I (361-395) and Julian Valens (361-363) and St. Gregory the Great (590-604) various penal laws were enacted by the Christian emperors against heretics as being guilty of crime against the State. In both the Theodosian and Justinian codes they were styled infamous persons; all intercourse was forbidden to be held with them; the goods and property of all of profit and dignity in the civil administration, while all burdensome offices, both of the camp and of the curia, were imposed upon them; they were disqualified from disposing of their own estates by will, or of accepting estates bequeathed to them by others; they were denied the right of giving or receiving donations, of contracting, buying, or selling; particularly in the case of all that was well disposed, that was not to be procured or disposed of at the time, the prohibition was made more strict. The penal law against apostates is *De Apostolidem Suecit*, and *pars potestatis*, and *recusiorum* in the
son, but not the negative doubter, who simply abstains from formulating a judgment. The believers (cre\-_dentes) in heresies are they who, without examining particular doctrines, give a general assent to the teaching of the sect. The favourable (adulators) are they who by commission or omission lend support to heresy and thus help or allow it to spread; the receivers and defenders are they who shelter heretics from the rigours of the law.

(2) "Excommunication specially reserved to the Roman Pontiff incurred by each and all who know of the sect, the doctrine (doctrina), and the heretics (heretics) are they who by commission or omission lend support to heresy and thus help or allow it to spread; the receivers and defenders are they who shelter heretics from the rigours of the law.

The fact of having received valid baptism places material heretics under the jurisdiction of the Church, and if they are in good faith, they belong to the soul of the Church. Their material secession, however, precludes them from the use of ecclesiastical rights, except for the temporalities which are given to them; they are in a sense deprived of their spiritual rights, and are not allowed to exercise them in their own organization. This is the method of ecclesiastical documents, which are not allowed to exercise them in their own organization.

The recurrence of a heresy or profession of faith in a heretical society is only granted when the Church has given a written assurance that the candidate is sufficiently instructed and otherwise prepared, and that there is some reasonable guarantee of his perseverance. The order of proceeding in a reconciliation is: first, abjuration of heresy; second, conditional baptism (this is given only when the heretical baptism is doubtful); third, sacramental confession and conditional absolution.

XII. ROLE OF HERESY IN HISTORY. — The role of heresy in history is that of evil generally. Its roots are in corrupted human nature. It has its origins in the Church, as well as in the Church's own history. Heresy constitutes an impedo to the Church's life and growth, and it is not so intrinsically evil that, under given circumstances, it may not be excused. Thus friends and relatives may for good reasons accompany a funeral, be present at a marriage or a baptism, without causing scandal or lending support to the non-Catholic rites, provided no active part be taken in them: their motive is friendship, or maybe courtesy, but it is not excused as a formal and material heresy, she applies to the former canon. So, most firmly hold and in no way doubt that every heretic or schismatic is to have part with the Devil and his angels in the flames of eternal fire, unless before the end of his life he be incorporated with, and restored to the Catholic Church." No one is forced to enter the Church, but having once entered it through baptism, he is bound to keep the promises he freely made. To restrain and bring back her heretics, the Church uses the spiritual power and the secular power at her command. Towards material heretics her conduct is ruled by the saying of St. Augustine: "Those are by no means to be accounted heretics who do not defend their false and pernicious opinions with pertinacious zeal (animositas), especially when their error is not the fruit of audacious presumption but has been brought about, as is often the case, by seduced and lapsed parents, and when they are seeking the truth with cautious solicitude and ready to be corrected" (P.L., XXXIII, ep. xliii, 160). Pius IX, in a letter to the bishops of Italy (7 Aug., 1868), restates this Catholic doctrine: "It is known to Us and to You that they who are in invincible ignorance concerning our religion have given evidence of their natural law and are ready to obey God and lead an honest and righteous life, can, with the help of Divine light and grace, attain to eternal life . . . for God . . . will not allow any one to be eternally punished who is not wilfully guilty" (Denzinger, Enchir. n. 1329).

X. ECCLESIASTICAL JURISDICTION OVER HERESY.

— The fact of having received valid baptism places material heretics under the jurisdiction of the Church, and if they are in good faith, they belong to the soul of the Church. Their material secession, however, precludes them from the use of ecclesiastical rights, except for the temporalities which are given to them; they are in a sense deprived of their spiritual rights, and are not allowed to exercise them in their own organization. This is the method of ecclesiastical documents, which are not allowed to exercise them in their own organization.

The recurrence of a heresy or profession of faith in a heretical society is only granted when the Church has given a written assurance that the candidate is sufficiently instructed and otherwise prepared, and that there is some reasonable guarantee of his perseverance. The order of proceeding in a reconciliation is: first, abjuration of heresy; second, conditional baptism (this is given only when the heretical baptism is doubtful); third, sacramental confession and conditional absolution.

IX. PRINCIPLES OF CHURCH LEGISLATION.

The guiding principles in the Church's treatment of heretics are the following: Distinguishing between formal and material heretics, she applies to the former the canon. So, most firmly hold and in no way doubt that every heretic or schismatic is to have part with the Devil and his angels in the flames of eternal fire, unless before the end of his life he be incorporated with, and restored to the Catholic Church." No one is forced to enter the Church, but having once entered it through baptism, he is bound to keep the promises he freely made. To restrain and bring back her heretics, the Church uses the spiritual power and the secular power at her command. Towards material heretics her conduct is ruled by the saying of St. Augustine: "Those are by no means to
is, or moves, or lives, for tolerance of destructive elements within the organism amounts to suicide. Biological sects are subject to the same law: they live or die in the measure they apply or neglect it. The charge of cruelty is also easy to meet. All repressive measures cause suffering or inconvenience of some sort: it is their nature. But they are not therefore cruel. The father who chastises his guilty son is just and may be tenderhearted; cruelty only comes when the punishment exceeds the requirements of the case. Opponents say: Precisely: the rigours of the Inquisition violated all humane feelings. We answer: they offend the feelings of later ages in which there is less regard for the purity of faith; but they did not antagonize any of their own time, when Learned looked on as more malignant than treason. In proof of which it suffices to remark that the inquisitors only pronounced on the guilt of the accused and then handed him over to the secular power to be dealt with according to the laws framed by emperors and kings. Medieval people found no fault with the system, in fact heretics had been burned by the populace before the Inquisition became a regular institution. And whenever heretics gained the upper hand, they were never slow in applying the same laws: so the Huguenots in France, the Hussites in Bohemia, the Calvinists in Geneva, the Elizabethan statesmen and the Jacobites in England, and when faith went out; lenient measures were resorted to only where the power to apply more severe measures was wanting. The embers of the Kulturkampf in Germany still smoulder; the separation and confiscation laws and the ostracism of Catholics in France are the scandal of the day. Christ said: "Do not think that I came to send peace upon earth: I came not to send peace, but a sword" (Matt., x, 34). The history of heresy verifies this prediction and shows, moreover, that the greater number of the victims of the sword is on the side of the faithful adherents of the one Church founded by Christ (see INQUIZITION).

J. WILHELM.

HERGENRÖTHER, JOSEPH, church historian and canonist, first Cardinal-Prefect of the Vatican Archives, b. at Würzburg, 15 Sept., 1824; d. at Mehrerau (Bodensee), 3 Oct., 1890. He was the second son of Johann Jacob Hergenröther, professor of medicine in the University of Würzburg. In 1842 Hergenröther completed with notable success his gymnasium course in his native town, and entered the University of Würzburg to take up a two-year course of philosophical studies, to which he added certain branches of theology. His historical studies exhibited themselves at this early age in a dramatic poem entitled "Papst Gregor VII" (Würzburg, 1841). Bishop von Stahl took a lively interest in the promising youth, and in 1844 sent him to the Collegium Germanicum at Rome, whither he had already sent Denzinger and Hettlinger. Among his scholarly teachers were Perrone and Pastor. His doctoral thesis was entitled "Sulla teologia di Marzio Ballerini in church history, Patrizi in Scriptural exegesis, and Marzio in canon law. The political troubles of 1848 prevented the completion of his theological studies at Rome; he was ordained to the priesthood 28 March of that year, and returned to Würzburg, where he pursued ecclesiastical studies the next year. In 1849 he was appointed chaplain at Zeillingen, and for some time devoted himself with zeal to the duties of his office. In 1850 he stood successfully for the degree of doctor of theology before the University of Munich, and offered as his dissertation a treatise on the Trinitarian teaching of St. Gregory Nazianzen (Die Lehre von der göttlichen Dreieinigkeit nach d. heil. Gregor von Nazianzen, Ratisbon, 1850). The brilliant qualities of the young doctor induced the theological faculty of Munich to offer him a place as instructor (privadocent) in theology, which he accepted. Following ancient usage, he justified the confidence of the university by a printed thesis (Habilitationsschrift) on the later Fathers, in which he treated the Catholic Church (De catholicae ecclesiae primordii recentiorum Protestantantium systemata expedientur, Ratisbon, 1851). Henceforth he devoted himself without reserve to his professional duties. In 1852 he was called to Würzburg, as professor extraordinary of church history, and in 1855 he was promoted to the full possession of that chair. To his other duties he added the teaching of patrology. In those years Würzburg rejoiced in the possession of such brilliant theologians as Hettlinger, Denzinger, Bühnelm, and Hergenröther; their reputation spread far and wide. The fame of this old Franciscan school (St. Barbara's College) was often increased by election to the office of dean of his faculty, and occasionally to the University Senate; the latter office he never held after 1871, because of his opposition to Dollinger. For a similar reason he was never chosen to be rector of the university. Until 1860 Hergenröther was occupied almost exclusively with the history of early Christian and Byzantine ecclesiastical history. The discovery (1851) of the Greek Christian text known as the Fragmenta led him to examine his disputed authorship in a series of studies in the "Tübinger Theol. Quartalschrift" (1852) and in the supplementary volume (1856) to the first edition of the "Kirchenlexikon" of Wetzer and Welte. He again defended the authorship of Hippolytus in the "Gösterreichische Vierteljahreschrift f. kath. Theol." (1863).

Hergenröther was especially interested in the career of Photius and in the origins of the Greek Schism, and kept up continuous research in the principal libraries for manuscripts of the works of Photius, in order to exhibit the original materials in perfect text as could be established. This led to the publication (Ratisbon, 1857) of the work, "Photii Constantinopolitani Liber de Spiritu Sancti mystagogia." He contributed essays on the same subject to the "Aphorismen" of Photius to the "Tab. Theol. Quarta- lischrift" (1858). In 1860 appeared at Paris the Migne edition of "Photii" (F. G., CI-CIV). It offered many textual emendations that were owing to Hergenröther, particularly in the "Aphorismia"; it was against his will that his earlier edition of the "Liber de Sp. Sancti mystagogia" was reprinted by Migne. When Pichler's work on the history of the separation of the Eastern and Western Churches appeared (Munich, 1864), Hergenröther was prepared to criticize it in the most thorough manner, which he did in a series of studies in a Würzburg theological periodical, the "Würzburger Theol." (1864-65), and in a number of the "Aphorismen" of Photius to the "Tab. Theol. Quartalschrift" (1865). The results of his twelve years of research in the history of the Greek Schism appeared finally in the classical work, "Photii Patriarchi de Constantinopel, sein Leben, seine Schriften, und das griechische Schisma" (3 vols., Ratisbon, 1865-69). An additional volume bears the title: "Monumenta Oraculorum e aliis libris ecclesiasticis pertinentia" (Ratisbon). In this monumental work it is difficult to say whether the palm belongs to the author's extensive knowledge of all the manuscript material, to his profound erudition, or to his calm objective attitude. Krumbacher, the historian of Byzantine literature, has said that the work can never be surpassed. In these volumes Hergenröther laid bare in minute detail the origins of the Byzantine Church, its development since the fourth century, and after the death of Photius until the unfortunate completion of the schism in the twelfth and thirteenth centuries.
While professor of canon law at Würzburg, Hergenhörner published several important historico-canonical essays on such subjects as early ecclesiastical coordination (Öster. Vierteljahrschr. f. kath. Theol., 1862), the canonical relations of the various rites in the Catholic Church (Archiv f. kath. Kirchenrecht, 1864), the existence of the Holy See and the Holy See in the Sacred Councils of the Greeks to the end of the ninth century (ibid., 1870). His interest in the ecclesiastical vicissitudes of his own day was manifested by valuable essays on the States of the Church after the French Revolution (Hist.-polit. Blätter, 1860), spirit of the age (Zeitschr. für kath. Kirchenrecht, 1861), the Franco-Sardinian Treaty (Frankfort, 1865). Among his historico-apologetic essays we may count his treatises on the modern errors condemned by the Holy See in the Encyclical (Syllabus) of 8 Dec., 1864 (in the Chilleanum, 1865), the veneration of the Blessed Virgin in the first ten centuries of the Christian Era (Münster, 1870). He was a regular contributor of similar but briefer articles to the Würzburg periodicals, "Die katholische Wochenchrift" and the "Chilleanum". Hergenhörner was constantly engaged in attempting to develop a genuine Catholic sentiment and attitude of life throughout the Catholic Church. He preached frequently, and was always a welcome speaker at the general assemblies of the German Catholic associations (Vereine; 1863-77). For the Fulda meeting of the Prussian bishops (1870) he prepared an exhaustive historical study on the spoliation of the Papal States, in which he developed at length the arguments for the temporal power of the papacy.

Together with other Catholics of prudence and insight, Hergenhörner deplored the attitude that certain Catholic theologians assumed from about 1860, in particular that of the celebrated historian Döllinger. The latter wrote in the "Katholik in Kirche und Papsttum, Papsttum und Kirchenstaat" (1861) an essay that was criticized by Hergenhörner in "Der Katholik". At the Munich meeting of Catholic savants (1863), Hergenhörner was one of the eight who sent in a written protest against the opening discourse of Döllinger on the past and present of Catholic theology. Among the other signers were Heinrich Moufang, von der Heydt, Hoffner, Hettinger, and Schoeber. Hergenhörner was soon called on to answer the pamphlet of Dr. Micheli, "Kirche oder Partei? Ein offenes u. freies Wort an den deutschen Episkopen" (Church or Faction? A Frank Address to the German Episcopate), in which this writer attacked very severely the papacy and the clergy: the title, "Der Katholik", and Hergenhörner's answer appeared in the "Chilleanum" (1865) under the title of "Kirche u. nicht Partei. Eine Antwort auf die jüngste Broschüre des Herrn Dr. Fr. Micheli" (Church and not Faction: An Answer to the latest Brochure of Dr. Micheli). In the same review (1863) Hergenhörner had written a critical account of the latest efforts of Western Catholics for ecclesiastical reunion with the Oriental Churches.

The opening of the Vatican Council (1870) brought to a head the domestic conflict in Germany. Hergenhörner was the foremost defender of the council and its decrees, as early as 1868 he had been appointed, with Hettinger, consultant for the preparation of the council's work and had taken up his residence at Rome. His inexhaustible knowledge of ecclesiastical history, canon law, and Catholic dogma made him a valuable co-labourer in the many careful and detailed preliminary meetings of the council commissions. His "Gebotliche Studienkurse, "Kaiserreich und Papsttum" (1870) were delivered at the theological faculty of Würzburg in reply to five questions, submitted by the Bavarian Government, concerning the approaching council. He also published (Der Katholik, 1871) another outlined memorial concerning the Vatican Council, in reply to eleven questions submitted by the Bavarian Minister of Worship to the theological and law faculties of Würzburg. This memorial, though projected, was never formally called for by the Government. The opposition to the Vatican Council reached its acme in the notorious work, "Der Papst und das Concil", by "Janus" (Döllinger). In the same year (1869) Hergenhörner prepared the "Anti-Janus-Reden", a powerful apologetic critique (Freiburg, 1870). He also published a number of small brochures in favour of the council and against Döllinger, e.g. "Die Irthümere von mehr als vier hundert Bischof" and ihr theologischer Censor" (Freiburg, 1870), and a critique of Dr. Döllinger's declaration of 28 March, 1871 (Freiburg, 1871). His new work, "Kirchen- und politisch-politische Blätter", where he published (1870) a series of articles on the "Allgemeine Zeitung" and its letters from the council, on papal infallibility before the Vatican Council, and on ancient Gallicans and modern Appellants. In 1871 he published the solid study, "Das unfehlbare Lebramt des Papstes" (The Infallible Magisterium (teaching office) of the pope, Passau, 1871). These grave and exhausting labours were crowned and partially summarized by a new work, "Katholische Kirche u. christlicher Staat in ihrer geschichtlichen Entwicklung u. in Beziehung auf die Aufgabe der Gegenwart" (The Catholic Church and the Christian State, in their historical development and their relations to the present), together with an "Anti-Janus vindicatus" (Freiburg, 1872, 2nd annotated ed., Freiburg, 1876). The former is a thesaurus of information concerning politico-ecclesiastical conflicts of the past, and is marked throughout by an uncompromising Catholic tone. It was translated into Italian (Pavia, 1877) and into English (London, 1876; Baltimore, 1889).

The friends and disciples of Hergenhörner had often urged him to compose a manual of ecclesiastical history, but the labours of the Vatican Council had left no time for such work. He was therefore considering an extensive work on Church and State in the eighteenth century. He yielded, however, to the general desire, and published his "Handbuch der allgemeinen Kirchengeschichte" (Manual of General Church History) in the "Theological Library" of Herder (Freiburg, 1876). The first edition appeared in 1879; in 1880 a third volume was added, containing the notes and documentary evidence. This work was then and remains yet unsurpassed for abundance of information, accuracy of narrative, and manifold sources of historical proof. The first edition, however, was never reprinted, and are no longer printed apart, but accompany the text. The writer of this article is the editor of a fourth edition (3 vols., Freiburg, 1902-1909). When it was proposed to bring out a new edition of the "Kirchenlexikon of Weiser and Welte", Hergenhörner was naturally suggested as the most capable of revising this gigantic task. He accepted it, but was compelled to abandon it when scarcely begun; his elevation to the dignity of cardinal with the obligation of a Roman residence, left him no freedom for the enterprise. The first volume contains many articles from his pen, some of them quite lengthy. He was unable to do as much for the other volumes in all the articles are eighty-seven articles signed by him. Other minor literary tasks consumed his spare hours in the last period of his life at Würzburg. The various subjects were Pius IX (Würzburg, 1878); Athanasius the Great (Cologne, 1878); Cardinal Maury in "Archiv f. kath. Kirchenrecht" (1877); the canonical significance of nomination (ibid., 1878). Hergenhörner's solid and important works in the departments of church history and canon law, and his firm attitude on the great ecclesiastical questions of the day, won for
him the confidence of all the bishops and Catholic scholars of Germany. In 1877 Pius IX had recognized his services to the Vatican Council and the ecclesiastical sciences by making him a domestic prelate. When Leo XIII determined to open the Vatican Archives to the scholars of the world, he found in him the savant to whom he might safely entrust the practical execution of this generous act. Hergenröther was appointed Cardinal-Decan of San Nicola in Carcere, 12 May, 1879, to the great joy of all German, and particularly Bavarian, Catholics. At a later date he was transferred to Santa Maria in Via Lata. He was also appointed Cardinal-Prefect of the Apostolic Archives, a new office, which he was the first to fill, and in which he carried on the established research work in the Vatican Archives and the systematizing, on scientific lines, of scholarly work among these rich treasures. That he executed the views of Leo XIII in a satisfactory and even generous manner, is acknowledged by the numerous historical workers who have laboured in the archives since 1879. Hergenröther was also a member of several Roman congregations (Index, Studies, and Extraordinary Ecclesiastical Affairs), and protector of several religious institutes. He undertook, moreover, to edit the official correspondence (Regesta) of Leo X, a rather thankless task of great difficulty, because of the exceedingly bad handwriting of that day. He was efficiently aided by his youngest brother, Franz Hergenröther, who had accompanied him to Rome. Before his death the cardinal published eight parts of Fasciculi of this extensive work, "Leone X Pont. Maximi Regesta," Vol. I (Freiburg, 1884-85). A small part of the second volume was brought out (Freiburg, 1891) by his brother and fellow-editor, since which time the publication has ceased by reason of the latter's return to Würzburg as canon caputlutar of the cathedral. Despite the grave burdens that now weighed upon him, Cardinal Hergenröther undertook another work of the most exacting nature, the continuation of Hefele's "History of the Councils"; two volumes of which he published before his death (vol. VIII, Freiburg, 1887; vol. IX, 1890). The latter volume contains the preliminary history of the Council of Trent and the history of the Council of Florence. He suffered much in the last years of his life, as the result of an apoplectic attack which crippled him grievously though it did not affect the brightness and vigour of his intellect. He was able to keep up his literary labours to the day of his death. During the summer of 1880 he took up his residence in the Cistercian Abbey of Mehrerau (on the Bodensee) the hospitality of which he had more than once enjoyed. In this secluded spot he met with another apoplectic stroke, and died. He was laid to rest in the church of the abbey. In 1897 a suitable monument was erected to his memory by his friends, and dedicated (25 March).

Heribert, Saint, Archbishop of Cologne; b. at Worms, c. 970; d. at Cologne, 16 March, 1021. His father was a nobleman of Worms. After the death of his education at the cathedral school of Worms, he spent some time as guest at the monastery of Gores, after which he became provost at the cathedral of Worms. In 994 he was ordained priest; in the same year King Otto III appointed him chancellor for Italy and four years later also for Germany, a position which he held until the death of Otto III on 23 January, 1002. As chancellor he was the most influential adviser of Otto III, whom he accompanied to Rome in 996 and again in 997. He was still in Italy when, in 999, he was elected Archbishop of Cologne. At Benevento he received ecclesiastical investiture and the pallium from Pope Sylvester II on 9 July, 999, and on the following Christmas Day he was consecrated at Cologne. In 1002 he was present at the death-bed of the youthful emperor at Paterno. While returning to Germany with the emperor's remains and the imperial insignia, he was held captive for some time by the future King Henry II, whose candidacy he at first opposed. As soon as Henry II was elected king, on 7 June, 1002, Hergenröther acknowledged the establishment of research work in the Vatican Archives and the systematizing, on scientific lines, of scholarly work among these rich treasures. That he executed the views of Leo XIII in a satisfactory and even generous manner, is acknowledged by the numerous historical workers who have laboured in the archives since 1879. Hergenröther was also a member of several Roman congregations (Index, Studies, and Extraordinary Ecclesiastical Affairs), and protector of several religious institutes. He undertook, moreover, to edit the official correspondence (Regesta) of Leo X, a rather thankless task of great difficulty, because of the exceedingly bad handwriting of that day. He was efficiently aided by his youngest brother, Franz Hergenröther, who had accompanied him to Rome. Before his death the cardinal published eight parts of Fasciculi of this extensive work, "Leone X Pont. Maximi Regesta," Vol. I (Freiburg, 1884-85). A small part of the second volume was brought out (Freiburg, 1891) by his brother and fellow-editor, since which time the publication has ceased by reason of the latter's return to Würzburg as canon capitular of the cathedral. Despite the grave burdens that now weighed upon him, Cardinal Hergenröther undertook another work of the most exacting nature, the continuation of Hefele's "History of the Councils"; two volumes of which he published before his death (vol. VIII, Freiburg, 1887; vol. IX, 1890). The latter volume contains the preliminary history of the Council of Trent and the history of the Council of Florence. He suffered much in the last years of his life, as the result of an apoplectic attack which crippled him grievously though it did not affect the brightness and vigour of his intellect. He was able to keep up his literary labours to the day of his death. During the summer of 1880 he took up his residence in the Cistercian Abbey of Mehrerau (on the Bodensee) the hospitality of which he had more than once enjoyed. In this secluded spot he met with another apoplectic stroke, and died. He was laid to rest in the church of the abbey. In 1897 a suitable monument was erected to his memory by his friends, and dedicated (25 March).

Heribert (Aribert, Ariberto), Archbishop of Milan (1018-1045), an ambitious and warlike prince of the Church; d. at Monza, 16 January, 1045. After Conrad II was elected King of Germany in 1024, Heribert visited the new king at Constance in 1025, and in consideration of various privileges promised to help him to secure the crown of Lombardy. On 23 March, 1026, Heribert crowned Conrad II at Milan with the iron crown of Lombardy, and a year later was present at his imperial coronation, which was performed in Rome by John XIX on 26 March, 1027. In 1034 he assisted Conrad in the conquest of Sardinia, and in 1035 he accompanied the supreme spiritual ruler of Upper Italy, who disregarded the rights of other dioceses, and consequently came into collision with the Metropolitan of Ravenna. He, moreover, committed many acts of violence against the inferior nobility, the so-called valvassores, and in consequence marched against him. Upon his request the emperor came to Italy to quell the revolt. When, however, the emperor demanded that the archbishop should give an account of his actions, the latter refused to do so on the plea that he was not a subject, but the equal of the emperor. Upon this the emperor had him arrested. The Milanese looked upon Heribert as a national insult, and after the attempted escape, assisted him loyally against all the attempts of the emperor to gain possession of Milan, even after the archbishop was excommunicated by Benedict IX in March, 1038. In the same year Heribert introduced the famous cartoccio as the military insignia of Milan. It was afterwards accepted by the cities of Lombardy and Tuscany and by Rome. After the death of Conrad II, Heribert made peace with the new emperor, Henry III, at Ingelheim in 1040.

HERIBERT (Ariberto II Medici, primusque martyris pontificum) (Berlin, 1844); Archivio storico, Ser. XII, vol. XXIX. See also the biographical sketches of Heribert by ANNONI (Milan, 1872) and BONIFADIO (Rome, 1898). MICHAEL OTT.

