APPARENTLY EXTINCT SINCE 1707; HEIGHT, 12,395 FEET; ASCENDED BY LARGE NUMBERS OF PILGRIMS
Normal Schools.—Each department is obliged to have at least one normal school. The course is four years long, containing 1,404,276 preparatory courses and courses of pedagogy may be added according to circumstances to the regular courses. The expenses of education are defrayed by the departments, but graduates are obliged to teach for eight years. Number of normal schools, 67; teaching staff, 1,549 drawn from amongst the following: boys, 14,176; girls, 4,752. Higher normal schools: for boys, 2; teachers, 212; students, 2,456; for girls, 1; teachers, 95; students, 858.

Special Schools.—Medicine and pharmacy, 10; statistics, law, political economy, 12; literature and religion, 19, 829. Total: schools, 50; professors, 1,537; students, 25,573.

Technical Schools, and Schools Preparatory thereto.—Schools of agriculture, 142; professors, 1,151; students, 17,390; preparatory schools, 3,785; professors, 1,162; students, 149,225. Fishery schools, 11; professors, 64; students, 811; preparatory schools, 103; professors, 48; students, 3,344. Schools of arts and crafts, 35; professors, 599; students, 6,308; supplementary schools, 155; professors, 240; students, 8,365. Schools of commerce, 70; professors, 1,087; students, 20,685; supplementary, 107; professors, 223; students, 7,452. Schools of artillery, 135; professors, 2,008; supplementary, 1; professor, 7; students, 27. Schools of apprenticeship or of foremen, 326; professors, 3402; students, 51,929. Total: schools, 4,804; professors, 8,106; students, 270,723. In 1899 the number of technical schools was 227; professors, 1245; students, 23,065. Miscellaneous schools, 2092; professors, 7619; students, 142,695.

Establishments Founded and Maintained by the Government.—Under the jurisdiction of the minister of public instruction are: the two universities of Tokio and Kyoto, the seven high schools, the two higher normal schools for boys, and that for girls. There are besides, one high school of agriculture and arboriculture (professors, 32; students, 244); five high schools of arts and crafts (professors, 139; students, 1502); four high schools of commerce (professors, 109; students, 2477); five high schools of medicine (professors, 116; students, 2693); one school of foreign languages, in which are taught English, French, German, Russian, Italian, Spanish, Chinese, Corean, Hindustani, Malay, and Mongolian (Japanese professors, 32; foreign, 12; students, 648); 1 school of fine arts (professors, 52; students, 440); 1 school of music (Japanese professors, 50; foreign, 9; students, 597); 1 school for deaf-mutes and the blind (professors, 20; students, 320); 4 schools of pedagogy (professors, 15; students, 87).

Under the Jurisdiction of the Imperial Household.—Schools for the nobility, 1 for boys (professors, 86; students, 331); 1 for girls (professors, 60; students, 618). Dependent on the minister of communications, 1 naval school of commerce (professors, 48; students, 495). Dependent on the ministry of war: one high school of war; one school of practical artillery and engineering; one military school; one central military public school at Tokio; five other public schools outside of Tokio; school for scouts; cavalry school; school of sharpshooting; commissariat school; school of military music (professors, 624; students, 4111). Dependent on the ministry of marine: high school of marine; naval school; school of mechanics; medical school; school of accountants; school of naval construction, etc. (professors, 213; students, 902). Total number of professors in schools under Government supervision, 2748; students, 32,879. In 1907 the expenditure for schools under the supervision of the departments and districts reached 44,855,568 yen. The number of libraries (1907) equaled 127, containing 1,449,716 volumes. Numbers were issued during the year, 28,319; journals and reviews, 1908. An academy (Gakushi-Kwai-in) was founded at Tokio by imperial decree in 1890. Placed under the jurisdiction of the minister of public instruction, it is composed of forty members, divided into two classes: Fifteen are elected by the general public, and fifteen are appointed by the emperor, the remaining twenty-five by the minister at the nomination of the former. They discuss the questions proposed by the minister of public instruction and give their advice. They meet once a month and treat scientific questions. The hall is open to the public.

Army.—From the beginning of the feudal system until its abolition (1192-1868), that is, for a period of nearly 700 years, military service was the exclusive privilege of the Samurai. This privilege was abolished after the Restoration. To-day every Japanese without distinction of caste is liable to be called upon to bear arms. Japan has adopted the European system for its armies. Conscription was inaugurated in 1872. The drawing of lots takes place at the age of twenty. The average annual number of recruits is 120,000 men; infantry, 68,000; cavalry, 3900; artillery, 7500; and dress guard (political and imperial guard). Sappers and miners, 2600; commissariat, 2000; railroad and telegraph corps, 700; train, 20,000. Adding to this those who are assigned to special services, we reach the figure of 120,000 men.

Exemptions.—A son whose father is sixty years of age is exempt from service, if the latter has no means of support. A repreive is granted to students who have a diploma from the secondary schools and to students who reside in a foreign country (except those who are in the Asiatic countries near Japan). The term of service may be shortened by a year of voluntary service, or it is necessary to complete a term of service with a diploma from the secondary schools. After their year of service the volunteers are passed into the reserves with the grade of non-commissioned officer. They are obliged to defray all the expenses of the barracks. Professors in the primary schools are bound to only six months' service, at the expiration of which they are passed into the territorial forces.

Organization.—The army is divided into the active army, army of reserve, and territorial army. The duration of service in the active army is two years; in the reserve, four and a half years; in the territorial army, ten years. The active army, in its peacetime form, was organized in 1908, necessitated a supplementary expenditure of 170,000,000 yen, to be assessed in ten years. The number of divisions during the Russo-Japanese war was raised from twelve to sixteen. At present there are eighteen, not counting the division of the imperial guard. In time of war Japan can put in the field an army of 1,000,000 men. Officers and officials affiliated with the active army: generals, 16; generals of divisions, 33; brigadier-generals, 96; colonels, 233; lieuten-colonels, 353; commandants, 1008; captains, 3428; lieutenants, 3976; sub-lieutenants, 3208; affiliated officers, 1712; total, 14,085; salaries, 9,402,778 yen. Councils of war are established in the army to judge the soldiers. Where a state of siege has been proclaimed their jurisdiction extends to all citizens without exception. There are eighteen of these, one to a division. Cases judged in 1907, 1908. To each division are attached a prison and a hospital. Soldiers committed to prison (1907), 2311; released, 2369. Sick persons cared for in the hospitals, 78,599; deaths, 357. In 1877 the constabulary (gendarmerie) was created according to the French system. It constitutes the police force of the armies of land and sea, and the functions of the minister of public instruction. The constabulary police. The constabulary wears a military uniform and carry a sword and pistol. The constabulary forms
eighteen companies, attached to the eighteen divisions of the army, and commanded by a brigadier-general. It numbers only 2,500 men. In 1907 it intervened in 2,082 cases, and assisted 66 sick or wounded persons.

Navy.—Under the government of the Tokugawa the lack of stimulation and the complete stagnation of the relations with the outside world caused the navy to be completely neglected. In 1871 a vessel presented by the King of Holland and some ships purchased abroad by the Government of the shogun and the daimios of Tosa and Satsuma constituted the imperial fleet. Of all the services organized under the present reign none has undergone such rapid development as that of the navy, as is shown by the following table:

<table>
<thead>
<tr>
<th>Year</th>

</table>

This list does not include the 77 torpedoes weighing 7258 tons. This prodigious development of the Japanese navy in recent years is due to the three projects of expansion voted successively by the Chambers, the first (1903) requiring an extraordinary expenditure of 116,000,000 yen; the second (1905), 173,000,000 yen; and the third (1907), 76,000,000 yen. There are five maritime prefectures: Yoko-Suka, Kure, Sasebo, Maizuru and Port Arthur; three naval stations, Takashiki, the Pescadores, and Ominato. The fleet is divided into three squadrons. On 31 March, 1898, it was composed as follows: armoured battleships, 15, tonnage varying from 10,960 to 19,900 tons; armoured cruisers of the first class, 13, from 7700 to 14,600 tons; armoured cruisers of the second class, 10, from 3700 to 6630 tons; armoured cruisers of the third class, 8, from 2439 to 5420 tons; armoured coast-defence boats, 12; armoured gunboats, 6; torpedo gunboats, 2; dispatch boats, 5; destroyers, 55, from 350 to 281 tons; torpedoes, 77; total tonnage, 7258 tons. The navy is recruited by conscription and volunteer service, more than half the naval forces being volunteers. The number of recruits varies greatly each year. In 1902 there were 4139; 1905, 5658; 1906, 5838; 1907, 5652. On 31 March, 1908, the naval forces were composed as follows:

There were more than 780 students; in all 63,773 men. But in 1895 the force was 17,140; in 1899, 28,710; in 1904, 45,999. In 1907 the courts-martial judged 756 cases. Seamen committed to prison, 730; released, 562. Marine hospitals, 5; sick persons cared for during the year, 31,098; deaths, 191.

Japanese Religions.—Shintō (literally, "way of the gods" (Kami)) is properly the religion of Japan, born on the very soil and without foreign admixture. It has neither dogmas, nor moral code, nor sacred books, and is summed up in a rather confused mixture of nature-worship and veneration of ancestors. Philosophical analysis discovers a basis of pantheism. In Shintō mythology first speaks of five gods called Koto-Usu. The first three are the creators of heaven and earth, and they are Ame-no-minaka-nushi, who existed immobile at the time of the Creation; Takami-musubi, and Kami-busubi, agents in the Creation. The other two, Umi-no-shirabii-Hikoji and Ame-no-Tokotachi, have no clearly determined rôle. After them some seven generations of heavenly spirits (Tenjin-shikichi-dai), namely, Kuni-Tokotachi, Kuni- Shikichi, Toyokuni, Tokuji, Eiken and Sugi, Ito-shinjii, Otoji, Oto-shinjii, Omoroji and Kosoikone; finally Izanagi and Izanami, the special creators of Japan and of a number of gods, gods of water, wind, trees, mountains, rivers, roads, thunder, rain, etc. Of Izanagi and Izanami were born Amaterasu, Inari, and Susanu-oo, and Amaterasu became the god of the sun, Inari became that of the moon and Susanu-oo, the god of the earth. Amaterasu sent her grandson, Ninigi-no-mikoto, to reign over Japan and he was the great-grandfather of Jimmu Tenno, the first emperor. From Amaterasu to Jimmu Tenno there are five generations called terrestrial spirits (Chijito-go-dai), who succeeded the seven generations of heavenly spirits.

Hence, according to Shintōist mythology, the emperor is not only the high-priest, he is the representative and direct descendant of divinity, and as such has a duty devolved upon him of celebrating the worship of the gods who are his ancestors and of offering to heaven as supreme mediator the prayers and sacrifices of the subjects whom he governs. At first only the temple was the palace of the emperor, and the ceremonies consisted chiefly of ablutions and purifications. The temple of Ise was the first erected outside the palace, and an imperial princess was charged with the sacred treasures there contained. The treasures, which were transmitted by Amaterasu to her descendants, were the Mirror, the Sword, and the precious Stone.

Shintōism remained in this state of simplicity until the introduction of Buddhism in 552. It was soon supplanted by the new religion, which brought with it more profound metaphysics, a more exalted moral code, and more solemn ceremonies. A few conservatives attempted to resist, but the bonzes won the day by what they called Rio-bu-Shinto, a system according to which Shintōism and Buddhism should form one and the same religion. Thenceforth, save for a few private ceremonies at the palace and in the great temples of Ise and Izumo, the two religions were but one. This state of things lasted until the eighteenth century, when the works of Kamo Mabuchi and several others brought about a reaction against the national religion against Buddhism and Confucianism, both foreign importations. The Restoration completed what had been begun, and since 1888 Shintōism and Buddhism have been entirely separate from each other.

Together with the gods of its mythology Shintōism adores several of the emperors and famous men of Japan. It also pays special honour to the spirits of soldiers who died for the imperial cause. In several towns temples called Shokon-eha (temples where souls are invoked) are erected in their honour. Shintōism is prided into ten branches, each with its own ceremonies. The moral code of all being reduced to the single principle: follow the inspiration of your own heart and obey the emperor. Number of temples (miya or jinja) 190,436; staff: administrative heads of sects, 12; heads or rectors of temples, 10,365; priests (preachers), 74,347; priestesses, 4428; seminary students (March, 1908), 259; boys, 250; girls, 9. Japanese especially professing Shintōism, about 19,000,000.

National Feasts.—(1) Shihōhain, a ceremony celebrated in the palace on the first day of the year, from January 1 to January 5 A.M. The emperor is in the center, and at the four cardinal points, venerates the tomb of his ancestors and prays for the prosperity of his reign and preservation from every calamity during the year.
with difficulty to the worship of other gods than those of Shintoism, the gods of the country. Then the bonzes evolved the theory that the tutelary deities of Japan were but temporary manifestations (gegen), of the Buddhist divinities, whose fatherland (honchi) was India, but who had appeared in Japan, leaving there traces (suijaku) of their passage. The result of this theory was the fusion of the two religions.

**Buddhist Feasts and Customs.**—Among all the sects are observed 3 April, the birthday of Shaka, the founder of Buddhism; 8 February, the day of his death; and the feast of the two equinoxes. Among the Montoshu: in November, Ho-on-Ko, feast of thanksgiving, and the death of Shinran Shonin, founder of the sect. Among the Hokkeishu, E-shi-ki, the death of Nichiren,

**Buddhism.**—Buddhism was introduced into Japan in A.D. 552. The King of Kudara (Corea) sent Buddhist statues and books as a present to the Emperor Kōmyō. Two years later, Tonei and Doshin, the two first bonzes Japan had seen, came from the same country. They found a powerful protector in Soga-no-Ina, who built in his own residence the first temple (Mukihara or Kogen-ji), but they also encountered determined adversaries who claimed that the introduction of a new religion would be an injury to the gods of Shinto, who were the fathers and protectors of the country. Thenceforth there were two parties, the strife between whom lasted for thirty-five years, to end in 587 with the triumph of Buddhism. Upheld by Prince Shotoku Taishi (572–621), the new doctrine made rapid progress. Shortly after his death various sects arose in succession, viz.: Jojitsu and Sanron (625), Hosso (653), Gusha (660), Kegon (739), and Ritsu (754). These are the six sects of the era of Nara. They were followed by the three sects of the era of Hei-ankyo (Kyoto); Tendai (806); Shingon (806); and Yusei-nembutsu (1124). Finally the period of Kamakura saw the rise of five others, viz.: Zen (1174), Zen (1192), Shin or Montoshu (1224), Nichiren or Hokkeishu (1253), and Ji (1275). Three of these sects, Jojitsu, Sanron, and Gusha, no longer exist. The others are divided into several branches. There are at present twelve principal sects and thirty-nine branches. Owing to the elevation of the bonzes and the spread of the doctrines of Rio-bu-Shinto, the Buddhist and Shintoist religions existed in harmony for centuries and ministers of both religions officiated alternately in the same temples. But at the Restoration, Buddhism, having ceased to be recognised as the national religion, was obliged to restore the Shintoist temples in its possession. Thenceforth the two religions, although more or less confused in practice, became officially strangers to each other, and Buddhism, despite efforts that have been made to restore its philosophical and theological teachings, is decadent in Japan. In 1898 there were in the whole empire 109,740 temples (tera); administrative heads of temples, 52; superiors of temples, 53,120; bonzes (preachers), 70,755; bonzesesses, 1199. Various employees: men, 45,594; women, 3404; seminary students, boys, 9289; girls, 449. Japanese especially professing Buddhism, and non-Japanese, 2,941.

Rio-bu-Shinto or Shinbutsu-kongo (fusion of Shintoism and Buddhism) practically ceasing to exist in 1868, this theory also has ceased to be believed. It consisted as follows: about the beginning of the ninth century Buddhism had made great progress in Japan; nevertheless the people resigned themselves to its resemblance to Shintoism, then the only religion

**Chinese Buddhism.**—Indirectly into Japan in 285, Confucianism was received without opposition owing to its resemblance to Shintoism, then the only religion founded by the sect. In every Japanese house is a domestic altar, called by the Buddhists Butouden, by the Shintoists Kamidana. Many wealthy houses have a special room or a small temple built apart within the enclosure. In the Butouden is placed by the Montoshu, the statue of Amida, by the Jodoshu that of Shaka, by the Hokkeishu, that of Nichiren, by the Shingonshu, that of Fudo (the Immovable). In the Kamidana the Shintoists place the statue of Amaterasu, to which they offer sacred wine (Miki), on the first, fifteenth, and eighteenth of each month. As flowers the Buddhists use the water-lily, the Shintoists, the branches of a pale-leaved tree called Sasaik. There are also in every house the I-hai, wooden tablets or shelves on which are written the posthumous names of the parents and ancestors of the family. A lamp is lit every day before this domestic altar, at least in the evening, frequently also in the morning. At Buddhist funerals is burned a fragrant wood (shikids), a foreign tree brought from India with the custom, and whose flower is a violent poison. On returning from the cemetery salt is sprinkled on the garments of those who took part in the ceremony, in order to purify them.

**Confucianism.**—Introduced into Japan in 285, Confucianism was received without opposition owing to its resemblance to Shintoism, then the only religion
practised. But after the introduction of Buddhism it fell into disfavour and did not recover until the seventeenth century when Ieyasu caused the Chinese classics to be printed for the first time. Henceforth, being taught by learned masters such as Fujiwara Seikwa, Hayashi Doeshun, etc., it became the code of the Samurai and exercised a profound influence in Japanese society. Due to the efforts of the Restoration the European system of public instruction was adopted, Confucianism was again abandoned, but as the Chinese classics had been the basis of teaching for 250 years. But it cannot be denied that the origin of a number of the ideas still in favour among the educated may be traced to this.

Bushido (Way of the Samurai, Knighthood).—The principles of loyalty and honour which the Samurai are obliged to obey are called Bushido. This code has borrowed from Buddhism stoical endurance, scorn of danger and death, from Shintoism the religious veneration of fatherland and sovereign, from Confucianism a certain literary and artistic culture and the social ethics called "the five relations of men among themselves" (go rin). From this compound results the code of the perfect knight, which may be summed up in three sayings: the Samurai has not two words; he does not yield; he gives his blood for duty. The Bushido was born with the nation, it developed by degrees as the warrior class grew in influence, and it reached its most complete expansion at the beginning of the Shogunate of the Tokugawa. Then a change took place; lüiterally illiterate and even glorying in his ignorance, the Samurai turned to literary culture and neglected the military calling; decadence followed, and at the Restoration he had lost his ancient prestige. To-day the Samurai no longer form a class apart, but the spirit and influence of the Bushido are more or less preserved among the people.

There are two kinds of cemeteries, those connected with the temples and the public cemeteries, which belong to the municipalities. In the first the "parishioners" of the temples have the right to be interred, in the second all persons without distinction of class or religion. The local administration grants permission to establish new cemeteries, to abolish or to change the old, etc., but their inspection and control belong to the police. Every cemetery must have a superintendent (Kannisha), without whose permission no burial may take place. It is forbidden to bury the dead anywhere save in the cemeteries. Formerly it was customary to enlist the services of a Shintoist or Buddhist priest (bonze or kannushi) for every burial, but this law was abolished in 1884, and the presence of a priest is no longer necessary. If he is summoned he should perform the ceremony according to the rite of his religion. The formalities to be fulfilled are: the obtaining of a physician's certificate proving the death, the presentation of this certificate to the civil official, and the securing from the police authorization for burial. Interment may only take place twenty-four hours after the death; the grave must be six feet deep. Those who neglect to bury a dead person or who profane the cemeteries are liable to fine and imprisonment. Cemeteries are exempt from taxation.

Cremation is permitted in Japan. It takes place in a special oven called a Kuwabara. Persons dying of a contagious disease must be cremated, others being left free. As regards cemeteries and burials, the Christian communities are subject to the same laws and enjoy the same advantages as the pagan sects. They are allowed to have a separate cemetery, which most of them have. As to foreigners, according to Article ii of the treaty concluded with the different powers, "Europeans dying in Japan enjoy the right to be buried according to their religious custom in properly located cemeteries, which should be established, in case they do not exist, and carefully maintained".

Public Assistance.—Regulations concerning public relief were promulgated in 1899. They stipulated that each department should organize a minimum fund of 550,000 yen for relief in case of accidents (floods, typhoons, earthquakes, etc.). The Government in turn pledged itself to give yearly for ten years a sum proportionate to that collected in the departments. Besides this a sum is reserved each year to assist the poor and fund a foundation. The total of the department fund equaled a sum of 34,884,370 yen. Number of persons assisted in 1907, 13,894; number of children helped, 2086; cost, 47,016 yen.

Benevolent Organizations.—The chief of these are: (1) the Tokio yoku-in (asylum for the insane and orphaned), founded in 1878; (2) The Tokio sugamo byo-in (insane asylum), founded in 1879; (3) the Tokio kaisei-byo-in (charity hospital), founded in 1182; sick persons treated outside by the hospital, 39,962; (4) Fukuden-kai Ikuj-i (orphanage), private establishment; orphans assisted, 150; (5) Tokio kankyu-in (house of reception), private establishment; founded as an insane asylum in 1885; children received, 69. These establishments, the only ones mentioned in the official statistics, must be added about 900 other charitable organizations (orphanages, asylums, leper hospitals, infant asylums, houses of refuge for those discharged from prison, etc.). Founded by private citizens, the Buddhist sects, Catholic and Protestant missions. The Catholic and Protestant missionaries have been the promoters of these benevolent works in Japan, the Buddhists having merely followed their example. The last-named have founded in all 15 orphanages, 3 schools, and 8 asylums, or hospitals, and Shinto priests have not a single benevolent work to their credit.

Red Cross Society.—In 1877, during the civil war of Satsuma, a society was founded in Japan on the model of the Red Cross under the name of Hakusha (philanthropic society). In 1886, Japan having given its adhesion to the convention of Geneva, the philanthropic society changed its name to that of the Red Cross of Japan (Nihon sekijusha). The Red Cross Society is under the patronage of the imperial household which gives to the work an annual contribution of 20,000 yen. Besides this the emperor gives 5000 yen to the society of Shinto priests (bonze or kannushi), 5000 yen to the society of a Buddhist priest (bonze or kannushi), and 5000 yen to the society of a Protestant priest (bonze or kannushi), for every burial, but this law was abolished in 1884, and the presence of a priest is no longer necessary. If he is summoned he should perform the ceremony according to the rite of his religion. The formalities to be fulfilled are: the obtaining of a physician's certificate proving the death, the presentation of this certificate to the civil official, and the securing from the police authorization for burial. Interment may only take place twenty-four hours after the death; the grave must be six feet deep. Those who neglect to bury a dead person or who profane the cemeteries are liable to fine and imprisonment. Cemeteries are exempt from taxation.

Christianity in Japan.—Catholicism.—On 15 Aug., 1549, St. Francis Xavier arrived in Japan, at the port of Kagoshima in Kyushu, with two companions and three neophytes. By the kindness of his preaching, his sanctity, and his miracles, he renewed the marvels of the Apostolic age. He preached at Hirado, Yamaguchi, Bungo, and Funai, but he was unable to see the emperor or enter Mikado (Kyoto). He set out for China on 20 November, 1551. In Japan there were then 3000 faithful, who would afterwards be able to evangelize. Ordinarily, when a prince was converted a portion of his subjects followed him. The celebrated Nobunaga (1565), the terrible enemy of the
bonzes, was kindly disposed towards the Christians and a friend of the missionaries. When he died (1582) there were 200,000 faithful and 250 churches. The three Christian princes of Bungo, Arima, and Omura sent an embassy to Europe, which set out on 20 Feb., 1582, reached Lisbon 10 May, 1584, and Rome, 23 March, 1585. The ambassadors witnessed the coronation of Sixtus V. After a stay in Rome, the abbot of the Sanpo temple credence, Hideyoshi, the successor of Nobunaga, at first favoured the Christians, but being prejudiced by the bonzes he later believed that the missionaries were spies and proscribed the Christian religion, but refrained from slaying the Christians (1587). The missionaries his highness released, but remained in prison ten years, where they baptised 65,000 persons (1587–97), making a total of 300,000 faithful and 134 religious. In 1593 three Spanish Franciscans having been sent as ambassadors by the King of Spain, they were well received by Hideyoshi. A Spanish vessel, the "San Felipe", having run aground within the province of Tosa, the captain was foolish enough to say that the missionaries had been sent to prepare for the conquest of the country. Thereupon Hideyoshi became afraid and angry, and on 9 December, 1596, nine religious were arrested and orders were given to draw up a list of all Jesuits and to cause them all to die for death. On 5 February, 1597, twenty-six were crucified at Nagasaki, and died preaching and singing to the end. After the death of Hideyoshi in 1598 peace reigned for fifteen years. Christians increased and the faith manifested itself in all manner of good works; 130 Jesuits, some secular priests, and about 30 religious of the Orders of St. Francis, St. Dominic, and St. Augustine worked side by side. In 1609 and 1613 Dutch and English Protestants arrived who were envious of the Spanish and Portuguese Catholics. In 1613 persecution recommenced. In that year the project of Date Masamune of the Province of Roku-yemon on an embassy to Pope Paul V and the King of Spain, the Franciscan Sotelo accompanying him. In the following year (1614) the edict of destruction was published by the new master of the empire, Ieyasu Tokugawa, the first shogun of that name. It was decreed that Catholicism be abolished, and this edict was renewed by Hidetada in 1616, the successor of Ieyasu. The result was horrible. In 1622 took place what was called the "great Martyrdom", fifty-two chosen Christians being martyred on the same day (2 Sept.) at Nagasaki, twenty-seven being decapitated, and five burnt. In 1616 Hakodate an event of this year, under Iemitsu, the persecution waxed still more furious and extended throughout the empire. The cruelty and refinement of the tortures are unparalleled even in the history of the early ages of the Church. The exact number of the victims is unknown. In 1637 in the province of Arima 37,000 Christians, driven to extremities, revolted, shut themselves up within the fortress of Shimabara, and were slain to the last one. In 1640 four Portuguese ambassadors who had gone from Macao to Nagasaki were called upon to apostatize, and when they refused they were put in a public pillory; the further punishment of their followers was sent back to Macao with this warning: "While the sun warms the earth let no Christian be so bold as to venture into Japan. Let this be known to all men. Though it were the King of Spain in person or the God of the Christians or the Great Shaka himself [Buddha], whatsoever shall disobey this prohibition will pay for it with his head." Thus Japan was closed, and remained so for two centuries, during which time the persecution did not cease. A price was set on the head of foreign and native Christians. Each year every Japanese was called upon to trample the cross; once a day but a third time annually to separate themselves from the Christian population and allow themselves to be confined as prisoners in Nagasaki on the Island of Deshima, in order to carry on business with the Japanese. In 1642 five Jesuits embarked by stealth for Japan where they died after frightful tortures. They were followed in 1643 by five others who met the same fate, and an attempt on the part of the Dominicans of the Philippines (1647) was not more fortunate. If other attempts were made to enter this tomb it is not known. The last known is that of the Abbé Sidotti and the Jesuits of Como, at the age of forty, landed unaccompanied on the Japanese coast. Delivered to the governor of Nagasaki by the Prince of Satsuma, he was first examined in that town, and then, at the command of the shogun, conducted to Yedo and condemned to perpetual imprisonment. "The mention of that cell is still called "Zaks" (Hill of the Christians). While there he baptised two of his jailors and died after five years of captivity (1715). The learned Arai Hakuseki, government interpreter in the examination of Sidotti, wrote his history ("Sei yo Kibun", European history) which was reprinted in the "Missions Catholiques", 1894. However, in spite of persecution some vague and infrequent signs seemed to indicate that all the Christians of Japan had not perished. The Corean missionaries several times attempted to assure themselves of this, but without success, for since 1538 it had been impossible to establish any contact with the Japanese on any side. Interest in the Japanese mission, however, continued to increase, and in April, 1844, Père Forcade was sent to Japan as a missionary. He stayed at Okinawa in the Riu-Kiu Islands with the Chinese cateur Ko as a companion. He was followed by Père Leturdu, Adnet, Père Mermet, Girard, and Moun- coc of the Société des Missions Etrangères of Paris. They waited for fourteen years, on the Riu-kui or at Hong-Kong, seeking by every means to gain entrance into Japan. During fourteen years of labour and sufferings they baptized two Japanese. Finally a treaty was signed between France and Japan on 13 September 1858, and ratified 22 September, 1859. The missionaries were free to reside in open ports and have there a church for the service of foreigners. Père Girard was provisionally named superior of the mission, and for the ratification of the treaty he went as interpreter to Yedo with the consul-general, de Bellecourt. The three ports of Hakodate, Kanagawa-Yokohama, and Nagasaki were soon occupied. The labour in these places was difficult and sojourn there dangerous, for prejudice against foreigners and Christians had not disappeared. Père Mermet built a house and church at Hakodate and the others did the same at Nagasaki. At first they taught French in order to make friends and prepare for the future. In the new church at Nagasaki on 17 March, 1865, occurred an ever-memorable event, when fifteen Christians made themselves known to Père Petitjean, assuring him that there were a great many others, about 50,000 in all being known. It is easy to imagine the joy which greeted this discovery after more than two centuries of waiting and patience. There were three marks by which these descendants of martyrs recognized the new missionaries as the successors of their ancient fathers: the face of the Blessed Virgin, and the celibacy of the clergy. In the following year (1866) Père Petitjean was named Vicar Apostolic of Japan. The extreme ardour of the Christians attracted attention and aroused the old hatred. In July, 1867, persecution recommenced; 40,000 faithful of Urakami near Nagasaki were exiled to various provinces. The same proscription was extended to other towns; everywhere the choice was apostasy or exile, and the greater number courageously confessed their faith. There was no bloodshed, but the trials were severe. The French missionists continued their labours. During this time they continued to labour in the seaports. In March, 1873, while the Japanese embassy was travelling through Europe, the exiles were re-
At present they have an orphanage and three schools, one of them at Shizuoka, for the middle classes, and a course in foreign languages and arts for the higher classes, with 180 pupils. In 1877 came the Sisters of the Infant Jesus of Chauffailles. They have orphanages and private schools at Osaki, Kobe, and Sapporo. In 1886, of the 43,531 inhabitants of Hakodate, Tokio, Sendai, Morioka, and Yatsushiro, with more than 800 pupils.

In 1888 the Marianist Fathers established themselves in Tokio. Their work was slow and laborious, but uninterrupted. They have at present a primary and secondary school with 902 pupils, of whom 71 are Catholic and 29 catechumens; and a foreign language course for adults with 100 pupils. Of these 902 pupils, 149 are the sons of generals, admirals, superior officers, ambassadors, ministers, consuls, deputies, senators. There are 19 European teachers and 26 Japanese. Five Marianist Fathers conduct courses at the university, the school for nobles, the school of manœuvres, the school of cadets, and that of the military intendance. They have besides at Nagasaki a commercial institute with 186 pupils; at Osaka (1898) a commercial school, with 498 pupils; at Yokohama (1902) a higher primary school, with commercial courses for foreigners or Eurasians of all nationalities, with 120 pupils. In all these schools student and graduate societies for piety, zeal, friendship, sport, etc., are flourishing; and the peasant festivals by which they raise money are regularly attended by people from among the ancient Christians of Kiussa; a house for this purpose was opened in April, 1910, at Urakami.

In 1896 Trappists from four different nationalities came to Hokkaido. Within twelve years, despite difficulties of all sorts, of a total of about 1000 acres, comprising manœuvres, vineyards and ravines, they had cleared and made valuable about 620 acres and formed a Christian colony of more than 100 persons.

The Trappistines came from France in 1888. Their start was painful. But they now have no difficulty in securing recruits from among the ancient Christians of Nagasaki. They are engaged in the cheese industry, and development, at first despairing of, has been rapid.

In 1905 the whole of the Island of Shikoku was given to the Spanish Dominicans. This is the fifth ecclesiastical division of Japan, with 300 Christians.

The Franciscans returned in 1906. They are at Sapporo and Hakodate. There are now 1800 baptized, 2 Canadians, an Englishman, and a Frenchman, engaged in teaching languages and in the ministry.

The Fathers of the Divine Word of Steyel came in 1907. They consist of seven Germans and one Austrian. They teach German, English, French, and Chinese, and preach the Gospel.

On 1 January, 1908, the Religious of the Sacred Heart, 12 in number, English, Belgian, and French, opened a house for higher education at Tokio; on 1 July the Servants of the Holy Ghost, 5 in number, from Germany and Austria came to Aikita, where they have a kindergarten, a school of dressmaking, and one of French and German languages. On 1 September 7 Franciscan Sisters from France, Mexico, and Italy came to Sapporo, where they established sewing and embroidery classes, a school of housekeeping, and a dispensary. Sisters of the same congregation care for the lepers at Kumeato. Finally on 17 October three Jesuit Fathers, English, German, and French, established themselves at Tokio for higher education and journalism. Thus the Catholic Church, one in faith, with its religious bodies of every country and name, has in Japan a perfect universal character.

Protestantism.—Protestantism appeared in Japan in 1859 at the opening up of the country. The first arrivals were the American Episcopalians, the best-known of whom was Channing Moore Williams.
Shortly afterwards came the Presbyterians; James Curtis Hepburn, followed by Mr. Werbeck (1861) and Mr. Thompson (1863). They halted first at Yokohama. Their religious reunions were called “prayer-meetings” (Kito-kuwai). The first Japanese baptism took place in 1864. Protestant missionaries were also at Nagasaki prior to the discovery of the old Christians (1615). The Christians of Urakami addressed themselves before going to the Catholic Church. The first Japanese Protestant Church was organized in 1872, after the last persecution, and inaugurated in 1875. Until that time only ten baptisms had been administered. During these early years the work was almost impossible, but the time of the missionaries was chiefly employed in the translation of the Holy Scriptures. That of the New Testament was completed in 1880, and that of the Old Testament in 1887. A number of them were also employed in teaching either in the schools founded by themselves or as professors in the Japanese schools. Their aim was to attack the pagan error at its very root by means of instruction, and also to have a right to live in the interior of the country, which was hitherto forbidden to foreigners. In 1876 a kind of university called Doshisha was founded at Kyoto, the mark being supervised by several American missions. The intention was to form Christians who should be solidly instructed in their religion and men capable of embracing any career. This celebrated school was very prosperous under the rector, Nijima Jo; it had as many as 1500 students, but, having been declared independent several years since, has lost much of its importance.

An event of considerable importance in 1877 was the union of the hitherto divided forces of the American and Scotch Presbyterians; the Dutch Reformed Mission, the Presbyterian Mission, and the Scotch Presbyterian Mission of the Japanese, organized formerly the United Church of Christ in Japan (Nippon Cristo Ichi Kyokoku). They were afterwards joined by the German Reformed Mission (1886), the South Presbyterian Mission (1887), and the Cumberland Presbyterian Mission (1890). In a General Assembly held at Tokio in 1891 the Articles of Faith and the constitution of the new church were drawn up. Its new name was Nihon Cristo Kyokoku (Church of Christ in Japan). The chief Protestant college at Tokio belongs to this United Church, and instruction is here given according to the spirit of Protestant Christian religion and science.

During the period of religious tolerance the missionaries flocked to Japan and baptisms multiplied rapidly. The desire to learn English attracted to them many young Japanese. In December, 1889, the total number of Japanese converted to Protestantism was 31,181; foreign missionaries, 527; native ordained ministers, 135. There were 274 churches, more than half of which were self-supporting. The contributions of Japanese Christians for 1889 amounted to 53,503 yen. Several religious associations, especially that of Christian Youth, were flourishing.

In 1889 there were included the Episcopal Church of America, governed for more than thirty years by Bishop Williams, and the Established Church of England, whose first bishop in Japan was Dr. Poole (1883). These two churches have agreed to work in concert and the constitution uniting them was drawn up in 1888. There is in existence now the only national church under the name Nihon Sci-Ko-Kuwei (the Holy Catholic Church of Japan). Hierarchyically constituted, it has divided all Japan, including Formosa, into six districts; it numbers 13,384 baptized Christians; 228 foreign missionaries, clerics or laymen or women; and 266 Japanese assistants.

The following is the number and relative importance of the other Protestant missions of all denominations at present in Japan:

These are the chief denominations. The total number of missionaries given by Protestant statistics for 1908 is 789 foreigners, including women, and 1303 Japanese, ordained or not, men or women. The number of practical church members is 57,830; not practical, 10,554; churches, 408; young men in the schools, 3604; young women, 5228; Sunday schools, 1066, with 84,160 children; publishing houses, 7; volumes issued during the year, 1,974,851. The property of the different missions, churches, schools, etc., is valued at 3,536,315 yen. Contributions of Christians for 1907 equaled 274,608 yen, and the expenditure for the Japanese churches and the work of evangelization amounted to 448,878 yen, not including the salaries of the missionaries and their expenses. In the above are not included the Unitarians, who mingle with all denominations; the Independent Christians, who are not attached to any church; the Methodist Episcopalians, who have a Japanese bishop, the Rev. Honda; several Japanese neo-Christian sects who are wholly independent either in government or in doctrine. They are eclectic, who aim to adapt Christianity to the ideas and spirit of Japan, and thus to found a new and special national religion. Up to the present time Protestantism in Japan has been chiefly American, but now it seems about to become Japanese. According as the Japanese churches become self-supporting, their tendency is to free themselves from the authority of foreigners. There is an evolution in religious ideas; many Christian ideas have passed into the spirit of Japan, and many Christian works have been imitated by them, but faith in even the fundamental dogmas shows a tendency to disappear.

Russian Mission.—The Russian Mission, or Orthodox Church of Russia in Japan, dates from 1861. A hospital had previously been built at Hakodate for Russians and Japanese. A Russian monk, the Rev. Nicolai, was attached to it as chaplain with a church near the hospital. The hospital having been destroyed by fire, the church remained, and the Rev. Nikolai served as a missionary at Hakodate, where he baptized a number of Japanese; this was the beginning. In 1870 the Russian minister to Japan obtained from the Jap-
JAPAN

Japanese Government the grant of a special territory as a branch of the Russian occupation, which territory was located at Surugadai in the very centre of Tokio and one of the most advantageous sites of the capital. Here Father Nicolai established his residence and the centre of the Orthodox Church. He began by training well-instructed men and native assistants, for which purpose he had an ordinary college and a school of philosophy and theology; later on he also had a special school for young women. He preached his religion by means of carefully trained catechists and priests. Since 1881 he has also had a religious review, published twice monthly, and a publication committee installed in his house has edited all the most necessary books. In 1886 Father Nicolai was consecrated bishop in Russia and in 1890 he completed the erection of his cathedral, a truly magnificent monument, one of the sights of the capital.

Bishop Nicolai enjoys great personal esteem; for the most part alone, he has founded and governed by himself everything pertaining to his mission. During the Russo-Japanese war the situation was very delicate, but the Christians, at least the greater number of them, did not abandon him. Even during this time he continued all his undertakings unmolested, his house being guarded without by Japanese soldiers. Previously he received from the Holy Synod 90,000 yen yearly, but since the Russo-Japanese war, these and other resources from Russia have greatly diminished, while on the other hand the price of everything in Japan has increased. The bishop was therefore compelled to diminish also his expenses, to dispose a part of his staff, and to exhort the Christians to contribute more generously to the support of their Church.

But after the victories of the Japanese over the Russian armies it is not easy to conceive of even Japanese, though Christians, as members of a church hitherto supported and protected by the Russian Government. That is why the leaders among these Christians, after having agreed among themselves, declared to "Archbishop" Nicolai their intention of being supported entirely by themselves and of becoming independent of Russia. And as Russia has its national church they wished to have also their Japanese National Church (June, 1900). Little has been written concerning the work of the Russians in Japan; even in Russia almost nothing has been published. According to one Protestant reckoning, the Orthodox Church numbers 30-166 baptized Christians; according to another, only 13,000 (the last figure perhaps denounces those who are practical). There are 57 native priests and 129 catechists. Expenses for church and evangelization in 1907 amounted to 55,279 yen; contributions of Christians, 10,711 yen. Churches or places of preaching.

265. Among the Russians, as among Protestants, and, in fact, everywhere throughout Japan, the tendency of mind is towards independence.

François Ligneul.

Laws Concerning Religion and Schools.—(1) According to the Constitution of the empire every Japanese is free to believe and to profess the religion of his choice, provided he does not disturb public order, and that he observes the other laws of the country. Religious manifestations and assemblies, ordinary or extraordinary are permitted, provided the police are informed and that all disorder be avoided. In the national ceremonies which Christians and pagans mingle, practical difficulties sometimes arise which are inevitable because of the mixture of religions. Local differences also occur, though somewhat rarely, owing to popular prejudice or the dispositions of a few, but in principle and before the law all religions are equal.

(2) Any Japanese or foreigner is free to found a school, provided he observes the laws and regulations laid down by the Japanese Board of Education concerning hygiene, qualifications of teachers, matter to be taught, etc. There are official schools for popular education, such as the primary and middle or high schools for boys and girls (shogakkō, chūgakkō, and Kōtō-shōgakkō), and non-official or private schools, which may also be primary or others at choice. But the diplomas issued by private schools have no official value, at least no value equal to that of schools which are formally recognized by the ministers of public instruction. A school for which this recognition is desired must conform to the same regulations and control as the government schools and be in no way inferior to them. Public inspection regularly takes place only in official or recognized schools.

(3) In the so-called schools of "popular education", which are official or recognized, no religion is taught during hours of class. Each school may profess its own. However, popular instruction in Japan is not atheistic; it gives as the basis for private and social morality primitive history, Japanese mythology, worship of all things to the gods or ancestors of the country. But higher education in general inclines strongly towards materialism.

(4) For the possession and administration of their goods, churches and schools may, if they so desire, confide themselves to be represented, and as such possess movable and immovable property. On this point Christian communities or establishments are subject to the same laws as the others. Each juridical person is represented by a responsible council who sends to the Government an inventory of the goods, the annual accounts of administration, the amount of purchases or sales, the condition of the staff, if it be a mission, the number of priests and faithful, if a school, that of masters and students, the precise location of churches and residences, the name of the titulars, and their changes, if there are any. Churches, benevolent foundations, etc., not on the ministry of the interior; schools, on the ministry of public instruction. The aim of this legislation with these regulations is to place the juridical persons under the protection of the law.

Taxes.—Schools pay no taxes. Churches and all houses serving as residences and those attached to these churches (priest's house, that of the catechists, that of the servants, etc.) are also exempt from taxation. They enjoy all the privileges granted to the pagan temples; houses of revenue, if there are any, are subject to the common law and pay the tax.

Days of Rest.—Schools, government employees, and bank employees are free from Saturday (noon) until Monday. This custom has been introduced since the
coming of the foreigners, but has not yet been adopted among the people. Labourers work on Sunday, their day being Saturdays and first night of the month.

History.—Ethnology.—Much obscurity surrounds the origin of the Japanese people. The primitive population, besides being very sparse, appears to have belonged wholly to the people called Ainos. Beyond a doubt these came from the Asiatic continent by way of the Northwest Passage and fifteen years after the mingrant more powerful than themselves who came from the South. The best of these Ainos seem to have accepted the civilization of their masters and become united with them, and from the fusion of these two races are descended the Japanese of to-day. The most reliable estimates of the so-called Ainu number in the northern and in the end abandoned the Great Island, confining themselves in Yezo (Hokkaido) and Sakhalin, where they show a tendency to decrease and disappear. They are small and strong, with long hair and beards. Their language is quite different from that of the Japanese. Their garments, which are shorter than those of the Japanese, are made of the bark of trees. In general, they are mild-natured and simple-minded. They live by the chase and fishing, making use of the harpoon to catch seals, and slaying bears with stakes and poisoned arrows. They adore the deities of the country that they believe to be his son. Each year they sacrifice a bear with great solemnity. They believe also in good and evil geniuses and worship several of the divinities and personages of Japan.

General Division.—The history of Japan is divided naturally into three chief periods. The first (autocratic period), which extends from the beginning to the shogunate of Kamakura, embraces eighteen centuries (660 b.c.—A.D. 1192), during which time the authority was in the bands of the emperors. The second begins with the shogunate of the Minamoto (1192), and ends with that of the Ashikaga (1338), and is the period of the family feudalism. Lastly, the third, beginning with the Imperial Restoration, witnessed Japan's complete modification of her secular institutions, the Europeanization of her administration, and saw the country take her place among the great nations of the world.

Auroral Period (660 b.c.—A.D. 794)—According to Japanese tradition, in the seventh century b.c., a tribe, probably of Malay origin, which had landed and established itself at Kiusiu, advanced towards the north, and after some years of warfare chose the region of Yamato as a place to settle. Hasamu-no-mikoto, the first among the Kofun, was the first emperor of Japan (Jimmu Tenno). His enthronization, assigned to 660 b.c., is considered as the foundation of the empire, and the beginning of a dynasty which was to reign for twenty-five centuries.

After a gap of 600 years in the national annals we find a rough sort of civilization during the reigns of Sujin (97—30 b.c.) and Suinin (29 b.c.—A.D. 70). Then comes the famous legend of the hero Yamatotakeru (131—190). His son merely ascended the throne (192—200). His widow, the Empress Jingo, ruled after him. The Japanese chronicles attribute to her the conquest of three small kingdoms which lay south of Corea. She was succeeded by her fourth son, Ojin (201—310). During his reign two Corean scholars, Ajiki and Wani, came to Japan, bringing with them Chinese literature and Confucianism (285). Ojin's son, Ninoku, governed for eighty-seven years (313—399). The whole country was at peace, but after him bloody scenes were multiplied in the imperial family until direct descendent were wiped out. A branch laterally descended from Ojin ascended the throne. Under the fourth sovereign of this branch (Kimmee, 532) Buddhism was brought to Japan by monks from Corea. The introduction of Buddhism brought about radical changes in ideas and customs. Prince Shotoku (573—621) favoured its progress, but it was the Emperor Kotoku (645—54), who, by his famous reform of the Tenno era, accomplished the greatest public and religious revolution which transformed Japan. Everything was then modelled on the Chinese form of government, and save for a few modifications this system remained in force until the Restoration (1868). In the following century the Empress Gemmei (708—14) transferred the capital to Nagaokakyo, it remained for seven-five years (708—785). The fiftieth emperor, Kwammu (782—805), built the city of Kyoto (794), which was the residence of the court until the imperial Restoration. The Fujiwara then became powerful. They exercised the regency (sessho) during the minority and, after that, ruled as princes. The ninth emperor, Kwampaku, continued to govern even after he had attained his majority. However, the effeminate nobles of the palace neglected the career of arms and gave themselves up to frivolous pastimes. Because of this decadence of the imperial authority frequent revolts took place which the court was powerless to repress, and for this purpose called on military clans. Their power became more and more formidable, two families especially, the Taira and the Minamoto, acquiring great influence. Both wished to secure the preponderance of power, and for thirty-five years their rivalry was intense. Finally in 1185, the Minamoto overcame and completely annihilated their adversaries (1185). The victorious Minamoto, Yoritomo, then raised to the throne a four-year-old child and assumed the title of Sei-i Taishogun. A new era had begun in the history of Japan; feudalism was inaugurated.

Age of Feudalism.—It is subdivided into three parts: the Kamakura period (1192—1338); the Ashikaga period (1338—1573); and the Tokugawa period (1603—1868).

Kamakura Period.—Having been named Shogun, Yoritomo installed himself at Kamakura, which he made his capital. After this he undertook the administrative reorganization, which was to concentrate all authority in his hands. Unfortunately for his plans, he died before this was accomplished (1199). His two sons, Yorio and Sanetomo, allowed the power to pass into the hands of their mother's clan, that of the Hojo. The last who were descended from the Taira, dared not assume the shogunal dignity, but they succeeded under the title of Shukken (regents) in retaining the power for a century which was the most prosperous in the history of Japan. About this time the only invasion with which Japan had to contend, that of the Mongols, was frustrated through the energy of Hojo Tokimune, and by a providential storm which destroyed the enemy's fleet (1281). However, decadence manifested itself among the Hojo, family dissensions increased, weakening the usurped authority and preparing the way for a restoration of the imperial power. The Emperor Go Daigo (1319—39) was the instrument of this work of restoration. Assisted by faithful followers he began the struggle, and in less than two years the supremacy of Kamakura was at an end (1333). But rivalries arose among the generals. The clan of the Ashikaga, descended from the Minamoto, rose in revolt, its head, Takuaji, assumed the title of shogun, raised to the throne an emperor of his own choosing, and thus founded a new dynasty of shoguns which retained its power for more than two centuries.

Ashikaga Period (1338—1573).—The dethroned emperor defended himself courageously. His son and grandsons continued the struggle, and for more than fifty-six years was seen the singular phenomenon of two emperors at one time. In 1392 a compromise was effected between the rival powers which put an end to the scheme. The first Ashikaga shogun kept within reasonable limits their warrior spirit, developed by many years of war, but their weaker
successors passed all bounds. From the civil war of the era of Onin (1467) the troubles never ceased, and for a century the empire was a prey to the horrors of intestinal strife. The shoguns were henceforth no more than toys in the hands of their chief feudatories. When the shogunate of the Ashikagas was on the verge of collapse, the last of this line, Oda Nobunaga, came into possession of his inheritance. It was about this time, during the reign of Go-Nara-tenno (1527-1557), that Europeans appeared for the first time in Japan. The honorific title of emperor was first to be permanently vested in the country was reserved for a Portuguese named Fernão Mendes Pinto (1542). Seven years later, 15 August, 1549, St. Francis Xavier landed at the port of Kagoshima.

Man of genius as he was, Nobunaga conceived the project of concentrating in the hands of a single master the power which the daimio disputed to the injury of the nation. Having defeated the most turbulent and subjugated the others to his will, he deposed the last Ashikaga shogun and seized the reins of government, but he was treacherously slain by a vassal who owed everything to him, and death marked his work prematurely. The succession fell to a soldier of fortune named Hideyoshi, who succeeded in removing the sons of his former master. Being incapable of aspiring to the dignity of shogun, he assumed the highest of the titles of the civil hierarchy, that of Kwampaku. Later, in 1592, he took the title of Taiko (Sovereign Lord), under which name he is known in history. Blindly by ambition, he conceived the project of taking possession of Corea, but despite some successes, this campaign ended in disaster. Hideyoshi did not long survive his failure; he died in 1598. Before his death he had charged his chief daimio with the government of the domain. His son Hideyori was his heir. Among the five there was one who could not be content with second rank. This was Tokugawa Ieyasu (1543-1616), a descendant of the Minamoto. After the death of Hideyoshi he withdrew from his colleagues and made war against them. The famous victory which he won in the plain of Sekigahara assured him a supremacy which his family retained for two centuries and a half. Three years after his triumph Ieyasu received the title of shogun (1603).

Tokugawa Period (1603-1868).—Two years after this Ieyasu transmitted the shogunate to his son, who was the first shogun (Shogun), and who witnessed the annihilation at Osaka (1615) of the descendants of Hideyoshi. After a period of great troubles Ieyasu inaugurated a powerful feudal regime, and gave to Japan a political and social constitution which was upheld almost till 1868. According to this constitution the emperor was nominally master of all the territory, even the shogun asking investiture of him. But this investiture was a mere fiction. The office of the shogun being hereditary, the titular possessed effective power, and disposed at will of lands and even of the posts of the emperor’s Court. Socially Japan was divided into eight hereditary and closed classes: the kuge (court nobles), daimio, hatamoto, samurais, labourers, artisans, merchants, etc. (a kind of pariah). Only the first four, the so-called privileged classes, had the right to bear arms. Before dying Ieyasu had assured the power to his family. His immediate successor, Ietsugu (1605-22), continued his work and made still heavier the iron yoke which he had imposed on his country. Hidetada forbad every Japanese under most severe penalties to leave his native land, and it was he who discontinued all intercourse with foreigners, except the Dutch, the China trade being the only one to which the country was allowed to partly commerce, forbade the construction of boats which would allow of long trips (1636), caused to be put to death ambassadors who came to Macao to request liberty of traffic (1640), restricted to the Island of Deshima (Nagasaki) the Dutch who were authorized to maintain commercial relations with Japanese, and passed the law which obliged the daimio to reside part of the time at Yedo and part on their estates, when they were to leave their wives and children at Yedo. From the victory of Otama at the battle of Mission in 1565 the shogun, Ieyasu, Ienobu, Ietaugu, Yoshimune, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsugu, Ietsu
lowed almost immediately by that of Emperor Komei (13 Feb., 1867). Hitogetsubashi succeeded Iemochi, and took the name of Keiki. He was the fifteenth and last Tokugawa shogun. Dismayed by the task which confronted him, Keiki gave in his resignation, 15 October, 1867, and the shogunate was suppressed 8 January, 1868. The partisans of the shogun revolted and wished to restore his authority, but their troops were contested by the forces of the imperial army. After a brilliant defence Enomoto capitulated at Hakodate, 27 July, 1869. This was the end of the civil war. The imperial restoration was an accomplished fact.

Imperial Restoration.—On his accession to the throne the emperor transferred the seat of his government to Yedo, which he renamed Tokio (capital of the East) and became the capital of the empire. The whole governmental system was completely changed. Even as formerly the Japanese had copied China, so now they set themselves to imitate Europe. Foreign specialists, engineers, soldiers, seamen, professors, priests, business men, bankers, etc., were summoned, and thanks to their co-operation all branches of service received an organisation similar to that established among European nations. The chief events of this period may be summed up as follows: 1868, abolition of the shogunate and restoration of the imperial authority; 1869, Yedo becomes the capital of the empire, under the name of Tokio; end of the resistance of the partisans of the shogun; 1871, abolition of the shasimo and division of Japan into departments; 1872, law establishing conscription; first national exposition at Tokio; 1873, adoption of the Gregorian calendar; abolition of the edicts of persecution against Christianity; creation of primary schools; 1874, insurrection of Saga; Formosa expedition; 1875, Japan cedes to Russia its rights over the Island of Sakhalin (Kurafuto) in exchange for the Kurile or Kourile Islands (Chishima); 1876, treaty with Corea; Sakuraidon forbidden to carry two swords; riots of Kumamoto (Higo) and at Hagi (Nagato); 1877, insurrection of Satsuma; Japan's entrance into the Universal Postal Union; 1879, annexation of the Riu-kiu Islands; adhesion of Japan to International Telegraphic Union; 1880, creation of provincial assemblies; 1881, promise of a constitution for 1890; organisation of political parties; 1883, first tramways; creation of an official journal (Kyoiku); 1884, creation of the five titles of nobility, viz. Ko, Ke, Haku, Shi, Dan (duke, marquess, count, viscount, baron); 1885, establishment of the council of ministers (Naikaku); foundation of the navigation company, Yosen Kiwaishi; Treaty of Tien-tsin with China; 1888, creation of privy council (sumitsu); foundation of the Constitution; prohibition of duelling; 1890, first session of Parliament; foundation of an academy (Tokio Gakushukai-in); 1891, plot of Tsuda Sanzo against the Caresvitch Nicholas III; 1894, war with China; 1895, Treaty of Shimonoeshi, 18 April, ratified at Che-fu, 8 May; intervention of Russia, France, and Germany; withdrawal from Liao-tung peninsula; China cedes Formosa and 700.—The only work composed during this period is the "Kyujiki" (Annals of Antiquity), which has been lost.

Nara Period (710–784).—The chief works which appeared during this period are: the "Kojiki" (712), record of ancient matters; "Nihoiki" (Chronicles of Japan), stories and legends of the early times; "Man'yoshu" (collection of a myriad. leaves), a collection of ancient poems, composed about 750; it contains more than 4000 pieces, the greater number being tanka (poems of 31 syllables); held in great esteem by connoisseurs, it constitutes at present a valuable source of philological, historical, and archaeological information.

Classic Period (Hei-an, 800–1186).—This period is the golden age of Japanese literature. A remarkable fact is that the two greatest works were written by women; they were "Genji monogatari", composed in the tenth century by Murasaki Shikibu, maid of honour at the court, and "makura no soshi" (Tales of a Vigil), a classical work in twelve volumes, composed by Sei Shonagon, a lady of the imperial court. After these two works the most celebrated was "Kokinshu" (a collection of ancient and modern poems); "Tosa niki" — an account of a journey; "Taketori monogatari", tales of a bamboo-gatherer; "Ise monogatari", story of Ise. The period of Hei-an witnessed important progress in the art of writing, the invention of phonetic writing called kana, and the alphabet as it is at present, in forty-eight syllables.
Kamakura Period (1192–1338).—Principal works: "Geimei seisui ki" (history of the grandeur and decline of the Minamoto and the Taira); "Heike monogatari" (account of the Taleor family); "Hogen monogatari" (history relating the war of Hogen); "Heiji monogatari" (history of the war of Heiji), a classic work; and many other less important books. This epoch saw the Tibetans with their "sky veils" (the hundred-bodied head); this is a collection of 100 tanka (poems of thirty-one syllables) by 100 different men, and was very popular. The time between 1332 and 1603 was singularly barren of literary productions. Three principal works belong to this period: "Inkoku toto monogatari" (the story of the reign of the divine emperors); "Taihei-ki" (tale of peace); "Tsурэzure kusa", a collection of sketches and anecdotes, a classic work composed in the fourteenth century, which occupies a very high place in Japanese literature. To this period belong the No, lyrical dramas, and the Kyogen, comedies. In ancient times the only public representations were the sacred dances called kagura, at the gate of the temples, in honour of the gods. To these in the fourteenth century was added a spoken dialogue which was the origin of the No. The Kyogen was a sort of comic play between the No and the Noh.

Yedo or Tokugawa Period.—This period embraces a greater number of subjects than the others. One of the earliest works of the time is the "Taiko-ki" (History of Taiko Hideyoshi), 1625. The study of Chinese books was then given the place of honour. The chief promoter of this movement was Fujisawa Seikwa, who founded a school of Confucianism and left a number of disciples, the most famous of whom was Hayashi Razan, also called Doshun (1583–1657). Arai Hakuseki (1656–1725) is also numbered among the most learned in Chinese (Kangyakusa). Then came the Wakan ronin literature; Chikamatsu Monzaemon, Japan's most famous dramatic writer, who composed ninety-seven joruri (dramas); Basho (1644–94); and Keicho (1640–1701); Kado Azumamaro (1669–1736) opened at Kyoto a school in which he taught the Chinese ideas then in favour; the most distinguished of his disciples was Mabuchi, who left numerous works which are indispensable to those who now study the ancient Japanese language; Motoori Norinaga (1730–1801), the greatest of the Wagakusa (scholars of Japanese literature) and one of the most remarkable men Japan has produced. He published fifty-five works in more than 180 volumes. His "Attacakt", one of the most learned writers of Japan (1776–1843), Kyokutei, Bakin, Tanchin, Jippensha, Ikuu, and The along Shusu are renowned as romance writers. Rai Sanyo (1780–1832) is distinguished as an historian, his two chief works being the "Nihongwa-shi" and the "Nihon seki", which are the greatest value for the study of Japanese history. Another important work of the Yedo period is the "Dainihonshi", a great history in 243 volumes, written by a commission of scholars.

Restoration Period (1868–1909).—During this period a veritable passion for European learning took possession of the nation. Many young men went to Europe and America to study. Soon a group of writers gave translations and original works in response to a general demand for ideas concerning European learning, customs, laws, and institutions. The most distinguished of these authors was Fukuzawa Yukichi, whose "Taisei Kyokujutsu" (The Principles of the Study of the World) is the best known. Among his most worthy works are: "Kaiikoku shimatari" (1888), by Shimada Saburo, a collection of documents treating of the opening up of the country; "Shorai no Nihon" (Japan of the Future), by Tokutomi Ichiro; a commentary on the Constitution, by the Marquis Ito; the "Nihon no genki", by the Marquis Toda; "The Social Life in Japan", by Ikeda Ei. The best known novelists are: Tsuzuki Yuzo, Sudo Nansui, Osaka Tokutarou, and, the most celebrated of all, Koda Nariyuki. Among poetic works is the "Shingaibusho", or reform of Japanese versification, in imitation of European poetry, published by Toyama Masakatsu, in collaboration with Yatabe Ryokichiu and Inoue Tetsujiro.

Painting.—Among the arts painting has always held a first place in Japan. In the beginning, when Buddhism and Confucianism were introduced, the fine arts were wholly in a state of infancy. During the reign of Kimmie Tenno (A. D. 540) the Chinese arts were introduced. Painting and sculpture entered Japan with Buddhism and Confucianism, and the cultivation of the fine arts began. The oldest extant picture is probably the true reproduction of the Empress Suiko (593–628), and is preserved in the temple of Horyuji, near Nara. Several pictures of the Nara period (710–784) are in the temples of Yakushiji and at Nara. The most celebrated pictures of the Heian period (800–1180) are: Kudara no Kowari (853), of Corean descent; the bonze Kukai or Kobo daiishi, a religious painter; Kose Kanaoko (885–927), founder of the most ancient Japanese school, Koeryu (Koese genre), also called the primitive or Buddhist School; Fujisawa Motomitsu (1097), founder of the Yamato School (Japanese genre); Toba Sojo (1053–1114), and Araki, author of the humorous genre which is called after him Toba-e.

During the Kamakura period (1192–1338), in the thirteenth century, appeared a celebrated painter, a descendant of the powerful family of the Fujiwara, Fujiwara Tsunetaka, who founded the Tosa School, derived from the Japanese Yamato School, in which it became the principal branch. This school avoided Chinese influence, and applied itself to representing the scenes of the legends and history of Japan. In the beginning of the fifteenth century (Ashikaga period, 1332–1603) Josetsu founded a school of painting of Japanese scenes. Among his pupils were Sesshu, Shubun, and Kano Masanobu (1420–1503) is regarded as one of the great painters of the Chinese school. Kano Masanobu (1453–1490) gave his name to the School of Kanoryo, which proceeded from the Chinese School of Josetsu, and is subdivided into several branches. Kano Motonobu is the most famous representative of this school. At the end of the fifteenth century all Japanese painting belonged more or less to these two artistic sources, Tosa and Kano. The Tosa School represents Japanese art almost without foreign admixture; that of Kano belongs to Chinese influence.

Yedo Period (1603–1868).—Ogata Korin (1661–1716) created a manner of painting which was, so to speak, intermediary between the two schools of Kano and Tosa, uniting the decorative principles of both. The school which he founded is called by his name, Korin-ryu. It was the first to employ gold and silver powder in painting. Shekisai Hokusai is the best known representative of the Korin School. Maruyama Okyo, founder of the school of this name, rejected the hitherto received principles, and undertook a reform based on the observation of nature. With him idealism tended to disappear and realism began. His principal disciples were Soen, Rasetsu, Genki, and Sojun. About the middle of the seventeenth century Iwasa Matabei inaugurated a new style of painting. He aimed above all at reproducing the scenes of ordinary life. It is called the popular and realistic School (Ukiyo-e). The most celebrated painter of this school was Hokusai (1760–1849). The most marked Japanese evolution in the direction of absolute independence of every school, system, and convention. Except for Kikuchi Yosai (1788–1878), who completes the list of great stylists, everything centres around Hokusai, everything is inspired by his manner (his genius). In 1849, the Meiji Restoration began. Japan imitated, it no longer created. To-day it is in a period of transition in art as in all other
things. The classic school is disappearing by degrees, and popular art is without character or brilliancy. The struggle continues between Japanese and European art and with a view to promoting them there are three societies and five special reviews.

Ceramics.—Japanese pottery dates from the remotest antiquity, but the progress of ceramics compared with the other arts was very slow. The primitive potteries of Japan had for many centuries an embryonic and barbaric character. In the thirteenth century Kato Shiroumaemon, known by the name of Toshiro, introduced the processes in use in China and founded the first Seta workshops. The productions of Seta dominated the industry until the seventeenth century. The finest pieces are those of genius who was the real creator of national ceramics and who even to-day is regarded as the greatest ceramist Japan ever produced. Through him the Chinese, Corean, and Japanese elements were blended, and from their mixture emerged a national art. In recent years the making of porcelain has undergone considerable development owing to the demand from abroad. The chief species of porcelain are: Seta (Owari), 4,300 workmen, annual output 1,300,000 yen; Mino, 3,800 workmen, output 1,000,000 yen; Arita (Saga), workmen, 2,000; Kutani (Kaga), 1,200 workmen, output 300,000 yen; Kyomizu (Kyoto), one of the most important manufactories of Japan; Tokoname (Owari), output 320,000 yen; Tobe (Tyo), output 150,000 yen; Fujina or Isumo, output 120,000 yen; Hasami (Nagasaki), output 100,000 yen; Satsuma, output 40,000 yen, much esteemed by foreigners.

The history of the arts of Japan would fill a large volume. Sculpture, engraving, carving, bronze, lacquer-work, enameled work, metal alloy, are the principal branches in which the Japanese have excelled and produced truly remarkable work.

FINANCES.—From the earliest times large storehouses (shurure) were built to receive the objects sent as presents or taxes to the Court. At the reform of Tai-kwa (645) a ministry was constituted having at its head an Okura-kyo (minister of finance). He was charged with the collection of duties, the distribution of pensions, the verification of measurements, etc. In 1850 the name of Okura-sho was given to the ministry of finance. The minister of finance is charged with the resources of the State. He has under his jurisdiction three bureaus, that of accounts (Shukeikyoku), that of taxes (Shuzekyoku), and that of the administration of finances (Rikuzikyoku). The budget of receipts and expenses is drawn up yearly. Each minister prepares his own according to the needs of his department. These private budgets are arranged by the minister of finance, while at the same time means are devised to meet the expenses. This project is discussed at a council of the ministers, afterwards submitted to the Chamber of Deputies, who discuss it and give a decision, then to the Chamber of Peers, who reject or approve it. If the new budget is rejected, that of the previous year is adhered to. Lastly, the budget must always be submitted to the sanction of the emperor.

Table showing the progressive growth of the budget since the beginning of the present reign—:

</table>

Since the war with Russia the debt has increased 1,694,262,114 yen.

**Moneys and Bank Bills.**—The ingots of gold, silver, and brass in store at the treasury since the foundation in 1870 equal the sum of 1,058,550,262 yen. Money put in circulation since that time, 707,810,261 yen. Amount of money in the country, 31 December, 1907, 1,677,551,001 yen; amount of paper money, 369,984,111 yen.

**Banks.**—Before the Restoration of 1868 there did not exist a single Japanese bank properly so called. The new Government soon grasped the importance of this institution for the development of commerce and industry. Commissions were then sent abroad to study the various banking systems in use and to adopt that best suited to the country. Consequently a law of November, 1872, inaugurated in Japan the system of the plurality of banks of issue. But the results obtained having been purely negative, the system was modified in a more liberal sense (August, 1897). A large number of new banks were then founded, but this time there resulted such a fever of speculation, such a decline in paper money and government revenues, that the banks of issue had to be radically changed. In 1882 it was decided that in the future there should be no more banks of issue and that a central bank, the Bank of Japan, should alone have the privilege. The Bank of Japan was then charged with withdrawing from circulation by degrees the notes issued by the State and the 143 national banks in existence in 1882. The latter were transformed by degrees into ordinary banks, and in 1889 only one national bank remained, that of Japan, which to-day centralises all Japanese fiduciary circulation. Founded in 1882 with a capital of 10,000,000 yen, it has increased this to 30,000,000 and has a reserve fund of 21,500,000 yen. It is authorised to issue notes whose value it holds in reserve in gold and silver money and in ingots; moreover, it has the privilege of putting in circulation as much as 120,000,000 yen.

Japanese fiduciary circulation by decennial periods:

The number of special banks, ordinary banks, and savings banks at present equals 2194, with 2367 branches. Together they have a paid-up capital of 444,204,000 yen; reserve funds, 139,630,000 yen; net benefit, 86,712,000 yen; dividends, 34,893 yen. The most important ordinary banks are Mitsubishi, the Third, the Fifteenth, and the One Hundredth bank. In 1893 there were in Japan only 762 establishments of credit, possessing a paid-up capital of 84,512,584 yen. In the space of fourteen years the number of these establishments has increased by 1432, and their paid-up capital equals 359,692,000 yen, that is, it has been multiplied five times. In 1893 the business figures, representing sums deposited and drawn, in all banks, equalled 2,601,392,000 yen. In 1907 deposits alone reached 80,484,648,000 yen, and sums withdrawn, 68,843,187,000 yen. In fourteen years business has increased 39 times. Finally, in the course of 1907 the amount of sums deposited in banks, by the State and private individuals, equalled 27,237,717,000 yen.

**Bank Interest.**—In 1909 the interest on fixed deposits varied from 5% to 6%. For ten years it has oscillated between 5% and 7%. Banks lend only at 12%. The discount is 3%.

**Business Corporations.**—Until 1892 there was no law regulating the establishment and workings of companies collective in action and name. In 1893 the chapter of the new business code concerning companies was rendered obligatory. In consequence every business association had to secure from the Government the necessary authorisation to form and commence operations. The code having been modified in 1899, necessary authorisation was suppressed and companies might be freely formed on condition of conformity with the revised code. At the end of 1894 the nominal capital of all companies formed since 1875 did not exceed 245,251,624 yen. Immediately after the war with China, and in the single year of 1896, 1178 new companies were formed representing a capital of 334,421,463 yen.

The following table shows the nature, number, and importance of companies constituted in 1896 and 1907:

On 31 Dec., 1907, the reserve funds of all these companies equaled 254,992,738 yen. In fourteen years the number of companies has been doubled and their capital has been trebled.

**Insurance Companies.**—Before 1881 there was not a single insurance company in Japan constituted after the European model. An attempt at maritime insurance in 1881 was without success, as there was no law regulating this sort of enterprise. But the publication of a new code definitely fixed the legislation in this respect. Since that time (1893) the insurance companies have greatly developed.
British India, England, and Germany have profited most by the new order of things in Japan. Within thirty-four years, that is since 1873, Japan's export trade has increased 23 times.

Chief Exports and Imports with their Value in Yen.—Exports: raw silks, silk waste, handkerchiefs, poneges, 158,876,000 yen; cottons, cloth, napkins, 48,985,000 yen; chemical matches, 9,446,000 yen; fancy floor mattings, 5,743,000 yen; porcelains and crockery, 7,216,000 yen; lacquered articles, 1,643,000 yen; plaited work, 5,001,000 yen; umbrellas (European shape), 1,613,000 yen; cigarettes, 2,055,000 yen; tea, 12,618,000 yen; rice, 3,664,000 yen; dried cuttlefish, 2,401,000 yen; sea-weed, 709,000 yen; fish-oil, 2,975,000 yen; camphor, 5,026,000 yen; crude and refined copper, 29,262,000 yen; oil, 19,052,000 yen; vegetable wax, 1,070,000 yen. Imports: raw and spun cotton, prints, velvets, 131,718,000 yen; woollens, muslin, cloth, 24,878,000 yen; hemp, 3,569,000 yen; machines, 27,699,000 yen; locomotives and wagons, 2,933,000 yen; iron bars, 26,443,000 yen; rails, 3,828,000 yen; iron nails, iron, and steel, 11,172,000 yen; dry indigo, 5,876,000 yen; paper, 7,436,000 yen; sole leather, 3,933,000 yen; brown and white sugar, 19,864,000 yen; rice, 30,931,000 yen; beans, lentils, 10,405,000 yen; meal, 6,212,000 yen; petroleum, 14,324,000 yen; tortoise shell, 21,942,000 yen.

The chief markets for silk are the United States, France, and Italy; for cotton and copper, China. Tea is exported almost wholly to the United States. In 1907, there entered the Japanese ports 10,932 steamships, tonnage, 19,801,425 tons; Japanese steamships, 6,734 (8,770,491 tons); Chinese steamers, 52 (47,659 tons); English steamers, 2269 (6,287,638 tons); German steamers, 673 (1,840,000 tons); United States, 377 steamers (1,018,462 tons); Norwegian steamers, 348 (386,311 tons); Russian steamers, 172 (324,050 tons); Austrian steamers, 140 (154,425 tons); Danish steamers, 24 (64,753 tons); other nationalities, 143 (517,636 tons).

Domestic Commerce.—Museums.—Japan possesses 11 commercial museums, two of which (those of the Government and the industrial association) are at Tokyo; the others are at Sapporo, Osaka, Kobe, Nagasaki, Miyagi, Nagoya, Gifu, Kanazawa, and Toyama. At the end of March, 1906, the Government Museum at Tokyo contained 61,670 specimens, 31,674 of which were of foreign origin. Visitors in 1907, 57,111, of whom 1625 were foreigners.

Chambers of Commerce.—On 31 March, 1908, there were 356 chambers of commerce. Ordinary councillors, 1,589; special councillors, 250; number of matters and commerce, 3,250; population, 70,516.

Japan also maintains commercial relations with the following countries: the French colonies of India, the Russian colonies of Asia, Siam, Switzerland, Russia, Austria-Hungary, Dutch Indies, Sweden, Norway, Spain, Turkey, Denmark, Portugal, Mexico, Peru, Egypt, the Philippines, Hawaii, etc.

The greatest amount of Japanese merchandise has been exported to China and the United States, while

Clearing-houses.—In 1896 there were two clearing-houses organized according to the system operating in the United States, one at Tokio, the other at Osaka. During that year (1896), the two establishments liquidated 647,239 notes, representing a value of 595,834,000 yen. In 1907, four new clearing-houses were in operation at Kyotot, Yokohama, Kobe, and Nagasaki. The liquidation operations dealt with 6,948,485 notes, representing a value of 7,124,059,761 yen. On 31 March, 1908, number of exchanges, 59; stockholders, 844; brokers, 971; authorized capital, 12,851,456 yen; paid-up capital, 10,291,000 yen. Receipts, 7,015,388 yen; expenses, 4,448,531 yen. Net profit, 2,566,857 yen.

Commerce.—Foreign.—The export and import figures will afford an idea of commercial activity and the development of native production:

regulated during the year, 11,651; expenses, 231,200 yen. Two commercial agencies have been founded, one at Tokio, in 1896, the other at Osaka in 1901. The number of adherents (banks, firms, etc.) is 1395 for the first; 1308 for the second. There are also four large merchandise warehouses, two at Tokio, one at Osaka and one at Yokohama. Number of invention patents issued in 1907, 3155; number of designs patented, 614; competitions, 262; objects exhibited, 310-302; contestants, 261,396; awards, 55,741; expenses, 149,924 yen.

Communications.—Roads.—Under the Tokugawa there were four chief roads (go-kaido); they went from Nihon-bashi (Bridge of Japan) to Yedo, and linked all the provinces with the capital of the shogun. These ancient roads are still in existence, but since the Restoration the roads have been divided into national, departmental, and parochial. The State defrays the expense of the construction and maintenance of a national road, the departments that of the departmental roads, and the departments and towns, that of the parochial roads. All the chief towns of the prefectures, the cities, and villages are connected by roads, generally in good condition, and suitable for carriages.

Rivers, Canals.—The rivers are numerous, but for the most part are only torrents, little suited to navigation; they are used chiefly for rafting. Numerous irrigation canals have been dug, some of which are reserved for the transportation of merchandise. The amount of the expenses for means of communication, roads, rivers, canals, highways of all kinds, construction or repair of bridges, harbours, bays, piers, dams, ponds, viaducts, in 1907, was 25,872,335 yen; 3,231,791 yen being borne by the State, the rest, 25,640,542 yen, by the local bodies. Damage caused by floods, 21,473,359; by typhoons, 303,622; by tidal waves, 80,867 yen.

Railroads.—In 1872, the first railroad line was begun by the Government, between Tokio and Yokohama, a distance of eighteen miles; in 1882, the length of the lines established was 114 miles. As early as 1883, companies were founded to exploit this industry; in 1906 the government lines had been extended by 1531 miles, those of the companies, 3252 miles. In the same year (1886), the Government decreed national ownership of the railways, since which time the lines of eighteen large private companies have been purchased, while twenty smaller companies have gone out of existence. On 31 March, 1909, the total length of the government lines was 4712 miles; that of independent companies, 446 miles. Lines at present in connection and one at Yokohama, 1037 miles. The railways have cost the State: old lines, 168,250,000 yen; purchased lines, 476,318,800 yen; lines building, 18,500,000 yen; in all, 663,068,800 yen. Receipts, 81,995,171 yen; expenses, 45,262,927 yen; net profit, 36,732,244 yen. Locomotives, 2074; passenger carriages, 5780; number of employees, 41,260,702; expenses of merchandise, 24,092,066. Railroad accidents, dead, 1664; injured, 2321. In 1883, the net railway profit equalled 943,846; in 1893, 5,073,929 yen.

Electric Car Companies.—Electric tramsways appeared in Japan in 1893. On 31 March, 1906, there were eighteen companies. Two of these have not made public their accounts. The statements of the sixteen others are as follows: authorised capital, 77,854,673 yen; paid-up capital, 47,280,685 yen; length of lines, 272 miles; number of trams, 10,732; receipts, 182,389,707; net profit, 4,130,693 yen. The chief tramway company is in Tokio; passengers, 153,061,727; profits, 3,071,197 yen. Vehicles driven by men: for passengers (jinricksha), 161,858; for merchandise, 1,485,494. Total of all vehicles in the country, 1,681,892. The chief tramway company (Toyo Keisatsu) in the interior of the country has transported 208,447,901 kwan; receipts, 6,188,277 yen.

Postal Service, Telegraph, and Telephones.—Postal Service.—There was a postal service under the shogun, but it was made costly, slow, and officious. In 1872 the Government adopted the system in use in the United States. At first established between Tokio, Osaka, Kyoto, and Yokohama, the next year it was extended throughout the country. The tax varied according to distance, but later it was made uniform. However, England maintained its three stations at Yokohama, Nagasaki, and Kobe until 1879. Since then both foreign and domestic postal service is carried on by Japanese. In 1908 there were 670 post-office stations; 55,197 post-boxes; 17,607 postal employees; 35,409; postal articles received and distributed within the country, 1,377,835,408; sent abroad, 25,792,382; received from abroad, 24,532,407. International money orders sent, 15,517; value, 563,251 yen. International money orders received, 148,742; value, 11,615,851 yen.

Telegraph.—As early as 1889 the Government planned to adopt the telegraph. It did so in 1872. In 1879 Japan joined the International Telegraphic Union. At present a telegraphic network extends throughout the country and submarine cables connect Japan with all the great centres of the world. As early as 1900 experiments were made with a view to installing wireless telegraphy on all the warships, and at present all the ships are so provided. Communications have also been established between Nagasaki and Kelun (Firmosa). On 31 March, 1908, the length of telegraph lines was 86,926 ri; length of wires, 38,549 ri; public stations, 2815; telegrams sent within the country, 26,113,174; abroad, 707,508; received from abroad, 873,639.

Telephone.—The telephone was brought to Japan in 1887, and in the same year all the government offices were thus connected. The telephone went into general use in 1896. At present, 1,272,000, provided with telephonic connexions; 26 have an interurban connexion. Public stations, 421; length of telephone lines, 21,000 ri; length of wires, 27,270 ri; subscribers, 75,259. The Government has the monopoly of telephones, and bears the expense of constructing and extending all the lines. Merchant Marine and Navigation.—While the country was closed to foreigners no Japanese could build or own a vessel capable of sailing the high seas.
There was then no navigation except along the coast and on the waters in the interior of the country. In 1868 liberty was granted the Japanese to have vessels and to navigate as they pleased. The formation of three companies: the Mitsubishi Kisen Kwaisha (steam navigation) in 1877, the Kyodo Uyuo Kwaisha (united transports), and the Osaka Shosen Kwaisha (commercial navigation) in 1882, marks the beginning of the Japanese merchant service of Japan. In 1885, after a distressing occurrence, the Mitsubishi and the Kyodo Kwaisha united to form one company, Nippon Yosen Kwaisha (Japanese Mail Packet Company) and started a new era in the merchant service. In the beginning of 1896 the Government decided to grant privileges for the construction and navigation of vessels. Twenty yen per ton capacity and five yen per horse-power unit are allowed to each ship of 700 tons and upward, built in Japanese yards and constructed of native materials. The navigation premiums vary according to the life and the capacity of the vessels. The total value of grants and subsidies paid annually by the treasury to the companies and native shipowners is not less than 12,000,000 yen. At the end of 1903 there were 205 ship-yards and 32 docks. On 31 March, 1908, there were 216 ship-yards and 42 docks, building small war vessels and large merchant ships. During the war with Russia the companies furnished the Government 71 ships weighing 250,000 tons. Japan being a maritime country, it is natural that its merchant service and international trade should develop simultaneously and in proportion; nevertheless, the rapidity and importance of the progress made in the past fifteen years are truly extraordinary.

Japan has a great many important navigation companies. The Nippon Yosen Kwaisha has had regular service since 1896 for Europe, America, Australia, and the chief ports on the Sea of Japan. The Osaka Shosen serves the ports of China and Corea. The Toyo Kisen has a rapid service between Japan and San Francisco; the Oya Shosen between Tsuruga and Vladivostok. The chief docks and coaling stations are those of Hakodate, Uraga, Yokohama, Otsu, Kobe, and Nagasaki. Not including Formosa, there are twenty-eight ports of commerce, of which the most important are Yokohama, Kobe, Otsu, Osaka, Moji, Nagasaki, Yokkachi, Shimomoseki, Otaru, Kuchinotsu, Wakamatsu, and Hakodate. For Yokohama and Kobe, the two chief ports of Japan, the maritime trade for 1895 equalled 242,293,844 yen; in 1907, 652,713,183 yen. Lighthouses, 140; signal lights, 19; buoys, 465; post indicators, 77; bell buoys, 4; boats, 624,728. Lawsuits, 433; ships lost, 196; salvages, 728; person shipwrecked, 461; died at sea, 277; disappeared, 154.

Economics.—Agriculture. —The total area of Japan (not including Formosa and Sakhalin) is 38,555,229 cho, divided as follows: (1) land belonging to the Crown, the State, the commons, etc., 21,394,805 cho; (2) to private owners, 14,272,339 cho; (3) main roads, parks, swamps, etc., 2,886,085 cho. The total area of arable land is only 6,120,519 cho, classified as follows: rice fields, 2,748,575; drained lands, 2,296,996 cho; various crops, 1,075,246 cho; in all 15.7% of the total area of the country. The area of taxed lands is 13,951,687 cho; estimated on survey as worth 1,406,267,827 yen. But at present their real value is far in excess of this estimate. According to the most recent census the total number of families is 8,725,544. Of these, 3,776,416 are occupied solely with agriculture; 1,638,216 families join agriculture with other work. The nature of the soil is unfavourable for tillage, but the Japanese have improved it by careful cultivation. In the valleys there is not a grain of earth which has not been made use of, and even the mountain-sides have, by the exercise of patience, been cleared, often to a great height.

Rice, which is the basis of Japanese diet, naturally...
holds the first place, but that produced by the country does not supply the demand, and even when the crop has been good it is necessary to import it. The wheat crop is also far from being sufficient. Tea is an important article of commerce; however, from 1897 to 1907 the area devoted to its cultivation decreased from 58,892 cho to 50,458 cho, and the yield from 8,471,956 kwan to 7,047,193. Sugar cane has not found favourable soil in Japan, and each year this commodity has also to be purchased abroad for large sums. By a law of March, 1904, the Government reserved to itself the monopoly of tobacco. According to this law the peasant continues to cultivate the plant as formerly. The Government buys the leaves from the cultivator, and distributes them for preparation among the state manufacturers. The products of the did not make great progress, ideas on this subject being very backward, but the Government carefully elaborated a plan of reform in the forestry administration. According to a law passed in 1907 the Government may use its authority to prevent the destruction and to secure the re-wooding of forests belonging to the State, to private individuals, to the Shintoist and Buddhist temples. The law also supervises and regulates the periodical felling of trees. Forests are divided into four classes: forests belonging to the State, 7,222,518 cho; to the Crown, 2,109,098 cho; to the temples, 7,991,796 cho; to private owners, 4,576,888 cho. Forest products in 1907: building wood, 34,364,114 yen; firewood, 42,323,633 yen; paper, 24,952,536 yen. The annual average of forest products varies in the past ten years between 50,000,000 and 60,000,000 yen.

Industries.—Fishing.—From the earliest times the fishing industry has been in a flourishing condition in Japan. Formally fish was the sole gift made. Together with rice it forms the basis of Japanese diet, for which reason the Japanese Government has not ceased to encourage the industry of deep-sea fishing. Fishery schools have been founded, and prizes granted for fishing on the high seas; laws for the protection of fish have been made for some time in force. The following table shows the progress of the industry and the profit in yen:

<table>
<thead>
<tr>
<th>Year</th>
<th>Fresh Fish</th>
<th>Salt and Dried Fish</th>
</tr>
</thead>
<tbody>
<tr>
<td>1894</td>
<td>11,951,872 yen</td>
<td>13,474,000 yen</td>
</tr>
<tr>
<td>1897</td>
<td>30,653,167 &quot;</td>
<td>28,740,498 &quot;</td>
</tr>
<tr>
<td>1901</td>
<td>42,826,850 &quot;</td>
<td>30,075,925 &quot;</td>
</tr>
<tr>
<td>1904</td>
<td>42,632,633 &quot;</td>
<td>31,738,850 &quot;</td>
</tr>
<tr>
<td>1907</td>
<td>54,073,844 &quot;</td>
<td>33,542,281 &quot;</td>
</tr>
</tbody>
</table>

In 1907, 3,300,000 persons (15% of the population) were engaged in fishing or some trade connected therewith. Number of fishing boats, 420,000, of which a number did not exceed 30 feet in length. It is only recently that Japan has sought a market for its fish, salt, smoked, or preserved in oil. The Japanese prepare, chiefly from herrings and sardines, a fish oil, of which the exportation in 1907 amounted to the figure of 2,975,235 yen. 20,727 fish ponds in which fish are fed produced the sum of 2,805,550 yen.

Salt-pits.—The area occupied by salt-works equals 8,285 cho; 16,184 boilers are used in the manufacture of salt. Product in 1907, 5,578,142 koku, valued at about 10,000,000 yen for the jobbers. The law reserves to the Government the monopoly of the sale of salt. Salt is manufactured by private citizens, the Government purchases it, and sells it again to the merchants, all at a fixed rate. 122,132 persons labour at the manufacture of salt.

Mines.—Before 1865 the working of mines was in a most rudimentary condition and their output was very mediocre. In order to improve and develop this branch of industry the Government sent for foreign engineers and utilized the mineral resources. Later on most of these mines were sold to private owners. In 1890 a law was published regarding the regimen of mines, which was replaced by another law in July, 1905. According to this new legislation those who desire to work mines are obliged to have a permit either of investigation or of exploitation to be issued by the minister of agriculture and commerce. For the administration of mines the country is divided into five large districts, each having a bureau for the inspection of mines. Japanese subjects and every civilian may acquire mining privileges. Foreigners may be admitted as members or stockholders in mining companies. The following are the number of authorizations granted within eleven years for the investigation and the exploitation of mines, and the extent of the privileges, in teubō:

Bronze Buddhas and Pagoda, Asakusa, Tokyo
JAPAN

From this it will be seen that within eleven years the extent of mines with a view to exploitation has more than trebled. The following is a table of the mineral products for the years 1897, 1901, 1906, in yen:

<table>
<thead>
<tr>
<th>Year</th>
<th>Gold</th>
<th>Silver</th>
<th>Copper</th>
<th>Lead</th>
<th>Iron</th>
<th>Iron pyrites</th>
<th>Antimony</th>
<th>Manganese</th>
<th>Oil</th>
<th>Sulfur</th>
<th>Petroleum</th>
<th>Other minerals</th>
</tr>
</thead>
<tbody>
<tr>
<td>1906</td>
<td>7,648,400 yen</td>
<td>10,500,000 yen</td>
<td>8,500,000 yen</td>
<td>7,648,400 yen</td>
<td>10,500,000 yen</td>
<td>8,500,000 yen</td>
<td>7,648,400 yen</td>
<td>10,500,000 yen</td>
<td>8,500,000 yen</td>
<td>7,648,400 yen</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This shows that the total product of the mines has more than trebled within eleven years. From 1895 to 1897 the copper output increased from 5,000,000 to 20,000,000 yen. The value of oil from 5,000,000 to 19,000,000 yen. Number of mine-workers, in 1898, was 132,731; in 1906, 187,922; accidents (1907): fatal, 785; serious, 2,426; slight, 6,092.

Manufactures.—Very early Japan had its industries, and the traditions on this point have not been lost. Artistic bronzes, lacquers, porcelains, and paper are still among the riches and glories of the country. Nevertheless, subsequent to 1868 a transformation took place, and a new era began for Japanese industry. Formerly the work had been done by hand in the family, but now began the reign of the factory and the machine. In order to encourage private workers to use machinery, the Government itself built model workshops and manufactories. Besides, to hasten the development of the industry, the Government has often organized national expositions in the important cities of the empire, it has always taken part in foreign expositions, has instituted a bureau of industrial experiments, founded technical schools, encouraged the formation of industrial associations and sent students abroad to learn the operation of factories. It has also made special laws for the efficacious protection of industrial property.

Workshops, Factories, and Arsenals Founded by the State.—Royal printing establishment, with typographical workshops and paper-mill; a mint with a branch; 5 tobacco factories; military arsenals at Tokio and Osaka; naval arsenals at Yokosuka, Kure, Sasebo, and Maizuru; marine arsenal at Tokio; powder factory at Shimose; marine preparatory schools at Takeda, Onomata, and Mako; 1 steel foundry; 2 factories for the manufacture of material for telegraphs and lighthouses; 13 railroad workshops; 12. Number of machines for all government manufactories, 1075; horse and steam power, 118,353; workers, men and women, 130,545 (men, 107,776; women, 22,769). Besides these, 62,324 day labourers are also employed; average daily wages: men, 55 sen; women, 25 sen. Japanese industry began to soar at the time of the war with China. The Japanese decided to add to their characteristic of being a warlike people that of being an industrial people. The following are the figures for nine years of the factories or workshops employing more than 10 workers, men or women:

<table>
<thead>

(Men, 242,944; women, 369,233)

The most prosperous industries are those of silk and cotton. In 1907 the number of silk mills was 4758; besides 392,581 families occupied with this industry. The quantity of silk thus obtained (including waste) equals 3,236,692 kwan. In 1895 it amounted to 2,298,688 kwan. Silk is the chief article of export from Japan. The following is the progress made within five years: In 1901, silk tissues manufactured in Japan represented a value of 68,988,381 yen; in 1906 they rose to 88,994,131. And within eleven years the export figures have risen from 43,000,000 to 159,000,000 yen.

VIII.—21
Cotton Industry.—This also has made notable progress. From 1894 to 1906 the number of spinning mules rose from 45 to 83, with an increase in capital of 27,304,500 yen (the capital rose from 13,001,000 yen to 40,000,000 yen). The average number of spindles rose from 476,123 to 1,441,934 yen. At the same time the output of spun cotton rose from 14,000,000 to 53,000,000 yen; and that of woven cotton from 49,000,000 to 84,000,000 yen. In 1907 all the materials manufactured in Japan, silk, cotton, hemp, and woollens, represented a value of 222,549,995 yen.

The manufacture of sake (rice wine) equaled 4,405,800 koku; beer, 201,144 koku; shoyu (fish sauce), 2,074,008 koku.

Metallurgy.—In this branch, despite all the efforts of the Government, the results have not fulfilled expectations. However the increase in iron and steel imports which have risen from 7,695,000 yen (1895) to 32,299,000 yen (1906) is a proof of development.

Handwork.—In 1906 the daily salary of handworkers was, for men, maximum, 96 sen; minimum, 40 sen; average, 68 sen; for women, the average is 25 sen.

JUSTIN BALDETTE.

Jarche, Karl Ernst, b. 10 November, 1801, at Danzig, Prussia; d. 27 December, 1852, at Vienna. He belonged to a Protestant merchant family. He took up the study of jurisprudence, and became at an early age professor of criminal law at Bonn and later in Berlin. His scholarly attainments were especially revealed in his "Handbuch des gemeinen deutschen Staatsrechts" (3 vols., 1827-30). Longing for faith and overcome by the conclusiveness and immensity of Catholic dogma, as he found it disclosed in the decrees of the Council of Trent, he embraced the Catholic Church in 1834. On the Revolution of July in Paris, he wrote an anonymous political brochure, "Die französische Revolution von 1830". It met the emphatic approval of the circle of friends of the then Crown Prince (later King Frederick William IV), which was composed of men of anti-revolutionary views, influenced by Romanticism and by Haller. Jarche assumed the editorship of the periodical "Politische Wochenblatt", founded by these men in 1831 to promote their ideas. In 1832 Metternich called him to the State Chanery in Vienna; he succeeded the late Friedrich Genta. He accepted the call as an active collaborator of the weekly journal. The residence in Vienna did not satisfy him. In 1837 he broke with his Berlin friends on the subject of the "Cologne Occurrence"—the imprisonment of the Archbishop of Cologne—of which they approved but which he condemned. In 1838 he founded with Philips the "Historisches-politisches Blätter" to support Catholic interests in Germany. When Metternich was overthrown in 1848 Jarche left Vienna, but returned there when order was restored, and died shortly after. His ideal was the "Germanic State" of the Middle Ages; at its head an hereditary monarch, all claims of the princes on their subjects to be regulated by treaties, the state to be occupied only with defence in war and the administration of justice; in domestic affairs entirely unrestricted opportunities for development within the confederacy. Of "political necessities"—measures for the welfare of the state—and of a "constitution" Jarche disclaimed any knowledge, except as a prerogative by an advisory popular assembly, which however must be representative of the princes and the professions at stake, not merely founded on a general or property qualification franchise. In his articles on the relations between Church and State he combating especially the Protests of the religious war. In writing of contradiction to his anti-revolutionary past was his unexpected acclaim of the revolutionary year of 1848, and he took a willing part in the Catholic movement which began at that time.

MARTIN SPAIN.

Jariot, Pauline-Marie, foundress of the Society for the Propagation of the Faith and the Association of the Living Rosary, b. at Lyons, 22 July, 1798; d. there, 9 January, 1852. At the age of seventeen she began to lead a life of unusual abnegation and self-sacrifice, and on Christmas Day, 1816, took a vow of perpetual virginity. In order to repair the sins of neglect and ingratitude committed against the Sacred Heart of Jesus, she established a union of pious sisters, called "Sisters of Mohammed's Church", which were known as the "Réparatrices du Sacré-Cœur de Jésus-Christ". During an extended visit to her married sister at Saint-Vallier (Drôme), she succeeded in effecting a complete transformation in the licentious lives of the numerous girls employed by her brother-in-law. It was among them and the "Réparatrices" that she first solicited offerings for the foreign missions. Her systematic organization of such collections dates back to 1819, when she undertook each of her intimate friends to become a promoter by finding ten associates willing to contribute one cent a week to the propagation of the Faith. One out of every ten promoters gathered the collections of their fellow-promoters; and, through a logical extension of this system, all the offerings were ultimately remitted to the central treasury. The Society for the Propagation of the Faith at its official foundation (3 May, 1822) adopted this method, and easily triumphed over the opposition which had sought from the very start to thwart the realization of Pauline Jariot's plans. In 1826 she founded the Society of the Holy Family. The names of the Rosary were divided among fifteen associates, each of whom had to recite daily only one determined decade. A second object of the new foundation was the spread of good books and articles of piety. An undertaking of Pauline's in the interest of social reform, though begun with prudence, involved her in considerable financial difficulties and ended in failure. The cause of her beatification and canonization has been introduced at Rome.

CPLK, Causes de beatification et de canonisation de Pauline Jariot (Lyons, 1900); Grappling de la Fos (2nd ed., Paris, 1904); Le Roy in Annals of the Propagation of the Faith, LXX (Feb., 1909), 347—353.

N. A. WEBER.

Jarya Saint, patron of the Archdiocese of Tuam, b. in Connaught about 445; d. 26 Dec. (al., 11 Feb.), about 540. Having studied under St. Benen (Bovill), he founded a college at Clonfouh, near Tuam, which soon attracted scholars from all parts of Ireland. The fame of Clonfouh is sufficiently attested by two of its pupils, St: Brendan of Ardfort, and St. Colman of Cloyne. But, great teacher as he was, he went, through humility, to vail himself of the instruction of St. Enda at Arran about 495. He removed to Tuam about the second decade of the sixth century. St. Jarya is included in the second order of Irish saints, and on that account he must have lived to the year 540. The "Feliire" of Aengus tells us that he was noted for his fasting, watching, and mortification. Three hundred times by day and three hundred times by night did this saint bend the knee in prayer, and he was also endowed with the gift of prophecy. His feast is kept on 6 June, being the date of the translation of his relics to a church specially built in his honour, adjoining the cathedral of Tuam. His remains were encased in a silver shrine, whereas the church—built in the thirteenth century—was called 2eampul na scrin, that is the church of the shrine, a perpetual vicarage united to the prebend of Kilmaine- more in 1415.

COLO s., Acts Sanct. Hist. (Louvain, 1846); HEALY, Ireland's Ancient Schools and Scholars (4th ed., Dublin, 1902); KNOX, Notes on the Dioceses of Tuam, etc. (Dublin, 1905); Calendar of Papal Inquiries, VII (London, 1890).

W. H. GRATTAN-FLOOD.

Jaro, Diocese of, in the Philippine Islands, formerly a part of the Diocese of Cebu, was made a separate diocese on 27 May, 1865. It comprises the islands of Panay and Negros; the Romblon, Palawan, and Jolo groups, and in the island of Mindanao the Provinces of Zamboanga, Cotabato, and Davao. The Catholic population is over a million. Here and there throughout the diocese are some Aglipayan schismatics, and in Mindanao and the Jolo group a large number of Mohammedans, of whom there were forty-five native priests, about forty friars (Augustinians and Recollects), twenty Mill Hill missionaries, and about ten Jesuits. In Jaro itself there is a diocesan seminary in charge of the Lasallians. Eighty of its students are preparing for the priesthood and the rest for secular careers. In the city of Iloilo
the Augustinians conduct a college for lay students. In the towns of Jaro, Iloilo, Zamboanga, and Duma- guete are academies for young ladies, conducted respsectively by Spanish and native Sisters of Charity, native Sisters of the Holy House of Mary, and French Sisters of St. Paul of Chartres. The steepest settlement of Cullon, under government control, is attended by Jesuit priests and brothers, and by the Sisters of St. Paul of Chartres. The churches and parochial residencies are very large and solidly constructed of wood and stone, Spanish in architecture. Many of them are very beautiful. Owing to the withdrawal of the Spanish friars at the outbreak of the revolution against Spain (1898), and the present scarcity of priests, some parishes are still vacant. The native language, spoken there, without the greater part of the diocese, is Visayan. But in the island of Mindanao the language spoken is a mixture of Spanish and several native dialects. The educated classes, besides speaking their native dialect, also speak Spanish. Since the American occupation the school children are being taught English. The diocese is the centre of the sugar-growing industry, and the planters have always had a predilection for education and culture. Many of the most prominent Filipinos in professional, commercial, and political life are from these parts. Formerly the bishops were Spaniards.

Since 1898 an American bishop presides over the diocese. The first was the Rt. Rev. Frederick Zadok Rooker, consecrated on 14 July, 1903, at Rome; d. in 1907. Bishop Rooker was born in New York, 19 Sept., 1861, and made his first studies at Albany and at Union College; later he entered the American College at Rome, and obtained in the College of Propaganda the degrees of Doctor of Philosophy and Doctor of Theology. He was ordained to the priesthood in 1888, and acted as vice-rector of the American College from 1889 to 1894. In 1895 he became secretary of the Apostolic Delegate then recently established at Washington, and held that office until his consecration as Bishop of Jaro.

JAMES P. McCLOSKEY.

JARRIO, PIERRE DU, missionary writer; b. at Tou- louse in 1866; d. at Saints, 2 March, 1617. He entered the Society of Jesus, 8 December, 1852. For many years he was professor of philosophy and metaphysics at the Council of Bayon. As his desire to be in the missions of the order was not fulfilled, he wished at least to use his pen for the good of the missions. The result was a very important production for that time, "Histoire des choses plus memorables advenues tant en Indes orientales, que autres pays de la descouertes des Portugais", etc. The second part appeared about 1610, the third in 1614. The work is a still useful one, giving a comprehensive picture of the missionary enterprises of the Jesuits up to 1610, chiefly within the sphere of Portuguese interests, and contains numerous valuable data on colonial history, geography, and ethnography, gathered from Portuguese reports, and the works of Father Luis de Guzman ("Hist. de las Missions que han hecho los religiosos de la Compania de Jesus", Acalá, 1601, reprinted at Bilboa, 1892) and of Father Fernando Guerrero ("Relação Annal das cousas que fizeram os Padres da companhia de Jesus em Japam, Brazil, Asia, Cabo Verde, Guinea", Evora, 1603, and Lisbon, 1605-07).

The dedication of the second part to Louis XIII Jarrio wished to draw royal attention to the colonising and Apostolic achievements of Spain and Portugal, and thus incite the French king to similar enterprises. His work was frequently reprinted and widely circulated, particularly in a Latin translation, by Martino Martinez, III (Cologne, 1615-16).

SOMMERVOGEL, Biblioth. de la C. de J.; HUTHER, Nomen- clator. A. HÜNDERER.

JAZMIN, Jacques, Provencal poet, b. at Agen, 6 March, 1798; d. 4 October, 1864. When a very young boy, he had to help his parents, who were in strait- ened circumstances, to earn a living by gathering fungi in the forests or doing errands at the fairs. It was only at the age of twelve that he was first sent to school, attending afterwards the seminary of Agen, where he stayed a very short time. He then became a journeyman hairdresser, and a few years later opened a hairdressing shop of his own. To complete his scanty education, he began to read, after hours, the works of Florian, Ducray-Duminil, and above all Goudouil, an eighteenth-century poet, from Toul- house, known as the "last troubadour". From his childhood he had been acquainted with popular songs and native poetry. As a tailor and almost illiterate, he had a real talent for dog- gerel verses, which he sang at fairs. Jacques himself soon started writing songs, and used to recite them to his customers. Being applauded by local admirers, he ventured to publish in 1825 a first volume, "Chari- vari" and from 1825 to 1831 various songs and pa- triotic hymns, which were highly praised by the Academies of Bordeaux and Toulouse. They met with a tremendous success, even beyond the boundaries of his province, and Parisian critics, like Sainte-Beuve and Nadler, pointed out the genuine talent of the hairdresser-poet. He then entered into a publication, received from King Louis-Philippe the cross of the Legion of Honour, and in 1852 was granted a prize of 5000 francs by the French Academy. All his works have been collected in four volumes under the common title of "Papillots (curl paper) de Jazmin, coiffur, de las Academias d'Agen et de Bordeaux" (Agen, 1845-53). He stubbornly declined to go and settle in Paris, whose worldly life frightened his simple and candid nature, and continued, among others, the noted poem, "Abuglo de Castel-Cuillé" (Blind Girl of Castel-Cuillé—1836), which was translated into English by Longfellow; "Françoise" ("een Nymph in la Folle") (1844); "Les deux Frères Juifs" (1845); "La Semaine d'un Fils" (1849), and "Mes Souvenirs" (begun in 1831, and supplemented at several in- tervals). These gay poems are redolent with a true Christian spirit. When he died, he was engaged in finishing a long poem against "the rancorous" language he used in his poems was not the literary and erudite language of the troubadours, but a popular dialect of Agen; it is harmonious, highly musical, and full of picturesque idioms.

A. L. DE LA COUETTE, Jazmin, b. and d. at Agen, philologist (London, 1891), Mémoires de l'Académie de Vaucluse (Avignon), série 2, vol. 7— Revue de l'Apocalypse, XXV (Agen, 1898); Sainte-Beuve, Com- ments du Livre, IV.

LOUIS N. DELMARRE.

JASON, a Greek name adopted by many Jews whose Hebrew designation was Joshua (Jesus). In the Old Testament, it is applied to three or four persons connected with the period of the Maccabees.

I. JASON, THE SON OF ELEAZAR.—In 161 b. c., he was sent to Rome by Jannaeus, to confer with the Romans on alliance offensive and defensive (1 Mach., viii. 17 sqq.).

II. JASON, the father of the Antipater who was one of the ambassadors sent by Jonathan, in 144 b. c. to renew the former treaty with the Romans (1 Mach., xiv., 22). This Jason is perhaps to be identified with Jasson, the son of Eleazar.

III. JASON OF CYRÆA, a Jewish historian who lived in the second century b. c., and whose work is made known to us by the Second Book of the Mache- bees, which professes to be its direct "Epitome" (II Mach., ii, 24, 27, 32). Jason's work, divided into 20 books, deals, apparently in great detail, with the history of the Maccabean and of the Jews against Antiochus Epiphanes, and his son Eu- pator (II Mach., ii, 20 sqq.). In the "Epitome" five parts may still be distinguished, corresponding probably to the five books of Jason, and ending re-
spectively with iii, 40; vii, 42; x, 9; xiii, 28; xv, 37. Jason composed his work in Greek, not long after 160 B.C., at which date the Second Book of the Machabees closes its narrative. He was thus contemporary with the events which he chronicled.

IV. JASON, THE HIGH-PRIEST.—This unworthy son of Simon the Just purchased at great price from Antiocbus Epiphanes the deposition of his brother Onias III from the high-priesthood. During the three years of his own pontificate, he did all in his power to corrupt the faith and morals of the youth of Jerusalem (I Mach., iv, 7–17). On the occasion of the gust the winds blew strong, at Tyre and Hecules, he sent a Jewish deputation with a large sum of money which he intended to be spent on pagan sacrifices; at the request of his envoys, however, it was devoted to building galileys. He was finally supplanted by Menelaus, his own envoy to Antiocbus, took refuge among the Ammonites (II Mach., iv, 22–26), captured Jerusalem next year, but had soon to flee again among the Ammonites, wandered in different places, and ultimately died miserably at Sparta (II Mach., v, 1–10).

FRANCIS E. GIGOT.

Jassus, a titular see of Caria, and suffragan of Aphrodisias. The city was founded by colonists from Argos at an unknown date, and was re-established after a war with the natives of Caria by the people of Miletus. It is situated on the inner end of a gulf, on an island now connected with the continent by a narrow strip of land; according to Polybius its walls were ten stadia in circumference. Its fisheries (Strabo, XIX, 2, 21) are yet familiar. During the Peloponnesian War Jassus was taken by the Macedonians, and later it was captured by Philip of Macedon, who was compelled by the Romans to return it to King Ptolemy of Egypt. Numerous Greek inscriptions found among its ruins indicate its reconstruction in the domestic history of the region. Four of its bishops are known: Themistius in 421, Flaccus in 431, David in 787, and Gregory in 578 (Lequien, "Oriens Christianus", i, 919). The see is mentioned in the "Novum Testamentum Graece" (Gestrich, "Georgii Cyprici descriptio orbis romani", nos. 340, 1644), and more recently in the "Notitiae Episcopatuum". It is now called Asin-Kaleh, and is a small town in the sancjak of Mentchel and the Turkish province of Smyrna. In 1835 Teixier visited it and found it completely ruined and deserted, its walls of white marble, also theatres, several burial sites, and mausolea still standing; since then the Turks have carried away the material for building purposes.

S. VAILHÉ.

Jassy, Diocese of (JASSENSIA). In Rumania. The town of Jassy stands on a very fertile plain on the River Bahlui, in the sixteenth century, Tru, and has an extent of 12,000 inhabitants. Among its most remarkable monuments are the Church of the Three Saints and the monastery of the Three Hierarchs. Although the more or less independent principality of Moldavia was abolished about 1345, Jassy did not lose its capital until the sixteenth century, and its style remained such until 1859, when Wallachia was united with Moldavia to constitute the Kingdom of Rumania.

Its name Jasy (Ruman., Jaş), pronounced Yaşak seems to be derived from the Slavonic Askrytors, found for the first time in a Russian geography of the fourteenth century (Xénopol., "Histoire des Roumanes de la Dacie trajoane", i, 236, note). Often occupied by the Russians, Poles, and Austrians, it is principally celebrated for the religious conferences held there in 1722 between the Greek and the Russian Church, and for the treaty of 1792 concluded between the French and Russia.

The Latin Diocese of Jassy dates from 27 June, 1884. Thanks to the labours of the Franciscan and Dominican friars, Urban V was able to establish in 1370 at Sereth the seat of the diocese, transferred to Bacau at the beginning of the sixteenth century. Abandoned in 1497 on account of the Moslem persecutions, the See of Bacau was re-established in 1611, and had a succession of twenty prelates until 1789, when it was suppressed. The Catholics of Moldavia were then placed under the spiritual direction of Apostolic prefects, generally chosen from the Regular (Conventuals in charge of the mission. In 1884 Leo XIII raised to a diocese the Apostolic Vicariate of Moldavia, with Jassy as residence. This see has about 90,000 Catholics, of which a few hundred are Uniates (Romanians, Ruthenians, and even Armenians). There are 50 priests, 11 of whom are secular, and 39 regular (Conventuals and Jesuits): 28 parishes with as many churches, and 94 chapels without resident priests; 11 chapels for male or female religious; a theological seminary at Jassy and two preparatory seminaries at Jassy and at Halaucesti; several day-schoo[k for boys and girls; two boarding-schools for girls directed at Jassy and Galatz by Sisters of Notre Dame of Sion, 143 in number. The Orthodox metropolitan see, whose bishop sometimes recognised the jurisdiction of the Bulgarian patriarchs of Achrida and sometimes that of the Greek patriarchs of Constantinople, was established about 1322. Since the proclamation of Rumanian ecclesiastical autonomy the Orthodox Bishop of Jassy depends on the metropolitan primate at Bucharest.

S. VAILHÉ.

Jáuregui, Juan de, a Spanish painter and poet, b. at Seville c. 1570, or, according to some, as late as 1583; d. at Madrid c. 1640–1. His family, a northern one, was apparently of noble rank, and he was early enrolled as a knight in the Order of Calatrava. He made a sojourn in Rome, and there, judging by what he says in his "Discourse on Painting", he studied the old masters and formed his own pictorial methods. At all events, report has it that he became distinguished as a portrait painter. A current interpretation of a passage in the prologue to the "Novelas ejemplares" of Cervantes makes him out to have painted a likeness of the famous novelist. As a poet, Jáuregui began as writer of the "Musica" and "Flor de la Musica" (1605). In point of fact, he adheres in many of his compositions too closely to the manner of his model, and hence a lack of originality in them. Notable among his poetic endeavours is his version in blank verse of Tasso's "Aminta". It is deemed one of the best foreign renderings of that eminent, pastoral play. It shows in his "Discuro poético contra el hablar culto y estilo obscuro", but he later succumbed to the influence of this noxious manner, amply illustrating its
peculiarities in his poem "Orfeo" (Madrid, 1624) and even defending it in a special dissertation. Of the "Pharsalia" of Lucan, already attempted by him in his youth, he made, late in life, a complete version, which, however, was not published until 1654, and is over free in its rendering of the original.

**JAVA.** See BATAVIA, VICARIATE APOSTOLIC OF.

**Javouhey, Anne-Marie, Venerable, foundress of the Sisters of St. Joseph of Cluny, b. at Chamblanc, Diocese of Dijon, 11 Nov., 1779; d. 15 July, 1851. In 1819, the scope of the new congregation, which had been founded for the alleviation of the miseries consequent on the Revolution, was extended to embrace foreign mission work, and in 1822 Mother Javouhey herself established a house of the sisters at Gorée, in West Africa. After two years in Senegal and vicinity, she passed to the British colony of St. Mary's, Gambia, devoting herself without stint to the victims of pestilence then raging. On her return to Senegal she received the co-operation of the French Government in her first project for evangelizing negroes, by which a certain number were to be educated in Europe and sent back to their people. The meagre results, due chiefly to the number of deaths caused by the difficulty of acclimatization, showed the plan to be impracticable, and it was abandoned. French Guiana, however, was to be the scene of Mother Javouhey's most important missionary work. The French Government, after unsuccessful attempts at colonizing the rich interior of this country, appealed to the foundress of the Sisters of St. Joseph, who were already established there. Having submitted her plans for approval and received full authority, Mother Javouhey set out for Guiana in 1828, with 36 sisters and 50 emigrants, and soon had organized a self-supporting colony, in which all the useful arts were practised. In 1835, two years after her return to France, again at the request of the Government, she once more went to Guiana to take charge of 520 African negroes, formerly in government service at Cayenne, whom the authorities wished reclaimed for civilization and Christianity before being granted their freedom. Harassed as she was by opposition, and even calumny, her success with the negro colony, due largely to her personal influence with the colonists, was so great that when emancipation was granted there were no such scenes of disorder as marked similar occasions in other colonies. The blacks of the colony had become Christians and had learned the ways of civilization and the value of manual labour.

Long before this Mother Javouhey had established a leper colony on the banks of the Accarouey. Even the Indians came within the sphere of her influence; whole tribes were instructed in the Faith and asked for baptism. On her return to France, in 1840, Mother Javouhey found fresh trials awaiting her, including ecclesiastical opposition. Nevertheless she continued to direct the establishment of new mission houses of her order in all parts of the world, in addition to over thirty foundations in the various dioceses of France. When the news of the death of "the mother of the blacks" reached French Guiana, there was general grief, and most of the inhabitants of her colonies went into mourning as for a personal bereavement. The cause of Mother Javouhey's beatification was introduced 11 February, 1907. *Missiones Franciscanas*, VI (Paris, 1903), 399 sqq.; _Hélou, Ordres religieux_, (Paris, 1859); _Hermanns, Orden und Kongregationen_, (Paderborn, 1898).

F. M. RUDGE.

**Jealousy** is here taken to be synonymous with envy. It is defined to be a sorrow which one enters at another's well-being because of a view that one's own excellence is in consequence lessened. Its distinctive malice comes from the opposition it implies to the supreme virtue of charity. The law of love constrains us to rejoice rather than to be distressed at the good fortune of our neighbour. Besides, such an attitude is a direct contradiction of the spirit of solidarity which we desire to share with the human race and, in an especial degree, the members of the Christian community. The envious man tortures himself without cause, morbidly holding, as he does, the success of another to constitute an evil for himself. The sin, in so far as it bids defiance to the great precept of charity, is not merely a grave sin; although on account of the trifling matter involved, as well as because of the want of sufficient deliberation, it is often reputed to be venial. Jealousy is most evil when one repines at another's spiritual good. It is then said to be a sin against the Holy Ghost. It is likewise called a capital sin because of the other vices it begets. Among its progeny St. Thomas (II-II, Q. xxxvi) enumerates hatred, detraction, rejoicing over the misfortunes of one's fellow, and whispering. Regret at another's success is not always jealousy. The motive has to be scrutinized. If, for instance, I feel sorry at the news of another's promotion or rise to wealth, either because I know that he does not deserve his accession of good fortune, or because I have founded reason to fear he will use it to injure me or others, my attitude, provided that there is no excess in my sentiment, is entirely rational. Then, too, it may happen that I do not, properly speaking, begrudge my neighbour his happier condition, but simply am grieved that I have not imitated him. Thus if the subject-matter be praiseworthy, I shall be not jealous but rather laudably emulate.

JOSEPH F. DELAY.

**Jean-Baptiste-Marie Vianney, Blessed, Cure of Ars, b. at Dardilly, near Lyons, France, on 8 May, 1786; d. at Ars, 4 August, 1859; son of Mathieu Vianney and Marie Beluze. In 1805, the cure at Ecully, M. Bailey, opened a school for ecclesiastical students, and Jean-Marie was sent to him. Though he was of average intelligence and his masters never seem to have doubted his vocation, his knowledge was extremely limited, being based upon dogmatic, historical, and geographical, and he found learning, especially the study of Latin, excessively difficult. One of his fellow-students, Matthias Loras, afterwards first Bishop of Dubuque, assisted him with his Latin lessons. But now another obstacle presented itself. Young Vianney was drawn in the conscription, the war with Spain and the urgent need of recruits having caused Napoleon to withdraw the exemption enjoyed by the ecclesiastical students in the diocese of his uncle, Cardinal Fesch. Mathieu Vianney tried unsuccessfully to procure a substitute, so his son was obliged to go. His regiment received marching orders. The morning of departure, Jean-Baptiste went to church to pray, and on his return to the barracks found that his comrades had already left. He was threatened with arrest, but the recruiting captain believed his story and sent him after the troops. At a small town he met a young man who volunteered to guide him to his fellow-soldiers and led him to Noes, where some deserters had gathered. The mayor persuaded him to remain there under an assumed name as schoolmaster. After fourteen months, he was able to communicate with his family. His father was vexed to know that he was a deserter and ordered him to surrender, but the schoolmaster was settled by his younger brother offering to serve in his stead and being accepted.
Jean-Baptiste now resumed his studies at Ecully. In 1812, he was sent to the seminary at Verrières; he was so deficient in Latin as to be obliged to follow the philosophy course in French. He failed to pass the examinations for entrance to the seminary proper, but on re-examination three months later succeeded. On 13 August, 1815, he was ordained priest by Mgr Sisini. His difficulties in writing the preparatory studies seem to have been due to a lack of mental suppleness in dealing with theory as distinct from practice—a lack accounted for by the meagreness of his early schooling, the advanced age at which he began to study, the fact that he was not of more than average intelligence, and that he was far advanced in years before he took to the practice of virtue long before he came to study it in the abstract. He was sent to Ecully as assistant to M. Baillé, who had first recognised and encouraged his vocation, who urged him to persevere when the obstacles in his way seemed insurmountable, who interceded with the examiners when he failed to pass for the higher seminary, and who was his model as well as his preceptor and patron. In 1818, after the death of M. Baillé, M. Vianney was made parish priest of Ars, a village not very far from Lyons. It was in the exercise of the functions of the parish priest in this remote French hamlet that as “curé d’Ars” he became known throughout France and the Christian world. A few years after he went to Ars, he founded a sort of orphanage for destitute girls. It was called “The Providence” and was the model of similar institutions established later all over France. M. Vianney himself instructed the children of “The Providence” in the catechism, and these catechetical instructions came to be so popular that at last they were given every day in the church to large crowds. “The Providence” was the favourite work of the “curé d’Ars”, but, although it was successful, it was closed in 1847, because the holy curé thought that it was not justified in maintaining itself in the face of the opposition of many good people. Its closing was a very heavy trial to him. But the chief labour of the Curé d’Ars was the direction of souls. He had not been long at Ars when people began coming to him from other parishes, then from all parts of France, and finally from other countries. As early as 1835, his bishop forbade him to attend the annual retreats of the diocesan clergy because of “the souls awaiting him yonder”. During the last ten years of his life, he spent from sixteen to eighteen hours a day in the confessions sought by bishops, priests, religious, young men and women in doubt as to their vocation, sinners, persons in all sorts of difficulties, and the sick. In 1855, the number of pilgrims had reached twenty thousand a year. The most distinguished persons visited Ars for the purpose of seeing the holy curé and hearing his daily instruction. The Venerable Father Colin was ordained deacon at the same time, and was his life-long friend, while Mother Marie de la Providence founded the Helpers of the Holy Souls on his advice and with his constant encouragement. His direction was characterised by considerate sense, remarkable insight, and supernatural knowledge. He would sometimes divine sins withheld in an imperfect confession. His instructions were simple in language, full of imagery drawn from daily life and country scenes, but breathing faith and that love of God which was his life principle and which he infused into his audience as much by his manner and tone of voice, as by his words. For, at the last, his voice was almost inaudible. The miracles recorded by his biographers are of three classes: first, the obtaining of money for his charities and food for his orphans; secondly, supernatural knowledge of the past and future; thirdly, healing the sick, especially children. The greatest miracle of all was his life. He practised mortification from his early youth, and for forty years his food and sleep were insufficient, humanly speaking, to sustain life. And yet he laboured incessantly, with unfailing humility, gentleness, patience, and cheerfulness, until he was more than seventy-three years old. On 3 October, 1874, Jean-Baptiste-Marie Vianney was proclaimed Venerable by Pius IX, and on 8 January, 1863, he was enroled among the Blessed. Pope Pius X has proposed him as a model to the parochial clergy. His feast is kept on 4 August.

SUSAN T. OTTEN

Jean-Gabriel Perboyre, BLESSED, missionary and martyr, b. at Puech, Diocese of Cahors, France, 6 May 1802; martyred at Ou-Tchang-Fou, China, 11 September, 1840. Jean-Gabriel was one of eight children born to Pierre Perboyre and Marie Rigal. By reason of his piety, he was the model of his companions during his childhood. While acting as companion to his younger brother, in the preparatory seminary of Montauban, he felt the Divine call to the priesthood, and after obtaining his father to take the step, he entered the novitiate of the Congregation of the Mission, in the seminary of Montauban, Dec., 1818. On the feast of the Holy Innocents, 1820, he made the four vows of the Vincentians. He was raised to the priesthood, 25 Sept., 1825, in the chapel of the Sisters of Charity at New-Orleans, and on the following day he said his first Mass. Shortly after, he was sent to the seminary of St. Flour to teach dogmatic theology, and two years later, he was appointed superior of the preparatory seminary of St. Flour. His great sanctity and marvellous success induced his superiors, in 1832, to appoint him sub-director of the novitiate in Paris. He continued in this office until 1835, when he obtained the permission which for fourteen years he had sought and begged and prayed for, permission to go to China, there to preach, to suffer, and to die. He left Havre on 21 March, and on 29 Aug. 1835, arrived at Macao, where he spent some time studying the Chinese language. On 21 Dec., 1835, he began his journey to Ho-Nan, the mission assigned him. In Jan., 1838, he was transferred to the mission of Hou-Pé, in which, as in that of Ho-Nan, he laboured zealously and with great success. In Sept., 1839, the persecutions against the Christians broke out in Hou-Pé, and Jean-Gabriel was one of the first victims. The events leading to his death bear a striking resemblance to the Passion and Death of Christ. A neophyte, like another Judas, betrayed Jean-Gabriel for thirty ounces of silver. He was stripped of his garments and clothed with rags, bound, and dragged from tribunal to tribunal. At each trial, he was treated inhumanly, tortured both in body and in soul. Finally, he was taken to Ou-Tchang-Fou, and after unparalleled tortures, was condemned to death. The sentence was ratified by an imperial edict, and on 11 Sept., 1840, Jean-Gabriel was led to death with a rope around his neck. The priest was strangled to death on a cross. Jean-Gabriel was declared Venerable by Gregory XVI on 9 July, 1843; and was beatified by Leo XIII on 9 Nov., 1889. His feast is celebrated on 7 Nov.

JOSEPH S. GLASS.

Jeanne de Valois, SAINTE, queen and foundress of the Order of the Annunziates, b. 1464; d. at Bourges, 4 Feb., 1505. Daughter of one king and wife of another, there are perhaps few saints in the calendar who suffered greater or more bitter humiliations than did Madame Jeanne de France, the heroic woman usually known in English as St. Jane of Valois. A daughter of Louis XI by his second wife, Charlotte de Savoy, she
was hated from birth by her father, partly because of her sex and partly on account of her being sickly and deformed. Sent away to be brought up as a shepherdess in a lonely country château, and deprived not only of every advantage due to her rank, but even of common comforts and almost of necessities, it was the intense solitude and abjection of her life that first made Jeanne turn to God for consolation, and that gave her vocation as a tender and pietistical devotion to the Blessed Virgin. She is said to have had a supernatural promise that some day she would be allowed to found a religious family in honour of Our Lady. The mysteries of the Annunciation and Incarnation, as set forth in the Angels, were her great delight.

The machinations of Louis XI compelled Jeanne to marry Louis, Duke of Orleans, his second cousin, and heir presumptive to the throne. After her marriage, the princess suffered even more than before, for the duke hated the wife imposed upon him, and even publicly insulted her in every possible way. She, imagining virtues in her husband that did not exist, loved him tenderly, and when he got into disgrace and was imprisoned exerted herself to mitigate his sufferings and to get him freed. No sooner, however, was the duke, on the death of Charles VIII, raised to the throne of France as Louis XII, than she got her marriage with Jethy annulled at Rome, on the ground that it was invalid, from lack of consent, and from the fact that it had never been consummated (see Alexander VI); and the saint’s humiliations reached their climax when she found herself, in the face of all France, an unjustly repudiated wife and queen.

But the two special virtues in which Jeanne had resolved to imitate the Blessed Virgin were silence and humility; hence, though she bravely contested the matter while it was of any use, she accepted the verdict, when it came, without a complaint, merely thanking God that it had made her free to serve His Mother as she had always hoped to do, by founding an order for her service. She was made Duchess of Berry, and given that province to govern. Going to live at Bourges, its capital, she fulfilled all her duties as ruler with strict conscientiousness and tender care for her subjects’ welfare. In 1500, in conjunction with her French cousin director, Gilbert Nicolas, Jeanne founded the Order of the Annunciation, an order for prayer and penance, whose chief rule was to imitate the virtues of Mary, as shown in the Gospels. The rejected queen found happiness at last in devoting herself to this work; and towards the close of her life, she took vows, if, putting on her wedding ring, which she had hitherto worn, and wore the habit under her clothes. In spite of bad health and constant suffering, she had done much bodily penance all her life, besides giving many hours to prayer. Up to her death she prayed incessantly for her heartless husband, and left as a legacy to her order the duty of constant prayer for his soul as well as her father’s and brother’s.

Jeanne died as she had lived, and was lamented by her spiritual daughters and all her people. Many miracles, especially of healing, followed her death. In 1514, Leo X allowed the Annunciation to honour her by a special office. Benedict XIV pronounced her Blessed, and extended her cult throughout France; but, though the process of canonization had been introduced in 1614, owing to various delays and hindrances, she has never been actually canonized, though universally known as a saint.

Jeanne was the youngest of the four daughters of Jean de Flandres, and his wife, Jeanne de Laval. Her mother died when she was only six years old, and she was brought up by her father, who was a soldier of fortune. From an early age she showed a remarkable talent for music, and she was particularly skilled in the art of playing the harp. She was also a gifted writer, and her letters and poems were highly regarded in her time.

Jeanne was married at the age of sixteen to a wealthy merchant named Robert de Chalon, with whom she had two children: a son named Jean and a daughter named Louise. However, her marriage was unhappy, and she soon became estranged from her husband. In 1537, she founded the Order of the Annunciation, which quickly gained a reputation for its spiritual purity and devotion to the Virgin Mary. Jeanne was the first superior of this order, and she devoted her life to the care of the poor and the sick.

Her reputation for sanctity grew, and she became known throughout France as a holy woman. In 1543, she was arrested by the authorities and sent to prison, where she spent several years. However, she remained undaunted, and continued to minister to the needs of the poor while in captivity.

In 1552, Jeanne was released from prison and allowed to return to her convent. She died peacefully in 1563, and was buried in the church of the Annunciation. Her tomb became a place of pilgrimage, and her reliquary was venerated throughout France.

In 1665, Jeanne was canonized as a saint, and her feast day is celebrated on March 10th.

Jeanne d’Arc was a 15th-century French peasant girl who became a national heroine of France. She was born in Domrémy, a small village in northeastern France, in 1412. Her family was poor, and she worked in the fields as a child.

In 1428, at the age of 17, Jeanne had a vision in which the Archangel Michael appeared to her and told her to go to the king and help him. She was sent to the court of Charles VII, who was in exile in England. Jeanne convinced the king to let her lead his army to victory, and she became a symbol of French resistance against the English. She was captured by the English in 1430 and was tried as a witch. She was burned at the stake in 1431.

Jeanne d’Arc was canonized as a saint in 1920.

JEDBURGH (eighty-two different spellings of the name are given in the “Origines Parochiales Scotiae”), Augustinian abbey, in the town of the same name (capital of Roxburghshire, Scotland), established as a priory by David I, King of Scots, in 1118, and consecrated by Canons Regular of St. Augustine from the Abbey of St-Quentin, at Beauvais, France. Fordun gives 1147 as the year of foundation, but this seems to have been the date of the erection of the priory into an abbey, when prior Oebert (styled in the Melrose chronicle “primus abbas de Goddeworth”) was raised to the abbatial dignity. Jedburgh soon became one of the greatest Scottish monasteries, deriving importance from its proximity to the castle (now entirely destroyed), which was the favourite residence of many of the Scottish kings. Lands, churches, houses, and valuable fisheries, on both sides of the border, were granted on the abbey, and the abbots held the titles of Lords of the Manor of Jedburgh, IV, William the Lion, and other royal and noble benefactors; and Alexander IM chose to be married in the abbey church to Yolande de Dreux in 1285, by which year the monastic buildings, including the great church, were probably complete.

An old chapel they so near the English border as Jedburgh was sure to suffer much in the constant war between England and Scotland. About 1300 the monastery became uninhabitable, owing to repeated attacks made on it, and the community was dispersed. Later on it recovered its prosperity for a time, but in the century and a half preceding the Reformation it was devastated, plundered, and occasionally set on fire, at least four times by the invading English. In 1559 (John Home being aabbot) the abbey was suppressed, and its possessions confiscated by the Crown. A Protestant church was afterwards constructed within the nave and used until 1875, when a new church was built by the Marquess of Lothian, whose family has possessed the lordship of Jedburgh continuously since 1622. Practically the whole of the domestic buildings of Jedburgh Abbey have disappeared; but the magnificent church is still wonderfully entire. The oldest part is the early Norman choir, of which the two western bays remain; and the nave, 129 feet long, is a very

JEUARAT, EDMOND (E.D.), French engraver, b. at Vernon, near Auxerre, 1658; d. at Paris, 1738. He was the elder brother of Etienne Jeaurat, the painter, and the son of an engraver or worker in metal, who on a visit to Paris took his eldest boy with him, and brought him to Bernard Picart. Here Edmond spent many years, and when he left his master's studio he wandered away to Holland, and for a few years studied the art of the Dutch painters, earning his living by engraving a few plates after the chief paintings in Amsterdam and The Hague. On returning to Paris he married the sister of the artist Le Clerc, and many of his engravings represented the religious pictures painted by his brother-in-law, Le Clerc the younger. He had two sons, one Nicholas Henry, a painter, usually known as Jeaurat de Bertry or Berty, the other Sébastien, who devoted himself to science. There is a fine collection of his engravings in the British Museum, London, and they can also be studied in the Bibliothèque Nationale in Paris. His finest work is probably "Achilles discovered among the Daughters of Lycomedes," dated 1713, and there are many others of his engravings taken from works by Poussin, Veronese, and Watteau.

D. O. HUNTER-BLAIR.

Jehovah, the proper name of God in the Old Testament: the name by excellence, the great name, the only name, the glorious and ter-

rible name, the hidden and mysterious name, the name of the substance, the proper name, and most fre-

quently שם הים, הים of the exalted, i.e. the explicit or the separated name, though the precise meaning of this last expression is a matter of discussion (cf. Buxtorf, „Lexicon“, Basle, 1639, col. 2432 sqq., Jehovah occurs more frequently than any other Divine name. The Concordances of Fürst („Vet. Test. Concordi-

te“), Leipzig, 1840) and Mandelkern („Vet. Test. Con-

cordiania“), Leipzig, 1890) do not explicitly agree as to the number of its occurrences; but the round number is included in the Old Testament in 60 (40, 60, 60, etc.) alone or in conjunction with another Divine name. The Septuagint and the Vulgate render the name generally by „Lord“ (Κύριος, Dominus), a translation of Adonai,—usually substituted for Jehovah in reading.

I. PRONUNCIATION OF JEHOWAH.—The Fathers and the Rabbinic writers agree in representing Jehovah as an ineffable name. As to the Fathers, we only need draw attention to the following expressions: ἡ φρονία ημῶν, ἡματτομ, ἐκκλησία, ἐκκλησία, ἐκκλησία, ἐκκλησία ημῶν ἐν δύναμιν, μονότον. Leusden could not induce a certain Jew, in spite of his poverty, to pronounce the real name of God, though he held out the most alluring promises. The Jew's compliance with Leusden's wishes would not indeed have been of any real advantage to the latter; for the modern Jews are as uncertain of the real pronunciation of the Sacred name as their Christian contemporaries. According to the modernized pronunciation, Jehovah ceased to be used at the time of Simeon the Just, who was, according to Maimonides, a contemporary of Alexander the Great. At any rate, it appears that the name was no longer pronounced after the destruction of the Temple. The Mishna refers to our question more than once (Benj. iii. 5), and so does the use of the Divine name by way of salutation; in Sahedrin, x, 1, Abba Shaul refuses any share in the future world to those who pronounce it as it is written; according to Thaddai, vii, 2, the priests in the Temple (or perhaps in Jerusalem) might employ the true Divine name in their private and individual pronouncements (cf. “Jehovah” (1. 9), (Jerusalem) had to be contented with the name Adonai; according to Maimonides („More Neb. 1, 61, and „Yad chasaka“, xiv, 10) the true Divine name was used only by the priests in the sanctuary who imparted the blessing, and by the high-priest on the Day of Atonement. Philo („De mut. nom.,“ n. 2 (ed. Marg., i, 580); „Vita Mose. 1, iii, 25 (ii, 166) seems to maintain that even on these occasions the priests had to speak in a low voice. Thus far we have followed the post-Christian Jewish tradition concerning the attitude of the Jews before Simeon the Just.

And in the earlier traditions (Antiq., XII, vi, 4) declares that he is not allowed to treat of the Divine name; in another place (Antiq., XII, v, 5) he says that the Samaritans erected on Mt. Garism an ἀνάστασις ταῦτα. This extreme veneration for the Divine name must have generally prevailed at the time when the Septuagint version was made, for the translators always substitute Κύριος (Lord) for Jehovah. Elcclus. xxiii, 10, appears to prohibit only a wanton use of the Divine name, though it cannot be denied that Jehovah is not employed there. More recent canonical books of the Old Testament as in the older books. It would be hard to determine at what time this reverence for the Divine name originated among the Hebrews. Rabbinic writers derive the prohibition of pronouncing the Tetragrammaton, the name of Jehovah in Lev. xxv, 16: „And he that blasphemeth the name of the Lord, dying let him die“. The Hebrew particle n;qd, hv, rendered „blasphemeth“, is translated בֵּךְ הִצָּרָה in the Septuagint, and appears to have the meaning “to determine“, “to denote“ (by means of its proper wording) in Gen. xxxv, 28; Num. xxiv, 16; etc. Still, the context of Lev. xxv, 16 (cf. verses 11 and 15), favours the meaning “to blaspheim“; Rabbinic exegetes derive the prohibition also from Ex., iii, 15; but this argument cannot stand the test of the laws of sober hermeneutics (cf. Drusius, „Tetragrammaton“, 8-10, in „Critici Sacri“, Amsterdam, 1698, I, p. 1, col. 339-42; „De nomine divino“, ibid., 512-16; Drach, „Harmonie entre l'Eglise et la Synagogue“, I, Paris, 1844, pp. 350-53, and Note 30, pp. 512-16). What has been said explains the so-called qeri perpetuum, according to which the consonants of Jehovah are always accompanied in the Hebrew text by the tail of the preceding letter in case while Adonai stands in apposition to Jehovah: in these cases the vowels of Elohim are substituted. The use of a simple shewah in the first syllable of Jehovah, instead of the compound shewah in the corresponding syllable of Adonai and Elohim, is required by the rules of Hebrew grammar governing the use of shewah. Hence the question: What are the true vowels of the word Jehovah? It has been maintained by some recent scholars that the word Jehovah dates only from the year 1520 (cf. Hastings, „Dictionary of the Bible“, II, 1899, p. 199; Gesenius-Buhl, „Handwörterbuch“, 13th ed., 1899, p. 311). Drusius (loc. cit., 344) represents Peter Galatinus as the inventor of the word Jehovah, and Fagius as its propagator in the world of scholars and commentators. But the writers of the sixteenth century, Catholic and Protestant (e.g. Cajetan and Théodore de Bèze), are perfectly familiar with the name Jehovah. (Galatinus himself rendered the name Jehovah and Galatinus, I, Bari, 1516, a, p. 77) represents the form as known and received in his time. Besides, Drusius (loc. cit., 351) discovered it in Porchetus, a theologian of the fourteenth century. Finally, the word is found even in the "Pugio fidelis" of Raymund Martin, a work written about 1270 (ed. Paris, 1571), cap. iii, p. 448, and Note, p. 745). Probably the introduction of the name Jehovah antedates even R. Martin. Wonder no then that this form Jehovah has been regarded as the true pronunciation of the Divine name by such scholars as Michaelis ("Supplementa ad lexicon hebraicum", I, 1792, p. 224), Schuch (loc. cit., I, 469-95), Stier (Lehrgebäude der hebr. Sprache, 327), and others. (a) Jehovah is composed of the abbreviated forms of the imperfect, the participle, and the perfect of the Hebrew verb "to be" (γε-γεννήθη, ω-θη-καθαρή, ω-θη-καθαρή). According to this explanation, the meaning of Jehovah would be, "he who will be, is, and has been". But such a word-formation has no analogy in the Hebrew language. (b) The abbreviated form יְהֹוָּה supposes the full form Jehovah. But the form Jehovah cannot account for the abbreviations יְהֹוָּה and יְהֹוָּה, while the abbreviation יְהֹוָּה may be derived from another יְהֹוָּה. The former is said to be paraphrased in Apoc., i, 4, and iv, 8, by the expression וַיְהֹוָּה וַיְהֹוָּה וַיְהֹוָּה וַיְהֹוָּה וַיְהֹוָּה, in which יְהֹוָָאפר is regarded as equivalent to יְהֹוָָאפר, the one that will be"; but it really means "the coming one", so that after the coming of the Lord, Apoc., xi, 17, re-
JEHOVAH

tains only 4 by 3 x 4. (d) The comparison of Jehovah with the Latin Jupiter, Jovis. But it wholly neglects the fuller forms of the Latin names Dispiter, Divus. Any connexion of Jehovah with the Egyptian Divine name consisting of the seven vowels e η ω ο ν ι α, has been rejected by Hengstenberg (Beiträge zur Einleitung ins Alte Testament, II, 204 sqq.) and Theodor Hahn in his Ztschr. f. d. Neu-test. Wschr. 1884, 59 ff. To take up the ancient writers: Diodorus Siculus writes Jâô (I, 94); Irenæus ("Adv. haer." II, xxxv, 3, in P. G., VII, col. 840); Jaôth; the Valentinian heretics (I., "Adv. haer."); I, iv, 1, in P. G., VII, col. 481); Jâô; Clement of Alexandria ("Strom." V, 6, in P. G., col. 668) have translated it as "Jehovah." (I., I, 14, in P. G., XIV, col. 105); Jâô; Porphyry (Eus., "Præp. evang."); I, ix, in P. G., XXI, col. 72); Josèp; Epiphanius ("Adv. haer."); I, iii, 40, in P. G., XLI, col. 685); Jâô; Pseudo-Jerome ("Breviarium in Ps."); in P. L., XXVI, 828); Jâô; the Samaritans (Theodoret, in "Ex. quest." xv; in P. G., LXXX, col. 244); Jâô; James of Edessa (cf. Lamy, "La science catholique."); 1891, p. 196); Jephî; Jerome ("Ep. xxv ad Marcell." in P. L., XXII, col. 429) speaks of certain ignorant Greek writers who transcribed the Hebrew Divine name Hô Hô. The judicious reader will perceive that the Saxon pronunciation presumably approaches the real sound of the Divine name closest; the other early writers transmit only abbreviations or corruptions of the sacred name. Inserting the vowels of Jâô into the original Hebrew consonant text, we obtain the form Jehovah (Yahweh), which has been generally accepted by modern scholars as the true pronunciation of the Divine name. It is not merely closely connected with the pronunciation of the ancient synagogue by means of the Samaritan tradition, but it also allows the legitimate derivation of all the abbreviations of the sacred name in the Old Testament.

The MEANINGS OF THE DIVINE NAME Jehovah (Yahweh) is one of the most obscure of Biblical names, such as Jacob, Joseph, Israel, etc. (cf. Ewald, "Lehrbuch der hebr. Sprache."); 7th ed., 1863, p. 664), derived from the third person imperfect in such a way as to attribute to a person or a thing the action or the quality expressed by the verb after the manner of a verbal adjective or a participle. Fürst has collected most of these nouns, and calls the form forma participialis imperficta. As the Divine name is an imperfect form of the archaic Hebrew verb "to be," Jehovah means "He Who is." Whose characteristic note consists in being, or Thus, Jehovah is the imperfect hiphil or the imperfect qal. Calmet and Le Clerc believe that the Divine name is a hiphil form; hence it signifies, according to Schrader (Die Keilinschriften und das Alte Testament, 2nd ed., p. 25), He Who brings into existence, the Creator, and according to Lagarde (Psalterium Hieronymi, 153), He Who causes to arrive, Who realizes His promises, the God of Providence. But this opinion is not in keeping with Ex., iii, 14, nor is there any trace in Hebrew of a hiphil form of the verb meaning "to be." Moreover, this hiphil form is supplied in the cognate languages by the περὶ form, except in Syriac where the hiphil is rare and of late occurrence.

On the other hand, Jehovah may be an imperfect qal from a grammatical point of view, and the traditional exegesis of Ex., iii, 6-16, seems to necessitate the form Jehovah. Moreover God; "If they should ask you, What is this name [God's]? what shall we say to them?" In reply, God returns three several times to the determination of His name. First, He uses the first person imperfect of the Hebrew verb "to be;" here the Vulgate, the Septuagint, Aquila, Theodotion, and the Arabic version suppose that God uses the imperfect hiphil of the Tennessee, however, makes it mean "I am who am," and it does not express the idea of "eternal" or "existent;" it is only a future tense. The two latter pronouns, however, are not accurately translated into English. The two former pronouns, Jehovah and Jerusalem, both imply the imperfect hiphil. Hence we have the renderings: "I am who am" (Vulg.), "I am who is" (Sept.), "I shall be [who shall be]" (Aquila, Theodotion), "the Eternal who does not cease." (Arabic), only the above-mentioned Targums seem to refer any reference to the creation of the world. The second time, God uses again the first person imperfect of the Hebrew verb "to be;" here the Syriac, the Samaritan, the Persian versions, and the Targums of Onkelos and the Targum of Jonathan suppose here the imperfect qal: "He Who is, hath sent me to you" instead of "I Am, hath sent me to you." (Vulg.), "I am who am, and shall be, hath sent me to you." (Targ. Jon.). Finally, the third time, God uses the third person of the imperfect, or the form of the sacred name itself; here the Samaritan version and the Targum of Onkelos retain the Hebrew form; the Septuagint, the Vulgate, and the Syriac version render "Lord." Though, according to the analogy of the former two passages, they should have translated, "He is, the God of your fathers, . . . hath sent me to you," the Arabic version substitutes "God." Classical exegesis, therefore, regards Jehovah as the imperfect qal of the Hebrew verb, probably a "proper noun." Here another question presents itself: Is the being predicated of God in His name, the metaphysical being denoting nothing but existence itself, or is it an historical being, a passing manifestation of God in time? Most Protestant writers regard the being implied in the name Jehovah as an historical one, though some do not wholly exclude such metaphysical ideas as God's independence, absolute constancy, and fidelity (cf. Oehler, "Theologie des Alten Test."); 1882, p. 142); or again God's indefinableness, absolute consistency, fidelity to His promises, and immutability in His plans (cf. Dr. Verhoesen, "Das Hebräische Name Jehovah"). The following are the reasons alleged for the historical meaning of the "being" implied in the Divine name: (a) The metaphysical sense of being was too abstruse a concept for the primitive times. Still, some of the Egyptian speculations of the early times are almost as abstruse; besides, it was not necessary that the Jews of the time of Moses should fully understand the meaning implied in God's name. The scientific development of its sense might be left to the future Christian theologians. (b) The Hebrew verb hâyâh means rather "to become" than "to be" permanently. But good authorities deny that the Hebrew verb denotes being in a more empirical than in an eternal sense. It is true that the participle would have expressed a permanent state more clearly; but then, the participle of the verb hâyâh is found only in Ex., ix, 3, and a few proper names in Hebrew are derived from the participle. (c) The imperfect mainly expresses the action of one who enters anew on the scene. But this is not always the case; the Hebrew imperfect is a true aorist, presencing from time and there, best adapted for general principles (Driver, p. 38). (d) "I am who am" appears to refer to "I will be with thee," of v. 12: both texts seem to be alluded to in Os., 1, 9, "I will not leave you." But if this be true, "I am who am" must be considered as an ellipse: "I am who am with you," or "I am who am faithful to my promises." This is harsh enough; it becomes quite inadmissible in the clause, "I am who am, hath sent me." Since then the Hebrew imperfect is admittedly not to be considered as that which is the nature of the language does not force us to see in it the expression of transition or of becoming, and since, moreover, early tradition is quite fixed and the absolute character of the verb hâyâh has induced even the most ardent patrons of its historical sense to admit in the texts a different meaning, we are encouraged to take the expressions in Ex., iii, 13-15, for what they are worth. Jehovah is He Who is, i.e., His nature
is best characterised by Being, if indeed it must be designated by a personal proper name distinct from the term God (Revue biblique, 1893, p. 338). The scholastic theories as to the depth of meaning latent in Jehovah (Yahweh) rest, therefore, on a solid foundation. The old definitions are defying assumption, because He can be defined only by being, pure and simple, nothing less and nothing more; not by abstract being common to everything, and characteristic of nothing in particular, but by concrete being, absolute being, the ocean of all substantial being, independent of any cause, in case of change; and defying assumption, because He is infinite: “Alpha and Omega, the beginning and the end, . . . who is, and who was, and who is to come, the Almighty” (Apoc., i. 8). Cf. St. Thomas, I, qu. xiii., a. 14; Franzelin, “De Deo Uno” (3rd ed., 1883), thesis XXIII, pp. 279–80.

III. ORIGIN OF THE NAME JAHWEH (YAHWEH).

The opinion that the name Jehovah was adopted by the Jews from the Chanaanites, has been defended by von Bohlen (Genesis, 1835, p. cix), Von Alm (Theol. Briefe, i, 1862, pp. 324–27), Colenso (The Pentateuch, V, 1865, pp. 209–94), Goldscheider (Der Mythus bei den Semiten, 1894, p. 339), etc., by Kuenen (“De Godsdiens van Israel”), I, Haarlem, 1869, pp. 379–401) and Baudissin (Studien, i, pp. 213–18). It is antecedently improbable that Jehovah, the irreconcilable enemy of the Chanaanites, should be originally a Chanaanite god.

Jehovah (Die Religion des Alten Test., 1835, p. 672) and J. G. Müller (Die Semiten in ihrem Verhältniss zu Chamiten und Japhethitern, 1872, p. 163) that the name Jehovah is of Indo-European origin. But the transition of the Sanscrit root dī to the Latin Jupiter-Justus (Divus), the Greek Zeus-Aster, the Indian-Vedic Dharma-into the Hebrew form Jehovah has never been satisfactorily explained. Hitzig’s contention (Vorlesungen über bibl. Theol., p. 38) that the Indo-Europeans furnished at least the idea contained in the name Jehovah, even if they did not originate the name itself, is without any value.

The theory that Jehovah is of Egyptian origin may have a certain amount of a priori probability, as Moses was educated in Egypt. Still, the proofs are not convincing: (a) Röth (Die Aegypt. und die Zoroa. Glaubenslehre, 1846, p. 175) derives the Hebrew name from the ancient moon-god Ilu or Iu. But there is no connection between the Hebrew and the moon-god Ilu (cf. Ritter, “Vocabul. hierogl.”, 1875, p. 44). (b) Plutarch (De Iside, 9) tells us that a statue of Athene (Neith) in Sais bore the inscription: “I am all that is, and is, and will be.” But Tholuck (op. cit., 1887, pp. 189–205) shows that the meaning of this inscription is wholly different from that of the name Jehovah. (c) The patriarchs of the Egyptian origin of the sacred name appeal to the common Egyptian formula, Nukh b nuk but though its literal signification is “I am I,” its real meaning is “I is who” (cf. Le Page Renouf, “Hibbert Lectures for 1879,” p. 244).

As to the theory that Jehovah has a Chaldaean or an Assyrian origin, the following facts are for this supposition: Jehovah is said to be a merely artificial form introduced to put meaning into the name of the ancient god (Delttsch., “Wo lag das Paradies,” 1881, pp. 158–64); the common and popular name of God is said to have been Yahu or Yahu, the letter I being the essential Divine element in the name. This contention, if true, does not prove the Chaldaean or Assyrian origin of the Hebrew Divine name; besides the form Yah is rare and exclusively poetic; Yahu never appears in the Bible, while the ordinary full form of the Divine name is found even in the inscription of Mea (line 18) dating from 940 B.C. The name Yahu is the name God known outside Israel; the forms enter into the composition of foreign proper names; besides, the variation of the name of a certain King of Hamath shows that Ilu is equivalent to Yau, and that Yau is the name of a god (Schrader, “Bibl. Bl.”, II, pp. 42, 56; Sargon, “Cyldnder”, xxv; Keil, “Fastes” 1, 33). But foreign proper names containing Yahu or Yahu are extremely rare and doubtful, and may be explained without admitting gods in foreign nations, bearing the sacred name. Again, these Babylonian appellations are well known at present, but the god Yau does not appear in it. (e) Among the pre-Semitic Babylonians, I is a synonym of Ilu, the supreme god; now I with the Assyrian nominative ending added becomes Yau (cf. Deltitsch, “Lesserstucke,” 3rd ed., 1885, p. 42, Syllab., col. 1, 13–16). Uebelacker (“Etymologie der altassyrischen Wörter,” 1897, pp. 144, 225) feels sure that he has discovered this Chaldaean god Yau. It is the god who is represented ideographically (Ilu) A-a, but ordinarily pronounced Malak, though the expression should be read At or Ia (Ia). The patriarchal family employed this name, and Moses borrowed and transformed it. But La Grande points out that the Jews did not believe that they offered their children to Jehovah, when they sacrificed them to Malak (Religion sémite, 1905, pp. 100 sqq.). Jer. xxxiii, 35, and Soph., i, 5, distinguish between Malak and the Hebrew God. (f) Words of Ancient Israel, 1907, pp. 63 sqq.) connects the origin of Jehovah with his Yerushm’el theory; but even the most advanced critics regard Cheyne’s theory as a discredit to modern criticism. Other singular opinions as to the origin of the sacred name may be safely omitted. The view of the name Jehovah is of Hebrew origin is the most probable. Arguing from Ex., vi, 2–8, such commentators as Nicholas of Lyra, Tostatus, Cajetan, Bonfrère, etc., maintain that the name was revealed for the first time to Moses on Mount Horeb. God declares in this vision that he “appeared to Abraham . . . by the name of God Almighty; and my name [Jehovah] I did not shew them.” But the phrase “to appear by a name” does not necessarily imply the first revelation of that name; it rather signifies the explanation of the name, or a manner of acting conformable to the meaning of the name (cf. Robiou “La Science cathol.”), 1888, pp. 618–24; Delattre, ibid., 1892, pp. 673–87; van Kasteren, ibid., 1894, pp. 299–315; Robert in “Revue biblique,” 1894, pp. 161–81). On Mt. Horeb God told Moses that He had not acted with the Patriarchs as the God of the Covenant, Jehovah, but as God Almighty.

Perhaps it is preferable to say that the sacred name, though perhaps in a somewhat modified form, had been in use in the patriarchal family before the time of Moses. On Mt. Horeb God revealed and explained the accurate form of His name, Jehovah. (a) The sacred name occurs in Genesis about 156 times; this frequent occurrence can hardly be a mere prolepsis. (b) Gen. iv, 28, states that Esau “began to call upon the name of the Lord [Jahveh],” or as the Hebrew text suggests, “began to call himself after the name of Jahveh.” (c) Jochabed, the mother of Moses, has in her name an abbreviated form Jo (Yo) of Jehovah. The pre-Mosaic existence of the Divine name among the Hebrews accounts for this shortening. (d) The supposition that the Divine element was introduced after the revelation of the name. (e) Among the 163 proper names which bear an element of the sacred name in their composition, 48 have yehô or yô at the beginning, and 116 have yahu or yahu at the end, while the form Jehovah never occurs in any such composition. Perhaps it might be assumed that these shortened forms yehô, yô, yahu, yahu, represent the Divine name as it existed among the Israelites before the full name Jehovah was revealed on Mt. Horeb. On the other hand, Driver (Studia biblica, 1, 5) has shown that these short forms are a Babylonian substitution of the full name. At any rate, while it is not certain that God revealed His sacred name to Moses for the first time, He surely revealed on Mt. Horeb that Jehovah is His incommunicable name, and explained its meaning.
Jehu (Heb. יְחַוע).

—The derivation of the name is uncertain. By some it is translated "Yahweh is he".

I. Jehu (Sept. יְחַוע), a prophet, described in III Kings, xvi, 1, as the son of Hanani, and as prophecying against Baasha, the then reigning King of Israel. Hanani was probably to be identified with the prophet of that name mentioned in II Par., xvi, 7. It is uncertain whether he belonged to the Southern or the Northern Kingdom, but, at all events, his ministry seems to have been exercised chiefly in the latter. He appears later in the reign of Josaphat, King of Juda, whom he reproaches for his alliance with Achab (cf. II Par., xix, 2-3). He outlived Josaphat, and wrote the history of his reign (II Par., xx, 34).

II. Jehu, the tenth King of Israel, 884 to 856, or 865 to 838, son of Josaphat, son of Nami; his tribe is not mentioned. According to Josephus (Antiq., IX, vi, 1) he was chief commandant of the army of Joram, his predecessor. For his sudden elevation to the royal throne his reign see IV Kings. The Prophet Elias had previously received a command from the Lord to anoint Jehu king over Israel (III Kings, xix, 16), but the order was only carried out by Elishaeus, his successor. While Joram, King of Israel, was still convalescing in Jezreel from a wound, Elishaeus sent "one of the sons of the prophets" to Jehu's head-quarters in Ramoth Galaad with orders to anoint him king and announce to him his mission of Divine vengeance against the wicked house of Achab. Jehu was immediately acclaimed king by his brother officers, and he forthwith set out in his chariot with his followers for Jezreel, The village was, however, razed to the ground, and Jehu, visiting his ally Joram. They fled, but Joram was killed by an arrow from the bow of Jehu, and Ozechias, being mortally wounded, died shortly after in Magdado. Entering the town of Jezreel, Jehu perceived the Queen Jezebel at a window of her palace, and he bade her attendants to cast her down headlong and she was trampled under the hoofs of the horses (III Kings, xxi, 23). Consistently with his programme of vengeance, Jehu caused the seventy sons of Achab who resided in Samaria to be put to death, and likewise all of the chief men and friends of the house of Achab, as well as forty-two of the brethren of Ozechias. He abolished the worship of Baal and slew its priests and followers, but he maintained the worship of the golden calves erected by Jeroboam. He was commended by Yahweh for his conduct towards the house of Achab, but nevertheless he is counted among the unfaithful rulers. Brief allusion is made to his defence of Israel against the incursions of the Syrians. On the occasion of Salmanasar's invasion in 842, Jehu sent a delegation to meet the Assyrian conqueror, with rich presents. This fact is recorded in one of the cuneiform inscriptions of Salmanasar, where Jehu is called the son of Amri (חָיָא), doubtless through a mistake on the part of the Assyrian annalist, who naturally considered Jehu as a lineal descendant of Amri, the founder of Samaria, since he occupied the throne of that dynasty. The same event is pictorially set forth on the Nimrud oelfast.

III. Jehu (Sept. יְחַוע), son of Obed, of the tribe of Juda (I Par., ii, 38).

IV. Jehu, son of Josabah, of the tribe of Simeon (I Par., iv, 35).

V. Jehu (Sept. יְחַוע), one of David's heroes, of the tribe of Benjamin, native of Anthoth (I Par., xii, 3).

VI. Jehu (Sept. יְחַוע), a Jewish name (Vulg., Jo November, 1:2).

JAMES PUEBLO, an Indian pueblo situated upon the north bank of the river of the same name about twenty miles north-west of Bernalillo, New Mexico. Its inhabitants, of Tanoan Shochehuan stock, are all of the same stock. An importation tribe occupying some ten villages in the same region. The first known by the Spaniards in 1541. The name comes from their Keran neighbours. They themselves call their town Walatoa, "Bear Village". The Jemes country was first entered by Coronado in 1541, and was visited by Espejo (1555) and Ofate (1588). Through the efforts of the Franciscan missions of Nuestra Señora de los Angeles the tribe was induced, about 1618, to concentrate in two villages, in each of which a mission was established. Somewhat later one of these was abandoned for a new station, San Juan (de los Jemes). Twice the Jemes, in connexion with some other Indians, conspired against the Spaniards, but the risings were speedily suppressed, until the outbreak of the general Pueblo rebellion in 1680, when the Jemes rose in both villages, killing one of the missionaries. At last, in 1694, General Vargas stormed their pueblo, killing nearly 100 of the inhabitants and carrying off some 400 prisoners. The uprising was thereby effectively reduced to the tribe to the single pueblo of San Diego. In 1696 they again revolted, killing the resident Franciscan missionary, and fled west to the Navaho. After some years of exile they returned and built the pueblo in which they now reside. In 1728 and 1780—1 they resided heavily from smallpox. The number now is about 500, including the remnant of the kindred Pecos tribe. Both a government and a Franciscan day-school are kept among them. In culture and general characteristics the Jemes resemble the other Pueblos.

JENINGEN, PHILIPP, VENERABLE, b. at Eichstatt, Bavaria, 5 Jan., 1642; d. at EiJwangen, 8 Feb., 1704. Entering the Society of Jesus, 19 Jan., 1663, he became a most successful popular missionary at the shrine of Our Lady of Schönben, near EiJwangen in Swabia, made famous by the Jesuits, and to which Jeningen, through the renown of his holiness, drew pilgrims from near and far. For many years he went forth on missions in the entire neighbourhood country, his burnt-out zeal achieving wonderful results. He is yet remembered as the "Apostle of the Ries".

FERGOLI, Vito, Philipp Jeningen, (Iglsstadt and Munich, 1783); HACEN, Leopold, Philipp Jeningen (Dillingen, 1766; Reprint, 1873); FISCHER, Aus dem Leben des ehrw. Philipp Jeningen... (Paderborn, 1850); Der ehrw. P. Philipp Jenog, von einem Priester der Joshvan-Kirche von Rotenberg (EiJwangen, 1808); Beschreibung der laurischen Kapelle und Kirche auf dem Schönben (EiJwangen, 1870); a life in MS. at the Jesuit College at Feldkirch; a collection of letters in the archives of the German province. A. HÜNDER

JENKS, SILVESTER, theologian, b. in Shropshire, c. 1656; d. early in December, 1714. He was educated at Douai College, where he was ordained priest 23 Sept., 1684, and where he was professor of philosophy from 1680 to 1688. He was later a preacher in ordinary to James II. At the Revolution of 1688 he fled to Flanders. On his return he served as a missionary in or near London and was appointed by the chapter Archbishop of Surrey and Kent. In 1711 he was elected by Propagation Vicar Apostolic of the Northern District (13 Aug., 1713), but died of paralysis before his consecration. Among his works are: "A Commentary and Hispanic Elements" (1692); "Practical Discourses on the Morality of the Gospel" (1699); "The Blind Obedience of a Humble Penitent the Best Cure for Scrupules" (1699, republished, London, 1872); "The Whole Duty of a Christian" (1707); "A Short Review of the Book of Jansenius" (1710).
A portrait engraved by le Pouter in 1694 is prefixed to a Paris edition of "A Contrite and Humble Heart".

JENNINGS, Sir Patrick Alfred, Australian statesman, b. at Newry, Ireland, 1831; d. July, 1897. He received his education, which included a training in engineering, and was, in his native town, went to Victoria in 1852, and settled in the St. Arnaud district, where he filled various public offices. In 1863 he went to New South Wales, and engaged in pastoral pursuits in the Riverina district. Four years later he was appointed to the Legislative Council of New South Wales, from which he resigned in 1869, and stood as a candidate for the Legislative Assembly, to which he was elected. In 1874 he was honoured by Pius IX with the Order of St. Gregory the Great, and in 1876 was made a Knight Commander of the Order of Pius IX and St. Gregory the Great. In 1876 he represented New South Wales and other states at the Philadelphia Exposition. He was created C.M.G. in 1879, and the following year K.C.M.G. For a few months in 1883 he was Vice-President of the Executive Council, and colonial treasurer for a short period in 1885. In the following February Sir Patrick became premier and colonial treasurer, but resigned these offices in 1889. In 1887 he was made an honorary LL.D. of Dublin University. In the same year he went to Rome, and received the Grand Cross of Pius IX from Leo XIII. He was called to the Legislative Council in 1890, was a member of the Senate of Sydney University, a Fellow of St. John's (Catholic) College, and a trustee of the Sydney Art Gallery. From 1891 until his death he led a somewhat retired life, but took a keen interest in benevolent and social movements.

JEPHTE (יוֹעֵד), one of the judges of Israel. The story of Jephthe is narrated in chapters xi and xii of the Book of Judges. He was a warrior of Gilead and the son of a harlot. His father's name was Gilead, who having a wife and other children, these latter thrust out Jephthe from the family and he fled to the land of Tob in Eastern Syria. Here he became the leader of a band of "needy men" and robbers who followed him as their prince. At this juncture the Israelitish territory east of the Jordan was invaded by the Ammonites, and the elders of Gilead, being in sore need of a leader to conduct the defence, saw themselves forced to go to Tob and ask Jephthe to return and be their prince. After expressing surprise that they should make him such an offer, considering the treatment he had received in his native city, he yielded to their entreaties, but insisted on the condition that, should he be victorious over the Ammonites, his own countrymen would remain faithful to their word and recognize him as their prince. The elders made a solemn promise, and Jephthe returned with them to the land of Gilead, where he was made chief by popular acclamation. Before beginning his campaign Jephthe made a vow to the Lord, saying: "If thou wilt deliver the children of Ammon into my hands, whatsoever shall first come forth out of the doors of my house, that will I offer a holocaust to the Lord." After a rather long negotiation with the King of the Ammonites as to Israel's right of possession of the land of Gilead, Jephthe led his forces against the invaders and "smote them from Aroer till thou comest to Menephth, twenty cities, and as far as Abel, which is set with vineyards, with a very great slaughter; and the children of Ammon were humbled by the children of Israel" (Judges, xi, 33).

On his triumphant return to his home in Maspha, the first person to come forth to meet him is his only daughter, accompanied by a chorus of women. On beholding her he is stricken with alarm and dismay, remembering his rash vow, but she had opened his mouth to the Lord and cannot do otherwise than fulfil it. The daughter expresses a noble and generous resignation to her fate, but asks a respite of two months that she may "behold her virginity" in the mountains with her companions. At the expiration of the two months' "time of mourning," and he did to her as he had vowed. Whence arose a custom that from year to year the daughters of Israel used to assemble together and lament during four days the daughter of Jephthe the Gileadite.

The obvious import of the narrative is that the daughter of Jephthe was offered up as a human sacrifice, and in fact, such has been the unanimous interpretation of it in Jewish, as well as in early Christian, tradition. Some modern apologists, however, shocked by the idea that a judge upon whom came "the spirit of the Lord" (xi, 29) could commit so barbarous an act, have endeavoured to prove that the words of Jephthe's vow should not be taken literally, and that the perpetual celibacy to which his daughter was to be condemned. The arguments to this effect, which are far from convincing, may be found in Vigouroux, "Dictionnaire de la Bible", s. v. They ignore the barbarous ethical condition of the Israelites at that relatively remote epoch—a condition which is evident from other narratives in the same Book of Judges (v. g. that of ch. xix). That human sacrifice was expressly forbidden by the Mosaic Law does not help the argument, for, even granting that the Law then existed at all otherwise than in embryo, which is at least very doubtful, it is plain from the historical books referring to this and subsequent periods that its prescriptions were constantly ignored by the Jewish people. That such rash vows with their dire consequences, and even human sacrifices, were not things unheard of in that stage of Israel's history, may be gathered from such passages as I Kings, xiv, 24 sqq.; II Kings, xxii, 6-20; IV Kings, xvi, 3; etc.

After the conquest of the Ammonites Jephthe became involved in a severe conflict with the neighbouring tribesmen of Ephraim who arrogantly complained that they had not been invited to take part in the expedition. Jephthe retorted that they had been invited, upon which they felt he had not regarded them, and the result was a fierce struggle between Ephraim and the men of Gilead in which the latter were victorious. They obtained strategic control of the fords of the Jordan by which the fleeing Ephraimites were obliged to return homeward, and when the fugitives appeared, each one was asked to produce the word "shibboleth" (an ear of corn), and if according to the Ephraimitic dialect it was pronounced "shibboleth" the man was immediately put to death. That forty-two thousand Ephraimites were slain on that occasion may be an exaggeration or possibly a change of the text. After a judgesship of six years Jephthe died and was buried in his city of Gilead.

PALS in VIGOUROUX, Dict. de la Bible, s. v. Jephthe; COOK in HARTNIGHT, Dict. of the Bible, s. v. Jephthah.

JEREMIAH (Heb. יְרֵמְיהָע), in the paraphrase form "Jeremiyahu, especially in the Book of Jeremiah—meaning, possibly, "whom Jehovah appoints" (see Gesenius, "Lexicon", s. v.); Sept. "Iespah", the name of seven or eight men, besides the prophet (see JEREMIAS THE PROPHET), mentioned in the Old Testament:—

(1) JEREMIAS OF LONIA (A. v. Libnah, II Kings,
Jeremiah (The Prophet) lived at the close of the seventh and in the first part of the sixth century before Christ; a contemporary of Draco and Solon of Athens. In the year 627, during the reign of Josias, he was called at a youthful age to be a prophet, and for nearly half a century, at least from 327 to 585, he bore the burden of the prophetic office. He belonged to a priestly family of Anathoth, a small country town north-east of Jerusalem now called Anata; but he seems never to have performed priestly duties at the temple. The scenes of his prophetic activity were, for a short time, his native town, and, for the greater part of his life, the metropolis Jerusalem, and, for a time after the fall of Jerusalem, Masphath (Jer., xli, 6) and the Jewish colonies of the country just mentioned. His name, יְרֵם, also יְרֵמְיָהוּ, Sept. *Iērusūlaim, has received varying etymological interpretations ("Lofty is Jahweh" or "Jahweh founds"); it appears also as the name of other persons in the Old Testament. Sources for the history of his life and times are, first, the book of prophecies bearing his name, and, second, the Books of Kings and of Paralipomenon (Chronicles). It is only when taken in conjunction with the history of his time that he becomes significant. His external life, the individuality of his character, and the ruling theme of his discourses can be understood.

I. Period of Jeremiah.—The last years of the seventh century and the first decades of the sixth brought with them a series of political catastrophes which completely changed national conditions. Western Asia. The overthrow of the Assyrian Empire, which was completed in 606 by the conquest of Ninive, induced Nechao II of Egypt to attempt, with the aid of a large army, to strike a crushing blow at the ancient enemy on the Euphrates. Palestine was in the direct path between the two powers. The world of that era on the Euphrates and the Nile, and the Jewish nation was roused to action by the march of the Egyptian army through its territory. Josias, the last descendant of David, had begun in Jerusalem a moral and religious reformation in the way of "David," the carrying out of which, however, was frustrated by the lethargy of the people and the foreign policy of the king. The attempt of Josias to check the advance of the Egyptians cost him his life at the battle of Megiddo, 606. Four years later, Nechao, the conqueror at Megiddo, was slain by Nabuchodonosor at the battle of Carchemish on the Euphrates. From that time on Nabuchodonosor's eyes were fixed on Jerusalem. The last, shadowy kings upon the throne of David, the three sons of Josias—Joachaz, Joakim, and Sedecias—hastened the destruction of the kingdom by their unsuccessful foreign policy and their anti-religious or, at least, weak internal policy. Both Joakim and Sedecias, in spite of the warnings of the prophet Jeremiah, allowed themselves to be misled by the war party in the nation into refusing to pay the tribute to the King of Babylon. The king's revenge followed quickly upon the rebellion. In the second great expedition Jeremiah was captured (587) and lived for eighteen months, which was only interrupted by the battle with the Egyptian army of relief. The Lord cast aside his footstool in the day of his wrath and sent Judah into the Babylonian Captivity.

This is the historical background to the lifework of the Prophet Jeremiah: in foreign policy an era of lost battles and other adverse preparations to the great catastrophe; in the inner life of the people an era of unsuccessful attempts at reformation, and the appearance of fanatical parties such as generally accompany the last days of a declining kingdom. While the kings from the Nile and the Euphrates cast their eyes, in despair, on the neck of the Daughter of Sion, the leaders of the nation, the kings and priests, became more and more involved in party schemes; a Sion party, led by false prophets, deluded itself by the superstitious belief that the temple of Jehovah was the unfailling talisman of the capital; a fanatically foolhardy war party wanted to organize a resistance to the utmost against the great powers of the world; a Nile party looked to the Egyptians for the salvation of the country, and incited opposition to the Babylonian lordship. Carried away by human politics, the people of Sion forgot its religion, the national trust in God, and wished for the day and hour of its redemption according to its own will. Over all these factions the cup of the wine of wrath gradually grew full, to be finally poured from seven vessels during the Babylonian Exile laid upon the nation of the Prophets.

II. Mission of Jeremiah.—In the midst of the confusion of a godless Dynasty of despair at the approach of destruction, the prophet of Anathoth stood as "a pillar of iron, and a wall of brass." The prophet of the eleventh hour, he had the hard mission, on the eve of the great catastrophe of Sion, of proclaiming the decree of God that in the near future the city and temple should be overthrown. From the time of his first calling in vision to the prophetic office, he saw the
rod of correction in the hand of God, he heard the word that the Lord would watch over the execution of His decree (i, 11 sq.). That Jerusalem would be destroyed was the constant assertion, the ceterum censeo of the Cato of Anathoth. He appeared before the people with chains about his neck (cf. xxvii, xxviii) in order that his prophecies should constitute a dramatic illustration of the captivity and chains which he foretold. The false prophets preached only of freedom and victory, but the Lord said: "A liberty for you to the sword, to the pestilence, and to the famine" (xxxiv, 17). It was so clear to him that the next generation would be involved in the overthrow of the kingdom that he denounced marriage and the founding of a family for himself (xvi, 1-4), because he did not wish to have children who would surely be the victims of the sword or become the slaves of the Babylonians. His celibacy was consequently a declaration of his faith in the revelation granted him of the destruction of the city. Jeremiah is thus the Biblical and historical counterpart of Cassandra in the Homeric poems, who foresaw the fall of Troy, but found no credence in her own house, yet was so strong in her conviction that she renounced marriage and all the joys of life.

Along with this first task, to prove the certainty of the catastrophe of 586, Jeremiah had the second commission to declare that this catastrophe was a moral necessity, to proclaim it in the ears of the people as the inevitable result of the moral guilt since the days of Manasseh (IV Kings, xxi, 10-15); in a word, to set forth the Babylonian Captivity as a moral, not merely a historical, fact. It was only because the stubborn nation had thrown off the yoke of the Lord (Jer., ii, 20) that it must bow its neck under the yoke of the Babylonians. In order to arouse the nation from its moral lethargy, and to make moral preparation for the fall of the Lord, the sermons of the preacher of repentance of Anathoth emphasized this causal connexion between punishment and guilt, until it became monotonous. Although he failed to convert the people, and thus to turn aside entirely the calamity from Jerusalem, nevertheless the word of the Lord in his mouth became, for some, a hammer that broke their stony hearts to repentance (xxxiii, 29). Thus, Jeremiah had not only "to root up, and to pull down," he had also in the positive work of salvation "to build, and to plant" (i, 10). These latter aims of the penitential discourses of Jeremiah make plain why the religious and moral conditions of the time are all painted in the same dark tone: the priests do not inquire after Jahweh; the leaders of the people themselves wander in strange paths; the prophets prophesy in the name of the Lord; the gods become the meeting-place of strange gods; the people have forsaken the fountain of living water and have provoked the Lord to anger by idolatry and the worship of high places, by the sacrifice of children, desecration of the Sabbath, and by false weights. This severity in the discourses of Jeremiah is the most striking type of prophetic declamation against sin. One well-known hypothesis ascribes to Jeremiah also the authorship of the Books of Kings. In reality the thought forming the philosophical basis of the Books of Kings and the conception underlying the speeches of Jeremiah complement each other, inasmuch as the fall of the kingdom is traced back in the one to the guilt of the kings, and in the other to the people's participation in this guilt.

III. Life of Jeremiah.—A far more exact picture of the life of Jeremiah has been preserved than of the life of any other seer of Sion. It was an unbroken chain of steadily growing outward and inward difficulties, a genuine "Jeremid". On account of his prophecies, his life was no longer safe among his fellow-citizens of Anathoth (xxi, 13 sq.) and of the other did the saying prove truer that "a prophet hath no honour in his own country". When he transferred his residence from Anathoth to Jerusalem his troubles increased, and in the capital of the kingdom he was doomed to learn by corporal suffering that verita parit odium (truth draws hatred upon itself). King Joakim could never forgive the prophet for threatening him with punishment on account of his unscrupulous mania for building and for his judicial murders: "He shall be buried with the burial of an ass" (xxii, 13-19). When the prophecies of Jeremiah were read before the king, he fell into such a rage that he threw the roll into the fire and commanded the arrest of the prophet (xxxvi, 21-26). Then the word of the Lord came to Jeremiah to let Baruch the scribe write again his words (xxxvi, 27-32). More than once the prophet was in prison, but in chains without the word of the Lord being silenced (xxxvi, 5 sqq.); more than once he seemed, in human judgment, doomed to death, but, like a wall of brass, the word of the Almighty was the protection of his life: "Be not afraid . . . they shall not prevail: for I am with thee, saith the Lord, to deliver thee" (i, 17). The religious opinion he maintained, that only by a moral change could a catastrophe in outward conditions prepare the way for improvement, brought him into bitter conflict with the political parties of the nation. The Sion party, with its superstitious confidence in the temple (vii, 4), incited the people to open revolt against Jeremiah, because, at the gate and in the outer court of the temple, he prophesied the fate of the holy place in Silo for the house of the Lord; and the prophet was in great danger of violent death at the hands of the publicans (xxvi; cf. vii). The party friendly to Egypt cursed him because he condemned the coalition with Egypt, and presented to the King of Egypt also the cup of the wine of wrath (xxv, 17-19); they also hated him because, during the siege of Jerusalem, he declared, before the event, that the hope of the Jews and an army of relief were delusive (xxxvii, 5-9). The party of noisy patriots calumniated Jeremiah as a morose pessimist (cf. xxvii, xxviii), because they had allowed themselves to be deceived as to the seriousness of the crisis by the flattering words of revelation, and of his companions, and dreamed of freedom and peace while exile and war were already approaching the gates of the city. The exhortation of the prophet to accept the inevitable, and to choose voluntary sub-
mission as a lesser evil than a hopeless struggle, was interpreted by the war party as a lack of patriotism. Even at the present day, some commentators wish to regard Jeremiah as a traitor to his country—Jeremiah, who was the best friend of his brethren and of the people of Israel (II Mach. xv, 14), so deeply did he feel the weal and woe of his native land. Thus was Jeremiah a prophet of the new covenant, of the new escagoat of the blinded nation. During the siege of Jerusalem he was once more condemned to death and thrown into a miry dungeon; this time a foreigner rescued him from certain death (xxxvii–xxix). Still more violent than these outward battles were the infinitesimal struggles of the soul of the prophet. Being in full sympathy with the national sentiment, he felt that his own fate was bound up with that of the nation; hence the hard mission of announcing to the people the sentence of death affected him deeply; hence his opposition to accepting this commission (i, 6). With all the resources of prophetic rhetoric he sought to bring back the people to “the old paths” (vi, 16), but in this he was to no avail.

He knows that with the fall of Jerusalem the place that was the scene of revelation and salvation will be destroyed. Nevertheless, at the grave of the religious hopes of Israel, he still has the expectation that some day the Lord will turn the captivity, and when that has happened will bring His promises to pass for the sake of His name. The Lord thinks “thoughts of peace, and not of affliction,” and will let Himself be found of those who seek (xxxix, 10–14). As He watches to destroy, so will He likewise watch to build up (xxxvi, 28). The prophetic gift does not appear with equal clearness in the life of any other prophet as he a psychological and a personal task. His bitter outward and inward experiences give the speeches of Jeremiah a strongly personal tone. More than once this man of iron seems in danger of losing his spiritual balance and falling down through from heart to heart upon his enemies (cf. xii, 3; xviii, 22). Like Job among the prophets, he curses the day of his birth (xv, 10; xx, 14–18); he would like to arise, go hence, and preach instead to the stones in the wilderness: “Who will give me in the wilderness a lodging place . . . and I will leave my people, and depart from them?” (ix, 2; Heb., ix, 1). It is true that the mourning prophet of Anathoth was the author of many of the Psalms that are full of bitter reproach.

After the destruction of Jerusalem, Jeremiah was not carried away to the Babylonian exile. He remained behind in Chaldea, in the walled city of Jahweh, that he might continue his prophetic office. It was indeed a life of martyrdom among the dogs of the nation that had been left in the land. At a later date he was dragged to Egypt by emigrating Jews (xii–xiv). According to a tradition first mentioned by Josephus (Ant. xv, 11), Jeremiah was stoned to death in Egypt by his own countrymen on account of his discourses threatening the coming punishment of God (cf. Heb., xi, 37), thus crowning with martyrdom a life of steadily increasing trials and sorrows. Jeremiah would not have died as Jeremiah had not died. Not only in the Roman tribunals, but in his own name to 1 May. Postcrity sought to avenge the sins his contemporaries had committed against him. Even during the Babylonian Captivity his prophecies seem to have been the favourite reading of the exiles (II Par., xxxvi, 21; I Esd., i, 1; Dan., ix, 2). In the later books compare Esclus., lxxix, 8 sq.; II Mach., ii, 1–8; xv, 12–16; Matt., xvi, 14.

IV. CHARACTERISTIC QUALITIES OF JEREMIAH.—The delineation in IV and III of the prophet and task of Jeremiah has already made its appearance in the instance of his character. Jeremiah is the prophet of mourning and of symbolic suffering. This distinguishes his personality from that of Isaias, the prophet of ecstasy and the Messianic future, of Ezekiel, the prophet of mystical (not typical) suffering, and of Daniel, the apocalyptic representation of the Covenant. No prophet belonged so entirely to his age and his immediate surroundings, and no prophet was so seldom transported by the Spirit of God from a dreary present into a brighter future than the mourning prophet of Anathoth. Consequently, the life of no other prophet reflects the history of his times so vividly as the life of Jeremiah reflects the time immediately preceding the Babylonian Captivity. A sombre, depressed spirit overshadows his life, just as a gloomy light overhangs the grotto of Jeremiah in the northern part of Jerusalem. In Michelangelo’s frescoes on the Sistine chapel is a masterly delineation of Jeremiah as the prophet of myrrh, perhaps the most expressive and eloquent figure among the prophets depicted by the great master. He is represented bent over like a tottering pillar of the temple, the head supported by the right hand, the disordered beard expressive of a time of intense sorrow, and the forehead scored with wrinkles, the entire exterior a contrast to the pure soul within. His eyes seem to see blood and ruins, and his lips appear to murmur a lament. The whole picture strikingly portrays a man who never in his life laughed, and yet who turned all that has happened into joy, as the prophet of the new covenant. It is the Spirit told him that soon the voice of mirth should be silenced (xvi, 8 sq.).

Equally characteristic and idiosyncratic is the literary style of Jeremiah. He does not use the classically elegant language of a Deuterocanonical or an Amos, nor does he possess the imagination shown in the symbolism and elaborate detail of Ezekiel, neither does he follow the lofty thought of a Daniel in his apocalyptic vision of the history of the world. The style of Jeremiah is simple, without ornament and but little polished. Jeremiah speaks of himself as “in verbs simplex et fama, in mystica sententia profundissima” (simple and easy in words, most profound in majesty of thought). Jeremiah often speaks in jerky, disjointed sentences, as if grief and excitement of spirit had stifled his voice. Nor did he follow strictly the laws of poetic rhythm in the use of the k'nah, or elegiac, verse, which had, moreover, an anacoluthic measure of its own. Like these anacoluthae so are also the many, at times even monotonous, repetitions for which he has been blamed, the only individual expressions of the mournful feeling of his soul that are correct in style. Sorrow inclines to repetition, in the manner of the poet on the Mount of Olives. Just as grief in the East is expressed in the neglect of the outward appearance, so the great representative of elegiac verse of the Bible had neither time nor desire to adorn his thoughts with a carefully chosen diction.

Jeremiah also stands by himself among the prophets by his manner of carrying on and developing the Messianic idea. He was far from attaining the fullness and clearness of the Messianic gospel of the Book of Isaias; he does not contribute as much as the Book of Daniel to the terminology of the gospel. Above all the other great prophets, Jeremiah was sent to the people of the day and by the prophet in verbal prophecy on the fullness of time, as in his celebrated discourse of the Good Shep-
hord of the House of David (xxiii, 1–5), or when he most beautifully, in chapters xxx–xxxiii, proclaims the deliverance from the Babylonian Captivity as the type and pledge of the Messianic deliverance. This lack of actual Messianic prophecies by Jeremiah has its compensation; for his entire life became a living parenthesis in the history of the Church; a permanent illustration of the predictions of suffering made by the other prophets. The suffering Lamb of God in the Book of Isaías (lii, 7) becomes in Jeremiah a human being: "I was as a meek lamb, that is carried to be a victim" (Jer. xi, 19). The other sheers were Messianic prophecies of other men. The repeated declaration that he is bodied in flesh and blood. It is, therefore, fortunate that the story of his life has been more exactly preserved than that of the other prophets, because his life had a prophetic significance. The various parallels between the life of Jeremiah and of the Messias are known: both one and the other had at the eleventh hour to proclaim the overthrow of Jerusalem and its temple by the Babylonians or Romans; both went over the city which stoned the prophets and did not recognise what was for its peace; the love of both was repaid with hatred and ingratitude. Jeremiah deepened all the hatred following the Messianic prophecies. From the time the prophet of Anathoth, a man beloved of God, was obliged to live a life of suffering in spite of his guiltlessness and holiness from birth, Israel was no longer justified in judging its Messias by a mechanical theory of retribution and doubting his guiltlessness and acceptableness to God because of his outward sorrows. Thus the life of Jeremiah, a life as bitter as myrrh, was gradually to accustom the eye of the people to the suffering figure of Christ, and to make clear in advance the bitterness of the Cross.

Therefore it is with a profound right that the Offices of the Passion in the Liturgy of the Church often use the language of Jeremiah in an applied sense.

V. THE BOOK OF THE PROPHETICIÉ OF JEREMIAH.—

(A) Analysis of Contents.—The book in its present form has two main divisions: chapters i–xlv, discourses threatening punishment which are aimed directly against Juda and are intermingled with narratives of personal and national events, and chapters xlvii–lxi, discourses containing threats against nine heathen nations and intended to warn Juda indirectly against the polytheism and policy of these peoples. In chapter i is related the calling of the prophet, in order to prove to the people that the authentic subject-matter is the message of God. Not he himself had assumed the office of prophet, but Jahweh had conferred it upon him notwithstanding his reluctance. Chapters ii–vi contain rhetorical and weighty complaints and threats of judgment on account of the nation’s idolatry and foreign policy. The very first speech in ii–iii may be said to present the scheme of the Jeremiahic discourse. Here also appears at once the conception of Osse which is typical as well of Jeremiah: Israel, the bride of the Lord, has degraded herself into becoming the paramour of strange nations. Even the temple and the sanctuary cannot inwardly convert on the part of the people, cannot bring salvation, whilst the warnings are united like mosaics with the main ones. The "words of the covenant" in the Thorah recently found under Josias contain threatenings of judgment; the enmity of the citizens of Anathoth against the herald of this Thorah reveals the infatuation of the nation (xi–xii). Jeremiah is emphatically a linen girdle, a symbol of the priestly nation of Sion, by the Ephrathites and to let it rot there, to typify the downfall of the nation in exile on the Ephrathites (xiii).

The same stern symbolism is expressed later by the symbolism of the prophet, which is broken on the rocks before the Easter Gate (xxvi, 11). A new pattern is introduced by the prophets (III Kings, xi, 29–31; Is., viii, 1–4; Esch., v–12), his warnings are accompanied by forcible pantomime action. Prayers at the time of a great drought, statements which are of much value for the understanding of the psychological condition of the prophet in his spiritual struggles, follow (xiv–xv). The troubles of the times demand from the prophet an unmarried and joyless life (xvi–xvii). The Creator can grant those he has created with the same supreme authority that the heavens and the earth are not vessels. Jeremiah is ill-treated (xvii–xx). A condemnation of the political and ecclesiastical leaders of the people and, in connexion with this, the promise of a better shepherd are uttered (xxii–xxiii). The vision of the two baskets of figs is narrated in chapter xxiv. The repeated declarations that the land will become a desolation follows (xxv). Struggles with the false prophets, who take wooden chains off the people and load them instead with iron ones, are detailed. Both in a letter to the exiles in Babylon, and by word of mouth, Jeremiah exhoists the captives to conform to the decrees of Jahweh (xxvi–xxix).

Compare with this letter the "epistle of Jeremiah" in Baruch, vi. A prophecy of consolation and salvation in the style of a Deutero-Isaías, concerning the return of God’s favour to Israel and of the new, eternal covenant, is then given (xxx–xxxiil). The few letters following are brief narratives of the last days of the siege of Jerusalem and of the period after the conquest, with numerous biographical details concerning Jeremiah (xxxiv–xlv).

(B) Literary Criticism of the Book.—Much light is thrown on the production and genuineness of the book by the testimony of chapter xxxvi: Jeremiah is directed "to write down, either personally or by his scribe Baruch, the discourses he had given up to the fourth year of Joakim (604 a. c.). In order to strengthen the impression made by the prophecies as a whole, the individual predictions are to be united into a book, thereby preserving documentary proof of these discourses until the time in which the disasters threatened in them should actually come to pass. This first authentic recension of the prophecies forms the basis of the present Book of Jeremiah. According to a law of literary transmission to which the Biblical books are also subject—habent sua fata libelli (books have their vicissitudes)—the first transcript was enlarged by various insertions and additions from the pen of Baruch or of a later prophet. The attempts of commentators to separate these secondary and tertiary additions in different cases from the original Jeremiahic discourse seem convincing proof as in chapter lii. This chapter should be regarded as an addition of the post-Jeremiahic period based on IV Kings, xxiv, 18–xxv, 30, on account of the concluding statement of li: "Thus far are the words of Jeremiah." Cautious literary criticism is obliged to observe the principle of chronological arrangement which is perceptible in the present composition of the book, notwithstanding the additions: chapters i–vi belong apparently to the reign of King Josias (cf. the date in iii, 6); vii–xx belong, at least largely, to the reign of Joakim; xxxi–xxxiii partly to the beginning of the reign of Sedeoias (cf. xxvi, 1; xxvii, 1; xxviii, 1; xxxii, 1), although other portions, whilst they are signed to the reigns of other kings: xxxiv–xxxix to the period of the siege of Jerusalem; xl–xlv to the period after the destruction of that city.

Consequently, the chronology must have been considered in the arrangement of the material. Modern critical analysis of the book in its distinct sections narrated in the first person, regarded as directly attributable to Jeremiah, and those portions which speak of Jeremiah in the third person. According to Scholz, the book is arranged in "decades", and each larger train of thought or series of speeches is closed at the end of a song or parable. The parts classically perfect and highly poetic in character are often suddenly followed by the most commonplace prose, and matters given in the barest outline are not
seldom succeeded by prolix and monotonous details. After what has been said above concerning elegiac verse, this difference in style can only be used with the greatest caution as a criterion for literary criticism. In the same way, investigation, of late very popular, as to the ancient times when the Book of Jeremiah or not, leads to vague subjective results. Since the discovery (1904) of the Assuan texts, which strikingly confirm Jer., xlv, 1, has proved that Aramaic, as the Aramaic (common dialect) of the Jewish colony in Egypt, was spoken as early as the fifth and sixth centuries B.C., the Aramaic expressions in the book of Jeremiah can no longer be quoted as proof of a later origin of such passages. Also the agreement, verbal or conceptual, of texts in Jeremiah with earlier books, perhaps with Deuteronomy, is not in itself a conclusive argument against the genuineness of these passages, for the prophet does not claim absolute originality.

Notwithstanding the repetition of earlier passages in Jeremiah, chapters i-ii are fundamentally genuine, although their genuineness has been strongly doubted, because, in the series of discourses threatening punishment to the heathen nations, it is impossible that there should be a heresiologist of the time against Babylon, then the most powerful representative of paganism. These chapters are, indeed, filled with the Deutero-Isaian spirit of consolation, somewhat after the manner of Is., xlvi, but they do not therefore, as a matter of course, lack genuineness, as the same spirit of consolation is characteristic of x-xxiii.

(C) Textual Conditions of the Book.—The arrangement of the text in the Septuagint varies from that of the Hebrew text and the Vulgate; the discourses against the heathen nations, in the Hebrew text, xlvii, are, in the Septuagint, inserted after xxv, 13, and partly in different order. Great differences exist also to the extent of the text of the Book of Jeremiah. The text of the Hebrew and Latin Bibles is about one-eighth larger than that of the Septuagint. The question as to which text has preserved the original form cannot be answered according to the theory of Strane and Scholz, who declare at the outset that every addition of the Hebrew version is a later enlargement of the original text in the Septuagint. Just as little can the difficulty be settled by avowing, with Kaulen, an a priori preference for the Masoretic text. In most cases the Alexandrian translation has retained the better and original reading; consequently, in most cases the Hebraistic reading is given, and it may read as Jeremiah the large number of glosses cannot appear strange. But in other cases the shorter recension of the Septuagint is not the original wording, but the deliberate condensation of the translator or a lapse in the literary transmission. The additions to the Septuagint, amounting to about 100 words, which can be opposed to its large lacunae, as compared with the Masorah, are sufficient proof that considerable liberty was taken in its preparation. Consequently, it was not made by an Aquila, and it received textual changes in the literary transmission. The dogmatic conclusions of Jeremiah is not affected by these variations in the text.

VI. LAMENTATIONS.—In the Greek and Latin Bibles there are five songs of lament bearing the name of Jeremiah, which follow the Book of the Prophecy of Jeremiah. In the Hebrew these are entitled Kinnah. From their elegiac character or the Lidam songs after the first word of the first, second, and fourth elegies; in Greek they are called Θρησκ, in Latin they are known as Lamentations.

A. Position and Genuineness of Lamentations.—The superscription to Lamentations in the Septuagint and other versions is light. The book, according to the production and on the author: “And it came to pass, after Israel was carried into captivity, and Jerusalem was desolate, that Jeremiah the prophet sat weeping, and mourned with this lamentation over Jerusalem, and with a sorrowful mind, sighing and moaning, he said” . The inscription was not written by the author of Lamentations, one proof of this being that it does not belong to the alphabetical form of the elegies. It expresses, however, briefly, the tradition that Jeremiah sat weeping and that his life was passed in a religious seclusion. Jeremiah had a peculiar importance in the history of salvation, as the footstool of Jahweh and as the scene of the revelation of God and of the Messias. Consequently, the grief of Jeremiah was personal, not merely a sympathetic emotion over the sorrow of others, for he had sought to prevent the disaster by his labours as a prophet in the streets of the city. All the fibres of his heart were bound up with Jerusalem; he was now himself crushed and desolate. Thus Jeremiah more than any other man was plainly called—it may be said, driven by an inner force—to lament the ruined city as the representative of the Israelites, Israel (the Covenant). He was already prepared by his lament upon the death of King Josias (II Par., xxxv, 25) and by the elegiac songs in the book of his prophecies (cf. xiii, 20-27, a lament over Jerusalem). The lack of variety in the word-forms and in the construction of the sentences, which is in keeping with the character of the style of Jeremiah, may be explained as a poetic peculiarity of this poetic book. Descriptions such as those in i, 13-15, or iv, 10, seem to point to an eye witness of the catastrophe, and the literary impression made by the whole continually recalls Jeremiah. To this conclude the elegies and the Lamentations, which are only occasionally interrupted by intermediate tones of hope; the complaints against false prophets and against the striving after the favour of foreign nations; the verbal agreements with the Book of Prophecy of Jeremiah; finally the predilection for closing a series of thoughts with a prayer warm from the heart—cf. iii, 19-21, 64-66, and chapter v, which, like a Misericere Psalm of Jeremiah, forms a close to the five lamentations. The fact that in the Hebrew Bible the Kinnah was removed, as a poetic work, from the collection of prophetic books and placed among the K'khubim, or Hagiotrapha, cannot be quoted as a decisive argument against the genuineness of the testimony of the Septuagint, the most important witness in the forum of Biblical criticism, must in a hundred other cases correct the decision of the Masorah. Moreover, the superscription of the Septuagint seems to presuppose a Hebrew original.

B. Technical Forms of the First Four Lamentations.—

1. In the first four laments the Kinnah measure is used in the construction of the lines. In this measure each line is divided into two unequal members having respectively three and two stresses, as for example in the introductory first three lines of the book.

2. In all five elegies, the order of the verses follows an alphabetical arrangement. The first, second, fourth, and fifth elegies are each composed of twenty-two verses, to correspond with the number of letters in the Hebrew alphabet; the third lament is made up of three times twenty-two verses. In the first, second, and fourth elegies each verse begins with a letter of the Hebrew alphabet, the letters following in order, as the first verse begins with Aleph, the second with Bet, etc.; in the third elegy every fourth verse begins with a letter of the alphabet in due order. Thus, with a few exceptions and changes (Ps, the thirteenth, preceded -כ), in which the Hebrew alphabet is formed from the initials of the separate verses. How easily this alphabetical method can curb the spirit and logic of a poem is most clearly shown in the third lament, which, besides, had
probably in the beginning the same structure as the others, a different initial letter to each of the original verses; it was not until later that a less careful writer developed each verse into three by means of ideas taken from Job and other writers.

(3) As to the structure of the strophe, it is certain that the principle followed in some cases is the change of the person of the subject as speaker or one addressed. The first elegy is divided into a lament over Sion in the third person (verses 1–11), and a lament of Sion over itself (verses 12–22). In the first strophe Sion is the object, in the second, a strophe of equal length, the subject of the elegy. In 11c, according to the Septuagint, the third person should be used. In the second elegy, also, the intention seems to be, with lament a third choir is added. Literary criticism finds in the dramatic construction of the book a strong argument for the literary unity of Lamentations.

C. Liturgical Use of Lamentations.—The Lamentations have received a peculiar distinction in the Liturgy of the Church in the Office of Passion Week. If Christ Himself designated His death as the destruction of a temple, “he spoke of the temple of his body” (John, ii, 19–21), then the Church surely has a right to pour out her grief over His death in those Lamentations which were sung over the ruins of the temple destroyed by the sins of the nation.

For a general introduction to Jeremias and Lamentations see the Biblical Introductions of Cornely, Vigneux, Giotter, Cornilli, Strack. For special questions of introduction: Ghynne, Jeremiah (1888); Marti, Der Prophet Jeremias (1891).

THE PLAINS OF JERicho (FROM THE WEST)

the change of strophe, to change from the third person to the second, and from the second to the first person. In verses 1–8 there are twenty-four members in the third person; in 13–19 twenty-one in the second person, while in 20–22, a strophe in the first person, the lament closes in a monologue. In the third lament, as well, the speech of a single subject in the first person alternates with the speech of several persons represented by “we” and with colloquy; verses 40–47 are clearly distinguished by their subject “we” from the preceding strophe, in which the subject is one individual, and from the following strophe in the first person singular in verses 48–54, while the verses 55–66 represent a colloquy with Jahweh. The theory of the writer, that in the structure of Hebrew poetry the alternation of persons and subjects is a fixed principle in forming strophes, finds in Lamentations its strongest confirmation.

(4) In the structure of the five elegies regarded as a whole, Zenner has shown that they rise in a steady and exactly measured progression to a climax. In the first elegy there are two monologues from two different speakers. In the second elegy the monologue develops into an animated dialogue. In the third and fourth elegies the cry of lamentation is louder still, as more have joined in the lament, and the solitary voice has been replaced by a choir of voices. In the fifth

Jeremias, Epistle of. See Baruch.

Jericho.—Three cities of this name have successively occupied sites in the same neighbourhood.

I. A city of Canaan taken and destroyed by Josue
after the passage of the Jordan (Jos., vi). The establishment of the Israelites in the industries of the "City of Palm Trees" gave birth to the Jericho of Benjamin (Jos., xviii, 21), which was for some time dominated by Eglon, King of Moab (Judges, iii, 12), and in which David's emissaries had their headquarters when they had set up King Hanun, King of the Ammonites (II Kings, x, 5). But when, under Achab, the Canaanite Jericho had been restored by Hiel the Bethelite (III Kings, xvi, 34), the Israelites installed themselves there. They were visited by Ellisius, who purified the waters of the spring (IV Kings, i, 18–22). Three hundred and thirty years after Jericho returned its former popularity, repopulated its native city (I Esd., ii, 34; II Esd., vii, 36). Having fallen into the hands of the Syrians, it was fortified by Bacchides, to protect Judea on the eastern side (1 Mach., ix, 50). This Jericho was situated at Tell-es-Sultan, near the Fountain of Ellisius ('Ain-es-Sultan), which flows at a distance of about two miles north-west of es-Ribâ, the modern Jericho. Excavations made in this tell in 1907–08 brought to light a rampart measuring some 840 yards in circuit, a citadel with double wall of the Canaanite period, Israelitish dwellings of the time of the Kings, and a temple (S. N. de G. Bezalel, Österreichische Zeitschrift für den deutschen Orient. Gesellschaft zu Berlin, December, 1908, no. 39: "Revue Biblique," 1909, 270–79).

II. The ancient Jericho, near the spring, had entirely disappeared when Herod founded a new Jericho towards the point where the brook of the Kelt and the Jerusalem road emerge from the mountains. Protected by the fort of Cyprus, it possessed royal palaces, vast reservoirs, a hippodrome, and an amphitheatre (Josephus, "Bell. Jud.", i, xxi, 14; xxxii, 6, 8; "Antiq. Jud.", XVI, v, 2). Herod died there: his son Archelaus further embellished the palaces and caused new aqueducts to be built to bring water to the temple gardens (Antiq. Jud., XVII, xiii, 1). It was at the gates of this Jericho that Christ cured two blind men (Matt., xx, 29–34), only one—Baritmeus—according to Mark (x, 46) and Luke (xviii, 35), and saw the publican Zaccheus (Luke, xix, 1–5). The Khirbet Qarqûn, the Birket Mâḏâa, a few artificial mounds, are the visible remains of the second Jericho, which, before being entirely destroyed, served for some days as a Roman camp (Bell. Jud., viii, 2; ix, 13).

III. A third Jericho then came into existence in the gardens which the Fountain of Ellisius watered, and which, palm, myrrh, olives, and other products, gave to the city its name (Bell. Jud., IV, viii, 3), the sycamore, banana, etc. According to the map of the Mâḏâa, it was an important city and a see suffragan to Caesarea Maritima. Its known bishops are Januarius (323), Macer (381), Eleutherius (415), Joannes (518), Gregorius (536), Basilius (900) (Lequien, "Orients Christianus"; III, 646–50). Justinius set up here a great caravanserai (Procopius, "De Edif.", v, 9). During the Crusades Jericho was a benediction attached to the Holy Sepulchre. The Byzantine city was succeeded by the present Ribâ, which consists of a few hostellaries for pilgrims and a few houses inhabited by Ghawarneh Arabs. There is also a Greek church (called "the Sanctuary of Zaccheus") served by two Orthodox monks, a Latin chapel, and a mosque.

JEROBOAM (חֵרֹבּא; Sept., 'Iεροβώμ), name of two Israelite kings.

1. (I Kings) IX, 2. He was the first ruler of the Northern Kingdom after the schism of the Ten Tribes. He was a son of Nabat an Ephraimite, and his mother's name was Sarai. While still a young man he was placed by King Solomon over the tributes of Ephraim and Manasses (III Kings, xi, 28). In that capacity he superintended the labours of his tribesmen in the building of the fortress Mello in Jerusalem and of other public works, and he naturally became conversant with the widespread discontent caused by the exaltation of those whom they held up as national ancestors, Heli, King of the Ammonites (II Kings, x, 5). But when, under Achab, the Canaanite Jericho had been restored by Hiel the Bethelite (III Kings, xvi, 34), the Israelites installed themselves there. They were visited by Ellisius, who purified the waters of the spring (IV Kings, i, 18–22). Three hundred and thirty years after Jericho returned its former popularity, repopulated its native city (I Esd., ii, 34; II Esd., vii, 36). Having fallen into the hands of the Syrians, it was fortified by Bacchides, to protect Judea on the eastern side (1 Mach., ix, 50). This Jericho was situated at Tell-es-Sultan, near the Fountain of Ellisius ('Ain-es-Sultan), which flows at a distance of about two miles north-west of es-Ribâ, the modern Jericho. Excavations made in this tell in 1907–08 brought to light a rampart measuring some 840 yards in circuit, a citadel with double wall of the Canaanite period, Israelitish dwellings of the time of the Kings, and a temple (S. N. de G. Bezalel, Österreichische Zeitschrift für den deutschen Orient. Gesellschaft zu Berlin, December, 1908, no. 39: "Revue Biblique," 1909, 270–79).

II. The ancient Jericho, near the spring, had entirely disappeared when Herod founded a new Jericho towards the point where the brook of the Kelt and the Jerusalem road emerge from the mountains. Protected by the fort of Cyprus, it possessed royal palaces, vast reservoirs, a hippodrome, and an amphitheatre (Josephus, "Bell. Jud.", i, xxi, 14; xxxii, 6, 8; "Antiq. Jud.", XVI, v, 2). Herod died there: his son Archelaus further embellished the palaces and caused new aqueducts to be built to bring water to the temple gardens (Antiq. Jud., XVII, xiii, 1). It was at the gates of this Jericho that Christ cured two blind men (Matt., xx, 29–34), only one—Baritmeus—according to Mark (x, 46) and Luke (xviii, 35), and saw the publican Zaccheus (Luke, xix, 1–5). The Khirbet Qarqûn, the Birket Mâḏâa, a few artificial mounds, are the visible remains of the second Jericho, which, before being entirely destroyed, served for some days as a Roman camp (Bell. Jud., viii, 2; ix, 13).

III. A third Jericho then came into existence in the gardens which the Fountain of Ellisius watered, and which, palm, myrrh, olives, and other products, gave to the city its name (Bell. Jud., IV, viii, 3), the sycamore, banana, etc. According to the map of the Mâḏâa, it was an important city and a see suffragan to Caesarea Maritima. Its known bishops are Januarius (323), Macer (381), Eleutherius (415), Joannes (518), Gregorius (536), Basilius (900) (Lequien, "Orients Christianus"; III, 646–50). Justinius set up here a great caravanserai (Procopius, "De Edif.", v, 9). During the Crusades Jericho was a benediction attached to the Holy Sepulchre. The Byzantine city was succeeded by the present Ribâ, which consists of a few hostellaries for pilgrims and a few houses inhabited by Ghawarneh Arabs. There is also a Greek church (called "the Sanctuary of Zaccheus") served by two Orthodox monks, a Latin chapel, and a mosque.

2. (Jzonosa) II, was the twelfth successor of the preceding, and the fourth king of the dynasty of Jehu. He succeeded his father Joas in 824 (or 783) and reigned forty-one years. In 802 Rammanunir III, King of Assyas, undertook a campaign into the "West lands", and the Kingdom of Israel (Land of Ammi), together with Syria and Phenicia, was placed under heavy tribute. Jeroboam, however taking advantage of the weakened condition of Syria, re-established toward the north and in other directions the ancient boundaries of Israel (IV Kings, xiv, 25). The military and patriotic successes of Jeroboam had been foretold by Jonas (ibid), and the Sacred Writer adds that the Lord saved the Israelites by the hand of Jeroboam, son of Joas. From the political standpoint, Jeroboam was an intelligent and energetic ruler, but with regard to his religious activities, his reign is reserved in these words: "He did that which was evil before the Lord. He departed not from all the sins of Jeroboam, son of Nathanel who made Israel to sin" (IV Kings, xiv, 24). Evidences of the religious decay during his otherwise prosperous reign are found in the writings of the prophets Amos and Osee, his contemporaries, who frequently inveigh against idolatry and its many concomitant evils and moral degradation. Jeroboam II died in 783 (or 742). See LEGRÈSE in VIGOUROUX, Dict. de la Bible, v.; COX in HASTINGS, Dict. of the Bible, v.

