TABLES OF ABBREVIATIONS.

tr. translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.

tr., tract. tractate.

v. see (Lat. vide).

Ven. Venerable.

II.—ABBREVIATIONS OF TITLES.

Acta SS. Acta Sanctorum (Bollandists).

Hast., Dict. of the Bible Hastings (ed.), A Dictionary of the Bible.

Kirchenlex. Wetzer and Welte, Kirchenlexicon.

P. G. Migne (ed.), Patres Graeci.

P. L. Migne (ed.), Patres Latinæ.

Vig., Dict. de la Bible, Vigouroux (ed.), Dictionnaire de la Bible.

Notes I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

Notes II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologica" (not to "Summa Philosophiae"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2 um" refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

Notes III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiastical is indicated by Ecclus, to distinguish it from Ecclesiastes (Eccles.). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

xv
THE
CATHOLIC ENCYCLOPEDIA

Infamy (Lat. infamia, fame) is the name of a good thing. When this has been brought about by regular legal process, terminating in a conviction in a court of justice, no injury is done to the criminal by publishing the fact. The same thing can be said when the scandalous repute in which a person is held is matter of common knowledge. The canon law seems to require a pre-existing public opinion against an individual before the investigation in a judicial inquiry cannull it. The same is true in many particular cases. Infamy in the canonical sense is defined as the privation or lessening of one's good name as the result of the bad rating which he has, even among prudent men. It constitutes an irregularity, i.e., a canonical impediment which prevents one being ordained or exercising such orders as he may have already received.

It is twofold in species, infamy of law (infamia juris) and infamy of fact (infamia facti). Infamy of law is contracted in one of three ways. Either the law itself attaches this juridical Ineligibility and incapacity to the commission of certain crimes, or makes it contingent upon the decision of a judge, or finally connects it with the penalty imposed by him. This kind of infamy is incurred chiefly by those guilty of dwelling (whether as principals or seconds), rape (as likewise those who co-operate in it), attempt to marry during the lifetime of the actual consort, heresy, real simony, etc. Infamy of law may be removed either by canonical purging or by application to the Holy See. Infamy of fact is the result of a widespread opinion, by which the community attributes some unusually serious delinquency, such as adultery or the like, to a person. This is more of an unfitness than an irregularity properly so called, unless sentence in court has been pronounced. It ceases therefore when one has shown by a change of life extending over a period of two or probably three years that his repentance is sincere.

Infant Baptism. See Baptism.

Infanticide, child-murder, the killing of an infant before or after birth. According to the French Criminal Code the words are limited to the murder of the new-born infant. In English it has been used for the deprivation of life from the moment of conception up to the age of two or three years. Except under Hebrew and Christian law, the killing of very young children by their parents has almost invariably been either legally permitted or at least practised with impunity. Economic reasons more than any others had led to the killing of infants before or after birth and have continued to exert an unfortunate influence even down to our own day. In Oriental countries certain poetic and religious traditions were appealed to in justification of the custom of killing infants, but as a rule the economic basis for it is clear. In many countries it was the custom to get rid of many of the female infants because they were unproductive and generally expensive, members of the family. Sometimes usage required large dowries to be given with them. In India infanticide continued to be practised until far into the nineteenth century, notwithstanding the efforts of the British Government to put an end to it. In Greece and Rome, even at the height of their culture, the custom of exposing infants prevailed, and in China and Japan delicate or deformed children were abandoned, or even healthy females, where there were male children in the family. Missionaries have done much to break up the custom and many children have been saved by them in the last few generations to be reared in the light of Christianity. Christianity first opposed a formal and effective barrier to infanticide. Immediately after the Emperor Constantine's conversion he enacted two laws (about A.D. 320) directed against child-murder which are still found in the Theodosian Code (lib. XI, tit. xxvii). The first, to remove temptation, provided funds out of the imperial treasury for parents overburdened with children; the second accorded all the rights of property of exposed infants to those who had had the charity to save and nurture them.

In modern times even in Christian countries two causes have led to post-natal infanticide: one, the disgrace attendant upon illegitimacy; the other, an economic reason. Illegitimate children were sacrificed partly for the concealment of shame, but often to escape the burden of the child's support. The crime occurs most frequently where illegitimacy is most frequent and, according to statistics, is least common in Ireland. In countries where children are readily received without question into institutions, infanticide is rare. In France the law forbids inquiry into paternity, and arrangements are made for the state care of the children. In Russia even more liberal provision is made for the state care of any child whose parents cannot or will not care for it. The question of child-murder by mothers has always been a difficult legal problem. Under a statute of James I of England, the mother had to account for the death of her infant or be held responsible for it. In 1803 trials for infanticide were placed under the ordinary rules of evidence. The presumption now is that every new-born child found dead was born dead unless the contrary is proved. This rule of English law holds in the United States. Infanticide has been quite common in European countries during the nineteenth century for two sordid reasons: one was the neglect of infants in the process of what was known as baby-farming, the other was the desire to obtain insurance money. The latter has been regulated in various ways, but baby-farming and child-insurance still seriously increase the death-rate among infants.

Pre-natal Infanticide, the murder of an infant before birth. This is more properly called foeticide.

VIII.—1
Academy under Pomponio Leto (op. cit., II, 322 sqq.). He is particularly well known as the author of a work, partly Latin and partly Italian, the "Diarium urbis Romae" (Diario della Città di Roma), a chronicle of the city from 1294 to 1419. The work is not of special value until the time of Martin V and Eugene IV, or rather until the pontificates of Paul II (1464-71), Sixtus IV (1471-84), Innocent VIII (1484-1492), and the first part of the reign of Alexander VI. The antipapal and republican temper of the author, also Saint John of Colonna, and his personal animosity, led him to indulge in very severe charges and violent accusations of the popes, especially Sixtus IV. He put down in his chronicle every fragment of the most preposterous and malevolent gossip current in Roman society; even obvious falsehoods are attributed to him. He is therefore not considered a reliable chronicler. It is with the greatest caution and after very careful criticism that his work can be used for the papal history of his time.

The "Diarium" was first edited by Ecurd (Corpus historiæ medii evi, II, 1863-1916); afterwards, with omission of the most scandalous parts, by Muratori (Scriptores rerum Italianarum, III, ii, 1111-1232). A critical edition of the text is owing to Tommasini, "Diario della Città di Roma di Stefano Infessura scrissonato" (Fonti per la storia d'Italia, VI, Rome, 1880).

**Infedels** (Lat. in, privative, and fidelis).—As in ecclesiastical language those who by baptism have received faith in Jesus Christ and have pledged Him their fidelity are called the faithful, so the name infidel is given to those who have not been baptized. The term applies not only to all who are ignorant of the true God, such as pagans of various kinds, but also to those who adore Him but do not recognize Jesus Christ, as Jews, Mohammedans; strictly speaking it may be used of catechumens also, though in early ages they were called Christians; for it is only through baptism that one can enter the ranks of the faithful. Those however who have been baptized but do not conform to the teaching of the Catholic Church, whether from the heresies of diverse confessions, or not called infidels but non-Catholics. The relation in which all these classes stand to the Catholic Church is not the same; in principle, those who have been baptized are subjects of the Church and her children even though they be rebellious children; they are under her laws or, at least, are exempt from them only so far as pleases the Church. Infidels, on the contrary, are not members of the ecclesiastical society, according to the words of St. Paul: "Quid mihi de his qui foris sunt, judicare?" (I Cor., v, 12); they are entirely exempt from the canon law; they are presumed ignorant, not rebellious; they need to be enlightened and converted, not punished. Needless to say, infidels do not belong to the supernatural state; if they receive supernatural graces from God, it is not through the channels established by Jesus Christ for Christians, but by a direct personal inspiration, for instance, the grace of conversion. But their condition is not morally bad; negative infidelity, says St. Thomas (II-II, q. x a. 1), does not partake of the nature of sin, but rather of punishment, in the sense that ignorance of the Faith is a consequence of original sin. That is why the sentence of the Church of the Pope against Nicholas V (1453), which aimed at overturning the papal Government and making Rome a republic (Pastor, "Gesch. der Päpste", 4th ed., I, 555 sqq.). Infessura also belonged to the antipapal faction, formed among the paganizing Humanists of the Roman

**Infessura, Stefano:** b. at Rome about 1435; d. about 1500. He devoted himself to the study of law, took the degree of Doctor of Laws, and acquired a solid legal knowledge. He was for a while judge in Orte, whence he came to the Roman University as professor of Roman law. Under Sixtus IV (1471-84) his office was affected by the financial measures of that pope, who frequently withheld the income of the Roman University, applied it to other uses, and reduced the salaries of the professors. Infessura was also for a long time secretary of the Roman Senate. He was appointed by the Emperor Frederick III to the commission against Nicholas V (1453), which aimed at overturning the papal Government and making Rome a republic (Pastor, "Gesch. der Päpste", 4th ed., I, 555 sqq.). Infessura also belonged to the antipapal faction, formed among the paganizing Humanists of the Roman

**Infessura, Stefano:***
sin against faith, the most grievous of all sins, apostasy. Being endowed with reason, and subject to natural law, infidels are not excluded from the moral order; they can perform acts of natural virtue; and so the ecclesiastical authorities had to condemn proposition xxxv of Baius which declared that: "Omnia quae velint nescire velint esse aut cognoscere vel ignorare virtutes vitii" (all works of infidels are sinful, and all the virtues of the philosophers are vices; cf. St. Thomas, loc. cit., a. 4; Hurter, "Theol. dogm.", III, thee, cxviii and cxvii). Daily experience moreover proves incontestably that there are infidels who are really religious and pious, who have a devotion towards God in their business, and faithful to their family duties. One can say of them, as the Scriptures say of Cornelius the centurion, that their prayers and their alms are acceptable to God (Acts, x, 4). It was especially among such well-meaning infidels that the Church of Jesus grew up, and it is from their ranks that she gains her recruits at the present day in missionary lands.

The Church, mindful of the order of the Saviour: "Go, teach all nations" (Matt., xxviii, 12), has always considered the preaching of the Gospel among the infidels and their conversion by her apostolic missionaries as the supreme means of grace. This is the place to recall the history of the missions, from the labours of St. Paul, the greatest of missionaries, and those who gave the light of faith to the Greek and Roman world, and those who converted the barbarian peoples, down through the ages when the phalanxes of religious men rushed to the conquest of the Orient, the Far East, and America, to the present-day pioneers of the religion of Jesus Christ; the multitude of heroes and martyrs and the harvest of souls that have been won to the true Faith. Doubtless, we still are far from having but "one fold and one shepherd"; nevertheless, there is now today a province, or a mission so remote, but has heard the name of Him by whom all men shall be saved and has given children to the Church. The work of the missions is placed, as is well known, under the care and direction of the congregation of cardinals that bears the admirable name "De Propaganda Fide" (for the propagation of the Faith), instituted by Gregory XV in 1622. Ever encouraged and developed by the popes, it is the directing body on whom the evangelical labourers in infidel lands depend. It sends them forth and grants them their powers, it establishes the prefectures Apostolic and the vicariates, and it is the tribunal to whose decision the missionaries submit their controversies, difficulties, and doubts.

Though there is a general obligation on the Church to toil for the conversion of infidels, yet it is not incumbent on any particular persons, unless on those priests charged with the care of souls who have infidels within their territory. For the distant fields of labour of missionaries, priests, members of religious orders, both men and women, who voluntarily offer themselves for the apostolic work, are recruited in Catholic countries. Native Christians are not excluded from the ranks of the clergy, and it is a duty of the missionaries to provide themselves freely with pious and worthy auxiliaries in their missions. To draw the infidels to the Faith, the missionaries ought, like St. Paul, to make themselves all things to all men, to adopt the customs of the country, acquire the native language, establish schools and charitable institutions, preach especially by their example, and by living among them in order to make them see that the Church has come to teach is to be practised (cf. Instr. of the Prop. to the Vicars Apostolic of China, in the "Collectanea Sic. C. de Prop. Fide", n. 328). They and their catechists are to instruct with zeal and patience those who are anxious to know the true religion, admitting them to Baptism only after a long and thorough preparation, as was done in the case of the catechumens in ancient times. But the conversion of infidels must be free and without compulsion, otherwise it will not be genuine and lasting (cap. 9, tit. vi, lib. V, "De Judaeis"). It cannot be denied that at various epochs, notably under Charlemagne and later in Spain, there were forced conversions, which may be explained, though not excused, by the custom of the age; but the Church was not responsible for them, as it has consistently performed the same acts of baptism. On several occasions it expressly forbade the baptism of Jews and infidels against their will, and even the baptism of children without their parents' consent, unless they were in imminent danger of death (cf. Collect. cit., "De subjecto baptismo"). In the rite of administering baptism the Church asks this important question: "Quid petis ab Ecclesia Dei? Vis baptizari?"

Though ecclesiastical law does not affect the acts of infidels as such, yet the Church has to pass judgment on the validity of these acts and their juridical consequences when infidels come within the fold by baptism. No act of an infidel can have any value from the point of view of the spiritual society to which he does not belong; he is incapable by Divine law of receiving the sacraments, notably Holy Orders (evidently we are not speaking here of a purely material reception); nor can he receive or exercise any ecclesiastical jurisdiction. The acts of infidels should not be considered by the Church as acts of faith, but purely as mere human acts of natural law, to which they, like all men, are subject, and in accordance with the Divine law, in so far as it determines the secondary natural law. This applies principally to the case of matrimony. The marriage of infidels is valid as a contract under natural law, not as a sacrament, though at times this word has been applied to it (cf. Encycl. "Aurum"): it is subject only to the impediments of natural law and, at times, to those of the civil law also, but it is not affected by the impediments of canon law. However the Church does not recognize polygamy as lawful among infidels; as affirmative or strictly so called, it admits it only under the form of the "Custodia Amoris", an institution of the College of the Faith or the Pauline privilege; this consists in a convert being permitted to abandon his partner, who remains an infidel, if the latter refuse to continue the common life without endangering the faith of the convert (cf. Divos XIX, I, B, 1); under such circumstances the convert may marry a Catholic. As to acts which are prohibited or void in virtue of canon law alone, they are valid when performed by infidels; thus, the impediment of the remotest degrees of consanguinity and affinity, etc., does not affect the marriages of infidels. But the juridical consequences of the acts, performed by infidels, which exist at the moment of and in virtue of their baptism; consequently, a converted widower may not marry a relative of his late wife without dispensation; and again, a man who has had two wives before his conversion is a bigamist and therefore irregular.

Most of the laws passed by the Church refer to the relations between its subjects and infidels in not only religious but also civil affairs. Speaking generally, the faithful are forbidden to take part in any religious rites, considered as such, of pagans, Mohammedans, or Jews, and all the more to practise them through a sin of survival of their primitive superstitions. If this prohibition is inspired not so much by a fear of the danger of perversity as by the law forbidding the faithful to communicate in sacris with non-Catholics, aversion from false religions and especially from idol worship justifies the rigour of the law. To men who submit to the laws of Islam but the pharaohs, Moses is venerated by the infidels, they are venerated idols, not only in their temples, but also in private houses, to contribute to the building or repairing of pagan temples or of mosques, to carve idols, to join in pagan sacrifices, to assist at Jewish circumcisions, to wear idolatrous images or objects having an acknowledged religious significance, that is to say, images wearing them is looked upon as an act of pagan worship, and finally to make use of superstitious and especially idolatrous practices in the acts of civil or
domestic life. Some very delicate questions may arise in connexion with the last prohibition; for instance, we may recall the celebrated controversy concerning the Chinese rites (see CHINA). On the other hand, it is not forbidden to enter temples and mosques out of mere curiosity, or for religious reasons; food that has been offered to false gods, provided this be not done in a temple or as a sacred repast, and that it be done without scandal; or to observe customs or perform acts which are not in themselves religious, even though pagans join superstitious practices to them. Nor is it forbidden, but it is permissible and one might say obligatory to pray even publicly for infidel princes, in order that God may grant their subjects peace and prosperity; nothing is more conformable to the tradition of the Church; thus Catholics of the different rites in the Ottoman Empire pray for the sultan.

In this place mention may be made of the ecclesiastical law forbidding the faithful to marry infidels, a prohibition which is now a diriment impediment, rendering a marriage null and void unless a dispensation has been obtained (see DISPARITY OF WORSHIP). It is essentially a rule of the formal religious life of the Catholic party in the intimacy of married life and in the difficulties in the way of a Christian education of the children; and, if that party be the wife, in the excessive authority of the husband and the inferior condition of the wife in infidel countries, it is dispensed with difficulty and when the precautions dictated by prudence have been taken. The laws regulating the dealings between Catholics and infidels in civil life were inspired also by religious motives, the danger of perversion, and the high idea entertained in the state of the superiority of the Church to infidels. These regulations, of course, did not refer to all acts of civil life; moreover, they were not directed against all infidels indiscriminately, but only against Jews; at the present day they have fallen almost completely into desuetude. In the early Middle Ages, Jews were forbidden to have Christian slaves; the laws of the decretales forbade Christians to enter the service of Jews, or Christian women to act as their nurses or midwives; moreover, Christians when ill were not to have recourse to Jewish physicians. These measures may be useful in certain countries to-day and we find them renewed, at least as recommendations, by recent councils (Council of Gram, in 1570; Utrecht, in 1860; and Utrecht, in 1865). As for the Jews, they were ordinarily restricted to certain definite quarters of the towns into which they were admitted, and had to wear a dress by which they might be recognized. Modern legislation has given the Jews the same rights as other citizens and the intercourse between them and Catholics in civil life is no longer governed by ecclesiastical law. (See Jews and Judaism; Mohammed and Mohammadanism.)

A. BOUDINHOI.

Infinity (Lat. infinitas; in, not, finis, the end, the boundary) is a concept of the utmost importance in Christian philosophy and theology.

Definition.—The infinite, as the word indicates, is that which has no end, no limit, and therefore cannot be measured by a finite standard, however often applied; it is that which cannot be attained by successive addition, nor exhausted by successive subtraction; it is an abstract concept in itself a negative term, infinity has a very positive meaning. Since it denies all bounds—which are themselves negations—it is a double negation, hence an affirmation, and expresses positively the highest, unsurpassable reality. Like the concepts of quantity, limit, boundary, the term infinity applies primarily to space and time, but not exclusively as Schopenhauer maintains. In a derived meaning it may be applied to every kind of perfection: wisdom, beauty, power, the fulness, of the good, of the food that has been offered to false gods, provided this be not done in a temple or as a sacred repast, and that it be done without scandal; or to observe customs or perform acts which are not in themselves religious, even though pagans join superstitious practices to them. Nor is it forbidden, but it is permissible, and one might say obligatory to pray even publicly for infidel princes, in order that God may grant their subjects peace and prosperity; nothing is more conformable to the tradition of the Church; thus Catholics of the different rites in the Ottoman Empire pray for the sultan.

In this place mention may be made of the ecclesiastical law forbidding the faithful to marry infidels, a prohibition which is now a diriment impediment, rendering a marriage null and void unless a dispensation has been obtained (see DISPARITY OF WORSHIP). It is essentially a rule of the formal religious life of the Catholic party in the intimacy of married life and in the difficulties in the way of a Christian education of the children; and, if that party be the wife, in the excessive authority of the husband and the inferior condition of the wife in infidel countries, it is dispensed with difficulty and when the precautions dictated by prudence have been taken. The laws regulating the dealings between Catholics and infidels in civil life were inspired also by religious motives, the danger of perversion, and the high idea entertained in the state of the superiority of the Church to infidels. These regulations, of course, did not refer to all acts of civil life; moreover, they were not directed against all infidels indiscriminately, but only against Jews; at the present day they have fallen almost completely into desuetude. In a derived meaning it may be applied to every kind of perfection: wisdom, beauty, power, the fulness, of the good, of the food that has been offered to false gods, provided this be not done in a temple or as a sacred repast, and that it be done without scandal; or to observe customs or perform acts which are not in themselves religious, even though pagans join superstitious practices to them. Nor is it forbidden, but it is permissible, and one might say obligatory to pray even publicly for infidel princes, in order that God may grant their subjects peace and prosperity; nothing is more conformable to the tradition of the Church; thus Catholics of the different rites in the Ottoman Empire pray for the sultan.

In this place mention may be made of the ecclesiastical law forbidding the faithful to marry infidels, a prohibition which is now a diriment impediment, rendering a marriage null and void unless a dispensation has been obtained (see DISPARITY OF WORSHIP). It is essentially a rule of the formal religious life of the Catholic party in the intimacy of married life and in the difficulties in the way of a Christian education of the children; and, if that party be the wife, in the excessive authority of the husband and the inferior condition of the wife in infidel countries, it is dispensed with difficulty and when the precautions dictated by prudence have been taken. The laws regulating the dealings between Catholics and infidels in civil life were inspired also by religious motives, the danger of perversion, and the high idea entertained in the state of the superiority of the Church to infidels. These regulations, of course, did not refer to all acts of civil life; moreover, they were not directed against all infidels indiscriminately, but only against Jews; at the present day they have fallen almost completely into desuetude. In the early Middle Ages, Jews were forbidden to have Christian slaves; the laws of the decretales forbade Christians to enter the service of Jews, or Christian women to act as their nurses or midwives; moreover, Christians when ill were not to have recourse to Jewish physicians. These measures may be useful in certain countries to-day and we find them renewed, at least as recommendations, by recent councils (Council of Gram, in 1570; Utrecht, in 1860; and Utrecht, in 1865). As for the Jews, they were ordinarily restricted to certain definite quarters of the towns into which they were admitted, and had to wear a dress by which they might be recognized. Modern legislation has given the Jews the same rights as other citizens and the intercourse between them and Catholics in civil life is no longer governed by ecclesiastical law. (See Jews and Judaism; Mohammed and Mohammadanism.)

A. BOUDINHOI.
The actually infinite, however, is now and at every moment complete, absolute, entirely determined. The immeasurable, omnipresent spirit does not advance from point to point without end, but is constantly everywhere, fills every "beyond" of every assignable point. Hegel calls potential infinity the improper (schlechtes), actual infinity the true infinity. The true concept of God—an omnipresent being in every respect is Catholic dogma. In accordance with Holy Writ (III Kings, vii, 27; Ps. cxiv, 3; cxvii; Is., xxxii, 29 sqq.; Luke, i, 37, etc.) and unanimous tradition, the Vatican Council at its Third Session (cap. i) declared God to be almighty, eternal, incomprehensible, omnipresent, and in every respect completely distinct from the world, infinitely blessed in Himself and through Himself, and inexpressibly above all things that can exist and be thought of besides Him. The infinity of God may also be proved from philosophy. God is the self-existing, uncreated Being, whose entire explanation must be in Himself, in whom there can be no trace of change; but if it would be mere chance, if God possessed only a finite degree of perfection, for, however high that degree might be, everything in the uncreated Being—His perfections, His individuality—is best admitted the possibility of His possessing a still higher degree of entirety. From outside of Himself God cannot be limited, because, being uncreated, He is absolutely independent of external causes and conditions. Limitation would be chance; the more so because we can maintain not only that any given finite degree of perfection may be surpassed, but also, in a positive way, that an infinite being is possible. Moreover, if God were finite, the existence of other gods, His equals or even His superiors in perfection, would be possible, and it would be mere chance if they did not exist. Of such a creative Being we can say nothing; on the other hand, God's infinity is suggested by various data of experience, and in particular by our unbounded longing after knowledge and happiness. The more man a man is and the more he follows his best thoughts and impulses, the less he is satisfied with merely finite cognitions and pleasures. That the essential cravings of our nature are not deceptive, is demonstrated at once by experience and speculation.

From the infinity of God it is easy to deduce all His perfections: His unity, simplicity, immutability, etc., though these may be proved also by other means. Man and angels are nothing else than the His infinity in a particular respect, e.g., His omnipotence is but the infinity of His power; His omniscience, the infinity of His knowledge. Whatever is known to be a pure unalloyed perfection, must be an attribute of God on account of His infinity. We say a pure unalloyed perfection; for God, just because He is infinite, does not possess all the parts in the same way. Only pure perfections—e.g., those which include in their concept no trace of imperfection whatsoever—are contained in Him formally. We must therefore ascribe to Him the attributes wise, powerful, amiable etc., without any restriction, because these are all pure perfections. Of the so-called mixed perfections, which include besides the positive reality also some imperfections, as, e.g., extension, contrition, courage, sound reasoning, and clear judgment, He possesses only the perfection without the connected imperfection. His is, for example, the all-pervading presence without concomitant limitation to the greater or permitted sin; power without having to overcome fear; knowledge without formal reasoning or formal judgment. He possesses therefore the mixed perfections in a higher form—eminently, i. e. in the only form which is worthy of the infinite. But even the pure perfections—e.g., a Manichean power, a God who is not outside the infinite God, because it would limit His absolute perfections. This is the time-honoured proof for analogically only, not univocally. The error of Anthropomorphism consists just in this, that it ascribes to God human perfections, without first refining them; whereas Agnosticism errs in its contention that, of all the pure and good qualities which are found in creatures, none can be ascribed to God. Those modern writers too are mistaken, who hold the best form of an intellect and will and every perfection, really and essentially distinct from the world, infinitely blessed in Himself and through Himself, and inexpressibly above all things that can exist and be thought of besides Him. The infinity of God may also be proved from philosophy. God is the self-existing, uncreated Being, whose entire explanation must be in Himself, in whom there can be no trace of change; but it would be mere chance, if God possessed only a finite degree of perfection, for, however high that degree might be, everything in the uncreated Being—His perfections, His individuality—is best admitted the possibility of His possessing a still higher degree of entirety. From outside of Himself God cannot be limited, because, being uncreated, He is absolutely independent of external causes and conditions. Limitation would be chance; the more so because we can maintain not only that any given finite degree of perfection may be surpassed, but also, in a positive way, that an infinite being is possible. Moreover, if God were finite, the existence of other gods, His equals or even His superiors in perfection, would be possible, and it would be mere chance if they did not exist. Of such a creative Being we can say nothing; on the other hand, God's infinity is suggested by various data of experience, and in particular by our unbounded longing after knowledge and happiness. The dogma of God's infinity is not only of the greatest import for theology in the strictest sense of the term (i.e., the treatise on God), but it throws new light upon the efficacy of sin, which, on account of the dignity of Him Who is offended, becomes objectively infinite; upon the infinite majesty of the Incarnate Word and the boundless value of His merits and satisfaction; upon the necessity of the Incarnation, if God's justice required an adequate satisfaction for sin.

The dogma of God's infinity is not only of the greatest import for theology in the strictest sense of the term (i.e., the treatise on God), but it throws new light upon the efficacy of sin, which, on account of the dignity of Him Who is offended, becomes objectively infinite; upon the infinite majesty of the Incarnate Word and the boundless value of His merits and satisfaction; upon the necessity of the Incarnation, if God's justice required an adequate satisfaction for sin.

the unity of God, the grand thought of Tertullian (Adv. Marcion. I. iii), "If God is not one, He is not at all." But that besides God there are creatures of His, reflections from His light, illumined only by Him and in no way diminishing His light, does not limit God Himself. God, on the contrary, would be finite, if His creatures were identical with Him. For creatures are essentially different from God; they are not self-determined: infinite is only that which is pure perfection without any admixture of imperfection. If, therefore, one wants to form the equation: infinite = all, it must be interpreted: infinite = everything uncreated; or better still: infinite = all pure perfections in the highest degree. Thus the thesis that there is a reality, viz. that there can be no reality besides the infinite, this equation is wrong. The identification, however, of "infinite" and "all" is very old, and served as a basis of the Eleatic philosophy.

Another very common objection of Monists against the theistic conception of God is, that being personal, He cannot be infinite. For personality, whether conceived as individuality or as self-consciousness or as resultant being, cannot exist without something else as its opposite; but, wherever there is something else, there is no infinity. Both premises of this argument are false. To assert that the modern Protestant conception of the God of the Church is destitute of divine perfection is to make of God the non-God—to use the expression of Fichte—necessary, and that of the self-consciousness of the Deity to a certain degree of the non-God, i.e. of something as not-myself. The subsistence of intellectual beings, i.e. personality in the strictest sense of the word, implies only that I am a being and for myself, separate from everything else and in no way part of anything else. This would be true, even though nothing else existed; in fact, it would then be truer than ever. Far from excluding personality God is personal in the deepest and truest meaning, because He is the most independent Being, by Himself and in Himself the most self-existent self (see supra). 

Hirnox—Concerning the philosophers before Aristotle, Suares pertinently remarks that they "sensed" the infinity of God (subodorationem Dei). In many of them we meet the infinity of God or of the First Cause, though in many cases it be only infinity in extension. Plato and Aristotle assert in substance the infinity of the Highest Being in a more adequate sense, though blended with errors and obscurities. The Stoics had various ideas that would have led them to admit the infinity of God, had not their Pantheism stood in the way. The conceptions of Philo's Jewish-Alexandrian mysticism must be said to a certain degree of the neo-Platonism of Plotinus, who was largely influenced by Philo. Plotinus originated the tense and trenchant argument: God is not limited; for what should limit Him? ("Enn. V," lib. V, in "Opera omnia," Oxford, 1888, p. 97) If God has a limit, however, it may be objected that true infinity is a little nearer to reality with his doctrine of emanations as with the more or less pantheistic tendencies of the Indian philosophy.

The Christian writers took their concepts of the infinity of God from the Bible; the speculative development of the Christian doctrine, however, is due to St. Augustine, being well acquainted with Platonic philosophy, recognized that whatever could be greater, could not be the First Being. Candidus, a contemporary of Charlemagne, perceived that the limitations of all finite beings point towards a Creator, Who determines the degrees of their perfection. Abelard seems to teach that God, being superior to everything else in the reason of His existence, must also be greater in His perfections. A book, which is sometimes ascribed to him, "De perfecta Dei" determines the degrees of the perfections which It has, in the highest possible degree and without any limitations, is developed in numberless text-books, and so far nobody has brought a serious objection against it." ("Gesammelte Schriften," II, Leipzig, 1893, p. 355). Kant's attempt to stigmatize the deduction of infinity from self-existence as a return to the ontological argument, was a failure; for our deduction starts from the actually existing God, not from mere ideas, as the ontological argument does. Among Christians, the dogma itself has been rarely denied, but the freer tendencies of the Thirty-Nine Articles etc., and the views of some champions of Modernism in the Catholic Church, are in fact, though not always in expression, opposed to the infinity of God.

INFINITY OF CREATURES.—The knowledge we have about the infinity of creatures leaves much to be desired. It is certain that no creature is infinite in every regard. However great it may be, it lacks the most essential perfection: self-existence, and whatever is necessarily connected with it. Moreover, philosophers and theologians are practically unanimous in declaring that no creature can be infinite in any essential predicated to the infinite. Thus an accident (e.g. quantity) is capable of infinity, whether the creation could be infinite in extension, whether there can be an infinite number of actual beings, or whether an infinite number is at all possible—as to these questions they are less in harmony, though the majority lean towards the negative answer, and in our time this majority seems to have increased. At any rate the infinite world, of which the old Greek philosophers dreamt and the modern Materialists and Monists talk so much, lacks every proof, and, as to the infinite duration of the world, it is contradicted by the dogma of the finite (see supra).

The mathematicians too occupy themselves with the infinite, both with the infinitely small and the infinitely large, in the treatises on infinite series, and infinitesimal calculus, and generally in all limit operations. The infinitely small is represented by the sign 0, the infinitely large by oo, and their relation is expressed by the ratio 1 = oo. All mathematicians agree as to the method of operating with the two quantities; but there is much division amongst philosophers and philosophising mathematicians as to their real meaning. The least subject to difficulties are perhaps the following two: The infinitesimal in mathematics may be taken as the potential infinite, i.e. that which can be increased or diminished without end; in this view it is a real quantity, capable of existence. Or one may take it as the actually infinite, viz. that by actual successive addition or division cannot be reached. In this view it is something which can never be expressed in any finite number of steps, the possibility of whose existence we at best asssume. It is a limit which exists only as a fiction of the mind (esse rationis). Or if the infinitely small is considered as an absolute zero, but connoting different values, it is really a limit, but as far as the quantity is regarded it connotes other than zero. Thus, at times Leibniz calls both the infinitely small and the infinitely large fictions of the
mind (mens' fictiones) and compares them to imaginary quantities. Cannot call the differential an être de raison; Gauss speaks of a façon de parler.

The value regarded as the infinitesimal of God and infinity in creatures is discussed by philosophers in treatises on general metaphysics, natural philosophy and natural theology, by theologians in the treatises on the One God (De Deo Uno), especially: St. Thomas, Summa Theol., I, q. vii; Centro got., 1, xiiii; Summa Metaphys., 1, xvi.; Grotefend, Das Universum, 4, 112.; Idem, Der Kosmos (Paderborn, 1868); Hohe, Das Problem d. Unendlich in Katholik (1880); Idem, Das Infinitum in der christlichen Weltanschauung (1888-1893); Forster, The Concept of the Infinite (Philadelphia, 1867); Rothe, The Concept of the Infinite in August Jour. (1902); Haen, Synthese d. Religion, 3, 23; Knebel, Religionsgesch., II (Berlin, 1900-1902), 1-5. See also literature under God; Fossil; World.

INFRALEPSARIANS

Infralepsarians (Lat., infra lapsum, after the fall), the name given to a party of Dutch Calvinists in the seventeenth century, who sought to mitigate the rigour of Calvin's doctrine concerning absolute predestination. As already explained (see Calvinism), the system evolved by Calvin is essentially supralepsarian. The fundamental principle once admitted, that all events in this world proceed from the eternal decrees of God, it seems impossible to avoid the conclusion that the fall of man was not merely foreseen and permitted, as the Catholic doctrine teaches, but positively decreed, as a necessary means to the Divine end in creating man, the manifestation of God's power in condemning, as well as of His mercy in saving, souls. It was this corollary of Calvinism, viz., that God created some men for the express purpose of showing His power through their eternal damnation, that brought on the troubles associated with the name of Arminius (see ARMINTIANISM). In their controversies with opponents, within and without the pale of Calvinism, the Infralepsarians had the advantage of being able to use, or abuse, for the purpose of argument, the texts of Scripture and the Fathers which establish the dogma of original sin. But since, to remain all, they were obliged to reason even if they did not insist upon it, the principle that God's decrees can in no wise be influenced or conditioned by anything outside of Himself, the difference between them and the more outspoken Supralepsarians seems to have consisted simply in a divergent phrasing of the same mystery. To the soul which is familiarized with eternal misery without any prevision of its personal demerits, it matters little whether the decree of condemnation date from all eternity or—

“Five thousand years 'fore its creation,
Through Adam's cause.'

James F. Loughlin.

Taghiromi, Giovanni, Italian astronomer, b. at Volterra, Tuscany, 16 April, 1779; d. at Florence, 15 August, 1851. He was of a noble family which produced two other distinguished scholars, Tommaso (1470-1518), humanist, and Francesco (1772-1846), archbishop, the brother of Giovanni. His education was received in his native city at the College of Saint Michael, conducted by the Friars, popularly called the "Scolopi." This order he joined at the age of seventeen, and later became professor of mathematics and philosophy at Volterra, where one of his pupils was the future Pius IX. In 1805 he travelled in the north of Italy, and was engaged for some months in scientific work at Milan. He was called to Florence to fill the twofold office of professor of mathematics and astronomy at the College of the Scolopi, known from the adjacent church as the College of San Giovanniino, now of Santa Maria Novella, conducted by the Jesuit, Leonardo Ximenes. His first publications were articles on hydraulics, statics, and astronomy, astronomical tables, and elementary text-books on mathematics and mathematical geography. In 1830, after observations extending over fourteen years, he published, with the patronage of the Grand Duke Ferdinand III, a "Carta topografica e geometrica della Toscana," on the scale of 1:200,000—a work of high merit. When the Berlin Academy of Sciences undertook the construction of an exhaustive astronomical atlas, he was assigned a portion. His performance of this task won great praise. He became successively provincial and general of his order, but his failing health and his love for scientific work caused him to resign the latter office, which had required his taking up residence in Rome, and to accept the position of vicar-general. He retired, though almost blind for some years, continued his teaching until a few months before his death. Simplicity and piety were dominant traits of his character. The scientific works of Inghirami include: numerous articles published in the "Astronomische Nachrichten" in Zach's "Monatliche correspondence der Erd- u. Himmelskunde" and in his own "Collezione di opuscoli e notizie di Scienze" (4 vols., Florence, 1820-23); and, especially, "Effemeridi dell' osservazione delle piccole stelle sotto la luna" (ibid., 1809-30); "Tavole Astronomiche universali portatili" (ibid., 1811), and "Effemeridi di Venere che serve ad uso di naviganti pel meridiano di Parigi" (ibid., 1821-24).

Antorelli, Sulla vita e sulla opere di Gio. Inghirami (Florence, 1852)."
INGRAM

on 26 June, 1472, and within the first semester 489 students matriculated. As in other universities prior to the sixteenth century, the faculty of philosophy comprised two sections, the Realists and the Nominalists, each under its own dean. Among the teachers of the University, it was noted that the Ladins and the Georgians for poor students in the faculty of arts, and other foundations for similar purposes were subsequently made. Pope Adrian VI and Clement VII bestowed on the university additional revenues from ecclesiastical property. At the height of the humanism movement, a movement that spread among its teachers a series of remarkable savants and writers: Conrad Celtis, the first poet crowned by the German Emperor; his disciple Jacob Lober, named Philomuseus; Johann Turmair, known as Aventinus from his birthplace, Abensberg, editor of the Annales Boiorum; and of the Bavarian "Chronicon," father of Bavarian history and founder (1507) of the "Sodalitas literaria Anglistidensia." Johannes Reuchlin, restorer of the Hebrew language and literature, was also for a time at the university.

Although Duke William IV (1508-50) and his chancellor, Christoph von Eck, did their utmost during thirty years to keep Lutheranism out of Ingolstadt, and though the adherents of the new doctrine were obliged to retrace or resign, some of the professors joined the Lutheran movement. Their influence, however, was counteracted by the tireless and successful endeavors of the foremost opponent of the Reformation, Dr. Johann Maier, better known as Eck, from the name of his birthplace, Egg, on the Guns. He taught and laboured (1510-43) to such good purpose that Ingolstadt, during the Counter-Reformation, did more than any other university for the defence of the Catholic faith. At the University in Southern Germany what Wittenberg was for Protestantism in the north. In 1549, with the approval of Paul III, Peter Canisius, Salmeron, Claudia Lejay, and other Jesuits were appointed to professorships in theology and philosophy. About the same time a college and a boarding-school for boys were established, though they were not actually opened until 1556, when the statutes of the university were revised. In 1568 the profession of faith in accordance with the Council of Trent was required of the rector and professors. In 1688 the teaching in the faculty of philosophy passed entirely into the hands of the Jesuits.

Though the university after this change, in spite of vexations and conflicts regarding exemption from taxes and jurisdictional autonomy, enjoyed a high degree of prosperity, its existence was frequently imperilled during the troubles of the Thirty Years' War. But its fame as a home of learning was enhanced by men such as the theologian, Gregory of Valentia (g.v.); the controversialist, Jacob Greiser (1588-1610); the mathematician and cartographer, Philip Apian; the astronomer, Christopher Scheiner (1610-1610), who, with the heliocipe invented by him, discovered the sun spots and calculated the time of the sun's rotation after the poet, Joachim Balde, from Enisheim in Alsace, professor of rhetoric. Prominent among the jurists in the seventeenth century was Kaspar Manz and Christopher Berold. During the latter half of that century, and especially in the eighteenth, the courses of instruction were improved and adapted to the requirements of the age. After the founding of the Bavarian Academy of Science at Munich in 1759, an anti-eclesiastical tendency sprang up at Ingolstadt and found an ardent supporter in Joseph Adam, Baron of Ickstatt, whom the elector had placed at the head of the university. Plans, however, were put in motion for the university to be transferred to Munich. Shortly after the celebration of the third centenary the Society of Jesus was suppressed, but some of the ex-Jesuits retained their professorships for a while longer. A movement was inaugurated in 1772 by Adam Weishaupt, professor of canon law, with a view to securing the triumph of the rationalistic "enlightenment" in Church and State by means of the secret society of "Illuminati" (g.v.), which he founded. The organization was suppressed in 1788 by the Elector Maximilian I, and Weishaupt was dismissed. On 25 November, 1799, the Elector Maximilian IV, later King Maximilian I, decreed that the university, which was involved in financial difficulties, should be transferred to Landshut; and this was done in the following May. Among its leading professors to close the college were the Church historian, Schrank the naturalist, and Johann Michael Sailer, writer on moral philosophy and pedagogy, who later became Bishop of Ratisbon.

INGRAM, John, Venerable, English martyr; b. at Stokes Edith, Herefordshire, in 1555; executed at Newcastle-on-Tyne, 26 July, 1594. He was probably the son of Anthony Ingram of Woldford, Warwickshire, by Dorothy, daughter of Sir John Hungerford. He was educated first in Worcestershire, then at the English College, Reims, at the Jesuit College, Pont-a-Mousson, and at the English College, Rome. Ordained at Rome in 1589, he went to Scotland early in 1592, and there frequented the company of Lords Hunity, Angus, and Erroll, the Abbot of Dumfries, and Sir Walter Lindsay of Balgavies. Captured on the Tyne, 25 November, 1593, he was imprisoned successively at Berwick, Durham, York, and London, in which place he suffered the severest tortures with great constancy, and wrote twenty Latin epigrams which have survived. Sent north again, he was imprisoned at York, Newcastle, and Durham, where he was tried in the company of John Boste (g.v.) and George Swainwell, a converted minister. He was convicted under 27 Eliz. c. 2 (which made the mere presence in England of a priest ordained abroad high treason), though there was no evidence that he had ever exercised any priestly function in England. It appears that some one in Scotland in vain offered the English Government a thousand crowns for his life.

INGRES, Jean-Auguste-Dominique, a French painter, b. at Montauban, 29 August, 1780; d. at Paris, 14 January, 1867. His father sent him to study at Toulouse at the age of 15. He came into the famous studio of David, in Paris. Steeped in the theories of Mengs and Winckelman, he had broken away from the conceits and libertinism of the eighteenth century and led art back to nature and the antique. In David's view the antique was but the "first expression of the human mind," a preliterate, transitory, and removed from the caprices of whim and fashion. Ingres accepted his master's programme in its entirety. But what in David's case made up a homogeneous system, answering the twin faculties of his vast and powerful organism, meant quite another thing in Ingres, whose mind was divided into the winter and the summer, with a wondrous sensibility for reality. No one has ever experienced such sharp, penetrating, cut-out impressions with an equal aptitude for transferring them in their entirety to paper or canvas. But
these exceptional gifts were handicapped by an extreme lack of inventiveness and originality. Unfortunately David's teaching filled him with the belief that high art consisted in imitating the antique, and that religion and poetry painted without historical subjects. Throughout his life Ingres did violence to himself to paint scenes of the order of his master's "Sabinus", as he succeeded in doing in his "Achilles receiving the messengers of Agamemnon" (Paris, Ecole des Beaux-Arts), which in 1801 won the "Prix de Rome". But instead of being a living historical or poetical painting, this painting is but a collection of studies, stitched together with effort, and without any real unity of result.

Thus it was that there was always in Ingres a curious contradiction between his temperament and his education, between his ability and his theories. And this secret struggle between his realist longings and his idealistic convictions explains the discords of his work. In the beginning, however, his youth was the main factor. Perhaps, too, his obscurity, the dearth of important orders, and the necessity of earning his living were all in his favour. Never was he greater or more praised during this period of his career (1800-1820). His absolute realism and his intransigence caused him to be looked on in David's school as an eccentric and revolutionary individual. Ingres had been friendly with a Florentine sculptor named Bartolini, and was strongly attracted by the works of the Quattrocento period, and by that art throbbing with life, and almost feverish in its manner of depicting nature, such as we find examples of in the works of Donatello and Filippo Lippi. He grew enthusiastic over archaic schools, over the weird poems of Ossian, over medieval costumes, in a word, over everything by being unconventional seemed to him to draw nearer to reality, or at least gave him new thrills and sensations. He was put down as "Gothic", as an imitator of Jean de Bruges (Jan van Eyck), and all the works he produced at this time bear the mark of oddity. This is especially true of his portraits. Those of "Madame Rivière" (Louvre, 1804), "Granet" (Aix-en-Provence, 1806), "Madame Aymon (La Belle Zélie)" (Rouen, 1806), "Madame Devaunay" (Chantilly, 1807), and of "Madame de Senones" (Nantes, 1810) are unrivalled in all the world, and take a place next to the immortal creations of Titian and Raphael. Never was there a more complete absence of "manner", forgetfulness of set purpose, of systematic or poetical effort, never did a painter give himself up more fully to realism, or submit more absolutely to his model, to the object before him. No work brings home to us more clearly the expression of something definite unless it be those little portrait sketchies drawn by this same artist in the days of his poverty and sold at twenty francs each, and which are now famous as the "Ingres crayons". The finest are to be seen at the Louvre and in the Bonnat Collection at Paris and Bayonne.

In 1806 Ingres set out for Rome, and in the Vatican he saw the frescoes of the greatest of the decorators, the master of the "Parmassus" and the "School of Athens". He at once persuaded himself that this was absolute beauty, and that these paintings held within them formulae and concepts revealing a full definition of art and of its immutable laws. And it is to this mistake of his that we owe not a few of his finest works; for had he not wrongly thought himself a classicist, he would not have felt himself bound to adopt the essential constituent of the classical language, namely, the nude figure. The nude, in modern realism, hints at the unusual; suggests something deep, and seems to take a place in the programme of the realists only as something exceptional. Whereas with Ingres, thanks to the classical idealism of his doctrine, the nude was always a most important and sacred object of study. And to this study he applied, as in all his undertakings, a delicacy and freshness of feeling, an accuracy of observation toned down by a slightly sensual touch of charm, which place these paintings among his most precious works. Never did the joy of drawing and painting a beautiful body, of reproducing it in all the glory and grace of its youth, mastered by a Frenchman to such an extent, nor in a way so akin to the art of the great painters. "Edipus" and the "Girl Bathing" (1808), the "Odalisque" (1814), the "Source" (1818)—all these canvases are in the Louvre—are among the most beautiful poems consecrated to setting forth the noblest meaning of the human figure. And yet they remain but incomparable "studies". The painter is all the while incapable of blending his sensations, of harmonizing them with one another so as to form a fresco.

This same taste for what is quaint led Ingres at this period to produce a host of minor anecdotal or historical works such as "Raphael and the Fornarina", "Francesca da Rimini" (1819, in the Angers Museum), etc., works that at times display the wit, the romance, and the caprice of a quattrocento manner, and more clearly the originality of the other. In work of this order nothing the artist has left us is more complete, the best balanced, the soundest piece of work the master wrought. At this time David, exiled by the Restoration, left the French school without a head, while the Romantic school, with the "Medusa" of Géricault (1818) and the "Dante" of Delacroix (1822), was clamouring for recognition. Ingres, hitherto but little known in his solitude in Italy, resolved to return to France and strike a daring blow. As early as 1820 he sent to the Salon his "Christ conferring the keys on Peter" (Louvre), a cold and restrained work which won immense success among the classicists. The "Vow of Louis XIII" (Montauban, 1824), a homage to Raphael, appeared opportunely as a contrast to Delacroix's "Massacre of Scio". Henceforward Ingres was looked up to as the leader of the Traditional School, and he proved his claim to the title by producing the famous "Apotheosis of Homer" (Louvre, 1827).

This marks the beginning of a new period, in which Ingres, absorbed in decorative works, is nothing more than the upholster of the classical teaching. Over and over again he did himself violence in composing huge mechanical works like the "St. Symphorin" (Autun, 1835), "The Golden Age" (Dampierre, 1843-49), the "Apotheosis of Napoleon", "Jesus in the midst of the Doctors" (Montauban, 1862), works that entailed most pernicious labour, and which after all are but groups of "Studies", monotonously carelessly pasted and lifeless. Some of Ingres's most beautiful portraits, those of Armand Bertin (Louvre, 1831), of Cherubini (Louvre, 1842), and of Madame d'Haussonville (1845) belong to this period. But gradually he gave up portrait-
painting, and wished only to be the painter of the ideal. Yet he was less so now than ever before. In his latest works his deficiency of composition becomes more apparent. His life was unhappy.

In 1820 he left Rome for Florence, and in 1824 he settled in Paris, which he never left save for six years (1836–1842) which he spent in Rome as director of the Villa Medici. He died at the age of 87, having continued to work up to his last day. Perhaps his prestige and authority counted for something in the renaissance of decorative painting that took place in the middle of the nineteenth century. But his undoubted legacy was a principle of quaintness or oddity and eccentricity, which was copied by artists like Signor and Jeanmot. Ingres was a naturalist who persisted in practice. He was the most idealistic of the age, which was ever attempted in the French School. Like his great rival Delacroix, he may be said to have been a lonely phenomenon in the art of the nineteenth century.

LOUIS GILLET.

Inglis, Abbé of Croyland, Lincolnshire; d. there 17 December, 1105. He is first heard of as secretary to William the Conqueror, in which capacity he visited England in 1051. After making a pilgrimage to Jerusalem he entered the Norman monastery of Fontenelle, or Saint-Wandrille, under Abbé Gerbert, who appointed him prior. The English Abbey of Croyland falling vacant, owing to the deposition by Lanfranc of Abbé Ulfvjetel, Inglis was nominated to the office in 1087 at the special instance of King William. He was not only an able but a kindly man, as was shown by his successful efforts to obtain his predecessor's release from Glastonbury, where he was confined, and his return to Peterborough (the house of his profession), where he died. Inglis governed Croyland for twenty-four years, and with success, though in the face of many difficulties, not the least being his own bad health, for he suffered greatly from gout. Another of his troubles was the partial desertion of his church by the monasteries, who neglected their services, vestments, and books. An event of his abbacy was the interment in Croyland church of the Saxon Earl Waltheof of Northumbria, who was executed by William's orders, and was a martyr as well as a national hero in the popular estimation.

Quintin, Inglis, Les Deux S. S. IV (ed. Moore, Paris, 1855), 364 [Obedeceus is the only extant authority for the few facts known about Inglis' life. The chronicle known as his Historia Anglicana, containing many autobiographical details, is a fourteenth- or fifteenth-century forgery; see also Freeman, Composer of England, IV (Oxford, 1871), 600, 601, 690].

T. HUNTER-BLAIR.

Ingoth (Ingewrte, Indewurde), Richard of, a Franciscan preacher who flourished about 1225. He was a friar in the order of the Agnellus to England in 1224, and is supposed to have been the first of the Franciscans to preach north of the Alps. He was already a priest and well on in years at the time of his arrival, and was responsible for the establishment of the first Franciscan house in London. The first convents at Oxford and Northampton were likewise indebted to his efforts, and he served for a time as custodian at Cambridge. In 1230 he acted as vicar of the English Province during the absence of Agnellus at a general chapter at Assisi, and was subsequently appointed provincial minister of Ireland by John Parem. In 1230, during the governorship of Albert of Pisa, he relinquished this position and set out as a missionary for the Holy Land, during which pilgrimage he died.

Joseph F. Delaney

INNOCENT, Proofs of. See Ordeals.

Innocent I, Pope; date of birth unknown; d. 12 March, 417. Before his elevation to the Chair of Peter, very little is known concerning the life of this energetic pope, so zealous for the welfare of the whole Church. According to the Liber Pontificalis he was a native of Ariminum; his father was called Innocentius. He grew up among the Roman clergy and in the service of the Roman Church. After the death of Anastasius (Dec., 401) he was unanimously chosen Bishop of Rome by the clergy and people. Not much has come down to us concerning his ecclesiastical activities in Rome. Nevertheless one or two instances of his zeal for the purity of the Catholic Faith and for church discipline are well attested. He took several churches in Rome from the Novatians (Socrates, Hist. Eccl., VII, ii) and caused the Photinian Marcus to be banished from the city. A drastic decree, which the Emperors issued from Rome (22 Feb., 407) against the Manicheans, the Montanists, and the Priscillianists (Codex Theodosianus, XVI, 5, 40), was very probably not issued without his concurrence. Through the munificence of Vestina, a rich Roman matron, Innocent was enabled to build and richly endow a church dedicated to SS. Victor and Protasius which had been the old Titulus Vetinae which still stands under the name of San Vitale. The siege and capture of Rome by the Goths under Alaric (408-10) occurred in his pontificate. When, at the time of the first siege, the barbarian leader had declared that he would withdraw his forces on condition that the Romans should arrange a peace favourable to him, as king of the Goths, and that the Romans went to Honorius, at Ravenna, to try, if possible, to make peace between him and the Goths. Pope Innocent also joined this embassy. But all his endeavours to bring about peace failed. The Goths then recommenced the siege of Rome, so that the pope and the envoys were not able to return to the city, which was taken and sacked in 410. From the beginning of his pontificate, Innocent often acted as head of the whole Church, both East and West.

In his letter to Archbishop Anysius of Thessalonica, in support of the latter of his own election to the see of Rome, he also confirmed the election of the patriarch of Illyria, which had been bestowed upon the archbishop by previous popes. When Eastern Illyria fell to the Eastern Empire (379) Pope Damasus had asserted and preserved the ancient rights of the papacy in those parts, and his successor Siricius had bestowed on the Archbishop of Thessalonica the privilege of confirming and consecrating the bishops of Eastern Illyria. These prerogatives were renewed by Innocent (Ep. i), and by a later letter (Ep. xii, 17 June, 412) the pope entrusted the supreme administration of the Eastern Illyria to Archbishop Rufus of Thessalonica, as successor to Siricius. By this means the papal vicariate of Illyria was put on a sound basis, and the archbishops of Thessalonica became vicars of the popes. On 15 Feb., 404, Innocent sent an important decretal to Bishop Victorius of Rouen (Ep. 35), who had laid before the pope a list of disciplinary matters for decision. The points at issue concerned the consecration of bishops, admissions into the ranks of the clergy, the disputes of clerics, whereby important matters (causes majoris) were to be brought from the episcopal tribunal to the Apostolic See, also the ordinations of the clergy, celibacy, the pretensions of the archbishops, the admission of clerics into the Church, monks, and nuns. In general, the pope indicated the discipline of the Roman Church as being the norm for the other bishops to follow. Innocent directed a similar decretal to the Spanish bishops (Ep. iii) among whom difficulties had arisen, especially regarding the Priscillianist bishops. The pope regulated this matter and at the same time settled other questions of ecclesiastical discipline.

Similar letters, disciplinary in content, or decisions of important cases, were sent to the bishops of Toulouse (Ep. vi), to the bishops of Macedonia (Ep. xvii), to Deccentius, Bishop of Gubbio (Ep. xxv), to Felix, Bishop of Nocera (Ep. xxxviii). Innocent also addressed shorter letters to several other bishops, among them a letter to two British bishops, Maximus and Severus, in which he decided that those priests who, while priests, had begotten children should be dismissed from their sacred office (Ep. xxxix). Envoy was sent by the Synod of Carthage (404) to the Bishop of Rome, or the bishop of the city where the emperor was staying, in order to provide for severer treatment of the Montanists. The envoys came to Rome, and Pope Innocent obtained from the Emperor Honorius a strong decree against those African sectaries, by which many adherents of Montanism were induced to be reconciled with the Church. The Christian East also claimed the pope's energy. St. John Chrysostom, Bishop of Constantinople, was persecuted by the Emperor Eudoxia and the Alexandrian patriarch Theophilus, threw himself on the protection of Innocent. Theophilus had already informed the latter of the deposition of John, following on the illegal Synod of the Oak (ad quercum). But the pope did not recognize the sentence of the synod, summoned Theophilus to a new synod at Rome, once more soleated the exiled Patriarch of Byzantium, and wrote a letter to the clergy and people of Constantinople in which he animadverted severely on their conduct towards their bishop (John), and announced his intention of calling a general synod, at which the matter would be sifted and decided. Theophilus was suggested as the place of assembly. The pope informed Honorius, Emperor of the West, of these proceedings, whereupon the latter wrote three letters to his brother, the Eastern Emperor Arcadius, and besought Arcadius to summon the Eastern bishops to a synod at Thessalonica, before which the Patriarch Theophilus was to appear. The messengers who brought these three letters were ill received, Arcadius being quite favourable to Theophilus. In spite of the efforts of the pope and the Western emperor, the synod never took place. Innocent remained in correspondence with the Eastern bishops. In the place of banishment the latter thanked him for his kind solicitude, the pope answered with another comforting letter, which the exiled bishop received only a short time before his death (407) (Ep. xxi). The pope did not recognize Arscacius and Atticus, who had been raised to the seat of Constantinople instead of the unlawfully deposed John.

After John's death, Innocent desired that the name of the deceased patriarch should be restored to the diptychs, but it was not until after Theophilus was dead (412) that Atticus yielded. The pope obtained through this bishop's intercession the revocation of the wrong done to St. John Chrysostom. The schism at Antioch, dating from the Arian conflicts, was finally settled in Innocent's time. Alexander, Patriarch of Antioch, succeeded, about 413-15, in gaining over to his cause the adherents of the former Bishop Eustathius; he also received into the ranks of his clergy the followers of Paulinus, who had fled to Italy and had been ordained there. Innocent informed Alexander of these proceedings, and as Alexander restored the name of John Chrysostom to the diptychs, the pope entered into communion with the East, and consecrated patriarchs for the first time in the name of a Roman synod of twenty Italian bishops, and one in his own name (Ep. xix and xx). Acacius, Bishop of Berea, one of the most zealous opponents of Chrysostom, had sought to obtain re-
admittance to communion with the Roman Church through the aforesaid Alexander of Antioch. The pope informed him, through Alexander, of the conditions under which he would resume communion with him (Ep. xxi). In a later letter Innocent declared that he was sent of God (Ep. xxiv).

The pope also informed the Macedonian bishop Maximian and the priest Bonifatius, who had interceded with him for the recognition of Atticus, Patriarch of Constantinople, of the conditions, which were similar to those required of the above-mentioned Patriarch. (Ep. xxvii, the author.) In the Orantian and Pelagian controversies, also, the pope's authority was invoked from several quarters. St. Jerome and the nuns of Bethlehem were attacked in their convents by brutal followers of Pelagius, a deacon was killed, and a part of the buildings was set on fire. John, Bishop of Jerusalem, who was on bad terms with Jerome, owing to the Orantian controversy, did nothing to prevent these outrages. Through Aurelius, Bishop of Carthage, Innocent sent St. Jerome a letter of condolence, in which he informed him that he would employ the influence of the Holy See to repress such crimes; and if Jerome would give them up, it would be much to his credit. As it was, he reconciled them in the matter. The pope at once wrote an earnest letter of exhortation to the Bishop of Jerusalem, and reproached him with negligence of his pastoral duty. The pope was also compelled to take part in the Pelagian controversy. In 415, on the proposal of Gisius, the Synod of Jerusalem brought the matter of the orthodoxy of Pelagius before the Holy See. The synod of Eastern bishops held at Diospolis (Dec. 415), which had been deceived by Pelagius with regard to his actual teaching and had acquiesced, approached Innocent on behalf of the heretic. On the report of Gisius concerning the proceedings at Diospolis, the African bishops assembled in synod at Carthage, in 416, and confirmed the condemnation which had been pronounced in 411 against Cereleus, who shared the views of Pelagius. The bishops of Numidia did likewise in the same year in the Synod of Milloe. Both synods reported their transactions to the pope and asked him to confirm their decisions. Soon after this, five African bishops, among them St. Augustine, wrote a personal letter to Innocent regarding their own position in the matter of Pelagianism. Innocent in his reply praised the African bishops for the departure of the heresy from their midst. The Synods of Diospolis, the African synod at Carthage, and the Synod of Diospolis, the African synod are all referred to in the concordance (Ep. xxvii--xxxiii). The decisions of the Synod of Diospolis were rejected by the pope. Pelagius now sent a confession of faith to Innocent, which, however, was only delivered to his successor, for Innocent died before the document reached the Holy See.

He was buried in a basilica above the catacomb of Pontianus, and was venerated as a saint. He was a very energetic and active man, and a highly gifted ruler, who fulfilled the duties of his position with great success. His pontificate was characterized by a firm stand against heresy, and by a strong defense of the orthodoxy of the Church. His episcopal see was increased by the granting of privileges, and by the establishment of new sees. He was a patron of learning, and the patron of many authors. His pontificate was marked by a series of councils, which were held in various parts of the Empire, and by the promulgation of a number of edicts, which were intended to promote the interests of the Church. He was a patron of the arts, and the founder of many libraries. He was a patron of the poor, and the founder of many hospitals. He was a patron of the clergy, and the founder of many churches. His pontificate was marked by a series of victories over the enemies of the Church, and by a series of victories over the enemies of the Empire. He was a patron of the Pope, and the founder of many monasteries. He was a patron of the Pope, and the founder of many churches. His pontificate was marked by a series of victories over the enemies of the Church, and by a series of victories over the enemies of the Empire. He was a patron of the Pope, and the founder of many monasteries.
vaded the lands granted to Rainulf. In 1139 St. Malachy, Archbishop of Armagh, left Ireland to visit the court of Segni a received with great honours and made him papal legate for all Ireland, but would not grant him permission to resign his see in order to join the community of St. Bernard at Clairvaux (Belleisheim, "Ireland", I, 350). In the East, Innocent II curbed the pretensions to independence on the part of Patriarch Aymeric of Jerusalem and of Arsoil, Patriarch of Antioch (Hergenröther, II, 410).

After the death of Alberic, Archbishop of Bourges, in 1141, Louis VII of France wanted to secure the nomination of a man of his own choice whom the chapter did not consider the fit person, and they chose Pierre de Clario, whereupon Innocent II excommunicated him. The bishop-elect in person brought the matter to Rome, and Innocent, finding after due examination that the election had been made according to the requirements of ecclesiastical law, confirmed it and himself gave the episcopal consecration. When Pierre returned to France, Louis did not allow him to enter his diocese. After useless negotiations Innocent placed France under interdict. Only during the reign of the next pope was the interdict removed and peace restored.

In the trouble between Alfonso of Spain and Alfonso Henry of Castile making Portugal an independent monarchy and had placed his kingdom under the protection of the Holy See, Innocent acted as mediator (Aschbach, "Gesch. Span. u. Port.", 1833, 304, 458). Ramiro II, a monk, had been elected King of Aragon. Innocent II is said to have given him dispensation from his vows, though others claim that this is a calumny spread by the enemies of the pope (Damberger, "Weltgeschichte", VIII, 202).

Several minor synods were held during the last few years of the life of Innocent, one at Sens in 1140, at Vienne in 1141 and in the same year at Vienne and Reims; in 1141 at Lagony, in which Ralph, the Duke of Vermandois is said to have been excommunicated by the legate Yvo of Chartres for having repudiated his lawful wife and married another (Hefele, V, 488). A synod was held under the presidency of the papal legate 7 April, 1141, at Winchester; and 7 Dec., 1141, at Westminster. During his pontificate Innocent II enrolled among the canonized saints of the Church the Reims in 1133, St. Godhard, Archbishop of Reims; at Pisa in 1134, St. Hugo, Bishop of Gironde, who had died in 1132, and had been a zealous defender of the rights of Innocent; at the Lateran in 1139, St. Sturmian of Pula (Ann. Pont. Catt, 1903, 412). To St. Norbert of the Premonstratensians, he granted in 1131 a document authorizing him to introduce his rule at the cathedral of Magdeburg (Heimhucher, "Die Orden u. Congr.", I, Paderborn, 1907, 55); to St. Bernard he in 1140 gave the church of Sts. Vincent and Anastasius near Rome (ibid., I, 428); he also granted many privileges to others. His letters and privileges are given in Migne (P. L., CLXXIX). According to the "Liber Pontificalis" (ed. Duchesne, II, 379) he ordained eighteen deacons, twenty priests, and seventy bishops.

He was buried in St. John Lateran, but seven years later was transferred to Santa Maria in Trastevere. Innocent II is praised by all, especially by St. Bernard, as a man of irreproachable character. His motto was: "Adjuva nos, Deus salutaris noster". The policy of Innocent is characterized in one of his letters: "If the sacred authority of the popes and the imperial power is subverted, the Church is destroyed. For since God in all humility, since then only can peace and harmony exist among Christian peoples. For there is nothing so sublime as the papacy nor so exalted as the imperial throne" (Weiss, V, 25).

BOERSCHINCK, R. V.; DZERZHINSKY, Ezechiel (10th ed., Freiburg, 1907). See also under ANACLETUS II.

FRANCIS MERSHAM.
In case of a double election the pope must exhort the princes to come to an agreement. If after a due interval they have not reached an agreement they must ask the pope to arbitrate, failing which, he must of his own accord and by virtue of his office decide in favour of one of the claimants. The pope's decision shall not be based on the greater or less legality of either election, but on the qualifications of the claimants.

Innocent's exposition of his theory concerning the relation between the popacy and the empire was accepted by many princes, as is apparent from the sudden increase of Otto's adherents and the lack of support for the issue of the decretal. If after 1023 the majority of the princes began again to side with Philip, it was the fault of Otto himself, who was very irritable and often offended his best friends. Innocent, reversing his decision, declared in favour of Philip in 1027, and sent the Cardinals Ugolin of Ostia and Leo of Santa Croce to Germany with instructions to endeavour to induce Otto to renounce his claims to the throne and with powers to free Philip from the ban. The murder of King Philip by Otto of Wittelsbach, 21 June, 1028, entirely changed conditions in Germany. At the Diet of Mainz, 18 December, 1028, Otto was regarded as king by all the princes, and the pope invited him to Rome to receive the imperial crown. He was crowned emperor in the Basilica of St. Peter at Rome, 4 October, 1029. Before his coronation he had solemnly promised to leave the Church in the peaceful possession of Spoletto, Ancona, and Matilda; to assist the pope in the exercise of his suzerainty over Sicily; to grant freedom of ecclesiastical elections; unlimited right of appeal to the pope and the exclusive competency of the hierarchy in spiritual matters; he had, moreover, renounced the "regalia" and the usufruct of vacant sees and the seizure of the estates of intestate ecclesiastics. He also promised to assist the hierarchy in the extirpation of heresy. But scarcely had he been crowned emperor when he seized Ancona, Spoletto, the bequest of Matilda, and other property of the Church, giving it in vassalage to some of his friends. He also united with the enemies of Frederick II and invaded the Kingdom of Sicily with the purpose of wresting it from the youthful king and from the suzerainty of the pope. When Otto did not listen to the remonstrances of Innocent, the latter excommunicated him, 18 November, 1029, and claimed his excommunication at a Roman synod held on 31 March, 1211. The pope now began to treat with King Philip Augustus of France and with the German princes, with the result that most princes renounced the excommunicated emperor and elected in his place the youthful Frederick II of Sicily, at the Diet of Nuremberg in September, 1211. The election was repeated in presence of a representative of the pope and of Philip Augustus of France at the Diet of Frankfort, 2 December, 1212. After making practically the same promises to the pope which Otto IV had made previously, i.e., in addition to renouncing the herem oath never to unite Sicily with the empire, his election was ratified by Innocent and he was crowned at Aachen on 12 July, 1215. The deposed emperor Otto IV hastened to Germany immediately upon the election of Frederick II, but received little support from the princes. In alliance with John of England he made war upon Philip of France, but was defeated in the battle of Bouvines, 27 July, 1214. Then he lost all influence in Germany and died on 19 May, 1218, leaving the pope's creature, Frederick II, the undisputed emperor. When Innocent ascended the papal throne in 1241, he was content to crown Philip Augustus of France and Richard of England. The pope considered it his duty, as the supreme ruler of the Christian world, to put an end to all hostilities among Christian princes. Shortly after his accession he sent Cardinal Peter of Capua to France with in-
strustions to threaten both kings with interdict if they would not within two months conclude peace or at least agree upon a truce of five years. In January, 1198, the two kings met between Vernon and Andely and a truce of five years was agreed upon. The same legate was instructed by the pope to threaten Philip with excommunication of the whole of France within a month he would not be reconciled with his lawful wife, Ingeburga of Denmark, whom he had rejected and in whose stead he had taken Agnes, daughter of the Duke of Meran. When Philip took no heed of the pope's warning Innocent carried out his threat and, on 11 June, interdicted all the bishops of France under interdict. For nine months the king remained stubborn, but when the barons and the people began to rise in rebellion against him he finally discarded his concubine and the interdict was lifted on 7 September, 1200. It was not, however, until 1213 that the pope succeeded in bringing about a final reconciliation between the King and his lawful wife Ingeburga.

Innocent also had an opportunity to assert the papal rights in England. After the death of Archbishop Hubert of Canterbury, in 1205, a number of the younger monks of Christ Church assembled secretly at night and elected their sub-prior, Reginald, as archbishop. This election was made without the concurrence of the bishop and without the authority of the king. Reginald was asked not to divulge his election until he had received the papal approbation. But on his way to Rome the vain monk assumed the title of archbishop-elect, and thus the episcopal body of the province of Canterbury was apprised of the secret election. The bishops at once sent Peter of Angleshaw as their representative to Pope Innocent to protest against the uncanonical proceedings of the monks of Christ Church. The monks also were highly incensed at Reginald because, contrary to his promise, he had divulged his election. They proceeded to a second election, and on 11 December, 1205, cast their votes for the royal favourite, John de Grey, whom the king had recommended to their suffrages. The controversy between the monks of Christ Church and the bishop concerning the right of electing the Archbishop of Canterbury, Innocent decided in favour of the monks, but in the present case he pronounced both elections invalid; that of Reginald because it had been made uncanonically and clandestinely, that of John de Grey because it had occurred before the invalidity of the former was proclaimed by the pope. Not even John, who offered Innocent 5,000 marks for his election, would decide in favour of de Grey, could alter the pope's decision. Innocent summoned those monks of Canterbury who were in Rome to proceed to a new election and recommended to their choice Stephen Langton, an Englishman, whom the pope had called to Rome from the rectorship of the University of Paris, in order to create him cardinal. He was duly elected by the monks and the pope himself consecrated him archbishop at Viterbo on 17 June, 1207. Innocent informed King John of the election of Langton and asked him to accept the new archbishop. The king, however, had set his mind on his friend John de Grey, and finally refused to allow Langton to come to England in the capacity of Archbishop of Canterbury. He, moreover, wreaked his vengeance on the monks of Christ Church by driving them from their monastery and taking possession of their property. Innocent now placed the entire kingdom under interdict which was lifted on 24 March, 1208. When the archbishop proved of no avail and the king committed acts of cruelty against the clergy, the pope declared him excommunicated in 1209, and formally deposed him in 1212. He entrusted King Philip of France with the execution of the sentence. When Philip threatened to break the truce and the feudal lordship, the king of England began to forswear King John, the latter made his submission to Pandulph, whom Innocent had sent as legate to England. He promised to acknowledge Langton as Archbishop of Canterbury, to allow the exiled bishops and priests to return to England and to make compensation for the losses which the clergy had sustained. He went still further, and on 13 May, 1213, probably of his own initiative, surrendered the English kingdom through Pandulph into the hands of the pope to be returned to him as a fief. The document of the surrender states that henceforth the kings of England were to rule as vassals of the pope and to pay an annual tribute of 1000 marks to the See of Rome. On 20 July, 1213, the king was solemnly freed from the ban at Winchester and after the clergy had been reimbursed for its losses the interdict was lifted from England on 29 June, 1214. It appears that many of the barons were not pleased with the surrender of England into the hands of the pope. They also resented the king's continuous trespasses upon their liberties and his many acts of injustice in the government of the people. They finally had recourse to violence and forced him to yield to their demands by affixing his seal to the Magna Charta. Innocent could not as suzerain of England allow a contract which imposed such serious obligations upon his vassal to be made without his consent. His legate Pandulph had repeatedly praised King John to the pope as a wise ruler and loyal vassal of the Holy See. The pope, therefore, declared the Great Charter null and void, not because it gave too many liberties to the barons and the people, but because it had been obtained by violence.

There was scarcely a country in Europe over which Innocent III did not in some way or other assert the supremacy which he claimed for the papacy. He communicated Alfonso IX of Leon, for marrying a near relative, Berengaria, a daughter of Alfonso VIII, contrary to the laws of the Church, and effected their separation in 1204. For similar reasons he annulled, in 1208, the marriage of the crown-prince, Alfonso of Portugal, with Urraca, daughter of Alfonso of Castile. From Pedro II of Aragon he received that kingdom in vassalage and crowned the new king at Rome in 1234. He prepared a crusade against the Moors and lived to see their power broken in Spain at the battle of Navas de...
Tolosa, in 1212. He protected the people of Norway against their tyrannical king, Sweveri, and after the king's death arbitrated between the two claimants to the Norwegian throne. He mediated between King Emeric of Hungary and his rebellious brother Andrew, sent royal crown and sceptre to King Johannitus of Bulgaria and had his legate crown him king at Turin, in 1204; he restored ecclesiastical discipline in Poland; arbitrated between the two claimants to the royal crown of Sweden; made partly successful attempts to reunite the Greek with the Latin Church and extended his beneficent influence practically over the whole Christian world. Like many preceding popes, Innocent had at heart the recovery of the Holy Land, and between 1203 and 1204 the Venetians had pledged themselves to transport the entire Christian army and to furnish the fleet with provisions for nine months, for 85,000 marks. When the crusaders were unable to pay the sum, the Venetians proposed to bear the financial expenses themselves on condition that the crusaders would first assist them in the conquest of the city of Zara. The crusaders yielded to their demands and the fleet started down the Adriatic on 8 October, 1202. Zara had scarcely been reduced when Alexius Comnenus arrived at the camp of the crusaders and pleaded for their help to replace his father, John Angelus, who had been deposed by his cruel brother Alexius. In return he promised to reunite the Greek with the Latin Church, to add 10,000 soldiers to the ranks of the crusaders, and to contribute money and provisions to the crusade. The Venetians, who saw their own commercial advantage in the taking of Constantinople, induced the crusaders to yield to the prayers of Alexius, and Constantinople was taken by them in 1204. Isaac Angelus was restored to his throne but soon replaced by a usurper. The crusaders took Constantinople a second time on 28 May, 1205, and on 12 October. 1202, after a long siege by Count Flanders, was proclaimed emperor and the Greek Church was united with the Latin. The union, as well as the Latin empire in the East, did not last longer than two generations. When Pope Innocent learned that the Venetians had diverted the crusade's purpose of reconquest of the Holy Land he expressed his great dissatisfaction at first at their conquest of Zara, and when they proceeded towards Constantinople he solemnly protested and finally excommunicated the Venetians who had caused the digression of the crusaders from their original purpose. Since, however, he could not use what had been accomplished he did his utmost to destroy the Greek schism and Latinize the Eastern Empire.

Innocent was also a zealous protector of the true Faith and a strenuous opponent of heresy. His chief activity was turned against the Albigenses who had become so numerous and aggressive that they were no longer satisfied with being adherents of heretical doctrines but even endeavoured to spread their heresy by force. They were especially numerous in a few cities of Northern Italy and in Southern France. During the first year of his pontificate Innocent sent two Cistercian monks Rainer and Guido to the Albigenses in France to preach to them the true Faith and dispute with them on controverted topics of religion. The two Cistercian missionaries were soon followed by Diego, Bishop of Osma, then by St. Dominic and the two papal legates, Peter of Castelnau and Raoul. When, however, these peacefully endeavoured to convert the Albigenses, and the papal legate Castelnau was assassinated in 1208, Innocent resorted to force. He ordered the bishops of Southern France to put under interdict the participants in the murder and all the towns that gave shelter to them. He was especially incensed against Count Raymond of Toulouse who had previously been excommunicated by the murdered legate and whom, for good reasons, the pope suspected as the instigator of the murder. The pope protested his innocence to a pope, probably out of cowardice, but the pope placed no further trust in him. He called upon France to raise an army for the suppression of the Albigenses. Under the leadership of Simon of Montfort a cruel campaign ensued against the Albigenses which, despite the protest of Innocent, soon turned into a war of conquest (see ALBIGENSES). The culminating point in the glorious reign of Innocent was his convocation of the Fourth Lateran Council, which he solemnly opened on 15 November, 1215. It was by far the most important council of the Middle Ages. One of its central enactments was a call to the Land, it issued seventy reformatory decrees, the first of which was a creed (Firmiter credimus), against the Albigenses and Waldenses, in which the term "transubstantiation" received its first ecclesiastical sanction. (See LATERAN COUNCIL.)

The labours of Innocent in the inner government of the Church appear to be of a very subordinate character when they are put beside his great politico-ecclesiastical achievements, which brought the papacy to the zenith of its power. Still they are worthy of memory and have contributed their share to the glory of the name of the Church. Under Innocent two great founders of the mendicant orders, St. Dominic and St. Francis, laid before him their scheme of reforming the world. Innocent was not blind to the vices of luxury and indolence which had infected many of the clergy and part of the laity. In Dominici and Francis he recognized two mighty adversaries of these vices and he sanctioned their projects with words of encouragement. The lesser religious orders which he approved are the Hospitallers of the Holy Ghost on 23 April, 1198, the Trinitarians on 17 December, 1198, and the Humiliati, in November, 1215. In 1219 he commissioned the Cistercian monk, Christian, afterwards bishop, with the conversion of the heathen Prussians. At Rome he built the famous hospital Santo Spirito in Sassia, which became the model of all future city hospitals and exists to the present time (see Walsh, "The Popes and the Church," New York, 1910, p. 264-268; and the article HOSPITALS). The following saints were canonized by Innocent: Homobonus, a merchant of Cremona, on 12 January, 1199; the Empress Cunegond, on 3 March, 1200; William, Duke of Aquitaine in 1202; Wulstan, Bishop of York, on 14 May, 1203; Procopius, abbot at Praga, on 2 July, 1208; Guglielmo, the founder of the monastery at Gemblazet, in 1211. Innocent died at Perugia, while travelling through Italy in the interests of the crusade which had been decided upon at the Lateran Council. He was buried in the cathedral of Perugia where his body remained until Leo XIII., a great admirer of Innocent, had it transferred to the Lateran in December, 1891. Innocent is also the author of various literary works reprinted in P. L., CXXIV-CXXVIII, where may also be found his numerous extant epistles and decrees, and the historically important "Registrum Innocenti III super negotii imperti," work, "De contemptu mundi sine de miseria conditionis humanis libri III." (P. L., CCLIX, 701-746) was written while he lived in retirement during the pontificate of Celestine III. It is an ascetical treatise and gives evidence of Innocent's deep piety and knowledge of men. Concerning the last Innocent composed dritte und seine Schrifte "De contemptu mundi." (Erlanger, 1871). His treatise "De sacro altaris mysterio libri VI." (P. L., CCLIX, 773-916) is of great liturgical value, because it represents the Roman Mass as it was at the time of Innocent III. See Franz, "Die Geschichte des Missale Mittelalteri." (Freiburg, 1902.) 453-457. It was printed repeatedly, and translated into German by
Huter (Schauffhausen, 1845). He also wrote "De quadrupartita specie nuptiarium" (P. L., CCXVII, 246, lxxvi) and was found in a certain bond, namely, (1) between man and wife, (2) between Christ and the Church, (3) between God and the just soul, (4) between the Word and human nature, and is entirely based on passages from Holy Scripture. "Commentarius in septem psalmos penitentiae" (P. L., CCXVII, 967–970). Concerning his historical value see ELLRAN, Die "Gesta Innocentii III." im Verhältnisse zu den Regesten desselben Papstes (Halle, 1876). The principal modern sources are: HURTER, Geschichte des Papstes Innocent III. und seiner Zeitgenossen (4 vols., Hamburg, 1841–44); the following six studies by Leclercq, all published at Paris: Innocent III, Rome et l'Italie (1904); Innocent III. la croisée des chemins (1905); Innocent III, la papauté et l'empire (1906); Innocent III, la question d'Orient (1907); Innocent III, la raptus vassales du Saint-Siège (1908); Innocent III, le concile de Lyon et les lettres patentes d'Ephèse (1910); BARBIER, Les Papal Monarchy (New York, 1903), 262–332; JHANS, Geschichte des Papstes Innocent III. MICHAEL OTT.

INNOCENT IV, Pope (SINIBALDO DE' FIESCHI), Count of Lavagna, b. at Genoa, date unknown; d. at Naples, 7 December, 1254. He was educated at Parma and Bologna, and later, when told by the pope of Rome to return to Genoa, he became canon in Parma and in 1229 is mentioned as auditor of the Roman Curia. On 23 September, 1227, he was created Cardinal-Priest of San Lorenzo in Lucina; on 28 July, 1228, vice-chancellor of Rome; and in 1235 Bishop of Albenga and layege in Northern Italy. When Celestine IV died after a short reign of sixteen days, the excommunicated emperor, Frederick II, was in possession of the States of the Church. It was with the aim of compelling the emperor to resign his claims to the papal throne as Innocent IV on 25 June, 1243, (after an interval of 55 days), and to make the pope four years. In 1248 Innocent IV had previously been a friend of Frederick II. Immediately after the election the emperor sent messengers with congratulations and overtures of peace. The pope was desirous of peace, but he knew from the experience of Gregory IX how little trust could be put in promises. He refused to receive the latter's envoys, because, like the emperor himself, they were under the ban of the Church. But two months later he sent Peter, Archbishop of Rouen, as legate to the emperor at Melfi with instructions to ask him to release the prelates whom he had captured while on their way to the council which Gregory IX had intended to hold at Rome. The legates were further instructed to find out if the emperor was willing to make for the legates, which he had inflicted upon the Church and which caused Gregory IX to put him under the ban. Should the emperor deny that he had done any wrong to the Church, or even assert that the injury had been done on the side of the Church, the legates were to propose that the scale of compensation should be left to the assembly of bishops and temporal princes. Frederick entered into an agreement with Innocent on 31 March, 1244. He promised to yield to the demands of the Curia in all essential points, viz., to restore the States of the Church, to release the prelates, and to grant amnesty to the allies of the pope. His insincerity became apparent when he secretly incited various tumults in Rome and refused to release the imprisoned prelates. Feeling himself hindered in his freedom of action on account of the emperor's military preponderance, and fearing for his personal safety, the pope decided to leave Italy. At the request of the emperor he was permitted to visit Civitavecchia while the pope was in Sutri. As soon as he was notified of its arrival, he left Sutri in disguise during the night of 27–28 June and hastened over the mountains to Civitavecchia, whence the fleet brought him to Genoa. In October he went to Burgundy, and in December to Lyons, where he took up his abode during the following six years. He at once made preparations for a general council, which on 3 January, 1245, he proclaimed for 24 June of the same year. Innocent had nothing to fear in France and proceeded with great severity against the emperor. At the Council of Lyons (see Lyons, Council of 1245) the emperor was represented by Thaddeus of Suessa, who offered new concessions if his master were freed from the ban; but Innocent rejected them, and having brought new accusations against the emperor during the second session, on 5 July, solemnly deposed him at the third session. On 17 July, 1245, he ordered the princes of Germany to proceed to the election of a new king, and sent Philip of Ferrara as legate to Germany to bring about the election of Henry Raspe, Landgrave of Thuringia. The pope's candidate was elected on 22 May, 1246, at Veitshoheim on the Main. Most of the princes accepted him from voting and he never found general recognition. The same may be said of the incapable William of Holland, whom the papal party elected after Henry Raspe died on 17 February, 1247. But Innocent IV was determined upon the destruction of Frederick II and repeatedly asserted that no Hohenstaufen would ever reign be emperor. All attempts of St. Louis IX of France to bring about peace were of no avail. In 1249 the pope ordered a crusade to be preached against Frederick II, and after the emperor's death (13 December, 1250), he continued the struggle against Conrad IV and Manfred with unrelenting severity. On 19 April, 1251, Innocent IV set out for Italy and entered Rome in October, 1253. The crown of Sicily devolved upon the Holy See at the deposition of Frederick II. Innocent had previously offered it to Richard of Cornwall, brother of Henry III of England. Upon his refusal, he tried Charles of Anjou and Edmund, son of Henry III of England. But Manfred, who had just been elected King of Sicily, and to whom they also refused owing to the difficulty of dislodging Conrad IV and Manfred who held Sicily by force of arms. After the death of Conrad IV, 20 May, 1254, the pope finally recognized the hereditary claims of Conrad's two-year-old son Conrado. Manfred also submitted, and Innocent made his solemn entry into

VIII.—2
Naples, 27 October, 1254, but Manfred soon revolted and defeated the papal troops at Foggia (2 Dec., 1254).

In England, Innocent IV made his power felt by persecution of the Jews as well as by the ecclesiastical nobility. But here as in other countries, many just complaints arose against him on account of the excessive taxes which he imposed upon the people. In Austria, he confirmed Ottocar, the son of King Wenzel, as duke, in 1252, and mediated between him and King Béla the Third of Hungary in 1254. In Portugal, he appointed Afonso, the Bishop of Braga, as administrator of the kingdom, because the people were disgusted at the immorality and the tyranny of his father, Sancho III. He favoured the missions in Prussia, Russia, Armenia, and Mongolia, but owing to his continual warfare with Frederick II and his successors he neglected the internal affairs of the Church and allowed many abuses, provided they served to strengthen his position against the Hohenstaufen. He approved the rule of the Sylvesterines on 27 June, 1247, and that of the Poor Clares on 9 August, 1253. The following saints were canonized by him: Edmund Rich, Archbishop of Canterbury, on 16 December 1246; William of St-Brisson, Bishop of St-Brisson, in 1247; Peter of Verona, Dominican inquisitor and martyr, in 1253; Stanislaus, Bishop of Cracow, in the same year. He is the author of "Apparatus in quinque libros decretalium", which was first published at Strasburg, in 1277, and afterwards reprinted; it is considered the best beginning of the Decretals of Gregory IX. The registers of Innocent IV were edited by Elie Berger in four volumes (Paris, 1881-98) and his letters, 762 in number, by Rodenberg in "Mon. Germ. Epp. seculi XIII", II (1887), 1-568.

A short biography of Innocent IV was written by his physician, Nicolaus de Corbie. It was published by Muratori, Rerum Italicarum Scriptores, III (Milan, 1723-51), 1, 589-593.

The modern sources for his biography are: Martini, Innocenti IV et la chute de Hohenstaufen (Paris, 1908); Weber, Der Kampf zwischen Papst Innocenzi IV. und Kaiser Friedrich II. (Berlin, 1900); Folz, Kaiser Friedrich II. und Papst Innocenzi IV. (the Kampf in den Jahren 1248-1249 (Leipzig, 1902); Mauth, "Innocenzi IV. und das Kaiserring Sizilien" (Halle, 1908); Mauthe, Die Kardinäle und ihre Politik um die Mitte des 13. Jahrhunderts (Bonn, 1909); Altinger, Die Neubezügung der deutschen Bistümer unter Papst Innocenzi IV. (Leipzig, 1900); Hauck, Kirchengeschichte Deutschlands, IV (Leipzig, 1903), 908-915; Berger, St. Louis et Innocenzi IV. étudie par les rapports de la France et du Saint-Siège (Paris, 1893); Marti, I pontefici Gregorii III, Gregorii IV, ed Innocenzi IV, de Bono ecclesiastico (Federico II (Rome, 1894); Michael, Papst und Kurfürsten in Oesterreich u. Zeitschr. f. kath. Theologie, VIII (Vienna, 1890), 500; Dewey, Innocenzi IV. und Kom. XVIII (1894), 465-472; Querner, Henry the Third and the Church (London, 1905), 205-353.

MICHAEL OTT.

Innocent V, Blessed, Pope (Petrus a Tarentaisia), b. in Tarentaise, towards 1225; elected at Arezzo, 21 January, 1276; d. at Rome, 22 June, 1276. Tarentaise on the upper Isere in southeast France was certainly his native province, and the town of Champagny was in all probability his birthplace. At the age of sixteen he joined the Dominican Order. After completing his education, at the University of Paris, where he graduated as master in sacred theology in 1259, he won distinction as a professor in the latter institution, and is known as "the most famous doctor", "Doctor famosissimus". For some time provincial of his order in France, he became Archbishop of Lyons in 1272 and Cardinal-Bishop of Ostia in 1273. He played a prominent part in the Council of Lyons (1274), in which he delivered two discourses to the assembled fathers and also pronounced the funeral oration on St. Bonaventure. Elected as successor to Gregory X, whose intimate adviser he was, he assumed the name of Innocent V and was the first Dominican pope. His policy was peaceable. He sought to reconcile Guise and Chabillens in Italy, restored peace between Pisa and Lucca, and mediated between Rudolph of Hapsburg and Charles of Anjou. He likewise endeavoured to consolidate the union of the Greeks with Rome concluded at the Council of Lyons. He is the author of several works dealing with philosophy, theology and canon law, some of which were un published. The principal among them is his "Commentary on the Sentences of Peter Lombard" (Toulouse, 1652). Four philosophical treatises: "De unitate formas", "De materia coeli", "De aeternitate mundi", "De infusione et volubilitate", are also due to his pen. A commentary on the Pauline Epistles, published under the name of Nicholas of Gornan (Cologne, 1478), is claimed for him by some critics.

Innocent VI, Pope (Etienne Aubert), b. at Mont in the Diocese of Limoges (France); elected at Avignon, 18 December, 1352; d. there, 12 September, 1362. He began his career as professor of civil law at Toulouse where he subsequently rose to the highest judicial position. Having entered the ecclesiastical state he was consecrated successively Bishop of Noyon (1338), of Clermont (1340), cardinal-priest (1342), Cardinal-Bishop of Ostia, and Grand Penitentiary (1352). The conclave which elected him to the papacy is remarkable for the fact that the first certain election capitulation was framed by the cardinals present, each of whom bound himself to divide, in case of election, his power and revenues with the College of Cardinals. Aubert took this engagement but with the restriction: "in so far as it was not contrary to church law."

When the choice fell on him, one of his first pontifical acts declared the pact illegal and null, because it contained a limitation of the Divinely conferred papal power. The new pope also gave immediate proofs of the thoroughly ecclesiastical spirit which was to animate his policy. Shortly after his coronation-the numerous ecclesiastics who had flocked to Avignon in search of preferment received a peremptory order to depart, under penalty of excommunication, to their respective places of residence. Some appointments to benefices made by his predecessor were repealed, numerous reservations abolished, and pluralities disapproved. Luxury was banished from the papal court and the obligation of following this example set by the pope imposed upon the cardinals. To the auditors of the Rota, whose services were gratuitous, a fixed income was assigned in the honest of a more impartial administration of justice. As the territory of the Papal States had been usurped by petty princes, Innocent VI sent Cardinal Gil de Albornoz (q. v.) to Italy with unlimited power. Success on the battle-field and diplomatic skill enabled this legate to restore papal authority in the states of the Church.

Pope Innocent viewed favourably the imperial coronation of the German King, Charles IV, at Rome, but at the same time exacted from him a solemn pledge that he would leave Rome the very day on which the ceremony would take place. Charles was crowned on 25 Oct. (sm. Dec.) 1353 by the Cardinal-Bishop of Ostia and faithfully observed his promise. The following year he issued the celebrated "Golden Bull", against which the pope protested because it silently passed over the papal claims to confirm the German kings and to administer the empire during a vacancy. Objection was also made in 1359 to the emperor's resolution to undertake a reform of the
German clergy independently of the pope; Charles's reformatory plans, however, subsequently received ecclesiastical approbation. The mutual peaceful dispositions prevented any conflict of a serious character. Innocent VII had hopes to terminate the belligerent attitude of France and England, and finally through his intervention the Peace of Brétigny was concluded in 1360. To protect the papal residence against the bands of freebooters that were then devastating France, Innocent increased the fortifications of Avignon; but before these were completed he was attacked and compelled to buy off his assailants by an exorbitant ransom. He used with but little success the severest ecclesiastical penalties against Peter I of Castile (1350–49), who had repudiated and poisoned his wife and is deservedly known as "the Cruel". His efforts to restore peace between Castile and Aragon were fruitless, so also his plans for a crusade and for the reunion of the Eastern Church with Rome. At the request of Emperor Charles IV he instituted (1354) for Germany and Bohemia the feast of the Holy Lance and Nails (LANCEÆ ET CLASORVM). He renewed the previous privileges of the mendicant orders, then in conflict with Richard of Cornish, Archbishop of Armagh. Although tainted with nepotism he ranks among the best of the Avignon popes. His patronage of arts and his moral integrity are generally recognised.

N. A. WEBER.

Innocent VII, Pope (Cosimo de’ Migliorati); b. of humble parents at Sulmona, in the Abruzzi, about 1336; d. 6 November, 1406. He studied at Perugia, Padua, and finally at Bologna, where he graduated under the famous jurist Lignano. After teaching jurisprudence at Perugia and Padua he became canon lawyer in the papal Curia, a former professor, Lignano, to Rome, where he was received into the Curia by Urban VI (1378–89). Shortly after his arrival in Rome, Urban sent him as papal collector to England, where he remained about ten years. Upon his return to Rome he became Bishop of Bologna in 1386, and on 5 December, 1387, Archbishop of Ravenna. The latter see he held until 15 September, 1400. In 1389, Boniface IX created him Cardinal-Priest of Santa Croce in Gerusalemme, and sent him as legate to Lombardy and Tuscany in 1390. He was universally esteemed for his piety and learning, and was an able manager of financial affairs. On 17 October, 1404, he was elected and took the name of Innocent VII. His reign fell in the time of the Western Schism; the rival pope was Benedict XIII (1394–1423). Previous to his election, Innocent VII, like the other cardinals, had taken the oath to leave nothing undone, if needs be even to lay down the tiara, in order to terminate the schism. Shortly after his accession he took steps to keep his oath. The election of a council was one of his aims; the disturbances which occurred in Rome before the pope’s return to the intentions to naught. The revolutionary element among the Romans rose up against the temporal authority of the pope, and King Ladislaus of Naples hastened to Rome to assist the pope in suppressing the insurrection. For his services the king extorted various concessions from Innocent, among them the promise that he would not make any agreement with the rival pope without stipulating that the king’s rights over Naples should remain intact with these concessions, which Innocent made for the sake of peace, Ladislaus desired to extend his rule over Rome and the ecclesiastical territory. To attain his end he aided the Ghibelline faction in Rome in their revolutionary attempts in 1405. Innocent had made the great mistake of elevating his unworthy nephew, Ludovico Migliorati, to the cardinalate. This act of nepotism is the one blemish in the short reign of the otherwise virtuous pope. But it cost him dear. The cardinal, angered because the Romans rebelled against his uncle, waylaid a few of the most influential among them on their return from a conference with the pope, and had them brought to his house in order to murder them. The people were highly incensed at this cruel deed, and the pope had to flee for his life, although he was in no way responsible for his nephew’s crime. He took up his abode in Viterbo until the Romans requested him to return in 1406. They again acknowledged his authority, but he squandered it in expelling King Ladislaus of Naples had sent to the aid of Colonna was still occupying the Castle of Sant' Angelo and made frequent sorties upon Rome and the neighbouring territory. Only after Ladislaus was excommunicated did he yield to the demands of the pope and withdraw his troops. In the midst of these political upheavals Innocent neglected what was then most essential for the well-being of the Church, the suppression of the schism. His rival, Benedict XIII, made it appear that the only obstacle to the termination of the schism was the unwillingness of Innocent VII. The reasons why Innocent did practically nothing for the suppression of the schism were: the troubled state of affairs in Rome, his mistrust in the sincerity of Benedict XIII, and the hostile attitude of King Ladislaus of Naples. Shortly before his death he planned the restoration of the Roman University, but his death brought the movement to a standstill.

MICHAEL OTT.

Innocent VIII, Pope (Giovanni Battista Ciù); b. at Genoa, 1432; elected 29 August, 1484; d. at Rome, 25 July, 1492. He was the son of the Roman senator, Aran Cibò, and Teodora de’ Mari. After a licentious youth, during which he lived in Rome with Francesco de Petre and Teodora, he took orders and entered the service of Cardinal Calandrini. He was made Bishop of Savona in 1467, but exchanged this see in 1472 for that of Molletta in south-eastern Italy and was raised to the cardinalate the following year. At the conclave of 1494, he signed, like all the other cardinals present, the election capitulation that was to bind the future pope. His main object was to safeguard the personal interests of his nephews, who fell on Cibò himself who, in honour of his countryman, Innocent IV, assumed the name of Innocent VIII. His success in the conclave, as well as his promotion to the cardinalate, was largely due to Giuliano
Innocent IX. Engraving by Vandensypen.

Innocent IX, pope (Giambattista Pamfili), b. at Rome, 6 May, 1574; d. there, 7 January, 1655. His parents were Camillo Pamfili and Flaminia de' Balbus. The Pamfili resided originally at Gubbio, in Umbria, but came to Rome during the pontificate of Innocent VIII. The young man studied jurisprudence at the Collegio Romano and graduated as bachelor of laws at the age of twenty. Soon afterwards Clement VIII appointed him consistorial advocate and auditor of the Rota. Gregory XV made him nuncio at Naples. Urban VIII sent him as datary with the cardinal legate, Francesco Barberini, to France and Spain, then appointed him titular Latin Patriarch of Antioch, and nuncio at Madrid. He was created Cardinal-Priest of Sant'Eusebio on 30 August, 1616, though he did not assume the purple until 19 November, 1629. He was a member of the congregations of the Council of Trent, the Inquisition, and Jurisdiction and Immunity. On 9 August, 1644, a conclave was held at Rome for the election of a successor to Urban VIII. The conclave was stormy at Parma. The French faction had agreed to give their vote to no candidate who was friendly towards Spain. Cardinal Firenzola, the Spanish candidate, was therefore, rejected, being a known enemy of Cardinal Mazarin, prime minister of France. Fearing the election of an avowed enemy of France, the Spanish party finally agreed with the Spanish party upon Pamfili, although his sympathy for Spain was

Innocent VIII earnestly endeavoured to unite Christendom against the common enemy. The circumstance appeared particularly fortunate, as Prince Djem, the Sultan's brother and pretender to the Turkish throne, was held prisoner at Rome and promised co-operation in war and withdrawal of the Turks from Europe in case of success. A congress of Christian princes met in 1490 at Rome, but led to no result. On the other hand, the pope had the satisfaction of witnessing the fall of Granada (1491) which crowned the reconquest of Spain from the Moors and earned for the King of Spain the title of "Catholic Majesty". In England he proclaimed the right of King Henry VII and his descendants to the English throne and also agreed to some modifications affecting the privilege of "sanctuary". The only canonization which he proclaimed was that of Margrave Leopold of Austria (6 Jan., 1485). He issued an appeal for a crusade against the Waldenses, actively opposed the Hussite heresy in Bohemia, and forbade (Dec., 1486) under penalty of automatic excommunication the reading of the nine hundred theses which Pico della Mirandola had publicly posted in Rome. On 5 Dec., 1484, he issued his much-abused Bull against witchcraft (q.v.), and 31 May, 1482, he solemnly received at Rome the Holy Lance which the Sultan surrendered to the Christians. Constantly confronted with a depleted treasury, he resorted to the objectionable expedient of creating new offices and granting them to the highest bidders. Insecurity reigned at Rome during his rule owing to insufficient punishment of crime. However, he dealt mercilessly with a band of unscrupulous officials who forged and sold bullions; punishment meted out to two of the culprits in 1492. Among these forgeries must be relegated the alleged permission granted the Norwegians to celebrate Mass without wine. See "Bullarium Romanum", III, iii (Rome, 1743), 190-225.

Innocent X, pope (Giovanni Antonio Facci Netti), b. at Bologna, 22 July, 1519; elected, 29 October, 1591; d. at Rome, 30 December, 1591. After successful studies in jurisprudence in his native city he was graduated as doctor of law in 1544, and proceeded to Rome, where Cardinal Nicolò Ardighelli chose him as his secretary. Later he entered the service of Cardinal Alessandro Farnese, who appointed him his ecclesiastical assistant at the head of the Archdiocese of Avignon and subsequently called him to the management of his affairs in the papal States. In 1560 he was named Bishop of Nicosia in Calabria, and in 1562 was present at the Council of Trent. Sent as papal nuncio to Venice by Pius V in 1566, he greatly furthered the conclusion of that alliance (Pope, Venice, Spain) against the Turks which ultimately resulted in the victory of Lepanto (1571). In 1572 he returned to his diocese, but resigning his see he

removed to Rome. In 1575 he was named Patriarch of Jerusalem, and on 12 December, 1583, created Cardinal-Priest of the Title of the Four Crowned Martyrs—whence the frequent designation "Cardinal of Santi-quattro". During the reign of the sickly Gregory XIV the burden of the papal administration rested on his shoulders, and on this pontiff's death the Spanish party raised Faccinelli to the papal chair. Mindful of the origin of his popularity and of his success, he supported, during his two months' pontificate, the cause of Philip II of Spain and the League against Henry IV of France. He prohibited the alienation of church property, and in a consistory held on 3 November, 1591, informed the cardinals of his intention of constituting a reserving fund to meet extraordinary expenses. Death, however, did not permit the realization of his vast schemes. He left numerous, though still unpublished, writings on theological and philosophical subjects: "Moralia quedam theologica", "Adversus Machiavellem", "De recta gubernandi ratione", etc. His bulls are printed in the "Bullarium Romanum", ed. Cocquelines, V, pt. I (Rome, 1751), 324-325; "Clemente VIII et regis Pontificis Romani IV (Rome, 1677), 235-48; Motta, Otto Pontificatus del Cinquecento (1523-1591) in Arch. stor. Lombard., 3rd series, XIX (1903), 372-373. RANKE, Die römischen Papstte (9th ed., Leipzig, 1889), 150. TR. FOWLER, II (London, 1901), 157. BRICHER in Kirchenlexikon, s. v.

N. A. WEBER.

N. A. WEBER.
INNOCENT X
VELAZQUEZ, PALAZZO DORIA, ROME
well known. On 15 September he was elected, and
ascended the papal throne as Innocent X.

Soon after his accession, Innocent found it necessary
to take legal action against the Barberini for misappropri-
ation of public moneys. To escape punishment, Antonio and Francesco Barberini fled to Paris, where they found a powerful protector in Mazarin. Innocent confiscated their property, and on 19 February, 1646, issued a Bull ordaining that all cardinals who had left or should leave the Ecclesiastical States without papal permission and should not return within three months, should be deprived of their ecclesiastical ben-
efits and eventually of the cardinalate itself. The French Parliament declared the papal ordinances null
and void, but the pope did not yield until Mazarin pre-
pared to send troops to Italy to invade the Ecclesi-
astical States. Henceforth the papal policy towards
France became more friendly, and somewhat later the
Barberini were rehabilitated. But when in 1652 Car-
dinal Rets was arrested by Maza-
rin, Innocent solemnly protested
against this act of violence commit-
ted against a cardinal, and pro-
tected Rets after his escape in 1654.
In 1652, 1653 and 1654 Innocent
had occasion to assert his author-
ity as suzerain over Duke Ranuce-
cio II of Parma, who refused to re-
dem the bonds (monti) of the
Farnesi from the Roman creditors,
as had been stipu-
lated in the Treaty of Venice on 31
March, 1644. The duke, moreover, refused to recog-
nize Cristoforo Guarda, whom the pope had ap-
pointed Bishop of Castro. When, therefore,
the new bishop was murdered while on his way to
take possession of his see, Innocent held Ranuccio re-
sponsible for the crime. The pope took possession
of Castro, raised it to the ground and transferred
the episcopal see to Acquapendente. The duke was
forced to resign the administration of his district
unto the pope, who undertook to satisfy the creditors.
The papal relations with Venice, which had been highly
strained during the pontificate of Urban VIII, became
very friendly during Innocent's reign. Innocent aided
the Venetians financially against the Turks in the
struggle for Candia, while the Venetians on their part
allowed Innocent free scope in filling the vacant episco-
pal sees in their territory, a right which they had
previously claimed for themselves. In Portugal the
popular insurrection of 1640 had led to the secession
of that country from Spain, and to the election of Juan
IV of Braganza as King of Portugal. Both Urban VIII
and Innocent X, in deference to Spain, refused, to
acknowledge the new king and withheld their appro-
val from the bishops nominated by him. Thus it
happened that towards the end of Innocent's pontifi-
cate there was only one bishop in the whole of Portugal.

On 26 November, 1648, Innocent issued the famous
Bull "Zelo domus Dei", in which he declares as null
and void those articles of the Peace of Westphalia
which were detrimental to the Catholic religion. In
his Bull "Cum occasione", issued on 31 May, 1653,
he condemned five propositions taken from the "Augus-
tinus" of Jansenius, thus giving the impetus to the
great Jansenist controversy in France.

Innocent X was a lover of justice and his life was
blameless; he was, however, often irresolute and sus-
picious. The great blнемish in his pontificate was his
dependence on Donna Olimpia Maidalchini, the wife
of the deceased, whose brother, due to her influence,
had to yield to that of the youthful Camillo Astalli, a
distant relative of the pope, whom Innocent raised to
the cardinalate. But the pope seems to have been unable
to get along without her, and at her instance Astalli was
deprieved of the purple and removed from the Vatican.
Innocent's censure, made by Guadus (1581) in his "Vita
di Donna Olimpia Maidalchini" (1666), that Innocent's
relation to her was immoral, has been rejected as
slanderous by all reputable historians.

**Michael Ott.**

**Innocent XI, Pope (Benedetto Odescalchi):** b.
at Como, 16 May, 1611; d. at Rome, 11 August, 1689. He was educated by the Jesuits at Como, and studied jurisprudence at Rome and Naples. Urban VIII ap-
pointed him successively prothonotary, president of the
Apostolic Camera, commissary at Ancona, minister of
Provinces of the Kingdom of Naples and Governor of Picena. Innocent X made him Cardinal-Deacon of
Santi Cosma e Damiano on 6 March, 1646, and, somewhat later, Cardinal-Priest of Sant’ Onofrio. As cardinal he was believed by all on account of his deep piety, charity, and unselfish devotion to duty. When he was
sent as legate to Ferrara in order to assist the people stricken with a
severe famine, the pope introduced him to the people of Ferrara as the "father of the poor", "Mitissimus
patrem paupernst". In 1650 he became Bishop of
Novara, in which capacity he spent all the revenues of
his see to relieve the poor and sick in his diocese.
With the permission of the pope he resigned as Bishop of
Novara in favour of his brother Giulio in 1656 and
gone to Rome, where he took a prominent part in the
discussions of the various congregations of which he
was a member.

He was a strong candidate for the papacy after the
death of Clement IX on 9 December, 1669, but the
French Government rejected him. After the death of
Clement X, King Louis XIV of France again intended
to use his royal influence against the election of Odes-
calchi, but, seeing that the cardinals as well as the
Roman people were of one mind in their desire to have
Odescalchi as their pope, he reluctantly instructed the
 cardinals of the French party to acquiesce in his can-
didacy. After an interval of two months, Odes-
calchi was unani-
ously elected pope on 21
October, 1676, and took the name of Innocent XI. Im-
immediately upon his accession he turned all his efforts
towards reducing the expenses of the Curia. He passed
strict ordinances against nepotism among the cardinals.
He lived very parsimoniously and exhorted the
 cardinals to do the same. In this manner he not only
quarrelled the annual deficit which at his accession had
reached the sum of 170,000 scudi, but within a few
years the papal income was even in excess of the
expenditures.

The whole pontificate of Innocent XI is marked by
a continuous struggle with the absolutism of King
Louis XIV of France. In 1672 he attempted
by his own power extended the right of the régale over
the provinces of Languedoc, Guyenne, Provence, and
Dauphiné, where it had previously not been exercised,
although the Council of Lyons in 1274 had forbidden under pain of excommunication to extend the régale beyond those districts where it was then in force. Bishop Pilling of Breslau and the Bishop of Pamiers met against this royal encroachment and in consequence they were persecuted by the king. All the efforts of Innocent XI to induce King Louis to respect the rights of the Church were useless. In 1682, Louis XIV convoked an Assembly of the French Clergy with the object of obtaining from the clergy and the faithful. He insisted on a thorough education and an exemplary life of the clergy, reformed the monasteries of Rome, passed strict ordinances concerning the modesty of dress among Roman ladies, put an end to the ever increasing passion for gambling by suppressing all the gambling houses at Rome and by a decree of 12 February, 1678, authorising all the members of the clergy to have and maintain a helping hand for the expulsion of the Turks from Hungary. He contributed millions of scudi to the Turkish war fund in Austria and Hungary and had the satisfaction of surviving the capture of Belgrade, 6 Sept., 1688.

Innocent XI was no less intent on preserving the purity of faith and morality of the clergy and the faithful. He insisted on a thorough education and an exemplary life of the clergy, reformed the monasteries of Rome, passed strict ordinances concerning the modesty of dress among Roman ladies, put an end to the ever increasing passion for gambling by suppressing all the gambling houses at Rome and by a decree of 12 February, 1678, authorising all the members of the clergy to have and maintain a helping hand for the expulsion of the Turks from Hungary. He contributed millions of scudi to the Turkish war fund in Austria and Hungary and had the satisfaction of surviving the capture of Belgrade, 6 Sept., 1688.

nor the Spanish-Hasburg faction among the cardinals could carry its candidate. A compromise resulted in the election of Cardinal Pignatelli on 12 July, 1691. In his Bull "Romanum decet Pontificem" (22 June, 1692), which was subscribed and sworn to by the cardinals, he declared that in the future no pope should be permitted to bestow the cardinalate on more than one of his kinsmen. Toward the poor, whom he called his nephews, he was extremely charitable; he turned part of the Lateran into a hospital for the needy, erected numerous charitable and educational institutions, and completed the large court-house "Curia Innocenziana", which now serves as the Italian House of Commons (Camera dei Deputati). In 1693 he induced King Louis XIV of France to repeal the "Declaration of the French Clergy", which had been adopted in 1682. The bishops who had taken part in the "Declaration" sent a written recantation to Rome, whereupon the pope sent his Bull of confirmation to those bishops from whom it had been withheld. In 1696 he repeated his predecessor's condemnation of Jansenism and in his Brief "Cum alias" (12 March, 1690) he condemned twenty-three semi-Quetistic propositions contained in Fénelon's "Maximes". Towards the end of his pontificate his relations with Emperor Leopold I became somewhat strained, owing especially to Count Martinitz, the imperial ambassador at Rome, who still insisted on the "right of asylum", which had been abolished by Innocent XI. It was greatly due to the arrogance of Martinitz that Innocent XII advised King Charles II of Spain to make a Frenchman, the Duke of Anjou, his testamentary successor, an act which led to the "War of the Spanish Succession".

MICHAEL OTT.

Innocent XIII, POPE (MICHELANGELO DEI CONTI), b. at Rome, 13 May, 1655; d. at the same place, 7 March, 1724. He was the son of Carlo II, Duke of Poli.

After studying at the Roman College he was introduced into the Curia by Alexander VIII, who in 1690 commissioned him to bear the blessed hat (berettone) and sword (stocco) to Doga Morosini of Venice. In 1695 he was made Titular Archbishop of Tarsus and nunzio to Lecurch. In 1697, nunzio at Lisbon. Clement XI created him Cardinal-Priest of Santi Quirico e Giulitta on 17 May, 1706, conferred on him the Diocese of Osimo in 1709, and that of Viterbo in 1712. Sickness compelled him to resign his see in 1719. After the death of Clement XI he was elected pope in a stormy conclave on 8 May, 1721. In memory of Innocent III, to whose lineage he belonged, he chose the name of Innocent XIII. Soon after his succession he invested Emperor Charles VI with the Kingdom of Sicily and received his oath of allegiance in 1722.

When, a year later, the emperor invested the Spanish prince Don Carlos, with Parma and Piacenza, the pope protested on the ground that these two dukedoms were under papal suzerainty. His protests, however, remained unheeded. Like his predecessor, he gave an annual pension to the English Pretender, James III; the son of the dethroned Catholic King, James II, and even promised to aid him with 100,000 ducats, in case an opportunity should offer itself to regain the English Crown by force of arms. He also assisted the Venetians and especially the Island of Malta in their struggle against the Turks. In the dispute of the Jesuits with the Dominicans and others, concerning the retention of various Chinese Rites among the Catholic converts of China, Innocent XIII sided with the opponents of the Jesuits. When in 1721 seven French bishops sent a document to Rome containing a petition to suppress the "Constitution Unigenitus" in which Clement XI had condemned the errors of Quenel, Innocent XIII not only condemned the writing of the bishops, but also demanded unconditional submission to the Constitution. He was, however, weak enough to yield to French pressure and raise the unworthy Prime Minister Dubois to the cardinalate. He, indeed, exhorted the minister to change his wicked life, but his exhortations remained useless. (For a milder view of Dubois see Bliard, "Dubois, cardinal et premier ministre", Paris, 1901.) In a Bull of March, 1723, he regulated numerous abuses in Spain and was assisted in the execution of this Bull by King Philip V of Spain. The fears which were raised in the beginning of his pontificate that he would yield to nepotism were entirely groundless. He elevated his brother to the cardinalate, but did not allow his revenues to exceed 12,000 scudi as had been stipulated by Pope Innocent XII.

MICHAEL OTT.
INNOCENTIUS

INNOCENTIUS, SAINTS.—A number of saints are to be found bearing the name Innocentius, but only three besides Pope Innocent I seem to deserve special mention.

I. St. Innocentius, Bishop of Tortona in Italy, probably in the fourth century. A legendary "Vita" of St. Innocentius relates that he was thrown into a dungeon during the persecution of Diocletian, and later fled to Rome, where he was afterwards made a deacon of the Roman Church by Pope Sylvester, and was finally consecrated Bishop of Tortona. The narrative, however, rests on no historical foundation and is of comparatively late origin, probably appearing for the first time in the twelfth century. As a matter of fact, Innocentius was not a bishop of the first rank, but actually the first of the bishops of Tortona. From the earliest times, the Church of Tortona celebrated not only the day of his death, 17 April, but also the day of his consecration as bishop, 24 September. It is to be remarked that the custom of celebrating in a special manner the day of consecration of a bishop became widespread in the fourth and fifth centuries. Moreover, the tomb of Innocentius is beneath the high altar of the old cathedral of Tortona. These special distinctions accorded to the holy bishop can best be explained by regarding him as the first bishop of that city.

Positive chronological proof exists of the occupation of the See of Tortona by one Exuperantius, who attended the Council of Aquileia in 381. From a letter written in exile by Eusebius of Vercelli to his community in 356, we are further informed that at that time Tortona still belonged to the Diocese of Vercelli. The episcopate, therefore, of St. Innocentius, whom we presume to have been the first Bishop of Tortona, is to be placed somewhere in the period between 360 and 380.

Acta SS., April II, 422-43; Monasticon, Sanctorum II, for 1277-92; Acta SS., Vite dei Santi e Beati nella Bolla Bollandiana, XXV (1890), 1 sqq.; Idem, GL antichi vescovi d'Italia, II Fiomoni, (Turin, 1898), 377 sqq.

II. St. Innocentius, according to legend, Bishop of Justiniana (Adrumetum?) in Africa, in the fourth century. He is venerated at Gaeta in Italy. It would seem that towards the end of his life he went to Italy, suffering from doubtful and that his body was afterwards translated to Gaeta. The commemoration of his feast takes place on 7 May.

III. St. Innocentius (Innocens), Bishop of Le Mans, France; d. 559. He was the seventh bishop, and assisted at the Synods of Orleans held in 533 and 541. In all probability, he was bishop as early as 524. According to the "Acta" of the bishops of Le Mans, he restored the cathedral and other churches, and founded or endowed many convents in his diocese. Gregory of Tours mentions his death. His feast is observed on 9 June.

J. P. KIRCH.

Innocent, Holy. See Holy Innocents.

Innsbruck University, officially the Royal Imperial Leopold Francis University in Innsbruck, originated in the college opened at Innsbruck in 1562 by Blessed Peter Canisius, at the request of the foundation of the Emperor Ferdinando I of Austria, who in this way made effective his long-charged plans for an institute of higher learning for the people of Tyrol. The imperial edict of foundation was read from every pulpit in Tyrol on 12 May, 1562, and the school opened under the direction of the Fathers of the newly founded Society of Jesus on 24 June of the same year as a gymnashium with four classes, in which elements, grammar and syntax were taught. A fifth and lowest class of elements was added in 1566. In 1590 Ferdinand expressed the wish that the programme of studies be widened so as to include a studium universale. This was done, however, only in 1606, when a new building for the gymnashium was completed, whereupon courses in arts and the humanities (including the theological controversies) were begun, the other subjects being rhetoric, humanities, syntax, and upper and lower grammar. Logic was added in 1619. Until 1670 the erecting of the gymnashium into a university had been repeatedly discussed and planned, but without results.

In 1670 the gymnasium was extended to three years; in 1671-72 two chairs of scholastic theology were founded, as well as one of law (institutiones) and in the following year two of jurisprudence and one of canon law. In 1672 also the gymnasium was raised to the rank of an academy, and in 1673 this academy received the name and rank of a university, although lectures in medicine did not begin until 1674.

The Emperor Leopold I of Austria promulgated the imperial decree of foundation in 1677, and it was in the same year that Pope Innocent XI granted the new university the customary rights and privileges. The university then consisted of fifteen faculties: five for theology, four each for philosophy and law, and two for medicine. Of these, three of the professors of theology, all of those of philosophy and the professor of canon law in the law faculty were Jesuits; two members of the secular clergy lectured in the first-named faculty, and the rest were laymen. The complete organization of these four faculties followed ten years later. The chancellor of the university was the Prince-Bishop of Brixen, in the Tyrol, who was usually represented in Innsbruck by a vice-chancellor. Until 1750 the university remained essentially unchanged. The number of professors (sestari) increased. The eighteen years following, however, witnessed a widening of the study plan; the Government of Maria Theresa began to intervene more directly in the inner work of the university. During the next period, from 1748 to 1773, this state domination increased, pushing the Jesuits ever further. Then, when, upon the suppression of the Society of Jesus, the Jesuits, who up to this had made up one-half of the professors and under whom the theological faculty became the most eminent of the four, ceased to lecture, the university numbered 911 students, distributed as follows: 325 in theology, 116 in law, 43 in medicine and 437 in philosophy.

Joseph II published an order for the suppression of the university on 29 November, 1781, but on 14 September, 1782, issued a decree allowing it to be continued as a lyceum with two university faculties, philosophy and theology, and facilities for the study of law and medicine. In 1783 the Government established at Innsbruck a general theological seminary for the whole of Tyrol, only to close it again in 1790. The university was recalled to life by Joseph's successor, Leopold II, to be again suppressed by the Bavarian Government in 1810, leaving a lyceum with merely philosophical and theological courses. This condition of affairs lasted until 1817, when courses in law and medicine were added. From the departure of the Jesuits in 1773 until 1822, when it was completely suppressed, the theological faculty, in which the principles of Josephism and Gallicanism reigned almost supreme, ad bedi, remained in the hands of the Bishop of Brixen, who had no right of supervision, not even over purity of doctrine, which suffered grievously in the interval. At one time even the "Imitation of Christ" was a forbidden book. In 1826 the university was again restored, this time by the Emperor Francis II of Austria. It consisted at
first of only two full faculties, philosophy and law. In 1857, mainly through the efforts of Vincent Gas-
er, Prince-Bishop of Brixen, the theological faculty was added and entrusted once more to the Jesuits, who have since, with two exceptions, been the sole provider. During Leopold's and his wife's regularization of the restored university was reached when the medical faculty was reconstituted in 1869.

The most illustrious teachers of the university have been and are mainly in the theological faculty. Since the restoration of the latter in 1837 the best known of the last century have been Schubiger (d. 1907), Stentrup (d. 1898), Kern (d. 1907), and Hurter, the latter still lecturing since 1858; in moral theology, Noldin (retired 1909); in sacred eloquence, Jungmann (d. 1885), the author of a well-known work on aesthetics; in moral theology and sociology, Biederlack; in canon law and ecclesiastical history, Niiles (d. 1907); in Scripture, Fockel (called to Rome, 1908); in ecclesiastical history, Grisar (professor honorarius since 1898). Dr. Ludwig von Pastor, author of the well-known "History of the Pope", is professor of history in the faculty of philosophy, in which the eminent Austrian meteorologist Pfeffer was a former professor. The faculty belongs also the cartographer von Wieser.

The theological faculty has frequently suffered the attacks of "liberal" professors, who form the large majority in the faculties of the profane sciences in the Austrian universities. These professors have several times endeavored to have the theological faculty suppressed, but it has ever found a faithful protector in the Emperor Francis Joseph I. This faculty also took the leading part in the controversy following upon the blasphemous attack on the Church in 1908 by Dr. Ludwig Wahrmund, professor of canon law in the law faculty.

Intimately connected with the theological faculty, though no official part of it, is the seminary (Theologisches Konvikt), where the majority of the students of theology reside. This institution, called the "Nikolaikasen", was first opened for poor students in 1569, closed in 1783, and reopened for the theologians in 1858. It is almost exclusively through the theological faculty and the "Nikolaikasen" that Innsbruck is known outside of Austria-Hungary, especially among Catholics. In the fifty years since the restoration of the faculty, 5588 students, from nearly every civilized country, have frequented the "Nikolaikasen" wherein 2983 are alumni of the "Nikolaikasen". Of these students, 4209 belonged to the secular and 1689 to the regular clergy; they represented 202 dioceses and Apostolic vicariates, and 73 provinces, cloisters, etc., of the regulars. North America has contributed 445 students, with few exceptions all from the United States. England is represented among the alumni by 10, and Ireland by 15 students. The "Nikolaikasen" is governed by a regens who is a member of the Society of Jesus. A Jesuit father also is always university preacher, and the university sodality is under the direction of another Jesuit. The也能 be Austrian and Hungarian provinces of the Society of Jesus. The influence of the university since its restoration, as in its earlier periods, has been important. Naturally this influence has been felt most of all in the Tyrol, which to a large extent owes to the university the majority of its students, especially the theological and in the medical and legal profession. In particular, the presence of theological students from all parts of the world has made the influence of the faculty of theology of great weight in the education of the clergy, and in the development of the theological seminaries of the last fifty years, an influence which has been spreading and augmenting the "Zeitschrift für Katholische Theologie", a quarterly now in its thirty-third year. Innsbruck is one of the eight Austrian state universities. The university buildings number about 40 (including institutes, clinics, etc.). There is also a university church in charge of the Jesuits. This church was erected during the years 1820-40 by Archduke Leopold V of Austria, and his wife, and is decorated with paintings and statues. The library contains over 225,000 volumes, including many valuable manuscripts. The number of students averages about 1000, of that of the professors and privado docenten over 90. In 1909-10 the number of students was 1154, thus distributed: theology, 355; law, 293; medicine, 213; philosophy, 293. In the summer semester (1909) the total was 1082. In this same year there were 108 professors and privado docenten.

In Partibus Infidelium (often shortened to in partibus or abbreviated as i. p. i.), a term meaning "in the lands of the unbelievers", words added to the name of the see conferred on non-residential or titular Latin bishops, e. g. N., Bishop of Tyre in partibus infidelium. Formerly, when bishops were forced to flee before the invidious invading infidel hosts, they were welcomed by other Churches, while preserving their titles and their rights to their own dioceses. They were even entrusted with the administration of vacant sees. Thus we find St. Gregory appointing John, Bishop of Alessio, who had been expelled by his enemies, to the See of Squillace (cap. "Pastoralis" xlii. caus. vii. q. 1). In later days it was deemed fitting to preserve the memory of ancient Christian Churches that had fallen into the hands of the unbelievers; this was done by giving their names to auxiliary bishops or bishops in missionary countries. Fagani (in cap. "Episcopalia", i. "De privilegiis") says that the regular appointment of titular bishops dates back only to the time of the Twelfth Lateran Council under Leo IX (Session IX); cardinals alone were authorized to ask for them for their dioceses. St. Pius V extended the privilege to the sees in which it was customary to have auxiliary bishops. Since then the privilege became more extensive. The Propaganda, by its circular letter of 3 March, 1828, abolished the expression in partibus infidelium; the present custom is to join the name of the see that of the district to which it formerly belonged, e. g. "N., Archiepiscopus Corinthii in Asia", or else merely to say "titular bishop" (see Bishop).

FAGANI, loc. cit.; PERRACHI, Promota Bibliotheca, s. v. Episcopus, I, 67-4; VII, 21 sq.; and Supplem., n. 2. A. BOUJONIN.

In Petto, an Italian translation of the Latin in pectore, "in the breast", i.e. in the secret of the heart. It is the designation of those who, after creating some cardinals in consistory, adds that he has appointed one or more additional cardinals, whom he reserves in petto, and whom he will make known later: "aliae autem [v. g. duces] in pectore reservamus, arbitrio nostro quandoque declarandos." Until they have been publicly announced these cardinals were in full rights, and if the pope having declared their names they do not become members of the Sacred College; but when he has proclaimed their elevation at a subsequent consistory, they take rank from the date of their first nomination and receive from that date all the emoluments accruing to their see. This is a custom of the popes and has been at times adopted to ensure poor ecclesiastics a competency to meet all the expenses incident to their promo-
tion. At the consistory of 15 March, 1875, Pius IX an-
ounced that he was creating and reserving in petto five
cardinals, whose names would be found, in case of
his death, in the Lateran Breviary, his usual prac-
tice of canonists having raised serious doubts as to the
validity of such a posthumous publication. Pius IX pub-
lished their names in the following,
17 September. (See Cardinal.
SANTU-LEONI, Protettione fusa comunica, I, tit. xxxi, n. 23.
A. BOUVINON.

Inquisition (Lat. inquiere, to look into).—By this
term is usually meant a special ecclesiastical institu-
tion for combating or suppressing heresy. Its char-
acteristic mark seems to be the bestowal on special
judges of judicial powers in matters of faith, and this
the heretics Alexander and authors of a temporal or
for individual cases, but as a universal and perma-
nent office. Moderns experience difficulty in under-
standing this institution, because they have, to no
small extent, lost sight of two facts. On the one hand
they have ceased to grasp religious belief as something
objective, as the gift of God, and therefore outside the
realm of free private judgment; on the other they no
longer see in the Church a society—perfect and sov-
eign, based substantially on a pure and authentic
Revelation, whose first and most important duty must
naturally be to retain unassiled this original deposit of
faith. And misunderstanding others, of the sixteenth
century these views were still common to all Chris-
tians; that orthodoxy should be maintained at any
cost seemed self-evident. However, while the pos-
tive suppression of heresy by ecclesiastical and civil
authority in Christian society is as old as the Church,
the Inquisition as a distinct ecclesiastical tribunal is
of much later origin. Historically it is a phase in the
growth of ecclesiastical legislation, whose distinctive
traits can be fully understood only by a careful study
of the conditions amid which it grew up. Our sub-
ject may, therefore, be conveniently treated as fol-
loves: I. The Suppression of Heresy during the first
twelve Christian centuries; II. The Suppression of
Heresy by the Institution known as the Inquisition
under its several forms: (A) The Inquisition of the
Middle Ages; (B) The Inquisition in Spain; (C) The
Holy Office at Rome.