Heriger of Lobbes, medieval theologian and historian; b. about 925; d. 31 October, 1007. After studying at the cathedral school of Liége, he became a Benedictine monk at the monastery of Lobbes,
where for many years he was scholasticus of the monastic school. He was an intimate friend of Bishop Naegel of Liége, whom he accompanied to Rome in 989, and at whose instance he wrote a few works. In 990 he was elected to succeed the deposed Folewin as Abbé of Lobbes. By long and assiduous study of the Fathers of the Church and the writers of classical antiquity he amassed an amount of learning quite unusual in those times. On the whole, he wrote with more historical criticism than most of his contemporaries, though as a hagiographer he at times sinks to the level of an ascetical novelist. His chief work is a history of the bishops of Liége, "Gesta episcoporum Leodiensium", which, however, reaches only to the death of St. Remaclus in 667. It was first published by the University degree of the Accademia dei Lincei at Turin, 1616, 1-98; a better edition was issued by Marténe and Durand in "Veterum Scriptorum Amplissima Collectio" (Paris, 1724-33), IV, 837-912; finally, it was published with a valuable historical disquisition on the writings of Héger by Köpke in "Mon. Germ. Hist.: Script. VII, 134-94, whence it was reprinted in Migne, P. L. CXXXIX, 958-1068. The history was continued to the year 1048 by Anselm of Liége. Héger's other writings are: the "Life of the Virgin St. Berlindis", published in "Acta SS.", February, I, 335-347; a "Vita et virtutum eruditiones" of the bishops of Liége, III, 35-42; a metrical "Life of St. Ursmer", of which only a few fragments remain; a treatise on the Body and Blood of Christ, "De Corporre et Sanguine Domini", which is little else than a compilation of excerpts from the Fathers, and must not be confused with another work of the same title, generally ascribed to Gerbert; and a few other works on hagiological and liturgical subjects. Most of these works are printed in Migne, P. L., CXXXIX, 999-1136. Héger is also the author of an arithmetical work entitled "Regula de numerorum abaci rationibus", which was published by Huygens in the "Opera Mathematica" of Gerbert (Berlin, 1899), 205-25.

KÖPKE, loc. cit. above; KURTH in Biographie nat. de Belgique, IX (Brussels, 1880), 245-51; BERLIN, Monasticon Belge (Bruges, 1900-7); 1, 390; D'ANCOURT in Neues Archiv der Geistlichen, 2 (1817), 365-9; ERBET, Allg. Gesch. der Literatur des Mittelalters im Abendlande (Leipzig, 1879-87), III, 505-9.

MICHAEL OTT.

HERINEX, WILLIAM, theologian, b. at Helmond, North Brabant, 1621; d. 17 Aug., 1678. After receiving his preliminary education at S Hertogenbosch he entered the University of Louvain, where he devoted himself primarily (at present) to the study of Greek, Latin and the Greek classics and obtained the degree of Doctor of Philosophy. As a student he was distinguished for his diligence, modesty, and piety. After completing his university course, he resolved to embrace the religious state and entered the Franciscan Order. In 1653 he was appointed lecturer in theology at Louvain. His superiors, who had observed his great talents and success in teaching, ordered him (1658) to draw up a course of theology for use in the Franciscan schools, and the first volume of his work was published in 1660. The style is concise and clear. A spirit of piety pervades the work. In the preface to his "De scientia" he wrote: "But he who teaching of theology does not consist alone in the search after truth, but it behooves us to make use of the truth for our own sanctification and for the sanctification of others, and above all for kindling and nourishing in ourselves and in others the love of God. According to the constitutions of the Order, Father Herinex professed the third vow of the Franciscan rule, but he does not neglect the teachings of St. Bonaventure or St. Thomas.

Father Herinex was a Probabilist, and his tractate "De scientia" is a masterpiece. He shows that the system of Probabilism is not altogether new, and he draws his proofs from St. Thomas, St. Bonaventure, St. Antoninus, and Scotus, although the Subtle Doctor is not so explicit on the matter as the other ancient writers. According to Herinex, the tempest that arose in the seventh century against Probabilism had its origin in Jansenism, for Rigorism was unknown among the theologians of the Middle Ages. The decrees of Alexander VII, issued in 1665 and 1666, after the publication of Father Herinex's "De scientia", twice elected minister provincial, then definitor general, and finally commissary general for the northern countries of Europe. On 28 April, 1677, whilst making a canonical visitation in England, he received word at Newport that Charles II had nominated him Bishop of Ypres. He was consecrated on 24 October in the same year, in the Franciscan church, Brussels. He left immediately for his diocese but ruled it for less than a year; he died while making his first diocesan visitation. The epitaph on his tombstone in the cathedral of Ypres says: "Ob virtutem et omnino in terrenis eruditionibus, bone et caritate omnium..." Letters found in his room after his death show that his promotion to the cardinalate had been determined on by the pope. His "Summa Theologica Scholastica et Moralis" was published at Antwerp, 1660-63; 2nd ed., 1680; 3rd, 1702-04.

GREGORY CLAYT.

HERMANN, Landgrave of Thuringia (1190-1217), famous as a patron of medieval German poets. He was the second son of Ludwig surnamed der Eiserner (the iron one) and of Judith, sister of the Emperor Frederick I. Together with his brother Ludwig, hewarred against Henry the Lion, Duke of Saxony, who had been put under the ban of the empire. The brothers were defeated and taken prisoner in the battle of Weissensee (1180) but released the following year. Ludwig had been made Count Palatine of Saxony as a reward for his services to the emperor, but he transferred the dignity to Hermann, who now took up his residence at Neuenburg on the Oder, which had been given to him by the Emperor. He died for the Warburg castle near Eisenach, when in 1190 on the death of Ludwig he became Landgrave of Thuringia. He successfully maintained his possessions against the ambitious designs of Henry VI. In 1197 he took part in a crusade, but returned on the news of Henry's death. In the wars between the rival kings, Philip of Swabia and Otto of Brunswick (1198-1208), he played a conspicuous, but not very glorious, part, changing sides more than once for material advantage. As a consequence his dominions suffered severely, being repeatedly overrun and devastated by the armies of the rival factions. When Otto was excommunicated by Pope Innocent III, a number of German princes, among them Hermann, assembled at Nuremberg, in 1211, and chose in his place Frederick of Hohenstaufen, King of Sicily. In the struggle that ensued Thuringia was again invaded by Otto, and Hermann was reduced to great distress, from which he was saved only by the timely arrival of Frederick, now newly elected emperor, at the news of which Otto turned back. Henceforth he remained loyal to Frederick, though he was always regarded with distrust. He died at Gotha, 25 April, 1217, and was buried at Reinhardtsbrunn. Hermann was twice
Hermann married his second wife, Sophia, daughter of Duke Otto of Bavaria. His oldest son, Ludwig, who succeeded him, was the husband of St. Elizabeth.

The liberality of the art-loving landgrave made the Thuringian Court the meeting-place of poets from all parts of Germany. Heinrich von Veldeke, Walther von der Vogelweide, and Wolfram von Eschenbach were among those who enjoyed the landgrave's hospitality. Wolfram wrote his "Willehalm" and Herbert von Fritalar his "Lied von Troyen", at Hermann's suggestion. Though this generosity was not always discriminating, and hence was liable to be abused, it was attested by Walther as well as Wolfram. "If a cart-load of wine" ... (p. 1207), and which is the subject of a poem of the thirteenth century, of unknown authorship, is purely legendary.

Knochenerzähler. Geschichte der Vorgänge zur Zeit des ersten Deutschen Kulturkongresses (Gotha, 1871); and "Theorie der Geschichte" (Leipzig, 1907), especially pp. 38-41.

Arthur F. J. Remy.

Hermann Contractus (Hermann Augustus, Hermann von Reichenau), chronicler, mathematician, and poet; b. 18 February, 1013, at Altehausen (Swabia); d. on the island of Reichenau, Lake Constance, 21 September, 1044. He was the son of Count Wolferdi II of Altehausen. Being a cripple from birth (hence the surname Contractus) he was powerless to move without assistance, and it was only by the greatest effort that he was able to read and write; but he was so highly gifted intellectually, that when he was but seven years of age his parents confided him to the learned Abbot Berno, on the island of Reichenau. Here he took the monastic vows in 1043, and probably spent his entire life. His iron will overcame all obstacles, and it was not long before his brilliant attainments made him a shining light in the most diverse branches of learning, including, besides theology, mathematics, astronomy, music, the Latin, Greek, and Arabic tongues. Students soon flocked to him from all parts, attracted not only by the fame of his scholarship, but also by his monastic virtue and his lovable personality. We are indebted to him chiefly for a chronicle of the most important events of the years before and from the birth of Christ to his day. It is the earliest of the medieval universal chronicles now extant, and was compiled from numerous sources, being a monument to his great industry as well as to his extraordinary erudition and strict regard for accuracy. While it is not improbable that this work was based on an earlier state chronicle of Swabia, saved, lost (called "Chronicum Universale Suevicum", or "Epitome Sangalensis"). See Breseiau, "Hermann von Reichenau und die sogenannte Epitome Sangalensis" in "Neues Archiv für ältere Deutsche Geschichtskunde" (11, 650), it has nevertheless a significance entirely of its own. The full measure of genius appears from the objectivity and clearness with which he wrote the history of his own time, the materials of which were accessible to him only by means of verbal tradition. The chronicle has repeatedly been published: first by J. Siehard (Boles, 1520), and by Usserhann, in P. L., CXLIII, 55-264; 1869, in: "Mon. Ger. Hist. Script.", V, 67-133. It was translated into German by Nobbe (Berlin, 1851, and Leipzig, 1893) "Geschichtschreiber der deutschen Vorzeit", XLII.

He also wrote mathematically-astronomical works (cf. Cantor, "Geschichte der Mathematik", I, 759 sq.). One of his most famous was the "De arte metrica". "Liber des Hermanns (Ratisbon, 1862); Desgeisal, Gesch. der Vaterl. Memento in Denkmal Werke des Herrn; Goergaeu, Écrits de l'Ordre de Prémontré" (Brienne, 1899).

Patricius Schlager.

Hermann Joseph, Blessed, Premonstratensian monk, and my venerable brother at Cologne, about 1150; d. at Hoven, 7 April, 1241. According to the annals of the St. Razo Bonvisinus, contemporary prior of Steinfeld (Asta SS., April I, 679), Hermann was the son of poor parents who had once been rich. At the age of seven he attended school and very early he began the tender devotion to the Blessed Virgin for which he was known during his entire life. At every available moment he could be found at the church of St. Mary on the Capitol, where he would kneel wrapt in prayer and childlike appeal to Mary. One day he is said to have presented an apple, saved from his own scanty repast, to the Child Who accepted it. According to still another legend, on another occasion one day he made his appearance with bare feet, Mary procured him the means of getting shoes. At the age of twelve he entered the monastery of the Norbertine or Premonstratensian Canons at Steinfeld, in the present Rhenish Prussia, made his studies in the Netherlands, and on his return was entrusted with the service of the refectory and later of the sacristy.

After he had been ordained priest, it was remarkable with what reverence and devotion he offered the Holy Sacrifice. He was known for his gentle demeanour and affability, his humility, his extraordinary mortifications, but, above all, for his affection for the Mother of God, before whose altar he would listen with pious intercourse and ecstatic visions, and in whose honour he composed wonderful prayers and hymns. Mary, in turn, showed him her predilection, called him her chaplain and her spouse, and confirmed his surname Joseph, given to him by his brothers in religion. Hermann was sometimes sent out to perform pastoral duties and was in frequent demand for the making and repairing of clocks. He had under his charge the spiritual welfare of the Cistercian nuns at Hoven near Züllich. Here he died and was buried in the cloister. His body was later transferred to Reichenau, where his marble tomb and large picture may be seen to the present day; portions of his hair are at Cologne and at Antwerp. He is represented in art as kneeling before a statue of the Virgin and Child and offering an apple. The process of his canonization was begun in 1826, at the request of Archbishop Ferdinand of Cologne and the Emperor Ferdinand II, but was interrupted. His feast was, however, celebrated on 7 April, and the name of Blessed Hermann is in the Premonstratensian supplement to the Roman Martyrology. They also celebrate the translation of his relics on 24 May. His works are: "A Commentary on the Canticle of Canticles", which is lost; "Opuscula" (new edition, Namur, 1809), including: "Divodiciem gratiarum actiones"; "Jubilus seu Hymnus de SS. undecim millibus Virginibus"; "Oratio ad Dominum nostrum Jesum Christum", taken to a great extent from the Cantic of Canticles; "Alia Oratio"; "Preludia de quinque Gandis M. Marie V.

It is not at all certain whether the last three are works of Hermann, though they are generally ascribed to him.

Timmann, Hermann Joseph (Tillé und Paris, 1901); Kaufm. Landesk. d. k. k. h. (in the Michaeliscental) was the "De arte metrica". Leben des sel. Herrn Joseph (Ratisbon, 1862); Desgeisal, Gesch. der Vaterl. Memento in Denkmal Werke des Herrn; Goergaeu, Écrits de l'Ordre de Prémontré" (Brienne, 1899).

Francis Mershman.
Hermann of Altach (Niederaltach), a medieval historian; b. 1200 or 1201; d. 31 July, 1275. He received his education at the Benedictine monastery of Niederaltach, where he afterwards made his vows and was appointed custos of the church. In this capacity he became thoroughly acquainted with the records of the monastery. Under Abbot Ditmar (1232–42) he was sent on important missions concerning the interests of the monastery, first to the emperor at Verona, then to the Roman Curia in 1258 and again in 1260. On 27 October, 1258, he was elected Abbot of Niederaltach. During his abbacy of thirty-one years the monastic discipline and the finances of the monastery were greatly improved. On 12 March, 1273, he resigned his office on account of ill-health and old age, and spent the remaining two years of his life in retirement at his monastery. Hermann is the author of a few historical works, of which the chief is the "Annales Hermanni", reaching from 1137 to 1273. Up to 1146 they are based on previous chronicles; but from 1146 to 1173 they are the independent work of Hermann and are considered one of the most important historical sources for the period, especially as regards the countries of Bavaria, Bohemia, and Austria. His other literary productions are: "De rebus suis gestis", an account of the various architectural improvements made at Niederaltach while he was abbot; "De institutione monasterii Altahensis", a short narrative on the foundation of Altach; and a "Brief History of the Dukes of Bogen, patrons of Altach". The works of Hermann were published in Jaffé in "Mon. Germ. Hist. XIX, 351–427", German translation by Weiland in "Geschichtsschreiber der deutschen Vorszeit" (Berlin, 1871; second edition, Leipzig, 1898).

BRADWELL, Hermann Alt von Niederaltach in Verhandlungen des hist. Vereins für Niederbayern, XIX (Landschat, 1870), 254–5; "Idem, Propylaen für die deutsche Geschichte, VIII (Munich, 1876); WEINERT, Geschichte von Niederaltach im Archiv für die geschichte des bayerischen Staates, I (Munich, 1882); SCHUMANN, Geschichte von Niederaltach im Archiv für die geschichte des bayerischen Staates, III (Freiburg, 1893); MICHAEL, Geschichte des deutschen Volkes vom 13. Jahrh. bis zum Ausgang des Mittelalters, III (Freiburg, 1903), 350–4.

MICHAEL OTT.

Hermann of Fritsalar.—With this name are connected two works on mystics written in German. The first, "Das Heiligenleben", preserved in a single manuscript, is a collection of ninety-one short sermons, of the sixteenth and seventeenth centuries, and it is uncertain whether he wrote all the sermons; they are all of the same authorship, and were collected by Abbot Froeden in 1343 and 1349, the matter being drawn from other books, as is expressly stated in the introductory sermon. The sermons, which begin with the feast of St. Andrew, contain here and there mystical considerations, wholesome and concise, which give the work a distinct place in the history of mysticism. Some are merely theoretical, as definitions, notes on union with God, the birth of Christ in the soul, etc.; others are based on the personal experience of the writer. This work, for a long time attributed to Hermann of Fritsalar, whose name is quoted at the end, was compiled, at his request, by Gisler of Slatheim, one of the Domini, who wrote that he compiled the work under the guidance of Hermann, his own master in the German mysticism. Gisler, formerly a reader of theology at Cologne and Erfurt, had made for himself a collection of sermons; now he compiled another work, drawing largely from his former one, and adding, with several of his own sermons, extracts from the travels and mystical considerations of Hermann; the simultaneous use of the first and third person may be easily noticed.

The other work attributed to Hermann, "Blume der Schauung" (Flower of Contemplation), and quoted in the sermon on the Annunciation, has been lately found in a manuscript in Nuremberg; it consists of a number of questions, often loosely thrown together, on union with God through the contemplative life, the various models to be assigned to this life, the road to perfect contemplation, etc.; many authorities are quoted, especially St. Augustine, St. Bernard, St. Thomas, Pseudo-Dionysius, Origen, Eckhart, etc. In their mysticism the two works show traces of the influence of Eckhart; but in neither can it be exactly determined the part played personally to Hermann. Even the person of Hermann is only known from the scattered suggestions and reminiscences in his works; he was neither a Dominican nor a Franciscan, but a pious layman; he sometimes attacks the manners of the clergy; he had travelled much, but stories of travel, descriptions of customs, etc. cannot always be used as a proof of Hermann's authorship, as they are found also in other collections of sermons (for instance the carnival at Rome); the writer speaks chiefly of Rome, then of Spain and St. James of Compostela, for he has visited the tombs of all the Apostles save those of St. John and Thomas; he has been also in Lisbon, Paris, and St.-Denis, Salerno, Amalfi, etc. The sermons, at least the first set compiled by Gisler, were written at Erfurt.

J. DE GHELINCK.

Hermann of Minden, provincial of the German province of Dominicans; b. at or near Minden on an unknown date; d. shortly after 1294. He belonged to the noble family of Scynne (Schiinnas), took the religious garb of St. Dominic at Minden, became papal penitentiary and chaplain, acted as vice-provincial "super Rhenum" during the provincialate of Conrad von Reginingen (1277–81), was provincial of the German Dominican province 1286–90, and vicar of the provincial in 1291 and 1294. In the capacity of provincial he attended the German national Council of Würzburg in March, 1287. Hermann's provincialate occurred in one of the most turbulent periods in the history of the German Dominicans. The secular clergy and the laity combined to prevent the spread of the youthful order. Especially serious were the quarrels of the order with the cities of Warburg and Strasburg, and with the cathedral chapters of Ratisbon and Zölfingen. It was due to the energy and tact of Hermann that the order was enabled to avoid a schism and to flourish in Germany. His literary activity was confined to two juridical works, "Tractus de interdicitio" and "De crimine inquisitionibus", and a number of letters. The first was a concise treatise on the ecclesiastical interdict and based on the recent decrees of Innocent IV. It was written in 1270, the second work, of which neither manuscript nor print exists, regulated the inquisitorial proceedings against members of his order. His numerous letters, which are of great historical value, were published by Finke (loc. cit. infra). An instruction concerning the "cura monialium", which Hermann sent in 1287 to the vicar of his province who was in the immediate confidence of the papal legate, the spiritual guidance of nuns, was published by Deniße in "Archiv für Literatur und Kirchengeschichte" (Berlin, 1896), II, 649–651.

MICHAEL OTT.

Hermann of Salsa, fourth Grand Master of the Teutonic Order, descendent of the noble Thuringian house of Salsa; b. 1180 at Langensalza in Thuringia; d. 26 March, 1239, at Barletta in Southern Italy. Nothing is known of him until in 1210 he succeeded Hermann Bart as Grand Master of the Teutonic Order. Soon after his accession he became one of the most influential persons in Europe, and the Teutonic
Order, which had dwindled down to a mere handful of knights, enjoyed a period of unprecedented prosperity during its term of office. In 1211 King Andrew II of Hungary arrived at Hermann for assistance against the pagan Cumans who had repeatedly devastated this part of Transylvania. He sent some of his knights to settle in that district and protect it against further devastation. As reward he received the so-called Bursland, a territory along the River Bursa, including Kronstadt and its vicinity. The Hungarian nobility, however, protested against the sale of the knights who were compelled to leave Bursland in 1225. About this time Duke Conrad of Masovia and Bishop Christian of Prussia agreed to ask the Grand Master for assistance against the pagan Prussians who continually harassed the Christian settlers in and near Prussia. In case the Prussians were subdued by the order, the Duke of Masovia offered Hermann the district of Cula and all the territory which the order could bring under subjection in Prussia. In a diploma of March, 1226, Emperor Frederick II allowed Hermann to accept the offer and gave him all the rights of a sovereign. The Grand Master appointed Hermann von Balk to take charge of the hostile operations against the Frisians who had invaded Germany in 1230, that memorable series of expeditions which finally resulted in the Christianization of Prussia and raised the Teutonic Order to one of the great powers of the Middle Ages. The strength of the order was materially increased when in 1237 it absorbed the Order of the Brothers of the Sword.

Amidst these activities of the Teutonic Order in the north, Hermann never lost sight of the main object of his order, the recovery of the Holy Land. With many of his knights he accompanied the German crusaders to the Holy Land and distinguished himself for his heroism at the taking of Damietta in 1186. In reward for his bravery John of Brienne, the King of Jerusalem, honoured him with the Golden Cross of Jerusalem, which he thereafter wore beside the black cross of his order. He incessantly urged Emperor Frederick II to undertake the crusade which he had repeatedly promised to Honorius III, and in order to join the interests of the Holy Land with those of the emperor he influenced him to marry the daughter of John of Brienne, Iolante, who was heiress to the throne of Jerusalem. It was chiefly due to the efforts of Hermann that in 1226 a reconciliation was effected between the emperor and his rival Emperor Frederick I. In 1229-30 he persuaded the excommunicated emperor to Jerusalem, and upon their return to Italy he effected the famous Treaty of San Germano on 23 July, 1230, by which the Patrimony of St. Peter was reconstituted and the ban removed from Frederick II. Hermann spent the remaining nine years of his life mostly in Italy, working incessantly for the welfare of the Teutonic Order.

MICHAEL OTT.

Hermas, Saint, Martyr.—The Roman Martyrology sets down for 18 August (XV Kal. September) the feast of the holy martyrs Hermas, Serapion, and Polyeus, with the statement that they suffered death in Rome for the Faith. The Greek calendars note all three names for the same day; but there is nothing in the history of the Lombard city of Como to explain the Synaxarium from which any inference can be drawn either as to the circumstances or the time of their martyrdom. The Martyrology of Hieronymianum does not give these names under the above date. On the other hand, the 28 August (V Kal. September) is the day set apart for the feast of the Roman martyr Hermas, the names of several others buried in the catacomb of Hermas and Basilla, and under the same date appear two Alexandrian martyrs, Polienus and Serapion. The writer surmises that the three martyrs of 18 August are identical with those of the 28th of the same month, namely, with the Roman martyrs Hermas and the Alexandrians Polienus and Serapion. Their appearance under the earlier date could have been the result of an error in the Greek calendar, as the name Hermas also appears for Hermas (Ephesius), a priest mentioned in the Roman Martyrology and in the Greek Menae as companion of Bishop Nicander of Myra in Lycis, and whose feast as a martyr is set down for November. It would seem from the Greek calendars that both saints had been ordained by St. Titus, the disciple of St. Paul.

J. P. KIRSCH.

Hermas (first or second century), author of the book called "The Shepherd" (Shepherd, Pastor), a work which had great authority in ancient times and was ranked with Holy Scripture. Eusebius tells us that it was "a holy work which really red" was denied to be canonical, others "considered it most necessary." St. Athanasius speaks of it, together with the Didache, in connexion with the deutero-canonical books of the Old Testament, as uncannibal yet recommended by the ancients for the reading of catechumens. Elsewhere he calls it a most unrivalled book. Rufinus similarly says that the ancients wished it to be read, but not to be used as an authority as to the Faith. It is found with the Epistle of Barnabas at the end of the New Testament in the great Sinaitic Bible g (fourth century), and between the Acts of the Apostles and the Acts of Paul in the stichometrical list of the Codex Claromontanus. In accordance with this conflicting evidence, we find two lines of opinion among the earlier Fathers. St. Ireneus and Tertullian (in his Catholic days) cite the "Shepherd" as Scripture. Clement of Alexandria constantly quotes it with reverence, and so does Orig. who held that the author was the Hermas mentioned by St. Paul, Rom., xvi, 14. He says the work seems to him to be very useful, and Divinely inspired; yet he repeatedly apologizes, when he has occasion to quote it, on the ground that "many people despise it." Tertullian, when a Montanist, implicitly ascribes to St. Caesarius had quoted it with authority (though evidently not as Scripture), for he replies: "I would admit your argument, if the writing of the Shepherd had deserved to be included in the Divine Instrument, and if it were not judged by every council of the Churches, even of your own Churches, among the apocryphal and false." And again, he says that the Epistle of Barnabas is "more received among the Churches than that apocryphal Shepherd" (De pudice., 10 and 20). Tertullian was no doubt right, that the book had been excluded from Rome by the Bible Instrumentum, but he is exaggerating in referring to "every council" and to "total rejection." The meaning of the "Pastor" was in direct contradiction with his own rigid views as to penance. His earlier use of it is paralleled by the Acts of St. Perpetua and Felicitas, before the end of the second century, but there is no trace of it in St. Cyprian, so that it would seem to have fallen out of use in the Memoria and Synaxarium of the third century. Somewhat later it is quoted by the author of the pseudo-Cyprianic tract "Adv. ales tores" as "Scriptura divina," but in St. Jerome's day it was "almost unknown to the Latins." Curiously, it went out of fashion in the East, so that the Greek Mss. of it are but two in number, whereas in the West it became better known and was frequently copied in the Middle Ages.