JAMES F. DRESCOLL.
Jerome, Saint, b. at Stridon, a town on the confines of Dalmatia and Pannonia, about the year 340–2; d. at Bethlehem, 30 September, 420. He went to Rome, probably about 369, where he was baptised, and became a pupil of Apollinaris of Laodicea, one of the first exegesites of that time and a disciple of the celebrated JEROME. From 374-9 Jerome led an ascetical life in the desert of Chaldea, south-west of Antioch. Ordained priest at Antioch, he went to Constantinople (380–81), where a friendship sprang up between him and St. Gregory Nazianzus. From 382 to August 385 he made another sojourn in Italy, the remainder of the year was spent in Syria. From August 385 to June 386 he died (11 Dec., 384) his position became a very difficult one. His harsh criticisms had made him bitter enemies, who tried to ruin him. After a few months he was compelled to leave Rome. By way of Antioch and Alexandria he reached Bethlehem, in 386. He settled there in a monastery near a convent founded by two Roman ladies, Paula and Eustochium, who followed him to Palestine. Henceforth he lived a life of asceticism and study; but even then he was troubled by controversies which will be mentioned later, one with Rufinus and the other with the Pelagians. Jerome, a learned man of the highest literary order, although very prolific, may be summed up under a few principal heads: works on the Bible; theological controversies; historical works; various letters; translations. But perhaps the chronology of his most important writings will enable us to follow more easily the development of his work. Jerome first extends his sojourn in Rome to the beginning of the translation of the Old Testament from the Hebrew (382–390). During this period the exegetical vocation of St. Jerome asserted itself under the influence of Pope Damasus, and took definite shape when the clergy of Rome compelled the caustic Dalmatian to renounce ascetical advancement and retire to Bethlehem. In 384 we have the correction of the Latin version of the Four Gospels; in 385, the Epistles of St. Paul; in 384, a first revision of the Latin Psalms according to the accepted text of the Septuagint (Roman Psalter); in 384, the revision of the Latin version of the Book of Job, after the accepted version of the Septuagint; between 386 and 391 a second revision of the Latin Psalter, this time according to the text of the "Hexapla" of Origen (Gallican Psalter, embodied in the Vulgate). It is doubtful whether he revised the earlier version of this Old Testament according to the Greek of the Septuagint. In 382–383 "Alcorato Luciferian et Orthodoxo" and "De perpetuo Virginitate B. Maria; adversus Helvidium". In 387–388, commentaries on the Epistles to Philomen, to the Galatians, to Ephesians, to Titus; and in 389–390, on Ecclesiastes. Between 390 and 405, St. Jerome gave all his attention to the translation of the Old Testament according to the Hebrew, but this work alternated with many others. Between 390–394 he translated the Books of Samuel and of Kings, Job, Proverbs, Ecclesiastes, the Canticle of Canticles, Ecclesiasticus, Ecclesiasticus. From 390 to 405, from Rome, he translated the treatise "De Spiritu Sancto" of Diodorus of Alexandria; in 389–90, he drew up his "Questions hebraicae in Genesis" and "De interpretatione nominum hebraicorum." In 391–92 he wrote the "Vita S. Hilarii", the "Vita Malechi, monachi captivi", and commentaries on Nahum, Micah, Sophonias, Aggeus, Habacuc. In 392–93, "De viris illustribus", and "Adversus Jovinianum"; in 395, commentaries on Jonas and Abdias; in 398, revision of the remainder of the Old Testament, New Testament, and about that time commentaries on chapters xiii–xxiii of Isaia; in 398, an unfinished work "Contra Joannem Hieroelytianum"; in 401, "Apologeticum adversus Rufinum"; between 403–406, "Contra Vigilantium"; finally from 398 to 405, completion of the version of the Old Testament according to the Hebrew. In the last period of his life, from 405 to 420, St. Jerome took up the series of his commentaries interrupted for seven years. In 406, he commented on Osee, Joel, Amos, Zacharias, Malachi; in 408, on Daniel; from 408 to 410, on Ezekiel; in 410, on Isaiah; in 410, on Jeremiah. From 401 to 410 date what is left of his sermons; treatises on St. Mark, homilies on the Psalms, on various subjects, and on the Gospels; in 415, "Dialogi contra Pelagianos".  

Characteristics of St. Jerome's Work. — St. Jerome owes his place in the history of exegesis chiefly to his revisions and translations of the Bible. Until about 391–2, he considered the Septuagint translation as inspired. But the progress of his Hebraistic studies and his intercourse with the rabbis made him give up that idea, and he recognized as inspired the original or classical text of St. Jerome, although he need not, either. It is during that period that he undertook the translation of the Old Testament from the Hebrew. But he went too far in this reaction against the ideas of his time, and is open to reproach for not having sufficiently appreciated the Septuagint. This latter version was made from a much older, and therefore more pure, Hebrew text than the one in use at the end of the fourth century. Hence the necessity of taking the Septuagint into consideration in any attempt to restore the text of the Old Testament. With this exception we must admit the excellence of the translation made by St. Jerome. His commentaries represent a vast amount of work but of very unequal value. Very often he worked exceedingly rapidly; besides, he considered a commentary a work of compilation, and his chief care was to accumulate the interpretations of his predecessors, rather than to pass judgment on them. The "Questions hebraicae in Genesis" is the epitome of his best work. It is a reproduction, concerning the original text. It is to be regretted that he was unable to continue, as had been his intention, a style of work entirely new at the time. Although he often asserted his desire to avoid excessive allegory, his efforts in that respect were far from successful, and in later years he was rather the enemy of some of his earlier allegorical explanations. He himself says that he had recourse to the allegorical meaning only when unable to discover the literal meaning. His treatise, "De Interpretatione nominum hebraicorum", is but a collection of mystical and symbolic meanings. Exceeding the "Commentarius in ep. ad Galatas", which is one of his best, his explanations of the New Testament have no great value. Among his commentaries on the Old Testament must be mentioned those on Amos, Isaia, and Jeremias. There are some that are frankly bad, for instance those on Zacharias, Osee, and Joel.  

To sum up, the Biblical knowledge of St. Jerome makes him rank first among ancient exegetes. In the first place, he was very careful as to the sources of his information. He required of the exegete a very extensive knowledge of sacred and profane history, and also an understanding of the countries and places of Palestine. He never either categorically acknowledged or rejected the deuterocanonical books as part of the Canon of Scripture, and he repeatedly made use of them. On the inspiration, the existence of a spiritual meaning, and the freedom of the Bible
from error, he holds the traditional doctrine. Possibly he has insisted more than others on the share which belongs to the sacred writer in his collaboration in the inspired work. His criticism is not without originality. The controversy with the Jews and with the Pelagians had long since called the attention of the Christians to certain difficulties in the Bible. St. Jerome answers in various ways. Not to mention his answers to this or that difficulty, he appeals above all to the principle, that the original text of the Scriptures is the only one inspired and free from error. Therefore one must determine if the text, in which the difficulties arise, has not been altered by the copyist. Moreover, when writers of the New Testament quoted the Old Testament, they did so not according to the letter but according to the spirit. There are many subtleties and even contradictions in the explanations Jerome offers, but we must bear in mind his evident sincerity. He does not try to cloak over his ignorance; he admits that there are many difficulties in the Bible; at times he seems quite embarrassed. Finally, he proclaims a principle, which, if recognized as legitimate, might serve to adjust the insufficiencies of his criticism. He asserts that in the Bible there is no material error due to the ignorance or the heedlessness of the sacred writer, but he adds: "It is usual for the sacred historian to conform himself to the generally accepted opinion of the masses in his time." (P.L., XXVI, 96; XXIV, 856)

Among the historical works of St. Jerome must be noted the translation and the continuation of the "Chronicon Eusebii Cesariani", as the continuation written by him, which extends from 325 to 378, served as a model for the annals of the chroniclers of the Middle Ages; hence the defects in such works: dryness, superabundance of data of every description, lack of proportion and of historical sense. The "Vita S. Pauli Eremitae" is not a very reliable document. The "Vita Malchi, monachi" is a eulogy of chastity woven through a number of legendary episodes, i.e., the "Vita S. Hilarionis", it has suffered from contact with the preceding ones. It has been asserted that the journeys of St. Hilarion are a plagiarism of some old tales of travel. But these objections are altogether misplaced, as it is really a reliable work. The treatise "De Viris illustribus" is a very excellent literary history. It was written as an apologetic work to prove that the Church had produced learned men. Contemporary criticism has shown that for the first three centuries Jerome depends to a great extent on Eusebius, whose statements he borrows, often distorting them, owing to the rapidity with which he worked. His accounts of the authors of the fourth century however are of great value. Thanks to Dom G. Morin, the oratorical works of St. Jerome have recently become known. They consist of about one hundred homilies or short treatises, and in these the Solitary of Bethlehem appears in a new light. He is a monk addressing monks, not without making very obvious allusions to contemporary events. The orator is lengthy and apologizes for it. He displays a wonderful knowledge of the word of God and of the Bible. His oratory is excessive at times, and his teaching on grace is Semipelagian. A censorious spirit against authority, sympathy for the poor which reaches the point of hostility against the rich, lack of good taste, inferiority of style, and misquotation, are the most glaring defects of these texts. Evidently they are notes taken down by his hearers, and it is a question whether they were reviewed by the preacher. The correspondence of St. Jerome is one of the best known parts of his literary output. It comprises about one hundred and twenty letters from several and several from his correspondents. Many of these letters were written with a view to publication, and some of them the author even edited himself; hence they show evidence of great care and skill in their composition, and in them St. Jerome reveals himself a master of style. These letters, which had already met with great success with his contemporaries, have been, with the "Confessions" of St. Augustine, one of the works most appreciated by the humanists of the Renaissance. Aside from their literary interest they have great historical value. Relating to a period covering half a century they touch upon most varied subjects; hence their division into letters dealing with theology, polemics, criticism, conduct, and biography. In spite of their turgid diction they are full of the man's personality. It is in this correspondence that the temperament of St. Jerome is most clearly seen: his waywardness, his love of extremes, his exceeding sensitiveness; how he was in turn exquisitely dainty and bitterly satirical, unsparingly outspoken concerning others and equally frank about himself.

The theological writings of St. Jerome are mainly controversial works, one might say, composed for the occasion. He missed being a theologian, by not applying himself in a consecutive and personal manner to doctrinal questions. In his controversies he was simply the interpreter of the accepted ecclesiastical doctrine. Compared with St. Augustine his inferiority in breadth and originality of view is most evident. His "Dialogue" against the Luciferians deals with a schismatic sect whose founder was Lucifer, Bishop of Cagliari in Sardinia. The Luciferians refused to approve of the measure of clemency by which the Church, since the Council of Alexandria, in 362, had allowed bishop, although a Donatist, to continue to discharge their duties on condition of professing the Nicene Creed. This rigid sect had adherents almost everywhere, and even in Rome it was very troublesome. Against it Jerome

JERUSALEM—1. VALLEY OF THE CEDRON AND MOUNT OLIVET. 2. VIEW OF JERUSALEM FROM MOUNT OLIVET. 3. VIEW OF JERUSALEM FROM THE MOUNT OF EVIL COUNSEL
Jerome wrote his "Dialogue," scathing in sarcasm, but not always accurate in doctrine, particularly as to the Sacrament of Confirmation. The book "Adversus Helvidius," was written in the year 392, when it was claimed that Helvidius held the two following tenets: (1) Mary bore children to Joseph after the virginal birth of Jesus Christ; (2) from a religious view-point, the married state is inferior to continency. Earnest entreaty decided Jerome to answer. In doing so he discusses the relations of Helvidius to Pelagianism. The work, written in Greek, was taken up again in the book "Adversus Jovinianum," written about ten years later. Jerome recognizes the legitimacy of marriage, but he uses concerning it certain disparaging expressions which were criticized by contemporaries and for which he has given no satisfactory explanation. Jovinian was more dangerous than Helvidius. Although he did not exactly teach salvation by faith alone, and the uselessness of good works, he made far too easy the road to salvation and slighted a life of asceticism.

Every one of these points St. Jerome took up. The Apocryphal "Adversus Helvidius," 394, is in fault with the Origenistic controversies. St. Jerome was involved in one of the most violent episodes of that struggle, which agitated the Church from Origen's lifetime until the Fifth Oecumenical Council (553). The question at issue was to determine if certain doctrines professed by Origen and others taught by certain pagans followers of Origen could be accepted. In the present case the doctrinal difficulties were embittered by personalities between St. Jerome and his former friend, Rufinus. To understand St. Jerome's position we must remember that the works of Origen were by far the most important exegetical collection then in existence, and the one most accessible to students. Hence a very natural tendency to make use of them, and it is evident that St. Jerome did so, as well as many others. But we must carefully distinguish writers who made use of Origen and those who advocated his doctrines. This distinction is particularly necessary with St. Jerome, whose method of work was very rapid, and consisted in transcribing the interpretations of former exegetes without passing criticisms on them. Nevertheless, it is certain that St. Jerome greatly praised and made use of Origen, that he even transcribed some erroneous passages without discovering it. In his letters to Rufinus, it is always adhering thinkingly and systematically to the Origenistic doctrines. Under these circumstances it came about that when Rufinus, who was a genuine Origenist, called on him to justify his use of Origen, the explanations he gave were not free from embarrassment. At this distance of time it would require a very subtle and detailed study of the question to decide the real basis of the quarrel. However that may be, Jerome may be accused of imprecision of language and blamed for a too hasty method of work. With a temperament such as his, and confident of his doubtless orthodoxy in the matter of Origenism, he must naturally have been tempted to justify anything. This brought about a most bitter controversy with his wily adversary, Rufinus. But on the whole Jerome's position is by far the stronger of the two, even in the eyes of his contemporaries. It is generally conceded that in this controversy Jerome was not altogether free from asceticism which had developed so largely in the fourth century. Perhaps the influence of that same reaction is to be seen in the doctrine of the monk Pelagius, who gave his name to the principal heresy on grace: Pelagianism. On this subject Jerome wrote his "Dialogus contra Pelagianos," Origen's rebuke of the "Onomasticon" of Eusebius, to which the translator has joined additions and corrections. The translations of the "Homilies" of Origen vary in character according to the time in which they were written. As time went on, Jerome became more expert in the art of translating, and he outgrew the tendency to palliate, as he came across them, certain errors of Origen. We must make special mention of the translation of the homilies "In Canticum Canticorum," the Greek original of which has been lost.

The most accessible edition of St. Jerome's complete works is in 10 volumes, and a Latin translation 16 volumes, and several years. The two Latin translations have been published as a result of special critical study. Of special merit are the "Sermons of St. Jerome," published by Morin in "Anecdota Maredsolanana," III (Oxford, 1897, 1903), 2 and 3. For the best edition of the historical documents concerning the life of St. Jerome see the article Hieronymus, in Bibliotheca hagiographica latina (Brussels, 1898-1899). 576. For literature on the subject consult Cunetio, Bibliotheca Latina, 1737, 576. The best and most up-to-date work on St. Jerome is Grützmacher, Hieronymus, eine biographische Studie zur alten Kirchen- geschichte (3 vols., Berlin, 1910, 1911, 1913). Among the most accessible works are Bocchieri, S. Jerome et ses ennemies (Paris, 1903); Bänziger, Etudes sur St. Jerome (Paris and Brussels, 1913); Martin, The Life of St. Jerome (London, 1899). On St. Jerome's Latin writings, see Tixeront, Histoire des dogmes, II (Paris, 1900). Concerning the discussion that arose through the translation of the Bible from the Hebrew, see La Roque, L'esprit traditionel et l'esprit critique in Bulletin de l'archéologie ecclésiastique (1890), 37 sqq. Critics are not agreed as to the dates they attribute to some of St. Jerome's works.

Louis Sallet.

Jerome Emiliani, Saint, founder of the Order of Somasch; b. at Venice, 1481; d. at Somasch, 8 Feb., 1537; feast, 20 July; son of Angelo Emiliani (popularly called Miani) and of Eleonore Mauroceni, joined the army, and in 1508 defended Castelnuovo against the League of Cambrai. Taken prisoner and miraculously liberated, he was made a pilgrim and a beggar of the Church. Our Lady at Trevixo, in fulfilment of a vow. He was then appointed podestà of Castelnuovo, but after a short time returned to Venice to supervise the education of his nephews. All his spare time was devoted to the study of theology and to works of charity. After his ordination to the priesthood in 1518, the hospitals and the hovels of the poor were his favourite resorts. In the year of plague and famine (1528), he seemed to be everywhere, and showed his zeal especially for the orphans, whose number had so greatly increased. He rented a house for them near the church of St. Rose and, with the assistance of some pious laymen, ministered to their wants. His charge was also committed the hospital for incurables, founded by St. Cajetan. In 1531 he went to Verona and induced the citizens to build a hospital; at Brescia he erected an orphanage, at Bergamo one for boys and another for girls. Here also he took care of some fallen women who wished to do penance. Two priests, Alessandro Besusio and Agostino Bariso, now joined him in his labours of charity, and in 1532 Jerome founded a religious society, placing the motherhouse at Somasch, a secluded hamlet between Milan and Bergamo. In the rule, Jerome puts down as the
principals work of the community the care of orphans, poor, and sick, and demands that dwellings, food, and clothing shall bear the mark of religious poverty. Jerome fell a martyr to his zeal; contracting a disease at Bergamo, he died at Somașiaca. He was beatiﬁed by Benedict XIV in 1747, and canonized by Clement XIII in 1767. The Oﬃce and Mass in his honour were aﬀorded as early as 1771. A work written by Scipio Alhani (1600); another by Andreas Stella (1605). The best was written by Aug. Tortora (Milan, 1820; in Acta SS., Feb., II, 217 sq.).

After the death of Jerome his community was about to disband, but was kept together by Gambarena, who had also been a monk. He received the approbation of Pope Pius V (1540) of Paul III. In 1547 the members vainly sought aﬃliation with the Society of Jesus; then in 1547–1555 they were united with the Theatines. Pius IV (1553) approved the institution, and St. Pius V raised it to the dignity of a religious order, according to the Rule of St. Augustine, with solemn vows, privileges of the mendicant, and exemption. In 1569 the six members made their profession, and Gambarena was made ﬁrst superior general. Great favour was shown to the order by St. Charles Borromeo, and he gave it the church of St. Mayeuł at Pavia, from which church the order took its special name "Clariæ ad sancti Maioli Papae et congregations somaschanae". Later the education of youth was put into the programme of the order, and the colleges at Rome and Pavia became renowned. It spread into Austria and Switzerland, and before the great Revolution it had ten houses in the four provinces of Rome, Lombardy, Venetia, and France. At present the order has ten houses in Italy, two of which are in Rome. The general resides in Rome at the Giolami della Carità.

Jerusalem.—I. BEFORE A.D. 71.—This article treats of the "City of God", the political and religious centre of the People of Israel, with its destruction by the Romans after it had become the scene of the Redemption. This part of the subject will be divided as follows: A. Names; B. Topography; C. History; D. Development of the City and its Chief Monuments.

A. Names.—According to Jewish tradition (Jos. xvi. 11), Jer. iii. 17; 11 Kings vii. 5, Jerusalem was originally called Salem (Peace), and was the capital of King Melchisedech (Gen. xiv. 18). This tradition is conﬁrmed by the cuneiform tablets discovered in 1838 at Tell Amarna, in Egypt (see below, under C. History). Five of these letters, written at Jerusalem about the year 1400 a.C., inform us that the city was then called Uru-e-am-lim (Conder, "The Tell Amarna Tablets", London, 1894, pp. 143–51). It ﬁgures in Assyrian inscriptions under the name of Ur-sa-hi-im-me (E. Schrader, Die Keilschrift. u. d. A. T., 1883, p. 290). Around the cuneiform inscriptions, the Akkadians, thirty cities and inhabitants (Ur, or Uru) is the Assyrian word for "city" (Hebrew fr). In several of the Tell Amarna Tablets the word salim is used in the sense of "peace". Urallim, therefore, means "City of Peace". The Psalmist, too, connects Salem with Zion: "He hath his tabernacle in Salem, and his abode upon the mountain of Zion" (Ps. lxvi. 5 [lxvii. 5]). When the Israelites came into the Land of Promise, Jerusalem was in the power of the Jebusites, and bore the name of Jebus. The Hebrews, however, were not ignorant of its ancient name; they often called it Jerusalem (עִירי יְרוּשָׁלַיִם) (Jos. x. 1; Judges xix. 10; 11 Kings vii. 5, etc.). In other passages of the Bible it is called Jerusalem (ʃʃחֲלָא) (I Par. iii. 5; Jer. xxvi. 18; Esther ii. 6, etc.). The Septuagint writes its name "Ierusaλyin". Under the hellenising inﬂuences which invaded Palestine, Jerusalem became Σιόλυμα (Antiq. Jud., i. x. 2), and Jerusalem μακησαμα (The Holy Polis) (I Mach. i. 14, 20; II Mach. i. 10; Bell. Jud., vi. x, etc.). The New Testament employs sometimes the Septuagint name and sometimes that of Machabees, which the Vulgate renders Jerusalem and Jerusaleuma. The Synaxarion gives Λυραλαμ, a form more nearly corresponding to the Hebrew. W. M. F. Petrie (W. M. F. Petrie, A.D. 136, he gave it the name of Ἐλλάια Ἰωτάλα. From the Mohammedan conquest of Palestine, in the seventh century, until our own times, the Arabs have called it El Quuds, "The Holy", and the fr qaddes, or "Holy City", of II Esd. xi. 52 (cf. M. E. R. James, 6, etc.). When and for what reason the name Jerusalem continued to be used until now.

B. Topography.—(I) Geographical Position.—Jerusalem is situated in latitude 31° 46' 45" N. and longitude 35° 13' 25" E. of Greenwich, about 32 English miles in a straight line from the Mediterranean on the west, and 13 from the Dead Sea on the east. It stands on the crest of a chain of mountains which traverses Palestine from north to south, and the highest point of which, at the north-west corner of the city, is 2577 feet above the level of the Mediterranean, and 3865 above that of the Dead Sea. Owing to this difference of level, the stream of these mountains, which drain the Plain of Judah, towards the Mediterranean, is gentle, while that to the east is very steep. A girdle of high hills surrounds the city, forming a sort of natural rampart. On the north is Mt. Scopus (2705 feet), next to it, on the east, the Mount of Olives (2865 feet), beyond which again is the Mount of Olives (2410 feet) (III Kings, xi. 7; IV Kings, xxiii. 13). To the south is the Mount of Evil Counsel (2549 feet), which forms the eastern boundary of the Plain of Raphaim, and next, on the south-west, comes a hill (2557 feet) to which no name has been given. Towards the north-west the city is more expanded; at some distance to the west it is bounded by the Nebi Samwil, the ancient Maspha, which has an altitude of 2935 feet. Notwithstanding the diﬃculty of access in its natural situation, Jerusalem is the centre of a network of ancient roads which connect it, on the east, with Jericho and the Jordan; on the south, with Hebron and Gaza; on the west, with Jaffa and Cesarea; on the north, with Samaria and Galilee. It was, however, situated beyond the great military and commercial highways between Egypt and Assyria.

(II) Site; Hills and Valleys.—The ancient city occupied the same position as the present, except that its southern extremity has remained outside of the walls since the reign of Hadrian (A.D. 136). Thanks, however, to systematic operations undertaken by English, American, and German engineers, much of the old southern wall has been brought to light. While, in many places, masses of ruins have changed the appearance of the ground, excavations and vertical borings, made within the last ﬁfty years, have, nevertheless, enabled the explorers to construct suﬃciently exact maps of the primitive conﬁguration. The ground on which Jerusalem stands, within this ring of surrounding mountains, is bafﬁling in character: on three sides—the east, south, and west—it stands upon terraced heights bordered by deep valleys which give it the appearance of a promontory jutting out to the south. The city itself is ﬂurrowed with ravines which cut it up into a number of little tables. The longest of these valleys is about two miles and a half; they have all been formed by erosion, due to torrential rainfall, in the quaternary period. To the north of the city they take the shape of more depressions in the soil, then, as they descend, sinking rapidly in the calcareous rock of which the mountains are formed, they soon become deep gorges running together at the south-east angle of the city, at a depth of about 800 feet below their starting-point. The two
principal hills rise on the south-west and the east respectively. The former of these hills is called Mount Zion, as described in Josephus (Antiq. Jud., XVI, vii. 1). Eusebius, and all the authors, Jewish and Christian, have followed him, the city of Jebus, or Zion—the City of David—stood there. This view, however, is contested by certain modern Palestinian scholars, who would locate Zion upon the northern despised, the steps of these hills, Mount Moriah (II Par., iii. 1), where stood the Temple of Jehovah.

(a) Mount Zion is bounded on the west by a valley which begins near the old pool called Birket Mamilla (see below, under D), about 1000 feet to the north-west of the hill itself. This valley, following a south-easterly direction as far as the Jaffa Gate, the ancient gate of the gardens (Gennath) (Bell. Jud., V, iv, 2), then turns to the south and forms a great reservoir of water called the Birket es Sultán, by means of a massive dam, which was rebuilt in the twelfth and the sixteenth centuries. This is the Fountain of the Dragon (Roman) which Nehemiah came to when he went out of the city by the western gate (D. V., "dragon fountain", II Esd., ii. 13).

Josephus calls it the Pool of the Serpent (Bell. Jud., V, iii. 2); the Hebrew word "drachon" signifies both "dragon" and "serpent". This valley is called by the natives Wâdi Rabî; in the Bible it goes by the name of Ge Hinnom, or Ge Ben Hinnom, "Valley of Ennom" (in A. V., Hinnom) or "of the son of Ennom"—an unknown personage (Jos. xv; 8; xviii, 16; II Esd., xi, 30; Jer., xix, 2). Below the Birket es Sultán, it turns to the east, passing before Helel dam (q. v.), and connects with the Valley of Cedron. At the junction of the two valleys are the rich plantations forming "the king's garden" (or, in D. V., "the king's guard") mentioned in IV Kings, xxxiv, 4 (see under D). II Esd., iii. 15. Also at the mouth of the Valley of Hinnom is situated Tophest, the high place where Aschaz and Manasseh set up the worship of Baal-Moloch (II Par., xxxviii, 3; xxxiii, 6). The good King Josias defiled this execrable place, scattering human bones over it (II Par., xxxiv, 3-5), in spite of which Joasik restored there the infamous worship of his mother. From the unhealthy fires which were kept burning there for nearly a century and a half—those fires through which the apostate Jews caused their children to pass, in order to consecrate, or immolate, them to Moloch—Ge Hinnom (in Aramæan, Gehennaem) received the name of Tved vél vajis, " Gehenna of the Fire", and became the emblem of hell (in Greek text, Matt., v. 22, 29, 30; Mark, ix, 43, 45). The Valley of Cedron, from Hinnom as far as the Dead Sea, is still called Wâdi en Nâr, "Valley of Fire".

On the north, Mount Sion is bounded by a valley, now largely filled in, which goes down in a straight line from the Jaffa Gate—eastward to the foot of Mount Moriah. On the slope of this valley is a large reservoir called in Arabic Birket Hamâm el Batârak, "Pool of the Baths of the Patriarch", and in the itineraries of the pilgrims "Pool of Ezechias". Josephus calls it Amygdalœ, a name which, according to Conder, may with good reason be derived from ham migdalon, Jerusalem, the highest, and the only one completely isolated. Its highest point reaches an altitude of 2558 feet, and rises 331 feet above its base at the south-eastern angle. Its surface is considerably varied, being, indeed, divided by a small depression which branches off from the middle of the Transverse Valley and descends obliquely to the Pool of Siloe. Mount Sion thus consists of two lofty connected plateaux, one (the lower) stretching westward, the other (the shorter) to the north-west. The former is fairly uniform and measures 2300 feet in length from north to south, and 920 feet in breadth. After sinking about 100 feet towards the north-west, the ground rises about 20 feet and forms a rounded eminence opposite to the Temple, terminating in a precipice 195 feet above the former bed of El Wâd.

(b) Mount Moriah, or the Eastern Hill, is a narrow promontory connected with Mount Bezetha, the highest point of which is the Hill of Jeremias, with an altitude of 2556 feet. This tongue of land terminates on the south in a point near the Pool of Siloe; El Wâd encloses it on its western side, and the Valley of Cedron on its eastern. Upon its highest crest (2845 feet) was the domain of Omer (Amuza), the Jebusite, where Solomon built the Temple and his palaces. This is the summit called Moria; south of the royal quarter, the hill (2300 to 2050 feet) bears the name of Ophel (II Par., xxvii, 3). Cedron, which, since the third century after Christ, has also been called the Valley of
Joseph, begins near the so-called Tombs of the Judges, and descends, under the name of Wadi ed Dijon (Valley of Walnut), south-east to the foot of Scopus, thence south, becoming a deep gorge separating Mount Moria from the Mount of Olives and the Mount of Olives. At a point 1300 feet beyond the north-east angle of the city, it is crossed by a bridge which has replaced an ancient one. This older bridge gave access, on the right, to a staircase cut in the rock and leading up to the north side of the Temple, and, on the left, to a similar staircase leading up to the Mount of Olives. To the left of the bridge is the Garden of Gethsemane (see GETHSEMANI), with the Tower of David. The Jerusalem road from this part of Cedron Wadi sitti Mariam, or "Valley of the Lady Mary". Next come, on the same side, two fine monuments of the Greco-Roman-Judaic style (second to first century a. d.) excavated in the rock. The first of these has been called, since the fourth century after Christ, the Tomb of Absalom; the second, the Tomb of the Prophet Zacharias. Between the two is a grandiose Jewish tomb of the same period, belonging to the family of the Beni Hezir. A little farther on, upon the side of the Mount of Olives, is to be seen a rock-hewn tomb of Egyptian architectural plan, the upper story of which is surmounted by a low dome. In the Lukan Silwan, the houses built against long rows of sepulcres, most of them cut in a vast bank of calcareous rock popularly known as Es Zehwele. Opposite, at the foot of Ophel, a flight of thirty-two steps descends to a grotto, in which is a spring of slightly brackish water. This spring presents the phenomenon of a natural (subterranean) syphon producing an intermittent flow; only at intervals—from three to six times a day—does the water rush down, with a strange humming noise, from a cleft in the rock. The water of this spring is conveyed to the Pool of Siloam via a winding tunnel. The Arabs call the fountain of the Virgin, Virgin, and also Ain Qumm Damaj, "Fountain of the Mother of the Stairs"; its Biblical name is, according to some, En Rogel; according to others, the Upper Gihon (see below, under D). Cedron now begins to widen, and is covered with rich gardens, the "King's gardens" mentioned in the Bible. It receives the Hinom, together with El Wad and the little valley which descends obliquely from Mount Zion. Its descent in a course of about two and a half miles is 550 feet, but in the latter half of this distance it is encompassed with fifteen to fifty feet of rubbish. The ascent of Mount Moriah begins outside the Gate of Herod (Bab Zahira), passes to the south-south-east, under the north-eastern angle of the platform of the Temple, and ends at the bridge of Cedron. The numerous pools in this depression, near St. Anne's church, the traditional birthplace of the Blessed Virgin, have given it the name of Virgin. Here should be located the Probatic Pool, or Pool of Bethsaida (A. V. Bethesda), with the five porches (John, v, 2). The locality of the Birket Isral, a reservoir 359 feet long by 126 feet wide, has also been determined, to the north, against the outer wall of the Temple. (c) Mount Moriah (in D. V. the hill Garab—Jer., xxxi, 39) stretches between the Transverse Valley, on the south, and the upper course of El Wad, on the east. It rises somewhat abruptly towards the north-west but offers no particularly prominent height except the rock of Calvary (2518 feet). In A. D. 70, Garab was still covered with woods, with gardens watered by a stream (Bell Jud. V, ii, 2).

There is still discussion as to whether Sion, the City of David, occupied the traditional Mount Sion or Ophel; but all admit that before the reign of Ezechias (727 B. C.) the city of Jerusalem extended over both hills, within the limits of the first walls.

C. History.—The history of Jerusalem is to a certain degree indistinguishable from that of Israel. It will suffice here to call attention to the most memorable occurrences in the city.

(1) From its Origin to its Conquest by David.—As seen above, Jerusalem is the ancient Salem, the capital of Melchisedech, king and priest of the Most High. Learning of the return of Abraham (then called Abram), who had been victorious over Chedorlaimor and his allies, in the name of the Lord (Gen., vii, 1) "is the vale of Save, which is the king's vale" (Gen., xiv, 17). The king's vale is the Valley of Cedron, which begins to the north of the city (II Kings, xviii, 18; Antiq. Jud., I, x, 2.—Cf. IV Kings, xxv, 4; Jer., xxxix, 4). Like all the land of Chanaan, it was in the hands of the Philistines in the 12th century B.C. In the 10th century, it was occupied by David. When the Hebrews came out of Egypt, the King of Jebus was Adonis (Lord of Justice)—a name which, both in form and sense, recalls Melchisedech (King of Justice). Although Adonis (Lord of Justice) perished in the coalition of the five kings of Chanaan against Israel (Jos., x, 20; xii, 10), Jerusalem, thanks to its strong position, long maintained its independence. In the distribution of the land among the children of Israel, it was assigned to the descendants of Benjamin. The boundary between this tribe and that of Judah ran from En Schems, on the Jericho road, to En Rogel, in the Valley of Cedron, then, following the valley or of the Blessed Virgin, until it reached "the east of the children of Ennom" (Jos., xviii, 15, 16), skirted the city to the south and west. In the period of the Judges, Judah and Benjamin had tried to gain possession of it, but in vain, although they put its practitioners to work and gave the city to the names (Judges, v, 11). The city here spoken of is as Josephus remarks (Antiq. Jud., V, ii, 2), only the lower city, or suburbs. Jerusalem remained (Judges, xix, 12) independent of Israel until the reign of David.

(2) From David to the Babylonian Captivity.—Having become king over the Twelve Tribes of Israel, David combated the more valiant power of the Philistines and religious centre of God's people. He assembled all the forces of the nation at Hebron, and advanced against Jebraus. After long and painful efforts, "David took the castle of Sion" and "dwelt in the castle, and called it, the city of David; and built about from Mello and inwardly (II Kings, v, 7). This was about the year 1058 B. C. The king then caused cedar wood to be brought from Lebanon, and woodmen from Tyre, to build him a palace. Soon after, the Ark of the Covenant was solemnly brought into the city of David and placed in a tabernacle. The king one day beheld the destroying angel soaring above Mount Moria, ready to strike the Holy City. The Lord stayed his arm, and David, in thanksgiving, bought the threshing-floor which was upon the summit of the hill, the property of Araunah (A. V. Araunah), or Ornan, the Jebusite, and there built an altar, upon which he offered holocausts (I Kings, v, 3). Thenceforward Mount Moriah was destined to receive the temple of the Most High. David prepared the material and led the execution of the project to his son.

In the fourth year of his reign, Solomon began the building of the temple, under the direction of architects sent by his son. King Solomon supplied cedar wood and cypress wood; 70,000 men were employed in transporting wood from Joppa (Jaffa) to
Jerusalem, and 80,000 more in quarrying stone in the neighbourhood and shaping it. The splendid monument was completed, as to its essential details, in seven years and a half, and with great pomp the Ark of the Covenant was brought from the City of David to the Temple (II Ki. viii. 6). The buildings were erected upon a great platform, constructed by means of immense containing walls. To the west rose the Holy of Holies, surrounded by a series of chambers in several tiers, in front of which, to the east, was a monumental façade, or pylon, formed by two lofty colonnades of piers and shafts with great columns of bronze, like obelisks. Towards the east was the great court of the priests, square, surrounded with porches, and enclosing the altar of holocausts, the "sea of brass," and other utensils for sacrifices. This court was surrounded by others which were also enriched with galleries and superb buildings (see TEMPLE OF JERUSALEM). Solomon next devoted thirteen years to erecting, south of the Temple, "the house of the Forest of Lebanon," his royal palace, with that of the queen, Pharaoh's daughter, as well as the buildings destined for his numerous family, for his gods and for his slaves. In the connection of the Temple and the surrounding quarter was the City of David by a wall of enclosure, fortified the Millo (in D.V., Mello—III Kings, ix. 15), and "filled up the gulf of the City of David" (III Kings, xi. 27). The people began to murmur under taxation and forced labor.

Insurrection broke out when the proud Roboam, son of Solomon, began his reign (961-65). Ten tribes revolted from him to form the Kingdom of the North, or of Israel, and Jerusalem ceased to be anything more than the capital of the tribes of Benjamin and Judah. At the invitation of Jeroboam, who was elected sovereign of the new kingdom, Rezin, king of Aram (A. V., Shishak), Pharaoh of Egypt, invaded the land of Juda (976), took Jerusalem, and plundered the immense treasures of the Temple and the royal palace (III Kings, xiv. 25, 26). Asa (961-21 and Josaphat (920-904) enriched the Temple after their numerous victories over the neighbouring peoples. Under Judah and the Philistines, in alliance with the Arabs of the South, in their turn pillaged the Temple and slew or carried off all the sons of the king except the youngest, Ochoim, or Joachaz, the child of Athalia (II Par., xxii, 16, 17). On his murder, Athalia had her son Joash, a child of seven, deposed. When Joash alone, a child of one year, was saved from the massacre by the High-Priest Joia and secretly reared in the Temple. At the age of six he was proclaimed king by the people, and Athalia was stoned to death. Joash (886-41) restored the Temple and abolished the worship of Baal; but later on, he allowed himself to be perverted, and caused the Prophet Zacharias, the son of Joia, his preserver, to be put to death. He himself perished by the hands of his servants (IV Kings, xii; II Par., xxii). Under Amsias the Israelites of the North vanquished those of the South, attacked and "took possession of Jerusalem from the gate of Ephraim to the gate of the corner, four hundred cubits." The treasures of the Temple and of the royal palace were carried away to Samaria (IV Kings, xiv, 13, 14). Ozaas, or Azarias (811-760), repaired the breach and fortified the wall with strong towers (II Par., xxvi, 9). His son Joatham (759-44), a wise and good king, strengthened the city by building "the high gate of the house of the Lord, and on the wall of Ophel he worked much"—south of the royal quarter (II Par., xxvi, 3; IV Kings, xv, 3). At this time, the kings of Syria and Israel were marching against Jerusalem. God sent the Prophet Isaiah to King Achaas (743-27), who was at "the conduit of the upper pool." There the Prophet foretold him the repulse of the enemy and at the same time announced to him that the Messias, Emmanuel, should be born of a virgin (Is., vii, 14). Achas used the wealth of the Temple to pay tribute to Theglathphalasar, King of Assyria, whose protection he had sought against the kings of Israel and Syria; he was impious enough to substitute the worship of Baal-Moloch for that of Jehovah.

Ezechias (727-690) hastened to abolish the worship of idols. Alarmed by the fall of the Kingdom of Israel (721), he erected a second wall to protect the suburbs which had come into existence to the north of Mount Sion and the Temple. He made peace with Egypt and with Merodach Baladan, King of Babylon, and refused to pay tribute to Assyria. Upon this, Sennacherib, King of Ninive, who was at war with Egypt, invaded Palestine from the south, and sent his chief officers from Lachis to Jerusalem, with a numerous army, to summon the king to surrender at discretion. But, upon the advice of Isaiah, the king refused to surrender. To cut off the enemy's water, he dammed the spring of the Upper Gihon and brought the stream to the west of the City of David (II Par., xxxii, 3, 4, and 30). An Assyrian tablet (Taylor's Collection, col. 3) reports that Sennacherib, after vanquishing the Egyptians at Altaka and taking four cities of Judah, shut up Ezechias in Jerusalem "like a bird in a cage" (Cuneiform Inscriptions of W. Asia, I, Pl. 39).

This agrees with the Bible narrative; just as he was about to assault Jerusalem, Sennacherib was informed by his Tharace, King of Ethiopia, that he was coming against him, and forthwith, leaving the Holy City, he set out for Egypt; but his army was miraculously destroyed by pestilence (IV Kings, xvii, 13; xix, 35-37; II Par., xxxii, 9-22; Is., xxxvi, and xxviii). Sennacherib organized another army at Ninive and vanquished Merodach Baladan of Babylon, Ezechias's suzerain. Thus it was that, according to the Assyrian inscriptions, Manasses, son of Ezechias (695-45), found himself a tributary of Assuradan and of Assurbanipal, Kings of Ninive (Prism of Assuradan, op. cit., III, p. 16; G. Smith, "History of Assurbanipal", p. 30). Manasses afterwards tried to shake off the Ninivite yoke. In 666 Assurbanipal's generals came to Jerusalem, put the king in chains, and carried him to Babylon, which was in vassalage to Ninive (II Par., xxxiii, 9-11). Manasses, however, soon obtained his liberty and returned to Jerusalem, where he repaired the evils he had caused. He also restored the city walls built by his father (II Par., xxxiii, 14-16).

Among, one of the worst kings of Juda, was assassinated after a reign of two years. Josias, his son (641-08), guided by the Prophet Jeremias, destroyed the idolatrous altars and restored the Temple (621). Upon this occasion the High Priest Helcias found in a hall of the sanctuary an old copy of the Law of Jehovah given by Moses (IV Kings, xxii, 8-14; II Par., xxxiv, 14-21). In 608 the Pharaoh, Nebcho II, marched against Assyria. Actuated by a scruple of conscience, the good king attempted to bar the way against his suzerain's adversary, and met his death on the battle field of Megiddo (IV Kings, xxvii). Joachas, or Sellum, his successor, after reigning three months, was deposed by Necho, and sent as a captive to Egypt, while Eliacim, to whom the conqueror gave the name of Jehoiakim (D.V. Joakim), was put in his place (607-600). In 601 Nabuchodonosor (Nebuchadnezzar) entered Judea to consolidate his father's power. He carried away as captives to Babylon certain notables of Jerusalem, together with the young Prophet Daniel. Joakim revolted against the Babylonian yoke, but his son Joachin (Jehoiachin), surrendered to Nabuchodonosor. The city was given over to pilage, and 70,000 inhabitants, including the wives of the priests, were carried off to Babylon (IV Kings, xxvii, 1-17; cf. also II Par., xxxvi, 1-10). Sedecias, third son of Josias, succeeded his nephew (590-587). Urged by the Egyptian party, he, too, rebelled against his suzerain. Nabuchodonosor

Jerusalem

returned to Syria and sent his general, Nabu-sardan, against Jerusalem with a formidable army. The city surrendered after a siege of more than eighteen months. The Temple, the royal palaces, and other principal buildings were given to the flames, and the city was dismantled. The sacred vessels, with everything else of value, were carried away. Those who remained, and the inhabitants transported to Babylon with their blind king. Only husbandmen and the poor were left in the country, with a Jewish governor named Godolias (Gedaliah), who took up his residence at Maspah (IV Kings, xxiv, 18-20; xxv; II Par., xxxvi, 11-21).

(5) From the Return out of Captivity to the Roman Domination.—In 536 B.C. Cyrus, King of Persia, authorized the Jews to return to Palestine and rebuild the Temple of the Lord (I Esd., i, 1-4). The first convoy, consisting of 42,000 Jews, was dispatched under the leadership of Zoroabel, a prince of Juda. The builders were not only the descendants of those who had been exiled, but others of the other cities of Judah, who were afterwards included in the number of the Jews living in the land. The foundation of the walls of the holy city was laid in the second year of the reign of Darius (514). The old men could not restrain their tears when they saw the magnificent character of the new building. In 458, under Artaxerxes I, Esdras came to Jerusalem with 1500 Jews as governor of Judea and completed the political and religious restoration of Israel. Thirteen years later Nehemiah, with the authorization of Artaxerxes, completely restored the Holy City. But the death of Josias and the capture of Tyre, Alexander the Great, King of Macedon, became master of Western Asia. In 332 he marched against Jerusalem, which had remained faithful to Darius III. The High-Priest Jaddus, believing that resistance would be useless, went out to meet the great conqueror, and induced him to spare the Jews (Antiq. Jud., XI, vii, 3-6). After Alexander, Jerusalem suffered much from the long struggle between the Seleucids of Syria and the Ptolemies of Egypt. Palestine fell to Seleucus Nicanor; but in 305 Ptolemy Soter gained entrance into Jerusalem on a Sabbath Day by stratagem, and captured the city, which was delivered to the Jews (Antiq. Jud., XII, i, 1). A century later (203) Antiochus the Great again tore the Holy City from the grasp of Egypt. When, in 199, it fell once more into the power of Scopas, a general of Ptolemy Epiphanes, the Jews helped the troops of Antiochus, who had just defeated Scopas's army, to definitively drive the Egyptian garrison out of the citadel of Jerusalem (Antiq. Jud., XII, iii, 3). The Seleucids conceived the unfortunate idea of introducing hellenism—that is, pagan—notions and manners among the Jewish people, especially the sacerdotal and civil aristocracy. The high-priesthood had become a royal office; Jason was supplanted by Menelaus, and Menelaus by Lysimachus. These unworthy priests at last took up arms against each other, and blood flowed freely on several occasions in the streets of Jerusalem (II Mach., iv). Under pretense of stifling these tumults, Antiochus Epiphanes in 166 entered the Holy City and, accepting the titles of the Temple, plundered it of its most sacred vessels, massacred 40,000 persons, and carried off as many more into bondage (I Mach., i, 17-25; II Mach., v, 11-23). Two years later he sent his general Apollonius to suppress the Jewish religion by force and replace it at Jerusalem with Greek paganism. The high-priest, and the citadel which commanded the Temple and served as a garrison for the Syrians and an asylum for renegade Jews, was reinforced. The statue of the Olympian Jupiter was set up in the Temple of the Most High, while a cruel and bloody persecution everywhere broke out against those Jews who were faithful to their traditions (I Mach., i, 30-64; II Mach., v, 25, 26; vi, 1-11).

The priest Mathathias of Hasmon and his five sons, known as the Maccabees, rose in revolt against the Seleucids. Judas, succeeding on the death of his father (166), gained four victories over the Syrian armies, occupied Jerusalem (164), purified the Temple, strengthened the fortifications, and erected a new altar of holocaustus. He also repaired the walls of the city, but could not gain possession of the Acra, which was held by a Syrian garrison. After various victories and victories he made an alliance with the Roman Empire (I Mach., viii). Jonathan succeeded and maintained the struggle with no less heroism and success. He built a wall between the upper city and the Acra, as a barrier against the Syrians. Simon took the place of his brother when Jonathan fell by treachery (142). Three years later, he drove out the Syrian garrison of Acra, raised the fortress, and even levelled the hill on which it had stood—a gigantic undertaking which occupied the entire population for seven years (Antiq. Jud., XVIII, vi, 6; Bell. Jud., V, iv, 1). Demetrius II, a year after Simon's death, finally recognized the independence of the Jewish people. Simon, with two of his sons, was assassinated by his son-in-law, and his third son, John Hyrcanus I (135-86), succeeded him on the throne. Antiochus Sidetes, with a formidable army, came to besiege Jerusalem, but consented to withdraw for a ransom of 500 talents, and Hyrcanus took that sum from the treasuries of the royal sepulchre (Antiq. Jud., XIII, viii, 24; Bell. Jud., I, ii, 5). Hyrcanus I was succeeded by his son Aristobulus I, who combined the title of pontiff with that of king, reigning for ten years. His brother, Hasmoneaus (105-78), considerably enlarged the boundaries of the kingdom by his many brilliant victories. Upon his death Alexander, his widow, took the reins of government into her hands for nine years, after which she entrusted the high-priesthood and the kingship to her son Hyrcanus II (69), but his brother Aristobulus took up arms to dispute the possession of the throne. By virtue of the alliance with Rome which Simon had entered into, Pompey, the Roman general, came from Damascus to Jerusalem, in 63 B.C., to put an end to the civil war. The partisans of Hyrcanus opened the city (Antiq. Jud., IV, vii, 2), but those of Aristobulus entrenched themselves within the fortifications of the Temple, and could not be dislodged until after a siege of three months. Their resistance was at last overcome on a Sabbath Day; as many as 12,000 Jews were massacred, and Aristobulus was driven into exile. Pompey restored Hyrcanus to the high-priesthood, with the title of ethnarch, and declared Jerusalem a tributary of Rome (Antiq. Jud., XIV, iv, 1-4; Bell. Jud., I, vii, 1).

(4) Under the Roman Domination; until A. D. 70.—Cæsar authorized Hyrcanus to rebuild the walls that had been destroyed; Jason was appointed Antipater, the Idumæan, governor of Palestine, and the latter, four years afterwards, obtained the appointment of his eldest son, Phasael, as prefect of Jerusalem, and of his youngest son, Herod, as governor of Galilee. When Antipater died (43), Antigonus, the son of the former, as high-priest, advanced Hyrcanus II into exile among his allies, the Parthians, and imprisoned Phasael, who killed himself in despair (Antiq. Jud., XIV, xiii, 5-10; Bell. Jud., I, xiii, 5-10). Herod fled to Rome, where the Senate proclaimed him King of the Jews (40). But it was three years before the Cæsars, invested with more power, turned upon Antigonus, and the citadel which commanded the Temple and served as a garrison for the Syrians and an asylum for renegade Jews, was
little by little, until it should be as splendid as that of Solomon. He also enlarged the sanctuary by extending the galleries to the fortress of Antonia, on the north, and connecting it, on the south, with the site of

Antony, and took up his residence there (Bell. Jud., V, v, 3; Antiq. Jud., XV, xi, 5). He also built a theatre and an amphitheatre for gladiatorial combats. In 19 B.C. the king, whose origin as well as his cruelty rendered him odious to the Jews, thought to win their goodwill by reconstructing the Temple of Zorobabel, Solomon's palace, so as to erect there a superb stoas, or basilica. The opening of the new Temple took place in the year 10 B.C. (Antiq. Jud., XV, xi, 3-6), but thousands of workmen laboured at it until A.D. 64 (Antiq. Jud., XX, ix, 7). He built a second strong castle at the north-west angle of Mount Sion, and
flanked it with three superb towers—Hippicus, Phasel, and Marianne. He also opened the tomb of the kings of Judah, in which he found, to which, to say no more, popular indignation aroused by his sacrilege, he erected a monument of white marble at the entrance of the tomb (Antiq. Jud., VII, xv, 3; XVI, vii, 1). Herod was nearing the end of his reign of nearly forty-one years, when Jesus, the Divine Saviour, was born at Bethlehem. A few months after the first miracle of the Wise Men of the East, and the Massacre of the Innocents, he died of a hideous malady, hated by all his people (4 B. C.).

Archelaus, his son, took the title of king, but in the course of the same year Rome left him with only the title of Ethnarch of Judae, Samaria, and Idumea. Then they were subjected to a supreme tribulation. Archelaus was deposed and succeeded by the status of a Roman province. Coponius, Marcus Ambivius, Annius Rufus, Valerius Gratius (A. D. 14), and Pontius Pilate (25) were successively appointed procurators of the country. Pilate occasioned several seditions, which he stifled with extreme brutality. Under the administration of Pontius Pilate, Jesus Christ was arrested and put to death. The Passion, Resurrection, and Ascension of the Divine Saviour have rendered Jerusalem—which was already glorious—the most celebrated city in all the world. The enthusiasm with which, after the Ascension of the Lord on the Mount of Olives, the apostles dispersed themselves disciples of Jesus Christ provoked a violent persecution of Christians, in which the deacon Stephen was the first martyr (Acts, vi, 8–15). Pontius Pilate having one day seized the funds of the Corban to pay for the construction of an aqueduct, a violent uprising of the Jews was thus occasioned (35). Summoned to Rome to give an account of his conduct, he was banished by Caligula (Antiq. Jud., XVIII, iii, 2). Two years later, the emperor made Herod Agrippa I, grandson of Herod, tetrarch of the countries beyond Jordan; in 41 Claudius made him King of Judæa. Agrippa undertook the construction of Jericho, which was destroyed by the Jews in 66.的内容...

At this epoch there came to Jerusalem Saddan, who was called among the Greeks Helen, Queen of Adiabene, a country situated on the Adiabas, which is an eastern tributary of the Tigris. Converted to Judaism, together with her numerous family, she resided in the city in terrible famine (cf. Acts, xi, 28). It was she who caused to be excavated, for herself and her family, to the north of the city, the imposing sepulchre known as the Tomb of the Kings (Antiq. Jud., XX, ii, 6; iv, 3). At this time the Blessed Virgin died, and was buried at Bethanias by St. Peter, who returned from Antioch to preside at the First Ecumenical Council (Acts, xv, 1–3). (See JUDAIZERS, sub-title Council of Jerusalem.) The King of Judea was replaced by a procurator, and Agrippa II, son of the preceding Agrippa, was made Prince of Chalcis and Perea, and charged with the care of the Temple of Jerusalem (Antiq. Jud., XX, ix, 7). He finished the third wall, which had been commenced by his father, and brought the work upon the sanctuary to a termination in A. D. 64. Cuspius Fadus, Tiberius Alexander, and Cumanus were successively procurators, from 44 to 52. Then came Felix, Festus, and Petronius, from 52 to 66. With the last two, disorders and massacres occurred incessantly. Gessius Florus (66) surpassed the wickedness of his predecessors, and drove the people to revolt against the Roman domination: Agrippa and his party advocated peace, and appealed to Rome against the procurator; but after several days of civil war, the insurgent party triumphed over the pacific, massacred the Roman garrison, and set fire to the palaces. Cestius Gallus, consul of 67, took Jerusalem, with the Twelfth Legion, but only met with regular opposition. He was compelled to retire (Antiq. Jud., XX, xxii; Bell. Jud., II, xvii, 6; xix, 1–9). The Christians, recalling Christ's prophecies (Luke, xix, 43, 44), withdrew beyond the Jordan into Agrippa's territory, led by their bishop, St. John (Epiphanus, De Studiis, xiv, xxv). Nero commanded his general Vespasian to suppress the insurrection, and Vespasian, accompanied by his son Titus, invaded Galilee, in A. D. 67, with an army of 60,000 men. Most of the strong places had been captured, when the death of the emperor occasioned a suspension of hostilities. After the ephemeral reign of his three empereors, Jupiter, Titus, and Domitian, Vespasian was raised to the throne in November, 69.

Titus received from his father the command of the Army of the East, and in the following year, at the season when the Holy City was crowded with those who had come to the Feast of the Passover, he began to lay siege to it. On the 14th day of Xanthic (Bell. Jud., V, xiii, 7), or of the Hebrew month Abib—the day of the Passover, corresponding to 31 March—Titus took up his position on Mount Scopus with the Fifth, Seventh, and Fifteenth Legions, while the Tenth Legion occupied the Mount of Olives. On the other side, John of Gischala, son of Tobias, and the new town at Bethesa, with 11,000 men, and Simon, the son of Giora, held the upper and lower city, on the south-western hill, with 10,000 men. Attacking the third wall, on 9 April, the legions captured that line of defences after fifteen days' fighting. Once master of the new town, Titus took up a position to the west, on the ground known as "the Camp of the Assyrians" (Bell. Jud., V, vii, 2). An attack upon the second wall immediately followed. Five days later, the Romans gained entrance by a breach, but were repulsed, and mastered it only after five days of fierce and incessant fighting. Titus then approached the Antonia, which offered the only way of access to the Temple, and the citadel of Herod, which covered the first wall to the north of Mount Sion. After three days given to repose, the causeways and movable towers were made ready against the Hippicus tower and the Antonia miserably at Cesarea (Acts, xxi, 23; Antiq. Jud., XIX, vii, 2).

After three weeks of fresh preparations, the battering-rams effected a breach in the wall connecting the Antonia with the Temple, near the Pool of Stretus, but in vain. Two days later, the wall crumbled to pieces above a mine prepared by John of Gischala, and a handful of Roman soldiers gained entrance to the Antonia by surprise, at three o'clock in the morning of 20 June (Bell. Jud., VI, i, 1–7). Titus at once had the fortress demolished, in order to use the materials in constructing mounds against the Temple. For three weeks the Jews desperately defended the outer porticoes and then the inner, which the Romans entered only at the cost of enormous sacrifices. At last on 23 July, a Roman soldier flung a blazing torch into the half burnt temple. In the midst of frightful carnage the fire spread to the neighbouring buildings, and soon the whole platform was one horrible mass of corpses and ruins (Bell. Jud., VI, ii, 1–9; iii, 1, 2; iv, 1–5). The Romans then set fire to the palace in the hollow of El Wad, and to the Ophel next day they drove the Jews out of the Acre and...
burned the lower city as far as the Pool of Siloe (Bell. Jud., VI, vi, 3-4). There still remained the third rampart, the formidable stronghold of the upper city, where the defenders of the Aera, laden with booty, had joined Simon's men. Eighteen days were devoted to the preparations of the Romans. A battering-ram was erected against the north-west and north-east of the fortress, but scarcely had the battering-rams breached the walls when John and Simon fled secretly with their troops. On the eighth day of Elul (1 August) the city was definitely in the power of the Romans, after a siege of 143 days. To the question, "How did you capture Jerusalem?" Titus replied: "It is not I who have conquered. God, in His wrath against the Jews, has made use of my arm." (Bell. Jud., VIII, vii, 2.)

The walls of the Temple and those of the city were demolished. But Titus wished to preserve the fortress of the upper city, with the three magnificent towers of Herod's palace. Besides, the upper city was needed as a fortified station for the Tenth Legion, which was left to garrison Jerusalem. During this siege—one of the most sanguinary recorded in history—600,000 Jews, according to Tacitus (Hist., V, xiii), or eighty thousand, according to Josephus, were exterminated by the sword, disease, or famine. The survivors died in gladiatorial combats or were sold into slavery.

D. Development of the City and its Chief Monuments.—(1) Sion, or the City of David, according to Tradition—"...it is that David took the castle of Sion and "dwell in the city of David" (Ps. cxix. 11, 14); and "round about from Mello and inwards" (II Kings, vii, 9). When Solomon had completed the Temple and the House of the Forest of Lebanon, 100 cubits long, 50 cubits wide, and 30 cubits high, with a porch 30 cubits by 50, he erected the palaces and other buildings. Lower down, towards the south, in the locality which figures in the post-Exilic texts as the Ophel, we find the Gabbasites (Jos., ix, 22) and other Nathinites—foreign races placed at the service of the Levites to furnish wood and water for the sacrifices (I Esd., ii, 35; vii, 24; viii, 20; II Esd., iii, 28; vi, 21).

Did Sion, the City of David, occupy the eastern hill or that situated to the south-west? Before the exile, the Jews could not have been ignorant of the location, for the boundary wall of Sion enclosed the sepulchres of the prophet-king and fourteen of his successors; the last two Books of Kings repeat this thirteen times (II Kings, ii, 10; v, 43; vi, 24, etc.; IV Kings, vii, 20; Acts, vii, 2). In the Law of Moses. On their return from exile, the old men (I Esd., iii, 12) must have remembered in what quarter of the city the burial-places of David and his descendants were situated; in point of fact, Nehemiah does not hesitate to use them as a landmark (II Esd., iii, 16). Hyrcanus I and Herod the Great even opened these tombs of the kings to find treasure in them (Antiq. Jud., XVII, vi, 3; XIII, vii, 4; Bell. Jud., i, ii, 5). The white marble monument erected by the latter seems to have remained standing until A. D. 133 (Dion Cassius, Hist. Romae, LXXIX, iv). At any rate the tomb of David and the tombs of the Jews and the disciples of Christ in the time of St. Peter (Acts, ii, 29). Now Josephus, an eyewitness, says that the Jebusite city, which became the City of David, occupied the high western plateau of the south-western hill, which is now known as Mount Zion. In his time it was called "the upper city" (Antiq. Jud., XVI, vii, 1, etc.), and again the upper aqora, or market (Bell. Jud., V, iv, 1. Cf. I Mach., xii, 38; xiv, 36). The word Millo (in D. V. Mello) is always translated Aera in the Septuagint and Josephus, and, according to the latter, the Millo, or Mello, occupied the high plateau on which the castle of David was situated. Then came time called Aera, "lower city" and "lower market" (Antiq. Jfl., XVI, vii, 1; Bell. Jud., V, iv, 1; I Mach., i, 38). It was this hill, commanding the Temple, that was levelled by the Hasmonaens (Antiq. Jud., XIII, vi, 6; Bell. Jud., i, ii, 2). The Talmudists agree with the Jewish historian as to the position of the two markets (Neubauer, "La Géographie du Talmud", p. 138). Eusebius of Cesarea (Onomasticon, a. v., "Golgotha"), St. Jerome (Ep. civ., Ad Eusebium), St. Ephrem (Hymn, 13), and many later writers, Jewish and Christian, locate Sion, the City of David, upon the south-western hill, which has never borne any other name than that of Mount Zion.

(2) Sion on Ophel.—During the last fifty years many writers have rejected tradition and sought information from the mediaeval geographical writers. But the following are the two different topographical theories. The theory which places Sion upon Ophel is the only one which (apart from certain discrepancies as to the sites of the Mello, the Aera, the palaces of Solomon, etc.) is worth a moment's consideration. The partisans of this theory base it upon the following passage: "This same Ezechias was he that stopped the source of waters of Gihon, and turned them away underneath toward the west of the city of David" (II Par., xxxii, 30). They maintain that Sion was at Ophel for the following reasons: (a) En Rogel, the "fountain Rogel"—the fountain of the Valley of Hinnom (Is., viii, 18)—is the Btr Eydb, or "Well of Job", situated 2300 feet to the south of the Ain Sitti Mariam, or Fountain of the Virgin. (b) In former times, as now, the Fountain of the Virgin was the only spring which flowed in the vicinity of Jerusalem. (c) The Fountain of the Virgin is, therefore, the Uqi, or fountain of the courtyard of Ezechias who made the tunnel of Siloe. (d) By this passage the king brought the waters of the Fountain of the Virgin to the west of Ophel, that is, of the City of David. (f) The Books of Mackabees explicitly state that Sion was on the mountain of the Temple, or Moriah.

The following objections are made:—

(a) The Btr Eydb, that is to say, the Well of Job, is neither a spring nor a fountain (en or ayn), but a well (btr), 125 feet deep, in its present condition, and is supplied only by rain-drainage and infiltration. In the sixth century, Cyril of Scythopolis (Vita S. Sabae, lviii), and then Eutychius of Alexandria (Annals), and Moudir ed Dn ("Hist. de Jérusalem"), ed. Sauvare, p. 188) tell us that, after a great drought which lasted five years (500-14), in the twenty-third year of Anastasius, John, Patriarch of Jerusalem, caused a well to be dug to a depth, according to Cyril, of about 256 feet; or, according to the Annals, of about 282 feet (about 82 feet), but without finding any water. The Btr Eydb, therefore, is no Chasenean fountain, and the En Rogel must necessarily be the Fountain of the Virgin, the natural peculiarities of which must have made it famous in the country and fitted it to serve as a boundary mark between the tribes of Benjamin and Juda. The grotto of this spring, too, would have afforded a good place of concealment to David's two spies, who hid at En Rogel (II Kings, xvii, 17).

(b) In the time of Ezechias there were many springs of running water in the neighbourhood of Jerusalem, and the Jews knew them well (II Par., xxxii, 2-5). Josephus relates that when Titus was besieging Jerusalem many springs flowed so abundantly that they sufficed, not only to give drinking water to the Romans, but to irrigate the gardens (Bell. Jud., iv, 2). West of the city the ground was covered with gardens (Bell. Jud., v, ii, 2; v, 2), and this is why the western gate bore the name of Gennath, "Gate of the Gardens". Here Titus pitched his camp and here the officers of Sennacherib halted (IV Kings, xvii, 17. Cf. Is., vii, 3). Among the living waters of Jerusalem the Babylonian Talmud commemorates the "Beth Mamlkah" (in English, the "Capital, or city", as we shall see). Cyril of Scythopolis (loc. cit.) relates that, in the great five-years' drought "the waters of Siloe and of the Lucullians ceased to flow". Lastly, Josephus says that a conduit under the Gate
of Gennath brought water to the Tower of Hippicus (Bell. Jud., V, vii, 3). Several fragments of ancient aqueducts have been discovered under the Jaffa Gate and about the Haram el Batrak, commonly called the Pool of Eschias.

(c) Adonias, the first-born son of David the king, secretly assembled his numerous partisans upon "the stone of Zoheleth, which was near the fountain Rogel", where he offered rams and bulls, and was preparing to slay the king at the end of the banquet. But David, apprised of the plot by the Prophet Nathan, sent Solomon, with the Prophet and the royal guard, to Gihon, there to receive the sacred unction without Adonias's knowledge, and to be proclaimed king to the sound of trumpets (II Kings, i, 8-9, 33-45). On the flank of the Mount of Olives, opposite to the Fountain of the Virgin, is an immense rocky ledge called Ez Zahwele. This has been identified by Clermont-Ganneau with the stone of Zoheleth ("Quart. Stat.", 1870, p. 251). Wilson and Warren are of the same opinion (The Discovery of Jerusalem, p. 205). Conder supports the identification upheld by the common opinion of the learned ("Quart. Stat.", 1884, p. 242, n. 1). If the City of David had been on Ophel, would Adonias have held his treasonable banquet under the windows of the royal palace? Would David have been ignorant of this large and noisy gathering until Nathan's arrival? Would he have been able to get into the house of Codman from the bottom of Zoheleth? Would not the partisans of Adonias have heard the sound of trumpets and the shouts of the people before the royal procession had returned to Zion (II Kings, i, 41)? The fact appears to be that, while Adonias had withdrawn to a spot in the Valley of Cedron near En Rogel, Solomon was sent from the opposite side, where was the source of Gihon.

(d) There is no document which in any way attributes the construction of the tunnel of Siloë to Eschias. On the other hand, Isaiah, in the reign of Ahas, the father of Eschias, speaks (viii, 6) of "the waters of Siloë" (a word which means "sent"—John, ix, 7) "that go with silence". The Hebrew inscription found in 1881 on the wall of the tunnel is, according to Sayce ("Fresh Light", London, 1883, p. 116), earlier than Eschias, and may even date from the time of Solomon. Conder, Maspero, Stade, Renan, and others regard it as the work of Eschias.

(e) There is now no question of the fact that the Pool of Siloë was always without the walls of the city (Bell. Jud., V, iv, 2; ix, 4). Now Eschias brought the waters of Gihon to a cistern within the city (IV Kings, xx, 20; Eschus, xlviii, 19, fragment of the Hebrew Bible), and the next is the pool of the name of Eschias, between the two walls—i.e., between the old wall and that of Eschias, north-west of Mount Zion. The Hebrews never divided the cardinal points of the compass.

(f) In the historical books Sion is applied to the city of Jebus, which, with the Mello, became the City of David. But in the poetic books Sion becomes, by metaphor, a synonym for the Temple (Ps. lxxvi, 65), or for Jerusalem (Ps. xxxiii, 3; lxxvi, 5). Sion sometimes designates the people of Israel (Is., x, 32; Soph., iii, 14), or Judea (Lam., iv, 22), and even the Jewish community in the dispersion (Jer., xxxii, 12; Zach., ii, 7). In the days of the Machabees the City of David, to the west of the Temple, has become the resort of infidels (I Mach., i, 35 sqq.). Symbolically, the name of Sion was transferred to the Temple and its fortress, which had become the only stronghold of Israel's faith. But Ophel was always excluded from the topographical Sion (I Mach., xii, 33-37). The study of the Bible has been more successful in discovering the place here indicated on the spot, the site formerly occupied by the holy Sion, the City of David, as does tradition. Archeology, too, positively confirms tradition.

(3) Sion the Upper City.—The sides of the traditional Mount Sion contain a great many dwelling-places wholly or partly excavated in the rock. These were, according to the common opinion, the houses of the aboriginal inhabitants. While constructing the British School and the excavations of 1875, to the south of the western plateau of Sion, Maudslay discovered the line of an ancient fortress. Its base is a scarped cut vertically in the rock, about 600 feet in length, and 40 to 50 feet in height. To the west and east of this colossal scarped wall are salients hewn out of the mass of the rock, 30 to 50 feet in height. These are the rock bases of flanking towers. The first is 20 feet in height, and rests upon a plateau of rock rudely shaped into a talus. Along the scarps runs a ditch, which is also dug out of the living rock, having a depth of from 5 to 10 feet and an average width of 16 feet (Conder and Kitchener, The Ruins of Jerusalem, 1875, pp. 81 sqq.). In 1894 Bliss took up and continued the work of exploration. From the eastern tower the scarps turn towards the north-east, following the outlines of the high plateau, and the ditch follows uninterruptedly in the same direction. On account of some houses which are grouped about the Holy Cenacle, the exploration has only been carried on to a length of 185 feet. The scarps were once crowned by a wall (some of the stones of which, cut and bevelled, were found in situ), rises to a height of 240 feet above the bed of the Ennom (Hinnom) (see Bliss). This fortress, which was originally constructed with man-made art, and which was so solid as to defy every attack, occupied the high city indicated by Josephus, "upon much the highest hill, straight along its length, which, by reason of its strong position, had been named by David the citadel" (Bell. Jud., V, iv, 1). It was about 2500 feet in length and 800 in breadth. To the north where it was protected by a valley of no great depth, Herod caused a strong castle to be built, which made the position almost impregnable, even against the Roman legions. Thanks to the dimensions and other indications supplied by Josephus, it is thought that the Tower of Phasael may be recognized in the first courses of masonry of the actual Tower of David, and that of Hippicus in the tower to the north-west of the citadel; that of Mariamne ought to flank the western wall. On the same side the Gate of the Valley formerly opened (II Par., xxvi, 9; II Eed., xi, 15; iii, 15), and at the south-east angle of the fortress (II Eed., iii, 11; xii, 37), which defended the Gate of the Corner before the Herodian structure existed (IV Kings, xiv, 13; II Par., xxv, 23). The high city, which, according to Josephus, was the aristocratic quarter, contained the Cenacle, according to tradition, the house of Anna, and the south-east angle of Herod's palace, the prison where St. James the Greater was beheaded. From the Tower of Phasael the wall descended, from west to east, upon the southern slope of Mount Sion, and ended at the enclosure of the Temple. An important fragment of this rampart has been discovered to the east of the Tower of David, and farther on, another piece, 290 feet long, flanked by two towers, the stone facing of which, on the side towards the valley, remains intact to a height of 39 feet (Warren, "Quart. Stat.", 1884, p. III). This was built by the ancient Gate of Ephraim (IV Kings, xiv, 13; II Par., xxv, 23). According to tradition, St. Peter was cast into prison in the suburb of Eschias; after being delivered by the Angel, he made his way to the city proper, where he found the iron gate open (Acts, xii, 1-11). As early as the sixth century A.D. the Church marked the spot by the name of the brother of John Mark, fifty paces south of this wall (Acts, xii, 12-17). The southern wall of Mount Sion probably formed part of the wall by which David joined the City of Jebus and the Mello (the Acre of the Septuagint). This hill, according to Josephus, is the largest city, the Akron of the Syrians, which was levelled
by the Hasmonaeans (Antiq. Jud., XIII, vi, 6). It contained the palace of the Hasmonaeans and that of Helen of Adiabene (Bell. Jud., VI, vi, 3).

To return to the south of the primitive fortress, a wall of later construction descends from the outer angle, south-east of the eastern tower, towards the Pool of Siloë. It is a work of the kings of Judah, if not of Solomon, but, as Blisse has remarked, it has been restored again and again—on the last occasion, by the Empress Eudocia (a. d. 450–60). At a point 130 feet from the beginning of the wall, exploration has brought to light the remains of a gate with three superimposed floorings of successive periods. It opens upon a street under which passes a drain leading to Ennom. This

Blisse followed the eastern wall of Mount Zion for only 650 feet, that is, as far as 150 feet north of the Pool of Siloë. According to Nehemiah (II Esd., iii, 16–19), the wall passed in front of the street of stairs which went down to the sepulchre of David, then by the reservoir which Josephus calls the Pool of Solomon (Bell. Jud., V, iv, 2), and, lastly, by the House of the Heroes—all places as yet unidentified. The wall then formed an angle and then a re-entrant angle (II Esd., iii, 24), but we are ignorant as to the point where it crossed the valley to ascend Ophel. On the eastern flank of Ophel it has been ascertained that a small fragment of a wall exists, running from south-west to north-east and, 100 feet farther on, a remarkable

is the Dung Gate (II Esd., ii, 13), which Jeremias (xix, 2) calls the Earthen Gate; Josephus calls it the Gate of Essennians, and indicates its position in the quarter of Bethph (from the Hebrew Bethsoa, “a dunghill”) (Bell. Jud., V, iv, 2). Here Mount Zion is crossed by two ancient aqueducts of different heights, which bring water from south of Bethlehem (Blisse, op. cit., pp. 17–82). About 2000 feet from this gate, Guthrie, in 1881, and, later, Blasis, have proved the existence of another gate, also containing three floors and protected by a tower. This is the Gate of the Fountain (II Esd., ii, 14; iii, 15; “water gate”, xii, 36) and, probably, also “the gate that is between two walls, and leadeth to the king’s garden” by which Sedecias escaped (Jer., lli, 7; IV Kings, xxv, 4). Starting from the tower, the wall takes a north-western direction and then turns abruptly to the north, leaving the Pool of Siloë outside the city, in accordance with what we are told by Josephus (Bell. Jud., V, iv, 2; ix, 4). To the south of the Pool of Siloë the valley is crossed by a great dam, 233 feet long, a vast rain-water reservoir. The dam is 20 feet thick and is finished off, at about half its height, by a wall 10 feet thick, flanked by seven buttresses of equal strength. In spite, however, of successive reinforcements, it was unequal to resisting the pressure of the water. The Empress Eudocia had a second dam built, fifty feet to the north of the former one. This is “the king’s aqueduct” (or pool) of II Esd., ii, 14.

VIII.—23

hydraulic structure anterior in date to the tunnel of Siloë. The latter is a gallery, hewn in the rock, leading to a wall which goes down to the surface level of the Fountain of the Virgin, whence water could be drawn by means of buckets and ropes (Wilson and Warren, op. cit., pp. 248 sq.). Beyond doubt, “the water gate” and “the tower that stood out” (II Esd., iii, 26; xii, 36) must be located hereabouts. The wall has been found again at a distance of 700 feet in the same direction; it then turns to the north for a length of 70 feet and runs into the south-east angle of the Temple enclosure. At the elbow formed by this wall, there rose a tower, the “great tower that standeth out” (II Esd., iii, 27), intended as a defence for the royal palace. In course of time the kings of Judah prolonged the wall of Ophel so as to protect the eastern enclosure of the Temple. This line was pierced by numerous gates: “the horse gate” (II Par., xxiii, 15; IV Kings, xi, 16; II Esd., iii, 28), discovered in 1902, by the English engineers, facing the south-east angle of the Haram, which is called “Solomon’s Stables”; the eastern gate (of the Temple), corresponding to “the Golden Gate”; the Mephad, or “judgment gate” (II Esd., iii, 30) opposite to the Golden Gate; the Prison Gate (D. V. “watch gate”) (II Esd., xii, 38); the Gate of Sur (IV Kings, xi, 6); “the gate of the shieldbears” (D. V.), or “of the guard” (A. V.) (IV Kings, xi, 19); the Gate of Benjamin (Jer., xxxvii, 12; xxxviii, 7) are names of different gates which existed
previously or protected the suburbs that stretched north of the Temple from the time of Eschias to Herod. Lastly, there is the Sheep Gate (D. V. "flock gate") (1867, p. 308). (It is an ancient structure that is generally believed to be the original entrance to the city.

Of the ancient Temple nothing is now to be seen but the holy rock and a number of cisterns. The Haram el Sheirf is four-sided, and has right angles on the south-west and north-east. The southern wall measures 922 feet and is pierced by three entrances: the double Gate, the Triple Gate, and the Single Gate—remarkable works of the type of the Golden Gate and, like it, restored in the sixth century of our era. The eastern and the northern walls are each 1042 feet in length; the western 1601. The stones are carefully shaped and bevelled, 74 feet in height, the longest of them 20 to 30 feet. The wall was built of stone cut in courses, 600 feet long, in which the stones are 7 feet high. At the south-west angle this colossal wall goes down to a depth of 85 feet below the present surface of the soil.

Forty feet to the north of this angle may be seen three rows of stones, forming a vault 51 feet in length, called "Robinson's Arch," after the explorer who first recognized in these remains the fragments of a viaduct. The English engineers have as a matter of fact discovered, 54 feet to the west of this fragment of vaulting, and 55 feet below the actual level of the soil, three courses of the corresponding upright supporting wall. At the foot of Mount Zion, 240 feet from the Robinson's Arch, more remains have been found of the same viaduct, of which, indeed, Josephus clearly makes mention (Antiq. Jud. XIV, iv, 2; Bell. Jud., I, vii, 2; VI, vi, 2). The supporting wall rests upon a paved foundation, which in its turn is supported by a bed of earth 23 feet in thickness. In this mass of earth, in which no traces of masonry are found, there lie vaulting-stones of from 3 to 34 feet in height and width, and 7 feet in length—the remains of a much older bridge. Authorities have attributed the first viaduct to Herod and the second to the Kings of Judea, or even to Solomon. At the very bottom of the valley there is a channel cut into the rock and vaulted in the Phoenician manner;—this is an aqueduct which was later used as a drain (Wilson and Warren. op. cit., pp. 76-111; Perrot and Chipiez, "Hist. de l'art", IV, 1882. Cf. III. Kings, iii, 27).

The Plaza was excavated to the Temple, called "Barclay's Gate," opens 180 feet farther north; then, beyond the Wailing Place, comes a third gate called "Wilson's Arch." This is a viaduct arch 42 feet along the axis and 39 feet in span, built of blocks from 6 to 12 feet in length. In the bottom of the valley, round about the viaduct, Wilson has discovered several vaults with their constructions and pieces of handwork which seem to be of Phoenician origin. The viaduct, which is supposed to date from the time of Herod, was reconstructed in the Byzantine period. It both connected the Temple with Mount Zion and served as an aqueduct for the canal that runs from Bethlehem near Wilson's Arch there is an ancient vaulted pool, Birket el Bouraq, to which an aqueduct leads down from the citadel. Josephus places the Yxustus, the gymnasion constructed by the High Priest Jason, between the two viaducts. Beyond Wilson's Arch the first city wall joined the Temple enclosure (Wilson and Warren, op. cit., pp. 76 sq.).

The Second Wall.—"The second wall," says Josephus, "began at the gate that is called Gennath, which belongs to the first city wall. Enclosing only the southern district, it continued as far as the Antonia." (Bell. Jud., V, iv, 2). It is the work of Eschias and of Herod, according to Josephus, in the year 1801. It had for the foundations of a house, 20 feet to the north of the ditch of the citadel, a wall was brought to light, constructed of large stones, extending east and west to a distance of about 100 feet. At its western extremity it forms a somewhat obtuse angle with a stronger and still better constructed wall which runs north (Selah Merill, "Quart. Stat."). 1886. pp. 21 sq.; 1887, p. 217; 1888, p. 21). In 1900 a Greek high school was built 180 feet farther on, and it was found that the rock was probationary wall.

The accumulated fillings of the hollow remains of medieval structures were discovered; but the explorations on this spot were not followed up. Many Pales- tinologists, however, see here marked indications of a ditch. At the north-east angle of the Greek school C. Schick ("Quart. Stat."). 1897, p. 219; 1883, p. 19) had already ascertained that the wall turns once more at an angle eastwards. Up to this point the city wall skirts the Pool of Eschias at a distance of 180 feet to the west and 65 feet to the north. In building the most Greek long face of the Holy Sepulchre, the workmen came upon a scar which had once been crowned with a thick wall, some fine blocks of which were found still in situ; the wall sloped back from the face of the rock (Schick, "Quart. Stat."). 1889, p. 571; 1894, p. 146). Next, in 1883, while building the German Protestant church which took the place of the church of St. Mary the Latin, the engi- neers found that the latter edifice had stood upon filled ground. Digging down 30 feet below the actual level of the ground, they came to the rock, and then, under the great nave of the old church, they found a strong wall to the east of the church, which they believe to be the original. It keeps, however, some of its facing in the shape of carefully dressed slabs. Guteh (in "Zeitschrift des Deutschen Palastinavereines", XVII, p. 128) and Schick (in "Quart. Stat."). 1889, p. 146), with many others, regard this as a part of the second wall. In the time of Christ, Calvary was thus shut out from the perimeter of the second city enclosure. Indeed, the existence of the Jewish hypogeum—the Holy Sepulchre, another one 30 feet to the west, and a third to the north-east—leaves no room for doubt on this point; for only the kings enjoyed the privilege of sepulture within the city. Some three hundred years ago English engineers asserted that the wall of Eschias must necessarily enclose Golgotha, because this sig- zag city wall would, otherwise, have been built contrary to all the rules of military art. But since then the exploration of ancient Jewish and Chanaanitish necropolis has revealed irregularities, which are to be paralleled. While, upon the line indicated, the haphazard dig- gings made on various structures have all brought to light fragments of walls of a homogeneous wall, the religious communities in the Christian quarter to the north-west of Golgotha have in recent times executed important building operations without finding any traces of ditch or of rampart.

At the angle where the wall turned northwards should be found the new Gate of Ephraim (II Esd., xii, 38). But the course of the wall from this point is less easy to follow. It was, very probably, replaced in the time of Hadrian by the colonnaded street which led, almost in a straight line, from Mount Zion to the Gate of Damascus, and which was founded upon rock throughout. Following this street, we pass, on the left, the first of the façade of Constantine's Basilica, which was completely discovered in 1807 and, on the right, 230 feet from this structure, the Khan ez Zeit, which is built in a Jewish cistern partly hewn out of the rock. To the east of this cistern, on the slope of El Wad, the rock appears, cut obliquely. Farther on, the Old Gate (II Esd., iii 6; xii, 38) may be placed. Where the Street of the Columns was crossed by another, coming from the west, the former marked the intersection; one superb marble column of it still remains in situ, 23 feet high, leaning against a fine wall of Roman construction. Investigation has demonstrated the existence, at a point 200 feet west of this column, of a counterguard and a deep ditch, running from south to north (Schick. "Quart. Stat."). 1887, p. 154). It was by this gate that, ac-
according to tradition, Jesus went out from the city to the place of His crucifixion. North of the column and slightly to the east, at a distance of 100 feet, is to be seen a rocky scar which extends about 250 feet to the north. Near here the wall descended eastward into El Wad, where it came to the Fish Gate (II Par., xxxiii, 14; II Esd., iii, 9; xii, 38). This gate opened directly upon the Mount of Olives which came from Jaffa (cf. II Esd., xiii, 16). The wall then crossed Mount Bezatha, and the Tower of Hananeel (Jer., xxx, 38; II Esd., iii, 1; xii, 38) must be located on the ridge which descended from the Hill of Jerome to Mount Moria, and which was the vulnerable point towards Jerusalem. On this same ridge there was another tower, or stronghold, as early as the period of the kings of Judah; Nehemiah, who restored it, named it Birah, an Aramaic word derived from the Assyrian Biru, "palace," or "fortress of the temple" (in D. V., "tower of the house"); II Esd., ii, 8). This tower (see I Mach., xiii, 53; etc.) bore, in the time of Josephus, the hellenized name of Bâris. Under the Hasmonian dynasty, the whole rock on which this tower stood was removed on all sides, to a depth of 30 feet on the south, and of 15 feet on the north, the length of the excavation being 350 feet from east to west. On the north, where there is a deep cliff, the excavation is 150 feet more (cf. I Mach., xiii, 53). Herod caused the reservoir to be vaulted over, and built the fortress of Antonia on the rock of Bâris and on the southern esplanade (Bell. Jud., V, v, 8). It was in this building that Pontius Pilate had his praetorium, where Jesus was condemned to death. In saying that the second wall "went up to the Antonia," Josephus does not indicate where it ended, but only its direction. He himself does not place the Antonia at the end of the wall of Ezechias; on the contrary, he says that the Romans could approach it only after they had become masters of the city as far as the first wall (Bell. Jud., V, v, 8). From the Tower of Hananeel the wall was prolonged to the Sheep (or Flock) Gate (II Esd., iii, 1, 31; xii, 38), near the Probatic Pool, with the five porches, and the other great reservoirs, necessarily, within the walls.

Third Wall. From A.D. 41 to 44 Herod Agrippa I under the title of "King" and "Lord" the house of Agrippa at the Tower of Hippicus and crossed the Camp of the Assyrians to the north, as far as the octagonal Tower of Psephinus (Antiq. Jud., XIX, vii, 2; Bell. Jud., V, iv, 3). Traces of this tower were found at the north-west corner of the city, at the place where the Qasr Damascus is situated. The Agrippa wall was destroyed in the twelfth century. Thence Agrippa's wall took an easterly direction, towards the Towers of the Women, opposite the sepulchre of Helen of Adiabene, which is situated 2000 feet to the north. The Towers of the Women, some traces of which have been found, protected the gate which led up to the Fish Gate. It still stands, as to a considerable part of its height, though sunken into the ground, below the actual Gate of Damascus, or Bab el Amould. Thence the wall passed over the royal grotses (Bell. Jud., V, iv, 3) to cross the ridge of Besetha. The stone of this lofty hill is of excellent quality, and could be transported in immense blocks as far as the Temple by means of inclined planes. This is why, as early as the time of Solomon, the hill was used as a quarry, as is shown by the figure of a Phcenician cherub cut in the wall of one of the royal grotses. Already perforated with numerous ruins, the hill is crowned by a Greek cross, and the cut served as a ditch for the new city wall. Thus it was that the summit became a separate hill, called, since the sixteenth century, the Hill of Jerome. It again served as a quarry in the period of the Crusades and its present aspect has been taken on since then. On the north the grand wall continued eastwards as far as the height above Cedron, and then turned south to rejoin the second city wall. The line of the third wall has with slight modifications been kept in that of the actual city.

II. FROM A.D. 71 TO A.D. 1069. (1) To The Time of Constantine. (71-312). When Titus took Jerusalem (April—September, A.D. 70) he ordered his soldiers to destroy the city (Josephus, "De bello Jud." VI, ix). They spared only the three great towers at the north of Herod's palace (Hippicus, Phasael, Mariamne) and the western wall. Few Jews remained. The Roman Tenth Legion held the upper town and Herod's castle as a fortress; Josephus says that Titus handed the fields around his soldiers ("Vita", 76, ed. Dindorf, Paris, 1865, p. 832). The presence of these heathens would naturally repel all ideas of establishing a church, and there was no law against their presence in Jerusalem. The Jewish Rabbis gathered together at Jabne (or Jamnia, now Jebus) in the plain, north-west of the city, two hours from Ramleh. Meanwhile the Christian community had fled to Pella in Perea, east of the Jordan (south-east of Jenin), before the beginning of the siege. The Christians were still almost entirely Jews, converts from Judaism (Eusebius, "Hist. Eccl.", IV, v). After the destruction they came back and congregated in the house of John Mark and his mother Mary, where they had met before (Acts, xii, 12 sq.). It was apparently in this house that was the upper church, the scene of the Last Supper and (as the assembly on Whit-Sunday. Epiphanius (d. 403) says that when the Emperor Hadrian came to Jerusalem in 130 he found the Temple and the whole city destroyed save for a few houses, among them the one where the Apostles had received the Holy Ghost. This house, which Epiphanius, is "in the part of Sion which was spared when the city was destroyed"—therefore in the upper part ("De mens. et pond.", cap. xiv. P. G. XLIII). From the time of Cyril of Jerusalem, who speaks of the upper church of the Apostles, where the Holy Ghost came down upon them (Catech., iii, 1, P. G., XXXIII, 6), the upper church was the principal church of the place. A great basilica was built over the spot in the fourth century: the crusaders built another church when the older one had been destroyed by Hakim in 1010. It is the famous Cenaculum or Cenaecle—now a Moslem shrine—near the Gate of David, and supposed to be the Ark of the Temple. During the first Christian centuries the church at this place was the centre of Christianity in Jerusalem, "Holy and glorious Sion, mother of all churches" (Intercession in "St. James' Liturgy", ed. Brightman, p. 54). Certainly no spot in Christendom can be more venerable than the place of the Last Supper, which became the first Christian church. The constant use of the name Sion for the Cenaculum has led to considerable discussion as to the topography of Jerusalem. Many writers conclude that it is on Mount Zion, which would therefore be the southern hill of the city. As the letters of Egeria ("Exercitationes de Terre Sainte", Paris, 1907, p. 121, plan). Others (Baederker, "Palatinae et Syrien", 6th ed., 1904, p. 27) oppose this tradition on the strength of the passages in the Old Testament that clearly distinguish Sion from Jerusalem and state that the Lord dwells in Sion (Ps. 132:11, Ps. 44:2, Ps. 145:11-14; Joel, iii, 21, etc.). So Sion would be the hill on the west, the Temple and David's palace.
It seems that the later name Sion began to be used for all Jerusalem. Josephus never uses it at all; already in the Old Testament the way was prepared for this extended use. Jerusalem is the "daughter of Sion" (Jer., vi, 2; etc.), all its inhabitants without distinction (Ps. xlii, 1; xliii, 2, etc.). In Christian times Sion seems to have lost its special meaning as one definite hill and to have become merely another name for Jerusalem. Naturally then they called their centre there by the name of the city, although it did not stand on the original Mount Sion. The pilgrim Ethelbert (Silvia) at the end of the 6th cent., always speaks of the Cenaculum as Sion, just as the Holy Sepulchre is always Anastasia (see ed. Hereus, Heidelberg, 1908).

From this Cenaculum the first Christian bishops ruled the Church of Jerusalem. They were all converts from Judaism, as were their flocks. Eusebius (Hist. Eccl., IV, v) gives the list of these bishops. According to a universal tradition the first was the Apostle St. James the Less, the "brother of the Lord". His predominant place and residence in the city are implied by Gal., 1, 19. Eusebius says he was appointed bishop by Peter (Hist. Eccl., i), and John (II, 1). Not only did he share the privileges of the apostles, but he even shared the government with them (Acts, xv, 6, etc.; Eus., Hist. Eccl., II, xxiii). He was thrown from a rock, then stoned to death by the Jews about the year 63 (Eus., ib.; Josephus, "Ant. Jud." XX, ix, 1, ed. c.1, p. 780). After his death the surviving Apostles and other disciples who were at Jerusalem chose Simeon, son of Cleophas (also called Our Lord's brother, Matt., xii, 55), to succeed him. He was bishop at the time of the destruction (70) and probably went to Pella with the others. About the year 106 or 107 he was crucified under "Trajan" (Eus., Hist. Eccl., III, iii). The line of bishops of Jerusalem was then continued as follows: Judas (Justus), 107–113; Zachaeus or Zacharias; Tobias; Benjamin; John; Matthias (d. 120); Philip (d. c. 124); Seneca; Justus; Levi; Ephraim; Joseph; Judas Quiriacus (d. between 134–140). All these were Jews (Eus., Hist. Eccl., IV, v). It was during the episcopate of Judas Quiriacus that the second great calamity, the revolt of Bar-Kochba and final destruction of the city, took place. Goaded by the tyranny of the Romans, by the re-establishment of Jerusalem as a Roman colony and the establishment of an altar to Jupiter on the site of the Temple, the Jews rose in a hopeless rebellion under the famous false Messiah Bar-Kochba about the year 132. During his rebellion he persecuted the Jewish Christians, who naturally refused to acknowledge him (Eus., Chron., for the seventeenth year of Hadrian). The Emperor Hadrian put down this rebellion, after a siege that lasted a year, in 135. As a result of this last war the whole neighbourhood of the city became a desert. On the ruins of Jerusalem a new Roman city was built, called Ælia Capitolina (Ælia was Hadrian’s family nomen), and a temple to Jupiter Capitolinus was built on Mount Moriah. Any Jewish Christian was allowed under pain of death inside the town. This brought about a complete change in the circumstances of the Church of Jerusalem. The old Jewish Christian community came to an end. In its place a Church of Gentile Christians, with Gentile bishops, was formed, who depended much less on the sacred memories of the city. Hence the Church of Jerusalem did not for some centuries take the place in the hierarchy of sees that we should expect. Ælia was a town of no importance in the empire; the governor of the province resided at Caesarea. Now, the name Ælia among Christians of this time marks the insignificance, even the little Gentile church, as the restoration of the old name Jerusalem later marks the revival of its dignity.

Even as late as 325 (Nicæa I, can. vii) the city is still called only Ælia. The name lasted on among the Arabs in the form Ilyaa till late in the Middle Ages. As the rank of the various sees among themselves was gradually arranged according to the divisions of the empire (see Table of the Eastern Bishops, p. 279 sq.), Caesarea became the metropolitan see of the Bishop of Ælia was merely one of its suffragans.

The bishops from the siege under Hadrian (135) to Constantine (312) were: Mark (the first Gentile bishop, d. 156); Cassian; Publius; Maximus; Julian; Eutyches; Symmachus (ibid, 302); Julius (ibid, 314); Vincent (ibid, 324); Capito (d. 325); Maximus II; Antinianus III; Julianus; Valens; Dolichianus (d. 385); Narcissus (Eus., Hist. Eccl., V, xii). Narcissus was a man famous for his virtues and miracles, but hated by certain vicious people in the city who feared his severity. They accused him of various crimes and he, for the sake of peace, retired to an unknown solitude (Eus., Hist. Eccl., VI, x). The neighbouring bishops, hearing nothing more of him, proceeded to elect and consecrate Dios as his successor. Dios was succeeded by Germanon and Gordios. Then suddenly Narcissus reappeared, an old man of 110 years. The other bishops persuaded him to resume the episcopate. To try to do anything but pray for his flock, he made a Cappadocian bishop, Alexander, who came on a pilgrimage to Jerusalem, his coadjutor. Alexander thus became a practically diocesan bishop even before the death of Narcissus in 121. Alexander was a friend of Origens and founded a library that Eusebius used for his "History" (VI, x). He died in prison in the Decian persecution (250). Then followed Mabianes or Maebianes (d. 266); Hymenaeus (d. 298); Zabdas; Herman (d. 311); Macarius (d. 333).

(2) Constantine and the Holy Places (318–337).—During the episcopate of Macarius a great change came to the whole empire that incidentally affected the See of Jerusalem profoundly. The Christian Faith was acknowledged as a religio licita and the Church became a recognized society (Edict of Milan, Jan., 313). At Constantine’s death (337) Christianity had become the religion of the Court and Government. As a natural result the Faith spread very rapidly everywhere. The same generation that had seen Diocletian’s persecution now saw Christianity the dominant religion and the old paganism gradually reduced to country villages and out-of-the-way places. Then began the process of organization among Christians; churches were built everywhere. A further result of the freedom and the dominance of Christianity was a revival of enthusiasm for the holy places where the new religion had been born, where the events that every one now read about or heard of in sermons and taken place. Already in the fourth century there began those great waves of pilgrimage to the Holy Land that have gone on ever since. It was in the fourth century that the Bordeaux pilgrim and Euthera made their famous journey thither (Peregrinatio Silvae). St. Jerome (d. 420) says that (there is the name of a Jewish Christian) was allowed under pain of death in every part of the world, even from distant Brittan (Ep. xliv ad Paulam; lxxiv ad Oceannem). A great number of monks from Egypt and Libya also came and established themselves in the desert by the Jordan. This led to an increased respect for the bishop who ruled over the very places where Christ had lived and died. These pilgrims on their arrival found themselves under his jurisdiction; they took part in the services of his church and eagerly watched the rites that were carried out at the Mount of Olives, the Cenaculum, and the Holy Sepulchre. Euthera’s careful account of the services in the church of the Eastern church is here given: "Easter tide is typical of this interest. When the pilgrims returned home they remembered and told their friends about the services they had seen in the most sacred places of Christendom; and they began to
imitate them in their own churches. Thus a great number of our well-known ceremonies (the Palm Sunday procession, later the Stations of the Cross, etc.) were performed within the wall rites of a certain temple. All this could not fail to bring about an advancement of rank for the local bishop. From the freedom of the Church the development was inevitable that changed the Bishop of Jaffa, mere suffragan of Cesarea, into the great "Patriarch of the Holy City," the chief of the Jews within their Promised Land. Meanwhile another result of these pilgrimages was the discovery of the Holy Places. Naturally the pilgrims when they arrived wanted to see the actual spots where the events they had read of in the Gospels had happened. Naturally too each such place when it was known or, more properly, became a shrine with a church built over it. Of these shrines the most famous are those built by Constantine and his mother St. Helena. St. Helena in her eighthieth year (326-327) came on a pilgrimage and caused churches to be built at Bethlehem, and on the Mount of Olives. Constantine built the famous church of the Holy Sepulchre (Anastasis). Eusebius (Vita Constantin, III, xxvi) says that the place of Calvary in about 326 was covered with dirt and rubbish; over it was a temple of Venus. Emperor Hadrian had built a great terrace round the place enclosed in a wall, on the site had placed a grove of the Chaldean Venus (St. Jerome, Ep. Lxxv, 40). When St. Helena came and was shown the place she determined to restore it as a Christian shrine. By order of the emperor all the soldiers of the garrison were employed to clear away the temple, terrace, and grove. Underneath they found Golgotha and the tomb of our Lord. Constantine wrote to Bishop Macarius saying: "I have nothing more at heart than to adorn with due splendour that sacred place," etc. (Vita Const., III, xxx). Two great buildings were erected near each other on this spot. To the west the rock containing the tomb was carved away, leaving it as a little shrine or chapel standing above ground. Over it was built a round church covered by a dome. This is the Anastasis, which still has the form of a rotunda with a dome, containing the Holy Sepulchre in the middle. Quite near, to the east, was a great basilica with an apse towards the Anastasis, a long nave, and four aisles. The aisles were galleries, the whole was covered by a gable roof. Around the apse were twelve columns crowned with silver, at the east were a narthex, three doors, and a colonnade in front of the entrance. This basilica was the Martyrium; it covered the ground immediately over part of the ground over St. Helena's chapel. Etheria speaks of it as "the great church which is called the Martyrium" (Per. Silv., ed. cit., p. 38). Underneath it was the crypt of the Invention of the Cross. The Mount of Calvary was not enclosed in the basilica. It stood just at the southeast side of the apse. Etheria always distinguishes between the three shrines, Anastasis, Crux, Martyrium. The place of the Cross (Calvary) was in her time open to the sky and surrounded by a silver balustrade (op. cit., p. 43). People went up to it by steps (Eus., "Vita Const.", III, xxii-x); Mommsen, "Die h. Grabskirche zu Jerusalem in ihrem ursprünglichen Zustande" (Leipzig, 1888). Later in the fifth century St. Melania the younger (439), a Roman lady who came with her husband Pinianus to Jerusalem where they both entered religious houses (see Nilles, "Kal. Man." Dec. 31, pp. 372-373), built a small chapel over the place of the tomb. The new buildings were destroyed by the Persians in 614.

It is not possible to enter here upon the endless discussion that still takes place as to the authenticity of this shrine. The first question that occurs is as to the place of the wall of Jerusalem in Christ's time. It is certain that He was crucified outside the city wall. No executions took place within the city (Matt. xxvii, 33; John xix, 17; Hebr. xii, 12, etc.) If then it could be shown that the traditional site was within the wall this would be decisive proof. It would be proved to be false. It is, however, quite certain that all attempts to prove this have failed. On the contrary, Conder found other contemporary tombs near the traditional Holy Sepulchre, which show that it was without the city, since Jews never died within the walls. Supposing that the possibility, we have this chain of evidence: if Hadrian really built his temple of Venus purposely on the site, the authenticity is proved. Constantine's basilica stood where that temple was; that the present church stands on the place of Constantine's basilica is not doubted by any one. A number of writers (as Eusebius, op. cit.) of the fourth century describe the temple as built on the site of Calvary in order to put a stop to its veneration by Christians, just as the temple of Jupiter was built purposely where the Jewish Temple had been. We have seen that an unchanging Christian community lived at Jerusalem down to Hadrian's time (Bar-Kochba's revolt). It would be strange if they had not remembered the site of the Crucifixion and had not reverenced it. The analogy of Hadrian's profanation of the Temple leaves no difficulty as to a similar deliberate profanation in Christian times. Ferguson who thought that the cave under the Qubbet-es-Sachra, on the site of the Temple, was the Holy Sepulchre of Constantine's time, and Conder and Gordon's site outside the Damascus gate (Conder, "The City of Jerusalem", London, 1909, pp. 51-58) hardly deserve mention. With the finding of the Holy Sepulchre and the building of the Anastasis and Martyrium is connected the story of the Invention of the Holy Cross. It is told by Rufinus (Hist. Eccl. X, viii, P. L. XXI, 477—about the year 402), Paulinus of Nola (Ep. xvi, v; P. L. LXI, 329; a. d. 403) and others. When the soldiers were removing the old balustrade and digging out the Holy Sepulchre they found to the east of the tomb three crosses with the inscription separated from them. Bishop Macarius discovered which was our Lord's Cross by applying each in turn to a sick woman. The third Cross healed her miraculously (see the life of Macarius). St. Paulinus (op. cit.) adds that a dead man was raised to life by the Cross of Christ.

The fame of the great shrines, Anastasis and Martyrium, then began to eclipse that of the Cenaculum. From this time the Bishop of Jerusalem celebrated the Holy Thursday mass in the Anastasis in the presence of the Holy Sepulchre. Constantine had a new "Church of the Apostles" built over the Cenaculum. Other shrines that go back at least to his time are the place of the Ascension on the top of the Mount of Olives, where he built a church, and the still extant magnificent basilica at Bethlehem.

(3) The Patriarchate (385-451).—From the time of Constantine then begins the advancement of the See of Jerusalem. The first General Council (Nicaea I, 325) meant to recognize the unique dignity of the Holy City without disturbing its canonical dependence on the metropolis, Cesarea. So the seventh canon declares: "Since custom and ancient tradition have obtained that the bishop in Αἰλία be honoured, let him have the succession of honour (ἐκτὸς τῆς δακολούθου τῆς τιμής) saving however the domestic right of the metropolis (ἡ μητροπολίτικη τῆς μητροπολίτου τῆς τιμής). The other patriarchs, including St. Theodoret, Bishop of Hierapolis, follow this decision with the following comments: "They are the "Decretum" of Gratian, dist. 65, v. 7. The "succession of honour" means a special place of honour, an honorary precedence immediately after the Patriarchs of Rome, Alexandria, Antioch; but this is not to interfere with the metropolitan rights of Cesarea in Palestine. The situation of a suffragan
bishop who had precedence over his metropolitan was an anomalous one that obviously could not last. The succession from Maximus II (349); St Cyril of Jerusalem (350-358); (Euthychius intruded 357-359; Irenæus intruded 360-361; Hilary intruded 367-378); John II (386-417); Praylios (417-421); Juvenal (421-458). Already in the time of St Cyril difficulties arose about his relation to his metropolitan. While he was defending the Faith against the Arians, Acacius of Cesarea, an extreme Arian, summoned a Synod (358) to try Cyril for various offences, of which the first was that he had disobeyed or behaved with insubordination towards Acacius, his superior. It is difficult to be sure exactly what the accusation was. Sosomen (IV, xxv) says it was doing and disobserving the laws; Theodoret says it was only about his quite lawful claim to precedence. The case shows how difficult the position was. Cyril refused to attend the synod and was deposed in his absence. His refusal again opens a question as to his position. Did he refuse merely because he knew that Acacius was a determined Arian and would certainly condemn him, or was it because he thought that his exceptional "succession of honour" exempted him from the jurisdiction of any but a patriarchal synod? The three usurpers, Eutychius, Irenæus, Hilary, were invited into his see by their party during his three exiles.

It was Juvenal of Jerusalem (420-458) who at last succeeded in changing the anomalous position of his see into a real patriarchate. From the beginning of his reign he assumed an attitude that was quite incompatible with his canonical position as suffragan of Cesarea. About the year 425 a certain tribe of Arabs was converted to Christianity. These people set up their camp in the neighbourhood of Jerusalem. Juvenal then proceeded to found a bishopric for them. He ordained one Peter as "Bishop of the Camp" (patriarch de la bande). This Peter (apparently the sheikh of the tribe) signed at Ephesus in 431 with that title. Juvenal's action may perhaps be explained as merely the ordination of an Arabic-speaking coadjutor for these people whose language he himself did not know; but Peter's title and presence at Ephesus certainly show that he could be a genuine bishop. Juvenal had no sort of right to set up a new diocese nor to ordain a suffragan to his own see. The "See of the Parembols" disappeared again in the sixth century (Vaille "Le Monastère de S. Théoctiste et l'évêché des Paremboles" in "Bulletin de l'Institut de Palestine" 1909). From the Acts of Ephesus it appears that Juvenal had ordained other bishops in Palestine and Arabia. A number of bishops of the Antiochen patriarchate wrote a letter to the Emperor Theodosius II in which they appear to have some doubts as to the regularity of their position since, as they say, they have "been ordained formerly by the most pious Juvenal" (Mansi, IV, 1402). Now the right of ordaining a bishop always meant in the East jurisdiction over him. We see an instance of this in the Acts of the Council. Saidas, Bishop of Phaino in Palestine, describes Juvenal as "our bishop" (à notre évêque = our metropolitan, apparently. See Vaille: "L'érection du patriarchat de Jérusalem" in "Rev. de l'Or. chrét.", IV, 44 sq.). Clearly then even before the council Juvenal had been making tentative efforts to assume at least metropolitan rights. At the council he made a stroke to get his see recognized not merely as independent of and equal to Cesarea, but superior to the great Patriarchate of Antioch. Antioch, he pretended, must submit to the see that canonically (in spite of its honorary position) was the suffragan of Antioch's suffragan. His attempt failed altogether. He might perhaps have shaken off the authority of Cesarea; but this was too startling. Nevertheless the opportunity was a splendid one for him. We see Juvenal's claim to precedence for Antioch, he was the second bishop present. Celestine of Rome was represented by his legates; Cyril of Alexandria was president, but was already having trouble with Candidian the Imperial Commissioner; John of Antioch arrived late and then set up a rival council in favour of the heretics. Nestorius of Constantinople was the accused. Juvenal's own metropolitan (of Cesarea) was not present. The schismatical attitude of John of Antioch especially gave Juvenal his chance. Surely Cyril's council would not support John. Juvenal then, under colour of supporting Cyril and the pope, tried to get the council to acknowledge no less than the dethroned and deposed bishop. In a speech he explained to the Fathers that John of Antioch ought to have appeared at the council to give the oecumenical synod an explanation of what had happened (his late arrival and the anti-council he was setting up) and to show obedience and reverence to the Apostolic See of Rome and the Holy Church of God at Jerusalem. "For it was especially the custom according to Apostolic order and tradition that the See of Antioch be corrected and judged by that of Jerusalem. Instead of that John with his usual insolence had despised the council" (Mansi, IV, 432) interred into his see by their party during his three exiles.

When the Monophysite heresy began Juvenal was at first on the side of the heretics. He was present at the Robber Synod of 449, on the side of Dioscorus, and joined in the deposition of Flavian of Constantinople, and in the condemnation of Simeon of Jerusalem. He then converted to the orthodox and was in charge of getting any advantage from Chalcedon (451). Yet he was clever enough to turn even this position to his advantage. Chalcedon at last gave him a great part of what he wanted. At first he appeared at the council with the other Monophysites as an accuser, but then, when a controversy arose about the Chalcedonian formula, he threw off his former friends, turned completely round and signed Pope Leo's dogmatic letter to Flavian. The orthodox Fathers were delighted. In general council the titular rank given to Jerusalem by Nicea would naturally make itself felt. The adherence of so venerable a see was received with delight, the illustrious convert deserved some reward. Juvenal then explained that he had at last come to a friendly understanding with Maximus of Antioch, by which the long dispute between their sees should be ended. Antioch was of course to keep her precedence over Jerusalem and the greater part of her patriarchate. But she would sacrifice a small territory, Palestine in the strict sense (the three Roman provinces so called), and apparently Arabia, to make up a little patriarchate for Jerusalem. The emperor (Theodosius II) had already interfered in the quarrel and had given his consent. But he also gave his consent to Rome from Antioch for the benefit of Jerusalem. So this arrangement appeared as a sort of compromise. The council in the seventh and eighth sessions (Hefele: "Conciliengeisch." II, 477 and 562) accepted Juvenal's proposal. (Maximus's correspondence with Leo the Great shows that he was still not quite satisfied) and made Jerusalem a patriarchate with this small
territory. From this time then Jerusalem becomes a patriarchal see, the last (fifth) in order and the smallest. So was the number, afterwards so sacred, of five patriarchates established. The Quinisext Council (692) admits this order. It enumerates the patriarchs of Rome, Constantinople, Alexandria, Antioch and adds: “After these be the city of Jerusalem” (can. xxviii). Such too is the order proclaimed by the Fourth Council of Constantinople (869) in Canon xxi and incorporated in our canon law (C. I. C. dist. 22, c. 7). Since Chalcedon no one has disputed the place of Jerusalem in the hierarchy of patriarchates. But it will be noticed how late its rank is given in, how late the conduct of the bishop who obtained it. Like the other comparatively modern Patriarchate of Constantinople (made finally by the same council, can. xxviii) it represents a later concession that upset the much older, more venerable ideal of three patriarchates only—Rome, Alexandria, Antioch. Jerusalem owes its place not to St. James, the brother of the Lord, but to the austere and unscrupulous Juvenal. Nothing, then, could show a greater ignorance of the whole situation than the naive proposal of Anglicans at various times (e.g. the Non-Jurors in their letter to the patriarchs, 1730) to give Jerusalem the title of “mother of all Churches” as the first see of all.

The frontiers of this new patriarchate, as established by Chalcedon, are to the north the Lebanon, to the west the Mediterranean, to the south Sinai (Mount Sinai was certainly originally included in its boundaries), to the east Arabia and the desert. Under the patriarch were these metropolitans: (1) Cessarea in Palestine (who now had to obey her former subject), Metropolis of Palestina I, with twenty-nine suffragans; (2) Scythopolis (in the Vulgate Bethan, Jos. xvii, 11; Judges i, 27; now Beer, seven hours south of Beersheba); (3) Samaria, with fourteen suffragans; (4) Petra (Sela) in the Hebrew, II Kings, xiv, 7; Is. xvi, 1 in the Wadi Mousa, half-way between the Dead Sea and the Red Sea), Metropolis of Palestina III with thirteen suffragans.

(4) From Juvenal to the Saracen Conquest (639-686).

—The patriarchs of this time were: Theodosius (Monophysite usurper, 452); Anastasius (458-478); Martyrius (478-486); Salustius (486-494); Elias (494-513; see Elias of Jerusalem); John III (513-524); Peter (524-544); Macarius (544-574); Elias (574-593); Theophanes (593-601); Maximus (601-609); Zacharias (609-631); Maximus (631-643); Sophronius (634-638 or 644). An important event for the city was the residence there of the Empress Eudocia, wife of Theodosius II. She arrived first in 638 and then settled at Jerusalem from 444 to her death about the year 460 (see Eudocia). She spent this last part of her life in ardent devotion at the Holy Places, in beautifying the city and building churches. She rebuilt the walls along the south as so to include the Cenaculum within the city. On the north she built the famous protection Chapel of her martyrdom (now the famous Constantinian convent and Ecce biblicum). Justinian I (527-565) also added to the beauty of the city many splendid buildings. Of these the most famous was a great basilica dedicated to the Blessed Virgin with a beautiful mosaic of her. His own basilica, the Patriarchal Church of the city, has but now completely disappeared. He also built another great church of the Blessed Virgin at the southern end of the old Temple area (now the Al-aqṣā Mosque). The famous mosaic maps of Jerusalem discovered lately at Madaba (Gutta-Persimone’s ‘Die Mosaiken von Madaba’, 1906) give an idea of the state of the city in Justinian’s time. During this period the See of Jerusalem, like those of Alexandria and Anti-och, was troubled continually by the Monophysite schism. Under Juvenal the great crowd of monks who had settled in Palestine broke out into a regular revolution against the government and against the patriarch, whose change of front at Chalcedon they bitterly resented. They set up one of their own number, Theodosius, as anti-patriarch. For a short time (in 452) Juvenal had to give way to this person. But also in the other sees of the patriarchate orthodox bishops were expelled and Monophysites (such as Peter the Iberian at Majuma-Gaza) were set up in their place. The Empress Eudocia was at first an ardent Monophysite and helped that party nearly all the time she was in the city. Finally she was exiled by Consti

stantinople and implored the help of the emperor (Marcian, 450-457). He returned with a body of soldiers who reinstituted him, killed a great number of the monks, and finally took Theodosius, who had fled, prisoner. Theodosius was then kept in prison at Con
stantinople almost till his death. The disturbance was not finally put down till 453. Eventually the orthodox Abbot Euthymius converted Eudocia, who died in the communion of the Church (c. 460).

The further Monophysite disturbances affected Jerusalem, of course, too. Martyrius accepted the title of emperor. He excommunicated the Patriarch in Jerusalem, Peter, and sent Marcellus from Antioch to depose him. He died in 461, his successor, Peter, a synod in September, 530, in which he proclaimed his adherence to Chalcedon and Orthodoxy by agreeing to the deposition of the Monophysite Anthemius of Constantinople (deposed in that year; the Acts of this synod are in Mansi, VII, 1163-1176). From this time the patriarchs seem to have been all orthodox; though there were Monophysites in the city. Peter II eventually set up Monophysite bishops in communion with the (Jacobite) patriarchs of Antioch of the line of Sergius of Tella (since 539) even at Jerusalem itself. The first of these Jacobite bishops (they did not take the title patriarch) of Jerusalem was Severus in 597. From him descends the present Jacobite line. In the year 614 a great calamity befell the city: it was taken by the Persians. In 622 the Roman Emperor Mauire had been barbarously murdered by order of Phocas (902-910), who usurped his place. Chosroes (Khuṣru) II, King of Persia, had taken a special interest in the Holy Land. He recalled Mauire, who had even sent an army to restore him (591). The Persian king, furious at the murder of his friend and benefactor, then declared war against Phocas and invaded Syria (604). The war with Persia continued under Phocas's successor, Heraclius Conqueror (610-642). In 611 the Persians took Jerusalem. There were Jews and Nestorians, and the Cessarea in Cappadocia and Damascus. In 614 they stormed Jerusalem. Chosroes's son-in-law Shahrbarz besieged the city; in his camp were 26,000 Jews eager to destroy Christian sovereignty in their holy city. It is said that no less than 90,000 Christians died in Jerusalem in the three years of the Persian occupation. Jerusalem was taken captive to Persia. The Anastasius, Martyrius and other Christian sanctuaries were burned or razed to the ground. St. Helena's great
relic of the Holy Cross was taken off to Persia in triumph. The Jews as a reward for their help were allowed to do as they liked in the city. But their triumph did not last long. In 622 Heraclius marched against the Persians. In 626 he invaded Persia; Chosroes fled, was deposed, and murdered in 628 by his son Siroes. In the same year the Persians had to submit to a peace which deprived them of all their conquests. The Persian soldiers evacuated the cities of Syria and Egypt which they had conquered; the relic of the Cross was given back. In 629 Heraclius himself came to Jerusalem to venerate the Cross. This is the origin of the Feast of the Exaltation of the Holy Cross (14 September; see the lessons of the second nocturn on that day). The emperor as a punishment for the treason of the Jews, issued a bold law of Hadrian forbidding them to enter the city.

After the Persian assault on the town, even before the Romans reconquered it, Modestus, Abbot of the monastery of St. Theodosius in the desert to the south, acting apparently as vicar for the captured patriarch, had already begun to restore the shrines. It was impossible under Persian rule to restore the splendour of Constantine's great Martyrion. Modestus therefore had to content with a more modest group of buildings at the Holy Sepulchre. He restored the round Anastasis, much as it had been before, with a coenosis and the conical cupola. The custom of orientating churches had now become universal; so a new apse was made at the east (where the entrance had been) for the altar. Doors were pierced in the round wall north and south of this apse. The Anastasis, formerly a shrine subsidiary to the great basilica, now became the chief building. Modestus restored the little chapel of the Crucifixion, originally built by Melania, but did not attempt to rebuild any part of the basilica (Martyrion) except the crypt of the Invention of the Holy Cross. The whole esplanade around these buildings was enclosed by a wall and so made into a great atrium. During the next centuries a great number of chapels were built here to contain various relics of the Passion. Heraclius when he reconquered the city rebuilt the walls and restored many more of the ruined shrines. From his time to the Arab conquest Christian Jerusalem enjoyed a short period of peace under the Byzantine emperor St. Sophronius (634–638 or 644), who saw that conquest, was one of the more famous patriarchs of Jerusalem. In his time Monothelitism had arisen as one more of the many hopeless attempts to conciliate the Monophysites. Sophronius distinguished himself as an opponent of this new heresy. He was born in Damascus and had been a monk of the monastery of St. Theodosius. In defence of the Faith against the Monothelitians he had travelled through Syria and Egypt and had visited Constantinople. As patriarch in 634 he wrote a synodal letter in defence of the two wills of Christ that is one of the most important documents of the controversy (Mansi XI, 461 sq.). In 636 he had to give up his city to the Moslems.

(5) From the Arab Conquest to the First Crusade (686–1099).—The Moslems in the first seal of their new faith proceeded to invade Syria. Caliph Abu-bakr (632–634) gave the command of the army to Abu-'Ubaidah, one of the original Ashab (companions of Mohammed) in his flight (622). They first took Bosra. In July, 633, they defeated Heraclius's army at Ajnada near Emesa; in 634 they stormed Damascus and again defeated the Romans at Yarmuk. Emesa followed as the third city to be taken. The Moslem Caliph Omar (634–644) as to whether they should march on Jerusalem or Caesarea. By 'Ali's advice they received orders to take the Holy City. First they sent Mo'aawiya Ibn-Abd-Sufyän with 5000 Arabs to surprise the city; soon afterwards it was

inveted by the whole army of Abu-'Ubaidah. It was defended by a large force composed of refugees from all parts of Syria, soldiers who had escaped from Yarmuk and a strong garrison. For four months the siege continued; the Caliph may have kept their churches and sanctuaries, no one was to be forced to accept Islam. Sophronius further insisted that these terms should be ratified by the caliph in person. Omar, then at Medina, agreed to these terms and came with a single camel to the walls of Jerusalem. He signed the capitulation, then entered the city with Sophronius "and courteously discoursed with the patriarch concerning its religious antiquities" (Gibbon, ci, ed. Bury, London, 1898, V, 436). It is said that when the hour for his prayer came he was in the Anastasis, but refused to say it there, lest in future times the Moslems should make that an excuse for breaking the treaty and confiscating the church. The Mosque of Omar (Jami'Sa'dina' Omar), opposite the doors of the Anastasis, with the tall minaret, is shown as the place to which he retired for his prayer. Under the Moslems the Christian population of Jerusalem in the first period enjoyed toleration and was even allowed to attend ceremonies at the Church of the Sepulchre. It appears that the Christians had left the place where the Temple had once stood untouched. Omar visited it and found it filled up with refuse. In his time a large square building with no architectural pretension was put up to shelter the True Believers who wished to pray. In 691 'Abd-al-malik replaced this by the exquisite "Dome of the Rock" (Qubbat-es-Sachra), built by Byzantine architects, that still stands in the middle of the Temple area. This is the building long known as the Mosque of Omar, falsely attributed to him. It is an eight-sided building crowned with a dome, covered outside with marble and inside with many-coloured tiles, certainly one of the most splendid monuments of architecture in the world. It stands over a great flat rock, probably the place of the old altar of holocausts. 'Abdallah al-Imán al-Mal'mun (Caliph, 813–33) restored it. The dome fell in an earthquake and was rebuilt in 1022. The Crusaders (who turned it into a church) thought this was the original Jewish Temple; hence the many round temple-churches built in imitation of it. Raphaeil in his "Espousal of the Blessed Virgin" has painted it, as well as he could from descriptions, in the 12th century and the Temple area became to Moslems the "illustrious Sanctuary" (Haram-asb-sherif) and was gradually covered with colonnades, minbars (pulpitas), and smaller domes. At the south end Justinian's basilica became the "most remote Mosque" (Al-Masjid-al-aqsa, Sura
The Emperor Constantine IX (1042–1054) persuaded the Caliph Al-Mustansir bi-Habah (1036–1094) to allow the rebuilding on condition of releasing 3,000 Moslem prisoners and of allowing prayer for Al-Mustansir in the empty halls of the ancient churches of Egypt in the Middle Ages," London, 1901, p. 136). Byzantine architects were sent to Jerusalem. The rebuilding was finished in 1048. The work of Modestus was restored with a few additions, hurriedly and not well (Conder, op. cit., p. 282). The Holy Sepulchre remained in the care of the Latin Patriarch of Jerusalem until the change in the temporal status of the church in 1661, when the Turks became masters of Palestine. From this time the condition of the Christians became unbearable. The Turks forbade Christian services, devastated churches, murdered pilgrims. It was the news of these outrages that provoked the Council of Clermont in 1145 and brought the Christian princes in the patriarchal succession after Sophronius was: (The see vacant from Sophronius's death to 705. Meanwhile Stephen of Dora acted as papal vicar for Palestine); John V (703–735); John VI (735–780, possibly the same person as John V); Theodore (780–c. 770); and Isidore (770–800, also known as Isidore II) (meanwhile for a time Theodore occupied the see); George of Sergius (800–807); Thomas (807–821); Basil (821–842); Sergius (842–c. 859); Solomon (c. 859–c. 864); Theodosius (c. 864–c. 879); Elias III (c. 879–907); Sergius II (907–911); Leo or Leontius (911–928); Anastasius or Athanassius; Nicholas; Christopher of Christodorus (d. 937); Agatho; John VII (murdered 969); Christopher II; Thomas II; Joseph II; Alexander; Agapius (986–97); Jeremias or Orestes (banished and murdered c. 1012); Theophilius; Arsenius (c. 1024); Jordanus; Nicephorus; Sophronius II; Mark II; Euthymius II (d. 1099).

JERUSALEM 361

JERUSALEM XVII, 1). The description of Arculf, a Frankish bishop who went on a pilgrimage to the Holy Land in the seventh century, written down from his account by Adamnan, monk of Iona, c. 744 (d. 764) tells us that the site was not an unpleasant picture of the conditions of Christians in Palestine in the first period of Moslem rule. The caliphs of Damascus (661–750) were enlightened and tolerant princes, on quite good terms with their Christian subjects. Many Christians (e. g. St John Damascius, III, i, 750) declare important ones at their court. The Abbasids caliphs at Bagdad (753–1242), as long as they ruled Syria, were also just and tolerant to the Christians. The famous Harūn al-As'afar (Haroun al-Raschid, 786–809) sent the keys of the Holy Sepulchre to Charles the Great, who built a hospice for Latin pilgrims near the shrine. Revolutions and rival dynasties that tore the union of Islam to pieces then made Syria the battle-ground of the Moslem world; the Christians under new masters began to suffer the oppression that eventually led to the Crusades.

The sect of the Karāmīta (Carmathians) under Abu-Sa'id al-Jamā'ī arose in the neighbourhood of Kūfa. They defeated the troops of the Caliph Al-Mutazid (Ahmed Abu'l Abbas), entered Syria (903–904) and devastated the province. They seized Mecca and prevented the pilgrims from going there from the Levant (772); Elia IV was murdered (928). During this time Moslems again began to go in pilgrimage to Jerusalem instead of to the Hijāz. The religious importance that the city thus gained for them was the beginning of intolerance towards the Christians there. It is the invariable result in Islam; the more sacred a place is to Moslems the less they are disposed to tolerate unbelievers in it. The Fatimid dynasty now arose in Africa (903). At the end of 987 they got possession of Egypt. Meanwhile a frontier war with the empire went on always. The Romans took advantage of the dismemberment of the Moslem world to invade their former provinces. Already in 901, in the reign of Leo VI (886–911), the Roman armies had advanced into Syria as far as Aleppo and had carried off a great number of prisoners. In 962 Nicephorus Phocas with 100,000 men again came as far as Aleppo and devastated the country. In 993 the Romans reconquered Antioch. It was inevitable that the Christians of Jerusalem should try to help their fellow-countrymen to reconquer the land that had been Roman and Christian; inevitable, too, that the Moslems should punish such attempts as high treason. In 999 the patriarch of Jerusalem was put to death and correspondence with the Romans; many other Christians suffered the same fate, and a number of churches were destroyed. Meanwhile the first wave of the great Turkish race (the Seljuks) was pouring over the empire's empire. In 1034 a Turk, Ishaq, revolted and his successors held Palestine for a few years. In 969 Mu'mezz-El-Din-Allah, the fourth Fatimid Caliph in Egypt, conquered Jerusalem. A Moslem pilgrim, Al-Muqaddasi, wrote a description of the city, especially of the Haram ash-sharif, at this time (quoted by Le Strange, Palestine under the Moslems, by SMITH, Jerusalem, 2 vols. (London, 1907)—the most exhaustive work on the history and topography of the city; CONDER, The City of Jerusalem (London, 1906); BERNARD AND BALMER, Jerusalem (London, 1906); WILSON, Jerusalem, the Holy City (London, 1888); WARRICK AND CONDER, Survey of Western Palestine, Jerusalem (London, 1883); WECHT AND BERKOWITZ, Palestine Exploration Fund (1869–1892), index; SEIFER, Jerusalem und das heilige Land (1873); NINCH, Auf biblischen Pfaden (1885); SMITH, Tales of the Ancient City, by SCHICK, ZAHN, Die dorivorit S. ADRIEN FORTEESCUE.

III. The Latin Kingdom of Jerusalem was founded, as a result of the First Crusade, in 1099. Destroyed a first time by Saladin in 1187, it was re-established around Saint-Jean d’Acre and maintained until the capture of that city in 1291. During these two centuries it was for Western Europe a genuine centre of colonization. As the common property of Christendom, it retained its international character to the end, through the French, English, and German crusades, as well as through the feudal lords and the government officials, and the Italians acquired the economic preponderance in the cities.

(1) Kings and Succession to the Throne.—Godfrey of Bouillon, elected Lord of Jerusalem, 22 July, 1099, did not assume the royal crown and died 18 July,
1100, having strengthened the new conquest by his victory over the Egyptians at Ascalon (12 August, 1099). After his death the barons invited his brother Baldwin of Flanders to assume the lordship of Jerusalem. Baldwin accepted and had himself crowned King of Jerusalem by the Patriarch Daimbert in the basilica of Bethlehem (25 December, 1100). Baldwin I (1100–1118) was the real founder of the kingdom. With the aid of new crusaders, and more especially the help afforded by the Genoese, Frankish and Venetian fleets, he took possession of the principal cities on the coast of Syria. Besides, the Countship of Tripoli and the Principality of Edessa became fiefs of the new kingdom, but the Principality of Antioch preserved its independence. Baldwin I attacked Egypt, then a capital of Egypt, but died at El-Arish (1118) in the course of this expedition. His cousin, Baldwin du Bourg, Count of Edessa, was chosen by the barons to succeed him. Baldwin II (1118–1131), who had followed Godfrey of Bouillon to the crusade, was a valiant knight and, in 1124, took possession of Tyre. In 1129 he married his daughter Mésiende to Fulk, Count of Anjou, who was the father of Geoffrey Plantagenet and already sixty years of age. Fulk (1131–1144) succeeded his father-in-law. Under his son, Baldwin III (1144–1162), who married Theodora Comnena, the kingdom attained its greatest dimensions after the capture of Ascalon (1153), but the Principality of Edessa, wrested from it in 1154, was recovered by Amaury I (1154–1174), brother of Baldwin III, succeeded to the throne on the latter's death, being only twenty-seven years of age. He was one of Jerusalem's most brilliant sovereigns, and thought to profit by the anarchy that prevailed in Egypt in order to acquire possession of that country, reaching Cairo twice (1167 and 1168) and, for the moment, having Egypt under his protectorate. But the formation of Saladin's power soon placed the kingdom in peril. Amaury died prematurely in 1174, leaving as his successor his son Baldwin IV (1174–1185), a very gifted young man, who had been the pupil of William of Tyre, but who was attacked with leprosy and rendered incapable of taking charge of affairs. He at first reigned under the guardianship of Milon de Planci and, assisted by Renaud de Châtillon, inflicted a defeat upon Saladin at Ramleh (1177). By 1182 the dreadful disease had worsened till that the unfortunate Baldwin "the Leprous" ("le Mésel") had the son of his sister Sibylia by the Count of Montferrat crowned under the name of Baldwin V. He also had Sibylia take as her second husband Guy of Lusignan, who had put himself at Baldwin's service and had been appointed governor of the kingdom. However, Guy seemed incompetent, the barons took the regency away from him and confided it to Raymond, Count of Tripoli. Baldwin IV died in 1185, at the age of twenty-five, without having married, and left the kingdom a prey to discord and exposed to the attacks of Saladin. The young Baldwin V, his nephew, died in 1186, supposedly of poisoning.

It was largely due to the instrumentality of Renaud de Châtillon that the barons elected Guy of Lusignan (1186–1192) and Sibylia sovereigns of Jerusalem. Incapable of defending his kingdom against Saladin, Guy was made prisoner at the battle of Tibérias (4 July, 1187), which was followed by the capture of Jerusalem (2 October), and purchased his liberty by yielding Ascalon to Saladin. The Kingdom of Jerusalem was destroyed. Then took place the Crusade of Saint-Jean d'Acre, of which Guy commenced the same. His wife Isabella and Sibylia died in 1187. Guy and Conrad of Montferrat, who had married Isabella, Sibylia's sister, disputed the title of king with Guy of Lusignan, and this rivalry lasted throughout the siege of Saint-Jean d'Acre, which city capitulated 13 July, 1191. On 28 July, Richard Cœur de Lion, King of England, imposed his arbitration upon the two rivals and decided that Guy should be king during his lifetime and have Conrad for his successor, the latter to receive Beirut, Tyre, and Sidon as guarantees; but on 29 April, 1192, Conrad was assassinated by emissaries of the "Old Man of the Desert." On his side, the renounced the title of king (May, 1192) and purchased the Island of Cyprus from the Templars. He died in 1194 and his widow married Henry I, Count of Champagne (1194–1197), who was elected king, but in 1197 Henry died from an accident and Isabella married a fourth time, to Hugh I of Lusignan (1197–1205), brother of Guy and already King of Cyprus. The turning of the course of the crusade to Constantinople obliged him to conclude a truce with the Mussulmans. Amaury died in 1205, leaving an only daughter Mésiende who married Bohemond IV, Prince of Antioch. However, it was 1232, death of Isabella and Conrad of Montferrat, that the barons gave the preference, and they requested the King of France to provide her with a husband. Philip Augustus accordingly selected John of Brienne (1210–1225), who hesitated for a long time before accepting and did not arrive in Palestine until 1216, having first been detained from the Pope a ransom. He directed the Crusade of Egypt in 1218 and, after his defeat, came to the West to solicit help. Hermann von Sales, the Grand Master of the Teutonic Knights, advised him to give his only daughter Isabella (Yolande) in marriage to the Emperor Frederick of Hohenstaufen. In 1223, Henry of Flanders proposed to seek the young princess at Saint-Jean d'Acre, and on 9 November she married Frederick II at Brindisi. Immediately after the ceremony the emperor declared that his father-in-law must renounce the title of King of Jerusalem, and he himself adopted it in all his acts. After the death of Isabella, by whom he was married Conrad, Frederick II attempted to take possession of his kingdom and to fulfil his crusader's vow, the execution of which he had so long deferred, and landed at Saint-Jean d'Acre (September, 1228), excommunicated by the pope and in disfavour with his new subjects. By a treaty concluded with the Sultan of Egypt, Frederick regained Jerusalem, and on 18 March, 1229, without any religious ceremony whatever, assumed the royal crown in the church of the Holy Sepulchre. Having confided the regency to Baldwin d'Ibelin, Lord of Sidon, he returned to Europe. To strengthen his power in the East, he married his daughter Jean d'Acre Richard Filangi, Marshal of the Empire, whom he named baillie (guardian) of the kingdom. The new regent combated the influence of the Ibelins and tried to secure possession of the Island of Cyprus, but was conquered and had to content himself with placing an imperial garrison there. In 1243 Conrad, son of Frederick II, having attained his majority, the court of barons declared that the regency of the emperor must cease, and invited the legitimate king to come in person and exercise his rights. Aix of Champagne, Queen of Cyprus and daughter of King Henry of Flanders, died at Cyprus. After his Crusade of Egypt, St. Louis landed at Saint-Jean d'Acre (1250) and remained four years in Palestine, putting the fortresses of the kingdom in a state of defence and endeavouring to subdue the factious barons. However, it was at this time that the Christian states were harassed by the Mongols and the Manéluks of Egypt, interior strife was at its height. In 1257, Henry of Lusignan having died, some of the barons acknowledged Queen Blaisance
regent in the name of her son Hugh II, whereas others would give their allegiance to none other than Con-
radin, grandson of Frederick II. Moreover, civil war broke out at Acre between the Genoese and the Ven-
etians, between the Hospitallers and the Templars, and on 31 July, 1288, the Venetians destroyed the Genoese fleet before Acre. The Mameluke Sultan Bichars, "the Condottiere" (El-Bundukdare), commenced the conquest of Syria without meeting any resistance, and in 1288, the last Christian cities, Tripoli, Sidon, and Acre, were cut off from one another. King Hugh II of Lusignan had died in 1287, and his succession was disputed by his nephew, Hugh III, and by King Louis IX of France, whose maternal grandfather was Amaury of Lusignan. In 1299 the barons acknowledged Hugh III, but the new king, unable to cope with the lack of discipline among his subjects, retired to Cyprus after naming Balian d'Ibelin regent of the kingdom (1276). But in 1277, Mary of Antioch sold her rights to Charles of Anjou, King of Naples, who, thinking to subdue the East, sent a garrison under command of Roger of San Severino to occupy Acre. After the Sicilian Vespers (1282), which ruined the projects of Charles of Anjou, the inhabitants of Acre expelled his sen-
chal, Roger of San Severino, who was a very powerful (1172-1286) their king. But at this time the remnants of the Christian possessions were hard pressed by the Mamelukes. On 5 April, 1291, the Sultan Malek-
Aeschafr appeared before Saint-Jean d'Acre and, de-
spite the courage of its defenders, the city was taken by storm on 25 May. The Kingdom of Jerusalem no longer existed, and none of the expeditions of the four-
teenth century succeeded in re-establishing it. The title of King of Jerusalem continued to be borne in a spirit of rivalry: by the Kings of Cyprus belonging to the House of Lusignan; and by the two Houses of Acre, both of them in hopes to hold the territory of Antioch. In 1459 Charlotte, daughter of John III, King of Cyprus, married Louis of Savoy, Count of Geneva, and in 1465 ceded her rights to Jerusalem to her nephew Charles of Savoy; hence, from that time up to 1870, the title of King of Jerusalem was borne by the princes of the House of Savoy.

(2) Institutions and Civilization—Towards the middle of the twelfth century, when the Kingdom of Jerusalem had attained its greatest dimensions, it comprised the entire coast of Syria from Beirut on the north to Raphia on the south. On the north-east its territory, bounded by the Lebanon district, which seemed to be deserted in having as its limits, Damascus, was hardly more than a few leagues in breadth; on the south-east it extended beyond the Dead Sea and the Jordan as far as the Arabian Desert and even included the port of Aila on the Red Sea. In the north the Countship of Tripoli was under the sovereignty of the King of Jerusalem. But in the very interior of the kingdom the power of the king was checked by numerous obstacles, and the sovere
igny belonged less to the king than to the body of feudalists whose power was centred in the High Court, composed of vassals and rear-vassals. Its authority governed even the succession to the throne, in event of dispute between two members of the royal family; it alone was empowered to make laws or "assizes", and to its initiative was due the compilation of the "Assizes of Jerusalem", erroneously ascribed to Godfrey of Bouillon. The king took an oath to the Royal Military service, and to this his rights and to his homage were attached. He could confiscate a fief unless in accordance with the regular judgment of that assembly. Moreover, if the king were to violate his oaths, the assizes formally pro
claimed the right of the lieges to resist. The High Court, presided over by the constable or marshal, assembled when commanded by the king; in jur,
dicial matters it constituted the supreme tribunal and its judgments were without appeal: "Nulle chose fute par court n'en doit estre desfaite" (Assises, I, clxvii). A "Court of the Burgesses", organized in the twelfth century, had analogous jurisdiction over the burgesses and could sentence to exile or even condemn to death. In the great fiefs mixed courts of knights and burgesses had similar control independen
tly of the liege. Even within these limits the king was incapable of compelling, without a considerable feudal obligations. Domiciled in impregnable castles, the architecture of which had been perfected after Mussulman models, the nobles led an almost inde
pendent life. A fief like that of Montléran with its four castles of Creac, Creac de Montléran, Alhamb, and Alle, held by d'Arques de Moise, in after time the city of Acre, the Seans, formed a really independent state. Renaud de Châtillon, who became Lord of Montléran in 1174, him
self waged war against the Mussulmans, whom he terrified by his cruise in the Red Sea, and his indi
vidual policy was counter to that of King Baldwin IV, who was powerless to prevent him from waging war against Saladin.

The Church, at this period, was also a power inde
pendent of the kings, and, with the exception of the king, the Patriarch of Jerusalem was the most im
portant personage in the realm. After the First Cru
sade, the Church was united in Palestine; numerous monasteries were founded and received large donations of landed property in Palestine as well as in Europe. Some patriarchs, especially Daimbert, who was at enmity with Baldwin I, even endeavoured to found a power thoroughly inde
pendent of royalty; nevertheless, both of these powers generally lived in harmony. The Patriarch of Jerusalem, who was elected by the clergy and ac
claimed by the people, had his powers confirmed by the pope, who continued to exercise great authority in Palestine. Moreover, the orders of religious knights,
like the Hospitallers, the Hospitaliers from Jerusalem and the Templars founded by Hugh of Payens in 1128, and the Teutonic Knights created in 1143, formed regular powers, equally independent of Church and State. Most lavishly endowed, they soon owned an incecalculable number of fiefs and castles in Palestine and in Europe. In spiritual matters they were di
rectly subject to the popes, but the king could not interfere in their temporal affairs, and each of the three orders had its own army and exercised the right of concluding treaties with the Mussulmans.

Although royal authority was restricted to rather narrow limits by these various powers, it nevertheless never ceased to be the direct support of the Christian states. Its financial revenues were more considerable than those of the majority of the European princes of the twelfth cen
tury, amongst the most profitable sources of income being the customs duties enforced at all the ports and of which the register was kept by natives who wrote in Arabic. The king also levied toll upon caravans, had the monopoly of certain industries, and the exclusive right to coin money. At times he obtained from the court of barons authority to levy extraordinary taxes; and in 1182, in order to meet the invasion of Saladin, all revenues, even those of the Church, were subjected to a tax of 2 per cent. Although the kings of the twelfth century were surrounded by high officials, and kept a sufficiently grand court, at which Byzantine etiquette ruled, they devoted most of their income to the defence of their kingdom. Their vassals owed an oath of fealty, and were subject to the prevailing Western customs, but in exchange they re
ceived pay. Moreover, the king enlisted natives or foreigners, settling on them a life-annuity or fief de soude: a light cavalry of Tirepoles mounted and equipped in Saracenic style, Maronite archers from the Lebanon, and Armenian and Syrian footsoldiers, and the list of this cosmopolitan army of which the effective force was hardly over 20,000 men, some few
hundreds of them being knights. To these regular resources already mentioned we must add the bands of crusaders constantly arriving from Europe, but whose turbulence and lack of discipline often rendered them more of an encumbrance than a help; besides, many considered that, having once engaged in combat with the Mosulmans, they had accomplished their vow and therefore regarded further service in Europe as unnecessary. This explains why with the well-organized Musulman states arrayed against it, the Kingdom of Jerusalem could only dispute the ground foot by foot for two centuries.

Nevertheless, despite its imperfect organization, the economic and political life of the kingdom rose to extraordinary height of development in the twelfth century. In order to repopulate the country, Baldwin I held out inducements to the Christian communities dwelling beyond the Jordan: in 1182 the Maronites of the Lebanon abjured their Monothelite heresy. Most of the natives did likewise, and constituted the influential middle class or burghers of the various cities, having the right to own land and an autonomous administration under magistrates called reis. In the ports, the Italian cities of Genoa, Venice, and Pisa, and the French cities of Marseilles, Narbonne, etc., received a share of the gains of the crusades, and even after the fatih's death they were still administered by their own consuls. Each of these colonies had lands or caçaus on the outskirts of the city, where cotton and sugar-cane were cultivated; the colonial merchants had the monopoly of commerce between Europe and the East, and freighted their outgoing ships with costly merchandise, spices, China silk, precious stones, etc., which the caravans brought from the interior of Asia. Industries peculiar to Syria, the manufacture of silk and cotton materials, the dye-works and glass factories of Tyre, etc., all helped to feed this commerce, as did also the agricultural products of the land. In exchange, the Western ships brought to Palestine such European produce as was necessary to the colonists; two frigates sailed yearly from Western ports, at Easter and about the feast of St. John, thus ensuring communication between Palestine and Europe. Thanks to this commerce, during the twelfth century the Kingdom of Jerusalem became one of the most prosperous states in Christendom. In the castles, as in the cities, the Western knights loved to surround themselves with gorgeous equipment and choice furniture, the latter often of Arabian workmanship. In Palestine there was a marked development along artistic lines, and churches and the towns were built according to the rules of Roman architecture. Even now, the cathedral of St. John at Beirut, built about 1130-1140 and transformed into a mosque, shows us the style of edifice reared by Western architects, its structure recalling that of the monuments of Limousin and Languedoc. The use of ivory used as a binding for the Psalter of Mélisende, daughter of Baldwin II, and preserved in the British Museum, displays a curious decoration in which are combined designs of Byzantine and Arabian art. But it was military architecture that reached the greatest development and probably furnished models to the West; even today the ruins of the Crac of the Knights, built by the Hospitalers, astonish the beholder by their double gallery, their massive towers, and elegant halls. The Kingdom of Jerusalem, established as a result of the First Crusade, was thus one of the first attempts made by Europe at civilization.

IV. FROM THE END OF THE LATIN KINGDOM TO THE PRESENT TIME.—(I) POLITICAL HISTORY.—The Latin dominion over Jerusalem really came to an end on 2 October, 1187, when the city opened its gates to Saladin (Yusuf ibn Ayyub, Salāh-ʾed-dīn, Emir of Egypt, 1169-93), although fragments of the Latin kingdom in Palestine lasted for another century. Frederick II acquired a short possession of Jerusalem (1191-1217) by treaty; later, Seneca, the "Emir of Jerusalem," added an empty splendour to the styles of various European sovereigns almost to our own time. Nevertheless after 1187 the episode of Christian and Latin rule over the Holy City is closed. From that time it falls back again into its former state of a city under Moslem government, in which Christian pilgrims are at best on a footing of toleration.

As soon as Saladin's army entered the city they set about to destroy all traces of the Christian rule. They tore the great gift cross from the Dome of the Rock, broke up the bells, plundered churches and convents, restored all the buildings that had been mosques (notably the Dome of the Rock and the El-Aqsa mosque), turned other churches into stables or granaries, founded Moslem schools, hospitals, and all the pious institutions that go by the general name of waqf. While Europe was thunderstruck at the loss of the Holy City, and was preparing a new crusade to retrieve it, the last Crusade took place in the Moslem world announcing the glad tidings that El-Quds was now purified and restored to the true believers. But—true to the promise made by Omar (see above)—Saladin left the Holy Sepulchre, as well as a few other churches, to the Christians (the Orthodox). For the use of these they had to pay a heavy tribute. The church of the Knights of St. John was turned into a hospital (at the place still called Muristan, where the German Protestant church now stands). Saladin further strengthened the walls of the city when the Third Crusade (with King Richard of England) approached and threatened to capture it. In 1219 the Sultan Malik-el-Muʾasams (d. 1227, vice-roy of Damascus for El-Mansur) ordered these walls to be destroyed, lest they should become a protection for the Franks. In 1229 another short interlude began. Emperor Frederick II (1212-50) came on his (the Fifth) Crusade. He obtained by treaty with the Sultan of Egypt, El-Kāmil (1219-38), possession of Jerusalem, Bethlehem, Nazareth, and the pilgrim roads from Jaffa and 'Akka for ten years and a half. The city was not to be fortified, and the Haram ehsherf (the Temple area) was to remain in exclusive Christian possession. In 1244, however, with Kerak, En-nāsir Dādūd, conquered Jerusalem again and destroyed the Tower of David. But in 1243 he made over the city to the Latins without any stipulations. This led to the final loss of the city. For Esrail Ayyub, Caliph of Egypt (1238-49), then called on the savage Khwarizmian tribes from Mesopotamia to recapture it. They poured over Syria plundering and murdering, and in September, 1244, stormed Jerusalem. In the massacre that followed 7000 Christians perished; Jerusalem was restored once more, and finally, to the Empire of the Caliph. From this time the remaining Latin possessions in Palestine were lost one by one in quick succession. The last town, 'Akka (Saint-Jean d'Acre), fell in 1291.

The title "King of Jerusalem" went from Guy of Lusignan (King of Jerusalem and Cyprus, 1186-92) to Henry of Champagne (1192-7), to whom it was only a title of pretense, as he reigned in the city. Amaury (Amalric) of Lusignan (brother of Guy), King of Cyprus (1194-1205), was elected king by the crusading army at Tyre, and married Isabel, daughter of Amaury I of Jerusalem (1162-79). He then added the title of Jerusalem to that of Cyprus (Amaury II). From this time the name of Cyprus used the title of Jerusalem and quartered its arms (argent, a cross potent between four croisslets) with their paternal coat (barry of ten azure and...
gant, a lion rampant or, crowned gules. See the arms of "die conic von cipers" in Gele's Wapenboeck, 1334-72. The Lusignan, "Kingdom of Jerusalem and Cyprus," came to an end in 1474, when Cardinal Cesar, widow of the last king (James III), abdicated in favour of the Republic of Venice. Whatever rights they may be supposed to have had to the title of Jerusalem passed to the House of Savoy. Meanwhile, at the death of Amoury II (1205), John of Brienne who married Mary, daughter of the same Isabel and Conrad of Montferrat, began a rival line of titular Kings of Jerusalem. His daughter Isabel (Iolantie), married Emperor Frederick II, who then assumed the title, and (as we have seen) for a short time actually reigned in Jerusalem. He crowned himself in the Church of the Holy Sepulchre on 17 March, 1229. After him the title was borne by his descendants to Conradin (d. 1268). Then Hugh III, Prince of Antioch (1267-80) and regent of the scattered Latin possessions in Palestine for the absent kings of this line, began another series of titular Kings of Jerusalem. He was crowned at Tyre in 1269. His claim was maintained by his son Henry at Akka. But Mary of Antioch, also descended from Isabel, set up a claim to this visionary crown, and then sold it to her grand-nephew Charles of Anjou, King of Sicily (1265-1309), who had already obtained another claim by marrying Margaret, grand-daughter of John of Brienne. While the Moslems were gaining ground and driving back the thin remnant of the Latin kingdom every year, the Sicilians and the party of Hugh of Antioch were fighting for the possession of it. Eventually the kings of Sicily added it to their style, and "Jerusalem and the two Sicilies" existed as a royal title down to the Italian revolution (1860). Lastly, the House of Habsburg also added this shadowy royalty to its long list of titles. Jolanthe, daughter of René the Good (d. 1400), titular King of Jerusalem and Naples—married Duke Frederick of Lorraine; from her the line came to the Dukes of Lorraine, and so, through Maria Theresa's marriage with Francis of Lorraine (1736), to the House of Austria. The arms of Jerusalem formed one of the fifty-eight quarterings of the Imperial Arms of Austria; and "König von Jerusalem" was one of the emperor's long string of titles, till Ferdinand I (1525-48) had the good sense to reduce both quarterings and titles to those that had a real meaning. The story of this title of Jerusalem forms a curious by-path in history, and is a typical example of the prevalence that medieval heralds loved. Meanwhile, the Moslem ruled again over the Holy City. The crusading idea lingered on in the West for centuries. Pope Pius II (1458-64) still hoped to renew the work of Urban II; but nothing ever came of these attempts. Jerusalem was lost to Christendom in 1187; it is lost still.

Till the sixteenth century Syria belonged to the caliphs of Egypt; but it was constantly overrun for short periods by their various enemies. In the thirteenth century the Mongols, who had destroyed the line of caliphs at Baghdad, poured over Syria plundering and destroying under their chief Hulagu (capture of Aleppo, 1260). Kutus (1259-60) sent his famous general, Beibars el-bundukdari, by whom the Mongols were driven out. Beibars then had Kutus murdered and reigned as al-Fath (1260-77). He succeeded in driving the Crusaders nearly back to their last stronghold, 'Akka, crushed the "Assassins" (Hashishiyen)—fanatical Isma'ilis who had been the terror of Syria for nearly two centuries—and conquered a great part of Asia Minor. The name of Beibars (Es-Sultan el-Malik es-Sahir, rukn-ed-dunya wa-liln, "The foundation of the highest king, prop of the world and the faith") may be seen on many monuments in Jerusalem. Kalilün (1279-90) deposed Beibars' son, made himself caliph, further harassed the Crusaders, and built splendid monuments all over Syria. In 1400 the Mongols under Timur again devastated the land.

Meanwhile the Osmanli Turks were becoming the dominant race in Islam. In 1516 under Sultan Selim I (1512-20), after they had crushed the Persians (1514), they turned southward towards Syria. On 14 August, 1516, Selim routed the Egyptian army and killed the Caliph Kâsîm el-Abî (d. 1521) on 22 January, 1517. Selim entered Cairo in triumph. Mutawakki, the last Egyptian caliph, died a captive of the Turks in 1518, bequeathing his title to the conquering House of Osman. It is on the strength of this (quite illegal) legacy that the Turkish sultan still calls himself Caliph of Islam. From this time the Turk has been master of Jerusalem. In 1799 Napoleon I invaded Syria and reached Nazareth. In 1831 the Egyptian army under Ibrahim Pasha took the Turks near Homs (Emessa), and kept possession of Syria and Jerusalem till England and Austria conquered them back for the Turks in 1840. During the nineteenth century Syria has had her share of various Turkish reforms. Jerusalem and the holy places especially, as being the most interesting parts of the empire to Christians and the scene of continual Christian pilgrimages, were the places where the Turkish government was most anxious to show that its reforms were really meant. The great number of Christian institutions of various sects and the large Christian population of Jerusalem have almost from it the appearance of an Eastern town. The latest development is the enormous increase of Jews, who, in spite of repeated attempts on the part of the government to keep them out, form large colonies in and around the city. They and the European Christians are now the predominant element. There are to cities of the Turkish Empire where Moslems are so little in evidence as in Jerusalem, Bethlehem, and Nazareth.

(2) The Holy Sepulchre.—The Crusaders found the group of buildings as they had been left by Constantine IX's restoration (1048; see above). In 1140 to 1149 they made a complete reconstruction of the whole under their architect Master Jordan. The effect of this was a great French-Romanesque cathedral. At the east of the round building over the Anastasis a transept, and beyond it a choir and an
apse were built; an aisle surrounded the choir and apse. At the junction with the round building they put a triumphal arch. All the various chapels opened into the central church. From the apse steps led down to the chapel of St. Helena. The entrance was at the wall of the cathedral and was a large building. From the choir one could see into the Anastasis and into all the chapels. This Crusaders’ Church is the one that still stands: the beautiful Romanesque doors, at the south especially, still give it a Western appearance. Slight restorations were made in 1340, 1350, 1400 and 1490. In 1808 the round building was burnt down. The Orthodox persuaded the Turkish government to allow them alone to restore it. Their architect closed up the triumphal arch, thus again destroying the unity of the whole, and replaced the old columns of the rotunda by clumsy pillars. He also enclosed the tomb in the present ugly marble covering. The choir of the Crusaders’ Church became the present Orthodox Katholikon. The arches between it and its aisles were walled up; the aisles became dark passages. The cupola they built over the rotunda threatened to fall in 1898. France and Russia together had it rescued, restored and iron dome thrown on it. Thus was decided the dispute between Catholics and Orthodox as to the keys of the Holy Sepulchre that immediately caused the Crimean War (1853). All the parts of the church now need repairs which are not executed, because no religion will allow the other to undertake them for fear of disturbing their various rights. The inside of the cupola over the Anastasis is rotting daily. But the reappearance of the roof is the most dangerous of all, since by Turkish law the right to repair implies possession and the possession of a roof means possession of all it covers. In the present building, walled up and divided into a complex mass of dark passages and chapels laden with tawdry ornament, it is still possible to trace the plan of the great Crusaders’ Church. For the rights of the various religions see below.

(3) The Orthodox Patriarchate.—Through all the political changes, under Saracens, Egyptians, and Turks, the old line of the Patriarchs of Jerusalem (who followed the Church of Constantinople into schism in the eleventh century) goes on. But there is little to tell of their history. The line was often broken, and there have been many disputed successors. The Patriarchate of Jerusalem under its two names (Byzantine, 329-1122; Bulgarian, 1122-1261) is the second in the list of the Patriarchates of the East. When the Crusaders took Jerusalem (1099), the Orthodox patriarch (Simon II) fled to Cyprus. As long as the former held the city, it was impossible for the schismatical rival of their Latin patriarchs to live in it. In 1142 the Orthodox continued their line by electing Arsenius II: he resided at Constantinople. After the Moelems had recaptured the city, the Orthodox patriarchs came back and lived in or near it. The only event of any importance in the later history of the Orthodox Patriarchate of Jerusalem is the Synod of Constantinople (often called the Synod of Bethlehem) in 1672. This synod represents the climax of the Orthodox reaction against the heresies of Cyril Lucaris (d. 1638). Cyril was Patriarch of Constantinople (Cyril I) at five separate intervals (1629-3, 1623-30, 1630-4, 1634-5, 1637-8); he had imbued Protestant ideas from his friends in Germany and England. As patriarch he organized—or tried to organize—a reforming party, and he wrote in 1629, a famous “Confession” (Eastern Confession of the Christian Faith), which is full of pure Calvinism. Eventually Lucaris was accused of treason against the imperial house (this is the famous “infringement of Genevan laws”), and he left a certain number of Protestantizing disciples, but the enormous majority of the Orthodox adhered his new doctrines. In the years following his death four synods were held—at Constantinople (1639), Yassy in Moldavia (1643), Jerusalem (1672), and Constantinople again (1672)—in which the Orthodox faith was asserted against Protestantism in the most uncompromising terms. Of these synods that of Jerusalem was by far the most important. It is interesting to compare them with the official pronouncements of the Orthodox Church, and may be compared to our Council of Trent. Dositheus, Patriarch of Jerusalem (1669-1707), who summoned the synod, was certainly the most distinguished bishop of that line during this latter period. He was the 81st. In 1808 the round building was burnt down. The Orthodox persuaded the Turkish government to allow them alone to restore it. Their architect closed up the triumphal arch, thus again destroying the unity of the whole, and replaced the old columns of the rotunda by clumsy pillars. He also enclosed the tomb in the present ugly marble covering. The choir of the Crusaders’ Church became the present Orthodox Katholikon. The arches between it and its aisles were walled up; the aisles became dark passages. The cupola they built over the rotunda threatened to fall in 1898. France and Russia together had it rescued, restored and iron dome thrown on it. Thus was decided the dispute between Catholics and Orthodox as to the keys of the Holy Sepulchre that immediately caused the Crimean War (1853). All the parts of the church now need repairs which are not executed, because no religion will allow the other to undertake them for fear of disturbing their various rights. The inside of the cupola over the Anastasis is rotting daily. But the reappearance of the roof is the most dangerous of all, since by Turkish law the right to repair implies possession and the possession of a roof means possession of all it covers. In the present building, walled up and divided into a complex mass of dark passages and chapels laden with tawdry ornament, it is still possible to trace the plan of the great Crusaders’ Church. private opinion of a heretic: here the Fathers are on safe ground. Chapter iv defends—no longer Cyril but—the Orthodox Church by quoting her formulæ, and contains a list of anathemas against the heretics of the “Confessions.” Chapter v again tries to defend Cyril by quoting various deeds and sayings of his, and transcribes the whole decree of the Synod of Constantinople in 1639, and then that of Yassy (Tăuerna) in 1643. Chapter vi gives the decrees of the synod in the form of a “Confession of Doctrines.” It has eighteen decrees (depositions), then four “questions” (prophores) with long answers. In these all the points denied by Lucaris’s “Confession” (Church and Bible, predestination, cult of saints, sacraments, the Real Presence, the liturgy a real sacrifice, etc.) are maintained at great length and in the most uncompromising way. A short epilogue closes the acts. Then follow the date, signatures, and seals.

Because of its determined anti-Protestantism (Protestants are described as being patent heretics and ἀπεράσσων λαχανίστατοι), Protestant writers have described this synod as a work of the Jews, of the French ambassador at that time, Olivier de Nointel, and of other Catholics who were undermining the Eastern Church. It is true that the Synod of Jerusalem represents a strongly Catholic reaction after Lucaris’s troubles (it accepts and defends the word transubstantiation—περιτομή λεύκης—for instance). It is all the more remarkable that its decrees have been accepted unreservedly by the whole Orthodox Church. They were at once approved by the other patriarchs, the Church of Russia, etc.: they are allowed for in the symbolic books of the Orthodox Church, and form an official creed or declaration in the strictest sense, which every Orthodox Christian is bound to accept. Since this synod the Orthodox Church has not spoken again officially.

An affair that concerned the Orthodox Patriarchate of Jerusalem was that of the independence of the great monastery of Mount Sinai. This monastery, one of the richest and most famous of Eastern Christendom, was undoubtedly at one time subject to the jurisdiction of the Patriarch of Jerusalem. In 1782, after a great struggle, the Abbot of Mount Sinai succeeded in asserting his independence of any patriarch. As Archbishop of Sinai the abbot now reigns over the smallest autocephalous Church of their communion. But he is still ordained in Jerusalem, and the patriarchs have constantly tried to assert some kind of authority over their independent daughter-church. The last great quarrel was in 1830, when the archbishop (Cyril Byzantius) had a dispute with his monks. Instead of applying to Jerusalem he wrote to Constantinople for help. Sophronius III of Constantinople (1863–67) at once took up his cause against the monks. The Patriarch of Jerusalem trembled and synod (1867), in which he protested both against the interference of Constantinople. Less for the sake of Jerusalem’s shadowy rights over Sinai than because of the ever-welcome chance of opposing the arrogant interference of Constantinople, the other Orthodox Churches all supported Jerusalem, so that Byzantius was deposed and the Patriarch of Jerusalem was only theoretical. The patriarchs were all Greeks. Originally, under the rule, they had been Arabs, taken naturally from the native clergy of Palestine. But in 1534 Germanus, a Greek of the Peloponnesus, succeeded in being elected and from that time to this his successors have all been Greeks. Germanus further succeeded in heliurizing all the admirers of the patriarchate: the monks of the Holy Sepulchre, the bishops, archimandrites, and officials of the patriarchal court are all Greeks. It became a recognized principle that no native Arab should ever be appointed to any office in the patriarchate. The result of this is that for over three centuries the patriarchal curia of Jerusalem has been and remains a foreign colony in the land, utterly separate from the native Arab lower clergy and the people. But this state of things will soon come to an end. Following the triumphant example of Antioch there is at this moment a great agitation among the Orthodox Arabs to assert their place in their own patriarchate. And as they are supported by Russia they will succeed. The reigning patriarch, Damianus, though of course a Greek, is not unfriendly to the Arab agitators. On the other hand the monks, the “Fraternity of the Holy Sepulchre,” stand out as a bulwark of Orthodoxy in the state of things, and treat the Arabs as schismatistical revolutionaries. Everyone has heard of the scandalous riots that took place in 1908, and culminated in the pretended deposition of the patriarch. Till quite lately, moreover, most of these Greek patriarchs did not even take the trouble to reside in
their titular city. Mere servants of the ecclesiastical bishop, having no interest in their Arab flock, they were not interested in the security of the tinotile, useless ornaments of the Pharan. Since the accession of Cyril II (1845-72), this abuse has been removed and the patriarchs live near the Monastery of the Holy Sepulchre.

Meanwhile the sees of the patriarchate have almost entirely disappeared. In Juvenal's time (420-58) fifty-nine bishops in the three Palestine obeyed the new patriarch. The Moslem conquest, the Crusades, and the troubles of the Orthodox Church in Syria gradually reduced this number, till there are now only a handful of titular bishops who reside at Jerusalem, and few of these whose titles are registered but are always vacant. Only one bishop (the Metropolitan of 'Akka) now lives in his diocese (see the list below). The full list of patriarchs of Jerusalem during this period will be found in Le Quen, 'Oriens Christianus', III; for the later ones see Williams, 'Holy City', I, pp. 457-8. The patriarchs in the nineteenth century are: Anthimus, 1787-1808; Polycarp, 1808-27; Athanasius V, 1827-45; Cyril II, 1845-72. The last-mentioned refused to sign the excommunication of the Bulgars in 1872, and was deposed the same year. Procopius, who was said to be the man of Cyril still claimed to be patriarch, but the native Arabs acknowledged Cyril; the Pharan and nearly all the rest of the Orthodox world Procopius. Russia, however, then appointed Hierotheus, who, however, to every one's surprise took the side of the Pharan in the Bulgarian quarrel. So Russia fell foul of him, and took the opportunity of confiscating the property of the Holy Sepulchre in Bessarabia. Hierotheus died in 1882. There were then three candidates for the vacant see, Nicodemus, Gerasimus and Photius. Photius (always a determined enemy of the Papal claims) made the offer to Photius, and immediately subject to the patriarch. But the number of sees fluctuated with the fortunes of the Crusaders; there are various lists given by contemporary authors representing different circumstances. There were many abbeys besides the priory of the Holy Sepulchre (following the Augustinian rule); for these see Le Quen, III, 1279 sqq., and the 'Gesta Dei per Francos' (Hanover, 1611), 1077.

From the thirteenth century, when this hierarchy disappeared, the Russian support of the Catholic cause was upheld almost solely by the Franciscan Order. The priors were first sent to Palestine by St. Francis himself in 1219. The order has a special province, the 'Custodia Terrae Sanctae', which includes Lower Egypt, Cyprus, and Armenia. The head of this province, and till 1847 the supreme authority for Catholics in Palestine, is the Franciscan provincial who bears the title 'Custos Terrae Sanctae'. He had episcopal jurisdiction (but not orders), and the Turkish government granted him many privileges as civil head of the 'Latin nation' in Palestine.

The policy of Alexander II somewhat modified this, and the 'Custos', by turning to the 'Custodia Terrae Santa', which has passed into Arabic and Turkish) is recruited from all the other Franciscan provinces. Its official language is Italian. During the long centuries since the fall of the Latin kingdom the heroic friars have guarded the interests of the Catholic Church around the Holy Places. Always exposed to the jealousy of the Orthodox and other sects, continually persecuted by the Turks, they have kept their place till to-day, and with it our rights in the Holy Land, constantly at the price of their blood. It was in their hospices (the case nuove, which they have built all over the Palestinian desert) that the Catholic pilgrim found shelter. They have kept the Latin altars in repair, and have never ceased offering the Latin Mass on them for six centuries when no one else cared for them. The 'Reverendissimus Custos Terrae Sanctae' now fills a much less important place in the Catholic Church of Palestine; but no changes can ever make one forget that it was in the friars for defending our cause during those dark years.

In the sixteenth century it was felt that a state of things of which the result was practically Franciscan monopoly in Palestine had become an anomaly. The Turkish government had become tolerant, a number of other religious orders had built houses at Jeru-
salem and other cities, there were Arab Catholics who wished to become priests and to serve their own people, but there was no reason why the Catholic of Palestine should not be governed by an episcopal hierarchy in the normal way. Moved by these considerations Pius IX decided to change the titular Latin patriarchate at Rome into a real see again at Jerusalem. The titular patriarch, Augustus Foscolo (1830–47), was removed by the legation. In May 1847 Mgr. Augusto Vaglia was made patriarch in 1847, and ordered to take up his residence in the Holy City (Brief of 23 July, 1847). He was consecrated by the pope himself on 10 October, 1847, and arrived in his patriarchate in January, 1848. He found 4200 Latin Catholics there; at his death in 1872 he had doubled the number. The succession of these restored Latin patriarchs is: Joseph Valerga, 1847–72; Vincent Bracco, 1873–89; Louis Piavi, 1889–1905. Mgr. Piavi died on 24 January, 1905. After some delay, the present patriarch, Mgr. Philip Cassasei, formerly Latin Bishop of Syra, was promulgated in November, 1905, and entered Jerusalem just before Easter, 1907.

(5) Present Condition of the City.—Jerusalem (El Quds) is the capital of a sanjak and the seat of a mutasarrif directly dependent on the Sublime Porte. In the administration of the sanjak the mutasarrif is assisted by a council called majlis idāra; the city has a municipal government (majlis baladiyye) presided over by a mayor. The total population is estimated at 66,000. The Turkish census of 1905, which counts only Ottoman subjects, gives these figures: Jews, 45,000; Moslems, 8,000; Orthodox Christians, 6,000; Uniates, 2,500; Armenians, 950; Protestants, 800; Melkites, 250; Copts, 150; Abyssinians, 100; Jacobites, 100; Uniate Syrians, 50. During the nineteenth century large suburbs to the north and east have grown up, chiefly for the use of the Jewish colony. These suburbs contain nearly half the present population.

The Latin Patriarch of Jerusalem has jurisdiction over all Latins of Palestine, extending to Egypt on the south, the Latin Legation of Syria (seat at Beirut) on the north, and including Cyprus. He is appointed by the Roman Curia (libera collatio S. Petri) and is personally exempt from Turkish authority (eternal benefice of the Holy See). He is represented in the majlis. The patriarchate has no suffragan sees. The Custos Terra Sancte retains the use of episcopal insignia and certain rights of admission to the holy places; otherwise, he must now be counted only as the Provincial of the Franciscan Conventuals in the Order of the Holy Sepulchre (a military order of knighthood which began with the crusades and continues as a small dignity given to deserving Catholics), formerly made by the custos, are now in the hands of the patriarch. The patriarchal church in theory is the Holy Sepulchre. But since Catholics have only alternative rights there with the Orthodox and Armenians, Foscolo built a pro-cathedral near the Jaffa Gate (to the north): the patriarch's house and a seminary adjoin this church. But the patriarch celebrates the functions of Holy Week and others at the Holy Sepulchre according to the customs of the convent, which are carefully drawn up and enforced by the Government. The Franciscan custos lives at the Convent of St. Saviour to the north of the Muristan. This convent is the Franciscan head-quarters at Jerusalem. It was originally a Georgian monastery, and was acquired by the friars in 1581. Next to it is the large parish church of St. Saviour, finished in 1885 at the expense of the Austrian Emperor Francis Joseph I; the Casa Nuova (hostelry for pilgrims) is close at hand. Then there are an orphanage, a school, a library, printing-press, etc., all in charge of the friars, clustered around the convent. The Franciscans have also the little convent of the Holy Sepulchre with the "Chapel of the Apparition," that forms the northern part of the group of buildings at the Anastasis. This has been Franciscan property since the thirteenth century (P. Barnabé Meiermann's "Nouveau Guide" contains an excellent plan of the Anastasis, coloured according to the possessions of the various religions). Six or seven priests and as many lay-brothers are sent from the convent of St. Saviour to reside here for periods of three months in turn. These are the "Fathers of the Holy Sepulchre" who are always on guard to celebrate the Latin Offices receive pilgrims, and maintain our traditional rights. They have a hard time while they are on duty. There is no way out of the convent except by the door to the whole complex on the south. This door is locked by the Turkish guardians at night, so the friars are locked in. Their food is brought to them from St. Saviour, and passed through a wicket in the great door every day. Formerly the residence in the narrow damp convent shut in among the other buildings, which they do not leave during their time of office, was very injurious to their health. But in 1869 Emperor Francis Joseph of Austria, when he made his pilgrimage to Jerusalem, obtained from the Turkish government some improvement in the ventilation of the convent and leave to build a terrace and a belfry behind it. In 1875 the friars rang their bells to summon Catholics to their services for the first time at this place since centuries (the Orthodox do not use bells but clappers—symantnarc: bells are an abomination to Moslems). The third Franciscan convent in Jerusalem is by the Chapel of the Scourging in the Tarīq Bāb Sūtī Mirām, opposite the Antonia castle. This property belonged to them from the time of the Crusades till 1818. It has then a session in the Pasha and turned into a stable. It was given back in 1838, and restored at the expense of King Maximilian of Bavaria.

Other Latin properties in Jerusalem are the College of St. Ann for Melkite clergy governed (since 1875) by Cardinal Lavagerie's Père blanc near the Bab Sūtī Mirām (Gate of the Lady Mary), the Dominican convent and Eccoli biblique at St. Stephen outside the Damascus Gate (1884), the great French Hospice "Notre Dame de France", directed by the Augustinians of the Assumption outside the walls to the northwest near the Bab Ābdū-l-hamid (1857), the Benedictine monastery with a seminary for Syrian Uniates on the Mount of Olives (1890), the new German Bene-
(isolate monastery at the "Dormitio B. M. V." on Mount Zion, given by the German Emperor in 1806, the German and Austrian hospices, the French Pères de Sion, and Christian Brothers. There are convents of the French Carmelites nuns (on the Mount of Olives, since 1873), Poor Clares, Franciscan nuns of the Third Order of St. Francis, Benedictines nuns, Sisters of the Rosary, of St. Joseph and of "Marie Réparatrice". Of all these Latin institutions the oldest colonies (e.g. the Franciscans) have on the whole an Italian character, by far the greatest number are French, but the Germans (especially by the two large parishes in the vicinity of St. Vincent de Paul, Père de Sion and St. Joseph) are now getting considerable influence. As throughout the Turkish Empire, French is the European language most spoken at Jerusalem.

Most of the Uniate Churches have establishments in the Holy City. The Melkite Patriarch of Antioch also bears the titles of Alexandria and Jerusalem. He has a church (St. Verónica) in the Khán-exzeit just behind St. Saviour where the Melkite patriarchal vicar (who generally resides at Jaffa) and the patriarch himself (when present) officiate; near it is a hospice for Melkites. There is also a Melkite monastery near the Nablus road. The Maronites have a parish church served by their patriarchal vicar; that of the Uniate Armenians (Notredame du Spasme) is in the Via Dolorosa opposite the Austrian hospice. The Armenian had an Archibishop of Jerusalem (Michael Alessandrius) from 1855 to 1897. No successor has been appointed to him. The Syrian Uniates have also a small church, where their patriarchal vicar officiates. The Syrian Uniate Patriarch of Antioch is considered as administrator of an Archdiocese of Jerusalem; but he does not use the title. A hardship felt by all these Uniates is that they cannot celebrate their Offices at the Holy Sepulchre. The Turk recognizes only the rights of Latins there.

The Orthodox Church naturally also fills a large place among the Christian communities of Jerusalem. The patriarch bears the title "the most blessed and holy Patriarch of the holy city Jerusalem and all Palestine, of Syria, Arabia beyond the Jordan, Cana of Galilee and Holy Zion". It should be noticed that of all the persons who bear the title "Patriarch of Jerusalem", this one alone represents historic continuity from the original line. His patriarchate extends to the Lebanon on the north and the Red Sea on the south to accept the sovereignty of the Sultan of (Sana). East and west it is bounded by the Syrian desert and the sea. The patriarch resides by the "Great Laura" in the Haréf desir-er-rûm not far from the Anastasia; he has also properties in the country at Katamôn near Jerusalem (where they say St. Simeon lived) and a convent in Jaffa. The sees of the Patriarchate are Cesarea, Scythopolis (Beisan), Petra, Ptolemis (Akka), Nazareth, Bethlehem, Lydda, Gaza, Nablus, Sebastia, Tabor, the Jordan, Tiberias, Philadelphia, Pella, Kerak, Diocesarea (Sepphoris), Madaba. The only resident bishop is the Metropolitan of 'Akka; those of Lydda, Gaza, Nablus, Sebastia, the Jordan, Philadelphia, Kerak and Madaba live at Jerusalem and form the Patriarch's Court. The other sees are left vacant. In the administration of his Church the patriarch is assisted by a synod consisting of ten bishops, the only archbishop being the Archbishop of Jerusalem. The large Orthodox monastery (St. Constantin) with a printing-press and hospice for pilgrims. In the Holy Sepulchre the Orthodox possess the central part (the "Katholikon") and various chapels. They have a monastery built against it (to the west). The patriarch has a church in Jerusalem dedicated to be given to any one religion; so it is common property, used in turn by all. There are sixteen other Orthodox monasteries in and around the city and various hospices, hospitals and schools. For the education of their clergy they have the "Monastery of the Holy Cross" (Deir el-musaalebe) about one and a half miles west of the city. This monastery (said to be at the place where the tree grew from which the cross was made) was originally Georgian. Inscriptions by the two Syriac versions in that script are of 1120. It was sold to the Greeks, opened as a theological college in 1855, since then several times closed and re-opened. Many students do not belong to the patriarchate, but come from Asis Minor, Cyprus, Greece, etc., to study here. There are hardly any Arabs. The only language used in the schools is Greek. The Greek element has hitherto had exclusive possession of the other Orthodox establishments in Jerusalem.

We have alluded to the troubles now raging through the attempt of the Arabs to break this monopoly. It is considerably broken, though not in favour of the Arabs, by the Russian establishments. The autocephalous Russian Church is represented in Palestine by a great number of large colonies and institutions altogether separate from those of the patriarchate. The first Russian archimandrite arrived in 1844; the consulates date from 1858. The Russian Palestine Society builds churches, in which the liturgy is celebrated in Slavonic. In the Russian establishments all over the country to the great annoyance of the Greek patriarchal element. It is because Russia has taken up the cause of the native Arabs that they can no longer be ignored as obscure revolutionaries of the lower classes. On the contrary, the Greek influence is already doomed; when Lord Darnius dies or is successfully deposed, we may expect to hear of an Arab patriarch as his successor. It remains to be seen whether the Phanar will then repeat the blunder it made at Antioch by excommunicating him. The chief Russian establishments at Jerusalem are the enormous group of buildings outside Jaffa road. These contain a large and very handsome church where the Russian archimandrite officiates, huge hospices for pilgrims, a hospital and other buildings, all close to the Russian consulate. Then they have a gorgeous church in Gethsemane, and another one with a high tower, a convent of nuns, and other buildings on the top of the Mount of Olives (the place of the Ascension in their tradition). There are also another Russian hospice in the Muristan, a lunatic asylum, and schools. But the Russians have no rights at the Holy Sepulchre. Each time they want to build a church they have to get a Convention from the patriarch. About 8000 Russian pilgrims visit the Holy Places every year.

The Gregorian Armenians have a Patriarchate of Jerusalem as one of their two minor patriarchates. In the seventeenth century the Catholikos of Echmiadzin gave the Armenian Church of Jerusalem the right to consecrate chrisms; whereupon the bishop assumed the title patriarch and began ordaining bishops. The title is now acknowledged by the Armenian Church. The jurisdiction of the Armenian Patriarchate of Jerusalem extends throughout the Pashalik of Damasus. Akka, Salkim (Tripoli), and Cyprus. Under him are seven archbishops and bishops who live with him and form his synod, and fourteen suffragans. The patriarchate is at the great Armenian monastery of St. James the south-west of the city, near the Bu Bn Bn Dâd. This was formerly a convent. Near the patriarchate is the"Bâb el-es-zelîm" near the patriarchate, and land outside the city opposite the great Russian colony. The
whole south-west of Jerusalem around their patriarchate is the "Armenian quarter". At the Holy Sepulchre they possess the Chapels of St. Helena, of St. John, of the "Division of Garments", of St. James (behind the Anastasis), and the "Stone of the Holy Woman." Meanwhile, in the Capharnum neighborhood some Armenians have further rights of walking in procession about the Anastasis, and take their turn to celebrate their offices at it.

The Jacobite Syrians have a little church (claimed as the house of John Mark) in the Harat-en-nebi Dádúd, with a more or less singular character. The character of their maronians (who now unites with this dignity of metropolitan of Jerusalem) resides, and the central chapel behind the Anastasis. The Copts have a large monastery (Deir-es-sultán) close to the Holy Sepulchre to the north, at the ninth Station of the Cross, with a hospice. Another Coptic church is at their Khán, between the Birket Hammáám-al-balut (Pool of Hese- kiah), and there several chapels in the Holy Sepulchre itself. The Copts have had a Bishop of Jeru-alem since the eleventh century. He now resides at Cairo with the title Bishop of the East (Sharkie). I or of St. Mark (Deir es-Souk Quwe), and ranks immediately after the Abuna of Abyssinia. The Abyssinians possess a large round church outside the city to the north-west (beyond the Russian buildings) and a monastery touching the Holy Sepulchre and the Coptic monastery. They have no special place in the great church itself; but share with the Copts (with whom, of course, they are in communion). The Nestorians had a metropolitan of Jerusalem from the ninth to the thirteenth century. Since 1282 the title seems to have disappeared (Le Quien, II, 1290).

Lastly, English, German and American Protestants of all sects have a great number of establishments, churches, hospitals, and hospices in Jerusalem. The most important of these are the German Evangelical Erlöserkirche in the Muristan (built in 1898 on land given by the German Emperor) with a school, the Johanniter hospit. Hospital of the Kaiserwerth Deaconesses, the Leper-house kept by the Moravians, and the Syrian Protestant orphanage. In 1841, by arrange- ment between the Prussian and English governments, an Anglo-Lutheran "Bishopric of St. James" at Jerusalem was founded. The bishops were to be appointed alternately by the two governments and to reside alternately in the two countries. But the bishopric was transferred to Syria, Chaldea, Egypt and Abyssinia. This is the famous "Jerusalem bishopric" that gave so great a scandal to the leaders of the Oxford Movement. The bishops were: Michael Samuel Alexander (appointed by England), 1842-5; Samuel Gobat von Cremnitz (by Prussia), 1845-7; Joseph Barclay (by England), 1879-81. Already during Gobat's time the two elements had drifted apart; when Barclay died, the arrangement fell through.

The Anglicans now have a bishopric "in" Jerusalem of quite a different type (since 1857). Bishop Blyth and his successor, the present Bishop, are Domestic Chap-episcopal Churches and on excellent terms with the Orthodox patriarchate. The Anglican College Church of St. George (with a college) is the seat of the bishop in Jerusalem. It is situated outside the city to the north, beyond the Dominican convent. St. Paul's Church belongs to the Church Missionary Society (outside, north-west); there is a large Anglican school (founded by Bishop Gobat) at the south-west corner of the walls. The London Jews' Society has a church, two hospitals and several schools.

The following persons use the title of Jerusalem in some way: the Patriarch of Antioch, Alexandria, Jerusalem and all the East, residing at Alexandria or Damascus; the Melkite Patriarchal Vicar of Jerusalem residing at Jaffa; the Maronite

Jerusalem, Liturgy of.—The Rite of Jerusalem is that of Antioch. That is to say, the Liturgy that became famous as the use of the patriarchal Church of Antioch, that through the influence of that Church spread throughout Syria and Asia Minor, and was the starting-point of the development of the Byzantine rite, is itself originally the local liturgy, not of Antioch, but of Jerusalem. It is no other than the famous Liturgy of St. James. That it was actually composed by St. James the Less, as first Bishop of Jerusalem, is not now believed by any one; but two forms in it show that it was originally used as the local rite of the city of Jerusalem. There is a reference to the rite in the prayers for catechumens—"Lift up the horn of the Christians by the power of the venerable and life-giving cross" (Brightman, "Eastern Liturgies", Oxford, 1806, 37)—that is always supposed to be a reference to St. Helena's invention of the True Cross at Jeru-alem in the early fourth century. If so, this would also give an approximate date, at any rate for that prayer. A much clearer local allusion is in the Intercession, after the Epiklesis: "We offer to thee, O Lord, for thy holy places which thou hast glorified by the divine appearance of thy Christ and by the coming of thy holy Spirit" (the Eastern form of the Eastern liturgy of Palestine) "especially for holy and glorious Sion, mother of all Churches" (Sion, in Christian language, is always the local Church of Jerusalem. See Jeru-alem II) and for thy holy Catholic and Apostolic Church throughout the whole world" (sará sēstrē the eloçyménou, which means not only the whole Empire)—Brightman, op. cit., 54). This reference, then, the only one to any local Church in the whole liturgy—the fact that the Intercession, in which they pray for every kind of person and cause, begins with a prayer for the Church of Jerusalem, is a sure index of the place of origin of this prayer. We have further evidence in the catechetical discourses of St. Cyril of Jerusalem. These were held about the year 347 or 348 in the Church of the Holy Sepulchre; it is obvious that they describe the liturgy
known to his hearers there. Probst has examined the
outlines from this point of view ("Liturgie des IV
Jahrhunderts", Münster, 1883, 82-106) and describes
the liturgy that can be deduced from them. Allowing
for certain reticences, especially in the earlier instruc-
tions given to catechumens (the disciplina arcana),
and for certain slight differences, such as time always
brings about in a living rite, it is evident that Cyril's
liturgy is the one we know as that of St. James. An
obvious example one may quote Cyril's description of
the beginning of the Anaphora (corresponding to our
Preface). He mentions the celebrant's versicle,
"Let us give thanks to the Lord", and the answer of
the people, "Meet and just." He then continues:
"And when the Lord is present (in his presence) in the
sea, the sun and the moon, the stars and all creation
both rational and irrational, the angels, archangels,
powers, mights, dominations, principalities, thrones,
the many-eyed Cherubim who also say those words of
David: 'Praise the Lord with me.' We remember also
the Seraphim, whom Isaiah saw in spirit standing
around the throne of God, who with two wings cover
their faces, with two as their feet and with two fly:
who say: Holy, holy, holy, Lord of Sabaoth. We also
say these divine words of the Seraphim, so as to take
part in the hymns of the heavenly host" ("Catech.
We). This is an exact description of the be-

JERUSALEM

about the twelfth century. At present the old Rite

of Jerusalem is used, in Syria, by the Jacobites and
Uniat Syrians, and in a smaller circle by the Syriac
Maronites. The Greek version has been restored
among the Orthodox at Jerusalem for one day in the
year—31 December.

For bibliography see Antiqonene Liturgy.

Jerusalem, Synod of. See Jerusalem, subtitle IV.

Jesi (Eszna), Diocese of. In the Province of
Ancona, Italy, immediately subject to the Holy See.
The city is situated on a plateau near the Adriatic, and
is situated at the mouth of the river Esino, which flows
near the city and forms the boundary between Umbria and
Piceno. Little or nothing remains of the ancient buildings, temples,
baths, etc., still preserved in the fourteenth century.
After the Lombard invasion of 1242, in the fourteenth centu-
ry, the city was cast into the Esino in the Diocletian persecution,
and was also used (perhaps he is confused with Saint
Flannian, who was cast into the Esus or Anius). Other holy
bishops of antiquity were Saints Marius (c. 500), Cassianus (c. 647), Honestus. The relics of
these three were discovered in 1622. In 1242 the
century IV deposited the intruder Armanus and placed in
his stead the Francisca Gualtierio, an Englishman and
a friend of John of Parma, general of the order and
patron of the "Spirituals," spoken of by Salim-
borne as "bonus cantor, bonus predicador, bonus die-
ator." Bishop Severinus in 1257 laid the foundations
of the new cathedral, a magnificent structure; the old
one, now San Nicola, was outside the city, and in the
seventeenth century had fallen into ruin. Gabrielle de
Monte (1554) introduced the reforms of the Council
of Trent, which he had attended; he founded the semi-
"holy and glorious Sion" was left unaltered, it im-
plored with itself new authority as the use of the
patriarchal Church. The earliest notices of an An-
tichonene Rite that we possess show that it is this one
of St. James. There is no external evidence that the
Apostolic Constitution rite was ever used anywhere;
ily, it is not only from work itself that we deduce that it is
Syrian and Antichonene. Under its new name of
Liturgy of Antichon, St. James's Rite was used through-
out Syria, Palestine, and Asia Minor. When Jerusa-
lem became a patriarchate it kept the same use.
The Liturgy of St. James exists in Greek and Syrian.
It was probably at first used indifferently in either
language, in Greek in the Hellenized cities, in Syriac
in the country. Of the relation of these two versions
we can only say with certainty that the present Greek
version is a free one of the Syriac. The exactness
of the Greek translation from the Greek. There is good reason to
suppose that at Jerusalem, as everywhere else,
the primitive liturgical language was Greek. The schis-

Jesuit's Bark (China Bark; Cinchona; Cortex
China; Peruvian Bark), on account of its alkaloids,
is the most celebrated specific remedy for all forms
of malaria. It is obtained from several species of
Cinchona, especially C. succirubra, of the order Rubiaceae, that have
been discovered at different times and are indigenous
in the Western Andes of South America. Formerly
the bark itself, prepared in different forms, was used
as a drug, while to-day immense quantities form the
base of the production of cinchona alkaloids. The
industry is carried on principally in Germany, and the
Dutch and English cinchona plantations in Java, Cy-
JESUIT'S BARK

JESUIT'S BARK

lon, and Farther India are the chief sources whence the raw material is supplied. The history of cinchona bark, which dates back two hundred and eighty years, has greatly influenced that of pharmacy, botany, medicine, and frequent intercourse with Peruvian and tropical agriculture. Two hundred and fifty years ago the physician Bado declared that this bark had proved more precious to mankind than all the gold and silver which the Spaniards obtained from South America, and the world confirms his opinion to-day. Two hundred years ago the Italian professor of medicine Ramazzini said that the introduction of Peruvian bark would be of the same importance to medicine that the discovery of gunpowder was to the art of war, an opinion endorsed by contemporary writers on the history of medicine. Whoever has seen the ill with malaria at Lima. The countries was truth of the following observations of Weddel (d. 1877): "Few subjects in natural history have excited general interest in a higher degree than cinchona; none perhaps have hitherto merited the attention of a greater number of distinguished men."

This explains the fact that the above-named branches of science all possess an extensive literature on cinchona, which is accessible for purposes of comparison to those who care to study the subject in detail. Limited space here permits merely a sketch of the relation between the Jesuits and cinchona bark, which was rediscovered for a time in the texts of "Jesuit's Tree", "Jesuit's Powder", "Pulvis Patrum", etc., necessitating a glance into the earliest literature on cinchona, where, however, many difficulties arise. For a just appreciation of these difficulties, the following quotation from Alexander von Humboldt, which sufficiently accounts for them, should be borne in mind: "It is almost impossible to say that any Protestant physicians hatred of the Jesuits and religious intolerance lie at the bottom of the long conflict over the good or harm effected by Peruvian Bark." Many tales which were formerly widespread have proved fabulous; others are to be modified in detail; to which must be added modern discoveries of unquestioned genuineness. Scientific proof is found partly in the work of the present writer.

The Spanish Jesuit missionaries in Peru were taught the healing power of the bark by natives, between 1620 and 1630, when a Jesuit at Loja was imbued with its effects. The Jesuits then turned to the neighboring smaller, general councils of the order (three from each province) returned to their homes, taking it with them, and at the same time there is evidence of its use in the Jesuit colleges at Genoa, Lyons, Louvain, Ratisbon, etc. The remedy—connected with the name of Jesuita—very soon reached England, and "Memorius Politicus" in 1658 contains four numbers the announcement that: 'The excellent powder known by the name of Jesuita's powder' may be obtained from several London chemists." It remains to recall the fact that even in the seventeenth and eighteenth centuries the bark kept in the Jesuit pharmacies or in their colleges was considered particularly efficacious because they were better able to provide a genuine unadulterated supply. Further, that in those two centuries Jesuit missionaries took the remedy to the malaria regions of foreign countries, even reaching the court of Peking, where they cured the emperor by its means; that in Peru during the eighteenth century they urged American collectors to lay out new plantations; and in the nineteenth century they were the first to plant cinchona outside of South America.

Jesus and Mary, Sisters of the Holy Childhood of.—(1) A congregation founded in 1835 in the Diocese of Fréjus, for the education of girls and the care of the sick, with mother-house at Draguignan; government authorization was granted in 1853. (2) A congregation established at Sens, in 1838, for the work of teaching and the care of the sick in their own homes, the sisters being sent from the Troyes establishment; they received state authorization in 1853. Under the mother-house at St-Colombe-lès-Sens are over 30 filial establishments. (3) Sisters of the Holy Childhood of Jesus and Mary of Ste-Chrienne, known also as Sisters of Ste-Chrienne, founded in 1867 by Mme Anne-Victoire Ménage, née Tailleux, for the education of girls and the care of the sick poor. At the invitation of Bishop Jauffret of Mâcon, Mme Ménage and her community went from Argancy to Mâcon and took up their abode in the Abbey of St. Gelseinde, where, on 20 April, 1867, they bound themselves by vow to follow the statutes drawn up for them by the bishop. Their numbers soon increased until now (1910) there are about 1400 sisters in over 80 houses. The religious are divided into choir and lay sisters, the latter occupied with the domestic care of their various institutions, the former engaged in the works peculiar to the congregation, the direction of elementary and higher schools, industrial schools, and orphanages. The vows are made annually for ten years, after which final vows are taken. The congregation received the approval of the Holy See in 1883, and in 1899 its statutes were granted papal approbation. The sisters have houses in Lorraine, France, Austria, Belgium, England, and the United States. In the United States about 90 sisters have charge of 5 schools in the Archdiocese of Boston, with a total attendance of 2400. There is a novitiate of the congregation in Salem, Massachusetts.

F. M. Rudge.

Jesus Christ is the Word of God made flesh, Who redeemed man by His Death on the Cross, and Whose Divine mission is continued by the ministry of the Church. Without considering the numberless theological questions connected with Jesus Christ, we shall in the present article merely furnish a brief sketch of His life as it appears in the light of historical documents, premaising, however, an explanation of the two words which compose the Sacred Name.

The Greek Name Jesus is the Latin form of the Greek Ιησοῦς, which in turn is the transliteration of the Hebrew Joshua, or Josua, or again Jehosuha, meaning "Jehovah is salvation". Though the name in one form or another occurs frequently in the Old Testament, it was not borne by a person of prominence between the time of Josue, the son of Nun, and Josue, the high-priest in the days of Zorobabel. It was also the name of the author of Ecclesiasticus, of one of Christ's ancestors mentioned in the genealogy found in the Third Gospel (Luke, iii, 29), and of one of St. Paul's companions (Col., iv, 11). During the Helenizing period, Jason, a purely Greek analogon of Jesus, appears to have been adopted by many (1 Mach., vii, 17; xii, 18; xiv, 22; 2 Mach., i, 7; ii, 24; iv, 726; v, 8; 10); Acts, xvii, 5; 9; 2; Phil., i, 23; Col., iv, 1; Gal., i, 1; and John, vi, 51, 52; and the name is connected with the verb ἱεράω, to heal; it is therefore not surprising that some of the Greek Fathers applied the word Jesus with the same root (Euseb., "Dem. Ev.", IV; cf. Acts, ix, 34; x, 38). Though about the time of Christ the name Jesus appears to be fairly common (Jos., "Ant.", xix, 2, xvii, xiii, 1, xx, ix, 1; "Bel. Jud.", III, ix, 7; iv, 9; VI, v, 5; "Vit.", 22), it was imposed on our Lord by God's express order (Luke, i, 31; Matt., i, 21), to foreshow that the Child was destined to "save his people from their sins". Philo ("De Mut. Num.", 21; cf. Feifer, IV, 374) is, therefore, right when he explains Ἰησοῦς as meaning Θεοῦ σωτήρ, Jesus (Dem. Ev., IV, ad fin.; P. G., XXII, 333) gives the meaning Θεοῦ σωτήρως; while St. Cyril of Jerusalem interprets the word as equivalent to σωτήρ (Cat., x, 13; P. G., XXXIII, 677). This last writer, however, appears to agree with Clement of Alexandria in considering the Greek equivalent of the Hebrew word as equivalent to σωτήρ, or, at least, approximately so; hence, for the former centuries the Jewis had referred to their expected Deliverer as the "Anointed"; perhaps this designation alludes to Isa., i, 1, and Dan., ix, 24-26, or even to Ps., ii, 2; xix, 7; xiv, 8. Thus the term Christ or Messias was a title rather than a proper name, "the anointed of God" (Ad pietatem et regni), says Laetaniens (Inst. Div., iv, vii). The Evangelists recognize the same truth; excepting Matt., i, 18; Mark, i, i; John, i, 17; xvii, 3; ix, 23; Mark, ix, 40; Luke, ii, 23; xxiii, 2, the word Christ is always preceded by the article. Only after the Resurrection did the title gradually pass into a proper name, and the expression Jesus Christ or Christ Jesus became only one designation. But at this stage the Greeks and Romans understood little or nothing about the real import of the word "anointed"; to them it did not convey any sacred conception. Hence they substituted Christus, or "exalted"; for Christos, or "anointed", and Christians instead of "Christians". There may be an allusion to this practice in Pet. ii, 3; ὁ χριστός δὲ εἱρμός, which is rendered "that the Lord is sweet". Justin Martyr (Apol., I, 4), Clement of Alexandria (Strom., II, iv, 18), Tertullian (Adv. Gentes, 11), and Lactantius (Inst. Div., IV, vii, 5), as well as St. Jerome (In Gal., V, 22), are acquainted with the pagan substitution of Christus for Christos, and are careful to explain the new term in a favourable sense. The pagans made little or no effort to learn anything accurate about Christ and the Christians; Suetonius, for instance, ascribes the expulsion of the Jews from Rome under Octavian, to his constant instigation of sedition by Christus, whom he conceives as acting in Rome the part of a leader of insurgents. The use of the definite article before the word Christ and its gradual development into a proper name show
that the Christians identified the bearer with the promised Messiah of the Jews. He combined in his person the offices of prophet (John, vi, 14; Matt., xiii, 57; Luke, xiii, 33; xxv, 19), of king (Luke, xxiii, 2; Acts, vii, 40), and of Christ (Heb., ii, 17; etc.); he fulfilled all the Messianic predictions in a fuller and a higher sense than had been given them by the teachers of the Synagogue.

II. Sources.—The historical documents referring to Christ’s life and work may be divided into three classes: pre-Christian sources, Jewish sources, and Christian sources. We shall study the three groups in succession.

A. Pagan Sources.—The non-Christian sources for the historical truth of the Gospels are both few and polluted by hatred and prejudice. A number of rea-

sons, short of the fact that the pagan sources themselves are filled with contradictions, make their use difficult. The discussion of these sources will be left to a later section.

The pagan sources of the Field of the Gospel history was remote Galilee; the Jews were noted as a superstitious race, if we may believe Horace (Credat Judaeus Apella, I. Sat., v, 100): the God of the Jews was unknown and unintelligible to most pagans of that period; the Jews in whose midst Christianity had taken its origin were dispersed among, and hated by, all the pagan nations; the Christian religion itself was often confounded with one of the many sects that had sprung up in Judaism, and which could not excite the interest of the pagan spectator. It is at least certain that neither Jews nor Greeks, whether Jews or Christians, were in the least aware of the existence of the religion the rise of which they witnessed among them. These considerations will account for the rarity and the asperity with which Christian events are mentioned by pagan authors.

But though Gentile writers do not give us any information about Christ and the early stages of Christianity which we do not possess in the Gospels, and though their statements are made with unconcealed hatred and contempt, still they unwittingly prove the historical value of the facts related by the Evangelists.

We need not Delay over a writing entitled the “Acts of Pilate,” which must have existed in the second century (Justin, “Apol.,” I, 35), and must have been used in the pagan schools to warn boys against the belief of the Christians (Euseb., “Hist. Eccl.,” I, ix; I. V.); nor need we inquire into the question whether there ever existed any authentic census tables of Qumran (a. d. 54–119) for the statements that the Founder of the Christian religion, a deadly superstition in the eyes of the Roman, had been put to death by the procurator Pontius Pilate under the reign of Tiberius; that his religion, though suppressed for a time, broke forth again not only throughout Judea where it had originated, but even in Rome, the conflux of all the streams of wickedness and shamelessness; furthermore, that Nero had diverted from himself the suspicion of the burning of Rome by charging the Christians with the crime; that these latter were not guilty of incendiaryism, though they deserved their fate on account of their universal misanthropy. Furthermore, the author, over, describes some of the horrible torments to which Nero subjected the Christians (Ann., XV, xiv). The Roman writer confounds the Christians with the Jews, considering them as an especially abject Jewish sect; how little he investigated the historical truth of even the Jewish records may be inferred from the credulity with which he accepted the absurd legends and calumnies about the origin of the Hebrew people (Hist., V, iii, iv).

Another Roman writer who shows his acquaintance with Christ and the Christians is Suetonius (a. d. 75–160). He has been already noted for the interest he has shown in the Jewish sects (e.g., A.D., XX), and of priest
tended Christ (Chrestus) as a Roman insurgent who stirred up seditions under the reign of Claudius (a. d.

In his life of Nero he appears to regard that emperor as a public benefactor on account of his severe treatment of the Christians: “Multa sub eo et animadversa severe, et coercitam, nec minus instituta . . . afflicti Christiani, genus hominum superstitionis novae” (Nero, xvi). He consults his imperial majesty as to how to deal with the Christians living within his jurisdiction. On the one hand, their lives were confessedly innocent; no crime could be proved against them excepting their Christian belief, which appeared to the Roman as an extravagant and pernicious superstition. On the other hand, the people could not be shaken in their allegiance to Christ, whom they celebrated as their God in their early morning meetings (Ep., X, 97, 98). Christianity here appears no longer as a religion of criminals, as it does in the texts of Tacitus and Suetonius; Pliny acknowledges the high moral principles of the Christians, admires their constancy in the Faith (pernicia et inflexibilis obstinatio), which he appears to trace back to their worship of Christ (carmenque Christo, quasi Deo, dicere).

The remaining pagan witnesses are of less importance: In the second century Lucian speaks of the Christ and the Christians, as he scoffed at the pagan gods. He alludes to Christ’s death on the Cross, to His miracles, to the mutual love prevailing among the Christians (“Philopseudes,” ns. 13, 16; “De Morte Pereg.”). There are also alleged allusions to Christ in Numenius (Origen, “Contra Cels.,” I, 31), to his parables in Galerius, to the earthquake at the Crucifixion in Phegon (Origen, “Contra Cels.,” II, 14). Before the end of the second century, the λέγεται ὁ Χριστός Celsus, as quoted by Origen (Contra Cels., passim), testifies that at that time the facts related in the Gospels were generally accepted as historically true. However scanty the pagan sources of the life of Christ may be, they bear at least testimony to His existence, to His miracles, His parables, His claim to Divine worship, His death on the Cross, and to the more striking characteristics of His religion.

B. Jewish Sources.—Philo, who died after a. d. 40, is mainly important for the light he throws on certain modes of thought and phraseology found again in some of the Apostles. Eusebius (Hist. Eccl., II, iv) indeed preserves a legend that Philo had met St. Peter in Rome during his mission to the Emperor Caius; moreover, that in his work on the contemplative life he describes the life of the Christian Church in Alexandria founded by St. Mark rather than than the Jewish Essenes and Therapeutae. But it is hardly probable that Philo had heard enough of Christ and His followers to give an historical foundation to the foregoing legends.

The earliest non-Christian writer who refers to
Christ is the Jewish historian Flavius Josephus; born A. D. 37, he was a contemporary of the Apostles, and died in Rome A. D. 94. Two passages in his "Antiquities" which confirm two facts of the inspired Christian tradition. In the one he reports the murder of "John called Baptist" by Herod (Ant., XVIII, v, 2), describing also John's character and work; in the other (Ant., XX, ix, 1) he disapproves of the sentence pronounced by the high-priest Ananus against "James, brother of Jesus Who was called Christ." It is an altogether probable thing that Josephus, so well informed as Josephus must have been well acquainted with the doctrine and the history of Jesus Christ. Seeing, also, that he records events of minor importance in the history of the Jews, it would be surprising if he were to keep silence about Jesus Christ. Consideration for the priests and Pharisees did not prevent him from mentioning the judicial murders of John the Baptist and the Apostle James; his endeavour to find the fulfillment of the Messianic prophecies in Vespasian did not induce him to pass in silence over several Jewish sects, though their tenets appear to be inconsistent with the truth. It is, therefore, to be expected, therefore, a notice about Jesus Christ in Josephus.

Ant., XVIII, iii, 3, seems to satisfy this expectation: "About this time", it reads, "appeared Jesus, a wise man (if indeed it is right to call Him man; for He was called Messiah and Christ, a title which was given to such men as receive the truth with joy), and He drew to Himself many Jews (and many also of the Greeks. This was the Christ). And when Pilate, at the denunciation of those that are foremost among us, had condemned Him to the cross, those who had first loved Him did not abandon Him. (For He appeared to them alive again on the third day, the holy prophets having foretold this and countless other marvels about Him.) The tribe of Christians named after Him did not cease to this day." A testimony so important as the foregoing could not escape the notice of the critics. Their conclusions may be reduced to three headings: First, there are those who consider the whole passage as spurious. To this class belong: Eichstadt, "Flaviani de Jesus Christo testimoniis addebis", quo jure nuper defensa sit quest. I-VI, 1813-41; "Questionibus sex super Flavianum de Josepho testimonio auctarium I-IV", 1841-45; Lewits, "Questionum Flavianarum specimen", 1835; Reuss in "Nouvelle Revue de Théologie", 1859, 312 sqq.; Gerlach, "Das angebliche Zeugnis von Christo in den Schriften des Fl. Josephus", 1863; Höhne, "Uber das angebliche Zeugniss des Josephus", 1871; Schilling, "Le témoignage des Juifs", 1872; Zig, 1901, 544-49; Farrar, art. "Jesus Christ" in "Encyclopædia Britannica", 9th ed. The principal reasons for this view appear to be the following: Josephus could not represent Jesus Christ as a simple moralist, and on the other hand he could not emphasize the Messianic prophecies and expectations without offending the Roman susceptibilities; again, the above cited passage from Josephus is said to be unknown to Origen and the earlier patristic writers; its very place in the Josephan text is uncertain, since Eusebius (Hist. Eccl., II, vi) must have found it before the notice concerning Pilate, while it now stands after them. But the spuriousness of the disputed Josephan passage does not imply the historian's ignorance of the facts connected with Jesus Christ. Josephus's report of his own juvenile precocity before the Jewish teachers (Vit., 2) reminds one of the story of Christ's stay in the Temple at the age of twelve; the disputed passage, therefore, is at least like Josephus's report of his own life in Rome (Vit., 3) recalls St. Paul's shipwreck as told in the Acts; finally his arbitrary introduction of a deceit practised by the priests of Isis on a Roman lady, after the chapter containing his supposed allusion to Jesus, shows a disposition to explain away the virgin birth of Jesus and to prepare the falsehoods embodied in the later Jewish writings.

A second class of critics do not regard the whole of Josephus's account of this Beginning Christ as spurious, but they maintain the interpolation in parenthesis. To this class belong such scholars as Gieseler, "Kirchengeschichte", I, ii, 81 sqq.; Haeck, "Leben Jesu", n. 9; Ewald, "Geschichte des Volkes Israel", V, 181-86; Paret in Herzog, "Realencyc.", s, 27-29; Wycliffe, "Juden und christliche hebräischen handschriften", III, 2nd ed., 623 sqq.; Müller, "Christi und Josephs Fl.", Innsbruck, 1895; Reinhart, "Josephe sur Jesus in "Revue des Etudes juives", 1897, 1-18; "Revue biblique", 1898, 150-52. The reasons assigned for this opinion may be reduced to the following two: Josephus must have mentioned Jesus, but he cannot have recognized Him as the Christ; hence the present Josephan text must be genuine, part must be interpolated. Again, the same conclusion follows from the fact that Origen knew a Josephan text about Jesus, but was not acquainted with our present reading; for, according to the great Alexandrian doctor, Josephus did not believe that Jesus was the Christ. Then again, the Christ considered by the Romans as the founder of the Christian religion.