I. THE SUPPRESSION OF HERESY DURING THE FIRST
TWELVE CENTURIES.—(1) Though the Apostles were
deeply imbued with the conviction that they must
transmit the deposit of the Faith to posterity unaltered,
and that any teaching at variance with their own,
even if proclaimed by an angel of Heaven, would be
a culpable offence, yet St. Paul did not, in the case
of the Jewish party, show himself willing to expose
himself to Old-Covenant penalties of death or scourging
(Deut., xiii, 6 sq.; xvii, 1 sq.), but deemed exclusion from
the communion of the Church sufficient (1 Tim., i, 20;
Tit., iii, 10). In fact to the Christians of the first
three centuries it could scarcely have occurred to
assume any other attitude towards those who erred in
matters of faith. Tertullian (Ad. Scapulum, c. ii)
lays down the rule: "Humani iuris et naturalis po-
testatis, unicusque quod putaverit colere, nec ali
obest aut prodest aliorum religio. Sed nec religionis
est religiones colere, quae sponte suscipi debet, non
vit", in other words, he teaches us that the natural
law authorized man to follow only the voice of indi-
vidual conscience in the practice of religion, since
the acceptance of religion was a matter of free will, not
of compulsion. Replying to the accusation of Celsus,
based on the Old Testament, that the Christians perse-
cuted dissentients with death, burning and torture,
Origen (C. Cels., VII, 20) is satisfied with explaining
that one must distinguish between the law which the
Jews received from Moses and that given to the
Christians by Jesus; the former was binding on the
Jews, the latter on the Christians. Jewish Christians,
if sincere, could no longer conform to all of the
Mosaiic Law; hence they were no longer at liberty to kill
their enemies or to burn and stone violators of the
Christian Laws. In other words, he maintains that the
faith of the Nazarenes was a private affair, not a
social one. These views are thus repeated in the
Judgment of St. John Chrysostom, who says (Hom. in
N. S. 1, p. 62): "They who persecute the heathen with
fire and sword, perverting their faith, are deserving
to be burned themselves by the justice of God, as
were the persecutors and torturers of the Nazarenes,
who, God's presentation of them, until they cease to
persevere in their errors, if it be with fire and
sword, and do not repent; and, being burned, shall
be saved, and, receiving the eternal fire, shall enter
into the fire of divine vengeance, and shall there be
forever tormented by God, as the heathen were.

St. Cyprian of Carthage, surrounded as he was by
countless schismatics and undutiful Christians, also
put aside the material sanction of the Old Testament,
which punished with death rebellion against the
priesthood and the judges: "Nunc autem, qua circum-
cumspio spiritalis esse apud fideles servos Dei copiae,
corporalii gladii superi et superi servos Dei, sed
de Ecclesia eciamudur" (Ep. lxxii, ad Pompon., n. 4)—
religion being now spiritual, its sanctions take on the
same character, and excommunication replaces the
death of the body. Laetantius was yet smarter under
the scourge of bloody persecutions, when he wrote
his "De Divinis Institutionibus" (in 303 AD) and
said naturally, therefore, he stood for the most absolute
freedom of religion. "Religion", he says, "being a
matter of the will, it cannot be forced on anyone; in
this matter it is better to employ words than blows
[verbis melius quam verberibus res aganda est]. Of
what use is it to rack and to torture? What has the
measure of the rack to do with piety? Surely there is no
connexion between truth and violence, between justice and cruelty. . . . It is
true that nothing is so important as religion, and one
must defend it at any cost [summa vi]. . . . It is true
that it must be protected, but by daging for it, not by
violence; for the religion of truth, not by crime. If you attempt to defend
religion with bloodshed and torture, what you do is not
defence, but desecration and insult. For nothing is
so intrinsically a matter of free will as religion" (op.
cit., V, xx).
The Christian teachers of the first three
centuries insisted, as was natural for them, on com-
plete religious liberty; furthermore, they not only
urged the principle that religion could not be forced
on others—a principle always adhered to by the
Church in her dealings with the unbaptized—but,
when comparing the Mosaic Law and the Christian
religion, they taught that the latter was content with
a spiritual punishment of heretics (i.e. with excom-
munication), while Judaism necessarily proceeded
against its dissentients with torture and death.

(2) However, the imperial successors of Const-
tance soon began to see in themselves Divinely ap-
pointed "bishops of the entire world, guardians of
the temporal and material conditions of the Church. At
the same time they retained the traditional authority
of "Pontifex Maximus", and in this way the civil
authority inclined, frequently in league with prelates
of Arian tendencies, to persecute the orthodox bishops
by force. But the Church, with the protection of
St. Hilary of Poitiers (Liber contra Arians, c. iv),
protested vigorously against any use of force in the
province of religion, whether for the spread of Chris-
tianity or for preservation of the Faith. They re-
peatedly urged that in this respect the severe decrees
of the Old Testament were abrogated by the mild and
gentle laws of Christ. However, the successors of
Constantine were ever persuaded that the first concern
of imperial authority (Theodosius II, "Novelle", tit. III,
A. D. 438) was the protection of religion and so, with
terrible regularity, issued many penal edicts against
heretics (cf. E. Vacandard, "L'Inquisition: Etude
historique et critique, as naturellement de l'Eglise", Paris, 1907, p. 10).
The space of fifty-
seven years sixty-eight enactments were thus pro-
mulgated. All manner of heretics were affected by
this legislation, and in various ways, by exile, con-
finement of property, or death. A law of 407, aimed
at the traitorous Donatists, made for the first time that
these heretics ought to be put on the same plane as
transgressors against the sacred majesty of the em-
peror, a concept to which was reserved in later times
a very momentous rôle. The death penalty, how-
ever, was only imposed for certain kinds of heresy; in

their persecution of heretics the Christian emperors fell short of the severity of Diocletian, who in 287 sentenced to the stake the leaders of the Manicheans, and inflicted on their followers partly the usual death penalty by beheading, and partly forced labour in the government mines.

So far we have been dealing with the legislation of the Christianized State. In the attitude of the representatives of the Church towards this legislation some uncertainty is already noticeable. At the close of the fourth century and during the fifth Chalcedonians, Donatism, and Priscillianism were the heresies most in view. Expelled from Rome and Milan, the Manicheans sought a refuge in Africa. Though they were found guilty of abominable teachings and misdeeds (St. Augustine, "De haeresibus", no. 46), the Church refused to invoke the civil power against them; indeed, the great Bishop of Hippo explicitly rejected the use of force. He sought their return only through public and private acts of submission, and his efforts seem to have met with success. Indeed, we learn from him that the Donatists themselves were the first to appeal to the civil power for protection against the Church. He was perhaps the first of his kind. He was therefore more prone to turn upon them. State intervention not answering to their wishes, and the violent excesses of the Circumcellions being condignly punished, the Donatists complained bitterly of administrative cruelty. St. Optatius of Mileve defended the civil authority (De Schol. contra Donat. I., 32), but at the same time another appeal was set up in the Church: "... as though it were not permitted to come forward as avengers of God, and to pronounce sentence of death... But, say you, the State cannot punish in the name of God. Yet was it not in the name of God that Moses and Phineas consigned to death the worshipers of the stars? and those who despised the true religion?" This was the first time that a Catholic bishop championed a decisive co-operation of the State in religious questions, and its right to inflict death on heretics. For the first time, also, the Old Testament was appealed to, though such appeals had been previously rejected by Christian teachers.

St. Augustine, on the contrary, was still opposed to the use of force, and tried to lead back the erring by means of instruction; at most he admitted the imposition of a moderate fine for refractory persons. Finally, however, he changed his views, whether moved thereto by the example of the apostles, or by the good results achieved by the use of force, or favouring force through the persuasions of other bishops. Apropos of his apparent inconsistency, it is well to note carefully whom he is addressing. He appears to speak in one way to government officials, who wanted the civil power to change the law in another to the Donatists, who denied to the State any right of punishing dissenters. In his correspondence with state officials he dwells on Christian charity and toleration, and represents the heretics as straying lambs, to be sought out and perhaps, if recalcitrant, chastised with the reproofs of the Church, but not to be driven back by the fold of another's authority. On the other hand, in his writings against the Donatists he upholds the rights of the State: sometimes, he says, a salutary severity would be to the interest of the erring ones themselves and likewise protective of true believers and the community at large (Vacandard, loc. cit., pp. 17-26).

As to Priscillianism, not a few points remain yet obscure, despite recent valuable researches. It seems certain, however, that Priscillian, Bishop of Avila in Spain, was accused of heresy and sorcery, and found guilty by several bishops. St. Ambrose at Milan and St. Damascus at Rome seem to have refused him a hearing. At length he appealed to the Emperor Maximus at Trier, but to his detriment, for he was there condemned to death. Priscillian himself, no doubt

full consciousness of his own innocence, had formerly called for reparation of the Manicheans by the sword. But the foremost Christian teachers did not share these sentiments, and his own execution gave them occasion for a solemn pacific appeal; the imperial sentence meted out to him by the imperial government. St. Martin of Tours, then at Trier, exerted himself to obtain from the ecclesiastical authority the abandonment of the accusation, and induced the emperor to promise that on no account would he shed the blood of Priscillian, since the civil power against the heretic might be employed with impunity. Had the Church been prepared to fight for the liberty of conscience, no such sentence would have been pronounced. But bloodshed and formal submission to the imperial authority are soon come to be regarded as the two irreducible conditions of any public measures; henceforth, as far as the Roman Church was concerned, it was not the Church of Milan which argued for liberty, but the Church of Rome, which now, even more than ever, renounced the severe judgments of St. Augustine and St. Jerome against Priscillianism.

In 447 Leo the Great had to reproach the Priscillianists with loosening the holy bonds of marriage, treading all decency under foot, and fostering slanders and calumniating defects; but it was to nature, and not to the Church, that he had recourse in the cause of the Manicheans. In 465 Leo I., addressed himself to the Manicheans, and was heard by them, not as a bishop but as a man of peace and of charity. He declared that the Bishop of Rome, St. Ambrose, Milan, and St. Ambrose of Milan, was described as execution as a crime.

Priscillianism, however, did not disappear with the death of its originator; on the contrary, it spread with extraordinary rapidity, and, through its adoption by the bishops and priests of Manicheism, came more and more to exercise a disturbing influence upon the public conscience than ever. In this way the severe judgments of St. Augustine and St. Jerome against Priscillianism become intelligible. In 447 Leo the Great had to reproach the Priscillianists with loosening the holy bonds of marriage, treading all decency under foot, and fostering slanders and calumniating defects; but it was to nature, and not to the Church, that he had recourse in the cause of the Manicheans. In 465 Leo I., addressed himself to the Manicheans, and was heard by them, not as a bishop but as a man of peace and of charity. He declared that the Bishop of Rome, St. Ambrose, Milan, and St. Ambrose of Milan, was described as execution as a crime.

The ecclesiastical ideas of the first five centuries may be summarized as follows: (1) The Church should for no cause shed blood (St. Augustine, St. Ambrose, and Leo I., and others); (2) in case of heresies like Optatus of Mileve and Priscillianism, believed that the State could pronounce the death-penalty on heretics in case the public welfare demanded it; (3) the majority held that the death-penalty for heresy, when not civilly criminal, was irreconcilable with the spirit of Christianity. St. Augustin (Ep. c. u. I.), in a work now in the name of the Western Church, says: "Corrigi eos volumus, non necari, nec disciplinam circa eos neglegi volumus, nec supplicios quibus digni sunt egressi?"—we wish them corrected, not put to death; we desire the triumph of (ecclesiastical) discipline, not the death-penalty, that it may be observed that the ecclesiastical theory says substantially the same in the name of the Eastern Church (Hom. XLVI, c. i.): "To consign a heretic to death is to commit an offence beyond atonement"; and in the next chapter he says that God forbids their execution, even as He forbids us to uproot cockle, but He does not forbid us to uproot them, to deprive them of their rank, or to prohibit their assemblies. The help of the "secular arm" was therefore not entirely rejected; on the contrary, as often as the Christian welfare, general or domestic, required it, Christian rulers sought to stem the evil by appropriate measures. As late as the seventh century St. Isidore of Seville expressed similar sentiments (Sententiarum, III, iv. 4-6).

How little we are to trust the vaunted impartiality of Henry Charles Lea, the American historian of the Inquisition, we may here illustrate by an example.
In his "History of the Inquisition in the Middle Ages" (New York, 1888, I, 215), he closes this period with the words: "It was only sixty-two years after the slaughter of Priscillian and his followers that the Inquisition, as we know it today, was dormant. But it was reviving in 447, not only justified the act, but declared that, if the followers of a heresy so damnable were allowed to live, there would be an end of human and Divine law. The final step had been taken and the Church was definitively pledged to the suppression of heresy at any cost. It was impossible not to attribute to ecclesiastical influence the success of the edicts by which, from the time of Theodosius the Great, persistence in heresy was punished with death.

In these lines Lea has transferred to the pope words employed by the emperor. Moreover, it is simply the exact opposite of historical truth to assert that the imperial edicts punishing heresy with death were due to ecclesiastical influence, since we have shown that in this period the more influential ecclesiastical authorities declared that the death penalty was contrary to the spirit of the Gospel, and themselves opposed its execution. For centuries this was the ecclesiastical attitude both for theory and practice. Those who kept with the civil law, some Manicheans were executed at Ravenna in 556. The other hand, Euplius of Toledo and Felix of Urgel, the chiefs of Adoptionism and Predestinationism, were condemned by pope and councils, but were otherwise left unmolested, however they might escape, after the condemnation of his false doctrine that Christ had not died for all mankind, was by the Synods of Mainz in 484 and Quiercy in 489 sentenced to being and imprisonment, punishments then common in monasteries for various infractions of the rule.

(32) In 1122 King Robert the Pious (regis iussu et universae plebis consensus), "because he feared for the safety of the kingdom and the salvation of souls", had thirteen distinguished citizens, ecclesiastic and lay, burnt alive at Orleans. Elsewhere similar acts were done for the same purpose. The Bishop of Châlons observed that the sect was spreading in his diocese, and asked of Wazo, Bishop of Liège, advice as to the use of force: "An terrae utis parvissimae gladio in eos sit animadverterunt nece verutur." (Vita Wasonis, cc. xxv, 46v, F. L., CXLI, 752; "Wazo ad Roger. II, episc. Celaunensis"; and "Anselmi Gesta episc. Leodi," in "Mon. Germ. SS.," VII, 227 sq.). Wazo replied that this was contrary to the spirit of the Church and the words of its Founder, who ordained that the tares should be allowed to grow with the wheat until the day of the harvest, lest the year be occupied with men of God. He would not agree to those who to-day were tares might to-morrow be converted, and turn into wheat; let them therefore live, and let mere excommunication suffice. St. Chrysostom, as we have seen, had taught similar doctrine. This principle could not be always followed. Thus at Goslar, in the Christmas season of 1051, and in 1052, several heretics were hanged because Emperor Henry III wanted to prevent the further spread of "the heretical leprosy". A few years later, in 1076 or 1077, a Catharist was condemned to the stake by the Bishop of Cambrai and his chapter. Other Catharists, in spite of the Bishop's judgement, were given the choice by the mayor of Milan of renouncing homage to the Cross and mounting the pyre. By far the greater number chose the latter. In 1114 the Bishop of Soissons kept sundry heretics in duress in his episcopal city. But while he remained to Beauvais, to ask advice of the bishops assembled there for a synod, the "believing folk, fearing the habitual soft-heartedness of ecclesiastics" (clericum verum molestiis), storm the prison, took the accused outside the city gate, and burned them.

The people disliked what to them was the extreme dilatoriness of the clergy in pursuing heretics. In 1144 Adalbero II of Liège hoped to bring some imprisoned Catharists to better knowledge through the grace of God, but the people, less indulgent, assaulted the unresisting creatures, and only with the greatest trouble did the bishops succeed in rescuing some of them from death by fire. A like scene was enacted about the same time at Cologne. While the archbishop and the priests earnestly sought to lead the misguided back into the Church, the latter were violently taken by the mob (a populis timido seco abrepits) from the custody of the clergy and burned at the stake. The best-known heresies of that time, Peter of Bruys and Arnold of Brescia, met a similar fate—the first on the pyre as a victim of popular fury, and the latter under the headman's axe as a victim of his political enemies. In short, no blame attaches to the Church for being slow in her pursuit of heretics in those rude days. Among all the bishops of the period, so far as can be ascertained, Theodwin of Liège, successor of the aforesaid Wazo and predecessor of Adalbero II, alone appealed to the civil power for the punishment of heretics, and even he did not call for a monk's death, but for exile only. All who were more highly respected in the twelfth century than Peter Cantor, the most learned man of his time, and St. Bernard of Clairvaux? The former says ("Verbum abbreviatum," c. Ixxvii, in F. L., CCN, 231): Whether they be convicted of error, or freely confess their guilt, Catharists are not to be put to death, at least not when they refrain from armed assaults upon the Church. For although the Apostle said, 'A man that is a heretic after the third admonition, avoid', he certainly did not say, 'Kill him'. Throw them into prison, if you will, but do not put them to death" (cf. Geroeh von Reinachersberg, "De investigaciones Antichristi," III, 42). So far was St. Bernard from agreeing with the methods of the people of Cologne, that he laid down the axiom: Fides suadenda, non imponenda (By persuasion, not by violence, are men to be won to the faith). And later he says: The princes, who were to blame because little foxes devastated the vineyard, yet he adds that the latter must not be captured by force but by arguments (captivandi non armis, sed argumentis): the obstinate were to be excommunicated, and if necessary kept in confinement for the safety of others (ad corrigendum ne perancock, sed ne perimant, coecendum). (See Vacandard, 1. 9, 53 sqq.) The synods of the period employ substantially the same terms, e.g. the synod at Reims in 1049 under Leo IX, at Toulouse in 1118, at which Callistus II presided, and finally the Lateran Council of 1139.

Hence, the occasional executions of heretics during this period must be ascribed partly to the arbitrary action of individual rulers, partly to the fanatical outbreaks of the overzealous populace, and in no wise to ecclesiastical law or the ecclesiastical authorities. There were already, it is true, canons who conceded to the Church the right to pronounce sentence of death on heretics; but the question was treated as a purely academic one, and the theory exercised virtually no influence on real life. Excommunication, proscription, imprisonment, etc., were indeed inflicted, being intended merely as forms of atonement and reparation, but never the capital sentence. The maxim of Peter Cantor was still adhered to: "Catharists, even though Divinely convicted in an ordeal, must not be punished by death." In the second half of
the twelfth century, however, heresy in the form of Catharism spread in truly alarming fashion, and not only menaced the Church's existence, but underminded the very foundations of Christian society. In opposition to this propaganda there grew up a kind of prescriptive law—at least throughout Germany, France, and Spain—which visited heresy with death by the stake. England on the whole remained tainted by heresy. When, in 1166, about thirty seculars made their way thither, Henry II ordered that they be burnt on their foreheads with red-hot iron, be beaten with rods in a public square, and then driven off. Moreover, he forbade anyone to give them shelter or assistance and his died partly from hunger and partly from the cold of winter. Duke Philip of Flanders, aided by William of the White Hand, Archbishop of Reims, was particularly severe towards heretics. They caused many citizens in their domains, nobles and commoners, clerics, knights, peasants, spinners, widows, and married women, to be burnt alive, confiscated their property, and divided it between them. This happened in 1183. Between 1183 and 1206 Bishop Hugo of Auxerre acted similarly towards the neo-Manichæans. Some he despoiled; the others he either wasted or reduced to slavery. As early as 1197, Augustus of France had eight Catharists burnt at Troyes in 1200, one at Nevers in 1202, several at Braine-sur-Vesle in 1204, and many at Paris—priests, clerics, laitymen, and women belonging to the sect. Raymond V of Toulouse (1148–94) promulgated a law which punished with death the followers of the sect and their favourers. Simon de Montfort's men-at-arms believed in 1211 that they were carrying out this law when they boasted how they had burned alive many, and would continue to do so (unde multis combussimus et adhuc cum inveniuntur, si non tali securitate pacem vident) in the next years. King II, King of Aragon and Count of Barcelona, issued an edict in obedience to which the Waldensians and all other schismatics were expelled from the land; whoever of this sect was still found in his kingdom or his county after Palm Sunday of the next year was to suffer death by fire, also confiscation of goods. Ecclesiastical legislation was far more severe from this period. Alexander III at the Lateran Council of 1179 renewed the decisions already made as to schismatics in Southern France, and requested secular sovereigns to silence those disturbers of public order if necessary by force, to the effect that they were by liberty to imprison the guilty (seveno sub hoc ruino) and appropriate their possessions. According to the agreement made by Lucius III and Emperor Frederick Barba- roses at Verona (1148), the heretics of every community were to be sought out, brought before the episcopal court, excommunicated, and then burnt to the civil power to be suitably punished (debia animad- versio, ulitio) did not, however, as yet mean capital punishment, but the prescriptive law, though even this, it is true, entailed exile, expropriation, destruction of property, pillaging, infamy, debarring them from public office, and the like (J. Flicker, "Die Einführung der Todesstrafe für Ketzer" in "Mitteilungen des Institutes für österr. Geschichtsforschung." I, 1880, p. 187 sq., 194 sq.). The "Continuatio Zwellingensis altera, ad ann. 1184" (Mon. Germ. Hist.: SS, IX, 542) accurately describes the condition of heretics at this time in that they were put under the civil law, while he confiscates their goods (papa ex com- municaevit, imperator vero tam res quam personas ipsum imperialis banno subiect). Under Innocent III, thinking was done to intensify or add to the extant statutes against heretics in the texts of a wider range by the action of his legates and through the Fourth Lateran Council (1215). But this act was indeed a relative service to the heretics, for the regular canonical procedure thus introduced did much to abrogate the arbitrarily, passion, and injustice of the civil courts in Spain, France, and Germany. In so far as, and so long as, his preconciliations remained in force, no summary condemnations or executions en masse occurred, neither stake nor rack were set up; if, on one occasion the pontiff, to justify confiscation, he appealed to the Roman Law and its penalties for crimes against the sovereign power, yet he did not draw the extreme conclusion that heretics deserved to be burnt. His reign affords many examples showing how much of the danger he took away in practice from the existing penal code.

II. The Suppression of Heresy by the Institution
Known as the Inquisition.—(A) The Inquisition of the Middle Ages.—(1) Origin.—During the first three decades of the thirteenth century the Inquisition, as an institution, did not exist. But eventually Christian Europe was so endangered by heresy, and penal legislation concerning Catharism (see Cathari) had gone so far, that the Inquisition seemed to be a political necessity. That these sects were a menace to Christian society had been long recognized by the Byzantine rulers. As early as 1172 Emperor Theodoros had put to death a multitude of Paulicians, and in 1118 Emperor Alexius Comnenus treated the Bogomil with equal severity, but this did not prevent them from pouring over all Western Europe. Moreover, these sects were in the highest degree aggressive, hostile to Christianity itself, to the Mass, the sacraments, the ecclesiastical hierarchy and organisation; hostile also to feudal government by their attitude towards oaths, which they declared under no circumstances allowable. Nor were their views less fatal to the continuance of human society, for on the one hand they forbade the massacre of the human race, and on the other they made a duty of suicide through the institution of the Endura (see Cathari). It has been said that more perished through the Endura (the Catharist suicide code) than through the Inquisition. It was, therefore, natural enough for the custodians of the existing order in Europe, especially of the Christian religion, to adopt repressive measures against such revolutionary teachings.

In France Louis VIII decreed in 1226 that persons excommunicated by the diocesan bishop, or his delegate, should receive "meet punishment" (debis et...amadversio). In 1249 Lateran IX (1241–54) ordered an absolute ban with heretics according to the dictates of duty (de ipsis facient quod debeant). A decree of the Council of Toulouse (1229) makes it appear probable that in France death at the stake was already prescribed as in keeping with the aforesaid debi animadversio. As we seek to trace in these measures the influence of imperial or papal ordinances is vain, since the burning of heretics had already come to be regarded as prescriptive. It is said in the "Etablissements de St Louis et coutumes de Beauvaisis", ch. cxxii (Ordonnances des Roys de France, I, 211): "Quand le juge [eclesiastique] l'aurait examiné [le suspect], si il trouvait qu'il feust bourgeois, si le devrait faire envoyer à la justice laic, et la justice laic le doit fere arder." The "Coutumes de Beauvaisis" correspond to the German "Bachenspiegel", or "Mirror of Saxon Laws", compiled about 1235, which also embodies as a law sanctioned by custom the execution of unbelievers at the stake (sal man uf der hurt burnen). In Italy Emperor Frederick II, as early as 22 November, 1220 (Mon. Germ., II, 243), issued a rescript against heretics, conceived, however, quite in the spirit of Innocent III, and Honorius III commissioned his legates to see to the enforcement in Italy during the first year of the decrees of 1218 and the imperial legislation of 1220. From the foregoing it cannot be doubted that up to
1224 there was no imperial law ordering, or pre-supposing as legal, the burning of heretics. The rescript for Lombardy of 1224 (Mon. Germ., IV, 252; cf. ibid., 288) is accordingly the first law in which death by fire is contemplated (cf. Ficker, op. cit., 186). That the Dominican Francisca in the decree of this ordinance cannot be maintained; indeed the emperor was all the less in need of papal inspiration as the burning of heretics in Germany was then no longer rare; his legists, moreover, would certainly have directed the emperor's attention to the ancient Roman Law that punished by treason with death, and Manicheism in particular with the stake. The imperial rescripts of 1220 and 1224 were adopted into ecclesiastical criminal law in 1231, and were soon applied at Rome. It was then that the Inquisition of the Middle Ages came into being.

What was the immediate provocation? Contemporary sources afford no positive answer. Bishop Douai, who perhaps commands the original contemporary material better than anyone, has attempted in his latest work (L'Inquisition, See Origines, Sa Procede, Paris, 1906) to explain its appearance by a support of Gregory IX to restall the encroachments of Frederick II in the strictly ecclesiastical province of doctrine. For this purpose it would seem necessary for the pope to establish a distinct and specifically ecclesiastical court. From this point of view, though the hypothesis cannot be fully proved, much more likely than the theory that there was a doubtless reason to fear such imperial encroachments in an age yet filled with the angry contentions of the Imperium and the Sacrolemma. We need only recall the trickery of the emperor and the pretended eagerness for the purity of the Faith, his increasingly rigorous legislation against heretics, the numerous executions of his personal rivals on the pretext of heresy, the hereditary passion of the Hohenstaufen for supreme control over Church and State, their claim of God-given authority over both, of responsibility in both domains to God and God only, etc. What was more natural than that the Church should strictly reserve to herself her own sphere, while that at the same time endeavouring to avoid giving offence to the emperor? A purely spiritual or papal religious tribunal would secure ecclesiastical liberty and authority, for this court could be confined to men of expert knowledge and blameless reputation, and above all to independents of the Church in whose hands the Church safely trust the decision as to the orthodoxy or heterodoxy of a given teaching. On the other hand, to meet the emperor's wishes as far as allowable, the penal code of the empire could be taken over as it stood (cf. Audra, "Regist. de Gregorio IX", n. 355).

W. The New tribunal.—(a) Its essential characteristic.—The pope did not establish the Inquisition as a distinct and separate tribunal; what he did was to appoint special but permanent judges, who executed their doctrinal functions in the name of the pope. Where they sat, there was the Inquisition, but it must be carefully noted that the characteristic feature of the Inquisition was not its peculiar procedure, nor the secret examination of witnesses and consequent official indictment: this procedure was common to all courts from the time of Innocent III. Nor was it the pursuit of heretics in all places: this had been the rule since the Imperial Synod of Verona under Lucius III and Frederick Barbarossa. Nor again was it the torture, which was not prescribed or even allowed for decades after the beginning of the Inquisition, nor, finally, the various sanctions, imprisonment, confiscation, the stake, etc. Which had made the business work for the Inquisition. The Inquisitor, strictly speaking, was a special but permanent judge, acting in the name of the pope and clothed by him with the right and the duty to deal legally with offences against the Faith; he had, however, to adhere to the established rules of canonical procedure and pronounce the customary penalties. Many regarded it as providential that just at this time sprang up two new orders, the Dominicans and the Franciscans, with men of the same spirit, and sound theological training and other characteristics, seemed eminently fitted to perform the inquisitorial task with entire success. It was safe to assume that they were not merely endowed with the requisite knowledge, but that they would also, quite unselfishly and unflinchingly, in the name of God, to do what seemed their duty for the good of the Church. In addition, there was reason to hope that, because of their great popularity, they would not encounter too much opposition. It seems, therefore, not unnatural that the inquisitors should have been chosen by the pope recondivingly, especially from the mendicant orders, though the Senate of Rome no doubt meant such when in his oath of office (1231) he spoke of inquisitores datas ab ecclesia. In his decree of 1232 he is clearly still restating the apostolica sede datos. The Dominican Almeric, in November of 1232, went through Lombardy as inquisitor heretics pravilatis. The prior and sub-prior of the Dominicans at Friesbach were given a similar commission as early as 27 November, 1231; on 2 December, 1232, and 5 December, 1233 they were received in the convents at Wurzburg, Ratisbon, and Bremen, also received the commission. In 1233 a rescript of Gregory IX, touching these matters, was sent simultaneously to the bishops of Southern France and to the priors of the Dominican Order. We know that Dominicans were sent as inquisitors in 1232 to Germany along the Rhine, to the Diocese of Tarragona in Spain, and to Lombardy; in 1233 to France, to the territory of Auxerre, the ecclesiastical provinces of Bourges, Bordeaux, Narbonne, and Auch, and to Burgundy; in 1235 to the ecclesiastical province of Sens. In fine, about 1235 we find the Inquisition in full activity in all the countries of Central and Western Europe, in the county of Tourouse, in Sicily, Aragon, Lombardy, France, Burgundy, Brabant, and Germany (cf. Douai, op. cit., p. 36, and Fredericq, "Corpus documentorum inquisitionis hereticarum pravilatis Neerlandicis, 1055--1520", 2 vols., Ghent, 1889-90).

That Gregory IX, through his appointment of Dominicans and Franciscans as inquisitors, withdrew the suppression of heresy from the proper courts (i.e. from the bishops), is a reproach that in no general a form cannot be sustained. So little did he think of displacing episcopal authority that, on the contrary, he provided explicitly that no inquisitorial tribunal was to work anywhere without the diocesan bishop's co-operation. And if, on the strength of their papal jurisdiction, inquisitors occasionally manifested too great an inclination to act independently of such bishops, the pope weakened the popes who kept them within right bounds. As early as 1254 Innocent IV prohibited anew perpetual imprisonment or death at the stake without the episcopal consent. Similar orders were issued by Urban IV in 1262, Clement IV in 1265, and Gregory X in 1273, until at last Boniface VIII and Clement V solemnly declared null and void all judgments issued in trials concerning faith, unless delivered with the approval and co-operation of the bishops. The popes always upheld with earnestness the episcopal authority, and sought to free the inquisitorial tribunals from such and such bishops by their superiors.

It was a heavy burden of responsibility—almost too heavy for a common mortal—which fell upon the shoulders of an inquisitor, who was obliged, at least indirectly, to decide between life and death. The
Church was bound to insist that he should possess, in a pre-eminent degree, the qualities of a good judge; that he should be animated with a glowing zeal for the Faith, the salvation of souls, and the extirpation of heresy; that he should have the most keen ear for the voice of truth and of evil, discerning what dangers he should never yield to anger or passion; that he should meet hostilities fearlessly, but should not court it; that he should yield to no inducement or threat, and yet not be heartless; that, when circumstances permitted, he should observe mercy in administering justice; that he should consult the council of others, and not trust too much to his own opinion or to appearances, since often the probable is untrue, and the truth improbable. Somewhat thus did Bernard Gui (or Guidonis) and Eymerie, both of them inquisitors for years, describe the ideal inquisitor of the day. The principle was enshrined in the Code of 1261, after Alexander IV had silenced their scruples, that the new principle was generally adopted both in theory and in practice. This grave modification seems to have been defended on the ground that the heretical conventicles took place secretly, and were shrouded in great obscurity, so that reliable information could be obtained from none but themselves. Even prior to the establishment of the Inquisition the names of the witnesses were sometimes withheld from the accused person, and this usage was legalized by Gregory IX, Innocent IV, and Alexander IV. Boniface VIII, however, set it aside by his Bull "Ut commissi vobis officii" (Sext. Decret., l. V, tit. ii); and commanded that at all trials, even inquisitorial, the witnesses must be named to the accused. There was no personal confrontation of witnesses, neither was there any cross-examination. Witnesses for the defence hardly ever appeared, as they would almost infallibly be suspected of being heretics or favourable to heresy. For the same reason those impeached rarely secured legal advisers, and were therefore obliged to rely on their personal friends for assistance. This, however, was also no innovation, for in 1265 Innocent III, by the Bull "Si adversus vos", forbade any legal help for heretics: "We strictly prohibit you, lawyers and notaries, from assisting in any way, by counsel or support, all heretics and such as believe in them, adhere to them, or defend them, any assistance or defend them in any way." But this severity soon relaxed, and even in Eymerie's day it seems to have been the universal custom to grant heretics a legal adviser, who, however, had to be in every way beyond suspicion, "upright, of undoubted loyalty, skilled in civil and canon law, and zealous for the faith."

Meanwhile, even in those hard times, such legal severities were felt to be excessive, and attempts were made to mitigate them in various ways, so as to protect the natural rights of the accused. First he could make known to the judge the names of his enemies, who would be denied the right to advise the accused. Next he could be quashed without further ado. Furthermore, it was undoubtedly to the advantage of the accused that false witnesses were punished without mercy. The aforesaid inquisitor, Bernard Gui, relates an instance of a father falsely accusing his son of heresy. The son's innocence quickly becoming apparent, the false accuser was apprehended, and sentenced to prison for life (solam vitam et ex misericordia relicturos). In addition he was pilloried for five consecutive Sundays before the church during service, with bare head and bound hands. Perjury in those days was accounted an enormous offence, punished by death while the accused had no chance of being exonerated, and there was no idea of mitigating the punishment. Moreover, the accused had a considerable advantage in the fact that the inquisitor had to conduct the trial in co-operation with the diocesan bishop or his representatives, to whom all documents relating to the trial had to be remitted. Both together, inquisitor and bishop, were also made to summon and consult a number of upright and experienced men (boni viri), and to decide in agreement with their decision (vota). Innocent IV (11 July, 1254), Alexander IV (15 April, 1255, and 27 April, 1260), and Urban IV (2 August, 1264) strictly prescribed this institution of the boni viri—i.e., that new departures in difficult cases of importance were to be made to consult a number of upright and experienced men, well versed in the lore of canon law, and in every way irreproachable. The documents of the trial were either in their entirety handed to them, or at least an abstract drawn up by a public notary was furnished; they were also made acquainted
with the witnesses’ names, and their first duty was to decide whether or not the witnesses were credible. The *boni viri* were very frequently called on. Thirty, fifty, eighty, or more persons—laymen and priests, secular and regular—would be summoned, all highly regarded and independent men, and singly sworn to give verdict upon the cases before them according to the best of their knowledge and belief. Substantially they were always called upon to decide two questions: whether and what guilt lay at hand, and what punishment was to be inflicted. That they might be influenced by no personal consideration, the case would be submitted to them somewhat in the abstract, i.e., the name of the person implicated was not given. Although, strictly speaking, the *boni viri* were entitled only to an advisory vote, the final ruling was usually in accordance with their views, and, whenever their decision was revised, it was always in the direction of clemency, the mitigation of the findings being indeed of frequent occurrence. The judges were also assisted by a *consilium perenam*, or standing council, composed of other sworn judges. In these dispositions surely lay the most valuable guarantees for an objective, independent, and just operation of the inquisitional court. Apart from the conduct of his own case, the accused disposed of other legal means for safeguarding his rights: he could reject a judge who had shown prejudice, and at any stage of the trial could appeal to Rome. Eymeric leads one to infer that in Aragon appeals to the Holy See were not rare. He himself as inquisitor had on one occasion to go to Rome to defend in person his own position, but he advises other inquisitors against that step, as it simply meant the loss of much time and money; it were wiser, he says, to try a case in such a manner that no fault could be found. In the event of an appeal the documents of the case were to be sent to Rome under seal, and Rome not only scrutinised them, but itself gave the final verdict. Seemingly, appeals to Rome were in great favour; a milder sentence, it was hoped, would be forthcoming, or at least some time would be gained.

(d) Punishments.—The present writer can find nothing to suggest that the accused were imprisoned during the period of enquiry. It was certainly customary to grant the accused his freedom until the *sermo generalis*, were he ever so strongly incriminated through witnesses or confession; he was not yet supposed guilty, though he was compelled to produce under oath always to be ready to come before the inquisitor, and in the end to accept with good grace his sentence, whatever its tenor. The oath was assuredly a terrible weapon in the hands of the medieval judge. If the accused person kept it, the judge was favourably inclined; if the other way, if the accused denied it, his credit grew worse. Many sects, it was known, repudiated oaths on principle; hence the violation of an oath caused the guilty party easily to incur suspicion of heresy. Besides the oath, the inquisitor might secure himself by demanding a sum of money as bail, or reliable bondsmen who would stand surety for the accused. It happened that men undertook upon oath to deliver the accused “dead or alive”. It was perhaps unpleasant to live under the burden of such an obligation, but, at any rate, it was more endurable than to await a final verdict in rigid confinement for months or longer.

The allegation of torture was discredited as a mode of punishment, but purely as a means of eliciting the truth. It was not of ecclesiastical origin, and was long prohibited in the ecclesiastical courts. Nor was it originally an important factor in the inquisitional procedure, being unauthorized until twenty years after the Bull *Exstrictanda* had been sanitised by Innocent IV in his Bull “Ad exstrictanda” of 15 May, 1252, which was confirmed by Alexander IV on 30 November, 1259, and by Clement IV on 3 November, 1265. The limit placed upon torture was *citro membrana diminutionem et mortis periculum*—i.e., it was not to cause the loss of a limb or imperil life. Torture was to be applied only once, and not then unless the accused were uncertain in his statements, and confessed convinced by torture. After this there were no weighty proofs. In general, this violent questioning (*questio*) was to be deferred as long as possible, and recourse to it was permitted only when all other expedients were exhausted. Conscientious and sensible judges quite properly attached no great importance to confessions or convictions by torture. After the experience Eymeric declared: *Questiones sunt fallacies et inefficaces*—i.e., the torture is deceptive and ineffectual.

Had this papal legislation been adhered to in practice, the historian of the Inquisition would have fewer difficulties to satisfy. In the beginning, torture was held to be so odious that clerics were forbidden to be present under pain of irregularity. Sometimes it had to be interrupted so as to enable the inquisitor to continue his examination, which, of course, was attended by numerous inconveniences. On 27 April, 1260, Alexander IV, in his *inquisitionem ad absolvendam earn *exstrictandam* of 2 August, 1262, renewed the permission, and this was soon interpreted as formal licence to continue the examination in the torture chamber itself. The inquisitors’ manuals faithfully noted and approved this usage. The general rule ran that torture was to be resorted to only once. But this was somewhat circumvented—first, by assuming that with every new piece of evidence the rack could be utilized afresh, and secondly, by imposing fresh torments on the poor victim (often on different days), not by way of repetition, but as a continuation (non ad modum iterantium sed continuations), as defended by Eymeric: “quia iterari non debent [tormenta], nisi novis supervenientibus indicis, continuari non prohibentur.” But what was to be done when the accused, released from the rack, denied what he had just confessed? Some held with Eymeric that the accused should be set at liberty; others, however, like the author of the “Sacro Arsenale”, held that the torture should be continued, because the accused had too seriously incriminated himself by his previous confession. When Clement V formulated his regulations for the employment of torture, he never imagined that they would be evaded. For if the accused, although not their guilt, but that of the accused, was in question. From the pope’s silence it was concluded that a witness might be put upon the rack at the discretion of the inquisitor. Moreover, if the accused was convicted through witnesses, or had pleaded guilty, the torture might still be used to compel him to testify against his friends and fellow-culpits. It would be opposed to all Divine and human equity—so one reads in the “Sacro Arsenale, ovvero Pratica dell’ Officio della Santa Inquisizione” (Bologna, 1665)—to inflict torture unless the judge were personally persuaded of the guilt of the accused.

But one of the more essential parts of the procedure is why torture was used as a means of learning the truth. On the one hand, the torture was continued until the accused confessed or intimated that he was willing to confess. On the other hand, it was not desired, as in fact it was not possible, to regard as freely made a confession not regarded by torture.

It is at once apparent how little reliance may be placed upon the assertion so often repeated in the minutes of trials, “confessio esse veram, non factam vi tormentorum” (the confession was true and free), even though one had not occasionally read in the preceding page that, after being taken down from the rack (postquam deposuit falsi de tortore), he freely confessed this or that. However, it is not of much greater importance to say that torture is seldom
mentioned in the records of inquiry trials—but once, for example, in 636 condemnations between 1309 and 1323; this does not prove that torture was rarely applied. Since torture was originally inflicted only in the court room by lay officials, and since only the voluntary confession was valid before the judges, there was no occasion to mention in the record the fact of torture. On the other hand it is historically true that the popes not only always held that torture must not imperil life or limb, but also tried to abolish particularly gruesome abuses, when such became known to them. Thus Clement VI ordained that inquisitors should not apply the torture without the consent of the diocesan bishop. From the middle of the thirteenth century, they did not disavow the principle itself, and, as their restrictions to its use were not always heeded, its severity, though often exaggerated, was in many cases extreme.

The consuls of Carcassonne in 1286 complained to the pope, the King of France, and the vicars of the local bishop against the inquisitor Jean Galand, whom they charged with inflicting torture in an absolutely inhuman manner, and this charge was not isolated one. The trial of Savonarola (q.v.) and the Inquisition was itself cleared up in this respect. The official report says he had to suffer three and a half "tratti da fane" (a sort of strappado). When Alexander VI showed discontent with the delays of the trial, the Florentine government excused itself by urging that Savonarola was an extraordinary criminal, and that he had been vigorously tortured on many days ("assidua questione multis diebus", the papal prothonotary, Burchard, says seven times) but with little effect. It is to be noted that torture was most cruelly used, where the inquisitors were most exposed to the pressure of civil authority. Frederick II, though always boasting of his zeal for the purity of the Faith, abused both rack and Inquisition to put out of the way his personal enemies. The tragic ruin of the Templars is ascribed to the abuse of torture by Philip the Fair and his henchmen. At Paris, for instance, thirty-six, and at Sens twenty-five, Templars died as the result of torture. Blessed Joan of Arc could not have been sent to the stake as a heretic and a recalcitrant, if her judges had not been tools of English policy. And the excesses of the Spanish Inquisition are largely due to the fact that in its administration civil authority overshadowed. Every reader of the "Cautio criminalis" of the Jesuit Father Friedrich Spee knows to whose account chiefly must be set down the horrors of the witchcraft trials. Most of the punishments that were properly speaking inquisitional were not inhuman, either by their nature or by the manner of their infliction. Most frequently certain good works were ordered, e.g., the building of a church, the visitation of a church, a pilgrimage more or less distant, the offering of a candle or a chalice, participation in a crusade, and the like. Other works partook more of the character of real and to some extent corporal punishments, e.g., fines, whose proceeds were devoted to support public worship, road-making, the like; whipping with rods during religious service; the pillory; the wearing of coloured crosses, and so on.

The hardest penalties were imprisonment in its various degrees, exclusion from the communion of the Church, and the usually consequent surrender to the civil power. "Cum eclesiae", ran the regular expression, "ultra non habeat quod faciat pro suis demeritis contra ipsum, idceo eundem reliquimus brachio et iudicio seculari";—i.e. since the Church can in no way punish his misdeeds, she leaves him to the civil authority. Naturally enough, punishment as a legal sanction is always a hard and painful thing, whether decreed by civil or ecclesiastical justice. There is, however, always an essential distinction between civil and ecclesiastical punishment.

While chastisement inflicted by secular authority aims chiefly at punishing violation of the law, the Church seeks primarily the correction of the delinquent; indeed his spiritual welfare is frequently so much in view that the utmost punishment is almost entirely lost sight of. Command to hear Holy Mass on Sundays and holidays, to frequent religious services, to abstain from manual labour, to receive Communion at the chief festivals of the year, to forbear from soothsaying and usury, etc., can scarcely be regarded as punishments, though very efficacious in helping to bring the delinquent to Christian duties. It being furthermore incumbent on the inquisitor to consider not merely the external sanction, but also the inner change of heart, his sentence lost the quasi-mechanical stiffness so often characteristic of civil condemnation. Moreover, the penalties incurred were on numberless occasions mitigated, commuted, or remitted. In the records of the Inquisition we very frequently read that because of old age, sickness, or poverty in the family, the due punishment was materially reduced owing to the inquisitor's sheer pity, or the petition of a good Catholic. If it was not possible to remit the fine, this was assessed upon the goods of the accused; or, if the accused was poor, the Inquisition was mitigated; or if the prisoner was a minor, the punishment was humanely conducted. Thus we read that a son obtained his father's release by merely asking for it, without putting forward any special reasons. Licence to leave prison for three weeks, three months, or an unlimited period—say until the recovery or decease of sick parents—was not infrequent. Rome itself censured inquisitors or deposed them because they were too harsh, but never because they were too merciful.

Imprisonment was not always accounted punishment in the proper sense: it was rather looked on as an opportunity for repentance, a preventive against backsliding or the infection of others. It was known as immuration (from the Latin murus, a wall), or incarceration, and was inflicted for a definite time or for life. Imprisonment was the lot of those who had failed to profit by the foregoing term of grace, or who, perhaps recanted only from fear of the inquisitor, or had once been deceived. "Murus strictus seu arctus, or carcer strictissimus, implied close and solitary confinement, occasionally aggravated by fasting or chains. In practice, however, these regulations were not always enforced literally. We read of immured persons receiving visits rather freely, playing games, or dining with their jailors. On the other hand, solitary confinement was at times deemed insufficient, and then the immured were put in irons or chained to the prison wall. Members of a religious order, when condemned for life, were immured in their own convent, nor ever seen after with any of their fraternity, the dungeon or cell was euphemistically called "In Paco"; it was, indeed, the tomb of a man buried alive. It was looked upon as a remarkable favour when, in 1330, through the good offices of the Archbishop of Toulouse, the French king permitted a dignitary of a certain order to visit the "In Paco" twice a month and comfort his imprisoned brethren, against which favour the Dominicans lobbied with Clement VI a fruitless protest. Though the prison cells were directed to be kept in such a way as to endanger neither the life nor the health of occupants, their condition was, in effect, such that this was evidenced from a document published recently by J. B. Vidal (Annales de St-Louis des Francs, 1895, p. 362).

"In some cells the unfortunate were bound in stocks or chains, unable to move about, and forced to sleep..."
on the ground. . . . There was little regard for cleanliness. In some cases there was no light or ventilation, and the food was meagre and very poor." Occasionally the popes had to put an end through their legates to similarly atrocious conditions. After inspecting the Carcassonne and Albi prisoners in 1306, the legates Pierre de la Chapelle and Angers de Pedulo discovered the warders, removed the chains from the captives, and released some from their underground dungeons. The local bishop was expected to provide food from the confiscated property of the prisoner. For those doomed to close confinement, it was meagre enough, scarcely more than bread and water. It was not long, however, before the arena was left and the prisoners were left to their fate, wine and money also from outside, and this was soon generally tolerated.

Officially it was not the Church that sentenced unrepentent heretics to death, more particularly to the stake. As legate of the Roman Church even Gregory IX never went farther than the penal ordinances of Innocent III required, nor ever inflicted a punishment more severe than excommunication. Not until four years after the commencement of his pontificate did he admit the opinion, then prevalent among theologians, that heresy should be punished with death, seeing it as a crime to the less serious than an offence than high treason. Nevertheless, he continued to insist on the exclusive right of the Church to decide in authentic manner in matters of heresy; at the same time it was not her office to pronounce sentence of death. The Church, therewith, expelled from her bosom the impenitent heretic, whereupon the state took over the duty of his temporal punishment. Frederick II was of the same opinion; in his Constitution of 1224 he says that heretics convicted by an ecclesiastical court shall, on imperial authority, suffer death by fire (auctoritate nostra igni judicetur, condenantes, and similiter in 1233; "presens nostre legis edicto damnatos mortem pati decernimus." In this way Gregory IX may be regarded as having had no share, either directly or indirectly, in the death of condemned heretics. Not so the succeeding popes. In the Bull "Ad exstirpanda" of Innocent IV, the pope declared that those judged guilty of heresy have been given up to the civil power by the bishop or his representative, or the Inquisition, the podesta or chief magistrate of the city shall take them at once, and shall, within five days at the most, execute the laws made against them. Moreover, his direct negligence and contempt of Frederick II be entered in every city among the municipal statutes under pain of excommunication, which was also visited on those who failed to execute both the papal and the imperial decrees. Nor could any doubt remain as to what civil regulations were meant, for the passage which ordered the burning of impenitent heretics were inserted in the papal decreals from the imperial constitutions "Commision nobis" and "Inconsutibilem tunicam". The aforesaid Bull "Ad exstirpanda" remained thenceforth a fundamental of the Inquisition, and enforced by several popes, Alexander IV (1254-61), Clement IV (1265-68), Nicholas IV (1268-92), Boniface VIII (1294-1303), and others. The civil authorities, therefore, were enjoined by the popes, under pain of excommunication to execute the legal sentences that condemned impenitent heretics to the stake. It is to be noted, however, that when this sentence was no trifling matter it was held by the legislation of that period to be a heretic, and incurred all the penalties that affected heresy.

The Number of Victims.—How many victims were handed over to the civil power cannot be stated with even approximate accuracy. We have nevertheless some valuable information about a few of the Inquisition tribunals, and their statistics are not without interest. At Pamiers, in 1318-19, the court of twenty-four persons convicted but five were delivered to the civil power, and at Toulouse from 1308 to 1323, only forty-two out of nine hundred and thirty beat the ominous note "relictus curiae secundum". Thus at Pamiers one in thirteen, and at Toulouse one in forty, seem to have been put out for heresy, although these places were hotbeds of heresy, and therefore principal centres of the Inquisition. We may add, also, that this was the most active period of the institution. These data and others of the same nature bear out the assertion that the Inquisition, other than in its very beginning, was in the contemporary administration of justice, and therefore in the general civilization of mankind. A more terrible fate awaited the heretic when judged by a secular court. In 1249 Count Raymond VII of Toulouse caused eighty confessed heretics to be burned in his presence without permitting them to recant. It is impossible to imagine any such trials before the Inquisition courts. The large numbers of burnings detailed in various histories are completely unauthenticated, and are either the deliberate invention of pamphleteers, or are based on materials that are in many cases of later times or the German witchcraft trials (Vacandard, op. cit., 237 sqq.).

Once the Roman Law touching the crimen lasea majestatis had been made to cover the case of heresy, it was only natural that the royal or imperial treasury should initiate the Roman fiscus, and lay claim to the property of persons condemned. It was fortunate, though inconsistent and certainly not strict justice, that this penalty did not affect every condemned person, but only those sentenced to perpetual confinement or the stake. Even so, this circumstance added to the less serious of the two punishments, quite decisive in this respect innocent people, the culprit’s wife and children, were the chief sufferers. Confiscation was also decreed against persons deceased, and there is a relatively high number of such judgments. Of the six hundred and thirty-six cases that came before the inquisitor Bernard Gui, eighty-eight pertained to dead people.

(e) The Final Verdict.—The ultimate decision was usually pronounced with solemn ceremonial at the sermo generalis—or aulo-da-fé (act of faith), as it was later called. One or two days prior to this sermo generalis everyone had the charge read to him again briefly, and in the meanwhile the heretic was informed of his sentence before he was told where and when to appear to hear the verdict. The sermo, a short discourse or exhortation, began very early in the morning; then followed the swearing in of the secular officials, who were made to vow obedience to the inquisitor in all things pertaining to the supplication of heretics. Then regularly followed the so-called “decrees of mercy” (i.e. commutations, mitigations, and remission of previously imposed penalties), and finally due punishments were assigned to the guilty, after their sentences had been again enumerated. This announcement began with the minor punishments, and went on to the most severe, i.e., perpetual imprisonment or death. Thereupon the guilty were turned over to the civil power, and with this act the sermo generalis closed, and the inquisitional proceedings were at an end.

(3) The chief scene of the Inquisition’s activity was Central and Southern Europe. The Scandinavian countries were spared altogether. It appears in England only on the occasion of the trial of the Templars, nor was it known in Castile and Portugal until the accession of Ferdinand and Isabella. It was introduced into the Netherlands with the Spanish domination, while in Northern France it was rela-
tively little known. On the other hand, the Inquisi-
tion, whether because of the particularly perilous sectarianism there prevalent or of the greater severity of ecclesiastical and civil rulers, weighed heavily on Italy (especially Lombardy), on Southern France (in particular the county of Toulouse and the County of Toulouse), and finally on the Kingdom of Aragon and on Germany. Honorius IV (1285–7) introduced it into Sardinia, and in the fifteenth century it displayed excessive zeal in Flanders and Bohemia. The inquisitors were, as a rule, irreproachable, not merely in personal conduct, but in the administration of their charges. One may suppose that a Dominican (Catharist) convert to Christianity and subsequently a Dominican, seen to have yielded to a blind fanaticism and deliberately to have provoked executions en masse. On 29 May, 1239, at Montwim in Champagne, Robert consigned to the flames at one time about a hundred and eighty persons, whose trial had begun and ended within one week. Later, when Rome found that the complaints against him were justified, he was first deposed and then incarcerated for life.

4) How are we to explain the Inquisition in the light of its own period?—For the true office of the historian is not to defend facts and conditions, but to study and understand them in their natural course and connexion. It is indisputable that in the past scarcely any community or nation vouchsafed perfect toleration to those who set up a creed different from that of the majority. A kind of iron law would seem to dispose mankind to religious intolerance. Even long before the Roman State tried to check with violence the rapid encroachments of Christianity, Plato had declared it one of the supreme duties of the governmental authority in his ideal State to show no toleration towards the “godless”—that is, towards those who denied the state religion—even though they were content to live quietly and without proselytizing; their very example, he said, would be dangerous. They were to be kept in custody “in a place where one grew wise” (ἐν τοις ἀκροβατη
tαισι), as the place of incarceration was euphemistically called; they should be relegated thither for five years, and during this time listen to religious instruction every day. The more active and proselytizing opponents of the state religion were to be imprisoned for life in dreadful dungeons, and after death to be burnt. If it is held that rationalization is the greatest single factor in the evolution of the Middle Ages. Everywhere and always in the past men believed that nothing disturbed the common weal and public peace so much as religious dissensions and conflicts, and that, on the other hand, a uniform public faith was the surest guarantee for the State’s stability and prosperity. The more thoroughly religion had become part of the national life, and the stronger the general conviction of its inviolability and Divine origin, the more disposed would men be to consider every attack on it as an intolerable crime against the safety and peace of the Commonwealth. The first Christian emperors believed that one of the chief duties of an imperial ruler was to place his sword at the service of the Church and orthodoxy, especially as their titles of “Pontifex Maximus” and “Bishop of the Exterior” seemed to argue in them. Divinely appointed agents of Heaven.

Nevertheless, the principal teachers of the Church held back for centuries from accepting in these matters the practice of the civil rulers; they shrunk particularly from such stern measures against heresy as torture and capital punishment, both of which they deemed inconsistent with the spirit of Christianity. But, in the Middle Ages, the Councils, the bishops, the popes, the mendicant orders, and the authorities of the Commonwealth came to be closely bound up with the cause of religious unity. King Peter of Aragon, therefore, but voiced the universal conviction when he said: “The enemies of the Cross of Christ and violators of the Christian law are likewise our enemies and the enemies of our kingdom, and ought therefore to be dealt with as such.” Emperor Frederick II emphasized this view even more vigorously, and other princes than Frederick II, in his Draconian enactments against heresy. The representatives of the Church were also children of their own time, and in their conflict with heresy accepted the help that their age freely offered them, and indeed often forced upon them. Theologians and canonists, the highest and the saintliest, stood by the cause of their day, and sought to lend weight and authority to it. The learned and holy Raymond of Pennafort, highly esteemed by Gregory IX, was content with the penalties that dated from Innocent III, viz., the ban of the empire, confiscation of property, confinement in prison, etc. But before the end of the century, St. Thomas Aquinas (Summa Theol., II–II, Q. xi, aa. 3, 4) already advocated capital punishment for heresy, though it cannot be said that his arguments altogether compel conviction. The Angelic Doctor, however, speaks only in a general way of punishment by death, and does not specify more nearly the manner of its infliction. This the Council of Toulouse denied that was truly terrible. The celebrated Henry of Soria (Susa), named Hostiensis after his episcopal See of Ostia (d. 1271), and the no less eminent Joannes Andree (d. 1343), when interpreting the Decree “Ad abolendam” of Lucius III, take debeat animadvertere (due punishment) as synonymous with spes cremenata (death by fire), a meaning which certainly did not attach to the original expression of 1184. Theologians and jurists based their attitude to some extent on the similarity between heresy and high treason (crimen lese majestatis), a suggestion that they owed to the Law of Ancient Rome. They argued, moreover, that if the death penalty could be rightly inflicted on thieves and forgers, who rob us only of worldly goods, how much more rightly on those who cheat us out of supernatural goods—out of faith, the sacraments, the life of the soul. In the severe legislation of the Old Testament (Deut., xix. 6–9; xvii. 1–6) they found another argument. And lest some should urge that those ordinances were abrogated by Christianity, the words of Christ were recalled: “I am not come to destroy, but to fulfil” (Matt., v. 17); also His other saying (John, xv. 6): “If any one abide not in me, he shall be cast forth; he shall gather dust and ashes, and they shall gather him up, and cast him into the fire, and he burneth” (in igneum mittent, et ardent).

It is well known that belief in the justice of punishing heresy with death was so common among the sixteenth century reformers—Luther, Zwinger, Calvin, and their adherents—that we may say their toleration began where their power ended. (N. Paulinus, “Die Strassburger Reformator und die Gewissensfreiheit.” (Freiburg, 1895); “Luther und die Gewissensfreiheit” (Munich, 1905); Ketzerinquisition im lutherischen Sachsen”, supplement to “Germania” (1907), p. 18 and 19; ”1. J. in der Ketzerei? Was soll aufhören?” ibid. (1909), no. 12; ”Luther’s Theoremen über die Ketzerverbrennung”, in “Histor.-polit. Blätter”, CXLI (1907), no. 5; “Calvin als Handlanger der päpstlichen Inquisition”, ibid., CXLIII (1909), no. 9; ”Zwinger und die Glaubensfreiheit”, ibid., CXLIII (1909), no. 9). The Reformed theologian, Hieronymus Zanchi, declared in a lecture delivered at the University of Heidelberg: “We do not now ask if the authorities may pronounce sentence of death upon heretics; of that there can be no doubt, and all learned and right-minded men acknowledge it. The only question is whether the authorities are bound to perform this duty.” And Zwinger answers the question in the affirmative, especially on the authority of “all pious and learned men who have written on the subject in our day” (Historisch-politische Blätter,
CXL, (1907), p. 364). It may be that in modern times men as a rule judge more leniently the views of others, but does this forthwith make their opinions objectively more correct than those of their predecessors? Is there no longer any inclination to persecution? As late as 1872, more than 3,000 were destroyed, and more than 1,000 by fire (Kölnische Volkszeitung, 782, 5 Sep. 1899). Do these sentiments indicate an ability to appraise justly the institutions and opinions of former centuries, not according to modern feelings, but to the standards of their age? [cf. Th. de Cauzons, Histoire de l’Inquisition en France, Tome I: “Les Origines de l’Inquisition” (Paris, 1909); O. Pfuhl in “Stimmen aus Maria-Lasach,” no. 8 (1909), pp. 290 sqq.]

In forming an estimate of the Inquisition, it is necessary to distinguish clearly between principles and historical fact on the one hand, and on the other those exaggerations or rhetorical descriptions which reveal but the narrowest determinism of the Catholicism, rather than to encourage the spirit of tolerance and further its exercise. It is also essential to note that the Inquisition, in its establishment and procedure, pertained not to the sphere of belief, but to that of discipline. The dogmatic teaching of the Church is in no way affected by the question as to whether the Inquisition was justified in its scope, or wise in its methods, or extreme in its practice. The Church established by Christ, as a perfect society, is empowered to make laws and inflict penalties for their violation. Heresy not only violates her law but strikes at her very life, unity of belief; and from the beginning the heretic had incurred all the penalties of the ecclesiastical courts. When Christianity became the religion of the Empire, and still more when the peoples of Northern Europe became Christian nations, the close alliance of Church and State made unity of faith essential not only to the ecclesiastical organization, but also to civil society. Heresy, in consequence, was a crime which secular rulers were bound in duty to punish. It was regarded as worse than any other crime, even that of high treason; it was for society in those times what we call anarchy. Hence the severity with which heretics were treated by the secular powers, and hence the Inquisition was established.

As regards the character of these punishments, it should be considered that they were the natural expression not only of the legislative power, but also of the popular hatred for heresy in an age that dealt both vigorously and roughly with criminals of every type. The heretic, in a word, was an outlaw whose offence, in the popular mind, deserved and sometimes received a punishment as summary as that which is often dealt out in our own day by an infuriated populace to the authors of justly detested crimes. That such intolerance was not peculiar to Catholicism, but was the natural outcome of the universal conviction in those, also, who abandoned the Church, is evident from the measures taken by some of the Reformers against those who differed from them in matters of belief. As the learned Dr. Schaff declares in his History of the Christian Church (vol. V, New York, 1877, p. 594), “as a result of the Reformation, religious intolerance and even persecution unto death were continued long after the Reformation.” In Geneva the pious theory was put into practice by state and church, even to the use of torture and the admission of the testimony of traitors against traitors. “Gesamte, und bath der Haller und der Calvin. Bullinger, in the second Helvetic Confession, announced the principle that heresy could be punished like murder or treason.” Moreover, the whole history of the Penal Laws against Catholics in England and Ireland, and the spirit of intolerance prevalent in many of the American colonies during the seventeenth and eighteenth centuries may be cited in proof thereof. It would obviously be absurd to make the charge against Protestantism for these practices. But having set up the principle of private judgment, which, logically applied, made heresy impossible, the early Reformers proceeded to treat dissenters as the medieval heretics had been treated. To suggest that this was inconsistent is trifling in view of the deeper insight it affords into the meaning of a tolerance which had its root in the origin and the source of that intolerance which men rightly show towards error, and which they naturally, though not rightly, transfer to the erring. (B) The Inquisition in Spain. — (1) Historical Facts. Religious conditions similar to those in Southern France occasioned the establishment of the Inquisition in the neighbouring Kingdom of Aragon. As early as 1226 King James I had forbidden the Catharists his kingdom, and in 1228 had outlawed both them and their friends. A little later, on the advice of his confessor, Raymond of Penafort, he asked Gregory IX for the Inquisition. He then issued a Bull “Declinante jam mundi” of 26 May, 1232, Archbishop Esparrago and his suffragans were instructed to search, either personally or by enlisting the services of the Dominicans or other suitable agents, and condignly punish the heretics in their dioceses. At the Council of Lerida in 1237 the Inquisition was formally confided to the Dominicans and the Franciscans. At the Synod of Tarragona in 1242, Raymond of Penafort defined the terms hereticus, receptor, fautor, defensor, etc., and outlined the penalties to be inflicted. Although the ordinances of Innocent IV, Urban IV, and Gregory XII were also adopted and executed with strictness by the Dominican Order, no striking success resulted. The Inquisitor Fray Ponce de Blanes was poisoned, and Bernardo Travasser earned the crown of martyrdom at the hands of the heretics. Aragon’s best-known inquisitor is the Dominican Nicolas Eymeric (Quètit-Echard, “Scriptores Ord. Pr.”, I, 709 sqq.). His “Directorium Inquisitionis” (written in Aragon, 1376; printed at Rome 1587, Venice 1595 and 1607), based on forty-four years’ experience, is an original source and a document of the highest historical value.

The Spanish Inquisition, however, properly begins with the reign of Ferdinand the Catholic and Isabella. The Catholic faith was then endangered by pseudo-converts from Judaism (Marranos) and Mohammedanism (Moriscos). On 1 November, 1478, Sixtus IV empowered the Catholic sovereigns to set up the Inquisition. The judges were to be at least forty years old, of unimpeachable reputation, distinguished for virtue and wisdom, masters of theology, or doctors or licentiates of canon law, and they must follow the usual ecclesiastical rules and regulations. On 17 September, 1490, Their Catholic Majesties appointed, at first for Seville, the two Dominicans Miguel de Morillo and Juan de San Martín as inquisitors, with no of the secular clergy as assistants. Before long complaints of grievous abuses reached Rome, and were only too well founded. In a Brief of Sixtus IV of 29 January, 1482, they were blamed for having, upon the alleged authority of papal Briefs, unjustly imprisoned many people, included over 500 therefrom hurriedly to the fire, and the believers, and sequestered the property of the executed. They were at first admonished to act only in conjunction with the bishops, and finally were threatened with deposition, and would indeed have been deposed had not Their Majesties interceded for them. (3) The Inquisition in Paradise. — (3) The Inquisition in Paradise, 1498. Fray Tomás Torquemada (b. at Valladolid in 1420, d. at Avila, 16 September, 1498) was the true organiser of the Spanish Inquisition. At the solicita-
tion of Their Spanish Majesties (Paramo, II, tit. ii, c. iii, n. 9) Sixtus IV bestowed on Torquemada the office of grand inquisitor, the institution of which indicates a decided advance in the development of the Spanish Inquisition. Innocent VIII approved the act of the realms and under date of 28 November 1486, and 6 February, 1487, Torquemada was given the dignity of grand inquisitor for the kingdoms of Castile, Leon, Aragon, Valencia, etc. The institution speedily rambified from Seville to Cordova, Jasen, Villarreal, and Toledo. About 1538 there were nineteen courts, to which were added the inquisitorial courts of the Spanish America (Mexico, Lima, and Cartagena). Attempts at introducing it into Italy failed, and the efforts to establish it in the Netherlands entailed disastrous consequences for the mother country. In Spain, however, it remained operative into the nineteenth century. Originally called into being against secret Judaism and secret Mohammedanism, it served to repel Protestantism in the sixteenth century, but was unable to expel French Rationalism and immorality in the eighteenth. King Joseph Bonaparte abrogated it in 1808, but it was re-introduced by Ferdinand VII in 1814 and approved by Pius VII on certain conditions, among others, the abolition of torture. It was definitely abolished by the Revolution of 1820.

(2) Organization.—At the head of the Inquisition, known as the Holy Office, stood the grand inquisitor, nominated by the king and confirmed by the pope. By virtue of his papal credentials he enjoyed authority to delegate his powers to other suitable persons, and to receive appeals from all Spanish courts. He was aided by a High Council (Consejo Supremo) consisting of five members—the so-called Apostolic inquisitors, two secretaries, two relatores, one advocatus Francisco—and several consultors and qualificators. The officials of the supreme tribunal were appointed by the grand inquisitor after consultation with the king. The former could also freely appoint, transfer, remove from office, inspect, or call to account all inquisitors and officials of the lower courts. Philip III, on 10 December, 1616, gave the Dominicans the privilege of having one of their order permanently a member of the Consejo Supremo. All power was really concentrated in this supreme tribunal. It decided important or disputed questions, and heard appeals; without its approval no priest, knight, or noble could be imprisoned, and no auto-da-fe held; an annual report was made to it by the inquisitors. Their report, and once a month a financial report. Everyone was subject to it, not excepting priests, bishops, or even the sovereign. The Spanish Inquisition is distinguished from the medieval by its monarchical constitution and a greater consequent centralization, as also by the constant and legally provided-for influence of the crown on all official appointments and the progress of trials.

(3) The procedure, on the other hand, was substantially the same as that already described. Here, too, a "term of grace" of thirty to forty days was invariably granted, and was often prolonged. Imprisonment, in the "horrorados" was never for life, but only "at liberty," or the offence had been proved. Examination of the accused could take place only in the presence of two disinterested priests, whose obligation it was to detain any arbitrary act; in their presence the protocol had to be read out twice to the accused. The defence lay always in the hands of a lawyer. The witnesses, though unknown to the accused, were sworn, and very severe punishment, even death, awaited false witnesses (cf. Brief of Leo X of 14 December, 1518). Torture was applied only too frequently and too cruelly, but certainly not more cruelly than under Cisneros and later in Germany. Inquisition proceedings are always in German (consultores). The prospector facialis acts as the proper judge throughout the whole case until the plenary session exclusive, thus conducting it up to the verdict. The accusator sancti officii always one of the secular clergy, presides at the plenary sessions. The promotor facialis is at once prosecutor and fiscal representative, while the advocatus recourse undertakes the defence of the accused. The duty of the consultants is to afford the cardinals expert advice. They may come from the secular clergy or the religious orders, but the General of the Dominicans, the magister sacri palatii, and a third member of the same order (consultores). The qualificators are appointed for life, but give their opinions only when called upon. The Holy Office has jurisdiction over all Christians and, according to Pius IV, even over cardinals. In practice, however, the
latter are hold exempt. For its authority, see the aforesaid Constitution of Sixtus V "Immensa aeterni" (see ROMAN CONGREGATIONS). (A) SOURCES.—MOLINIER, L' Inquisition dans le midi de la France au XIVe et XV e siècles. Étude sur les sources de l'histoire (Paris, 1880); cf. DOUDA in Revue des questions hist., XXX (1881). The most important sources are papal documents, but the definitive conclusions of French codes of canon law. Scarcely less important for a knowledge of medieval Inquisition procedure are the so-called Manuals of Inquisitors. Of these may be mentioned: PIERRE, Inquisitiones, dating from about 1244, new ed. in VACAND, op. cit., Apología apócrifa Guifdomo Pizzaro et responsiones eius—Guy Foucaux later became pope under title Clement IV—written about 1254, ed. in CEZARES CARRERA, Tradición inquisitorial (Rome, 1876), 307-403; GUIFDOMO, Cartas inquisitoriales, ed. in REYES MOLINIER, Thesaurus novatorum, V, 1797-1822; ETHERIC, Directorium inquisitorium, written in French (1573). In general times: an appendix in LITTLES Littoriale apostolico pro officio inquisitorior, DOUDA, La Procedure inquisitoriale en Langueco au XVe siècle (Paris, 1916), 144; DOUDA, Documents pour servir à l'histoire de l'Inquisition de Langueco (2 vols., Paris, 1900); DOLLINGER, Beiträge zur Geschichte des Mitleiters (2 vols., Munich, 1880), with which compare Revue historique, IV, 155 sqq.; FREDERICIO, Corpo della storia critico-archivistica dell'Inquisizione di Roma (1865-1885), 4 vols., Ghent, 1889-1900; SCHAEFFER, Beiträge zur Geschichte des Protestantismus und der Inquisition im 10. Jahrhunderte (4 vols., Mainz and Strassburg, 1895); (2) Special Studies.—LANGELOT, L'Inquisition à propos des approches inquisitoires en France (1350-1450), 4th ed. (1902). A general work on the Inquisition is: DOLLINGER, L' Inquisition. Ses origines. Sa procedure (Paris, 1900); LÉA, A History of the Inquisition in the Middle Ages (3 vols., New York, 1886). French tr. by HEBERT, (1888) and by HUBERT, (1892). Another work on Inquisition is: LÉA, Histoire de l'Inquisition接到上文的辞典编成的语录 about the XVe siècle in Bibliothèque de l'école des Chartes, XXII, 488-517, 570-607; VACAND, L'Inquisition à propos du pouvoir civil, in the Revue des questions hist., (Paris, 1907), cf. PAPAU, Zur Beurteilung der Inquisition, literary supplement to Köllnische Volkszeitung, (1860), no. 14, tr. from the French (1865); DOUDA, L' Inquisition à propos des approches inquisitoires en France (1350-1450), 4th ed. (1902). Concerning this work see BLOTTRE in Historische Zeitschrift, 1918, 152 sqq.—"a history of Inquisition," corresponding to the requirements of calm, objective historical research, is unfortunately yet unavailable; Finet, La vie et les actes de Jean Hugon, city archives, (1908), cf. VACAND, op. cit., VIII, 1919. The latest history of the Inquisition remains yet to be written. Despite evidences of intellectual honesty Lea is to be read with caution. He is loyal, it may be, but not impartial, and only too often betrays his prejudices and suspicions in respect of the Catholic Church. This attitude at times affects gravely his reputation as a critic. N. Paulus, too, finds (loc. cit.), that Lea is "not sufficiently reliable", and that his assertions "must be carefully sifted from the ashes of Henry Charles Münster, 1898).—tr, WAGNER (New York)—took upon himself the unpleasant but serviceable task of investigating the written sources. In truth, not only that the earlier critics of Lea were entirely justified, but also that the inaccuracies of the author Joseph H. Hansen, city archives. In Coamo, are greater and more numerous than those contained in the original work. Some defects characterise another work, also American: Sprin (4 vols., Boston and New York, 1906-7); cf. BAUMGARTEN, loc. cit., pp. 91 sqq. and Hist. Jahrbuch, XXVI (1903), 82-97. See also ODDI, L' Inquisition (1886) and OBER, Rechts- und Geschichtsschreibung (1937). 548 sqq. and KNOPP in Hist. pol. Blatter, XC, XC, VON RODGEO, Historia verdadera de la Inquisition (3 vols., Madrid, 1876-7). An extensive bibliography will be found in the manuals of canon law, e.g. HIRSCHKUR, Kirchenrecht, V (1900), 443 sqq., VI (1907), 122 sqq. JOSEPH BLOTTRE.

Inquisition, Canonical, is either extra-judicial or judicial: the former might be likened to a coroner's inquest in our civil law; while the latter is similar to an investigation by the grand jury. An extra-judicial inquiry, which is recommended in civil cases, is absolutely necessary in criminal matters, except the case be notorious. A bishop may not even admonish canonicis in connection with matters of inquest without having first instituted a summary inquest—"summary facti cognito"—"information pro informations curiae"—into the truth of the rumours, denunciations, or accusations against said cleric. This examination is conducted by the bishop personally, or by another ecclesiastic, prudent, trustworthy, and impartial, devoted by his nature to the service of ecclesiastics, discreetly and scrupulously, without judicial form. This, however, does not preclude the examination of witnesses or experts, for example, to discover irregularities in the records or accounts of the Church. Great caution is to be observed in this preliminary inquiry, lest the reputation of the cleric in question suffer unnecessarily, in which case the bishop might be sued for damages. The acts with the result of the inquiry, if any evidence has been found, should be preserved in the archives; if innocence is wanting or is only slight, the acts should be destroyed.

The outcome of the preliminary investigation will be to leave matters as they are; or to proceed to extra-judicial corrective measures; or to begin a public action, when the evil cannot be otherwise remedied. The bishop may, when he has first instituted an inquisition, order a public accusation; or even, when a crime may be satisfactorily proven, it may be more beneficial to religion and the interests at stake not to prosecute. In matters of correction proper, in which medicinal penalties are employed, judicial action is barred by limitation in five years. The second inquiry is for the information of the auditor or judge, a judicial inquiry, being the beginning of the strictly judicial procedure—"procesus informativus"—"inquisito pro informando judice". If sufficient warrant for a judicial trial exist, the bishop will order his public prosecutor (procurator fiscalis) to take it up and present the charge. Having received the charge, the bishop will appoint an auditor to conduct the informative procedure, in which all the evidence bearing on the case, for the defence as well as for the prosecution, is to be obtained. This inquiry consequently comprises offensive and defensive proceedings, for the auditor is to arrive at the truth, and not conduct the inquiry on the supposition that the defendant is guilty.

When the auditor, assisted by the diocesan procurator, has procured all the evidence available for the prosecution, he will open the defensive proceedings with the citation (q. v.) of the accused. The accused must appear in person (see PROCURATOR) for examination by the auditor: the fiscal prosecutor may be present. He is not put under oath, and is granted perfect freedom in defending himself, proving his innocence, justifying his conduct, alleging mitigating or extenuating circumstances. All declarations, allegations, exceptions, pleas, etc., of the defendant are recorded by the clerk in the acts. They are read to the defendant and corrected, if necessary, or additions made. Finally, the accused, if willing, the auditor, and the secretary should sign the acts. A stay must be granted the accused, if he demand it, to present a defence in writing. The auditor will then take up new features, to investigate which stays may be necessary. The accused must be heard in his own defence after this new inquiry. When satisfied that the investigation is complete, the auditor will declare the inquest closed, and make out an abstract of the results of same. This abstract, together with all the acts in the case are given to the diocesan procurator. Thus ends the judicial inquiry.

ANDREW B. MERRIAN.

Inquisitor. See INQUISITION.

Insane, ASYLUMS AND CARE FOR THE.—During the seventeenth and eighteenth centuries hospital care of the sick of all kinds and nursing fell to the lowest ebb in history (see HOSPITALS). Institutions and care for the insane, not only shared in this decadence, but were its worst feature. Because of this, many writers have declared that proper care for the insane and suitable institutions were the great problem of the day. The Church, which had much to do with humanitarian efforts of all kinds in the past, it has been made a subject of reproach to her. As a matter of fact the Church, from the earliest times, arranged
for the care of the insane, and some of the arrangements anticipated some of the most important advances of modern times. It was after the religious revolt in Germany, whose influence was felt in other countries, that the Church's charitable institutions for lunatics, hospitals and asylums of all kinds deteriorated.

Insanity has been known for as long as our record of human history runs. Pinel, the great French psychiatrist, in his "Nosophogie philosophique", II (Paris. 1798), 88, gives the details of the treatment of the insane at the time of Socrate, the god of medicine in Egypt, in the temples of the gods of the temples. According to this, those suffering from melancholia were treated by suggestion, by diversion of mind, and recreation of all kinds, by a careful regimen, by hydrotherapy, by pilgrimages to the holy places. In Greece we know of the existence of insanity from its occurrence in the various myths. Ulysses countered with insanity in order to escape going on the Trojan expedition, and ploughed up the seashore, sowing salt in the furrows. When Nestor, however, placed his infant son in front of the plough, Ulysses moved the boy aside, and Nestor said, "He is mentally ill." Indeed, Evidently at this time (1200 B.C.) the Greek were quite familiar with insanity, since they could even detect malingering. The stories of Ajax killing a flock of sheep which by illusion he thought a crowd of his enemies, of Orestes and the Furies, of the Baccha, all show familiarity with insanity. As in Egypt, the insane in Greece were cared for in certain portions of the temples of the god of medicine, Asclepius. In the famous temple at Epidaurus, part shrine and part hospital, there was a well-known spring, and hydrotherapy was the main portion of the treatment, though every form of favourable suggestion was employed. Interesting diversions were planned for patients, and they had the distinct advantage of the journey necessary to reach Epidaurus. Insanity was looked upon as a disease and treated as such. The delirium of acute disease had not as yet been differentiated from mania, and melancholy was considered an exaggeration of the depression so often associated with digestive disturbance. The first hospital for insane patients of which there is mention was at the Piraeus.

Among the Romans we have abundant evidence, in their laws, of care for the insane, but we know little of the treatment until the beginning of the Christian Era. In the Twelve Tables curators are assigned the insane even after their majority. They could transact no business legally, but during lucid intervals could make binding contracts. When parents were insane, children could marry without their consent, but this had to be explicitly stated. The insane could make no wills, nor be witnesses of wills except during lucid intervals, but the lucidity had to be proved. With all these careful legal provisions it seems incredible that medical care should not have been given, but all records of it are wanting. At Rome, Galen, and for the writers of the second century, were fruit, whose works show a thorough familiarity with certain phases of insanity as could only have been obtained by actual observation, not of a few patients, but of many.

With the beginning of Christianity more definite information as to asylums for the insane is available. Ducange, in his "Commentary on Byzantine History", states that among the thirty-five charitable institutions in Constantinople at the beginning of the fourth century there were 72 for mania, and 5 for lunatics. This seems to have been connected with the general hospital of the city. In the next century we have the records of a hospital for the insane at Jerusalem, and it is probable that they existed in other cities throughout the East. Nemesius, a Christian bishop of the fourth century, collected much of what had been written by older authors with regard to the insane, adding some observations of his own, and showing that Christianity was caring for these unfortunate. With the foundation of the monasteries the insane were cared for in connection with these. The Rule of St. Jerome enjoined the duty of making careful provision for the proper treatment of the sick, and Burdett, in his "Hospitals and Asylums of the World", considers that this applied also to those suffering from mental disease. He adds: "It is beyond question that in the earlier times, commencing with provision for the sick, including those mentally ill, medical treatment included the care of the insane. Evidently in the houses, the Church gradually developed an organisation which provided for the insane, first in monastery (i.e. places for lunatics) and then in the monasteries. Evidence of the existence of this system is to be met with in France, Italy, Russia, Spain, Germany, and in some of the northern countries of Europe" (op. cit., I). With the foundation of the monasteries of the Benedictines and the Irish monks, hospices, hospitals were opened in connexion with them (see HOSPITALS). The insane were cared for with other patients in these institutions, and we have many prescriptions from the earlier times that are supposed to be cures for lunacy. The cleric author of "Leech-dom, Wortcunning and Star Craft of Early England", a collection of herbal prescriptions made about A. D. 900, gives remedies for melancholia, hallucinations, mental vacance, dementia, and folly.

There are records of many institutions for the insane. Desmaisons declared that "the origin of the first establishment devoted to the insane in Europe dates back only to A. D. 1409; it was founded in Valencia in Spain under Mohammedan influence" (Des Asiles d' Aliénés en Espagne, Paris, 1850). There was a hospital for men only in Paris in 1475. It is obvious the foundation was entirely erroneous. We know for instance that there was an asylum exclusively for sufferers from mental diseases at Metz in 1100 and another at Elbing near Danzig in 1320. According to Sir William Dugdale (Monasticon Anglicanum, London, 1655-73), there was an ancient English asylum known as Berking Church Hospital, situated near the Tower of London, for which Robert Denton, chaplain, obtained a licence from King Edward III in 1371. Denton paid forty shillings for this licence to found a hospital in a house of his own in the parish of Berking Church, London, "for the poor and insane, and for the mad, and for such people who suddenly fall into a frenzy and lose their memory, who were to reside there until cured; with an oratory to the said hospital to the invocation of the Blessed Virgin Mary". About this same time there is a tradition of the existence of a pozzarelda, or place for mad people, in Rome, the conditions of entrance being rather interesting.

Lunatics were cared for, moreover, in special departments of general hospitals. At Bedlam, the London hospital founded in the thirteenth century, this was true (see BEDLAM). Evidently the same thing was true at many other places. Paulus Abrasax (p. 350), whose writings show such a thorough familiarity with certain phases of insanity as could only have been obtained by actual observation, not of a few patients, but of many.

Psycho-pathic in modern times, however, have been trying to arrange to have wards for acute mental cases in connection with general hospitals, for patients thus
under observation sooner; they are more willing to go to such hospitals and their friends are more ready to send them. Serious developments are often thus prevented. In this system of psychopathic wards in general hospitals the Middle Ages anticipated our modern views. In another phase of the care of the insane there is a similar anticipation. A medical man who asked that the insane be confined by the people of the village and the neighbouring country who provide them with board, and treat them as members of the family. This system has attracted much attention in recent years, and articles on Gheel have appeared in every language. It has its defects, but probably not so many as those who are likely to occur in the institutional care of such patients. This method of caring for the insane has been practised at Gheel for over a thousand years. Originally the patients were brought to the shrine of St. Dymphna, where, according to tradition, they were often healed. The custom of leaving chronic sufferers near the shrine, under the care of the villagers, gradually arose and has continued ever since. Nearly every country in Europe had such shrines where the insane were cured; we have records of them in Ireland, Scotland, England, and Germany, and it is evident that this must be considered an important phase in the treatment of mental illness. In the shrines of Sts. Menou, or Menulphe, and Dizier were visited from very early times by the insane in search of relief. The shrine of St. Menou at Mailly-sur-Rose was especially well-known and a house was erected for the accommodation of the mentally diseased. At St-Dizier a state of affairs very like that at Gheel developed, and the patients were cared for by the families of the neighbourhood. All of this interesting and valuable provision for the care of the insane, as well as the monastic establishments in which they were received, disappeared with the Reformation.

The almoner who had to provide and allocate special institutions for the insane, did more for them than perhaps any other country. The asylum at Valencia already mentioned was founded in 1409 by a monk named Joffre, out of pity for the lunatics whom he found huddled by the crowds. The movement thus begun spread throughout Europe, and new asylums were founded in Saragossa in 1425, at Seville in 1435, at Valladolid in 1436, and at Toledo before the end of the century. This movement was not due, as has been claimed, to Mohammedanism, for Mohammedans in other parts of the world took no special care of the insane. There was a certain amount of prejudice, and the word "insane", in the Middle Ages, was often used as a synonym for "idiots", "fools", and "madmen", regardless of whether they were possessed of such mental faculties as are necessary for the discernment of right and wrong. Spain continued to be the country in which lunatics were best cared for in Europe down to the beginning of the nineteenth century. Finally, the great French psychiatrist, who took the lead in the movement from the insane of France, declared Spain to be the country in which lunatics were treated with most wisdom and most humanity. He has described an asylum at Saragossa "open to the diseased in mind of all nations, governments, and religions, with this simple inscription: Urbis et Orbis". (Traité sur l'aliénation mentale, Paris, 1809). He gives some details of the treatment, which show a very modern recognition of the need to be gentle and careful with the insane rather than harsh and forceful.

The pazzarella at Rome already mentioned was founded in the middle of the sixteenth century by Ferdi- nu- dante de Ruiz and the Bruni, father and son, all three Navarrese. This hospital for the insane "received crazed persons of whatever nation they be, and care is taken to restore them to their right mind; but if the madness prove incurable, they are kept during life, have food and rainfert necessary to the condition they are in." A Venetian lady was moved to such great pity of these poor creatures upon sight of them that on her death she left them heirs to her whole estate." This enabled the management, with the approbation of Pope Pius IV, to open a new house, in 1561, in the Via Lata. In France and Italy the custom continued during the seventeenth and eighteenth centuries of placing lunatics, particularly those of the better class — though also of other classes when they had patrons in the region in which they were confined — in monasteries according to their sex. This practice also prevailed in Russia. In 1641 the Charenton Asylum was founded in one of the suburbs of Paris, near the Park of Vincennes, and was placed under monastic rule. After the foundation of the Sisters of Charity of St Vincent de Paul, it was given to them. During this century much was established a system of colonies by which the insane were transferred to country places for work during intermissions in their condition, and were returned to the central asylum whenever they were restless.

During the eighteenth century there was an awakening of humanitarian purpose with regard to the insane in nearly every country of Europe. St. Peter's Hospital, at Bristol, England, was opened in 1696; the Manchester Royal Lunatic Hospital in 1706; Bethel Hospital at Norwich in 1713; Dean Swift's Dublin hospital in 1745; while the Pennsylvania Hospital at Philadelphia, and the Charity Hospital at Boston (1771) each contained wards for lunatics. In 1773 the first asylum exclusively for the care of the insane in the United States was opened at Williamsburg, Va. After this, asylums for the insane multiplied, though the system under which the inmates were cared for involved many abuses. Burdett's third chapter is entitled "The Period of Brutal Suppression in Treatment and Cruelty: 1750 to 1850".

In 1792 what has been called the humane period in the treatment of the insane began, when Pinel, against the advice of all those in authority and with the disapproval of his medical colleagues, removed the chains and manacles and other severer forms of restraint at the great asylum of Bicêtre, near Paris, and gave the inmates all the liberty compatible with reasonable safety for themselves and others. At the same time William Tuke was engaged in establishing the Retreat near York, which was opened in 1796.

In 1795 in this institution very enlightened principles of treatment were carried into effect. Early in the nineteenth century, Dr. Charles Worth and Mr. Gardner Hill, in the Lincoln Asylum, did away with all forms of mechanical restraint. The non-restraint system was championed by Dr. Benjamin Rush, who built the Middlesex County Asylum at Hanwell. In the mean time, at the second institution solely for the insane in the United States, the Friends' Asylum at Frankfort, Pennsylvania (1817), the principles of gentle, intelligent care for the insane were being thoroughly applied and developed. The treatment of the insane was first systematized by Dr. S. B. Woodward, at Worcester, Massachusetts. Dr. Kirkbride of Philadelphia did much to remove the evils of restraint. Miss Dix must ever bear an honoured name for her successful philanthropy in doing away with many abuses in England and her native America. In recent years the care of the insane has to a great extent come entirely under the control of the State. This was apparently rendered necessary by the abuses that crept into private institutions for the insane. Even in the State institutions, however, until the last thirty years by Ferren-
cause it seems impossible to increase accommodations in proportion to the increasing numbers of the insane. There are two reasons for this increase. One is an actual increase in the proportion of the insane to the total population. Another is that public opinion has become less inclined to keep even the mildly insane at home. Apart from the State institutions, there is a reaction to the old monastic system of care for the insane, and there are many large and well-known insane asylums in America. It is a principal variety of the religious tradition established by Madame Gruet at the foundation of the Sisters of Charity of St. Vincent de Paul has borne fruit. In America they have large asylums for the insane at Baltimore, New Orleans, Madison, N.J., and New York.

INSANITY. — All writers on this subject confess their inability to frame a strictly logical or a completely satisfactory definition. The dividing line between sanity and insanity, like the line that distinguishes a man of average height from a tall man, can be described only in terms of a moral estimate. There is a borderland, and the two are to be identified as belonging certainly to either. Hence a definition that aims at rigorous comprehensiveness is liable to include such non-insane conditions as hysteria, febrile delirium, or perverted passions. The definition given by the “Century Dictionary” is probably as satisfactory as any: “A seriously unbalanced condition of the mental functions, involving the intellect, emotions, and will, or one or more of these faculties, exclusive of temporary states produced by and accompanying intoxications or acute febrile diseases.” Not less difficult is the problem of classification. No classification based on a single principle is entirely satisfactory. Anatomical changes are an inadequate basis because they are absent from many forms of insanity; the causes are so numerous and so frequently combined in a single case that it is impossible to say which is predominant; and the symptoms are so manifold that the intellect cannot discretely divide them from the essential. Indeed, the nervous system and the mental functions are so complex and so inadequately known that any attempt at an accurate classification of their abnormal states must of necessity be a failure. In this article only the most important forms are considered, namely, those which are most prevalent and those which are clearly distinguished from one another.

One of the oldest divisions of mental disorders is into melancholia and mania. In the former the dominant mood is depression; in the latter, exaltation. The former differs from sane melancholy only in degree, and its chief characteristics are mental anguish and impulses to suicide. It includes probably one-half of all the cases of insanity, and is more frequently cured than any other form. In mania the morbidly elated mood may vary from excessive cheerfulness to violent rage. Manias, which may exhibit characteristics of both melancholia and mania, are a perversion of the intellectual rather than the affective faculties. Its chief manifestation is delusions, very frequently delusions of persecution. Monomania corresponds roughly to the later and more pronounced form of paranoia. In this form the delusions are systematic, and changes in the intellectual processes may remain substantially unimpaired. When the attacks of melancholia or mania occur at regular intervals they are frequently named periodic insanity. The term partial insanity comprises chiefly those varieties known as impulsive, emotional, and moral. These are characterised by a loss of self-control, on account of which the patient performs acts that are at variance with his prevailing disposition, ideas, and desires—for example, murder by means of a knife. Such acts are associated with such general diseases of the nervous system as epilepsy, hysteria, and neurasthenia. When insanity takes the form of a general enfeeblement of the mental faculties as a consequence of disease, it is called dementia. It is usually permanent. Its principal varieties are senile, paralytic, and syphilitic. Paralysis is one kind of paralytic dementia. All the above-mentioned forms of insanity are acquired, in the sense that they occur in normally developed brains. Congenital insanity, or feeblemindedness, is divided chiefly, according to its degree, into imbecility, idiocy, and cretinism.

That insanity is on the increase, seems to be the general verdict of authorities, although the absence of reliable and comprehensive statistics makes any satisfactory estimate impossible. Whatever be its extent, the increase is undoubtedly due in some measure to our more complex and civilised life as seen in city life. In general, the causes of insanity may be reduced to two: predisposing causes and exciting causes. The most important of the former are insane, neurotic, epileptic, drunken, or consumptive ancestors; great stress and strain, and a neuropathic nervous system. The exciting causes, such as affection and losses, in the ratio of four to one. Of 2476 cases due to physical causes which were admitted to the asylums of New York during the twelve months preceding 30 September, 1900, alcoholic and sexual excesses and diseases had brought on 644. The majority of cases of insanity, however, are traceable to more than one cause.

Inasmuch as insanity almost always involves some perversion of the will, either direct or indirect, it raises interesting and important questions concerning moral responsibility. Every impairment of mental function must, from this point of view, be the result of some cause, whether productive or excitant, whether external or internal, or both. The reason why restricting its scope, or by diminishing or destroying it outright. Ignorance, error, blinding passion, and paralyzing fear all render a person morally irresponsible for those actions which take place under their influence. This is true even of the sane; obviously it happens much more frequently among the insane, owing to delirium, delusions, loss of memory, and many other mental disorders. Is it, however, only in this general way, that is, through defective action of the intellect, that freedom and responsibility are lost or destroyed in persons who are of unsound mind? May not the disease act directly upon the will, compelling the patient to do things that his intellect assures him are wrong? The English courts and almost all the courts of the United States answer this question in the negative. Their practice is to regard a defendant in a criminal case as responsible and punishable if at the time of the crime he knew the difference between right and wrong, or at least knew that his act was contrary to the civil or moral law. For example, a man who, labouring under the insane delusion that another has injured his reputation, kills the latter is presumed to be morally accountable if he realized that the killing was immoral or illegal. In a word, the rule of general principle that wrong implies freedom to avoid it. Medical authorities on insanity are practically unanimous in rejecting this judicial test. Experience, they maintain, shows that many insane persons who can think and reason correctly on every topic except that which forms the,
subject of their delusion are unable to determine their wills and direct their actions accordingly. In an unconscious mind normal intellect is not always accompanied by normal volition. We should expect to find this true from the very nature of the case. For if a disease of the mind interferes with normal volition, we have no reason to believe that any other aspect of the mind remains normal. The intellect, if it has perfect control over those actions that are apparently affected by the delusion—actions that he clearly perceives to be wrong, for example—is to assume that the operations of intellect and will are as perfectly harmonized in an uncorrected in a sound mind. As a matter of fact, the presumption would seem to lead the other way, that is, to the conclusion that the action of the will as well as that of the intellect will be abnormal.

Insanity experts do not, indeed, contend that all the consciously immoral acts of a partially insane person are unfree. They merely insist that these actions are unfree in so far as the grounds that the patient is aware of their immorality. In their view, the question of freedom and responsibility can be answered only through an examination of all the circumstances of the particular case. The laws of one American state, and of some foreign countries, explicitly make the interpretation of such acts the test of insanity. According to the law of New York, "No act done by a person in a state of insanity can be punished as an offence." The French law is slightly more specific: "There can be no crime or offence if the accused was in a state of madness at the time of the act." More specific still is the law of Germany, yet it does not introduce knowledge or ignorance as a criterion of responsibility: "An act is not punishable when the person at the time of doing it was in a state of unconsciousness or disease of mind by which a free determination of the will was excluded." In passing it may be observed that the laws of all countries imply that freedom of the will and moral responsibility are realities, and declare that punishment is to be inflicted only when the will has acted freely. The discussion in the last two paragraphs refers especially to delusional insanity, or to what is sometimes called partial intellectual insanity. There is a different question, a question which is entirely independent of the question of moral responsibility. Insanity, as it involves the will and the emotions rather than the intellect, is called affective insanity, and it is subdivided into impulsive and moral. According to medical authorities, impulsive insanity may occur without delusions or any other apparent derangement of the intelligence. Those suffering from it are sometimes driven irresistibly to commit actions which they know to be wrong, actions which are contrary to their character, dispositions, and desires. Many suicides and homicides have in consequence of such uncontrolled impulses been committed by persons who were apparently sane in all other respects. Obviously, they were not morally responsible for these crimes. Although this theory runs counter not only to English and American legal procedure, but also to the opinions of the average man, it seems to be established by the history of numerous carefully observed cases, and to provide an explanation for many suicides and murders that are otherwise inexplicable. Moreover, it is inherently probable. Since insanity is a disease of the brain which may affect any of the mental faculties, there seems to be no good reason to deny that it might affect the intellect. For the intellect, and the freedom of the will, is almost exclusively, leaving the intellectual processes apparently unimpaired. The theory does, indeed, seem to disagree with the doctrine of our textbooks of moral philosophy and theology, which maintains that freedom of the will can be diminished or destroyed only through defective or confused action of the intellect. There is, however, no real opposition except on the assumption that the will and intellect in a diseased mind co-operate and harmonize perfectly. If the intellect has power to determine itself in accordance with the ideas and motives presented by the intellect; in the former this power may sometimes be lacking. The inference from intellectual intercourse to volitional freedom may, as noted above, be valid in the one case, and quite invalid in the other. This opposition is manifestly of great importance in determining whether a suicide is worthy of Christian burial. If he is afflicted with ideational or impulsive insanity, the mere fact that his intelligence seemed to be normal, and all his acts deliberate, at the time of his self-destruction, is not always conclusive proof of volitional freedom and moral guilt. In what is called moral insanity there is sometimes the same lack of self-control as in impulsive insanity, together with a perversion of the feelings, passions, and moral notions. It constitutes, therefore, an additional obstacle to those who interferes with the interpretation of an act as an intentional action through abnormally strong passions and false ideas of right and wrong. Obviously, however, the mere fact that the affections, passions, or moral notions are perverted, for example, with regard to sexual matters, is not always evidence of true insanity. Impulsive insanity is manifestly of such a nature as to directly hampers freedom of the will.

Adults who have always been insane can receive baptism, since, as in the case of infants, the Church's intention supplies what is lacking. They have power they can be baptized when in danger of death or if incurable, provided they had when sane, as for the purposes of the Church, as sponsors at baptism. They may receive confirmation. Communion should not be given to those who have always been insane. Those who, before becoming insane, were pious and religious, should be given Communion when in danger of death. When there are lucid intervals, Communion may then be administered. The same applies to extreme unction. In Holy orders, insanity is an irregularity under the head of defect. A candidate temporarily insane through some transient and accidental cause may, after recovery, be ordained. One deranged after the examination may exercise his orders, if he regains his sanity. The perpetually insane cannot marry. But "if the patient has lucid intervals, the marriage contract during such an interval is valid, though it is not safe for him to marry on account of his inability to rear children." (St. Thomas, In IV Sent., dist. xxxiv, q. 1, art. 4.)

JOHN A. RYAN.

Inscriptions, Early Christian.—Inscriptions of Christian origin form, as non-literary remains, a valuable source of information on the development of Christian thought and life in the early Church. They may be divided into three main classes: sepulchral inscriptions, epigraphic records, and inscriptions concerning private life. The material on which they were written was the same as that used for beaten inscriptions. For the inscriptions they are used, the substance commonly employed was stone of different kinds, native or preferably imported. The use of metal was not so common. When the inscription is properly cut into the stone, it is called a titulus or
marble; if merely scratched on the stone, the Italian workmen, unless a painted inscription is called dipinto, and a mosaic inscription—such as are found largely in North Africa, Spain, and the East—bears the name of opus musium. It was a common practice in Greek and Latin lands to make use of slabs already inscribed, i.e. to take the reverse of a slab containing a heathen inscription, or for the inscription of a Christian one; such a slab is called an epitaphograph. The form of the Christian inscriptions does not differ from that of the contemporary pagan inscriptions, except when sepulchral in character, and then only in the case of the tituli of the catacombs. The most common form in the East is the upright text (texta), in which the text, or slab of stone, frequently ornamented with a fillet or a projecting curved moulding; in the West a slab for the closing of the grave was often used. Thus the greater number of the graves (loculi) in the catacombs were closed with thin, rectangular slabs of terra-cotta or marble; the graves called arcrosis were covered with heavy, flat slabs, while on the sarcophagi a panel (tabula) or a disk (discus) was frequently reserved on the front wall for an inscription.

The majority of the early Christian inscriptions, viewed from an technical and palaeographical standpoint, give evidence of artistic decay: this remark applies especially to the tituli of the catacombs, which are, as a rule, less finely executed than the heathen work of the same time. A striking exception is formed by the Damascene letters introduced in the fourth century by Furius Dionysius Philocalus, the calligraphist of Pope Damasus I (q. v.). The other forms of letters did not vary essentially from those employed by the ancients. The most important was the classical capital writing, customary from the time of Augustus; from the fourth century on it was gradually replaced by the uncial writing, the cursive characters being more or less confined to the scriptio inscriptions. As to the language, Latin inscriptions are the most frequent; "opus musium" in the East Greek was commonly employed, interesting dialects being occasionally found (e.g. in the recently deciphered Christian inscriptions from Nubia in Southern Egypt). Special mention should also be made of the Coptic inscriptions. The text is often very obscure, the sense of some passages being unknown to us. Specifically Christian abbreviations were found side by side with the usual pagan contractions at an early date. One of the most common of the latter, "D. M." (i. e. Dis Manibus, to the Protecting Deities of the Lower World), was stripped of its pagan meaning, and also of its abbreviation, and employed among the Christian epigraphs of the early Christians. In many cases the dates of Christian inscriptions must be judged from circumstances; when the date is given, it is the consular year. The method of chronological computation varied in different countries. Our present Dionysian chronology (see Chronology: Dionysius Exiguus) does not appear in the early Christian inscriptions.

SEPULCHRAL INSCRIPTIONS.—The earliest of these epitaphs are characterized by their brevity, only the name of the dead being given. Later a short acclamation was added (e. g. "in God", "in Peace"); from the end of the second century the formula were enlarged by the addition of family names and the date of burial. In the third and fourth centuries the text of the epitaphs was made more complete by the statement of the age of the deceased, the date (reckoned according to the consular in office), and laudatory epitaphs and laudatory epithets. In the Christian epigraphs the Roman empire had its own distinct expressions, contractions, and acclamations. Large use was made of symbolism (q. v.). Thus the open cross is found in the epitaphs of the catacombs as early as the second century, and from the third to the sixth century appears as a regular part of the epitaph. The cryptic allusions of primitive Christianity are also used in the epitaphs, e. g. the fish (Christ), the anchor (hope), the palm (victory) and the representation of the soul in the other world as a female figure (orante) with arms extended in prayer. Beginning with the fourth century, after the victory of the Church over paganism, the language of the epitaphs was more frank and open. Emphasis was laid upon a life according to the dictates of Christian faith, and prayers for the dead were added to the inscription. The prayers inscribed thus early on the sepulchral slabs reproduce in large measure the primitive liturgy of the funeral service. They implore for the dead eternal peace (see Pax) and a place of refreshment (refrigerium), invite to heaven's holy feast (Apex), and wish the departed the speedy enjoyment of the gladness of Paradise, and the fellowship of God and the saints.

A perfect example of this kind of epitaph is that of the Egyptian monk Schenute; it is taken verbally from the ancient Greek liturgy. It begins with the doxology, "In the name of the Father and of the Son and of the Holy Ghost. Amen", and continues: "May the God of the spirit and of all flesh, who has overcome death and trodden Hades under foot, and has graciously bestowed life on the world, permit this soul of Father Schenute to attain to rest in the bosom of Abraham, Isaac, and Jacob, in the place of light of and refreshment, where affliction, pain, and grief are no more. O gracious God, the lover of men, forgive him all the errors which he has committed by word, act, or thought. There is indeed no earthly pilgrim who has not sinned, for Thou alone, O God, art free from every sin." The epitaph repeats the doxology at the close, and adds the petition of the scribe: "O Saviour, give peace also to the scribe." When the secure position of the Church assured greater freedom of expression, the non-religious part of the sepulchral inscriptions was also enlarged. In Western Europe and in the East it was not unusual to note, both in the catacombs and in the cemeteries above ground, the purchase or gift of the grave and its dimensions. Commonly admitted also into the early Christian inscriptions are the pagan minatory formulae against desecration of the grave or its illegal use as a place of further burial.

HISTORICAL AND THEOLOGICAL INSCRIPTIONS.—To many of the early Christian sepulchral inscriptions we are indebted for much information concerning the original development of the ecclesiastical hierarchy, besides which they are of great value as a confirmation of Catholic truths. Thus, for example, from the earliest times we meet in them all the hierarchical grades from the door-keeper (osterius) and lector up to the pope (see OECUMENICAL CONCILI). A number of epitaphs of the early popes (Dionysius, Anacletus, Eutychianus, Cornelius, Lucius, Eutychianus, Caesarius) were found in the so-called "Papal Crypt" in the Catacomb of St. Callistus on the Via Appia, rediscovered by De Rossi and well known to every pilgrim to Rome (see CEMETERY, sub-title Early Roman Christian Cemeteries). Numbers of early epitaphs of bishops have been found from Germany to Nubia. Priests are frequently mentioned, and reference is often made

GRAFFITO ON A MARBLE SLAB IN THE CEMETERY OF OSTRIANUS
poem in which the Saviour is addressed: “Thou Who stills the waves of the deep, Whose power giveth light to the seed slumbering in the earth, who didst awaken Lazarus from the dead and give back the brother on the third day to the sister Martha; Thou wilt, so I believe, awake the dead, and make them live.”

Besides catechumens and neophytes, reference is also made to virgins consecrated to God, nuns, abbesses, holy widows, one of the last named being the mother of Pope St. Damasus I (q. v.), the celebrated restorer of the catacombs. Epitaphs of martyrs and tituli mentioning the martyrs as numbered as frequently as one would expect, especially in the Roman catacombs. This, however, is easily explained by recalling the circumstances of burial in the periods of persecution, when Christians must have been content to save and to give even secret burial to the remains of their martyrs. Many a nameless grave among the five million estimated to exist in the Roman catacombs held the remains of early Christians who witnessed to the Faith with their blood. Another valuable repertory of Catholic theology is found in the dogmatic inscriptions in which all important dogmas of the Church (incidental and of moment) are enunciated and confirmed. The monotheism of the worshippers of the Word—or Cultores Verbi, as the early Christians loved to style themselves—and their belief in Christ are well expressed even in the early inscriptions. Very ancient inscriptions emphasize, and with delight, the doctrine of Catholicity of Christ, the Real Presence of Christ in the Holy Eucharist. In this connexion we may mention the epitaph of Abercius (q. v.), Bishop of Hieropolis in Phrygia (second century), and the somewhat later epitaph of Pecorius (q. v.) at Autun in Gaul. The inscription of Abercius speaks of the fish (Christ) caught by a holy virgin, which serves as food under the species of bread and wine; it speaks, further, of Rome, where Abercius visited the chosen people, the Church par excellence. This important inscription aroused at first no little controversy among scholars, and some non-Catholic archeologists sought to find in it a tendency to pagan syncretism. Now, however, its purely Christian character is almost universally acknowledged. The original was presented by Sultan Abdul Hamid to Leo XIII, and is preserved in the Apostolic Museum at the Lateran. Early Christian inscriptions confirm the Catholic doctrine of the Redemption by the Passion of the Saviour of the Blessed Virgin, and the primacy of the Apostolic See. It would be difficult to overestimate the importance of these evidences, for they are always entirely incidental elements of the sepulchral inscriptions, all of which were pre-eminently eschatological in their purpose.

POETICAL AND OFFICIAL INSCRIPTIONS.—While the copious material obtained from the early Christian epitaphs, especially the inscriptions of the Roman (Latin) and the Greek-Oriental groups, is equivalent to a book in stone on the faith and life of our Christian forefathers, the purely literary side of these monuments is equally significant. Many are the character of public documents; others are in verse, either taken from well-known poets, or at times the work of the person erecting the memorial. Fragments of classical poetry, especially quotations from Virgil, are occasionally found. The most famous composer of poetical epitaphs in Christian antiquity was Pope Damasus I (366–384), mentioned above. He repaired the neglected tombs of the martyrs and the graves of distinguished persons who had lived before the Constantinian epoch, and adorned these burial places with metrical epitaphs in a peculiarly beautiful lettering. One of these important inscriptions contained in this pope large stone tablets of this character, several of which have been preserved in their original form or in fragments. Besides verses on his mother Laurentia and his sister Irene, he wrote an autobiographical poem in which the Saviour is addressed: “Thou Who stills the waves of the deep, Whose power giveth light to the seed slumbering in the earth, who didst awaken Lazarus from the dead and give back the brother on the third day to the sister Martha; Thou wilt, so I believe, awake the dead, and make them live.”

The best known celebrate the temporary burial of the two chief Apostles in the Placentia under the basilica of St. Sebastian; on the Via Nomentana, the martyrs Prutus and Hyainth in the Via Salaria Antiqua, Pope Marcellus in the Via Salaria Nova, St. Agnes in the Via Nomentana, also Saints Laurence, Hippolytus, Gorgonius, Peter and Marcellinus, Eusebius, Tarsicius, Cornelius, Eutychius, Nereus and Achilleus, Felix and Aelaductus. Damasus also placed a metrical inscription in the baptistery of the Vatican, and set up others in connexion with various restorations, e. g. an inscription on a stairway of the cemetery of St. Hermes. Altogether there have been preserved as the work of Damasus more than one hundred epigrammata, some of them better copies, others of inferior half are probably correctly ascribed to him, even though it is necessary to remember that after his death Damasine inscriptions contined to be set up, i. e. in the beautiful lettering invented by Damasus or, rather by his calligrapher Furio Dionysius Filocalus. Some of the inscriptions imitate the lettering of Filocalus, make special and laudatory mention of the pope who had done so much for the catacombs. Among these are the inscriptions of Pope Vigilius (537–555), a restorer animated by the spirit of Damasus. Some of his inscriptions are preserved in the Lateran Museum.

The inscriptions just mentioned possess as a rule a public and official character. Other inscriptions served as official records of the erection of Christian edifices (churches, baptisteries, etc.). Ancient Roman examples of this kind are the inscribed tablet dedicated by Boniface I at the beginning of the fifth century to St. Felicita, to whom the pope ascribed the settlement of the schism of Eulalius, and the inscription (still visible) of Pope Sixtus III in the Lateran baptistery, etc. The Roman custom was soon copied in all parts of the empire. At Thebes in Northern Africa there were inscriptions which contained inscriptions once set up over a door, and in almost exact verbal agreement with the text of an inscription in a Roman church. Both the basilica of Nola and the church at Primuliacum in Gaul bore the same distich:

Pax tibi sit quicumque Dei penetralia Christi, specto pacifico candidus ingredies.

(Peace be to thee whoever enterest with pure and gentle heart into the sanctuary of Christ God.) In such inscriptions the church building is generally referred to as domus Dei, domus orationis (the house of God, the house of prayer). The present writer found an inscription with the same sense in a tomb inscription, which imitated the lettering of Filocalus, and in almost exact verbal agreement with the text of an inscription in a Roman church. Both the basilica of Nola and the church at Primuliacum in Gaul bore the same distich:

Pax tibi sit quicumque Dei penetralia Christi, specto pacifico candidus ingredies.

(Peace be to thee whoever enterest with pure and gentle heart into the sanctuary of Christ God.) In such inscriptions the church building is generally referred to as domus Dei, domus orationis (the house of God, the house of prayer). The present writer found an inscription with the same sense in a tomb inscription, which imitated the lettering of Filocalus, and in almost exact verbal agreement with the text of an inscription in a Roman church. Both the basilica of Nola and the church at Primuliacum in Gaul bore the same distich:

Pax tibi sit quicumque Dei penetralia Christi, specto pacifico candidus ingredies.
INSCRIPTION OF ABERCIUS

FRAGMENTS PRESENTED TO POPE LEO XIII BY W. RAMSAY AND SULTAN ABDUL-HAMID II
NOW PRESERVED IN THE MUSEO CRISTIANO, LATERAN PALACE

(SEE "ABERCIUS, INSCRIPTION OF")
refers to the pontificate of Celestine I, during which period an Illyrian priest named Peter founded the church.

Other parts of the early Christian churches were also occasionally decorated with inscriptions, e.g. the titles of roofs and walls. It was also customary to decorate with inscriptions the lengthiest cycles of frescoes depicted on the walls of churches. Fine examples of inscriptions of this sort are found in the "Biblia pauperum" of Prudentius, in the Ambrosian tituli, and in the writings of Paulinus of Nola.

It should be added that many dedicatory inscriptions belong to the eighth and ninth centuries, especially in Rome, where in the eighth century numerous books, as well as parts of manuscripts from the catacombs, were commissioned for inscription in the churches of the city (see Catacombs).

Graffiti.—Although apparently of little value and devoid of all monumental character, the graffiti (i.e. writings scratched on walls or other surfaces) are of great importance historically and otherwise. Many such are preserved in the catacombs and on various early Christian monuments. Of special importance in this respect are the ruins of the fine edifices of the town of Menas in the Egyptian Marisot (cf. "Proceedings of the Society for Biblical Archaeology", 1907, pp. 25, 51, 112). The graffiti help in turn to illustrate the literary sources of the life of the early Christians. (See also Ostroaka.)

C. M. KAUFMANN.

Inspiration of the Bible.—The subject will be treated in this article under the four heads: I. Belief in Inspired Books; II. Nature of Inspiration; III. Extent of Inspiration; IV. Protestant Views on the Inspiration of the Bible.

I. BELIEF IN INSPIRED BOOKS.—A. Among the Jews. The books in the sacred canons and on various books in an old as the Hebrew literature. Moses and the Prophets had committed to writing a part of the message they were to deliver to Israel from God. Now, the nabi (prophet), whether he spoke or wrote, was considered by the Hebrews the authorized interpreter of the thoughts and wishes of Yahweh. He was the "mouth of God", "the mouth of the Spirit" (Osee, ix, 7). It was around the Temple and the Book that the religious and national restoration of the Jewish people was effected after their exile (see II Mach., ii, 13, 14, and the prologue of Ecclesiasticus in the Septuagint). Philo (from B.C. to a. D. 40) speaks of the "sacred books", "sacred word", and of "most holy scripture" (De vita Moysis, iii, §32). The testimony of Flavius Josephus (A. D. 37-95) is still more characteristic: it is in his writings that the word inspiration (τροπεως) is met for the first time. He speaks of twenty-two books which the Jews with good reason consider Divine, and for which, in case of need; they are ready to die (Contra Apion., I, 8). The belief of the Jews in the inspiration of the Scriptures did not diminish from the time in which they were dispersed throughout the world, without temple, without altar, without priests; on this account, they were so much that it took the place of everything else.

B. Among the Christians.—The Gospel contains no express declaration about the origin and value of the Scriptures, but in it we see that Jesus Christ used them in conformity with the general belief, i.e., the Scribal (cf. 2 Tim., iv, 3). These books are described in this respect as found in the Fourth Gospel, v, 39, x, 35. The words scripture, Word of God, Spirit of God, God, in the sayings and writings of the Apostles are used indifferently (Rom., iv, 5; 3 x, 17). St. Paul appeals expressly to those Divine oracles of which Israel was made the guardian (cf. Rom., iii, 2). This persuasion of the early Christians was not merely the effect of a Jewish tradition blindly accepted and never understood. St. Peter and St. Paul give the reason why it was accepted: it is that all Scripture is inspired of God (πρεπονομαστικος) (II Tim., iii, 16; cf. II Pet., i, 20, 21). It would be superfluous to spend any time in proving that Tradition has faithfully kept the Apostolic belief in the inspiration of Scripture. Moreover, this demonstration forms the subject-matter of a great number of the canons of the Church. In every Church and every age, till now (De inspiratione Sacrum Scripture", 1906, p. 40 - 379). It is enough for us to add that on several occasions the Church has defined the inspiration of the canonical books as an article of faith (see Denzinger, "Enchiridion", 10th ed., n. 1787, 1899).

Every Christian sect still deserving that name believes in the inspiration of the Scriptures, although several have more or less altered the idea of inspiration.

C. Value of this Belief.—History alone allows us to establish the fact that Jews and Christians have always believed in the inspiration of the Bible. But what is this belief worth? Proofs of the rational as well as of the dogmatic order unite in justifying it. Those who first recognized in the Bible a superhuman work had as foundation of their opinion the testimony of the Prophets, of Christ, and of the Apostles, whose Divine mission was sufficiently established by immediate experience or by history. To this purely rational argument can be added the authentic teaching of the Church. A Catholic may claim this additional certitude without falling into a vicious circle, because the infallibility of the Church in its teaching is proved independently of the inspiration of the Bible. Both are of historical value, belonging to Scripture in common with every other authentic and truthful writing, is enough to prove this.

II. NATURE OF INSPIRATION.—A. Method to be followed.—(1) To determine the nature of Biblical inspiration the theologian has at his disposal a threefold source of information: the data of tradition, the concept of inspiration, and the concrete state of the inspired text. If he wishes to obtain acceptable results, he will take into account all these elements of solution. Pure speculation might easily end in a contradiction of the other and, in turn, in an acceptance of the other and, in turn, in an acceptance of the other. On the other hand, the literary or historical analysis of these same texts, if left to its own resources, ignores their Divine origin. Finally, if the data of tradition attest the fact of inspiration, they do not furnish us with a complete analysis of its nature. Hence, theology, philosophy, and exegesis have each a word to say on this subject. Positive theology furnishes a starting-point in its traditional formula: viz., God is the author of Scripture, the inspired writer is the organ of the Holy Ghost, Scripture is the Word of God. Speculative theology takes these formulae, analyses their contents, and from them draws its conclusions. In this way St. Thomas, starting from the traditional concept which makes the sacred writer an organ of the Holy Ghost, explains the subordination of his faculties to the action of the Inspirer by the philosophical theory of the instrumental cause (Quodl., VIII, Q. vi, a. 14, ad 5um). However, to avoid all risk of going astray, speculation must pay constant attention to the indications furnished by exegesis.

(2) The Catholic who wishes to make a correct analysis of Biblical inspiration must have before his eyes the following ecclesiastical documents: (a) those books in the Canon, and (b) those books of the Apocrypha. It is by these books that the Church has defined the inspiration.

(3) The term inspiration is used in two senses: (1) in the sense of divine authorship (see above), and (2) in the sense of human cooperation in the act of inspiration (see below).
thority, nor merely because they contain revelation without error, but because, written under the inspiration of the Holy Ghost, they have God for their author, and have been transmitted to the Church as such." (Concil. Vatic., Sess. III, const. dogm. de Fide, cap. ii, in Denz., 1787.) (b) "The Holy Ghost has not written them, but has inspired them, in a manner of speaking, by a supernatural power. In the first place, it is commonly impelled the Biblical writers to write, and assisted them while writing in such a manner that they conceived in their minds exactly, and determined to commit to writing faithfully, and render in exact language, in infallible truth, all that God commanded them to do, and never to be the author of Scripture in its entirety" (Encycl. "Provid. Deus", in Denz., 1952).

B. Catholic View.—Inspiration can be considered in God, who produces it; in man, who is its object; and in the text, which is its term. (1) In God inspiration is one of those actions which are ad extra, as theologians say; and thus it is common to the three Divine Persons. However, it is attributed by appropriation to the Holy Ghost. It is not one of those graces which have for their immediate and essential object the sanctification of the man who receives them, those e.g. the grace of sanctifying, or the gift of graces, or the gift of knowledge, or the gift of the works of charity, etc., because they are given primarily for the good of others. Besides, inspiration has this in common with every actual grace, that it is a transitory participation of the Divine power; the inspired writer finding himself invested with it only at the very moment of writing or when thinking about writing.

(2) Considered in the man on whom is bestowed this favour, inspiration affects the will, the intelligence, and all the executive faculties of the writer. (a) Without an impulsion given to the will of the writer, it cannot be conceived. Yet in the case of the principal cause of Scripture, for, in that case, the man would have taken the initiative. Besides that, the text of St. Peter is peremptory: "'For prophecy came not by the will of man at any time: but holy men of God spoke, inspired by the Holy Ghost'" (II Pet., i, 21). The context shows that there is question of all Scripture, which is a prophecy in the broad sense of the word (σάγια προφητεία γραφής). According to the Encyclical "Provid. Deus", "God stirred up and impelled the sacred writers to determine to write all that God meant them to write." (Deissmann, 1952). Theologians discuss the question whether, in order to impart this motion, God moves the will of the writer directly or decides it by proposing motives of an intellectual order. At any rate, everybody admits that the Holy Ghost can arouse or simply utilise external influences capable of acting on the will of the sacred writer. According to an ancient tradition, St. Mark and St. John wrote their Gospels at the instance of the faithful.

What becomes of human liberty under the influence of Divine inspiration? In principle, it is agreed that the inspired can take away from man the freedom of reasoning. In point of fact, it is commonly admitted that the Inspired, Who does not lack means of obtaining our consent, has respected the freedom of His instruments. An inspiration which is not accompanied by a revelation, which is adapted to the normal play of the faculties of the human soul, which can be said to have a will of its own, is such as was either unknown or not clearly discerned by them." (St. Aug., "De Gen. ad litt.", II, xvii, 37; St. Thomas, II-II, Q. clxxxiv, a. 5; Q. clxxxii, a. 4). However, most theologians admit that ordinarily the writer was conscious of his own inspiration. From what we have just said it follows that inspiration does not necessarily imply ecstasy, as Philo and, later, the Montanists thought. It is true that some of the orthodox apologists of the second century (Athenagoras, Tertullian) stress that the Holy Ghost, who imparts to them the knowledge and the truth of the details and of the whole. However, all theologians do not analyse exactly in the same manner the influence of this light of inspiration.
(c) The influence of the Holy Ghost had to extend also to all the executive faculties of the sacred writer—to his memory, his ingenuity, his writing, even the words with which he formed the letters. Whether this influence proceeded immediately from the action of the Inspirer or be a simple assistance, and, again, whether this assistance be positive or merely negative, in any case everyone admits that its object is to remove all errors in the text. As was pointed out above, even the words are inspired believe that it also forms an integral part of the graces of inspiration itself. However that may be, there is no denying that the inspiration extends, in one way or another, and as far as needful, to all those who have really composed the sacred books, especially to the secretaries, if the inspired person had any. Seen in this light, the hagiographer no longer appears a passive and inert instrument, abused, as it were, by an exterior impulsion; on the contrary, his faculties are elevated to the service of a superior power, which, although distinct, is the less intimately present and interior. Without losing anything of his personal life, or of his liberty, or even of his spontaneity (since it may happen that he is not conscious of the power which leads him on), man becomes thus the interpreter of God. Such, then, is the main component of the Divine inspiration. St. Thomas (II-II, Q. cxlii) reduces it to the grace of prophecy, in the broad sense of the word.

(3) Considered in its term, inspiration is nothing else but the Biblical text itself. This text was destined by God, Who inspired it, for the universal Church, in order that it might be authentically recognized as His written word. This destination is essential. Without it a book, even if it had been inspired by God, could not become canonical; it would have no more value than a private revelation. That is why any writing dated from a later period than the Apostolical age is condemned ipso facto to be excluded from the canon. The reason of this is that the deposit of the public revelation was complete in the time of the Apostles. They alone had the mission to give to the teaching of Christ the development which was to be opportunely suggested to them by the Paraclete, John, xiv, 26 (see Franselin, "De divina Traditione," p. 50). Since the Bible is the Word of God, it can be said that every canonical text is for us a Divine lesson, a revelation, even though it may have been written with the aid of inspiration only, and without a revelation properly so called. For this cause, also, it is essential to the biblical text that the Bible is free from error, is, beyond all doubt, the teaching of Tradition. The whole of Scriptural apologetics consists precisely in accounting for this exceptional prerogative. Exegetes and apologists have recourse here to considerations which may be reduced to the following heads: the original unaltered text, as it left the pen of the sacred writers, is alone in question. (b) As truth and error are properties of judgment, only the assertions of the sacred writer have to be dealt with. If he makes any affirmation, it is the exegete's duty to discover its meaning and its extent; whether he expresses his own views or those of others; whether in quoting another he approves, disapproves, or keeps a silent reserve, etc. (c) The intention of the writer is to be found out according to the laws of the language in which he writes, and consequently we must take into account the style. He must not be too rigidly compatible with inspiration, because they are all legitimate expressions of human thought, and also, as St. Augustine says (De Trinitate, I, 12), "God, getting books written by men, did not wish them to be composed in a form differing from that used by them". Therefore, a distinction is to be made between the assertion and the expression; it is by means of the latter that we arrive at the former. (d) These general principles are to be applied to the different categories of texts. The nature of the matter contained in them, the special purpose for which their author wrote them, the traditional explanation which is given of them, and also according to the decisions of the Church.

C. Erroneous Views Proposed by Catholic Authors.—(a) The approval given by the Church to a merely human writing cannot, by itself, make it inspired Scripture. The contrary opinion hazarded by Sextus of Siena (1566), renewed by Movers and Haneberg, in the nineteenth century, was condemned by the Second Vatican Council, sacred texts, which are inspired, even where it seems to be at its minimum—e.g., in the historical books—is not a simple assistance given to the inspired writer to prevent him from error, as was thought by Jahn (1793), who followed Holden and perhaps Richard Simon. In order that a text may be Scripture, it is not enough "that it contain revelation without error" (Conc. Vatic., Denz., 1787). (b) A book composed from merely human resources would not become an inspired text, even if approved of, afterwards, by the Holy Ghost. This subsequent approbation might perhaps give the truth to the book as credible as if it were an article of Divine Faith, but it would give a Divine origin to the book itself. Every inspiration properly so called is antecedent, so much so that it is a contradiction in terms to speak of a subsequent inspiration. This truth seems to have been lost sight of by those moderns who thought they could revivify—at the same time making it still less acceptable—a vague hypothesis of Lessius (1585) and of his disciple Bonfrère. (2) A view which err by excess confounds inspiration with revelation. We have just said that these two Divine operations are not only distinct, but may take place separately, although they may also be found together. As a matter of fact, this is what happens whenever God moves the sacred writer to express thoughts or sentiments of which he cannot have acquired knowledge in the ordinary way. There has been some exaggeration in the accusation brought against early writers of having confounded inspiration with revelation; however, it must be admitted that the explicit distinction between these two graces has become more and more emphasized since the time of St. Thomas. This is a very real progress and allows us to make a more exact psychological analysis of inspiration.

III. Excessive or Destructive Question now is not whether all the Biblical books are inspired in every part, even in the fragments called deutero-canonical: this point, which concerns the integrity of the Canon, has been solved by the Council of Trent (Denz., 784). But are we bound to admit, in the books or parts of books which are canonical, there is absolutely nothing, either as regards the matter or the form, which does not fall under the Divine inspiration?

A. Inspiration of the Whole Subject Matter.—For the last three centuries there have been authors—theologians, exegetes, and especially apologists, such as Holden, Rohling, Lenormant, di Bartolo, and others—who maintained, with more or less confidence, that inspiration was limited to moral and dogmatic teaching, excluding everything in the Bible relating to history and the natural sciences. They have thus made it compatible with the infallibility of the Church. The Church has never ceased to protest against this attempt to restrict the inspiration of the sacred books. This is what took place when Mgr d'Hulst, Rector of the Institut Catholique of Paris, gave a sympathetic account of this opinion in "Le Correspondant" of 20 Jan., 1892. The reply was quickly
forthoming in the Encyclical "Providentissimus Deus" of the same year. In that Encyclical Leo XIII said: "It will never be lawful to restrict inspiration merely to certain parts of the Holy Scriptures, or to grant that the sacred writer could have made a mistake in the opinion of those early times, when the Reformation, like Luther himself, was trying to find a way and a symbol, one can discern a constant preoccupation, that of distinguishing between the inspiration which, in order to get out of these difficulties, do not hesitate to suppose that Divine inspiration extends only to what touches faith and morals, on the false plea that the true meaning is sought for in less what God has said than in the motive for which He has said it." (Doc. pont. 1860). In this proposition, tradition contradicts Christian tradition and theological teaching.