CONTENTS.—The book consists of five visions,
twelve mandates, or commandments, and ten similitudes, or parables. It commences abruptly in the first person: "He who brought me up sold me to a certain Rhoda, whom I set free; I met her again, and began to love her as a sister." As Hermas was on the road to Cume, he had a vision of Rhoda, who was presumably dead. She told him that she was his accuser in heaven, on account of an unchaste thought he had once had concerning her, though only in passing; he was to pray for her life and all his house. He is consoled by a vision of the Church in the form of an aged woman, weak and helpless from the sins of the faithful, who tells him to do penance and to correct the sins of his children. Subsequently he sees her made younger through penance, yet wrinkled and with white hair; the young lady is still with white hair—this is the Church of the forgiven. Lastly, she shows herself all glorious as a Bride—this is the Church of the end of the days. In the second vision she gives Hermas a book, which she afterwards takes back in order to add to it. He is to give this writing to the presbyters set over different parishes: Grapte (no doubt a young woman) is commissioned to send it to Clement, the pope, who is the organ of communication with other Churches; indeed, the constant communication between Rome and the rest of the Church in the second century is well known to us from other sources. The fifth vision, which is represented as taking place twenty days after the fourth, introduces "the Angel of repentance" in the guise of a shepherd, from whom the whole work takes its name. He delivers to Hermas a series of precepts (mandata, ἱερολαία) as to the belief in one God, simplicity, truthfulness, chastity, long-suffering, faith, fear, continence, confidence, cheerfulness, humility, and good desires. These form an interesting development of early Christian ethics. The only point which needs special mention is the assertion of a husband's obligation to take back an adulterous wife on her repentance. The eleventh mandate, on humility, is concerned with false prophets who desire to occupy the first seats (that is to say, among the priests). It is here a reference to Marcion, who came to Rome about 142-4 and desired to be admitted among the priests (or possibly even to become pope). After the mandates aten similitudes (ἐναποδαλι) in the form of visions, which are explained by the angel. The longest of these (xix) is the parable of the building of a tower, which had formed the matter of the third vision. The tower is the Church, and the stones of which it is built are the faithful. But in viii. ii. it looked as though only the holy are a part of the Church; in xii. x 11 it is clearly pointed out that all the baptized are included, though they may be cast out for grave sins, and can be readmitted only after penance.

The whole book is thus concerned with the Christian virtues and their exercise. It is an ethical, not a theological, work. The intention is above all to preach penance. A single chapter of restoration after baptism is dedicated to the instruction of those who had never been clearly published before. The writer is pained by the sins of the faithful and is sincerely anxious for their conversion and return to good works. As a layman, Hermas avoids dogma, and, when incidentally it is thrust in upon him, he is more prepared to think that if he had not been thought with some reason that he did not distinguish the Son from the Holy Ghost, or that he held that the Holy Ghost became the Son by His Incarnation. But his words are not clear, and his ideas on the subject may have been rather misty and confused than definitely erroneous.

Authorship and Date.—It is not easy to decide whether the writer has given us a genuine fragment of autobiography and a true account of visions which he saw or imagined that he saw, or whether the entire work is fictitious both in form and in setting. Three dates are suggested by the variety of evidence available. The reference to St. Clement shows the date 98-99 or at least the first two visions. On the other hand, if the writer is identified with the Hermas mentioned by St. Paul, an earlier date becomes probable, unless he wrote as a very old man. But three ancient witnesses, one of whom claims to be contemporary, declare that he was the brother of Pope St. Pius I, who was not earlier than 140-53. These three are (a) the Muratorian fragment; (b) the Liberian catalogue of popes, in a portion which dates from 235 (Hippolytus?); (c) the poem of Pseudo-Tertullian against Marcion, of the third or fourth century. (a) "Pastorem uero superrime temporibus nostris in urbe Ema Herma conscriptum, sedente cathedra urbis Romae ecclesiae Pio episcopo fratres ejus. Et ideo legi eum quidem oporet, se publicare uero in ecclesia populo neque inter prophetas completas numero, neque inter apostolos in fine temporum, potest."—And very recently, in our own times, in the city of Rome, Hermas wrote the Pastor, when his brother Pius, the bishop of Rome, and the Church of the city of Rome. And therefore that (book) ought to be perused, but it cannot be publicly read to the people assembled in church, neither among the Prophets, whose number is complete, nor among the Apostles (who came) in the end of times." (b) "Sub hujus [Pii] episcopatus alter ejus Ermess librum scriptum, in quo mandatum continetur quas [quod] precepti ei angelus, cum venit ad illum in habitu Pastorii?"—"Under his [Pius's] episcopate, his brother Hermas wrote a book in which are contained the precepts which the angel delivered to him, coming to him in the guise of a shepherd." (c) "Post hunc deinde Pius, Hermas cui germine frater, angelicus Pastor, quae tradita verba locutus."—"Then, after him, Pius, whose brother according to the flesh was Hermas, the angelic shepherd, because he spoke the words given to him." The three authorities are probably citing the same papal catalogue (of Hegesippus?). As (c) gives us some detail that was not given from (b), it would seem that he is independent of (b). (a) has added the inference that the "Pastor" may be read publicly, provided it be not numbered among the fourteen prophets, nor among the Apostolic writings. The statement that Hermas wrote during his brother's pontificate may similarly be an inference from the fact that it was in a list of popes, against the name of Pius, that the writer found the information that Hermas was that pope's brother. He may have been an elder brother of the pope, who was probably an old man in 140. Hence it is quite possible that Hermas may have been passed over by the memory of his time of his first and second visions. But because this is possible, it does not follow that it is very probable.

Older critics unanimously attributed the authorship to the Hermas of Rom., xvi, 14—Bellarmino, Cave, Le Nourry, Remi Cellier, Lardner, etc., with the modern standard text. The opinion of Schröder might have been brother to Pius I. In the middle of the eighteenth century Mosheim and Schröder preferred the testimony of the Muratorian Canon, which was published in 1740; but Gallandi and Lumper adhered to the earlier view. Zahn, in an early work (1868), by the reference of St. Clement, identified Hermas, neither known to St. Paul nor brother to St. Pius, but writing in the last decade of the first century. He was followed by Peters and Caspari. But Hefebä had been teaching that we cannot refuse the contem-
temporary witness of the Muratorian Fragment, and this view has in the end prevailed amongst scholars, being now almost universally received. The question remains how we are to explain the name of St. Clemen-
tent. It was suggested above that Hermas may have been older than his brother Pius. But Harnack, holding that monepiscopacy was unknown in Rome until Anicetus, the successor of Pius, has no difficulty in holding that Clement really lived into the beginning of the second century, and that Pius was the most prominent among the priests at Rome even before 140. He therefore dates part of Visio ii, the kernel of the whole, before 110, and the final redaction not earlier than 135, nor later than 145. It is indeed true that the book itself describes the various parts as having been written down successively, and the process may well have taken the Hausseilers forth by hardly a decade or two. Perhaps the most probable view is that the historical data in the book are fictitious; the author was really the brother of Pope Pius, and wrote during his brother's pontificate. The evils of the Church in his day which he describes are not those which were in the first centuries, but they certainly suit the second better. There is a possible reference to Marcion's visit to Rome about 142, and there is a probable reference to Gnostic theories in Simil. viii, ix. The writer wished to be thought to belong to the preceding generation—hence the name of Clement, though forty years or a century earlier than that of Pius. We cannot even be sure that the writer's name was really Hermas. It is a suitable name for a slave, being a shortened form of Hermogenes, Hermo-
modorus, or some such word. Dr. Rendel Harris has urged in an interesting essay that where Hermas de-
scribes twelve mountains in Arcadia (Simil. ix, 1), the description of the location can be taken from Paulus. Dr. Armitage Robinson thought that we must even suppose that Hermas knew the place himself, and had been brought up in Arcadia. But all this is incon-
clusive, though plausible. The notion of De Cham-
pagny (who was followed by Dom Guéranger), that the "Shepherd" is made up of two works, one (Vis. i-iv) by the disciple of St. Paul, the remainder by the brother of Pope Pius, is sufficiently refuted by the unity of style and matter, as Baumgartner has shown. The same is to be said of Hilgenfeld's opinion, that we have before us a fusion of works by three authors. Spitta insists on the unity of the message, and has applied the Acts of the Apostles and the Apoc-
lypse, and he finds in Hermas traces of a Christian enlargement of a Jewish writing, as Volter had said of the Apocalypse. It is natural that Volter should have approved this theory, but Spitta has not been followed. All Hausseiler for his part, attributing only Vis. v—Simil. x to the brother of Pius, regarding Vis. i—iv as an addition made at the end of the second century in order to recommend the book as the work of Hermas, disciple of St. Paul. But that personage is not even mentioned.

There is but one direct quotation in the "Shep-
 herd," and that is from the apocalyptic book of "El-
dad and Modat, who prophesied to the people in the wilderness," and the reference is apparently ironical. But there are many indirect citations from the Old Testament. According to Swete, Hermes never cites the Septuagint, but he uses a version of Daniel akin to that of St. Jerome in his acquaintance with his matthean one or other of the Synoptic Gospels, and, since he also uses that of St. John, he probably knew all three. He appears to employ Ephesians and other Epistles, including perhaps 1 Peter and Hebrews. But the books he most certainly and most often uses are the Epistles and the Apocalypse. His material is rather dull to us moderns, and the simplicity of his manner has been characterized as childish. But the admiration of Origen was not given to a work without depth or value; and, even with regard to the style, Westcott has reason to say ("On the Canon," pt. 2, ch. ii): "The beauty of the language and conception in many parts has never been sufficiently appreciated. The thought of it may be compared with the 'Pilate's re-

From the intensity and directness of the ancient Roman Catholic and that of the persecuted Puritan, however antipodal the antithesis between the in-
dividualism of the primitive Christian Church and the Universal Church which dominates the whole thought of the other. The "Shepherd" was first printed in Latin by Faber Stapelanius (Lefèvre d'Étaples) in "Liber trium virorum et trium spiritualium virginum" (Paris, 1615); better edition by Fell (Oxford, 1888), and especially by Hilgenfeld (Leipzig, 1873) and von Gebhardt (Leipzig, 1877). This version, which is contained in many MSS., and has been frequently reprinted in the editions of the Apostolic Fathers, is known as the Vulgate. It was certainly known to the author of the "Adversus aleatorem" (third or fourth century), and perhaps to Tertullian, and the translation was probably made in the second century. Another version is contained in a single MS. (Vat. Patal. 150, sec. xiv), and has been printed by Dressel, "Patres Apost." (Leipzig, 1857 and 1863), and von Gebhardt and Harnack ("Patres Apost." Leipzig, 1877). It is possible that the fifth century, and instead of the Vulgate translator has used the Vulgate version as an aid. Hausseiler's attempt to show that the Palatine is the older is rejected by Harnack and Funk. An Ethiopic version was discovered in 1847 by d'Abbadie; it has unfortunately a few lacunae and accidental omissions. It seems to have been from a Greek original which was first known from a fourteenth-century MS. on Mount Athos. The well-known forger Simonides stole four of the leaves and copied the rest. But he sold to the library of the University of Leipzig a Greek version which he had composed him-
self. This was published in 1556 by Rudolf Anger, with preface and index by Dindorf. The fraud was soon discovered. The four leaves and Simonides' copy were procured by the library, and the true readings were published by Anger in the "Leipziger Repertorium der deutschen und ausländischen Liter-
atur," III (1856), 135. Since then the six leaves have been replaced by a copy made at the expense of J. Armitage Robinson. The Codex Sinaiticus discovered by Tischendorf, and published by him in 1862, contains the "Pastor," but in both MSS. the end is wanting. Two fragments of the book are found on a papyrus leaf from the Fayoum, now at Berlin.
Hermeneutics, derived from a Greek word connected with the name of the god Hermes, the reputed messenger and interpreter of the gods. It would be wrong to infer from this that the word denotes the interpretation or exegesis of Sacred Scripture. Usage has restricted the meaning of hermeneutics to the science of Biblical exegesis, that is, to the collection of rules by which one arrives at a right interpretation of Scripture. Exegesis is therefore related to hermeneutics, as language is to grammar, or as reasoning is to logic. Men spoke and reasoned before there was any grammar or logic; but it is very difficult to speak correctly and reason rightly at all times and under any circumstances without a knowledge of grammar and logic. In the same way our early Christian writers explained Sacred Scripture—as it is interpreted in particular cases even in our days by students of extraordinary talent—without relying on any formal principles of hermeneutics, but such explanations, if correct, will always be in accordance with the canons of our present-day science of exegesis.

I. Necessity of Hermeneutics.—The reader must not infer from what has been said that hermeneutics is a mere accomplishment in the Biblical exegete, that its knowledge is not necessary for the Bible student. It is, indeed, a necessary tool of exegesis was not developed; but it must be remembered that the so-called sacred languages were the vernacular tongues of the Syrian and Greek writers, who were familiar with what are to us Biblical antiquities, and who were also imbued with the early oral traditions containing the true explanation of the many difficult passages of Sacred Scripture. As soon as these natural aids of the Christian interpreter began to wane, the principles of hermeneutics began to develop. Even at the time of St. Augustine they were collected into a single book, so that they could be made known and put into practice without much difficulty. Anyone acquainted with the variety of opinion concerning the meaning of some of the most important passages of the Bible will wonder rather than at the suggestion of explaining Scripture without the aid of hermeneutics, than at the claim for its urgent necessity. Nor can it be said that the variety of exegetical results on the part of writers well-versed in the principles of scientific interpretation shows the uselessness of hermeneutics in the explanation of Sacred Scripture. 

No scientific principles have ever been done away with all disagreement of scientists in any branch of knowledge; besides, in the case of Scripture study, hermeneutics has diminished the effect of the opinions held by interpreters by eliminating the view that one is compelled by the text. Such principles are even more necessary for the Biblical interpreter than a study of logic for the thinker; for while the laws of thought are based on an inborn tendency of the mind, the rules of hermeneutics rest to a great extent on facts external to the mind. And the results flowing from the application of the principles of hermeneutics are not less important than those derived by many, for the formal laws of logic, since the controversies between Jews and Christians, between Christians and Rationalists, between Catholics and Protestants, are in the end brought back to hermeneutic questions.

II. Limits of Hermeneutics.—Though the influence of hermeneutics is so far reaching, its efficiency must not be overestimated. Hermeneutics does not supply a deficiency of natural ability, nor does it rectify false philosophical principles or perverse passions, nor again does it impart the needed philological and historical erudition. Secondly, hermeneutics deals with a truth of a writer's meaning, which has been established by its canons; it does not inquire what is true or false, but only what the writer intended to say. Hence a hermeneutic truth may be an objective falsehood, unless the writing subjected to the hermeneutic rules be endowed with the prerogative of inerrancy. Thirdly, hermeneutics does not inquire into the authenticity of a writing, nor into the genuineness of its text, nor again into its special character—for instance, whether it be of a sacred or profane nature. Biblical hermeneutics presupposes, therefore, a knowledge of the history of the Canon of both the Old and the New Testament, an acquaintance with the lower or textual criticism, and a study of the dogmatic treatise on inspiration. The number of limitations of hermeneutics will not render the reader impatient, if he keeps in mind that he bears with the limits which circumscribe the field of other branches of learning: no one blames grammar, for instance, because it does not confer any special linguistic aptitude on the grammarians, or because it does not improve the melody or the syntactical structure of the language.

III. Object of Hermeneutics.—After removing what is foreign to hermeneutics, we are enabled to understand its proper object more thoroughly. Its material object is the book or writing which is to be explained; its formal object is concerned with the sense expressed by the author of the book in question. Thus, Biblical hermeneutics deals with Sacred Scripture as its material object, furnishing a complex set of rules for finding and interpreting the true sense of the inspired writers, while the discovery and presentation of the genuine sense of Sacred Scripture may be said to be its formal object.

IV. Division of Hermeneutics.—The most direct and simple method of determining the meaning of an author consists in the latter's statement of the sense he intended to convey. Such a statement, whether it proceed from the author himself or from another person who has certain knowledge of the author's mind, is called an authentic interpretation. The legal interpretation differs from the authentic in that it proceeds, not from the lawgiver himself, but from his successor, or from his equal in legislative power, or from the supreme legal authority. The scientific interpretation differs from both the authentic and the legal; its value is not derived from authority, but from the trustworthiness and the learning of the commentator, from the weight of his arguments, and from his faithfulness to the rules of hermeneutics. Authority as such does not enter into the field of general hermeneutics. The rules of hermeneutics, thus circumscribed, may be either of universal or particular application, that is, they may be valid for the right explanation of any book or writing, or they may be adapted for a particular class of books, e.g., Sacred Scripture or canonical. Biblical hermeneutics belongs to this second class, not because the universal rules of exegesis are applicable to the Sacred Books, but because the sacred character of the Bible demands additional rules of interpretation which are not applicable to profane writings. Finally, Biblical herme-
neutics is either general or special, according to the character of the exegetical rules it contains: it is general if its rules are applicable to the whole Bible; it is special if its application for the exegesis of particular books only, e.g., the Psalms or the Pauline Epistles. But, as in logic the species contains all the essential notes of the genus, so does special hermeneutics contain all the exegetical rules of general hermeneutics, and so does particular hermeneutics embrace all the laws of interpretation imposed by universal and those of special hermeneutics.

V. First Principle in Hermeneutics.—Since the more special hermeneutics laws do not contradict the more general laws, but only determine them more accurately in order to adapt them to the particular circumstances of each law, there is no limit to the number of possible to determine the first and highest principle or law of hermeneutics, from which all the special exegetical rules are derived. The reader will remember that such first principles exist in other sciences, too; in logic, for instance, and in ethics, we have the principle of contradiction and the principle of sufficient reason, respectively. Returning to hermeneutics, thought must be derived from language according to the same law which regulates the expression of thought in language, the process alone being inverted. In this respect language in general does not differ from a cipher message which must be read according to the code in which it was written. Now, a writer constantly uses the code of his day and of his own peculiar circumstances; he employs language in accordance with its peculiar usages and its rules of grammar; he follows in the expression of his thoughts the sequence of logic, and his words reflect his mental as well as his physical and social conditions. If the interpreter wishes to fully understand the writer, he must be guided by these quasi-criteria of the author's meaning: his language, his train of thought or the context, and his psychological and historical condition at the time of writing. Hence flows the first and highest principle of hermeneutics: Find the sense of a book by way of its language (grammatically and philologically), by way of the rules of logic (from the context), and by way of the writer's mental and external condition. Expressing the same truth negatively, we may say that any meaning of a passage which does not agree with its grammar, its internal and external conditions of its author, cannot be the true sense of the writer. In the case of Scripture, the fact of its inspiration and of its authentic interpretation by the Church must be added to the three common criteria of interpretation; hence any meaning which does not agree with Scripture, or the concrete conditions of the Biblical writers, or not in harmony with the fact of inspiration and the spirit of the Church's interpretation, cannot be the true sense of Scripture. Regard to only the first three of these criteria renders the exegesis rationalist, and adherence to the specific Christian doctrine of Biblical inspiration; but it is only the conjunction of the fifth with the other four that gives birth to true Catholic exegesis without destroying the rational and simply Christian character of the interpretation.

VI. Sources of Hermeneutic Principles.—The foregoing remarks reveal the sources from which hermeneutics derives its secondary principles. It presupposes a grammatical and philological knowledge of the language in which the work is written, an acquaintance with the laws of logic and rhetoric, and a familiarity with the data of psychology and the facts of history. These are the sources of the rules of universal hermeneutics; in the case of the Sacred Scriptures, the scientific interpreter must be well-grounded in the so-called Sacred or Biblical languages; he must be well-versed in Biblical history, archeology, and geography; he should know the various Christian dogmas bearing on the Bible and their history; finally he must be instructed in patrology, ecclesiastical history, and Biblical literature. Before entering on the exegesis of any book of the Bible, the commentator must also be versed in the dogmatic, moral, philosophical, and scientific questions connected with his particular subject. In the light of these many requirements, one easily understands why it is so hard to find commentaries which are fully satisfactory, and one also understands reading several commentaries before one can claim fully to understand the Scriptures or any part thereof.

VII. Historical Development of Hermeneutics.—Seeing the importance of Biblical hermeneutics, it may seem a matter for surprise that this branch of science was not developed till the 18th century. In the world of other branches of sciences of the Bible, it is difficult to find a man who has attempted to unite the study of the Bible with modern psychology. The men of the 16th and 17th centuries, the great theologians, the great exegetes, were rather men of collected knowledge and of the great many men who were versed in the content of the Bible, and it is only in the 18th century that we find men who have attempted to unite the science of the Bible with modern psychology.

(1) Jewish Development.—Not long after the days of Christ, R. Hillel set forth seven hermeneutical rules (Midrashim), among which are found the inference from the greater to the less, from the general to the particular, from the context, and from parallel passages. At the beginning of the second century R. Yehuda ha'elben Eliezer' increased the number of Hillel's rules to thirteen, treating among other questions the way of harmonizing contradictory passages. About the middle of the second century R. Eliyzer derived thirty-two hermeneutical rules from the then prevailing method of interpretation, and these are still to be found in the editions of the Talmud after the treatise "Berakoth". In the Middle Ages Aben Ezra and Maimonides explained certain hermeneutical rules, but no rabbinic writer has written professo any complete treatise on Biblical hermeneutics.

(2) Christian Development.—(a) The First Three Centuries.—Among the earliest Christians, too, the Scriptures were read and explained without the guidance of any acknowledged rules of hermeneutics. We may infer from the sayings of the Fathers that tradition and the analogy of faith were the sovereign laws of the early Christian Church. In the second century Melito of Sardis composed a hermeneutical treatise, entitled "The Key", in which he explained the Biblical tropes. The Fathers of the third and fourth centuries suggested many rules of interpretation without collecting them into any distinct work. Besides, the so-called "principles" of Scripture, the so-called "rules of exegesis" in his work "De principiis", lib. IV; Diodorus of Tarsus (d. before 394) wrote on the difference between type and allegory, but his work "Quod mox differt theorica ab allegoria" has been lost; St. John Chrysostom urges the commentator to study the context, the author, the readers, the intention of the speaker, the occasion, place, time, and manner of writing (Hom. in Jer. x, 33; Hom. xv in Joan.). St. Jerome, too, has left many hints on the proper method of interpretation ("Ep. ad Pammasch. ", "De optimo genere interpretandi", "Lih. quest. Hebr. in Gen."); "Dio. cassianus ad. Hebr.", "Pref. in 12 prophet.", "In qt. evang.", etc.).

(b) From the Fourth to the Fourteenth Century.—About A. D. 390 the Donatist Tychonius published a work entitled "Septem regulae ad inquirendum et inueniendum sensum S. Scripturæ", which was both
incomplete and infected with error; it was on this account that St. Augustine (d. 430) wrote his work "De doctrina Christiana libri quattuor", in which he treated the errors of the humanistic principles of the School of Antioch, and also a work entitled "De interpretatione divinae scripturae". To Eucherius of Lyons (d. about 450) we are indebted for two hermeneutic works, "Formularum spiritualis intelligenz ad Uranium liber unus" and "Instructionum ad Salomonem liber unus". In the latter, taken at the beginning of the sixth, the monk Adrian explained the figurative expressions of Sacred Scripture, especially of the Old Testament, according to the principles of the School of Antioch in a work entitled "Introductio ad divinas scripturas". About the middle of the sixth century Junilius Africanus wrote his celebrated treatise "De pastorum divinae legationis interpretatione" in which he expounds the rules of Biblical interpretation, as he received them from an adherent of the School of Edessa. About the same time M. Aureliius Cassiodorus (d. about 565-75) wrote, among other works, "De institutio divinarum litterarum", "De aratione Bibliae litterarum", and "De schemasibus et tropis". (c) To the Council of Trent.—Though we meet with fewer complete hermeneutic works during the period of the Middle Ages, still we have copious exegetical rules in the commentaries and introductions of St. Venerable Bede, Alcuin, Rabanus Maurus, Hugh of St. Victor, and especially St. Thomas (Summ. theol., I, q. 1, n. 9 sq.): There were several special reasons which led to the promotion of Biblical and hermeneutical studies in the fourteenth and fifteenth centuries. The Council of Vienne (1311) ordained that chairs of Oriental languages were to be erected in the universities; the humanistic studies began to flourish anew and reacted favourably on the pursuit of the Biblical language; the discovery of the art of printing (1440-1450) facilitated the spread of the Scriptures; the taking of Constantinople by the Turks (1453) occasioned the westward emigration of numerous learned men, who carried with them the Biblical treasures as well as their learning and artistic skill. It was during this period, too, that Nicolaus Lyranus (d. 1340) wrote his works, "Tractatus de differentiis nostrae translationis ab Hebr. littera" and "Liber differentiarum V. et N. Testamenti", and John Gerson (d. 1429) produced his hermeneutic treatise entitled "Propositiones de sensu litterali Scripturae Sacrae", in which he considers the various kinds of Scriptural sense, and expresses his preference for the literal sense to be determined according to the teaching of tradition and the pronouncements of the Church. In the sixteenth century, the so-called Reformers began with regard to the analogy of faith and the symbols as the criteria of Biblical exegesis, but in the end they had to fall back on the rules of Christian and even rationalistic hermeneutics, so that they naturally prepared the way for the Biblical rationalism of the eighteenth century. The Catholic hermeneutic literature also grew during these centuries, partly owing to the rivalry between Catholic and Protestant scholars. As this tended to enlarge the hermeneutic works, clearness and thoroughness demanded the separation from hermeneutics of critical, historical, and dogmatic questions, and the development and solid proof of the strictly hermeneutic sense. 