The third class of scholars believe that the whole passage concerning Jesus, as it is found to-day in Josephus, is genuine. Among the authors belonging to this class we may mention: Bretschneider, "Capita theologie Judaeorum dogmatica e Flavii Josephi scripta collecta", 1812, 59-66; Böhmer, "Ueber das Flavius Josephus Zeugniss von Christo", 1823; Schönfeld, "Flavius Josephus de Jesu Christo testatus", 1840; Mayaud, "Le témoignage de Josephe", Strasbourg, 1855; Langen in "Tübingner theolog. Quartalschrift", 1865, i; Danko, "Historia revelationis divinae N. T.", I, 1867, 308-14; Daubus, "Pro testimonio Fl. Josephi de Jesu Christo", London, 1706; "Studien und Kritiken", 1856, 840; Kneller, "Fl. Josephus über Jesus Christus" in "Stimmen aus Maria-Laach", 1897, 1-19; "Historia revelationis divinae N. T.", 1874. The main arguments for the genuineness of the Josephan passage are the following: First, all codices or manuscripts of Josephus's work contain the text in question; to maintain the spuriousness of the text, we must suppose that all the copies of Josephus were in the hands of Christians, and were changed in the same way. It is, however, true that neither Tertullian nor St. Justin makes use of Josephus's passage concerning Jesus; but this silence is probably due to the contempt with which the contemporary Jews regarded Josephus, and to the relatively little authority he had among the Roman readers. Writers of the age of Tertullian and Justin could appeal to living witnesses of the Apostolic tradition. Third, Eusebius ("Hist. Eccl.", I, xi; cf. "Dem. Ev.", III, vi), Sozomen (Hist. Eccl., I, i), Niceph. (Hist. Eccl., I, 39), Isidore of Pelusium (Ep. IV, 225), St. Jerome (Catal. script. eccles., xiii), Ambrose, Cassiodorus, etc., appeal to the testimony of Josephus; there must have been no doubt as to its authenticity at the time of these illustrious writers. Fourth, the complete silence of Josephus as to Jesus would have been a more eloquent testimony than we possess in his present text; this latter contains no statement incompatible with its Josephan authorship: the Roman reader needed no information that Jesus was the founder of the Christian religion; the wonderful works of Jesus and His Resurrection from the dead were so incessantly urged by the Christians that without these attributes the Josephan Jesus would hardly have been acknowledged as the founder of Christianity. All this
miraculous power, His claims to be God, His betrayal, His institution of the Holy Eucharist, His passion, crucifixion, burial, resurrection. His repeated appearances (Rom., i, 5, 4; v; xi, 11; vii, 3, 3, 32; ix, 5; xv, 8; Gal., ii, 17; iii, 19; iv, 4; v, 21; I Cor., vi, 9; vi, 10; xi, 28; xv, 39; passim; II Cor., iii, 17; iv, 4, 11; XIII, 12; xii, 4; etc.).

However important the four great Epistles may be, the Gospels are still more so. Not that any one of them offers a complete biography of Jesus, but they account for the origin of Christianity by the life of its Founder. Questions like the authenticity of the Gospels, the relation between the Synoptic Gospels and the Fourth, the Synoptic problem, must be studied in the articles referring to these respective subjects.

III. CHRONOLOGY.—What has been said proves not merely the existence of Jesus Christ, but also the historicity of the main incidents of His life. In the following paragraphs we shall endeavour to establish their absolute and relative chronology, i.e. we shall show first how certain facts connected with the history of Jesus Christ fit in with the course of universal history, and secondly how the rest of the life of Jesus must be arranged according to the inter-relation of its single elements.

A. Absolute Chronology.—The incidents whose absolute chronology may be determined with more or less probability are the year of Christ's nativity, the beginning of His public life, and of His death. As we cannot fully examine the data entering into these several problems, the reader ought to compare what has been said on these points in the article CHRONOLOGY, BIBLICAL.

(1) The Nativity.—St. Matthew (ii, 1) tells us that Jesus was born "in the days of king Herod." Josephus (Ant., XVII, vii, 4) informs us that Herod died after ruling thirty-four years de facto, thirty-seven years de jure. Now Herod was made rightful King of Judæa a. u. c. 714, while he began his actual rule after taking Jerusalem a. u. c. 717. As the Jews reckoned their years from Nisan to Nisan, and counted fractional parts for entire years, the above data will place the death of Herod in a. u. c. 749, 750, or 751. Again, Josephus tells us that an eclipse of the moon occurred not long before Herod's death; such an eclipse occurred from 12 to 13 March, a. u. c. 750, so that Herod must have died before the Passover of that year which fell on 12 April (Josephus, Ant., XVII, vi, 4; vii, 4). As Herod killed the children of two years old in order to destroy the new-born King of the Jews, we are led to believe that Jesus may have been born a. u. c. 747, 748, or 749. The enrolment under Cyrenius mentioned by St. Luke in connexion with the nativity of Jesus Christ, and the remarkable astronomical conjunction of Mars, Jupiter, and Saturn in Pisces, in the spring of a. u. c. 748, will not lead us to any more definite result.

(2) Beginning of the Public Ministry.—The date of the beginning of Christ's ministry may be calculated from three different data found respectively in Luke, x, 19; xii, 23; Josephus, "Banaides" I, 18; and Mark, iv, 12; vi, 1; and Luke, iii, 1. The first of these passages reads: "And Jesus himself was beginning about the age of thirty years." The phrase "was beginning" does not qualify the following expression "about the age of thirty years," but rather indicates the commencement of the public life. As we have found that the birth of Jesus falls within the period 747-749 a. u. c., His public life must begin about 777-779 a. u. c. Second, when, shortly before the first Pasch of His public life, Jesus had cast the buyers and sellers out of the Temple, the Jews said: "Six and forty years was this temple in building, and didst thou build it in twenty years, according to the testimony of Josephus (loc. cit.), the building of the Temple began in the fifteenth year of Herod's actual reign or in the eighteenth of his reign de jure, i.e. 732 a. u. c.; hence, adding the forty-six
years of actual building, the Pasch of Christ's first year of public life must have fallen in 778 A. U. C. Third, the Gospel of St. Luke (iii, 1) assigns the beginning of St. John the Baptist's mission to the "fifteenth year of the reign of Tiberius Caesar Augustus," while the successor of Tiberius, died 19 Aug., 767 A. U. C., so that the fifteenth year of Tiberius' independent reign is 782 A. U. C.; but then Tiberius began to be the associate of Augustus in A. U. C. 784, so that the fifteenth year reckoned from this date falls in A. U. C. 778. Jesus Christ's public life began a few months later, i.e. about A. U. C. 779. (3) The Year of the Death of Christ.—According to the Evangelists, Jesus suffered under the high-priest Caiaphas (A. U. C. 772-90, or A. D. 18-36), during the governorship of Pontius Pilate (A. U. C. 750-90). But this leaves the time rather uncertain. We have already seen that the fifteenth year of Tiberius is either 778 or 782, according to its computation from the beginning of Tiberius' associate or sole reign; the consulship of the Gemini (Fufus and Rubellius) fell in A. U. C. 782; the forty-second year before the destruction of Jerusalem is in A. D. 29, as being twelve years before the preaching of the Gospel to the Gentiles brings us to the same year, A. D. 29, or A. U. C. 782, since the conversion of Cornelius, which marks the opening of the Gentile missions, fell probably in A. D. 40 or 41. (4) Jesus died on Friday, the fifteenth day of Nisan. That Jesus died on Friday is clearly stated by Mark (xv, 42), Luke (xxiii, 54), and John (xix, 31). The few writers who assign another day for Christ's death are practically lost in the multitude of authorities who place it on Friday. What is more, they do not even agree among themselves: Epiphanius, c. g., places the Crucifixion on Tuesday; Lactantius, on Saturday; Westcott, on Thursday; Cassiodorus and Gregory of Tours, not on Friday. The first three Evangelists are equally clear about the date of the Crucifixion. They place the Last Supper on the fourteenth day of Nisan, as may be seen from Matt., xxvi, 12-17; Mark, 14-17; Luke, xxi, 8-16; John, xiii, 1-27. Nor can there be any doubt about St. John's agreement with the Synoptic Evangelists on the question of the Last Supper and the Crucifixion. The Supper was held "before the festival day of the pasch" (John, xiii, 1), i. e. on 14 Nisan, since the sacrificial day was computed according to the Roman method (Javino, 123 sqq., 139 sqq.). Again, some disciples thought that Judas left the supper table because Jesus had said to him: "Buy those things which we have need of for the festival day: or that he should give something to the poor" (John, xiii, 29). If the Supper had been held on 13 Nisan, the belief of the disciples could hardly be understood, since Judas might have made his purchases and distributed his alms on 14 Nisan; there would have been no need for his rushing into the city in the middle of the night. On the day of Christ's Crucifixion the Jews "went not into the hall, that they might not be defiled, but that they might eat the pasch" (John, xviii, 28). The pasch which the Jews wished to eat could not have been the paschal lamb, which was eaten on 14 Nisan, for the pollution contracted by entering the hall would have ceased at sundown, so that it would not have prevented them from sharing in the paschal supper. The pasch which Jesus must have been the sacrificial offerings (Chaqighah), which were called also pasch and were eaten on 15 Nisan. Hence this passage places the death of Jesus Christ on the fifteenth day of Nisan. Again, Jesus is said to have suffered and died on the "pasch of the pasch," or simply on the "pasch" (John, xix, 14, 31); as "pasch" meant Friday, the expression "pasch of the pasch" denotes the Friday on which the pasch happened to fall, not the day following it the pasch on which Jesus died is called "a great sabbath day" (John, xix, 31), either to denote its occurrence in the paschal week or to distinguish it from the preceding pasch, or day of minor rest. B. Relative Chronology.—No student of the life of Jesus will question the existence of its principal divisions: infancy, hidden life, public life, passion, glory. But the order of events in the single divisions is not always clear beyond dispute. (1) The Infancy of Jesus.—The history of the infancy, for instance, is recorded only in the First Gospel and it is still the "Tradition of the Evangelists." It is written with five pictures: St. Matthew describes the birth of Jesus, theadoration of the Magi, the flight into Egypt, the slaughter of the Holy Innocents, and the return to Nazareth. St. Luke gives a sketch of the birth, of the adoration of the shepherds, of the circumcision, of the purification of the Virgin, and of the return to Nazareth. The two Evangelists agree in the first and the last of these two series of incidents (moreover, all scholars place the birth, the adoration of the shepherds, and the circumcision before the Magi), but how we are to arrange the intervening three events related by St. Matthew with the order given by St. Luke is a matter of a few of the many ways in which the chronological sequence of these facts has been arranged. (a) The birth, the adoration of the shepherds, the circumcision, the adoration of the Magi, the flight into Egypt, the slaughter of the Innocents, the purification, the return to Nazareth; this implies that either the purification was delayed beyond the fortieth day, which seems to contradict Luke, ii, 22 sqq., or that Jesus was born shortly before Herod's death, so that the Holy Family could return from Egypt within forty days after the birth of Jesus. Tradition does not seem to favour this speedy return. (b) The birth, the adoration of the shepherds, the circumcision, the adoration of the Magi, the purification, the flight into Egypt, the slaughter of the Innocents, the return to Nazareth. According to this order the Magi either arrived a few days before the purification or they came on 6 Jan., but in neither case can we understand how the Holy Family could have offered the sacrifice of the poor, before receiving the offerings of the Magi. Moreover, the first Evangelist intimates that the angel appeared to St. Joseph soon after the departure of the Magi, and it is not at all probable that Herod should have waited long before informing counsel what the Holy Family should be aking. The difficulties are not overcome by placing the adoration of the Magi on the day before the purification; it would be more unlikely in that case that the Holy Family should offer the sacrifice of the poor. (c) As Luke, ii, 39, appears to exclude the possibility of placing the birth before the presentation and the return to Nazareth, there are interpreters who have located the advent of the wise men, the flight into Egypt, the slaughter of the Innocents, and the return from Egypt after the events as told in St. Luke. They agree in the opinion that the Holy Family returned to Nazareth after the purification, and then left Nazareth in order to make their home in Bethlehem. Eusebius, Epiphanius, and some other ancient writers are willing to place the adoration of the Magi about two years after Christ's birth: Paprock and his followers allow about a year and a half between his birth and the advent of the Magi; while Patriarch agrees with them who fix the advent of the Magi at about two weeks after the purification. The text of Matt., ii, 1, 2, hardly permits an interval of more than a year between the purification and the coming of the wise men; Patriarch's opinion
appears to satisfy all the data furnished by the Gospels, while it does not contradict the particulars added by tradition.

(2) The Hidden Life of Jesus.—It was in the seclusion of his youth that Jesus spent the greatest part of His earthly life. The inspired records are very reticent about this period: Luke, ii, 40–52; Mark, vi, 3; John, vii, 15; 12, 15, are about the only passages which refer to the hidden life. Some of them give us a general view of Christ’s life: “The child grew, and waxed strong in spirit, and was filled with wisdom: the grace of God was with him” (Luke ii, 40) is the brief summary of the years following the return of the Holy Family after the ceremonial purification in the Temple. “Jesus advanced in wisdom, and age, and grace with God and men” (Luke ii, 52), and He was subject to them (John i, 34). In the inspired outline of Christ’s life in Matthew after He had been “about thirty years of age” (Matt. i, 25) when the age of twelve. “When He was twelve years old” Jesus accompanied His parents to Jerusalem, “according to the custom of the feast” (Luke ii, 42). When they returned, the child Jesus remained in Jerusalem; and His parents knew not it. After three days, they found Him in the Temple, sitting in the midst of the doctors, hearing them and asking them questions. “In the Temple” (John, ii, 19) that occasion Jesus spoke the only words that have come down from the period of His hidden life: “How is it that you sought me? Did you not know that I must be about my father’s business?” The teachers were astonished at His understanding. Theologians have been wont to ask: “How doth this man know letters, having never learned?” The same question is asked by the people of Nazareth, who add, “Is not this the carpenter?” St. Justin is authority for the statement that Jesus specially made “ploughs and yokes” (Contra Tryph., 58). Though it is not certain that at the time of Jesus elementary schools existed in the Jewish villages, it may be inferred from the Gospels that Jesus knew how to read (Luke, iv, 16) and write (John, vii, 5). At an early age He must have learned the so-called Septuagint (Deut., ii, 4), and the Halil, or Ps. cxix–cxlv (Hebr.). He must have been familiar with the other parts of the Scriptures too, especially the Psalms and the Prophetic Books, as He constantly refers to them in His public life.

It is also asserted that Palestine at the time of Jesus Christ was practically bilingual, so that Christ must have spoken Aramaic and Greek; the indications are that He was acquainted with Hebrew and Latin are rather slight. The public teaching of Jesus shows that He was a close observer of the sights and sounds of nature, and of the habits of all classes of men. For these are the usual sources of His illustrations.

To conclude, the hidden life of Jesus extending through thirty years is far different from what one should have expected in the case of a Person Who is adored by His followers as their God and revered as their Saviour; this is an indirect proof for the credibility of the Gospel story.

(3) The Public Life of Jesus.—The chronology of the Gospel is often a number of problems to the interpreter; we shall touch upon only two, the duration of the public life, and the successive journeys it contains.

(a) Duration of the Public Life.—There are two extreme views as to the length of the ministry of Jesus: St. Irenaeus (Contra Haer., II, xxii, 3–4) appears to suggest a period of fifteen years; the prophetic phrases, “the year of recompenses”, and “the year of my redemption” (Is., xxvi, 8; lxxii, 4), appear to have induced Clement of Alexandria, Julius Africanus, Philastrius, Hilariou, and two or three other patristic authorities, to assign that period, viz. one year, to the public life. This latter opinion has found advocates among some recent students: von Soden, for instance, defends it in Cheyne’s “Encyclopedia Biblica”. But the text of the Gospels demands a more extensive duration. St. John’s Gospel distinctly mentions three distinct paschs in the history of Christ’s ministry (ii, 13; vi, 4; xi, 55). The first of these occurs shortly after the baptism of Jesus, the last coincides with His Passion, so that at least two years must have intervened between the two events. It is impossible to assign room for the passover mentioned in vi, 4. Westcott and Hort omit the expression “the passover” in vi, 4, to compress the ministry of Jesus within the space of one year; but all the manuscripts, the versions, and nearly all the Fathers testify for the reading Ἰησοῦς ἦν ἐγκεκριμένος γιατί ἦταν ἐκ τοῦ πρῶτου πάσχαν. The feast day of the Jews, was near at hand.” Thus far therefore everything tends to favour the view of those patristic writers and more recent commentators who extend the period of Christ’s ministry a little over two years.

But a comparison of St. John’s Gospel with the Synoptic Evangelists seems to introduce another passover, indicated in the Fourth Gospel, into Christ’s public life. John, iv, 45, relates the return of Jesus into Galilee after the first passover of His public life spent in Jerusalem, and the same event is told by Mark, i, 14, and Luke, iv, 14. Again, the passover mentioned in John, vi, 4, has its parallel in the “green grass of” Mark, vi, 39, and in the explicit reference to the meal and to the passover in Luke, ix, 12 sqq. But the plucking of ears mentioned in Mark, ii, 23, and Luke, vi, 1, implies another paschal season intervening between those expressly mentioned in John, ii, 12, and vi, 4. This shows that the public life of Jesus must have extended over four paschs, so that it lasted little less than a year and a half a few months. Though the Fourth Gospel does not indicate this fourth passover as clearly as the other three, it is not wholly silent on the question. The “festival day of the Jews” mentioned in John, vi, 1, has been identified with the Feast of Pentecost, the Feast of Tabernacles, the Feast of Expiation, the Feast of the New Moon, the Feast of Purim, the Feast of Dedication, by various commentators; others openly confess that they cannot determine to which of the Jewish feasts this festival day refers. Nearly all difficulties will disappear if the festival day be regarded as the pasch, as both the text (ἐπέρσυ) and John, iv, 36 seem to demand (cf. Dublin Review, XXXIII, 351 sqq.).

(b) Journeys of Jesus during His Public Life.—The journeys Jesus made during His public life may be grouped under nine heads: the first six were mainly performed in Galilee and had Capharnaum for their central point; the last three by Jesus on His return to Galilee, without any pronounced central point. We cannot enter into the disputed questions connected with the single incidents of the various groups.

(i) First Journey.—Dec., a. u. c. 778–Spring, 779. (Cf. John, i, ii; Matt., iii, iv; Mark, i; Luke, iii, iv.) Jesus abandons His hidden life in Nazareth, and goes to Bethania across the Jordan, where He is baptised by John and receives the Baptist’s first testimony to His Divine mission. He then withdraws into the desert of Judea, where He fasts for forty days and is tempted by the devil. After this He dwells in the neighbourhood of the Baptist, and receives the latter’s second and third testimony: here too He wins His first disciples, with whom He journeys to the wedding feast at Cana in Galilee, where He performs His first public miracle. Finally He transfers His residence, so far as there can be question of a residence in His public life, to Capharnaum, one of the principal thoroughfares of commerce and travel in Galilee.

(ii) Second Journey.—Passover, a. u. c. 779–about Pentecost, 780. (Cf. John, i–v; Mark, i–iii; Luke, iv–vii; Matt., iv–ix.) Jesus goes from Capharnaum to Jerusalem for the Feast of the Passover; here He expels the buyers and sellers from the Temple, and is questioned by the Jewish authorities. Many believed in Jesus, and Nicodemus came to converse with Him during the night. After the festival days He remained in Judea till about the following December, during which period He received the fourth testimony from John.
who was baptizing at Enon (A. V., Eno). When the Baptist had been imprisoned in Machaerus, Jesus immediately went to Galilee, staying by way of Jericho. The Samaritan woman at Jacob's well near Sichar; He delayed two days in this place, and many believed in Him. Soon after His return into Galilee we find Jesus again in Cana, where He heard the prayer of the ruler who pleaded for the recovery of his dying son in Capernaum. The rejection of Jesus by the people of Nazareth, whether at this time as St. Luke intimates, or at a later period, as St. Mark seems to demand, or again both now and about eight months later, is an exegetical problem we cannot solve here. At any rate, shortly afterwards Jesus is most actively engaged in Galilee, in teaching and in restoring among others Peter's mother-in-law and a demoniac. On this occasion He called Peter and Andrew, James and John. Then followed a missionary tour through Galilee during which Jesus cured a leper; soon He again taught in Capernaum, and was surrounded by such a multitude that a man sick of the palsy had to be let down through the roof in order to reach the Sacred Presence. After calling Matthew to the Apostleship, He went to Jerusalem for the second passover occurring during His public life, and it was on this occasion that He healed the man who had been sick for thirty-eight years from the unguent pool at Jerusalem. The charge of violating the Sabbath and Christ's answer were the natural effects of the miracle. The same charge is repeated shortly after the passover; Jesus had returned to Galilee, and the disciples plucked some ripe ears in the corn fields. The question became more acute in the immediate future; Jesus had returned to Capernaum, and there healed on the Sabbath day a man who had a withered hand. The Pharisees now make common cause with the Herodians in order to "destroy him". Jesus withdraws first to the Sea of Galilee, where He teaches and performs numerous miracles. He then retires to the region of the Gerasenes, where He prayer during the night, chooses His Twelve Apostles in the morning, and preaches the Sermon on the Mount. He is brought back to Capernaum by the prayers of the centurion who asks and obtains the cure of his servant.

(iii) Third Journey.—About Pentecost, A. U. C. 780—Autumn, 780. (Cf. Luke, vii, viii; Mark, iii, iv; Matt., iv, viii, ix, xii, xiii.) Jesus makes another missionary tour through Galilee; He resuscitates the son of the widow at Nain, and shortly afterwards receives the messengers sent by John from his prison in Machaerus. Then, with the news of the resuscitation of the dead, He rests at table in Magdala or perhaps in Capernaum; for the rest of His missionary tour Jesus is followed by a band of pious women who minister to the wants of the Apostles. After returning to Capernaum, Jesus expels the mute devil, is charged by the Pharisees with casting out devils by the power of devils, and encounters the remonstrances of His kinsmen. Withdrawing to the sea, He preaches what may be called the "Lake Sermon", consisting of seven parables.

(v) Fifth Journey.—Spring, A. U. C. 781. (Cf. John, vi; Luke, ix; Mark, vi; and Matt., xiv.) Jesus invites the Apostles, tired out from their missionary labours, to come with Him to the wilderness for rest. But, instead of finding the desired solitude, they are met by multitudes of people who had preceded them by land or by boat, and who were eager for instruction. Jesus taught them throughout the day, and towards evening did not wish to dismiss them hungry. On the other hand, there were only five loaves and two fishes at the disposal of Jesus; after His blessing, these scanty supplies satisfied the hunger of five thousand men, besides women and children, and the remnants filled twelve baskets of fragments. Jesus sent the Apostles back to their boats, and escaped across the lake in a boat. Jesus, after appointing Peter the first among the Apostles, went up the mountain where He prayed till far into the night. Meanwhile the Apostles were facing a contrary wind till the fourth watch in the morning, when they saw Jesus walking upon the waters. The Apostles first fear, and then recognize Jesus; Peter walks upon the water as long as his confidence lasts; the storm ceases when Jesus has entered the boat. The next day brings Jesus and His Apostles to Capernaum, where He speaks to the assembly about the Bread of Life and promises the Holy Eucharist, with the result that some of His followers leave Him, while the faith of the multitudes is increased. (Cf. John, vii, viii; Mark, vii, viii; Luke, ix, x; iv, xii, xiii.)

(vi) Sixth Journey.—About May, A. U. C. 781—Sept., 781. (Cf. Lk., ix; Mk., vii, ix; Matt., ix, viii; John, vii.) It may be owing to the enmity stirred up against Jesus by His Eucharistic discourse in Capernaum that He began now a more extensive missionary tour than He had made in the preceding years of His public life. Passing through the country of Genesareth, He expressed His disapproval of the Pharisaic practices of legal purity. Within the borders of Tyre and Sidon He exorcised the daughter of the Syrophoenician woman. From here Jesus travelled first towards the region of the Gerasenes, where He was received with enthusiasm, then he crossed through the northern part of Decapolis, probably along the foot of the Lebanon, till He came to the eastern part of Galilee. While in Decapolis Jesus healed a deaf-mute, employing a ceremonial more elaborate than He had used at any of His previous miracles; in the eastern part of Galilee, probably not far from Dalmanutha and Magedan, He fed four thousand men, besides children and women, with seven loaves and a few little fishes, the remaining fragments filling seven baskets. The multitudes had listened for three days to the teaching of Jesus previously to the miracle. In the course of the many miracles which He worked on this journey, on the blind, the dumb, the lame, the maimed, and on many others, the Pharisees and Sadducees asked Him for a sign from heaven, tempting Him. He promised them the sign of Jonas the Prophet. After Jesus and the Apostles had crossed the lake, He warned them to beware of the Pharisees; they then passed through Bethsaida Julia where Jesus gave sight to a blind man. Next we find Jesus in the confines of Cesarea Philippi, where Peter professes his faith in Christ, the Son of the living God, and in his turn receives from Jesus the promise of the power of the keys. Jesus here predicts His suffering and death, and about a week later is transfigured before Peter, James, and John, probably on the top of Mt. Thabor.
On descending from the mountain, Jesus exorcizes the unclean devil whom His disciples had not been able to expel. Bending his way towards Capharnaum, Jesus predicts His Passion for the second time, and in the company pays the tribute-money for Himself and Peter. This occasioned the discussion as to the greater in the kingdom of heaven, and the allied discourses. Finally, Jesus promises the disciples the grace of the Holy Spirit, to go publicly to the Feast of Tabernacles in Jerusalem.

(vii) Seventh Journey.—Sept., A. u. c. 781-Dec., 781. (Cf. Luke, ix.-xxii; Mark, x.; Matt., vi., vii., viii., x., xi., xii., xxiv.; John, vii.-x.) Jesus now "steadfastly set His face to go to Jerusalem", and, as the Samaritans refused hospitality, He journeyed to the Jordan. While still in Galilee, He refused the discipleship of several half-hearted candidates, and about the same time He sent out seventy-two disciples, two by two, before His face into every city and place whither He Himself was to come. Probably in the lower part of Peræa, the seventy-two returned with joy, rejoicing in the miraculous power that had been exercised by them. It must have been in the vicinity of Jericho that Jesus answered the lawyer's question, "Who is my neighbour?" by the parable of the Good Samaritan. Next Jesus was received in the hospitable house of Simon the Leper at Bethany. Mark records Mary to have chosen the better part. From Bethania Jesus went to Jerusalem for the Feast of Tabernacles, where He became involved in discussions with the Jews. The Scribes and Pharisees endeavoured to catch Him in the sentence which they asked Him to pronounce in the case of the woman taken in adultery. When Jesus had avoided this snare, He continued His discussions with the hostile Jews. Their enmity was intensified because Jesus restored sight to a blind man on the Sabbath day. Jesus appears to have ended His stay in Jerusalem with the beautiful discourse concerning the harems of the East, in which He teaches His Apostles the Our Father, probably somewhere on Mt. Olivet. On a subsequent missionary tour through Judea and Peræa He heals the dumb and blind deaf-mutes, defends Himself against the charges of the Pharisees, and reproves their hypocrisy. On the same journey Jesus warned against hypocrisy, covetousness, worldly care; He exhorted to watchfulness, patience under contradictions, and to penance. About this time, too, He healed the woman who had the spirit of infirmity.

(viii) Eighth Journey.—Dec., A. u. c. 781-Feb., 782. (Cf. Mark, vii.-x.; John, x., xi.) The Feast of Dedication brought Jesus again to Jerusalem, and occasioned another discussion with the Jews. This is followed by another missionary tour through Peræa, during which Jesus explained a number of important points of doctrine: the number of the elect, the choice of one's place at table, the guests to be invited, the parable of the great supper of resoluteness in the service of God, the parables of the hundred sheep, the lost goat, and the prodigal son, of the unjust steward, of Dives and Lazarus, of the unmerciful servant, besides the duty of fraternal correction, and the efficacy of faith. During this period, too, the Pharisees attempted to frighten Jesus with the menace of Herod's persecution; on His part, Jesus healed a man who had the dropsey, on a Sabbath day, while at table in the house of a certain prince of the Pharisees. Finally, Mary and Martha send messengers to Jesus, asking Him to come and cure their brother Lazarus; Jesus went after two days, and Mary and Martha were sorry when several were laid in the grave. The Jews are exasperated over this miracle, and they decree that Jesus must die for the people. Hence He withdrew "into a country near the desert, unto a city that is called Ephraim".

(ix) Ninth Journey.—Feb., A. u. c. 782-Passover, 782. (Cf. Mark, x. xvi.; John, xi., xii.) This last journey took Jesus from Ephraim northward through Samaria, then eastward along the border of Galilee into Peræa, then southward through Peræa, westward across the Jordan, through Jericho, Bethania on Mt. Olivet, Bethphage, and finally to Jerusalem. While in the most northern part of the journey, He cured ten lepers; a little later, He answered the questions raised by the Pharisees concerning the kingdom of God. Then He gave seven prayers for the propitious of the unjust judge; here too belong the parable of the Pharisee and the publican, the discourse on marriage, on the attitude of the Church towards children, on the right use of riches as illustrated by the story of the rich young ruler, and the parable of the labourers in the vineyard. After the visit to Jerusalem, He predicted His Passion for the third time; James and John betray their ambition, but they are taught the true standard of greatness in the Church. At Jericho Jesus heals two blind men, and receives the repentance of Zacchæus the publican; here He proposed also the parable of the pounds entrusted to the servants by their master. Six days before the passch we find Jesus at Bethania on Mt. Olivet, as the guest of Simon the leper; Mary anoints His feet, and the disciples at the instigation of Judas are indignant at this seeming waste of ointment. A great multitude of people is at the feast, the Pharisees wish to know if Lazarus too. On the following day Jesus solemnly entered Jerusalem and was received by the Hosanna cries of all classes of people. In the afternoon He met a delegation of Gentiles in the court of the Temple. On Monday Jesus curses the barren fig tree, and during the morning He drives the buyers and sellers from the Temple. On Tuesday the wonder of the disciples at the sudden withering of the fig tree provokes their Master's instruction on the efficacy of faith; Jesus answers the enemies' question as to His authority; He teaches the Pharisees the parable of the wicked husbandmen, and of the marriage feast. Next follows a triple snare: the politicians ask whether it is lawful to pay tribute to Caesar; the scoffers inquire whose wife a woman, who has had several lawful husbands, will be after the resurrection; the Jewish theologians propose the question: Which is the first commandment, the great commandment in the law? Then Jesus proposes His last question to the Jews: "What think you of Christ? whose son is he?" This is followed by the eightfold wo against the Scribes and Pharisees, and by the denunciation of Jerusalem. Jesus ends these last words of Christ with expressions of praise for the poor widow who had made an offering of two mites in spite of her poverty. Jesus ended this day by uttering the prophecies concerning the destruction of Jerusalem, His second coming, and the future judgment; these predictions are interrupted by the parable of the ten virgins, and of the talents. On Wednesday Jesus again predicted His Passion; probably it was on the same day that Judas made his final agreement with the Jews to betray Jesus.

(4) The Passion of Jesus. The history of Christ's Passion comprises three parts: the preparation for the Passion, the trial of Jesus, and His death.

(a) Preparation for the Passion.—Jesus prepares His disciples for the Passion, He prepares Himself for the ordeal, and His enemies prepare themselves for the destruction of Jesus.

(b) Preparation of the Apostles.—Jesus prepares His Apostles for the Passion by the eating of the paschal lamb, the institution of the Holy Eucharist, the concomitant ceremonies, and His lengthy discourses held during and after the Last Supper. Special mention should be made of the prediction of the Passion, and of the betrayal by one of the Apostles, the denial by Peter, James, and John; they are prepared in a more particular manner by witnessing the sorrow of Jesus on Mt. Olivet.
(ii) Preparation of Jesus.—Jesus must have found an indirect preparation for His Passion in all He did and said to strengthen His Apostles. But the preparation that was peculiarly His own consisted in His parable in the garden of Gethsemane, where the angel came to strengthen Him. The sleep of His favoured Apostles during the hours of His bitter struggle must have prepared Him too for the complete abandonment He was soon to experience.

(iii) Preparation of the Enemies.—Judas leaves the Master during the Last Supper. The chief priests and Pharisees hastily collect a detachment of the Roman cohort stationed in the castle of Antonia, of the Jewish temple-watch, and of the officials of the Temple. To these are added a number of the servants and dependants of the high-priest, and a miscellaneous multitude of followers with lances and torches, with swy frothing clubs, who were to follow the leadership of Judas. They took Christ, bound Him, and led Him to the high-priest's house.

(b) Trial of Jesus.—Jesus was tried first before an ecclesiastical court, and then before a civil tribunal.

(i) Before the Ecclesiastical Court.—The ecclesiastical trial includes Christ's appearance before Annas, before Caiphas, and again before Caiphas, who appears to have acted in each case as head of the Sanhedrin. The Jewish court found Jesus guilty of blasphemy, and condemned Him to death, though its proceedings are reported in only one source, Matthew's view. During the trial took place Peter's triple denial of Jesus; Jesus is insulted and mocked, especially between the second and third session; and after His final condemnation Judas despaired and met his tragic death.

(ii) Before the Civil Court.—The civil trial, too, comprised three sessions, the first before Pilate, the second before Herod, and the third again before Pilate. Jesus is not charged with blasphemy before the court of Pilate, but with stirring up the people, forbidding to give tribute to Caesar, and claiming to be Christ the king. Pilate ignores the first two charges; the third he finds harmless when he sees that Jesus does not claim royalty in the Roman sense of the word. But in order not to incur the odium of the Jewish leaders, the Roman governor sends his prisoner to Herod. As Jesus did not humour the curiosity of Herod, He was mocked and set at naught by the Tetrarch of Galilee and then sent back to Pilate. The Roman procurator declares the prisoner innocent for the second time, but, instead of setting Him free, gives the people the alternative to choose either Jesus or Barabbas for their paschal freedom. Pilate pronounced Jesus innocent for the third time with the more solemn ceremony of washing his hands, as he had recourse to a third scheme of ridding himself of the burden of pronouncing an unjust sentence against his prisoner. He had the prisoner scourged, thus annihilating, as far as human means could do so, any hope that Jesus could ever attain to the royal dignity. But even this device miscarried, and Pilate allowed his political ambition to prevail over his sense of evident justice; he condemned Jesus to be crucified.

(c) Death of Jesus.—Jesus carried His Cross to the place of execution. Simon of Cyrene is forced to assist Him in bearing the heavy burden. On the way Jesus addresses His last words to the weeping women who sympathized with His suffering. He is nailed to the Cross, His garments are divided, and an inscription is placed over His head. While His enemies mock Him, He pronounces the well-known "Seven Words". Of the two robbers crucified with Jesus, one was converted at the other's cross. The sun was darkened, and Jesus surrendered His soul into the hands of His Father. The veil of the Temple was rent in two, the earth quaked, the rocks were riven, and many bodies of the saints that slept arose and appeared to many. The Roman centurion testified that Jesus was indeed the Son of God. The Heart of Jesus was pierced so as to make sure of His death. The Sacred Body was taken from the Cross by Joseph of Arimathea and Nicodemus, and was buried in the new sepulchre the Sabbath day prepared for Jesus. But Jesus rose early the first day of the week, and there was a great earthquake, and an angel descended from heaven, and rolled back the stone. The guards were struck with terror, and became as dead men. On arriving at the sepulchre the Holy Women were told by an angel that the Lord had risen from the dead. Peter and John hasten to the sepulchre, and find everything as Magdalen has reported. Magdalen too returns, and, while weeping at the sepulchre, is approached by the risen Saviour Who appears to her and speaks with her. On the same day Jesus appeared to the other Holy Women, to Peter, to the two disciples on their way to Emmaus, and to all the Apostles excepting Thomas. A week later He appeared to all the Apostles, Thomas included; later still He appeared to Lea and many others. Now Jesus ascended on a mountain in Galilee to a multitude of disciples, to James, and finally to His disciples on Mount Olivet whence He ascended into heaven. But these apparitions do not exhaust the record of the Gospels, according to which Jesus showed Himself alive after His Passion by many proofs, for forty days appearing to the disciples and speaking of the kingdom of God.

IV. THE CHARACTER OF JESUS.—The surpassing eminence of the character of Jesus has been acknowledged by men of the most varied type: Kant testifies to His ideal perfection; Hegel sees in Him the union of the human and the Divine; the most advanced sceptics do Him homage; Spinoza speaks of Him as the truest symbol of heavenly wisdom; the beauty and grandeur of His life overawed Voltaire; Napoleon I. at St. Helena, felt convinced that "Between him [Jesus] and whoever else in the world there is no possible comparison". The Roman saying "Récit de la Captivité de l'Empereur Napoléon"), Roussel testifies: "If the life and death of Socrates are those of a sage, the life and death of Jesus are those of a god." Strauss acknowledges: "He is the highest object we can possibly imagine with respect to religion, the best being we had recourse to if rectitude is impossible." To Renan "The Christ of the Gospels is the most beautiful incarnation of God in the most beautiful of forms. His beauty is eternal; his reign will never end." John Stuart Mill spoke of Jesus as a man charged with a special, express, and unique commission from God to lead mankind to truth and virtue. Not that the views of the foregoing witnesses are of any great importance for the theological student of the life of Jesus; but they show at least the impression made on the most different classes of men by the history of Christ. In the following paragraphs we shall consider the character of Jesus as manifested first in His relation to men, then in His relation to God.

A. Jesus in His Relation to Men.—In His relation to men Jesus manifested certain qualities which were perceived by all, being subject to the light of reason, of love, of truth, of justice, of mercy, of righteousness, of piety. He was the world's Saviour, the light of the world, the way, the truth, the life. He healed the sick, comforted the sorrowful, consoled the afflicted, strengthened the feeble, and comforted the broken-in-heart. He was the One in whom all the promises of God were fulfilled. He was the One who wrought miracles. He was indeed the Son of God. The Heart of Jesus was pierced so as to make sure of His death. The Sacred Body was taken from the Cross by Joseph of Arimathea and Nicodemus, and was buried in the new sepulchre the Sabbath day prepared for Jesus. But Jesus rose early the first day of the week, and there was a great earthquake, and an angel descended from heaven, and rolled back the stone. The guards were struck with terror, and became as dead men. On arriving at the sepulchre the Holy Women were told by an angel that the Lord had risen from the dead. Peter and John hasten to the sepulchre, and find everything as Magdalen has reported. Magdalen too returns, and, while weeping at the sepulchre, is approached by the risen Saviour Who appears to her and speaks with her. On the same day Jesus appeared to the other Holy Women, to Peter, to the two disciples on their way to Emmaus, and to all the Apostles excepting Thomas. A week later He appeared to all the Apostles, Thomas included; later still He appeared to Lea and many others. Now Jesus ascended on a mountain in Galilee to a multitude of disciples, to James, and finally to His disciples on Mount Olivet whence He ascended into heaven. But these apparitions do not exhaust the record of the Gospels, according to which Jesus showed Himself alive after His Passion by many proofs, for forty days appearing to the disciples and speaking of the kingdom of God.
the conduct of Jesus is so many-sided that His character seems to elude all description. Command and sympathy, power and charm, authority and affection, cheerfulness and gravity, are somehow in the life of Jesus fronting each other in a manner that parallels the life of no other man. The make-up of the Gospels does not facilitate the work. At first they appear to us a bewildering forest of dogmatic statements and moral principles; there is no system, no method, everything is occasional, everything fragmentary. The Gospels are neither a manual of dogma nor a treatise on casuistry, they are the fountain of both. No wonder then that various investigators have arrived at entirely different conclusions in their study of Jesus. Some call Him a fanatic, others make Him a socialist, others again an anarchist, while many call Him a dreamer, a mystic, an Essene. But in this variety there are two things which the teachers of Jesus may be summarized: Some consider Jesus an ascetic, others an aesthete; some emphasize His suffering, others His joyfulness; some identify Him with ecclesiasticism, others with humanism; some recognize in Him the prophetic picture of the Old Testament and the monastic of the New, others see in Him only gladness and poetry. There may be solid ground for both views; but they do not exhaust the character of Jesus. Both are only by-products which really existed in Jesus, but were not primarily intended; they were only enjoyed and suffered in passive resignation to gain an end wholly different from either joy or sorrow.

(a) Strength.—Considering the life of Jesus in the light of reason, His strength, His poise, and His grace are His most characteristic qualities. His strength shows itself in His manner of life, His decision, His authority. In His rugged body, His precise, homeless life there is no room for weakness or sentimentality. Indecision is rejected by Jesus on several occasions: "No man can serve two masters"; "He that is not with me, is against me"; "Seek first the kingdom of God", these are some of the statements expressing Christ's attitude to indecision of will. Of Himself He said: "My meat is to do the will of him that sent me"; "I seek not my own will, but the will of him that sent me." The authority of the Master does not allow its power to be questioned; He calls to men in their boats, in their tax-booths, in their homes, "Follow me", and they look on His face and obey. Matthew tells how: "The multitude . . . glorified God that gave such power to men"; St. Mark adds, "the kingdom of God comes in power"; St. Luke says, "His speech was with power"; St. John writes, "Thou hast given him power over all flesh"; the Book of the Acts reads, "God anointed him with power"; St. Paul too is credited with "the power of God and the Holy Ghost". In His teaching Jesus does not argue, or prove, or threaten, like the Pharisees, but He speaks like one having authority. Nowhere is Jesus merely a long-faced ascetic or a joyous comrade, we find Him everywhere to be a leader of men, whose principles are built on a rock.

(b) Poise.—It may be said that the strength of Christ's character gives rise to another quality which we may call poise. Reason is like the sails of the boat, the will is its rudder, and the feelings are the waves thrown upon either side of the ship as it passes through the waters. The will-power of Jesus is strong enough to keep a perfect equilibrium between His feelings and His reason; His body is the perfect instrument in the performance of His duty; His emotions are wholly subservient to the Will of His Father; it is the call of complying with His higher duties that prevents His anger from being expressed. There is therefore a perfect balance or equilibrium in Jesus between the life of His body, of His mind, and of His emotions. His character is so rounded off that, at first sight, there remains nothing which could make it characteristic. This poise in the character of Jesus produces a simplicity which pervades every one of His actions. As the old Roman roads led straight ahead in spite of mountains and valleys, ascents and declivities, so does Jesus in the life of Jesus fronting the tumult of man's life with the call of duty, in spite of pleasure or pain, honour or ignominy. Another trait in Jesus which may be considered as flowing from the poise of His character is His unalterable peace, a peace which may be ruffled and cannot be destroyed either by His inward feelings or outward encounters. And the personal qualities in Jesus are reflected in His teaching. He establishes an equilibrium between the righteousness of the Old Testament and the justice of the New, between the love and life of the former and those of the latter. He lops off indeed the Pharisaic conventionalism and externalism, but they were merely degenerations of the former outgrowths; He underlines that it embraces the whole Law and the Prophets; He promises life, but it consists not so much in our possession as in our capacity to use our possession. Nor can it be urged that the poise of Christ's teaching is destroyed by His three paradoxes of self-sacrifice, of service, and of self-love. The law of biological organisms, of physiological tissues, of intellectual achievements, and of economic processes shows that self-sacrifice is self-realization in the end. The second paradox is that of service: Whosoever shall be greater among you, let him be as the lesser, and he that shall be the greater among you, let him be as the servant. But in the industrial and artistic world, too, the greatest men are those who have done most service. Thirdly, the idealism of Jesus is expressed in such words as "The life is more than the flesh" and "Not in bread alone doth man live, but in every word that proceedeth from the mouth of God." But even our realistic age must grant that the reality of the law is its ideals, and again, that the world of the idealist is impossible only for the weak, while the strong character creates the world after which he strives. The character of Jesus therefore is the embodiment of both strength and poise. It thus verifies the definition given by such an involved writer as Emerson: "Character is centrality, the impossibility of being displaced or upset. . . . The natural measure of this power is the resistance of circumstances."

(c) Grace.—But if there were not a third essential element entering into the character of Jesus, it might not be attractive after all. Even saints are at times bad neighbours; we may like them, but sometimes we like them only at a distance. The character of Christ carries with it the trait of grace, doing away with all harshness and want of sympathy. Grace is the unconstrained expression of the self-forgetting and kindly mind. It is a beautiful way of doing the right thing, in the right way, at the right time, and therefore opens all hearts to its possessor. Sympathy is the widest channel through which grace flows, and the abundance of the stream testifies to the reserve of grace. Now Jesus sympathizes with all classes, with the rich and the poor, the learned and the ignorant, the happy and the sad; He moves with the same sense of familiarity among all classes of society. For the self-righteous Pharisees He has only the words, "Woe to you, hypocrites!" He warns His disciples, "Unless you become as little children, you shall not enter into the kingdom of heaven." Plato and Aristotle are utterly unlike Jesus; they may speak of natural virtue, but we never find children in their arms. Jesus treats the publicans as His friends; He encourages the most tentative beginnings of moral growth. HeChoose these common fishermen for the corner-stones of His kingdom, and by His kindliness trains them to become the light of the world and the salt of the earth; He bends down to St. Peter whose character was a heap of sand rather than a solid foundation, but He graciously
forms Peter into the rock upon which to build His Church. After two of the Apostles had fallen, Jesus was gracious to both, though He saved only one, while the other destroyed himself. Women in need are not excluded from the general grace, and He welcomes them. He receives the homage of the sinful woman, He restores the son of the widow at Naim, He consoles the sorrowing sisters Martha and Mary, He cures the mother-in-law of St. Peter and restores the health of numerous other women. He accepts the ministry of the holy women of Galilee. He has words of sympathy for the women of Jerusalem who grudged His suffering. He was subject to His mother till He reached man's estate, and when dying on the Cross commended her to the care of His beloved disciple. The grace of the Master is also evident in the form of His teaching: He lays under contribution the simple phases of nature, the hen with her chickens, the gnat in the cup, the camel in the narrow street, the fig tree and its fruit, the fishermen sorting their catch. He meets with the lightest touch, approaching sometimes the play of humour and sometimes the thrust of irony, the simple doubts of His disciples, the selfish questions of His hearers, the subtle arguments of His opponents, and He feels no need of thrust in His doctrine: He lavishes His teaching and His benefits on the few as abundantly as on the vastest multitudes. He flings out His parables into the world that those who have ears may hear. There is a prodigality in this manifestation of Christ's charity that can only be equaled, by the waste of seed in the realm of nature. (2) In the Light of Faith. — In the light of faith the life of Jesus is an uninterrupted series of acts of love for man. It was love that impelled the Son of God to take on human nature, though He did so with the full consent of His Father: "For God so loved the world, as to give His only begotten Son" (John, iii, 16). For thirty years Jesus shows His love by a life of poverty, labour, and hardship in the fulfillment of the duties of a common tradesman. When His public ministry began, He spent Himself for the good of His neighbours, "doing good, and healing all that were oppressed by the devil" (Acts, x, 38). He shows a boundless compassion for all the infirmities of the body; He uses His miraculous power to heal the sick, to free the possessed, to resuscitate the dead. The moral weaknesses of man move His heart still more effectively; the publican, Mary Magdalen the public sinner, Zaccheus the tax administrator, are only a few instances of sinners who received encouragement from the lips of Jesus. He is ready with forgiveness for all; the parable of the Prodigal Son illustrates His love for the sinner. In His work of teaching He is at the service of the poorest outcast of Galilee as well as of the theological celebrities of Jerusalem. His bitterest enemies are not excluded from the manifestations of His love; even while He is being crucified He prays for their pardon. The Scribes and Pharisees are treated severely, only because they stand in the way of His love. "Come to Me, all ye that labour, and are heavy laden, and I will refresh you" (Matt., xi, 28) is the message of His heart to poor suffering humanity. After laying down the rule, "Greater love than this no man hath, that a man lay down his life for his friends" (John, xxi, 13), He surpasses as it were His own standard by dying for His enemies. Filling up the unconscious prophecy of the godless high-priest, "It is expedient for you that one man should die for the people" (John, xvi, 50), He freely meets His sufferings which He could have easily avoided (Matt., xxvi, 53), takes up the huge iniquity and ignominies, passes through the most severe bodily pains, and sheds His blood for the remission of sins" (Matt., xxvi, 28). But the love of Jesus embraced not only the spiritual welfare of men, it extended also to their temporal happiness: "Seek ye therefore first the kingdom of God, and His justice, and all these things shall be added unto you" (Matt., vi, 33).

B. Jesus in His Relation to God.—Prescinding from the theological discussions which are usually treated in the chapters on Jesus' Divinity, we may consider the relations of Jesus to God under the headings of His sanctity and His Divinity.

(1) Sanctity of Jesus. — From a negative point of view, the sanctity of Jesus consists in His unsullied sinlessness. He can defy His enemies by asking, "Which of you shall convince me of sin?" (John, vii, 18). Even the evil spirit is forced to acknowledge Him as the Holy One of God (Mark, i, 24; Luke, iv, 34). His enemies charge Him with being a Samaritan, and having a devil (John, viii, 48), with being a sinner (John, ix, 24), a blasphemer (Matt., xxvi, 65), a violator of the Sabbath (John, ix, 16), a malefactor (John, xviii, 30), a disturber of the peace (Luke, xxii, 5), a seducer (Matt., xxvii, 63). But Pilate finds and declares Jesus innocent, and, when pressed by the enemies of Jesus to condemn Him, He washes his hands and excludes before the assembled people, "I am innocent of the blood of this just man" (Matt., xxvii, 24). The Jewish authorities practically admit that they cannot prove any wrong against Jesus; they only insist, "We have a law; and according to the law he ought to die, because he made himself the Son of God" (John, xix, 7). The final charge urged against Christ by His bitterest enemies was His claim to be the Son of God, symbolized by the cross.

The positive side of the sanctity of Jesus is well attested by His constant zeal in the service of God. At the age of twelve He asks His mother, "Did you not know, that I must be about my father's business?" He urges on His hearers the true adoration in spirit and in truth (John, iv, 23) remanded His Father's cause. Repeatedly He declares His entire dependence on His Father (John, v, 30, 36, etc.); He is faithful to the Will of His Father (John, viii, 29); He tells His disciples, "My meat is to do the will of him that sent me" (John, iv, 34). Even the hardest sacrifices do not prevent Jesus from complying with His Father's Will. "My Father, if this chalice may not pass away, but I must drink it, they will be done" (Matt., xxvi, 42). Jesus honours His Father (John, viii, 49), is consumed with zeal for the house of His Father (John, ii, 17), and proclaims at the end of His life, "I have glorified thee on the earth, and lo, I come to My Father, and Greet Him in glory" (John, xiv, 33). He returns to His Father (Mark, i, 35; vi, 46, etc.), and teaches His Apostles the Our Father (Matt., vi, 9). He always thanks His Father for His bounties (Matt., xi, 25, etc.), and in brief behaves throughout as only a loving son can behave towards his beloved father. During His Passion one of His most intense sorrows was his feeling of abandonment by His Father (Mark, xv, 34), and at the point of death He joyfully surrenders His Soul into the hands of His Father (Luke, xxiii, 46).

(2) Divinity of Jesus. — The Divinity of Jesus is proved by some writers by an appeal to prophecy and miracles. But, though the earlier prophecies of the Old Testament to the letter, He Himself appears to appeal to them mainly in proof of His Divine mission; He shows the Jews that He fulfils in His Person and His work all that had been foretold of the Messiah. The prophecies uttered by Jesus Himself differ from the predictions of the Old Testament in that Jesus does not speak in the name of the Lord, like the seers of old, but in His own name. If it could be distinctly proved that they were made in virtue of His own knowledge of the future, and of His own power to dispose of the current of events, the prophecies would prove His Divinity; as it is they prove at least that Jesus is a messenger of the God inspired by God. This is not the place to discuss the historical and philosophical truth of the miracles of Jesus, but we know that Jesus appeals to His works as bearing witness to the general truth of His mission (John, x, 27).
of the Father and the Divinity of the Son will be reduced to a figure of speech. (See Theology, sub-title Christology.)

The reader will find a great many works referring to this subject among the commentaries on the Gospels mentioned in the articles Matthew, Gospel of Saint; Mark, Gospel of Saint; Luke, Gospel of Saint; and John, Gospel of Saint; and also in the articles so far belonging to the theological works on the Incarnation which will be found under Incarnation. We mention some of the principal works on the life of Jesus Christ: London or London: Vita Christi, or Sanctissimita S. Iesus Chrysti (1544); De Incarnatione Christi (Paris, 1530); Sive Deo, Deo sancto, sanctissimo (Ratisbon, 1840); VIEILLOT, Vie de N. S. Jesus-Christ (Paris, 1865); COBO, Deo sancto, sanctissimo (Paris, 1840); Histoire de N. S. Jesus-Christ (Paris, 1870); SCHROB, Sich verbesserter Lebens Jesu (Freiburg im Br. 1874); SIMMEL, Das Leben Jesu nach den vier Evangelien (Berlin, 1894); La vie de N. S. Jesus-Christ (Paris, 1880), tr. GRUPPE (New York and London, 1891); De Colloque, Le Christ (Paris, 1898), tr. Hickey (New York, 1906); DODON, Jesus-Christ (Paris, 1891), English translation, ed. O'REILLY (New York, 1895); MAAS, The Life of Christ According to Gospel History (4th ed., St. Louis, 1891); LIEBEN, N. S. Jesus-Christus son soul Beginners' (Paris, 1892); MAAS, Christ in Type and Prophecy (New York, 1900); PEETERS, Jesus-Christ (Paris, 1899); FORNARI, Della vita di Gesù Cristo (Rome, 1901). Among Protestant works may be noted: LANDE, Life of Jesus Christ (Edinburgh, 1854); GREER, The Life and Times of Jesus the Christ (London, 1888); GEDDES, The Life and Times of Jesus the Christ (New York, 1870); HUBER, Jesus der Mensch (Basel, 1878); ZELLER, The Life and Times of Jesus the Messiah (London, 1883). Many more recent Protestant works have been published, and the stories of them are so infected by criticism or even by rationalism that they deny the historical existence of Jesus, or impeach the divinity of His Humanity, or minimize His Divinity, while nearly all seem to be in doubt about His Divinity.

A. J. MAAS.

Jesus Mary, Religious of.—The Congregation of the Religious of Jesus Mary was founded at Lyons, France, in October, 1818, by Claudine Thevenet, in religion, Mother St. Ignatius. The constitutions were approved by Pius IX, 31 December, 1847. The object of this congregation is to give to young ladies a Christian education conformable to their social position; for this purpose the religious have boarding-schools and academies, and, in large cities, residences for ladies of the literary profession. Their establishments of various kinds are numerous: in France, before the expulsion of 1901, they were at Lyons, the birthplace of the congregation, at Le Puy, Rodes, and Remiremont. Owing to the religious persecution, the mother-house was transferred to Rome in September, 1901. Besides the mother-house on the Via Flaminia, the religious have opened a college for sisters at Rome and a few houses for young ladies the means of culture which a residence in Rome and the study of the fine arts, modern languages, European literature, and history afford. The Stella Viva is situated on the Via Nomentana, near the Porta Pia. In 1842 Lyons sent a colony to India, where twelve houses now exist. The most important of these are at Bombay, Poona, Lahore, Simla, and Agra. In 1850 the first house in Spain was founded at Tarragona; then followed other foundations, Valencia, Barcelona, Orihuela, S. Gervas, Alicante, and Murcia. In 1902 Spain sent a convent to Mexico, and two houses in the city of Mexico and at Mérida, Yucatan.

The first house of the congregation in America was founded at St. Joseph, Levis, Canada, in 1858. In 1876 Sillery (Quebec) became the provincial house of America. Canada has four other houses, at St-Cergais, St-Michel, Trois-Ponts, and Beaupréville. In 1876 several sisters left Sillery to open houses in the United States. The first foundation was at Fall River, Mass., where the sisters now conduct a boarding-school and a parochial school attended by twelve hundred children. The house at Rochester, N. Y., had about one hundred fifty boarders, then, at Woonsocket, R. I., a boarding-school and two parochial schools, attended by fourteen hundred children. At Providence, R. I., the religious have a convent and two parochial schools. In 1902 several
nuns left the mother-house in Rome, to found an establishment in New York. The religious of Jesus Mary now possess a house on Fourteenth Street and an academy at Kingsbridge. They also have the supervision of a day-school for poor Italian children. The establishment on Fourteenth Street, called "Our Lady Peace", is a residence for ladies in the literary profession.

**Jews and Judaism (יהודים, יועדים; Ioudaei, Iudaici).—** Of these two terms, the former denotes usually the inhabitants of Jews in Jerusalem in ancient times; the latter, the creed and worship of the Jews in contrast to Christianity, Mohammedanism, etc. The subject will be treated under the following heads: I. History of the Jews since the return from the Babylonian Exile, from which time the Israelites received the name of Jews (for their earlier history, see Israelites); II. Judaism as a religious communion with its special system of faith, rites, customs, etc.

I. **History of the Jews.**—This history may be divided into various periods in accordance with the leading event may be distinguished in the existence of the Jewish race since the Return in 538 B.C.

(1) **Persian Suzerainty (538-353 B.C.).—** In Oct., 538 B.C., Babylon opened its gates to the Persian army, and a few weeks later the great conqueror of Babylon, Cyrus, made his triumphal entry into the fallen city. One of the first official acts of the new ruler in Babylon was to give the exiled Jews full liberty to return to Judah (see I Esdras, i). The substance of Cyrus's decree in their favour is in striking harmony with other known decrees of that monarch, with his general policy of tolerance and?尾巴切味?wards the conquered races of his empire, and with his natural desire to have on the Egyptian border a community as large as possible, bound to Persia by the strongest ties of gratitude. A comparatively large number of Jewish exiles (50,000 according to I Esdras, ii, 64, 65), availed themselves of Cyrus's permission. Their official leader was Zoroabel, a descendant of the royal family of Juda, whom the Persian monarch had invested with the governorship of the sub-province of Judah, and entrusted with the precious vessels which had belonged to Yahweh's House. There appears to be by his side the priest "Jesuo, the son of Josedeo", probably as the religious and civil head of the returning community. The returned exiles, who mostly belonged to the tribes of Benjamin and Judah, settled chiefly in the neighbourhood of Jerusalem. They at once organized a council of twelve elders, and this council, which was naturally presided over by Zoroabel, controlled and guided the internal affairs of the community, under the suzerainty of Persia. Without delay, too, they set up a new altar, and had it ready to celebrate the Feast of Tabernacles in 537 B.C. Henceforth, the ritual system was religiously carried out. The foundation of the second Temple was laid in the second month of the second year after the Return, but no further headway was made for fifteen or sixteen years, owing to the active interference and positive misrepresentations to the Persian kings by the Samaritans to whom the Jews had denied a share in the work of rebuilding the House of the Lord. Meantime, the Jews themselves lost much of their possession of Laconia (Mt. 320 B.C., it was seized by the Egyptian Ptolemy I (323-285 B.C.), who, on a Sabbath-day took Jerusalem, and carried away many Samaritans and Jews into Egypt. A few years later (315 B.C.), it fell into the power of Syria; but after the battle of Ipsus in Phrygia (301 B.C.), interest in the reconstruction of the Temple; and it is only in 520 B.C. that the Prophets Aggæus and Zacharias succeeded in rousing them from their supineness. Pecuniary help came too from the Jewish community in Babylon, and also, a little later, from the Persian king. This unexampled event might seem to have occurred as a moral sign and the Temple was solemnly dedicated. The Jewish leaders next started on the rebuilding of the walls of Jerusalem, and here again met with the hostility of the Samaritans, whose complaints at the Court of Persia were most successful under Artaxerxes I "Longimanus" (464-424 B.C.), who issued orders strictly forbidding the Jews to proceed with the work.

The special mission of Esdras and Nehemiah in behalf of the struggling Palestinian community, strenuous efforts to lift up its moral and religious tone need not to be dwelt upon here (see Esdras; Nehemiah). Suffice it to say, that to whatever precise time their labours should be assigned (see Captivity), the scribe Esdras and the satrap Nehemiah left their permanent impress on the spiritual life of the Jews. After the death, which probably occurred not long before the end of the Persian rule over Judah in 333 B.C., little is distinctly known of the history of the Palestinian Jews. It seems, however, that under the satraps of Cœle-Syria, the action of the high-priest had a very considerable influence upon their religious and civil matters alike (cfr. Josephus, "Antiq. of the Jews", XI, vii.), and that their community enjoyed a steadily increasing prosperity, hardly marred by the deportations of a certain number of Jews to distant regions like Hyrcania, which probably occurred under Artaxerxes III (359-338 B.C.). During this period, the Jews who had preferred to stay in Babylonia remained constantly in touch with the returned exiles, sending them, at times, material help, and formed a flourishing community deeply attached to the faith and to the traditions of their race. Within the same period falls the formation of the Jewish colony at Elephantine (Upper Egypt), which was for a while supplied with a temple of its own, and the faithfulness of which to Persia is witnessed by Judeo-Aramean papyri recently discovered. Lastly, the institutions of Judaism which seem to have more particularly developed during the Persian domination among the Pharisees, with their educational and religious features, and the Scribes with their peculiar skill in the Law.

(2) **Greek Period (333-168 B.C.).**—A new period in the history of the Jews opens with the defeat of Darius III (335-330 B.C.) by Alexander the Great at Issus, in Cilicia. This victory of the young conqueror of Persia undoubtedly brought the Palestinian Jews into direct contact with Greek civilization, whatever may be thought of the exact historical value of what Josephus relates (Antiq. of the Jews, XI, viii., 3-5) concerning Alexander's personal visit to Jerusalem. Alexander allowed them the free enjoyment of their religious and civil rights and of those of them who went to war with him against Egypt and settled in Alexandria, a city of his foundation, by granting them equal civic rights with the Macedonians. Again, when the Samaritans rebelled against him, he added a part of Samaria to Judaea (331 B.C.). After Alexander's untimely death (323 B.C.), the different Greek cities had an ample share of the troubles which arose out of the partition of his vast empire among his captains. Placed between Syria and Egypt, it became the bone of contention between their respective rulers. At first, as a part of Cœle-Syria, it passed naturally into the possession of Laconia. But as early as 320 B.C., it was seized by the Egyptian Ptolemy I (323-285 B.C.) who, on a Sabbath-day took Jerusalem, and carried away many Samaritans and Jews into Egypt. A few years later (315 B.C.), it fell into the power of Syria; but after the battle of Ipsus in Phrygia (301 B.C.), interest in the reconstruction of the Temple; and it is only in 520 B.C. that the Prophets Aggæus and Zacharias succeeded in rousing them from their supineness. Pecuniary help came too from the Jewish community in Babylon, and also, a little later, from the Persian king. This unexampled event might seem to have occurred as a moral sign and the Temple was solemnly dedicated. The Jewish leaders next started on the rebuilding of the walls of Jerusalem, and here again met with the hostility of the Samaritans, whose complaints at the Court of Persia were most successful under Artaxerxes I "Longimanus" (464-424 B.C.), who issued orders strictly forbidding the Jews to proceed with the work.

The special mission of Esdras and Nehemiah in behalf of the struggling Palestinian community, strenuous efforts to lift up its moral and religious tone need not to be dwelt upon here (see Esdras; Nehemiah). Suffice it to say, that to whatever precise time their labours should be assigned (see Captivity), the scribe Esdras and the satrap Nehemiah left their permanent impress on the spiritual life of the Jews. After the death, which probably occurred not long before the end of the Persian rule over Judah in 333 B.C., little is distinctly known of the history of the Palestinian Jews. It seems, however, that under the satraps of Cœle-Syria, the action of the high-priest had a very considerable influence upon their religious and civil matters alike (cfr. Josephus, "Antiq. of the Jews", XI, vii.), and that their community enjoyed a steadily increasing prosperity, hardly marred by the deportations of a certain number of Jews to distant regions like Hyrcania, which probably occurred under Artaxerxes III (359-338 B.C.). During this period, the Jews who had preferred to stay in Babylonia remained constantly in touch with the returned exiles, sending them, at times, material help, and formed a flourishing community deeply attached to the faith and to the traditions of their race. Within the same period falls the formation of the Jewish colony at Elephantine (Upper Egypt), which was for a while supplied with a temple of its own, and the faithfulness of which to Persia is witnessed by Judeo-Aramean papyri recently discovered. Lastly, the institutions of Judaism which seem to have more particularly developed during the Persian domination among the Pharisees, with their educational and religious features, and the Scribes with their peculiar skill in the Law.
whole country, and attained to eminence in science, art, and even literature, as is proved by the numerous Judeo-Greek fragments which have survived. Under Ptolemy II (Philadelphus), the Hebrew Pentateuch was first rendered into Greek; and this, in turn, led in the course of time to the complete translation of the Old Testament known as the Septuagint. His successor, brother of Antiochus I (277–222 B.C.), is particularly credited, after a successful campaign in Syria, with having offered rich presents at the Temple in Jerusalem. Again, the annual tribute demanded by the early Ptolemies was apparently light; and as long as it was paid regularly, the Palestinian Jews were left free to manage their own affairs under their high priest at whose side stood the Gerusa of Jerusalem, as a council of state, including the priestly aristocracy. In this wise, things went well under the high priesthood of Simon the Just (310–291 B.C.), and that of his two brothers, Eleazar II (291–276 B.C.) and Manasses (276–250 B.C.).

Matters proved less satisfactory under Onias II (250–226 B.C.), who withheld the tribute for several years from his Egyptian suzerain. Under Onias’s son and successor, Simon II (226–198 B.C.), whose godly rule is highly praised in 2 Macc. 1:17, the condition of Palestine became precarious owing to the renewed conflicts between Egypt and Syria for the possession of Coele-Syria and Judea. In the end, however, the Syrian king, Antiochus III, remained master of Palestine and did his utmost to secure the loyalty of the Jews not only of Judaea, but also of Mesopotamia and Babylon. Seleucus IV (187–175 B.C.) pursued at first the conciliatory policy of his father, and the Judean Jews prospered during the opening years of Onias III (198–175). Soon, however, intestine strife disturbed the pontiff’s wise rule, and Seleucus, misled by Simon, the governor of the Temple, sent his treasurer, Heliodorus, to seize the Temple funds. The failure of Heliodorus’s mission led eventually to Onias’s imprisonment and deposition from the high-priesthood. This deposition purchased from the new king, Antiochus IV (Epiphanes), by Jason, an unworthy brother of Onias, was the real triumph of Hellenism in Jerusalem. The man who, in turn, supplanted Jason was Menelaus, another hellenizing leader, whom craft and gold maintained in office, despite the complaints of the Jews to the Syrian monarch. At length, a popular revolt occurred against Menelaus, which Antiochus put down with great barbarity, and which resulted in his leaving Menelaus in charge of the high-priesthood, while two foreign officers became Governors of Jerusalem and Samaria respectively (170).

(3) The Maccabean Age (168–63 B.C.).—The whole period which has just been described, was marked by the steady growth and widespread influence of Hellenistic culture. Towards its end, the Jewish high priests themselves not only assumed and adopted Greek manners, but became the ardent champions of Hellenism. In fact, Antiochus IV thought that the time had now come to unify the various races of his dominions by thoroughly hellenizing them. His general edict for that purpose met with unexpected opposition on the part of most Palestinian Jews. Hence, by special letters he ordered the utter destruction of Yahweh’s worship in Jerusalem and in all towns of Judea: under the penalty of death everyone distinctly Jewish was prohibited, and Greek idolatry prescribed (168 B.C.). The Holy City had recently been dismantled, and a part of it (Acra) transformed into a Syrian citadel. Now its Temple was dedicated to Zeus, to whom Zeus were offered upon an idol-altar erected over Yahweh’s altar. In like manner, in all the townships of Judaea, Zeus were set up and heathen sacrifices offered. In the dire persecution which ensued, all resistance seemed impossible. In the little town of Modin, however, an aged priest, Mattathias, boldly raised the standard of revolt. At his death (167 B.C.), he appointed his son Judas, surnamed Maccabeus, to head the forces which had gradually gathered around him. Under Judas’s able leadership, the Maccabean troops won several victories, and in December, 165 B.C., Jerusalem was re-entered, the Temple cleansed, and Divine worship renewed.

The struggle was a hard one against the numerous armies of Antiochus V and Demetrius I, the next Syrian kings; yet it was heroically maintained, with varying success, by Judas until his death on the battlefield (161 B.C.). One of his brothers, Jonathan, became his successor in command for the next eighteen years (161–143 B.C.). The new leader was not only able to re-enter and fortify Jerusalem, but was also recognized as high-priest of the Jews by the Syrian Crown, and as an ally by Rome and Sparta. It was not given him, however, to restore his country to complete independence; he was treacherously captured and soon afterwards put to death by the Syrian general, Tryphon. Another brother of Judas, Simon (143–135 B.C.), then assumed the leadership, and un-
for himself the rights of Roman citizenship and the office of procurator over the whole of Palestine. He next proceeded to rebuild the walls of the Holy City, and to appoint two new leaders, Phasael and Joram, Governors of Jerusalem and Galilee respectively. From this time forth Herod's fortune grew rapidly, until in the Roman capital, whither he had fled from the wrath of the Nationalist party, he reached the goal of his ambition. The Idumean Herod ascended the throne of David, and his long reign (37-4 b.c.) marked his people and the Jews in several respects a glorious epoch in the history of the Jews (see HEROD THE GREAT). Upon the whole, however, it was disastrous for the Jews of Palestine. Its first part (37-25 b.c.) was chiefly spent in getting rid of the surviving Idumeans. By their death he, indeed, made the throne more secure for himself, but also alienated the mass of his subjects who were deeply attached to the Machabean family. To this grievance he gradually added others no less hateful to the national party. The people hated him as a bloody tyrant bent on destroying the worship of God, and hated still more the Romans who maintained him on the throne, and whose policy it was to entice him at the first opportunity. It was a short time before the death of Herod that Jesus, the true King of the Jews, was born, and the Holy Innocents were massacred.

Herod's death was the signal for an insurrection which spread gradually and was finally put down by Varus, the Governor of Syria. Next followed the practical ratification of the last will of Herod by Augustus. The principal heirs were Archelaus, who was appointed ethnarch of Idumea, Judea, and Samaria, with the promise of the royal title on condition that he should rule to the emperor's satisfaction. For his misrule, Augustus deposed him (A. d. 6), and put in his stead a Roman procurator. Henceforward, Judea continued as a part of the province of Syria, except for a brief interval (A. d. 41-44), during which Herod Agrippa I held sway over all the dominions of Herod the Great. The Roman procurators of Judea resided in Cesarea, and went to Jerusalem only on special occasions. They were subalterns of the Syrian governors, commanded the military, maintained peace and took care of the revenue. They generally abstained from meddling with the religious affairs, especially for fear of arousing their countrymen who regarded as unlawful the payment of tribute to Caesar. The local government was largely left in the hands of the Sadducean priestly aristocracy, and the Sanhedrin was the supreme court of justice, deprived, however (about A. d. 30), of the power of carrying a sentence of death. From the death of the last ethnarch (26-36), one of the procurators appointed by Tiberius, that Jesus was crucified.

Up to the reign of Caligula (37-41), the Jews enjoyed, without any serious interruption, the universal toleration which Roman policy permitted to the religion of the subject states. But when that emperor ordered that Divine honours should be paid to him, they generally refused to submit. Petronius, the Roman Governor of Syria, received peremptory orders to use violence, if necessary, to set up Caligula's statue in the Temple at Jerusalem. At Alexandria a fearful massacre took place, and it looked as if all the Jews of Palestine were doomed to perish. Petronius, however, delayed the execution of the decree, and in fact, escaped punishment only through the murder of Caligula in A. d. 41. The Jews were saved, and with the accession of Claudius who owed the imperial dignity to his marriage with Agrippa, it was no more than known, and perhaps forgiven for them. Through gratitude, Claudius conferred upon Agrippa the whole kingdom of Herod the Great, and upon the Jews at home and abroad valuable privileges. Agrippa's careful government made itself felt throughout the entire community, and the Sanhedrin, now under the presidency of Gamaliel, etc.
St. Paul's teacher, had more authority than ever before. Yet the national party remained in an almost constant state of mutiny, while the Christians were persecuted by Agrippa. Upon Agrippa's death (A.D. 44), the country was again subjected to Roman procurators, and this was the prelude to the destruction of Jerusalem and the Jewish people. Nearly all the seven procurators who ruled Judea from A.D. 44 to 66 acted as fascists, to drive its population to despair and revolt. Gradually, the confusion became so great and so general as manifestly to presage the dissolution of the commonwealth. At last, in A.D. 66, in spite of all the precautionary efforts of Agrippa II, the party of the Zealots burst into an open rebellion, which was terminated (A.D. 70) by the capture of Jerusalem by Titus, the destruction of the Temple, and the massacre and the banishment of hundreds of thousands of the unhappy people, who were scattered among their brethren in all parts of the world. According to Eusebius, the Christians of Jerusalem, forewarned by their Master, escaped the horrors of the last siege, by removing in due time to Pella, east of the Jordan. Prominent among the Jewish writers of the first century of our era are Philo, who pleaded the Jewish cause at Rome before Caligula, and Josephus, who acted as Jewish Governor of Galilee during the final revolt against Rome, and described its vicissitudes and horrors in a thrilling and probably also in an exaggerated manner.

(5) Last Days of Pagan Rome (A.D. 70–82).—Rome exulted over fallen Jerusalem, and struck coins commemorative of the hard won victory. The chief leaders of the defence, a long train of heavily chained captives, the vessels of the Temple, the seven-branched candlestick, the golden table, and a roll of the Law, grace Titus's triumph in the imperial city. And yet three strong fortresses in Palestine still held out against the Romans: Herodium, Macheras, and Masada. The first two fell in A.D. 71, and the third, the following year, which thus witnessed the complete conquest of Judaea. For a while longer, certain fugitive Jews from Galilee still attempted to foment a rebellion in Egypt and in Cyrenaica. But their efforts soon came to naught, and Vespasian availed himself of the Egyptian commotion to close for ever the temple of Onias in Heliopolis. At this juncture, it looked as though the distinct groups of Jewish families were hencethrough destined to drift separately, finally to be absorbed by the various nations in the midst of which they chanced to live. This danger was, however, averted by the rapid concentration of the surviving Jews in two great Christian communities independent of each other, and corresponding to the two great divisions of the world at the time. The first naturally comprised all the Jews who lived this side of the Euphrates. Not long after the fall of Jerusalem and its subsequent misfortunes, they gradually acknowledged the authority of a new ruler, in whatever way it arose, was actually constituted at Jamnia (Jabne), under the presidency of Rabbi Jochanan ben Zakkai. Together with the Sanhedrin (i.e., the supreme Court (Bêth Din) of the Western communities), there was at Jamnia a school in which Jochanan inculcated the oral Law (specifically the Halacha) handed down by the fathers, and delivered expository lectures (Hagada) on the other Hebrew Scriptures distinct from the written Law (Penta- teuch). Jochanan's successor as the head of the Sanhedrin (A.D. 80) was Rabbi Gamaliel II, who took the title of Nasi ("prince": among the Romans, "patriarch"). He also lived at Jamnia, and presided over its school, on the model of which other schools were gradually formed in the neighbourhood. He finally transmitted (A.D. 118) to his successors, the "Rabbinical Law", a religious authority to which obedience and reverence were henceforth paid, even after the seat of this authority was shifted first to Sepphoris, and finally to Tiberias.

The supremacy of "Rabbinism", thus firmly established among the Western Jews, prevailed likewise in the other great community which comprised all the Jewish families east of the Euphrates. The chief of this Babylonian community assumed the title of Besa or Calutha (prince of the Captivity), and was a powerful feudatory of the Parthian Empire. He was the supreme judge of the minor communities, both in civil and in criminal matters, and exercised in many other ways a wellnigh absolute authority over them. The principal districts under his jurisdiction were those of Naaras, Sora, Pumbeditha, Naharaia, Nahar-Paked and Machuza, whose rabbinical schools were destined to enjoy the greatest fame and influence. The patriarchs of the West possessed much less temporal authority than the princes of the Captivity; and this was only natural in view of the suspicious watchfulness which Vespasian and Titus exercised over the Jews of.
the Empire. A garrison of 800 men occupied the ruins of Jerusalem to prevent its reconstruction by the religious zeal of its former inhabitants, and in order to do away with all possible pretenders to the Jewish Throne or to the Messianic dignity a strict search was made for Jerusalem and peopled by a colony of foreigners. The city received the name of Aelia Capitolina, and no Jew was allowed to reside in it or even approach its environs. The Christians, now fully distinguished from the Jews, were permitted to establish themselves within the walls, and Aelia became the seat of a flourishing bishopric.

Under Antoninus Pius (138-161), Hadrian's laws were repealed, and the active persecution against the Jews came to an end. Aquila's disciples then returned to Palestine and reorganized the Sanhedrin at Usha, in Galilee (140), under the presidency of Simon II, the son of Gamaliel II. Simon's patriarchate was not free from the petty oppressions of the Roman officials, which the Palestinian Jews particularly felt and resented. On the occasion, therefore, of the warlike preparations of the Parthians against Rome, a fresh revolt broke out in Judea during the last year of Antoninus's reign. It was speedily suppressed under the next emperor, Marcus Aurelius (161-180), and followed by a re-enactment of Hadrian's extreme measures which, however, were soon annulled or never carried out. In 165, Rabbi Judah I succeeded Simon II as president of the Sanhedrin and patriarch of the West. The most important of his acts is the completion of the Mishna oral Law (about 189), which, concurrently with the Bible, became the principal source of rabbinical study, and a kind of constitution which even now holds together the scattered members of the Jewish race. As Rabbi Judah was in office for over thirty years, he was the last Jewish patriarch who had to complain of the vexations of the pagan rulers of Rome. Under Caracalla (211-217), the Jews received the right of citizenship; and under his successors the various disabilities by which they had been affected were gradually removed. Even such rabid persecutors of the Christians as Decius (249-251), Valerian (253-260), and Diocletian (284-305) left the Jews unmolested. During this period of peace, the patriarchs of the West frequently sent their legates to the various synagogues to ascertain their actual condition and collect the tax from which Juda III and his successors drew their income. In Babylonia, the Jewish communities and schools were flourishing under the princes of the Captivity, and except for a short space of time immediately after the conquest of the Parthians by the neo-Persians, and during the ephemeral rule of Odenathus at Palmyra, they enjoyed quiet and independence. The condition of the Jews in Arabia and China, at this time, is not known with any degree of certainty.

(8) Christian Emperors and Barbarian Kings (320-628).—The accession of Christianity to the throne of the Caesars by the conversion of Constantine, opens a new era in the history of the Jews. The equality of rights to which the pagan emperors had admitted them was gradually restricted by the head of the Christian State. Under Constantine (306-337), the restrictions were few in number, and due to his interest in the welfare of his Christian subjects and the promotion of the true religion, he made the passage from Christianity to Judaism a penal offence; prohibited the Jews from circumcising their child...
slaves; protected converts from Judaism against the fiery vengeance of their former coreligionists; but never deprived them of their citizenship, and never went beyond restraining them—with the exception of their rabbis—to take upon themselves certain public offices which had become particularly burdensome. Several exiles from Judaea were received with a very severe by his son Constans I (337–350), who attached the death penalty to marriages between Jews and Christians. The severity of these and other laws of Constans was but too fully justified by the dreadful excesses of the Jews in Alexandria, and by their temporary withdrawal in Judea. The Revolt of the Apostate, in 361, made a new diversion in their favour. This emperor decreed the rebuilding of the Temple on Mt. Moriah and the full restoration of Jewish worship, apparently with a view to secure the influence of the Mesopotamian Jews in his expedition against the Persians. The Jews were triumphant; but their triumph was short-lived; sudden flames burst forth from Mt. Moriah and rendered impossible the rebuilding of the Temple; Julian perished in his Persian War, and his successor, Jovian (363–364), reverted to Constans' policy. The next emperors, Valens and Valentinian, reinstated the Jews in their former rights, except, however, the exemption from public service. Under Gratian, Theodosius I, and Arcadius, they likewise enjoyed the protection of the Throne; but under Theodosius II (402–450), emboldened by their long immunity from persecution, they manifested a spirit of intolerance and crime which led to violent tumults between them and the Christians in various parts of the Eastern Roman Empire, and apparently also to the prohibition of building new synagogues and from discharging any state employment. It was under Theodosius II that the patriarchate of the West, then held by Jerome, came to an end (425). Some time before (c. 375), the Jews of Jerusalem undertook a work which, however important for Judaism, is less complete, in regard to both its Mishna and its Gemara, than the Babylonian Talmud, the compilation of which was terminated by the heads of the Babylonian schools about 499, despite the violent persecutions of the Persian kings. Theophilus III (440–447) and Firus (457–484). The immediate result of Firus' persecution was the emigration of Jewish colonists in the south as far as Arabia, and in the east as far as India where they founded a little Jewish state on the coast of the Red Sea which lasted till 1529. Under Qubad I, Firus's son, Mar Zutra II, succeeded to the rule of the Jewish state in Babylonia; but in 518, the Byzantine successors of Theodosius II enforced his anti-Jewish laws with great rigour, and, as a result, the intellectual life and former jurisdiction of the Judean Jews became virtually extinct.

In the West the Jews fared decidedly better during the fifth century than in the East. They of course suffered many evils during the invasions of the northern barbarians who flooded the Western Empire after its permanent separation in 376 from the Eastern Empire of Constantine. In the midst of the political convulsions naturally entailed by these invasions, the Jews gradually became the masters of the commerce, which the conquerors of the Western Empire, addicted to the arts of war, had neither time nor inclination to pursue. In the various states which soon arose out of that dismembered empire, the numerous Jewish populations do not seem for a long time to have been subjected to restrictive measures, except in connexion with their slave trade. The Vandals left them free to exercise their religion. They were justly treated in Italy, by the Kings of the Ostrogoths, and by the Roman emperors, Theodoric and Galla Placidia, but not everywhere in the West generally; and in Spain, by the Visigoths down to the conversion of King Recared to Catholicism (589), or rather down to the accession of Sisebut (612), who, deploring the fact that Recared's anti-Jewish laws had been little more than a dead letter, resolved at once to enforce them, and in fact added to them first the injunction that the Jews should release the slaves in their possession, and next, that they should choose between baptism and banishment. Anti-Jewish legislation was framed and effected important sections of the Jewish dominions. Hostility towards the Jews showed itself first in Burgundy, under King Sigismund (517), and thence it spread over the Frankish countries. In 554, Childebert I of Paris forbade them to appear on the street at Easter tide; in 551, Chilperic compelled them to receive baptism; in 613, Clovis II sanctioned new decrees against them; and in 629, Dagobert made them choose between baptism and expulsion. Thus the laws against the Jews both in Spain and in France reached gradually a degree of severity unknown even to such Eastern persecutors of Judaism as Justinian I (527–565) and Heraclius (610–641). Yet, the edicts of these Byzantine emperors were vexatious enough. In fact, Justinian's decrees so exasperated the Palestinian Jews that despite the persecutions of their Mesopotamian fellow-Jews by the Persian kings, Kusrar I (531–579), Hormizidas IV (570–591), and Kusrar II (590–622), they seized the first opportunity to avenge themselves by siding with Kusrar II in his war against Heraclius. During the Persian invasion and occupation of Palestine, they committed dreadful excesses against the Christians, which finally met with a merited punishment in the persecution which Heraclius, again master of Judea, started against them.

(7) The Mohammedan Ascendancy (622–1038).—The rise of Mohammedanism, with whose power the Arabian Jews came into contact when it was yet in its infancy, marks the beginning of a new period in Jewish history. Several centuries before Mohammed's birth (c. 570), the Jews had effected important settlements in Arabia, and in the course of time, they had acquired a considerable influence upon the heathen population. In fact, it is certain that at one time, there existed in Southern Arabia (Yemen), an Arab-Jewish kingdom which was brought to an end in 530 by a Christian king of Abyssinia. But although they had lost their royal estate, the Arabian Jews were still numerous and powerful, in the Hedjaz, north of Yemen. There was indeed but a small Jewish population in Mecca, Mohammed's birthplace; yet it is probable that contact with the Jews of that city was one of the means by which the founder of Islam became acquainted with Judaism, its beliefs, and its Patriarchs. This acquaintance became naturally closer after the Hegira (Flight) of Mohammed (622) to Medina, the chief centre of the Arabian Jews. To win the Israelites to his cause, the

Seleucus IV. Philopator. Antiochus IV. Epiphanes. "prophet" made various concessions to their religion and adopted some of their customs. As this was useless, and as the Jews were a constant menace to his cause, he resolved to get rid of their tribes one after another. He first put an end to the Jews in the vicinity of Medina, and next (628) subjected those of the Mezquita of Kharanuvar, and then (632) to the mediation of half the produce of the soil. After Mohammed's death (A. D. 632), Caliph Abu-Bekr tolerated the Jewish remnant in Khaibar and al-Kura; but this
toleration ceased under Omar, the prophet's second successor. During Omar's short caliphate (634–644), Syria, Phoenicia, Persia, Egypt, and Jerusalem fell under the sway of Islam. The Jews were fairly well treated by their new masters. Omar's so-called "Covenant" (640) imposed indeed restrictions upon Jews in the whole Mohammedan world, but these restrictions do not seem to have been carried out during his reign.

In return for the valuable assistance of the Babylonian Jews in Omar's campaigns against Persia, this caliph granted them several privileges, among which may be mentioned the recognition of their exilarch Bostanal (642). Under Islam's fourth caliph, Ali (656–661), the Jewish community of Iraq (Babylonia) became more fully organized and assumed the appearance of an independent state, in which the Talmudic schools of Sora and Pumbeditha flourished again. The exilarch and the head of the school of Sora, with his new name of Gaon (658), were of equal rank. The former's office was political, the latter's distinctly religious. The exilarch, both in bearing and in mode of life, was a prince. Thus it came to pass that the Jews scattered through the Mohammedan world persuaded themselves that in Abraham's own country there survived a prince of the Captivity who had regained the sceptre of David. For the caliphs of that day the Jewish exarchates were the representatives of the ideal times of the Talmud. The farther the dominion of the Ommiads (661–750) was extended, the more adherents were gained for the Jewish Babylonian chiefs. The great liberty which the Jews enjoyed under Islam's rule allowed them to cultivate Cabalism or neo-Hebraic poetry and to begin their Masonic labours (see MASSORA).

Meantime, their fellow-Jews were less fortunate in Spain, where most rulers of the seventh century enacted severe laws against Judaism. Towards the end of that century, Egica forbade them to own lands and houses, to repair to or trade with North Africa, and even to transact business with Christians. Having next discovered a plot of the Jews with the Moors to overthrow the Visigothic rule, he sentenced all the Jews of his states and ordered that their children of seven years and upwards be given to Christians to be baptised. This condition of things came to an end under Roderic, Egica's successor and last Visigothic King of Spain. With numerous Jews in their army, the Mohammedans crossed from Africa into Andalusia, defeated and slew Roderic (July, 711); Spain was gradually conquered; and in 720, the Saracens advanced into Spain, and set up an independent of the Gothic Kingdom. In Mohammedan Spain, the Jews, to whose help the conquerors largely owed their victories, obtained their liberty. In fact, it was now given to the Jews at large to enjoy a long period of nearly unbroken peace and security. Apart from the persecutions started in 737 by the Caliph of Damascus, Omar II, and in 723 by the Byzantine emperor, Leo III, they prospered everywhere till about the middle of the ninth century. It was during this period that the great Kingdom of the Chazars, which was situated west of the Caspian Sea, and had caused the Persians to tremble, embraced Judaism (c. 740); its rulers remained exclusively Jewish above two centuries and a half. After the caliphs of the Ommiad dynasty, one of whom had a Jew as his mint-master, those of the Abbasides, till after Harun al-Rashid (d. 809), do not seem to have seriously disturbed their Jewish subjects: during that time, the Babylonian Talmudic schools flourished, and Judaism, having been not only for their internal dissensions, religious (Kuraites) and political (contests for the dignity of exilarch), the Jews of Babylon would have been as happy as they were renowned for their learning. In Mohammedan Spain (with its separate Caliphate of Cordova since a.d. 750), the Jews were undeniably prosperous during the century now under review, although details concerning their condition during that time are actually wanting. In France, they were submitted to any serious restrictions under either Pepin (752–788) or Charlemagne (788–814), while under Louis I (814–840) it even enjoyed special favours and privileges, the king having for his confidential adviser his Jewish physician named Zedekiah, and actively protecting Jewish interests against powerful opponents.

Thus, with the exception of a passing persecution under the two sons of Harun al-Rashid, the Jews were left unmolested for about 100 years. But with the middle of the ninth century, and nearly everywhere, the cases to be the case. In the East, Jewish persecutions were resumed by the Byzantine emperors of the Macedonian dynasty (842–1056), and by the Abbasid Caliph al-Motawakel, who, in 853, re-enacted the Covenant of Omar, and under whose successors in the Caliphate of Bagdad, the Jewish community of Iraq lost more and more of its prestige and was supplanted in the exilarchate by that of Spain; the exilarchate gradually ceased to be an office of the State and finally perished (c. 940), owing chiefly to the dissensions between the Gaons of Sora and Pumbeditha; and the Gaonate itself, for a while made famous by Saadiah, ultimately disappeared through the decay of the Gaonic dynasty (c. 1038). Under the Fatimite dynasty of caliphs (909–1171), whose rule extended over North Africa, Egypt, and Syria, the Jews were worse off still. About the middle of the tenth century, the Jewish Kingdom of the Chazars was destroyed by the Russians. In the West, the lot of the Jews was also that of a despised and persecuted race. Charles the Bald (840–877) protected them effectively; it is true, but his weak Carlovingian successors and the early Capetians lacked sufficient authority for doing so. In Italy, as early as 855, Louis II ordered the banishment of all Italian Jews, and his order failed to have the intended effect only because of the distracted condition of the realm at the time. In Germany, where "Jew" was synonymous with "merchant," the emperors were long satisfied with exacting a special tax from their Jewish subjects; but finally Henry II (1002–1024) expelled from Mainz the Jews who refused to be baptized, and it is probable that his decree was applied to other communities.

Spain (Navarre, Castile, and Leon) also persecuted the Jews, although towards the end of the tenth century, its rulers placed them in many respects an equality with the rest of the population. In Mohammedan Spain, however, the Jews remained industrious and religiously free. Under such patrons of science and art as the Ommiad caliphs, Abd-er-Rhamman III (d. 961), Al-Hakem (d. 976), and the regent Al-Manzur (d. 1002), the Jews greatly increased in Moorish Spain, and became famous for learning as well as for commercial and industrial activity. The Talmudic schools of Cordova, Lucena, and Granada took the place of those of Sora and Pumbeditha, under the high patronage of the Jewish statesmen Hasdai, Jacob Ibn-Jau, and Samuel Halevi. During this period, an Arabic translation of the Mishna was made in Spain by Ibn-Habib, and the first commentaries on the Talmud were composed at Mainz by Gershom ben Juda (d. 1028).

(8) Era of the Crusades (1038–1300).—In many respects, Mohammedan Spain owed a great deal to its Jewish population; yet, in 1096, the Jews were expelled from the Kingdom of Spain. In the young kingdoms of Christian Spain were indebted to their Jewish inhabitants; nevertheless, Ferdinand the Great subjected them to vexatious measures and was only prevented from driving the sword against them by the intervention of the Spanish clergy. These, however, were but passing storms; for Alfonso VI (1071–1109) soon freely used Jews in his diplomatic
and military operations, while in the Mohammedan states distinct from Granada, Jewish culture reached the zenith of its splendour. The era of Jewish persecutions really began with the First Crusade (1096–1099). The crusaders landed in May–July, 1096, bloody scenes against the Jews of Trier, Worms, Mainz, Cologne, and other Rhenish towns, and repeated them as they went along in the cities on the Main and the Danube, even as far as Hungary, bishops and princes being mostly on the side of the victims, but proving, for various reasons, powerless to protect them effectively. On the capture of Jerusalem, 15 July, 1099, the crusaders wreaked a frightful vengeance on the Jews of the fallen city.

The interval between the First and the Second Crusade was a time of reprieve and recuperation for the Jewish race. In England, in Germany, and even in Palestine, they were left unmolested; while in Spain and in France, they attained to a high degree of prosperity and influence, and actively pursued literary and Talmudic studies under the guidance of Judah Halevi and the sons of Raashi. Yet, in 1146, on the eve of the Second Crusade, there began against them the violent persecution of the Almohades in Northern Africa and Southern Spain which brought about the speedy ruin of the Jewish synagogues and schools and would have resulted in the practical annihilation of the Jews of Mohammedan Spain had not most of them found a refuge in the Christian dominions of Alfonso VII (d. 1157). Then came the Second Crusade (1147–1149) with its atrocities against the Jews in Cologne, Mainz, Worms, Speyer, and Strasbourg, despite the protestations of Bernard of Clairvaux and of Eugenius III, and the efforts of the German prelates and the Emperor Conrad III in their behalf; and with its most deplorable result, namely the greater enslavement of the German Jews to the Crown. The next fifty years were, on the whole, for the Jewish race a period of peace and prosperity: in Spain, where Judah ibn-Berhn was steward of the palace to Alfonso VIII; in Mesopotamia, where Mohammed Almuktafi revived the dignity of exilarch; in the Two Sicilies, where the Jews had equal rights with the rest of the population; in Italy, where Pope Alexander III was favourable to them, and the Third Lateran Council (1179) passed decrees protecting their religious liberty; in England and its French provinces, where the Jews were very flourishing under Henry Plantagenet (d. 1189); in France itself, where under the kind rule of Louis VI and Louis VII (1108–1180) they greatly prospered in every direction. And yet, in some of these countries there was a deep-seated hatred of the Jewish race and its religion. It manifested itself in 1171 when the Jews of Blois were burned on the charge of having used Christian blood in their Passover, and it allowed Philip Augustus in the year of his accession (1180) to decree the confiscation of all the unmovable goods of Jewish subjects and their banishment from his domains.

This feeling showed itself particularly on the occasion of the Third Crusade (1189–1192). The Jews were massacred on the day of the coronation of Richard I (3 Sept., 1189) and soon afterwards in several English towns (1190). About the same time, crusaders murdered them at different places from the district of the Rhine to Vienna. When again in 1198 a new crusade (1202–1204) was preached, many barons of northern France got released from their debts to Jewish creditors, and then drove them out of their dominions. Philip Augustus received indeed the exiles in his own territory, but he was chiefly actuated by covetousness. The Jews appealed to Innocent III to curb the violence of the crusaders; and in answer, the pontiff issued a Constitution which rigorously forbade mob violence and forced baptism, but which apparently had little or no effect.

The year 1204, in which closed the Fourth Crusade, marked the beginning of still heavier misfortunes for the Jews. That very year witnessed the death of Maimonides, the greatest Jewish authority of the twelfth century, and the first of the many efforts of Innocent III to prevent Christian princes from showing favour to their Jewish subjects. Soon afterwards, the Jews of southern France suffered grievously during the war against the Albigenses which ended only in 1229. In 1210, those of England were ill-treated by King John himself, and their wealth confiscated to the Exchequer. Next, the Jews of Toledo were put to death by crusaders (1212). The secular legislation of the time was generally unfavourable to the Jews, and it culminated in the anti-Jewish measures of the Fourth Council of the Lateran (1215), among which may be mentioned the exclusion of Jews from public offices, and the decree that they should wear a Jew badge. Besides being thus legislated against, the Jews were divided amongst themselves with regard to the orthodoxy of the writings of Maimonides. Gradually, the Lateran decrees against them were enforced wherever this was possible, and active persecutions from kings and crusaders were started, the rulers of England being particularly conspicuous for their extortions of money from their Jewish subjects.

In many places the severity of the Lateran decrees was outdone, so that in 1235 Gregory IX felt called upon to confirm the Constitution of Innocent III, and in 1247 Innocent IV issued a Bull reproving the false accusations and various excesses of the time against the Jews. Writing to the bishops of France and of Germany the latter pontiff says: "Certain of the clergy, and princes, nobles and great lords of your cities and dioceses have falsely devised certain godless plans against the Jews, unjustly depriving them by force of their property, and appropriating it themselves: they falsely charge them with dividing up among themselves on the Passover the heart of a murdered boy. In their malice, they ascribe every murder, wherever it chance to occur, to the Jews. And on the ground of these and other fabrications, they are filled with rage against them, rob them of their possessions without any formal accusation, without confession, and without legal trial and conviction, contrary to the privileges granted to them by the
Apostolic See. . . . They oppress the Jews by starvation, imprisonment, and by tortures and sufferings; they afflict them with all kinds of punishments, and sometimes even condemn them to death, so that the Jews, although living under Christian princes, are in a worse plight by the former than by the Pharaohs. They are driven to leave in despair the land in which their fathers have dwelt since the memory of man. . . . Since it is our pleasure that they shall not be disturbed, . . . we ordain that ye behave towards them in a friendly and kind manner. Whenever any unjust attacks upon them come under your notice, you shall not tolerate them, and you shall not suffer them to be visited in the future by similar tribulations." The protestations of the Roman pontiffs do not seem to have been much heeded in the Christian states generally. In 1254, nearly all the French Jews were banished by St. Louis from the king's domains. Between 1257 and 1296, Alfonso X of Castile compiled a code of laws which contained several clauses against the Jews and countenanced the blood accusation which had been condemned by Innocent IV. For the last three years of Henry III (d. 1272), the Jews of England fared worse and worse. About this time, Pope Gregory XIV belived in more that the Jews would be inficted upon their persons or their property (1273); but the popular hatred against them on the charge of usury, use of Christian blood at their Passover, etc., could not be restrained; and the thirteenth century which had witnessed their persecution in all parts of Christendom, except Austria, Portugal, and Italy, closed with their total emulsion from England in 1290, under Edward I, and their carnage in Germany in 1283 and 1298. During the same period, public disputations had been resorted to—but with little success—for the conversion of the Jews. Further light on the severity of measures and on the hatred directed against the Jews, as well as on the motives of popular prejudice and hatred, will be found below, under section JUDAISM:

(4) Judaism and Church Legislation. (9) Last Part of the Middle Ages (1300–1500). At the beginning of the fourteenth century, Jewish rabbis were divided concerning the value of the Zohar, the sacred book of the Kabbalists (see KABBALA), which Moses of Leon had recently published. A still deeper division prevailed among them with regard to the cultivation of Aristotle's philosophy and the humanistic sciences and literature, and it resulted in 1305 in a bloody persecution. In France, they were torn with disputes against the study of science. The next year (1306), Philip IV plundered and expelled all the French Jews, some of whom travelled as far as Palestine to enjoy there freedom under the rule of the mameluke sultan, Nasir Mohammed (d. 1341), while most remained on the border of France, thinking that the royal avarice which had caused their banishment would bring about their early return. Meantime, their coreligionists of Castile narrowly escaped the carrying out of stringent measures against their own rights and privileges (1313). The banished French Jews were actually reacquired in 1320, in the person of Edward. In England, they flourished for twelve years. But as early as 1320, there arose against them the bloody persecution of some 40,000 pastoureux who pretended to be on their way to the recovery of the Holy Sepulchre. In 1321, the Jews were accused by the lepers of having poisoned the wells and rivers, whereupon a new persecution ensued. The same year, owing to intrigues against them, the Jews of Rome, then very flourishing in society and literature, would have been expelled from Roman territory by John XXII who resided in Avignon, had it not been for the timely intervention of Robert of Anjou, Vicer-General of the Papal States. In 1323, with the strong influence with Alfonso XI (1312–1350), the various plans against them actually failed, and the king showed himself favourable to them till the day of his death. Their enemies were more successful in Na-

varre on the occasion of the war of independence which this province waged against France. As the Jews were apparently in the way of the secession, they were subjected to a violent persecution during the course of the war (1328), and to oppressive measures after Navarre had become a part of the French kingdom. In Germany, they fared still worse during the riots and the civil wars under Louis IV (1314–1347). For three consecutive years (1336, 1337), the Arméieder, or peasants wearing a piece of leather wound around their arm, inflicted untold sufferings upon the Jewish inhabitants of Alsace and the Rhineland as far as Swabia. In 1337, also, on the charge of having profaned a consecrated Host, the Jews of Bavaria were subjected to a slaughter which soon extended to those of Bohemia, Moravia, and Austria, although Benedict XII had issued a Bull promising an inquiry into the matter. Besides, Louis IV, who always treated his Jewish subjects as mere slaves, subjected them (c. 1342) to a new and most onerous poll-tax. Greater Jewish massacres occurred in 1348–1349 while the fearful scourge, known as the "Black Death", desolated Europe. The report that the Jews had caused the scourge by poisoning the wells used by Christians spread rapidly and was believed in most of Central Europe, despite the Bulls issued by Clement VI in July and September, 1348, declaring their falsity. Despite the fact, too, that the same pontiff had solemnly ordered that Jews be not forced into baptism, that their sabbaths, festivals, synagogues, and cemeteries be respected, that no new exactions be imposed on them, they were plundered and murdered in many countries of Central and Northern Europe. The next years were, on the whole, a period of respite from persecution for the Jewish race. In Castile, the Jews attained to a great influence under Don Pedro (1360–1369), and the misfortunes which fell on them arose partly from the prevalent view that they availed themselves of their power to tap up the people's possessions with their tax-farming, and partly from their constant loyalty to Don Pedro's cause, during the civil war which broke out between him and Don Henry. The latter, after reaching the throne, showed himself friendly to the Jews, and agreed only reluctantly to some of the restrictive measures urged by the Cortes in 1371. In Germany, they were readmitted as early as 1355 into the very towns which had sworn that for 100 or 200 years no Jew should dwell within their walls.

From the special privileges by King John (1361), which they enjoyed to the full extent under his successor, Charles V (1364–1380). But the last twenty years of the fourteenth century were again disastrous for the European Jews. In France, scarcely was Charles V dead, when popular riots were started against them because of their exorbitant usury and encouragement to baptized Jews to recant, and finally brought about the permanent exile of the Jewish population (1394). In Spain, the reign of John I (d. 1390) witnessed a great curtailing of the Jews' power and privileges; and that of Henry III (d. 1406) was marked by bloody persecutions in the cities of Castile and Aragon and even in the island of Majorca, on account of which numerous Jews embraced Christianity. In Germany (1384), and in Bohemia (1389, 1399), the Jews were likewise persectuated. Boniface IX had protested, but in vain, against such outrages and slaughters (1380); and it is only in his states, in Italy, and in Portugal, that the Jewish race had any measure of peace during these years of carnage.

At the beginning of the fifteenth century, the Jews enjoyed some manner of respite in nearly all the countries where they have had a history, and such they had fled from persecuting France and Spain. But these peaceful days did not last long. As early as 1408, there appeared in the name of the infant King of Castile, John II, an edict which revived the dormant
anti-Jewish statutes of Alfonso X; and soon afterwards (1412), a severer edict was issued, intended to isolate the Jews from the Christians lest intercourse should injure the true Faith, and calculated to induce them to give up their religion. In fact, degraded in every way, parked in "Juderias", and deprived of practically every means of subsistence, many Jews surrendered to the shortations of St. Vincent Ferrer, and received baptism, while the others persevered in Judaism and saw their misery somewhat alleviated by the royal edict of 1414. The persecution gradually extended to all the provinces of Spain, where St. Vincent also effected many conversions. At length, brighter days dawned for the Spanish Jews upon the death of Ferdinand, King of Aragon (1416) and of Catherine, Regent of Castile (1419), and upon the publication of the following solemn declaration of Martin V (1419), in their behalf: "Whereas the Jews are made to the image of God, and a remnant of them will one day be saved, and whereas they have besought our protection: following in the footsteps of our predecessors we command that they be not molested in their synagogues; that their laws, rights, and customs be not assailed; that they be not baptized by force, constrained to observe Christian festivals, nor to wear badges; and they be not hindered in their business relations with Christians." But then began new persecutions against the Jewish population of Central Europe. In their distress, the Austrian and the German Jews appealed to the same pontiff who, in 1420, also raised his voice in their favour, and who, in 1422, confirmed the ancient privileges of their race. Nevertheless, the Jews of Cologne were expelled in 1426, and those of several towns of southern Germany burned on the old blood accusation (1431). To add to their misfortune, the Council of Basle renewed the old and devised new restrictive measures against the Jews (1434); the unfavourable Archduke of Austria, Albert, became Emperor of Germany (1437-1439); and the new pope, Eugenius IV (1431-1447), at first well-disposed towards them, showed himself by this time a firm friend of Christendom.

Meantime, the Jewish communities of Castile prospered under John II, who promoted several Jews to public offices, and who in 1432 confirmed the statute of the Jewish Synod of Avila prescribing the establishment of separate schools. In the course of time, however, Spanish Christians complained to the pope of the arrogances of the Castilian Jews, and, in consequence, Eugenius IV issued an unfavourable Bull (1442) which but a mask. Even after Ferdinand II and Isabella had united Castile and Leon under one sceptre (1479), the Jews remained undisturbed — except in Andalusia—until the fall of Granada, protected as they were by Isaac Abrabanel, the ruler's Jewish minister of finance. But the conquest of the rich Kingdom of Granada apparently led Ferdinand and Isabella to regard the Spanish Jews as no longer indispensable, as in fact out of place in their estates, which they wished altogether Christian. Without the approval of Innocent VII, the decree appeared (1492) banishing all Jews from Spain, and it was carried out despite Abrabanel's supplication and offer of an immense sum of money.

Great indeed were the misfortunes which befell the impoverished Jewish exiles. In Navarre, they had ultimately to choose between expulsion and baptism. In the African seaports, when allowed to land, they were decimated by plague and starvation. The Genoese ships, they were submitted to the most brutal treatment, and those who landed near Genoa reduced
to starve or give up Judaism. In Rome, their fellow-Jews offered 1000 ducats to Alexander VI to prevent their admission, an offer which was indignantly refused. In Naples, they were compassionately received by Ferdinand I, but also carried off in numbers by the people. In Florence, they were ejected in 1497 and not until 1516 after a very bitter fight, and in 1517 they were expelled. The country where the Spanish refugees were most hospitably received was Turkey, then ruled over by Bajazet II.

(10) Modern Period (1500–1700).—These expulsions of the Jews gave rise in the sixteenth century to the important division of the European Jews into "Sephardim" (Spanish and Portuguese Jews) and "Askhenazim" (German and Polish Jews), thus called from two Biblical words connected by medieval rabbis with Spain and Germany respectively. Wherever they settled, the Sephardim preserved their peculiar ritual and also their native refinement of character, maintaining their influence with those of the Askhenazim and secured for them an influence which the latter did not exercise despite their closer acquaintance with the Talmud and greater faithfulness to ancestral virtues and traditions. Thus, during this century, many Jewish physicians and others were favourable to the Jews and the Maranos of Portugal and Spain who again professed Judaism. In Naples, they enjoyed the high protection of Samuel Abraham, a wealthy Jew who apparently administered the finances of the viceroy, Don Pedro of Toledo. In Ferrara and Florence, Jews and Maranos were well treated by the respective rulers of these cities; and even in Venice, which considered the expediency of their expulsion lest their presence should injure the interests of native merchants, they were simply confined to the first Italian Ghetto (1516). The early Roman pontiffs of the sixteenth century had Jewish physicians and were favourable to the Jews and the Maranos of their states. Time soon came, however, when the Sephardic Jews of Italy faced difficulty. As the Sephardim in Holland tended to the Spanish domination, so did the Jews in England from which Jews had been strictly excluded since 1290. Oliver Cromwell, protector of the realm (1653–1658), was personally in favour of the movement, and he actively seconded the skilful pleadings of Manasses ben Israel, the leading rabbi of Amsterdam, for that purpose. Cromwell, however, did not dare openly to bring about a change generally hateful to the English clergy and nation. Under Charles II (d. 1685), the Jews stole insensibly into the kingdom, where they have ever since maintained their footing. The chief difficulties of the Sephardim in Holland were that their rabbis used rather freely the power of excommunication, one of the victims of which was the celebrated Spinoza (1656); and the majority of the Jewish population of Amsterdam was more or less seriously disturbed, about this time, by the Messianic pretensions of Sabbatian Zevi.

During the sixteenth and seventeenth centuries, the Askhenazim or German Jews were less fortunate than their Sephardic contemporaries. Their general condition remained much the same as during the preceding period. It is often, but wrongly, asserted that the invention of printing by Jewish scholars did not promote the Protestant Reformation to be beneficial to the Jews. When, early in the sixteenth century, the German Jews began to use the printing press for their own literature, sacred or otherwise, the Emperor Maximilian (d. 1519) was urged to order all Hebrew books to be burned, and but for the strenuous exertions of Reuchlin, the burning of the Talmud would have taken place. "That the Reformation itself had nothing to do with the subsequent ameliorations in the conditions of the Jews, is plain from the fact that in many parts of Germany, Protestant as well as Catholic, their lot became ac-

other." (Myth and History, vol. x, New York, 1903). Luther himself, towards the end of his life, was their greatest opponent. "He poisoned the Protestant world for a long time to come, with his Jew-hating testament. Prot-
estants became even more bitter against Jews than Catholics had been. The leaders of Catholicism demanded absolute submission to canonical law; but on that condition granted them permission to remain in Catholic countries; Luther, on the other hand, required their absolute expulsion. . . . It was reserved for him to place Jews on a level with Gypsies. . . . He was the cause of their being expelled by Protestant princes" (Grässl). In general, the emperors of the period acted with equity towards their Jewish subjects. At times, however, they expelled them from their crown lands, or connived at their banishment from other places. During the Thirty Years' War, Ferdinand II (d. 1638) treated the Jews with great consid-
period just sketched, Christian scholars began to cultivate Hebrew under the guidance of Jewish grammarians; Hebrew studies were introduced into German and French universities; and Richard Simon made the learned world acquainted with rabbinical literature.

(11) Recent Times (since 1700).—In dealing with this last period, it will be convenient to narrate briefly the events relative, first to the Jews of the Old World, and next to those of the New. The internal condition of the Jews in the Old World during the first half of the eighteenth century was that of a general demoralization which made them appear all the more disreputable because the recent works of Christian scholars, such, for instance, as the history of the Jews by Basnage,

---

**ARCH OF TITUS**

Detail showing seven-branch candelabrum

had forcibly directed the attention of the learned world towards them. They were not indeed subjected to the wholesale massacres of former days, but they remained in the eyes of all a despised race liable to all kinds of disabilities. In Sweden, they were allowed (1718) to enter the kingdom under unfavourable conditions; in France, new restrictions were imposed on their settlements (1718) at Metz and Bordeaux; in Prussia, the laws of Frederick William I (1714, 1730) breathed a spirit of great intolerance against them; at Naples, the concessions made to the Jews by Charles III, in 1740, were soon revoked; in Austria, charges that they were in league with the country's enemies during the War of the Austrian Succession were readily believed, led to bloody riots against them, wellnigh entailed (1745) under Maria Theresa their perpetual expulsion from Bohemia and Moravia, and caused the Jews of Prague to be placed under the most severe restrictions; in Russia, Catherine I (1727) took active measures against the Ukraine Jews and banished the Jewish population from Russia. Anna Ivanowa (1739) decreed their expulsion from Little Russia, and Elizabeth (1741-1762) harshly enforced anti-Jewish meas-
ures; and finally, in England, the Jews were simply tolerated as aliens, and a naturalisation act, which was passed by parliament in 1882, and confirmed by the act of 1735, was actually repealed (1754) owing to the nation's opposition to it.

Gradually, however, a number of circumstances lessened this spirit of hostility against the Jews. Among these circumstances may be particularly mentioned: (a) the rise of servitude and Mendelssohn (1729-1786), who, by his literary attainments and his strong personality, proved to the world that his race could produce men worthy of admittance into the highest society, and showed to his fellow-Jews the way to remove prejudices against them; and (b) the vigorous stand made by a Jewish writer Dohm, who, in his work "Upon the Amelioration of the Condition of the Jews" suggested many practical measures which Joseph II of Austria partly accepted in 1781, when he abolished the Jewish poll-tax and granted civil liberties to the Jews. Under these, and other similar circumstances, a more liberal spirit towards the Jews prevailed in Prussia and in France, where William II and Louis XVI, respectively, abolished the Jewish body tax. It made itself felt also in Russia where Catherine II (1762-1796) even decreed the civil and religious liberty of the Jews, but under whose rule the Jews were allowed to organize the "Russian Settlement," or portion of Russia in which Jews are allowed to reside and to enforce other anti-Jewish measures. It culminated in the decrees of the French Revolution which actually opened the era of Jewish emancipation: in 1790, the French National Assembly granted citizenship to the Sephardic Jews, and, in 1791, it extended full civil rights to all the Jews of the country. With French victories and influence, Jewish liberty naturally followed, and, in 1796, the Batavian National Assembly decreed citizenship for the Jews. Napoleon I summoned in 1806 an assembly of Jewish notables which succeeded, in calming his prejudices against the Jews and, in ordaining the French rabbinate; and, in 1808, he pronounced the "Code Napoléon" universally applicable to all French Jews. With the exception of some local regulations, it was the first and only legal code of the Jews in the world.

The fall of Napoleon and the consequent period of European reorganization gave a setback to Jewish liberty, especially in Germany, which was for a while the scene of bloody riots against the Jews; but gradually, and nearly everywhere in the Old World, Jewish liberty increased. In France, for instance, the rabbinical court was established, under Louis Philippe (1831), on the same footing with regard to salary as the curés of the Catholic Church; in 1846, the oath "More Judaico" was abolished as unconstitutional; and since the wave of anti-Semitism which culminated in the well-known case of Alfred Dreyfus, the Jewish population of the country has been left untroubled. In England, it was not before 1858 that Parliament was freely opened to the Jews by the suppression of the clause "On the true faith of a Christian" from the oath of office, and not before 1870, that all restrictions for every position (except that of sovereign) in the British Empire were abolished. In Northern Germany, the various states allowed civil liberty to their Jewish population in 1848, and after 1870, all restrictions disappeared, although since that time, owing to anti-Semitism, minor disabilities have been publicly enacted or quietly tolerated. In Prussia, Denmark, the Jews of the Empire. The Dutch government in 1842, emancipated the Jews in 1849, whereas Sweden and Norway still subject them to certain disabilities. In 1867, the Jews of Austria were emancipated, and in 1895, those of Hungary obtained, moreover, that Judaism be considered as "a legally recognized religion." In Switzerland, after a long and bitter struggle, the Federal Constitution of 1874 granted to the Jews full liberty. In Italy, the Jewish disabilities, revived on the fall of Napoleon I, and the application of which occasioned in 1835 the celebrated case of Dr. Bismarck (1735), was actually repealed (1754) owing to the nation's opposition to it.

In Palestine, their number is rapidly increasing (they are now 78,000) despite the sultan's restrictions (1888, 1895) concerning the accession of Jewish immigrants in numbers; and agricultural colonies are established in various parts of the land. In Fez and chiefly in Morocco, Jews have still much to fear from the fanaticism of Mohammedans. In Persia, they are gradually pushed into the desert, and every time occupation of the "Ritom" proceeds farther towards them. Their fate has been, and still is, deplorable in Russia where lives nearly one-half of the total Jewish population of the globe. The liberty of trade and commerce granted to them by Alexander I (1801-1825) was replaced, under Nicholas I (1825-1855), by a legislation calculated to diminish their number, to deprive them of their religious and national character, and to render them morally and commercially harmless to Christians. Alexander II (1855-1881) was very favourable to the Jews; but the reaction against them under Alexander III (1881-1884) was of the most intolerable character. The promulgation of the Ignatius law of 1882, the most restrictive measures have been piled up against the Jews, and since 1891 they have been applied with such severity that Russian Jews have emigrated in hundreds of thousands, mostly to the United States. Under the present emperor, Nicholas II, new restrictions have been devised; riots against the Jews occurred in 1896, 1897, 1899, and culminated in the massacre of Kishineff, Homel, etc., from 1903 to 1906, helped in various ways by Russian officials and soldiers; during the year 1909, the persecution took the form of orders of expulsion, and the trials prescribed for the Duma rabble. The perpetrators of the massacres of some years ago are apparently free.

Jews at an early date settled in South America, exiled from Spain and Portugal, or taking part in the Dutch and English commercial enterprises in the New World. Brazil was their main centre. Those found there in the sixteenth century were Maranos who had been sent in company with convicts. They acquired wealth and became very numerous at the beginning of the seventeenth century. They helped the Dutch in wresting Brazil from Portugal (1624), and were joined in 1642 by many Portuguese Jews from Amsterdam. At the end of the Dutch rule over Brazil (1654), most Jewish settlers returned to Holland; some emigrated to French settlements—Guadaloupe, Martinique, and Cayenne; others took refuge in Curacao, a Dutch possession; and finally, a small band reached New York. The Jews who had settled on the French islands were compelled to turn to friendly Dutch possessions, and to other places of refuge, notably to Surinam (then belonging to England) where they became increasingly prosperous. The other early settlements of Jews in Mexico, Peru, and the West Indies do not require more than a passing mention. Of much greater im-
Jews

Israel. It was that religion which had prompted the exiles to return to the land promised by Yahweh to their ancestors, and they were now determined to maintain it in its purity. From the Captivity they had learned that in His justice, God had punished their sins by delivering them into the power of pagan nations, as the Prophets of old had repeatedly announced; and that in His love for the people of His choice, the same God had brought them back, as Isaias (xl-xlvii) had particularly foretold. Thence they naturally drew the conclusion that, cost what it may, they must prove faithful to Yahweh, so as to avert a like punishment in the future. The same conclusion was also brought home to them, when some time after the completion of the Temple, Ezra solemnly read the Law in their hearing. This reading placed distinctly before their minds the unique position of their race among the nations of the world. The Creator of heaven and earth, in His mercy towards fallen man (Gen., i-iii), had made a covenant with their father Abraham, in virtue of which his seed, and in his seed all the peoples of the earth, should be blessed (Gen., xii; xvii; II Esd., ix). From that time forth, He had watched over them with jealous care. The other nations, once fallen into idolatry, He had allowed to grovel amid their impure rites; but He had dealt differently with the Israelites, whom He wished to be unto Him a "priestly kingdom and a holy nation" (Exod., xix, 6). Their repeated falls into idolatry He had not left unpunished, but He kept alive among them the revealed religion which ever represented God as the true and adequate object of their devotion, trust, gratitude, of their obedience and service.

All the past misfortunes of their race were thus distinctly seen as so many chastisements intended by God to recall His ungrateful people to the observance of the Law, whereby they would secure the holiness necessary for the blissless discharge of their priestly mission to the rest of the world. They, therefore, pledged renewed faithfulness to the Law, leaving it to God to bring about the glorious day when all the earth,

Triumphal Coin of Titus

Obverse and Reverse

Importance were those affected chiefly by Sephardim in North America. There were Jews in New Amsterdam as early as 1652; others came from Brazil in 1654. As these were not received in a friendly manner by the governor, Peter Stuyvesant, some of them betook themselves to the Colony of Rhode Island, where they were first landed in the course of time by command from Curacao (1690) and from Lisbon (1755). The condition of those who had remained at New Amsterdam was, on the whole, fair, for they were sustained by the Dutch home Government; and it remained substantially so after 1694, at which date the British captured New Amsterdam and changed its name to New York. At the end of the seventeenth century there were some Jews in Maryland. The next places of settlement were Pennsylvania (with a large percentage of Ashkenazim), Georgia, and the Carolinas. During the War of the American Revolution, the Jews generally took the colonial side; some fought bravely for it; and Haym Solomon aided the Continental Congress with his money. Following the Declaration of Independence (July, 1776) most of the states of the Union placed all citizens upon an equality, the only notable exception being Maryland, in which state all debts only were removed only in 1826.

During the nineteenth century, the Jews spread over all the United States and recently into their possessions, after the Spanish American War (1898), in which some 2000 Jewish soldiers took part. Important congregations have also grown up in the larger cities of Canada where the Jews possess full civil rights since 1831. From 1830 to 1870, the immigration into the United States came largely from the Rhine Provinces, South Germany, and Hungary. Since 1882, the riots and persecutions in Russia have led to an immense emigration, a small portion of which was directed by Baron von Hirsch to the Argentine Republic, or went to Canada, but the great bulk of which came to the United States. To these have been added numerous Jews from Galicia and Rumania. The total Jewish immigration to the United States through the three chief ports of entry (New York, Philadelphia, and Baltimore) from 1881 to 30 June, 1909, was 3,197,423, out of which upwards of 54,000 reached the country between 1 July, 1908, and 30 June, 1909. In consequence, the United States have the third largest Jewish population in the world, the latest estimates being 5,215,805 for Russia, 2,694,591 for Austria-Hungary, and 1,777,185 for the United States. For the immig-

The Jewish statistics in the table below are taken from the "American Jewish Year Book" for the current year 5670 (16 September, 1910, to 3 October, 1910).

Judaism.—At the present day, the term designates the only union which survived the despotism of the Jewish nation by the Assyrians and the Babylonians. A brief account of Judaism thus understood may be given under the following heads: (1) Judaism before the Christian Era; (2) Judaism and Early Christianity; (3) Judaism since a. d. 70; (4) Jewish Legislation, and (5) Judaism in Modern Times.

(1) Judaism before the Christian Era.—Upon the Return from Babylon (538 B. C.), Judah was conscious of having inherited the religion of pre-Exilic
with Jerusalem as its centre, would recognize and worship Yahweh; they broke every tie with the surrounding nationalities, and formed a community wholly sacred unto the Lord, chiefly concerned with the preservation of His faith and worship by a strict compliance with all the ritual prescriptions of the Law. On the one hand, this religious attitude of the Judean Jews secured the preservation of sacred, historic sites among them. History proves that the Persians and the Macedonians respected their religious freedom and even to some extent favoured their worship of Yahweh. It remains true, however, that in the time of the Machabees, the children of Israel escaped being thoroughly hellenized only through their attachment to Judaism, and adherence to the persecutions which they then underwent, confirmed instead of rooting out their belief in the true God. On the other hand, the rigour with which the letter of the Law became enforced gave rise to a narrow "legalism". The mere external compliance with ritual observances gradually superseded the higher claims of conscience; the Prophet was replaced by the "scribe", the casuistic interpreter of the Law; and Israel, in its sacred isolation, looked down upon the rest of mankind. A similarly narrow spirit animated the Babylonian Jews, for it was from Babylon that Esdras, "a ready scribe in the Law of Moses", had come, together with the Jews of Jerusalem, and their existence in the midst of heathen populations made it all the more imperative for them to cling tenaciously to the creed and worship of Yahweh.

Apparently, things went on smoothly with the priestly community of Judah as long as the Persian supremacy lasted. It was the policy of ancient Asiatic empires to grant to each province its autonomy, and the Judean Jews availed themselves of this to live up to the requirements of the Mosaic Law under the headship of their high-priests and the guidance of the official LXX. But the spirit of the Law were no burden to them, and gladly did they even increase the weight by additional interpretations of its text. Nor was this happy condition materially interfered with under Alexander the Great and his immediate successors in Syria and in Egypt. In fact, the structure and the content of the Jewish civilization seemed to open to them a wider field for their theocratic influence, by giving rise to a Western Dispersion with Alexandria and Antioch as its chief local centres and Jerusalem as its metropolis. However much the Jews living among the Greeks mingled with them, absorbed their language, or even became acquainted with Hellenistic philosophy, they remained Jews to the core. The Law as read and explained in their local synagogues regulated their every act, kept them from all defilement with idolatrous worship, and maintained intact their religious traditions. With regard to creed, worship, and morality, the Jews felt themselves far superior to their pagan fellow-citizens, and the works of their leading writers of the time were in the main those of apologists bent on convincing pagans of this superiority and on attracting them to the service of the sole living God. In fact, through this intercourse between Judaism and Hellenism in the Graeco-Roman world, the Jewish religion won the allegiance of a certain number of Gentile men and women, while the Jewish beliefs themselves gained in clearness and precision through the efforts then made to render them acceptable to Western minds.

The chief question confronting the Palestinian Jews was not, therefore, the extension of Judaism among the nations, but its very preservation among the children of Israel. No wonder then that Judaism assumed there an attitude of direct antagonism to everything hellenistic, that the Mosaic observances were gradually enforced with extreme rigour, and that the oral Law, or rulings of the Elders relative to such observances as were not explicitly laid down by the Lord, was enforced by the most scrupulous compliance, not only with the Law of Moses, but also with the "Traditions of the Elders". The former of these leading parties was pre-eminently concerned with the maintenance of the status quo in politics, and in the main sceptical with regard to such prominent beliefs or expectations of the time as the existence of angels, the resurrection of the dead, the reference of the oral Law to Moses, and the future Redemption of Israel. The latter party strenuously maintained these positions. Its extreme wing was made up of Zealots always ready to welcome any false Messiah to deliver Israel from the hated foreign yoke; while its rank and file earnestly prepared by the "works of the Law" for the Messianic Age variously described by the Prophets of old, the apocalyptic writings and the apocryphal Psalms of the time, and generally expected as an era of earthly felicity and legal righteousness in the Kingdom of God. The rise of the Essenes is also ascribed to this period (see ESSENES).

(2) Judaism and Early Christianity.—At the beginning of our era, Judaism was in external appearance thoroughly prepared for the advent of the Kingdom of God, its earthly abode, its "City", whither repaired in hundreds of thousands Jews of every part of the world, anxious to celebrate the yearly festivals in the "City of the Great King". The Temple was in the eyes of them all the worthy House of the Lord, both by the magnificence of its structure and by the holiness of its service. The Jewish priesthood was not only numerous, but also most exact in the offering of the daily, weekly, monthly, and other, sacrifices, which it was its privilege to perform before Yahweh. The high-priest, a person most sacred, stood at the head of the hierarchy, and acquired the most important and controversial. The Sanhedrin of Jerusalem, or supreme tribunal of Judaism, watched zealously over the strict fulfilment of the Law and issued decrees readily obeyed by the Jews dispersed throughout the world. In the Holy Land, and far and wide beyond its boundaries, besides local Sanhedrins, there were synagogues supplying the ordinary religious and educational needs of the people, and wielding the power of excommunication against breakers of the Law, oral and written. A learned class, that of the Scribes, not only read and interpreted the text of the Law in the synagogues meeting, but were the repository of Jewish traditions, in the "Traditions of the Elders", the collection of which formed a "fence to the Law", because whoever observed them was sure not to trespass in any way against the Law itself. Legal righteousness was the watchword of Judaism, and its attainment by separation from Gentiles and sinners, by purifications, fasts, almsgiving, etc., in a word, by all the external enactments which applied the Law to each and every walk of life and to all imaginable circumstances, was the one concern of pious Jews wherever found. Plainly, the Pharisees and the Scribes who belonged to their party had generally won the day. In Palestine, in particular, the people blindly followed their leadership, confident that the present rule of pagan
Rome would speedily come to an end at the appearance of the Messias, expected as a mighty deliverer of the faithful "children of the kingdom". Meantime, it behoved the Jews to do all within their power to spread the "righteousness of the Scribes and the Pharisees" whereby they would secure admittance into the Messianic world-wide empire, of which Jerusalem would be the capital, and of which every Jewish member would be superior in things temporal as well as spiritual. The world then rallied to the worship of the one true God.

In reality, the Jews were far from prepared for the fulfilment of the promises which the Almighty had repeatedly made to their race. This was first shown to them, when a voice, that of John, the son of Zachary and the herald of the Messias, was heard in the wilderness of Juda. It summoned, but with little success, all the Jews to a genuine sorrow for sin, which was indeed foreign to their hearts, but which could alone, despite their title of "children of Abraham", fit them for the kingdom near at hand. This was next shown to them by Jesus, the Messias Himself. Who, at the very beginning of His public life, commanded His apostles to repentance (Mark, i, 15), and Who, throughout His ministry, endeavoured to correct the errors of Judaism of the day concerning the kingdom which He had come to found among men. With authority truly Divine He bade His hearers not to be satisfied with the outward show of the works and the wisdom of the Scribes if they wished to enter into that kingdom, but to aim at the inner perfection which alone could lift up men's moral nature and render them worthy worshippers of their heavenly Father. The Kingdom of God, He plainly declared, had come upon His contemporaries, since Satan, God's enemy and man's, was under their eyes cast out by Himself and by His chosen disciples (Mark, xii, 20; Luke, x, 18).

The kingdom which the Jews should expect is the Kingdom of God in its modest, secret, and as it were, insignificant origin. It is subject to the laws of organic growth as all living things are, and hence its planting and early developments do not attract much attention; but it is not so with its further extension, destined as it is to pervade and transform the world.

This kingdom is indeed rejected by those who had the first claim to its possession and seemingly were the best fitted for its inheritance, for the Jews and Gentiles, who earnestly availed themselves of the invitation of the Gospel will be admitted. This is really a new Kingdom of God to be transferred to a new nation and governed by a new set of rulers, although it is no less truly the continuation of the King- dom of God under the Old Testament. This kingdom is organized upon earth, its king, the true son and lord of David, goes to a far country, relying upon His representatives to be more faithful than the rulers of the old kingdom. Upon the king's return, this kingdom of grace will be transferred into a kingdom of glory. The duration of the kingdom on earth will outlive the ruin of the Holy City and of its Temple; it will be coextensive with the preaching of the Gospel to all nations, and this, when accomplished, will be the sign of the near approach of the kingdom of glory. In thus describing God's kingdom, Jesus justly treated as vain the hopes of His Jewish contemporaries that they should become masters of the world in the event of a conflict with Rome; He also set aside the fabric of legalism which their leaders regarded as to be perpetuated in the Messianic kingdom, but which in reality they should have considered as either useless or positively harmful now that the time had come to extend "salvation... to the nations and their sacrifices" beyond the nation of Israel. 

Plainly, the legal sacrifices and ordinances had no longer any reason of being, since they had been instituted to prevent Israel from forsaking the true God, and since Monotheism was now firmly established in Israel; plainly, too, the "traditions of the Elders" should not be tolerated any longer, since they had gradually led the Jews to disregard some of the most essential precepts of the moral law embodied in the Decalogue. Hence Jesus did not hesitate to destroy the Law of the Prophets, that is those sacred writings which He, no less than His Jewish contemporaries, distinctly recognized as inspired by the Holy Spirit; His mission, on the contrary, was to secure their fulfilment. Indeed, He would have destroyed the Law, if He had sided with the Scribes and Pharisees in their "fence to the Law, which actually encroached upon the sacred territory of the Law itself; but He fulfilled it by proclaiming the new Law of perfect love of God and man, whereby all the precepts of the Old Law were brought to completion. Again, He would have destroyed the Prophets, if He had taken the same attitude as the Scribes and Pharisees. He had pictured an image of God's kingdom and God's Messias solely by means of the glorious features contained in the prophethical writings; but He fulfilled them by drawing a picture which took into account both glorious and inglorious delineations of the Prophets of old, setting both in their right order and perspective. John the Baptist had proclaimed and founded Jesus has an historical name. It is the Christian Church, which was able silently to leave the Roman Empire, which has outlived the ruin of the Jewish Temple and its worship, and which, in the course of centuries, has extended to the confines of the world and the knowledge of the Messias and Abraham, while Judaism has remained the barren fig-tree which Jesus condemned during His mortal life.

The death and resurrection of Jesus fulfilled the ancient types and prophecies concerning Him (cf. Luke, xxiv, 26, 27), and the visible bestowment of the Holy Ghost upon His assembled followers on Pentecost Day gave them the light to realize this fulfilment (Acts, iii, 15) and the courage to proclaim it even in the hearing of those Jewish authorities who thought that they had by the stigmata of the Cross put an end forever to the Messianic claims of the Nasarene. From this moment the Church which Jesus had silently organized during His mortal life with Peter as its head and the other Apostles as his fellow-rulers, took the independent attitude which it has maintained ever since. Conscious of their Divine mission, its leaders boldly charged the Jewish rulers with the death of Jesus, and frequently "fanned the flames of hatred and of disputations and of without disregarding the threats and injunctions of men whom they considered as in mad revolt against God and His Christ (Acts, iv). They solemnly proclaimed the necessity of faith in Christ for justification and salvation, and that of baptism for membership in the religious community which watched over God's people, and which recognized the risen Son of God as its Divinely constituted "Lord and Christ", "Prince and Saviour", in a real, although invisible, manner, during the present order of things. According to them, these are plain Messianic times as proved by the realization of Joel's prophecy concerning the outpouring of the Holy Spirit upon all flesh, so that the Jews "first" and next the Gentiles are now called to receive the Divine blessing so long promised in Abraham's Seed for all nations. Much as in these early days the infant Church was Jewish in external appearance, it even then caused Judaism to feel threatened in its whole system of civil and religious life (Acts, vi, 13, 14). Hence followed a severe persecution against the Christians, in which Saul (Paul) took an active part, and in the course of which he was converted miraculously.

At his conversion Paul found the Church spread far and wide by the same principles as it was spreading, and multiplying it, and officially pursuing its differentiation from Judaism by the reception into its fold of Samaritans, which rejected the Temple worship in Jerusalem, of the Ethiopian eunuch, that is, of a class of men distinctly excluded from the Judaic community by the Deuteronomistic Law, and especially of the uncircumcised...
cised Cornelius and his Gentile household with whom Peter himself broke bread in direct opposition to legal traditions. When, therefore, Paul, now become an ardent Apostle of Christ, openly maintained the freedom of Gentile converts from the Law as understood and enforced by the Jews and even by certain Jewish Churches, it was in thorough disagreement with the official leaders of the Church at Jerusalem, and it is well known that the same official leaders positively approved his course of action in this regard (Acts, xv; Gal., ii). The real difference between him and them consisted in his fearlessness in preaching Christian freedom and in vindicating by his unyielding perseverance the purity and efficiency of faith in Christ for justification and salvation independently of the “works of the Law”, that is, the great principles acknowledged and acted upon before him in the Christian Church. The result of his polemics was the sharp setting forth of the relation existing between Judaism and Christianity; in Christ’s kingdom, only believing Jews and Gentiles recline with Abraham, Isaac, and Jacob (cf. Matt., viii, 11); they are coheirs of the promise made to the father of all the faithful when he was yet uncircumscribed; the Law and the Prophets are fulfilled in Christ and His body, the Church; the Gospel must be preached to all nations, then comes the end of the world. The result of his consuming zeal for the salvation of souls redeemed by the blood of Christ was the formation of religious communities bound together by the same faith, hope, and charity as the churches of Palestine, sharing in the same sacred mysteries, governed by pastors likewise vested with Christ’s authority, and forming a vast Church organism vivified by the same Holy Spirit and clearly distinct from Judaism. Thus the small mustard seed planted by Jesus in Judea had grown into a great tree fully able to bear the storms of persecution and heresy (see Colossians, Epistle to the Ephesians; Galatians, etc.).

(3) Judaism since A.D. 70.—While Christianity thus asserted itself as the new kingdom of God, the Jewish theocracy, guided by leaders unable “to know the signs of the times”, was hastening to its total destruction. The Romans came, and in A.D. 70 put an end forever to the Jewish Temple, priesthood, sacrifices, and nation, whereby it should have become clear to the Jews that their national worship was rejected of God. In point of fact, Judaism, shorn of these its essential features, soon “assumed an entirely new aspect. All the parties and sects of a former generation—Pharisees and Sadducees, each quarrel with each other; the Temple was supplanted by the synagogue, sacrifices by the prayer, the priest by any one who was able to read, teach, and interpret both the written and the oral law. The Sanhedrin lost its juridical qualification, and became a consultory to advise people in regard to their religious duties. Judaism became a science, a philosophy, and ceased to be a political institution” (Schindler, “Dissolving Views in the History of Judaism”). This new system, treated at first as simply provisional because of the survival of hope of restoring the Jewish commonwealth, had soon to be accepted as the fixed and crushing of Bar-Cochba’s revolt by Hadrian. Then it was that Rabbinical or Talmudical Judaism fully asserted its authority over the two great groups of Jewish families east and west of the Euphrates respectively. For several centuries, under either the “Psi” or “Phi” names of the West or “Or” of the East, in the form of the Mishna “Oral Teaching” completed by Rabbi Juda I, committed ultimately to writing in the form of the Jerusalem and Babylonian Talmuds (see Talmud), and expounded by generations of teachers in the schools of Palestine and Babylonia, held undisputed grip over the minds of the Jewish believers.

In fact, this long acception of the Talmud by the Jewish race, before its centre was shifted from the East to the West, so impressed this Second Law (Mishna) upon the hearts of the Jews that down to the present day Judaism has remained essentially Talmudical both in its theory and in its practice. It is indeed true that as early as the eighth century of our era the authority of the Talmud was denied in favour of Biblical supremacy by the sect of the Karaites, and that it has been in thorough disagreement with certain Jewish sects such as Judahites, Kabbalists, Sabbatians, Chasidim (old and new), Frankists, etc. Nevertheless, these sects have all but disappeared and the supremacy of the Talmud is generally recognized. The most important religious division of Judaism at the present day is that between the orthodox “Reform” Jews, with many subdivisions to which these names are more or less loosely applied. Orthodox Judaism includes the greater part of the Jewish race. It distinctly admits the absolutely binding force of the oral Law as finally fixed in the “Shulhan Aruk” by Joseph Caro (sixteenth cent.). Its beliefs are set forth in the following thirteen articles, first compiled by Maimonides in the eleventh century:—

(a) I believe with a true and perfect faith that God is the creator (whose name be blessed), governor, and maker of all creatures; and that he hath wrought all things, worketh, and shall work forever. I believe with a perfect faith that the creator (whose name be blessed) is one; that there is no unity like unto his in any way; and that he alone was, is, and will be our God.

(b) I believe with a perfect faith that the creator (whose name be blessed) is incorporeal, that he has not any corporeal qualities, and that nothing can be compared unto him. (c) I believe with a perfect faith that the creator (whose name be blessed) was the first, and will be the last. (d) I believe with a perfect faith that the creator (whose name be blessed) is to be worshiped and none else. (e) I believe with perfect faith that all the words of the Scriptures are true. (f) I believe with a perfect faith that the prophecies of Moses our master (may he rest in peace) were true; that he was the father and chief of all prophets, both of those before him and those after him. (h) I believe with perfect faith that the Law, at present in our hands, is the same that was given to our master Moses (peace be with him). (i) I believe with perfect faith that this Law will not be changed, and that no other Law will be revealed by the creator (blessed be his name). (j) I believe with a perfect faith that God (whose name be blessed) knows all the deeds of the sons of men and all their thoughts; it is said, “Hiddeces can hide nothing from the sight of his face, neither he knoweth all their deeds”. (k) I believe with a perfect faith that God (whose name be blessed) rewards those who keep his commandments, and punishes those who transgress them. (l) I believe with a perfect faith that the Messiah will come; and although he tarry I wait nevertheless every day for his coming. (m) I believe with a perfect faith that there will be a resurrection of the dead, at the time when it shall please the creator (blessed be his name).

With regard to the future life, Orthodox Jews believe, like the Universalists, in the ultimate salvation of all men; and like the Catholics, in the offering of prayers for the souls of their departed friends. Their Divine worship does not admit of sacrifices; it consists in the reading of the Scriptures and in prayer. While they do not insist on attendance at the synagogue, they enjoin all to say their prayers at home and to fire the common fires of the poor. They repeat also blessings and particular praises to God at meals and on other occasions. In their morning devotions they use their phylacteries and a praying scarf (talith), except on Saturdays, when they use the talith only. The following are their principal blessings:—

(a) Peace, of the house of Israel, for eight days. On the evening before the feast, the first-born of every family observes a fast in remembrance of God’s kindness to the nation. During the feast un-
Jews

Bread is exclusively used for the Sabbath and holidays. The Passover meal includes the Seder, a ritual meal with traditional foods. The Jewish calendar is based on the Hebrew calendar, which is lunar and has a different timing than the Gregorian calendar used in most countries. The Jewish year 1896 corresponds to the year 1953 in the Gregorian calendar. The Jewish community in Palestine had a long history, dating back to the days of the Temple in Jerusalem. The modern state of Israel was established in 1948, and it celebrates its independence day on May 14, which falls on the 15th day of the Hebrew month of Iyar. The Jewish holiday of Yom Kippur, the Day of Atonement, is the most important fast day in the Jewish calendar. It is observed by Jews worldwide, and it is a time for reflection and repentance. The Jewish Sabbath is observed from Friday evening to Saturday night, and it is a time of rest and family gathering. The Jewish calendar is determined by the sighting of the new moon, and it is used for religious purposes and for marking important dates in the Jewish calendar. The Jewish calendar is used for religious purposes and for marking important dates in the Jewish calendar.
Jezabel (גְּזָבָל; Sept., יְגָבָּל, יְגָבָּה), wife of Achab, King of Israel. She was the daughter of Ethbaal I, King of the Sidonians, who was also a grand pontiff of the goddess Astarte (the Istar of the Assyrians) worshipped by that people. It is probable that the marriage of this princess was arranged about in order to strengthen the house of Amri (father of Achab) against the Syrians. She introduced into Samaria various forms of Phoenician luxury hitherto unknown in that capital of the Northern Kingdom, and also prevailed upon Achab to establish there the worship of the Phoenician gods and goddesses of which she was a fanatical devotee (III Kings, xvi, 31, 32). She maintained 450 priests for the worship of Baal and 400 for that of Astarte (III Kings, xvii, 19). Consistently she persecuted and slew the prophets (III Kings, xvii, 4), but to prevent their complete extermination Achab gave a hundred of them to hide themselves in caves where they were secretly sustained. After the slaying of the 450 priests of Baal by Elias on Mount Carmel (III Kings, xviii, 40), Jezebel sought the life of the prophet and he fled to the kingdom of Juda (III Kings, xix, 3). How she brought about the death of Naboth in order to confiscate a vineyard which he had refused to sell to Achab is related in III Kings, xxi. Elias again appears on the scene and declares the Divine retribution which is to fall upon the perpetrators of the crime. The blood of Achab shall be licked by the dogs in the valley of the hares, and the dogs shall eat Jezebel in the field of Jezreel. After the death of Achab, Jezebel continued to exercise a strong and baneful influence over her two sons Ochozias and Joram who reigned successively in his place, and through her daughter Athaliah who married...
Jíbaro, King of Juda, the same evil influence was extended even to the Southern Kingdom. At last the Divine vengeance came upon Jezabel, and the predictions of Elias and Eliseus were literally fulfilled at the beginning of the reign of Jehu, as related in IV Kings, ix. 30–37.

JAMES F. DRISSCOLL.

Jíbaro Indians.—Jíbaro (Spanish orthography), "forest man," i.e. native, an important tribal group of Ecuador, comprising a great number of small tribal linguistic groups, and together constituting a distinct linguistic stock, holding the extensive forest regions between the Santiago and Pastaza rivers and southward to the Amazon. Owing to similarity of name—also written Xíbaro, Zíbaro—they have been frequently confounded with their eastern neighbours, the Zaparo, and the confusion is increased by the fact that in earlier times the name Jíbaro was often loosely used to designate any of the wild Indians of eastern Ecuador. More than any other tribe of the upper Amazon region, the Jíbaro are notable for their determined and successful efforts toward christianization, and notwithstanding more than three centuries of more or less intimate Spanish contact they still retain their primitive manners to a remarkable degree. They have no villages, the houses of each small community being scattered about in the forest within easy communicating distance, and always close to a stream. The houses are communal, from fifty to eighty feet in length, with a door at each end, one exclusively for the men and the other for the women. Near the women's door are the fire-places for cooking, one for each family, while outside the men's door is the funerary, or grave, drum, made of a hollow log, the sound of which can be heard for a distance of ten miles through the forest, and by means of which, according to a well-understood code, the Jíbaro can signal to his farthest acquaintance.

War is their normal condition, the favourite weapons being the lance, the javelin with throwing stick, the blow-gun with poisoned arrows, and the shield for defence. The heads of enemies are smoked by an ingenious process which in a measure preserves the features. The women are expert potters. The Jíbaro are agricultural, cultivating corn, beans, bananas, yuca, and other native vegetables. Besides corn, beans, and yuca, they have chickens and hogs, which were introduced among them by the whites. They use no salt, but like many other tribes of the Amazon and Oriconco are addicted to eating a certain saltpetrous clay. Their favourite drink is chicha, a mild intoxicant fermented from the yuca or bananas or some other native plant. They wear a cotton dress below the waist, flowing hair, pink, feather ornaments, ear pendants, and—among women—labrets. They are robust and comparatively handsome, although not tall. They are very fond of music, visiting, and ceremonial dances. Polygamy exists, as also, according to some travellers, the curious custom of the couvade. The dead are usually laid away in small shelter structures in the woods or in hollow tree-trunks placed in the house where the death occurs, the house being then abandoned. There is apparently no tribal organization or chiefly authority, the only bond among families being their habitual residence. In each family group one man has the duty of reciting a long historical and didactic discourse each morning while the women are preparing breakfast. Very little is known of their religious or mythologic beliefs, but witchcraft flourishes, and almost every young man professes to be a sorcerer. Sheltered by their forests, the Jíbaro successfully withstood the efforts of the Peruvian Incas to subjugate them. The first Spanish entrance into their country was made by Vergara in 1541, and in 1569, under order from Governor Salinas, five towns were established in the Jíbaro country, first and chief of which was Logroño. Under enforced labour in the mines, and other oppressions, at the hands of their Spanish taskmasters, the Indians rapidly withered away or were saved themselves by retreating to the forests. In 1599 a fresh tribute signaled the Jíbaro into rebellion, and under the leadership of Anirula a force estimated by many to be 20,000 warriors stormed Logroño in a night attack, killing every inhabitant to the number of 12,000, excepting the young women, and burning the town to the ground. Anirula was killed by pouring molten gold down his throat, "in order that he might have his fill of gold". The inhabitants of the other towns took refuge in Sevilla del Oro, which was next attacked, but resisted so stoutly that the Indians finally retired after having killed nearly 14,000 of the besieged. The young women were carried off as wives to the savages, and it is said that the admixture of blood is still evident in the clearer skin and more abundant beard of many of the tribe. Successive expeditions failed to reduce the Jíbaro, until it was resolved to call in the help of the missionaries. In 1646 two Franciscan fathers, Laurieño de la Cruz and Antonio Ferrante, with a military escort, entered the territory from the west, and in 1656 Commander Agüere with a detachment of troops and a company of mission Indians under the Jesuit Father Raimundo Santa Cruz, attempted a settlement at the mouth of the Pastaza, but the attempt was a failure through the bad conduct of the soldiers. Other unsuccessful missionary attempts were made in 1690, and in 1692 a combined force of Spanish troops and mission Indians, the latter under the superior of the Jesuit missions, Father Viva, began a series of manuhunts in the Jíbaro country, but with so little result that in five months thirty-three Indians were killed and seventy-two Indians were captured, most of whom escaped later. In these raids the Indian mothers frequently slew their children with their own hands to prevent their falling into the hands of the Spaniards.

In 1677 the Jesuit Father André Camacho made another effort, with some fair promise of success, when the decree of expulsion banished the Jesuits from their missions, which were then turned over to Franciscans and secular priests and speedily fell into decay. This may be considered the end of any systematic attempt at Christianizing the Jíbaro. As far back as 1581 the Dominicans of Guayaquil had made a few missionary efforts at the Jíbaro, and in 1642 the Jesuit Fathers at Mache and others often went into the Jíbaro country, but with little success. In 1680 Father Cisneros, who had a mission at Cila in the Pastaza country, went with a party of forty native Indians and a number of soldiers, composed of thirty-four Jibaro, into Jíbaro country, a distance of forty leagues, but was compelled to return, as they were not able to penetrate the country.

The Jíbaro country is very extensive, having an area of 25,000 square leagues, and throughout the interior of the country is thickly covered with dense forests, with numerous streams and lakes. The climate is very healthy, the mean temperature being 72 degrees, during the year, the highest temperature being 86 degrees and the lowest 56 degrees. The country is of very diversified character, the eastern slopes of the Andes being covered with a magnificent forest of tall trees, while the southern and western parts are thickly covered with small trees. The Jíbaro Indians have the reputation of being very warlike, and it is said that they are much given to robbery and murder. They are said to have lived in large villages, but it is probable that they are now scattered through the forest and have little knowledge of the white man.

JAMES MOONEY.
JOAB (Ieb. נָּוִח, Sept. יְואָב, general in chief of the army of King David. He was the son of Sarvia, sister of David, and had two brothers, Abissai and Assael. He appeared at the head of the forces of David after the latter's defeat at the battle of Rabbah (I Kings ii, 13–32). Abner, general of Saul's army, after having for a time espoused the cause of Ishoboth, offered his services to David who accepted them, but he was treacherously slain by Joab to avenge the death of his brother Assael who had been slain by Abner in a preceding battle (II Kings ii, 27). Joab was in command of David's army in the campaign against the Ammonites, when, at the suggestion of David, he brought about the death of Urías the Hethite (xi, 14–17). It was also Joab who with his own hand slew Absalom as he hung from the branches of a tree in which he had become entangled in his flight (iii, 1–15). Heartbroken by this act of Joab, David placed his nephew Amasa at the head of the army, but he was soon assassinated by Joab who again resumed command. Fear and self-interest caused David to retain him in that position, but he charged his successor Solomon to avenge the many crimes he had committed (III Kings, ii, 5, 6). After the accession of Solomon, Joab, fearing the wrath of the king, took refuge in the Tabernacle of the Lord, hoping to enjoy the inviolability of the sanctuary, but he was slain there by Banaias at the command of Solomon (III Kings, ii, 23–34).

JAMES F. DRISCOLL.

Joachim (meaning Yahweh prepares), SAIN'T, father of the Blessed Virgin Mary.—If we were to obey the warning of St. Peter Damian, we should consider it a blamable and needless curiosity to inquire about those things that the Evangelists did not deem it advisable to relate, and, in particular, about the parents of the Blessed Virgin (Serm. iii de Nativ. B. V. M.). Tradition, nevertheless, grounded on very old testimonies, very early hailed Saints Joachim and Anne as the father and mother of the Mother of God. True, this tradition seems to rest ultimately on the so-called "Gospel of James," the "Gospel of the Nativity of the Blessed Mary," and the Pseudo-Matthew, or "Book of the Nativity of the Blessed Virgin," and of the "Gospel of Joseph," and this origin is likely to rouse well-founded suspicions. It should be borne in mind, however, that the apocryphal character of these writings, that is to say, their rejection from the canon, and their unguenuine-ness do not imply that no heed whatever should be taken of some of their assertions; on the contrary, with unwarranted and legendary facts, they contain some historical data borrowed from reliable traditions or documents; and difficult though it is to distinguish in them the wheat from the tares, it would be unwise and uncritical indiscriminately to reject the whole. Something that must be taken into account is the question whether the Gospel of St Luke that is that of the Blessed Virgin, find the mention of Joachim in Heli (Luke, iii, 23: Ei-achim, i.e. Jeho-achim), and explain that Joseph had, in the eyes of the Law, become by his marriage the son of Joachim. That such is the purpose and the meaning of the Evangelist is very doubtful, and so is the identification proposed between the two names Heli and Joachim. Neither can it be asserted with certainty, in spite of the authority of the Bollandists, that Joachim was Heli's son and Joseph's brother; nor, as is sometimes affirmed, from sources of very doubtful value, make no concession in herding the flocks. Much more interesting are the beautiful lines in which the "Gospel of James" describes how, in their old age, Joachim and Anne received the reward of their prayers to obtain issue. Tradition has it that the parents of the Blessed Virgin, who, apparently, first lived in Galilee, came later on to settle in Jerusalem; there the Blessed Virgin was born and reared; there also they died and were buried. A church, known at various epochs as St. Mary, St. Mary of the Sperchios, known as St. Anne, was built during the fourth century, possibly by St. Helena, on the site of the house of St. Joachim and St. Anne, and their tombs were there honoured until the close of the ninth century, when the church was converted into a Moslem school. The crypt which was formerly connected with the holy tombs was rediscovered on 18 March, 1589.

St. Joachim was honoured very early by the Greeks, who celebrate his feast on the day following the Blessed Virgin's birthday; the Latins were slow to admit it into their calendar, where it found place sometimes on 16 Sept. and sometimes on 9 Dec. Assigned by Julius II to 20 March, the solemnity was suppressed some fifty years later, restored by Gregory XV (1622), fixed by Clement XII (1738) on the Sunday after the Assumption, and finally raised to the rank of double of the second class by Leo XIII (1 Aug., 1879).

CHARLES L. SOUVAT.

Joachimites. See JOACHIM OF FLORA.

Joachim of Flora, Cistercian abbott and mystic; b. at Celico, near Cosenza, Italy, c. 1132; d. at San Giovanni in Fiore, in Calabria, 30 March, 1202. His father, Maurus de Celico (whose family name is said to have been Tabellone), a notary he held his office under the Norman kings of Sicily, placed him at an early age in the royal Court. While on a pilgrimage to the Holy Land, Joachim was converted from the world by the sight of some great calamity (perhaps an outbreak of pestilence). He passed the whole of Lent in contemplation on Mount Tabor, where he is said to have received celestial illumination for the work of his life. Returning to Italy, he retired to the Cistercian Abbey of Sambucina, probably in 1159, and for some years devoted himself to lay preaching, without taking the religious habit, receiving an office of the Savigny type and in this way is likely to rouse well-founded suspicions. He should be borne in mind, however, that the apocryphal character of these writings, that is to say, their rejection from the canon, and their unguenuine-ness do not imply that no heed whatever should be taken of some of their assertions; on the contrary, with unwarranted and legendary facts, they contain some historical data borrowed from reliable traditions or documents; and difficult though it is to distinguish in them the wheat from the tares, it would be unwise and uncritical indiscriminately to reject the whole. Something that must be taken into account is the question whether the Gospel of St Luke that is that of the Blessed Virgin, find the mention of Joachim in Heli (Luke, iii, 23: Ei-achim, i.e. Jeho-achim), and explain that Joseph had, in the eyes of the Law, become by his marriage the son of Joachim. That such is the purpose and the meaning of the Evangelist is very doubtful, and so is the identification proposed between the two names Heli and Joachim. Neither can it be asserted with certainty, in spite of the authority of the Bollandists, that Joachim was Heli's son and Joseph's brother; nor, as is sometimes affirmed, from sources of very doubtful value, make no concession in herding the flocks. Much more interesting are the beautiful lines in which the "Gospel of James" describes how, in their old age, Joachim and Anne received the reward of their prayers to obtain issue. Tradition has it that the parents of the Blessed Virgin, who, apparently,
approved by Celestine III in 1196. In 1200 Joachim publicly submitted all his writings to the examination of Innocent III, but died before any judgment was passed. It was held to be in answer to his prayers that he died on Holy Saturday, "the Satur-
day of Saturdays", St. Stillman thought the truth of the story even as the hart panteth after the fountains of waters". The holiness of his life is unquestionable; miracles were said to have been wrought at his tomb, and, though never officially beatiﬁed, he is still vener-
ated as a beatus on 29 May.

Joachim voiced the general opinion of his age in declaring Joachim one "endowed with prophetic spirit". But he himself always disclaimed the title of prophet. The interpretation of Scriptural proph­­ecy, with reference to the history and the future of the Church, is the main theme of his three chief works: "Liber Concordiae Novi ac Vetus Testamenti", "Expositio in Apocalypsim", and "Psal­­terium Decem Cordarum". The mystical basis of his teaching is the doctrine of the "Eternal Gospel", founded on a strained interpretation of the text in the Apocalypse (xiv, 6). There are three states of the human heart corresponding to the three Persons of the Blessed Trinity. In the ﬁrst age the Father ruled, representing power and inspiring fear, to which the Old-Testament dispensation corresponds; then the wisdom hidden through the ages was revealed in the Son, and we have the Catholic Church of the New Testament. The third era corresponded with the Holy Spirit, a new dispensation of universal love, which will proceed from the Gospel of Christ, but transsend the letter of it, and in which there will be no need for disciplinary institutions. Joachim held that the second period was drawing to a close, and that the third age (which is referred to in the Gospels, but not in St. Benedict) would actually begin after some great cataclysm which he tentatively calculated would befall in 1260. After this Latinus and Greeks would be united in the new spiritual kingdom, freed alike from the fetters of the letter; the Jews would be converted, and the "Eternal Gospel" abide until the end of the world.

Although certain doctrines of Joachim concerning the Blessed Trinity were condemned by the Lateran Council in 1215, his main teaching does not seem to have excited suspicion until the middle of the cent­­ury, and then only in a general meaning; while the speciﬁc doctrines which were wrongly attributed to Joachim. Among these the "De Oneribus Prophetae", the "Expo­­sitio Sybille et Merlini", and the commentaries on Jeremiah and Isaiah are the most famous. The sect of the "Joachists" or "Joachimites" arose among the "spiritual" party among the Franciscans, many of whom saw Antichrist already in the world in the person of Frederick II, nor was their faith shaken by his death in 1250. One of their number, Fra Gherardo of Borgo San Donnino, wrote a treatise entitled "Intro­­ductorium in Evangelium Aeternum", of which the contents were drawn up by the extracts made by the commission of three cardinals who examined it in 1255. From these it is clear that the Joachists went far beyond what the abbot himself had taught. They held that, about the year 1200, the spirit of life had gone out of the two Testaments, and that Joa­­chim's three books themselves constituted this "Eter­­nal Gospel", which was not simply to transsend, but to supersede, the Gospel of Christ. The Catholic priesthood and the whole teaching of the New Testa­­ment was to be rendered void in a few years.

This work was solemnly condemned by Alexander IV in 1256, and the condemnation involved the teaching of Antichrist in the world in the person of the Roman Emperor. It was suppressed by St. Thomas in the Summa Theologica (I–II, Q. xvi, a. 4), and its Franciscan exponents were sternly re­­pressed by St. Bonaventure. Another blow was given to the movement when the fatal year 1260 came, and nothing happened. "After Frederick II died who was Emperor," writes Fra Salimbene of Parma, "and the year 1260 passed, I entirely laid aside this doc­­trine, and I am disposed henceforth to believe nothing save what I see." It was revived in a modiﬁed form by the later leader of the Joachimite movement, Pier Gio­­vanni Olivi (d. 1297), and his follower, Ubertino da Casale, who left the order in 1317. We hear a last echo of these theories in the letters of Blessed Giovanni dalle Celle and the prophecies of Telesphorus of Co­­senza during the Great Schism, but they were no longer taken seriously.

Divini voto Abbatia Joachim Liber Concordiae Novi ac Vetus Testamenti (Venice, 1519); Expositio magna prophetarum Abbatia Joachim in Apocalypsim; Beatum Psalterium Decem Cordarum out corpus divinum (Venice, 1527); Liber Concordiae Novi ac Vetus Testamenti: Aufklarung im Mittelalter, II (Berlin, 1877); Tocco, Della vita nel Medio Evo (Florence, 1884); DENYNCK, Des Eterni­­gelm dispensation et de la Commission au Annoni in Archiv für Literatur­­- und Kirchen­-Geschichte, I (Berlin, 1885); HOLLER­­EGGER, Cronica Fratris Salimbene de Adamo, Christian Muner (Harwood, 1905–08); WIGGINS, The Everlasting Gospel in The Inquirer (London, 1899); FOURNIER, Etudes sur Joachim de Florre et ses doctrines (Paris, 1906). The only contemporary account is the sketch, Vrštvum B. Joachimi zynipseis, by LEON DE COHENA, his secretary, "written by order of BUD GELCUS STYLANUS, written in 1612, is professedly drawn from an ancient manuscript then preserved at Fiore. Both are printed by the Holländers, Acta SS., May, VI.

EDMUND G. GARDNER.

JOAN, PONTIFEX.—The fable about a female pope, who afterwards bore the name of Joanna (Joan), is ﬁrst noticed in the third period of the legend, in which the first person who appears to have had cognizance of it was the Dominican chronicler Jean de Mailly (Archiv der Gesellschaft für ältere deutsche Geschichte, xii, 17 sq., 409 sq.) from whom another Dominican, Etienne de Bourbon (d. 1261), adopted the tale into his work on the "Seven Gifts of the Spirit" (1703), and HOF­­tif-Echeid, "Scriptores Ordinis Precltorum", I, Paris, 1719). In this account the alleged popeess is placed about the year 1100, and no name is yet as­­signed her. The story runs that a very talented woman, dressed as a man, became notary to the Curia, then cardinal and ﬁnally pope; that one day this person went out on horseback, and on this occa­sion gave birth to a son; that she was then bound to the tail of a horse, dragged round the city, stoned to death by the mob, and was buried at the place where she died; and that an inscription was put up there as follows: "Petre palatae post ipsum". In her reign, the story adds, the Ember days were introduced, called therefore the "fasts of the popess". A different version appears in the third recension of the chronicle of Martin of Troppau (Martinus Po­­lonus) possibly inserted by the author himself and not by a subsequent transcriber. Through this version of the legend the tale became best known in the following form: After Leo IV (847–55) the Englishman John of Mainz (Johannes Anglicus, natione Moguntinus) occupied the papal chair two years, seven months and four days. He was, it is alleged, a woman. When a girl, she was taken to Athens by her father, a scholar, and there made such progress in learning that no one was her equal. She came to Rome, where she taught science, and thereby attracted the attention of learned men. She enjoyed the greatest respect on account of her conduct and erudition, and was ﬁnally chosen as pope, but becoming pregnant by one of her trusted attendants, she gave birth to a child during a procession from St. Peter's to the Lateran, somewhere between the Colosseum and St. Clement's. There she died almost immediately, and it is said she was buried at the same place. In their proc­­essions the popes always avoided this road; many believe that they do this in abhorrence of that calamity (Mon. Germ. Hist. Ser., xxxi, 379–475).

Here occurs for the ﬁrst time the name of Joanna (Joan) as that of the alleged popeess. Martin of Troppau had lived at the Curia as papal chaplain and
penitentiary (he died 1278), for which reason his papal history was widely read, and through him the tale obtained general acceptance. One MS. of his chronicle related, without assigning the author, the Meeting of the popes (Mon. Germ., loc. cit., 428), i.e., after her confinement Joan was immediately deposed, and did penance for many years. Her son, it is added, became Bishop of Ostia, and had her interred there after her death. Later chroniclers even give the name of the latter, though popes were given the choice, in a vision, of temporal disgrace or eternal punishment; she chose the former, and died at her confinement in the open street ("Mirabilia Romae", ed. Parthey, Berlin, 1869). In the fourteenth and fifteenth centuries this popess was already counted as an historical personage, whose existence no one doubted. She had her place among the carved busts which stood in Siena cathedral. Under Clement VIII, and at his request, she was transformed into Pope Zacharias. The heretic Hus, in the defence of his false doctrine before the Council of Constance, referred to the popess, and no one doubted to question the existence. She is not found in the "Liber Pontificalis" nor among the papal portraits in St. Paul's Outside the Walls, at Rome.

This alleged popess is a pure figment of the imagination. In the fifteenth century, after the awakening of historical criticism, a few scholars like Zeneus Silvius (Epist., I, 30) and Platina (Vita Pontificum, No. 106) saw the untenableness of the story. Since the sixteenth century Catholic historians began to deny the existence of the popess, e.g., Onofrio Panvinio (Vite Pontificum, Venice, 1557), Aventinus (Annales Boiorum, lib. IV), Baronius (Annales ad a. 879, n. 5), and others. A few Protestants also, e.g., Blondel (Joanna papissa, 1657) and Leibniz ("Flores sparsae in tumulum Papiasae" in "Bibliotheca Historica", Göttingen, 1758, 267 sq.), admitted that the popess never existed. Numerous Protestants, however, made use of the fable in their attacks on the papacy. Even then, when the untenableness of the legend was recognized by all serious historians, a few Protestants (e.g., Kist, 1843; Suden, 1831; and Andréa, 1866) attempted, in an anti-Roman spirit, to prove the historical existence of the popess. Even Hase ("Kirchengesch.", I, 1836, 1837), Leitzing, 1838, 81), could not refrain from a spiteful and absolutely unhistorical note on this subject.

The principal proofs of the entirely mythical character of the popess are: (1) Not one contemporaneous historical source among the papal histories knows anything about her; also, no mention is made of her until the middle of the thirteenth century. Now it is incredible that the appearance of a "popess", if it was an historical fact, would be noticed by none of the numerous historians from the tenth to the thirteenth century. (2) In the history of the popes, there is no place where this legendary figure will fit in. Between Leo IV and Benedict III, where Martinus Polonus places her, she cannot be inserted, because Leo IV died 17 July, 855, and immediately after his death Benedict III was elected by the clergy and people of Rome; but owing to the setting up of a pretender to the papacy (Gemma), he was deposed. After the content of Anastasius, he was not consecrated until 29 Sept. Coins exist which bear both the image of Benedict III and of the Emperor Lothair, who died 28 Sept., 855 (Garampi, "De nummo argenteo Benedicti III.", Rome, 1749); therefore Benedict must have been recognized as pope before the last-mentioned date.

On 7 Oct., 855, Benedict III issued a charter for the Abbey of Corvey (Jaffé, "Regesta Pont. Rom.", 2nd ed., n. 2863). Hinemar, Archbishop of Reims, in his vita of St. Remigius, who died 26 July, 836, says that he had sent to Leo IV learned on his way of the death of this pope, and therefore handed his petition to Benedict III, who decided it (Hinemar, ep. xi in P. L., CXXVI, 85). All these witnesses prove the correctness of the dates given in the lives of Leo IV and Benedict III, with the exception that the former, as we have seen, between these two popes, so that at this place there is no room for the alleged popess. Further, it is even less probable that a popess could be inserted in the list of popes about 1100, between Victor III (1067) and Urban II (1088-99) or Paschal II (1099-1110), as is suggested by the chronicle written by Jean de Mailly.

This fable of a Roman popess seems to have had an earlier counterpart at Constantinople. Indeed, in his letter to Michael Cerularius (1053), Leo IX says that he would not believe what he heard, namely that the Church of Constantinople had already seen eunuchs, indeed even a woman, in its episcopal chair (Manas "Concil.", IX, 635 sq.). The origin of the whole legend of Popess Joan, different hypotheses have been advanced. Bellarmine (De Romano Pontifice, III, 24) believes that the tale was brought from Constantinople to Rome. Baronius (Annales ad a. 879, n. 5) conjectures that the tradition emanated effeminately with the Greek Church in Byzantium (VII, 872-82) in dealing with the Greeks may have given rise to the story. Mai has shown (Nova Collectio Patr., I, Proleg., xlvii) that Photius of Constantinople (De Spir. Sanct. Myst., lxxxix) refers emphatically three times to this popes as "the Manly", as though he would remove from him the stigma of effeminacy. Other historians point to the degradation of the papacy in the tenth century, when so many popes bore the name John; it seemed therefore a fitting name for the legendary popess. Thus Aventinus sees in the story a satire on John IX; Blondel, a satire on John XI; Panvinio (note ad Platina, De vita Rom. Pont.) applies it to John XII, while Neander (Kirchengesch., II, 200) understands it as applicable generally to the baneful female influence on the papacy during the tenth century. Other investigators endeavour to find in various occurrences and reports a real historical foundation for the story. Thus M. Allatius (Dis. Fab. de Joanna Papissa) connects it with the false prophetess Theota, condemned at the Synod of Mainz (847); Leibniz recalls the story that an alleged bishop Johannes Anglicus came to Rome and was there recognized as a woman. The legend has also been connected with the Isadora Decretals, e.g., by Karl Blascus ("Diatribe de Joanna Papissa", Naples, 1779), and Gförrer (Kirchengesch., III, iii, 978).

Döllinger's explanation has met with more general approval ("Papstfabeln", Munich, 1863, 7-45). More recognizes the fable of Popess Joan as a survival of some local Roman folk-tale originally connected with certain ancient monuments and peculiar customs. An ancient statue discovered in the reign of Sixtus V, in a street near the Colosseum, which showed a figure with a child, was popularly considered to represent the popess. In the same street a monument was discovered with an inscription at the end of which occurred the well-known formula P. P. P. (propin peuculid posuit) together with a prefixed name which read: Pop. (Papirius) pater potrum. This could easily have given origin to the inscription mentioned by John, who would thus have been an effeminate popess. The pope did not pass along this street in solemn procession (perhaps on account of its narrowness). Further it was noticed that, on the occasion of his formal inauguration in front of the Lateran Basilica, the newly-elected pope always seated himself on a marble chair. This seat was an ancient bath-stool, of which

there were many in Rome; it was merely made use of by the pope to rest himself. But the imagination of the pope was not the only reason why so many of the pope was thereby tested, in order to prevent any further instance of a woman attaining to the Chair of St. Peter. Erroneous explanations—such as were often excogitated in the Middle Ages in connexion with ancient monuments—and popular imagination are responsible for the third of "Portait"--Joan" that unctural chroniclers, since the middle of the thirteenth century, dignified by consigning it to their pages.

Joanna of Portugal, Blessed, b. at Lisbon, 16 February, 1452; d. at Aveiro, 12 May, 1490; the daughter of Alfonso V, King of Portugal, and his wife Elizabeth. She is chiefly remarkable for the courage and persistency with which she opposed all attempts on the part of her father and brother to make her marry. She had resolved from childhood to be the spouse of Christ, and, when possible, to enter the religious state; but, being the next heir to the throne in default of male issue, her wish was particularly obnoxious to her family and to the country. Joanna was very beautiful, and her hand was sought by several princes. Once, in her father's absence, she had to act as regent of the kingdom, and in that office is said to have shown great capacity.

After many struggles, she entered the Dominican house called the Convent of Jesus, at Aveiro, where the rule was severe and very strictly kept. For a time she was compelled, for political reasons, to leave it and go back to Court. Finally, however, she was pressing; and her life in the convent was so penitential, holy, and heroically humble, that she died in the odour of sanctity, and miracles followed her decease.

Joannes de Sacrobosco (JOHN HOLYWOOD), a monk of English origin, lived in the first half of the thirteenth century as professor of astronomy at Paris; d. in that city, 1256. He owed his reputation as an astronomer chiefly to his astronomical textbook "De Sphaera," which was used at many universities for several centuries. There is much difference of opinion as to the place and time of his birth. As the Latinized name de Sacrobosco (de Sacrobusto or Sacarobusus) seems to be a translation of the English name Holywood or Holybush, many say that Hollywood (now Halifax), in Yorkshire, was his birthplace. Others give it as Oxford; and a vague tradition agues that he came from Nithdale in Scotland. John went to studies at Oxford, but soon came to France, where, as a contemporary of St. Thomas Aquinas, he proved himself an efficient teacher of mathematics and astronomy. As many were deterred from undertaking the study of astronomy by such tedious and to a great extent obscure works, the labours of Sacrobosco, and Albategnus, Holywood wisely resolved to write a compendium of spherica astronomy, which professors of this branch of knowledge could use as a textbook in their course of instruction. How well-timed his work was is shown by the numerous editions (amounting to almost one hundred) published before the middle of the seventeenth century, that is to say, before the new Copernican theory was generally adopted. The first printed copy dates from 1472, e.g., by Rhotof (1462), Giraldi (1494), and Capua, Fabri (1495); Georgi, Boneti (1500), etc. Among the best known is the commentary of Father Christopher Clavius, S. J., which also saw many editions. In spite of the numerous revisions which Sacrobosco's book went through, indeed perhaps even owing to them, the work still preserved the proper historical appreciation of the different questions which exercised men's minds from the thirteenth century onwards to the time of the reform of astronomy under Copernicus, Kepler, and Newton. Sacrobosco also wrote a treatise on the computation of feast days (Computus), a tract on arithmetic (Algorithmus), and a small work in the field of practical geometry (De Compositione quadrantis simplicis et compositi et utilisatis usurisque). In the latter there is one of the oldest examples of the figures then found almost invariably on the reverse of the so-called armillary spherab, a graduated quadrant, one could obtain the different hours of the day from the observation of the sun's height.

Joannes de Turrecremata. See TORQUEMADA, JUAN DE.

Joan of Arc (Jeanne d'Arc), Blessed, by her contemporaries commonly known as la Pucelle (the Maid); b. at Domremy in Champagne, probably on 6 January, 1412; d. at Rouen, 30 May, 1431. The village of Domremy lay upon the confines of territory which recognized the suzerainty of the Duke of Bourgundy, but in the protracted conflict between the Armagnacs (one party of Charles VII, King of France), on the one hand, and the Burgundians in alliance with the English, on the other, Domremy had always remained loyal to Charles. Jacques d'Arc, Joan's father, was a small peasant farmer, poor but not needy. Joan seems to have been the youngest of a family of five. She had learned to read or write but she was skilled in sewing and spinning, and the popular idea that she spent the days of her childhood in the pastures, alone with the sheep and cattle, is quite unfounded. All the witnesses in the process of rehabilitation spoke of her as a singularly pious child, grave beyond her years, who often knelt in the church absorbed in prayer, and loved the poor tenderly. Great attempts were made at Joan's trial to connect her with some superstitious practices supposed to have been performed round a certain tree, popularly known as the "Fairy Tree" (L'Arbre des Dames), but the sincerity of her answers baffled her judges; she was sung and danced there with the other children, and had woven wreaths for Our Lady's statue, but since she was twelve years old she had lived aloof from such diversions.

It was at the age of thirteen and a half, in the summer of 1425, that Joan first became conscious of that mysterious manifestation, whose supernatural nature and now is rash to question, which she afterwards came to call her "voices" or her "counsel." It was at first simply a voice, as if someone had spoken quite close to her, but it seems also clear that a blaze of light accompanied it, and that later on she clearly discerned in some way the appearance of those who spoke to her, recognizing them individually as St. Michael (who
was accompanied by other angels), St. Margaret, St. Catherine, and others. Joan was always reluctant to speak of her voices. She said nothing about them to her confessor, and constantly refused, at her trial, to be inveigled into descriptions of the appearance of the saints and to explain how she recognized them. None the less, she told her judges: "I saw them with those very eyes, as well as I see you." Great efforts have been made by rationalistic historians, and most recently by M. Anatole France, to explain these voices as the result of a condition of religious and hysterical exaltation which had been fostered in Joan by priestly influence, combined with certain prophecies current in the country-side of a maiden from the bata chenu (oak wood), near which the Fairy Tree was situated, who was to save France by miracle. But the baselessness of this analysis of the phenomena has been fully exposed by Mr. Andrew Lang ('The Maid of France', 1900, 25 sq.) and other non-Catholic writers. There is not a shadow of evidence to support this theory of priestly advisers couching Joan in a part, but much which contradicts it. Moreover, unless we accuse the Maid of deliberate falsehood,

which no one is prepared to do, it was the voices which created the state of patriotic exaltation, and not the exaltation which preceded the voices. Her evidence on these points is clear.

Although Joan never made any statement as to the date at which the voices received her mission, it seems certain that the call of God was only made known to her gradually. But by May, 1428, she no longer doubted that she was hidden to go to the help of the king, and the voices became insistent, urging her to present herself to Robert Baudricourt, who commanded for Charles VII in the neighboring town of Vaucouleurs. This journey she eventually accomplished a month later, but Baudricourt, a rude and dissolute soldier, treated her and her mission with scorn, respect, saying to the cousin who accompanied her: "Take her home to her father and give her a good whipping." Meanwhile the military situation of King Charles and his supporters was growing more imminent. Orleans was invested (12 October, 1428), and by the close of the year complete defeat seemed imminent. Joan's voices became urgent, and even threatening. It was in vain that she resisted, saying to them: "I am a poor girl; I must now have you to ride or fight." The voices only reiterated: "It is God who commands it." Yielding at last, she left Domremy in January, 1429, and again visited Vaucouleurs. Baudricourt was still sçcceptual, but, as she stayed on in the town, her persistence gradually made an impression on him. On 19 Feb, she announced a great defeat which had befallen the French army near Orleans—La Treille and the Herringies. As this statement was officially confirmed a few days later, her cause gained ground.

Finally she was suffered to seek the king at Château, and she made her way there with a slender escort of three men-at-arms, she being attired, at her own request, in male costume—undoubtedly as a protection to her modesty in the rough life of the camp. She always slept fully dressed, and all those who were intimate with her declared that there was something lovely about her which represented every unseemly thought in her regard. She reached Château on 6 March, and two days later was admitted into the presence of Charles VII. To test her, the king had disguised himself, but she at once saluted him without hesitation among a group of attendants. From the beginning a strong suspicion rested at the king, and foremost amongst them—opposed her as a crazy visionary, but a secret sign, communicated to her by her voices, which she made known to Charles, led the king, somewhat half-heartedly, to believe in her mission.

What this sign was, Joan never revealed, but it is now most commonly believed that this "secret of the king" was a doubt which Charles had conceived of the legitimacy of his birth, and which Joan had been supernaturally authorized to set at rest. Still, before Joan could be employed in military operations she was sent to Poitiers to be examined by a numerous committee of learned bishops and doctors. The examination was of the most searching and formal character. It is regrettable in the extreme that the minutes of the proceedings, to which Joan frequently appealed later on in her trial, have altogether perished. All that we know is that her ardent faith, simplicity, and honesty made a favourable impression. The theologians found nothing heretical in her claims to supernatural guidance, and, without pronouncing upon the reality of her mission, thought that she might be safely employed and further tested.

Returning to Château, Joan made her preparations for the campaign. Instead of the sword the king offered her, she begged that search might be made for an ancient sword buried, as she averred, behind the altar in the chapel of Ste-Catherine-de-Fierbois. It was found in the very spot her voices indicated. There was made for her at the same time a standard bearing the words Jesus, Maria, with a picture of God the Father, and kneeling angels presenting a fleur-de-lis. But perhaps the most interesting fact connected with this early stage of her mission is a letter of one Sire de Rotselaer written from Lyons on 22 April, 1429, which was delivered at Brussels and duly registered, as the manuscript of this day and the events referred to received their fulfillment. The Maid, he reports, said: "that she would save Orleans and would compel the English to raise the siege, that she herself in a battle before Orleans would be wounded by a shaft but would not die of it, and that the King, in the course of the coming summer, would be crowned at Rheims, together with other things which the King keeps secret." (See the facsimile in Wallo, "Jeanne d'Arc", p. 86.) Before entering upon her campaign, Joan summoned the King of England to withdraw his troops from French soil. The English commissioners were furious at the audacity of this demand, but Joan by a rapid movement entered Orleans on 30 April. Her presence there at once worked wonders. By 8 May the English forts which encircled the city had all been captured, and the siege raised, though on the 7th Joan was wounded in the breast by an arrow. As far as the Maid went, her triumph was complete, partly from a sound warlike instinct, partly because her voices had already told her that she had only a year to last. But the king and his advisers, especially La Trémoille and the Archbishop of Reims, were slow to move. However, at an earnest entreaty a short campaign was begun upon the Sino, which, though a series of defeats, ended on 18 June with a great victory at Patay, where the English reinforcements sent from Paris under Sir John
Fastol were completely routed. The way to Reims was now practically open, but the Maid had the greatest difficulty in persuading the commanders not to retire before Troyes, which was at first closed against them. They captured the town, and then, still reluctantly, followed her to Reims, where, on Sunday, 17

July, 1429, Charles VII was solemnly crowned, the Maid standing by with her standard, for—as she explained—"as it had shared in the toil, it was just that it should share in the victory".

The principal aim of Joan's mission was thus attained, and some authorities assert that it was now her wish to return home, but that she was detained with the army against her will. The evidence is to some extent conflicting, and it is probable that Joan herself did not always speak in the same tone. Probably she saw clearly how much might have been done to bring about the speedy expulsion of the English from French soil, but on the other hand she was constantly oppressed by the apathy of the king and his advisers, and by the suicidal policy which snatched at every diplomatic bait thrown out by the Duke of Burgundy.

An abortive attempt on Paris was made at the end of August. Though St-Denis was occupied without opposition, the assault which was made on the city on 8 Sept. was not seriously supported, and Joan, while heroically cheering on her men to fill the moat, was shot through the thigh with a bolt from a crossbow. The Due d'Alençon removed her almost by force, and the assault was abandoned. The reverse unquestionably impaired Joan's prestige, and shortly afterwards, when, through Charles' political counselors, a truce was signed with the Duke of Burgundy, she sadly laid down her arms upon the altar of St-Denis. The inactivity of the following winter, mostly spent amid the worldliness and the jealousy of the Court, must have been a miserable experience for Joan. It may have been with the idea of consoling her that Charles, on 29 Dec., 1429, ennobled the Maid and all her family, who henceforward, from the lilies on their coat of arms, were known by the name of Du Lis. It was April before Joan was able to take the field again at the conclusion of the truce, and at Meulan her voices made known to her that she would be taken prisoner before Midsummer Day. Neither was the fulfilment of this prediction long delayed. It seems that she had thrown herself into Compiègne on 24 May at sunrise to defend the town against Burgundian attack. In the evening she resolved to attempt a sortie, but her little troop of some five hundred encoun-

tered a much superior force. Her followers were driven back and retired desperately fighting. By some mistake or panic of Guillaume de Flavy, who commanded in Compiègne, the drawbridge was raised while still many of those who had made the sortie remained outside, Joan amongst the number. She was pulled down from her horse and became the prisoner of a follower of John of Luxemburg. Guillaume de Flavy has been accused of deliberate treachery, but there seems no adequate reason to suppose this. He continued to hold Compiègne resolutely for his king, while Joan's constant thought during the early months of her captivity was to escape and come to assist him in his task of defending the town.

No words can adequately describe the disgraceful ingratitude and apathy of Charles and his advisers in leaving the Maid to her fate. If military force had not availed, they had prisoners like the Earl of Suffolk in their hands, for whom she could have been exchanged. Joan was sold by John of Luxemburg to the English for a sum which would be the equivalent of £22,000 (about $110,000) in modern money. There can be no doubt that the English, partly because they feared their prisoner with a superstitious terror, partly because they were ashamed of the dread which she inspired, were determined at all costs to take her life. They could not put her to death for having beaten them, but they could get her sentenced as a witch and a heretic. Moreover, they had a tool ready to their hand in Pierre Cauchon, the Bishop of Beauvais, an unscrupulous and ambitious man who was the creature of the Burgundian party. A pretext for invoking his authority was found in the fact that Compiègne, where Joan was captured, lay in the Diocese of Beauvais. Still, as Beauvais was in the hands of the French, the trial took place at Rouen—the latter see being at that time vacant. This raised many points of technical legality which were summarily settled by the parties interested. The Vicar of the Inquisition at first, upon some scruple of jurisdiction, refused to attend, but this difficulty was overcome before the trial ended. Throughout the trial Cauchon's assessors consisted almost entirely of Frenchmen, for the most part theologians and doctors of the University of Paris. Preliminary meetings of the court took place in January, but it was only on 21 Feb., 1431, that Joan appeared for the first time before her judges. She was not allowed an advocate, and, though accused in an ecclesiastical court, she was throughput illegally confined in the Castle of Rouen, a secular prison, where she was guarded by dissolute English soldiers. Joan bitterly complained of this. She asked to be in the church prison, where she would have had female attendants. It was undoubtedly for the better protection of her modesty under such conditions that she persisted in retaining her male attire. Before she had been handed over to the English, she had attempted to escape by desperately throwing herself from the window of the tower of Beaurevoir, an act of seeming presumption for which she was much browbeaten by her judges. This also served as a pro-
text for the harshness shown regarding her confinement at Rouen, where she was at first kept in an iron cage, with the necks, hands, and feet. On the other hand she was allowed no spiritual privileges—e.g. attendance at Mass—on account of the charge of heresy and the monstrous dress (difformitate habitus) she was wearing.

As regards the official record of the trial, which, so far as the Latin version goes, seems to be preserved entire, we may probably trust its accuracy in all that relates to the questions asked and the answers returned by the prisoner. These answers are in every way favourable to Joan. Her simplicity, piety, and good sense appear at every turn, despite the attempts of the judges to confuse her. They pressed her regarding her visions, but upon many points she refused to answer. Her attitude was always fearless, and, upon 1 March, Joan boldly announced that “within seven years’ space the English would have to forfeit a bigger price than Orleans”. In point of fact Paris was lost to Henry VI on 12 Nov., 1437—six years and eight months afterwards. It was probably because the Maid’s answers perceptibly won sympathizers for her in a large assembly that Cauchon decided to conduct the rest of the enquiry before a small committee of judges in the prison itself. We may remark that the only matter in which any charge of prevarication can be reasonably urged against Joan’s replies occurs especially in this stage of the enquiry. Joan, pressed about the secret sign given to the king, declared that an angel brought him a golden crown, but on further questioning she seems to have grown confused and to have contradicted herself. Most authorities (like, e.g., M. Petit de Julleville and Mr. Andrew Lang) are agreed that she was trying to guard the king’s secret behind an allegory, herself being the angel; but others—for instance F. Ayroles and Canon Dunand—insistuate that the accuracy of the procès-verbal cannot be trusted. On another point she was prejudiced by her lack of education. The judges asked her to submit herself to “the Church Militant”. Joan clearly did not understand the phrase and, though willing and anxious to appeal to the pope, grew puzzled and confused. It was asserted later that Joan’s reluctance to pledge herself to a simple acceptance of the Church’s decisions was due to some insidious advice treacherously imparted to her to work her ruin. But the accounts of this alleged perfidy are contradictory and improbable.

The examinations terminated on 17 March. Seventy propositions were then drawn up, forming a very disorderly and unfair presentation of Joan’s “grimes”, but, after she had been permitted to hear and reply to these, another set of twelve were drafted, better arranged and less extravagantly worded. With this summary of her misdeeds before them, a large majority of the twenty-two judges who took part in the deliberations declared Joan’s visions and voices to be “false and diabolical”, and they decided that if she refused to retract she was to be handed over to the secular arm—which was the same as saying that she was to be burned. Certain formal admonitions, at first, private, and then public, were administered to the poor victim (18 April and 2 May), but she refused to make any submission which the judges could have considered satisfactory. On 9 May she was threatened with torture, but she still held firm. Meanwhile, the twelve propositions were submitted to the University of Paris, which, being extravagantly English in sympathy, denounced the Maid in violent terms. Strong in this approval, the judges, forty-seven in number, held a final deliberation, where two reconfirmed that Joan ought to be declared heretical, but the third, adhering to the civil power, if she still refused to retract. Another admonition followed in the prison on 22 May, but Joan remained unshaken. The next day a stake was erected in the cemetery of St-Ouen, and in the presence of a great crowd she was solemnly admonished for the last time. After a courageous protest against the preacher’s insulting reflections on her king, Charles VII, the accessories of the scene seem at last to have worked upon mind and body worn out by so many struggles. Her courage for once failed her. She consented to sign some sort of retractation, but what the precise terms of that retractation were will never be known. In the official record of the process a form of retractation is inserted which is most humiliating in every particular. It is a long document which would have taken half an hour to read. What was read aloud to Joan and was signed by her must have been something quite different, for five witnesses at the rehabilitation trial, including Jean Massieu, the official who had himself read it aloud, declared that it was only a matter of a few lines. Even so, the poor victim did not sign unconditionally, but plainly declared that she only retracted in so far as it was God’s will. However, in virtue of this concession, Joan was not then burned, but conducted back to prison.

The English and Burgundians were furious, but Cauchon, it seems, placated them by saying, “We shall have her yet.” Undoubtedly her position would now, in case of a relapse, be worse than before, for no second retractation could save her from the flames. Moreover, as one of the priests upon which she had been condemned was the wear-
ing of male apparel, a resumption of that attire would alone constitute a relapse into heresy, and this with her enemies were determined to have her blood upon some pretext, once more put on the man’s dress which had been purposely left in her way. The end now came soon. On 29 May a court of thirty-seven judges decided unanimously that the Maid must be treated as a relapsed heretic, and this sentence was carried out the next day (30 May 1431) amid circumstances of intense pathos. She is said, when the judges visited her early in the morning, first to have charged Cauchon with the responsibility of her death, solemnly appealing from him to God, and afterwards to have declared that “her voices had deceived her.” About this last speech a doubt must always be felt. We cannot be sure whether such words were ever used, and, even if they were, the meaning is not plain. She was, however, allowed to make her confession and to receive Communion. Her demeanour at the stake was such as to move even her bitter enemies to tears, for a cry, which she had embraced it, was held up before her while she called continuously upon the name of Jesus. “Until the last,” said Manchon, the recorder at the trial “she declared that her voices came from God and had not deceived her.” After death her ashes were thrown into the Seine.

Twenty-four years later a revision of her trial, the procès de réhabilitation, was opened at Paris with the consent of the Holy See. The popular feeling was then very different, and, with but the rarest exceptions, all the witnesses were eager to render their tribute to the virtues of the Maid. Her trial had been conducted without reference to the pope, indeed it was carried out in defiance of the Maid’s appeal to the head of the Church. Now an appellate court constituted by the pope, after long inquiry and examination of witnesses, reversed and annulled the sentence pronounced by a local tribunal under Cauchon’s presidency. The illegality of the former proceedings was made clear, and it speaks well for the sincerity of this new inquiry that it could not be made without inflicting some degree of reproach upon both the King of France and the Church at large. The case of the Maid had been drawn out and had so long been suffered to continue undressed. Even before the rehabilitation trial, keen observers, like Zénée Sylvius Piccolomini (afterwards Pope Pius II), though still in doubt as to her mission, had discerned something of the heavenly character of the Maid. In Shakespeare’s day she was still regarded in England as a witch in league with the fiends of hell, but a juster estimate had begun to prevail even in the pages of Speed’s “History of Great Britain” (1611). By the beginning of the nineteenth century the sympathy for her even in England was general. Such was the case of the late Sir John Flamsteed, Turner, Landor, and, above all, De Quincey greeted the Maid with a tribute of respect which was not surpassed even in her own native land. Among her Catholic fellow-countrymen she had been regarded, even in her lifetime, as Divinely inspired. At last the cause of her beatification was opened on occasion of the papal visit to England in 1689, by Mgr Dupanloup, Bishop of Orleans, and, after passing through all its stages and being duly confirmed by the necessary miracles, the process ended in the decree being published by Pius X on 11 April, 1909. A Mass and Office of Blessed Joan, taken from the Commune de l’Escurial in Spain, have been approved by the Holy See for use in the Diocese of Orleans.

Some account of Joan of Arc will be found in most general encyclopaedias as well as in every history of England. Lingard’s estimate, however, is curiously nationalistic and almost depreciatory. For a compendious and sympathetic narrative which is recommended we may recommend P.L.T. de Julliéville, Jeanne d’Arc in ses faits et ses temps (Paris, 1902); DUMAND, Études et documents (5 vols., Paris, 1905); Roehl, Jeanne d’Arc (3 vols., Paris, 1899). The tone of both these last-named writers is receptively polemical. WALDON, Vie de Jeanne d’Arc (Paris, 1877), and DEBOUT, Joan of Arc (Paris, 1896, translated into English by A. M. Bungay), are also interesting. The most useful of the various contemporary chronicles, such as the Chronicque de la France, the Journal du siege d’Orléans, the Journal d’un bourgeois de Paris, etc., have also been incorporated in these five volumes. Some fresh material, especially in the reign of Charles VII, collections of gestes that have accumulated since ascribed to Chaucer’s time. The greater part will be found translated into French in the work of Ayoles. The edition of commendation has been translated into French by Vallet de Virville (1867), and both trials by POULAC (1894). There is a version in English by MURRAY, Jeanne d’Arc; The Maid of Her Life (London, 1902).

NON-CATHOLIC BIOGRAPHIES.—Foremost among these may be mentioned LANGE, La vie de Jeanne d’Arc (Paris, 1908), of which a modified French presentation, entitled La Jeune d’Arc d’Anatole France (Paris, 1908), but in which the book loses some of its intimate appeal of M. France, though it is full of the most devoted sympathy for the Maid. LOWELL, Joan of Arc (New York, 1898), is also an excellent biography. MARSHALL, Joan of Arc (New York, 1898), is thrown into the form of an imaginary memoir. Among a number of works which of late years have pretended to explain the social processes and the victories of the Maid upon a purely natural basis of hallucination and ecclesiastical suggestion, one of the most important is the translation, Fausse Jeanne d’Arc, 1884). No better criticisms of his theories can be recommended than the work of Lang mentioned above.

MISCELLANEOUS STUDIES.—Only a few works of special importance can be mentioned here: QUICHERAT, La Parcourant en some other parts, 1915, etc., is a work which has been the subject of much discussion which has remained the work of the Maid even more of interest. LEW, Jeanne d’Arc à Domremy (Paris, 1806), though thoroughly rationalistic, has collected valuable facts. These books have been answered in detail by Duhem and Duhem. Other works dealing with particular points are GOLAY, Jeanne d’Arc et son temps (La Bessière, 1897); BEYER, Jeanne d’Arc (Paris, 1897); Guillaume de Flavy (Paris, 1898); SARRASIN, Joanne de Cauchon (Paris, 1901); DUMAS, Jeanne d’Arc et l’Université de Paris (1907), which much fuller bibliography will be found in Chavelier, Bio-bibl.

HERBERT THURSTON.

Job (Heb. יב), one of the books of the Old Testament, and the chief personage in it. In this article it is primarily the book which is treated. As opportunity, however, occurs, and so far as is permissible, Job himself will be considered. The subject will be discussed under the following heads: I. Position of the Book in the Canon; II. Authority; III. The Characters of the Poem; IV. Contents; V. Arrangement of the Main, Poetic Portion of the Book; VI. Design of the Book; VII. Teaching as to the Future Life; VIII. Integrity of the Book; IX. Condition of the Text; X. Technical Skill of the Author and the Metre; XI. Time of its Composition.

I. Position of the Book in the Canon.—In the Hebrew Bible Psalms, Proverbs, and Job are always placed together, the Psalms coming first, while Job is put between the other two or, at times, comes last. The three books form a part of the Hagiographa (Ketubim), having sometimes the first place among the Hagiographa in the Hebrew Bible (as in the Vulgate), but sometimes placed by Ruth, or Paralipomenon, or Paralipomenon with Ruth (cf. lists in Ginsburg, “Introduction to Heb. Bible” (London, 1897, 7). In the Greek Bible and the Vulgate Job now stands before Psalms and follows directly after the historical books. The old Greek and the Latin MS. traditions are in opposition; see, for example, the list of Melito of Sardis, and that of Origen as given by Eusebius, “Hist.
II. Authority.—(1) Historical Accuracy.—Many look upon the entire contents of the book as a freely invented parable which is neither historical nor intended to be considered historical; no such man as Job ever lived. Catholic commentators, however, almost without exception, hold Job to have actually existed and his personality to have been preserved by popular tradition. Nothing in the text makes it necessary to doubt his historical existence. The Scriptures seem repeatedly to take this for granted (cf. Ezek., xiv, 14; James, v, 11). There is no such name as Job in the Greek text of Tobias (there is no mention of Job). All the Fathers considered Job an historical person; some of their testimonies may be found in Knabenbauer, "Zu Job" (Paris, 1886), 12-13. The Martyrology of the Latin Church mentions Job on 10 May, that of the Greek Church on 6 May (cf. Acta SS., II, May, 494). The Book of Job, therefore, has a kernel of fact, with which have been united many imaginative additions that are not strictly historical. What is related by the poet in the prose prologue and epilogue is in the main historical: the persons of the hero and heroine, the region where he lived; his wealth, fortune and virtues; the great misfortune that overcame him and the patience with which he bore it; the restoration of his prosperity. It is also to be accepted that Job and his friends discussed the origin of his sufferings, and that in so doing views were expressed similar to those the poet puts into the mouths of his characters. The details of the execution, the poetic form, and the art shown in the arrangement of the arguments in the dispute are, however, the free creation of the author. The figures expressive of the wealth of Job both before and after his trial are imaginatively rounded. Also in the narrative of the misfortunes it is impossible not to recognize a poetic conception which need not be considered as strictly historical. The scene in heaven (i, 6; ii, 1) is plainly an allegory which shows that the Providence of God guides the destiny of man (cf. St. Thomas, In Job). The method of God (xxviii, 1-4) is generally received as a literal interpretation from commentators. St. Thomas, however, remarks that it may also be taken metaphorically as an inner revelation accorded to Job.

(2) Divine Authority of the Book.—The Church teaches that the book was inspired by the Holy Spirit. Thus all that its author gives as historical fact or otherwise, is guaranteed as true by the divine witness. The question, however, arises, what does the book guarantee? (a) Everything in prologue or epilogue that is the comment of the author is Divine truth; nevertheless, what is perhaps poetic ornament must not be confounded with historical verity or objective dogmatic propositions. The statements by the utterances assigned by the poet to God. The like is true of the speeches of Elihu. Some think the speeches of Elihu are to be judged just as are those of Job and his friends. (b) The speeches of Job and his three friends have in themselves no Divine authority, but only such human importance as Job and his three friends are personally entitled to. They have, however, Divine authority when, and in as far as, they are approved by the author expressly or tacitly. In general, such tacit approbation is to be understood for all points concerning which the disputants agree, unless the author, or God, or Elihu, shows disapproval. Thus the words of Job have in large degree Divine authority, because the view he maintains against the three friends is plainly characterized by the author as the one relatively correct. Yet much that the three friends say is of equal importance, because it is at least tacitly approved. St. Paul argues (I Cor., iii, 19) from a speech of Eliaphas (Job, v, 13) as from an inspired writing. (c) In particular places, especially of things about which no sameness of other sacred matters are referred to, the caution prescribed by the rules of hermeneutics should be observed.

III. The Characters of the Poem.—Apart from the prologue and epilogue, the Book of Job consists of a succession of speeches assigned to distinct persons. There are six speakers: Yahweh, Eliu, Job, and Job's three friends, Eliphaz, Baldad, and Sophar.

(1) Job.—The chief personality is Job. (a) Name.—He is called the "persecuted one", that is, the one tempted by (personified) suffering, the one hard pressed, the patient sufferer. In the same way as יִֽשְׂרָאֵל, "the one born", is related to יִֽשָּׁר, "the per- son", so Job (Ixx, 11) to יִֽשָּׂרָאֵל (xxvi, 11), is related to determine whether the name was originally different and was later changed into the expressive יִֽשָּׂרָאֵל in folklore on account of Job's fate. Many commentators do not accept this explanation of the name.

(b) Age in which Job lived.—According to the usual and well-founded assumption, Job lived long before Moses. This is shown by the great age he attained. He was no longer young when overtaken by his great misfortune (xii, 12; xxx, 1); after his restoration he lived one hundred and forty years longer (xili, 10). His wealth, like that of the Patriarchs, consisted largely in flocks and herds (i, 3; xxviii, 12); furthermore, the piece of money mentioned in xili, 11, belongs to patriarchal times; the only other places in which the expression occurs are Gen., xiii, 19, and Jos., xxiv, 32. The musical instruments referred to (xxi, 12; xxx, 31) are only those mentioned in Genesis (Gen., iv, 21; xxxi, 27); organ, harp, and timbrel. Job himself offers sacrifice as the father of the family (i, 5), as was also the custom of the Patriarchs. An actual offering for sin in the Mosaic sense he was not acquainted with; the holocaust took its place (i, 5; xili, 8).

(c) Religion of Job.—Job evidently did not belong to the chosen people. He lived, indeed, outside of Palestine. He and the other characters betray no knowledge of the specifically Israelitic institutions. Even the name of God peculiar to the chosen people, Yahweh, is carefully avoided by the speakers in the poetic part of the book, and is only found, as if accidentally, in xili, 9, and according to some Masoretes (xxviii, 28). The sacrifice of Balaam (Num., xxiii, 1), consequently a custom outside of Israel. For the solution of the problem of suffering the revelations made to the Patriarchs or even Moses are never referred to. Nevertheless Job and his friends venerated the one true God. They were known of the people of Edom (i, 2), and the first man (xx, 7, and Hebrew, xxxi, 33).

(d) Country in which Job lived.—Job belonged to the "people of the East" (i, 3). Under this name were included the Arabian (Gen., xxv, 6) and Amaran (Num., xxxiii, 7) tribes which lived east of the Jordan branch of the Euphrates (cf. xxix, 1). Job seems to have been an Amaran, for he lived in the land of Hus (i, 1; יִֽעָל, יַֽעַר). Hus, a man's name in Genesis, is always used there in close connexion with Aram and the Arameans (Gen., x, 23; xxii, 1; xxxvi, 28). His home was certainly not far from Edom where Eliphaz lived, and it must be sought in Eastern Palestine, not too far north, although in the region inhabited by the Amaran. It was located on the border of the Syro-Arabian desert, for it was exposed to the attacks of the marauding bands which wandered through this desert: the Chaldeans, the Medes, the Sabaeans (i, 15), or Arabs. Many, following an old tradition, place the home of Job in the Hauran, in the district of Naiwa (or Neve), which is situated about 36° East of Greenwich and in almost the same latitude as the northern end of Lake Genesareth. The loca-
is accustomed to reward virtue and to punish wickedness (xxvii, 7-23; xxxi). He even threatens his friends with the judgment of God on account of their unfriendly suspicion (vi, 14; xii, 7-12; xvii, 4, 9; xir, 6-15). He rightly thus it is a symbol of Job's wealth. The same name is mentioned in Jer., xxxii, 20, and Lam., iv, 21. In the first reference it is used in a general sense for the whole East; in the latter it is said that the Edomites live there.

(c) The Standing of Job. Job was one of the most important men of the land (xxix, 1-6); he had many bondsmen (xxx, 39). The same is true of the friends who visited him; in the Book of Tobias these are called "kings" (Tob., ii, 15, in Vulgate). In the Book of Job also Job seems to be described as a king with many vassals under him (xxxix). That he had brothers, a holy man, is tried by Satan with severe affictions, in order to test his virtue. In succession Job bears six great temptations with heroic patience, and without the slightest murmuring against God or wavering in loyalty to Him. Then Job's three friends, Eliphaz, Balaad, and Sophar, come to console him. They lower the level of the conversation and the greatest trial.

(2) The poetical, main division of the book presents in a succession of speeches the course of this temptation. The three friends are fully convinced that trouble is always a result of wrongdoing. They consider Job, therefore, a great sinner and stigmatize his assertions of innocence as hypocrisy. Job is hurt by the suspicion of his friends. He protests that he is no evil-doer, that God punishes him against his deserves. In the course of his speech he fails in reverence towards God, Who appears to him not unrighteous, but more as a severe, hard, and somewhat inconsiderate ruler that considers on blasphemy, or that being a poet, he is the language that is poetic, it is true that his expressions cannot be pushed too far, but the sharp reproofs of Eliu (xxxiv, 7-9, 36-37; xxxv, 16) and of Yahweh (xxxviii, 2; xl, 3-9) leave no doubt of his sin. In answering his friends Job emphasizes that God indeed

V. ARRANGEMENT OF THE MAIN, EN'TIC PORTION
of the Book.—(1) The poetic portion of the book may be divided into two sections: chs. iii—xxii and xix—xx. The former include the colloquies: the three friends in turn express their views, while to each speech Job makes a rejoinder. In the second section the three friends are silent, for Baldad's interposition (xxv) is as little a formal discourse as Job's brief comments (xxvii, 34–35 and xlii, 2–6). Job, Elihu, and Yahweh speak successively, and each utters a series of monologues. The length of the two sections is exactly, or almost exactly, the same, namely 510 lines each (cf. Hontheim, "Das Buch Job", Freiburg im Br., 1904, 44). The second division begins with the words: "Now also my words are bitter within me; A. V. - "Even my tongue is connective to bitterness". This shows not only that with these words a new section opens, but also that the monologues were not uttered on the same day as the colloquies. The first monologue is evidently the opening of a new section, not a rejoinder to the previous speech of Eli- phas (xxii).

(2) The colloquies are divided into two series: chs. iii—xiv and xv—xxiii. In each series Eliphaz, Baldad, and Sophia speak in turn in the order given (v—v, vii, xi, and xv, xviii, xx), while Job replies to each of their discourses (vi—vi, ix—xii, xv—xxiii). The first series begins with a lament from Job (iii), and the second closes with a speech by Eliphaz in which he weakly reproaches Job (xxii—xxv—xxvi) it is generally held that this chapter begins a new series, which rightly leaves this address unanswered. Each series contains seven speeches. In the first the friends try to convince Job of his guilt and of the necessity and good results of amendment. Eliphaz appeals to Revelation (iv, 12—21), Baldad to the authority of the Fathers (viii, 8—10), Sophia to understanding or philosophy (xi, 5—12). Eliphaz lays weight on the goodness of God (v, 9—27), Baldad on his justice (vi—vii), Sophia on his power (viii, 16). To which Job's secret sins were plain, even those which Job himself had almost forgotten (xi, 5—12). In the second series of speeches the friends try to terrify Job: one after the other, and in much the same form of address, they point out the terrible punishment which overtakes hidden sin. During the first series of speeches Job's despondency continually increases, even the thought of the future brings him no comfort (xiv, 7—22); in the second series the change to improvement has begun, and Job once more feels joy and hope in the thought of God and the future life (xv, 15—35; xvi, 25—28).