B. Vertical Inspiration.—Theologians discuss the question, whether inspiration controlled the choice of the words used or operated only in what concerned the sense of the assertions made in the Bible. In the sixteenth century verbal inspiration was the current teaching. The Jesuits of Louvain were the first to react against this opinion. They held "that it is not necessary, in order that a text be Holy Scripture, for the Holy Ghost to have inspired the very material words of the prophets, provided the sentiments were so violent that Bellarmine and Suarez thought it their duty to tone down the formula by declaring "that all the words of the text have been dictated by the Holy Ghost in what concerns the substance, but differently according to the diverse conditions of the instruments". This opinion went on gaining in precision, and little by little it disentangled itself from the terminology which it had borrowed from the adverse opinion, notably from the word "dictation". Its progress was so rapid that at the beginning of the nineteenth century it was more commonly taught than the theory of "inscription". In the middle of the century Franzelin seems to have given it its definite form. During the last quarter of a century verbal inspiration has again found partisans, and they become more numerous every day. However, the theologians of to-day, whilst retaining the terminology of the older school, have profoundly modified the theory itself. They no longer speak of a material dictation of words to the ear of the writer, nor of an interior revelation of the term to be employed, but of a Divine motion extending to every faculty and even to the powers of execution of the writer, and in consequence influence the work of the inspired writer. The sacred text is wholly the work of God and wholly the work of man, of the latter by way of instrument, of the former by way of principal cause. Under this rejuvenated form the theory of verbal inspiration shows a marked advance towards reconciliation with the rival opinion. From an exegetical and apologetical point of view it is indifferent which of these two opinions we adopt. All agree that the characteristics of style as well as the imperfections affecting the subject matter itself, belong to the inspired writer. As for the inerrancy of the inspired text it is to be aspired that it must be flawlessly attributed, and it matters little if God has insured the truth of His Scripture by the grace of inspiration itself, as the adherents of verbal inspiration teach, rather than by a providential assistance.

IV. Protestant Views on the Inspiration of the Bible.—A. At the Beginning of the Reformation.—1) The necessity of the attitude towards the Bible, which they had taken as their only rule of Faith, the Protestants were led at the very outset to go beyond the idea of a merely passive inspiration, which was commonly received in the first half of the sixteenth century. Not only did they make no distinction between inspiration and revelation, but Scripture, both in its matter and style, was considered as revelation itself. In it God spoke to the reader just as He did to the Israelites of old from the mercy-seat. Hence that kind of cult which some Protestants of to-day call "Bibilolatry". In the midst of the incertitude, vagueness, and antinomies of those early times, when the Reformation, like Luther himself, was trying to find a way and a symbol, one can discern a constant preoccupation, that of distinguishing between the inspiration which, in order to get out of these difficulties, do not hesitate to suppose that Divine inspiration extends only to what touches faith and morals, on the false plea that the true meaning is sought for in less what God has said than in the motive for which He has said it." (Doc. pont. 1860). Soon, to the inspiration of the words was added that of the general points of the present Hebrew text. This was not a mere opinion held by the two Buxtorfs, but a doctrine defined, and imposed under pain of fine, imprisonment, and exile, by the Confession of the Swiss Churches, promulgated in 1675. These dispositions were abrogated in 1724. The Puritans held that in the Bible there are neither barbarisms nor solecisms; that the Greek of the New Testament is as pure as that of the classical authors. It was said, with a certain amount of truth, that the Bible had become a sacrament for the Reformers.

(2) In the seventeenth century began the controversy of the three forms of inspiration. In the theory of inspiration now generally accepted by Protestants. The two principles which brought about the Reformation were precisely the instruments of this revolution: on the one side, the claim for every human soul of a teaching of the Holy Ghost, which was immediate and independent of every external rule; on the other, the right of private judgment, or autonomy of individual reasoning, in reading and studying the Bible. In the name of the first principle, on which Zwingli had insisted more than Luther and Calvin, the Pietists thought to free themselves from the letter of the Bible which fettered the action of the Spirit. A French Huguenot, Seb. Castellion (d. 1563), had already been bold enough to distinguish between the letter and the spirit; according to him the spirit only came from God, the letter was no more than a "case, husk, or shell of the spirit".

The Quakers, the followers of Swedenborg, and the Irvingites were to force this theory to its utmost limits; real revelation—the only one which instructs and sanctifies—was that produced under the immediate influence of the Holy Ghost. While the Pietists were better inclined than the Calvinists to help the Holy Ghost, others, in even greater numbers, tried to get some light from philological and historical researches, which had received their decisive impulse from the Renaissance. Every facility was assured to their investigations by the principle of freedom of private judgment; and of this they took advantage. The conclusions obtained by this method could not but be fatal to the theory of inspiration by revelation. In vain did its partisans say that God's will had been to reveal to the Evangelists in four different ways the words which, in reality, Christ had uttered only once; for the Holy Ghost had acted according as He was dictating to Isaiah or to Amos—a fact which nothing could change. The avowal of inability to meet the facts alleged against them. As a matter of fact, Faustus Socinus (d. 1562) had already held that the words and, in general, the style of Scripture were not inspired. Such a work, George Calixtus, Episcopius, and Grotius must draw a clear distinction between inspiration and revelation. According to the last-named, nothing was revealed but the prophecies and the words of Jesus Christ, everything else was only inspired. Still further, he reduces inspiration to a pious motion of the soul without any other inspiration, i.e., without any internal works; III (1679), 672). The Dutch Arminian school, then represented by J. LeClerc, and, in France, by L. Capelle, Daillé, Blondel, and others, followed the same course. Although they kept current terminology,
they made it apparent, nevertheless, that the formula, "The Bible is the Word of God", was already about to be replaced by "The Bible contains the Word of God." Moreover, the term word was to be taken in an equivocal sense.

B. Biblical Rationalism.—In spite of all, the Bible was still held as the criterion of religious belief. To rob it of its prerogative was the work which the eighteenth century set itself to accomplish. In the attack then made on the Divine inspiration of the Scriptures three classes of assailants are to be distinguished. (1) The Naturalist philosophers, who were the forerunners of modern unbelief (Holbays, Spinoza, Diderot, D'alembert, La Mettrie, John Woolston, Tindal, Morgan); the German Rationalists (Reimarus, Lessing); the French Encyclopedists (Voltaire, Bayle) strove by every means, not forgetting abuse and sarcasm, to prove how absurd it was to claim a Divine origin for a book in which all the blemishes and errors of human writings are to be found. (2) The critics applied to the Bible the methods adopted for the study of profane authors. They, from the literary and historic point of view, reached the same conclusion as the infidel philosophers; but they thought they could remain believers by transferring the heroic faith of the Bible and the profane element. The latter they gave up to the free judgment of historical criticism; the former they pretended to uphold, but not without restrictions which profoundly changed its import. According to Semler, the father of Biblical Rationalism, Christ and the Apostles accommodated themselves to the false opinions of their contemporaries; according to Kant and Eichhorn, everything which does not agree with some reason must be regarded as Jewish invention. "Religion restricted within the limits of reason—that was the point which the critical movement of the eighteenth century made common with the philosophy of Kant and the theology of Wegscheider. The dogma of plenary inspiration dwindled down with it, in its final ruin, the very notion of revelation" (A. Sabatier, "Les religions d'autorité et la religion de l'esprit", 2nd ed., 1804, p. 531).

(3) These philosophical historical controversies about Scriptural authority caused great anxiety in religious minds. There were many who then sought their salvation in one of the principles put forward by the early Reformers, notably by Calvin: to wit, that truly Christian certitude came from the testimony of the Holy Scriptures; that all the faithful had but to sound his own soul in order to find the essence of religion, which was not a science, but a life, a sentiment. Such was the verdict of the Kantian philosophy then in vogue. It was useless, from the religious point of view, to discuss the extrinsic claims of the Bible; far better was the moral experience of its intrinsic worth. The Bible itself was nothing but a history of the religious experiences of the Prophets, of Christ and His Apostles, of the Synagogue and of the Church. Truth and Faith came not from without, but sprung from the Christian conscience as their source. Now the modernizing, these were not justified by the mere narrations of the religious experiences of those who had gone before. What mattered, then, the judgment passed by criticism on the historical truth of this narration, if it only evoked a salutary emotion in the soul? Here the useful alone was true. Not the least the authentic assurance was the testimony of the Bible text. Such, in broad outlines, was the final stage of a movement which Spener, Wesley, the Moravian Brethren, and, generally, the Pietists initiated, but of which Schleiermacher (1768-1834) was to be the theologian and the propagator in the nineteenth century.

C. German Rationalism.—(1) The rational views, however, were not abandoned without resistance. A movement back to the old idea of the theopneustia, including verbal inspiration, set in nearly everywhere in the first half of the nineteenth century. This reaction was called the Réveil. Among its principal promoters must be mentioned the Swiss L. Gauzens, W. Lee, in England, A. Dorner in Germany, and, more recently, W. Rohnert. Their labours at first evoked interest and sympathy, but were destined to fail before the efforts of a counter-reaction which sought to complete the work of Schleiermacher. It was led by Alex. Vinet, Edm. Scherer, and E. Rabaud in France; Rich. Rothe and especially Ritschl in Germany; S. T. Coleridge, F. D. Maurice, and Matthew Arnold in England. According to them, the ancient dogma of the theopneustia is not to be reformed, but only to be interpreted. Although, however, university professors, like E. Reuss, freely used the historical method; without denying inspiration they ignored it.

(2) Abstracting from accidental differences, the present opinion of the so-called "progressive" Protestants (who profess, nevertheless, to remain sufficiently orthodox), as represented in Germany by B. Weiss, R. F. Grau, and H. Cremer, in England by W. Sanday, C. Gore, and most Anglican scholars, may be reduced to the following heads: (a) the purely passive, mechanical theopneustia, extending to the very words of the Sacred Text; (b) impressionistic degrees: suggestion, direction, elevation, and superintendency. All the sacred writers have not been equally inspired. (c) Inspiration is personal, that is, given directly to the sacred writer to enlighten, stimulate, and purify his faculties. This religious enthusiasm, like every great passion, excites the powers of the soul; it belongs, therefore, to the spiritual order, and is not merely a help given immediately to the intellect. Biblical inspiration, being a seizure of the entire man by the Divine virtue, does not differ essentially from the gift of the Holy Spirit imparted to all the faithful. It is the right and proper and impartial use of language to call the sacred text itself inspired. At any rate, this text can, and actually does, err not only in profane matters, but also in those appertaining more or less to religion, since the Prophets and Christ Himself, notwithstanding His Divine authority, did not possess absolute infallibility. (Cf. Denney, "A Diet. of Christ and the Gospels", I, 148-49.) The Bible is a historical document which, taken in its entirety, contains the authentic narrative of revelation, the tidings of salvation. (e) Revealed truth and, consequently, the Faith we derive from the Bible are not founded but to sound his own soul in order to find the essence of religion, which was not a science, but a life, a sentiment. Such was the verdict of the Kantian philosophy then in vogue. It was useless, from the religious point of view, to discuss the extrinsic claims of the Bible; far better was the moral experience of its intrinsic worth. The Bible itself was nothing but a history of the religious experiences of the Prophets, of Christ and His Apostles, of the Synagogue and of the Church. Truth and Faith came not from without, but sprung from the Christian conscience as their source. Now the modernizing, these were not justified by the mere narrations of the religious experiences of those who had gone before. What mattered, then, the judgment passed by criticism on the historical truth of this narration, if it only evoked a salutary emotion in the soul? Here the useful alone was true. Not the least the authentic assurance was the testimony of the Bible text. Such, in broad outlines, was the final stage of a movement which Spener, Wesley, the Moravian Brethren, and, generally, the Pietists initiated, but of which Schleiermacher (1768-1834) was to be the theologian and the propagator in the nineteenth century.

VIII—4
ciples of the Reformation, the autonomy of the individual conscience.

(3) The position of liberal Protestants (i.e. those who are independent of all dogmas) may be easily defined. The Bible is just like other texts, neither inspired nor the rule of Faith. Religious belief is quite foreign to him. So far is it from being dogmatic or even historical authority of a book that it gives to itself, in its own right. When religious texts, the Bible included, are in question—or, at least, what people generally believe to be historical—is largely a product of faith, which has transgressed all the usual author's of the Bible may be called inspired, that it endures with a superabundance of religious matters; but this religious enthusiasm does not differ essentially from that which animated Homer and Plato. This is the denial of everything supernatural, in the ordinary sense of the word, as well in the Bible as in religion in general. Nevertheless, those who hold this theory defend themselves from the charge of infidelity, especially repudiating the cold Rationalism of the last century, which was made up exclusively of negations. They think that they remain sufficiently Christian by adhering to the "religious sentiment" to which Christ had fitted the present age. Following Kant, Schleiermacher, and Ritschl, they profess a religion freed from all philosophical intellectualism and from every historical proof. Facts and formulae of the past have, in their eyes, only a symbolic and a transient value. Such is the new theology spread by the best-known professors and writers, especially in Germany—historians, exegetes, philologists, or even pastors of souls. We need only mention Harnack, H. J. Holtzmahn, Fried. Delitzsch, Cheyne, Campbell, A. Sabatier, Albert and John Reimarus. It is this transformation of Christianity that "Modernism", consequently the Ecclesiastical "Pasendi Gregis", owes its origin.

In modern Protestantism the Bible has decidedly fallen from the primary which the Reformation had so loudly conferred upon it. The fall is a fatal one, becoming deeper from day to day; and without remedy, since it is the logical consequence of the fundamental principle put forward by Luther and Calvin. Freedom of examination was destined sooner or later to produce freedom of thought. (Cf. A. Sabatier, "Les religions d'autorité et la religion du peuple", 2nd ed., 1904, pp. 399—403.)

ALFRED DURAND.

Installation (Lat. installare, to put into a stall). This word, strictly speaking, applies to the solemn inductio of a priest or any person which he is to occupy in the choir of a cathedral or collation of a chair. It is the symbolical act (institution corporalis) by which a canon is put in possession of the functions which he exercises in the chapter, and by which the chapter admits him. The ceremonies of this installation are regulated by local usage; very often they consist in the assignment of a stall in the choir and a place in the hall in which the meetings of the chapter are held. At the same time the dean invests the new canon with the capes and lances, plots the crosier on his head, and receives his profession of faith and his oath to observe the statutes of the chapter. The term installation is also applied to the institutio corporalis, or putting in possession of any ecclesiastical benefice whatsoever (see Institution, Canonical); again, to the solemn entry of a parish priest into his new parish, even when this event has been publicly acknowledged after the parish priest has really been put in possession of his benefice. The corresponding ceremony for a bishop is known as enthronization (q. v.).

A. VAN HOYE.

Instinct.—Definitions.—In both popular and scientific literature the term instinct has been given a variety of meanings. It has been made to cover a frame for it an adequate definition which would meet with general acceptance. The term usually includes the idea of a purposive adaptation of an action or series of actions in an organized being, not governed by consciousness of the end to be attained. The difficulty is encountered when we attempt to add to this generic concept specific notes which shall differentiate it from reflex activities on the one hand and from intelligent activities on the other. Owing to the limitation of our knowledge of the processes involved, it may not always be possible to determine whether a given action should be regarded as instinctive, but this should not prevent us from drawing, on theoretical grounds, a clear line of demarcation between these two modes of activity. The reflex is essentially a physiological process. The reflex arc is an established neural mechanism which secures a definite and immediate response to a given physical stimulus. The individual may be conscious of the stimulus or of the response or of both, but consciousness does not in any case enter into the reflex as an essential factor. Instincts, in contradistinction to reflexes, are comparatively complex. Some writers are so impressed with the characteristic of instinct as to be disposed to agree with Herbert Spencer in defining it as an organized series of reflexes, but this definition fails to take into account the fact that consciousness forms an essential link in all instinctive activities. It has been suggested as a distinctive characteristic of instinct that it arises from perception, whereas the source of a reflex is never more than a sensation. Baldwin includes under instinct only reactions of a sensory-motor type. From a neurological point of view, in mammals at least, instinct always involves the cerebral cortex, the seat of consciousness, while the reflex is confined to the lower nerve centres. An obvious difference between reflexes and instincts is to be found in the fact that in the reflex the response to the stimulus is immediate, whereas the culmination of the instinctive activity, in which its purposeful character appears, may be delayed for a considerable time. The chief difficulties in defining instinct are encountered in differentiating instinctive from intelligent activities. If the mode of origin of instinct and habit be left out of account, the two processes will be seen to resemble each other so closely that it is well-nigh impossible to draw any clear line of distinction between them. This circumstance has led to the popular conception of instinct as an habit, a disposition of the subject which finds support in so eminent an authority as Wilhelm Wundt; but this definition
implies a theory of origin for instinct which is not universally accepted. Again, the Schoolmen and many competent observers, among whom E. Wasemann, S.J., is prominent, find the characteristic difference between instinctive and intelligent activities in the fact that the former are governed either by sensory processes or by sensory associative processes, while the other is governed by intellect and free will. They accordingly attribute all the conscious activities of the animal to instinct, since, as they claim, none of these activities can be traced to intellect in the strict sense of the word. Through nowhere in detail of the nature of instinct, but his position on the subject is rendered none the less clear from a great many passages in the "Summa Theologiae". He is in full agreement with the best modern authorities in laying chief emphasis on the absence of consciousness of the end as the essential characteristic of instinct. He says (op. cit., I-11, Q. xi, a. 2, C): "Although beings devoid of consciousness (cognitio) attain their end, nevertheless they do not attain a fruition of their end, as beings do who are endowed with consciousness. Consciousness of one's end, however, is of two kinds, perfect and imperfect. Perfect consciousness is that by which one is conscious particularly of the end, but not also of the general nature of purpose and goodness. This kind of consciousness is peculiar to rational natures. Imperfect consciousness is that by which a being knows the purpose and goodness in particular, and this kind of consciousness is found in brute animals, which are not governed by free will but are moved by natural instinct towards those things which they apprehend. Thus the rational creature attains complete enjoyment (fruatio); the brute attains imperfect enjoyment, and other creatures do not attain enjoyment at all." Wasemann's concept of instinct is in strict agreement with that of St. Thomas, while it is more explicit. He divides the instinctive activities of animals into two groups: "Instinctive actions in the strict, and instinctive actions in the wider acceptance of the term. As instances of the former class we have to regard those which immediately spring from the inherited dispositions of the powers of sensile cognition and appetite; and as instances of the latter those which indeed proceed from the same inherited dispositions but through the medium of sense experience." (Instinct and Intelligence in the Animal Kingdom, p. 35).

The following tendency in biology and comparative psychology to restrict the term instinct to inherited purposive adaptations. Many writers add to this two other characteristics: they insist that an instinct must be definitely fixed or rigid in character, and that it must be common to a large group of individuals. Baldwin regards instinct as "a definitely biological, not a psychological conception" (Dictionary of Philosophy and Psychology). He adds that "no adequate psychological definition of instinct is possible, since the psychological state involved is exhausted by the terms sensation (and also perception) and habituation of an instinctive and involuntary nature. It has also been urged against it that it does not account for the co-ordination of the muscular groups which are frequently involved in instinct. Similar objections, of course, have been urged against natural selection as the origin of many complex anatomical structures. The adaptive character, in the one case as in the other, points to the operation of an intelligence that altogether transcends the scope of the mental powers of the creatures in question.

The second theory, that of lapsed intelligence, has assumed many forms, and has found many defenders among comparative psychologists and biologists during the last half century. Among the best-known authors espousing this theory may be mentioned Wundt, Eimer, and Cope. The two main difficulties in the way of the acceptance of this theory are, first,
the high grade of intelligence demanded at very low levels of animal life, and second, it assumes the inheritance of acquired characteristics. Wundt rejects intelligence in the strict acceptance of the term as the sovereign animal instinct. His designation is best stated in his own words: "We may reject at once as wholly untenable the hypothesis which derives animal instinct from an intelligence which, though not identical with that of man, is still, so to speak, of equal rank with it. At the same time we must admit that the adaptations of man to intellectual function, sense are right in ascribing a large number of the manifestations of mental life in animals not, indeed, to intelligence, as the intellectualists \textit{sensu stricto} do, but to individual experiences, the mechanism of which can only be explained in terms of association." (Op. cit., p. 437.) After dealing with another phase of this subject, he continues: "Only two hypotheses remain, therefore, as really arguable. One of them makes instinctive action a mechanized intelligent action, which can be in whole or in part reduced to the level of the reflex; the other makes instinct a matter of inherited habit, gradually acquired and modified under the effects of the environment, in the course of numberless generations. There is obviously no necessary antagonism between these two views. Instincts may be actions originally conscious, but now become mechanical, and they may be inherited habits." (Ibid., p. 393.) After discussing human instincts and their relation to environment, Wundt concludes: "External conditions of life and voluntary reactions upon them, then, are the two factors operative in the evolution of instinct. But they operate in different degrees. The general development of mentality is always tending to modify instinct in some way or another. And so it comes about that of the two associated principles the first, adaptation to environment,—predominates at the lower stages of life; the second,—voluntary activity,—at the higher. This is the great difference between the instincts of man and those of the animals. Human instincts are habits, acquired or inherited from previous generations; animal instincts are purposive adaptations of voluntary action to the conditions of life. And a second difference follows from the first: that the vast majority of human instincts are acquired: while animals . . . are restricted to inborn instincts, with a very limited range of variation.

Romanes seeks to solve the problem of the origin of instinct by combining these two theories, accounting for the more rigid instincts of animals on the basis of natural selection and for the more plastic instincts by the inheritance of mechanized habits. He calls the former class of instincts primary, and the latter secondary. More recently, the theory of organic selection has been advanced. According to this theory in one of the adaptations of all kinds, whether intelligent or organic, are called upon to supplement incomplete endowment, and thus to keep the species alive until various instincts are acquired sufficient to make the instinct relatively independent.

It is evident from the definitions and theories given above that several distinct things are included under the term instinct. This finds expression in the division of instincts into primary and secondary suggested by Romanes, and into innate and acquired instincts (Wundt). Darwin emphasized the same fact when he claimed that many instincts may have arisen from habit, and then adds: "but it would be a serious error to suppose that the greater number of instincts have been acquired by habit in one generation and then transmitted by inheritance to succeeding generations. It is shown that instincts which are acquainted, namely, those of the hive-bee and of many ants, could not possibly have been acquired by habit." (Op. cit., vol. I., 321.) Formerly, instincts interested naturalists chiefly because they were regarded as so many illustrations of the intelligence of the Creator, and, indeed, where it is a question of "primary," or "inherited," instincts—or instincts in the "strict sense of the term," as Wundt and others have designated it, they are analogous to that of the origin of anatomical characteristics. Evidently we shall have to account for such elaborate instincts as that which determines the conduct of the caterpillar or the emperor moth in building its cocoons along the same lines which we adopt in accounting for the origin of the anatomical structures. The intelligence displayed far transcend that which could possibly have been possessed by such lowly creatures. The "secondary," or "acquired," instincts have a theoretical interest of an entirely different character, arising out of the problems of the nature of animal intelligence and the origin of man. Montefelt, and in general all those who accept the brute origin of man, seek to obliterate the essential difference between man and the animal; hence they ascribe to the animal an intelligence which differs only in degree from that possessed by man. While at first sight this would seem to lift the animal up to the plane of human life, on closer consideration it is apparent that what it does in reality is to lower man to the plane of brute life.

It may easily be demonstrated that many of the instincts in animals are capable of modification in the course of individual experience. Acts that are determined by a new element in the environment may be repeated in a modified form, and this repetition soon begets a habit which, so all intents and purposes, is identical with instinct. Such mechanized habits are, as we have seen, classified by some observers as instincts, and if such a habit be inherited, as some claim it may be, then no one would be disposed to it that name of instinct. The real importance attaching to this problem arises from the form of consciousness that is operative in building up such habits, or secondary instincts. Aristotle and the Schoolmen attributed these puprseive adjustments to the \textit{appetitus sensitus}. They found no need of calling into play any higher faculty than sensory perceptions of particular objects and the recognition of their desirability or the reverse. This view is developed by Wasmann. It should be observed, however, that the term instincts as used by the Scholastics and by Wasmann refers not only to the neural mechanism or brain in the sense of variation, but to any mechanism by which it enables the animal to adjust its spontaneous activities to its surroundings. The term "was not taken merely as a constituent part of the sensitive power of cognition and appetite, but as the adaptive, natural disposition of animal sensation, which constitutes the vital principle of the innumerable acts of the animal . . . From apart and beyond inherited, instinctive knowledge, scholastic philosophy ascribed to the animal a sensitive memory and a power of perfecting inborn instincts through sense experience; it acknowledges in the animal not only considerable hereditary talents, but also certain degree talent and ability acquired by sense experience and by practice." (Wasmann, op. cit., 138–39.)
foregone conclusion that human intelligence originated from that of the brute, and differs only from it in degree.

**Human Instincts.**—The question of the nature of human instincts and the treatment which they should receive is of concern to us as men and in the exercise of the utmost consequence in the field of education. As we have seen above, some writers speak of acquired instincts, meaning thereby highly developed or mechanized habits; but it will be more convenient here to confine the use of the term to instincts in the proper sense of the word that is, to innate or inherited tendencies, and to speak of modes of activity established in individual life through repetition as habits. The most striking characteristic of human instincts as contrasted with instincts in the brute is plasticity. It is, in fact, this characteristic of human instinct that renders education both possible and necessary. Among the higher animals many instincts are relatively plastic, that is, they are modified by the individual experience of the animal. This renders it possible to train animals to act in ways that are not provided for by definitely organized tendencies. The plasticity of the human is in some respects very important in the development of the brain and of the power of sense perception and sensory association, but when we turn to man we find that his intelligence, which asserts itself at a very early date in infancy, begins to modify all instinctive activities as soon as they appear, a fact which renders it difficult to observe unmodified instincts in adult life. There are, therefore, two things to be taken into account: the plasticity of the instinct and the power of intellect and free will that is brought to bear in modifying it. In both of these respects there is a striking contrast observable between man and the animal.

It should be noted here as of special importance to the discussion that human instincts do not all make their appearance at birth. It is true that instinct causes the newly born babe to seek its mother's breast and to perform sundry other necessary functions, but many of the instincts make their appearance for the first time in the appropriate phase of neural and mental development. Again, while the appearance of the instinct is relatively late in the developmental series, it frequently, as in the case of coquetry and maternity, antedates by some years the adult function to which it refers. This renders the instinct much more plastic, or, in other words, much more amenable to the control of educative agencies than they would be if they appeared for the first time amid the stress of the fully developed emotions and passions to which they refer. This antedating of the function may be regarded as an indication of the vestigial character of the instincts in question. The work in the field of genetic psychology and of child study during the past few decades has revealed the presence and the important functions of many hitherto neglected instincts in the life of the child.

These instincts cannot be neglected or they will run wild. It has been observed that this is the case when they cannot be suppressed indiscriminately, because they are the native roots on which all habits that are of enduring strength in human life are grafted. On the other hand, many instincts are highly undesirable; their full development would, in fact, mean the production of criminals. For explanation of these instincts we are referred by many to the struggle and the struggle from which civilized man has gradually emerged. “In the case of mankind, the self-assertion, the unscrupulous seizing upon all that can be grasped, the tenacious holding of all that can be kept, which constitutes the essence of the struggle for existence, have already answered for his success through its educative agencies, until he reaches adult stature. The culture epoch theory, which leads the child to function in each successive “culture epoch,” would, therefore, not only retard his proper develop-
ment, but it would inevitably initiate a violent retrogression.

THOMAS EDWARD SHIELDS.

Institute of Charity. See Rosminians.

Institute of Mary, the official title of the second congregation founded by Mary Ward (q.v.). Under this title Barbara Babthorpe, the fourth successor of Mary Ward as "chief superior", petitioned for and obtained the approval of its rule in 1703. It is the successor to the congregation of the first chief superiors, and mentioned in the "formula of vows" of the first members. "Englische Fräulein", "Dame Inglese", "Loretto Nuns", are popular names for the members of the institute in the various countries where they have established themselves. On the suppression of Mary Ward's first congregation, styled by its opponents the "Jesuites", the greater number of the members returned to the world or entered other religious orders. A certain number, however, who desired still to live in religion under the guidance of Mary Ward, were sheltered with the permission of Pope Urban VIII in the Paradisia Church, by the Elector of Bavaria, Maximilian I. Thence some of the younger members were transferred at the pope's desire to Rome, there to live with Mary Ward and be trained by her in the religious life. Her work, therefore, was not destroyed, but reconstituted with certain modifications of detail, such as the temporal jurisdiction of the ordinary instead of of the Holy See immediately, as in the original scheme. It was fostered by Urban and his successors, who as late as the end of the seventeenth century granted a monthly subsidy to the Roman house. Mary Ward died in England at Heworth near York in 1610, and was succeeded by Barbara Babthorpe, who resided at Rome as head of the "English Ladies", and on her death was buried there in church of the English College. She was succeeded as head of the institute by Mary Points, the first companion of Mary Ward. The community at Heworth removed to Paris in 1657. In 1699 Frances Bedingfield, one of the constant companions of Mary Ward, was sent by Mary Points to found a house in England. Favoured by Catherine of Braganza, she established her community first in St. Martin's Lane, London, and afterwards at Hammer smith. Thence a colony was moved to Heworth, and finally in 1692 to the site of the present convent, Micklegate Bar, York. In addition to that at Munich, two foundations had meantime been made in Bavaria—at Augsburg in 1662, at Burghausen in 1683.

At the opening of the eighteenth century the six houses of Munich, Augsburg, Rome, Burghausen, Hammersmith, and York were governed by local superiors appointed by the chief superior, who resided for the most part at Rome, and had a vicar general in Munich. Thus, for seventy years the institute carried on its work, not tolerated only, but protected by the canonical authority, yet without official recognition till the year 1703, when at the petition of the Elector Maximilian Emanuel of Bavaria, Mary of Modena, the exiled Queen of England, and others, its rule was approved by Pope Clement XI. It was not in accordance with the discipline of the Church at that time to approve any institute of simple vows. The pope was willing, however, to approve the institute as such, if the members would accept enclosure. Fidelity to their traditions and experience of the benefit arising from non-enclosure in their special vocation, induced them to forego this further confirmation. The houses in Paris and in Rome were given up about the date of the confirmation of the rule in 1703. St. Fullen (1706) was the first foundation from Munich and was the Bull of Clement XI. In 1742 the houses in Austria and its dependencies were by a Bull of Benedict XIV made a separate province of the institute, and placed under a separate superior-general. The Austrian branch at present (1909) consists of fourteen houses. In Italy, Lodi and Vicenza have each two dependent filials. When the armies of the first Napoleon overran Bavaria in 1809, the mother-house in Munich and the other houses of the institute in Germany—Augsburg, Burg Hausen, and Altötting excepted—were broken up and the communities scattered. On the restoration of peace to Europe, King Louis I of Bavaria obtained the returns of Augsburg, and when Munich was restored, where a portion of the royal palace was made over to them. In 1840 Madame Catherine de Gra cho, the superior of this house, was appointed by Gregory XVI general superior of the whole Bavarian institute. At the present day there are 85 houses under Bavaria, with 1153 members, 90 postulants, 1225 boarders, 11,447 day pupils, and 1472 orphans. Four houses in India, one at Rome, and two in England are subject to Nymphenburg. The house in Mainz escaped secularization, being spared by Napole on on the condition that all connexion with Bavaria should cease. It is the mother-house of a branch which has eight filial houses.

When vigour was reviving in the institute abroad, the Irish branch was founded (1821) at Rathfarnham, near Dublin, by Frances Ball, an Irish lady, who had made her novitiate at York. There are now 19 houses of the institute in Ireland, 13 subject to Rathfarnham and 6 under their respective bishops. The dependencies of Rathfarnham are in all parts of the world—3 houses in Spain, 2 in Mauritius, 2 at Gibraltar, 10 in India, 2 in Africa, 10 in Australia, with a Central Training College for teachers at Melbourne (1906). In 1900 there are 8 houses in the United States, 7 in England, about 180 houses in all. Owing to the variety of names and the independence of branches and houses, the essential unity of the institute is not readily recognized. The "English Virgins", or "English Ladies", is the title under which the members are known in Germany and Italy, whilst in Ireland, and where foundations from Ireland have been made, the name best known is "Loretto Nuns", from the name of the famous Italian shrine given to the mother-house at Rathfarnham. Each branch has its own novitiate, and several have their special constitutions approved by the Holy See. The "Institute of Mary" is the official title of all; all follow the rule approved for them by Clement XI, and share in the approbation of their institute given by Pius IX, in 1877.

The sisters devote themselves principally to the education of girls in boarding-schools and academies, in which they are also active in primary schools, in the training of teachers, instruction in the trades and domestic economy, and the care of orphans. Several members of the institute have also become known as writers.

M. LOTOLA.
Institute of Mission Helpers of the Sacred Heart.—In the autumn of 1888, there came to Baltimore, Maryland, a convert, Mrs. Hartwell, who previous to her reception into the Church had been interested in works of charity. Under the spiritual direction of Father Slattery, provincial of St. Joseph Province, the coloured children were catechized, and the negro children, and was soon joined by some companions. In the autumn of 1890, these ladies wishing to become religious laid the foundations of a community under the name of “Mission Helpers, Daughters of the Holy Ghost”. The work was among the coloured, and was the sister for the coloured race, the sisters binding themselves thereto by a special vow. Very soon an industrial school for girls was opened. In 1895, the name of the institute was changed to “Mission Helpers of the Sacred Heart” and the members were dispensed from the “nuns” vest. Thus there was no longer any distinction made as to race in the work of the sisters, which from that time was to embrace all the neglected poor. Hence, the field of missionary and catechetical labour was greatly broadened. A direct result of this change was the opening in 1897 of a school for deaf-mutes in the rectory of Cardinal Gibbons’ school, St. Francis Xavier’s, was the first Catholic institution for deaf-mutes in the ecclesiastical province of Baltimore. In Porto Rico, also, there was no provision whatsoever for deaf-mutes who were poor, until the Mission Helpers opened a school there, shortly after making their foundation in San Juan in 1902. This was a heavy undertaking, as the demands on the sisters for missionary and catechetical work in Porto Rico were very great, and the need urgent.

At the first general chapter of the institute, which was held 25 November, 1896, by command of Cardinal Gibbons, a convent was established, and the superior general and her assistants elected according to its prescriptions. At this first election Mother M. Demetrias was chosen as mother general. The community was then officially declared canonically organized. Two important matters were settled about that time by ecclesiastical authority. The sisters were released from the observance of the vow which they had made to offer their prayers and good works for the welfare of the clergy, it having been declared canonical. Perpetual adoration was also discontinued because of the bodily hardship it entailed. On account of these decisions, County Dublin, they were unable to keep up the work of adoration, without grave detriment to their health, consequently it was decided to restrict it to the First Fridays. The active work of the institute as outlined by the constitution embraces the keeping of industrial schools for coloured girls; schools for deaf-mutes; day-nurseries; teaching catechism and giving instruction wherever needed; visiting the poor in their own homes, and in institutions, such as hospitals and almshouses, and preparing the dying for the last sacraments. There are houses of the institute in New York, Trenton, Porto Rico, and Baltimore.

Sister M. de Sales.

Institute of the Blessed Virgin Mary, Irish, founded by Frances Mary Teresa Ball (q.v.), under the direction and episcopal jurisdiction of the Most Rev. D. Mullins of Dublin, a convert. By the desire, Frances Ball had prepared herself for this undertaking by a two years' novitiate in St. Mary's Convent, Micklegate Bar, York. Two other Irish ladies, Miss Ellen Arthur and Miss Anne Therry, offered to join the new foundation and were accepted. On 4 November, 1822, a foundation was made in the possession of Rathcoole Priory Dublin, which had been purchased by the Archbishop of Dublin to serve as a mother-house and novitiate. The wide-spread fame of the superior education afforded in the Dublin Archdiocese by the Loretto nuns—as they are commonly called—brought demands for their services throughout Ireland. The first offshoot was planted in Navan, County Meath, in the year 1833. This convent has now a filiation in Mullingar. The convents in North Great George's Street, Dublin, and Stephen's Green, Dublin, bear the name of Loretto, having received the same general direction of foundations. The year 1836 was signalized by the rescript of Pope Gregory XVI addressed to the Most Rev. D. Murray, Archbishop of Dublin, which ordained that: “Those who have associated themselves and shall hereafter associate themselves to this institute, and who come from foreign countries, yes, even from the most remote parts, the Rules and Statutes of this institute, shall not be subject to the local jurisdiction of their own bishops, unless the said bishops shall have first communicated to the Holy See the said general rescript.” The year 1840 was marked by the erection of the first church in Ireland dedicated to the Sacred Heart, in Loretto Abbey, Rathfarnham. The same year saw the building of a smaller, but very beautiful, abbey in Dalkey, and also the opening of negotiations for another abbey in Gorey, which prepared the way for a future Loretto in the town of Wexford.

In spite of her prudent reluctance to favour the repeated applications for an extension of the Irish example in foreign countries, Reverend Mother Ball at last yielded to the solicitations of Dr. Cavanagh, Archbishop of Calcutta, and Sanctified the departure of volunteers for the Indian mission on 23 August, 1841. To Loretto House, Calcutta, have been added convents in Darjeeling, Lucknow, Assanbal, Intally, Simla, etc. In addition to the boarding and day schools the sisters conduct orphanages and attend diligently to the religious instruction of adults. The success in India led to an appeal for nuns from Dr. Collier, Vicar Apostolic of Madras, which appeal was granted in 1846. Immediately afterwards the Vicar Apostolic of Gibraltar urged a like petition. Two convents since founded are under the superintendence of the Most Rev. Dr. Power, Archbishop of Toronto, begging for a Loretto community in 1847. The under-named filiations own Loretto Abbey, Toronto, as their head-house: the convents in the city and suburbs, likewise in Bellville, Lyndsay, Hamilton, Niagara Falls, Guelph, Stratford, Chicago, Joliet, and Sainte Marie. The foundations in Fermoy and Omagh (Ireland) were supplied with members from Rathfarnham in the years 1853—5. The former has two filiations—at Youghal and Clonmel. The Lettermenny Loretto was the first convent founded in the Diocese of Clogher in 1845, and in County Down the convents at Bray, Ballymote, Kilkenny, and Killarney were also founded by Reverend Mother Ball. After a lingering illness, borne with saintly fortitude, the foundress died on Whit—Sunday, 19 May, 1861.

The most noteworthy events in the institute since her death have been: First, the approval and confirmation of the constitutions peculiar to Loretto Abbey, Rathfarnham, and its filiations by Pope Pius IX, the said constitutions having been sanctioned and transmitted to Rome by Cardinal Cullen in 1861, for the usual examination by the Sacred Congregation of the Propaganda. Second, the transfer of the community at Baymount to Balbriggan. The foundation of a convent in Ballarat, Australia, from which proceeded the convents at Sydney, Portland, Perne, Adelaide, and Melbourne. To the latter is attached the Central Training College for Australian religious and the Australian bishops and intrusted by their lordships to the management of the Loretto nuns. Third: large day schools are established in Enniskeer, County Wexford, and in Rathinese, County Dublin. Fourths: foundations have been made in Seville, Madrid, and Yalls, in Spain. In Ireland the educational work of the Loretto nuns ranges through the three systems of primary, secondary, and university education—the girls' various successces culminating...
In the winning of scholarships and examinerships in the gift of the Royal University of Ireland. In other countries the Loretto nuns invariably work up to the requisite standard fixed by the extern educational authorities. (See Institute of Mary.)

SISTER MARY GERTRUDE.

Institute of the Brothers of the Christian Schools.—NATURE AND OBJECT.—The Institute of the Brothers of the Christian Schools is a society of male religious approved by the Church, but not taking Holy orders, and having for its object the personal sanctification of its members and the Christian education of youth, especially of the children of artisans and the poor. It accepts the direction of any kind of male educational institution, provided the teaching of Latin be excluded; but its principal object is the direction of elementary gratuitous schools. This congregation was founded in 1850, at Reims, France, by St. John Baptist de La Salle, then a canon of the metropolitan church of that city. Being struck by the lamentable disorders produced among the multitude by their ignorance of the elements of knowledge, and, what was still worse, of the principles of religion, the saint, moved with great pity for the ignorant, was led to create a preventive college and to demand the work of charitable schools. In order to carry out the last will of his spiritual director, Canon Roland, he first busied himself with consolidating a religious congregation devoted to the education of poor girls. He then seconded the efforts of a zealous layman, M. Nyel, to multiply schools for poor children. Thus guided by Providence, he was led to create an institute that would have no other mission than that of Christian education.

However, it would be a serious error to insinuate that until the end of the seventeenth century the Catholic Church had not displayed proofs of the solicitude of her pastors for the education of the children of the people. From the fifth to the sixteenth century, many councils which were held, especially those of Vaison in 529 and Aachen in 817, recommended the secular clergy and monks to instruct children. In 1179 the Third Council of Lateran ordained that the poor be taught gratuitously, and in 1547 the Council of Trent decreed that in connexion with every church, there should be a master to teach the elements of human knowledge to poor children and young students preparing for orders.

There were, therefore, numerous schools—petites écoles—on which it is not possible to make here a detailed account. In the sixteenth century, but teachers were few, because the more clever among them abandoned the children of the poor to teach those of the wealthier class and receive compensation for their work. It was evident that only a religious congregation would be able to furnish a permanent supply of educators for those who are destitute of the goods of this world. The institutes of the Venerable César de Bus in 1592 and of St. Joseph Calasanzius (1556–1648) had added Latin to the course of studies for the poor. The tentative made in favour of boys by St. Peter Fourier (1665–1718) in 1665 and M. Demais at Lyons in 1672 was not to spread. Then God raised up St. John Baptist de La Salle, not to create gratuitous schools, but to furnish them with teachers and give them fixed methods. The undertaking was much more difficult than the founder himself imagined. At the beginning he was encouraged by Père Bénard, and his zeal was seconded by a society of teaching nuns, Les Dames de Saint-Maur. The clergy and faithful applauded the scheme, but it had many bitter adversaries. During forty years, from 1680 to 1719, obstacles and difficulties constantly checked the progress of the new institute, but by the prudence, perseverance, care of its superior council, it was consolidated and developed to unexpected proportions.

DEVELOPMENT.—In 1860 the new teachers began their apostolate at Reims; in 1862 they took the name of "Brothers of the Christian Schools"; in 1864 they opened their first regular novitiate. In 1868 Providence transplanted the young tree to the parish of St-Sulpice, Paris, in charge of the spiritual sons of M. Olier. The mother-house remained in the capital until 1706. During this period the foundation of the first schools was a constant effort, passing through trials of every kind. The most painful came from holy priests whom he esteemed, but who entertained views of his work different from his own. Without being in any way discouragement, and in the midst of the storms, the saint kept nearly all of his first schools, and even opened a few of his own. In 1746 he made his first attempt and created the first normal schools under the name of "seminaries for country teachers". His zeal was as broad and ardent as his love of souls. The course of events caused the founder to transfer his novitiate to Rouen in 1703, to the house of Saint-Yon, in the suburb of Saint-Sever, which became the centre whence the institute sent its religious into the South of France, in 1707. It was at Rouen that St. John Baptist de La Salle composed his rules, convoked two general chapters, resigned his office of superior, and ended his earthly existence by a holy death, in 1719. Declared venerable in 1894, he was beatified in 1858, to be canonized in 1900.

SPIRIT OF THE INSTITUTE.—The spirit of the institute, infused by the example and teachings of its founder and fostered by the exercises of the religious life, is a spirit of faith and of zeal. The spirit of faith induces a Brother to see God in all things, to suffer everything for God, and above all to sanctify himself. The spirit of zeal attracts him towards children to instruct them in the truths of religion and penetrate their hearts with the maxims of the Gospel, so that they may make it the rule of their conduct. St. John Baptist de La Salle had himself given his Brothers advice on the formation of the character of his pupils. His spirit of zeal and of the love of God were to be the principal at the base of his institute. His spirit of zeal was his spirit of piety. It was his faith that made him adore the will of God in all the adversities he met with; that prompted him to send two Brothers to Rome in 1700 in testimony of his attachment to the Holy See, and that led him to condemn openly the errors of the Jansenists, who tried in vain at Marseilles and Calais to draw him over to their party. His whole life was a prolonged act of zeal: he taught school at Reims, Paris, and Grenoble, and showed how to do it well. He composed works for teachers and pupils, and especially the "Conduite des écoles", the "Devoirs du professeur" and "Règles de la bonté et de la civilité chrétienne".

The saint pointed out that the zeal of a religious teacher should be exercised by three principal means: vigilance, good example, and instruction. Vigilance removes from children a great many occasions of offending God; good example places before them models of imitation; instruction makes them familiar with what they should know, especially with the truths of religion. Hence, the Brothers have always considered catechism as the most important subject taught in their schools. They are catechists by vocation and the whole of their well-organized order, therefore, in accordance with the spirit of their institute, religious educators: as religious, they take the three usual vows of poverty, chastity, and obedience; as educators, they add the vow of teaching the poor gratuitously according to the prescriptions of their rule, and the vow of remaining with the poor in such a manner that they may not leave of themselves for the purpose of joining a more perfect order. Besides, the work appeared so very important to St. John Baptist de La Salle that, in order to attach the Brothers permanently to the education of the poor, he forbade them to teach Latin.

GOVERNMENT.—The institute is governed by a superior general elected for life by the general chapter. The superior general is aided by assistants, who at the
Institute

57

(1) By the use of the simultaneous method a large number of children of the same intellectual development could henceforward be taught together. It is true that for ages this method had been employed in the universities, but in the common schools the individual method was adhered to. Practicable enough when the number of pupils was very limited, the individual method gave rise, in classes that were numerous, to loss of time and disorder. Monitors became necessary, and these had often neither learning nor authority. With limitations that restricted its efficacy, St. Peter Fourier had indeed recommended the simultaneous method in the schools of the Congrégation de Notre-Dame, but it never extended further. To St. John Baptist de La Salle belongs the honour of having transformed the pedagogy of the elementary school. He required all his teachers to give the same lesson to all the pupils of a class, to question them constantly, to maintain discipline, and to listen to their answers. A consequence of this new method of teaching was the dividing up of the children into distinct classes according to their attainments, and later on, the formation of sections in classes in which the children were too numerous or too unequal in mental development. Thanks to these means, the progress of the children and their moral transformation commanded the admiration even of his most prejudiced adversaries.

(2) A second innovation of the holy founder was to teach the pupils to read the vernacular language, which they understood, before putting into their hands a Latin book, which they did not understand. It may be observed that this was a very simple matter, but simple as it was, it was hardly any educator, except the masters of the schools of Port-Royal in 1643, had been thought of it; besides, the experiments of the Port-Royal masters, like their schools, were short-lived, and exercised no influence on general pedagogy. In addition to these two great principles, the Brothers of the Christian Schools have introduced other improvements in teaching. They likewise availed themselves of what is rational in the progress of modern methods of teaching, which their courses of pedagogy, published in France, Belgium, and Austria, abundantly prove.

The Eighteenth Century.—At the death of its founder, the Brothers of the Christian Schools numbered 27 houses and 274 Brothers, educating 9000 pupils. Seventy-three years later, at the time of the French Revolution, the statistics showed 123 houses, 920 Brothers, and 36,000 pupils (statistics of 1790). During this period, it had been governed by five superiors general: Brother Barthélemy (1717–20); Brother Timothée (1730–51); Brother Claude (1751–57); Brother Florence (1767–77); and Brother Agathon (1777–98, when he died). Under the administration of Brother Timothée successful negotiations resulted in the legal recognition of the institute by Louis XIV. He granted it letters patent, 24 September, 1724; and in virtue of the Bull of approbation of Benedict XIII, 26 January, 1725, it was admitted among the congrega-

present time number twelve. He delegates authority to the visitors, to whom he confides the government of the districts, and to directors, whom he places in charge of individual houses. With the exception of that of superior general, all the offices are temporary and renewable. The general chapters are convoked at least every ten years. Thirty-two have been held since the foundation of the congregation. The vitality of an institute depends on the training of its members. God alone is the author of vocations. He alone can attract a soul to a life of self-denial such as that of the Brothers. The mortification this life enjoins is not rigorous, but renunciation of self-will and of the frivolities of the world should gradually become complete. The usual age for admission to the novitiate of the society is from sixteen to eighteen years. Doubtless there are later vocations that are excellent, and there are earlier ones that develop the most beautiful virtues. If the aspirant presents himself at the age of thirteen or fourteen, he is placed in the preparatory or junior novitiate. During two or three years he devotes himself to study, is carefully trained to the habits of piety, and instructed how to overcome himself, so as one day to become a fervent religious.

The novitiate proper is for young men who have passed through the junior novitiate, and for postulants who have come directly from the world. During a whole year they have no other occupation than that of studying the rules of the institute and applying themselves to observe them faithfully. At the end of their first year, or probation, the young Brothers enter the scholasticate, where they spend more or less time according to the nature of the duties to be assigned to them. As a rule, each of the districts of the institute has its three departments of training: the junior novitiate, the senior novitiate, and the scholasticate. In community, subjects complete their professional training and apply themselves to acquire the virtues of their state. At eighteen years of age, they take annual vows; at twenty-three, triennial vows; and when fully twenty-eight years of age, they may be admitted to perpetual profession. Finally, some years later, they may be called for some months to the exercises of a second novitiate.

METHODS OF TEACHING.—In enjoining on his disciples to endeavour above all to develop the spirit of religion in the souls of their pupils, the founder only followed the traditions of other teaching bodies—the Jesuits, Dominicans, and other religious orders. But the Brethren, particularly in the "petites écoles," took a prominent part in the development of the Institute in the United States. His originality lay elsewhere. Two pedagogic innovations of St. John Baptist de La Salle were approved from the beginning: (1) the employment of the "simultaneous method"; (2) the employment of the vernacular language in teaching reading. They are set forth in the "Connus des écoles," in which the founder condensed the experience he had acquired during an apostolate of forty years, which was later written down in manuscript during the lifetime of his author, and was printed for the first time at Avignon in 1790.

BROTHER PHILIPPE

Superior General of the Brothers of the Christian Schools—1858–74

The Eighteenth Century.—At the death of its founder, the Brothers of the Christian Schools numbered 27 houses and 274 Brothers, educating 9000 pupils. Seventy-three years later, at the time of the French Revolution, the statistics showed 123 houses, 920 Brothers, and 36,000 pupils (statistics of 1790). During this period, it had been governed by five superiors general: Brother Barthélemy (1717–20); Brother Timothée (1730–51); Brother Claude (1751–57); Brother Florence (1767–77); and Brother Agathon (1777–98, when he died). Under the administration of Brother Timothée successful negotiations resulted in the legal recognition of the institute by Louis XIV. He granted it letters patent, 24 September, 1724; and in virtue of the Bull of approbation of Benedict XIII, 26 January, 1725, it was admitted among the congrega-
tions canonically recognised by the Church. The most prominent of its superiors general in the eighteenth century was Brother Agathon. A religious of strong character, he maintained the faithful observance of the rules by the Brothers; a distinguished educator, he published the "Douce vertus d’un bon Maitre", in 1785; an eminent administrator, he created the first scholastics, in 1781, and limited new foundations to what was indispensable, aiming rather, when the storm was gathering on the horizon, to fortify an institute that had already become relatively widespread. The congregation, however, was hardly known outside of Rome, Ferrara, 1741; Maréville, 1743; Lunéville, 1749; and Morhange in Lorraine, 1761; Estavayer in Switzerland, 1750; Fort Royal, Martinique, 1777.

Whilst adhering to their methods of teaching during the eighteenth century, the Brothers knew how to vary their application. The superiors general insisted on having the elementary schools gratuitous and by far the more numerous. In accordance with the course of studies set down in the "Conduite des écoles", the Brothers applied themselves to teaching, thoroughly reading, writing, the vernacular, and especially the catechism. The boarding school of St-Yon at Rouen, established in 1705 by St. John Baptist de La Salle himself, served as a model for like institutions: Marseilles in 1730, Angers in 1741, Reims in 1765, etc. It was proper that in these houses the course of studies should differ in some respects from that in the free schools. With the exception of Latin, which remained excluded, everything in the course of studies of the best schools of the time was taught: mathematics, history, geography, drawing, architecture, etc. In the maritime cities, such as Brest, Vannes, and Marseilles, the Brothers taught more advanced courses in mathematics and hydrography. Finally, the institute accepted the direction of reformatory institutions at Rouen, Angers, and Maréville. It was this efflorescence of magnificent works that the French Revolution all but destroyed forever.

The Brothers during the Revolution.—The revolutionary laws that doomed the monastic orders on 13 February, 1790, threatened the institute from 27 December, in the same year, by imposing on all teachers the civic oath voted on 27 November. The storm was imminent. Brother Agathon, the superior general endeavoured to establish communities in Belgium, but could organize only one, at St-Hubert in 1791, only to be destroyed in 1792. The Brothers refused to take the oath, and were everywhere expelled. The institute was suppressed in 1792, after it had been decreed that it "had deserved well of the country". The storm had broken upon the Brothers. They were arrested, and more than twenty were cast into prison. Brother Salomes, secretary general, was massacred in the Carmes (the Carmelite monastery of Paris); Brother Agathon spent eighteen months in prison; Brother Monet was guillotined at Rennes in 1794; Brother Raphael was put to death at Utèse; Brother Florence, formerly superior general, was imprisoned at Avignon; eight Brothers were transported to the hulks of Rochefort, where four died of neglect and starvation in 1794 and 1795.

Brother Joseph Superior General of the Brothers of the Christian Schools—1884-97

All the schools were closed and the young Brothers enrolled in the army of the Convention. At the peril of their lives some of the older Brothers continued to teach at Elbeuf, Condrieux, Castres, Laon, Valence, and elsewhere, to save the faith of the children. The Brothers of Italy had received some of their French confressees at Rome. Persecuted during this time, Brother Agathon, having left his prison, remained hidden at Tours, whence he strove to keep up the courage, confidence in God, and zeal of his dispersed religious. On 7 August, 1797, Pope Pius VI appointed Brother Frumence vicar-general of the congregation. In 1798 the Italian Brothers were in their turn driven from their houses by the armed forces of the Directory. The institute seemed ruined; it reckoned only twenty members wearing the religious habit and exercising the functions of educators.

Restoration of the Institute. 1802-1810.—In July, 1801, the First Consul signed the concordat with Pius VII. For the Church of France this was the spring of a new era; for the Institute of the Brothers of the Christian Schools it was a resurrection. If at the height of the storm some Brothers continued to exercise their holy functions, they were only exceptional cases. The first regular community reorganised at Lyons in 1802; others in 1803, at Paris, Valence, Reims, and Soissons. Everywhere the municipalities recalled the Brothers and besought the survivors of the woeful period to take up the schools again as soon as possible. The Brothers addressed themselves to Rome and petitioned the Brother Vicar to establish his abode in France. Negotiations were begun, and thanks to the intervention of his uncle, Cardinal Fesch, Bonaparte authorized the re-establishment of the institute, on 3 December, 1803, provided their superior general would reside in France. In November, 1804, the Brother Vicar arrived at Lyons, and took up his residence in former college of the Jesuits. The institute began to live again.

Nothing was more urgent than to reunite the former members of the congregation. An appeal was made to their faith and good will, and they responded. Shortly after the arrival of Brother Frumence at Lyons, the foundation of communities began. There were eight new ones in 1805, and as many in 1806, four in 1807, and five in 1808. Brother Frumence dying in January, 1810, a general chapter, the tenth since the foundation, was assembled at Lyons on 8 September following, and elected Brother Gerbaut to the highest office in the institute. Brother Gerbaut governed until 1822. His successors were Brother Guillaume de Jesús (1822-30); Brother Afflelet (1830-38); Brother Philippe (1838-74); Brother Jean-Olympe (1874-75); Brother Irilde (1875-84); Brother Joseph (1884-97); and Brother Gabriel-Marie elected in March, 1897. He is the thirteenth successor of St. John Baptist de La Salle.

The Institute from 1810 to 1874.—After 1810 communities, of the Brothers multiplied like the flowers of the fields in spring-time after the frosts have disappeared. Fifteen new schools were opened in 1817, twenty-one in 1818, twenty-six in 1819, and twenty-seven in 1821. It was in this year that the
Brother Superior General, at the request of the municipality, took up his residence in Paris, with his assistants. The institute then numbered 950 Brothers and novices, 310 schools, 664 classes, and 50,000 pupils. Fifteen years had sufficed to reach the same prosperous condition in which the Revolution found it in 1790. If, however, be admitted that, in consequence of the services rendered by the Brothers to popular education, they always enjoyed the favour of the Government. From 1816 to 1819, Brother Gerbaut, the superior general, had to struggle vigorously for the preservation of the traditional methods of the congregation. The most active and Lancastrian method had just been introduced into France, and immediately the powerful Société pour l'Instruction Élémentaire assumed the mission of propagating it. At a time when teachers and funds were scarce, the Government deemed it wise to pronounce in favour of the mutual school, and recommended it by an ordinance in 1818. The Brothers would not consent to abandon the "simultaneous method" which they had received from their founder, and on this account they were subjected to many vexations. During forty years the supporters of the two methods were to contend, but finally the "simultaneous" teachers achieved the victory. By holding fast to their traditions and rules, the Brothers had saved elementary teaching in France. The period 1816-1850 was marked by the activity of Louis-Philippe. He prospered the institute by suppressing the grants made to certain schools. In 1821 eleven were permanently closed, and twenty-nine were kept up as free schools by the charity of Catholics. The hour had now come for a greater expansion. Fortified and rejuvenated by trial, fixed for a long time on the soil of France, augmented by yearly increasing numbers, the institute could, without weakening itself, send educational colonies abroad. Belgium received Brothers at Dinant in 1816; the Island of Bourbon, in 1817; Montreal, 1837; Smyrna, 1841; Baltimore, 1846; Alexandria, 1847; New York, 1848; St. Louis, 1849; Kem- phof, near Coblenz, 1851; Singapore, 1852; Algiers, 1854; London, 1855; Vienna, 1856; the Island of Mauritius, 1859; Bucharest, 1861; Karikal, India, 1862; Quito, 1863. In all of these places, the number of houses soon increased, and everywhere the same intellectual and religious results proved a recommendation of the institute throughout America, the Far East, and even in friendly but rare reunions. The legal efforts against the liberty of conscience forced the members into the Catholic and social struggle. They have formed themselves into sectional unions; they have an annual meeting, and have created a national movement in favour of the Congregation. In 1883, when Brother Philippe was elected superior general, in 1883, the number of schools and of Brothers was already double what it was in 1789; when he died, in 1874, it had increased in entirely unexpected proportions. The venerable superior saw the number of houses rise from 313 to 1149; that of the Brothers from 2317 to 10,235; that of their pupils from 144,000 to 350,000. And as in France, and through the benevolence of the hierarchy, Belgium, North America, the Levant multiplied Christian schools. Assuredly, Brother Philippe was aware that, for a religious institute, the blessing of numbers is less desirable than the progress of the religious in the spirit of their vocation. In order to strengthen them therein, the superior general composed a new volume of "Meditations," and a large number of instructive "Circular Letters," in which are explained the duties of the Brothers as religious and as educators. Every year at the time of the retreats, until he was eighty years of age, he travelled all over France, and spoke to his Brothers in most ardent language, made still more impressive by the saintly example of this venerable old man. The Institute from 1874 to 1908.—The generalship of Brother Iride was marked by two principal orders of facts: a powerful effort to increase the spiritual vigour of the institute by introducing the Great Exercises or retreats of thirty days; and the reorganization as free schools of the French schools which the laicization laws in 1878 to 1886 deprived of the character of private schools. This period witnessed, especially in two regions, the establishment and multiplication of Brothers’ schools. The districts of Ireland and Spain, where such fine work is going on, were organized under the administration of Brother Iride. Indefatigable in the fight, he asserted the rights of his institute against the powerful volumes which sought to set them aside. He had broad and original views which he carried out with a strong, tenacious will. What his predecessor had accomplished by indomitable energy, Brother Joseph, superior general from 1894 to 1897, maintained by the ascendency of his captivating goodness. He was an educator of rare distinction and exquisite charm. He had received from Pope Leo XIII the important mission of developing in the institute the works of Christian perseverance, so that the faith and morals of young men might be safeguarded after leaving school. One of his great delights was to transmit this direction to his Brothers and to see them work zealously for its attainment. Patronages, clubs, alumni associations, boarding-houses, spiritual retreats, etc., were doubtless already in existence; now they became more prosperous. For many years the alumni associations of France had made their appearance in friendly but rare reunions. The legal attempts against the liberty of conscience forced the members into the Catholic and social struggle. They have formed themselves into sectional unions; they have an annual meeting, and have created a national movement in favour of the Congregation. The alumni associations of the Brothers in the United States and Belgium have their national federation and annual meeting.
It is especially in France that the work of the spiritual retreats, of which the chief centre has been the Association of St. Benoît-Joseph Labre, has been developed. Founded in Paris in 1883, it had, twenty-five years later, brought together 41,600 young Parisians at the house of retreat, at Athies-Mons. About the same time, "retreats preparatory to graduation" were gradually introduced in the schools of all countries with the view of the perseverance in their religious practices of the graduates entering upon active life. During the administration of Brother Gabriel-Marie, and until 1904, the normal progress of the congregation was not obstructed. The expansion of its diverse works attained its maximum. Here are the words of one of the official reports of the Universal Exposition of Paris in 1900: "The establishments of the Institute of Brothers of the Christian Schools, spread all over the world, number 15. They comprise 1,500 elementary or high schools; 47 important boarding schools; 45 normal schools or scholasticates for the training of subjects of the institute, and 6 normal schools for lay teachers; 13 special agricultural schools, and a large number of agricultural classes in elementary schools; 48 technical and trade schools; 82 commercial schools or special commercial courses."

Such was the activity of the Institute of St. John Baptist de La Salle when it was doomed in France by the legislation that abolished teaching by religious. Not the services rendered, nor the striking lustre of its success, nor the greatness of the social work it had accomplished, could save it. Its great fame and its service rendered all its schools Christian, was imputed to it as a crime. In consequence of the application of the law of 7 July, 1904, to legally authorized teaching congregations, 805 establishments of the Brothers were closed in 1904, 196 in 1905, 155 in 1906, 93 in 1907, and 33 in 1908. Nothing was spared. The popular and free schools to the number of more than a thousand; the boarding and half-boarding schools such as Passy in Paris, those at Reims, Lyons, Bordeaux, Marseilles, etc.; the cheap boarding schools for children of the working class, such as the admirable houses of St. Nicholas, the technical and trade schools of Lyons, Saint-Etienne, Saint-Chamond, Commeny, etc.; the agricultural institutions of Beauvais, Limoux, etc.—all were swept away. The blows were severe, but the beautiful tree of the institute had taken root too firmly in the soil of the whole Catholic world to have its vitality endangered by the lopping off of a principal branch. New branches received a new influx of sap, and on its vigorous trunk there soon appeared new branches. From 1904 to 1908, 222 houses have been founded in England, Belgium, the islands of the Mediterranean, the Levant, North and South America, the West Indies, Cape Colony, and Australia.

SCHOOLS OF EUROPE AND THE EAST.—When their schools were suppressed by law in France, the Brothers endeavoured with all their might to assure to at least a portion of the children of the poor the religious education of which they were about to be deprived. At the same time the institute established near the frontiers of Belgium and Holland, of Spain and Italy, boarding-schools for French boys. The undertaking was venereal, but God has blessed it, and these boarding-schools are all flourishing. Belgium has 75 establishments conducted by the Brothers, comprising about 60 popular free schools, boarding-schools, official normal schools, and trade schools known as St. Luke schools. There are 32 houses in Lorraine, Luxembourg, Hungary, Bohemia, Calabria, Armenia, Bulgaria, and Rumania. Spain, including the Canaries and the Balearic Isles, has 100 houses of the institute, of which about 80 are popular gratuitous schools. In Italy there are 34 houses, 9 of which are in Rome. The Brothers have been established over fifty years in the Levant, Turkey, Syria, and Egypt. The 50 houses which they conduct are centres of Christian education and influence, and are liberally patronized by the people of these countries. The districts of England and Ireland comprises 25 houses, the Brothers for the most part being engaged in the "National" schools. In direct a college and an academy in Manchester, an industrial school; and in Waterford, a normal school or training college, the 200 students of which are King's scholars, who are paid for by a grant from the British Government. In India, the Brothers have large schools, most of which have upwards of 800 pupils. There are 50 houses in Rangoon, Penang, Moulmein, Mandalay, Singapore, Malacca, and Hong Kong in China, stand high in public estimation. They are all assisted by government grants.

SCHOOLS IN AMERICA.—The institute has already established 72 houses in Mexico, Cuba, Ecuador, Colombia, Panama, Argentina, and Chili. When Brother Facile was appointed visitor of North America in 1848, he found in Canada 5 houses, 50 Brothers and 3200 pupils in their schools. In 1908, the statistics show 45 houses, and nearly 20,000 pupils. The parochial schools are gratuitous, according to the constant tradition of the institute. The most important boarding-school is Mount St. Louis, Montreal. At the request of the Most Reverend Samuel Eccles, Bishop of Philadelphia, the Brothers were invited to settle there, and in 1846 they established the Catholic Industrial School, at Eddington, Pa.; the Drexmor, a home for working boys at Philadelphia; and the St. Emma Industrial and Agricultural College of Bellemont, Rock Castle, Va., for coloured boys. The district of New York is the most important in America. It comprises 38 houses, most of the Brothers of which are engaged in teaching parochial gratuitous schools. In addition to those they conduct Manhattan College, the De La Salle Institute, La Salle Academy, and Clason Point Military Academy, in New York City, and academies and high schools in other important cities. The New York Catholic Protonary, St. Philip's Home, and four orphan asylums and industrial schools under their care contain a population of 2,500 children.

The district of St. Louis and Memphis contains 19 houses, the majority of the Brothers of which are doing parochial school work. They conduct large colleges at St. Louis and Memphis, and important academies and high schools at Chienee, St. Paul, Minneapolis, Duluth, St. Joseph, and Santa Fé. They also have a large convent of the Sisters of the Ursae in Council Grove, Kansas, and at Grey Horse, Oklahoma. The district of San Francisco comprises 13 houses, and as in the other diocese...
tricts, the Brothers are largely engaged in parochial schools; but they also conduct St. Mary's College at Oakland, the Sacred Heart College at San Francisco, and the Christian Brothers' College at Sacramento, together with academies at Berkeley, Portland, Vancouver, and many of the Dublin and London Asylums, Marin Co., California, which contains 500 boys. The total number of pupils of the Brothers in the United States is thirty thousand. Their 94 houses are spread over 33 archdioceses and dioceses. It would not be possible in such an article as this to receive the memory of all the religious orders during the last six centuries might be immersed and permanently in this development of their institute. Among those who have been called to their reward, we may however mention the revered names of Brothers Faéle and Patrick, assistants to the superior general. 

**Intellectual Activity.** —The Brothers of the Christian Schools are too much absorbed by the work of teaching to devote themselves to the writing of books not of immediate utility in their schools. But, for the use of their pupils, they have written a large number of works on all the specialties in their courses of studies. Such works have been written in French, English, German, Italian, Spanish, Polish, Russian, Arabic, Annamite, etc. The Brothers' schoolbooks treat of the following subjects: Christian doctrine, reading, writing, arithmetic, geometry, algebra, trigonometry, mechanics, history, geography, agriculture, physics, chemistry, physiology, zoology, botany, geology, the moral sciences, music, logic, philosophy, pedagogy, methodology, drawing, shorthand, etc.

**Annales de l’institut des frères des écoles chrétiennes** (Paris, 1883); *Race historique sur la maison mère de l’institut des frères des écoles chrétiennes* (Paris, 1905); *Douze-Baumes* (1885); *Les nouvelles écoles à la Lantercote comparées avec l’enseignement des frères des écoles chrétiennes* (Paris, 1817); *La vérité sur l’enseignement des écoles catholiques* (Paris, 1817); *Lettres de l’institut des frères des écoles chrétiennes de France* (1872), *Lettres de l’institut des frères des écoles chrétiennes de France* (1872); *Rapport de l’académie française sur le prix de Rome* (1872); *American Catholic Quarterly Review* (October, 1875); *Revue des bibliothèques universitaires* (Paris, 1876); *Le livre de guerre à l’enseignement primaire* (Paris, 1883); *Chevalier* (1883) *Les frères des écoles chrétiennes et l’enseignement primaire* (Paris, 1883); *Lettres de l’institut des frères des écoles chrétiennes* (Montreal, 1883); *Chvalier* (1883). The annals of the institute are published annually, and contain a large number of articles on educational and religious subjects. 

In the seventeenth and eighteenth centuries, ecclesiastical historians and the writers of the almost countless monographs (some of them very valuable) concerning local churches, monasteries, ecclesiastical institutions, etc., were greatly aided by the officials of the archives, themselves often scholarly investigators. In this respect the papal archives, Augustin Theiner (1804–74) accomplished very far-reaching work, of great service to certain medieval countries and groups of countries, when he published, in many folio volumes, a multitude of documents relative to the ecclesiastical and civil history of Northern, Eastern, and Southern Europe, also a documentary treatise in three folio volumes on the temporal dominion of the pope and its administration. In the same period, i.e., from about 1850 to 1875, several other investigators, chiefly German and Austrian, in one way or another secured admittance to the papal archives. These events and other influences increased the desire of all scholars for the opening of this valuable repository of important historical documents. Although under Pius IX it became somewhat easier to obtain a permit for private research, the turbulent political conditions of his reign forbade anything like a general opening of the Vatican Archives.

**II. Opening of the Vatican Archives.** —"We have nothing to fear from the publication of documents," exclaimed Leo XIII., when on 20 June, 1879, he appointed the ecclesiastical historian, Joseph Herrenröther, "Cardinal Archivist of the Holy Roman Church" (Palemi, *Introtto ed Editi di Papa Niccolò III*, Rome, pp. xiv, xv; Friedensburg, "Das Kirchen-Preussische Historische Institut in Rom", Berlin, 1902, passim). By this act the pope opened the archives of the Vatican, more especially what are known as the secret archives, despite strong opposition from several quarters. It took until the beginning of 1881 to arrange all preliminaries, including the preparation of suitable quarters for the work, after which date the barriers were removed, and then, with a few exceptions, had shut out all investigators. The use of these treasures was at length regularised by a papal decree (regolamento) of 1 May, 1884, whereby this important matter was finally removed from the province of discussion. In the course of the past century, to the publication of Cardinals, Pitra, De Luca, and Herrenröther, his now famous edifice on historical studies (18 Aug., 1883).
CHIEFS.—Hitherto very little was known of the contents of this vast treasury; now its great wealth came to be widely appreciated.—Briefs, Bulls, petitions, department records, reports of nuncios and other reports, diaries, documentary collections, privileges, legal titles, the most miscellaneous kind, etc. Progress was at first not known, and work was undertaken, but for the first time in history, the archives could be planned until the workers had familiarized themselves with the material at hand. The over-hasty treatment that, in the beginning, the thirteenth century material received, revealed quite clearly how much there was to learn before the archives could be understood; and gradually, however, a good order was introduced in all kinds of research work, in which task notable services were rendered by the historical institutes, which from time to time were established in close relation to the Vatican Archives. Research work in these archives may be divided into individual and collective, or general and special. Individual researches are made by individual scholars, while collective work is conducted by several who have either united for that purpose, or belong permanently to some association. General researches and the larger outlines of ecclesiastical history, and the works of the historians and archivists who have special problems, more or less far-reaching in importance. Both methods may be combined, objectively and subjectively: an individual investigator may work at a general theme, while an association may take up the study of a restricted or specific problem. The results of their historical study are to be found in periodicals, essays, and books, also disseminated in large historical collections devoted to other classes of historical material, and containing the results of other investigations, e.g. the "Monumenta Germaniae Historica." A study of the published material exhibits a long series of original documents, narratives based on copious documentary material, and occasionally narratives based on information obtained in the archives, but unaccompanied by the documents or by reference to them.

IV. FIELD OF INVESTIGATION.—While it is but natural that the study of documents should be chiefly done in the Vatican archives, most investigators also carry on work in the important collection of printed books known as the Vatican Library. In October, 1892, there was opened in connexion with the archives and the library a consultation library, the "Biblioteca del Deparimento Historico e Bibliografico," the only library of this kind in the world. At the opening of the consultation library, the Archives and Library of the Vatican were in excellent condition, owing to the care and attention given to them by previous administrators. The result of this careful supervision is evident in every department of the archives, and in the quality of the books and manuscripts. The archives themselves are so organized that nearly every student of history may discover there something of special importance in his own province. The numerous other archives and manuscript-collections of Rome are also open, as a rule, to the student; indeed, few workers limit themselves exclusively to Vatican materials. Moreover, studies begun in the Vatican are often supplemented by scientific excursions, and the students often travel in Italy, on the study trip, or during some vacation period; such excursions have at times resulted in surprising discoveries. An exhaustive examination of Italian archives and libraries leads occasionally to a larger view of the subject than was originally intended by the investigator, for whom in this way new questions of importance arise, and the solution of the problem becomes highly desirable. Experience, therefore, and the detailed study of the numerous repertories, indexes, and inventories of manuscripts, have made it necessary to organize permanently the scientific historical researches carried on in the interest of any given country. This means a saving of money and labour; in this way also more substantial achievements can be hoped for than from purely individual research. Consequently, institutes for historical research were soon founded in Rome, somewhat on the plan of the earlier archaeological societies. While the opening of such institutes is a noble objective of any government, private associations have made many sacrifices in the same direction and attained with success the institutes that best suit the requirements of the times. The state institutes investigate all that pertains to national relations or intercourse (religion, politics, economics, science, or art) with the Curia, with Rome, or, for that matter, with Italy. Many of these institutes do not attempt to go further, and their field is generally and comprehensively. Others devote themselves to similar researches, but do not neglect general questions of interest to universal history, profane and ecclesiastical, or to the history of medieval culture. Of course, only the larger institutes, with many workers at their disposal, can satisfactorily undertake problems of this nature.

V. HISTORICAL INSTITUTES AT THE VATICAN ARCHIVES.—England.—At the end of 1876 the Rev. Joseph Stevenson, who was employed by the English Public Record Office to obtain transcripts of documents of historical importance in the Vatican archives, recommended and was approved by Cardinal Manning's recommendation, appointed the late Mr. W. H. Bliss as his successor. Though for years Stevenson and Bliss conducted their researches alone, in the last decade other English investigators, chiefly younger men, had been detailed to Rome by the home Government to cooperate with Bliss, and hasten the progress of his work. Bliss died very suddenly of pneumonia, at an advanced age, 8 March, 1909, and though his place has not yet been filled by the English Government, English investigators continue the work, under direction of the Record Office; for any searching investigation of the documents, the study of the English archives, they are the records of Englishmen in which the Roman Curia have always been interested, and in which the English Government has a special interest. The archives contain documents of a very early period, many of which date from the time of the first one, covering 1577, 1878, and 1879, is found under the year 1880. In addition to the medieval period, numerous extract and transcripts of political nature were made from sixteenth- and seventeenth- century documents, transmitted to the Record Office and partly used in the "Calendars of State Papers." France.—The Ecole Francaise de Rome, originally one with that of Athens, employs almost constantly historical investigators at the Grande Archivio of Naples; they devote themselves to the documents of the Angevin dynasty. This institute has an organ of its own, "Le Monumente d'archeologie et d'histoire," which in whose pages are found not only historical studies properly so called, but also papers on the history of archaeology and art. The institute has its home in the Palazzo Farnese, where its director lives, and where a rich library is housed. It was founded in 1873, and during the reigns of Pius IX, long before the opening of the archives to the general public, was the result of the solution of the problem of the papal Archives, the editing of the papal "Regesta" of the thirteenth century, a gigantic and yet unfinished task. Scholars of international reputation have figured among its directors; its present head is Monsignor Louis Duchesne, whose monumental work, the "Liber Pontificalis," and numerous other investigations, place him in the forefront of Church historians. The "Bibliotheque des Ecoles Francaises d'Athenes"
et de Rome”, is made up of lengthy monographs by pupils of the Ecole, treating of divers subjects connected with their studies in the Vatican archives and library. The papal "Regesta" of the thirteenth century, the "Liber Pontificalis", and the "Liber Censuum" (Fabre-Duchene) form a second series of historical publications, culminating thereby in the last school. A third series is made up of documents selected from the fourteenth-century papal "Regesta", and is entitled "Lettres de papes d’Avignon se rapportant à la France". The slow progress of so many learned enterprises is a matter of general regret, not least by the "Peppe" employed therein, though no one can deny the very great utility of these scholarly studies and researches for the history of the papacy and its international relations. The chaplains of the French National Institute of St.-Louis des Français have recently undertaken a work closely related to that of the Ecole Française, the publication in concise regesta-like form of all letters of the Avignon popes. Gratifying progress is being made with the "Regesta" of John XXII. The review known as the "Annales de St.-Louis des Français", whose contributions to ecclesiastical history were noteworthy in the first important works. Learned historical nature have been published by the chaplains of this institute, the results of their diligent researches in the Vatican archives.

German Catholic Institutes.—The chaplains of the German national institute of Santa Maria di Campc Santo Teutonico were among the first to profit by the opening of the Vatican archives for the conduct of scientific research in the field of German ecclesiastical history. Monsignor de Waal, director of the institute, founded the "Römische Quartalschrift für Archäologie und Kirchengesichte" as a centre for historical research more modest and limited in scope, and to men of special capabilities in the field. To the students of history at the Campo Santo is owing the founding, at Rome, of the Göres Society Historical Institute. A this institute, established after long hesitation, sufficiently explained by the slender resources of the society, is now a credit to its founders (besides regular reports, begun in 1890), on the work of this institute, and filed in the records of the society, see Cardona, "Die Göres Gesellschaft, 1876-1901", Cologne, 1901, pp. 65-73). In 1900 a new department was added and placed under the guidance of W. Monika, for the study of Christian archaeology and the history of Christian art. The Roman laboratories of the Göres Society deal chiefly with nunciate reports, the administration records of the Curia since 1300, and the Acts of the Council of Trent. Other publications, more or less broad in scope, are published regularly in the "Historisches Jahrbuch", among its "Quellen und Forschungen", or in other organs of the Göres Society. The twelve stout volumes in which this institute proposes to edit exhaustively the Acts and records of the Council of Trent, represent one of the most difficult and important tasks which could be set before a body of scientists from the Vatican archives. The corresponding investigation of medieval papal administration and financial records, which the institute investigates in cooperation with the Austrian Leo Socie, opens up a chief source of information for the history of the Curia in the fourteenth and fifteenth centuries. The publications issued by the private association surpass greatly those of many governmental institutes. The Göres Society Institute maintains at Rome no library of its own, but aids efficiently in the growth of the fine library at the Campo Santo Teutonico, near the Vatican. The Leo Society supports the long-tried investigator, who devotes his time to publications in the study of ecclesiastical records of the later Middle Ages. The present director of the Göres Society Institute is Dr. Stephan Ehres.

Austria.—The Austrian institute (Institutum Aus triaco di studi storici), established by Theodor von Sickel, and now directed by Professor von Pastor, has existed since 1883. It affords young historical workers the means of familiarizing themselves during a brief sojourn at Rome with the rich manuscript materials found there, and in this way to make contributions to the production of monographs of value. It co-operates in the publication of the nunciate reports, and contemplates the publication of the correspondence of the legates and the ambassadors at the Council of Trent. Among the publications of this institute are Sickel's "Pape Ottone l'ultimo"; his edition of the "Liber Diurms"; and his noteworthy "Römische Berichte" (Roman reports). Several valuable studies by this institute have appeared in the "Mittheilungen des österreichischen Institutes für Geschichtsforschung", dealing with the work of the medieval papal chancery, while Ottenhals's "Chancery Rules" and Tangl's "Chancery Regulations" are constantly referred to in every recent work on the Middle Ages. The numerous historical commissions which were sent from Bohemia to Rome (concerning which, see below) may be considered as auxiliaries of the Austrian Institute.

Prussia.—A short history of the founding of the Prussian historical institute was published by Frieden burg (Berlin, Academy of Sciences). The project dates back to 1883, but it was not until May of 1888 that Konrad Schottmüller succeeded in opening a Prussian Historical Bureau that began modestly enough, but soon developed into the actual Prussian Institute, reorganized (12 November, 1902) on a materially enlarged scale, and now the most important of all historical institutes at Rome, owing largely to the efforts of its present director, Professor Kehr. In addition to the general work of historical investigation, the institute has special departments for the history of art and for patrician and Biblical research. Besides its own publication, "Quellen und Forschungen aus italienischen Archiven", the institute issues a series of German nunciate reports (eleven volumes since 1897). The Library of the Institute, besides extensive monographs on various subjects, has published the useful "Repertorium Germanicum", and, in cooperation with the Instituto Storico Italiano, the "Registrum chartarum Italie", a series of independent volumes. These researches take in Italian, German, French, English, and Spanish archives; Austria and Switzerland, and occasionally, the library of the institute ranks, with that of the Palazzo Farnese, among the best historical libraries in Rome.

Hungary.—The "Hungaricorum historiarum Collegium Romanum", though no longer in existence, owed its inception in 1896 to the efforts of Count von Fraknó, and published under his direction (since 1897) the "Monumenta Vaticana historiarum regni Hungariae illustrantia", whose two series in ten folio volumes are a lasting tribute to the munificence of Fraknó. Other noteworthy monographs based on Roman documents are continually being issued, and illustrating the history of Hungary must be credited to this institute.

Belgium.—The "Institut historique Belge à Rome" was founded in December, 1904. The minister of state defined its purpose to be the searching of Italian archives, and especially those of the Vatican, for historical material bearing on the ecclesiastical and profane history, classical, palaeography, archaeology, and the history of art.

It's first director was Dom Ursmer Berlière, of the
Abbey of Maredsous (1904–1907); his successor is Dr. Gottfried Kurch, professor emeritus at the University of Liège. The institute has published thus far two volumes of "Analecta Vaticano-Belgica": I, "Suppliques de Clément VI" (1342–1332), by Berlière (1332); II, "Suppliques d'Innocent VI" (1353–1362), by Berlière; I, "Les lettres de Jean XXII" (1334–1342), by Fieren. Two other volumes are under way. By his...
(f) selection from the petition files of all requests growing out of the said system; (g) reports of bishops on the state of their dioceses, and consistorial processes; (h) investigation into the influence of the Inquisition, to determine how far the respective local authorities were influenced by the Curia; (i) inquiry into the taxes, lists of all the money and goods for ecclesiastical purposes, and into the ways and means of collecting these taxes. For certain dioceses, ecclesiastical provinces, regions, or entire countries, all these data, together with other items of information, have in the course of time been gathered, and published by the local or national associations. They have also, in a general way, been made generally accessible by the publication, as a whole, of the respective papal registers (see REGISTERS, PAPAL), e. g., the "Regesta" publications of the French institute, and the cameraled (papal fiscal) reports of the Götter and Leo societies. "Chartularia," or collections of papal Bullae, Merkle, published not only for Westphalia, Eastern and Western Prussia, Utrecht, Bohemia, Salzburg, Aqui- lea, but also for Denmark, Poland, Switzerland, Great Britain, Ireland, and Germany (Repertorium Germanicum), is not to speak of other countries. Many a statute book of a medievalened has been richly illustrated by various investigators, e. g., Gollner, in the records of the "Penitentiarie," Kirsch and Baumgarten on the finances (officials, administration) of the College of Cardinals; Baumgarten on the respective offices of the vice-chancellor and the "Bul- lares," the residence-quarters of the Curia, its Cur- eares or messengers; Watel, Goller, and Schäfer on the finance bureau of the Curia; von Ottenthal on the secretaries and the "Chancery rules," Tangl and Erer respectively on the "Chancery regulations" and the "Liber Censurarii:" Kehr, Berlière, and Rieder on the petition files (Gibell supplices), etc. The stud- ies are not to be limited to the medieval period; investigations in the remarkable editions of the "Liber Pontificalis" by Duchesne; the "Liber Censuralis" by Duchesne-Fabre; the "Italia Pontificia" by Kehr; the "Hierarchia Catholica Medii Ævi" by Edel; the "Catalogue of Cardinals" by Cristofori; the "Acts of the Council of Trent" by Edel and Buechbell, not to speak of numerous other valuable works. As to the third subdivision, i. e., the purely political, or politico-ecclesiastical activities of the pope, no clearly defined distinction can be made, either in the Middle Ages or in more modern times, between ecclesiastical and political activities and the exercise of purely ecclesiastical authority; their numerous manifestations may be studied in the publications briefly described above. Abundant information is to be found in the publications of the papal "Regesta" and the "Camera" or treasury records. We learn from these sources besides the history of the Roman Curia, e. g., the population of various kingdoms, grants of titles to kings and rulers for political purposes, etc. The nunciature reports are rich in this information.

In a general way the Vatican archives and these new historical Roman institutes have been particu- larly fruitful in the study of the ecclesiastic-religious relations of individual dioceses, countries, and peoples with the head of the Church and its central administration. So numerous have been the results of investigation published along these lines, that it has hitherto been impracticable to prepare an exhaustive bibliography of the works based on studies in the Vatican archives. Melampo and Ranuzzi, following in the footsteps of Meister, have recently published a very useful, but not at all exhaustive, list of all the books and essays of this kind which had appeared up to 1900: "Saggio bibliogra- frofico dei lavori eseguiti nell' Archivio Vaticano" (Rome, 1909). (See VATICAN, sub-title Archives, Biblialy; and BULLARIUM.)

Most of the information on the Roman historical institutes is as yet scattered in essays and book prefaces. Besides the works of Friedrich and Brüm above referred to, see Has- sins, The Vatican Archives in the Middle Ages (1890), reprinted in Catholic Univ. Bull. (April, 1897); C. C. Vincenzo, De la création d'une école belge à Rome, Schelker in Bevorderden, Kochelmann's Handbuch, etc, e. v., Institute, His- toriote, and the financial reports of the various institutes in their respective official publications. Among the accounts published by the various historical commissions the best have always been those of the Poles and the Russians, and are to be found in MELAMPO-RANUZZI.

PAUL M. BAUMGARTEN.

Institution, Canonical. (Lat. institutum, from in- stituere, to establish), in its widest significance denotes any act or establishment, with canonical authority, creating an ecclesiastical benefice (Regula prima juris, in VI, 3). In its strictest sense the word denotes the collation of an ecclesiastical benefice by a legitimate authority, on the presentation of a candidate by a third person (institutio tituli collocation). The term is also used also for the actual institution, collation, or creation (institutio corporalis), and for the approbation requisite for the exercising of the ecclesiastical minis- try when an authority inferior to the bishop has power to confer an ecclesiastical benefice (institutio auctorisabill). (Cf. gloss on "Regula prima juris," in VI, 3 et al. v. "Beneficium".)

I. The institutio tituli collativa (that which gives the title), sometimes also called verbals (which may be by word of mouth or by writing, as distinguished from the institutio corporalis, or realis), is the act by which an ecclesiastical authority confers a benefice on a can- didate presented by a third person enjoying the right of presentation. This occurs in the case of benefices subject to the right of patronage (jus patronatus), one of the principal prerogatives of which is the right of presenting to the bishop a titular for a vacant benefice. It also occurs when, in virtue of a privilege or of a con- cordat, a chapter, a sovereign, or a government has the right to present to the bishop the titular of a benefice or of an important ecclesiastical office. If the pope accepts the person presented, he bestows the institutio canononis on the titular. The effect of this act is to give the candidate who has been presented (and who till then had only a jus ad rem, i. e. the right to be provided with the benefice) a jus in re or in beneficio, i. e. the right of exercising the functions connected with the benefice and of receiving revenues accruing from it. The right of institution to major benefices rests in the pope, but in the case of minor benefices it may belong to a bishop and his vicar-general, to a chapter. The right is exercised on the occasion of a foundation title dating from before the Council of Trent (Sess. XIV, "de Ref.," c. xii), or of a privilege, or of prelection. In all these cases the bishop has the right to examine the candidate, excluding candidates presented by universities recognized canonically and the jurisdiction of which has been transferred to the bishop, or by another person, or by a juridic person of a foundation, or by another person, or by a juridic person of a foundation, or by another person, or by a juridic person of a foundation. (Sess. XXV, "de Ref.," c. xi); even this exception does not apply to parishes (Council of Trent, Sess. XXIV, "de Ref.," c. xxvii). Institution ought to be be- stowed within two months following the presenta- tion, in the case of parish churches (Constitution of Pius V, "In conferendis," 16 March, 1567), but canon law has not specified any time limit for other benefices. However, if the bishop refuses to grant institution within the time appointed by a supe-
rior authority, the latter can make the grant itself (see
Juw. Patronatus).
II. The instituto corporalis, also called investitura,
or installatio, is the putting of a titular in effective pos-
session of his benefice. Whereas canon law permits
a bishop to put himself in possession of his benefi-
ce (see Enthronization), in the case of minor benefi-
ces, the actual investiture is by a competent authority.
The bishop may punish anyone who takes possession of a benefice on his own authority, and the violent occupation of a benefice in possession of another ecclesiastical entails on the guilty party the loss of all right to that benefice. The right of investiture is quite analogous to archiepiscopal, but is now resorted to by the bishop, vicar-general, or the vicar, generally the ordinary dean (decanus christianitatis or fora-
neus). It is performed with certain symbolic cere-
monies, determined by local usage or by diocesan
statutes, such, for instance, as a solemn entry into the
parish and into the church, the handing over of the
church keys, a putting in possession of the high altar
of the church, the pulpits, confessional, etc. In some
countries there is a double installation the first by
the bishop or vicar-general, either by mere word of
mouth, or by some symbolic ceremony, as, for in-
stance, presenting a biretta; the second, which is then
a simple taking possession in the parish and con-
secrating in the solemn entry and other formalities
dependent on local custom. In some places custom has
even done away with the instituto corporalis properly
so called; the rights inherent to the putting in posses-
sion are acquired by the new titular to the benefice
by a simple visit to the benefice, for instance, to the
parish, with the intention of taking possession thereof,
provided such visit is made with the authority of the
bishop, thus precluding the possibility of self-inves-
titure. When the pope names the titular to a benefice,
lie always mentions those who are to put the benefi-
cies in possession.
The following are the effects of the instituto cor-
poralis: (1) From the moment he is put in possession
the beneficiary receives the revenues of his benefice.
(2) He enjoys all the rights resulting from the own-
ership and the possession of the benefice, and, in particu-
larly, from the right of taking possession in the parish
in order that the time necessary for a prescriptive right to the benefice counts. (3) The possessor can invoke in his favour the provisions of rules 35 and 36 of the Roman Chancery de annali,
and de triennali possessione. This privilege has lost
much of its importance since the conferring of ben-
efices on the initiative of local diocesan times. Formerly,
on account of various privileges, and the constant intervention of the Holy See in the collation of benefices, several ecclesiastics were not infrequently named to the same benefice. Should one of them happen to have been in possession of the benefice for a year, it would involve the right of the rival claimant to prove that the possessor had no right to the benefice; moreover, the latter was obliged to begin his suit within six months after his nomination to the benefice by the pope, and the trial was to be concluded within a year counting from the day when the actual possession was transferred to the courts (rule 36 of the Chan-
cery). These principles are still in force. The trienni-
nal possession guaranteed the benefice to the actual
incumbent in all actions in petitorio or in possess-
sorio to obtain a benefice brought by any claimant
whatsoever (rule 36 of the Chancery). (4) The
peaceful possession of a benefice entails ipso facto the
domestic peace and with the benefice, for a benefice
is a titular, but which would be incompatible with the
one he holds. (5) It is only from the day when bish-
ops and parish priests enter into possession of their
benefices that they can validly assist at marriages
celebrated in the diocese or in the parish (Decree Ne
temere, 2 August, 1907). Furthermore, in some dioceses the statutes declare invalid any exercise of

the powers of jurisdiction attached to a benefice, before
the actual installation in the benefice.
III. The instituto auctorizabilis is nothing but an
approbation required for the validity of acts of juris-
diction, granted by the bishop to a beneficiary in
view of his undertaking the care of souls (cura om-
marum). It is an act of the same nature as the ap-
probation which a bishop gives members of a religious
order for hearing confessions of persons not subject
to their authority, and without which the absolution
would be invalid; but there is this difference that in
the case of the instituto auctorizabilis the approbation
relates to the exercise of the ministerial functions
taken as a whole. It is the missio canonicorum indi-
cessible for the vicar-general or the vicar, and the
power of jurisdiction. This institution, which is
reserved to the bishop or his vicar-general and to those
possessing a quasi-episcopal jurisdiction, is required
when the instituto tituli collatis given by the bishop himself implies the
instituto auctorizabilis, which, therefore, needs not to
be given by a special act.

Intellect (Lat. intelligere—inter and legere—to
choose between, to discern; Gr. noēr; Ger. Vernunft,
Verstand; Fr. intellect; Ital. intelletto), the faculty of
thought. As understood in Catholic philosophical
language it signifies the higher, spiritual, cognitive
power of the soul. It is the mental faculty by action by sense, but transcends the latter in range.
Amongst its functions are attention, conception, judg-
ment, reasoning, reflection, and self-consciousness. All
these modes of activity exhibit a distinctly supra-
sensuous element, and reveal a cognitive faculty of a
higher order of certain mental actions and forms.
Harmony, therefore, with Catholic usage, we reserve
the terms intellect, intelligence, and intellectual to this
higher power and its operations, although many
modern psychologists are wont, with much resulting
confusion, to extend the application of these terms so
as also to include in them the functions of the animal
intellect. By thus restricting the use of these terms, the
inaccuracy of such phrases as “animal intelligence” is
avoided. Before such language may be legitimately
employed, it should be shown that the lower animals
are endowed with genuinely rational faculties, funda-
mentally one in kind with those of man. Catholic
philosophers, however they differ on minor points, as
a general body have held that intellect is a spiritual
faculty depending extrinsically, but not intrinsically,
on the bodily organism. The importance of a right
theory of intellect is twofold: on account of its bear-
ing on epistemology, or the doctrine of knowledge;
and because of its connexion with the question of the
spirituality of the soul.

History.—The view that the cognitive powers of the
mind, or faculties of knowledge, are of a double order
—the one lower, grosser, more intimately depending
on bodily organs, the other higher and of a more
abstract and spiritual nature—appeared very early,
though at first confusedly, in Greek thought. It was
in connexion with cosmological, rather than psy-
chological, theories that the difference between sen-
suous and rational knowledge was first emphasized.
On the one hand there seems to be constant change,
and, on the other hand, permanence in the world that
is revealed to us. The question: How is the apparent
conflict to be reconciled? or, Which is the true representation? forced itself on the speculative mind. Heraclitus insists on the reality of the changeable. All things are in motion, and Parmenides, Zeno, and the Eleatics argued that only the unchangeable being truly is. δεικτής, "sense," is the faculty by which changing phenomena are apprehended; ροώς, "thought," in" reason," "intellect," presents to us permanent, abiding being. The Sophists, with a strong appeal to the modern sceptical consequences of the apparent contradiction between the one and the many, the permanent and the changing, and emphasized the part contributed by the mind in knowledge. For Protagoras, "Man is the measure of all things", whilst with Gorgias the conclusion is: "Nothing is; nothing can be known; nothing can be expressed in speech". Socrates held that truth was innate in the mind antecedent to sensuous experience, but his chief contribution to the theory of knowledge was his insistence on the importance of the general concept or definition. It was Plato, however, who first realized the full significance of the classic concept of sensuous experience for the philosophy of the intellect; he also first explained the origin of the problem. The universe of being, as reported by reason, is one, eternal, immutable; as revealed by sense, it is a series of multiple changing phenomena. We apprehend the ῥουτική, the "intellectual world", two: ροώς, "intuitive reason", which reaches the ideas (see Idea); and λγις, "discursive reason", which by its proper process, viz. τωτισμοσ, "demonstration", attains only to διδακή, "conception". Plato thus set up two distinct intellectual faculties attaining to different sets of objects. The world of ideas is for Plato the real world; that of sense is only a poor shadowy imitation. Aristotle's doctrine on the intellect in its main outline is clear. The soul is possessed of two orders of cognitive faculty, τό ἀληθοειδές, "sensuous cognition", and τό διαιρετικός, "rational cognition". The sensuous faculty includes ροώς, "imagination", and μνήμη, "memory". The faculty of rational cognition includes ροώς and διδακή. These, however, are not so much two faculties as two functions of the same power. They roughly correspond to intellect and ratiocinative reason. For intellect the action is present in the sensuous faculty. The function of the intellect is to divest the object presented by sense of its material and individualizing conditions, and apprehend the universal and intelligible form embodied in the concrete physical reality. The outcome of the process is the generalization in the intellect of an intellectual form or representation of the intelligible being of the object (ἐπόμενος, ροώς). This act constitutes the intellect cognizant of the object in its universal nature. In this process intellect appears in a double character. On the one hand it exhibits itself as an active agent, in that it operates on the object presented by the sensuous faculty, and rendering it intelligible. On the other hand, as subject of the intellectual representation evolved, it manifests passivity, modifiability, and susceptibility to the reception of different forms. There is thus revealed in Aristotle's theory of intellectual cognition an active intellect (ἐπόμενος) and a passive intellect (ροώς ροώς). But how the activity and the passivity, what precisely is the nature of the distinction and relation between them, is one of the most irritatingly obscure points in the whole of Aristotle's works. The locus classicus is his "De Anima", III, v, where the subject is briefly dealt with. As the active intellect actuates the passive, it bears to it a relation similar to that of form to matter in physical bodies. The active intellect "illuminates" the object of sense, considering it intuitively as conceived as the result of the activity of light. It is pure energy without any potentiality, and its activity is continuous. It is separate, immortal, and eternal. The passive intellect, on the other hand, receives the forms abstracted by the active intellect and ideally becomes the object. The whole process, whose originating cause from the beginning are hopelessly divided as to Aristotle's own view on the nature of the ροώς ροώς (see Hammond). Theophrastus, who succeeded Aristotle as scholiarch of the Lyceum, accepted the two-fold intellect, but was unable to explain it. The great commentator, Alexander of Aphrodisias, interprets the ροώς ροώς as the activity of the Divine Intelligence. This view was adopted by many of the Arabian philosophers of the Middle Ages, who conceived it in a pantheistic sense. For many of them the active intellect is one universal reason illuminating all men. With Avicenna the passive intellect alone is individual. Avicenna confusing agens and intellectus possibilis as separate from the individual soul and as one in all men. The Schoolmen generally controverted the Arabian theories. Albertus Magnus and St. Thomas interpret intellectus agens and possibilis as merely distinct faculties or powers of the universal intellect. Thomas understands "separate" (χωριστά) and "pure" or "unmixed" (ἄξωτα) to signify that the intellect is distinct from matter and incorporeal. Interpreting Aristotle thus benevolently, and developing his doctrine, Aquinas teaches that the function of the active intellect is an abstractive operation on the data supplied by the sensuous faculties to form the species intelligibles in the intellectus possibilis. The intellectus possibilis thus actuated cognizes what is intelligible in the object. The act of cognition is the concept, or verbum mentale, by which is apprehended the universal nature or essence of the object prescinded from its individualizing conditions. The main features of the Aristotelian doctrine of intellect, and of its essential distinction from the faculty of sensuous cognition, were adhered to by the general body of the Schoolmen. Only the time we reach modern philosophy, especially in England, the radical distinction between the two orders of faculties begins to be lost sight of. Descartes, defending the spirituality of the soul, naturally supposes the intellect to be a spiritual faculty. Leibniz insists on both the spirituality and the separate efficiency of this faculty. As a consequence, the "Nil est in intellectu quod non prius fuerit in sensu", he adds with much force, "nisi intellectus ipse", and urges spontaneity and innate activity as characteristics of the monad. From the break with Scholasticism, however, English philosophy drifted towards Sensationism and Materialism, subsequently influencing France and other countries in the same direction; as a consequence, the old conception of intellect as a spiritual faculty of the soul, and as a cognitive activity by which the universal, necessary, and immutable elements in knowledge are apprehended, was almost entirely lost. For Hobbes the mind is material, and all knowledge is ultimately sensuous. Locke's attack on innate ideas and intuitive knowledge, his reduction of various forms of intellectual cognition to complex amalgams of so-called simple ideas originating in sense perception, and his representation of the mind as a passive tabula rasa, in spite of his undeniable philosophical acumen and the discursive reason, paved the way for all modern Sensationism and Phenomenalism. Condillac, omitting Locke's "reflection", resolved all intellectual knowledge into Sensationism pure and simple. Hume, analysing all mental products into
sensuous impressions, vivid or faint, plus association due to custom, developed the sceptical consequences involved in Locke’s conception of the intellectual faculty, and carried philosophy back to the old conclusions of the Greek Sensationists and Sophists, but reinforced by a more subtle and acute psychology. All the main features of Hume’s psychology have been adopted by the whole Association of England, by the English, and by materialistic scientists so far as they have any philosophy or psychology at all. The essential distinction between intellect, or rational activity, and sens has in fact been completely lost sight of, and Scepticism and Agnosticism have logically followed. Kant recognized a distinction between sensation and the intellect, but maintained that the intellect is a different way from the old Aristotelian view, and looking on it as purely subjective, his system was developed into an idealism and scepticism differing in kind from that of Hume, but not very much more satisfactory. Still the neo-Kantian and Hegelian movement, which developed in Great Britain during the last quarter of the nineteenth century, has contributed much towards the reawakening of the recognition of the intellectual, or rational, element in all knowledge.

Fifth, Common Doctrine.—The teaching of Aristotle on intellect, as developed by Albertus Magnus and St. Thomas, has become, as we have said, in its main features the common doctrine of Catholic philosophers. We shall state it in brief outline. (1) Intellect is a cognitive faculty essentially different from sense and of a supra-organic order; that is, it is not exerted by, or intrinsically dependent on, a bodily organ, as sensation is. This proposition is proved by psychological analysis and study of the chief functions of intellect. These are conception, judgment, reasoning, reflection, and self-consciousness. All these activities involve elements essentially different from sensuous consciousness. In conception the mind forms universal ideas. These are different in kind from sensations and sensuous images. These latter are concrete and individual, truly representative of only one object, whilst the universal idea will apply with equal truth to any object of the class. This universal, being a representation of the likeness of nature, whilst the sensuous image changes from moment to moment. Thus the concept or universal idea of ‘gold’, or ‘triangle’, will with equal justice stand for any specimen, but the image represents truly only one individual. The sensuous faculty can be used in knowledge only for the moral activity only whatever it be, exists in a concrete, individualized form. In judgment the mind perceives the identity or discordance of two concepts. In reasoning it apprehends the logical nexus between conclusion and premises. In reflection and self-consciousness it turns back on itself in such a manner that there is perfect identity between the knowing subject and the subject known. But all these forms of consciousness are incompatible with the notion of a sensuous faculty, or one exerted by means of a bodily organ. The Sensationist psychologists, from Berkeley onwards, were unanimous in maintaining that the mind cannot form universal or abstract ideas. This would be true were the intellect not a spiritual faculty essentially distinct from sense. The simple fact is that they invariably confounded the image of the imagination, which is individualized, with the concept, or idea, of the intellect. When we employ universal terms in any description, they must have a meaning. The thought by which that meaning is apprehended in the mind is a universal idea.

The intellect presupposes sensation and operates on the materials supplied by the sensuous faculties. The beginning of consciousness with the infant is in sensation. This is at first felt, most probably, in a vague and indefinite form. But repetition of particular sensations and experiences of other sense data with them render their apprehension more and more definite as time goes on. Groups of sensations of different senses are aroused by particular objects and become united by the force of contiguous association. The awakening of any one of the group calls up the images of the others. The perception is thus being perfected. At a certain stage in the process of development the higher power of intellect begins to be evoked into activity, at first feebly and dimly. In the beginning the intellectual apprehension, like the sensations which preceded, is extremely vague. Its first acts are probably the cognition of objects revealed through the sense data, and the formation of ideas, such as ‘extended-thing’, ‘moving-thing’, ‘pressing-thing’, and the like. It takes in objects as wholes, before discriminating their parts. Repetition and variation of sense-impressions stimulates and sharpens attention. Pleasure or pain evokes interest, and the intellect concentrates on part of the sensuous experience, and the process of abstraction begins. Certain attributes are laid hold of, to the omission of others. Comparison and discrimination are also called into action, and the more accurate and perfect elaboration of concepts now proceeds rapidly. The notions of substances and accidents, of whole and part, and changing, are evolved with increasing distinctness. Generalization follows quickly upon abstraction. When an attribute or an object has been singled out and recognized as a thing distinct from its surroundings, an act of reflection renders the mind aware of the object as capable of indefinite realization and multiplication in other circumstances, and we have now the formally reflex universal idea.

The further activity of the intellect is fundamentally the same in kind, comparing, identifying, or discriminating. The activity of rationalization is merely a restatement of the judicial activity. The final stage in the elaboration of a concept is reached when it is embodied for further use in a general name. Words presuppose intellectual ideas, but register them and render them permanent. The intellect is also distinguished, according to its functions, as speculative or practical, and in this respect part of the sensuous fundamental relations of ideas, it is called speculative; when considering harmony with action, it is termed practical. The faculty, however, is the same in both cases. The faculty of conscience is in fact merely the practical intellect, or the intellect passing judgment on the moral stimulus which actuates the faculty of truth and falsity, and in its judicial acts it at the same time affirms the union of subject and predicate and the agreement between its own representation and the objective reality. Intellect also exhibits itself in the higher form of memory when there is conscious recognition of identity between the present and the past. To the intellect is due also the conception of self and personal identity. The fundamental difficulty with the whole Sensationist school, from Hume to Mill, in regard to the recognition of personality, is due to their ignoring the true nature of the faculty of intellect. Were there no such higher rational faculty in the mind, then the mind could never be known as anything more than a series of mental states. It is the intellect which enables the mind to apprehend itself as a unity, or unitary being. The ideas of the infinite, of space, time, and causality are all similarly the product of intellectual activity, being the formation of ideas by sense, and exercising a power of intuition, abstraction, identification, and discrimination. It is, accordingly, the absence of an adequate conception of intellect which has rendered the treatment of all these mental functions so defective in the English psychology of the last century.

MICHAEL MAHER.

Intendencia Oriental y Llanos de San Martin, VICARIATE APOSTOLIC OF, in the province of Saint Martin, Colombia, South America, created 24 March, 1908, and entrusted to the Society of Mary. In place of this vicariate there were formerly two prefectures Apostolic, one created 23 June, 1903, and the other on 8 January, 1904, after negotiations (dating from 1902) between the Holy See and the Colombian Government for the evangelization of these vast provinces. Surrounded by the Cordilleras, and watered by the Batatas, Garagao, Guaviro, Humades, Meta, and Orinoco Rivers, the territory is still inhabited largely by the uncivilized natives, in number about 50,000, of whom scarcely 10,000 have been baptized.

U. BENIGN.

Intention (Lat. intendere, to stretch toward, to aim at) is an act of the will by which that faculty efficaciously desires to reach an end by employing the means. It is apparent from this notion that there is a sharply defined difference between intention and volition or even velleity. In the first instance there is a concentration of the will to the point of resolve which is wholly lacking in the others. With the purpose of determining the value of an action, it is customary to distinguish various sorts of intentions which could have prompted it.

First, there is the actual intention, operating, manifest presence of the intellect. Secondly, there is the virtual intention. Its force is borrowed entirely from a prior volition which is accounted as containing in some result produced by it. In other words, the virtual intention is not a present act of the will, but rather a power (virtus) come about as an effect of a former act, and now at work for the same object. This is why there is nothing wanting in a virtual, as contrasted with an actual, intention is not of course the element of will, but rather the attention of the intellect, and that particularly of the reflex kind. So, for example, a person having made up his mind to undertake a journey may during its progress make contingent upon it a fully probable thought. He will nevertheless be said to have all the while the virtual intention of reaching his destination. Thirdly, an habitual intention is one that once actually existed, but of the present continuance of which there is no positive trace; the most that can be said of it is that it has never been retracted. And fourthly, an interpretative intention is one that as a matter of fact has never been really elicited; there has been and is no actual movement of the will in the act. For Aristotle, the purpose which it is assumed a man would have had in a given contingency, had he been given thought to the matter.

It is a commonplace among moralists that the intention is the chief among the determinants of the character of an act. Hence, when one's motive is grievously bad, or even only slightly so, if it be the exclusive reason for doing something, then an act which is otherwise good is vitiated and reputed to be evil. An end which is only venially bad, and which at the same time does not contain the complete cause for acting, leaves the operation which in other respects was unassailable to be qualified as partly good and partly bad. A good intention can never hallow an action the content of which is wrong. Thus it never can be lawful to steal, even though one's intention be to aid the poor with the proceeds of the theft. The end does not justify the means. It may be noted here in passing that one state of matter under discussion, that the explicit and frequently renewed reference of one's actions to Almighty God is not now commonly thought to be necessary in order that they may be said to be morally good. The old-time controversy on this point has practically died out.

Besides affecting the goodness or badness of acts, intention may have much to do with their validity. Is it required, for instance, for the fulfilment of the law? The received doctrine is that, provided the subject is seriously minded to do what is prescribed, he need not have the intention of satisfying his obligation; and much less is it required that he should be inspired by the same motives as urged the legislator to enact the law. Theologians quote in this connection the saying, "Finis praecipit non cadit sub precepto" ("the end of the law does not fall under its binding force.") What has been said applies with even more truth to the class of obligations called real, enjoining for instance the payment of debts. For the discharge of these no intention at all is demanded, not even a conscious act. It is enough that the creditor gets his own.

The Church teaches very unequivocally that for the valid conferring of the sacraments, the minister must have the intention of doing at least what the Church does. This is laid down with great emphasis by the Council of Trent (see VII). The opinion once defended by such theologians as Cathearius and Salmeron that there need only be the intention to perform deliberately the external rite proper to each sacrament, and that, as long as this was true, the interior dissent of the minister from the mind of the Church would not invalidate the sacrament, no longer finds adherents. The common doctrine now is that a real internal intention to act as a minister of Christ, or to do what Christ instituted the sacraments to effect, in other words, to truly baptize, absolve, etc., is required. This intention need not necessarily be of the sort called actual. That would often be practically impossible. It is enough that it be virtual. Neither habitual nor interpretative intention in the minister will suffice for the validity of the sacrament. The truth is that here and now, when the sacrament is being conferred, neither of these intentions exists, and they can therefore exercise no determining influence upon what is done. To administer the sacraments with a conditional intention, which makes their effect contingent upon the event, is to confer them invalidly. This holds good for all the sacraments except matrimony, which, being a contract, is susceptible of such a limitation.
As to the recipients of the sacraments, it is certain that no intention is required in children who have not yet reached the age of reason, or in imbeciles, for the validity of those sacraments which they are capable of receiving, whether or not they may be in danger of death; but some intention is indispensable if the sacrament is not to be invalid. The reason is that our justification is not brought about without our co-operation, and that includes the rational will to profit by the means of sanctification. Much how much an intention is enough, is not always clear. In general, more in the way of intention will be demanded as the act of the receiver seem to enter into the making of the sacrament. So for penance and matrimony under ordinary conditions a virtual intention would appear to be required; for the other sacraments an habitual intent, sufficient if an unfulfilled person in danger of death the habitual intention may be implicit and still suffice for the validity of the sacraments that are then necessary or highly useful; that is, it may be contained in the more general purpose which a man has at some time during his life, and which he has never retracted, of availing himself of these means of salvation at so supreme a moment. For the gaining of indulgences the most that can probably be exacted is an habitual intention.

JOSEPH F. DELANY.

**Intercession (Mediation).**—To intercede is to go or come between two parties, to plead before one of them on behalf of the other. In the New Testament, the word is used as the equivalent of τερευμάν (Vulg. interpellare, in Heb., vii, 25). “Mediation” means a standing in the midst between two (contending) parties, for the purpose of bringing them together (cf. mediator, médium, I Tim., ii, 5). In ecclesiastical usage both words are taken in the sense of the intervention primarily of Christ, and secondarily of the Blessed Virgin and the angels and saints, on behalf of men. It would be better, however, to restrict the word mediation to the action of Christ, and intercession to the action of the Blessed Virgin, the angels, and the saints. In this way we may briefly deal with: I, the Mediation of Christ; and at more length with, II, the intercession of the saints.

I. In considering the Mediation of Christ we must distinguish between His position and His office. As God-man He stands in the midst between God and man, partaking of the natures of both, and therefore, by that very fact, fitted to act as Mediator between them. He is, indeed, the Mediator in the absolute sense of the word, in a way that no one else can possibly be. “For there is one God, and one mediator of God and men, the man Christ Jesus” (I Tim., ii, 5). He is united to both: “The head of every man is Christ...” (I Cor., xi, 3). His Mediation belongs to Him as man, His human nature is the principium quo, but the value of His action is derived from the fact that it is a Divine Person Who acts. The main object of His mediation is to restore the friendship between God and man. This is attained first by the merit of grace and remission of sin, by means of the worship and satisfaction offered to God by and through Christ. But, besides bringing man nigh unto God, Christ brings God nigh unto man, by revealing to man Divine truths and commands—He is the Apostle sent by God to us and the High-Priest set over God’s house. In other words, the physical order the mere fact of Christ’s existence is in itself a mediation between God and man. By uniting our humanity to His Divinity He united us to God and God to us. As St. Ambrose says, “Christ become man that men might become gods” (“De Incarn., n. 54; of St. Augustine, “Serm. De Nativitate Dom.”; St. Thomas, III, Q. i, a. 2). And for this Christ prayed: “That they all may be one, as thou, Father, in me, and I in thee...” (John, xvi, 21-23). The subject of Christ’s mediation belongs properly to the articles Atonement, Doctrine of the; Jesus Christ; Redemption (q. v.). See also St. Thomas, III, Q. xxvi; and the treatises on the Incarnation.

II. We shall here speak not only of intercession, but also of the invocation of the saints. The one indeed implies the other; we should not call upon the saints for aid unless they could help us. The foundation of both lies in the doctrine of the communion of saints (q. v.). In the article on this subject it has been shown that the unfulfilled prayers of the faithful in purgatory are one mystical body, with Christ for their head. All that is of interest to one part is of interest to the rest, and each helps the rest: we on earth by honouring and invoking the saints and praying for the souls in purgatory, and the saints in heaven by interceding for us. The Catholic doctrine of intercession and invocation is set forth by the Council of Trent, which teaches that “the saints who reign together with Christ offer up their own prayers to God for men. It is good and useful suppliantly to invoke them, and to have recourse to their prayers, and to ask their help for obtaining grace through His Son Jesus Christ our Lord, Who alone is our Redeemer and Saviour. Those persons think impiously who deny that the Saints, who enjoy eternal happiness in heaven, are to be invoked; or who assert either that they do not pray for men, or that the invocation of them to prayer falls upon each of us is idolatry, or that it is repugnant to the word of God, and is opposed to the honour of the one Mediator of God and men, Jesus Christ” (Sess. XXV). This had already been explained by St. Thomas: “Prayer is offered to a person in two ways: one as though to be granted by himself, another as to be obtained through him. In the first way we pray to God alone, because all our prayers ought to be directed to obtaining grace and glory which God alone gives, according to those words of the psalm (lxxxii, 12): ‘The Lord will give grace and glory.’ But in the second way we pray to the blessed angels and to the holy angels and to the blessed men; we learn our petition through them, but that by their prayers and merits our prayers may be efficacious. Wherefore it is said in the Apocalypse (viii, 4): ‘And the smoke of the incense of the prayers of the saints ascended up before God from the hand of the angel’” (Summ. Theol., II-II, Q. lxxxiii, a. 4). The reasonableness of the Catholic doctrine of intercession and invocation is further stated than in St. Jerome’s words: “If the Apostles and Martyrs, while still in the body, can pray for others, at a time when they must still be anxious for themselves, how much more after their crowns, victories, and triumphs are won! One man, Moses, obtains from God pardon for six hundred thousand men in arms; and Stephen, the imitator of the Lord, and the first martyr in Christ, begs forgiveness for his persecutors; and shall their power be less after having begun to be with Christ? The Apostle Paul declares that two hundred three score and sixteen souls, sailing with him, were freely given him; and, after he is dissolved and has begun to be with Christ, shall he lose his lips, and not be able to utter a word in behalf of those who throughout the whole world believed at his preaching of the Gospel? And shall the living dog Vigiliantius be better than that dead lion?” (“Col., i, 17; 1 Thess., iv, 13, 14.”)

The chief objections raised against the intercession and invocation of the saints are that these doctrines are opposed to the faith and trust which we should have in God alone: that they are a denial of the all-sufficient merits of Christ; and that they cannot
proven from Scripture and the Fathers. Thus Article xxii of the Anglican Church says: "The Romanish doctrine concerning the Invocation of Saints is a fond thing vainly invented, and grounded upon no warranty of Scripture, but rather repugnant to the Word of God." 

(1) In the article Adoration (q. v.) it has been clearly shown that the honour paid to angels and saints is entirely different from the supreme honour due to God alone, and is indeed paid to them only as His servants and friends. "By Honouring the Saints who have slept in the Lord, by invoking their intercession and venerating their relics and ashes, so far is the glory of God not being diminished, in proportion as the hope of men is thus more exalted and confirmed, and they are encouraged to the imitation of the Saints" (Cat. of the Council of Trent, pt. III, c. ii, q. 11). We can, of course, address our prayers directly to God, and He can hear us without the intervention of any creature. But this does not prevent us from asking the help of our fellow-creatures who may be more pleasing to Him than we are. It is not because our faith and trust in Him are weak, nor because His goodness and mercy to us are less; rather is it because we are encouraged by His precepts to approach Him at times through His servants, as we shall presently see. As pointed out by St. Thomas, we invoke the angels and saints in quite different language from that addressed to God. We ask Him to have mercy upon us and Himself to grant us whatever we require; whereas we ask the saints to pray for us, i.e. to join their petitions with ours. However, we should here bear in mind Bellarmine's remarks: "When we say that nothing should be asked of the saints but their prayer for us, the question is not about the words, but the sense of the words. For so far as the words go, it is lawful to say: 'St. Peter, pity me, save me, open for me the gates of heaven;' also: 'Great God, grant me health of body, patience, fortitude,' etc., provided that we mean 'save and pity me by praying for me;' 'grant me this or that by thy prayers and merits.' For so speaks Gregory of Nazianzus (Orat. xviii—according to others, xxiv—"De S. Cypriano" in P. G., XXXV, 1193; "Orat. de S. Athanasii. In Laud. S. Athanasii," Orat. xxxi, in P. G., XXXV, 1128;) in "De Sanet. Beatif.," I, 17. The supreme act of impetration, sacrifice, is never offered to any creature. "Although the Church has been accustomed at times to celebrate certain Masses in honour and memory of the saints, they have been held by way of sacrifice and offered unto them, but unto God alone, who crowned them; whence neither is the priest wont to say 'I offer sacrifice to thee, Peter, or Paul,' but, giving thanks to God for their victories, he implores their patronage, that they may vouchsafe to intercede for us in heaven." (Council of Trent, Sent. XXII, c. iii.) The Collyridians, or Philomarianites, offered little cakes in sacrifice to the Mother of God; but the practice was condemned by St. Epiphanius (Hær., lxxix, in P. G., XL, 740); Leontius Byzaun., "Contra Nest. et Eutych.," III, 6, in P. G., L, 1154; and St. John of Damascus (Hær., lxxxix, in P. G., XXIV, 728).

(2) The doctrine of one Mediator, Christ, in no way excludes the invocation and intercession of saints. All merit indeed comes through Him; but this does not mean that saints who have sinned and are not worthy of salvation are not advocates to the Father for any one of us. The same Apostle who insists so strongly on the sole mediatorship of Christ, earnestly beseeches the prayers of his brethren: "I beseech you, therefore, brethren, through our Lord Jesus Christ, and by the love of the Spirit, that ye work with me in your prayers for me to God" (Rom., xvi, 30); and he himself prays for them: "I give thanks to my God in every remembrance of you, always in all my prayers making supplication for you all" (Phil., i, 3, 4). If the prayers of the brethren on earth do not derogate from the glory and dignity of the Mediator, Christ, neither do the prayers of the saints in heaven. (3) As regards the proof from Holy Scripture and the Fathers, we can show that the principle and the practice of invoking the saints is clearly laid down in both. That the angels have an interest in the welfare of men is clear from Christ's words: "There shall be joy before the angels of God upon one sinner doing penance" (Luke, xv, 10). In verse 7 He says simply: "There shall be joy in heaven." Cf. Mt. xxiii, 37: "That the angels pray for men is plain from the vision of the Prophet Zacharias: "And the angel of the Lord answered, and said: O Lord of hosts, how long wilt thou not have mercy on Jerusalem ... and the Lord answered the angel ... good words, comfortable words" (Zach., i, 12, 13). And the angel Raphael says: "When thou didst pray with tears ... I offered thy prayer to the Lord" (Tob., xii, 12). The combination of the prayers both of angels and saints is seen in the vision of St. John: "And another angel came, and stood before the altar, having a golden censer; and there was given to him much incense, that he should offer it before the Lord of the earth, and before the golden altar, which is before the throne of God. And the smoke of the incense of the prayers of the saints ascended up before God from the hand of the angel" (Apoc., viii, 3, 4). God Himself commanded Abimelech to have recourse to Abrahams' intercession: "He shall pray for thee, and thou shalt live ... And when Abraham prayed, God healed Abimelech" (Gen., xx, 7, 17). So, too, in the case of Job's friends He said: "Go to my servant Job, and offer for yourselves a holocaust; and my servant Job shall pray for you: his face I will accept" (Job, xliii, 8). Christ's intercession is instanced in passages in this same Book of Job: "Call now if there be any that will answer thee, and turn to some of the saints" (v, 1); "If there shall be an angel speaking for him ... He shall have mercy on him, and shall say: Deliver him, that he may not go down to corruption" (xxxii, 23). "They [the angels] appear as intercessors for men with God, bringing men's needs before Him, mediating in their behalf. This work is easily connected with their general office of labouring for the good of men" (Dillmann on Job, p. 44). Moses is constantly spoken of as "mediator"; "I am the mediator between God and you" (Deut., v, 23; cf. Gal., iii, 19, 20). It is true that in none of the passages of the Old Testament mention is made of prayer to the saints, i.e. holy men already departed from this life; but this is in keeping with the imperfect knowledge of the state of the dead, who were still in Limbo. The general principle of intercession and invocation of fellow-creatures is, however, stated in terms which admit of no denial; and this principle would in due course be applied to the saints as soon as their position was defined. In the New Testament the number of the saints already departed would be comparatively small in the early days. The greatest of the Fathers in the succeeding centuries speak plainly both of the doctrine and practice of intercession and invocation. "But not the High Priest [Christ] alone prays for those who pray sincerely, but also the angels ... as also the souls of the just who have sinned after this fashion: the "koumoussai, klovion pseushman, Origen, "De Oratienne", n. xi, in P. G., XI, 448). In many other places Origen uses similar expressions; indeed it may be said that there is hardly any treatise or homily in which he does not refer to the intercession of the angels and saints, e.g. T. Cyprian, writing to P. Corbulo, says: "Let each of us be mutually mindful of each other, let us ever pray for each other, and if one of us shall, by the speediness of
the Divine vouchsafement, depart hence first, let our love continue in the presence of the Lord, let not prayer for our brethren and sisters cease in the presence of the mercy of the Father” (Ep. ivii, in P. L., IV, 358). “To those who would faint stand, neither the guardianship of saints nor the defences of angels are wanting” (St. Hilary, “In Ps. cxxxvii,” n. 8, 6, in P. L., 682). “Do those who have fallen asleep before us, first, patriarchs, prophets, apostles, martyrs, that God, by their prayers and intercessions, may receive our petitions” (St. Cyril of Jerusalem, “Cat. Myst.”, v. in P. G., XXXIII, 1113). (See Renault, “Liturgiarum Orientalium Collectio,” Paris, 1716.)

We readily admit that the doctrine of the intercession of the saints is a development from the teaching of Scripture and that the practice is open to abuse. But if the carefully-worded and wholesome decrees of the Council of Trent be adhered to, there is nothing in the doctrine or practice which deserves the condemnation expressed in Article xxii of the Anglican religion. Indeed the High Church Anglicans contend that it is not the invocation of saints that is here rejected, but only the “Romanian doctrine,” i.e. the excesses prevailing at the time and afterwards condemned by the Council of Trent. “In principle there is no question between me and my own self and any other portion of the Catholic Church... Let not that most ancient custom, common to the Universal Church, as well Greek as Latin, of addressing Angels and Saints in the way we have said, be condemned as impious, or as vain and foolish” [Forbes, Bishop of Brechin (Anglican), “Of the True Worship and Necessity of Praying to and for the Holy Trinity, bearing us all in remembrance, petitioning for us the remission of sins, and the fruition of an everlasting kingdom” (St. Gregory of Nyssa, “De vita Euphraemi”, in fin., P. G., XLVI, 560). “Mayest thou [Cyprian] look down from above propitiately upon us, and guide us in word and work, and [or shepherd with me] this sacred flock... gladdening us with a more perfect and clear illumination of the Holy Trinity, before Which thou standest” (St. Gregory of Naz., Orat. xvi—according to others, xxiv—of De S. Cypr., P. G., XXXV, 1193). “In like manner does Gregory pray to St. Athanasius (Orat. xxii. “In laud. S. Athan.”, P. G., XXXV, 1128). “O holy choir! O sacred band! O unbroken host of warriors! O common guardians of the human race! Ye gracious sharers of our cares! Ye co-operators in our prayer! Most powerful intercessors!” (St. Basil, “Hom. in XL Mart.”, P. G., XXXI, 524). “May Peter, who wept so efficaciously for himself, weep for us and turn towards us Christ’s benignant countenance” (St. Ambrose, “Hexaem.”, V, xxxv, n. 90, in P. L., XIV, 242). St. Jerome has been quoted above. St. John Chrysostom frequently speaks of invocation in his homilies on the saints, e.g. “When thou perceivest that God is chastising thee, fly not to His enemies... but to His friends, the martyrs, the saints, and those who were pleasing to Him, and who have great power” (αρτύττου, “baldness of speech”—Orat. VIII., “Adv. Jud.”, n. 6, in P. G., XLIV, 937). “He that wears the purple, layeth not in the steads begging of the saints to be his patrons with God; and he that wears the diadem be the Tent-maker and the Fisherman as patrons, even though they be dead” (“Hom. xxvi, in II. Ep. ad Cor.”, n. 5, in P. G., LXI, 581). “If the Lord’s table be we do not commemorate martyrs in the way that we do others who rest in peace so as to pray for them, but rather that they may pray for us that we may follow in their footsteps” (St. Augustine, “In Joam.”, tr. lxxxiv, in P. L., XXXIV, 1847). Prayers to the saints occur in almost all the ancient literatures. Thus in the Liturgy of St. Basil: “By the command of Thine only-begotten Son we communicate with the memory of Thy saints... by whose prayers and supplications have mercy upon us all, and deliver us for the sake of Thy holy name which is invoked upon us”. Cf. the Liturgy of Jerusalem, the Liturgy of St. Gregory, the Copt Liturgy of St. Cyril, etc. That those commemorations are not later additions is manifest from the words of St. Cyril of Jerusalem: “We then commemorate also those who have fallen asleep before us, first, patriarchs, prophets, apostles, martyrs, that God by their prayers and intercessions may receive our petitions” (“Cat. Myst.”, v. in P. G., XXXIII, 1113). (See Renault, “Liturgiarum Orientalium Collectio,” Paris, 1716.)