VIII. RELATION OF HERMENEUTICS TO THE OTHER BRANCHES OF SACRED STUDY.—It may be of interest to consider the relation in which hermeneutics, thus reduced to its own specific limits, stands to the other branches of Scriptural studies. Needless to say, the first step in the scientific study of the Bible consists in acquainting oneself with the foundation and the extent of the humanistic authority with which the Scripture is endowed; the so-called historico-critical introduction to Sacred Scripture teaches us all this. The second step leads us to the key for the right understanding of this doubly authoritative collection of books, that is, to the study of hermeneutics proper. The final stage of Bible study is exegesis, which opens to us the innermost treasures of the inspired writings. All this would be very simple and clear, if the second stage did not demand the additional erudition now taught by three distinct branches of knowledge: sacred philology, history, and sacred theology. It was for this very reason that it was necessary to apply the rules of hermeneutics without possessing this knowledge. Finally, those who arrange theological studies systematically place philosophy and Bible study, together with ecclesiastical history and patrology, among the preambles preparing us for theoeretic theology (fundamental, dogmatic, and apologetic), practical theology (moral), pastoral theology, and canon law.

IX. CONTENTS OF HERMENEUTICS.—After considering hermeneutics in its relation to its cognate branches of study, we may return to a more accurate scrutiny of its own contents. We have seen that the science of exegesis has formal objects having both a logical and the presentation of the sense of Sacred Scripture. Starting from this fact, we may infer that (1) a complete treatise of hermeneutics ought to treat first of the sense of Scripture in general; (2) it must lay down definite rules for finding this sense; (3) it must teach us how to present this sense to others. These three questions have been fully explained in the article EXEGESIS (vol. V, 692 sqq.), so that it is unnecessary to repeat their respective developments here. It will be useful, however, for the reader to have before his eyes a summary of the principal points treated in this article.

X. SUMMARY OF HERMENEUTIC PRINCIPLES.—(1) The genuine sense of Sacred Scripture is first divided into (a) the literal, and (b) the typical sense. Then follows a consideration of (a) the nature, (b) the division, (c) the ubiquity, and (d) the unity and multiplicity of the literal sense. Next comes a brief study of the so-called plain sense, which best bears only an analogy to the real Biblical sense; (e) the derivative or consequent sense, and (f) Biblical accommodation. Then, as to the typical sense, the writer (a) describes the nature of the typical sense, (b) gives its divisions, (c) shows its existential occurrence in the Old Testament and in the New, (e) indicates its criterion, and (f) investigates its theological value.

(2) In the next place the writer treats of the method of finding the genuine sense of Scripture, considering: (a) the human character of the Bible, which demands an historico-grammatical interpretation so that the commentator must keep in mind (a) the significance of the literary expression of its sacred and Scriptural language; (b) the sense of its literary expression, which is often determined by the subject matter of the writing, by its occasion and purpose, by the grammatical and logical context, and by parallel passages; (g) the historical setting of the book and its author; (b) The Divine or inspired character of the Bible requires a so-called Catholic interpretation, which involves additional directions of both (a) a negative character preventing (i) all irreverence and (ii) the admission of any error, and (b) of a positive nature, as did the interpretation to respect (i) the divinity of the Church, (ii) the patristic interpretation, and (iii) the analogy of faith.

(3) After the genuine sense of Sacred Scripture has been found, it has to be presented to others by means
of (a) the version, (b) the paraphrase, (c) the gloss and scholion, (d) the dissertation, (e) or finally the commentary. The homily may also be classed among the more popular methods of Biblical exposition.

(4) The concluding pages of the article Exegetics are devoted to a brief history of the subject: (a) Jewish exegesis is divided into (a) Palestinian and (b) Hellenistic; (b) Christian exegesis comprises, (a) the patristic period, i.e., (i) the Apostolic Fathers and apologists, (ii) the Greek Fathers such as Alexander and Athanasius, (iii) the Latin Fathers; (b) the period after the Council of Trent; (c) the non-Catholic exegetes, whether they be of the number of the early Reformers, or of their immediate successors, or again of the rationalists. We have added this survey of the history of exegesis because it throws light on the historic development of heresies.

XI. TWO SPECIAL QUESTIONS.—No difficulties will be raised against the Biblical interpreter as long as he remains within the sphere of the rules which govern his grammatico-historical exegesis; but protest will rise up on every side as soon as he urges the principle of necessity and legitimacy of bowing down to the authority of the Church. A few additional observations on these two points will therefore not be out of place.

(1) Inerrancy.—(a) Nature of Inerrancy.—The inerrancy of Scripture means that its hermeneutic truth is also objectively true, and that its genuine sense is adequately presented by its literal expression, at least by its complete literal expression, found in the original text interpreted in the light of the special purpose of the Holy Ghost and of its intended circle of readers. But this perfection of literary presentation does not remove obscurity and ambiguity of expression, defects which flow naturally from the human authors of the various books of Sacred Scripture, and were foreseen, and for good reasons permitted or even intended, by the Holy Ghost. Nor does the absolute truthfulness of Sacred Scripture imply that the Bible always presents the whole truth under all its aspects, much less that all the things quoted in the Bible as historical facts are objectively true. Words quoted in Scripture as spoken by infallibly truthful speakers, e.g., by God Himself, or the good angels, or the prophets and apostles actually inspired, or by the sacred writer himself while under the influence of inspiration, all these words are not merely historically, but also objectively, true; but words quoted in Scripture as proceeding from speakers open to error are not necessarily objectively true, though they are historically true. If however such profane words are expressly approved of by the inspired writers, they are also objectively true.

(2) Inferences flowing from Inerrancy.—It follows from what has been said that there can be no contradictions in the Bible, and that there can be no real opposition between Biblical statements and the truths of philosophy, science, or history.

(a) No Contradictions in Sacred Scripture.—The impossibility of any contradiction existing in the Bible itself flows from the fact that God is the author of Sacred Scripture, and would be responsible for any such discrepancy. But how are we to remedy apparent contradictions in Scripture, the existence of which cannot be denied?

(i) In some cases it is practically certain that our present text has been corrupted. 1 Kings, xiii, 1, says that Saul was a child of one year when he began to reign, and he reigned two years over Israel, though, according to Acts, xiii, 21 (and Joseph., Antiq., VI, xiv) Saul reigned forty years, beginning at the age of twenty-one. In the former case, the letters of the Hebrew text denoting forty and twenty respectively must have been lost. A similar position may be admitted in III Kings, iv, 26, which grants to Solomon 40,000 stalls of chariot horses instead of the 4000 as assigned to him in II Par., ix, 25 (Hebrew text).

(ii) In other cases the apparent contradictions in the Bible are due to an erroneous exegesis of one or both of the passages in question. Such wrong interpretations are easily caused by a literal meaning of a word; by the assumption of a wrong nexus of ideas (chronological, real, or psychological); by a restriction or an extension of the meaning of a passage beyond its natural limits; by an interchange of figurative with proper, of hypothetical with absolute, language; by a coalescence of Divine authority to mere quotations from profane sources, or by a neglect of the difference between the Old and the New Testament. Thus the word "tempt" has one sense in Gen., xxii, 1, and quite another sense in James, i, 13; the expressions "faith" and "works" have not the same sense in Rom., iii, 28, 29; the " sincere companion" of Phil., iv, 3, does not mean "wife", and does not place this passage in opposition to I Cor., vii, 8; the "hatred of parents" inculcated in Luke, xiv, 26, is not the hatred prohibited by the commandment of the decalogue; the nexus of events in the First Gospel is not chronological, and does not establish an identity between Simeon, the father of Christ, and the other Evangelists; in I Kings, xxxi, 4, the inspired writer testifies that Saul killed himself, while in II Kings, i, 10, the lying Amalecite boasts that he slew Saul; in John, i, 21, the Baptist denies that he is "the prophet", without contradicting the statement in Matt., xi, 9, that John is a prophet; etc.

(iii) Apparent contradictions in the Bible may have their source in an erroneous identification of distinct words or facts, in a neglect of the difference of standpoint of different writers or speakers, or finally in an erroneous assumption or opposition between two really concordant passages. Thus Gen., xxi, 11 sqq., refers to facts wholly different from those related in Gen., xx, 2, and xxvi, 7; the healing of the centurion's servant related in Matt., viii, 5 sqq., is entirely distinct from the healing of the king's son mentioned in John, iv, 46 sqq.; the multiplication of loaves in Matt., xiv, 16 sqq., is distinctly different from the loaves quoted in John, vi, 32 sqq., the cleansing of the temple related in John, i, 13 sqq., is not identical with the event told in Matt., xxi, 12 sqq.; the anointing described in Matt., xxvi, 6 sqq., and John, xii, 3 sqq., differs from that told in Luke, vii, 7, 37 sqq.; the prophets view the coming of Christ now from a historical, now from a spiritual, and again from an eschatological, standpoint, etc.

(b) No Opposition between Biblical and Profane Truth. (i) Proof.—Thus far we have considered apparent contradictions between different statements of Sacred Scripture; a word must be added about the opposition which may appear to exist between the teaching of the Bible and philosophy, science, and history. The Bible student must be convinced that there can be no such real opposition. The Vatican Council declares expressly: "Though faith is above reason, still there can never be a true discrepancy between faith and reason, since the same God, who reveals mysteries and infuses faith, implants in the human mind the light of reason" (Sess. III, Const. de fide cath., cap. iv). The same truth is upheld by Leo XIII in the Encyclical "Providentissimus Deus": "Let the learned maintain steadfastly that God the creator and ruler of all things is also the author of the Scriptures, and that therefore nothing can be gathered from nature, nothing from historical documents, which really contradicts the Scriptures." Consequently, any opposition between Biblical and profane truth is only apparent. Such an appearance
of opposition may spring from one of three sources: Scripture may be wrongly interpreted, there may be a mistake in reputed profane truth, or finally the proof established in philosophy or in Biblical truth may be fallacious.

(ii) Apparent Opposition.—Any statement resting on a faulty text, or an exegesis neglecting one or more of the many hermeneutic rules, cannot be said to be a Biblical truth. On the other hand, a mere theory, or a mere hypothesis in science, or a mere conjecture in history, cannot claim the dignity or right of a profane truth. Many mistakes have been made by Scriptural exegesis, but their number is not greater than that of scientific blunders. But even in cases in which the sense of the Bible is certain, and the reality of the profane truth cannot be doubted, the use of optical science is not to be praised. It is all the easier to go wrong in the proof of such an opposition, because the language of the Bible is not that of philosophy, or of science, or of the professional historian. The Scriptures do not claim to teach ex professo either philosophical theses, or scientific facts, but such harmonizing expositions of Scripture must be interpreted in the light of their own age and of their original writer, before they are placed in opposition to any profane truth. There are expressions even in the language of to-day (for instance, the rising and the setting of the sun, etc.) which cannot be interpreted from mere religious or scientific truths, if no attention be paid to the conformity of such language with "sensible appearances".

(iii) Relation between Hermeneutics and Profane Learning.—What is, therefore, to be the relation between the interpreter and the scientist? (1) It would be wrong to make Scripture the master of science, to decide our modern scientific questions from our Biblical data. In certain historical controversies this course may be followed, because some of the books of Scripture are truly historical works. But in scientific questions, it suffices to hold that "in matters of faith and morals" Scripture agrees with the truths of science; and that in other matters, Scripture rightly understood does not oppose true scientific results. (2) Towards the use of profane truths in Biblical exegesis, the attitude adopted by commentators is not so uniform. The ultra-conservatives are inclined to explain Scripture without any regard to the progress of profane science in this method. It is in many cases, to temper our conservatism with prudence: precluding from "matters of faith and morals" in which there can be no change, we should be ready to accommodate our exegesis to the progress of historians and scientists in their respective fields, showing at the same time that such harmonizing expositions of Scripture represent only a progressive stage in Bible study which will be perfected with the progress of profane learning. To repeat once more, with regard to "matters of faith and morals" there is no progress of the faith in the faithful, but only progress of the faithful in the faith; with regard to other matters, the progress of profane knowledge may throw additional light on the true sense of Sacred Scripture.

(2) Authority of the Church.—Thus far we have considered the inerrancy of the Bible which can never be lost sight of by the believing interpreter: we come now to the question of authority to which the Catholic church accords the greatest

(a) Law of the Church.—The Council of Trent (Sess. IV, De edit. et usu ss. II) forbids that, in "matters of faith and morals belonging to the building-up of Christian doctrine", the Bible be explained against the sense held by the Church, or against the unanimous consent of the Fathers. The Tridentine Confession of Faith and the Vatican Council (Sess. III, Const. de fide cath., cap. I) demand that discussion between profane and Biblical truth may be fallacious.

In "matters of faith and morals belonging to the building-up of Christian doctrine", the Scriptures be explained according to the teaching of the Church and the unanimous consent of the Fathers. In the article Exceuss the rules have been laid down which will ensure due uniformity of Catholic exegesis with Catholic and patristic teaching; but little has been said about the meaning of the clause "in matters of faith and morals" and the relation of ecclesiastical authority to those truths which do not belong to "matters of faith and morals".

(b) Meaning of "matters of Faith and Morals".—The phrase "matters of faith and morals" has been compared with St. Thomas's truths revealed on their own account as distinct from truths revealed, accidentally as it were, on account of their connexion with the former (II-II, Q. i, a. 6, ad 1 num.): matters not of faith and morals have been found in the Apologists. But St. Thomas's exegesis has to be corrected: "nulla est veritatis sanctae ecclesiae" (Il Sent., dist. ii, Q. i, a. 3): Vatican extends the words "matters of faith and morals" to the dogmas of faith and the truths pertaining to the custody of the deposit of faith; Grandeneth identifies "matters of faith and morals" with all religious truths as distinguished from mere religious truths. In certain cases, it is not only to comprise under "matters of faith and morals" all revealed truth, and again the whole deposit of faith, in which he includes all Biblical truths; Vinatier appears to extend "matters of faith and morals" to all truths that must be believed with either Catholic, or Divine faith, adding that all Biblical statements fall under these groups; Nisius seems to identify "matters of faith and morals" with the truths contained in the deposit of faith without including all Biblical statements in this collection (cf. "Theologische Zeitschrift", 1885, 365 sqq.; 1899, 252 sqq., 460 sqq.; 1900, 672 sqq.; "Science catholique", 1900, 500 sqq.; "Revue biblique", 1900, 135 sqq.). Whatever may be thought of the foregoing opinions, it appears to be clear that "matters of faith and morals" contain all truths that must be believed with either Catholic, or Divine, or theological faith. The further clause, pertaining to the building-up of Christian doctrine", includes all the truths necessary for the completion of the divine system of doctrine and morals whether by way of foundation, or necessary proof, or, again, logical inference.

(c) As to Matters not of Faith or Morals.—Certain writers have inferred from the fact that the decrees of the councils do not say anything explicitly about the interpreter's subjection to authority in case of Biblical truths not included among "matters of faith and morals", that the Church has left the commentator perfectly free in this part of Biblical exegesis. The laws of logic hardly justify this inference. On the contrary, the Church demands that he should not give any explanation which would not be in keeping with the analogy of faith. The most reasonable view of this question maintains that in matters not of faith or morals the teaching of the Church offers no positive guide to the commentator, but that it supplies a negative aid, inasmuch as it tells the Catholic student that any explanation must be false which is not conformable with the spirit of the Catholic faith. To illustrate the foregoing rules, we may consider the attitude of the Church towards the movement of the earth as involved in the Galileo question: (a) If the Bible evidently teaches the stability of the earth, it is excluded by Biblical inerrancy to say that the earth moves; (b) If the Biblical teaching needs any explanation with regard to this point, the question arises whether the stability of the earth belongs to the "matters of faith and morals"; this is a question of
right; (7) if the question of right be answered in the affirmative, it is followed by the question of fact: does the teaching of the Church, or the analogy of faith, or again the unanimous consent of the Fathers maintain the stability of the earth? Or even if the second be answered in the negative, is there any unanimous consent of the Fathers on this point which compels the reverent consideration of the Catholic interpreter? A careful study of these points will show how the rules of hermeneutics affect the judgment passed on Galileo.

A. J. MAAS.

Hermengild, Saint, date of birth unknown; d. 13 April, 585. Leovigild, the Arian King of the Visigoths (569-80), had two sons, Hermengild and Recared, by his first marriage with the Catholic Princess Theodolinda. Hermengild married, in 576, Ingundis, a Frankish Catholic princess; the daughter of Childebert and Brunilde. Led by his own inclination, and influenced by his wife as well as by the instructions of St. Leander of Seville, he entered the Catholic fold. Leovigild's second wife, Goswintha, a fanatical Arian, hated her daughter-in-law and sought by ill-treatment to force her to abandon her Catholic Faith. Hermengild had accordingly withdrawn, with his father's sanction, to Andalasia, and had taken his wife with him. But when Leovigild learned of his son's conversion he summoned him back to Toledo, which command Hermengild did not obey. The fanatical Arian King, his stepmother, and his father's severe treatment of Catholics in Spain, stirred him to take up arms in protection of his oppressed co-religionists and in defence of his own rights. At the same time he formed an alliance with the Byzantines. Leovigild took the field against his son in 582, prevailed on the Byzantines to betray Hermengild for a sum of 30,000 gold solidi, besieged the latter in Seville in 583, and captured the city after a siege of nearly two years. Hermengild sought refuge in a church at Cordova, whence he was enticed by the false promises of Leovigild, who stripped him in camp of his right garment and banished him to Valencia (584). His wife, Ingundis, fled with her sons to Africa, where she died, after which the boy was given, by order of Emperor Mauritius, into the hands of his grandmother, Brunhide. We are not fully informed as to Hermengild's subsequent fate.

Hermes, Saint, martyr. Bishop of Salona (Spalato), in Dalmatia. Very little is known about him in the Rom., xvi, 14, St. Paul says: "Salute Aspernus, Phlegon, Hermes, Patrobas, Hermes, and the brethren that are with them." This last name is supposed by many to refer to the subject of this article, who is also said to have succeeded Titus as Bishop of Dalmatia, and to have been martyred. The mention is made of a Hermes in the Acta SS. Bolla, in Servius, VIII, 8, under Herodion; and Pape says he was one of the seventy-two disciples of Our Lord. Hermes was a very common name among slaves. Migne (P. G., 4 November) says he was one of the seventy disciples, along with Patrobas, Linus, Galus and Philologus; and Caninius talks of a "Hermes presbyter," a name converted many from idols to Christ, suffered for his faith with Nicander, Bishop of Myra, and was "lacerated and hanged.

C. F. WEMTS BROWN.

Hermes, George, philosopher and theologian, b. at Dreierwalde near Rheine (Westphalia), 22 April, 1775; d. at Bonn on the Rhine, 26 May, 1831. After completing his course in the gymnasium, or high school, at Rheine, Hermes studied philosophy at the University of Münster from 1792 until 1794. He then took up theology in order to remove the doubts regarding faith awakened in his mind by the study of Kant and Fichte. Initiated as he was into the science of theology by professors of limited ability, and altogether dissatisfied with the traditional methods of proof, he determined for the time being to adhere to the faith of the Church as set forth in the Catechism, but afterwards to seek on his own the foundation of a better basis for the truths of Christianity. In 1797 Hermes became professor at the Münster gymnasium; in 1799 he was ordained a priest. The first work he wrote, "Untersuchung über die innere Wahrheit des Christentums" (Münster, 1805), in which he sought to destroy the foundation of Christian revelation, was received with so much favour that in 1807 its author, warmly commended by the Protestant theologian Niemeyer, at Halle, was appointed to a chair of theology at the University of Münster.

Hermes lectured on dogmatic theology, and, with especial zest, on the introduction to theology. Impressive and attractive in appearance, he was highly esteemed by his students because of his extraordinary pedagogic ability and his exemplary priestly bearing. He also earned the respect and appreciation of his colleagues by his devotion to the university; up to 1819 they elected him dean three times. But his rationalistic methods of instruction, which were out of harmony with the theology of the past, roused opposition among the ruling circles at Münster including several men of eminence, such as Clement August von Droste-Vischering (later Archbishop of Cologne), Christian von Hpenberg, Katerkamp, Kistemaker, Kellermann. When the Vicar-General von Droste-Vischering, who was at the head of the administration of the diocese during a vacancy of the see, demanded that Hermes should continue the use of the Latin tongue in the dogmatic lectures, the latter very reluctantly, by order of the pope, denied the legality of the uncanonical reorganization of the cathedral chapter by Napoleon I, refused to acknowledge the wrongful
appointment of Baron von Spiegel (later Archbishop of Cologne) as vicar-general, and on 31 March, 1813, took back into his own hands the government of the diocese. Thereupon Hermes published a voluminous opinion disputing his right to such a procedure ("Gut- schiden in Sürrealsachen des Münsterschen Domkapitels mit dem Generalverwaltungs-Kapitels, Mitten in Abenteuer des hochwürdigen Domkapitels herausgegeben", Münster, 1815). As confidential adviser of the Prussian ministry he wrote at its request, particularly between the years 1815 and 1819, several important opinions, e. g. the one published in 1818 concerning the establishment of a theological faculty at the new University of Bonn. Herein he avowed the Christian at the opinion he wrote condemning the inaccurate and erroneous translation of the Bible by Carl and Leander van Ess and the first-named author's "Geschichte der Vulgata." Although the Prussian ministry, to his deep regret, reduced the Münster University to the rank of an academy in 1818, Hermes refused a call to the new University of Bonn just as firmly as he had declined, in 1816, the offer of a professorial chair at the University of Bonn.

In 1819 Hermes published "Die philosophische Einleitung", the first part of his principal work "Einleitung in die dogmatische Theologie" (Bonn, 1822; 1st ed., 1819; 2nd ed., 1831). The purpose of this book was to put an end to all doubt regarding three questions which are of fundamental importance to all religious conviction, and especially to that of the Christian. These questions are: Whether there is any truth at all; whether God exists, and what are His attributes; whether a supernatural revelation is possible, and under what conditions. The theological faculty of Breslau conferred on him the degree of Doctor of Theology honoris causa for his "Philosophische Einleitung." After that Hermes, yielding to the persistent urging of the Prussian Government, founded the chair of dogmatic theology in Bonn, 27 April, 1820. His success led him, in concert with the relative position of positive theology to the general principles of science (see "Zeitschrift für Philosophie und katholische Theologie", 1823, pp. 52-61). His election, 3 August, 1820, as "Rector Magnificus", which he declined, and the degree of Doctor of Philosophy honoris causa, which the philosophical faculty of Bonn subsequently conferred on him, in 1821, are ample evidence of the respect paid to him in Bonn. The University of Freiburg im Breisgau tried in vain to secure him for its faculty. His lectures on philosophy, the introduction to theology, and dogmatic theology were attended by a large number of students and jurists. The Prussian ministry suspended the theological faculty in Münster for six months, on account of the interdict which the Vicar-General Clement August issued against Hermes, forbidding all theological students in the Diocese of Münster to attend any outside university without his permission. It was revoked immediately upon the retirement of the vicar-general. The theologians in the Diocese of Paderborn were also forbidden by the ecclesiastical authorities to attend Hermes' lectures. To please Hermes, the Governor in 1825 dismissed his coadjutor Seber who was not in sympathy with him. Moreover, the Archbishop Baron von Spiegel, who had been a patron of Hermes even in his Münster days, appointed him a member of the cathedral chapter, examiner to the synod, and ecclesiastical counselor in Cologne, without disturbing his professorial duties, or requiring him to reside in Cologne.

As examiner, Hermes was a bitter opponent of all ecclesiastics who did not share his views. Like the theological faculty at Bonn, to which only pupils of Hermes had been appointed since 1826 (Achterfeldt, Braun, Vogelang, Müller), the seminary at Cologne and a large part of the clergy were soon imbued with his ideas. Even the other faculties of Bonn included followers of his, particularly Professor Clement August von Droste-Hülshoff in law and Elveng in philosophy. In a very short time the theological faculties of Breslau, Münster, and Braunschweig, the seminary at Trar, many cathedral chapters and instructorships in religion at the gymnasium were filled with Hermessians. In 1829 Hermes cast the decisive vote against calling Mühler and Döllinger to the chair of ecclesiastical history at Bonn. On the other hand the appointment of Professor Klee for Biblical exegesis and dogmatic theology implied a distinct concession to the anti-Hermesian movement which in the meantime had been slowly gathering strength. Hermes began to publish his "Introduction to Theology", the "Positive Einleitung", or "Positive Introduction", in 1829 (Münster, 1829, 2nd ed., 1834). Therein he sought to demonstrate the truth of Christianity by way of completing the "Philosophical Introduction". The "Philosophical Introduction" having shown the possibility of proving that Christianity is both extrinsically and intrinsically true, and having shown also how the demonstration should proceed, we have now got to the point of furnishing this proof;—such is the purpose of the "Positive Introduction" (Positive Introduction, 1). In carrying out "Einleitung" (the purpose of questions: (1) Are the books of the New Testament externally (historically) true? (2) Is the so-called oral tradition likewise historically true? (3) Are the expositions and interpretations of Jesus' doctrine, as communicated by the oral teaching of the Catholic Church, infallibly correct? (4) Are the teachings of Jesus contained in the books of the New Testament intrinsically true? (5) Are the teachings of Jesus that have been handed down by oral tradition likewise intrinsically true?