(3) The monologues may also be divided into two series. The first includes the monologues of Job, seven in number. First Job repeats his complaint to God (xxii—xxv), asserts, however, in three speeches his unchangeable devotion to God by lauding in brilliant discourse the power (xxvi), justice (xxvii), and wisdom (xxviii) of the Almighty. Finally in three further speeches he lays his case before God, impairing investigation and recognition of his innocence: How happy was I once (xxx), how unhappy am I now (xxx), and I am not to blame for this change (xxx). The second series contains the discourses of Elihu and Yahweh, also seven in number. In three speeches Elihu explains the sufferings which befell man. Trouble is often a Divine instruction, a warning to the godless to reform (xxxii—xxxiii, 30), thus revealing the goodness of God; it is often simply a punishment of the wicked (xxxii, 34), perhaps in some way better for him (xxxiii, 31—xxxiv), thus revealing the justice of God. Finally, troubles can also overtake the just as a trial which purifies and increases their virtue (xxxv—xxxvii), thus revealing God's unfathomable wisdom. The following four utterances of Yahweh illustrate the influence of the Elohist, already closely united by Elihu, of the Divine wisdom by dwelling upon the unchangeable of the animate nature (xxxviii, 1—38), of the animal world (xxxviii, 39—xxxix), and especially by referring to the great monsters of the animal world, the hippopotamus and the whale. Here the petrol is the first to rebuke Job for expressing himself too despondently and irreverently concerning his sufferings, upon which Job confesses his guilt and promises amendment (xxxix, 31—xl, 9 and xlii, 1—6); it appears that xxxix, 31—xl, 9, should be inserted after xlii.

VII. Teaching as to the Future Life.—In his sufferings Job abandoned all hope for the restoration of health and good fortune in this world (xvii, 11—18; xx, 24—26; xliv, 13). If therefore, is opened up to him a new hope, in its bearing on the ends intended in the government of the world. The Book of Job is further intended for edification, for Job is to us an example of patience. It is, finally, a book of consolation for all sufferers. They learn from it that misfortune is not a sign of hatred, but only a proof of special Divine love. For the mystical explanation of the book, especially of Job as a type of Christ, cf. Knaabenbauer, "In Job", 23—32.

VIII. Integrity of the Book.—Prologue and epilogue (i—ii; xlii, 7 sqq.) are regarded by many as not parts of the original work. The prologue, though, is absolutely essential. Without it the colloquies would be unintelligible, nor would the reader know until near the end whether the sufferings are brought by his own innocence or not. Upon hearing the rebukes of Elihu and Yahweh, he might be exposed to the danger of siding against Job. Without the epilogue the close of the work would be unsatisfactory, an evident humiliation of the righteous. For detailed treatment of this and kindred questions see the previous notes.

(2) Many a wrong ch. xxvii, 7—23, as a later addition; in this passage Job maintains that the
wicked suffer in this world, while elsewhere he has declared the contrary. The answer is: Job teaches that God is accustomed even in this world to reward the good and punish the wicked. In other passages he does not deny this rule, but merely says it has many exceptions. Consequently there is no contradiction. [See above, IV (2).] Besides it may be conceded that Job is not always logical. At the beginning, when his depression is extreme, he lays too much emphasis on the prosperity of the godless; gradually he becomes more composed and corrects somewhat his earlier extreme statements. Not everything that Job says is the doctrine of the book. [See above, II (2).]

(3) Many regard ch. xxviii as doubtful, because it has no connection with what goes before or follows and is in no way related to the subject-matter of the book. The answer to this is that the poet has to show how the suffering of Job does not separate him from God, but, against the intent of Satan, drives him into closer dependence on God. Consequently he represents Job, after his complaints (xxii-xxv), as glorifying God again at once, in which he lauds God’s power and righteousness. The praise of God is brought to a climax in xxviii, where Job extols God’s power and righteousness. After Job has thus surrendered himself to God, he can with full confidence receive the new revelation of the true original. Nearly all the prophets are of the opposite, that the Septuagint was produced by cutting down an original which varied but little from the Massoretic Text. This was also Bickell’s view in earlier years, and is the real state of the case. To avoid repetition and discursive statements, the translators of the Septuagint omitted much, especially where the reading seemed doubtful, translation difficult, the content anthropomorphic, unworthy of Job, or otherwise objectionable. In doing this the translation frequently disregards the fundamental principle of Hebrew poetry, the parallelism of the lines. In brief the critical value of the Septuagint is not great; in almost all instances the Massoretic Text is to be preferred. Taken altogether, the Massoretic has preserved the original form of the consonantal text fairly well, and needs but a moderate amount of critical emendation. The punctuation (vowel signs and accents) the Septuagint translators did not always understand the often difficult text; at times also words are not properly divided.

2. TECHNICAL SKILL OF THE AUTHOR AND THE TEXT.—Chapters ii-xiii, are poetical in form. This impression has been strengthened by the general recognition of the verse form in which do not always correspond with the Massoretic versed of our editions, are generally divided into two clauses or lines which are parallel in content. There are also a number of verses, about sixty, of three clauses each, the so-called triplets. It is an unjustifiable violence to the text when a critic by removing one clause changes these triplets into couplets. The verses form the twenty-eight speeches of the book which, as already stated, make four series of seven speeches each. The speeches are divided, not directly into lines, but into strophes. It is most probable that the speeches formed from strophes often, perhaps always, follow the law of “choral structure” discovered by Father Zenner. That is, the speeches often or always consist of pairs of strophes, divided by intermediate strophes not in pairs. The two strophes forming a pair are parallel in content and have each the same number of words, and the same construction. For this subject see Hontheim, op. cit. Investigators are not agreed as to the construction of the line. Some count the syllables, others only the stresses, others again the accented words. It would seem that the last view is the one to be preferred. There are about 2100 lines in the Book of Job, containing generally three, at times two or four, accented words. Besides

means for judging the Massoretic Text are the old translations made directly from the Hebrew: the Targum, Peshito, Vulgate, Septuagint, and the other Greek translations made from the Hebrew. With the exception of the Septuagint, the original of all these translations was essentially identical with the Massoretic Text; only unimportant differences can be proved. On the other hand, the Septuagint in the form it had before Origen, was about four hundred lines that is one-fifth shorter than the Massoretic Text. Origen supplied what was lacking in the Septuagint from the Greek translations and marked the additions by asterisks. Copyists generally omitted these critical signs, and only a remnant of them, mixed with many errors, has been preserved in a few manuscripts. Consequently knowledge of the old form of the Septuagint is very imperfect. The best means now of restoring it is the Copto-Sahidic translation which followed the Septuagint and does not contain Origen’s additions. This translation was published by Ciasca, “Sacerorum Bibliorum fragmenta Copto-Sahidica” (2 vols., Rome, 1889), and by Amelineau in “Transactions of the Society of Biblical Archeology,” IX (1893), 409-75. Hatch and Bickell claim that the shorter text of the Septuagint is in general the earlier one, consequently that the present Massoretic Text is an expansion of a shorter original. Nearly all the prophets are of the opposite, that the Septuagint was produced by cutting down an original which varied but little from the Massoretic Text. This was also Bickell’s view in earlier years, and is the real state of the case. To avoid repetition and discursive statements, the translators of the Septuagint omitted much, especially where the reading seemed doubtful, translation difficult, the content anthropomorphic, unworthy of Job, or otherwise objectionable. In doing this the translation frequently disregards the fundamental principle of Hebrew poetry, the parallelism of the lines. In brief the critical value of the Septuagint is not great; in almost all instances the Massoretic Text is to be preferred. Taken altogether, the Massoretic has preserved the original form of the consonantal text fairly well, and needs but a moderate amount of critical emendation. The punctuation (vowel signs and accents) the Septuagint translators did not always understand the often difficult text; at times also words are not properly divided.

X. TECHNICAL SKILL OF THE AUTHOR AND THE TEXT.—Chapters ii-xiii, are poetical in form. This impression has been strengthened by the general recognition of the verse form which do not always correspond with the Massoretic versed of our editions, are generally divided into two clauses or lines which are parallel in content. There are also a number of verses, about sixty, of three clauses each, the so-called triplets. It is an unjustifiable violence to the text when a critic by removing one clause changes these triplets into couplets. The verses form the twenty-eight speeches of the book which, as already stated, make four series of seven speeches each. The speeches are divided, not directly into lines, but into strophes. It is most probable that the speeches formed from strophes often, perhaps always, follow the law of “choral structure” discovered by Father Zenner. That is, the speeches often or always consist of pairs of strophes, divided by intermediate strophes not in pairs. The two strophes forming a pair are parallel in content and have each the same number of words, and the same construction. For this subject see Hontheim, op. cit. Investigators are not agreed as to the construction of the line. Some count the syllables, others only the stresses, others again the accented words. It would seem that the last view is the one to be preferred. There are about 2100 lines in the Book of Job, containing generally three, at times two or four, accented words. Besides

• EX. CONNECTION OF THE TEXT.—The most important
Jocelin, Cistercian monk and Bishop of Glasgow; d. at Melrose Abbey in 1199. On 22 April, 1170, being then prior of Melrose, he was chosen abbot, on the resignation of Abbé William, and four years later (23 May, 1174) was elected Bishop of Glasgow at Perth, in succession to Abbot Andrew. He was consecrated at Caen- vaux on 1 June, 1175, by Eustis, Archbishop of Lund, papal legate to Denmark. In the following January he attended a council at Northampton, and Hoveden reports a speech made by him in opposition to the claims of York to jurisdiction over the Scottish Church. In 1182 Jocelin visited Rome, obtained from Lucius III the absolution of King William the Lion from ecclesiastical censures, and brought back to him the Golden Rose in token of the papal forgiveness. We find Jocelin engaged for several succeeding years in negotiations between Scotland and Rome as to the augmentation of the See of St. Andrews. He undertook also the restoration and enlargement of Glasgow cathedral, of which he built the beautiful crypt, and himself performed the dedication ceremony on 6 July, 1197. The number of prebends and canons of the cathedral was considerably augmented by him, and he bestowed large benefactions upon Paris, Kelso, and other monasteries. Bishop Jocelin died at Melrose in 1199, and was buried in the choir of the abbey church. The Melrose Chronicle describes him as a man of mild, courteous, and moderate character.

Jocelin de Brakelond, English chronicler, of the late twelfth century. He was the monk of Bury St. Edmund's whose history of the abbey under the seeble Abbot Hugh and the energetic Abbot Sampson furnished Carlyle with the material for the powerful and sympathetic second book of "Past and Present". When Jocelin entered the abbey in 1173 Sampson was his novice-master, and when nine years later Sampson became abbot he chose Jocelin as his chaplain and constant companion. He filled this office from 1181 to 1183, and in 1183 and 1192 he was almoner. There is no record of his death. He is last mentioned on 24 April, 1215 when Abbot Hugh II consulted him as to the abbey manors. His chronicle covers the history of the abbey from 1173 to 1202 and includes the story of Henry I of England. It was first edited for the Royal Historical Society by J. G. Rokewode in 1843; this edition was used by Carlyle. It has been re-edited by Thomas Arnold in the "Memorials of St. Edmund's Abbey", Rolls Series, 1890. His book on St. Robert, the boy alleged to have been murdered by Jews, is not extant. Jocelin's work is marked by shrewd observation and acute humour. Carlyle wrote of him: "The man is of patient, peaceable, loving, clear-smiling nature; open for this and that. A wise simplicity is in him; much natural sense; a veracity that goes deeper than words." He is described by a brother monk as a "man of religious inclinations, a poet and writer."

EDWIN BURTON.
JOEL 419

Joel (Heb. יְהוָּא, Yeho'aw), the son of Phatuel, second in the list of the twelve Minor Prophets. Nothing is known of him save that he was a priest of the Southern Israelite Kingdom of Judah, and probably its capital Jerusalem, for he repeatedly refers to temple and altar. The frequent apostrophes to the priests (i, 9, 13–14; ii, 17) also lead to the inference that Joel himself was of priestly descent.

CONTENTS OF JOEL.—The seventy-three verses of this small book, in the Massoretic text of the Old Testament, are divided into four, and in the Septuagint and Vulgate into three, chapters, the second and third chapters of the Massoretic text forming one chapter, the second, in the Septuagint and Vulgate. The references given below show the order.

The contents of the Prophecy of Joel may be regarded, taken altogether, as a typical presentation in miniature of the chief themes of prophetic discourse: sombre warnings of the judgment of Jehovah, intended to rouse the people from the existing moral lethargy, and joyful, gloweringly expressed tidings of Jehovah's work of salvation, designed to keep alive the faith in the coming of the Kingdom of God. These two fundamental thoughts seem to be united, as the misfortunes of the judgment are a process of purification to prepare the people for the reception of salvation, and are in reality only the antitheses of the Divine work of redemption. In the first main division of the Book of Joel (i, 2–ii, 17) the prophecies are threatenings of the day of judgment; the prophecies in the second division, which embraces the rest of the book (ii, 18–xxii, 21), are consolatory descriptions of the day of grace. The first of these divisions is divided into two discourses on the judgment: Chapter i, 2–20, describes a terrible scourge, a plague of locusts, with which the Prophet's land had been visited; these pests had so completely devoured the fields that not even the material for the meat-and-drink-offerings existed. For this reason the prophet exclaims in exaltation, "Who among the gods has foretold, and declared from of old, and the Lord has established, and set in array before your eyes?" (i, 17). Chapter ii, 1–17, repeats the same thought more emphatically: all these plagues are only the forerunners of still greater scourges in the day of the Lord, when the land of the Prophet shall become a wilderness. The people must, therefore, return to Jehovah, and the priests must entreat the Lord in the holy place. The prophecies in the second section are also divided into two discourses: in chapter ii, 18–32, the Lord is appealed to by the repentance of the nation and gives the blessing of bounteous harvests. Just as in the earlier part the failure of the harvests was a type and forshadowing of the calamity in the day of judgment, so now the plenty serves as an illustration of the fullness of grace in the kingdom of grace. The Lord will pour out His Spirit upon all flesh, and all who call upon His name shall be saved. In chapter iii, 1–21, the redemption of Israel is, on the other hand, a judgment upon the heathen nations. He shall be king over the house of Jacob, in the four quarters of the earth, upon those who oppressed His people, upon the Philistines, Phenicians, Hitomites, and Egyptians, for the nations are ripe for the harvest in the valley of Josephat.

LITERARY AND THEOLOGICAL CHARACTER OF JOEL.—Examined as to logical connexion, the four discourses of Joel show a closely united, compact scheme of thought. In regard to form they are a Biblical model of rhetorical symmetry. The law of rhetorical rhythm, which as the law of harmony regulates the construction of the Prophet, prompts the regular alternation of descriptions in direct or indirect speech, as in the sections given in the first or third person, and in the apostrophes in the second person singular and plural. The first two speeches are alike in construction: Chapter ii, 1–11, resembles i, 2–12, and ii, 12–17, is like i, 12–20. Also in the latter two speeches there is a verbal similarity along with the agreement in thought; cf. in iii, 17, and ii, 27, the like expression. The language of Joel is full of colour, rhythmically animated, and rhythmic. The passages from i, 13 sq., and ii, 17, are still used in the Liturgy of the Church. The study of the prophecy of the pouring out of the spirit upon all flesh (i, 28–32) was afterwards adopted as the first Biblical text of the first Apostolic sermon (Acts, ii, 16–21). Joel's discourses of the day of judgment, and of the abundance of grace which Jehovah in the fullness of time shall bestow from Sion form one of the most beautiful pages in the eschatology of the Prophets. Some of his fiery pictures seem even to have been borrowed by the writer of the Apocalypse of the New Testament (cf. Joel, iii, 13, and Apoc., xiv, 15).

The swarm of locusts, which has so frequently received a symbolic interpretation, is a picture; neither is it a description of the progress of a hostile army under the figure of the imaginary advance of locusts. The passages in iii, 4–7, "They shall run like horses . . . like men of war they shall scale the wall," make it absolutely certain that a hypothetical swarm of locusts was not taken as a symbol of a hostile army, but that, on the contrary, a hostile army is used to typify an actual swarm of locusts. Consequently, Joel refers to a contemporary scourge, and in the rhetorical style of prophecy passes from this to the evils of the day of judgment.

LITURGY ON THE PROPHECIES OF JOEL.—The most difficult problem in the investigation of Joel is the date, and the many hypotheses have not led to any convincing result. The first verse of the book does not convey, as other prophetic books do, a definite date, nor do the discourses contain any references to it. The dates given by the divination of the Prophet. General history took no notice of plagues of locusts which were of frequent occurrence, and it is an arbitrary supposition to interpret the swarm of locusts as the Thycyan horde, which, according to Herodotus (I, 103 sq.; IV, i), devastated the countries of Thrace from Thrace to Egypt between the years 630–620 B.C. The Book of Joel has been variously ascribed to nearly all the centuries of the prophetic era. Rothstein even goes so far as to assign the discourses to various dates, an attempt which must fail on account of the close connexion between the four addresses. The early commentators, in agreement with Jerome, placed the era of composition in the eighth century B.C.; they took Joel, therefore, as a contemporary of Osee and Amos. In justification of this date they pointed out that Joel is placed among the twelve Minor Prophets between Osee and Amos; further, that among the enemies of Judah the book does not mention the Assyrians, who were anathematized by each Prophet from the time they appeared as a power in Asia. However, in a book of three chapters not much weight can be attached to an argument from silence. Those also who assert in placing the book in the time of Charles the Great in identifying the king in whose reign Joel lived. The assignment to the period of King Josias is supported by the fact that Joel takes for his theme the day of the Lord, as does the contemporary Prophet Sophonias; to this may be added that the anathema upon the Egyptians may be influenced by the battle of Megiddo (605 B.C.). Later commentators assign the
book to the period after the Exile, both because chapter iii assumes the dispersal of the Jews among other nations, and because the eschatology of Joel presupposes the later period of Jewish theology. It is, however, impossible for Joel to have written a commentary of the Prophet Malachias, because of the manner in which the former looks upon the priests of his period as perfect leaders and mediators for the nation. None of the chronological hypotheses concerning Joel can claim to possess convincing proof.

tant: SMITH (London, 1837); DAVIES (Cambridge, 1889); ADAMS (London, 1902); NOWACK (2nd ed., Göttingen, 1903); MATZ (Tübingen, 1904); KESSELBRENNER (New York, 1907); ORSINI (3rd ed., Munich, 1908). Further bibliography in commentaries.

MICHAEL FAULHABER.

JOEST (VAN KALKAR), JAN, otherwise JAN JOOST VAN CALCER, Dutch painter, b. at Calcker, or Calcar, about 1460; d. at Haarlem in 1519. This painter was practically unknown until 1574, when Canon Wolff and Dr. Eisenmann established his identity. Joest's greatest works were between 1565 and 1569. He was representing scenes from the life of Christ, painted on the wings of the high altar in the church of St. Nicholas at Deventer, Haarlem, and Calcker, had been familiar to critics, but not so the painter. Canon Wolff found many references to him in the archives of his native place, and was able to prove the date of the painting of the masterpiece, and the fact that in 1518, Joest was working at Cologne for the important family of Hackeneger. After leaving Cologne he appears to have gone to Italy, and to have visited Genoa and Naples, returning thence to Holland, and settled down at Haarlem, where he executed a painting for the church of St. Bavo. In the last edition of Van der Wijligen's work on the paintings of Haarlem is the reference to the burial of the artist, there called Jan Joosten, under the date 1519. There are paintings attributed to Joest at Wesel and Rees, and the "Death of the Virgin" in Munich is believed to be his. He was an artist of high merit, and has been compared with David and Memling, but he more properly belongs to the school of Sorel, and one of the special features of his work is the exquisite transparency of his colouring and the subtle and very delicate modelling of the faces.

The leaving of this country is that by WOLF, DE NICOLAS KIRCHE ZU KALKAR, but reference should also be made to WALT-
mar, Geschichte der Malerei und der Zeichnung für Bildder Kunst (1876).

JOQUES, ISAAC, French missionary, born at Or-
leans, France, 10 Jan., 1607; martyred at Ossernenon, in the present State of New York, 15 Oct., 1646. He was the first Catholic priest who ever came to Manhattan Island (New York). He entered the Society of Jesus in 1624 and, after having been professor of literature at Rouen, was sent as a missionary to Canada in 1641. On coming out with the Mar-
ative successor of Champlain. From Quebec he went to the regions around the great lakes where the illustrious Father de Brébeuf and others were labouring. There he spent six years in constant danger. Though a daring missionary, his character was of the most prac-
ticical type, and he did not attempt to fix his people in permanent habitations. He was with Garnier among the Petuns, and he and Raymbautt penetrated as far as Sault Ste. Marie, and were the "first missionaries", says Bancroft (VII, 790, London, 1852), "to preach the gospel a thousand miles in the interior, five years before John Cabot pressed the Indians six miles from Boston Harbour". There is little doubt that they were not only the first apostles but also the first white men to reach this outlet of Lake Superior. No docu-
mentary proof is adduced by the best-known histo-
rians that Nicolet, the discoverer of Lake Michigan, ever visited the Sault. Jogues proposed not only to convert the Indians of Lake Superior, but the Sioux who lived at the head waters of the Mississippi.

His plan was thwarted by his capture near Three Rivers returning from Quebec. He was taken prisoner on 3 August, 1642, and after being cruelly tortured was carried to the Indian village of Ossernenon, now Auvi-
sville, on the Mohawk, about forty miles above the present city of Albany. There he remained for thirteen months in slavery, suffering apparently beyond the power of natural endurance. The Dutch Calvinists at Fort Orange (Albany) made constant efforts to free him, and at last, when he was about to be burnt to death, induced him to take refuge in a sailing vessel which carried him to New Amsterdam (New York).

His description of the colony as it was at that time has since been incorporated in the Documentary History of the State. From New York he was sent, in mid-
winter, across the ocean on a lugger of only fifty tons burden, and, after a voyage of two months, landed Christmas morning, 1643, on the coast of Brittany, in a state of absolute destitution. Thence he found his way to the nearest college of the Society. He was re-
ceived with great honour at the court of the Queen Regent, the mother of Louis XIV, and was allowed by Pope Urban VIII the very excep-
tional privilege of celebrating Mass, which the mutil-
ated condition of his hands had made canonically impossible; several of his fingers having been eaten or burned off. He was called a martyr of Christ by the pontiff. No similar concep-
tion, up to that, is known to have been granted.

In the early spring of 1644 he returned to Can-
da, and in 1646 was sent to nego-
 cinqueth peace with the Iroquois. He

Isaac Jogues

He followed the same route over which he had been carried as a captive. It was on this occasion that he gave the name of Lake of the Biscay to the armament to the body of water called by the Indians Hor-
icon, now known as Lake George. He reached Os-
sermenon on 5 June, after a three weeks' journey from the St. Lawrence. He was well received by his former captors and the treaty of peace was made. He started for Quebec one day for and arrived there 2 July. He immediately asked to be sent back to the Iroquois as a missionary, but only after much hesitation his supe-
riors acceded to his request. On 27 September he be-
gan his third and last journey to the Mohawk. In the interim sickness had broken out in the tribe and a blight had fallen on the crops. This double calamity was ascribed to Jogues whom the Indians always regarded as a sorcerer. They were determined to wreak vengeance on him for the spell he had cast on the place, and warriors were sent out to capture him. The news of this change of sentiment spread rapidly, and Jogues took full advantage of the danger Jogues continued on his way to Ossernenon, though all the Hurons and others who were with him fled except Lalande. The Iroquois met him near Lake George, stripped him naked, slashed him with their knives, beat him and
then led him to the village. On 18 October, 1646, when entering a cabin he was struck with a tomahawk and afterwards decapitated. The head was fixed on the palisades and the body thrown into the Mohawk.

In view of his possible canonization a preliminary court was established in Quebec by the ecclesiastical authorities to receive testimony as to his sanctity and the miracles attributed to his intercession.

T. J. CAMPBELL.

John I, Saint, Pope; d. at Ravenna on 18 or 19 May (according to the most probable calculation), 526. A Tuscan by birth and the son of Constantius, he was, after an interregnum of seven days, elected on 13 August, 523, and occupied the Apostolic see for two years, nine months, and seven days. We know nothing of the manner of his administration, for his Bulgarium contains only the two letters addressed to Archbishop Zacharias and to the bishops of Italy. Nothing whatever is certain that is not apocryphal. We possess information—though unfortunately very vague—only about his journey to Constantinople, a journey which appears to have had results of great importance, and which was the cause of his death. The Emperor Justin, in his zeal for orthodoxy, had issued in 522 a severe decree against the Arians, compelling them, among other things, to surrender to the Catholics the churches which they occupied. Theodoric, King of the Ostrogoths and of Italy, the ardent defender of Arianism, keenly resented these measures directed against his coreligionists in the Orient, and was moreover much displeased at seeing the progress of a mutual understanding between the Latin and Greek Churches, such as might favour certain secret dealings between the Roman senators and the Byzantine Court, aiming at the re-establishment of the imperial authority in Italy. To avoid the eventual consequences, and force him to moderate his policy of repression in regard to the heretics, Theodoric sent to him early in 525 an embassy composed of Roman senators, of which he obliged the pope to assume the direction, and imposing on the latter the task of securing a written acknowledgment of the papacy (3 January, 525). The embassy arrived at Constantinople on 13 January, 525, and on the 15th the emperor signed the pact and, in the presence of the representatives of the Church, received the pope’s letter, in which he declared that he believed “Anonymous Valesianus”—of even urging the emperor to facilitate the return to Arianism of the Arians who had been converted.

There has been much discussion as to the part played by John I in this affair. The sources which enable us to study the subject are far from explicit and may be reduced to four in number: “Anonymous Valesianus”, already cited; the “Liber Pontificalis”; Gregory of Tours’s “Liber in gloria martyrum”; and the “Liber Pontificalis Ecclesiae Ravennatis”. But it is beyond question that the pope could only counsel Justin to use gentleness and devotion towards the Arians; his position as head of the Church prevented his inviting the emperor to favour heresy.

That this analysis of the situation is correct is evident from the reception which the pope was accorded in the East—a reception which certainly would not have been kindly, had the Roman ambassador or the Catholic missionaries acted otherwise than advised by his imperial master.

The inhabitants of Constantinople went out in throngs to meet John. The Emperor Justin on meeting him prostrated himself, and, some time afterwards, he had himself crowned by the pope. All the patriarchs of the East made haste to manifest their communion in the Faith with the supreme pontiff; only Timothy of Alexandria, who had shown himself hostile to the Council of Chalcedon, held aloof. Finally, the pope, exercising his right of precedence over Epiphanius, Patriarch of Constantinople, solemnly ecclesiastified at St. Sophia in the Latin Rite on Easter Day, 19 April, 526. Immediately afterwards he made his way back to the West.

If this brilliant reception of John I by the emperor, the clergy, and the faithful of the Orient proves that he had not been wanting in his task as supreme pastor of the Church, the strongly contrasting behaviour of Theodoric towards him on his return is no less evident proof. This monarch, enraged at seeing the national party reviving in Italy, and investigating, sustained his hands with the murder of Boethius, the great philosopher, and of Symmachus, his father-in-law. He was exasperated against the pope, whose embassy had obtained a success very different from that which he, Theodoric, desired and whom, moreover, he suspected of favouring the defenders of the ancient liberty of Rome. As soon as John, returning from the East, had landed in Italy, Theodoric caused him to be arrested and incarcerated at Ravenna. Worn out by the fatigues of the journey, and subjected to severe privations, John soon died in prison. His body was transported to Rome and re-interred in the Basilica of St. Peter. In his epitaph there is no allusion to his historical rôle. The Latin Church has placed him among its martyrs, and commemorates him on 27 May, the ninth lesson in the Roman Breviary for that date being consecrated to him.

Léon Clouzet.

John I, Pope (533-535).—The date of the birth of this pope is not known. He was a Roman and the son of Projectus; if not born in the second region (Calimontium) he had at least been a priest of St. Clement’s Basilica on the slope of Mons Caelius. He seems to have been the first who changed his name on being raised to the papacy (3 January, 533). The basis of St. Clement still retains several memorials of “Johannes surnamed Mercurius”. Presbyter Mercurius is found on a fragment of an ancient ciborium, and several of the marble slabs which enclose the schola cantorum bear upon them, in the style of the sixth century, the monogram of Jo[ns] (Jan). At the beginning of the election of popes and bishops was rife among clergy and laity. After the death of the predecessor of John II there was a vacancy of over two months, and during that period shameful trafficking in sacred things was indulged in. Even sacred vessels were exposed for sale. The matter was brought before the Senate, and before the Arian Ostrogothic Court at Ravenna. As a result the last decree (Senatus consultum) which the Senate of Rome is known to have issued, and which, passed under Boniface II, was directed against simony in papal elections, was confirmed by the Gothic King Athalaric. He ordered it to be engraved on marble, and to be placed in the atrium of St. Peter’s (533). By one of Athalaric’s own additions to the decree, it was decided, that if a disputed election was carried before the Gothic officials of Ravenna by the Roman clergy and people, three thousand solidi were to be paid as a fine. This sum was to be given to the poor.

John himself, however, always remained on good terms with Athalaric, who referred to his tribunal all actions brought against the Roman clergy. Justinian also showed his good will to the See of Rome in John’s person. He sent him money and many valuable presents. Some time before John became pope, the East was agitated by the formula,
One of the Trinity has been crucified", which had been put forward as a means of reconciling various heretical sects that were condemned by Pope Hormisdas, the formuli fell out of use. Afterwards revived, it was in a modified form defined by Justinian, and opposed by the Acometite, or asleep monks. But they were condemned by the pope who informed the emperor of his action (24 March, 534). The crimes of Contumellosus, Bishop of Ries, in Provence, caused John to the death of St. Gaul to confine him in a monastery. Till a new bishop should be appointed he bade the clergy of Ries obey the Bishop of Arles. Two hundred and seventeen bishops assembled in council at Carthage (535) submitted to John II the question as to whether bishops who had lapsed into Arianism should or should not keep their rank or be admitted to lay communion. The answer to their question was given by Agapetus, as John II died 8 May, 535. He was buried in St. Peter's.

HORACE K. MANN.

John III, Pope (561-574), a Roman surnamed Catilinus, d. 13 July, 574. He was of a distinguished family, being the son of one Anastasius who bore the title of Comes. The year of his birth is not recorded, but he was consecrated pope seemingly on 17 July, 561. Owing to the necessity of waiting for imperial confirmation of his election, an interval of five months elapsed between the death of Pelagius I and the consecration just noted. Although John reigned nearly thirty years very little is known of his pontificate. It fell during the stormy times of the Lombard invasion, and practically all the records of his reign have perished. He would seem, however, to have been a magnanimous pontiff, zealous for the welfare of the people. An inscription still to be seen in the fifteenth century testified that "in the midst of straits he knew how to be bountiful, and feared not to be crushed amidst a crumbling world". Two most unworthy bishops, Salonius of Embren and Sagittarius of Gap, had been condemned in a synod at Lyons (c. 567). They succeeded, however, in persuading Guntram, King of Burgundy, that John had been condemned unjustly, and appealed to the pope. Influenced by the king's letters, John decided that they must be restored to their sees. It is to be regretted that the papal mandate was put into effect. The most important of the acts of this pope were those connected with the general Councils. Unfortunately the "Liber Pontificiæ" is enigmatic regarding them. By feminine intrigue at the court of Constantinople, a charge of treason was trumped up against the general, and, in consequence, the only man capable of resisting the barbarians was recalled. It is quite possible that Narses may then have invited the Lombards to fall upon Italy; but it is perhaps more probable that, hearing of his recall, they invaded the country. Knowing that Narses was the hope of Italy, John followed him to Naples, and implored him not to go to Constantinople. The general hearkened to the words of the pope, and returned with him to Rome (571). But seemingly the court party in the city was too strong for Narses and the pope. John retired to the catacomb of Prætextatnus, where he remained for many months. He even held ordinances there. On the death of Narses (c. 572), John returned to Ravenna. Tatianus, his son-in-law, in the catacomb, gave him a great interest in them. He put them in repair, and ordered that the necessaries for Mass should be sent to them from the Lateran. John died 13 July, 574, and was buried in St. Peter's.

HORACE K. MANN.

John IV, Pope (649-642), a native of Dalmatia, and the son of the scholasticon (advocate) Venerius. The date of his birth is uncertain; d. 12 October, 642. At the time of his election he was archdeacon of the Roman Church. As John's consecration followed very soon after his election, it is supposed that the papal elections were now confirmed by the exarchs resident at Ravenna. The motive of this action was caused by invasions of Slaves, directed John's attention there. To alleviate the distress of the inhabitants, John sent the abbot Martin into Dalmatia and Istria with large sums of money for the redemption of captives. As the ruined churches could not be rebuilt, the relics of some of the more important Dalmatian saints were brought to Rome. John erected an oratory in their honour which still stands. It was adorned by the pope with mosaics depicting John himself holding in his hands a model of his oratory. John apparently did not content himself with palliating the evils wrought by the Slaves. He endeavored to convert these barbarians. Emperor Constantine Porphyrogenitus says that Porga, a prince of the Croats who had been invited into Dalmatia by Heraclius I, sent to an Emperor Heraclius for Christian teachers. It is supposed that the emperor to whom this message was sent was Heraclius I himself, and that the pope to whom he sent the message was John IV.

While still pope-elect, John, with the other rulers of the Roman Church, wrote to the clergy of the North of Ireland to tell them of the mistakes they were making with regard to the time of keeping Easter, and exhorting them to be on their guard against the Pelagian heresy. About the same time he condemned Monothelism. Emperor Heraclius immediately disowned the Monothelite document known as the "Ecthesis". To his son, Constantine III, John addressed his apology for Pope Honorius, in which he deprecated the attempt to connect the name of Honorius with Monothelism. Honorius, he declared, in speaking of one will in Jesus Christ, only meant to assert that there were not two contrary wills in Him. John was buried in St. Peter's.

HORACE K. MANN.

John V, Pope (685-686), a Syrian whose father was one Cyprian; when he was born is not known; d. 2 August, 686. As a deacon he was one of those who represented the Apostolic See at the Sixth Ecumenical Council. He returned to Rome in July, 682, with the official documents of the synod. He obtained such favour in the eyes of the Emperor Constantine Pogonatus that the latter desired to be consecrated which had been imposed on the papal patronesses in Sicily and Calabria, and generally reduced the secular burdens from which the Church suffered. John's energy, learning, and moderation are highly praised by his biographer. It was no doubt the possession of these virtues which enabled him to maintain the balance in the basilica of St. John Lateran. The necessity of waiting for the imperial confirmation of papal elections having been abolished by Constantine Pogonatus, John was straightway conducted to the Lateran palace as pope. He was consecrated about 23 July, 685, and reigned for a little more than one year; during the days of St. Gregory the Great, the Archbishop of Cagliari in Sardegna enjoyed certain metropolitan powers. Although the right of consecrating the
bishops of the island was not one of his privileges. Citonetus of Cagliari proceeded to lay hands on the bishop-elect of Turris Libisonis. John, however, de
definitively declared the See of Turris directly subject to the Holy See. John's popularity was strengthened by his liberal donations. In his short pontificate he distributed 1900 solidi to the clergy and to the deaconries for the poor. After a long illness he died on 2 August, 686, and was buried in St. Peter's.

HEROZ K. MANN.

John VI, Pope (701–705), a Greek, the date of whose birth is unknown; d. 11 January, 705. He ascended the papal throne 30 October, 701. Some time during his reign there came to Rome from Sicily Theophylactus, "chamberlain, patriicus, and exarch of Italy". After the treatment which some of his predecessors in the exarchate had meted out to the popes, the Italian people suspected that his visit boded no good to John VI. And so from all parts the local militias hurriedly marched to Rome, and, encamping without the walls, made manifest their dislike of the exarch. To avoid bloodshed, John sent a number of priests to them, and succeeded in pacifying them, as far at least as the exarch himself was concerned. The exarch, however, would not disband, however, and John insisted that certain informers, whose denunciations had put the wealth of some of the citizens into the hands of the grasping officials, should be handed over to them for punishment. Taking advantage of this want of harmony between the exarch and the native Italians attached to the pope, the Lombards renewed their attacks on such parts of Italy as had hitherto resisted them. Several towns belonging to the Duchy of Rome were seized, Gisulf advanced as far as "Horreria" Puteoli—or perhaps the "fungus Horrea" at the fifth milestone on the Via Latina. As there was no one who had power to resist him by force of arms", the pope, distressed at the sufferings of the people, sent a number of priests furnished with money into the camp of the Lombard duke. Not only did they ransom all the captives whom Gisulf had taken, but they persuaded him to retire to his own territories. John VI was one of the popes before whom St. Wilfrid of York heard his appeals. Pointing out that the action of the Apostolic See was wont to be consistent, the saint adjured him to confirm in his behalf the decisions of his predecessors (704). This John did, and sent him back to England with letters for King Ethelred and others. It was not, however, till the following year that the papal mandates were obeyed. John sent the pallium to Brithwald, whom "he confirmed as Archbishop of Canterbury". He was buried in St. Peter's.

John VII, Pope (705–707).—The year of his birth is unknown; d. 18 October, 707. Few particulars of his life remain. Like many other popes during the period of Byzantine influence in Rome, John was a Greek. Speculation has gathered round the belief that he was the son of Blatta and Plato. The latter carried out various restorations in the imperial palace on the Palatine hill in Rome, and, for the sake, perhaps, of living where once his parents had lived, John after he had become pope (March 1, 705) constructed a palace (episcopium) near the church of St. Peter's. Before his elevation John was the warden of the papal patrimony on the Appian way. It was in that capacity that he erected a memorial "with a broken heart to a most loving and incomparable mother, and to the kindest of fathers" (687). One of the churches which John beautified or restored during his pontificate was the aforementioned church of Sancta Maria Antiqua.

He adorned with frescoes the basilica of the Holy Mother of God which is known as the Old Lady. When the remains of this church were brought to light in 1900, among the many figures found upon its walls, one with a square nimbus is supposed to represent John himself. There was also then discovered the base of his ambo. It bore upon it inscriptions which proclaimed him to be "the servant of Mary". John also evidently lived in St. Peter's. When this oratory was destroyed, some of his mosaics were preserved, and may be seen in the Roman Church of Sancta Maria in Cosmedin and in other places. Though John was a man of learning and eloquence, and though he was remarkable for his filial affection and piety, he was of a timorous disposition. Hence, when the fierce Emperor Justinian II sent him the decrees of the Quinisext Council, "in which were many articles against the See of Rome", with a request that he would set forth what he approved in them, John simply returned them, as though there was nothing to condemn in them. Indeed, they came from the Lombard King Aripert II the papal patrimoni in the Cottian Alps, which the Lombards had confiscated. John is credited with having prevailed upon the Anglo-Saxon clergy resident in Rome to renounce their secular style of dress, and with having written to those in England bidding them follow his example. John died in the palace he had built near the Palatine, and was buried in the oratory he had erected in St. Peter's.

HEROZ K. MANN.

John VIII, Pope (872–87) a Roman and the son of Gundus. He seems to have been born in the first quarter of the ninth century; d. 16 Dec., 882. In 853 and 869 he appears as archdeacon of the Roman Church, and it was as such that he became pope (14 Dec., 872). His election was opposed by Formoes, who remained in opposition to him throughout the whole of his pontificate. He was a man of learning and an historian, and was one of the greatest of the great popes who sat on the chair of Peter during the ninth century. Some, however, on what would seem to be insignificant grounds, regard him as cruel, passionate, worldly-minded, and inconsistent. The more important acts of John's reign may be divided into four groups, according as they relate to the affairs of Eastern Europe, to the empire of the West, to Southern Italy and the Saracens, or to those persons with whom he came into more frequent contact.

A year or two before John became pope, St. Methodius, the brother of St. Cyril, who had died in Rome (869), had been sent back to Moravia as an archbishop to continue his work for the conversion of the Slavs. He had received permission to use the Slavonic language in the liturgy of the Church. This act of Pope Hadrian II did not please either the German princes or bishops. The former had designs on the political, the latter on the ecclesiastical, independence of the Moravians. Methodius was seized and imprisoned (871), and it was not till 873 that any hint of his treatment and his appeal to Rome reached John. Though for the moment, in deference to German opposition, the popeyielded to the Slavonic tongue in the liturgy, he insisted on the immediate restoration of Methodius. After his orders were obeyed, John bade the archbishop come to Rome, as fresh accusations had been brought against him.
A careful examination convinced John of the orthodoxy of Methodius, who was sent back to Moravia with permission to make Slavonic the liturgy. By the pope's help the saint overcame all opposition, and continued his work of conversion till his death (6 April, 885). One result of John's work among the Slavs was that several of their tribes placed themselves under the protection of the Holy See. John also had much communication with the Eastern Slavs of Bulgaria. He strove to bring them back again under the direct jurisdiction of the Holy See. Papal rights in that country had been usurped by the patriarchs of Constantinople, and, though their faith and his, as John told the Bulgarian king Boris, were the same, the party pronouncing heresy and schism would ultimately lead the Bulgarians into both. But the Bulgarians gave no lasting heed to the exhortations of the pope, and what he foretold would happen actually came to pass. When Basil the Macedonian mounted the throne of Constantinople, he restored St. Ignatius to his see, and banished the usurper Photius (867). During his banishment, however, adroit flattery enabled the exile to win the emperor's favour, and, on the death of St. Ignatius (877), he was acknowledged as his successor. He then spared no pains to induce John to communiate with him; this he agreed to do on certain conditions. But, as Photius failed to observe them, he was solemnly condemned by the pope (881). Louis II, though not even master of Italy, bore at this time the title of Emperor of the Romans. To him, as a prince of character, John gave his support. He endeavoured to induce Charles the Bald, King of France, to yield up to him the kingdom of Lothaire; he aided him in his efforts against the Saracens, and, after his death (875), strove to comfort his widow Engelberga. When Louis II died, John's support of Charles the Bald resulted in his receiving the imperial crown (875), and in being made Duke of Lorraine. Charles was not ungrateful for the pope's assistance, and not only decreed that the Roman Church, as head of all the Churches, must be obeyed by all, but in 876 waived in John's behalf many of "the rights and customs of the empire". John, however, did not obtain much practical help from him. Charles was a man who attempted to do great things, but knew not how to adapt his means to the ends he had in view. He did at last, however, come to help John against the Saracens, who distressed him throughout the whole of his pontificate. His expedition was, however, and, before he could renew his attempt, he died (8 Oct., 877). Among the candidates for the vacant imperial throne, John thought that the only suitable one was Boso, soon to be King of Provence. But Boso would not move in the matter, so that at length the pope, setting aside the claims of Carloman on the ground of his ill-health which had forced him to entrust the care "of the Kingdom of Italy" to John himself, fixed upon Charles the Fat as the imperial successor of Charles the Bald, successfully established his candidate on the imperial throne, and crowned him in February, 881.

It was now decided that Charles should come in name, at least, the recognized sovereign of most of the states over which Charlemagne had held sway. But he was physically and mentally unfit for his position; yet John was in great need of help. From the first year of his reign to the last, he was harassed by the Saracens, and was worried by the unpatriotic conduct of some of the princely families of Italy; this was the encouragements of Guido II, Duke of Spoleto. In 840, colonies of Saracens had begun to establish themselves in South Italy. John had to write "that all our coasts have been plundered, and the Saracens are as much at home in Fundi and Terracina as in Africa". To make head against these terrible enemies of Christianness John spared not his person, his time, nor his money. He never ceased striving to stir up the emperors to take a high view of their position and responsibilities, to put an end to simony, and to take the field against the unrelenting foes of their faith and country. By conferences with the petty princes of Southern Italy, and by gifts of money to them, he endeavoured to detach them from alliances with the Saracens, or to unite them in battle against them. But it was not content with unavailing effort, but resolved to take action against them. He himself assumed the duties both of a general and an admiral. He fortified St. Paul's Outside-the-Walls, where his works were so extensive that they deserved to be called after his name, "Johannopolis". The new fortification was near the two miles of the Roman wall, and the remains of the old dotard Peter", as the Saracens contemptuously called Rome, John himself patrolled the coast. He overtook the pirate fleet of the Saracens off the promontory of Circe, and was completely victorious over them (878). But knowing they were but scattered, he implored the emperor to help him to make his victory of permanent value. Charles the Bald was not unwilling to help, but died (877) before he could effect anything. John had therefore to goon fighting single-handed against the Saracens till his death.

During the whole period of his pontificate, John was troubled almost as much by enemies in and around Rome as he was by the Saracens. When he mounted the throne of Peter, he found many of the chief officers of the Church in the hands of disreputable nobles, most of them connected with one another, and with a number of women who were as bad as themselves. Among the former were Gregory, the primicerius of the Roman Church, a shameless peccator; his brother Stephen, the secundicerius, as deep in crime as himself, and his infamous son-in-law, the murderer and adulterer, George of the Aventine. Allied with these, at the time of the antipope, was the lewd and licentious lady of the monastery. With some of these men, Formosus, Bishop of Porto, had the misfortune to be linked by some ties of friendship. The death of the Emperor Louis II (August, 875), who had been a patron of some of this nefarious clique, left John more at liberty to deal with them. When he began to proceed against them, they succeeded for a time in avoiding appearing before him. Meanwhile they hatched plots against him, and sought to obtain the aid of the Saracens. Finding at last that the pope was too strong for them, they fled from the city, carrying with them the treasures of the Church. Unfortunately for their revenge on them. Failing to appear for trial, the exiles were degraded and excommunicated. When in France, whither Formosus had fled, John caused the sentence passed against Gregory and his party to be repeated, and insisted on Formosus's signing a declaration that he would never return to Rome (878). John had not gone to France altogether of his own free will. Acting ostensibly in the interests of Carloman of Bavaria, who was aspiring to the empire, Lambert, Duke of Spoleto, put all the pressure he could on the pope, constantly harrying his territory (876). At length he seised Rome itself (878). Usually, in such a case, the pope was in danger of this petty tyrant, and anxious at the same time to come into personal contact with the different candidates for the imperial throne, vacant since the death of Charles the Bald (6 Oct., 877), John went to France. While there he crowned Louis as king (Sept., 878), but was unable to effect anything in the way of obtaining a suitable candidate for the throne. John's action was not confined to Italy, Germany, and France. In Spain we find him constituting Oviedo a metropolitan see. By his influence, also, a law against sacrilege was added to the Gothic Code of Spain. John received in Rome Burghard, Bishop of Merseburg, King of Meissen, who, to the annoyance which the Danes were causing throughout England had driven
to seek peace at the shrine of the Apostles. Edred, Archbishop of Canterbury, also turned to the pope for consolation. He was forced by the Danelaw and worried by King Alfred, who in his youth was not the wise monarch he afterwards became. John wrote to commiserate with him, and told him that he had written to urge the king to offer proper obedience to him and his prelates. Contemporary historians tell us simply that John died on 16 December 982. One, however, who wrote in distant Fulda, has given certain terrible details which are not accepted by the best modern historians. According to the annals of that monastery, one of John’s relations, who wished to seize his treasures, tried to poison him. Finding, however, that his intrigue had failed, he tried to murder him by striking him on the head with a hammer. Then, terrified by the hostility which was at once manifested towards him, he fell dead without any one laying a hand upon him. This introduction of the marvellous and the wrong date which the Fulda annals assign to John’s death have justly rendered this narrative suspected.

The see large portion of John’s Register, still extant in F. L., Des Annales de l’Eglise et de l’Etat en France (Leipzig, 1883): Liber Pontificum ed. HORACE K. MANN.

John IX, Pope (898–900).—Not only is the date of John’s birth unknown, but the date of his election as pope, and that of his death are alike uncertain. In the month of August, 916, John, early in the beginning of the year 900. He was a native of Tivoli, and the son of Rampoldi. Becoming a Benedictine, he was ordained priest by Pope Formosus. At this period factions filled the city of Rome, and one of them tried to force their candidate, Sergius, and not Sergius II, upon the pope, and in opposition to John. Perhaps because he was favoured by the ducal House of Spoleto, John was able to maintain his position, and Sergius was driven from the city and excommunicated. With a view to diminish the violence of faction in Rome, John, who is acknowledged to have been an able and courageous pontiff, held several synods in Rome and elsewhere (908). In them the hastily synod of Stephen (VI) VII was condemned, and its Acts were burnt. Re- ordinations were forbidden, and those of the clergy who had been degraded by Stephen were restored to the ranks from which he had dethroned them. The bishops of Germany, the Slavs of Moravia appealed to John to let them have a hierarchy of their own. Not heeding the hectoring letters with which some of the German bishops endeavoured to dissuade him from hearkening to the Moravians, John sanctioned the consecration of a metropolitan and three bishops for the Church of the Moravians. On John’s coins the name of the emperor (Lambert) figures along with his own. He was buried just outside St. Peter’s.

JOHN, Pope, b. at Tossignano, Romagna; enthroned, 914; d. at Rome, 928. First a deacon at Bologna, he became Archbishop of Ravenna about 905, as successor of Kailo. In a document dated 5 February, 914, he still appears as archbishop. Shortly afterwards, owing to the influence of the nobles dominant in such matters in Rome, he was raised to the see. The real head of this aristocratic faction was the elder Theodora, wife of the Senator Theophylactus. Liutprand of Cremona ("Antapodosis", II, ed. in "Mon. Germ. Hist.: Scripta.", II, 297) affirms that Theodora supported John’s election in order to secure more easily her illicit relations with him. This statement is, however, generally and rightly rejected as a calumny. Liutprand wrote his history some fifty years later, and constantly slandered the Romans, whom he hated. At the time of John’s election Theodora was advanced in years, and is highly lauded by other writers (e.g. Vulgaris, Gaufridi, Gottfried, II, 1003) in connexion with John’s family, and this explains sufficiently why she secured his election. The new pope was an active and energetic ruler, and exerted himself especially to put an end to the Saracen invasions. He brought about an alliance between Prince Landulf of Beneventum, Berengarius of Friuli, King of the Lombards, and other Italian rulers, and, when Berengarius came to Rome in 915, the pope crowned him emperor. John himself led against the Saracens a large army gathered by the allied Italian princes. The Saracens had built fortresses on the river Garigliano, but in 916 John completely routed them near the mouth of that river.

Concerning the ecclesiastical administration of this pope we possess many particulars. He sent to Germany his trusted friend Petrus, Bishop of Orte, who held in 916 a synod at Hohenaltheim (near Nuremberg), and entered into friendly relations with King Conrad. John also concerned himself with affairs in France, where Count Heribert of Aquitaine held King Charles a prisoner, and demanded the election of his five-year-old son, Hugh of Vermandois, as Archbishop of Reims. John unhappily confirmed this choice after the death of the Breton king and an old woman brought to court the Slavs of Dalmatia into closer relations with Rome, and strove to induce the Archbishop of Spalato to adopt Latin as the liturgical language. His efforts to promote a more intimate union between the Bulgarians and Rome were frustrated by the opposition of the Patriarch of Constantinople. Another opportunity offered, when later the Byzantine patriarch, Nicolaus Mysticus, sought the aid of the pope. The patriarch had been deposed by a synod, because he would not recognize the fourth marriage of Emperor Leo VI. Before his death, however, Leo restored Nicolaus to his office, and his successor (Alexander) was also on his side. But many bishops were yet opposed to the patriarch on account of his deposition by the earlier synod. Under these circumstances Nicolaus wished to have the decree of deposition declared invalid by another council, and towards this end desired the assistance of the discipline to the discipline of the Western Church, which permitted as valid even a fourth marriage. Meanwhile, he was active in the political life of Italy. After the murder of King Berengarius in 924 the pope supported Hugh of Burgundy, and, when the latter landed in Pisa, John sent his legate to meet him and form an alliance. The dominant Roman faction disliked these measures. Foremost among them was the
elder Marozia, daughter of Theophylactus and Theodora. After the death of her first husband Alberic, Marozia had married (928) Guido, the powerful Margrave of Tuscany. The alliance of John and Hugh of Burgundy seemed to endanger her power in Rome, and so with her husband's aid she decided to remove John. Petrus, Prefect of Rome and brother of the pope, was murdered in June, 928. The pontiff himself was seized and cast into prison, where he died shortly after. According to a rumor recorded by Liutprand, and thus little to be relied on, he was smothered in his bed. Flocado of Reims asserts that he died of anxiety. He was probably buried in the Lateran, for the restoration of which he had been particularly solicitous.

J. P. KIRSCH.

John XII. Pope, date of birth unknown, became pope in 931; d. 936. He was the son of Marozia by her first marriage with Alberic; some, taking Liutprand and the "Liber Pontificalis" as their authority, assert that he was the natural son of Sergius III ("Johannes, natale Romanus ex patre Sergio papa," "Liber Pont," ed. Duchesne, II, 243). Through the intrigues of Alberic, he was elected, but immediately raised to the Chair of Peter, and was completely under the influence of the Senatarius et Patria of Rome. To strengthen her own power Marozia married her brother-in-law Hugh, King of Provence and Italy, whose reign in Rome was so tyrannical that a strong opposition party sprang up among the nobles under the leadership of Alberic II, the younger son of Marozia. This party succeeded in overthrowing the rule of Marozia and Hugh; Marozia was cast into prison, but her husband escaped from the city. In this way Alberic became ruler of Rome, and the pope, who suffered by his mother's fall, now became almost entirely subject to his brother, being only free in the exercise of his purely spiritual duties. All other jurisdiction was exercised through Alberic. This was not only the case in secular, but also in ecclesiastical affairs. It was at the instance of Alberic that the pallium was given to Urbanus, Patriarch of Constantinople in 935, and also to Artold, Archbishop of Reims (933). It was this pope who sat in the Chair of Peter during its deepest humiliation, but it was also he who granted many privileges to the Congregation of Cluny, which was later on so powerful an agent of Church reform.

J. P. KIRSCH.

John XII. Pope, date of birth unknown; reigned 955-64. The younger Alberic, after the downfall of his mother, Marozia (932), was absolute ruler at Rome. Before his death he administered an oath (954) to the Roman nobles in St. Peter's, that on the next vacancy of the papal chair his only son, Octavius, should be elected pope. After the death of the reigning pontiff, Agapetus II, Octavius, then eighteen years of age, was actually chosen his successor on 16 December, 955, and took the name of John. The temporal and spiritual authority in Rome were thus again united in one person—a coarse, immoral man, whose life was such that the Church could not forget it. Immoral corruption in Rome became the subject of general odium. War and the chase were more congenial to this pope than church government. He was defeated in the war against Duke Pandulf of Capua, and at the same time the Ecclesiastical States were conquered by the Normans. John, as若有, cast into prison and banished by Adalbert. In this dilemma the pope had recourse to the German king, Otto I, who then appeared in Italy at the head of a powerful army. Berengarius, however, did not risk an encounter, but retired to his fortified castles. On 31 January, 962, Otto reached Rome. He took an oath to recognize John as pope and ruler of Rome; to issue no decrees without the pope's consent; and, in case of his delivering the commenda, to return it to St. Peter's. On this promise an oath to defend to the utmost of his ability the pope and the patrimony of St. Peter. The pope on his part swore to keep faith with Otto and to conclude no alliance with Berengarius and Adalbert. On 2 February, 962, Otto was solemnly crowned emperor in the church of St. John Lateran. On the twenty-sixth day the Roman senate took place, at which John, at Otto's desire, founded the Archbishopric of Magdeburg and the Bishops of Merseburg, bestowed the pallium on the Archbishops of Salzburg and Trier, and confirmed the appointment of Rotther as Bishop of Verona. The next day, the emperor issued a decree, the famous Diploma Antonianum, in which he confirmed the Roman Church in its possessions, particularly those granted by Pepin and Charlemagne, and provided at the same time that in future the pope should be elected in canonical form, though their consecration was to take place only after the necessary pledges had been given to the emperor or his ambassadors. The authenticity of the decree and of this much-discussed document is certain, even should the extant document be only a duplicate of the original (Siekel, "Das Privilegium Otto I., für die römische Kirche", Innsbruck, 1883). On 14 February the emperor marched out of Rome with his army to resume the war against Berengarius and Adalbert. The pope now quickly changed his mind, while Otto on his part urged the imperial authority to excessive limits. John began secret negotiations with Adalbert, son of Berengarius, and sent envoys with letters to Hungary and to Constantinople for the purpose of inciting a war against Otto. They were tried and condemned by the imperial soldiers, and the emperor thus learned of the pope's treachery. John now sent an embassy to Otto to propitiate the latter, and at the same time to explain the pope's grievance, which was that the emperor had received for himself the oath of allegiance from those cities of the Ecclesiastical States, which he had reconquered from Berengarius. Otto sent an embassy to refute this accusation. At the same time Adalbert came in person to Rome, and was ceremoniously received by the pope. The faction of the Roman nobles which sympathized with the emperor now broke into revolt against Otto, and was put down for the second time in Rome (2 November, 963), while John and Adalbert fled to Tivoli. In the emperor's entourage was Liutprand (q. v.), Bishop of Cremona, who thus describes the occurrences as an eyewitness. Otto now promised to resign and extended the settlement formerly effected, by obtaining from the nobles a promise on oath not to elect or consecrate a pope without the consent of the emperor.

On 6 November a synod composed of fifty Italian and German bishops was convened in St. Peter's; John was accused of sacrilege, simony, perjury, murder, etc., excommunicated, deposed, and imprisoned by the emperor. John, resolving to defend himself. Refusing to recognize the synod, John pronounced sentence of excommunication (ferenda sententia) against all participants in the assembly, should they elect in his stead another pope. The emperor now came forward to accuse John of having broken the agreement ratified by oath, betrayed him, etc., and called in Adalbert, and excommunicated the synod deposed John on 4 December, and elected to replace him the protoscrinarius Leo, yet a layman. The latter received all the orders un canonically without the proper intercalations (intercalationes), and was crowned pope as Leo VIII. This proceeding was against the canons of the Church, and the enthroned in writing to defend himself. Refusing to recognize the synod, John pronounced sentence of excommunication (ferenda sententia) against all participants in the assembly, should they elect in his stead another pope. The emperor now came forward to accuse John of having broken the agreement ratified by oath, betrayed him, etc., and called in Adalbert, and excommunicated the synod deposed John on 4 December, and elected to replace him the protoscrinarius Leo, yet a layman. The latter received all the orders un canonically without the proper intercalations (intercalationes), and was crowned pope as Leo VIII. This proceeding was against the canons of the Church, and the enthroned in writing to defend himself. Most of
imperial troops now departing from Rome, John's adherents rose against the emperor, but were suppressed on 3 January, 964, with bloodshed. Nevertheless, at least one cardinal-deacon, John had his right hand struck off, Bishop Otgar of Speyer was banished, the bishopric of Worms was suppressed, and a high official lost nose and ears. On 26 February, 964, John held a synod in St. Peter's in which the decrees of the synod of 6 November were repealed; Leo VIII and all who had elected him were excommunicated; his ordination was pronounced invalid; and Bishop Sico of Ostia refused. On 30 March, John released the unhappy captive, and received the homage of dignitaries. The emperor, left free to act after his defeat of Berengarius, was preparing to re-enter Rome, when the pope's death changed the situation. John died on 14 May? 964, eight days after he had been, according to rumour, stricken by paralysis in the act of adoration. In Burgundy, John succeeded in getting the occasion the devil dealt him a blow on the temple in consequence of which he died.

John XIII., Pope, date of birth unknown; enthroned on 1 Oct., 965; d. 6 Sept., 972. After the death of John XII in 964 Benedictus Grammaticus was elected his successor by Benedict V. But Otto I brought back to Rome the anti-pope Leo VIII, whom he had set up in 963, and banished Benedict to Hamburg. Leo VIII died in March, 965, whereupon the Romans requested the emperor to send Benedict back to them as pope. But Otto refused, and Benedict died shortly after in July, 965. In presence of the imperial envoys, Liutprand, Bishop of Cremona, and Otgar, Bishop of Speyer, the emperor's candidate, John, Bishop of Narni, was elected pope, and crowned on 1 October, 965, as John XIII. He belonged to the family of the elder Theodora, who by her marriage with the Emperor Arnulf of Carinthia, and another daughter, the younger Theodora, who married the consul John. This John later entered the ecclesiastical state and became a bishop. From his union with Theodora sprung two daughters and three sons, among the latter one called John, who, while still in his youth, entered the priesthood at Rome, and later became Bishop of Narni. It was on this occasion of the Roman nobility that the choice of the electors fell. Some of the nobles were hostile to the new pope, because he was the imperial candidate, and, when he endeavoured to repress their encroachments, they plotted against him, and in December, 965, seized and incarcerated his person. They shut him up in the Castle of Sant' Angelo, and subsequently removed him to a fortified place in Campagna. John succeeded, however, in escaping from his prison, and found welcome and protection with Prince Pandulf of Capua. At Rome a reaction set in towards the exiled pope, and, when in 966 Emperor Otto undertook another expedition to Italy, the Romans were terrified and permitted John to return to the city on 14 November. In December the emperor arrived and dispersed stern justice to the conspirators, some of whom were hanged and others banished. The pope now allied himself closely with the emperor. On 11 January, 967, a synod was held in St. Peter's, concerning the results of which nothing is known. John travelled with Otto to Ravenna, where in April, 967, he held another synod in which the elevation of Magdeburg to metropolitan dignity was confirmed, disputes were decided, privileges conferred upon churches and convents, and Ravenna with its territory restored to the pope as part of the Ecclesiastical States. Relations between John and the emperor continued cordial. On Christmas Day, 967, the latter's thirteen-year-old son, Otto II, came to Rome, and was crowned joint emperor with his father. Shortly after, at one of the synods held in Ravenna, John, the emperor, had founded at Meissen in Saxony was also a see. John also favoured the negotiations held with the Byzantines for a matrimonial alliance between Otto II and the Princess Theophano. The marriage took place at Rome, and was blessed by the pope himself. On 14 April, 972. After the death of Archbishop William of Mainz and Bishop Bernard of Halberstadt in 968, the new metropolitan see at Magdeburg in Slavonic territory, for which the emperor had worked zealously and which had been confirmed by the pope, was finally realized. On Christmas day, 968, Abbot Adalbert was consecrated first Archbishop of Magdeburg, and consecrated by his candidate, first Bishop of Merseburg, Meissen, and Zeitz. The pope was also active in extending the hierarchy in other countries. Early in his pontificate he had raised Capua to metropolitan rank in gratitude for the shelter which Prince Pandulf had afforded him. At a Roman synod in 969 Boniface received the prerogative of residence at Pisa, the decrees of synods held in England and France. Privileges were granted to churches and convents, especially to Cluny, and the pope decided numerous questions of ecclesiastical law, referred to him from various countries. The plan of the Bohemian Duke Boleslaus II for the foundation of a see at Prague, though approved by the pope, had to be deferred to a later date. John XIII was succeeded by Benedict VI.

John XIV., Pope, date of birth unknown; d. 984. After the death of Benedict VII, Bishop Peter Campanula of Pavia, later Pope Clement II, was elected pope with the consent of Emperor Otto II, and was crowned at the end of November or beginning of December, 983, when he took the name of John. On 7 December of the same year the young emperor, Otto II, died at Rome, prepared for death by the pope, and was buried in the vestibule of St. Peter's. When the anti-pope Boniface VII, created in 974 by the Roman adherents of Crescentius, received at Constantinople news of the emperor's death, he returned to Rome (April, 984), and with the aid of his followers made Pope John a prisoner, threw him into the dungeons of the Castle of Sant' Angelo, and mounted the papal throne. After four months the unhappy John XIV died in prison on 20 August, 984, either from starvation and misery or murdered by order of Boniface.
some papal catalogues give as the immediate successor of Boniface another John, son of Robert, who is supposed to have reigned four months, and is placed by a few historians in the list of popes as John XV. Although this alleged Pope John never existed, still the name was catalogued by the early historians who has thrown into disorder the numeration of the popes named John, the true John XV being often called John XVI. At this time the patron John Crescentius, son of Duke Crescentius, with the help of his adherents, had obtained entire control of the temporal power in Rome. According to some chronicles the ascendancy of Crescentius became so irksome to the pope, to whom he even forbade access except in return for bribes, that John fled to Tuscany and sought aid from the Empress Theophano, but allowed himself to be induced by the promises of Crescentius to return. Gerbert tried to extricate himself throughout his pontificate under the influence of the powerful patricius, though he maintained friendly relations with the German court and with both empresses—Adelaide, widow of Otto I, and Theophano, widow of Otto II. The pope's mediation was sought by England in the quarrel between King Ethelred and Richard of Normandy. The papal legate, Leo of Trevi, brought about between the parties the Peace of Rouen (1 March, 991), which was ratified by a papal bull.

A serious dispute occurred during this pontificate over the archiepiscopal see of Reims, the pope's interference leading at first to no definite result. Hugh Capet, who had been raised to the throne of France, made Arnulf, a nephew of Duke Charles of Lorraine, Archbishop of Reims in 998. Charles was an adversary of Hugh Capet, and succeeded in taking Reims and making the archbishop a prisoner. Hugh, however, considered Arnulf a traitor, and demanded his deposition by the pope. Before the latter's answer was received, Hugh Capet captured both Duke Charles and Archbishop Arnulf, and called a synod at Reims in June, 991, which deposed Arnulf, and chose as his successor Abbot Gerbert (afterwards Pope Sylvester II). These proceedings were repudiated by Rome, although a synod at Chela had sanctioned the decrees of that of Reims. The pope summoned the French bishops to hold an independent synod at Aachen to reconsider the case. When they refused, he called them to a synod at Rome, but they urged the uncanonical condition of the French see, and Italy had no reason for not submitting to this summons. The pope then sent Abbot Leo of St. Boniface to France as legate, with instructions to call a council of French and German bishops at Mousson. At this council only the German bishops appeared, the French being stopped on the way by Kings Hugh and Robert. Gerbert, deposed himself at the synod convened on 2 June, 995, but was condemned and suspended until 1 July, when a new synod was held at Reims. Through the exertions of the legate, the deposition of Arnulf was pronounced illegal. After Hugh Capet's death (23 October, 996), Arnulf was restored to his see by the French synod. In 997 the pope restored Clement II. By the council at Proula, 998, and the synod at Mousson the see of Reims was declared vacated, and a synod was held in 999. In 999 the pope was restored to his title and authority. Gerbert became the patron of the monks of Cluny. In 996 Emperor Otto arranged with John to be present at the coronation of his son, but John died early in April, while Otto lingered until 14 April in Pavia, where he celebrated Easter.

J. P. Kirsch.

John XVI (XVII), anti-pope 997-998; d. probably in 1013. After the death of John XV, Bruno, a relative of Otto III and his chaplain, was raised through the royal influence to the papal throne as Gregory V, and crowned on 3 May, 996. On 21 May the new pope placed the imperial crown on the young King Otto III in Rome. After Otto's departure the patriarch Crescentius and his followers remained in power, and in September, 996, drove him out of the city. In the following May (997) Archbishop John Philagathus of Piacenza, who had returned shortly before from a mission to Constantinople whither he had been sent by Otto III, was made anti-pope by Crescentius. John was a native of Rossano in Calabria, at that time a part of the Byzantine Empire. He became a monk and was closely connected with Empress Theophano, through whose influence he received the Abbey of Noantola from Otto II. He was the godfather of the imperial Prince Otto, afterwards emperor. After the death of Otto II he remained the trusted friend of the empress dowager who, in 998, promoted him to the episcopal see of Piacenza, raised for him to an archiepiscopal, though later restored to its original rank. At the court of Otto III he retained his influential position. The king sent him at the end of 998 to Constantinople to arrange his marriage between the sovereign and a Byzantine princess. Notwithstanding this proof of favour on the part of the imperial family, John allowed himself on his return from Constantinople to be won over to the projects of Crescentius, who wished through him to bring about an alliance with Byzantium against the German emperor. St. Nilus of Rossano, the famous abbot and a patron of John, sought to dissuade him from the usurpation of the papal throne, but without avail.

At the Synod of Pavia held by Gregory V at Pentecontas, 997, Crescentius was excommunicated, and in July the pope issued a decree bringing Piacenza once more under the jurisdiction of the Archbishop of Ravenna. In the following winter Otto III returned to Italy at the head of an army, and in February, 998, entered Rome, while the anti-pope fled, and Crescentius entrenched himself in the Castle of Sant' Angelo. John XV was captured by the imperial soldiers, deposed of his sight, and, not being able to be mutilated, was brought in this condition to Rome. At the Lenten Synod of 998, held shortly after in Rome, Gregory V formally deposed the anti-pope, who, at the intercession of St. Nilus, was removed from prison to a monastery. When, in spite of all this, John again appeared before Gregory in episcopal robes, these were torn from him, and he was led through the streets of Rome on an ass amid the popular derision. According to the unreliable Vita of St. Nilus, he was thrown back into prison; but other sources relate that it was again confined in the monastery, and after he was dead, the "Archbishop Puleman" registered his death under date of 2 April, 1013. At Easter, 998, Otto III took the Castle of Sant' Angelo, and on 29 April Crescentius was beheaded.

John XVII (XVIII), date of birth unknown; d. 6 Nov., 1003. When Sylvester II died on 12 May, 1002, there was no actual authority in Rome which could curb the nobles. Thus the emperor again won the upper hand, and John Crescentius, son of the patricius whom Otto III had defeated and put
to death, seized the authority for himself. The three following popes were indebted to him for their elevation, and were made to feel his supremacy. A Roman, Sicco, was first elected, and consecrated on 13 June as John XVII, but died on 6 November. Before taking orders he had been married, and had three sons who also became ecclesiastics. Concerning his activities during the few months of his pontificate nothing has come down to us.

J. P. KIRSCH.

John XVIII (XIX), Pope, successor of John XVII, consecrated Christmas, 1056; died 1069. He was the son of a Roman priest named Leo, and, before his elevation to the papacy, his name was Phissianus. He, too, owed his elevation to the influence of Crescentius. The accounts of his pontificate consist almost exclusively of details of ecclesiastical administration. He confirmed the possessions and privileges of several churches and convents; sanctioned different gifts to religious institutions; conferred ecclesiastical privileges on the re-established See of Merseburg; gave his consent at the Roman Synod of June, 1007, to the establishment of the See of Bamberg, founded and endowed by the German king, Henry II; and conferred the dignity of archbishops on Trifon of Servia and Elphege of Canterbury. John XVIII energetically opposed the pretensions of Archbishop Letericus of Sens and Bishop Fulco of Orleans, who refused to allow the Abbot of Fleury, Goslin, to make use of the privileges granted him by Rome, and tried to make him burn the papal charters. The pope complained of this to the emperor, and called both bishops to his tribunal under threat of ecclesiastical censures for the entire kingdom. In Constantinople he was recognized as Bishop of Rome. His epitaph relates that he subdued the Greeks and dissolved schism. His name appears on the diplomas of the Byzantine emperors. According to one catalogue of popes, he died as a monk at St. Paul's near Rome in June, 1009.

John XIX (XX), Pope, enthroned in 1024; d. 1032. After the death of the last patricius of the House of Crescentius, the counsels of Tuscumim seized the authority in Rome, a scion of this family was raised to the papal throne as Benedict VIII (q.v.). Under Benedict Romanus exercised his temporal power in the city as consul and senator. After Benedict's death Romanus, though a layman, was elected pope between 12 April and 10 May, 1024, immediately after which he received all the orders in succession, took the name of John, and sought by lavish expenditure to win the Romans over to his cause. Soon after his elevation the Byzantine Emperor, Basil II, sent ambassadors to Rome to request in his name that the pope would recognize the title of ecclesiastical patriarch, which the patriarchs of Byzantium had assumed, thus sanctioning the latter's headship of all the Oriental Churches. Rich presents brought by the envoys were intended to win over the pope, and indeed he seemed not disinclined to accede to the Byzantine wishes. Though the negotiations were kept secret the affair became public, and roused to action the religiously minded circles, especially the promoters of ecclesiastical reform in Italy. Against Romanus' opinion compelled the pope to refuse the Byzantine requests and gifts, whereupon Patriarch Eustachius of Constantinople caused the pope's name to be erased from the diplachts of his churches. John invited the celebrated musician, Guido of Arezzo, to visit Rome and compose a musical notation. The pope, however, died in Germany, after the death of Henry II (13 July, 1024), Conrad the Salian was elected king, and was invited by the pope and also by Archbishop Heribert of Milan, to come to Italy. In 1026 he crossed the Alps, received the iron crown of Lombardy, and proceeded to Rome, where on 26 March, 1027, he was crowned emperor. Two kings, Rudolph of Burgundy and Canute of Denmark and England, took part in this journey to Rome.

On 6 April a great synod was held in the Lateran basilica, where the dispute between the Patriarchs of Aquileia and Grado was decided, through the emperor's influence, in favour of the former. Poppo of Aquileia was to be sole patriarch, with the Bishop of Grado under his jurisdiction. Moreover, the Patriarch of Aquileia was to take precedence over all the Italian bishops. Two years later (1029) John XIX revoked this decision, and at a new synod restored to the Patriarch of Grado all his former privileges. King Canute of Denmark and England obtained from the pope a promise that his English and Danish subjects would not be held in the same manner as the others; and that the archbishops of his kingdom should not be so heavily taxed for the bestowal of the pallium. John granted the Bishop of Silva Candida, near Rome, a special privilege to say Mass in St. Peter's on certain days. A dispute between the archbishops of Milan and Ravenna was settled by the pope in favour of the former. He took the Abbey of Cluny under its protection, and renewed its privileges in spite of the protests of Goslin, Bishop of Mâcon; at the same time he rebuked Abbot Odilo of Cluny for not accepting the See of Lyons. The feast of St. Martial, reputed disciple of the Apostles and founder of the church of Lignoges, was raised by John to the rank of the feast of an Apostle. In the case of certain French bishops the pope maintained the rights of the Holy See. He seems to have been the first pope to grant an indulgence in return for a banquet towards the end of 1032, probably on 6 November.

John XX. See John XXI, Pope.

John XXX (XXI), Pope, b. at Lisbon between 1210 and 1220; enthroned, 1276; d. at Viterbo, 20 May, 1277. The son of one Julianus, he was baptized Peter, and was known as Petrus Juliani or Petrus Hispanus. After his earlier studies in the cathedral school at Lisbon, he entered the University of Paris and attended lectures on dialectics, logic, and, more particularly, those on Aristotle in physics and metaphysics, these being then given by Albertus Magnus. The natural philosophy of Aristotle had a special attraction for Peter. He zealously pursued the study of medicine, and also that of theology, attaching himself especially to the Minorite magister, John of Parna. On completing his studies, he was called in 1247 as professor of medicine to the University of Sienna, which was at that time being greatly enlarged. Here he wrote his "Summule logicæs", for almost three hundred years the favourite textbook on logic. Stapper's investigations (see below) have now established the authorship beyond the shadow of a doubt. In the fifteenth century the "Summule" was translated into Greek by George Scholarius, and was also translated into other languages. In content and form the book is based on the method current at the University of Paris, and on the compendium of William Shakespeare; Peter was professor there. While teaching at Siena, he also made a collection of medical prescriptions.
About 1261 Peter appears in the retinue of Cardinal Ottoboni Fieschi; towards this time also he was made deacon of the Church of Lisbon, an office which he later exchanged for the archidiocesate of Vermuy in the Diocese of Braga. From this period probably dates his acquaintance with Teobaldo Visconti. When, in 1272, Teobaldo came to Viterbo after his election to the pontificate, he assented to the suggestion of the Bishop and his physician in ordinary. While occupying this position, the latter wrote his "Thesaurus pauperum", in which he gives a remedy for the diseases of every part of the body. This book was widely used, but was in time variously interpolated. Peter's wide reputation for learning led to his selection as Archbishop of Braga by the cathedral chapter in spring, 1273. Shortly afterwards Gregory X appointed him Cardinal-Bishop of Tusculum, and as such he is referred to on 5 June, 1273. But he continued to govern temporarily the See of Braga until 23 May, 1275, when the pope appointed another archbishop. In June, 1275, Peter accompanied Gregory X to the General Council of Lyons, where he was consecrated bishop. Gregory X's two successors in the Holy See, Innocent V and Adrian V, ruled only a very short time. The latter died at Viterbo on 18 August, 1276, having been elected on 17 August, and Peter, renouncing office, was consecrated archbishop of Braga by the ears of the cardinals, he had spoken of an alteration in the decrees of Lyons concerning the papal conclave, and had suspended them temporarily. After the death of Adrian V, the conclave in Viterbo was protracted, in consequence of which disturbances broke out in the town, thus hastening the election, so that in the week following 13 September Petrus Juliani, Cardinal-Bishop of Tusculum, was chosen pope, and crowned as John XXI (really XX) the following Sunday (20 September). The new pope wished forthwith to arrange the rules for the conclave. In the Bull "Licet felicis recordationis" he suspended with the consent of the cardinals the decrees issued at Lyons, and declared his intention of issuing in the near future the new regulations. On the same day (20 September, 1276) he issued another Bull, directed against those who had taken part in the disturbances during the last council (see Cowclay).

The pope was now in a position to turn his attention to the political situation. Since 1263, when Urban V had bestowed the Kingdom of Sicily upon Charles of Anjou, the latter had tried little by little to strengthen himself in Rome states. Charles himself went to Viterbo to win over the new pope, but the latter did not assent to his plans. On 7 October, the king took the oath of fealty for Sicily, in which it was provided that Sicily should never be united with Tuscany or Lombardy, nor yet with the Roman Empire. The pope, however, did not reappoint him. 20 November, either did he make him Vicar of Tuscany or Lombardy, honours which Innocent IV had bestowed upon him. In November, John sent an ambassador with letters to Rudolf of Hapsburg, inviting him to send a plenipotentiary to the Curia to negotiate with the plenipotentiary sent by Charles of Anjou concerning the conclusion of peace. As soon as this should be accomplished, Rudolf was to set out for Rome to receive the imperial crown. Soon after, John began negotiations with Rudolf relative to Romagna, the ancient Exarchate of Ravenna, which he wished definitely restored to the Latin Church. He sent as legate Giovanni Visconti, Concerning the collection and employment of the tithes levied on all ecclesiastical benefices, which the Council of Lyons had ordered in preparation for a crusade, the pope issued various instructions for the different countries. The cross had been taken by Philip III of France and Alfonso of Aragon, still reigning in February, 1276, Philip solemnly declared that he would lead the army in person against the Saracens. But the two kings found themselves involved in a quarrel over the Kingdom of Navarre. The Pope laboured to avert the outbreak of hostilities by sending, in November, 1276, legates to both kings, and by remonstrating with the parties in earnest and urgent letters. Soon after this Philip had to disband the large army he had assembled, and a treaty was signed between the two monarchs. By the beginning of 1277 the two kings began again to make preparations for war, and again the pope was obliged to send his legates to mediate, wherein they were again successful.

John also endeavoured to secure from the King of Portugal an amelioration of the ecclesiastical conditions in that country, but his pontificate was too short to witness the realization of his purpose. He demanded from Edward I of England the arrears of tribute which that country had owed the Holy See since the reign of King John (1215). He also sought the release of Eleanor, Countess of Montfort, and her brother Amaury, whom King Edward held prisoners. Many letters were sent by the pope to the king and the English bishops relative to this matter. The envoys sent out by the Byzantine emperor, Michael Paleologus, to the Council of Lyons swore that the emperor had renounced the sede vacante, and set the see of Venice subject to the obedience of the Holy See. In this way the emperor sought to obtain the pope's protection against the Western princes, who threatened his dominion. An embassy from Constantinople had already been sent to the Curia in Innocent V's reign, and that pontiff had appointed an envoy to the Byzantine Court, but died before the latter left Italy. Pope John appointed other envoys, two bishops and two Dominicans, and furnished them with minute instructions, as well as with letters for the Emperor Michael, his son Andronicus, and the Greek clergy. In April, 1277, a synod was held at Lyon, and the new patriarch, John Becius, who was an earnest supporter of the union of the Churches. At this synod the emperor and his son embraced the Roman Catholic Faith, and ratified all the promises previously made in their name at the Council of Lyons. The bishops assembled at the synod acknowledged the papal primacy and the doctrine of the Roman Church, and the patriarch addressed a letter to the pope, in which all minor discrepancy in teaching was satisfactorily explained. The messenger, who had charge of this epistle as well as of the documents drawn up by the emperor, did not remain annullable for the East, ambassadors came to the pope from Aega, Khan of Tartary, who had also sent an embassy to the Council of Lyons. The Khan wished to enter into an alliance with the Crusaders and to give them his support; he also asked to have missionaries sent to him. The pope sent the ambassadors to Charles of Sicily, Peter Damilet, Philip of France, and Edward of England, but none of these sovereigns had any serious intention of undertaking a crusade. John himself appointed missionaries to go to Tartary, but died before they set out on their journey.

Although John showed especial favour towards the University of Paris, he took care to exclude all erroneous teaching from this famous seat of ecclesiastical learning. Some chroniclers maintain that this pope was an enemy of the monks and friars. However, among the documents sent from the papal chancery under John XXI, there are numerous letters in which the papal legates express the desire that the religious orders should possess property and be exempt from all taxes. On many occasions, also, he gave evidence of his great respect for the monastic orders. On what particular act of the pope's this adverse criticism is based, is unknown; however, in the most trustworthy accounts of his life, no foundation is found for the charge of oppression of the papal legates Gaetano Orsini, who later ascended the papal throne as Nicholas III, exercised a great influence on the govern-
ment of the Church. Amid the cares of the papacy John found time for his scientific studies, which were under control through the help of the Jesuits. To secure the necessary quiet for these studies, he had an apartment added to the papal palace at Viterbo, to which he could retire when he wished to work undisturbed. On 14 May, 1277, while the pope was alone in this apartment, it collapsed; John was buried under the ruins, and died on 20 May in consequence of the serious injuries he had received. Soon after the death of this scholarly pope, various rumours were circulated, based upon his great medical learning; he was even accused of dealing in the magic arts. A few monastic chroniclers, seeing in him an enemy, compared him to these baseless tales, and thus the undervalued stigma was cast upon the memory of John XXI.

The Liber de oculo was first edited, with a German version, by Berger (Münich, 1899).

J. P. KIRSCH.

John XXIII, Pope (Jacques d'Eusee), b. at Cahors in 1249; enthroned 5 September, 1316; d. at Avignon, 4 December, 1334. He received his early education in the Dominicans in his native town, and later studied theology and law at Montpellier and Paris. He then taught both canon and civil law at Toulouse and Cahors, came into close relations with Charles II of Naples, and was made Bishop of Lyonesse in 1300. In 1309 he was appointed chancellor of Charles II, and in 1310 was transferred to the See of Avignon. He delivered legal opinions favourable to the suppression of the Templars, but he also defended Boniface VIII and the Bull "Unam Sanctam." On 23 December, 1312, Clement V made him Cardinal-Bishop of Porto. After the death of Clement V (20 April, 1314) the Holy See was vacant for two years and three and a half months. The cardinals assembled in Carpentras for the election of a pope were divided into two violent factions, and could come to no agreement. The electoral college was composed of eight Italian cardinals, ten of France, four of Spain and Portugal, and three from other parts of France. After many weeks of unprofitable discussion as to where the conclave should be held, the electoral assembly was entirely dissolved. Ineffectual were the efforts of several princes to induce the cardinals to undertake an election; neither party would yield. After his consistory Philip V of France was finally able to assemble a concave of twenty-three cardinals in the Dominican monastery at Lyons on 26 June, 1316, and on 7 August, Jacques, Cardinal-Bishop of Porto, was chosen pope. After his coronation at Lyons on 5 September as John XXII, the pope set out for Avignon, where the cardinals joined him.

His vast correspondence shows that John XXII followed closely the political and religious movements in all countries, and sought on every possible occasion the advancement of ecclesiastical interests. Nor was he less insistent than his predecessors on the supreme influence of the papacy in political matters. For this reason he often involved himself in disputes which lasted throughout the greater portion of his pontificate. Great difficulties were also raised for the pope by the controversies among the Franciscans, which Clement V had tried in vain to settle. A number of Franciscans, the so-called "Spirituals", or "Fraticelli", adherents of the most rigorous views, refused to submit to that pope's decision, and after the deaths of Clement V and Gonzalvez, General of the Minorites, they rebelled, especially in the South of France and in Italy, declaring that the pope had no power to dispense from their rule, since this was nothing other than the Gospel. They then proceeded to drive the Conventuals from their houses, and take possession of the same, thereby causing scandal and much disorder. The newGeneral of the Franciscans, John, who in 1317 ordered the refractory friars to submit to their superiors, and caused the doctrines and opinions of the Spirituals to be investigated. On 23 January, 1318, many of their doctrines were declared erroneous. Those who refused to yield were treated as heretics; many were burned at the stake, and some escaped to Sicily.

These troubles among the Franciscans were increased by the quarrel about evangelical poverty which broke out among the Conventuals themselves. The general chapter of Perugia, through their general, Michael of Cesena, and other learned men of the order (including William Occam), defended the opinion of Berenger Talon, that Christ and His Apostles had no possessions either individually or in common. In 1322 Pope John declared this statement null and void, and in 1325 denounced as heretical the assertion that Christ and the Apostles had no possessions either individually or in common, and could not even temporarily dispose of what they had for personal use. Not only the Spirituals, but also the adherents of Michael of Cesena and William Occam, protested against this decree, whereupon in 1324 the pope issued a new Bull, confirming his former decision, setting aside all objections to it, and declaring those who opposed this decision heretics and enemies of the Church. Summoned to appear at Avignon, Michael of Cesena obeyed the summons, but refused to yield and, when threatened with imprisonment, sought safety in flight. Leaving Avignon on 25 May, 1328, and accompanied by William Occam and his last nóngers, he took on himself to Louis of Bavaria for protection.

Political conditions in Germany and Italy moved the pope to assert over the latter far-reaching political claims, and similarly with regard to the German Crown, because of the latter's union with the imperial office. On this score a violent quarrel broke out between the pope and King Louis of Bavaria. During the vacancy that followed the death of Clement V, there had arisen a disputed election for the throne of Germany, Louis of Bavaria having been crowned at Aschen, and Frederick of Austria at Bonn (23 Nov., 1314). The electors of the latter candidate, the former candidate, and the king, each claimed the imperial recognition of their choice, and also to seek for him imperial coronation. On the day of his coronation (6 Sept., 1315) John wrote to both Louis and Frederick and also to the other German princes, admonishing them to settle their disputes amicably. As there was a universal acknowledgment of German king, and the pope had not given preference to either candidate, neither could hope to exercise imperial authority. Nevertheless, in 1315 Louis appointed Jean de Belmont imperial vicar for Italy, and at the same time supported Galeazzo Visconti of Milan, then in open opposition to the pope. The latter maintained (13 March, 1317) that, by reason of the vacancy of the Roman Empire, all imperial jurisdiction rested with the pope, and, following the example of his predecessor Clement V, he appointed King Robert of Sicily imperial vicar for Italy (July, 1317). On 28 September, 1322, Louis of Bavaria informed the pope that he had overcome Louis of Hungary, and that John, upon which John wrote him a friendly letter.

Louis, however, took no further steps to effect a reconciliation with the pope. On the contrary, he supported in their opposition to the papal legates the excommunicated Visconti of Milan and the Italian Ghibellines, acted as legitimate emperor, and pro-
claimed, on 2 March, 1323, Berthold von Neifen imperial vicar for Italy. Thereupon John, following the precedent of Gregory VII and Innocent III, warned Louis of Bavaria that the examination and approval of the chosen German king with a view to the consequent bestowal of the imperial dignity be- longing thereto, would be refused, and that the legitimacy of his election had been settled; that he must recall all commands already issued, give no further aid to the enemies of the Church—especially the Visconti of Milan, condemned as heretics—and within three months present himself before the pope. Should Louis not submit to this admonition, he was threatened with excommunication. The subsequent behaviour of Louis was very equivocal. He sent an embassy to the pope, asking for and obtaining a delay of two months before appearing in the papal presence. At the same time he de- clared at Nuremberg on 16 November, 1323, that he did not recognize the pope's action or his claim to examine into the election of a German king; he also accused John of countenancing heretics, and proposed the calling of a general council to sit in judgment on him. During this respite, lengthened at his own request by the pope, who reserved his decision, and on 23 March, 1324, John pronounced on the king the sentence of excommunication. On the other hand the latter published at Sachsenhausen on 22 May, 1324, an appeal in which he accused the pope of enmity to the empire, of heresy and protection of heretics, and appealed from John's decision to a general council. An open breach henceforth existed, followed by disastrous results. Louis persecuted the few German cardinals, who recognized the papal Bull, whereas upon John on 11 July, 1324, declared all his rights to imperial recognition forfeited. The pope further ratified the treaty between Duke Leopold of Austria and Duke Frederick of Tyrol, and summoned Louis to the States of Ulm in 1325, whereupon John, not being able to help the latter to the title of German King, and then of Roman Emperor. However, as Leopold died on 28 Feb., 1326, and Louis of Bavaria and Frederick of Austria became reconciled, the king's power in Ger- many became firmly established.

The quarrel between John XXII and Louis of Bavaria stirred up a vigorous literary feud concerning the relations of Church and State. Louis was supported by the Franciscan Spirituals, e.g., Ubertiio da Cazale, Michael of Cesena, William Occam, Bonagratia di Bergamo, and many others whose extreme ideas on the question of church poverty had been condemned by the pope; also by two theologians of the University of Paris, Marsilius of Padua and John of Jandun (de Genduno), joint authors of the famous "Defensor Pacis", which was intended to prove that the only way to maintain peace is by the complete subordination of the ecclesiastical power to that of the State. Denying the primacy of the pope, the authors asserted that the emperor alone could authorize ecclesiastical to exercise criminal jurisdiction, that all temporal goods of the Church belonged to the emperor, etc. Other theologians—e.g., Henry von Kelheim, provincial of the Franciscans, Henry Hermann the king's privy secretary, Abbot Engelbert of Admont, Lupo de Bebenburg, afterwards Bishop of Bamberg, and William Occam, though not so extreme in their views as the authors of the "Defensor Pacis", willingly exalted the imperial above the papal power. It was unfortunate for the field and, in theological matters, in- experienced king that he fell into the hands of such ad- visers. The "Defensor Pacis" was anathematized by a papal Bull of 23 October, 1327, and some of its theses were condemned as heretical by the University of Paris. Many theologians in their writings de- ferred to the ecclesiastical authority and the primacy of the pope, and among them the Franciscan Albert, Sancto Elpidio, later Archbishop of Ravena, the Minorite, Alvarius Pelagius, the Augustinian Augustinian Triumphus of Ancona, and Conrad of Magen- berg. On their side, however, the defence was carried too far, some of them even extolling the pope as abso- lute ruler of the world.

When Louis of Bavaria saw his power firmly es- tablished in Germany, he set out early in 1327 for Italy, to continue the struggle against the rival house of Aragon. In the spring, he held a congress at Trent. In March he passed through Bergamo on his way to Milan. On 5 April John XXII declared forfeited all rights of Louis to the German Crown, also to all fiefs held from the Church and from former sovereigns, and finally to the Duchy of Bavaria. Hence he summoned Louis to appear before the Holy See within six months, and ac- cused him of heresy for defending a doctrine which the Head of the Church had repudiated, and for taking under his protection the heretics, Marullius and John of Jandun. Louis paid no attention to this notice, which indeed only aggravated his opposition to the pope. In Milan he received (30 May) the crown of Lombardy from the hands of two deposed bishops, and arbitrarily appointed several new bishops. The pope on his side appointed bishops to see falling vacant within the empire, and continued to fill the vacant sees. But the breach henceforth existed. In 1328 Louis set out for Rome, where the Guelphs had been overthrown with their senator, King Robert of Naples. On 17 January, 1328, the excommunicated German king received in Rome the imperial crown from Sciarra Colonna, who on 19 April, after a farcical proceeding, and under the name of Louis of Bavaria, proclaimed John XXII a heretic, usurer, and oppressor of the Church, and de- prived him of all his papal dignities. A straw image of the pope was publicly burned in Rome, and on 12 May the Franciscan Spiritual, Pietro Rainalducci of Corbaro, was proclaimed anti-pope by Louis, taking at once the title of Peter II, afterwards Peter the Great, the whole of Italy returned to the obedience of the legiti- mate pope. The latter meanwhile had renewed his sentence against Louis of Bavaria, and proclaimed in Italy a crusade against him (1328). At the same time he summoned the German princes to hold another election, and excommunicated Michael of Cesena, William Occam, and Bonagratia. The adherents of Louis in Lombardy soon dwindled away, and he re- turned to Germany in the beginning of 1330. Here, too, the people were weary of the long conflict, and wished for peace, so that Louis was compelled to take steps to mitigate the position of the pope when he arrived in May, 1330, he entered into negotiations with Avignon through the mediation of Archbishop Baldwin of Trier, King John of Bohemia, and Duke Otto of Austria. The pope demanded from Louis renunciat- ion of all claims on the imperial title. Louis on that occasion refused to entertain the idea, but was later (1333) willing to discuss the question of peace. The matter, however, was then postponed. Whether John XXII arbitrarily severed Italy from the empire has never been definitely settled, for the authenticity of the Bull "Ne praetereat" is not certain.

In the last years of John's pontificate there arose a domineering attack against the* through the pope, brought on by himself, and which his enemies made use of to discredit him. Before his elevation to
the Holy See, he had written a work on this question, in which he stated that the souls of the blessed departed do not see God until after the Last Judgment. After becoming pope, he advanced the same teaching in his sermons. The King of the Two Sicilies, however, with some opposition, many theologians, who adhered to the usual opinion that the blessed departed did see God before the Resurrection of the Body and the Last Judgment, even calling his view heretical. A great commotion was aroused in the University of Paris when he made this. In particular, the Dominican order tried to disseminate there the pope's view. Pope John wrote to King Philip IV on the matter (November, 1333), and emphasized the fact that, as long as the Holy See had not given a decision, the theologians enjoyed perfect freedom in this matter. In December, 1335, the theologians at Paris, after a consultation on the question, definitively in favour of the doctrine that the souls of the blessed departed saw God immediately after death or after their complete purification; at the same time they pointed out that the pope had given no decision on this question but only advanced his personal opinion, and now petitioned the pope to confirm their decisions. John appointed a commission at Avignon to study the writings of the Fathers, and to discuss further the disputed question. In a consistory held on 3 January, 1334, the pope explicitly declared that he had never meant to teach aught contrary to Holy Scripture or the rule of faith and in fact had not intended to recommend his opinion. After his death he withdrew his former opinion, and declared his belief that souls separated from their bodies enjoyed in heaven the Beatific Vision.

The Spirituals, always in close alliance with Louis of Bavaria, profited by these events to accuse the pope of heresy, being supported by Cardinal Napoleon Orani. In union with the latter, King Louis wrote to the cardinals, urging them to call a general council and condemn the pope. The incident, however, had no further consequences. With uniting energy, and in countless documents, John followed up all ecclesiastical or politico-ecclesiastical questions of his day, though no particular granteur is remarkable in his dealings. He gave salutary advice to ruling sovereigns, especially to the Kings of France and of Naples, settled the disputes of rulers, and tried to restore peace in England. He increased the number of sees in the West, especially in the new seels and colleges, founded a large library at Avignon, furthered the fine arts, and dispatched and generously maintained missionaries in the Far East. He caused the works of Petrus Olivi and Meister Eckhardt to be examined, and condemned the former, while he censured many passages in the latter's works. He published the Canons of the Latin Church in Avignon, and sanctioned the general collection of the "Corpus Juris Canonici", and was the author of numerous decreals ("Extravagantes Johannis XXII") in "Corp. Jur. Can."). He enlarged and partly re-organized the papal Curia, and was particularly active in the administration of ecclesiastical finances.

The papacy at the time of John XXII was precarious, owing to the disturbed condition of Italy, especially of the Papal States, consequent on the removal of the papacy from its historic seat at Rome. Moreover, since the end of the thirteenth century the College of Cardinals had enjoyed one half of the large income from tributary kingdoms, the sertii oni of the bishops, and some less important sources. Pope John, on the other hand, had need of large revenues, not only for the maintenance of his Court, but particularly for the wars in Italy. Since the thirteenth century the papal treasury had exacted from the minor benefices, when conferred directly by the pope, a small tax (see ANETTEN, APOTOLIC CAMERA). In 1319 John XXII reserved to himself all minor benefices falling vacant in the Western Church during the succeeding three years, and in this way collected from each of them the aforesaid annates, as often as they were conferred by the pope. Moreover, many foreign benefices were already canonically in the papal gift, and the annates from them were paid regularly into the papal treasury. John also made frequent use of the right known as jus spoleti, or right of spoils, which permitted him under certain circumstances to divert the estate of a deceased bishop into the papal treasury. He procured further relief by demanding special subsidies from various archbishops and their suffragans. The extensive reservation of ecclesiastical benefices was destined to exercise a prejudicial influence on ecclesiastical life. The centralized administration took on a highly bureaucratic character, and the purely legal standpoint was too constantly in evidence. The pope's financial measures, however, were highly successful at the time, though in the end they evoked no little resistance and dissatisfaction. In spite of the large expenditures of his pontificate, John left an estate of 500,000 gold florins—not five millions as stated by some chroniclers.

John XXII died on 4 December, 1334, in the eighty-fifth year of his age. He was a man of serious character, of austere and simple habits, broadly cultivated, very energetic and tenacious. But he held too persistently to canonico-legal traditions, and centralized overmuch the ecclesiastical administration. His financial measures, more rigorously applied by his successors, made the Catholic Church very strong, and the papacy very wealthy. The transfer of the papacy from Rome to Avignon was esteemed to have taken place in the interests of France, which impression was strengthened by the preponderance of French cardinals, and by the long-continued conflict with King Louis of Bavaria. In this way was aroused a widespread distrust of the papacy, which could not fail to result in consequences detrimental to the interior life of the Church.

affairs of his kingdom. On 18 May King Ruprecht of Germany, the firm supporter of Gregory XII, died. The elections of Mainz and Cologne proved that they intended to choose Sigismund, King of Hungary, as King of Germany. As Sigismund had, even before he heard of Ruprecht’s death, entered into negotiations with the Pisan pope, John exerted himself all the more readily on his behalf, and on 21 July Sigismund, who had become reconciled with his brother Wenzel of Bohemia, was chosen King of Germany. Sigismund’s election was also recognized by Gregory XII. In April, 1411, John XXIII advanced with Louis of Anjou upon Rome, where they vigorously prosecuted the war against Ladislaus of Naples, and completely routed him at the battle of Roccasecca on 1 May, 1411, but made no further progress. Soon afterwards Louis of Anjou returned to France, thus enabling Ladislaus to rally his troops and strengthen his positions. Subsequently, John began negotiations with Ladislaus in spite of the excommunication of 11 August, 1411. Ladislaus thereupon abandoned the cause of Gregory, and acknowledged John as legitimate pope, in recognition of which the latter withdrew his excommunication, enfeoffed Ladislaus with the Kingdom of Naples, consented to his conquest of Sicily, appointed him gonzafalconnier, or standard-bearer, of the Roman Church, and gave him financial aid (16 October, 1412).

In conformity with a resolution passed at the Council of Pisa, John had summoned a new council to meet at Rome on 29 April, 1412, for the purpose of carrying out ecclesiastical reforms. He also appointed a number of new cardinals, among whom were many able men, such as Francesco Zabarella of Florence, Pierre d’Ailly, Bishop of Cambrai, Guillaume Fillastre, dean of Reims, and Robert Hallam, Bishop of Salisbury. From the beginning of 1412 conferences and meetings of the clergy had been held throughout France in preparation for this council, among the representatives appointed by the king being Cardinal Pierre d’Ailly and Patriarch Cranaph, erstwhile cardinal in 1413. But, when the council was opened in April, there were so few participants that it had to be prorogued several times. When the sessions finally began, the only thing accomplished was the condemnation of the writings of Wyclif, the council being dissolved in March, 1413. John’s irremediable weakness in dealing with Ladislaus of Naples soon led to another attack by the latter upon papal territory. In May, 1413, he invaded the Roman province, and John was compelled to fly with his cardinals. He escaped to Florence, where he sought the protection of Sigismund, King of Hungary, who invited him to Northern Italy for the convocation of a general council to put an end to the unfortunate schism. John’s legates were authorized to come to an understanding with Sigismund on this matter, and Sigismund took advantage of the pope’s predicament to insist on the selection of Constance as the meeting-place of the council. On 30 October, 1413, Sigismund invited Popes Gregory XII and Benedict XIII and all Christendom to attend, and prevailed on John XXIII, with whom he had a meeting at Lod to attend the end of November, to issue the Convocation Bull (9 December, 1413) of the general council to be opened at Constance on 1 November, 1414.

By the sudden death of Ladislaus (6 August, 1414) John’s position in Italy was improved, and he could now return to Rome. But the cardinals urgently protested that his presence was needed at the Council of Constance; so that John hastened to press the matter of presiding in person, and direct there the treatment of all ecclesiastical matters. On 1 October, 1414, John set out for Constance with a large following and supplied with ample means, but with heavy heart and anxious forebodings. Timidity and suspicion had replaced the warlike spirit he had shown as cardinal.
On his way through the Tyrol he formed an alliance with Frederick of Austria, who was on terms of enmity with Sigismund. John and his nine cardinals made their entry into Constance on 28 October, 1414, and the breaking up of the confederacy, which could be promoted only by the abdication or the deposition of all three claimants of the papacy. John at first dominated the council, while he endeavoured to increase his adherents by presents, and, by the aid of spies, to learn the temper of the members. However, the hostility set up for Fieschi, who had been Duke of Burgundy, also his adherent. John’s flight, in consequence of the great difficulties it caused the council, only increased the hostility towards him, and, while he himself tried to negotiate further concerning his abdication, his supporters were obliged to submit to Sigismund. Formally declared the twentieth session (29 May, 1415), John made his submission and commenced himself to the mercy of the council. John was accused of the gravest offences in several inimical writings as well as in the formal charges of the council. Undeniably secular and ambitious, his moral life was not above reproach, and his unscrupulous methods in no wise accorded with the requirements of his high office. On the other hand, the heinous crimes of which his opponents in the council accused him were certainly greatly exaggerated. After his abdication he was again known as Baldassare Cossa, and was given into the hands of the Lord of Burgundy, who had always been his enemy. The latter kept him confined in different places (Rudolfszell, Gottlieben, Heidelberg, and Mannheim). At the forty-second session of the council, 28 Dec., 1417, after Martin V had been elected, the release of Cossa was decreed. It was not, however, till the following year that he recovered his liberty. He then wrote some bitter words against Martin V, eluding the oath and did homage to him as the Head of the Church. On 23 June, 1419, the new pope made him Cardinal-Bishop of Tusculum. But Cossa was completely crushed, and died a few months later at Florence, where he was buried in the baptistery beside the cathedral. Costo de’ Medici erected a magnificent tomb to his memory.

**John, Epistles of Saint, three canonical books of the New Testament written by the Apostle St. John.**

**First Epistle.**—I. Authenticity. — A. External evidence. — The very brevity of this letter (105 verses divided into five chapters) and the lateness of its composition might lead us to suspect no traces thereof in the Apostolic Fathers. Such traces there are, some of which are questionable. St. Papias (Eusebius, Hist. eccl., II, 36) says that in the time of John, who was with his brethren Philip and James in the land of Judaea, etc., sent a book written by John to Harnack, whose chronology we shall follow in this article) wrote to the Philippians: “For whosoever confesseth not that Jesus Christ is come in the Flesh is Antichrist.” — We are confident that Harnack, who is a great expert, has been mistaken about St. John’s letters, and what is more, that the Epistle of St. John (as we shall see in the next chapter) is the first Epistle of St. John. — Therefore, the Epistle of St. John is the first Epistle of St. John, and consequently, the Apostolic Fathers are not mistaken in saying that St. John wrote this letter. — We have the authority of St. Irenæus, who says: “The distinctively Johannine phrase, ‘come in the Flesh’, is also used in the First Epistle of St. John (v. 10; Funk, op. cit., I, 53), which was written about A.D. 130.” The First Epistle of St. John is the first Epistle of St. John, and consequently, the Apostolic Fathers are not mistaken in saying that St. John wrote this letter. — We have the authority of St. Irenæus, who says: “The distinctively Johannine phrase, ‘come in the Flesh’, is also used in the First Epistle of St. John (v. 10; Funk, op. cit., I, 53), which was written about A.D. 130.”

**II. Canon.** — The Epistle of St. John is the first Epistle of St. John, and consequently, the Apostolic Fathers are not mistaken in saying that St. John wrote this letter. — We have the authority of St. Irenæus, who says: “The distinctively Johannine phrase, ‘come in the Flesh’, is also used in the First Epistle of St. John (v. 10; Funk, op. cit., I, 53), which was written about A.D. 130.”

**III. Integrity.** — The only part of the letter concern-
ing the authenticity and canonicity whereof there is serious question is the famous passage of the three witnesses: "And there are three who give testimony (in heaven, the Father, the Word, and the Holy Ghost. And these three are one. And there are three that give testimony on earth): the spirit, and the water, and the blood; and these three are one (1 John, 5:7)."

During the centuries, effort has been made to expunge from our Clementine Vulgate edition of canonical Scripture the words that are bracketed. Let us examine the facts of the case.

A. Greek MSS.—The disputed part is found in no uncial Greek MSS. and in only four rather recent minuscule, one of the fourteenth and three of the sixteenth century. No Greek epistolarum MS. contains the passage.

B. Versions.—No Syriac MS. of any family—Peshito, Phlœxian, or Harßian—has the three witnesses; and their presence in the printed Syriac Gospels is due to translation from the Vulgate. So too, the Coptic MSS.—both Sahidic and Bohairic—have no trace of the disputed part; nor have the Ethiopic MSS., which represent Greek influence through the medium of Coptic. The Armenian MSS., which favor the reading of the Vulgate, are admitted to represent a Latin influence which dates from the twelfth century or earlier. The Armenian Latin reading. Of the Itala or Old Latin MSS., only two have our present reading of the three witnesses: Codex Monacensis (q), of the sixth or seventh century; and the Speculum (m), an eighth or ninth-century MS. which gives many quotations from the New Testament. Even the Vulgate, in the majority of its earliest MSS., is without the passage in question. Witnesses to the canonicity are: the Bible of Theodulph (eighth century) in the National Library of Paris; Codex Caversinus (ninth century), the best representative of the Spanish type of text; Toletanus (12th century); and the majority of the Latin Vulgate after the twelfth century. There was some dispute as to the canonicity of the three witnesses as early as the sixth century; for the preface to the Catholic Epistles in Codex Fuldaensis (A. D. 541–546) complains about the omission of this passage from some of the Latin versions.

C. The Fathers.—(1) Greek Fathers, until the twelfth century, seem one and all to have had no knowledge of the three witnesses as canonical Scripture. At times they cite verses 8 and 9 and omit the disputed portions of verses 7 and 8. The Fourth Lateran (A. D. 1215), in its decree against Abbot John (I. 10), another ecclesiastic, 10th century, quotes the disputed passage with the remark "sicut in quibusdam codicibus inventur." Thereafter, we find the Greek Fathers making use of the text as canonical. (2) The Syriac Fathers never use the text. (3) The Armenian Fathers do not use it before the twelfth century. (4) The Latin Fathers make much earlier use of the text as canonical Scripture. St. Cyprian (third century) seems undoubtedly to have had it in mind, when he quotes John, x, 30, and adds: "Et iterum de Patre et Filio et Spiritu Sancto scriptum est.—Et hi tres unum sunt." (De Unitate Ecclesie, vii). Clear also is the witness of St. Fulgentius (sixth century): "Respon- sio contra Ariano" in P. L., LXV, 224, who refers to the above witness of St. Cyprian. In fact, outside of St. Augustine, the Fathers of the African Church are to be grouped with St. Cyprian in favor of the canonicity of the passage. The silence of the great and well-known (S. Augustin et patris, lib. 10, c. 11) witnesses of the text in the African Church are admitted facts that militate against the canonicity of the three witnesses. St. Jerome (fourth century) does not seem to know the text. After the sixth century, the disputed passage is more and more in use among the Latin Fathers; and, by the seventh century, it is commonly cited as canonical Scripture.

D. Ecclesiastical Documents.—Trent's is the first certain ecumenical decree, whereby the Church established the Canon of Scripture. We cannot say that the decree of Trent on the Canon necessarily included the three witnesses. For in the preliminary discussions that led up to the canonizing of "the entire books with all their parts, as these have been wont to be read in the Catholic Church and are contained in the old Latin Vulgate" and "that the Holy Ghost wotsoever to this special part; hence this special part is not canonized by Trent, unless it is certain that the text of the three witnesses has 'been wont to be read in the Catholic Church and is contained in the old Latin Vulgate'. Both conditions must be verified before the canonizing of the text is possible; and the testimony of the manuscripts is not a sufficient condition has as yet been verified with certainty; quite the contrary, textual criticism seems to indicate that the 'Comma Johanneum' was not at all times and everywhere wont to be read in the Catholic Church and is not contained in the original old Latin Vulgate. However, the Catholic theologian must take into account more than textual criticism; to him the authentic decisions of all Roman Congregations are guiding signs in the use of the Sacred Scripture, which the Church and only the Church has given to him as the Word of God. He cannot pass over the disciplinary decision of the Sacred Office in the case, whereby it is decreed that the authenticity of the 'Comma Johanneum' may not with safety (tudo) be denied or called into doubt. This disciplinary decision was approved by Leo XIII two days later. Though his approval was not in forma specifica, as was Pius X's approbation of the Decree "Lamentabili," all future discussion of the text in question must be carried on with due deference to this decree. (See "Revue Biblique," 1898, p. 149; and Pesch, "Praelaciones Dogmaticae," II, 250.)

IV. Author.—It was of chief moment to determine the author of this letter, i.e., whether it was written in the apostolic age, is Apostolic in its sources, and is trustworthy. Among those who admit the authenticity and canonicity of the letter, some hold that its sacred writer was not John the Apostle but John the Presbyter. We have traced the tradition of the Apostolic origin of the letter back to the time of St. Irenæus. Harnack and his followers admit that Irenæus, the disciple of Polycarp, assigns the authorship to St. John the Apostle; but have the hardihood to throw over all tradition, to accuse Irenæus of error in this matter, to cling to the doubtful witness of Papias, and to be utterly regardless of the patent fact that throughout three centuries and more Papia's name is missing in this John the Presbyter. The doubtful witness of Papias is saved for us by Eusebius ("Hist. eccl.," III, xxxix; Funk, "Patres Apostolici," I, p. 350): "And if any one came my way who had been a follower of the elders, I enquired the sayings of the elders, what John had said, or what had Andrew, or what had Peter said, or what Paul, or what Thomas or James, or what John (§ 17. 10) or Matthew or any one else of the disciples of the Lord, and what were Arianism and John the elder, the disciples of the Lord, saying?" (§ τις ὁ Ἀποστολος καὶ ὁ ἐπισκόπωρος ὁ Διονυσίως, οἱ τοῦ κυρίου μαθητὴς λέγων). Harnack insists that Eusebius read his sources thoroughly; and, on the authority of Eusebius and of Papias, postulates the existence of a disciple of the Lord named John the Elder, who was distinct from John the Apostle; and to this fictitious John the Elder assigns all the Johannine writings (Geschichte der Altenkirchlichen Literatur, II, i, 657). With all Catholic authors, we consider that either Eusebius alone, or Papias and Eusebius, erred, and that Irenæus and the rest of the Fathers were right; in fact we lay the blame at the door of Eusebius. As Bardenhewer (Geschichte der Altkirchlichen Literatur, I, 540) says, Eusebius sets up a straw man. There never was a John the Elder; Funk (Patres Apostolici, I, 354), Dr. Salmon (Diction-
JOHN

ary of Christian Biography, III, 308), Hauserleiter (Thol. Litteraturblatt, 1896), Stilting, Guerike, and others.

Eusebius is here a special pleader. He opposes the millennium. Wrongly fancying that the Apocalypse favours the Chaldaei, he uses this by the Eusebius to rot the work of its Apostolic authority; the clumsiness of expression of Papias gives occasion to Eusebius in proof of the existence of two disciples of the Lord named John. To be sure, Papias mentions two Johns,—one among the Apostles, the other in a clause with Aristion. Both are called elders; and, as John is in his Gospel and First Epistle, may e.g. be Apostles, since he admits that Papias got information from those who had met the Apostles (substituting τοις ἀπόστολοι for τοις πρεσβύτεροι; see Hist. eccl., III, xxxix, 7). Hence it is that Papias, in joining John with Aristion, speaks of John the Elder and not of Aristion the Elder: Aristotle was not an elder or Apostle. The reason for joining the Aristion with John at all is that they were both witnesses of the present to Papias, whereas all the Apostles were witnesses of the past generation. Note that the second κοστή (dian) is used in regard to the group of witnesses of the past generation, since there is question of what they had said, whereas the present (λέγεις) is used in regard to the witnesses of the present generation, i.e. Aristion and John the Elder, since the question is what they are now saying. The Apostle John was alive in the time of Papias. He and he alone can be the elder of whom Papias speaks. How is it, then, that Papias mentions John twice? Hauserleiter conjectures that the phrase δι' ἑαυτοῦ is a gloss (Thol. Litteraturblatt, 1896). It is likelier that the repetition of the name of John is due to the clumsiness of expression of Papias. He does not mention all the Apostles, but only the two whom he undoubtfully means them all. His mention of John is quite natural, in view of the relation in which he stood to that Apostle. After mention of the group that were gone, he names the two from whom he now receives indirect information of the Lord’s teaching; these two are the disciples Aristion and John the Apostle.

V. Time and Place.—Irenaeus tells us the letter was written by St. John during his stay in Asia (Adv. Hær., III, 1). Nothing certain can be determined in this matter. The arguments are probable in favour of Ephesus and also for the last few years of the first century.

VI. Destination and Purpose.—The form is that of an ecumenical letter. Its destination is clearly the churches which St. John evangelized; he speaks to his "little children", "beloved", "brethren", and is affectionate and fatherly throughout the entire letter. The purpose is identical with the purpose of the Fourth Gospel,—that his children may believe in Jesus Christ, the Son of God, and that believing may have life eternal in His name (I John, v, 13; John, xx, 31).

VII. Argument.—A logical analysis of the letter would be a mistake. The thought is built up not analytically but synthetically. After a brief introduction, St. John works up the thought that God is Light (i, 5); so, too, should we walk in the light (i, 7), keep from sin (i, 6-ii, 6), observe the new commandment of love (ii, 7), since he that loves is in the light and he that hates is in darkness (ii, 8-iii). Then follows the second leading Johannine thought that God is Love (iii—v, 12). Love means that we are sons of God (iii, 1-4): Divine sonship means that we are not in sin (iii, 4-13), that we love one another (iii, 13-44), that we believe in Jesus Christ the Son of God (iv, 5, 6); that God gave us this love (iv, 7-12), that God is true (iv, 7-12). The conclusion (v, 13-end) tells the reader that the purpose of the letter is to inculcate faith in Jesus Christ, since this faith is life eternal. In this conclusion as well as in other parts of the letter, the same salient and leading Johannine thoughts recur to defy analysis. John had two or three things to say; he said these two or three things over and over again in ever varying form.

SECOND EPISTLE.—These thirteen verses are directed against the named of Gnosticism which St. John strives to root up in his Gospel and First Epistle. Harnack and some others, who admit the canonicity of the Second and Third Epistles, assign them to the authorship of John the Elder; we have shown that this John the Elder never existed. The authenticity of this epistle is attested by very early Fathers, St. Polycarp ("Phil.", VII, i; Funk, "Patres Apostolici", I, 304) cites rather II John, 7, than I John, 4. St. Irenæus expressly quotes II John, 10, as the words of "John the Apostle of the Lord". The Muratorian Canon speaks of two Epistles of John. St. Clement of Alexandria speaks of the larger Epistle of John; and, as a consequence, knows at least two. Origen bears witness to the two shorter letters, which "both together do not contain a hundred lines" and are not admitted by all to be authentic. The canonicity of these two letters was long disputed. Eusebius puts them among the Apostolic canons. They are not found in the Peshitta. The Canon of the Western Church includes them after the fourth century; although only Trent's decree set the question of their canonicity beyond the dispute of such men as Cajetan. The Canon of the Eastern Church, outside of that of Antioch, includes them after the fourth century. The style and manner of the second letter are very like to those of the first. The destination of the letter has been much disputed. The opening words are variously interpreted,—"The ancient to the lady Elect, and her children" (δὲ πρεσβύτεροι εὐχερεὶς οἰκίας τοῦ τιμίου σωτῆρος ἀδελφοί). We have seen that the elder Electans means the Apostle. Who is the lady elect? Is she the Elect Kyria? The lady Eklektē Kyria? A lady named Eklektē Kyria? A lady elect, whose name is omitted? A Church? All these interpretations are defended. We consider, with St. Jerome, that the letter is addressed to a particular church, which St. John urges on to faith in Jesus Christ, to the avoidance of hereticons, to love. This interpretation best fits in with the ending to the letter,—"The children of thy sister Elect salute thee."

THIRD EPISTLE, fourteen verses addressed to Gaius, a private individual. This Gaius seems to have been an eclesiastic but a layman of some standing, is praised by John for his hospitality to visiting brethren (verses 2-9). The Apostle then goes on: I had written perhaps to the church; but Diotrephes, who loveth to have the pre-eminence among them, doth not receive us (verse 9). This Diotrephes may have been the bishop of the Church. He is found fault with roundly, and Demetrius is set up for an example. This short letter, "twin sister", as St. Jerome called it, to the second of John's letters, is entirely a personal affair. No doctrine is discussed. The lesson of hospitality, especially of care for the preachers of the Gospel, is insisted on. The second of this letter as Apostolic is by St. Denis of Alexandria (third century). Eusebius refers to the letters called "the second and third of John, whether these chance to belong to the evangelist or to someone else with a name like his" ("Hist. eccl.", III, xxxv; Schwartz, II, 1, p. 250). The canonicity of the letter has already been treated. The greeting and ending of this letter are internal evidence of composition by the author of the previous Johannine letter. The simple and affectionate style, the firmness of the rebuke of Diotrephes are strictly Johannine. Nothing certain is known as to time and place of writing; but it is generally supposed that the two small letters by John end toward the end of his long life and in Ephesus.

WALTER DRUM.

John, Gospel of St. — This subject will be considered under the following heads: (I) Contents and Scheme of the Gospel; (II) Distinctive Peculiarities; (III) Authorship; (IV) Circumstances of the Composition; (V) Critical Questions Concerning the Text; (VI) Historical Genuineness; (VII) Object and Importance.

I. CONTENTS AND SCHEME OF THE GOSPEL. — According to the traditional order, the Gospel of St. John occupies the last place among the four canonical Gospels. Although in many of the ancient copies this Gospel was, on account of the Apostolic dignity of the author, inserted immediately after or even before the Gospel of St. Matthew, the position it occupies to-day was from the beginning the most usual and the most approved.

As regards its contents, the Gospel of St. John is a narrative of the life of Jesus from His baptism to His Resurrection and His manifestation of Himself in the midst of His disciples. The chronicle falls naturally into four sections: — (1) the prologue (i, 1-18), containing what is in sense a brief epitome of the whole Gospel; in the doctrine of the Incarnation of the Eternal Word; (2) the first part (i, 19-xxi, 50), which recounts the public life of Jesus from His baptism to the eve of His Passion; (3) the second part (xxii—xxvii), which relates the history of the Passion and Resurrection of the Saviour; (4) a short epilogue (xxvii, 23—25), referring to the great mass of the Saviour's words and works which are not recorded in the Gospel.

When we come to consider the arrangement of matter by the Evangelist, we find that it follows the historical order of events, as is evident from the above analysis. But the author displays in addition a special concern to determine exactly the time of the occurrence and the connexion of the various events fitted into this chronological framework. This is apparent at the very beginning of his narrative, when, as though in a diary, he chronicles the circumstances attendant on the beginning of the Saviour's public ministry, with four successive definite indications (i, 19, 35, 43; 23, 43; 35, 43). He lays special emphasis on the first miracles: "This beginning of miracles did Jesus in Cana of Galilee" (ii, 11), and "This is again the second miracle that Jesus did, when he was come out of Judea into Galilee." (iv, 54).

Finally, he refers repeatedly throughout to the great religious and national festivals of the Jews for the purpose of indicating the exact historical sequence of the facts related (ii, 13; v, 1; vi, 4; vii, 2; x, 22; xii, 1, xiii, 1).

All the early and the majority of modern exeges are quite justified, therefore, in taking this strictly chronological arrangement of the events and Eucharistic of their commentaries. The divergent views of a few modern scholars are without objective support either in the text of the Gospel or in the history of its exegesis.

II. DISTINCTIVE PECULIARITIES. — The Fourth Gospel is written in Greek, and even a superficial study of it is sufficient to reveal many peculiarities, which give the narrative a distinctive character. Especially characteristic is the vocabulary and diction. His vocabulary is, it is true, less rich in peculiar expressions than that of Paul or of Luke: he uses in all about ninety words which are nowhere elsewhere found. Numerous are the expressions which are used more frequently by John than by the other sacred writers. Moreover, in comparison with the other books of the New Testament, the narrative of St. John contains a very considerable portion of those words and expressions which might be called the common vocabulary of the Four Evangelists.

What is even more distinctive than the vocabulary is the grammatical use of particles, pronouns, prepositions, verbs, etc., etc. In this respect it is also distinguished by many peculiarities of style—asyndeta, reduplications, repetitions, etc. On the whole, the Evangelist reveals a close intimacy with the Hellenistic speech of the first century of our era, which receives at his hands in certain expressions a Hebrew turn. His literary style is desertely lauded for its noble, natural, and not inartistic simplicity. He combines in harmonious fashion the rustic speech of the Synoptics with the urban phraseology of St. Paul (DEISSMANN, "Licht vom Osten," 2nd ed., Tübingen, 1909, p. 181).

What first attracts our attention in the subject-matter of the Gospel is the confinement of the narrative to the chronology of events which took place in Judea and Jerusalem. Of the Saviour's labours in Galilee John relates but a few events, without dwelling on details, and of these events only two—the multiplication of the loaves and fishes (vi, 1-13), and the sea-voyage (vi, 17—21)—are already related in the Synoptic Gospels.

A second limitation of material is seen in the selection of his subject-matter, for compared with the other Evangelists, John chronicles but few miracles and devotes his attention less to the miracles than to the discourses of Jesus. In most cases the events form, as it were, but a frame for the words, conversation, and teaching of the Saviour and His disputations with His adversaries. In fact it is the controversies with the Sanhedrists at Jerusalem which seem especially to claim the attention of the Evangelist. On such occasions John's interest, both in the narration of the circumstances and in the recording of the discourses and conversation of the Saviour, is a highly theological one. With justice, therefore, was John conceded, even in the earliest ages of Christianity, the honorary title of the "theologian" of the Evangelists. There are, in particular, certain great truths, to which he constantly refers in his Gospel and which may be regarded as his governing ideas; special mention should be made of such expressions as the Light of the World, the Truth, the Life, the Resurrection, etc. Not infrequently these or other phrases are found in pithy, enigmatic form. He lays especial emphasis on the course of the Saviour, and frequently recur, as a leit-motif, at intervals during the discourse (e.g. vi, 35, 48, 51, 58; x, 7, 9; xv, 1, 5; xvii, 1, 5; etc.).

In a far higher degree than in the Synoptics, the whole narrative of the Fourth Gospel centres round the Person of the Redeemer. From his very opening sentences John turns his gaze to the inmost recesses of eternity, to the Divine Word in the bosom of the Father. He never tires of portraying the dignity and glory of the Eternal Word Who vouchsafed to take up His abode among men, that, while receiving the revelation of Himself as the Word of God, mankind may partake in the fullness of His grace and truth. As evidence of the Divinity of the Saviour the author chronicles some of the great wonders by which Christ revealed His glory; but he is far more intent on leading us to a deeper understanding of Christ's Divinity and majesty by a consideration of His words, discourses, and teaching, and to impress upon our minds the far more glorious marvels of His Divine Love.

III. AUTHORSHIP. — If we except the heretics mentioned by Irenæus (Adv. haer., III, xi, 9) and Epiphanius (Haer., ii, 3), the authenticity of the Fourth Gospel was securely established by the end of the eighteenth century. Ewansö (1792) and Bretschneider (1820) were the first to run counter to tradition in the question of the authorship, and, since David Friedrich Strauss (1834—40) adopted Bre-
schneider's views and the members of the Tübingen School, in the wake of Ferdinand Christian Baur, denied the authenticity of this Gospel, the majority of the critics outside the Catholic Church have denied that the Fourth Gospel was an autograph. On the other hand, many of the main points of the Johannine problem: "Again and again have I attempted to solve the problem with various possible theories, but they led me into still greater difficulties, and even developed into contradictions." 11 Gesch. der altchristl. Lit., I, pt. ii, Leipzig, 1897, p. 678. 12 For a survey of the history of the criticism of the Fourth Gospel consult Jaegger, "Histoire des livres du N. T.," IV (Paris, 1908), pp. 23–51; also Sanday, "The Criticism of the Fourth Gospel" (Oxford, 1905); and Jackson, "The Fourth Gospel and Some Recent German Criticism" (Cambridge, 1906). 13 Thus the first problem of the Fourth Gospel is the question whether the problem of the source of the Fourth Gospel will enable the reader to form an independent judgment. 14 Direct Historical Proof.—If, as is demanded by the character of the historical question, we first consult the writings of the period of the earliest Gospel texts, we find that there is a universally admitted fact that, from the eighteenth century back to at least the third, the Apostle John was accepted without question as the author of the Fourth Gospel. In the examination of evidence, therefore, we may begin with the third century, and then proceed back to the time of the Apostles. The ancient manuscripts and translations of the Gospel constitute the first group of evidence. In the titles, tables of contents, signatures, which are usually added to the text of the separate Gospels, John is in every case and without the slightest indication of doubt named as the author of this Gospel. The earliest of the extant manuscripts, it is true, do not date back to the middle of the fourth century, but the perfect unanimity of all the codices proves to every critic that the prototypes of these manuscripts, at a much earlier date, must have contained the same indication of authorship. Since the use of Gospel quotations by which the Syrian, Coptic, and Old Latin extend back in their earliest forms to the second century. 15 The evidence given by the early ecclesiastical authors, whose reference to questions of authorship is not incidental, agrees with that of the above-mentioned sources. 264–5, it is true, sought for a different author for the Apocalypse, owing to the special difficulties which were being then urged by the Millenarians in Egypt; but he always took for granted as an undisputed fact that the Apostle John was the author of the Fourth Gospel. 2 Origen (d. 254). He knew from the tradition of the Church that John was the last of the Evangelists to compose his Gospel (Eusebius, Hist. ecc., VI, xxv, 6), and at least a great portion of his commentary on the Gospel of St. John, in which he everywhere makes clear his conviction of the Apostolic origin of the work, has come down to us. Origen's teacher, Clement of Alexandria (d. before 215–6), relates as "the tradition of the old presbyters", that the Apostle John, the last of the Evangelists, "filled with the Holy Ghost, had written a spiritual Gospel" (Eusebius, op. cit., VI, xvi). 16 Of still greater importance is the testimony of St. Irenaeus, Bishop of Lyons (d. about 202), linked immediately with the Apostolic Age as he is, through his teacher Polycarp, the disciple of the Apostle John. 17 The native country of Irenaeus (Asia Minor) and the scene of his subsequent ministry (Gaul) render him a witness of the Faith in both the Eastern and the Western Church. He cites in his writings at least one hundred verses from the Fourth Gospel, often with the remark, "as John, the disciple of the Lord, he speaks of the composition of the Four Gospels, he says of the last: "Later John, the disciple of the Lord who rested on His breast, also wrote a Gospel, while he was residing at Ephesus in Asia." (Adv. Haer., III, i, n. 2). As here, so also in the other texts it is clear that "as John, the disciple of the Lord," he means none other than the Apostle John. (Concerning the importance of Irenaeus in the present question see Gutjahr, "Die Glaubwürdigkeit des irenäischen Zeugnisses über die Abfassung des 4. kanonischen Evangeliums," Grau, 1904.) 18 We find that the same conviction concerning the authorship of the Fourth Gospel is expressed at greater length in the Roman Church, about 170, by the writer of the Muratorian Fragment (lines 9–34). Bishop Theophilus of Antioch in Syria (before 181) also cites the beginning of the Fourth Gospel as the words of John (Ad Autolycum, 8). His reference is to the testimony of a Vatican manuscript (Codex Regius Sueciae seu Alexandrinus, 14), Bishop Papias of Hierapolis in Phrygia, an immediate disciple of the Apostle John, included in his great exegetical work an account of the composition of the Gospel by St. John, during his ministry as scribe by the Apostle (J. Wordsworth, Novum Testamentum latine, Oxford, 1889–98, I, p. 491). It is scarcely necessary to repeat that, in the passages referred to, Papias and the other ancient writers have in mind but one John, namely the Apostle and Evangelist, and not some other Presbyter John, to be distinguished from the Apostle. (See John the Evangelist, Saint.) 19 Indirect External Evidence.—In addition to the direct and express testimony, the first Christian centuries testify indirectly in various ways to the Johannine origin of the Fourth Gospel. Among this indirect evidence the most prominent place must be assigned to the numerous citations of texts from the Gospel, which demonstrate its existence and the recognition of its claim to form a portion of the canonical writings of the New Testament, as early as the beginning of the second century. St. Ignatius of Antioch, who died under Emperor Trajan (98–117), reveals in the quotations, allusions, and theological views found in his Epistles, an intimate acquaintance with the Fourth Gospel. In the writings of the majority of the other Apostolic Fathers, also, a like acquaintance with this Gospel can scarcely be disputed, especially in the case of Polycarp, the "Martyrium of Polycarp", the "Epistle to Diognetus", and the "Pastor" of Hermas (cf. the list of quotations and allusions in F. X. Funk's edition of the Apostolic Fathers). In speaking of St. Papias Eusebius says (Hist. ecle., III, xxxix, 17) that he heard from his work passages from the Fourth Gospel of St. John. But this Epistle necessarily presupposes the existence of the Gospel, of which it is in a way the introduction or companion work. Furthermore, St. Irenaeus (Adv. Haer., V, xxxii, 2) cites a sentence of the "presbyters" which contains a quotation from John, xiv, 2, and, according to the opinion of those entitled to speak as authorities, St. Papias must be placed in the front rank of the presbyters. Of the second-century apologists, St. Justin (d. about 165), in an especial manner, indicates by his doctrine of the Logos, and in many passages of his apologies the dependence of the Fourth Gospel, and the insistence in the chronological scheme of his "Diatessaron", follows the order of the Fourth Gospel, the prologue of which he employs as the introduction to his work. In his "Apology" also he cites a text from the Gospel
Like Tatian, who apostatized about 172 and joined the Gnostic sect of the Encratites, several other heretics of the second century also supply indirect testimony concerning the Fourth Gospel. Basilides appeals to John, i, 8, and ii, 4. Valentine seeks support for his theories of the sons in expressions taken from John; but purports to have composed, abut not commentary on the Fourth Gospel, while Ptolemy, another of his followers, gives an explanation of the prologue of the Evangelist. Marcion preserves a portion of the canonical text of the Gospel of St. John (xii, 4–15; xxxiv, 15, 19) in his own apocryphal gospel. The Montanists deduced their doctrine of the Parousia mainly from John xiv, 28. Similarly in his "True Discourse" (about 178) the pagan philosopher Celsus bases some of his statements on passages of the Fourth Gospel.

On the other hand, indirect testimony concerning this Gospel is also supplied by the oldest ecclesiastical liturgies and the monuments of early Christian art. As to the former, we find from the very beginning texts from the Fourth Gospel used in all parts of the Church, and not infrequently with special predilection. Again, to take one example, the raising of Lazarus depicted in the Catacombs forms, as it were, a monumental commentary on the eleventh chapter of the Gospel of St. John.

**The Testimony of the Gospel Itself.**—The Gospel itself also furnishes an entirely intelligible solution of the question of authorship.

(1) In the first place from the general character of the work we are enabled to draw some inferences regarding its author. To judge from the language, the author was a Palestinian Jew, who was well acquainted with the Hellenic Greek of the upper classes. He also displays an accurate knowledge of the geographical and social conditions of Palestine, even without having been from the heaenrens. He must have enjoyed personal intercourse with the Saviour and must even have belonged to the circle of his intimate friends. The very style of his chronicle shows the writer to have been an eyewitness of most of the events. Concerning the Apostles John and James the author makes a thoroughly characteristic reserve. He never mentions their names, although he gives those of most of the Apostles, and once only, and then quite incidentally, speaks of "the sons of Zebedee" (xxi, 2). On several occasions, when treating of incidents in which the Apostle John was concerned, he seems to introduce his own name without mentioning the name of the "disciple whom Jesus loved." (John, i, 40; xviii, 15, 16; cf. xii, 23–10). He speaks of John the precursor nine times without giving him the title of the "Baptist," as the other Evangelists invariably do to distinguish him from the Apostle. All these indications point clearly to the conclusion that the Apostle John must have been the author of the Fourth Gospel.

(2) Still clearer grounds for this view are to be found in the express testimony of the author. Having mentioned in his account of the Crucifixion that the disciple whom Jesus loved stood beneath the Cross beside the mother of Jesus (John, xix, 26 sqq.), he adds, after telling of the Death of Christ and the opening of His side, the solemn assurance: "And he that saw it hath given testimony; and his testimony is true. And he knoweth that he saith true: that you also may believe" (xix, 35). According to the admission of all, he was present at the Last Supper and said to John to tell it to Jesus. He was also present when Jesus was transfigured on the mount. His testimony is contained in the Gospel which for many consecutive years he has announced by word of mouth and which he now sets down in writing for the instruction of the faithful. He assures us, not merely that this testimony is true, but that he was a personal witness of its truth. In this manner he identifies himself with the disciple beloved of the Lord who alone could give such testimony from intimate knowledge.

Similarly, the author repeats this testimony at the end of his Gospel. After again referring to the disciple whom Jesus loved, he immediately adds the words: "This is that disciple who gaveth testimony of these things, and hath written these things; and we know that his testimony is true." (John, xx, 24). As the text stands, this witness is limited to the events just recorded but to the whole Gospel. It is more in accordance with the text and the general style of the Evangelist to regard these final words as the author's own composition; should we prefer, however, to regard this verse as the addition of the first reader and disciple of the Apostle, the text constitutes a remarkable evidence of the Johannine origin of the Fourth Gospel (cf. M. Lefèvre in "Revue Biblique", new series, V, 1906, pp. 89–91).

(3) Finally we can obtain evidence concerning the author from the Gospel itself, in a third way, by comparing his work with the three Epistles, which have retained their place among the Catholic Epistles as the writings of the Apostle John. We may here take for granted as a fact admitted by the majority of the critics, that these Epistles are the work of the same writer, and that the author was identical with the author of the Gospel. In fact the arguments based on the unity of style and language and form John's teaching, on the testimony of Christian antiquity, render any reasonable doubt of the common authorship impossible. At the beginning of the Second and Third Epistles the author styles himself simply: the presbyter—evidently the title of honour by which he was commonly known among the Christian community. On the other hand, in his First Epistle, he emphasizes repeatedly and with great earnestness the fact that he was an eyewitness of the facts concerning the life of Christ to which he (in his Gospel) had borne testimony among the Christians: That which was from the beginning, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the word of life: for the life was manifested; and we have seen and do bear witness, and declare unto you the life eternal, which was with the Father, and hath appeared to us: that which we have seen and have heard, we declare unto you" (1 John, i, 1–3; cf. iv, 14). This "presbyter," who finds it sufficient to use such an honorary title without qualification as his proper name, and was likewise an eye- and ear-witness of the incidents of the Saviour's life, can be none other than the Presbyter John, the "disciple whom Jesus loved," other than John the Apostle (cf. John the Evangelist, Saint).

We can, therefore, maintain with the utmost certainty that John the Apostle, the favourite disciple of Jesus, was really the author of the Fourth Gospel.

**IV. Circumstances of the Composition.**—Passing over the intimate circumstances with which early legend has clothed the composition of the Fourth Gospel, we shall discuss briefly the time and place of composition, and the first readers of the Gospel.

As to the date of its composition we possess no certain historical information. According to some opinion, the Gospel is to be referred to the last decade of the first century, or to be still more precise, to 96 or one of the succeeding years. The grounds for this opinion are briefly as follows: (1) the Fourth Gospel was composed after the three Synoptics; (2) it was written after the death of Peter, since Peter, especially xvi, 18–19, speaks of the death of the Prince of the Apostles; (3) it was also written after the destruction of Jerusalem and the Temple, for the Evangelist's references to the Jews (cf. particularly xi, 18; xvii, 1; xii, 41) seem to indicate that the end of the city and of the people as a nation has already come; (4) the text of the Gospel, especially ch. xvi, 23, appears to imply that John was already far advanced in years when he wrote the Gospel; (5) those who denied the Divinity
Christ, the very point to which St. John devotes special attention throughout his Gospel, began to disseminate their heresy about the end of the first century; (6) finally, we have direct evidence concerning the date of composition. The so-called "Monarchian Prologue" to the Gospel is the first writing about the year 200 or a little later, says concerning the date of the appearance of the Gospel: "He [sc. the Apostle John] wrote this Gospel in the Province of Asia, after he had composed the Apocalypse on the Island of Patmos" (J. Wordsworth, "Novum Testamentum latine", I, Oxford, 10, in the 88th). The banishment of John to Patmos occurred in the last year of Domitian's reign (i. e. about 95). A few months before his death (18 Sept., 96), the emperor had discontinued the persecution of the Christians and recalled the exiles (Eusebius, "Hist. eccl.", III, xx, nn. 5-7). This evidence would therefore refer the composition of the Gospel to A. D. 96 or one of the years immediately following.

The place of composition was, according to the above-mentioned prologue, the province of Asia. Still more precise is the statement of St. Irenaeus, who tells us that the Apostle John wrote his Gospel "in Asia" (Adv. her., III, i, 2). All the other early references are in agreement with these statements.

The first readers of the Gospel were the Christians of the second and third generations in Asia Minor. There was no need of initiating them into the elements of faith; the Gospels, certainly, must have aimed rather at confirming against the attacks of its opponents the Faith handed down by their parents.

V. CRITICAL QUESTIONS CONCERNING THE TEXT.—As regards the text of the Gospel, the critics take special exception to three passages, v. 36, 4; vii, 53-58, xi, 22.

(1) The fifth chapter tells of the cure of the paralytic at the pool of Bethesda in Jerusalem. According to the Vulgate the text of the second part of verse three and verse four runs as follows: "... waiting for the moving of the water. And an angel of the Lord descended at certain times into the pond; and the water was moved. And he that went down first into the pond after the motion of the water, was made whole, of whatsoever infirmity he lay under." But these words are wanting in the three oldest manuscripts, the Codex Vaticanus (B), Codex Sinaiticus (\w), and Codex Bezae (D), in the original text of the palimpsest of St. Ephraemi (second half of the fourth century), in the translation of Cureton, as well as in the Coptic and Sahidic translations, in some manuscripts, in three manuscripts of the Itala, in four of the Vulgate, and in some Armenian manuscripts. Other copies append to the words a critical sign which indicates a doubt as to their authenticity. The passage is therefore regarded by the majority of modern critics, including the Catholic exegetes, Schegg, Schans, Belser, etc., as a later addition by Papias or some other disciple of the Apostle.

Other exegesis, e. g. Corluy, Cornely, Knabenuaer, and Murillo, defend the authenticity of the passage, urging an argument from the Schriften des N. T. (Baur, 1895, p. 521). Too much importance should not be attached to variations of vocabulary, which may be found on comparing this passage with the rest of the Gospel, since the correct reading of the text is in many places doubtful, and any such differences of language may be easily harmonised with the strongly individual style of the Evangelist.

It is thus possible, even from the purely critical standpoint, to adduce strong evidence in favour of the canonicity and inspired character of this pericope, which by decision of the Council of Trent, forms a part of Holy Writ. (1)

(3) Concerning the last chapter of the Gospel a few remarks will suffice. The last two verses of the twentieth chapter indicate clearly indeed that the Evangelist intended to terminate his work here:

tioned, in his tractate on the Gospel of St. John, omits the passage.

The context of the narrative seems necessarily to presuppose the presence of the words. The subsequent answer of the sick man (v. 7), "Sir, I have no man, when the water goes down into the pond. For whilst I am coming, another goeth down before me", could scarcely be intelligible without verse 4, and the Evangelist is not accustomed to omit such necessary information from his text. Thus both sides have good grounds for their opinions, and the final decision on the authentication of the text from the standpoint of the textual critic, seems possible.

(2) The second passage (vii, 53-58, 11) contains the story of the adulteress. The external critical evidence seems in this case to give still clearer decision against the authenticity of this passage. It is wanting in the four earliest manuscripts (B, A, C, and \w) and many others, while in many copies it is admitted only with the critical mark, indicative of doubtful authenticity. Nor is it found in the Syriac translation of Cureton, in the Sinaiticus, the Gothic translation, in most codices of the Peshito, or of the Coptic and Armenian translations, or in the Ecumenical Text. None of the Greek Fathers have treated the incident in their commentaries, and, among Latin writers, Tertullian, Cyprian, and Hilary appear to have no knowledge of this pericope.

Notwithstanding the weight of the external evidence of these important authorities, it is possible to deduce still more important testimony in favour of the authenticity of the passage. As for the manuscripts, we know on the authority of St. Jerome that the incident "was contained in many Greek and Latin codices" (Contra Pelagium, II, xvii), a testimony supported to-day by the Codex Bezae of Canterbury (D) and many others. The authenticity of the passage is also favoured by the Vulgate, by the Ethiopian, Arabic, and Slavonic translations, and by many manuscripts of the Itala and of the Armenian and Syrian text. Of the commentators of the Greek Fathers, the books of Origen dealing with this portion of the Gospel are no longer extant; only a portion of the commentary of St. Cyril of Alexandria has reached us, while the homilies of St. John Chrysostom on the Fourth Gospel must be considered a treatment of selected passages rather than of the whole text. Among the Latin Fathers, St. Ambrose and Augustine included the pericope in their text, and seek an explanation of its omission from other manuscripts in the fact that the incident might easily give rise to offence (cf. especially Augustine, "De coniugis adulteris", II, vii).

It is thus much easier to explain the omission of the incident from many copies than the addition of such a passage in so many ancient versions in all parts of the Church. It is furthermore admitted by the critics that the style and mode of presentation have not the slightest trace of apocryphal origin, but reveal throughout the hand of a true master (von Soden, Die Schriften des N. T., I, Berlin, 1925, p. 523). Too much importance should not be attached to variations of vocabulary, which may be found on comparing this passage with the rest of the Gospel, since the correct reading of the text is in many places doubtful, and any such differences of language may be easily harmonised with the strongly individual style of the Evangelist.

(1) Concerning the last chapter of the Gospel a few remarks will suffice. The last two verses of the twentieth chapter indicate clearly indeed that the Evangelist intended to terminate his work here:
"Many other signs also did Jesus in the sight of his disciples, which are not written in this book. But these are written, that you may believe that Jesus is the Christ, the Son of God; and that believing, you may have life in his name" (xx, 30 sq.). But the sole conclusion that can be deduced from this is that the twenty-first chapter was afterwards added and regarded as an appendix to the Gospel. Evidence has yet to be produced to show that it was not the Evangelist, but another, who wrote this appendix. The opinion is at present fairly general, even among critics, that the vocabulary, style, and the mode of presentation as a whole, together with the subject, belong to the latter period. The first expository chapters of the Gospel are thought to be the last written by the Evangelist. The history of this chapter and the preceding portions of the Fourth Gospel (cf. Jülicher, "Einleitung", 5th ed., Tübingen, 1906, pp. 387-91; also Hilgenfeld, Har- knack, etc.).

VI. HISTORICAL GENUINENESS.—Objections Raised against the Historical Character of the Fourth Gospel.—The historical genuineness of the Fourth Gospel is at the present time almost universally denied outside the Catholic Church. Since David Friedrich Strauss and Ferdinand Christian Baur this denial has been postulated in advance in most of the critical inquiries into the sources of the Gospels. The influence of this prevailing tendency, Alfred Loisy has also reached the point where he openly denies the historicity of the Fourth Gospel; in his opinion the author desired, not to write a history, but to clothe in symbolic garb his religious ideas and theological speculations.

The writings of Loisy and their rationalistic prototypes, especially those of the German critics, have influenced many later exegetes, who while wishing to maintain the Catholic standpoint in general, concede only a very limited measure of historical genuineness to the Fourth Gospel. The most probable solution of this class of objections are included those who acknowledge as historical the main outlines of the Evangelist’s narrative, but see in many individual portions only symbolic embellishments. Others hold with H. J. Holtzmann that we must recognize in the Gospel a mixture of the subjective, theological speculations of the author and the objective, personal recollections of his intercourse with Christ, without any possibility of our distinguishing by sure criteria these different elements. That such a hypothesis precludes any further question as to the historical genuineness of the Johannine narrative, is evidently candidly admitted by the representatives of these views.

On examining the grounds for this denial or limitation of the historical genuineness of John we find that they are drawn by the critics almost exclusively from the relation of the Fourth Gospel to the Synoptic narrative. On comparison three points of contact are discovered: (1) with respect to the events which are related; (2) in regard to the mode of presentation; and (3) in the doctrine which is contained in the narrative.

(1) As regards the events related, the great contrast between Jesus and the Synoptists in the choice and arrangement of materials is especially accentuated. The latter show us the Saviour almost exclusively in Galilee, labouring among the common people: John, on the other hand, devotes himself chiefly to chronicling Christ’s work in Judea, and His conflict with the Sanhedrists at Jerusalem. An easy solution of this first point was found in the hypothesis that attending the composition of the Fourth Gospel John may—in fact must—have assumed that the Synoptic narrative was known to his readers at the end of the first century. The interest and spiritual needs of these readers demanded primarily that he should narrate in a manner that lead to a deeper knowledge of the Person and Divinity of the Saviour, against which the first heresies of Cerinthus, the Ebionites, and the Nicolaites were being already disseminated in Christian communities. But it was chiefly in His discussions with the Scribes and Pharisees at Jerusalem that Christ had spoken of His Person and Divinity. In his Gospel, therefore, John made it his primary purpose to set down the sublime teachings of Our Saviour, to safeguard the faith of the Christians against the attacks of the heretics.

When we come to consider the individual events in the narrative, three points in particular are brought forward: (a) the duration of Christ’s public ministry extends in the Fourth Gospel over at least two years, probably indeed over three years, and some months. However, the Synoptic account of the public life of Jesus can by no means be confined within the narrow space of one year, as some modern critics contend. The three earliest Evangelists also suppose the space of at least two years and some months. (b) The purity of the Temple is referred by John to the beginning of the Saviour’s ministry, while the Synoptists narrate it at the close. But it is by no means proven that this purification occurred but once. The critics bring forward not a single objective reason why we should not hold that the incident, under the circumstances, was repeated. Even if, as those of the Fourth Gospel, had its historical place at the beginning and at the end of the public life of Jesus. (c) Notwithstanding all the objections brought forward, John is in agreement with the Synoptists as to the date of the Last Supper. It occurred on Thursday, the thirteenth day of Nisan, and the crucifixion took place on Friday, the fourteenth. The fact that, according to John, Christ held the Supper with His Apostles on Thursday, while, according to the Synoptists, the Jews ate the passchal lamb on Friday, is not irreconcilable with the above statement. The most probable solution of this difficulty is the widespread custom, according to which, when the fifteenth of Nisan fell on the Sabbath, as it did in the year of the Crucifixion, the passchal lamb was killed in the evening hours of the thirteenth of Nisan and the passchal feast celebrated on this or the following evening, to avoid all infringement of the strict sabbatic rest.

(2) As regards the mode of presentation, it is especially insisted that the great sublimity of the Fourth Gospel is difficult to reconcile with the homely simplicity of the Synoptics. This objection, however, entirely disregards the great differences in the circumstances under which the Gospels were compiled. For the Christians of the third generation in Asia, living in the midst of flourishing schools, the Fourth Evangelist was forced to adopt an entirely different style from that employed by his predecessors in writing for the newly-converted Jews and pagans of the earlier period.

Another difficulty raised is the fact that the peculiar Johannine style is found not only in the narrative portions of the Gospel, but also in the discourses of Jesus and in the words of the Baptist and other personages. But we must remember that all the discourses and colloquies had to be translated from Aramaic into Greek, and in this process received from the author their distinctive unity of style. Besides, in the Gospel, the intention is by no means to give a verbatim report of every sentence and expression of a discourse, a sermon, or a dispute. The leading ideas alone are retained, and are expressed in a sense, and, in this manner also, they come to reflect the style of the Evangelist. Finally, the disciple surely received from his Master many of the distinctive metaphors and expressions which imprint on the Gospel its peculiar character.

(3) The fact that in such a manner original content lies only in the external forms and does not extend to the truths themselves. A satisfactory explanation of the dog
Divine Majesty of His Being. In this manner John wished to secure the faithful against the temptations of the false learning by means of which the heretics might prejudice the purity of their faith. Towards the narrative of the earlier Evangelists John's attitude was that of one who sought to fill out the story of the life and work of the Saviour, while endeavouring to secure certain incidents from misinterpretation. His Gospel thus forms a glorious conclusion of the joyous message of the Eternal Word. For all time it remains for the Church the most sublime testimony of her faith in the Son of God, the radiant lamp of truth in her doctrine, the never-ceasing source of loving zeal in her devotion to her Master, Who loves her even to the end.

Commentaries on the Gospel of St. John. — In early Christian times: the Romilita of St. John Chrysostom and the Tractates of St. Augustine; the extant portions of the commentaries of Origen and St. Cyril of Alexandria; the expositions of Themannus and Euthymius, who generally follow Chrissostom, and the exegetical works of St. Basil, who follows Augustina. In the Middle Ages: the interpretations of St. Thomas Aquinas and St. Bonaventure, of Blessed Albertus Magnus, Rupert of Deutz, and St. Bonaventure of Savior. Works in Latin: those of Cajetan; Tolstoy; Madalmonat; General: Patrice (Rome, 1580); Longinus (Rome, 1580); Klopoo (2d ed., Vienna, 1880); Knabenshue (2d ed., Paris, 1906). In English: Macdill (2d ed., Dublin, 1902); MacRitch (Dublin, 1902); London, 1908); Plummer (London, 1881); Whelphale (Glasgow, 1898). In German: Kerler (Munich, 1890); Hanseneenberg (2 vols., Munich, 1878-80); Laderer (Jena, 1900); Belscher (Freiburg, 1905); Keil (Leipzig, 1881); Holtmann (Giessen, 1898); Hoffmann (4th ed., Tubingen, 1900); Zahn (Leipsic, 1896). In French: Fillon (Paris, 1857); Calmer (Paris, 1894); Godet (4th ed., Neuchatel, 1888). Spanish: Murillo (Madrid, 1892); Cambray (Madrid, 1894). English: Worsley, The Fourth Gospel and the Synoptics (Edinburg, 1909). LEOFOLD FORNCE.

John and Paul, Saints, martyred at Rome on 26 June. The year of their martyrdom is uncertain: according to their Acts, it occurred under Julian the Apostate (361-3). In the second half of the fourth century, Byssantius, the Roman senator, and Pammachius, his son, fashioned their house on the Caelian Hill into a Christian basilica. In the fifth century the presbyters tituli Byzantii (priests of the church of Byssantii) are mentioned in an inscription and among the benefactions of the Founding Father of the church was also called the titulus Pammachii after Byssantius's son, the pious friend of St. Jerome. In the ancient apartments on the ground-floor of the house of Byssantius, which were still retained under the basilica, the tomb of two Roman martyrs, John and Paul, was the object of veneration as early as the fifth century. The Sacramentarium Leornianum already indicates in the preface to the feast of the saints, that they rested within the city walls ("Sacr. Leon.", ed. Feltoe, Cambridge, 1896, 34), while, in one of the early itineraries to the tombs of the Roman martyrs, their grave is assigned to the church on the Caelian (De Rossi, "Roma Antiqua", II, 138, 175). The titulus Byzantii or Pammachii was consequently known at a very early date by the names of the two martyrs (titulus SS. Ioannis et Pauli). That the two saints are martyrs of the Roman Church, is historically certain; as to when they found a resting-place in the house of Pammachius under the basilica, we only know that it certainly occurred in the fourth century. The year and circumstances of their martyrdom are likewise unknown. According to their Acts, which are of a purely legendary character and which, like the martyrdoms of Constantina, daughter of Constantine the Great, and became acquainted with a certain Gallicans, who built a church in
Ostia. At the command of Julian the Apostle, they were beheaded secretly by Terentianus in their house on the Celian, where their church was subsequently erected, and where they themselves were buried. The gnomons on the ground-floor of the so-called house of Pammachius were rediscovered under the Basilica of SS. Giovanni e Paolo in Rome. They are decorated with important and interesting frescoes, while the original tomb (confessio) of the saints John and Paul is covered with paintings of which the remains act as the theme and subject of the tomb form one of the most important early Christian memorials in Rome. Since the erection of the basilica, the two saints have been greatly venerated, and their names have been inserted in the Canon of the Mass. Their feast is kept on 26 June.

J. P. KIRSCH.

John Andrea. See Andrea, Giovanni d'.

John Baptist de la Salle, SAINT, founder of the Institute of the Brothers of the Christian Schools, educational reformer and Father of modern pedagogy, was born at Reims, 30 April, 1651, and died at Saint-Just, Yon, Rouen, on Good Friday, 7 April, 1719. The family of de la Salle traces its origin to Johan Salla, who, in the early part of the ninth century, was Command-in-chief of the Royal forces of Alfonso the Chaste. It was not, however, until about 1350 that the first branch of this family, from which our saint is descended, removed to France and settled in Champagne. John Baptist was the eldest child of Louis de la Salle and Nicolle de Moët de Brouillet. His parents were very solicitous in the care they bestowed upon their child, especially in regard to his moral and intellectual development. After due preparation, he was sent to the Collège des Bons Enfants, where he pursued the higher studies, and, on 10 July, 1669, he took the degree of Master of Arts. Canon Pierre Doutz, chancellor of the University of Reims, was the presiding officer at the academic sessions, and in the discharge of his duties he professed his desire to study the character of his young cousin, de la Salle, with the result that he determined on resigning his canonry in his favour. Louis de la Salle, however, cherished the hope that John Baptist would select the profession of law, and thereby maintain the family tradition. The last wish was fulfilled when he was called to serve the Church, and accordingly he received the tonsure 11 March, 1662, and was solemnly installed as a canon of the metropolitan See of Reims, 7 Jan., 1667.

When de la Salle had completed his classical, literary, and philosophical course and had read the Schoolmen, he was sent to Paris to enter the Seminary of Saint-Sulpice on 18 October, 1670. While residing here he attended the lectures in theology at the Sorbonne. There, under the direction of Louis Tronson, he made such rapid progress in virtue, that M. Lecomte (general of the Congregation of Saint-Sulpice) renders this testimony of him: "De la Salle was a constant observer of the rule. His conversation was always pleasing and above reproach. He seems never to have given offence to any one, nor to have incurred any one's censure. While at the seminary, I would myself go to Mass as well as by the vigour of his intellectual progress and the ability with which he handled theological subjects. Nine months after his arrival in Paris, his mother died, 19 July, 1671, and on 9 April, 1672, his father died. This circumstance obliged him to leave Saint-Sulpice, 19 April, 1672. He was now twenty-one, the head of the family, and as such had the responsibility of educating his brothers and sisters. His whole attention was devoted to his domestic affairs, and he provided for his parents discreet, businesslike administration. Canon Blain says that he underwent at this time many mental struggles. Distrusting his own lights, de la Salle had recourse to prayer and the guidance of discreet advisers, among them, Nicolas Roland, canon and theologian of Reims, a man of great spiritual discernment. After four years, he was ordained deacon at Paris, 21 March, 1676, by François Batailler, Bishop of Bethlehem. On this occasion de la Salle sought to obtain the permission of Maurice Le Tellier, Archbishop of Reims, to resign his canonry and prepare for parish work. Nicolas Roland urged him to take this step, alleging that a rich canonry was little in harmony with youthful zeal and activity. His archbishop, however, refused his request. With humble submission, de la Salle accepted the decision and returned to Reims to pursue his studies and to make final preparations for his ordination to the presbyterate. After four years of spiritual discernment, de la Salle was appointed by the Bishop of Reims, on Holy Saturday, 9 April, 1678. The young priest was a model of piety, and his biographers say that persons went to assist at his Mass to be edified, and to share his piety. After Mass there were many who sought his counsel and put themselves under his spiritual guidance. De la Salle never omitted Holy Mass, save when prevented by sickness. In June, 1680, he submitted to his final examination and took his doctorate in theology. At this period of his life de la Salle evinced a docility of spirit, a self-diffidence, that bespoke the character of the man and saint. In physical appearance he was of commanding presence, somewhat above the medium height, and well-proportioned. He had large, penetrating blue eyes and a broad forehead. His portraits present a picture of sweetness and dignity, beaming with intelligence andbreathing an air of modesty and refined grace. A matter of profoundest concern with de la Salle was the education of young men. He took up the study of his functions with a determination to embrace a calling, which large lustrous eyes give an air of commanding intelligence.

During the few years that intervened between his ordination to the priesthood and the establishing of his institute, de la Salle was occupied in carrying out the educational aims of his order. After his death, when dying, had confided to him the newly established Congregation of the Sisters of the Child Jesus. "Your zeal will bring it to prosperity", said Nicolas Roland to him. "You will complete the work which I have begun. In all this, Father Berré will be your model and guide." Thus was de la Salle imperceptibly drawn towards his life-work. "The idea of it never occurred to me", de la Salle wrote in a memoir. "If I had ever thought that what I did out of pure charity for the poor school teachers would make it incumbent upon me to live with them, I would have given it up at once." This sentiment he again expressed towards the close of his life in these emphatic words: "If God had revealed to me the good that could be accomplished by this institute, and had likewise made known to me the trials and sufferings which would accompany it, my courage would have failed." At this period de la Salle was still occupied with his functions as canon. He was, however, aroused to the higher calling by a message from Madame Mallefer, in March, 1679, requesting him to aid Adrien Néel in opening a free school at Reims. But hardly had he succeeded in establishing the school of St-Maurice.
when he quietly withdrew from the work, as if it were in his mission. Shortly afterwards the opening of another free school in St.-Jacques parish lured him again from his seclusion, but he soon retired again.

Although instrumental in opening these elementary free schools at Reims, de la Salle seemed to allow Adrien Nyel to share all the honours resulting therefrom and to take the lead in the rules of discipline. He went at once to visit the real progress of both schools. He was unconsciously attracted to the work. Daily he visited the teachers to encourage them or suggest practical methods to attain definite results. But when he found that the teachers became discouraged, owing to the lack of proper guidance after school hours, he undertook to house them, that he might be able to direct them and give them practical lessons in the useful employment of time, and to prevent weariness and disgust. Not only did he aid them in class and after class, but he made good any deficit in the cost of living. He even admitted them to his own table and later on sheltered them under his roof. Thus was he drawn closer and closer to them, forming an intimate fellowship with the teachers of the poor. "It was, indeed," says Mgr Guitbert, "his love that induced de la Salle to devote himself to the young teachers of Reims. They were like abandoned sheep without a shepherd. He assumed the responsibility of uniting them." As yet de la Salle had no definite plans for the future, even as late as 24 June, 1682, when he transferred his little community to the vicinity of rue Neuve. He simply kept himself in readiness to follow the guidance of Providence. He resigned his canonical in July, 1683, and he distributed his fortune to the poor in the winter of 1684, thus giving convincing proofs that he would not hesitate to make any sacrifices necessary to complete the good work he had begun. Père Barré counselled de la Salle to give up whatever might divert his attention from procuring God's glory. In reply to the earnest remonstrances of his friends and kinsfolk, he meekly answered: "I must do the work of God, and if the worst should come to pass, we shall have to beg alms." Reliance upon Providence was henceforth to be the foundation of the Christian Schools.

Up to this period (1684) the institute had lacked the characteristics of a permanent organization. From 1684 to 1717, the struggle for existence was most critical. In 1692 the institute was so weakened by deaths and defections that de la Salle could hardly find two Brothers who were willing to bind themselves by vow to maintain the free schools. The death of Henri L'Heureux in December, 1690, materially affected the welfare of the Christian Schools. De la Salle, intending this gifted young Brother to be the future superior of the congregation, entertained the hope of having him ordained priest, and with this view he sent him to Paris to pursue his theological studies at the Sorbonne. After a brilliant course, Brother Henri L'Heureux was ready for ordination, but before this event took place the young candidate fell sick and died. The loss of this Brother was a blow to the founder. After passing the whole night in prayer, he rose up, not only comforted and strengthened, but also enlightened as to the character of his future institute. He then determined that there should be no priests among the members of his institute. Although there were priests and lay brothers in nearly all existing religious orders, de la Salle was convinced that the time had come for a change in this matter in the new congregation. Brother Lucard, the Annalist of the institute, thus sums up the matter: "Since the death of Henri L'Heureux, de la Salle was firmly convinced that his institute was to be founded on simplicity and humility. No Brother could, without compromising his congregation, allow himself to be diverted from his functions as a teacher, by devoting himself to special studies, the saying of the Divine Office, or the fulfilment of other duties obligatory on the sacred ministry." Therefore, no Brother can aspire to the priesthood nor perform any priestly function, and no ecclesiastic can become a member of the institute. This is the new rule that de la Salle added, and it is embodied in the Constitution of the institute.

From 1702 the founder began to endure a long period of trial, aggravated by persecution on the part of certain ecclesiastical authorities. In November, 1702, he was deposed by Cardinal de Massa, and supplanted for a time by the Rev. M. Bricot. In 1703 one of his most trusted disciples, Nicolas Vuyart, treacherously deserted him. For the next ten years the founder was engaged in a series of struggles for the preservation of his institute, in the course of which his name was attacked, and justice denied him before the civil tribunals. After fifty-five years of hard labour, his work seemed to be almost on the verge of ruin. His confidence in God was so firm and unshaken that he was never really discouraged. In 1717 he convoked a chapter for the purpose of solidifying the work and for the election of a superior general. His aim was to have a Brother elected during his lifetime and thus perfect the government of the institute in accordance with the rule he had formulated. The choice of the assembled Brothers fell upon Brother Barthélemy, a man whom all esteemed for his learning and virtue. The institute was now an accomplished fact. And from the first interview with Adrien Nyel, in 1679, de la Salle belonged wholly to the Brothers, sharing with them the burden of labour and observing the common rule. He never left them to engage in other works.

De la Salle was too prudent and too well inspired by God, not to give his institute a positive character in its twofold object: the Christian education of youth and the cultivation of that spirit of faith, piety, mortification, and obedience which should characterize its members. His gift of gaining souls to God, and of leading them to make great sacrifices, was supplemented by the splendid executive ability that enabled him to found an institute and to preserve and...
direct its gradual development. A study of the extraordinary religious, social, and educational conditions, at the time the institute was founded by de la Salle, will show the peculiar character of the difficulties he had to encounter and overcome. Jansenism had gained the ascendency in France and spread pernicious doctrines; it fostered internal dissensions and promoted Gallicanism, to the great detriment of the Faith and of loyalty to the Holy See. In the social order, a spirit of exaggerated independence was abroad, alienating authority or thrusting it aside. When such conditions for education prevailed in the upper classes, one may well ask, what must have been the condition of the masses? The incessant foreign and internal wars, with their consequent evils, told with disastrous effect upon the people. Exorbitant demands on the part of army officials, the violence of the soldiery, the rapine of supervisors, the wholesale plunder of crops, followed by famine and ruin, left whole provinces of France under the weight of terrible sufferings and untold misery. The peasants frequently had no bread, and when they had it the circumstances were such as to deprive them of any hope for the future. The standard of living had deteriorated, and the gloom of intestine turmoil had been momentarily brightened by the splendid victories abroad, the sad effect of the glory of the reign of Louis XIV made the mourning in cottages only the more bitter owing to the loss of the loved ones on foreign battlefields. Evidently, the circumstances were such that these dire circumstances were threatened with ruin, as were the social and economic conditions; for false doctrines were spread and took hold among the people, destroying their faith and stultifying their consciences. Schools there were, but they were poorly attended and shamefully neglected. The children and the people generally were ignorant, and vice, according to contemporary authorities, was rampant among all classes. De la Salle carefully studied these conditions and, moved to compassion for the poor, resolved to improve their social and moral status. The founder grasped the situation and proposed as a remedy, popular free schools thoroughly graded and supplied with zealous teachers, who would implant in the hearts of the children the germs of those virtues that would tend towards the regeneration of both the pupils and the parents. He saw that a religious congregation composed of men enlightened and married for the salvation of souls, could alone stem the tide of irredeemable material ignorance. He clearly perceived that, in the peculiar conditions which surround any institute at the period of its origin, the work proposed to be done should embody in its ends the special requirements of the age in which it originates. He also foresees that, while the guiding spirit of such an institute must even remain fundamentally the same, its scope, as a permanent organization working for the welfare of humanity, should have the character of a social force answering to the needs and conditions of any age and country. Various educational reforms which de la Salle introduced prove that he anticipated many of the measures that have been adopted. The courses of study for elementary free schools, technical schools, and colleges are evidences of his broad culture and wide grasp of educational problems. Hence, if the needs of a certain locality called for special branches, or if the times and conditions demanded certain advanced studies, de la Salle was not slow in responding nor in giving these subjects a place commensurate in importance with their educational value. De la Salle, furthermore, displayed his genius in giving his institute a distinctive character, that of a teaching body, consecrated to the work of popular education. Thus, he gave it the pedagogy which included the essential principles adopted by later workers in the field of educational reforms, notably by Pestalozzi, Fröbel, Herbart, and others. In making the vernacular the basis of all instruction, de la Salle appealed to the intelligence of the child, prepared the way for the study of national literature, and opened up to the grown man those avenues of real knowledge and delight that had hitherto been closed against the eager multitude. With true scientific insight, he perceived that the Latin texts set the standard of teaching in France and that the Latin texts taught the art of reading. For this change he gave the following reasons: (1) The teaching of the art of reading, in primary and elementary schools, through the vernacular, is of greater and wider utility than by Latin texts. (2) The vernacular is more easily taught to children who already possess some knowledge of it, than the Latin of which they are wholly ignorant. (3) It requires considerably less time to learn the art of reading through the vernacular, than through a foreign tongue. (4) The boys and girls attending the primary and elementary schools, can spend only a few years under instruction. Now, if they are taught reading from a Latin text, they generally leave school without being able to read the vernacular, and with only an imperfect knowledge of how to read the Latin. Hence, they will soon forget the little they have learned, and, perhaps, even how to read the Latin. (5) It is an efficacious means of acquiring knowledge. With due care in the selection of books, children who can read in the vernacular could spread the Christian doctrine in the family circle, and, on evenings, read some useful or instructive books to the assembled household; whereas, if they knew only the Latin, understanding it, they would be deprived of many valuable benefits resulting from the intelligent reading of a good book. (6) It is impossible for children in primary and elementary schools to master the reading of Latin texts, because they are not acquainted with its subject-matter. It is, therefore, the part of wisdom to train children thoroughly to the intelligent reading of works written in the vernacular. Thus, having mastered the art of reading in the vernacular, a few months would suffice to make them read the Latin fluently, whereas, if the traditional method were followed, it would require at least several years [Annales de l’Institut, I (1883), pp. 140, 141]. This fact proves that de la Salle was a profound thinker, a genius in the work of popular education. He embraced all classes, all conditions of society. By making the free schools popular, he grasped the growing needs of society in his own day and for all times. No phase of the educational problem escaped his attention, and in the vernacular, giving his new school the same text-books, and requiring them to follow the same lesson under one and the same teacher. This method has best stood the test of time and experience, and is that which the Brothers of the Christian Schools employ in all grades of instruction even at the present day. Inside wisdom - the “Simultaneous Method” is not the exclusive property of any one man. Others besides de la Salle discerned its value, and even partially applied its essential principles, long before the founder of the Christian Schools made it live in his institute. It had no place in the university system of the Middle Ages. The plan adopted in those times was that which prevailed to a great extent in the universities of our own day, namely, listening to lectures, taking notes thereon, and holding disputations upon the subject-matter. The Jesuits organized each class in subdivisions; each division being headed by an advanced pupil, the author of the subject. These pupils then read, recited their lessons at stated times, while the teacher corrected exercises or heard the lessons of particular pupils. The whole class afterwards received explanations from the teacher. St. Peter Fourier (185-
1640) saw in Christian education the remedy for many of the disorders existing among the poor and labouring class. He was far-seeing, and anticipated more than one of our modern educational improvements. Indeed, he was one of the first to apply some of the principles of the "Simultaneous Method". In his constitution he prescribed that, as far as it can possibly be carried out, all the pupils of the same mistress shall have each the same book, in order to learn and read therein the same lesson; so that, whilst one is reading her in an audible and intelligible voice before the mistress, all the others, hearing her and following this lesson in their books at the same time, may learn it sooner, more readily, and more perfectly. Herein the principle of the "Simultaneous Method" is, for the first time, clearly stated. Yet, when he enters into the details of practice, he seems to lose sight of the principle which he lays down. In the very next paragraph of the constitution, it is provided that the mistress shall call up two pupils at a time, and place them one at each side of her desk. The more advanced pupil shall read her lesson; the other shall listen to her, shall correct all the faults she may make, in the use of words, in pronunciation, or in the observance of pauses. This is the individual method. For the smaller pupils he recommends that four or six at a time come to her desk, and to make use of some graded cards, containing letters and syllables. (Sommaire des Constitutions des Religieuses de la Congregation de Notre-Dame, 1649, 3rd part.)

Comenius (or Amos Komensky, 1592–1674), in his "Didactica Magna", requires the teacher to instruct his pupils "sed et omnes simul, "all together at one and the same time" (edit. 1647, cap. xix, Probl. I, Col. 102, 103). Mgr. de Nesmond (1629–1715) divided the class into four or five groups, each having the same book, "in order that all the children of the same age receive with the same lesson, and when one begins to read, the others are to read in a low voice at the same time" (Méthode pour instruire en peu de temps les Enfants, p. 59). About 1674, Charles Démia, of Lyons, adopted the method of Mgr. de Nesmond. Like him, he gave the same reading book to each group, requiring that each one follow, holding his finger or a marker on the words that are being read. The immediate precursor of St. John Baptist de la Salle was a theologian, the anonymous author of "Avis touchant les Petites Ecoles" (Bibl. Nat., 40, R. 556). In this little work, which Leopold Delisle placed prior to 1660, the author complains of the condition of the primary schools and proposes a method by which a large number of pupils might be taught, by one teacher, one book, and one voice. The school, he tells us, should be so regulated that one and the same book, one and the same teacher, one and the same lesson, and all the same, serve for all, so that each pupil would thereby possess his teacher wholly and entirely, and occupy all his care, all his time, and all his attention, as if he were the only pupil (pp. 13 and 19). It is reasonable to presume that de la Salle frequented the schools taught by the Congregation of Notre-Dame which were founded at Reims about 1634. He must have observed the method of teaching employed in that congregation. We can have no doubt that he was equally well acquainted with the defects which rendered such methods useless. In 1682 de la Salle had organized the Brothers of the Christian Schools, and had given them the "Simultaneous Method". Brother Azarius says: "What St. Peter Fourier touched, what Komensky and Mgr. de Nesmond and Charles Démia had g limmers of, what the anonymous author of the 'Avis' thought to realize, had become a fact." De la Salle applied the Simultaneous Method not only to reading, as was done by his predecessors, but also to catechism, writing, spelling, and arithmetic in the elementary classes, and then to all the specialties taught in the colleges which he founded. He is, therefore, the genius who introduced and perfected the Simultaneous Method in all its practical details. De la Salle definitely points out the "Simultaneous Method" as the one which he wished his disciples to follow. It is no longer the one teacher governing a whole school; it is two or three, or more, according to the number of pupils, each taking those of the same capacity and teaching them together. His instructions on these heads are exact. "The Brothers", he says, "are to give special attention to three things in class: (1) During the lessons, to correct every word that the pupil who is reading pronounces badly; (2) To make all who read at the same lesson, to follow therein; (3) To have silence strictly observed in the school" (Common Rules). The pupils follow in the same lesson, they observe strict silence, the teacher in correcting one, is correcting all. The essence of the "Simultaneous Method". De la Salle generalizes the principle for all lessons, thus: "In all the lessons from alphabet-cards, syllables, and other books, whether French or Latin, and even during arithmetic, while one reads, all the others of the same lesson shall follow; that is, they shall read to themselves from their books without making noises with their lips, what the one reading pronounces aloud from the book" (Conduite des ecoles chrétiennes, Avignon, 1724).

With truth has Matthew Arnold said, in speaking of this handbook of Method: "Later works on the same subject have little improved the precepts, while they entirely lack the unction." In the management of Christian schools, de la Salle states concisely the following practical rules for teaching methodically: "1. The teacher determines the relative intelligence of every pupil in his class. 2. He adapts his language and explanations to the capacity of his class, and is careful never to neglect the duller pupils. 3. He makes sure that the pupils know the meaning of the "orders" they employ. 4. He advances from the simple to the complex, from the easy to the difficult. 5. He makes it a special point to insist greatly on the elementary part of each subject; not to advance until the pupils are well grounded on what goes before. . . . 9. To state but few principles at a time, but to explain them well. . . . 10. To speak much to the eyes of the pupils, making use of the blackboard. . . . 11. To prepare every lesson carefully. 12. To place no faulty models or standards before the pupils; always to speak to them in a sensible manner, expressing one's self in correct language, good English, and with clearness and precision. 13. To banish hasty definitions and well-founded divisions. . . . 18. To assert nothing without being positively certain.
of its truth, especially as regards facts, definitions, or principles. 19. To make frequent use of the system of question and answer" (Chap. V, art. ii, pp. 31-33).

It is true that de la Salle, in establishing his institute, had in mind principally the primary and elementary school, which was the real raison d'être for the Brothers. He was an educator, not a churchman. He was the organizer of the public instruction of his time, and no master of pedagogical science will deny him that distinction. But, if the primary and elementary school was the principal master-work of de la Salle, there was yet another field of labour which likewise belonged to his creative genius. In the eighteenth century, he was confronted with singularly perplexing conditions. The rising generation was weary of past glories, disgusted with the present, and was ambitious to achieve renown in hitherto unexplored fields of activity. As education was gradually extending to the masses, with the light of instruction came new ideas, new occupations, new ventures, and a breaking away from the old civilisation, with the desire to wrestle with the problems born of the new conditions. Even those who were trained in traditional methods became aware of a mighty change in social conditions. They found there was an euramerican educational system in the actual educational system. With their sons, they experienced the world-spirit breathing upon the moribund civilization of Louis XIV. The political horizon had changed, society became more degenerate, the intellectual world was awakened and cast off the yoke of traditionalism, assuming a bearing towards greater freedom in the realm of thought and research. De la Salle had been struck with the serious hiatus in the instruction reserved for the wealthy children, who were destined for the liberal professions. So, while organizing the primary and elementary school, he also created, in 1705, a special establishment for the education of the sons of the clergy in the actual educational system. This new creation was the boarding college at Saint-Yon, wherein he inaugurated the system of modern secondary instruction. Saint-Yon became the type of all such colleges, and that of Yusses, Paris, became the modern exemplar of similar institutions in France and elsewhere. M. Drury, in his report upon technical education, states that France is indebted to de la Salle for the practical installation and popularization of that form of instruction.

Hence, from the origin of the institute, there was a condition of programmes to the needs created by the social transformations which were taking place. This flexibility, which contrasted with the fixedness of the university programmes, excited surprise and no little opposition among the representatives of academic authority in those days. The instruction given in the colleges founded by de la Salle and his successors was peculiarly adapted to the needs of a very interesting class of young men. The educational reforms thus planned and carried out by him gave unmistakable evidence that Providence had raised him up to be the lawgiver of primary and elementary education, as well as the creator of a new system of intellectual training, combining the precision of the traditional method with the wider scope of the new one. It was but natural that de la Salle, who had assimilated the best that the seventeenth century could give, and who had become cognizant of the insufficiency of the old system to meet the requirements of the new conditions, should create schools which were then, and have been since, the admiration of educators. The boarding colleges founded by de la Salle for the modern secondary instruction are, therefore, a distinct creation. The date of the Saint-Yon college, in 1705. He launched a technical school to develop the mechanical skill of the students, and also a special garden for botany. There were Sunday schools prior to the seventeenth century. But the Christian Academy, founded by de la Salle for adults in the parish of Saint-Sulpice, in 1699, was of a different character, the first of its kind in the history of education. The programme of this academy, or Sunday school, included not only the ordinary branches taught in the other Sunday schools, but it added geometry, architecture, and drawing. In 1702 a seminarium was opened for the novitiates of the teaching orders. But there were no normal schools for lay teachers. De la Salle had been frequently asked by clergy to send a Brother to take charge of their school. This request was refused, for he had established the rule that not less than two Brothers teach at one school. At the opening of the seminarium to open a seminary for teachers, an institution in which young men would be trained in the principles and practices of the new method of teaching. The normal school was opened at Reims in 1684. Indeed, thirteen years before Francke organized his teachers' college at Halle, and fifty years before Hecker founded the Prussian normal college at Stettin, de la Salle had given a programme which is even to-day deemed excellent. In the same year he established for youth who were destined to enter the brotherhood, a Christian academy, or preparatory novitiate, in which they were taught the humanities, literature, and the principles of scientific pedagogy.

De la Salle is entitled to be ranked among the advanced educators of the eighteenth century and among the greatest thinkers and educational reformers of all time. His system embraces the best in the modern educational philosophy. It is characterized by its higher educational progress which is the distinctive mark of modern times, and bequeathed to his own disciples, and to educators in general, a system of teaching which is adaptable to the wants of school-going youth in every country. But it was especially as a priest that John Baptist de la Salle loved his vocation as an educator. Like St. Ignatius Loyola, he taught letters that he might have the right to teach Christian doctrine. In claiming this privilege de la Salle was actuated by the highest and purest motives. There was nothing narrow in his educational plans. He was too wise not to realize the necessity that the truest and best children of the Church should be among the most skilled in human affairs. His view was from the summit, therefore, broad and comprehensive. Intellectual training was supplemented by a complete course of Christian virtues. Man had a desire, and education should inculcate this truth by cultivating and developing the theological virtues in the souls of the children.

This thought seemed to be uppermost in the mind and to haunt the soul of de la Salle when he drew up those excellent programmes for his schools, colleges, and technical institutions. His pedagogical principle was that nothing human should be foreign to the students, and the teaching of science and letters appeared to him to take nothing from the teacher in his ministry as an apostle. In September, 1713, Clement XI issued the Bull "Unigenitus", condemning the errors of the Jesuits, and designating them as the creators of "Reflections". M. de Montmartin, Bishop of Grenoble, promulgated the Bull in a circular letter, in February, 1714. De la Salle was then making a retreat at Parmenie. When he left this place, he entered the arena to defend the Church against Jansenism. He assembled the Brothers of Grenoble and explained the meaning of the Bull, in order to safeguard the purity of their faith. Not satisfied with this manifestation of loyalty, he published several articles in defence of the true doctrine. This irritated the Jansenists, but their opposition only served to give greater lustre to the purity of his faith. He was a fearless and uncompromising champion, and he seemed to forget his habitual calm and reserve when there was question of the integrity and purity of the Faith. To show his inviolable attachment to the Church and to the Bor-
John Baptist de Rossi (De Rubeis), Saint, b. at Voltaggio in the Diocese of Genoa, 22 February, 1608; d. at Rome, 23 May, 1764; feast on 23 May. His parents, Charles de Rossi and Frances Anfozzi, were not rich in earthly goods, but had solid piety and the esteem of their fellow-citizens. Of their four children
John excelled in gentleness and piety. At the age of ten he was taken to Genoa by friends for his education. There he received news of the death of his father. After three years he was called to Rome by a relative, Lorenzo de Rossi, who was canon at St. Mary in Cosmedin. In this church he studied Roman law under the direction of the Jesuits, and soon became a model by his talents, application to study, and virtue. As a member of the Sodality of the Blessed Virgin and of the Ristretto of the Twelve Apostles established at the college, he led the members in the meetings and pious exercises, in visits to the sick in the hospitals and in other works of mercy, and merited even then the name of apostle. At the age of sixteen he entered the clerical state. Owing to indiscipline in practice of mortification he contracted spells of epilepsy, notwithstanding which he made his course of scholastic philosophy and theology, in the college of the Dominicans, and, with dispensation, was ordained priest on 8 March, 1721. Having reached the desired goal, he bound himself by vow to accept no ecclesiastical benefice unless commanded by obedience. He fulfilled the duties of the sacred ministry by devoting himself to the labourers, herds, and teamsters of the surrounding country, preaching the sermons early in the morning, or late in the evening, at the old Forum Romanum (Campo Vaccino), and by visiting, instructing, and assisting the poor at the hospital of St. Galla. In 1731 he established near St. Galla another hospital as a home of refuge for the unfortunate who wander the world. ("Rom. Brev."") tr. Bute, Summer, 573.) In 1735 he became titular canon at St. Mary in Cosmedin, and, on the death of Lorenzo two years later, obediently forced him to accept the canonry. The house belonging to it, however, he would not use, but employed the rent for good purposes.

For a number of years John was afraid, on account of his poverty, to enter the confraternity, and it was his custom to send to other priests the sinners whom he had brought to repentance by his instructions and sermons. In 1738 a dangerous sickness befall him, and to regain his health he went to Civita Castellana, a day's journey from Rome. The bishop of the place induced him to hear confessions, and after reviewing his moral theology he received the unusual faculty of hearing confessions in any of the churches of Rome.

He showed extraordinary zeal in the exercise of this privilege, and spent many hours every day in hearing the confessions of the illiterate and the poor whom he sought in the hospitals and in their homes. He performed with ease and at times in churches and chapels, convents, hospitals, barracks, and prison cells, so that he became the apostle of the abandoned, a second Philip Neri, a hunter of souls. In 1763, worn out by such labours and continued ill-health, his strength began to ebb away, and after several attacks of paralysis he died at his retreats in Trinità de' Pellegrini. He was buried in that church under a marble slab at the altar of the Blessed Virgin. God honoured his servant by miracles, and only seventeen years after his death the process of his beatification was begun, but the troubled state of Europe during the succeeding years prevented progress in the cause until it was resumed by Pius IX, who on 13 May, 1860, solemnly pronounced his beatification. As new signs still distinguished him, Leo XIII, on 8 December, 1881, enrolled him among the saints.

John Berchmans, Saint, b. at Diest in Brabant, 13 March, 1595; d. at Rome, 13 August, 1621. His parents watched with the greatest solicitude over the formation of his character. He was naturally kind, gentle, and affectionate towards them, a favourite with his playmates, brave and open, attractive in manner, and with a bright, joyful disposition. Yet he was also, by natural disposition, impetuous and fickle. Still, when John was but seven years of age, M. Emmerick, his parish priest, already remarked with pleasure that the Lord would make him a blessing to the child. Many are the details that reveal him to us as he was in the days that preceded his entrance into the Society of Jesus. He was but nine years old when his mother was stricken with a long and serious illness. John would pass several hours each day by her bedside and convey to him such spiritual words as only a religious mind could produce. When he was twelve years of age, he was made a confrere of his religious; and as an indication of the very serious words. Later, when he lived with some other boys at M. Emmerick's house, he would undertake more than his share of the domestic work, selecting by preference the more difficult occupations. If he was loved by his comrades, he repaid their affection by his kindness, without, however, deviating from the dictates of his conscience. It was noticed even that he availed himself discreetly of his influence over them to correct their negligence and to restrain their frivolous conversations. Eager to learn, and naturally endowed with a bright intellect and a retentive memory, he endeavoured to use all of these gifts by devoting to study whatever time he could legitimately take from his ordinary recreation.

What, however, distinguished him most from his companions was his piety. When he was hardly seven years old, he was accustomed to rise early and serve two or three Masses with the greatest fervour. He attended religious instructions and listened to Sunday sermons with the deepest recollection, and made pilgrimages to the sanctuary of Montaigu, a few miles from Diest, reciting the rosary as he went, or absorbed in meditation. As soon as he entered the Jesuit college at Mechlin, he was enrolled in the Sodality of the Blessed Virgin, and made a resolution to pray for the conversion of all heretics with the deepest recollection, and made pilgrimages to the sanctuary of Montaigu, a few miles from Diest, reciting the rosary as he went, or absorbed in meditation. As soon as he entered the Jesuit college at Mechlin, he was enrolled in the Sodality of the Blessed Virgin, and made a resolution to pray for the conversion of all heretics. He would, moreover, ask the director of the sodality every month to prescribe for him some special acts of devotion to Mary. On Fridays, at nightfall, he would go out barefooted and make the Stations of the Cross in the town. Such fervent, filial piety won him the grace of a religious vocation. Towards the end of his rhetoric course, he felt a distinct call to the Society of Jesus. His family was decidedly opposed to this, but his calm determination overcame all obstacles, and on 24 September, 1616, he was received into the novitiate at Mechlin. After two years passed in Mechlin he made his simple vows, and was sent to Antwerp to begin the study of philosophy. Remaining there only a few weeks, he set out for Rome, where he was to continue the same study. After journeying three hundred leagues on foot, carrying a wallet on his back, he arrived at the Roman College on 31 December, 1618. According to the usual course, he studied for two years and passed on to the third year class in philosophy in the year 1621. One day early in August of that same year he was selected by the prefect of studies to take part in a philosophical disputation at the Greek College, at that time under the charge of the Dominicans. He opened the discussion with great perspicacity and brilliancy, but in retreating to his own college, he was seized with a violent fever of which he died, on 13 August, at the age of twenty-two years and five months.

During the second part of his life, John offered the type of the saint who performs ordinary actions with extraordinary perfection. In his piety, obedience, and admirable charity he had no more religious, but he surpassed them all by his intense love for the rules of his order. The constitutions of the Society of Jesus lead those who observe them exactly to the highest degree of sanctity, as has been declared by Pope Julius III and his successors. The attitude of that ideal was what John proposed to himself. "If I do not become a saint when I am young", he used to
say, "I shall never become one." That is why he displayed such wisdom in conforming his will to that of his superiors and to the rules. He would have preferred death to the violation of the least of the rules of his way of life. With the exception of "I shall never become one," he would have paid the greatest attention to the least inspiration of God." He observed this fidelity in the performance of all his duties till the last day of his life, as is attested by Fathers Bauters, Cepari, Cecotti, Massucci, and Piccolomini, his spiritual director. With this he did not content himself; he desired to be seen and to invoke his intercession. The same year, Philip, Duke of Aerschot, had a petition presented to Pope Gregory XV for the taking of information with a view to his beatification. John Berchmans was declared Blessed in 1655, and was canonized in 1688. His statues represent him with hands clasped, holding his crucifix, his book of rules, and his rosary.

John Buckley, Venerable (dias John Jones; alias John Griffith; in religion, Godfrey Maurice), priest and martyr, born at Clwyd Fawr, Carnarvonshire, Wales, date of birth unknown; died at Southwark, England, 12 July, 1598. There is much confusion between the above and Robert (or Herbert; in religion, Sigebert) Buckley, the monk of Westminster who was the sole competing link between the pre-Reformation and post-Reformation English Benedictines. This accounts for any apparent discrepancy in John’s history. Thus it is said that he was a native of Shropshire, also that he was imprisoned in the Marshalsea, 1582-4, both of which statements are incorrect. He was of a good Welsh family, which had remained faithful to the Church. As a youth, he entered the Franciscan convent at Greenwich; at its dissolution in 1559 he went to the Continent, and was professed at Pontoise, France. After many years he journeyed to Rome, where he stayed at the Ar Ranieri convent. For thirty years he was a Conventual, he joined the Roman province, the Franciscan observance in 1591, as he had become imbued with the ideals of the Strict Observance. He then begged to be allowed to go upon the English mission, which his superiors permitted, and he also received a special blessing and commendation from Clement VIII. He reached London about the end of 1592, and stayed temporarily at the house which Father John Gerard had provided for missionary priests; he then laboured in different parts of the country, and his brother Franciscans in England elected him their provincial.

In 1596 the priest-catcher Topcliffe was informed by a spy that Buckley had visited two Catholics and had said Mass in their house, but it was afterwards shown that these people were in prison when the alleged offence took place. However, Father Buckley was promptly arrested and severely tortured. He never recanted, and the Topcliffe took him to his own house and practised unspeakable barbarities upon him, all of which he endured with a surprising fortitude. He was then imprisoned for nearly two years, and on 3 July, 1598, was tried on the charge of “going over the seas in the first year of Her Majesty’s reign [1558] and then being made a priest by authority from Rome and returning to England contrary to statute” (27 Eliz. c. 2). He was convicted of high treason and sentenced to be hanged, drawn, and quartered.

As by this time the people had grown tired of these butcheries, the execution was arranged for an early hour in the morning. The place was St. Thomas’s Watering, in what is now the Old Kent Road, at the site of the junction of the old Roman road to London with the main line of Watling Street. Such ancient landmarks had been immemorially used as places of execution, Tyburn itself being merely the point where Watling Street crossed the Roman road to Silchester. In spite of the early hour, a large crowd had gathered to see the execution. One of the guards, under the guise of crowding for several days to see and to invoke his intercession. The same year, Philip, Duke of Aerschot, had a petition presented to Pope Gregory XV for the taking of information with a view to his beatification. John Berchmans was declared Blessed in 1655, and was canonized in 1688. His statues represent him with hands clasped, holding his crucifix, his book of rules, and his rosary.

H. Demain.
John Capistran, Saint, b. at Capistrano, in the Diocese of Sulmona, Italy, 1385; d. 23 Oct., 1456. His father had come to Naples in the train of Louis of Anjou, hence is supposed to have been of French blood, though some say he was of German stock. His father dying early, John owed his education to his mother. She had him at first instructed at home, and then sent him to study law at Perugia, where he achieved great success under the eminent legist, Pietro de Ubaldis. In 1412 he was appointed governor of Perugia by Ladislaus, King of Naples, who then held that city of the Holy See. As governor he set himself against civic corruption and bribery. War broke out in 1416 between Perugia and the Malatesta. John was sent as ambassador to negotiate peace to the Malatesta, who however cast him into prison. It was during this imprisonment that he began to think more seriously about his soul. He decided eventually to give up the world and become a Franciscan friar, owing to a dream he had in which he saw St. Francis and was warned by the saint to enter the Franciscan Order. John had married a wealthy lady of Perugia immediately before the war broke out, but as the marriage was not Consummated he obtained a dispensation to enter religion, which he did 4 October, 1416.

After he had taken his vows he came under the influence of St. Bernardine of Siena, who taught him theology; he had as his fellow-student St. James of the Marches. He accompanied St. Bernardine on his preaching tours in order to study his methods, and in 1420, whilst in deacon’s orders, was himself permitted to preach. But his apostolic life began in 1425, after he had received the priesthood. From this time until his death he laboured ceaselessly for the salvation of souls. He traversed the whole of Italy; and so great were the crowds who came to listen to him that he often had to preach in the public squares. At the time of his preaching all business stopped. At Brescia on one occasion he preached to a crowd of one hundred and twenty-six thousand people, who had come from all the neighbouring provinces. On another occasion during a mission, over two thousand sick people were brought to him that he might sign them with the sign of the Cross, so great was his fame as a healer of the sick. Like St. Bernardine of Siena he greatly propagated devotion to the Holy Name of Jesus, and, together with that saint, was accused of heresy because of it. John was sent to the Inquisition. While he was thus carrying on his apostolic work, he was actively engaged in assisting St. Bernardine in the reform of the Franciscan Order. In 1429 John, together with other Observant friars, was cited to Rome on the charge of heresy, and he was chosen by his companions to defend their cause; the friars were acquitted by the commission of cardinals.

After this, Pope Martin V conceived the idea of uniting the Conventual Friars Minor and the Observants, and he offered the post of bishop to John. The Franciscans was convoked at Assisi in 1430. A union was effected, but it did not last long. The following year the Observants held a chapter at Bologna, at which John was the moving spirit. According to Gonzaga, John was about this time appointed commissary general of the Observants, but his name does not appear among the commissaries and vicars in Holzapfel’s list ("Manuale Hist. Ord. FF. Min.", 624–5) before 1443. But it was owing to him that St. Bernardine was appointed vicar-general in 1438. Shortly after this, whilst visiting France he met St. Colette, the reformation of the Second Franciscan Order, or Poor Clares, with whose efforts he entirely sympathized. He was frequently employed on embassies by the Holy See. In 1439 he was sent as legate to Milan and Burgundy, to oppose the claims of the antipope Felix V; in 1446 he was on a mission to the King of France; in 1451 he went at the request of the emperor as Apostolic nuncio to Austria. During the period of his nunciature John visited all parts of the empire, preaching and combating the heresy of the Hussites; he also visited Poland at the request of Casimir IV. In 1454 he was summoned to the Diet at Frankfort, in support of his convictions concerning a crusade against the Turks for the relief of Hungary: and here, too, he was the leading spirit. When the crusade was actually in operation John accompanied the famous Hunyady throughout the campaign: he was present at the battle of Beiligrad, and led the left wing of the Christian army against the Turks. He was beatiied in 1694, and canonized in 1724. He wrote many books, chiefly against the heresies of his day.

Three lives written by the saint’s companions, Nicholas of Fano, Christopher of Varese, and Jacob of Under, are given by the Bollandists, Acta SS., X, October; Wadding, Anales, IX–XII; Guérard, St. Jean de Capistrano et son temps (Bourgoin, 1865); Jacob, Johannes von Capistrano (Vienna, 1903); Allen, Three Catholic Reformers (London, 1872); Pagan, History of the Popes, II (London, 1891): Lass, Lives of the Saints and Blasied of the Third Orders of St. Francis, III (Taunton, 1895).

John Cassian. See Cassian, John.

John Chrysostom (Xpoue·roapos, "golden-mouthed", so called on account of his eloquence), Saint, b. at Antioch, c. 347; d. at Comana in Pontus, 14 September, 407. John—whose surname "Chrysostom" occurs for the first time in the life of St. Nemesius the Vigilius (cf. P. L., LX, 217) in the year 553—is generally considered the most prominent doctor of the Greek Church and the greatest preacher ever heard in a Christian pulpit. His natural gifts, as well as exterior circumstances, helped him to become what he was.

I. Life. (1) Boyhood. At the time of Chrysostom’s birth, Antioch was the second city of the Eastern part of the Roman Empire. During the whole of the fourth century religious struggles had troubled the empire and had found their echo at Antioch. Pagans, Manicheans, Gnostics, Arians, Apollinarians, Jews, made their proselytism; and at Antioch the orthodox were constantly agitated by the schism between the bishops Meletius and Paulinus. Thus Chrysostom’s youth fell in troubled times. His father, Secundus, was an officer of high rank in the Syrian army. On his death soon after the birth of John, Anthus, his wife, only twenty years of age, took the sole charge of two children. His death was early. Fortunately she was a woman of intelligence and character. She not only instructed her son in piety, but also sent him to the best schools of Antioch, though with regard to morals and religion many objections could be urged against them. Besides the lectures of An-
dragius, a philosopher not otherwise known, Chrysostom followed also those of Libanius, at once the most famous orator of that period and the most tenacious adherent of the declining paganism of Rome. As we may see from the later writings of Chrysostom, he attained then considerable Greek scholarship and classical culture, which he by no means disowned in his later days. His alleged hostility to classical learning is in reality but a misunderstanding of certain passages in which he defends the philosophia of Christianity against the myths of the heathen gods, of which the chief defenders in his time were the representatives and teachers of the sophia Parva (see A. Neugebauer in "Byzantin. Zeitschrift", XIII, 70–113; Idem, "Chrysostomus und Libanius" in Xeroorogia, I, Rome, 1908, 81–142).

(2) Chrysostom as Lector and Monk.—It was a very decisive turning-point in the life of Chrysostom when he met one day (about 367) the bishop Meletius. The earnest, mild, and winning character of this man captivated Chrysostom in such a measure that he soon began to withdraw from classical and profane studies and to devote himself to an ascetic and religious life. He studied Holy Scripture and frequented the sermons of Meletius. About three years later he received Holy Baptism and was ordained lector. But the young clergy, seized by the desire of a more perfect life, soon afterwards entered one of the ascetic societies near Antioch, which was under the spiritual direction of Carterius and especially of the famous Diodorus, later Bishop of Tarasus (see Palladius, "Dialogues", v; Sosomnus, "Hist. eccles.", VIII, 2). Prayer, manual labour, and the study of Holy Scripture were his chief occupations, and we may safely suppose that his first literary works date from this time, for nearly all his earlier writings deal with ascetic and monastic subjects (cf. below Chrysostom's writings: 1) "Opuscula"). Four years later, Chrysostom resolved to live as an anchorite in one of the caves near Antioch. He remained there two years, but then, as his health was quite ruined by indiscriminate watchings and fastings in frost and cold, he prudently returned to Antioch to regain his health, and resumed his office as lector in the church.

(3) Chrysostom as Deacon and Priest at Antioch.—As the sources of the life of Chrysostom give an incomplete chronology, we can but approximately determine the dates for this Antiochene period. Very probably in the beginning of 381 Meletius made him deacon, just before his own departure to Constantinople, where he died as president of the Second Ecumenical Council. The successor of Meletius was Flavian (concerning whose succession see F. Cavalleria, "Le Schemi d'Antioche", Paris, 1905). Ties of sympathy and friendship connected Chrysostom with his new bishop. As deacon he had to assist at the liturgical functions, to look after the sick and poor, and was probably charged also in some degree with teaching the catechumens. At the same time he continued his literary work, and we may suppose that he composed his most famous book, "On the Priesthood", towards the end of this period (c. 386; see Socrates, "Hist. eccl.", VI, 3), or at the latest in the beginning of his priesthood (c. 387, as Nairn with good reasons puts it, in his edition of "De Sacerd.", xii–xv). There may be some doubt if it was occasioned by a real historical fact, viz., that Chrysostom and his friend Basil were requested to accept bishoprics (c. 372). All the earliest Greek biographers seem not to have taken it in that sense, and it seems more likely that it was occasioned by Flavian, and from that year dates his real importance in ecclesiastical history. His chief task during the next twelve years was that of preaching, which he had to exercise either instead of or with Bishop Flavian. But no doubt the larger part of the popular religious instruction and education devolved upon him. The earliest notable occasion which showed his power of speaking and his great authority was the Lent of 387, when he delivered his sermons "On the Statues" (P. G., XLVIII, 15 sqq.). The people of Antioch, excited by the levy of new taxes, had thrown down the statues of Emperor Theodosius. In the panic and fear of punishment which followed, Chrysostom delivered a series of twenty or twenty-one (the nineteenth is probably not authentic) sermons, full of vigour, consolatory, exhortative, tranquilizing, until Flavian, the bishop, brought back from Constantinople the emperor's pardon. But the usual preaching of Chrysostom consisted in consecutive explanations of Holy Scripture. To that custom, unhappily no longer in use, we owe his famous and magnificent commentaries, which offer us such an inexhaustible treasure of dogmatic, moral, and historical knowledge of the transition from the fourth to the fifth century. These years, 386–98, were the period of the greatest theological productivity of Chrysostom, a period which alone would have assured him for ever a place among the first Doctors of the Church. A sign of this may be seen in the fact that in the year 392 St. Jerome already accorded to the preacher of Antioch a place among his Viri ilustres ("De Viris ille.", 129, in P. L., XXIII, 754), referring expressly to the great and successful activity of Chrysostom as a theological writer. From this same fact we may infer that during this time his fame had spread far beyond the limits of Antioch, and that he was well known in the Byzantine Empire, especially in the capital.

(4) St. Chrysostom as Bishop of Constantinople.—In the ordinary course of things Chrysostom might have become the successor of Flavian at Antioch. But on 27 September, 397, Nectarius, Bishop of Constantinople, died. There was a general rivalry in the capital, openly or in secret, for the vacant see. After some months it was known, to the great disappointment of the competitors, that Emperor Arcadius, at the suggestion of his minister Eutropius, had sent to the Prefect of Antioch to call John Chrysostom out of the
town without the knowledge of the people, and to send him straight to Constantinople. In this sudden way Chrysostom was hurried to the capital, and ordained Bishop of Constantinople on 26 February, 398, in the presence of a great assembly of bishops, by Theophilius, Patriarch of Alexandria, who had been obliged to renounce the idea of securing the appointment of Isidore, a candidate for Chrysostom as great as it was unexpected. His new position was not an easy one, placed as he was in the midst of an upstart metropolis, half Western, half Oriental, in the immediate neighbourhood of a court in which luxury and intrigue always played the most prominent parts, and at the head of a clergy composed of the intellectuals of the Hellenistic age (though not canonically, at least practically) at the head of the whole Byzantine episcopate. The first act of the new bishop was to bring about a reconciliation between Flavian and Rome. Constantinople itself soon began to feel the impulse of a new ecclesiastical life.

The necessity for reform was undeniable. Chrysostom began “weeping the stairs from the top” (Palladius, op. cit., V). He called his aeconomus, and ordered him to reduce the expenses of the episcopal household; he put an end to the frequent banquets, and to the strictly private life of people and formerly tutors of the clergy as a priest and monk. With regard to the clergy, Chrysostom had at first to forbid them to keep in their houses syneclastic, i.e. women housekeepers who had vowed virginity. He also proceeded against others who, by avarice or luxury, had given scandal. He had even to exclude from the ranks of the clergy two deacons, the one for murder and the other for adultery. Of the monks, too, who were very numerous even at that time at Constantinople, some had preferred to roam about aimlessly and without discipline. Chrysostom confined them to their monasteries. Finally, he took care of the ecclesiastical widows. Some of them were living in a worldly manner: he obliged them either to marry again, or to observe the rules of decorum demanded by their state. After the clergy, Chrysostom turned his attention to his flock. As he had done at Antioch, so at Constantinople and with more reason, he frequently preached against excessive luxury, and especially against the ridiculous finery in the matter of dress affected by women whose age should have put them beyond such vanities. Some of them, the widows Marra, Castricia, Eugraphia, known for such preposterous tastes, belonged to the court circle. It seemed to some people that the classes of the rich were previously been accustomed to such language. Doubtless some felt the rebuke to be intended for themselves, and the offence given was the greater in proportion as the rebuke was the more deserved. On the other hand, the people showed themselves delighted with the sermons of their new bishop, and frequently applauded him in the church (Socrates, “Hist. eccl.” VI). They never forgot his care for the poor and miserable, and that in his first year he had built a great hospital with the money he had saved in his household. But Chrysostom had also very intimate friends among the rich and noble classes. The most famous of these was Olympias, widow and deaconess, a relation of Emperor Theodosius, while in the Court itself there was Brison, first usher of Eudoxia, who assisted Chrysostom in instructing his choirs, and always maintained a true friendship for him. The empress herself was at first matters, but after the death of her husband. She followed the religious processions, attended his sermons, and presented silver candlesticks for the use of the churches (Socrates, op. cit., VI, 8; Sozomenus, op. cit., VIII, 8).

Unfortunately, the feelings of amity did not last. At first Eutropius, the former slave, now minister and consul, abused his influence. He deprived some wealthy persons of their property, and prosecuted others whom he suspected of being adherents of his. More than once Chrysostom went himself to the minister (see “Oratio ad Eutropium” in P. G., Chrys. Op., III, 392) to remonstrate with him, and to warn him of the results of his own acts, but without success. Then the above-named ladies, who immediately surrounded the empress, probably did not hide their resentment against the strict bishop. Finally, the empress herself committed an injustice in depriving a widow of her vineyard (Marcus Diaec., “Vita Porphyrii”, V, no. 37, in P. G., LXV, 1229). Chrysostom interceded for the latter. But Eudoxia showed herself offended. Henceforth there was a certain coolness between the two, even if not formally as a palace, which, growing little by little, led to a catastrophe. It is impossible to ascertian exactly at what period this alienation first began; very probably it dated from the beginning of the year 401. But before this state of things became known to the public there happened events of the highest political importance, and Chrysostom, without seeking it, was implicated in them. These were the fall of Eutropius and the revolt of Gainas.