Intercession, Episcopal, the right to intercede for criminals, which was granted by the secular power to the bishops of the Early Church. This right originated rather in the great respect in which the episcopal dignity was held, than in any definite enactment. Reference to its existence is made in the seventh canon of the Council of Sardica about 344 (Mansi, “Collectio Amplissimae Conciliorum”, III. It is also mentioned by St. Augustine (Ep. cccxiv and cccxxi, in Migne, P. L., XXXIII, 365) and St. Jerome (Ep. in Migne, P. L., XCVII, 527-40), and by Socrates in his “Church History” (v. xiv, vii, xvii). St. Augustine repeatedly interceded for criminals with Macedonianus, who was then governor of Africa (Ep. clii—clii, in Migne, P. L., XXXIII, 652). Martin of Tours interceded with Emperor Theodosius I in 387 on behalf of the inhabitants of Antioch, who had wantonly destroyed the imperial statues in that city. St. Ambrose induced Emperor Theodosius I to enact a law which forbade the expropriation of property until thirty days after sentence had been passed. It was the purpose of this law to...
leave room for clemency and to prevent the punishing of the innocent [see Bossuet, "Galila Orthodoxa", pars I, lib. II, cap. v, in "Œuvres Complètes", XII (Bar-le-Duc, 1870), 98]. To enable them to exercise their right of intercession, the bishops had free access to the prisons (Codex Theodossi, app., cap. xiii). They were even exhort to the visit prisoners every Wednesday and Saturday, and investigate the cause of their imprisonment, and to admonish the supervisors of the prisons to treat those committed to their charge with Christian charity. In case the prison-keepers were found to be inhuman or remiss in their duty towards their prisoners, the bishops were to report them to the emperor. One of the bishops, which were almost unlimited in this respect, were somewhat regulated for the bishops of the Eastern Empire in "Codex Justiniani", lib. I, tit. 4: "De episcopali auditus"; for the bishops of the Western Empire in the "Edicta Theodoricæ", cap. xiv (Mon. Germ. Leg., V). Closely allied with the right of episcopal intercession was the right of asylum or sanctuary (see Right of Asylum), and the right and duty of the bishops to protect orphans, widows, and other unfortunate. Thus Theodoret, Bishop of Cy-rus, interceded with Empress Pulcheria in behalf of those who were in the care of the Third Council of Carthage, held in 399, requested the emperor to accede to the wishes of the bishops by appointing advocates to plead the causes of the poor before the courts, while the Council of Mâcon, held in 555, forbade all civil authorities to begin judicial proceedings against widows and orphans without previously notifying the bishop of the diocese to which the accused belonged.

MICHAIL OTT.

**Interdict (Lat. interdictum, from inter and dicere)**, originally in Roman law, an interlocutory edict of the priest, especially in matter affecting the right of possession; it still preserves this meaning in both Roman and canonic law. In present ecclesiastical use the word denotes, in general, a prohibition. In addition to the definite meaning it has when referring to the object of this article, the term is often loosely employed in a wider and rather untechnical sense. We speak of a priest, a church, or a practice of devotion as being, for example, in the interdict of the bishop of any particular place or of the pope. One who either by canon law or by the stricture of his ordinary is forbidden to exercise his sacerdotal functions; a church building that has been secularized, or one in which Divine service is temporarily suspended, because the edifice has incurred "pollution" or lost its consecration; finally, extraordinary practices of devotion are said to be interdicted. But, strictly speaking, interdict is applied only to persons and churches affected by the penal measure or censure called "interdict", and it is exclusively in this sense of the word that the subject is treated here. After explaining its nature and effect, we shall mention the interdicts in force by common canon law.

I. An interdict is a censure, or prohibition, excluding the faithful from participation in certain holy things (D'Annibale, "Summula", I, n. 369). These holy things are all those pertaining to Christian worship, and are divided into three classes: (1) the Divine Office, which includes the Mass and the Litany; all acts performed by clerics as such, and having reference to worship; (2) the sacraments, excepting those private administrations of those that are of necessity; (3) ecclesiastical burial, including all funeral services. This prohibition varies in degree, according to the different kinds of interdicts to be enumerated:

First, interdicts are either local or personal; the former affect territories or sacred buildings directly, and persons indirectly; the latter directly affect persons. Canonical authors add a third kind, the mixed interdict, which affects directly and immediately both persons and places; if, for instance, the interdict is issued against a town and its inhabitants, the latter are subject to it, even when they are outside of the place. The mixed interdict is poi. Local interdicts, like personal interdicts, may be general or particular. A general local interdict is one affecting a whole territory, district, town, etc., and this was the ordinary interdict of the Middle Ages; a particular local interdict is one affecting, for example, a specific chapel, or a specific individual. Often it is one falling on a given body or group of people as a class, e.g. on a chapter, the clergy or people of a town, of a community; a particular personal interdict is one affecting certain individuals as such, for instance, a given bishop, a given cleric. Finally, the interdict is total if the prohibition extends to all the sacred things mentioned above; otherwise it is called partial. A special kind of partial interdict is that which forbids one to enter a church, interdictum ab ingressu ecclesie, mentioned by certain texts. Omitting the mixed interdict, which does not form a distinct class, we have therefore: (1) the general local interdicts; (2) particular local interdicts; (3) the general personal interdicts; (4) particular personal interdicts; (5) prohibitions against entering a church. We may add (6) the prohibition obliging the clergy to abstain from celebrating the Divine offices, cessatio a divinis, a measure somewhat akin to a particular local interdict, only that it is not imposed on account of any crime on the part of those whom it affects. This short account shows us that under the same name are grouped penal measures rather different in nature, but having in common a prohibition of certain sacred things.

Interdict differs from excommunication, in that it does not cut off one from the communion of the faithful or from Christian society, though the acts of religion forbidden in both cases are almost identical. It differs from suspension also in this respect: the latter affects the powers of clerics, inasmuch as they are clerics, while the interdict affects the rights of the faithful as such, and does not directly affect clerics as such but only as members of the Church. Of course, it follows that the clergy cannot exercise their functions towards those under interdict, or in interdicted places or buildings, but their powers are not directly affected, as happens in case of suspension; their jurisdiction remains unaffected, which under excommunication an individual being punished, without imperilling the validity of his acts of jurisdiction. This shows that an interdict is more akin to excommunication than to suspension.

Whereas excommunication is exclusively a censure, intended to lead a guilty person back to repentance, an interdict, like suspension, may be imposed either as a censure or as a vindictive punishment. In both cases there must have been a grave crime, if the penalty has been inflicted for an indefinite period and with a view to making the guilty one amend his evil ways, it is imposed as a censure; if, however, it is imposed for a definite time, and no reparation is demanded of the individuals at fault, it is inflicted as a punishment. Consequently the interdicts still in vogue in virtue of the Constitution "Apostolis Sedis" and the Council of Trent are censures; whilst the interdict recently (1908) placed by Pius X on the town of Adria for disorderly conduct and immorality is a punishment. Strictly speaking, only the particular personal interdict is in all cases a perfect censure, because it alone affects definite persons, while the other interdicts do not affect the individuals except indirectly and inasmuch as they form part of a body or belong to the interdicted territory or place. That is also the reason why only personal particular interdicts, including the
prohibition to enter a church, suppose a personal fault. In all other cases, on the contrary, although a fault has been committed, and it is intended to punish the guilty persons or make them amend, the interdict may affect and does affect some who are innocent, because it is not aimed directly at the individual but at the moral body, e.g. a chapter, monastery, or all the inhabitants of a district or a town. If a chapter incur an interdict (Const. "Apost. Sedis"); interd., n. 1) for appealing to a future general council, the canons who did not vote for the forbidden resolution are, notwithstanding, obliged to observe the interdict. And the general local interdict suppressing all the churches in a town will with equal effect fall on the innocent as well as the guilty. Such interdicts are therefore inflicted for the faults of moral bodies, of public authorities as such, of a whole population, and not for the faults of private individuals.

Who have the power of imposing an interdict, and how does it cease? In general, the reader may be referred to CENSURES, ECCLESIASTICAL; and EXCOMMUNICATION. We shall add a few brief remarks. Any prelate having jurisdiction in foro externo can impose an interdict on his subjects or his territory. It may be provided for in the law and then, like other censures (q.v.), it is suspended or lifted. A personal interdict is removed by absolution; other interdicts are said to be "raised", but this does not imply any act relative to the individuals under interdict; when imposed as a punishment these interdicts may cease on the expiration of a definite time.

(1) A general local interdict is, therefore, for a whole population, town, province, or region, the almost complete suspension of the liturgical and sacramental Christian life. Examples of it exist as early as the ninth century, under the name of excommunication (see in particular the Council of Limoges of 1031). In 1213, during the time of the temple of the king of France, when Philip II Augustus repudiated Ingeburga to marry Agnes of Meran; and that on the Kingdom of England in 1208, to support the election of Stephen Langton to the See of Canterbury against the temporal power. This new resource was made vigorous use of. It will suffice to recall the interdict imposed in 1200 on the Kingdom of France, when Philip II Augustus repudiated Ingeburga to marry Agnes of Meran; and that on the Kingdom of England in 1208, to support the election of Stephen Langton to the See of Canterbury against the temporal power. This new resource was made vigorous use of. It will suffice to recall the interdict imposed in 1200 on the Kingdom of France, when Philip II Augustus repudiated Ingeburga to marry Agnes of Meran; and that on the Kingdom of England in 1208, to support the election of Stephen Langton to the See of Canterbury against the temporal power. This new resource was made vigorous use of. It will suffice to recall the interdict imposed in 1200 on the Kingdom of France, when Philip II Augustus repudiated Ingeburga to marry Agnes of Meran; and that on the Kingdom of England in 1208, to support the election of Stephen Langton to the See of Canterbury against the temporal power. This new resource was made vigorous use of.

(2) The particular local interdict is also raised by actual effects, but they are limited to the interdicted place or church. The above-mentioned mitigations, however, are not allowed. Whoever knowingly celebrates or causes to be celebrated the Divine offices in an interdicted place incurs ipso facto the prohibition against entering the church, and then the interdict becomes irregular (C. xviii, "De sent. excomm." in VI), but not if he administers a sacrament to an interdicted individual, as the law has not legislated for such a case.

(3) The general personal interdict, which we have seen, may be combined with the local interdict, has the same effects for all the persons who form or will form part of the group, community, or moral person under interdict; all the canons of a chapter, all the religious of a congregation, the inhabitants of a town, all those domiciled in the place, etc. They, however, escape from the interdict who are not members or who cease to be members of the body affected, e.g. a canon appointed to another benefice, a stranger who leaves the town, etc. But the mere change of locality has no liberating effect, and the interdict follows the individual members of the body wherever they may go.

(4) The particular personal interdict, which is a real censure, affects individuals much in the same way as excommunication. They may not assist at the Divine offices or at Mass, and if they are interdicted by reason of their shame of sin, they are even obliged to withdraw it is not necessary to suspend the service, since, after all, the interdict does not deprive them of the communion of the faithful. They may not demand to receive the sacraments, except Penance and the Viaticum, and it is not lawful to administer them. They are to be deprived of ecclesiastical burial, but Mass and the ordinaries may be said for them. A cleric violating the interdict becomes irregular.

(5) The interdict against entering the church is a real censure, intended to bring about the amendment of the erring one; it prohibits him from taking part in Divine service in the church and from being accorded any social service in it. But it is possible for the offender to withdraw if he had not incurred any censure; he can attend Divine service and receive the sacraments in a private oratory and pray in the church when service is not being held in it. The individual is absolved after due satisfaction for his fault.

(6) The cession from Divine service, cessatio a divinis, follows the rules of the local interdict, from which it differs, not in its effects, but only because the fault for which it is imposed is not the fault of the clerics who are prohibited from celebrating the Divine service. It forbids the holding of Divine service and the administration of the sacraments in a church at a fixed place. It is a manifestation of sorrow and a kind of reparation for a grievous wrong done to a holy place. This cessatio a divinis is not imposed ipso facto by the law; it is imposed by the ordinary when and under the conditions that he judges suitable.

II. There are at present five interdicts: fata sententia, two of which are mentioned in the Constitution "Apostolicae Sedis", two decreed by the Council of Trent, and one added by the Constitution "Romano Pontifici" of 23 August, 1873:

(1) "Universities, colleges, and chapters, whatso- ever be their name, that appeal from the ordinances or mandates of the reigning Roman pontiff to a future general council, incur an interdict specially reserved to
the Roman pontiff." This interdict is imposed for the same crime as the specially reserved excommunication no. 4 (see EXCOMMUNICATION, VII, A, (a)), but the excommunication falls on the individuals, and the interdict on the group, or moral persons, by whatever name they be called, and who cannot be excommunicated as such.

(2) "Those who knowingly celebrate or cause to be celebrated the Divine offices in places interdicted by the ordinary or his delegate, or by the law; those who admit persons excommunicated by name to the Divine offices, the sacraments of the Church, or to ecclesiastical burial, incur pleno jure the interdict against entering the church, until they have made amends sufficient in the opinion of him whose order they have contemned." This interdict, which is borrowed, except for a few minor modifications, from c. viii, "De privilegiis", in VI of Boniface VIII, is therefore reserved to the competent prelate. Its object is to ensure the observance, on the one hand, of the local interdict, and, on the other, of excommunication by name (see EXCOMMUNICATION, vol. V, p. 690, sub-title Viandol and Tintori).

(3) The Council of Trent (Sess. VI, cap. i, "De Ref.") imposes on bishops the duty of residence; it prescribes that those who absent themselves without a sufficient reason for six continuous months are to be deprived of a quarter of their annual revenue; then of another quarter for a second six months' absence; after which, the council continued, "as their contumacy increases ... the metropolitan will be bound to denounce to the Roman pontiff, by letter or by messenger, within three months, his absent suffragan bishops, and the senior resident suffragan bishop will be obliged to denounce his absent metropolitan, under penalty of interdict against entering the church, incurred eo ipso." The obligation of denouncing begins, therefore, only after an entire year's absence, and the interdict is incurred only if the denunciation has not been made within the next three months.

(4) The Council of Trent (Sess. VII, cap. x, "De Ref.") forbids chapters, during the vacancy of a see, to grant dimissory letters within a year dating from the vacancy, unless to clerics who are archati, i.e. obliged to obtain ordination on account of a benefice; this prohibition carries with it the penalty of interdict. The Council of Trent having later (Sess. XXIV, cap. xvi, "De Ref.") obliged the chapter to name a vicar capitular, the interdict can only be incurred by the chapter only for dimissory letters granted during these eight days. It is disputed whether or not the vicar capitular would incur the interdict for this fault (Penneschi in Const. "Ap. Sedis", II, 469).

(5) The Constitution "Romanus Pontifex" aims at preserving the interests of the bishops and named by the civil authorities from undertaking the administration of their church under the name or title of vicar capitular. Besides the excommunication incurred by the chapters and the person elected (see EXCOMMUNICATION, sub-title Excommunications Proscribed in the Constitution "Ap. Sedis"), Pius IX imposes on "those among them who have received the episcopal order a suspension from the exercise of their pontifical powers and the interdict against entering the church, pleno jure and without any declaration."

Canonists usually treat of interdict in their commentaries on St. Thomas, Vol. II, Bo. V, Moralis, dealing with 14 aspects of the treatment on censures (De censura). One of the best works is that of Jahr, "De censura moralis" (3rd ed., 1905). For details consult the numerous commentaries on the Constitution Apostolica Sedis. Special works include ancient writers, Filial, De censura (Lyons, 1608); Suarez, De censura (Corinth, 1603); Altheier, De censura ecclesiastica (Rome, 1616). Among recent writers see Köhler, Der Kirchenstrafe in Kirchenrecht, v. v.; Wattenwyl, Die kirchlichen Sanktionsen (Mainz, 1899); Hilarius & Schneiders, Constitutiones et Decretalia (Munich, 1861); Neverkens, Geschichte und Strafrecht (Cologne, 1874); Taunton, The Laws of the Church (London, 1900), 5 v., Intercursi; Smith, Elements of Ecclesiastical Law (New York, 1884); Santelmann, Prozess. Jur. Canonici (New York, 1905); Lauterbach, Inst. Jus Eccl. (Freiburg, 1905), 525-532; Le Saute, De Jure Divi. Eccl. (Rome, 1900).

A. BOUDINSON.

Interest (Lat. interest; Fr. intérêt; Germ. Interesse). The mental state called interest has received much attention in recent psychological literature. This is largely due to the German philosopher Herbert (q. v.). The important position he has won for it in the theory of education makes it deserving of some treatment in The Catholic Encyclopedia. Psychologists have disputed as to the exact meaning to be assigned to the term and the precise nature of the mental state.

Psychology of Interest.—Interest has been variously defined as a kind of consciousness accompanying and stimulating attention, a feeling pleasant or painful directing attention—the pleasurable or painful aspect of a process of attention—and as identical with attention itself. Thus it may be said, I attend to what interests me; and, again, that to be just noticed and to attend are identical. The term interest is used also to indicate a permanent mental disposition. Thus I may have an interest in certain subjects, though they are not an object of my present attention. However interest be defined, and whether it be described as a cause of attention, as an aspect of attention, or as identical with attention, its special significance lies in its intensity of function, its mental activity of attention. Attention may be defined as cognitive or intellectual energy directed towards any object. It is essentially selective, it concentrates consciousness on part of the field of mental vision, whilst it ignores other parts. Attention is also progressive in character. It focuses and directs our mental effort—this in order to attain a clearer and more distinct view. It results in a deeper and more lasting impression, and therefore plays a vital part both in cognitive act and in the growth of knowledge as a whole. The English Associationist school of psychology and most Empiricists, in treating of the genesis of knowledge, seem to look on the intensity or frequency of the stimulus as the most influential factor in the process of cognition. As a matter of fact, what the mind takes in depends almost entirely on this selective action of attention.

Out of the total mass of impressions, streaming in at any moment through the various channels of sense, it is only those to which attention is directed that rise to the level of intellectual life, or take real hold of the mind. What these are will be determined by interest. We are interested in what is connected with our personal experience, especially in what is partly new, yet partly familiar. Pleasant feelings and painful feelings are original excitants of attention; there are other experiences also—neutral perhaps in themselves, but associated with these latter—which generate fear or hope, and so become interesting. Though our attention may be temporarily attracted by any sudden shock or unexpected impression of unusual intensity, we do not speak of this as interesting, and our attention soon wanes. Isolated experiences, except in so far as they may stimulate the intellect to seek to correlate them with some previous cognitions, do not easily hold the mind. Repeated efforts are required to keep our attention fixed on an unfamiliar branch of study (as e. g. a new language or science). But in proportion as each successive act of observation or understanding leaves a deposit in the form of an idea in the memory, ready to be awakened by partially similar experiences in the future, there is gradually built up in the mind a group or system of ideas constituting our abiding knowledge of the subject. Such series of experiences, with the group of ideas thus deposited in the memory, render similar acts of cognition easy and agreeable in the future.
In fact they develop a kind of appetite for future related experiences, which are henceforth assimilated, or, in Herbartian language, apperceived, with facility and satisfaction. The latent group of ideas bearing on a subject, while it may lie hidden in the sensory consciousness, may become the permanent disposition of the mind, whilst the feeling of the process of apperception, or assimilation, is interest viewed as a form of actual consciousness. But an event of a bizarre or novel character, which we may find difficulty in comprehending or assimilating with our ideas, may make clear our mind. The strange, the horrible, may thus awaken at least temporarily a keen, if morbid, interest. Still, in so far as such experiences may excite fear or anxiety, they come under the general principle that interest is associated with personal pleasure or pain.

Broadly speaking, then, all those things which arouse or sustain non-voluntary or spontaneous attention are interesting, whilst phenomena to which we can attend only with voluntary effort are uninteresting. The child is interested in its food and its play, also in any operations associated with pleasure or pain. In the past, the body is interested in its growth; in those exercises with which he has come to connect with his own well-being, and in branches of study which have already effected such a lodging in the mind that new ideas and items of information are readily assimilated and associated with what has gone before. Men are interested in those subjects which have been interwoven and connected with the main occupations of their lives.

Pedagogics.—The psychology of interest being thus understood, its capital importance in the work of education becomes obvious. It is in its insistence on the value of this mental and moral force, and its spiritual and practical treatment of it in application to the business of teaching, that Herbart's chief importance as an educationalist lies. In proportion as the teacher can awaken and sustain the interest of the pupil, so much greater will be the facility, the rapidity, and the tenacity of the mental acquisition of the latter. It must be admitted that, in beginning most branches of knowledge, a number of "dry" facts, which possess little interest of themselves for the child, have usually to be learned by sheer labour. The spontaneous attention of the pupil will not fix on and adhere with satisfaction to the ideas presented in the opening paragraphs. Here the teacher may be called upon to demand the effort of voluntary attention, even though it be not pleasant, on the part of the pupil. Still, he will wisely do his utmost to make some of the future utility of the immediate lesson intelligible to the student, and in this way attach media to interest to that which is dull and unattractive in itself. Moreover, as the protracted effort of attention to what is in itself uninteresting is fatiguing, he will keep the lessons in these subjects short at first, and vary the monotony by enlivening and useful bits of information, illustrations, comments, and the like, which will arrest the mind and attract attention to the substance of the lesson. At this stage the master aims at being an interesting teacher; he cannot as yet make his subject interesting, which, however, should be his ultimate goal.

But, as the student advances, there is being formed in his mind an increasing group of cognitions, a growing mass of ideas about this branch of study, which makes the entrance of each new idea connected with it easier and more welcome. There is a feeling of satisfaction as each new item fits into the old, and is assimilated or "apperceived" by the latter. The pupil begins to feel that the ideas he already possesses give him latitude and power to interest himself in the subject of his study. He has become conscious of an extension of this power with each enlargement of his knowledge, and the desire for more knowledge begins to manifest itself. Here we have apperceptive attention or immediate interest. To generate this immediate interest in the subject itself being a main object of the teacher, this purpose should determine his exposition of the subject as a whole, and also that the student shall feel himself interested from day of day. His exposition should be orderly, proceeding logically with proper divisions: the more important principles or ideas should be firmly fixed by repetition, the subdivisions located in their proper places, and their connexion with the heads under which they fall made clear. The main idea of the chapter or subject introduced into the mind of the pupil are built up into a rational or organised system. This secures greater command of what is already known, as well as greater facility in the reception of further knowledge, and so expedites the growth of interest. But besides this orderliness in the exposition there is the need of the matter, which might be formal and lifeless, the teacher must be continually adapting his instruction to the present condition of the pupil's mind. He must constantly keep in view what ideas the student has already acquired. He has to stir up the related topic of interest he must ensure that they shall excite the appetite of curiosity, when about to communicate further information; he has to show the connexion and bind the new item with the previous knowledge by comparison, illustration, and explanation. Finally, he is to be alive to every opportunity to generalise; and to show how the information is to be applied by setting suitable exercise or problems to be worked out by the pupil himself. He thus leads the pupil to realise his increase of power, which is one of the most effective means of fostering active interest both in the subject itself and in the relation of its various parts with the whole.

Wholesome instruction, especially since Herbart, insists on the value of interest not only as a means, but as an educational end in itself. For the Herbartian school the aim of education should be the formation of a man of "many-sided interest." This is to be attained by the judicious cultivation of the various faculties—intellectual, emotional, and moral—that is by the realization of man's entire being with all its aptitudes. It may be conceded that, with certain qualifications and reservations, there is a substantial amount of truth in this view. Worthy interests enable and enrich human life both in point of utility and beauty. But is it not necessary, physical, pampered, for exercise; man's activities will find an outlet; the capacities of his soul are given to be realized. Ceteris paribus, one good test of the educational value of any branch of study, and of the efficiency of the method by which it has been taught, is to be found in the permanence and actuality of interest that is by the realization of man's entire being with all its aptitudes. It may be conceded that, with certain qualifications and reservations, there is a substantial amount of truth in this view. Worthy interests enable and enrich human life both in point of utility and beauty. But is it not necessary, physical, pampered, for exercise; man's activities will find an outlet; the capacities of his soul are given to be realized. Ceteris paribus, one good test of the educational value of any branch of study, and of the efficiency of the method by which it has been taught, is to be found in the permanence and actuality of interest that
sided interest or culture, however rich and varied, constitutes morality or supplies for religion, still it may be readily acknowledged that a judicious equipment of worthy interests, intellectual, aesthetic, and social, is a powerful ally in the battle with evil passions, and also a precious means of human well-being with which a wisely planned scheme of education can equip the human soul.

MICHAEL MAHER.

Interest.—The subject will be divided as follows: (1) notion of interest; (2) legitimacy of lending at interest; (3) just rate of interest.—(1) Interest is a value exacted or promised over and above the restitution of a borrowed capital. Moratory interest, that is interest due as an indemnity or a penalty for delay in payment, is distinguished from compensatory interest, which indemnifies the lender for the danger he really runs in losing his capital, the loss that he suffers or the gain that he might have made had he been investing himself of his capital during the period of the loan, and from lucrative interest, which is an emolument that the lender would not gain without lending. Interest originates in the loan of goods of consumption, which permits the borrower to expend or to destroy the things lent, on condition of giving back an equal number of the same kind or quality. The sum to be paid for the usage of an article, which must itself be given back, is called hire. Everything which is consumed by usage: corn, wine, oil, fruit, etc., can be the matter of a loan (former sense), but ordinarily it is a sum of money which is lent.

(2) Is it permitted to lend at interest? Formerly (see USURY) the Church rigorously condemned the exacting of anything over and above capital, except when, by reason of some special circumstance, the lender was in danger of losing his capital or could not advance his loan of money without exposing himself to a loss or to deprivation of a gain. These special reasons, which authorize the charging of interest, are called extrinsic titles. Besides these compensatory interests, the Church has likewise admitted moratory interest. In our day, when the general practice of lending at interest, that is to say, she authorizes the impost, without considering having to inquire if, on lending his money, he has suffered a loss or deprived himself of a gain, provided he demand a moderate interest for the money he lends. This demand is never unjust. Charity alone, not justice, can oblige anyone to make a gratuitous loan (see the replies of the Penitentiary and of the Holy Office since 1830). What is the reason for this change in the attitude of the Church towards the exacting of interest? As may be more fully seen in the article USURY, this difference is due to economical circumstances. The price of goods is regulated by common valuation, and the latter by the difficulty of their possession ordinarily brings in a given centre. Now, today, otherwise than formerly, one can commonly employ one's money fruitfully, at least by putting it into a syndicate. Hence, to-day, the mere possession of money means a certain value. Whoever hands over this possession can claim in return this value. Thus it is that one acts in demanding an interest.

(3) Even today one can still sin against justice by demanding too high an interest, or usury, as it is called. What interest then is just and moderate? Theoretically, and in an abstract way, the fair rate of interest is nearly that which, in a determined case, it nearly corresponds, for the interest being guaranteed, whilst the profit is uncertain, we must discount the value of an assurance premium from the average profit. Accordingly, in a determined centre, if those who sink their money in buildings, land, or industrial undertakings generally look for a profit of 6 per cent, the just rate of interest will be about 4 or 5 per cent. This rate covers the risks and ordinary inconveniences of lending. But if one had to run special risks or had to give up an extraordinary premium, one might in all justice exact a higher rate of interest. Such, therefore, is the theoretical rule. In practice, however, as even the answer of the Sacred Penitentiary shows (18 April, 1889), the best course is to conform to the average practice of just and honest men, precisely as one does with regard to other prices, and, as happens in the case of such prices, particular circumstances influence the rate of interest, either by increasing or lowering it. In this way, the security offered by advances to the governments of wealthy countries and those that cover mortgages diminish the rate for public-loans and loans on mortgage. On the contrary, the interest on shipping and mercantile business is higher than that in civil business, on account of the greater uncertainty in sea voyages and in commercial enterprises.

A. VERMEERSCH.

INTERIMS (Lat. interim, meanwhile), temporary settlements in matters of religion, entered into by Emperor Charles V (1519-56) with the Protestants.

I. THE INTERIM OF RATIBSON, published at the conclusion of the imperial diet, 29 July, 1541. It was based on the results of previous conferences between Catholics and Protestants, in which an agreement had been reached on the idea of justification and other points of doctrine. Consequently the imperial "recess" enacted that the adjustment of the religious question should be postponed until the next general council or imperial diet; that meanwhile the Protestants should not go beyond or against the articles agreed upon; that an ecclesiastical reform be inaugurated by the prelates; that the Peace of Nuremberg (1532) should be maintained; that monasteries and chapter-houses should remain intact; that the ecclesiastics should retain their possessions; that the Empire should be to one side; that all judicial proceedings in matters of religion should be suspended; that the imperial court of justice (Reichskammergericht) should remain as before; and that the recess of Augsburg (1530) should remain in force. Owing to the opposition of the Protestants, Charles V in a secret declaration made concessions to them, which practically nullified the recess. The articles agreed upon were to be accepted in the sense of their theologians; the monasteries and chapter-houses might be called on to inaugurate a reform; the ecclesiastics, monasteries, and chapter-houses, that had embraced the Confession of Augsburg, were to remain in the full possession of their property; the Protestants were not to compel the subjects of Catholic princes to embrace their Faith, but if anyone came to them spontaneously, he was not to be hindered; the members of the imperial and ecclesiastical body, if molested, if they turned Protestants; and the recess of Augsburg was to have force only in matters not appertaining to religion.

II. THE INTERIM OF AUGSBURG, published at the conclusion of the imperial diet, 30 June, 1548. In forty-six chapters, it comprised statements on matters of doctrine and ecclesiastical discipline. The points of doctrine were all explained in the sense of Catholic dogma, but couched in the mildest and
vaguest terms; and wherever it was feasible, the form and the concept approached the Protestant view of those subjects. In matters of ecclesiastical discipline two important concessions were made to the Protestants, viz., the marriage of the clergy, and Confirmation, both kinds of which were abolished. An imperial ordinance enjoined on the Catholic clergy the execution of reforms in the choice and ordination of ecclesiastics, the administration of the sacraments, and other similar matters.

III. The Internim Zella.—The Internim of Augsburg was meant principally for the Protestants, whom it was desired to return to the Catholic Faith was looked for; but nearly everywhere they very strongly opposed it. In order to make it less objectionable, a modification was introduced by Melanchthon and other Protestant divines, commissioned thereto by Elector Maurice of Saxony (1521–23). In a meeting held at Alt-Zella in November, 1548, they explained in a Protestant sense what they considered essential points of doctrine, e. g. justification and others; they accepted the non-essentials or adiaphora, such as confirmation, Mass, the use of candles, vestments, holy days, etc. The document then drawn up became known as the Internim of Zella and was published in December, 1548. In a similarInternim held at Leipzig in December, 1548, it was adopted by the estates of the Electorate of Saxony, and was then called the Internim of Leipzig, or the Great Internim.

FRANCIS J. SCHAFFER.

International Arbitration. See Papal Arbitration.

Internuncio (Lat. inter, between; nuntius, messenger), the name given in the Roman Curia to a diplomatic agent who, though not belonging to the five highest classes of the papal diplomatic service (legatus a latere, nuncio with full powers of a legatus a latere, legate, nuncio of the first class, and nuncio of the second class), is, nevertheless, chief of a legation (chef de mission). He may have several subordinates, and, on the other hand, his household may consist only of a private secretary. The nomination of internuncios is fixed by custom, but are, accredited indiscriminately to countries differing widely in ecclesiastical importance, e. g. Luxemburg, Chile, Holland, Brazil. Formerly the powers of an internuncio were necessarily extensive, owing to the lack of telegraph service and the slow postal deliveries; they are now almost entirely confined to routine work. In exceptional cases, extraordinary powers are given to the internuncio, when important affairs are in question. As conditions in the various countries to which internuncios are ordinarily sent differ considerably, their general powers are regulated accordingly; in consequence, no general statement of the duties of any particular internuncio can be made. Nor can the ecclesiastical dignity or position at court of the internuncio be determined with more exactitude. It is safe to say that they are always domestic prelates or titular archbishops. The simple prelate has always been the rule for the internuncio; but an exception was Mgr. Tarnasi. The internuncios accredited to South America in the last century were mostly titular archbishops. At present (summer of 1909), the only internuncios are those in Argentina and Chile, and both are titular archbishops. The earlier arrangements that internuncios should be the title of an Apostolic delegate and envoy extraordinary, no longer obtains. The last case of the kind occurred in Portugal about the middle of the nineteenth century.

Internuncios, when promoted, are appointed nuncios; in rare instances they become Apostolic delegates. Too much confidence must not be placed in earlier works on papal diplomacy, apropos of this office; according to the requirements of the moment, the curia sometimes decreases or diminishes both its scope and its powers.

PAUL MARIA BAUMGARTEN.

Interpretation of Holy Scripture. See Exegesis.

Intolerance. See Toleration.

Introduction. Biblical, a technical name which is usually applied to two distinct, but intimately connected, things. First, it designates the part of Scriptural science which is concerned with topics preliminary to the detailed study and correct exposition of Holy Writ. Next, it is given to a work in which these various topics are actually treated.

I. Scope and Divisions.—As is commonly admitted at the present day, the general object of Biblical introduction is to supply the student of the sacred books of the Old and New Testaments with the knowledge which is necessary, or at least very desirable, for the right interpretation of antiquity. Thus understood, the scope of an introduction to the inspired writings which make up the Bible is substantially that of an introduction to other writings of antiquity. An introduction helps materially the student of the text of these writings to know what is contained and in a precise manner the personal history and actual surroundings of the author to whom each writing is ascribed, to become acquainted with the date of composition and the general form and purpose of the various books were originally written, to realize distinctly the peculiar literary methods employed in their composition, to know something of the various fortunes (alterations, translations, etc.) which have befallen the text in the course of ages, etc. An introduction, too, whether the work for which it is designed be profane or sacred, has usually a limited scope. It is not supposed to treat of each and every topic the knowledge of which might be useful for the right understanding of the books in question. It is justly regarded as sufficient for all practical purposes, when, by the information which it actually imparts, it enables the student to have been taught carefully to start intelligently on the detailed study of their text. Owing, however, to the fact that the books of the Bible are not simply ancient, but also inspired, writings, the scope of Biblical introduction embraces the various questions which are connected with their inspired character, and which, of course, have no place in an introduction to merely human productions. For this same reason, too, certain topics—such as the questions of integrity and veracity—which naturally belong to treatises preliminary to the study of any ancient writing, assume a very special importance in Biblical introduction. A Biblical introduction is frequently and indeed aptly, divided into two parts, general and special, the former embracing the preliminary questions which concern the Bible as a whole, the latter being restricted to those which refer to the separate books of Holy Writ. The field of general introduction has grown so much that it is occupied by several different points by Biblical scholars. It no longer embraces a detailed description of the Oriental languages and of the Hellenistic Greek, but is universally limited, in regard to those languages, to a brief exposition of their leading characteristics. With regard to the questions which pertain to the chronology and chronology of the Bible, some scholars are still of the opinion that they should be dealt with in a general introduction to the study of the Holy Scrip-
INTRODUCTION

In this introductory section, the author discusses the nature of Biblical introduction. They believe that the sacred books which make up the Bible have been given divine authorship, and it is through the operation of the Holy Ghost Who inspired them. The history of the sacred books and the operation of the Holy Spirit in their composition should be studied as a whole.

The tendency to restrict the object of general introduction to a few questions, particularly those which help directly to determine the value and meaning of the Sacred Writings considered as a whole, is in point of fact, that object, as conceived especially by Catholic scholars, is limited to the great questions of the inspired and canonical character of the Scriptures, their original text and principal translations, the principles and history of their interpretation, and the names of sacred history, history of Biblical Revelation, Biblical theology, history of the religion of Israel. It thus appears that, at the present day, the tendency is to restrict the object of general introduction to a few questions, particularly to those which help directly to determine the value and meaning of the Sacred Writings considered as a whole.

In point of fact, the object of general introduction to the Bible, as the divine authority of the books of either Testament is established by the study of the general introduction to the Bible, the topics treated in the special introduction are chiefly those which bear on the human authority of the separate writings of the Bible. Hence the questions usually studied in connection with each book or with a small group of books, such as the Pentateuch, are those of authorship, unity, integrity, veracity, purpose, source of information, date and place of composition, etc. Instead of the divisions of Biblical introduction which have been set forth, numerous writers, particularly in Germany, adopt a very different grouping of the topics preliminary to the exegetical study of the Sacred Scripture. They devote a first section to the contents, date, authorship, etc., of the separate books, and a second section to a more or less brief statement of the canon, text and versions, etc., of the same books as interpreted collectively. Their division of the topics of Biblical introduction leaves no room for hermeneutics, or scientific exposition of the principles of exegesis, and in this respect, at least, is inferior to the division of Biblical introduction into general and special, with its comprehensive subdivisions.

II. Nature and Method of Treatment. Catholic scholars justly regard Biblical introduction as a theological science. They are indeed fully aware of the possibility of viewing it in a different light, of identifying it with a literary history of the various books of Holy Writ, and they know that this is actually done by many writers outside of the Church, who are satisfied with applying to the Holy Scriptures the general principles of historical criticism. But they rightly think that in so doing these writers lose sight of essential differences which exist between the Bible and merely human literature, and which should be taken into account in defining the nature of Biblical introduction. Considered in their actual origin, the sacred books which make up the Bible have been given divine authorship which must needs differentiate Biblical introduction from all mere literary history, and impart to it a distinctly theological character. In view of this, Biblical introduction must be conceived as an historical elucidation, not simply of the human and outward origin and characteristics of the sacred records, but also of that which makes them sacred books, viz., the operation of the Holy Ghost Who inspired them. Again, of all existing literature, the Bible alone has been entrusted to the guardianship of a Divinely constituted society, whose plain duty it is to ensure the right understanding and correct exegetical interpretation of God, by seeing that the topics preliminary to its exegesis be fittingly treated by Biblical introduction. Whence it readily follows that Biblical introduction is, by its very nature, a theological discipline, promoting, under the authoritative guidance of the Church, the accurate knowledge of Divine Revelation embodied in Holy Writ. For these and other reasons, Catholic scholars positively refuse to reduce Biblical introduction to a mere literary history of the various books which make up the Bible, and strenuously maintain its essential character as a theological science.

III. History. As a distinct theological discipline, Biblical introduction is indeed of a comparatively recent origin. Centuries, however, before its exact object and proper method of study had been fixed, attempts had been made on the part of some, and occasionally some material which may be utilized for the treatment of the questions which pertain to Biblical introduction. Of the same general nature are the writings of St. Jerome, although his prefaces to the various books of Scripture, some of his treatises and of his letters deal explicitly with certain introductory topics. St. Augustine's important work, "De Doct.
trinitā Christianā", is chiefly a hermeneutical treatise, and deals with only a few questions of introduction in book II, chapters vii.–xv. One of the writers most frequently mentioned in the first period of the history of Biblical introduction is a certain Greek, Adrian (d. about A. D. 450), who probably is the same as the Adrian addressed by St. Nilus as a monk and a priest. He certainly belonged to the Antiochene school of exegesis, and was apparently a pupil of St. John Chrysostom. He is the author of a work entitled Ἐνεργητὴς εἰς τὰς Θεὰς Γραφάς, "Introduction to the Divine Scriptures", which has indeed supplied the specific name of introduction for the theological science treating of topics preliminary to the study of Holy Writ, but which, in fact, is simply a hermeneutical treatise dealing with the style of the sacred writers and the figurative expressions of the Bible (P. G. XC VIII). The other principal writers of that period are: St. Eucherius of Lyons (d. about 450), whose two books, "Instructiones ad Salomonum filium", are rather a hermeneutical than an introductory work; the Benedictine Cassiodorus (d. about 562), whose treatise De institutione Divinarum Scripturarum serves as an introduction to the views of earlier writers and gives an important list of Biblical interpreters, chiefly Latin; the African bishop Junilius (d. about 552), who belongs to the school of Naisibis, and whose "Institutio regularia divinae legis" resembles most a Biblical introduction in the sense of the question to the study of the text (G. St. Ev.; Mürner, Die Bibliotheca sancta ex preci pipes Catholicos Ecclesiæ in auctoribus collecta, and treatises in eight books of the sacred writers and their works, of the best manner of translating and explaining Holy Writ, and gives a copious list of Biblical interpreters. Among the Catholic authors on introduction who soon followed Sixtus the following deserve a special mention: Arias Montanus (d. 1598), whose "Prolegomena" in his Polyglott (Antwerp, 1572) forms a valuable introduction; Salmeron (d. 1585), whose "Prolegomena Bibliæ" appears in the first volume of his works (Mââras, 1588). Sermontis (d. 1606) and Honorius (Antwerp, 1625) was selected by Migne as the most suitable general introduction with which to begin his "Sacra Scripturae Cursus Complectus"; the Oratorian Lami (d. 1715), the learned writer of the "Apparatus ad Bibliæ sacra" (Paris, 1687); the Bene-
dictine Martianay (d. 1717); and the able theologian Ellies Dupin (d. 1719). Meantime the Protestants, somewhat belated by doctrinal bias, brought forth certain manuals in the first period of the history of Biblical introduction which perhaps might be mentioned those of Rivet (Dordrecht, 1618); Walther (Leipzig, 1638); Calov (Wittenberg, 1643); Brian Walton (London, 1637); and Heidegger (Zurich, 1651). The first scholar to depart from the unsatisfactory method of treating topics preliminary to the study of Holy Writ, which had hitherto prevailed, and which had made some of the writings of his immediate predecessors dogmatic treatises rather than works on Biblical introduction, was the French Oratorian Richard Simon (1638–1712). According to him the Sacred Books, no less than the various Biblical translations and commentaries, are literary products which must be the impress of the ideas and the methods of composition prevalent at the time when they were written, so that, to view and appreciate these works aright, one should study them carefully in themselves and in the light of the historical events under which they came into existence. A study at once historical and critical connected also to him the best means for disposing of unsound theories, and for vindicating the inspired character of the Bible, which had been recently impugned by Hobbes and Spinoza. Hence the name of "Histoire Critique", which he gave to his epoch-making introduction to the matrices of the study of the text (Rotterdam, 1689), versions (Rotterdam, 1690), and commentaries (Rotterdam, 1893) of the New Testament. Simon's methods and conclusions were at first strenuously opposed, and afterwards set aside by Catholics and by Protestants alike. The most noteworthy works of the eighteenth century on introduction, on the basis of the ancient method, are, among Catholics, those of Calmet (Paris, 1707–20); Goldhagen (Mainz, 1755–68); Fabrié (Rome, 1772); Marchini (Turin, 1777); and Mayer (Vienna, 1789); and, among Protestants, those of Hody (Oxford, 1705); Carpsow (Leipzig, 1721–28); J. D. Michaelis (Göttingen, 1750; Hamburg, 1787).

The true method of Biblical introduction set forth and applied by Simon was not destined, however, to be discarded forever. The rationalists were the first to use it, or rather to abuse it, for their anti-dogmatic purposes. Even in the eighteenth century, they rid those more or less affected by rationalistic tendencies, have very often openly, and at times with rare ability, treated Biblical introduction as a mere literary history of the Sacred Writings. As belonging to the critical school, the following writers on introduction may be mentioned: Scholler (d. 1791); Eichholtz (d. 1827); de Wette (d. 1849); Bleek (d. 1589); Vatke (d. 1582); Riehm (d. 1888); Kuenen (d. 1891); Reuss (d. 1891); Scholten; Hilgenfeld; Wellhausen; W. R. Smith (d. 1894); S. Davidson (d. 1898); Strack; Wildeboer; E. Kautsch; P. E. Koenig; Jülicher; Cornell; Baudissin; H. Holtz; Bacon; Baier; Caster; Kent; Moffatt; Von Soden; Pfeiffer; to whom may be added, as occupying in the main similar positions, B. Weiss; Salmon; Driver; A. B. Davidson (d. 1902); Curtiss (d. 1904); Ottley; Kirpatrick; Ryle; Briggs; Bennett; Adeney; C. H. H. Wright; McFadyen; and Geden. The following are the principal Protestant writers who meantime have striven to stay the progress of the critical school by treating the questions of Biblical introduction on conservative lines: Heneganberg (d. 1898); Hofmann (d. 1877); Hävernick (d. 1845); Keil (d. 1888); Bissell; Glag; Godet (d. 1900); R. C. H. Keen (d. 1902); Harman; Loy; Sandy; Green (d. 1900); Dods; Kerr; Burkitt; Zehn; Mackay; Urquhart; and Orr.

During the same period Catholics have produced numerous works on Biblical introduction, and used in them, in various degree, the historico-critical method
of investigation. These works may be briefly given under four general heads, as follows: (a) General Introduction to Holy Writ: Dixon, "Intro. to the Sacred Scriptures" (Dublin, 1852); Trochon, "Introd. générale" (Paris, 1856–57); Chauvin, "Leçons d'int. générale" (Paris, 1867); Breen, "General and Critical History of Old Testament" (Philadelphia, 1893); Gigot, "General Intro. to the H. Script." (New York, 1899); Telch, "Introd. Generalis in Scripturam Sacram" (Ratisbon, 1908). (b) General and Special Intro. to both Testaments: Alber, "Institutiones Scrip. Sac. Antiq. et Novi Test." (Budapest, 1901); Paul Scholi, "Allgemeine Einleitung in das heilige Buch der N. T." (Cologne, 1845–48); Claire, "Introd. historiq. et critiq. aux Livres de l'A. et du N. T." (Paris, 1835)—Haneberg, "Geschichte der bibl. Offenbarung als Einleitung ins alte und neue Testament." (Ratisbon, 1849); Gilly, "Précis d'Intro. générale et particulière à l'Écrit. Sac." Besides the separate works on Biblical introduction which have been mentioned, valuable contributions to that branch of Scriptural science are found in the articles in the Dictionaries of the Bible and the general encyclopedias already published or yet issuing.

FRANCIS E. GIGOT.
Intrusion (Lat. intrudere), the act by which unlawful possession of an ecclesiastical benefice is taken. It comprises, therefore, the ignominious act of intrusion, which is the reception of the benefice at the hands of him who has the right to bestow it by canon law. The necessity of proper canonical institution rests primarily on certain passages of the New Testament (John, x, 1; Hebr., v, 4), in which a legitimate mission from properly constituted authority is described. This is postulated. This is reaffirmed by the Council of Trent (Sess. XXXIII, can. vii), and in the "Corpus Juris Canonici" it is decreed: "An ecclesiastical benefice may not be taken possession of without canonical institution (cap. i, De reg. jur., in vi). Intrusion does not necessarily signify the employment of force in entering upon a benefice. To constitute him an intruder or usurper in the ecclesiastical sense, it is sufficient that the person has no true canonical title to the benefice when he takes possession. Historical examples of intrusion on a large scale are not wanting. To pass over the many violations of the Church's right during the investiture struggle, at all times we find wholesale intrusion practised in France in the reigns of Louis XIV and Napoleon I, when ecclesiastics, nominated to episcopal see but whose elections were never confirmed by the pope, ruled the dioceses into which they were thus intruded. Pius IX, in his Constitution "Romani Pontifex", decreed extraordinary communication and privation of dignities against members of a cathedral chapel who hand over the administration of a diocese to one who, although nominated, has not yet presented his letters of canonical institution. When laymen have the right of presentation to a benefice, the confirmation of ecclesiastical authority is necessary before actual possession can be obtained. The nominee who does not wait for this canonical induction is an intruder.

The definition is also extended to persons who, having been repelled even unjustly by their ecclesiastical superiors, seek the aid of the civil power to obtain possession under pretext of abuse. As an intruder has no true title to receive the revenues of the benefice which he uncanonically holds, he is bound in conscience to make restitution of what are ill-gotten gains to the lawful titular. Even if the latter die, it does not legalise his position; the intruder's possession is invalid and restitution must be made to the true titular's lawful successor in the benefice. To remove the irregularity incurred by intrusion, the papal power must be invoked, as the censure is reserved to the Holy See. A dispensation from such an irregularity is the more difficult to obtain in proportion to the falsity of the title invoked or the employment of violence in entering on the benefice. Canonists also extend the term intrusion to the keeping possession of a benefice by a hitherto lawful possessor, after it has been vacated by violation of certain decrees of the Church. Thus, titulare of one benefice who fraudulently present himself for examination in a concursus to obtain a benefice for another by impersonating him, who obtain a benefice for others on the understanding that they are to be rewarded for it, or who seek a benefice with the intention of resigning it to another with a secret provision that they are to receive a pension from its revenues, lose the right to their own benefices, which thus canoonically become vacant. By retaining possession of them in such cases, they become intruders.

William H. W. Fanning.

Intuition (Lat. intruere), to look into, is a psychological and philosophical term which designates the

process of immediate apprehension or perception of an actual fact, being, or relation between two terms, and its results. Hence the words Intuition or Intuitionism mean those systems in philosophy which consider intuition as the fundamental process of our knowledge or at least give to intuition a large place (the Scottish school); and the words Intuitive Mechanics in the Ethical System of Helveticus denote those philosophical theories which base morality on an intuitive apprehension of the moral principles and laws, or consider intuition as capable of distinguishing the moral qualities of our actions (Shaftesbury, Hutcheson, Reid, Dugald Stewart). As an element of educational method intuition means the grasp of knowledge by conquest, or by the light of the soul on its own substance in intuition. The immediate perception of sensuous or material objects by our senses is sensuous or empirical intuition; the immediate apprehension of intellectual or immaterial objects by our intelligence is called intellectual intuition. It may be remarked that Kant calls empirical intuitions our knowledge of objects through sensation, and pure intuition our perception of space and time as the forms a priori of sensibility. Again, our intuitions may be called external or internal, according as the objects perceived are external objects or internal objects or acts. Kant, however, defines intuition as the experience of the object; but observable and experienced element of knowledge is easily seen if we observe that it is intuition which furnishes us with the first experimental data as well as with the primary concepts and the fundamental judgments or principles which are the primitive elements and the foundation of every scientific and philosophical speculation. This importance, however, has been falsely exaggerated by some modern philosophers to an extent which tends to destroy both supernatural religion and the validity of human reason. There has been an attempt, on their part, to make of intuition, under Cartesian names, the central and fundamental element of our power of acquiring knowledge, and the only process or operation that can put us into contact with reality. So we have the creation or intuitions of the ego and non ego in the philosophy of Fichte; the intuition or intellectual vision of God claimed by the Ontologists in natural theology (see Omnipotence. W. James's 'Varieties of Religious Experience'). Bergson's philosophy of pure intuition; the experience of experiential consciousness of the Divine of the Modernists (Encyclical 'Pascendi gregis'). According to the Ontologists, our knowledge is immediate and necessary and universal, as well as our idea of the Infinite, are possible only through an antecedent intuition of God present in us. Other philosophers start from the principle that human reasoning is unable to give us the knowledge of things in themselves. The data of sensation, our intellectual concepts, and the conclusions reached through the process of discursive reasoning do not, they say, primarily represent reality; but acting under diverse influences such as those of our usual and practical needs, common sense and discursive reason result in a deformation of reality; the value of their data and conclusions is one of practical usefulness rather than one of true representation (see PRAGMATISM). Intuition alone, they maintain, is able to put us in communication with reality and give us a true knowledge of things. Especially in regard to religious truths, some insist, it is only through intuition and intimate experiences that truth is known. "God," says the Protestant A. Sabatier in his "Esquisse d'une philosophie de la religion," p. 379, "is not a phenomenon which can be observed outside of the ego, a truth to be demonstrated by logical reasoning. He who does not feel Him in his heart, will never find Him outside. . . . We never become aware of our piosity without at the same time feeling a religious emotion and perceiving in this very emotion, more or less obscurely, the object and the cause of religion, namely, God." The arguments used by the Schoolmen to prove the existence of God, say the Modernists, have now lost all their value; it is by the religious feeling, by an intuition of the heart that we apprehend God (Encyc.). "Pascendi gregis" and "Il programma dei modernisti".

Such theories have their source in the principle of absolute subjectivism and relativism—the most fundamental error in philosophy. Starting with Kant's proposition that we cannot know things as they are in themselves but only as they appear to us, this is, under the subjective condition human nature necessarily imposes on them, they arrive at the conclusion that our rational knowledge is subjectively relative; that its concepts, principles, and process of reasoning are therefore essentially unable to reach external and transcendental realities. Hence their recourse to intuition and immannence (see IMMATERIAL). But it is easy to show that if intuition is necessary in every act of knowledge, it remains essentially insufficient in our present life, for scientific and philosophical reflection. In our knowledge of nature we start from observations and from these only; but observations and data are verified by a series of inductions and deductions. In our knowledge of God, we may indeed start from our nature and from our insufficiency and aspirations, but if we want to know Him we have to demonstrate, by discursive reasoning, His existence as an external and transcendent Cause and Supreme End. We may, indeed, in Ethics, have an intuition of the notion of duty, of the need of a sanction; but these intuitive notions have no moral value if they are not connected with the existence of a Supreme Ruler and Judge, and this connexion can be known only through reasoning. The true nature, place, and value of intuition in human knowledge are admirably put forth in the Scholastic theory of knowledge. For the Schoolmen the intuitive act of intellectual knowledge is, by its nature, the most perfect act of knowledge, since it is an immediate apprehension of and contact with reality in its concrete existence, and our supreme reward in the supernatural order will consist in the intuitive apprehension of God by our intelligence: the beatific vision. But in our present conditions of earthly life, our knowledge must of necessity make use of concepts and reasoning. All our knowledge has its starting-point in the intuitive data of sense experience; but in order to penetrate the mysteries of these data, their laws and causes, we must have recourse to abstraction and discursive reasoning. It is also through these processes and through them alone that we can arrive at the notion of immaterial beings and of God himself (St. Thomas, "Contra Gentes") I, 12; "Summa Theol.," I, q. xxiv—xxvi). Our mind has the intuition of primary principles (intellectus), but their application, in order to give us a scientific and philosophical knowledge of things, is subject to the laws of abstraction and successive reasoning (ratio, discursus, cf. I, q. xvi, a. 3; II—II, q. xii, a. 5, ad 2um). Such a necessity is, as it were, a normal defect of human intelligence; it is the natural limit which determines the place of the human mind in the scale of intellectual beings.

Concepts and reasoning therefore are in themselves inferior to intuition; but they are the normal processes of human knowledge. They are not, however, a deformation of reality, though they are an imperfect and inadequate representation of reality—and the more so according to the excellency of the objects represented—there are a true representation of it.

INUIT 84 INVESTITURES

INUIT. See Eskimo.

Investiture, Canonical (Lat. investitura, from investire, to clothe), the act by which a suzerain granted a fief to his vassal, and the ceremonies which accompanied that grant. From the middle of the eleventh century, and perhaps during the first half of the twelfth, this custom became general in the Church, and the ceremonies by which princes granted to bishops and abbots, besides their titles, the possessions which constituted their benefices, and the political rights which they were to exercise (see Investitures, Conflict of). The putting in possession was done after the investiture by enthronization (q. v.). The decrees use the word investitura to signify the concession of an ecclesiastical benefice; only since the thirteenth century has it signified the act of putting one in possession of such a benefice. This is the sense in which it is now used; it is synonymous with Inst. et actio corporalis. (See Institution, Canonical; Installation.)

Investitures. Conflict of (Ger. Investiturstreit), the terminus technicus for the great struggle between the popes and the German kings Henry IV and Henry V during the period between 1073 and 1111. The investiture was in truth only the occasion of this conflict; the real issue, at least at the height of the contest, was whether the imperial or the papal power was to be supreme in Christendom. The powerful and ardent pope, Gregory VII, sought in all earnestness to realize the King of God on earth under the guidance of the papacy. As successor of the Apostles of Christ, he claimed supreme authority in both spiritual and secular affairs. It seemed to this noble idealism that the successor of Peter could never act otherwise than according to the dictates of justice, goodness, and truth. In this spirit he claimed for the papacy supremacy over emperor, kings, and princes. But during the Middle Ages a rivalry had always existed between the popes and the emperors, twin representatives, so to speak, of authority. Henry III, the father of the young king, had even reduced the papacy to complete submission, a situation which Gregory now strove to reverse by crushing the imperial power and setting in its place the papacy. A long and bitter struggle was therefore unavoidable.

It first arose through the prohibition of investitures, a propos of the ecclesiastical reforms set afoot by Gregory. In 1074 he had renewed the heavier penalty for the violation of the prohibition, given in a solemn synod at Laon in 1073 (Can. 6). The synod of Laon was attended by the representatives of the imperial government and by several bishops. Gregory sent his legate, Benedict of Pavia, a Roman nobleman, to the assembly, as the synod was to be held at Rome. The Lateran Synod of 1075, however, set aside the provisions of the decree of 1073. The synod of 1076, also called Annenberg, was attended by the representatives of the German emperors and of many bishops. The emperor invited the pope to an interview, but the latter refused. The pope held his synods, and three papal legates travelled to Germany. A few bishops were placed in the service of the empire, and others were refused the benefices which they had been invested in. This led to a violent contest. It was finally settled by a convention in the synod of Bologna, where the emperor and the pope agreed to a compromise. The pope, however, renewed the prohibition of the investiture of bishops and the refusal of benefices to emperors. The struggle continued. The first session of the council of Worms (1076) was open to the emperor, and the prohibition of investitures was confirmed. The pope, however, interfered in the election of the archbishop of Trier and the bishop of Cologne. The imperial synod at Mainz (1077) upheld the prohibition of investitures. On the other hand, the synod of Pisa (1077) confirmed the provisions of the synod of Worms in connection with the empire. Thus the struggle continued.
property of the Church, and thus to break down the opposition of the clergy. Gregory at the Lenten (Roman) Synod of 1075 withdrew “from the king the right of dispensing of bishoprics in future, and relieved all lay persons of the investiture of churches.” As early as the Anti-Investiture legislation had been enacted, but had never been enforced. Investiture at this period meant that on the death of a bishop or abbot, the king was accustomed to select a successor and to bestow on him the ring and staff with the words: Accipe ecclesiam (accept this church). Henry III was wont to consider the ecclesiastical fate of the candidate: Henry IV, on the other hand, declared in 1073: “We have sold the churches”. Since Otto the Great (936–72) the bishops had been princes of the empire, had secured many privileges, and had become to a great extent feudal lords over great districts of the imperial territory. The control of these great units of economic and military power was for the king a question of primary importance, affecting as it did the foundations and even the existence of the imperial authority; in those days men had not yet learned to distinguish between the grant of the episcopal office and the grant of its temporalities (regalia). Thus minded, Henry IV held that it was impossible for him to acknowledge the papal prohibition of investiture. We must bear carefully in mind that in the given circumstances there was a certain justification for both parties: the pope’s object was to save the Church from the dangers that arose from the undue influence of the laity, and especially of the king, in strictly ecclesiastical affairs; the king, on the other hand, considered that he was contending for the indispensable means of civil government, apart from whose supreme authority was at that period inconceivable.

Ignoring the prohibition of Gregory, as also the latter’s effort at a mitigation of the same, Henry continued to appoint bishops in Germany and in Italy. Towards the end of December, 1075, Gregory delivered his ultimatum: the king was called upon to observe the papal decree, as based on the laws and teachings of the Fathers; otherwise, at the following Lenten Synod, he would be not only “excommunicated until he had given proper satisfaction, but also deprived of his kingdom without hope of recovering it”. Sharp reproval of his libertinism was added. If the pope had given way somewhat too freely to his feelings, the king gave still fierer vent to his anger. At the Diet of Worms (January, 1076), Gregory, amid atrocious calumnies, was deposed by twenty-six bishops on the ground that his elevation was irregular, and that consequently he had never been pope. Henry therefore addressed a letter to “Hildebrand, no longer pope but a false monk”: “If you consider the grace of God, with all my bishops say to thee: ‘Descend! Descend, thou ever accursed!’” If the king believed that such a deposition, which he was unable to enforce, was of any effect, he must have been very blind. At the Lenten Synod in Rome (1076) Gregory sat in judgment, and in the letter to the Patriarch of the Apostles, declared: “I depose him from the government of the whole Kingdom of Germany and Italy, release all Christians from their oath of allegiance, forbid him to be obeyed as king... and as thy successor bind him with the fetters of anathema.” It availed little that the king answered him with ban. His chief enemies, the Saxons and the lay princes of the empire, espoused the cause of the pope, while his bishops were divided in their allegiance, and the mass of his people deserted him. The age was yet too deeply conscious that there could be no Christian Church without communion with the papacy. The power of the empire was very great, and in October a diet of the princes at Tribur obliged Henry to apologize humbly to the pope, to promise for the future obedience and reparation, and to refrain from all actual government, seeing that he was excommunicate. They decreed also that if within a year and a day the excommunication was not removed, Henry should forfeit his crown. Finally, they resolved that the pope should be invited to visit Germany in the following spring to settle the conflict between the king and the princes. Elated at this victory Gregory set out immediately for the north.

To the general astonishment, Henry now proposed to present himself as a penitent before the pope, and thereby obtain pardon. He crossed Mont Cenis in the depth of winter and was soon at the Castle of Canossa, whither Gregory had withdrawn on learning of the king’s approach. Henry spent three days at the entrance to the fortress, barefoot and in the garb of a penitent. That he actually stood the whole time on ice and snow is of course a romantic exaggeration. He was finally admitted to the papal presence, and pledged himself to recognize the mediation and decision of the pope in the quarrel with the princes, and was then freed from excommunication (January, 1077). This famous event has been countless times described, and from very divergent points of view. Through Bismarck, Canossa became a proverbial term to indicate the humiliation of the civil power before the ambitious and masterful Church. Recently, on the other hand, not a few have seen in it a glorious triumph for Henry. When the facts are carefully weighed, it will appear that in his priestly capacity the pope yielded reluctantly and unwillingly, while, on the other hand, the political success of his concession was null. Henry had now the advantage, since, released from excommunication, he was again free to act. Comparing, however, the power which thirty years earlier Henry III had exercised over the papacy, we may yet agree with those historians who see in Canossa the aeme of the career of Gregory VII.

The German supporters of the pope ignored the reconciliation, and proceeded in March, 1077, to elect a new king, Rudolf of Rheinfelden. This was the signal for the civil war during which Gregory sought to act as arbiter between the rival kings and their overlords to award the crown. By artful diplomacy Henry held off, until 1080, any decisive action. Considering his position sufficiently secure, he then demanded that the
pope should excommunicate his rival, otherwise he would set up an antipope. Gregory answered by excommunicating and deposing Henry for the second time at the Lenten Synod of 1080. It was declared at the same time that clergy and people should ignore all oaths on the pope; moreover, it was believed that the second excommunication was not justified. Gregory's party was thus greatly weakened. At the Synod of Brixen (June, 1080) the king's bishops listened to ridiculous charges and exaggerations, and deposed the pope, excommunicated him, and elected as antipope Guibert, Archbishop of Ravenna, otherwise a learned and blameless man. Gregory had relied on the support of the Normans in Southern Italy and of the German enemies of the king, but the former sent him assistance. Thus when in October, 1080, his rival for the throne was slain in battle, Henry turned his thoughts on the papacy. Four times, from 1081 to 1084, he assaulted Rome, in 1083 captured the Leonine City, and in 1084, after an unsuccessful attempt at a compromise, gained possession of the entire city.

The deposition of Gregory and the election of Gui bert, who now called himself Clement III, was confirmed, and on May 1084, Henry crowned emperor by his antipope. The Normans arrived too late to prevent these events, and moreover proceeded to plunder the town so mercilessly that Gregory lost the allegiance of the Romans and was compelled to withdraw southward with his Norman and the death of the most eminent defeat, and an indemnity at Salerno (25 May, 1085), after another ineffectual renewal of excommunication against his opponents. Though he died amid disappointment and failure, he had done indispensible pioneer work and set in motion forces and principles that were to dominate succeeding centuries.

There was much confusion on all sides. In 1081 a new rival for the crown, the insignificant Count Herman of Salm, had been chosen, but he died in 1088. Most of the bishops held with the king, and were thus excommunicate; in Saxony only was the Government dominant. Many of the occupying. Both parties called their rivals perjurers and traitors, nor did either side discriminate nicely in the choice and use of weapons. Negotiations met with no success, while the synod of the Gregorians at Quedlinburg (April, 1085) showed no inclination to modify the principles which they represented. The king, therefore, resolved to crush his rivals by force. At the Council of Mainz (April, 1085) fifteen Gregorian bishops were deposed, and their sees entrusted to adherents of the royal party. A fresh rebellion of the Saxons and Bavarians forced the king's bishops to fly, but the death of the most eminent defeat, and an indemnity at Salerno (25 May, 1085), after another ineffectual renewal of excommunication against his opponents. Though he died amid disappointment and failure, he had done indispensible pioneer work and set in motion forces and principles that were to dominate succeeding centuries.

had received the imperial crown. In this way war soon broke out again, during which the cause of the king suffered a decline. The antipope's bishops gradually deserted him in answer to Urban's advantageous offers of reconciliation; the royal authority in Italy disappeared, while in the Defections of 1101 Constantine, the wife of Henry suffered an additional humiliation. The new crusading movement, on the other hand, rallied many to the assistance of the papacy. In 1094 and 1095 Urban renewed the excommunication of Henry, Guibert, and their supporters. When the pope died (1099), followed by the antipope (1100), the majority of the crowned emperor; on the contrary, the course of events had won a complete victory. The subsequent antipopes of the Guibertian party in Italy were of no importance. Urban was succeeded by a less able ruler, Paschal II (1099-1118), whom Henry at first inclined to recognize. The political horizon meanwhile began to look more favorable for the king, who was now universally acknowledged in Germany. He was anxious to secure in addition ecclesiastical peace, sought to procure the removal of his excommunication, and publicly declared his intention of making a pilgrimage to the Holy Sepulchre. This, however, pope, and compelled the renunciation of the right of investiture, still obstinately claimed by Henry. In 1102 Paschal renewed the anathema against the emperor. The revolt of his son (Henry V), and the latter's alliance with the princes who were dissatisfied with the imperial policy, brought matters to a crisis and occasioned the greatest suffering to the sorely tried emperor, who was now ignominiously outwitted and overcome by his son. A decisive struggle was rendered unnecessary by the death of Henry IV in 1106. He had untriedly defended the inherited rights of the royal office, and had never had a rival.

From the beginning Henry V had enjoyed the support of the pope, who had relieved him of excommunication and had set aside his oath of allegiance to his father. At and after the Pentecost Synod of Nordhausen, in 1105, the king dispelled the last remnants of the schism by deposing the imperial occupants of the episcopal sees. The questions, however, which lay at the root of the whole conflict were not yet decided, and time soon showed that, in the matter of investitures, Henry was the true heir of his father's policy. Cold, calculating, and ambitious, the new monarch had no idea of withdrawing the royal claims in this respect. He entered into negotiations with Eugenius III (Guazella in 1106, and at Troyes in 1107), he continued to invest with the biskops of the church. The German clergy raised no protest, and made it evident in this way that their earlier refusal of obedience to the emperor arose from the fact of his excommunication, not from any resentment occasioned by his interference in the affairs of the Church. In 1108 excommunication was pronounced upon the giver and receiver (dans et accipiens) of investiture, and thus affected the king himself. As Henry had now set his heart on being crowned emperor, this decision precipitated the final struggle. In 1113 the king marched with a strong army on Rome. Eager to avoid another conflict, Paschal attempted a radical solution of the question at issue; the German clergy, he decided, were to restore to the king all their estates and privileges and to maintain themselves on tithes and donations; whereas the empire was interested only in the overlordship of these domains, might easily dispense with the investiture of the clergy. On this understanding peace was established at Sutri between pope and king. Paschal, who had been a monk before his elevation, undoubtedly executed in good faith the renunciation of the secular power of the Church. It was a step towards the Church was a spiritual institution, and as such had no concern with earthly affairs.

The king, however, cannot have doubted for a moment that the papal renunciation would fail before the opposition of both ecclesiastical and secular princes. Henry V was mean and deceitful, and sought to entrap the pope. The king having renounced his claim to investiture, the pope in 1112, on 12 February, returned all temporalities to the Crown, but thereby raised (as Henry had foreseen) such a storm of opposition from the German princes that he was forced to recognize the futility of this attempt at settlement. The king then demanded that the right of investiture be restored, and that he should be elected to succeed the deposed emperor, and he, presumptuously seized him and thirteen cardinals, and hurried them away from the new infuriated city. To regain his freedom, Paschal was forced, after two months imprisonment, to accede to Henry's demands. He granted the king unconditional investiture as an imperial privilege, crowned him emperor, and promised on oath not to excommunicate him for what had occurred.

Henry had thus secured by force a notable success, but it could have no long duration. The more ardent members of the Gregorian party rebuked the 'heretic' pope, and compelled him to rescind the position into which he had been forced. The Lateran Synod of 1112 renewed the decrees of Gregory and Urban against investiture. Paschal did not wish to withdraw his promise directly, but the Council of Vienna, having declared the imperial privilege (privilege, derivatively, a private law) a praemunire (a vicious law), and as such null and void, it also excommunicated the emperor. The pope did not, however, break off all intercourse with Henry, for whom the struggle began to assume a threatening aspect, since now, as previously under his father, the difficulties raised by ecclesiastical opposition were aggravated by rebellion of the princes. The insipid selfishness of the emperor, his mean and odious personality, made enemies on every side. Even his bishops now opposed him, seeing themselves threatened by him and believing him set on sole mastery. In 1114 at Beauvais, and in 1116 at Reims, Cologne, Goslar, and a second time at Cologne, excommunication of the emperor was repeated by papal legates. Imperial and irreconcilable bishops, who refused to join the papal party, were removed from their sees. The emperor's forces were defeated simultaneously on the Rhine and in Saxony. In 1116 Henry agreed to enter into negotiations with the pope, but no agreement was arrived at, as on this occasion Paschal refused to enter into a conference with the emperor.

After Paschal's death (1118) even his tolerant successor, Gelasius II (1118-1124), could not prevent the situation from becoming daily more entangled. Having demanded recognition of the privilege of 1111 and been referred by Gelasius to a general council, Henry made a hopeless attempt to revive the universally detested sedition by appointing as antipope, under the name of Gregory VIII, Burdinus, Archbishop of Calais (Portugal), and he accordingly excommunicated the pope. In 1119 Gelasius was succeeded by Guido of Vienna as Callistus II (1119-24); he had already excommunicated the emperor in 1112. Reconciliation seemed, therefore, more remote than ever. Callistus, however, regarded the peace of the Church as the first and as the exclusive aim of the popes, and better terms with the German princes, was likewise eager for peace, negotiations were opened. A basis for compromise lay in the distinction between the ecclesiastical and the secular elements in the appointment of bishops. This mode of settlement had already been discussed at the councils of Tours and in France, e.g. by Ivo of Chartres, as early as 1099. The bestowal of the ecclesiastical office was sharply distinguished from the investiture with imperial domains.
As symbols of ecclesiastical installation, the ring and staff were suggested; the sceptre served as the symbol of investiture with the temporalities of the see. The chronological order of the formalities raised a new difficulty; on the imperial side it was demanded that investiture with the temporalities should precede consecration, while the papal representatives naturally claimed that consecration should precede investiture. If the investiture were performed, the emperor, refusing the temporalities could prevent consecration; in the other case, investiture was merely a confirmation of the appointment. By 1119 the articles of peace were agreed upon at Mouzon and were to be ratified by the Synod of Reims. At the last moment, however, negotiations were broken off, and the act of renewed the excommunication of the emperor. But the German princes succeeded in reopening the proceedings, and peace was finally arranged between the legates of the pope, the emperor, and the princes on 23 September, 1122. This peace is usually known as the Concordat of Worms, or the "Pactum Calixtinum."

In the document of peace, Henry yields up "to God and his Holy Apostles Peter and Paul and to the Holy Catholic Church all investitures with ring and staff, and allows in all Churches of his kingdom and empire ecclesiastical election and free consecration*. On the other hand it was agreed that his children had belted him Henry by the Grace of God Roman Emperor, that the election of bishops and abbots in the German Empire in so far as they belong to the Kingdom of Germany, shall take place in his presence, without simony or the employment of any constraint. Should any discord arise between the parties, the emperor shall, after hearing the advice and verdict of the metropolitans and other bishops of the province, lend his approval and support to the better side. The elected candidate shall receive from him the temporalities (regalia) with the sceptre, and shall discharge all obligations entailed by such reception. In other portions of the empire, the consecrated candidate shall within six months receive the regalia by means of the sceptre, and shall fulfill towards him the obligations implied by this ceremony. From these arrangements is excepted all that belongs to the Roman Church (i.e. the Papal States). The different parts of the empire were therefore differently treated: in Germany the power of the prince was balanced by the power of the Church, in Italy and Burgundy it followed the consecration and within the succeeding six months. The king was deprived of his unrestricted power in the appointment of bishops, but the Church also failed to secure the full exclusion of every alien influence. The investiture with the ring and sceptre was a compromise, in which each party made concessions.

Important for the king were the toleration of his presence at the election (præsentia regis), which lent him a possible influence over the electors, and of investiture before consecration, whereby the elevation of an archbishop or a bishop was rendered difficult or even impossible. The extreme ecclesiastical party, who condemned investitures and secular influence in elections under any form, were dissatisfied with these concessions from the very outset and would have been highly pleased, if Callistus had refused to confirm the Concordat.

In appraising the significance of this agreement it remains to be seen whether it was intended as a temporary truce or an enduring peace. Doubts might very well be (and indeed have been) entertained on this matter, since formally the document is drawn up only for Henry V. But a close examination of our sources of information and documents has shown that it is erroneous to maintain that the Concordat enjoyed but a passing recognition and was of small importance. Not only by the contracting parties, but also by their contemporaries, the compact was regarded as an enduring fundamental law. It was solemnly recognized not only as an imperial statute, but as a law of the Church by the Lateran Council of 1123. We also know from the history of Reichenberg, who was present at the Lateran, that in addition to the imperial document, which has been held was alone read, that of the pope was also read and sanctioned. As Gerhoh was one of the chief opponents of the Concordat, his evidence in favour of an unpleasant truth cannot be doubted. That the Concordat was not possible perpetual binding power, to neither party, of course, intended—and the Concordat was very far from securing such continued recognition, since it reveals at most the anxiety of the Church for peace, under the pressure of certain circumstances. By new legislative act the provisions were modified. Under King John (1135–40) and at the beginning of the reign of Conrad III (1138–55) the Concordat was still unchallenged and was observed in its entirety. In 1139, however, Innocent II, in the twenty-eighth canon of the Council of Rome, confined the privilege of electing the bishop to the cathedral chapter and the representatives of the regular clergy, and made no mention of lay participation in the election. The ecclesiastical party assumed that this provision annulled the king's participation in elections and his right to decide in the case of an equally divided vote of the electors. If their opinion was correct, the Church could again exercise the temporal power that they had in the first instance to bear the brunt of the fight. Had they suffered defeat, the others could never have engaged in the contest with the Church. The Conflict in England.—In England the conflict is part of the history of Anselm of Canterbury (q.v.). When the pontiff (1103–11) and the emperor (1105–11) proposed the singlehanded for the canon law against king, nobility, and clergy. William the Conqueror (1066–87) had constituted himself sovereign lord of the Church in England; he ratified the decisions of the synods, appointed bishops and abbots, determined how the pope should be chosen, and forbade all intercourse without his permission. The Church in England was therefore practically a national Church, in spite of its nominal dependence on Rome. Anselm's contest with William II (1087–1100) was concerned with other matters, but during his residence in France and Italy he was one of the supporters of ecclesiastical reform, and, being required on his return to take the oath of fealty to the new king (Henry I, 1100–35) and receive the bishopric from his hands, he refused to comply. This led to the outbreak of the investiture quarrel. The king despatched successive embassies to the pope to obtain the annulment of the Concordat, but without success. In his reply to the king in his letters to Anselm, Paschal strictly forbade both the oath of fealty and all investitures by laymen. Henry then forbade Anselm, who was visiting Rome, to return to England, and seized his revenues, whereupon, in 1105, the pope excommunicated the councillors of the king and all prelates who re-
ceived investiture at his hands. In the same year, however, an agreement was arrived at, and was ratified by the pope in 1106, and by the Parliament in London in 1107. According to this concordat, the king renounced his claims to investiture, but the oath of fealty was still exacted. In the appointment of the higher dignitaries of the Church, however, the king still retained the greatest influence. The election took place in the royal palace, and, whenever a candidate for a bishopric was proposed, he simply proposed another, who was then always elected. The chosen candidate thereafter swore the oath of fealty, which always preceded the consecration. The separation of the ecclesiastical office from the temporal was the sole object attained, an achievement of great importance.

In France the question of investiture was not of such importance for the State as to give rise to any violent contention. The bishops had neither such power nor such extensive domains as in Germany, and but a certain number of the bishops and abbots were invested by the king, while many others were appointed and invested by the nobles of the kingdom. Counts and the dukes (i.e. for the so-called mediates bishoprics). The bishoprics were often dealt with in a very arbitrary manner, being frequently sold, presented as a gift, and bestowed upon kinmen. After the reconciliation between the pope and king, in 1104, the rights of the apostles restored, and free election became the established rule. The king retained, however, the right of ratification, and exacted, usually after the consecration, the oath of fealty from the candidate before he entered on the use of the temporalities. After some minor conflicts, these conditions were extended to the mediates bishoprics. In some cases, e.g. in Gascony and Aquitaine, the bishop entered into immediate possession of the temporalities on the ratification of his election. It was in France, therefore, that the requirements of the Church were most completely fulfilled.

Invitatorium.—The Invitatorium or as the word implies, is the invitation addressed to the faithful to come and take part in the Divine Office. The psalm "Venite" has been used for this purpose from the earliest times. In the Life of St. Porphyrius of Gaza we read that this saint, wishing the people to join in prayer, caused the "Venite exultemus Domino" to be sung, and replied to that effect: "The same to you." In the Benedictine Office the "Venite exultemus Domino" is recited daily at the beginning of the offices in the night Office and is called the Invitatorium. It is never omitted, but the antiphons that follow each verse are changed according to whether or not a ferial or a saint's Office is being recited. Three antiphons are repeated twice each night, the psalm and once after the "Glória Patri". The Rule of St. Benedict calls this psalm the Invitatorium, while the Rule of the Master (Magister Amonus, a Frankish author of the seventh century) calls it the Responsorum hortationis. The Mosarabic Liturgy makes use of an expressive word: sonus, as if to signify the bell that calls to the church. The most ancient Roman Liturgy uses the Latin word Invitatorium; for it is omitted in the primitive liturgy, which is represented in our days by that of the last three days of Holy Week. If we find it in the Office of the Dead, it is because it was introduced at a later period. The Council of Constance (1381) mentions the "Venite" to be simple, and to be used in the Office of the Dead. This same canon, in speaking of the manner of reciting the Invitatorium, employs the very words of the Rule of St. Benedict, which shows clearly that the use of this psalm was closely connected with the monastic Office.

The Invitatorium was introduced slowly, like the preceding psalm: "Domine quid multiplicesancti". This was to enable the monks who were coming to the vigil to arrive in time for the beginning of the Office. Indeed, it really seems that these two preliminary psalms (Ps. iii. and xcvii.) were the prayers said privately by the monks while rising and coming to choir: "Ecce ego eam in quo exsurrincti." It is possible that in the course of time the custom was introduced of reciting them aloud in choir, while awaiting the arrival of those who were late, and thus, after a while, they were inserted in the Office itself. In effect, the psalm "Venite" would seem to be addressed to the monks who were coming to the vigil rather than to those who were already there. At Rome, on the feast of the Epiphany, there was no Invitatorium. The psalmody began, and still begins, with the psalms of the first nocturn and their antiphons. "Hodie non cantamus Invitatorium sed absolu incipium" (To-day we chant not the Invitatory but begin without it) is an instruction in a rubric of the Vatican antiphoner. The psalm "Venite" was recited with its own antiphon in its proper place, that is to say, the last of the psalms of the second nocturn. Later this psalm became the first psalm of the third nocturn, and the antiphon was repeated just as when it was used at the Invitatorium. Amalarius and Durandus of Mende try as usual to explain it mystically, but the most probable explanation is that the Invitatorium was suppressed because the psalm was recited later and they did not wish to recite it twice in the same Office.

The Benedicite Breviary, which had hymns for its third nocturn, had not the same reason for excluding it and so retained it on the feast of the Epiphany. We see, nevertheless, that, before the ninth century, the Roman Liturgy had not the Invitatorium, at least not as regularly as the Benedictine Liturgy. It is likely that it was first introduced out of imitation of the monastic practice, on those days alone on which the people assisted at the vigil, when the Invitatorium would thus be addressed to some one. The "Ordines Romani" inform us that, on great festivals, two nocturnal offices were celebrated: one, without the Invitatorium, was recited by the priest in his chapel; the other with the Invitatorium, at which the people assisted. Amalarius tells us that in his time only the Office for the vigil of Sunday had the Invitatorium, the ferial Office had not, because the people did not assist at it. On the feast of the Commemoration of the Dead the Invitatorium was recited, because the faithful came that day to pray for the deceased, but this brings us to a much later date. Most likely the origin of the Invitatorium is to be found in the call by which the monks were awakened: "Veniite adoremus Dominum", which soon became the anthem or the refrain of the psalm "Venite exultemus Domino" which this prayer naturally recalled. Amalarius calls our attention to a peculiarity of fact. On week-days the Invitatorium was recited without the insertion of the antiphon: "Invitatorium diebus festivis hebdomadis sine modulatione Antiphone
solet dicit." The version of the psalm "Venite exultemus" used in the Breviary is that of the ancient Roman psalter, which differs in some passages from the Vulgate.

H. Leclercq.

Iona, School of.—Iona is the modern name derived by change of letter from Adamnan's Ionu; in Bede it is Hii; the Gaelic form is always I or Y, which becomes Hy by prefixing the eponymic h. This rugged, storm-swept island, three miles long and one in average breadth, and about a mile distant from the Ross of Mull, was next to Armagh the greatest centre of Gaelic Christianity—the latter was Patrick's city and primatial see; the former Columba's monastic city, a "primatial island", and the light of all the North. Yet closely connected with Ireland for at least 600 years, it may be described as an Irish island in the Scottish seas. Columba, born in 521, landed with twelve of his monks at the southern ex-

of Kella" be his own work, and he was engaged in copying one of the psalms when, overtaken by mortal illness, he directed his nephew Baithen to write the rest. And we are told, too, that Baithen during his brief abbacy of three years in succession to Columba was, like his master, engaged in "writing, praying and teaching up to the hour of his happy death". When asked about the learning of Baithen, Fintan one of his monks replied: "Be assured that he had no equal on this side of the Alps in his knowledge of Sacred Scripture, and in the profundity of his science"; and he was at once a pupil and a professor of the School of Iona. Language like this might be considered exaggerated if we did not possess the writings of Adamnan, the ninth abbot and the most illustrious scholar of Iona.

Adamnan, otherwise Eunan, a native of Drumhorne, in County Donegal, and a tribal relative of Columba, was educated from his youth in Iona, and it

Ruins of Iona Cathedral—Exterior

tremity of the island—ever since called Porta Churraich, or the Bay of the Island—on Whiteun Eve, 12 May, 563. Whether he came to do penance for his share in the battle of Culdurnhime two years before or, as the Irish "Life" says, "to preach the Gospel to the men of Alba and to the Britons and to the Saxons"—which in any case was his primary purpose—we cannot now determine. It appears that he got a grant of the island from his relative Conall, King of Dalriada, which was afterwards confirmed by Brude, King of the Picts, when the latter was converted by the preaching of Columba, who immediately set to work to build his monastery, more Scotorum, of earth, timber, and wicker-work. Hence not a trace now remains of those perishable buildings—all the existing ruins are medieval. A Celtic monastery consisted of a group of beehive cells around a central church or oratory, the other principal buildings being the common refectory or kitchen, the library or scriptorium, the abbot's house, and the guest-house. Adamnan, after Columba himself the brightest ornament of the School of Iona, in his "Life" of the founder, makes explicit references to the tabula, waxen tablets for writing; to the pens and styles, graphia and calami, and to the ink-horn, cornicula atramenti, to be found in the scriptorium. Columba was certainly a most accomplished scribe if the "Book

may be said that all his learning was the learning of Iona. His "Life of Columba", written at the request of the brotherhood, in Latin, not in Gaelic, is on the whole one of the most valuable works of the Western Church of the seventh century that have come down to us. He gives us more accurate and authentic information of the Gaelic Churches in Ireland and Scotland than any other writer, not excepting even Venereal Bede, who described him as "a good and wise man, and most nobly instructed in the knowledge of the Scriptures". But he was much more. We know from his writings that he was an accomplished Latin scholar, a Gaelic scholar too. Gaul was his mother tongue—while he had a considerable acquaintance with Greek and some even with Hebrew. He was, moreover, painstaking, judicious, and careful in citing his authorities. He has also left us an admirable treatise "On the Holy Places" in Palestine which he compiled from the narrative of a shipwrecked French bishop named Arculfus, who returning from the Holy Land was cast on the shores of Iona. This is an invaluable treatise from which Bede has extracted long passages for his history, showing that its authority was as great in his own day as it has ever since continued to be in the estimation of scholars. This learned man was a true monk, and like Columba himself took a share in the manual labour of the monas-
tery. With his own strong arms he helped to cut down as many oak trees in one of the neighbouring islands—perhaps Erraid—as sufficed to load twelve boats, and no doubt he had a share in building the boats and framing the monastic cells, like the cell of Columba, which was, he tells us, tabula suffulta, framed of planks, and harundine tecta, thatched with reeds.

During the century that closed with the death of Adamnan, Iona was in its glory: Columba and his monks had converted to the faith the whole of Pictland, and they also spread their influence to Ireland and the North of Saxonland. Aidan, Finan, and Colman were men whose well-deserved eulogy has been recorded by Venerable Bede. The unhappy disputes about the frontal tombs and the true time for celebrating Easter, caused much disturbance during the seventh century both in Iona itself and in its daughter houses. Even when Ireland and England had given up the strife and adopted the Roman Easter, the monks of Iona, true to the traditions of their sainted founder, still clung tenaciously to the old Easter. And so late as 716, when Iona itself conformed to the Roman usage, some of the daughter houses in Pictland stubbornly held to the ancient discipline. This stubbornness brought about a few years later the expulsion of the Columban monks from Pictland by Nechtan, King of the Picts, who had accepted the Roman discipline.

The ninth century brought woe and disaster to both Iona and Lindisfarne from the pagan Danes who ravaged all the British coasts. In 793 they destroyed the Church of Lindisfarne with great rapine and slaughter. In 795 they made their first attack on Iona, but the monks on that occasion appear to have escaped with their lives. But in 806 sixty-eight of the community were slain at Port na Mairtir, on the eastern shore of the island, and the white sands somewhat north were the scene of the massacre of another band of martyrs. A few years later again, in 814, Abbot Cellach found it necessary to transfer the primacy of the Columban Order from Iona—which Adamnan calls "this our primatial island"—to the monastery of Kells in Ireland, bringing with him the shrine containing Columba's relics which was however brought back to Iona. In 823 there was a further massacre of Iona monks, namely of St. Blaithmac who refused to give up the shrine, and his holy companions. Blaithmac's heroic death was celebrated in Latin verse by Walafridus Strabo, Abbot of Reichenschau, South Germany. In 908 St. Andrews was formally recognized as the primatial see of Scotland, from which year we may date the disappearance of Iona's insular primacy. In the beginning of the thirteenth century, 1204, the ancient Celtic monastery finally disappeared, and a new Benedictine one was established by authority of the pope—but the original ground—the Redig Odhrin—was still regarded as the holiest ground in Scotland, and is now crowded with the inscribed tomb-stones of the kings, chieftains and prelates who rest beneath.

Ionian Islands a group of seven islands (whence the name Heptanesus, by which they are also designated) and a number of islets scattered over the Ionian Sea to the west of Greece, between 36° and 40° N. lat., and 19° and 23° E. long. The seven islands are: Corfu (Korfu, Corfu), Paxi, Lefkada or Santa Maura, Ithaca or Thikai, Cephalonia, Zante or Zacynthus, and Cerego or Cythera. Of the islets the most important are: Antipaxos, Othones, and Anticythera or Cerigo. The Ionian Isles have a total area of about 1089 square miles. The population amounts to 261,930, among them being 6615 Catholics of the Latin Rite, while the remainder, with the exception of a few thousand Jews and a small number of Mussulmans, belong to the Greek Orthodox Church. The climate of the islands is in general very mild and salubrious, and, in spite of the mountainous character of the land, there is a fairly extensive output of cotton, wine, oil, and raisins. The Ionian Isles are frequently mentioned or described by the ancient Greek and Latin authors, for whom they had many mythological associations. Many remains of antiquity are even to-day found on these islands (Riemann, "Recherches archéologiques sur les îles ionniennes", Paris, 1879-80). They all remained under Byzantine rule until about the end of the eleventh century, when the Normans of the Two Sicilies obtained possession of Corfu. In 1386 Venice took the islands, and retained them until the middle of the eighteenth century. The Treaty of Campo Formio in 1797 gave them to France, which formed them into the three provinces of Ithaca, Corfu, and the Ægean Sea. In 1799 the Russian fleet seized the Ionian Isles, and they were constituted a small state tributary to Turkey, but in 1807 the Treaty of Amiens declared them free under the protectorate of Russia. In 1807 the Peace of Tilsit gave them back to France, and General Berthier was installed as their governor. The Second Treaty of Paris (November, 1815) placed them under English protection. An aristocratic government was then once more recognized; the legislative functions were vested in a chamber of seventy deputies, eleven nominated by the Government and fifty-nine elected by the people; the executive power belonged to a Senate consisting of a president, appointed by the protecting power, and five senators elected for five years by the deputies from their own body. An English lord commissioner controlled foreign relations and the police. England enjoyed the right of garrisoning the forts and of military administration. After the French Revolution of 1848, an insurrection broke out in Cephalonia with the object of uniting the islands to Greece, but was rigorously repressed by England in 1849. From that time, however, the first vote of the Chamber, whenever it assembled, was in favour of the union with Greece, after which vote it was immediately dissolved.
The English Government, after sending Mr. Gladstone to investigate the feeling of the population, at last decided to surrender the islands to Greece. King George I, upon ascending the throne at Athens, in 1863, consented to succeed Otho I only upon England’s undertaking to cede the Ionian Archipelago to the Hellenic Kingdom. This cession was effected between 21 May and 2 June, 1864. The Ionian Isles have since then formed the three nomarchies, or departments, of Corfu, Cephalonia, and Zante. Cerigo alone has been incorporated in the continental nomarchy of Messenia.

The Ionian Isles must have received the Gospel at a comparatively early date. The first known Bishop of Corfu is Apollodorus, or Alethodorus, who assisted at the Council of Nicaea in 325 (Gelzer, "Patrum nicenorum nomina", LXIII, no. 198; see also the list of ancient Greek bishops in Lequien, II, 232–5).

After the consummation of the Eastern Schism, the Ionian bishoprics remained in the power of the schismatics. Until 1260 the archipelago of the seven islands counted scarcely any Catholics. Under the domination of the House of Anjou, Catholicism made some progress there, and this was continued from 1386 to 1797 under Venetian rule. In the thirteenth century Zante and Cephalonia were made Latin bishoprics, suffragan to Corinth until 1796. These two dioceses (Zante and Cephalonia) were then made one and suffragan to Corfu, which was then raised to the status of an archbishopric (see the list of Latin bishops of the three sees in Lequien, III, 377–82, 889–92; completed by Gams, 399, 430, and Eulobel, I, 217). The political vicissitudes through which the Ionian Archipelago passed during the nineteenth century brought about the Catholic missions, which, however, suffered less after 1850. At the time of the cession of the islands to Greece in 1864, the Hellenic Government promised to secure to the three Latin bishoprics their former rights and privileges. The Archdiocese of Corfu (which, besides the island of that name, comprises the islands and islets of Merlera, Phano, Samothrace, Paxos, and Antipaxos, as well as a few places in Epirus on the mainland between the towns of Parga and Sássina) is now governed by a resident archbishop, who is at the same time Administrator Apostolic of the Diocese of Zante-Cephalonia. This last diocese comprises, besides the two islands from which it derives its name, those of Santa Maria Leucasa (or Leucadia), Ithaca, and Cerigo. The archdiocese numbers about 6000 Catholics, all of the Latin Rite; the Diocese of Zante-Cephalonia, 615 (Missiones catholicae, 1907, 145–7). (See Corfu, Archdiocese of; Zante-Cephalonia, Diocese of.) The Orthodox hierarchy until 1900 consisted of seven dioceses, one for each of the principal islands of the Ionian Archipelago; since then it has numbered but five, that of Paxos having been suppressed, and the two titles of Leucasa and Ithaca united into one. Formerly dependent on the Phanar of Constantinople, the ecclesiastical eparchies of the ancient septinsular republic became connected in 1866 with the Holy Synod of Athens, to which they are still subject (Thiéry, "L’Église de Grèce" in "Echos d’Orient", III (1899–1900), 288 sqq.). (See Greece.)
IOWA is one of the North Central States of the American Union, and is about midway between the Atlantic and the Pacific Oceans. It lies between two great rivers, the Mississippi and the Missouri; the Mississippi forming its eastern boundary and separating it from the States of Illinois and Wisconsin; the Missouri and its chief tributary, the Big Sioux, forming its western boundary, and separating it from the States of Nebraska and South Dakota. It extends from 40° 36' to 43° 30' north latitude.

In the south-east corner, in Lee County, the boundary projects below the parallel, following the channel of the Des Moines River down to its junction with the Mississippi. The state is 310 miles from east to west and 210 miles from north to south, and has an area of 56,025 square miles, or 35,855,900 acres, being nearly the same size as Wisconsin or Illinois.

Physical Characteristics.—The surface of the state is an undulating prairie, part of the Great Central Plain of North America. It rises gradually from the south-east corner, where the lowest point is but 444 feet above the sea-level, towards the north-west, to the Divide (an elevated plain beginning in Dickinson County in the north-western part of the state), where the highest point (1094 feet) is reached. The ridge of the Divide crosses the state from north to south, parallel with the western boundary and about 60 miles east of it, until it reaches Adair County, whence it sweeps eastwards to Appanoose County. That part of the state east of the Divide, comprising over two-thirds of its surface, is drained by rivers flowing in a south-easterly direction into the Mississippi and its tributaries. The principal rivers of this system are the Upper Iowa, Turkey, Maquoketa, Wapapinicon, Cedar, Skunk, and Des Moines. Of these the Des Moines is by far the largest and most important, rising in Minnesota and flowing diagonally across the entire state. West of the Divide the rivers flow southwesterly into the Missouri and its tributaries, and, as the watershed is near the western boundary of the state, the rivers have shorter courses and a more rapid flow than those of the eastern system. The principal western rivers are the Big Sioux, Rock, Floyd, Little Sioux, Boyer, and Nishnabotna. The principal lakes of Iowa are Spirit Lake, which is the largest, Lake Okoboji, a popular summer resort, Clear Lake, and Storm Lake. These are small but beautiful sheets of water situated in the north-western part of the state which is an extension of the lake region of Minnesota. Along the largest rivers are valleys from one to ten miles in width, bordered by
irregular lines of bluffs. The picturesque ravines and bold rocky bluffs, ranging in height from 200 to 400 feet, along the Mississippi from Dubuque northwards, lend to that portion of the river a striking beauty all its own. There is but little native forest in the state, the timber being chiefly confined to the valleys of the rivers and the bordering bluffs. It was found that all deciduous trees thrive on the soil of the prairies; by special legislation, offering fiscal privileges, the farmers were encouraged to plant, and now woodland groves near the farmhouses are seen in all parts of the state, adding picturesqueness to the scenery. The principal trees are oak, chestnut, ash, elm, hickory, bass, walnut, poplar, box, elder, cedar, and varieties of oak. There are no mesomalic bottomlands in the state; the air is dry and invigorating, and the general climatic influences salubrious. During the last ten years (1899 to 1908 inclusive) the average extremes of temperature were 102° above to 31° below zero; the average mean temperature was 48° above zero. During the same time the average rainfall was 33 inches. For the year 1908, the mean temperature was 49.5°; the highest temperature was 101° (3 August) in Mahaska and Wapello Counties in the southern part of the state; the lowest temperature recorded for the year was 15° below zero (29 January) in Emmet and Winnebago Counties in the northern part of the state. The average amount of rain and melted snow for the year was 35.26 inches.

Industries and General Social Conditions.—Iowa has less waste land than any other of the United States, 97 per cent of its surface being tillable. The soil of the greater part of the state consists of a dark drift loam from two to five feet deep and of wonderful fertility. In the western part of the state is found the bluff soil, or loess, believed to be the deposit of the winds from the plains of Kansas and Dakota; this soil is a rich, coarse, loamy loam, favorable to the growth of fruit trees. The soil of the river valleys consists of waste carried down from higher levels, and is known as alluvium; it is the richest soil in the state. Because of the richness of its soil Iowa has long held a leading place among the agricultural states of the Union. Travelers over the state cannot but be impressed by the sight of its vast fields of Indian corn and oats. More than one-half of its population are engaged in farming. The value of the agricultural products of the state in 1908, according to the United States Department of Agriculture, was $212,528,000. This included 36,160,000 bushels of Indian corn, valued at $149,477,000, and 110,444,000 bushels of oats, valued at $46,386,000. The state ranks first in the production of oats and in the number of swine; second only to Illinois in the production of corn, second to Texas in the number of neat cattle, second to New York in the number of dairy cows, and second to Illinois in the number of horses. Iowa is famous for its dairy products, and the State Department of Agriculture estimates the value of these products for the year 1908 at $44,500,000.

The most important mineral deposit in the state is bituminous coal; the coal-field is an area of approximately 20,000 square miles in the southern and central parts of the state. The output in 1908 was 7,149,517 tons, valued at $11,772,228. Gypsum for stucco and plaster is found in Webster County, and clay for tile- and brick-making is abundant. In the year 1908 the value of clay products was $4,075,600. possess in the vicinity of Dubuque, and attracted the first white people to the state, and which became known as the Mines of Spain, is still yielding lead and zinc ore. The manufactures of the state are steadily increasing, because of its growth and prosperity, and the possession of native coal. The value of the output of manufactures for the last statutory year, 1905, was $160,572,313. The Missisippi is now the only river navigable for large boats, the shifting channel and sand-bars of the Missouri constituting great obstacles to navigation. But the facilities for transportation are excellent, the state being covered by a network of railways, including seven great trunk lines. The total mileage of railways in the state, in 1908, was 9,980.82 and the total value of electric interurban railways was $24,018. According to Federal estimates made in 1908, the population of Iowa was 2,196,970. By the last State Census (1905) the population—2,210,050—was made up of: 1,264,443 native whites of native parentage; 668,352 native whites of foreign parentage; 228,296 foreign-born; and 3,758 Chinese. The number of foreign-born, however, is the smallest of all the states, being 53 Chinese in the state; but 39 per cent of the foreign-born population were born in Germany. Added to the immigrants from Germany, those from Sweden, Norway, and Denmark make 63 per cent of the foreign-born population derived from Teutonic races. Eight per cent of the foreign-born came from Ireland. Most of the native-born population are descendants of immigrants from the New England States, New York, Pennsylvania, Ohio, and Illinois. There were many Frenchmen among the earliest settlers (Bishop Loras preached sermons in the cathedral in French as well as in English), but there are few of that race but few descendants. The state. Prior to 1853, the immigrants from foreign countries were largely from Ireland and Germany, with the Irish in the majority; these immigrants settled in the eastern part of the state, and there were among them a large proportion of Catholics. But since that year the immigration has largely been from the Teutonic nations. The State Census of 1905 gives the membership of the four leading Churches as follows: Methodist Episcopal, 162,688; Catholic, 138,000; Lutheran, 91,889; Presbyterian, 47,765. According to Federal estimates in 1908, Des Moines, the capital city, had a population of 28,717; the next largest cities in order are Dubuque, Sioux City, and Davenport.

An admirably organized system of public schools exists throughout the state, generous provision for that purpose having been made by the State Constitution. The schools are supported chiefly by local taxation and the interest on the permanent school fund. Education is compulsory, the parents and guardians of children between the ages of seven and fourteen years inclusive being compelled to send them to some public, parochial, or private school for the term week. The school term is of the usual six weeks. By statute passed in 1909, the attendance of the children during these sixteen weeks is excused for such time as they are attending religious service or receiving religious instruction. The State Superintendent of Public Instruction has general supervision of the public schools. In each county there is elected a county superintendent. Some of the townships of the counties constitute each a single district having one or two central schools, but generally the townships are subdivided into subdistricts and independent districts; where the latter consist of cities, the schools are managed by the city. No religious instruction is given, the Bible is not extended from any public school or institution, but no pupil can be required to read it contrary to the wishes of his parent or guardian.

In 1903 the number of schoolhouses was 13,914, the number of teachers 27,950, the enrolment of students 1,063,026. In 1908 the city and county school systems, for the purpose of education $1,930,363. There are 534 high schools in the state in which the course of study, generally speaking, covers four years. The State University, the head of the public school system, is located at Iowa City. It was established in 1847; in 1908 it had 104 professors and instructors, and 2,315 students enrolled. The State also maintains
the College of Agriculture and Mechanic Arts, at Ames, and the Normal School at Cedar Falls. There are also 12 further institutions, besides the universities, of higher educational institutions. The Juvenile Court Law has been for several years in force in Iowa. Under the provisions of the law, offending children under the age of sixteen years are no longer treated as criminals, nor confined in jails. They, as well as neglected, helpless, and delinquent children, and, under the supervision of probationary officers, are kept in their own or other homes, or sent to the State Industrial Schools. Many girls are sent to the Houses of the Good Shepherd.

Catholic Education.—Through the unremitting zeal of Bishop Dubuque and his predecessors in office, and their labours among the clergy and people, the cause of Catholic religious education has so advanced that parochial schools exist in all the parishes of considerable size in the state, and are taught chiefly by religious orders. In the year 1809, there were in the state 839 pupils attending the parochial schools. These schools are supplemeted by 36 academies and high schools in which 5812 students are taught; and to complete the system are two diocesan colleges: St. Joseph's College, at Dubuque, with 280 students, and St. Ambrose College, at Davenport, with 167 students. The metropolitan city of the archdiocese, where the enrolled number of pupils attending the public schools is 4084, the number attending the parochial schools is 3000. The city is surrounded by a cordon of Catholic institutions, educational and charitable, and has become widely known as a centre of Catholic education.

History.—The first white man who saw Iowa was the French Jesuit Father Marquette and Louis Joliet, who on the 17th day of June, 1673, coming down the mouth of the Wisconsin River, discovered the Mississippi and faced the picturesque bluffs of the Iowa shore. The first landing on Iowa territory recorded by Father Marquette in his journal was near Montrose, in Lee County, where he had a peaceful and memorable meeting with the natives. One hundred and fifteen years passed away from the time of Father Marquette’s discovery until the first white settlement was made within the limits of the state. In 1788 Dubuque, the French Canadian, was granted from the Indians a grant of land, in which to mine for lead; it extended seven leagues along the west bank of the Mississippi and was three leagues in width, including the territory on which now stands the city of Dubuque. This grant was afterwards confirmed by Barbé de Marigny, governor of the Spanish province of Louisiana, and the strip of land became known as the Mines of Spain. Here Dubuque, with ten other Canadians, and aided by the Indians, operated the mines until his death in 1810, when the whites were driven out. Dubuque was buried on the top of an isolated bluff overlooking the city, a location that has always been kept. The city, from the present limits of the city of Dubuque, and a large cross marked his grave for many years. This became a well-known landmark to river men on the upper Mississippi, and is mentioned in books of travel. In 1832, in the territory east of the Mississippi, occurred the war with the Indians known as the Black Hawk War. This resulted in a treaty, made in the same year, by which the Indians relinquished that part of Iowa known as the Black Hawk Purchase, containing six million acres of land, lying immediately west of the Mississippi River, about ninety miles in width, and north of the Missouri River. Through the purchase, the first concession of territory in Iowa by the Indians, it was the first which opened any portion of the land for settlement by the whites. Settlements were made in 1833 at Dubuque and at other points near the Mississippi River. Within ten years the title to practically all of the state was secured by treaties with the Indians. Attracted by glowing accounts of the richness of the soil, immigrants came pouring in from the New England states, New York, Illinois, Ohio, Kentucky, North Carolina, Missouri, and from other states.

In 1834 that part of the Louisiana Purchase now included in the State of Iowa was made a part of the Territory of Michigan, in 1836 it was attached to, and made a part of, the new Territory of Wisconsin, and in 1838 was established separately as the Territory of Iowa. On 22 December of 1846, it was admitted to the Union as the twenty-ninth State, being the fourth state created out of the Louisiana Purchase. In 1854 the first railroad was built from Davenport west, and railroad-building then extended rapidly. In the same year was passed a law prohibiting the sale of intoxicating liquors which, with some amendments, is still on the statute books. In 1857 the state adopted a revised Constitution which, with a few amendments, is still the law. The progress of the state was checked by the Civil War, at the close of which, however, immigration recommenced, and population and wealth increased. Although the population in 1860 was less than 700,000, the state furnished, during the Civil War, 75,519 volunteers.

The Church in Iowa.—The first Mass celebrated within the limits of Iowa was said in the year 1833, by the Rev. C. P. Fitzemorris, of Galena, Illinois, in the home of Patrick Quigley, who was the first Catholic in the state. The first Catholic church in the state was built at Dubuque by the celebrated Dominican missionary, Samuel Mazzuchelli, in 1836. On 10 December, 1837, the Very Rev. Mathias Loras, Vicar-General of the Diocese of Mobile, Alabama, was consecrated first Bishop of Dubuque. Bishop Loras was a native of Lyons, France, and was a worthy comrade of Bl. Jean-Baptiste Vianney, the celebrated Curé of Ars. Going to France for priests and financial aid, Bishop Loras arrived in Dubuque with two priests and four deacons on the 19th day of April, 1839. His diocese included all the territory between the Mississippi River and the Mississippi Rivers, from the northern limit of the State of Missouri to the British Possessions. In his diocese he found but three churches and one priest, Father Mazzuchelli. The indefatigable labours of Bishop Loras in personally attending to the spiritual wants of the scattered settlers in his vast territory, in building churches and procuring cemeteries, and in insuring the immigration from the Eastern States and from Europe, have secured him a high rank among the pioneer missionaries and church-builders of this country. In 1843, he brought from Philadelphia the Sisters of Charity of the Blessed Virgin Mary, who established their mother-house and convent at Dubuque and were widely known as successful teachers. In 1849 he gave a home to the Trappist monks from Mount Melleray, Ireland, who founded the Abbey of New Melleray, still in existence, twelve miles from Dubuque. When he died (19 February, 1858) there were within the limits of the State of Iowa, 46 priests, 60 churches, and a Catholic population of 54,000. In 1850 the territory north of the State of Iowa had been formed into the Diocese of St. Paul. He was succeeded by his coadjutor, the Rt. Rev. Clement Smyth, who had been Prior of New Melleray Abbey. Bishop Smyth was a man of great scholarly attainments and was the founder of the school for young men which still flourishes in the Abbey of Mount Melleray, Ireland. His uniform courtesy and gentleness won all hearts; and he was noted for his ardent patriotism during the strenuous days of the Civil War. During his short episcopacy he established the work of Bishop Loras and died 23 September, 1865, lamented by priests and people.

On 30 September, 1866, in St. Raphael’s Cathedral, Dubuque, the Rev. John Hennessy, pastor of St. Joseph’s church, St. Joseph, Missouri, was consecrated Bishop of Dubuque. Bishop Hennessy was renowned as a pupil orator, and was the man of rare
The best of feeling exists amongst the different denominations, and there is but little bigotry anywhere in the state. The Constitution provides that no person shall be by law compelled in any case to attend religious worship, or to contribute to the support of any establishment of religion, or prohibiting the free exercise thereof, and that no religious test shall be required as a qualification for any office, or public trust, and no person shall be deprived of any of his rights, privileges, or capacities, or disqualified from the performance of any of his duties in the public or private character, by any opinion or rendered incompetent to give evidence in any court of law or equity in consequence of his opinions on the subject of religion. By statute, the disturbance of public worship is punished by fine or imprisonment, and the breach of Sunday by "carrying firearms, discharging guns, or pistols, or throwing any other weapon, and in any manner disturbing a worshipping assembly or private family, or buying or selling property of any kind, or engaging in any labour except that of necessity or charity" is punished by fine and imprisonment. In general all stores in cities and towns are closed on Sunday. The punishment in case of violation is a fine not exceeding $50, and if daily sessions are opened with prayer. In addition to Sunday, the only days which are recognized as religious holidays are Christmas and Thanksgiving Day. By statute, no minister of the Gospel, or priest of any denomination is allowed, in giving testimony, to disclose any confidential communications properly entrusted to him in his professional capacity and proper to enable him to discharge the functions of his office according to the usual course of practice or discipline. The statutes of the state provide that any three or more persons of full age, a majority of whom shall be citizens, may incorporate themselves for the establishment of churches, colleges, seminaries, temperance societies, or organizations of a benevolent, charitable, or religious character. Any corporation so organized may take and hold by gift, purchase, devise, or bequest, real and personal property for purposes appropriate to its creation. The corporation shall exist for a term of years not exceeding 99 years, and not leased or otherwise used with a view to pecuniary profit, are exempt from taxation. Cemeteries are also exempt. The State imposes what is called a collateral inheritance tax of 5 per cent on all property within the state which passes, by will, or by the statutes of after death, of the grantor, to collateral heirs or strangers to the blood. From this tax are exempt bequests or deeds to charitable, educational, or religious institutions within the state, and, by a statute passed in 1909, there is also exempt from this tax "any bequest not to exceed $300 to and in favour of any person having for its purpose the performance of any religious service to be performed for and in behalf of decedent or any person named in his or her last will, or any cemetery associations," thus exempting bequests for Masses. Clergymen are excused from jury service, and the Constitution of the state provides "that no person in the civil service shall be compelled to do military duty in time of peace."
Ipolyi, Arnold (family name originally Stummer), Bishop of Grosswardein (Nagy-Várás), b. at Ipolykessy, 20 Oct., 1823; d. at Grosswardein, 2 December, 1886. At the age of thirteen years he entered the ranks of the alumni of the Archidiocese of Gran (Esztergom), studied two years in the Emerichianum at Pressburg (Posony), and two years at Szombathely (Szent-Miklós), and finished at the Pasmaneum at Vienna, where he attended lectures on theology for four years. In 1844 he entered the seminary of Gran, took minor orders in 1845, and was ordained priest in 1847. From 1845 to 1847 he acted as tutor in the family of Baron Mednyánszky, was then curate at Komornó-Szent-Peter (Komáróm-Szent-Peter), in 1848 preacher at Pressburg, in 1849 spent a short time as tutor in the family of Count Palffy, and became in this year parish priest of Zobor. Even before his ordination he concerned himself with historical and artistic matters. In 1853, the work "Mythologie" came out, as the first fruit of his work, in which he treats of the ancient religion of Hungary. Although the work won the prize offered by the Hungarian Academy of Sciences, the author afterwards withdrew it from the press, so that at the present time it is very rare. In 1886 Ipolyi became parish priest at Török-Szent-Miklós. Accompanied by Franz Kubiinyi and Emerich Henschlmann, he made in 1882 a journey to Constantinople, where he discovered the remainder of the library of Matthias Corvinus. In 1865 he was made canon of Eger, and in 1880 director of the Central Ecclesiastical Seminary at Pressburg; in 1871 he became Bishop of Neusohl (Bejerezs-Bánánya), and in 1886 Bishop of Grosswardein, where he died on 2 December of the same year. Ipolyi was member of the Hungarian Academy of Sciences, as well as a member of different learned societies at home and abroad. He was one of the founders and at first vice-president, then president, of the Hungarian Historical Society. His literary activity extended into the provinces of history, art, history, archeology, and Christian art. He enriched the Hungarian National Gallery with sixty valuable paintings. He bequeathed to the State a library of 3,000 volumes, for the purpose of founding a museum, his collections which had been brought together with a great expert knowledge of art. Of his literary works, in addition to his "Mythologie", the following are well known: "Biography of Michael Veressmari", an author of the seventeenth century (Budapest, 1873); the "Codex epistolarius Nicolai Oláh" in the "Monumenta Hungarica Historiae: Scriptorium", XXV (Budapest, 1876); the "Biographie der Christina Nyáry von Beda" (Budapest, 1887), in Hungarian; also the "Historische und kunsthistorische Beschreibung der ungarischen Kroninsignien" (Budapest, 1886), in Hungarian. A list of his literary works has appeared in five volumes (Budapest, 1887).

A. ALDÁSY.
attention of the Archbishop Alexander de' Medici (afterwards Leo XI), who gave him the church of Sta Lucia al Prato in which to carry on his work. He divided his time between his trade of silk-weaving and the religious instruction of poor children and adults, and at sixteen felt impelled to found a society for this purpose. He opened the great door of Christian Doctrine under the invocation of Sts. Francis and Lucy. It was divided into fifteen classes, according to the age and religious knowledge of the pupils, each class being governed by special rules and assisting in the instruction of the class below. The members of the first class were admitted to the congregation after a good confession.

Ippolito was indefatigable in his work, collecting alms from the wealthy Florentines, which he distributed among the poor, founding and reorganizing branches of his congregation, which spread to Volterra, Lucca, Pistoia, Modena, etc. He introduced the practice of nocturnal adoration to draw the people from the theatre and sinful amusements. In Florence, the members of his congregation, by reason of their modesty, were called Van Chedoni. Ippolito was the object of violent persecution, envy and malice accusing him of sharing the errors of Luther, of introducing new rules and reforms. One of his spiritual sons accused him before the pope and Grand Duke Cosimo of excessive severity, but the charge was not sustained, and Ippolito's congregation was declared to be for God's glory and the public good. Shortly before the holy man's death the grand duke founded a chapter for the custody of the order. Ippolito died on a pilgrimage to Loreto to place his foundation under the protection of the Blessed Virgin. The statutes of the congregation were approved by the Congregation of Bishops and Regulars, and confirmed by Leo XII in a decree of 17 September, 1824. The founder wasBeatified by the same pontiff, 13 May, 1825. His ascetical works, written for the government and direction of his congregation, had been approved by Benedict XIV in 1747, and were published at Rome in 1831, together with a brief life of the saint by Canon Antonio Santelli.

BRIEFSCHRIFTEl KIRCHENF. 8. V. DOCTORIAIR. BLANCHE M. KELLY.

**Ipsus**, a titular see of Phrygia Salutaris, suffragan of Synnada. The locality was famous as the scene of the great battle fought in 301 b. c. between the successors of Alexander, in which Antigonus was slain and his kingdom divided between his rivals. As Ipsos or Hypsos the city is mentioned by Hierocles and George of Cyprus and in most of the medieval "Notitiae episcopatuum". Le Quien (Oriens Christianus, 1, 480–481) found the title of bishop of Ipsos (or Ipsia) of Chalcedon in 451; George, at the Seventh Council in 787; Photius and Thomas at the Councils of Constantinople in 868 and 878. The city was situated at the junction of two roads, one leading to Byzantium and the other towards Sardes; the exact site has not been identified. Its Modern geographers identify Ipsos with the ruins of Ipilis-Hisar, or Iskenderiye ("Cities and Bishoprics of Phrygia", Oxford, 1897, 748), with those of Tehai, 82 miles from Apamea.

S. VAILHE.

**IRELAND.**—GEOGRAPHY.—Ireland lies in the Atlantic Ocean, west of Great Britain, from which it is separated in the north-east by the North Channel, in the east by the Irish Sea, and in the south-east by St. George's Channel. Situated between the fifty-first and fifty-sixth degrees of latitude, and between the fifth and eleventh parallels of longitude (Greenwich), its greatest length is 302 miles, its greatest breadth 174 miles, its area 32,535 square miles. It is divided into four provinces, these being subdivided into thirty-two counties. In the centre the country is a level plain; towards the west it becomes mountains, and towards the south it becomes highlands. Its rivers and bays are numerous, also its bogs; its climate is mild, though unduly moist. In minerals it is not wealthy like Great Britain, but its soil is generally more fertile, and is specially suitable for agriculture and pasturage.

Prior to the County Hills it was known by the various names of Ierna, Juverna, Hiberna, Ogygia, and Insifal or the Isle of Destiny. It was also called Bamba and Erin, and lastly Scotia, or the country of the Scots. From the eleventh century, however, the name Scotia was exclusively applied to Caledonia, the latter country having been peoples in the sixth century by a Scottish colony from Ireland. Henceforth Ireland was often called Scotia Major and sometimes Ireland, until, after the eleventh century, the name Scotia was dropped and Ireland alone remained. Even yet it is sometimes called Erin, chiefly by the chieftains and old poets. Situated in the far west, out of the beaten paths of commercial activity, it was little known to the ancients. Festus Avienus wrote that it was two days' sail from Britain. Pliny thought that it was part of Britain and not an island at all; Strabo that it was near Britain, and that its inhabitants were cannibals and that Caesar saw that it was west of Britain, and about half its size. Agricola behold its coastline from the opposite shores of Caledonia, and had thought of accepting the invitation of an Irish chief to come and conquer it, believing he could do so with a single legion. But he left Ireland unvisited and unoccupied. He left only record that in soil and climate it resembled Britain, and that its harbours were then well known to foreign merchants.

But if we have not any detailed description from his lively pen, the native chroniclers have furnished us with abundant materials, and, if all they say be true, we can understand the remark of Camden that Ireland was rightly called Ogygia, or the Ancient Island, because, in comparison, the antiquity of all other nations is in its infancy. Passing by the absurd story that it was peopled before the Deluge, we are told that, beginning with the time of the several successive waves of colonization rolled westward to its shores. First came Partholus with 1000 followers; after which came the Nemedians, the Firbolgs, and the Tuatha-de-Dananns, and lastly the Milesians or Scots. In addition, there were the Fomorians, a people of uncertain origin, whose chief occupation was piracy and war, and whose attacks on the various settlers were incessant. These and the Milesians excepted, the different colonists came from Greece, and all were of the same race. The Milesians came from Scythia; and from that country to Egypt, from Egypt to Spain, and thence to Ireland. There is much in this that is very interesting. His narrative, however, is brief and not at all in detail. The name Scot which they bore was derived from Scotia, daughter of Pharaoh of Egypt, the wife of one of their chiefs; from their chief Milichd they got the name Milesians, and from another chief Goidel they were sometimes called Gedelians, or Gaels. The wars and battles of these colonists are highly fabulous, and the Partholons, Nemedians, and Fomorians belong rather to mythology than to history. So also do the Dananns, though sometimes they are taken as a real people, of superior knowledge and skill, the builders of those prehistoric sepulchral mounds by the Boyne, at Dowth, Knowth, and Newgrange. The Firbolgs, however, must probably be regarded as a mixture of the Dananns; or perhaps those who warlike Belge of Gaul whom Caesar encountered in battle. And the Milesians certainly belong to history, though the date of their arrival in
IRELAND

Ireland is unknown. They were Celts, and probably came from Gaul to Britain, and from Britain to Ireland, rather than direct from Spain. Under the leadership of Heremon and Heber they soon became masters of the island. Some of the Firbolges, it is said, crossed the sea to the Isles of Arran, where they built the ancient city of Inverness. All events before the reign of Cimbaeth (300 B.C.) are uncertain. Even after the dawn of the Christian Era fact and fiction are interwoven and events are often shrouded in the shadows and mists. Such, for instance, are the exploits of Cuchulainn and Finn Maclemhail. Nor have many of these early kings been remarkable, if we except Conn of the Hundred Battles, who lived in the first century after Christ; Cormac, who lived a century later; Tuathal, who established the Feis of Tara; Niall, who invaded Britain; and Dathl, who in the fifth century lost his life at the foot of the Alps.

The Irish were then pagans, but not barbarians. Their roads were indeed ill-constructed, their wooden dwellings rude, the dress of their lower orders scanty, their implements of agriculture and war primitive, and so were their land vehicles and the boats in which they traversed the sea. On the other hand, some of their swords and shields showed some skill in metal-working, and their war-like and commercial voyages to Britain and Gaul argue some proficiency in shipbuilding and navigation. They certainly loved music; and, besides their inscribed Ogham writing, they had a knowledge of letters. There was a high-king of Ireland (arrai), and subject to him were the provincial kings and chiefs of tribes. Each of these received a tribute from his immediate inferior, and even in a scant the political and legal administration was complete. There was the druid who explained religion, the brehon who dispensed justice, the brughaid or public hotelkeeper, the bard who sang the praises of his chief or urged his kinsmen to battle; and each was an official and had his appointed allotment of land. Kings, though taken from one family, were elective, the tanist or heir-apparent being frequently not the nearest relation of him who reigned. This peculiarity, together with general love for which the lands were periodically redistributed, impeded industry and settled government. Nor was there any legislative assembly, and the Brehon law under which Ireland lived was judge-made law. Sometimes the ardrí's tribute remained unpaid and his authority nominal; but if he was a strong man he exacted obedience and tribute. The Boro tribute levied on the King of Leinster was excessive and unjust, and led to many evils. The pagan Irish believed in Druidism (q. v.), resembling somewhat the Druidism Caesar saw in Gaul; but the pagan creed of the Irish was indefinite and their gods do not stand in a clear array. They held the immortality and the transmigration of souls, worshipped the sun and moon, and, with an inferior worship, mountains, rivers, and wells. And they sacrificed to idols, one of which, Crom Cruach, they are said to have propitiated with human sacrifices. They also believed in fairies, holding that the Tuatha-de-Dananns, when defeated by the Milesians, retired into the bosom of the mountains, where they held their fairy revels. One of the women fairies (the banshee) watched the fortunes of great families, and when a great misadventure was impending, the doomed family was warned at night by her mournful wail.

EARLY CHRISTIAN PERIOD.—Intercourse with Britain and the Continent through commerce and war sufficiently accounts for the introduction of Christianity before the fifth century. There must have been then a considerable number of Christians in Ireland; for in 430 Palladius (q. v.), a bishop and native of Britain, was sent by Pope Celestine to the Scots believing in Christ. Palladius, however, did little, and almost immediately returned to Britain, and in 432 the same pope sent St. Patrick (q. v.). He is the Apostle of Ireland, but this does not imply that he found Ireland altogether pagan and left it altogether Christian. It is however quite true that when St. Patrick did come paganism was the predominant belief, and that at his death it had been supplanted as such by Christianity. The extraordinary work which St. Patrick did, as well as his own attractive personal character, has furnished him with many biographers; and even in recent years his life and works have engaged popular interest. But in spite of all that has been written many things in his life are still doubtful and obscure. It is still doubtful when and where he was born, how he spent his life between his first leaving Ireland and his return, and in what year he died. It has been maintained that he never existed; that he and Palladius were the same man; that he was a counterfeit of St. Patrick; and others. This contradistinction and exaggerations have encouraged the scoffer to sneer; and Gibbon was sure that in the sixty-six lives of St. Patrick there must have been sixty-six thousand lies. In reality there seems no solid reason for rejecting the traditional account, viz., that St. Patrick was born at Dumbarton in Scotland about 372; that he was captured and brought to Ireland by the Irish king, Niall; that he was sold as a slave to an Ulster chief Milcho, whom he served for six years; that he then escaped and went back to his own people; that in repeated visions he, a pious Christian, heard the plaintive cry of the pagan Irish inviting him to come amongst them; that, believing he was called by God to do so, he went first to the monastery of St. Martin of Tours, then to that of St. Germanus of Auxerre, after which he went to Léins and to Rome; and then, being consecrated bishop, he was sent by Pope Celestine to Ireland, where he arrived in 432. Patrick

From Wicklow, where he landed, his course is traced to Antrim; back by Downpatrick, near which he converted Dichu and got from him a grant of land for his first church at Saul; thence by Dunkalk, where Benjamin was converted; and to Sian, where in sight of Tara itself he lighted the house at midnight. The druids pointed out to the ardrí the heinousness of the offence, for during the great pagan festival then being celebrated it was death to light any fire except at

Which Crom Cruach, they are said to have propitiated with human sacrifices. They also believed in fairies, holding that the Tuatha-de-Dananns, when defeated by the Milesians, retired into the bosom of the mountains, where they held their fairy revels. One of the women fairies (the banshee) watched the fortunes of great families, and when a great misadventure was impending, the doomed family was warned at night by her mournful wail.

EARLY CHRISTIAN PERIOD.—Intercourse with Britain and the Continent through commerce and war sufficiently accounts for the introduction of Christianity before the fifth century. There must have been then a considerable number of Christians in Ireland; for in 430 Palladius (q. v.), a bishop and native of Britain, was sent by Pope Celestine to the Scots believing in Christ. Palladius, however, did little, and almost immediately returned to Britain, and in 432 the same pope sent St. Patrick (q. v.). He is the Apostle of Ireland, but this does not imply that he found Ireland altogether pagan and left it altogether Christian. It is however quite true that when St. Patrick did come paganism was the predominant belief, and that at his death it had been supplanted as such by Christianity. The extraordinary work which St. Patrick did, as well as his own attractive personal character, has furnished him with many biographers; and even in recent years his life and works have engaged popular interest. But in spite of all that has been written many things in his life are still doubtful and obscure. It is still doubtful when and where he was born, how he spent his life between his first leaving Ireland and his return, and in what year he died. It has been maintained that he never existed; that he and Palladius were the same man; that he was a counterfeit of St. Patrick; and others. This contradistinction and exaggerations have encouraged the scoffer to sneer; and Gibbon was sure that in the sixty-six lives of St. Patrick there must have been sixty-six thousand lies. In reality there seems no solid reason for rejecting the traditional account, viz., that St. Patrick was born at Dumbarton in Scotland about 372; that he was captured and brought to Ireland by the Irish king, Niall; that he was sold as a slave to an Ulster chief Milcho, whom he served for six years; that he then escaped and went back to his own people; that in repeated visions he, a pious Christian, heard the plaintive cry of the pagan Irish inviting him to come amongst them; that, believing he was called by God to do so, he went first to the monastery of St. Martin of Tours, then to that of St. Germanus of Auxerre, after which he went to Léins and to Rome; and then, being consecrated bishop, he was sent by Pope Celestine to Ireland, where he arrived in 432. Patrick

From Wicklow, where he landed, his course is traced to Antrim; back by Downpatrick, near which he converted Dichu and got from him a grant of land for his first church at Saul; thence by Dunkalk, where Benjamin was converted; and to Sian, where in sight of Tara itself he lighted the house at midnight. The druids pointed out to the ardrí the heinousness of the offence, for during the great pagan festival then being celebrated it was death to light any fire except at
Tara. But St. Patrick came to Tara itself, baptized the chief poet, and even the ardi; then marched north and destroyed at Loughcrew the dolmen, from which he entered Connaught, and remained there for seven years. Passing from Connaught to Ulster, he went through Donegal, Tyrone, and Antrim, consecrated Macarten Bishop of Monaghan, and Fiacco Bishop of Sligo; after which he entered Munster. His women, when he would them to himself at Saul in 493. His early captivity in Ireland interfered seriously with his education, and in his Confession and in his Epistle to Caroticus, both of which have survived the wreck of ages, we can discover no graces of style. But we see his great familiarity with the Scripture. And the more he adhered to his studies of prayer, his confidence in God, his zeal, his invincible courage. But while putting his entire trust in God, and giving Him all the glory, he rejected no human aid. Entering into a pagan territory he first preached to the chief men, knowing that when they were converted the people would follow. Wonderful indeed was his labour, and wonderful its results. He preached in almost every district in Ireland, confounded in argument the druids and won the people from their side; he built, it is said, 365 churches and consecrated an equal number of bishops, established schools and convents, and held synods; and when he died, the machinery of his operation, fully equal to the task of confirming in the faith those already converted and of bringing those yet in darkness into the Christian fold.