In its essence Hermes' theological system, or "Hermesianism", was rationalism; and, through in many respects opposed to the "Philosophical Introduction", it was strongly influenced by them. According to Hermes our knowledge is subjectively true when we are convinced in our minds that it coincides with its object. This conviction, however, becomes a certainty when it is irresistible. The necessity of our conviction, therefore, is the criterion of objective truth. This necessity is either physical or moral, that is, it is either independent of, or dependent on, duty and conscience. It comes to pass in two ways: it is either forced upon us, or we admit it freely. In the first case, we call our conviction belief in a truth, in the second, acceptance of the truth. Belief in a truth is a matter of theoretical reason, while acceptance is a matter of practical, or obliging, reason. Belief in a truth is in part the result of mediate necessity, in which case it is founded either on imagination, i.e. on the clearness and vividness of the mental concept, or on insight (understanding); in part, also, it springs from immediate necessity, and only in this case is knowledge philosophically certain. "It is of immediate necessity that we must accept the following proposition as true, together with all propositions subordinate to it: 'Everything that must have a sufficient reason.'" (Philosophische Einleitung, § 14). Now the first and most immediate reality, that is forced upon the reason of direct necessity, is inseparably connected with the consciousness that I know, and with the thought that something is there. In order to discover the sufficient reason for this first reality, we are referred to the world as it appears to us, both within and outside the human consciousness. The variations which occur in these phenomena require a sufficient reason in order to account for them; the variations in the origin of things call for a sufficient and absolute reason for their origin, and this ultimately can only be found in the idea of God. In such wise Hermes proves the existence of God along the lines of theoretical reason in contradiction to
Kant, who treated the acknowledgment of God's existence as a postulate of practical reason.

The knowledge of the existence of God and of His attributes, which determine His relation to the world and to mankind, is a preliminary condition indispensable to the solution of the question as to whether supernatural revelation is possible. Hermes answers this question in the affirmative, first, because God is also the source of all creative representations in the human mind, and secondly, because by means of representations man can be convinced of the intrinsic truth of conceptions supernaturally imparted to him, and also of conceptions naturally produced by himself, the truth of which he cannot himself demonstrate (cf. Ph. dog., Einleitung, § 2). The use of revelation, as a fact of a supernatural revelation must be distinguished from the question of its possibility. Revelation, said Hermes, must be admitted as a fact so soon as it can be shown that a message has emanated supernaturally from God. But the duty of the practical reason to admit revelation as a fact is demonstrated if in any alleged Divine revelation all the conditions are present on fulfilment of which it can and must be accepted for what it purports to be. Hermes, however, deems it necessary to make a very questionable division between philosophers and non-philosophers in regard to the duty of accepting revelation. As a concept of practical reason he says, can oblige the philosopher, who has a well-founded confidence in his knowledge, to accept a revelation that was imparted to him supernaturally, even if he had ascertained its supernatural character, and even if it fulfilled all the conditions of a Divine origin. For the philosopher can through his own discerning perceive very definitely his natural duties, and he will always be convinced that he does so perceive them. Consequently, practical reason cannot oblige him to look for this perception outside of himself, or to accept it if offered to him unsought, whether by another person or by supernatural agency.

On the other hand, when a revelation known to be supernatural is offered to a person unversed in philosophy, he is bound by practical reason to accept it in order that he may learn his natural obligations. He must accept it, since he could not otherwise acquire the total of needs on which he is unable to attain it by philosophical methods. If, however, it is incumbent on the great majority of mankind—consisting, of course, of non-philosophers—to obey the behests of practical reason by believing in revelation, then neither can the philosopher refuse to accept a revelation; reflective theology, that reason obliges him to accept it. At the most he could refuse to do so only on the ground that he had not yet been convinced of its Divine origin, since the fact that it could not be of any advantage to him would be no reason for withholding his acquiescence in its Divine origin. In order, therefore, to deny this certainty of the Divine origin of revelation, he must assume that what others, millions in fact, are in strictest duty bound to assume as true may possibly be untrue, and that obligatory reason when it leads mankind of absolute necessity to believe something to be true can guide them to the opposite of objective truth. Hermes' rationalistic conception of the idea of revelation follows from this line of argument; and furthermore he says expressly that reason cannot teach the existence of truths of such primary importance and yet declare that it is unable to know them.

Again, Hermes' opinions on the motiva credibilitatis, are his own. Theoretical reason, he said, can accept the probability of the Divine origin of extraordinary phenomena (miracles and prophecies) only because it does not know all the laws of the natural world, while practical reason, for the sake of duty, can accept their supernatural origin as certainly true. Theoretical reason, for example, could not assert with certainty that the revival of a decomposing corpse was of supernatural origin, whereas practical reason could. For, if such a phenomenon should have a natural cause, men should be allowed to act accordingly and, in this case, to delay the burial of the corpse because the possibility of a natural reanimation was as yet by no means excluded. In this way Hermes sought to demonstrate the moral duty of accepting representations in the human mind, in opposition to Kant who had laid it down as a moral principle never to presuppose the miraculous. Furthermore, Hermes denied that miracles afforded conclusive testimony in favour of revelation; he distinguished between the proof of the supernaturalness of the miracles and the proof of the divine revelation. That many of the supernatural miracles worked by higher intelligent powers are of Divine origin can only be proved by the contents of the revelation and its moral character. A revelation shown to be genuine to the satisfaction of practical reason demonstrates the Divinity of the miracles.

According to Hermes, the starting-point and chief principle of every science, and hence of theology also, is not only methodical doubt, but positive doubt. One can believe only what one has perceived to be true from reasonable grounds, and consequently one must continue doubting until one has found reliable grounds to satisfy the reason. We may follow only where reason leads us, because this is the only guide that the Author of our being has given us for this life. Hermes differentiated the Herzenglaube, or belief of the heart, i.e. the accepting of revealed truths dictated by the will, from the Vernunftglaube, or belief of the reason, brought about by scientific demonstration. "In order that one's faith may be efficacious it is not enough," he says, "for the intellect, impelled by the laws of our cognitive faculties, to acquiesce in the evidence of all these truths which reason or revelation teaches or establishes, nor to adhere firmly to the same in consequence, but it is also required that men should surrender themselves to these truths (realities). Efficacious faith is not the faith dictated by reason, which is subject to necessity and can, therefore, be demonstrated, but the faith of the heart, that cannot be coerced by the reason, that is accepted by a free, unconditional surrender of the will. It is for reason to prevent us from believing blindly or in a visionary way, but it is for the will as a free agent to impel us to work by faith." (Christkatholische Dogmatik, III, § 285).

Although he was absolutely lacking in originality as a philosopher, and although as a theologian his acquaintance with the traditional theology was very limited, Hermes soon acquired a following. In philosophy there were Esser, Biunde, and Elvenich; in ethics G. Braun and Vogelang; in natural and ecclesiastical law Droste-Hülshoff and all of whom continued their subjects according to the Hermetic way of thinking, while Achterfeldt and Siemers wrote for use in the higher schools textbooks of religious instructions incorporating his views. Among his other disciples were Baltzer, Hilgern, Rosenbaum, and J. W. J. Braun. The last-named, together with Achterfeldt, founded the "Zeitschrift für Philosophie und katholische Theologie" (1832-52) in defence of Hermes' ideas. The Archbishop of Cologne, Baron von Spiegel, continued to champion Hermesianism even after the death of his author, and he silenced by repeated favourable reports the doubts that had been awakened in Rome as to the orthodoxy of his theology.

Hitherto only individual attacks had been made on the Hermesian theology. With the exception of a few anonymous articles in Mastiaux's "Literaturzeitung" (1820, p. 369-394), and in the "Aschaffenburger Kirchenzeitung", Windischmann was the first to write an incisive and thorough criticism of
Hermes' doctrines, in the "Katholik", 1825. But the controversy became sharp and bitter when Pope Gregory XVI, in a Brief of 26 September, 1835, condemned the Hermesian system and placed both "Introductions" as well as the first part of the "Dogmatik" on the Index. The same fate befell the second and third part of the "Dogmatik" in a Decree of 1 January, 1836. Prior to the issuing of this condemnation, the Holy See, at the solicitation of several German bishops, advised by Windischmann and Binterim among others, had ordered the most thorough investigation possible. Prominent theologians, such as Reisach, director of studies in Prophaneo, who later joined the Jesuits, and Father Perrone, the Jesuit dogmatist, were entrusted with the task of examining Hermesian doctrines. The papal Brief characterized the theological errors of Hermesianism as "false, rash, captious, leading to scepticism and indifference, erroneous, scandalous, harmful to Catholic schools, subversive of Divine faith, savouring of heresy, and already condemned by the Church". The decree expressly designated the doctrinal points in which Hermes had diverged from the Catholic Church, namely: on the nature and rule of faith; on Holy Writ and tradition, Revelation, and the teaching office of the Church; the theory of the transubstantiation of the elements of the Eucharist, the proofs of the existence of God, and the doctrines concerning the nature, holiness, justice, and freedom of God, and His ultimate purpose in His works ad extra; on the necessity of grace and its bestowal; on the reward and punishment of men; on the original state of our first parents; on original sin and on the powers of man in the fallen state.

The Hermesians tried to weaken the force of the impression produced by this unexpected condemnation and to prevent the carrying out of the Brief. In fact, they succeeded in inducing the Prussian Government to forbid the publication of the Brief, and Hübner, by a decree of the Government of Cologne, on the pretext that the document had not come to him in the regular course of official procedure, through the Prussian Government. On the contrary, the new Archbishop of Cologne, Clement August von Droste-Vischering, former Vicar-General of Münster, demanded the submission of the theological professors at Bonn, forbade theological students to attend the lectures of recusant professors, and compelled the clergy, on their appointment, to repudiate the Hermesian errors in eighteen theses. Although it was not an act of the Government, with the help of the Prussian Government, on 21 April, 1837, forbade the theological professors at Bonn, as well as the philosopher Windischmann and the canonist Walter, to take part in any controversy on the subject of Hermesianism. The Bonn professors, Braun and Elvenich, made a last appeal to vindicate the system, journeying to Rome in May, 1837, in order to prevail upon the pope to withdraw the condemnation by emphasizing the (Jansenist) distinctio juris et facti. The repeated personal interviews they had with the Secretary of State, Cardinal Lambruschini, and with the General of the Jesuits, Father Roothan, who had been entrusted with their case, were just as fruitless as was their comprehensive treatise on Hermesianism entitled: "Meletemata theologica", which was handed back to them unopened (printed, in Latin, at Leipzig, in 1839; in German, at Cologne, in 1839, under the title "Theologische Studien"). After their return in April, the professors of both of Cologne, and at Gießen of Cologne in particular, Hermesianism was completely eradicated, and in 1860 even the most stubborn Hermesians, Braun and achterfeldt, returned to their allegiance. Since their dismissal from their academic professorships in 1844, they had for a long time continued their defence of Hermesianism in their periodical and in polemical pamphlets, but they had only a few followers. The German Theologische Wochenschrift, with special reference to the doctrines of Hermes (cf. Conc. Coll. Lec., VII, 1664, 1841), in the "Constitutio de fide catholica", cap. iii, can. v, defined the freedom of the act of faith and the necessity of grace for faith (see Denninger-Banwari, 1814).

Joseph Schulze, Hermite, Charles, b. at Dieuse, Lorraine, 2s. December, 1822; d. at Paris, 14 January, 1901; one of the greatest mathematicians of the nineteenth century. He studied at the Collège de Nancy and then, in Paris, at the Collège Henri IV and at the Collège Louis-le-Grand. As a boy, he mastered Euclid and Lagrange on the solution of numerical equations, and of Gauss on the theory of numbers. In 1842, his first original contribution to mathematics, in which he gave a simple proof of the proposition of Abel concerning the impossibility of obtaining an algebraic solution for the equation of the fifth degree, was published in the "Nouvelles Annales de Mathématiques". The same year he entered the Ecole Polytechnique, where he remained as a student but one year. A correspondence with Jacobi, begun in 1843 and continued in 1844, led to the insertion, in the complete edition of Jacobi's works, of two articles by Hermite, one concerning the connection of Abel's theorem with one of the theorems of Abel on elliptic functions, and the other concerning the transformation of elliptic functions. In 1848, Hermite returned to the Ecole Polytechnique as répétiteur and examinateur d'admission. In 1856, through the influence of Cauchy and of a pupil who nursed him, he resumed the practice of his religion. On 14 July, of that year, he was elected to fill the vacancy created by the death of Binet in the Académie des Sciences. In 1869, he succeeded Duhamel as professor of mathematics, both at the Ecole Polytechnique, where he remained until 1874, when he was made one of the presidents of the Academy, to which position he occupied until his death. From 1862 to 1873 he was lecturer at the Ecole Normale Supérieure. Upon his seventieth birthday, on the occasion of his jubilee which was celebrated at the Sorbonne under the auspices of an international committee, he was promoted grand officer of the Legion of Honour.

As a teacher Hermite was inspiring. His correspondence with Stietjes testifies to the great aid he gave those entering scientific life. His efforts in teaching were directed not towards too rigorous minuteness, but towards exciting admiration for things simple and beautiful. His published courses of lectures have exercised a wide influence. His important original contributions to pure mathematics, published in the leading mathematical journals of the world, dealt chiefly with Abelian and elliptic functions and the theory of numbers. In 1858 he solved the equation of the fifth degree by elliptic functions; and in 1873 he proved the base of Napier 1.098654 the transcendental logarithm. This last was used by Lindemann to prove (1882) the same for π. The following is a list of his works: "Cours d'analyse de l'Ecole Polytechnique", Paris, 1853; "Cours professé à la Faculté des Sciences", edited by Andoyer, 4th ed., Paris, 1881; "Correspondances", edited by Baillaud and Bourget, Paris, 1905, 2 vols. The "Œuvres de Charles Her-
miete" were edited by Picard for the Academy of Sciences, 2 vols., Paris, 1905 and 1908.

Paul H. Linehan.

Hermits (or Eremites, "inhabitants of a desert") ρητροι or ρητροι, also called anchorites, were men who fled the society of their fellow-men to dwell alone in retirement. Not all of them, however, sought so complete a solitude as to avoid absolutely any intercourse with their fellow-men. Some took a companion with them, generally a disciple; others remained close to inhabited places, from which they procured their food. This kind of religious life preceded the community life of the hermits. Elias is considered the precursor of the hermits in the Old Testament. St. John the Baptist lived like them in the desert, and the later ascetics of this kind of life joined the Desert into the mountains. But the eremitic life proper really begins only in the time of the persecutions. The first known example is that of St. Paul, whose biography was written by St. Jerome. He began about the year 250. There were others in Egypt; St. Athanasius, who speaks of them in his life of St. Anthony, does not mention their names. Nor were they the only ones. These first solitaries, few in number, selected this mode of living on their own initiative. It was St. Anthony who brought this kind of life into vogue at the beginning of the fourth century. After the persecutions the number of hermits increased greatly in Egypt, then in Palestine, then in the Syrian peninsula, Mesopotamia, Syria, and Asia Minor. Cenobitic communities sprang up among them, but did not become so important as to extinguish the eremitic life. They continued to flourish in the Egyptian deserts, not to speak of other local congregations arising from the respective merits of the cenobitic and the eremitic style of life. Which was the better? Cassian, who voices the common opinion, believed that the cenobitic life offered more advantages and less inconveniences than the eremitic life. The Syrian hermits, in addition to the evident symptoms of the past, were accustomed to great bodily austerities. Some passed years on the top of a pillar (stylites); others condemned themselves to remain standing, in open air (stationaries); others shut themselves up in a cell so that they could not come out (recluses).

Not all these hermits were models of piety. History points out many abuses among them; but, considering everything, they remain one of the noblest examples of heroic asceticism the world has ever seen. Very many of them were saints. Doctors of the Church, like St. Basil, St. Gregory of Nazianzus, St. John Chrysostom, St. Jerome, belonged to their number; and we might also mention Sts. Ephraem, Hilarion, Nilus, Isidore of Pelusium. We have no rule giving an account of their mode of life, though we may form an idea of it from their biographies, which are to be found in Palladius, "Historia Lausiaca," P. L., XXXVII, 1279-1497; also in the "Verba Seniorum,""P. L., LXV, 381-843, and the "Apophthegmata Patrum," P. G., LXV, 71-442.

The eremitic life spread to the West in the fourth century, and flourished especially in the next two centuries. The reason of this development was shown by its results the advantages of the cenobitic organization. St. Gregory the Great, in his "Dialogues," gives an account of the best-known solitaries of central Italy (P. L., LXXVII, 149-430). St. Gregory of Tours does the same for a part of France (Vita Patrum, "Epistola IV," "Lividus Archiepiscopatus," "Lividus Archiepiscopatus," 39-60). Of course almost to spread the cenobitic ideal were originally solitaries themselves, for instance, St. Severinus of Norica and St. Benedict of Nursia. Monasteries frequently, though by no means always, sprang from the cell of a hermit, who drew a band of disciples about him. From the seventh century we meet with instances of monks who at intervals led an eremitic life. As an example we may cite St. Columbanus, St. Riquier, and St. Germer. Some monasteries had isolated cells close by, where those religious who were judged capable of living in solitude might retire. Such was especially the case at the monastery of Cassiodorus, at Viviers in Calabria, and the Abbey of Fontenelles, in the Diocese of Rouen. Those who felt the want of solitude were advised to reside near an oratory or a monastic church. The councils and the monastic rules did not encourage those who were desirous of leading an eremitic life.

In the East, in the countries through which the Franks and the Normans advanced, St. Odo, the great apostle of reform in the sixth century, into the solitude of the forest. The religious fervour of the succeeding age produced many hermits. But to guard against the serious dangers of this kind of life, monastic institutes were founded that combined the advantages of solitude with the guidance of a superior and the protection of a rule. Thus, for example, we had the Carthusians and the Camaldolese at Vallombrosa and Monte Vergine. Nevertheless there still continued to be a large number of isolated hermit, and an attempt was made to form them into congregations having a fixed rule and a responsible superior. Italy especially was the home of these congregations at the beginning of the thirteenth century. Some drew up an entirely new rule for themselves; others adapted the Rule of St. Benedict to meet their wants; while others again preferred to base their rule on that of St. Augustine. Pope Alexander IV decided the first order under the name of the Hermits of St. Augustine (1256). Three congregations of hermits were called after St. Paul, one formed in 1250 in Hungary, another in Portugal, founded by Mendo Gomes de Simbria, who died in 1481, and the third in France, established by Guillaume de l'Ormeux in 1287. These three congregations were known also by the name of the Brothers of Death. Eugene IV formed into a congregation, to be called after St. Ambrose, the hermits who dwelt in a forest near Milan (1441). We may mention also the Brothers of the Apostles (1484), the Cistercians (1530), the Hermits of Monte Sanario (1593), and those of Monte Lucco who were in Italy; those of Mont-Voiron, whose constitutions were drawn up by St. Francis de Sales; those of St-Sever, in Normandy, founded by Guillaume, who had previously been a Camaldolese: those of St. John the Baptist, in Navarre, approved by Gregory XIII; the hermits of the same name, founded in France by Michel de Sainte-Sabine (1630): those of Mont-Valérien, near Paris (seventeenth century): those of Bavaria, established in the Diocese of Ratisbon (1789). The Venerable Joseph Cotellema founded a congregation of hermits in Lombardy in the middle of the nineteenth century. Several monasteries were founded on them. Thus we have the case of St. William of the Desert (1330) and the hermits of Our Lady of Montserrat, in Spain. The latter were well known from the sixteenth century, from their connexion with García de Cisneros. They disappeared in the eigh-
teenth century. At the present time there exists a body of hermits on a mountain near Cordova. They were numerous in Italy, Spain, France, and Flanders in the seventeenth century. Benedict XIII and Urban VIII took measures to prevent the abuses likely to arise from too great independence. Since then the eremitic life has been gradually abandoned, and the attempts made to revive it in the last century have had no success. See Antoine, Camillus de Lellis, Carmelite Order; Carthusian Order; Hieronymites; also under Greek Church, Vol. VI, p. 761.)

Bulteau, Histoire des moines d'Orient (Paris, 1878); Bow- wine, Ordo et Ordines, p. 209; and the works of a number of monasteries, as the Rule of St. Benedict is under the name of the Joinville, where the majority of the Williamite monasteries adopted the Rule of St. Benedict. When these were required by the Bull "Licet ecclesiae catholicae" to join the new order, they raised objections and obtained a prohibition to exchange the Benedictine Rule for the milder one of the Augustinians. (See Guili. de Waha, "Explanatio vitae S. Guilelmi Magni" etc., 1693; "Acta Sacnt. Boll.", Feb., II, 450 sqq.; "Kirchenlex.", 2nd ed., XIII, 1609 sqq.)

(2) Several unspecified houses of the Order of St. Augustine, established chiefly in Italy, and forming separate congregations. To those belong the Order of the Holy Trinity in Tuscany, who had already been united into an Augustinian congregation by Pope Innocent IV, in 1243, with Cardinal Richard for a protector, and with indulgences granted to those who visited their churches (in 1244). (3) The Bonites, so called from their founder, John Buoni, a member of the Buononini family, born about 1168 in Mantua. He lived a hermit's life at Cesena, and died in his native city in 1249 (Lodi, "Vita e miracoli del b. Giov. Buoni", Mantua, 1591; "Acta SS. Boll.", Oct., IX, 693 sqq.)

In the year 1256 the Bonites possessed eleven monasteries and gave the first general to the Augustinian Order (see above). (4) The Britonides were a community of monks called from their oldest foundation, that of St. Blasius de Brittinis, near Fano, in the district of Ancona. Many congregations, such as the Brothers of Penance of Christ (Saccati, or "Sack-bearers"), the foundations of Durandus of Huesca (Oca), and those of the "Catholic Poor" united with the Bonites.

The Hermits of St. Augustine spread rapidly, partly because, although they did not radiate from a single parent monastery, and partly because, after violent conflicts in the previously existing congregations, the active life was finally adopted by the greater number of communities, following the example of the Friars Minor and the Dominicans. Thus, the British Hermits in 1260, was granted permission to continue following the contemplative life. A few years after the reorganization of the Augustinian Order, Hermits monastery sprang up in Germany, France, and Spain. Germany soon possessed forty, many of them large and important, such as those at Mainz, Wurzburg, Worms, Nuremberg, Speyer, Strasbourg, Ratisbon, all built between 1260 and 1270. As early as the year 1299, the German province was divided into four sub-provinces: the Rheinisch-Swabian, the Cologne, the Bavarian, and the Saxon. At the period of its greatest prosperity the order governed 42 provinces and 2 viceprovinces numbering 2000 monasteries and about 30,000 members. (Cf. Aug. Lubin, "Orbis Augustinianus sive conventuum O. Erem. S. A. chorographica et topographica descriptio", Paris, 1659, 1671, 1672.)

Present Condition of the Order.—Since the sixteenth century most of the European countries, particularly to the Reformation, lost numbers of monasteries. During the French Revolution the greater part of the 157 monasteries were destroyed, as well as all the monasteries of the Displaced Augustinian Hermits. The secularization of the religious houses in Germany, Austria, and Italy brought about great losses. In 1835, out of a total of 153 in Spain, 101 were suppressed. The Augustinian monasteries in
Mexico were suppressed in 1860; in Russia, in 1864; in the Kingdom of Hanover, in 1875. The Philippine Islands, however, suffered the heaviest losses, during the disturbances of 1896. Hence the Augustinian Order of to-day has only a tenth of the monasteries which it possessed at the time of its greatest prosperity.

Without counting the Discalced Augustinians, the order comprises 19 provinces, 2 commissariats, 2 congregations, and 60 large monasteries (with 6 or more fathers), in all, including residences and mission stations, 275 foundations, with 2050 members (priests, clerical novices, and lay brothers). These figures, according to the “Catalogus Fratrum O. Erm. S. Augustini” (Rome, 1908) are:

1. **Provincia Romana** (Rome), with 13 convents.
2. **Provincia Picena** (northern-eastern Italy), with 16 convents.
3. **Provincia Castella** (Spain), with 5 colleges and 2 residences (S. German and Cabo Rojo) in Porto Rico.
4. **Provincia Hollandica**, with 6 convents.
5. **Provincia Belgica**, with 3 convents.
7. **Provincia Bavaria - Germanica et Polonica**, with 7 convents in Bavaria, 1 in Prussia, and 1 in Austrian Galicia.
8. **Provincia Bohemia**, with 7 convents in Bohemia.
9. **Commissariatus Neapolitanus**, with 2 convents.
10. **Commissariatus Siculus**, with 8 convents in Sicily.