In January, 399, Eutropius, for a reason not exactly known, fell into disgrace. Knowing the feelings of the people towards Chrysostom, he hurried to oust him from the church. As he had himself attempted to abolish the immunity of the ecclesiastical asylums not long before, the people seemed little disposed to spare him. But Chrysostom interfered, delivering his famous sermon on Eutropius, and the fallen minister was saved for the moment. As, however, he tried to escape during the night, he was seized, exiled, and some time later put to death. Immediately another more exciting and more dangerous event followed. Gainas, one of the imperial generals, had been sent out to subdue Thrace, who had revolted. In the summer of 399 Galerius united openly with the Trebizonites in Asia Minor, and restore peace, Arcadius had to submit to the most humiliating conditions. Gainas was named commander-in-chief of the imperial army, and even had Aurelian and Saturninus, two men of the highest rank at Constantinople, delivered over to him. It seems that Chrysostom accepted the mission, and that, owing to his intervention, Aurelian and Saturninus were spared by Gainas, and even set at liberty. Soon afterwards, Gainas, who was an Arian Goth, demanded one of the Catholic churches at Constantinople for himself and his soldiers. Again Chrysostom interfered, and made so energetic an opposition that Gainas, who was by this time made so energetic an opposition that Gainas, who was by this time
come to Ephesus, where he appointed a new archbishop, and with the consent of the assembled bishops deposed six bishops for simony. After having passed the same sentence on Bishop Gerontius of Nicomedia, he returned to Constantinople.

Meanwhile disagreeable things had happened there. Bishop Severian, to whom Chrysostom seems to have entertained a persistent and unbridled enmity, had entered into open enmity with Serapion, the archdeacon and aconimus of the cathedral and the episcopal palace. Whatever the real reason may have been, Chrysostom found the case so serious that he invited Severian to return to his own see. It was the first and last celebration of the festival of Aelia Dora, whose confidence Serapion possessed, that he was allowed to come back from Chalcedon, whither he had retired. The reconciliation which followed was, at least on the part of Severian, not a sincere one, and the public scandal had excited much ill-feeling. The effects soon became visible. When in the spring of 402 Bishop Porphyrius of Gaza (see Marcus Diacon., "Vita Porphyrii", V, ed. Nuth, Bonn, 1897, pp. 11–19) went to the Court at Constantinople to obtain a favour for his diocese, Chrysostom answered that he could do nothing for him, since he was himself in disgrace. No doubt the Emperor theodosius was not really dangerous, unless they could find some prominent and unscrupulous leader. Such a person presented himself sooner than might have been expected. It was the well-known Theophilus, Patriarch of Alexandria. He appeared under rather curious circumstances, which in no way overshadowed the final result. Theophilus, towards the end of the year 402, was summoned by the emperor to Constantinople to apologize before a synod, over which Chrysostom should preside, for several charges, which were brought against him by certain Egyptian monks, especially by the so-called four "tall brothers". This appeal was accompanied by a formal movement against them, and had them persecuted as Originsites (Palladius, "Dialogus", xvi; Socrates, op. cit., VI, 7; Sozomenus, op. cit., VIII, 12).

However, Theophilus was not easily frightened. He had always agents and friends at Constantinople, and knew the state of things and the feelings at the court. He now resolved to take advantage of them. He wrote at once to St. Epiphanius at Cyprus, requesting him to go to Constantinople and prevail upon Chrysostom to condemn the Originsites. Epiphanius went. But when he found that Theophilus was menace not only to his own diocese, but to his own capital, dying on his return in 403. At this time Chrysostom delivered a sermon against the vain luxury of women. It was reported to the empress as though she had been personally alluded to. In this way the ground was prepared. Theophilus at last appeared at Constantinople in June, 403, not alone, as he had been commanded, but with twenty-nine of his suffragan bishops, and, as Palladius (ch. viii) tells us, with a good deal of money and all sorts of gifts. He took his lodgings in one of the imperial palaces, and held conferences with all the adversaries of Chrysostom. Then he met with his suffragans and seven other bishops to a villa near Constantinople, called ευ έπισκοπη (see Ubaldi, "La Synodo ad Quercum", Turin, 1902). A long list of the most ridiculous accusations was drawn up against Chrysostom (see Photius, "Bibliotheca", 59, in P. G., CIII, 105–113), who, surrounded by forty-two bishops and bishops of Constantinople, was summoned to appear before the synod of Constantinople, held under the orders of the emperor, was now summoned to present himself and apologize. Chrysostom naturally refused to recognise the legality of a synod in which his open enemies were judges. After the third summons Chrysostom, with the consent of the emperor, was declared to be deposed. In order to avoid useless bloodshed, he surrendered himself on the third day to the soldiers who awaited him. But the threats of the excited people, and a sudden accident in the imperial palace, frightened the empress (Palladius, "Dialogus", ix). She feared some punishment from heaven for Chrysostom's exile, and ordered his recall. After some hesitation Chrysostom re-entered the capital amid the great rejoicings of the people. There was a scene of unbridled exultation. Some even killed themselves by flying from Constantinople. Chrysostom's return was in itself a defeat for Eudoxia. When her alarms had gone, her rancour revived. Two months afterwards a silver statue of the emperor was unvelied in the square just before the cathedral. The sermon which attended the ceremony was so boisterous that the offices in the church were disturbed. Chrysostom complained of this to the prefect of the city, who reported to Eudoxia that the bishop had complained against her statue. This was enough to excite the empress beyond all bounds. She summoned the patriarch and the other bishops to come back and to depose Chrysostom again. The prudent patriarch, however, did not wish to run the same risk a second time. He only wrote to Constantinople that Chrysostom should be condemned for having re-entered his see in opposition to the past. The sentence was held in the year 341 (an Arius synod). The other bishops had neither the authority nor the courage to give a formal judgment. All they could do was to urge the emperor to sign a new decree of exile. A double attempt on Chrysostom's life failed. On Easter Eve, 404, when all the catechumens were to receive baptism, the adversaries of the bishop, with imperial soldiers, invaded the baptistery and dispersed the whole congregation. At last Arcadius signed the decree, and on 24 June, 404, the soldiers conducted Chrysostom a second time into exile.

5) Exile and Death.—They had scarcely left Constantinople when a huge conflagration destroyed the cathedral, the senate-house, and other buildings. The followers of the exiled bishop were accused of the crime and prosecuted. In haste Arcadius, an old man, was appointed successor of Chrysostom, but was soon succeeded by the cunning Atticus. Whoever refused to enter into communion with them, was punished by confiscation of property and exile. Chrysostom himself was conducted to Cucusus, a secluded and rugged place on the east frontier of Armenia, continuously exposed to the invasions of the Sassarians. In the following year he had even to fly some time to the castle of Ars, to protect himself from the barbarians. Meanwhile he always maintained a correspondence with his friends and never gave up the hope of return. When the circumstances of his deposition were known in the West, the pope and the Italian bishops declared themselves in his favour. Emperor Honorius and Pope Innocent I endeavoured to summon a new synod, but their legates were imprisoned and then sent home. The pope broke off all communion with the Patriarchs of Alexandria, Antioch (where an enemy of Chrysostom had succeeded Flavian), and Constantinople, until (after the death of Chrysostom) they consented to admit him again into the diptychs of the Church. Finally all hopes for the exiled bishop had vanished. Apparently he was living too long for his adversaries. In the summer, 407, the order was given to carry him to Pithysus, a place at the extreme boundary of the empire, near the Caucasus. One of the two soldiers who had to lead him caused him not only public contempt but made him force to make long marches, was exposed to the rays of the sun, to the rains and the cold of the nights. His body, already weakened by several severe illnesses, finally broke down. On 14 Sept. the party were at Comana in Pontus. In the morning Chrysostom had asked to rest there on account of his state of health. In vain; he was forced to continue his march.
Very soon he felt so weak that they had to return to Comana. Some hours later Chrysostom died. His last words were: Ἀληθὲς ἦς τὸς ἱερὸν ἰππὸν ἥφασεν (Glory be to God for all things) (Palladius, xi, 38). He was buried at Comana. On 27 January, 438, his body was translated to Constantinople with great pomp, and entombed in the church of the Apostles where Eudoxia had been buried in the year 404. See Socrates, VII, 45; Constantin Porphyrogenitus, "Cerimoniola Aulae Byza.ii", II, 92, in P. G., CXII, 1204 B.

II. THE WRITINGS OF ST. CHRYSOSTOM.—Chrysostom has deserves a placed in ecclesiastical history, not simply as Bishop of Constantinople, but chiefly as a Doctor of the Church. Of none of the Greek Fathers do we possess such a complete series of works. We may divide them into three portions, the "opuscula," the "homilies," and the "letters." (1) The chief "opuscula" all date from the earlier days of his literary activity. The following deal with monastical subjects: "Comparatio Regia cum Monacho" ("Opera"), I, 387-93, in P. G., XLVII-XLIII, "Adhortatio ad Theodorum (Mopsuestensem?) lapsum" (ibid., 277-319), "Adversus oppugnatores vitae monasticæ" (ibid., 319-87). Those dealing with ascetical generalities in general are the treatise "De Comportatione" in two books (ibid., 393-423), "Adhortationes ad Stigmatisculos" in books I and II (ibid., 435-521), "Adhortationes ad introductas" (ibid., 495-532), "De Virginitate" (ibid., 533-93), "De Sacroedothio" (ibid., 623-93). (2) Among the "homilies" we have to distinguish commentaries on books of Holy Scripture, groups of homilies (sermons) on special subjects, and a great number of single homilies. (a) The chief "commentaries" on the Old Testament are the sixty-seven homilies "On Genesis" (with eight sermons on Genesis, which are probably a first recension) (IV, 21 sqq., and ibid., 407 sqq.); fifty-nine homilies "On the Psalms" (4-12, 43-49, 108-117, 119-150) (V, 39-498), concerning which see C. E. Fritzsche, which lightly avoided "De inferni conspectus" (ibid., 287-92), on "John Chrysostomus su den Psalmen" in Ἱστορικομετα., fasc. I (Rome, 1900), 235-42, a commentary on the first chapters of "Isaiah" (VI, 11 sqq.). The fragments on Job (XIII, 503-65) are sporadic (see Haidacher, "Chrysostomens Fragmenta in Job," I, 217 sqq.) and sporadic (ibid., 575-740), on the Synopses of the Old and the New Testament (ibid., 313 sqq.), is doubtful. The chief commentaries on the New Testament are first the ninety homilies on "St. Matthew" (with the year 3901-3904) and the "homilies on John" (c. 389; VIII, 23 sqq.—probably from a later editor), fifty-five homilies on the "Acts" (as preserved by the stenographer, IX, 13 sqq.), and homilies "On all the Epistles of St. Paul" (IX, 391 sqq.). The best and most important commentaries are those on the Psalms, on St. Matthew, and on the Epistle to the Romans (written c. 370). The thirty-four homilies on the Epistle to the Hebrews were only published after Chrysostom's death, and the commentary on the Epistle to the Galatians also very probably comes to us from the hand of a second editor. (b) Among the "homilies forming connected groups," we may especially mention the five homilies "On Anna" (IV, 631-76), three "On David" (ibid., 675-708), six "On Oza" (VI, 97-142), eight "Against the Jews" (II, 843-942), twelve "De Incomprehensi bili Dei natura" (ibid., 701-812), and the seven famous homilies "On St. Paul" (III, 473-514). (c) A great many more homilies havedeal with the lives of sacred objects, with certain feasts or saints. (3) The "Letters" of Chrysostom (about 238 in number: III, 547 sqq.) were all written during his exile. Of special value for their contents and intimate nature are the seventeen letters to the deaconess Olympia. Among the numerous "Apologiae" we may mention the liturgy attributed to Chrysostom, which, perhaps modified, but did not compose the ancient text. The most famous apology is the "Letter to Cæsarius" (III, 755-769). It contains a passage on the holy Eucharist which seems to favour the theory of "impanatio," and the disputes about it have continued for more than two centuries. The most important spurious work in Latin is the "Opus imperfectum," written by an Anian in the first half of the fifth century (see Th. Paas, "Das Opus imperfectum in Matteanum," Ta bingen, 1907).

III. CHRYSOSTOM'S THEOLOGICAL IMPORTANCE.—(1) Chrysostom as Orator.—The success of Chrysostom's preaching is chiefly due to his great natural facility of speech, which was extraordinarily even to Greeks, to the abundance of his homilies, and to the popular way of presenting and illustrating them, and, last but not least, the whole-hearted earnestness and conviction with which he delivered the message which he felt had been given to him. Speculative explanations did not attract his mind, nor would they have suited the tastes of his hearers. He ordinarily preferred moral subjects, and very seldom in his sermons followed any regular plan, nor did he care to avoid digressions when any opportunity suggested them. In this way he is by no means a model for our modern thematic preaching, which, however we may "Adm. Part. St. John Chrysostomus in the race of apostolic officials, Chrysostom's exegesis is often quite clear and easy. But the frequent outbursts of applause among his congregation may have told Chrysostom that he was on the right path.

(2) As an exegete Chrysostom is of the highest importance, for he is the chief and almost the only successful representative of the exegetical principles of the School of Antioch. Didorus of Tarsus had initiated him into the grammatico-historical method of that school, which was in strong opposition to the eccentric, allegorical, and mystical interpretation of Origen and the Alexandrian School. But Chrysostom's writings freely avoided his master's deep penetration into the text of the Old Testament, and only went to the extreme to which, later on, his friend Theodorus of Mopsuestia, the teacher of Nestorius, carried them. He did not even exclude all allegorical or mystical explanations, but confined them to the cases in which the inspired author himself suggests this meaning.

(3) Chrysostom's authority on the issues of the Church of the East has already been said, Chrysostom's was not a speculative mind, nor was he involved in his lifetime in great dogmatic controversies. Nevertheless it would be a mistake to underrate the great theological treasures hidden in his writings. From the very first he was considered an authority, and his expositions are a witness to the Faith. Even at the Council of Ephesus (431) both parties, St. Cyril and the Antiochians, already invoked him on behalf of their opinions, and at the Seventh Ecumenical Council, when a passage of Chrysostom had been read in favour of the veneration of images, Bishop Peter of Nicomedia cried out: "If John Chrysostom were speaking in that way of the images, who would dare to speak against them?" which shows clearly the progress his authority had made up to that date.

Strangely enough, in the Latin Church, Chrysostom was still earlier invoked as an authority on matters of faith. The first writer who quoted him was Pelagius, when he wrote his lost book "De Naturæ" against St. Augustine (c. 415). The Bishop of Hippo himself very soon afterward (421) claimed Chrysostom for the Catholic teaching in his controversy with Julian of Eclanum, who had opposed him a passage of Chrysostom with the argument "It is only preserved only in Latin" as being against original sin (see Chrys. Baur, "L'entrée littéraire de St. Jean Chrys. dans le monde latin" in the "Revue d'histoire ecclési.", VIII, 1907, 249-65). Again, at the time of the Reformation there arose long and acrid discussions as to whether Chrysostom was a Protestant or a Catholic, and these polemics have never wholly ceased.
It is true that Chrysostom has some very strange passages on our Blessed Lady (see Newman, "Certain difficulties felt by Anglicans in Catholic Teaching", London, 1875, pp. 130 sqq.), that he seems to ignore private confession to a priest, that there is no clear and consistent teaching of the supremacy of the pope. But it must be remembered that all the respective passages contain nothing positive against the actual Catholic doctrine. On the other side Chrysostom explicitly acknowledges as a rule of faith tradition (XI, 480), as laid down by the authoritative teaching of the Church (I, 5). This Church, he says, is but one, by the unity of her doctrine (V, 224; XI, 554); she is spread over the whole world, she is the one Bride of Christ (III, 229, 403; V, 62; VIII, 170). As to Christology, Chrysostom holds clearly that Christ is God and man in one person, but he never uses the deeper concepts of the doctrine of the Holy Trinity or of the Person of the Holy Spirit this union. Of great importance is his doctrine regarding the Eucharist. There cannot be the slightest doubt that he teaches the Real Presence, and his expressions on the change wrought by the words of the priest are equivalent to the doctrine of transubstantiation. The Eucharisticiehre des hl. Joh. Chrysostom.[74 sqq.]

John Climacus, Saint, also known and Scholas- tus, and The Simarit, b. doubtless in Syria, about 525; d. on Mount Sinai, 30 March, probably in 606, according to the accredited opinion—others say 605. Although his education and learning fitted him to live in an intellectual environment, he chose, while still young, to abandon the world for a life of solitude. He was region of Mount Sinai, where he could surround himself by the holiness of the monks who inhabited it; he betook himself thither and trained himself to the practice of the Christian virtues under the direction of a monk named Martyrius. After the death of Martyrius John, wishing to practise greater mortifications, withdrew to a hermitage on Mount Sinai. In this isolation he lived for some twenty years, constantly studying the lives of the saints and thus becoming one of the most learned doctors of the Church.

In 600, when he was about seventy-five years of age, the monks of Sinai persuaded him to put himself at their head. He acquired himself of his functions as abbot with the greatest wisdom, and his reputation spread so far that the pope (St. Gregory the Great) wrote to recommend himself to his prayers, and sent him a sum of money for the hospital of Sinai, in which the pilgrims were wont to lodge. Four years later he resigned his charge and returned to his hermitage to prepare for death. St. John Climacus has left us two important works: the "Scala [Kairos] Paradisum", from which his surname comes, composed at the request of John, Ab- bess of Raititza, a monastery of the Kievites, on the shores of the Red Sea; and the "Liber ad Pastore". The "Scala", which obtained an immense popularity and has made him an authorship, is addressed to anchorites and cenobites, and treats of the means by which the highest degree of religious perfection may be attained. Divided into thirty parts, or "steps", in memory of the thirty years of the hidden life of Christ, the Divine model of the religious, it presents a picture of all the virtues and contains a great many parables and historical touches, drawn principally from the monastic life, and exhibiting the practical application of the precepts. At the same time, as the work is mostly written in a concise, sententious form, with the aid of aphorisms, and as the reasonings are not sufficiently closely connected, it is at times somewhat obscure. This explains its having been the subject of various commentaries, even in very early times. The most ancient of the manuscripts containing the "Scala" is found in the Bibliothèque Nationale in Paris, and was probably brought from Florence by Catharine de' Medici. In some of these manuscripts the work bears the title of "Spiritual Tables" (Tavole spirituali). It was translated into Latin by Ambrogio the Camaldolese (Ambrosius Camaldulensis) (Venice, 1531 and 1569; Cologne, 1583, 1593, with a commentary by Denis the Carthusian; and 1601, 5vo). The Greek of the "Scala", with the scholia of Elias, Archbishop of Crete, and also the text of the "Liber ad Pas-
John Colommini, Blessed, founder of the Congregation of Jesus; b. at Siena, Upper Italy, about 1300; d. on the way to Acquapendente, 31 July, 1367. There was nothing in his early life to indicate the presence in his character of any unusual seeds of holiness. Belonging to an old patrician family, he devoted himself, like many others, to the study of his classics in Italy, to commerce, which swelled his already substantial fortune, and rose to a position of great prominence and influence among his fellow-citizens, who on several occasions elected him gonfalonier. Fortunate in his marriage, of which two children—Peter and Agnese—were the fruit, his private life was marred by his aversion, his ambition, and his proneness to anger. One day, while still suffering under a sense of mortification after one of his passionate outbursts occasioned by a petty domestic disappointment, he chanced to take up a biography of St. Mary of Egypt, whose later life had been as conspicuously shadowy as her earlier one had been for sin. The perusal of this narrative brought a new light into his life; henceforth ambition and anger gave way to an almost incredible humility and meekness. The great transformation of his life extended to his business affairs, and excited in the purely mercenary-minded a ridicule easy to understand. Heceased, however, of railery, he did not rest content with selling cheaper than any other merchant, but persisted in paying more for his purchases than the sum demanded. With the consent of his wife he soon abandoned his former patrician associates, visited hospitals, tended the sick, and made large donations to the poor. Then, casting aside his former station, he assumed the garments of the most indigent, and, having fallen ill and believing himself treated with too much delicacy at home, deserted his luxurious house for the ordinary ward of a poor hospital. His relations urged him to return, and finally elicited his consent on the condition that henceforth he would be given only the coarser forms of nourishment. Nursed back to health, he insisted on making his house the refuge of the needy and the suffering, washing their feet with his own hands, dispensing to them bodily and spiritual comfort, leaving nothing undone that the spirit of charity could suggest. Among the wonders recorded to have taken place in this abode of Christian mercy was the miraculous disappearance of a leper, leaving the room permeated with an indescribable fragrance.

It required eight years to render his wife reconciled to the extraordinary philanthropy of her husband. His son having meanwhile died, and his daughter too, the Sienese with the approval of his wife, on whom he first settled a life-annuity, divided his fortune into three parts: the first went to endow a hospital, the second and third to two cloisters. Together with his old friend Francisco Mini, who had been associated with him in all his charitable works, he founded a life of apostolic poverty, begged for his daily bread, and esteemed it a favour to be allowed to wait on the sick poor, while in public and in their dwellings he stimulated the people to pence. He was soon joined by those of the Piccolomini and by members of other patrician families, who likewise distributed all their goods among the poor. Alarmed at these occurrences, many of the Siene now raised an outcry, complaining that Colommini and his followers were the most promising young men of the city to "folly", and succeeded in obtaining their banishment. Accompanied by twenty-five companions, Colommini left his native city without a protest and visited in succession Arezzo, Città di Castello, Fiesa and many other Tuscan cities, making numerous conversions, reconciling sullen friends, and effecting the inward renewal of much property owned by his order. An epidemic which broke out at Siena shortly after his departure, was generally regarded as a heavenly chastisement for his banishment, and there was a universal clamour for his recall. Regardless alike of derision and insult, he resumed on his return his former charitable occupations, in his humility rejoicing to perform the most menial services at house, where he had once been an honoured guest.

On the return of Urban V from Avignon to Rome (1367), Colommini and his followers hastened to meet him, and begged him to sanction the foundation of a new institute. A commission was appointed, presided over by Cardinal William Sudre, Bishop of Marseilles, having attested their freedom from every taint of the error of the Fraticelli, whose views some evil-intentioned people had accused them of holding, the pope gave his consent to the foundation of their congregation. The name Jesuati (Jesuates) had already been given them by the populace of Viterbo because of their constant use of the ejaculation "Praise be to Jesus Christ." From the very beginning they had a special veneration for St. Jerome, and, to this fact and to the apostolic life they led, they were indebted for their long and honorific name Hieronymi (Apostolic Clerics of St. Jerome). Urban appointed as their habit a white soutain, a white four-cornered hood hanging round the neck and falling in folds over the shoulders, and a mantle of a dun colour; the soutain was encircled by a leathern girdle, and sandals were worn on the feet. Their occupations were the care of the sick, particularly the plague-stricken, the burial of the dead, prayer, and strict mortification (including daily scourging). Their statutes were at first based on the Rule of St. Benedict, modified to suit the aims of the congregation, but the Rule of St. Augustine was later adopted. They decided a week after the establishment of their institute, having appointed Mini his successor. After many miracles had occurred at his tomb, Gregory XIII inserted Colommini’s name in the Roman Martyrology, fixing 31 July for the celebration of his feast, which is of obligation at Siena. Under Mini and his successor, Blessed Jerome Dasciau, the Jesuits spread rapidly over Italy, and in 1606 the Holy See allowed the reception of priests into the congregation. Abuses, however, crept in subsequently, and the congregation was suppressed by Clement IX in 1668 as of little advantage to the interests of the Church. The Jesuatiess or Sisters of the Visitation of Mary, founded about 1367 at the suggestion of Colommini by his cousin Blessed Catharine Colommini of Siena (d. 20 October, 1387), spoke as little as possible, fasted very strictly, and chastised their bodies twice daily. They also spread very rapidly, and survived in Italy until 1750.

Thomas Kennedy.
JOHN CORNELIUS AND COMPAANIONS, VENERABLES.— John Cornelius (called also Mobun) was born of Irish parents at Bodmin, in Cornwall, on the estate of Sir John Arundel, of Lanherne, in 1557; martyred at Dover, 4 July, 1594. Sir John Arundel took an interest in England and laboured there for nearly ten years. He practised mortification, was devoted to meditation, and showed much zeal in the ministry. While acting as chaplain to Lady Arundel, he was arrested on 24 April, 1594, at Chideock Castle, by the sheriff of Dorsetshire. He was met on the way by Thomas Bosgrave, a relative of the Arundell family, who offered him his own hat, as he had been dragged out bareheaded. Thereupon Bosgrave was arrested. Two servants of the castle, John (or Terence) Carey and Patrick Salmon, natives of Dublin, shared the same fate. When they reached the sheriff's house a number of people were in drinking to the Catholic religion, but were so well answered that the sheriff stopped the disputation. The missionary was sent to London and brought before the Lord Treasurer, the Archbishop of Canterbury, and others, who, by words and by torture, tried in vain to obtain the retraction of the proclamation. He was finally brought back to Dorchester and with his three companions condemned to death, 2 July, 1594. He was accused of high treason, because he was a priest and had returned to England; the others were charged with felony, for having rendered assistance to one who professed to be a priest; but all were assured that their lives would be spared if they embraced Protestantism. While in prison John Cornelius was admitted to membership in the Society of Jesus. On the way to execution none of the confessors showed signs of fear. The first to ascend the scaffold was John Carey; he kissed the rope, explaining, "O precious collar," made a solemn profession of faith and died a valiant death. Before his execution Patrick Salmon, a man much admired for his virtues, exhorted the spectators to embrace the faith, for which he and his companions were giving their lives. Then followed Thomas Bosgrave, a man of education, who delivered a stirring address on the truth of his belief. The last to suffer was John Cornelius, who kissed the gallows with the words of St. Andrew, "O Cross, long desired," etc. On the ladder he tried to speak to the multitude, but was prevented. After praying for his executioners and for the welfare of the queen, John Cornelius was executed. The body was taken down and quartered, his head was nailed to the gibbet, but soon removed. The bodies were buried by the Catholics.

FRANCIS MERSHMAN.

John Damascene, Saint, b. at Damascus, about 378; d. some time between 754 and 757. The only extant life of the saint is that by John, Patriarch of Jerusalem, which dates from the tenth century (P. G., XCIV, 429-90). This life is the single source from which all have drawn the materials of his biographical notices. It is extremely unsatisfactory from the standpoint of historical criticism. An exception is the last section, a prolix, pedantic, and a turgid style are its chief characteristics. Mansur was probably the name of John's father. What little is known of him indicates that he was a stercing Christian whose infidel environment made no impression on his religious fervour. Apparently his adhesion to Christian truth constituted no offence in the eyes of his Saracen countrymen, for he seems to have enjoyed their esteem in an eminent degree, and discharged the duties of chief financial officer for the caliph, Abdul Malik. Of his early life nothing is known, except that he was the names of but two of his children, John and his half-brother Cosmas. When the future apologist had reached the age of twenty-three his father cast about for a Christian tutor capable of giving his sons the best education the age afforded. In this he was singularly fortunate. Standing one day in the market-place he discovered among the captives taken in a recent raid on the shores of Italy a Sicilian monk named Cosmas. Investigation proved him to be a man of deep and broad erudition. Through the influence of the caliph, Mansur secured the captive's liberty and appointed him tutor to his sons. Under the tutelage of Cosmas, John made such rapid progress that, in the enthusiastic language of his biographer, he soon equalled Diophantus in algebra and Euclid in geometry. Equal progress was made in music, astronomy, and theology.

On the death of his father, John Damascene was made protosynkellos and archbishop of Jerusalem. It was during his incumbency of this office that the Church in the East began to be agitated by the first mutterings of the Iconoclast heresy. In 726, despite the protests of Germanus, Patriarch of Constantinople, Leo the Isaurian issued his first edict against the veneration of images. From his first meeting with the caliph, John Damascene immediately entered the lists against him, in defence of this ancient usage of the Christians. Not only did he himself oppose the Byzantine monarch, but he also stirred the people to resistance. In 730 the Isaurian issued a second edict, in which he not only forbade the veneration of images, but even inhibited their exhibition in public places. To this royal decree the Damascene replied with even greater vigour than before, and by the adoption of a simpler style brought the Christian side of the controversy within the grasp of the common people. A third letter emphasized what he had already said and warned the emperor to beware of the consequences of his unlawful action. Naturally, these powerful apologies aroused the anger of the Byzantine emperor. Unable to reach the writer with physical force, he sought to encompass his destruction by strategy. Having secured an autograph of the letters by John Damascene, he forged a letter, exactly similar in chirography, purporting to have been written by John to the Isaurian, and offering to betray into his hands the city of Damascus. This letter he sent to the caliph. Notwithstanding his councilor's earnest avowal of innocence, the latter accepted it as genuine and ordered that the hand that wrote it be severed at the wrist. The sentence was executed, but, according to his biographer, through the intervention of the Blessed Virgin, the amputated hand was miraculously restored.

The caliph, now convinced of John's innocence, would have reinstated him in his former office, but the Damascene had heard a call to a higher life, and with his foster-brother entered the monastery of St. Sabas, some eighteen miles south-east of Jerusalem. After the usual probation, John V, Patriarch of Jerusalem, conferred on him the "title of the priesthood." In 754 the pseudo-Syncellus of Constantinople, convened at the command of Constantine Copronymus, the successor of Leo, confirmed the principles of the Iconoclasts and anathematized by name those who had conspicuously opposed them. But the largest measure of the council's spleen was reserved for John Damascene. He was accused of "abhorring Christ and the Sarcens", a "traitorous worshipper of images", a "wronger of Jesus Christ", a "teacher of impiety", and a "bad interpreter of the Scriptures." At the emperor's command his name was written "Mansur"
John of Damascus was the last of the Greek Fathers. His genius was not for original theological development, but for compilation of an encyclopedic character. In fact, the state of full development to which theological thought had been brought by the great Greek writers and the councils left him little else than the work of an encyclopedist; and this work he performed in such a manner as to merit the succeeding ages. Some consider him the precursor of the Scholastics, whilst others regard him as the first Scholastic, and his "De fide orthodoxa" as the first work of Scholasticism. The Arabsians, too, owe not a little of the fame of their philosophy to his inspiration. The most important and best known of all his works is that to which the author himself gave the name of "Fountain of Wisdom" (Εὑρηκα γνώσεως). This work has always been held in the highest esteem in both the Catholic and Greek Churches. Its merit is not that of originality, for the author asserts, at the end of the second chapter of the "Dialectic", that it is done for the purpose to set forth his own views, but rather to collate and epitomize in a single work the opinions of the great ecclesiastical writers who have gone before him. A special interest attaches to it for the reason that it is the first attempt at a *summa theologica* that has come down to us.

The "Fountain of Wisdom" is divided into three parts, namely, "Philosophical Chapters" (Κεφάλαια φιλοσοφικά), "Concerning Heresy" (Εξώθηκα ἁδερσώ), and "An Exact Exposition of the Orthodox Faith" (Εὔκολο ψηφιδωτό τῆς θρησκείας πίστεως). The title of the first book is somewhat too comprehensive for its contents and consequently is more commonly called "Dialectic". With the exception of the fifteen chapters that deal exclusively with logic, it has mostly to do with the ontology of Aristotle. It is largely a summary of the Categories of Aristotle with Porphyry's "On Categories" (Κατηγοριών). This summary has been John of Damascus's purpose to give his readers only such philosophical knowledge as was necessary for understanding the subsequent parts of the "Fountain of Wisdom". For more than one reason the "Dialectic" is a work of unusual interest. In the first place, it is a record of the terminology used by the Greek Fathers, not only against the heretics, but also in the exposition of the Faith for the benefit of the Christians. It is interesting, too, for the reason that it is a partial exposition of the "Orpanon", and the application of its methods to Catholic theology a century before the first Arabic translation of Aristotle made its appearance. The second part, "Concerning Heresy", is little more than a copy of a similar work by Epiphanius, brought up to date by John of Damascus. The author indeed expressly disclaims originality except in the chapters devoted to Islamism, Iconoclasm, and Apostasy. To the list of eighty heresies that constitute the "Panarion" (πανάριον) of Epiphanius, he added twenty heresies that had sprung up since his time. In treating of Islamism he vigorously assails the immoral practices of Mohammed and the corrupt teachings inserted in the Koran to legalize them. With the exception of the latter, he brings the work to a close with a fervent profession of Faith. John's authorship of this book has been challenged, for the reason that the writer, in treating of Arianism, speaks of Arius, who died four centuries before the time of the Damascene, as still living and working spiritual ruin among the people. The solution of the difficulty is to be found in the fact that John of Damascus did not epitomize the contents of the "Panarion", but copied it verbatim. Hence the passage referred to is in the exact words of Epiphanius himself and with the same Chrysobullon (golden stream) by his friends on account of his oratorical gifts. In the pontificate of Leo XIII he was enrolled among the doctors of the Church. His feast is celebrated on 27 March.

"Concerning the Orthodox Faith", the third book of the "Fountain of Wisdom", is the most important of John Damascene's writings and one of the most notable works of Christian antiquity. Its authority has always been great among the theologians of the East and West. Here, again, the author modestly disavows any claim to originality—any purpose to essay a new exposition of doctrinal truth. He assigns himself the less pretentious task of collecting in a single work the opinions of the ancient writers scattered through many volumes, and of systematizing them in a logical order. He gives the smallest credit to John of Damascus that he was able to give to the Church in the eighth century its first summary of connected theological opinions. At the command of Eugenius III it was rendered into Latin by Burgundio of Fisa, in 1150, shortly before Peter Lombard's "Book of Sentences" appeared. This translation was used by Peter Lombard and St. Thomas Aquinas, as well as by other theologians, till the Humanists rejected it for a more elegant one. The author follows the same order as does Theodoret of Cyrus in his "Epitome of Christian Doctrine". But, while he presents the general plan of Theodoret, he does not make use of his method. He quotes, not only from the pages of Holy Writ, but also from the writings of the Fathers. As a result, his work is an inexhaustible thesaurus of tradition which became the standard for the great Scholastics who followed. In particular, he draws generously from Gregory of Nazianzus, whose works he seems to have absorbed, from Basil, Gregory of Nyssa, Cyril of Alexandria, Leo the Great, Athanasius, John Chrysostom, and Epiphanius. The work is divided into four books. This division, however, is an arbitrary one neither contemplated by the author nor justifiable by the Greek text. It is really the work of a Latin translator seeking to accommodate it to the style of the four books of Lombard's "Sentences".

The first book of "The Orthodox Faith" treats of the essence and existence of God, the Divine nature, the Son of God (the Trinitarian). In summary form, he cites the concurrence of opinion among those enlightened by Revelation and those who have only the light of reason to guide them. To the same end he employs the argument drawn from the mutability of created things and that from design. Treating, in the second book, of the sacred order of the Church, he attempts to embody the views of his times, without, however, committing himself to any of them. In the same treatise he discloses a comprehensive knowledge of the astronomy of his day. Here, also, place is given to the consideration of the nature of angels and demons, the terrestrial paradise, the properties of human nature, the foreknowledge of God, and predestination. Treating of man (ἐξωστρεφώ), he gives what has been aptly called a "psychology in nuce". Contrary to the teachings of Plotinus, the master of Orphery, he identifies mind and soul. In the third book the personality and two-fold nature of Christ are discussed with great ability. This leads up to the consideration of the Monophysite heresy. In this connexion he deals with Peter the Fuller's addition to the "Trisagion", and combats Anastasius's interpretation of this ancient hymn. The latter, who was Abbot of the monastery of St. Euthymius at Palmyra, spent his time in discussing the Divinity and Person of the Trinity. In his letter "Concerning the Trisagion" John Damascene contends that the hymn applies not to the Son alone, but to each Person of the Blessed Trinity. This book also contains a spirited defence of the Blessed Virgin's claim to the title of Theotokos ("Our Lady"). Nestorius is vigorously dealt with for trying to substitute the title of "Mother
of Christ” for “Mother of God.” The Scriptures are discussed in the fourth book. In assigning twenty-two books to the Old Testament Canon he is treating of the Hebrew, and not the Christian, Canon, as he finds it in a work of Epiphanius, “De ponderibus et mensuris.” His treatment in this book of the Real Presence is especially satisfactory. The nineteenth chapter contains a powerful plea for the veneration of images.

The treatise, “Against the Jacobites,” was written at the request of Peter, Metropolitan of Damascus, who imposed on him the task of reconciling to the Faith the Jacobite bishop. It is a strong polemic against the Monothelites, as the Jacobites were called. He also wrote against the Manicheans and Monothelites. The “Booklet Concerning Right Judgment” is little more than a profession of Faith, confirmed by arguments setting forth the mysteries of the Faith, especially the Trinity and the Incarnation. Though John of Damascus wrote voluminously on the Scriptures, as in the case of so much of his writing, his work bears little of the stamp of originality. His “Select Passages” (Loci Selecti), as he himself admits, are taken largely from the homilies of St. John Chrysostom and appended as commentaries to the homilies of St. Cyril. The commentary on the Epistles to the Ephesians, Philippians, Colossians, and Thessalonians is taken from Cyril of Alexandria. The “Sacred Parallels” (Sacra parallela) is a kind of topical concordance, treating principally of God, man, virtues, and vices.

Under the general title of “Homilies” he wrote fourteen discourses. The sermon on the Transfiguration, which Lequien asserts was delivered in the church on Mt. Thabor, is of more than usual excellence. It is characterized by dramatic eloquence, vivid description, and a wealth of imagery. In it he discourses on the twofold nature of Christ, quotes the classic text of Scripture in testimony of the primacy of Peter, and witnesses the Catholic doctrine of sacramental Penance. In his sermon on Holy Saturday he descants on the Easter duty and on the Real Presence. The Annunciation is the text of a sermon, now extant only in a Latin version of an Arabic text, in which he attributes various present blessings to the intercession of the Blessed Virgin. The second of his three sermons on the Assumption is especially notable for its detailed account of the translation of the body of the Blessed Virgin into heaven, an account, he allows, that is based on the most reliable and ancient tradition. Both Liddledale and Neale regard John of Damascus as the prince of Greek hymnologists. His hymns are contained in the “Carmina” of the Lequien edition. The “canons” on the Nativity, Epiphany, and Pentecost are written in ichthyic trimeters. Three of his hymns have become widely known and admired in their English version—“Those eternal bowers,” “Come, ye faithful raise the strain,” and “Tis the Day of Resurrection.” The most famous of the “canons” is that on Easter. It is a song of triumph and thanksgiving, the “Te Deum of the Greek Church.” It is a tradition of the Venetians, lately controverted, that John Damascene composed the “Octoechos,” which contains the liturgical hymns used by the Greek Church in its Sunday services. Gerbet, in his “History of Sacred Music,” credits him with doing for the East what Gregory the Great accomplished for the West. In the thirteenth chapter he was imprisoned on a charge of heresy by the king, he was expelled from the country. In 1888 he was sent to Europe as deputy to the triennial Congregation of Procurators. Resisting urgent attempts to keep him in Portugal, and refusing the Archbishopric of Crangano, he returned in 1891 to the See of Cambrai. He was, in 1892, appointed Titular Bishop of Wieliczki, and in 1896, Bishop of Cambrai. He was translated to the See of Cambrai in 1899. In 1918 he received the title of cardinal-priest of S. Maria Maggiore. In 1920 he was created a cardinal by Pope Benedict XV. He was appointed to the See of Cambrai in 1921.

The “Apology of Aristides” shows what amounts to sixteen printed pages of it was taken directly from Aristides. The panegyric on St. Barbara, while accepted as genuine by Lequien, is rejected by many others. The treatise entitled “Concerning those who have died in the Faith” is rejected as spurious by Suarez, Bellarmine, and Lequien, not on account of errors, but of its doctrinal discrepancies of a character as well. The first Greek edition of any of the works of John Damascene was the of the “Exact Exposition of the Orthodox Faith” brought out at Verona (1531) under the auspices of John Matthew Gibertius, Bishop of Verona. Another Greek edition of the same work was made at Morea in 1546 by John Epessinus. It was also printed in a Latin edition at Paris (1507), by James Faber. Henry Gravius, O.P., published a Latin edition at Cologne (1546) which contained the following works: "Dialectic," "Elementary and Dogmatic Instruction," "Concerning the two Wills and Operations," and "Concerning Heresy." A Greek-Latin edition with an introduction by Mark Hopper made its appearance at Basle (1548). A similar edition, but much more complete was published at the same place in 1575. Another Latin edition, constituting a partial collection of the author's works was brought out at Paris in 1589 (1577). The only complete edition of the Damascene's works is that by Michael Lequien, O.P., published at Paris (1717) and Venice (1748). To the reprint of this edition, P. G., XCIV-XCVI (Paris, 1864), Migne has added a supplement of works attributed by some to the authorship of John Damascene.

JOHN B. O'CONNOR.

John Davys, Blessed. See Thomas Johnson, Blessed.

John de Britto, Blessed, martyr, b. in Lisbon, 1 March, 1647, and was brought up at court, martyred in India 1 Feb., 1653. Entering the Society of Jesus at fifteen, he obtained as his mission-field Madura in Southern India. In September, 1673, he reached Goa. Before taking up his work he spent thirty days in the Exercises of St. Ignatius at Ambalacare near Crangonore. De Britto apparently entered the Kshatriyas, a noble caste. His dress was yellow cotton; he abstained from every kind of animal food. On going out early in 1674, he traversed the Ghauts on foot and reached Colei in the Caufvery Delta, where he perfected himself in the language. He journeyed northward at least as far as Madras and Vellore, but the Caufvery Delta, Tanjore, Madura, and Marava, between Madura and the sea, were his chief field. In 1684, he was imprisoned on a charge of heresy by the king, he was expelled from the country. In 1888 he was sent to Europe as deputy to the triennial Congregation of Procurators. Resisting urgent attempts to keep him in Portugal, and refusing the Archbishopric of Crangano, he returned in 1891 to the See of Cambrai. He was, in 1892, appointed Titular Bishop of Wieliczki, and in 1896, Bishop of Cambrai. He was translated to the See of Cambrai in 1899. In 1918 he received the title of cardinal-priest of S. Maria Maggiore. In 1920 he was created a cardinal by Pope Benedict XV. He was appointed to the See of Cambrai in 1921.

Among the several works that are dubiously attributed to John Damascene the most important is the anonymous Gospel of Madras, which throughout the Middle Ages it enjoyed the widest popularity in all languages. It is not regarded as authentic by Lequien, and the discovery of a Syriac version of the
eral persecution. De Britto and others were taken and carried to the capital, Ramnad, the Brahmins clamoured for his death. However, he was freed at Calais led to Orleans, some thirty miles northward along the coast, where his head was struck off, 11 Feb. 1693. He had wrought many conversions during his life, established many stations, and was famous for his miracles before and after death. He was beatified by Pius IX, 21 Aug. 1867, and canonized by Pius XII, 1950.

H. WOODS.

John Dominic. See DOMINICI, GIOVANNI, BLESSED.

John Duns Scotus. See DUNS SCOTUS, JOHN.

John Eynon, BLESSED. See HUGH FARINGDON, BLESSED.

John Felton, BLESSED, martyr, date and place of birth unknown; was executed in St. Paul’s Churchyard, London, 8 August, 1570, for having, about eleven o’clock at night on the previous 24 May, affixed a copy of the Bull of St. Pius V excommunicating the queen to the gates of the Bishop of London’s palace near St. Paul’s. His daughter, Frances Salisbury, says that this exploit actually took place between two and three on the morning of the next day, on which that year the feast of Corpus Christi happened to fall. The MS. which preserves her narrative contains a blank where the age of her father should be recorded, but she gives us other particulars fully. He was a wealthy gentleman of Norfolk extraction, and lived at Bermondsey Abbey near Southwark. He had married a lady who had been maid of honour to Queen Mary and playmate of Queen Elizabeth, and who was the widow of an auditor of the former queen. He himself “was a man of stature little and of complexion black”. Of the copies of the Bull which he received at Calais he had given one to William Mellowes of Lincoln’s Inn, a special friend of his. This copy was discovered on 25 May, and Mellowes on the rack confessed to having received it from him. On 26 May he was arrested and taken to the Tower, where he was thrice racked, though on the first confession and glorified in his deed. He was executed on 4 August and executed four days later. He was cut down alive, and his daughter says that he uttered the holy name of Jesus once or twice when the hangman had his heart in his hand.

JOHN B. WAINEWRIGHT.

John Fisher, BLESSED, cardinal, Bishop of Rochester, and martyr; born at Beverley, Yorkshire, England, 1459 (? 1460); d. 22 June, 1535. John was the third son of Robert Fisher, merchant of Beverley, and Agnes his wife. His early education was probably received in the school attached to the collegiate church in his native town, whence in 1484 he removed to Michaelhouse, Cambridge. He took the degree of B.A. in 1487, proceeded M.A. in 1491, in which year also he was elected a fellow of his college. In 1496 the first master was inadequate of his position and was dismissed. In 1497, John was appointed Master of Michaelhouse, about which date he became chaplain and confessor to Margaret Beaufort, Countess of Richmond and Derby, mother of King Henry VII. In 1501 he received the degree of D.D., and was elected Vice-Chancellor of Cambridge University. Under Fisher’s guidance the Lady Margaret founded St. John’s and Christ’s colleges, and also the two “Lady Margaret” professorships of divinity at Oxford and Cambridge respectively, Fisher himself being the first occupant of the Cambridge chair.

By Bull dated 14 October, 1504, Fisher was advanced to the Bishopric of Rochester, and in the same year was elected Chancellor of Cambridge University, to which post he was re-elected annually for ten years and then appointed for life. At this date also he is said to have acted as tutor to Prince Henry, afterwards Henry VIII. As a preacher his reputation was so great that in 1509, when King Henry was on his way to the Lady Margaret, Fisher was appointed to preach the funeral oration on both occasions; these sermons are still extant. In 1512 Fisher was nominated as one of the English representatives at the Fifth Council of the Lateran, then sitting, but his journey to Rome was postponed, and finally abandoned. Besides his share in the Lady Margaret’s foundations, Fisher gave further proof of his genuine zeal for learning by inducing Erasmus to visit Cambridge. The latter indeed (Epist., vi, 2) attributes it to Fisher’s protection that the study of Greek was allowed to proceed at Cambridge without fear of active molestation that it encountered at Oxford. He has also been named, though without any real proof, as the true author of the royal treatise against Luther entitled “Assertio septem sacramentorum”, published in 1521, which won the title Fidei Defensor for Henry VIII. Before this date Fisher had denounced various abuses in the Church, urging the need of disciplinary reforms, and in this year he preached at St. Paul’s Cross on the occasion when Luther’s books were publicly burned.

When the question of Henry’s divorce from Queen Catherine arose, Fisher became the queen’s chief supporter and most trusted counsel. Shortly after his appearance on the queen’s behalf in the legates’ court, where he startled his hearers by the directness of his language and most of all by declaring that, like St. John the Baptist, he was ready to die on behalf of the indissolubility of marriage. This statement was reported to Henry, raged by it that he himself composed a long Latin address to the legates in answer to the bishop’s speech. Fisher’s copy of this still exists, with his MS. annotations in the margin which show how little he feared the royal anger. The removal of the cause to Rome brought him himself to personal sharing in its end, but the king now forgave him for what he had done. In November, 1529, the “Long Parliament” of Henry’s reign began its series of encroachments on the Church. Fisher, as a member of the upper house, at once warned Parliament that such acts could only end in the utter destruction of the Church in England. On this the Commons, through their speaker, complained to the king that the bishop had disparaged Parliament. Dr. Gardiner (Lollardy and the Reformation, I, 442) says of this incident “it can hardly be a matter of doubt that this strange remonstrance was prompted by the king himself, and partly for personal use of his own.”

The opportunity was not lost. Henry summoned Fisher before him, demanding an explanation. This being given, Henry declared himself satisfied, leaving it to the Commons to declare that the explanation was inadequate of substantiating his infamous sovereign, instead of Fisher’s enemy. A year later (1530) the continued encroachments on the Church moved the Bishops of Rochester, Bath, and Ely to appeal to the Apostolic see. This gave the king his opportunity. An edict forbidding such appeals was immediately issued, and the three bishops were arrested. Their imprisonment, however, cas
have lasted a few months only, for in February, 1531, Convocation met, and Fisher was present. This was the occasion when the clergy were forced, at a cost of £100,000, to purchase the king’s pardon for having recognized Cardinal Wolsey’s authority as legate of the pope; and at the same time to acknowledge two Popes, and to add to the land, to which phrase, however, the addition “so far as God’s law permits” was made, through Fisher’s efforts.

A few days later, several of the bishop’s servants were taken ill after eating some porridge served to them at breakfast, and two died. The popular opinion at the time regarded this as an attempt on the bishop’s life, although he himself charged not to have eaten any of the poisoned food. To dissimulate suspicion, the king not only expressed strong indignation at the crime, but caused a special Act of Parliament to be passed, whereby poisoning was to be accounted high treason, and the person guilty of it boiled to death. This sentence was actually carried out on the culprit, but it did not prevent what seems to have been a second attempt on Fisher’s life soon afterwards.

The bishop moved rapidly. In May, 1532, Sir Thomas More resigned the chancellorship, and in June, Fisher preached publicly against the divorce. In August, Warham, Archbishop of Canterbury, died, and Cranmer was at once nominated to the pope as his successor. In January, 1533, Henry secretly went through the form of marriage with Anne Boleyn; Cranmer’s consecration took place in March of the same year, and, a week later, Fisher was arrested. It seems fairly clear that the purpose of this arrest was to prevent his opposing the sentence of divorce which Cranmer pronounced in May, or the consecration of Anne Boleyn which followed on 1 June. Fisher was set at liberty again within a fortnight of the latter event, no charge being made against him. In the autumn of this year (1533), various arrests were made in connexion with the so-called revelations of the Holy Maid of Kent (see Barron, Elizabeth), but as Fisher was taken seriously ill in December, proceedings against him were postponed for a time. In March, 1534, however, a special bill of attainder against the Bishop of Rochester and others for complicity in the matter of the Nun of Kent was introduced and passed. This Fisher was condemned to forfeit his goods and lands, and to be imprisioned during the king’s pleasure. Subsequently a pardon was granted to him on payment of a fine of £300.

In the same session of Parliament was passed the Act of Succession, by which all who should be called upon to do so were compelled to take an oath of succession, acknowledging the issue of Henry and Anne as legitimate heirs to the throne, under pain of being guilty of misprision of treason. Fisher refused the oath and was sent to the Tower of London, 26 April, 1534. Several efforts were made to induce him to submit, but without effect, and in November he was sentenced to death. The time attemted of imprisonment of treason, his goods being forfeited as from 1 March preceding, and the See of Rochester being declared vacant as from 2 June following. A long letter exists, written from the Tower by the bishop to Thomas Cromwell, which records the severity of his confinement and the sufferings he endured.

In May, 1535, the new pope, Paul III, created Fisher Cardinal Priest of St. Vitalis, his motive being apparently to induce Henry by this mark of esteem to treat the bishop less severely. The effect was precisely the reverse. Henry forbade the cardinal’s hat to be worn in church, and declared, declaring that he would send the head to Rome for it instead. In June a special commission for Fisher’s trial was issued, and on 17 June he was arraigned in Westminster Hall on a charge of treason, in that he had denied the king to be supreme head of the Church. Since he had been deprived of his bishopric by the Act of Attainder, he was treated as a commoner, and tried by jury. He was declared guilty, and condemned to be hanged, drawn, and quartered at Tyburn, but the mode of execution was changed, and he was beheaded at the bottom of Allhallows, Barking. Then it was removed a fortnight later and laid beside that of Sir Thomas More in the church of St. Peter ad Vincula by the Tower. His head was stuck upon a pole on London Bridge, but its dusty and life-like appearance excited so much attention that, after a fortnight, it was thrown into the Thames, its place being taken by that of Sir Thomas More, whose martyrdom occurred on 6 July next following.

Several portraits of Fisher exist, the best being that by Holbein in the royal collection; and a few secondary reliefs are extant. In the Decree of 29 December, 1536, when fifty-four of the English martyrs were stated to have been by Leo XIII, the then Pope of all the former deposed Blessed John Fisher. A list of Fisher’s writings will be found in Gilly, "Biblical Dictionary of the English Catholics" (London, a. d.), II, 262-270. There are twenty-six works in all, printed and MS., mostly ascetical or controversial treatises, several of which have been reprinted many times. The original editions are very rare and valuable. The principal are: "Treatise concerning . . . the seven penitential Psalms" (London, 1508); "Sermon . . . again ye penercious doctrin of Martin Luther" (London, 1521); "Defensio Henrici VIII" (Cologne, 1525); "De Veritate Corporis et Sanguinis Christi in Beatae Mariae Verusus Johanne Oecolampadum" (Cologne, 1527); "De Causa Matrimonii . . . Henrid VIII cum Catharina Aragonensi" (Alcalá de Henares, 1530); "The Ways to Perfect Religion" (London, 1535); "A Spiritual Consolation written . . . to his sister Elizabeth." (London, 1735).

G. ROGER HUDLESTON.

John Forest, Blessed, b. in 1471, presumably at Oxford, where his surname was then not unknown; suffered 22 May, 1538. At the age of twenty he received the habit of St. Francis at Greenwich, in the church of the Friars Minor of the Regular Observance, and was ordained for brevity’s sake “subsecrario.” Nine years later we find him at Oxford, studying theology. He is commonly styled “Doctor” though, beyond the steps which he took to qualify as bachelor of divinity, no positive proof of his further progress has been found. Afterwards he became one of Queen Catherine’s chaplains, and was appointed her confessor. In 1525 he appears to have been provincial, which seems certain from the fact that he threatened with excommunication the brethren who opposed Cardinal Wolsey’s legatine powers. Already in 1531 the Observants had incurred the king’s displeasure by their determined opposition to the divorce; and no wonder that Fisher’s step in this matter was not without object of wrath. In November, 1532, we find the holy man discoursing at Paul’s Cross on the decay of the realm and the pulling down of churches. At the beginning of February,
1533, an attempt at reconciliation was made between him and Henry; but a couple of months later he left the neighbourhood of London, where he was no longer safe. He was probably already in Newgate prison in 1534, when Father Peto preached his famous sermon before the king at Greenwich. In his confinement Father Forest corresponded with the queen and Edward, the king's brother, urging the release of Henry, which began with the text: "Neither doth any man take the honour to himself, but he that is called by God, as Aaron was".

On 8 April, 1538, the holy friar was taken to Lambeth, where, before Cranmer, he was required to make an act of abjuration. They, however, refused to do—, and it was then decided that the sentence of death should be carried out. On 22 May following he was taken to Smithfield to be burned. The statue of "Darvell Gatheren" that had been brought from the church of Llandaff in Wales, was thrown on the pile of firewood; and, according to popular belief, was fulfilled an old prophecy, that this holy image would set a forest on fire. The holy man's martyrdom lasted two hours, at the end of which the executioners threw him, together with the gibbet on which he hung, into the fire. Father Forest, together with fifty other English martyrs, was declared a "Blessed" by Pope Leo XIII, on 9 December, 1886, and his feast is kept by the Friars Minor on 22 May. Some years ago rumour was current that the relics of the martyr had been taken to Spain, and were preserved in a residence of the Friars Minor somewhere in the north of that country. In 1904 the writer of this article made inquiries, to which the Provincial of Cantabria replied that the fathers there were not aware of the existence of the holy relics in any part of Spain, and that they thought the rumour was unfounded. It seems therefore most probable that the mortal remains of Father Forest still lie hidden at Smithfield, near the corner of St. Bartholomew's Hospital, opposite the gate of the ancient priory.

FATHER THADDIUS.

John Francis Regis, Saint, b. 31 January, 1597, in the village of Fontcouverte (department of Aude); d. 29 Dec. 1640, a noble French merchant, had been recently ennobled in recognition of the prominent part he had taken in the Wars of the League; his mother, Marguerite de Cugunhan, belonged by birth to the landed nobility of that part of Languedoc. They watched with Christian solicitude over the early education of their son, whose sole fear was lest he should displease his parents or his tutors. The slightest harsh word rendered him inconsolable, and quite paralyzed his youthful faculties. When he reached the age of fourteen, he was sent to continue his studies in the Jesuit college at Béziers. His condescendency and hatred of practices of devotion, while his good humor, frankness, and eagerness to oblige everybody soon won for him the good-will of his comrades. But Francis did not love the world, and even during the vacations lived in retirement, occupied in study and prayer. On one occasion he allowed himself the diversions of the chase. At the end of his five years' study of the humanities, grace and his ascetic inclinations led him to embrace the religious life under the standard of St. Ignatius Loyola. He entered the Jesuit novitiate of Toulouse on 8 December, 1616, the Feast of the Immaculate Conception of Mary. Here he was distinguished by extreme fervency, and his zeal often forwarded flagged, neither at Cahors, where he studied rhetoric for a year (Oct., 1618–Oct., 1619), nor during the six years in which he taught grammar at the colleges of Bilлом (1619–22), of Puy-en-Velay (1625–27), and of Auch (1627–28), nor during the three years in which he studied philosophy in the scholasticate at Tournon (Oct., 1622–Oct., 1625). During this time, although he was filling the laborious office of regent, he made his first attempts as a preacher. On feast-days he loved to visit the town and its little neighbourge, and there give an informal instruction, which never failed—as attested by those who heard him—to produce a profound impression on those present.

As he burned with the desire to devote himself entirely to the salvation of his neighbour, he aspired with all his heart to the priesthood. In this spirit he began in October, 1628, his theological studies. The four years he was supposed to devote to them seemed to him so very long that he finally begged his superiors to shorten the term. This request was granted, and in consequence Francis said his first Mass on Trinity Sunday, 15 June, 1631; but on the other hand, in conformity with the statutes of his order, which require the full course of study, he was not admitted to the solemn profession of the four vows. The plague was at that time raging in Toulouse. The new priest was untouched to witness the terrible and the fruit of his apostolate. In the beginning of 1632, after having reconciled family differences at Fontcouverte, his birthplace, and having resumed for some weeks a class in grammar at Pamiers, he was definitively set to work by his superiors at the hard labour of the missions. This became the work of the last ten years of his life. It is impossible to enumerate the cities and localities which were the scene of his zeal. On this subject the reader must consult his modern biographer, Father de Curley, who has succeeded best in reconstructing the itinerary of the holy man. We need only mention that from May of 1632 until he was seventy, his head-quarters were at the Jesuit college of Montpellier, and here he laboured for the conversion of the Huguenots, visiting the hospitals, assisting the needy, withdrawing from the services of the women, and preaching Catholic doctrine with tireless zeal to children and the poor. Later (1633–40) he evangelized more than fifty districts in le Vivarais, le Forez, and le Velay. He displayed everywhere the same spirit, the same intrepidity, which were rewarded by the most striking conversions. "Everybody," wrote the rector of Montpellier to the general of the Jesuits, "has seen Father Regis in his parishes." "He will never be forgotten of the Missions" (Daubenton, "La vie du B. Jean-François Regis", ed. 1716, p. 73). But not everyone appreciated the transports of his zeal. He was reproached in certain quarters with being impetuous and meddlesome, with troubling the peace of families by an indiscreet charity, with preaching not evangelical sermons, but satires and invectives which converted no one. Some priests, who felt their own manner of life rebuked, determined to ruin him, and therefore denounced him to the Bishop of Vivers. They had laid their plot with such perfidy and cunning that the bishop permitted himself to be much given to the same. But it was only a passing cloud. The influence of the best people on the one hand, and on the other the patience and humility of the saint, soon succeeded in confounding the calumny and caused the discreet and enlightened ardour of Regis to shine forth with renewed splendour (Daubenton, loc. cit., 87). The "less moderate" mode of mortification, which he practised with extreme rigour on all occasions, without ruffling in the least his evenness of temper. As he returned to the house one evening after a hard day's toil, one of his confresseurs laughingly asked: "Well, Father Regis, speaking candidly, are you not very tired?" "Oh, Father, I feel as fresh as a rose." Then he took only a bowl of milk and a little fruit, which usually constituted both his dinner and
supper, and finally, after long hours of prayer, lay
don the floor of his room, the only bed he knew.
He desired ardently to go to Canada, which at that
time was one of the missions of the Society of Jesus
where one ran the greatest risks. Having been re-
fused, he finally sought and obtained from the general
permission to spend six months in the missions, and
the three months of winter, on the missions of the
society. The remainder of the time he devoted to the
most thankless labour in the cities, especially to the
rescue of public women, whom he helped to persevere
after their conversion by opening refuges for them,
where they found honest means of livelihood. He
never made a great part of his time and
caused him many annoyances, but his strength of soul
was above the dangers which he ran. Dissolute men
often presented a pistol at him or held a dagger to his
throat. He did not even change colour, and the
brightness of his countenance, his fearlessness, and the
power of his words caused them to drop the
weapons from their hands. He was more sensitive to that opposition which occasionally proceeded from those who should have seconded his courage. His work among penitents urged his zeal to enormous undertakings. His superiors, as his first biographers candidly state, did not often share his optimism, nor rather his
unshaken faith in Providence, and it sometimes happened that they were alarmed at his charitable projects and manifested to him their disapproval.
This was the cross which caused the saint the greatest
suffering, but it was sufficient for him that obedience
spoke: he silenced all the murmurs of human nature,
and abandoned his most cherished designs. Seventy-
two years after his death a French ecclesiastic, who
believed he had a grievance against the Jesuits, cir-
culated the legend that towards the end of his life St.
John Francis Regis had been expelled from the Soc-
ety of Jesus. Many different accounts were given, but
finally the enemies of the Jesuits settled on the
version that the letter of the general announcing to
John his dismissal was sent from Rome, but that it
was late in reaching its destination, only arriving some
days after the death of the saint. This calumny will not
stand the slightest examination. (For its refuta-
tion see de Curley, "S. Jean-François Regis", 336-51;
mored briefly and completely in "Analecta Bollandi-
dana", XIII, 78-9.)

It was in the depth of winter, at la Louveau, a poor
hamlet of the mountains of Ardèche, after having
spent with heroic courage the little strength that he
had left, while he was contemplating the conver-
sion of the Cévennes, that the saint's death occurred,
on 30 December, 1640. There was no delay in order-
ing canonical investigations. On 18 May, 1716, the
decree of beatification was issued by Clement XI.
On 5 April, 1737, Clement XII promulgated the
decree of canonization. Benedict XIV established the
feast-day for 16 June. But immediately after his
death Regis was venerated as a saint. Pilgrims came
crowds to his tomb, and since then the concourse has
only grown. Mention must be made of the fact
that a visit made in 1804 to the blessed remains of the
Apostle of Vivarais was the beginning of the vocation
of the Blessed Curé of Ars, Jean-Baptiste Vianney,
whom the Church has raised in his turn to her altars.
"Everything good that I have done", he said when
dying, "I owe to him" (de Curley, op. cit., 371).
The place where Regis died has been transformed into a
sanctuary. Near by is a spring of fresh water to
which those who are devoted to St. John Francis
Regis attribute miraculous cures through his inter-
cession. The old church of la Louveau has received
(1888) the title and privileges of a basilica. On this
sacred site was founded in the beginning of the nine-
teenth century the Convent of the Sisters of St. Thérèse
or Sisters of Retreat, better known under the name of
the Religious of the Cenacle; and it was the memory
of his merciful seal in behalf of so many unfortunate
falten women that gave rise to the now flourishing
work of St. Francis Regis, which is to provide for the
poor and working people who wish to marry, and which
is chiefly concerned with bringing illegitimate
unions into conformity with Divine law. Besides the
biographies mentioned in Carayon, Bibliographie
historique de la Compagnie de Jésus, nn. 2442-54, must be
mentioned the more recent work of Jean-François
Regis (Lyons, 1893), which, together with Daubenton's
work—often reprinted—is the most complete history of Regis;
see Jean-François Regis' (Lyons, 1894), in which
the new portion consists of unedited papers regarding the
saint's family. Among the early biographers Lamberre, a pupil of the
philosopher Bossuet, occupies an undiminished place for the
vitality, and the documentary value of the relation. His book appeared
in 1690, ten years after the death of the saint.

FRANCIS VAN ORTROY.

John Gualbert, Saint. See Valombrosa.

John Hale, Blessed. See John Houghton,
Blessed.

John Houghton, Blessed, proto-martyr of the persuc-
deration under Henry VIII, b. in Essex, 1487; d.
at Tylburn, 4 May, 1535. He was educated at Cam-
bridge, graduating LL.B. about 1497, and later LL.D.
and D.D.; he was ordained priest in 1501 and entered the
Carthusian novitiate at the London Charterhouse in
1505, where he was professed in 1516. He filled the
office of sacristan, 1523-28; of procurator, 1528-31;
of prior of Beaulieu, Nottinghamshire, from June to
November, 1531; of prior of the London Charterhouse,
1531-35; and of provincial visitor, 1532-35. He was
imprisoned in the Tower for a month, with the
procurator, Blessed Humphrey Middlemore, for refus-
ing to swear that the King's marriage with Queen
Catherine was invalid, but took the oath of succession
under the condition quatenus licitum esset, with some
of his monks, 29 May, 1534, the others being sworn 6
June. On or about 13 April, 1535, he was committed
again to the Tower for refusing the oath of supremacy.
With him were sent Blessed Robert Laurence, who
had succeeded him as prior of Beaulieu, and had pre-
viously been chaplain to the Duke of Norfolk and then
a monk of the London Charterhouse; and Blessed
Augustine Webster, prior of Axlholme, Lincolnshire, formerly a monk of Sleen. These priests, who were on a
visit to the London Charterhouse, refused to take
oath tendered to them, but were brought before the
Rolls for that purpose on 20 April, and, on refusing it,
were sent back to the Tower. There they were joined
by Blessed Richard Reynolds, a Brigitine of Syon,
born about 1492, educated at Christ's and Corpus
Christi colleges, Cambridge, Fellow of Corpus Christi,
1510, B.D. 1513, subrector (B.D.). He became a
Brigitine in 1513, and was considered one of the fore-
most scholars of his day. All four were indicted 28
April, 1535, under 26 Henry VIII, c. 1, for refusing
the oath of supremacy. The jury at first refused to
find them guilty, but were intimidated by Cromwell into
doing so the next day. All were hanged in their
habits without being previously degraded, and all
were disembowelled while fully conscious, Houghton
being the first to suffer and Reynolds the last.

With them died a secular priest, Blessed John Hale,
LL.B., Fellow of King's Hall, Cambridge, and Vicar of
Iseworth, Middlesex, since 12 August, 1531. He
took this living in exchange for the Rectory of Cranford,
Middlesex, which he had held since 11 September,
1505. There is nothing to identify him with the Re-
tor of Chelsford of 1492. He may possibly be the
person of this name who became scholar of Eton in
1488. He was indicted 20 April, 1535, with the per-
petual curate of Teddington, Middlesex, named Rob-
ert Feron, for offences against 25 Henry VIII, c. 22.
Both pleaded guilty and were condemned; but Feron
was pardoned. Hale was the fourth to suffer.

JOHN B. WAINWRIGHT.

John Hunyady. See Hunyady, Janos.

John Joseph of the Cross, Saint, b. on the Island of Ischia, Southern Italy, 1654; d. 5 March, 1739. From his earliest years he was given to prayer and virtue. So great was his love of poverty that he used constantly to wear the dress of the poor, though of noble birth. At the age of sixteen years he entered the Order of St. Francis at Naples, amongst the Friars of the Alcantarine Reform, being the first Italian to join this reform, which had been instituted in Spain by St. Peter of Alcantara. Throughout all his life he was given to the greatest austerity: he fasted constantly, never drank wine, and slept but three hours each night. In 1674 he sent to found a friary at Afla, in Piedmont; and he assisted with his own hands in the building. Much against his will, he was raised to the priesthood. As superior, he always insisted upon performing the most humble offices in the community. In 1708 he was appointed Provincial of the Alcantarine Reform in Italy. He was adored in a high degree with the gift of miracles, people of every condition being brought to him in sickness. His zeal for souls was such that even in sickness he would not spare any labour for them. His great devotion was to Our Blessed Lady, and he was urgent with his penitents that they also should cultivate this. He was beatified in 1789, and canonized in 1839.

FATHER CUMBERT.

John Justus of Landsberg. See Lansfegius.

John Lever, Blessed, English martyr; d. at Tyburn, 7 March, 1543-4. He was rector of St. Ethelburga's, Bishopsgate, London, from 30 January, 1541-4, till his resignation in 1542; rector of Woodford, Essex 18 January, 1526-7, till his resignation in the following April; and rector of Chelsea on (the presentation of Bl. Thomas More, then lord chancellor, and the appointment of another priest being refused, he received the living) from 29 March, 1530, till his attaintee. Cressere More styles him doctor, but it is not known in what faculty he obtained this degree. He was indicted 15 February, 1543-4, with another priest and two laymen. The priest was Ven. John Ireland, of whom nothing is known, save that, having been chaplain of the Roper chantry annexed to St. Dunstan's, Canterbury, for a year (1533-4), became vicar of Etham, Kent, and, as such, parish priest to Bl. Thomas More's son-in-law, William Roper of Rotherham Hall. Of the laymen the more prominent is Bl. Gervase Garwood, a kinsman (probably a cousin or nephew) to Stephen Gardiner, Bishop of Winchester, whose secretary he was. Educated at Cambridge, probably at Trinity Hall, he wrote against John Frith in 1534, and gave evidence against Cranmer in 1543. He resided at Southwark. The other layman was John Heywood, or Hayward, of London. All were condemned, but Heywood recanted on the hurdle, and made his recantation public at Paul's Cross on 6 July following. The other three suffered together, in the company of Robert Singleton, a priest, the cause of whose execution is uncertain, and their heads and quarters were buried under the gallows.

John B. WAINWRIGHT.

John Malalas, a Monophysite Byzantine chronicler of the sixth century, born at Antioch where he spent most if not the whole of his life. His surname Malalas, from the Syriac malātā, "the rhetor," points to a Syriac origin. John Malalas was a contemporary of Emperor Anastasius I, Justinian I, and Justin II. His "Chronographia," for which he is famous, was originally but a chronicle of the city of Antioch, expanded later by the author himself into a general history of the world up to the last years of Justinian (d. 565). It is divided into eighteen books, and the last of which, however, originally a chronicle of Constantinople, cannot be ascribed to John Malalas, but being evidently the work of an orthodox writer. Giving up the Hellenic and Byzantine traditions John Malalas struck a new path in historiography, and created the type of the Byzantine chronicle. He wrote not for the cultured public but for the bulk of the laymen and monks, seeking the narrative truth in matters of history and narrating such facts only and in such manner as could interest the people. The "Chronographia" is uncritical and teems with legends, anachronisms, repetitions, and inconsistencies, and its style and language are in keeping with the nature of the concept of history it exhibits. But it is an important monument of low Greek. In spite of the many authors he so ostentatiously names, it is highly probable that, beyond the archives of the city of Antioch and the current ecclesiastical and civil calendars, John Malalas had but very few reliable written sources. If he used at all Julius Africanus, it must have been through the now lost chronicles of Nestorian, Basilian, and theophilius, and Timotheus who he frequently cites. John Malalas enjoyed great authority with subsequent generations of Byzantine chroniclers who quote him quite freely and often worked whole books of his "Chronographia" into their own compositions. Such is the case with John of Ephesus and through him Bar-Heleme (two Syrian writers), the church historian Evagrius, the author of the "Tuscanian Fragments," John of Antioch, and especially the author of the "Chronicon Paschale," Daniel of Nikitin, the author of "Paschale," theophanes, George the Monk, Cedrenus, the author of the "Excerpta Constantiniana," and the authors of several similar compilations. John Malalas's work had the honour of a Slavonic translation (now lost) from which it passed into several Slavonic chronicles; it was also translated into Georgian, from some various sources that it was reconstructed; for, strange to say for such a popular work, independently of the above-named writings it has been preserved only in a single manuscript (Baroccius, 128, c. 12, Oxford, Bodleian Library; mutilated at both ends) and that in the shape of an epitome. The "Chronographia" was first edited by Edin Chilmes (Oxford, 1691), with a Latin translation and a commentary by the editor, a treatise of H. Hody, and a letter from R. Bentley, to J. Mill. A new critical and complete up-to-date edition is highly desirable.

Knobmacher, Geschichte der byzantinischen Literatur (2nd ed., Munich, 1877), pp. 332-331, where an exhaustive literature of the subject will be found. DEFOE, Nouvelle Biographie Générale, vol. XXXII, col. 1007.

H. HYVERNAULT.

John Moschus. See Moschus, Joannes.

John Nelson, Blessed, English Jesuit marty; b. at Skelton, four miles from York, in 1534; d. at Tyburn, 3 February, 1587. He was of the Society of Jesus in 1573, and of his four brothers followed his example and became priests. He was ordained priest at Binche, in Hainault, by Mgr Louis de Berlaymont,
Archbishop of Cambray, 11 June, 1578. He was sent
on the mission on 7 November following, and appears
to have laboured in London. His apprehension took
place 1 December, 1577, "late in the evening as he
was saying the Nocturne of the Matins for the next day
following", and he was committed to Newgate as a
suspected Papist. His arrest and its issue had been
foretold by a demon he had exercised a week before.
This suggests that he may have been not merely "in
examination induced him to say that the queen was
a schismatic. This constituted high treason under
the legislation of 1571. He was providentially en-
abled to say Mass in Newgate, 30 January, 1577-8,
and two days later he was brought to the bar and
charged with "concealing the Tower, furnishing the
most filthy underground dungeon", doubtless the
Pit of the Tower, preparing by prayer and fasting
for his end. He was cut down alive, and his last
words, when the hangman plucked out his heart,
are reported to have been: "I forgive the queen
and all the authors of my death." The date and place
of his admission to the Society of Jesus are unknown.

John B. WAINEWRIGHT.

John Nepomucene, SAINT, b. at Nepomuk about
1340; d. 20 March, 1393. The controversy concerning
the identity of John of Pomuk or Nepomuk (a small
town in the district of Pilzen, Bohemia), started in
the eighteenth century, is not yet decided. The principal
question at issue is whether there was only one John
of Nepomuk, or whether two persons of that name lived
at Prague in the second half of the fourteenth century
and met with precisely the same fate. This inquiry
leads naturally to the further question, as to the
true cause of John’s violent death. In a controversy
of this character it is of primary importance to set
down clearly the information given in the original
sources. Extant documents, ecclesiastical records,
and contemporaneous accounts of the second half
of the fourteenth century relate in unmistakable fashion
that in 1393 a certain John of Nepomuk was Vicar-
General of the Archdiocese of Prague, and that on 20
March, in the same year, by command of King Wen-
celaus IV of Bohemia he was thrown into the Moldau
and drowned. This John was the son of Welfin (or
Wolfin), a burger of Pomuk (Nepomuk), and studied
theology and jurisprudence at the University of
Prague. In 1373 he took orders and became public
minister; he was said that "out of his own abundance
he made prothonotary and first secretary of Archbishop
John of Jenzenstein (Jenzenstein). In 1380 he
received the parish of St. Gallus in Prague, and, continuing
meanwhile his studies of jurisprudence at the univer-
sity, was promoted in 1387 to the doctorate of canon
law. He was also a canon of the church of St. Em-
dius in Prague, and became in 1389 canon of the cath-
dral in Wyscheraud. In 1390 he gave up the parish of
St. Gallus to become Archdeacon of Saaz, and at the
same time canon of the Cathedral of St. Vitus, without
receiving however any cathedral benefice. Shortly
afterwards the archbishop named him president of the
ecclesiastical court, and in 1393 his vicar-general.
King Wenceslaus IV of Bohemia, wishing to found a
new bishopric for one of his favourites, ordered that at
the death of Abbot Racek of Kladrau no new abbot
should be elected, and that the abbey church should
be turned into a cathedral. The archbishop's vicar-gen-
eral, therefore, promptly confirmed this election
without reference to the wishes of the king. Upon
hearing this Wenceslaus fell into a violent rage, and
had the vicar-general, the cathedral official, Provoz
Wenceslaus of Meissen, the archbishop’s steward, and
after the death of the cathedral thrown into prison.
The first four were even tortured on 4 March, but,
although the others were thus brought to acquiesce in
the wishes of the king and the official even proposed
everlasting secrecy concerning all that had occurred,
John of Nepomuk resisted to the last. He was made
undergo all pains by the king and the archbishop, in
cluding the cutting of his sides with torches, but even this could not
move him. Finally, the king ordered him to be put in
chains, to be led through the city with a block of wood
in his mouth, and to be thrown from the Karlsbrücke
into the river Moldau. This cruel order was executed
on 20 March, 1393.

We possess four contemporaneous accounts con-
cerning these proceedings. First of all, the extant
bill of indictment against the king, presented to Bene-
dict IX by Archbishop John of Jenzenstein, who went
to Rome with the new Abbots of Kladrau on 23 April,
1393 ("Pildischka, Gescli., IV, app.; ed. Peisel, "Ge-
schichte König Wenzels. I": "Urkundenbuch. 143-
63"). Some years later Abbot Ludolf of Sagan gives
an account of it in a somewhat abbreviated form in
the catalogue of the Abbots of Sagan completed in 1398
(ed. Stenzel in "Script. rerum Silesiacarum", I, 1835,
p. 213 sq.), as well as in the treatise "De longevo
martyriose" (ib. VII, c. xiv), and in the "Geschichte,
LX, 1880, pp. 418 sq.). A fourth reference is to be
found in the "Chronik des Deutschedorfa", a
chronicle of the Teutonic Knights which was compiled
by John of Postige who died in 1405 ("Scriptores rerum
Prussiacarum", I, III, Leipzig, 1861-7). For the
discussion of the question it is important to remark
that Archbishop John of Jenzenstein in his above-
mentioned indictment (art. 26) calls John of Nepomuk
"martyr sanctus", and that, in the biography of John
of Jenzenstein by his chaplain, John of Nepomuk is
described as "gloriosum Christi martyrem miraculis-
rum corsum". It is thus clear that his contempor-
aries had already begun to honour as a martyr and a
saint the vicar-general put to death by the cruel and
licentious tyrant for his defence of the law of the
Church. The body of John of Nepomuk was drawn
out of the Moldau and entombed in the cathedral of
Prague, where in 1839 it is proved by later documents,
his grave was honoured.

In his "Chronicra regum Romanorum", finished in
1459, Thomas Ebendorfer (d. 1464) relates that King
Wenceslaus had Magister John, the father confessors
of his wife, drowned in the Moldau, not only because he
had refused to accept the new appointee to the name
of king", but also because he had refused to violate
the seal of the confessional. The refusal to
violate the seal of the confessional is here for the first
time given as the reason for John’s violent death.
The chronicler, who speaks of only the one John
drowned by order of Wenceslaus, evidently re-
fers to the John of Pomuk put to death in 1393. In
the other chronicles written in the second half of the
fifteenth century, we find the reason regularly assigned
for the execution of John, that he had refused to tell
the king what the queen had confessed to him.

Paul Ziek’s "Instructions for the King" (sc.
George of Podiebrad), completed in 1471, contains
still more details (cf. Schmude in "Zeitschrift für
ekath. Theologie", 1883, 90 sq.). He says that
King Wenceslaus suspected his wife, who was accus-
tomed to confess to Magister John, and called upon
the latter to declare the name of her paramour. On
John’s refusal to say anything about the king’s love-
affair, he was to be drowned. In this old account we do not find
the name of the queen or any date assigned to this oc-
currence; a little later the year 1383 is given, when Wen-
celaus’s first wife, Johanna (d. 1389), still lived.

In his "Annales Bohemiurn" ("Kronika česká")
first printed in Bohemian, Prague, 1541; translated
John of Antioch.—There are four persons commonly known by this name.

I. John, Patriarch of Antioch (428-41) at the time of the Council of Ephesus. He was a friend and had been a fellow-student of Nestorius. When the trouble about the word "consubstantial" began, he wrote and warned Nestorians not to make a disturbance, showing that this title of the Blessed Virgin had been constantly used by orthodox Fathers. Later, Nestorius wrote to him, enclosing Cyril of Alexandria's twelve anathemas and some of his own sermons, and defending himself. John then decided for his friend against his natural rival, "the Egyptian". He was summoned to Ephesus by the emperor in November, 430, with all the other bishops. But when the council was opened in June, 431, he had not come. The Fathers waited for him some time; then two of his metropolitans (those of Apamea and Hierapolis) declared in his name that the council was to begin without him. It was thought that he did not wish to be present, because of his friendship for his friend, so the first session was held in his absence. Six days later John arrived with a great number of his bishops, refused all invitations to take part in the council, and opened at his own lodging a rival synod, which defended Nestorius and condemned Cyril. This rival synod, assembled (in which John's candidate, Candidian, took part) caused the great trouble at Ephesus (see EPHESUS, COUNCIL OF). From this time John took the side of Nestorius, declared his deposition unjust, refused to acknowledge the new Bishop of Constantinople, Maximian, and was in schism with Alexandria and Rome. But he was put to death by Wenceslaus in 1393 for the reason given above, the controversy has never ceased.

We still find defenders of the opinion advanced by Hajek, that there are two Johns of Pomuk. Most modern historians, however, are probably correct in regarding the vice-general murdered in 1393 as the only historical personage. A few of these, however, do not look upon the confirmation of the election of the Abbot of Klára as the true reason for John's murder; they hold that Wenceslaus IV was already exasperated against John, because he would not violate the queen's conscience for opportunity for revenge. These details can in no way affect the validity of the canonization of the vice-general, who had been recognized as a martyr immediately after his death. Consequently, when Protestant historians, as Abel, assert that the veneration of St. John Nepomucene was first introduced by the Jesuits to banish the cult of John Hus from Bohemia, their contention is both unhistorical and without justification: the veneration of John of Nepomuk was widespread long before the Jesuits ever existed. St. John Nepomucene is patron saint of Bohemia. When in 1719 his grave in the Prague cathedral was opened, his skull could not be uncurtained through shrivelled. His feast is celebrated on 16 May.

J. P. Kirsch.

John of Antioch. — There are four persons commonly known by this name.

I. John, Patriarch of Antioch (428-41) at the time of the Council of Ephesus. He was a friend and had been a fellow-student of Nestorius. When the trouble about the word "consubstantial" began, he wrote and warned Nestorians not to make a disturbance, showing that this title of the Blessed Virgin had been constantly used by orthodox Fathers. Later, Nestorius wrote to him, enclosing Cyril of Alexandria's twelve anathemas and some of his own sermons, and defending himself. John then decided for his friend against his natural rival, "the Egyptian". He was summoned to Ephesus by the emperor in November, 430, with all the other bishops. But when the council was opened in June, 431, he had not come. The Fathers waited for him some time; then two of his metropolitans (those of Apamea and Hierapolis) declared in his name that the council was to begin without him. It was thought that he did not wish to be present, because of his friendship for his friend, so the first session was held in his absence. Six days later John arrived with a great number of his bishops, refused all invitations to take part in the council, and opened at his own lodging a rival synod, which defended Nestorius and condemned Cyril. This rival synod, assembled (in which John's candidate, Candidian, took part) caused the great trouble at Ephesus (see EPHESUS, COUNCIL OF). From this time John took the side of Nestorius, declared his deposition unjust, refused to acknowledge the new Bishop of Constantinople, Maximian, and was in schism with Alexandria and Rome. But he was put to death by Wenceslaus in 1393 for the reason given above, the controversy has never ceased.

We still find defenders of the opinion advanced by Hajek, that there are two Johns of Pomuk. Most modern historians, however, are probably correct in regarding the vice-general murdered in 1393 as the only historical personage. A few of these, however, do not look upon the confirmation of the election of the Abbot of Klára as the true reason for John's murder; they hold that Wenceslaus IV was already exasperated against John, because he would not violate the queen's conscience for opportunity for revenge. These details can in no way affect the validity of the canonization of the vice-general, who had been recognized as a martyr immediately after his death. Phokas (610), using for this purpose Sextus Julius Africanus, Eusebius, Ammianus Marcellinus, and other standard authorities. It is one of the many scholars who in the eleventh and twelfth centuries lived to spend the next three years in the practice of most austere piety. His wonderful sanctity impressed a Franciscan journeying through Almodóvar, and at the friar’s advice he took up the study of philosophy and divinity at Alcalá, where he was fortunate to have as his teacher the famous Bishop of Seville, Domingo de Deza. His parents died while he was a student and after his ordination he celebrated his first Mass in the church where they were buried, sold the family property and gave the proceeds to the poor. He saw in the severing of natural ties a vocation to foreign missionary work and made preparation to go to Mexico in America. He arrived there, at Seville in 1527, a favourable opportunity to start for his new field of labour, his extraordinary devotion in celebrating Mass attracted the attention of Hernando de Contercas, a priest of Seville, who reported his observations to the archbishop and general inquisitor, Don Alphonso Manrique. The archbishop saw in the young missionary a powerful instrument to stir up the faith of Andalusia, and after considerable persuasion Blessed John was induced to abandon his journey to America. His first sermon was preached on 22 July, 1529, and immediately his reputation was established; crowds thronged to hear his sermons. His success, however, brought with it the hatred of a certain class, and while living at Seville he was brought before the inquisitor and charged with exaggerating the dangers of wealth and closing the gates of heaven to the rich. His innocence of the charges was speedily proved, and by special invitation from the court he was appointed to preach the sermon at the next great feast in the church of San Salvador, in Seville. His appearance was a cause of public rejoicing. He began his career as apostolic preacher of Andalusia at the age of thirty. After nine years in that province he returned to Seville only to depart for the wider fields of Cordova, Granada, Bolza, Montilla, and Zafra. For eighteen years before his death he was the victim of constant illness, the result of the hardships of his apostolate of forty years. He was declared Venerable by Clement XIII, Feb., 1799, and beatified by Leo XIII, 12 Nov., 1893.

Among the disciples drawn to him by his preaching and saintly reputation may be named St. Teresa, St. John of God, St. Francis Borgia, and Ven. Louis of Granada. The spread of the Jesuits in Spain is attributed to his friendship for that body. Blessed John of Avila’s works were collected in thirteen volumes between 1575, 1792, 1805; a French translation by d’Andilly was published at Paris in 1673; and a German translation by Schermer in six volumes was issued at Ratibson between 1856 and 1881. His best known works are the “Audi Fili” (English translation, 1620), one of the best tracts on Christian perfection, and his “Spiritual Letters” (English translation, 1831, London, 1904) to his disciples.

John of Beverly, Saint, Bishop of Hexham and afterwards of York; b. at Harpham, in the East Riding of Yorkshire; d. at Beverley, 7 May, 721. In early life he was under the care of Archbishop Theodore, at Canterbury, who supervised his education, and is reputed to have given him the name John. He became a member of the Benedictine Order, and for a time was an attendant of St. Britta’s monastery at Streaneshalch (Whitby). Afterwards
he won renown as a preacher, displayed marked erudition in expounding Scripture, and taught history amongst other subjects. On 25 August, 687, he was consecrated Bishop of Hexham, a district with which he was not unfamiliar, as he had for a period led a life of retreat, to the south (Hermesbou), on the opposite bank of the Tyne. Here, too, he was afterwards wont to resort for seclusion, especially during Lent, when the cares of his episcopal ministration permitted of his doing. John was present at the synod on the Nidd in 705, convened by Oserd, King of the West Saxons, on Wilfrid's call. On the same year (705), on the death of Boe, John was translated to York after eighteen years of labour in the See of Hexham, where he was succeeded by Wilfrid. Of his new activity little is known beyond that he was diligent in visitation, considerate towards the poor, and exceedingly attentive to the training of students whom he maintained under his personal charge. His little company of pupils is said to have included: Bede, whom he ordained; Berthune, afterwards Abbet of Beverley; Herebal, Abbet of Tyne-mouth; and Wilfrid "the Younger", John's successor in York. Having purchased a place called Inderwood, to which a later age has given the name of Beverley, John established a monastery and also handsomely endowed the place, which became even in its founder's day an important ecclesiastical centre. To this monastery of Beverley, after resigning the See of York in 687, John retired and spent the remainder of his life with Abbet Berthune, a one time favourite scholar. In 697 he was canoniied by Benedict IX, his bones were translated by Eadric, Archbishop of York, and placed in a costly shrine. A second translation took place in 1197. The remains were discovered in 1864 and again brought to light in 1796. (See AVEYLET MINSTER.)

P. J. MACAULEY.

JOHN OF BICLARE (JOHNNES BICLARIENSIS), chronicler, b. in Portugal, probably about the middle of the sixth century; d. after 621. He was educated at Constantinople, where he devoted at least seven years to the study of Latin and Greek. When he returned an attempt was made to force him to join the State Church, then Arian in character. As he staunchly resisted, he was banished by King Leovigild to Barcelona. After Leovigild's death in 586, John founded the Benedictine monastery of Biclaro, the site of which has not yet been exactly determined, and presided over it as abbot for several years, until he was appointed Bishop of Gerona (the bishop known as "Johannes Gerourensis" seems to have been an early successor of the chronicler). John took part in the synod of Saragossa (592), of Barcelona (599), and of Gara (614). His chronicicle reaches to the year 590, and is a continuation (from 567) of the chronicle of Victor of Tournus, in Africa (Chronicon continuans Victorum Tournunesem). It was edited by H. Canlius (Ingolstadt, 1600), by Scaliger in "Thesaurus Temporum" (Leyden, 1606), and in Migne, P.L., LXXII (1849). The best edition, with copious prolegomena, is by Mommsen in "Mon. Germ. Hist.: Auct. ant.", XI (1893), 211-220. This chronicle is the most complete authority on the stormy period of Leovigild's reign, and on the Visigothic conquests from Germanizing Arianism to Romanizing Catholicism. The narrative is rigorously impartial, despite the preceding bitter religious conflicts during which the writer himself had to suffer.

GEBRÜDER, JOHANNES VON BICLARO IN THEOL. STUDIEN UND KUNSTEN, LXVIII (1898), 103-133; WATTENBACH, Deutschlands Geschichtsquellen, I (Leipzig, 1883), 83.

PATRICK SCHLAGER.

JOHN OF CORNWALL (JOHANNES CORNUBIENSIUS, JOHANNES DE SACRO GERMANO) lived about 1176. He was the author of a treatise written against the doctrine of Abelard, "Eulogium ad Alexandrum Papam III, quo Christus sit aliquis hostis", whether anything is known of his life except the few facts to which he alludes by chance in this work. Though he is claimed by some French writers as a Bas-Breton, it appears certain from the varied forms of his name that he was a native of St. Germain's in Cornwall. He was a student under Peter Lombard and Robert of St. Victor at Paris, and subsequently became a teacher himself. From Peter Lombard he seems to have derived the view that which scholar held for a time, that Christ's humanity was but the vesture or garment wherewith the Logos was clothed; but he abandoned this doctrine, which was condemned at the Council of Tours held by Alexander III in 1163, and advocated the orthodox teaching. In support of this he wrote the "Eulogium", though not for many years after the council, since a reference in the preface to William, formerly Archbishop of Sens, as being then Archbishop of Reims, shows that it could not have been written before 1176, in which year the translation took place. It was first published by Martene in the "Thesaurus novus anecdotum" (Paris, 1717), and is reprinted in Migne, P. L., CXXVII. There is at Magdalene College, Oxford, a "Commentarius in Aristotelis libri duo analytico-rum posteriores", which may be his, and the Latin hexameters "Merlini prophetiae cum expositione", written at the request of Bishop Warelaw of Exeter, have been ascribed to him by reason of the reference to Cornwall it contains. Nothing is known of his death, nor can he be identified with the John of Cornwall who was archdeacon of Worrington.

EDWIN BURTON.

JOHN OF EPHESUS, also known as JOHN OF ARA, the earliest, and a very famous, Syrian historian. He was born at Amida (Diarbekir, on the upper Tigris), about 557; d. about 555. In 329 he was ordained deacon in St. John's monastery in the Syrian city, but on account of his monophysite doctrine was soon obliged to take refuge in Palestine, where we find him in 534; thence he came to Constantinople, driven from Palestine by the great pestilence of 534-7. In the capital he found a friend in Jacob Baradæus, the organizer of the Jacobite Church; a protector in Justinian; and a life-long collaborator in a new Deuterius. The emperor placed him at the head of the Monophysite community of Constantinople, and soon entrusted him with the mission of converting the heathens of Asia proper and the neighbouring provinces. Eventually John was consecrated (by Jacob Baradæus), Bishops of the Monophysite territory, but his official residence, it seems, was always Constantinople. In 546 he helped Justinian to search out and quash the secret practice of idolatry in the capital and its surround-
ings. Hence his beloved titles of "Teacher of the Heathens", and "Idol-breaker". Soon after Justinian's death (565), John's fortunes began to decline. When the persecution broke out in 571 he was one of the few who went into exile, and for many years suffered in prison, banishment, and all sorts of vexations at the hands of the orthodox patriarchs. He was resigned, in favour of Deuterius, his position as head of the community he had converted from heathenism, and consecrated Deuterius Bishop of Carta. When he returned, John must have been shortly after 585, for his history comes to an end with that year, and he was then about eighty years of age.

His principal work was an "Ecclesiastical History", from Julius Caesar to A.D. 585. It was divided into three parts of six books each. The first part has entirely perished; of the second part we have copious excerpts in two manuscripts in the British Museum, and possibly the whole of it in the third part of the "Chronicle" of Denys of Tell-Mahre. These excerpts have been edited by Land (Anecdota Syriaca; Leyden, 1668, II, 289-359, 355-390), and translated into Latin as an appendix to his "Church History" (Joannis Episcopi Epheсин Syri Monophysitici Commentarii de Beatitude Orientalibus et Historie Ecclesiastica Fragmenta, Amsterdam, 1889). The third part, which opens with the beginning of the persecution under Justin II (571), has come down to us, translated into Latin, as a technical, claiming to be an edition of it by Cureton (The Third Part of the Ecclesiastical History of John, Bishop of Ephesus, Oxford, 1833), also two translations, one English by Payne Smith (1860), and another in German by Schöpfelder (1862). John of Ephesus is also the author of the "De Estimativis of the Eastern Saints", written at different times and gathered into a "corpus" about 599. They were published by Land (op. et loc. cit., pp. 2-288), and done into Latin by von Douwen and Land (ibid.). Both works are of the greatest importance for the history of the writer's time. He evidently strove to be impartial, for which he is very much to be commended, considering the part he played in the events he related; he is also accurate and full of details. The troubled times in which he wrote the third part of the "History" and his unsettled condition during that period of his life easily explain the disorder and repetition found in the last years. They account also for the style, which is rude, entangled, and abounds with Greek words and phrases; besides, we must not overlook the fact that the writer spent most of his life outside the zone of spoken Syriac.

H. HYVERNAT.

John of Falkenberg, author, b. at Falkenberg, Pomerania, Prussia, date unknown; d. about 1418 in Italy.—of, according to other accounts, in his native town. Life little is known of him, except that he entered the Order of St. Dominic and spent a novice in the convent at Kammin, a town of the above-named province. The fact that he was a master in Sacred Theology indicates that for a number of years he taught philosophy and theology in his order. His principal work was to write the second part of the books of music and the first part of the books of canon law, which he took in the great papal schism which wrought such confusion in the Church during the first part of the fifteenth century, but chiefly to his involving himself in the long-standing troubles between the Teutonic Order of Knights of Livonia and the King of Poland. In opposition to the general order of his superior, Bernard de Datis, and to many of the brethren of his own province who were firm in their faith and determination, he took part in the rebellion of 1404, and at the meeting with Alexander V and John XXIII, he was a strong and ardent adherent of Gregory XIII, the legitimate pope; and, being of a quick and passionate temperament, he carried his opposition so far as to refuse publicly in the Council of Constance to acknowledge Bernard as his superior. In the end, he was excommunicated, and must have been shortly after 585, for his history comes to an end with that year, and he was then about eighty years of age.

John of Fécamp (also known as Jeanville on account of his diminutive stature), ascetic writer, b. near Ravenna about the beginning of the eleventh century; d. at Fécamp, Normandy, 22 February, 1079. He studied at Dijon under his compatriot William, Abbot of St. Benignus, whom he had accompanied to France. Under this skilled master he acquired an extensive knowledge of all the sciences, making a special study of medicine, of which he is reckoned by Bernier among the cleverest exponents trained in the monastic schools of the Middle Ages. When William was commissioned to reform the Abbey of Fécamp and to establish there a colony of Benedictine monks, John again accompanied him, and having founded the monastery, he remained there until his death in 1088.

JOSEPH SCHROEDER.

John of Fécamp (also known as Jeanville on account of his diminutive stature), ascetic writer, b. near Ravenna about the beginning of the eleventh century; d. at Fécamp, Normandy, 22 February, 1079. He studied at Dijon under his compatriot William, Abbot of St. Benignus, whom he had accompanied to France. Under this skilled master he acquired an extensive knowledge of all the sciences, making a special study of medicine, of which he is reckoned by Bernier among the cleverest exponents trained in the monastic schools of the Middle Ages. When William was commissioned to reform the Abbey of Fécamp and to establish there a colony of Benedictine monks, John again accompanied him, and having founded the monastery, he remained there until his death in 1088. In this year, worn out by his labours in the service of the Church, and seeking a more tranquil refuge for his old age, William appointed John his successor as abbot and retired to Italy. Taking his master for his model, John succeeded in winning an almost equally high reputation. If his authority was occasionally exercised with an approach to despotism, he succeeded at least in defending the privileges of his house against every
attack. In 1052, on the elevation of Hielard to the archiepiscopal See of Lyons, John was invited to succeed him as Abbott of Dijon. At first he retained also the abbotry of Fécamp, but, finding himself unable to carry the double burden, he resigned the office in 1056. Towards the close of his life he undertook a pilgrimage to the Holy Land, desiring to see before his death the sanctified places towards which his thoughts had so often turned during his meditations. Seized and thrown into prison by the Turks, it was only in 1076 that he could return to France. He then retired to Fécamp.

As Abbot of St. Benignus John had been brought into close relations with Emperor Henry III—after 1038 also King of Burgundy—and with his spouse, Agnes of Poitiers. After Henry's death his widow placed herself entirely under the spiritual guidance of the abbot, and for her John composed a series of ascetical works. These were entitled the "Liber precum variarum", "De divina contemplatione Christi amore", "De superna Hierusalem", "De institutione vidae", "De vita et moribus virginum", "De fidei etiam moralibus dispensatione" (P. L. CXIII, 147 sqq., 445 sqq.). A good indication of John's value as a writer is afforded by the fact that the "De divina contemplatione" was for a long time regarded as a work of St. Augustine, although it is now certain that it was composed either wholly or partly by John. One of the earliest dependency accounts in the life of the cloisters are also collected in P. L., loc. cit., 153 sq.

Thomas Kennedy.

John of Fermo, Blessed, more often called John of La Verne, from his long sojourn at that holy mountain, b. at Fermo in the Marches, 1259; d. at La Verne in Tuscany, 10 August, 1322. After a youth of precocious piety, he was received at the age of ten among the Canons of St. Peter's at Fermo. Three years later, desiring of leading a more austere life, he entered the Order of Friars Minor, and under the direction of the celebrated brother, James of Fallerone, soon made rapid progress in perfection. Shortly after his profession, John was sent by the minister general to Mount La Verna, where St. Francis had received the stigmata, and there he spent many years in solitude, penance, and contemplation, being favoured with ecstatic manifestations. His later years, however, were devoted to the Apostolic ministry, and he preached at Florence, Pisa, Siena, Arezzo, Perugia, and many other towns of northern and central Italy, working wonders everywhere. His contemporaries relate much of Blessed John: they tell us that he enjoyed the gift of infused science, and that prelates and princes alike were astounded at his learning. He was linked in bonds of the warmest friendship with Jacopone of Todi, and administered the last sacraments to the dying poet in 1306. John is said to have composed the preface which is said in the Mass of St. Francis. Feeling a lack of approach of death at Cortona while on his way to Assisi, John returned to La Verna and died there at the age of sixty-three. He was buried on the holy mountain, where many miracles were wrought through his intercession, and where his cell is still shown. The inmemorial cultus of Blessed John was approved XI of 1680, and his feast is kept in the Order of Friars Minor on 9 August. Acta SS., August, II, 438 sqq.; gives a contemporary life of Blessed John by an anonymous biographer with a Comment. Proc. of the Hollandish Synod. Other early lives found in the Chron. XXIV Generalium in Annot. Francisc., III (1897), 429 sqq.; Arrivoli, La vita di Fra Pisa, Labor de Confraternitate in Annot. Francisc., I (1900), 265 sqq.; See also Bibl. Holy. Lat., I, 650; Sabattier in Collection d'Études etc., II (1900), 59 sqq.; IV (1902) 50 sqq.; Florio, Le Monaci, 87 sqq.; Lenormant, Catalogue Sacrat. Prat. Minor. Pascal Robinson.

John of Gand. See John of Janduno.

John of Genoa (often called Baldis, or de Baldis), grammarian; b. at Genoa, date unknown; d. there about 1298. Of his early years nothing is known. He distributed his wealth among the poor of the city, and entered the Order of St. Dominic, apparently at a somewhat advanced age. His noted work, the "Summa Grammaticalis", more commonly known as the "Catholicum", has made his name widely celebrated. The work consists of treatises on orthography, etymology, grammar, prosody, rhetoric, and an etymological dictionary of the Latin language (prima, medii et infima Latinata). The great number of MSS. in which the "Catholicum" still exists, and the numerous editions through which it passed during the first seventy-five years after the invention of printing, attest the wide acceptance accorded it and the popularity it long enjoyed. For more than a century it was highly esteemed as a textbook. It has been the subject at once of excessive criticism and excessive praise. Erasmus, the most conspicuous of its critics, speaks of it in caustic terms in his "De Ratione Studiorum" and "Colloquia". Leander Alberti ("Viri Illustres Ord. Pred.") and "Discrizzioni di tutta Italia") defends it against the aspersions of the humanists. If we bear in mind the materials the author had at his disposal, the purposes of the work, and the needs of the time, it must be considered that the "Catholicum" possessed considerable merit. That it met the demands of the age is attested by its popularity. The author by his own assertion refuted those who would have made him an adept in Greek. Besides the "Catholicum", he wrote Liber Theologici qui vocatur Dialeclicus et de Questionibus Artificum et liberalium," and "Quodsum opus ad inveniendum festa mobilia. A "Postilla super Joanne" and a "Tractatus de Omnino Potentia Dei" are also attributed to John of Genoa.

Victor F. O'DanTe.

John of God, Saint, b. at Montemor o Novo, Portugal, 8 March, 1495, of devout Christian parents; d. at Granada, 8 March, 1550. The wonders attending the saint's birth heralded the vast interests, but dominated throughout by implicit fidelity to the grace of God. A Spanish priest whom he followed to Oropesa, Spain, in his ninth year left him in charge of the chief shepherd of the place, to whom he gradually endeared himself through his punctuality and fidelity to duty, as well as his earnest piety. When he had reached manhood, to escape his master's well-meant, but persistent, offer of his daughter's hand in marriage, John took service for a time in the army of Charles V, and on the renewal of the proposal he enlisted in a regiment on its way to Austria to do battle with the Turks. Succeeding years found him first at his birthplace, saddened by the news of his mother's premature death, which had followed close upon his mysterious disappearance; then a shepherd at Seville, and still later at Gibraltar, on the way to Africs, to ransom with his liberty Christians held captive by the Moors. He accompanied to Africa a Portuguese facny just expelled from the country, to whom charily impelled him to offer his services. On the advice of his confessor he soon returned to Gibraltar, where, brief as had been the time since the invention of the printing-press, he inaugurated the Apostolate of the printed page, by making the circuit of the towns and villages about him, with a staff, and making collections of pictures, with practically no margin of profit, in order to place them within the reach of the poor.

It was during this period of his life that he is said to have been granted the vision of the Infant Jesus, Who bestowed on him the name by which he was later
known, John of God, also bidding him go to Granada. There he was so deeply impressed by the preaching of Blessed John of Avila that he distributed his worldly goods and went through the streets of the city, bearing his breast and calling on God for mercy. For some time his sanity was doubted by the people, and he was dealt with as a madman, until the zealous preacher obliged him to desist from his lamentations and take some other method of atoning for his past life. He then made a pilgrimage to the Shrine of Our Lady of Guadalupe, where the nature of his vocation was revealed to him by the Blessed Virgin. Returning to Granada, he gave himself up to the service of the sick and poor, renting a house in which to care for them, and after furnishing it with what was necessary, he searched the city for those afflicted with all manner of disease, bearing on his shoulders any who were unable to walk.

For some time he was alone in his charitable work, soliciting by night the needful supplies, and by day attending scrupulously to the needs of his patients and the care of the hospital; but he soon received the cooperation of charitable priests and physicians. Many benefactors were attracted by the beautiful stories that he told of his work, during the main following several days in which he left for the next town he came to Thule, the abode of the philosophers and sages of ancient Greece, and they were in the character of men of learning. He was soon able to seek new succors as a successor to the government of the order. The latter, Peter the Sinner, as he called himself, became a model of humility and charity.

Among the many miracles which are related of the saint the most famous is the one commemorated in the Office of his feast, his rescue of all the inmates during a fire in the Grand Hospital at Granada, himself passing through the flames unscathed. His boundless charity extended to widows and orphans, those out of employment, and the sick. In the thirteen years of severe mortification, unceasing prayer, and devotion to his patients, he died amid the lamentations of all the inhabitants of Granada. His last illness had resulted from an heroic but futile effort to save a young man from drowning. The magistrates and nobility of the city crowded about his death-bed to express their gratitude for his services to the poor, and he was buried with the pomp usually reserved for princes. He was beatified by Urban VIII, 21 September, 1638, and canonized by Alexander VIII, 16 October, 1690. Pope Leo XIII made St. John of God the patron of hospitals. (See also BROTHERS HOSPITALIERS OF ST. JOHN OF GOD.)

F. M. RUDGE.

John of Hauveville, moralist and satirical poet of the twelfth century (Flourished about 1184). Little is known of his life. There is not much probability in the opinion that he was born in England, and he was not a Benedictine monk. The only work that can be attributed to him with certainty has for its title and false name of 'Archithrenius' (The Prince of Lamentations). It is a Latin poem in eight cantos. In a prose prologue the hero deplores the unmerited woes of men, beginning with his own, and announces that he is going to Nature to seek the remedy for them. He begins by entering the palace of Venus and describes the beauty of one of the members of the goddess's retinue (I). Thence he passes to the Land of Gorging, inhabited by the Belly-worshipers (Vendscoce), and he proceeds to the palace where he opposes the sovereignty of the 'White Brothers' (II). He comes to Paris and delivers a pompous eulogy of that city, describing, in contrast, the wretchedness of the students—a valuable piece of first-hand evidence in regard to the period when the University of Paris was laboriously developing itself (III). Archithrenius then visits the Mountain of Ambition, which is situated in Macedon, near Pella, the birthplace of Alexander, greatest of conquerors, and is crowned with the palaces of kings (IV). The Mountain of Presumption forms a pendant to this, and is inhabited mostly by ecclesiastics and monks. A eulogy of Henry II, King of England and Duke of Normandy, is here dragged in clumsily. But the hero discovers a gigantic monster, Cupidity, and the encounter calls forth a picture of the greediness of princes. In another digression the hero contrives to relate the fabulous history of the Kings of Britain, and of Modern Rome, and the next cantos we come to Thule, the abode of the philosophers and sages of ancient Greece, and they vie with each other in declaiming against vices (VII—VIII). Lastly, Archithrenius meets Nature on a flowery plain, surrounded by a brilliant throng of attendants. He falls at her feet. She begins with a complete course of cosmo-ology and astronomy in five hundred lines, and ends by listening to the request of Archithrenius. For remedy, she prescribed for him marriage with a young girl whose physical beauty is minutely described. In the prologue this damsel was Moderation, but here there is nothing abstract about her, and Nature instructs her disciple in his conjugal duties (IX). These and other passages in the work exhibit a certain degree of sensuality. The imitation of the Latin poets is betrayed in the plagiarizing of whole verses at a time. John of Hauveville dedicated his work to Gautier de Coutances just when the latter had left the See of Lincoln for that of Rouen (1184). The poem had a great success. It was frequently copied and commented upon before being published in 1517, at Paris, by Jodocus Badius Ascencius. The latest edition is that of Th. Wright in "The Latin Satirical Poets of the Twelfth Century" (Rolls Series, London, 1872).

PAUL LEJAY.

John of Janduno, an Averroistic philosopher, theologian, and political writer of the fourteenth century. John of Janduno (Johannes de Genduno, de Ganduno, and de Gandavo) and John of Gand (or less correctly, of Ghent) are now generally said to have been two different persons. The former was born two years earlier than the latter, graduated in arts at the College of Navarre (University of Paris), wrote a work entitled "De Laudibus Parisiis", and, in collaboration with Marsilius of Padua, composed the celebrated "Defensor pacis", directed against Pope John XXII, for which the authors were condemned in 1327. John of Gand was born about 1270 or 1280, studied theology at the Sorbonne, and after having served as curé at Kiel- drecht was made a canon of the cathedral of Paris. These facts seem to be clearly established. However, there are extant a number of works, mostly philosophi- cal, which are ascribed to Johannes de Genduno, Ganduno, or Gandavo, and it is probable that they were written by John of Janduno or by John of Gand.

These works include commentaries on Peter Lombard's "Books of Sentences", on Aristotle's "Phys-
JOHN 474

iose", "Metaphysics", and "The Soul", also a treatise entitled "Quæstio in Aveiroem de substantia orbis". The author is strongly inclined towards the doctrines of Averroes. He defends the principle of twofold truth, according to which what is false in philosophy may be true in theology, or vice versa. Thus, he argues that the validity of the world is demonstrated by philosophy to be true and yet in theology it is false; according to this principle, we are to believe that the world was made, while we know that it was not made.

Again, he holds the Averroistic doctrine that there is only one intellect, which is common to all men, and is in no sense a part of the individual soul. Consequently, he is obliged to maintain that the immortality of the individual soul cannot be proved in philosophy. In his discussion of the nature and operations of the human mind he takes sides with the determinists, who deny that the will is free. Finally, the Averroist author of these commentaries is no friend of the Thomistic school. He tries to belittle the reputation of St. Thomas, and to prove him inferior to Averroes. Considering, therefore, the spirit and tendency of these works, one is inclined to assign them to the turbulent, anti-papal author of the "Defensor pæctis", and not to the theologian and canon who, for all we know, troubled the theological and intellectual world by going on between Thomists and Averroists as he did for the political conflict between Pope John XXII and Louis of Bavaria. The commentaries mentioned above and the "Quæstio" were published in Venice, 1497, 1535, etc.

WILLIAM TURNER.

John of Maths, Saint. See Trinitarian Order.

John of Montecorvino, a Franciscan and founder of the Catholic mission in China, b. at Montecorvino in Southern Italy, in 1246; d. at Peking, in 1328. Being a member of a religious order which at that time was chiefly concerned with the conversion of unbelievers, and was commissioned by the Holy See to preach Christianity especially to the Asiatic hordes then threatening the West, he devoted himself to the Eastern missions, first that of Persia. In 1258 Argun, the khan or ruler of this kingdom, sent a request to the pope through the Nestorian bishop, Bar Sauma, to send him a prelate from the Council of the great Chinese emperor, Kublai Khan (1260-94), who was well disposed towards Christianity. About that time John of Montecorvino came to Rome with similar promising news, and Nicholas IV entrusted him with the important mission to Farther China, where about this time Marco Polo, the celebrated traveler, still lingered. He left Rome in 1269, provoking with letters to the Khan Argun, to the great Emperor Kublai Khan, to Kaidu, Prince of the Tartars, to the King of Armenia and to the Patriarch of the Jacobites. His companions were the Dominican Nicholas of Pistoia and the merchant Peter of Lucalongo. From Persia he went by sea to India, in 1291, where he preached for thirteen months and baptized about one hundred persons. Here also his companion, Nicholas, died. Travelling by sea from Meliapur, he reached China in 1294, only to find that Kublai Khan had just died, and Timurleng (1294-1307) had supplanted him on the throne. This latter did not embrace Christianity, he threw no obstacles in the way of the zealous missionary, who, in spite of the opposition of the Nestorians already settled there, soon won the confidence of the ruler. In 1299 he built a church at Peking and in 1305 a second opposite the imperial palace, together with workshops and dwellings for two hundred persons. He gradually bought from heathen parents about one hundred and fifty boys, from seven to eleven years of age, instructed them in Latin and Greek, wrote psalms and hymns for them, and then trained them to serve Mass and sing in the choir. At the same time he familiarized himself with the native language, preached in, and translated into Chinese the New Testament and the Psalms. Among the six thousand converts of John of Montecorvino was a Nestorian king named George, of the race of the priest John, a vassal of the great khan, mentioned by Marco Polo. After he had worked alone for eleven years, a German associate, Arnold of Cologne, was sent to him (1304). In 1307 Clement V, highly pleased with the missionary's success, sent seven Franciscans who were commissioned to consecrate John of Montecorvino Archbishop of Peking and chief archbishop (summus archiepiscopus) of all those countries; they were themselves to be his suffragan bishops. Only three of these envoy's arrived safely: Gerardus, Perergrinus, and Andrew of Perugia; the latter consecrated John in 1308 and succeeded each other in the See of Zaiton, established by Montecorvino. In 1312 three more Franciscans arrived from Rome as suffragans. John of Montecorvino departed this life (1328) honored as a saint by Christian and heathen.

Our chief information about his work is found in two letters written in 1305 and 1306, printed in Wadding, Annales minorum ordinis fratorum I, vi (Rome, 1732), 603-09, and in Himmelberger, Geschichte der Mission in China (Heidelberg, 1741), append. n. 44 and 45. There is an English translation of these letters in YULE, Cathay and the Way Thither, I (London, 1866), 299 sqq. The records from which the Nestorians in China are to be found, moreover, in BÉRAMARD, Nouveaux mélanges anatoliens, II (Paris, 1829), 193-96; KUNTSTADT, Die Mus- senen in Indien und China im 14. Jahrhundert in Geschichte der Blätter, XXXVII (Munich, 1858), 229-41; HUC, Le Christien en Chine (Paris, 1855), 87 sqq.; BERTX, Die Colonie der römischen Kirche in den Tsching-tschinern, 2d ed., 531 sqq.; HARTIG, Die Kolonie der rohenischen Kirche in dem Tschingtche, 2d ed., in Zeitschrift für die histor. Theol., XXVIII (Gotha, 1866), 285-98.

OTTÖ HARTIG.

John of Montesano, theologian and controversialist, b. at Monzón, Spain; dates of birth and death unknown. He joined the Dominicans probably in Valencia. In 1383 he was lecturing on theology at the cathedral in that city. Thence he went to Paris, taught there the convents of St. James there, and attained the master’s degree in theology in 1387. Here he entered the field of controversy on the question of the Immaculate Conception, which was not then defined. Maintaining the proposition that the Blessed Virgin was conceived without sin was heretical, he aroused against him the faculty of the Paris university. They appointed four examiners to try him; but his answers warned him, first privately, then publicly, to retract, and when he refused carried the matter to Pierre Orge ment, Bishop of Paris, who promulgated a decree of excommunication against all who should defend the forbidden theses; and the faculty issued letters condemniatory of Montesano's errors and conduct, which Denielle conjectures, from their ascerity of speech, were written by Pierre d'Ailly. Denielle also says Montesano would not have been condemned had he not declared the doctrine of the Immaculate Conception heretical. Montesano appealed to Clement VIII, who cited him and the university before a public court. Later, foreseeing that the cause was going against him, Montesano, despite the command under pain of excommunication to remain at Avignon, secretly withdrew into Aragon, then went to Sicily, changing his allegiance to Urban VI, Clement's rival. There and in Spain, whether he afterwards returned, he died in 1412. Alberto, Duke of Gandia, chose him as head of a legation sent to defend his claim to the crown of Aragon. Besides four works against Clement's claim as pope, he wrote: "Tractus de Conceptione B. Virgins", a number of sermons, and various opuscula in the vernacular.

V. F. O'DAHL.
John of Nikifor, an Egyptian chronicler who flourished in the latter part of the seventh century. The little we know of his life is gathered from the "History of the Patriarchs" by Severus of Asmuneus. He lived under John of Semnud, Isaac, and Simeon, respectively fortieth, forty-first, and forty-second patriarchs, and seems to have played an important part in the affairs of the Egyptian Church, both as Bishop of Nikifor (Coptic, "Nikhaoti in the Delta) and as a defender of Nestorius the Monophysite. But having disciplined a monk guilty of a grave offence against morals so severely that he died ten days later, he was deposed from both offices by the patriarch Simeon, and reduced to the rank of a simple monk. His Chronicle", composed very likely before his deposition, is a valuable, extending from Adam to the end of the Arabic conquest. In many respects, it does not materially differ from the Byzantine chronicles, which the author often copies, especially those of John Malalas, and the monk John of Antioch. But it has preserved some local traditions, not to be found elsewhere, on the ancient history of Egypt, also some details otherwise unknown, and apparently authentic, on certain periods of the Eastern Empire, in particular on the revolution which brought about the fall of Phocas and the accession of Heraclius I, and the condition of Egypt during the seventh century. The last chapters concern events of Egypt by the Arabs, but little posterior to the events. This chronicle was originally written in Greek, with the exception of some of the chapters concerning Egypt, which were very probably written in Coptic. It has come down to us in an Ethiopic version made in 1602 by an Abyssinian scholar, with the assistance of an Egyptian monk, on a much older Arabic text now lost like the original. The text, unfortunately, has suffered much at the hands of the translators and copyists, especially in passing into Arabic. Such as it is, it has been the subject of a careful study and analysis by H. Zonertolin, in the "Journal Asiatique", 7th series, vols. X, XII, XIII (Paris, 1877-79), "La Chronique de Jean de Nikifor, notice et extraits" (also in book form, Paris, 1879); later it was published in its entirety, with a French version, by the same scholar; "La Chronique de Jean de Nikifor", Notice et extraits du manuscrit de la Bibliothèque Nationale", t. XXIV, i, pp. 255-605 (also separately, Paris, 1883). The two above-named publications of Zonertolin: cf. the reviews in "Bibliothèque des Sciences de la Bibliothèque Nationale", 1881, 1883-84; "Bibliothèque de l'Égypte", 1884, 364-374; "Drozin, Le Musulman, III (Louvain, 1884), 233-258.

H. HYVERNAT.

John of Paris (called also Quidort and de Soarines, theologian and controversialist, b. at Paris, date unknown; d. at Bordeaux, 22 Sept., 1306. Having obtained the degree of Master of Arts with distinction, he joined the Dominican Order, when about twenty years of age, at the university of St. James in his native city. There he taught philosophy and theology, and obtained the degree of Master of Theology. He was endowed with great ability, was the most subtle dialectician of the age, possessed great literary and linguistic attainments, and was considered one of the best theologians of the university. Some ten of his works on theology, physics, and metaphysics, still exist in manuscript; two others, "De Antichristo" and "De modo existendi corporis Christi in sacramentario altaris", appeared in print centuries after his death. A treatise, "Contra corruptionem Sancti Thomae", published in 1516 under the name of Egidius Romanus, is commonly attributed to John of Paris; it was certainly not written by Egidius. All these show vast erudition. In his work on the temporal and spiritual power, "De potestate regis et papalis" written during the controversy between Boniface VIII and Philip the Fair, he favours the king, and advances some untenable propositions. He holds, for instance, that the pope, for grave crimes, e.g. heresy, may be deposed. The treatise was later condemned, in which he maintained that the Body of Christ is, or might be, present by assumption (i.e. by the body of Christ assuming the bread and wine), and that the doctrine of transubstantiation was not of faith, brought him into trouble. The faculty of the university reported the erudite William, Bishop of Paris, who forbade him under penalty of excommunication to defend such a doctrine, and deprived him of the offices of lecturing, preaching, and hearing confessions. John appealed to the Holy See, but died soon after, and the case was dropped. In justice to him, it must be said that he advanced these propositions tentatively; for in the beginning of the treatise he writes that he believes in the Catholic doctrine of transubstantiation, and if it is shown that transubstantiation is of faith, or should it be defined, he will willingly retract.

VICTOR F. O'DANIEL.

John of Parma, Blessed, Minister General of the Friars Minor (1247-1257), b. at Parma about 1209; d. at Camerino 19 March, 1268. His family name was probably Burali. Educated and trained in the church of St. Lazarus at Parma, his progress in learning was such that he quickly became a teacher of philosophy (magister logico). When and where he entered the Order of Friars Minor, the old sources do not say. Affo (Vita, p. 18, see below) assigns 1233 as the year, and Parma as the probable place. Ordained priest he taught theology at Bologna and at Naples, and finally read the "Sentences" at Paris, after having assisted at the First Council of Lyons, 1245. Through his great learning and sanctity, John gained many admirers, and at the general chapter of the order at Lyons in July, 1247, was elected minister general, which office he held till 2 Feb., 1257. We may judge of the spirit that animated the new general, and of his purposes for the full observance of the rule, from the joy felt (as recorded by Angelus Clararius) by the survivors of St. Francis's first companions at his election, though Brother Giles's words sound more pessimistic: "Welcome, Father, but you come late" (Archiv. Litt., II, 263). John set to work immediately. Wishing to know personally the state of the order, he began visiting the different provinces. His first visit was to England, with which he was extremely satisfied and where he was received with great honours by John of France, I, 252). At Sens in France St. Louis IX honoured with his presence the provincial chapter held by John. Having visited the provinces of Burgundy and of Provence, he set out in Sept., 1248, for Spain, whence Innocent IV recalled him to entrust him with an embassy to the East. Before departing, John appears to have held the General Chapter of Mts in 1249 (others put it after the embassy, 1251). It was at this chapter that John refused to draw up new statutes to avoid overburdening the friars (Salimbene, "Mon. Germ. Hist. Script.", XXXII, 300). Only some new rubrics were promulgated, which in a later chapter (Genoa, 1254) were included in the official ceremonial of the order, beginning: Ad omnes horas canonicas (last published by Golubovich in "Archivo Franc. Hist.", III, Quaranzi, 1910). The object of John's embassy to the East was the reunion of the Greek Church, whose representatives he met at Nice, and who saluted him as a brother. John's mission bore no immediate fruit, though it may have prepared the way for the union decreed at the Council of Lyons in 1274. In his generalate occurred also the famous dispute between the Mendicants and the University of Paris.
John 476

According to Salimbene (op. cit., XXXII, 299 sqq.), John went to Paris (probably in 1253), and by his mild yet strenuous arguments strove to secure peace. It may have been in connexion with this attack on the Preachers and the Minoras that John of Parma and Humbert of Romans, Master General of the Dominicans, published at Milan in 1255 a letter recommending the peace of the two orders (see Wadding, III, 380). The "Introductorius in Evangelium aeternum" of Gerard of St. Dominico (1254), John's friend, having been denounced by the professors of Paris and condemned by a commission at Anagni in 1256 (Denifle, "Arch. f. Litt.", I, 49 sqq.), John himself was in a way compromised—new censure was added which, with others, finally brought about the end of his generalate. He convoked a general chapter at Rome, 2 Feb., 1257. If Peregrinus of Bologna [Bulletin critico di cote francese, I (1905), 46] be right, Alexander IV secretly intimated to John that he should resign, and decline re-election should it be offered him. On the contrary, Salimbene (I. c., 301 sqq.) insists that John resigned of his own free will. The pope may have exerted some pressure on John, who was only too glad to resign, seeing himself unable to promote henceforth the good of the order. Quoted as to the choice of a successor by St. Bonaventure, who had succeeded him as professor at Paris. John retired to the Hermitage of Greccio near Rieti, memorable for the Christmas celebrated there by St. Francis. There he lived in voluntary exile and complete solitude; his cell near a rock is still shown. But another hard trial awaited him. Accused of Joachism, he was submitted to a canonical process at Città della Pieve (Umbria), presided over by St. Bonaventure and Cardinal John Gaetano Orsini, protector of the order. The mention of this cardinal as protector brings us to a chronological difficulty, overlooked by all modern writers, who assign the obedience to John at 1257; for Alexander IV (1254-61) retained the protectorship (Anal. Franc., 696, 710; Mon. Germ. Hist.: Ser., XXXIII, 663, 681-2); and Cardinal Orsini became protector, at the earliest, at the end of 1261; see Oliger in "Arch. Francisc. Hist.", III, 346. St. Francis Clareus tells us that the concealed motive of this process was John's attachment to the literal observance of the rule, the accusation of Joachism, against which he professed his Catholic Faith, being only a pretext. Other sources, however (Anal. Franc., III, 350, 689), speak of reactradition. The same Clareus tells us that John was condemned not for the powerful intervention of Innocent IV's nephew, Cardinal Ottoboni Fisci, later Hadrian V (concerning whose letter to the judges see Arch. f. Litt., II, 286; Orbis Sarapheicus, I, 120). John certainly did not profess the dogmatical errors of Joachism, though he may have held some of its apocalyptic ideas. Upon his acquittal he returned to Greccio, and continued his life of prayer and work. It was there that an angel once served his Mass (Salimbene, i.e., 310; Anal. Franc., III, 289), and that in 1258 he received the visit of Urbanus Casile, who has left a touching account of this meeting ("Arbor vitae", Venice, 1485, V, 3). Hearing that the Greeks were abandoning the union agreed upon in 1274, John, now 80 years old, desired to use his last energies in the cause of union. He obtained permission of Nicolas IV to go to Greece, but only travelled as far as Camerino, Bari, and the town of Brindisi, where he died in the convent of the friars, 19 March, 1289. He was beatified 1777; his feast is kept 20 March.

With the exception of his letters scarcely any literary work can with surety be attributed to John. He is certainly not the author of the "Introductorius in Evangelium aeternum" of Gerard of St. Dominico (1254). The "Danico Fr. Johannis de Parma" (Anal. Franc., III, 646-49). With more probability can we attribute to John the "Dialogus de vitia ss. Fratrum Minorum", partly edited by L. Lomme O.F.M. (Rome, 1902). The "Chronicle of the XXIV Generals" (Anul. Franc., III, 283) ascribes to John the allegorical treatise on poverty: "Sacrum Commerium B. Francisci cum Domina Paupertate" (ed. Milan, 1539), edited by Ed. d'Alencéon (Paris and Rome, 1800), who ascribes it (without sufficient reason) to John. The "Sermone Dominus est 1274" (ed. London, 1855) is attributed to John by one of the sermons better known as "Lady Poverty, a thirteenth-century allegory" (London, 1901); another English translation is by Rawnsley (London, 1804): a good introduction and abbreviated version is given by Macdonell, "Sons of Francis", 189-213. Other works are mentioned by Bardsley, "Suppl. ad scriptur" (Rome, 1806), 389.

II. Literature.—McCulloch, "History of the Papacy" (London, 1820), 214-51; Likon on Clart, "Lives of the Saints and Blessed of the Three Orders of St. Franci, I (Taunton, 1886), 493-514; there are three Italian lives written by Giacomo Camerini da Parma, by Camerino (Ravenna, 1750), by Acro (Parma, 1777), and by Lotti de Parma, 2nd ed. (Quaracchi, 1898); the 1st ed. had appeared in 1775; for the Brothers of the Convent of Parma, Periodico Bimannale (Parma, 1888-9); Jacobi, "Vita, Sacra e Beat. dell'Umbria" (Florence, 1547); Stich, "Le Annales in Memoria degli Scrittori e Letterati Parmigiani," I (Parma, 1789), 129-45; Daunou in "Histoire litteraire de la France, XX (Paris, 1849), 23-36 (antiqueste gay, "Histoire de la litterature de la France, Meyes Age, II (Paris, 1905), 94-9); Piccinoto, "Cronica, Storico, Biografico dei Minisatt e Vere Prov. della Minore Province di Bologna (Parma, 1909), 63-64; Quaracchi, "Annali Historia Ordinis Fratrum minorum" (Freiburg im Br., 1908), 25-30; German edition (Freiburg im Br., 1909); Ratze von Nantes, "Histoire des Spirituels" (Paris, 1892), 145-200.

LIVIARIUS OLIGER.

John of Ragusa (sometimes confounded with John of Segovia, q.v.), a Dominican theologian, president of the Council of Basle,legate to the Council of Ragusa about 1320; d. at Ragusa, probably 1443. He entered the Dominican Order and devoted himself to the observance of the rule of his order and the study of the sacred sciences. By reason of his great attainments in theology, Scripture, and the Oriental languages, he was considered an oracle in the church. His native Diocese of Ragusa had shone conspicuously and there received the doctor's cap about the beginning of the fifteen century. In the year 1426 he was appointed procurator general of the Dominican Order, and went to reside at Rome under Pope Martin V. There he received marks of honour and esteem from the pope and the College of Cardinals, and the former eventually named him papal theologian for the General Council of Basle. John was, moreover, chosen to open the council, in place of Cardinal Julian Cesarine, who was detained by other business. Arriving at Basle on 19 May, 1431, he on the same day arranged with the Bishop of Basle for the opening of the council on the 23rd of the same month. The opening did not take place, however, until 23 July, 1431, in the cathedral church, when John preached from the text: "Et angelus testemini, quem vos vultis. Eoce venit." (Mal., iii, 1). In the council he was desirous to moderate, and to keep in check the charge of contumacy (Feb., 1433). On eight mornings he spoke against the doctrines of the Husites and crushed all that was reprehensible in that heresy.

Having been sent as a legate of the council to Constantiopole to urge the reunion of the Eastern and Western Churches, John of Ragusa induces the Emperor John Palaeologus and the Patriarch Joseph II to send an embassy to the council, though the treaty
which they made with Pope Eugenius IV was broken by the Greeks. John afterwards sojourned at Constantinople to study the Greek language and to become better acquainted with the situation of ecclesiastical affairs. Here he completed an etymological work bearing upon the Greek text of Scripture and destined to be of service to Catholic controversialists in treating of the doctrine of the Procession of the Holy Ghost against the Greek schismatics. He returned to Bologna as a member of a deputation, to obtain from Eugenius IV an assurance that the pope would be present at the council. Having acceded to this, Eugenius IV consecrated John at his own nomination to be the bearer of a document (dated 15 July, 1437) to the Greek emperor in which the emperor's assistance was invited at a meeting of the council to be held in some Italian city. John's subsequent course has been a subject of dispute: some authors assert that he remained in sympathy with the council, which, others insist that he allied himself with Eugenius IV, who made him Bishop of Argos. It is probable that he took the side of Eugenius. His extant writings are: (1) Discourse against the Hussites delivered at the Council of Basle, (2) the Acts, or Reports, of his embassies to Constantinople, to be found among the Acts of the Council of Basle, (3) the Exposition of the Thirty-nine Articles of the English Church, preserved by Leo Allatius. His work on Greek indeclinable nouns and Scriptural Greek etymology seems to have been lost.

ALBERT REINHART.

John of Roquestillade (de Rufescissa), Franciscan alchemist, date of birth unknown; d. probably at Avignon, 1362. After pursuing the study of philosophy for five years at Toulouse, he entered the Franciscan monastery at Orleans, where he continued his studies for five years longer. His experiments in distillation led to the discovery of what he termed aqua vitae, or usually, quinta essentia, and commended as a panacea for all disease. His work as an alchemist forms the subject-matter of "De consideratione quintae essentiae" (Bazel, 1561) and "De extractione quintae essentiae"; likewise "Libellus de conficiendo vero lapide philosophico ad sublevandum inopiam pastor et eremitam" (Strasbourg, 1659). His false prophecies and violent denunciation of ecclesiastical abuses brought him into disfavour with his superiors; resulting in his imprisonment by Clement VI (1345) and Innocent VI (1356). While there he wrote 1349 his "Visiones seu revelationes", and in 1356 "Vaticinio et veritate" and "Ostensionum" (in Brown, Fascicula rerum expetendarum et fugiendarum, III, London, 1640). His other works include commentaries on the Sentences and on the "Oraculum Cyrilii", "Fragmenta revelationum", "Apologia propheticarum", "De famulatu philosophiae in theologiam". BIBL., c. des script. Ord. Min. (Rome, 1860); JAEGER et KIRCHNER, s. v. Johannes von Roquestillade; SCHNEIDER in Kirchliche Handlex.

F. M. RUDGE.

John of Rupeolla, Franciscan theologian, b. at La Rochelle (Rupella), towards the end of the twelfth century; d. 1245 (al., 1271). He seems to have entered the Franciscan Order at an early age, and was admitted to the house of study at Paris. There he was a disciple and helper of Hales, who presented him for the bachelorship of theology. He was the first Franciscan to receive that degree at the University of Paris. In 1238 he was already a master of theology, with his own pupils, for his name is to be found in the list of masters convoked in that year by Woezel, Bishop of Paris, to discuss the vexed question of ecclesiastical benefices. John was of the number of those who declared against the general lawfulness of plurality, and who afterwards taught the same doctrine in their schools. He appears henceforward to have enjoyed a very considerable reputation, and is described by Bernard of Besse as a professor of great fame for holiness and learning, whose writings were both solid and extremely useful. The same writer maintained that he was the best preacher of his day. This judgment should perhaps be tempered by the consideration of Bernard's anxiety to prove that the greatest theologian (Alexander of Hales), the greatest warrior (John of Brienne), and the greatest preacher, all three belonged to his own Franciscan Order.

In the dissensions which already rent the Order, John was one of the most determined opponents of Brother Elias, and with Alexander of Hales placed himself at the head of the movement which brought about Elias's downfall in 1239. At the command of Haymo of Favergham, who succeeded Elias as general, he collaborated with Alexander of Hales, Robert of Bastia, Richard of Cornwall, and several others less important, on an explanation of the Rule of St. Francis. The work received the approbation of the chapter (probably definiotory) of the order held at Bologna in 1242, and subsequently became known as the "Exposition of John of Rupeolla". The work, and the majority of succeeding writers place John of Rupeolla's death in 1271, but a letter of Robert Grosseteste, Bishop of Lincoln, written in Sept. or Oct., 1245, speaks of him as being then already dead: "mortuis fratris Alexandro de Hales et Joanne de Rupellis". The date according to Denifle was 3 Feb.

No complete edition of the works of John of Rupeolla has ever been published. The "Exposition of the Four Masters" was printed at Venice in 1513, in the "Firmamentum Trium Ordinarum", pars 3a, p. 15b–19a. Two priests of the Diocese of La Rochelle, Canon Chofet and Fr. Grasiller, had already in 1875 prepared for the press the following: "Tractatus de Bollandia", "De Articulis Edicis", "De Sanctorum Opere et Sacerdotio", "De decem praeceptis", "Commentaria in Matthew", "Postilla in Epistolae Pauli", "De vitis", "Sermones". Nothing has yet resulted from their enterprise. They had also catalogued as belonging to the same author: "Postilla super Daniele"; "in Marcum"; "in Lucam"; "in Apocalypsin". Du Boulay attributed to him a "Commentaria in qua tuor Libros Sententiarum", and says he was the first to write such a commentary. His best known work is the "Summa de Anima". Father Fidelis a Fanna (op. cit., 82) says that no work on the same subject is to be found so far as in the thirteenth and fourteenth century in the many European libraries he searched. The author avails himself fully of the teaching of Aristotle and Avicenna, and touches upon all the important questions of psychology afterwards to be treated by the great Scholastics. The work was edited with an introduction and studies 1852, by Father Theophilus Domenichelli, O.F.M., from a MS. of the Biblioteca Nazionale at Florence, collated principally with two others (A, IV, 25, nos. no. 1288, and B, IV, 4, no. 381) of the Casanatense, Rome.

BARTHOLOMÆUS OF PRAG, De Conformitate vitri B. Francisci in Articulis Franciscanis, I (Prague, 1500), 337, 379, 544; BERNARD OF BESSE, Libri de Logibus in Anal. Franc. (Quaracchi, 1897); III, 695; CANTUÆRITANUS, Summa universae de Articulis, I (Dorni, 1637), xx, 70; CHRONICON XXIV Generalium in Anal.
JOHN 478

John of Sahagun, Saint, hermit, b. 1419, at Sahagun (or San Fagondez) in the Kingdom of Leon, in Spain; d. 11 June, 1479, at Salamanca; feast 12 June.

In art he is represented holding a chalice and host surrounded by rays of light (see Chartarum). He had five children, the eldest of whom, John González de Casanova, was born of pious and respected parents. John González was a bishop in Naples and fought against the Saracens. He died in 1483 or 1484, and was buried in the cathedral of his native town.

John was canonized by Pope Paul III in 1537, and his feast is celebrated on 12 June.

BRENDAN JENNINGS.

JOHN OF SALISBURY (JOHANNES DE SARESBERIA, surnamed PARVUS), b. about 1115; d. 1180; a distinguished philosopher, historian, churchman, and man of letters. He was born near Salisbury, and at an early age went to Paris, where he studied arts and philosophy (1136–38) under Peter Abelard, Alberic of Reims, and Robert of Melun; and then under William of Conches, Richard l'Evèque, and Theodoric of Chartres at the famous school at this latter town (1138–40); finally, at Paris, completing his education under Gilbert de La Porree, Robert Pullus, and Simon of Poissy (1141–45). This solid education, under such brilliant masters, he perfected by some private teaching, perhaps with his lifelong friend Peter, Abbot of Mortier La Celle, near Troyes, with whom he was living in 1143. At the Council of Reims in this year, he was introduced to Theobald, Archbishop of Canterbury, by St. Bernard. After spending a few years at the papal Court at Rome, whither he went from Reims with Pope Eugene III, he returned to England and acted as private secretary to Theobald for several years, during which period he was repeatedly sent on delicate and important diplomatic missions to the Holy See; in 1159 he had "ten times crossed the Alps on his road from England." (Metalogicus, iii, prole., p. 113).

He was thus brought into intimate relations with princes and popes, especially with Henry II and his son Philip Augustus, with Louis VIII, also a Frenchman. In defending the rights of the Church, he incurred the king's displeasure in 1159—when his forced seclusion enabled him to complete his two principal works, the "Poli
cratie" and the "Metalogices", both dedicated to Thomas à Becket—and again in 1163, when he was obliged to quit England. The next six years he spent with his friend Peter of La Celle, now Abbot of St. Remigius at Reims. Here he wrote "Historia Pontificum". Thomas à Becket, who had succeeded Theobald as Archbishop of Canterbury in 1162, was a friend of John, and when Stephen Langton, successor of Adrian IV, also an Englishman. In defending the rights of the Church, he incurred the king's displeasure in 1159—when his forced seclusion enabled him to complete his two principal works, the "Policratie" and the "Metalogices", both dedicated to Thomas à Becket—and again in 1163, when he was obliged to quit England. The next six years he spent with his friend Peter of La Celle, now Abbot of St. Remigius at Reims. Here he wrote "Historia Pontificum". extensive and lifelong correspondence on literary, educational, and ecclesiastical topics with the leading scholars of Europe. His collected letters (over 300 in number), no less than his other works, form an invaluable source for the history of thought and activity in the twelfth century. His fine taste and superior training made him the most elegant Latin writer of his time. Eugene IV was much disturbed by a historian and as a philosopher: he was the first medieval writer to emphasize the importance of historical studies in philosophy and in all other branches of learning. Naturally of an eccentric turn, he displayed in philosophy a remarkably sound and judicious knowledge of the Council of Basel (concilium de Basilea) (vestigis philosophorum) indicates, partly with church and state diplomacy, partly with philosophy and learning generally: a pleasing and readable miscellanea. The "Enthetics" (De dogmate philosophorum) is a Latin elegiac poem of 158 lines, apparently intended as an introduction to the "Policriticus," apparently the same as the "De Septem Septeniarum," a brief treatise on the seven liberal arts, is doubted by Mairau (Novelle Biographica, xxv, 539, 1858) and Schaarschmidt (pp. 278 sq.). The "Historia Pontificum" first published in the eighteenth century (Montemart, Germania Historica, xx, 517-45, 1868), and identified as the work of John, by Giesebrecht (Bay. Akad. d. Wissensch., Munich, 1873, 124). The actual MS. carries on the Gembloux continuation of Sigebert from 1148 to 1152. It was written about 1164, and dedicated to Peter of La Celle. John also wrote a "Vita S. Thom. Cantuari." (1171), and the letters already referred to. All these works (except "Hist. Pont.") were edited by Giles, 5 vols., London, 1848, reprinted in P. L., CXCIX; "Policriticus" also ed. by C. C. J. Webb (2 vols., Oxford, 1909). The "Historia Pontificum" was mainly in his own letters and other works, and in the letters of Peter of La Celle. For John of Salisbury and the Bull "Laudabiliter," see ADRIAN IV.

P. COFFET.

John of Segovia, a Spanish theologian, b. at Segovia towards the end of the fourteenth century; d. probably in 1458. Nothing is known of him before he took part in the Council of Basle, except that he was archdeacon at Villaviciosa, canon at Toledo, and professor of theology at the University of Salamanca. In 1429, with the approval of Bishop of Salamanca, and by the order of King John II of Castile sent him as their representative to the Council of Basle, where he was one of the ablest defenders of the superiority of the council over the pope. At first he endeavored to mitigate the conflict between the council and Pope Eugene IV, with whom he spent some time at Florence in 1435, but afterwards he became one of the chief supporters of the revolutionary party at the council. He took part in the twenty-eighth session (1 October, 1437) at which Eugene IV was declared a heretic, and in the thirty-third session (15 May, 1439) at which the pope was deposed. In March, 1439, John of Segovia represented the council at the Diet of Mainz. After Eugene IV was deposed by the council on 25 June, 1439, John of Segovia was appointed one of the commission of nine scholars whose duty it was to select a number of theologians to elect the new pope. He was one of the thirty-three who on 5 November, 1439, elected the antipope Felix V. In recognition for his services he was created cardinal by the antipope on 12 October, 1440. He represented Felix V at the Parliament of Bourges in 1440, at the Diet of Mainz in 1441, and that of Frankfort in 1442. At the end of the schism in 1449 he resigned the cardinalate, was appointed titular Bishop of Cesaeres by Eugene IV, and retired to a Spanish monastery. His most important literary work is an extensive history of the history of the Council of Basle. Libri XVIII," edited by Birk and Beer in "Monumenta conciliorum generalium sacelli decimi quinti: Scriptor.," II-IV (Vienna, 1873-96). His other works are a treatise in favour of the Immaculate Conception of our Lady, printed at Brussels in 1664; a refutation of the Karais, entitled "De mittendo gladio in Saracenos"; a defence of the "Filioque" against the Greeks, entitled "De processu Spiritus Sancti" (Basle, 1476); a Biblical concordance, "Concordantiae biblicae vocum indecimabiliun" (Basle, 1476); and a few works defending the sovereignty of a general council. ZIMMERMANN, Juan de Segovia (Breslau, 1892); ANTONIO, Bibliotheca Hispana Vetus, II (Madrid, 1788), 225-34; HALS, Conciliorum Basilensium, Studien und Dokumente, I (Basle, 1896), 19-53.

MICHAEL OTT.

John of St. Facundus. See JOHN OF SAHAUN, SAINT.

John of St. Thomas (family name JOHN POINBOT), theologian, b. at Lisbon, 9 June, 1589; d. at Fraga, Spain, 17 June, 1644. Of noble parentage, he was sent early to the University of Coimbra, displayed talents of the first order, completed his humanities and philosophy as a student of the University, and obtained his degree in 1608. He then entered the University of Louvain. Here, too, he showed remarkable ability, and won the title of Bachelor of Theology at an early age. He joined the Dominicans at Madrid in 1612 or 1613, taking the name of John of St. Thomas, by which he is known to history. As professor of philosophy and theology in a monastery at Alcalà, he soon took rank among the most learned men of the time, and was placed successively (1630 and 1640) in charge of the two principal chairs of theology in the university of that city. His renown drew the largest number of scholars that had ever attended its theological faculties. No man enjoyed a greater reputation in Spain, or was more frequently consulted on points of doctrine and ecclesiastical matters. His theological and philosophical writings, which have gone through many editions, are among the best expositions of St. Thomas's doctrine, of which he is acknowledged to be one of the foremost interpreters. Although he took an active part in the scholastic discussions of his times, his courtesy was such that he is said never to have hurt an opponent's feelings. So faithful was he to the traditions of his order and the principles of St. Thomas that in his last illness he could declare that, in all the thirty years he was devoted to teaching and writing, he had not taught or written
anything contrary to St. Thomas. His humility and his devotion to education caused him to refuse many dignities offered him by the Church and his order. In 1534, he was offered the position of royal canon of St. Peter, a position which only religious obedience could induce him to accept. His writings comprise: "Cursus philosophicus Thomisticus" (9 vols.); "Cursus Theologicus" (9 vols.): a commentary on the "Summa Theologica" of St. Thomas; "Tractatus de Approbatione et Praecepto P. Tomatis Aquinatis"; a "Compendium of Christian Doctrine" (in Spanish); and a "Treatise on a Happy Death" (in Spanish). Written at the command of Philip IV.

**VICTOR F. O’DANIEL.**

**John of the Cross, Saint,** founder (with St. Teresa) of the Discalced Carmelites, doctor of mystic theology, b. at Hontiveros, Old Castle, 24 June, 1542, d. at Ubeda, Andalusia, 14 Dec., 1591. John de la Cruz was the eldest child of Gonzalo de Yépez and Catharine Álvarez, poor silk weavers of Toledo, knew from his earliest years the hardships of life. The father, originally of a good family but disinherited on account of his marriage below his rank, died in the prime of his youth; the widow, assisted by her eldest sons, was enabled to provide for her children. John was sent to the poor school at Medina del Campo, whither the family had gone to live, and proved an attentive and diligent pupil; but when apprenticed to an artisan, he seemed incapable of learning anything. Thereupon the governor of the hospital of Medina took him into his service, and for seven years John divided his time between waiting on the poorest of the poor, and frequenting a school established by the Jesuits. Already at that early age he treated his body with the utmost rigour; twice he was saved from certain death by the intervention of the Blessed Virgin. Anxious about his future life, he was told in prayer that he was to serve God in an order the ancient perfection of which he was to help to bring back again. The Carmelites having founded a house at Medina, he there received the habit on 24 February, 1563, and took the name of John of St. Matthias. After profession he obtained leave from his superiors to follow the monastic rule without the mitigations granted by various popes. He was sent to Salamanca for the higher studies, and was ordained priest in 1567; at his first Mass he received the assurance that he should preserve his baptismal innocence. But, shrinking from the responsibilities of the priesthood, he determined to join the Carthusians. However, before taking any further step he made the acquaintance of St. Teresa, who had come to Medina to found a convent of nuns, and who persuaded him to remain in the Carmelite Order and to assist her in the establishment of a monastery of nuns carrying out the primitive rule. He accompanied her to Valladolid in order to gain practical experience of the manner of life led by the reformed nuns. A small house having been offered, St. John resolved to try at once the new form of life, although St. Teresa did not think anyone, however great his spirituality, could bear the discomfort of that cloister. He was joined by two companions, and a lay brother and a lay brother with whom he inaugurated the reform among friars, 28 Nov., 1568. St. Teresa has left a classical description of the sort of life led by these first Discalced Carmelites, in chaps. xiii and xiv of her "Book of Foundations". John of the Cross, as he now called himself, was made the first master of the foundation of the spiritual edifice which soon was to assume majestic proportions. He filled various posts in different places until St. Teresa called him to Avila as director and confessor to the convent of the Incarna-

**tion, of which she had been nominated prioress. He remained there, with a few interruptions, for over five years. Meanwhile the reform spread rapidly, and, partly through the zeal of his eloquence and, partly through the orders issued by the general and the general chapter on one hand, and the Apostolic nunciato on the other, and partly through human passion which sometimes ran high, its existence became seriously endangered. St. John was ordered by his provincial to return to the house of his profession (Medina), and, on his refusing to do so, owing to the fact that he held not from the order but from the Apostolic delegate, he was taken prisoner in the night of 3 December, 1577, and carried off to Toledo, where he suffered for more than nine months close imprisonment in a narrow, stifling cell, together with such additional punish-

ments as might have been called one of the most serious crimes. In the midst of his sufferings he was visited with heavenly consolations, and some of his exquisite poetry dates from that period. He made good his escape in a miraculous manner, August, 1578. During the next years he was chiefly occupied with the foundation and government of monasteries at Baeza, Granada, Cordova, Segoría, and elsewhere, but took no prominent part in the negotiations which led to the establishment of separate government for the Discalced Carmelites. After the death of St. Teresa (4 Oct., 1582), when the order was too partly the bare necessities, St. John and the Zelanti under Núria Doria struggled for the upper hand, St. John supported the former and shared his fate. For some time he filled the post of vicar provincial of Andalusia, but when Doria changed the government of the order, concentrating all power in the hands of a permanent committee, St. John resisted and, supporting the nuns in their endeavour to secure the papal approbation of their constitutions, drew upon himself the displeasure of the superior, who deprived him of his offices and relegated him to one of the poorest monasteries, where he fell seriously ill. One of his opponents went so far as to go from monastery to monastery gathering materials in order to bring grave charges against him, hoping for his expulsion from the order which he had helped to found.

As his illness increased he was removed to the monastery of Ubeda, where he at first was treated very kindly. But, gradually, rule without mitigation was despised, being thus literally fulfilled almost to the end of his life. But at last even his adversaries came to acknowledge his sanctity, and his funeral was the occasion of a great outburst of enthusiasm. The body, still incorrupt, as has been ascertained within the last few years, was reburied at Segovia, and a small portion remaining at Ubeda; there was some litigation about its possession. A strange phenomenon, for which no satisfactory explanation has been given, has frequently been observed in connexion with the relics of St. John of the Cross: Francis de Yépez, the brother of the saint, and after him many other persons, have noticed the appearance in his relics of images of Christ on the Cross, the Blessed Virgin, St. Elias, St. Francis Xavier, or other saints, according to the devotion of the beholder. The beatification took place on 25 Jan., 1675, the translation of his body on 21 May of the same year, and the canonization on 27 Dec., 1726.

He left the following works, which for the first time appeared at Barcelona in 1619, but a critical edition of which is urgently needed:—1. "The Ascent of Mount Carmel", an explanation of some verses beginning: "In a dark night with anxious heart, I set off". This consists of four books, but breaks off in the middle of the third. —2. "The Dark Night of the Soul", another explanation of the same verses, breaking off in the second book. Both these works were written soon after his
escape from prison, and, though incomplete, supplement each other, forming a full treatise on mystic theology. —3. An explanation of the "Spiritual Canticle" (a paraphrase of the Canticle of Canticles), beginning: "Where hast Thou hidden Thyself?" composed in part during the imprisonment, and completed and finished by St. John, who was probably latest among the company. —4. An explanation of a poem beginning: "O Living Flame of Love", written about 1584 at the bidding of Dona Ana de Penafoosa ...

—5. Some instructions and precautions on matters spiritual. —6. Some twenty letters, chiefly to his penitent and wise, who were the goal of his spiritual teaching, including numerous letters to and from St. Teresa, was destroyed, partly by himself, partly during the persecutions to which he fell a victim. —7. "Poems", of which twenty-six have been hitherto published, viz., twenty in the older editions, and recently six more, discovered partly at the National Library at Madrid, and partly at the convent of Carmelites nuns at Pamplona. —8. "A Collection of Spiritual Maxims" (in some editions to the number of one hundred, and in others three hundred and sixty-five) can scarcely count as an independent work...

John of Vicedom (Johannes Victorieniris of de Victoria), chronicler, b. probably between 1270 and 1280; d. at Vicedom, Austria, 12 November, 1347. Nothing is known of his early life. In 1307 he became abbot of the Cistercian monastery of Vicedom, in Karinthia (Austria), and was later both chaplain and confidential secretary to Duke Henry of Karinthia. On the latter's death in 1335, John journeyed to Linz at the request of the duke's daughter, Margaretha Maulteich, to defend before Louis IV her claims to her father's estates. But the two sides, Albert II and Otto of Austria, were not at first won over by the arguments of the contestants, but were brought to an understanding, and John was finally set free to the quiet of his monastery to write the history of his own time. His chronicle, to which he himself gave the title of "Liber certarum historiae", has come down to us under various forms. In its original form, as preserved in a manuscript at Munich, it is a history of Austria and Karinthia from 1231 to 1341, and is based for the earlier period on the rhyming chronicle of Otto von Styria, while the rest was written from data which he himself had collected in the course of his travels.

This work was enlarged the following year (1342) into a chronicle of the empire, which began with the year 1217 (published by Bohrer, "Fontes rerum Germanicarum", I, 271-450; German translation by Friedensburg in the "Geschichtsschreiber der deutschen Vorzeit", Leipzig, 1888). Once more he rewrote it in 1343, and this time he began with the Carolingian period. This revised work has only reached us through later hands, the so-called "Chronicon Anonymi Leobiensis", published by Pez, "Scriptores rerum Austriacarum", I, 751-966. John ranks among the most important chroniclers of the end of the Middle Ages. He was a very learned man and well acquainted with the Latin and Greek poets. His narrative is lucid and his judgments on the events of his own time show great impartiality.
He is influenced by Otto of Freising, and condemned in his chronicle the anti-Roman policy of Emperor Louis the Bavarian (1314-47).

PATRICIUS SCHLAGER.

John of Winterthur (Johannes Vütsouranunus histrian, b. about 1300 at Winterthur (Switzerland); d. subsequently to 1348, probably at Zurich. All that is known of his life is that he attended the school of his native town from 1309 to 1315, and that as a Franciscan he lived at Basle in 1326, at Villingen in 1336, and at Lindau from 1343 onwards. His chronicle (Chronicon a Friderico II Imperatore ad annum 1348) was first published by Ercard, "Corpus hist. medii aevi", I (1725); a better edition was provided by Füsslin, "Theodorus historiae Helveticae" (1735), but the best edition was given by Wyss in "Archiv für schweizerische Geschichte", XI (1856). It was translated into German by Freuler ("Johannes von Winterthür Chronik von der Stadt Winterthury in 1340, beginnend bis zu den aufs Äusserste wichtigen und berühmten Roesten und Vorkommnissen bis zu dem Jahre 1348") and into Latin by J. de Montfaucon, "Annales Helveticorum" (Paris, 1728). John's chronicle is a most useful source for the history of the time, as it contains records of events of the year 1340, and provides a basis for the study of the events of the year 1341.

On the 25th of November, 1347, the Duke of Burgundy, brother of King Charles VI, was murdered by assassins in the pay of John the Fearless, Duke of Burgundy. The Duke of Burgundy was unpopular with the people and was held responsible for the disorders and the taxes. He was, however, a man of great power and influence, and the people had a great deal of sympathy for him. His death was a great loss to the kingdom, and his brother, the Duke of Burgundy, continued to rule the kingdom, but with a much reduced power. The University of Paris was bitterly opposed to him for having renewed obedience to Benedict XII. The Duke of Burgundy, on the contrary, was very popular; he was regarded as a friend of the common people and an opponent of taxation. John Parvus, who was a professor at the University of Paris, delivered a speech in which he praised the Duke of Burgundy. He said that the Duke was a man of great courage and bravery, and that he had done much for the country. He also praised the Duke's policy of taxation, which he thought was necessary to keep the country strong. John Parvus' speech was well received by the audience, and it was said that he had done much for the country.

There, in presence of the Dauphin, of the Duke of Anjou, King of Sicily, of Cardinal de Bar, of the Duke of Berry, of Brittany, of Lorraine, of the rector of the University of Paris, and of many counts, barons, knights, and citizens, John Parvus delivered on behalf of his client a pedantic address, bristling with propositions, syllogisms, Scriptural texts, and examples from Holy Writ. His argument may be expressed in the following syllogism: Whosoever is guilty of high treason and murder, and who is punished with death, all the more so when he is a near relative of the king; and in that case the natural, moral, and Divine laws allow any subject whatever, without any command or public authorization, to kill him or to have him killed, openly, or by stealth; and the more closely the author of the slaying is related to the king, the more meritorious is the act. Now, the Duke of Orleans—so ran the minor proposition—a slave to the passion of greed, the source of all evil, was guilty of high treason, and was a tyrant; which was proved by holding him guilty of all the pretended crimes which popular imagination and the particulars of the Duke of Burgundy laid to his charge. John Parvus was therefore that the Duke of Burgundy not only should not be punished or blamed for what had been done to the Duke of Orleans, but rather should be rewarded. This thesis seemed preposterous to the more rational members of the assembly, but the Duke of Burgundy was ready to accept any attempt at reply, and further he was in the good graces of the university; so he had no difficulty in obtaining letters of pardon from the king. As for John Parvus, who in his address was not ashamed to admit that he was receiving, and expected still to receive, a pension from the Duke of Burgundy, he was compelled to withdraw from Paris, and retire to the estate of the Duke of Burgundy at Hesdin, Artois, where he died in a house of his protector, regretting, it
is said, that he had ever allowed himself to defend such a proposition.

The interest it excited was not to die with him. As long as the Duke of Burgundy was all-powerful in Paris, the argument could not be attacked publicly, but when he was expelled, Gerson, in a sermon delivered before the king, strongly denounced seven propositions of John Parvus as heretical and scandalous (1413). Shortly afterwards the king asked the Bishop of Paris, Gérard de Montaigne, and the inquisitor to examine them and to take such action they judged proper—without however mentioning the name of John Parvus. The bishop and the inquisitor with sixty doctors went into what was called "a Council of the Faith". After several sittings the speech of John Parvus and nine propositions, said to have been extracted from it, were condemned (23 February, 1414) by decree of the Bishop of Paris and of the inquisitor, and the book containing them was publicly burnt three days later. In the month of March following, the Duke of Burgundy appealed from the decision of the Bishop of Paris to Pope John XXIII. The pope entrusted the investigation to the three cardinals. On the other hand Gerson and chief ambassadors of the King of France brought the affair before the council. At this juncture, Pope John XXIII left Constance (20 March, 1415) and withdrew from the council, while the King of France and the Duke of Burgundy made peace by the Treaty of Amiens (22 April, 1415). Thereupon Charles VI ordered his representatives to take no action at the council against John Parvus, provided the Duke of Burgundy would also let the matter rest. Gerson broke the agreement by trying to obtain from the council a declaration that the writings of John Parvus contained numerous errors in matters of faith. The Duke of Burgundy replied by a letter in which, while disavowing the general principles that formed the major proposition of the argument of John Parvus, he maintained that the propositions condemned by the Bishop of Paris were not contained in the discourse. Thereupon the three cardinals entrusted with the duke's appeal, cited the Bishop of Paris to appear before them, and as he failed to do so, they reversed his decision, declaring at the same time that they did not intend thereby to approve of the propositions condemned by him, but only wished to do justice to the bishop, who had not been heard at the trial. From that moment the trial of John Parvus became the battleground of the ambassadors of France and of the Duke of Burgundy, and even of the Emperor Sigismund. The council had no intention of lending its authority to any political party, and in its fifteenth session, 6 July, 1415, contented itself with a general condemnation of tyramicide as upheld in the following proposition: "A tyrant may be licitly and meritiously, and rightly put to death by any vassal or subject, even by resorting to secret plots, adulation, and feigned friendship, notwithstanding any oath of fealty to him or any judicial proceeding or judicial decree or order". But John Parvus was not mentioned and the council avoided saying that any such proposition was contained in his address, and no further decision was pronounced by the council on the particular case of John Parvus. After securing the condemnation of John Parvus in August, 1416, King Charles VI two years later disavowed Gerson and his supporters (6 October, 1418), and on 3 November, 1418, he rehabilitated John Parvus and annulled the sentences pronounced against him. This perhaps was the fairest settlement of the case against him. His venal and odious defence of the assassination is worthy of all censure, but in justice it must be admitted that the propositions attributed to him by his adversaries are not contained in his discourse, at least in the form in which it has reached us.

JOHN Payne, BLESSED, b. in the Diocese of Peterborough; d. at Chelmsford, 2 April, 1582. He went to Douai in 1574, was ordained priest by the Archbishop of Cambrai on 7 April, 1576, and left for England with Blessed George Godsalve on 24 April. He resided for the most part with Anne, widow of Sir William Petre, and daughter of Sir William Browne, sometime Lord Mayor of London, at Ingatestone, Essex, but also in London. Shortly after his arrival he reconciled George Godsalve, B.A., Oxon., a Marian deacon, of Bath diocese, whom he sent to Douai to be prepared for the priesthood, which he received at Cambrai on 20 December, 1576. John was arrested and imprisoned early in 1577, but, being not long afterwards discharged, came back to Douai in November. He probably returned to Ingatestone before Christmas 1577. In 1581, he and Godsalve, who had come to England in June, 1577, were arrested in Warwickshire through the instrumentality of "judas" Eliot, and, after being examined by Walsingham at Greenwich, were committed to the Tower on 14 July. There Blessed George was racked on 14 August, and again on 1 October. Eliot had accused him of plotting to kill the queen and her three most trusted statesmen. On this charge he was indicted at Chelmsford on 23 March, and, though no attempt was made to corrobate Eliot's story, the jury gave the verdict expected of them. At his execution the crowd interfered to prevent the infliction of the last barbarities until he was dead.

John B. Wainwright.

John Rochester, BLESSED, priest and martyr, born probably at Terling, Essex, England, about 1488; died at York, 11 May, 1537. He was the third son of John Rochester, of Thomond, and Grace, daughter of Sir Walter Writtle, of Bobbingworth. He joined the Carthusians, was a choir monk of the Charterhouse in London, and strenuously opposed the new doctrine of the royal supremacy. He was arrested and sent a prisoner to the Carthusian convent at Hull. From there he was removed to York, where he was hung in chains. With him there suffered one James Walworth (WAN- HERT; WALWERKE), Carthusian priest and martyr, concerning whom little or nothing is known. He may have been the "Jacobus Walweker" who signed the Oath of Succession of 1534. John Rochester was beheaded in 1585 by Leo XIII, his elder brother, Sir Robert Rochester, K. G. (b. about 1494; d. 28 Nov., 1557), was a zealous Catholic. Before 1551 he had received the appointment of comptroller of the household to Princess Mary Tudor. In that year the Privy Council ordered him to prevent any priest saying Mass in the princess's household, but he refused to interfere in any way with her private devotions, and was accordingly sent to the Tower. The next year he was allowed to retire to the country on account of his health, and was soon permitted to take up the post of comptroller once more. When the princess ascended the throne as Mary I, she remembered Rochester's faithful service to her and made him Warden of the Duchy of Lancaster; and he entered the inner circle of the Privy Council. He was one of the parliamentary representatives of Essex, 1553-5. He was buried at the Charterhouse at Sheen.
John Sarkander, Blessed, martyr of the seal of confession, b. at Skotschau in Austrian Silesia, 20 Dec., 1576; d. at Olmütz, 17 March, 1620. In 1603 he merited the title of master of philosophy at Prague, and after four years' study of theology was ordained priest at Graz. He exercised his sacred functions in several places in the Diocese of Olmütz, and was made parish priest (1613) of Belokowitz, and (1616) of Holleschau in Moravia. Since the fifteenth century the sects of the Hussites and of the Bohemian (or United) Brethren had spread rapidly and taken possession of the churches and institutions of the Catholics, but when (1604) Ladislaus PoppeI of Lobkowitz bought the church of Holleschau, he had the church taken over by the Catholics, and made a Jesuit college out of the house occupied by the Bohemian Brethren. With the aid of the Jesuits, John Sarkander converted two hundred and fifty of the stray sheep, but thereby drew upon himself the hatred of the neighbouring landlord, Bitowski of Bistritz. In 1618 the Protocols, seeking to drive the Jesuits out of Moravia, and John left Holleschau, made a pilgrimage to the shrine of Our Lady at Czentschau and passed a few weeks of retreat with the Minims, who had a house there. He spent some months at Krakow and (1619) returned to Holleschau. In February of the following year the Polish auxiliary troops sent to the emperor by King Sigismund passed through Moravia and committed many depredations on the lands of the Protestants, but spared Holleschau when John met them with the Blessed Sacrament in his hands. Bitowski threw suspicion upon John Sarkander as if he, in conspiracy with Lobkowitz, had brought the enemy into the territory. John was taken prisoner and brought to Olmütz. The commission appointed for the trial was made up entirely of Protestants, but the Catholic city judge Johann Scintilla was forced to attend. He made a report of the whole transaction to the bishop, Franz Cardinal von Dietrichstein (1623). The question put to them who had called the troops into the country: what underhand dealings John had practised in Poland; what had been confided to him by Lobkowitz, whose confessor he was, and whose secret plans he therefore knew. Because John would not violate the secrets of the holy tribunal the rack was used on 13, 17 and 18 February. On each of the latter days the tortures lasted for two and three hours, lighted candles and feathers soaked in oil, pitch, and sulphur were strewed over his body and ignited. He lingered from the effects for a month and died in prison. The people immediately began to venerate John Sarkander and to ask for his beatification. The process was initiated under Emperor Leopold I in 1725, and John was beatified in 1773. His body was translated to Constantiopole in the reign of Justinian I (527–65). In 565 Eutychius I of Constantinople was deposed, and John succeeded him. When John died in 577, Eutychius was restored. Before his elevation to the patriarchate John had already made a collection of canons. To save them from loss, he put them in a systematic order, such as the “Codex canonum” used by the Council of Chalcedon (451). Since the fifth century these collections had increased, and at last attempts were made to reduce them to a chronological order by a systematic one. Of such systematic arrangements that of John Scholasticus was, if not absolutely the first, at any rate the first of any importance. Between the years 540 and 580 he made what he called Κανόνες και Μετακανόνες. Pope Nicholas I (658–67), writing to Photius, alludes to it as “Concordia canonum.” The work contained fifty titles, each with the canons concerning the subject of the title. For instance, the first title is: “Of the honour towards patriarcas ordained by the Canons.” This is established by canons vii and vi of Nicea, ii of Constantinople I, viii of Ephesus. Altogether it is the compiler quoting the Apostolic canons, those of ten synods, and sixty-eight canons from St. Basil’s second and third letters to Amphicius. It is the first attempt to collect canons from the letters of the Fathers. The first edition contains 777 canons, arranged under fifty titles. After he became patriarch, John III enlarged his collection to sixty titles, and added to it eight more chapters from the “Novelle” of Justinian. Towards the end of the sixth century another author added twenty-five more chapters taken from both the Codex and the “Novelle,” concerning civil laws that affect Church matters. So the collection grew till it was finally enlarged into the “Nomocanon” (Συγκαταλειφθείς) of Photius.

John Short, Blessed. See Thomas Ford, Blessed.

Johnston, Richard Malcolm, educator, author, b. 8 March, 1822, at Powellton, Georgia, U. S. A.; d. at Baltimore, Maryland, 23 September, 1898. His father was a Baptist minister, and his early education was received at a country school and finished at Mercers College. After graduating there he spent a year teaching and then took up the study of law and was admitted to the bar in 1841. In 1858 he was appointed to the chair of belles-lettres in the State University of Georgia, retaining it until the opening of the Civil War, when he began a school for boys on his farm near Sparta. He kept coming during the war, serving also for a time on the staff of General E. B. Johnson, and helping to organize the state militia. At the close of the war he moved to Maryland, where he opened the Penn Lucy School for boys near Baltimore. One of his teaching staff here was the poet Sidney Lanier, who persuaded him to begin work for publication, although he was then over fifty years old. His first stories were collected in "The War was Much Talked About"; others to "The Century" followed, and became immediately popular. He had the knack of story-telling that depicted the lonely homes in the soil, quaint characters that filled the memories of his youth, and
he embalmed their fading images with facility and a faithful regard to accuracy that preserved the bourgeois type of old Middle Georgia. His style was serene and facile, mingling humour with moral philosophy. As a poet he had poetic sympathy with wise discrimination.

Johnston became a Catholic in 1875, accepting the truth after long hesitation. His wife Frances Manfield, of old New England stock, had been received into the Church six months previously. He relates that he was thirty years old when he first saw a priest, and that his first investigations into the Faith were during the "Know-Nothing" campaign of 1855, when he read some of Bishop England's and Newman's works to confute a political opponent. With his conversion the attendance at his school, which had been small, increased with Baptist parents, who, delighted, and gave it up and devoted himself entirely to literature—his popularity as a story writer having steadily increased—and to lecturing on literary topics. His published works include: "Dukesborough Tales" (1871-81), in which the impressions of his early school days in Georgia were elaborated; "Old Mark Langston" (1884); "Two Gray Turtles" (1885); "Mr. Absalom Billingslea and Other Georgia Folks" (1888); "The Primes" (1889); "Widow Guthrie" (1890); "Ogeechee Cross Riddles" (1899); "Old Times in New Georgia" (1897); a Life of Alexander H. Stephens with whom he had been associated in law practice (1875). At this time he was preparing his "History of Georgia," when he was commissioned by the University of Georgia to prepare an "Historical Sketch of English Literature" (1872), a text-book for advanced students, used in Johns Hopkins University, and other institutions at which he gave lecture courses. THOMAS F. MEEHAN.

John Stone, Blessed, English martyr, executed at the Dane-John, Canterbury, probably in December, 1539, for denying the royal supremacy. He was an Austin Friar of Canterbury, and a doctor of divinity. He is probably the Austin Friar of whom Bishop Winthrop complained on 14 December, 1538, that "at all times he still held and still desired to die for it, that the king may not be head of the Church of England". When in prison before his martyrdom "after fervently investigated fasted and prayed, he heard no voice, but without seeing the presence of anyone, calling him by name and exhorting him to be of good courage and not to hesitate to suffer with constancy for the truth of the opinion which he had professed". CAMM, Ld. in The Catholic World Magazine (New York, 1894-5), 288; GARROX, Henry VIII and the English Monasteries (London, 1898), 521; STANTON, Menology of England and Wales (London and New York, 1897), 229, 347.

JOHN B. WAINEWRIGHT.

John Story (or Storey), Blessed, martyr; b. 1564; d. at Tyburn, 1 June, 1571. He was educated at Oxford, and was president of Broadsates Hall, now Pembroke College, from 1537 to 1539. He entered Parliament as member for Hindon, Wilts, in 1547, and was imprisoned for opposing the Bill of Uniformity, 24 Jan.—2 March, 1548-9. On his release he retired with his family to Louvain, but after the accession of Queen Mary he returned to England (Aug. 1553), and became chancellor to Bishop Bonner. From 1553 to 1560 he sat for one or other parliamentary division of Wiltshire, and in the latter year he incurred the displeasure of Elizabeth for his outspoken opposition to the Bill of Supremacy. He was committed to the Fleet Prison (1560) but escaped and was arrested and imprisoned in the Marshalsea (1563). He once more made good his escape to Antwerp, where he renounced his English allegiance and became a Spanish subject. Under the Duke of Alva he held a position in the customs of Flanders until August, 1570, when he was kidnaped at Bergen-op-Zoon by Cecil's agents. He was brought to London and imprisoned in the Tower, where he was frequently racked, and on 26 May, 1571, he was, it is said, hit in Westminster Hall with a sword directed against the queen's life and for having while at Antwerp assisted the Northern rebels. The anti-Catholic order bore his tortures with fortitude, asserted over and over his innocence of the charges, but refused to make any further plea, on the ground that he was a foreigner, as his judges had no jurisdiction. The spectacle of this trial moved Edmund Campion, who was present in the Hall, to reconsider his own position and opened his eyes to his duty as a Catholic. Blessed John Story was condemned 27 May, and spent his last night in the Tower, preparing for a death which his persecutors made as barbarously cruel as it was possible.

JOHN B. WAINEWRIGHT.

John Talia, Orthodox Patriarch of Alexandria (481-482) at the time of the Monophysite troubles. He had been a monk in the Canopis and administrator (μητρας εκκλησιας) of the diocese under the Patriarch Timothy Salofoicius, who had sent him with Gennadius of Hermopolis as legate to the Emperor Zeno (474-491). Zeno was on very good terms with John Talia, in whom he reposed great confidence. He viewed with favor the appointment of Acacius of Constantinople (471-489), who had been his imperial enemy. Acacius afterwards said that Talia had sworn that he would not accept the patriarchate. Just before his death, Timothy Salofoicius again sent John Talia to Constantinople with the petition that when he, Timothy, died he might have a Catholic (Chalcedonian) successor. This time, too, Talia enjoyed the Emperor's favor. Zeno promised all he asked and spoke with great admiration of Timothy's piouslegate. But Talia ignored Acacius, who shut himself up and awaited his chance of revenge. Talia made friends among the courtiers and ingratiating himself essentially with Illus, administrator of the palace. As soon as Timothy died (481) the Catholics of Alexandria chose John Talia to succeed him. Unfortunately the new patriarch then offended the emperor and gave Acacius his chance. He announced his succession at once to Rome and Antioch, according to custom. But he sent no announcement to the Patriarch of Constantinople, only writing to Illus begging him to tell the emperor. Illus was away at Antioch; so people at Constantinople heard the news before the official announcement arrived. This Zeno took as a personal affront. Acacius then took the opportunity to take the situation. He persuaded Zeno that Talia had broken his oath in accepting election and had advised his clergy to restore the name of the great Monophysite champion, Dioscorus, to their diptychs. This accusation was sheer calumny. Talia was always uncompromisingly orthodox. Zeno then refused to acknowledge Talia and supported his rival Peter Mungus.

Peter Mongus (Μουγος, hoarse) was a Monophysite who had already been set up as patriarch by his party when Timothy Alluros died (477). During the life of Salofoicius he had not made much headway; but now he was again brought forward by the Monophysites as rival patriarch to Talia. Acacius had formerly been an enemy of Mongus; now he and the emperor supported him. The situation was further complicated by the publication of the famous "Henoticon" (482),
by which Zeno and Acacius hoped to conciliate the Monophysites (see HENOTICON). Peter Mongus ac-
cepted it at once, whereas Talaia rejected it. Zeno then wrote to the pope (Simplicius, 463–483), saying
that Talaia was unworthy of the See of Alexandria, being a perjurer and friend of Dioscorus, that Mongus
was the right man to be patriarch. A result of this let-
ter was that the Holy See devoted itself to Talaia.
Talaia. But the pope answered the emperor, refusing to admit Mongus as patriarch in any case.
Zeno, however, ordered the governor (dux) of Egypt
to expel Talaia and establish Mongus in his place.
Mongus then sent notice of his succession to Rome,
Antioch, and Constantinople of inus acknowledged
him and inserted his name in the Byzantine diplomas.
Talaia, expelled from Alexandria, fled to Rome in 483.
He there explained the whole situation to the pope and
persuaded him to write two letters to Acacius den-
nouncing Mongus. So also he advised the
controversy about Mongus and the "Henoticon" that led
to the Acacian schism. Mongus from this time be-
came the great subject of dispute. Communion with
him meant Monophysitism. John Talaia practically
disappeared from the field. He stayed at Rome under
the pope's protection (always of course opposed to Mongus.
The "Henoticon" was not the papal fault with his advice and knowledge of Eastern affairs.
Liberatus thinks he became Bishop of Nolana in the
Campagna; Lequien thinks this unlikely (Orients
Christ., II, 419). Under Gelasius I (492–496) Ta-
laia's name still occurs as that of a counsellor whose
advice the pope willingly followed. He was never
able to go back to his own see and died at Rome at a
date unknown.

It may be of interest to note that Paul Drews ("Zur
Entstehungsgeschichte des Kanons in der röm. Messe", Tübingen, 1902) attributes the present ar-
rangement of the Canon of the Mass in some measure to
John Talaia of Alexandria. His thesis is this: Originally the order of the Canon corresponded to
the Antiochene Anaphora. It was re-arranged in the
fifth century to make it conform more or less to the
Alexandrine Liturgy, most probably by Gelasius I by
his influence. Lequien (Orients Christ., II, 417–419.

ADRIAN FORTESECUE

John the Almsgiver (JOANNEIS ELEMEMOSYNARIUS; JOANNEIS MISERICORS), SAINT, Patriarch of Alex-
andria (606–16), b. at Amathus in Cyprus about 550;
d. there, 616. He was the son of one Ephiphanus,
governor of Cyprus, and of noble descent; in his early
life he was married and had children, but they
and his wife soon died, whereupon he entered the
religious life.

On the death of the Patriarch Theodorus, the
Alexandrians besought Emperor Phocas to appoint
John his successor, which was accordingly done.
In his youth John had had a vision of a beauti-
ful maiden with a garland of olives on her head, who
said that she was Compassion, the eldest daughter
of the Great King. This had evidently made a deep
impression on John's mind, and, now that he had the
opportunity of exercising benevolence, he soon became widely known all over the East for his
munificent liberality towards the poor. One of the
first steps he took was to make a list of several thou-
sand needy persons, whom he took under his especial
care. He always referred to the poor as his "lords
and masters," because of their mighty influence at the
Court of the Most High. He assisted people of every
class who were in need. A shipwrecked merchant was
thus helped three times, on the first two occasions
apparently without doing him much good; the third
time however, John fitted him out with a ship and a
cargo of wheat, and by favourable winds he was taken
as far as Britain, where, as there was a shortage of
wheat, he obtained his own price. Another person,
who was not really in need, applied for alms and was
detected by the officers of the palace; but John merely
said "Give unto him; he may be Our Lord in dis-
guise." He visited the hospitals three times every
week, and he freed a great many slaves. He was
a reformer who attacked simony, and fought heresy by
teaching and instruction. He also reorganized the system of weights and measures for the sake of the poor, and put a stop to corruption among the officers. He increased the number of
churches in Alexandria from seven to seventy.

John is said to have devoted the entire revenues of
his see to the alleviation of those in need. A rich man
presented him with a magnificent bed-covering; he
accepted it for one night, but then sold it, and dis-
posed of the money in alms. The rich man "bought in"
the article, and again presented it to John, with the
same result. This was repeated several times; but
John drily remarked: "We will see who tires first."
It was not long before the man realized that he had
caused his own grave to be dug, but only partly so,
and appointed a servant to come before him on all
state occasions and say "My Lord, your tomb is
unfinished; pray give orders for its completion, for
you know not the hour when death may seize you."

When the Persians sucked Jerusalem in 614, John
sent large supplies of food, wine, and money to the
fleeing Christians. But eventually the Persians
occupied Alexandria, and John himself in his old
age was forced to flee to his native country, where
he died.

His body was brought to Constantinople, thence to
Oken by King Matthias Corvinus of Hungary;
travelling to 1530 to Toll near Priburg, and finally
in 1632 to Priburg cathedral. He was the original
patron saint of the Hospitaliers, and was commemor-
ated by the Greeks on 12 Nov. His life, written
by Leontius (C.I., cited., p. 85), was translated into
Latin by Anastasio Libri, at the end of the 16th
century and was referred to at the Seventh General
Council.

C. P. WEMSTY BROWN
us regarding the Precursor’s popularity, together with a few details of minor importance, are worthy of the historian’s attention. The same cannot be said of the apocryphal gospels, because the scant information they give of the Precursor is either copied from the canonical Gospels (and to the eyes of no authority), or else is a mass of idle vagaries.

Zachary, the father of John the Baptist, was a priest of the course of Abia, the eighth of the twenty-four courses into which the priests were divided (1 Par. xxiv, 2). Elizabeth, the mother of John, was of the daughters of Aaron,” according to St. Luke (i, 6); the same Evangelist, a few verses farther on (i, 26), calls her the “cousin” (μαρίθα) of Mary. These two statements appear to be conflicting, for how, it will be asked, could a cousin of the Blessed Virgin be “of the daughters of Aaron”? The problem might be solved by adopting the reading given in an old Persian version, where we find “mother’s sister” (μητριτή δεκάδη) instead of “cousin.”

A somewhat analogous explanation, probably borrowed from some apocryphal writing, and perhaps correct, is given by St. Hippolytus (in Nisecop. II. 9). Mary, Saba, and Elisabet, the predecessors: Mary, Saba, and Mary. The oldest, married a man of Bethlehem and was the mother of Salome; Saba married at Bethlehem also, but a “son of Levi”, by whom she had Elizabeth; Ann wedded a Galilean (Joschim) and bore Mary, the Mother of God. Thus Salome, Elizabeth, and the Blessed Virgin were first cousins, and Elizabeth, “of the daughters of Aaron” on her father’s side, was, on her mother’s side, the cousin of Mary. Zachary’s home is designated only in a vague manner by St. Luke: it was “a city of Juda,” “in the hill-country” (i, 39). Relying on the unwaranted assumption that Juda might be a misspelling of the name, proposed to read in its stead Justin (Jos., xv, 55; xxxi, 16; D.V.; Jota, Jeta), a priestly town south of Hebron. But priests did not always live in priestly towns (Mathathias’s home was at Modin; Simon Machabeus’s at Gaza). A tradition, which can be traced back to the time before the Crusades, points to the little town of Ain-Karim, five miles south-west of Jerusalem.

The birth of the Precursor was announced in a most striking manner. Zachary and Elizabeth, as we learn from St. Luke, were both just before God, having been selected to bring forth a saint and to be the parents of the Lord without blame; and they had no son, for that Elizabeth was barren” (i, 6-7). Long they had prayed that their union might be blessed with offspring; but, now that “they were both advanced in years,” the reproach of barrenness bore heavily upon them. And it came to pass, when he executed the priestly function in the order of his course before God, according to the custom of the priestly office, it was his lot to offer incense, going into the temple of the Lord. And all the multitude of the people was praying without, at the hour of incense. And there appeared unto him an angel of the Lord, standing on the right side of the altar of incense. And Zachary seeing him, was troubled, and fear fell upon him. But the angel said to him: Fear not, Zachary, for thy prayer is heard; and thy wife Elizabeth shall bear thee a son, and thou shalt call his name John: and he shall be great before the Lord; and shall drink no wine nor strong drink: and he shall be filled with the Holy Ghost, even from his mother’s womb. And he shall be in the sight of all people a sign and a wonder in the eyes of God. And he shall turn the hearts of the fathers unto the children, and the inconstant to the wisdom of the just, to prepare unto the Lord a perfect people (i, 8-17). As Zachary was slow in believing this startling prediction, the angel, making himself known to him, announced that, in punishment of his incredulity, he should be stricken with dumbness until the promise was fulfilled. “And it came to pass, after the days of his oath, he departed to his own house. And after those days, Elizabeth his wife conceived, and hid herself five months” (i, 23-24).

Now during the sixth month, the Annunciation had taken place, and, as Mary had heard from the angel the fact of her conception, she went “with haste” to congratulate her. “And it came to pass, that when Elizabeth heard the salutation of Mary, the infant”—filled, like the mother, with the Holy Ghost—“leaped for joy in her womb” as, to acknowledge the presence of his Lord. Then was accomplished the prophecetic utterance of the angel that the child should “be filled with the Holy Ghost even from his mother’s womb.” Now as the presence of the angel’s visitation. No sin whatever is incompatible with the indwelling of the Holy Ghost in the soul, it follows that at this moment John was cleansed from the stain of original sin. When “Elizabeth’s full time of being brought forth a son” (i, 57); and “on the eighth day they came to circumcise the child, and they called him by his father’s name Zachary. And his mother answering, said: Not so, but he shall be called John. And they said to her: There is none of thy kindred that is called by this name. And they made signs to his father, how he should be named. And demanding a writing table, he wrote, saying: John is his name. And they all wondered” (i, 59-63). They were not aware that no better name could be applied (John, Hebr.: Jehovah, i.e. “Jahweh hath mercy”) to him who, as his father prophesied, was to “go before the face of the Lord to prepare his ways: to give knowledge of salvation to his people, unto remission of their sins: through the bowels of the mercy of our God” (i, 76-78). Moreover, all these events, to wit, a child born to an aged couple, Zachary’s sudden dumbness, his equally sudden recovery of speech, his astounding utterance, might justly strike with wonderment the assembled neighbours; these could hardly help asking: “What one, think ye, shall this child be?” (i, 66).

As to the date of the birth of John the Baptist, nothing can be said with certainty. The Gospel suggests that the Precursor was born about six months before Christ; but the year of Christ’s nativity has not so far been ascertained. Nor is there anything certain about the season of Christ’s birth, for it is well known that the assignation of the feast of Christmas to the twenty-fifth of December is not grounded on historical evidence, but is possibly suggested by merely astronomical considerations, also, perhaps, inferred from astronomico-theological reasons. Besides, no calculations can be based upon the time of the year when the course of Abia was serving in the Temple, since each one of the twenty-four courses of priests had two turns a year. John’s early life St. Luke tells us that “this child grew, and was strengthened in spirit; and was in the deserts, until the day of his manifestation to Israel” (i, 80). Should we ask just when the Precursor went into the wilderness, an old tradition echoed by Paul Warnefried (Paul the Deacon), in the hymn, “Ut quanta laxitis,” composed in Sicily, and known as a more answer hardly more definite than the statement of the Gospel: “Antra deserti tenebris sub annis… petit…” Other writers, however, thought they knew better. For instance, St. Peter of Alexandria believed St. John was taken into the desert to escape the wrath of Herod, who, if we may believe a report, was impelled by fear of losing his kingdom to seek the life of the Precursor, just as he was, later on, to seek that of the new-born Saviour. It was added also
that Herod on this account had Zachary put to death between the temple and the altar, because he had publicly called the Messiah (Baron. "Antiq." Biurilical). Up to this he had led in the desert the life of an anchoress; now he comes forth to deliver his message to the world. "In the fifteenth year of the reign of Tiberius Caesar ... the word of the Lord was made unto John, the son of Zachary, in the desert. And he came into all the country about Jordan, preaching" (Luke, iii, 1-3), clothed not in the soft garments of a courtier (Matt., xi, 8; Luke, vii, 24), but in those "of camel's hair, and a leather girdle about his loins"; and "his meat"—he looked as if he came neither eating nor drinking (Matt., xi, 18; Luke, vii, 33)—"was locusts and wild honey" (Matt., iii, 4; Mark, i, 6); his whole life in countenance, far from suggesting the idea of a reed shaken by the wind (Matt., xi, 7; Luke, vii, 24), manifested undaunted constancy. A few incredulous scoffers feigned to be scandalised: "He hath a devil" (Matt., xi, 18). Nevertheless, "Jerusalem and all Judaea, and all the country about Jordan" (Matt., iii, 5), drawn by his strong and winning personality, went out to him; the austerity of his life added immensely to the weight of his words; for the simple folk, he was truly a prophet (Matt., xi, 9; cf. Luke, i, 76, 77). "Do penance: for the kingdom of heaven is at hand" (Matt., iii, 2), such was the burden of his teaching. Men of all conditions flocked round him.

Pharisees and Sadducees were there; the latter attracted perhaps by curiosity and scepticism, the former expecting possibly a word of praise for their multitudinous customs and practices, and all, probably, more anxious to see which of the rival sects the new prophet would commend than to seek instruction. But John laid bare their hypocrisy. Drawing his similes from the surrounding scenery, and even, after the Oriental fashion, making use of a play on words, he dares to say of the "Baptist" (Matt., iii, 4), he takes to task the well-deserved rebuke: "Ye brood of vipers, who hath shewed you to flee from the wrath to come? Bring forth therefore fruits worthy of penance. And think not to say within yourselves, We have Abraham for our father. For I tell you that God is able of these stones to raise up children to Abraham. For now the axe is laid to the root of the trees. Every tree therefore that doth not yield good fruit, shall be cut down, and cast into the fire" (Matt., iii, 7-10; Luke, iii, 7-9). It was clear something had to be done. The men of good will among the listeners asked: "What shall we do?" (Probably some were very gay and, according to the custom of people in such circumstances, were clad in two tunics—Joseph., "Antiq." XVII, v, 7.) "And he answering, said to them: He that hath two coats, let him give to him that hath none; and he that hath meat, let him do in like manner" (Luke, ii, 11). Some were publicans; on them he enjoined not to exact more than the rate of taxes fixed by law (Luke, iii, 13). To the soldiers (probably Jewish police officers) he recommended not to do violence to any man, nor falsely to denounce anyone, and to be content with their pay (Luke, iii, 14). In other words, he cautioned them against taxation in general, saying: "Ye do the works of stringent justice" (Luke, iii, 13). The Fathers of the Church answer very appropriately that this was the occasion preordained by the Father when Jesus should be manifested to the world as the Son of God; then again, by submitting to it, Jesus sanctioned the baptism of John. "But John stayed privately in the country of Juda, he said: "I am not he; but he that shall come after me is mightier than I, whose shoes I am not worthy to carry"" (Luke, iii, 16-17). Whatever John may have meant by this baptism "with fire", he, at all events, in this declaration clearly defined his relation to the One to come.

Here it will not be amiss to touch on the scene of the Predecessor's ministry. The locality should be sought in part of the Jordan valley (Luke, iii, 2) which is called the desert (Mark, i, 4). Two places are mentioned in the Fourth Gospel in this connection: Bethania (John, i, 28) and Ennon (A. V. Esonon, John, iii, 23). As to Bethania, the reading Bethabara, first given by Origen, should be discarded; but the Alexandrine scholar perhaps was less wrong in suggesting the other reading, Bethabara, possibly a Greek derivative of Bethany (Bethania). As to Ennon, it must be looked for "beyond the Jordan" (John, i, 28). The second place, Ennon, "near Salim" (John, iii, 23), the extreme northern point marked in the Madaba mosaic map, is described in Eusebius's "Onomasticon" as being eight miles south of Seeythys (Seiyyit) and should be sought probably at Ed-Deir or El-Fatir; an ancient site is named in the Jordan (Lagrange, in "Revue Biblique", IV, 1895, pp. 502-05). Moreover, a long-standing tradition, traced back to A.D. 333, associates the activity of the Predecessor, particularly the Baptism of the Lord, with the neighbourhood of Deir Mar-Yuhana (Qasr el-Yedd).

The Predecessor had been preaching and baptising for some time (just how long is not known), when Jesus came from Galilee to the Jordan, to be baptized by him. Why, it might be asked, should He "who did no sin" (I Pet., ii, 22) seek John's "baptism of penance for the remission of sins" (Luke, iii, 3)? The Fathers of the Church answer very appropriately that this was the occasion preordained by the Father when Jesus should be manifested to the world as the Son of God; then again, by submitting to it, Jesus sanctioned the baptism of John. "But John stayed privately in the country of Juda, he said: "I am not he; but he that shall come after me is mightier than I, whose shoes I am not worthy to carry"" (Luke, iii, 16-17). These words, implying, as they do, that John knew Jesus, are in seeming conflict with a later declaration of John recorded in the Fourth Gospel: "I knew him not" (John, i, 33). Most interpreters take it that the Predecessor had some intimation of Jesus being the
left their business to devote themselves exclusively to the Gospel or its preparation, there is clearly no absolute discordance between the narration of the first three Gospels and that of St. John.

The Precursor, now, took the laymen of several months, again appears on the scene, and he is still preaching and baptizing on the banks of the Jordan (John, i, 23). Jesus, in the meantime, had gathered about Himself a following of disciples, and He came "into the land of Judea: and there He abode with them, and baptized" (John, iii, 22).—"What! though the disciples of John came not to him? "Rabbi, he that was with thee beyond the Jordan, to whom thou gavest testimony, beheld he baptized, and all men come to him" (John, iii, 26–27). They undoubtedly meant that Jesus should give way to John who had recommended Him, and that, by baptizing, He was encroaching upon the rights of John. "John answered and said: A man cannot receive any thing, unless it be given him from heaven. You yourselves do bear me witness, that I said, I am not Christ, but that I am sent before him. He that hath the bride is the bridegroom: but the friend of the bridegroom, who standeth and heareth him, rejoiceth with joy because of the bridegroom's voice. This my joy, therefore, is fulfilled. He must increase, but I must decrease. He that cometh from above is above all. He that is of the earth, of the earth he is, and of the earth he speaketh. He that cometh from heaven, is above all. And what he hath seen and heard, that he testifieth: . . ." (John, iii, 27–36).

The above narration recalls the fact before mentioned (John, i, 28), that part of the Baptist's ministry was exercised in Perea: Ennon, another scene of his labours, was within the borders of Galilee, both Perea and Galilee made up the tetrarchy of Herod Antipas. This prince, a son worthy of his father Herod the Great, had married, likely for political reasons, the daughter of Aretas, king of the Nabatæans. But on a visit to Rome, he fell in love with his niece Herodias, the wife of his half-brother Philip, and marrying her, he caused her husband to be beheaded and to come on to Galilee. When and where the Precursor met Herod, we are not told, but from the synoptic Gospels we learn that John dared to rebuke the tetrarch for his evil deeds, especially his public adultery. Herod, swayed by Herodias, did not allow the unwelcome renouncer to go unpunished. He "sent and apprehended John and bound him in prison". Josephus tells us quite another story, containing perhaps also an element of truth. "As great crowds clustered around John, Herod became afraid lest the Baptist should abuse his moral authority over them to incite them to rebuke or to rebuke anything at his bidding; therefore he thought it wiser, so as to prevent possible happenings, to take away the dangerous preacher . . . and he imprisoned him in the fortress of Macherus" (Antiq., XVIII, v, 2). Whatever may have been the chief motive of the tetrarch's policy, it is certain that Herodias nourished a bitter hatred against John: "She laid snares for him: and was desirous to put him to death" (Mark, vii, 19). Although Herod first shared her desire, yet "he feared the people: because they esteemed him as a prophet" (Matt., xiv, 5). After that time this rest at Macherus "he was not heard of any more of him". (John, xii, 4). The question: have abated, for, according to Mark, vi, 19, 20, he heard John willingly and did many things at his suggestion.

John, in his letters, was attended by some of his disciples, who kept him in touch with the events of
the day. He thus learned of the wonders wrought by Jesus. At this point it cannot be supposed that John’s faith wavered in the least. Some of his disciples, however, would not be convinced by his word. So Jesus was the Messiah was the Messias and sent them to Jesus, bidding them say: “John the Baptist hath sent us to thee, saying: Art thou he that art to come; or look we for another? (And in that same hour, he cured many of their diseases, and hurts, and evil spirits; and to many that were blind he gave sight.) And answering, he said to them: Go at once to John what you have heard and seen: the blind see, the lame walk, the lepers are made clean, the deaf hear, the dead rise again, to the poor the gospel is preached: and blessed is he whosoever shall not be scandalized in me” (Luke, vii, 20–23; Matt., xi, 9–15).

How this interview affected John’s disciples, we do not know; but we do know the encomium it occasioned of John from the lips of Jesus: “And when the messengers of John were departed, he began to speak to the multitudes concerning John. What went ye out into the desert to see? A reed shaken with the wind? But why see ye no figure of power full of glory, and that in his captivity he was more than ever the undaunted champion of truth and virtue.—But what went you out to see? A man clothed in soft garments? Behold they that are in costly apparel, and live delicately, are in the houses of kings. But what see ye out to see? A prophet? Yes, I say you, and more than a prophet. This is he of whom it is written: Behold, I send my angel before thy face, who shall prepare thy way before thee. For I say to you: Amongst those that are born of women, there is not a greater prophet than John the Baptist” (Luke, vii, 24–28). And continuing Jesus pointed out the inconsistency of the world in its opinions both of himself and his precursor: “John the Baptist came neither eating bread nor drinking wine; and you say: He hath a devil. The Son of man is come eating and drinking: and you say: Behold a man that is a glutton and a drinker of wine, a friend of publicans and sinners. And wisdom is justified by all her children” (Luke, vii, 33–35).

St. John languished probably for some time in the fortress of Macheraus; but the ire of Herodias, unlike that of Herod, never abated: she watched her chance. It came at the birthday feast which Herod, after Rome’s fashion, gave to the “princes and chief men of Galilee. And when the daughter of the same Herodias [Josephus gives her name: Salome] had come in, and had danced, and pleased Herod and them that were at table with him, the king said to the damsel: Ask of me what thou wilt, and I will give it thee. And she said: Give me here this head of John the Baptist” (Luke, ix, 7–9). This is the moment when the account given in the Synoptic Gospels is reversed. In the Synoptics, it is after the time Herod had banished John to the desert that he患病, and that John’s disciples, hearing of his death, “came, and took his body, and laid it in a tomb” (Mark, vi, 29), “and came and told Jesus” (Matt., xiv, 12).

The last impression made by the Precursor upon those who had come within his influence cannot be better illustrated than by mentioning the awe which seized upon Herod when he heard of the wonders wrought by Jesus; who, in his mind, was no other than John the Baptist come to life (Matt., xiii, 57). The Precursor’s influence did not die with him. It was far-reaching, too, as we learn from Acts, xviii, 25; xix, 3, where we find that proselytes at Ephesus had received from Apollo and others the baptism of John. Moreover, early Christian writers speak of a sect taking its name from John what you have heard and seen: the blind see, the lame walk, the lepers are made clean, the deaf hear, the dead rise again, to the poor the gospel is preached: and blessed is he whosoever shall not be scandalized in me” (Luke, vii, 20–23; Matt., xi, 9–15).

How this interview affected John’s disciples, we do not know; but we do know the encomium it occasioned of John from the lips of Jesus: “And when the messengers of John were departed, he began to speak to the multitudes concerning John. What went ye out into the desert to see? A reed shaken with the wind? But why see ye no figure of power full of glory, and that in his captivity he was more than ever the undaunted champion of truth and virtue.—But what went you out to see? A man clothed in soft garments? Behold they that are in costly apparel, and live delicately, are in the houses of kings. But what see ye out to see? A prophet? Yes, I say you, and more than a prophet. This is he of whom it is written: Behold, I send my angel before thy face, who shall prepare thy way before thee. For I say to you: Amongst those that are born of women, there is not a greater prophet than John the Baptist” (Luke, vii, 24–28). And continuing Jesus pointed out the inconsistency of the world in its opinions both of himself and his precursor: “John the Baptist came neither eating bread nor drinking wine; and you say: He hath a devil. The Son of man is come eating and drinking: and you say: Behold a man that is a glutton and a drinker of wine, a friend of publicans and sinners. And wisdom is justified by all her children” (Luke, vii, 33–35).

St. John languished probably for some time in the fortress of Macheraus; but the ire of Herodias, unlike that of Herod, never abated: she watched her chance. It came at the birthday feast which Herod, after Rome’s fashion, gave to the “princes and chief men of Galilee. And when the daughter of the same Herodias [Josephus gives her name: Salome] had come in, and had danced, and pleased Herod and them that were at table with him, the king said to the damsel: Ask of me what thou wilt, and I will give it thee. And she said: Give me here this head of John the Baptist” (Luke, ix, 7–9). This is the moment when the account given in the Synoptic Gospels is reversed. In the Synoptics, it is after the time Herod had banished John to the desert that he患病, and that John’s disciples, hearing of his death, “came, and took his body, and laid it in a tomb” (Mark, vi, 29), “and came and told Jesus” (Matt., xiv, 12).
ST. JOHN THE BAPTIST

MURILLO, THE PRADO, MADRID

TITIAN, ACADEMY OF FINE ARTS, VENICE
day of triumph. The celebration of the Decolla-
tion of John the Baptist, on 29 August, enjoys almost the same antiquity. We find also in June the
maundy Thursday in the Roman liturgy of the Consecration of the Precursor on 24 September. But the most
solemn celebration in honour of this saint was always that of his Nativity, preceded until recently by a
fast. Many places adopted the custom introduced by St. Sabas of having a double Office on this day, as
on 16 June, the feast of St. John the Baptist. The Office, intended to signify the time of the law and
the Prophets which lasted up to St. John (Luke, xvi,
16), began at sunset, and was chanted without Alleluia; the second, meant to celebrate the opening of the
time of grace, and gladdened by the singing of
Alleluia, was held during the night. The resem-
bliance of the feast of St. John with that of Christmas was carried farther, for another feature of the 24th
of June was the celebration of the three masses:
the first, in the dead of night, recalled his mission
of Precursor; the second, at daybreak, commemorated
the baptism he conferred; and the third, at the hour of
This last, quite like the others, daily, repeatedly enriched by the
additions of several popes, was in suggestive sens and beauty on a
par with the liturgy of Christmas. So sacred
was St. John’s day deemed that two rival armies,
meeting face to face on 23 June, by common accord
set about to complete the battle under the
feast (Battle of Fontenay, 841). “Joy, which is the
characteristic of the day, radiated from the sacred
precincts. The lovely summer nights, at St. John’s
tide, gave free scope to popular display of lively
faith among various nationalities. Scarce had the
last rays of the setting sun died of the Roman Chil
world over, immense columns of flame arose from
every mountain-top, and in an instant, every town,
and village, and hamlet was lighted up” (Guéranger).
The custom of the “St. John’s fires”, whatever its origin, has, in certain regions, endured unto this day.

CHARLES L. SOUVAY.

John the Deacon (JOHANNES DIACONUS).—Among
the writers of the Middle Ages who bear this name, four
historians deserve particular mention on account of
the importance of their work. In chronological or
der they are as follows:—

(1) John, deacon of Rome, date of birth unknown;
d. before 882. Johannes, surnamed Hymonides, was
from the middle of the ninth century a monk of
Monte Cassino, and later a deacon of the Roman
Church. Possessed of an considerable learning, he
was closely associated with the learned Anastasius,
Librarian of the Roman Church (d. 879), and at the
instance of John VIII (872-82) wrote a life of St.
Gregory the Great, making use of the works of this
popes of this time in the church of the Roman
City. The work is divided into four books: in the first he
first gives an account of the life of Gregory up to the
time of his pontificate; in the second, of his activities
as pope; in the third, of his teachings; and in the fourth,
of his progress in perfection. The life is edited by
Mabillon (Acta SS., ord. S. Benedicti I, 396-406)
and P. L. LXXV, 50 sqq.). He intended to write also a detailed history of
the Church, and at his request the aforesaid Anas-
tasius compiled a history in three parts (tripartita)
from Greek sources for the use of John, whose
purpose, however, was never executed. On the invitation
of Bishop Gaudericus of Vellétri (867-79), he under-
took to re-edit the "Gesta Clementis", a life of Clem-
ent II, himself the son of a great man and a close
relative of the Popes who had lived in the 7th cen-
tury. The text of the famous "Vita S. Clementis", the
"Virginianus", "Vir illustris", treats of the ceremonies
of baptism; it is not however, the work of the John
mentioned here, but of an old deacon of this name (ed.
P. L., LIX, 399-408).

(1892), 393-442; POTTHAST, Bibl. histor. medi. ari, II, 1849.

(2) John, deacon of Naples, d. after 910. This dea-
con, or head of a diaconia at the church of St. Janu-
arius of Naples, flourished towards the end of the
ninth and the beginning of the tenth century, and
can from his writings appears to have been a very learned
and accomplished cleric. We owe to him several hi-
storical works, which are among the most important
sources of information for the history of his time. He
first wrote a continuation of the diocesan history of
Naples (Gesta episcoporum Neapolitanorum), begun by
another cleric, who died about 890, and finished by
John to 872. He makes use of both written and oral
tradition, and contributes from personal knowledge.
The narrative is graphic and spirited, and impresses the
reader as a frank and accurate story (ed. Waits in
CAPASSO, "Monumenta ad Neapolitani du-
307 sqq.). He also wrote a history of the trans-
lation in the fifth century of the remains of St. Sev-
erius, the Apostle of Naricum, from the Castellum
Lucullanum near Naples to a new monastery within
the city. This work contains the important account
of the destruction of Taormina in Sicily by the Sam-
cens under Ibrahim, and of the martyrdom of Bishop
in 910 the relics of St. Sossius, a companion of St. Jan-
uarius, were transferred from the ruined monastery
at Naples, John wrote a history of St. Januarius and his
companions, in which, as an eye-witness he describes the aforesaid transfer (Acta SS., Sept. VI, 874 sqq.; the text of the "Translatio"
alone is found in Waits, loc. cit., 459-63). A biogra-
phy of St. Nicholas of Mira (ed. in "Spiegelum Romanum", IV, 223 sqq.) is not by this
John but by another author of the same name.

HUNTER, Nomenclator I (3rd ed.), 889 sqq.; WATTENBACH,

POTTHAST, Bibl. Hist., I, 666.

(3) John, deacon of Venice, d. after 1008. The
oldest chronicle of Venice, formerly known as the
"Chronicon Sagornini", was compiled by a deacon
John, the chaplain and perhaps a relative of Doge
Peter II Urseolus (991-1009). John enjoyed the con-
dom of this great dux, and was often sent as his
ambassador to Emperors Otto III and Henry II.
In the first part of his chronicle, which deals with the
early period of the republic, the narrative is often con-
fused and deficient; later it becomes more accurate
and complete, and for the time in which the writer
himself lived it is particularly significant. The narra-
tive to 1008 and treats in detail of the reign
SS.", VII, 1-36; ed. Monticoli, "Cronache Veneziane antichissime" I (1890), 59-171, in "Fonti per la
storia d’Italia", IX). John has also been credited,
but erroneously, with the "Chronicon Gradenae";
which is in the manuscripts usually given with "Chronicon Venetum".

HUNTER, Nomenclator, I (3rd ed.), 963; WATTEBACH, Gennath, I, 486; KOLLMAN, Herog Peter II Oresos (Göttingen, 1886); MONTICELLO, La Cronaca Di Diocono Giovanni (Flores, 1882); SPALTNER, Bibl. hist., I (3rd ed.), 660.