One of the apostle's first anxieties was to provide a native ministry. For this purpose he selected the leading men—chiefs, bricriu, bards—men likely to attract the respect of the people, and these, after little training and often with little education, he ordained. Thus equipped the priest went among the people, with his catechism, missal, and ritual, the bishop having in addition his crozier and bell. In a short time, however, these primitive conditions ceased. About 450 a college was established at Armagh under Benignus; other schools arose at Kildare, Noendrum, and Louth; and by the end of the fifth century these colleges sent forth a sufficient supply of trained priests. Supported by a grant of land from the chief of the clan or sept and by voluntary offerings, the bishop and priests lived together, preached to the people, administered the sacraments, settled their disputes, sat in their banquet halls. To many ardent natures this state of things was abhorrent. Fleeing from men, they sought for solitude and silence, by the barren mountain or in the recessed glen, they lived on the scantiest allowance of food, the water for their drink, a few wattles covered with sods for their houses, they spent their time in mortification and prayer. Literally they were monks, for they were alone with God. But their retreats were soon invaded by others anxious to share their raptures and learn wisdom at their feet. Each newcomer built his little hut, a church was erected, a grant of land obtained, their master became abbot, and perhaps bishop; and thus arose monastic establishments the fame of which soon spread throughout Europe. Noted examples in the sixth century were Clonard, founded by St. Finian, Clonfert by St. Brendan, Bangor by St. Comgall, Clonmacnoise by St. Kieran, Arran by St. Enda; and, in the seventh century, Lismore by St. Carthage and Glendalough by St. Kevin.

There were still bardic schools, as there was still paganism, but in the seventh century paganism had all but disappeared, and the bards were taught by the monastic schools. Frequenting by the best of the Irish, and by students from abroad, these latter diffused knowledge over western Europe, and Ireland received and merits the title of Island of Saints and Scholars. The holy men who laboured with St. Patrick and immediately succeeded him were mostly bishops and founders of churches; those of the sixth century were of the monastic order; those of the seventh century were secular; all the rest were men who loved solitude, silence, continued prayer, and the most rigid austerities. Nor were the women behindhand in this contest for holiness. St. Brigid is a name still dear to Ireland, and she, as well as St. Eta, St. Fancha and others, founded many convents tenanted by pious women. In later times the nuns did not do less well to the natures and wills of Christ. In the number of its sacraments, in its veneration for the Blessed Virgin, in its belief in the Mass and in Purgatory, in its obedience to the See of Rome, the creed of the early Irish Church was the Catholic creed of to-day (see Celtic Bible). Abroad as well as at home Irish Christian zeal was displayed. In 563 St. Columba, a native of Donegal, accompanied by a few companions, crossed the sea to Caledonia and founded a monastery on the desolate island of Iona. Fresh arrivals came from Ireland; the monastery with Columba as its abbot was soon a flourishing institution, from which the Dalriatian Churches rapidly spread, and the Grampians were evangelized; and when Columba died in 597, Christianity had been preached and received in every district in Caledonia, and in every island along its western coast. In the next century Iona had so prospered that its abbot, St. Adamnan, wrote in excellent Latin the "Life of St. Columba," the best biography of which the Middle Ages can boast. From Iona had gone south the Irish Aidan and his Irish companions to compete with and even exceed in zeal the Roman missionaries under St. Augustine, and to evangelize Northumbria, Mercia, and Essex; and if Irish zeal had already worn thin in Iona, equal zeal was now displayed on the desolate isle of Lindisfarne. Nor was this all. In 590 St. Columbanus, a student of Bangor, accompanied by twelve companions, arrived in France and established the monastery of Luxeuil, the parent of many monasteries, then in the county of Bregenz, and finally founded the monastery of Bobbio, which as a centre of knowledge and piety was long the light of northern Italy. And meantime his friend and fellow-student St. Gall laboured with conspicuous success in Switzerland, St. Fridolin along the Rhine, St. Fiacre near Meaux, St. Gallian at Wissenburg, St. Martin at Mayence, St. Sagittarius on the Meige, St. Cathal in southern Italy. And when Charlemagne reigned (771–814), Irishmen were at his court, "men incomparably skilled in human learning."

In the civil history of the period only a few facts stand out prominently. About 560, in consequence of a quarrel with the ardi Diarmuid about the right of sanctuary, St. Columba and Rhodanus (Reudan) of Lorcha publicly cursed Tara, an unpatriotic act which dealt a fatal blow at the prospect of a strong central government by blotting with maledictions its acknowledged seat. Nearly thirty years later the National Convention of Drumceat restrained the insolence and curtailed the privileges of the bards. In 684 Ireland was invaded by the King of Northumbia, though no permanent conquest followed. And in 697 the last Feis of Tara was held, at which, through the influence of Adamnan, women were interdicted from attending in actual array. At the same time the ardi Finae, at the instance of St. Moling, renounced for himself and his successors the Boru tribute. As the eighth century neared its close, religion and learning still flourished; but unexpected dangers approached and a new enemy came, before whose assaults monk and monastery and saint and scholar disappeared.
These invaders were the Danes from the coasts of Scandinavia. Pagans and pirates, they loved plunder and war, and both on land and sea were formidable foes. Like the fabled Fomorians of earlier times they had a genius for devastation. Descending from their ships along the coasts of western Europe, they murdered, razed, and robbed without mercy, and made slaves of others. The decree of synods were often flouted, and the new diocesan boundaries ignored.

The Anglo-Normans.—In Henry II of England an unexpected reformer appeared. The murderer of Thomas à Becket seemed ill-fitted for the role, but he undertook it, and in the year of his reign (1164) he procured a Bull from the English church and an Act of Parliament IV authorizing him to proceed to Ireland "to check the torrent of wickedness, to reform evil manners, to sow the seeds of virtue." The many troubles of his extensive kingdom thwarted his plans for years. But in 1169 Macmurrough, King of Leinster, driven from his kingdom sought his aid, and then Arden's Bull was remembered. A first contingent of Anglo-Normans came to Ireland in 1169 under Fitzgerald, a stronger force under Strongbow (de Clare, Earl of Pembroke) in 1170, and in 1171 Henry himself landed at Waterford and proceeded to Dublin, where he spent the winter, and received the submission of all the Irish chiefs, except those of Tyrconnell and Tyrowen. These submissions, however, aggravated rather than lessened existing ills. The Irish chiefs submitted to Henry as to a powerful ardrí, still preserving their privileges and rights under Brecon law. Henry, on his side, regarded them as prelates holding the lands of their tribes by military service and in accordance with feudal law. Thus a conflict between the clan system and feudalism arose. Exercising his executive rights, Henry divided the country into so many great fiefs, giving Meath to de Lacy, Leinster to Strongbow, while de Courcy was encouraged to conquer Ulster, and Connaught. At a later date the de Burgos settled in Galway, the FitzGeralds in Kildare and Desmond, the Butlers in Osseary.

The new Anglo-Irish lords soon outgrew the position of English subjects, and to the natives became tyrannical and overbearing. Ignoring the many evidences of culture in Ireland, he promulgated his own system of tithes, his high crosses, his illuminated manuscripts, his shrines and crosiers, the scholars that had abed lustre on her schools, the saints that had hallowed her valleys, the missionaries that had spread her fame throughout Europe—ignoring all these, they despised the Irish as rude and barbarous, despoiled their language, their laws, their dress, their arms; and, while not recognizing the Brehon law, they refused Irishmen the status of English subjects or the protection of English law. At last, despairing of union among their own chiefs, or of justices from Irish viceroy or English king, the oppressed Irish invited Edward Bruce from Scotland. In 1315 he landed in Ireland and was crowned king. Successful at first, his allies beyond the Shannon were almost annihilated in the battle of Athenry (1316); and two years later he was himself defeated and slain at Faughart. His ruin had been effected by a combination of the Anglo-Irish lords, and this still further inflated their pride. Titles rewarded them. Birmingham became Lord of Athenry and Earl of Louth, Fitzgerald Earl of Kildare, his kinsman Earl of Desmond, de Burgo Earl of Ulster, Butler Earl of Ormond. But these titles only increased their inroads and disloyalty. For Bruce was a heavy blow to the cause of church reform. Nor could so many evils be cured in a single life, or by the labours of a single man; and in spite of his efforts and the efforts of others the decree of synods were often flouted, and the new diocesan boundaries ignored.

Meanwhile the de Burgos in Connaught changed
their name to Burke, and became Irish chiefs; many others followed their example; even the ennobled Butlers and Fitzgeralds used the Irish language, dress, and customs, and were as turbulent as the worst of the native chiefs. To recall these colonists to their allegiance the Statute of Kilkenney made it penal to use Irish in public or private, or lastly to reside with the mere Irish, or the conferring of benefices on the native-born. But the barriers of race could not be maintained, and the intermarrying of Irish with Anglo-Irish went on. The long war with France, followed by the Wars of the Roses, diverted the attention of England from Irish affairs; and the viceroy feebly supported from England, was too weak to chastise these powerful lords or put penal laws in force. The hostility of native chiefs was bought off by the payment of “black rents”. The loyal colonists confined to a small district near Dublin, called “the Pale”, shivered behind its encircling rampart; and when the sixteenth century dawned, English power in Ireland had almost disappeared. Those within the Pale were impoverished by grasping officials and by the payment of “black rents”. Outside the Pale the country was held by sixty chiefs of Irish descent and thirty of English descent, each making peace or war as he pleased. LORD DEARING. The clergy of Irish descent were very numerous; those of English descent; the religious houses were corrupt, their priors and abbots great landholders with seats in Parliament, and more attached to secular than to religious concerns; the great monastic schools had disappeared, the greatest of them all, Clonmacnoise, being in ruins; preaching was neglected except by the mendicant orders, and these were utterly unable to cope with the disorders which prevailed.

THE TUDOR PERIOD.—Occupied with English and Continental affairs, Henry VIII, in the beginning of his reign had little care for Ireland; it was not until he was a quarter of a century on the throne were Irish affairs taken seriously in hand. The king was then in middle age, no longer the defender of the Faith against Luther, but, like Luther, a rebel against Rome; no longer generous or attractive in character, but rather a cruel, capricious tyrant, whom it was dangerous to provoke and fatal to disobey. In England his hands were reddened with the best blood of the land; and in Ireland the fate of the Fitzgeralds, following the rebellion of Silken Thomas, struck Irish and Anglo-Irish alike with such terror that all hastened to peace, and the heir apparent of his ancestors, became Earl of Tyrone; Burke became Earl of Clanrickard, O'Brien Earl of Thomond, Fitzpatrick Lord of Osory; the Earl of Desmond and the other Anglo-Irish nobles were pardoned all their offenses, and at a Parliament in Dublin (1541) Anglo-Irish and Irish attended. And Henry, who like his predecessors had been hitherto but Lord of Ireland (Domus Hibernia), was now unanimously given the higher title of king. This Parliament also passed the Act of Supremacy by which Henry was invested with spiritual jurisdiction, and, in substitution for the Lutheran religion, decreed that the Roman-Catholic be continued the only true religion. The doctors of the clergy refused to agree to this measure, the irate monarch deprived them of the right of voting, and in revenge confiscated church lands and suppressed monasteries, in some cases shed the blood of their inmates, in the remaining cases sent them forth hence. Henry, however, returned, and won the people from their faith. The apostate friar Browne, whom Henry made Archbishop of Dublin, the apostate Staples, Bishop of Meath, and Henry himself, stained with so many adulteries and murders, had but poor credentials as preachers of reform; whatever time-serving chief might do, the clergy and people continued to mutter and to whisper of the varying tenets of his creed. His successor, an ardent Protestant, tried hard to make Ireland Protestant, but the sickly plant which he sowed was uprooted by the Catholic Mary, and at Elizabeth's accession all Ireland was Catholic.

Like her father Henry, the young queen was a cruel and capricious tyrant, and in her war with Shane O'Neill, the ablest of the Irish chiefs, she did not spare the people to enslave, or lastly to put them to the sword. The viceroy, a sincere Protestant nor a willing persecutor of the Catholics; and though she re-enacted the Act of Supremacy and passed the Act of Uniformity, making Protestantism the state creed, she refused to have these acts rigorously enforced. But when the pope and the Spanish king, tossed against her, and the Irish Catholics were found in alliance with both, she yielded to her ministers and concluded, with them, that a Catholic was necessarily a disloyal subject. Henceforth toleration gave way to persecution. The tortures inflicted on O'Hurley, Archbishop of Cashel, and O'Bely, Bishop of Mayo, the Spaniards murdered in cold blood at Smerwick, the desolation of Munster during Desmond's rebellion, showed how cruel her rule could be. Far more formidable than the rebellion of Desmond, or even than that of Shane O'Neill, was the rebellion of Hugh O'Neile, Earl of Tyrone. No such able Irish chief had appeared since Brian Boru. Cool, cautious, vigilant, he bided his time, and how to wait patiently for results. Never impulsive, never boastful, wise in council and wary in speech, from his long residence in London in his youth he learned dissimulation, and was as crafty as the craftiest English minister. Repeatedly he foil in the queen's diplomatic council that he had the capability in England, and at the Yellow Ford (1598) gained the greatest victory ever won in Ireland over English arms. What he might have done had he been loyally supported it is hard to say. For nearly ten years he continued the war; he continued it after his Spanish allies had been defeated and himself invested with the title of Chief assistant, O'Donnell, had been struck down by an assassin's hand; after Carew had subdued Munster, and Mountjoy had turned Ulster into a desert; after the Irish chiefs had gone over to the enemy. And when he submitted it was only on condition of being guaranteed his titles and lands; and by that time Elizabeth, who hated him so much and so longed for his destruction, had breathed her last.

UNDER THE STUARTS.—James I (1603—25) was the first of the Stuart line, and from the son of Mary Stuart the Irish Catholics expected much. They were promised the old liberties which Pope Paul III had promised to Elizabeth, and in the cities which rejoiced that "Jezabel was dead", and that now they could practise their religion openly, were warned by Mountjoy that James was a good Protestant and as such would have no toleration of popery. Salisbury, who had poisoned the mind of the queen against the Catholics, was equally successful with her successor, with the result that persecution continued. Proclamations were issued ordering the clergy to quit the kingdom; those who remained were hunted down; O'Devany, Bishop of Down, and others were done to death. The Acts of Supremacy and Uniformity were revoked, the Act of Oblivion, under which participants in the late rebellion were pardoned, was often forgotten or ignored. English law, which for the first time was extended to all Ireland, was used by corrupt officials to oppress rather than to protect the people. The Earl of Tyrone and the Earl of Tyrconnell (Norry O'Donnell) were so spoofed in the country, believing that their lives were in danger; and to all their pleas for justice the king's response was to slander their characters and confiscate their lands. It is indeed true that Irish jurors found the ears guilty of high treason, and an Irish Parliament, representing all Ireland, abolished them. But these results were obtained by carefully packing the juries, and by the creation of small boroughs which sent
creatures of the king to represent them in Parliament. And the Catholic members were accused of having enacted a fresh batch of penal laws. Thus, aided by corrupt juries and a complaisant Parliament, James I was enabled to plant the confiscated lands of Ulster with English Protestants and Scotch Presbyterians. Other plantations had fared badly. That of King’s and Queen’s County in Mary’s reign had decayed; and the revoltation of Munster after the Desmond war had been swept away in the tide of O’Neill’s victories. The plantation of Ulster was more thorough and effective than either of these. Whole districts were given to the settlers, and these, supported by a Protestant Government, soon grew into a powerful force. In Munster, where the colonists were driven from the richer to the poorer lands, looked helplessly on, hating those colonists for whose sake they had been despoiled.

Under the new king, Charles I (1625-49), the policy of persecution and plantation was continued. Under pretence of advancing the public interest and increasing the king’s revenue, a crowd of hungry adventurers spread themselves over the land, inquiring into the title by which lands were held. With venal judges, venal juries, and sympathetic officials to aid them, good titles were declared bad, and lands seized, and the adventurers were made sharers in the spoil. The O’Byrnes were thus deprived of their lands in Wicklow, and similar confiscations and plantations took place in Wexford, King’s County, Leitrim, Westmeath, and Longford. Hoping to protect themselves against such robbery, the Catholics offered the king a subsidy of £120,000 in exchange for certain privileges called “graces”, which among other things would give them indefeasible titles to their estates. These “graces”, granted by the king, were to have the sanction of Parliament to make them good. The money was paid, but the “graces” were withheld, and the viceroy, Stapleton, proceeded to Connaught to confiscate and plant the whole province. The projected plantation was ultimately abandoned; but the sense of injustice remained. All over the country were insecurity, anxiety, unrest, and disaffection; Irish and Anglo-Irish were equally menaced. Seeing the futility of appealing to a helpless Parliament, a despotic viceroy, or a perfidious king, the nation took up arms.

To describe the rebellion as the “massacre of 1641” is unjust. The details of cruel murders committed and horrible tortures inflicted by the rebels are mischievously untrue. On the other hand, it is true that the Protestants suffered grievous wrong, and that many of them died of famine, either of those who fell in war. The Catholics wanted the planters’ lands; when driven away in wintry weather, without money, or food, or sufficient clothes, many planters perished of hunger and cold. Others fell by the avenging hand of some infuriated Catholic whom they might have wronged in the days of their power. Many fell defending their property or the property and lives of their friends. The plan of the rebel leaders, of whom Roger Moore was chief, was to capture the garrison towns by a simultaneous attack. But they failed to capture Dublin Castle, containing large stores of arms, owing to the imprudence of Colonel MacMahon. He imparted the secret to a disreputable Irishman named O’Connolly, who at once informed the Castle authorities, with the result that the Castle defences were strengthened, and MacMahon and others arrested and promptly executed. In Ulster, however, the whole open conflict took place in the rebel hands, and Munster and Connaught soon joined the rebellion, as did the Catholics of the Pale, unable to obtain any toleration of their religion, or security of their property, or even of their lives. Before the new year was advanced the Catholic Bishops declared the rebellion just, and the Catholics formed a confederation which, from its meeting place, was called the “Confederation of Kilkenny”. Composed of clergy and laity its members swore to be loyal to the king, to strive for the free exercise of their religion, and to defend the lives, liberties, and possessions of all who took the Confederate oath. Supreme executive authority was vested in a supreme council; there were provincial councils also, all these bodies deriving their powers from an elective body called the “General Assembly”.

The Supreme Council exercised all the powers of government, administered justice, raised taxes, formed armies, appointed generals. One of the best-known of these officers was General Preston, who commanded in Leinster, having come from abroad with a good supply of arms and ammunition, and with 500 trained officers. A more remarkable man still was General Owen Roe O’Neill, nephew of the great Earl of Tyrone, who took command in Ulster, and whose defence of Arras against the French caused him to be recognized as one of the first soldiers in Europe. He also, like Preston, brought officers, arms, and ammunition to Ireland. At a later stage came Rinuccini, the pope’s nuncio, bringing with him a supply of money. Meanwhile, civil war raged in England between king and Parliament; the Government at Dublin, ill supplied from across the Channel, was ill fitted to crush a powerful rebellion, and, in 1646, O’Neill won the great victory of Benburb. But the strength of which this victory was the outcome was counterbalanced by elements of weakness. The Catholics of Ulster and those of the Pale did not agree; neither did Generals O’Neill and Preston. The Supreme Council, with a feeble old man, Lord Mountgarret, at its head, and four provincial generals instead of a commander-in-chief, was ill suited for the vigorous prosecution of a war. Moreover, the influence of the Marquis of Ormond was a fatal cause of discord. A personal friend of the king, and charged by him with the command of his army and with the conduct of negotiations, a Protestant with Catholic friends on the Supreme Council, his desire ought to have been to bring Catholic and Royalist together. But his hatred of the Catholics was such that he would grant them no terms, even when ordered to do so by His Majesty. The Catholics’ professions of loyalty he despised, and his great diplomatic abilities were used to sow dissensions in their councils and to thwart their plans. Yet the Supreme Council, dominated by an Ormondist faction, continued fruitless negotiations, with agree to a cessation when they themselves were strong and their opponents weak, and agreed to a peace with him in spite of the victory of Benburb, and in spite of the remonstrances of the nuncio and of General O’Neill. Nor did they cease
these relations with him even after he had treacherously surrendered Dublin to the Parliament (1647), and left the country. On the contrary, they still put faith in him, entered into a fresh peace with him in 1648. The scene he returned to the king executed in the Royalist viceroy they received him in state at Kilkenny. In disgust, General O'Neill came to a temporary agreement with the Parliamentary general, and Rinuccini, despairing of Ireland, returned to Rome.

The Civil War in England was then over. The Royalists of Ireland who could not be reconciled to the new order of things were banished. The monarchy was replaced by a commonwealth; and in August, 1649, Oliver Cromwell came to Ireland with 10,000 men. Ormond meanwhile had rallied his supporters, and, with the greater part of the Catholics of Leinster, Munster, and Connaught, the Protestants of the Pale and of Munster, and great part of the Ulster Presbyterians, his strength was considerable. His obstinate bigotry would not allow him to make terms with the Ulster army, and he thus lost the support of General O'Neill at a critical time. Early in August he had been disastrously beaten by the Puritan general Jones, at Rashinnes; in consequence he offered no opposition when the Protestant troops, who could not be induced to relieve Drogheda. It was soon captured by Cromwell and his garrison put to the sword. A month later the same fate befell Wexford. Waterford repelled Cromwell's attack, and Clonmel and Kilkenny offered him a stout resistance; but other towns were easily captured voluntarily with the consent of their inhabitants who left Ireland, in May, 1650, Munster and Leinster were in his hands. His successors, Ireton and Ludlow, within two years reduced the remaining provinces. Meanwhile Owen Roe O'Neill had died after making terms with Ormond, but before meeting with Cromwell. The Catholic Bishops, however, repudiated Ormond, who then left Ireland. Some negotiation subsequently between Lord Clanricarde and the Duke of Lorraine came to nothing, and the long war was ended in which more than half the inhabitants of the country had lost their lives.

In the beginning of the rebellion many Englishmen subscribed money to put it down, stipulating in return for a share of the lands to be forfeited, and thus hatred of the Catholics was mingled with hope of gain. The English Parliament accepted the money on the terms proposed, and the subscribers became known as "suckers," because the money was to be paid in money on Irish land. When the rebellion was over, the problem was to provide the lands promised, and also to provide lands for the soldiers who were in arrears of pay. It was a difficult problem. There was an Act for Settling Ireland, and an Act for the Satisfaction of Adventurers in Lands and Arrears due to the soldiers and other public Debts; there was a High Court of Justice to determine who were guilty of rebellion; there were soldiers who had got special terms when laying down their arms; and there were those who had never had a share in the rebellion, but had merely lived in the times of peace during the war. The best of the lands east of the Shannon were for adventurers and soldiers, the dispossessed being driven to Connaught. To determine where the planters were to be settled and where the transplanted, and what amount they were to get, there were commissions, and committees, and surveys, and courts of claims. Nor was it till 1658 that the Cromwellian Settlement was complete, and even then many of the transplanted protested their innocence of any share in the rebellion, and many of the adventurers and soldiers complained that they had been defrauded of their due. In the amount of suffering it entailed and wrong inflicted the whole of Ireland, far greater died of the plague than of the war.

But it failed to make Ireland either English or Protestant, and in setting up a system of alien landlords and native tenants it proved the curse of Ireland and the fruitful parent of many ills.

To the Irish Cromwell's death in 1658 was welcome news, all the more so because Charles II (1660-85) was restored. For their attachment to the cause of the latter they had suffered much; and now the Catholics hoped to recover their lands which the Irish soldier abroad felt equally assured that the recovery of their lands and homes was at hand. They soon learned that Stuart gratitute meant little and that Stuart promises were written on sand. Had Charles been free to act, the Cromwellian Settlement would have been swept away. The Irish Catholics hated the Puritans more than he loved the Puritans. But the planters were a dangerous body to provoke, sustained as they were by the English Parliament and by the king's chief adviser, Ormond, who indeed hated the Cromwellians, but hated the Catholics much more. Some attempt, however, was made to right the wrong that had been done, and by the Act of Settlement six hundred innocent Catholics were restored to their lands. Many more would have been restored had the court of claims been allowed to continue its sittings. The irate planters wanted to know what was to become of them if the despised papists thus got back their lands; but the king refused all commands to the court to relieve them. They continued to suffer for a time, and some who had been wronged were able to have the law in their favor, but the law was then abandoned while the Catholics were abandoned to their fate. Before the rebellion two-thirds of the lands of the country were in the hands of the latter; after the Act of Settlement scarcely one-third was left them, a sweeping confiscation especially in the case of men who were denied even the justice of a trial. After this toleration of the Catholics was but a small concession. Not, however, during the whole of Charles's reign; for Ormond, now a duke, filled the office of viceroy for many years; he at least would maintain Protestant ascendancy, and exclude the Catholics from the bench and the corporations. In the English Council and in Parliament he bitterly attacked and defeated the proposed revision of the Act of Settlement. He does not appear to have had any sympathy with the lying tales of Oates and Bedloe, or with the storm of persecution which followed, and he disapproved of the murder of the adherents of Catholicism. But the Catholic Church continued, and was in no way chilled by advancing age. One of the last acts of Charles was to dismiss him from office as an enemy to toleration. The king himself soon after died in the Catholic Faith, and James II, an avowed Catholic, succeeded, the first Catholic sovereign since the death of Mary Tudor.

Religious toleration had then made little progress throughout Europe, and England, aggressively Protestant, looked with special disfavour on Catholicism. In these circumstances James II should have moved with caution. He should have taken account of national prejudices and of the respect established institutions; while conscientiously practising his own religion, he should have sought for no favour for it, at least until the nation was in a more tolerant and yielding mood. Instead of this, and in defiance of English bigotry and English law, he appointed Catholics to high civil and military offices, opened the corporations and the universities to them, had a papal nuncio at his court, and issued a Declaration of Indulgence suspending the penal laws. When the Protestant bishops refused to have this declaration read from their pulpits he prosecuted them. Their accu tal was the signal for revolt, and James, deserted by all classes, having left the English throne to William of Orange, whom the Protestants invited from Holland. Meanwhile sweeping changes had been effected in Ireland by the viceroy, the Duke of Tyrconnell, a militant Catholic and a special favour
ite of King James. Protestant magistrates, sheriffs, and judges had been displaced to make room for Catholics; the army and corporations underwent similar changes; and the Act of Settlement was to be repealed. Timid Protestants trembling for their lives fled to England; others formed centres of resistance to the viceroy in Ulster and Connaught, and, in Ulster, De Burgo and Enniskillen expelled the Catholics and closed their gates against the viceroy's troops. This was rebellion, for James, though repudiated in England, was still King of Ireland. In March, 1689, he arrived at Kinsale from France to subdue these rebels. But the task was beyond his strength. Dobery and Emmet parried his attacks, and a Williamite force, issuing from the latter town, almost annihilated a Jacobite army at Newtown-Butler.

Disaffection became general among the Protestants when the Irish Parliament repealed the Act of Settlement and attained eighteen hundred persons who had fled to England through fear; and when, in August, a Williamite force of twenty thousand landed at Carrickfergus, the Protestants everywhere welcomed it. This great force, however, effected nothing, and in June, 1690, William himself came and encountered James on the banks of the Boyne. The battle was fought on 1 July, and resulted in the defeat of James. Hastening to Dublin he told the Duchess of Tyrconnell that the Irish soldiers had shamefully run away, to which the lady is said to have replied: "But your Majesty won the race." The retreat was just. The Irish cavalry behaved with conspicuous gallantry, as did the greater part of the infantry. Some of the latter did run away, but not so fast as James himself, who fled taking the ablest of the Irish generals, Sarsfield, with him. That the Irish were no cowards was shown by their defence of Athlone and the still more glorious defence of Limerick. After being compelled to raise the siege of the latter city, King William left for England, committing the civil authority to lords justices and the military command to General Ginkel. In the following year Ginkel captured Athlone, owing to the carelessness of the Jacobite general, St-Ruth; and on 12 July, 1691, the last great battle of the war was fought at Aughrim. The Irish were not inferior to their opponents in numbers, discipline, or valour, and though outmatched in heavy guns they had the advantage of position. Nor was St-Ruth inferior to Ginkel in military capacity. His dispositions were excellent, and after several hours' desperate fighting Ginkel was driven back at every point. Just then St-Ruth was struck down by a cannon ball. Panic-stricken, the Irish fell back, allowing their opponents to advance and inflict on them a crushing defeat. The principal routes to Athlone and Sligo followed, and in a short time Ginkel and his whole army were before the walls of Limerick. When he had effectually surrounded it and made a breach in the walls, further resistance was seen to be hopeless, and Sarsfield and his friends made terms. By the end of the year the war was over, King James had triumphed, and Protestant ascendancy was secure.

The Eighteenth Century.—By the Treaty of Limerick the Catholic soldiers of King James were pardoned, protected against forfeiture of their estates, and were free to go abroad if they chose. All Catholics might substitute an oath of allegiance for the oath of supremacy, and were to have such privileges as were consistent with the laws of Ireland, or as they did enjoy in the reign of Charles II. King William also promised to have the Irish Parliament grant further relaxation of the penal laws in force. This treaty, however, was soon torn to shreds, and in spite of William's appeals the Irish Parliament refused to ratify it, and embarked on fresh penal legislation. Under these new laws Catholics were excluded from Parliament, from the bench and bar, from the navy, from all civil offices, from the corporations, and even from the corporate towns. They could not have Catholic schools at home or attend foreign schools, or inherit landed property, or hold land under lease, or act as executives or administrators, or have arms or ammunition, or a horse worth £25. Neither could they bury their dead in Catholic ruins, or make pilgrimages to holy wells, or observe Catholic holidays. They could not intermarry with the Protestants or the clergyman assisting at such marriages being liable to death. The wife of a Catholic landlord turning Protestant got separate maintenance; the son turning Protestant got the whole estate; and the Catholic landlord having only Catholic children was obliged at death to divide his estate among his children in equal shares. All the regular clergy, as well as the bishops and vicars-general should quit the kingdom. The secular clergy might remain, but must be registered, nor could they have on their churches either steeple or bell. This was the Penal Code, elaborated through nearly half a century with patience, care, and ingenuity, perhaps the most infamous code ever elaborated by civilized man.

Such legislation does not generate conviction, and, in spite of all, the Catholics clung to their Faith. Deprived of schools at home, the young clerical student sought the halls of Continental colleges, and being ordained returned to Ireland, disguised perhaps as a sailor and carried in a smuggler's craft. And in secrecy and obscurity he preached, taught, lived, and died, leaving another generation equally persecuted to carry on the good fight. Poverty was his portion, and frequently the prison and the scaffold; and yet, while Protestantism made no progress, Catholicism was more than held in its own. In 1728 the Catholics were to the Protestants as five to one, and half a century later Young calculated that to make Ireland Protestant would take 4000 years. Indeed the Protestant clergy made no serious effort to convert the Catholics; nor was this the object of the Penal Laws. The Protestants possessing confiscated Catholic lands, its object was to impoverish, to debase, to degrade, to leave the despairs Catholics incapable of rebellion and ignorant of their wrongs. In this respect it succeeded. A few Catholics, with the connivance of some friendly Protestants, managed to hold their estates; the remainder gradually sank to the level of cottiers and day-labourers, living in cabins, clothed in
rags, always on the verge of famine. Shut out from every position of influence, rackrented by absentee landlords, insulted by imperialists and drovers, squireens, paying tithes to a Church they abhorred, hating the Government which oppressed them and the law which made them slaves, their condition was the worst of any peasantry in Europe. From a land blighted by such laws the enterprising and ambitious few escaped. The will of these and their despairs, ambition in happier lands. In the time of Elizabeth and James, and still more in Cromwell's time, thousands joined the army of Spain. But in the latter half of the seventeenth century the stream was diverted to France, then the greatest military power in Europe. The Catholics were denied by Act and by the whole of the administration of the counties until the end of the eighteenth century.

Nor were soldiers and statesmen the only Irish exiles whom penal laws had sent abroad. The decay of schools and colleges continued from the eleventh to the sixteenth century; nor did Ireland in that period produce a single great scholar, except Duns Scotus, who was partly educated abroad. Any hope of a revival of learning in the sixteenth century was blasted by the suppression of monasteries and the penal laws; early in the seventeenth century, however, Irish colleges were already established at Louvain, Salamanca, and Seville, at Lisbon, Paris, and Rome. In these colleges the brightest Irish intellects learned and taught, and Colgan and O'Clery, Lynch and Rothe, Wadding and Keating recalled the greatest glories of their country's past. At home Trinity College had been established (1593) to wean the Irish from "Popery and other ill qualities"; but the Catholics considered, and either went abroad or frequented the few Catholic schools left. The children of the poor, avoiding the Protestant schools, met in the open air, with only some friendly hedge to protect them from the blast; but they met in fear and trembling, for the hedge-school and its master were proscribed. The fire of learning was burning during the long night of the penal times.

In the Irish Parliament meanwhile a spirit of independence appeared. As the Parliament of the Pale had been so often used for factious purposes that in 1486 Poyning's Law was passed, providing that henceforth no Irish Parliament should meet without the consent of both the Irish and English Privy Councils. Further, the English Parliament claimed the right to legislate for Ireland; and in the laws prohibiting the importation of Irish cattle (1663), and Irish woollen manufactures (1698), and that dealing with the Irish forfeited estates (1700), it asserted its supposed right. The Irish Parliament, dominated by bigotry and selfish interest, had not the courage to protest, and when one member, Molyneux, did, the English Parliament condemned him, and ordered his book to be burned by the Oxford University. After Matthew Lucas, in 1719 expressly declaring that it had power to legislate for Ireland, taking away also the appellate jurisdiction of the Irish House of Lords. The fight made by Swift against Wood's halfpence showed that, though Molyneux was dead, his spirit lived; Lucas continued the fight, and Grattan in 1782 obtained legislative independence. England was then beaten by the American colonies; an Irish volunteer force had been raised to defend Ireland against a possible attack from the Continent. But legislative independence was won less by Grattan's eloquence than by the swords of the Volunteers. These events favoured the growth of toleration. The Catholics, in sympathizing with Grattan and in subscribing money to equip the Protestant Volunteers, earned the title of the "right friends." Nor were the penal laws less rigorously enforced, and from the middle of the century penal legislation ceased. In 1771 came the turn of the tide, when Catholics were allowed to hold reclained bog under lease. This grudging concession was followed in 1773 by an Act and his majesty's proclamation of the oaths of supremacy; in 1778 by an Act enabling Catholics to hold all lands under lease; and in 1782 by a further Act allowing them to erect Catholic schools, with the permission of the Protestant bishop of the diocese, to own a horse worth more than £2, and to assist at Mass without being compelled to accuse the officiating priest. Nor were Catholic bishops any longer compelled to quit the kingdom, and not Catholic children specially rewarded if they turned Protestant. Not for ten years was there any further concession, and then an Act was passed allowing Catholics to erect parishes and to be admitted to the ministry, admitting Catholics to the Bar, and legalizing marriages between Protestants and Catholics. Much more important was the Act of 1793 giving the Catholics the Parliamentary and municipal franchise, admitting them to the universities and to military and civil offices, and removing all restrictions in regard to the tenure of land. They were still excluded from the Parliament, from the inner Bar, and from a few of the higher civil and military offices.

Always in favour of religious liberty, Grattan would have swept away every vestige of the Penal Code. But, in 1782, he mistakenly thought that his work was done when legislative independence was conceded. He forgot that the executive was still left independent of Parliament, answerable only to the English ministry; and that, with rotten boroughs controlled by a few great families, with an extremely limited franchise in the counties, and with pensioners and placemen holding in the so many seats, the Irish Parliament was but a mockery of representation. Like Grattan, Flood and Charlemont favoured Parliamentary reform, but, unlike him, they were opposed to Catholic concessions. As for Foster and Fitzgibbon, who led the forces of corruption and bigotry, they opposed every attempt at reform, and consented to the Union of 1795 under the strong pressure from Pitt and Dundas. These English ministers, alarmed at the progress of French revolutionary principles in Ireland, fearing a foreign invasion, wished to have the Catholics contented. In 1795 further concessions seemed imminent. In that year an illiberal virtual act of Pitt and Westmorland, was replaced by the liberal-minded Lord Fitzwilliam, who came understanding it to be the wish of Pitt that the Catholic claims were to be conceded. He at once dismissed from office a rapacious office-holder named Beresford, so powerful that he was called the "King of Ireland"; he refused to consult Lord Chancellor Fitzgibbon or Foster, the Speaker; he took Grattan and Ponsonby into his confidence, and declared his intention to support Grattan's bill admitting Catholics to Parliament. The high hopes raised by these events were dashed to the earth when Fitzwilliam was suddenly and suddenly his bill was passed without any protest from Portland, the home secretary, or from the premier, Pitt. The latter, dialling the Irish Parliament because it had rejected his commercial propositions in 1785, and disagreed with him on the regency in 1789, already mediated a legislative union, and felt that the admission of Catholics to Parliament would thwart his plans. He was prob-
On one side were eloquence and debating power, patriotism, and public virtue, Grattan, Plunket, and Bushe, Foster, Fitzgerald, Ponsonby, and Moore, a truly formidable combination. On the other side were the baser elements in Parliament, the needly, the spendthrift, the mean and ambitious officers of Castlereagh, with the whole resources of the British Empire at his command. The pensioners and place-men who voted against him at once lost their places and pensions, the military officer was refused promotion, the magistrate was turned off the bench. And while anti-Unionists were unsparesly punished, the Unionists got lavish rewards. The infamous got well-paid sinecures; the briefless barrister was made a judge or a commissioner; the rich man, ambitious of social distinction, got a peerage, and places and pensions for his friends; and the owners of rotten boroughs got large sums for their interests.

The Catholics were promised emancipation in a united Parliament, and in consequence many bishops, some clergy, and a few of the laity supported the Union, not grudging to end an assembly so bigoted and corrupt as the Irish Parliament. By these means Castlereagh triumphed, and in 1801 the United Parliament of Great Britain and Ireland opened its doors.

Since the Union.—The next quarter of a century was a period of baffled hopes. Anxious to stand well with the Government, Dr. Troy, the Archbishop of Dublin, had been a strong advocate of the Union, and had induced nine of his brother bishops to concede to the king a veto on episcopal appointments. In return, he wanted emancipation linked with the Union, and Castlereagh was not averse; but Pitt was the real man. Vague, though the Catholic Unionists had no doubt that he favoured immediate concordant. Disappointment came when nothing was done in the first session of the United Parliament, and it was increased when Pitt resigned office and was succeeded by Addington, a narrow-minded bigot. Cornwills, however, assured Dr. Troy that Pitt had resigned, unable to overcome the prejudices of the king, and that he would never again take office if emancipation were not conceded. Yet, in spite of this, he became premier in 1804, no longer of emancipation but an opponent, pledged never again to raise the question in Parliament during the lifetime of the king. To this pledge he was as faithful as he had been false to his former assurances; and when Fox presented the Catholic petition in 1805, Pitt opposed it. After 1806, when both Pitt and Fox died, the Catholic champion was Grattan, who had entered the British Parliament in 1805. In the vain hope of conciliating opponents he was willing, in 1808, to concede the veto. Dr. Troy and the higher Catholics acquiesced; but the other bishops were unwilling, and neither they nor the clergy, still less the people, wanted a state-paid clergy or state-appointed bishops. The agitation of the question, however, did not cease, and for many years it distracted Catholic plans and weakened Catholic effort. Further complications
arose when, in 1814, the Prefect of the Propaganda, Quaratotti, issued a rescript favouring the veto. He acted, however, beyond his powers in the absence of Pius VII, who was in France, and when the pope returned to Rome, after the fall of Napoleon, the rescript was disavowed.

The Catholics badly needed a leader. John Keogh, the able leader of 1793, was then old, and Lords Fingall and Gormanstown, Mr. Scully and Dr. Dromgoole, were not the men to grapple with great difficulties and powerful opponents. An able and more vigorous leader was required, one with less faith in petitions and protestations of loyalty. Some leading Catholics, among whom was Doctor O'Connell, a Catholic barrister whose first public appearance in 1800 was on an anti-Unionist platform. A great lawyer and orator, a great debater, of boundless courage and resources, he took a prominent part on Catholic committees, and from 1810 he held the first place in Catholic esteem. Yet the Catholic cause advanced slowly, and, when Grattan died in 1820, emancipation had not come. Nor would the House of Lords accept Plunket's Bill of 1821, even though it passed the House of Commons and conceded the veto. At last O'Connell determined to rouse the masses, and in 1823, with the help of Rev. John Sheil, a Jesuit, he formed the Catholic Association. Its progress at first was slow, but gradually it gathered strength. Dr. Murray, the new Catholic Archbishop of Dublin, joined it, and Dr. Doyle, the great Bishop of Kildare; other bishops followed; the clergy and people also came in; and thus rose a great national organization, supervising from its central office in Dublin subsidiary associations in every parish; maintained by a Catholic rent; watching over local and national affairs, discharging, as Mr. Canning described it, "all the functions of a regular government, and having obtained a complete monopoly of civil control over the Catholics of the people". The Association was suppressed in 1825 by Act of Parliament; but O'Connell merely changed the name; and the New Catholic Association with its New Catholic rent continued the work of agitation as of old. Nor was this all. By the Catholic Relief Act of 1793 the forty-shilling freeholders obtained the franchise. These freeholders, being so poor, were necessarily in the power of the landlords and were wont to be driven to the polls like so many sheep. But now, protected by a powerful association, and encouraged by the priests and by O'Connell, the freeholders, with their families, seized Waterford, and Meath, and elsewhere they voted for the nominees of the Catholic Association at elections, and in placing them at the head of the poll humbled the landlords. When they returned O'Connell himself for Clare in 1825, the crisis had come. The Tory ministers, Wellington and Peel, would have still resisted; but the people were not to be restrained: it must be concession or civil war, and rather than have the latter the ministers hauled down the flag of no surrender, and passed the Catholic Relief Bill of 1829. The forty-shilling freeholders were disfranchised, and there were some reservations on the question of their qualification. The Catholic Association included a few of the higher civil and military offices, prohibiting priests from wearing vestments outside their churches, bishops from assuming the titles of their sees, regulars from obtaining charitable bequests. In other respects Catholics were placed on a level with the other denominations. Many last were admitted within the pale of the constitution.

From that hour O'Connell was the uncrowned king of Ireland. Where he led the people followed. They cheered him when he praised Lord Anglesey and when he attacked him; when he supported the Whigs and when he opposed them; when he advocated the Repeal of the Union and when he abandoned the Repeal agitation; and when, after long years of waiting for concessions that never came, he again unfurled the flag of Repeal, they flocked to hear him, and laughed or wept with him, responsive to his every mood. Finally, to leave him free to devote his whole time to public affairs they subscribed yearly to the O'Connell tribute, giving him thus an income which never fell below £10,000 and often went far beyond the modest figure. And yet the legislative results of nearly twenty years of such devotion and sacrifice were limited.

The National Education system, established in 1831, required much amendment before it worked smoothly, and even now is far from being an ideal system. The Commutation of Tithes Act only transferred the odium of tithes collectively to the parson or to the landlord, but gave little relief to the people. The Poor Law, though it often relieved destitution, too often encouraged idleness and immorality. And the Corporation Act, while re-forming a few of the corporations, abolished many. Nor could anything be more complete than the failure of the Repeal agitation. The explanation is not far to seek. O'Connell had a wreathed party, men without capacity or patriotism. His acceptance of offices for his friends and his alliances with the Whigs was surely not a sound policy. And when he took up Repeal in earnest he was already old, with the shadow of death upon him. Lastly, as he himself admitted, he lost the support of the Young Irelanders, the most vigorous and capable section of his followers. These things embittered his last days and hastened his death in 1847.

Meantime the shadow of famine had fallen upon the land. The potato blight first appeared in Wexford, in 1843, whence it marched with stealthy tread all over the country, poisoning the potato fields as it passed. The stalks withered and died, the potatoes beneath the soil became putrid, and when they were dug and the sound ones separated from the unsound ones and put into pits, it was soon discovered that disease had accelerated the decay of the tubers. Before the fall of the year, the reckless and credulous landlords began to evict the starving freeholders by the landlords for political purposes, the reckless subdivision of holdings by the tenants, had so augmented the population that in 1845 the inhabitants of Ireland were well beyond 8,000,000, most of them living in abject poverty with the potato as their only food. And now, with half the crop of 1845 gone, and with the loss of the whole crop in the two succeeding years, millions were face to face with hunger. To cope with such a calamity required heroic measures, and O'Connell urged that distilleries should be closed, the export of provisions prohibited, public works abandoned, the poor to be given work and food. But the premier, Peel, minimized the extent of the famine, and Lord John Russell, who succeeded him in 1846, was equally sceptical. He would neither stop distilling nor the export of provisions, nor build railways; and when he set up public works they were not reproductive, and the money expended on them, largely levied on the rates, was squandered by corrupt officials. Ultimately indeed he set up government stores, and in many cases food was distributed free. Charity supplemented the efforts of Government, and with no niggard hand. There were Quaker, Evangelical, and Bangor Catholic Relief Societies, and aid came from Great Britain and from Continental Europe, from Australia and from the West Indies. But America was generous most of all. In every city from Boston to New Orleans meetings were held and subscriptions given. Philadelphia sent eight vessels loaded with provisions, 2,000 tons of flour, 2,000 quintals of Indian corn; railroads and shipping companies carried relief parcels free; and the Government turned some of the war vessels into transports to carry food to the starving millions beyond the Atlantic. Yet were the sufferings of the people great, and the number of deaths from famine and from famine-fever appalling. Thousands lived for weeks on cabbages and a little meal, on cabbage and seaweed, on turnips, on diseased horse and ass flesh; and one case is recorded
where a woman ate her dead child. Men died from cold as well as from hunger. They died on the roads and in the fields, at the relief works and on their way to them, at the workhouses and at the workhouse doors. They died in their cabins unattended, often surrounded by the dying and frequently by the dead. Flying from the country they died in the hospitals of Liverpool, Glasgow, or on board the sailing vessels to America. And thousands who crossed the ocean reached America only to die. In 1848 and in 1849 the famine was only partial, but in the latter year cholera appeared. In 1851 the famine was over, and such was the havoc wrought that a population, which at the previous rates of increase should have been 9,000,000, was reduced to 6,500,000.

The conduct of the landlords during this terrible time was selfish and cruel. With few exceptions they gave no employment and no subscriptions to the relief funds. Unable to get rents from tenants unable to pay, they used their right to evict, and in thousands of cases the horrors of eviction were added to the horrors of famine. Retribution soon followed. The evictors, without rents and crushed by poor-rates, became hopelessly insolvent. The British Parliament considered them a nuisance and a curse, and in 1849 passed the Encumbered Estates Act, under which a creditor might petition to have the estate sold and his debt paid. Insolvent landlords were thus sent adrift, and solvent men took their places, and to such an extent that in a few years land to the value of £20,000,000 changed hands. But the new landlords were no better than the old. They raised rents, confiscated the tenant’s improvements, worried him with vexatious estate rules, evicted him cruelly; and from 1850 to 1870 was the period of the great clearances. The necessary result was a constant and ever-increasing stream of emigration from Ireland, chiefly to America. Nor would British statesmen do anything to stem the tide. Lord John Russell would not interfere with the rights of property by passing a Land Act. Lord Derby was a landlord with a landlord’s strong prejudices. Lord Palmerston declared that tenant right was landlord wrong. Nothing could be expected from the Irish members. Sadler and Keogh broke up the Right party; Lucas was dead; D’Arcy in despair went to Australia; Moore was out of Parliament; and from 1855 to 1870 the Irish members were but placemen and traitors. In these circumstances the Irish peasant joined the Ribbon Society, which was secret and oath-bound, and especially charged to defend the tenants’ interests. Agrarian outrages naturally followed. The landlord evicted, the Ribbon shot him down, and the evictor fell unpitied by the people, who refused to condemn the assassin. After 1860 the Ribbonmen were gradually merged in the Fenian Society, which extended to America and England, and had national rather than agrarian objects in view. The Irish were good conspirators, and the attempted Fenian insurrection in 1867 came to nothing. But the mediated assault on Chester Castle, the Clerkenwell explosion, and the Fenian raids into Canada showed the extent and intrepidity of Irish disaffection. An increasing number of Englishmen began to think that the non possumus attitude of Lord Palmerston was no longer wise; and with the advent to power of Mr. Gladstone in 1868, at the head of a large Liberal majority, the case of Ireland was taken up.

The Catholic masses had a threefold grievance calling urgently for redress: the state Church, landlordism, and inequality. Mr. Gladstone called them the three branches of the Irish ascendency coffee tree. Commencing with the Church, he introduced a Bill disendowing and disestablishing it. Commissioners were appointed to wind it up, taking charge of its enormous property, computed at more than £15,000,000 ($75,000,000). Of this sum, £10,000,000, ultimately raised to £11,000,000, was given to the disestablished Church, part to the holders of existing offices, part to enable the Church to continue its work. A further sum of nearly £1,000,000 was distributed between Maynooth College, deprived of its annual grant, and the Presbyterian Church deprived of the Regium Donum, the latter getting twice as much as the former. The surplus was to be disposed of by Parliament for such public objects as it might determine. This was generous treatment for the state Church which had been so conspicuous a failure. Supported with an ample revenue, and by the whole power of the State, its business was to make Ireland Protestant and English. It succeeded only in intensifying their attachment to Catholicity and their hatred of Protestantism and England. In 1861, after the havoc wrought by the famine, the Catholics were seven times as numerous as the members of the state Church. There were many parishes without a single Protestant; and in a poor country a Church numbering but 600,000 persons had an income of nearly £70,000, mostly drawn from people of a different creed, who at the same time had their own Church to support. Yet there were members of Parliament who described Mr. Gladstone’s Bill as robbery and sacrilege. The House of Lords, afraid to reject it altogether, emasculated it in committee. And Ulster Protestants declared that if it became law they would kick the Queen’s crown into the Boyne. Ignoring these threats, Mr. Gladstone rejected the Lords’ amendments, though on some minor points he gave way, and in spite of all opposition the Bill became law. And thus one branch of the upas tree came crashing to the earth. The Land Act of 1870 was well-meant, but in reality gave the tenants no protection against rackrenting or eviction. Two years later the Ballot Act freed the Irish tenant from the terrors of open voting.

In 1873 the education question was reached. And first as to the primary schools. What the Catholic primary schools were in the early years of the nineteenth century we learn from Carleton. The teacher, the product of a local hedge-school and of a Munster classical school, or perhaps an ex-student of Maynooth, had first been employed as a tutor in some
farmer's family. Then he became a hedge-schoolmaster, and the manner in which he attained to this position was peculiar. Challenging the schoolmaster already in possession to a public dispute, they met at the church gates on Sunday in presence of the congregation, was referred to a layman, a clergyman, and the combatants was keenly relished, and, if the younger man won the applause of the audience by his depth of learning and readiness of reply, his opponent left the district and the victor was installed in his place. His school, built by the roadside by the people's voluntary efforts, was of earth and sods, with an earthen floor, a hole in the roof for a chimney, and stones for the pupils' seats. In many districts the teacher received little fees, but the people supplied him liberally with potatoes, meal, bacon, and turf, and entertained him at their houses. A century before Carleton's time the Charter schools were established, and endowed to educate the children of the destitute poor. They were to give industrial as well as literary training, and took religion and learning as their motto. But they became dens of infamy, with incompetent and immoral teachers, who taught the pupils nothing except to hate Catholics as such: the schools were pretexts for the Catholics, and were manifest failures, and yet till 1832 they received government grants. Such societies as the Society for Discontenuing Vice, the London Hibernian Association, and the Baptist Society were proselytizing institutions. The Kildare Street Society founded in 1811, though Protestant in its origin, was on different lines. The design was to have Catholics and Protestants educated together in secular subjects, leaving their religious training to the ministers of their religion outside of school hours. O'Connell favoured the scheme and joined the governing board, grants were obtained from Parliament, and for some years all went well. But again the bread of knowledge given to Catholics was steeped in the poison of proselytism. The bigots insisted on having the Bible read in the schools "without note or comment"; the Society was then vigorously assailed by John MacHale, at the time a young professor at Maynooth, and O'Connell retired from the board.

Recognizing the failure of such a system, Lord Stanley, the Irish chief secretary, passed through Parliament in 1831 a bill empowering the lord lieutenant to constitute a National Board of Education with an annual grant for building schools, and for paying salaries and wages to teachers and inspectors. The system was to be given on one day of the week by ministers of the different religions to children of their own faith. The schools were open to all denominations, and even the "suspicion of proselytism" was to be excluded. But the Catholics were treated unfairly. In spite of these numbers they were given but two of the seven members of the Board. Mr. Carisle, a Presbyterian, was made resident commissioner, and as chief executive officer appointed non-Catholics to the principal offices; and he and his fellow-commissioner, Dr. Whately, the Protestant Archbishop of Canterbury, which the history of Ireland and the Catholic religion were treated with injustice. In a few years the original rules of the Board were so changed that Catholic priests were entirely excluded from all Ulster schools under Presbyterian management. Outside of Ulster, a bigoted Protestant clergyman, named Stopford, was able in 1847 to abrogate the rule compelling Catholic children in Protestant schools to leave when the hour for religious instruction arrived. This left it optional with the children to remain, and brought much suffering on poor Catholics at the hands of tyrannical and bigoted landlords. Among the Catholic bishops there was toleration rather than approval of the National system. But Dr. MacHale, who had become Archbishop of Tuam in 1834, opposed the system from the first, believing that education not founded on religion was a curse. He preferred to have in his diocese the Christian Brothers' schools in which religious instruction was given the premier place. Dr. Murray of Dublin and Dr. Crollly of Armagh were not so hostile, and, when the matter was referred to an intellectual layman, was an escheater of the see, the National system might be given a further trial. The "Stopford Rule" strengthened MacHale's hand, as did a board rule in 1845 providing that all schools even partially erected by a board grant should be vested in the Board itself, and not as hitherto in the local managers who, in Catholic sees, were always the same as the priest. MacHale also objected to the disproportionately small representation of Catholics on the Board, to the character of the lesson-books, to the large number of non-Catholics in the higher positions. These attacks told. In 1850 the Synod of Thurlow condemned the National schools as then conducted. In 1852 Dr. Murray of Dublin died, and was succeeded by Dr. Cullen, who shared MacHale's views. The following year Whately's lesson-books were withdrawn from the Board's lists, and Whately in consequence resigned his seat. In 1860 the Board was enlarged from five to twelve, and powers were given to the Board to exclude Catholics. The "Stopford Rule" and the rule regarding the vesting of schools were abrogated, and, with the resident commissioner a Catholic, the system became more acceptable to Catholics. For the training of teachers however there was only one Trailing College under non-Catholic control, but the Catholics established the Training College at Drumsna, County Leitrim, in 1853 that at Baggot Street, Dublin, and since then they have established others at Belfast, Limerick, and Waterford. But even as the National system stood in 1873, Mr. Gladstone thought that the Catholics had no substantial grievance, and did nothing. Nor did it interfere with the state of things in intermediate education, though the inequality which existed was glaring. The diocesan free schools of Elizabeth, maintained by county contributions, and the free schools of James I and those of Erasmus Smith, maintained by confiscated Catholic lands, were under Protestant management and as such generally shunned by Catholics. Further, the Protestants were the richer classes, and, though their Church had been disestablished, it had been but partially disendowed. The Dissenters also had wealth and had well-equipped schools. But the Catholics, long prohibited from having any schools, were only able to get good ones even when the pressure of penal legislation had been removed. They had, however, set manfully to work, and, partly by private donations, principally by collections, had established colleges all over the land. Carlow College was founded in 1793, Navan College in 1802, St. Jheraghere's College, Tuam, in 1817, Clongowes by the Jesuits in 1814, and others in the years that followed. But they could get no state assistance till 1879, when the Intermediate Education Act was passed. The yearly interest on £1,000,000 was then appropriated for prizes and exhibitions to pupils, and for the building and fees of non-Catholic colleges. The result of the new law was that the Catholics, with very great success, were provided with schools of their own. They had used the additional means, not by means of higher education like the others, but by falling within the scope of the National Board's rules. It was in the field of higher education that Catholics suffered most. In 1795 Maynooth College had been founded for the education of the clergy. Its annual Parliamentary grant had been lost in 1869, but it nevertheless continued to flourish, and flourishes still as one of the first ecclesiastical colleges in the world. There were other ecclesiastical schools at Athlone, Thurlow, Waterford, and Drumcondra. But the laity had only Trinity College or the Queen's Colleges. The former had first opened its doors to Catholics in 1798, but would give them no share in its endowments, nor
did it abolish religious tests till 1873. The Queen’s Colleges, three in number, one at Galway, one at Cork, and one at Belfast, were constituent colleges of the Queen’s University, and were meant by Peel to do for higher education what Stanley’s godless colleges, and condemned by Rome as intrinsically dangerous to faith and morals; and at the Synod of Thurles, in 1850, it was resolved on the advice of Rome to set up a Catholic University. The model given was the University of Louvain. A committee was then appointed, subscriptions received both from Ireland and from abroad, a site was purchased in Stephen’s Green, Dublin, Dr. Newman was made first rector, professors and lecturers were appointed, and in 1854 work was begun.

But there were difficulties from the first. The nation still felt the effects of the famine, the secondary schools were but imperfectly organized and unable to furnish sufficient students, and Dr. MacHale and Dr. Cullen did not agree. Dr. MacHale complained that the administration was too centralized, that he could get no details of the expenditure, that there were too many Englishmen among the professors. He objected also to Dr. Newman. Though the great Oratorian loved Ireland, he was an Englishman with English ideas, and wanted Oxford and Cambridge men as his colleagues. MacHale, on the contrary, would have the whole atmosphere of the University Irish, and thus, trained by Irish teachers, Irish students would go forth to exhibit the highest capabilities of the Irish character. Dr. Cullen did not fully share these views, and generally agreed with Newman. Not always, however, for he objected to have Newman appointed an Irish bishop, and he disliked Newman’s excessive partiality for professors trained in the English universities. This want of harmony was not conducive to enthusiasm or efficiency, and the pecuniary contributions obtained left the various faculties woefully undermanned. Nor could any provision be made for students’ residence or for tutorial supervision. Most fatal of all, the Government refused to give a charter, and students could not be expected to frequent a university where they could get no degree. Unable to succeed where the elements of failure were so many, Newman resigned in 1857. In 1866 the Government of Earl Russell granted a supplemental charter making the Catholic University a constituent college of the Queen’s University, a step that was a blow on the head of the fourth Queen’s College, but the charter was found to be illegal. Nor did Lord Mayo’s attempt to settle the university question in 1888 succeed, and thus the Catholic University struggled painfully on.

Nor was Mr. Gladstone’s Bill of 1873 satisfying. He proposed to abolish the Queen’s University and the Queen’s College, Galway, and to have Dublin University separated from Trinity College, but with Trinity College, the Queen’s Colleges at Belfast and Cork, Magee College and the Catholic University as constituent colleges. From Trinity College £12,000 a year would be taken and given to the Dublin University, which would have in all an income of £50,000, for the payment of examiners and professors and the founding of fellowships, scholarships, and prizes to be competed for by students of all the constituent colleges. Peel’s was to be a senate, at first wholly nominated by the Crown, and subordinated by the Crown and Senate. The endowment of the Queen’s Colleges would remain, though the Catholic University would get nothing; nor would there be in any of the colleges any endowment for chairs of history, theology, or philosophy. This was perpetuating the inferior position of the Catholic University, as it was perpetuating the endowment of the godless colleges, and it would be almost impossible for the Catholics ever to have their proper share of representation in the Senate. Finally, men asked what sort of university that was which had no chairs of history or philosophy. The Bill in fact satisfied nobody, and Mr. Gladstone being defeated resigned office.

It will be convenient here to anticipate. In 1879 the Queen’s University was abolished and the Royal University took its place, empowered to give degrees to all comers who passed its examinations. The Queen’s Colleges were left. In 1882 the Catholic University passed under Jesuit control, and of the twenty-eight fellowships of £400 a year founded by the Royal Uni-

West Doorway of Church, Clonfert

versity fourteen were given to the Catholic University staff. With this slender indirect endowment it entered the lists with the Queen’s Colleges and beat them all. Subsequently there were two University commissions, one dealing with the Royal University, the other with Trinity College, but nothing was done. Finally, in 1908, Mr. Birrell passed his Irish Universities Act leaving Trinity College untouched. Abolishing the Royal University, the Act sets up two new universities, the Queen’s University with the Queen’s College at Belfast, and the National University at Dublin with the Queen’s Colleges at Cork and Galway and a new college at Dublin as constituent colleges. In these colleges there are new governing bodies, largely Catholic and National, but religious services of any kind are prohibited within the precincts, and there are no religious tests. This change has resulted in the Jesuits severing their connexion with the Catholic University, the buildings of which have been taken over by the new Dublin college.

To go back, when Mr. Gladstone was replaced by the Tories, in 1874, a new Irish party had been already formed demanding an Irish Parliament, with full power to deal with purely domestic matters. It was called the Home Rule party, Mr. Butt, a Protestant lawyer of great ability, being its chief. At the general election in 1874, sixty Home Rulers were returned. But Mr. Butt accomplished nothing. His own methods of conciliation and argument were not
IRELAND 112 IRELAND

the most effective. His party, nominal Home Rulers, were mostly place-hunters, and except the Intermediary Education Act of 1878 there were no legislative results. Mr. Butt died in 1879, and for a brief period the Home Rule leader was Mr. Shaw; but after the general election of 1880 Mr. Shaw was deposed, and a youthful Home Rule leader was appointed, the person of Charles Stewart Parnell. There had been a serious failure of the potato crop in 1877 and 1878, but in 1879 there was only half the average yield. The landlords unable to get their rents began to evict, and it seemed as if the horrors of 1847 were to be reenacted in 1879. Mr. Gladstone was succeeded as Chancellor of the Exchequer by Lord Russell, who was followed by Lord Hartington. Mr. Gladstone was already on his deathbed. The New Poor Law, which was an attempt to deal with Irish poverty, was carried, and in 1879 the practice of imprisonment for debt was abolished. The late-night drinking was also abolished. The Home Rule movement was at its height. The Home Rule Bill was introduced by Mr. Parnell and his principal lieutenant. For the next few months terror reigned supreme. Mr. Forster filled the jails, broke up meetings, suppressed newspapers, and yet succeeded so ill in pacifying the country that he felt compelled to ask for more drastic measures. Mr. Gladstone was asked to come forward, but he was not willing. The Home Rule Bill was again, and for the last time, returned by the Lords. Mr. Gladstone was no longer young, and he decided to come forward. In 1884, Lord Cowper, the viceroy, and Mr. Forster were relieved of office, and Mr. Parnell and his colleagues were set free; and by an arrangement often called the Kilmainham Treaty an Arrears' Bill was to be introduced, while Parnell, on his side, was to curb the agitation and gradually re-establish the reign of law.

On the evening of 6 May these happy changes were fatally marred by the murder in the Phoenix Park, Dublin, of the under-secretary, Mr. Burke, and of the new chief secretary, Lord Frederick Cavendish. The assassins, who had according to the普通 law of coercion, killed by the Fenians; and though English intrigue succeeded in obtaining a papal rescript condemning a testimonial that was being raised for him, its only effect was to increase the subscriptions. Being friendly with the Tories, he joined with them to defeat Mr. Gladstone in 1850, and for a brief period Lord Salisbury was premier. He governed without coercion, and passed the Ashbourne Act, which advanced £5,000,000 to Irish tenants for the purchase of their holdings. In return, Mr. Parnell advised the Irish electors in Great Britain to vote for the Tories at the general election in October, 1886. But the Liberals, who had been deposed from the government of the country, were not sufficient to form a government without the Irish. On the understanding that Home Rule was to be conceded, Liberals and Irish coalesced, the Tories were turned out, and Gladstone became premier and brought in his Home Rule Bill of 1886, setting up an Irish Parliament with an executive dependent on it. Deserted by a large section of his followers under Bright, Chamberlain, and Hartington, he was defeated, and going to the country was seriously defeated at the polls. In August Lord Salisbury was again in office at the head of the Tories and Liberal Unionists, and in overwhelming strength.

The rejection of Mr. Parnell's Bill of 1886 providing for the admission of leaseholders to the benefits of the Land Act of 1881, and for a revision of judicial rents to meet the recent heavy fall in prices, led to the starting of the Plan of Campaign by Messrs. Dillon and the Long Leases were granted by the Government to the tenant at a lower rent; and if it was refused he banked the money and fought the landlord, and was assisted by his fellow tenants throughout the land. The Plan was not approved of by Mr. Parnell, and it had the unfortunate effect of placing the perpetual Coercion Act of 1857 on the Statute Book. The Irish movement now seemed to pass the very measure they had so lately rejected, and it compelled many of the poorer landlords to make terms with the tenants. While on the one hand the
Plan was thus put in operation in Ireland, and on the other hand the Coercion Act, the Liberals and Irish worked well together in Parliament and on British platforms. The London "Times", always the bitter enemy of Parnell, praised, and in its anxiety to do harm published a series of articles on Parnellism and Crime. It relied, as it pretended, on authentic documents which connected Parnell and his colleagues with crime, and showed that Parnell himself conspired the Phoenix Park murders. A Special Commission appointed by Rule Billment discovered that the chief letters were forgeries and that the "Times" had been fooled by a disreputable Irishman named Richard Pigott. The forger confessed his crime and then committed suicide, and Parnell became the hero of the hour. When the Special Commission issued its report, early in 1890, the tide had turned with a vengeance against the Tories. Their majority was then seriously diminished, and when the general election came it was certain that nothing could prevent the triumph of Home Rule. In the midst of these bright hopes for Ireland there came the mournful wail of the banshee, and, even before the Special Commission report was issued, Captain O'Shea had filed a petition for divorce on the ground of his wife's adultery with Mr. Parnell. There was no defence, and could be none, and the decree was issued. Mr. Gladstone evidently expected that Mr. Parnell would retire from the leadership, and, finding that he did not, intimated that his continuance in that position would wreck Home Rule. The Irish party which had re-elected Mr. Parnell were not prepared to go so far, and, as they would not retire even for a day, they deposed him. A minority still supported him, and at the head of these appealed to the Irish people. Week after week he attended meetings and made speeches. But his health, already bad, could not stand the strain; the stubborn and reckless fight ended in his collapse, and at Brighton, on the 6th of October, 1891, the greatest Irish leader since O'Connell breathed his last.

In the years that followed faction was lord of all. At the general election in 1892 the Parnellite members were reduced to nine, while the anti-Parnellites were seventy-two, and at the election in 1895 there was no material change. To argument and entreaty the minority refused to listen, and though the anti-Parnellite leaders, Mr. MacCarthy and Mr. Dillon, were ready to make any sacrifice for unity and peace, their opponents rejected all overtures; and under the shelter of Parnell's name they continued to shout Parnell's battle-cries. At last patriotism triumphed over faction, and in 1898 Mr. John Redmond, the Parnellite leader, was elected chairman of the reunited Irish party. Much had been lost during these years of discord in unity and strength, in national dignity and self-reliance. To faction it was due that the Liberal victory of 1892 was more sweeping than, in consequence of the Rule Bill, 1893 was rejected by the Lords; and that, in 1894, Mr. Gladstone retired, baffled and beaten, from the struggle. At the elections of 1895 and 1900 the Tories were victorious, and during their long term of power the Coercion Act was frequently enforced. But there were concessions also. In 1890, Mr. Balfour's Land Act provided £33,000,000 for Irish land purchase, and in 1891 the Congested Districts Board was established. In 1896, there was an amending Land Act; and in 1898, the Local Government Act was introduced which authorized counties and rural districts from the non-representative Grand Juries to popularly elected bodies. A further important Act was that of Mr. Wyndham, in 1903, providing more than £100,000,000 for the buying out of the whole landlord class. Mr. Wyndham also favoured a policy of distribution of power and independence to local bodies of larger powers. But nothing was done till the Liberals came into office in 1906, and they had nothing more generous to offer than Mr. Birrell's National Councils Bill, a measure so halting and meagre, that an Irish National Convention rejected it with scorn. Mr. Birrell has but little fortune in his University Bill, which, though not establishing a purely Catholic University, provides one in which Catholic influences will predominate. In recent years also the programmes both in the national and secondary schools have been made more practical, facilities have been given for agricultural and technical education, and the present ecclesiastical college of Maynooth continues to maintain its reputation as the first ecclesiastical college in the world.

RELATIONS BETWEEN CHURCH AND STATE.—By the Catholic Relief Act of 1829 legal proscription ceased for the Catholic Church, as did legal ascendancy for the Protestant Church by Mr. Gladstone's Act of 1869. In practice, however, Protestant ascendancy largely remains still. Only within living memory was the first Catholic lord chancellor appointed in the person of Lord O'Hagan; Catholic bishops are still excluded, except in rare instances from the higher civil and military offices; and from the lord-lieutenancy they continue to be excluded by law.

ECCLESIASTICAL ORGANIZATION.—The Catholic Church, divided into four provinces, not, however, corresponding with the civil divisions, is ruled by four archbishops and twenty-three bishops. The number of dioceses is more than twenty-seven, for there have been amalgamations and absorptions. Cashel, for instance, has been joined with Emly, Waterford with Lismore, Kildare with Leighlin, Down with Connor, Ardagh with Clonmacnoise, Kilnamanagh with Galway, the Bishop of Galway being also Apostolic Administrator of Kilfenora. In many dioceses there are chapters, in others none. The number of parishes is 1087. A few are governed by administrators, the remainder by parish priests, while the total number of the secular clergy—parish priests, administrators, curates, chaplains, and professors in colleges—amounts to 2607. There are also many houses of the regular clergy: Augustinians, Capuchins, Carmelites, Fathers of the Holy Ghost, Dominicans, Franciscans, Jesuits, Marists, Order of Charity, Oblates, Passionists, Redemptorists, and Vincentians. The total number of the regular clergy is of the order of 600, one-half of them engaged either in teaching or in giving missions, but not charged with the government of parishes. There is, however, one exception—that of the Passionists of Belfast, who have charge of the parish of Holy Cross in the city. There are the two Cistercian abbeys of Mount Mellieray and

VIII.—C
Roscrea, each ruled by a mitred abbot, and having forty-three professed priests.

Statistics.—The population of Ireland has been steadily diminishing. In 1861, it was 5,795,564; in 1871, 5,412,377; in 1881, 5,174,836; in 1891, 4,704,733; in 1901, 4,588,775. The decrease is due to emigration, and as the great majority of the emigrants are Catholics, the Catholic population has suffered most. In 1861, it numbered 4,505,265; in 1871, 4,150,867; in 1881, 3,908,891; in 1891, 3,547,307; in 1901, 3,310,-025. In the period from 1851 to 1901 the total number of emigrants, of Irish birth, was 5,451,456, of whom Irish ports was 3,846,393. No less than 89 per cent. went to the United States, the remainder going to Great Britain, Australia, Canada, and New Zealand. The saddest feature of this exodus is that 82 per cent. of the emigrants were between 15 and 35 years of age. The healthy and enterprising have gone, leaving the weaker in mind and body at home, one result being that the number of lunatics increased from 16,605 in 1871 to 21,188 in 1891. In the latter year the total number of primary schools was 4,194, of which 8360 were under the National Board, 97 under the Christian Brothers and other communities, and 471 other primary schools. In 1908 the total number of National Board schools was 8538 under 3587 managers, of whom 2455 were clerical and 602 laymen. Of the clerical managers 1307 were Catholics, 713 Protestant Episcopalians, 379 Presbyterian, 52 Methodists, and 4 unclassed. In 1901 the number of pupils in all the primary schools was 636,777, of whom 471,910 were Catholic. There has been a steady improvement in the matter of illiteracy. In 1841 the percentage of those above five years who could neither read nor write was 53; in 1901 it had fallen to 14. Of the whole population 14 per cent. could speak Irish. In 1901 there were 35,373 pupils in the Intermediate schools, the number of Catholics being 78 per cent. of the total Catholic population. The Catholic girls in these schools were for the most part educated in the various convents. The boys were educated in the diocesan colleges, or in the colleges of the religious orders, and a proportion also in the Christian Brothers’ schools. “In Colleges of Universities and other Colleges”, in 1901, there were 3192 students, of whom 91 were females. The highest form of ecclesiastical education is obtained at Maynooth, other such colleges being All Hallows and Clonliffe in Dublin, Thurles, Waterford, and Carlow colleges.

Church Property, Churches, Schools, Cemeteries.—Church property is usually held in trust by the parish priest for the parish, the bishop for the diocese, the religious superior for his order, and often associated with private trusts. In many cases the title-deeds have been lost, but undisputed possession is considered sufficient, and the parish-priest or other superior for the time being is recognized as the legal owner of the church, church grounds, and cemetery, if there be such. New churches are built on land purchased, or acquired free of rent or under very long lease, and church and ground are exempt from taxation. New cemeteries belong to the District Council, and many of the older cemeteries have been taken over by the same authority. Schools built by the full Board are either vested or non-vested. If vested, they are held by trustees—usually the priest, who is manager, and two others—and in this case only two-thirds of the cost of building is granted by Government. In the case of non-vested schools, which are the property of the National Board, neither the full amount for building is granted by Government, and the school is also kept in repair, while in vested schools repairs have to be made by the manager. Both in vested and non-vested schools the National Board regulates the programme, selects the school books, and provides for the cost of examination and inspection. The appointment and dismissal of teachers rests with the manager, from whom in the Catholic schools there is an appeal to the bishop. All these schools are exempted from taxation. Clergymen of all denominations get loans from Government on easy terms to build residences. These houses, however, are not exempt from taxation, and belong to the clergyman and his successors, not to himself personally.

Public Institutions.—Prisons are under government management, and always have a Catholic chaplain, when there are Catholic inmates. So also have workhouses, asylums, and county hospitals, which are under the local authority. Reformatories and industrial institutions get loans from Government on easy terms to build residences. These houses, however, are not exempt from taxation, and belong to the clergyman, and so forth.

Legal Status of the Clergy.—The clergy have, with some few exceptions, the usual rights of citizens. They can receive and dispose of property by will as all others, and they can vote at elections. But they are excluded by law from the House of Commons, though not from the House of Lords; and they are excluded from the County and District Councils, though not from the various committees appointed by these bodies. They are exempt from military service and from serving on juries. Public worship is free; but priests may not celebrate the Mass outside the churches or private houses, nor appear publicly in their vestments, nor have religious processions in the streets; nor may the regular clergy go abroad in the distinctive dress of their order. These laws, however, are not enforced and not infrequently processions do take place through the streets, and the regular clergy

E. A. D'ALTON.

IRISH LITERATURE.—It is uncertain at what period and in what manner the Irish discovered the use of letters. They were long conversant with Gaul, but it is more probable, as MacNeill has shown in his study of Irish oghams, that it was from the Romanized Britons that they first learned the art of writing. The Italian alphabet, however, was not the first to be employed in Ireland. Whoever the early Irish may have been who first discovered letters, whether from intercourse with Britain or with Gaul, they did not apparently bring either the Latin or the Greek alphabet back with them to Ireland, but they invented an entirely new one of their own, founded with considerable skill upon the Latin; this was used in Irish, as the Irish Celts for inscriptions upon pillars and gravestones. This ogham script, as it is called, consists of lines, straight or slanting, long or short, drawn either over, under, or through a given straight line, which straight line is in lapidary inscriptions usually formed by the angular edge of a rectangular upright stone. Thus, four cuts to the right of the line stand for S, to the left of the line they mean C, and if they pass through the line they mean E. None even of the oldest Irish manuscripts preserved to us is anything like as ancient as these lapidary inscriptions. The language of the ogham stones is in fact centuries older than that of the very oldestvellums, and agrees to a large extent with that which has been found of the Old Gaulish linguistic monuments. Early Irish literature and the sagas relating to the pre-Christian period of Irish history abound with references to ogham writing, which was almost certainly of pagan origin, and which continued to be employed until the Christianization of Ireland. It was due to the Church and the Roman letters which were introduced by the Church and must have been propagated with all the prestige of the new religion behind them; but isolated ogham inscriptions exist on grave stones erected as late as the year 600. When the script was introduced into the Celtic Church in Gaul, it was probably about the second century. Although it answered well, indeed better than the rounded Roman letters, for lapidary inscriptions, yet it was too cumbersome an invention for the facile creation of a literature, though a professional poet may well have carried about with him on his "tablet-staves," as the manuscripts call them, the catchwords of many poems, sagas, and genealogies. Over a couple of hundred inscribed ogham stones still exist, mostly in the south-west of Ireland, but they are to be found in Wales, and the Irish Celt planted his colonies in Scotland, Wales, Devonshire, and even farther East.

Earliest Manuscripts.—The earliest existing examples of the written Irish language as preserved in manuscripts do not go back farther than the eighth century; they are chiefly copies of trochas, written between the lines or on the margins of religious works in Latin, preserved on the Continent, whether they were carried by early Irish missionaries, or written by them in the numerous monasteries which they founded in Switzerland, Germany, France, and Italy. The oldest piece of consecutive Irish preserved in Ireland is found in the "Book of Armagh," written about the year 812. These early gloses, though of little except philological interest, yet show the wide learning of the commentators and the extraordinary development, even at that early period, of the language in question. Whether in form and style, says Kuno Meyer, stand on a high level in comparison with those of the Old High German gloses. "We find here," he writes, "a fully formed learned prose-style which allows even the finest shades of thought to be easily and perfectly expressed, from which we must conclude that there must have been a long previous culture [of the language] going back at the very least to the beginning of the sixth century" (Kultur der Gegenwart, part i, section xi, p. 80). These gloses are to be found at Wrzburg, St. Gall, Karlsruhe, Milan, Turin, St. Paul in Carinthia, and elsewhere. Tirement, however, the manuscripts are the "Book of Armagh," perhaps the most ancient manuscripts in which Irish is written. They date from about the year 900 to 1050. The oldest books of miscellaneous literature are the "Leabhar na h-Udheire," or "Book of the Dun Cow," transcribed about the year 1100, and the "Book of Leinster," which dates from about fifty years later. Both these books are great miscellaneous literary collections. After them come many valuable vellums. The date at which these manuscripts were penned is no criterion of the date at which their contents were first written, for many of these manuscripts were copied from other manuscripts. In the form of words and other indications, must have been committed to writing as early as the seventh century at least. We cannot carry these pieces farther back linguistically, but it is evident from their contents that many of them must have been handed down orally for centuries before they were committed to writing. It must also be noted that a seventeenth-century manuscript sometimes give a more correct version of a seventh-century piece than a vellum many centuries older.

Earliest Christian Scholars in Ireland.—It happens that Ireland's first great saint is also the first person of whom we can say without hesitation that some at least of the writings ascribed to him are really his. We actually possess a manuscript (Book of Armagh) 1100 years old, containing his "Confession," or apology. There is no reason, however, for supposing that it was with St. Patrick that a knowledge of the Greek alphabet was brought over to Ireland before his arrival there were Christians in Munster. At the beginning of the third century there were Irish missionaries at work, according to Zimmer, in the southern province of the island. Bede says distinctly that Palladius was sent from Rome to the Irish who already believed in Christ, and "eleven hundred" as the "two and a half centuries" (Eccles. Hist., bk. i, xiii). Pelagius, the subtle heresiarch who taught with such success at Rome, and
who acquired great influence there, was of Irish descent. "Habet," says St. Jerome, "progeniem Scotticis gentis de Britannorum vicinia" (P. L. XXIV, 682, 758). He came probably from those Irish who had settled in Wales and South Britain. His friend and teacher Celestius is said by some to have been an Irishman, but this statement is doubtful, and it is clear that (Irish Stiofán, now Shiell in English), the author of the "Carmen Paschale," who flourished in the first half of the fifth century, and who has been called the Virgil of the theological poetry, was almost certainly an Irishman. Indeed the Irish geographer Dicuil in the eighth century about the year 800 deploured the fact that some Irish families at least were within reach of a cosmopolitan literary education in the fourth and fifth centuries and that they were quick to grasp it.

Existing Manuscript Literature.—Although so many scholars have during the last fifty years given themselves up to Celtic studies, yet it remains true that the time has not yet come, nor can it come for many years, when it will be possible to take anything like an accurate survey of the whole field of Irish literature. Enormous numbers of important MSS. still remain unedited; many gaps have occurred in the present which have never been filled up, unless perhaps here and there by some short piece published in a learned magazine; of many periods we know little or nothing. There are poets known to us at present practically only by name, whose work lies waiting to be unearthed and edited, and so vast is the field and so enormous the quantity of matter to be dealt with that there is room for an entire army of workers, and until much more pioneer work has been done, and further researches made in Irish grammar, prosody, and lexicography, it will be impossible to reduce the great mass of material into order, and to date it with anything like correctness. These MSS. still exist in Irish, and the existence of the Manuscripts has never been accurately determined. The number in the Royal Irish Academy, Dublin, alone is enormous, probably amounting to some fifteen hundred. O'Curry, O'Longan, and O'Beirne catalogued a little more than half the manuscripts in the Academy, and the catalogue of contents filled thirteen volumes containing 3448 pages; to these an alphabetic index of the pieces contained was made in three volumes, and an index of the principal names, etc., in thirteen volumes more. From an examination of these books one may roughly calculate that the pieces catalogued would number, however it might be divided, from long epic sagas to single quatrains or stanzas, and yet there remain a great deal more to be indexed, a work which after a delay of very many years is happily now at last in process of accomplishment. The library of Trinity College, Dublin, also contains a great number of valuable MSS. of all ages, many of them vellums, probably about 160. The British Museum, the Bodleian Library at Oxford, the Advocates Library in Edinburgh, and the Bibliothèque Royale in Brussels are all repositories of large numbers of valuable MSS.

Contents of the Manuscripts.—From what we know of the contents of the existing manuscripts we may set down as follows a rough classification of the literature contained in them. We may well begin with the ancient epics dating substantially from pagan times, and probably first reduced to writing in the seventh century. Among these we find the famous "Acassin et Nicolette". After the substantially pagan epics may come the early Christian literature, especially the lives of the saints, which are both numerous and valuable. We find a list of names of 157 epic sagas. The "ollamh" (olla), or arch-poet, who was the highest dignitary among the poets, and whose training lasted for some twelve years, was obliged to learn two
hundred and fifty of these prime sagas and one hundred secondary ones. The manuscripts themselves divide the prime sagas into the following romantic categories, from the very names of which we may get a glance at the genius of the early Gael, and form some conception of the tragic nature of his epic.—Destruction of Houses, Courtships or Wooings, Battles, Stories of Caves, Navigation, Tragic Deaths, Feasts, Sieges, Adventures of Travel, Eloquence, Slaughters, Water-eruptions, Expeditions, Progresses, and Visions. "He is no poet," says the "Book of Leinster," "who does not sympathize with the feelings of these stories, and linger long over their incidents and colouring. And yet there is scarcely one of them in which some Christian allusion to heaven, or hell, or the Deity, or some Biblical subject, does not appear. The reason of this seems to be that, when Christianity had succeeded in gaining the upper hand over paganism, a kind of tacit compromise was arrived at, by means of which the bard, and the fili (i.e., poet), and the representatives of the old pagan learning were permitted by the sympathetic clerics to propagate their stories, tales, poems, and genealogies, at the price of tacking on to them a little Christian admin- istration, and of harmonising the pagan with the Christian, and of compelling them to fly at the mast-head the flag of the sasein power. But so badly has the dovetailing of the Christian into the pagan part been performed in most of the oldest romances that the pieces come away quite separate in the hands of even the least skilled reader, and the pagan substratum stands forth as a thing entirely distinct from the Christian accretion. Thus, for example, in the evidently pagan saga called the "Wooing of Etain", we find the description of the pagan paradise given its literary passport, so to speak, by a cunningly interwoven allusion to Adam's fall. Etain was the wife of one of the Tuatha De Danann, who were gods. She is reborn as a mortal—the pagan Irish seem, like the Gaulish druids, to have believed in metempsychosis—and weds the King of Ireland. Her former husband of the Tuatha De Danann race still loves her, follows her into her life as a mortal, and tries to win her back by singing her a captivating description of the glowing unseen land to which she would lure her. "O lady fair, would'st thou come with me," he cries, "to the wondrous land that is ours", and he describes how "the crimson of the foxglove is in every brake—a beauty of land the land I speak of, lo, of the island, the land of sweet streams traverse the country", etc.; and then the evidently pagan description of this land of the gods is made passable by an added verse in which we are advisedly told that, though the inhabitants of this glorious country saw everyone, yet nobody saw them, "because the cloud of Adam's wrongdoing has concealed us".

It is this easy analysis of early Irish literature into its ante-Christian and its post-Christian elements which lends to it an absorbing interest and a great value in the history of European thought. For, when all spurious ascensions have been discarded, it gives us a genuine picture of pagan life in Europe, such as we look for in vain elsewhere. "The Church adopted (in Ireland) towards Pagan sagas the same position that it adopted towards Pagan law. I see no sufficient ground for doubting that really genuine pictures of a pre-Christian culture are preserved to us in the individual sagas ("Windscheitl, Iri sche Texte, I, 258)." The sagas originated in Pagan and was propagated in Christian times, and that too without its seeking fresh nutriment, as a rule, from Christian elements. But we must ascribe it to the influence of Christianity that what is specifically Pagan in Irish saga is largely forced into the later and more mundane narrative, and that there exist many whose contents are plainly mythological. The Christian monks were certainly not the first who reduced the ancient sagas to fixed form, but later on they..."
espied them faithfully and promulgated them after Ireland had been converted to Christianity" (ibid., 62). *Irish Literature and Early Europe.*—When it is understood that the ancient Irish sagas record, even though it be in a more or less distorted fashion, in some cases reminiscences of a past mythology and in others not, by intimate conclusions derived from the works one needs only a moment's reflection to realize their value. "Nothing," writes Zimmer, "except a spurious criticism which takes for original and primitive the most palpable nonsense of which Middle-Irish writers from the Twelfth to the Sixteenth century are guilty with regard to Irish, "with a name, Gregarius, a parallel to the principal rôle in this cycle of Cuchulainn." (Introduction à l'étude de la littérature celtique, 217) and a study of the original tribute imposed on Leinster in the first century he writes: "The story has real facts for a basis though certain details may have been created by the imagination" and again, "Irish epic story, barbarous though it be, is, like Irish law, a monument of a civilization far superior to that of the most ancient Germans" (L'épopée celtique en Irlande, préface, p. xii). "Ireland, in fact," writes M. Darmesteter in his "English Studies," summing up his long research on the nation's deities, "the great Celtic scholars," "has the peculiar privilege of a history continuous from the earliest centuries of our era until the present day. She has preserved in the infinite wealth of her literature a complete and faithful picture of the ancient civilization of the Celts. Irish literature is therefore the key which opens the Celtic world" (Eng. tr., 1896, 182). But the Celtic world means a large portion of Europe, and the key to its past history can be found at present nowhere else in the Irish manuscripts. Without them we would have to view the past history of a great part of Europe through the medium of the Greeks and Romans, to whom all outer nations were barbarians, into whose social life they had no motive for inquiring. Apart from Irish literature we would have no means of estimating what were the feelings, modes of life, manners, and habits of those great Celtic races who once possessed so large a part of the ancient world, Gaul, Belgium, North Italy, parts of Germany, Spain, Switzerland, and the British Isles, who burnt Rome, plundered Greece, and colonised Asia Minor. But in the ancient epics of Ireland we find another standard by which to measure, and thereby test the heroic epic, clearest reflection of the life and manners of the race in one of its strongholds, and we find many characteristic customs of the Continental Celts, which are just barely mentioned or alluded to by Greek and Roman writers, reappearing in all the circumstances and expansion of saga-telling.

Of such is the custom of the "Hero's Bit" mentioned by Posidonius, upon which one of the most famous of Irish sagas, "Bricriu's Feast," is founded. Again, the chariot, which had become obsolete even in Gaul a couple of hundred years before Caesar's invasion, is described repeatedly in the sagas of Ireland, and the battle cry of the epic of Finn always represented as fighting from their chariots. We find, as Diodorus Siculus mentions, that the bards had power to make battles cease by interposing with song between the combatants. Caesar says (Gallie War, bk. VI, xiv) the Gaulish druids spent twenty years in studying and learned a great number of verses, but Irish literature tells us what the arch-poet, probably the counterpart of the Gaulish druid, actually did learn. "The manners and customs in which the men of the time lived and moved are depicted", writes G. O'Kelly, "what is really a distorted early for doubt as to the former actuality of the scenes depicted. In matter of costume and weapons, eating and drinking, building and arrangement of the banquet hall, manners observed at the feast, and much more, we find here the most valuable information" (Ir. Archeol., I, 232). "It may be said that the Irish saga is the only richly-flowing source of unbroken Celtism." "It is the ancient Irish language," says d'Arbois de Jubainville, "that forms the connecting point between the neo-Celtic languages and the Gaulish of the inscribed stones, coins, and proper names preserved in Greek and Roman literature." It is evident, then, that those of the great Continental nations of to-day whose ancestors were mostly Celts, but whose language, literature, and traditions have completely disappeared, must, if they wish to study their own past, turn themselves first to Ireland, and there they will find the tale of Poseidon, the rise up before them in a ruddy covering of flesh and blood, which, for the first time, will enable them to see what manner of men were their own forbears.

Three Principal Saga Cycles.—There are three great cycles in Irish story-telling, two of them very full, but the third, in many ways the most interesting, is now but scantily represented. This last cycle is the purely mythological one, dealing with the Tuatha De Dannan, the gods of good, and the Fomorians, gods of darkness and evil, and giving us, under the apparent early history of the various races that formed the vast later Celtic pantheon. According to these accounts the Nemedians first seized on the island and were oppressed by the Fomorians, who are described as African sea-robbers; these races nearly exterminated each other at the fight round Conning's Tower on Tory Island. Some of the Nemedians escaped to Greece and came back a couple of hundred years later calling themselves Firbolg. Others of the Nemedians who escaped came back later, calling themselves the Tuatha De Dannan. These last fought the battle of North Moytura and beat the Firbolg, and, the battle of Magh Trench, and, the battle of Magh Trench, and, the battle of the Firbolg. They held the island until the Gaels, also called Milesians or Scoti, came in and vanquished them. From these Milesians the present Irish are mostly descended. Good sagas about both of these battles are preserved, each existing in only a single copy. Nearly all the rest of this most interesting cycle has been lost or is to be found merely in condensed summaries. These mythological pieces dealt with peoples, dynasties, and probably the struggle between good and evil principles. There is over it all a sense of vagueness and uncertainty. Thus in the Irish legend of the battle of Magh Trench (or Ulster cycle, as it is variously called), on the other hand, deals with the history of the Milesians themselves within a brief but well-defined period, and we seem here to find ourselves not far removed from historical ground. The romances belonging to this cycle are sharply drawn, numerous, and ancient, many of them are fine both in their conception and execution. The time is about the birth of Christ, and the figures of Cuchulainn (Coochullin), King Conor Mac Nessa, Fergus, Naiose (Neesa), Meadbh (Mève), Déidire, Conall Cearnach, and their fellows, have far more distinctness in them than the dim, mist-defined, distorted forms of the Tuatha De Dannan such as Nuada of the Silver Hand, Bres, Balor of the Evil Eye, Dana, and the other beings whom we find in the mythological cycle. The best known and greatest of
all these sagas is the "Táin Bo Cuailnge", or "Cattle-Raid of Cooley", a district in the County of Louth. It gives a full account of the struggle between Connacht and Ulster, and the hero of the piece, as indeed of the whole Red Branch cycle, is the youthful Cuchulainn, the Hector of Ireland, the most chivalrous of enemies. This long saga contains many episodes drawn together and formed into a single whole, and is a kind of Irish Diaghel, and the state of society which it describes from the point of culture-development is considerably older and more primitive than that of the Greek epic. The number of stories that belong to this cycle is considerable. Standish Hayes O'Grady has reckoned ninety-six (appendix to Eleonora Grant's The Leinster Cycle of Irish Literature). These sagas seem to be now wholly lost, and many others very much abbreviated, though they were all doubtless at one time told at considerable length.

After the Red Branch or heroic cycle we find a third very comprehensive and even more popular body of romance woven round Finn Mac Cumhail (Cool), his son Oscar, his grandson Oisin or Osian, Conn of the Hundred Battles King of Ireland, his son Art the Lonely, and his grandson Cormac of the Lifsey, in the second and third centuries. This cycle of romance is usually called the Fenian cycle, because it is the story of Ireland and of the Fenian militia. These, according to the Irish historians, were a body of Irish janissaries maintained by the Irish kings for the purpose of guarding their coasts and fighting their battles, but they ended by fighting the king himself and were destroyed in the famous cadh (or battle) of Tailtean (Gowra). As the heroic cycle is often called the Ulster cycle, so this is also known as the Leinster cycle of sagas, because it may have had its origin, as MeicNeill has suggested, amongst the Galoines, a non-Mediterranean tribe and subject race, who dwelt round the Hill of Allen in Leinster. That whole body of romance is of later growth or rather expresses a much later state of civilization than the Cuchulainn stories. There is no mention of fighting in chariots, of the Hero's Bit, or of many other characteristics which mark the antiquity of the Ulster cycle. Very few pieces belonging to the Ulster story have come down, and the great mass of texts is of Middle and Late Irish growth. The extension of the story to all the Gaelic-speaking parts of the kingdom is placed by MacNeill between the years 400 and 700; up to this time it was (as the product of a vassal race) propagated only over the parts of the country developed in different quarters of the country, that about Diarmuid of the Love Spot in South Munster, and that about Goll the son of Morna in Connacht. Certainly it is that this cycle was by far the most popular and widely spread of the three, being familiarly known in every part of Ireland and of Gaelic-speaking Scotland even to the present day. It developed also in a direction of its own, for, though none of the heroic tales are wholly in verse, yet the number of Ossianic epoeyes, ballads, and poems is enormous, amounting probably to some 50,000 lines, mostly in the more modern language.

Early Christian Literature.—Perhaps no country that ever adopted Christianity was so thoroughly and rapidly permeated and even saturated with its language and conceptions as was Ireland. It adopted and made its own in secular life scores and hundreds of German words astirly the Christian ecclesiastical purposes. Even to the present day we find in Irish words like pós, a kiss, borrowed from the Latin for "[the kiss] of peace", pacīs, Old Irish pōc; the word for rain, bðsteach, is from baptizare, and meant originally "the water of baptism"; both these root stems appear in the modern English word "head", i.e. the baptized part. A common word for warrior, or hero, laoch, now laoch, is simply from laicus, a layman. The Latin language was, of course, the one used for religious purposes, both in private and very formal parts of society, such as the Church and the temples of Christianity. In it were written the earliest hymns; Patrick used it in his "Confession", as did Adamnan in his "Life of Columcille". But already by the middle of the eighth century the native language had largely displaced it all over Ireland as a medium for religious thought, for homily, for litany, for books of devotion, and the lives of saints. We find the Irish language used in a large religious literature, much of which is native, while some of it represents lost Latin originals which are now known to us only from the Irish translations. One interesting development of "rith eager", the written word, is the literature beginning with the vision of St. Fursa, which is given at some length by Bede, and of which Sir Francis Palgrave states that "tracing the course of thought upwards we have no difficulty in deducing the poetic genealogy of Dante's Inferno to the Milesian Fursus". These "visions" were very popular in Ireland, and so numerous that they gave rise to the, the twelfth-century "Vision of Mac Conglina". More important than these, however, are the lives of the saints, because many of them, dating back to a very remote period, throw a great deal of light upon conditions and customs in an early Irish. In the first half of the seventeenth century Brother Michael O'Clergy, a Franciscan, travelled round Ireland and made copies of between thirty and forty lives of Irish saints, which are still preserved in the Burgundian Library at Brussels. Nine, at least, exist elsewhere in ancient volumes. A part of one of these, the voyage of St. Brendan, spread through all Europe, but the Latin version is much more complete than any existing Irish one, the original having probably been lost.

Irish Historical Literature.—Owing to the nature of the case, and because it is not easy to join the isolation of Ireland, it is extremely difficult, or rather impossible, to procure independent foreign testimony to the truth of the Irish annals. But, although such testimony is denied us, yet there happily exists another kind of evidence to which we may appeal with comparative confidence. This is nothing less than the natural phenomena as reported in the annals, for if it can be shown by calculating backward, as modern science has enabled us to do, that such natural phenomena as the appearance of comets or the occurrence of eclipses are recorded to the day and hour by the early Irish, then we can with some certainty that these phenomena were recorded at the time of their appearance by writers who personally observed them, and whose writings must have been actually consulted and seen by these later annalists whose books we now possess. If we take, let us say, the "Annals of Ulster", which treat of Ireland and Irish history from about the year 444, but of which the written copy dates only from the fifteenth century, we find that they contain from the year 496 to 854 as many as eighteen records of eclipses and comets, and all these agree exactly to the day and hour with the calculations of modern astronomers. How impossible it is to keep such records unless written memoranda are made of them at the time by eyewitnesses is shown by the fact that Bede, born in 675, in recording the great solar eclipse which took place only eleven years before his own birth, is yet two years wrong, and so the "Annals of Ulster" give, not only the correct day, but the correct hour, thus showing that their compiler, Cathal Maguire, had access either to an original, or a copy of an original, account by an eyewitness. Whenever any side-issues from an external quarter have been touched upon, the chief sources, even the Cymric, Saxon, or Continental sources, they have always tended to show their accuracy. We may take
IRELAND

it then, without any credulity on our part, that Irish history as recorded in the annals may be pretty well relied upon from the fourth century onward.

The first scholar whom we know to have written concerning the Irish was a certain Abbot of Clonmacnoise, who died in 898. He begins in Latin with the founding of Rome, later on he makes occasional mention of Irish affairs, and lays it down that Irish history is not to be trusted before the reign of Cínbaed, that is, prior to about the year 300 n. c., "Omnis memoria de Hibernia in antiquo tempore est". This statement [the Irish were always called Scotti till into the late Middle Ages] usque Cínbaed incerta erat." In the fourth century n. c. the references to Ireland become fuller and more numerous, they are partly in Latin, partly in Irish, but towards the end of the work Latin gives way to the native speech. The greatest book of annals, with a few trifling exceptions also the latest, is that known under the title of the "Four Masters" (q. v.). It is evident from the entries that the compilers of the "Annals of Ulster" and the rest copied from original annals. In the "Annals of Ulster", for instance, we read under the year 428 "Chronicum magnum scriptum est", at 427 and 428 the compiler writes "sic in libro Cuanach inveni", at 428, "ut Cuanach scriptur", at 507, "seundum librum Mochod", at 428, "sicut in libro Dubhdailithe narratur", etc. No nation in Europe can boast of so continuous and voluminous a history preserved in a vernacular literature as the Irish. The only annals and distinguished from annals were written under great difficulties by Geoffrey Keating, a learned priest, in the first half of the seventeenth century; it also is taken, almost exclusively, from the old vellum manuscripts then surviving, but which mostly perished, as Keating himself did, in the cataclysm of the Cromwellian wars.

Early Irish Poetry.—There is no other vernacular poetry in Europe which has gone through so long, so unbroken, and so interesting a period of development as that of the Irish. The oldest poems are ascribed to the early Milesians and are perhaps the most ancient pieces of vernacular literature existing. None of the early poems rhymed. There is little that we can see to distinguish them from prose except a strong tendency, as in the Teutonic languages, towards alliteration, and a leaning towards dissyllabic words so that the bards were eligible without heavy glosses. It is a tremendous claim to make for the Celt that he taught Europe to rhyme, yet it has been often made for him, and not by himself, but by such men as Zeuss, the father of Celtic learning, Constantine Nigra, and others. Certain it is that as early as the seventh century and the Irish had brought the art of rhyming verses to a high pitch of perfection, that is, centuries before the rest of the vernacular literatures of Europe knew anything at all about it. Nor are their rhymes only such as we are accustomed to in English, French, or German poetry, for they dealt with not only in all rhymes, like these nations, but also in assonances, like the Spaniards, and they often thought more of a middle rhyme than of an end rhyme. The following Latin verses, written no doubt after his native models by Aengus Mac Tipratae sometime prior to the year 704, will give the reader an idea of this middle or interlinear rhyming which the Irish have practised from the earliest times down to the present day:—

Martinus mirus more
Ore laudavit Deum,
Puro corde cantavit
Atque amavit Eum.

A very curious and interesting peculiarity of a certain sort of Irish verse is a desire to end a second line with a word of a syllable more than that which ends the first, the stress of the voice being thrown back a syllable in the last word of the second line. Thus, if the first line end with an accented monosyllable the second line will end with a disyllable word accented on its first syllable, or if the first line end with a disyllable accented on its first syllable the second line will end with a trisyllable accented on its antepenultimate. This is called aird-rinn in Irish, as:—

Fail'n the land of learned men
The bardic band is fallen,
None now learn a song to sing
For our song is fading.

This metre, which from its popularity may be termed the hexameter of the Irish, is named Deibhidhe (D'yeveve), and well shows in the last two lines the internal rhymes to which we refer. If it be maintained, as Thurneysen maintains, that the Irish derived their rhyming verses from the Latins, it seems necessary to account for the peculiar forms that so much of this verse assumed in Irish, for the merest glance will show that the earliest Irish verse is full of touras de force, like this "aird-rinn", which cannot have been derived from Latin. The best of the "aird-rinn" is not that which the Irish brought their rhyming system to a pitch of perfection undreamt of by any nation in Europe, even at the present day, and it is no exaggeration to say that perhaps by no people was poetry so cultivated and, better still, so remunerated as in Ireland.

There were two kinds of poets known to the early Gael. The principal of these was called the filé (fella); there were seven grades of filé, the most exalted being called an ollamh (ollaw). These last were so highly esteemed that the annalists often give their obituaries, as though they were so many princes. They took from twelve to twenty years to arrive at this dignity. Some fragments of the old metrical textbooks still exist, showing the courses required from the various grades of poets, in pre-Norse times. One of these, in elucidation of the metre, gives the first lines of three hundred and fifty different poems, all no doubt well-known at the time of writing, but of which only about three have come down entire to our own time. If there were seven species of filé there were sixteen grades of bards, each with a different name, and each had his own peculiar metres (of which the Irish had over 300) allotted to him. During the wars with the Norse, on the other hand, the bards suffered fearfully, and it must have been at this time, that is in the ninth and tenth centuries, that the finely-drawn distinction between the poets and bards seems to have come to an end. So highly esteemed was the poetic art in Ireland that Keating in his history tells us that at one time no less than a third of the patrician families of Ireland followed that profession. These constituted a heavy drain on the resources of the country, and at three different periods in Irish history the people tried to shake off their incubus. However, Columcille, who was a poet himself, befriended the bards of Clontarf, and, in the sixth century, their numbers were reduced and they were shorn of many of their prerogatives; but, on the other hand, public lands were set apart for their colleges, and these continued until the later English conquest, when those who escaped the spear of Elizabeth fell beneath the sword of Cromwell.

Modern Irish Poetry.—Much of the ancient poetry of the schools was largely in the nature of a memoria technica, the frame in which valuable information was enshrined, but the bards attached to the great houses chanted a different strain. So numerous are the still surviving poems from the period of the Battle of Clontarf down to the sixteenth century that Meyer has remarked that the history of Ireland could be written out of them alone. When the great houses fell beneath the sword of Elizabeth, of Cromwell, and
The poets we praise are up-raising the notes
Of their lays, and they know how their tones will delight.
For the golden-haired lady so graceful so poseeful
So Gaelic so glorious enthralled in our sight.
Unfolding a tale how the soul of a fay
Must be clothed in the frame of a lady so bright,
Untold are her graces, a rose in her face is,
And no man so staid is but faints at her sight.

Owen Roe O'Sullivan, the witty and facetious name-sake of the poet, was unpretentious, and which, though reduced to less than a score in the Elizabethan period, were still the proper property of the learned and highly educated, so intricate were the verse forms, now died away completely. There was, perhaps, not a single writer living by the middle of the eighteenth century who could correct verses in the classical metres of the schools.

On the other hand, however, there arose a new kind of poetry, in which the consonant rhyming of the old school was replaced by vowel chiming or vowel rhymes, and in which only the syllables on which the stress of the voice fell were counted; a splendid lyrical poetry sprang up amongst the people themselves upon these lines. The chief poets of these latter times were in very reduced circumstances, mostly schoolmasters or farmers, and very different indeed in status from the refined, highly educated, and still more the learned, poets with a constant at the right hand of powerful chieftains advising them in peace and war. A usual theme of the new poets, who seemed to revel in their newly found liberty of expression, was the grievances of Ireland sung under a host of allegorical names, the chances of the Stuarts returning, and the bitterness of the present as compared with the glories of the past, or the vision of Ireland appearing as a beautiful maiden. The poets of the South used even to hold annual bardic sessions, though such attempts must always have been attended with great danger, for the possession of a manuscript was often sufficient cause for persecuting or imprisoning the possessor; many fine books were on this account hidden away or walled up lest they should bring the owner into trouble with the authorities. Even as late as 1798, the grammarian Neilson of County Down, who was a Protestant clergyman of the Established Church and pew-money payer, was convicted by the Governor of a dozen dragoons and accused of treason because he preached in Irish.

It is very difficult to convey in the English language any idea of the beautifully artistic and refined measures in which the poets of the last two or three centuries have resided, both in Ireland and in the Highlands of Scotland, where also they produced a splendid lyrical outburst, about the same time as in Ireland, and on the same lines. Suffice it to say that most of their modern poetry was written and is being written to this very day upon a wonderful scheme of sound, on a careful arrangement of rhyme that first one and then another vowel will strike the ear at skillfully recurring intervals. Some poems are written entirely on the œ sound, others on the o, others on the ū (oo), ê (ee), or ã (au) sounds, but most upon a delightfully intermingling of two or more of them. Here is a typical verse of Tadhg Gáelach Ó Súillivan, who died in 1800 and who consecrated his muse, which had at first led him astray, to the service of religion, his poems producing a profound effect for good all over the South of Ireland. The entire poem is made upon the sounds of è (e) and o, but with a careful arrangement in the first half of the verse is ò/è/ò/ò/è/ò, the arrangement in the second half is o/è/ò/ò/è/è. To understand the effect that this vowel rhyming should produce, we must remember that the vowels are dwelt upon in Irish, and not passed over quickly as they are in English:—
Aryan origin and have their counterparts in most Aryan literature. Of these, too, it is only recently that collections have been made. There is one remark which must not be omitted about this folk-poetry and its MSS. poetry as well—it resembles scarcely anything in the nature of a ballad. Lyrics couched in the most exquisitely artful rhyme, and didactic and bacchæanéan and religious poetry of all sorts, Ireland and the Highlands of Scotland produced in plenty, but they have almost nothing in the nature of the splendid Lowland ballads. They could not tell a story in verse. With the exception of the Ossianic poems and a few poems of the classical school there was never any attempt made to recount a striking tale through the medium of verse.

Modern Irish Printed Literature.—For long it was believed that the Celtic languages were connected with the East—with the Phenicians, according to a favourite theory—or at least that they had nothing in common with the Aryan, or Indo-European, group of tongues. All the scholars of the eighteenth century and of the beginning of the nineteenth century took up this attitude. Even the great German scholar Bopp excluded Celtic from his Indo-European grammar. Lhuyd, the Welsh antiquary, had already shown early in the eighteenth century the close co-relation between all the Celtic tongues, but it remained for the Bavarian Zeuss to prove to the world beyond seas or nay, in his "Grammar of Celtic" published in 1853, that the Celtic languages were Indo-European. Since that day Celtic scholarship, based upon Zeuss's monumental work, has made enormous strides. The work of the great native Irish scholars O'Curry and O'Donovan, who first penetrated the difficult language of the Brevon Laws, and the more recent works of the learned and unique acquaintance with Irish manuscripts first gave to the world a general knowledge of Irish literature, was succeeded by the more distinctly scientific labours of Whitley Stokes, Father Edmund Hogan, S.J., Robert Atkinson, and of Standish Hayes O'Daly (whose acquaintance with the modern and ancient literature makes him the legitimate successor of O'Donovan and O'Curry), of W. M. Hennessy and Father Bartholomew MacCarthy, all in Ireland, while Zeuss found a worthy successor in Ebel, who published a corrected and augmented version of his "Grammatik" in 1874. In recent years Windisch, Thurneysen, Zimmer, and Kuno Meyer have done immense work in the same field. In France, Gaidos founded the "Revue Celtique" in 1870, afterwards edited by d'Arbois de Jubainville, and of which twenty-eight volumes have appeared; in them many Irish texts have been published and much light thrown upon Celtic subjects in general. The "Zeitschrift für celtische Philologie" made its appearance in 1896, and was followed by the "Archiv für celtische Lexicographie".

Up to this point, and by most of these learned men, the Celtic language regarded as a subject for pure scholarship only, as a thing dead, having no immediate or necessary connexion with the country or the people that had given it birth. Their scholastic labours, however, may to some extent have unconsciously prepared the way for the popular movement which succeeded. Certain it is that a great popular movement in favour of the language and literature sprang up at the very close of the nineteenth century in Ireland itself, under the auspices of a society called the Gaelic League and the extension of the previous society called the Gaelic Union, which was an offshoot from an older and still existing body, the Society for the Preservation of the Irish Language. The Gaelic League was founded in the year 1893; the objects were: (1) The preservation of Irish as the national language and the extension of its use as a spoken tongue. (2) The study and publication of existing Irish literature and the cultivation of a modern literature in Irish.

Such was the intellectual stagnation in Ireland at the period of this foundation that it would be safe to assert that there were not, at that time, more than a few hundred people living, if so many, who could read or write in Irish. After many years of silent labour and much painful uphill toil, the League has at last become a widely spread popular movement throughout the Irish world. Hundreds of books have been written and published under its auspices, and many thousands of people have been taught to read them. It publishes a weekly and a monthly paper and it has done a great deal towards collecting the rapidly perishing folk-lore of the country. The number of working affiliated branches belonging to the League, carrying on educational work from week to week, in the year 1908, was in Munster 129, in Leinster 115, in Ulster 113, and in Connacht 74. There were 22 branches in Scotland, 11 in England, and a few more isolated ones scattered over Europe and America. The League is governed by a president, two vice-presidents, and an annually elected executive of forty-five members, of whom thirty-two are resident in or near Dublin, the rest represent various parts of the country and Scotland and England. These meet once a month in Dublin, and govern the League. They controlled and paid out of their own funds in 1908 seven organizers for Conn's Half of Ireland (Connacht and Ulster), and there were forty-two district teachers working for the League in this part of Ireland. In Mogh's Half (Leinster and Munster) there were six organizers and eighty district teachers. There are also six colleges connected with and practically founded by the Gaelic League, at Ballingarry in Cork, at Farrar in Mayo, at Cloghaneely in Donegal, at Ring in Waterford, and one each in Dublin and Belfast. The country colleges have two terms, each of which lasts about six weeks. The Dublin and Belfast colleges are open during the winter. There were over two hundred students at each of the Cork and Mayo colleges in 1908.

Scores of writers in Irish have arisen under the impetus of the new movement, scarcely one of whom, it is safe to say, would ever have put pen to paper in English. Perhaps the best-known and most idiomatic writer in Irish at the close of the last decade was Canon O'Leary, P.P., of Castlelyons in County Cork. He is a novelist, grammarian, and writer on miscellaneous subjects. Michael Breathnach (or Walsh), J. J. Doyle, T. Hayes, Father Dinneen, M. Ó Malley, P. O'Connor, Conal Maol (P. J. O'Shea), P. O'Shea,
made further progress. The introduction of Christianity left its mark deeply upon the people and on the language. The Irish annals may be substantially relied on from about the fourth century onwards. The Irish had already highly developed the use of the book as a repository of tradition. The Lecanary, a phase of its activity which recalls to us the Greek renaissance of the sixteenth century. Fathers O'Leary, O'Reilly, Edmund Hogan, S.J., Crehan, Dr. Bergin, Dr. Henry, P. McGinley, J. H. Lloyd, D. Foley, S. O'Catáin, and J. Craig have all worked on greater subjects as well as on other ecclesiastic and literary subjects; while the Rev. Dr. Henebery, Father Hayden, J. S.D., Dr. Quiggin, and Father Mullin have written upon Irish pronunciation and dialects. Voluminous writers on history and other subjects are Michael Breathnach (d. in October, 1908), Eoghan O'Neachtain, and Sean O'Kelly. Father Dinneen gives a lexicographer, editor of texts, and miscellaneous writer. Father John C. MacErlean, S.J., R. Foley, and Tadgh O'Donoghue are all editors of texts; the latter is also a poet and a miscellaneous writer. Canon O'Leary, Father T. O'Keeley, T. Hayes, W. Ryan, P. O'Mahony, Dr. O'Flynn, and F. Partridge have all written books; Fr. O'Kelly has written the libretto of an Irish opera which was produced in 1909.

The Gaelic League has also published editions principes of the poetry of Owen Roe O'Sullivan, Seaghan Claíraích MacDonnell, Pierce Ferriter, Geoffrey Keating, Geoffrey O'Donoghue of the Glen, Pierre T. O'Gorman, Murphy of Rathmearsel, Colum Wallace, and others. The works of all these poets existed previously only scattered in manuscripts or in the mouths of the people until the League saved them. The Irish Texts Society, founded in London in 1896, has published ten handsome volumes of hitherto unprinted Irish texts, including Keating's "History" in three volumes. T. O'Conocannon, M. Foley, Rev. P. O'Sullivan (a Protestant clergyman), P. Stanton, the late Denis Fleming, and others have been enriching Irish by translations from English and other languages. Nearly all the Catholic and Nationalist papers now publish more or less Irish in every issue, so there is little danger of the language ceasing to be written. Of 11,332 students who followed the various courses under the intermediate, or secondary, school system in 1908-9, 6085 took up Irish as one of their subjects. The language is also taught in five or less satisfactory schools out of about 8538. Of these schools, however, many belong to the more Protestant counties of the North of Ireland, and these have as yet had little to do with the new movement. The School of Irish Learning under Dr. Bergin, of which Dr. Kuno Meyer was the practical founder, gives university teaching in comparative philology, philology, comparative grammar, and the reading of the old vellum MSS. Its courses in 1908-9 were attended by over 30 students, its journal "Éiriu" and its "Anecdota Hibernica" are known to all Celtic scholars.

We may now briefly sum up what we have said about the native Gaelic literature. The Irish probably learnt the use of letters in the second century, but did not use the Roman alphabet till the country was converted to Christianity in the fourth and fifth centuries. The earliest existing manuscripts do not go back further than the eighth century, but the inscribed Ogham stones are centuries older than these. The early epics and sagas contain a substantially accurate picture of pagan times and of pagan manners and customs. The feeling of the Church was from the start favourable towards the native language and native scholarship. The number of existing Irish manuscripts is great, but it is difficult to say with accuracy what they contain, nor can they be certainly dated and sifted until Celtic studies have
Ireland produced a more vigorous literature in English, which began to be occasionally written by natives as well as Palesemen. Stanhurste (1547–1618), although he wrote his “De rebus in Hibernia gestis” in Latin, was perhaps the first Irish-born man (he was a native of Dublin) to attempt to express things in English verse. He translated the first four books of Virgil’s *Æneid* into “English heroic Verse” in 1583, but only aroused the scornful derision of his English contemporaries by his effort. The seventeenth century, however, was one of an era of great men and great learning, if not of great literature. It witnessed from start to finish a war of race and religion, miserable and merciless, a long drawn out agony. Such eras are necessarily fatal to literature. During this century Keating and MacFhibris wrote in Irish, O’Mulchonry in Irish and Latin and translated from the Spanish. O’Sulliven Bearb wrote his great history of Ireland in Latin. Usber, the renowned scholar and ecclesiastic, the glory of the Pale, wrote in Latin and English. Stanhurste, his uncle, answered him in Latin; Ward, Colgan, and O’Clery wrote in Irish and Latin. Ware wrote in Latin. So did Lynch, and Luke Wadding, pride of the Franciscan Order. Of all the great writers and scholars of the seventeenth century Keating, MacFhibris, and O’Flaherty were the only ones who remained throughout upon their native soil. During many years the lives of most of these men would not have been worth an hour’s purchase had they been caught upon their native soil. It is indeed only with the advent of Molyneux (b. in 1656), that we find the first Irishman who used the English language with effect on behalf of Ireland herself. He forms a kind of connecting link between the nationalities of the Catholic and Celtic Irish, by this time largely banished, broken, or exterminated, and those Protestant nationalists who waxed ever stronger during the succeeding century in Ireland’s artistic and learned writer of renown, a friend of Locke, and by training and inclination a philosopher. Molyneux was moved to write his “Case of Ireland” in 1690 by his indignation at the violent action of the English Parliament in ruining Ireland by forcibly throttling its woolen trade to help the traders of England. His book was by order of the British House of Commons burnt by the common hangman. But it was a mighty echo soon after in the *memoires de Swift*, and its legitimate consumption, three-quarters of a century later, in the burning eloquence of Grattan and the humilation of England. One brilliant Irish writer of this century, Jonathan Swift (1667–1745) three, in 1646; d. 1720), used French for his literary medium. His “*Memoires du Chevalier de Gramont*” is a delightful classic, which gives a brilliant description of the Court of Charles II.

A number of poets of Anglo-Irish birth, but chiefly of Hibernia, seeming whose names figure rather prominently in the story of English literature, are found through this and the next century. Of these, one of the most remarkable as a man, though hardly as in the English language must look to England and to it alone, for there only was to be had a public who would understand them. It is really with Jonathan Swift (1667–1745) that English literature in Ireland for the first time allowed itself to be coloured, in part at least, by the country of its birth. For although the bulk of Swift’s direct, lucid, powerful, and nervous writings belong to England, yet a considerable portion of them are the direct outcome of his Irish life and his Irish surroundings. It is true that Molyneux had preceded him as the Protestant nationalist which, by making the English in Ireland as independent as possible of the English in
England, tended also in some measure towards the up-lifting of the enslaved and disfranchised native Irish. But Molyneux did not wield the pen of Swift. He was a thinker, not a stylist, a philosopher rather than a writer. Swift was both. He who in England had been, beyond all comparison the most powerful political pamphleteer of his day, the protagonist and mainstay of his party, became in Ireland the determinant supporter of the civil rights of his fellow-countrymen and their outspoken champion against English aggression. His services to his native country rendered his name endeared to hundreds of thousands of the native Irish Catholics, men whom he himself looked on, and quitetruly, as being powerless in Ireland either for good or evil, merely "hewers of wood and drawers of water". Indeed the dean was, like all the other Protestant dignitaries of his day, the declared enemy, if not of the Irish race, at least of the Irish language, which was the only one used by the great majority of the native inhabitants. At one time he thought that he had a scheme by which the Irish language "might easily be abolished and become a dead one in half an age, with little expense and less trouble". "It would be", he said again, "a noble achievement to abolish the Irish language in the kingdom", but whatever his scheme was, he did not further enlighten the public upon it and it died with him. One of his own most spirited poems, "O'Rorke's Feast", is a translation from the Irish, perhaps the first of the kind ever made in Ireland. He heard it sung at a banquet in the County Leitrim, and was so taken by the air that he asked for a translation and was told that Mackey, the author, could give it to him either in Latin or in English. Several other poems of the dean's relate to his life in Ireland and his surroundings there.

It is because a certain percentage of Swift's writings both in prose and verse are concerned with the people and conditions of Ireland, that he may be regarded as the father of Anglo-Irish literature, a term which can properly be applied only to literature coloured by or inspired by Ireland and Irish themes, written in the English language but by Irish-born people. If this definition of Anglo-Irish literature be correct it would exclude almost all Swift's predecessors and many of his successors for indifference to Ireland on the part of Irish writers of English did not by any means end with Swift. With the eighteenth century it becomes increasingly difficult to place Irish-born writers, for an ever-growing number belong, like Swift, to both countries. It is hard to see how by any stretch of imagination Laurence Sterne, the author of "Tristram Shandy", though born and partly educated in Ireland, could be called an Anglo-Irish writer. Ireland, as the Psalmists says, was not in all his thoughts. The same is true of Sir Philip Francis, the reputed author of the "Letters of Junius". Even our beloved Goldsmith (1730-1774) and altogether delightful Irishman though he was, cannot properly be termed an Anglo-Irish poet. His "Vicar of Wakefield" struck a new note in English literature and even profoundly affected the rising genius of Goethe, but neither it nor his plays nor his poetry concerned themselves even indirectly with his native country. What is true of Goldsmith is true to some extent even of Richard Brinsley Sheridan (1751-1816), who was of the Milcah in England, and whose nature like that of Goldsmith was Irish in the extreme. Bishop Berkeley (1684-1753), on the other hand, after whom the State University of California is named, is really an Irish writer. His wonderful "Querries" are almost as pertinent to the case of Ireland to-day as they were eight score years ago. Edmund Burke (1729-1797), the profoundest and, perhaps the noblest political thinker that the British Isles ever produced, while he was never for a moment forgetful of the country of his birth, yet belongs for the most part, as far as his writings go, to England and English politics.

It is apparent from what we have written that Ire land gave to England in the seventeenth and eighteenth centuries some of its most distinguished authors, that these authors, though born in Ireland and brought up amidst Irish surroundings, were mostly of English descent, and turned naturally for a public to the Eng land of their fathers, whose language they spoke and wrote. It is evident that, as time went on, an ever-increasing number of Irish Gaels (still unemancipated and denied education in their own language) joined the ranks of those English writers who looked to an English and not to an Irish public. It is only within the nineteenth century, however, that we get a vigorous and promising Anglo-Irish literature, inspired wholly by Irish themes and written mainly for the Irish people themselves. The foremost of these new Anglo-Irish writers were, in prose, Miss Edgeworth and, in poetry, Thomas Moore.

Maria Edgeworth (1767-1849), the creator of the Anglo-Irish novel, was the scion of a good family, some of whose members belonged to the Catholic and some to the Protestant religion. She herself belonged to the latter, but it was a relative of hers (see Edgeworth, Henry Essex) who attended the unfortunate Louis XVI to the scaffold. She was gifted with a mind as singularly open and unprejudiced as it was acute and observant. To this she united an admirable style, clear and pungent, and a dramatic power of presentation which rarely failed her. She never looked upon herself as a writer with a mission, but undoubtedly she was. In her "Castle Rackrent", theSwift's downfall through its own reckless sangundering of a great Irish family, as told through the mouth of an acquaintance of the chief servitor of his house, is a tale of very great power. In her novel the "Abenteer" she attacks, and with equal force though in a different vein, another side of the same social evil whose effects she had portrayed so powerfully in "Castle Rackrent". Following Macklin (really Man aulgin), in his play of "The True-Born Irishman" produced in 1763, she holds up to merciless ridicule the Irish land-owners who deserted their own estates to try to cut a figure in London, and there compete with men who were at once much wealthier than
themselves and also, so to speak, born and bred to the life of the English metropolis. Her "Moral Tales" are frequently reprinted even to this day. Miss Edgeworth cannot in any political sense be called a nationalist writer. The cry of "Ireland a Nation" never appealed to her, nor does she break the native Irish against the English garrison, nor the doing of the men of '98, nor the feelings of the natives against the settlers. With her began the Irish novel, but not the Irish political novel. Her contemporaries, Lady Morgan (1783–1859), wrote Irish novels also, but no one ever reads them now, while Miss Edgeworth's popularity is perennial. A different temper was Thomas Moore (1779–1852), the first great Anglo-Irish poet. It is true that he had had some few predecessors, among whom were Ned Lysaght, the poet of Grattan and the Volunteers, and William Drennan, the poet of the United Irishmen, but he owed nothing to any of them. A Catholic and in his youthful days a sympathiser with the men of the '98 Rebellion, and with Irish national aspirations, his muse spread the name and fame of his native island throughout thousands upon thousands of those gilded drawing-rooms, where, before that, Irish aspirations or even the very name of Erin would have been met only by a scoff or perhaps by some still more emphatic disapproval. While rescuing the admirable ancient music of Ireland from oblivion he wedded it to the most melodious songs that the English language had yet produced, and he never shrank from insisting upon the national character both of his music and his verses, nor hesitated to depict the sad and oppressed state of his mother country. Who can say what considerable if indirect influence Moore's verses must have exercised on the hearts of men, when it came, as it soon after did, to dealing with the gravest Irish problems in the House of Commons, including the emancipation of the Catholics. Just as Sir Walter Scott's novels affected a profound change in the outlook of England upon Scotland, and of the Lowlanders upon the Highlanders, so Moore's "Melodies" must have made hundreds of thousands of Englishmen and loyalists for the first time familiar with the wrongs, the aspirations, and the inner soul of Ireland. Not that Moore was in any sense a poet of the people; he was a poet rather of the cultured classes and of the drawing-room, and thus the very consciousness of his Irishness was inapparent. It is safe to say that the Irish peasantry themselves never grasped his melodies as a popular possession or sang them commonly at their firesides. But with the cultured classes his voice was enormous. Probably no poet ever lived whose lines penetrated so many drawing-rooms alien in sympathy to himself and his ideals.

It has been of late years the custom on many sides to decry Moore. It is, however, hard to subscribe to almost any of the complaints. It is true that divorced to a certain extent from the life of the native Gael, and being ignorant of the national language, he takes the tunes and welds them into songs, and takes love songs and makes slogans of them. This is a real fault of commission; with regard to the other criticisms it is not always fair to judge a poet for faults of omission, or in other words for not being what nature did not make him. Above all it is hard to accuse of timeserving or of pusillanimity a poet who could imperil his popularity in England by such a vigorous melody as that in which he compares the oppression of Ireland to the Jewry and prophesies the destruction of her tyrant. A great deal of Moore's success as a poet is due to the national music of Ireland to which his songs are wed, and lyrics such as "Avenging and Bright," "The Minstrel Boy," "Let Erin remember," "When he who adores thee," and "She is far from the land" have become almost embedded in the life of Ireland and part and parcel of the national mind.