11. **Provincia Etruria**, with 5 convents.
12. **Provincia Hibemica**, with 12 convents in Ireland (Galway, Galway, Cork, Limerick, Drogheda, Callan, Dungarvan, New Ross, Fethard, Ballyhaunis, Clonmines, and Orlagh), 3 in England (Hoxton, West Kensington, and Hythe), 3 in Australia (Echuea, Rochester, and Kyabram), and 1 in Italy (St. Patrick’s, Rome).
13. **Provincia Ligure**, with 5 convents.
14. **Provincia Michoacanensis** (Mexico), with 10 convents, 16 vicariates or parishes, and 1 chaplaincy.
15. **Provincia SS. Nominis Jesu Insularum Philippinarum**. This comprises 2 residences at Madrid; the Real Colegio at Valladolid; 4 other residences and 7 convents in other parts of Spain; a procurator’s house (domus procurationis) at Rome; 3 convents and 10 parish residences in the Philippines; a procurator’s house and 6 mission stations in China; one college and five houses in the Republic of Colombia; 1 convent, 3 colleges, and 3 mission stations in Peru; a college, the house and 16 other houses (including 1 diocesan seminary) in Brazil; 5 colleges, 1 school, and 4 other houses in Argentina.
16. **Provincia S. Michaelis Quitensis** (Ecuador), with 3 convents.
17. **Provincia Mexicana SS. Nominis Jesu** (Mexico), with 6 convents and 7 vicariates.
18. **Provincia Chilensis** (Chile), with 6 convents and 1 house.
19. **Provincia Melitensis** (Malta), with 3 convents.
20. **Provincia S. Thomae a Villanova in Statibus Federalibus Americae Septentrionalis** (United States of America) comprises, besides the college of Villanova, in Pennsylvania, and that of St. Augustine, at Havana, Cuba, 9 convents and 11 houses.
21. **Provincia Martiniensis SS. Cordis Jesu** (Spain), with 2 chapels in Madrid, a convent and 2 colleges in the Escorial, 1 college each at Palma (Majorca), Guernica, and Ronda, and a school at Portuguese.
22. **Congregatio S. Ioannis ad Carbonarium** (Naples), with 4 convents.
23. **Congregatio S. Mariae de Nenore Siciliae** (Sicily), with 2 convents.

The convents of St. Thomas, at Alt Brunn, Moravia, and of Our Lady of Good Counsel, Philadelphia, U.S.A., are immediately subject to the general of the Augustinian Order.

The chief house of the order is the International College of St. Monica at Rome, Via S. Ufficiu No. 1. It is also the residence of the general of the order (prior generalis) and of the curia generalis. Another monastery of the Augustinian Hermits in Rome is that of St. Augustinus de Urbe, est. 1593, near the church of St. Augustine, in which the remains of St. Monica, the mother of St. Augustine, were deposited when they were brought from Ostia in the year 1430. This, formerly the chief monastery of the order, is now occupied by the Italian Ministry of Marine, and the Augustinian Fathers who serve the church in connection with the small portion of their former property. Another Augustinian convent in Rome is S. Maria de Populo de Urbe.

In 1381 Pope John XXII had appointed the Augustinian Hermits guardians of the tomb of St. Augustine in the church of S. Pietro in Ciel d’Oro at Pavia. They were driven thence in 1700, and fled to Milan. Their monastery being destroyed in 1799, and the church desecrated, the remains of St. Augustine were taken back to Pavia and placed in its cathedral. In recent times the church of S. Pietro was restored, and on 7 October, 1900, the body of the saint was removed from the cathedral and replaced in San Pietro—an event commemorated in a poem by Pope Leo XIII.

The Augustinians are again in possession of their old church of S. Pietro.

**Reform Movements.**—In the fourteenth century, owing to various causes, such as the mitigation of the rule, either by permission or to a lesser degree by a lessening of fervour, but chiefly in consequence of the Plague and the Great Western Schism, discipline became relaxed in the Augustinian monasteries; hence reformers appeared who were anxious to restore it. These reformers were themselves Augustinians and instituted several reformed congregations, each having its own vicar-general (vicarius generalis), but all under the control of the general of the order. The most important of these congregations of the “Regular Observants” were those of Illece, in the district of Siena, established in 1385, having 22 and subsequent convents; of the monastery of Bonaria (founded c. 1390), having 14 convents, of which 4 still exist; of Perugia (1491), having 11; the Lombard Congregation (1430), 56; the Congregation of the Spanish Observance (1430), which since 1506 has comprised all the Castilian monasteries; of Monte Ortigo near Padua (1436), having 6 convents; of the Blessed Virgin at Genoa, also called Our Lady of Conso- lation (c. 1470), 25; of Apulia (c. 1490), 11; of the German, or Saxon, Congregation (1493) (see next paragraph); the Congregation of Zampani in Calabria (1507), 40; of the Dalmatian Congregation (1610), 6; the Congregation of the Colorites, or of Monte Colorito, Calabria (1600), 11; of Centrorito in Sicily (at present 2, which form the Congregation of S. Maria de Nenore Siciliae); of the “Little Augustinians” of Bourges, France (c. 1503), 20; of the Spanish, Italian,
and French congregations of Discalced, or Barefooted, Augustinians (see below), and the Congregation del Bosco in Sicily established in the year 1818 and having 3 convents.

Among these reformed congregations, besides those of the Barefooted Augustinians, the most important was the German (Saxon) Congregation. As in Italy, Spain, and France, reforms were begun as early as the fifteenth century in the four German provinces existing since 1299. Johannes Zacharias, an Augustinian monk of Eschwege, Provincial of the Order from 1419–1425, was professor of theology at Erfurt, began a reform in 1492. Andreas Proles, prior of the Himmelpforten monastery, near Wernigerode, strove to introduce the reforms of Father Heinrich Zoller in as many Augustinian monasteries as possible. Proles, aided by Father Simon Lindner of Nuremberg and other zealous Augustinians, worked indefatigably till his death, in 1503, to reform the Saxon monasteries, even calling in the assistance of the secular ruler of the country. As the result of his efforts, the German, or Saxon, Reformed Congregation, recognized in 1493, comprised nearly all the important convents of the Augustinian Hermits in Germany. Johann von Pfeffer, his successor, as vicar of the congregation, followed in his footsteps. Staupitz had been prior at Tübingen, then at Munich, and had taken a prominent part in founding the University of Wittenberg in 1502, where he became a professor of theology and the first dean of that faculty. He continued to reform the order with the zeal of a Pope, as well as in his spirit and with his methods. He collected the "Constitutiones fratrum eremitarum S. Aug. ad apostolicorum privilegium formam pro Reformatione Alemanniae," which were approved in a chapter held at Nuremberg in 1504. A printed copy of these is still to be seen in the university library of Jena. Supported by the general of the order, Egidius von Viterbo, he obtained a papal Brief (15 March, 1506), granting independence under their own vicar-general to the reformed German congregations and furthermore, 15 December, 1507, a papal Bull commanding the union of the Saxon province with the German Congregation of the Regular Observants. All the Augustinian convents of Northern Germany were, in accordance with this decree, to become parts of the regular observance. But when, in 1510, Staupitz commanded all the hermits of the Saxon province to accept the regular observance on pain of being punished as rebels, and to obey him as their vicar-general, the order appealed and published the papal Bull at Wittenberg, seven convents refused to obey, among them that of Erfurt, of which Martin Luther was a member. In fact, Luther seems to have gone to Rome on this occasion as a representative of the rebellious monks.

In consequence of his trip to Rome, the consolida tion did not take place. Staupitz also continued to favour Luther even after this. They had become acquainted at Erfurt, during a visitation, and Staupitz was responsible for Luther's summons to Wittenberg in 1508; nay, even after 1517 he entertained friendly sentiments for Luther, looking upon the proceedings as being directed only against abuses. From 1519 on he gradually turned away from Luther. Staupitz resigned his office of vicar-general of the German congregations in 1520. Father Wenzel Link, preacher at Nuremberg, former prefect and dean of the theological faculty at Wittenberg, was elected his successor, cast in his lot with Luther, whose views were endorsed at a chapter of the Saxon province held in January, 1522, at Wittenberg. In 1523 Link resigned his office, became a Lutheran preacher at Altenberg, where he introduced the Reformation and married, and went in 1528 as preacher to Nuremberg, where he died in 1547. The work of Link was followed by many Augustinians of the Saxon province, so that their convents were more and more deserted, and that of Erfurt ceased to exist in 1525. The German houses that remained faithful united with the Lombardic Congregation. There were, however, many Augustinians in Germany who by their writings and their sermons opposed the Reformation. Among them is Bartholomäus Arnoldi of Usinger (d. 1532 at Wurzburg), for thirty years professor at Erfurt and one of Luther's teachers, Johannes Hoffmeister (d. 1547), Wolfgang Cäppelmair (d. 1531), and Konrad Treger (d. 1542).

The Discalced Augustinians (sometimes called the Barefooted Augustinians, or Augustinian Recollects)—More fortunate than that of the German (Saxon) province was the reform of the order begun in Spain in the sixteenth century, which extended thence to Italy and France. The originator of this reform was Father Thomas of Andra, afterwards called Thomas of Jesus. Born in Lisbon, in 1520, he entered the Augustinian Order in his fifteenth year. Although aided in his efforts at reform by the Cardinal Infante Henry of Portugal, and his teacher, Louis of Montoya, his plans were impeded at first by the hesitance of his brethren, then by his captivity among the Moors (1578), on the occasion of the crusade of the youthful King Sebastian of Portugal, and lastly by his death in prison which took place on 17 April, 1582. The celebrated poet and scholar Fray Luis Ponce de León (d. 1591), of the Augustinian monastery at Salamanca, took up the work of Thomas of Andra. Appointed provincial of theology at the University of Salamanca in 1561, he undertook the revision of the constitutions of his order and in 1588 Father Díaz, with the support of Philip II, established at Talavera the first monastery of the Spanish Regular Observance. In a short time many new monasteries of Discalced Augustinians sprang up in Spain and were followed by others in the Spanish colonies. In 1606 Philip III sent some Discalced Augustinians to the Philippine Islands, where, as early as 1565, Fray Andrés de Urdaneta, the well-known navigator and cosmographer (cf. "La Ciudad de Dios", 1602; "Die katholischen Missionswerke", 1880, pp. 4 sqq.), had founded the first mission station on the island of Cebú. In a few years many mission stations of the Discalced Augustinians sprang up in the principal places on the islands and developed a very successful missionary activity. In 1622 Pope Gregory XV permitted the erection of a separate congregation for the Discalced, with its own vicar-general. This congregation comprised four provinces: three in Spain and the Philippine province, to which was later added that of Peru. When the Discalced Augustinians in Spain were either put to death or obliged to flee, during the revolution of 1836, they continued to flourish in the Philippines and in South America.

In Italy, Father Andrés Díaz introduced the reformed congregations in 1592, the first house being
that of Our Lady of the Olives, at Naples, which was soon followed by others at Rome and elsewhere. As early as 1624 Pope Urban VIII permitted the division of the Italian congregations of Barefooted Augustinians into four provinces (later, nine). In 1626 a house of this congregation was founded at Prague and another in Vienna. In 1631, of which the celebrated Abraham a Sancta Clara was a member in the eighteenth century. In France, Fathers François Amet and Matthew of St. Francis, of Villar-Blon, completed the reform of the order in 1596. The French Congregation of Discalced Augustinians comprised three provinces: at Paris, Lorraine, and Provence. In 1629, of which the celebrated Bishop of Forby, rector of the Augustinian college (of which the church of St. Paul is the parish church), to his office also belongs the duty of preserving in his oratory a consecrated Host which must be renewed weekly and kept in readiness in case of the pope's illness, when it is the privilege of the papal sacristan to administer the last sacraments to His Holiness. The sacristan must always accompany the pope when he travels, and during a conclave it is he who celebrates Mass and administers the sacraments. He lives in the Vatican with a sub-sacristan and three lay brothers and also in the Augustinian church of the Barberini, "San Giovanni dei Fiorentini". The Augustinian and the Hermits always fill one of the chairs of the Sapienza University, and one of the consultorships in the Congregation of Rites. The work of the Augustinians includes teaching, scientific study, the cure of souls, and missions. The history of education makes frequent mention of Augustinians who distinguished themselves particularly as professors of philosophy and theology at the great universities of Salamanca, Coimbra, Alcalá, Padua, Pisa, Naples, Oxford, Paris, Vienna, Prague, Würzburg, Erfurt, Heidelberg, Wittenberg, etc. The Augustinian church of St. Michael in Rome is an abbey and every college by a rector. The members of the order are divided into priests and lay brothers. The Augustinians, like most religious orders, have a cardinal protector (at present, Mariano Rampolla del Tindaro). The choir and outdoor dress of the monks is of black woollen material, with long, wide sleeves, a black leather girdle, and a long pointed cowl reaching to the girdle. The indoor dress consists of a black habit with scapular. In many monasteries, which were formerly the colour of the house garment, also worn in public, in places where there were no Dominicans. Shoes and (out of doors) black hat complete the costume.

The Discalced Augustinians have their own constitutions, differing from those of the other Augustinians. Their fasts are more rigid, and their other ascetic exercises are more severe. They wear the tonsure, and are therefore not strictly discalced. They never sing a high Mass. As an apparent survival of the hermit life, the Discalced Augustinians practise strict silence and have in every province a house of recollection situated in some retired place, to which monks striving at perfection can retire in order to practise severe penance, living only on water, bread, fruits, olive oil, and wine.

**Privileges of the Order.** Privileges were granted to the order almost from its beginning. Alexander IV freed the order from the jurisdiction of the bishops; Innocent VIII, in 1490, granted to the churches of the order indulgences such as can only be gained by making the Stations at Rome; Pius V confirmed the Augustinians among the benefactors of the church, and ranked them next to the Carmelites. Since the end of the thirteenth century the sacristan of the papal palace has always been an Augustinian. This privilege was ratified by Pope Alexander VI and granted to the order forever by a Bull issued in 1497. The present holder of this office is the Ordinary of the College of the Augustinian Canons, with the title of Bishop of Forby, rector of the Vatican College (of which the church of St. Paul is the parish church). To his office also belongs the duty of preserving in his oratory a consecrated Host which must be renewed weekly and kept in readiness in case of the pope's illness, when it is the privilege of the papal sacristan to administer the last sacraments to His Holiness. The sacristan must always accompany the pope when he travels, and during a conclave it is he who celebrates Mass and administers the sacraments.

**Organization of the Order.** The Augustinian Hermits, while following the rule known as that of St. Augustine, are also subject to the Constitutions drawn up by Bl. Augustinus Novellus (d. 1309), prior general of the order from 1298 to 1300, and by Bl. Clement of Osimo. The Rule and Constitutions were approved at the general chapters held at Florence in 1287 and at Ratisbon in 1290. A revision was made at Rome in 1895. The Constitutions have frequently been published at Rome, in 1581, 1651, and 1655, and in German, by Girolamo Seripando, at Venice, in 1549, and at Rome, in 1553. The newly revised Constitutions were published at Rome in 1895, with additions in 1901 and 1907.

The government of the order is as follows: At the head is the prior general (at present, Tomás Rodríguez, a Spaniard), elected every six years by the general chapter. The prior general is aided by four assistants and a secretary, also elected by the general chapter. These form the Curia Generalis. Each province is governed by a provincial, each commisionary by his superior general, each of the two congregations by a vicar-general, and every monastery by a prior (though the monastery of Alt-Brün, in Moravia, is under an abbot) and every college by a rector. The members of the order are divided into priests and lay brothers. The Augustinians, like most religious orders, have a cardinal protector (at present, Mariano Rampolla del Tindaro). The choir and outdoor dress of the monks is of black woollen material, with long, wide sleeves, a black leather girdle, and a long pointed cowl reaching to the girdle. The indoor dress consists of a black habit with scapular. In many monasteries which were formerly the colour of the house garment, also worn in public, in places where there were no Dominicans. Shoes and (out of doors) black hat complete the costume.
and Michelangelo Marcelli (d. 1804), the following were notable theologians: James of Viterbo (Giacomo di Capoccio), Archdeacon of Benevento and Naples (d. 1308), called *Doctor speculativeus*; Alexander a S. Epipide (also called Fasstelli or A. de Marchia) (d. 1326), Bishop of Melfi; Augustinus Triumphus (d. 1331), Bishop of Urbino (also called de Carpusia) (d. 1330), Bishop of Urbino; Henry of Friemar (d. 1354); Blessed Herman of Schildbece (Schildis, near Bielefeld) (d. 1357), called *Doctor Germanus* and *Magnus legista*; Giacomo Caracciolo (d. 1357); Simon Baringuedus (d. after 1373); Johann Kienk (Kienke) (d. 1374), author of the "Decadentia", "Sachsenspiegel"; Johannes Zacharias (d. 1428), known for his controversy with John Hus at the Council of Constance and for his "Oratio de necessitate reformationis"; Paulus (Nicolettus) de Venetiis (d. 1429); Giovanni Dati (d. 1471); Ambrose of Cora (Corianus, Coriolanus) (d. 1465), general of the order after 1476; Thomas Petrekt (d. 1487); Egidius of Viterbo (d. 1532); Cosmas Damian Hortalanus (Hortola) (d. 1568); Caspar Casal (d. 1587), Bishop of Coimbra; Pedro Aragón (d. 1595); Giovanni Battista Arrighi (d. 1607); Gregorio Nufes Coruñel (d. 1620); Egidius a Præsenteone Foneca (d. 1628); Luigi Alberti (d. 1628); Basilius Pontius (d. 1629); Ludovicus Angelicus Aprosius (d. 1681); Nikolaus Giirken (d. 1717). Giovanni Michele Cavaliere (d. 1757) was a rubricist of note. Father Angelo Rocca, papal sacristan and titular Bishop of Tagaste (d. 1620), known for his liturgical and archaeological researches, was the founder of the Angelica Library (Bibliotheca Angelica), which was called after him and is now the public library of the Augustinians in Rome.

Many Augustinians have written ascetic works and sermons. In the department of historical research the following are worthy of mention: Onofrio Panvini (d. 1619); Joachim Brulius (d. after 1652), who wrote a history of the colonization and Christianization of Peru (Antwerp, 1615), also a history of China; Enrique Pñeres (d. 1773), called "the first historian of Spain"; author of "España Sagrada"; and, lastly, Manuel Risco (d. 1801), author of a history of printing in Spain.

To the missionaries of the order we owe many valuable contributions in linguistics. Father Melchor de Vargas composed, in 1576, a catechism in the Mexican Otomi language; Father Diego Basalquen (d. 1651) and Miguel de Guevars compiled works in the languages of the savage Indians of Mexico; Manuel Pérez translated the Roman Catechism into Asteco in 1723. Others have made researches in the languages of the Philippine Islands, such as Father Diego Bergano and, in more recent times, José Sequi (d. 1844), a prominent missionary of the order, who baptized 50,000 persons. Many wrote grammars and compiled dictionaries. Father Herrera wrote a poetical life of Jesus in the Tagalog language in 1639. Fathers Martín de Heredia and Hieronymus penetrated into the interior of China in 1577, to study Chinese literature with the intention of bringing it into Europe. Father Antonius Aug. Georgius (d. 1797) composed the "Alphabetum Tibetarum" for the use of missionaries. Father Agostino Ciacca (d. 1902), titular Archbishop of Larissa and cardinal, a prominent member of the order in recent times, established a special faculty for Oriental languages at the Roman Seminary, published an Arabic translation of Tatsian's "Diestassaron" and wrote "Bibliorum Fratrum Cosmophilicon". Father Dionysius of Borgo San Sepolcro (d. 1342), Bishop of Monopoli in Lower Italy, is the author of a commentary on the "Factorum et dictionum memorabilium libri IX" of Valerius Maximus, and was also much esteemed for his talents as poet, philosopher, and orator. The missionaries of the order have also given us valuable descriptive works on foreign countries and peoples. In this class of writing Cipriano Navarro's important work on "The Inhabitants of the Philippines" and a monumental work in six volumes entitled "La Flora de Filipinas" (Madrid, 1877—), are valuable contributions to literature and learning. Manuel Blanco, Ignacio Mercado, Antonio Llanos, Andrés Naves, and Celestino Fernández are also worthy of mention. Fathers Angelo Pérez and Cecilio Guemes published in 1905 a work in four volumes entitled "La IMPRENTA DE MANILA".

A number of mathematicians, astronomers, and musicians are also found among the members of the order, but it was the great scientist, Johann Gregor Mendel, abbot of the monastery of St. Thomas at Albrunn in Moravia (d. 1884) who shed glory on the Augustinian Order in recent times. He was the discoverer of the Mendelian laws of heredity and hybridization (see under EVOLUTION, V, 659; and MENDEL, GREGOR). The value set upon learning and science by the Augustinian monks is proved by the care given to their libraries and by the establishment of their own printing-press in their convent at Nuremberg, in 1479, as well as by the numerous learned men produced by the order and still contributing valuable additions to knowledge. Father Tomás Cámara y Castro (d. 1904), Bishop of Salamanca, founded a scientific periodical, "La Ciudad de Dios", formerly entitled "Revista Augustiniana" and published by the Augustinians at Madrid since 1851. In Spain the order possesses besides several meteorological stations, the observatory of the Escorial. Among the Augustinian writers of the present time should be mentioned: Zacarias Martínez Nufes, a celebrated Spanish orator and master of natural science; Honorato del Val, author of a great work on dogs; Aurelio Palmieri, one of the best authorities on the Russian language, literature, and church history.

The Augustinian Order has devoted itself from its beginning, with great zeal to the cure of souls. Only those engaged in teaching and residing in the houses of recollection, among the Discalced, are exempt from
the obligation to this duty, to follow which the order, though retaining its name Hermit, exchanged the contemplative life for the active. Seeing the good done by the Friars Minor and the Dominicans, they wished to share in the harvest, undertaking to preach and instruct the people. Augustinians became the confessors and advisers of popes, princes, and rulers. Many bishops, several cardinals, executed these offices for the good of the Church and the honour of their order. At present the order has a cardinal, Sebastiano Martinelli (formerly Apostolic delegate for the United States), several bishops—Guglielmo Pifferi (see above); Stephen Reville, Bishop of Sandhurst in Australia; Arsenio Capo, Bishop of Nueva Cáceres in the Philippine Islands; Giovanni Camilleri, Bishop of Gozzo; José López de Mendoza y García, Bishop of Pamplona, Spain; Giuseppe Capecci, Bishop of Alessandria in Italy; Francisco Xavier Valdés y Noriega, Bishop of Salamanca; William A. Jones, Bishop of Porto Rico; the Vicars Luis Pérez of Northern Hu-nan (China) and Dominio Murray, Cooktown, Australia; the Prefect Apostolic (Pulito Díaz Alonso) of San León de Amazonas—and, finally, two mitred abbots.

The order has produced many saints, for example, Sts. Nicholas of Tolentino (d. 1305), John of Sahagun, St. Isidore (d. 1407), and Tomás of Villanueva (d. 1555). Stefano Bellesi (d. 1840), the Augustinian parish priest of Genazzano, in the Roman province, was beatified by Pius X, 27 December, 1904. The process for the beatification of seven Augustinians, among them the papal sacristan Bartalommeo Menochio (d. 1837), is under consideration.

As to the devotional practices specially connected with the Augustinian Order, and which it has striven to propagate, we may mention the veneration of the Blessed Virgin under the title of "Mother of Good Counsel", whose miraculous picture is to be seen in the Augustinian church at Genazzano, in the Roman province. This devotion has spread to other churches and countries, and confraternities have been formed to cultivate it. Several periodicals dedicated to the honour of Our Lady of Good Counsel are published in Italy, Spain, and Germany by the Augustinians (cf. Meschler on the history of the miraculous picture of Genazzano in "Stimmen aus Maria-Laz", LVII, 482 sqq.). Besides this devotion the order fosters the Archconfraternity of Our Lady of Consolation, a co-called confraternity, the members of which wear a blessed girdle of black leather in honour of St. Monica, and solemnly recite daily thirteen Our Fathers and Hail Marys and the Salve Regina, fast strictly on the eve of the feast of St. Augustine, and receive Holy Communion on the feasts of the three above-named saints. This confraternity was founded by Pope Eugene IV at St. Gaetano, Bologna, in 1439, made an archconfraternity by Gregory XIII, in 1575, aggregated to the Augustinian Order, and favoured with indulgences. The Augustinians, with the approbation of Pope Leo XIII, also encourage the devotion of the Scapular of Our Lady of Good Counsel and the propagation of the Third Order of St. Augustine for the laity, as well as the veneration of St. Augustine and his scapular St. Monica, in order to infall the Augustinian spirit of prayer and self-sacrifice into its parishioners.

The Augustinians hold an honourable place in the history of foreign missions. Before the middle of the fourteenth century, Father Nikolaus Teschel (d. 1349), Bishop of Ratzeburg, embarked on a voyage to the African coast, with some brethren preached the Gospel in Africa. In 1533, after the subjugation of Mexico by Cortez, some Augustinians, sent by St. Thomas of Villanova, accomplished great missionary work in that country. Monasteries sprang up in the principal places and became the centres of Christianity, art, and civilization. The Patio (Cloister) of the former monastery of St. Augustine, now the post office, at Querétaro, is one of the most beautiful examples of stone-carving in America. The Augustinian monasteries in Mexico are to-day either deserted or occupied by a few fathers only; some even only by one. The Provincia Michoacanensis (see above, Present Condition) at present has about 55 members, while the Provincia of the dominion of which the Augustinian missionaries extended their labours to South America (Colombia, Venezuela, Peru) with great success. Political events in these countries prevented the order from prospering and hindered the success of its undertakings, so that in course of time the monasteries became deserted. Late events in the Philippine Islands, however, have permitted the Augustinians to return to their former churches and monasteries and even to found new ones.