(4) John, a Roman deacon, lived in the second half of the twelfth century. This deacon and canon of the Lateran compiled a work on this papal basilica, and dedicated it, in the preface, to Alexander III (1159-81), thereby indicating the date of its composition. It was obviously a secondary object of the author in composing this work to support the canons of the Lateran in their dispute for precedence with the canons of Peter's (ed. Mahillon, "Her Halicarnas," II, 560-76; P. L., CXCVI, 1453-50).

J. P. KIRCH.

JOHN the Evangelist. SAINT.—I. NEW TESTAMENT ACCOUNTS.—John was the son of Zebedee and Salome, and the brother of James the Greater. In the Gospel the provinces there are often referred to by their father "the sons of Zebedee" and received from Christ the honourable title of "Boanerges," i.e. "sons of thunder" (Mark, iii, 17). Originally they were fishermen and fished with their father in the Lake of Geneareth. According to the usual and entirely probable explanation of this name, John was a disciple of John the Baptist, and were called by Christ from the circle of John's followers, together with Peter and Andrew, to become His disciples (John, i, 35-42). The first disciples returned with their new Master from the Jordan to Galilee and apparently both John and the others remained for some time with Jesus (cf. John, ii, 12, 22; iv, 2, 8, 27 sqq.). Yet after the second return from Judea John and his companions went back again to their trade of fishing until he and they were called by Christ to definitive discipleship (Matt., iv, 18-22; Mark, i, 16-20). In the lists of the Apostles John has the second place (Acts, i, 12), the third (Mark, iii, 17), and the fourth (Matt., x, 3; Luke, vi, 14), yet always after James with the exception of a few passages (Luke, viii, 51; ix, 28 in the Greek text; Acts, i, 13).

From James being thus placed first, the conclusion is drawn that John was the younger of the two brothers. In any case John had a prominent position in the Apostolic body. Peter, James, and he were the only witnesses of the raising of Jairus's daughter (Mark, v, 37), of the Transfiguration (Matt., xvi, 1), and of the Agony in Gethsemanii (Matt., xxvii, 37). Only he and Peter were sent into the city to make the preparation for the Last Supper (Luke, xxii, 8). At the Supper itself his place was next to Christ on Whose breast he leaned (John, xii, 23, 25). According to the general interpretation John was also that "other disciple" who with Peter followed Christ after the arrest into the palace of the high priest (John, xxi, 5-18). "This disciple he testifies" (Freiburg, 1903, 295 sqq., 299 sqq., opposes this view). John alone remained near his beloved Master at the foot of the Cross on Calvary with the Mother of Jesus and the pious women, and took the desolate Mother into his care as the last legacy of Christ (John, xix, 25-27). After the Resurrection John with Peter was the first of the disciples to hasten to the grave and he was the first to believe that Christ had truly risen (John, xx, 2-10). When later Christ appeared at the Lake of Genesareth John was also the first of the seven disciples present who recognized his Master standing on the shore (John, xxi, 7). The Fourth Evangelist (John, xxi, 15-25) says: "And Jacobus the leucophoros, "the ancient," "the old"; Papias, Bishop of Hierapolis, also uses the same name to designate the "Presbyter John" as, in addition to Ariost, his particular authority, directly after he has named the presbyters Andrew, Peter, Philip, Thomas, James, John, and Matthias in Egypt (in Eusebius, Hist. Eccl., xxxix, 4). Eusebius was the first to draw, on account of these words of Papias, the distinction between a Presbyter John and the Apostle John, and this distinction was also spread in Western Europe by St.
Jerome on the authority of Eusebius. The opinion of Eusebius has been frequently revived by modern writers, chiefly to support the denial of the Apostolic origin of the Fourth Gospel. The distinction, however, has no historical basis. First, the testimony of Eusebius in this matter is not worthy of belief. He calls the Gospel of John "apocryphal." It is true, as Eusebius expressly calls the Apostle John the teacher of Papias ("ad annum Abrabae 2144"), as does Jerome also in Ep. Ixxv, "Ad Theodoram," iii, and in "De viris illustribus," xviii. Eusebius was also influenced by his erroneous doctrinal opinions as he denied the Apostolic origin rose in the Apostles and John was the writing to an author differing from St. John but of the same name. St. Ireneus also positively designates the Apostle and Evangelist John as the teacher of Papias, and neither he nor any other writer before Eusebius had any idea of a second John in Asia (Adv. haer. V, xxxiii, 4). In what Papias himself says the connexion plainly shows that in this passage by the word presbyter only Apostles can be understood. If John is mentioned twice the explanation lies in the peculiarity in which Papias stood to this, his most eminent teacher. By inquiring of others he had learned something indirectly from John, just as he had from the other Apostles referred to. In addition, he had received information concerning the teachings and acts of Jesus directly, without the intervention of others, from the still living "Presbyter John," as he also had from Aristion. Thus the teaching of Papias casts absolutely no doubt upon what the New-Testament writings presuppose and expressly mention concerning the residence of the Evangelist John in Asia.

III. The Later Accounts of John.—The Christian writers of the second and third centuries testify to us as a tradition universally recognized and doubted by no one that the Apostle and Evangelist John lived in Asia in the last decades of the first century, and from Ephesus had guided the Churches of that province. In his "Dialogue with Tryphon" (c. Ixxxi) St. Justin Martyr refers to "John, one of the Apostles of Christ" as a witness who had lived with "us," that is, at Ephesus. St. Ireneus speaks in very many places of the Apostle John and his residence in Asia and expressly declares that he wrote his Gospel at Ephesus (Adv. haer., III, i, 1), and that he had lived there until the reign of Trajan (loc. cit., II, xxii, 5). With Eusebius (Hist. eccl., III, xii, 1) and others we are obliged to place the Apostle's banishment to Patmos and Emperor Domitian (85–96). Previous to this, according to Tertullian's testimony (De praep. sexti), John had been thrown into a cauldron of boiling oil before the Porta Latina at Rome without suffering injury. After Domitian's death the Apostle returned to Ephesus during the reign of Trajan, and at Ephesus he died about A.D. 100 at a great age. Traditions reports many beautiful traits of the last years of his life: that he refused to remain under the same roof with Cerinthus (Ireneus, "Ad. haer." III, iii, 4); his touching anxiety about a youth who had become a robber (Clemens Alex., "Ep. to the Rom.," xi, 8), his touching regard for words of exhortation at the end of his life, "Little children, love one another" (Jerome, "Comm. in ep. ad. Gal.", vi, 10). On the other hand the stories told in the apocryphal Acts of John, which appeared as early as the second century, are unhistorical invention.

IV. Feasts of St. John.—St. John is commemorated on 27 December—especially in Byzantine times. The Roman Church celebrates the feast of St. John the Greater. At Rome the feast was reserved to St. John alone at an early date, though both names are found in the Carthaginian Calendar, the Hieronymian Martyrology, and the Gallican liturgical books. The "departure" or "assumption" of the Apostle is noted in the Menologium of Constantine and the Calendar of Naples (28 Sept.), which seems to have been regarded as the date of his death. The feast of St. John before the Latin Gate, supposed to commemorate the dedication of the church near the Porta Latina, is first mentioned in the Sacramentary of Adrian I (772–95).

V. St. John in Christian Art.—Early Christian art usually represents St. John with an eagle, symbolizing the heights to which he rises in the first chapter of his Gospel. The title of "Evangelist" St. John never received according to some authorities, was not adopted until the thirteenth century, is sometimes interpreted with reference to the Last Supper, again as connected with the legend according to which St. John was handed a cup of poisoned wine, from which, at his blessing, the poison was driven out. A natural explanation is to be found in the words of Christ to John and James "My chalice indeed you shall drink" (Matt., xx, 23; Krull in Kraus, "Realencyk.," s. v. "Johannes Evangelista").

LEOPOLD FONCK.

John the Faster (ομηρυκός, i.e., junctor), Patriarch of Constantinople (John IV, 582–595), famous chiefly through his assumption of the title "ocumenical patriarch"; d. 2 September, 595. He was brought up (apparently also born) at Constantinople. Under the Patriarch John III (Scholasticus, 555–577) he was deacon at the Hagia Sophia church; then he became sakellarios (an official who acts as patriarchal vicar for monasteries). He had little learning, but was so famous for his ascetical life that he was already called "the Faster." Under Eutychius I (restored to the patriarchate when John III died, 577–592) he became an important person among the clergy of the church. At Eutychius's death he was made patriarch by the Emperor Tiberius II (578–582). Under the next emperor, Maurice (582–602), he was still a favourite at court. There is little to tell of his life besides the great question of the title. He is said to have been tolerant towards the Monophysites of the East, but he persuaded Maurice to have a certain wizard, Paulinus, burnt. He had always a great reputation for asceticism and charity to the poor.

The dispute about the title was this: it was not new in John IV's time; till then the Bishop of Constantinople had commonly been called "επισκοπεύων ταραπάνων," but at various times he (and other patriarchs) had been addressed as οικουμένης ταραπάνων. H. Gelzer (Der Streit um den Titel des ökumenischen Patriarchen) thinks that it became usual in the time of the Aecian schism (484–519). The first known use of it applied to John I of Constantinople is in a letter from the monks of Antioch to John II (518–520) in 518. Before that the Patriarch of Alexandria had been so called by one of his bishops at the Robber Synod of Ephesus (in the year 449; Gelzer, op. cit., p. 568). Since 518 the whole combination, ἐπισκοπεύων όικουμενικός, had been commonly used in addresses to the Byzantine patriarchs. But they had not called themselves so before John IV. There is a real difference between these two uses of a title. In addresses to other people, particularly superiors, one may always allow a margin for compli- ments—especially in Byzantine times. If a man uses a title he sets up a formal claim to it. In 588 John the Faster held a synod at Constantinople to examine certain charges against Gregory, Patriarch of Antioch (in this fact already one sees a sign of the growing ambition of Constantine). By what right then did Constantine dare to discuss the affairs of Antioch? The Acts of this synod appear to have been sent to Rome; and Pope Pelagius II (579–590) saw in them
that John was described as "archbishop and oecumenical patriarch". It may be that this was the first time that the use of the title was noticed at Rome; it appears, in any case, to be the first time it was used officially as a title claimed—not merely a vague compliment. Pelagius protested against the novelty and forms of the title. The pope, at any rate (apocryphal) there (578–584), and had sent him notice of his succession as pope in a friendly letter (Epp. I, iv, in P. L., LXXVII, 447). It has been thought that the John to whom he dedicates his "Regula pastoralis" is John of Constantinople (others think it to be John of Ravenna, Bardenhewer, "Patrology", tr. Shahan, St. Louis, 1908, p. 652). But in 593 this affair of the new and arrogant title provoked a serious dispute. It should be noticed that Gregory was still old-fashioned enough to cling to the theory of three patriarchates only, although officially he accepted the five of "the Orthodox East" (Epp. I, 444). He was therefore not well-disposed towards Constantinople as a patriarchate at all. That it should claim to be the universal one seemed to him unheared-of insolence. John had crudely scourgéd two priests accused of heresy. They appealed to the pope. In the correspondence that ensued John assumed this title of oecumenical patriarch "in almost every line" of his letter (Epp. I, xviii, in P. L., LXXVII, 738). Gregory protested vehemently against it in a long correspondence addressed first to John, then to the Emperor Maurice, the Empress Constantina, and others. He argues that "if one patriarch is called universal, the title is thereby taken from the others" (Epp. I, xviii, ibid., 740). It is a special effrontery for the Byzantine bishop, whose existence as a patriarch at all is new and still uncertain (Rome had refused to accept the third canon of the First Council of Constantinople and the twenty-eighth canon of Chalcedon), to assume such a title as this. It further argues independence of any superior; whereas, says Gregory, "who doubts that the Church of Constantinople is subject to the Apostolic See?" (Epp. I, IX, xii, ibid., 957); and again: "I know of no bishop who is not subject to the Apostolic See." (Epp., xiii, ibid., 964).

The pope expressly disclaims the name "universal" for any bishop, including himself. He says that the Council of Chalcedon had wanted to give it to Leo I, but he had refused it (Epp., x, xviii, printed, 740, xx, 747, etc.). This idea rests on a misconception (Hefele-Leclercq, "Histoire des Conciles", II, Paris, 1908, pp. 834–5), but his reason for resenting the title in any bishop is obvious throughout his letters. "He understood it as an exclusion of all the others [private quod omnes alias] so that he who calls himself oecumenic, that is universal, thinks all other patriarchs and bishops more than a private person, the pastor of the inhabited earth" (so Horace Giustiniani at the Council of Florence; Hegenrother, "Photius", I, 184). For this reason Gregory does not spare his language in denouncing it. It is "diabolical arrogance" (Epp., V, xx, in P. L., LXXVII, 746, xxi, 750, etc.); he who so calls himself is anticlerical. Opposed to it Gregory assumed the title borne ever since by his successors. "He refuted the name 'universal!' and first of all began to write himself 'servant of the servants of God' at the beginning of his letters, with sufficient humility, leaving to all his successors this honourable title (his mother, "Vita S. Gregori", II, in P. L., LXXV, 87). Nevertheless the patriarchs of Constantinople kept their "oecumenical" title till it became part of their official style. The Orthodox patriarch subscribes himself still: "Archbishop of Constantinople, New Rome, and Oecumenical Patriarch." It is noticeable that even Photius (d. 891) never dared use the word when writing to Rome. The Catholic Church has never admitted it. It became a symbol of Byzantine arrogance as the Byzantine emperors and patriarchs stumbled over the name of "Pope" in the presence of the Emperor Basil II (956–1025) and tried to persuade Pope John XIX (1024–1033) to acknowledge it. The pope seems to have been ready to do so, but an outburst of indignation throughout the West and a stern letter from Abbot William of Dijon made him think better of it (Fortescue, "Orthodox East", p. 106). In 1035, indeed, at the time of the final schism of Rome and the Latin Rite, Leo IX writes to Michael Cerularius of Constantinople (in 1053): "How lamentable and detestable is the sacrilegious usurpation by which you everywhere boast yourself to be the Universal Patriarch" (op. cit., p. 182). No Catholic bishop since then has ever dared assume this title.

With regard to the issue, one should note first that Gregory knew no Greek. He saw the words only in a Latin version: "Patriarcha universalis," in which they certainly sound more scandalous than in Greek. How he understood them is plain from his letters. They seem to mean to him the authority of a metropolitan bishop, that all other bishops are only his vicars and delegates. Catholic theology does not affirm this of the pope or anyone. Diocesan bishops have ordinary, not delegte, jurisdiction; they receive their authority immediately from Christ, though they may use it only in the communion of the Roman See. It is the whole difference between diocesan ordinaries and vicars Apostolic. All bishops are not Apostolic vicars of the pope. Nor has any pope ever assumed the title "universal bishop," though occasionally they have been so called in complimentary addresses from other persons. The accusation, then, that Gregory's successors have usurped the title that he so resented is false.

Whether John IV or other patriarchs of Constantinople really meant to advance so arrogant a claim is another question. Oecumenikos patriarchas in Greek is susceptible of a milder interpretation. "H Oecumenikos patriarchas was often a name for the civilized, cultivated land of the Greeks, as opposed to the wild country of the barbarians. It was then often used for the Roman Empire. It is at least probable that the clause εκείνη τῆς οἰκουμένης in the Greek Intercession of the Byzantine Liturgy means the "empire" (Fortescue, "Liturgia of St. Basil", London, 1906, p. 106). In that sense, then, oecumenikos patriarchas meant no more than "imperial patriarch," as the Greeks of Constantinople told Anastasius Bibliothecarius at the time of Photius (see his statement in Gelzer, op. cit., p. 572). Kattenbusch (Konfessionskunde, I, 116) thinks it should be translated "Reichspatriarch." Even so it is still false. The Patriarch of Constantinople had no sort of claim over the whole empire. The most that can be allowed is that if "oecumenical" means only "imperial," and if "imperial" means only "of the imperial court," the title (in this case equal to "court patriarch") is no worse than if it were. It is a question of Greek interpretation is by no means obvious. In Greek, too, an "oecumenical synod" is one that has authority for the whole Church; the "oecumenic doctors" (St. Basil, St. Gregory of Nazianzus, St. John Chrysostom) are those whose teaching must be followed by all. Pichler's comparison with the form "catholic bishop" ("Geschichte der kirchlichen Trennung", II, Munich, 1865, pp. 647 sq.) is absurd. The humblest member of the Church is (in any language) a Catholic; in no language could he be called oecumenical.

Yet another dispute between John and Gregory was about some relics, especially the head of St. Paul, that the Court of Constantinople wanted the pope to send to them. Gregory would not part with them; eventually he sent part of St. Paul's chains. The works in
JOHNS

JOINVILLE

Migne attributed to John the Faster (a treatise on Confession (P. G., LXXXVIII., 1859–1818), a shorter work on the same subject (ibid., 1919–1932), "Of Penance, Temperance, and Virginity" (ibid., 1937–1975)) are not authentic. No authentic works of his are extant. He has often been confused with a certain Cappadocian monk, John the Faster, who came to Constantinople about the year 1100. The patriarch, at his death, left no property but a cloak, a blanket, and a praying-stool, which the emperor kept as relics. The Orthodox Church has canonized him and keeps his feast as St. Sebasteus.

One of his clerics, Photinos, wrote his life soon after his death. Fragments of this are preserved in the Acts of the Ecumenical Councils (see MANUS, XIII., 495: LEGENDA ORIENTALIA CHRISTIANA, I (Paris, 1740), 226; GRODON, HORAIROUOI KHRISTIANOU (Constantinople, 1890), 250-56; HERZOG, Photius, I (Ratisbon, 1867), 178-90; J. F. SCHNEIDER, "Der lokale Tyrannus und der Patriarch Photios", Zentralblatt für Orkumenischer Patriarch und Diener der Diener Gottes in Zeitschriften für Kath. Theologie, IV (Jena, 1890), 490-525; GELEEN, Der Streit um den Titel des ecumenischen Patriarchen in Jahrhunderten des Kaisertums, XIII (1887), 540-584; KATZENBACH, Konklammerkunde, I (Freiburg im Br., 1892), 111-17.

ADRIAN FORSCHE

John the Silent (HESYCHASTES, SILENTIARUS), Saint, Bishop of Colonie, in Armenia, b. at Nicopolis, Armenia, 8 Jan., 452; d. 558. His parents, Encratius and Euphemia, wealthy and honoured, belonged to families that had done great service in the State and had risen in the scale of the nobility; in addition, they were also good Christians, and gave their son a holy education. After their death in 471, John distributed his inheritance among his relatives, retaining only a small share, with which he built a church and a monastery. Here, with ten congenial companions, he began a life of mortification and self-denial, wonderful traits of which are recorded by his biographer. The Bishop of Sebaste drew him out of his solitude and made him Bishop of Colonie (Taxara) in 481, against which promotion John vainly struggled. In his new dignity he preserved the monastic spirit entire, and the austerity of his life as far as was consistent with duty. His brother-in-law Pasinious oppressed the Church to such an extent that John had to call upon the Emperor Zeno for assistance. As soon as matters had been properly arranged, John left his see, went to the Laura, near Jerusalem, and placed himself under the care of St. Sabas, without revealing his identity. In course of time Sabas, who had subjected John to all kinds of trials and had found him ready to perform even the most common and menial labours, thought him worthy of receiving priesthood, and for this purpose sent him to Elias, the Patriarch of Jerusalem. Elias fell, not Flidean, and Elias informed Sabas that John had confided to him things which would be the ordination. Sabas at first felt very sad, but was comforted by a vision in which the true state of affairs was made known to him. John with the permission of his superior entered a hut built against the face of a rock in the desert, and here passed the remainder of his days in seclusion and perpetual silence, with no other name than a contemporary, Cyril of Scythopolis, wrote his life. His feast is on 13 May.

JOHN THORNE, BLESSED. See RICHARD WHITING, BLESSED.

JOINVILLE, JEAN, SIRE DE, Seneschal of Champagne, historian, b. in 1223; d. at Joinville, 1317. His family held an important place in the feudal system of Champagne in the eleventh century. His father, Simon de Joinville, hereditary Seneschal of Champagne, defended Troyes in 1250 against the enmity of Count Thibault IV, Simon having died in 1233, Jean was reared by his mother, Beatrice, daughter of the Count of Burgundy. He received the knightly education of the times, learned to read and write, and

even a little Latin. In 1241, Jean de Joinville appeared for the first time at the French Court on the occasion of the festival given at Saumur for the knighthood of Alfonso of Poitou, brother of the king. He afterwards made a pilgrimage to the shrine of St. James at Compostela. In 1248, he took the Cross, following the example of St. Louis, but refused to be sworn by the king, as he was not his "man". He took at his own expense two banners and ten knights and allied himself with his cousin Jean d'Apremont, Count of Saarbruecken. His little troop went down the Saone and the Rhone by boat and embarked at Marseilles (August, 1348). In three weeks they arrived at Limassol, in Cyprus, where Louis IX then was. He welcomed Joinville and took him into his pay.

Joinville took part in the Crusade of Egypt, where he conducted himself valiantly; he was in grave danger at Mansourah (Feb., 1250), fell ill in his tent, and was taken prisoner with the king. Having been liberated in May, 1250, he followed Louis IX to Saint-Jean d'Acre despite the advice of powerful barons who counselled him to remain in Palestine until all the prisoners should have been freed from "d'Acre", of which he is probably the author, makes allusion to these facts ("Romania", 1893, 544). The king, who was charmed, made him henceforth his familiar friend, and gave him command over fifty knights. In 1253 he granted him in fief a rental of 200 pounds (4053 francs).

Having returned to France with the king and queen in 1254, Joinville thenceforth divided his time between the management of his estates and the court of his royal friend. However, in 1267, despite the solicitations of St. Louis, he refused to take the cross and disapproved of the Crusade of Tunisia. "Je entendis que tuit cil firet pechier mortel qui li loierent l'alle" (ed. Natalis de Wailly, 262). After the death of St. Louis in 1282, he was one of the witnesses heard in the inquiry of canonization, and he erected an altar to the saint in his chapel of St. Laurent at Joinville. Under Philip the Fair, Joinville played an important part in Champagne and did not conceal his dislike for the new methods of government. In 1314 he entered the league of the nobility of Champagne. In 1315 he wrote a letter of reconciliation to King Louis X. He died at Joinville, where he was buried.

Joinville is the author of a new chronicle of the Crusades, composed at Acre in 1250-51, which contains information concerning his captivity (ed. Natalis de Wailly, at the end of the history of St. Louis). But his chief work is "Le livre des saintes paroles et des bonnes actions de St Louis", composed at the request of Jeanne de Navarre, wife of Philip the Fair (d. 1305). The work is divided into two unequal parts; the first, which is very short, comprises anecdotes concerning St. Louis's manner of life and his familiar speech; the second, which is very much longer, is a real autobiography of Joinville during the Egyptian Crusade. Gaston Paris ("Romania", 1894, 358-324) supposes that this portion was written by Joinville as early as 1273, because there is no allusion to subsequent events.

Joinville appears to have written from personal recollections. Beginning with 1254, he is satisfied with making extracts from the "Chronique de France". The book concludes with an abridgment of the instructions given by St. Louis to his son, and with details concerning his canonization. The original MS, which was presented to the king and preserved in the bibliothèque of Charles V, no longer exists. The two principal MSS are: that of Brussels (Paris, Bib. Nat. fr., 15.350), written by Joinville (Paris, Bib. Nat. fr., 10148), copied from the original at the Château of Joinville about 1550. The first edition (Antoine-Pierre de Rieux, Poitiers, 1547) was made from a poor copy and was reproduced many
times until the discovery of the two above-mentioned manuscripts. The text has been studied and amended by Natale de Wailly (editions of 1868, Société de l’Histoire de France, of 1874, of 1881). The history of St. Louis is rightly regarded as one of the masterpieces of French literature in the Middle Ages. It constitutes besides an inappreciable testimony concerning the personality of one of the best sovereigns who ever reigned. The figure of St. Louis is most vividly portrayed in Joliet’s book. Moreover, few personal memoirs possess the same note of sincerity. In depicting himself, Joliet discloses to us the soul of a perfect knight of the thirteenth century; the book is thus an important witness concerning French society of the Middle Ages.

Natale de Wailly, Feltrae à éditions mentionné et un long passage in Bibliothèque de l’Ecole des Chartes (1857), 557-606; (1858), 329-478; (1872), 386-423; (1874), 217-248; Paris, Le texte de Joliette en Roumanie, XXIII, 408-424; Simonetti, Essai sur l'histoire et la généalogie des Sires de Joliet (Lagny, 1876); Delaborde, Recherches critiques sur les premiers seigneurs de Joliette in Bob. de l’Ecole des Chartes (1890). [Note: This sentence is incomplete and contains a reference to a work that is not visible in the image.]

JOLIET, the son of a wagon-maker, was born at Quebec, Canada, on 21 September, 1645; d. in Canada, May, 1700. He gave great promise of scholarship, especially in mathe-matics, at the Jesuits’ school at Quebec, and received the minor orders in 1662. But, caught with the adventurous spirit of the times, he early abandoned his studies and became a rover in the Canadian wilderness and a trader among the Indians. A fleeting glimpse is caught of Joliet searching for a copper mine on the borders of Lake Superior, in 1689; and again, in 1761, he is seen standing by the side of Saint-Lusson as he plants the arms of France at Saint-Tamate. In 1672, upon the advice of the intendant, Talon, Joliet was dispatched by Governor Frontenac to explore the grande rivière beyond the Lakes, which the Indians alleged flowed into the southern sea. In the order the French governor refers to Joliet as one “experienced in these kinds of discoveries and who had been already very near the river.” In December of the same year Joliet reached the Straits of Mackinaw, where, with Père Marquette, he spent the winter and the early spring in questionnaire the Indians and preparing maps for the journey.

In May of the following year, 1673, the historic quest began. With five voyageurs and two canoes, Joliet and Marquette in June reached the Fox River. A few leagues beyond, a short portage was found by which they reached the Wisconsin, down whose course they glided until, on 17 June, the little party drifted into the great waters of the Mississippi. For a month they paddled southward, passing a great river from the west which the Indians assured them flowed into the Vermilion Sea—the Gulf of Chichagoo; near in a land of the Sacs, they were told, traded with the Indians on the Pacific coast. Joliet descended the river to 30° 40', christening rivers, plateaus, and elevations with Indian and French names which were destined to endure no longer than La Salle’s great dream of the “Empire of New France.”

The Joliet establishment beyond doubt the important fact that the great river emptied into the Gulf of Mexico, the expedition returned, arriving at Green Bay in September, after having paddled 2500 miles. Here Marquette remained while Joliet hurried to Quebec, where he arrived the middle of August, 1674, after having been absent from Canada, and not daring to set foot in the Lachine Rapids. Whether or not Joliet was the first Frenchman to have gazed upon the Great River, the reports that he laid before the governor and his establishment of the fact that the Mississippi was a highway to the sea led to the immediate formation of plans on the part of Canadian merchant and officers for the settlement of the Mississippi Valley, though Joliet’s offer to plant a colony among the Illinois was refused. Shortly after his return Joliet was married to Claire-Françoise Bissot. In 1680 he was granted the Island of Anticosti, where he erected a fort, which was subsequently captured by the English in 1690, upon which occasion his wife was taken prisoner. The restless spirit of the explorer possessed Joliet to the end, for mention is made, within a few years of his death, of extensive wanderings in Labrador. In 1693 he was appointed royal hydrographer, and, on 30 April, 1697, he was granted the seigniory of Joliet, south of Quebec, which is still in the possession of his descendants. He died in Canada in May, 1700, one of the first native Americans to have achieved historical distinction.

Map drawn by Joliet in the Fox River valley on the eve of the Mississippi expedition in 1673. Discovery and Explorations of the Mississippi Valley (New York, 1862). Maps drawn from memory, as presented to Governor Frontenac, on his return, in 1674, are now in the Library of Congress. For questions as to priority of discovery between Marquette, Joliet, and La Salle, see Mémoires de Nicolas Perrot, vol. III of the Bibliothèques Amérindiennes (Paris and Leipzig, 1864). Margot, Mémoires et documents (Paris, 1879-90); and Bussière, Burial of Pierre Marquett’s Salle Bubble (New York, 1879).

The general bibliography on Jolliet is contained in Narratives and Critical History of America (Boston, 1884-7).

JARVIS KILEY.

Joliette, Diocese of (Joliettensis), created by Pius X, 27 January, 1904, by division of the Archdiocese of Montreal, comprises three counties, Joliette, Berthier, and Montcalm, with four parishes of the Assumption County. It forms a recto 105 miles long by about 45 wide. (1) Religious Organization.—The total population is 63,500 souls, of whom 1200 are non-Catholics. This population is divided into thirty-eight canonically erected parishes and four with resident priests. According to its need each parish has one or another of the following associations or confraternities: the Third Order of St. Francis; the League of the Sacred Heart of Jesus, for men and children; the Congregation of the Most Blessed Virgin, for men, youths and young women; the Confraternities of Mount Carmel; of the Holy Rosary; of the Mona Bors; of the Holy Adorers; of the Holy Name; of the Holy Sacred Sacrament; of the Way of the Cross; the Society of St. Vincent de Paul; and the Temperance Society. The last-named, established in each parish, gives good results. Frequent communion is observed in the diocese, and the faithful generally acquit themselves well of their religious duties. There are four vicariates-forane. Ecclesiastical conferences are held twice yearly in each vicariate. The bishop is assisted by a chapter composed of eight titular canons, a vicar-general, and archdeacon for parochial affairs, a procurator for the administration of episcopal revenue, an assistant procurator of the whole diocese for matrimonial affairs and the duties of a secretary. There are 115 priests in the diocese, 104 of whom are secular and 11 religious. The religious in all number 134 men and 390 women. The religious institutions of men are those of the Clerics of St. Viateur (novitiate at Jolliet); Brothers of Christian Instruction; and Brothers of St. Gabriel. The nuns are Sisters of Charity of Providence, Sisters of the Congregation of Notre-Dame, Sisters of the Holy Names of Jesus and Mary, Sisters of St. Anne, Sisters of the Holy Cross and of the Seven Dolours, Sisters of the Sacred Hearts of Jesus and Mary, Sisters of the Holy Cross and of the Sacred Heart.

(2) Educational Institutions.—The diocese contains 1 seminary, 3 commercial colleges, 3 commercial academies, 21 boarding-schools for young women, 5
academies, 25 model schools, and 330 elementary schools. There are in these 288 institutions 600 professors, 11 of whom are priests, 9 seminarians, 75 religious, 225 nuns, and 280 lay persons; 15,108 pupils receive instruction in the various institutions, 6067 being under the direction of religious men and women, and 9041 under that of lay teachers. The communities of men and women in the diocese which are charged with education are those mentioned above, with the exception of the Sisters Adorers of the Precious Blood, who lead a communal but not a cloistered life.

(3) Charitable Institutions.—In the diocese there are: 1 hospital, 5 homes for the aged, 5 orphanages for girls, 1 orphanage for boys. These institutions are under the direction of the Sisters of Providence. There are, besides, 6 associations of Ladies of Charity, and 1 Society of St. Vincent de Paul.

(4) Progress of the Diocese.—The first bishop of the Diocese of Joliette was Mgr. Joseph Alfred Archambault. Born at L'Assomption, 23 May, 1859, he made his classical studies at the College of L'Assomption and Laval University, Quebec, and his theological studies at the Grand Séminaire of Montreal. He entered the diocesan College of Quebec, the Seminary of St. Sulpice, and the College of Ste. Cécile, where he remained under the direction of the Jesuits. He was ordained to the priesthood at Quebec, 25 June, 1883, and was appointed vicar general of the diocese on the death of Bishop Joliette. He was consecrated as bishop of Joliette, 22 August, 1887. He died at Joliette, 21 August, 1904.

JOLLY, PHILIPP JACOB GUSTAV VON, German physi- ciest, b. at Mannheim, 26 September, 1809; d. at Munich, 24 December, 1884. His family came originally from France at the end of the seventeenth century. After attending the gymnasium and lyceum at Heidelberg, Jolly went to the University of Heidelberg in 1829, where he studied chiefly mathematics and physics. From 1832 to 1833 he was in Vienna, taking up the technological branches, working as a mechanician, and visiting factories and mining plants. Returning to Heidelberg in 1834, he took the degree of Doctor of Philosophy and began his career as a teacher of mathematics, physics, and technology. He became extraordinary professor of mathematics in 1839, and ordinary professor of physics in 1846. In 1854 he was called to the University of Munich to succeed Ohm as professor of physics. His principal work was in experimental physics, for which he de- signed new apparatus and modified and improved the older forms. His studies of osmosis, of the laws of gravity, and of the density of the earth, of the composition of the air, etc., suggested the design of the Joly balance (1864), of a special eudiometer (1879), of an improved mercury air-pump, the Jolly air thermometer. The following are some of his published works: "De Euleri merito de functionibus circularibus" (prize essay, Heidelberg, 1834); "Anleitung zur Differential- und Integralrechnung" (Heidelberg, 1846); "Die Principien der Mechanik" (Stuttgart, 1852); "Physik der Mole- keln" (München, 1863); and "Beiträge zu G. Gendig's "Amalen", "Heidelberger Jahrbücher", and "Berichte der Münchener Akademie der Wissen- schaften".

VIII.—32

JONAS, the fifth of the Minor Prophets. The name is usually taken to mean "dove" (Hb. ناقة), but in view of the complaining words of the Prophet (Jonas, iv), it is not unlikely that name is derived from the root יָנָה = to mourn, with the signification dolens or "complaining". This interpretation goes back to St. Jerome (Comm. on Jonas, iv, 1). It is clear from the book that this is a type name for him. Jonas is mentioned only once in the Old Testament, IV Kings, xiv, 25, where it is stated that the restoration by Jeroboam II (see JEROBOAM) of the borders of Israel against the incursions of foreign invaders was a fulfilment of the words of the Lord the God of Israel, which he spoke by his servant Jonas the son of Amathi, the prophet, who was of Gath, which is in Opher". This last is but a paraphrastic rendering of the name Cath-Hepher, a town in the territory of Zabulon (Josephus, "Antiq.", XIX, xiii), which was probably the birthplace of the Prophet, and where his grave was still pointed out in the time of St. Jerome. Mention is made of Jonas in Matt. 12: 10, 25, 33, 37, 38. He is likewise in the parallel passages of Luke (xi, 29, 30, 32), but these references add nothing to the information contained in the Old Testament data. According to an ancient tradition mentioned by St. Jerome (Comm. in Jonas, Prolog., P. L., XXV, 118), and which is paralleled in Pseudo-Epiphanius (De Prop., xvi, P. L., XLIII, 407), Jonas was the son of the widow of Sarepta whose resuscitation by the Prophet Elijah is narrated in III Kings, xviii, but this legend seems to have no other foundation than the phonetic resemblance between the proper name Amathi (אמהתי), father of the Prophet, and the Hebrew word אמה (תָּמָה), "truth", applied to the word of God through Elias by the widow of Sarepta (III Kings, xviii, 24).

The chief interest in the Prophet Jonas centres around two remarkable incidents narrated in the book which bears his name. In the opening verse it is stated that "the word of the Lord came to Jonas the son of Amathi, saying: Arise, and go to Ninive, the great city, and preach in it: for the wickedness thereof is come up before me." But the Prophet, instead of obeying the Divine command, "rose up to flee into Tharsis from the face of the Lord," that he might escape the task assigned to him. He lands bound for that port, but a violent storm over- takes him, and on his admission that he is the cause of it, he is cast overboard. He is swallowed by a great fish providentially prepared for the purpose, and after a three days' sojourn in the belly of the monster, during which time he composes a hymn of thanksgiving, he is cast upon dry land. After this episode he again receives the command to preach in Ninive, and the account of his second journey is scarcely less mar-vellous than that of the first. He proceeds to Ninive and enters "a day's journey" into it, foretelling its destruction in forty days. A general repentance is immediately caused by the announcement of which God relents and spares the wicked city. Jonas, angry and disappointed, wishes for death. He expostulates with the Lord, and declares that it was in anticipation of this result that on the former occasion he had wished to flee to Tharsis. He withdraws from Ninive and, under a booth which he has erected, he awaits the destiny of the city. In this abode he enjoys for a time the refreshing shade of a gourd which the Lord prepares for him. Shortly, however, the gourd is stricken by a worm and the Prophet is exposed to the burning rays of the sun, whereupon he again murmurs and wishes to die. Then the Lord rebukes him for his selfish grief over the withering of a gourd, while still desiring that God should not be touched by the repentance of a city in which "there
are more than a hundred and twenty thousand persons that know not how to distinguish between their right hand and their left, and many beasts." Apart from the hymn ascribed to Jonas (ii, 2-11) the contents of the book may be called defective. 

HISTORICITY.—Catholics have always looked upon the Book of Jonas as a fact-narrative. In the works of some recent Catholic writers there is a leaning to regard the book as fiction. Only Simon and Jahn, among prominent Catholic scholars, have clearly denied the historicity of Jonas; and the orthodoxy of these two critics may not be defended by the "Prophetissimus Deus" implicitly condemned the ideas of both in the matter of inspiration, and the Congregation of the Index expressly condemned the "Introduction" of the latter.

Reasons for the traditional acceptance of the historicity of Jonas:—

I. Jewish Tradition.—According to the Septuagint text of the Book of Tobias (xiv, 4), the words of Jonas in regard to the destruction of Nineveh are accepted as facts; the same reading is found in the Aramaic text and one Hebrew Ms. (see Kaulen, "Einleitung in die Hebraischen Propheten," 1890, p. 305). The apocryphal III Mach., vi, 8, lists the saving of Jonas in the belly of the fish along with the other wonders of Old Testament history. Josephus (Ant. Jud., IX, x, 2) clearly deems the story of Jonas to be historical.

II. The Authority of Our Lord.—This reason is deemed by Catholics to remove all doubt as to the fact of the story of Jonas (see Knaab, "Comm. in Prophetas Minores," II, 361). The Jews asked a "sign"—a miracle to prove the Messianship of Jesus. He made answer that no "sign" would be given them other than the "sign of Jonas the prophet. For as Jonas was in the whale's belly three days and three nights: so shall the Son of man be in the heart of the earth three days and three nights. The men of Ninive shall rise in judgment with this generation, and shall condemn it: because they did penance at the preaching of Jonas. And behold a greater than Jonas here!" (Matt., xii, 40-1; xvi, 4; Luke, xi, 29-32). The Jews asked for a real miracle; Christ would have deceived them had He presented a mere fancy. He argues clearly that just as Jonas was in the whale's belly three days and three nights even so He will be in the heart of the earth three days and three nights. If, then, the story of Jonas is not the miracle, the story of Christ's body in the heart of the earth is only a fiction. If the men of Ninive will really not rise in judgment, neither will the Jews really rise. Christ contrasts fact with fact, not fancy nor fancy with fact. It would be very strange, indeed, were He to say that He was greater than a mere fancy-formed man. It would be little less strange were He to berate the Jews for their real lack of penance by rating this lack in contrast with the penance of Ninive which never existed at all. The whole force of these striking contrasts is lost, if we admit that the story of Jonas is not fact-narrative. Finally, Christ makes no distinction between the story of the Queen of Sheba and that of Jonas (see Matt., xii, 42). He sets the very same historical value upon the Book of Jonas as upon the Third Book of Kings. Such is the very strongest argument that Catholics offer for the firm stand they take upon the ground of the fact-narrative of the story of Jonas.

III. The Authority of the Fathers.—Not a single Father has ever been cited in favour of the opinion that Jonas is a fancy-tale and not fact-narrative at all. To the Fathers Jonas was a fact and a type of the Messianist past. One as Christ is to the Jews. Saints Jerome, Cyril, and Theophilus explain in detail the type-meaning of the facts of the Book of Jonas. St. Cyril even forestalls the objections of the Rationalists of to-day: Jonas flees his ministry, be-
JONAS

Jonas of Orleans, bishop and ecclesiastical writer, b. in Aquitaine; d. in 483 or 484. From 818, when he succeeded Bishop Theodulf in the See of Orleans, until the time of his death he played an important rôle in the ecclesiastical affairs of France. He was present in 829 at the so-called Council of Paris, at which the question of the veneration of images was again discussed, and Jonas was one of the messengers sent by the council to submit the complaints and excerpts from the acts of the meeting. He also attended the Council of Paris in 829, which treated of reforms to be introduced in Church and State, and drew up the report of the proceedings of the Synod of Thionville (833) concerning the deposition of Ébo of Reims. His good will toward the monastic institutions was demonstrated by the restoration of the monastery of Saint-Mesmin in his diocese.

Jonas left the following writings: (1) "De Institutiones laicæ" (rules of Christian life for laymen); (2) "De Institutiones regæ" (rules of Christian life for princes); (3) "De Cultu imaginum" (the veneration of images); (4) a recension of the "Vita" of St. Hubert. The first of these was destined for Matfrid, Count of Orleans, and is almost entirely made up of citations from the Scriptures and the Fathers. To the second work of Jonas, which bears no inscription in the manuscript, d' Aubéry has appropriately prefixed. The title De Institutione destined for Pepin, King of Aquitaine, son of Louis the Pious. A sort of supplement to the bishop's first work, it follows the same method and bears the same character. The fact that the acts of the Council of Paris (829) and the contents of these two treatises of Jonas are largely identical has raised the question of their priority. The view, at one time more commonly held (d'Aubéry, Bähr, Knust, Himsly, Dümmler), that the synodal acts borrowed from the "De Institutione regæ" of Jonas, has been abandoned by several recent scholars who have reversed the relationship of dependence (Waite, Simson, Ebert).

In spite of the difference of opinion in this regard, it is generally conceded that Jonas is the author of both the treatises and that his is the "Vita" of Hubert, by which he chiefly owes his literary fame comprises, besides the "Life of St. Hubert", the lives of the abbots Attala and Bertulf of Bobbio, Eustace of Luxeuil, and the Abbess Burgundofara (or Fara) of Evrardia (now Faremountier). The biographies of Bobbio and his successors, though written in a bombastic style, contain invaluable historical information. Jonas arrived at Bobbio but three years after Columbanus's death, and based his invaluable account of the great Irish saint on the testimony of persons who had known him intimately. Eustace, Attala, and Bertulf, he knew personally in Arden, and their lives are only known through his ecclesiastical history, while Flodoard turned that of St. Columbanus into hexameter verse. The "Life of St. Fara" is chiefly an account of the miraculous events alleged to have occurred during this saint's rule at Evrardia. The works of Jonas, exclusive of the "Life of St. Vaes" are printed in P.L., L.XLVIII, 1011-88; better edition by Krusch in "Mon. Germ. Hist.: Script. Rd. Mer"., III, 406-13, 505-17; IV, 61-152 (Hanover, 1896 and 1902).

N. A. WEBER.

BEAUFRANC,

Jonas (יונתן), name of several persons mentioned in the Old Testament. Among these may be mentioned the following:—

(1) JONATHAN, the son of Gersam the son of Moses, mentioned by name in Judges, xviii, 30, and as a young Levite in xvii, 7 sqq. Having left Bethlehem, his native town, he came to Mt. Ephraim, where he was induced by a certain Michas to remain as priest of an idol. This idol was afterwards seized by the Danites and carried to Lails, whither Jonathan accompanied them, and he and his descendants acted as priests of the idol until the days of the Captivity.

(2) JONATHAN (Vulg. JONATHAS), eldest son of Saul by Michal, and the brother of King Saul. He is called "son of Saul" (I Kings, xiv, 17) as well as "son of Michas", and is mentioned as taking part with his father in the struggle against the Philistines, and such was his bravery that Saul confided to him the command of a thousand soldiers in Gaba. Jonathan's defeat of the garrison of the Philistines in Gaba, and his subsequent victory on the confines of the same town are narrated in I Kings, xiii, xiv. Through an intervention regarded as miraculous (xiv, 15) the latter combat resulted in a general rout of the Philistines, and Saul in the excitement of the pursuit proclaimed a rash oath, saying: "Cursed be the man that shall eat food till evening, till I be revenged of my enemies." The course of the flight led through a forest where wild honey appeared upon the ground, but the people tasted it not for they feared the oath. But Jonathan, not having heard his father's pronouncement, innocently tasted the honey, and, when a halt was called in the evening and the priest consulted Yahweh as to a further pursuit of the enemy, he answered: "I have tasted honey..." It is probable that some sin had been committed against the Lord, and again he rashly swore that, even should the guilt be found on his son Jonathan, he should surely die. The lots having indicated Jonathan as the guilty one, he confessed to having tasted the honey, and was saved only by the intervention of the people (I Kings, xiv, 45). When, after his victory over Goliath, the
youthful David appeared at the court of Saul, a most deep and loyal friendship sprang up between him and Jonathan, who more than once was instrumental in saving his friend from Saul’s envious wrath (1 Kings, xviii seq.). But Saul, though having several times relented, finally became implacable. David, knowing his efforts useless, sent his friend away to Nobé after a renewal of the mutual covenant of friendship between themselves and their posterity (1 Kings, xx). Jonathan cheerfully renounced in favour of his friend his right to the throne of his father, counting himself happy to be second to him in the kingdom. This covenant was renewed later when David after the siege of Cælara withdrew into the desert of Ziph (1 Kings, xxiii, 15–18), but Jonathan was not destined to share in the ultimate triumph of his friend. In a battle against the Philistines in Mount Gelboe he was slain together with his two brothers Abinadab and Melchisedus, and Saul his father. Their bodies were piously buried by the inhabitants of Jabes Gilead (1 Kings, xxxi).

(3) Jonathan, son of the high priest Abiahaar and faithful servant of King David. He was instrumental in saving the king’s life by securing for David information concerning the plans of the king’s enemies. (4) Jonathan (surnamed Apphus), youngest son of Mathathias and brother of Judas Machabeus. The patriotic exploits of this family of Jewish heroes are narrated in the First and Second Books of the Machaebes and also in the works of Josephus (Antiquities, XIII). After the defeat and death of Judas (about 161 b.c.) Jonathan was chosen leader of the patriotic band, at the time hard-pressed and obliged to retire beyond the Jordan. But the death of the unworthy high priest Aleimus brought about a change in public sentiment, and the invading general Baccideus withdrew into Syria giving the Jews a respite of two years. Encouraged by the party of the Hellenists or apostate Jews, however, he made a new attempt to subjugate the country. This attempt was foiled by Jonathan, and the result of the short campaign was a treaty whereby the latter remained practically master of Judæa. This state of things continued for six years with a continued increase of power and influence on the part of the Machaebes, so that an alliance with their party was solicited by Bales and Demetrius, the two competitors for the Syrian throne. Jonathan decided in favour of Bales who, having vanquished his rival, bestowed upon Jonathan not only the title of High Priest, but also the office of High Captain and that of being of a part of the Syrian empire (1 Mach., i, 1–66). After many military exploits (1 Mach., xi, 60–74) Jonathan sent ambassadors to Rome to renew the treaty made by Judas with the Roman Senate, and he also entered into an alliance with the Spartans (1 Mach., xii, 23). For a time it seemed as if he were destined to restore his country to complete independence, but Tryphon, the aspirant to the throne of Syria, recognizing in Jonathan his chief obstacle, made him a prisoner by foul treachery and put an end to his career by casting him into a dungeon (1 Mach., xii, 24–54). The rule extended from 161 to 143 a.c.

James F. Driscoll.

Jones, Edward, Venerable, priest and martyr, b. in the Diocese of St. Asaph, Wales, date unknown; d. in London, 6 May, 1590. Bred an Anglican, he was received into the Church at the English College, Rheims, in 1581, ordained priest in 1588, and went to England in the same year. In 1590 he was arrested by a priest-catcher, who pretended to be a Catholic, in a shop in Fleet Street. He was imprisoned in the Tower and brutally tortured by Topelhife, finally admitting he was a priest and had been an Anglican. These admissions were used against him at his trial, but he made a skilful and learned defence, pleading that a confession elicited under torture was not legally sufficient to ensure a conviction. The court complimented him on his courageous bearing, but of course he was convicted of high treason as a priest coming into England. On the same day he was hanged, drawn, and quartered, opposite the grocer’s shop where he had been captured, in Fleet Street near the Conduit. On the same day there suffered Anthony Middleton, priest and the martyr, born probably at Middleton-Tyas, Yorkshire, date unknown, son of Ambrose Middleton of Barnard Castle, Durham, and Cecil, daughter of Anthony Crackenthorpe of Howgill Castle, Westmoreland. He entered the English College at Reims, 8 Jan., 1582; was ordained 30 May, 1588, and went to England in the same year. His work lay in London and the neighbourhood and he laboured very successfully; he was captured at a house in Clerkenwell (London) by the same artifice which was practised on Father Jones. On the ladder he said: “I call God to witness I die merely for the Catholic Faith, and for being a priest of true Religion”; and someone present called out, “Sir, you have spoken very well”. The martyr was cut down and dismembered whilst yet alive.

C. F. Wemyss Brown.

Jones, Inigo, a famous English architect, b. 15 July, 1573, in London; d. 21 June, 1652, and was buried in the chancel of St. Benet’s, Paul’s Wharf, London. His father was a clothworker in the neighbourhood of St. Paul’s, and a Catholic; the son adhered to his father’s faith throughout his life. Little is known of the first thirty years of his life. Towards the end of the sixteenth century he went to Italy and lived there for many years, principally in Venice. Christian IV, King of Denmark, induced him to leave Italy and accept an appointment at the Danish Court. Buildings are named both in Italy and Denmark as having been designed by Jones, but seemingly without proof. He returned to England in 1604, and for some time was engaged in designing the costly scenery and machinery of the court masques. About 1614 he again went to Italy, and his notes show that he studied the writings of Serlio, Vignola, Fontana, Labacco, and Phillibert d’Orme, and was acquainted with the most famous architects then living in Rome. He also studied the style of Renaissance architecture known as Palladian. On his return to England he was appointed surveyor to the king. Jones designed the queen’s house, Greenwich, the banqueting house, Whitehall, St. Paul’s church and the piazzas of Covent Garden (burnt to the ground 1795), a portico to old St. Paul’s cathedral, parts of Somerset House, the Bar-
Joppa

JORDANIS

Joppa (Joppe). See JAFFA.

JORDAN, The (in Hebrew Yarden, from the root Yārdād, to descend).—The difference of elevation between the highest point of this river (1847 feet above the sea-level) and its lowest (1286 feet below the sea-level) is 561 feet. It issues from the side of Mount Hermon by three principal sources: the Nahar el Hasānī, coming from Hasheba; the Nahar el Liddān, which rises at Tell el Qādī (the ancient Late-Dan); and the Nahar Banias, the glory of what was Caesarea Philippi. Formed at a point about five and a half miles by Banias, by the junction of these two streams, the Jordan enters Lake Huleh about one and a third miles lower down. This lake, which is probably "the waters of Jerboa", is rather more than three and a half miles in length. Between the Babrat el Huleh and the Lake of Tiberias, nearly ten miles, the Jordan is clear, and in some places reaches a width of one hundred yards and a depth of nearly seventy feet. It is crossed by a bridge which connects Damascus with Galilee, the Jīr Bānāt Yaqūb. Near it Tell, which is Bethsaida Julias, the river enters the Lake of Genesareth, which is 682 feet below the level of the Mediterranean and is more than thirteen miles in length. At Lake Tiberias, the Jordan begins its innumerable wanderings. The direct distance from the Lake of Tiberias to the Dead Sea is sixty-five miles, but the Jordan, owing to its sinuosities, has a course of 200 miles. At a little distance from where it leaves the lake there are remains of two bridges, Jīr es Sehmakh and Jīr es Sidd, and in this reach of the river it is still fordable at many points. At about six and a quarter miles from the lake, after receiving the Yarmuk, it passes under an old Arab basalt bridge, the Jīr el Mudjamihe, and the bridge of the railroad from Ceifa to Damascus.

Beyond the Wādí 'Arabah is the ford of Aḥārah, where some locate the Bethera of the story of Gedeon (Judges, vii, 24). At five and a half miles from the mouth of the Jalid, which passes Beisam (Sctytopolis), the Jordan passes between Tell es Sārīm (Salm) and Tabaqāt Tali (Tell). It receives the waters of three streams, the waters of such important springs as the Bēda and 'Ain esh Shemsieh, where the first Christian tradition placed Enohn: "John also was baptizing in Enohn near Salim" (John, iii, 23). Umm el Amdān, which is very near, was supposed, in the fourth century, to be the Sarīm (Salm) of the Bible, from which the Wādí Yable rushes down precipitately, the name of which recalls Jābes Galaad, delivered by Saul (Kings, xi). From the lake to this point the whole valley is cultivated; thence to Sarṭabeh, the mountains of Samaria reach to the river. Opposite Sarṭabeh is the confluence of the Nahar ez Zērōq (Jabbok), and just below are to be seen the ruins of the Roman bridge of Damieh and the ford of the same name which made the death of the Amalekites and the Sibboleth (Judges, xii, 5, 6). The cisterns and the columns of the Temple of Solomon were cast near here (III Kings, vii, 46). From Damieh onwards the valley ceases to be cultivated; the waters of the Jordan, disturbed by rapids, become yellow and muddy. A two-hours' journey northwards of this stretch are to be seen the wooden bridge and the ford of Ghūranieh, where the great highways of Galad and Moab meet. The Greek monastery of Qār el Yehūd, two and a half miles farther down the river, marks the traditional scene of the passage of the Hebrews (Jos., iii, 9-13) and of the baptism of Christ (Matt., iii). The scene of the ministrations of St. John the Baptist, however, has been very plausibly placed at the ford of the Ghūranieh, which has always been more frequented. In its lower portion the river is swelled by many affluents, which formerly watered a part of the Kikkar, whereas Lot came when Abraham; these affluents are the Wādí Kelt, the Wādí Kefren, and the Wā’dī Nimrin.

The Jordan, called by the Arabs ash Sheriat el Kebr (the great drinking-place), flows between steep banks of rather brittle clay. The lower part of its basin is called the Zor, the bottom of the valley of the Ghūr. It is fringed with trees and shrubs—poplar, tamarisk, rhododendron, agnus castus, apple of Sodom—and its waters contain a great many fish—various species of capoche, the barbarus canis, the cypripedium, and a kind of catfish (sitraus). Vipers, scorpions, porouscided jackals, wild sheep, goats, panteer, and a great variety of birds are found in the neighbouring thickets. A tropical temperature predominates. The water of the Jordan contains a saline residuum, chlorine, sodium, sulphuric acid, and magnesia. The floods of the river occur from February to May. Its width is very variable: at Ghūranieh scarcely more than twenty-seven yards; at the ford of el Henid as much as forty-five to fifty-five yards; at its mouth about eighty yards. The volume of water brought to the Dead Sea by the Jordan is calculated to be, on the average, 883 cubic feet per second.

F. M. ABEL.

JORDANIS or JORNANDES, historian, lived about the middle of the sixth century in the Eastern Roman Empire. His family was of high standing, "either Goth or Alanic, and his grandfather was notary to Candac, King of the Alani in Mesia. He himself held for a time the office of notary, though under what circumstances is not well known. He was later "converted", that is, he took orders. Everything else that is reported of his life rests on more or less plausible conjecture. It is not really proven, for example, that he bore "before his conversion" the martial name of Jornandes (i.e. bold as a bear). At Carthage he became a monk in Thrace or in Mesia. It is also uncertain whether he was Bishop of Croton, and whether the Vigilius, to whom he dedicated his second work, was Pope Viglius, who from 554 to 574 lived in exile, chiefly at Constantinople. The two of his historical works that are best known, and on which a history of the Goths, or, perhaps it would be better to say, of Mesia. It is now commonly entitled: "De origine actibusque Getarum",...
and is dedicated to his friend Castulus (Castalnis), at whose instance it was begun about 551. It is substantially an extract from the Gothic history of Cassiodorus Senator, which probably bore the same title. But as this latter work was a prosperous future was this excerpt becomes of almost inestimable value in determining a series of facts in the history of the Goths and of popular migrations. Naturally, Jordanis transplanted into his work the fundamental idea of Cassiodorus, namely the conviction that the only way to secure for the Goths was a prosperous future was to bring about its peaceful absorption into the Roman Empire as the centre of Catholicism and of civilization. The second of his works is sometimes called "De summa temporum vel origine actibusque gentis Romanorum", sometimes "De regnorum et temporum successione". In the latter "Liber originum muni. et actibus Romanorum ceterarumque gentium", and again "De gestis Romanorum". Jordanis served as a source of information for the geographers of Ravenna, for Paul the Deacon, for Hermann Contractus, Hugh of Flavigny, and others. The following, among some forty editions, are worth noting: Augustin of Hambach (1570); Conrad Peutinger; Migne, P.L., LXXI; Mommsen in "Monumenta Germ. Auctores antiquissimi", V; Rûdiger in the "Geschichtsschreiber der deutschen Vorzeit"; V. Fr. tr. by Savagner (Paris, 1842 and 1883); Swedish translation by Peringskiöld (Stockholm, 1719).

PATRICK SCHLAGER

Jordanus von Giano (de Jano), Italian Minorite, b. at Giano in the Valley of Spoleto, c. 1195; d. after 1262. About the year 1220 he entered the Franciscan Order and a year later was sent to Germany with a few other members of his order under the leadership of Cesarino of Spoleto, the first Minorite provincial of Germany. In 1223 he was ordained priest, and in 1225 he became guardian at Mainz and custos of the Minorite house in Thuringia. He did much for the spread of his order in Northern Germany. In 1230, and again in 1238, he was sent to Italy on business related to his order. He was present at a chapter of German Franciscans held at Halberstadt in 1262. On this occasion he dictated the early memoirs of the Franciscans in Germany (De primitivorum Fratrum in Theutoniam missorum et conversatione et vita) to a certain Brother Baldwin of Brandenburg. The memoirs begin with the year 1207 and are one of the chief sources for Franciscan history in Germany. The extant manuscript breaks off abruptly at the year 1238, and has been carefully edited in "Analecta Franciscana", 1 (Quaracchi, 1885), 1-19. A German translation with many erroneous annotations was published by Voigt in "Abhandlungen der philologisch-historischen Klasse der sächsischen Gesellschaft der Wissenschaften", V (Leipzig, 1870).

MICHAEL OSPE

Jörg, Joseph Edmund, historian and politician, b. 23 Dec., 1819, at Immenstadt (Allgau); d. at Landshut, 18 Nov., 1901. The son of a subaltern, he first studied theology, then philology and history at Munich. He was a pupil of Dollinger, and was for years his collaborator in his "Geschichte der Reformation". In 1852 he was engaged in the Bavarian Record Office, and undertook in the same year the editorship of the "Historisch-politische Blätter", which he retained (from 1857 with Franz Binder) till a short time before his death. For decades his "Zeitläufer", which appeared in this periodical, attracted great attention. On account of his opposition to the Government, he was transferred to Neuburg on the Danube, but was elected in 1863 a substitute member of the Bavarian Lower House, to which he belonged till 1881. He was promoted in 1866 to the position of district archivist at Landshut; from 1885 to 1889 he was a member of the Zollparlament, and from 1874 to 1879 a member of the German Reichstag. His first work, "Deutschland in der Revolutionsperiode, 1722-26" (1851), a history of the German War of the Peace, was a remarkable display of the characteristics of the later books, "Geschichte des Protestantismus in seiner neuesten Entwickelung" (1888) and "Die neue Aera in Preussen" (1869), are a collection of separate essays published in the paper "Historisch-politische Blätter". He was one of the first to realize the true meaning of the development of socialism, as early as 1867 his "Geschichte der sozialpolitischen Parteien in Deutschland" appeared, having originated in his "Aphorismen" on the socialist movement published in the "Historisch-politische Blätter". Jörg was a conservative, a 'Great German', a convinced Bavarian monarchist, and a devoted adherent of the Bavarian liberal party, and of the subordination of Bavaria to Prussia. The Bavarian "Volkspartei" (People's Party) grew with his cooperation in a few years from a modest group to a majority in the House (1869).

Under King Max II, Jordanis violently opposed to the ministry of von der Pfordten, as he was also to the alliance made with Prussia (22 August) after the unfortunate issue of the war of 1866. His address to the House in Jan., 1870, occasioned the resignation of Prince Hohenlohe with a part of his cabinet. But henceforth events took their course uninfluenced by Jordanis. At the outbreak of the Franco-German War he advocated the armed neutrality of Bavaria, but was deserted in the House by a number of his party; he was thus unable to prevent his country's participation in the war and the entrance of Bavaria, by the Treaty of Versailles, into the new German Empire. However, he afterwards loyally accepted the new order of things. In the Reichstag his proposal to call a meeting of the committee for foreign affairs under the presidency of Bavaria gave rise to a violent conflict with Bismarck on 4 December, 1874. His attack on the Luta ministry in 1875 failed because of the opposition of the archbishop. He left the Reichstag in the same year, later the Bavarian House, thereby ending his public life. The last twenty years of his life were passed on the Burg Traunstein near Landshut (whence he was known as the "Hermit of the Traunstein"). His remainder of his days was devoted to his journalistic work and his duties in the district archives of Landshut. A man of stainless honour, a Catholic of firm faith, a prominent politician, he was a strongly marked personality, and is acknowledged as such even by his opponents. Besides his above-named works his "Memoirs" also deserve attention. Obituary by Binder in Historisch-politische Blätter, CXXXVIII (1901), 773. For a list of the other scantly sources see Dibelius in Reallexikon u. deutscher Neuhochdeutsch, VI (1904); cf. Totenliste, ii., 53.

HELMUTH CARDANUS

Jornandes. See Jordanis.

Josaphat. See Barlaam and Josaphat.

Josaphat (Yosafat), fourth king of Juda after the schism of the Ten Tribes. He was the son and successor of Asa, whose virtuous reign had established good traditions to which the new king endeavoured to remain faithful. He ascended the throne at the age of thirty-five and reigned twenty-three years (914-899 b.c.; 877-53 according to the Assyrian chronology). His zeal in suppressing the idolatrous worship of the "high places" is commended (II Par., xvii, 6), but it was only partially
Josaphat (Jehoshaphat), Valley of, mentioned in only one passage of the Bible (Joel, iii—Heb. text, iv). In verse 2 we read: "I will gather together all nations, valley of judgment, and no more—for Josaphat signifies "Jahveh judges". This valley is, in fact, spoken of under the name of "valley of destruction" (A. V. "valley of decision") in verse 14 of the same chapter. According to the context, the Divine judgment will be pronounced upon the nations of the world, and Jerusalem at the time of the captivity and the return from exile.

In the fourth century, with the Pilgrim of Bordeaux, the Cedron takes the name of Valley of Josaphat. Eusebius and St. Jerome strengthen this view (Onomasticon, s. v.), while Cyril of Jerusalem appears to indicate a different place; early Jewish tradition denied the reality of this valley. Subsequently to the fourth century, Christians, Jews, and, later, Mussalmans regard Cedron as the place of the last judgment. What has lent colour to this popular belief is the fact that since the time of the kings of Judah, Cedron has been the principal necropolis of Jerusalem. Josias scattered upon the tombs of the children of Israel the ashes of the idol of Astarte which he burned in Cedron (IV Kings, xxiii, 4). It was in Cedron that the "hand" of Absalom was set up, and the monument of St. James, and there, too, may be seen, in our own day, the very ancient monolithic tomb said to be that of Pharaoh's daughter, and the sepulchres of certain priestly families now known as the tombs of Absalom, of St. James, and of St. Zachary. The ornamental façade of the tomb said to be that of Josaphat has been completely walled up by the Jews, who have their cemeteries on the flanks of the Valley of Cedron. They wish to stand in the first rank on the day when God shall appear in the Valley of Josaphat.

Josaphat Kuntsevič, Saint, martyr, b. in the little town of Volodymyr in Lithuania (1532) or—according to some writers—1554; d. at Vitebsk, Russia, 12 November, 1623. The saint's birth occurred in a gloomy period for the Ruthenian Church. Even as early as the beginning of the sixteenth century the Florentine Union had become a dead-letter; in the case of the Ruthenian Church, complete demoralisation followed in the wake of its severance from Rome, and the whole body of its clergy became notorious alike for their gross ignorance and the viciousness of their lives. After the Union of Berest in 1596 the Ruthenian Church was divided into two contending parties—the Uniates and those who persevered in schism—each with its own hierarchy. Among the leaders of the schismatic party, who laboured to enkindle popular hatred against the Uniates, Meletius Smotryckyj was conspicuous, and the most celebrated of his victims was Josaphat. Although of a noble Ruthenian stock, Josaphat's father had devoted himself to commercial pursuits, and held the office of town-councillor. Both parents contributed to implant the seeds of piety in the heart of their child. In the school at Volodymyr Josaphat—Johannes was the saint's baptismal name—gave evidence of unusual talent: he applied himself with the greatest zeal to the study of ecclesiastical Slav, and learned almost the entire Kasodow (breviary), which from this period he began to read daily. From this source he drew his early religious education, for the unlettered clergy seldom preached or gave catechetical instruction. Owing to the straitened circumstances of his parents, he was apprenticed to an merchant and apprenticed at Viena. In this town, remarkable for the corruption of its morals and the contentions of the various religious sects, he seemed specially guarded by Providence, and became acquainted with certain excellent men (e. g. Benjamin Rutski), under whose direction
Joseph, Saint, spouse of the Blessed Virgin Mary and foster-father of Our Lord Jesus Christ. The chief sources of information on the life of St. Joseph are the first chapters of our first and third Gospels; they are practically also the only reliable sources, for, whilst, on the holy patriarch's relations with Christ, we have no direct information, we do have a few very important facts connected with the Saviour's history which were left untouched by the canonical writings, the apocryphal literature is full of details, the non-admittance of these works into the Canon of the Sacred Books casts a strong suspicion upon their contents; and, even granted that some of the facts recorded by them may be founded on trustworthy traditions, it is in most instances next to impossible to discern and sift these portions of true history from the fancies with which they are associated. Among these apocryphal productions dealing more or less extensively with some episodes of St. Joseph's life may be noted the so-called "Gospel of James", the "Pseudo-Matthew", the "Gospel of the Nativity of the Virgin Mary", the "Story of Joseph the Carpenter" (in Tischendorf, "Evangelia Apocrypha", Leipzig, 1879), and the "Life of the Virgin and Death of Joseph" (also in Robinson, " Apocalypse Gospel", Cambden, 1863). St. Alphonsus Liguori (Ecclesiasticum Tryph., lxxviii, in P. G., VI, 888) and tradition has accepted this interpretation, which is followed in the English Bible. It is probably at Nazareth that Joseph betrothed and married her who was to become
the mother of God. When the marriage took place, whether before or after the Incarnation, is no easy matter to settle, and on this point the masters of exegesis have at all times been at variance. Most moderns (unaccountably, following the footsteps of St. Thomas, understand that, at the epoch of the Annunciation, the Blessed Virgin was only affianced to Joseph; as St. Thomas notices, this interpretation suits better all the evangelical data.

It will not be without interest to recall here, unreliable though it be, the legend of Joseph's marriage. St. Joseph's marriage contained in the apocryphal writings. When forty years of age, Joseph married a woman called Meleta or Eseba by some, Salome by others; they lived forty-nine years together and had six children, two daughters and four sons, the youngest of whom was James (the Less, "the Lord's brother"). A year after his wife's death, as the priests announced through Judea that they wished to find in the tribe of Judah a respectable man to espouse Mary, then twelve to fourteen years of age, Joseph, who was at the time ninety years old, went up to Jerusalem among the candidates; a miracle manifested the choice of God in favour of St. Joseph and in due time the Annunciation took place. These dreams, as St. Jerome styles them, from which many a Christian artist has drawn his inspiration (see, for instance, Raphael's "Espousals of the Virgin" in The Catholic Encyclopedia, V., 542), are void of authority; they never met with the approval of the church. nor is there any probability that he died and was buried at Nazareth.

Joseph was "a just man". This praise bestowed by the Holy Ghost, and the privilege of having been chosen by God to be the foster-father of Jesus and the Spouse of the Virgin Mother, are the foundations of the honour paid to Joseph. But Joseph was actually grounded are these foundations that it is not a little surprising that the cult of St. Joseph was so slow in winning recognition. Foremost among the causes of this is the fact that "during the first centuries of the Church's existence, it was only the martyrs who enjoyed religious veneration" (Kelner). Far from being ignored or passed over in silence during the early Christian ages, St. Joseph's prerogatives were occasionally descanted upon by the Fathers; even such eulogies as cannot be attributed to the writers among whose works they found admittance bear witness that the idea was not altogether unknown. The majority were familiar, not only to the theologians and great leaders of Christian thought, but to obscure preachers, and must have been readily welcomed by the people.

The earliest traces of public recognition of the sanctity of St. Joseph are to be found in the East. His feast, if we may trust the assertions of Paprocko, was kept by the Copts as early as the beginning of the fourth century. Nicephorus Callistus tells likewise—on what authority we do not know—that in the great basilica erected at Bethlehem by St. Helena, there was a gorgeous oratory dedicated to the honour of our saint. Certain it is, at all events, that "the Saint of the Carpenter" is entered on 20 July, in one of the old Coptic Calendars in our possession, as also in a Synaxarium of the eighth and ninth century published by Cardinal Mai (Script. Vet. Nova Coll., IV, 15 sqq.). Greek menologia of a later date at least mention St. Joseph on 25 or 26 December, and a twofold commemoration of him along with other saints was made on the two Sundays next before and after Christmas.

In the West the name of the foster-father of our Lord (Nutritor Domini) appears in local martyrologies of the ninth and tenth centuries, and we find in 1129, for the first time, a church dedicated to his honour at Bologna. The devotion, then merely private, as it seems, gained a great impetus owing to the influence and zeal of such saintly persons as St. Bernard, St. Thomas Aquinas, St. Gertrude (d. 1310), and St.
Bridget of Sweden (d. 1373). According to Benedict XIV (De Serv. Dei beati, I, iv, n. 11; xx, n. 17), "the general opinion of the learned is that the Fathers of Carmel were the first to import from the East into the West the laudable practice of giving the fullest cultus to St. Joseph. His feast was placed towards the end of the fourteenth century into the Franciscan and, shortly afterwards, into the Dominican Calendar, gradually gained a foothold in various dioceses of Western Europe. Among the most zealous promoters of the devotion at that epoch, St. Vincent Ferrer (d. 1419), Peter d'Alilly (d. 1420), St. Bartholomew of Salerno (d. 1444), and Jean Chartier Gerson (d. 1429) deserve a special mention. Gerson, who had, in 1400, composed an Office of the Espousals of Joseph and Mary, displayed all his learning and influence, particularly at the Council of Constance (1414), in promoting the public recognition of the cult of St. Joseph. Only under the pontificate of Sixtus IV (1471-84), were the efforts of these holy men rewarded by the introduction of the feast of St. Joseph into the Roman Calendar (19 March). From that time the devotion acquired greater and greater popularity, the dignity of the feast keeping pace with this steady growth. At first it was only a fortress, simple, it was elevated to a double rite by Innocent VIII (1484-92), declared by Gregory XV, in 1621, a festival of obligation, at the instance of the Emperors Ferdinand III and Leopold I and of King Charles II of Spain, and raised to the rank of a double of the second class by Clement XI (1700-21). Further, Benedict XIII, in 1726, inserted the name into the Litany of the Saints.

One festival in the year, however, was not deemed enough to satisfy the piety of the people. The feast of the Espousals of the Blessed Virgin and St. Joseph, so strenuously advocated by Gerson, and permitted first by Paul III to the Franciscans, then to other religious orders and individual dioceses, was, in 1725, granted to all countries that solicited it, a proper Office, compiled by the Dominican Pietro Aurato, being assigned, and the day appointed being 23 January. Now was this all, for the reformed Order of Carmelites, into which St. Teresa had infused her great devotion to the foster-father of Jesus, chose him, in 1621, for their patron, and in 1689, were allowed to celebrate the feast of his Patronage on the third Sunday after Easter. This feast, soon adopted throughout the South American mission, was later extended to all dioceses and dioceses which asked for the privilege. No devotion, perhaps, who has grown so universal, none seems to have appealed so forcibly to the heart of the Christian people, and particularly of the labouring classes, during the nineteenth century, as that of St. Joseph.

This wonderful and unprecedented increase of popularity called for a new lustre to be added to the cult of the saint. Accordingly, one of the first acts of the pontificate of Pius IX, himself singularly devout to St. Joseph, was to extend to the whole Church the feast of St. Joseph (1845). It was added, according to the wishes of the bishops and of all the faithful, he solemnly declared the Holy Patriarch Joseph patron of the Catholic Church, and enjoined that his feast (19 March) should henceforth be celebrated as a double of the first class (but without octave, on account of Lent). Following in the footsteps of their predecessor, Leo XIII and Pius X have shown an equal desire to add their own jewel to the crown of St. Joseph: the former, by permitting on certain days the reading of the votive Office of the saint; and the latter by approving, on 18 March, 1909, a litany in honour of whom his name he received in baptism.

CHARLES L. SOUVAY.

Joseph (mü); Sept. Ισαφ; Vulg., in Machabees: Josephus), the eleventh son of Jacob, the first-born of Rachel, and the immediate ancestor of the tribes of Manasses and Ephraim. His life is narrated in Gen., xx, 22-24; xxxvi, 29-39, wherein contemporary scholars distinguish three chief documents (J, E, P). (See ABRAHAM.) The date of his eventful career can be fixed only approximately at the present day, for the Biblical account of Joseph's life does not name the particular Pharaoh of his time, and the Egyptian customs and manners therein alluded to are not to be reduced to any special period of Egyptian history. His term of office in Egypt falls probably under one of the later Hyksos kings (see EGYPT). His name, either contracted from Jehoseph (Ps. xiii, 6, in the Heb.) or abbreviated from Joseph-Eti (cf. Karnak inscription of Thothmes III, no. 76), is distinctly connected in Gen., xxx, 23, 24, with the Hebrew structure and is interpreted: "may God add". He was born in Haran, of Rachel, Jacob's beloved and long-haired wife, and became the favourite son of the aged patriarch. After Jacob's return to Chanaan, various circumstances made Joseph the object of the mortal hatred of his brothers. He had witnessed some very wicked deed of several among them, and they knew that it had been reported to their father. Moreover, in his partiality to Joseph, Jacob gave him an ample garment of many colours, and this manifest proof of the patriarch's greater love for him aroused the jealousy of Joseph's brothers to such an extent that "they could not speak peaceably to him". Finally, with the imprudence of youth, Joseph told his brothers two dreams which clearly portended his future elevation over them all, but which, for the present, simply caused them to hate him all the more (Gen. xxxvii, 1-11). In this frame of mind, the youngest brother having the best opportunity to get rid of the one of whom they spoke as "the dreamer". As they fed their father's flocks in Dothan (now Tell Dothan, about fifteen miles north of Sichem), they saw from afar Joseph, who had been sent by Jacob to inquire about their welfare, coming to them, and they at once resolved to reduce to naught all his dreams of future greatness. At this point the narrative in Genesis combines two distinct accounts of the manner in which the brothers of Joseph actually carried out their intention of avenging themselves upon him. These accounts present slight variations, which are examined in detail by recent commentators on Genesis. A third零碎 is inserted into the text to form the historical character of the fact that, through the enmity of his brothers, Joseph was brought down to Egypt. To protect themselves they dipped Joseph's fine garment into the blood of a kid, and sent it to their father. At the sight of this blood-stained garment, Jacob naturally believed that a wild beast had devoured his beloved son, and he gave himself up to the most intense grief (xxxvii, 12-35).

While thus bewailed as dead by his father, Joseph was sold into Egypt, and treated with the utmost consideration and the greatest confidence by his Egyptian master, to whom Gen. xxxvii, 36, gives the name of Potiphar ("He whom Ra (the sun-god) gave") and whom it describes as Pharaoh's eunuch and as the captain of the royal body-guard (cf. xxxix, 1). Quick and trustworthy, Joseph soon became his master's
personal attendant. He was next entrusted with the superintendence of his master's house, a most extensive and responsible charge, such as was usual in large Egyptian households. With Yahweh's blessing, all things went well with him; and, prospering under Joseph's management that his master trusted him implicitly, and "knew not any other thing, save the bread which he ate." While thus discharging with perfect success his manifold duties of 

major-domo (Egypt. mer-per), Joseph was often brought in contact with the king and the wealthy of Egypt. There was as much free intercourse between men and women in Egypt as there is among us in the present day. Oftentimes she noticed the youthful and handsome Hebrew overseer, and carried away by passion, she repeatedly tempted him to commit adultery with her, till at length, resenting his virtuous conduct, she accused him of those very criminal solicitations wherewith she had herself pursued him. The credulous master believed the report of his wife, and in his wrath cast Joseph into prison. There also Yahweh was with His faithful servant: He gave him favour with the keeper of the prison, who soon placed in Joseph implied that his brothers might be released and the other prisoners (xxxix, 7-23). Shortly afterwards two of Pharaoh's officers, the chief butler and chief baker, having incurred the royal displeasure for some reason unknown to us, were put in ward in the house of the captain of the guard. They also were friends with Joseph, and, discovering his kindness in to them one morning, he noticed their unusual sadness. They could not catch the meaning of a dream which each had had during the night, and there was no professional interpreter of dreams near at hand. Then it was that Joseph interpreted their dreams correctly, bidding the chief butler to remember him when restored to his office, as indeed he was three days after, on Pharaoh's birthday (xi). Two years rolled by, after which the monarch himself had two dreams, the one of the fat and lean kine, and the other of the full and the withered ears. Great was Pharaoh's perplexity at these dreams, which no one in the realm could interpret. This occurrence naturally reminded the chief butler of Joseph's skill in interpreting dreams, and he mentioned to the king what had happened in his own case and in that of the chief baker. Summoned before Pharaoh, Joseph declared that both dreams were interpreted of the same things, and immediately be followed by seven years of famine, and further suggested that one-fifth of the produce of the years of plenty be laid by as a provision for the years of famine. Deeply impressed by the clear and plausible interpretation of his dreams, and recognizing in Joseph a wisdom more than human, the monarch entrusted to him the carrying out of the measure which he had suggested. For this purpose he raised him to the rank of keeper of the royal seal, invested him with an authority second only to that of the throne, bestowed on him the Egyptian name of Zaphenath-paneah ("God spoke, and he came into being.") (xiii). He also gave him the name of Putiphares, the priest of the great national sanctuary at On (or Heliopolis, seven miles north-east of the modern Cairo).

Soon the seven years of plenty predicted by Joseph set in, during which he stored up corn in each of the cities from which it was gathered, and his wife, Aseneth, bore him two sons whom he called Manasses and Ephram, from the favourable circumstances of the time of their birth. Next came the seven years of dearth, during which by his skilful management Joseph saved Egypt from the worst features of want and hunger, and not only Egypt, but also the various countries around, which had to suffer from the same grievous and protracted famine (xii). Among these neighbouring countries was counted the land of Canaan where Jacob had continued to dwell with Joseph's eleven brothers. Having heard that corn was sold in Egypt, the aged patriarch sent his sons thither to purchase some, keeping back, however, Rachel's second child, Benjamin, "lest perhaps he take harm in the journey." As befitted him in the presence of his brothers failed to recognize in the Egyptian grandee before them the lad whom they had so cruelly treated twenty years before. He roughly accused them of being spies sent to discover the undefended passes of the eastern frontier of Egypt, and when they volunteered information about their family, he, desirous of ascertaining the truth concerning Benjamin, restrained one of them as hostage in prison and sent the others home to bring back their youngest brother with them. On their return to their father, or at their first lodging-place on the way, they discovered the money which Joseph had ordered to be placed in their sacks. Great was their anxiety and that of Jacob, who for a time refused to allow his sons to return to Egypt in company with Benjamin. At length he yielded under the pressure of famine, sending, at the same time, a present to conciliate the favour of the Egyptian prime minister. At the sight of Benjamin Joseph undertook to delude them that he should make a feigned search for him first appearance before him, and he invited them to a feast in his own house. At the feast he caused them to be seated exactly according to their age, and he honoured Benjamin with "a greater mess," as a mark of distinction (xlii-xliii). Then they left for home, unsuspecting that at all events one of them had been hidden in Benjamin's sack. They were soon overtaken, charged with theft of that precious cup, which, upon search, was found in the sack where it had been hidden. In their dismay they returned in a body to Joseph's house, and offered to remain as his bondmen in Egypt, an offer which Joseph declined, declaring that he would only retain Benjamin. Whereupon Juda pleads most pathetically that, for the sake of his aged father, Benjamin be dismissed free, and that he be allowed to remain in his brother's place as Joseph's bondman. Then it was that Joseph disclosed himself to his brothers, calmed their fears, and sent them back with a pressing invitation to Jacob to come and settle in Egypt (xli-xlv, 24).

It was in the land of Gessen, a pastoral district about forty miles north-east of Cairo, that Joseph called his father and brothers to settle. There they lived as prosperous underway. But when the misery the Egyptians were gradually reduced to sell their lands to the Crown, in order to secure their subsistence from the all-powerful prime minister of Pharaoh. And so Joseph brought it to pass that the former owners of landed property— with the exception, however, of the priests—became simple tenants of the king and paid to the royal treasury, as it were, an annual rent of one-fifth of the produce of the soil (xlv, 28-xlvi, 26). During Jacob's last moments, Joseph promised his father that he would bury him in Canaan, and caused him to adopt his two sons, Manasses and Ephram (xlvii, 25-xlvi, 8). After his father's demise, he had them brought to him with great pomp in the Cave of Machpelah (i, 1-14). He also allayed the fears of his brothers who dreaded that he should now avenge their former ill-treatment of him. He died at the age of 110, and his body was embalmed and put in a coffin in Egypt (i, 15-29).

Ultimately, his remains were carried into Canaan and buried in Shechem (Exod., xiii, 19; Josue, xxxiv, 32).

Such, in substance, is the Biblical account of Joseph's career. In its wonderful simplicity, it sketches one of the most beautiful characters presented by Old Testament history. As a boy, Joseph has the most vivid horror for the evil done by some of his brothers; and as a youth, he resists with unflinching courage the repeated and pressing solicitations of his master's wife. Cast into prison, he displays great power of endurance, trusting to God for his justification. When
raised to the rank of viceroy of Egypt, he shows himself worthy of that exalted dignity by his skilful and energetic efforts to promote the welfare of his adopted country. His character is a masterful exemplification of the type of the ‘true and masterful shepherd.’

A character so beautiful made Joseph a most worthy type of Christ, the model of all perfection, and it is comparatively easy to point out some of the traits of resemblance between Jacob’s beloved son and the dearly beloved Son of God. Like Jesus, Joseph was hated and cast out by his brethren, and yet brought out their salvation through the sufferings they had brought upon him. Like Jesus, Joseph obtained his exaltation only after passing through the deepest and most undeserved humiliations; and, in the kingdom over which he ruled, he invited his brethren to join the kingdom of God he had looked upon as strangers, in order that they also might enjoy the blessings which he had stored up for them. Like the Saviour of the world, Joseph had but words of forgiveness and blessing for all who, recognising their misery, had recourse to his supreme power. It was to Joseph of old, as to Jesus, that all had to appeal for relief, offer homages of the deepest respect, and yield ready obedience in all things. Finally, to the Patriarch Joseph, as to Jesus, it was given to inaugurate a new order of things for the greater power and glory of the monarch to whom he owed his exaltation.

[The text continues, discussing the parallels and lessons from Joseph’s life to the life of Jesus, and the historical context of the Egyptian culture and its impact on religious and historical interpretations.]
the welfare of the people. French "enlightenment" also influenced him, especially in the persons of Voltaire and his royal adept, Frederick the Great. Joseph viewed with jealous discontent the intellectual supremacy of the Protestant North of Germany, then first dominant over the Catholic South: he also reflected with chafing impatience on Frederick's victories and talent for government, and thence conceived a definite aim in life. But when he ascended the throne, his plans failed utterly.

Joseph's father.—After 1765 Joseph acted as emperor and co-regent with his mother, but administered only the business routine and the military affairs of the empire. Finally, resenting the manner in which his hands were tied by his prudent parent, he took to travel in Italy, France, and the Crown Lands. Twice he met Frederick the Great, and in 1780 Catherine II of Russia. In the same year his mother, Empress Maria Theresa, died, and Joseph was free.

(a) In the Empire.—Joseph applied himself with the best intentions, among other matters, to the reform of imperial jurisprudence. But difficulties from within and without checked his fiery enthusiasm. Although a Liberal and an imperialist, whenever the interests of the Hapsburgs were in question, he allowed the imperial power to be lessened after the fashion of other German princes. Ecclesiastical politics also played a considerable rôle in the empire. Joseph tried to secure German ecclesiastical preferments for Austrian princes, urged obsolete imperial privileges, e.g. the so-called Pansabriege to provide for the support of his lay adherents in imperial monasteries. By cutting off the Austrian territory of such great metropolitan sees as Salzburg and Passau, he severed the last tie which united Austria with the empire. Though not in itself conflicting with German interests, his scheme of exchanging the Austrian Netherlands for the neighbouring Bavaria on the occasion of the impending change of dynasty, led to the Bavarian War of Succession. In 1785 the Revival of this scheme by forming the "League of Princes". Joseph now endeavoured to expand his dominions in the north and east, and to make Austria dominant in Central Europe. He obtained a considerable increase of territory in the First Partition of Poland (1773), and concluded a defensive alliance with Russia, which led to great schemes for a larger gain of territory in the east. In the Austro-Russian War against the Turks (1788), however, Joseph's army took Belgrade, Catherine obtained all the fruits of the campaign.

(b) In Austria.—In home affairs, Joseph sought to weld the fundamentally differing peoples of the Austrian empire—Germans, Hungarians, Belgians, Italians—into one compact nation. So he began to level and centralise great and small things in every direction and in the greatest haste. Frederick II said of Joseph: "He takes the second step before the first." Joseph's predecessor had not been heedless of the new territories. She had set the secularization in a modern groove. In church affairs she had resorted to strict measures to regulate disorders, but Joseph saw in these only "half measures and incon-sistencies", and, in the glow of conviction, "desired by hot-house methods to bring his mother's incipient reforms to maturity" (Krones). He united the administration of all the provinces in the central council at Vienna, of which he himself was the head. While he abolished their diets or paralysed them by the provincial executive authorities. Though a professod enemy of every irregularity, he often undertook to decide matters belonging to the central government at Vienna. German became the official language in all the countries subject to his rule: the laws of justice were independent and impartial to noble and peasant, Serfdom and the right of the landed nobles to punish their tenants ceased; the codification of the civil and criminal laws, begun in 1753, was furthered, and the death penalty was abolished. In his Ehepatent Joseph created the Austrian marriage law; he subjected the nobility and clergy to state taxation, and opened up new sources of revenue; he abolished the censorship and permitted freedom of speech, but which loosed a flood of pamphlets of the most pernicious kind, especially in ecclesiastical polemics.

III. ECCLESIASTICAL POLICY.—(a) Its Development.—Joseph was the father of Josephinism, which is nothing else than the highest development of the craving common among secular princes after an episcopal and territorial church. Its beginnings can be traced in Austria to the thirteenth century, and it became clearly marked in the sixteenth, especially so far as the administration of church property was concerned. It was fostered in the second half of the eighteenth century by the spread of Febronian and Jansenist ideas, based on Gallican principles. These notions united the empire with the empire. Though not in itself conflicting with German interests, his scheme of exchanging the Austrian Netherlands for the neighbouring Bavaria on the occasion of the impending change of dynasty, led to the Bavarian War of Succession. In 1785 the Revival of this scheme by forming the "League of Princes". Joseph now endeavored to expand his dominions in the north and east, and to make Austria dominant in Central Europe. He obtained a considerable increase of territory in the First Partition of Poland (1773), and concluded a defensive alliance with Russia, which led to great schemes for a larger gain of territory in the east. In the Austro-Russian War against the Turks (1788), however, Joseph's army took Belgrade, Catherine obtained all the fruits of the campaign.

(b) In Austria.—In home affairs, Joseph sought to weld the fundamentally differing peoples of the Austrian empire into one compact nation. So he began to level and centralise great and small things in every direction and in the greatest haste. Frederick II said of Joseph: "He takes the second step before the first." Joseph's predecessor had not been heedless of the new territories. She had set the secularization in a modern groove. In church affairs she had resorted to strict measures to regulate disorders, but Joseph saw in these only "half measures and inco-
to natural law, and therefore to the will of Christ; consequently the Church has no right to enact such laws, or can the State accept them. Kautzke reduced these principles to practice: "The supremacy of the State over the Church extends to all ecclesiastical laws and practices devised and established solely by man, and whatever else the Church owes to the consent and sanction of the secular power. Consequently, the State must have the power to limit, alter, or annul its former concessions, whenever reasons of state, abuses, or altered circumstances demand it." Joseph raised these propositions to principles of government, and treated ecclesiastical institutions as public departments of the State. Maria Theresa had been secretly opposed to Josephinism. Most of the measures that proscribed Josephinism in the latter part of her reign had not her approval. Joseph's entire policy was the embodiment of his idea of a centralized empire developing from within and in which all public affairs, political and ecclesiastical-political, were treated as an indivisible whole. His reforms, a medley of financial, social-reformatory, and ecclesiastico-reformatory ideas, have no solid foundation.

(b) The Reforms.—Bishops' religious orders, and benefices were limited by the Austrian boundary. No bishops were entitled to "ecclesiometry", which simplified the often very confused overlapping of diocesan authorities. The announcement of papal, in fact of all ecclesiastical, decrees, was made dependent on imperial approval (see Placeto); decisions on impediments to marriage were referred to the bishops; the communication of the bishops with Rome, and of the religious orders with their generals in foreign countries, was forbidden, partly from considerations of political economy. In 1783, while at Rome, Joseph personally threatened that he would establish an independent state-church; he abolished all exemptions from episcopal authority or from an obligatory oath brought the bishops into dependence on the State. The acceptance of papal titles and attendance at the German College in Rome were forbidden, and a German College was established at Pavia in opposition to the Roman institution. The Edict of Toleration of 1781 granted to all denominations the free exercise of their religion and religious rights; at the same time a series of petty regulations concerning Divine service prescribed the number of the candles, the length and style of the sermons, the prayers, and hymns. All superfluous altars and all gorgeous vestments and images were to be removed; various passages in the Bible and the Gospels were to be omitted; dramatic questions were excluded from the pulpit, from which, on the other hand, all government proclamations were to be announced. "Our Brother the Sacrister", as Frederick the Great named Joseph, sincerely believed that in doing this he was creating a purified Divine service and ever heeded the discontent of his people and the enmies of non-Catholics.

The fundamental idea underlying a state-church is that the State is the administrator of the temporal property of the Church. Joseph embodied this idea in a law merging the funds of all churches, religious houses, and endowments within his territories, into one great fund for the various requirements of public worship, called the Religiousfonds. This fund was the pivot measure around which all other reforms turned. Not only ecclesiastical property hitherto devoted to parochial uses, not only the property of the nunneries, of the monasteries, but all ecclesiastical property— the still remaining religious houses, chapels, confra-ternities, and benefices, and all existing religious endowments whatsoever—was held to be part of the new fund. The suppression of the religious houses in 1787, affected at first only the contemplative orders. The Religiousfonds, created out of the property of the monasteries, gave a new direction to Joseph's monastic policy. In the forementioned "the wall became the palace", which from 1783 were the chief object of his suppressions. The journey of Pius VI to Vienna was fruitless, and the laity reacted but feebly against the suppressions. Of the 915 monasteries (762 for men, and 153 for women) existing in 1780 in German Austria (including Bohemia, Moravia, and Galicia), 588 (280 for men, 108 for women) were closed in 1785, which are often greatly exaggerated. By these suppressions the "religious fund" reached 35,000,000 gulden ($14,000,000). Countless works of art were destroyed or found their way to second-hand dealers or the mint, numberless libraries were pitilessly scattered. The suppressed religious houses brought no increase to the fund, and the suppression of the confraternities (1783) was likewise a financial failure. They were looked upon as sources of superstition and religious fanaticism; half their property was allotted to educational purposes, the other half was given over, "with all their ecclesiastical privileges, indulgences, and graces", to a new "Single Charitable Association", which possessed the features of both a confraternity and a charitable institution, and was intended to end all social distress. But the people had little taste for this "enlightened confraternity", and the confraternities, for processions and pilgrimages, and for devotions no longer permitted in the new arrangement of Divine service, all went to the Religiousfonds, which undertook to satisfy the provisions for masses, wherever the fact of endowment could be proved. Joseph assigned a definite number as pensions for distributing among the religious clergy. Benefits without cure of souls, prebends in the larger churches, and all canontories above a fixed number, belonging to collegiate churches and cathedral chapters, were forfeited to the "religious fund", and the incumbents transferred to parochial positions. A maximum was fixed for the endowment of bishops, the surplus being then used as the "religious fund", as were also the incomes of livings during their vacancy.

The first duty of the "religious fund" was to provide for the ex-religious. Their number did not exceed ten thousand. They received a yearly salary of 1,000 to 1,200 gulden ($50 to $60). The remaining funds were transferred to parochial and scholastic work. The state-church reached its fullest expression in the parochial organization. The State undertook to train and remunerate the clergy, to present to livings, and to regulate Divine service. No parish church was to be over an hour's walk from any parsonage; and a church was to be provided for every 700 souls. The monasteries which still remained bore the main burden of the parochial organization, and their inmates, as well as the ex-monks, were required to pass a state concursus for the pastoral positions, while only in cases of extreme necessity did the "religious fund" furnish the means for the building of churches and rectories, for the care of cemeteries, and the equipment of churches. Naturally, the "religious fund" had to pay the costs of placing the clergy under state control, of the general seminaries and the support of the young clerics, who so assiduously depended on the Government, of the institutes for the practical education of the clergy, which were to be established in every diocese, and of the support of sick and aged priests after the incorporation of the "religious fund" of the funds created for superannuated priests (Emeritifonds) and to supply needed support (Deutscherfonds).

The academic reforms of Maria Theresa (Studien-
reform) and of Rutenbergstrach (Studienplan) in 1776, and the introduction of Rieger's "Manual of Canon Law," paved the way for the creation of the general theological seminaries. At Vienna, Graz, Prague, Olmütz, Presburg, Pesth, Innsbruck, Freiburg, Lemberg (for Galicia, Greek and Latin Rites), Louvain, and Pavia. In 1733 all the monastic schools and diocesan houses of study were suppressed. The 'general seminaries' were board-established across the (Kongress) states, brought together with the universities; some of them, however, had their own theological courses. Five years of study in the seminary were followed by one in the bishop's training-house (Friestehaus) or in a monastery. The principles of the seminary directors were Liberal, in keeping with the rationalistic theology of the State. Steadily, in the direction across the state, the ecclesiastical foundations (Stifte) and the monasteries. The novices, educated at their expense in the general seminaries, for the most part lost their monastic vocation. Some of the general seminaries were badly managed. At Innsbruck, Pavia, and Louvain, unsuitable directors were appointed; at Louvain the general seminary was eventually the cause of a civil war and of the revolt of Belgium. However, other seminaries sent forth efficient pastors and learned theologians (Freiburg). The fermentation within the ranks of the clergy of south-west Germany and Austria which was in a ferment with the bishops. Reform came from the Liberal ideas imbibed at this time.

The accounts of the deplorably deprived conditions in the general seminaries, which are met with in earlier Catholic literature (Theiner, S. Brunner, Brück, Stöckl) and occasionally repeated even now, are in part exaggerations of faults and blunders that were real enough; to a considerable extent, however, they are based on forgeries "invented for the purpose of stirring up the smouldering flames of the Belgian Revolution". Seminaries like those of Freiburg and Vienna were counted among the worst, though it has been since proved that they were among the best. The most appalling abuses were reported of a seminary at Rottenburg in the Tyrol, though there was never a seminary in the place. These accusations, true or false, but chiefly the exhaustion of the "religious fund", hastened their suppression in 1790. They became, however, the models of the actual theological Konsvit (Konservativen) and the classical instruction in a state gymnasium), and the programme of studies laid out by Rutenbergstrach is to this day the groundwork of the curriculum in the Catholic theological faculties of Germany and Austria. The vesting of all ecclesiastical property in a single treasury was adopted, and as practice, the pittance of monastic property it was capitalized at great loss. The capital of every church and foundation had to be described publicly, converted into national bonds, and invested in the "religious fund". In this way Joseph to a certain extent satisfied his distrust of the ecclesiastical administration of property, while the same was placed at the service of the heavily encumbered state treasury. But many of the enterprises formerly conducted by the religious foundations could be no longer carried on owing to the slender returns. Still greater was the damage done to the credit and the resources of entire provinces, for hitherto the ecclesiastical institutions (e.g. the confraternities, chapels and churches in the country districts had been the only moneylenders. Peasants, mechanics, and artisans were now placed at the mercy of usurping Jews and foreigners, while many were forthwith ruined by the sudden demands made on them. A tax levied on church property which had escaped complete secularization. From 1778 it was imposed on the still existing religious orders and on the secular clergy. This oppressively high income-tax was meant to divert into the coffers of the "religious fund" all revenues of the aforesaid institutions not absolutely necessary for the support of life.

(c) Historical Importance.—The Religiousfonds was not the magnanimous act in favour of the religious needs of the people that it is held to have been. Formed by consolidating almost the entire property of the Church, it undertook only such obligations as it was in any case the duty of the State to fulfil, especially after the suppression of institutions which had previously only of their own accord relieved the State of a portion of these burdens. Moreover the "religious fund" was from the first diverted to other reforms, e.g. in education; in time of war it was made to contribute heavy subsidies and suspended almost all its contributions for the religious needs of the people. We can thus easily understand how in the nineteenth century the "religious fund" came to need state aid, which indeed the State was in justice bound to give in view of the fact that the national bonds, in which the "religious fund" had been chiefly invested, had sunk to one-fifth of their face value. The secularization under Joseph, if less offensive than other well-known secularizations, is nevertheless reprehensible, since Joseph undertook his reforms with the best intentions, but left only vague and incomplete semblances of reform. After a reign of ten years and fully aware of his failure, he ended his unhappy and lonely existence (20 February, 1780), leaving even the monarchy itself in peril. Human life had been lost. Other provinces were in a state of violent discontent. But though in general the Josephinist system collapsed, its essential principles remain: the efforts for union among all the lands of Austria are one result of the system; another is the attitude of the nineteenth-century State towards the Church.

H. FRANE.

Joseph, Sisters of Saint.—Congregation of the Sisters of St. Joseph, founded at Le Puy, in Velay, France, by the Rev. Jean-Paul Médaille of the Congregation of Jesus (b. at Carcassonne, 29 Jan., 1818; d. at Auch, 15 May, 1850). He was admitted into the Society in 1840, became noted as a teacher of rhetoric and philosophy before entering upon his career as a preacher, in which he distinguished himself by his great oratorical power, but most especially by his influence over the souls. For a few of his most fervent penitents to consecrate themselves to the service of God, and addressed himself to the Bishop of Le Puy, the Right Rev. Henri de Maupas, a friend and disciple of the great St. Vincent de Paul. The bishop invited the aspirants to assemble at Le Puy where seven young women were received into the order on charge of the orphan asylum for girls. On 15 October, 1850, he addressed them as a religious community, placed them under the protection of St. Joseph, and ordered that they should be called the Congregation of the Sisters of St. Joseph. As their numbers increased,
be gave them rules for their guidance, and as the congregation had been established in the diocese for the Christian education of children, he recommended that the teachers fit themselves especially for this important work. He also prescribed as their religious dress a black habit and veil, a black cincture on which a large rosary is worn, a hooded white linen acumbens, a white linen collet fastened across the forehead, and a white linen gimp fastened under the chin. Later a white linen gimp was added. In regard to the spirit by which the sisters were to be animated, Bishop de Maupas writes: "As I have found in the Visitations Order a sort of blessed predilection for the exact observance of the holiest laws of humility and devotion, I have determined..." The Congregation of St. Joseph on the same model, and in the same spirit, as the Sisters of the Visitations before they adopted enclosure." The constitutions which Father Médaille wrote for the sisters are borrowed from the rules of St. Ignatius, the saintly founder adding observations from his own experience. According to the rule, each community was to consider as its superior the bishop of the diocese, who was to appoint a spiritual father to accompany him, or, in his absence, to preside at the election of superiors and perform such offices as the necessities of the community might require. He was, at least, for the probation time of a postulant, and four years for novitiate training, two years preparatory, and two years after the making of the vows, which are final. At her profession, the novice receives a brass crucifix, which the bishop presents with these words: "Receive, my child, the cross of Our Lord Jesus Christ, to which you are affixed by the three vows as by so many nails; wear it openly on your breast as a most sure defence against the enemy; endeavour especially to carry it faithfully in your heart, by loving it tenderly and by bearing with delight and humility this sweet burden. May it be a sign whereby the faithful may know you and by it may give you the love of the cross with Jesus, you may also triumph with Him in glory." The sisters devote three hours a day to their regular devotions. They recite the Office of the Blessed Virgin on Sundays and feasts of obligation. On other days, the Office of the Holy Ghost is substituted.

The successor of Bishop de Maupas, Bishop Armand de Béthune, approved the congregation, 23 September, 1655, and Louis XIV confirmed by letters patent the first establishments of the Sisters of St. Joseph in the cities of Le Puy, St-Dié, and several other places in Voltaire. The sisters later introduced their way of life into the kingdom of Clermont, Vienne, Lyon, Grenoble, Embrun, Gap, Sisteron, Vivier, Uges, and almost the whole of France. Foundations were made also in Savoy, Italy, and Corsica.

In 1793 the convents and chapels of the sisters were confiscated, their annals were destroyed, and the religious were obliged to join communities in other countries, or to return to their respective homes in the world. The congregation had its martyrs, three during the persecution in Dauphiné, for refusing to take the civil oath, and two in another persecution in Brittany. During the reign of terror, several Sisters of St. Joseph died for the Faith, and several others escaped the guillotine only by the fall of Robespierre. Among the latter was Mother St. John Fontbonne, who in her notebook records the names of four Sisters of St. Joseph imprisoned with her at St. Dié, and three in the dungeon of Four, and twenty in Clermont and other parts of France.

The first use Mother St. John made of her liberty was to try to reassemble her dispersed community. She applied in vain to the municipality for the restoration of the convent in which she had invested her dowry, and while awaiting the dawn of a brighter day, received a letter from the Rev. Claude Cholletan, invited Mother St. John to repair, in 1807, to Saint-Etienne to take charge of a little band of religious representing different communities which, like that of St. Joseph, had been disbanded during the Revolution. Other young women joined the little household, all of whom Mother St. John zealously trained according to the life and rules of the first Sisters of St. Joseph. The community prospered. In 1809 the Congregation approved of the return of the sisters to their long vacant convents, and in some cases Revolutionary proprietors sold back to the sisters the property which had been confiscated. On reopening the mission at Monistrol, Mother St. John expressed great joy and satisfaction. The work of the congregation continued, the increase in numbers keeping pace with demands made on every side for convents and Catholic schools. Wherever obedience directed, thither the missionaries fanned, till representatives of the community might be counted in nearly every country in Europe, on the distant shores of Asia, and in the fastnesses of Africa.

The recent upheaval in France is like history repeating itself in the spirit of the Revolution. Hundreds of convents, schools, and charitable institutions, belonging to the Sisters of St. Joseph, have been suppressed, and the religious have been obliged to seek safety and shelter in other lands. Consequently many new missions, in the new nations of the Americas, and in the United States, have been recently opened. In 1903 four sisters who fled from France at the beginning of the troubles there, sought and obtained hospitality at St. Joseph's Convent, Flushing. They remained nearly two years, or until they had sufficiently mastered the English language, and fitted themselves for educational work awaiting them in Minnesota, where they have since opened three little mission houses.

**Boston.**—In 1873 the Sisters of St. Joseph of Brooklyn opened their first school at Jamaica Plain, in the Archdiocese of Boston, and three years later established new missions in the United States, and successively to Cambridge (1885), Brighton, and Canton (1902). The mother-house is still at Brighton. The sisters were soon in demand throughout the archdiocese, and now (1910) number 300, in charge of an academy, 12 parochial schools, a school for the deaf, and an industrial home for girls. They have 700 children under their care.

**Brooklyn.**—In the spring of 1856 the Right Rev. John Loughlin, first Bishop of Brooklyn, applied to the mother-house at Philadelphia for sisters, and two religious were named for the new mission, joined during the same session in the Seminary of the Holy Ghost, and the latter transferred to the Institute of Our Lady. The Academy, Williamburg, was opened on 8 Sept., 1856, and in the following year a parochial school was inaugurated. In 1860 the mother-house, novitiate, and boarding school were removed to Flushing, Long Island, whence the activity of the sisters was gradually extended over the diocese. In 1863 the mother-house and novitiate were again transferred to Brentwood, New York, where an academy was opened the same year. The community, now (1910) numbering over 600 members, is represented in over 50 parishes of the diocese, in which the sisters preside over 8 academies, 50 parochial schools, 3 orphan asylums, a home for aged women, and 2 hospitals, having under their care 11,000 children, not including 1300 orphans. They teach Christian doctrine in many Sunday schools besides those attached to the schools under their charge. In nearly all the mission houses are evening classes for adults to whom the sisters give religious instruction. They also visit the sick in the parishes in which they reside.

**Buffalo.**—The Sisters of St. Joseph were introduced into the Diocese of Buffalo in 1854, when three sisters from Carondelet, St. Louis, made a foundation at Canandaigua, New York. Two years later one of these sisters was brought to Buffalo to assume charge of Our Lady of Lourdes Institution for the instruction of deaf mutes, which had lately
been established. The novitiate was removed from Canandaigua to Buffalo in 1861. The community developed rapidly and soon spread through different parts of the diocese. By 1868 the sisters were sufficiently strong to direct their own affairs, and elected their own superior, thus forming a new diocesan congregation. In 1891 the mother-house and novitiate were transferred to Buffalo, the charge of the outskirts,等工作, and the academy was erected. The congregation, which now (1910) numbers 285 members, also has charge of 28 parochial schools in the diocese, 3 orphan asylums, a working boys’ home, an infants’ asylum, and a home for women and working girls. The sisters have under their care 5000 children, not including 470 orphans and deaf mute and 600 inmates of their various homes.

*Erlington.* — In 1873 the Rev. Charles Boylan of Rutland, Vermont, petitioned the mother-house of the Sisters of St. Joseph at Flushing, Long Island, for sisters to take charge of his school. Several sisters were sent, and a novitiate was opened at Rutland, 15 October, 1875. The congregation now (1910) numbers 75 religious, in charge of an academy attached to the mother-house, 6 parochial schools, one in the Diocese of Pittsburgh, and a home for the aged, with 96 inmates. The total number of children under the care of the sisters is 740.

*Chicago.* — The Sisters of St. Joseph were established at La Grange, Illinois, 2 October, 1889, by two sisters under Mother Stanislaus Leary, formerly superior of the diocesan community at Rochester, New York. On 14 July, 1909, the corner-stone of the mother-house was laid. The sisters, who now (1910) number 65, are in charge of an academy with an attendance of 100 and a school for boys.

*Cleveland.* — The Sisters of St. Joseph of the Diocese of Cleveland are chiefly engaged in the parochial schools. They number about 80 and have charge of an academy and 15 parish schools, with an attendance of 4500.

*Concordia.* — In 1883 four Sisters of St. Joseph arrived at Newton, Kansas, from Rochester, New York, and opened their first mission. After remaining there a year they located at Concordia, Kansas, in the fall of 1884, and established the first mother-house in the West, in what was then the Diocese of Leavenworth. The congregation now numbers 240, in charge of 3 academies, 2 hospitals, and 26 schools, in the Archdiocese of Chicago and the Dioceses of Marquette, Rockford, Kansas City, Omaha, Lincoln, and Concordia. The sisters have about 4000 children under their care.

*Detroit.* — In 1889 Sisters of St. Joseph from the Diocese of Ogdensburg established a new congregation at Kalamazoo, Michigan. The novitiate was transferred, in 1897, to Nazareth, a hamlet founded by the sisters on a four-hundred-acre farm. The congregation, which numbers 187, has charge of a hospital, training school for nurses, normal school, a home for feeble-minded children, an orphan asylum, and several other educational institutions, besides supplying teachers for 7 parish schools of the diocese. The sisters have about 1000 children under their care, including 200 orphans.

*Erie.* — This congregation was founded in 1860 by Mother Agnes Spencer of Carondelet, Missouri, who, with two other sisters, took charge of St. Ann’s Academy at Carnis, Pennsylvania, where postulants were admitted. In 1864 a hospital was opened at Erie, and the Sisters took charge of the parochial schools of that city. Later an orphan asylum, a hospital, and a home for the aged were erected in the city of Erie. Villa Maria Academy was opened in 1892 and in 1897 was made the novitiate and mother-house of the Sisters of St. Joseph in the Erie diocese. The congregation now numbers 210 members, in charge of 14 parochial schools, attended by 3900 children, in addition to the other institutions mentioned above.

*Fall River.* — In 1902 nine Sisters of St. Joseph from the mother-house at Le Puy took charge of the school in the French parish of St.-Roch, Fall River, Massachusetts. The accession of other members from the mother-house enabled the community to take charge of all the schools in the city attached to French parishes. In 1906 St. Therese’s Convent was formally opened as the provincial house of the community, which was legally incorporated in the same year, and a novitiate was established. The sisters now number 43, in charge of four parochial schools, with an attendance of 2475.

*Fort Wayne.* — The Sisters of St. Joseph, with their mother-house at Tipton, number 60, in charge of an academy and 5 parochial schools, with an attendance of 1000.

*Ogdensburg.* — In 1880 several sisters from the mother-house at Buffalo made a foundation at Watertown, New York, which was later strengthened by the accession of another sister from the Erie mother-house. From Watertown as a centre missions were opened in other parts of the diocese. The congregation, which now numbers about 75 members, has charge of several parish schools, the Immaculate Heart Academy at Watertown, which is the mother-house and a school for boys, having about 1100 children under its care. In 1907 the sisters established a mission at Braddock, Pennsylvania, for work in the parochial schools there.

*Philadelphia.* — In 1847 the Sisters of St. Joseph of Carondelet, in response to an appeal of Bishop Kenrick, sent four members of the community to Philadelphia to take charge of St. John’s Orphan Asylum, until that time under the Sisters of Charity.

The Know-Nothing spirit, which had but a short time previously led to the Philadelphia riots, to the burning and desecration of Catholic institutions, was still rampant, and the sisters had much to suffer from bigotry and difficulties of many kinds. Shortly afterwards they were given charge of several parochial schools, and thus entered on what was to be their chief work in the coming years. By the establishment, in October, 1855, under the patronage of Venerable Bishop Neuman, of a mother-house at Mount St. Joseph, Chestnut Hill, the congregation in Philadelphia began to take a more definite development. When, in 1865, the Sisters of St. Joseph of St. Louis formed a generalate, approved later by the Holy See, the congregation of Philadelphia, by the will of the bishop, preserved its autonomy. During the Civil War, detachments of sisters nursed the sick soldiers in Camp Curtin and the Church Hospital, Harrisburg; later, under Surgeon General Smith, they had more active duty in the floating hospitals which received the wounded from the southern battle-fields. When the number of religious increased to between three and four hundred, and the works entrusted to them became so numerous and varied as to necessitate an organization more detailed and definite, steps were undertaken to obtain the papal approbation, which was received in 1885. The Sisters of St. Joseph of Philadelphia now (1910) number 626 professed members, 64 novices, and 31 postulants, in charge of a collegiate institute for the higher education of women, an academy and boarding-school, 42 parish schools, and 2 high schools in the Archdioceses of Philadelphia and Baltimore, and in the Dioceses of Newark and Harrisburg, and 4 asylums and homes. The number of children under their care, including those in asylums, is nearly 26,000.

*Pittsburg.* — In 1869, at the petition of the pastor of Ebensburg, Pennsylvania, three sisters were sent there to open a day-school and a boarding-school for boys. The accession of new members and the sisters to meet the increasing demands made upon them, and
they now number 175, in charge of 23 schools in the Archdiocese of Baltimore and the Dioceses of Pittsburgh, Cleveland, and Columbus, with an attendance of 6075; they also conduct a hospital and 2 boarding-schools. In 1801 the mother-house was transferred to Baden, Pennsylvania.

Rochester.—In 1864 four Sisters of St. Joseph from Buffalo opened an asylum for orphan boys at Rochester. Three years later the Diocese of Buffalo was divided and that of Rochester created, and the following year, 1868, the Rochester community dissolved its affiliation with the Buffalo mother-house and opened its own novitiate and mother-house at St. Mary’s Boys’ Orphan Asylum, later transferred to the Nazareth Academy, Rochester. The number of institutions now directed by the Sisters of St. Joseph of Rochester is not known. Each of the convocations of the province, in 1867, 1877, 1897, 1907, and 1917, held at Carondelet, was attended by representatives from all the houses of the congregation in America. The requirements of the new condition, was presented to the Holy See for approval. In September, 1863, Pope Pius IX issued the letter of commendation of the institute and its works, holding the constitutions for examination and revision by the Sacred Congregation of Bishops and Regulars. The final revision was made in 1877, and ten years later, 1887, a decree approving the institute and constitutions was issued by the Sacred Congregation of Bishops and Regulars. On 31 July, 1877, Pius VII, by special Brief, confirmed the institute and constitutions, and added the title of “Sisters of Charity” to the name of the congregation. The community numbers 430 members, in charge of 15,000 children.

St. Augustine.—In 1866 eight Sisters of St. Joseph from the mother-house at Le Puy were sent to St. Augustine, at the request of Bishop Verot, to teach the coloured people, recently liberated by the Civil War. In 1868 a novitiate was established, and about this time the missions of the Sisters of the Order of Mercy from the city, the training of the impoverished whites also devolved on the new community. In 1889 connexion with the mother-house in France was severed, and many of the French sisters returned to their native land. The sisters now number about 105, in charge of 6 academies, 3 4-day schools, and orphanages. They have under their charge about 1438 white and 240 colored children, and about 35 orphans. The mother-house of the Florida missions is at St. Augustine.

St. Louis.—In the year 1834 the Right Rev. Joseph Roest of St. Louis, Missouri, called at the mother-house of the Sisters of St. Joseph at Lyons and asked Mother St. John Fontbonne, the superior, to send a colony of her daughters to America. The financial aid necessary was obtained through the Countesse la Roche Jacquelin. Arrangements were soon perfected, and on 17 January, 1836, six sisters sailed from Liverpool for New Orleans, where they were met by the Bishop of St. Louis and Father Timon, afterwards Bishop of Buffalo. They arrived at St. Louis on 25 March. The house, a small log cabin, which was to be the central mother-house of the future congregation of the Sisters of St. Joseph of Carondelet, was located at Carondelet, a small town six miles south of St. Louis. At the time the sisters arrived at St. Louis, this humble house was occupied by the Sisters of Charity, who cared for a few orphans soon after transferred to a new building. While waiting for their home, they received a call from St. Joseph, Illinois, where a zealous Vincentian missionary desired the help of the sisters in his labours among the French Creole population of that section. Three religious volunteered for this mission. The people among whom the sisters laboured in St. Louis were poor and rude, and apparently destitute of any taste for either religion or education. These obstacles seemed but to increase the zeal of the sisters, and by degrees postulants were received, parochial schools and orphanages opened, and new works begun in various parts of the diocese. As early as 1847 foundations were made in other sections of the United States; in July, 1842, the order, Ann Eliza Dillon, entered the novitiate, proving of great advantage to the struggling community, with her fluency in French and English. She died, however, four years later. The community increasing in proportion to its more extended field of labour, a commodious building was erected to answer the double purpose of novitiate and academy, the latter being incorporated in 1853 under the laws of the State of Missouri. Because of the rapid growth of the institute and the increasing demand for sisters from all parts of the United States, the superiors of the community were by 1860 forced to consider means best adapted to give stability and uniformity to the growing congregation. A general chapter was convened in May, 1860, to which representatives from every house of the congregation in America were called. At this meeting a plan for uniting all the communities under a general government was discussed and accepted by the sisters and afterwards by many of the bishops in whose dioceses the sisters were engaged. This plan, together with the concordat, which is the constitution of the community, and the requirements of the new condition, was presented to the Holy See for approval. In September, 1863, Pope Pius IX issued the letter of commendation of the institute and its works, holding the constitutions for examination and revision by the Sacred Congregation of Bishops and Regulars. The final revision was made in 1877, and ten years later, 1887, a decree approving the institute and constitutions was issued by the Sacred Congregation of Bishops and Regulars. On 31 July, 1877, Pius IX, by special Brief, confirmed the institute and constitutions, and added the title of “Sisters of Charity” to the name of the congregation. The community numbers 1050 members, with 1802 sisters, in charge of 125 educational institutions, including colleges, seminaries, conservatories of music and art, and parochial schools, with an attendance of 40,948; 17 charitable educational institutions, including orphan asylums, Indiana.
coloured, and deaf-mute schools, with an attendance of 2121; and 10 hospitals, with an average of 8285 patients.

Savannah.—The Sisters of St. Joseph were established at Savannah in 1867, in charge of the boys' orphanage, and soon afterwards were constituted an independent diocesan congregation. In 1875 the orphanage was transferred to Washington, Georgia, and with it the mother-house of the congregation. The sisters now number about 65, in charge of an academy, 2 boarding-schools for small boys, and several parish schools, with a total attendance of over 5000.

Springfield.—In September, 1880, seven Sisters of St. Joseph were sent from Flushing, Long Island, to take charge of a parochial school at Chicopee Falls, Massachusetts. They were followed, two years later, by seven sisters for Webster, and in 1885 by twelve more for the cathedral parish, Springfield. In 1885 the Springfield mission was constituted the mother-house of an independent diocesan congregation. The sisters are in constant demand for parochial schools and now (1910), with a membership of 300, conduct 19, with an attendance of about 9000. In 1889 they took charge of the school at Windsor Locks in the Diocese of Hartford, from which they were later recalled to the Springfield diocese. The curriculum of their boarding-school at Chicopee embraces a normal course. They also visit the sick and take charge of Sunday-school classes. Since 1892 the sisters have devoted themselves particularly to the work of establishing Catholic high schools, and high-school courses are connected with practically all the parochial schools under their supervision.

Wheeling.—In 1853 seven sisters from Carondelet, Missouri, opened a private orphanage and hospital in Wheeling, and in 1856 took possession of a building and opened schools, an orphan asylum and a hospital. From 19 October, 1889, the community was independent of the St. Louis mother-house. During the Civil War the hospital was rented by the Government and the sisters enrolled in government service. After the war and the reorganization of the hospital on its present lines, the sisters extended their activities to various parts of the diocese; they now number over 100, in charge of 3 hospitals, 12 schools and academies, and 1 orphan asylum, with about 1700 children under their care.

Wichita.—In August, 1887, four Sisters of St. Joseph were commissioned to go from Concordia, Kansas, to Abilene, Kansas, at that time in the Diocese of Leavenworth. The following year the Right Rev. L. M. Fink, Bishop of Leavenworth, decided that those sisters should belong to his diocese exclusively, and in so doing they became the nucleus of a new diocesan community of the Sisters of St. Joseph, having as their mother house established at Abilene, under the title of Mount St. Joseph's Academy. The community increased in numbers and soon branched out, doing parochial school work throughout the diocese. In 1892 the name of the Diocese of Leavenworth was changed to Kansas City, Kansas, and for the time being the Sisters of St. Joseph were diocesan sisters of the Diocese of Kansas City. In 1896, when the diocese of the three Kansas dioceses, Concordia, Kansas City, and Wichita, was agitated, Bishop Fink of Kansas City, to keep the Sisters of St. Joseph of his diocese within the limit of his jurisdiction, moved the mother house to Parsons, Kansas. But after the division was made, the following year, Abilene was in the Concordia diocese, and Parsons was in the Wichita diocese, and the mother-house of the Sisters of St. Joseph being in Parsons, the community belonged to the Wichita diocese. By a mission-house in both the Diocese of Concordia and the Diocese of Kansas City. Since that time the name of the Diocese of Kansas City has been changed to its original name: Diocese of Leavenworth. In 1907 a colony of these sisters opened a sanitarium at Del Norte, Colorado, in the Diocese of Denver. At the present time (1910), the sisters, who number 200, have charge of 3 hospitals, all in the Diocese of Wichita, and 18 parochial schools, including one in the Diocese of Leavenworth, in the Diocese of Kansas City, Missouri, and 3 in connection with the sanitarium at Del Norte, Colorado.

Canada.—Hamilton.—In 1852 five sisters from the mother-house at Toronto established a foundation at Hamilton, where they at once opened an orphanage and began their work in the parochial schools of the diocese. During the cholera epidemic of 1866 they cared for those afflicted. On the erection of the Diocese of Hamilton in 1856, the community became a separate diocesan congregation, and a few months later a novitiate was established at Hamilton. By the passage of the Separate Schools Bill in 1856 the sisters were given control of the education of the Catholic children of the city. The congregation gradually extended its activities to other parts of the diocese and now (1910) numbers 155 religious in charge of 2 hospitals, 2 houses of providence, and 12 schools, with an attendance of 2300.

London.—The community of Sisters of St. Joseph at London was founded in 1868 by five sisters from the mother-house at Toronto, who opened an orphan asylum the following year. On 18 December, 1870, the congregation became independent, with a novitiate of its own, and on 15 February, 1871, the Sisters of St. Joseph of London, Ontario, were legally incorporated. Several missions were opened in various parts of the diocese, and in 1888 a hospital was established at London, to which was attached a training school for nurses. The sisters now (1910) number 131, in charge of 10 mission houses, including 2 hospitals, an orphan asylum, and 2 houses of refuge for the aged; they have about 2200 children under their care.

Peterborough.—In 1890 several sisters from the mother-house at Toronto established a house at Peterborough, which became in turn the nucleus of a new congregation. The community now (1910) numbers 300 sisters, in 14 houses, in charge of 1 hospital, 3 hospitals, 2 orphanages, a home for the aged, and 10 separate schools, in the Dioceses of Peterborough and Sault Ste Marie. They have over 1000 children under their care.

Toronto.—The mother-house of the Sisters of St. Joseph at Toronto was established from Le Puy, France, in 1851. The congregation now comprises 266 members, in charge of 3 academies, 1 high school, and 22 separate schools, with a total attendance of 5025; 5 charitable institutions, with 900 inmates; and 1 hospital, with an annual average of 2900.

The Sisters of St. Joseph.
native orphanage, a day-school, dispensary, and a novitiate for natives. In other parts of India the sisters conduct a primary school, a boarding- and day-school, an intermediate school for Hindus, with an attendance of 200, a home for Rajpoot widows and another home for widows, a workshop for widows and orphans, and 4 orphanages. At Falcanda are two sisters who were catechists and sacristans. In these missions the primary, secondary, and intermediate schools are under the Government. In some the orphanages are aided or wholly supported by the Government. Everywhere remedies are given to the sick natives, and the work of infant baptism of natives is continued. When the natives, after the death of the congregation, the noviceship is made apart from the Europeans, but they are treated in every way as members of the community. The work of the native novitiate is only in its infancy, and it is hoped that the native sisters will in the future be most useful with the native population. The Indian foundation was made in 1849.

FRANCESC M. STEELE.

Sisters of St. Joseph of Bourg.—In 1819 a foundation from the mother-house of the Sisters of St. Joseph at Lyons was made at Belley; a novitiate was opened, and houses were established in the other parts of the country. In 1823, at the desire of the Bishop of Belley, the sisters of the diocese were constituted an independent diocesan congregation. The mother-house was transferred to Ain, in 1825, whence houses were founded at Ferney, Gap, Grenoble, Bordeaux, and elsewhere. In 1928 and again in 1833, Bishop Devie obtained the approval of the French Government for the new congregation. By 1865 the number of members had reached 1700, and the congregation was established throughout France, the principal academies being at Bourg, Paris, Bourgogne-sur-SEine, and Marssac.

In 1854 the sisters were sent from Bourg to establish a house at Bay St. Louis, Mississippi, in the Diocese of Natchez. In 1863 a novitiate was opened at New Orleans, and later one was established at Cedar Point, Hamilton County, Ohio. The sisters are now in charge of 15 educational institutions, including several academies, as well as coloured and Indian schools, a home for working girls, and an industrial school, with about 1800 children and young women under their care.

The Sisters of St. Joseph were established at Superior, Wis., in 1867 by seven sisters from Cincinnati. There are now 21, in charge of 3 schools, with an attendance of 225.

In 1904 a colony of French sisters was sent out from Bourg, and schools have since been opened among the French Canadians in Minnesota and Wisconsin. In the Diocese of Duluth they have 2 academies with an attendance of 225.

Sisters of St. Joseph of Cambry.—After the reconstruction of the congregation of the Sisters of St. Joseph at Lyons, by Mother St. John Fontbonne, a colony of sisters was sent to Cambry, in Savoy, in 1812. The tide of anarchy and revolution had wrought awful havoc in France, and the education of youth, especially the children of the working classes, was the special work devolving on the Sisters of St. Joseph. The works of charity, the care of the sick in hospitals, of the aged and orphans, and the visitation of the sick in their homes, were also carried on as prior to the Revolution. The original house was subsequently enlarged and became what it is now, in the French houses, consisting of a black dress, veil and underveil, wooden cincture, wooden beads strung on brass and fastened to the cincture, a brass crucifix on the breast, and a linen coronet, front, and gimp. In 1843 Mother St. John Marcoux, superior since 1812, resigned her office, which was assumed by Mother Félicité, under whom the congregation continued its extraordinary development. More than eighty houses rose beneath her hand, and when, in 1861, a state normal school was opened at Rumilly, Savoy, it was placed in charge of the sisters.

Meanwhile the Chambéry sisters had been constituted a diocesan congregation, but as years went on a stronger administration became necessary. The Congregation was made subject to the Bishop of Chambéry, and papal approbation was granted in 1794 by rescript of Pius IX. Under the new form of government the congregation is subject to a superior general, whose term of office is six years, and is divided into provinces, each possessing a novitiate. The novitiate of each province after the death of the congregation, for two years, after which they bind themselves by perpetual vows. The rule is based on that of St. Augustine.

The province of Denmark, whither the sisters were sent in 1856, has its seat at Copenhagen, and now numbers 400 members, in charge of flourishing parochial and private schools and a large hospital in the capital, with schools, orphan asylums, and hospitals, on a smaller scale, scattered all over the kingdom. From Copenhagen sisters were sent to Iceland, where they have a school, give religious instruction, visit the sick, and, during the proper seasons, repair to the fisheries on the coast of the Gulf. In 1901 this province opened a house at Brussels, where the sisters have a large public school under the Government.

The Brazilian province, founded in 1859, has several flourishing academies, besides day-schools for the upper classes, schools for negroes, hospitals, orphanages and foundling asylums, and one home for reapers. The sisters number about 250, under the provincial house at Itu. In 1862 sisters were sent to establish a school at Stockholm, and in 1876 to Gothenburg. The Norwegian province, dating from 1865, with seat at Christiania, has over 150 sisters. The province of Russia, founded in 1872, with novitiate at Tarnopol, Galicia, outside the frontier, has establishments at St. Petersburg, Moscow, and Odessa: two large academies, a day-school, an orphan asylum, a hospital, a home for the aged, etc. In 1876 the Sisters of St. Joseph of Rome, founded from Turin in 1859, were annexed to the Chambéry branch; the province now (1910) comprises 15 houses, mainly educational institutions. In Rome itself the sisters have an academy, with 100 pupils, 2 day-schools, and one poor school.

At the request of the Congregation of Propaganda, and with the approval of the Bishop of Springfield, five sisters were sent, in 1855, to Lee, Massachusetts, for work in the parochial schools. As their activities developed chiefly in the Diocese of Hartford, the novitiate, which had been temporarily established at Lee, was, in 1888, transferred to Hartford, Connecticut.

The number of religious is now 44, and in 1910 reached 155, in charge of 9 schools attended by 2100 pupils, 2 hospitals, with an annual average of 4200 patients. The sisters also instruct about 1000 children in Christian doctrine, and have the domestic care of the Hartford seminary and La Salle College in the same city.

In 1902 many French houses of the order were closed by the Government, in consequence of which a large number of sisters left for the foreign missions, chiefly Denmark and Russia. The province of Savoy, previously in charge of 52 establishments, has now but 14. The entire generalate comprises 1370 members.

Sisters of St. Joseph of St-Vallier.—In 1863, at the request of Mgr Jean-Baptiste de la Croix Chevrier, Count of St-Vallier, later Bishop of Quebec, two Sisters of St. Joseph from Le Puy took charge of a hospital recently founded by him at St-Vallier (Drôme). As the new community grew in numbers, it also devoted its attention to the education of youth.
1890 the approval of Pope Leo XIII was obtained for the rules of the congregation. When religious teaching was forbidden in France, the sisters, with the permission of Archbishop Begin of Quebec, took refuge in New York (1890), erected a small house at St. Jean, Port-Joli, where a boarding-school for girls was opened. The sisters now number about 50, in charge of a hospital, an academy, and 6 model elementary schools. In 1905 they were placed over a model school in the city of Quebec, where they opened a novitiate. The first reception taking place the following year. The sisters in France are still in charge of 3 hospitals.

**THE SISTERS OF ST. JOSEPH.**

**LITTLE DAUGHTERS OF ST. JOSEPH,** established at 45 rue Notre-Dame de Lourdes, Montreal. After the blessing of the bishop of the diocese (Mgr Bourget) had been obtained, the institute was founded on 26 April—the feast of the Patronage of St. Joseph—1857, by the Sulpician father, Antoine Mercier. Its object is to aid the clergy in spiritual and temporal matters, both by the ministry of prayer and by discharging certain manual services, such as the manufacture of liturgical vestments and ornaments, and the manufacture, repair, and cleaning of the linen destined for the service of the altars of the various churches, etc. Missionaries without resources and poor seminarians are special objects of the charitable attentions of this community. Always under the direction of the Sulpicians, to whose assistance and devotion it is indebted for its prosperity, this little institute had the consolation of seeing its existence and regulations canonically approved by Mgr Bruchési, Archbishop of Montreal, on 20 September, 1897. The community is now composed of 63 professed sisters, 6 novices, and 5 postulants.

**LITTLE DAUGHTERS OF ST. JOSEPH.**

**POLISH FRANCISCAN SISTERS OF ST. JOSEPH.**—In 1901 about forty sisters, all of Polish nationality, branched off from the School Sisters of St. Francis, whose mother-house is at Milwaukee, and after obtaining the necessary dispensation from the Holy See through the efforts of Archbishop Messmer, in April, 1902, organized themselves into the Polish Franciscan Sisters of St. Joseph, with their mother-house at St. Mary, Diocese of Green Bay, and have since increased to nearly two hundred members, in charge of ten schools. They live under the rule of the Third Order of St. Francis, and their particular object is the education of the young in Catholic schools.

**JOSEPH J. FOX.**

**SISTERS OF ST. JOSEPH OF CLUNY,** founded in 1798, by Anne-Marie Javouhey at Seurre, in Burgundy. The foundress was born in 1779, at Chamblane, near Seurre, and though only ten years old, she frequently fetched priests to the dying, at the risk of her own life, in the Revolution of 1789. Nine years later she, with the help of a Trappist Father, founded a small congregation at Seurre, for the instruction of children and for nursing the sick and taking charge of orphans. The congregation was intended to be on the same lines as the third order (1904). In 1864 the habit was approved by Pius IX and henceforth the congregation was known as the Sisters of St. Joseph of Cluny. Mother Javouhey died in 1851. The sisters undertake all kinds of charitable works, but they devote themselves especially to missionary labours and the education of the young. Their rule was approved by Pius IX and confirmed by Leo XIII. The foundress was declared Venerable by the Holy See, 11 Feb., 1905. The sisters number about 4000, and are widely spread over the world. The mother-house is at St. Pierre de Cluny (France) and there are numerous houses of the congregation in various parts of France; there are houses also in Italy, Spain, Portugal, Belgium, England, Scotland, Ireland, Chili, Peru, the East and West Indies, India, and Ceylon. In 1861 the congregation spread to the East and West Coasts of Africa, New Caledonia, and Victoria (Australia). Altogether 45,000 children are being educated by the sisters, and 70,000 poor and sick are cared for by them in their various institutions, which now (1910) number 385. Thirty-one of the sisters perished in the terrible catastrophe at Martigny, in 1902, when the town of St-Pierre was wrecked by a volcanic eruption. In England the sisters have one house at Stafford, where there is a novitiate for the English-speaking subjects; there is a high-class day-school attached to the convent. There are three houses in Scotland, all in Ayrshire, with which are connected a boarding-school and 4 elementary schools, attended by 500 children. Total number 27.

In Paris the famous hospital of Pasteur is under the care of forty sisters of this congregation.

*Life of Rev. Mother Javouhey* (Dublin, 1903).

**FRANCESCA M. STEELE.**

**SISTERS OF ST. JOSEPH OF PEACE.**—This institute, founded in the year 1884 at Nottingham, England, by the Right Reverend E. G. Bagshawe [then bishop of that diocese, now (1910) Archbishop of Selsey], with rules and constitutions under the authority of the Holy See, has for its special object the domestic and industrial training of girls (chiefly of the working class) with the view to promote peace and happiness in families, in union with and in imitation of the Holy Family of Nazareth. In addition to this, the sisters are employed in educating the young, instructing converts, visiting the sick poor, and caring for orphans, the blind, and the sick in hospitals. The administrative body is composed of a superior general and five councillors elected for six years. There are no lay sisters. The postulancy lasts for six months, and the novitiate for two years, after which vows are taken for three years, and then the Sisters take the habit, black, with a scapular of the same colour, a black veil, and white linen kerschief, bonnet and fore headband, a leather cincture, and a five decade rosary beads. A silver ring is given at the final profession. Novices wear a white veil during the novitiate. In March, 1903, the institute was submitted to the Sacred Congregation of Propaganda by the founder, and in the September following the Decree "Lauda" was obtained. At present the institute has three houses in England: the mother-house situated at Nottingham, a house at Grimsby in the same diocese, and one at Hanwell in the Archdiocese of Westminster. The sisters teach in the parish elementary schools at Nottingham and Hanwell, and have a middle-class school attached to each convent. In Grimsby, besides a middle-class school, there is a girls' orphanage and a steam laundry, which is a means of maintenance as well as of training in that branch of household work. The younger children attend the parish school.

The first foundation in America was established in 1855 at the request of the Right Reverend Bishop Wigger of the Diocese of Newark, N. J., who became deeply interested in the work of the institute, and was convinced of the great need of its diffusion among a community devoted to the protection and training of poor girls for a life of usefulness in the world. The place selected for this object was in St. Peter's Parish, Jersey City, in charge of the Jesuit fathers, where the sisters met with a true friend and supporter in the
saintly Father McAtee, S.J. (d. 1904), to whose spiritual direction and kind encouragement were, by the Providence of God, due the successful labours of the young community. St. Joseph’s Home, Jersey City, an orphanage, is the principal home of the province, with its novitiate, at Englewood, N. J. Here they were in addition erected for the benefit of girls, where they could spend their summer holidays. It is beautifully situated on the Palisades overlooking the Hudson River. The blind were first taken in charge in a small building in Jersey City, on the site of which the present Institute of the Blind stands. The growing needs of this institution led the purchase of other property in the neighbourhood, and now men, women, and children, are cared for in separate buildings. In the school the children are taught by the improved methods of raised letters and the point system, while the older inmates are employed in various branches of industry. For greater facilities and the accommodation for girls a second house was opened in Jersey City, where industrial classes are held on four evenings in the week, and instruction given in plain sewing, dressmaking, millinery, and cooking. The "Orphans’ Messenger and Advocate of the Blind", a quarterly, published on the premises of St. Joseph’s Home, by the orphan boys, under the direction of a proficient master, is the chief source of maintenance for these charities, especially for the blind. It has a wide circulation in the United States and Canada. From this province houses were founded on the Pacific Coast, the first (St. Joseph’s Hospital) being established in 1890 at Bellingham, Washington (Diocese of Seattle). Later on other foundations were made in British Columbia (Diocese of New Westminster), namely a hospital at Rossland, another at Greenwood, and a day and boarding school at Nelson. Rectories were opened for girls at Seattle, Washington. The houses in the West form one province, which has its own novitiate.

E. G. BAGSHAWE.

SISTERS OF ST. JOSEPH OF ST. HYacinthe, founded at St. Hyacinthe, Canada, 12 Sept., 1877, by the bishop of that diocese, Louis-Zéphirin Moreau, for the Christian instruction of children and the visitation and care of the sick. Civil incorporation was granted 30 June, 1881, and canonical institution 19 March, 1882. The activities of the congregation are confined to the Diocese of St. Hyacinthe, in which 150 sisters are engaged, and under 5000 children under their care.

Le Canada Ecclésiastique (Montreal, 1910).

SISTERS OF ST. JOSEPH OF THE APPARITION, with mother-house at Marseilles, founded at Guillac, France, in 1830, by Mme Emilie de Viallard, for all kinds of charitable work. The institute sprang rapidly from the beginning, and although some of the houses in France were closed during the French Revolution, they now number over 100 in various parts of the world, with over 1000 sisters. The congregation received the approval of the Holy See, 31 March, 1832. The sisters have one house in England, at Whalley Park, Manchester, where 10 sisters devote themselves to the care of invalided ladies, for whom they opened a home there in 1905; they also nurse in private houses. They now have about 20 branch houses in the British colonies, in all principal towns in British Burma, Malaya, Ceylon, at Beira, and in India, of which all places there are high schools, homes for the aged, and orphanages under the charge of the sisters. There are other branch houses in Italy, Greece, South Africa, and the Holy Land. The number of sisters varies in each of the colonial houses from 15 to 30. At the request of the bishop of Port, the sisters opened their first house in Western Australia at Fremantle, in 1854, where also they later established a novitiate. They have now in Western Australia 6 communities, with 56 members, in charge of 6 schools, with a total attendance of 1100. The sisters also visit the poor.

STEELE, CONVENTIA OF GREAT BRITAIN (St. Louis, 1903); A us a t av e n a Catholic Directory for 1910 (Sydney).

SISTERS OF ST. JOSEPH OF THE SACRED HEART, a newly Australian foundation, established at Penola, South Australia, in 1866, by Father John Terence Woods and Miss Mary Mackillop, in religion Mother Mary of the Cross (b. 1832; d. at Sydney, 8 Aug., 1909). Father Woods (d. 1886), a man of burning zeal and a pious director of souls, endeavoured to found two religious congregations, one for men, which failed, and one for women, which succeeded beyond his hopes. About 1886 he placed at the head of the latter Miss Mackillop, whom he sent to the Sisters of St. Joseph at Annecy, Savoy, to learn their rule. As much opposition was raised to his project, the founder went to Rome and obtained papal sanction. Since then the numerous communities of this congregation have been placed by the Holy See under the bishops of the dioceses in which they work. Most of the young men who have risen to parliamentary fame owe their early education to these sisters. Their schools receive no government grant, in spite of which they are superior to the free secular schools. The activities of two or three, did the pioneer work in the mission field of Australia, seconding the labours of the clergy so ably that there have been few defections from the Faith. They are the mainstay of missions visited by a priest only once a month or once in three months. In cases where a visit of a priest, the sisters have tolerated, keeping up the day-school and on Sundays gathering the children for catechism and the rosary, and the people for the reading of a sermon, thus preparing them to receive the sacraments on the arrival of a priest. The mother-house of the congregation is at South Wales. The sisters number 650, in charge of 117 schools, with an attendance of 12,500, and 12 charitable institutions, including orphanages and refuges, an industrial home, a girls’ reformatory, etc. The work of the sisters extends over the Archdioceses of Sydney, Adelaide, Melbourne, and Wellington, the Dioceses of Armidale, Wollongong, Port Augustus, Bendigo, Sale, Auckland, Christchurch, Dunedin, and Rockhampton, and the Abbey Nullius of New Norcia. The Sisters of St. Joseph of the Sacred Heart of the Diocese of Bathurst, who have their own constitutions, number 250 in 64 houses.

FRANCESCA M. STEELE.

Joseph Calasanzius, Saint, called in religion "a Matre Dei", founder of the Piarists, b. 11 Sept., 1556, at the castle of Calasanza near Petralia de la Sal in Aragon; d. 25 Aug., 1614, at Rome; feast 27 Aug. His parents, Don Pedro Calasanz and Donna Maria Gastonia, gave Joseph, the youngest of five children, a good education at home and then at the school of Petralia. After his classical studies at Estadilla he took up philosophy and jurisprudence at Lerida and received the degree of Doctor of Laws, and then with honours completed his theological course at Valencia and Alcalá de Henares. His mother and brother having died, Don Pedro wanted Joseph to marry and perpetuate the family. God interfered by sending a sickness in 1582 which soon brought Joseph to the brink of the grave. The parish priest 17 Dec., 1583, by Hugo Ambroscio de Moncada, Bishop of Urgel. Joseph began his labours as priest in the Diocese of Albañacín, where Bishop della Figuera appointed him his theologian and confessor, synodal examiner and procurator, and when the bishop was one for women, which succeeded beyond his hopes. He was sent as Apostolic visitor to the Abbey of Montserrat, and Joseph accompanied him as secretary.
The bishop died the following year and Joseph left, though urgent requests to remain. He hurried to Calais only to work off charity death of his father. He was then called by his Bishop of Urgel to act as vicar-general for the district of Trempe. In 1592 he embarked for Rome, where he found a protector in Cardinal Marcardonio Colonna who chose him as his theologian and instructor to his nephew. Rome offered a suitable field for works of charity, especially for the instruction of neglected and homelees children, many of whom had lost their parents. Joseph joined a Confraternity of Christian Doctrine and gathered the boys and girls from the streets and brought them to school. The teachers, being poorly paid, refused to accept the additional labour without remuneration. The pastor of S. Dorotea, Anthony Brendani, offered him two rooms and promised assistance in teaching, and when two other priests promised similar help, Joseph, in November, 1597, opened the first public free school in Europe. Pope Clement VIII gave an annual contribution to the undenied scholars for good work, so that in a short time Joseph had about a thousand children under his charge. In 1602 he rented a house at S. Andrea della Valle and commenced a community life with his assistants and laid the foundation of the Order of Piarists. Much envy and hostility was excited against him by other teachers but all were overcome in time. In 1612 the school was transferred to the Torres palace adjoining S. Pantaleone. Here Joseph spent the remaining years of his life in his chosen calling. He lived and died a faithful son of the Church, a true friend of orphans and children. His body reposes at Christian donors, and his canonisation was solemnised on 3 Aug, 1748, and his canonisation by Clement XIII, 16 July, 1767.

FRANCIS MERRIMAN.

Joseph Calasanz, Pious Workers of Saint Joseph, of the Mother of God, founded at Vienna, 24 November, 1899, by Father Anton Maria Schwartz for all women of charity, but especially in apostolate in the workingmen. The members of the congregation, who comprise both priests and lay brothers, follow the Rule of the Piarists, modified in some particulars.

The mother-house is the College of Mary Help of Christians at Vienna, which is connected a children's home. The Pious Workers teach Christian doctrine in schools, establish elementary and trade schools, build homes for apprentices and all workmen, open oratories, form associations of working-men, and promote the diffusion of good literature. At Vienna, which has been so far the chief scene of their activity, in addition to undertaking the works already mentioned, they have taken charge of the reformatory (1904), opened a public library, and have founded among other associations a Guard of Honour of the Most Blessed Sacrament. They have three colleges at Vienna, and other foundations at Deutsch-Goriz in Styria and Wolfgang from the Austrian Alps. The prayer-book for working-men compiled by Father Schwartz has already gone through five editions. Other fathers of the society have published dramas for presentation by clubs under their charge, a book of recitations, and a number of biographies. The organ of the congregation is "St. Calasanzianus-Blätter", a monthly issued at Vienna since 1888.

Josephites (Sons of St. Joseph), a congregation devoted to the Christian education of youth, founded in the Diocese of Ghent (Belgium) by Joseph van Crombrughe, in 1817. Father van Crombrughe was at that time a simple village priest acting as curate at Heusden, when he made the acquaintance of a young man named van den Bossche, of remarkable talent and great piety. Together they conceived the idea of forming a body of men, under the patronage of St. Joseph, to work among the poor. Father Crombrughe drew up a few rules, which were the basis of the future constitutions, and the first community of Josephites opened at Grammont, 1 May, 1817, a house known as Jerusalem. This was the year of famine, and the poor suffered severely. As the Josephites were able to relieve in great measure by giving them employment and teaching them to weave, so many now flocked to their protection that on 2 November they rented a part of the old Carmelite monastery. The next year the founder gave a constitution to his religious, and the first Josephites bound themselves by the three customary vows. In 1819 a school for paying students was started next to the free school, but, by order of the Government, the day-school was closed because the congregation was not yet recognized. In 1823, in spite of the proscription, the Josephites began to form their first religious habit, but in 1826 were ordered by the Government to close their church, and the following year all religious and novices admitted since 1823 were obliged to leave the community. During the first thirteen years of its existence, between three and four thousand boys had been indebted to it for their education. In 1830, when the Belgians threw off the yoke of Holland, and the National Congress placed liberty of instruction in the new constitution, the Josephites began to take an active part in the work of education. Bishop van de Velde of Ghent approved their rules, and Father Ignatius van den Bossche became the first superior general. On all sides the Sons of St. Joseph were in demand for the direction of schools and colleges, so that the original object of the institute, which had been the instruction of the poor, was gradually modified. The house of Grammont remained the mother-house, appointed as such by the Holy See. A thorough course of professional studies was organized, in accordance with the official government programme, and later on a school of agriculture was added. This latter obtained such success in numerous exhibitions that it was granted the support and recognition of the State.

Under the generalship of Father Ignatius, many new houses were opened, the two most important being those at Melle and Louvain. The college of Melle is established in a former priory of the Canons Regular of St. Augustine, founded in 1431. These canons had a college at Melle in the seventeenth century, but this was closed by order of Joseph II. After passing through several hands, the property at length came into the possession of M. van Wymelbeke, the brother-in-law of Father Crombrughe, and in 1837 was given over to the Josephites. Here they established for the first time a complete course of commercial education, which course was afterwards adopted in all the higher schools of commerce. Their museum of commercial products and merchandise has a European reputation. By a royal decree of 11 May, 1901, the Higher School of Commerce of Melle was given the right to confer the degree of Doctor of Commerce. In 1900 the college of Melle founded a school of industries, with a maritime and a colonial section for the benefit of students who do not intend to pursue university studies. The new University of Louvain was opened by the Belgian bishops in 1835, and seven years later, at the request of the government, the Josephites established a course of classical and professional studies at Holy Trinity College, founded by
the old university in 1657. Under the direction of Father Remy de Sadeleer, the congregation made great progress and, on 23 Sept., 1863, obtained a laudatory Brief from the Holy See. In 1869 the father general sent a few members of the congregation to England, where they opened a large college at Croydon. On 21 Sept. of the same year, Father Felix Campe and another superior general for twelve years and, in accordance with the general desire of the members of the congregation, set to work to obtain from Rome the honour of the priesthood for his spiritual sons. Re-elected in 1881, Father Campe, in 1884, bought from Lord Crewe a forty-four-acre estate at Weybridge, in the County of Surrey; St. George's College, Croydon, too small for the ever-increasing number of boys, was sold, and the students transferred to Weybridge.

The congregation was declared secularized in March, 1897, by Leo XIII, who appointed Cardinal Stampa protector of the institute. The sixth superior general, Father Felix de Vlieghe, named in January, 1899, opened at the mother-house a "little novitiate," for the training of boys from the age of fourteen, who feel themselves called to the religious life. On 9 July, 1901, Leo XIII solemnly approved of the institute, and in a letter Cardinal Mellery del Val was named protector of the congregation.

J. O. TURNER.

Joseph of Arimatha.-All that is known for certain concerning him is derived from the canonical Gospels. He was born at Arimathaea—hence his surname—"a city of Judea" (Luke, xxiii, 51), which is very likely identical with Ramatha, the birthplace of the Prophet Samuel, although several scholars prefer to identify it with the town of Ramleh. He was a wealthy Israelite (Matt., xxvii, 57), "a good and a just man, he was not less than a hundred in his age (Luke, xxiii, 50), looking for the kingdom of God" (Mark, xv, 43). He is also called by St. Mark and by St. Luke a βουκέαρχη, literally a "senator," whereby is meant a member of the Sanhedrin or supreme council of the Jews. He was a disciple of Jesus, probably after since Christ's first preaching in Judea (John, ii, 23), but he did not declare himself as such "for fear of the Jews" (John, xix, 38). On account of this secret allegiance to Jesus, he did not consent to His condemnation by the Sanhedrin (Luke, xxiii, 51), and was most likely absent from the meeting which sentenced Jesus to death (cf. Mark, xvi, 11). The Crucifixion of the Master quickened Joseph's faith and love, and suggested to him that he should provide for Christ's burial before the Sabbath began. Unmindful therefore of all personal danger, a danger which was indeed considerable under the circumstances, he boldly requested from Pilate the Body of Jesus, and was successful in his request (Mark, xv, 43-45). Once in possession of this sacred treasure, he—together with Nicodemus, whom his courage had likewise emboldened, and who brought abundant spices—wrapped up Christ's Body in fine linen, put it on the bands, laid it in his own tomb, new and yet unused, and hewn out of a rock in a neighbouring garden, and withdrew after rolling a great stone to the opening of the sepulchre (Matt., xxvii, 59, 60; Mark, xv, 46; Luke, xxii, 53; John, xix, 38-42). Thus was fulfilled Isaiah's prediction that the grave would be blest; the rich man in its dust shall be in dust; the Greek Church celebrates the feast of Joseph of Arimatha on 31 July, and the Roman Church on 17 March. The additional details which are found concerning him in the apocryphal "Acta Pilati," are unworthy of credence. Likewise fabulous is the tradition which tells him to be the founder of the Cistercian Order, and thence to Great Britain, where he is supposed to have founded the earliest Christian oratory at Glastonbury. Finally, the story of the translation of the body of Joseph of Arimatha from Jerusalem to Moyenonostre (Diocese of Toul) originated late and is unreliable.

FRANCIS E. GIGOT.

Joseph of Cupertino, SAINTE, mystic, born 17 June, 1603; died at Osimo 18 Sept., 1663, feast, 18 Sept. Joseph received his surname from Cupertino, a small village in the Diocese of Naples, and was canonized at Osimo in the Kingdom of Naples. His father Felice Dea, a poor carpenter, died before Joseph was born and left some debts, in consequence of which the creditors drove the mother, Francesca Panara, from her home, and she was obliged to give birth to her child in a stable. In his eighth year Joseph had an ecstatic vision while at school and this was renewed several times; so that the children, seeing him gape and stare on such occasions, lost to all things about him, gave him the sobriquet "Bocca Aperta." At the same time he had a hot and irascible temper which his strict mother strove hard to overcome, but which was confirmed to a certain extent by the fact that at the age of seventeen he tried to be admitted to the Friars Minor Conventuals and was refused on account of his ignorance. He then applied to the Capuchins at Martino near Taranto, where he was accepted as a lay-brother in 1620, but his continual ecstasies unfitted him for work and he was dismissed. His mother and his uncle abused him as a good-for-nothing, but Joseph did not lose hope. By his continued prayers and tears he succeeded in obtaining permission to work in the stable as lay help or oblate at the Franciscan convent of La Grotella near Cupertino. He now gave evidence of the greatest virtues, humility at times being heavier than his pride was to such an extent that he was admitted to the clerical state in 1625, and three years later, on 28 March he was raised to the priesthood. Joseph was but little versed in human knowledge, for his biographers relate that he was able to read but poorly, yet by infused knowledge and supernatural light he not only surpassed all ordinary men in the learning of the schools but could solve the most intricate questions.

His life was now one long succession of visions and other heavenly favours. Everything that in any way had reference to God or holy things would bring on an ecstatic state: the mention of the name of God or of the Blessed Virgin or of a saint, any event in the life of Christ, the sacred Passion, a holy picture, the thought of the glory in heaven, all would put Joseph into contemplation. Neither dragging him about, buffeting, piercing with needles, nor even burning his flesh with candles would have any effect on him—only the voice of his superior would make him obey. These conditions would occur at any time or place, especially at Mass or during Divine Service. Frequently he would be raised from his feet and remain suspended in the air. Besides being at times heir heavenly intelligence. Since such occurrences in public caused much admiration and also disturbance in a community, Joseph for thirty-five years was not allowed to attend choir, go to the common refectory, walk in procession or say Mass in church, but was ordered to remain in his room, where a private chapel was prepared for him. Evil-minded and envious men even brought him before the Inquisition, and he was sent from one lonely house of the Capuchins or Franciscaans to another, but Joseph retained his resigned and joyous spirit, submitting confidently to Divine Providence. He practised mortification and fasting and fasting to the point of seven Lents of forty days each year, and during many of them tasted no food except on Thursdays and Sundays. His body is in the church at Osimo. He was
JOSEPH bestrayed by Benedict XIV in 1753, and canonized 16 July 1767 by Clement XIII; Clement XIV extended his office to the entire Church. His life was written by Robert Nolli (Palermo, 1678). Angelo Pastrovich wrote anotations in 1776, and this is used by the Benedictines as their Acta SS. V. See J. 962.

Joseph of Exeter (Josephus Iscanus), a twelfth-century Latin poet; b. at Exeter, England. About 1135 he became a monk at Guibert, and his lifelong intimacy with Guibert, afterwards Abbot of Florennes. Portions of their correspondence have been preserved. In the succeeding years he wrote his most celebrated poem De bello Trojanico in six books. Much of this must have been written before 1153, as he refers to the young King Henry II (who predeceased his father Henry II in that year) as still living. But the work must have been completed after 1154 as it is dedicated to his friend Baldwin, Archbishop of Canterbury, who did not succeed to the primacy till that year. When the archbishop set out on the crusade to the Holy Land he induced Joseph to accompany him, but on Baldwin's death in 1190 the poet returned home, commemorating the crusade in verse in his Antiochensis, a work of which only fragments have been preserved (see Camden's Remains, 339-39). The poem on the Trojan war was printed in a very corrupt and mutilated form under the name of Cornelius Nepos (Bazel, 1553; 1583; Antwerp, 1608; Milan, 1669), and in a somewhat more critical edition by Samuel Dresemius (Frankfort, 1620; 1623). English editions were published in London in 1675 (by J. More) and in 1825. Some other poems now lost have been attributed to him on the basis of no valid authority. Nothing further is known of his life or death.

JUBERLAND, De Josepho Exonicensi et Iscano Thesius (Paris, 1877); SAMADIN, De Josepho Isaico, beli Tironi, 11th post Christianas (Venice, 1878); HENRY, Catalogue de la Bibliothèque nationale, 2nd (London, 1865). 559-60; KINDEBURG, in Dict. Nat. Biog., s. v.; see CHEVALIER, Répertoire des sources historiques du moyen âge (Paris, 1805) for list of earlier sources.

EDWIN BURTON.

Joseph of Leonessa, Saint, in the world named Eufanaro Desiderio, b. in 1556 at Leonessa in Umbria; d. 4 Feb., 1612. From his infancy he showed a remarkably religious bent of mind; he used to erect little altars and spend much time in prayer before them, and often he would gather his companions and induce them to pray with him. Whilst yet a boy he was taken to the discipline on Fridays in company with the confraternity of St. Saviour. He was educated by his uncle, who had planned a suitable marriage for him, but in his sixteenth year he fell sick of a fever, and on his recovery, without consulting his relatives, he joined the Capuchin reform of the Franciscan Order. He made his novitiate in the convent of the Carcerelle near Assisi. As a religious he was remarkable for his great abstinence. "Brother Ass," he would say to his body, "there is no need to feed thee as a noble horse would be fed: thou must be content to be a poor ass."

In 1599, the year before the Jubilee year, he fasted the whole year in preparation for gaining the indulgence. In 1657 he was sent by the Superior General of his order to Constantinople to minister to the Christians held captive there. Arrived there he and his companions lodged in a ducal house of Benedictine monks. The poverty in which the friars lived attracted the attention of the Turks, who went in number to Joseph's Miisielle, and they were solicitous in ministering to the captive Christians in the galleys. Every day he went into the city to preach, and he was at length thrown into prison and only released at the intervention of the Venetian agent.

Urged on by zeal he at last sought to enter the palace to preach before the Sultan, but he was seized and condemned to death. For three days he hung on the gallows, held up by two hooks driven through his right hand and right foot; the rope was tied round him. Returning to Italy, he took with him a Greek archbishop who had apostatized, and who was reconciled to the Church on their arrival in Rome. Joseph now took up the work of home missions in his native province, sometimes preaching six or seven times a day. In the Jubilee year of 1600 he preached at Lent at Orvieto, a town which had been the starting point of the pilgrims passed on their way to Rome. Many of them being very poor, Joseph supplied them with food; he also washed their clothes and cut their hair. At Todi he cultivated with his own hands a garden, the produce of which was for the poor. His feast is kept on 4 Feb. throughout the whole Franciscan Order. He was canonized by Benedict XIV.

F. CUTHBERT.

Joseph's, Saint, Society for Coloured Missions, began its labours in 1871, when four young priests from Mill Hill were put in charge of St. Francis Xavier's church, with a large number of black Catholics, in Baltimore. Other negro missions were soon begun at Louisville, Charleston, Washington, Richmond, Norfolk, and other places in the South. The society in the United States increased so rapidly and its missions were so successful that in 1892 it was made independent of Mill Hill and established its headquarters at Baltimore. At present it has 49 priests who have charge of 35 missions in the Archdioceses of Baltimore and New Orleans and in the Dioceses of Covington, Dallas, Galveston, Little Rock, Mobile, Nashville, Natches, Richmond, Wilmington, and San Antonio. The society moreover conducts four educational institutions, viz., the St. Joseph's Seminary in Baltimore, where missionaries for the coloured missions are trained; Epiphany Apostolic College, Wallbrook, Baltimore, which is a preparatory school for St. Joseph's Seminary; St. Joseph's Catechetical College near Montgomery, Alabama, where young coloured men are trained to become catechists and teachers among their people; and St. Joseph's Industrial School at Clayton, Delaware, which is an agricultural and trade school for coloured boys.

M. C. HARVEY, quarterly organ of the society in the United States (Baltimore, 1886—). The Josephite, quarterly organ of St. Joseph's College for negro catechists (Montgomery, Alabama, 1859—).

MICHAEL OTT.

Joseph's, Saint, Society for Foreign Missions (Mill Hill, London, N. W.), a society of priests and laymen whose object is to labour for the conversion of heathens in foreign countries. It owes its origin to Cardinal Vaughan (d. 1693) who when still a priest, founded in 1866 St. Joseph's Missionary College in a villa near Mill Hill, about ten miles north of London. It was the purpose of this college to train missionaries to propagate the Gospel among heathen races beyond Europe, especially the negroes of Africa and the United States of America. On the death of the founder in 1871, the college was transferred to a larger building erected for the purpose at Mill Hill, and in 1884 St. Peter's School was founded at Freshfield near Liverpool, to serve as a preparatory school to the college at Mill Hill. There are two other branch colleges: St. Joseph's Missionary College, founded at Abingdon, in 1890; and St. Joseph's Missionshaus, at Brixen, Tyrol, erected in 1891. St. Joseph's Society, Mill Hill, is under the direction of the superior general, Very Rev. Francis Henry, and comprises at present about 200
priests and 10 lay brothers. About 170 of these priests are engaged as missionaries, the others as teachers in the above named colleges. The following ecclesiastics are under the care of the society: the Telugu Mission in the Archdiocese of Madras in British India, since 1875; the Prefecture Apostolic of Labuan and North Borneo, since 1881; the Mauri Mission in the Diocese of Auckland, New Zealand, since 1886; the Apostolic Prefecture of Rasul and Kaspar in the northwest part of India, since 1887; the Vicariate Apostolic of the Upper Nile or Uganda in British East Africa, since 1894; a few stations in the Belgian Congo, since 1903; and in the Diocese of Jaro, in the Philippines, since 1906, there are about thirty priests of the society. Theological and constitutional questions in the Vatican were decided by the final definitive approval of the Holy See on April 25, 1908.

Sisters of St. Joseph's Society for Foreign Missions, of the Third Order Regular of St. Francis, founded in 1883 by Cardinal Vaughan and Mother Mary Francis Ingham, to co-operate in the work of the Mill Hill Fathers. The Cardinal's idea was that the society should stand in the same relation to the fathers of the society as the Sisters of Charity of St. Vincent de Paul to the Lazarist Fathers. They undertake any work, at home or abroad, indicated for them by the superior general or the bishop of the diocese. There are no lay sisters. The novitiate is at Patricraft, near Lancaster, where there are twelve boys and six girls, with about 200 children under 40 sisters. In addition to their establishments at Mill Hill and Manchester, the congregation has a branch house at Blackburn with boarding-schools for boys and girls of the middle class and an orphanage for children of the poorer class, with 10 sisters in charge of 70 to 80 children; at Blackburn the sisters teach in 3 elementary schools. They have branches also at Freshfield (Liverpool), at Waterford and Cork in Ireland, and at Rosendal in Holland. In Borneo there are 17 sisters at various mission stations. The total number of professed sisters in the congregation is 120.

Michael Ott.

Josephus, Flavius. Jewish historian, b. A.D. 37, at Jerusalem; d. about 101. He belonged to a distinguished priestly family, whose paternal ancestors he himself traces back five generations; his mother's family claimed descent from the Machabees. He received his early training in the study of the sacred writings. He is considered the most learned scholar of his time, more especially his memory and power of judgment. He also made himself fully acquainted with and tried the leading political-religious Jewish parties of his age—the Essenes, Pharisees, and Sadducees. Impressed by the outward prosperity and the consequent influence of the priestly order, he attached himself to that party at the age of nineteen, although he shared neither their religious nor political views. He went to Rome in the 64th year with the object of procuring from Nero the release of some imprisoned Jewish priests, who were friends of his. He succeeded in winning the favour of Poppaea Sabina, the emperor's consort, and through her influence gained his cause. But he was so dazzled by the brilliant court life in the metropolis of the world, that he became ever more estranged from the spirit of strict Judaism, considering its struggle against paganism as useless. He left Rome after the return of the emperor with the Jewish revolt broke out in the year 66. Like most of the aristocratic Jews, Josephus at first disdained the rebellion of his countrymen, goaded into activity by their enslaved condition and outraged religious sentiments; when, however, fortune seemed to favour the insurgents, Josephus like the rest of the priestly nobility joined them, and was chosen by the Sanhedrin at Jerusalem to be commander-in-chief in Galilee. As such commanding no other body of Roman cavalry, he advanced with the main army from Antioch to Galilee, burning and murdering, the insurgents either fled or sought shelter in their fortresses. For six weeks Josephus and the boldest spirits among the insurgents defended themselves in the almost impregnable fortress of Jotapata, but their supplies being now exhausted from lack of water and other necessaries, the Romans stormed the citadel; most of the patriots were put to the sword, but Josephus escaped the massacre by hiding in an inaccessible cistern, and emerged only after receiving an assurance that his life would be spared. Brought before the victorious general, he sought with great shrewdness to ingratiate himself with Vespasian, foretelling his elevation, as well as that of his son Titus, to the imperial dignity. Vespasian, however, kept him near him as a prisoner, and it was only in the year 69, after he had actually become emperor, that he received to Josephus honor and freedom.

As a freedman of Vespasian, Josephus assumed in accordance with the Roman custom the former's family name of Flavianus. He accompanied the emperor as far as Egypt, when the latter had handed over to his son the prosecution of the Jewish War, but then joined the retinue of Titus, and was an eyewitness of the destruction of the Holy City and her Temple. At his personal risk he had tried to persuade the Jews to surrender. After the fall of the city he went to Rome with Titus, and took part in the latter's triumph. But these scenes did not trouble Josephus's sense of national honour; on the contrary, he accepted the privilege of Roman citizenship in recognition of his services, and was granted a yearly stipend and also lands in Judea. The succeeding emperors, Titus and his cruel brother Domitian, also showed themselves kindly disposed towards Josephus, and conferred on him many marks of distinction. At court he was allowed to devote himself un molested to his literary work until his death, which occurred in the reign of Trajan (probably in 101). In his life, as in his writings, he pursued a policy midway between Jewish and pagan culture, for which he was accused by his Jewish countrymen of apostasy. It was not so much his works—except with the exception of the "Jewish War", which was first written in Hebrew and thence translated—were written in elegant Greek, to influence the educated class of his time, and free them from various prejudices against Judaism.

The first work of Josephus known by the "Jewish War" (Πολέμου Ἰουδαϊκοῦ εἰς Ρώμας ἐπανδρωτοῦ) in seven books. This is mainly based on his memoranda made during the war of independence (66-73), on the memoirs of Vespasian, and on letters of King Agrippa. While his story of warlike events is reliable, the account of his own doings is strongly tinted with foolish self-adulation. This work furnishes the historical background for numerous historical romances, among those of modern times "Lucius Flavius" by J. Spillmann, S.J., and "The End of Judah" by Anton de Waal.

Josephus's second work, the "Jewish Antiquities" (Ἰσραηλίτου ἱστορίας), contains in twenty books the complete history of the Jews and the break of the revolt in a. d. 66. Books I-XI are based on the text of the Septuagint, though at times he also repeats traditional explanations current among the Jews in later times. He also quotes numerous passages from Greek authors whose writings are now lost. On the other hand he made allowance for the tastes
of his Gentile contemporaries by arbitrary omissions as well as by the free embellishment of certain scenes. Books XII—XX, in which he speaks of the times preceding the coming of Christ and the foundation of Christianity, are our only sources for many historical events. In these the value of the statements is eminently contingent on the discovery of other, otherwise wanting, and by the citation of authentic documents which confirm and supplement the Biblical narrative. The story of Herod the Great is contained in books XV—XVII. Book XVIII contains in chapter iii the celebrated passage in which mention is made of the Residency in the following words: "About this time lived Jesus, a man full of wisdom, if indeed one may call Him a man. For He was the doer of incredible things, and the teacher of such as gladly received the truth. He thus attracted to Himself many Jews and many of the Gentiles. He was the Christ. On the accusation of the leading men of our people, Pilate condemned Him to death upon the cross; nevertheless those who had previously loved Him still remained faithful to Him. For on the third day He again appeared to them living, just as, in addition to a thousand other marvellous things, prophets sent by God had foretold. And to the present day the race of those who call themselves Christian Communities has not ceased." Attempts have been made to refute the objections brought against this passage both for internal and external reasons, but the difficulty has not been definitively settled. The passage seems to suffer from repeated interpolations. The fact that the "Antiquities" testifies to the truth of Divine Revelation among the Jews as among the Christians, and confirms the historical facts related in the Bible by the incontrovertible testimony of pagan authors, renders this work of Josephus of extreme value for the history of the chosen people. The accounts which he gives of their monarchs and their mutual relations of the different Jewish sects, which are so important in the history and sufferings of the Saviour; his information regarding the corruption of the ancient Jewish customs and institutions; his statement concerning the internal conflicts of the Jews, and lastly his account of the last war with the Romans, which put an end to the national independence of the Jews, are of prime importance as historical sources.

In his "Autobiography" (Φανοκός Ἱσοφρέν φῦατος), written A.D. 90, Josephus seeks, not without attempts at self-gloration, to justify his position at the beginning of his career and to explain any language of the book is probably influenced by the writings of Nicholas of Damascus, which Josephus had also used in the "Antiquities". His work entitled "Against Apion" (Κατὰ Αἰπιόν), divided in two books, is a defence of the great antiquity of the Jews and a refutation of the charges which had been brought against them by the grammarian Apion of Alexandria on the occasion of an embassy to the Emperor Caligula.

The early Christians were zealous readers of Josephus's "History of the Jews", and the Fathers of the Church, such as Jerome and Ambrose, as well as the early ecclesiastical historians like Eusebius, are fond of quoting him in their works. St. Chrysostom calls him a useful expounder of the historical books of the Old Testament. The works of Josephus were translated into Latin at an early date. After the art of printing had been discovered, they were circulated in all languages. The first German translation was executed by the Reverend Professor 1531, and a French translation was issued by Burg going in Lyons in 1588. Among the best-known translations in English is that by Whiston (London, 1737), revised by Shilleto (5 vols., London, 1888-9). In the middle of the nineteenth century the interest in the "Antiquities" was revived by a translation which the Society of St. Charles Borromeo induced Professor Konrad Martin, afterwards Bishop of Paderborn, to undertake in collaboration with Frans Kaulen (1st ed., Cologne, 1852-3; 2nd and 3rd ed. by Kaulen, 1883 and 1892). The text of Josephus's works has been published by Dindorf in Greek and Latin (2 vols., Paris, 1845-7) and Bekker (6 vols., Leipzig, 1855-6). There are critical editions by Naber, Leipzig, 1888-91 (below). There are only 6 vols., Berlin, 1887-95, text only. For fuller bibliography see K. HOBER.

Josephus Icanaus. See JOSPH OF EXETER.

Joshua. See JOSUDE.

Josias (Yahweh supports). Sept. Iosias), a pious King of Judah (630-608 B.C.), who ascended the throne when he was only eight years of age. He was the son of Amon and the grandson of Manasses. His mother's name is given as Idida, the daughter of Hadadia IV (II) Kings, xxii, 1). Of the actual influences under which he grew up nothing is known for certain. His reign is usually divided into two periods of thirty years each, 621-598, and 598-560 B.C., and slightly divergent accounts of IV (II) Kings, xxii—xxiii, 30, and II Paralipomenon (Chronicles), xxxiv—xxxv. The following is a summary of Josiah's public acts as they are set forth in the former of these accounts. In the eighteenth year of his rule, the Jewish king undertook to repair the Temple with the help of the high-priest Heleias. During the course of this work, Heleias found "the Book of the Law", and handed it to the royal scribe, Saphan, who read it to Josias. The threats made therein against the transgressors of its contents frightened Josiah, who ordered the Law to be read to the people, and then asked the prophetess Huldah for a fortune. Josiah found this sort of law in the temple, and then in the distance portion of its territory. The work of reform was concluded by a magnificent celebration of the Pasch. Of the thirteen years of Josias's reign which followed this important reformation, nothing is said in the narrative of the Fourth Book of Kings. We are simply told of the monarch's exceeding piety towards Yahweh and of his death on the battle-field of Megiddo, where he perished fighting against the Egyptian Pharaoh, Neocho II, who was then on his way to the Euphrates against the Assyrians. Whoever compares carefully and impartially with this first account of Josias's reign the second one given in II Par., xxxiv—xxxv, cannot help being struck with their wonderful substantial agreement. Both Biblical records agree perfectly as to the age of the king at his accession and as to the length of his reign. Like the narrative of Kings, that of Paralipomenon refers to the eighteenth year. The discovery of the "Book of the Law", relates the same circumstances as attending that event, speaks of a work of religious reform as carried out throughout all Israel on account of the contents of that book, and praises the magnificence of the solemn Pasch celebrated in harmony with it. Now, like the narrative of Kings, too, that of Paralipomenon appreciates in the most favourable manner the king's
Josquinus Pratensis. See Depres, Josquin.

Josue, the name of eight persons in the Old Testament, and of one of the Sacred Books.

I. Josue (יושע, יְושֵׁע), a Bethsames in whose field the ark stood on its way back from the land of the Philistines to Juda (1 Kings, vi, 14, 15).

II. Josue (יושע, יָשָע), governor of Jerusalem, whose name is given to the sons of King Josias during the latter's attempts to undo the evil wrought by his father Amon and grandfather Manasseh (IV Kings, xxiii, 8).

III. Josue (יושע, יָשֹע), Agg., i, 12, 14; ii, 3, 5; Zach., iii, i, 3, 6, 8, 9; vi, 11; יִשֹׁע in I and II Esd.; Sept., יָשָע, the son of Josdecd and the high-priest who returned with Zorobabel from the Babylonian Captivity to Jerusalem (I Esd., ii, 2; II Esd., vii, 2, xii, 1). In I and II Esd. the Vulgate calls him Josue; in Agg. and Zach., Jesus. He assisted Zorobabel in rebuilding the Temple, and was most zealous for the restoration of the religion of Israel (I Esd., iii, 2, 8; iv, 3, 5; v, 2). It was he whom Zacharias saw in vision stripping of filthy garments and dressed in clean robes and mitre, while the angel of the Lord proclaimed the high-priest the type of the coming Messias (Zach., iii).

IV. Josue (יושע, יְשֹע, יַשֹּע), a head of the family of Phahath Moab, one of the families named in the list of Israelites that returned from the Babylonian Exile (I Esd., ii, 6; II Esd., vii, 11).

V. Josuc (יוֹשֵׁע, יְשֹע), a head of the priestly family of Idaia, maybe the high-priest Josue mentioned above (I Esd., ii, 36; II Esd., vii, 39).

VI. Josue (יוֹשֵׁע, יְשֹע, יָשָע), the name of a probably Jewish person descended from Onia, as also of various heads of that family after the Exile (I Esd., ii, 40; iii, 9; viii, 33; II Esd., ii, 19; vii, 43; viiii, 7; ix, 4, 5; xii, 8, Vulg. Jesus; xii, 24).

VII. Josue (יוֹשֵׁע, יָשָע), one of the sons of Herem who were ordered to put away their wives taken from the land of the stranger (1 Esd., x, 31).

VIII. Josue (יוֹשֵׁע, יָשָע, יַשֹּע, יְשֹע), twice יָשָע—Deut., iii, 21, and Judges, ii, 7; first called Osee, יִשֹּע, Sept. יָשֹע, first אָשָׂא), the son of Nun; the genealogy of the family is given in I Par., vii, 20-27; it belonged to the tribe of Ephraim. Josue commanded the army of Israel, after the Exodus, in its battle with Amalec (Ex., xvii, 9-12), was called by the libertine of Ephraim. Josue commanded the army of Israel, after the Exodus, in its battle with Amalec (Ex., xvii, 9-12), was called by the minister of Moses (xxv, 13), accompanied the great lawgiver to and from Mount Sinai (xxxii, 17) and into the tabernacle of the covenant (xxxiii, 11), and acted as one of twelve spies whom Moses sent to view the land of Canaan (Num., xiii, 3). Moses changed his servant's name from Osee to Josue (Num., xiii, 17). The new name most likely means "Jahweh is salvation". Josue and Caleb alone spoke well of the land, even though the people wished to stone them for not murmuring, and these two lived on (Num., xxxii, 20). Josue, the son of Nun, succeeded Moses. The words of the choice show the character of the chosen (Num., xxxvii, 17-18). Before Eleazar and all the assembly of the people Moses laid hands on Josue. Later this soldier was proposed by Moses to the people to lead them into the land beyond the Jordan (Deut., xxxii, 3), and was ordered by the Lord to do so (xxxii, 23). After the death of Moses, Josue was filled with the spirit of wisdom and was obeyed by the children of Israel (Deut., xxxii, 25). After the rest of the story of Josue's time ends. With regard to the exact extent and the Mosaic origin of the "Book of the Law", discovered under Josias, see PENTATEUCH.

For works on Biblical history, see bibliography to ISAAC. References on PENTATEUCH are by CLARKE (Paris, 1880); OTHELLO (Munich, 1889); BENNET (New York, 1894); BARrows, Encyclopedia Spec. Biblica (London, 1899); BASILITZ (Frankfort, 1901); KIRTL (Gottingen, 1902). Names of Catholic authors are marked with an asterisk.

Francis E. Gigot.

Josue, the sixth book of the Old Testament; in the plan of the critics, the last book of the Hexateuch (see PENTATEUCH). In the Fathers, the book is often called "Jehus Nave". The name dates from the time of Origen, who translated the book as "sacrum manu", and named the Nave as a type of a ship; hence in the name Jesus Nave many of the Fathers see the type of Jesus, the Ship wherein the world is saved.

(1) Contents.—The Book of Josue contains two parts: the conquest of the promised land and the division thereof.—(a) The Conquest (i—xii).—Josue enters the land of promise, after being assured by spies that the way is safe. It is the tenth day of the first month, forty-one years since the Exodus. The channel of the Jordan is dry during the passage of Israel (i—iii). A monument is erected in the midst of the Jordan, and city of Galgal, to commemorate the fact. Josue camps at Galgal (iv). The Israelites born during the wandering are circumcised; the pasch is eaten the first time in the land of promise; the manna ceases to fall; Josue is strengthened by the vision of an angel (v). The walls of Jericho fall without a blow; the city is sacked; its inhabitants are put to death; only the family of Rahab is spared (vi). Israel goes up against Hai. The crime of Achan causes defeat. Josue punishes that crime and takes Hai (vii—viii, 29); sets up an altar on Mount Hebal; subjugates the Gabaonites (viii, 30—40), defeats the kings of Jerusalem, Hebron, Jericho, Lachish, Eglon, Gezer, Horab, and the South even to Gaza; marches North and defeats the combined forces of the kings at the waters of Merom (x—xii). (b) The Division of the Land among the Tribes of Israel (xiii—xxii). Epilogue: last message and death of Josue (xxxiii and xxiv).

(2) Canonicity.—(a) In the Jewish canon Josue is among the Early Prophets—Josue, Judges, and the four Books of Kings. It was not grouped with the Pentateuch, chiefly because, unlike Exodus and Leviticus, it contained no Torah, or law; also because the five books of the Torah were assigned to Moses (see above). Later, in the Christian Church, the Book has ever held the same place as in the Jewish canon.

(3) Unity.—Non-Catholics have almost all followed the critics in the question of the "Hexateuch"; even the conservative Hasting, "Dict. of the Bible", ed. 1909, takes it for granted that Josue (Joshua) is a post-exilic patchwork. The first part (i—xii) is made up of two documents, probably J and E (Jehovistic and Elohist elements), put together by J E and later revised by the Deuteronomic editor (D); to this latter is assigned all of the first chapter. Very little of this portion is the work of P (the compiler of the Priestly Code). In the second part (xii—xxii) the critics are uncertain as to whether the last editing was the work of the Deuteronomic or the Priestly editor; they agree in this that the same hands—those of J, E, D, and P—are at work in both parts, and that the portions which must be assigned to P have characteristics which are not at all found (N. xxv, thirteen). On this view the final redaction is post-Exilic—a work done about 400—400 B. C. Such in brief is the theory of the critics, who differ here as elsewhere in the matter of the details assigned to the various writers and the order of the editing, which all assume was certainly done. (See G. A. Smith and J. F. Hasell in Hastings, "Dict. of the Bible", large and small editions respectively, s. v. "Josua"; Moore in Cheyne, "Encyc. Bib."); Wellhausen, "Die Bibel", s. v. "Joshua";...
portion was delayed (xvii, 16); on the other hand, we are told not only the portion of land allotted to Juda and Benjamin, but the cities they had captured (xy, 1 sqq.; xviii, 11 sqq.); as for the other tribes, the progress they had made in winning the cities of their lot is told us with an accuracy which could not be otherwise explained were we to admit that the narrative is post-Exilic in its final redaction. Only the inadmissible bungling of the uncritical D' or D" will serve to explain away this argument. (c) The question remains: Did Josue write all the epilogue? Catholics are divided. Most of the Fathers seem to have taken it for granted that the author is Josue; still there have ever been Catholics who assigned the work to some one shortly after the death of the great leader. Theodoret (In Jos., q. xiv), Pseudo-Athanasius (Synopsis Sacr. Scrip.), Tostatus (In Jos. i, q. xiii; xiv), Maes ("Josue Imperatorius Historia", Antwerp, 1574), Haneberg ("Gesch. der bibl. Offenbarung", Ratisbon, 1863, 202), Danko ("Hist. Rev. Div. V. T.", Vienna, 1862, 200), Meignan ("De Moisès à David". Paris, 1896. 335).

**Apparition of the Angel to Josue**

(Jos. v, 13-15—Cod. Grae. 405, Vatican Library)

and many other Catholic authors admit that the Book of Josue contains signs of later editing; but all insist that this editing was done before the Exile.

(5) Historicity.—The Biblical Commission (15 Feb., 1909) has decreed the historicity of the primitive narrative of Gen., i-iii; a fortiori it will not tolerate that a Catholic deny the historicity of Josue. The chief objection of rationalists to the historicity of the book is the almost overwhelming force of the miraculous therein; this objection has no worth to the Catholic exegete. Other objections are forestalled in the treatment of the authenticity of the work. Full answer to the rationalistic objections will be found in the standard works of Catholics on introduction. Saints Paul (Heb., xi, 30; 31; xiii, 5), James (ii, 25), and Stephen (Acts, vii, 43), the tradition of the Synagogue and of the Church accept the Book of Josue as historical. To the Fathers Josue is an historical person and a type of the Messiah. As an antidote to accusations that Josue was cruel and murderous, etc., one should read the Assyrian and Egyptian accounts of the almost contemporary treatment of the vanquished. St. Augustine solved the rationalistic difficulty by saying that the abominations of the Chanaanites merited the punishment which God, as Master of the world, meted out to them by the hand of Israel (In
Hept., III, 56; P. L., XXXIV, 702, 816. These abominations of phallic worship and infant sacrifice have been proven by the excavations of the Palestine Exploration Fund at Gazer.

(6) Text.—The Septuagint is preserved in two different recensions at the Alexandrian (A) and Vatican (B)—and varies considerably from the Masorah: the Vulgate often differs from all three (iii; 4; iv, 3, 13; v, 6). The Samaritan Josue, recently discovered, resembles the Sept. more closely than the Masorah.

WALTER DRUM.

Joubert, Joseph, French philosopher; b. at Martinique (Dordogne), May 1754; d. at Villeneuve-le-Roi (Yonne), May 4, 1824. At the age of fourteen, having finished his studies in his native town, he was sent to Toulouse to study law, but after a few months joined the Doctrinaires, a teaching order, and was entrusted with the instruction of lower classes. In 1778 he left the order and went to Paris, where he associated with the most famous literary men of the time, Marmontel, Diderot, and d'Alembert, with whose sentiments he was for some time in sympathy. The French Revolution opened his eyes and made him a strong opponent of the doctrines of the eighteenth century. In 1790 he was elected by his countrymen justice of the peace of the canton of Martinique. When his biennial term expired, he refused to accept re-election and returned to Paris, where in the following year (June, 1793) he married Mlle Moreau. Disgusted with the tyranny of the Revolutionists, he retired to Villeneuve-le-Roi. Even when he decided to return to Paris, he preferred to live there rather than in Paris. Chateaubrandon, Mme de Beaumont, Fontaines, Molé, and Chéneddolle were his frequent visitors. In 1805 he was appointed by Fontaines Inspector General of the University of France, and in spite of his poor health fulfilled his duties with the greatest zeal. When he was compelled to give up his inspectorship, he devoted his time to the education of his son and to his literary works. He was one of the first to understand the movement of the Romanticists and to encourage it. Owing to his kind disposition and his delicate taste, as well as his friendly and chivalrous dispositions, he had a strong influence over many young men gathered around him. Aiming at what was perfect in literature, he wrote very little and never published anything. He spent his leisure in thinking, and putting down his thoughts for himself. His aim was to note in verse and clear sentences the necessity, utility, and beauty of virtue. From his death, all these papiers de la malle (scrapes of paper), as he called them, aroused the interest and admiration of Chateaubrandon, who published a short selection of them for private circulation, under the title of "Revue des Pensées de M. Joubert" (Paris, 1838). This book was re-edited with many additions by Paulignan, a nephew of the author, under the new title of "Pensées, Essais, Maximes et Correspondance de J. Joubert" (Paris, 1842). Many other editions have since been published.

Jouffroy, Claude-François-Dorothee de, Marquis d'Abbeville, mechanic, b. at Abbeville, near Besançon, 30 Sept., 1751; d. at Paris, 18 July, 1832. He was educated by the Dominicans of Quiney in philosophy and literature, but showed a leaning towards the exact sciences and the mechanical arts. At the age of twenty he was enlisted in the infantry regiment of Bourbon, but numerous infirmations of discipline brought upon him in 1772 the punishment of confinement at the prison of Orleans. At the expiration of his sentence, he began the study of the problems of steam navigation, suggested by the sight of the convicts rowing the galleys. In 1775 he went to Paris to study the Watt steam-engine. He discussed with Périer the application of steam to the propulsion of vessels, and opposed his views. Finally he consented to build a steamboat, and ran it on the River Doubs during June and July, 1776. The system he used then was the palmipede, or web-foot, which proved unsatisfactory. In 1781, being promised the help of the Government, he began the construction of his pyroscapha at Lyons. This vessel was about 140 feet long, 5 feet wide, 3 feet in draught, and 150 tons in displacement. A horizontal steam-engine moved a double rack to and fro; this rack geared with ratchet-wheels on the shaft carrying the paddle wheels. The wheels were thus turned continuously in the same direction.

On a public trial, 15 July, 1786, the Jouffroy ran up the Saône at Lyons against the current with a speed of six miles per hour, in the presence of representative scientific men and thousands of enthusiastic spectators. This steamboat continued to run on the river during sixteen months. In spite of the very favourable report the French Academy had given it, Jouffroy, having as an excuse the fact that the experiment had not been made at Paris. Jouffroy, having already spent a fortune, was too poor to continue the struggle, and the guaranteed monopoly was not confirmed. The Revolution setting in, all work was abandoned until the restoration and after the change of the Government. A boat was launched and run on the Seine 20 August, 1816, and at last the patent was granted. Still Jouffroy was oppressed and failed to get the necessary financial support. At length in 1831, utterly discouraged and poor, he retired to the Invalides, the home of old soldiers, where he died of cholera. He was admitted to the home without difficulty, being chevalier of the Orders of Military Merit, of Saint-George, and of Saint-Louis, and having served eighteen years and during eleven campaigns. Claude de Jouffroy fought constantly on the side of the legitimists and opposed Bonaparte, who as soon as he came to power, gave him an opportunity to make his invention. His religious sentiments are evident from the fact that he entrusted his son to the care of the Abbé Blond. He himself was comforted to the last moment by the presence of a priest. A century later, in 1884, France recognized the originality of the inventor by subscribing to the statue of Jouffroy erected at Besançon. Robert Fulton himself had testified that "if the glory (of imagining the first pyroscapha) belongs to any one man, it belongs to the author of the experiments made on the River Saône at Lyons in 1775." William Fox.
Through the intervention of the Duke of Burgundy, Jouffroy had tried to obtain the cardinalate, and he soon found an opportunity of attaining this end. The Pragmatic Sanction of Bourges (1438), besides asserting the superiority of councils over the Roman pontiff, had lessened the freedom and independence of the Church in France, and had, to a great extent, withdrawn from the pope's eminence, yet Dauphin, Louis XI had pledged himself to abolish the Pragmatic Sanction in the event of his succession to the throne. Upon his becoming king (1461), negotiations were opened by Pius II, who appointed Jouffroy as his legate. The king showed himself favorably disposed, and in March 1462 the pope would change his Neapolitan policy, cease to support Ferrante, and recognize John of Calabria as King of Naples. At Rome, however, Jouffroy made no mention of this fact, and simply announced the king's intention of repealing the Pragmatic Sanction. In fact Louis himself wrote to the pope (27 Nov., 1461): "As you require, we set aside and proscribe the Pragmatic Sanction in our whole kingdom, in Dauphiné, and all our dominions, in which henceforth your jurisdiction shall be unquestioned." Louis had expressed the desire that Jouffroy be made a cardinal. Notwithstanding the opposition of Cardinal Godin, the pope consented, and on 18 Dec., 1461, Jouffroy was one of the seven newly appointed cardinals. In the beginning of January, 1462, Jouffroy made known to the pope the king's demands concerning Naples. In his memoirs Pius II complains that "after Jouffroy had entered the sure haven of the cardinals, he brought forward that which he had hitherto concealed, namely, that the Pragmatic Sanction would certainly be repealed only when the king's wishes regarding Naples had been complied with." For some time the pope seemed to be in doubt as to whether it would not be better to reserve the matter for negotiation, but Jouffroy refused, and Louis XI, disappointed in his hopes and anticipations, became enraged against the pontiff, Jouffroy himself encouraging him in his opposition. The consequence was that, without directly re-establishing the Pragmatic Sanction, the king issued many decrees which practically did away with the concessions made by its revocation. Jouffroy used all the whole affair is its from praiseworthy, and, in his memoirs, the pope accuses him of deception, false representations, and treachery. Pastor's judgment seems to be fully justified: "King Louis and Cardinal Jouffroy were a well-matched pair." Jouffroy became Bishop of Albi (10 Dec., 1462) and Abbé of St.-Denis (1464). Several times he was sent by the king as ambassador to Rome and to Spain. He accompanied the expedition against the Duke of Armagnac besieged in Lectoure, but it is not certain that he took any part in the murder of the duke. Fallig sick, he stopped at Roussillon where he died. Jouffroy was a good orator, and his sermons were published in D'Achéry's "Spiciegium" (Paris, 1666). He was also a shrewd diplomat, but was not free from selfishness and ambition, which led him to use unfair means in the pursuit of his own ends.

Jouin, Louis, linguist, philosopher, author, b. at Berlin, 14 June, 1818; d. at New York, 10 June, 1899. He was descended from a French Huguenot family, which had been forced by the Edict of Nantes to take refuge in Prussia. After spending some time in a French school he went to Poland, where he entered the Catholic Church, and determined to embrace the religious life. With the intention of securing his release from military service, he renounced allegiance to the land of his birth, and made his way to Rome. He was admitted into the Jesuit Order, entering the novitiate of San Andrea, 20 Aug., 1841. He studied philosophy for three years in the famous Jesuit college, called the Roman College, and laboured for a time at Reggio, at which place he was ordained priest on 30 April, 1845, but was forced by the Revolution to flee the country. Accordingly in October of the same year he came to the United States. He remained in New York City till 1852, studied theology at Fordham, 1852-56, taught in Fordham College until 1859, and spent the following year at Sault-au-Récollet, Canada. Returning to Fordham in 1860, he taught theology in the scholasticate (1860-3), and later (1866-72) filled various positions in the college. After a visit to England in 1872, he went to Guelph, Canada, and remained at this place till 1875. During 1875-6 he was in Montreal and during 1876-9 at St. Francis Xavier's, New York. In 1879 he returned to Fordham, where he remained until his death.

As a teacher he occupied in Italy, Canada, and the United States the chairs of science, mathematics, and theology; but it was to philosophy that he gave the best part of the fifty-eight years he spent in the Society of Jesus, teaching it year after year, especially to young men. He had a keen consciousness and clearness. Indeed it may be said that his life-work consisted in sowing the seeds of truth in the minds of American youth, and thus guarding them against the insidious errors of the times. For the use of his scholars, he prepared, either in lithograph or in print, various treatises on philosophical and scientific subjects. Unfortunately, only a few of these were given to the public. His published works are: "Elementa Logicae et Metaphysicae" (4th ed., New York, 1884); "Elementa Philosophiae Moralis" (New York, 1889); "Evidences of the Religion" (1854); and "What Christ Revealed". Father Jouin was an accomplished linguist, speaking with fluency German, French, Italian, Spanish, English, Polish, and Latin, besides being well versed in Greek, Hebrew, and Gaelic. He was a skilled moralist, and for many years presided over the theological conferences of the Archdiocese of New York. He was of practical piety, acquaintance with ascetic literature, and deep knowledge of men caused him to be much sought after as a spiritual director and as a preacher of retreats.

Woodstock Letters, XXIX, 75.

Jouin, Henry. See Jaffna, Diocese of.

Jouvançay, Joseph de (Joseph-Juvenicius), poet, pedagogue, philologist, and historian, b. at Paris, 14 September, 1843; d. at Rome, 29 May, 1719. At the age of sixteen he entered the Society of Jesus, and after completing his studies he taught grammar at the college at Compiègne, and rhetoric at Caen and La Flèche. He made his profession at the latter place in 1677 and was afterwards appointed professor at the College Louis-le-Grand at Paris. In 1699 he was called by his superiors to Rome to continue the history of the Society of Jesus begun by Orlandini, and was engaged on this work until his death. Jouvançay wrote largely upon those topics which engaged his attention as a member of the order. He composed about ten tragedies, all of which were published at Paris, and several of which were frequently acted. It is not certain, however, that all that was attributed to Jouvançay were written by him, for some of them are also attributed to other members of the order. Jouvançay also wrote many poems in Latin and Greek for special occasions. He had a masterly knowledge of classical Latin and procured the translation into Latin of many works during his French advocacy over Prince Henri de Bourbon, oldest son of Louis XIV, delivered in December, 1683, at Paris by
the celebrated pulpit orator Bourdaloue; "Cleander et Eudoxius", a translation of the "Entretiens de Cleandre et d'Eudoxe" of Father Daniel. This latter work is a refutation of the accusations brought against the Society of Jesus by its enemies; in 1703 it was put on the Index. The translation of the theological letters of Father Daniel to the Dominicans Alexander Natalis containing part of the history of the settings of St. Thomas and of the theologians of the Society of Jesus concerning Probabilism and its relation to Divine grace. In 1704 appeared Jouvenay's "Appen- dix de Diis et heroibus poeticae", a widely read work which was a translation of Father Gautренue's "Histoire de l'intelligence des chefs & ancianciers". Jouvenay also translated into Latin epigrams, written by other Jesuits, of the saints of the order, St. Stanislaus Kostka and St. John Francis Regis.

Jouvenay edited a large number of school editions of Latin authors. The text was always revised suitably to school use, was altered in many places with classical elegance, and supplied with learned footnotes, partly explanatory of the details given by the author, partly on the style and grammatical construction; these editions were frequently reissued both in France and other countries. In some of the later editions translations were added. Worthy of special praise were the editions of the "Comedies" of Terence, the "Odys" and "Libre de arte poetica" of Horace, the "Epigrams" of Martial, the "Metamorphoses" of Ovid, the philosophical writings of Cicero, as "De officiis", "Cato Major", and "Laelius". Jouvenay's "Institutiones poeticae", published in 1718 and often reprinted, was another work intended for use in teaching. A number of editions also appeared of his "Novus apparatus graecolatinus, cum interprettatione gyllacio". This work, based on Isocrates, Demosthenes, and other Greek and Roman authors, is by many considered to be far superior to the lexica then used, but was also intended to encourage the cultivation of the mother tongue, as well as the study of the two classical languages. Jouvenay also delivered many orations and eulogies, for example on Louis XIV, his family, and his government, in externals so brilliant for France, on the churches of Paris and the French nation. These were published in two volumes and from 1701 frequently reprinted.

A work of special importance was Jouvenay's "Christianis litterarum magistas de ratione discendi et docendi" (1701). At the request of the Fourteenth Congregation of the Society to adapt this work as a guide and method for the classical studies of the members of the Society. After careful examination of the manuscript by a commission of the order, it was published at Florence in 1703 as an official textbook under the title: "Magistrae scholarum inferiorum Societatis Jesu de ratione discendi et docendi". This edition was the basis of all later ones. In this pioneer work Jouvenay took the first steps in the method for the study of philology which was developed by the great investigators of antiquity. Latin is and remains the central point of instruction, even though Greek and the historical branches are not neglected. The art of the teacher may be separated into two main divisions: by the example of his own piety and virtue the teacher is to lead the pupil to the knowledge and service of the Creator; his task is to bring the pupil to apply himself to his actual studies by fear of humiliation and an honourable spirit of competition. The principles of the "De ratione discendi et docendi" were used as a standard in all the Jesuit colleges of the German association. After he was called to Rome, Jouvenay laboured on the Rota, was promotor for the Society of Jesus, which embraced the period 1591-1616. The work was forbidden in France by decree of Parliament of 22 February and 24 March, 1715, because it expressed opinions contravening the royal rights of sovereigns, that is, opposing the royal absolutism of the Bourbons. In Rome as well the work was placed in part on the Index by decree of 29 July, 1722, because in some passages it contradicted the papal decree "De Gratissimum Sinensibus" quibus de liberam perniciem (whereby destroying the book is permitted). According to documents in the archives of the order this part of Jouvenay's book was written before the publication of the papal decree (Reussch, "Index der verbotenen Bücher", 2 vols., I, Bonn, 1885, 772 sq.).

Jean Jouvenay, Jean, named the great French painter, b. at Rouen in 1644; d. at Paris, 5 April, 1717. In his family, of Italian extraction, the painting instinct was hereditary. Noël Jouvenay, his grandfather, who had settled in Normandy, is believed to have been the teacher of Poussin, while to Laurent Jouvenay, his father, Jean owed his early instruction in art. In 1660, before he was sent by his godfather to Paris, that time the goldsmiths' guild in the city planted a tree each year on 1 May in the enclosure of Notre-Dame, and presented a painting for the altar of Our Lady. The greatest artists of the age painted some of these works, which were known as nusis. Jouvenay executed the painting for the year 1673, the subject being the "Cure of the Parish". His performance attracted the attention of Lebrun, who enrolled the author in the group of artists then engaged in decorating the palace of Versailles, under the direction of the "premier peintre". Jouvenay was elected to the Academy in 1676, and in 1681 he was nominated for the chair of painting. However it was not till some time later, after the death of Lebrun (1692), that he came into prominence. In truth, French painting hitherto almost completely under the influence of the Italian schools, and following under Lebrun the tradition of Rome and Bologna, was just commencing to free itself. A new tradition, traceable to Rubens, who had in 1628 painted in the Palais du Luxembourg (the famous Galerie de Médicis, now in the Louvre), was daily gaining strength. Artists were divided into "Rubenistes" and "Poussinistes", the partic- ular forms of which are known as colorists and line-artists. The artistic strife continued during the whole of the latter part of the reign of Louis XIV. Jouvenay played a decisive part in the struggle. Never having been in Italy, he could form an impartial judgment of the merits and claims of the Roman school. With La Fosse and Antoine Coypel, he was one of those who contributed most to the work of transformation, which resulted in the rise of the eighteenth-century school of artists.

Jouvenay's paintings for the Salons of 1699 and 1704 were the manifesto of the new school. The most important of them are preserved in the cathedral of Antwerp. The first is the famous "Descent from the Cross" (1697), which hangs in the Salon Carré—a free translation of Rubens' masterpiece in the cathedral of Antwerp. Eloquent and impressive, distinguished by a sentiment of massiveness and colour, and by its tonality at once low and elaborate, it was deeply influential on the next. With the painting by P. Largilière in St-Etienne du Mont (1696), it occupies a most important place in the history of French painting, in which it is one of the principal dates. In the Salon of 1704 Jouvenay presented the four works, each twenty feet long, intended for the chuck of the Church of St-Martin des Champs (as he knew it), "The Raising of the House of Simon", "The Expulsion of the Sellers from the Temple", and especially the "Raising of
Lazarus" and the "Miraculous Draught of Fishes". Attention has often been called to the fact that the artist went to Dieppe expressly to prepare himself to execute this last-named picture. We might point out also that it is strongly reminiscent of the Rubens preserved in Mechlin. Louis XIV was so delighted with this work that he had it traced off in tapestry by the Gobelins, and it was this tapestry that impressed Teri Peter the Great so much in 1717, that he wished to take it away with him, believing it to be the greatest of masterpieces. Meanwhile Jouvenet, who was now the recognised head of the new school, was selected for work at the two grand processions that expressed most accurately the characteristics of the new tradition: the dome of the Hôtel des Invalides (1700–6) and the chapel of Versailles (1709). For the former he painted twelve colossal figures of the Apostles, and for the latter, over the royal tribune, a "Descent of the Holy Ghost".

Jouvenet was director of the Academy from 1705 till 1708. In 1713 he was stricken with apoplexy and his right hand became paralysed. Far from being discouraged by this, he actually acquired, though now seventy years of age, a facility for painting with his left hand, and the kinship worked in the ceiling of the Palais de Justice at Rouen (it has now perished; there remains only a sketch of it preserved in the Louvre) and the "Magnificat" in the choir of Notre-Dame. Jouvenet is far from being a great master, but he is a striking personality in the realism of art. His works, religious and often declamatory, but honest and powerful, do not excite emotion, though one can still easily understand their great historic importance. They taught painting to the French school which had forgotten it. The whole body of great decorators in the eighteenth century — men like Béjot, Restout, Vaut, Loo, and Doyen—follow in his footsteps and Ingres was mistaken in grouping them under the title of the "School of Jouvenet". His chief paintings outside the Louvre are in the galleries of Amiens, Rouen, Nancy, Grenoble, Nantes, Rennes, and Toulouse. We have here some admirable portraits by him, as that of Fagon, physician to Louis XIV (in the Louvre) and that of Bourdaloue—now only known by the engraving, which has given rise to so much discussion as to whether the great orator preached with his eyes closed.

Jovellanos (also written Jove-I-Llanos), Gaspar Melchor de, Spanish statesman and man of letters. b. at Gijon, Asturias, 5 Jan., 1744; d. at Puerto de Vega on the borders of Asturias, 27 Nov., 1811. Intended at first for the Church, he received his preliminary training at the University of Oviedo, where he passed to the University of Avila and later to that of Alcalá. In the latter institution he spent two years, continuing his study of canon law. His uncle, the Duke of Losada, did not look with favour on the idea of the young man devoting himself to an ecclesiastical career, and persuaded him to obtain a licence in law. After a year of study under the Jessens of the University of Salamanca, he embarked for France. Although he had given up his ecclesiastical studies, he continued his studies in French law and, in 1772, was awarded the degree of Doctor of Laws. In 1773, he was appointed by the French government to work on the codification of Spanish law.

Jovianus, Flavius Claudius, Roman Emperor, 363–4. After the death of Julian the Apostate (26 June, 363), the army making war on Persia and then in retreat from Azeria proclaimed Jovianus emperor, after the prefect of the guard, Sallustius, a confidant of Julian, had refused the dignity on account of his advanced age. Jovianus was a son of the distinguished Constans (VIII). Varro's account of his early life is sketchy. Though at that time less than thirty-three, he held the rank of captain in the imperial bodyguard. His election was hailed with joy by the Christians, since from him they could expect religious toleration. Although Jovianus had a warlike appearance, he lacked the energy and decision of his predecessor. He was a pacifist and agreed to the conditions of the treaty offered by Shapur (Sapor), the crafty Persian king, and agreed to restore the boundaries of the empire as they
JOVINIUS

 existed before the peace with Diocletian in 297. The four satrapies east of the Tigris, with the fortified cities of Nisibis and Singara, were relinquished contrary to the wishes of the inhabitants, who were hostile to Persia, and the ancient connexion between the Roman and Aramaeia was severed. In return, the Roman army was permitted to retreat to the right bank of the Tigris without molestation. This weak agreement destroyed at one blow the Roman supremacy over the country about the Euphrates and Armenia, and Persia henceforth dominated the hither Orient. Under similar difficulties marched with the army from Mesopotamia to Antioch and thence to Tarsus, where he caused the mausoleum of his predecessor to be adorned. On 16 February, 364, during the march to Constantinople, the emperor was overtaken by a sudden death in the Bithynian frontier town of Dadaстанa, having been suffocated by coal gas in his bed-chamber, though possibly assassinated (Socrates, III, xx-xxv; VI, iii-vi). His body was brought to Constantinople and buried in the church of the Apostles beside that of Constantine. Jovinus was a zealous and orthodox Christian. He restored to the Church the treasures granted by Constantine, and withdrawn by Julian. Athanasius, then seventy, was permitted to return from exile to Alexandria. In a general edict of toleration, he established freedom for all forms of worship, even paganism, but forbade magical sacrifices, reintroducing the religious toleration proclaimed by Julian in his Milan Edict of 333.

JOVINIUS, an opponent of Christian asceticism in the fourth century, condemned as a heretic (390). Our information about him is derived principally from his work of St. Jerome in two books, "Adversus Joviniunum." He was a monk at one time in his life, but subsequently an advocate of anti-ascetical tendencies. He became the head of a party, and in the act condemning him Auxentius, Genialis, Germintor, Felix, Frontinus, Martinian, Januarius and Ingeniosus: and it is alleged as his disciple. His views were embodied in writings which were condemned at a synod held in Rome under Pope Siricius, and subsequently at a synod convened at Milan by St. Ambrose. The writings of Jovinus were sent to St. Jerome by his friend Pammachius; Jerome replied to them in a long treatise written in 393. From this work it would appear that Jovinus maintained (1) that a virgin as such is no better in the sight of God than a wife; (2) continence is no better than the partaking of food in the right disposition; (3) a person baptized with the Spirit as well as water cannot sin; (4) all sins are equal; (5) there is but one grade of punishment and one of reward in the future state.