Moore died in 1852, but long before his death there had sprung into being a distinctively Irish literature in the English language, inspired by Irish feelings and ideals, and looking not to an English but to an Irish public. The poets Callahans and Walsh were its precursors. The foundation by Davis, Dillon, and Duffy of the weekly paper "The Nation" in 1842 produced a profound effect all over Ireland, but the Young Ireland writers who then arose never attempted to reach the people through any other medium than English, although at this time Irish was still the familiar speech of about four millions. Of the poets of the Young Ireland movement two stand out pre-eminently, Thomas Davis (d. 1845) and Clarence Mangan (d. 1849). Davis sang, not so much because he was born with the divine afflatus, as because he deliberately set himself to act upon the soul of the people through the medium of poetry. In this he succeeded, for his vigorous political verse, ballads, and other national and patriotic songs, thrown off in haste and not always polished, though generally powerful, exercised a profound effect upon Ireland. Mangan on the other hand, though a Young Irelander by conviction, shrank from the glare and glare of political movements, and led a lonely life, consumed by the fire of his own thoughts. Though the effect of his poems upon the people was far less than that of Davis, he, when at his best, as in his "Dark Rosaleen", attained to heights which would have been impossible to the other. By far the greatest prose writer of the Young Ireland movement was that ardent rebel against English rule, John Mitchel (1816–1872), of whom it is safe to say that no man born in Ireland, Swift alone excepted, ever made such powerful use of the English tongue as a medium for thought, instruction, and invective. His powers of sardonic scorn and indignation are very Swiftian, and his "Last Conquest of Ireland (perhaps)" is one of the most scathing political works ever written, while his "Jail Journal" gives a good idea of the man himself. At this time also appeared a group of novelists whose works have never ceased to be popular for nearly two generations. Of these the most remarkable was Carleton (1794–1859), who understood the peasantry and depicted their feelings in a way that no one else has ever done. In books like "Fardourougha the Miser", the "Black Prophet", and "Traits and Stories of the Irish Peasantry", he portrays not so much the life as the passions of the people with vividness and power.
Samuel Lover (1797–1868), on the other hand, and John Banim (1798–1844), were the novelists of the bourgeois class, and Charles Lever (1797–1883) and perhaps W. H. Maxwell, of the rollicking, sporting, jovial gentry, whose day of domino was even then prosaically, though they knew it not. The gentle and retiring Gerald Griffin, a poet also, gave Ireland at least one novel of supreme excellence in the "Colleen Bawn", and Sheridan Le Fanu (1814–1873) left behind him some very weird stories, the excellent ballad "Shamus O'Brien", and a capital novel of eighteenth century life in Ireland, "The House by the Churchyard". On the whole it may be said of the Young Ireland movement that it, more than any other movement either before or after it, worked by and through letters; but strong political passions do not make for a true and abiding literature; and the vigorous ballads and political verses of Davis, Gavan Duffy (q. v.), and D'Arcy McGee and their group seem to us to-day to contain but little originality. After the great famine, and the dispersion of the Young Irish group, Ireland lay exhausted and wearied listless until the Fenian movement stirred her into activity once more, in the sixties. But this movement passed off without any great influence upon literature. Charles Kickham whose peasant ballads are admirable and whose novel of "Knocknagow" is still widely read, was almost the only literary Fenian of any note. Then came the Land War and the Parnell movement, but it too produced no literary outlet of any consequence. The ballads and poems of Timothy D. Sullivan are probably the most popular and enduring of these writings. Through all these periods of storm and stress, but almost wholly untouched by them so far as their art went, lived Sir Samuel Ferguson (1810–1886), the first and greatest poet to draw extensive inspiration from Ireland's Gaelic past, William Allingham (1824–1889), a graceful singer of the fairies, and Aubrey De Vere (1814–1902), the friend of Tennyson, and at once the most productive and the most essentially Catholic poet ever born in Ireland. Of these names Ferguson's is the greatest. A scholar, an antiquary, and a successful man of the world he gave Ireland her best epic poems in his "Conary" and his "Congal", while his translations from the Irish language have seldom been excelled. Dowden characterizes him as "the only epic poet of the Victorian age", and Stopford Brooke as "the first and perhaps the best of all who have striven to bring into recognition, light, and beauty the Ancient Sages and tales of Ireland". Taking as a whole the popular English poetry of Ireland, as produced from the close of the eighteenth till the last decade of the nineteenth century, we find it replete with notes and themes that would be practically unrepresented in English literature were it not for Ireland. Through a vast proportion of this poetry flame the lightnings of bards and dreamers. To this is frequently joined a devoted Catholicism; for though the worst of the Ascendancy was over, and the blood-hounds were no longer taught, in the phrase of Thomas Davis, "alike to run upon the scent of wolf and friar", still the memory of those days remained, and continued to colour men's passions and their poetry. Almost all of it is shot through with insistent national aspirations. Then we have the poetry of exile, which fills so dreadful a space in Ireland's literary history, and mystic, the emigrant, the cry of the coffin ship, the poetry of misery—the misery not of unite but of a whole country—for as Stopford Brooke has well put it, "Ireland has added to English literature this poetry of the Sword, the Famine and the pestilence" (preface to the "Treasury of Irish Poetry"). The early English verses of the Irish peasant himself, as distinguished from the poets of education, were made upon the models of his native songs, and consisted principally of word-rhyming. Unhappily no collection has been made of these pieces which are of great interest, for their manner rather than for their matter.

The last decade of the nineteenth century ushered in a fresh era for English-Irish poetry. A new band of poets made their appearance who sacrificed less to passion and more to craftsmanship. The Gaelic movement, unlike the upheavals that went before it, has created a body of poets who have turned their thoughts to poetry than the reverse, and many of these poets have written under its influence. Others of them, however, as Stopford Brooke writes in the preface to his and Rolleston's anthology, "have been so deeply influenced by Wordsworth, Keats, and in part by Shelley, and even when they write of the airs of England breathe and the waters of England ripple in their poetry". Of all these new writers there is an almost universal consensus of opinion that the greatest is William Butler Yeats. He has in his art applied the most refined technique to a subject-matter drawn alternately from things symbolic and poetic or from nature in its simplest moods, or again from the old Irish sagas and folklore, which he visualizes from his own standpoint. Mysticism is also the prevailing note of George Russell ("A. E."), painter, poet, and editor. On the other hand religion and simple faith are the distinguishing characteristics of Katherine Tynan Hinkson. Ardent love of country and depth of feeling mark the works of Anna MacManus ("Eithne Carbery"). Almost all the poets of the last fifteen years draw their inspiration more or less from Ireland and things Gaelic.

The greatest Irish historian of the last half century has been beyond all question W. E. Hartpole Lecky (1838–1903). His earliest writings were coloured by a strong nationalism; this, however, gradually departed from him. Of the seventeen volumes of his "History of England" in the eighteenth century, five are given up to the history of Ireland during the same period, and these are written with an admirable impartiality which makes them a valuable and necessary antidote to the biased pictures of Froude. After Lecky's works Alexander Richey's (1830–1883) "Lectures on Irish History present us with what are probably the soundest and most philosophic views that have appeared on this subject. Another book which has produced a deep effect upon the country and upon the current of historic thought has been Alice Stopford Green's "Making of Ireland and its Undoing" which appeared in 1908. A. M. Sullivan's "Story of Ireland" and P. W. Joyce's "Social History of Ireland" are two popular and useful works.

We must now turn to Anglo-Irish drama. The Irish have always been a dramatic race, and also a race of born actors. Beginning with Lodowick Barry, an Irishman whose play of "Ram Alley" was actually written during Shakespeare's life, Ireland has gone to England a large share of her dramatists and actors. It is necessary only to mention the names of Southern, Macklin, Farquhar, Steele, Goldsmith, Sheridan, O'Keefe, Kenney—and so on through Sheridan Knowles, Dion Boucicault
and the two operatic composers, Michael Balfe and William Vincent Wallace, down to Bernard Shaw, to show how deeply this branch of English literature has influenced Irish music. The oldest form of the Anglo-Irish drama is in full swing, and the Abbey Theatre, Dublin, under the direction of Lady Gregory and Mr. Yeats, where some forty-nine or fifty new plays by Irish writers have recently been produced, has aroused a great deal of interest and is undoubtedly the most remarkable development of Irish literature in the present day.

In romance Ireland seems at present to fall far short of the palmy days of Carleton and Lever, Le Fanu and Lover, Banim and Gerald Griffin. Of romance proper, standish o'grady, to whose stimulating books dealing with Gaelic Ireland a host of younger men owe inspiration, is the leading representative. One of the best Irish novel-writers of the day is Canon Sheehan of Doneraile, who has struck a new note in literature by his brilliant and sympathetic descriptions of clerical life inside the Catholic Church. Other well-known and widely-read authors are Jane Barlow, lady r. m. gilbert, Lady Bevan, Emily l. lawson, the poet of the "Wild Geese", Katherine tynan hinkson, and Shan Bullock. Nor can we close this article without some allusion to the translators of and adapters from the Irish, of whom two stand out pre-eminently, lady Gregory in prose and dr. sigerson in verse. One hundred and fifty years ago, the Irish in their "Bards of the Gael and Gall", has given us in English verse a long vista of Irish poetry reaching back for some fourteen hundred years and lost in the dim twilight of bygone ages. Of memoirs and autobiographical works the most remarkable are swift's "Journal to Stella" and dolan's "Memoirs of Joseph Holt", a memoir of the irish revolution of 1798, carleton's "Autobiography" (1896), miles byrne's "Memoirs" (he was another '68 man), and the remarkable series of letters, mostly unpublished, written by john o' Donovan on his official investigations into Irish topography—perhaps one of the most extensive collections of official letters in the world.

"O'Reilly, irish writers, ed. for the bernese-celtic society (Dublin, 1892); o'curry, lectures on the tradition of irish history (re-issue, dublin, 1879); idem, manners and customs of the ancient irish, with an introduction by w. k. spillane (3 vols., dublin, 1873); douglas brogden, life of the irish poet john petter (london, 1888); sheehan, a literary history of ireland (london, 1899); tournier, essais d'une histoire des peuples celtiques (leipsig, 1865); dottin, la litterature irlandaise (1829); douglas, the irish nation, an essay in culturalugenwart (berlin and leipzig, 1900); joyce, social history of ancient ireland (2 vols., dublin, 1905); eleanor hopkins, the irish language (london, 1898); idem, 18; o'grady, catalogue of irish manuscripts in the british museum. old and modern series, part o'connor and 1894, 51; henry ferguson, the history of the gael in the british islands (london, 1879); ferguson, celtic inscriptions of ireland (london, 1887); macalister, studies in irish etymology (3 vols., london, 1890-1897); and elsewhere.

IRENAEUS

Saint, Bishop of Lyons, Father of the Church.—Information as to his life is scarce, and in some measure inexact. He was born in Proconscal Asia, or at least in some province bordering thereon, in the first half of the second century; the exact date is controverted, between the years 115 and 125, according to some, or, according to others, between 130 and 142. It is certain that, while still very young, Irenaeus had seen and heard the holy Bishop Polycarp (d. 155) at Smyrna. During the persecution of Marcus Aurelius, Irenaeus was a priest of the Church of Lyons, a church which, however, was subject to the care of the bishops of the Church of Asia Minor, whom heUps. essays on New Testament Hebrews 12:1-2.Translation, interpretation, and literary analysis of this passage are provided in this section. The discussion includes textual challenges, historical context, and theological implications. The commentary highlights the critical role of Hebrews 12:1-2 in understanding the Apostle Paul's message to his Christian communities.

The passage is cited as follows:

Hebrews 12:1-2

Christ, then, who spoke through the holy apostles and prophets, announced oracles of eternal things, so that by them all of you would be reminded and instructed. For the first time the things that are written are not only a matter of speculation but also of sure knowledge. For the things that are written in the holy apostles and prophets are not just pronouncements about things that have long since passed but also are a sure prophecy of what is to come. This is the purpose of the Church, to be a school of instruction and to teach you knowledge of the Holy Scriptures. This is the purpose of the Church, to be a school of instruction and to teach you knowledge of the Holy Scriptures.

Critical Textual Challenges:

1. Hebrews 12:1-2 seems to contain a mixture of themes, including the role of the holy apostles and prophets as witnesses of eternal truths, the certainty of revealed knowledge, and the function of instruction and prophecy in the Church. These themes may require careful attention to the historical and theological context.

2. The phrase "things that are written" may refer to the Old Testament or the New Testament, or both. Understanding the specific referent is crucial for interpreting the passage.

3. The phrase "things that are written are not only a matter of speculation but also of sure knowledge" suggests a distinction between speculative and certificatory knowledge. Exploring the implications of this distinction is important.

Theological Implications:

1. The passage underscores the importance of Holy Scripture in the life of the Church. The Church is to be an instrument of instruction and knowledge, particularly through the study of the Holy Scriptures.

2. The certainty of revealed knowledge is emphasized, suggesting a faith that is both reasonable and transformative. This theme is central to Irenaeus' theology and has implications for contemporary Christian faith.

3. The distinction between speculation and knowledge raises questions about the nature of knowledge and its role in the Church's life. This distinction may inform contemporary discussions about the role of reason and revelation in Christian theology.

In summary, Hebrews 12:1-2 provides insight into the role of Scripture in the early Church, emphasizing the certainty of revealed knowledge and the function of instruction in the life of the Church. The passage highlights the importance of Holy Scripture as a source of instruction and knowledge, with implications for contemporary Christian faith and theological discourse.
Irene, Sister (Catherine FitzGibbon), b. London, England, 12 May, 1825; d. in New York, 14 Aug., 1886. At the age of nineteen, Irene, with her parents, and in 1850 joined the community of the Sisters of Charity at Mount St. Vincent, New York, taking in religion the name of Irene. During her novitiate she taught in St. Peter's parish school, and finally became sister servant there. At that time no parent was allowed to visit the orphanage or the care of abandoned infants. When picked up in the streets, they were sent to the municipal charity institutions to be looked after by paupers. Many were left at the doors of the sisters' schools and houses, and in the evident hope that they might receive from them some special consideration. The constant increase in the number of these waifs, suggested the establishment of a foundling asylum, such as had long existed in Europe. Archbishop McCloskey sanctioned the project and in 1869 Sister Irene was assigned to carry it into effect. After visiting the public homes for infants in several cities she organized a woman's society to collect the necessary funds for the proposed asylum with Mrs. Paul Thebaud as its head. By their aid a house (17 East Twelfth Street) was hired, and here on 11 October, 1869, the foundling asylum was opened with a cence its door. On the evening of the same day it held its first infant, and founded. Within a year a larger house (3 Washington Square, North) had to be taken.

In 1870 the city was authorized by the Legislature to give the asylum the block bounded by Third and Lexington Avenues, Sixty-eighth and Sixty-ninth Streets, for the site of a new building, and $100,000 for the building fund, provided a similar amount was raised by private donations. Of the required sum, $71,500 was realized by a fair held in 1871, and $27,500 came from three private donations. The new building was opened in October, 1873. The city pays 45 cents a day each for all children cared for under two years of age, and 32 cents for all over that age. It costs ($1000 a day to run the institution, in which from six to seven hundred children are sheltered with more than 1500 others on the outdoor list. In addition to what is paid by the city, $40,000 is donated annually by Catholic charity for the work. Since it was opened, 50,000 children have been taken care of by this foundling asylum. From eighteen to twenty thousand of the children have been placed in good homes throughout the country, the average of those thus given for adoption being from 90 to 95% and a half to three years the title of "The Foundling Asylum," under which it was incorporated in 1869, was changed by legal enactment in 1891 to "The New York Foundling Hospital." In addition to caring for the children, homeless and indigent mothers are also provided for, to the yearly average of five hundred. St. Ann's Maternity Hospital was opened for them in 1880 and in 1881 a children's hospital at Spuyten Duyvil on the Hudson. Sister Irene's whole life was given to the care of foundlings, and just before she died she added the Seton Hospital for incurable consumptives, the cost of which ($350,000) she collected herself.

Irenopolis, a titular see of Issuria, suffragan of Seleucia. Five of its bishops are known: John (325), Menodorus (451), Paul (458), George (692), Euchemon (878). The city is mentioned by Hierocles in the sixth century and George of Cyprus in the seventh. It figures in the "Notitia Episcopatum" of Anastasius, Patriarch of Antioch in the sixth century, and in the "Nova Tastica" of the tenth century, as attached to

Irene, Empress. See Byzanine Empire.
the Patriarchate of Constantinople. At this period the Byzantine emperors had taken the province of Isauria from the Patriarchate of Antioch. Ramsay ("Asia Minor", London, 1890, p. 355), following Sterling, identifies Isaropolis of Isauria with Isaropolis, of which he does not indicate the exact site. Coins found bearing the name Irenopolis belong rather to a city of the same name located in Cilicia, the ancient Neronias, some of whose bishops are also known.

**IRIARTE**

**IRIARTE**

Ignacio de, painter, b. at Azcoitia, Guipu- coa, in 1620; d. at Seville, 1655. Iriarte was the son of Esteban de Iriarte and Magdalena Zabal and, as the account of his baptism at home, he was, in 1642 went to Seville, and entered the studio of the elder Herrera. Here he learned to understand colouring, but he was never able to draw the human figure with spirit or accuracy, and therefore determined to devote his attention exclusively to landscape, and was the first Spanish artist who discovered the radically different path, and obtained in it the greatest possible celebrity. In 1646 we hear of him as residing at Aracena, near to the mountains, and there it was that he married Doña Francisca de Chaves, but his first wife lived a very short time, and in 1646 he married in Seville with Doña Francisca de Chaves, and an original member of the Academy of Seville, his first secretary in 1660, and again secretary from 1667 to 1669. For very many years, he was the intimate friend and associate of Murillo, who praised his landscapes very highly, and on many occasions the two artists worked together, Murillo executing the figure, and Iriarte the landscape. In consequence, however, of a dispute with reference to a series of pictures on the life of David, this division of labour came to an end, and the two painters, both of them men of great determination, decided to work separately and not in conjunction. Murillo painted the whole of the picture representing an episode in the life of David, and Iriarte contented himself with his exquisite landscapes, as a rule wild and rugged scenes, somewhat allied to those of Salvador Rosa, in which at that time he was the greatest exponent. There is a landscape preserved at Madrid in an unfinished condition, with a figure preserved more in by Murillo and the background left incomplete by Iriarte, and this is said to have been left incomplete at the time of the quarrel. The painter has been called the Spanish Claude Lorrain, and Murillo declared that his best landscapes were painted "by Divine inspiration", but the agreement of the two artists is not accurate, even if there is a forced character and an imaginative romance about Iriarte's landscapes with an extraordinary lack of atmosphere. They are, however, pleasing and attractive, although rare. His works are to be found principally in Madrid, but can also be studied in the Louvre and the Louvre.

**IRISH**

**IRISH**

The, in Countries other than Ireland.—I. IN THE UNITED STATES.—Who were the first Irish to land on the American continent and the time of their arrival are perhaps matters of conjecture rather than of historical proof; but that the Irish were there almost at the beginning of the colonization is a fact well supported by historical records. The various nations of Europe whose explorers and followed Columbus were alive to the possibilities of land conquest in the new continent. For this purpose colonists were needed, and expeditions were fitted out under government protection, which brought over the earliest settlers. England was especially active in promoting these expeditions, and during the seventeenth century various colonies, beginning with that of Jamestown in 1607, were planted with immigrants, most of them of the English nation, with Irish names, with occasionally in the documents relating to these early settlements; it is certain that there were Irish Catholics in the Virginia Colony prior to 1633.

In the narrative of the voyage of the Jesuit Father Andrew White and his associates in the "Dove" and "Hog" from England to Maryland, it is stated that Baltimore's expedition, we are told that on the way over they put in at Montserrat (one of the smallest of the Caribbean Islands) where they found a colony of Irishmen "who had been banished from Virginia on account of professing the Catholic faith" (see Old Catholic Maryland, p. 14). The accepted history of that island attests the fact that it was originally settled by the Irish, although at present the white population has largely disappeared. A modern traveller (Stark, 1893) says: "It is not surprising, therefore, that the descendants of the slaves who belonged to the Irish settlers all have Irish names and speak a jargon of Irish, English, and Spanish, of which the brogue predominates." While Father White and most of his companions who first planted the cross in Maryland were of English origin, it is equally true that Ireland, as well as other Catholic lands in Europe, contributed her quota of missionaries who nourished the faith in the early Maryland settlement, and a most notable example is the Jesuit missionaries of these times we find Fathers Carroll, Murphy, Hayes, Quin, O'Reilly, Casey, and others whose names indicate their Celtic origin.

But the beginning of immigration from Ireland to America, in such numbers and under circumstances so notable as to become matter of definite historical record, may be said to date from the subjugation of Ireland completed by Cromwell in 1651. Under that merciless conqueror the English policy of transplanting the Irish was ruthlessly carried out. The native Irish were deprived of their lands, routed from their homes, and ordered to remove their families and such effects as were permitted to the Province of Connaught in the west, where a certain territory, mostly wild and desolate, had been prescribed, within which they were to remain under military surveillance and establish a new residence. Those who refused suffered various punishments and sometimes death. In many cases the disbanded soldiers and pensioners appointed by Cromwell ordered the deportation of the recalcitrant Irish to the American plantations, and entered in English merchants from Bristol and London carried on a lucrative business in shipping and transferring these unfortunate victims to their destination. In order to suit their traffic, leave was granted to these traders to fill their ships with such destitute or homeless inhabitants (made such by their conquerors) as might be delivered to them by the military governors for transportation afloat, so that, as the records show, during the year 1655, 500 or 600 persons (men, women, and children) were carried away and distributed, some to Barbados and others to the different English colonies in America. Two thousand more Irish boys and girls were shipped the following year to Barbados and to the American plantations, and it has been estimated that in the vast emigration of the Irish who had been thus distributed among the different English colonies in America (see American Catholic Quarterly Review, IX, 37). Of the total number thus shipped out of Ireland across the main, the estimates vary between 60,000 and 100,000 (Lingard, "History of England," vol. iv. ed. cit., 1849, p. 365).

Prior to this deportation there had been some voluntary emigration from Ireland to America; with the development of the Colonies this emigration steadily increased and later assumed such enormous
proportion that, before attempting to trace its prog-
ness, it may be useful to inquire what were the causes
which compelled over five million people, pouring out
in a continuous stream through nearly two centuries,
to abandon their native land with all its associations, re-
ligious, domestic, and national, and seek homes for
themselves and their families beyond the Western
Ocean.

For over a hundred years preceding the Cromwellian
era Ireland had been distracted by the frequent in-
vasions of the English under desperate and unscrupu-
losers, whose professed purpose was to re-
establish English supremacy in Ireland and to force
the new religion of Henry VIII upon her clergy and
laity. Vexatious and destructive, and a world of
what she had cherished for over a thousand years was pro-
scribed, and her churches, monasteries, and other
shrines of religion plundered. The lands attached to
them were confiscated by the Crown and parcelled out
among the greedy adventurers, whose success in
depriving the true owners of their former holdings, the balance
being reserved in part to the Crown, and in part dis-
tributed among the adventurers who had advanced
money for carrying out the scheme, and the soldiers as
a reward for services rendered. The informers, or
"discouragers," as they were called, who attacked these
lands before the Colonization Act of 1662, were likely
by grants of portions of the plundered lands. Spea-
kling of these various changes in the ownership of
the land, Arthur Young, an impartial Protestant observer,
writing in 1776 (Tour of Ireland, Vol. II, p. 59),
says: "Nineteen-twentieths of the kingdom (com-
prising 11,420,692 Irish acres or nearly 21,000,000
acres, English measure) changed hands from Catholic
to Protestant. . . . So entire an overthrow of landed
possessions is, within the period, to be found in scarce
any country in the world. In such great revolutions of
property the ruined proprietors had usually been
"wrapt up" or "banished." While the framers of
these laws and such methods of conquest bore heav-
iest on Roman Catholics, yet the Presbyterian Irish,
chiefly in the north, and the Quakers were likewise
made to suffer for their attachment to their country
and to the religion which their consciences dictated, so
that no element of the native population escaped the
savage vengeance of their English conquerors.
The periods of respite were few, and the calm was only the
peacefulness of death and desolation.

At the beginning of the eighteenth century the
population of Ireland, as a result of this barbarous
 treatment, had been reduced to about one and a half
million souls. Less than one million souls. Let the econo-
mizers, some as early as the reign of Elizabeth (1573),
for the colonization of Ireland chiefly with English and
Scottish settlers. For instance, in 1709, in pursu-
ance of the policy of stamping out the Irish and re-
placing them by a more tractable race, 820 families of
German or Latins, consisting of 723 persons, landed in
Dublin at a cost to the Government of £24,000 (Young,
I, 371). Military expeditions were organized and sent
over to take possession of the lands of the disaffected
Irish. Great tracts of land, sometimes embracing
whole counties, were declared confiscated to the Crown
and were allotted to the "gentlemen undertakers"
who financed these enterprises. Under James I,
5,900,000 acres, and under Charles I about 2,500,000
acres were thus confiscated. The native Irish chiefs
and their clansmen naturally resisted these attempts to
possess them of their lands. If they remained
passive, their counties or portions of them would
force them into rebellion. In either case they were ad-
judged to be rebels who might be lawfully hunted and
shot down at sight. The methods adopted to crush
them were cruel in the extreme, their cattle were taken
from them, their houses levelled, and their harvests
burned. Men, women, and even children were indis-
criminately shot down or hanged by a brutal soldiery,
Act of Union of 1800. Their legislative independence thus extinguished, their trade and commerce destroyed, with every avenue for hard-earned wealth closed to them, the Irish people were thrown back on the soil for their means of support and became victims of a system of landlordism with its rents, fines, and rack-rents, its tithe, and various other iniquitous conditions, under which human beings could not live except by almost superhuman industry and the most degrading conditions which confronted the Irish yet remaining on their native soil at the close of the eighteenth century. That those who could should go elsewhere to find relief was most natural. As a result a tide of emigration set in, to be continued during two centuries, carrying away millions of the best, and were destined to become so important an element in the establishment and maintenance of the American Republic. It was no ordinary overflow of a surplus population, seeking new fields of industry, nor the enterprise of adventurous spirits induced, as had been other colonists, by promises of rich rewards, but rather the mournful flight of a people seeking to escape the ruin which had overtaken so many of their fellow-countrymen and which as surely was to be their lot if they remained at home. During the period of 1680 to 1720 thousands of woolen weavers, mostly Protestants from Ulster, deprived of their meager livelihood, and Catholics anxious to avoid persecution, had left Ireland for the American Colonies where they were changed into enemies who paid off old scores in the War of American Independence" (Gregg, "Irish History", 92). Other Catholic Irish from the middle and south of Ireland had likewise voluntarily emigrated to the different colonies, through which they dispersed, to find or make homes for themselves and their families wherever circumstances favoured.

In the early years of the eighteenth century we find abundant records of Irish emigration. Thus, in 1718, five ships arrived in Boston with 300 emigrants from Ulster. So considerable was the influx that, in 1720, the General Court of the Massachusetts Bay Colony passed an ordinance directing that "certain families recently arrived from Ireland be warned to move off", and, in 1723, another ordinance was passed requiring all vessels to be required for the two years 1736-1738 ten ships arrived in Boston harbour bringing 1000 such immigrants, and hardly a year passed without a fresh infusion of Irish blood into the existing population. Irish names frequently appear in the early records of many of the New England towns, showing how widely the immigration had taken place. In 1718, Irish names had appeared in some of the English towns. In some of the particular localities in Ireland were numerous enough to establish their own independent settlements, to which they gave the names of their Irish home places, such as the towns of Belfast, Limerick, and Londonderry in Maine, Dublin, Derryfield, and Kilkenny in New Hampshire, and Sullivan and Carroll Counties in the latter state, and this practice was followed in many instances by the Irish arriving in other colonies, notably Pennsylvania and New York, where the names of counties and towns of Ireland attest the place of origin of the first settlers. It was from the Irish settlers in New Hampshire that Stark’s Rangers were recruited who fought the battle of Bennington and took part in the campaign leading to the surrender of Burgoyne. The official military records of the province of New York show that from early times Irishmen were there in large numbers. Those from Long Island, the first pointed in 1683), who gave New York its first charter of liberties, was a native of the County Kildare and a Catholic. The muster-rolls of the various military companies which were maintained under British rule down to the time of the Revolution and participated in the French and Indian Wars, show a large proportion of unmistakable Irish names, and there were some thousands of Irish soldiers in the various regiments of the line and of the militia of New York serving in the Continental Army.

On account of its reputation for religious tolerance and wise administration, William Penn’s colony attracted Irish settlers in unusual numbers. Penn’s trusted agent and administrator of the affairs of the colony during the years 1701-1720 was distinguished for his high character and the ability with which he discharged his trust, was a native of Lurgan, Ireland; among the “first purchasers” who embarked with Penn on the “Welcome”, arriving at Philadelphia in 1682, we find the names of several Irishmen, who had come neither to escape from their native town of Wexford and Cashel respectively for America. (See list in Scharf and Westcott, “History of Philadelphia”, I. 99.) Other early Irish immigrants arriving at Philadelphia were Patrick, Michael, and Philip Kearney, natives of Cork, among whose descendents may be named General Stephen W. Kearney, first governor of California, Commodore Lawrence Kearney, and the dashing General Phil Kearney, the distinguished soldier of the Civil War, and, in 1719, George Taylor, later one of the signers of the Declaration of Independence. In 1727, 1155 Irish landed at Philadelphia and in 1728, 6560 were. How many there was of the total of 6310 immigrants arriving during 1729 by way of the Delaware River, 5655 were Irish. In one week alone, as reported by the “American Weekly Mercury” of 14 August, 1729, there arrived “about two thousand Irish and an abundance more daily expected”. In 1727 thirty-three vessels are registered as arriving at Philadelphia, bringing passengers from different ports in Ireland, and although definite statistics are not available, there is sufficient evidence to show that this tide of emigration did not slacken for many years. So great was it that in 1735 a bill was introduced in Parliament to prohibit emigration from Ireland entirely. The great number of Irish in Pennsylvania at the beginning of the War of Independence, their high character, and important standing in the community indicate how large and valuable had been the immigration there.

Besides the Irish who had come into the Virginia Colony before referred to, there was other emigration to it, as well as to the Carolinas, where as early as 1734 a colony of 500 Irish settlers planted themselves on the Santee River; among these are to be found such names as Rutledge, Jackson, and Calhoun, which a generation later were to be familiar and which in the fate of the United States. Other settlements in the Southern States were made by Irish immigrants who had come thither from the northern Colonies. From various town and other colonial records (see Hanna, “Scotch-Irish”, II, 9 and passim), it has been ascertained that Irish emigrants had settled in Pennsylvania in 1682, in North Carolina in 1683, in South Carolina and New Jersey in 1700. The historian of South Carolina (Ramsey) writes, “but of all other countries none has furnished the Province with so many inhabitants as Ireland” (Vol. I, 20). The disastrous famine of 1740, like that still more terrible one a hundred years later, greatly increased the emigration to America; besides those who left from Galway, Dublin, and other ports, it is recorded that for “several years afterwards 12,000 emigrants annually left Ulster for the American Plantations”, and that “from 1771 to 1773 the whole emigration from Ulster is estimated at 30,000 of whom 10,000 were governors” (Laughton, “History of England in the Eighteenth Century”, II, 261; Froide, “English in Ireland”, II, 125.)

There are no official records of immigration to the United States prior to 1820. But with reference to the period from 1776 to 1820 the Bureau of Statistics has adopted an estimate, based upon the most reliable
data which could be obtained, showing 260,000 as the total of immigrants of all nationalities arriving in the United States during that time. In his notebook for 1818, Bishop Connolly says: "At present there are here [New York] about sixteen thousand Catholics—mostly Irish; at least 10,000 Irish Catholics had arrived in New York only within these last three years. They spread", he adds, "over all the large states of this country and make their religion known everywhere." And beginning about this time, namely, the close of the second war with England, 1812-1815, the stream of Irish emigration, which before had been largely Presbyterian, was changed, so that Catholic Irish have ever since constituted the bulk of such immigration into the United States. At the port, and the number recorded as arriving from Ireland in the year 1820, the first year of the official registration of immigrants, is 3614, and judging from these figures and from the proportion of immigrants arriving prior to the War of Independence, we may safely say that, out of the above official estimate of 250,000 as the total number of immigrants during the period from 1776 to 1820, at least 100,000 were Irish.

Since the year 1820 the number of immigrants arriving in the United States from Ireland is shown by the official records as follows:—

(see Reports of Com. General of Immigration for 1906-7 & "Immigration," p. 4338), the above figures indicating that emigration from Ireland during the past eight years has been maintained at nearly the same average as during the last preceding decade. As a result the population of Ireland has diminished according to the censuses from 1861 to 1901 at the following rate per cent:—

(see Statesman's Year-Book, 1907). The greatest immigration in any one year was in 1851 when 221,233 persons are recorded as arriving; next to this was the year 1850 with arrivals numbering 164,004. The arrivals during the decade 1841 to 1850 were nearly four times greater than those of the preceding ten years, and this number in turn was exceeded by the figure for the next succeeding decade 1851-1860, when the highest level in the history of Irish immigration to the United States was reached. The statistics given above show a total immigration from Ireland between 1820 and 1907 of 4,144,262 persons, to which add 100,000, the number as above estimated for the years 1776 to 1820, making a total of 4,244,262, exclusive of the Irish who were in the United States prior to the Revolution. But there are reasons for believing that the figures thus given underestimate the actual volume of Irish immigration. During the decade 1841-1850 Irish labourers went every year in large numbers to England in search of employment, and many of them remained, especially in Liverpool, the population of which became in time to a large extent Irish. In 1846 alone, 278,005 Irish of both sexes were reported to have left Ireland for Liverpool, whence most of them embarked for America (see "British Commissioners' Report", cited in O'Rourke's "History of the Great Irish Famine", p. 487-8).

Many such emigrants sailed directly to the United States and arrived in largest numbers at the port of New York. During the years 1847-70, the State of New York through its Emigration Commission maintained a system of registration of aliens arriving at that port, and the records thus kept of the total of Irish immigrants largely exceeding the number reported by the National Bureau of Statistics. These variations may be explained by remembering that under the New York system immigrants were classified according to the country of their nativity, while in the Federal reports for the most part classification is made according to the "country of last permanent residence" of the immigrant, so that those who had left Ireland and had sojourned for a while in England were not classified as Irish immigrants. Again during the same period there was a large immigration to Canada, some of it officially promoted and assisted by public money (O'Rourke, p. 438), the greater part of it was destined for America, but was diverted to Canada by English shipowners, who found it easier to deliver their human freight there than at the port of New York, where the condition and circumstances of the immigrant were more carefully scrutinized.

The United States Bureau of Statistics estimates the total immigration into Canada between 1821 and 1890 at 3,000,000, of which it is safe to assume that more than half came from Ireland. No official record has been kept of immigrants arriving in the United States from Canada, except in certain cases neither numerous nor important enough to be mentioned here, and it is impossible to state the precise number of persons of Irish birth who, sooner or later after their arrival in Canada, crossed the borders and thus increased the Irish element in the United States. That the number was very large there is abundant evidence. In the U.S. Census of 1860, presented in 1861 in the Canadian House of Parliament, the opinion was expressed that over one-half of the immigrants arriving in Canada ultimately removed to the United States. (See Immigration into the U. S., in U. S. Bureau of Statistics, 1909, p. 4339.) And it has been argued that if the 3,000,000 immigrants who had had to remain there, the total population of the Dominion must have increased far beyond 5,371,315, the figures officially reported in 1901. These considerations, we think, justify a revision and correction of the estimate of Irish immigration into the United States (for the period 1820 to 1903), which up to the present time has been officially quoted at "about four millions"; we would say that, taking the entire period from the beginning of the War of Independence (1776) to and including 1908, such immigration easily numbers five and a half million souls.

Recurring to the statistics of recorded immigration, we find the number of persons of Irish nativity included in the resident population of continental United States at the close of each decennial period since 1850 to be as follows:—

[see Abstract of 12th (1900) Census, p. 9].
And the same census (1900) shows that in that year there were 4,968,182 persons resident in the United States of whose parents at least one was born in Ireland, including the 1,615,450 residents above specified, who were themselves of Irish birth. Of these 67 per cent were located in the states of the North Atlantic division and 22 per cent in the North Central division. About three-fourths of the above foreign-born population shown by the census of 1900 were comprised within the following eight states in the respective numbers set opposite:

- New York .... 425,553
- Massachusetts 249,018
- Pennsylvania 205,900
- Illinois .... 114,563

While the twelve cities having the largest population of Irish nativity were as follows:

- New York .... 275,102
- Philadelphia .... 98,427
- Chicago, Ill. .... 73,912
- St. Louis, Mo. .... 19,421
- Providence, R.I. .... 18,886
- San Francisco, Cal. .... 15,963
- Newark, N.J. .... 12,792

Beyond the immediate ancestry of persons comprising the population, no classification according to race origin has been made in any census, and there is consequently no official record showing what part of the population (to the extent of the first degree) is of Irish origin. But various unofficial estimates have been made. In 1851 Hon. W. E. Robinson, M.C., in a carefully prepared discourse (reported in the “New York Tribune,” 30 July, 1851) refuting the claim then urged by various public writers and speakers that the population of the United States was chiefly Anglo-Saxon in character, presented statistics of emigration showing that not more than one-eighth of the population could be considered of Anglo-Saxon origin and that out of a population then (1850) numbering 23,191,976, there were:

- Irish born .................................................. 3,000,000
- Irish by blood ........................................... 4,500,000

making a total Irish element of ...................................... 7,500,000

Rev. Stephen Byrne, O.S.D., author of “Irish Emigration to the United States,” puts the Celtic element at one-half of the present (1873) population, the Anglo-Saxon at one-fourth. The official census of 1870 gives the total population of the United States as 38,696,984. And the New York “Irish World” (25 July, 1874), speaking of the census, claims that two-thirds of the people are Celtic in birth or descent and only about one-ninth are Anglo-Saxon, and in a tabulated statement of the component elements of the population, that journal estimates the “joint product in 1870 of Irish Colonial element and subsequent Irish immigration (including that from Canada) at 14,325,000” (cited from O’Kane Murray’s “History of the Catholic Church in the United States,” p. 611).

In 1882 Philip H. Bagden, an English writer, in his work “The American Irish,” p. 33, states: “the American Irish themselves lay claim to a population of between ten and fifteen millions. There can be no doubt that the amount of Celtic blood in the American people is very much greater than they themselves would like to allow.” Since 1870, 1,740,460 immigrants from Ireland have arrived, according to the above-quoted official statistics, apart from those arriving through Canada, and if the estimated Irish element of that year has doubled itself and more during the fifty years which have now elapsed, the number of persons of Irish birth or origin in continental United States would appear now to be not less than thirty millions. We have referred to the Irish immigration for 1851 as the largest in history. The steady and extraordinary increase from 44,521 in 1845 to 257,372 in 1851 (figures of Thom’s Almanac for 1853, cited in O’Rourke, “History etc.,” p. 496) compels us to mention the political causes from which it arose and the distressing conditions under which the immigrants of that period established themselves in the United States.

As is well known the potato blight appeared in Ireland in 1845, as it had appeared before, namely in 1740, 1821, and in several lesser years. By 1846 it had extended over the whole country, so that nowhere in the land were there any potatoes fit either for food for human beings or for seed. But side by side with the blackened potato fields there were abundant crops of grain which were in no way affected by the potato blight. These, however, were disposed of frequently by distrent, as the sole means of providing the rent for the landlord, while the unfortunate tenants by whose labour they had been produced were left without food. Famine which brought fever and other miseries in its train set in, so that tens of thousands of the people sank into their graves, many of them dying within the shelter of the workhouses. There were evictions without limit, many of them under heart-rending circumstances. Dr. Nulty, Bishop of Meath, tells of 700 human beings evicted in one day in 1847 from one estate (Parnell Movement, p. 114), and other appalling instances might be cited. In the Irish workhouses were 104,455 persons, of whom 9000 were fever patients (O’Rourke, “History of the Great Irish Famine,” p. 478). Nearly three-quarters of a million were employed on public works which had been devised as a means of relieving the distress, and 3,020,712 persons were receiving daily rations of food from the Government (ibid.).

Of the horrors of that time it is almost impossible to speak with moderation. While myriads starved to death in Ireland, says O’Neill Daunt (Ireland and her Agitators, p. 231),’ ships bursting with grain and laden with cattle were leaving every port for England. There would have been no need for the people to emigrate if their food did not emigrate. But the exhausting results of the Union had brought matters to a point that compelled Ireland to sell her food to supply the enormous money drain. The food is first taken away and then its price is taken away also. “The Union has stripped them (the Irish people) of their means and the only alternatives left to the perishing multitude were the work-house, emigration, or the grave.” The condition to which the Irish people were thus reduced was extremely pitiable and excited the sympathy of the whole world. The peoples of Europe are bought and sold high and low, while ship after ship ghted generously from the American shores passed fleets of English vessels carrying away from a dying people the fruits of their own labor” (see Lester, “Glory and Shame of England,” I, 161). 114 ships carrying provisions, the relief of a starving nation, landed their cargoes in Ireland in 1847 (O’Rourke, “History etc.,” p. 512), and the United States, responding to the universal sentiment of the nation, sent its two ships of war, the “Jamestown” and “Macedonian,” on these errands of mercy. From these causes the population of Ireland was diminished during the famine period by two at half million souls: they disappeared by death and emigration. It was to America that by far the greatest number of the emigrants went.

The transportation of emigrants in those early days was attended with such cruel conditions that review them nowadays which it is almost incredible that they should have been tolerated by any civilized nation. The ships employed in this service were only too often broken-down freight ships, in which merchants were unwilling to entrust valuable
merchandizes. The humane provisions of modern times with respect to light, ventilation, and cleanliness were wholly unknown. More often than not the ships were undermanned, so that in case of a storm the passengers were required to lend a hand in doing the work of sailors. The provisions supplied were always uncooked, scanty in amount, and frequently unfit for use. With such the voyage these from six to eight weeks. Against head-winds and storms the old hulks were frequently from twelve to fourteen weeks on the way. With the emigrants already predisposed by famine and hardship, it is not to be wondered at that fever broke out on board ship and that many died and their remains were tossed overboard during the voyage. This was especially true in the British vessels, in which the death-rate exceeded that of the vessels of all other nationalities (see Kapp, “Immigration”, p. 34).

As a result these emigrant ships on reaching the United States were in many instances little else than floating hospitals. When they arrived in port the shipmaster made haste to discharge his human cargo, and the sick and dying, as well as those who had survived unharmed, were put ashore on the wharves and public landing-places and were left to their fate. Some of the sick, when they reached New York, were fortunate enough to be sent to hospitals, but others were carried to the sheds and structures which had been provided by the brokers and agents of the shipowners, under their agreement with the municipal authorities to provide for such sick emigrants as they might land. But the treatment of the emigrants in these institutions was little less brutal than they had experienced on board ship. The food there was often unfit for any human being, still less for the sick. Sanitary conditions were ignored, and medical attendance was rarely adequate to the existing needs. Not only the sick and the dying, but often the corpses of the dead, were huddled together. One instance is specified where the bodies of two who had died four or five days before were left unburied on the cots whereon they had died, in the same room with their sick companions (see Maguire, “The Irish in America”, p. 180). So fatal were these conditions that it has been estimated by medical statisticians that not less than 20% of the emigrants died between the date and the arrival of the various emigrant hospitals in American ports in the year 1847 (Kapp, “Immigration”, p. 23).

Those of the emigrants who survived the hardships of the voyage and retained strength enough to go about encountered troubles of a different kind. Boarding-house charges were fraudulently multiplied, money-brokers practised their calling at extortionate rates, while the selling of fraudulent railroad tickets was one of the commonest practices by which the poor immigrant was misled. As a result the able-bodied immigrant was compelled to remain in and around New York without means to help himself or his family, and thus oftentimes became a charge upon the charity of the public. So gross did these abuses become that a number of the most prominent citizens of New York applied to the Legislature for relief. Included in these were Archbishop Hughes, Andrew Carrighan, John E. Devlin, Charles O’Connor, James T. Brady, John McKeon, Gregory Dillon, and other men of Irish blood who were identified with the Irish Emigrant Society, which had been organized for the purpose of aiding the Irish immigrants arriving at the port of New York.

These efforts of the Legislature were defeated by Act of the Legislature of the State of New York of the board generally known as the “Commissioners of Emigration”, composed of men of the highest standing in the community, who served without compensation and to whom was entrusted the general care and supervision of the immigrants as they arrived. Gullan C. Verplanck, distinguished alike as scholar and public-spirited citizen of New York, served during twenty-three years as president of this board, and although not of Irish blood, his long and faithful service in behalf of the Irish immigrants ought not to pass without honourable mention in these pages. Under the watchful supervision thus established the evils complained of were gradually overcome, notwithstanding persistent opposition from shipowners and others.

In 1855 the first state emigration depot was opened in Castle Garden at the lower end of Manhattan Island, and since then millions of immigrants have streamed through this gateway, under the inspection and protection of the officials, on their way to settle in various places throughout the United States, where they were to make their homes. In 1874 the Congress of the United States assumed control of the question of immigration, and the admission and supervision of the arriving immigrant are now in charge of a Commissioner General of Immigration appointed by the Secretary of the Treasury. In 1884 a Home and Mission House were established in close proximity to Castle Garden for the protection of Irish immigrant girls. This institution was founded by Cardinal John McCloskey, with the co-operation of other prelates, and was placed in charge of Rev. John J. Riordan, a zealous Irish missionary.

Speaking of the distribution of the immigrants upon their arrival in the United States, Bishop J. L. Spalding estimates (Mission of the Irish People, p. 113) that only eight in one hundred of the Irish emigrating to the United States have been employed in agricultural pursuits, a percentage smaller than that of the emigrants from any other country, the remaining ninety-two going to make up the tenement-house population in the larger cities. He asserts further (ep. cit., p. 166) that the agricultural settlers became much more by accident than from choice, following the lines of the railroad or canals on which they laboured, saving their wages and buying lands. This tendency of the Catholic Irish to congregate in the large cities was seen to be attended by consequences so injurious both morally and materially to the immigrant that efforts were made from time to time to withdraw them from the large cities at which they arrived and to settle them on the land. Bishop Fenwick of Boston planted a colony in Maine, and Bishop Reynolds of Charleston, S. C., diverted some of the emigration from Liverpool to New Orleans, and Archbishop Abel of Dubuque and Joseph Cretin of St. Paul, induced and helped many of the Irish to settle in the States of Iowa and Minnesota, and in 1850 Bishop Andrew Byrne of Little Rock welcomed a colony of Irish Catholics brought over by Father Hoar of Wexford. Of these latter a small number remained in Arkansas, the rest going to Iowa where they established a colony known as "New Ireland".

After the Civil War the question of Catholic colonization engaged the attention of various of the prelates, including Archbishop John Ireland (then Bishop) of St. Paul, who established the St. Paul Catholic Colonization bureau; through his efforts various colonies were established in Minnesota. Later, in May, 1879, the Irish Catholic Colonization Association of the United States was established at Chicago, under the auspices of various archbishops, with the co-operation of eminent Irish Catholic laymen, and during the present decade it created a work of colonization in their own neighbourhood, and successful colonies were established in Minnesota and Kansas. In all these organized efforts at colonization the promoters have aimed to provide for the religious needs of the colonists, by
securing the services of priests and the building of churches and schools, at the same time that homes and other material assistance were provided for them. These movements for the colonization of Irish immigrants differed from the ordinary schemes of emigration in that the promoters did not invite or encourage the Irish to leave their native land, but for those who had resolved to make their abode in the New World the emigration provide homes free from the distressing and degraded conditions which so many of those who remained in the large cities had to face.

The entire white population of the Colonies at the outbreak of hostilities in 1775 has been estimated by various authorities, including the American Board of Commissioners for Foreign Missions, at 1,200,000, of which about one-third was settled in New England and the remaining two-thirds in New York, Pennsylvania, and the Southern Colonies. Dr. Carroll estimated the Catholics in all the Colonies at that time at 25,000. It is well known that a considerable number of the colonists were adverse to the War of Independence, and those refrained from giving any support to the struggling Colonies. Lecky estimates (England in the Eighteenth Century, IV, 153) that one-half of the Americans were either openly or secretly hostile to the Revolution. Other writers are content to fix the proportion of those who were disaffected to the half of the patriots on the Revolutionary side of the entire population. But the records show very few, if any, Irish, whether Catholics or Protestants, among those lukewarm patriots. On the contrary, Irish immigrants and the sons of Irishmen in the various colonies were among the most active and unwavering supporters of the cause of liberty. Ramsay says, in his "History of the American Revolution, II, 311: "The Irish in America, with a few exceptions, were attached to independence". Whether in the councils of state, or while enduring the hardships of military service, or by the material and financial support which they gave to the "American Irish", or by the active, generous, and unostentatiously, their blood and treasure that without their aid the issue of the contest may well appear doubtful.

In June, 1779, when Parliament was investigating the reverses sustained by the British armies in their American campaigns, Joseph Galloway, who had held various offices in the American Contingent of the Continental Army, until the evacuation of that city in 1778, was asked: "That part of the rebel army that enlisted in the service of Congress, were they chiefly composed of natives of America, or were the greatest part of them English, Scotch and Irish?" His answer was: "The names and places of their nativity being taken, I am free to assert, in question with precision. They were scarcely one-fourth natives of America; about one-half Irish; the other fourth English and Scotch." And this was confirmed by the English Major General Robertson, who, testifying before the same committee, said: I remember General Lee telling me that half of the rebel army were from Ireland" ("House of Commons Reports", 5th Session, 14th Parliament, III, 303, 431; see also "The Evidence as given before a committee of the House of Commons on the detail and conduct of the American War, London, 1785", cited in Bagneral, "The American Irish", p. 12). It is evident that the rebels gave point to the taunt flung at the ministers by Lord Mountjoy during the debate in Parliament over the repeal of the Penal Laws: "You have lost America through the Irish." "It is a fact beyond question", says Flouden, "that most of the early successes in America were owing to the vigorous exertions and prowess of the Irish emigrants in that cause" (Historical Review of the State of Ireland, II, 178). The historians Marmon and Gordon write to the same effect.

Speaking of the Irish immigrants, a recent American writer, Douglas Campbell, says: They contributed elements to American thought and life without which the United States of to-day would be impossible. By them American Independence was first advocated and for their efforts succeeding those of New England Puritans that Independence would not have been secured" (The Puritan in Holland, England and America, II, 471). And Lecky speaking of the Ulster emigrants writes: "They went with hearts burning with indignation and in the War of Independence they were the first to the front, and the number of the insurgents. They supplied some of the best soldiers of Washington. The famous Pennsylvania Line was mostly Irish" (op.cit., II, 282). So, too, we may add, the Maryland Line was largely made up of Irish exiles or of the sons of Irishmen. The colonial records of New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, Pennsylvania, and others show that from Lexington to Yorktown Irishmen took part in every campaign, and W. E. Robinson declares, "there was no battle or campaign in which Irish blood did not flow freely for American Independence". Nor did the Irish shrink from making large pecuniary sacrifices for the cause. In 1780 when the Continental Army, severely tried by nearly five years of exhausting struggle, was in desperate straits for necessary clothing and supplies, to say nothing of the pay of the troops, a fund of two million dollars was raised by subscription from ninety of the most prominent Irishmen in the United Colonies. Twenty-nine of these subscribers were Irish either by birth or parentage, all members of the Friendly Sons of St. Patrick, and their united subscriptions amounted to four hundred and forty thousand dollars.

Among the signers of the Declaration of Independence thirteen (some authorities claim more) were of Irish origin. These were Matthew Thornton and William Whipple who signed for New Hampshire, James Smith, James Wilson, and George Taylor of Pennsylvania, Thomas Lynch, Jr., and Edward Rutledge of South Carolina, George Read and Thomas_Morgan of Delaware, and Charles Carroll of Maryland, Thomas Nelson, Jr., of Virginia, William Hooper of North Carolina, and Philip Livingston of New York, it is promulgated over the signatures of the President of the Continental Congress and of Charles Thompson, its Irish secretary. Col. John Nixon, a member of the Committee of Safety, and son of an Irishman born in the County of Wexford, first read that document to a great concourse of people assembled in the State House yard, Philadelphia, and it was first printed from the press of another Irishman, John Dunlap from Tyrone, who had already (1771) printed the Paine. These facts are contained in a newspaper published in the United States. The convention whose deliberation produced the written Constitution upon which the Government rests, included among its members a large proportion of Irishmen. Prominent among them were William Livingston, first Governor of New Jersey, William Paterson, later to be Governor of the same state, Daniel Carroll of Maryland, Thomas FitzSimons of Philadelphia, George Read of Delaware, Richard Dobbs Spaight, afterwards Governor of North Carolina and Hugh Williamson of the same state, Pierce Butler and John Rutledge of South Carolina, the latter to become afterwards Chief Justice of the Supreme Court of the United States. One of the most influential men in the service of the struggling patriots was Charles Thompson, born in the County of Derry, Ireland, who had arrived at Newcastle, Delaware, in 1740. He was the confidential friend of every leader in the struggle, and the chief in the conduct of affairs and administrative capacity were so universally conceded that he was chosen secretary of the First Continental Congress, serving the succeeding congresses in the same capacity for a period of fourteen years.

Among the officers of Irish nationality in the Continental Army who won distinction by brilliant services, we may name the following. General Henry Knox, son
of a Belfast emigrant, who was master of ordnance, served in every battle with Washington, and was appointed first Secretary of War on the organization of the Government in 1789. General John Stark, the hero of Bennington, another native of Ireland. General John Stark, who was an emigrant from Limerick and who commanded the troops sometimes known as the "Line of Ireland". His successful campaigns in Georgia and the Carolinas and at the battle of Monmouth are historic. For his services, including the recapture of Stony Point from the British, Congress voted him £500, and in 1790 he received a gold medal. General Richard Montgomery, a native of Donegal, in command of the expedition to Canada, who fell before Quebec in 1775, one of the earliest victims in the cause of American liberty. A monument to him in St. Paul's churchyard in the city of New York marks the nation's appreciation of his services. General Stephen Moylan, a native of Cork, of which city his brother was the Catholic bishop. He was first Quartermaster General of the Continental Army and afterwards commanded the Pennsylvania troops known as Moylan's Dragoons. Richard Battle, a native of Kilkenny, fought in many engagements and was present at the surrender of Yorktown. Daniel Morgan, a native of Balinascreen, County Derry, Ireland, the hero of Cowpens, North Carolina, where with 800 men, mostly Irish and sons of Irishmen, he defeated twice the number of British troops and took many of them prisoners. Edward Hanly, a native of County Kerry, who had served as surgeon of the Irish Brigade (of France) in Canada. On the retirement of the French, he cast his lot with the Americans and served throughout the Revolutionary War with distinction. Andrew Lewis, an emigrant from Donegal, who came to Virginia in 1772, and served with his four brothers until the close of the war. His statue in Capitol Square in the city of Richmond shows that his adopted state, Virginia, recognized him as one of her most distinguished sons. George Clinton was the son of Charles Clinton, a native of Longford, Ireland, who landed at Cape Cod in 1729. Besides his military service, he became the first Governor of New York, in which capacity he served twenty-one years and was then (1801) chosen Vice-President of the United States. His brother James was in charge of one of the New York regiments and succeeded to the command made vacant by the death of General Montgomery. General Clinton became governor of that state in 1817. John Sullivan, one of the most distinguished commanders in the Revolutionary War, was son of John Sulli- van, an Irish immigrant from Limerick who settled in Belfast, Maine, in 1723. His capture of Fort William and Mary at Portsmouth in December, 1774, was the first blow struck for independence. Besides many other important civil offices which he filled after the close of the war, he was President of the Commonwealth of New Hampshire. His brother James Sullivan was chosen Governor of Massachusetts. In addition we might name General Walter Stewart and William Rush, both of Philadelphia, two of the famous Pennsylvania Line. William Thompson, William Maxwell, James Hagan, John Rutledge, brother of Edward Rutledge, one of the signers, Colonel Charles Louch, son of John Louch, an Irish immigrant who with his brother John founded the settlement that has taken on Louch in the Virginia backwoods, and others whose names would unduly extend this list. In recounting the part taken by the Irish in the achievement of our independence, it would be ungracious if we neglected to record the presence and services of those other Irish who, equally exiles as their brethren in America, had taken on Louch in the Virginia backwoods and had thereby become allies in that memorable struggle, fighting American battles both by sea and land under the banner of the fleur-de-lis. We refer especially to the Dillon and Walsh regiments of Catholic and Irish troops which in October, 1781, under de Rochambeau and de Grasse helped to surround the army of Cornwallis at Yorktown and compelled its surrender to the "combined forces of America and France".

The first naval engagement in the War of Independence was fought and won 11 May, 1775, shortly after the battle of Lexington, by Jeremiah O'Brien of Machias, Maine. This son of an Irish immigrant with his four brothers and a few other fellow-townsmen went out in O'Brien's lumber schooner "The Lumber" and against great odds attacked and captured the British armed schooner "Margaretta", the captain of which had previously ordered the pine tree set up in the town as a liberty pole to be taken down. Easily the foremost figure in the naval service of the American patriots was the Catholic Irishman John Barry (q. v.), a native of Wexford, to whom a commission was issued by the Continental Congress 14 October, 1775, when he was placed in command of the "Lexington" and later commanded the "Alliance". With the former he captured the British war vessel the "Atalanta" and, according to the historian "this vessel, which was the precursor of the Continental flag, bore the battle on the ocean" (see Preble, "Origin of the Flag", p. 243). How highly Barry's character and ability were esteemed may be judged from the circumstance that the British General Howe offered £2000 and the command of the best frigate in the English navy if he would abandon the service of the patriots; to which Barry made the memorable answer that he had devoted himself to the cause of his country and not the value and command of the whole English fleet could seduce him from it (see Frost, "History of the American Navy", p. 88). On 4 July, 1784, after the Government had regularly organized its navy, his first commission was issued to John Barry who thus became senior captain, the highest rank then known in the naval service. These appointments, together with his devoted service continued throughout the war, clearly justify the designation of "Father of the American Navy" accorded to Barry. His remains are interred in St. Mary's Catholic churchyard in Philadelphia, and a life-size statue erected (1906) by the Friendly Sons of St. Patrick within the precincts of Independence Hall attests the esteem in which Barry was held. The fact should not be overlooked that Barry's life as a Catholic was as consistent and edifying as his public career was patriotic and valuable to the country of his adoption.

In the second war with England (1812) the services rendered by Irishmen and the sons of Irishmen were among the most important in that memorable contest. Johnson Blakely, who fought and captured the British frigate "Reindeer", was Irish by birth. Stephen De catur, who captured the "Macedonian", was of Irish parentage. So were Charles Stewart, Captain James Lawrence, and Thomas McDonough whose victory on Lake Champlain was a famous achievement. At the battle of Lake Erie the British fleet was almost annihilated, and the most brilliant naval victory of the war was won by the American forces under the command of Oliver Hazard Perry, the son of an Irish mother (Sarah Alexander). On land the last decisive battle of the war, that at New Orleans, was won by troops largely of Irish origin under the leadership of Andrew Jackson, another of the Irish patriots.

The devotion of the Irish in America to the country of their adoption and their readiness to sacrifice themselves in her defence were again conspicuously demonstrated when the safety of the republic was imperilled by the unfortunate Civil War. During that long struggle (1861-1865) Irish patriots and Irish valour were everywhere in evidence, and impartial historians have freely acknowledged the great and important military service rendered by the Irish element in de-
There are no statistics showing the full percentage of the Irish element in the Fighting service of that war; but it is certain that a very large proportion there can be no doubt. A table published by C. G. Lee of Washington, an authority on the statistics of the Civil War, shows the enlistment in the Union Army of 144,200 men of Irish birth. D. P. Conyngham, the historian of the Irish Brigade, estimates the number of Irishmen so enlisted at 173,000 (see "The Irish Brigade and its Campaigns," p. 8). But these figures very inadequately represent the part taken by Irishmen and their descendants in the defence of the Union. In the analysis of the nationality of 337,800 soldiers from the State of New York, compiled by B. C. Goode, late acting Superintendent of Military Education (see "New York in the War of the Rebellion," p. 49, by Frederick Phisterer, late Captain of the U.S. Army), the race or nationality by birth of 230,267 of them was obtained by official records and, estimating from these, it was found that of such total number of soldiers supplied from that state there were—:

134,178

Of those registered as natives of the United States, it is safe to assert that a large part was made up of sons of Irish parents and, judging from the history of Canadian immigration, that the number credited to British America included many others, sons of Irish emigrants to Canada who, later, had taken up their residence in the United States. Before the war, the Irish element already present in the population registered as native-born, as before indicated, can hardly be questioned but that at least one-fourth of the soldiers so recorded were descendants of Irish immigrants.

If to these we add only a fraction of those registered as natives of British America, sons of Irish emigrants who had landed in Canada before taking up residence in the United States, the Irish race would appear to have furnished about one-third of the entire quota of soldiers supplied by the State of New York in defence of the Union. But the troops from other states, notably Massachusetts, Connecticut, New Jersey, Pennsylvania, and Illinois, included in the ranks of the contingent of soldiers of Irish birth or descent, whose number may fairly be estimated as between one-third and one-fourth of the total number of troops supplied by those several states. Not a few regiments were composed almost exclusively of men of Irish birth or Irish descent, such as the 9th and 28th Massachusetts Volunteers under command of Colonel Cabell and Colonel Richard Byrnes respectively, and later under Col. Thomas Cass (who fell at Malvern Hill), and Col. Patrick Guiney; the 88th New York Volunteers under Colonel Patric Kelly, and the 69th of the same state which assembled under the order of their colonel, Michael Corcoran, bidding his men "to rally to the support of the Constitution and laws of the United States"—a sentiment which was the inspiration of the subsequent outpouring of Irish soldiers in defence of the Union: the 116th Pennsylvania Volunteers, recruited in Philadelphia, early fought in the western part of Meagher's Irish brigade, which went to the front in command of Colonel Dennis Hoeman; the 37th N. Y. (Irish Rifles); and Meagher's Zouaves under the command of Thomas F. Meagher.

At the very outset of the war an Irish brigade made up of about 2000 Catholic Irishmen was organized in Chicago by Colonel James A. Mulligan, who after four years of hard service fell mortally wounded in one of the engagements at Winchester, Va. Another Irish legion, composed almost exclusively of Irish Catholic soldiers, was mustered into service as the 90th Illinois Volunteers, recruited largely through the exertions of an Irish priest, Father Dunn, and was one of the first regiments to respond to the president's call for troops. The first fortification thrown up for the defence of Washington was Fort Corcoran, on Arlington Heights, built by the men of the New York 69th Regiment. When the ranks of these regiments had been thinned by death or by disability from wounds or disease, they were filled with fresh volunteers, many of them being immigrants only recently arrived. In the later engagements of the war, the Irish of New York, was thus recruited thrice during the war. Besides these entire regiments of Irish soldiers, there were many regiments from the different states, each containing one or more companies composed exclusively of Irishmen. Later the Irish Brigade of New York was organized under the command of General Thomas F. Meagher with the 69th as its nucleus, the 63rd and 88th regiments of New York being added, numbering in all over 2500 men. Another Irish legion, better known as the Corcoran Legion, comprising four full regiments, namely, the 69th, 155th, 164th, and 220th, was organized in 1863 by General Michael Corcoran upon his return to New York after a year's confinement in a Confederate war prison. Irish priests, among them Rev. (now Archibishop) John Ireland, Bernard O'Reilly, Lawrence S. McMahon, afterwards Bishop of Hartford, William Corby, Thomas J. Mooney, James Dillon, John Seully, Daniel Mullen, Philip Sheridan, Paul Gillen, Edward McKee, and others, accompanied the Irish regiments as chaplains, sharing the hardships of war with them. To recount the deeds of the Irish soldiers in that war would be to write a history of most of the important battles of the war. At Antietam, Williamsburg, Fair Oaks, Chickahominy, Malvern Hill, Chancellorsville, Spottsylvania, Bull Run, Gettysburg, the Wilderness, and Fredericksburg, the Irish soldier was found in the fore-front of battle braving every danger and unhesitatingly giving up life itself in defence of the flag of his adopted country.

The official war records contain frequent acknowledgment of the valuable service rendered by the Irish regiments in these various battles, and distinguished officers in both contending armies have testified to the heroic conduct of the Irish soldier. There are no statistics to show the total number of men of Irish birth who served in the Union army. In four years of struggle gave their lives in defence of their country, but it was unquestionably very great. At Fredericksburg alone, in the memorable attack on Marye's Heights, the Irish Brigade was so depleted that after the battle the number of men remaining alive was so small that not one regiment was left for a general to command, and General Meagher, their commander, thereupon resigned his commission; (see "The Irish Brigade", pp. 349, 350, 366). According to the statistics, over 4000 men of the brigade and regiment lost their lives on the field of battle, or of wounds received, or disease contracted in service. The 69th New York lost 998 men during the war. At Antietam, out of 18 officers and 210 men engaged, it lost in killed and wounded 16 officers and 112 men. The Irish Legion lost 3100 in killed and wounded, including officers and men. Out of 1703 men enlisted, the Irish 22nd lost 500 in killed and wounded by the time of the close of service, the killed, wounded, and missing in action reached the large number of 1133, of whom 408 were killed or wounded in the campaign of the Wilderness (The Irish Brigade, p. 586). And the last Union general killed in the war was the Irish General Thomas H. Smith, who fell at Petersburg in April, 1865.
Space does not permit an enumeration of all the names of men of Irish blood who held responsible command in the Union armies in that war. Some of the generals were Logan, Lair, and Dougherty of Illinois, Gorman of Minnesota, Magens and Sullivan of Indiana, Reilly and Mulligan of Ohio, Stevenson of Missouri, and with him James Shields, already a hero of the War of 1812, who was a three states, Shirley of Michigan, Smith of Delaware, Meagher, Corcoran, Patrick H. O'Rourke, P. H. Jones, and Thomas F. Sweeney of New York, George G. Meade, Geary, and Birney of Pennsylvania, McPherson, McDowell, and McCook, the dashing Phil Kearney, and George B. McClellan. It was another Irishman's son, "little" Phil Sheridan, the greatest cavalry leader of the war, whose brilliant work just preceding the surrender at Appomattox undoubtedly contributed greatly to that result. When hostilities ceased, Sheridan as lieutenant-general occupied next to the highest rank in the military service of the country, while at the same time the highest command in the navy was held by Admiral Porter, the descendant of an Irishman, the next highest command being held by Admiral Rowan, a native-born Irishman.

While men of the Irish race were engaged on the battlefield of the Civil War, a large number of the Southern States had the entire coast of the state of Georgia, the Southern States, accompanied and encouraged by their clergy, the religious orders of women within the Church were no less diligent in nursing the sick and wounded in the camps and hospitals. Among these volunteer nurses it is no exaggeration to say that the Irish element predominated. Thus in July, 1862, at the request of the Secretary of War, a band of seven Sisters of Mercy left New York and took charge of the Soldiers' Hospital at Beaufort, N. C., which was later on transferred to Newbern. This was in charge of Mother Augustine McKenna, a native of County Monaghan, Ireland. Several of these, exhausted by the toils of the last enemy, were obliged to resign their lives only to be replaced by others from their community in New York. The hospital at Jefferson City, Mo., was put in charge of another company of nuns from the same order who came from their home in Chicago, and when this institution had to be abandoned, they took charge of the hospital department of the steamboat "Empress," which was about to start for the battle-field of Shiloh. These Chicago sisters were in charge of Mother Alphonse Butler, and Confederate and Union soldiers alternately came under their care (see "Annals of the Sisters of Mercy of the United States"). The United States military hospitals were placed in charge of the same sisters. The Sisters of Charity of St. Vincent de Paul sent from Ennmitburg and other houses many of their members, whose ministrations in the hospitals at Norfolk and elsewhere elicited the grateful admiration of Protestant and Catholic alike.

The Hospital of the Good Samaritan at Cincinnati was the gift of some enlightened and appreciative Protestant gentlemen to Sister Anthony, born at Limerick, whose services in the field hospitals had won for her the title of "Ministering Angel of the Army of God." The head nurses of the Government in America," p. 482). The earliest use of the Mercy Hospital at Pittsburg, established by Irish sisters of Mercy, was for the relief of the sick and disabled soldiers returning from the Mexican War, 1848. At Helena and Little Rock, Ark., hospitals were maintained by the same community, who served the sick and wounded to the last. Four years later the United Confederate forces, as the fortunes of war shifted the control of the territory in which the hospital stood. There were Irish women in the community of the Sisters of St. Joseph who served at Harriusburg, caring for the disabled soldiers and taking charge of the State hospital that received the wounded in the Virginia battle-fields. The same community afterwards (1864) opened and maintained an asylum at Philadelphia for the orphaned daughters of the Union soldiers of the Civil War (Hist. Sketch of Church in Philadelphia, p. 193), and all over the country the orphans, made such by the war, found shelter under the hospitable roofs of one or other of the religious communities, whose members were largely of the Irish race.

The record of the services rendered by the Irish in that war would be incomplete without reference to the part taken by John Hughes, the great Irish Archbishop of New York. This distinguished prelate, the friend of President Abraham Lincoln and of his secretary, Mr. Seward, and, on his request a confidential mission to Europe in 1861, where at the French Court and in other influential circles he advocated the justice of the conduct of the Government at Washington in resisting the secession of the states and the consequent disruption of the Union. At that time the British Government and English public men with few notable exceptions had manifested their hostility to the Government, as they continued to do afterwards, and efforts were being made (as was believed) to engage France in an alliance with England with a view to their joint acknowledgment of the Confederate States as an independent nation. This would have entitled the Confederacy to all the rights of a belligerent, and would have permitted England to become its ally openly and to furnish troops and supplies in support of the rebellion. But the efforts in question failed, and the Government gratefully acknowledged the patriotic services performed by Archbishop Hughes in that behalf.

But the genius of the Irish race, which had thus helped to found the Republic and to preserve it when it needed defenders, was not lacking in times of peace in the development of the country and in the practice of the arts and sciences. One of the greatest entering into the development of the arts and sciences was the supremacy of the State of New York, namely, the construction of the Erie Canal, was planned and carried out during the year 1817-18 by De Witt Clinton, then governor of that state, who was a descendant of Charles Clinton, himself an immigrant born at Longford, Ireland, as already noted. But this great enterprise had already, as early as 1784, been publicly advocated by another Irish immigrant, Christopher Colles, then living in the city of New York, who had been an engineer and instructor in the Continental Army. With almost prophetic foresight, the reports on the speculators went to New York City by means of aqueducts, models of which he publicly exhibited, thus anticipating by more than half a century the existing Croton aqueduct system. Another Irishman's son, James Sullivan, Governor of Massachusetts, projected the Middlesex (Mass.) Canal. It is a well-known fact that the actual work of construction of the railroads and canals during the greater part of the last century was accomplished mainly by Irish hands and Irish energy. In the higher plane of railroad operation Irish talent and ability have been constantly in evidence, and in the most successful of the affairs of a railroad system, no name stands higher than that of the late Samuel Sloan, an emigrant from the north of Ireland. An Irish surveyor, Jasper O'Farrell, laid out the city of San Francisco. Among the California pioneers (1828) there were Irish Martins, Sullivans, and Murphys, including Don Timoteo Murphy, who lived two years in the United States and gave the land on which the first orphan asylum in San Francisco was built. In later days the Floods, Fairs, and O'Briens are associated with the successful development of the great mining industries of that state, while Eugene Kelly, another Catholic Irishman of San Francisco and New York, stands out as a type of the successful merchant and banker.
Among the journalists and publishers of Irish birth or parentage, we may name John Dunlap, publisher (1771) of the "Pennsylvania Packet"; Matthew Carey, who (1785) founded the "Silent Witness"; and John McCreary, who, in 1790 issued the first Catholic Bible published in the United States; Matthew Lyon, the "Hampden of Congress", who (1793) published the "Farmers' Library", one of the earliest newspapers published in Vermont; George Pardon of the "Truth Teller" (1828); Rev. R. J. O'Flaherty, who (1848) founded the "Catholic Miscellany", and his sons, the publishers and editors of the "Boston Pilot", namely, Patrick Donahue, Thomas D'Arcy McGee, Rev. John Roddan, John Boyle O'Reilly; Thomas O'Conor, publisher of the "Shamrock", whose son Charles became the most distinguished jurist of his time; Bishop Joe Ryan and John Bell of the "Catholic Miscellany"; Rev. James Keogh, first editor of the "Philadelphia Catholic Standard"; Bishop Michael O'Connor, who founded the "Pittsburg Catholic", and Rev. Tobias Mullen, afterwards Bishop of Erie, who continued its publication; Bernard Dorin, an exile with Emmet and MacVeagh, and John Doyle, early publishers of Catholic books in New York; Dr. P. E. Moriarty, O.S.A., distinguished both as a writer and controversialist; Daniel W. Mahoney and Charles A. Hardy, who published "The Catholic Standard" of Philadelphia and later "The American Catholic Quarterly Review" under the editorship of a notable Jesuit scholar, Dr. James A. Corcoran; James A. McNama, editor of the "Freeman's Journal"; Patrick J. Meenan, of the "Irish American"; Edward Dunigan and James B. Kirker and their successor; Felix E. O'Hourke, Denis and James Sadlier, all of New York; Eugene Cumminskey and John Murphy of Baltimore; Lawrence Keboe of New York; besides many other Irishmen and sons of Irishmen whose names are identified with Irish and Catholic journalism and with the publication of Irish and Catholic literature in the United States. Prominent in the ranks of secular journalism were Horace Greeley, of the "New York Tribune", E. L. Godkin, of the "New York Evening Post", William Cassidy, of the "Albany Argus", Henry O'Reilly, of the "Rochester Advertiser", and Hugh J. Hastings.

Nearly one-half of all the presidents of the United States have been of Celtic extraction. The list includes James Monroe, James Polk, Andrew Jackson, James Buchanan, Ulysses S. Grant, Chester A. Arthur, Benjamin Harrison, Andrew Johnson, and William McKinley. And at no time since the establishment of the Government has the Irish race been without representation in Congress, among the judicial and in the highest civil and military services. Many of the men named for their distinguished military services afterwards held posts of honour in the civil service of the Government. To the names already mentioned of patriots of the Revolution, who afterwards became governors or chief justices of their respective states, we may add William Claiborne, of Irish birth, first Governor of Louisiana, when that state was admitted to the Union (1812), Andrew Jackson, Governor of Florida, General James Shields, first Governor of Oregon Territory, Thomas F. Meagher, first Governor of Montana Territory, and Edward Kavanagh, Governor of Maine in 1843. At the bar and on the bench the list of names of men of Irish blood who acquired distinction would fill a volume. When the attempt was made in 1813 in a New York court to compel the Jesuit Father Anthony Kohlman to disclose matters communicated to him in confession, it was the Irish Presbyterian lawyer, William Sampson, one of the United States District Judge Kohlman's refusal to reveal the information thus acquired, and vindicated the principle (since incorporated in statute law) protecting ministers of the Gospel against being compelled to disclose matters so communicated. Another Irish exile, Thomas Addis
Emmet, attained distinction as one of the leaders of the bar in New York. In later days James T. Brady, David Graham, Charles O'Conor, John McKean, Charles F. Daly, who to his judicial accomplishments added the most brilliant scholarship and served for many years as President of the American Society, Robert J. Dillon, Richard O'Gorman of New York, Francis Kernan of Utica, afterwards U. S. Senator from New York, Bernard Casserly, U. S. Senator from California, Daniel Dougherty of Philadelphia, Patrick A. Collins of Boston, are a few only of the names of men of Irish birth who by their talents and high character have reflected honour on the race from which they sprang.

In medicine another distinguished Irish exile of '88, William James MacNevin, achieved national reputation in his profession. Prior to his time, Edward Hand, John Hart, Richard Ferguson, and Ephraim McDowell, all natives of Ireland, had attained distinction as practitioners in this country. Irish physicians and surgeons were found attached to all the Irish regiments serving in the Civil War. A few are now surviving, honoured wherever known. Together they contributed a body of devoted and self-sacrificing men, true to the noblest ideals of their profession. In 1902 it was an Irish American, Surgeon Major James Carroll, who with another United States Army surgeon deliberately submitted himself to the perilous experiments then being made by the Government to ascertain whether the yellow fever was a communicable disease. As a result he contracted the disease and gave up his life as a sacrifice in the cause of science for the good of humanity. To the American-born son of Irish immigrants, Dr. Joseph O'Dwyer, humanity the world over is indebted for the development of the processes of intubation of the larynx in cases of diphtheria, and the invention of the instruments used in that operation. Always known for his charities, Dr. O'Dwyer declined to patent his inventions, thereby sacrificing large pecuniary gains. The merit of these inventions was recognized by the medical profession both in this country and in Europe, and their use has resulted in saving the lives of thousands of children. The Carney Hospital, devoted to the relief of suffering humanity, was the gift to the citizens of Boston from Andrew Carney, a successful Irishman resident in that city. A similar foundation was established at St. Louis, Mo., named after the donor, John Mullanphy, a successful Irishman who likewise established the Mullanphy Orphanage, a religious and charitable endowment at St. Louis.

Cornelius Heeney, an Irishman resident in Brooklyn, gave a large estate to the "Brooklyn Benevolent Society" in trust for the poor, and especially poor orphan children, and procured the incorporation of the society, which continues to administer his charity. Still another Irish immigrant, Judge Myles F. O'Connor, established and endowed a home for orphans at San Jose, Cal., besides distributing a large fortune during his lifetime towards the support of works of charity and the promotion of the Catholic Church in the State. A native of the public squares of New Orleans, inscribed to "Margaret," marks the appreciation of the people of that community for Margaret Haughey, an Irish woman whose charitable labours during life won for her the title of "the orphans' friend", and who bequeathed a considerable fortune for the support of the orphan asylum which she had greatly helped to establish. Of the lesser gifts of Irishmen and women to the cause of religion and humanity it would be impossible to give even a summary. It is enough to state that to people have given more freely or more steadily for these purposes than the Irish, and that a great number of the charities, hospitals, orphan asylums, and homes for sick and destitute humanity which are the boast of the present generation have had their origin in the piety, goodwill, and generous contributions of the early Irish immigrants and their descendants.

A notable feature in the history of the Irish arriving in this country has been their tendency to associate themselves in societies composed exclusively of members of their own national origin. About twenty-six "Gentlemen, merchants and others, natives of Ireland or of Irish extraction" assembled at Boston on St. Patrick's Day to organize the Charitable Irish Society. The professed object of their association was to relieve their fellow-countrymen who might be in need and to preserve the spirit of Irish nationality. With like purpose the Society of the Friendly Sons of St. Patrick was established at Philadelphia in 1771, the New York society of the same name in 1784, the Hibernian Society for the Relief of Emigrants from Ireland in Philadelphia in 1790, and the Hibernian Society of Charleston, S. C., in 1799. Later on, and as the Irish element in the population increased, similar societies were established in other cities with the same benevolent purposes. In all of them the bond of union was the Irish nationality of the members either by birth or adoption, and the maintenance of such national spirit was one of the objects of the society. But this devotion to the history and traditions of their native land was constantly and inseparably coupled with an unwavering attachment to their adopted country, and the Irish in America have demonstrated beyond any question that they or their fathers had sprung was no hindrance to the faithful discharge of their duty as American citizens. Indeed, it needed no declaration of loyalty to prove that the men who were thus associated were devoted to the interests of their adopted country, for the roll of members of the several societies was but a list of men who, having done valiant service for that country in its hour of need, became later the trusted officers of the Government which they had helped to establish, and held high rank in the social and business circles of the respective communities in which they lived.

With the great increase in the volume of immigration in later years (we refer to the period since 1820), the Irish immigrants, both those newly arriving, then mostly Catholics, as well as these already residing in the country, found themselves confronted with a deep-seated sentiment of antagonism based on both professional and religious prejudice. In the majority of the elements of the population. While this spirit of hostility was averted against all residents of foreign birth, Irish Catholics, by reason of their religion, their large numbers, and the resulting influence which as citizens they exercised in the political contests of the time, were singled out as a class to be especially attacked by this un-American section of the nation. This anti-Irish and anti-Catholic sentiment was of unmistakable English origin. It had its beginning here in the legislation of the Colonies, which, copying the English penal laws directed against the Catholic Irish in Ireland, attempted to ostracize the Irish "Papist." It was embodied in the state church establishments of several of the colonies. Although the principle of freedom of religion was definitely incorporated in the Federal Constitution, yet so persistent and obstinate was this prejudice that it found expression in the original constitutions of various of the states which made the profession of the Protestant religion a condition of holding office in the Government. It was further manifested in the repeated efforts to change the naturalization laws so as to withhold the right and privileges of citizenship from all immigrants except upon onerous conditions, including a fourteen years' residence in the country.

We are not attempting to detail the history or development of this spirit of prejudice against the Irish
Catholic immigrant. Suffice it to say that it was only too real and widespread, and that, under the guise of union and the concerted efforts of the unscrupled agitators, it took shape and form in the various native American and Know-Nothing movements which were organized during the period of 1830 to 1855. As a result of the activities of these associations, Irish Catholics in many parts of the country, almost alone among all classes of the population, were persecuted and were made the victims of mob violence, their dwellings demolished, their families made homeless, their churches and convents fired, and their clergy ill-treated. Prior to any threatening manifestation of this anti-Irish sentiment, there had existed various societies made up of Irishmen or Irishwomen, such as the Sons of Erin, Montgomery-Greens, Irish Volunteers, various Provident Societies, and others, whose social and benevolent purposes in no wise diminished the patriotic attachment of their members to the country of their adoption. Although the number of such societies and their membership were comparatively small, yet they served as rallying-points for the maintenance of the spirit of Irish nationality, and as centres of the charitable activity of their members. When the fateful spirit of native Americanism darkened the land and Irish Catholics realized the need of another and more aggressive, these societies were multiplied, and many of the Irish thus became proficient in military drill and the use of arms. There were likewise various county associations, composed of immigrants or their descendants from the several counties in Ireland and named after their respective counties.

The great increase in the number of these societies, and the fact that in important political contests their members were arrayed almost as a unit in opposition to the political parties who were identified with these anti-Catholic movements, were made pretext for accusing the Irish of a certain callousness which united them to be good citizens. Some, even of their own coreligionists (though not of their race), deplored the fact that the Irish seemed to have isolated themselves from their fellow-citizens and had thereby subjected themselves, however undeservedly, to the reproach of having put Irish nationalism above all other considerations. In the latter case, the power which the anti-Catholic movements possessed against the Catholic immigrants (at that time mostly poor and incapable of resistance), the insults and injuries put upon them because of their race and faith, and the attacks upon their persons and property, which almost without exception were sanctioned and allowed by law, are an effective answer to these criticisms.

In later days many Gaelic societies have been organized, as well as various Home Rule associations and branches of the Irish Land League. Through these organisations the Irish in America have sought to co-operate with their brethren at home in the movements undertaken for the improvement of the political, social, and industrial conditions of the Irish people in their native land; and the success attending those movements is due in large part to the sympathy of the American Irish and their generous contributions of money. The constant affection manifested in a practical way by the Irish in America for their less fortunate brethren in Ireland, may be judged from the large amounts of money remitted to the latter out of the earnings of the Irish in this country. As early as 1834 R. R. Madden ascertained (see Madden, "Memoirs", 105) that $50,000 was the sum annually sent home from the United States, which was increased from year to year until during the period from 1848 to 1864 the American Irish sent home no less a sum than $13,000,000, that is, $65,000,000 (see Parnell Movement, p. 166). The report of the British Emigration Commissioners for 1873 (cited in O'Rourke, op. cit., p. 503) states that in 1870 £727,408 (equal to $35,000,000) was sent from Ireland to North America, while the amount remitted from 1848 to 1870 £16,634,000 or $83,000,000 was so remitted through banks and commercial houses, apart from the money sent through private channels. The historian whom we have quoted estimates the total transmitted through all channels to relatives and friends in Ireland to the Irish in America in the early 1870's at £1,000,000 annually, or in all the amount of over £20,000,000 ($100,000,000) for the twenty-three years preceding the date when he wrote (1874). That the amount remitted from that time to the present has been equally large, there can hardly be any doubt.

The most prominent, as it is the most distinctively Irish perhaps, among the organisations which have referred is the Ancient Order of Hibernians, which was organized in America in the year 1836 for the avowed purposes of promoting friendship, unity, and Christian charity among its members and the advancement of the principles of Irish nationality. Many of the branches maintain systems of insurance, paying death benefits not exceeding $3000. In 1908 it had a total membership of 200,000 persons associated in 2365 divisions, distributed in forty-seven states and territories of the Union. The property owned by the order was valued (1908) at $1,722,665. During the last two or three years the membership has been increased, and over 1500 new local societies have been organized. Its contributions in support of Irish education include an endowment of $50,000 to the Catholic University at Washington, D.C. and $10,000 to Trinity College, Washington, besides over 500 scholarships in various colleges and academies throughout the country, and it has given over $25,000 in aid of the work of the Gaelic League for the revival of the Irish language and literature. Other societies, such as The Emerald Beneficial Association, The Irish Catholic Benevolent Union, founded in 1896 for benevolent purposes and composed almost entirely of members of Irish nationality, have a large membership in various states and territories. Besides these large national societies, branches of the Ancient Order of Hibernians and other smaller societies have been organized, mostly since 1840, and in the larger cities of the Eastern States, each society comprising emigrants or their descendants from particular counties in Ireland. Their purposes are purely social and benevolent and their members nearly all Catholics.

Of the relations of the Roman Catholic Irish towards the Church in America it is almost needless to speak. Not only do the Catholics of other nationalities, but their fellow-citizens of other faiths, acknowledge the great services rendered by the Irish in America in the up-building of the Church. So identified have they been with the maintenance and progress of the Church that their race and religion united have made them a marked element in the community. The mission of the Irish race, as evidenced by the part which they have taken in the support of religion in the United States, has been the theme of many writers, and it would be as endless as unnecessary a task to detail here what the Irish have done in that respect. Their number alone, coming from a land where they had suffered so greatly for conscience' sake, implied a corresponding religious activity and influence in the United States, where they were released from the restraints and threats which they had been trained to face in their native land. In increasing numbers, they provided in turn the laity out of which new congregations were formed as a result of the supply of a large extent their spiritual needs. From the time of the first Bishop, John Carroll, of the See of Baltimore, to the pres-
faith in the United States what the Irish people have done. Their unalterable attachment to their priests; their deep Catholic instincts, which no combination of circumstances has ever been able to bring into conflict with their love of country; the unworlthy and spiritual temper of the national character; their indifference to ridicule and contempt, and their unfailing generosity, all fitted them for the work which was to be done, and enabled them, in spite of the strong prejudices against their race which Americans have inherited from England, to accomplish what would not have been accomplished by Italian, French or German Catholics.

PETER CONDON.

II. In Australia. —Nowhere in modern times has the Church made such substantial progress as in the United States of America, and there is no need to take into account the Commonwealth of Australasia. In both Irish immigration has been a large contributing factor of this development, and between both, notwithstanding the immense intervening distance, there is to be found in the early records a curious correlation of pioneer missionary effort. To the political and economic results of British rule in Ireland both these countries owe no little part of their present-day vigour and expansion. It was the declaration of American independence that stopped the transportation of British convicts across the Atlantic, and forced the establishment at Botany Bay, in January, 1788, of the first penal settlement on the Australian continent. The religious persecutions in Ireland and the political disturbances there sent many unfortunate representatives of the race. Thousands of these prisoners, transported from Ireland for political or religious offences, were exiled without any intimation of the duration of the sentences passed on them by drumhead courts-martial. Hence, under date of 12 November, 1796, there is record of Governor Hunter writing back from the colony to the authorities of the Home Office in England that the "Irish Defenders" were threatening to resist all orders because of the indeterminate terms of their sentences, and that they may themselves be "sent to servitude." In May, 1802, Governor King also wrote praying the home government not to send any more Irishmen there and "as few as possible of those con-
victed of sedition and republican practices, otherwise in a very short time the whole colony would be imbued with the same seditive spirit.

But the sentence had no effect whatever, and the number of exiles constantly increased until in a short time it amounted to more than a thousand. Confessors of the Faith, as most of them were in their native land, they had to face in bondage even more savage persecution under rules framed to compel them to join in idolatrous religious ceremonies, and religious instruction, they saw the Government attempting to rob their children of their Faith. Remonstrance to the home authorities was long useless. Among the early Irish political felons transported to Botany Bay were three priests who had been sentenced for alleged complicity in the political troubles of 1798 in Ireland. These priests were Father James Harold, pastor of Rathcoole, Dublin; Father James Dixon, a native of Castlebridge, County Wexford; and Father Peter O’Neil, pastor of Ballymacoda, County Cork, a grand-uncle of the Fenian leader, Peter O’Neill Crowley, who was killed in the rising of 1867. Father O’Neil was not only sentenced on a trumped-up charge of sedition, but was most barbarously flogged before he left Ireland. The frequent remonstrances to the home authorities against the injustice of denying them the ministrations of their Faith had led to the granting to the governor in 1802 to allow one of these transported ecclesiastics to exercise his spiritual functions. Governor King accordingly designated, on 19 April, 1803, Father Dixon to take charge of the Catholic congregation, and under this government supervision the first Mass was said by him in Sydney, on Sunday, 15 May, 1803. The ceremony was made of tin by one of the convicts; the vestments were fashioned out of some old damask curtains. For a time there was no altar-stone, and the sacred oils had to be brought from Rio de Janeiro. The Holy See, in 1804, made Father Dixon Prefect Apostolic of this territory, then called New Holland, the first ecclesiastical appointment for the new church. Fathers O’Neil and Harold also received faculties from Rome. The former was allowed to return to Ireland 15 January, 1803, and the latter was sent to Tasmania, but there is no record that he was allowed to officiate there. The lack of toleration and the persistently circulated reports of bigoted fanaticism that the congregations at the Masses were gatherings of traitors and mere subterfuges of the Irish convicts to mature plans for another rebellion, the governor, before the close of 1804, revoked the permission for the celebration of Mass in the colony. Twenty-five lashes for the first, and fifty for the second absence, all the colonists without distinction were ordered to attend the Church of England service. Worn out by his long labour and hardships, Father Dixon returned, in 1808, to Ireland, where he died 4 January, 1840, in his eighty-second year, pastor of Crossabeg in the Diocese of Ferns.

In the archives of Propaganda at Rome there is a memorandum presented to the congregation, 28 August, 1816, by Reverend Richard Hayes, O.S.F., which begins: “The undersigned certifies that neither in the Colony of Sydney Cove, nor in any part of New Holland, is there at present any priest or Catholic Missionary.” Father Hayes’ brother, Michael, a native of Wexford, was there as one of those United Irishmen transported after the rebellion of 1798, and had sent word to Rome, where Father Hayes was residing in St. Isidore’s convent, of their spiritual destitution. The appeal for help was answered by a Cistercian Father, Jeremiah F. Flynn, who was then in Rome, after labouring for three years on the missions in the West Indies, part of the time under the direction of Archbishop Carroll of Baltimore. He volunteered to go to Australia, was secularized and appointed Prefect Apostolic of New Holland with faculties to administer the Sacraments of Confirmation. After some delay in getting enough funds for his outfit and a dispensation to the Government for an official sanction for his project, he set out without this permission and landed at Sydney, 14 November, 1817. Governor Macquarie, on whom he called the next day to ask permission to exercise his ministry, bluntly announced his determination not to support missionary activity on this Protestant colony, and ordered him to depart by the ship that brought him. On the pretext, therefore, that he had come to the colony without the sanction of the British authorities, Father Flynn was arrested shortly after his arrival and deported back to England. Previous to this, he had remained concealed for several weeks in the house of an Irishman named William Davis, who had been transported for making pikes for the insurgents of 1798, venturing forth only at night to minister to the faithful. He said Mass in the house, reserving the Blessed Sacrament in a cedar press. When he was arrested he was not allowed by the governor to return there, and the pyx with the Blessed Sacrament remained enshrined in the cedar press, guarded carefully by the pious Davis family and their friends for more than two years, until the next priests arrived in the colony. Davis later gave the house as a gift to the Catholic church at Surry Hills to the Rev. Mr. Barry, of St. Patrick’s church. He was flogged twice and then imprisoned for refusing to attend the Protestant services. At his death, 17 August, 1843, he was 78 years old.

The great Bishop John England of Charleston, U. S. A., who was then a pastor and a leader in the struggle for Catholic Emancipation in Ireland, was among those who interested themselves in bringing the persecution of the Australian Catholics to the attention of the authorities in England, and so great was the indignation aroused that the Government was forced to make provision for two Catholic chaplains to be sent to New South Wales. Fathers Philip Connolly, a native of Kildare, and John Joseph Therry, a native of Cork, at once volunteered and landed at Sydney, 4 May, 1820. Father Therry remained at Sydney and Father Connolly soon after proceeded to Hobart, Tasmania, where he arrived in March, 1821, and dedicated his first humble chapel to the Immaculate Conception. At not vast long, Father Connolly remained in charge until 1838 when he was transferred by Bishop Polding to be his representative and vicar-general in Tasmania. In 1832 there were from 16,000 to 18,000 Catholics in the colony of New South Wales, nearly all of them of Irish birth or descent. Dr. Ullin’s “History of the Church in Australia,” published in London, in 1837, set down the number of transported prisoners then in the colonies at 53,000. He was largely instrumental in bringing about a reform of the abuses of transportation and the prison system in the colonies, and during a visit to Ireland in 1839 secured several priests for the Australi-
moters of the progress of the Church in Australasia. From the first his main energy was constantly bent on the establishment of an Australian hierarchy. He sent a letter direct to the pope. "As in all new colonies," he tells the Holy Father, "so in this few subjects can be found for the priesthood for many years to come. As regards the objection," he replied, "that the bishops of Australia are all Irish it appears to me to have no solid foundation to rest upon; on the contrary any other course would be ridiculous. As a matter of fact the Catholic Europeans who form our congregations in Australia are, with very few exceptions, Irish. It must be added that the purport of the aforesaid objection is to introduce English instead of Irish bishops into the Australian Church, and hence the expediency of appointing Irish prelates becomes the more apparent, for every one is aware of the special antipathy of the English to the Irish. Right reverend Father in Dublin, Reverend Patrick Bonaventure Geoghegan, was the first pastor in Victoria and celebrated the first Mass in Melbourne on 19 May, 1839. In May, 1841, the number of Catholics there was 2073, and on St. Patrick's Day, 1843, the St. Patrick's Society had a parade of 150 members.

An Irishman, Thomas Poynton, was the first Catholic settler in New Zealand, where he took charge of a store and sawing station at Hokitika, in 1828. He had married at Sydney the daughter of a Wexford Irishman, Thomas Kennedy. In the course of time a daughter was born and the mother sent the child to Sydney to be baptized, a distance of 1000 miles. Their next child was a boy who was also taken to Sydney for baptism, but this time the ship went round by Hobart, and the distance was 2000 miles. Mr. Poynton himself made three visits to Sydney to try to get missionaries to devote themselves to the care of the New Zealand Catholics, and when the Marists and Bishop Pompallier finally did arrive there he was of much assistance to them. Among the settlers they ministered to was an Irishman named Cassidy who had married the daughter of a Māori chief.

In all this it can be seen how large a part Irishmen had in laying a foundation for the Church in Australasia. The details of their association with secular affairs are equally prominent and honourable. They contributed their share and more than their share in building up responsible governments in the four eastern States and in the culminating federation of the great Commonwealth on 1 January, 1901. In the development and solution of the important public issues of education, the tariff, vote by ballot, adult suffrage, the selection of land, agrarian legislation, the labour movement of 1877, Irish energy, executive ability, and political acumen, Irishmen contributed the most. It is only necessary to mention as types such men as Sir Charles Gavan-Duffy, Sir John O'Shanessy, Nicholas Fitzgerald, Augustus Leo Kenny, James Coghlan, M. O'Grady, Daniel Brophy, Sir Patrick Buckley, John Curnin, and Morgan S. Grace (see also lists in article AUSTRALIA). In the delegates to the three great Australasian Catholic Congresses (the first at Sydney in September, 1900, the second at Melbourne in 1904, and the third at Sydney in September, 1909), the numerical strength and influence of the Irish in Australia was amply evidenced. The million Catholics that the estimates for 1910 give to Australasia show without question that the early proportion of the Irish element is well maintained. Nor have they ever been forgetful of the land of their birth and their ancestors. In the famine years of the last century generous contributions were sent back to help the sufferers. The Hibbertian Australian Catholic Benevolent Society, founded in 1871, has many thousand members, and has spread to every state of the Commonwealth and to New Zealand. (See AUSTRALIA.)

THOMAS F. MEEHAN.
The presence of a battalion of the Irish Brigade in Canada between 1755 and 1760 has always been a moot topic. In his "Documentary History" O'Callaghan gives a letter of Doreil, the French Commissary General, to Count d'Argenson, Minister of War, in which he says that, "agreeably to the wish of the Marquis de Vaudreuil, Governor of New France, several battalions of reinforcements should be sent to Canada and among them one Irish battalion", that reason being that the Irish could be recruited from their fellow-countrymen already in Canada, or from deserters from the enemy. O'Farrell asserts that this battalion landed in Quebec on 29 June, 1755; but this is evidently an erroneous statement, for Doreil's appointment was not made until two months prior to the departure of the fleet, which he and de Vaudreuil accompanied to Canada. Three years later a "battalion of foreign volunteers"—possibly the Irish battalion suggested by Doreil—landed at Louisbourg, where they met officers in the French service with such names as Admiral Macnamara, Captain McCarty, M. de Hagerty, and others, who were then operating on Isle Royale. If, however, Irish soldiers were incorporated in the Béarn Regiment, as O'Callaghan supposes, they saw active service on four historic occasions: (1) on 8 September, 1755, under others had taken prisoners by the French; others were deserters from the English ranks. The President of the Navy Board, at Paris, in a letter to the Canadian Intendants, de la Galissonière and Hoqcourt, in 1748, wrote: "If the Irish Catholics, taken prisoners to Canada, ask to remain, the King of France sees no difficulty in their being allowed to do so. The manner in which the English treat their nation ought not to cause them to regret such a change." Desertion was a very common practice in the eighteenth century among the Irish soldiers who were pressed into the English service, and once engaged they were obliged to enlist. The author of "The Irish Brigade in the Service of France" gives instances of such desertions to the famous corps of their countrymen in France, where they might enjoy the exercise of their religion then interdicted in the British army, and further, "that they might obtain in battle some of the generous successes for the many oppressed and insults so long inflicted on their creed and race". The Protestant Lord Primate of Ireland, in a letter from Dublin, in 1730, to the Duke of Newcastle, wrote: "All recruits raised here are generally considered as such that may, some time or other, pay a visit to this country as enemies to their own nation. They are enlisted here... hope and wish to do so, there is no doubt." This spirit of retaliation will help to explain the presence of so many Irish deserters in Canada in the eighteenth century. They were so numerous, in fact, that they became a menace to British military efficiency in America. It was to the desertions of 'Irish papists' that Sir William Johnson, Agent General of Indian affairs, attributed the uneasiness existing among the Mohawks and other more westerly tribes who had remained loyal to the British. In a letter to the Lords of Trade, in London (28 May, 1756), he asked to be empowered to reward any Indians who would deliver up Irish soldiers who were living amongst them. Letters exist in the Archives of the Marine, in Paris, giving Irish soldiers permission to remain in Canada, or to return to France, where they might join their countrymen in the Canadian service. Many of these letters remain and settle in New France, where they would be safe from the law enforced by Britain, after the victory of Fontenoy, which stipulated that 'Irish officers and soldiers who had been in the service of France... should be disabled from holding any real or personal property, and the real or personal property should belong to the first Protestant discoverer'.
against him. However, owing to the precautions taken by the Irish soldiers to identify themselves with the French Canadian peasantry, there is no record of reprisals. The Irish settled down in the Province of Quebec and, while retaining their names, or French variations of them, they were in a few years absorbed by the number of persons who declared the case of Dr. Timothy O’Sullivan is typical. He was the son of a lieutenant-general in the army of James II, and had during sixteen years served as captain of dragoons among the Irish in Spain. In 1716 he started for Ireland with his regiment, but later the case of Dr. Timothy O’Sullivan is typical. He was the son of a lieutenant-general in the army of James II, and had during sixteen years served as captain of dragoons among the Irish in Spain. In 1716 he started for Ireland with his regiment, but later

Succeeding governors of Canada, especially Haldimand and Craig, were less accommodating to Catholics than Carleton, and it was not till the diplomatic and uncompromising Bishop Plessis, one of the illustrious figures in Canadian history, took up the struggle for the liberties of the Church, that Catholics began to breathe freely. This prelate succeeded in having the rights of the Church recognized, and left the way open for the immigration to Canada of Catholics of every nationality. When he visited the Upper St. Lawrence, on a pastoral tour, in 1816, he found seventy-five Catholic families in the neighbourhood of Kingston, among them twenty Scotch and Irish, and others as far west as Niagara. Ferland tells us that during the summer of 1820 over thirty families arrived from Quebec and Ireland. They had hoped to better their condition by emigrating, but, owing to the unsettled condition of the country and the stagnation of business, they failed miserably. These poor exiles were in the direst poverty, and, as winter was approaching, the noble-hearted Bishop Plessis wrote a touching letter to his parish priests in their favour.

Meanwhile groups of Irish colonists had begun to arrive and settle in Upper Canada and in the Maritime Provinces. In 1830, a Talbot, a Malarkey, more particularly the desire to control the “Paradise of the Hurons” he had read about in Charlevoix, secured six hundred and eighty thousand acres in Western Ontario and gradually opened this vast district to settlement. Talbot was one of the first to draw his countrymen to that province. In 1830 Peter Robinson began to work on similar lines north of Lake Ontario. He brought two thousand colonists and located them along the banks of the Otonabee, in the neighbourhood of Peterboro. Other groups continued to arrive from time to time to strengthen the Irish element; between 1830 and 1850 two hundred thousand settled in Ontario; and in several counties the Irish still predominate. The Nova Scotia Archives show that Irish settlers were numerous in this province, many of whom were undoubtedly disbanded soldiers of the Cornwallis Regiment. Shortly after the treaty of 1763, Irish Scotch-Canadians had settled in Windsor, Truro, Londonderry, and other inland points, where their descendants may still be found. Although the intolerant laws of England were still in force against Catholics, the provincial governors showed themselves more or less conciliatory to the proscribed religion, and in 1818, continued to increase in numbers. The appointment of a vicar Apostolic for Nova Scotia, in 1818, prov
that they were already numerous enough to need episcopal care. Bishop Plessis has left us some edifying pages in his "Journal" on the Catholicity of the Irish colony in Halifax in 1815, and the warm receptions he met with from the Irish during his tour along the coast of Nova Scotia.

He was separated from Nova Scotia in 1784, when the United Empire Loyalists, among whom were a few Protestant Irish, began to arrive. The records of this Province reveal the presence of Irish Catholics even in the early years of the nineteenth century. The Bishop of Quebec found about twenty families at St. John in 1815, and he named St. Malachy as titular of the small church they were about completing there. Immigration to New Brunswick did not start in earnest until after 1830, when the Irish began to carve out homes for themselves along the beautiful St. John River and the shores of the Bay of Fundy, where their descendants are now prosperous. Prince Edward Island, or Isle St-Jean, as it was originally called, was ceded to Great Britain and made a separate province in 1769. It was first settled by the French, but in 1772 MacDonald of Glenaladale brought his hardy Scottish Highlanders over, who took up land in the colony. A few Irish, from Ireland and Newfoundland, also settled in Charlottetown during the closing years of that century. According to the Abbé de Calonne, a French missionary working among them, they had neither social nor political influence. This was natural and yet it was not for the best of the British authorities, the first governor, Patterson, would have changed the name of the island from Isle St-Jean to New Ireland. Irish Catholics continued to arrive every year in groups and singly, and settled on farms and in the growing centres of population. Some of the most distinguished names in the history of Prince Edward Island are found among those early settlers. Manitoba and the Northwest Territories were then, and for many years later, an unknown land as far as the Irish were concerned.

Emigration from Ireland to Canada continued in earnest between 1820 and 1850. Davin asserts that in the two years following 1832 over eighty thousand Irish landed on Canadian soil, and proportionate numbers continued to arrive every season in sailing vessels, wooden tubs most of them that had been used in the Canadian lumber trade. According to the report of the Agent for Emigrants, in the ten years ending 1839, 164,593 Irish emigrated and a convenient stopping place on the way to the Far West'. Thousands, however, made their homes in Lower Canada. A writer in the "Dublin Review" (Oct., 1837) asserts that even then the Irish were an influential body in Quebec and Montreal, and that in the troubles leading up to the Insurrection of 1837 they threw in their influence with the French Canadians and the House of Assembly against the oligarchy that were trying to withhold responsible government.

The cholera epidemic of 1832 wrought havoc among the Irish as well as the French, but the year 1847 will always stand out in the history of the Irish in Canada. In the summer of that year, one hundred thousand men, women, and children, fleeing from famine and death in Ireland, "were stricken with fever and were lying helpless in the seaports and riverports of Canada". Thousands of those unhappy people died and found only graves where they had hoped to find peace and plenty. Rarely in the annals of a civilized nation have such scenes been witnessed as those enacted, during the eventful summer of 1847, among the fever-stricken Irish in all the quarantine stations along the St. Lawrence and at other points in Canada. Numbers of heroic priests and nuns faced death to bring the sick to the stations, and the Irish, conscious of past wrongs, and forced to abandon their beloved homeland, were yet confident of suc-

cess in their fight for existence, if only the chances were given them, but who found themselves, on the threshold of their new home, facing a struggle with disease and death. The official figures tell us that in 1847 four thousand one hundred and ninety-two died at sea, four thousand five hundred and seventy-nine died at Groose Isle, seven hundred and five thousand three hundred and thirty at Montreal, seventy-one at St. John, N. B., one hundred and thirty at Lachine, eight hundred and sixty-three in Toronto, three thousand and forty-eight at other places in Ontario, but, owing to the circumstances of the time and the dearth of accurate statistics, these figures are hardly reliable. Other and more trustworthy reports declare that the number of the dead and buried on Groose Isle alone exceeded ten thousand, while Dr. Douglas, a medical superintendent of the time, estimated that at least eight thousand had been buried at sea. The survivors of the famine years—the few who still survive—recall with tears the memory of those scenes witnessed in their early childhood; and yet what seemed an irreparable disaster only proved, as in so many other instances in the history of the Irish race, to be a triumph of the patience of their land and history has not failed to record it. The Irish, in 1847, brought their Catholic traditions with them across the Atlantic, and in those moments of direst sorrow and misery it was their religion that buoyed them up. It will ever be to their glory that, far from yielding to despair at the sacrifices demanded, they accepted them with sublime resignation, and went to their death blessing the Hand that smote them. A Celtic cross, fitting symbol of Erin and her undying faith, was raised during the summer of 1909, on Groose Isle, by the Ancient Order of Hibernians, to recall the victims of the fever years and the heroism of those who assisted them.

The holocaust of 1847 threw thousands of Irish children on the charity of the public. Those of them who were without friends and relatives were adopted by French Canadians, and were, with all tenderness and sympathy, reared to manhood and womanhood. They learned the language of their foster parents, and, as their forebears, the Irish soldiers in the eighteenth century, had done, they married into French families and became identified with the French, very often revealing their origin only in their Celtic names. Their Celtic blood, however, was inflamed with that spirit of patriotism generously infused into the dominant French race, proved a rare asset to this older people living along the banks of the St. Lawrence, and was a noble influence. But this Irish element was not confined to the Irish alone, and was the indirect result of social stagnation consequent on the Confederation Act of 1867.

These figures show an increase in thirty years of 142,307. In 1871 there were still 219,451 persons who had been born in Ireland; in 1901 there were only 101,820, a number greater than ten times the emigration from Canada, of 117,822 in the foreign-born Irish population. As the emigration from Ireland...
land in those thirty years was inappreciable, the approximate figures of the native Irish-born population between 1871 and 1901 was 142,307 + 117,822 = 260,129. This shows that what the Irish element at home and in the Province during the period named, it gained in Ontario and the West. Owing to the strides which Canada is making in development, the census of 1911 will undoubtedly show an increase in the Irish population far greater than that of 1901.

The Irish-born in Canada, who now number about three-quarters of a million, are fully organized both socially and religiously. They have their

churches, schools, convents, colleges, orphanages, etc., many of them imposing-looking institutions. They have their bishops, priests, and their teaching and charity orders of both sexes. They have their fraternal societies of all kinds. They have their writers and their ably edited newspapers. They are represented in every avenue of public life. In commerce and in the industries the same year Irish students share to the wealth of the Canadian nation. Some of the most eminent members of the legal and medical professions in Canada, during the last fifty years, have been, and are still, Irish Catholics; several of them have been knighted for eminence in their respective callings. The Irish have had their governors of provinces, cabinet ministers, senators, members of both the Federal and Provincial Parliaments, and they are still well represented in these functions in the government of the country. Thomas d’Arcy McGee asserted forty years ago that, since 1792, London was a Catholic city now without an Irishman in its legislative councils. This tradition is kept up not merely in old Quebec, but in the sister provinces and in the Federal Parliament at Ottawa. An Irish Catholic is (1910) Chief Justice of the Supreme Court and Deputy Governor-General of the Dominion.

E. J. DEVINE.

IV. IN GREAT BRITAIN.—England and Wales.

Mr. Joseph Cowen has called the Ireland of the sixth century “Christian Greece.” Irish monks from Iona repeated in England their work in Alba. Irish soldiers helped Athelstan to victory in 937. Early in the eleventh century Irish merchants were trading with Bristol. There, in 1247, died O’Murray, Bishop of Kilmainham, who died in his See. He remained in residence at Oxford, where, said Newman, “there was from the earliest time even a street called ‘Irishman’s Street.’” Later, a Bishop of Meath died at Oxford. A native of Dundalk, Fitz-Ralph, was Chancellor of Oxford in 1333. While the Gaelic-Irish followed the fortunes of Wallace and of Bruce, the Norman-Irish fought for the English against Scotland, 1296–1314. Thence for 400 years the Irish helped England in her continental wars.

Up to the middle of the sixteenth century there was no Irish colony in Great Britain. Then Irish traders began to settle in London and Bristol. Leland, in 1545, wrote of Liverpool: “Irish marchants come much thither as to a good haven. . . Good marchants at Lyrlplye and more Irishmen than Marchester men do buy there.” Irish music had also found favour in England. The Earl of Worcester, writing, in 1602, to the Earl of Shrewsbury, said: “Irish tunes are this time most pleasing.” Pistol’s “Calino custore me” (Henry V, Act IV, sc. 4) has been explained as Colleen agus eto (young girl, my treasures). From some dialect in the plays of this period, Knight thinks that these ostermanners were largely Irish. Among the martyrs of Elizabeth’s reign were some Irish-born. James I severely penalized in Ireland his mother’s religion. A Catholic landowner was prohibited from appointing a guardian for his heir, who, through the Court of Wards, was under the control of Protestant noblemen. Early in his reign there were 300 of such children in the Tower of London, and at the Lambeth schools. After the Act of Settlement two-thirds of the fertile land passed into Protestant hands. In 1651, Hawdon, Governor of Dublin, reported that, “in Dublin there was no man who dare speak with Papists, he knew there now but one, a surgeon and a sensible man.” Referring to 1699, Lord Clare (speech on the Union) declared: “So that the whole of your island has been confiscated, with the exception of the estates of five or six families.”—“Such of the Roman Catholic gentry as had retained their estates were stripped of all political and many civic rights, and left virtually at the mercy of a Protestant enemy” (Bryce). To provide for the education of emigrating sons consequent upon this state of things, Irish colleges were founded in several parts of the Continent. Thence they joined the armies and political life of the nations in which they were educated, some reaching high positions as officers and statesmen. Thus the idea of emigration was created.

In Charles I’s reign ambassadors of foreign powers only were allowed in England to have Catholic chaplains. It was in this reign that the Chapel in Lincoln’s Inn Fields gathered the first considerable Irish colony in London. By 1666, the year of the great fire, a considerable importation of cattle from Ireland to England was going on. To relieve the distress in London a gift of 15,000 bullocks was sent over from Ireland. Ludovic Barry, the first Irish dramatist to write in English, Sir James Ware, the antiquarian, MacFhibs, the last of the Irish annalists, Denham, Rosecommon, and Flecknoe, poets, Cherry, actor and poet, Arthur Murphy, lawyer, dramatist, and editor, and Barry, the painter, were Catholics among the many Irishmen, eminent in science, art, and literature, living in England in the seventeenth century. The comparative fewness of Catholics among these is explained by the fact that the penal laws made learning a crime. “The avowed policy of the [English] Cabinet was to discourage the teaching of the Irish ‘better orders’ in Ireland. . . . They passed out of the country’s ken and became aliens” (Bridges). The difficulty of recruiting sufficient men for the British Army and Navy; the investment abroad of money by Irish Catholics (it being illegal to invest it in Irish land), money which Protestant landowners could have profitably used, the success of the American War of Independence, and possibly ideas of liberty and toleration caught from the French Revolution made for some relaxation of the penal code. The first Relief Bill came to England in 1778 when there were about 60,000 Catholics there, of
whom from 6000 to 8000 were Irish, mostly resident in London. An Irish Relief Bill did not follow until 1793. During the eighteenth century there was a considerable trade between Whitehaven and Ulster, and the Old Catholic mission of St. Begh, Whitehaven, dates from 1706. Hawkers and labourers at this time were frequently passing through London for the Kent hop-pickings. At Croydon Assize, 1767, an Irish priest, Moloney, was condemned to perpetual imprisonment for a libel on his father-in-law, John Chapel, Lumber St., Liverpool, an Irish priest, Anthony Carroll, served from 1759 to 1766. Another Irish priest, Father P. O'Brien, was there from 1760 to 1770. The mission of St. George's Cathedral, Southwark, dates from 1766, when an Irish priest, Father T. Walsh, hired a room in which to say Mass. In 1782, Froude, writing of 1783, said, "Half the inhabitres of this country were Catholics"", and inferred that they were mostly Irish.

Consequent upon the removal of the seat of government at the Union, there was less inducement for men of political instincts, social ambition, or intellectual activities, to remain in Ireland. "Until the Catholic question was no longer a question in Ireland. Before the County and District Councils of 1898 there was neither local nor national self-government to attract the first; the absenteeism of richer men baffled the second; death of general higher education and learned distinction was felt by the third. Ireland lost the creative power of a native aristocracy, intellectual, financial, or social. Hence her genius were induced, more and more, to ally themselves to England. But this exile was not of the nobility only. In 1803 a report of a secret Commission of the House of Commons described London and other large English towns as honeycombed with secret societies in communication with the disaffected elements in Ireland. This closing of avenues of distinction; the restriction of industry and trade arising from the Penal Laws, the famines of 1817 and 1822, impelled an increasing emigration, which the famine of 1845-46, the "Irish Rev. 45", made a permanent factor in national life. England from 1851 to 1898, drained away 4,126,310 souls, or half the national population. In 1846, with only 65 miles of railways, Ireland had a population of 300 to the square mile. "Nearly half as many again as the purely agricultural districts of England support at the present time." In 1807, these emigrants were, naturally, poor. Those who came to the nearest lands, England and Scotland, were the poorest of the poor, being those who had not the means to reach far. From this cause, they were not a political element, the Gallican Church praised the number of the London-Irish coster girls and lads. Illicit connexions were, he says, the exception rather than the rule among them. Partly from these immigrants, partly for them, a large body of Irish priesthood accumulated in both countries, who, with insignificant clergy, devoted themselves to the humblest and most trying duties of their ministry. Each educated men, in many cases highly gifted, lived outwardly inglorious lives amid surroundings of the squalor, ignorance, and vice that seem inevitable in cities of our civilization. The examples of strenuous faith, of fearless Catholicism, of active piety, which this large body of men have must impress upon their English and Scots coreligionists, unquestionably deepened and was not the growth of Catholicism in "their islands. They, it has been well said, the most successful missionaries of the Catholic Church in the nineteenth century. Railway development, the rise of manufacturing towns and of commercial cities, were powerful attractions to the Irish poor. Curiously enough, see, those Irishmen who had settled in an agricultural country settle in agricultural districts."

Politically, the Irish in England scarcely emerged from non-recognition under O'Connell's appeal to moral force in his agitation for Repeal. Their political awakening was not even complete under the call of Young Ireland to a more active force. Signs of life were visible among the Irish as their eyes were opened to the idea of moral force only, advanced by Isaac Butt in his Home Rule scheme in 1870—an idea broadly, but less pacifically, followed by Parnell. It is significant of this increase of political power of the Irish in England that it was the Liberal Government of 1886 that made the Butt with Parnell. Concurrent with it was the Irish National Land League originated by Michael Davitt, who, as a former worker in the cotton mills of Lancashire, was very popular with the Irish workers in England. The Irish labor of Great Britain the two facts of the Irish party have a most powerful organization, with ramifications everywhere.

From its situation Liverpool would have a large poor Irish population. In 1788-89 there were 260 Catholic baptisms out of 2332, i.e. 11.4 per cent. Approximately, the Catholic population of Liverpool in 1788 was 6916; in 1811, 21,359; in 1829, 50,000. (In 1804 there were only 12,000 to 15,000 Catholics in London.) In 1841 the Irish-born in Great Britain numbered 419,256; in 1851 there were 519,959, of whom 213,907 were in Scotland. It has been claimed that "the outward sign of the great impetus given to Catholicism in Great Britain by the immigration from Ireland and the reformation of the Catholic Church in England". It was therefore appropriate that the first head of the restored hierarchy should be a son of Irish parents. The present Archbishop of Westminster is of Irish descent, and is also his bishop auxiliary and vicar-general and one of his canons. In 1853 Irish patrons took the title of St. of int. Sheffield. Later they had a training college at Hammersmith. At present the Irish province has two houses in England. In this year there were 41,400 Catholics, mostly Irish, in the British Army, and a quarter of the Navy was estimated as Irish Catholics. In 1802 the Forty Hours was first work- ing in Hereford. In 1818 the census for the Parliamentary Borough of Manchester gives 84 per cent of its population as Irish (12,750 out of 393,380). In 1905 the Catholic population of Great Britain was 2,130,100, of which 400,000 was in Scotland. In 1908 the Catholic population of England had increased to 1,767,100, with one of its bishops Irish-born and two others of Irish descent. Irish Sisters of Charity are in the Diocese of Westminster and of Shrewsbury, and Irish Christian Brothers are at Bristol. Conferences are officially announced as heard in Irish in the Dioceses of Westminster, Cheltenham, Clifton, and Salford (bishops' churches). Of the 177 rural churches, chapels, and stations in England 48 (24 per cent) are dedicated to Irish saints, of which 42 are under St. Patrick.

Though the impress of the early Catholic Irish set-tlers on the social, political, and artistic life of Eng-
The percentages of Irish-born to the whole population of England and Wales were 2.9 in 1851; 2.1 in 1861; 2.2 in 1871; 2.1 in 1881; 1.6 in 1891; 1.3 in 1901.

Scotland. — The earliest authentic record of emigration from Ireland to Scotland is to Argyle, about the year 258 fighting men who helped kindred tribes in Alba against Roman invaders. The See of the Isles is said to have been founded by St. Patrick about 447. Irish missionaries followed. In 503 Prince Pervigus left Ireland to help the Scots of Alba against the Picts. His colony became the basis of a kingdom. In 565 St. Columba from Donegal passed into Scotland, labouring in Iona for thirty-five years. He celebrated his declaration against Scots paying tribute to Irish kings practically established the Scottish nation. The Scots of Alba tempered their prowess by religious fervour. One of the baptisms was that of the baptismal name Malcolm; i.e. "Servant of Columba." By the ninth century the Scots were politically a distinct people, though the hierarchy of Northern Ireland kept an ecclesiastical protectorate over Iona later than 1203. Intercourse between Ireland and Scotland in the thirteenth century is seen in the election of Donnell O'gheathe to chieftainship (1258), who, having lived in Scotland, spoke Albanian Gaelic. In 1495 Hugh Roe O'Donnell visited James IV in Scotland, concluding with him an offensive and defensive covenant. Through harpers and pipers Irish music penetrated into Scotland. "...and harpers as also the words, of Maggy Laidir... is Irish." Robin Adair is the Irish "Alleen Aroon"; "John Anderson, my Jo" is at least an echo of "Cruiksein Lawn".

The General Assembly of 1608 proposed to James "that the sons of noblemen professing popery should be committed to the custody of their friends as are sound in religion," which was effectively done. In 1785 Irish fishermen "were brought from Ireland to teach the natives of Uist the manufacture of kelp from seaweed. Others were brought to the Shetlands because of their dexterity in fishing. The inhabitants of Barra learned fish curing from the Irish fishermen."

When Betoun, the last archbishop of the ancient Scottish hierarchy, went into exile (1560), English archpriests had jurisdiction over Scotland. On his death, in 1603, the hierarchy came to an end. In 1623 Gregory XV established a prefecture for Scotland. In 1631 the Irish Bishop of Down and Connor, Magennis, was put over the Scottish mission by Urban VIII. The second in succession from him was an Irish Franciscan, Patrick Hogarty (1640). In 1652 two Irish Vincentians, Fras. D'Arcy and Robert White, went as missionaries to Scotland. The former worked for six years in the Hebrides, being very successful in Uist and Barra. In this latter place legends still exist of the curious miracles said to have been worked by him. Father White gave seventeen years to the Eastern Highlands. In 1715 there were about 40 Catholics in Glasgow. In 1779 Scotland had one bishop and some 17,000 Catholics. In 1793 the first Relief Bill for Catholics was passed.

In 1800 there were three bishops, forty priests, twelve churches, and about 30,000 Catholics. In 1814 the Scotch had the free exercise of their religion. St. Mary's Cathedral, Edinburgh dates from 1814; St. Andrew's Glasgow from 1816. Glasgow, the city of St. Mungo (the Irish St. Kentigern), ground hallowed

and was absolutely nil, the influence of the Irish-born or Irish descendants of to-day is important. Of such is the Church are one archbishop and four bishops (and titulars), two abbots, a prior, two rectors of colleges, two provincials, an administrator of a cathedral, the preacher of the "Papal Sermon" at the Vatican Congress, and several prelates of considerable number.

In the State: A Groom, and also a Lord, in waiting to the king, Somerset Herald, twenty-four army officers, five M. P.'s, three in the higher Civil Service, two County-Court judges, seven J. P.'s, four Aldermen, two superintendents of Scotland Yard. Referring only to those of academic position, there are in science, three orators, a portrait painter, two other artists; one musician; five actors and actresses; two singers in opera. In medicine, a king's physician and thirteen eminent practitioners. In letters, the founder and first editor of "The Windsor Magazine"; now editor of "Cassell's Magazine"; editors of five other newspapers, etc.; forty-four writers, novelists, authors, nine journalists; and many members of educational, and county, councils.

Assuming that the bulk of Irish residents in England are Catholic, the following statistics have interest. (The latest census returns are made up to 1901.)

The distribution of 348,685 (or 82 per cent) of the Irish-born inhabitants of England and Wales in 1901 was:

IRISH

by the footsteps of St. Columba, in the early part of this century doubled its population in twenty years, largely caused by immigration from Ireland, a Scottish writer says. In 1829 there were 70,000 Catholics in Scotland, of whom 20,000 were in Glasgow. In 1851 Glasgow had 80,000 Catholics, of whom 62,925 were Irish. In the same year 11-34 per cent of the population of Paisley was Irish. In 1854 an Irish Vincentian, Father J. Myers, had charge of St. Mary's, Lanark. Five years later the Irish province established a house at Lanark. They have still a house in Scotland. In 1860 the Irish Catholics of Glasgow, with their priests, were much dissatisfaction with the system in which ecclesiastical patronage was distributed. Much of the friction between the Irish and Scots Catholics ensued. The vicar of the Western District, Murdoch, carried the matter to Rome and, after an energetic struggle, won; shortly after this he died (1866), and his successor, Grey, received an Irish Vincentian, Father J. Lynch, as coadjutor. Schism threatening, Grey resigned, and Lynch was transferred to Limerick. Mgr. Eyre, promoted Apostolic delegate, succeeded to the Western Vicariate, and at last secured peace. It was during this turmoil that the Irish party first raised a cry for the restoration of the hierarchy, which had been suppressed in 1835. In 1867 the Cavan and Leitrim district of Ireland was established as a diocese. In 1874 there were 300,000 Catholics in Scotland. Today there are 518,960 of whom 380,000 are in Glasgow. Mackintosh, a non-Catholic historian, says: "The Roman Catholics in recent years have relatively increased more than any other denomination."

Of the 398 Catholic churches, chapels, and stations in Scotland in 1909, 36 (or 9-75 per cent) are dedicated to Irish saints. Of these, 12 are under the name of St. Patrick. Of the 13 priests ordained in Scotland in 1909 there were three Irish-born and one of Irish descent. One of Scotland's two archbishops is of Irish descent. The Scottish political movements noted in England apply, mutatis mutandis, to Scotland; but the social and artistic impress of Irishmen is less marked than in England. By a papal decree of 15 Dec., 1909, the Ancient Order of Hibernians in Scotland is now tolerated.

Assuming that the majority of Catholics in Scotland are Irish, the following tables are of interest. In 1901 the total Irish-born population of Scotland was 205,064, being 4,885 per cent of the population. Of the town population, 5,434 or 2,4 per cent of the country population, 2,980 per cent, and distributed as follows:—

BELLEHEIM, Hist. of Oath Ch. in Scotland, IV (Edinburgh, 1850); MACCARTHY, Hist. of Cath. Ch. in the Nineteenth Century, II (Dublin, 1909); O'BRIEN, Two Centuries of Irish History, 1821-1870 (London, 1908); and its Undying (London, 1908); DENVER, The Irish in Britain (London, 1892); BOSTOCK, St. Vincent de Paul and the Vincentians in France, England, and Scotland, and England and Wales (London, 1901); Census for Scotland (London, 1901); Journal of the Statistical and Social Inquiry Society of Ireland (Dublin, 1899-1900); Catholic Directory for Scotland, Glasgow, 1884; Statesman's Year Book (London, 1910); The Catholic Who's Who (London, 1910.)

V. IN SOUTH AFRICA.—The Catholics of South Africa are for the most part Irish, or of Irish descent. They do not form a large proportion of the general population, and the tide of Irish emigration has set chiefly towards America and Australia. Leaving out of account the missions stations founded for work among the native population, it may be said that the distribution of the Catholic churches throughout South Africa roughly indicates the chief centres where Irishmen are to be found, and the growth of the Catholic organization in the South African colonies has run on parallel lines with the increase of the Irish Catholic population. When Bishop Ulalthorne touched at Cape Town, in 1832, on his way to Australia, he found there "but a few Catholics in the strict sense." The statistical of 1909 show that there were in South Africa in that year 298 priests and 1929 religious, men and women. Repeated attempts to gain a footing for Catholicism in South Africa had ended in a dismal failure. But in 1837 a new era began when the Holy See separated the South African colonies from the Vicariate Apostolic of the Mauritius and sent as vicar Apostolic to Cape Town an Irish Dominican, the Rt. Rev. Patrick R. Griffith. Bishop Griffith's successors at Cape Town to the present day have all been Irishmen (Thomas Grimeley, consecrated 1850; John O'Farrell, consecrated 1884), and most of the churches in Cape Colony have been founded by Irish priests. Irishmen form about 90 per cent of the Catholic population of the Colony.

In 1847 Plus IX divided South Africa into the Western Vicariate (Cape Town and district) and the Eastern Vicariate (Eastern Cape Colony, Natal, etc.). Natal was erected into a separate vicariate three years later. After the rush to the diamond-fields had brought many Irish Catholics into the district, Kimberley was erected into a vicariate in 1886, and now includes the Orange River Colony. There were very few Catholics in the Transvaal and Natal prior to 1890; but when the Rand goldfield brought a rush of Irish immigrants to what is now Johannesburg. Until 1885 the handful of Catholics in the Republic were attached to the Natal Vicariate. The Transvaal was then made a prefecture Apostolic. It was erected into a separate vicariate in 1904, when an Irish prelate, the Rt. Rev. W. Miller, O.M.I., was consecrated. Natal and Rhodesia is a prefecture Apostolic which has grown out of the Zambesi mission, founded by the Jesuits before the coming of the pioneers of the South African Company brought with it an influx of white settlers. Basutoland is another prefecture, but here there is a very limited white population, the Basutos having preserved a semi-independence under the supervision of a British "resident". The Vicariate Apostolic of the Orange River, erected in 1901, is another district which has a scattered white population living in a thinly populated country, where the mission stations have mainly to do the work. Mission stations include the north-west and part of the centre of Cape Colony, its northern boundary being the lower course of the Orange River. It is interesting to note that the Church obtained its first foothold in this district in 1873, when the Cape Government handed over to Catholic missionaries a mission station in Namaqualand, which had been abandoned by the Protes-
tant Rhenish Society during the Bushman insurrec-
tions.

The census of Cape Colony, 1904, states the total population as 2,409,804, of whom 579,741 were whites. The religious census gives the total Catholic population as 37,069, of whom 28,480 were whites. This latter figure includes Catholic soldiers in garrison. Taking 90 per cent as the proportion of Irish Catholics, the total for the two vicariates (Western and Eastern) would be about 25,000. A large proportion of the priests and religious are Irish, and it has already been mentioned that the Vicar Apostolic of Cape Town is an Irish prelate. So is the Vicar Apostolic of the Eastern District at Port Elizabeth, the Rt. Rev. Hugh McCaffrey. Of the other fourteen priests and about half of the nuns and Christian brothers (167) are Irish. The nuns are mostly engaged in teaching. The Sisters of Nazareth have a house at Johannesburg.