In the Republic of Colombia, 26 members of the Philippine province are employed, including 6 at the residence of Santa Fe de Bogotá, 8 in the college at Facatativá, and 12 at other stations. In Peru 49 members of the same province are employed: 14 priests and 2 lay brothers belonging to the convent at Lima; 12 priests to the college in the same city; 6 in each of the two seminaries at Cusco and Ayacucho. The Provincia of San Jorge, at the mission stations of Peba, Rio Tigré, and Leticia, in the territory of the Iquito Indians there are 9 priests. In June, 1904, Father Bernardo Calle, the lay brother, Miguel Vilajoli, and more than 70 Christians, were murdered at the recently erected mission station, Huabico, in Upper Maranon and the station itself was destroyed. The Augustinian settlements in Brazil also belong to the Philippine province. In the procurative house at S. Paulo (Rua Apeninos 6) and in the college at Brotas there are 4 Augustinians each; in the diocesan seminary at S. José de Manao, 6; and in the other settlements, 27 priests—in all, 42 members of the order, including one lay brother. In Argentina, there are 25 priests and two lay brothers in the six colleges and schools of the order. In Ecuador, which forms a province by itself, there are 21 members of the order; 9 priests and 7 lay brothers in the monastery at Quito; 3 priests in the convent at Lategum and 2 in that at Guayaquil. The province of the United States of America is very large, as the Augustinians driven out of the province of the Philippines in 1829.s. Because of the political events in that republic. This province now numbers 200 members. The largest convent is at Villanueva, Pa.; it is also the novitiate for North America, and among the 117 religious occupying the convent 21 are priests (see above, Present Condition). The other convents contain 66 members, 50 of whom are lay brothers. To the province of the United States belongs also St. Augustine's College at Havana, Cuba, where there are 5 priests and 3 lay brothers.

The greatest missionary activity of the Augustinian Order has been displayed in the Philippine Islands, and the first missionaries to visit these islands were Augustinians. When Magalhães discovered the Philippines (16 March, 1521) and took possession of them in the name of the King of Spain, he was accompanied by the chaplain of the fleet, who preached the Gospel to the inhabitants, baptizing Kings Colombu and Siagu and 800 natives of Mindanao and Cebú, on the island of Negros. The following day, whilst he was on the island of Mindanao, was soon almost destroyed; Magalhães was killed in a fight with natives on the little island of Mactan on 27 April and the seed sown by the first Spanish missionaries all but perished; nor were those missionaries brought from Mexico in 1543 by Ruy Lópeu Villalobos more successful, for they were obliged to return to Europe by way of Goa, having gained very little hold
on the islanders. Under the Adelantado Legazpi, who in 1565 established the sovereignty of Spain in the Philippines and selected Manila as the capital in 1571, Father Andrés de Urdaneta and 4 other Augustinians landed at Cebú in 1565, and at once began a very successful apostolate. The first houses of the Augustinians were established at Cebú, in 1565, and at Manila, in 1571. In 1573, under the leadership of Father Alfonso Gutierrez, twenty-four Spanish Augustinians landed in the island and, with the provosts Domingo de Herrera and Martín de Rado, worked very successfully, at first as wandering preachers. The Franciscans first appeared in the Philippines in 1577 and were warmly welcomed by the Augustinians. Soon they were joined by Dominicans and Jesuits. Sent by Philip III, the first Barefooted Augustinians landed in 1606. All these orders shared in the labours and difficulties of the missions. Protected by Spain, they prospered, and their missionary efforts became more and more successful. In 1773 the Jesuits, however, were obliged to give up their missions in consequence of the suppression of the Society. The religious orders have suffered much persecution in the Philippines in recent times, especially the Augustinians. In 1897 the Caled Augusinians, numbering 319 out of 644 religious then in the Philippine province, had charge of 225 parishes, with 2,377,743 souls; the Discalced (Recollects), numbering about 220, with 235 parishes and 1,175,166 souls; the Augustinians of the Philippine province numbered in all 532, counting those in the convents at Manila, Cavite, San Sebastian, and Cebú, those at the large model farm at Imus, and those in Spain at the colleges of Monteagudo, Marcilla, and San Millán de la Cogulla. Besides the numerous parishes served by the Caled Augustinians, they possessed several educational institutions: a superior and intermediate school at Vigan (Villa Fernandina) with 209 students, an orphanage and trade school at Tambohn near Manila, with 145 orphans, etc. In consequence of the disturbances, the schools and missions were deserted; six fathers were killed and about 200 imprisoned and sometimes harshly treated. Those who escaped unmolested fled to the principal house at Manila, to Macao, to Han-kou, to South America, or to Mexico. Up to the beginning of 1900, 46 Caled and 120 Discalced Augustinians had been imprisoned. Upon their release, they returned to the few monasteries still left them in the islands or set out for Spain, Colombia, Peru, Brazil, Argentina, and China. The province of the United States sent some members to supply the vacancies in the Philippines. The monastery of St. Paul, at Manila, now has 24 priests and 6 lay brothers; that at Cebú, 5 members of the order, that at Iloilo, on the island of Panay, 11 priests and 2 lay brothers, while in the 10 residences there are 20 fathers; so that at the present time there are only 68 Caled Augustinians in the islands. In all, the Province of the 8th Nominae Jesu Insularum Philippinarum, including theological students and the comparatively small number of lay brothers, has 660 members: 350 in Spain, 185 of whom are brothers; 29 in the Philippines; 29 in China; 26 in Colombia; 49 in Peru; 42 in Brazil; 27 in Argentina. The Augustinian missions in the Philippines have provided missionaries for the East since their first establishment. In 1603 some of them penetrated into Java, where several were martyred, and in 1655 others entered China, where, in 1701, the order had six missionary stations. At present the order possesses the mission of Northern Hu-nan, China, where there are 24 members, 2 of whom are naves; in the district of Yo-chou; in the district of Ch'ang-t'ae; 9 in the district of Li-chu; three other religious are also labouring in other parts of China under the vicar Apostolic, Mgr. Pérez. The mission comprises about 3000 baptized Christians and 3500 catechumens in a population of 11 millions of heathens. In 1891 there were only 219 Christians and 11 catechumens, as well as 29 schools, with 420 children and 750 orphans. There are, moreover, two priests at the mission house at Han-kou and two at the procuration house at Shang-hai (Yang-tze-poo Road, 10). The missionary history of Persia also mentions the Augustinians. Towards the close of the sixteenth century, Alexio de Menezes, Count of Cantanheda (d. 1617), a member of the order, appointed Archbishop of Goa in 1595, and of Braga in 1612, Primate of the East Indies, and several times Viceroy of India, sent several Augustinians as missionaries to Persia while he himself laboured for the reunion of the Thomas Christians, especially at the Synod of Diamper, in 1599, and for the conversion of the Mohammedans and the heathens of Malabar. (Goves, "Jornada do Arcebispo de Goa Dom Alexiode Menezes", Coimbra, 1606; also, "Histoire Orient. de grands progres de l'eglise Romaine en la reduction des anciens chretiens dit de St. Thomas" translated from the Spanish of Franc. Muñoz by J. B. de Glen, Brussels, 1609; Joa. de Facundo Raulin, "Historia ecclesiae malabaricae", Rome, 1745.) The Augustinians also established missions in Oceania and Australia. Here the Spanish Discalced Augustinians took over the missions founded by Spanish and German Jesuits in the Ladrones, which now number 7 stations, with about 10,000 souls, on Guam and about 2500 on each of the German islands of Saipan, Rota, and Tinian. The mission on the German islands was separated from the Diocese of Cebú on 1 October, 1906, and made a prefecture Apostolic on 18 June, 1907, with Saipan as its seat of administration, and the mission is now in charge of the German Capuchins. In Australia the Caled Augustinians are established in the ecclesiastical Province of Melbourne and in the Vicariate Apostolic of Cooktown, Queensland, where there are at present twelve priests of the Irish province under Monsignor James D. Murray. Three monasteries, each with two priests, in other parts of Australia also belong to this province. The order has furnished some prominent bishops to Aus-
tralia, among them, James Alipius Gould. The Irish Augustinian college of St. Patrick at Rome, built in 1884 by Father Patrick Glynn, O.S.A., is the training college for the Australian missions. The present rector is Rev. Maurice McGah.

Augustinian Nuns.—These regard as their first foundation the monastery of nuns for which St. Augustine wrote the rules of life in his Epistola exi (alias cix) in 423. It is certain that this epistle was called the Rule of St. Augustine for nuns at an early date, and has been followed as the rule of life in many female monasteries ever since the seventh century. These monasteries were not consolidated in 1256, like the religious communities of Augustinian monks. Each convent was independent and was not subject to the general of the order. This led to differences in rule, dress, and mode of life. Only since the fifteenth century have certain Augustinian Hermits reformed a number of Augustinian nunneries, become their spiritual directors, and induced them to adopt the Constitution of their order. Henceforth, therefore, we meet with female members of the Order of Hermits of St. Augustine in Italy, France, Spain, Belgium, and later in Germany, where many were suppressed during the Reformation, or by the secularising law of 1803. In the other countries many nunneries were closed in consequence of the Revolution. The still existing houses, except Caesia, Renteria (Diocese of Vitoria), Eibar (Diocese of Vitoria), and Cracow, are nunneries not under the charge of a bishop of the Order. Many convents are celebrated for the saints whom they produced, such as Montefalco in Central Italy, the home of Blessed Clara of the Cross (Clara of Montefalco, d. 1308), and Cascia, near Perugia, where St. Rita died in 1457. In the suppressed convent of Agnetenberk near Dülmen, in Westphalia, lived Anne Catherine Emmerich celebrated for her visions.

Mention should also be made of the monastery of the Augustinians called delle Vergini, at Venice, founded in 1177 by Alexander III after his reconciliation with Frederick Barbarossa, whose daughter Julia, with twelve girls of noble birth, entered the monastery and became first abbess. Doge Sebastiano Zani, who had endowed the institution, was appointed patron, with the privilege of approving the election of the abbess before the granting of the papal confirmation. On the French occupation in the eighteenth century the religious went to America, where they devoted themselves to the work of teaching and the care of the sick. Later they established monasteries in Italy and in 1817 at Paris. Towards the end of the sixteenth century communities of female Descalced Augustinians appeared in Spain. The first convent, that of the Visitation, was founded at Madrid, in 1589, by Prudencia Grao, a lady of noble birth, and made a Constitution from Father Alfonso of Oroqué. Juan de Ribera, Archbishop of Valencía (d. 1611), founded a second Descalced Augustinian congregation at Acov, in 1597. It soon had houses in different parts of Spain, and in 1603 was established at Lisbon by Queen Louise of Savoy in addition to the houses already established by these religious observed the exercises of the Reformed Carmelites of St. Teresa. In the convent at Cybar, Mariana Mansanedo of St. Joseph instituted a reform which led to the establishment of a third, that of the female Augustinian Recollects. The statutes, drawn up by Father Antinóz, and later confirmed by Paul V, bound the sisters to the strictest interpretation of the rules of poverty and obedience, and a rigorous penitential discipline. All these reforms spread in Spain and Portugal, but not in other countries. A congregation of Augustinian nuns under the title of "Sisters of St. Ignatius" was introduced into the Philippines by St. Francis Xavier, an American Augustinian Hermits. They worked zealously in aid of the missions, schools, and orphanages in the island, and founded the colleges of Our Lady of Consolation and of St. Anne at Manila, and houses at Neiva, Segovia, Cebú, and Mandalay on the Pasig, where they have done much for the education of girls.

MAX HERMBRUNER.

Hermón [hermōn], sacred (mountain); Sept., 'Acremp', a group of mountains forming the southern extremity of Anti-Lebanon, and marking on the east of the Jordan the northern boundary of the land of Israel. "Hermón" is the Hebrew name among the Sidonians was Siryon, and by the Amorrites the most prominent part of the group was called Sanir (Deut. iii. 9), corresponding to the Sa-ni-ru of the cuneiform inscriptions. These varying forms all signify a cuirass or coat of armour, and were probably applied to one or other of the peaks, either on account of its form or because its cladt heights shone in the sunlight after the manner of a polished shield. The name sometimes occurs in the plural form Hermontim, doubtless because the range has three conspicuous peaks. In the Talmud and in the Targums Hermón is designated the "mountain of snow", and the Descalced Augustinian Arab geographers. The modern name is Jebel-eash-Shiekh, "mountain of the sheik or chief", because in the tenth century A. D. Hermón became the centre of
the Druse religion, viz. when its founder, Sheikh-ed-Derasi retired thither from Egypt. It is sometimes called the Great Hermon to distinguish it from the smaller and situated to the east of the plain of Edreben, between Thabor and Gelboe, and so named through an erroneous interpretation of Ps. lxxxviii (Heb. lxxxix), 13.

The geographical formation of the range is calcareous with occasional veins of basalt. Hermon is noted as offering the most striking view of the sea-level of the Mediterranean, in Palestine. The view from the summit is also magnificent, embracing the Lebanon and the plain of Damascus. It is at the foot of Hermon that the River Jordan takes its rise. The highest peak, which is covered with snow until late in summer, rises to a height of 9200 ft. above the level of the Mediterranean. On the summit of one of the peaks is to be seen an extensive mass of ruins, probably the remains of an early pagan sanctuary dedicated to Baal, whence the designation Baal-Hermon applied to the mountain in two Biblical passages ( Judges, iii, 3; 1 Par., v, 23).

In the O.T., Hermon is hardly mentioned except as the northern boundary of Palestine. Poetical allusions occur in the Psalms (v. g. Ps. lxxxviii, 13, Herb. lxxxix, 13) and in the Canticle of Canticles, iv, 8. In Ps. cxxxii (Heb., cxxxiii), 3, the happiness of brotherly love is compared to the "dew of Hermon, which descends upon the mountains." In the N.T., however, it may be noted that in no other locality of Palestine is the dew so heavy and abundant as in the vicinity of this mountain group. Some scholars think it probable that Hermon is the "high mountain" near Cesarea Philippi which was the scene of the Transfiguration (Mark, xvii, 1; 1 Par., ix, 26) and which by Luke, ix, 29, is called "a high mountain." (Legendes in Vico, 12, 13, 26, 32, 34.)

Hermopolis Magna, a titular see of Thebais Prima, suffragan of Antinoe, in Egypt. The native name was Khmunou; in Coptic, Chmoun. It is to-day the village of Ashmonein on the left bank of the Nile, about four miles south-west of Raps (a station on the Cairo-Thebes railway, 180 miles from Cairo). Khmunou dates from a very remote antiquity, and at a very early period was an important religious centre. It worshipped a moon-god Thoth (Hermes), ibis or baboon, and was formed by four pairs of isles, whereof the name Khmunou (the eighth). It played an important part from the sixth to the eleventh centuries, and later became the chief town of the nome of Hermopolis. To the west of the village is the Ibeum, or burial-place of the animals sacred to Thoth; at the foot of Gebel-el-Bahneh is the necropolis of the local rulers. Palladius (Hist. Laus., iii) records a tradition to the effect that the Holy Family came to Hermopolis. St. Cuthbert suffered martyrdom there under Maximian and Dioecletian. For a time, also, St. Athanasius lived there. Lequien (Oriens Christianus, II, 595) mentions eight bishops; and the place is still a see for the Church. In 956 it was re-established by Leo XIII for the Coptic Catholics, but the titular lives at Munich.

S. PETRIDES.

Hermopolis Parva, a titular see of Egyptus Prima, suffragan of Alexandria. Its ancient name, Dimanhor or Tensa-en-Hor, signifies the town of Horus. The Copts call it Sudan, the Antin; the Greek, Damahor. Situated on the canal uniting Lake Mareotis (Markou) to the Copanic branch of the Nile, it has no history and no ruins. It was near Damahor that on 10 July, 1798, Bonaparte, walking unaccompanied, barely escaped being taken by the Mamelukes. The modern Damahor, forty miles from Alexandria, on the Cairo-Alexandria railway, has 20,000 inhabitants and is the chief town of the province of Behira. It is famous for its silk, and the cotton stems. Lequien (Or. Chr., II, 513 sqq.) mentions a dozen bishops of Hermopolis Parva, among them Dracontius, about 354, who suffered exile for the faith under Constantius; St. Isidore, his successor (feast kept 3 January); Dioscorus, the oldest of the four famous monks of Nitria, known as the Tall Boul. (See Venables in Dict. Christ. Biol. s. v. Dioscorus; Smith, Dict. of Greek and Roman Geog.; De Rouss', Géographie ancienne de la Basse Egypte (Paris, 1881).

S. PETRIDES.

Hered (Gr. Ἡρέδ, from Ηρός) was the name of many rulers mentioned in the N. T. and in history. It was known long before the time of the biblical Herods. (See Schurer, "Hist. of the Jewish People," etc., Div. I, v, p. 416, note.) The Herods connected with the early history of Christianity are the following:—

1. Herod, surnamed the Great, called by Grattius "the evil genius of the Judean nation" (Hist., v, II, p. 77), was a son of Antipater, an Idumean (Jos., "Bel. Jud.," I, vi, 2). The Idumeans were brought under subjection by John Hyrcanus towards the end of the second century B.C. and obliged to live as Jews, so that they were considered Jews (Jos., "Ant.," XIII, vi, 3). Yet Antipater claimed to be a half-Jew (Jos., "Ant.," XIV, xv, 2, and he is noted by Xenophon, when the Jews, if it furthered their interests, spoke of Herod their king as by birth a Jew (Jos., "Ant.," XX, vii, 7). Antipater, the father of Herod, had helped the Romans in the orient, and the favour of Rome brought the Herodian family into great prominence and power. Herod was born 73 B.C. and he is the first mentioned governor of Galilee (Jos., "Ant.," XIV, ix, 2). Here the text says he was only fifteen years old, evidently an error, since it mentions forty-four years later he died, "almost seventy years of age" (Jos., "Bel. Jud.," I, xxxii, 1). His career was more wonderful than that of many heroes of fiction. Among the rapidly changing scenes of Roman history he never failed to win the good will of fortunate favours. In 40 B.C. the young Octavian and Antony obtained for him from the Roman senate the crown of Judea, and between these two powerful friends he went up to Rome to the temple of Jupiter where he sat. Antigonus was beheaded in 37 B.C., and from this date Herod became king in fact as well as in name. He married Mariamne in 38 B.C., and thereby strengthened his title to the throne by entering into matrimonial alliance with the Hasmonaees, who were always very popular among the Jews (Jos., "Bel. Jud.," I, xii, 3).

The reign of Herod is naturally divided into three periods: 37-25 B.C., years of development; 25-13, royal splendour; 13-4, domestic troubles and tragedies. During the first period he secured himself on the throne by removing rivals of the Hasmonaean line. He next to death Hyrcanus, grandfather of Mariamne, and Aristobulus her brother, whom though but seventeen years old he had appointed high-priest. Their only offence was that they were very popular (Jos., "Ant.," XV, vi, 1, iii, 3). Mariamne also was executed in 29 B.C., and her mother Alexander, 28 B.C. (Jos., "Ant.," XV, vii; "Bel. Jud.," I, xiii). As Herod was a friend to Antony, whom Octavian defeated at Actium 31 B.C., he was in great fear, and set out for Rhodes like a criminal with a halter around his neck to plead with the conqueror; but Cæsar confirmed him in the kingdom, with a grant of additional territory (Jos., "Bel. Jud.," I, xii, 3).

Herod and his children were builders. Having the reins of government well in hand, and having wreaked vengeance upon his enemies, he adorned his kingdom by building cities and temples in honour of the emperor and of the gods. Samaria was built and called
Sebaste, from the Greek name for Augustus. Cesarea with its fine harbour was also built; and, being a Greek city, it also secured theatres, amphitheatre, and hippodromes for games, which were celebrated at stated times even at Jerusalem (Jos., "Ant.", XV, viii, 1, XVI, v, 1; "Bel. Jud.", I, xxi, 1, 5).

As he built temples to the false gods—one at Rhodes, for instance, to Apollo (Jos., "Ant.", XVI, v, 9)—we must recall that at this time the last straw was being added to the press which Roman emperors were at that time building. As such the age was ripe for the great work of his reign, the temple of Jerusalem. It was begun in his eighteenth year as king (Jos., "Ant.", XV, xi, 1), i.e., about 22 B.C. (Grätz, "Gesch. d. Jud.", V, iii, 187). In Josephus (Bel. Jud., I, xxi, 1) the text has the fifteenth year, but here the historian says that the story was later than that of Græco-Roman Antigonos, 37 B.C., which gives the same date as above. The speech of Herod on the occasion, though full of piety, may be interpreted by what he said to the wise men: "that I also may come and adore him" (Matt., ii, 8; Jos., "Ant.", XV, xi, 1). The temple is described by Josephus ("Ant.", XV, xi; cf. Edecker, "The Temple and its Ministry and Services", i and ii), and the solidity of its architecture referred to in the N. T. (Matt., xxiv, 1; Mark, xiii, 1). In John, ii, 20, forty-six years are mentioned since the building was undertaken, but it requires some juggling with figures to make this number square with the history of either the second temple or that built by Herod. (See Madochi, who thinks the text refers to the second temple, and MacRory, "The Gospel of St. John", for the other view).

The horrors of Herod's home were in strong contrast with the splendour of his reign. As he had married ten wives (Jos., "Bel. Jud.", I, xxiv; note in Whiston) by whom he had many children, the demon of discord made domestic tragedies quite frequent. He put to death even his own sons, Aristobulus and Alexander (6 B.C.), whom Antipater, his son by Doris, had accused of plotting against their father's life (Jos., "Ant.", XV, xi). This Antipater, who in cruelty was a true son of Herod, and who had caused the death of so many, was himself accused and convicted of having prepared poison for his father, and put to death (Jos., "Bel. Jud.", I, xxxii, 7). The last joy of the dying king was afforded by the letter from Rome authorising him to kill his son; but a little later, like another Antiochus under a curse, he died. The account of his death and of the circumstances accompanying it is so graphically given by Josephus ("Ant.", XVII, vii, vii; "Bel. Jud.", I, xxxii), who follows Nicholas of Damascus, Herod's friend and biographer, that all the essential points of the story are supplied. In the hot springs of Callirrhoe, east of the Dead Sea, the king sought relief from the sickness that was to bring him to the grave. When his end drew near, he gave orders to have the principal men of the country shut up in the hippodrome at Jerusalem and slaughtered as soon as he had passed away, that his grave might not be without the tribute of tears. This barbarous command was not carried into effect; but the Jews celebrated as a festival the day of his death, by which they were delivered from his tyrannical rule (Grätz, "Gesch. d. Jud.", III, 195 — "Hist.", in Eng.), II, 117). Archelaus, whom he had made his heir on discovering the perfidy of Antipater, buried him with great pomp at Herodium—now called Frank Mountain—S.E. of Bethlehem, in the tomb the king had prepared for himself (Jos., "Ant.", XVII, vii, 2, 3; "Bel. Jud.", I, xxxiii, 8, 9).

The death of Herod is important in its relation to the New Testament. The prophecy mentioned by Josephus ("Ant.", XVII, vi, 4), who also gives the length of Herod's reign—thirty-seven years from the time he was appointed by the Romans, 40 B.C.; or thirty-four from the death of Antigonus, 37 B.C. (Ant., XVII, vii, 1)—fixes the death of Herod in the spring of 750 A.D.C., or 4 B.C. Christ was born before Herod's death (Matt., ii, 1), but how long before is uncertain; the possible dates lie between 740 and 750 A.D.C. (see summaries of interpretations. Reasons for dating in Gigü, "Outline of N. T. Hist.", 42, 43).

Herod's gifts of mind and body were many. "He was such a warrior as could not be withstood . . . fortune was also very favourable to him" (Jos., "Bel. Jud.", I, xxi, 13), yet a man of great barbarity—war, rape, and murder were as natural to him as to his fathers. But he was above the consideration of what was right" (Jos., "Ant.", XVII, viii, 1). His ruling passions were jealousy and ambition, which urged him to sacrifice even those that were nearest and dearest to him: murder and munificence were equally good as means to an end. In his eyes, the killing of Pontius, 37 B.C., was performed perfectly with what history relates of him, and St. Matthew's positive statement is not contradicted by the mere silence of Josephus; for the latter follows Nicholas of Damascus, to whom, as a courtier, Herod was a hero. Hence Armstrong (in Hastings, "Dict. of Christ and the Gospels", s. v. "Herod") justly blame those who, like Grätz ("Gesch. d. Jud.", III, 194—"Hist.", Eng.), II, 116), for subjective reasons, call the evangelist's account a later legend. Macrobius, who wrote in the beginning of the fifth century, narrates that Augustus, having heard that among the children whom Herod had ordered to be slain in Syria was the king's own son, remarked: "It is better to lose my son than his son" (Saturn., II, 4). In the Greek text there is a bon mot and a relationship between the words used that etymologists may recognize even in English. The law among the Jews against eating pork is hinted at, and the anecdote seems to contain extra-Biblical elements. "Cruel as the slaughter may appear to us, it disappear among the cruelties of Herod. It cannot, then, surprise us that history does not speak of it" [Maas, "Life of Christ" (1897), 38 (note); the author shows, as others have done, that the number of children slain may not have been very great. This same Antipater was the son of Herod the Great, was with Antipas his brother, educated at Rome (Jos., "Ant.", XVII, i, 3), and he became heir in his father's last will (Jos., "Ant.", XVII, vii, 1). After the death of his father he received the acclamations of the people, to which his title and authority depended upon the good will of Cæsar (Jos., "Ant.", XVIII, vii, 4). The death of Herod having delivered the Jews from his tyrannical rule, they petitioned Cæsar to put them under the jurisdiction of the presidents of Syria. He, however, rejected the petition, and willing to make a show of the power of his people, he gave the title of high priest to the half of his father's kingdom, with the title of ethnarch, the royal title to follow should he rule virtuously. The N. T. says that he resigned (Matt., ii, 22), and in Josephus (Ant., XVII, vii, 2, ix, 2) he is called king, by courtesy, for the Romans never so styled him. His territory included Judea, Samaria, Idumæa, with the cities of Jerusalem, Cesarea, Sebaste, and Joppa (Jos., "Ant.", XVII, xi, 2, 4, 5). He soon aroused opposition by marrying his brother's wife—a crime like that of Antipas later—and having been accused of cruelty by his subjects, "not able to bear his barbarous and tyrannical usage of them" (Jos., "Ant.", XVII, vii, 2, ii, 7), was banished to Vienne, Gaul, a.d. 7, in the tenth year of his government (Jos., "Ant.", XVII, vii, xii, 1, 2). The N. T. tells us that Joseph, fearing Archelaus, went to live at Nazareth (Matt., ii, 22, 23); and some interpreters think that in the parable (Luke, xix, 12-27) our Lord refers to Archelaus, whom the Jew would wish to rule over him, and who, having been placed in power by Cæsar, took vengeance upon his enemies. "Whether our Lord had Archelaus in view, or only spoke generally, the circumstances admirably suit his case" (MacEvilly, "Exp. of the Gosp. of St. Luke").