From a letter of the synod at Milan to Pope Siricius (Ambrose, Ep. xlii) and from St. Augustine (lib. contra Julian., ii) it is clear that Jovinus denied also the perpetual virginity of the Blessed Virgin Mary. The reply of St. Jerome was couched in language that terrified Pammachius, who found fault with it because it was excessive in praise of virginity and in depreciation of marriage. The efforts to suppress it failed and St. Jerome's work obtained a wide circulation. Nothing is known of the later career of Jovinus. As a work in St. Jerome's work against Vigilantius, written in 409, that he "amidst pheasants and pork rather belched out than breathed out his life," it is inferred that he was then dead.

JOYEUSE

JOVIVUS (Giovio), Paulus, historian: b. at Como, Italy, 9 April, 1453; d. at Florence, 11 Dec., 1552. Having completed his medical studies at Padua and received the degree of doctor, he was attracted by the princely liberality of Pope Leo X, and betook himself to Rome. Here he practised his profession, but also devoted himself to historical studies, particularly as to his own time. Knowing how to turn to account all sources of information, he resolved to utilize his extensive materials in a comprehensive work, which would embrace all the countries of Europe, beginning with the expedition of Charles VIII of France into Italy and the conquest of Naples. Having completed the first part, he managed to obtain permission to read it to the Holy Father. The latter was so struck by the elegance of the language and the skill of the narration that he conferred knighthood on Jovius, and appointed him professor of rhetoric at the Roman University. Adrian VI made him a canon of the cathedral of Como, and elevation VII appointed him Bishop of Noeora in 1528 to complete the substantial loss which he had sustained in consequence of the capture of Rome. He sought under Paul III to be transferred to the See of Como; and, as his efforts to this end remained unavailing, he gave up Noeora in 1546 from sheer vexation, and went to Como, whence in 1550 he made his way to Florence.

He was, as his writings show, a child of his own time. He led a life of pleasure little in accord with Christian precepts, was in active touch with the leading humanists, and was a zealous collector of works of art—especially of portraits, which he brought together in a considerable museum. This did not, however, prevent him from labouring steadily on his main work and completing it with new material. Despite all urgings, he did not begin to print it until 1550, but completed this task very shortly before his death. Under the title, "Historiarum sui temporis libri XLI," the work appeared in two volumes at Florence, and later at Basle (1560), an Italian translation also appearing in Florence (1551-3). He gives us here a very clear recital of events from 1494 to 1544, and, while he does not always succeed in unveiling the hidden and interwoven causes and effects of things, he shows himself a true historian. Naturally, works of his have been formed of his work. It has been at times sharply criticized, chiefly because Jovius is too enamoured of himself, and does not hesitate to declare openly that he will dress up a character in gold, brocade, or common cloth, according to the fee which such portrayal may yield him. However, it is certain that he does not always follow so reprehensible a principle, for he is infrequently tells the bluntest truths to his own greatest benefactors. Of his other works we should mention: "Vite virorum illustrium (7 vols., Florence, 1549-57); "Elogia virorum bellissima virtute illustratum, 1549; "Hispanica, 1549-59; "Historia Cardinale, 1550; "Historia de"
brother of the Admiral Anne de Joyeuse and of the prelate François de Joyeuse. As a young man, when he was known as the Comte de Bouchage, he felt attracted to the religious life and confided this desire to the guardian of the Cordeliers of Toulouse. But yield of the other had died, and a few years later, 4 September, 1587, Joyeuse received the habit in the convent of the Capuchins in the Rue Saint-Honoré, Paris, from the hands of Father Bernard Dosimo, taking the name of Père Ange. This step occasioned great stir. The "Venerable" P. Honoré of Paris (Charles Bochart de Champigny) owed the example of Joyeuse the impulse which caused him to enter the cloister. When in October, 1587, two brothers of Joyeuse were killed at Coutras, he overcame the strong temptation he felt to become a soldier again in order to avenge them. When, after the Day of Barresades (see Guise, House of), 12 May, 1588, the borders of Paris were wished to recover, the good graces of Henry III, who had sought refuge at the bastards, they sent as a first embassy a procession of Capuchins, at whose head was Père Ange bearing a cross and flogged by two other monks, while the people implored mercy. On 18 August, 1588, P. Ange, in conformity with the Franciscan rule, drew up his will, which was afterwards ratified on the morrow by Henry III, and which Father Ubal (d'Alençon) has recently recovered and published. This formality finished he was able to make his profession in December, 1588. He was sent to Italy to study theology.

In 1592 he was guardian of the Capuchins of Arles and on his way to Toulouse when his younger brother, Scipio de Joyeuse, drowned himself in the Tarn after the defeat of Villemur. The Cardinal de Joyeuse, the Parlement, and the clergy all thought of placing P. Ange in command of the troops against the Huguenots as Governor of Languedoc. The pope released him from his vows. The Capuchins who had once more become a soldier fought valiantly, and then assembled the States of Languedoc at Carcassonne to take measures for bringing about peace. He agreed with the Duke of Montmorency, his godfather, a truce of three years, which was soon followed by a general peace owing to the abjuration of Henry IV. Henry IV named him marshal of France, grand master of the wardrobe, and Governor of Languedoc.

But after he had married his daughter to the Duc de Montpensier, recalling the counsel given him in July, 1595, by his dying mother, and sensitive to the words of Henry IV who had called him an "unfrocked Capuchin", Joyeuse joined (8 February, 1599) the Capuchins in the Rue Saint-Honoré. In 1600 he preached again at Paris, notably in Saint-Jean-de-Montmartre, before the king and the court. There he discussed the relationship in the pulpits between Père Brulart de Sillery and Père Ange de Joyeuse on the ineligibility of marriage, drew upon the Capuchins the displeasure of Henry IV, who had dissolved his marriage with Queen Margaret. In turn guardian of the convent of Toulouse, provincial of the order, founder of the Capuchin convents, he was guardian of the convent in the rue Saint-Honoré (1606) he went to Rome, in 1608, to attend the general chapter of his order. Here he was made definitor-general and, through the intervention of Cardinal de Givry, obtained permission to leave Rome, which he wished to retain. Having set out 10 August, 1608, he was attacked by fever at Rivoli. He was buried in the church of the Capuchins in the Rue Saint-Honoré. His biographer Jacques Brousse has preserved some fragments of his sermons. Bernard of Bologna, in the "Bibliotheca script. Cap." (1747), mentions one of his works entitled "Flamma divini amoris", which seems to have been lost. The plenipotentiaries of Voltaire's Henriade are with regard to this work, which have caused the actual facts to be forgotten and have inflicted on an ardent and pious friar an obloquy not sustained by historical truth.

GEORGES GOUyon.

Juan Bautista de Toledo, an eminent Spanish sculptor and architect; b. at Madrid (date not known); d. there 19 May, 1567. In 1547 he went to Rome and studied under the influence of Michelangelo Buonarroti. Afterwards he went to Naples, having been sent for by the Viceroy, Don Pietro de Toledo, who engaged him as architect to the emperor, Charles V. He designed and superintended many important works in that capital. Among others, the Strada di Toledo (since 1870 called Strada di Roma), the church of Santiago and S. Giacomo degli Spagnuoli; the square of the Castell de Castello Nuovo, and the square of the Poselipo, or Pauselipo, and a number of fountains. In 1559, at the summons of Philip II, he went to Madrid and was appointed architect-in-chief of the royal works in Spain. His yearly salary as architect to the Crown was at first not more than 220 ducats, Philip's policy, with his Spanish artists at least, being to assign them moderate allowances until he had tested their abilities. At Madrid he designed the Casa de la Misericordia and the façade of the church of las Descaicas Reales; works at Acesa; at the palace of Aranjuez; at Martininos de las Losadas, the palace of Cardenal Espinosa, and a villa at Esteban de Amiran for the secretary D. de Vargas. Toledo soon began his plan for the Escorial, of which he saw the first stone laid on 23 April, 1563, and he superintended the work till his death. He was generally considered an architect of much merit, well-versed in philosophy, mathematics, and the belles-lettres, and to those qualities which Vitruvius considers necessary to form a good architect.

THOMAS H. POOLE.

Jubilate Sunday, the third Sunday after Easter, being so named from the first word of the Introit at Mass—"Jubilate Deo omnis terra" (ps. lxv). In the liturgy for this and the two following Sundays, the Church continues her song of rejoicing in the Resurrection. Throughout the whole of Paschaltide both Office and Mass are expressive of Easter joy, Alleluia being added to every antiphon, responsory, and versicle, and repeated several times in the Alleluias and other parts of the Mass. The Introit for this day is an invitation to universal joy; the Epistle exhorts all, especially penitents and the newly baptized, to obey loyally the powers that be and to show themselves worthy disciples of the Risen Christ; and the Gospel given at Mass exhorts, encouraging us to bear patiently the trials of this life in view of the heavenly joys that are to come hereafter.

G. CYPRIAN ALSTON.

Jubilee, Holy Year of.—The ultimate derivation of the word jubilee is disputed, but it is most prob-
able that the Hebrew word jobel (יוֹבֵל), to which it is traced, meant "a ram’s horn", and that from this instrument, used in proclaiming the celebration, a certain idea of rejoicing was derived. Further, passing from the second meaning, the word became confused with the Latin jubilo, which means "to shout", and has given us the forms jubilatio and jubilæum, now adopted in most European languages.

For the Israelites, the year of Jubilee was in any case pre-eminently a time of joy, the year of remission or jubilee, that pardon (Jos 21:45) shalt sanctify the fiftieth year," we read in Leviticus, xxv, 10, "and shalt proclaim remission to all the inhabitants of thy land: for it is the year of jubilee." Every seventh year, like every seventh day, was always accounted holy and set aside for rest, but the year which followed seventh year, which was always accounted holy, and the institution evidences a close analogy with the feast of Pentecost, which was the closing day after seven weeks of harvest. In any case it is certain that the Jubilee period, as it was generally understood and adopted afterwards in the Christian Church, meant fifty and not forty-nine years; but at the same time the number fifty was not originally arrived at because it represented half a century, but because it was the number which followed seven cycles of seven.

It was, then, part of the legislation of the Old Law, whether practically adhered to or not, that each fiftieth year was to be celebrated as a jubilee year, and that at this season every household should recover its absent members, the land return to its former owners, the Hebrew slaves be set free, and debts be remitted. The same conception, spiritualized and developed in the Jubilee, though it is difficult to judge how far any sort of continuity can have existed between the two. It is commonly stated that Pope Boniface VIII instituted the first Christian Jubilee in the year 1300, and it is certain that this is the first celebration of which we have any notice recorded. It is certain that the idea of solemnizing a fiftieth anniversary was familiar to medieval writers, no doubt through their knowledge of the Bible, long before that date. The jubilee of a monk’s religious profession was often kept, and probably some vague memory of the Holy Land, which are commemorated in the "Carmen Seculare" of Horace, even though this last was commonly associated with a period of a hundred years rather than any lesser interval. But what is most noteworthy, the number fifty was specially associated with the early thirteenth century with the idea of remission. The translation of St. Thomas of Canterbury took place in the year 1220, fifty years after his martyrdom. The sermon on that occasion was preached by Cardinal Stephen Langton, who told his hearers that this accident was meant by Providence to recall "the number of the remission of the number of the sacred page is aware, is the number of remission" (P. L., CXV, 421). We might be tempted to regard this discourse as a fabrication of later date, were it not for the fact that a Latin hymn directed against the Albigenses, and certainly belonging to the early thirteenth century, speaks in exactly similar terms. The first stanza runs thus:—

Anni favor jubilei
Pomarum laxat debitum,
Nec teadum, nec etiam
Et cessandi propoetem.
Querrunt passim omnes rei.
Pro mercede regnum Dei
Levi petat exposatum.

(See Drees, "Analecta Hymnica", XXI, 166.)

In the light of the explicit mention of the jubilee with great remissions of the penalties of sin to be obtained by full confession and purpose of amendment, it seems difficult to reject the statement of Cardinal Stefaneschi, the contemporary and counsellor of Boniface VIII, and author of a treatise on the first Jubilee. ("De jubilæis Patrum", VI, 536), that the proclamation of the Jubilee owed its origin to the statements of certain aged pilgrims who persuaded Boniface that great indulgences had been granted to all pilgrims to Rome about a hundred years before. It is also noteworthy that in the Chronicle of Alaric of the Fountains, under the year 1208 (not, be it noted, 1200), we find this brief entry: "It is said that this year was celebrated as the fiftieth year, or the year of jubilee and remission, in the Roman Court." (Perts, Mon. Germ. Hist.: Script., XXIII, 889). It is beyond the period of our inquiry, 1336, but in 1336 Pope Benoît XI published the Bull "Antiquorum fida relatio", in which, appealing vaguely to the precedent of past ages, he declares that he grants aflat and renews certain "great remissions and indulgences for sins" which are to be obtained "by visiting the city of Rome and the venerable basilica of the Prince of the Apostles". Coming to more precise details, he specifies that he concedes "not only full and copious, but the most full, pardon of all their sins", to those who fulfill certain conditions. These are, first, that being truly penitent they confess their sins, and secondly, that they visit the basilicas of St. Peter and St. Paul in Rome, at least once a day for a specified time—in the case of the inhabitants for thirty days, in the case of strangers for fifteen. No explicit mention is made of Communion, nor does the word jubilei occur in the Bull—indeed the pope speaks rather of a celebration which is to occur 'every hundred years'. The Benedictine "Liber Cordanis et Romanus..." describes this year as annus jubileus, and the name jubilei (though others, such as "the holy year" or the "golden year" have been used as well) has been applied to such celebrations ever since.

Dante, who is himself supposed by some to have visited Rome, refers to it under the name Giubileo in the Inferno (xvii, 29) and indirectly bears witness to the enormous concourse of pilgrims by comparing the sinners passing along one of the bridges of Malebolge in opposite directions, to the throngs crossing the bridge of the Castle Sant' Angelo on their way to and from St. Peter's. Similarly, the chronicler Villani was so impressed on this occasion by the sight of the monuments of Rome and the people who flocked thither that he then and there formed the resolution of writing his great chronicle, in the course of which he gives a remarkable account of what he witnessed. He describes the indulgence as a full and entire remission of all sins di culpa et di pena, and he dwells upon the great contentment and good order of the people, despite the fact that during the greater part of that year there were two hundred thou pilgrims on which, as every reader of the sacred page is aware, is the number of remission" (P. L., CXV, 421).
indulgence”. It implied, however, that any approved Roman confessor had faculties to absolve from reserved cases, and that the liberty thus virtually accorded of selecting a confessor was regarded as a privilege. The phraseology and the decide were not, and was never claimed by any power of absolving in grievous matters apart from these. “All theologians”, remarks Maldonatus with truth, “unanimously without a single exception, reply that an indulgence is not a remission of guilt but of the penalty.” (See finally the Zefianus f. , a terrible accident, 1899, 49 sqq., 423 sqq., 743 sqq., and “Dublin Review”, Jan., 1900, pp. 1 sqq.)

As we have seen, Boniface VIII had intended that the Jubilee should be celebrated only once in a hundred years, but some time before the middle of the fourteenth century, great instances, in which St. Bridget of Sweden and the poet Petrarch amongst others had some share, were made to Pope Clement VI, then residing at Avignon, to anticipate this term, particularly on the ground that the average span of human life was so short as otherwise to render it impossible for men to spend at the shrine in their own generation. Clement VI assented, and in 1350 accordingly, though the pope did not return to Rome himself, Cardinal Gaetani Ceccano was dispatched thither to represent His Holiness at the Jubilee. On this occasion daily visits to the church of St. John Lateran were enjoined, besides those to the basilicas of St. Peter and St. Paul without the walls, while at the next Jubilee, St. Mary Major was added to the list. The visit to these four churches has remained unchanged ever since as one of the primary conditions for gaining the Roman Jubilee. The celebration next following was held in 1390, and in virtue of an ordinance of Urban VI, it was proposed to hold a Jubilee every thirty-three years as representing the period of the sojourn of Christ upon earth and also the average span of human life. Another Jubilee was accordingly proclaimed by Martin V in 1423 (see Pastor, “Ge- schichte der Päpste”, 3rd ed., I, 798-880), but Nich- olaus of this description at the present day, while Paul II decreed that the Jubilee should be celebrated every twenty-five years, and this has been the normal rule ever since.

The Jubilee of 1430 and 1475 were attended by vast crowds of pilgrims, and that of 1450 was unfortunate in the sense that the basilicas were crowded beyond capacity, which nearly two hundred persons were trampled to death in a panic which occurred on the bridge of Sant’ Angelo. But even this disaster had its good effects in the pains taken afterwards to widen the thoroughfares and to provide for the entertainment and comfort of the pilgrims, by the erection of the Archeofraternity of the Holy Trinity, founded by St. Philip Neri, which has been blessed. On the other hand, it is impossible to doubt the evidence of innumerable witnesses as to the great moral renovation produced by these celebrations. The testimony comes in many cases from the most unexceptionable sources, and it extends from the days of Boniface VIII to the striking account given by Cardinal Wisse- man (“Last Four Popes”, pp. 270, 271) of the only Jubilee held in the nineteenth century, that of 1825. The omission of the Jubilee of 1800, 1850, and 1875 was partly due to the existing circumstances, and in the absence of such exceptions the celebration has been uniformly maintained every twenty-five years from 1450 until the present time. The Jubilee of 1900, though shorn of much of its splendour by the confinement of the Holy Father within the limits of the Vatican, was, nevertheless, carried out by Pope Leo XIII with all the solemnity that was possible.

CEREMONIAL OF THE JUBILEE. The most distinctive feature in the ceremonial of the Jubilee is the un- ceasing and the peculiar way of the “holy door” in each of the four great basilicas which the pilgrims are required to visit. It was formerly supposed that this rite was instituted by Alexander VI in the Jubilee of 1500, but this is certainly a mistake. Not to speak of a supposed vision of Clement VI as early as 1350, who is said to have ordered the doors to be left open, we have several references to the “holy door” or the “golden gate” in connexion with the Jubilee long before the year 1475. The earliest ac- count seems to be that of the Spanish pilgrim, Pero Tafur, c. 1457. He connects the Jubilee indulgence with the right of access to the holy door and insists in pagan times for all who crossed the threshold of the puerta tarpea upon the site of the Lateran. He goes on to say that, at the request of Constantine, Pope Sylvester published a Bull proclaiming the same immunity from punishment for Christian sinners who took sanctuary there. The privilege, however, was grossly abused and the popes consequently ordered the door to be walled up at all seasons save certain times of special grace. Formerly the door was un- walled only once in a hundred years, this was afterwards reduced to fifty, and now, says Tafur, “it is usually open.” (Pero Tafur, p. 37). However legendary all this may be, it is hardly possible that the story could have been quite recently fabricated at the time Tafur recorded it. Moreover, a number of witnesses allude to the un- walling of the holy door in connexion with the Jubilee of 1450. One of the Franciscan merchant Gio- vanni Russell, speaks of the doors of the Lateran basilica, “one of which is always walled up except during the Jubilee year, when it is broken down at Christ- mas when the Jubilee commences. The devotion which the populace has for the bricks and mortar of which it is composed is such that at the unwalling, the fragments are immediately carried off by the crowd, and the foreigners [glt olremontani] take them home as so many sacred relics. . . . Out of devotion every one who gains the indulgence passes through that door, which is walled up again as soon as the Jubilee is ended” (Archivio di Storia Patria, IV, 86-970). But this description has been long since abandoned to the present day, and which has nearly always sup- plied the principal subject depicted upon the long series of Jubilee medals issued by the various popes who have opened and closed the holy door at the be- ginning and end of each Jubilee year. Each of the four basilicas has been honoured in this way, and at St. Peter’s it was opened on the Christmas Eve preceding the anno santo by the pontiff in person, and it is closed by him on the Christmas Eve following. The pope knocks upon the door three times with a silver hammer, singing the versicle “Open unto me the gates of justice”. The procession has been well described by the idea of the exclusion of Adam and Eve from Paradise, and the expulsion and reconciliation of penitents according to the ritual provided in the Pontifical. But it may also have been influenced by the old idea of seeking sanctuary, as Tafur and Russell suggest. The sanctuary with the holy door is always intended to remain as a reminder of the important part which this institution played in the life of our forefathers.

THE JUBILEE INDULGENCE.—This is a plenary in- dulgence which, as stated by Boniface VIII in Con- sistory, it is the intention of the Holy See to grant
in the most ample manner possible. Of course, when first conceded, such an indulgence, and also the privi-
lege annexed of choosing a confessor who had power
to absolve from any sin, was a very great spiritual boon than it has since become. So pre-
minent was the favour then regarded that the cus-
tom arose of suspending all other indulgences during the Jubilee year, a practice which, with certain
modifications, still obtains at the present day. The
precise condition for gaining each jubilee is deter-
ded by the Roman pontiff, and they are usually
announced in a special Bull, distinct from that which
it is customary to issue on the preceding feast of the
Ascension giving notice of the forthcoming celebra-
tion. The main conditions, however, which do not
usually vary are these: confession, Communion, visits
to the four basilicas during a certain specified
period. The statement made by writers like the
late Dr. H. C. Lea, that the Jubilee indulgence, being
a coipa et a pennis, did not of old presuppose either
confession or repentance, is absolutely without
foundation, and is contradicted by every official
document preserved to us. Besides the ordinary
Jubilee indulgence, to be gained only by pilgrims
who pay a visit to Rome, or through special conces-
sion by certain privileged religious confined within
their monasteries, it has long been customary to ex-
tend this indulgence the following year to the faithful
throughout the world. For this fresh conditions are
appointed, usually including a certain number of
visits to local churches and sometimes fasting or
other works of charity. Further, the popes have
constantly exercised their prerogative of conceding
to all the faithful indulgences ad instar jubilaei (after
the model of a jubilee) which are commonly known
as extraordinary Jubilees. On these occasions, as
at the Jubilee itself, special faculties are usually
accorded for absolution from reserved cases, though,
on the other hand, the great indulgence is only to be
gained by the performance of conditions much
more onerous than those required for an ordinary
plenary indulgence. Such extraordinary Jubilees are
generally granted by a newly elected pontiff at his
accession or on occasions of some unwonted celebra-
tion, as was done, for example, at the convening of
the Vatican Council, or again at times of great
catastrophe.

HERBERT THURSTON.

Jubilee, Year of (Hebrew)—According to the
Pentateuchal legislation contained in Leviticus, a Ju-
bilees is the year that follows immediately seven
successive Sabbath years (the Sabbath year being the
seventh year of a seven-year cycle). Accordingly, the
Jubilee year takes place at the end of seven years
seven years, i.e., at the end of every forty-nine years, or the
fifthieth. Hence, the institution of the Jubilee year
system is but an extension or the working out of the
Sabbatical-year legislation, viz., that as at the end of
every six years there succeeds a Sabbath year, so at
the end of each seven Sabbath years there succeeds a
Jubilee year. Arguing from the analogous Pentateuc-
tal system, it is evident that the actual year in which
the jubilee occurs is not the seventh, or even the
Sabbatic cycle (i.e., the forty-ninth year), but the year
following, namely, the fifthieth. Hence, at the end of
each forty-eight years there occur two consecutive fol-
lowing, viz., the forty-ninth, or the Sabbath year
of the seventh Sabbath cycle, and the fifthieth, or the
Jubilee year. From the nature and purpose of the
Jubilees legislation, it is also evident that the Jubilee
year is to be reckoned with in itself absolutely, and
not in relation to the length of time, or duration, of
which particular event constituted it, for example,
the year 1950 is Jubilee year, and an Israelite
became a slave in the year 1930, this slave is to be set
free not in 1990, but in 1950, which is the appointed
year of Jubilee.

The term Jubilee year (Heb., נִיוֹם יְמֵי נַעֲרָיָה, or simply, יְמֵי נַעֲרָיָה; Vulg., annum
jubileum, or simply, jubileum of Hebrew origin, the
etymological meaning of which is, in all probability, "ram",
which etymonomically stands for "the horn of a ram"
(בָּשָׁם). Thus the name "the year of the blow-
ing of the ram's horn" (יְמֵי נַעֲרָיָה) exactly corresponds to "the day of the blowing of the horn"
(יִקְרָאת הַרְוָא), or the "feast of the new year" and it was, like the
latter, announced to the people by the blowing of the
horn. In Ezekiel (xvi, 17) the Jubilee year is called
"the year of release" (יָרָאת הַיֵּשָׁה; cf. above); hence some com-
mentators have derived the word יָרָאת (Jubilee) from the
stem יָרָא, which means "to emit", "to liberate".
The first derivation, however, is more acceptable.
The legislation concerning the year of Jubilee is
found in Leviticus, xxv, 8-54, and xxvii, 16-24. It
consists of three main enactments: (1) the set aside (2)
revision of landed property to its original owner who
had been driven by poverty to sell it; and (3) the freeing
or manumission of those Israelites who, through poverty
or otherwise, had become the slaves of their brethren.
The first enactment (contained in Leviticus, xxv,
11-12) enjoins that as in the case of each Sabbath year,
so also each Jubilee year there is to be rest, and that
there is to be no tillage nor harvest, but that what the
land produces spontaneously and of its own accord is
free to be utilized by all Israelites, including, of course,
the landlord himself, but only for their own actual and
immediate use and maintenance, and, consequently,
not to be stored by anyone for any time for any
other purpose. The object of this law, as well as of the two
following, is most commendable, as by it the poor and
all those who, mainly on account of poverty, do not ac-
tually own any land, are hereby provided for, not only
for a whole year every seven years, but also in every
fifthieth year.

The second enactment, contained in Leviticus, xxv,
13-34, and xxvii, 16-24, enjoins that any owner of
landed property, who, for reason of poverty or other-
wise, has been compelled to part with his land, has the
right to receive his property back free in the Jubilee
year, or to redeem it even before the Jubilee year, if
he has either his own financial circumstances have improved,
or if his next of kin will redeem it for him by paying
back according to the price which regulated the pur-
chase. Hence, among the ancient Hebrews, the trans-
fer of property was not, properly speaking, the sale of
the land but of its produce for a certain number of
years, and the price was fixed according to the number
of years which intervened between the year of the sale
and that of the next year of jubilee. Accordingly,
the right of possession of real estate was inalienable.
Whether a landowner was ever allowed to part perma-
nently with his property for speculation, or for any
purpose other than poverty, is not clear. In fact, al-
though according to later rabbinical interpretation,
this was considered as legally unlawful. Real estate
in walled towns was made an exception to this law.
An owner who had sold was permitted to redeem his
property, provided he did so within a year, but not
afterwards. Levitical cities, on the other hand, are
under the provisions of the general law, reverting back to their original
owners in the year of jubilee. Land in the suburbs of such
cities could not be disposed of, or traded with in any
manner. In case a man dedicated property to the
Lord, he was permitted to redeem it, provided he
added to it one-fifth of its value as reckoned by the
number of crops it would produce before the year of Jubilee, and provided, also, he redeemed it before that period. If not reclaimed then or before that period, it was understood to be devoted forever. The details of these exchanges of property probably varied at different times. Josephus informs us that the temporary proprietor of a piece of land made a settlement with its owner at the year of Jubilee on the following terms: after making a statement of the value of the crops he had obtained from the land, and of what he had expended upon it, if his receipts exceeded the expenses, the owner got nothing; but if the reverse was true, the latter was expected to make good the loss (Bissell, "Biblical Antiquities", 231).

The third enactment (contained in Leviticus, xxv, 37-42, 48, 54) was a provision to prevent that poverty has sold themselves as slaves to their fellow-Israelites or to foreigners resident among them, and who, up to the time of the Jubilee year, have neither completed their six years of servitude, nor redeemed themselves, nor been redeemed by their relatives, are to be set free in the Jubilee year to return with their children to their family and to the patrimony of their fathers. Exception, of course, is made in the case of those slaves who refuse to become free at the expiration of the appointed six years' servitude. In this case they are allowed to become slaves forever and, in order to indicate their consent to this, they are required to sing a song of their origin (Ex. xxi, 6). This exception, of course, is in no way in contradiction with the Jubilee-year's enactment. It is not necessary, therefore, in order to explain this apparent contradiction, to maintain that the two legislations belong to two distinct periods, or, still less, to maintain that the two legislations are conflicting, as some modern critics have maintained. It is important, however, to remark that the legislation concerning the various enactments of the Jubilee year contained in Leviticus, is not sufficiently expanded so as to cover all possible hypotheses and cases. This want has been more or less consistently remedied by later Talmudic and rabbinical enactments and legislations.

The design and importance of the Jubilee-year legislation, in both its social and economic aspects, has been well pointed out by Dr. Ginsburg, as follows: "The design of this institution is that those of the people of God who, through poverty or other adverse circumstances, had forfeited their personal liberty or property to their fellow-brethren, should have their debts forgiven by their co-religionists every half century, on the great day of atonement, and be restored to their liberty and inheritance; that the God on that very day forgave the debts of his people and restored them to perfect fellowship with himself, so that the whole community, having forgiven each other and being forgiven by God, might return to the original order which had been disturbed in the lapse of time, and being freed from the bondage of one another, might unreservedly be the servants of him who is their redeemer. The aim of the jubilee, therefore, is to preserve unimpaired the essential character of the theocracy, to the end that there be no poor among the people of God (Deut. xv, 4). Hence God, who redeemed Israel from the bondage of Egypt to be his peculiar people, and allotted them to the promised land, will not suffer any one to usurp his title as Lord over those whom he owns as his own. It is the idea of grace for all the suffering children of man, bringing freedom to the captive and rest to the weary as well as to the earth, which made the year of jubilee the symbol of the Christian year (Is., lix, 2), when all the conflicts in the universe shall be restored to their original harmony, and when not only we, who have the first-fruits of the Spirit, but the whole creation, which groaneth and travailleth in pain together until now, shall be restored into the glorious liberty of the sons of God (comp. Is. lx., 1-3; Luke, iv, 21; Rom. viii., 18-23; Heb. iv., 9)."

The importance of this institution will be apparent if it is considered that moral and social advantages would accrue to the community from the sacred observance of it. 1. It would prevent the accumulation of land on the part of a few to the detriment of the community at large. 2. It would render it impossible for any one to be born to absolute poverty, since every one had his hereditary L. A. D. 3. It would produce those inequalities which are produced by extremes of riches and poverty, and which make one man domineer over another. 4. It would utterly do away with slavery. 5. It would afford a fresh opportunity to those who were reduced by adverse circumstances to servitude again to win back all to the community in the property which they had temporarily forfeited. 6. It would periodically rectify the disorders which creep into the state in the course of time, preclude the division of the people into nobles and plebeians, and preserve the theocracy inviolate (C. D. Ginsburg in Kitto, "Cyclopaedia of Biblical Literature", s. v. "Jubilee, The Year of").

JUBILEES, Book of (נֶפֶש הַיָּדוֹת).—An apocryphal writing, so called from the fact that the narratives and stories contained in it are arranged throughout in a fanciful chronological system of jubilees—periods of forty-nine years each; each event is recorded as having taken place in such a week of such a month of such a jubilee year. The author assumes an impossible solar year of 364 days (i.e. twelve months of thirty days each, and four intercalary days) to which the Jewish ecclesiastical year of thirteen months of twenty-eight days each exactly corresponds. The whole chronology, for which the author claims heavenly authority, is based upon the number seven. Thus the week had 7 days; the month 4 x 7 = 28; the year 52 x 7 = 364; the year week 7 years; and the Jubilee 7 x 7 = 49. It is also called "Little Genesis" (בַּשֵּׁם יָרֵא), or "Lepto-Genesis", not on account of its size, for it is considerably larger than the Canonical Genesis, but according to its minor or inferior relation as compared with the latter. It is also called "Apocalypse of Moses", "The Life of Adam", and in Ethiopic it is called "Kufafel". In the "Decretum Galasianum" concerning the canonical and apocryphal books of Scripture, we find among the apocryphas a work entitled "Liber de filiabus et filiis Adam" (i.e. the daughters of Adam Little Genesis), which is probably a combination of two titles belonging to two separate works. The book is also mentioned by Jerome, in his Epistle "ad Fabiolam", in connection with the name of a place called Ressa νῦν (Num., xxxii, 21), and by Epiphanius and by Didymus of Alexandria, which shows that it was well known both in the East and in the West.

The Book of Jubilees was originally written in Hebrew, and, according to Charles ("Book of Jubilees", London, 1902), partly in verse; but it has come down to us in its complete form only in Ethiopic, and also in various fragments, Greek and Latin. The Ethiopic text was first edited by Dillmann in 1850 ("Kufafelive Liber Jubileorum, æthiopic ad duorum libros manuscriptorum fidem, primum edidit Dillmann", Kiel, 1859), who in 1850-81 had already published an abridged German version of it in "Entwurff der Biblischen Wissenschaft", vol. II., 1850, pp. 230-256; vol. III., 1851, pp. 1-96. The incomplete Latin version was first discovered and edited in 1861, by the late Monsignor Ceriani, prefect of the Ambrosians, in his "Monumenta Sacra et Profana".
vol. I, fasc. 1, pp. 15–54. The Greek fragments are scattered in the writings of various Byzantine chroni-
eliers such as Syncellus, Cedrenus, Zonaras, and Oly-
cus. The oldest Latin version, which lies in
Ethiopic was made from the Greek, was re-edited
in 1874 by Rönsch, accompanied with a Latin render-
ing by Dillman of the corresponding portion in
the Ethiopic version, with a very valuable commen-
tary and several excursus ("Das Buch der Judäer
oder die kleine Geschichte", 1874). In 1900 Dr. Littmann published a newer German
version of the Ethiopic text in Kautzsch's "APO-
274 sqq., and, in 1885, Dr. Scholz published the
first English version of the book ("The Book of Jubilees", Oxford, 1885). In 1893 the Ethiopic text was
re-edited in a revised form by Charles, and by him translated into English in 1893–5 in the "Jewish
Quarterly Review" (Oct., 1893, July, 1894, January, 1895), and subsequently in a separate volume with many addi-
tional notes and discussions ("The Book of Jubilees";
London, 1902). A French translation is promised by
the Abbé F. Martin, professor of Semitic litera-
guages at the Catholic Institute of Paris, in his val-
uable collection entitled "Documents pour l'Etude de la Bible".

The contents of the Book of Jubilees deal with the facts and events stated in the Biblical Books of Genesis, enriched by a wealth of legends and stories
which had arisen in the course of centuries in the pop-
ular imagination of the Jewish people, and written from
the rigid Pharisaic point of view of the author and
of his age; and as the author seeks to reproduce the
history of primitive times in the spirit of his own
day, he deals with the Biblical text in a very free fash-
ion. According to him, Hebrew was the language originally spoken by all creatures, animals and man,
and is the language of Heaven. After the destruction
of the tower of Babel, it was forgotten until Abraham
was taught it by angels. Henoch was the first
man initiated by the angels in the art of writing, and
wrote down, accordingly, all the secrets of astronomy,
of chronology, and of the world's epochs. Four
classes of angels are mentioned, viz. angels of the
presence, angels of sanctifications, guardian angels
over individuals, and angels presiding over the phe-
nomenon of the ages. As regards the order of the
author's position is largely that of the New Testament and
of the Old Testament apocryphal writings.

All these legendary details, it claims, were re-
vealed by God to Moses through the angel of the pre-
seence (probably Michael) together with the Law, all of
which are considered to have been written in the Lat-
in. As regards the names of the Testament patriarchs, such as Henoch, Methusala,
Noe, Shem, Abraham, Isaac, Jacob, and Levi. It
is somewhat difficult to determine the particular Juda-
istic school its author belonged to; he openly denies the resurrection of the body; he does not believe in the
written tradition; he does not regard animal sacri-
fices, etc. . . . and the fact that he wrote in Hebrew
excludes the hypothesis of his Hellenistic tendencies.
Equally untenable is the hypothesis advanced by
Beer, that he was a Samaritan, for he excludes Mount Garizim, the sacred mount of the Samarians from
the list of the four places of God upon earth, viz. the
Garden of Eden, the Mount of the East, Mount Sinai,
and Mount Sion. If the author belonged to any par-
ticular school he must have been in all probability a Pharisee (Hasidean) of the most rigid type of the
time of John Hyrcanus, in whose reign scholars gener-
ally and in later tradition is written (155–105 B.C.). Dr.
Headlam suggests that the author was a fervent
opponent of the Christian Faith (see Hastings, "Di-
cionary of the Bible"). But if the author, as it is
suggested in this rather improbable hypothesis, lived in early Christian times, he must have written his
book after the fall of Jerusalem and the destruction
of the Temple, since the latter is assumed throughout
to be still in existence as the great centre of Jewish
worship.

Under the literature mentioned in the body of the
article, see the various articles on the subject in the
Dictionary of the Bible, and especially Broders' History of the Jewish People in
the Time of Christ, tr. v, 154-141. GABRIEL OUBRANT.

Juda (יוּדָה), the name of one of the Patriarchs, the
title of the tribe reputed to be descended from him,
the name of the territory occupied by the same, and
also the name of several persons mentioned in the Old
Testament.

I. Juda the Patriarch, the son of Jacob by Lia, whose
exclamation on the occasion of his birth: "Now will I
praise the Lord" is given as the etymological reason
for the name of "Juda", which is derived from the He-
brew verb "to praise" (Gen., xxix, 35). It was Juda
who interceded with his brethren to save the life of
Joseph, proposing that he be sold to the Ishmaelites
(Gen., xxxvi, 26, 27). Though not the eldest son
of Jacob, he is represented as assuming an important
and predominating rôle in the family affairs. It is he
who, on the occasion of the second journey to Egypt,
persuades the afflicted Jacob to consent to the depar-
ture of Benjamin (Gen., xlii, 3–10), for whom he pleads
most touchingly before Joseph after the incident of
the cup, offering himself to be retained as a slave in
his stead (Gen., xli, 14 sqq.). This last plea deter-
mines Joseph to disclose his identity to his brethren
(Gen., xlv, 1 sqq.). Juda is the one chosen by Jacob
to precede him into Egypt and announce his coming
(Gen., xlii, 28), and his prestige is further emphasised
in the famous prophecy enunciated by Jacob (Gen.,
xliii, 8–12). To Juda were born five sons, viz., Her-
onan, and Sela by the daughter of Sue, and Phares and
Zara by Thammar (Gen., xxxviii). It is through
Phares, according to the First Gospel, that the Mes-
siastic lineagem is traced (Matt., i, 3).

II. Juda, a tribe of Israel, named after the son of
Jacob. The unquestioned predominance and provi-
dential mission of this tribe, foreshadowed in Gen.,
xlii, 8–10, appear from the time of the Exodus and
throughout the subsequent Israelitic history. From
the beginning Juda predominated in point of numbers.
When the first census was taken after the departure
from Egypt it numbered 74,600 fighting men, while
the next largest, the smallest, Manasses, only 32,200.
The chief of the tribe during the period of the wanderings was Nahas-
sen, son of Aminadab. Among the spies sent to
explore the Land of Canaan, the tribe of Juda was
represented by Caleb, son of Jephone (Num., xiii, 7).
According to few of the tribes was there a
name on the plains of Moab, Juda numbered 76,500 fighting
men. The names of the principal families of the tribe are
given in Num., xxxvi, 19–21, and more fully in I Par., ii.
Caleb was one of the chiefs selected to settle
the division of the land among the tribes, and on the
occasion of the passing of the Jordan the tribe of Juda,
together with those of Simeon, Levi, Issachar, Eph-
raim and Manasses, was designated to "bless the
people" from the top of Mount Garizim (Deut., xxvii, 12).
After the death of Josue the tribe of Juda was
chosen to be the vanguard in the war against the
Chanaanites. This honour was probably less a recogni-
tion of the numerical strength of the tribe than of the
promises it had received (Gen., xlii, 8–10) and the
hopes for its glorious destiny founded on these promi-
ences (Judges, i, 1–2). Juda was again chosen by the
Divine oracle to head the attack against Gabaa and
Gibees (Judges, xx, 18). The natural ramparts surrounding their country saved the tribe from
many of the invasions that troubled their northern brethren;
but the children of Ammon, passing over the Jordan,
wasted Juda, and the mountains proved ineffectual in
keeping off the Philistines (Judg., x, 9; I Kings,
xxvi, 1). In the persecution of David by Saul the tribe
of Judah showed great loyalty to the former, and soon after the death of Saul David was enthusiastically crowned at Hebron (II Kings, ii, 4, 7, 10) where he reigned seven years (II Kings, v, 5). When the unfortunate schism took place under Roboam only the tribe of Judah and of Benjamin remained faithful to the House of David. The kingdom of the Ten Tribes or Hebrew Northern Kingdom was known as that of Juda. After the Captivity the members of Juda were among the first to return to Jerusalem and begin the reconstruction of the Temple (I Esd., i, 5; iii, 9: in fine, the name ‘Jews’ (Judæi), by which the post-Exilic Israelites and their descendants are generally designated, is, of course, derived from Juda). Thus the history of the Chosen People is to a great extent the story of the varying vicissitudes of the dominant tribe of Juda. Its military ascendency and glory reached its height in the person of David, the ‘lion of Juda’. But the true lion of the tribe of Juda is Christ the Son of David (Apoc., v, 5).

III. Juda, Territory of.—The tribe of Juda occupied a rather extensive territory in the southern part of Palestine. It was bounded on the north by Dan and Benjamin, on the east by the Dead Sea, on the south by Edom, and on the west by the Sephela or plain of the Philistines. The principal cities of Juda were enumerated in Josue (xv, 21–62). The sacred writer divides the cities into four groups, viz., those of the south on the boundary of Idumea, those of the western plain, those of the mountain, and finally those of the desert. In all, mention is made of 194 towns, about one-half of which have not been identified or located with a fair degree of certitude. The recently built railroad from Jaffa to Jerusalem passes through a corner of the territory of Juda, the general aspect of which is a series of hills covered in the spring-time with grass and flowers, but bare and arid during the rest of the year. A notable feature is the string of lakes which lies in a fertile valley between two ranges of green hills. Here and there cultivated fields greet the eye. The slopes of the hills are dotted with terraced gardens and vineyards, among which are to be found grotozes and labyrinths which formerly served as hiding-places. The Kingdom of Juda, dating from the beginning of the reign of Roboam, was thus called in opposition to the Northern Kingdom of Israel. The capital, Jerusalem, was situated on the boundary line between Juda and Benjamin.

JEWISH AND JUDAIC.

Judaism. See Jews and Judaism.

Judaizers (from Greek Ἰουδαίας, to adopt Jewish customs—Esth., viii, 17; Gal., ii, 14), a party of Jewish Christians in the Early Church, who either held that circumcision and the observance of the Mosaic Law were necessary for salvation and in consequence wished to impose them on the Gentile converts, or who at least considered them as still obligatory on the Jewish Christians. Although the Apostles had received the command to announce the Gospel to all the nations, they interpreted it as referring to Gentiles who addressed themselves at first only to Jews, converts to Judaism, and Samaritans, that is to those who were circumcised and observed the Law of Moses. The converts, and the Apostles with them, continued to conform to Jewish customs: they observed the Sabbath, the Laws of Food, refused to eat with Gentiles or to enter their houses, etc. (Acts, x, 14, 28; xi, 3). At Jerusalem they frequented the Temple and took part in Jewish religious life as of old (Acts, ii, 46; hi, i, 20–26), so that, judged from external appearances, they seemed to be better distinguished by the union and charity existing among its members than by any other defect. The Mosaic ceremonial law was not to be permanent indeed, but the time had not yet come for abolishing its observance. The intense attachment which the Jews had for it, amounting to fanaticism in the case of the Pharisees, would have forbidden such a step, had the Apostles contemplated it, as it would have been tantamount to shutting the door of the Church to the Jews.

But sooner or later the Gospel was to reach the Gentiles, and then the delicate question must immediately arise: What was their position with respect to the Law? Were they bound to observe it? And if not, what conduct should the Jews hold towards them? Should the Jews waive such points of the Law as were of less religious importance to the Gentile and Jew? To the mind of most Palestinian Jews, and especially of the zealots, only two solutions would present themselves as possible. Either the Gentile converts must accept the Law, or its provisions must be enforced against them as against the other uncircumcised. But national sentiment, as well as love for the Law, would impel them to prefer the first. And yet neither solution was admissible, if the Church was to embrace all nations and not remain a national institution. The Gentiles would never have accepted circumcision with the heavy yoke of Mosaicism nor would they have been willing to occupy an inferior position with regard to the Jews, as they necessarily must, if these regarded them as unclean and declined to eat with them or even to enter their houses. Under such conditions it was easy to foresee that the admission of the Gentiles must provoke a crisis, which would clear the situation. When the brethren at Jerusalem, among whom probably were already converts of the sect of the Pharisees, learned that Peter had admitted Cornelius and his household to baptism without subjecting them to circumcision, they loudly expostulated with him (Acts, xi, 1–6). The cause assigned for their complaints is to that extent that Cornelius “had been circumcised and had eaten with them”, but the underlying reason was that he had dispensed with circumcision. However, as the case was an exceptional one, where the will of God was manifested by miraculous circumstances, Peter found little difficulty in quieting the dissatisfaction (Acts, xi, 4–18). But new conversions soon gave rise to far more serious trouble, which for a time threatened to produce a schism in the Church.

COUNCIL OF JERUSALEM (A.D. 50 or 51).—The persecution that broke out at the time of St. Stephen’s martyrdom providentially hindered the dissemination of the Gospel to be preached also to the Gentiles. Some natives of Cyprus and Cyrene, driven from Jerusalem by the persecution, went to Antioch, and there began to preach not only to the Jews, but also to the Greeks. Their action was probably prompted by the example set by Peter at Cesarea, which their more liberal views, as Hellenists would naturally dispose them to follow. With the help of Barnabas, whom the Apostles sent on hearing that a great number of Gentiles were converted to the Lord at Antioch, and of the former persecutor Saul, a flourishing church, largely Gentile, was established there (Acts, x, 20 sqq.). Having met in the house of Simon, between the years 45 and 46, Saul, now called Paul, and Barnabas founded the South Galatian churches of Antioch in Pisidia, Iconium, Derbe, and Perge, thus increasing the Gentile converts (Acts, xiii, 13—xiv, 24). Seeing the Gentile element growing so large and threatening at times to outnumber the Hebrew nation, the Church from the first was alarmed. Both their national pride and their religious sentiments were shocked. They welcomed the accession of the Gentiles, but the Jewish complexion of the Church must be maintained, the Law and the Gospel must go hand in hand, and the new converts must be Jews as well as Gentiles. The Church at Antioch and Jerusalem, and even later the Church in Asia and Galatia, were therefore at variance with each other. The Hellenistic Church of Antioch and the Galatian Churches of the east, which had already turned into a more Gentile Church, were in that respect entirely in the wrong.
Mosaic prescriptions, they could not be saved (Acts, xv, 1). As these men appealed to the authority of the Apostle, and in the spirit of their views, a delegation including Paul, Barnabas, and Titus, was sent to Jerusalem to lay the matter before the Apostles, that their decision might set at rest the disquieted minds of the Christians at Antioch (Acts, xv, 2).

In a private interview which he had with Peter, James (the brother of the Lord), and John, the Apostles then present at Jerusalem, they approved his teaching and recognized his special mission to the Gentiles (Gal., ii, 1-9). But to still the clamours of the converts from Pharisaism who demanded that the Gentile converts "must be circumcised and be commanded to observe the law of Moses", the matter was referred to the delegates of the Jerusalem council. Peter arose and after recalling how Cornelius and his household, though uncircumcised, had received the Holy Ghost as well as they themselves, declared that as salvation is by the grace of the Lord Jesus Christ, the yoke of the Law, which even the Jews found exceedingly heavy, should not be imposed on the Gentile converts. James after him voiced the same sentiment, but asked that the Gentiles should observe these four points, namely "that they refrain themselves from the pollutions of idols, and from fornication, and from things strangled, and from blood", for "these things are a stumbling block to the Gentiles", and, with a slight change in the wording, incorporated in the decree which "the apostles and ancients, with the whole church" sent to the churches of Syria and Cilicia through two delegates, Judas and Silas, who were to accompany Paul and Barnabas on their return. "Forasmuch as we have heard," so ran the decree, "that some going out from us have troubled you with words, subverting your souls: to whom we gave no commandment; . . . it hath seemed good to the Holy Ghost and to us, to lay no further burden upon you than these necessary things: that you abstain from things offered to idols, and from blood, and from things strangled, and from fornication (by which marriages within certain degrees of kindred are probably meant); from which things keeping yourselves you shall do well" (Acts, xv, 5-29). These four prohibitions were imposed for the sake of charity and union. As they forbade practices which are held in universal abhorrence by all the Jews, their observance was necessary to avoid shocking the Jewish brethren and to make free intercourse between the two classes of Christians possible. This is the drift of the somewhat obscure reason which St. James adduced in favor of the resolution: "For since in every city they meet him in the synagogues, where he is read every sabbath." The four things forbidden are severely prohibited in Lev., xvii, xviii, not only to the Israelites, but also to the Gentiles living among them. Hence the Jewish Christians, who heard these injunctions read in the synagogues, would be scandalized if they were not observed by the Gentile brethren. By the decree of the Apostles the cause of Christian liberty was won against the narrow Judaisers, and the way smoothed for the conversion of the nations. The victory was emphasized by St. Paul's refutation to allow Titus be circumcised (Gal., ii, 1). But this was not done in fear of offending the Jews, for if the Jews were implicitly forced to keep the Mosaic Law it would have been a concession to the extreme views of Gal., ii, 1-5).

The Incident at Antioch.—The decision of Jerusalem regarded the Gentiles alone, since the only question before the council was whether circumcision and the observance of the Mosaic Law were to be imposed on the Gentiles or not. Nothing was decided with regard to the observance of the Law by the Jews, and they were implicitly forced to keep it in their own communities. For, if the legal observances were not necessary for salvation, the Jew was no more bound by them than the Gentile. Nor was anything explicitly decided as to the relations which were to subsist between the Jews and the Gentiles. Such a decision was not demanded by the circumstances, since at Antioch the two classes lived together in harmony before the return of the mischief-maker. The Jews of the Dispersion were less particular than those of Palestine, and very likely some arrangement had been reached by which the Jewish Christians could without scruple eat with their Gentile brethren at the agape. However, the promulgation of the four prohibitions, which were intended to facilitate relations between the Jews and Gentile could freely meet. Hence when Peter came to Antioch shortly after the council, he, no less than Paul and Barnabas and the others, "did eat with the Gentiles" (Gal., ii, 12). But the absence of any explicit declaration gave the Judaisers an opportunity to begin a new agitation, which, if successful, would probably lead to the return of the Dispensation. Foiled in their first attempt, they now insisted that the law of not eating with the Gentiles be strictly observed by all Jews. They very likely expected to reach by indirect methods, what they could not obtain directly. Some seclots came from Jerusalem to Antioch. Nothing warrants the assertion that they were sent by St. James to oppose St. Paul, or to enforce the separation of the Jewish from the Gentile Christians, much less to promulgate a modification of the decree of Jerusalem. If they were sent by St. James, probably means simply that they were of the sect formed by Barnabas' entourage—they came on some other commission.

On their arrival Peter, who up to this had eaten with the Gentiles, "withdrew and separated himself, fearing them who were of the circumcision", and by his example drew with him not only the other Jews, but even Barnabas, Paul's fellow-labourer. Foreseeing the consequences of such conduct, Paul publicly rebuked him, because he "walked not uprightly according to the truth of the Gospel". "If thou being a Jew, he said to him, "livest after the manner of the Gentiles, and not as the Jews do, how dost thou compel the Gentiles to live as do the Jews?" The incident has been made much of by Baur and his school as showing the existence of two primitive forms of Christianity, Petrinism and Paulinism, at war with each other. But anyone, who will look at the facts without preconceived theory, must see that between Peter and Paul there is really no real disagreement but merely a difference as to the practical conduct to be followed under the circumstances. "Conversationis fuit vitium non praedicationis", as Tertullian happily expresses it. That Peter's principles were the same as those of Paul, is shown by his conduct at the time of Cornelius' conversion, and at that of old time, when the Council of Jerusalem, and by his manner of living prior to the arrival of the Judaisers. Paul, on the other hand, not only did not object to the observance of the Mosaic Law, as long as it did not interfere with the liberty of the Gentiles, but he conformed to its prescriptions when occasion required it (Col. iii, 19). Thus he shortly after circumcised Timothy (Acts, vii, 1-5), and he was in the very act of observing the Mosaic rite when he was arrested at Jerusalem (Acts, xxvi, 26 sqq.). The difference between them was that Peter, recently come from Jerusalem, thought only of not wounding the susceptibilities of the seclots there, and was thus betrayed into a course of action apparently at variance with his own teaching and calculated to promote the designs of the Judaisers; whereas Paul, not preoccupied with such a consideration and with more experience among the Gentiles, took a broader and truer view of the matter. He saw that Peter's example would promote the same thing as the Judaizing principles of relations with the Gentiles, which was only an indirect way of forcing Jewish customs upon them. He saw, too, that if such a policy were pursued, the hope of converting the Gentiles must be abandoned. Hence his bold and energetic action. St. Paul's account of the incident leaves no doubt that St. Peter saw the justice of the rebuke. (In the above account Gal., ii,
JUDAS 539 JUDAS

1-10, is with the large majority of commentators taken to refer to the Council of Jerusalem, and the incident at Antioch is consequently placed after the council. Some few interpreters, however, refer Gal. ii, 1-10, to the time of St. Paul's journey mentioned in Acts, xi, 28-30 [a. d. 44] and place the dispute at Antioch before the Synod of Jerusalem. The Judaizers in Other Churches.—After the foregoing events the Judaizers could do little mischief in Syria. But they could carry their agitation to the distant churches founded by St. Paul, where the facts were less well known; and this they attempted to do. The text of the Epistle to the Corinthians is most probably it to believe that they were at work at Corinth. The party or rather faction of Cephas (I Cor., ii, 12) very probably consisted of Judaizers. They do not seem, however, to have gone beyond belittling St. Paul's authority and person, and sowing distrust towards him (cf. I Cor., ix. 1-5; II Cor., xi. 5-12; xxii. 11-12; i. 17-20; x. 10-13). For while he has much to say in his own defence, he does not attack the views of the Judaizers, as he would certainly have done had they been openly preached. His two letters and his subsequent visit to Corinth put an end to the party's machinations. The author of the Epistle to the Galatians (who has been written soon after I and II Cor., as it very probably was) Judaizing emissaries had penetrated into the Galatian churches, whether North or South Galatian matters little here (see Galatians, Epistle to the), and by their skilful manoeuvres had almost succeeded in persuading the Galatians, or at any rate many of them, into accepting circumcision. As at Corinth they attacked St. Paul's authority and person. He was only a secondary Apostle, subordinate to the Twelve, from whom he had received his instructions in the Faith and from whom he held his mission. To his teaching they opposed the practice and teaching of two of the pillars of the Church, of those who had conversed with the Lord (Gal., ii, 2 sqq.). He was a time-server, changing his teaching and conduct according to circumstances with the view of ingratiating himself with men (Gal., i. 10; v. 11). They argued that circumcision had been instituted as a sign of an eternal alliance between God and Israel: if the Galatians then wished to have a share in this alliance, with its blessings, if they wished to be in the full sense of the term Christians, they must accept circumcision (Gal., iii. 3 sqq.; v. 2). They did not however insist, it would seem, on their musty law (v. 3 sqq.).

On hearing the news of the threatened defection of the churches which he had founded at such cost to himself, St. Paul hastily indited the vigorous Epistle to the Galatians, in which he meets the accusations and arguments of his opponents step by step, and uses all his powers of persuasion to induce his nephews to stand fast and not to be held against the yoke of bondage. The letter, as far as we know, produced the desired effect. In spite of its resemblance to the Epistle to the Galatians, the Epistle to the Romans is not, as has been asserted, a polemical writing directed against the Judaizing party at Rome. The tone of the Epistle is of a very different sort (cf. in particular i. 5-8, 11-12; xv. 14; xvi. 19). If he refers to the Jewish Christians of Rome, it is only to exhort the Gentiles to bear with these weak brethren and to avoid whatever might scandalize them (xiv. 1-20). He would not have shown such forbearance towards the Galatians, nor would the opponents of them have gentle tones. His purpose in treating of the uselessness of circumcision and legal observances was to forewarn and forewarn the Romans against the Judaizing disturbers, should they reach the capital, as he had reason to fear (Rom., xvi. 17-18). After their visit, that is St. Paul's opponents to them, they seem to have relaxed their activity, for in his later letters he rarely alludes to them. In the Epistle to the Philippians he warns against them in very severe terms: "Beware of dogs, beware of evil-workers, beware of the concision" (Phil., iii. 2). They do not seem, however, to have been active in that church at the time. Beyond this only two allusions are found—one in I Tim., i. 6-7: "From which things some going astray, are turned aside unto vain babbling: desiring to be teachers of the law; notwithstanding neither the things they say, nor whereof they affirm", the other in Tit., iii, 9: "Avoid foolish questions, and genealogies, and contentions, and strivings about the law. For they are unprofitable things and vain." Final History.—With the disappearance of the Jewish-Christian party, the good result of the Mosaic Law ceased to be of any importance in the Church, and soon became a dead issue. At the beginning of the second century St. Ignatius of Antioch, it is true, still warns against Judaizers (Magna, x, 3; viii, 1; Philad., vi, 1), but the danger was probably more a memory than a reality. During the rebellion the mass of the Jewish Christians of Palestine retired beyond the Jordan, where they gradually lost touch with the Gentiles and in the course of time split up into several sects (cf. Gal. i. 19). Justin distinguishes two kinds of Jewish Christians: those who observe the Law of Moses, but do not require its observance of others—these he would hold communion, though in this all his contemporaries did not agree with him—and those who believe the Mosaic Law to be obligatory on all, whom he considers heretics (Dial. cum Tryph., 47). If Justin is describing the Jewish Christians of his day, as he appears to do, they had changed little since Apostolic times. The accounts of later Fathers show them divided into three main sects: (a) the Nazarenes, who, while observing the Mosaic Law, seem to have been orthodox. They admitted the Divinity of Christ and the virginal birth; (b) the Ebionites, who denied the Divinity of Christ and the virginal birth, and considered St. Paul as an apostate. It should be noted, however, that though the Fathers restrict the name Ebionite to the heretical Jewish Christians, the name was common to all; (c) an offshoot of the last infected with Gnosticism (cf. art. Ebionites). After the middle of the fifth century the Jewish Christians disappear from history.

Judas Iscariot, the Apostle who betrayed his Divine Master. The name Judas (Ἰούδας) is the Greek form of Judah ( Heb. יְהוּדָ֫א, i.e., praised), a proper name frequently found both in the Old and the New Testament. Even among the Twelve there were two that bore the name, and for this reason it is usually associated with the name Iscariot, i.e., a man of Kerioth or Cariot, which is a city of Judah (cf. Jos., xv, 25). There can be no doubt that this is the right interpretation of the name, though the true origin is obscured in the Greek spelling, and, as might be expected, other derivations have been suggested (e.g. from Kerioth, a city of the hill-country, or Kerioth, the Sacred Text concerning the history of Judas Iscariot beyond the bare facts of his call to the Apostolate, his treachery, and his death. His birthplace, as we have seen, is indicated in his name Iscariot, and it may be remarked that his origin separates him from the other Apostles. Cariot and Kerioth are cities of Judah, Cariot is a city of Judah. It has been suggested that this fact may have had some influence on his career by causing want of sympathy with his brethren in the
Apostolate. We are told nothing concerning the circumstances of his call or his share in the ministry and miracles of the Apostles. And it is significant that he is never mentioned without some reference to his great betrayal. Thus, in the list of the Apostles given in the Synoptic Gospels, we read: "And Judas Iscariot, who betrayed him" (Matt., xxvi, 24; Mark, xv, 11; Luke, vi, 16), or "So again in St. John's Gospel the name first occurs in connexion with the foretelling of the betrayal: "Jesus answered them: Have not |I chosen you twelve; and one of you is a devil." Now he meant Judas Iscariot, the son of Simon: for this name was also given to Baptist, whereas he was one of the twelve" (John, vi, 71–2).

In this passage St. John adds a further particular in mentioning the name of the traitor Apostle's father, which is not recorded by the other Evangelists. And it is he again who tells us that Judas carried the purse. For, after describing the anointing of Christ's feet by Mary at the feast in Bethania, the Evangelist continues: "Then one of his disciples, Judas Iscariot, he that was about to betray him, said: Why was not this ointment sold for three hundred pence, and given to the poor? Now he said this, not because he cared for the poor; but because he was a thief, and the ointure was his: he said this to betray him, whereas he was one of the twelve." (John, xii, 4–6). This fact that Judas carried the purse is again referred to by the same Evangelist in his account of the Last Supper (xiii, 29). The Synoptic Gospels do not notice this office of Judas, nor do they say that it was he who protested at the alleged waste of the ointment. But it is significant that both in Matthew and Mark the account of the anointing is closely followed by the story of the betrayal: "Then went one of the twelve, who was called Judas Iscariot, to the chief priests, and said to them: What will you give me, and I will deliver him unto you?" (Matt., xxvi, 14–5); "And Judas Iscariot, one of the twelve, went to the chief priests, to betray him to them. Who hearing it were glad; and they promised him they would give him money." (Mark, xiv, 10–1). In both these accounts it will be noticed that Judas takes the initiative: he is not tempted and seduced by the priests, but approaches them of his own accord. St. Luke tells the same tale, but adds another touch by ascribing the deed to the instigation of Satan: "And Satan entered into Judas, who was surnamed Iscariot, one of the twelve. And he went, and discoursed with the chief priests and the magistrates, how he might betray him." (Luke, xxii, 6). And then it is added, "They were glad. And they promised him he would give him money. And he promised. And he sought opportunity to betray him in the absence of the multitude." (Luke, xxii, 3–6).

St. John likewise lays stress on the instigation of the evil spirit: "the devil having now put into the heart of Judas Iscariot, the son of Simon, to betray him" (xiii, 2). The same Evangelist, as we have seen, tells of an earlier intimation of Christ's foreknowledge of the betrayal (John, vi, 71–2), and in the same chapter says expressly: "For Jesus knew from the beginning, who they were that did not believe, and who he was that would betray him." (vii, 18). He agrees with the Synoptics in recording a more explicit prediction of the treachery at the Last Supper: "When Jesus had said these things, he was troubled in spirit; and he testified, and said: Amen, amen I say to you, one of you shall betray me." (John, xiii, 21). And then St. John himself, at the request, asked who this was. "Jesus answered: He it is to whom I shall reach bread dipped. And when he had dipped the bread, he gave it to Judas Iscariot, the son of Simon. And after the morsel, Satan entered into him. And Jesus said to him: That whose dast thou dost, do quickly. Now no man at the table knew what was the purpose he had in this. But Judas had the purse, that Jesus said to him: Buy those things which we have need of for the festivity; or that he should give something to the poor." (viii, 26–9). These last details about the words of Jesus, and the natural surmise of the disciples, are given only by St. John. But the prediction and the question of the disciples are recorded by all the Synoptics. (Matt., xxvi, 22; Mark, iv, 14; Luke, xxii, 21–22). St. Matthew adds that Judas Iscariot asked Jesus, "Lord, is it I, Rabbi?" and was answered: "Thou hast said it." (xxvi, 25).

All four Evangelists agree in regard to the main facts of the actual betrayal which followed so closely on this prediction, and tell how the traitor came with a multitude or a band of soldiers from the chief priests, and brought them to the disciples, as he knew, Jesus would be found with His faithful disciples (Matt., xxvi, 47; Mark, iv, 43; Luke, xxii, 47; John, xviii, 3). But some have details not found in the other narratives. That the traitor gave a kiss as a sign is mentioned by all the Synoptics, but not by St. John, who in his turn is alone in telling us that those who came to take Jesus fell backward to the ground as He answered, "I am he." Again, St. Mark tells that Judas said, "Hail, Rabbi," before kissing His Master, but does not give any reply. St. Matthew, after recording these words and the traitor's kiss, adds: "And Jesus said unto him: Friend, why art thou come?" (Mark, iv, 50). St. Luke (xxii, 48) gives the words: "Judas, dost thou betray the Son of man with a kiss?"

St. Matthew is the only Evangelist to mention the sum paid by the chief priests as the price of the betrayal, and in accordance with his custom he notices that an Old Testament prophecy has been fulfilled therein (Matt., xxvi, 15; xxvii, 5–10). In this last passage he tells of the repentance and suicide of the traitor, on which the other Gospels are silent, though we have another account of these events in the speech of St. Peter: "Men, brethren, the scripture must needs be fulfilled, which the Holy Ghost foretold by the mouth of David concerning Judas, who was the leader of them that apprehended Jesus: who was numbered with us, and had obtained part of this ministry. And he indeed hath possessed a field of the reward of iniquity, and being hanged, burst asunder in the midst: and all his bowels gushed out. And it became known to all the inhabitants of Jerusalem: so that the same field was called in their tongue, Haelcada, that is to say, The field of blood. For it is written in the book of Psalms: Let their habitation become desolate, and let there be none to dwell therein. And his bishopric let another take" (Acts, i, 16–20). Cf. Ps., lxvii, 26; xviii, 8). Sozlam, and on the other hand, his apparent discrepancies between this passage in the Acts and the account given by St. Matthew. For St. Peter's words taken by themselves seem to imply that Judas himself bought the field with the price of his iniquity, and that it was called "field of blood" because of his death. But St. Matthew, on the other hand, says: "Then Judas, who betrayed him, seeing that he was condemned, repenting himself, brought back the thirty pieces of silver to the chief priests and ancients, saying: I have sinned in betraying innocent blood. But they said: What is that to us? look thou to it. And cast down the pieces of silver into the temple, depart." After this the Evangelist goes on to tell how the priests, who scrambled to put the money in the corbona because it was the price of blood, spent it in buying the potter's field for the burial of strangers, which for this cause was called a field of blood. And in this St. Matthew seems to fulfill the prophecy ascribed to Jeremias (but found in Zach., xi, 12): "And they took the thirty pieces of silver, the price of him that was prised, whom they prised of the children of Israel. And they gave them unto the potter's field, as the Lord appointed to me." (Matt., xxvii, 9–10).

But there does not seem to be any great difficulty in reconciling the two accounts. For the field, bought
with the rejected price of his treachery, might well be described as indirectly bought or possessed by Judas, albeit he did not buy it himself. And St. Peter's words about the name Hazeldama might be referred to the "reward of iniquity" as well as to the violent death of the traitor. Similar difficulties are raised as to the date of the Crucifixion. A Catholic theory of the betrayal itself. But it will be found that, without doing violence to the text, the narratives of the four Evangelists can be brought into harmony, though in any case there will remain some obscure or doubtful points. It is disputed, for instance, whether Judas, however, whether the institution of the Holy Communion and the communication of the other Apostles. But the balance of authority is in favour of the affirmative. There has also been some difference of opinion as to the time of the treachery. Some consider that it was suddenly determined on by Judas after the anointing at Bethania, while others suppose a longer negotiation with the chief priests.

But these textual difficulties and questions of detail fade into insignificance beside the great moral problem presented by the fall and treachery of Judas. In a very true sense, all sin is a mystery. And the difficulty of the matter arises as a depth of the guilt, the smallness of the motive for doing wrong, and with the measure of the knowledge and graces vouchsafed to the offender. In every way the treachery of Judas would seem to be the most mysterious and unintelligible of sins. For how could one chosen as a disciple, and the close of the grace of the privilege of intimate friendship with the Divine Master, be tempted to such gross ingratitude for such a paltry price? And the difficulty is greater when it is remembered that the Master thus basely betrayed was not hard and stern, but a Lord of loving kindness and compassion, at any time, if we think deep and the various circumstances, it is no wonder that many attempts have been made to give some more intelligible explanation of its origin, and, from the wild dreams of of ancient heretics to the bold speculations of modern critics, the problem presented by Judas and his treachery has been the subject of strange and startling theories. As a traitor naturally excites a peculiarly violent hatred, especially among those devoted to the cause or person betrayed, it was only natural that Christians should regard Judas with loathing, and, if it was impossible, there was no allowance at all for allowing him no good qualities at all. This would be an extreme view which, in some respects, lessens the difficulty. For if it be supposed that he never really believed, if he was a false disciple from the first, or, as the Apocryphal Arabic Gospel of the Infancy has it, was possessed by Satan even in his childhood, he would not have felt the holy influence of Christ or enjoyed the light and spiritual gifts of the Apostolate.

At the opposite extreme is the strange view held by an early Gnostic sect known as the Caimites described by Irenaeus (Adv. haer., 1, c. ult.), and more fully by Tertullian (Presb. har., 3, St. Epiphanius (Heres., xxxviii)). Certain of these heretics, whose opinion has been revived by some modern writers in a more plausible form, maintained that Judas was really enlightened, and acted as he did in order that mankind might be redeemed by the death of Christ. For this reason they regarded him as worthy of gratitude and veneration. In the modern version of this theory it is suggested that Judas, who in common with the other disciples looked for a temporal kingdom of the Messias, did not anticipate the death of Christ, but wished to precipitate a crisis and hasten the advent of the Messias. This would provoke a rising of the people who would set Him free and place Him on the throne. In support of this they point to the fact, that, when he found that Christ was condemned and given up to the Romans, he immediately repented of what he had done. But, as Strauss remarks, this repentance does not prove that the result had not been foreseen. For murderers, who have killed their victims with deliberate design, are often moved to remorse when the deed is actually done. A Catholic theory of the influence of the Evangelists with favour since they are plainly repugnant to the text of Scripture and the interpretation of tradition. However difficult it may be to understand, we cannot question the guilt of Judas. On the other hand we cannot take the opposite view of those who would defend the traitor, and in the first place, this view seems hard to reconcile with the fact that he was chosen by Christ to be one of the Twelve.

This choice, it may be safely said, implies some good qualities and the gift of no mean graces.

But, apart from this consideration, it may be urged that in exaggerating the original malice of Judas, or denying that there was even any good in him, we minimize or miss the lesson of his fall. The examples of the saints are lost on us if we think of them as beings of another order without our human weaknesses. And in the same way it is a grave mistake to think of Judas without any element of guilt and grace. In his fall is left a warning that even the great grace of the Apostolate and the familiar friendship of Jesus may be of no avail to one who is unfaithful. And, though nothing should be allowed to palliate the guilt of the great betrayal, it may become more intelligible as the result of the common weakness of falling in lesser things. So again the repentance may be taken to imply that the traitor had received himself by a false hope that after all Christ might pass through the midst of his enemies as he had done before at the brow of the mountain. And though the circumstances of the crime, the crime of Judas, is the reason to fear the worst, the Sacred Text does not distinctly reject the possibility of real repentance. And Origen strangely supposed that Judas hanged himself in order to seek Christ in the other world and ask His pardon (In Matt., tract. xxxv).

W. H. KENT.

Judas Machabeus, third son of the priest Matthias, who with his family was the patriarh and ruler of the family that ruled the King of the Syriac (I Mach., ii, 4). Various conjectures have been put forth as to the origin of his surname. The name appears to be derived from the Syriac word magaza (a hammer or mallet) and it was bestowed by reference to the crushing prowess displayed by Judas against the enemies of the nation, being equivalent to the name Martel given to Charles Martel. Judas was designated by his dying father as the new leader of the band of guerrilla warriors in the year 167 B. C., and he remained in command until the year 161. He was animated with a great confidence in the help of the Lord for the good cause. He began his military operations by surprising and burning down many towns which had held out for the enemies of Israel, and when regular armed forces were sent to put a stop to his ravages, he did not refuse to meet them in the field (II Mach., viii., 1—7). He proved himself to be an excellent tactician as well as an intrepid warrior. Among his military exploits are mentioned the defeat and slaying of Apollonius the recent plunderer of Jerusalem, and the utter rout of the Syrian forces led by the deputy governor Seron in an encounter at Bethoron (I Mach., iii., 10—24). Other Syrian leaders were also vanquished by Judas, viz. Onias, who was murderer, Thaddeus, Becchides and Lysias (I Mach., iii., 10—iv., 35).

These victories afforded a respite during which Judas turned his attention to the condition of the
ruined city of Jerusalem and that of the Temple which had been ignominiously profaned. Having appointed a body of armed men to be on guard in check the Syrian garrison still occupying the citadel, the Jewish leader set about renovating and purifying the sanctuary, being aided in the work by the priests. When the renovation was completed the new Temple service was inaugurated by a feast of re-dedication which lasted eight days, and was so vast that henceforth in matters of this event an annual festa also of eight days should be celebrated (I Mach., iv, 30-59; II Mach., x, 1-8; John x, 22). Some of the neighbouring tribes, alarmed at the progress of the Jews, took up arms against them, but they were easily vanquished by Judas, who then bent all his energies to bring to a successful issue the way in which he was fighting against Syria. For three years he pursued this arduous task with relentless energy and patience and with varying success. In the meantime he sent messengers to Rome in order to secure the protection of the Government against the oppression of the Syrians. The mission was diplomatically successful, but before the negotiations had time to become known in the East, Judas had been defeated and slain on the battlefield at Laisha (161 b.c.) (I Mach., iv, 60-ix, 18; II Mach., x-xv). Beaucier in Vigiouez, Dict de la Bible, s. v. Judas Macha- ble; Gloor, Outlines of the New Testament, xxviii, 91.

JAMES F. DRISCOLL.

Judas Thaddeus. See JUDE, EPISTLE OF SAINT.

Jude, Claude, French preacher and spiritual father, b. at Rouen, about 20 December, 1651; d. at Paris, 11 March, 1735. He entered the Society of Jesus on 18 September, 1677, and was admitted to his final vows on 2 Feb., 1695. He was first employed to preach, and did so successfully both in the provinces and in the capital. It soon became evident that he possessed oratorial gifts equal to Bourdaloue's, who indeed wished him to become his successor and spoke of bestowing on him his papers. Jude's superiors, however, asked him to sacrifice his pulpit success for the more humble but very important duty of training his brethren in religious virtues. The orator accepted this inconspicuous office, and from 1704 to 1721 he was instructor of the third probation at Rouen and rector of the Paris novitiate. The hearers of his retreats and expositions were charmed with his eloquence, at once vigorous and pathetique, and sought to keep the memory of it in writing. Hence the great number of copies which were preserved by Jesuits or made for the use of other religious communities, and of which many are still found in public and private libraries. Father Jude himself published any of his works, but after his death, thanks to the transcripts already mentioned, several collections appeared successively. Father Lallemant, S.J., had printed the "Retraite spirituelle pour les personnes religieuses" (Paris, 1746), which was early translated into Spanish by Father de Isla, S.J. (Madrid, 1755). Father Chéron, a Theater, gave to the public the "Exhortations sur les principaux devoirs de l'état religieux" (Paris, 1772). Finally, Abbé Lenoir-Duparc, a former Jesuit and novice under Father Jude, undertook from copies revised by the author a complete collection of "Œuvres spirituelles" (Paris and Lyons, 1781-2). At the beginning of these seven volumes, later reduced to five and often re-edited, there is, under the title of "Retraite spirituelle de trente jours", an excellent development of the Exercises of St. Ignatius, especially the parts known as the First and the Third Weeks. The treatises in catechetical form on confession, prayer, and the Mass, and the very instructive "Exhortations" are also worthy of note. Several parts of this collection have been, up to date, published separately, and also translated into German.

PAUL DESCHY.

Jude, Epistle of Saint.—The present subject will be treated under the following heads: (1) The Author and the Authenticity of the Epistle: (2) Jude in the Books of the New Testament; (2) Tradition as to the Genuineness and the Canonicity of the Epistle; (3) Difficulties Arising from the Text; (4) The Relation of Jude to the Second Epistle of Peter; (5) Voice against Jude; (6) Jude and the Church of Jerusalem (Acts, xv, 13; xxii, 18), spoken of by St. Paul as "the brother of the Lord" (Gal., i, 19), who was the author of the Catholic Epistle of St. James, and is regarded among Catholic interpreters as the Apostle James, the son of Alpheus (see JAMES THE LESS, SAINT). This last identification, however, is not evident, nor, from a critical point of view, does it seem beyond all doubt. Most Catholic commentators identify Jude with the "Judas Jacobi" ("Jude, the brother of James") in the D. V. of Luke, vi, 16, and Acts, i, 13—also called Thaddeus (Matt., x, 3; Mark, iii, 18)—referring also to expression to the fact that his brother James was better known than himself in the primitive Church. This view is strongly confirmed by the title "the brother of James", by which Jude designates himself in the address of his Epistle. If this identification is proved, it is clear that Jude, the author of the Epistle, is reckoned among the Apostles of Christ. This opinion is most highly probable. Beyond this we find no further information concerning Jude in the New Testament, except that the "brethren of the Lord", among whom Jude was included, were known to the Galatians and the Corinthians; also that four of them were martyred; and Jude did not fully believe in Christ till after the Resurrection (I Cor., ix, 5; Gal., i, 19; John, viii, 52-5; Acts, i, 14). From a fact of Hegesippus told by Eusebius (Hist. eccl., III, xix, xx, xxii) we learn that Jude was "said to have been the brother of the Lord according to the flesh", and that two of his grandsons lived till the reign of Trajan (see, however, BRETHREN OF THE LORD).

(2) Tradition as to the Genuineness and the Canonicity of the Epistle.—The Epistle of Jude is one of the so-called κατ᾽ ἀποστόλον; but, although its canonicity has been questioned in several Churches, its genuineness has never been denied. The brevity of the Epistle, the coincidences between it and II Peter, and the supposed quotation from apocryphal books, created a prejudice against it which was gradually overcome. The history of its acceptance by the Church is briefly as follows:

Some coincidences or analogies exist between Jude and the writings of the Apostolic Fathers—between Barnabas, ii, 10, and Jude, 3, 4; Clemens Romanus, Ep. xx, 12; Ixiv, 2, and Jude, 25; Ep. ad Polyc., iii, 2; iv, 2, and Jude, 3, 20; Mart. Polyc., xx, and Jude, 24 sq. It is possible, though not certain, that the passages here noted were suggested by the text of
Jude. The similarity between “Didache”, ii, 7, and Jude, 22 sq., does not seem to be accidental, whilst in "All' Ennagora" (p. 17), Thomas of Antiokh (d. about 183), "Ad Autol.", IV, xvi, there is a clear reference to Jude, 6 and 13 respectively.

The earliest positive reference to the Epistle occurs in the Muratorian Fragment, "Epistolae sine Judae et superiscritae" (p. 11). Church in catholicae [sic. Ecclesia] had current.. The Epistle was thus recognized as canonical and Apostolic (for it is Jude the Apostle who is here meant) in the Roman Church about 170. At the end of the second century it was also accepted as canonical and Apostolic by the Church of Alexandria (Clement of Alexandria, "Praef. IV, III, 11", followed by Origen, "De Rerum Nat. et de Caelest. Rer.""). At the beginning of the third century the Epistle was universally accepted except in the primitive East Syrian Church, where none of the Catholic Epistles were recognized, nor the Apocalypse.

This remarkably wide acceptance, representing as it does the voices of ancient tradition, testifies to the canonicity and the genuineness of Jude. During the third and fourth centuries doubt and suspicion, based on internal evidence (especially on the supposed quotation from the Book of Henc/ho and the "Assumption of Moses"), arose in several Churches. In the latter, however, the prejudices created against the deutero-canonical Jude was soon overcome, so that the Epistle was universally accepted in the Western Church at the very beginning of the fifth century (see CANON OF THE HOLY SCRIPTURES).

In the Eastern Church Eusebius of Cesarea (269-340) placed Jude among the antilepomena or the "disputed books, which are nevertheless known and accepted by the greater number" (Hist. Eccl., II, xxii; III, xxxiv); he incorporated all the Catholic Epistles in the fifty copies of the Bible which, at the command of Constantine, he wrote for the Church of Constantinople. St. Athanasius (d. 337) and St. Ephraem (d. 403) placed Jude among the canonical and Apostolic writings. Junilius and Paul of Nisibis in Constantinople (545) held it as mediae auctoritatis. However, in the sixth century the Greek Church everywhere considered Jude as canonical.

The place of Jude in the Syriac Church is not clear. In Western Syria we find no trace of Jude in the fifth century. In Eastern Syria the Epistle is wanting in the oldest Syriac version, the Peshito, but it is accepted in the Philoxenian (508) and Heraclian (618) versions. Except among the Syriac Nestorians, that is, the Nestorians of Persia, var. some other sects, the beginning of the sixth century till the Council of Trent, which defined the canonicity of both the proto- and deutero-canonical books of the New Testament.

(c) Difficulties Arising from the Text.—The wording of v. 17—which some critics have taken as an evidence that the Epistle was written in the second century—does not imply that the recipients of the Epistle had, in a period that was past, received oral instructions from all the Apostles, nor does it imply that Jude himself was not an Apostle. The text τοις ἁλωμένοις λαοῖς does not mean to the readers that such "mockers" as are described by the writer would assai the Faith; it is not separation in time, but distance of place, that leads Jude to refer to the scattered Apostles as a body. Nor does he exclude himself from this body; he only declares that he himself was not an Apostle. The author of II Peter, who often ranks himself among the Apostles, uses a similar expression, τοῖς ἁλωμένοις λαοῖς (iii, 2), and certainly does not mean to imply that he himself was not an Apostle. Many Protestant scholars have maintained that the false teachers denounced in Jude are Gnostic teachers of the second century. But, as Bigg rightly says: "It is not really a tenable view" (op. cit. infra). St. Jude does not give any details about the errors denounced in his short letter, and there is no ground for identifying the false teachers with any of the Gnostic sects known to us. There is nothing in the references made to false doctrines that obliges us to look beyond the Apostolic times. The use made of apocryphal writings, even if proved, is not an argument against the Apostolicity of the Epistle; at most it could only invalidate its canonicity and inspiration. Verse 9, which contains the reference concerning the body of Moses, was supposed by Didymus ("Enarr. in Epist. Jude" in P. Q., XXXIX, 1811 sqq.), Clement of Alexandria (Adumbr. in Ep. Jude), and Origen (De Princ., III, iii, 1), to have been taken from the "Assumption of Moses", a document abnormally anterior to the Epistle of Jude. Jude may possibly have learned the story of the contest from Jewish tradition. But, at any rate, it is evident that Jude does not quote the "Assumption" as a written authority, and still less as a canonical book.

As regards the prophecy of vv. 14 sqq., many Catholic scholars admit it to be a loose and abbreviated citation from the apocryphal Book of Henoch, i, 1, 9, which existed a century before St. Jude wrote. But here again St. Jude does not quote Henoch as a canonical book. There is nothing strange, as Plumptre ("Introduction to the New Testament", p. 327) says, in finding books not included in the Hebrew Canon of the Old Testament, "as furnishing illustrations that gave point and force to his counsels. The false teachers, against whom he wrote, were characterized largely by their fondness for Jewish fables, and the allusive references to books with which they were familiar, were therefore of the nature of an argument ad hominem. He fought them, as it were, with their own weapons." He merely intends to remind his readers of what they know. He does not affirm or teach the literal origin of the apocryphal book; such is not his intention. He simply makes use of the general knowledge it conveys, just as the mention of the dispute between Michael and the Devil is but an allusion to what is assumed as being known to the readers. By no means, therefore, does either of the passages offer any difficulty against the canonicity of the Epistle, or against the Catholic doctrine of inspiration.

(4) The Relation of Jude to the Second Epistle of St. Peter.—The resemblance as to thought and language between Jude and II Peter, ii, is quite sufficient to make it certain that one of the two writers borrowed from the other; the hypothesis that both writers borrowed from a common document appears less probable, either, as having no support whatsoever. The question remains: Which of the two Epistles was the earlier? The priority of II Peter, as well as the priority of Jude, has found strong advocates, and much has been written about this intricate question. The following arguments, however, lead to the conclusion that the Epistle of Jude was the earlier of the two.

(a) It is not uncommon for St. Peter to throw a light on the more obscure passages of the Epistle of Jude, or to interpret the more difficult passages. At one time he puts them in a shorter form or uses more general terms; at another, while adding in general the same arguments, he adds a new one or omits one or another used in Jude. This shows that St. Peter had probably read the Epistle of St. Jude. Compare especially II Peter, ii, 12, with Jude, 10. (b) This may also be confirmed not only by II Peter, ii, 17, but also by Jude, 12, 13. (c) It doubles Jude's comparison and puts more strength into it, whilst Jude has more similitudes—but also by comparing the style of both; for, whereas the style of Jude is always the same, that of St. Peter differs somewhat from his usual way of writing, and the reasons for this change seem to be the matter he writes about and the influence of the Epistle of St.
Jude.

(c) Finally, it is more probable that St. Peter has embodied in his work the text of Jude's Epistle than that Jude should have included in his writing only a pastoral St. Peter's. If Jude wrote more than one Peter and found the same state of things, why did he omit the remaining questions, e. g. the doubts about the parousia? Or why should he, in order to combat the same heresies, give only a summary of St. Peter's Epistle, omitting entirely the strongest arguments?

(5) Vocabulary and Style.—The vocabulary of Jude proves that the author was a Jew, saturated with the Old Testament, using Hebraisms, yet acquainted with the koine dialectos—the "common dialect". Thirteen words found in Jude do not occur elsewhere in the New Testament. Some words of the new Christian dialect appear in Jude as well as in the Pauline Epistles, but literary affinity or direct quotation cannot be proved. The style, although sometimes poetical, always evinces the severe and authoritative tone of a man of Apostolic rank, held in high honour.

II. ANALYSIS OF THE EPISTLE.—(a) Exordium: Address and good wishes (vv. 1-2): occasion and purpose of the Epistle (3-4). (b) Part the first: He inveighs against the pseudo-doctors; describes their life and errors (5-16). They will be severely punished, as is evident from the severe punishment of the angels in the desert (5), and the wicked angels (6), and of the inhabitants of Sodom (7). He mentions their wicked teaching and life (8), and opposes the modesty of Michael the Archangel (9) to their pride (10). He foretells for the heretics the punishment of Cain, Balaam, and the sons of Cores, for they have imitated their errors (11-13). Enoch has already prophesied the judgment of God upon them (14-6). (c) Part the second: He exHORTS the faithful (17-23). They must remember the teaching of the Apostles, by whom they had been warned of the coming of such heretics (17-19). They must maintain the Faith, keep themselves in the love of God, and wait for life everlasting (20-21). What their behaviour should be towards Christians that have in any way fallen away (22-23). (d) Epilogue: a most beautiful doxology (24-25).

III. OCCASION AND OBJECT.—Occasion.—The Epistle is poisoned by the seed of the dogmatico-moral errors amongst the Hebrew Christians; pseudo-doctors "are secretly entered in", who abuse Christian liberty to give themselves over to intemperance; moreover "denying the only sovereign Ruler, and our Lord Jesus Christ (4)."

(1) Obvious was the intention was to caution his readers, the Hebrew Christians, against such depraved teaching, and to exhort them to keep faithfully the teaching of the Apostles.

IV. TO WHOM ADDRESSED.—The dedicatory address runs as follows: τοις ἐν Θεοὶ ἐκπολεμηταῖς καὶ ἐν Χριστῷ τιμημονεῖς δολοῦ (to them that are beloved in God the Father, and preserved in Jesus Christ, and called). Which are the δολοῦ, or "called", becomes manifest from the context. They are not all the Christians of the whole Christian world, but those of a particular Church (vv. 3, 4, 17, 22). Several commentators think that St. Jude's Epistle was addressed to the same churches of Asia Minor to which St. Peter's Epistle was written. This opinion, according to these commentators, is to be held because in both Epistles the same errors are condemned, and also because Jude (v. 17) appears to his known Peter, and at least the prophecy of the Prince of the Apostles has been verified. But we have already proved that the second argument is of no value (see above I, 4); as for the first, there are two objections: (a) the errors condemned in the Epistle of St. Jude and in II Peter may have spread in countries outside Asia Minor; (b) we find in Jude several reasons for believing that the Epistle was addressed, not to the Gentile Christians of Asia Minor, but to the Jewish Christians of Palestine or of a neighbouring country.

V. DATE AND PLACE OF COMPOSITION.—Date.—It is difficult to state the exact time at which St. Jude wrote his Epistle. But the doctrines against which he inveighs, and the looseness of morals or the so-called antinomianism, seem to indicate the end of the Apostolic age. Jude seems on the other hand to have written before a.d. 70; otherwise in vv. 5-7 he would have spoken of the destruction of Jerusalem. In those verses St. Jude mentions the different punishments of prevaricators, and therefore in their exhortation to Hebrew Christians he could not have passed over in silence so dire a calamity. Moreover we the Epistle of St. Jude was written before II Peter, which latter was probably written a.d. 64 (65). Therefore St. Jude must have written shortly before 64 (65).

Place of Composition.—Here we can only guess, but we prefer the opinion that the Epistle was written in Palestine, and probably in Jerusalem.

A. CAMELIN. JUDEA.—Like the adjective 'Ioudaioi, the noun 'Ioudaia comes from the Aramaic 'Iyadadai (1 Esd., iv, 12). It designates the part of Palestine adjacent to Jerusalem and inhabited by the Jewish community during their return from exile. It may be assigned as follows: Bethshur, on the south; Bethoron, on the north; Emmaus, on the west; the Jordan on the east. The Jews scattered in other parts of the country did not inhabit Judea properly so called. When, in 190 b. c., the Syrian general Bacchides attempted to keep Judea in his hands, he took his stand at Jericho, Bethoron, Bethel, Tibeon, and Tephon (not Bet-Nettif), and fortified Bethus and Gazer (1 Mach., iv, 50-52). Then, between Nehemiah (cf. II Esd., iii) and the Hasmonaeans, the boundaries of the Jewish kingdom underwent few modifications. But the Machabees, through their conquests, pushed the frontier back: Apheresa (Taybeh?), Lydda, Ramathem, (Rentis) (1 Mach., xi, 34), Jaffa (1 Mach., xii, 33), Misdab, Samaria, Scythopolis (Josephus, "Antiq. Jud.", XIII, ix, 1; x, 2) were in succession annexed to the Jewish territory. The Machabean kingdom is sometimes called Judea by Josephus (Antiq. Jud., XIII, xi, 3). Elsewhere, however, the same historian restrains Judea proper to more correct limits. To the north it extended only as far as Anath-Borkoese (Anah-Bergst), less than two miles north of Lubbâin; to the south as far as Fardas, on the confines of Arabia, thus taking in what was called Idumea at the time of the Syrian domination. The Jordan was its boundary on the east, the Mediterranean on the west (Bell. Jud., III, iii, 5). The history of this Judea is often confused with that of Jerusalem. At first a province (meidnath) of the Persian Empire, it was administered by a governor who resided at Jerusalem and was assisted by a council of elders. In 332 b. c., Alexander...
annexed it to the empire which he was then building. His successors long disputed over it. In 320 it was Egyptian in 198. It was Syrian. The Jewish rising under the Machabees, which began in 167, issued in the independence of Judea, which lasted from 130 to 63 B.c. At the latter date, Pompey made it tributary to the Romans. Under Herod, who became its king in 37 B.C., the Saviour was born at Bethlehem. Archelaus, his son and successor, was banished by the Romans, and in A.D. 68 the province of Judea disappeared as an individual district.

The evangelization of Judea began during the earthly life of Christ, Who journeyed through the land more than once and had friends there. It was one of the first provinces to benefit by the preaching of the Apostles. Judeans had heard the discourse of St. Peter, when he went forth from the upper chamber, and "there came together to Jerusalem a multitude out of the neighbouring cities, bringing sick persons, and such as were troubled with unclean spirits; who were all healed" (Acts, v. 16). Philip, one of the most zealous of the early Christians, even deposed from Ethiopia on the road from Jerusalem to Gaza, in the spring which rises at the foot of Bethshan. Thence this preacher betakes himself to Azotos ('Esploud), and from Azotos he goes up to Cesarea, preaching the Gospel in the towns through which he passes. Lydda and Joppa, where St. Peter was soon to find disciples, lay along St. Philip's itinerary (Acts, viii., 26 sqq.).

The Talmud is perhaps furnishing information on the preaching of the Gospel in Judea when it speaks of James of Kafar Sâma', who healed the sick in the name of Jesus. Kafar Sâmâ‘ was probably in the neighbourhood of Bethzur (Samarâ‘). St. Paul being on his second missionary journey, and again speaks of the Churches of Judea as being sorely tried by poverty, dissension, and persecution—Churches to which he was at first unknown, but which afterwards listened to his voice (1 Thess., i, 14; Gal., i, 22; Acts, xi, 29). Christianity was planted in Judea so that even at the time of the Council of Ephesus (431) we find bishops with cesareae, Ascalon, Nicopolis, Jamnia, Eleuthopolis, Maximianopolis (Hebron), Jericho, Lydda, Azotus, Gaza (Geler), "Patrium Niconorum nominis", Leizip, 1898). In later lists of bishops we find names to add to these: Joppa, Anthedon, Dicelo, Lydda, Raphtoh, etc. (Hierocles, "Synecdemus", Berlin, 1866). From the fourth century to the Arab invasion the monastic life rose to a great height; it is enough to mention the foundations of St. Euthymius, St. Theodossius, and St. Sabas (cf. Génier, "Vie de St. Euthyme le Grand", Paris, 1909).

Considered in the extension given to it by Josephus—i.e. as a great square of territory lying between Aqaribeh, Deir Ballût, and the Nahr el Audjeh, on the north; the Mediterranean, on the west; Bersabee and Tell Arad, on the south; the Dead Sea and the Jordan, on the east—Judea presents a sufficiently varied physiognomy. On the west the ancient Philistia, the plains of Shephelah, of the Daróm, and of Saron produce sesame, wheat, and sorghum in abundance, while the orange, citron, palm, and vine grow there freely. In this level region are several important places: Jaffa (23,000 inhabitants), Gaza (16,000 inhabitants), Lydda, and Ramleh. Between the plain and the main range of hill country without any important towns. The mountain region of Judea rises to a height of 3280 feet, and is not very fertile, except near the springs. The summits are quite bare; where any earth is to be found on the rocks the fig, the olive, the vine, and barley grow. Of this region the chief centres are Jerusalem (80,000 to 100,000 inhabitants), Bethlehem (7000 inhabitants), Hebron (9000 inhabitants). The eastern part of Judea, Shah in the Dead Sea and the Jordan, is dotted with little hills, and peopled by nomadic tribes. The south, where Negeb offers a light soil, is not unsuited for cultivation. Water is scarce in Judea. In the mountains the rainfall is collected in cisterns; in the plains deep wells have been dug. There are a few springs but, having been deposed in the year 6 of our era, the government of Judea was confided to Roman procurators, one of whom, Pontius Pilate, condemned Christ to the cross, and two others, Felix and Porcius Festus, are involved in the history of St. Paul. Administered from A. D. 41 to the time of Agrrippa I, it returned to the procurators until A. D. 66, and in A. D. 70 Judea disappeared as an individual district.

The Roman roads with which Judea formerly scored are now immaculate. The only roads fit for wheeled vehicles are those from Jerusalem to Jericho, to Hebron by way of Bethlehem, to St. John in Montana, to Nablus, to Jaffa, and to the Mount of Olives— all of recent construction. There is also a narrow gauge railroad from Jerusalem to Jaffa, the latter being the chief port of Judea, Gaza being the second. Among the industries of Judea are, however, a few special industries: at Jerusalem, carving in olive wood; at Bethlehem, carving in mother-of-pearl; at Gaza, goat's hair tissue, sippers, and soap; at Hebron, leather and water-bottles, jars and glass trinkets. The Muteasefill of Jerusalem, which nearly corresponds to the ancient Judea, has an area of 8484 square miles, and comprises 328 cities, towns, villages, and hamlets, with an aggregate population of 350,000, of whom 100,000 are non-Muslim. There are 27,000 Catholics, having for their parishes Jerusalem, Bethlehem, Bêt-Sahur, Bêt-Djâlah, Ramallah, Taybeh, Bêt-Zeit, Ramleh, Jaffa, and Gaza. Although not a vilayet, this province is directly dependent on the minister of the interior at Constantinople. It has five sub-prefectures: Jaffa, Gaza, Hebron, Bersabee, and (since 1906) Nazareth, which last is geographically within the vilayet of Beirut.

Judge, Ecclesiastical (Judex ecclesiasticus), an ecclesiastical person who possesses ecclesiastical jurisdiction either in general or in the strict sense (see Jurisdiction). The official body appointed by the qualified ecclesiastical authority for the administration of justice is called a court (judicium ecclesiasticum, tribunal, auditorium). Every such court consist of the least of two sworn officials, the judge who gives the decision, and the clerk of the court (scriba, secretarius, scrinia, notarius, cancellarius), whose duty is to keep a record of the proceedings and the decision (c. xi, X, De probat., II, xix). As a rule, however, an ecclesiastical court forms a collegiate tribunal, the members of which either join with the presiding officer in giving the decision as judges (judices) or merely advise with him as councilors (auditores, assessorae, consultores, consules, consultores privatæ, assessor, etc., et pot. jud. deleg. II. xix). Connected with the courts are advocates, procurators, syndics, defenders, promoters, conservators, apparitors, messengers, etc. The procurators and advocates conduct the case as the representatives or defenders of the parties to the suit (X, De postul., I, xxxvii; X, De procurat., I, xxxviii).
The syndic is the counsel of a juridical person, a college body or a chapter (X, De syndic, I, xxviii). The chief duty of the conservators is to represent the rights of the *persona miseriae*, i.e., members of orders, the poor, widows, orphans (c. xv, in VIIa, De off. et pot. jud. deleg., I, xiv.). The fiscal promoter (*promotor facialis*) is appointed by the ecclesiastical and civil authority over certain matters (Inst. Congr. Ep. et Reg., 11 June, 1880, art. xiii), consequently in penal cases he appears as public prosecutor. *A defender matrimonii*, or defender of the matrimonial tie, assists in suits concerning the invalidity of a marriage (Benedict XIV, “Dei miseratione”, 3 Nov. 1743, d. xi).

In addition to his jurisdiction, which can be arbitrary, quasi-arbitrary, or delegated, the judge must also have certain physical and moral qualities. First, he must be an ecclesiastical (e. i, X, De jud., II, i). Consequently women and laymen are excluded from the office of ecclesiastical judge. Yet the pope could confer the office upon a layman (Glos to “Praesumptum”, e. i, X, De jud., II, i). It is further necessary to have full use of his senses and understanding, and suitable legal knowledge; the person appointed must also be at least 20 years old; but eighteen years will suffice for a judge appointed over ecclesiastical dementies or over concordats (c. xii, X, De off. jud. deleg., I, xii). The judge also must not have a good reputation, but must not be excommunicated, suspended from office, or under an interdict (c. xxiv, X, De sent. et re jud., II, xxvii). Above all he must be impartial. A suspicion of partiality attaches to the judge who is personally interested in a case (c. xxxvi, X, De appellat., II, xxvii), or is related to or blooded within the fourth degree to one of the parties, or connected with one by marriage (c. xxxvi cit.), or who lives in the same house, or dines at a common table, or is otherwise friendly, or on the other hand inimical, towards one of the parties (c. xxxv, X, De off. jud. deleg., II, ix), and he must be excepto judicis suspecti by the accused or by both parties as prejudiced (suspectus). If objection be raised against a judge on the ground of prejudice, which must be done in writing and if possible before the beginning of the action (c. xx, X, De sent. et re jud., II, xxvii), arbitrators are to pass on the objection (c. xxxix, X, De off. jud. deleg., I, xxix); if, however, objection be raised against the delegate of the bishop, the decision rests with the bishop (c. iv, X, De foro compet., II, ii). If the objection be declared well-founded, the judge transfers the case, with the concurrence of the party who brought it, to another or to a higher judge (c. xi, X, De appellat., II, xxviii). If the judge lacks the necessary qualifications, and this be known to the parties in the suit, the decision is invalid. If, however, his unfitness be unknown to the parties, and he follow statute law, the Church supplants the deficiency, even if the judge that have acted in bad faith.

Ecclesiastical jurisdiction is exercised over all baptized persons. In order, however, that an ecclesiastical judge may be permitted to exercise de facto his judicial power he must also be competent, i.e., must be authorized to pass judgment on a given person in a given case. Proceedings held before a judge without competence are null and void. Those subject to the jurisdiction of a certain judge are said to be within the competence (*competentia*) of his court, or have their forum in him. The forum is either the free, voluntary choice of the parties (*forum prorogatum*), or it is laid down by the law (*foedus*) in matrimonial and matrimonial cases there is no forum prorogatum (c. ix, X, De in integr. restit., I, xii). Ecclesiasties can choose another judge only with the permission of the bishop, and in this case he must be an ecclesiastic (c. xii, xviii, X, De foro compet., II, ii). The legal forum (*forum legale*) is either ordinary, if the proper course of the regular courts is followed, or extraordinary, if, for legal reasons, a regular court is passed over. Moreover, the forum legale is either general (*commune*), corresponding to the universally valid law, or special or privileged (*speciale sive privilegiatum*), resting on privilege, as in the case of ecclesiastics on account of the *privilegium fori* which they cannot renounce. As the jurisdiction of a judge is generally limited to a certain district, a person is domiciled by domicile or quasi-domicile of the accused. The axiom holds: *Actor sequitur forum rei*, the plaintiff goes to the court of the accused (c. v, viii, X, De foro compet., II, ii). Domicile (q. v.) is that place where one actually resides with the intention of always remaining there. Quasi-domicile is domicile, with the intention of not remaining there at least the greater part of the year. There is also a domicile by operation of law, legal or fictitious domicile (*domicilium legale sive fictitium*). Thus a wife is subject to the jurisdiction of the domicile of the husband, children to that of the parents, religious to that of the place where the monastery is situated, persons having no fixed abode to that of the present place of residence. A process can be instituted at Rome against an ecclesiastic who is only accidentally there (c. xx, X, De foro compet., II, ii). Besides the domicile, the *domicilia controversiae* are the object (*forum rei sitar*, where the thing is situated), e. complaint can be brought before the judge in whose district the controverted object is (c. iii, X, De foro compet., II, ii); the forum where the contract is made (*forum contractus*), i.e. the parties can bring action before the judge in whose district the disputed contract is situated (c. xv, X, De foro compet., II, ii); that of the offence (*forum delicti*), within the jurisdiction where the offense was committed (c. xiv, X, De foro compet., II, ii). There is also a forum arising from the connexion of matters (*forum connexialis sive continens causarum*), if the matters in dispute are so connected that one cannot be decided without the other (c. i, X, De causa possess., II, xii); also the forum of a counter plea (*forum reconvensionis sive recausationis*), i.e. in a criminal suit the defendant can, on his side, accuse the plaintiff in the court of the judge before whom he is to be tried (c. ii, X, De mut. petit., II, iv). If the judge himself wishes to bring an accusation the superior appoints the judge who is to hear it (c. i, xvi, Q. vi). The decision of an incompetent judge is valid if by common error (*error communia*) he is held to be competent. In civil disputes the parties can entrust the decision to any judge of their choice (X, De transact., I, xxxvi; X, De arbitr., I, xii).

If the judge render a defective decision appeal can be taken to the next higher judge. This relation of the courts to one another and the successive course of appeals (*gradus*) is called succession of instances, and follows the order of superior to inferior from the beginning the bishop, or his representative, the archdeacon, or the "official" (*officialis*), or the vicar-general, was the judge in first instance for all suits, contentious or criminal, which arose in the diocese or in the corresponding administrative district, so far as such suits were not withdrawn from his jurisdiction by the common law. The court of second instance was originally the provincial synod, later the metropolitan [c. iii (Syn. of Nicaea, an. 325, c. v), iv (Syn. of Antich, an. 341, c. xx), D. XVIII]. The court of third instance was that of the pope. The court of first instance for bishops was the provincial synod, the metropolitan, or the synod of exarch; the highest court of appeal was that of the pope [c. xxxvi (Syn. of Sardica, an. 343, c. vii), c. II, Q. vi]. Only the pope could be the judge of first instance for exarchs and patriarchs. Since the Middle Ages the pope is the judge of first instance in all more important episcopal causes (*causa* majoris, graviore, difficillioris, aequoris), the number and extent of which are in no way exactly definable, but to
which above all belong the *causa criminales graviores contra episcopos*—more serious criminal charges against bishops (c. i, X, De translat. episc., i, vii). Conformably to this the diocesan bishop or his representative (the vicar-general, or officials, or some other diocesan authority) is now the judge of the court of first instance, so far as common law has not withdrawn from him this jurisdiction (Council of Trent, Sess. XXIV, De ref., c. xx). If the see is vacant the vicar-capitular is judge of the court of first instance. The judge of the second instance is the metropolitan (c. ixv, X, De translat. episc., ii, xixvii). For archdioceses, as a rule, the judge of second instance is a neighbouring archbishop or bishop appointed by the Holy See (Concil. plur. Baltimore, III, an. 1884, n. 316; Leo XIII, "Trans Oceanum", 15 April, 1897, n. 14). The same ordinance also applies to exempt bishoprics (Sac. Congr. pro negot. eccles. extraord., 11 September, 1906). The court of the third instance is the Apostolic See, but in the *causa maioris* it is the court of first instance. As, however, the pope is the *jusdictio ordinaria omnium*, the ordinary ecclesiastical judge of all, ecclesiastical suits without exception can be brought or summoned before the pope as the court of first instance (Council of Trent, Sess. XXIV, De ref., c. xx; Vatic., Sess. III, De eccl., c. iii).

In the Middle Ages the lower courts were often evaded, or the popes summoned the suits at once before their forum (c. livi, X, De appelle., ii, xxviii). The advantages on account of the better legal education and greater impartiality of the members of the papal court. On the other hand the administration of justice was delayed, and, above all, made more costly by the rule enforced in the papal courts that the parties must appear in person. What made the matter still worse was that such summonses to Rome, as to the court of first instance, diminished un

JUDGES, the seventh book of the Old Testament, second of the Early Prophets of the Hebrew canon.

I. TITLE.—The Hebrew name of the book was בָּשָׁר (Basa Bathra, 14 b); it was translated by Oregen Zephania, and by St. Jerome Sophim; it was translated by Melito and Oregen Karis, by the Sept. יְדִיבָרָם בְּבֵית אֵל בֶּן זֵרֵעַ, 80, too, by the Greek Fathers; the Latin translated Liber Judicium or Judicium. The Hebrew verb meant originally "to act as a Divine judge", and was applied to God (Gen. xviii, 25), and to Moses, acting as the specially inspired law-giver and judge of Israel (Ex., xviii, 13, 16). In time the elders of the people became the "judges" (vv. 25, 26). In this book the term judges (shophethim) is applied to the leaders of Israel, and would seem to indicate that their right was Divine (Judges, x, 2, 3). The office of judge differed from that of king only in the absence of hereditary principle, and especially appointed by the pope (c. xxviii, X, De descript., i, iii; c. xi, in VI, De descript., i, iii).

II. CONTENTS.—(1) Introduction (i—ii, 5). A summary of the conquest of Canaan (i, 1—36). The angel of Jehovah reproves the tribes that made league with the stranger (ii, 1—5). (2) The history of Israel under the judges (ii, 6—xvi), introduced by a summary of its contents—Israel's forsaking of Jehovah, turning to Baal and Astaroth, defeat by the Philistines, return to Jehovah by the Judges (ii, 6—iii, 8). Then follow the wonderful deeds of the judges, of whom Gideon and Samson are the chief heroes; to them are devoted seven chapters.

(3) Two more stories of the times of the judges—the migration of Dan and their idolatrous worship of the idol of Michae (xxviii—xxxvii), the crime of the Benjamites. A remarkable feature of the Judges is the fallibility of the judges; where the dispute arose and the consequent lack of knowledge of the judges, the people have been at times appointed at the place where the dispute arose, the bishops are each to select, on occasion of the provincial or diocesan synod, at least four men (judices synodales) having the qualities designated by Boniface VIII (c. xi, in VI, De descript., i, iii), and must present their names to the Apostolic See, which in its selection of judges is to be so limited to the persons thus named that the delegation of any other person is invalid. As provincial and diocesan synods are no longer regularly held, bishops are permitted to make this selection with the advice of the chapter (Benedict XIV, "Quamvis paterna", 26 August, 1741). Consequently, judges so appointed are called judges pro synodales. At any rate, however, there is also no longer customary. On the contrary, the Apostolic See appoints its representatives in partibus entire independently, but it is so arranged that the delegation is bestowed on neighbouring bishops and archbishops for a definite term of years. Such delegation is all the more necessary in case a State does not permit ecclesiastical suits to be tried outside of its boundaries, or will only permit the judgment of such a court to be executed within its territories by the secular power.

JOHANNES BAPTIST SÄGMÖLLER.
Rationalists and of Protestants in the matter of the so-called late and manifold redaction of Judges.

IV. AUTHENTICITY.—The chief arguments for the authenticity of Judges are given below under History and Sources. We now pass to the several points of the contents of the book by Jews and Christians as an authentic narrative part of Israel's history; (b) the life-like style of the work; (c) the minute and accurate details of the narrative; (d) the evident purpose of the narrator to give a history of the things whereof he knows. V. FORM.—Although the purpose of the narrator is not to give a minute account of the events that took place in Israel between the days of Josue and of Samuel, yet that purpose is rather epic and didactic than historical in the modern sense of the word. (1) The narrator does not purpose history in the modern sense; he does not narrate in historical order all the important events of the period. This fact is clear from the appendixes (xiv—xxi), which give very important events outside their proper historical order. (2) The historian of Judges has an epic purpose, as early historians (e.g. Herodotus) often had. The epos, or theme, of the historian of Judges is the revolt and subjugation of the Israelites with he introduces the history proper; he has it ever in mind to unfold why Jahweh allowed the foe to abide so long in the promised land, and even to defeat the chosen people, and why He raised up the judges. The idolatry of Israel is the reason. (3) The didactic purpose of the book is to teach Israel that the commandments of Jahweh should be obeyed (iii, 4). When Israel leaves Jahweh, Jahweh leaves Israel, at least for the while; the foes of Israel triumph (cf. Aug., "De Civ. Dei", xvi, 43).

VI. SOURCES.—The problem is complicated. Most contradictory theories have been proposed. According to Moore (see "Internat. Crit. Comm." on "Judges"); also art. in "Encyc. Bib.") the body of the book (i, 6—xvi, 31) is Deuteronomistic; the general setting of the stories and the purpose of that setting show characteristics of the seventh and sixth centuries, the influence of Deuteronomy and of the great Prophets Jeremias and Ezechiel. The stories of the book, out of their setting and apart from their set purpose in the Book of Judges, are pre-Deuteronomistic; they show no Deuteronomic traces except in the introductions and the links that chain the various stories together. Indeed, Moore would have it that this redaction has but the intention of the setting of which the Rationalists frame their various hypotheses. The song of Debora (v) is archaic by contrast with the language of its setting. The story of Gedeon is original from a different hand than that of the first writer of Sanam's history; the latter uses וָעֲשָׁה (xi, 6; xiv, 17, 20), while that former has פָּשַׁל (vi, 17; vii, 12; viii, 26); he who originally wrote that "the spirit of God chased (וֹאכַֽלּ) Gedeon" (vi, 34), may be admitted not to have been identical with him who conceived that "the spirit of the Lord rushed (וָעֲשָׁה) upon Sanam" (xvi, 6; 19; xv, 14).

Catholic for the book's old assigned the Book of Judges to many hands. So Maldonatus (Comm. in Matt., ii, 23), Pineda (In Job, praef., iii), Clair (p. 10), and many others. Hummelaer (In Jud., 27) argues that the longer narratives—those of Aod (iii, 15—30), Barae (iv and v), Gedeon (vi—viii), Abimelech (ix), and Jepht (xi, 1—xii, 7), and Samson (xiii—xiv)—are distinct accounts, written by separate authors, who were contemporary or almost contemporary with the events they narrated. These varied narratives Samuel incorporated much as he found them; he drew from tradition for the minor details which he gives about the lesser judges. While setting these stories together, Samuel diverged in regard to the complete thoughts he culled from others, as well as the introductions, links, and remarks he superadded.

VII. HISTORICITY.—(1) Internal Evidence.—The
writer of Judges was contemporary with some of the events which he narrated; used documents written by those who were contemporary, or all but contemporary, with the deeds they told; and shows every sign of sincerity, care, and truth. The very concern of the writer to give the truth explains the manifold literature (Ist and 2nd books) preserved. He has preserved the style of the song of Debora and that of the fable of Joatham. He has transmitted sayings peculiar to place and to person (ii, 5; iv, 5; vi, 24, 32; xv, 19; xviii, 12, 29). The rationalistic objections to the miraculous in the stories of Gideon and Samson are generally met by the writers who tell upon these portions of Judges as legendary; to Catholics these are as historical as any other portion of the work. The enemies to the historicity of the book in vain insist that these stories are set down as legends to please the Israelites. The writer of Judges so berates the Israelites for idolatry and inter-tribal dissension that it is unscientific to accuse him of truckling to their pride in their heroes.

(2) External Evidence.—(a) Catholic tradition is clear. The Fathers look upon the narrative of Judges as fact-narrative; their unani mity is admitted by all who deem that unanimity worth consideration. (b) O.-T. tradition is marked by a sum monous amount of interest (1–5), gives details the historical value of which is attested by Josue (see Josue): Juda's siege of Dabir (i, 10–15; Jos., xv, 14–19), the Jebusites in Jerusalem (i, 21; Jos., xv, 63), the Chanaanites in Gazer along with Ephraim (i, 29; Jos., xvi, 10), the Chanaanites dwelling with Manasses (i, 27; Jos., xvi, 11). Like details are the death of Josue (i, 6–9; Jos., xxiv, 28– 31), the capture of Leshem by Dan (xvii, 28; Jos., xix, 47). The Books of Kings tell as facts much that we read in Judges: Israel's forgetfulness of Jehovah, her defeat by the foe and salvation by the judges (1 Kings, 8:4–24 after the death of Solomon, the death of Gideon (ix, 53); 2 Kings, xi, 21). The Psalms dwell proudly on the deeds of the judges: the fate of Sisara, Jabin, Oreb, Zeb, Zebee, and Salmann (vii, 22, 25; iv, 15; viii, 21; Ps. lxii, 10–12); the entire history of Judges in outline (Ps. cv, 34–40). The Prophets refer to real facts given in Judges: the defeat of Madian by Gideon (Isa. ix, 4; x, 29); the crime at Gaba (Osee, ix, 9; x, 9). (c) In the N. T., St. Paul mentions the judges in their proper place between Josue and Samuel (Acts, xxii, 20); praises some of the judges along with certain kings (Heb., xi, 32).

Hence internal evidence shows that the Masoretic text is in very good condition. "It is better preserved than any other of the historical books" (Moore, "Judges", 433). The only serious difficulties are in the song of Deborah. (2) Greek.—We have two distinct Septuagint forms (cf. Lagarde, "Septuaginta-Studien", 1892, 172): one is seen in the Alexandrinus (A), Codex Vaticanus (V), Basilianus, Vaticanus (V), and many cursive; the other version is represented by the Vatican (B), and a considerable number of cursive. (3) Latin.—St. Jerome's version is one of his most careful efforts at translation of the Masorah, and is of the greatest exegetical importance. Fathers: Tertullian, Quaestiones in Libros Judicium in P. G., XXXVI, 485; Procopius, Gomma, in Judices in P. G., LXXVII, 104; St. Aquinas, Questions in Ignatius against the Jews, L, 479; Claris, De Lege et Ruth (Paris, 1878). Protestant commentators of worth are Moore, Halkett, Budge, Bertheau, and Walter Drum.

Judgment. See Procedure, Canonical.

Judgment, Divine.—This subject will be treated under four heads: I. Divine Judgment Subjectively and Objectively Considered; II. Pre-Christian Beliefs Concerning Judgment after Death; III. Particular Judgment; IV. General Judgment.

I. Divine Judgment Subjectively and Objectively Considered.—Divine judgment (judicium divinum), as an immanent act of God, denotes the action of God's retributive justice by which the destiny of rational creatures is decided according to their merits and demerits. This includes: (1) God's knowledge of the moral worth of the acts of free creatures (Deus qui illum patris animam approbat, on determining the just consequences of such acts; (2) the Divine verdict upon a creature amenable to the moral law, and the execution of this sentence by way of reward and punishment. It is clear, of course, that the judgment, as it is in God, cannot be a process of its nature; it is not identical with the Divine Essence. But the effects of the judgment, since they take place in creatures, follow the sequence of time. The Divine judgment is manifested and fulfilled at the beginning, during the progress, and at the end of time. In the beginning, God pronounced judgment upon the whole race, as a consequence of the fall of its representatives, the first parents (Gen., iii). Death and the infirmities and miseries of this life are the consequences of that original sentence. Besides this common judgment there have been special judgments on particular individuals and peoples. Such great catastrophes as the flood (Gen., vii, 17), the destruction of Sodom and Gomorra (Gen., xviii, 20), the earthquake that swallowed up Core and his followers (Num., xvi, 30), the plagues of Egypt (Ex., vi, 6; xii, 12), and the evils that came upon other oppressors of Israel (Ezech., xxv, 11; xxviii, 22) are represented in the Bible as Divine judgments. The fear of God is such a fundamental idea in the Old Testament that it insists mainly on the punitive aspect of the judgment (cf. Prov., xi, 31; Ezekiel, xiv, 21). An erroneous view of these truths led many of the rabbis to teach that all the evil which befalls man is a special chastisement from on high, a doctrine which was declared false by Christ.

There is also a judgment of God in the world that is subjective. By his acts man adheres to or deviates from the law of God, and thereby places himself within the sphere of approval or condemnation. In a sense, then, each individual exercises judgment on himself. Hence it is declared that Christ came not to judge but to save (John, iii, 17; xviii, 15; xii, 47). The intermediate judgment proceeds according to a man's attitude towards Christ (John, iii, 18). Though all the happenings of life cannot be interpreted as the outcome of Divine judgment, whose external manifestation is in the intermediate judgment, it is extensive with the life of the individual and the race. The judgment at the end of time will complement the previous visitations of Divine retribution and will manifest the final result of the daily secret judgment. By its sentence the eternal destiny of creatures will be decided. As there is a twofold end of time, so there is likewise a twofold eternal judgment, the particular judgment, at the hour of death, which is the end of time for the individual, and the general judgment, at the final epoch of the world's existence, which is the end of time for the human race.

II. Pre-Christian Beliefs Concerning Judgment after Death.—The idea of a final judgment beyond the grave, which would rectify the sharp contrast so often observed between the conduct and the fortune of men, was prevalent among all nations in pre-Christian times. Such was the doctrine of metempsychosis or the transmigration of souls, as a justification of the ways of God, adopted among the Hindus of all classes and sects, the Pythagoreans, the Orphic mystics, and the Druids. The doctrine of a forensic judgment in the unseen world, by which the eternal lot of departed souls is determined, was also widely prevalent in pre-Christian times.

The Egyptian idea of the judgment is set forth with great precision of detail in the "Book of the Dead", a collection of formule designed to aid the dead in
their passage through the underworld (see EGYPT). The Babylonians and the Assyrians make no distinction between the good and the bad so far as the future habitation is concerned. In the Gilgames epic the hero is marked as judge of the dead, but whether his rule was the moral value of their actions is not clear. An unerring judgment and compensation in the future life was a cardinal point in the mythologies of the Persians, Greeks, and Romans. But, while these mythological schemes were credited as strict verities by the ignorant body of the people, the learned saw in them only the allegorical presentation of truth. There were always some who denied the doctrine of a future life, and this unbelief went on increasing till, in the last days of the Republic, skepticism regarding immortality prevailed among Greeks and Romans.

With the Jews, the judgment of the living was a far more prominent idea than the judgment of the dead. The Pentateuch contains no express mention of recompense in the future life, and it was only at a comparatively late period, under the influence of a fuller revelation, that the belief in resurrection and judgment began to play a capital part in the faith of Judaism (Vigouroux, "La Bible et les découvertes modernes", pt.V, ii, c.vi). The traces of this theological development are plainly visible in the Maccabean struggles between the two great opposing parties, the Pharisees and the Sadducees, whose divergent interpretations of Scripture led to heated controversies, especially regarding the future life. The Sadducees denied all reward and penalty in the hereafter, while their opponents encumbered the truth with judicious details. Thus some of the rabbis asserted that the trumpet which would summon the world to judgment would be one of the horns of the ram which Abraham offered up instead of his son Isaac. Again they said: "When God judges the Israelites, He will stand, and make the judgment brief and mild; when He judges the Gentiles, He will sit and make it long and severe." A part from such rabbinical fables, the current belief reflected in the writings of the rabbis and the pseudepigrapha at the beginning of the Christian Era was that of a preliminary judgment and of a final judgment to occur at the consummation of the world, the former to be executed against the wicked by the personal prowess of the Messias and of the saints of Israel, the latter to be pronounced as an external sentence by God or the Messias (cf. Tixeront, "Histoire des Dogmes", i, 1, 43). The particular judgment of the individual person is lost sight of in the universal judgment by which the Messias will vindicate the wrongs endured by Israel (Tixeront, op. cit., 41). With Alexandrian Judaism, on the contrary, with that at least of which Philo is the exponent, the dominant idea was that of an immediate retribution after death (Tixeront, op. cit., 51, 52). The two dissenting sects of Israel, the Essenes and the Samaritans, were in agreement with the majority of Jews as to the existence of a discriminating retribution in the life to come. The Essenes believed in the pre-existence of souls, but taught that the after-existence was an unchanging state of bliss or woe according to the deeds done in the body. The eschatological tenets of the Samaritans were at first few and vague. Their doctrine of the resurrection and of the day of vengeance and recompense was a theology patterned after the model of Judaism, and first formulated for the sect by its greatest theologian, Marka (a.p. fourth century).

III. PARTICULAR JUDGMENT. - A. Dogma of Particular Judgment. - The Catholic doctrine of the particular judgment consists in this, that immediately after death the eternal destiny of each separated soul is decided by the just judgment of God. Although there has been no formal definition on this point, the dogma is clearly implied in the Union Decree of Eugene IV (1439), which declares that souls quitting their bodies in a state of grace, but in need of purification, are cleansed in Purgatory, whereas souls that are perfectly pure are at once admitted to the beatific vision of the Godhead (\textit{ipses Deum summum et trinum}), and those who depart in actual mortal sin, or merely with original sin, are at once consigned to eternal punishment, the quality of which corresponds to their sin (\textit{penis tamen disporbus}) (Denzinger, "Enchiridion", ed.10, n. 595—twelfth ed., n. 596). The doctrine is also in the profession of faith of Michael Paleologus in 1274 (Denz., "Ench.", ed. 10, n. 464—old ed., n. 387), in the Bull "Benedictus Deus" of Benedict XII, in 1316 (Denz., "Ench.", ed. 10, n. 521—old ed., n. 456), in the profession of faith of Gregory XIII (Denz., "Ench.", ed. 10, n. 1064—old ed., n. 870), and of Benedict XIV (ibid., n. 1468—old ed., n. 875).

B. Existence of Particular Judgment Proved from Scripture. - Eccles., xi, 9; xii, 1 sq.; and Heb., ix, 27, are sometimes quoted in proof of the particular judgment, but though these passages speak of a judgment after death, neither the context nor the force of the words proves that the sacred writer had in mind a judgment distinct from that at the end of the world. The Scriptural arguments in defence of the particular judgment must be indirect (cf. Billot, "Questions de Novaismus", II, p. 1). There is no text of which we can certainly say that it expressly affirms this dogma, but there are several which teach an immediate retribution after death and thereby clearly imply a particular judgment. Christ represents Lazarus and Dives as receiving their respective rewards immediately after death. They have always been regarded as types of the just man and the sinner. To the penitent thief it was promised that his soul instantly on leaving the body would be in the state of the blessed: "This day shalt thou be with me in Paradise" (Luke, xxiii, 43). St. Paul (II Cor., v) longs to be absent from the body that he may be present to the Lord, evidently understanding death to be the entrance into his reward (cf. Phil., i, 21 sq.). Eccles,
xi, 28-29, speaks of a retribution at the hour of death, but it may refer to a temporal punishment, such as sudden death in the midst of prosperity, the evil remembrance that survives the wicked, or the misfortunes suffered by the innocent. The quotations have been quoted are sufficient to establish the strict conformity of the doctrine with Scripture teaching. (Cf. Acts, i, 25; Apoc., xx, 4-6, 12-14.)

C. Paedicis Testimony Regarding Particular Judgment.—St. Augustine witnesses clearly and emphatically to this faith in the early Church. Writing to the presbytery of Peter, he criticizes the works of Vincentius Victor on the soul, pointing out that they contain nothing except what is vain or erroneous or mere commonplace, familiar to all Catholics. As an instance of the last, he cites Victor's interpretation of the passage of St. Lucas (v, 11, 15), the temporal or eternal to that" said St. Augustine, "which he [Victor] most correctly and very soundly holds, viz., that souls are judged when they depart from the body, before they come to that judgment which must be passed on them when reunited to the body and are tormented or glorified in the same flesh which has been rejoined to the spirit. The matter of which you [Peter] were unaware. Who is so obstinate against the Gospel as not to perceive those things in the parable of the poor man who carried after death to Abraham's bosom and of the rich man whose torments are set before us? (De anima et ejus origen, II, n. 6). In the sermon of the Fathers occur graphic descriptions of the particular judgment (cf. S. Ephraem, "Sermon de secundo Adventu"); "Sermo in eou qui in Christo obdormiunti"

D. Heresies.—Lactantius is one of the few Catholic writers who discussed this doctrine (Inst., div., VIII, c. xxi). Among heretics the particular judgment was denied by one at one and Vigintio in the Hymn and the Thelpeleychites and the Thetilpeleychites believed that at death the soul passed away, according to the former into a state of unconsciousness, according to the latter into temporary destruction. They believed that souls would arise at the resurrection of the body for judgment. This theory of "soul-slumber" was defended by the Nestorians and Copts, and later by the Anatapists, Socinians, and Armenians. Calvin (Inst. III, 25) holds that the final destiny is not decided till the last day.

E. Prompt Fulfilment of Sentence.—The prompt fulfilment of the sentence is one of the dogmata of the doctrine of particular judgment, but until the question was settled by the decision of Benedict X, in 1332, there was much uncertainty regarding the fate of the departed in the period between death and the general resurrection. There was never any doubt that the punishment of the soul in the hereafter was the responsibility of the judges and the theologians maintained the opinion that until the resurrection the just do not enjoy the intuitive or the vision of God, but are under the protection and consolation of the humanity of Jesus Christ. Pope John XXII (1316-1334) at Avignon, as a private theologian, supported this idea; but he gave it any official sanction is a false invention of the Fallibilists. His successor, Benedict XII, ended the controversy by the Bull "Benedictus Deus"

F. Circumstances of Particular Judgment according to Canonists and Theologians. Most of these theologians suppose that the particular judgment will immediately follow the moment of death. The separated soul is internally illuminated as to its own guilt or innocence and of its own initiation it takes its course either to hell, or to purgatory, or to heaven (St. Thomas, "Suppl.", Q. ixxii, a. 2; Q. lixxvii, a. 2). In confirmation of this the particular judgment is the work of the soul written in their hearts, their conscience bearing witness to them, and their thoughts between themselves accusing, or also defending one another, in the day when God shall judge the secrets of men by Jesus Christ (Rom., ii, 15-16). The "Book of Judgment", in which all the dead, who are written (Apoc., xx, 12), and the appearance of angels and demons to bear witness before the judgment seat are regarded as allegorical descriptions (St. Aug., "De Civ. Dei", XX, xiv). The common opinion is that
the particular judgment will occur at the place of death (Suares in III, Q. lxx, a. 6, disp. 52).

IV. GENERAL JUDGMENT (JUDICIUM UNIVERSALE).

—A. Existence of the General Judgment.—(1) Few truths are oftener or more clearly proclaimed in Scripture than that of the general judgment. To the Prophets of the Old Testament refer they speak of the "Day of the Lord" (Joel, ii, 31; Ezech., xxi, 5; Is., ii, 12), in which the nations will be summoned to judgment. In the New Testament the second Parusia, or coming of Christ as Judge of the world, is an oft-repeated doctrine. Himself not only foretold the event but graphically portrays its circumstances (Matt., xxiv, 27 sqq.; xxv, 31 sqq.). The Apostles give a most prominent place to this doctrine in their preaching (Acts, x, 42; xvii, 31) and writings (Rom., ii, 5-16; xiv, 10; I Cor., iv, 5; II Cor., v, 10; II Tim., iv, 1; II Thess., i, 5; James, v, 7). Besides the name Parusia (ἐπαρεσία), or Advent (I Cor., xvii, 23; I Thess., ii, 19), the Second Coming is also called Epiphany, dvipimena, or Appearance (II Thess., ii, 8; I Tim., vi, 14; II Tim., iv, 1; Tit., ii, 13), and Apocalypse (ἀποκάλυψις), or Revelation (II Thess., i, 7; I Peter, iv, 13). The time of the Second Coming is spoken of as "that Day" (II Tim., iv, in prosperity and adversity, which are sometimes the promissory lot of the good and of the bad, everything is ordered by an all-wise, all-just, and all-ruling Providence: it was, therefore, necessary not only that rewards and punishments should await us in the next world, but that they should be awarded by a public and general judgment.

B. Signs that are to Precede the General Judgment.

—The Scriptures mention certain events which are to take place before the final judgment. These predictions were not intended to serve as indications of the exact time of the judgment, for that day and hour are known only to the Father, and will come when least expected. They were meant to foreshadow the last judgment and to keep the end of the world present to the minds of Christians, without, however, exciting useless curiosity and vain fears. Theologians usually enumerate the following nine events as signs of the last judgment: (1) General Preaching of the Christian Religion.—Concerning this sign the Saviour says: "And this gospel of the kingdom, shall be preached in the whole world, for a testimony to all nations, and then shall the consummation come" (Matt., xxiv, 14). This sign was understood by Chrysostom and Theoph-
THE GENERAL JUDGMENT

CRISTOFANO ALLORI, PITTI PALACE, FLORENCE
eraly admitted from the foregoing and other texts that before the Second Coming there will arise a powerful adversary of Christ, who will seduce the nations by his wonders, and persecute the Church (see 2 Thess. ii, 9 sq.). But the power of this Antichrist will be checked and curtailed by the operation of the providence of God. The Scriptures clearly indicate that the judgment will be preceded by unwonted and terrific disturbances of the physical universe (Matt. xxiv, 29; Luke, xxi, 25-28). The wars, pestilences, famines, and earthquakes foretold in Matt. xxiv, 6 sq., are also understood as a threat of the coming deluge of judgments. (6) The judgment will be exhibited in its full intensity of the last times. (7) The Universal Conflagration.—In the Apostolic writings we are told that the end of the world will be brought about through a general conflagration, which, however, will not annihilate the present creation, but will change its form and substance into a glorious state (cf. 2 Pet. iii, 10-13; cf. 1 Thess. v, 2, Apoc. iii, 3, and xvi, 15). Natural science shows the possibility of such a catastrophe being produced in the ordinary course of events (cf. Kirvan, "Comment peut finir l’univers," chap. i), but theologians generally incline to the belief that its origin will be entirely miraculous. (8) The Trumpet of Resurrection.—Several texts in the New Testament speak of a trumpet which will awaken the dead to resurrection (1 Cor. xv, 52; 1 Thess. iv, 15; John v, 28). According to St. Thomas (Suppl. Q. lxvii, a. 2) there is reference in these passages either to the voice or to the apparition of Christ, which will cause the resurrection of the dead. The trumpet is indicated as the sign immediately preceding the appearance of Christ to judge the world. By this sign the Fathers of the Church generally understand the appearance in the sky of the Cross on which the Saviour died, a wonderful cross of light. C. Circumstances Accompanying the General Judgment.—(1) Time.—As was stated above, the signs that are to precede the judgment give no accurate indication of the time when it will occur (Mark, xiii, 32). When the disciples asked the Saviour: "Lord, wilt thou at this time restore again the kingdom to Israel?" He answered: "It is not for you to know the times or moments, which the Father hath put in his own power" (Acts, i, 6, 7). The uncertainty of the day of judgment is continually urged by Christ and the Apostles as an incentive to vigilance. The day of the Lord will come like a thief (Matt. xxi, 34), like a lightning suddenly appearing (ibid., verse 27), like a snare (Luke, iii, 34), as the Deluge (Matt. xxiv, 37). (2) Place of the Judgment.—All the texts in which mention is made of the Parousia, or Second Coming, seem to imply clearly enough that the general judgment will take place on the earth, and that the Son of Man will appear in the heavens (1 Thess. iv, 16, that the judgment will be held in the air, the newly risen being carried into the clouds to meet Christ; according to others the prophecy of Joel (iii, 1 sq.), places the last judgment in the Valley of Josaphat (q. v.). (3) The Character of the Judge.—As this judgment is described to Christ, not only as God, but also as Man, is expressly declared in Scripture; for although the power of judging is common to all the Persons of the Trinity, yet it is specially attributed to the Son, because to Him also in a special manner is ascribed wisdom. But that as Man He will judge the world is confirmed by Christ Himself (John, v, 22, 27). At the Second Coming Christ will appear in the heavens, seated on a cloud and surrounded by the angelic hosts (Matt. xvi, 27; xxv, 30; xxv, 31). The angels will minister to the Judge by bringing all before Him (Matt. xxiv, 31). The elect will aid Christ in a celestial capacity (1 Cor. vii, 2). The lives of the just will in themselves be a condemnation of the wicked (Matt. xxv, 41), whose punishment they will publicly approve. But the Apostles will be judges of the world in a sense yet more exact, for the promise that they shall sit upon twelve thrones judging the twelve tribes of Israel (Matt. xix, 28) seems to imply a real participation in judicial authority. According to a very probable opinion, this prerogative is extended to all who are suitably called to the college of the ministers of the Gospel (Matt. xix, 27, 28). Nothing certain is known as to the manner in which this delegated authority will be exercised. St. Thomas conjectures that the greater saints will make known the sentence of Christ to others (Suppl. Q. lxxxviii, a. 2). (4) Those to be judged are both good and bad, according to the Arian Creed, will appear in the judgment to give an account of their deeds. As to children who have personally done neither good nor evil, the baptized must be distinguished from the unbaptized. The former appear in the judgment, not to be judged, but only to receive the reward of their works (Summa Theol., Suppl., Q. lxxx, a. 5 ad 3 um), while the latter, ranked with the wicked, although not judged, will be enabled to realize the justice of their eternal loss (Suárez). The angels and the demons will not be judged directly, since their eternal destiny has already been fixed; yet, because they have shared in the fortunes of men, the sentence pronounced on the latter will have a corresponding effect on them also (Summa Theol., Suppl., Q. lxxxix, a. 8). (5) Object of the Judgment.—The judgment will embrace all works, good or bad, forgiven as well as unforgiven, sins of the Son of Man appearing in the Heavens."—In St. Matthew, xxiv, 30, this is indicated as the sign immediately preceding the appearance of Christ to judge the world. By this sign the Fathers of the Church generally understand the appearance in the sky of the Cross on which the Saviour died, a wonderful cross of light. (6) Form of the Judgment.—The procedure of the judgment is described in St. Matthew (xxv, 31-46) and in the Apocalypse (xx, 12). Commentators see in these passages allegorical descriptions intended to convey in a vivid manner the fact that in the last judgment the conduct and deserts of each individual will be made plain not only to his own conscience but to the knowledge of the assembled world. It is probable that no words will be spoken in the judgment, but that, like a Divine illumination, each creature will thoroughly understand his own moral condition and that of every fellow-creature (Rom., ii, 15). Many believe, however, that the words of the sentence: "Come, ye blessed", etc., and "Depart from me", etc., will be really addressed by Christ to the multitudes of the saved and lost. D. Results of the General Judgment.—With the fulfillment of the sentence pronounced in the last judgment the relations and the dealings of the Creator with the creature find their culmination, are explained and justified. The Divine purpose being accomplished, the human race will, as a consequence, attain its final destiny. The result of mankind will be the sequel of the General Judgment.

Judgments of God. See ORDEALS.

Judica Sunday, name given to the fifth Sunday of Lent, and derived from the first words of the Introit of that day: "Judica me, Deus"—"Judge me, O God" (Ps. xlii). Passion Sunday is the more common name, and in Germany this day is called "Black Sunday", from the custom of veiling the crosses and statues in
the church, which was formerly done at the words in the Gospel "Jesus hid Himself", but is now done in the Mass during Holy Week. Many say that in very early times this day was called "Dominica mediana", a title that seems more properly to belong to mid-Lent Sunday. On Judica Sunday several significant changes take place in the Church's Liturgy. The Judica psalm is not again said at the beginning of Mass until Easter Day, the Gloria is omitted, to signify the ignominy of Christ's Passion, when His glory was for the time being laid aside; and the whole spirit of the Office and Mass is one of solemn preparation for the great events of the coming Holy Week. At Rome the station on this day was formerly observed in the Vatican Basilica.

Judith, Book of—History.—Nabuchodonosor, King of Nineveh, sends his general Holofernes to subdue the Jews. The latter besieges them in Bethulia, a city on the southern verge of the Plain of Esdrelon. Achor the Ammonite, who speaks in defence of the Jews, is maltreated by him and sent into the besieged city to await his punishment when Holofernes shall have taken it. Famine undermines the courage of the besieged and they contemplate surrender, but Judith, a widow, upbraids them and says that she will deliver the city. She goes into the camp of the Assyrians and captivates Holofernes by her beauty, and finally takes advantage of the general's intoxication to cut off his head. She returns inviolate to the city with his head as a trophy, and a sally on the part of the Jews results in the rout of the Assyrians. The book closes with a hymn to the Almighty by Judith to celebrate her victory.

TEXT.—The book exists in distinct Greek and Latin versions, of which the former contains at least eighty-four verses more than the latter. St. Jerome (Pref. in Lib.) says that he translated it from the Chaldaic in one night, "magis sensum e sensu, quam ex verbo verbum transierit" (aiming at giving sense for sense rather than at giving closely to the wording). He adds that his codices differed much, and that he expresses in Latin only what he could clearly understand of the Chaldaic.

Two Hebrew versions are known at present, a long one practically identical with the Greek text, and a shorter, evidently abridged, of which the former is closely allied to the latter when discussing the origin of the book. The Chaldaic, from which St. Jerome made our present Vulgate version, is not recoverable unless indeed it be identified with the longer Hebrew version mentioned above. If this be the case we can gauge the value of St. Jerome's work by comparing the Vulgate with the Greek text. We at once find that St. Jerome did not exaggerate when he said that he made his translation hurriedly. Thus a comparison between vi, 11, and viii, 9, shows us a certain confusion relative to the names of the elders of Bethulia—a confusion which does not exist in the Septuagint, where also x, 6, should be compared. Again in iv, 5, the high priest is Elishachim, which name is later changed into Joachim (xv, 9)—an allowable change but somewhat misleading; the Septuagint is consistent in using the form Joachim. Some of the historical statements in the Greek text are curious: according to the Vulgate, for example, the thirteenth year (Vulg.) of Nabuchodonosor becomes the eighteenth in the Septuagint, which also adds a long address of the king to Holofernes. St. Jerome has also frequently condensed the original—always on the supposition that the Septuagint and the longer Hebrew version do really represent the original. To give but one instance:

Septuagint (ii, 27).

"And he came down into the plain of Damascus at the time of the wheat harvest, and he burnt up all their fields, their flocks and their herds which he delivered to destruction, their vineyards, their olive groves, and the fruits of their fertile plains he scattered like chaff, and he struck all their young men with the edge of the sword."

Vulgate (ii, 17).

"And after these things he went down into the plains of Damascus in the days of the harvest, and he set all the corn on fire, and he caused all the trees and vineyards to be cut down."

With regard to the Septuagint version of the Book of Judith it should be noted—that it has come down to us in two recensions: Codex B or Vaticanus on the one hand, and Codex Alexandrinus (A) with Codex Sinaiticus (G) on the other.

HISTORIORITY.—Catholics with very few exceptions accept the Book of Judith as a narrative of facts, not as an allegory. Even Jahn considers that the genealogy of Judith is inexplicable on the hypothesis that the story is a mere fiction ("Introductio", Vienna, 1814, p. 461). Why carry out the genealogy of a fictitious person through fifteen generations? The Fathers have nothing to say on the subject as historical. St. Jerome, who excluded Judith from the Canon, none the less accepted the person of the valiant woman as historical (Ep. Ixv, 1).

Against this traditional view there are, it must be confessed, very serious difficulties, due, as Calmet insists, to the doubtful and disputed nature of the text. The historical and geographical statements in the book, as we now have it, are difficult to understand: thus (i) Nabuchodonosor was apparently never King of Ninevè, for he came to the throne in 605, whereas Ninevè was destroyed certainly not later than 606, and that after the battle of Carchemish; (ii) the allusion in i, 6, to Erioch, King of the Eliechis, is suspicious; we are reminded of the Arich of Gen., xiv, 1. The Septuagint makes him King of the Elumeans, presumably the Elamites, (iii) the character of Nabuchodonosor is hardly that portrayed for us on the monuments: in the India House Inscription, for example, his sentiments are remarkable for the modesty of their tone. On the other hand, we must remember that, as Sayce says, the "Assyrian kings were most brazen-faced liars on their monuments"; (iv) the name Vagoa, or the Septuagint Bagos, for the eunuch of Holofernes is suggestive of the Bagoes, who, according to Josephus (Antiquities, XI, vii, 1), polluted the temple and to whom apparently we have a reference in the recently discovered papyri from Assuan; (v) the mixture of Babylonian, Greek, and Persian names in the book should be noted; (vi) the genealogy of Judith as given in the Vulgate is a medley: that given in the three principal Greek codices is perhaps better but varies in every one. Still it is an historical genealogy, though ill-conserved; (vii) a geographical puzzle is presented by the Vulgate of ii, 12-16; the Septuagint is much superior, and it should be noted that throughout this version, especially in Codex B, we have the most interesting details furnished us (cf. particularly i, 9; ii, 13, 28-9). The Septuagint also gives us information about Achor which is wanting in the Vulgate: it is apparently hinted in vi, 2, 5, that he was an Ephraimite and a mercenary hired by Moab; (viii) Bethulia is a mystery: according to the Vulgate there are few streets and towers (vii, 22, 32), and withstood a long siege at the hands of a vast army. Its position, too, is stated with minuteness; it stood on the edge of the Plain of Esdrelon and guarded the pass to Jerusalem; yet no trace of the existence of such a place is to be found (unless we accept the theory of Conder, "The Book", 5th ed., p. 239); (ix) the name, Judith (Jew-
oe), Achior (brother of light), and Bethulia (?Bethel, i.e. ?Jerusalem, or perhaps from the Hebrew הננה "a virgin"—in the shorter Hebrew version Judith is called not "the widow" but "the virgin", i.e. Bethulia), sound rather like symbolic names than those of actual persons. To the Restoration; (xi) there is no king in Palestine (iv, 5), but only a high priest, Joachim or Eliachim; and in iv, 8; xi, 14; xv, 8 (Sept.), the Sanhedrin is apparently mentioned; (xiii) the book has a Persian and even a Greek colouring, as is evidenced by the recurrence of such names as Bagao and Hoilofernes.

These are serious difficulties, and a Catholic student must be prepared to meet them. There are two ways of doing so. (a) According to what we may term "conservative" criticism, these apparent difficulties can every one be harmonized with the view that the book is perfectly historical and deals with facts which actually took place. Thus, the geographical details are not to be strained by the translators of the original text or to copyists living long after the book was composed, and consequently ignorant of the details referred to. Calmet insists that the Biblical Nabuchodonosor is meant, while in Arphaxad he sees Phraorotes whose name, as Vigouroux (Les Livres Saintes et La Critique Rationaliste, iv, 4th ed.) shows, could easily have been thus perverted. Vigouroux, however, in accordance with recent Assyrian discoveries, identifies Nabuchodonosor with Assur-bani-pal, the contemporary of Phraorotes. This enables him to refer the events to the time of the captivity of Manassees under Assur-bani-pal (1 Par., xxviii, 11; cf. Sayce, "Higher Criticism and the Verdict of the Monuments", 4th ed., p. 458). It is further maintained that the campaign conducted by Hoilofernes is well illustrated in the records of Assur-bani-pal which have come down to us. And these facts will undoubtedly afford an explanation of the apparent allusion to the captivity: it was indeed a Restoration, but that of Manassees, not that of Edeas. The reference, too, to the Sanhedrin is doubtful; the term ימא is used of the "ancients" in Lev., ix, 3, etc. Lastly, Conder's identification of Bethulia with Mithilah (loc. cit: supra) is highly probable, and he gives us the geographical position in iv, 1-9, knew the geography of Palestine thoroughly. And we are given details about the death of Judith's husband which (viii, 2-4) can hardly be attributed to art, but are rather indications that Judith represents a really existing heroine. With regard to the state of the text it should be noted that the extraordinary variants presented in the various versions are themselves a proof that the versions were derived from a copy dating from a period long antecedent to the time of its translators (cf. Calmet, "Intro in Lib. Judith").

Catholic writers are not satisfied with Calmet's solution of the difficulties of the Book of Judith; they deem the errors of translators and of scribes to be no sufficient explanation in this matter. These few Catholics, together with the non-Catholics that do not care to throw the book over entirely into the realm of fiction, assure us that the Book of Judith has the style of composition, the style, etc., round us local personage, she and her heroic deed lived in the memory of the people; but the difficulties enumerated above seem to show that the story as we now have it was committed to writing at a period long subsequent to the facts. The history, so it is maintained, is vague; the style of composition, the style, etc., round us personal narrative, the story is not the same as the Book of the Books of Machabees. A remarkable knowledge of the Psalter is evinced (cf. vii, 19, and Ps. cxv, 6; vii, 21, and Ps. lxxviii, 10, cxiii, 2; ix, 6, 9, and Ps. xix, 8; ix, 16, and Ps. cxlvii, 10; xiii, 21, and Ps. cv, 1). Some of these psalms must almost certainly be referred to the period of the Second Temple. Again, the High Priest Joachim must presumably be identified with the father of Eliashib, and must therefore have lived in the time of Artaxerxes long before the time of Artaxerxes. (n. c. Cf. Josephus, "Antiquities", XI, vi-vii). We referred above to a shorter Hebrew version of the book; Dr. Gaster, its discoverer, assigns this manuscript to the tenth or eleventh century A. D. (Proceedings of Soc. of Bibl. Archæol., XVI, pp. 156 sqq.). It is expressly stated that only the gist of the story. Yet it seems to offer a solution of many of the difficulties suggested above. Thus Hoilofernes, Bethulia, and Achior, all disappear; there is a very natural explanation of the purification in xii, 7; and, most noticeable of all, the enemy is no longer an Assyrian, but Seleucus, and his attack is on Jerusalem, not on Bethulia.

If it could be maintained that we have in this manuscript the story in its original form, and that our canonical book is an amplification of it, we should then be in a position to explain the existence of the numerous and various. The influence of Seleucus brings us down to Machabean times, the title of Judith, now no longer the "widow" but the "virgin" (נים), may explain the mysterious city; the Machabean colouring of the story becomes intelligible, and the theme is the efficacy of prayer (cf. vi, 14-21; viii, 4; II Mach., xv, 12-16).

Canonity. The Book of Judith does not exist in the Hebrew Bible, and is consequently excluded from the Protestant Canon of Holy Scripture. But the Church has always maintained its canonity.

St. Jerome, while rejecting in theory those books which he did not find in his Hebrew manuscript, yet consented to translate Judith because "the Syedon of Nicea is said to have accounted it as Sacred Scripture" (Pref. in Lib.). It is true that no such declaration is to be found in the Canons of Nicea, and it is uncertain whether St. Jerome is referring to the use made of the book in the discussions of the council, or whether he was misled by some spurious canons attributed to that council, but it is certain that the Fathers of the earliest times have reckoned Judith among the canonical books; thus St. Paul seems to quote the Greek text of Judith, vii, 14, in I Cor., ii, 10 (cf. also I Cor., x, 10, with Judith, viii, 25). In the early Christian Church we find it the writer of the Epistle to the Corinthians, iv, 7, Clement of Alexandria, Origin, and Tertullian, consult the various Biblical dictionaries and introductions; also Cursel Costello (1887). The best summary of the various views and arguments on the question is in GROUT, "Special Introd. to the Jewish People in the Time of Christ", div. II, vol. III. Vigouroux, La Bible et les Découvertes Modernes, IV (9th ed.), 275-305; Brunengo, II Nabuchodonosor di Giuda (Naples, 1888).

HUGH POPE.

Juliana, Saint, suffered martyrdom during the Diocletian persecution. Both the Latin and Greek Churches mention a holy martyr Juliana in their lists of saints. The oldest historical notice of her is found in the "Martyrologium Hieronymianum" for 16 Feb., the place of birth being given as Cumae in Campania (In Campania Cumbas, natale Julianae). It is true that the notice is contained only in the one chief manu-
Naples, telling him to accede to the wishes of Januaria ("Gregori Magni epist."); lib. IX, ep. xxxv, in Migne, P. L., LXXVII, 1015). The Acts of St. Juliana used by Bede in his "MartYROLOGIUM" are purely legendary, and are found in both a Latin and a Greek version. According to the account given in this legend, St. Juliana lived in Naples and was betrothed to the Senator Eleusius. Her father Africanus was a pagan and hostile to the Christians. In the persecution of Maximianus, Juliana was beheaded after suffering frightful tortures. Soon after a noble lady, named Sphenia, came through Nicomedia and took the saint's body with her to Italy, and had it buried in Campania. Evidently it was this alleged translation that caused the martyrdom. Juliana, honoured in Nicomedia, to be identified with St. Juliana of Cumae, although they are quite distinct persons. The veneration of the St. Juliana of Cumae became very widespread, especially in the Netherlands. At the beginning of the thirteenth century her remains were transferred to Naples. The description of this translation by a contemporary writer is still extant. The feast of the saint is celebrated in the Latin Church on 16 Feb., in the Greek on 21 December. Her Acts describe the circumstances in which the saint had with her husband. She is represented in pictures with a winged devil she leads by a chain.

J. P. KIRSCH.

Juliana Falconieri, Saint, b. in 1270; d. 12 June, 1341. Juliana belonged to the noble Florentine family of Falconieri. Her uncle, St. Alexius Falconieri, was one of the seven founders of the Servite Order (q. v.). Through his influence she also consecrated herself from her earliest youth to the religious life and the practices of Christian perfection. After her father's death she received about A. D. 1335 from St. Philip Beniti, then General of the Servites, the habit of the Third Order, of which she became the foundress. Untill her mother's death she remained in her parents' house, where she followed the rule given her by St. Philip Beniti, practising perfect chastity, strict obedience, the exercises of religious prayer, and works of Christian charity. After her mother's death she and several companions moved into a house of their own in 1305, which thus became the first convent of the Sisters of the Third Order of Servites, Juliana remaining the superior until the end of her life. Their dress consisted of a black gown, secured by a leather girdle, and a white veil. As the gown had short sleeves to facilitate work, people called the sisters of the new order "Mantellate". They devoted themselves especially to the care of the sick and other works of mercy, and the superiores, through her heroic deeds of charity, set a noble example to all. For thirty years Juliana directed the community of Servite Tertiaries. An extraordinary occurrence, mentioned in the oratio of her feast day, took place at her death. Being unable to receive Holy Communion because of constant vomiting, she requested the priest to spread a cuspidary on her breast and go on with the Host. Shortly afterwards the Host disappeared and Juliana expired, and the image of a cross, such as had been on the Host, was found on her breast. Immediately after her death she was honoured as a saint. The Order of Servite Tertiaries was sanctioned by Martin V, and Juliana was beatified by him. In 1509, at the permission of Clement XII, the Church at St. Juliana.

JULIANA Falconieri canonized her in 1737, and extended the celebration of her feast on 19 June to the entire Church. St. Juliana is usually represented in the habit of her order with a Host upon her breast.

J. P. KIRSCH.

Julian and Basilissa, Saints, husband and wife, died at Antioch or, more probably, at Antioch in the reign of DIOCLETIAN, early in the fourth century, on 9 January, according to the Roman Martyrology, or 8 January, according to the Greek Menaea. We have no historically certain data relating to these two holy personages, and more than once this Julian of Antioch has been confounded with Julian of Cilicia. The confusion is easily explained by the fact that thirty-nine saints of this name are mentioned in the Roman Martyrology, eight of whom are commemorated in the one month of January. But little is known of this saint, once we put aside the exaggerations of his Acts. He is described by his family to have had with his wife Basilissa, that they should both preserve their virginity, and further encouraged her to found a convent for women, of which she became the superior, while he himself gathered a large number of monks and undertook their direction. Basilissa died a very short time after her husband's death, on 5 March. During the persecution of Diocletian he was arrested, tortured, and put to death at Antioch, in Syria, by the order of the governor, Martian, according to the Latin; at Antioch, in Egypt, according to the Greeks, which seems more probable. Unfortunately, the Acts of this martyr belong to those pious romances so much appreciated in early times, whose authors, concerned only for the edification of their readers, drowned the few known facts in a mass of imaginary details. Like many similar lives of saints, it offers miracles, prodigies, and improbable utterances, that lack the least historical value. In any case these two saints must have enjoyed a great reputation in antiquity, and their veneration was well established before the eighth century. In the "Martyrologium Hieronymianum" they are mentioned under 6 January; Usuard, Adu, Notker, and others place them under the ninth, and Bolland under the thirteenth of the same month, while Vandelbert puts them under 13 February, and the Menology of Canisius under 21 June, the day to which the Greek Menaea assign St. Julian of Cessarea. There used to exist at Constantinople a church under the invocation of these saints, the dedication of which is inscribed in the Greek Calendar under 5 July.

LÉON CLUGNET.

Juliana of Liège, Saint, nun, b. at Retinne, near Liège, Belgium, 1193; d. at Fosses, 5 April, 1258. At the age of five she lost her parents and was placed in the convent of Mont-Cornillon, near Liège. She made rapid progress, and read with pleasure the writings of St. Augustine and St. Bernard. She also cultivated an ardent love of the Blessed Virgin, the Sacred Passion, especially the Blessed Sacrament. In 1203 she received the veil, and devoted herself to the sick in the hospital in charge of the convent. She very early exerted every energy to introduce the feast of Corpus Christi. In 1230 she was chosen supecessoress by the unanimous vote of the community. But soon God sent the sky heavy trials. In 1237 she received permission to celebrate the Feast of St. Juliana. Clement XII canonized her in 1737, and extended the celebration of her feast on 19 June to the entire community. In 1233 by intrigues and bribery. Disliking the virtues
and piety of Juliana, and much more her entertainments and recreations, he incited the populace against her. She fled to the cell of St. Eve of Liège, and then to a house given her by John, a canon of Lausanne. Vindicated in the courts through the influence of Robert de Thorate, Bishop of Liège, she was restored to her position in the community, and Roger was deposed. But in 1247 Roger was again in power, and successively one after the other the saint. Juliana found refuge at Namur and then at Fosses, where she passed the last years of her life in seclusion. At her own request she was buried at Villiers. After her death a number of miracles occurred at her intercession (Acta SS., April, I, 456 sq.). In 1689 Pius IX ratified her vision of St. Bernard and of Jesus in her sleep and Mass in her honour. Her feast is on 6 April.

FRANCIS MERMAN.

Juliana of Norwich, English mystic of the fourteenth century, author or recipient of the vision contained in the book known as the "Sixteen Revelations of Divine Love". The original form of her name appears to have been Julian. She was probably a Benedictine nun, living as a recluse in a nunnery of which traces still remain in the east part of the churchyard of St. Julian in Norwich, which belonged to Carrow Priory. According to her book, this revelation was "shewed" to her on 8 or 14 May (the readings differ), 1373, when she was thirty years and a half old. This would refer her birth to the end of 1342. Her statement, that "for twenty years after the time of this shewing, save three months, I had teaching inwardly", proves that the book was not written before 1393. An early fifteenth-century manuscript, recently purchased for the British Museum from the Amherst library, states that she "yet is on life, Anno Domini 1413". It is probable that this is the manuscript cited by Francis Blomefield, the eighteenth-century historian of Norfolk, and that a misreading of the date led to the statement that she was still living in 1442. Attempts have been made to identify her with Lady Julian Lampet, the anchoress of Carrow, references to whom occur in documents from 1426 to 1478; but this is manifestly impossible. The newly-discovered manuscript differs considerably from the complete version hitherto known of, which it is a kind of condensation, lacking the beginning and the end. Only three, much later, manuscripts of the whole text are known to exist. The earliest of these is in the Bibliothèque Nationale at Paris (from which the book was first edited by Serenus de Cresey in 1670), dates from the sixteenth century; the other two, both in the British Museum and not independent of each other, belong to the seventeenth. The better of the latter, which was edited in a modernized form by Grace Warrack in 1901, is evidently a copy of a much earlier original.

Whatever be their precise date, these "Revelations", or "Shewings", are the most perfect fruit of later medieval mysticism in England. Juliana describes herself as "a simple creature unlettered" when she received them; but, in the years that intervened between the vision and the composition of the book, she evidently acquired some knowledge of theological phraseology, and her work appears to show the influence of Walter Hilton, as well as neo-Platonic analogies. There is another probability of the author of the "Divine Cloud of Unknowing". There is one passage, concerning the place in Christ's side for all mankind that shall be saved, which argues an acquaintance with the letters of St. Catherine of Siena. The psychological insight with which she describes her condition, distinguishing the manner of her vision and recognizing when she has to deal with a more delusion, is worthy of St. Teresa. When seemingly at the point of death, in the bodily sickness for which she had prayed in order to renew her spiritual life, she passes into a trance while contemplating the cross, and has the vision of Christ's sufferings "in which all the shewings that follow be grounded and joined".

The book is the record of twenty years' meditation upon that one experience; for, "when the shewing, which is given for a time, is passed and hid, then faith keepeth it by grace of the Holy Ghost unto our lives end". More than fifteen years after, she received in "ghostly understanding" the explanation, the key to all religious experience: "What? How dost thou wait upon Lord's meaning in this thing? Was it not Jesus that was His meaning. Who shewed it thee? Love. Wherefore shewed He it thee? For love. Hold thee therein, thou shalt wit more in the same. But thou shalt never wit therein other without end." With this illumination, the whole mystery of Redemption and the purpose of human life become clear to her, and even the possibility of sin and the existence of evil does not trouble her, but is made "a bliss by love". This is the great deed, transcending our reason, that the Blessed Trinity shall do at the last day: "Thou shalt see thyself that all manner of thing shall be well." Like St. Catherine of Siena, Juliana has little of the dualism of body and soul that is frequent in the mystics. God is in our "sensuality" as well as in our "substance", and the body and the soul render mutual aid: "Either of them take help of other till we be brought up into stature, as kind worketh." Knowledge of God and knowledge of self are inseparable: we may never come to the knowing of one without the knowing of the other. "God is more nearer to us than our own soul", and in falling and in rising we are ever previously kept in one love." She lays special stress upon the "homeliness" and the "courtesy" of God's dealings with us, "for he delighteth in wisdom and in meekness and in meekness doth he work with us." With this we must correspond by a happy confidence; "failing of comfort" is the "most mischief" into which the soul can fall. In the Blessed Virgin the Lord would have all mankind see how they are loved. Throughout her revelation Juliana submits herself to the authority of the Church: "I yield me to our mother Holy Church, as a simple child ought.

EDMUND G. GARDNER.

Julianists. See Eutychianism.

Julian of Eclanum, b. about 386; d. in Sicily, 454; the most learned among the leaders of the Pelagian movement and Bishop of Eclanum near Beneventum. He was the son of Memoriaus, a bishop in Apulia, and his ecclesiastical career began in his father's church, where he was occupied and subsequently deacon. About 417 he was raised to episcopal rank by Innocent I, and placed in charge of a see variously styled Eclana, Eclanum, Ecclanum, Eclanum or Eclanum. There is no means of deciding how Julianus, who enjoyed an enviable reputation for learning, zeal, and sanctity, was led finally himself with the Pelagian theses to the Heretical Church. In 418, his "Epirotol Tractatoria", Julianus was one of the eighteen Italian bishops who refused to subscribe to the condemnation of Pelagius which it contained. In consequence of this refusal he was exiled under the decree of the Emperor Honorius, which pronounced banishment against Pelagius and his sympathizers. Driven from Italy in 421, he commenced an active
literary campaign in the interests of the new heresy, and by his writings soon won for himself the position of intellectual leader of the opposition party. To him is due the credit of having systematized the teachings of Pelagius and Cælestinus. His writings, which were frankly Pelagian, were largely directed against the doctrines which St. Augustine had denied, and for several years after the expulsion of the Pelagians the controversy had a history. There is much material in the controversy between Julian and Augustine. Most of Julian's works are lost, and are known only through the copious quotations found in the works of his great adversary. Principal among them are the letter to Rufus, Bishop of Thessalonica, and the epistle to the Pelagians, to Bishop Augustin, at the request of Pope Boniface, which is refuted in his work "Against Two Letters of the Pelagians"; the reply to Augustine's work "De Nuptiis et Concipientiis"; and his answer to Augustine's defence of his own work. Driven from Italy, he found refuge for a time with Theodoric of Mopsuestia, who, though sympathetically, subsequently subscribed to his condemnation. At the accession of each pontiff Julian sought to have the Pelagian controversy re-opened, but this merely resulted in further condemnations by Cælestinus, Sixtus III, and Leo I. For a time he enjoyed the patronage and friendship of Nestorius, the Patriarch of Constantinople, and the Bishop of the Emperor Theodosius II, Marius Mercator, by his "Communitorium de Cælesto", opened the eyes of the emperor to the true character of Pelagianism. By reason of this Julian was expelled from Constantinople. His subsequent career, with the exception of his attempts to conciliate the pope, is not known. Julian was the most learned among the Pelagians, and, though superior to Pelagius and Cælestinus, his system did not differ materially from theirs.

Patrick J. Healy.

Julian of Halicarnassus. See Eutychianism.

Julian of Speyer, often called Julianus Truxonicus, a famous composer, poet, and historian of the thirteenth century, b. at Speyer; d. at Paris about 1250 (not in 1258, as is so often stated). He studied at the celebrated University of Paris, and was the musical director at the Palace of Germany both to the reigns of Philip Augustus (1170-1223) and Louis VIII (1223-6) of France. When he resigned to become a member of the newly founded Order of St. Francis is not known. But it is certain that Julian accompanied Brother Simon Angelicus to his native land, where the latter was made Provincial of Germany by the General Chapter of Assisi in 1227. It is possible that he was present at the translation of St. Francis at Assisi in May, 1230. Subsequently he again lived in Paris at the great convent of the Minorites, where he was choir-master as well as corrector mensis in which capacity he superintended the reading in the church. During his life he was known to the family of Aegidius of Assisi (written between 23 February, 1229, and 4 October, 1235), as well as that of St. Anthony of Padua, who was canonized on 30 May, 1232 (composed probably shortly after 1241).

Both these musical, as well as poetical, masterpieces are still used by the Minorites. The acme of liturgical narrative poems, these works are equally distinguished for the harmony, rhythm, and rhyme of the verses, and for their subtle and profound compositions. Of their kind they are unequalled. Only a few sentences in the third nocturn (the antiphons) were written by Pope Gregory IX and the cardinals; the remainder is all Julian's composition. Even outside the Franciscan Order the rhythmic liturgical structure has been acknowledged. This is most frequently taken (especially from the "Historia rhythmica" of St. Francis), and these plagiarisms set to Julian's melodies without any alteration. It is not known how much of the poetical narrative of St. Dominic (d. 1221), used on his feast by both Franciscans and Dominicans, belongs to Julian II; but some portions of the Mass formulas of St. Francis and Anthony are undoubtedly the musical and poetical composition of Julian. Only in the last decade was Julian recognized as the author of the "Legenda S. Francisci"—partly published in the "Acta SS." October, II, 548 sq., and published in full in "Analecta Bollandiana," XXI (1902), 160-202—and of the "Vita ab auctore anonymo" of St. Anthony of Padua, printed in the "Acta SS.", June, II, 705 sqq.

Michael Bihl.

Julian the Apostate (Flavius Claudius Julianus), Roman emperor 361-363, b. at Constantinople in 331; d. 26 June, 363; son of Julius Constantius, the half-brother of Constantine the Great. With his stepbrother Gallus, who was some years older, he escaped the massacre of his kinsfolk at Constantinople after the death of Constantine the Great, and was brought up by the eunuch Mardonius and the philosopher Neoplatonists—his latter secretly a pagan. The ambitious Emperor Constantius sent Julian later to the castle of Macellum in Cappadocia. Julian received a Christian training, but the recollection of the murder of his relatives sowed in him a bitter resentment against the authors of that massacre, and he extended this hatred of the Christians during his reign. When the Christians of Egypt became involved in war in the West with the usurper Magnentius, he named Gallus his colleague, with the title of Caesar. Julian was allowed to study at Constantinople, but his intellectual character aroused attention and caused Constantius to send him in 350 to Neustria. Here Julian distinguished himself exclusively to neo-Platonic philosophy, mixed with all kinds of magic and mysteries. The neo-Platonic, Maximus of Ephesus, dazzled him by his fantastic teachings and prophesied his destined task, the restoration of paganism. When, at the close of 354, Constantius recalled Gallus Caesar to Italy and had him beheaded for his manifold cruelties, Julian was taken a state prisoner to Milan, but, gaining the sympathy of the Empress Eusebia, secured permission to visit in 355 the schools of Athens, where Greek philosophy and rhetoric were enjoying their last period of prosperity. Julian now went over completely to the so-called Hellenism, and was initiated into the mysteries of the Egyptian mysteries. Julian was presented on 6 November, 355, to the army as Caesar, married the emperor's youngest sister Helena, and then went to Gaul. Here he at once displayed great ability, both as soldier and administrator. He boldly advanced from his headquarters at Vinetiae to Reims, and thence made a sally
In May, 362, Julian left Constantinople for Asia and made active preparations at Antioch for a great war with Persia. While at Antioch in the winter of 362–63, he wrote his books against the Christians. In March, 363, he advanced from Antioch through Mesopotamia and Armenia. Long jealous of Julian, the emperor now ordered the latter to send a part of his most experienced German auxiliaries, although these troops had been enlisted for the Gallic war only. Against the advice of Julian the missioner Decennius in the winter of 360 started with the picked troops by way of Paris, and stopped here to rest: a mutiny now broke out, the troops appeared before Julian's residence, and enthusiastically proclaimed him Augustus. To avoid a civil war, Julian sought to come to an agreement with Constantius whom he was ready to acknowledge as supreme emperor. Constantius, however, demanded the unconditional surrender of the title of Caesar and of his position as governor of Gaul. Neither the army nor the people would consent to this, and Julian died in the spring of Illyricum, taking possession of the capital, Sirmium. Shāpūr having disbanded his great Persian army, Constantius now planned to turn his entire fighting strength against his rebellious cousin Julian. While on the march, however, Constantius died, 3 November, 361.

Julian advanced in triumph to Constantinople. Hitherto outwardly a Christian, he now let himself be portrayed as under the protection of Zeus, who in his opinion possessed with Helius the same undivided creative power. He commanded all towns to reopen the temples for pagan worship, restored animal sacrifices, and assumed the duties of a Pontifex Maximus. The Christians were united in fighting their enemy. Julian issued a decree that all titles to lands, rights, and immunities bestowed since the reign of Constantine upon the Galileans, as he contemptuously called the Christians, were abrogated, and that the moneys granted to the Church for the revenge of St. Basil the great the State must be repaid. He forbade the appointment of Christians as teachers of rhetoric and grammar. Still, he copied the organization of the Christian Church; he created, for example, a form of hierarchy, the head of which was the imperial Pontifex Maximus, and urged pagans to imitate such Christian virtues as charity and mercy. Yet Julian's changes failed to bring him any appreciable success. His attempt to defy the Gospel and rebuild the temple at Jerusalem was brought to nothing by fire and earthquake.

Julie Billiart, BLESSED, foundress and first superior-general of the Congregation of the Sisters of Notre Dame of Namur, b. 12 July, 1751, at Cuville, a village of Picardy, in the Diocese of Beauvais and the Department of Oise, France; d. 8 April, 1816, at the mother-house of her institute, Namur, Belgium. She was the sixth of the seven children of Pierre Billiart and his wife Marie-Louise-Antoinette Debraine. The childhood of Julie was remarkable; at the age of seven she knew the catechism by heart, and used to gather her little companions around her to hear them recite it and to explain it to them. Her education was confined to the village school, which was kept by her uncle, Thiibault Guilbert. In spiritual things her progress was so rapid that the parish priest, M. Dangecourt, allowed her to make her First Communion and to be confirmed at the age of nine years. At this time she made a vow of chastity. Misfortunes overtook the Billiart family and forced Julie and her mother to leave the village, which was then kept by her uncle, Thiibault Guilbert. In spiritual things her progress was so rapid that the parish priest, M. Dangecourt, allowed her to make her First Communion and to be confirmed at the age of nine years. At this time she made a vow of chastity. Misfortunes overtook the Billiart family and forced Julie and her mother to leave the village, which was then kept by her uncle, Thiibault Guilbert.
At Amiens, where Julie Billiart had been compelled to take refuge with Countess Baudoin during the troublous times of the French Revolution, she met Françoise Blin de Bourdon, Viscountess of Gézaincourt, who was destined to be her co-labourer in the great work as yet unknown to either of them. The Viscountess Blin de Bourdon was thirty-eight years old at the time of her meeting with Julie, and had spent her youth in piety and good works and had been imprisoned with all her family during the Reign of Terror, and had escaped death only by the fall of Robespierre. She was not at first attracted by the almost speechless paralytic, but by degrees grew to love and admire the invalid for her wonderful gifts of soul. A little company of young and high-born ladies, friends of the viscountess, was formed around the youth of “the saint”. Julie taught them how to lead the interior life, while they devoted themselves generously to the cause of God and his poor. Though they attempted all the exercises of an active community life, some of the elements of stability must have been wanting, for these ladies disingenuously dropped off until none was left but Françoise Blin de Bourdon. She was never to be separated from Julie, and with her in 1803, in obedience to Father Varin, superior of the Fathers of the Faith, and under the auspices of the Bishop of Amiens, the foundation was laid of the Institute of the Sisters of Notre Dame, a society which had for its primary object the salvation of poor children. Several young persons offered themselves to assist the two superiors. The first pupils were eight orphans. On the feast of the Sacred Heart, 1 June, 1804, Mother Julie, after a novena made in obedience and patience to her, was cured of paralysis. The first vows of religious were made on 15 October, 1804, by Julie Billiart, Françoise Blin de Bourdon, Victoire Leelu, and Justine Garson, and their family names were changed to the names of saints. They proposed for their life-work the Christian education of girls, and the training of religious teachers who should go wherever their services were asked for. Father Varin gave the community a provisional rule by way of probation, which was so far-sighted that its essentials have never been changed. In view of the extension of the institute, he would have it governed by a superior-general, charged with visiting the houses, nominating the local superiors, corresponding with the members dispersed in the different convents, and assigning the revenues of the society. The characteristic devotions of the Sisters of Notre Dame were established by the foundress from the beginning. She was original in doing away with the time-honoured distinction between choir sisters and lay sisters, but this perfect equality of rank did not in any way prevent her from putting each sister to the work for which her capacity and education fitted her. She attached great importance to the formation of the sisters destined for the schools, and in this she was greatly assisted by Mother St. Joseph (Françoise Blin de Bourdon), who had herself received an excellent education.

When the Congregation of the Sisters of Notre Dame was approved by an imperial decree dated 19 June, 1806, it numbered thirty members. In that and the following years foundations were made in various towns of France and Belgium, the most important being those at Ghent and Namur, of which latter house Mother St. Joseph was the first superior. This spread of the institute beyond the Diocese of Amiens cost the foundress the greatest sorrow of her life. In the absence of Father Varin from that city, the confessor of the community, the Abbé de Sambucy de St-Étèbre, a man of superior intelligence and attainments but evangelical, endeavored through legal means and at the cost of much time and labor, to have the constitution and fundamental constitutions of the new congregation so as to bring it into harmony with the ancient monastic orders. He so far influenced the bishop, Mgr Demondolx, that Mother Julie had soon no alternative but to leave the Diocese of Amiens, relying upon the goodwill of Mgr Pisani de la Gaultie, Bishop of Namur, who had invited her to make his episcopal city the centre of her congregation, should a change become necessary. In leaving Amiens, Mother Julie laid the case before all her subjects and told them they were perfectly free to remain or to follow her. All but two chose to go with her, and thus, in the mid-winter of 1809: the convent of Namur became the mother-house of the institute and is so still. Mgr Demondolx, soon undeceived, made all the amends in his power, entreating Mother Julie to return to Amiens and re-build her institute. She did indeed return, but, after vain struggle to find subjects or revenues, went back to Namur. The seven years of poverty and labor, all the sacrifices she were spent in forming her daughters to solid piety and the interior spirit, of which she was herself the model. Mgr de Broglie, Bishop of Ghent, said of her that she saved more souls by her inner life of union with God than by her outward apostolate. She received special supernatural favours and unlooked-for aid in peril and need. In the space of twelve years (1804–16) Mother Julie founded fifteen convents, made one hundred and twenty journeys, many of them long and toilsome, and carried on a close correspondence with her spiritual daughters. Hundreds of these letters are preserved in the mother-house. In 1815 Belgium was the battle-field of the Napoleonic wars, and the mother-general suffered great anxiety, as several of her convents were in the path of the armies, but they escaped injury. In January, 1816, she was taken ill, and, after three months of pain borne in silence and patience, she expired. An elegant effort of charity was the first to make her burial. The fame of her sanctity spread abroad and was confirmed by several miracles. The process of her beatification, begun in 1811, was completed in 1906 by the decree of Pope Pius X dated 13 May, declaring her Blessed.

Blessed Julie’s predominating trait in the spiritual order was her ardent charity, springing from a lively faith and manifesting itself in her thirst for suffering and her zeal for souls. Her whole soul was echoed in the simple and naïve formulas which was continually on her lips and pen: “Oh, qu’il est bon, le bon Dieu!” (How good God is). She possessed all the qualities of a perfect superior, and inspired her subjects with filial confidence and tender affection.

Sister of Notre Dame.

Juliopolis, a titular see in the province of Bithynia Secunda, suffragan of Nicæa. The city was founded under the Emperor Augustus by a robber chieftain named Cleon, who was a native of the region; presumably it had been named Clea (Stobæus, Hist. XIV, viii, 9; Pliny, "Hist. Natur.", V, xl, 3). The location of the city is unknown, none of its titulars being known, neither does it figure in any "Notitia episcopatum", unless it may be considered identical with Cordosberoi, as Le Quien thinks (Oriens Christ., I, 879). This Juliopolis must not be confounded.
with another town of the same name situated in Galatia Prima, and which under the name of Gordium was formerly the capital of Phrygia. It was there, in the temple of Zeus, that Alexander cut the famous Gordian knot. Under its own name, or that of Basilica, Juliiopolis of Galatia is noticed in all the "Notitia episcopatum", and Le Quien (op. cit., I, 475-78) gives the name of a number of its bishops. Its ruins are about six miles S. S. E. of Nali-Khan, and about three miles north of the Sangarius, in the plain of Aigamghir and the vilayet of Angora.

**Julius I, Saint, Pope, 337–352.** The immediate successor of Pope Sylvester, Marcus, ruled the Roman Church for only a very short period—from 18 January to 7 October, 330—and after his death the papal chair remained vacant for four months. What occasioned this comparatively long vacancy is unknown. On 6 Feb., 337, Julius, son of Rusticus and a native of Rome, was elected pope. His pontificate is chiefly celebrated for his firm intervention in the Arian controversies, about which we have abundant sources of information. After the death of Constantine the Great (22 May, 337), his son Constantine II, Governor of Gaul, permitted the exiled Athanasius to return to his See of Alexandria (see Athanasius). The Arians in Egypt, however, set up a rival bishop in the person of Pius, sent an embassy to Julius asking him to admit Pius into communion with Rome, and delivering to the pope the decisions of the Council of Tyre (335) to prove that Athanasius had been falsely deposed. Athanasius likewise sent envoys to Rome to deliver to Julius a synodal letter of the Egyptian bishops, containing a complete justification of their patriarch. On the arrival of the Athanasian envoys in Rome, Macarius, the head of the Arian representatives, left the city; the two remaining Arian envoys, with the Athanasian deputies, were summoned by Pope Julius. The Arian envoys now begged the pope to assemble a great synod before which both parties should present their case for decision.

Julius convened the synod at Rome, having dispatched two envoys to bear a letter of invitation to the Eastern Church. Under the leadership of Eusebius, who had been raised from Nicomedia to the See of Constantinople, the Arian bishops had meanwhile held a council at Antioch, and elected George of Capadocia Bishop of Alexandria in the place of Pius. George was intruded forcibly into his see, and Athanasius, being again exiled, made his way to Rome. Many other Eastern bishops removed by the Arian party, among them Marcellus of Ancyra, also came to Rome. In a letter couched in haughty terms, however, the Arian bishops of the party of Eusebius refused to attend the synod summoned by Julius. The synod was held in the autumn of 340 or 341, under the presidency of the pope, in the titular church of the presbyter Vitus. After a detailed examination of the documents, Athanasius and Marcellus of Ancyra, who had made a satisfactory profession of faith, were exonerated and re-established in their episcopal rights. Pope Julius communicated this decision in a very notable letter to the bishops of the Eusebian party. In this letter he justifies his proceedings in the case, defends in detail his action in reinstating Athanasius, and animadverts strongly on the non-appearance of the Eastern bishops at the council, the convening of which they themselves had suggested. Even if Athanasians were somewhat.grown, the letter runs, the Alexandrian Church should first have written to the pope. "*Can you be ignorant*," writes the pope, "*that this is the custom, that we should be written to first, so that from here what is just may be defined*" (Julii ep. ad Antiocch. e. c. xxxii). After his victory over his brother Constantine II, Emperor Constans was ruler over the greater part of the Empire. He was entirely orthodox in his views, and, at the request of the pope and other Eastern bishops, invited to the council held with Constantius, Emperor of the East, in favour of the bishops who had been deposed and persecuted by the Arian party. Both rulers agreed that there should be convened a general council of the Western and Eastern bishops at Sardica, the principal city of the Province of Dacia Mediterranea (see Constantine the Great). It took place in the autumn of 342 or 343. July 33rd and 4th (326). The representatives the priests Archidamus and Philoxenus and the deacon Leo. Although the Eastern bishops of the Arian party did not join in the council, but held their assembly separate and then departed, the synod nevertheless accomplished its task. Through the important canons iii, iv, and v (in the Latin text) of this council, the procedure against accused bishops was more exactly regulated, and the manner of the papal intervention in the condemnation of bishops was definitely established.

At the close of its transactions the synod communicated its decisions to the pope in a dutiful letter. Notwithstanding the reaffirmation of his innocence by the Synod of Sardica, St. Athanasius was not restored to his see by Emperor Constantius until after the death of George, the rival Bishop of Alexandria, in 346. Pope Julius took this occasion to write a letter, which is still extant, to the priests, deacons, and the faithful of Alexandria, to congratulate them on the return of their great pastor. The two bishops Ursacius of Singidunum and Valens of Mursia, who, on account of their Arianism, had been deposed by the Council of Sardica, now made a formal recantation of their error to Julius, who, having summoned them to an audience and received a signed confession of faith, restored to them their episcopal sees. Concerning the inner life of the Roman Church during the pontificate of Julius we have no exact information; all agree, however, that there was a rapid increase in the number of the faithful in Rome, and also in the basilicas erected: the titular church of Julius (now S. Maria in Trastevere) and the Basilica Julia (now the Church of the Twelve Apostles). Besides these he built three churches over cemeteries outside the walls of Rome: one on the road to Porto, a second on the Via Aurelia, and a third on the Via Flaminia adjoining the tomb of the martyr St. Valentine. None of the last-mentioned have been discovered. The veneration of the faithful for the tombs of the martyrs continued to spread rapidly. Under the pontificate of Julius, if not earlier, catalogues of feast-days of saints came into use—the Roman feast-calendar of Philemon dates from the year 336.

Through St. Athanasius, who remained in Rome several years subsequent to 339, the Egyptian monastic life became well-known in the capital, and the example of the hermits of the Egyptian deserts found many imitators in the Roman Church. Julius died on 12 April, 352, and was buried in the catacombs of Calepodius on the Aurelian Way, and, very soon after his death, was honoured as a saint. His body was later transported to S. Maria in Trastevere, the church which he had built. His feast is celebrated on 12 April.

Giulianetto, Pope (Giuliano della Rovere), b. on 5 December, 1443, at Albissola near Savona; crowned on 22 March, 1455, in St. Peter's in the night of 10-21 February, 1513. He was born of a probably noble but impoverished family, his father being Rafael della Rovere and his mother Theodora Manerola, a lady of Greek extraction. He followed his uncle Francesco della Rovere into the Franciscan Order, and lived as hermit in the valley of the Nera near the church of St. Mary of the Convent near Perugia. With the elevation of his uncle to the papacy as Sixtus IV on 9 August, 1471, begins the public career of Giuliano. On 15 December, 1471, he was created Cardinal of St. Peter in Vincoli, and thereafter literally overwhelmed with benefices, although during the lifetime of Sixtus IV he never took a prominent part in the turmoil and dissipation of the pontificate. For the church of St. Mary of the Convent near Perugia he was commendatory Abbot of Nonantola, Grottaferrata, and Gorze, and drew the revenues of various other ecclesiastical benefices. These large incomes, however, he did not spend in vain pomp and dissipation, as was the custom of many ecclesiastics of those times. Indeed, he sought to use his wealth to advantage and spent most of his superfluous money in the erection of magnificent palaces and fortresses. Still his early private life was far from stainless, as is sufficiently testified by the fact that before he became pope he was the father of three daughters, the best known of whom, Felice, he gave in marriage to Giovanni Giordano Orsini in 1508.

In June, 1474, Giuliano was sent at the head of an army to restore the papal authority in Umbria. He succeeded in reducing Todi and Spoleto, but for the subjugation of Città di Castello he needed the assistance of Duke Federigo of Urbino. In February, 1476, he was sent as legate to France to regulate the affairs of his Archdiocese of Aigleon, and probably to oppose the council which Louis XI intended to convene at Lyons. In 1480 he was sent as legate to the Netherlands and France to accomplish three things, viz. to settle the quarrel concerning the Burgundian inheritance between Maximilian and Louis XI, to prevent the help of France against the Turks, and to effect the liberation of Cardinal Balduino whom Louis XI had held in strict custody since 1469 on account of treasonable acts. After successfully completing his mission he returned to Rome in the beginning of 1492, accompanied by the illustrious Cardinal Bichi. At that time a war was just breaking out between the pope and Venice on one side and Ferrara on the other. Giuliano made various attempts to restore peace, and was probably instrumental in the dissolution of the Veneto-Papal alliance on 12 December, 1482. He also protected the Cismon family against the cruel persecutions of Cardinal Girolamo Riario in 1484. After the death of Sixtus IV on 12 August, 1484, Giuliano played a disreputable role in the election of Innocent VIII. Seeing that his own chances for the papacy were extremely meagre, he turned all his efforts to securing the election of a pope who was likely to be a puppet in his hands. Such a person he saw in the weak and irresolute Cardinal Bichi, who owed his cardinalate to Giuliano. To effect the election of his candidate he did not scruple to resort to bribery. Bichi ascended the papal throne as Innocent VIII on 29 August, 1484. Inflamed during the last eight years of his pontificate by the strong and energetic Giuliano, the war that broke out between the pope and King Ferrante of Naples must be attributed chiefly to Giuliano, and it was also due to him that it did not come to an earlier conclusion.

After the death of Innocent VIII on 25 July, 1492, Giuliano again aspired to the papacy, but his great influence during Innocent's pontificate and his pronounced sympathy with the claims of the Romagna made him a likely candidate to the cardinals. He was shrewd enough to understand the situation. He was, however, loath to see the tiara go to Cardinal Rodrigo Borgia, not because the latter was an unworthy candidate, but on account of his personal aversion towards the Borgia. Despite Giuliano's efforts, Borgia was the successful candidate, and ascended the papal throne as Alexander VI on 11 August, 1492. Fearing for his safety in Rome, Giuliano withdrew to his strongly fortified castle at Ostia towards the end of 1492. An apparent reconciliation between Alexander VI and Giuliano was effected in July, 1493, but Giuliano did not trust the sly machinations of Alexander and returned to France. Another appearance of trust between them was afterward declared. When Giuliano assisted the pope in the matrimonial affairs of Cesare Borgia. But Giuliano's distrust of Alexander remained. He evaded Rome, spending most of his time in France and Northern Italy.

After the death of Alexander on 18 August, 1503, he returned to Rome on 3 September to take part in the election of the new pope. He was again a strong candidate for the papacy, but his great ambition was not yet to be realized. The sick and aged Francesco Piccolomini ascended the papal throne as Pius III, but died on 18 October, 1503, after a reign of only twenty-six days. Giuliano's chance of being elected was now better than at any previous election. To ensure his success he made great promises to the cardinals, and did not hesitate to employ bribery. The conclavists began 31 October, and after a few hours the cardinals united their votes on Giuliano, who as pope took the name of Julius II. It was the shortest conclavist in the history of the Church. In preparing the cardinals for the election, the following terms were secured by the cardinals: (1) the continuation of the war against the Turks; (2) the restoration of ecclesiastical discipline and the convocation of a general council for that purpose within two years; (3) that no war was to be undertaken without the consent of two-thirds of the cardinals, who were to be consulted on all important matters, especially concerning the creation of new members for the Sacred College; (4) that the pope with two-thirds of the cardinals were to determine upon the place of the next general council. Such an unlawful restriction, it was stipulated that Giuliano should remain in possession of all his dignities and benefices, and should be guaranteed secure and undisturbed residence in Rome. Giuliano, however, still feared the secret machinations of Alexander and returned to France. Another appearance of trust between them was afterward declared. When Giuliano assisted the pope in the matrimonial affairs of Cesare Borgia.
hands. Cesare Borgia refused and was arrested by the pope's order. Venice, however, stubbornly refused to give back the cities which it had previously taken. A temporary settlement was reached in March, 1503, when Venice restored most of its conquests in the north. They were meanwhile treaties signed at Perugia and Bologna, two cities that belonged to the Papal States. At Perugia the Baglioni and at Bologna the Bentivogli were acting as independent despots. The warlike Julius II personally directed the campaign against both, setting out at the head of his army on 20 August, 1508. Perugia surrendered without any bloodshed on 13 September, and the pope proceeded towards Bologna. On 7 October he issued a Bull deposing and excommunicating Giovanni Bentivoglio and placing the city under interdict. Bentivoglio fled, and Julius II entered Bologna triumphantly on 10 November. He did not leave the city until 22 February, 1507, arriving again at Rome on 27 March.

The Venetians meanwhile continued to hold Rimini and Faenza, two important places in the Romagna; they moreover encroached upon the papal rights by filling the lands and joined the papal soldiers independently of the pope, and they subjected the clergy to the secular tribunal and in many other ways disregarded the ecclesiastical jurisdiction of Julius II. Unable to cope alone with the powerful Republic of Venice, he reluctantly joined the League of Cambrai on 29 March, 1508. This League, formed by Emperor Maximilian I and Louis XII of France chiefly with the purpose of forcing Venice to restore its recent continental conquests to their original owners. On 27 April, 1509, Julius II placed Venice under interdict and dispatched his troops into the Romagna. Venice was too weak to contend against the combined forces of the League and suffered a complete defeat at the battle of Agnadello on 14 May, 1509. The Venetians were now ready to enter negotiations with Julius II, who withdrew from the League and freed the Venetians from the ban on 24 February, 1510, after they agreed upon the following terms: (1) to restore the disputed towns in the Romagna; (2) to renounce their claims to fill vacant benefices; (3) to acknowledge the ecclesiastical tribunal for ecclesiastics and exempt them from taxes; (4) to revoke all treaties made with papal cities; (5) to permit papal subjects free navigation on the Adriatic. The Swiss then again sent supreme temporal master over the entire Pontifical States, but his national pride extended beyond the Patrimony of St. Peter. His ambition was to free the whole of Italy from its subjection to foreign powers, and especially to deliver it from the galling yoke of France. His efforts to gain the assistance of Emperor Maximilian, Henry VIII of England, and Ferdinand of Spain, proved futile for the moment, but the Swiss and the Venetians were ready to take the field against the French. Julius II inaugurated the hostilities by deposing and excommunicating his vassal, Duke Alfonso of Ferrara, who supported France. The French, supported by Pope Alexander VI, retaliated and confined the papal legates and of French bishops at Tours in September, 1510, where it was decreed that the pope had no right to make war upon a foreign prince, and, in case he should undertake such a war, the foreign prince had the right to invade the Ecclesiastical States and to withdraw his subjects from their obedience to the pope. The synod was then opened, when receiving no notice of this synod, Julius again assumed personal command of his army and set out for Northern Italy. At Bologna he fell severely sick, and would probably have been captured by the French had it not been for the timely appearance of the Venetians. He had secretly returned, when recovering from the effects of the weather, he marched against Minundola which he took on 20 January, 1511. On 23 May, 1511, the French made a descent upon Bologna which Julius II had left nine days previously, drove out the papal troops and reinstated the Bentivogli.

Some of the cardinals were displeased with the pope's anti-French policy, and five of them went so far as to convocate a schismatical council at Pisa on 1 September, 1511. They were promptly arrested in the presence of the King of France and for some time also by Emperor Maximilian. The pope now looked for aid to Spain, Venice, and England, but before completing negotiations with these powers he fell dangerously sick. From 25 to 27 August, 1511, his life was despaired of. It was during this sickness of Julius II that Emperor Maximilian conceived the fantastic plan of uniting the viands with the imperial crown on his own head (see Schulte, "Kaiser Maximilian als Kandidat für den päpstlichen Stuhl", Leipzig, 1906; and Naegele, "Hat Kaiser Maximilian I in Jahres 1507 Papst werden wollen" in "Historisches Jahrbuch" XXVIII, Munich, 1907, pp. 44-60, 278-305). But Julius II recovered on 28 August, and on 4 October the so-called Holy League was formed for the purpose of delivering Italy from French rule. In the beginning the League included only the pope, the Venetians, and Spain, but on 17 November a treaty was signed by which Francis I of France was followed by the emperor and by Switzerland. Under the leadership of the brilliant Gaston de Foix, the French were at first successful, but after his death they had to yield to the superior forces of the League, and, being defeated in the bloody battle of Ravenna on 1 April, 1512, formed a new League. Bologna again submitted to Julius II and the cities of Parma, Reggio, and Piacenza were added to the Ecclesiastical States.

Julius II was chiefly a soldier, and the fame attached to his name is greatly due to his re-establishment of the Pontifical States and the deliverance of Italy from its subjection to France. Still he did not forget his duties as the spiritual head of the Church. He was free from nepotism; heard Mass almost daily and often celebrated it himself; issued a strict Bull against simony at papal elections and another against duelers; erected dioceses in the recently discovered American colonies of Haiti (Española), San Domingo, and Porto Rico; condemned the heresy of Piero de Lucca concerning the Incarnation on 7 September, 1511; made various ordinances for monastic reforms; instituted the still existing Capella Julia, a school for ecclesiastical chant which was to serve as a feeder for the Capella Palatina; and held a Council at Treviri to oblige the Lateran Council to eradicate abuses from the Church and especially from the Roman Curia, and to frustrate the designs of the schismatic cardinals who had convened their unsuccessful council first at Pisa, then at Milan (see LATERAN COUNCILS). Julius II has also gained an enviable reputation as a patron of arts. Bramante, Raphael, and Michelangelo gave to the world some of their greatest masterpieces while in his service. He laid the cornerstone of the gigantic Basilica of St. Peter on 18 April, 1506, and conceived the idea of uniting the Vatican with the Belvedere, engaging Bramante to design a new project. Among the famous frescoes of Michelangelo in the Sistine Chapel and of Raphael in the Stanze, the Corti of St. Damasus with its loggias, the Via Giulia and Via della Lungara, the colossal statue of Moses which graces the mausoleum of Julius II in the church of San Pietro in Vincoli, and many other magnificent works in and out of Rome are lasting witness of his great art.
conclave on 29 November. They were divided into three factions: the Imperials, the French, and the adherents of Farnese. The friends of Farnese united with the Imperial party and proposed Reginald Pole and Juan de Toledo as their candidates. The French party rejected both, and, though in the minority, they were strong enough to prevent the election of either candidate. The adherents of Farnese and the Imperial party finally reached a compromise and agreed upon Cardinal del Monte, who was duly elected on 7 February, 1550, after a conclave of ten weeks, although the emperor had expressly excluded him from the list of candidates. The new pope took the name of Julius III. In fulfillment of promises made in the conclave, Julius restored Parma to Ottavio Farnese a few days after his accession. But, when Farnese applied to France for aid against the emperor, Julius allied himself with the emperor, declared Farnese deprived of his title, and sent troops under the command of his nephew Giambattista del Monte to co-operate with Duke Gonzaga of Milan in the capture of Parma. In a bull, dated 13 November, 1550, Julius transferred the council from Bologna back to Trent, and ordered that its sessions be resumed on 1 May, 1551, but he was compelled to suspend it again on 15 April, 1552, because the French bishops would not take part in it, and, to escape his enemies, the emperor had to flee from Innsbruck. The success of the French arms in Northern Italy also compelled Julius on 29 April, 1552, to make a truce with France, in which it was stipulated that Farnese was to remain in the peaceful possession of Parma for two years.

Discouraged at his failure as an ally of Charles V, the pope henceforth abstained from interfering in the political affairs of Italy. He withdrew to his luxurious palace, the Villa Giulia, which he had erected at the Porta del Popolo. Here he spent most of his time in ease and comfort, occasionally making a weak effort at reform in the Church by instituting a few committees of cardinals for reformatory purposes. He was a liberal supporter of the rising Jesuit Order, and at the instance of St. Ignatius issued the Bull of foundation for the Collegium Germanicum on 31 August, 1552, and granted it an annual subsidy. During his pontificate the Catholic religion was temporarily restored in England by Queen Mary, who succeeded Edward VI on the English throne in 1553. Julius sent Cardinal Reginald Pole as legate to England with extensive faculties to be used at his discretion in the interests of the Catholic restoration. In February, 1553, an embassy was sent by the English Parliament to Julius III to inform him of its unsanctioned submission to the papal supremacy, but the embassy was still on its journey when the pope died. Shortly before his death Julius III sent Cardinal Morone to represent the Catholic interest at the Religious Peace of Augsburg. At the beginning of his pontificate Julius III had the earnest desire to bring about a reform in the Church and with this intent he reopened the Council of Trent. That the council was again suspended was due to the force of circumstances. His inactivity during the last three years of his pontificate may have been caused by the frequent and serious attacks of the gout to which he was subject. The great blemish in his pontificate was nepotism. Shortly after his accession he bestowed the purple on his unworthy favourite Innocenzo del Monte, a youth of seventeen whom he had picked up on the streets of Parma some years previously, and who had been adopted by the pope’s brother, Baldassarre. There were some disagreeable remarks concerning the pope’s relation to Innocenzo. Julius was also extremely lavish in bestowing ecclesiastical dignities and benefices upon his relatives.

MASSARELLI. De Pontificatu Iuli III, d. ianu. 258-329. PARTON,
Julius Africanus (c. 160–c. 240; the full name is Sextus Julius Africanus, Σεξτός Ιουλίου Ἀφρικανός) is the father of Christian chronography. Little is known of his life and little remains of his works. He is important because his chronicle of Church history from the beginnning to the death of Constantine, and on all the later writers of Church history among the Fathers, and on the whole Greek school of chroniclers. His name says that he was an African; Suidas calls him "a Libyan philosopher". Gelzer ("S. Julius Africanus", pp. 4, 5) thinks he was of Roman descent. He knew Greek (in which language he wrote), Latin, and Hebrew. He was at one time a soldier and had been a pagan; he wrote all his works as a Christian. Tille- ment deduced that he was a priest from the fact that he addresses the priest Origen (in his letter to him) as "dear brother" ("Mémoires pour servir à l'histoire ecclésiastique de Rome", 1, 74–86; Cambridge, 1912, cit., 9) points out that a friendly Christian layman could quite well use such a form. The statement that Julius Africanus was a bishop does not appear till the fourth century. It is probably an error. He went to Alexandria to study, attracted by the fame of its catechetical school, possibly about the year 215 (Euse- bius, "H. E.", VI, 31). All the dates of his life are uncertain. One tradition places him under the Emperor Gordianus (238–244; Gelzer, p. 7), another mentions him under Alexander Severus (222–235; id., p. 6). He appears to have known Abgar VIII, the Christian King of Armenia. In his Galatian, he calls him a "holy man" (Gelzer, p. 3). Eusebius, in his chronicle (ad a. Abr., 2239, ed. Schoene, II, Berlin, 1875, 178), says that under Alexander Severus the city of Emmaus in Palestine was restored and called Nikopolis under the direction of "Julius Africanus the writer of the Chronicle". It appears that he lived there for a time (Bardenhewer, "Patrologie", Freiburg, 1894, p. 173). He shows in his Chronicle that he knows the topography of Palestine (Gelzer, p. 10). He seems to have been in Greece; he went to Rome about the year 221 (id., 11). Bardenhewer (op. cit., p. 173) puts his death about 240 (Pruckner, "Unter- der altchristlichen Literatur", p. 507) says that he died "after 221" and adds "under Gordianus 238– 244?", Harnack ("Realenc. für prot. Theol. u. Kirche", Leipzig, 1901, IX, 627) says, "after 240".

The works of S. Julius Africanus are: (1) The "Chronicle" (Xwnevypapias) in five books, covering the time from the Creation (n. c. 5499 in his calculation) to the third year of Elagabalus (A. d. 221). Gelzer thinks he wrote this work between 212 and 221 (op. cit., 12). It is an attempt to combine the account in the Bible and the secular (Roman and Greek) history known to him, especially regarding chronology. For the third book the order is strictly chronological. Julius uses sources first from the Bible, then Greek, Roman, and Jewish historians, especially Justus of Tiberias, who depends on Josephus. He is also influenced by the "Stromata" of Clement of Alexandria (Gelzer, 19–24). As the first Christian attempt at a universal history, in which the sources are chronicology, this work is of great importance. Eusebius made it the foundation of his chronicle. It is the source of all later Byzantine writing of history, so that for centuries the Christian world accepted the dates and epochs calculated by Julius. Only fragmentary copies of the "Chronicle" survive, the best being from the 6th century and the 7th century. The works of Julius Africanus, of whom five books of "temporibus (= the Chronography)" are extant, were a mission for the restoration of the city of Emmaus, which Julius was to visit a few years later.

Sextus Julius Africanus, different from the Christian Julius Africanus. This is directly contradicted by Eusebius in his "Chronicle" (E., VI, 31): Africanus (the author of the "Chronography"), wrote the "composite Embroideries" (ἐκ τῶν ἐγγεγραμμένων κειμένων συγγραφών). Gelzer (2–3) has shown that the author of the "Chronicle" was a Christian (he quotes Ps. xxxiii, 9) and that there is no reason to doubt Eusebius's statement. This work, too, constantly quoted and much esteemed by the Germans, has its influence on Eusebius. All the later writers of Church history have fragments about agriculture and war (Gelzer, 13–16). It had originally twenty-four books. It is from the "Chronicle" in which the author discourses of magic, divination and medicine, that the opinion arose that he was a physician. (3) Two letters of Julius are known, one to Origen, in which he disputes the authenticity of the story of Susanna, pointing out that the play upon words in the Greek text (πάρθενον, an oak-tree, and παρθένος, to saw asunder; σίδηρος, a mastic-tree and σίδηρον, to cleave: Dan., xxxii, 54–55, 58–59) would not exist in the Hebrew or Aramaic. Gelzer ("Kýkrhos zôi kal old") seems to have been an old man when he wrote it. Origen answered it. Both letters are included in Origen's works (e. g. ed. of De la Rue, I, Paris, 1733, 10). This letter is the only one of Julius's works that is completely extant. His criticism has won for him high respect among modern writers. J. G. Rosenmüller (Historia Interpretationis, III, 161) considers that these few lines contain more true exegesis than is to be found in all Origen's works. Gelzer (p. 17) points out that the "Chronography" and especially the "Chronicle" show that Julius does not deserve the reputation as a Christianist that is addressed to a certain Aristides. In it he proposes what is still the favourite explanation of the two pedagogies of our Lord (Matt., i, 11–19; Luke, iii, 11–20), namely that St. Joseph's two fathers, Jacob (Matt., i, 16) and Heli (Luke, iii, 23), were half-brothers of the same mother, that Heli died without children, and Jacob took his wife to raise up seed to his brother according to the Levitical law (Deut., xxv, 5–6). Of this letter a fragment is preserved by Eusebius (H. E., i, vii), another fragment is contained in an epitome of Eusebius's "Questions de differ. Evang.," published by A. Mai ("Script. 1. Orientis", IV, Rome, 1852). Julius also translated Tertullian's "Apologeti- cum" into Greek (Harnack in "Texte und Untersuchun- gen", VIII, 4).

Later Syrian writers mention works that have disappeared. Dionysius Bar-Salibi speaks of a commentary on the Gospels (Assemanii, "Bibliotheca orientalis", II, Rome, 1721, 158), Ebed-Jesu of commentaries on the New Testament (Hebedieu, "Catalogus librorum chaldæorum", Rome, 1633, p. 15). Spuri- ous works are the Acts of St. Symphorosa (Ruinart, "Acta primorum martyrum", Ratisbon, 1658, 70), a Latin version of "Abd al Abdul Abul ("Historia apostolica, auctore Abdin", Cologne, 1576, which asserts itself throughout, even the title, that it was translated from the Hebrew by Julius Africanus) and an astonishing semi-pagan "Interpretation of the things that happened in Persia through the Irana- this of our Lord and God and Savior, Jesus Christ," written by Ignaz Christ, a Jewish convert. The other "Beiträge zur Gesch. u. Litter.", II, Munich, 104, 52– 69. St. Jerome in his "de Viris illustribus" (no. 63) includes: "Julius Africanus, of whom five books de temporibus (= the Chronography) are extant, accepted a mission for the restoration of the city of Emmaus, which Julius was to visit a few years later.

There is a letter to Origen about the question of Su-
senna in which he says that this fable is not in the Hebrew, nor does ὐπὸ τοῦ φυσιοῦ καὶ τὸ ὐπὸ τοῦ σκλήρου agree with Hebrew etymology; against whom Origén wrote a learned letter. There exists also an answer of his to Aristides in which he discusses at length the disagreement which seems to be in the genealogy of the Saviour in Matthew and Luke. Except for the wrong date (M. Aurelius) this account, taken from Eusebius, represents very fairly what we know of Afriacus.

ADRIAN FORTESCUE

Julius Echter von Mespelbrunn. See ECHTER VON MESPELBRUNN, JULIUS.

Jumièges, Benedictine Abbey of, situated on the north bank of the Seine, between Duclair and Caudebec, in Normandy (Seine-Infrérieure). The abbey was founded in 634 by St. Philibert, who had been the companion of St. Ouen and Warden at the Merovingian court. Philibert became first abbot, but was later expelled at the instance of certain enemies who were obliged to leave Jumièges, and afterwards founded another monastery at Noirmoutier, where he died about 685. Under the second abbot, St. Achard, Jumièges flourished exceedingly and numbered within its walls nearly a thousand monks. Enjoying the patronage of the dukes of Normandy, the abbey became a great centre of religion and learning, its schools producing, amongst many other scholars, the national historian, William of Jumièges. It reached the zenith of its fame about the eleventh century, and was regarded as a model of perfection for all the monasteries of the province. It was renowned especially for its charity to the poor, being popularly called "Jumièges l'Aumônière". In the ninth century it was pillaged and burnt by the Normans, but was rebuilt on a grander scale by William, Duke of Normandy, surnamed Longe-Épée. The church was enlarged in 1256, and again restored in 1573. The abbots of Jumièges took part in all the great affairs of the Church and nation; one of them, Robert, became Archbishop of Canterbury in 1040; many others became bishops in France, and some were also raised to the cardinalitial dignity. The fortunes of the abbey suffered through the English invasion and the Hundred Years' War, but it recovered and maintained its prosperity and high position until the whole province was devastated by the Huguenots and the Wars of Religion. In 1649, during the abbacy of Francis III, Jumièges was taken over by the Maurist Congregation, under which rule some of its former grandeur was resuscitated. The French Revolution, however, closed its career as a monastery, and only its majestic ruins now remain to show what it was in the days of its splendour. These comprise the church, with its beautiful twin towers and western façade, and portions of the cloisters and library. The contents of the latter were removed to Rouen when the abbey was suppressed.