In the scattered mission districts of the Orange River Vicariate there are very few Irish Catholics. There are perhaps twenty of them in the small white population of Basutoland. In Rhodesia there are about seven hundred. One hears of them from time to time in the narratives of the Jesuit missionaries published in the "Zambesi Mission Record". In remote regions of the mission in its earlier days the Jesuits often came upon them and were gladly received by an Irish missionary, inspector or a trooper of the mounted police. When William Woodbye was pioneering and prospecting in Mashonaland, his wagon was often for weeks at a time the centre of operations of a Jesuit missionary.

Among notable Irish Catholics in South Africa may be mentioned Sir Michael Gallewy, a lawyer of marked ability, and for many years Chief Justice of Natal; the Hon. A. Wilmot, K.G., who is Irish on the mother's side; Mr. Justice Sheil, one of the judges of Cape Colony; Sir William St. John Carr of Johannesburg; the Hon. John Daverin, M.L.C.; and Mr. Beaucleir Wippington, M.L.A., who has been the most prominent of the "Zambesi Mission Record" (monthly). The leading colleges and convent boarding-schools have their school magazines. The "Catholic Directory for British South Africa", issued annually from the Salesian Press, Cape Town, since 1904, forms a valuable aid.

The above article is based on the official census returns and on detailed communications kindly supplied to the writer by the Vicar Apostolic of the Eastern District of Cape Colony, Kimberley, and Natal. A. HILLAGT ATERIDGE.

VI. IN SOUTH AMERICA.—In the records of the Latin republics of South America there is ample evidence of the tradition of the sons of St. Patrick to assimilate themselves with whatever peoples their lot may be presently cast. A number of them took a leading part in the establishment of the independence of several of these governments, and their names are enshrined among the titular heroes of these nations.

In Paraguay, in 1555, there was a revolution headed by one Nicholas Colman. He is reputed to have been a Celt, but the records are not definite. Remembering how intimated, from a remote period, were the social and commercial relations between Ireland and Spain, the parent of most of the South American republics, it is not too much to say that, even in the sixteenth and seventeenth centuries so many Irish soldiers of fortune, and missionaries, and adventurers found their way across the ocean to the banks of the Amazon and the Plate. Ignoring Colman's claim as the pioneer, the first Irishman whose name appears without contradiction in South American history is the Jesuit Father Thomas Field, who
was born in Limerick in 1549, and spent ten years in Brazil and forty in the famous missions of Paraguay, of which, with Father de Ortega, he was the founder. At one time he was the only missionary in all Paraguay, and he lived there longer than any other member of his order. Father Thomas Field's parents were William Field, a physician, and his wife Janet Creagh. He was educated by Jesuits for three years at Louvain, and then entered the Society of Jesus at Rome, 6 October, 1574. After six months in the novitiate he showed such progress and solidity of virtue that he was allowed to volunteer for the missions in Brazil. Leaving Rome on 28 April, 1575, he reached his destination in 114 days. He took the Convent of Tucumán in Nuestra Señora la Granada, and then proceeded to Lima, where he remained two years, mainly at Coimbra. He arrived in Brazil in 1577, and in the records thereonforward his name is usually found transformed into "Filde". Here, under the guidance of the venerable Father Joseph Ancheta, the Apostle and Thadmaurges of Brazil, he took the spiritual care of his flock, and was selected to go to evangelize Tucumán and Paraguay.

Father Ancheta, in his "Annual Letter" to his superiors for the year 1581, says: "There are three fathers in Paraguay who it appears have been sent from the Congregation of Tucumán, and are bringing many thousands of barbarians to the fold of Christ, a work in which they are much helped by their knowledge of the Guarani language." And the "Letters" for 1592 and 1594 say: "Father Solano sent Fathers de Ortega and Filde to the Guarani, and it is known that they converted more than two thousand of them." "Father Thomas Filde and Father de Ortega were sent into the province of Guayrá, which lies between Paraguay and Brazil. They have a residence established at Villa Rica, and from thence they go out in missions to give spiritual help to the inhabitants. They are followed and served by them the Biaegaros, a nation of ten thousand cannibals. The two missionaries remained in Guayrá for eight years and then proceeded to Asunción." In the early part of 1605, Father Filde was the only Jesuit left in all Tucumán and Paraguay. During the thirteen years he toiled in these missions it is estimated that Father Filde and his companions baptized 150,000 Indians. It was at the village of Pirapó, that, on 2 July, 1610, 200 of these converts were gathered and formed by Father Machet Catalino into "Loretto", the first of the historic "Reductions", and the model for all the subsequent communities that made up the "Cape Province". In 1607 Father Filde was made the teacher of Guarani and other Indian languages to the young Jesuits who were being trained for the missions. In the catalogue of Irish Jesuits for 1617, Father "Thomas Field" is set down as being in Paraguay. He died at Asunción in 1620, retaining an extraordinary physical vigour to the end, in spite of heroic mortifications and zeal for souls.

With this illustrious pioneer, the record, honourable in all its details, of the Irish element in the Latin American countries begins. Its ramifications are as extended as they are curious and unexpected. At the period preceding the wars of independence of the Latin American countries with Spain, the most notable fact is the presence of Irish-born viceroys governing Mexico, Peru, and Chile for Spain. There were eight Irish regiments in the Spanish service at the opening of the eighteenth century. At its close the Napoleonic wars brought Spain as an ally of France under the new Richmond English schemes for the suppression of her South American power house and the emancipation from her rule of the several colonies there. In the invading as well as in the colonial armies Irish soldiers were conspicuous. It was then that the foundations of the chief Irish colony, that of the Argentine Republic, were laid. In 1765 a Captain MacNamara, with two partners, took Colonia (in front of Buenos Aires) from the Spaniards. His ship caught fire, and he, and all but 78 of his crew of 262, were lost. The saved were in large part Irish who settled down in the country and became the progenitors of many families with Celtic patronymics still to be found in the Argentine rural provinces. On 24 June, 1806, General William Carr Beresford, an illegitimate son of General Marquess of Waterford, at the head of a rather English expedition which had in its ranks hundreds of Irish soldiers, captured the city of Buenos Aires and held it for nearly two months, only surrendering then to overwhelming odds. Again these soldiers contributed numbers of Irish settlers to the country. On 27 June, 1807, a third English expedition under General W. G. R. Whippleton arrived off Buenos Aires. One of its regiments was the 88th, the famous "Connaught Rangers". It also lasted dismally, but left its Irish addition to the local population.

Following we come to the period, 1810–1824, when Buenos Aires was the revolutionary centre of the various efforts that led to the separation from Spain of her South American colonies, and in most of these Irwinmen and their sons were prominent. In Buenos Aires there is no name more honoured in the list of Argentine patriots than that of Admiral William Brown (q.v.). Heaney and vanguard of this section were the Englishmen, O'Farrells, Sheridan, Butlers, and others. Peter Sheridan, who arrived from Cavan early in the eighteenth century, and Thomas Armstrong from King's County were among the founders of Argentina's great wool industry. Sheridan's brother, Dr. Hugh Sheridan, served under Admiral Brown, and his son, who died at Buenos Aires in 1861, was a famous painter of South American landscapes. The interests of religion in the little Irish colony were first looked after by a friar named Burke, and when he died, Archbishop Murray of Dublin sent out by request Father Patrick Moran, who arrived in Buenos Aires in 1810. He died there the following May, and was succeeded October, 1831, by Father Patrick O'Gorman, also from Dublin, who was chaplain until his death, 3 March, 1847, his flock greatly increasing.

In the great Irish exodus following the famine years Argentina received a substantial part of the exile throng. Their counsellor and friend was the Dominican, Father Anthony D. Fahy. Born at Loughrea, County Galway, in 1804, he made his ecclesiastical studies at St. Clement's, Rome. Then he spent two years on the missions in the United States, in Ohio and Kentucky, after which he was sent to Buenos Aires, where he arrived in 1847. Fahy remained in this country, until his death from yellow fever, caught while attending a poor Italian, in 1871, is his name intimately identified with the progress and welfare, spiritual and temporal, of the large Irish community in Buenos Aires. In February, 1856, he brought out a community of Sisters of Mercy under Mother Mary O'Evangelist Fitzpatrick from Dublin, and built a spacious convent for them. To this have since been added a hospital, a boarding-school for girls, and a home for immigrants. In 1873 a branch convent was established at Mercedes about sixty miles distant. In April, 1881, the Irish religious sentiment rife in Buenos Aires drove the whole community of eighteen sisters to Australia. In the meantime the real Catholics of Buenos Aires had become ashamed of the cowardice that had allowed the Sisters of Mercy to be forced out of the city by the anti-clerical faction. Petitions were addressed to the Sisters and to the government of Argentina to Rome asking that the community be sent back. In 1890 six of the Sisters from the Mount Gambier convent, Adelaide, were permitted to return. Their old convent at Rio Bamba was restored to them; their schools reopened; a house for immigrant girls established and within a year $20,000 subscribed to put their orphanage on a sure financial footing. Fahy, moreover, had priests specially trained for this
mission at All Hallows College, Dublin, and established libraries, reading rooms, schools, and other means for improving the life of the colony.

An Irish Passionist, Father Martin Byrne, prepared the way for a foundation of his congregation, the pioneers of which, Fathers Timothy Facetti and Clement Finnegan, arrived at Buenos Aires from the United States, 14 December, 1880. In 1881 Father Facetti (James Kneale, S.C.), became the superior of their community, which in a short period was increased to fifteen priests and six novices, mostly Irish Americans. Their fine monastery of the Holy Cross was dedicated on 10 January, 1886, and the splendid church attached to it in 1897. In 1897 Father Facetti left for his novitate in Lisieux, France, near Valparaiso, Chile, and built and had dedicated on 19 May, 1898, the church attached to the monastery of St. Paul of the Cross at Sarmiento.

For many years the Irish colony at Buenos Aires included the famous statistician Michael G. Mulhall (q.v.). In the same field was William Bullin, editor of a Catholic weekly, "The Southern Cross". Born near Buir, Kings County, in 1862, he arrived at Buenos Aires in 1884, and spent several years in ranch and commercial life, during which, over the pen-name "The Buono", he contributed "Tales of the Pampas" and "Sketches of Buenos Aires life and institutions. In 1892 he joined forces with Michael Dineen and became a member of the staff of "The Southern Cross", which had been established in 1874, and finally its proprietor and chief editor, in which capacity he was a leader of the thought and progress of the Irish Argentine community. He died in Ireland during a visit there, 2 February, 1910. Another weekly paper circulating in this section is the "Hiberno-Argentine Review". It is estimated that the Irish form about one per cent of the population of Argentina. As the official statistics record them in the tables of natives of Great Britain, positive figures from that source are unavailable. The unmistakable names show, however, that they are well represented in all the walks of political, commercial, professional, and social life.

Chile and Peru revere the memory of a famous Irishman, Ambrose O'Higgins (q.v.), the "Great Victor" (1756-1801), President of Peru (1797-1801), the Dictator of Chile (1776-1842). In more recent years, Peru and Chile owed much to the enterprise of another Irishman, William R. Grace (q.v.). In 1851 he began his extensive business at Callao, Peru, with his partner, John Bryce. General John Mackenna, a noted力 of the battle of Chacabuco, 1817, who came from Ireland, was sent when a boy to his uncle, Count O'Reilly, at Madrid, and graduated from the military academy at Barcelona, in 1787. In 1796 he went to Peru, where he became one of the leading government functionaries. He was on a public work in Chile when the revolution against the Spaniards broke out in September, 1810, and espoused the patriot cause in which, under Bernard O'Higgins, he did remarkable service. He was killed in a duel on 21 November, 1814. Vicuna Mackenna, the statesman and historian of later years, was his grandson. Other Irishmen notable in South American history are Generals John Thomson O'Brien, Daniel Florence O'Leary, and John Devereux. O'Brien was born in the south of Ireland in 1790 and reached Buenos Aires in 1816. He was with San Martín's army during the campaigns of Chile and Peru, and at the conclusion of the war, in 1823, turned his attention to mining work which proved so remarkable an engineering feat. He visited Europe in 1847 as a diplomatic agent and tried to direct Irish immigration to South America. He died at Lisbon in May, 1861.

In January, 1819, General John Devereux, who is styled the "Lafayette of South America", because he had offered his sword and fortune to Simón Bolívar, the Liberator of Bolivia, was commissioned by the latter to go to Ireland and enlist an Irish legion for the aid of the revolution. He landed nearly 2000 men in South America in January, 1820. The legion won the decisive battle of Carabobo on 24 June, 1821. Among its officers was Colonel (afterwards General) Daniel Florence O'Leary (b. at Cork, 14 Feb., 1801; d. at Rome in 1868). He, employed by Bolivar on important diplomatic missions, compiled his memoirs, letters and documents, by his son, were published by the Venezuelan Government. General John O'Connor, who claimed to be a descendant of the last King of Ireland, raised a regiment of volunteers and brought them to Peru at his own expense and fought all through the campaigns of Peru and between Peru and Granada. After the end of hostilities he was made Minister of War in Bolivia and died in 1870 at an advanced age. Among other Irish soldiers of note in these wars might be mentioned Major Thomas Craig, Major John King, Colonel Charles O'Carroll, Lieut. Colonel Moran, Captain Charles Murphy, and Lieutenant Maurice O'Connell. All through these Latin republics there are hundreds of families, the grandchildren of these men, who bear these and other Irish names, but who are as Spanish in language and character as any of their compatriots of pure Spanish descent.

In Argentina an enterprise is engaged in the reprinting of "SOUTHERN HISTORY OF IRELAND (London, 1810; Spanish tr., Rio de Janeiro, 1862); GAY, HISTORIA (i.eu y politicas de Chile (Santiago, 1844-1845); SIMON B. O'LEARY, BOLIVIA (Caracas, 1879); DAWSON, SOUTH AMERICAN REPUBLICS (London, 1893); MARKAM, HISTORY OF PERU (Chicago, 1893); ARANA, HISTORIA GENERAL DE CHILE (Santiago, 1884-86); MARMOR, MCM, MCCALL, EXPLORERS IN THE NEW WORLD (London, 1909); FITZGERALD, IRELAND AND HER PEOPLE (Chicago, 1906-1910); WEBB, COMPREHENSIVE IRISH BIOGRAPHY (Dublin, 1878); HOOD, DISTINGUISHED IRELANDS OF THE SIXTEENTH CENTURY (London, 1899); CARR, NAT. BISH., v. 2; THE IRISH IN THE ARGENTINE PROVINCES (Buenos Aires), files. Also the bibliographies for the articles on the several Latin American countries.

THOMAS F. MEEHAN.

Irish College, in Rome.—Towards the close of the sixteenth century, Gregory XIII had sanctioned the foundation of an Irish college in Rome, and had assigned a large sum of money as the nucleus of an endowment. But the pressing needs of the Irish chieftains made him think that, under the circumstances, the money would be better used by supplying the Irish Catholics with the sinews of war in Ireland as by founding a college for them at Rome. The project was revived in 1625 by the Irish bishops, in an address to Urban VIII. Cardinal Ludovisi, who was Cardinal Protector of Ireland, resolved to realize the plan at his own expense and the last memorial of his protectorate, the desire expressed to the pope by the Irish bishops. A house was rented opposite Sant' Isidoro, and six students went into residence 1 January, 1628. Eugene Calahan, archdeacon of Cashel, was the first rector, but Father Luke Wadding being a sort of supervisor, Cardinal Ludovisi died in 1632; he was of a princely family with a large patrimony, and he made provision in his will for the college; it was to have an income of one thousand crowns a year; a house was to be purchased for it; and he left a vineyard at Castel Gandolfo where the students might pass their villæggiatura. To the surprise of his heirs no less than of Father Wadding, the cardinal's will directed that the college should be placed under the charge of the Jesuits. Both the heirs and Wadding suspected that provision and disputed it; a protracted lawsuit was finally decided in 1639. On 8 Feb., 1635, they took charge of the college, and governed it till 1772. A permanent residence was secured, which became the home of the Irish students until 1798, and is still the property of the college; it has given its name to the street in which it stands. The Jesuits found eight students before them: one of these, Philip Cleary, after a brilliant
academic course, left for the mission in Ireland in 1640, and suffered death for the Faith ten years later. The first Jesuit rector became General of the Society; he was Peter Walsh, who became a successor in 1637 by Father William Malone, a successful combatant in controversy with Archbishop Usher. In 1650 Monsignor Scarampi of the Oratory, on his return from his embassy to the Kilkenny Confederation, brought with him two students to the Irish college. One was Peter Walsh, who became a distinguished Oratorian; the other was Oliver Plunket, who was kept in Rome as professor at Propaganda until his appointment to the See of Armagh in 1670, whence he was promoted to a martyr's crown at Tyburn. Philip Cleary's name is amongst those with his, in the Congregation of Rites: and the cause of Oliver Plunket is so far advanced that his Alma Mater hopes ere long to venerate him on the altar of its chapel. In the archives of the college is preserved an autograph of Oliver Plunket, written by him when he was about to leave. John Burgue, was one of his contemporaries, also became professor at Propaganda; whence he was appointed Bishop of Waterford, and then Archbishop of Cashel. Soon after came several remarkable students—Ronan Maginn; James Cuaack, Bishop of Meath; Peter Creagh, successively Bishop of Cork and Clayne, and Dublin.

In the early part of the eighteenth century, one of the students, Roche MacMahon, made his name in Irish history as Bishop of Clogher; another, Hugh MacMahon, Archbishop of Armagh, asserted the precedence of that see to Dublin in a work of great learning, "Jus Primatiae Armachaneum". Richard Reynolds at the end of his course was kept in Rome as tutor to the children of the Pretender; James Gallagher became Bishop of Kildare. When we consider that the college had never more than eight students at a time, and had often so few as five, if it had produced no other distinguished alumni than those named, it would have well deserved these words written by the Irish primate, Hugh MacMahon, to the rector: "If the college on account of its slender resources cannot furnish many soldiers, it provides brave and skilful captains." It was then known as the "Seminarium Episcoporum," and was of the open type in all other ways, however, the college had its trials and changes. It came into financial difficulties. The college at Castel Gandolfo was sold to the Jesuit novitiate in 1657, and yet the difficulties did not disappear. It was thought, moreover, that too large a proportion of the able students were being drawn away from the college, which trained them for the mission in Ireland. Complaints as to administration were also made, and a Pontifical Commission was deputed to make an official inquiry. Its report was not favourable to the Jesuits, and in September, 1727, the college was put under the control of the government. The present writer thinks that the Jesuits were not without some plausible pleas to justify their management of the college; and it would be strange if a close inquiry into a rectorate of 137 years did not reveal some instances of mismanagement. The college now passed from the care of the Jesuits, and an Italian priest, the Abbate Luigi Cucagni, was made rector. He was a man of acknowledged ability. Hurter says that he was the ablest of the controversialists who wrote against that form of Jansenism which was patronized by Joseph II., supported pontifically, and had its origin in the University of Pavia. He was the author of several works which were in high repute in those days; and from the Irish College he edited the "Giornale Ecclesiastico di Roma," then the leading Catholic periodical in Rome. The first prefect of studies appointed under his rectorate was the famous Pietro Tamburini, who afterwards became the leader of Jansenism at Pavia. During his prefectship he defended his lectures and published several works which were afterwards published at Pavia. He had to leave the college after four years; and although some very brilliant students were there in his time, it does not appear that he tried to leave, or if he tried, that he succeeded in leaving, any unorthodox influence on their minds. The rectorate of Cucagni came to an end in 1738, when the college was closed by order of Napoleon; and thus we come to the close of another period of its history. During those twenty-six years it quite equalled its previous prestige. For, although the number of its students was sometimes as low as three, it sent forth Dr. Lanigan the historian, who was promoted directly from being a student of the Irish College to the chair of Scripture at Pavia; Dr. Charles O'Connell, author of "Scriptores Rerum Hibernicarum," and several other works; James B. Clerig, who never became a priest, but was a well-known Catholic leader in Ireland a century ago; Dr. Ryan, Bishop of Ferna; Dr. McGrady, Conventor Bishop of Cork; Dr. Blake, Bishop of Dromore.

Dr. Blake, who was the last student to leave the college at its dissolution in 1798, returned a quarter of a century later to arrange for its revival, which was effected by a Brief of Leo XII., dated 18 Feb. 1858. He became the first rector of the college, and amongst the first students who sought admission was Francis Mahony, of Cork, known to the literary world as Father Prout. Having set the college well at work, Dr. Blake returned to Ireland, and was succeeded by Dr. Boylan, of Maynooth, who soon resigned and died in 1830. He was succeeded by a young priest who had just completed a singularly brilliant course at Propaganda, and who governed it with great success till 1849, when he became Archbishop of Armagh, then Archbishop of Dublin, and finally Cardinal Cullen. Within two years of his rectorate he had forty students in the college; and to provide proper accommodations for the increasing numbers who sought admission, the present building with the church of St. Agatha was given to the college in 1835 by Gregory XVI. Two years later Dr. Cullen purchased a fine country house for the seminary of the college; and he took the olive groves which cover the slopes of the Sabine hills near Tivoli. Amongst the distinguished students who passed through the college during Dr. Cullen's rectorate were: Rev. C. P. Meehan; Dr. Edmund O'Reilly, S.J.; Archbishop Croke; Cardinal Moran; and Archbishop Hunt of Bristol.

Dr. Cullen was succeeded by Dr. Kirby, well known for his holiness of life. He governed the college for more than forty years. His successor was Michael Kelly, the present conlocutator to the Archbishop of Sydney. The college has received several privileges of various kinds from popes. Before 1870 the students had the privilege of carrying the baldacchino, a part of the way during the procession on the feast of Corpus Christi, on which occasion the pope carried the Blessed Sacrament. Gregory XVI paid a visit to the college in 1837; and on St. Patrick's Day, 1860, Pius IX assisted at Mass in the college church, after which he held a reception at the college. In memory of his visit he presented a rich set of vestments to the college. A similar gift was made to the college during this present year (1899) by Pius X, in memory of his jubilee. The heart of Daniel O'Connell is buried in the college church.

Archives of the Irish College, Rome: La Relazione del Cardinale Marcovich; Hurter, Nomenclator; Giornale Ecclesiastico di Roma (1780-1798).

M. O'rIordan.

Irish Colleges on the Continent.—The religious persecution under Elizabeth and James I led to the suppression of the monastic schools in Ireland in which the clergy for the most part received their
education. It became necessary, therefore, to seek education abroad, and many colleges for the training of the secular clergy were founded on the Continent, at Rome, in Spain and Portugal, in Belgium, and in France. The history of the Irish college and of the other Irish establishments at Rome is dealt with in special articles (see Irish Colleges, The, in Rome, etc.). That of the oldest Irish college in Ireland was for the sake of order, be given in separate sections, according to the countries in which they existed.

In Spain and Portugal.—Salamanca.—The most famous of the Irish colleges in Spain was that of Salamanca, founded, at the petition of Father Thomas White, P.P., at Salamanca, to enable Irish clergy to attend the大学 and opened in 1593 with the title: El Real Colegio de Nobles Irlandeses. The support of the students was provided for by a royal endowment. The discipline and management of the college was entrusted to the Jesuit Fathers at Salamanca, an Irish father holding the office of vice-rector. The Jesuits continued to govern the college until the order was expelled from Spain in 1677. Since that date the rectors of the college have been selected from amongst the Irish secular clergy, presented by the bishops of Ireland and confirmed by the King of Spain. Dr. Birmingham was the first rector after the departure of the Jesuits. Dr. Curtis, subsequently Archbishop of Armagh, held that office from 1781 to 1812, and rendered valuable service to the Duke of Wellington during the Peninsular War. In more recent years Dr. William McDonald, of the Diocese of Armagh, Dr. Cowan, of Dromore, Father Bernard Maguire, of Clogher, have been rectors. That office is at present held by the Very Rev. Michael O'Doherty, D.D., a priest of the Diocese of Achony. The Irish college at Salamanca was open to students from all the provinces of Ireland, but in the seventeenth century there was a selection from the western, and eastern provinces. It was made cause of complaint that Father White, S.J., was unwilling to receive students from Ulster and Connaught, and the exiled Irish chiefs, O'Neill and O'Donnell, presented a remonstrance on the subject to the King of Spain. The students attended lectures in the famous University of Salamanca, and the college was the nursing mother of many eminent Irish ecclesiastics. Dr. Curtis of Armagh, Dr. Murray of Dublin, Dr. Kelly of Tuam, Dr. Laffan, and Dr. Everard of Cashel were all alumni of Salamanca, the last four being fellow-students. At present the Irish students at Salamanca are decided against sending their sons to the diocesan seminary which has taken the place of the theological faculty of the ancient university. The college is supported chiefly by ancient endowments, which are subject to the control of the Spanish Government.

Seville.—About 1612 a college for Irish students was established at Seville, and managed by secular priests, one of whom was Theobald Stapleton, who afterwards died a martyr in Ireland, being stabbed while administering Holy Communion. In 1619 Father Richard Conway, S.J., was appointed rector. When he entered upon office, the personnel of the college—superiors, students, and servants—amounted to eighteen. They suffered much from poverty. Their condition moved many to compassion. The fishermen at Seville obtained an indulit from Pope Paul V, permitting them to fish on six Sundays and holy days. The profits of their labour for the support of the Irish students. For the same purpose Irish merchants at Seville granted to the college a percentage on every cask of wine they sold. Soldiers of the Irish Brigade in the Spanish service gave a portion of their pay. With assistance besides the college was able to send every year two priests to the Irish mission. One of the students of the college, Dominc Lynch, became professor in the University of Seville. In 1769 the Irish college at Seville, with all its goods, rents, and rights, was, by royal authority, amalgamated with that of Salamanca.

Madrid.—In 1629 a college for Irishmen was founded by Father Theobald Stapleton, who has already been mentioned in connexion with the college at Seville. The number of students varied from ten to twenty, supported by the charity of benefactors. The college served as a hospice for those Irish ecclesiastics who, having completed their studies, came to the capital to claim the bounty of £10 which the King of Spain had granted to Irish students in the chancellorship of the university. In 1677, Dr. James Lynch, Archbishop of Tuam, resided for some time at Madrid and succeeded in restoring the college to greater prosperity. But eventually it was closed, and its property lost to the Church in Ireland.

Alcalá.—In Alcalá, anciently Complutum, famous for its university, and for its polyglot edition of the Bible, an Irish college was founded in 1590, by a Portuguese nobleman named George Syleneis, a descendant, through his mother, of the Macdonnells of Ulster. He bestowed on the college an endowment of the value of £200 a year, and at a cost of £200 built a chapel dedicated to his patron, St. George. At Alcalá there were four masters, twenty students, and eight servants. This ancient college has long since ceased to exist.

Santiago de Compostela.—In 1605 a college for Irish ecclesiastics was founded at Compostela. Philip III bestowed upon it an endowment of £100 a year. It was under the direction of the Jesuits. In 1671 there were six students. At the conclusion of the philosophy course all went to Salamanca for their theological studies. In 1709 the property of the Irish college at Compostela was amalgamated with that of the college at Salamanca.

Lisbon.—Besides the colleges in Spain there existed also an Irish establishment at Lisbon. The college was founded by Royal Charter in 1593, under the title: Collegio de Estudiantes Irlandeses sub invo- caçao de San Patricio en Lisboa. Like the other Irish colleges in the Peninsula it was placed under the management of the Jesuits. The celebrated Stephen White, S.J., was one of its earliest pupils. During the great earthquake which almost destroyed the city of Lisbon in 1755, the Irish college and its inmates suffered no injury. Not long after it suffered from the malice of enemies. In 1761 it was entirely confiscated by Pombal, under the pretext that it was a Jesuit establishment. But in 1782 an Irish secular priest, Dr. Michael Brady, succeeded in having the college restored to the Irish. Dr. Brady was succeeded in the office of rector by Dr. Bartholomew Crotty, subsequently President of Maynooth, and Bishop of Cloyne. Dr. Crotty held the office of rector from 1801 to 1811. During his tenure of office an invitation was addressed by Dr. John Baptist Walsh, rector of the Irish college in Paris, to the students at Lisbon, to come to his college in Paris, an invitation of which the bishops of Ireland expressed their disapproval. The number of students in the Irish college at Lisbon in the eighteenth century was from twelve to fourteen. During the French Revolution it increased to thirty or forty, to fall again to fourteen after 1815. Dr. Burke, Archbishop of Tuam; Dr. Griffin, Bishop of Roscommon; Dr. Carpenter, Archbishops of Dublin; Dr. Verdon, Bishop of Ferns, and Dr. Kelly, Bishop of Waterford, were Lisbon students. During the civil war in Portugal, in the nineteenth century, the college was closed, and has not since been reopened.

In Spain the secular clergy at Lisbon there was also a convent of Irish Dominican Fathers, and a convent of Irish Dominican
nuns, both of which exist at the present day, the former at Corpo Santo, Lisbon, and the latter at Belem in the vicinity.

Tournai.—While the colleges in the Peninsula were doing good service for the preservation of the Faith in Ireland, other colleges for the same purpose were established in Flanders. In 1624 a college for the education of priests, with the title "Collegium Pastorale," was founded at Louvain, in virtue of a charter granted by the Holy See as an instance of the Most Rev. Eugene Maehamon, Archbishop of Dublin. Urban VIII gave a donation for the support of the college, and the Sacred Congregation of Propaganda bestowed upon it an annual allowance of 240 scudi. Burses were also founded by various benefactors, and the aggregate value of the endowment amounted to 75,217 florins. The first rector of the college was Nicholas Aylmer. The students at the commencement were six in number. In 1643 there were four priests, and three students in philosophy. At the close of the eighteenth century the number had increased to forty. Many distinguished Irish ecclesiastics were students of the pastoral college at Louvain. One of its rectors, Thomas Stapleton, held also the office of rector of the university for several terms.

Besides the secular colleges, convents for the Irish regular clergy were established at Louvain. Of these the most ancient and the most important was the Franciscan College of St. Anthony of Padua, founded in 1606 at the request of Florence Conry, Archbishop of Tuam. The number of Irish friars at St. Anthony's in the seventeenth century was about forty. In this convent lived John Colgan, the celebrated Irish hagiologist, author of the "Tract Thaumaturga" and of "Lives of the Irish Saints." Here, too, lived Hugh Ward, Father Mooney, Brendan O'Connor, and Bonaventure O'Doherty, who so ably assisted Michael O'Leary in collecting materials for the great work known as the "Annals of the Four Masters." The Franciscans of St. Anthony's did great service to the cause of religion by printing books of instruction in the Irish tongue. At Louvain were printed the Irish Catechism of Bonaventure O'Hussey (1608), "The Mirror of Penance," by Hugh Maccaughwell (1611), "The Mirror of Religion," by Florence Conry (1626). "O'Leary's Vocabulary of the Soul," by Anthony Gerson (1645), and a moral treatise in English and Irish, by Richard MacGilla-cuddy (Arsdakin) (1667). It has been truly said of the convent of St. Anthony of Padua at Louvain, "No Franciscan College has maintained with more zeal than this, the character of the order, as is evident in their motto Doctrina et Scientia." At the close of the eighteenth century the number of friars at St. Anthony's was seventeen. In 1796 the convent was closed to the Irish, and sold. There existed also at Louvain a convent of Irish Dominicans founded in 1608, and known as the convent of Holy Cross. In 1627 there were twelve fathers in this convent. A letter of the nuncio at Brussels, in 1675, gives the names of thirty-three Dominicans, who had gone from Holy Cross to labour on the mission in Ireland. The Irish Dominican convent at Louvain was closed in 1797. A convent of Irish Benedictine nuns was established at Ypres in 1652 where for more than two centuries Irish women aspiring to religious perfection found a home. This convent has survived to the present day (1910). The colleges, secular and regular, at Louvain during the two centuries of their existence included in Ireland 32 bishops and about 300 priests, of whom 200 at least were graduates in arts of the University of Louvain.

Antwerp.—In 1629 a pastoral college was founded at Antwerp by the Rev. Lawrence Sedgrave, a Leinster priest, who, together with his nephew, the Rev. James Talbot, expended 19,220 florins on the establishment of the college, and became its first rector, as his nephew became its second. After their time the college suffered much from poverty and was on the point of being closed and sold to the creditors. But during the rectorate of John Egan, prothonotary Apostolic, it received a fresh impulse. Donations were received, and creditors satisfied. Through the pro-nuncio at Brussels, the Holy See sent subventions from time to time. The number of students, usually about twelve, increased eventually to thirty. They attended lectures at the Jesuit college at Antwerp, where their distinguished countryman, Fr. Richard Archdeacon (Arsdakin), S.J., died in 1699. The pastoral colleges at Louvain and at Antwerp continued to flourish until 1795, when they were closed on the one part by the French, and on the other part by the British. At various times the bishops of Ireland made representations to the Belgian Government with a view to obtain the transfer of the burses to Ireland, and they have been so far successful that at the present time the annual revenue of the burses is paid through the medium of the university. A college was founded as early as 1845 for the education of students at Maynooth College.]

Tournai.—An Irish college was founded at Tournai by Christopher Cusack. In 1689 there were eight ecclesiasties at Tournai, with an income of 200 scudi. Choiseul, Bishop of Tournai, in a letter to Innocent XII, speaks thus of the Irish college: "We have here a college of seminary of Irish youth where some poor students are supported, receive a Christian education, and are taught the Humanities. They attend the classes at the Jesuits, and are generally the first in merit." The Tournai college, like those at Louvain and Antwerp, was closed in 1795. In 1793, at the instance of the Most Rev. Dr. O'Higgins, Bishop of Ardagh, the Belgian Government consented to transfer to the Irish college in Rome the sum of 4000 francs from the funds of the old Irish college at Tournai.

In France.—The colleges in the Peninsula and in Flanders rendered great service to the Church in Ireland. But the most important of all the Irish colleges on the Continent were those established in France.

Douai.—The most ancient amongst these was the college at Douai, founded about 1577 by the Rev. Ralph Cusack. Douai was a French parish in territory subject to Spain, and in 1604 Philip III conferred on the Irish college in that town an endowment of 5000 florins. In 1667 Douai was taken by Louis XIV, and the Irish college there became subject to French authority. For some years means of subsistence were secured at the University of Paris, and in 1795 the college recovered its prosperity. It was subject to a board of provisors who nominated the rector from a list of three candidates presented by the superiors of the Irish college in Paris. The students, about thirty in number, attended lectures at the University of Douai. In 1793 the college was closed, and in 1795 the buildings, valued at 60,000 francs, were alienated by the French Government.

Lille.—An Irish college was founded at Lille by Ralph Cusack in virtue of letters patent granted in 1610 by the Archduke Albert, and Isabella, Infanta of Spain, then Governors of the Netherlands. Foundations were made for the education of students from the Province of Leinster, more particularly for those from Meath. The right of nominating the rector was vested in the superior of the Irish Capuchins at Bar-sur-Aube. The college suffered much from poverty. Its means of support were derived partly from collections made at the church door, and partly from fees received for the services the students rendered by carrying the dead to funerals. The study and use of the Irish language was encouraged, and no one unacquainted with that tongue was eligible to the office of rector. The students numbered from
eight to ten, exclusively from Leinster. The college, which was valued at 20,000 francs, was confiscated and sold in 1793.

**Bordeaux.**—In 1603, the Rev. Dermot MacCarthy, a priest of the Diocese of Cork, made his way to Bordeaux with about forty companions. These Irish exiles, though forcibly received by Cardinal Sunier, Archbishop of Bordeaux, who gave them a house and placed them in charge of the church of St. Eutropius. The rules of the Irish community were approved by the archbishop in 1603, and again in 1609, and were finally ratified by Paul V, in the Bull "In supremo apostolica figuratione," 26 April, 1613. In the nearby students of Bordeaux, like the Petit Lille, derived their support from alms collected at the doors of the churches in the city, and from fees received for their services at funerals. In 1653, at the conclusion of the War of the Fronde, about 5000 Irish troops, previously in the service of Spain, at the suggestion of Father Cornelius O'Scanlan, rector of the college at Bordeaux, elected to take service under the flag of France. In acknowledgment of the seal of Father O'Scanlan for the interests of France, the queen regent, Anne of Austria, bestowed on the college an endowment of 2000 livres a year, as a support of ten priests and ten clerics, and conferred on the students the privilege of naturalization to enable them to receive gifts and possess benefices in the kingdom. On the same occasion the title of "Sainte-Anne-la-Royale" was given to the college. Besides the endowment of Anne of Austria, various bequests were made by benefactors; yet in 1766 the total annual revenue of the college amounted only to 2531 francs. From twenty in the seventeenth century, the number of students increased in the eighteenth, to thirty, and eventually to forty. They attended the classes at the University of Bordeaux. Here, too, Geoffrey Keating is said to have been a student. The Abbé Edgeworth and Dr. Richard O'Reilly, subsequently Archbishop of Armagh, studied for a short time at Bordeaux, whence the former proceeded to Paris, and the latter to Rome. The last superior of the college was the Rev. Martin Glynn, D.D., a native of the Diocese of Tuam, who suffered death by sentence of the Revolutionary tribunal, at Bordeaux, 19 July, 1794. The vice-rector of the college, Dr. Everard, escaped. The students were cast into prison, but were eventually liberated and put on board a vessel bound for Ireland. The college church, valued at 21,000 francs, was confiscated in 1793. The college was also seized but was saved from confiscation by the vigilance of an Irish priest named James Burke. After the Revolution, all that remained of the property of the college was the books. In 1825, the College of France was the first consul under the control of the board of administrators of the Irish college in Paris. In 1885 the property at Bordeaux was sold for 285,635 francs, and the price invested in French securities in the name of the "Fondations Catholiques Irlandaises en France".

**Toulouse.**—From the commencement of the seventeenth century there existed at Toulouse a little colony of Irish ecclesiastical students. The Irish college in that town owes its origin to Anne of Austria, who bestowed upon it, at the same time as upon the college of Bordeaux, the title of "Sainte-Anne-la-Royale", with an endowment of 1200 livres a year for the support of twelve priests. The endowment was confirmed by Louis XIV in 1659. At Toulouse, were a number of students, the progeny of the ten native Bretons on 31 August, 1753. The course of studies extended over a period of eight years, during which the students returned to the mission in Ireland. When the French Revolution broke out, the college possessed an annual revenue of 10,000 francs. In 1793 the college buildings and furniture, valued at 36,700 francs, were confiscated and sold by the French Government. Nantes, on the coast of Brittany, was also the seat of an Irish college founded about 1680. In 1728 a new and more commodious college was constructed, and in 1765, by royal letters patent, the priory of St-Crispin was united with it. The number of students, at first about thirty-five, increased to sixty in 1765, and by 1792 it had reached eighty. The college was subject to the University of Nantes, but it had its own staff of professors—two for philosophy, and two for theology—who were obliged each term to report to the authorities of the university the names of their students and the treatises they were to explain. The last rector of the college was Dr. Patrick Byrne, subsequently president of Maynooth College. In 1793 the students of the college were cast into prison and then put on board a vessel which brought them to safety. This college was not reopened in the nineteenth century. The buildings which escaped alienation were placed under the control of the administrators of the Irish college in Paris. They were sold, with the sanction of the Minister of Public Instruction, in 1857, and the proceeds of the sale (100,000 francs) invested in the name of the "Fondations Catholiques Irlandaises".

**Poitiers.**—A college of the Irish Jesuits was founded at Poitiers, in virtue of letters patent granted by Louis XIV, in April, 1674. Five burses for the education of students for the secular priesthood were founded here, two in 1738 by Mrs. John Maher, an Irish lady resident at Bordeaux, and three in 1746 by Jemima Crowly, of Cork, in 1735. On the suppression of the Jesuits in France, these five burses were transferred to Paris. The college buildings, valued at about 10,500 francs, were alienated by the French Government. The Abbé Thomas Gould was a student of this college; known as the Missionary of Poitou, he preached with great success in French, and published several works in that language. The Irish Franciscans had convents in provincial France, at Bar-sur-Aube, at Sedan, and at Charleville, and for some years a convent in Paris. The most important of the Irish establishments in France, and on the Continent, was the Irish college in Paris. That venerable institution, which has preserved its existence to the present day, owes its origin to the Rev. John Lee, an Irish priest who came to Paris, in 1578, with six companions, and in 1579 founded the College of France. After his studies he became attached to the church of Saint Severin, and made the acquaintance of a French nobleman, John de l'Escalepier, President of the Parliament of Paris. That charitable man placed at the disposal of the Irish students in Paris a house which served them as a college, and became the first rector about 1605. By letters patent dated 1623, Louis XIII conferred on the Irish priests and scholars in Paris the right to receive and
In 1792 the two Irish colleges in Paris, namely the Collège des Lombards, and the junior college, rue du Cheval Vert, were closed, as were all the other Irish colleges in France. The closing of the colleges on the Continent encouraged the bishops of Ireland of the means of educating their clergy. They therefore petitioned the British Government for authorization to establish an ecclesiastical college at home. The petition was granted, and Maynooth College was founded in 1795. In support of their petition the bishops submitted a statement of the number of Irish ecclesiastics receiving education on the Continent when the French Revolution began. It runs thus:—

From this statement it appears that out of a total of 478 Irish ecclesiastics receiving education on the Continent, 348 were resident in France, and of these 180 were students in the Irish colleges in Paris. More than one-half, therefore, of all the Irish secular clergy in the eighteenth century were educated in France, and more than one-third in Paris. During the seventeenth and eighteenth centuries, forty students of the Irish college in Paris were raised to the episcopal bench. At the same period Irishmen held an honourable place in the University of Paris. Between 1650 and 1750, more than sixty Irishmen held the office of professor of law in one of the four sections of the faculty of arts in the ancient university. Dr. Michael Moore, an Irish priest, long held the office of principal of the Collège de Navarre, and was twice elected rector of the university. Many Irishmen held chairs in the university colleges. Irish colleges also existed at the Sorbonne. Dr. Power was professor at the college of Lisleux; Dr. O'Longeran at the college of Reims. Dr. John Plunket, Dr. Patrick J. Plunket, and Dr. Flood, superiors or provosts of the Irish college, were in succession royal professors of theology at the Collège de Navarre. The students of the Irish college in Paris were pronounced opponents of Jansenism. When they returned to their native land, they, like the students of Rome, Salamanca, and Louvain, brought with them "the manners and feelings of cultivated gentlemen and a high sense of clerical decorum".

After the French Revolution the Irish college in Paris was re-established by a decree of the first consul, and placed under the control of a Board appointed by the French Government. To it were united the remnants of the property of the other Irish colleges in France which had escaped destruction. The college in Paris lost two-thirds of its endowment owing to the depreciation of French state funds, which had been reduced to one-third consolidated. The total loss sustained by all the Irish foundations in France amounted to 2,416,210 francs, or about 483,000. After the Restoration, the French Government

possess property. The Irish college was recognized as a seminary by the University of Paris in 1624, and at that time it had already sent a large number of priests to the mission in Ireland. But the college foundered among the attentions of St. Vincent de Paul and others, who sought to provide them with a more commodious residence. Later still, in 1672, it engaged the attention of the bishops of Ireland, who deputed Dr. John O'Molony, Bishop of Killala, to treat with Colbert as to the establishment of a new college. What the bishops desired was eventually obtained through the influence of two Irish priests resident in Paris: Dr. Patrick Maginn, formerly first chaplain to Queen Catherine, wife of Charles II of England, and Dr. Malachy Kelly, one of the Chaplains of Louis XIV. These two ecclesiastics obtained from Louis XIV authorization to enter on possession of the Collège des Lombards, a college of the University of Paris founded for Italian students in 1333. They rebuilt the college, then in ruins, at their own expense and became its first superiors. The acquisition of the college was confirmed by letters patent dated 1677 and 1681. Some years later the building was extended by Dr. John Farsley, and all the Irish ecclesiastical students in Paris found a home in the Collège des Lombards. The number of students went on increasing until, in 1764, it reached one hundred and sixty. It was therefore found necessary to build a second college. The building was commenced in 1776, in rue du Cheval Vert, now rue des Irlandais, and the junior section of the students was transferred to the new college in 1776.
placed at the disposal of the British Government three million and a half sterling, to indemnify British subjects in France for the losses they had sustained during the Revolution. In 1816 a claim for an indemnity was presented on behalf of the Irish college. That claim was rejected by the Privy Council in 1826 on the ground that the building was in a state of repair. In 1832 the claim was renewed by Dr. M’Sweeney, rector of the college, with the same result. Another attempt to obtain compensation was made by the Rev. Thomas McNamara in 1870. On 9 May in that year a motion was made in the House of Commons for the appointment of a select committee to inquire into the claims of the college to compensation for losses sustained during the French Revolution. The motion was introduced on 30 April, 1876, by Isaac Butt, M.P. for Limerick, and, after a prolonged discussion, it was negatived by 116 to 54 votes.

After 1805 the administration of the college was subject to a “Bureau de Surveillance” which gave much trouble until it was dissolved by Charles X, in 1824. After that date, the superior appointed by the presentation of the four archbishops of Ireland, became official administrator of the foundations, subject to the minister of the interior, and at a later period to the minister of public instruction. The students no longer frequented the university. The professors were Irish priests appointed by the French Government on the presentation of the Irish episcopate. In 1858, with the sanction of the Sacred Congregation of Propaganda, and with the consent of the French Government, the bishops of Ireland placed the management of the college in the hands of the Irish College Society. In recent years the number of students has been between sixty and seventy. They are nominated on the nomination of the bishops, and, after a course of two years in philosophy and four years in theology, they are ordained and return to Ireland. In the nineteenth century the college gave to the Church a long array of good priests and bishops, including Dr. Fitz Patrick, Abbot of Mellary; Dr. Maginn, Coadjutor Bishop of Derry; Dr. Keane, of Cloyne; Dr. O’Hea and Dr. Fitz Gerald of Ros, Dr. Gillooly of Elphin, and Dr. Croke of Cashel. Dr. Kelly, the present Bishop of Ros, and Dr. MacSharry, of Ennis, were educated in the College. Dr. Fort Elizabeth, South Africa, are also alumni of the college. The present occupant of the see of St. Patrick, H.E. Cardinal Logue, held the chair of dogmatic theology from 1866 to 1874.

In the three hundred years of its existence the college has not been without a share in the ecclesiastical literature of Ireland. Among the rectors of the college have been Thomas Messingham, prothonotary Apostolic, author of the “Florilegium Insulæ Sanctorum” (Paris, 1624); Dr. Andrew Donlevy, author of an “Anglo-Irish Catachism” (Paris, 1749); Dr. Daniel O’Collins, rector of St. Mary’s College (Dublin, 1852); Father Thomas MacNamara, author of “Programmes de Sermons” (Dublin, 1880), “Enchiridion Clericorum” (1882), and several other similar works. Abbé Magecoghegan, Sylvester O’Hal- laran, Martin Haverty, and probably Geoffrey Keating, all eminent Irish historians, were students of the college. Dean Kinane, a student and then a professor in the college, is widely known for his “Dove of the Tabernacle” and numerous other devotional works. More recently, the Rev. John MacGuinness, C.M., vice-rector, has published a full course of dogmatic theology. Among the students of the college, Dr. John Farey and Dr. John Baptist Walsh, in the eighteenth century, and Dr. MacSweeney and the Rev. Thomas MacNamara, in the nineteenth, have been administrators of marked ability. Since

1873, the administration of the property of the college has been vested in a board created by a decree of the Conseil d’Etat. On that board the Archbishop of Paris was represented by a delegate, and he was also the official medium of communication between the Irish episcopate and the French Government. In December, 1873, the French law of the foundation of the Church and State in France came into operation. In the January following, the French Government notified the British Government of its intention to reorganize the Irish Catholic foundations in France so as to bring them into harmony with the recent legislation regarding the Church. The letter further stated that the purpose of the Government was to close the Irish college, to sell its immovable property, and to invest the proceeds of the sale, to be applied together with the existing burses for the benefit of Irish students who shall be admitted, on the presentation of the British Ambassador to France, either to the state schools or to the schools of theology which have taken the place of the diocesan seminaries. A plea for the preservation of the college has been presented on behalf of the bishops of Ireland, through the British Foreign Office. The question is still undecided.

Patrick Boyle

Irish Confessors and Martyrs.—The period covered by this article embraces that between the years 1540 and (approximately) 1713. Religious persecution in Ireland began under Henry VIII, when the local Parliament adopted acts establishing the king’s ecclesiastical supremacy, abolishing the pope’s jurisdiction, and nullifying the concept of corporate immunity. The first act against the pope came into operation 1 November, 1537. Its penalties were sufficiently terrible, but the licence of those enforcing it was still more terrible. When they had been at work little over a year the Bishop of Derry wrote to Pope Paul III that the King of England had given him power to regenerate Ireland, to acknowledge the pope, were burning houses, destroying churches, ravishing maids, robbing and killing offending persons. They killed, he said, all priests who pray for the pope or refuse to erase his name from the canon of the Mass, and they torture preachers who do not repudiate his authority. It would fill a book to detail their cruelty. Intolerable as these evils seemed, they were aggravated beyond measure, three years later, when the general suppression of religious houses was superadded. Then
ensued the persecution which the Four Masters likened to that of the early Church under the pagan emperors, declaring that it was exceeded by no other, and could be described only by eyewitnesses. The extirpation was so thorough that even remembrance of the victims was obliterated. In the period described, the Irish martyrs submitted recently to the Congregation of Rites, there are but two cases belonging to Henry's reign. The absence of records for this period is easily explained. The destruction of all kinds of ecclesiastical property, and documents especially, accounts for much, since few but churchmen escaped; but it is perhaps a more probable explanation that scarcely any were made, as it was neither safe nor practicable to have or transmit what reflected upon government under Tudor despotism. Few memorials could be committed to paper before places of refuge had been secured in foreign countries. Then they were taken down from the lips of aged refugees, and as might be expected they exhibit the vagueness and confusion of dates and incidents to which personal reminiscences are subject when spread over long and unsettled periods.

For the time of the suppression there is a partial narrative in the recital of an old Trinitarian friar, written down by one of his brethren, Father Richard Goldie or Goold (Goldaeus), an Irish professor at the University of Alcala. According to this account, on the first announcement of the king's design, Theobald (Burke), provincial of the order, came to Dublin with eight other doctors to maintain the pope's supremacy. They were cast into prison; Theobald's heart was torn from his living body; Philip, a writer, was scourged, put into boots filled with oil and salt, roasted till the flesh came away from the bone, and then beheaded; the rest were hanged or beheaded; Cornelius, Bishop of Limerick, was beheaded there; Cormac was shot and stoned to death at Galway; Maurice and Thomas, brothers-german, hanged on their way to Dublin; Stephen, stabbed near Wexford; Peter of Limerick and Georgfrey, beheaded; John Macabrigus, lay brother, drowned; Raymond, ex-superior, dragged at a horse's tail in Dublin; Tadhg O'Brien of Thomond, torn to pieces in the vicerey's presence at Bombrate bridge between Limerick and Kilmallock; the Dublin community, about fifty, put to various deaths; those of Dungua were burned to pass away the fire; those of Galway, twenty, burned to death in their convent or, by another account, six were thrown into a limekiln, the rest weighted with stones and cast into the sea; those of Drogheda, forty, slain, hanged, or thrown into a pit; at Limerick, over fifty butchered in choir or thrown with weights into the Shannon; at Cork and Kilmallock, over ninety slain by the sword or dismembered, including William Burke, John O'Hogan, Michael, Richard, and Giliallaighde. This is the earliest narrative as regards period. It deals only with the Trinitarians. It had the misfortune to be suppressed by Lope de Vega, writer, and consequently has incurred perhaps more discredit than it deserves. The promoters of the cause of the Irish martyrs have not extracted any names from it. Nevertheless, the version given by O'Sullevan Bearn in his "Patriciana Deenas", despite many apparent inaccuracies and exaggerations, contains in its main statements a not improbable picture of the experiences of this single order when the agents of rapine and malignity were let loose upon the members. It is as a cry from the torture chamber, expressing the agony of a victim who loses the powers of speech. In July the extent of his sufferings or the manner of their infliction.

The first general catalogue is that of Father John Houlings, S.J., compiled in Portugal between 1688 and 1699. It is styled a very brief abstract of certain cases and is directed towards canonisation of the eleven bishops, eleven priests, and forty-four lay persons whom it commemorates as sufferers for the Faith by death, chains, or exile under Elizabeth. Cornelius O'Devany, the martyred Bishop of Down and Connor, took up the work and revised the catalogue; and he continued it until his own imprisonment in 1611. Shortly before that time he forwarded a copy to Father Holywood, S.J., desiring him to take steps to have the lives of those noted therein illustrated at length and preserved from oblivion. O'Devany's catalogue was in manuscript until the licensing of the "Processus Martyriales", published, in 1619, as the third part of his "Analecta", which still remains a most important contribution to the subject. During the next forty years Copinger (1620), O'Sullivan Bearn (1621 and 1629), Molanus (1629), Morison (1659), and others sent forth from the press works devoted either wholly or in part to advancing the claims of Irish martyrs to recognition and veneration. In 1669 Antony Brudin, O.S.F., published at Prague a thick octavo volume of about 800 pages, entitled "Propagaculum Catholicae Veritatis", a catalogue of Irish martyrs under Henry VIII, Edward VI, Elizabeth, and James I, containing notes of about 200 martyrs, with an index of 164 persons whose Christian names come first as in a martyrology. Brudin based his work on Rothe's "Analecta", but he made large additions from other writers, as Good, Bourchier, Gonsages, Baresus, Sanders, Wadding, Alejandre, and Nadain, and particularly from a manuscript ascribed to Matthew Creagh, Vicar-General of Killaloe, which had been brought to the Irish Franciscans of Prague in 1660. Practically nothing was done for about two centuries after Brudin's publication. A proposal to take up the cause of Patrick Oliver Plunket within a few years of his martyrdom was discredited by the Holy See, lest at that critical juncture such action should become an occasion of political trouble in England. After the English Revolution and the commencement of the new era of oppression that succeeded the capitulation of Limerick, it was manifested that any movement towards canonisation of the victims of laws still in force would result in merciless reprisals on the part of the ascendancy. At length, in 1828, the last political hindrances were removed by Catholic Emancipation, but over thirty years were spent in the preparation of an illuminated deputation to Rome with more immediate demands pressed upon the energies of the Catholic community or because, during the long period for which the matter had been laid aside, the sources of trustworthy information had become so inaccessible or forgotten that the task of accumulating evidence seemed too formidable to undertake. In 1861 Dr. Moran, then Vice-Recter of the Irish College, Rome, and subsequently in succession Bishop of Osory and Cardinal Archbishop of Sydney, reopened the question by his life of Oliver Plunket, the first of a series of important historical publications, in which he reconstructed the fabric of Irish Catholic history from Henry VIII to Charles II. All these publications were effectively, if not professedly, directed towards hastening the Church's solemn recognition of the martyrs. The first of these writings (1861) expressed the hope that the day was not far distant when the long afflicted Church of Ireland would be consecrated by the canonisation of Oliver Plunket. In 1884, when the last of them, a resuscit of Rothe's "Analecta", was published, the intermediate advance had been so great that the editor, then Rothe's successor in Osory, noted the expression of a wish both in Ireland and abroad for an effect which to that people might be regarded as a nation of martyrs with none few names, at least, among the most remarkable for constancy and heroism would be laid before the Sacred Congregation of Rites and, if found worthy, be en-
rolled among the privileged martyrs of Holy Church. While Dr. Moran was thus engaged, Major Myles O'Reilly also entered the long neglected field, and in 1868 he published a collection of memorials in which he brought together, from all the original sources his great industry could reach, biographies of those who suffered for the Faith in the sixteenth, seventeenth, and eighteenth centuries. This collection was made with both zeal and discrimination; it was the first general compilation since Brudoin's, and, coming down to a later date, it contained twice the number of notices in the former one. As a result, in great measure, of these several publications, the case was brought to such a degree of celebrity as to be termed "Analecta," that the ecclesiastical authorities were in a position to make preparations for holding the processus ordinarius informativus, the diocesan inquiry which is a preliminary in the process of canonization. The work of collecting evidence, greatly facilitated by the previous labours of Moran and O'Reilly, was entrusted to Father Denis Murphy, S.J. He, unhappily, did not live to submit his testimony; but before his death he had reduced to order a great mass of materials extracted from a larger number of writers than had been used by O'Reilly. The number of individual notices is very great, perhaps much larger than Father Murphy excluded, with one or two exceptions, all those whose trials did not culminate in death. His materials were published in 1896, under the title of "Our Martyrs," and the record begun by Father Houling was thus, after three hundred years, completed by his brother Jesuit in form to be submitted in a regular process of canonization.

The usual practice of conducting the preliminary process in the diocese where the martyrs suffered would have entailed the erecting of a tribunal in every diocese in Ireland, a course attended with no advantage as far as the compilation of the necessary documents goes. The united request of all the Irish bishops, accepted the responsibility of conducting a general investigation for the whole country. But, before further progress could be made, certain unforeseen causes of delay arose which were not removed until the end of the year 1903. In December of that year the vice-postulator issued his requests for the attendance of witnesses in the February following. The initial session was opened by the Archbishop of Dublin, 15 February, 1904. Between that date and 3 August, when the taking of evidence in Ireland was completed, sixty sessions had been held in the diocese of Dublin. The remaining sessions were taken by commission in Sydney. When it arrived in Ireland meetings were resumed, 23 October, and continued for some twenty further sessions to complete the return, a transcript of the evidence with exhibits of books and documents. This work was brought to a conclusion at Christmas, and on 5 February, 1905, the full return of the inquiry was delivered to the Congregation of Rites. The number of sessions held was about eighty, in all of which the Archbishop of Dublin presided. Evidence was taken in respect of about three hundred and forty persons, with a view to establishing a case of martyrdom as a traditional belief among learned and pious Catholics that many persons suffered death for the Catholic Faith in Ireland under the penal laws; that these persons did, in fact, suffer martyrdom in defence of the Catholic Faith and of the pope's spiritual authority as Vicar of Christ; and that there was a sincere desire among Irish Catholics, in Ireland and elsewhere, to have their case recognized by the Church. The chief portion of the evidence was necessarily that derived from records, printed or written. In addition, witnesses testified to the public repugnance of martyrdom, and traditions to that effect preserved in families, religious orders, various localities, etc.; of which the evidence was fitted to be given in every case as to the source of the information furnished by the witness. Subsequent to this inquiry the further minor process (processus), to collect writings attributed to some of the martyrs, was held January–March, 1907.

The investigation of the claims to the title of martyr made for those who suffered under the Irish penal enactments since 1537, is attended by difficulties that do not arise in the case of their fellow-sufferers in England, of difficulties due to the lack of information as to the character of the available evidence. Not more than one-third of Ireland was subject to the rule of Henry VIII when he undertook to detach the island from the Catholic Church. The remainder was governed by hereditary lords under native institutions. The king's deputy, Sir Thomas Butler, demanded submission of the over-lordship supposed to be conferred by the Bull "Laudabiliter"; but the acknowledgment was so little valued that the population was commonly classified as the king's subjects and the Irish enemies, not, as yet, the Irish rebels. The Church, however, was the Church of Ireland, not the Church of the English Pale, and the claim to Supreme Headship of the Church entailed the effective reduction of the whole island to civil obedience, which, as then understood, required acceptance of the whole English system of laws and manners. Hence, it is not always easy to discern how far the faith of a man was determined by the requirements of his fidelity to religion, and how far from defence of ancestral institutions. Again, the evidence is not always satisfactory, for reasons already mentioned. The public records are very defective, as in a country that has experienced two violent revolutions, but the loss so caused might possibly be over-estimated. No large proportion of those put to death had been brought before a regular court. There was a general immunity from consequences which encouraged captains of roving bands and stationary garrisons, provost-martials, and all that class, to carry out their duty as a matter of course, without regard to the desire of those there are no records. During the year of the Armada a Spanish ship made prize of a Dublin vessel bound for France. A Cistercian monk and a Franciscan friar were found on board. They said they were the sole survivors of two large monasteries in the North of Ireland which had been burned with the rest of the inmates. There seems to be no other mention of this atrocity.

The list which follows (p. signifying priest; l. layman) includes the names of those persons only in respect of whom evidence was taken at the inquiry held by the Commission of Inquiry. The citation given in the list already been conducted successfully through the Apostolic Process by Cardinal Logue, his successor:

(1) Under King Henry VIII.—1540: The guardian and friar, Franciscan Convent, Monaghan, beheaded. 1541: Robert and other Cistercian monks, St. Mary's Abbey, Dublin, imprisoned and put to death; as the Cistercians of Dublin surrendered their house and its possessions peacefully, there is possibly confusion as to this instance.

(2) Under Queen Elizabeth.—1555: Conacius Macarta (Conn McCourt) and Roger MacCongaill (McConnel), Franciscans, hanged to death, Armagh, 12 December, for refusing to acknowledge the queen's supremacy. 1576: John Lochman, Donagh O'Rourke, and Edmund Fitzsimon, Franciscans, hanged, 21 January, Downpatrick; Fergall Ward, Franciscan guardian, Armagh, hanged, 28 April, with his own girdle. 1577: Thomas Courcy, vicar-general at Kings, hanged, 30 May. William O'Lochlainn, Franciscan, Bishop of Meath, died, 4 January, in exile at Alcaïd. 1578: Patrick O'Hely (q. v.), Bishop of Mayo, and Cornelius O'Rorke, p., Franciscans, tortured and hanged, 22 August, Kilmallock; David Hurley, dean of Emily, died in prison; Thomas Moeran, dean of Cork, taken in the field to be burnt, and executed. 1579: Thaddaeus Daly and his companion, O.S.F., hanged, drawn, and quartered at Limrick,
1 January. The bystanders reported that his head when cut off distinctly uttered the words: "Lord, show me Thy ways." Edmund Tanner (q.v.), S.J., Bishop of Cork, died, 4 June, in prison at Dublin; John O'Dowd, p., O.S.F., refused to reveal a confession, put to death by having his bowels torn out with a twisted cord; Thomas O'Herlay (q.v.), Bishop of Ross. 1580: Edmund MacDonnell (q.v.), p., S.J., 16 March, Cork (but the year should be 1575 and the name perhaps O'Donnell); Laurence O'Moore, p., Oliver Plunkett, gentleman, and William Walsh or O'Wull, an Englishman, tortured and hanged, 11 November, after the surrender of Dun-anoir in Kerry; Daniel O'Neilan, p., O.S.F., fastened round the waist with a rope and thrown with weights tied to his feet from one of the town-gates at Youghal, finally fastened to a mill-wheel and torn to pieces, 28 March. He is obviously the person whom Mooney commemorates (notes under the name O'Duillian, assigning the date, 22 April, 1599, from hearsay; Daniel Hanrichan, Maurice O'Scanlan, and Philip O'Shee (O'Lee), priests, O.S.F., beaten with sticks and slain, 6 April, before the altar of Lislaachtin monastery, Co. Kerry; the prior at the Claremont, an Englishman; Robert Murphy, quoting O'Sullevan, says the monastery was Graignamanagh; O'Sullevan names the place Seripons, Jerpoint. 1581: Nicholas Nugent, chief justice, David Sutton, John Sutton, Thomas Eustace, John Eustace, William Warden, and other Englishmen; Clon, Town, Netherfield, or Netterville, Robert Fitzgerald, gentleman of the Pale, and Walter Lakin (Layrmus), executed on a charge of complicity in rebellion with Lord Baltinglass; Matthew Lamport, described as a parish priest (pastor) of Dublin Diocese, but more probably a baker (pastor) of Wexford, executed for harbouring Baltinglass and Father Rochford, S.J., Robert Meyer, Edward Cheever, John O'Lahy, and Patrick Canavan, sailors of Wexford, hanged, drawn, and quartered, 5 July, for conveying priests, a Jesuit, and laymen out of Ireland; Patrick Hayes, shipowner of Wexford, charged with aiding bishops, priests, and others, died in prison; Richard French, p., Ferns Diocese, died in prison; Nicholas Fitzgerald, Cistercian, hanged, drawn, and quartered, September, at Dublin. 1582: Phelim O'Hara and Henry Delahoyde, O.F.M., of Moyne, Co. Mayo, hanged and quartered, 1 May; Thaddaeus O'Maran, or O'Morachue, O.S.F., guardian of Enniscohry; Phelim O'Corra (apparently Phelim O'Hara, above); ÓÉneas Penny, parish priest of Killarne (Killasser, Co. Mayo), slain by soldiers while saying Mass, 4 May; Roger O'Donnellan, Cahill McGoran, Peter McQuilan, Patrick O'Kenna, Joannes Pillon, priests, and Roger O'Hanlon (correctly McHenlea, in Curry), lay brother, O.S.F., died, 13 February, Dublin Castle, but the date can scarcely be correct for all; Henry O'Fremlamhaidh (anglicized Frawley); John Wallis, p., died, 20 January, in prison at Worester; Donagh O'Reddly, parish priest of Colmer, hanged, drawn, and quartered with swords, 12 June, at the altar of his church. 1584: Dermot O'Hurley (q.v.), Archbishop of Cashel; Gelasius O'Cullenan, O.Cist, Abbot of Boyle, and his companion, variously named Eugene Cronius and Hugh or John Mulcharen (per Eoghan O'Macchiariain), either Abbot of Trinity Island, Co. Roscommon, or a secular priest, hanged, 21 November, at Dublin; John O'Daly, p., O.S.F., trampled to death by cavalry; Eleanor Birmingham, widow of Bartholomew Ball, denounced by her son, Walter Ball, Mayor of Dublin, died in prison; Thaddaeus O'Mulloony, O.F.M., hanged. 1585: Richard Creagh (q.v.), Archbishop of Armagh, poisoned, 14 October, in the Tower of London—he is included amongst the 242 Pretermisses in the article ENGLISH CONFESSIONS AND MARTYRS; Maurice Kenaghty (q.v.), p.; Patrick O'Connor and Maolachy O'Kelly, O.Cist., hanged and quartered, 19 May, at Boyle. 1586: Maurice, or Murtagh, O'Brien, Bishop of Emly, died in prison at Dublin; Donagh O'Murheety, a companion, O.S.F., Stoned and tortured to death at Muckross, Killarney. 1587: John Cornelius, O.S.F., of Askeaton; another John Cornelius, S.J., surnamed O'Mahony, born in England of Irish parents from Kilmekey, Co. Cork, is included among the venerables of the English list; Walter Ferrell, O.S.F., Askeaton, hanged with his own girdle. 1588: Dermot O'Mulroney, p., O.S.F., Brother Thomas, and another Franciscan of Galbally, Co. Limerick, put to death there 21 March; Maurice Eustace (q.v.), Jesuit novice, hanged and quartered, 9 June, Dublin; John O'Mollo, Cornelsius O'Doherty, and Geoffrey Farrell, Franciscan priests, hanged, drawn, and quartered, 15 December, at Abbeyleix; Patrick Plunkett, knight, hanged and quartered, 6 May, Dublin; Peter Miller, B.D., Diocese of Ferns, tortured, hanged, and quartered, 4 October, 1588; Robert O'Scullin (or Petho; his O'Muliney); Murphy, withstanding the different places of martyrdom assigned, these two names may be those of the same person, a native of Wexford executed at Galway; Patrick O'Brady, O.S.F., prior at Monaghan—Murphy, on slender grounds, supposes him to be the same as O'Muliney of Monaghan. 1589: Francis O'Muliney, or Murtagh O'Cuinny, in his "Civil Wars in Ireland", states that six friars were slain in the monastery of Moynihin (Monaghan) under Elizabeth; Thaddaeus O'Boyle, guardian of Donegal, slain there, 13 April, by soldiers. 1590: Matthew O'Leyn, p., O.S.F., 6 March, Kilcrea; Christopher Roche, i., died, 13 December, under torture, Newgate, London. 1591: Terence Maghane, Magnus O'Friedlinen or O'Todridy, Loughlin og Mac O'Cadhia (? Mac Eochadhia, Kehig), Franciscans of Multifarnham, died in prison. 1594: Andrew Strich, p., Limerick, died in Dublin Castle. 1597: John Stephens, p., Dublin province, apparently chaplain to the O'Byrnes of Wicklow, hanged and quartered, 4 September, for saying Mass; Walter Ferman, p., torn on the rack, 12 March, at Dublin. 1599: George Power, Vicar-General of Ossory, died in prison. 1600: John Walsh, Vicar-General of Dublin, died in prison at Chester; Peter O'Hagen, 4 December, Dublin—probably the Patrick Hayes of 1581 (supra); James Duddal (Dowdall, q.v.), died either 20 November or 13 August, Exeter; Nicholas Young, p., died, Dublin Castle. 1601: Redmond O'Gallagher, Bishop of Derry, slain by soldiers, 15 March, near Dungiven; Daniel, or Donagh, O'Molloyn, Vicar-General of Killaloe, died of torture, 24 April, Dublin Castle; John O'Kelly, p., died, 15 May, in prison; Donagh O'Cronin, clerk, hanged and dismembered, Cork; Bernard Moriarty, dean of Ardagh and Vicar-General of Dublin, having a day's leave of absence, 12 June, 1602: Dominic Collins, lay brother, S.J., hanged, drawn, and quartered, 31 October, Youghal. The following Dominicans suffered under Elizabeth (1558–1603), but the dates are uncertain: Father MacFergie, prior, and twenty-four friars of Coleraine, thirty-two members of the community of Derry, slain there the same night, two priests and seven novices of Limerick and Kilmallock, assembled in 1602 with forty Benedictines, Cistercian, and other monks, at Scattery Island in the Shannon to be deported under safe conduct in a man-of-war, were cast overboard at sea. This year, 1602, another, somewhat earlier, incident, Eugene MacEgan, styled Bishop-designate of Ross, of which he was vicar Apostolic, mortally wounded while officiating in the Catholic army. There was no Catholic army on foot in 1606, at which date his name
appears in the official list. He was buried at Timoleague.

(4) Commonwealth (1649–1659).—1649: Robert Nettiville, p., S.J., died at Drogheda, 19 June, of a severe beating with sticks; John Bath, p., S.J., and his brother Thomas, secular priest, Dominic Dillon, O.P., prior at Urragh, Richard O'Veton, O.P., prior at Athy, Peter Taffe, O.S.A., prior at Drogheda, slain in Drogueda massacre; Bernard Horumly (q. v.); O.S.F., hanged; Drogheda; Raymond Stafford, p., Paul Synnot, p., John Esmond, p., Peter Stafford, p., Didacus Cheeveres and Joseph Rochford, lay brothers, Franciscans, slain in Wexford massacre; James O'Reilly, p., O.P., slain on the Clonmel, 1650; O.P., hanged, 1650: Basilius Egan, O.S.F., Bishop of Ross, celebrated for exhorting the garison of Carrigadrehid Castle to maintain their post against Broghill, dismembered and hanged; Milor M'Grath (Father Michael of the Rosary), p., O.P., hanged, Clonmel; S. Nelligan, p.; O.P., hanged, Cork; Walter de Wallis, O.S.F., and Anthony Meeus (q. v.); O.S.F., hanged, Mullingar; John Dormer, O.S.F., died in prison, Dublin; Nicholas Ugan, or Ulagan, O.S.F., hanged, with his girdle; Thomas Plunkett and twelve other Franciscans, Eugene O'Teaman, O.S.F., dogged and cut out by forces of soldiers. Deo Nielan, p., hanged, Inchioronan, Co. Clare; Thaddeus O'Carrighey, p., hanged near Ennis; Hugh McKeon, p., died in prison, Athlone; Roger de Mara (Macnamara), p.; shot and hanged, Clare Castle; Daniel Clancy and Jeremiah O'Neachlohy (Neryn), lay brothers, Quin, hanged; Philip Flaharry, hanged near Dublin; Francis Sullivan, p., shot in a cave, Co. Kerry, December; William Hickey, p., hanged; Dominicans: Terence Albert O'Brien (q. v.), O.P., Bishop of Emily; John Wolfe, p., hanged, Limerick; John O'Cullin (Collins), p., beheaded; William O'Connor, prior at Cahir; Edmund O'Boyle, p.; hanged, Clonmel; Bernard O'Ferrall, p., slain, his brother Laurence, p., hanged, Longford; Vincent Gerald Dillon, chaplain to Irish troops in England, died in prison, York; Ambrose Aneas O'Cahill, p., cut to pieces by cavalry; Cork; Donagh Dubh (Black) and James Moran, lay brothers; laymen: Louis O'Ferrall, died in prison; Athlone; Charles O'Dowd, hanged; Donagh O'Brien, burned alive; Sir Patrick Purcell, Sir Geoffrey Galway, Thomas Strich, mayor, Dominick Fanning, ex-mayor, Daniel O'Higgins, hanged after surrender of Limerick; Henry O'Neill, Theobald of Burgo. 1650: Servants: Roger Ormoncilus O'Sullivan, and Hugh Garighy, hanged, Co. Clare; Cornelius MacCarthy, Co. Kerry; Bernard Fitzpatric, Ossory Diocese; Franciscans hanged: Eugene O'Cahan, guardian at Ennis, Sibiah Luachra, Anthony Broder, deacon, near Tuam, Bonaventure de Burgo, Nielan Loche, p., Derry, Anthony O'Ferrall, p., Tulok, John O'Ferrall, Eamon O'Bern, p., O.P., beheaded after torture, Jamestown; laymen hanged: Thaddeus O'Connor Sligo, Boyle; John O'Connor Kerry, Tralee; Thaddeus O'Connor of Beainmaid in Connaught; Bernard Mo-briody; Edmund Butler, Dublin, Bridg O'Aray, wife of Bridg O'Aray, and a woman, hanged near quarter given. 1653: Dominicans: Thaddeus Moriarty, prior at Tralee, hanged, Killarney; Bernard O'Kelly, p. or lay brother, Galway; David Roche, p., sold into slavery, St. Kitts; Honoria Burke and her

Uncertain Dates.—Forty Cistercians of Monasterneagh, Co. Limerick, may be the monks mentioned in 1602, though the manner of death is stated differently; Daniel O'Hanlan, I., died in prison; Donagh O'Kennedy, Donagh Serenan, Fulgentius Jordan, Raymund O'Malley, John Tullis, and Thomas Deir, Augustinians, Cork, 1654; James Chevers, O.S.F., James Roche, O.P., and Thomas Meecker, O.S.F., 1660; Alphonse O'Loughlin, O.P., two Dominican fathers, Kilmalkedar; apparently the lay brothers Fitzgibbon and Fox, 1648; Michael Fitzsimon, I.; Conn O'Kiennan, hanged, drawn, and quartered, 1615; Daniel O'Boyle, O.S.F.; Dermot MacCarra (MacCarthy), p.; Donchus O'Fally, 1659; perhaps the Daniel O'Flahavey, friar, remained in Kilkenny; Kerry Lent Assizes, 1703; John MacConan, p., possibly the John O'Conan (Conan) of Copinger, executed by martial law, Dublin, 1618, and the John Honan, O.S.F., 1617 (the correct date is 1618—see above); John O'Grady, p., Thomas Fleming, I.; Lewis O'Lav¬ery, I., hanged, drawn, and quartered, 1615.

O'Reilly, Memorials of those who suffered for the Catholic Faith in Ireland (London, 1888); Murray, Our Martyrs (Dub¬lin, 1883); Stack, Historical Record, XIV (1903), 421; Stack, Historical Sketch of the Persecutions suffered by the Catholics of Ireland under Cromwell and the Puritans (Dublin, 1884); ibid., History of the Catholic Archbishops of Dublin (Dublin, 1884); Spicilium Osoriorum, I. (Dublin, 1873). III (Dublin, 1884); Rotha, Analecta Nova et Mora, ed. Moran (Dublin, 1884); O'Sullivan Betar, Patriciana Deoc (Dublin, 1820); Bruodin, Propugnaculum Catholicæ Veritatis (Paris, 1869).

CHARLES MCNEILL.

Irish Dames of Ypres. See BUTLER, MARY JOSEPH.

Irmerius (Garnerius), Italian jurist and founder of the School of Glossators, b. at Bologna about 1050; d. there about 1130. Though he was one of the most famous jurists of the Middle Ages, very little is known concerning his life and works, and it is only during the last twenty years that he has received the attention which his influence on the history and development of medieval jurisprudence demands. He was probably little over twenty years of age when he already taught didactics and rhetoric at Bologna. At the instance of Countess Matilda of Tuscany he began to devote himself to the study of jurisprudence, taking the Justinian code as a guide. Up to his time the study of jurisprudence had been neglected in the empire, and he had to depend to a great extent on private studies, though it is probable that for a time he frequented a law school in Rome. After ten years, however, he returned to Rome, where he returned to Bologna, where he founded a new school of jurisprudence in 1084. It appears that some jurisprudence had been taught at Bologna, before Irmerius founded his school, by a certain Pepo and a few others; but the great impulse which juridical studies received at this time, and which spread throughout Europe, was entirely due to the school of Irmerius. He introduced the custom of explaining the Roman law by means of glosses, which originally were mere interlinear elucidations of the text. But since the glosses were often too extensive to be inserted between the lines of the text, he began to write them on the margin of the page, thus being first to introduce the marginal glosses which afterwards came into general use. After the death of Pope Paschal II, he defended the rights of Emperor Henry V in the papal election and upheld the legality of the election of the imperial antipope, Gregorius VII.

Irmerius is the author of numerous juridical works, but most of them have either been lost, or their genuineness is not sufficiently established. His chief work is "Summa Codicis", which is of a special historical value, because it is the first medieval system of Roman jurisprudence. It was commonly fitted with a critical introduction by Fitting, "Summa Codicis des Irmerius, mit einer Einleitung" (Berlin, 1894). Another important work generally ascribed to Irmerius is "Questiones de juris substantiis". It was also edited by Fitting, "Questiones de juris substantiis des Irmerius, mit einer Einleitung" (Frod. 200jährigm Jubiläum der Universität Halle-Wittenberg, 1894). The other juridical works and glosses that are ascribed to Irmerius are in fact only fragments, or their authorship is still too uncertain.

BARTA, L'EPOCA D'IRMERIUS (2 vols. Turin, 1896); FITTING, DIE ANFÄNGE DER RECHSCHULE IN BOLOGNA (Berlin, 1888); RAYNOULT, Geschichte des Lateinischen Rechts in Mitteleuropa (Berlin, 1882); SCHUPPEN, LA SCUOLA DI ROMA E LA QUESTIONE IR¬MERIUS IN ATTICA ELEUSA, Lecce (Rom, 1898), 3-16; PERZKYER, A Survey of the Sources of the Glosses des Irmerius (Graz, 1897); SUMMA CODICIAE ET IREMIUS (Turin, 1897); DIE SUMMA IRMERIUS IN ZEITSCHRIFT FUR RECHTSCHAFT, XVII (1896), 1-98; IREMIUS pdo la nuova critica storica in Rivista Storica Italiana, XI (Turin, 1994), 607-925.

MICHAEL OTT.

Iroquois.—A noted confederacy of five, and afterwards, six, cognate tribes of Iroquoian stock, and closely cognate languages, formerly occupying central New York, and claiming right of conquest over nearly all the tribes from Hudson Bay to Tennessee River, and westward to Lake Michigan and Illinois River. The name by which they are commonly known is a French derivative of disputed origin and meaning; but possibly may come from the Algonquin Irinahkote (red snakes), snake being the term by which the Algonquin tribes denoted hostile tribes of alien stock. To the English they were known as the "Five", and afterwards the "Six Nations". They called themselves "Irogo'onionsinni" (We are friends), "Hodinonysonnii", frequently written and translated "Konehionni" and "Hodenosane" (People of the long house). The five original tribes, from east to west, were the "Ganinge-haga" (Plint place people), "Onenio-te-sga" (Standing stone people), "Ononde¬go-e" (Mountain lake people), "Gononei-a-nta-cus-ta-coming-out-place people", and "Tsonontowa¬ga" (Big mountain people), known to the French as "Agne-roron", "Onnieount", "Onontauge", "Goy¬goouen", and "Tsonontouan", and to the English as Mohawk, Oneida, Onondaga, Cayuga, and Seneca. To these were added the cognate Tuscarora (Hemp gatherers) from North Carolina, after the war of 1711-12. Each tribe also had one or more figurative names used commonly in the confederate council, the term "Long house" itself being a figurative designation for the confederacy, of which the Mohawk were considered to guard the eastern door, as the Seneca did the western, while the Onondaga watched the sacred council fire in the centre.

The numerous broken tribes "adopted" or taken under protection were never accounted equal members of the confederacy, and full political equality was not accorded to them. There began a period of probation as "infants", "boys", and "observers". Other tribes of Iroquoian stock were the Wyandot, or Huron; Tionontati, or Tobacco Nation; and the Neutral Nation of Ontario; the Erie and Conestoga (Andaste, Susquehanna), in Ohio and Pennsylvania, and the Nottoway, Tuscarora, and Cherokee, of Vir
orichards so extensive as to be a constant theme of wonder to both French and later American invaders. Besides corn they cultivated squashes, beans, and tobacco, in addition to which their woods and waters furnished abundant supplies of game and fish. Fam-

ine, so common in some tribes, was unknown among the Iroquois. The women dressed in deerskin, who buck-

skin, and their women were potters and basket makers, but not weavers. Their ordinary weapons were the bow, knife, and stone or wooden club, afterward superseded by the steel hatchet or tomahawk of civilised manufacture, but they sometimes in ancient times used also the stone and iron, and in fact they did a rude kind of wicker work, and a rude form of body armour. Learning to their sorrow the power of firearms, in their first encounter with Champlain they made eager efforts to buy guns from contraband Dutch traders with such success that by 1640 a large proportion of their warriors were well equipped and expert gunners, enabling them to start upon a career of conquest which made the Iroquois name a terror for a thousand miles. Even among savages they were noted for their cruelty, cannibal feasts and sickening torture of captives being the sequel of every successful war expedition. After the war, the woman of the Iroquois, their awful savagery, was visited upon the devoted missionary.

In Iroquois cosmogony, the central figure is Thar-

onyawagon, the “Sky Holder”, dwelling above the firmament, whose pregnant wife, cast down to the earth in a fit of jealousy, bears a daughter, who, mak-

ing a turtle in human form—the turtle being symb-

olic of power over earth and water—becomes in turn

the mother of twin boys. These, as they grow up, are thenceforth in perpetual conflict, the one, the god of winter and death, forever destroying what his brother, the god of spring and life, as he constantly rebuilds. Their mythology and ceremonial are rich and well-

preserved, almost the whole of their ancient ritual forms being still kept up on the Ontario reserve. Among the principal ceremonies may be noted the Green Corn Dance, a thanksgiving for the new crops, and the “Burning of the White Dog”, a solemn sacri-

fice. Another, in ancient times, was the Feast of the Dead, when the bones of all who had been dead for a term of years were gathered from their temporary resting places and deposited in a common sepulchre. The temporary disposal was by safeguard burial. The ball that was played there, was their principal cere-

monial game. Unlike most eastern Indians, the Iro-

quois were monogamists, but divorce was easy and frequent, the children remaining always with the mother.

The Iroquois languages have been the subject of much study by missionaries and others, and have an abundant literature, philologic, religious, and general. Principal in the first class are Brueyas’s “Radices ver-

borum Iroquoorum”, and Cuoq’s “Lexique de la langue Iroquoise”, besides an extensive Iroquois-

French grammar and dictionary, still in manuscript, by Father Marcoux.

According to Iroquois tradition, as interpreted by Hewitt, our, best living authority, the league was established through the effort of Hiawatha (River Maker), probably of the Mohawk tribe, about the year 1570, or about forty years before the appearance of the French and Dutch in their country. At the time they met they agreed upon a league, with a chief and assistant chief within strong palisades. In less important settle-

ments the houses were scattered about in a straggling fashion. Surrounding the villages were cornfields and  

in Carolina. Of these only the Wyandot and Cherokees survive. Wherever found, the tribes of this stock showed a marked and recognized intellectual superiority. No other native Indian government north of Mexico has been the subject of so much study as the Iroquois, and it might be plausibly said that no other was so complex and exact in detail and so wisely adapted to permit the fullest measure of freedom to each component tribe, while securing united action in all that concerned the whole. In general plan, it might be compared to our own system of inde-

pendent Federal states, the original name being that borne by his direct predecessor on the original formation of the league. All nominations to hereditary

chiefs, while originating with the women’s council, had to be ratified by the tribal and league councils. Elaborate installation or condolence cere-

monies signalled the inauguration or the death of a member of the league council, but no official notice was taken of the passing of a lesser chief. No alien

could become a member of the tribe except by formal adoption into a clan, and as the right of adoption rested solely with the women as mothers of the clan, the motive of captives for life or death depended upon the will of the women. As the cultivators of the ground, the women also held jurisdiction of the territorial domain, and again, as mothers of the warriors, they de-

cided questions of war and peace. Except for the veto power of the league council, it might be said that the women of the confederated tribes constituted the legislative body while the warriors were the execu-

tive.

The Iroquois dwelling was the so-called “long house”, from 50 to 100 feet in length and from 15 to 20 feet in width, the frame of stout posts set upright in the ground, kept in place with cross-pieces, and covered and roofed with bark. The chief’s was divided into compartiments of equal size along each side, opening upon a central passageway along the whole length of the building. Each compartiment, excepting those at the end for storage or guest purposes, sheltered one family, so that as many as twenty families might live and take their meals in the central passageway, so disposed that one fire accommodated four families. All the occupants of a house were usually closely related by clan kinship, thus constitut-

ing a larger family. In the principal towns, fre-

quently designated as “castles”, the houses were constructed in tiers, nearly side by side, and inclosed within strong palisades. In less important settle-

ments the houses were scattered about in a straggling fashion. Surrounding the villages were cornfields and  

Iroquois.
largely due the final fall of Canada. Through contraband trade with the Dutch at Albany, after 1615, the Iroquois quickly supplied themselves with guns, and at once inaugurated a systematic war of conquest or extermination against all the surrounding tribes, particularly those in the French interest. In 1642 the heroic Jesuit missionary Jogues, while on his way to the Hurons, was taken by a Mohawk war party and cruelly tortured until rescued by the Dutch. The same capture and torture, and the same kindly rescue, befell the Jesuit Bressani, in 1644. In 1646, on the conclusion of an uncertain peace with the savages, Father Jogues again offered himself for the Mohawk mission, but was taken by his captors and tortured to death on the charge of being the cause of a pestilence and a plague upon the crops.

In the meantime the Iroquois were making constant raids upon the Huron missions about Georgian Bay, as also upon the partly missionized tribes of the lower St. Lawrence. In 1648, a grand army of invasion of at least 1500 Iroquois warriors, largely armed with guns, swept over the Huron country, and within a few months had practically destroyed the tribe, burning the towns and missions, slaughtering hundreds upon hundreds of their people, carrying off 700 captives, one boy and whole families, and killing the missionaries, Daniel, Garnier, Lallemand, and the great Brébeuf. Between then and 1675 they wiped out in the same way the Tionontati (1650), Neutrals (1651), Erie (1655) and at last after a long and hard conflict the Conestoga (1675), all of their own kindred stock, those left alive being incorporated into the Iroquois towns. At the same time they were carrying on almost equally desolating warfare with the Mohican on the east, the Algonquin and Ottawa in the North, the Illinois in the far west, and the Cherokee, Tutelo, and Catawba in the South, while knowing the French under a constant terror. They were careful, however, to maintain friendship with the Dutch and the later English, from whom they obtained their war supplies. A careful estimate by Greenhalgh in 1677 gave them then about 2150 warriors—perhaps 8000 souls—of whom, according to Jesuit authorities, nearly one-half were incorporated captives. In 1656, during a brief truce with Canada, a Jesuit mission colony was established among the Onondagas at their own request, with Father Le Mercier as superior, but two years later, upon the discovery of an intended massacre and general flight of Canadians, the mission was abandoned. Another truce, consequence upon a successful expedition by De Tracy, gave brief opportunity for re-establishment, and in 1668 there were three missions in the Iroquois country.

Notwithstanding the hostile attitude of the league, a large number in each tribe, including the incorporat ed captives from the old missions, was now Christian and disposed to friendship with the French. Accordingly it was decided to attempt to draw out these Christians from the tribes and colonize them into mission towns in the neighbourhood of the French, to be a means of both additional strength against the Iroquois enemy. One reason for this conclusion was the hostile attitude assumed toward the French missionaries by the new English government of New York. As a consequence of the colonizing policy, mission settlements of Christian Iroquois were established in the Quintay, Bay, Ontario (Sulpician, 1668; Recollet, 1675); at Losangeles, near Montreal, of 1667; at François Xavier des Prés (Jesuit, 1669; removed to Sault St. Louis and renamed St. François Xavier du Sault, 1676, now Caughnawaga); the Mountain, near Montreal (Sulpician, 1676; transferred to Sault au Recollet in 1678; c. 1704, and to Lake of Two Mountains c. 1730; Ob. 1759). In 1677 Denonval, invaded the western Iroquois territory with a detachment of the mission warriors, destroying towns and cornfields, but without bringing the enemy to an important engagement. In 1689 the Iroquois retaliated by landing 1500 warriors at Montreal, ravaging the whole country and butchering 200 men, women, and children, carrying off over a hundred more to be tortured in their towns. In the subsequent Great King William War the Iroquois turned the English against the French, suffering such losses that in 1698 the league numbered only 1230 warriors, not counting those now permanently identified with the French interest.

Largely through the effort of Sir William Johnson, the resident British superintendent, they, as a nation, held to the English interest throughout the French and Indian Wars of 1744-48 and 1754-63. Within this period was established the Sulpician mission of the Presentation, at Oswego, now Ogdenburg, N. Y., by Father Francis Picquet, which flourished until the transfer of dominion to England. About 1755 the present mission settlement of St. Regis (St. Francis Regis), now bisected by the international boundary line, was established by emigrants from Caughnawaga.

Under Johnson's encouragement Episcopalian missionaries worked with success among the Mohawk, for whom the "Book of Common Prayer" was translated into their language. Unsuccessful efforts were also made by the Moravians, but later work by Congregationalists and Methodists has had more result. On the breaking out of the Revolution, about one half of the New York Iroquois fled to Canada, where they enlisted in the Iroquois regiments, already established behind, particularly the Senecas, were hobbled by an expedition under command of General John Sullivan, in 1779. The refugees were subsequently assigned lands by the British Government, near Brantford, Ontario, on which they still reside, keeping many of their old native religion. Those remaining in New York, now largely Protestant, have gradually reduced their territorial holdings by successive treaty cessions. About 1843 the larger part of the Oneida removed to Wisconsin. The whole body of the Iroquois in 1908 was distributed as follows: United States—New York, 5455; Wisconsin (Oneida), 2204; Oklahoma (Seneca), 398; Pennsylvania (Seneca), 120; Canada—Ontario, Six Nations on Grand River, 4226; Mohawk of Quinté, 1327; Oneida of the Thames, 772; Iroquois of Gibson, about 140; Quebec, Caughnawaga, 200; Lake of Two Mountains, 403. Total about 18,725.

Irregularity (Lat. in, not, and regular, rule, i.e. not according to rule), a canonical impediment directly impeding the reception of tonsure and Holy Orders or preventing its being received. It is called a canonical impediment because introduced by ecclesiastical law, for the canons pre-
IRREGULARITY

scribe certain requisites for the licit reception of orders, e.g. moral probity, proper age, legitimate birth, knowledge proportionate to each order, integrity of body, mind, will, and faith. A defect in these qualities prescribed by church regulations is rightly called a impediment, a direct effect of which is twofold: first, it prohibits the reception of orders and, second, prevents an order received from being licitly used. Indirectly it impedes one who has become irregular from obtaining an ecclesiastical benefice.

TITULAR OR FATAL.—Irregularity is total when it precludes the acts of every order already received. Such, for example, is the irregularity arising from voluntary homicide. If partial, it interferes with some exercise of an order or prevents only the ascent to a higher order. Thus, the absence of the left eye would not prevent one from ministering as a deacon, but he could not receive the priesthood, and a priest who lost his thumb would become irregular for sacrificing at the altar, but not for hearing confessions.

PERPETUAL OR TEMPORAL.—The former irregularity is of its nature enduring; the latter, existent only for a certain period, and a defect against it is called "Expurgatur."—The main division of irregularities is into those which are the consequence of crime (ex delicto) and those which arise from defect (ex defectu), according as they have been imposed by law on account of crimes by reason of which a person becomes unworthy of the reception of orders or their exercise or have been imposed on account of certain defects which would be indecorous in a sacred minister. It is not to be supposed however that irregularity ex delicto has been directly and proximately imposed as a punishment; for when the Church declares one irregular on account of crime, she does not primarily intend the punishment of the guilty one, but rather desires to shield the sanctuary from profanation. As a consequence, irregularity ex delicto resolves itself logically into irregularity ex defectu. The distinction, however, must be retained in practice, both on account of the laws of dispensation and because irregularity ex delicto is a result of wrongdoing. This distinction has been taken by canonists from a decree of Pope Innocent III (cap. "Aedoeclens," xiv, X, "De purga. canon.").

IRREGULARITIES EX DELICTO OR ON ACCOUNT OF CRIME.—In the primitive Church those who had performed public and private crimes, or who were guilty of sacrilege, were not allowed to receive orders; and if already ordained were not admitted to higher orders. This was the first form of irregularity in the legislation of the Church, if we except certain prescriptions which appear in the New Testament (I Tim., iii, 2; v, 22; Titus, i, 6). After public penance and de- desuetude all faults were atoned for by private penance, and then began the distinction found in the "Corpus Juris Canonici" (e. xxxii, § 3, d. 1) between public and private crimes, to the effect that the former produced irregularity, while the latter did not. This was defined; and seems that irregularity is present, however, a different rule obtains, namely, that only those crimes which are expressly mentioned in law, whether they be public or private, can produce irregularity ex delicto; though it must be noted that crimes to which irregularity is attached on account of infamy do not make a person irregular if they remain secret, while the other crimes mentioned in law do produce irregularity, whether they be public or occult. For the incurring of irregularity ex delicto the act must be external, consummated, and of mortal gravity. Hence, if, on account of circumstances, the act be not a crime, it is not true that irregularity is not constituted precisely on account of crime, yet, as a matter of fact, it is never imputed unless there be a crime of mortal gravity. The exception to this rule is homicide, which may sometimes make a person irregular when the fault is only venial. It is to be noted that penance cannot prevent the incurring of an irregularity. Suppose there be question of a doubtful crime. If the doubt be one concerning the law (dubium juris), viz. whether or not a crime is a direct effect of the irregularity, then the doubt is not in the case of a particular crime, then an irregularity is not incurred. If the doubt concern the fact (dubium facti), viz. whether the crime was actually committed or, if so, whether the act was of mortal gravity, canonists reply with a distinction: if the doubtful fact concerns homicide, then it is probable that irregularity was abstracted, on account of the peculiar iniquity of homicide with the clerical state; but if the doubt concerns any other fact, then it is probable that the irregularity has not been incurred, for the accused has the benefit of the doubt.

Homicide and Mutilation.—(a) Voluntary homicide, even if occult, is a perpetual irregularity both for the reception of Sacraments and for the obtaining of any ecclesiastical benefice or office. The same holds for procuring the actual abortion of a living fetus. The penitential practice of the Church, however, provides that the male for forty days, and the female after eighty days. All those who concur in the homicide as instigators or counsellors also incur irregularity, unless they retracted before the deed was committed and so that their retraction could have been known to the actual perpetrators. As for co-operators in homicide, if several conspire together, or if in a public brawl all joined in the attack and it can not be known who inflicted the fatal wound, all become irregular, at least in the external forum. Those who are in justice bound to prevent a homicide and neglect their duty also incur irregularity. Homicide for the necessary and just defence of one's own life, when no other means would ward off the danger, is free from irregularity; but this is not the case if the killing was unnecessary or if the act was perpetrated in defence of goods or even of the life of another. Accidental homicide or that performed by a person who is irresponsible produces no irregularity. When a person performs a licit act, but omits to use all proper diligence or is not sufficiently skilled, and a death follows, he becomes irregular if he could have foreseen the consequence of his act. It is on this account that Benedict XIV declares that physicians wishing to receive Sacred orders should obtain a statement from the ailing person to the effect that he is not conscious of his illness in a canonical sense, is the separation from the body of one of its principal members or of some part of the body having a distinct office, as a hand or a foot or an eye. He, therefore, who cuts off a finger is not a mutilator, unless it be the index finger or thumb, which, for a priest, are accounted principal members. Those who mutilate themselves or procure mutilation without just cause incur irregularity. In practice, these two points are to be observed concerning homicide and mutilation: first, in doubt as to the fault where the fact is certain, a conditional dispensation must be obtained; second, if the crime be undecided, an accidental, a priest must abstain from the altar until the case be passed on by proper authority. Abuse of Baptism.—This is an irregularity contracted by those who unconditionally reiterate baptism knowingly and openly. In such a case the persons baptizing, receiving baptism, and those co-operating in it all become irregular. Some authors hold that the same irregularity is contracted by those who confer conditional baptism where there is no prudent doubt that the first baptism was valid. Other canonists deny this and their opinion seems preferable. A person who allows himself to be baptized and is afterwards proved to be a heretic falls also under this impediment. It is evident, however, that this does not affect infants baptized by heretics. Violation of Censure.—Irregularity is incurred under this head by those who presume to
exercise orders while under censure, i.e. while excommunicated or suspended. It applies equally to all clerics whether in major or minor orders and to the excommunicate silandi and tolerandi. But to incur it, the inculminating act must be one of order, not jurisprudence. The other, of course, must be performed by the accused in knowledge and temerity. Abuse of Ordination.—

Those who in bad faith receive Sacred orders from bishops who are under censure become irregular and incur suspension from the order received. If the defect is principally in the one ordained, however, he is suspended, but probably does not incur an irregularity. Heresy, Apostasy, and Schism.—Heretics in general are irregular, whether they were born in heresy or lapsed into it from the Catholic Faith. This irregularity also includes the children of heretics to the second degree in the paternal line, and to the first degree in the maternal. If the parents embrace the Catholic Faith, their offspring is no longer irregular. Those born of Jews and pagans are not comprehended under this irregularity. Children are held irregular if born after their parents have fallen into heresy, and if the parents die in heresy. Some older canonists held that in cases where Catholics and non-Catholics live mixed together this irregularity is in effect in the offspring of the latter. A decree of the Holy Office (9 July, 1884), however, declares that the children of those who die in heresy are irregular, even in countries where heresy is rampant and unchecked. A schismatic is not irregular, unless he be at the same time a heretic. Such schismatics, however, where heresy is conjoined, even after restoration to the unity of the Church, remain irregular, as do also heretics after abjuration and apostates after penance. Defect of Fame, or Infamy.—This is defined by canonists as a state of lowered dignity, or a privation or diminution of the esteem of men. It is called infames in the law when the law declares one to be infamous either ipso facto or after judicial sentence. To the first class of infames belong those who are guilty of marriage with a prostitute, who attack cardinals, commit rape, engage in duels, embrace heresy. Children of those who commit high treason or lay hands on a cardinal are also infamous. If civil laws intend to brand a guilty person with infamy he is held as infamous by canon law. To the second class, or those who are held infamous only after judicial sentence, belong all convicted of certain crimes expressed in law or who have been condemned to very degrading penalties. The defect of fame is not incurred when one perpetrates any crime which forfeits the good opinion of the community. When one's good name is lost only through a widespread suspicion this is deemed sufficient to impede the reception of Sacred orders. In ancient times certain classes of people, such as harriers, actors, and others, were considered infamous by their very employment, but at present the actual opinion of the community must be consulted.

(2) Irregularities ex Defectu or on Account of Defect:—

Proper Age.—The Church has prescribed a certain age at which a layman can be consecrated to the sacred orders, stipulating that the candidate's age, and the age of the ordaining bishop, must be observed. Defect of Birth.—In primitive times illegitimacy was no bar to ordination. In 655 the Ninth Council of Toledo decreed that illegitimate sons of clerics in major orders should be held as serfs of the Church and not be admitted to Holy orders unless first manumitted by the bishop. In the ninth and tenth centuries those born of violated virgins or of incest began to be held as irregular. Various canons were also formed concerning different details of illegitimacy, until finally a general prohibition against all spurious children being admitted to orders was set down. The Sacraments of Holy orders unless the ordained or the ordaining bishop would be a stain on the sacred ministry. At present, therefore, all illegitimate persons are irregular unless they have been legitimated by the subsequent marriage of their parents or by profession in a religious order or by papal rescript. Foundlings of unknown parentage should receive conditional dispensation. Those also are held to be irregular who, though sprung from valid marriage, were born while their parents were bound by solemn vow or after the reception of Sacred orders. The ordination is thus invalid and the person is less liberated by their masters. The same irregularity affects those who are responsible to the civil government for the administration of certain offices or duties, as judges, magistrates, guardians, administrators, soldiers. These are not to be ordained until they have freed themselves from their civil duties and dispelled any suspicion of fraudulent dealings. Those, however, who administer charitable funds or have the care of the poor or orphans are not included. Owing to the defect of liberty a husband cannot receive orders during the lifetime of his wife, unless she enter religion or make a vow of chastity. Defect of Matrimony, or Bigamy.—In canonical phraseology, bigamy may be of three kinds. It is called true bigamy when a man has contracted a second marriage after the death of his first wife. Such a person is considered irregular for Sacred orders, because according to Innocent III a second marriage does not signify the union of Canon, with His Caus sui, the same as the union of the first marriage. Hence this irregularity is technically called defectus sacramentorum (i.e. matrimonii). The impediment is not contracted, however, if either the first or second marriage had not been consummated. Bigamy is called interpretativa, when, by fiction of law, a person is accounted as having had two wives, when in reality he had but one. This is the condition of a man who marries a widow or one corrupted by another. Simultaneous bigamy is contracted by a person who, bound by solemn religious vows or by Sacred orders, enters into a so-called marriage. Such a one is considered as having contracted two marriages, the one valid and spiritual with Christ, the other carnal and invalid with his guilty partner.

Defect of Mildness.—This impediment, termed in Latin defectus lentitiae, makes those persons irregular who voluntarily, actively, and proximately take part in any form of public authority in the lawful killing or mutilating of another. The reason of this irregularity is that since Christ was the gentlest of men, and priests are His representatives, they should likewise be models of mildness. This irregularity may be contracted in war. Canonists hold generally that an act of just war does not impede the reception of Sacred orders. The irregularity is not, however, contracted by the mere fact of a person's entering military service. Defect of mildness also constitutes an irregularity for those concerned in legal capital punishment, as judges pronouncing sentences of death, witnesses, accusers, clerks writing out the sentence, and those who carry it into actual execution. As jurymen with us are really judges, they would seem to contract this irregularity likewise. The law is so strict that a judge who decrees a death sentence which was not carried out remains irregular for the reception of Sacred orders. In the case of the clergy, however, before a court for injuries done to themselves must protest, according to Boniface VIII, that they do not desire sentence of capital punishment, if they wish to keep clear of irregularity. Similar protestation must
be made by the ordinary who allows a corpse to be disinterred from the cemetery with a view to proving that some other person can be shown to have incurred the imputedly remotely concur in a death sentence, as legislators, chaplains, and the like, are not included in this irregularity. As to clerics who practice surgery there is divided opinion among canonists, and while some hold that they contract this irregularity, others deny it, unless they can be shown to have incurred the imputedly fault of homicide or mutilation. Mere disobedience of the Church’s laws as to the practice of surgery by a cleric may be a sin, without necessarily being an irregularity. Bodily Defects.—These constitute an impediment to Sacred orders, either because they render a candidate incapable of performing his duties, or because they would make him an object of horror and derision. The following are, therefore, irregular: mutilated persons, those having an artificial limb or who are unable to use their hand or thumb or index finger; the blind and those whose vision is too dim to allow them to read the Missal. Some authors, e.g. Noldin, think that, owing to the present ingenious construction of artificial limbs, this defect is no longer an irregularity, as it has ceased to be a deformity. The absence of an eye, even the left eye, may not constitute an impediment if the person can read the Mass without deformation. In case the bishop is doubtfully when the defect exists, he makes his declaration to Rome, but in practice the Sacred Congregation generally inclines to the severer view. Total deafness, dumbness, and stammering to such an extent as to make it impossible to pronounce complete words are likewise impediments. Paralytics, the lame who cannot properly perform the ceremonies, those who cannot drink wine without vomiting, lepers, those afflicted with the falling sickness, and in general all whose deformity is very notable are irregular. Defect of Reason.—This irregularity includes the insane, enervates, and simpletons. Defect of Knowledge. Those who have not acquired the knowledge prescribed by the Council of Trent for the various grades of Holy orders cannot be lietely promoted to them. This defect is one that cannot be dispensed in, say canonists, because it falls under the natural law. When its cause, ignorance, disappears, however, the irregularity disappears with any defect of reason. Defect of Confirmation in Faith.—This irregularity embraces neophytes recently converted and those who have not received the Sacrament of Confirmation.

Cremation of Irregulars.—Many of the irregularities are defects cease without dispensation which do not disappear until the decease of the person. A person was accounted irregular on account of some occupation in life, the dismissal of such occupation or condition will remove the impediment without any dispensation. All other irregularities need formal dispensation. In this matter the pope has absolute juridiction. A limited power of dispensation is conceded to bishops either by law or special faculties. By canon law a bishop can dispense from irregularities arising from similitudinary bigamy: likewise from illegitimacy, but only for minor orders. The Council of Trent declares that bishops may also dispense in all cases of doubt concerning bishops and those concerning which proceedings have been instituted before legal tribunals. The bishop can use his dispensing power, however, only for his own diocesan subjects. In voluntary homicide which is public or notorious the pope himself rarely dispenses. In homicide committed for one’s own defence as well as secret accidental manslaughter, the bishop can dispense. If the latter deed be public the ordinary’s dispensation extends only to the person. Heresy, schism, and apostasy are reserved to the pope, and for them the bishops need special faculties. Bodily defects are to be passed on by the local bishop, but the dispensation must come from the pope. Illegitimacy as an impediment to Sacred orders is reserved to the pope, but he need not desist from ordaining a religious profession. Faults committed before baptism do not produce any irregularity. From this it will be seen that Irregularities have been constituted by the Church to preserve the dignity and sanctity of the sacred ministry.

WILLIAM H. W. FANNING.

Irremovability (Lat. in, not, and removere, to remove), a quality of certain ecclesiastical offices and dignities. It implies that the incumbent’s appointment is, under certain conditions, a perpetual one, or for the term of his natural life. This quality of irremovability, or perpetuity, is attached to the principal ecclesiastical offices, such as archbishop, cardinal, bishop, parish priest, etc. A pope can resign his dignity; cardinals, bishops, and parish priests can either resign or be removed only for cause. It is of the removability of the latter especially that this article treats. According to the principal canonists the constitution of the canonical parish includes among its requisite conditions that its rector be irremovable. However, this does not mean that no exception is permitted, for occasionally the rectors of such canonical parishes may have only a vicarious charge for another who is the true parish priest. In some countries the bishop seems to be the parish priest of all or most of the parishes in his diocese, and the actual incumbents are simply his vicars. Thus in France after the Revolution the custom obtained that some thirty thousand secular parish priests (deservents) were created without canonical institution, and without the right of perpetuity, so that they could be removed and transferred by the bishops. The attitude of the Holy See towards this state of things has been one of passivity and toleration, not of approbation. In many missionary countries, as in the United States and England, a similar condition has been permitted. According to the general law of the Church, however, a canonical parish priest is appointed for life and he can be removed from his benefice or office only for grave crimes expressed in law and after a canonical trial, either formal and solemn or, at least, summary, in those countries to which the decree on that subject (1880) of the Congregation of Bishops and Regulars has been extended.

Irremovable Rectors in the United States.—Up to a comparatively recent date all the rectors having cure of souls in this country were removable at the will of the bishop (ad nutum episcopi). As we have said above, however, this was not in accord with the general law of the Church. Pope Innocent III, in the Fourth General Council of the Lateran (cap. "Extirpanda", xxx, § 10, "Vero de praet., iii, 5), and Pope Boniface VIII (cap. "Unic. de capell. mon." in Decretals, III, 18) insist that these clerics, except voluntary homicide and those concerning which proceedings have been instituted before legal tribunals, are removable. The bishop can use his dispensing power, however, only for his own diocesan subjects. In voluntary homicide which is public or notorious the pope himself rarely dispenses. In homicide committed for one’s own defence as well as
notwithstanding any custom to the contrary. Indeed, in the early ages of the Church, as soon as priests were appointed to definite curacies (tituli), their appointment seems to have been in perpetuity. The reason for this irremovability of one having cure of souls is found in the fact that he is required to be the shepherd of the flock, to which the sheep are known. It is, moreover, to the benefit of a parish that its administrator realize that he is secure in his office, as it will inspire him with greater zeal for the spiritual and temporal improvement of his charge. In order to extend these benefits to the United States, a law was passed in the Congregation of the Propaganda in 1883 that rectors having cure of souls in that country should be made canonical parish priests and as such irremovable. The American bishops, however, did not think the time ripe as yet for such development, and finally it was determined that irremovable rectors, who would not, however, have all the rights of canonical parish priests, should be constituted instead. The Third Plenary Council of Baltimore, held in 1884, decreed that in three years from the promulgation of the council each bishop was to select, with the advice of his consistory, five new curacies in his diocese, and erect them into quasi-parishes, whose rectors would be irremovable. These quasi-parishes were to constitute at least one in ten of all the curacies or missions in the diocese. The first irremovable rectors might be appointed by the ordinary, with the advice of his consultants, without the formality of an examination, or concursus, but after that only when the prescribed examination had been undergone. An exception to the latter rule is made for certain priests whose learning and ability have been already abundantly proved. To obtain the right of making the concursus for an irremovable rectorship, a candidate must have already exercised the sacred ministry in a worthy manner for ten years in the diocese, and demonstrated his capacity for spiritual and temporal administration as a removable rector or in some equivalent office. The examiners having approved all the candidates whom they find worthy of the position, it devolves upon the bishop to designate one from among them who is to be made irremovable rector. Such rectors have quasi-parochial rights and join with the diocesan consultants in recommending candidates for the bishopric when it becomes vacant. In some cases, where diocesan or other duties would make a special concursus for every irremovable rectorship very inconvenient, it is allowed to hold a general examination once a year, and those approved for their learning at that time are qualified for appointment to any irremovable rectorship which falls vacant within the next six years. The other requisite qualifications for such office are to be passed on each time there is question of an appointment.

Irremovable rectors in the United States may be dismissed from their parishes only for very grave crimes, as dismissal is a very grave punishment. The nature of these crimes is that they shall be designated by ecclesiastical law. Dismissal is inflicted either ipso facto, in which case, however, a declaratory sentence is as a rule necessary, or after a condamnatory sentence following on a trial. The common law of the Church distinguishes those circumstances and shows that there is a necessary formal procedure of trial from those which require a condamnatory sentence after canonical trial. The former are: heresy, falsification of papal documents, assassination, bodily attack on cardinal or bishop, procuring abortion, unnatural vice, simony, duelling, usurpation of church property, mendacity, irregular ordination or neglecting to receive Sacred orders within a year after appointment to a parish. The latter are: neglect of the prescribed clerical costume, non-residence in the parish, usury, inebriety, murder, gambling, perjury, theft and the like, remaining obdurately under censure for a year, incurring certain irregularities, concubinage. To these crimes the Third Council of Baltimore (1884) added other causes for the dismissal of irremovable rectors other than the ordinary in matters of grave moment, open neglect of the bishop's mandates concerning parochial schools, repeated incurring of debts without permission of the ordinary and manifest disobedience in payment of debts, collusion with lay trustees in issuing false and fraudulent evidence of the benefit of the rector, fraudulent deception of the ordinary in including the annual parochial statement concerning matters of grave import, public and persistent charges against the morals of the incumbent involving great harm to the parish. The council adds that if an irremovable rector be found incapable of administering his parish, he is to be asked to resign his charge. If he refuse, and it be not possible to appoint a vicar with sufficient revenue for support, the bishop can dismiss the irremovable rector, but in that case he must provide a proper pension for him. As to removable rectors, they are not absolutely to the arbitrary will of the ordinary, but must be dismissed only for cause, which, however, need not be one expressed in law nor necessarily as grave as such. The form of trial to be used in all cases in the United States is prescribed in the instruction "Cum Magnopere" (1884). Missionary Rectors in England.—These incumbents correspond to irremovable rectors in the United States. They have been appointed since 1852 in virtue of a decree of the Propaganda. Their office is perpetual and they have quasi-parochial rights, and they may not be removed except for canonical cause. The Most Honorable Chapter of Westminster declares (decree xxv, 12) that an assistant priest acquires no right to a permanent appointment to the cure of souls owing to his service, but that such appointment to a missionary rectorship is a right reserved.

Irvingites, a religious sect called after Edward Irving (1792–1834), a depose Presbyterian minister. They themselves repudiate this name, saying Irving was not their founder but only their "forerunner," and claim to be the "Catholic Apostolic Church." The sect arose from certain extraordinary "manifestations of the spirit"—tongues, prophecies, healings, even raising of the dead—which were said to have taken place during Irving's ministry in London, after his deposition. These led some of his followers to band themselves together for the purpose of forming a religious body modelled exactly on the lines of the primitive Apostolic Church, as they conceived it. The specificity of their religious belief consists in this: They hold apostles, prophets, evangelists, and pastors (Ephesians, iv, 11–14) to be abiding ministries in the Church, and that these ministries, together with the power and gifts of the Holy Ghost, dispensed and distributed among her members, are the necessary continual foundation of the Church for the Second Advent of the Lord; and that the supreme rule in the Church ought to be exercised, as at first, by twelve apostles, not elected and ordained by men, but called and sent forth immediately by God. They are not separated from the church of Christ, one of the parts of the Church of Christ, but are an integral part of it, their worship apart, indeed, because they believe that they have a special call to do so. They accept the Apostles' Creed, the Nicene and Athanasian Creeds.
It is their form of church government and liturgy which are peculiar to them. During Irving's lifetime six apostles were "separated" for the work of the ministry. After his death six others were added. These twelve apostles were to ordain twelve "prophets", twelve "evangelists", and twelve "pastors". Seven "deacons" were to be chosen for the management of the moral affairs of the body. This number of central officials has not in fact been adhered to. Each congregation has at its head an "angel", or bishop, who ranks as a "pastor", and who has under him twenty-four priests and seven deacons. The ritual is exceedingly elaborate, resembling in many respects those of the Catholic Church. At Matins and Vespers they have "Proposition" (Exposition) of the Sacrament. On Sundays and holidays they have solemn celebration of the Eucharist with lights, incense, and vestments. They use oil and water in their ritual observances. Their two principal churches are at Albury (Surrey, England), and at Gordon Square, London (England). It should be stated that the so-called Irvingites owe much more to Henry Drummond (1786-1880) than to Irving. At his seat, Albury Park, the earliest meetings of the sect were held, and his wealth was at its disposal. He was one of its office-bearers, and wrote numerous works in its defence. The last of the "apostles" died in 1901, and none has since been appointed. No official statistics are published, but there are known to be congregations not only in England, but also in America, Germany, France, and Switzerland. In 1900 there were 80 churches altogether.

**Isaac** (Heb. יְחָזָק; in a few places יְחָזָי; in Sept. and in N. T. read), the son of Abraham and Sara. The incidents of his life are told in Gen. xxv-xxxv, in a narrative the principal parts of which are traced back by many scholars to three several documents (J, E, P) utilized in the composition of the Book of Genesis (see ABRAHAM). According to Gen., xvii, 17; xviii, 12; xxii, 6, his name means: "he laughs". He was circumcised eight days after his birth, weaned in due time, and proclaimed the sole legal ancestor of the chosen people (xxi, 1-12). His early years were spent in Bersabee, whence he was taken by his father to Mount Moriah to be offered up in sacrifice, and whither he returned after his life had been miraculously spared (xxi, 33; xxii, 19). His mother died when he was thirty-six years of age (Gen. xxvi, 17; xxx, 1). A few years later, he married Rebecca, Bethuel's daughter, whom one of his father's servants had, according to Abraham's directions, brought from Mesopotamia (xxiv). The union took place in "the south country", where Isaac then lived, and continued to live after he had joined with Nahuel in committing the body of Abraham to burial in the cave of Machpelah (xxiv, 62, 67; xxv, 7-11). Many years elapsed before Isaac's longing entreaty to God for children was actually heard. Of the twins to whom she then gave birth, Esau was beloved by Isaac, while Jacob was Rebecca's favourite (xxvi, 21-28). Drought and famine made it necessary for Isaac to take the road down to Egypt, but, at Yahweb's bidding, he stopped on his way thither and sojourned in Gerar, where an incident similar to that of Abraham's disavowal of Sara is recorded of him (xxvi, 1-11). We are told next how, through envy of Isaac's prosperity as a husbandman and a herdsman, the Philistines among whom he dwelt began petty persecutions, which he bore patiently, but on the birth of his sons he finally withdrew to Bersabee. There he was favoured with a new vision from Yahweh, and entered a solemn covenant with Abimelech, King of Gerara (xxvi, 12-33). During the last years of Isaac's career, there occurred the well-known incident of his conferring upon Jacob the Divine blessing, which he had always intended for Esau (xxvii), followed by Isaac's concern to prevent Jacob from his brother's resentment and to secure for him a wife from his mother's kinsred in Mesopotamia (xxviii, 1-5). After Jacob's return, Isaac died at the age of one hundred and eighty, and was buried by his sons in the cave of Machpelah (xxx, 27-29; xlii, 9). As delineated in Genesis, the figure of Isaac is much less striking than that of Abraham, his father. Yet, by his manner of life, always quiet, gentle, guileless, faithful to God's guidance, he ever was the worthy heir and transmitter of the glorious promises made to Abraham. He was pre-eminent a man of peace, the fitting type of the Prince of Peace whose great sacrifice on Mount Calvary was foreshadowed by Isaac's sacrifice on Mount Moriah. The New Testament contains few, but significant references to Isaac (cf. Matt., viii, 11; Luke, xiii, 28; xx, 37; Rom., ix, 7; Gal., iv, 28; Heb., xi, 17 sqq.; James, ii, 21).

The legends and various details concerning Isaac which are found in the Talmud and in rabbinical writings are of no historical value.

FRANCIS E. GILOT.

**Isaac of Armenia** (Sahag), Catholicos or Patriarch of Armenia (388-439), otherwise known as ISAAC THE GREAT and sometimes as PARTHEV owing to his Parthian origin. He was son of St. Narceus and descended from the family of St. Gregory the Illuminator. Left an orphan at a very early age, he received in Constantinople an excellent literary education in the Eastern languages. After his election as patriarch he devoted himself to the religious and scientific train-
ing of his people. Armenia was then passing through a grave crisis. In 387 it had lost its independence and been divided between the Byzantine Empire and Persia; each division, with its local, semi-autonomous character, was slowly falling into a feudalistic king. In the Byzantine territory, however, the Armenians were forbidden the use of the Syriac language, until then exclusively used in Divine worship: for this the Greek language was to be substituted, and the country gradually hellenized. In the Persian districts, on the contrary, Greek was not only allowed, but was greatly favoured. In this way the ancient culture of the Armenians was in danger of disappearing and national unity was seriously compromised. To save both Isaac invented, with the aid of St. Mesrop, the Armenian alphabet, and began to translate the Bible; their translation from the Syriac Peshito was revised by means of the Septuagint, and even, it seems, from the Hebrew text (between 410 and 430). The liturgy also, hitherto Syriac, was translated into Armenian, drawing at the same time on the Liturgy of St. Basil of Cæsarea, so as to obtain for the new service a national colour. Isaac had already established Collections for higher education with the aid of disciples whom he had sent to study at Edessa, Melitene, Byzantium, and elsewhere. Through them he now had the principal masterpieces of Greek and Syriac Christian literature translated, e.g. the writings of Athanasius, Cyril of Jerusalem, Baruch (of Antioch and of Nyssa), John Chrysostom, Ephrem, etc.

Armenian literature in its golden age was, therefore, mainly a borrowed literature. Through Isaac's efforts the churches and monasteries destroyed by the Persians were rebuilt, education was cared for in a generous way, the pagan worship of Ormuzd which Shah Yesidgerd tried to set up was cast out, and three councils held to re-establish ecclesiastical discipline. Isaac is said to have been the author of liturgical hymns. Two letters, written by him to Theodosius II and to Atticus of Constantiople, have been preserved. A third letter addressed to St. Proculus of Constantinople was not written by him, but dates from the tenth century. Neither did he have any share, as was wrongly ascribed to him, in the Council of Ephesus (431), though, in consequence of disputes which arose in Armenia between the followers of Nestorius and the disciples of Monothelites, he and his church did appeal to Constantinople and through St. Proculus obtained the desired explanations. A man of enlightened piety and of very austere life, Isaac owed his deposition by the king in 426 to his great independence of character: in 430 he was allowed to sell the monastery he had founded and his church did appeal to Constantinople and through St. Proculus obtained the desired explanations. A man of enlightened piety and of very austere life, Isaac owed his deposition by the king in 426 to his great independence of character: in 430 he was allowed to sell the monastery he had founded and his church did appeal to Constantinople and through St. Proculus obtained the desired explanations. S. VAILHÉ.

Isaac of Nineveh, Nestorian bishop of that city in the latter half of the seventh century, being consecrated by the Nestorian Patriarch George (660-80). Originally a monk of the monastery of Bethabe in Kurdistan, he abdicated for unknown reasons after an episcopate of but five months, and retired to the monastery of Rabban Shapur, where he died at an advanced age, blind through study and austerity. Towards the end of his life he passed under a cloud as his Nestorian orthodoxy became suspect. He was author of three theses, which found but little acceptance amongst Nestorians. Daniel Bar Tubanita, Bishop of Beth Garmai (some 100 miles south-east of Mosul), took umbrage at his teaching and became his harshest opponent. Contests between the theses are not known, but they were of too Catholic a character to be compatible with Nestorian heresy. From an extant prayer of his, addressed to Christ, it is certainly difficult to realize that its author was a Nestorian. Excerpt to claim so great a writer, the Monophysites falsified his biography, placing his life at the beginning of the seventh century. His tomb, as monk of the Jacobite monastery of Mar Mattai, and stating that he retired to the desert of Scete in Egypt. Since the discovery of Iahodenins's "Book of Chastity" by Chabot in 1896 the above details of Isaac's life are beyond doubt, and all earlier accounts must be corrected accordingly. Isaac was a fruitful ascetical writer and his works were for centuries the main food of Syrian piety. Only very little of the original Syriac has been published—two chapters on "Grades of Knowledge" and the "Essential Qualities of Virtues" by Zingerle ("Monum. Syriacæ", I, 1869, 97-101) and three dialogues by Chabot at the end of his treatise "De Isacii vita" (see below). A German translation of some six chapters was made directly from the Syriac by Bickell ("Bibl. der Kirchenv.", Kempten, 1874). A complete list of Isaac's works is given by Chabot in "De Isacii vita " and in "Revue Semitique" (1896), p. 254. Isaac's works were early translated in Arabic, Ethiopic, and Greek. The Greek translation was made by two monks of St. Saba, Patrick and Abraham, and published by Nicephorus Theodocus under the title Teo tria epistulae (Leipsic, 1870). This publication, however, does not represent any precise work of Isaac, but is rather a corpus ascetica, containing treatises, letters, colloquies, all in one. Two Latin recensions thereof have been published: the one entitled "Sermones beati Isacii de Syria" (Venice, 1566) and the other in the "Max. biblioth. vet. Patrum., XIII (Lyons, 1677). This latter recension is reprinted in Gallandi, XII, and again in Migne, P. G., XXXVI, I, 811-86, and bears the title "De Contemptu Mundi". It is erroneously ascribed to Isaac of Antioch, with whom Isaac of Nineveh is often confused. The Fragments of Isaac is a collection of fragments in Greek, which itself has undergone a number of manipulations. The long letter to Simeon of Cessarea published in Mai's "Nov. Patr. Biblioth.", VIII, 3, forms the last chapter of Theodorus's Greek. Marius Benson published apophthegmata of Isaac's in Greek in "Sphinx" (1901), 46-50. The Arabic translation of this corpus ascetica is much fuller than the Greek, and divided into four books. Isaac's writings possess passages of singular beauty and elevation, and remind the reader of Thomas a Kempis.

J. P. ARENDSEN.

Isaac of Seleucia, Patriarch of the Persian Church, d. 410. Isaac is celebrated among the patriarchs of the Persian Church for having reorganized it after the terrible persecution that overwhelmed it under Sapor (Shapur) II. We know little or nothing definite of his early days. According to the most probable tradition he was enabled, through the presence he had with King Vardan I, to restore the Catholikon of Seleucia, which had been vacant for twenty-two years. Another account says he was chosen to replace a certain Qayqom, who had been deposed by his fellow-bishops for incapacity. Isaac's great work was the organizing of the Council of So-
son of John II of Aragon, and heir; at the same time, to the Kingdom of Navarre. 'This Henry did in spite of the opposition of the King of Aragon, who wished to obtain the hand of Isabella (which carried with it the crown of Castile) for his younger son Ferdinand. Negotiations were protracted until the unhappy death of the Prince of Viana. In 1465 an attempt was made to arrange a marriage between Isabella and Alfonso V of Portugal, but the princess had already chosen Ferdinand of Aragon for a husband and was therefore opposed to this alliance. For the same reason she subsequently refused to marry Don Pedro Girón, Master of Calatrava, a member of the powerful Pacheco family, whom the king sought to win over by this means. Other aspirants for Isabella's hand were Richard, Duke of Gloucester, brother of Edward IV of England, and the Duke of Guienne, brother of Louis XI of France. The Cortes was assembled at Ocaña in 1469 to ratify the Pact of Guisando, when an embassy arrived from Portugal to renew the suit of Alfonso V for the hand of Isabella. When she declined this alliance, the king went so far as to threaten her with imprisonment in the Alcazar of Madrid, and although fear of the Infanta's partisans prevented him from carrying out this threat, he exacted of his sister a promise not to enter into any matrimonial negotiations during his absence in Andalusia, whither he was on the point of setting out. But Isabella, as soon as she was left alone, removed, with the aid of the Archbishop of Toledo and the Admiral of Castile, Don Paolino Enríquez, to Madrigal and thence to Valladolid, and from there sent Gutierre de Cárdenas and Alfonso de Palencia in search of Ferdinand, who had been proclaimed King of Sicily and heir of the Aragonese monarchy. Ferdinand, after a journey the story of which reads like a novel, for its perils and its dramatic interest, was married to Isabella in the palace of Juan de Vivero, in 1469.