III. ANTIPAS was a son of Herod the Great, after whose death he became ruler of Galilee. He married
the daughter of Aretas, King of Arabia, but later lived with Herodias, the wife of his own half-brother Philip. This union with Herodias is mentioned and blamed by Josephus (Ant., xvii, 3–4) as "the foundation of the whole building of those walls presently" (Ant., xix, vii, 2). He seems to have inherited from his Hasmonean ancestors a great love and zeal for the law (Jos., "Ant.", xix, vii, 3). This characteristic, with his ambition to please the people (ibid.), explains why he imprisoned Peter and James shortly after his elevation to the throne (Acts, xii, 1–3). His death is described in "Acts", xii, 21–23; "eaten up by worms, he gave up the ghost." He died at Caesarea during a grand public festival; when the people hearing him speak cried out, "It is the voice of a god and not of a man"; his heart was elated, and "an angel of the Lord struck him, because he had not given the honour to God." Josephus gives substantially the same account, but states that an owl appeared to the king to announce his death, as it had appeared many years before to predict his good fortune (Jos., "Ant.", xix, vii, 2). His death occurred in a.d. 44, the fifty-fourth year of his age, the seventh of his reign (ibid.). Grätz considers him one of the best of the Herods (Gesch. d. Jd., III, xii–Hist. (Eng.), II, vii); but Christians may not be willing to subscribe fully to this estimate.

AGRIPPA II was the son of Agrippa I and in a.d. 44, the year of his father's death, the Emperor Claudius wished to give him the kingdom of his father, but he was dissuaded from his purpose because a youth of seventeen was hardly capable of assuming responsibilities so great (Jos., "Ant.", xix, ix). About a.d. 50 he was made King of Chalcis (Jos., "Bel. Jud.", II, xii, 1), and afterwards ruler of a much larger territory including the lands formerly governed by Philip and Lysanias (Jos., "Bel. Jud.", II, xii, 8). He was also titular king of Judea, and in twenty years appointed seven high-priests (Grätz, "Gesch. d. Jd.", III, xiv–"Hist." (Eng.), II, ix). When the Jews wished to free themselves from the dominion of Rome in the time of Florus, Agrippa showed them the folly of violent measures, and gave them a detailed account of the vast resources of the Roman empire (Jos., "Bel. Jud.", II, xvi, 4). St. Paul pleaded before this king, to whom Festus, the governor, referred the case (Acts, xxvi). The Apostle praises the king's knowledge of the Jewish customs and questions him about his faith (Acts, xxvi, 23). The king asked if "there be any thing knowing of this man" (v. 3); Josephus likewise appeals to his judgment and calls him a most admirable man—βασιλεύς λατρευτός (Cont. Ap., I, ix). It was, therefore, not out of mere compliment that Festus invited him to hear what St. Paul had to say. His answer to the Apostle's appeal was, however, a judgment which St. Paul had not quite convinced him, which seems to suit the context better than the irony that some see in the king's words. The indifference, however, which he manifested was in harmony with the "great pomp" with which he and his brother Bernice had entered the hall of auditors (Acts, xxv, 20). After the fall of Jerusalem he lived in Rome, and it is thought he may have died in the third year of Trajan, a.d. 100. Grätz (Gesch. d. Jd., III, xvi, 410) gives a.d. 71–72 as the date of his death, a date based upon a more correct reading of a Greek text as authority.

JOHN J. TIBNERT.
HERODIAS

HERODIAS (Gr., Ἡρωδία), daughter of Aristobulus—son of Herod the Great and Mariamne—was a descendant of the famous Hasmonene heroes, the Machabeus, who had done so much for the Jewish nation. Having married Herod Philip, her own uncle, by whom she had a daughter, Salome, Herodias longed for social distinction, and accordingly left her husband and entered into an adulterous union with Herod Antipas, Tetrarch of Galilee, who was also her uncle (Mat., xiv, v, 1, 4). St. John the Baptist rebuked Antipas for this union and thus aroused the hatred of Herodias, who by the dance of her daughter brought about the death of the prophet (Mat., xiv, 3; 12; Mark, vi, 17–29). Josephus gives the main facts, but adds that John was put to death because Herod feared his influence over the people (Ant., XVIII, v, 2, 4). Schurer admits that here both the Evangelists and Josephus may be right; since all the motives mentioned may have urged Herod to imprison and murder John (Hist. (Eng. tr.) Div. I, V, ii, 25).

When Agrippa, the brother of Herodias became king, she persuaded Antipas to go to Rome in search of the royal title, as his claim to it was far greater than that of her brother. Instead of a crown, however, he found waiting him a charge of treason against the Romans, with Agrippa as chief accuser, who in advance had sent messengers to defeat the amorous plans of Antipas. He was therefore banished to Lyons in Gaul. At the same time Herodias, spurning the kind offers of the emperor, preferred exile with Antipas to a life of splendour in the palace of her brother Agrippa (Jos., Ant., XVIII, vii). This generosity, if we may so style it, came from her Hasmonene blood, but her cruelty she inherited from her grandfather Herod (see HEROD UNDER ANTIPAS).

JOSEPHUS, Ant., XVIII, v, vii; Iud., I, xxviii, II, ix; also authorities mentioned under HEROD.

JOHN J. TIERNEY.

HEROIC ACT OF CHARITY.—A decree of the Sacred Congregation of Indulgences dated 18 Dec., 1885, and confirmed the following day by Leo XIII, says: "The Heroic Act of Charity in favour of the souls detained in purgatory consists in this, that a member of the Church militant (Christifidelis), either using a set formula or not, either freely or by an act of devotion, deposits for the souls in purgatory all the satisfactory works which he will perform during his lifetime, and also all the suffrages which may accrue to him after his death. Many Christians devoted to the B. V. Mary, acting on the advice of the Theatine Regular Cleric Father Garcia, binder of breviaries, have the custom of depositing the said means of remission or suffrages in the hands of the B. Virgin that she may distribute these favours to the souls in Purgatory according to her own merciful pleasure." Olidier lived at the beginning of the eighteenth century.

The Heroic Act is often called a vow, yet it partakes more of the nature of an offering made to God and to Mary, and it is also, unlike a vow, revocable at will. This point has been decided by the S. C. Indulg. 20 Feb., 1907, in answer to a question from Chicoutimi in Canada. A special vow never to revoke the Act would probably be binding, because its subject matter is an act of the personal will of which man can freely dispose, whereas he has not the disposal of his satisfactory works in favour of the departed; that depends on God; for man it is only a matter of pious desire, and only in this sense a vow. It always remains doubtful to what extent God accepts the obligation, and in certain instances the donor together lack the power of accepting it. The practice of the Heroic Act is based on the communion of saints, in virtue of which the good deeds of one member of Christ's body benefit all other members. Its meritouness results from the more intense charity (love of God and His suffering friends) which inspires it, and on which the intrinsic perfection of all our good deeds depends. Its heroism arises from the willingness it involves, one to submit oneself to the painful pains of purgatory for the love of one's neighbour, although there remains the reasonable hope that God in His goodness, and the painted souls in their gratitude, will not allow the punishment to be exacted to the full.

The Heroic Act has been enriched with numerous indulgences by Pope John XIII (1728), Pius VI (1788), and Pius IX (1852). Priests who make it receive the personal privilege of gaining a plenary indulgence for a soul of their choice each time they say Mass (see ALTAR, under Privilegio Altar). Laymen gain a similar indulgence each time they receive Holy Communion, also each Monday they hear Mass for the departed; in both cases the usual visit to a church and prayers for the intention of the pope are required.

J. WILHELM.

HEROIC VIRTUE.—The notion of heroism is derived from hero, originally a warrior, a demigod; hence it connotes a degree of bravery, fanatical distinction which places a man high above his fellows. St. Augustine first applied the pagan title of hero to the Christian martyrs; since then the custom has prevailed of bestowing it not only on martyrs, but on confessors whose virtues and good works greatly outdistance those on whom it was originally conferred. The Church, whose chapters on heroic virtue are classical, thus describes heroism: "In order to be heroic a Christian virtue must enable its owner to perform virtuous actions with uncommon promptitude, ease, and pleasure, from supernatural motives and without human reasoning, with self-abnegation and full control over his natural inclinations." An heroic virtue, then, is a habit of good conduct that has become a second nature, a new motive power stronger than all corresponding inborn inclinations, capable of rendering easy a series of acts each of which, for the ordinary man, would be beset with very great, if not insurmountable, difficulties.

Such a degree of virtue belongs only to souls already purified from all attachment to things worldly, and solidly anchored in the love of God. St. Thomas (I–II, Q. ix, a. 4) says: "Virtue consists in the following, voluntary w. of God, of such kind that something, even nothing, has its type [exemplar] in God. Thus the Divine mind itself is the type of prudence; God using all things to minister to His glory is the type of temperance, by which man subjects his lower appetites to reason; justice is typified by God's application of the distributive law to all men; will makes it manifest that virtue is of the type of fortitude. And, since it is man's nature to live in society, the four cardinal virtues are social [political] virtues, inasmuch as by them man rightly organizes his conduct in daily life. Man, however, must raise himself beyond his natural life unto a life Divine: 'Be you therefore perfect, as also your heavenly Father is perfect' (Matt., v, 48). It is, therefore, necessary to posit certain virtues midway between the social virtues, which are human, and the exemplary virtues, which are Divine. These intermediate virtues are of two degrees of perfection: the lesser in the soul still struggling upwards from a life of sin to a likeness with God—these are called purifying virtues [virtutes purgatoriae]; the greater in the souls which have already attained to the Divine likeness—these are called virtues of the purified soul [virtutes jam purgati animi]. In the lesser degree, prudence, moved by the contemplation of things Divine, and all the soul's thought unto God alone; temperance relinquishes, as far as nature allows, the things required for bodily wants; fortitude removes the fear of departing this life and facing the life beyond; justice approves of the aforesaid dispositions. In the higher perfection of souls already purified and firmly
HERODIAS WITH THE HEAD OF ST. JOHN THE BAPTIST
TITIAN, PALAZZO DORIA, ROME
united with God, prudence knows nothing but what it beholds in God; temperance ignores earthly desires; fortitude knows nothing of passions; justice is bound to the Divine mind by a perpetual compact to do as it does. This degree of perfection belongs to the blessed in heaven or to a few of the most perfect in this life. But few perfection and perfection are the heroes of virtue, the candidates for the honours of the altar, the saints on earth.

Together with the four cardinal virtues the Christian saint must be endowed with the three theological virtues, especially with Divine charity, the virtue which imparts, baptises, and养育es, as it were, all other virtues; which associates and unifies them into one powerful effort to participate in the Divine life. Some remarks on the "proofs of heroism" required in the process of beatification will serve to illustrate in detail the general principles exposed above.

As charity stands at the summit of all virtues, so faith stands at their foundation. For by faith God is first apprehended, and the soul lifted up to supernatural life. Faith is the secret of one's conscience; to the world it is made manifest by the good works in which it abides. "Faith without works is dead" (James, ii. 26). Such the profession of faith, strict observance of the Divine commands, prayer, filial devotion to the Church, the fear of God, the horror of sin, penance for sins committed, patience in adversity, etc. All or any of these attain the grade of heroism when practised with unflagging perseverance, during a long period of time, or under circumstances so trying that by them men of but ordinary perfection would be deterred from acting. Martyrs dying in torments for the Faith, missionaries spending their lives in propagating it, the humble poor who with infinite patience drag out their wretched existence, the will of God and to reap their reward hereafter, these are heroes of the Faith.

Hope is a firm trust that God will give us eternal life and all the means necessary to obtain it; it attains heroism when it amounts to unshakeable confidence and security in God's help throughout all the untoward events of life, when it is ready to forsaake and sacrifice all other goods in order to obtain the promised felicity of heaven. Such hope has its roots in a faith equally perfect. Abraham, the model of the faithful, is also the model of the hopeful "who against hope believed in hope ... and he was not weakened in faith, neither did he consider his own body now dead ... nor the dead womb of Sara" (Rom., iv, 18-22).

Charity inclines man to love God above all things with the love of friendship. The perfect friend of God says with St. Paul: "With Christ I am nailed to the cross. And I live, now not I; but Christ liveth in me" (Gal., ii, 19-20). For love means union. Its type in heaven is the Divine Trinity in Unity; its highest degree in God's creatures is the beatific vision, i.e. participation in God's life. On earth it is the fruitful mother of holiness, the one thing necessary, the one all-sufficient possession. It is extolled in I Cor., xiii, and in St. John's Gospel and Epistles; the beloved disciple and the fiery missionary of the cross are the best interpreters of the mystery of love revealed to them in the Heart of Jesus. With the commandment to love God above all things coupled another: "And the second is like to it: Thou shalt love thy neighbour as thyself." The commandment greater than these" (Mark, xii, 31). The likeness, or the linking of the two commandments, lies in this: that in our neighbour we love God's image and likeness, His adopted children and the heirs of His Kingdom. Hence, serving our neighbour is serving God. And the works of spiritual and temporal mercy performed in this world will decide our fate in the next: "Come, ye blessed of My Father, possess you the kingdom ... For I was hungry, and you gave me to eat ... Amen I say to you, as long as you did it to one of these my least brethren, you did it to me" (Matt., xxv, 34-40).

Justice, which gives every one his due, is the pivot on which turn the virtues of religion, piety, obedience, gratitude, truthfulness, friendship, and many more. Jesus sacrificing His life to give God His due, Abraam willing to sacrifice his son in obedience to God's will, these are acts of heroic justice.

Fortitude, which urges us on when difficulty stands in the way of our duty and is itself the heroic element in the practice of virtue; it reaches its apex when it overcomes obstacles which to ordinary virtue are insurmountable. Temperance, which restrains us when passions urge us to that is wrong, comprises being deportment, modesty, abstinence, chastity, sobriety, and others. Incarnations of heroic temperance: St. Joseph, St. John the Baptist.

In fine it should be remarked that almost every act of virtue proceeding from the Divine principle within us has in it the elements of all the virtues; only a deeper analysis views the same act under various aspects.

HERP (or HARPE, LAT. CITHARECUS, or ERF as in the old manuscripts), HENRY, a fifteenth century Franciscan of the Strict Obervance and a distinguished writer on mysticism, praised by Mabillon, Bona, etc. Only the last thirty years of his life are known to us. Both at Duren (Marcoduransus), at Erps near Duren, or at Erps-Querbes near Louvain, Herp appears as rector of the Brethren of the Common Life, first in 1445 at Delft in Holland, then at Gouda, "to the great good of his subjects". In 1450, on a pilgrimage to Rome, he took the habit of St. Francis at the Convent of Ara Coeli. Twenty years later we find him provincial of the Province of Cologne (1470-73), then guardian of the convent of Mechlin in Belgium, where he died in 1478. The Franciscan Martyrology of Arturus of Rouen gives him the title of Blessed. Of his works, only one was printed during his lifetime, "Speculum aureum de vita sancti Hieronymi" (Mechlin, 1474); it is a collection of 213 sermons on the Commandments for the use of preachers and confessors. Another collection of 222 sermons (Sermones de tempore, de sanctis, etc.) was printed in 1484, etc. Both often quote the Doctors of the Middle Ages, e.g. St. Thomas Aquinas, St. Hales, St. Bernard, etc., and were often reprinted.

The other works of Herp, of which some—still unpublished—are to be found in the libraries of Cologne, Brussels, etc., are devoted to mystical subjects. The principal of these is the "Theologica Mystica", written on Mount Alverno and published in full at Cologne in 1538 by the Carthusian Th. Loher, with a dedication to George Skotborg, Bishop of Lund. It
HERRAD was reprinted five times before 1611, and translated into French, German, etc. The whole work comprises three parts: “Solioliquum divini Amoris”, “Directorium Aureum contemplativorum”, “Paradisus contemplativorum”. The second part, the most famous, was written originally in Flemish (Spiegel der Voleomenheyt), printed in 1501, etc.; then, with several short treatises on various matters, it was translated into Latin under the title given above (Cologne, 1513, etc.), into Italian, Spanish, German, etc. The edition of the mystical theology, dedicated to St. Ignatius in 1556 by Loher, was censured by the Index (1550, 1580, 1583, etc.). Corrected editions followed with an “Introductio ad doctrinam” (Rome, 1585), an “Exercitii morales” (Paris, 1586), etc. It can be found, as well as in the “Index of Sotomayor” (1640), the opinions to be corrected. As a whole and in the chief divisions of his doctrine, Herp shows several points of contact with his compatriot John of Ruysbroeck; he has some beautiful passages on the love of God and of Christ. The Franciscan Chapter of Toledo in 1663 recommended his works as standard writings in mystic theology.

Herregouts.—There were three artists of the name of Herregouts, father, son, and grandson, of whom the chief was Hendrik, the son of David, and the father of Jan.

David Herregouts, historical painter; b. at Mechlin in 1603; d. at Ruremonde. He was a pupil of his cousin Salmier and a member of the corporation of painters in his own city in 1624. The latter part of his life he spent at Ruremonde, where he was, and died in 1647 a member of the Guild of St. Luke. One of his pictures is still preserved in the little town, but his chief work, “St. Joseph Awakened by an Angel”, is at Mechlin in the church of St. Catherine.

Hendrik, his son; b. at Mechlin in 1633; d. at Antwerp in 1674. When his father, Ruremonde, Hendrik went to Rome, to which city he became so attached that he added the name of Romain to his signature on certain of his pictures. We hear of him at Cologne in 1660, where he was married the following year. In 1664 he was admitted a member of the Guild of St. Luke at Antwerp and practised his art in that city. Two years afterwards he came back to Mechlin and was admitted into the guild there, remaining in his native place for some years. In 1658 he was once more in Antwerp, and his studio was full of pupils, one of them being Abraham Godyn. His best work, “The Last Judgment” is now to be seen at Bruges; his “Martysdom of St. Matthew” in the cathedral at Antwerp is a very fine picture, and in Brussels there are two important works, the chief of which is “St. Jerome in the Desert.” He was employed by the Corporation of Antwerp to design and eventually decorate a triumphal arch which was raised to celebrate the jubilee year of the Catholic Faith in the city, and for this work, which was executed in 1658, he was thanked and honoured by the citizens. His work is imposing, as the figures are noble and expressive, and the colouring admirable.

Jan, d. at Bruges, 1721. It is uncertain where Jan was born. Some authorities say his birth took place at Rome, others Turin. Of his early life we know nothing, the first date we have in connection with him being 1677, when he was admitted to the Guild of St. Luke at Antwerp. He eventually settled in Bruges, was a member of its guild, held many important positions in its Corporation, and was one of the founders of its Academy. It was there he died in 1721, and his best pictures are to be seen in the Academy, and in the churches of St. Anne and of the Carmelites. His portraits of his grandfather and of himself are admirable, and his chief picture in the Carmelites’ church is of the Blessed Virgin and saints kneeling before Christ. He practised engraving and also etching, his “St. Cecilia” being a notable work. He was an artist of distinct merit, and his colouring is particularly good.

HERRERA, Fernando de, Spanish lyric poet; b. 1537; d. 1597. The head of a school of lyric poets who gathered about him at Seville, Herrera was an avowed library of Strasbourg. There the miniser’s were copied by Engelhardt in 1818. The text was published by Straub and Keller, 1879-1899. Thus, although the original perished in the burning of the Library of Strasbourg during the siege of 1870, we can still form an estimate of the artistic and literary value of Herrad’s work.

Herrera, Fray, Hortus Deliciarum, folio ed. with plates (Strasbourg, 1890); Engelhardt, Herrad von Landsberg (Bütt- gart and Tübingen, 1819); Schmidt, Herrad de Landsberg (Strasbourg, 1892); Articles: in C. Geiser, Collectanea et Scriptores, X 239; Gazette d’archéologie, IX, 57; Congrès archéol. de France, XXXVI, 270, see chapter in Ehrlich, Woman under Mono- theism (Cambridge, 1896), 228 sqq.

William Turner.

HERRERA, Fernando de, Spanish lyric poet; b. 1537; d. 1597. The head of a school of lyric poets who gathered about him at Seville, Herrera was an avowed
disciple of Garcilasso de la Vega, whose form he per-
mfects and to whose expression he adds more pathos
and dignity. Although a cleric, having taken minor
orders, he rarely reflects in his verse the feelings of a
churchman. On the contrary, it is the martial note
that he sounds most loudly and most frequently, when
he is moved by one of Petrarch's sonnets on his
attachment—it should be remembered that he had
only minor orders, and had probably taken them only
that he might enjoy certain ecclesiastical benefices—
to Elodora, that is, Leonor de Milan, Condesa de
Gelves and wife of Alvaro de Portugal. The most
famous of his lyric compositions are those in which he
extols the prowess of Don John of Austria, as exhib-
ited in the suppression of the outbreak of the Moriscos
in the region of the Alpujarras and at the battle of
Lepeanto, and commemorates the death of Don Se-
bastian, King of Portugal, who perished with the
flower of the Portuguese nobility during a Quixotic
expedition against the tribes in Northern Africa.
These are classics of Spanish literature. That Her-
erra was not devoid of critical acumen is proved by
his prose "Anotaciones a las obras de Garcilaso de la
Vega", his poetical master. In the opinion of Tick-
nor, he deliberately undertook to create a new
directing influence in the language, deeming that the
language as written before his time lacked the full me-
Sure of dignity, sonority, and poetic planity that it
should have; but Ticknor has probably exaggerated
the endeavours of Herrera in this direction, in so far as
any conscious process is concerned. However the
case may be, it must be admitted that he achieved a
real beauty and majesty in the verse of Herrera, and
that his contemporaries were right in terming him "el
divino" ("el divino"). He himself published only part of
his verse, "Algunas obras" (Seville, 1562). His "Poe-
sias" are accessible in the "Biblioteca de autores
españoles" (XXVIII, 1925), and "el apunte sobre la
obra de Lepeanto" was edited critically by Morel-i-Fatio
(Paris, 1893).

Fernando de Herrera, Controversia suaen sucesion a las
obras de Garcilaso de la Vega, Poems incisivos (Seville, in publi-
cations of the Sociedad de bibliófilos andalucia); Bourgeois, Les
années de F. de H. in the Annales de la Faculté des Lettres de
Bordeaux (1891); Pottharst-Keiley, History of Spanish Li-
terature: Ticknor, History of Spanish Literature.

J. D. M. FORD.

HERRERA. (1) FRANCISCO (EL VIEJO, THE ELDER), a
Spanish painter, etcher, medalist, and architect; b. in
Seville, 1578; d. in Madrid, 1656. Luis Fernandez
was his teacher, but Herrera soon broke away from
the timid style and Italian traditions of Spanish paint-
ing of his day, and became the pioneer of that bold,
vigorous, effective, and natural style whose pre-
eminent exponent was Velasquez. Herrera was the
first to use long brushes, which may, in part, account
for his "modern" technique and dexterous brush-
work. Many authorities ascribe to him the foun-
dation of the Spanish School. His great talent brought
him many pupils, whom his passionate temper and
rough manners soon drove away. Velasquez, when
then a prodigy, at the age of six, was placed under this
great professor, and remained a year with him. Herrera,
who was an accomplished work in bronze, engraved
medals skilfully. This gave rise to the charge of counterfeiting, and he fled for sanctuary to the Jesuit
College, for which he painted "The Triumph of St.
Hernando" in 1621. In the following year he placed his Plate of the Plateresque, in which Philip IV saw it (1621) he immediately pardoned the painter. Herrera thereupon returned to Seville. His
ungoverned temper soon drove his son to Rome and
his daughter to a nunnery. Herrera's pictures are full
of energy, the drawing is sure, the figures stand out
in splendid relief. Many of his small easel pictures
represent fairs, dances, interiors of inns, and deal with
the intimate life of Spain. His large works are nearly
all religious. In Seville he painted a "St. Peter" for
the cathedral and a "Last Judgment" for the church of
San Bernardo, the latter being considered his mas-
terpiece. After executing many commissions in his
native town he removed to Madrid (1650), where he
won great renown. In the archiepiscopal palace are
four large canvases of which, "Mocking of the Holy
Rock", is celebrated for its dramatic qualities and
daring technique. In the cloister of the Merced Cal-
sada is a noteworthy series of paintings whose sub-
jects are drawn from the life of St. Ramon. He
painted much in fresco, in which medium his best
work is to be found; he was born on the vault of San
Bonaventura, but this, with all his other frescoes,
has disappeared. None of his architectural produc-
tions are mentioned, and there remain but a few of his
etchings, all of which were reproductions of his paint-
ings. One of his pictures, "St. Basil dictating his
doctrine", is in the Louvre, and another, "St. Mat-
thew", is in the Dresden Gallery. Herrera left two
sons, "el Rubio" (the ruddy) who died before he ful-