Jungmann, Bernard, dogmatic theologian and ecclesiastical historian, b. at Münster in Westphalia, 1 March, 1833; d. at Louvain, 12 Jan., 1895. He belonged to an intensely Catholic family of Westphalia; like him, two of his brothers entered the service of the Church, one joining the Society of Jesus and the other becoming a missionary in the United States. After finishing his studies with brilliant success at the public schools of his native town, he entered the German College at Rome for the mediation of the bishop's secretary, afterwards Cardinal Meichers, and made his philosophical and theological studies in the Gregorian College. In 1854 he received the degree of Doctor of Philosophy; he was ordained priest in Rome on 8 June, 1857, and two years later received the degree of Doctor of Theology. He was professor to the young, and worked for a short time as chaplain in the church of St. Adelgunde at Emmerich. Bishop Malou of Bruges, who chanced to be present in Rome in 1854 when Jungmann made his public defence of the philosophical theses, called him in September, 1861, to the chair of philosophy in the Petit Séminaire at Roulers. Four years later (1865) he became professor of theology in the ecclesiastical seminary at Bruges. Even at Roulers, while performing his duties as teacher, he began that literary activity, which was thenceforth ever associated with his professorial duties. His appointment to the chair of ecclesiastical history at Louvain opened the way to Wouters, whom he recommended for his great ability. A keen intellect with powers of clear exposition, joined to the spirited delivery which distinguished his lectures, ensured him great success. He enlarged the field of ecclesiastico-historical studies by delivering special lectures on patrology, and establishing in 1890 a seminarium in which students were to receive a scientific and methodical training in original historical research. Jungmann remained to the end of his life a professor at Louvain, declining the honour of a call to be professor of dogmatic theology in the newly founded Catholic University at Washington. He was seized with a fit of apoplexy at the burial of a colleague, and died at Louvain in 1895. His activity as a writer was equal to his energy as a lecturer. As professor of philosophy he wrote "Demonstratio christiana. I. Demonstrationis christianae praemissa philosophica" (Roulers, 1864; 2nd ed., 1867). In the domain of theology he wrote his "Institutiones theologicae dogmaticae specialia" in five tracts, widely used and much appreciated for their clear style: "De Gratia" (Bruges, 1866; 5th ed., Ratisbon, 1882); "De Deo uno et trino" (Bruges, 1867; 4th ed., Ratisbon, 1882); "De Deo et Deo-creator" (Bruges, 1868; 4th ed., Ratisbon, 1888); "De verbo rursum" (Bruges, 1868; 3rd ed., Ratisbon, 1884); "De quattuor novissimis" (Ratisbon, 1871; 3rd ed., 1885). He wrote also the "Institutiones theologiae dogmaticae generalis" (Bruges, 1871; 4th ed., Ratisbon, 1886). In church history he first re-edited Wouter's "Historiae ecclesiasticae compendium" (5 vols., Louvain, 1856, and later published special studies, particularly on theological controversies and on the papacy: "Dissertationes selectae in historiam ecclesiasticam" (5 vols., Ratisbon, 1880). In patrology he issued Fessler's "excellent Institutiones Patrologiae" in a new and much enlarged edition (9 vols., Inbruck, 1890, 1899), and published numerous articles to German and French journals, particularly worthy of mention being: "Die neue französische Fortschrittsphilosophie" in the "Katholik" (Mainz, 1863); "Die hl. Märtyrer von Gorkum", ibid. (1867); Clemens V. und die Aufhebung des Templerorden in the "Zeitschrift für kath. Theologie" (Innsbruck, 1881); "Le caractère moral de Luther" in "La Controverse" (1883).

G. CYPRIAN ALSTON.

Jungmann, Josef, b. 12 Nov., 1830, at Münster, Westphalia; d. at Innsbruck, 25 Nov., 1885. In 1850 he entered the German College at Rome, and was
JURISDICTION

ordained priest in 1855. He afterwards joined the Society of Jesus and as early as 1858, even before the expiration of his novitiate, was elected to fill the chair of eloquence in the re-established theological faculty at Innsbruck. Besides many articles in periodicals Jungmann published: "Fünf Sätze zur Erklärung und wissenschaftlichen Begründung der Andacht zum hl. Hersen Jesu und zum reinsten Hersen Marie" (Innsbruck, 1889); "Eine Litanei zum hl. Hersen Jesu an die hl. Schrift" (2nd ed.; ibid., 1871); "Gefahren bellistrischter Lektüre" (ibid., 1872); "Zur Verehrung U. L. Frau" (2nd ed., ibid., 1879); "Das Gemüt und das Gefühlsvermögen der neuen Psychologie" (2nd ed., ibid., 1885); "Die Andacht zum hl. Hersen Jesu und die Bedenken gegen dieselbe" (ibid., 2nd ed., ibid., 1885); "Ecclesiastical Jurisdiction" (2 vols., 3rd ed., Innsbruck, 1886); "Aesthetik" (2 vols., 3rd ed., 1886). A third edition of his "Bereadsmak Heil" was published by his colleague, Michael Gatterer, who also edited a fourth and much abbreviated edition. Jungmann had a wonderful influence over his students. Speaking of him, one of them writes: "I do not know what it was that always charmed the other students so much, but, for myself, I felt irresistibly drawn to him on account of his high sentiments and character, founded on deeply rooted principles, influenced by such alone, and therefore immovable. The more I knew him, the more I loved him; the more I loved him, the more I knew him; in his daily avocations, in his religious exercises." HOPFANN, Des Nikolaus zu Innsbruck einst und jetzt (Innsbruck, 1898), 129.

KARL KLAAR.

Jürgens, Hermann. See Bombay, Archdiocese of.

Jurisdiction, Ecclesiastical, the right to guide and rule the Church of God. The subject is here treated of under the following heads: I. General Concept and Classification of Jurisdiction; II. Development of Jurisdiction in its strict sense; III. Present Scope of Jurisdiction in its strict sense.

I. General Concept and Classification of Jurisdiction.—The Church founded by Christ for the salvation of man is, like every society, a regulating power (the authority of the Church. The Church has bestowed upon it. Directly before His Ascension He gave to the Apostles collectively the commission, and with it the authority, to proclaim His doctrine to all nations, to baptize them, and to teach them to observe all things that He had commanded (Matt., xxviii. 19). This authority He distinguished from the "Lamentabili sane", of 3 July, 1907, rejects (n. 52 sqq.) the doctrine that Christ did not desire to found a permanent, unchangeable Church endowed with authority. It is customary to speak of a threefold office of the Church: the office of teaching (prophectic office), the priestly office, and the pastoral office (governing office), also, therefore, of the threefold authority of the Church, that is, the teaching authority, ministerial authority, and ruling authority. Since, however, the teaching of the Church is authoritative, the teaching authority is traditionally included in the ruling authority; regularly, therefore, only the ministerial authority and the ruling authority are distinguished. By ministerial authority, which is conferred by an act of consecration, is meant the inward, and, because of its indissoluble character, permanent capacity to perform acts by which Divine grace is transmitted. By ruling authority, both the Church and the Church body, the Church body (canonica, canonical mission), is understood the authority to guide and rule the Church of God.

Jurisdiction, in so far as it covers the relations of man to God, is called jurisdiction of the internal forum or jurisdiction of the forum of Heaven (jurisdiction polit.). See Forum, Ecclesiastical.) This again is either sacramental or penitential, so far as it is used in the Sacrament of Penance, or extra-sacramental, e.g. in granting dispensations from private vows. Jurisdiction, in so far as it regulates external relations, is called jurisdiction of the external forum or briefly juridicitio fori. This jurisdiction, the actual power of ruling is legislative, judicial, or coercive. Jurisdiction can be possessed in varying degrees. It can also be held either for both fora, or for the internal forum only, or, in either. Jurisdiction can be further sub-divided into: ordinary, special, extraordinary, and delegated jurisdiction. Ordinary jurisdiction is that which is permanently bound, by Divine or human law, with a permanent ecclesiastical office. Its possessor is called an ordinary judge. By Divine law the pope has such ordinary jurisdiction for the entire Church and a bishop for the diocese. If this jurisdiction is possessed by the cardinals, officials of the Curia and the congregations of cardinals, the patriarchs, primates, metropolitans, archbishops, the prolatus nullius, and prelates with quasi-episcopal jurisdiction, the chapters of orders, or, respectively, the heads of orders, cathedral chapters in reference to their own affairs, the archdiocesans in the Middle Ages, and parish priests in the internal forum. If, however, jurisdiction is permanently connected with an office, but the office itself is not perpetual and irrevocable, the jurisdiction is said to be quasi-ordinary, or juridicitio extra fori. The latter is, for example, by a vicar-general. Temporary exercise of ordinary or quasi-ordinary jurisdiction can be granted, in varying degrees, to another as representative, without conferring on him an office properly so called. In this transient form jurisdiction is called delegated or extraordinary, and concerning it canons law, following the Roman law, has developed exhaustive provisions. This development began when the popes, especially since Alexander III (1159-81), found themselves obliged, by the tremendous mass of legal business which came to them from all sides as the "judices ordinarii omnium" to hand over, with proper instruction, a large number of cases to third parties for decision, especially in matters of contentious jurisdiction.

Delegated jurisdiction rests either on a special authorization of the holders of ordinary jurisdiction or on delegatio ab homine, i.e., by the pope, lege, a jure, a canonise. Thus, the Council of Trent transferred a number of papal rights to the bishops "tanquam Apostolices Sedis delegati", i.e., as delegates of the Apostolic See (Sess. VI, De ref., c. ii, iii, etc.), and "etiam tanquam Apostolices Sedis delegati", i.e., also as delegates of the Apostolic See (Sess. VI, De ref., c. iv, etc.). In the first class of cases the pope did not ordain ordinary jurisdiction. The meaning of the second expression is disputed, but it is generally taken as purely cumulative. If the delegation applies to one or several designated cases only, it is special delegation. If, however, it applies to an entire class of subjects, it is then general delegation or delegation for the universality of causes. Delegated jurisdiction for the total of a number of matters is known as delegatio mandata. Only those can be appointed delegates who are competent to execute the delegation. For an act of consecration the delegate must have himself the necessary sacred orders. For acts of jurisdiction he must be an ecclesiastic, though the pope could also delegate a layman. Papal delegation is usually conferred only on ecclesiastical dignitaries or canons (c. xi, in VI", De rescript, I, iii; Council of Trent, Sess. XXV, De ref., c. x). The delegate must be twenty years old, but eighteen for dispensation for one appointed to the Church, (xvi, x, De off. jud. deleg., I, xxix). He must also be free from excommunication (c. xxiv, x, De sent. et re jud., II, xxvii). Those placed under the jurisdiction of the delegate must submit to the delegation (c. xxviii, x, De off. jud. deleg., I, xxix). Delegation for one matter can also be conferred upon several. The distinction
here to be made is whether they have to act jointly and severally (collectively), jointly but individually (solidarily), or solidarily at least in some given case (c. xvi, xxi, X, De off. jud. deleg., I, xxix; c. vii, in IV, h. t. I, xiv). The delegate is to follow the instructions given to him, however un-powered to do all that is necessary to execute them (c. i, v, vii, viii, xi, xxi, xxv, xxviii, X, De off. jud. deleg., I, xxix). If he exceed his power, his act is null (c. xxxvii, X, De off. jud. deleg., I, xxxix). When necessary the delegate can himself delegate, i.e. sub-delegate, a qualified person; he can do this especially if the delegate has been delegated a number of cases (Gloss to "Delegatus", c. lix, X, De appell., II, xxvii). Since delegation constitutes a new court appeal can be taken from the delegate to the delegate, and in the case of sub-delegation to the original delegator (c. xxvii, X, De off. jud. deleg., I, xxix). Delegated jurisdiction expires on the death of the delegate, in case the commission were not issued in view of the permanence of his office, on the loss of office or the death of the delegate, in case the delegate has not acted within the allotted time (i.e. by petition, on recall of his authority by the delegator (even re adhuc nondum integra, the matter being no longer intact), on expiration of the allotted time, on settlement of the matter, on declaration of the delegate that he has no power (c. xiv, xiv, iv, xxxvii, X, De off. jud. deleg., I, xxxix).

II. DEVELOPMENT OF JURISDICTION IN ITS STRUCTURE.

The Church has the right, as a perfect and independent society provided with all the means for attaining its end, to decide according to its laws disputes arising concerning its internal affairs, especially as to the ecclesiastical rights of its members, also to carry out its decisions, if necessary, by suitable means of compulsion, contentious or civil jurisdiction. It has, therefore, the right to admonish or warn its members, ecclesiastical or lay, who have not conformed to its laws, and also, if needful to punish them by physical means, that is, coercive jurisdiction. The church has, first, the power to judge sin. This it does in the internal forum. But a sin can be at the same time externally a misdemeanour or a crime (delictum crimen), when threatened with external ecclesiastical or civil punishment. The church also judges ecclesiastical crimes, because the civil cannot, in the absence of laws, impose penalties, except when the wrong-doing has remained secret. In this case it contents itself, as a rule, with penance voluntarily assumed. Finally, another distinction is to be drawn between necessary jurisdiction and voluntary jurisdiction; the latter contemplates voluntary subjection on the part of those who seek in legal matters the co-operation of ecclesiastical agencies, e.g. notarially executed instruments, testaments, etc. The judicial power described above, jurisdiction strictly so called, was given by Christ to his Church, was exercised by the Apostles, and transmitted to their successors (Matt. xvi, xviii, 16 sqq.; I Cor., iv, 21; v, 1 sqq.; I Tim., vi, 1 sqq.; II Cor., xiii, 10; I Tim., i, 20; v, 19 sqq.).

From the beginning of the Christian religion the ecclesiastical judge, i.e. the bishop, decided matters of dispute that were purely religious in character (causa mere ecclesiastia). This jurisdiction of the Church was recognized by the civil courts and ultimately became Christian. But long before this the early Christians, following the exhortation of Saint Paul (I Cor., vi, 14), were wont to submit to ecclesiastical jurisdiction matters which by their nature belonged to the civil courts. As long as Christianity was not recognized by the State, it was left to the conscience of the individual whether he would conform to the decision of the bishop or not. When, however, Christianity had received civil recognition, Constantine the Great raised the former private usage to a public law. According to an imperial constitution of the year 321 the parties in dispute could, by mutual agreement, bring the matter before the bishop even when it was already pending before a civil judge, and the latter was denied the jurisdiction of the bishop. A further constitution of 331 provided that in any case of the suit any one of the parties could appeal to the bishop even against the will of the others (Hænel, "De constitutionibus, quas F. Simondus, Paris, an. 1631 editid, 1840"). But Arcadius, in 398, and Honorius, in 408, limited the judicial competence of the bishop to the cases in which both parties applied to them (I Cor., vii, Cod. Just., De audientia episc., I, iv). This arbitral jurisdiction of the bishop was not recognized in the new Teutonic kingdoms. In the Frankish kingdoms purely ecclesiastical matters of dispute belonged to the jurisdiction of the bishop, but mixed cases, in which civil interests appeared, e.g. marriage questions, law suits concerning Church property, etc., belonged to the civil courts.

In the course of the Middle Ages the Church succeeded in extending its jurisdiction over all matters that offered an ecclesiastical interest (causa spiritualis), and even over matters that, in the eyes of the common law, were the property of laymen, so long as the issues involved had an ecclesiastical interest (c. xvi, X, Qui filii sint legit., IV, xvii: c. viii, X, De donat., IV, xx); matters concerning burial (X, De sepult., III, xxvii); testaments (X, De testam., III, xxvi); compacts ratified with an oath (c. iii, in IV, De foro compet., II, ii); matters pertaining to benefices (c. ii, X, De suppl. neglig. prelat., I, xx); questions of prebend (X, De jur. patron., III, xxxviii); litigation concerning church property and tithes (X, De decim., III, xxx). In addition all civil litigation in which the element of sin was in question (ratio peccati) could be summoned before an ecclesiastical court (c. xiii, X, De judic., II, i).

Also, the ecclesiastical court had jurisdiction over the affairs of ecclesiastics, monks, and nuns, the poor, widows, and orphans (persona miserabilis), also of those persons to whom the civil judge refused legal redress (c. xi, X, De foro compet., II, ii). Owing to the unsatisfactory administration of justice in the medieval world this far-reaching civil jurisdiction of the Church was beneficial. However, it eventually overlapped the natural boundaries of Church and State. The result was that the ecclesiastical became too much involved in secular litigation and grew estranged from the state, since it could not carry out its mission (especially the Church) as a result of the tax system. But in the fifteenth century, under Henry VIII, it was even taken over by the new monarch, who thus turned the Church into a purely lay body.
The Church in the Middle Ages increased its penal jurisdiction in the civil domain by infliction of varied penalties, some of them purely secular in character. Above all, by means of the principe forti it withdrew the so-called "criminous clerks" from the jurisdiction of secular courts and placed them under the jurisdiction of the church, thereby strengthening the power of the pope. This change altered the central tenet of the church's power, i.e., the right to determine the guilt of clerics, and brought about the development of the modern system of ecclesiastical jurisdiction. The power was further strengthened in the later Middle Ages and in the Renaissance, when the church was able to impose its authority over secular courts and even to declare war or peace.

The Church's power was not confined to the clergy, but extended to laymen as well. In the 12th century, the church began to assert its control over laymen, particularly in the area of ecclesiastical law. The Church's control over laymen was further extended by the introduction of the inquisition, which was established in the 13th century. The inquisition was a judicial body that was charged with investigating and punishing heresy and other religious offenses. The inquisition was able to exercise a great deal of power, and its decisions were often final.

The Church's power also extended to the realm of politics. In the 14th century, the Church was able to exert its influence over the political affairs of Europe, and it was able to use its power to influence the course of history. The Church's power was further increased by the Council of Trent, which was held in the 16th century. The Council of Trent was a major turning point in the history of the Church, and it marked the beginning of the Counter-Reformation.

The Church's power was not without its critics. During the Enlightenment, the Church was called into question, and its power was challenged by the rise of secularism. The Church's power was also challenged by the rise of nationalism, which sought to assert the sovereignty of the state over the church.

The Church's power was further diminished by the French Revolution, which marked the end of the Church's influence in Europe. The Church's power was also challenged by the rise of socialism, which sought to assert the sovereignty of the people over the church.

The Church's power was further diminished by the rise of democracy, which sought to assert the sovereignty of the people over the church.

The Church's power was also challenged by the rise of modernism, which sought to assert the sovereignty of science over the church.

The Church's power was also challenged by the rise of the state, which sought to assert its sovereignty over the church.

The Church's power was also challenged by the rise of internationalism, which sought to assert the sovereignty of the world over the church.

The Church's power was also challenged by the rise of globalism, which sought to assert the sovereignty of the planet over the church.

The Church's power was also challenged by the rise of scientism, which sought to assert the sovereignty of science over the church.

The Church's power was also challenged by the rise of technocracy, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of cybernetics, which sought to assert the sovereignty of cybernetics over the church.

The Church's power was also challenged by the rise of cultural relativism, which sought to assert the sovereignty of culture over the church.

The Church's power was also challenged by the rise of postmodernism, which sought to assert the sovereignty of postmodernism over the church.

The Church's power was also challenged by the rise of globalization, which sought to assert the sovereignty of the world over the church.

The Church's power was also challenged by the rise of technocentrism, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of scientism, which sought to assert the sovereignty of science over the church.

The Church's power was also challenged by the rise of technocracy, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of cybernetics, which sought to assert the sovereignty of cybernetics over the church.

The Church's power was also challenged by the rise of cultural relativism, which sought to assert the sovereignty of culture over the church.

The Church's power was also challenged by the rise of postmodernism, which sought to assert the sovereignty of postmodernism over the church.

The Church's power was also challenged by the rise of globalization, which sought to assert the sovereignty of the world over the church.

The Church's power was also challenged by the rise of technocentrism, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of scientism, which sought to assert the sovereignty of science over the church.

The Church's power was also challenged by the rise of technocracy, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of cybernetics, which sought to assert the sovereignty of cybernetics over the church.

The Church's power was also challenged by the rise of cultural relativism, which sought to assert the sovereignty of culture over the church.

The Church's power was also challenged by the rise of postmodernism, which sought to assert the sovereignty of postmodernism over the church.

The Church's power was also challenged by the rise of globalization, which sought to assert the sovereignty of the world over the church.

The Church's power was also challenged by the rise of technocentrism, which sought to assert the sovereignty of technology over the church.

The Church's power was also challenged by the rise of scientism, which sought to assert the sovereignty of science over the church.
toine, at the request of the botanist Vaillant, and after Vaillant's death in 1722 was appointed the latter's successor as professor and assistor at the Jardin du Roi. He devoted all his energies to the royal garden, which his brother Antoine left almost entirely to him. He also made botanical excursions in the country surrounding Paris, and was able in 1725 to issue a revised and enlarged edition of Tournesort's work on flowers and plants. This publication gained his admission into the Academy of Sciences. Many persons studied botany under his guidance, as the chemist Lavoisier. Owing to de Jussieu's unusual modesty and unselfishness he published very little, notwithstanding the wide range of his researches. He wrote an important paper on soo-
phytes, sea-organisms whose classification as plants or animals was then a matter of dispute. To study them he went three times to the coast of Normandy, proved in the "Mémoires" of 1742 that they belonged to the animal kingdom (before Peyssonel), and sought to classify them at this early date into genera. He also separated the fish, which had previously been included among the mammals. The few botanical papers which he published (1739–42) treat of three water-plants.

In 1758 Louis XV made de Jussieu superintendent of the royal garden at Trianon near Paris, in which all plants cultivated in France were to be reared. His greatest achievement is the system he arranged and catalogued the plants in the garden at Trianon; it is called "the older Jussieu natural system of plants of 1759", or the Trianon system. Jussieu himself never published anything about his system, nor did he offer any explanation of his arrangement, or give it a theoretical foundation. The genera are not arranged systematically in groups according to a single characteristic, but after consideration of all the characteristics, which, however, are not regarded as of equal value. De Jussieu proposed three main groups, to which he gave no name; these contained altogether fourteen classes, with sixty-five orders or families. Be-
inning with the cryptogams, the system proceeds from the monocotyledon to the dicotyledon, and closes with the coniferæ. Before this Linnaeus had pointed out that only the natural system should be the aim of botanical classification, and published, outside of his "Species stirpium" (1737), his "Système des plantes" (from 1789) and were extreme adherents of the Lin-
naean system. Even more vigorously than his uncle Bernard he upheld the theory of subordination or unequal value of the characteristics of a plant, according to which certain characteristic signs have a more general and comprehensive influence. The characteristics are "weighed, not simply mechanically counted" (pens et non comptes). Once ascertained, these essential characteristics are to be used like the chief fossils in geology, in order to assign plants to a definite group. It is true that in the application this principle frequently leads to false results. Antoine-
laurent gave to the three main groups of the original classification of his uncle the names of Acoyledon, Monocotyledon, and Dicotyledon, and divided them into fifteen classes, containing in all one hundred fami-
lies. A most important fact is that he sought out and clearly defined the characteristics of families, largely indeed in later treatises. In the period, beginning in 1789, of the French Revolution, it may be said in brief that with other scholars he reorganized the Natural History Museum at Paris in 1790, and in 1808 was appointed by Napoleon counselor of the university. During the years 1789–1802 he published no botani-
cal works. In 1814 "Antoine de Jussieu, et ses "Mémoires" of the Natural History Museum were founded that there began for him a new era of intense activity in investigation. He wrote for these publica-
tions, 1802–20, a very large number of memoirs and notes on individual species or genera, and especially, monographs on numerous families. He was led
largely to these labours by the work "De fructibus et seminibus plantarum" (1758-91) of the German botanist Joseph Gürzene (1701-1775), and published "Principes de la méthode naturelle des végétaux" (Paris, 1824). He partly prepared a greatly desired second edition of the "Genera plantarum", but the work was never issued. Only what had been left ready for print, an entirely rewritten "Introduc- tion" and a part of the "Genera", was published after his death by his son Adrien [An. des Sc. nat. (1837)].

(5) Adrien-Henri de Jussieu (botanical abbreviation, A. Juss.), son of Antoine-Laurent, b. at Paris, 23 December, 1797; d. there, 29 June, 1853. He re- ceived in 1824 the degree of Doctor of Medicine at Paris, presenting a dissertation on the plant family Eu- phorbiaceae. When his father retired in 1826 he was made professor of agricultural botany at the Jardin des Plantes; in 1845 he was made professor of organo- graphy of plants at the university. His textbook "Cours élémentaire de botanique" (Paris), passed through numerous editions and translations. Bes- sides a "Glosse de botanique" (Paris, 1845), he also published monographs on several families of plants, especially the Malpighiaceae (1843). He was presi- dent of the French Academy of Sciences.

Sachs, Geschichte der Botanik (Munich, 1875); Réé, Ge- schichte der biologischen Theorien, II (Leipzig, 1883).

JOSEPH ROMPE.

Jus Spoli (Right of Spoliation and Rapite Captive), a claim, exercised in the Middle Ages, of succession to the property of deceased clerics, at least such as they had derived from their ecclesiastical benefices. It was an outcome of ancient usages, which forbade clerics to dispose by will of goods accruing from their ecclesiastical office. These usages were gradually relaxed because of the difficulty of distinguishing between ecclesiastical and patrimonial property. Abuses then arose. Churches were despoiled at the death of their incumbents. Bishops and archbishops seized for the cathedral the spoils of abbots and other benefices, on the pretense that all other churches were but offshoots of the cathedral. After the fall of the Western Empire any one present at the death of a cleric felt at liberty to carry off whatever he desired. He decreed, if he desired, the whole, wise, he could seize (rapite captive, seize and take). As the civil power became more conscious of itself it began to restrain this indiscriminate plunder. The sovereign claimed for himself the "Jus Spoli" in the case of deceased bishops, while the smaller feudal lords laid similar claim to the property of all clerics who died in their domains. Councils (Tribur, 895; Troyes, 909; Clermont, 1095; II Lateran, 1129) of the Church legislated against these abuses, finally obtaining a renunciation of this so-called right. In the thir- teen century the Roman Church put forth in a modified way the same claim, and it eventually be- came a "Gospel of canon law that the goods of benefic- ecd ecclesiastics, dying intestate, belonged of right to the papal treasury. This right however was not allowed in France, Germany, Belgium, or Portugal. In the Kingdom of Naples a compromise was made at the close of the sixteenth century, whereby the right was ren- owing for an annual pension to the papal treasury.

ANDREW B. MEEHAN.

Jushe —The name conventionally applied to a family of Italian sculptors, whose real name was Berti, originally from San Martino a Mensola, near Florence. Giusto, whose name was afterwards given to the whole family, and Andrea are the first two known to us. Neither seems to have gone out of Italy. But Andrea had three sons—Anthony (1479-1519), Andrew (b. about 1483), and John, the most illustrious of the house (1485-1549). All of whom early emigrated to France and figured prominently during the Renaiss- ance. With Florence and Rome as the most brilliant representatives and the most active emissaries of Italian art beyond the Alps.

As early as 1504 the three brothers were in Brittany, at Dol, executing the monument of Bishop Thomas James. Later, they separated. Anthony worked for the Cardinal d'Arezzo at Florence, then at Fies- olon; while John, attracted to Tours, spent a few years in the atelier of Michel Colombe, famous as the sculptor of the "Entombment" in the Abbey of Solesmes. Colombe was the last representative of the Dijon School, founded by Claus Sluter under the first dukes of Burgundy. At this school John Juste became im- bued with the realism of Flanders, slightly softened and tempered with French delicacy. Through this combination of qualities, he created for himself a style whose charm consisted in its flexibility and complexity. At the death of Michel Colombe (1512) the Justes worked again in concert and inherited his fame. Francis I commissioned them to execute the famous mausoleum of Louis XII at St-Denis, and this occupied almost fifteen years (1516-31). But Anthony's share in this work was slight, as he died in 1519. The honour of this magnificent masterpiece belongs entirely to his brother John.

The original conception seems to have been Per- réal's, and yet it was not wholly his. The iconography of tombs was extremely rich in France in the fiftieth century. Its main theme consists of a gigant or recumbent effigy of the deceased, laid upon a funeral couch surmounting the sarcophagus, upon the sides of which a procession of mourners is represented. The most celebrated example of this style is the monument of Philip the Bold by Claus Sluter, at Dijon (1405), of which there have been several variants, down to the monument of Philippe Pot (1480) in the Louvre. The tomb of Louis XII inaugurated a new tradition, or rather a colossal development of the subject. The hero is represented kneeling on a cata- falque beneath which the gigant appears as a naked, emaciated corpse, "such as death has made it for us". This striking contrast is in itself a most eloquent funeral oration. The monument is an incomparable expression of the idea of death, as the ideal or- dinary, and would, alone, be sufficient to bring glory to an artist; but it is not the only work we have of John Juste. He also executed the tombs of Philippe de Montmorency and of Artus Goffier in the church of Oiron (Deux-Sèvres), that of Jean Rieux, at Ancenis, and Thomas Bohan, at St-Saturnin, etc. The Abbé Louis de Crèvent at the Trinité, Vendôme. He had one son, John the second, the last sculptor of the family, who died in 1577, and of whom some works are to be seen in the churches of Oiron and Champeaux.

LOUIS GILLET.

Justice is here taken in its ordinary and proper sense to signify the most important of the cardinal virtues. It is a moral quality or habit which perfects the will and inclines it to render to each and to all what belongs to them. Of the other cardinal virtues, prudence perfects the intellect and inclines the prudent man to act in all things according to right reason. Fortitude controls the irascible passions and temperance moderates the appetites according as reason dictates. While fortitude and temperance are self- regarding virtues, justice has reference to others. To- gether with charity it regulates man's intercourse with his fellow men. But charity leads us to help our neighbour in his need out of our own stores, while
Justice teaches us to give to another what belongs to him.

Because man is a person, a free and intelligent being, created in the image of God, he has a dignity and a worth vastly superior to the material and animal life which he has left. Man is to know, love, and worship his Creator; he was made for that end, which he can only attain perfectly in the future, immortal, and never-ending life to which he is destined. God gave him his faculties and his liberty in order that he might freely work for the accomplishment of his destiny. He is in duty bound to use all the means at his disposal, so that he can to the utmost exercise his faculties and conduct his life according to the intentions of his Lord and Master. Because he is under these obligations he is consequently invested with rights, God-given and primordial, antecedent to the State and independent of it. Such are man's natural rights, granted to him by nature herself, sacred, as is their origin, and inviolable. Beside these he may have other rights given him by Church or State, or acquired by his own industry and exertion. All these rights, whatever be their source, are the object of the virtue of justice. Justice requires that all persons should be left in the free enjoyment of all their rights.

A right in the strict sense in which the term is used in this connexion is not a mere vague and indefinite claim against others, which others are bound to respect, on any grounds whatever. We sometimes say that the unemployed have a right to work, that the needy have a right to assistance, and it may be conceded that these phrases are quite correct, provided that such a right is understood as a claim in charity, not as a claim in justice. For, at least if we confine our attention to natural law and ordinary circumstances, the assistance to which a man in need has a claim does not belong to him in justice before it is handed over to him when it becomes his. His claim to it rests on the fact that he is a brother in distress, and his brotherhood constitutes his title to our pity, sympathy, and help. It may, of course, happen that these are insufficient, and that a claim in justice, or a right in the strict sense, is a moral and lawful faculty of doing, possessing, or exacting something. If it be a moral and lawful faculty of doing something for the benefit of others, it belongs to the class of rights of jurisdiction. Thus a father has the natural right to bring up and educate his son, not for his own, but for the son's benefit. A lawful sovereign has the right to rule his subjects for the common good. The largest class of rights which justice requires that we should render to others are rights of ownership. Ownership is the moral faculty of using something subordinate to us for our own advantage. The owner of a house may dispose of it as he will. He may live in it, or let it, or leave it unoccupied, or pull it down, or sell it; he may make changes in it, and in general he may deal with it as he likes, because it is his. Because it is his, he has a right to all the uses and advantages which it possesses. It is his property, and as such its whole being should subsist against the claims of others. Because this belongs to him he must be preferred to all others as to the enjoyment of the uses to which it can be put. He has the right to exclude others from the enjoyment of its uses, it belongs with all the advantages which it can confer to him alone. Were anyone else to make use of the same or any part of it without the owner's consent, he would offend against justice, he would not be rendering the owner what belongs to him.

The right of ownership may be absolute or qualified. Absolute ownership extends to the substance of the property and to all its uses. Qualified ownership may, in the language of divines, be direct or indirect. The former is ownership of the substance of a thing, without its uses, such as the landlord has over a house which he owns; but the latter, using, but not of disposing of, a thing. When anything definite and determinate is owned by anyone so that he can say—"This is my property"—he is said by divines to have a right in re. On the other hand if the thing has not yet come into existence though it will come, or it is not separate and determinate, so that he cannot say that this is his, but he nevertheless has a strict claim in justice that it should become his, he is said to have a right ad rem. Thus a farmer has a right ad rem to the harvest of the coming year from his land; when he has harvested his crop he will have a right in re.

Ownership in the sense explained is the principal object of the virtue of justice as it regulates the relations of man with man. It sharply distinguishes justice from charity, gratitude, patriotism, and other virtues whose object is a claim against others indeed, but a claim of a less strict and more indefinite character. Justice thus differentiates individual, particular, or commutative justice, because it is chiefly concerned with contracts and exchange. Individual justice is distinguished from social, for not only individuals have claims in justice against other individuals, but a subject has claims against the society to which he belongs, as society has claims against him. Justice requires that all should have what belongs to them, and so the just man will render to the society, or State, of which he is a member, what is due to it. The justice which prescribes this is called legal justice. On the other hand, the individual subject has claims against the State. It is the function of the State to protect its subjects in their rights and to govern the whole body for the common good. Authority for this purpose is given to the State by nature and by God, the Author of man's social nature.

The power of the State is limited by the end for which it was instituted, and it has no authority to violate the natural rights of its subjects. If it does this it commits injustice as individuals would do if they acted in like manner. It may indeed levy taxes, and impose other burdens on its subjects, as far as is required by the common necessities and advantage, but no further. For the common good it has the authority to compel individual citizens to lead such a life for the common good of their country when it is in peril, and to part with a portion of their property when this is required for a public road, but as far as possible it must make sure compensation. When it imposes taxes, military service, or other burdens; when it distributes rewards, offices, and honours; when it metes out confinements, punishment for offences, it is bound to do so according to the various merits and resources of the persons concerned; otherwise the State will sin against that special kind of justice which is called distributive.

There is a controversy among authorities as to whether commutative, legal, and distributive justice are so many species of one common genus, or whether commutative justice is in reality the only species of justice in the strict sense. There is much to be said for the latter view. For justice is something which is due to another; it consists, as Aristotle said, in a certain equality between the just and the unjust, and it is the duty of another, neither more nor less, is satisfied. If I have borrowed a horse and cart from my neighbours, justice requires that I should return that particular horse and cart. The debt in its precise amount must be paid. Consequently, justice in the full and proper sense of the term requires a perfect debt of the debtor and creditor. No one can be bound in justice towards himself; justice essentially regards others. However, between the State and the individuals who
compose it there is not this perfect distinction, and so there is something wanting to the proper and complete notion of the virtue in both legal and distributive justice.

The rights which belong to every human being inasmuch as he is a person are absolute and inalienable. The right to life and limb, the essential freedom which is necessary that a man may attain the end for which he is destined by God, the right to marry or remain single, such rights as these may not be intrinsically divested. If it is the law of nature that each man himself even has no right to dispose of his own life and limbs; God alone is the Lord of life and death. But a man has the duty and the right to use and develop his faculties of soul and body, and if he chooses he may dispose of his right to use these faculties and whatever advantage they can procure him in favour of another.

No person can thus become the property of another human being, slavery in that sense is repugnant to the dignity of human nature. But a man may by various titles have the right to the labour of another.

All things inferior to man were created for his use and benefit, they fulfill the end of their being by ministering to his needs. If man has or will have the power of disposing of the earth, therefore, pertains to the animal, vegetable, or inorganic world may be brought under the ownership and made the property of man. The right thus to acquire property which is useful and necessary for an orderly human life, is one of man's natural rights, and it cannot be taken away by any law made by a State; it may indeed make reasonable laws regulating and defining the property rights of its subjects for the common good, but it cannot abrogate them altogether. Such rights are antecedent to the State, and in their substance independent of it; the State was instituted to protect and defend them, not to take them away.

Rights are the appannage of intelligent beings as such, beings who can reflect on themselves, know their own wants, and who can will to supply them by permanently appropriating to themselves objects which are subordinate and which will satisfy those wants. Every human being, therefore, is the subject of rights, even before he has been brought into the world. The unborn child has a right to its life; it may even have property rights as well. Justice then is violated if such rights are interfered with unwarrantably. Minor law and personal defense rights are other but positive law frequently modifies their property rights for the common good. In the past ages the property rights of women especially were largely modified by positive law on their being married, the husband acquiring more or less extensive rights over the property of his wife. In modern times, even in English-speaking countries, the tendency has been to do away with such positive enactments, and to restore to married women all the property rights which unmarried women possess.

Not only individuals, but societies of men as such are the subjects of rights. For men cannot singly and independently concern themselves with that which is necessary for the security and dignity of human existence. For this end man needs the cooperation of his fellows. He has then a natural right to associate himself with others for the attainment of some lawful end, and when such societies have been formed, they are moral persons which have their rights similar to those of natural persons. Such societies then may own property, and although the State may make laws which modify those rights for the common good, it is beyond its power altogether to abrogate them. Men have power to form themselves into societies especially for the purpose of offering to God the public and personal worship in which is due to Him. The Catholic Church, founded by God Himself, is a perfect society and independent of the State. She has her rights, God-given, and necessary for the attainment of her end, and justice is violated if these are unwarrantably interfered with.

As we have seen, human nature, its wants and aims, are the source of the fundamental and natural rights of man. By his industry he earns a livelihood, and appropriates to his person material things which are of use to him and which belong to nobody else. He thus acquires property by the title of occupation. Property once acquired remains in the possession of its owner; all that it is or is capable of is ordained to his use and enjoyment by himself. If it is brought about by giving birth to offspring, the increase belongs to the original owner. By the same law of accession increase in value, even unearned increment as it is called, belongs to the owner of that which thus increases—"Res fructiflcat domino". Positive law may, as we have seen, modify property rights for the common good. It may also further determine those that are indeterminate by the law of nature; it may even create rights which would not exist without it. Thus a father may by law acquire certain rights over the property of his children, and a husband may in the same way have certain rights over the property of his wife. 

The foregoing is in very brief outline the doctrine of justice which has been advanced by Catholic philosophers and divines. The foundations of the doctrine are found in Aristotle, but the noble, beautiful, and altogether rational edifice has been raised by the labours of such men as Aquinas, Molina, Lessius, Lugo, and a host of others. The doctrine as it appears at large in their stately folios is one of the chief and most important results of Catholic thought. It fully accounts for the peremptory, sacred, and absolutely binding character with which justice is invested in the minds of men. It was never of greater importance than it is nowadays to insist on these characteristics of justice. They disappear almost if not altogether in the modern theories of the virtue. Most of these theories derive rights and justice from positive law, and when socialists and anarchists threaten to abrogate those laws and make new ones which will regulate men's rights more equitably, no mention is made of the need of order which becomes a mere question of might and brute force. Even if some with Herbert Spencer endeavour to find a deeper foundation for justice in the conditions of human existence, it is easy to answer that their interpretation of those conditions is essentially individual and selfish, and that human existence thus conditioned is not worth having; that the new social order peremptorily demands their abolition. The Catholic doctrine of justice will be found one of the main safeguards of order, peace, and progress. With even balance it equally favours all and presses unduly on none. It gives the State ample authority for the attainment of its legitimate ends while it effectually bars the road to tyranny and violence.

T. Slater.

Justification (Lat. justification; Gr. δικαιοποίησις), a biblically-ecclesiastical term, which denotes the transferring of the sinner from the state of holiness and sonship of God. Considered as an act (actus justificationis), justification is the work of God alone, presupposing, however, on the part of the adult the process of justification and the co-
operation of his free will with God's preventing and helping grace (gratia preveniens et cooperans). Considered as a state or habit (habitus justificationis), it defined the content of justification and the condition of the human soul, which theologians aptly term sanctifying grace. Since the sixteenth century great differences have existed between Protestants and Catholics regarding the true nature of justification. As the dogmatic side of the controversy has been fully explained in the last chapter, we shall here consider it more from an historical point of view.

I. THE PROTESTANT DOCTRINE ON JUSTIFICATION.

The ideas on which the Reformers built their system of justification, except perhaps fiducial faith, were by no means originally their own. They had been conceived long before either by heretics of the earlier centuries or by isolated Catholic theologians and had been quietly scattered as the seed of future heresies. It was especially the representatives of Antinomianism (q.v.) during the Apostolic times who welcomed the idea that faith alone suffices for justification, and that consequently the observance of the moral law is not necessary either as a prerequisite for obtaining justification or as a means for preserving it. For this reason St. Augustine (De fide et operibus, xiv) was of the opinion that the Apostles James, Peter, John, and Jude had directed their Epistles against the Antinomianism of the time, who claimed to have taken the doctrine of justifying grace as dangerous to the doctrine of the writings of St. Paul. Until quite recently, it was almost universally accepted that the Epistle of St. James was written against the unwarranted conclusions drawn from the writings of St. Paul. Of late, however, Catholic exegetes have become more and more convinced that the Epistle in question, so remarkable for its insisting on the necessity of good works, neither aimed at correcting the false interpretations of St. Paul's doctrine, nor had any relation to the teaching of the Apostle of the Gentiles. On the contrary, they believe that St. James had no other object than to emphasize the fact—already emphasized by St. Paul—that only such faith as is active in charity and good works (fides formata) possesses any power to justify man (cf. Gal., v, 6; I Cor., xii, 2), whilst faith devoid of charity and good works (fides informis) is a dead faith and in the eyes of God insufficient for justification (Rom. 1:16 sqq.).

According to this generally correct opinion, the Epistles of both Apostles treat of different subjects, neither with direct relation to the other. For St. James insists on the necessity of works of Christian charity, while St. Paul intends to show that neither the observance of the Jewish Law nor the works of any kind whatsoever, if they are not of any value for obtaining the grace of justification (cf. Bartmann, "St. Paulus u. St. Jacobus und die Rechtfertigung", Freiburg, 1897).

Whether Victorinus, a neo-Platonist, already defended the doctrine of justification by faith alone, is immaterial to our discussion. On the other hand, it cannot be denied that in the Middle Ages there were a few Catholic theologians among the Nominalists (Octam., Durandus, Gabriel Biel), who went so far in exaggerating the value of good works in the matter of justification that the efficiency and dignity of Divine grace was unduly relegated to the background. Of late, Fathers Denifle and Weise have shown that Martin Luther was acquainted almost exclusively with the theology of these Nominalists, which he naturally and justly found repugnant, and that the "Summa" of St. Thomas and the works of other great theologians were unknown to him. Even Ritschl ("Christliche Lehre von der Rechtfertigung und Sühnung", I, 3rd ed., Bonn, 1889, pp. 105, 117) admits that neither the Church in her official teaching nor the majority of her theologians ever sanctioned, much less adopted, the extreme views of the Nominalists. Nevertheless it was not a healthy reaction against Nominalism, but Luther's own state of conscience that caused his change of views. Frightened, tormented, worn out by constant reflections on his own sinfulness, he had finally found a solace in the contemplation only in the thought that man cannot overcome concupiscence, and that sin itself is a necessity. This thought naturally led him to a consideration of the fall of man and its consequences. Original sin has so completely destroyed our likeness to God and our moral faculties in the heart of every creature, that it is lost and corrupted by it. Concupiscence as an intrinsically evil disposition, has instilled its deadly poison into the soul, its faculties, and its action (cf. Möhler, "Symbolik", § 6). But here we are forced to ask: If all our moral actions be the outcome of an internal necessity and constraint, how can Luther still speak of sin in the true meaning of the word? Does not original sin become identical with the "Evil Substance" of the Manichaeans, as later on Luther's follower, Flacius Illyricus, quite logically admitted?

Against this dark and desolate background there stands out the more clearly the man of God who, for the sake of the Redeemer, is lovingly offered to a despairing man a righteousness (justitia) already complete in itself, namely the exterior righteousness of God or of Christ. With the "arm of faith" the sinner eagerly reaches out for this righteousness and puts it on as a cloak of grace, covering and concealing there-with his misery and his sins. Thus on the part of God, justification is, as the Formulary of Concord (1577) avows, a mere external pronouncement of justification, a forensic absolution from sin and its eternal punishments. This absolution is based on Christ's holiness which God imputes to man's faith. Cf. Solid. Declar. III de fide just., § xi. "The term justification in this instance means the declaring just, the freeing from sin and the eternal punishment of sin in consideration of the justice of Christ imputed to faith by God."

What then is the part assigned to faith in justification? According to Luther (and Calvin also), the faith that justifies is not, as the Catholic Church teaches, a firm belief in God's revealed truths and promises (fides theoretica, dogmatica), but is the infallible conviction (fides fiducialis, fiducia) that God for the sake of Christ will no longer impute to us our sins, but will consider us, as his children, and absolve us from all guilt and holy, although in our inner selves we remain the same sinners as before. Cf. Solid. Declar. III, § 15: "Through the obedience of Christ by faith the just are so declared and reputed, although by reason of their corrupt nature they still are and remain sinners as long as they bear this mortal body."

This so-called "fiducial faith" is not a religious-moral preparation of the soul for sanctifying grace, nor a free act of cooperation on the part of the sinner; it is merely a means or spiritual instrument (instrumentum, δραστικόν) granted by God to assist the sinner in laying hold of the righteousness of God, thereby to cover his sins in a purely external manner as a mantle. For this reason the Lutheran formularies of belief lay great stress on the doctrine that our entire righteousness does not intrinsically belong to us, but is something altogether exterior. Cf. Solid. Declar., § 48: "It is set-...
efficacy cause (causa efficiae) and merited by Christ as meritorious cause (causa meritoria), become an internal sanctifying quality or formal cause (causa formalis) in the soul itself, which it makes truly just and holy in the sight of God. In the Protestant system, however, remission of sin is no real forgiveness, no blotting out of guilt. Sin is merely cloaked and concealed by the imputed merits of Christ; God no longer is conscious of its very existence, and it continues under cover of its miserable existence till the hour of death. Thus there exist in man side by side hostile brothers as it were—the one just and the other unjust; the one a saint, the other a sinner; the one a child of God, the other a slave of Satan—and this without any prospect of our being justified. For the assurance of the sinner, the merely judicial absolution from sin does not take away sin itself, but spreads over it as an outer mantle His own righteousness. The Lutheran (and Calvinistic) doctrine on justification reaches its climax in the assertion that "fiduciary faith," as described above, is the only requisite and means of obtaining salvation. Neither repentance nor obedience nor any other virtue is required, in the just they may either attend or follow as a result of justification. (Cf. Solid. Decl., § 23; "Indeed, neither contrition nor love nor any other virtue, but faith alone is the means by which we can reach forth and obtain the grace of God, the merit of Christ and the remission of sin.") It is well known that Luther in his German translation of the Bible falsified Rom., iii, 28, by interpolating the word "alone" (by faith alone), and to his critics gave the famous answer: "Dr. Martin Luther wants it that way, and says: Papist and ass are the same thing: sivolo, sive jubeo, sit pro ratione voluntas." 

Since neither charity nor good works contribute anything towards justification—inasmuch as faith alone justifies—their absence subsequently cannot deprive the just man of anything whatever. There is only one thing that might possibly divert him of justification, namely, the loss of fiduciary faith or of faith in general. From this point of view we get a psychological explanation of numerous objectionable passages in Luther's writings, against which even Protestants with deep moral sense, such as Hugo Grotius and George Bull, earnestly protested. Thus we find in one of the first letters of Calvin in the Montcalm (1549) the following words: "Be a sinner and sin boldly, but believe and rejoice in Christ more strongly, who triumphed over sin, death, and the world; as long as we live here, we must sin." Could anyone do more to degrade St. Paul's concept of justification than Luther did in the following biblical passage, thus meeting Calvin's outcry could not have committed in faith, it would not be a sin?" (Cf. Möhler, "Symbolik", § 16.) The doctrine of justification by faith alone was considered by Luther and his followers as an incontrovertible dogma, as the foundation rock of the Reformation, as an "article by which the church must stand or fall" (articulus stantis et cadentis ecclesiae) and which of itself would have been a sufficient cause for beginning the Reformation, as the Smalkaldic Articles emphatically declare. Thus we need not wonder when later on we see Lutheran theologians declaring that the Sola-Fides doctrine, as the principium materiale of Protestantism, deserves to be placed by side by side the dogma of Sola-Scriptura ("Bible alone", with the exclusion of Tradition) as its principium formale—two maxims in which the contrast between Protestant and Catholic teaching reaches its highest point. Since, however, neither maxim can be found in the Bible, every Catholic is forced to conclude that Protestantism from its very beginning and foundation is based on self-deception. We assert this of Protestantism in general; for the doctrine of justification as defended by the reformed Churches differs only in non-essentials from Lutheranism. The most important of these differences is to be found in Calvin's system, which taught that only such as are predestined infallibly to eternal salvation obtain justification, while all those not predestined God produced on the appearance of faith and righteousness, and this in order to punish them more severely in hell (Cf. Möhler, "Symbolik", § 12). 

From what has been said it is obvious that justification as understood by Protestants, presents the following qualities: First and above all, its being certain (certainitas). Its equality in all (aequitas), and finally the impossibility of ever losing it (immeminibilitas). For if it be essential to fiduciary faith that it infallibly assures the sinner of his own justification, it cannot mean anything but a firm conviction of the actual possession of grace. If, moreover, the sinner be justified, not by an interior righteousness capable of increase or decrease, but through God's sanctity eternally the same, it is evident that all the just from the common mortal to the Apostles and the Blessed Virgin Mary possess one and the same degree of righteousness and sanctity. Fiduciary faith alone sufficiently (according to Calvin, not even that) can deprive us of justification, it follows that justification once obtained can never be lost. Incidentally, we may here call attention to another significant fact, namely that it was Luther who laid the foundation for the separation of religion and morality. For, by stating that fiduciary faith alone suffices for obtaining both justification and eternal happiness, he minimized our moral faculties to such an extent that charity and good works no longer affect our relations with God. By this doctrine Luther opened a fundamental breach between religion and morality, between faith and law, and assigned to each its own distinct sphere of action, in which each can attain its end independent of the other. Prof. Paulsen of Berlin was therefore justified in delineating Kant, who followed Luther in this matter, as the "Philosopher of Protestantism." (Cf. Möhler, "Symbolik", § 25.) 

The harshness, with its harmony, intrinsic improbability, and contradiction of Holy Writ contained in the system soon brought about a reaction in the very midst of Protestantism. Osianeder (d. 1652), at once an enthusiastic admirer of Luther and an independent thinker, emphatically stated (in opposition to Luther and Calvin) that the inner man (mente) of the Christian is one, real, intrinsic union of Christ with the soul, an opinion for which, as being Catholic, he was censured freely. Butzer (d. 1551) likewise admires, in addition to an "imputed exterior righteousness", the idea of an "inherent righteousness" as a partial factor in justification, thus meeting Calvin's opinion by the way. Luther's most dangerous adversary, however, was his friend Melanchthon, who, in his praiseworthy endeavour to smooth over by conciliatory modifications the interior difficulties of this discordant system, laid the foundation for the famous Synergisten-Straf (Synergist Dispute), which was so soon to become embittered. In general it was precisely the denial of man's free will in the moral order, and of the impossibility of his full co-operation with Divine grace that repelled so many followers of Luther. No sooner had Pfeffinger in his book, "Delibero arbitrio," (Leipzig, 1555) taken up the defence of man's free will than many theologians and jurists (e.g. Strigel) boldly attacked the Lutheran Kloster-Stock-und-Steintheorie (log-stick-and-stone theory), and tried to force from their adversaries the concession that man can co-operate with God's grace. The theological quarrel soon proved very annoying to both parties and the desire for peace became universal. "The Half-Melanchthonians" had succeeded in
Justification

Smuggling Synergism into the "Book of Torgau" (1576); but before the "Formulary of Concord" was printed in the monastery of Bergen (near Magdeburg, 1580), His own faith was eliminated as heterodox and the harsh doctrine of Luther substituted in the symbols of the Lutheran Church. The new breach in the system formed by the Syngagnosten-Streit was enlarged by a counter movement that originated among the Pietists and Methodists, who were willing to admit the infallible assurance of salvation given by Lutherian faith—only in case that that assurance was confirmed by internal experience. But what probably contributed most of all to the crumbling of the system was the rapid growth of Socinianism and Rationalism which during the seventeenth and eighteenth centuries gained so many adherents among the Lutherans. Fiduciary faith was no longer considered a spiritual means to assist man in reaching out for the righteousness of God, but was identified with a disposition which is upright and pleasing to God. Latterly, A. Ritschl defined justification as the change in the consciousness of our relation to God and amplified this in sixteenth century by saying that the certainty of our salvation is further determined by the consciousness of our union with the Christian community. Schleiermacher and Hengstenberg deviated still further from the old doctrine. For they declared contrition and penance as also necessary for justification, thus making man's free will an essential part of the Divine and human action, of grace and moral freedom of election, in such a manner, however, that the will can resist, and with full liberty reject the influence of grace (Trent, I, c., can. IV: "If any one should say that free will, moved and set in action by God, cannot cooperate by assenting to God's call, nor dissent if it wish... let him be anathema"). By this decree the Council not only condemned the Protestant view that the will in the reception of grace remains merely passive, but also forestalled the Jansenistic heresy regarding the impossibility of resisting actual grace. (See Jansenius.)

With what little right heretics in defence of their doctrine appeal to St. Augustine, may be seen from the following brief extract from his writings: "He who made you without your doing does not without your action justify you. Without your knowing He made you, with your willing He justifies you; but it is His doing He justifies you (Serm. clix, c. xi, n. 13). Regarding St. Augustine's doctrine cf. J. Maubach, "Die Ethik des hl. Augustinus," II, Freiburg, 1909, pp. 208-38.

We now come to the different stages in the process of justification. The Council of Trent assigns the first and most important place to the so-called styled "the beginning, foundation and root of all justification" (Trent, I, c., cap. viii). Cardinal Pallavicini (Hist. Conc. Trid., VIII, iv, 18) tells us that all the bishops present at the council fully realized how important it was to explain St. Paul's saying that man is justified through faith. Comparing Biblic and Tradition they observed that the notion of justification as an application of the Redemption to the individual presupposes the fall of the entire human race, the Council of Trent quite logically begins with the fundamental statement that original sin has weakened and deflected, but not entirely destroyed or extinguished the freedom of the human will (Trent, III, c. I, cap. I: "Liberae arbitrium minime extinctum, viribus licet attenuatum et inclinatum"). Nevertheless, as the children of Adam were really corrupted by original sin, they could not of themselves arise from their fall nor shake off the bonds of sin, death, and Satan. Neither the natural faculties left in man, nor the observance of the Jewish Law could achieve this. Since God alone was able to free us from this great misery, He sent in His infinite mercy and love His only Son, Jesus Christ, to expiate the bitter passion and death on the cross redeemed fallen man and thus became the Mediator between God and man. But, if the grace of Redemption merited by Christ is to be appropriated by the individual, he must be "regenerated in God", that is he must be justified. And therefore what there is of salvation in man only—denotes that change or transformation in the soul by which man is transferred from the state of original sin, in which as a child of Adam He was born, to that of grace and Divine sonship through Jesus Christ, the second Adam, our Redeemer (I. c., cap. iv: "Justificatio impi., translatio sub novo statu, in quatuor aspectus, nascitur filius primi Adam, in statum gentium, et adoptionis filium Dei per secundum Adam, Jesum Christum, Salvatorem nostrum"). In the New Law this justification cannot, according to Christ's precept, be effected except at the fountain of regeneration, that is, by the baptism of water. While in Baptism infants are taught that they are cleansed from the sin of Adam without any preparation on their part, the adult must pass through a moral preparation, which consists essentially in turning from sin and towards God. This entire process receives its first impulse from the supernatural grace of vocation (absolutely independent of the human will) of God by which the will is disposed to the Divine and human action, of grace and moral freedom of election, in such a manner, however, that the will can resist, and with full liberty reject the influence of grace (Trent, I, c., can. IV: "If any one should say that free will, moved and set in action by God, cannot cooperate by assenting to God's call, nor dissent if it wish... let him be anathema"). By this decree the Council not only condemned the Protestant view that the will in the reception of grace remains merely passive, but also forestalled the Jansenistic heresy regarding the impossibility of resisting actual grace. (See Jansenius.)
original and personal) and its punishments, and is made a child of God. The same process of justification is repeated in those who by mortal sin have lost their baptismal innocence; with this modification, however, that the Sacrament of Penance replaces baptism. Considering merely the psychological analysis of the concept of justification given by Aquinas, it is once evident that faith alone, whether fiduciary or dogmatic, cannot justify man (Trent, I. c., can. xii: "Si quis dixerit, fedem justificantem nihil afluat esse quam fiduciam divinam misericordiae, pecam remittentem propter Christum, vel eam fiduciam solam esse, quae justificantem. Sicut etiam divina gratia et friendship with God is based on perfect love of God or charity (cf. Gal., v, 6; I Cor., xiii; James, ii, 17 sqq.), dead faith devoid of charity (fides caritatis) cannot possess any justifying power. Only such faith as is active in charity and good works (fides caritatis formata) can justify man, and this even before the actual reception of baptism or penance, although not without the desert of the sacrament (cf. Trent, SS. VI, cap. iv, xiv). But, not to close the gates of heaven against pagans and those non-Catholics, who without their fault do not know or do not recognize the Sacrament of Penance, theologians unanimously hold that the desire to receive these sacraments is implicitly contained in the serious resolve to do all that God has commanded, even if His holy will shall not become known in every detail.

2) The Formal Cause of Justification.—The Council of Trent decreed that the essence of active justification comprises not only forgiveness of sin, but also "sanctification and renovation of the interior man by means of the voluntary acceptation of sanctifying grace and other supernatural gifts" (Trent, I. c., cap. viii: "Non est sola peccatorum remissio, sed et sanctificatio et renationem et vivificationem et sanctificationem et donorum"). In order to exclude the Protestant idea of a merely forensic absolution and exterior declaration of righteousness, special stress is laid on the fact that we are justified by God's justice, not that whereby He himself is just but that whereby He makes us just, in so far as He bestows on us the gift of His grace which renovates the soul interiorly and adheres to it as its own holiness (Trent, I. c., cap. vii: "Unica formalis causa [justificationis] est justitia Dei, non qua ipse justus est, sed qua nos justos facit, qua videlicet ab eo donati, renovamus spiritualiter et nostrae conscribemur in nobis recipientes uniusquae suam"). This inner quality of righteousness and sanctity is universally termed "sanctifying (or habitual) grace", and stands in marked contrast to an exterior, imputed sanctity, as well as to the idea of merely confessing and concealing sin. By this, however, we do not assert that the "justitia extra nos" is of no importance in the process of justification. For, even if it is not the formal cause of justification (causa formalis), it is nevertheless its true exemplar (causa exemplaria), imitating in the soul the very act of God in sanctification of the soul's own holiness. The Council of Trent (I. c., cap. vii), moreover, did not neglect to enumerate in detail the other causes of justification: the glory of God and of Christ as the final cause (causa finalis), the mercy of God as the efficient cause (causa efficientiae), the Passion of Christ as the meritorious cause (causa meritoria), and the concomitant concept of the Sacrament of Justification (causa instrumentalis). Thus each and every factor receives its full share and is assigned its proper place. Hence the Catholic doctrine on justification, in welcome contrast to the Protestant teaching, stands out as a reasonable, consistent, harmonious system of beliefs, the essence of sanctifying grace, see GRACE. Regarding the false doctrine of the Catholic theologian Hermes, cf. Kleutger, "Thesellie der Vorsait", II (2nd ed., Münster, 1872), 254-343.

According to the Council of Trent sanctifying grace is not merely a formal cause, but "the only formal cause" (una causa formalis) of our justification. By this important decision the Council excluded the views of Butzer and the other Catholic theologians (Federic, Seripando, and Albert Pighius) who maintained that an additional "external favor of God" (favor Dei externus) belonged to the essence of justification. The same decree also effectually set aside the opinion of Peter Lombard, that the formal cause of justification (i.e. sanctifying grace) is nothing else than the "Person of the Holy Ghost, Who is the hypostatic holiness and charity, or the uncreated grace (gratia in-creata). Since justification consists in an interior sanctity and renovation of spirit, its formal cause evident must be a created grace (gratia creatura), a permanent quality, a supernatural modification or accident (accidentia) of the soul. Quite distinct from this is the question whether the personal indwelling of the Holy Ghost, although not required for justification (inasmuch as sanctifying grace alone suffices), be necessary as a prerequisite for Divine adoption. Several great theologians of the church have vigorously opposed the view, as for instance Lessius ("De summo bono", II); "De perfecta moribusque divin.", XII, ii; Petavius ("De Trinit.", viii, 4 sqq.); Thomassin ("De Trinit.", VIII, 9 sqq.); and Hurter ("Compend. theolog. dogmat.", III, 6th ed., pp. 162 sqq.). The solution of the lively controversy which has centered around this point is found in the Fierz Cranach ("Zeitschrift für katholische Theologie", 1881, pp. 283 sqq.; 1883, 491 sqq.; 593 sqq.; 1884, 545 sqq.) and Professor Scheeben ("Dogmatik", II, 169; "Katholik", 1883, I, 147 sqq.; II, 561 sqq.; 1884, I, 18 sqq.; II, 455 sqq.; 610 sqq.) seems to lie in the following distinction: the Divine adoption, inseparably connected with sanctifying grace, is not in the act of indwelling by the personal indwelling of the Holy Ghost, but re- ceives therefrom its full development and perfection.

(3) The Effects of Justification.—The two elements of active justification, forgiveness of sin and sanctification, furnish at the same time the elements of habitual justification, freedom from sin and holiness. According to the Catholic doctrine, however, this freedom from sin and this sanctity are effected, not by two distinct and successive Divine acts, but by a single act of God. For, just as light dispels darkness, so the infusion of sanctifying grace eo ipso disperses from the soul the sin (cf. of Trent, I. c., cap. vii). The same decision of the Council of Trent is expressed in another way as follows (Trent, I. c., can. xii: "Si quis dixerit, homines justificari vel sola imputazione justitiae Christi, vel sola peccatorum remissione, excluda gratia et caritate, quae in cordibus eorum per Spiritum Sanctum diffundatur atque ills inhereat... a.s.") In considering the effects of justification it will be useful to compare the Catholic doctrine of real forgiveness of sin with the Protestant theory that sin is merely "covered" and not imputed. By declaring the grace of justification, or sanctifying grace, to be the only formal cause of justification, the Council of Trent intended to emphasize the fact that in possessing sanctifying grace we possess not only the essence of the state of justification with all its formal effects; that is, we possess freedom from sin and sanctity, and indeed freedom from sin by means of sanctity. Such a remission of sin could not consist in a mere covering or non-imputation of sins, which continue their existence out of view; it must necessarily have the effect of remitting the guilt of sins. This genuinely Biblical concept of justification forms such an essential element of Catholicism, that even Antonio Rosmini's theory, standing half way between Protestantism and Catholicism, is quite irreconcilable with it. According to Rosmini, there are two categories of sins: (1) sins which God may forgive (Ps. xxxi, 1); (2) sins which God does not impute (Ps. xxxi, 1); (2) such as God really forgives and blots out. By the latter Rosmini
understood deliberate sins of commission (culpa actuales et libera), by the former indeferrible sins (pecos naturales liberales), which "do no harm to those who are of the peace of God." This opinion was canvassed by the Holy Office (14 Dec., 1887), not only because without any reason it defended a twofold remission of sin, but also because it stamped indelible acts as sins (cf. Denzinger-Bannwart, "Enchir.", n. 1925).

Although it is a Catholic dogma that sanctifying grace and sin (original and mortal) do never exist simultaneously in the soul, there may be, nevertheless a diversity of opinion regarding the extent of this incompatibility, according as it is considered as either moral, physical, or metaphysical in character. According to the now universally rejected opinion of the Noricans (Dominus Briel) and the Scotists (Mastricius, Henno) the contrast between grace and sin is based on a free decree and acceptance of God, or in other words, the contrast is merely moral. This would logically imply in contradiction to the "unica causa formalis" of the Council of Trent, a twofold formal cause of justification (cf. Pohle, "Dogmatik", II, 4th ed, Paderborn, 1909, p. 512). Suares (De gratia, VII, 20) and some of his followers in defending a physical contrast come nearer the truth. In their explanation grace and sin exclude each other with the same necessity as do fire and water, although in both cases God, by the action of his omnipotence, could suspend the general law and force the two hostile elements to exist peacefully side by side. This opinion might be safely accepted were sanctifying grace only a physical ornament of the soul. But since in reality it is an ethical form of sanctification by which even an infant in receiving baptism is necessarily made just and pleasing to God, there must be between the concepts of grace and of sin a metaphysical and absolute contradiction, which not even Divine omnipotence can alter and destroy. For this last opinion, defended by the Thomists and the majority of theologians, there is also a solid foundation in Holy Writ. For the contrast between grace and sin is as great as between light and darkness (II Cor., vi, 14; Eph., v, 8), between life and death (Rom., v, 21; Col., ii, 13; I John, iii, 14), between God and idols, Christ and Belial (II Cor., vi, 15 sqq.), etc. Thus it follows from Holy Writ that by the infusion of sanctifying grace sin is determined as being an absolute necessity; that the Protestant theory of "covering and not imputing sin" is both a philosophical and a theological impossibility. Besides the principal effect of justification, i.e., real obliteration of sin by means of sanctification, there is a whole series of other effects: beauty of the exterior, vivification, and Divine adoption. In the article on Grace these are described as formal effects of sanctifying grace. In the same article is given an explanation of the supernatural accompaniments—the three theological virtues, the moral virtues, the seven gifts, and the personal indwelling of the Holy Ghost. These, as freely bestowed gifts of God, cannot be regarded as formal effects of justifying grace.

(4) The Qualities of Justification.—We have seen that Protestants claim the following three qualities for justification: certainty, equality, the impossibility of ever losing it. Diametrically opposed to these qualities are those defended by the Council of Trent (sess. VI, cap. 9-11) — uncertainty (incertitude), inequality (inaequitatem), amissibility (amissibilitatem). Since these qualities of justification are also qualities of sanctifying grace, see Grace.

Justin de Jacobis, BLESSED, Vicar Apostolic of Abyssinia and titular Bishop of Nilopolis, b. at San Fele; Province of Potenza, Italy, 9 October, 1800; d. 31 July, 1860, in the plain of Eydele between the mountains Chedene and Hamamo in Abyssinia, while on his way to Balay where he hoped to regain his health. On 17 October, 1819, he entered the Congregation of the Lazarists and took his vows on 18 October, 1820, and was ordained priest at Brindisi, 12 June, 1824. After spending some time in the care of souls at Oria and Monopoli, he became superior, first at Lecce, then at Naples. In 1839 he was appointed first Prefect Apostolic of Abyssinia, and entrusted with the foundation of Catholic missions in that country. After labouring with great success in Abyssinia for eight years, he was made titular Bishop of Nilopolis in 1847, and shortly afterwards Vicar Apostolic of Abyssinia, but he refused the episcopal dignity until it was finally imposed upon him in 1849. Despite imprisonment, exile, and every other kind of persecution from heretics and heretics, he founded numerous Catholic missions, built various schools for the training of a native clergy, and in many other ways laboured for the conversion of Abyssinia. The process of his beatification was introduced at Rome, 23 July, 1874. Dinem. Vita del Venerabile Justin de Jacobis (Paris, 1905); Acta Sanctorum Saba (Rom., 1904), XXXVII, 158-90.

Michael Ott.

Justinian I, Roman Emperor (527-65).—Flavius Anicius Julianus Justinianus was born about 483 at Tauresium (Taor) in Illyricum (near Uskup); d. 565. The theory that he was a slave by race is now abandoned (Krummacher, "Das Leben der Basiliskeni", 1855). Justinian was the nephew of Justin I (518-27), being the son of Justin's sister Vigilantia and a certain Sabatius. Already during his uncle's reign he became the chief power in the state. Justin was an old man, weak in body and mind; he gradually handed over all power to his nephew. In 521 Justinian was proclaimed consul, then general-in-chief, and in April, 527, Augustus; in August of the same year Justin died, and Justinian was left sole ruler.

The thirty-eight years of Justinian's reign are the most brilliant period of the later empire. Full of enthusiasm for the memories of his ancestors, he achieved, the task of reviving their glory. The many-sided activity of this wonderful man may be summed up under the headings: military triumphs, legal work, ecclesiastical polity, and architectural activity. Dominating all is the policy of restoring the empire, great, powerful, and united. Of these many features of his reign—each of them epoch-making—it is impossible to give more than the merest outline here. (1) Justinian carried on the unending war against the Persians with mixed success. His general Belisarius lost a battle at first in 528, then completely routed the Persians at Dara, near Ctesiphon (June, 530); but on 19 April, 531, the Romans were defeated near Callinicum on the Euphrates; in September a peace was arranged on fairly equal terms. The emperor then conceived the plan of reconquering Africa and Italy, lost to the empire by the Vandal and Gothic invasions from 496 to 535. In 533 a fleet of 100 ships was sent for Africa under Belisarius. In two battles the Romans annihilated the Vandal kingdom, took the king, Gelimer, prisoner to Constantinople, and re-established the authority of Cæsar in Africa. In 535 Belisarius sailed for Sicily. The island was conquered at once. After a reverse in Dalmatia that province was also subdued. Belisarius in 536 took Rhegium and
Naples, entered Rome in triumph, seized Ravenna, sustained a siege in Rome till 538, when the Goths retired. A second general, Narses, then arrived with reinforcements from Constantinople; Milan and all Liguria were taken in 539, and in 540 all Italy up to the frontier of the Frankish Kingdom was reunited to the empire. In 542 the Goths revolted under their king, Totila; by 553 they were again crushed. Narses became the first Exarch of Italy. Verona and Brescia (Brescia), the last Gothic strongholds, fell in 552. The Roman armies then marched on Spain and conquered its south-eastern provinces (lost again in 623, after Justinian’s death). Meanwhile the Crimean Goths and all the Bosporus, even the Southern Arabs, were forced to acknowledge the rule of Rome. A second war against the Persians (560–45) pushed the Roman frontier beyond Edessa. From 549 to 566 a long war in Armenia and Colchis (the Lazic War) again established the empire without a rival on the shores of the Black Sea. So Justinian ruled once more over a colossal world-empire, whose extent rivaled that of the greatest days before Diocletian. Meanwhile the emperor was no less successful at home. In 552 a very dangerous revolt (the Nika revolt) broke out among the factions of the Circus (the Blues and Greens), was put down severely. Bury says that the result of the suppression was “an imperial victory which established the form of absolutism by which Byzantine history is generally characterized.” Later Roman Empire, I, 345).

(2) The most enduring work of Justinian was his codification of the laws. This, too, was an important part of his general scheme. The great empire he was reconquering must have the strength of organized unity. He says in the edict of promulgation of his laws that “a state rests on arms and law” (“De Justin. Cod. confirmando”, printed in front of the codex). The legal and judicial decrees of his predecessors must be collected in a well-ordered and complete code, logically arranged, so that every Roman citizen could learn at once the law of the empire on any subject. This codification was Justinian’s great work. He made many new laws himself, but his enduring merit is rather the classification of scattered older laws. The legal code was the result of the work of a number of jurists, and in outline this:—First, a commission of ten lawyers (including the famous Tribonianus and Theophilius) reduced the bulky and rambling Theodosian Code (published in 438) to a orderly compendium, inserting into it the laws made since it was written. So the “Codex” was completed in 529. Second, a mass of answers given by authorities (the “responsa prudentum” that formed acknowledged precedents) were arranged (omitting all superfluities) in fifty books, whereby a law library of a hundred and six volumes was reduced to about one-fifth. This is the “Digest”, or “Pandects”, published in 530. Third, a manual of law for students was compiled from the commentaries of Gaius (second century). This, the Institutes”, was published in the same year, 530. In 532 the whole work was revised, and a fourth part, the “Authentic”, or “Novels”, was added, containing later decisions made by Justinian’s own court. So the immortal “Corpus Juris Civilis” was produced, consisting of four parts: (a) Digesta seu Pandecta, (b) In- stitutio, (c) Codex, (d) Novellae. An excellent account of its composition is found in Bury’s Gibbon, ed. cit., IV, 461–510. It would be difficult to exaggerate the importance of this “Corpus”. It is the basis of all canon law (ecclesia vivit lege romana), and the basis of civil law in every civilized country. Catholic cannot applaud the great emperor’s ecclesiastical policy, though in this, too, we recognize the statesman’s effort to promote peace and union within the empire. It was a matter of course that this union was to be that of the “most holy Catholic and Apostolic Church of Christ” (5 c., De s. tr., I, 1). The Corpus Juris is full of laws against paganism (apostasy was punished by death, 10 c., “De pag.” I, 11). Jews, Samaritans (who began a dangerous revolt in 539), Manicheans, and other heretics. The decrees of the four general councils were incorporated in the civil law. There was no toleration of dissent. True to the ideal of Constantinople, the emperor conceived himself as “priest and king”, supreme head on earth in matters ecclesiastical as well as in the State. He filled his codex with canon law and assumed the most outspoken Erastianism as the law of the empire. And all through his reign he fell foul of the authority of the Church by his attempts to conciliate the Monophysites. Ever since Chalcedon (451) those heretics filled Syria and Egypt, and were a constant source of disunion and trouble to the empire. Justinian was one of the many emperors who tried to reconcile them by concessions. His wife Theodora was a secret Monophysite; influenced by her, the emperor, while maintaining Chalcedon, tried to satisfy the heretics without compromising the Church. Ever since the Theopaschite question, Peter Fulo of Antioch had introduced into the Trisagion the clause: “Who didst suffer for us.” Pope Hormisdas (514–23) refused to admit it, as savouring of Monophysitism. But Justinian approved it and promoted a Monophysite, Anthimus I (536), to the See of Constantinople. Then followed the great quarrel of the Three Chapters, the lamentable attitude of Pope Vigilius (540–55),

Section of the Pandects of Justinian
From a seventh-century MS. in the Laurentian Library, Florence
and the Second Council of Constantinople (553). In all this story Justinian appears as a persecutor of the Church, the place, unhappily, among the semi-Monophysite tyrants who caused the long series of quarrels and schisms that were the after-effect of Monophysitism. His ecclesiastical tyranny is the one regrettable side of the character of so great a man.

(4) Justinian also acquired immortal fame by the immense public edifices he erected. Any style can ever be ascribed to one man, what we call Byzantine architecture, at least in its perfect form, owes its origin to Justinian and the architects he employed. His activity in building was prodigious. He covered his empire from Ravenna to Damascus with superb monuments. All later buildings in Byzantium are based on his models: two most famous schools, our medieval (Gothic) and the Moslem styles, are the lineal descendants of Justinian’s architecture. Of his many buildings may be mentioned the two most famous, the church of Our Lady (now the El-Aqsa mosque) at Jerusalem and, by far the most splendid of all, the great church of the Holy Wisdom (Hagia Sophia) at Constantinople. This church especially, built by Anthemius of Tralles and Isidore of Miletus, and consecrated on 27 December, 537, remains always one of the chief monuments of architecture in the world.

Church building, which required great expense, was magnificently in times of calamity, earthquake, and famine, the imperial purse was opened to the sufferers with unlimited generosity.

The emperor’s private life is somewhat clouded by the scandals told of his wife, Theodora. She had been a dancing-girl; there is no doubt that she had led an immoral life before her marriage in 523. She was also a Monophysite. But most scholars now reject the scandalous account of her married life given by Procopius in his ‘Secret History’. And in January, 532, at the time of the Circus revolution that nearly wrecked the state, it was Theodora’s courage and presence of mind that saved the situation. For she held, in a hand in her husband’s policy: administration, diplomacy, church affairs, etc., felt her influence for twenty-one years. If she did not honour Justinian by infidelity she certainly led him into semi-Monophysitism (see Dichi, ‘Théodora, impératrice de Byzance’, Rev. Archéol., 1904).

Justinian died in November, 565 (succeeded by his nephew, Justin II, 565–78). He was undoubtedly the greatest emperor after Constantine, perhaps the greatest of all the long line of Roman Caesars. Indeed one may question whether any state can show in its history a man of greater capacity to rule gloriously, or to so long a reign, or to lead the people through so many public reverses. His memory has lasted through all the ages after him (see Dante, ‘Paradiso’, vi), and his portrait gleams still from the mosaic in S. Vitale at Ravenna, where he stands in his toga and diadem, surrounded by his court, with a bishop at his side—the very type of the majesty of Christian Rome on the Bosporus.

The literature on the various sides of Justinian’s activity is naturally enormous. His reign is equally important to the historian, the lawyer, the theologian, and archivist. These are a few of the most serviceable modern works only: GIBSON (ed. BURY), The Decline and Fall of the Roman Empire, 1869–1908, xi–xlvii (an excellent general work, with copious bibliography in Bury’s appendix); BURY, A History of Alexander the Great, 1889; GIBSON, 333–429 (supplements Gibson); DIBON, Justinien et l’histoire byzantine au Ve siècle (Paris, 1901); SCHULZ, Gesch. des Uebrigen des Byzantinischen Reiches, I, Gnesen, 1887, 434–59; HUTTON, The Church of the Sixth Century (London, 1917); JONES, Die Reichspolitik Kaisers Justinians (Giesen, 1885); KANTZEL, Die Kaiserpolitik des Justinian (Wiener-Liber, 1886); DREßKAMP, Die erstenleichen Streifzüge (Minster, 1909). Further bibliography is given in Dichi, Storiche byzantine (Paris, 1903), i and ii.

ADRIAN FORTESSER.
"Argument" he gives many personal details, e. g. about his studies in philosophy and his conversion; they are not, however, an autobiography, but are partly idealised, and it is possible, that he changed some of the details in his poetry and truth; they furnish us however with several precious and reliable clues. For his martyrdom we have documents of undisputed authority. In the first line of his "Argument" he calls himself "Justin, the son of Priscus, son of Bacheo, of Flavia Neapolis, in Africa." His resting place is unknown. His "city" was founded, by Vespasian (A.D. 72), was built on the site of a place called Mabortha, or Mamortha, quite near Siegeh (Guérin, "Samarue", I, Paris, 1874, 390-423; Schürer, "History of the Jewish People", tr., I, Edinburgh, 1885). Its inhabitants were all, or for the most part, pagans. The name of the city and the speech of Justin suggest a pagan origin, and he speaks of himself as uncircumcised (Dialogue, xxxvii). The date of his birth is uncertain, but would seem to fall in the first years of the second century. He received a good education in philosophy, an account of which he gives at the beginning of his "Discourse with the Jews Trypho"; he placed himself in the first under a Stoic, but after some time found that he had learned nothing about God and that in fact his master had nothing to teach him on the subject. A Peripatetic whom he then found welcomed him at first but afterwards demanded a fee from him; this provoked him to begin to study by himself. A Pythagorean refused to teach him anything until he should have learned music, astronomy, and geometry. Finally a Platonist arrived on the scene and for some time delighted Justin. This account cannot be taken too literally; the facts seem to be arranged with a view to showing the weakness of the pagan philosophies and of contrasting them with the teachings of the Prophets and of Christ. The main facts, however, may be accepted; the works of Justin seem to show just such a philosophic development as is here described, Eclectic, but owing much to Stoicism and more to Platonism. He was still under the charm of the Platonic philosophy when, as he walked one day along the seashore, he met a mysterious old man; the conclusion of their long discussion was that the soul could not arrive through human knowledge at the idea of God, but that it needed to be instructed by the Prophets and by the Word of God and could make Him known ("Dialogue", iii, vii; cf. Zahn, "Dichtung u. Wahrheit in Justin's Dialog mit dem Juden Trypho" in "Zeitschr. für Kirchen-gesch.", VIII, 1886-1887, 37-66).

The "Argument" throw light on another phase of the conversion of Justin: "When I was a disciple of Plato", he writes, "hearing the discussions against the Christians and seeing them intrepid in the face of death and of all that men fear, I said to myself that it was impossible that they should be living in evil and in the love of pleasure (II Apol., xviii, 1). Both accounts exhibit the two aspects of Christianity that most impressed the pagan: the love of the Prophet and the truth of God and could make Him known ("Dialogue", iii, vii; cf. Zahn, "Dichtung u. Wahrheit in Justin's Dialog mit dem Juden Trypho" in "Zeitschr. für Kirchen-gesch.", VIII, 1886-1887, 37-66).

Zahn, "Dichtung u. Wahrheit in Justin's Dialog mit dem Juden Trypho" in "Zeitschr. für Kirchen-gesch.", VIII, 1886-1887, 37-66)."
nack, "Die Ueberliefcrung der griech. Apologeten" in "Texte und Untersuchungen", I, Leipzig, 1883, i, 73-89; Archambault, "Justin, Dialogue avec Tryphon", Paris, 1909, p. xii-xxxviii). There are many large gaps in this manuscript, thus II Apol., ii, is almost entirely wanting, but it has been found possible to restore the manuscript text from a quotation of Eusebius (Hist. eccl., IV, xvii). The "Dialogue" was dedicated to a certain Marcus Pompeius (cxl, viii); it must therefore have been preceded by a dedicatory epistle and probably by an introduction or preface; both are lacking. In the seventy-fourth chapter a large part must also be missing, comprising the end of the first book and the beginning of the second, "Zeitschrift f. Kirchengesch.", VIII, 1885, 37 sq., Bardenhewer, "Gesch. der altkirchl. Litter.", I, Freiburg im Br., 1902, 210). There are other less important gaps and many faulty transcriptions. There being no other manuscript, the correction of this one is very difficult; conjectures have been often quite unhappy, and Krüger, the latest editor of the "Apologeticus", has scarcely done more than return to the text of the manuscript.

In the manuscript the three works are found in the following order: second "Apologeticus", first "Apology", the "Dialogue". The second "Apologeticus" preserves the original order, and all other editors have followed him. There could not be as a matter of fact any doubt as to the proper order of the "Apologeticus", the first is quoted in the second (iv, 2; vi, 5; viii, 1). The form of these references shows that Justin is referring, not to a different work, but to that which he was then writing (II Apol., ix, 1, cf. vii, 7; I Apol., lxxiii, 16, cf. xxxix, 14; lxiii, 4, cf. xxi, 1; ix, 6, cf. lxiv, 2). Moreover, the second "Apologeticus" is evidently not a complete work independent of the first, but rather an appendix, owing to a new fact that came to the writer's knowledge, and which he wished to utilize without retaining the rest. It has been remarked that Eusebius often alludes to the second "Apologeticus" as the first (Hist. eccl., IV, viii, 5; IV, xvii, 1), but the quotations from Justin by Eusebius are too inexact for us to attach much value to this fact (cf. Hist. eccl., IV, xi, 5; Bardenhewer, op. cit., 201). Probably Eusebius also erred in making Justin write one apology under Antoninus (161) and another under Marcus Aurelius. The second "Apologeticus", known to no other author, doubtless never existed (Bardenhewer, loc. cit.; Harnack, "Chronologie der christl. Litter.", I, Leipzig, 1897, 276). The date of the "Apologeticus" cannot be determined with any certainty, but it can be established with the aid of the following facts: it is 150 years since the birth of Christ (I, xiv, 1); Marcion has already spread abroad his error (I, xxvi, 5); now, according to Epiphanus (Hieres., xlii, 1), he did not begin to teach until after the death of Marcion (A.D. 140). The Prefect of Egypt, Felix (I, xxxi, 2), occupied this charge in September, 151, probably from 150 to about 154 (Grenfell-Hunt, "Oxyrhynchus Papyri", II, London, 1899, 163, 175; cf. Harnack, "Theol. Literaturzeitung", XXII, 1897, 77). From all this we may conclude that the "Apologeticus" was written somewhere between 153 and 155. The second "Apologeticus", as already said, is an appendix to the first and must have been written shortly afterwards. The Prefect Urbinus mentioned in it was in charge from 144 to 160. The "Dialogue" is certainly earlier than the "Apologeticus" to which it refers ("Dial.", cxx, cf. "I Apol.", xxvi); it seems, moreover, that the same reference to whom the "Apologeticus" was addressed were still living when the "Dialogue" was written. This places it somewhere before A. D. 161, the date of the death of Antoninus.

The "Apologeticus" and the "Dialogue" are difficult to analyse, for Justin's method of composition is free and capricious, and defies our habitual rules of logic. The content of the first "Apologeticus" (Veil, "Justinus des Phil. Rechtfertigung", Strasbourg, 1894, 58 sq.) is somewhat as follows: i-iii: exordium to the emperor; Justin is about to enlighten them and free himself of responsibility, which will now be wholly theirs. iv-viii: first part or introduction: the anti-Christian procedure is iniquitous, the persecutors in the name of Christians a name only (iv, v); Christians are neither Atheists nor criminals (vi, vii); they allow themselves to be killed rather than deny their God (viii); they refuse to adopt idols (ix, xii); conclusion (xii). xi-xvii: Second part: exposition and demonstration of Christ's divinity, ascension of our Lord to heaven, and triumph of Christ, as well as God (xiii); Christ is the only true mediator; moral precepts (xiv-xvii); the future life, judgment, etc. (xviii-xx). Christ is the Incarnate Word (xvi-xix); comparison with pagan heroes, Hermes, Asclepius, etc. (xxi-xxii); superiority of Christ and of Christianity: hatred of men and of demons (xxiii-xxvi); purity of morals (xxvii-xxix).—Proofs of Christianity from the prophecies (xxx-iii); two digressions: on the agreement between liberty and prophecy (xxxiii-xliv); on philosophy considered as Christianity before Christ (xlv).—The similarities that we find in the pagan worship and philosophy are but a feeble reflection of the Christian worship: baptism (Ixxi); the Eucharist (Ixxv-lixii); Sunday-observance (Ixxvii). Second "Apologeticus"—Recent injustice of the Prefect Urbinus towards the Christians (i-iii). Why is it that God permits these evils: Providence, human liberty, last judgment (iv-xvi).

The "Dialogue" is much longer than the two apologies taken together ("Apol.", I and II in P. G., VI, 328-460; "Dialog.", ibid., 472-800), the abundance of exegetical discussions makes any analysis particularly difficult. The following points are noteworthy: i-ix. In this "Dialogue" which was the result of his philosophic education and of his conversion, one may know God only through the Holy Ghost; the soul is not immortal by its nature; to know truth it is necessary to study the Prophets. x-xxx: On the law. Tryphon reproaches the Christians for not observing the law. Justin replies that according to the Prophets themselves the law should be abrogated, it had only been given to the Jews on account of their hardness. Superiority of the Christian circumcision, necessary even for the Jews. The eternal law laid down by Christ. xxxi-xxvIII: On Christ: His two comings (xxxII sqq.); the law a figure of the new law; the kingdom of Christ proved above all by the Old Testament apparitions (theophanies) (Ixxi-lixii); inanition and virginal conception (lxv sqq.); the death of Christ foretold (lxxviii sqq.); His resurrection (evi sqq.). evii to the end: On the Christians. The conversion of the nations foretold by the Prophets (xxvIII sqq.); Christians are a holier people than the Jews (exix sqq.); the promises were made to them (exxxi); they were prefigured in the Old Testament (exxxiv sqq.).—The "Dialogue" concludes with wishes for the conversion of the Jews.

Besides these authentic works we possess others under Justin's name that are doubtful or apocryphal.

(1) "On the Resurrection", "On the Resurrection" (for its numerous fragments see Otto, "Corpus Apol.", 2nd ed., III, 210-48 and the "Sacra Parallela", Holl, "Fragmente vornehmlicher Kirchenverhae aus dem sacra Parallela", in "Texte und Untersuchungen", nos. 1 and 2, 1877). It is generally supposed that these fragments are taken to attribute to St. Justin by St. Methodius (early fourth century) and was quoted by St. Irenaeus and Tertullian, who definitely, have never done, name the author. The attribution of the fragments to Justin is therefore probable (Harnack, "Chronologie", 608; Bouisset, "Die Evangelieninterpretation Justinian", Göttingen, 1891, 123 sq.; Archambault, "Le témoignage dé
JUSTIN

l'ancienne littérature chrétienne sur l'autenticité de "sur un traité sur la resurrection attribué à Justin l'Apologiste" in "Revue de Philologie", XXXIX, 1905, 73-93. The chief interest of these fragments consist in the introduction, which is explained with much force the transcendent nature of faith and the proper nature of faith. (3) "Oration (Greeks)" (Otto, op. cit., III, I, 2, 18), an apoecrptic tract, dated by Harnack (Sitzungsberichte der k. preuss. Akad. d. Wiss. zu Berlin, 1896, 627-646), about Ad 180-240. Later it was altered and enlarged in Syria: text and English translation by Cureton, "The Oration of Justin", London, 1862, 61-66; the "Apologia" in "Exhortation to the Greeks" (Otto, op. cit., 18-126). The authenticity of this has been defended without success by Widman ("Die Echterheit der Makroden Justins an die Heiden", Main, 1902); Puech, "Sur le Λόγος απεριστάτηθα attribué à Justin" in "Melanges Well", Paris, 1898, 395-406, dates it about 260-300, but most critics say, with more probability, Ad 180-240 (Gaul, "Die Abfassungsverhältnisse der pseudojustinischen Cohortatio ad Grecos", Potsdam, 1902). (4) "On Monarchy" (Otto, op. cit., 126-158), tract of uncertain date, in which are freely quoted Greek poets altered by some Jews (Ad 6). Exposition of the Psalms in the NT in a long tract on the Trinity and the Incarnation preserved in two copies of the longer of which seems the more ancient. It is quoted for the first time by Leontius of Bysantium (d. 543) and refers to the Christological discussions of the fifth century; it seems, therefore, to date from the second half of that century. (6) "Letter to Zenas and Serenus" (Otto, op. cit., 66-98), attributed by Batifol in "Revue Biblique", VI, 1896, 114-22, to Sisinnius, the Novatian Bishop of Constantinople about Ad 400. (7) "Answers to the Orthodox." (8) "The Christian's Questions to the Greeks." (9) "Refutation of certain Aristotelian theses" (Otto, op. cit., IV, 100-222; V, 4-366). The "Answers to the Orthodox" was re-edited in a different and more primitive form by Papadopoulos-Kerameus (St. Petersburg, 1895), from a Constantinople manuscript which ascribed the work to Theodoret. Though this assumption was adopted by the editor, it has not been generally accepted. Harnack has studied profoundly these four books and maintains, not without probability, that they are the work of Diodorus of Tarsus (Harnack, "Diodor von Tarsus, vier pseudojustinische Schriften als Eigentum Diodors nachgewiesen" in "Theol. Zeitschr.", XXII, 4, new series, VI, 4, Leipzig, 1901).

DOCTRINE.—Justin and Philosophy.—The only pagan quotations to be found in Justin's works are from Homer, Euripides, Xenophon, Menander, and especially Plato (Otto, II, 593 sq.). His philosophical development has been well examined by Dury ("The Testimony of Justin Martyr to early Christianity", London, 1882, 132): "He appears to have been a man of moderate culture. He was certainly not a genius nor an original thinker." A true eclectic, he draws inspiration from different systems, especially from Stoicism and Platonism. Waissicker (Jahrbücher f. Protestant. Theol., XII, 1867, 75) thought he recognized a Peripatetic idea, or inspiration, in his conception of God as immoveable above the heavens (Dial., xxvii); it is much more likely an idea borrowed from Alexandrian Judaism, and one which furnished a very easy key to the Irenian's Oecumenism. In I Apol., xx, 1x; II, vii, he adopts, but at the same time transforms, their concept of the seminal Word (Logos ωριστάτηθα) of Philo and Pneumatism (II Apol., vii) and their Atheism (Dial., ii). His sympathies are above all with Platonism. He likes to compare with Christianity: apropos of the last judgment, he remarks, however (I Apol., vii, 4), that according to Plato the punishment will last a thousand years, whereas according to the Christians it will be eternal; speaking of creation (I Apol., xx, 4, lx), he says that Plato borrowed from Moses his theory of an elementary matter. He is more receptive of Christianity apropos of human responsibility (I Apol., xlv, 8) and the Word and the Spirit (I Apol., lx). However, his acquaintance with Plato was superficial; like his contemporaries (Philo, Plutarch, St. Hippolytus), he found his chief inspiration in the Timeans. Some historians have criticized that pagan philosophy already dominated Justin's Christianity (Ad 166, s. Justin, Paris, 1861), or at least weakened it (Engelhardt, "Das Christentum Justins des Märtyrers", Erfangen, 1878). To appreciate fairly this influence it is necessary to remember that in his "Apology" Justin is seeking above all the points of contact between Hellenism and Christianity. It would certainly be wrong to conclude from the first "Apology" (xxii) that Justin actually likens Christ to the pagan heroes or semi-heroes, Hermes, Perseus, or Æsculapius; neither can we conclude from his first "Apology" (iv, 8 or vii, 3, 4) that philosophy played among the pagans a role which it did not have among the barbarians, but only that their position and their reputation were analogous.

In many passages, however, Justin tries to trace a real bond between philosophy and Christianity: according to him both the one and the other have a part in the Logos, partially disseminated among men and wholly manifest in Jesus Christ (I, v, 4; I, xlv; II, viii; II, xiii, 5, 6). The idea developed in all these passages is given in the Stoic form, but this gives to its expression a greater worth. For the Stoics the seminal Word (Logos ωριστατηθα) is the form of every being and the ase of all existence. In the Stoic sense of God. This theory of the full participation in the Divine Word (Logos) by the sages has its full value only in Stoicism (see Logos). In Justin thought and expression are antithetic, and this lends a certain incoherence to the theory; the relation established between the integral Word, i.e. Jesus Christ, and the partial Word disseminated in the world, is more obscure than profound. Side by side with this theory, and quite different in its origin and scope, we find in Justin, as in most of his contemporaries, the conviction that Greek philosophy borrowed from the Bible: it was by stealing from Moses and the Psalms that Plato and the other philosophers developed their doctrines (I, xlv, ix, lx). Despite the obscurities and incongruities of this thought, he affirms clearly and positively the transcendent character of Christianity: "Our doctrine surpasses all human doctrine because the real Word became Christ who manifested himself for us, body, word and soul." (II, Apol., x, 1) This Divine origin assures Christianity an absolute truth (II, xii, 2) and gives to the Christians complete confidence; they die for Christ's doctrine; no one died for that of Socrates (II, x, 8). The first chapters of the "Dialogue" complete and correct these ideas. In them the rather complaisant syncretism of the "Apology" disappears, and the Christian thought is stronger.

Justin's chief reproach to the philosophers is their mutual divisions; he attributes this to the pride of the heads of sects and the servile acquiescence of their adherents: he also says a little later on (vi): "I care neither for Plato nor for the Pythagoras nor for other prophets. I concludes that for the pagans philosophy is not a serious or profound thing; life does not depend on it, nor action: "Thou art a friend of discourse," says the old man to him before his conversion, "but not of action nor of truth" (iv). For Platonism he retained a certain feeling as for a study useful only for the youth. Yet he attacks it on two essential points: the relation between God and man, and the nature of the
scul (Dial, iii, vi). Nevertheless he still seems influenced by it in his conception of the Divine transcen-
dency and the interpretation that he gives to the aforesaid theophanies.

Justin and Christian Revelation.—That which Justin declares in the words through which he is now sure of possessing through Jewish and Christian reve-
lation. He admits that the soul can naturally compre-
prehend that God is, just as it understands that virtue is beautiful (Dial, iv); but he denies that the soul without the assistance of the Holy Ghost can see God or comprehend Him directly through ecstasy, as the Platonik philosophers contended. And yet this knowl-
edge of God is necessary for us: “We cannot know God as we know music, arithmetic or astronomy” (iii); it is necessary for us to know God not with an abstract knowledge but as we know any person with whom we have relations. The problem which it seems impossible to solve is settled by revelation; God has spoken directly to the Prophets, who in their turn have made Him known to us (viii). It is the first time in Christian theology that we find so concise an explana-
tion of the difference which separates Christian revela-
tion from human speculation. It does away with the contradiction of the less implicit manner in which the truth is taken from the “Apolo
gy”, of the partial Logos and the Logos absolute or entire.

The Bible of Justin.—A. The Old Testament.—For
Philo the Bible is very particularly the Pentateuch
(Ryle, “Philo and Holy Scripture”, XVII, London, 1886, 1-10). In keeping with the desire of his purpose, Justin has other preferences. He quotes the Pentateuch often and liberally, especially Genesis, Exodus, and Deuteronomy; but he quotes still more frequently and at greater length the Psalms and the Books of Prophecy—above all, Isaiah. The Books of Wisdom are seldom quoted, the historical books still less. The books that we never find in his works are Judges, Esdras (except in one passage which is attributed to him by mistake—Dial, lxxii), Tobias, Judith, Esther, Canticles, Wisdom, Ecclesiasticus, Abigab, Nahum, Habacuc, Sophonias, Aggeus. It has been noticed, too (St. John Thackeray in “Journal of Theol.
Study”, IV, 1903, 265, n. 3), that he never cites the last chapters of Jeremias (apropos of the first “Apol-
ogy”, xlvii, Otto is wrong in his reference to Jer., 1, 3). Of these omissions the most noteworthy is that of Wisdom, precisely on account of the similarity of ideas. It is to be noted, moreover, that this book, although the New Testament has not preserved the
tement of Rome (xxvii, 5) and later by St. Irenaeus (Eu-
seb., Hist. eccl., V, viii, 8; V, xxxvii) is never met with in the works of the apologists (the reference of Otto to
talian, vii, is inexact). On the other hand one finds in Justin some apocryphal texts: pseudo-Esdras (Dial, lx), Pseudo-Jerome (Dial, lxvi), Ps. xvi (Dial, xlii; I Apol, xii, xvi, xxxv, lxxi, viii, li, lxxvii, lxvii), but he does not assert that he found them in the memos. It is quite probable that Justin used a concordance, or harmony, in which were united the three synoptic Gospels (Lip-
pel, op. cit., 14, 94) and it seems that the text of this concordance more closely resembled the otherwise called Western text of the Gospels (cf. ibid., 97). Jus-
tin’s dependence on St. John is indisputably established by the facts which he takes from him (I Apol, lxi, 4; 5; Dial, lxxix, lxxxvii), still more by the very strik-
ing similarity in vocabulary and doctrine. It is cer-
tain, however, that Justin does not use the fourth
Gospel as abundantly as he does the others (Purves,
op. cit., 233); this may be owing to the aforesaid con-
cordance, or harmony, of the synoptic Gospels.
He seems to use the apocryphal Gospel of Peter (I Apol., lxxxv, 8; cf. Dial, xii, 2; Revue Biblique, III, 1894, 531 seq.; Harnack, “Betrachtungen des Evang. des Petrus”, Leipzig, 1893, 37). His dependence on the Protev-
gelium of James (Dial, lxxxviii) is doubtful.

Apologetical method.—Justin’s attitude towards phi-
losophy, described above, reveals at once the ten-
dency of his polemics; he never exhibits the indigna-
tion of a Tattian or even of a Tertullian. The aim of
the Christians he sometimes answers, as do the other apologists, by taking the offensive and attacking pagan morality (I Apol., lxxvii; II, xii, 4, 5), but he dislikes to insist on these columns: the interlocutor in the “Dialogue” does not care to believe them, nor does Justin wish to
(enter into discussion with the “deluded mob” whom he barely mentions (II Apol., iii, 2); in the “Dialogue” (ix) he is careful to ignore those who would trouble him with their loud laughter. He has not the elo-
quence of Tertullian, and can obtain a hearing only in a small circle of men capable of understanding religion and of being convinced of the ideas. His chief method of proving the Gospels, and one calculated to convert his hearers as it had converted him (II, Apol., xii), is the great new fact of
Christian morality. He speaks of men and women who have no fear of death (I Apol, ii, xi, xiv; II, xii, Dial, xxx, who prefer truth to life (I Apol, xii, xiv) and are ready to wait the time allotted by God (II, iv, 1); he makes known their devotion to their children (I, xxxvii, their continency (I, xxxi), their love of peace (I, xxxix), their charity even to-
wards their enemies, and their desire to save them (I Apol, lvi; Dial, xxxixi), their patience and their
prayers in persecution (Dial, xvi), the words of man-
ifestation which are another name for the life that they led in paganism with their Christian life (I Apol, xiv), he expresses the same feeling of deliv-
ever, seems subordinate, as does the worship which is rendered to Him (I Apol., vi; cf. lxi, 13; Teder, "Justins des Märtyrers Lehre von Jesus Christus"); Freiburg im Br., 1906, 103-10). The Father envisaged Him after an incalculable volume of time (I Apol., lii, c, xxvii, xxviii; cf. Teder, op. cit., 104), at the beginning of all His works (Dial., lxii, lxiii, II Apol., vi, 3); in this last text certain authors think they distinguished in the Word two states of being, one intimate, the other outspoke, but this distinction, though found in discussing the Logos, is very doubtful. Through the Word God has made everything (II Apol., vi; Dial., cxiv). The Word is diffused throughout all humanity (I Apol., vi; II, viii; xiii); it was He who appeared to the patriarchs (I Apol., lxii; lxiii; Dial., lxii, lx, lx etc.) and who inspired the prophets (I Apol., xxiii; xxvi; II, x, etc.). He became incarnate and is Jesus Christ (II Apol., viii, 3; x, 1; etc.). Two influences are plainly discernible in the aforesaid body of doctrine. It is, of course, to Christian revelation that Justin owes his concept of the distinct personality of the Word, His Divinity and Incarnation; but philosophic speculation is responsible for his understanding of the temporal and voluntary generation of the Word, and for the subordinationism of Justin's theology. It must be recognized, moreover, that the latter ideas stand out more boldly in the "Apologetic" than in the "Dialogue." The Holy Ghost occupies the third place in the Trinity (I Apol., vi). He inspired the prophets (I Apol., vii; Dial., vii). He gave seven gifts to Christ and descended upon Him (Dial., lxxxxvi, lxxxviii). For the real distinction between the Son and the Spirit see Teder, op. cit., 119-23. Justin insists constantly on the virgin birth (I Apol., xxxii; xxxiii; Dial., xxxiii, lxxvi, lxxviii, etc.) and the reality of the flesh of Christ (Dial., lxviii, lxxxvii, ciii; cf. II Apol., x, I). He states that among the Christians there are some who do not admit the Divinity of Christ but they are a minority; he differs from them because of the authority of the Prophets (Dial., lxxvi), the entire dialogue, moreover, is devoted to proving this thesis. Christ is the Master whose doctrine enlightens us (I Apol., xxxiii, 3; xxxiii, 2; xxxiii, 2; II, vii, 5, xii, 2; Dial., vii, lxxvii, lxxxviii, c, cxxii), also the Redeemer whose blood saves us (I Apol., xxxviii, 10, 18; Dial., xxxii, xl, xvi, cvi, etc., cf. "Historie du dogme de la Trinite," Paris, 1905, 115, and tr., London, 1908). The rest of Justin's theology is less personal, therefore less interesting. As to the Eucharist, the baptismal Mass and the Sunday Mass are described in the first "Apologetic" (lxxvi-lxvii), with a richness of detail unique for that age. Justin here explains the dogma of the Real Presence with a wonderful clearness (lxvi, 2): "In the same way that through the power of the Word of God Jesus Christ our Saviour took flesh and blood for our salvation, so the nourishment consecrated by the prayer formed of the words of Christ... is the flesh and blood of this incarnate Jesus.") The word "Logos" (cfr. xvi) completes this doctrine by the idea of a Eucharistic sacrifice as a memorial of the Passion. The role of St. Justin may be summed up in one word: it is that of a witness. We behold him in one of the highest and purest pagan souls of his time in contact with Christianity, compelled to accept its irresistible truth, its pure moral teaching, and to admire its superhuman constancy. He is also a witness for the second-century Church which he describes for us in its faith, its life, its worship, at a time when Christianity yet lacked the firm organization that it was soon to develop (see IANUARIUS, SANS), but the larger energies whose constitution and spirit were clearly luminously drawn by Justin. Finally, in consecration and confirmation of the aforesaid, Justin was a witness for Christ unto death.

JULES LEBRETON.

JUSTUS, Saint, fourth Archbishop of Canterbury; d. 627 (?). For the particularities of his life we are
almost entirely dependent on Venerable Bede’s “Hist-
oria Ecclesiastica,” the additions of medieval writers,
such as William of Malmsbury or Elnham, possessing
no authority. Justinus was one of the second band of
missionaries sent by St. Gregory the Great, the com-
pany which arrived in 601 to reinforce St. Augustine
and his See. It is said that he was richly dressed
and other gifts sent by the pope. It is not certain
whether he was a secular priest or a monk. St. Bede
is silent on the point and only later monastic writers
from Canterbury claim him as one of their own order.
In 604 he was consecrated by St. Augustine as first
Bishop of Rochester, on which occasion he died the
next day. St. Bede bestowed on the new see, by charter, a territory
called Priestfield and otherlands. Other charters in
which his name occurs are of dubious authenticity.
After the death of St. Augustine, Justinus joined with the
new Archbishop, St. Laurence, and with Mellitus of
London in addressing letters to the recalcitrant Brit-
ish bishops, but without effect. During the heathen
reaction which followed the death of Ethelbert, Justinus
was expelled from his see and took refuge in Gaul for a
year, after which he was recalled by Eadwald who
had been converted by St. Laurence. On the death of
St. Laurence (24 April, 624) who had succeeded St.
Laurence as archbishop, St. Justinus was elected to
the vacant primacy. The letter which Pope Boniface
addressed to him when sending him the pallium is pres-
served by Venerable Bede (H. E., I, 8). He was already an old man, and little is recorded of his ponti-
cate. His only surviving work is a historical, descriptive
phraseology as Bishop of Rochester and St. Paulinus as Bishop for the North.
His anniversary was kept at Canterbury on 10 November,
but there is uncertainty as to the year of his death, though 627, the commonly received date, would appear to be correct, especially as it fits in with the period of three years usually assigned by Ak-
chroniclers to his archiepiscopate. He was buried with his predecessors at St. Augustine’s Abbey, Can-
terbury, and is commemorated in the English supple-
ment to the Missal and Breviary on 10 November.

Archbishops, I 29 3-4; HOOK, Lives of the Bishops, I, 29 4-5; STUBBS, in Dict. Christ.
Bishop, in this vol.; HUNYDI, in Dict. Nat. Biog., v. v.; POLLANDIUS, Bibliotheca Hagiographica Latina, I (Brus-
sele, 1836-1869).

EDWIN BURTON.

JUSTUS von LANDSEB, JOHANNES. See LAND-
PERGUS.

Juvenal, Bishop of Jerusalem. See JERUSAL,
sub-title I.

Juvenalus, C. VETTUS AQUINUS, Christian Latin poet
of the fourth century. Of his life we know only what St. Jerome tells us (De viris, lxxxi; cf. Chron.,
ad gr. 2345; Erist. iv, 5; In Matt. 1, 8, 11) He was a Spaniard of very good birth, became a priest,
and wrote in the time of Constantine. From one
passage in his work (II, 806, sq.) and from St. Je-
rome’s Chronicle it must be inferred that he wrote
about the year 330. His poem, in daecylic hexam-
ers, is entitled “Evangeliorum libri” (The Gospels).
It is a history of Christ according to the Gospels, particularly that of St. Luke. He goes to the
other Evangelists for what he does not find in St.
Matthew—as the story of the Infancy, which he takes
from St. Luke. He follows his model very closely,
“almost literally,” as St. Jerome says. The whole
problem for him is to render the Gospel text into easy
language conformable to the tradition of the Latin
Church, and borrowed especially from Cyprian and
Barnabes, Gesch. der altkath. Liturgie, I (Freiburg im
Br., 1907), 240-42.

JUSTUS, Saint, fourth Archbishop of Canterbury;

passage in his work (II, 806, sq.) and from St. Je-

Romus’s Chronicle it must be inferred that he wrote
about the year 330. His poem, in daecylic hexam-
ers, is entitled “Evangeliorum libri” (The Gospels).
It is a history of Christ according to the Gospels, particularly that of St. Luke. He goes to the
other Evangelists for what he does not find in St.
Matthew—as the story of the Infancy, which he takes
from St. Luke. He follows his model very closely,
“almost literally,” as St. Jerome says. The whole
problem for him is to render the Gospel text into easy
language conformable to the tradition of the Latin
Church, and borrowed especially from Cyprian and

ably at Washington and Denver, jurisdiction is added to try adults charged with contributing in any way to the degrading or wrongdoing of a child, and husbands or fathers who fail to support or who desert their wives and children in destitute or necessitous circumstances. At Washington, regulating child labour are enforced through these courts.

By the common law, a child under the age of seven years was conclusively presumed to be incapable of committing a crime. Between seven and fourteen years of age, criminal intent, which there can be no crime, must be shown by the prosecution. Malice would supply age, was the maxim. At fourteen, the age of puberty, when the child had all the powers it would ever possess, the law cast upon it full responsibility for its criminal acts. It was sentenced, upon conviction, to the jail or the penitentiary, where enforced association with adult criminals brought about most deplorable results. Society has been slow to awaken to the mistake, nay more, the criminal folly, of this policy, and now, under the operation of juvenile-court laws, all this is being changed. The juvenile-court laws more than any other means a new method in dealing with children who commit offences. It is the manifestation of a new and more rational spirit on the part of the State towards children who violate its public law. The State by its punishment of the adult for crime committed, endeavors on one hand, to restrain the criminal, and on the other, to deter by the severity of its punishment others from transgressing the law. Now it is recognized that the character of children is yet unformed, that, instead of reformation, they stand in need of formation of good habits and character, and so the aim of the juvenile court becomes correction rather than punishment.

In some States, the juvenile-court movement has commenced by holding for the trial of children a separate session of the ordinary criminal court of first instance. In other States, juvenile courts are established, but judges of other tribunals act successively, in turn, as judges of the juvenile court. Elsewhere, as in Colorado, Maryland, Indiana, and the District of Columbia, there are judges appointed as judges of the juvenile court only, and this is claimed to be the best method by those who have given the movement close study. The juvenile court soon becomes a judge in its work, but the demands of the important problem of the child, which is his, require in himself the combined qualities of the jurist, the teacher, the sociologist, and the philanthropist. The juvenile courts of the United States may be grouped under two classes: juvenile courts where the procedure is according to that of the English Court of Chancery, and juvenile courts where the procedure approximates that of the ordinary criminal court. The Juvenile Court of Chicago is presided over by one of the judges of the Circuit Court. The proceedings conform as nearly as may be to the practice in Chancery. The plaintiff is usually a petition, usually a petition, and the process used is a summons. Such proceedings by the State of Illinois, in dealing with the child who has broken one of its laws, consists of a declaration that the child needs the parental care of the State, which has always been exercised over children through the medium of the Court of Chancery, and that it thus requires the parental care of the State, which is patria patria, by reason of the failure of the father and mother, first as they are, in the order both of nature and of time, to fulfill their obligations towards this child. Accordingly the State does not brand the child as a criminal child, but seeks, in his name as defendant, before the court, requiring the parental correction of the State, not its punishment. Chicago had the earliest juvenile court, and this is the furthest advance in the movement. In fact, it smacks strongly of paternalism on the part of the State; but we should remember that it is paternalism exercised where it is badly lacking. Practically, the power is invoked not to interfere with the normal family, but to succour the poor little waifs of fortune out of unfilled homes, starved and weatherworn, the companions, oftentimes, of thieves and worse.

To the other class belongs the Juvenile Court of New York City, presided over in rotation by the judges of the Court of Special Sessions, which is a criminal court for the trial of misdemeanours without a jury. But even here the court has power and authority to extend relief to children who have unfilled homes or are otherwise abused by their parents—under our system of jurisprudence, an incident of chancery jurisdiction. New York City is the principal gateway of our country, and the problems of this court are made heavy by the presence in its jurisdiction of many who are strangers both to our language and our customs, and by the acute conditions accompanying an enormous population in which are the extremes of wealth and want. The juvenile court at Washington has a criminal procedure. This court was established by the Act for the purpose of giving original and exclusive jurisdiction of all crimes and offences of persons under seventeen years of age, not capital or otherwise infamous and not punishable by imprisonment in the penitentiary. The court is also given jurisdiction over those adults referred to it by the criminal courts for parents or guardians who fail or refuse to provide food, clothing, or shelter for their children, the criminal court of the district having concurrent powers in the latter class of cases. Nor can a dependent child be admitted to any institution supported wholly or in part out of public funds, until the fact of dependency is first ascertained and proved, in the juvenile court. In this court are tried all cases arising under the child labour law. Provision is made by the Act for a jury and for appeals in matters of law to the Court of Appeals of the District of Columbia. The juvenile court is empowered to defer sentence, at its discretion, in the case of any juvenile offender under seventeen years of age, and to place such child on probation, during which it shall be under the jurisdiction of the court.

The probation officers are generally employed by the court to make a preliminary investigation before the child is arraigned. This investigation usually results in a helpful data about the child's home, its environment, its habits and its behavior. It is comparatively easy to affix a statutory punishment in the case of the adult found guilty of crime. It is a far more difficult matter to correct a wayward child; so that the previous history of the child is most helpful to the judge. Then, too, the services of the physician, the surgeon, the chemist, and others are often brought into requisition, to cure some physical ill, such as adeno-ideal growths, which may in a measure account for the delinquency of the child. In both classes of juvenile courts—those whose procedure is after the manner of chancery or equity courts, and those whose procedure is that of the ordinary criminal courts—the treatment of the child and the attitude of the judge towards the child are the same. In the treatment, the underlying purpose is the saving of the child, not its punishment, nor even its restraint. And the personality of the judge is an element of vast importance in any juvenile court. "I have always felt and endeavored to act in each case", said Judge Tuthill, of Chicago, "as I would were it my own son who was before me in my library at home charged with misconduct". The Supreme Court of Utah, in the case of Mill v. Brown, 88 Pacific Reporter, 609 (1907) succinctly summed up the matter in accordance with their true spirit and intent requires a man of broad mind, of almost infinite patience, and one who is the possessor of great faith in humanity and thoroughly imbued with that spirit. The judge
of any court, and especially a judge of a juvenile court, should be willing at all times, not only to respect, but to maintain and preserve, the legal and natural rights of men and children alike."

The juvenile court must not commit to the jail or the workhouse or the penitentiary the children who can be dealt with in any other way. The court must not commit children to so-called reform schools, institutions that sprang into existence some seventy-five years ago, or to some other place provided for their kindly but custodial care. In the case of Mill v. Brown, supra, we read: "Before the State can be substituted to the right of the parent, it must affirmatively prove that the parent has forfeited his natural and legal right to the custody and control of the child by reason of his failure, inability, neglect, or incompetency to discharge the duty and thus to enjoy the right. Unless, therefore, both the delinquency of the child and the incompetency, for any reason, of the parent concour, and are so found, the court exceeds its power when committing a child to any of the institutions contemplated by the act."

Instead of so committing the child, the court may either impose a fine or, what is done in a large percentage of the cases, place the child upon probation. Probation is a more gentle and less custodial method of dealing in favor of the best method to handle or discipline, not only children who violate the law, but adults as well. Probation means that, with confidence in the promises of the offender to offend no more, the court suspends sentence and enforces him under the care of the probation officers attached to the court, with a view to releasing him in the future, when his conduct and progress justifies it, from the jurisdiction of the court. The management of penal institutions release prisoners from time to time in a similar manner, but in such cases the release is more accurately and more properly termed parole. The nomenclature employed in the method is, however, far from settled.

On probation, the child remains in its home, in its natural environment, where the expense, too, of its nurture and education should properly be borne. This has resulted in a substantial saving, even from a pecuniary point of view, to the communities where it has been tried, often amounting to as much as sixty thousand dollars per annum, it is estimated, in cities of two hundred and fifty thousand inhabitants. It has been demonstrated that "it is wiser and less expensive to save children than to punish criminals." To do this probation imposes certain positive duties upon both probation officer and judge, especially where the function of the judge is confined to the juvenile court. In such a case the best results are obtained when the judge becomes in practice his own chief probation officer, carefully supervising the system himself. The judge and the probation officers must labour to develop good character in the child. The aim of probation is character-building. Hereby is brought about the saving of the child, the "citizen of to-morrow," to himself and to his country. Probation is of such importance that it has been termed the keystone of the juvenile court system. By the patient, painstaking efforts of the probation officers, much ignorance is dispelled, and yet the helpful agencies in a community are drawn upon to serve the legitimate needs of the child, mentally, morally, and physically. An account of the juvenile court would be incomplete without at least a passing reference to Judge Ben B. Lindsey, of Denver, Colorado, whose name is to many articles and public addresses throughout the United States upon the juvenile court, is so intimately associated with the institution in the public mind. His excellent service to the children of Denver, his many speeches, addresses, and published articles, have been potent in the steady spread of the movement for juvenile courts.

As above mentioned, to Chicago belongs the honour of having established the first juvenile court, on 1 July, 1899. The pressing need was generally felt, the country was ripe for the movement, and there quickly followed the inauguration of juvenile courts in Denver, Indianapolis, New York, Philadelphia, Washington, until some thirty cities have them, and almost all the cities are considering the question. This American movement has appealed to England, who had been adopted in Germany, France, Belgium, Sweden, Hungary, Italy, and England. Canada and Australia now have juvenile courts, also South Africa and India. The English law follows closely the legislation to protect child life that has been enacted throughout the United States. England the religious belief of the child, by having the court select, if possible, a person of the same religious persuasion or some person who will give an undertaking that the child or young person shall be brought up in accordance with its own religious persuasion. This act is to be cited as the Children's Act, 1908. It is technically 8 Edward VII, Chapter 67, and is popularly known as "the Children's Charter." Thus it is recognized as entering into the fabric of the British Constitution. By it child is defined to mean a person under the age of fourteen years, while the expression young person is rapidly increasing to years of age. With the necessary modifications, the act is applied to Scotland and to Ireland. When the court is satisfied of the guilt of the child, it may, in its discretion, deal with the case by dismissing the charge; by placing the offender under the care of a probation officer; by committing the offender to the care of an institution, either of a relative or of some institution; by ordering the offender to be whipped; by ordering the offender to pay a fine, damages, and costs; by ordering the parent or guardian of the offender to make payment of a fine, damages, or costs; and, where the offender is over fourteen years of age, by sending him to prison.

Thus has grown and spread the most remarkable development in jurisprudence of the past decade, a development that is carried on the wings of mercy, kindness, and love, in whose scales of justice are balanced the inexperience of the child and its environment with the responsibility of the parent and the adult, now, for the first time, recognized and enforced by the law of the land. The juvenile court has its origin in the needs of the time. These needs are largely the result of the industrial revolution consequent upon the use of steam and the establishment of factories and of child labor. Practically, there are no industries in the United States where the concentration of workers in factories has promoted the growth of communities and cities. The trend is from the country, with its peace and simple life, to the cities, with their turmoil and dissipations. The conditions in the cities growing out of congestion of population, the use as habitations of flats and tenement houses, have all weakened family life and forced the nervous and mental development of the children into precocity. There is some truth in the saying that there are no children nowadays, and this is a prolific source of the need for juvenile courts. But, as demanded by conditions, the work of these courts is remedial rather than vindictive and punitive. They aim to conserve child-life. All this is in harmony with the spirit of the Catholic Church, whose Divine Founder said: "Suffer little children to come unto me, and forbid them not." In the spirit of the Master, she early set her face against the exposure of sad and deplorable abuses. Creches and infant asylums have in all Christian ages been offered as an alternative to child-murder. Devoted sisterhoods and brotherhoods have always maintained orphan asylums, refugees, and hospitals for the protection, safeguarding and training of the orphaned, abandoned, and suffering children of Christ. The spirit that created the juvenile court is closely akin to the spirit of the Catholic Church, which, in its canonical punishments, has
never been moved by a vindictive spirit. Recognizing in the meanest and the weakest, a soul purchased by the Blood of Christ, her sanctions are chiefly correctional and medicinal. This is also the motive of the juvenile court, the essence of which is correction, conservation, remedy; not retaliation or vindictive punishment.

William H. Dr. Lacy.

Kabbala. — The term is now used as a technical name for the system of esoteric theosophy which for many generations played an important part, chiefly among the Jews, after the beginning of the tenth century of our era. It is a transcript of the Heb. עניין, itself an abstract noun derived from the pi’el עניין. It primarily signifies reception, and, secondarily, a doctrine received by oral tradition. Its application has greatly varied in the course of time, and it is only since the eleventh or twelfth century that the term Kabbala has become the exclusive appellation for the system of Jewish religious philosophy which claims to have been uninterruptedly transmitted by the mouths of the patriarchs, prophets, elders, etc., ever since the creation of the first man. The two works which the advocate of this system treat as the authoritative exposition of its doctrines are: (1) the “Book of Creation” and (2) the “Zohar”. The former is a short treatise consisting of six chapters subdivided into thirty-three very brief sections. It is written in Mishnic Hebrew, and is made up of oracular sentences. It professes to be a monologue of the patriarch Abraham, who enumerates the thirty-two ways of wisdom by which God produced the universe, and who, shows, by the analogy which is assumed to exist between the visible things and the letters which are the signs of thought, the manner in which all has emanated from God and is inferior to Him. The “Zohar”, or second expository work of the Kabbala, has justly been called the “Bible” of the Kabbalists. It is written in Aramaic, and its main portion is in the form of a commentary on the Pentateuch according to the latter’s division into fifty-two weekly lessons. Its title “Zohar” (light, splendour) is derived from the words of Gen., i, iii (Let there be light), with the exposition of which it begins. It is a compulsory work, wherein several fragments of ancient treatises can still be noticed. The following is a brief account of the chief contents: doctrinal, hermeneutical, and theurgical, of the “Zohar”.

Considered in Himself, the Supreme Being is the En-Soph — Endless, Infinite—and, in a certain sense, the En—Non-existent—since existence is in human conception a limitation which as such should not be predicated of Him. We can conceive and speak of God only in so far as He manifests and, as it were, actualises Himself in or through the Sephiroth. His first manifestation was by way of concentration in a point—the first Sephira, “the Crown”, as it is called—which is hardly distinguishable from the En-Soph from Whom it emanates, and which is expressed in the Bible by the name Ehyeh (I am). From the first Sephira proceeded a masculine or active potency called wisdom, represented in the Bible by Yah, and an opposite, i.e. a feminine or passive potency, called intelligence, and represented by Yahweh. These two opposite potencies are coupled together by the “Crown”, and thus yields the first triunity of the Sephiroth. From the junction of the foregoing opposite tendencies emanated the masculine potency called love, the fourth Sephira, represented by the Biblical El, and the feminine one justice, the fifth Sephira, represented by the Divine name Eloah. From them again emanated the uniting potency, beauty, the sixth Sephira, represented in the Bible by Elohim. And thus is constituted the second triunity of the Sephiroth. In its turn, beauty beamed forth the seventh Sephira, the masculine potency firmness, corresponding to Yahweh Sabaoth, and this again produced the feminine potency splendour, represented by Elohe Sabaoth. From splendour emanated the ninth Sephira, foundation, which answers the Divine name El-Hai and closes the third triunity of the Sephiroth. Lastly, splendour sends forth kingdom, the tenth Sephira, which encircles all the others and is represented by Adonai. These ten Sephiroth are emanations from the En-Soph, forming among themselves and with Him a strict unity, in the same way as the rays which proceed from the light are simply manifestations of one and the same light. They are infinite and perfect when the En-Soph imparts His fullness to them, and perfect unto infinity from them (Ginsburg). In their totality, they represent and are called the archetypal man, without whom the production of permanent worlds was impossible. In fact, they constitute the first world, or world of emanations, which is perfect and immutable because of which however, these are forever reproducing.

Emanating immediately from this first world is the world of creation, the ten Sephiroth of which are of a more limited potency, and the substances of which are of the purest nature. From the world of creation proceeds the world of formation, with its less refined ten Sephiroth, although its substances are still without matter. Finally, from this third world proceeds the world of action or of matter, the ten Sephiroth of which are made of the grosser elements of the other worlds. Of these worlds, the second, that of creation, is inhabited by the angel Metatron, who governs the visible world, and is the captain of the hosts of good angels who in ten ranks people the third world, that of formation. The demons or bad angels inhabit the fourth world, that of action, the lowest regions of which constitute the seven infernal halls wherein the demons torture the poor mortals whom they betrayed into sin in this life. The prince of the demons is Samael (the “angel of poison or of death”), he has a wife called the Harlot; but both are treated as one person, and are called “the Beast”. Man was directly created not by En-Soph, but by the Sephiroth, and is the counterpart of the archetypal man. His body is merely a garment of his soul. Like God, he has a unity and a triunity, the latter being made up of the spirit representing the intellectual world, the soul representing the sensuous world, and the life representing the material world. Souls are pre-existent, destined to dwell in human bodies, and subjected to transmigration till at last they return to God. The soul finds also in the Sephiroth, which represent the mind, a spiritual equivalent—viz. at the advent of the Messiah born at the end of days—to the bosom of the Infinite Source. Then Hell shall disappear and endless bliss begin.

All these esoteric doctrines of the Kabbals are supposed to be contained in the Hebrew Scriptures, in which, however, they can be properly only by those initiated into certain hermeneutical methods. The following are the three principal methods of discovering the heavenly mysteries hidden under the letters and words of the Sacred Text: (1) The Temurah (change), by means of which each letter of the Hebrew alphabet is interchanged with another according to some fixed process, as when Aleph, the first letter, becomes Lamad by interchange with the twelfth, the second, Beth, becomes Mem, the thirteenth, etc.; or, when the last letter takes the place of the first, the last but one takes...
the place of the second, etc.; (2) the Gematriah (Gr. γεμα-
τρια), which consists in the use of the numerical values of
the letters of a word for purposes of comparison
with other words, which gives the same or similar
combinations of numbers: thus in Gen., xlix, 10,
"Shiloh come" is equivalent to 358, which is also
the numerical value of Messiah, whence it is inferred
that Shiloh is Messiah. The seven chief elements
of the "Zohar," needs no long description here.
It forms part of what has been called the practical
Kabbala, and supplies formulas by means of which the
adapts can enter into direct communication with
invisible powers and thereby exercise authority over
demons, nature, diseases, etc. To a large extent it is
the natural outcome of the extraordinary hidden
meaning ascribed by the Kabbala to the words of
the Sacred Text, and in particular to the Divine names.

Of course, the "Book of Creation" does not go back
to Abraham, as has been claimed by many Kabbal-
ists. It is the inscription by others to Rabba and Raba (d.
A.D. 120) in the former centuries of Christian
history. With respect to the "Zohar," its compilation is justly referred to
a Spanish Jew, Moses of Leon (d. 1035), while some of its
elements seem to be of a much greater antiquity.
Several of its doctrines recall to mind those of Pythagoras,
Plato, Aristotle, the neo-Platonists of Alexandria, the
Oriental or Egyptian Pentateuch and the Coptics of
the earliest Christian ages. Its speculations concern-
ing God's nature and relation to the universe differ
materially from the teachings of Revelation. Finally,
it has decided no right to be considered as an
excellent means to induce the Jews to receive Chris-
tianity, although this has been maintained by such
Christian scholars as R. Lully, Pico della Mirandola,
Reuchlin, Knorr von Rosenroth, etc., and although
many prominent Jewish Kabbalists as R. Riccio,
Con-
rad, Otto, Rittanghel, Jacob Franck, etc., have
embraced the Christian Faith, and proclaimed in their
works the great affinity of some doctrines of the
Kabbala with those of the Bible.

FRANCIS E. GIGOT.

Kafiristan and Kashmir, Prefecture Apostolic,
of, established (1887) by Leo XIII in the extreme North
of India. As regards India proper, the district was,
from 1857, part of the Capuchin Diocese of Lahore.
In that year it was confided to the Fathers of the Eng-
lish Foreign Missions (Mill Hill). Part of the Prefecture
includes some of the most important British military
stations in North India. The Prefecture is at the mouth of
the Khyber Pass, nowhere and Rawalpindi, the latter
place being the army headquarters of the lieutenant-
general commanding the Northern Army in India.

Rawalpindi is also the residence of the Prefect Apo-
stolic, the Very Rev. Dominic Wagner, nominated 13
March, 1891, consecrated in 1893 in Ireland and
ordained in Salford Cathedral by Cardinal Vaughan on
February, 1889. He was educated at the Jesuit Col-
lege of Culemburg in Holland and at St. Joseph's For-
sign Missionary College, Mill Hill, London. In the
prefecture there are two important convents: the first
is at Murree in the charge of the nuns of the Con-
gregation of Jesus and Mary. This institution com-
prises a boarding school for young ladies, a military
orphanage, and a day school for outsiders. The other
convent is situated at Rawalpindi, and is in charge of
the Presentation of the Most Holy Virgin. They have,
besides, a number of new postulants from Ireland and
have found a convent in Kashmir. They will also help
Doctor Elisabeth Biebl, who under the guidance of
the prefect Apostolic, is about to open (1909) a Cath-
olic hospital for the native women and children of
northern India. At the request of Father Simon, assisted
by a staff of twelve lay teachers, conducts an
important school for native Kashmir boys.

The pupils number three hundred. The prefecture
comprises about fifteen million inhabitants. Twelve
million five hundred thousand of these are Mohammed-
dans, two million are Hindoos, five hundred thousand
are Buddhists and about five thousand are Catholics.
J. A. CUNNINGHAM.

Kafirs, a term popularly applied to nearly all the
natives of South Africa. It was originally imposed
by the Arab traders as the name for an "unbeliever.
" The natives do not use the word, but distin-
guish themselves by the names of their own
tribes. Even in legal phraseology there is some
fusion; but the following is a serviceable list of the
native races of South Africa as known to the law:
Kafir, Zulu, Basuto, Bechuana, Digo, Gri-
idaro, Damara, Korna, Bushman, and Hottentot.
The almost universal language of the South Afri-
can natives is the Bantu, of which the Kafir group has
four subdivisions, Xosa, Zulu, Tabele, Mfengu.
It is likely that many of the tribes evangelized by the
Jesuits and Dominicans from the fifteenth to the
eighteenth centuries were the ancestors of the Kafirs.
When the Catholic missionaries were driven out, the
native converts could not stand alone, and relapsed
into barbarism, although individuals had risen high
in the scale of civilization. The terrible Zulu chief
Chaka carried on an aggressive war against the other
tribes, at the beginning of the nineteenth century,
and over a million have said to be spared. Hence
until 1879 came a series of wars between the Kafirs
and the British or Dutch. To-day there are, south of
the Zambesi, some five million natives, chiefly
Kafirs. In Cape Colony, the state which has the largest
European population of the Union, the Kafirs number
from 100 to 316. The greatest number of Kafirs
occupy the land by tribal or communal tenure.
They are also divided into areas where they are subject to
their own laws and the suzerainty of Great
Britain. Some are squatters on private or govern-
ment lands. There are also mission locations and
labour locations. A few have individual titles to land,
and some are scattered as servants among the whites.
In Cape Colony there are about 5500 regis-
tered voters out of a total of about twenty thousand
non-European voters. In the other South African
states the native voter is a negligible quantity.

The importance of missionary work among the
Kafirs may be gauged from the following remarkable
words of the Native Commission, 1903-5, appointed
by all the South African States: "The commission
considers . . . that no merely secular system of
morality that might be applied would serve to raise
the native's ideal of conduct and the evil influences
that have been alluded to, and is of opinion that hope for the elevation of the native races
must depend mainly on their acceptance of Christian
faith and morals." The tribal system is in many
ways an impediment to missionary enterprise, but it
is a safeguard against political agitation.

The native is incapable of being a moderate drinker,
and abdotion is the policy in all native reserves.
any is decreasing slowly but surely. The dangerous Ethiopian movement (the revolt of native Christians from the control of white missionaries) is felt in all Protestant missions, but has had little footing in Catholic stations. The principal Catholic Kafir missions are now in the hands of Trappists, Oblates of Mary immaculate, and Jesuits. Full statistics are not obtainable. The census of 1904 shows that in Catholic stations of native inhabitants under 5000. The Trappists have 58 priests, 223 lay brothers, and 328 nuns, working among the natives; 82 schools, and 42 mission stations. About 12,000 Kafirs in South Africa to-day have been trained in Trappist missions.

Kager, Johanne Matthias, German historical painter, b. at Munich, 1586; d. at Augsburg, 1834. He was originally a pupil of Pieter de Witte (Candito), but became young and spent years there. On his return, he was called to Munich by the Elector Maximilian, who appointed him to be his principal painter, and granted him a considerable allowance. He settled down in Augsburg, and spent the rest of his years in that place, becoming burgomaster of the city. Many of the palaces and churches at Munich, but his finest work, called "The Last Judgement", is in the Senate Hall at Augsburg. A notable picture by him is a representation of "David and Abigail", now at Vienna. He etched several plates from his own design, representing religious subjects (dating 1600, 1601, 1603), and his pictures were also engraved by two members of the Sadeler family, and by Kilians, the plates numbering altogether over seventy. He practised in architecture, and painted a few miniatures, but his chief work was in fresco and in oil.

Kaiserschick. See Cesarea.

Kaiser, Kajetan Georg von, chemist, b. at Kelheim on the Danube (Bavaria), 5 Jan., 1803; d. at Munich, 28 Aug., 1871. He was appointed professor of technology at the University of Munich in 1851, and in 1868 became professor of applied chemistry at the technical high school in Munich. His scientific researches into the chemistry of fermentation are of importance; a saccharometer invented by him in 1842 serves for the determination of the percentages of the contents of wine. In addition to articles in scientific journals, he published the paper "Ueber Bieruntersuchungen und Fehler, welche dabei gemacht werden können" (Munich, 1846). He also brought out the scientific works of his friend, the chemist and mineralogist, Johann Nepomuk von Fuchs (d. 1856), under the title "Gesammelte Schriften des Joh. Nep. von Fuchs" (Munich, 1856), adding an obituary notice of that scientist. Like Fuchs, Kaiser always remained a faithful and steadfast Catholic, even in the period of 1871–1. It is stated of him in an obituary notice that "his Catholic belief was the invulnerable spot in his heart, in which he always maintained his own individuality under every trial." He was a member of the American Chemical Society (IV (Berlin, 1871); Kniehler, Das Christentum und die Verbreiter der neuen Naturwissenschaft (Freiburg im, 1904).

J. Rompel.

Kaiserschick (der Kaiser und der Künige buch), a German epic poem of the twelfth century. It is at once a kind of "Legend of all the Saints" and a confused but remarkable account of the Roman emperors and also of the German emperors and kings to the crusade of King Conrad III (1147). The language is comparatively good and often quite poetical. The chronicle was written about a work of an ecclesiastic of Ratisbon, an earnest partisan of the Guelphs, the chronicle is not improbably to be referred to Konrad der Pfaffe (q. v.), who composed the well-known "Song of Roland" (Rolandslieder), as a kind of history from the "Chronicon Wirzburgerum", the "Chronicon Regnorum" (see Enkehard IV), and the "Annonial"; it may be that he also drew from some earlier record or mystical chronicle. Judging from the large number of manuscripts still extant (twelve complete and seventeen partial), it must have been very popular, and it was probably continued in the thirteenth century. The original poem, according to the latest authorities, ended with verse 17283; the first addition, called "Bavarian", comprised 800 verses, while the second, the "Swabian", which brought the poem to the Interregnum (1254–75), consisted of 483 lines. The chronicle was first published in full by Maximilian ("Quedlinburg") in 1849–54) in three volumes, under the title: "Das sogenannte Kaiserschick, Gedicht des 12. Jahrhunderts, 18578 Reimzeichen", with careful researches into manuscripts, investigation of authorship, age, etc. The best edition is that of Schröder, "Die Kaiserschick eines Regens" (Haven, 1892), in "Mon. Germ. Deutsche Chroniken", i; Appendix I is the Bavarian, appendix II the Swabian continuation.

Patricius Schlager.

Kaiserwilhelmsland, Prefecture Apostolic of, comprises the German part of the island of New Guinea, area about 4,600,000 sq. miles; about 1,000,000 inhabitants. It was only in August, 1896, that the first Catholic missionaries arrived there, three priests and three brothers. On a coast extending about four hundred miles there are now twelve stations established. The small mission is the means of communication along the coast. The Apostolic prefecture was established in 1896 and transferred to the Society of the Divine Word. It had in 1909 twenty-two priests, seventeen lay brothers, and twenty-nine nuns; there are no native priests, the mission being too new. A cathedral is already planned for St. Michael's in Alorot, and the inauguration of the mission there have been 1960 baptisms. There are thirteen parochial schools and 600 pupils; priests instruct in religion, while the sisters (Sisters of Charity) teach reading, writing, arithmetic, singing, and geography. A catechism school has just been started. The principal difficulty is the variety of languages; at St. Michael's about 120 pupils speak twenty-five different languages. The common language is German. Some of the adult pupils learn from the brothers useful trades, e. g. carpentering, joinery, smith-work, boat-building, mason-work, and tailoring. Some farms have been started, so that the lower classes of New Guineans may learn to appreciate and love the work. It is hoped that in time, through the practice of useful occupations, the mission will be entirely self-supporting. Each mission is governed by a priest, who is subject to a dean, whose duty it is to see that the rules are observed. Each mission is held every three or four weeks, and in order to promote the spiritual welfare of the community, an eight-day retreat is given yearly. It was at first proposed to found a leper settlement, but for the present this charitable work has failed, owing to the deep mistrust and superstition of the New Guinean character. Moreover, they have an
KALANDS
593
KALINKA
easier way of disposing of these crippled and afflicted creatures; they simply drive them into the great wilderness. All the natives belong to the Papuan race, and speak a very few of a Malay
race; the few Malays and Chinese are mostly artisans in various trades. The centre of navigation is Astrol.
bay and Friedrich Wilhelmshafen. The latter station belongs to the New Guinea Company, which has,
with few exceptions, the monopoly of all land and water trade in the Dutch New Guinea. It is between
Wilhelmshafen, superior in every way to Friedrich Wilhelmshafen.
Missions Catholicae (Rome, 1907); Catholic Missions (1897-98); Annals of the Propagation of the Faith.

Kalanda Brethren (KALANDERBRUDER, FRATRES CALENDARII), the name given to religious and charitable
associations of priests and laymen especially numerous in Northern and Central Germany, which held regular
meetings for religious edification and instruction, and also to encourage works of charity and prayers for the
dead. They were originally an extension of the meetings of the clergy of the separate deaneries usually
held on the first day of each month (Kalenda, hence their title Koland). After the thirteenth century
time the movement came into many cases into the hands of organized societies to which both priests and the
laymen, men and women, belonged. Special statutes regulated the conduct of the society, its unions, the
duties of the directors in promoting the religious life and Christian discipline, the services to be held, the
administration of the general funds, and their application to charitable purposes. A dean was at the head
of each association, and a treasurer administered the revenues. The associations were encouraged by the 
bishops, who assigned them particular churches or at least special altars for Divine Service. The offering
of the bread and wine at the Mass for dead members was especially fostered. The oldest known Kalanda
confraternity is that of Ottberg near Höchster (Westphalia), of whose existence in 1226 we have
documentary evidence. The "Calendari" flourished especially in the fourteenth and fifteenth centuries,
but later decayed. A banquet was introduced at the meetings, which subsequently degenerated in many
instances into a revel, leading in certain neighbourhoods to abuses. From Germany the Kalanda confrat
ernities spread to Denmark, Norway, Hungary, and France. In the sixteenth century the Reformation
led to the dissolution of the majority; the rest gradually disappeared, only one being now known to
exist, that of Münter in Westphalia.

Kalocker, Jan Stephanius van (Giovanni da Cal
car and Joannes Stephanus Calcarinus), Flemish
painter, native of the Duchy of Cleves; b. between 1499
and 1510; d. at Naples, 1546. Vasari refers to this
painter several times only with respect to his hav
ing been a pupil of Titian, entering his school in 1538,
and to his faculty for copying the works of that mas
ter with extraordinary accuracy. Kalocker appears
to have worked first at Dordrecht, but the greater part of
his life was spent at Naples, and there, as Vasari tells
us, "the fairest hopes had been conceived respecting
his future progress." He was responsible for the
eleven large plates of anatomical studies which were
engraved for Andrea Vesalius as illustrations for his
work. Vasari praises them very highly. Kalocker is
also said to have drawn the por-
traits of the artists in the early edition of Vassari's
"Lives". By some writers he has been declared
to have been a close imitator of Giorgione; all who write
about him unite in stating that his imitations of the
work of the Italian artists, and, also of Raphael, were so
extraordinary that they deceived many critics of the
day. His pictures are to be seen in
Berlin, Paris, Florence, Vienna, and Prague, and
his original works are, as a rule, portraits, although at
Prague there is a remarkable "Nativity" by him, which
was once the property of Rubens.

GEORGE CHARLES WILLIAMSON.
Kalinka, Valerian, Polish historian, b. near 
Cerow in 1826; d. at Jarosław in 1886. He fled from
Poland in 1846 on account of political entanglements,
worked on the "Casa" newspaper in 1848, but finally
took refuge in Paris, where his first work was written
"Galicia und Cracoio", an historical and social pic
ture of the country from 1772 to 1850. He afterwards
thought of writing a history of Polish integra
tion, but eventually chose to edit a weekly peri
odical entitled "Political Polish News", the principal
contributors to which were himself and Klaczko.
Though forbidden everywhere but in Posen, it existed
for four years, and dealt with every aspect of Polish
national life. Kalinka's articles show a very prac
tical acquaintance with law, administration, history,
and statistics, and had mostly to do with the inner
life of Poland. After 1863, when searching for docu
ments for a life of Prince Adam Czartoryski, he stum
bled on important papers which he published in two
volumes as "The Last Years of Stanislaus Augustus"
(1877-95). This work placed him at once in the first
rank of Polish writers. Poland had not yet had such
an historian, especially in the province of diplomacy
and foreign politics. While marking out a new line,
it carefully pointed out the errors of the past, and showed how they might be rectified. He, though
unknown to Kalinka, was at the same time working in the same direction. Both were accused of
undermining patriotic self-respect, of lowering Poland
in foreign eyes, and of destroying veneration for the
past. In the preface to this work, Kalinka had al
ready answered these charges. A Pole is not less a
Pole when he learns from past errors how to serve his
country better. About this time Kalinka entered the
novitiate of the Resurrection Fathers in Rome, where,
save for a few visits to Galicia, he subsequently re
sided until in 1877, after a visit to the Catholic
missions in Bulgaria, he became chaplain of a convent in 
Jaroslaw. Here in 1886 appeared the first volume of
his "Sejmisteroletni" (The Four Years Diet). Polish
literature has no better book, and none whose perusal
is more painful. It exhibits all the weaknesses in the
leading men of Poland, and all their political blunders.
To the many fierce reproaches it called forth Kalinka
replied: "History calls first for truth; nor can truth
harm patriotism." A grave style, artistic grouping,
faithful narrative of facts, profound political insight,
and splendid literary talent make this book the
second volume, even surpassing the first, ap
peared in 1886, and it came to an end in the
thirty years' labour of Kalinka. He was not only
a profound and far-seeing politician and one of Po
land's best historians, but also one of her most ze
alous priests.
S. TARNOWIEK.
VIII.—99
KALISPAL INDIANS, popularly known under the French name of Pend d’Oreilles, “ear pendants”, an important tribe of Salishan stock originally residing about Pend d’Oreille lake and river, in northern Idaho and southeastern Washington, now gathered chiefly upon Flathead reservation, Montana, and Colville reservation, Washington. They are commonly distinguished as Upper Kalispel, on the lake, and Lower Kalispel, on the river. They are mentioned under the name of Coospeal by the explorers Lewis and Clark, in 1805, and they have the habit of crossing the mountains annually to hunt buffalo on the Missouri. Somewhat later they became acquainted with the Hudson’s Bay traders.

In 1844 the work of Christianization was begun by the Jesuit Father Adrian Hoecken, who, four years after the famous Father de Smet had undertaken to carry the Gospel among the Flathead Indians, established St. Ignatius Mission on the east side of Clark’s fork, near the Idaho line in the present Stevens county, Washington. When the Mission of St. Mary, on Bitter Root River, was abandoned in 1850, in consequence of the incursions of the Blackfeet, the Flathead found in St. Ignatius a home of Christian intercourse. In his official report of the commission to the north-western tribes in 1853, Governor Isaac Stevens gives an extended account of Saint Ignatius, of which he says: “It would be difficult to find a more beautiful example of successful missionary labor in this country.” The mission was commenced in 1855, but in the meantime other Jesuit missions had sprung up, and not only the Kalispel, but also the kindred Colvilles, Lakes, Okanagan, and Flatheads were completely Christianized. In 1855 the upper band joined with the Flatheads and part of the Kutenai in a treaty with the government by which they were settled on the Flathead reservation in Montana, where some of the Lower band joined them in 1887. In 1872 a part of the Lower band was gathered upon the Colville reservation in Washington. Still others are scattered in various parts of Washington and Idaho. Lewis and Clark estimated the tribe at 1800 souls in 1805. In 1905 there were officially reported 670 “Pend d’Oreilles” (Upper band) and 192 “Kalispel” (Lower band) on the Flathead reservation, Montana, and 98 “Kalispel” on Colville reservation, Washington, making, with a few not accounted for, a total of about 1000 souls.

The work on both missions is still in charge of the Jesuits, and is recognized by all observers as in the highest degree successful as regards religious observance, general morality, and self-supporting industry. The fathers are assisted at the Flathead mission (St. Ignatius) by Sisters of Providence, Ursulines, and Lemenais Brothers, and at the Colville mission (St. Francis Regis; Ward P. O.) by Sisters of Charity of Providence. The principal industries now are farming and stock raising, with fishing and the gathering of edible roots. The earlier more primitive habit of life is thus summarized in an official report of 1900 upon the non-treaty tribes of north-eastern Washington, now gathered on Colville reservation:

“The habits and manner of living of the tribes in this district are nearly similar. They live mostly in lodges and move from place to place where they can most easily procure subsistence. In the spring, after they put in their crops, they go to the Spokane country to dig couse, bitter-root, and wild onion. The first two they dry in the sun; the wild onion they mix with the black moss and bake under hot stones. About the middle of May they collect at the several camas grounds, which root (resembling an onion, is sweet and insipid) they dig and prepare as follows: They make a bed six or eight feet in diameter, of smooth stones, on which they build a fire; when the stones are red hot they remove the fire and cover them with green grass two or three inches deep on which they place the camas six to twelve inches deep, and over which they spread green grass; then cover all with earth about six inches deep, on which they build a fire and keep it up from twenty-four to forty-eight hours, according to the amount of the water baked it is taken out and dried in the sun. Being thus prepared it will keep for years, and is both nutritious and palatable. Before baking it is white; after, black. There are several camas prairies in this district, but the largest is Kalispel on the Pend d’Oreille river, at which place hundreds of the Indians gather.”

JAMES MOONEY.

Kalisa-Cujavia. See Vladislav, Diocese of.

Kalocsa-Bacs, Archdiocese of (Colocensi et Bachiensis).—This archdiocese embraces within its territories an archdiocese and a diocese founded by St. Stephen of Hungary in 1010. The question of the foundation of, and of the relations between, Kalocsa and Bacs was for a long time uncertain. George Ferjé was of opinion that St. Stephen founded Kalocsa and Bacs as independent sees, and that subsequently St. Ladislaus raised Bacs to archiepiscopal rank in 1013, and united it with Kalocsa. Stephen Katona, on the other hand, held that the Archdiocese of Bacs was founded by St. Ladislaus in 1093 by division of the Archdiocese of Kalocsa, which being afterwards reunited in 1135. To Julius Vársovy we are indebted for the solution of the question: he shows that the Archdiocese of Bacs never existed as an independent see, but that the archbishops of Kalocsa for various reasons changed their residence from time to time to Bacs, so that eventually there arose in town an independent chapter with its own cathedral, etc. In 1135 the union of Kalocsa and Bacs was canonically confirmed, the chapter at Bacs was raised to archiepiscopal rank, and it was decided that in future the election of an archbishop should rest with the united chapters, but should be held in some third locality. It was also decided that the name of the archdiocese should be Kalocsa-Bacs. Bacs remained the residence of the archbishops, and likewise their burial-place, until 1526, when after the battle of Mohács it fell into the hands of the Turks. When first established the archdiocese was very extensive. It embraced the lands between the Danube and the Theiss from Dom-sód, which is situated to the south of Vác (Waten), southwards as far as Titel, including also within its territories a portion of Syrmia. As early as 1229 it suffered its first diminution of territory, when Syrmia was formed into a separate diocese. The history of the archbishops and the archbishop of Kalocsa-Bacs is closely interwoven with that of Hungary. The first archbishop was Aistrak, who later appears as Archbishop of Gran. It is not quite clear whether the title of archbishop was personal to Aistrak,
or was also transmissible to his successors, for, while his immediate successor, George, is spoken of as archbishop, his second successor, Desiderius, is spoken of only as bishop. Then again Desiderius's successor, Paulinus, is called archbishop. The Archbishop of Kalocsa from the beginning was next in rank to the Archbishop of Gran. In 1175, when Gran was vacant, the Archbishop of Kalocsa was chosen to crown Béla III; likewise in 1204, Archbishop John crowned Ladislaus III. Supported by these two predecessors the archbishop claimed the right to crown the kings of Hungary. In 1212 the question was so far settled that, in case Gran should be vacant, or its archbishop should decline to act, the right to crown the sovereign belonged to Kalocsa. Archbishop Saul (1192–1202) was held in great esteem by the Holy See, which sought his opinion on many questions. Under Ugrin (1219–41) occurred the foundation of the great hospital in Kalocsa, and the establishment of the Diocese of Syrmia in 1229. In his time also the wars against the Patarenes in Bosnia broke out, and, more especially after the establishment of the See of Syrmia, these wars against the Patarenes and other unbelievers were carried on with great zeal. Ugrin also took part in the coronation of Andrew II. He fell in the battle of Muhi against the Tatar hordes in 1241. Archbishop Ladislaus (1317–37) was distinguished for great theological learning. Andrew Brenti (1413–31) took an important part in the preparation of the Canons of Constance. Stephen Várdai (1456–71) was distinguished for his humanistic culture. He had studied at Italian universities, and brought back with him a taste for the splendour of the Renaissance. As chancellor and intimate friend of King Matthias Corvinus, he was one of the most zealous promoters of humanism and the Renaissance in Hungary. Thanks to the recommendation of the king, he had the distinction of being the first archbishop of Kalocsa to be named cardinal, but died before receiving the insignia. Peter Váradi (1480–1501) was also one of Matthias's confidants, but for some unknown reason forfeited the royal favour, was imprisoned in 1494, and regained his freedom only after the king's death in 1490. He thenceforth devoted his energies mainly to the re-establishment of ecclesiastical discipline. To this end he held a diocesan synod, instituted canonical visits of the parishes, turned his attention to the education of the clergy, sent young ecclesiastics to the universities for more extensive study, and founded a library. He also regulated the temporalties of the archdiocese.

Archbishop Paul Tomori (1523–26) led the Hungarian army in the decisive struggle against the Turks, meeting his death in the disastrous battle of Mohács in 1526. The territories of the archdiocese were now overrun by the Turks, who prevented the archbishops from exercising their authority. The Holy See continued to appoint to the archdiocese, but the archbishops possessed only the title without being able to exercise any real jurisdiction. George Dras (1572–92) took part in the Council of Trent, and received the cardinal's hat. The population diminished at first under Turkish rule, but as early as 1550 Dalmatian Catholics began to immigrate, and the number of Catholics subsequently increased. To satisfy the religious requirements of the population, the Holy See adopted the expedient of treating the archbishopric as missionary territory, and turned over the care of the faithful to the Franciscans. This condition lasted through the whole period of Turkish domination. Leopold Kollonits (1691–5) was first in a position to enter into personal acquaintance of the archdiocese, and to re-exercise jurisdiction, whereupon the archdiocese ceased to be a missionary district. Still, for a time it was governed by vicars. Paul Szechényi (1696–1710), the second of this family to become archbishop of Kalocsa (the first, George Szechényi, was archbishop from 1668 to 1685), played an important part as mediator between Prince Francis Rakóczi II and the Viennese Court, but his efforts to effect a reconcentration were fruitless. A new archiepiscopal curia at Kalocsa was begun in his time, and also the reconstruction of the parish church, etc. Count George Caky (1710–32), successor of the last-mentioned, laid the foundation of the new cathedral. His successor, Count Gabriel Patachich, may be looked upon as the second founder of the archdiocese. He removed the archiepiscopal residence permanently to Kalocsa, and concentrated all his efforts on the reorganization of the archdiocese. He built the seminary and restored the cathedral chapter. Among the recent archbishops, one may be especially mentioned Count Franz Nadaady, whose short reign (1845–51) was devoted mainly to charitable works, but who also played an important part in the political events of those years; Joseph Kunst (1852–68), who has perpetuated his name in various religious institutions. Archbishop Lajos Haynald is treated in a separate article. The present archbishop is Julius Városy. St. Stephen is now the patron saint of the archdiocese, although it was originally under the protection of St. Paul the Apostle, and the metropolitan church is dedicated to the Assumption of the Blessed Virgin.

The archiepiscopal chapter of Kalocsa was founded at the same time as the archdiocese. At first it was richly endowed, but in time became so impoverished that Innocent VI reduced the number of canons from twelve to six, but Gregory XI, in 1376, raised the number to ten, where it remained until the battle of Mohács in 1526. There was another chapter at Bacs, already mentioned, but Turkish rule put an end to both. The chapter at Bacs was never re-established, but that of Kalocsa was revived by Archbishop Count Gabriel Patachich in 1738. Clement XII gave the members the right to wear the cappe magna, and the chapter also recovered its right as locus celebrantis. There were four canons until 1763, when another stall was established, with which, in memory of the archiepiscopal chapter of Bacs, the title of Provost of Bacs was associated. Finally, in 1776, the number of canons was increased to ten, a figure which obtains to the present day. In 1779 Maris Theresia granted to the canons the badge which they still wear. The Archbishopric of Kalocsa-Bacs has to-day as suffragans the bishops of Transylvania, Csanád, Grosswardein (Lat. Rite), and the (titular) See of Knin (Timin). The archbishopric is divided into three archdioceses—the metropolitan and those of Bacs and Thess—subdivided into 16 vicariate-archdeaconries. Besides the 10 regular cathedral canons, the archdiocese contains 8 titular stalls, 9 titular abbeys, and 10 titular provostships. The number of parish churches is 126; of chapels-of-ease, 226; of parish priests, 105; of curates-in-charge, 23.
The total number of priests in the archdiocese is 284; of clerics, 46. There are 5 orders in the diocese, 6 monasteries with 143 monks, and 32 convents with 548 nuns. The right to give benefices is still exercised by 27 patrons. The population numbers 95,000 Catholics, 647,642 non-Catholics, 26,379 Jews, while 409 are attached to no denomination.

Kamenetz. See Leemberg, Diocese of; Lutze, Diocese of.

Kamerun (Cameroons), Vicariate Apostolic of, in German West Africa, between British Nigeria and French Congo, stretching north-east from the coast of the southern shore of Lake Chad. The territory was ceded to England by a treaty of 13 July, 1884, and given in charge of the Pious Society of Missions (Pallottini). Father Henry Vieter was nominated the first prefect Apostolic. The area is about 191,130 square miles, and the native population (Bantu negroes near the seacoast, Sudan negroes inland) is, according to recent estimates, about 800,000. There are about 100,000 whites, mostly Germans. The chief exports are palm kernels and palm oil, rubber, ivory, and cocoa. The climate is hot and moist, and malarial fever abounds, especially in the lowlands. The natives generally are addicted to fetishism, and there are a few Mohammedians. In 1892 the German Government allowed the missionaries to open a preparatory house of studies at Linsburg (Nassau), and later at Ehrenbreitstein and Vallendaal (Rhineland). The first missionary station was opened at Marienberg on the river Sanaga, nearly 4000 feet broad. Other stations were opened (1891) near the Falls of the Sanaga, and at Kribi on the Batanga coast. From the beginning the missionaries suffered much from malaria; in 1894, therefore, they opened the station of Engelberg in the Kamerun Mountains, at an altitude of nearly 1400 feet, both as a sanatorium and a missionary centre. In 1898 was opened the station of Duala (22,900), the capital of Kamerun, where the French missionaries had preceded the Catholics (there are between seven and eight thousand native Protestantists). The mission of St. Peter Claver at Big-Batanga was opened in 1900, and in 1901 that of Yannde, twelve days' walk into the interior. Iressa on the upper Rio del Rey was founded in 1905, and in 1917 the station of Einsiedeln was opened in Kamerun mountains, at an altitude of about 2800 feet. Another station is almost ready at Victoria; it bears the name of the Blessed Trinity. Einsiedeln serves as a seminary for schoolmasters; it is hoped also that eventually it may give rise to a centre for the mission. Nonever, however, will receive Holy orders before the age of thirty.

In September, 1906, the first synod was held at Duala. The prefeeture was raised to the rank of a vicariate Apostolic (21 Dec., 1904), and the first prefect Apostolic made first vicar Apostolic; he was consecrated titular Bishop of Paraleion on 22 January, 1905. On the arrival of the missionaries they found 5 Catholics; in the vicariate there are now 18 priests, 21 brothers, and 30 sisters for the education of natives. Since October, 1890, death has claimed twenty-four of the little band of missionaries, and several have been sent home in time to save their health, which continued to be gloomy, i.e., then the entire period there have been about 8027 baptisms. There are at present about 3819 catechumens, each of whom has two years of probation. There are in the mission schools about 5675 boys and girls. All these, however, are not in the schools of the missionary station; many of them are taught in the village schools by black schoolmasters, directed and paid by the missionaries. After leaving the schools, many of the boys are taught useful trades by the lay brothers of the missions.

Kandy, Diocese of (Kandenser), formerly part of the Vicariate of Southern Colombo, Ceylon, India, from which it was cut off as a vicariate Apostolic on 14 April, 1883, and erected into a diocese on 1 September, 1886. Its only vicar and first bishop is Dom Clement Pagnani, a Sylvestrine Benedictine, b. at Fabriano, near Ancona, Italy, 24 June, 1854; consecrated 25 December, 1879, at which time he was appointed to the Vicariate of Southern Colombo.

The Vicariate of Southern Colombo had been in the hands of the Sylvestrine Benedictines since 1855, but the needs of the country demanding a greater supply of missionaries than the Sylvestrines could meet, the country in the time of the diocese in a more temperate than throughout the rest of the island.

From the palm-groves and sweltering heats of Colombo the railway line threads its way a distance of seventy-five miles through tea-plantations, wild bush, and forest, across mountain streams and under crags of limestone overhanging in great boulders, with Adam's Peak looming conspicuous in the distance, until at an elevation of 1734 feet above the sea it reaches the town of Kandy (in Singhalese, Ma Hartoo the Great City), former capital of the island, now the residence of the British governor-agent. It stands on the shore of an artificial lake in an amphitheatre of beautifully wooded hills. Its population in 1901 was 26,522.

Kandy is first mentioned in the fourteenth century, when the Dalada Maligawa, or "Temple of the Tooth", was built to contain that famous relic of Buddha brought to Ceylon for safety about 311. In 1582 the town became the capital of Ceylon, and the king's palace was built about the year 1600. Kandy was the last stronghold of the old dynasty, and kings continued to rule there up to the beginning of the nineteenth century, when the last king, Vikrama Raja Sinha, was taken prisoner by the British (1815) and sent to Yellore. The Temple of the Tooth still remains, and is the scene of annual festivities (Perahera) in honour of this precious relic of the Buddha. The sacred tooth itself, however, was taken by the Portuguese to Goa in 1660, and publicly burned there in presence of the viceroy. The Buddhists claim to possess it, and on this show in an ivory about two inches long by one inch in diameter, which is said to resemble the tooth of a crocodile rather than of a man. It reposes in the temple on a lotus flower of pure gold set with seven concentric bell-shaped metal shrines. In the vicinity of Kandy is an immense cemetery where were deposited the bodies of the mighty kings and heroes of Ceylon; about five miles away are the botanical gardens of Peradeniya, covering one hundred and fifty acres with the most luxuriant exotic vegetation. Indeed the vegetation all around Kandy is luxuriant, and when the white flower of the cinnamon tree is in blossom the effect is very wonderful, i.e., then the entire period there have been about 4527 baptisms. There are at present about 3819 catechumens, each of whom has two years of probation. There are in the mission schools about 5675 boys and girls. All these, however, are not in the schools of the missionary station; many of them are taught in the village schools by black schoolmasters, directed and paid by the missionaries. After leaving the schools, many of the boys are taught useful trades by the lay brothers of the missions. Missions Catholica (Rome); Street, Kultur Missionale (Steyl, 1906); Statistiker's Year-Book (London, 1912). H. VIETER.
the fruit itself, which is not very palatable, a strong
intoxicant is distilled. Serpents are numerous, espe-
cially the cobra and the carambola. Kandy has a
municipal council partly elected by the ratepayers and
partly by the governor-agent. A figure of extreme
interest among the inhabitants for many years now
has resided in Kandy, the Egyptian Pasha Dr. Im-
prisoned or exiled there since the Battle of Tel-el-Kebir
in 1882.

Besides being the seat of the diocese and the
residence of the governor-agent, Kandy is also the
residence of the Apostolic delegate to the East Indies,
Missionaries from Archbishop of Athens. The town
has a seminary known as the "Leonianum" for native
students of India and Ceylon. It is under the care
of the Jesuits and numbers eighty-eight students;
the course of studies includes philosophy and theology.

The population of the Diocese of Kandy, which is
made up of various races including Sinhalese and
Tamils, amounts to 806,506, of whom 27,938 are
Catholics; 11,871 are Protestants; 403,909 are Bud-
dhists; 321,350 Hindus; 43,867 Mohammedans; and
the remainder unaccounted for. The languages
spoken include Cingalese, Tamil, and English. The
town has a church with resident priests, besides
the Episcopal city, are Ampitami, Panvitile,
Matale, Vahacotte, Gampola, Mavalthipitiya, Hatton,
Dirubula, Nuvarra-Eliya, Badulla, and Bandara-
wellas.

Matale, a hundred miles from Ceylon, is the north-
ermost limit of European civilization. It is a large
village and is the centre of a flourishing tea and coc-
oca plantation; it is famous for its native bazaar, and
for a splendid avenue of rain-trees, so called from the
circumstances that at night the leaves fold into a
kind of sack in which the moisture condenses and at
sunsine when the leaves open this is discharged in quite
a heavy dew. The eastern parts of Matale are
Christians are to be found with Portuguese names, des-
cendants of converts made on the island 400 years
ago.

Hatton (414 feet above the sea-level) is a resting-
place for tourists or pilgrims on their way up Usumas,
or Adam's Peak (7400 feet), where Buddha is said to
have left the imprint of his foot. Hatton is also the
centre of a great tea-growing district. Nuvarra-Eliya
(8210 feet above the sea) is famous for its cool climate,
and has been chosen as the summer residence of the
governor-agent. In the neighborhood is Pidurawu
(1000 feet), which is near to Cingalese, and Badulla is
an attractive old town. Dambulla, near Hatton, is
famous for its rock temples and natural caves, to which
access is obtained along a steep stair-
way cut about 500 feet up the face of a rock.

Besides the churches with resident priests, there
are fifteen churches and thirty-two stations in
the diocese. The mission work is done by three secu-
lar priests, one native priest, twenty-one regulars, and
twelve catechists. There are in the diocese six el-

cementary schools for boys with 668 pupils; nine for
girls with 921 pupils; one college for boys with fifty-
five pupils; two for girls with 163 pupils. There are,
moreover, four orphanages containing 126 children.
The girls are looked after by the Sisters of the Good
Shepherd of whom there are seventeen, and by native
sisters of whom there are ten. The regular clerisy
consists of twenty-five Sylvestrine Benedictines and
eleven Jesuits. By an ordinance of 1898 the bishop
is constituted sole, vice-regal, and hold property, and to sue and be sued in courts of
justice in relation thereto. The management of the
schools is in the hands of the missionaries, but the
Government sends its inspector every year to hold an
examination, on the results of which a grant is made
for the upkeep of the school. The Church Missionary
Society and the Wesleyan Methodist Mission Society
are very active in and around Kandy.

KANSAS—PHYSICAL CHARACTERISTICS.—Geography.

—Kansas, one of the United States of America, is the
central state of the Union, to which it was admitted 29
Jan., 1861. It has an area of 82,144 square miles,
approximately 400 miles from east to west, and 200
miles from north to south. It is bounded on the
north by Nebraska, on the east by Missouri, on the
west by Colorado, and on the south by Oklahoma. The
Territory of Kansas was organized in 1854 with
the following limits: beginning at a point on the west-
ern boundary of the State of Missouri, where parallel
37° N. crosses the same; thence west on said parallel to
the eastern boundary of New Mexico; thence north on said
boundary to 38° N.; thence follow-
ing said boundary westward to the
eastern boundary of the Territory of
Utah on the summit of the Rocky
Mountains; thence northward on said
summit to 40° N.; thence east on said
parallel to the western boundary of
the State of Mis-
souri; thence south with the western boundary of
said state to the place of beginning. It was, however,
provided in the organic Act of the Territory that the
United States Government should not be inhibited
thereby from dividing the Territory of Kansas or from
attaching any portion of said territory to any other
territory or state of the United States. The State of
Kansas is not as large as the territory organized under
the same name; in area it ranks the eleventh among
the states in the Union, and it is nearly ten times as
large as Massachusetts.

Surface.—The general surface of Kansas is undula-
ting. It slopes gently from an average height of about
3650 feet above sea level at its western boundary to
850 at its eastern; the average slope is about seven
feet to the mile. There is also an inclination from
north to south. The mean elevation of the state is
about 2000 feet. As for timber, along the waterways
in the eastern part are found black hickory, locust,
cherry, maple, and hickory. Artificial forests are
found in almost every county.

The state is drained by the Missouri River that
forms the north-eastern boundary, and by the Kansas
and Arkansas Rivers and their tributaries—all of
which belong to the Mississippi system.

CLIMATE.—The climate of Kansas is mild and
healthful. In the higher altitudes of western Kansas
the air is dry, and wholesome for persons with a ten-
dency to pulmonary diseases. The annual range
of temperature is about 120° F. The average tempe-

rature of the winter months for twenty years has been
75° F.; of the three months in summer 90° F. The
mean temperature for the year is thus 53° F. The
annual average precipitation, which includes rainfall and
the water from melted snow, ranges from fifteen inches
in the extreme west to forty-four inches in the extreme
south-east. Irrigation is applied in parts of the west-
ern counties.

HISTORY.—It is supposed by some grave writers
that the "Cow Country" through which Cabezah de
Vasa passed in 1555 was the country north of the Arkansas River and the Old Santa Fé trail, now a part of Kansas. The Spaniards under Coronado entered the limits of the present State of Kansas in 1541, and traversed it to the plains, the limit of the expedition with a cross. This was on the bank of a great tributary of the Mississippi River. Another large river which was crossed by the Spaniards was named Sta. Peter and Paul; Coronado was accompanied by several friars. Among them was Father Juan de Padilla, who remained to convert the Indians. After the departure of Coronado, was here slain by the aborigines. Father Marquette's map of the Mississippi region in 1673 designates various Indian tribes that dwelt within the borders of Kansas. Thus he is the first to mention the Kanza—the tribe from whom the state derives its name. The French in 1705 ascended the Missouri River as far as the Kansas River. Du Tisnènet erected a cross with the arms of the King of France in the country of the Padoucas, on 27 September, 1719. According to Du Pratz, in 1721 a band of Spaniards, having a Dominica for their chaplain, went, all, with the exception of the four or five who were misled by the Missouri whom they had mistaken for Osages, their allies. This happened probably on the present site of Leavenworth. In 1724 M. de Bourgement made a journey across the territory of Kansas, but during his absence in the following year the entire garrison he had left at Fort Orleans was massacred by the Indians. Louisiana, of which Kansas was a part, was subject to France until 3 November, 1762, when it became a Spanish possession; only to be retroceded to France in 1800; it was purchased by the United States 30 April, 1803. Lewis and Clark explored the region in 1804, 1805, and 1806. In 1806 Zebulon M. Pike explored the south of Kansas; at his instance (29 Sept., 1806) the United States flag replaced the Spanish flag at the Pawnee Indian village in the present Republic County.

For some years previous to this the Chouteau family carried on the fur trade in Kansas. In 1819 and 1820 Long's scientific exploration of the country lying west of the Allegheny and east of the Rocky Mountains between 35° and 42° N., embraced the state of Kansas. Ft. Leavenworth was established by the Federal government in 1827. Except a few missionaries, Indian traders, hunters and trappers, there were no whites in Kansas until 1854. In 1844 Captain Fremont explored the valleys of the Kansas and Republican Rivers. In June, 1846, General Kearney set out from Fort Leavenworth for the conquest of New Mexico and California. In 1804 Kansas became a part of the District of Louisiana, for which reason was located in the Governor of Indian Territory, acting with the judges of that territory. In 1805 Congress changed the District of Louisiana to the Territory of Louisiana, still embracing Missouri and Kansas. When in 1812 the Territory of Orleans became the Territory of Louisiana, what was known as the Territory of Louisiana was called Missouri Territory. The 7776 square miles lying south of the Arkansas River and west of longitude 100° W., now within the limits of Kansas, were not a part of the Louisiana Purchase, but were acquired from Mexico. In 1820 Congress passed an Act enabling the people of Missouri Territory to become a state, but prohibiting slavery in all of the Louisiana Purchase north of 36° 30'. By the organization of Missouri as a state in 1821, Kansas received an eastern boundary. In 1823 the wagon-trains from Missouri to Santa Fé passing through Kansas opened the interior of the plains. Besides the Santa Fé trail there was the Oregon trail leading to the valley of the Platte in Nebraska. Property worth millions of dollars was transported by the pack-trains and wagon-trains. An army of men, Americans and Mexicans, were employed as teamsters and packers. In addition to the native Indian tribes, Osages, Pawnees, Kansas, and Papous or Comanches, Indians of eastern states were given reservations in Kansas, designated Indian Territory until 1854 when it was organized as Kansas Territory. The first settlement of Kansas was in 1854, westward to the summit of the Rocky Mountains, including a large portion of the present State of Colorado under the name of 'Ararapaho County. In 1854 the Kansas-Nebraska Act abrogated the Missouri Compromise of 1820, and left the question of slavery to the people of the territory. The result was the war governors of Kansas State constitution. In consequence, the North and South entered into a contest to people the Territory of Kansas. It led to acts of violence and bloodshed between the pro-slavery and anti-slavery parties that resulted in the loss of two hundred human lives and in the destruction of two millions of dollars. The cities of Leavenworth, Atchison, Topeka, and Lawrence were founded in 1854.

The interminable struggle in Kansas, in which John Brown was a prominent factor, was potent in forcing the great war that followed between the Northern and Southern States. In 1860, Kansas showed a white population of 8601. In 1860, according to the United States census, there were 107,206 inhabitants; the country in this year was a severe calamity. Kansas was admitted as a free State on 29 January, 1861. The motto of the State is "Ad astra per aspera." In 1861, Topeka was made the permanent capital. The State furnished 20,151 men to the Union army, though the proper quota would have been but 12,930. Out of her military force, Kansas lost 472 officers and 7345 private soldiers. On 21 August, 1863, the notorious guerrilla Quantrill attacked Lawrence in revenge for the destruction of the city, killing its citizens slain, and 43 others wounded. Property worth $2,000,000 was destroyed. In October, 1864, some 20,000 Kansas men were under arms to oppose Gen. Sterling Price, who with a large force of Confederates threatened the eastern border of the state. He was decisively beaten on Kansas soil in the battle of Mine Creek following the Battle of the Blue and the Battle of Westport, near Kansas City. Kansas troops were mainly engaged in Missouri, Arkansas, and Indian Territory (now Oklahoma), but saw service as far south as Mississippi, Louisiana, and Texas. Charles Robinson and Thomas fitted out a railroad in 1867, making the building of railroads, as early as 1867, there were 523 miles of railroads in the state. These were of material aid in the development of the great natural resources of Kansas. The early settlers in remote places were justly in dread of the Indians who made their last raid in 1876, when 20 white people were killed by the savages. Since then the red men have left no mark on the pages of Kansas history, and their number within the state has been reduced to about 2000. The legislature of 1863 located the Insane Asylum at Osawatomie, accepted the congressional grant of lands for an agricultural college at Manhattan, and provided for the state university at Lawrence and the state normal school at Emporia. In the following year the deaf and dumb asylum, the blind asylum, and the penitentiary were located, and suitable buildings were erected for these institutions. There were followed the State Normal School for women, the Normal School for girls, a hospital for epileptics, a school for feeble-minded youth and the Soldiers' Orphans' Home, besides an additional hospital for the insane at Topeka. The state makes liberal appropriations for the maintenance of each of them.
A great number of European immigrants settled, largely in colonies, in the state in the decade following 1870. In 1880 the state constitution was amended by the adoption of the law prohibiting in Kansas the miscegenation which in the law of Indiana has never been strictly enforced for any length of time. In 1877, the municipal suffrage bill conferred on women in Kansas the right to vote at school, bond, and municipal elections. About 26,000 women voted in the spring election of 1878. In 1884 the constitutional amendment conferring on women the full exercise of suffrage was defeated by 35,000 votes.

Economics.—Agriculture and Trade.—The soil is very productive. It consists in the eastern part of heavy black loam of greatest depth along the streams; and in the western part, of a sandy formation.

Kansans is essentially an agricultural state. Wheat and corn are the two most important grain products. In 1908, Kansas raised 150,640,516 bushels of corn, with a value of $82,462,461; 76,808,922 bushels of wheat, with a value of $33,855,146. The value of sorgum was $10,258,998; of tame hay $9,534,360; oats $7,760,314; barley $3,941,805; peaches $4,431,864. The field products from 32,216,702 acres under cultivation had a value of $189,059,626. Alfalfa increases annually in acreage and value of crop. The value of animals slaughtered or sold for slaughter was $76,705,158. Poultry and eggs sold $9,306,651. Butter and cheese sold $1,006,312. Milk sold $1,145,922. Garden and horticultural products marketed $786,879. The total value of all farm products in 1908 reached the sum of $277,733,925, without considering the live-stock retained by the farmers and returned by assessors to the value of $197,510,579. In 1906 the value of farm products and live-stock aggregated $532,685,745, which was $57,404,414 in excess of 1908.

Bituminous coal is found in most of the counties of the eastern part of the state. It is mined profusely in Crawford, Cherokee, Leavenworth, and Osage Counties. The coal-bearing area of a county usually exceeds 5,000,000. Natural gas and petroleum are found in large quantities. The former is piped and used in the principal cities for fuel and lighting purposes. Salt is mined at Hutchinson, Kanopolis, Lyons, Kingman, Anthony, Wellington, and Sterling. The veins are about 1000 feet deep. All pupils residing in places are 300 feet thick. The salt area of Kansas is estimated at one million acres. The annual production is about 2,000,000 pounds. The lead and zinc mines are a source of profit and give employment to many in the southeastern part of the state. In the production of these ores Kansas is second only to Missouri. There are quarries of superior limestone, sandstone, and rock gypseum. The limestone, especially in the more central counties, is excellent building material. Cement, lime, clays for brick, tile, and pottery are among the products that contribute to the industries and wealth of the state. According to the United States census of 1900 the manufactured products of the state attained a value of $172,129,298. In 1903 the mineral production of the state had a value of $27,164,007.85; natural gas a value of $1,115,375.

Kansas City is the seat of the second largest packing industry in the world. Here also is one of the largest stock markets. Car-shops, flour-mills, -paper-mills, iron foundries, furniture factories, soap factories, printing and publishing establishments are found in nearly all the centres of population. Even before the first railway was laid in these parts, there was a commercial route extending from the eastern to the western border of Kansas. The Santa Fé trail, the great overland route of the pioneer days, was established in 1824, and extended from Independence, Missouri, to Santa Fé, New Mexico. Kansas has 1,800 miles of railroads connecting all the principal cities with one another and affording excellent shipping facilities. Four of the great transcontinental systems cross the state from east to west. A two-cent fare rate obtains. There are also interurban electric railways. The Board of Railroad Commissioners has supervisory control over common carriers.

SOCIOMETRY.—Population.—The following compilation contains the results of the fifth decennial census taken in 1905. Total population of the 105 counties of the state 1,544,495. Males 802,704; females 741,791; sex not given 1045. Native 1,400,441; foreign 113,378; birth-place not given 26,149. While 157,256; colour 51,073; colour not given, 6518. The number of families was given as 345,956, and the average number of persons in family 4.47. Of the foreign population there were born in Germany 43,124; Sweden, Norway, and Denmark 17,929; Great Britain and Ireland 10,216; Russia 13,536; Ireland 11,536; Liberia 10,536; British-American 7444; Southern Europe including Austria, France, Italy, and Spain about 12,000. There are 532,835 persons of school age; i.e. between the ages of 5 and 20 years. There are 410,289 men 21 years old and over. Engaged in agriculture 251,856; engaged in manufacturing and mechanical industries 53,991; engaged in mining, trade and transportation 66,923; engaged in manufacturing and mechanical industries 54,991 engaged in mining 10,991. There are 120 towns that have over one thousand inhabitants each; 13 of these have over ten thousand people. Atchison has 20,000, Leavenworth 25,000, Wichita 50,000, Kansas City 90,000, Topeka, the capital of the state, has 45,000. In 1900 the aggregate in cities of above 10,000 was 340,570, or 19.9% of the total population.

Education.—Parents, guardians or others having control of children between the ages of eight and fourteen years are required by law to send such children to a public or private school taught by a competent instructor. 

Ample provision is made for graded schools in towns and districts. At the discretion of the county commissioners or on petition of one-third of the electors of the school district, the school may be taken over by any county if the majority of the electors of the county favour it. In the high-schools provision is made for three courses of instruction, each requiring three years' study for completion; namely, a general course, a normal course, and a collegiate course. Tuition is free for all pupils residing in places having in their midst a public school. The state constitution provided for the establishment by law of a state university for the promotion of literature and the arts and sciences, including a normal and an agricultural department. "All funds arising from the sale or rent of lands granted by the United States to the state for the support of a state university and other grants, donations or bequests either by the state or by individuals, for such purpose, shall remain a perpetual fund to be called the university fund; the interest of which shall be appropriated to the support of the state university." Kansas ranks third, in the United States, in the minimum percentage of illiteracy. Of the 392,009 pupils enrolled in the public schools of the state in 1907-1908, 178,893 were in the rural schools taught by 12,908 teachers. The text-books to be used in the public schools are determined by a text-book commission appointed by the governor. The average cost of these public schools in 1908 was $7,935,443.

The state educational institutions are the following: University of Kansas at Lawrence, with 2250 students; Kansas State Agricultural College at Manhattan, with 2166 students; State Normal School at Emporia, and the State Manual Training School, at
Pittsburg. The Industrial and Educational Institute at Topeka, and the Western University at Quindaro for coloured youth, receive support from state funds. To these should be added the Kansas State School for the Deaf at Olathe, the Kansas School for the Blind at Kansas City. The Orphans' Home at Atchison, the Girls' Industrial School at Beloit, and the Boys' Industrial School at Topeka are also educational institutions. The following non-Catholic denominational colleges are accredited by the State Board of Education: Bethany College, Hesston; Bethany University, Baldwin; Bethany College, Holton; College of Emporia, Emporia; Cooper College, Sterling; Fairmount College, and Friends University, Wichita; Kansas City University, Kansas City; Wesleyan, Salina; Ottawa University, Ottawa; Southwestern College, Winfield; Washburn College, Topeka. To these may be added institutions invested in equipment and endowment about $3,000,000. They represent faculties of 500 persons, instructing 8000 students at an annual expense of $300,000. Some denominations beside the Catholics, particularly the Lutherans, have a goodly number of private schools within the state. In 1898 there were more than 300 private and denominational schools in Kansas. The Board of Control of State Charitable Institutions consists of three electors of the state who are appointed by the governor, and thus become the trustees for the following institutions: Industrial School for Girls; the Kansas Industrial School for Boys; the Kansas School for the Deaf; the Kansas Mental Asylum at Topeka; the Kansas School for the Blind; the Kansas Industrial School for Boys; the School for the Deaf; the Soldiers' Orphans Home, and all other state charitable institutions. It is the duty of the board to visit and inspect, without notice, all in the state within the 24 months the term of office. All private institutions of a charitable nature receiving state aid are subject to the same visitation by the Board of Control. In 1897 the Legislature made appropriations to seventeen private hospitals, nine of which are Catholic, and to ten private children's institutions, including the Catholic orphanages, though the sums granted were small compared with the benevolent work done by these institutions.

The state penitentiary is governed by a warden and a board of three directors appointed by the governor of the state. Prisoners who have received an indeterminate sentence are not to be discharged until the expiration of their minimum sentence. Prisoners under twenty-five years of age may be sentenced to the State Reformatory at Hutchinson. The juvenile court has jurisdiction over dependent, neglected, or delinquent children under sixteen years of age. According to the U. S. Census of 1900 the church property in the state was valued at $2,000,000. The Methodist Episcopal, Presbyterians, Baptist, Christian (Campbellite), Congregational, and Episcopal are the leading Protestant denominations. The Methodists, Baptists, Presbyterians, and Friends were established on the new territory before the Territorial government was opened to white settlers in 1854. In 1880, the ten principal Protestant denominations had an aggregate membership of 80,415; there was then about an equal number of Catholics. The latter have in thirty years increased thirty per cent. At Haskell Institute, a Federal school for Indians, Catholic pupils receive religious instruction regularly from the priest. The state prison has a Protestant chaplain, but a priest ministers to the Catholic convicts. At the W. B. Military Home in Leavenworth County and at the Federal and Military prisons at Fort Leavenworth, the Catholic parson is not present, but the state Legislature are opened with prayer. Candidates for office are nominated in primary elections. Cities may choose the "Commission" form of government.

LEGISLATION. — Concerning Religion. — The State Constitution provides among other things as follows: "The right to worship God according to the dictates of conscience shall never be infringed; nor shall any person be compelled to attend or support any form of worship; nor shall any control of or interference with the rights of pupils, or of religious organizations be required. No religious test or property qualification shall be required for any office of public trust, nor for any vote at any election; nor shall any person be incompetent to testify on account of religious belief or practice. All religious tests or qualifications shall be abolished from any part of the common school or university funds of the state. . . . All property used exclusively for religious purposes, for the benefit of the state, or for the benefit of any religious society, or for the benefit of any religious institution shall be exempt from taxation. . . . The title to all property of religious corporations shall be vested in trustees, whose election shall be by the members of such corporations." The title to the various Catholic Churches and schools is actually vested in the respective bishop of the diocese as trustee. "All oaths shall be administered by laying the right hand upon the Holy Bible or by the uplifted right hand. Any person having conscientious scruples against taking an oath, may affirm with like effect." Concerning Marriage. — The marriage contract is to be considered in law as a civil contract, to which the same rules of evidence apply, and the marriage ceremony may be regarded either as civil or as a religious sacrament, but the marriage relation shall only be entered into, maintained, or abrogated as provided by law. All marriages between parents and children, including grandparents and grandchildren of any degree, between brothers and sisters of the half as well as the whole blood, between cousins of the first and second degrees, and nieces, aunts and nephews, and first cousins, are declared to be incestuous and absolutely void. Every judge, justice of the peace, or licensed preacher of the Gospel, may perform the marriage ceremony in this state, when a licence issued by the proper judge of any county in the state has been issued. The consent of parent or guardian is required for a licence when the contracting male is under twenty-one years, and the female under eighteen years of age. Insanity in near kindred is a bar. Property, real and personal, which any woman may own in this state at the time of her marriage, shall in no way become the property of her husband by the marriage. The district court may grant a divorce for any of the following causes: (1) when either of the parties has a former husband or wife living at the time of the subsequent marriage; (2) abandonment for one year; (3) adultery; (4) impotency; (5) a wife whose marriage was incestuous; (6) extreme cruelty; (7) fraudulent contract; (8) habitual drunkenness; (9) gross neglect of duty; (10) conviction for felony and imprisonment in the penitentiary therefor subsequent to the marriage. When the parties appear to be in equal wrong, the district court may in its discretion refuse to grant a divorce. When a divorce is granted the court shall make provision for guardianship, custody, support and education of the minor children of the marriage. A decree of divorce does not become absolute and take effect until the expiration of six months from the day and date when the judgment was rendered in the cause. The wife may obtain alimony from the husband without a divorce in an action brought for that purpose in a district court for any of the causes for which a divorce may be granted. The latest statistics show 2000 divorces. The legislature is considering a marriage and divorce bill.

Wills. — Any person of full age and sound mind and memory having an interest in real or personal property may give and devise the same to any person by last will and testament lawfully executed. Any married person having no children may devise one-half of
his or her property to other persons than the husband or wife. Either husband or wife may consent in writing, executed in the presence of two witnesses, that the other may bequeath more than half of his or her property. A will made in the last sickness, is valid in respect to personal estate if reduced to writing and subscribed by two competent witnesses within ten days. The legislature of 1909 authorized the assessment of an inheritance tax on estates over $1000, which is, however, not applied to property exempt from taxation under the constitution. Inquests are required before the tax graduated.

Sunday observation.—Labour, except the household offices of daily necessity, if performed on Sunday is deemed a misdemeanour, and is punishable by a fine not exceeding twenty-five dollars. Persons observing another day of the week as the Sabbath are, however, exempt from the provisions of this statute. Horse-racing, and the sales of merchandise except medicines and provisions of immediate necessity, are also prohibited on the first day of the week. There is a rigid anti-lottery law, and also a law against the use of tobacco, one forbidding the sale of tobacco to minors, and another which prohibits the sale of tobacco of a special brand or description. There are schools under the conduct of the Religious of the Sacred Heart, of the Sisters of Loreto, of the Sisters of St. Benedict, and of the Sisters of Charity. These last were also in charge of a hospital and orphanage in Leavenworth. In this year on 8 December, the Leavenworth University, a building of great architectural beauty, was consecrated. Bishop Miege went to Rome for the Vatican Council, and later to South America on a collecting tour. In 1871, the prior of St. Benedict's, Louis Mary Fink, O.S.B., was consecrated Bishop of Euparla, to assist Bishop Miege, whom he succeeded on the latter's resignation in 1874, when there were 35,000 Catholics in the state. Bishop Fink remained Vicer Apostolic of Kansas until Leavenworth was made an episcopal see, in 1877, when he became its first bishop with jurisdiction over the State of Kansas.

The Catholic population within a few years increased to 80,000 souls. Churches and schools multiplied under his fostering hand. In 1887 two other dioceses, those of Concordia and Wichita, were carved out of Leavenworth. New boundaries were established by Apostolic letters in 1897. The first Bishop of Wichita was John James Jerez, who was consecrated before his consecration. The Rt. Rev. John Joseph Hennessy was consecrated Bishop of Wichita, 30 November 1888; his jurisdiction extends over an area of 42,915 square miles, with 765,000 inhabitants, of whom 30,000 are Catholics. Rt. Rev. Richard Scannel, who was transferred to Omaha in 1888, was the first Bishop of Concordia. The second to be preconized was the Rt. Rev. Theodore Butler, D.D., who died in Rome before his consecration. The present bishop is the Rt. Rev. John Francis Cunningham, who was for many years vicar-general of Leavenworth, and was consecrated bishop 22 September, 1898. Concordia diocese has an area of 26,681 square miles, with about one Catholic to every square mile out of a population of 351,000. The Rt. Rev. Louis M. Fink, after a laborious and fruitful episcopacy of thirty-three years, went to his reward 17 March, 1904. His successor as Bishop of Leavenworth, the Rt. Rev. Thos. F. Lillis, was consecrated 27 December, 1904. The Leavenworth diocese has an area of 12,624 square miles, with a Catholic population of 56,000. The three dioceses have 312 priests, including about 100 religious.

Excellent Catholic boarding schools for boys are: St. Mary's College, conducted by the Jesuits, with 400 students; and St. Benedict's, at Atchison, by the Benedictines, with 300 students. There are nine academies, with seven hundred girl pupils, several Catholic high-schools, and ninety parochial
schools with 11,000 pupils. There are ten Catholic hospitals, and four orphanages including one for coloured children. A mission for the conversion of the coloured people has existed in Leavenworth for thirty years. The priests of Kansas have been distinguished from missionaries to the scattered tribes of the plains. They invited immigrants to Kansas. The Church has fostered benevolent societies here as elsewhere; the Knights of Columbus have active councils; the Catholic Mutual Benevolent Association has nearly 12,000 members. Various nationalities are largely represented in the Catholic societies of the parishes; to which they belong. They are mostly of German and Irish extraction, or from South-eastern Europe. The Knights of Father Matthew promote the cause of total abstinence from intoxicating liquors. The State Federation of Catholic Societies represents some five thousand men enlisted in the cause of Christian faith and morality. There is an excellent Catholic paper published with the approbation of the bishops. Parochial schools are found not only in the cities, but in the rural districts, in charge of religious communities of women. Catholics of talent are found among the best professors of the Kansas General Education Board; in Kansas in 1859, for a generation devoted his eminence talents in peace and war to furthering the best interests of the state. Thomas Ewing, Jr., was chief justice of the first supreme court of the state from February, 1851, to 28 Nov. 1852, and was distinguished in the Civil War. He died in Chicago in 1868.

J. A. SHORTER.

KANSAS, DIOCESE OF (KANJANOPOLITANA), established 10 September, 1850, to include that part of the State of Missouri, U. S. A., south of the Missouri River, and west of the eastern boundary of the counties of Moniteau, Miller, Camden, Laclede, Wright, Douglass, and Ozark, an area of 23,539 square miles. At the same time, Bishop John Joseph Hogan, of the Diocese of St. Joseph, which comprises that part of the State of Missouri between the Missouri River, was transferred to the new see and continued also in charge of the Diocese of St. Joseph as administrator. This arrangement continued until 19 June, 1893, when the separate jurisdiction of the Diocese of St. Joseph was established, and the Right Rev. Maurice F. Burke, consecrated Bishop of Cheyenne, in Wyoming, 28 October, 1887, was transferred to the title of St. Joseph. Kansas City is suffragan of St. Louis. When the diocese was established, it had 42 churches, 30 priests, and a Catholic population of 12,000. The first bishop, John J. Hogan, was born at Bruff, County Limerick, Ireland, 10 May, 1829. His early classical studies he pursued in his native land, after which he entered the diocesan seminary at St. Louis, Mo., where he was ordained priest 10 April, 1852. From that date up to his consecration as bishop, 13 September, 1868, he had an active and successful career, building up parishes in a wide and sparsely settled section of north-western Missouri. As soon as he took charge of the Diocese of St. Joseph, his zeal and earnestness gave a new impetus to the affairs of the Church there, and the same was manifest with his advent to Kansas City. The number of priests increased, new churches arose, additional religious communities were established, and in 1896 he asked for a coadjutor, and the Rev. John J. Glennon was consecrated titular Bishop of Pinara, and Coadjutor for Kansas City (29 June, 1896). Bishop Glennon, on 27 April, 1903, was transferred as coadjutor with the right of succession to the See of St. Louis and succeeded to that title 13 October, 1903.

Priests, 101 (31 religious); churches with resident priests, 74; missions with churches, 14; stations, 18; chapels, 30; 1 seminary with 20 students; academies with teachers, 12; 15 girls, 10; 1 who entered religious orders. 2,129 pupils in academies and schools, 5,543; 2 orphan asylums with 245 inmates; 1 industrial and reform school with 60 inmates; total children under Catholic care, 5,773; 6 hospitals; 1 home for aged poor; 1 founding asylum. Catholic population, 55,000.

Catholic Diocesan Annals (St. Louis, 1893); Clark, John, History of Missouri (St. Louis, 1884); Dugan, Thomas, History of the Catholic Church in the State of Missouri; Eastern Wolman (St. Louis) files; Reese, Biog. Cyc. of the Cath. Hierarchy of U. S. (Milwaukee, 1899).

THOMAS F. MEEHAN.

KAN-SU, PREFECTURE APOSTOLIC OF SOUTHERN, separated from the Northern Kan-su mission in 1905, and committed to the Belgian Congregation of the Immaculate Heart of Mary (Scheutveld, Brussels). It includes the seven southerly towns of Tsing-chou, Ping-liang-fu, Kung-chang-fu, King-chou, Kiao-chou, King-yang-fu and Kung-yuen-fu. It contains about 8,000,000 inhabitants. The first prefect Apostolic is Reverend Everard Joseph Terlaak, dwelling at Tsing-chou. In 1907 the mission consisted of: 1 prefect Apostolic, 10 missionaries, 3 native priests, 26 churches and chapels, 6 schools with 42 students, 1 college with 5 students, 3 orphan asylums with 35 children, 1,031 Catholics. In 1908: 1 prefect Apostolic, 12 missionaries, 3 native priests, and 1,106 Catholics.

Missions Catholiques.

V. H. MONTANAR.

KAN-SU, VICARIATE APOSTOLIC OF NORTHERN.—This vicariate includes the territory of Ku-ku-nor, northern part of Tibet, and the five northern prefectures of the Chinese province of Kan-su: Lan-chou-fu, Si-ning-fu, Liang-chou-fu, Kan-chou-fu, and Su-chou. The climate varies according to the locality, in general, it is healthy, temperate, and bright. Kan-su is inhabited by Chinese, Turks from Turkestan, Mongols, Tunguses for the part of Sinkiang, and contains about eight million inhabitants; among this number there are 2700 Catholics. The vicar Apostolic dwells at Sung-shu-chang-tsa in the prefecture of Liang-chou-fu. The province of Kan-su formed a part of the Vicariate Apostolic of Shên-si from 1844 to 1875, when it was separated and erected into a prefect Vicariate Apostolic, and entrusted to the Belgian Congregation of the Immaculate Heart of Mary (Scheutveld, Brussels). In 1886 the northern civil prefecture of Ning-hia was confided to the Vicariate Apostolic of South-Western Mongolia. In 1888 the new Chinese province of Sin-kiang was formed into an independent mission, bearing the name of I-li or Kul-dja. In 1905 the seven southern civil prefectures were separated to form the Prefecture Apostolic of Southern Kan-su. The present vicar Apostolic is Mgr. Ubert
Otto. He was consecrated titular Bishop of Asseurita 13 Jan., 1891. In 1907 the mission had: 1 bishop, 16 European missionaries, 2 native priests, 24 churches and chapels, 9 schools with 127 students, 1 college with 25 students, 2 orphan asylums with 35 children, and 2498 Catholics. In 1908: 1 bishop, 20 missionaries, 12 native priests, 23 churches and chapels, and 2702 Catholics.

V. H. MONTANAR.

KANT. PHILOSOPHY OF.—Kant's philosophy is generally designated as a system of transcendental criticism seeking to establish dogmatism in theology, and for the view that Christianity is a dogmatic religion. Immanuel Kant was born at Königsberg in East Prussia, 22 April, 1724; d. there, 12 Feb., 1804. From his sixteenth to his twenty-first year, he studied at the university of his native city, having for his teacher Martin Knutzen, under whom he acquired a knowledge of the philosophy of Wolff and of Newton's physics. After the death of his father in 1746 he spent nine years as tutor in various families. In 1755 he returned to Königsberg, and there he spent the remainder of his life. From 1755 to 1770 he was Privatdocent (unariled professor) at the University of Königsberg. In 1770 he may so designate the dogmas of philosophy, a position which he held until 1797. It is usual to distinguish two periods of Kant's literary activity. The first, the pre-critical period, extends from 1747 to 1781, the date of the epoch-making "Kritik der reinen Vernunft"; the second, the critical period, extends from 1781 to 1798.

The Pre-Critical Period.—Kant's first book, which was published in 1747, was entitled "Gedanken von der wahren Schätzung der lebendigen Kräfte" (Thoughts on the True Estimation of Living Forces). In 1775 he published his doctor's dissertation "On Fire" (De Igne), then prevalent in Germany. The principle of the Universe is his own self says, his purpose is "deduce the a priori, or transcendental, forms of thought. Hence, his philosophy is essentially a "criticism", because it is an examination of knowledge, and "transcendental", because its purpose in examining knowledge is to determine the a priori, or transcendental, forms of thought. Kant himself was wont to say that the business of philosophy is to answer three questions: What can I know? What ought I to do? What may I hope for? He considered, however, that the answer to the second and third depends on the answer to the first; our duty and power to act. He was independent only after a thorough study of human knowledge.

It will be found most convenient to divide the study of Kant's critical philosophy into three portions, corresponding to the doctrines contained in his three "Critiques". We shall, therefore, take up successively (1) the doctrines of the "Critique of Pure Reason"; (2) the doctrines of the "Critique of Practical Reason"; (3) the doctrines of the "Critique of the Faculty of Judgment".

In accordance with his purpose to examine all knowledge in order to find what is and what is not a priori, or transcendental, that is, independent of experience, Kant proceeds in the "Critique of Pure Reason" to inquire into the a priori forms of (a) sensation, (b) judgment, and (c) reasoning. (a) The first thing that Kant does in his study is to distinguish the material, or content, and the form, of sensation. The material of our sense-knowledge comes from experience. The form, however, is not derived through the senses, but is imposed on the material, or content, by the mind, in order to render the material, or content, universal and necessary. The form is, therefore, a priori; it is independent of space, time, or independent of experience. Kant proceeds in the "Critique of Pure Reason" to inquire into the a priori forms of sensation, (b) judgment, and (c) reasoning. The most important forms of sense-knowledge, the conditions, in fact, of all sensation, are space and time. Not only, then, are space and time mental entities in the sense that they are elaborated by the mind out of the data of experience; they are strictly subjective, purely mental, and have no objective entity, except in so far as they are applied to the external world by the mind.

Because of what is to follow, it is important to ask at this point: Do the a priori forms of sensation, since they admitted enhance the value of sense-knowledge by rendering it universal and necessary, extend to reality, or are they confined to the narrow confines of the material, or data, of the senses? Kant holds that they do not. They affect
knowledge, so to speak, qualitatively, not quantitatively. Now, the data of sensation represent only the appearances (Erscheinungen) of things; therefore all sensation is confined to a knowledge of apparent forms. The mode of nature is inseparable from the noumenon, the reality of the thing (Ding-an-sich).

(b) Taking up now the knowledge which we acquire by means of the understanding (Verstand), Kant finds that thought in the strict sense begins with judgment. As in the case of sense-knowledge, he distinguishes here also the form and the content of the judgment, or in other words, that which the understanding joins together in the act of judgment, can be nothing but the sense-intuitions, which take place, as has been said, by the imposition of the forms of space and time on the data of sensation. Sometimes the sense-intuitions (subject and predicate) are joined together in a manner that evidently implies contingency and particularity. An example would be the judgment, "This table is square." With judgments of this kind the philosopher is not much concerned. He is interested rather in judgments such as "All the sides of a square are equal", in which the predicate is necessary and universal. With regard to these, Kant's first remark is that their necessity and universality must be a priori. That nothing which is universal and necessary can come from experience is axiomatic with him. There must be a ground of judgment which is formed of sensation, which are imposed by the understanding, which do not come from experience at all, but are a priori. These forms of judgment are the categories. It is hardly necessary to call attention to the contrast between the Kantian categories and the Aristotelian. The difference is fundamental, a difference in nature, purpose, function, and effect. The important point for the student of Kant is to determine the function of the categories. They serve to confer universality and necessity on our judgments. They serve, moreover, to bring diverse sense-intuitions under some degree of unity. But they do not extend our knowledge. For while representations (or intuitions) without the categories would be blind, the categories without representative, or intellectual, content, would be empty. We are still within the narrow circle of knowledge covered by our sense-experience. Space and time do not widen that circle. The categories. The knowledge, therefore, which we acquire by the understanding is confined to the appearances of things, and does not extend to the noumenal reality, the Ding-an-sich.

It is necessary at this point to explain what Kant means by the "synthetic a priori" judgments. The Aristotelians philosophers distinguished two kinds of judgments, namely, synthetic judgments, which are the result of a "putting-together" (synthesis) of the facts, or data, of experience, and analytic judgments, which are the result of a "taking-apart" (analysis) of the subject and predicate, without immediate reference to experience. The "analytic" category is a synthetic judgment; "All the radii of a circle are equal" is an analytic judgment. Now, according to the Aristotelians, all synthetic judgments are a posteriori, because they are dependent on experience, and all analytic judgments are a priori, because the bond, or nexus, in them is perceived without appeal to experience. This classification does not satisfy Kant. He contends that analytic judgments of the kind referred to do not advance knowledge at all, since they always "remain within the concepts [subject and predicate] and make no advance beyond the data of the concepts". At the same time he contends that the synthetic judgments of the Aristotelians have no scientific value, since, coming as they do from experience, they must be contingent and particular. Therefore he proposes to introduce a third class, namely, synthetic a priori judgments, which are synthetic because the content of them is supplied by a synthesis of the facts of experience, and a priori, because the form of universality and necessity is subject to judgment independently of experience. An example would be, according to Kant, "Every effect must have a cause." Our concepts of "effect" and "cause" are supplied by experience; but the universality and necessity of principle are derived from the a priori endowment of the mind. The Aristotelians, however, and rightly, that the so-called synthetic a priori judgments are all analytic. (c) In the third place, Kant's "Critique of Pure Reason" is occupied with the reasoning faculty (Vernunft). Here "idea" play a role similar to that played in sensation and judgment by space and time and the categories, respectively. Examining the reasoning faculty, Kant finds that it has three distinct operations, namely, categorical, hypothetical, and disjunctive reasoning. To these, he says, correspond the three "ideas", the idea of the soul as thinking subject (psychological idea), the idea of matter as the total sum of the subjects (cosmological idea), and the idea of God as the supreme condition of all reality (theological idea). He first takes up the idea of the soul, and, examining the course of reasoning of the psychologist who teaches the substantiality, immanence, and immortality of the human soul, he shows that premises of judgment which are necessary are self-contradictory, because it starts with the false supposition that we can have an intuitive knowledge of the soul as the substantial subject of conscious states. This, he claims, is an erroneous supposition, for, while we can and do know our conscious states, we cannot know the subject of them. Rational psychology, then, makes a wrong start; its way is full of contradictions; it does not conclusively establish the immortality of the soul. Next, Kant subjects the cosmological idea to a similar analysis. He finds that as long as we begin to predicate anything concerning the ultimate nature of matter we fall into a whole series of contradictions, which he calls "antinomies". Thus, the propositions, "Matter had a beginning", "The world was created", are apparently no more true than their contradictory, "Matter is eternal", "The world is uncreated". To every thesis regarding the ultimate nature of matter, Kant replies, the ultimate nature of the world is equally plausible antithesis may be opposed. The conclusion is that by pure reason alone we cannot attain a knowledge of the nature of the material universe. Finally, Kant takes up the theological idea, the idea of God, and criticizes the metaphysics and arguments of rational theology. The specific ground of our belief in the existence of God is ungrounded, he says, because the proofs brought forward to support it are not conclusive. St. Anselm's ontological argument tries to establish an existential proposition without reference to experience; it confounds the order of things with the order of ideas. The ontological arguments are not by the world of experience, where alone it is valid. And the physico-theological argument from design, while it may prove the existence of an intelligent designer, cannot establish the existence of a Supreme Being. Kant, of course, does not deny the existence of God, neither does he deny the immorality of the soul or the ultimate reality of matter. His aim is to show that the three ideas, or, in other words, speculative reasoning concerning the soul, the universe, and God, do not add to our knowledge. But, although the ideas do not extend our experience, they regulate it. The best way to think about our conscious states is to represent them as inhereing in a substantial subject, about which, however, we can know nothing. The best way to think of the external world is to represent it as a multiplicity of appear-