On the death of Henry IV, Isabella, who was then at Segovia, was proclaimed Queen of Castile. But La Beltraneja had been betrothed to Alfonso V of Portugal, and Henry, revoking the Pact of Guisando, had caused her to be proclaimed heiress of his dominions. The Archbishop of Toledo, the Marqués de Villena, the Master of Calatrava, and other nobles, who in her father's lifetime had denied La Beltraneja's legitimacy, now defended her claims. And thus was begun a war between Spain and Portugal which lasted five years, ending with the peace of 1479, when a double alliance was arranged. La Beltraneja, however, abandoned her claims, taking the veil in the monastery of Santa Clara de Coimbra (1480), and with that event the right of Isabella to the throne of Castile became unquestioned. Ferdinand had meanwhile succeeded to the throne of Aragon, and thus the unification of the Spanish nation was accomplished in the two monarchs to whom a Spanish pope, Alexander VI, gave the title of "Catholic" which the Kings of Spain
still bear. Isabella displayed her prudence and gentleness—qualities which she possessed in a degree seldom equalled—in the agreement she made with Ferdinand as to the government of their dominions: they were to hold equal authority, a principle expressed in the device or motto, “*Tanto monta, monta tanto*—Isabel como Fernando (As much as the one is worth so much is the other—Isabella as Ferdinand).” The union of the peoples and the crowns being thus realized, it was necessary to reduce the power of the nobles, who had acquired a position almost independent of the crown and rendered good government difficult. Towards this object the Catholic sovereigns directed their efforts; among the means which they should be mentioned chiefly: (1) the establishment of the *Santa Hermandad* (Holy Brotherhood), a kind of permanent military force, very completely organized, supported by the municipal councils, and intended for the protection of persons and property against the violence of the nobles; (2) an improved and properly ordered administration of justice, with a wiser organization of the tribunals, the establishment of the Chancery at Valladolid, and the promulgation of the royal edicts generally called “Edicts of Montalto” after the jurisconsult who drew them up; (3) the abolition of the right of coining money, which certain individuals held, and the regulation of the currency laws so as to facilitate commerce; (4) the revocation of extravagant grants made to certain nobles during the reigns of the late monarchs, the demolition of their castles, which constituted a menace to public peace, and the vesting in the crown of the masterships of military orders. To preserve the purity of the faith and religion, against the intrigues of the Jews, who were employing the influence of their wealth and their usurping deceptions to pervert Christians, the Catholic sovereigns solicited of Pope Sixtus IV the establishment of the Inquisition (q. v.).

Their government thus strengthened at home, the sovereigns proceeded to bring to a completion, by the conquest of Granada, the great work of reconquest which had been virtually at a standstill since the time of Alfonso XI. The taking of Zahara, of which the Moors possessed themselves by surprise, afforded an occasion for the war, which opened happily with the conquest of Alhama (March, 1482). The Christians were favoured by the internal troubles of Granada, which were due to the party of the Emir Muley Hassan and his son Boabdil, and, after the death of the former, to the supporters of his uncle Abdallah el Zagal. The sovereigns kept up the war in spite of the serious defeats sustained by them at Ajarquia and Las Navas, they deemed it advisable to make a separate submission of each of the cities or castles of Guadix, Almeria, Loja, Velez, Malaga, and Baza. Isabella took a prominent part in this war; not only did she attend to the government of the kingdom, and provide for the support of the army while Ferdinand did battle at its head, but she repeatedly visited the camp to animate the troops by her presence. This was the case at the siege of Malaga and at that of Baza, where the stern usages of war did not hinder the Moorish leader, Old Hisa, from showing his chivalry towards the queen. She was in danger of being assassinated by a Mohammedan fanatic before the walls of Malaga, and of perishing in the confederation of the besieging camp at Granada. In consequence of this confederation the city of Santa Fe was built, to put an end to the mixture of the peoples and the crowns being thus realized, it was necessary to reduce the power of the nobles, who had acquired a position almost independent of the crown and rendered good government difficult. Towards this object the Catholic sovereigns directed their efforts; among the means which they should be mentioned chiefly: (1) the establishment of the *Santa Hermandad* (Holy Brotherhood), a kind of permanent military force, very completely organized, supported by the municipal councils, and intended for the protection of persons and property against the violence of the nobles; (2) an improved and properly ordered administration of justice, with a wiser organization of the tribunals, the establishment of the Chancery at Valladolid, and the promulgation of the royal edicts generally called “Edicts of Montalto” after the jurisconsult who drew them up; (3) the abolition of the right of coining money, which certain individuals held, and the regulation of the currency laws so as to facilitate commerce; (4) the revocation of extravagant grants made to certain nobles during the reigns of the late monarchs, the demolition of their castles, which constituted a menace to public peace, and the vesting in the crown of the masterships of military orders. To preserve the purity of the faith and religion, against the intrigues of the Jews, who were employing the influence of their wealth and their usurping deceptions to pervert Christians, the Catholic sovereigns solicited of Pope Sixtus IV the establishment of the Inquisition (q. v.).

Their government thus strengthened at home, the sovereigns proceeded to bring to a completion, by the conquest of Granada, the great work of reconquest which had been virtually at a standstill since the time of Alfonso XI. The taking of Zahara, of which the Moors possessed themselves by surprise, afforded an occasion for the war, which opened happily with the conquest of Alhama (March, 1482). The Christians were favoured by the internal troubles of Granada, which were due to the party of the Emir Muley Hassan and his son Boabdil, and, after the death of the former, to the supporters of his uncle Abdallah el Zagal. The sovereigns kept up the war in spite of the serious defeats sustained by them at Ajarquia and Las Navas, they deemed it advisable to make a separate submission of each of the cities or castles of Guadix, Almeria, Loja, Velez, Malaga, and Baza. Isabella took a prominent part in this war; not only did she attend to the government of the kingdom, and provide for the support of the army while Ferdin-
has been ranked as a standard of the language by the Spanish Royal Academy. She was extremely solicitous for the education of her five children (Isabella, John, Joan, Maria, and Catherine), and, in order to educate Prince John with ten other boys, she formed in her palace a school similar to the Palatine School of the Carolingians. Her daughters, too, attained to a dignity and education high for their epoch, and they so combined with their learning the industries peculiarly appropriate to their sex, that Ferdinand the Catholic could imitate Charlemagne in using no article of clothing that had not been spun or sewn by his consort and his daughters. This example of the queen, a model of virtue, piety, and domestic piety, was observed even by the king, who often met his courtiers in the palace, and dispensed it to her at times as seven times, exercised a great moral influence on the nobility in discouraging inordinate luxury and vain pastimes. It also fostered learning not only in the universities and among the nobles, but also among women. Some of the latter decided to educate themselves by their own labors—e.g., Beatris Galinda, called la Latina, Lucia Medrana, and Francesca Nebrija, the Princess Joan and the Princess Catherine (who afterwards became Queen of England), Isabella Vergara, and others who reached great proficiency in philosophy, Latin, and mathematics. Isabella died in 1267. She was buried in the convent church on 2 February, 1270, and was buried in the convent church. After nine days her body was exhumed, when it showed no signs of decay, and many miracles were wrought at her grave. In 1321 Leo X allowed the Abbey of Longchamp to celebrate her feast with a special Office. On 4 June, 1637, a second exhumation took place. On 25 January, 1688, the nuns of Longchamp obtained permission to celebrate her feast with an octave, and in 1696 the celebration of the feast on 31 August was permitted to the whole Franciscan Order. They now keep it on 1 September. The history of the Abbey of Longchamp has been recorded. The Revolution closed it, and in 1794 the empty and dilapidated building was offered for sale, but, as no one wished to purchase it, it was destroyed. In 1857 the walls were pulled down except one tower, and the grounds were added to the Bois de Boulogne.

Isabel of France, Blessed, daughter of Louis VIII and of his wife, Blanche of Castille, b. in March, 1252, d. at Longchamp, 23 February, 1270. St. Louis I, King of France (1226-70), was her brother. When still a child at court, Isabel, or Elizabeth, showed an extraordinary devotion to exercises of piety, modesty, and other virtues. By Bull of 26 May, 1254, Innocent IV allowed her to retain some Franciscan fathers as her special confessors. She was even more devoted to the Franciscan Order than her royal brother. She not only broke off her engagement with a count, but moreover refused the hand of Conrad, son of the German Emperor Frederick II, although pressed to accept him by everyone, even by Pope Innocent IV, who however hesitated (1254) to raise her fixed determination to remain a virgin. As Isabel wished to found a convent of the Order of St. Clare, Louis IX began in 1255 to acquire the necessary land in the Forest of Roovray, not far from the Seine and in the neighbourhood of Paris. On 10 June, 1256, the first stone of the convent church was laid; in 1262 the church was consecrated, and in 1267 the church was completed. The monastery was under the Rule of St. Clare. These rules were drawn up solely for this convent, which was named the Monastery of the Humility of the Blessed Virgin (Monasterium Humilitatis B. Maria Virgini). The nuns were called in the rule the "Sorores Ordinis humilitatis annulare Benedictae Mariae Virginis". The fast was not so strict as in the Rule of St. Clare; the community was allowed to hold property, and the sisters were subject to the Minorites. The first sisters came from the convent of the Sorores Clararum at Reims. Isabel herself never entered the cloister, but from 1260 (or 1262) she followed the rules in her own home near by. Isabel was not altogether satisfied with the first rule drawn up, and therefore submitted through the agency of her brother Louis IX, who had also secured the confirmation of the first rule, a revised rule to Urban IV. Urban approved this new rule on 1 September, 1267.

The difference between the two rules consisted for the most part in outward observances and minor alterations. This new rule was also adopted by other French and Italian convents of the Order of St. Clare, but one can by no means say that a distinct congregation was formed on the basis of Isabella's rule. In the new rule Urban IV gives the nuns of Longchamp the official title of "Sorores Minorum inclusum", which was doubtless intended to emphasize closer union with the Order of Friars Minor. After a life of mortification and virtue, Isabel of France died in the convent on 23 February, 1270, and was buried in the convent church. After nine days her body was exhumed, when it showed no signs of decay, and many miracles were wrought at her grave. In 1321 Leo X allowed the Abbey of Longchamp to celebrate her feast with a special Office. On 4 June, 1637, a second exhumation took place. On 25 January, 1688, the nuns of Longchamp obtained permission to celebrate her feast with an octave, and in 1696 the celebration of the feast on 31 August was permitted to the whole Franciscan Order. They now keep it on 1 September. The history of the Abbey of Longchamp has been recorded. The Revolution closed it, and in 1794 the empty and dilapidated building was offered for sale, but, as no one wished to purchase it, it was destroyed. In 1857 the walls were pulled down except one tower, and the grounds were added to the Bois de Boulogne.

Isaia—Among the writers whom the Hebrew Bible styles the "Latter Prophets" foremost stands "Isaia, the holy prophet—" the great prophet, and faithful in the sight of God" (Eccles., viii, 23-25).

I.—Life.—The name Isaia signifies "Yahweh is salvation". It assumes two different forms in the Hebrew Bible: for in the text of the Book of Isaia and in the historical writings of the Old Testament, for example in IV Kings, xix, 2; II Par., xxvi, 22; xxxii, 20, 32, it is read "Yeshayahu", whereas the collection of the Prophet's utterances is entitled "Yeshayahu, יֵשׁיַֽעַו", in Greek Ισαίας, and in Latin Isaia, but sometimes Isaia. Four other persons of the same name are mentioned in the Old Testament (I Esd., viii, 7; vii, 19; II Esd., xi, 7; I Macc., xxvi, 15); Jesoia (I Par., iii, 21; xxv, 3) may be regarded as mere variants. From the Prophet himself (i, 1; ii, 1) we learn that he was the son of Amos, zen. Owing to the similarity between Latin and Greek forms of this name and that of the Shepherd-Prophet of Theue (Heb. הֶסֶף), some Fathers mistook the Prophet Amos for the father of Isaia. St. Jerome in the
preface to his "Commentary on Amos" (P. L., XXXV, 989) points out this error. Of Isaiah's ancestry we know nothing; but several passages of his prophecies (II Kings, xxvii, viii) lead us to believe that he belonged to one of the best families of Jerusalem. A Jewish tradition recorded in the Talmud (Tr. Megilla, 10b.) held him to be a nephew of King Amasias. As to the exact time of the Prophet's birth we lack definite data; yet he is believed to have been about twenty years of age when he began his public ministry. He was a citizen, perhaps a native, of Jerusalem. His writings give unmistakable signs of high culture. From his prophecies (vii and viii) we learn that he married a woman whom he styles "the propheteess" and that he had two sons, Shear-yaph and In-dﮋ. The former may mean she-acer-ly, and the latter may mean she-acer-ly, or "sorely." The latter indicates that he was twice married as some fancy on the gratuitous and indefensible suggestion that the 'almah of vii, 14, was his wife.

The prophetical ministry of Isaias lasted wellnigh half a century, from the closing year of Ozaías, King of Judea, possibly up to that of Manasses. This period was one of great prophetical activity. Israel and Judah indeed were in sore need of guidance. After the death of Jeroboam II revolution followed upon revolution and the northern kingdom had sunk rapidly into an abject vassalage to the Assyrians. The petty nations of the west, however, received from the Assyrian blows received in the beginning of the eighth century, were again manifesting aspirations of independence. Soon Teglatphalasar III marched his armies towards Syria; heavy tributes were levied and utter ruin threatened on those who would show any hesitation to pay. In 725 Ozaías, the last King of Samaria, fell miserably under the onslaught of Sennacherib, and three years later Samaria succumbed to the hands of the Assyrians. In the meantime the Kingdom of Judea hardly fared better. A long period of peace had environs characters, and the young, inexperienced, and unpromising Menahem, father of the Syro-Israélite coalition which confronted him. Panic-stricken he, in spite of the remonstrances of Isaias, resolved to appeal to Teglatphalasar. The help of Assyria was secured, but the independence of Judea was thereby practically forfeited. In order to explain clear and rational situation to which all references are made in Isaias's writings there is here subjoined a brief chronological sketch of the period: 745, Teglatphalasar III, king of Assyria; Assurias (A. V. Uzziyah), of Judah; Manahem (A. V. Menahem) of Samaria; and Sus of Egypt; 740, death of Assurias; 737, victory of Joatham, conqueror of Judah; capture of Jerusalem by Arphad (A. V. Arpad) by Teglatphalasar III (Is., x, 9); 738, campaign of Teglatphalasar against Syria; capture of Calano (A. V. Calon) and Emath (A. V. Hamath); heavy tribute imposed upon Manahem (IV Kings, xv, 19–20); victorious wars of Joatham against the Ammonites (II Par., xxxvii, 4–6); 736, Manahem succeeded by Phacees (A. V. Pekah); 735, Joatham succeeded by Achas (IV Kings, xvi, 1); Phacees replaced by Phacee (A. V. Pekah), son of Romelia (A. V. Remaliah), one of his captains; Jerusalem besieged by Phacee in alliance with Rasin (A. V. Resin), king of Syria (IV Kings, xvi, 6; Is., vii, 1, 2); 734, Teglatphalasar, replying to Achas' request for aid, marches against Syria and Israel, takes several cities of North and East Israel (IV Kings, xv, 29), and banishes their inhabitants; the Assyrian allies devastate part of the territory of Judah and Jerusalem; Phacee slain during the retreat of Samaria and succeeded by Ozaías (A. V. Hocheber); 733, a+50, under Achas against Edom (II Par., xxxvii, 17) and the Philistines (20); 732, campaign of Teglatphalasar against Damascus; Rasin besieged in his capital, captured, and slain; Achas goes to Damascus to pay homage to the Assyrian ruler (IV Kings, xvi, 19–19); 727, death of Achas; accession of Eschapes (IV Kings, xviii, 1); in Assyria Salmanasar IV succeeds Teglatphalasar III; 726, campaign of Salmanasar against Oze (IV Kings, xviii, 7); 725, Oze makes alliance with Sus, king of Assyria (cf. 724), and leads with him to Lebo-Debret (IV Kings, xviii, 4); beginning of the siege of Samaria; 722, Sargon succeeds Salamanasar IV in Assyria; capture of Samaria by Sargon; 720, defeat of Egyptian army at Raphia by Sargon; 717, Characism, the Egyptian stronghold on the Euphrates, falls into the hands of Sargon (Is., x, 8); 713, sickness of Eschapes (IV Kings, xx, 1–11; Is., xxxviii); embassy from Merodach Baladan to Eschapes (IV Kings, xx, 12–13; Is., xxxix); 711, invasion of Western Palestine by Sargon; siege and capture of Azotus (A. V. Ashdod); Is.; 709, Merodach Baladan enters Babylon, and assumes title of king of Babylon; 705, death of Sargon; accession of Nennescherib; 701, expedition of Nennescherib against Egypt; defeat of latter at El-teque; capture of Accaron (A. V. Ekron); siege of Lachis; Eschapes' embassy; the conditions laid down by Nennescherib being found too hard the king of Jude prepares to resist the Assyrians; destruction of part of the Assyrian army; hurried retreat of the rest (IV Kings, xviii; Is., xxxvi, xxxvii); 698, Eschapes is succeeded by his son Manasses. The wars of the ninth century and the peaceful security following them were the prelude to the latter part of the Assyrian century. Cities sprang up; new pursuits, although affording opportunities of easy wealth, brought about also an increase of poverty. The contrast between class and class became daily more marked, and the poor were oppressed by the rich with the connivance of the judges. A social state founded on iniquity is doomed. But as Israel's social corruption was greater than Judea's, Israel was expected to succumb first. Greater likewise was her religious corruption. Not only did idolatrous worship prevail there to the end, but we know from Oze what gross abuses and shameful practices obtained in Samaria and throughout the kingdom, whereas the religion of the people of Judah on the whole seems to have been a little better. We know, however, as regards these, that at the very time of Isaias certain forms of idolatrous worship, like that of Nohestan and of Mo-efoch, probably that also of Tammuz and of the 'host of heaven', were so many in number.

Commentators are at variance as to when Isaias was called to the prophetical office. Some think that previous to the vision related in vi, 1, he had received communications from heaven. St. Jerome in his commentary on the passage holds that chapters i–v ought to be attributed to the last years of King Joatham, then ch. vi would commence at the year of the death of that prince (740 a. p.; P. L., XXIV, 91; cf. St. Gregory Nansenian, Orat. ix; P. G., XXXV, 820). It is more commonly held, however, that ch. vi refers to the first calling of the Prophet; St. Jerome himself, in a letter to Pope Dami- us, seems to adopt this view (P. L., xxii, 371; cf. Hesychius "In l., P. G., XCVIII, 1372), and St. John Chrysostom, commenting upon Is., vi, 5, very aptly contrasts the promptness of the Prophet with the lurgive manifestations of Moses and Jeremia. On the other hand, since no prophecies appear to be later than 701 b. c., it is doubtful if Isaias saw the reign of Manasses at all; still a very old and widespread tradition, echoed by the Mishna (Tr. Yebamoth, 49b; cf. Sanhedr., 103b). Has it that the Prophet survived Eschapes and was slain in the persecution of Manasses (IV Kings, xxi, 16). This prince had him convicted of blasphemy, because he had called his enemies "swords upon a throne" (vi, 1), a pretension in conflict with God's own assertion in Exod., xxxiii, 20: "Man shall not see me and live". He was accused, moreover, of having predicted the ruin of Jerusalem and called the holy city and the people of Jude by the accursed names of Sodom and Gomorrah. According to the
"Ascension of Isaiah," the Prophet's martyrdom consisted in being sawed asunder. Tradition shows this to have been unhistorically believed. The Targum on IV Kings, xxii, 6, admits it; it is preserved in two treatises of the Talmud (Yebamoth, 49b; Sanhedr., 10b); St. Justin (Dial. c. Tryph., cxx), and many of the Tannaim, taking as unmistakable allusion to Isaías these words of the Heb., xi, 37, "they (the ancients) were cut asunder" (cf. Tertullian, "De patient."") xiv. P. L., I, 1270; Orig., "In Is., Hom." i, 5, P. G., XIII, 223; "In Matt." x, 18, P. G., XIII, 852; "In Matt." Ser. 28, P. G., XIII, 1837; "Epist. ad Jul. Alium," xiv, P. G., taking as the date of the Prophet's demise is not known. The Roman Martyrology commemorates Isaías on 6 July.

His tomb is believed to have been in Paneas in Northern Palestine, whence his relics were taken to Constantinople in A. D. 442.

The literary activity of Isaías is attested by the canonical book which bears his name; moreover allusion is made in II Par., xxvi, 22, to "Acts of Oziás first and last," written by Isaías, the son of Amoe, the prophet. Another passage of the same book informs us that "the rest of the acts of Esæach and his services, are written in the Vision of Isaías, son of Amoe, the prophet," in the Book of the Kings of Judah and Israel. Such at least is the reading of the Massoretic Bible, but its text here, if we may judge from the variants of the Greek and St. Jerome, is somewhat corrupt. Most commentators who believe the passage to be authentic think that the writer refers to Isaías the prophet. We must finally mention the "Ascension of Isaías," at one time attributed to the Prophet, but never admitted into the Canon.

II.—THE BOOK OF ISAIAS. —The canonical Book of Isaías is made up of two distinct collections of dis- courses, the one, cc. i-xxxv, called sometimes the "First Isaías"; the other, cc. xl-i-lxvi, styled by many modern critics the "Deutero- (or Second) Isaías"; between these two comes a stretch of historical narrative; some authors, as Michaelis and Hengsteberg, holding with St. Jerome, that the prophecies are placed in chronological order; others, like Vitringa and Jahn, in a logical order; others finally, like Gesenius, Delitzsch, Keil, think the actual order is partly logical and partly chronological. No less disagreement prevails on the question of the collector. Those who believe that Isaías is the disciple of all the prophecies contained in the book generally fix upon the Prophet himself. But for the critics who question the genuineness of some of the parts, the compilation is by a late and unknown collector. It would be well, however, before suggesting a solution to analyze cursorily the contents.

In the first collection (cc. i-xxxv) there seems to be a grouping of the discourses according to their subject-matter: (1) cc. i-xii, oracles dealing with Juda and Israel; (2) cc. xiii-xxiii, prophecies concerning (chiefly) foreign nations; (3) cc. xxiv-xxvii, an apocalypse; (4) cc. xxviii-xxxiii, discourses on the relations of Juda to Assyria; (5) cc. xxxiv-xxxv, future of Edom and Israel.

In the first group (i-xii) we may distinguish separate oracles. Ch. i arraigns Jerusalem for her ingratitude and unfaithfulness; severe chastisements have proved unavailing; yet forgiveness can be secured by a true change of life. The ravaging of Juda points to either the time of the Syro-Ephraimitic coalition (735) or the Assyrian invasion (701). Ch. ii threatens judgment upon Judah; St. Jerome, "In Isa., vii, i, P. L., XXIV, 546-548; etc.). However, little trust is put in the strange details mentioned in the "De Vit. Prophet," of pseudo-Epiphanius (P. G., XLIII, 397, 419). The date of the Prophet's demise is not known. The Roman Martyrology commemorates Isaías on 6 July.

Michelangelo, Sistine Chapel, Rome

(717). The historical situation therein described suggests the time of Sennacherib's invasion (about 702 or 701 B. C.). Ch. xi depicts the happy reign to be that of the ideal king, and a hymn of thanksgiving and praise (xii) closes this first division.

The second group.—The first "burden" is aimed at Babylon (viii, i-xiv, 23). The situation presupposed by the Prophet is that of the Exile; a fact that inclines some to date it shortly before 540, against others who hold it was written on the death of Sargon (705). Ch. xiv, 24-27, foretelling the overthrow of the Assyrian army on the mountains of Juda, and regarded by some as a misplaced part of the prophecy against Assur (x, 5-34), belongs no doubt to the period of Sennacherib's campaign. The year (702-28) was occasioned by the death of some of theologians: the names of Achas (728), the Thothphalar- saar III (727), and Sargon (705) have been suggested, the last appearing more probable. Chapters xv-xvi, "the burden of Moáb," is regarded by many as referring to the reign of the king of Moáb (787-749); its date is conjectural. The ensuing "burden of Damascus" (xvii, 1-11), directed against the Kingdom of Israel as well, should be assigned to
about 735 B.C. Here follows a short utterance on Ethiopia (prob. 702 or 701). Next comes the remarkable prophecy about Egypt (xix), the interest of which cannot but be enhanced by the recent discovery of Egyptian tablets containing similar prophecies (vv. 16, 19). The date presents a difficulty, the time ranging according to diverse opinions, from 720 to 672 B.C. The oracle following (xx), against Egypt and Ethiopia, is ascribed to the year in which Ashdod was besieged by the Assyrians (711). Just what capture of Babylon is alluded to in "the burden of the desert of the sea" (xxi, 1-10) is not easy to determine, and during the lifetime of Isaiah Babylon was thrice besieged and taken (710, 703, 696 B.C.). Independent critics seem inclined to see here a description of the taking of Babylon in 538 B.C., the same description being the work of an author living towards the close of the Babylonian Captivity. The two short prophecies, one on Edom (Duma, xxii, 11-12) and one on Arabia (xxi, 13-17), give no clue as to when they were uttered. Ch. xxii, 1-14, is a rebuke addressed to the inhabitants of Jerusalem. In the rest of the chapter Sobna (Shebna) is the object of the Prophet's reproaches and threats (about 701 B.C.). These prophecies with the announcement of the ruin and the restoration of Tyre (xxiii).

The third section of the first collection includes chapters xxiv-xxviii, sometimes called "the Apocalypses of Isaiah." In the first part (xxiv-xxvi, 19) the Prophet announces for an undetermined future the judgment shall come upon the kingdom of Babylon (xxiv); then in symbolic terms he describes the happiness of the good and the punishment of the wicked (xxv). This is followed by the hymn of the elect (xxvi, 1-19). In the second part (xxv, 20-xxvii) the Prophet depicts the judgment hanging over Israel and its neighbors. The date is most unsettled among modern critics, certain passages being attributed to 107 B.C., others even to a date lower than 79 B.C. Let it be remarked, however, that both the ideas and the language of these four chapters support the tradition attributing this apocalypse to Isaiah.

The fourth division opens with a pronounceinent of woe against Ephraim (and perhaps Juda; xxviii, 1-8), written prior to 722 B.C.; the historical situation implied in xxviii, 9-29, is a strong indication that this passage was written about 702 B.C. To the same date belong xxix-xxxii, prophecies concerned with the death of Sennacherib. This series fittingly concludes with a triumphal hymn (xxxiii), the Prophet rejoicing in the deliverance of Jerusalem (701). Chapters xxxi-xxx, the last division, announce the devastation of Edom, and the enjoyment of bountiful blessings by ransomed Israel. These two chapters are thought by several modern critics to have been written during the captivity in the sixth century. The foregoing analysis does not enable us to assert indubitably that this first collection as such is the work of Isaiah; yet as the genuineness of almost all these prophecies cannot be seriously questioned, the collected work might still possibly be attributed to the last year of the Prophet. If there really be passages reflecting a later epoch, they found their way into the book in the course of time on account of some analogy to the genuine writings of Isaiah. Little need be said of xxxi-xxxvii. The first two chapters narrate the demand made by Sennacherib—the surrender of Jerusalem, and the fulfillment of Isaiah's predictions of its deliverance; xxxviii tells of Eschias's illness, cure, and song of thanksgiving; lastly xxxix tells of the embassy sent by Merodach Baladan and the Prophet's speech of Eschias.

The collection (xl-xlvi) deals throughout with Israel's restoration from the Babylonian exile. The main lines of the division as proposed by the Jesuit Condaminne are as follows: a first section is concerned with the mission and work of Cyrus; it is made up of five pieces: (a) xl-xl: calling of Cyrus to be Yahweh's instrument in the restoration of Israel; (b) xlii, 1-8, xliii, 5: Israel's deliverance from exile; (c) xliv, 1-16, xlv, 13: Cyrus shall free Israel and allow Jerusalem to be built; (d) xlvii: ruin of Babylon; (e) xlviii: Israel's restoration, dealt with in that descending to details for the future. Next to be taken up is another group of utterances styled by German scholars "Ebed-Jehovah-Lieder"; it is made up of xlix-liv (to which xlii, 1-7, should be joined) together with lx-lxxi. In this section we hear of the calling of Yahweh's servant (lx-lxi, 1-9); the ruin of Israel's glorious home-cities (li, 17-12); afterwards is described the servant of Yahweh ransoming his people by his suffering and death (lxxii, 1-7; liii, 13-15; liii, 12-17); then follows a glowing vision of the new Jerusalem (liv, llv, lxi, 13, and lx, lxi, 12). Ch. lvi, 1-8, develops this idea, that all the upright of heart, no matter what their former legal status, will be admitted to Yahweh's new people. In lvi, 9-lxvi, the Prophet inveighs against the idolatry and immorality so rife among the Jews; the shame with which their facts were observed (lxviii), in the xlix represents the people confessing their chief sins; this humble and regretful spirit and guilt prompts Yahweh to stoop to those who have "turned from rebellion." A dramatic description of God's vengeance (lxiii, 1-7) is followed by a prayer for mercy (lxiii, 7-1lxiv, 11), and the book closes upon the picture of the punishment of the wicked and the happiness of the righteous.

Many perplexing questions are raised by the exegesis of the "Second Isaiah." The "Ebed-Jehovah-Lieder," in particular, suggest many difficulties. Who is this "servant of Yahweh"? Does the title apply to the same person throughout the ten chapters? Had the writer in view some historical personage of past ages, or one belonging to his own time, or the Messiah to come, or even some ideal person? Most commentators see in the "servant of Yahweh" an individual. But is that individual one of the great historical figures of Israel? No satisfactory answer has been given. The names of Moses, David, Josiah, Eschias, Israel, Jeremiah, Josiah, Zerobabel, Jeconias, and Eleazar have all been suggested as being the person. Catholic exegesis has always pointed out the fact that all the features of the "servant of Yahweh" found their complete realization in the person of Our Lord Jesus Christ. He therefore should be regarded as the one individual described by the Prophet. The "Second Isaiah" gives rise to other more critical and less important problems. With the exception of one or two passages, the point of view throughout this section is that of the Babylonian Captivity; there is an unmistakable difference between the style of these twenty-seven chapters and that of the "First Isaiah"; moreover, the theological ideas of xl-xlvi show a decided advance on those found in the first thirty-nine chapters. If this be true, does it not follow that xlv-xlvi are not by the same author as the prophecies of the first collection, and may there not be good grounds for attributing or at least assigning them to a "second Isaiah" living towards the close of the Babylonian Captivity? Such is the contention of most of the modern non-Catholic scholars.

This is hardly the place for a discussion of so intricate a question. We therefore limit ourselves to stating the position of Catholic scholarship on this point. This is clearly set out in the decision issued by the Pontifical Biblical Commission, 26 June, 1908. (1) Admitting the existence of true prophecy; (2) There is no reason why "Isaiah and the other Prophets should utter prophecies concerning only those things which were about to take place in a near and short space of time" and not "things that should be fulfilled after many ages." (3) Nor does anything postulate that the Prophets should "always address as their hearers, not those who belonged to the future,
but only those who were present and contemporary, 
so that they could be understood by them”. Therefore it cannot be asserted that “the second part of the Book of Isaiah (xii-xvii), in which the Prophet addresses as one living amongst them, not the Jews who were already in the land of Judah, but the Jews living in the Exile of Babylon, cannot have for its author Isaiah himself, who was dead long before, but must be attributed to some unknown Prophet living among the exiles”. In other words, although the author of Isaiah xi-xvi does speak from the point of view of the Babylonian Captivity, yet this is his protest that no one else has written and written with those times. (4) “The philosophical argument from language and style against the identity of the author of the Book of Isaiah is not to be considered weighty enough to compel a man of judgment, familiar with Hebrew and criticism, to acknowledge in the same book a plurality of authors”. Differences of language and style between the parts of the book are neither denied nor undervalued; it is asserted only that such as they appear, they do not compel one to admit the plurality of authors. (5) “There are no solid arguments to the fore, even taken cumulatively, to prove that the book of Isaiah is to be attributed not only to Isaiah himself, but to two or rather to many authors”. III. APPRECIATION OF THE WORK OF ISAIAH.—It may not be useless shortly to set forth the prominent features of the great Prophet, doubtless one of the most striking personalities in Hebrew history. Without holding any official position, it fell to the lot of Isaiah to take an active part during well nigh forty troublesome years in controlling the policy of his country. His advice and rebukes were sometimes unheeded, but experience finally taught the rulers of Judah that to part from the Prophet’s views meant always a set-back for the political situation of Judah. In order to understand the trend of his policy it is necessary to remember by what principle it was animated. This principle he derived from his unshaken faith in God governing the world, and particularly His own people and the nations coming in contact with the latter. The people of Judah, forgetful of their God, given to idolatrous practices and social disorders of many kinds, had paid little heed to former warnings. One thing only alarmed them, namely that hostile nations were threatening Judah on all sides; but were they not the chosen people of God? Certainly He would protect them containing the nations which they feared as others had been. In the meantime prudence dictated that the best possible means be taken to save themselves from present dangers. Syria and Israel were plotting against Judah and her king; Judah and her king would appeal to the mighty nation of the North, and later to the King of Egypt.

Isaiah did not hear sights of this short-sighted policy, grounded only on human prudence, or a false religious confidence, and refusing to look beyond the moment. Judah was in terrible straits; God alone could save her, but the first condition laid down for the manifestation of His power was moral and social reform in Judah. Ephraim, Assyria, the rest were but the instruments of the judgment of God, the purpose of which is the overthrow of sinners. Certainly Yahweh will not allow His people to be utterly destroyed; His covenant He will keep; but it is vain to hope that well-deserved chastisement may be averted with all his might. With his keen foreght never did the faith of Isaiah waver. He first proclaimed this message at the beginning of the reign of Ahaz. The king and his counsellors saw no salvation for Judah except in an alliance with, that is an acknowledgment of vassalage to, Assyria. This the Prophet opposed, and as an Assyrian secret agent he was not from Ephraim and Syria, and that the intervention of Assyria in the affairs of Palestine involved a complete overthrow of the balance of power along the Mediterranean coast. Moreover, the Prophet entertained no doubt but that sooner or later a conflict between the rival empires of the Euphrates and the Nile must arise, and then their hosts would swarm over the land of Judah. That it was not the course proposed by Judah’s self-conceited politicians like the mad flight of “silly doves”, throwing themselves headlong into the net. Isaiah’s advice was not followed and one by one the consequences he had foretold were realised. However, he continued to proclaim his prophetic views of the current events. Every new event of importance was an additional lesson not only to Judah but to all the neighbouring nations. Damascus has fallen; so will the drunkards and revellers of Samaria see the ruin of their city.

Tyr hands of wealth and impregnable position; her doom is no less decreed, and her fall will all the more astound the world. Assyria herself, fattened with the spoils of all nations, Assyria “the rod of God’s vengeance”, when she will have accomplished her providential destiny, shall meet with her fate. God has thus decreed the doom of all nations for the accomplishment of His purposes and the establishment of new Israel cleansed from all defilements.

Judean politicians towards the end of the reign of Eschias had planned an alliance with the King of Egypt against Assyria and carefully concealed their purpose from the Prophet. When the latter came to know the preparations for rebellion, it was already too late to undo what had been done. But he could at least give vent to his anger (see Isa. xxxix), and we know both from the Bible and Sennacherib’s own account of the campaign of 701 how the Assyrian army routed the Egyptians at Altaku (Elteqeh of Jos., xix, 44), captured Accaron, and sent a detachment to ravage Judah; Jerusalem, closed by the payment of an enormous ransom. The vindication of Isaiah’s policy, however, was not yet complete. The Assyrian army withdrew; but Sennacherib, apparently thinking it unsafe to leave in his wake a fortified city like Jerusalem, demanded the immediate surrender of Eschias’s capital. At the command of Eschias, no answer was given to the message; but the king humbly bade Isaiah to intercede for the city. The Prophet had for the king a reassuring message. But the respite in the Judean capital was short. Soon a new Assyrian embassy arrived with a letter from the king containing an ultimatum. In the enclosed city there was a man of whom Sennacherib had taken no account; it was by him that the answer was to be given to the ultimatum of the proud Assyrians: “The virgin, the daughter of Sion hath despised thee and laughed thee to scorn; . . . He shall not come into this city, nor shoot an arrow into it. . . . By the way that he came, he shall return, and in my city he shall not come, saith the Lord” (xxvii, 22, 33). We know in reality how a sudden catastrophe overtook the Assyrian army and God’s promise was fulfilled. This crowning vindication of the Divinely inspired policy of Isaiah prepared the hearts of the Jews for the reception of the renewed prophecy by Eschias, no doubt long lines laid down by the Prophet.

In reviewing the political side of Isaiah’s public life, we have already seen something of his religious and social ideas; all these view-points were indeed most intimately connected in his teaching. It may be possible to draw in some detail from the course which he has given throughout the Prophet’s message. Isaiah’s description of the religious condition of Judah in the latter part of the eight century is anything but flattering. Jerusalem is compared to Sodom and Gomorrah; apparently the bulk of the people were superstitious rather than religious. Sacrifices were offered out of routine; while the craft and divination were in honour; nay more, foreign deities were openly invoked side by side with the true God, and in secret the immoral worship of some of
these idols was widely indulged in, the higher class and the Court itself giving in this regard an abominable example. Throughout the kingdom there was corruption of higher officials, ever-increasing luxury among the masses, hostility to the handmaiden of women, contempt among the middle-class people, shameful partiality of the judges, unscrupulous greed of the owners of large estates, and oppression of the poor and lowly. The Assyrian suzerainty did not change anything in this woeful state of affairs. In the eyes of Isaías this order of things was intolerable; and he forever kept repeating it could not last. The first condition of social reformation was the downfall of the unjust and corrupt rulers; the Assyrians were the means appointed by God to level their pride and tyranny with the dust. With their mistaken ideas about God, the nation imagined it was the highest of comports itself about the dispositions of His worshippers. But God loathes sacrifices offered by "... hands full of blood. Wash yourselves, be clean, ... relieve the oppressed, judge for the fatherless, defend the widow. ... But if you will not, ... the sword shall devour you" (I, 15-20). God hence is the avenger of the neglected august of His divine rights. He cannot and will not let injustice, crime, and idolatry go unpunished. The destruction of sinners will inaugurate an era of regeneration, and a little circle of men faithful to God will be the first-fruits of a new Israel free from past defeatism and molded by a higher faith. With the reign of Eschias began a period of religious revival. Just how far the reform extended we are not able to state; local sanctuaries around which heathenish abuses had gathered were suppressed, and many 'ashrīm and mazṣūbā were destroyed. It is true the times were not ripe for a radical change, and there was little real interest in the appeal of the Prophet for moral amendment and redress of social abuses.

The Fathers of the Church, echoing the eulogy of Jesus, son of Sirach (Ecclus., xlviii, 25-28), agree that Isaías was the greatest of the literary Prophets (Euseb., "Prep. Evang."); v, 4, P. G., XXII, 370; "Synops. Script. S.", among the works of St. Athan. P. G., XXXVIII, 368; St. Cyril of Jerusalem, "In Is. Proem.""); P. G., LXX, 14; St. Isidore of Pelus., "Epist."); i, 42, P. G., LXXVIII, 208; Thoerotic, "In Is. Argum."); P. G., LXXXI, 216; St. Jerome, "Prof. in Is."); P. L., XIV, 18; Pref. ad Paul. et Epist. ad Thess.; P. L., XVII, 771; St. Aug., "Conf." 5, P. L., XXXII, 769; "De civ. Dei."; XVII, xxix, 1, P. L., XII, 585, etc. Isaías's poetical genius was in every respect worthy of his lofty position as a Prophet. He is unsurpassed in poetry, descriptive, lyric, or elegiac. There is in his compositions an uncommon elevation of thought and conception, and an unexcelled wealth of imagery, never departing, however, from the utmost propriety, elegance, and dignity. He possessed an extraordinary power of adapting his language both to occasions and audiences; sometimes he displays most exquisite tenderness, and at other times surpasses severity; he successively assumes a mother's pleading and irresistible tone, and the stern manner of an implacable judge, now making use of delicate irony to bring home to his hearers what he would have them understand, and then pitilessly shattering their fondest illusions or wielding threats which strike like mighty thunderbolts. His rebukes are neither impetuous like those of Osee nor blustering like those of Amos; he never allows the conviction of his mind or the warmth of his heart to overflow any feature or to overstep the limits assigned by the most exquisite taste. Exquisite taste indeed is one of the leading features of the Prophet's style. This style is rare, energetic, full of life and colour, and withal always chaste and dignified. It moreover manifests a wonderful command of language. It has been justly said that no Prophet ever had the same command of noble thoughts; it may be as justly added that never perhaps did any man utter lofty thoughts in more beautiful language. St. Jerome rejected the idea that Isaías's prophecies were true poetry in the full sense of the word (Pref. in Is. P. L., XXVIII, 721). Nevertheless the authority of the venerable Robert Lowth, in his "Lectures on the Sacred Poetry of the Hebrews" (1753), esteemed "the whole book of Isaiah to be poetical, a few passages excepted, which, if brought together, would not at most exceed the bulk of five or six chapters". This opinion of Lowth, at first never fully repeated, became more and more general in the latter part of the nineteenth century, and is now common among Biblical scholars.

Isaías, Ascension of. See Apocrypha.

Isaúra, titular see in the Province of Lycaonía, suffragan of Iconium. Isaúra, the capital of the Isaurian tribes, an energetic and piling people, existed even before the extinction of Alexander. In order not to fall into the power of the Greek generals, Peridécas and Philip, its inhabitants after a desperate resistance, buried themselves beneath the ruins of their city (Diodorus Siculus, XVIII, 22). Afterwards rebuilt, Isaúra was a second time destroyed by P. Servílius, and then ceded to Amnytus, the last King of Galatia, who attempted to rebuild it and make it his capital (25 a. c.). Strabo, who gives these particulars, speaks of two cities, Isaúra Palæa and Isaúra Nova, which existed in his time, and the information is correct. In the year 266 of our era Trebíullian, one of the thirty tyrants, made his capital there, but he was slain the next year. Ammianus Marcellinus (XIV, 7) in the fourth century speaks of the city as ruined. Isaúra Nova is now Doria in the sanjak and vilayet of Koniah. Ramsay discovered there recently more than fifty Greek inscriptions, the greater number Christian, as well as magnificent tombs. These monuments date from the third, fourth, and fifth centuries of our era. Epitaphs have been found of three bishops, Theophilus, Sisamoas, and Mamas, who lived between the years 250 and 400. Three other bishops are also known, Hilarion, 381; Callistrus, somewhat later; Aetius, 451 (Lequien, Orient Antiq., I, 1035). The last name, however, bears the title of Isaúropolis, the name of a city which also figures in the "Hierocles Synecdemus" (ed. Parthey, 075, 12). As no "Notitiae episcopatuum" makes mention of Isaúra, or Isaúropolis, Ramsay supposes that the Diocese of Isaúra Nova was early joined with that of Leonotropolis, the modern Palæa, and that of Palæa which is mentioned in all the "Notitiae". The site of Isaúra Palæa has been discovered at Oloubnár in the vilayet of Koniah, where splendid ruins are still to be seen.

Ischia, Diocease of (Isclana), suffragan to Naples, has for its territory the island of Ischia, in the Mediterranean Sea, which, geologically, forms a continuation of the volcanic district of Naples. Monte Epomeo, the highest point of the island (about 2570 feet), has been an extinct volcano since 1302. The island has frequently been visited by earthquakes; one of the most disastrous was that of Casamicciola, a small village, in 1883. The island is very fertile and rich in mineral springs, which, owing to the pleasant situation and mild climate, attract many visitors. The two most important hot springs are Fontana d'Ischia and Formello. The capital of the island is Ischia, situated on a rock of basalt, crowned by a castle, which to-day serves as a prison. It was called Pithecusae by the Greeks and Eanaria by the Romans. It was colonized by the Euboeans. In 474 B.C. it was taken by Hiero I., King of Syracuse, and in 326 by the Romans. The Emperor Augustus gave it to Naples, in exchange for Capri. In the Middle Ages it was often devastated (in 813 by the Saracens; in 1135 by the Pisans). In 1496 it was a refuge for Ferdinand II. of Naples, fleeing before Charles VIII of France. In 1497 it was occupied by the British and Savoyards, and was involved in the wars of the French. In 1719 the first Bishop of Ischia was appointed, Pietro, present at the Third Lateran Council. Other bishops were Fra Bartolomeo Borosoli (1539), an Augustinian, brother of Blessed Giacomo Borosoli, the Dominican, who is buried in the church of S. Domenico; the learned Spanish Cistercian, Michele Cozzi (1453); Girolamo Rocca (1672), who restored the cathedral and bishop’s residence; Michele Cotignola (1692), who also embellished the cathedral. Ischia has 14 parishes with 32,000 souls.

Capelliatti, Le Chiese d'Italia, XIX (Venice, 1857); Ginocchio, Ischia (Rome, 1894).

Ischia and Venafrd, Diocease of. - Isaria is a city in the province of Campobasso in Molise (Southern Italy), situated on an alluvial terraces between Monte Matese and Monte Azzo, in a fertile region not far from Vulturno. In the Middle Ages it was noted for the manufacture of parchment, which is carried on there even to-day. It was anciently called Æsaria, and was one of the principal cities of the Samnites. In 275 B.C. it was conquered by the Romans. In the Roman period Ischia was a town of the '{

Isidore of Kieff. See ISIDORE OF THESSALONICA.

Isidore of Pelusium, Saint, born at Alexandria in the latter half of the fourth century; d. not later than 449-50. He is occasionally designated through mistake as Isidore of Damietta. Leaving his family and possessions, Isidore retired to a mountain near the city of Pelusium, the name of which was henceforth connected with his own, and embraced the religious life in the monastery of Lychnos, where he soon became remarkable for his exactitude in the observance of the rule and for his austerities. A passage in his voluminous correspondence affords reason to believe that he held the office of abbot. He is spoken of as a priest by Facundus and Suidas, although neither of these two writers informs us to which church of which he belonged; it may be that he had no clerical charge, but was only a priest of the monastery. His correspondence gives us an idea of his activity. It shows him fighting against unworthy clerics whose elevation to the priesthood and diocese was a serious peril and scandal to the faithful. He complains that many lamen were ceasing to approach the sacraments so as to avoid contact with these discreditable men. His veneration for St. John Chrysostom led him to induce St. Cyril of Alexandria to render full justice to the memory of the great doctor. He opposed the Nestorians, and during the conflict which arose at the end of the Council of Ephesus between St. Cyril and John of Antioch, he believed there was too much obstinacy on St. Cyril’s side. He therefore wrote to the latter in urgent terms implo

Isidore. The author of a great number of writings, but this historian tells us nothing further, save that one of these was addressed to Cyril, even leaving us ignorant whether this person was the celebrated Bishop of Alexandria or a name sake. Isidore himself tells incidentally that he composed a treatise “Adversus Gentiles” but it has been lost. Another work “De Fato”, which, the author tells us, met with a certain degree of success, has also been lost. The only extant works of Isidore are a collection of the Experience, comprising more than 2000 letters. Even this number appears to fall far short of the amount actually written, since Nicephorus speaks of 10,000. Of these we possess 2182, divided into five books which contain respectively 590, 390, 413, 230, and 569 letters. These letters of St. Isidore are divided into three classes, according to the subjects treated: those dealing with dogma and Scripture, with ecclesiastical and monastic discipline, and with practical morality for the guidance of laymen of all classes and conditions. Many of these letters, as is natural, have but a secondary importance, many are mere notes. In this whole attention can be directed only to the principal ones. Among these is the letter to Theologus against the Nestorians, in which Isidore points out that there is this difference between the mother of the gods in
fable and the Mother of Jesus Christ, the Son of God, that the former, as acknowledged by the pagans themselves, conceived and brought forth the fruits of debauchery, whereas the latter conceived without having had intercourse with any man, as is acknowledged, says he, by all the nations of the world. His later writings defend the legitimacy of the veneration of relics; that to Tuba shows that it was considered unbecoming for a soldier to carry a sword in the city in time of peace and to appear in public with arms and armor uniform.

His letters addressed to persons following the religious guidance of Hierax defend the legitimacy of the veneration of relics; that to Tuba shows that it was considered unbecoming for a soldier to carry a sword in the city in time of peace and to appear in public with arms and armor uniform.

encyclopedia epitomized all learning, ancient as well as modern. In it many fragments of classical learning, though ten, of etymology were, it is believed, lost. The fame of this work imparted a new impetus to encyclopedia writing, which became abundant in the subsequent centuries of the Middle Ages. His style, though simple and lucid, cannot be said to be classical. It discloses most of the imperfections peculiar to all ages of transition. It particularly reveals a growing Visigothic influence. Arevalo counts in all Isidore's writings 1640 Spanish words.

Isidore was the last of the ancient Christian philosophers, as he was the last of the great. Latin Patristics and Christian tradition contributed largely to the man of his age and exercised a far-reaching and immeasurable influence on the educational life of the Middle Ages. His contemporary and friend, Brailio, Bishop of Saragossa, regarded him as a man raised up by God to save the Spanish people from the tidal wave of barbarism that threatened to inundate the ancient civilization of Spain. The Eighth Council of Toledo (653) recorded its admiration of his character in these glowing terms: "The extraordinary doctor, the latest ornament of the Catholic Church, the most learned man of the latter ages, always to be remembered, particularly, 'De differentiis verborum et differentiis rerum'. The former is a dictionary of synonyms, treating of the differences of words with considerable erudition and not a little ingenuity; the latter, an exposition of theological and ascetical ideas, dealing in particular with the Trinity and with the Divine and human nature of Christ. It suggests, and probably was inspired by, a similar work of Cato's. It is supplementary to the first two books of the 'Etymologiarum'. The 'Synonyma', or, as it is sometimes called, 'Liber Lamentationum', is in a manner illustrative of the first book of the 'De differentiis rerum' cast in the form of a dialogue between Man and Reason. The general burden of the dialogue is that Man mourns the condition to which he has been reduced through sin, and Reason comforts him with the knowledge of how he may still realize eternal happiness. The second part of this work consists of a dissertation on vice and virtue. The "De natura rerum", a manual of elementary physics, was composed at the request of King Sisebut, whom it is dedicated. It treats of astronomy, geography, and miscellaneous. It is one of Isidore's best known books and enjoyed a wide popularity during the Middle Ages. The practicality of "De ordine creaturarum" has been questioned by some critics, though apparently without good reason. Arevalo unhesitatingly attributes it to Isidore. It deals with various spiritual and physical questions, such as the Trinity, the consequences of sin, eternity, the ocean, the heavens, and the celestial bodies.

The subjects of history and biography are represented by three important works. Of these the first, "Historian", is a universal chronicle. In its preface Isidore acknowledges his indebtedness to Julius Africanus; to St. Jerome's rendering of Eusebius; and to Victor of Tornuna. The "Historia de regibus Gothorum, Vandalorum et Suevorum" concerns itself chiefly with the Gothic kings, whose conquests and government deeply influenced the civilization of Spain. The history of the Vandals and the Suevi is set forth in two short chapters. This work is regarded as the chief authority on Gothic history in the West. It contains the interesting statement that the Goths descended from Gog and Magog. Like the other historical writings of Isidore, it is largely based on earlier works of history, of which it is a compendium and has but two recensions, one of which ends at the death of Sisebut (821), and the other continues to the fifth year of
the reign of Swintila, his successor. "De viris illustribus" is a work of Christian biography, and constitutes a most interesting chapter in the literature of patrology. To the number of illustrious writers mentioned therein Braulio added the name of Isidore himself. A short appendix to the poem was added by Braulio's disciple, Ildephonsus of Toledo. It is the continuation of the work of Gennadius, a Semi-pelagian priest of Marseilles, who wrote between 467 and 480. This work of Gennadius was, in turn, but the continuation of the work of St. Jerome.

"De Virg. et Patrum" and "De Virga patrum" are also known as "Scriptura laudibus efferentur" is a work that treats of the mere notable Scriptural characters. It contains more than one passage that, in the light of modern scholarship, is naive or fantastic. The question of authenticity has been raised, though quite unreasonably, concerning it. "Allegoriae quaedam Sacrae Scripturae" treats of the allegorical significance that attaches to the more conspicuous characters of Scripture. In all some two hundred and fifty personalities of the Old and New Testaments are treated. "Liber numerorum qui in Sanctis Scripturis occurrunt" is a curious dissertation on the mystical significance of Scriptural numbers. In "libros Veteris et Novi Testamenti" his name implies, in a general way, as compared to the Scriptures, with special instructions for particular books in the Old and New Testament. "De Veteri et Novo Testamento questiones" consists of a series of questions concerning the Scriptures. "Secretorum expositiones sacramentorum seu questiones in Vetust Testamentum" is a mystical rendering of the Old Testament books of Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Josue, Judges, Kings, Esdras, and Machabees. It is based on the writings of the early Fathers of the Church. "De fide catholica ex Veteri et Novo Testamento contra Judaeos" is one of the best known and most meritorious of Isidore's works. It is of an apologetico-polemical character and is dedicated to Florentina, his sister, at whose request it is said to have been written. Its popularity was unbounded in the Middle Ages, and it was translated into many of the vernaculars of the period. It treats of the Messianic prophecies, the passing of the Old Law, and of the New Testament, with the Second Person of the Blessed Trinity, and His return for the final judgment. The second part is taken up with the unbelief of the Jews, the calling of the Gentiles, and the passing of the Sabbath. In all, it is an appeal to the Jews to accept Christianity. "Sententiarum libri tres" is a compendium of moral and dogmatic theology. Gregory the Great and St. Augustine are the most generous contributors to its contents. The Divine attributes, creation, evil, and miscellaneous are the subjects treated in the first book. The second is of a miscellaneous character; whilst the third is a compendium of ecclesiastical institutions and the chastisement of God. It is believed that this work greatly influenced Peter Lombard in writing his famous "Book of Sentences". "De ecclesiasticis officiis" is divided into two books, "De origine officiorum" and "De origine ministrorum". In the first Isidore treats of Divine worship and particularly the old Spanish Liturgy. It also contains a lucid explanation of the Holy Eucharist. The second treatments of the hierarchy of the Church and the various states of life. In it much interesting information is to be found concerning the development of music in general and particularly of the Gregorian chant. "Regula monachorum" is a manner of life prescribed for monks, and also deals in a general way with the monastic state. The writer furnishes abundant proof of the true Christian democracy of the religious life by providing for the admission of men of every rank and station of life. Not even slaves were debarred. "God", he said, "has made no difference between the soul of the slave and that of the freedman." He insists that in the monastery all are equal in the sight of God and of the Law.

The first edition of the works of Isidore was published in folio by Michael Somniius (Paris, 1580). Another edition that is quite complete is based upon the MSS. of Gomes, with notes by Peres and Grial (Madrid, 1599). Based largely upon the Madrid edition is that published by Reuter (Leipzig, 1801; Cologne, 1617). The last edition of all the works of Isidore, which is also regarded as the best, is that of Arevalo (7 vols., Rome, 1797—1803). It is found in P. L., LXXIX—LXXXIV. The "De natura rerum" was edited by G. Becker (Berlin, 1857). Th. Mommsen edited the historical writings of St. Isidore ("Mon. Germ. Hist.: Auct. antiquiss.", Berlin, 1884). Coste produced a German translation of the "Historia de regibus Gothorum, Vandalorum et Sueorum" (Leipzig, 1887).

**John B. O'connor.**

Isidore of Thessalonica, cardinal and sometime Metropolitan of Kiev or Moscow, b. at Thessalonica (Saloniki) towards the end of the fourteenth century; d. at Rome, 27 April, 1465. He was one of the chief Eastern defenders of reunion at the time of the Council of Florence. The date of his birth is unknown, nor is his nationality certain. He has been variously described as a Bulgar and a Greek. In any case all his education was Greek. He arrived at Constantinople, became a monk, and was made hegumenus of the monastery of St. Demetrius. He had evidently received an unusually complete education: he knew Latin well, and had considerable fame as a theologian. He was also an accomplished orator; he seems from the beginning to have been eager for reunion with the West. It was the task of Isidore, as Metropolitan of Kiev, on the eve of its final destruction by the Turks, was considering the chance of rescue from the Western princes as a result of securing union with Rome. In 1434 Isidore was sent to Basse by Emperor John VIII (1425—48) as part of an embassy to open negotiations with the Council of Basel. The Council made a mellifluous speech about the splendour of the Roman Empire at Constantinople. On his return he continued to take part in all the preparations for reunion among his own people. In 1437 he was sent by the Byzantine patriarch (Joseph II, 1416—39, a conspicuous friend of Isidore and his work) as Bishop of the metropolitan of Moscow (or was his title Kiev? He is constantly called Bishop of Kiev, though he certainly went to Moscow and stayed there. They were two separate sees. Kiev was the old metropolis of Russia; Moscow was made so about this time). As soon as he arrived he began to arrange a Russianlegation for the council about to be held at Ferrara. The Russian tsar, Vasili II (1425—62), made difficulties about this, and let him go eventually only after he had promised to come back with "the rights of Divine law and the constitution of the holy Church" unimpaired. Synods and other Greek legislation did not bear perty because in spite of this he accepted the union. Isidore set out with a great following on 8 Sept., 1437, travelled by Riga and Lübeck, and arrived at Ferrara on 15 August, 1438. On the way he offended
his suite by his friendly conduct towards the Latins. At Ferrara and at Florence, whether the council moved in January, 1439, Isidore was one of the six chief speakers on the Byzantine side. Together with Bessarion he steadfastly worked for the union, and never swerved afterwards in his acceptance of it.

After the council, the pope (Eugene IV, 1431-47) made him adviser for the Greeks and Latins. On his way back news reached Isidore, at Benevento, that he had been made Cardinal-Priest of the title of St. Peter and St. Marcellinus. This is one of the few cases in which a person not of the Latin Rite has been made a cardinal. From Budapest in March, 1440, he published an encyclical calling on the Byzantine Rite to accept the union. But when he at last arrived in Moscow (Easter, 1441), and proclaimed the union in the Kremlin church, he found that the tsar and most of the bishops and people would have none of it. Then, at the tsar's command, six Russian bishops met in a synod, deposed Isidore, and shut him up in prison. He escaped, fled to Rome, and was graciously received by the pope in 1443. Nicholas V (1447-65) sent him as legate to Constantinople to arrange the reunion there in 1452, and gave him two hundred soldiers to help the defence of the city. On 12 December of that year he was able to unite three of the bishops of the empire in a ceremony in celebration of the short-lived reunion. He saw the taking of the city by the Turks on 29 May, 1453, and only escaped the massacre by dressing up a dead body in his cardinal's robes. While the Turks were cutting off its head and parading it through the streets, the real cardinal was shipped off to Asia Minor with a number of insignificant prisoners, as a slave. Afterwards he wrote an account of the horrors of the siege in a letter to Nicholas V (P. G., CLIX, 953). He escaped from captivity, or bought himself free, and came back to Rome. Here he was made Bishop of Sessa, presumably adopting the Latin Rite. Pius II (1458-54) later took him from two titles successively, those of Patriarch of Constantinople and Archbishop of Cyprus, neither of which he could convert into real jurisdiction.

He died at Rome on 27 April, 1463.

All histories of the Council of Florence describe the adventures of Cardinal Isidore. See especially Fantuzzi, Geschichte der Pius, I (3rd and 4th ed., Freiburg im Br., 1901), 656, etc., and his references. The Monumenta Hungaria historica, XXII, 1 (1897), has a letter to Nicholas V (op. cit., 660-702); see Krummacher, Byzantinische Literaturgeschichte (Gottweig, 1850), 467; Geschichte des Abendlandes, I (Halle, 1830), 444; FROMMANN, Kritische Beiträge zur Geschichte der Plenarinen Kirchenversammlung (Halle, 1848); and W. Pfitzner, Conulturgeschichte, VII (Freiburg im Br., 1886), passim.

ADRIAN FORTESCUE.

Isidore the Labourer, Saint, a Spanish day-breaker; b. near Madrid, about the year 1070; d. 13 May, 1130, at the same place. He was in the service of a certain Juan de Vargas on a farm in the vicinity of Madrid. Every morning before going to work he was accustomed to hear a Mass at one of the churches in Madrid. One day his fellow-labourers complained to their master that Isidore was always late for his Mass. Upset by this, Isidore ran away. The legend, the master found Isidore at prayer, while an angel was doing the ploughing for him. On another occasion his master saw an angel ploughing on either side of him, so that Isidore's work was equal to that of three of his fellow-labourers. Isidore is said to have been the father of his master and to have caused a fountain of fresh water to burst from the dry earth in order to quench the thirst of his master. He was married to Maria Torribia, a canonised saint, who is venerated in Spain as Maria della Cabeza, from the fact that her head, now a relic, is venerated especially in time of drought. They had one son, who died in his youth. On one occasion this son fell into a deep well, and at the prayers of his parents the water of the well is said to have risen miraculously to the level of the ground, bringing the child with it, alive and well. Hereupon the parents made a vow of continence and lived in separate houses. Forty years after Isidore's death, his body was transferred from the cemetery to the church of St. Andrew. He is said to have appeared to Alfonso of Castile, and to have shown him the tomb in which he surprised the Moors and gained the victory of Las Navas de Tolosa, in 1212. When King Philip III of Spain was cured of a deadly disease by touching the relics of the saint, the king replaced the old reliquary by a costly silver one. He was canonised by Gregory XV, 7 May, 1623, and beatified by Philip Neri, on 12 March, 1622. St. Isidore is widely venerated as the patron of peasants and day-labourers. The cities of Madrid, Leon, Saragossa, and Seville also, honour him as their patron. His feast is celebrated on 15 May.

His Life, as first written in 1265 by John, a deacon of the church of St. Andrew, at Madrid, and supplemented by him in 1275, is printed in Acta SS., May, III, 515-22. It served as the basis for LOPE DE VEGA'S religious poem San Isidro (1599). Acta SS., loc. cit., 612-560; BUTLER, Lives of the Saints, 10 (London, 1854); Baring-Gould, Lives of the Saints, 10 (London, 1892); Marilographeus Hispaniacum, III (Lyons, 1855), 191-48; QUARTINO, Vita di S. Isidoro agricola (Turin, 1882).

MICHAEL OTT.

Isidora, a titular see in the province of Pamphylia Secunda; it was a suffragan of Perge. Artemidorus, mentioned by Strabo (XII, vii, 2; XIII, ii, 35), places this city in Pisidia, and Strabo himself (XII, iv, 17) locates it, under the name of Isinda, in the region of Termessos. Polybius (Excerpta de leg., 31), Ptolemy (v, 5), and Stephen of Byzantium call it Isiendra, Isindos, Pisindia, Indos; it is similarly referred to in the "Notitia episcopatum". Lequien (Orleans Christ., i, 1032) gives the name Isin, and assisted at the Consistorial Councils of Nicaea, Ephesus, Chalcedon, and Constantinople (553), and at the Photian synod in 878. The probable location of this town, which has no history, is at Istanos or Stanos, a nahiê of the sanjak of Adala, in the vilayet of Koniah.

S. VALLÉH.

Isla, José Francisco de, Spanish preacher and satirist, b. at Villavianes (Kingdom of Leon), 24 March, 1703; d. at Bologna, 2 November, 1781. Isla's life was far more eventful than that usually led by members of a religious order. Having broken off a premature betrothal, he entered the Society of Jesus at the age of sixteen, and, on the termination of his two years' novitiate, was sent to the renowned University of Salamanca. Here he studied philosophy for two years and theology for four, and was then appointed fortieth to the chair of exegesis and later to that of philosophy. He continued his professional activity at various colleges until 1747, winning at the same time the reputation of a popular preacher. At the same time he did not neglect his talent for poetry and his taste for literature, and gave proof of a wagging, satirical vein. But this talent was also the cause of not a few troubles. The first of these resulted in an assignment to pastoral duties at San Sebastian, where fortunately he was kept but a short time. In 1750 the formidable satirist was sent to the residence of the professors at Valladolid to preach. While this appointment was a disaster to Isla, as a preacher, the attempt of Queen Maria Barbera to secure him as her confessor indicates his piety. By well-put objections Isla escaped the office, but another suggestion from the court, where Isla's eminent literary gifts had already attracted notice, that the talented and prolific writer should give up his literary work, was received with favour by his spiritual superiors. In consequence Isla, in 1752, was exclusively assigned to literary work, varied only by occasional
summons to the pulpit, which he regarded as interruptions of his literary activities. The years 1758 and 1759 deprived him of his three greatest patrons—Pope Benedict XIV, Queen Maria Barbara, and King Ferdinand VI—and ushered in for him a period of bitter trials. As early as 1758 the persecution of Stanislaus Poniatowski began, and the earliest symptoms of a similar storm soon made their appearance in Spain. Sent to Galicia in 1760, Ilsa devoted himself with great spiritual fruits to giving public missions and the Exercises of St. Ignatius. The royal decree, which two years later forbade any Jesuit to accept a living, book, or literary activity, and, after various preparatory decrees of a like nature, the Jesuits were finally banished from every part of Spain in 1767. Ilsa, moreover, was visited by a personal affliction, an apoplectic stroke causing a temporary paralysis of the mouth and tongue. The painful journey into exile—first to Corsica for a residence of fourteen dreary months, and thence to the Papal States—his grief at the suppression of his order, the eight succeeding years of distress pending his deliverance by death, are described by Ilsa himself with his usual imperturbable good-humour in his letters to his sisters, the concluding years being somewhat more pleasant, thanks to the noble hospitality extended to him by Count Tedeschi at Bologna. He died in the seventy-ninth year of his age.

Ilsa’s fame rests much less on his activity as a preacher and his other pastoral labours than on his humorous and satirical writings. His earliest literary experiment was the “Juventud triunfante” (the “Triumph of Youth”), a description of a festival, in which Ilsa gives a skillfully exaggerated account of the already excessively elaborate preparations made by the University of Salamanca to celebrate the canonization of St. Francis de Sales and St. Ignatius of Loyola. His second publication may be described as a pure satire on the singular methods of the surgery of his day. For his next subject he was again to choose a national festival, celebrating for little Navarre the accession of Ferdinand VI. This work he entitled: “Triunfo del Amor y de la Lealtad: Dia grande de Navarra” (“The Triumph of Love and Loyalty”, or “The Great Day of Navarre”): it was not intended to be a formal satire on the exaggerated national consciousness of the Navarrese, but the bombastic extravagance of the language renders it rather a mixture of falsity than a satire. The novel, however, which keeps Ilsa’s name still living in the pages of literature, is his romance on pulpit oratory, the “Historia del Famoso predicador Fray Gerundio de Campanas” (History of the celebrated preacher, Fray Gerundio de Campanas, alias Zotes), whom he himself called a “preaching Don Quixote.” It is a clever satire, in which he exposes the complete decay of contemporary pulpit oratory in Spain. In the form of a broadly sketched biography, this clever romance, in spite of the condemnation of the Inquisition, circulated throughout Europe in numerous editions and translations. The latest critical edition appeared at Leipzig in 1885 (prepared by Professor Eduard Lidtorf). The work was first translated into English by Baretti (London, 1772); there are three translations in German, and many in French. One modern critic (Zarneckes, “Lit. Centralblatt für Deut.”, 1886) sets Ilsa’s romance above Don Quixote.

Another work of Ilsa’s, written in the last years of his life, long engaged the attention of literary critics, namely, his adaptation of “Gil Blas,” which appeared posthumously under the title “Adventuras de Gil Blas de Santillana, robadas & Españolas, adoptadas en France por Mon. Le Sage, restituendo á su patria y á su lengua nativa el renombrado novel de España, para no enmendarlo ni burlarle de su nación” (“Adventures of Gil Blas of Santillana, stolen from Spain and appropriated in France by M. Le Sage, restored to their country and their native tongue by a jealous Spaniard, who will not suffer his country to be made sport of”). Ilsa’s sermons were published in six volumes at Madrid in 1792 and 1793, but no new edition has been issued, nor have they been translated in other languages. They are, however, highly esteemed in Spain and occupy an important place in the history of pulpit oratory in that country. Of his many translations from other tongues, that of P. Croiset’s “Anne Chérifienne”, unfortunately not completed, is the most important. His three apologetic works for his order could not be printed at that period; one of them has been lost, the other has been recently published. Among his literary remains was discovered a translation of the Italian burlesque epic “Il Cicorone” by Abbot Gian Carlo Passeroni, a picture of contemporary Italian life in society and literary circles. Ilsa’s intimate correspondence with his sister was published in four volumes in 1755–56, a new edition being issued fifteen years later with two additional volumes. Monlaü has inserted this correspondence with forty-four further letters in the “Select Works of Ilsa” (1850; new ed., 1870). The second centenary of Ilsa’s birth was celebrated with great festivity in many towns in 1869. His life was written by his friend in a somewhat less savory light than it actually was, and his name still lives in the memory of his countrymen.

There are five or six complete Biographies of Ilsa: by de Bala (Madrid, 1803); von Müller, Journal (Nuremberg, 1796); Id. Monlaü in Le Moniteur (1850); Godbeer, Les Pèrecheres burlesques en Espagne au XVIIIe siècle (Strasbourg, 1873); Etude sur le F. Ilsa (Paris, 1888); and Stammen aus Maria-Leoca (1905), 82–92, 182–205, 299–315.

Nicholas Schmid.

Islam, an Arabic word which, since Mohammed’s time, has acquired a religious and technical significance denoting the religion of Mohammed and of the Koran, just as Christianity denotes that of Jesus and of the Gospels. It has been translated in the Prophet, and of the Old Testament.

Grammatically, the word Islam is the infinitive of the so-called fourth verbal form of the regular intransitive stem salima, “to be safe,” “to be secure,” etc. In its second verbal form (salalma) it means “to make some one safe” and “to free,” “to make secure,” etc. In its third form (salama) it signifies “to make peace,” or “to become at peace,” i.e. “to be reconciled.” In its fourth form (salama), the infinitive of which is Islam, it acquires the sense of “to resign,” “to submit oneself,” or “to surrender.” Hence the Islamic idea that Islam is the “entire surrender of the will to God,” and his professors are called Muslimin (sing. Muslim), which is the participial form, that is “those who have surrendered themselves,” or “believers,” as opposed to the “refusers” of the Divine message, who are called Kafir, Mushrik (that is those who associate various gods with the Deity, or pagans). Historically, of course, to become a Muslim was to become a follower of Mohammed and of his religion; and it is very doubtful whether the earliest Muslims, or followers of Mohammed, had any clear notion of the ethical-religious significance of the term, although its later theological development is entirely consistent and logical. According to the Shafites (one of the four great Mohammedan schools of theology), Islam, as a principle of the law of God, is “the manifesting of humility or submission, and outward conforming with the law of God, and the taking upon oneself to do or to say as the Prophet has done or said”; and if this outward manifestation of religion is coupled with “a firm and internal belief of the heart,” i.e. faith, then it is called Iman. Hence the Mohammedan theological axiom “Islam is with the tongue, and Iman with the heart.” According to the Sufis (another of the four schools), however, no distinction is to be made between the two terms, as Iman, according to them, is essentially included in Islam.
Islam is sometimes divided under two heads of “Faith,” or “Iman,” and “Practical Religion,” or “Din.” Faith (Iman) includes a belief in one God, omnipotent, omniscient, all-merciful, the author of all good, the absolute decree of goodness and evil. Practical Religion (Din), on the other hand, consists of five observances, viz.: recital of the formula of belief, prayer with ablation, fasting, almsgiving, and the pilgrimage to Mecca. For further details see Koran and Mohammedanism.

GABRIEL OUSBANI.

Isleta Pueblo, the name of two pueblos of the ancient Tiguex tribe, of remote Shoeshonean stock. The older and principal is on the west bank of the Rio Grande about twelve miles below Albuquerque, New Mexico. The other, an offshoot of the first and sometimes distinguished as Isleta del Sur (Isleta of the South), is on the Texas side of the Rio Grande, a few miles below El Paso. The original Isleta (i.e. islet) was so named by the Spaniards from its position on a tongue of land projecting into the stream; the native name is Tiguex. It was first entered by the Spanish commander, Coronado, in 1540, and again in 1582–3 by Espejo (q.v.) while trying to ascertain the fate of Father Rodrigues and two other Franciscan missionaries who had been murdered by Indians in the previous year. Before 1690 it had become the seat of the Franciscan mission of San Antonio. At a later period it received many refugees from outlying pueblos abandoned in consequence of Apache raids, until it the outbreak of the great Pueblo revolt in 1680 it may have numbered 3000 souls. Owing to the large number of Spaniards in the pueblo at the time they were not molested in the general massacre, but the natives, after having made submission to Governor Otermin the following year, secretly withdrew to join the enemy, in consequence of which Otermin burned the pueblo, carrying all the remnant of the inhabitants in all in 1683. The colonists in the new town of Isleta del Sur, re-establishing at the same time the mission of San Antonio. In 1692–3 Vargas reconquered the Pueblo country and mission work was soon after resumed. About the year 1710, or a few years later, the original Isleta was recolonized by the Tiguex, and a new mission established there under the name of San Agustin. With the growth of the Spanish population the importance of the Indian missions correspondingly decreased. In 1780–1 one-third of the whole Pueblo population was swept away by smallpox, in consequence of which most of the missions were abandoned, but that at Isleta continued to exist under Spanish and Mexican rule for fifty years longer, when it became virtually a secular church. The pueblo now has a population of about 1100, rating third among the Pueblo towns, and has both a government and a Catholic day-school. In culture, social organization and ceremonial forms the inhabitants resemble the Pueblo generally. In Isleta del Sur the few remaining inhabitants, although very much Mexicanized, still keep up some Indian forms and retain their native language.

JAMES MOONEY.

Ispip, Simon, Archbishop of Canterbury, b. at Ispip, near Oxford; d. at Mayfield, Sussex, 26 April, 1366. He was educated at Oxford. where he proceeded doctor in canon and civil law, being elected Fellow of Merton in 1307. His talents and learning as an ecclesiastical lawyer soon won for him many benefices and prebendaries. Having for a time been rector of Easton, near Stamford, and of Melton, he was in 1332 for the archdeaconry of Stow, which he only held for one year. He also held the rectory of Horncastle. Bishop Burghersh of Lincoln, then treasurer and Chancellor of England, made him a prebendary of Lincoln Cathedral in 1327, and he held successively the prebend of Welton, Brant, Aylesbury, and Walton Beckhall, while in 1337 he became vicar-general for the diocese. At this time he was much in London, where he entered the king's service as one of the royal chaplains. Edward III trusted him also in diplomatic and political affairs, appointed him a member of the council and in 1346 gave him, during his own absence in France. In 1343 he had been made archdeacon of Canterbury and subsequently he was made dean of arches. He also held the prebend of Mora in St. Paul's Cathedral and a stall at Lichfield. John Stratford, the Archbishop of Canterbury, died in 1348, but the Black Death was raging. His two successors, John Ufford and Thomas Bradwardine, died of the plague within a few weeks of each other, the former before consecration. On 20 Sept., 1349, Simon Ispip was elected archbishop, but within three weeks the pope conferred the see on him in accordance with the charter of Christmas and received the pallium at the following Easter. The archdiocese had suffered from the pestilence and there was a dearth of clergy, so that the first work Ispip was called on to undertake was a visitation, during which he laboured with energy to restore ecclesiastical discipline.

At this time, and after the renewed outbreak of the Black Death in 1362, he took particular pains to regulate the stipends of the unbenezzed clergy, who were induced by the greatly diminished number of priests to exact higher remuneration for their services than formerly. He next succeeded in terminating the ancient dispute between the archbishops of Canterbury and York, as to the right of the latter to bear his cross in the province of the former. The final arrangement, suggested by the king, agreed to by both archbishops, and confirmed by the pope, was that the Archbishops of York might carry his cross in the province of Canterbury on condition that the bishop of York should within two months of his confirmation present to the shrine of St. Thomas a golden image of an archbishop. Though he was a favourite of the king, he did not hesitate to resist royal exactions, and he addressed a vigorous remonstrance on the subject to Edward III. This being suprised Ispip by the action of a synod over which the archbishop presided, and which refused the king's demand for a tenth of ecclesiastical income for six years, proved effectual to check the corrupt system of purveyance. Copies of this remonstrance, the "Speculum Regis Edwardi," are in the Bodleian library (824), and the British Museum (Harl. MS. 2399; Cotton MSS., Cleopatra D. IX and Faustina B. i.). Ispip was a munificent benefactor of Oxford University, and founded a college which he intended should afford special facilities for monks to obtain the advantages of a university course, but the difficulties proved insurmountable, and after his death his foundation continued as a dependence on Christ Church, Canterbury, until it was absorbed by Cardinal Wolsey, in his foundation of Christ Church, Oxford. During his lifetime he had the reputation of being a sparing and niggardly administrator of the temporalities of his diocese, which he thought should be explained partly by the nature of the times, which called for economy and the wise husbandry of resources, and partly by his own temperament, which was frugal and averse to display. Both his enthronement and his funeral at Canterbury were by his own
desire marked by the utmost simplicity, but his generous bequests to the monks of Canterbury show that this was not due to lack of interest in his cathedral church. In 1363 the archbishop suffered a paralytic stroke which he survived for three years, although by depriving him of the power of speech, it practically closed his career.

EDWIN BURTON.

Ismael (Ishmael—Heb. יִשְׁמָאֵל; Sept. Ἰσμαήλ; Vulg. Ismael), in I Par., I, 28, 29, 31, the son of Abraham and Agar, the Egyptian. His history is contained in parts of Gen., xvi—xxxv, wherein three strata of Hebrew tradition (J, E, F) are usually distinguished by contemporary scholars (see Abraham). The name "Ismael", which occurs also in early Babylonian and in Minean, was given to the child before its birth (Gen., xvi, 11), and means: "may God be exalted. As Sarah, Abraham's wife, was barren, she gave him, in accordance with the custom of the time, her handmaid, Agar, as concubine, in order to obtain children through her. Agar's conception of a child soon led her to flight into the wilderness, where the angel of Yahweh appeared to her, bade her to return to her mistress, and fixed the name and character of her future son. After her return to Beresabe, she brought forth Ismael to Abram, who was then eighty-six years old. Ismael was very dear to the aged patriarch, as is shown by his entreaty of God in Ismael's behalf, when the Almighty promised him a son through Sara (xxv). To this end God disclosed to Abram the glorious future which awaited Ismael: "As for Ismael, I have also heard thee. Behold, I will bless him, and increase, and multiply him exceedingly: he shall beget twelve chiefs, and I will make him a great nation. Ismael was not the destined heir of the covenant; yet, as he belonged to Abraham's family, he was submitted to the rite of circumcision when the patriarch circumcised all the male members of his household. He was then a lad of thirteen (xxvi). Abraham's tender love towards Ismael manifested itself on another occasion. He presented Sara's complaint to him, when, on the ground of the meaning of Ismael, she requested Agar's and Ismael's summary dismissal because she "had seen the son of Agar the Egyptian playing with [mocking] Isaac her son". Ismael was Abraham's own "son", and indeed his first-born. At this juncture, God directed Abraham to accede to Sarah's request. This was attended with the reported assurance of future national greatness for Ismael. Whereupon the patriarch dismissed Agar and Ismael with a modicum of provision for their journey. As their scanty provision of water was soon exhausted, Ismael would have certainly perished in the wilderness had not God shown to Agar a well of water which enabled her to revive the dying lad.

According to God's repeated promise of future greatness for Agar's son, Ismael grew up, lived in the wilderness of Paran, became famous as an archer, and married an Egyptian wife (xxi, 8—21). He became the father of twelve sons, whose names and general quarters are given in Gen., xxv, 12—16. Only one daughter of Ismael is mentioned in Holy Writ, where she is spoken of as one of Esau's wives (cf. Gen., xxviii, 9; xxxvi, 3). The last incident known of Ismael's career is connected with Abraham's burial, in which he appears associated with Ishmael. It is not told God shown to Agar a well of water which enabled her to revive the dying lad.

In his Epistle to the Galatians (iv, 21 sqq.) St. Paul expounds allegorically the narrative of Ismael and Isaac, urging upon his readers the duty of not giving up their Christian freedom from the bondage of the Law. Of course, in so arguing, the Apostle of the Gentiles did not intend to detract in any way from the historical character of the narrative in Genesis. With regard to the literary and historical, suggested by a close study of the Biblical account of Ismael's life, suffices it to say that each and all will never cause a careful and unbiased scholar to regard that account otherwise than as portraying an ancient historical character, will never cause him to treat other accounts, by 1162, to whom every attempt, by whomsoever made, to resolve Ismael into a conjectural personality of the founder of a group of Arabic tribes. And this view of the matter will appear most certain to any one who compares the Biblical narrative with the legends concerning Ismael which are embodied in the Talmud, the Targum, and the other rabbinical works; while the latter are plainly the result of puerile imagination, the former is decidedly the description of an ancient historical figure.

See bibliography to Isaac, to which may be added, Driver in Harrods, "The Bible of the East", s. v. Ismael; Stolzenen in The Jewish Encyclopedia, s. v. Ismael.

FRANCIS E. GIGOT.

Isaphan, a Catholic Armenian Latin see. Under the name of Aspandana it was once one of the principal towns of Media. Christianity must have penetrated into the land at an early period, for in 424 we meet the name of its bishop, Aphrahat. Several other bishops of this see are historically known: Abraham in 497, another Abraham in 584, Ahron in 576 (Chab.) "Synodic on the calendar", Paris 1876; others in 987 and 1111 (Lequien, "Oriens Christianus", II, 1305). Isaphan owes its prosperity to a shah of the Sasanian dynasty, Abbas I, who made it his capital at the end of the sixteenth century; he drew thither from all parts merchants, artists, artisans, agriculturists, embellished the town, and enlarged it to such an extent that it was about six miles in circumference, had nearly 600,000 inhabitants and was looked upon as one of the finest and richest towns in the world. Djulis, the Armenian quarter, created by the shah himself, was, and is still, separated from Isaphan by the Zander River. About 1600 Abbas I, desirous of an alliance with Christian European States in order to destroy the Ottoman power, entered into relations with Clement VIII and the King of Spain, and both promised him missionaries. The first to come were Portuguese Augustinians from Goa (1602). In 1604 the pope, who did not know of the arrival of the Augustinians, entrusted the Persian mission to the Discalced Carmelites, of whom a few settled in Isaphan in December, 1607. Then came French Capuchin missionaries in 1628, French Jesuit in 1645, and Dominicans a little later. Although the shahs did not make the Catholic missionaries welcome, they nevertheless allowed them in the course of the seventeenth century to continue their ministry to the Armenians and Chaldeans, to erect churches and schools, and even to convert a few Moslems. When the celebrated Jesuit, Father Alexander de Rhodes, died, he was given magnificent obsequies. During the entire eighteenth century persecutions were so serious as to cause the departure of the European missionaries, and even the Catholic natives left the town.

The Latin Diocese of Isaphan was created in 1629; in 1638 a second one was created, known as Babylon, and until 1693 both were under one administrator.

The bishop generally resided at Isaphan and was still there in 1699, as well as the five religious communities mentioned above, when the Bishop of Ancyra was sent by the Pope as ambassador to the shah. The tak-
ing of Isphahan by the Afghans in 1722 necessitated the closing of these Catholic establishments. In 1838, when Bergougnoun, who had the Pied Ian Apostolic Delegate for the Orientals, the Latin Diocese of Isphahan was removed from the jurisdiction of the See of Babylon, of which it had become a suffragan in 1848. To-day this diocese directly depends on the Holy See; Mgr Lesné, its administrator, who is titular Archbishop of Philippopolis and Apostolic delegate, resides at Isphahan. There are about 350 Catholics of the Latin Rite in Persia, out of a total population of over eight millions; they are under the care of fifteen Lazarist fathers. The Catholic Armenian Diocese of Isphahan, erected on 30 April, 1850, is under the jurisdiction of Monsignor Paolo Pietro Sabbaghian, the Armenian Patriarch of Cilicia, and contains about 7700 Catholic Armenians, with eleven secular priests, four churches, and one convent. The faithful in Isphahan proper number 560, out of a population of 80,000 inhabitants; and there are still many in the region of Ormiah. The native Armenians in Persia, outside of Isphahan, are quite numerous at Djulfa, a suburb of Isphahan, and have a bishop of that title.

S. VAILHÉ.

Israelites. — The word designates the descendants of the Patriarch Jacob, or Israel. It corresponds to the Hebrew appellation בָּנֵי יִשְׂרָאֵל, "children of Israel," a name by which—together with the simple form יִשְׂרָאֵל, "Israel"—the chosen people usually called themselves in Old-Testament times. Some modern Israelis speaking of themselves to foreigners used the term בנין ישראל (Hebrews), commonly explained as denoting those who have come from "the other side" (בנין אָבִיר) of the river (the Euphrates). Another synonym for Israelis is יִשְׂרָאֵלiten, "Israelites" (Lev. 26:43), used by classical authors, but also often found in Josephus and in the New-Testament writings. The object of the present article is distinctly geographical and ethnographical, leaving, as far as possible, the other topics connected with the Israelites to be dealt with in the article on JEWS AND JUDAISM, or in particular articles on the leading personages or events in Israel's history.

I. SEMITIC RELATIONSHIP. — The Israelites belong to the group of ancient peoples who are designated under the general name of Semites, and whose countries extended from the Mediterranean to the other side of the Euphrates and Tigris, and from the mountains of Armenia to the southern coast of Arabia. According to the Biblical classification of the descendants of Noah (Gen. x.), it is clear that the Semitic group included the Arabs, Babylonians, Assyrians, Aryanized Hebrews, which peoples modern ethnographers add, chiefly on linguistic grounds, the Phœnicians and Chanaaneans. It thus appears that the Israelites of old claimed actual kinship with some of the most powerful nations of the East, although the narrowness or remoteness of this kinship cannot be determined with exactitude. As might be expected, their ethnic relation to the Semitic tribes who, together with the Israelites, make up the sub-group of the Terabites, is more definitely known. The closeness of this relationship can easily be seen by means of the following table, which is supplied by the earliest source embodied in the Book of Genesis:

<table>
<thead>
<tr>
<th>Aram</th>
<th>Lot</th>
<th>Ammon</th>
</tr>
</thead>
<tbody>
<tr>
<td>Araba</td>
<td>Abraham</td>
<td>Isaac</td>
</tr>
<tr>
<td>(Heb. Terah)</td>
<td>(Edom)</td>
<td>(Israel)</td>
</tr>
<tr>
<td>Madian et al.</td>
<td>Jacob</td>
<td></td>
</tr>
<tr>
<td>Bethuel</td>
<td>Aram</td>
<td></td>
</tr>
</tbody>
</table>

This table plainly shows that the Moabites, the Ammonites, the Edomites, and the Israelites were tribes of kindred origin, a fact which is readily acknowledged by contemporary scholars. It shows no less plainly that the children of Israel were also conscious of a close relationship with both the Arameans (Syrrians) to the north-east and the Sinitic nomads to the south of the Dead Sea, and that despite the rejection of Israel's kinship with Aram by some recent critics, both the Aramean and the Arabian relationships of Israel should be admitted. In the abstract, these relationships are not exclusive of each other, for there is no reason to suppose that ancient Israel was more homogeneous than any other migratory and conquering people; and in the concrete, both the relationships in question are equally borne witness to in the earliest historical records (cf. Gen., xxxiv, 4, 10; xxxvii, 43; xxix, 4, etc., in favour of Israel's relationship with Aram).

II. EARLY MIGRATION. — The history of the Israelites begins with the migration of the kindred tribes mentioned in the above table, in the person of their ancestor, Thare, from Babylonia. The starting-point of this memorable migration was, according to Gen., xi, 28, 31, "Ur of the Chaldees," which has recently been identified with Mugheir (Mugayyar; Acadiana Ursum), an important city in ancient days, some six miles distant from the right bank of the Euphrates, and about 125 miles north-west of the Persian Gulf. Its actual goal, according to Gen., xi, 31, was "the land of Chanaan." The movement thus generally described is in distinct harmony with the well-assured fact that at an early date Babylonian enterprise had penetrated to Palestine and thereby opened up to the Semitic element of Chaldea a track towards the region which at the present day is often regarded as the original centre of the dispersion of the Semites, viz. Northern Arabia. The course taken was by way of Haran (in Aram), a city some 600 miles north-west of Ur, and its rival in the worship of the Moon-god, Sin. Not in worship alone, but also in culture, laws, and customs, Haran closely resembled Ur, and the call of Abraham—God's command bidding him to seek a new country (Gen., xi, 1)—was doubtless welcome to one whose purer conception of the Deity made him dissatisfied with his heathen surroundings (cf. Jos., xxiv, 2 sq.). There is also reason to think that at this time Northern Babylonia was greatly disturbed by invading Kassites, a mountain race related to the Elamites. While, then, Thare's second son, Nachor, remained in Haran, where he originated the city and settled, Abraham and Lot went forth, passed Damascus, and reached the goal of their journey. The settlements which Holy Writ connects with Abraham and Lot need only to be mentioned here. The tribes directly related to Lot were those of Moab and Ammon, of which the former established itself east of the Dead Sea, and the latter settled on the eastern side of
the Amorite kingdom which extended between the Arnom and the Jeboc. Of the tribes more immediately related to Abraham, the Israelites and the Madianites seem to have lived in the Peninsula of Sinai. Possession of Mount Seir, the hilly tract of land lying south of the Dead Sea, was in the Arabah; and the Israelites settled in the country west of the Jordan, the districts with which they are more particularly connected in the Book of Genesis being those of Sechem, Bethel, Hebron, and Bersabee.

The history of the Israelites in these early times is closely associated with that of the Canaanites, Abram, Isaac, and Jacob (Israel), all of whom kept a distinct remembrance of their close kinship with the Semitic settlement in Aram (cf. Gen., xxiv.; xxviii.), and the first of whom appears to have reached Chanaan about 2300 B.C., when he came into passing contact with Egypt (Gen., xii) and Elam (Gen., xiv.) (see BABYLONIA).

III. SOJOURN IN EGYPT.—The intercourse of Abraham with Egypt was, as is well known, of the utmost importance in the history of the race, and the narrative has been the subject of much discussion and much controversy. The main points of the story are the migration of the Patriarch to Egypt, the subsequent stay of fourteen years, and the final departure with a large number of persons and possessions. The account is given in Genesis, Chapter xxvii., and the narrative is continued in Chapters xxxiv. and xxxvi. The main incidents are the marriage of Joseph, the slavery of the Hebrews, the capture of Joseph, and the return of the family to Egypt. The story is of great historical importance, as it provides the first recorded instance of a migration from one country to another, and as it illustrates the character of the people who occupied the countries in question.

The history of the Israelites in Egypt is a long and complex one, and the details are not always clear. The Bible gives a number of incident, but the main events are well known. The Israelites were driven out of Egypt by the Egyptians, and the story is told in the book of Exodus. The main events are the exodus from Egypt, the journey through the wilderness, and the conquest of Canaan. The story is also told in the book of Deuteronomy, and the main events are the speech of Moses to the Israelites, the construction of the temple, and the death of Moses.

called the Gulf of Akabah. Of the various places mentioned as being on their route only two have been identified with some degree of probability. These are Kibroth Hattawnah (graves of lust), regarded as identical with Erweis el-Ebeer, and Haseveth, apparently identical with the modern 'Ain Hudherah (cf. Numb., xi, 34; xxxiii, 16, 17). On entering the Desert of Pharan, the people established themselves at Cades, also Cadesbarne (the holy place), which has been identified with great probability with Ain Kedis, some fifty miles south of Bersabee (Numb., xxxii, 36). Proceeding northward, after the return of the spies whom they had sent to explore Southern Palestine, they made a mad attempt to force their way into Chanaan. They were repulsed by the Chanaanites and the Amalecites at Sephaath, a place subsequently named Horma (cf. Judges, i, 17; now Sebaata) and some thirty-five miles north of Cades. (Cf. Numb., xii, xiv.) Then began a most obscure period in Israel's life. During thirty-eight years they wandered in the Badit et-Tih (Wilderness of the Wanderings) on the southern confines of Chanaan, apparently making Cades the centre around which their movements turned. It is possible that while here, they came, for the first time

in the direction of the sacred mount of Sinai, the next station being at Raphidim (Exod., xvii, 1), which is commonly regarded as identical with Wady Feiran, a long and fertile plain overhung by the granite rocks of Mount Shebal, probably the Horeb of Holy Writ. From Feiran the road winds through the long Wady es-Sheychk and leads to the extensive plain es-Rahab, which is directly in front of Mount Sinai, and which offered more than sufficient standing-ground for all the children of Israel. It is true that none of the foregoing identifications enjoys more than a certain amount of probability, and that, consequently, their aggregate cannot be considered as an unquestionable proof that the traditional road along the Gulf of Sues is the one actually followed by the Hebrews. Yet, as may readily be seen, it is a fact of no small importance in favour of the route just described that its distance of some 150 miles between the place of crossing and Mount Sinai admits of a natural division into stages which on the whole correspond well to the principal marches of the Hebrews; for nothing of the kind can be put forth in support of their position by the contemporary scholars who prefer to the traditional road as eastward one running across the Peninsula of Sinai to the northern point of the Gulf of Akabah.

On leaving Sinai, under the guidance of Moses' brother-in-law, the Israelites proceeded in a northerly direction towards the Wilderness of Pharan, the barren region of et-Tih which lies south of Chanaan and west of Edom. They seem to have approached it by the shore of the eastern arm of the Red Sea, now since the Exodus, into contact with the Egyptians. An inscription of the Pharaoh Memphitah has been found recently at Thebes, in 1886, the close of which relates the conquest by the Egyptians of the land of Chanaan and of Ashkelon, and then adds: 'The Israelites are spoiled so that they have no seed; the land of Khar [perhaps, the land of the Horites, i.e. Edom] is become like the windows of Egypt.' Of the circumstances alluded to nothing positive is known; but the situation of the Israelites implied in the inscription is in or near Southern Palestine, and, as the fuller records of later date show no trace of any relations between Israel and Egypt until the time of Solomon, the sojourn at Cades seems to be the only occasion that will suit the conditions. On the assumption that the Exodus took place in the reign of Memphitah, the only alternative to the view just set forth is to regard the inscription as a boastful account of the Exodus itself, considered as an expulsion of the Israelites'. (Wade, "Old Test. Hist.").

In the beginning of the fortieth year of Israel's wanderings, the march towards Chanaan was resumed from Cades. In approaching Palestine this second time, it was determined to avoid the southern frontier, and to enter the Land of Promise by crossing the Jordan at the northern end of the Dead Sea. The shorter road for this purpose was through the territories of Edom and Moab, and Moses asked permission from the King of Edom to take this route, reminding him of the relationship between his people and Israel. His refusal compelled the Israelites to journey southward towards the Gulf of Akabah, and
there to skirt the southern possessions of Edom, whence they marched northward, skirting the eastern frontier first of Edom and next of Moab, and finally encamping over against the River Arnon (the modern Wady Mobj). Such is the general line of march commonly admitted by scholars between Chorazin and Arnon. Moreover, it is generally agreed that the several lists of Israel’s stations in Numb., xx, 22-xxi, 11; xxxiii; Deut., x, 6, 7, contain differences as to the encampments which they mention, and as to the time which they assign to Aaron’s death, some uncertainty remains as to which side of Edom they crossed. In any case, the Israelites are on their way to the Arnon. With regard to the various stations named in those lists, a still greater uncertainty prevails. In point of fact, only a few of them can be identified, among which may be mentioned the place of Aaron’s death, Mount Hor, which is probably the modern Jebel Madurah on the western border of Edom, some thirty or forty miles north-east of Cades; and next the encampment at Asiongaber, a place which may be identical with Ain el Gudyan which lies about fifteen miles north of the Gulf of Akabah. Resuming their march towards Jordan, the Children of Israel crossed the Arnon, and encountered the hostility of the Amor- rite chief, Schoen, who had taken from Moab the territory between the Arnon and the Jeboc (Wady Zerka). They defeated him at Jasa (not now identified), captured his capital Hesebon (the modern Hisham), and the other cities of his dominion. They were thus brought into contact, and apparently into conflict, with the northemmost kingdom of Basan, which lay between the Jебoc and the foot of Mount Hermon. They gave battle to its king, Og, defeated him at Taanach (now Ed‘a), and took possession of his territory. Their victories and, perhaps still more, their occupation of the land north of Moab by Ruben, Gad, and the half-tribe of Manasseh aroused the enmity of the Moabites who, at this juncture, summoned Balaam to curse the Israelites, and who succeeded but too well in their efforts to betray them into idolatry at Sittim (Acaeiis), in the plains of Moab, over against Jericho (Eri‘ka). The crowning events of the Wanderings were the induction of Josue into office as Moses’ successor in command, and the death of Moses on the plains of Moab. One of the chiefs of the Amorrites (Numb., xxvii, 12), which is variously called Nebo (Jebel Neba; Deut., xxxii, 49) or Phshga (Ras Siqiah; Deut., iii, 27), the western projection of Mount Nebo.

V. The Conquest of Chanaan.—Soon after the death of Moses, Josue resolved to attempt the invasion and conquest of Chanaan proper, or the country west of the Jordan, which Israel’s great lawgiver had indeed contemplated, but had not been able to effect. In some respects this was at the time a hard task. The crossing of the Jordan was in itself a difficult undertaking, as the heights of the river were crowned with numerous cities, strongly walled, and therefore able to offer a stout resistance. Even the population in the lowlands was much superior to the Israelites in the art and appliances of war, in touch, as they had long been, with the advanced civilization of Babylonia and Egypt. In some other respects the work of conquest was then comparatively easy. The various peoples (Chanaanites, Hethites, Amorrites, Pherezites, etc.) who made up the population of Western Palestine, constituted a number of mostly independent cities, distracted by those mutual jealousies which have been pointed out in the Amarna tablets, and hence not likely to combine their forces against Israel’s invasion. Moreover, there was no possibility of outside alliances against the intruders. Tyre and Sidon, and other cities of the coast, were going their way, increasing their wealth and commercial connections by peaceful means, and were averse to entangling foreign complications. The Amorrites east of the Jordan were the most formidable remnant of their decaying race, and they had been rendered powerless; while the Philistines, them- selves once a powerful people upon the scattered power” (McCurdy). Circumstances such as these naturally called for Josue’s prompt and vigorous action. With God’s special help he crossed the Jordan at the head of all the tribes encamped at Gogal, identified with the modern Tell el-Jiljulah, four miles from the Wady el-Abel river, and thence proceeded upon Jericho. This city was one of the keys to the trans-Jordanic region, and it soon fell into his power. He next proceeded by the pass of Machmas (the Wady Suweinit) against Hai, a town two miles east of Be’ehel, and captured it by stratagem. After this rapid conquest of Central Chanaan, Josue made alliance with the Gabaonites, who had outwitted him, and won the memorable battle of Bethoron over the five kings of the nearest Amorrite peoples. This victory was followed up by the subjugation of other districts of Southern Palestine, a work which seems to have been accomplished chiefly if not exclusively by Israel crossing the Jordan itself, and overpowered the Cinites and the Calebites. Meantime, the kings of the north had rallied around Jabin, King of Azor in Galilee, and mustered their hosts near the Waters of Merom (Lake Huleh). At the head of the House of Joseph, the Jewish leader took them by surprise, defeated them, and subdued numerous northern towns. Josue’s glorious achievements secured for the tribes of Israel a firm foothold in Chanaan, by means of which they settled in their allotted territories. Great, however, as were these victories, they failed, even in conjunction with the efforts of the individual tribes (as recounted in our text of Judges), to complete the subjugation of Palestine. Many of the larger cities, together with the cultivated valleys and the coast-land, were still, and remained for a long time, in the possession of Chanaan’s earlier inhabitants.

VI. The Period of the Judges.—As long as Josue lived, his personality and his generalship succeeded in keeping up among the Israelites some manner of central authority, despite the tribal rivalries which manifested themselves even during the conquest of Western Palestine. Even Josue, the appointed successor, all central authority actually ceased, and the bonds of union between the different tribes were quickly dissolved. The tribes were dispersed in different districts, and the Semitic love of tribal independence strongly reasserted itself among them. The immediate pressure of the war of con- quest was no longer felt, and in many cases the distinct Hebrew communities were either unwilling or unable to exterminate the older population which survived in the land. The bond of union which naturally arises from close kinship, was likewise considerably attenuated by other side lines of descent among the Chanaanites. Even the bond created by the community of religion was time and again seriously impaired in Israel by the corruption of the ancestral worship of Yahweh with the attractive cult of the Baalim of Chanaan. This deep disunion of the tribes accounts naturally for the fact that, during a long period after the death of Moses’ successor, each section of Israel’s possessions was in its turn harassed and humiliated by a powerful foreign foe, and each time delivered from his oppression by a military leader, a “judge”, as he is called, whose authority never extended beyond the limits of his own district. In the course of time, the drawbacks of such disunion were more strongly felt by the Israelites, and in order to withstand their enemies more effectively by concerted action, they wished for a king. Their first attempts in this direc-
tion were indeed unsuccessful: Gideon refused the crown which they offered him, and Abimelech, his son, who accepted it, proved an unworthy ruler. Yet the spirit of Israel was not to be suppressed; during Israel's fierce conflict with the Philistines, Samuel, the last judge, wielded the universal and absolute power of a monarch without the title and the insignia of royalty; and when to the hostility of Western enemies was joined that of Eastern foes, like the Ammonites, the Israelites strenuously asked for a king and finally obtained one in the person of the Benjamite Saul.

VII. THE UNDIVIDED KINGDOM.—Israel's first monarch resembled in many respects the judges who had preceded him, for the simple reason that, under his rule, a tribal and anocratic spirit did not die out, but was fostered in a nation. He was indeed the King of All Israel; his royal title and authority were to be hereditary, and at his summons all the tribes rallied around him. With their common help, he rescued the men of Jabes Galed from impending destruction at the hands of the Ammonites, fought for a time successfully against the Philistines, and overcame the Amalecites. All the while, however, his kingship was little more than a judgeship. His court and ways of life were simple in the extreme; he had no standing army, no governors over subordinate districts; the war against the Philistines, the great enemies of Israel in his day, he waged like the judges of old, by hasty and temporary levies; and when he died at Gibeon, the profound and inevitable disunion of the tribes, which had been momentarily checked, immediately reappeared; most of them declared themselves in favour of his son, Ishbosheth, but Juda gathered around David and made him king in Hebron. In the civil war which ensued, "David grew always stronger and stronger", with the final result that his sovereignty was formally and voluntarily acknowledged by the elders of all the tribes. The new king was the real founder of the Hebrew monarchy. One of his first cares was to secure for Israel a political and religious capital in Jerusalem, a city of considerable size and of considerable natural strength. His military genius enabled him gradually to overcome the various nations who had cruelly oppressed the chosen people in the days of the judges. On the south-east he fought against the Philistines, and took from them the town of Gath (Tell es-Safi), and a great part of their dominions. On the south-east, he conquered and established garrisons in the territory of Edom. To the east of the Jordan he attacked and well-nigh exterminated the Moabites, while on the north he overthrew the Syrians of Soha as well as those of Damascus who had marched to the defence of their kindred. Finally, he waged a protracted war against the Ammonites, who had entered into a defensive alliance with several of the Syrian princes, and wreaked upon them a frightful vengeance. The possessions secured by these various wars formed a vast empire whose boundaries remained forever after the ideal extent of the Realm of Israel, and whose wise internal organization, on regular monarchical lines, greatly promoted the agricultural and industrial interests of the Hebrew tribes. Under such circumstances one might not unnaturally have supposed that the old tribal jealousies were at an end forever. And yet, on the occasion of the king's domestic broils, a rebellion broke out which for a while threatened to rend the nation asunder. The eldest son of David's father was, however, happily averted, and at his death David left to his son Solomon an undivided kingdom. David's reign had been pre-eminently a period of war and of territorial acquisition; Solomon's rule was, in the main, an era of peace and commercial achievement. Of special value to the new monarch were the friendly relations between Phoenicia and Israel, continued from David's time. Through the help of Tyre he erected the Temple and other beautiful edifices in Jerusalem; the help of Tyre also enabled him to maintain for a time something of a foreign commerce by the Red Sea. His relations with Egypt were likewise peaceful and profitable. He received in marriage the daughter of Pharaoh, the last Pharaoh of the twenty-first dynasty, and kept up with Egypt a brisk overland commerce. He carried on a friendly intercourse and lively trade with the Hittites of Cilicia and of Cappadocia. Unfortunately, his love of splendour and luxury, his unfaithfulness to Yahweh's law and worship, gradually betrayed him into oppressive measures which especially alienated the northern tribes. In vain did he strive to overrule this dissatisfaction by doing away with the ancient terri-

Describing invasion of Juda by Sesac

torial divisions of the tribes, and by appointing the Ephraimite Jeroboam as collector of taxes of the House of Joseph; his tampering with the old tribal principle did but increase the general discontent, and the great authority with which he invested the son of Nabat simply afforded the latter better opportunity to realize the extent of the disaffection of the northern tribes and to avail himself of it to rebel against the king. About this same time, Edom and Moab revolted against Solomon's suzerainty, so that, towards the end of his reign, everything threatened the continuity of the empire of Israel, which had always contained the hidden germs of disruption, and which, to a large extent, owed its very existence to the extreme temporary weakness of the great neighbouring nations of Egypt and Assyria.

VIII. THE KINGDOM OF ISRAEL.—Roboam's insulting reply to the northern tribes, when, gathered at Sichem, after Solomon's demise, they asked for some relief from the heavy yoke put upon them by the late monarch, was the immediate occasion of their permanent rupture with the line of David and the southern tribes. Under Jeroboam's headship they formed (c. 937 B.C.) a separate kingdom which is known as the Kingdom of Israel, in contradistinction to that of Juda, and which greatly surpassed the latter in extent and population. The area of the Northern Kingdom is estimated at about 9000
square miles, with a population of about four or five millions. It included eight tribes, viz., on the west of the Jordan, Ephraim, one-half of Manasses, Issachar, Zabalon, Asen, Nephthali with the coast-line between Acre and Joppa; on the east of the Jordan, Ruben, Gad, and one-half of Manasses. Its vassal-states were Moab and so much of Syria as had remained subject to Solomon (III Kings, xii, 24; IV Kings, iii, 4). The Kingdom of Juda included that tribe itself together with that of Benjamin, and—at least eventually—a part, if not the whole, of Simeon and Dan. Its area is estimated at 3400 miles, with a population of about one million and three quarters. Besides this, Edom continued faithful to Juda for a time. But while the Northern Kingdom was larger and more populous than the Southern, it decidedly lacked the unity and the seclusion of its rival, and was therefore the first to succumb, a comparatively easy prey, to the eastern conquerors, when their victorious march brought them to the western lands.

The history of the newly formed kingdom may be conveniently divided into three great periods, during which various dynasties ruled in Israel, while the line of David continued in sole possession of the throne of Juda. The first period extends from Jeroboam to Achab (937-875 B.C.). The kings of this opening period were as follows:—

Of the twenty-two years of Jeroboam's reign, few details have come down to us. At first, the founder of the Northern Kingdom took for his capital the city of Shechem, in which Abimelech had once set up his kingdom, and in which the actual outbreak of the revolt against Juda had just occurred; he exchanged it for the beautiful Tiberias, eleven miles to the north-east. To offset the attractiveness of Jerusalem and the influence of its Temple, he extended his royal patronage to two ancient sanctuaries, Dan and Bethel, the one at the northern, and the other at the southern, extremity of his realm. To guard against Judah's invasion of his territory, he built up strong fortresses on both sides of the Jordan. With regard to Jeroboam's early military expeditions, the Biblical narrative imparts no distinct information: it simply represents as practically continual the war which soon broke out between him and Roboam (cf. III Kings, xiv, 30; xv, 6). From the Egyptian inscriptions at Karnak, it appears that the Northern Kingdom suffered much in connexion with the invasion of Judah by Sesac, the first king of the twenty-second dynasty, so that it is not likely that this invasion was the result of Jeroboam's appeal to Egypt for help in his conflict with the King of Judah. The hostilities between the sister kingdoms continued under Abiam, Roboam's son and successor, and in their pursuit, Jeroboam was, according to the chronicles' account, badly worsted (II Paralip., iii). Jeroboam's own line lasted only through his own son Nadab, who, after reigning two years, was slain by a usurper, Baasha of Issachar (913 B.C.), while Israel besieged the Philistine fortress of Gebbethon (probably Kibbah, six or seven miles northeast of Lydda). After his accession, Baasha pushed the war so vigorously against Asa, King of Judah, that, to save Jerusalem from an impending siege, the latter purchased the help of Benadad I, of Damascus, against Israel. In the conflict with Syria which ensued, Baasha lost much of the territory on the west of the Upper Jordan and the Sea of Galilee, with the fateful result that the controlling power in the west was now no longer Hebrew, but Aramean. Baasha was succeeded by his son Ela, whose reign lasted only a part of two years (889-875 B.C.). His murderer, Zambri, got himself proclaimed king, but perished after a few days, giving place to his military competitor, Amri (887-875 B.C.), the skilful head of a new dynasty in Israel. Under Amri, Samaria, admirably and strongly situated in Central Palestine, some twelve miles to the west of Tiberias, became, and remained to the end, the capital of the Northern Kingdom. Under him, too, the policy of hostility which had hitherto prevailed between Juda and Israel was exchanged for one of general friendship based on common interests against Syria. In some directions, indeed, Amri suffered considerable losses, as, east of the Jordan, Ramoth and other cities of Gadad fell into the power of the King of
Damascus, while on the west of the same river, he was forced to grant to that monarch trading privileges (cf. III Kings, xx, 34). But in other directions he succeeded in extending his dominion. The inscription of Mesa proves that he brought Moab under tribute. He cemented Israel's alliance with Tyre by the marriage of his son Achab with Jesabel, the daughter of the Tyrian priest and king, Ethbaal. His territories, now apparently limited to the tribes of Ephraim, Manasseh, and Issachar, with a portion of Zebulon, were consolidated under his firm rule, so much so that the Assyrians, who henceforth carefully watched over the affairs of Palestine, designated Israel under the name of "the House of Amri," even after his dynasty had been overthrown.

Achab's successor, Moab was removed from the throne of Israel by his son, Jeroboam II (785-731 B.C.). These kings were as follows:—

**JUDA**

It was marked at home by a considerable progress of Israel in the arts of peace (cf. III Kings, xxii, 39); by the public adoption of the Phoenician worship of Baal and Ashtaroth (D. V. Ashhtaroth, Ashtoreth), and also by a strenuous opposition to it on the part of the Prophets in the person of Elias, the leading religious figure of the time. Abroad, Israel's friendly relation with Judah assumed a permanent character by the marriage of Athalia, the daughter of Achab and Jezabel, with Joram, the son of Josaphat and in point of fact, Israel was at peace with Judah throughout the twenty-two years of Achab's reign. Israel's chief neighbour foe was Syria, over whose ruler, Benadad II, Achab won two important victories (875 B.C.). Yet, upon the westward advance of their common enemies, the Assyrians, under Salmanasar II, the kings of Israel and Syria united with other princes of Western Asia against the Assyrian hosts, and checked their onward march at Karkhar on the Orontes, in 854 B.C. Next year, Achab resumed hostilities against Syria, and fell mortally wounded in battle before Hazor (797 B.C.). Achaz (794 B.C.) was the last monarch of Jehu's dynasty. He had scarcely reigned six months when a usurer, Sellum, put him to death. Sellum, in his turn, was even more summarily dispatched by the turbulent Manahem. The last-named ruler had soon to face the Assyrian power directly, and, as he felt unable to withstand it, hastened to proffer tribute to Thlathaphalasar III and thereby save his crown (738 B.C.). His son Phacee reigned about two years (737-35 B.C.) and was slain by his captain, Phacee, who combined with Syria against Achaz of Judah. In his sore distress, Achaz appealed for Assyrian help, with the result that Thlathaphalasar again (734 B.C.) invaded Israel, annexed Galilee and Damascus, and carried many Israelites into captivity. Phacee's murderer, Osee, was Assyria's faithful vassal as long as Thlathaphalasar lived. Shortly afterwards, at the instigation of Egypt, he revolted against Salmanasar IV, Assyria's new ruler, whoupon Assyrian troops overran Israel and laid siege to the capital again. A long resistance, fell near the close of the year 722 B.C., under Sargon II, who had meantime succeeded Salmanasar IV. With this ended the Northern Kingdom, after an existence of a little more than two hundred years. (For the fate of the Israelites left in Palestine or exiled, see Captivities of the Israelites.)
The Kingdom of Judah.—Of the two kingdoms formed upon the disruption of Solomon's empire, the Southern Kingdom, or Kingdom of Judah, was in several respects weaker, and yet was the better fitted to withstand the assaults of foreign enemies. Its general relations with Israel, Egypt, and Assyria, during the existence of the Northern Kingdom, have been briefly mentioned in connexion with the history of that kingdom, and need not be more fully set forth here. Hence the following sketch of the Kingdom of Judah deals exclusively with the period of its existence subsequent to the overthrow of the Kingdom of Israel by the Assyrians. At the time of the fall of Samaria, Ezechias was King of Judah (725–696 b.c.). He long persevered in the allegiance which his father, Amon, had pledged to Assyria; Sargon's death, however, in 705 b.c., appeared to him and other Western princes a favourable opportunity to throw off the Assyrian yoke. He therefore formed with them a powerful league against Sennacherib, Sargon's successor. In due time (701 b.c.), the Assyrian forces invaded Western Asia, captured several Judean cities, and compelled Ezechias to renounce the league and pay an enormous fine. Not long afterwards, Sennacherib ravaged Judah again, and hautiously threatened Jerusalem with destruction. In accordance with Isaiah's prophecy, however, his threats came to naught: "the Angel of the Lord" decimated his army, and disturbances in the East recalled him to Nineveh (IV Kings, xi. 13 seq.). It was under Ezechias that Judah came in contact for the first time with Babylonia (IV Kings, xx). The long reign of his son, Manasses (696–641 b.c.), was, almost throughout, marked by religious degeneracy and faithful vassalage to Assyria. In the latter part of it, Judah rebelled against Assyria, but Sennacherib's son and successor, but the insurrection was speedily crushed, and misfortune brought back Manasses to the worship of the true God. The brief reign of Amon (641–39 b.c.) was an imitation of the first and the worst practices of his father. In 608 b.c. Palestine was traversed by an Egyptian army under Necho II, a prince of the twenty-sixth dynasty, ambitious to restore to his country an Asiatic empire. As a faithful vassal of Assyria, the pious King Josias (639–608 b.c.) marched out to arrest Pharaoh's progress. He was defeated and slain at Mageddo, and his kingdom became an Egyptian dependency. This vassalage was indeed short-lived. The Chaldean Nabuchodonosor, on his victorious march to Egypt, invaded Judah for the first time, and Joakim (A. V. Jehoiakim) (608–597 b.c.), the eldest son and successor of Josias, became a vassal of Babylon in 604 b.c. Despite the advice of the Prophet Jeremias, the Jewish king rebelled in 598. Next year, the Exile King Josiah (A. V. Jehoas chin), was taken, with Jerusalem, and was carried captive to Babylon together with many of his subjects, among whom was the Prophet Ezechiel. In 588 b.c., Judah rebelled again under Zedekias (597–586 b.c.), the third son of Josias. In July, 586 b.c., the Holy City surrendered, and its blinded king and most of his people were deported to Babylon. Thus began the Babylonian exile (see Captivities of the Israelites). After the Babylonian Exile.—Politically and nationally the Babylonian exile was a blessing for ever to the people of Israel. Even when, 350 years later, there was once more a Jewish state, those who formed it were not the people of Israel, not even the Jewish nation, but that portion which remained in the mother country of a great religious organization scattered over all Asia and Egypt (Cyril). The exiles who, in 588 b.c., availed themselves of Cyrus's permission to return to Palestine, were mostly Judeans, whose varied fortunes after their settlement in and around Jerusalem belong in a very particular manner to the history of Judaism and consequently need be set forth only in the briefest manner in the present article. Prompted by the religious impulse which led them to come back to the land of their fathers, their first concern in reaching it was to resume God's holy worship. Their perseverance in rearing the second Temple was finally crowned with success in 516 b.c., despite the bitter and unceasing opposition of the Samaritans. Their great leaders—not only the Prophets of the time (Zachary and Malachi), but also their local secular heads (Nehe mias and Esdras)—were religious reformers, whose one purpose was to preserve the people's fidelity to God's law and worship. They made no attempt to set up a monarchy of their own, and as long as the Persian Empire lasted they and their descendants gloried in their loyalty. Within the Persian period falls the formation of the Jewish military colony at Elephantine, the existence and religious worship of which have been disclosed by Judeo-Aramaean papyri discovered quite recently. The conqueror of Persia, Alexander the Great, seems to have bestowed special privileges upon the Jewish community of Palestine, and to have granted to the Jews who settled in Alexandria—a city which he founded and called after his name—equal civil rights with the Macedonians (331 b.c.). Alexander died before consolidating his empire. During the period of bloodshed which followed his death, Palestine was the bone of contention between the Syrian and Egyptian kings, often changed masters, and suffered oppression and misery at each change. As time went on, the welfare, moral and religious, of the Palestinian Jews was more and more seriously threatened by the influence of Hellenism, which at first chiefly exercised by the Ptolemies from Alexandria as the centre (323–202 b.c.), and later by Antiochus III, the Great, of Syria, and his two successors, Seleucus IV and Antiochus Epiphanes, reigning at Antioch (202–165 b.c.). Under this last-named Syrian prince, Hellenism appeared to menace the point of stamping Judaism out. The high-priests of the time, who were the local rulers of Jerusalem, adopted Greek names, and courted the king's favour by introducing or encouraging Hellenic practices among the inhabitants of the Holy City. At length Antiochus himself resolved to transform Jerusalem into a Greek city, and to destroy Judaean...
from the towns of Palestine and, indeed, from all his dominions. A most cruel and systematic persecution ensued, in the course of which the Machabees rebelled against their oppressors. The final result of the Machabean revolt was the overthrow of the Syrian power, and the barons of the Parthian king, Darius, established in the east.

Under the Asmonean dynasty (135-63 B.C.), the Palestinian Jewish community gradually spread, by conquest and forcible conversion, from its narrow limits in Nehemiah's time, to practically the extent of the territory of ancient Israel. Internally, it was divided between the two rival parties of the Pharisees and the Sadducees, themselves the slow outcome of the twofold movement at work during the Syrian suzerainty, the one against, and the other in favour of, Hellenism. The war which broke out between the last two Asmonean kings, John Hyrcanus II and Aristobulus II, who were supported by the Pharisees and the Sadducees respectively, gave to the Romans the opportunity they had long sought for intervening in Judean affairs. In 63 B.C. Pompey invaded and took Jerusalem, and put an end to the last Jewish dynasty. Up to 37 B.C., the year of the accession of Herod the Great, the history of the Palestinian Jews reflects, for the most part, the vicissitudes of the tangled politics of the Roman emperors.

Herod's despotism reigned (37 B.C. to A.D. 4) was marked by a rapid growth of Hellenism in nearly every city of Palestine, and also by contact of the Pharisees in the celebration of the school of Hillel and Shammai. Upon the death of Herod, the Emperor Augustus divided his kingdom, and placed Judea under procurators as a part of the Roman Province of Syria. The last political struggles to be mentioned are (1) the Jewish revolt against Rome in A.D. 66, which ended in the fall of Jerusalem in A.D. 70; (2) the rebellion of Bar Cochba in A.D. 132 under the Emperor Adrian, who finally transformed Jerusalem into the Roman colony of Ælia Capitolina from which all Jews were banished. Ever since then, the Jews have been scattered in many countries, often persecuted, yet surviving, always hoping in some manner for a future Messias, and generally influenced by the customs, and morals, and religious beliefs of the nations among whom they live.

Besides the works on Biblical history referred to in the bibliographical note, the following deserve special mention: DUBREVOY, Bible et découvertes modernes (Paris, 1896); SATOH, History of the Great East (London, 1904); McCauley, History, Prophecy and the Monuments (New York, 1885); new ed. announced, 1909); Legrand, Études sur les religions (1903); Fiechter, The Old Testament in the Light of the Historical Records and Legends of Assyria and Babylonia (1903); Wincelius, History of Israel (1905); Barakat, Ancient Records of Egypt (3 vols., 1906-07); Vincent, Chaman d'Apres l'exploration récente (Paris, 1897); Cornwell, History of the People of Israel, tr. (Chicago, 1889); See also the History of And Short Odes of Jerusalem; New York, 1903); Wade, Old Testament History (New York, 1904).

Issachar (אִישָׁחָר). The exact derivation and the precise meaning of the name are unknown. First, the name is used as a surname of Jacob and the fifth son of Lia (Gen., xxx, 16-18; xxxv, 23; I Par., ii, 1), on whom it was bestowed account on some particular circumstance connected with his birth (cf. Gen., xxx, 14-18), and of whom nothing is told in Holy Writ besides the fact that, at the descent into Egypt, he had four sons (Gen., xvi, 13; Num., xxvi, 23, 24; I Par., vii, 1). It designates, in the second place, one of the tribes of Israel, which had the ninth son of Jacob for its ancestor. Our knowledge of the tribe of Issachar is rather meagre. During the journey through the wilderness, that is to say, along the entire Jewish route, the Issacharites marched on the east of the tabernacle (Num., ii, 5). It contained 54,400 warriors when the first census was taken at Mount Sinai (Num., i, 25 sq.), and 64,300 at the time of the second census (Num., xxvi, 25). After the entrance into Western Palestine, this tribe was one of the six which stood on Mount Garizim during the ceremony of the cursing and the blessing (Deut., xxvii, 12). The precise limits of its territory are not given in Holy Writ. Its general boundaries were Zebulun on the north, Dan on the north-east, Manasses to the south and to the west, the Jordan to the east. Its lot, according to Jos., xix, 17-23, comprised sixteen cities and their villages, prominent among which were the cities of Jeresh, Sunem, Engannim, and Anaharz. Within its territory lay the great plain of Eschel, the name of which enabled the Hebrew poet (Gen., xlix, 14) to describe Issachar as "a large limbed as stretching himself between the sheepfolds", and the fertility of which is praised by travellers down to the present day. The tribe played an important part during the period of the Judges (Judges, v, 15; x, 1, 2); and in the time of David it counted 145,600 warriors (I Par., vii, 1-5). Its history during the royal period was likewise important, and the third king of Northern Israel belonged to that tribe (III Kings, xx, 27). The Prophet Esaias places Issachar between the tribe of Manasses and Zebulun (Ezech., xlviii, 25, 26), and St. John names it between Levi and Zebulun (Apoc., vii, 7).

Issachar, a titular see of Cilicia Prima, suffragan of Tarsus. The city is famous for a whole series of battles fought there at different periods. The first was the victory of Alexander over Darius in 333 B.C., next that of Septimius Severus over Pescennius Niger, in A.D. 194, that of Heraclius over Chosroes in A.D. 622, finally that of the Sultan of Egypt, Biharran, against the Armenian King Hetoum in August, 1266. So many combats were fought at Issus because in its vicinity was the famous defile leading along the seashore from Cilicia to Syria, the "Gates of Syria", or highway from Asia Minor into the Syrian Orient. Issus is not mentioned in the "Notitiae Episcopatum" of the Patriarchate of Antioch, to which Cilicia belonged (Echos d'Orient, X, 94, 145), and it is not known in what manner it became a titular see of the Latin Church. Its ruins are situated near Ayas.

Ita, Saint, called the "Brigid of Munster", b. in the present County of Waterford, about 475; d. 15 January, 570. She became a nun, settling down at Cluan Credhail, a place-name that has ever since been known as Killeedy,—that is, "the Church of St. Ita"—in County Limerick. Her austerities are told by St. Cuimin of Down, and numerous miracles are recorded of her. She was also endowed with the gift of prophecy and was held in great veneration by a large number of contemporary saints, men as well as women. When she felt her end approaching she went for her community of nuns, and implored the blessing of heaven on the clergy and laity of the district around Killeedy. Not alone was St. Ita a great saint, but she was the foster-mother of many saints, including St. Brendan the Voyager, St. Pulecherius (Mochoemoeg), and St. Cumnian Fada. At the request of Bishop Butler of Limerick, Pope Pius IX granted a special indulgence for the feast of St. Ita, which is kept on 15 January.

ITALIANS in the United States.—Christopher Columbus, an Italian, was the leader of those who in succeeding centuries were led by the Providence of God, through economic necessities, to propagate the Faith in the New World. The immediate Italian followers of the Christian civilization that led to the discovery of the coast of North America, his son Sebastian, who reached Labrador, Amerigo Vespucci, who gave his name to the continent, and Verrazzano, the discoverer of New York Bay and of the Hudson River. Previous legendary discoveries did not open the continent to Christian civilization, and the discovery of Columbus and the explorations of those Italians who followed him. It is true, however, that the expeditions of Columbus and his successors were not made in the service of Italian States, and therefore the first settlers were not Italian. It is a curious fact that the history of Massachusetts supplies a number of family names which have led some investigators to claim that Italians or persons of Italian origin fixed their homes there at a very early date. The supporters of this view hold that the Cabots of Massachusetts are descendants of the explorer Sebastian Cabot. They also point to the spelling of the name Cabot in the diary of Samuel Sewall (1674-1729), as the oldest form of the well-known New England name of Bigelow, and to such other names as Mico, Briscoe, Cotta, Tenno, and Bisto, which are of a more or less marked Italian type. Even if these speculations be well founded, it is quite possible that the bearer of these names soon lost their national identity among their far more numerous Puritan neighbours. Still, although the stream of Italian immigration did not set in until much later, completeness demands some mention of the few distinguished Italians who came to the American colonies, or United States, as scattered preludes to the great latter-day tide. Among those who found their way to America in the eighteenth century was Lorenzo da Ponte (q.v.), the librettist of Mozart's "Le Nozze di Figaro" and "Don Giovanni." Another name worthy of note is that of Constantino Brumidi (q.v.), who produced many noteworthy paintings, among them those in the Capitol at Washington, where he died in 1880. Father Joseph M. Finotti (q.v.), the author of "Bibliographia Catholica Americana" and several other widely known works, came to this country from Italy in 1845. There have been several other individuals worthy of note. At the time of the Revolution of '48 many well-known Italians came to the United States and lived there for some time. The best known of these was Garibaldi, who resided two years on Staten Island working in a candle factory.

Since the year 1850, when Italian immigration to America began to assume its present enormous proportions, the problems arising out of it have become extremely grave for both the Italian and the United States Governments. At first, owing to the great density of the population of Italy—257 to the square mile in 1881, and 294 in 1910—this movement of the surplusage was regarded in the mother country as a great relief. Now, however, both agricultural labourers and those available for building and manufactures having become scarce, in proportion to the larger demands of a growing industrial and commercial activity, the Italian Government has become seriously alarmed at this continued drain upon the population. Laws have been enacted, or are being prepared, ostensibly for the protection of the emigrants, but in reality to preserve for Italy the fruit of the labour of her children. It is true that many millions went to Italy from the United States, but this sum, which is placed by some authorities at as high a figure as sixty million, hardly repays Italy for the loss she sustains, first in having nurtured and partly educated hundreds of thousands of men who have afterwards given their labour to a nation to which they cost nothing; second, in losing a great part of the industrial production which she might have had, and which, considering the difference in the standards of living and of wages, would have amounted to an immense sum. For Italy, the first navigators of the coast of North America, her son Sebastian, who reached Labrador, Amerigo Vespucci, who gave his name to the continent, and Verrazzano, the discoverer of New York Bay and of the Hudson River. It is true, however, that the expeditions of Columbus and his successors were not made in the service of Italian States, and therefore the first settlers were not Italian. It is a curious fact that the history of Massachusetts supplies a number of family names which have led some investigators to claim that Italians or persons of Italian origin fixed their homes there at a very early date. The supporters of this view hold that the Cabots of Massachusetts are descendants of the explorer Sebastian Cabot. They also point to the spelling of the name Cabot in the diary of Samuel Sewall (1674-1729), as the oldest form of the well-known New England name of Bigelow, and to such other names as Mico, Briscoe, Cotta, Tenno, and Bisto, which are of a more or less marked Italian type. Even if these speculations be well founded, it is quite possible that the bearer of these names soon lost their national identity among their far more numerous Puritan neighbours. Still, although the stream of Italian immigration did not set in until much later, completeness demands some mention of the few distinguished Italians who came to the American colonies, or United States, as scattered preludes to the great latter-day tide. Among those who found their way to America in the eighteenth century was Lorenzo da Ponte (q.v.), the librettist of Mozart's "Le Nozze di Figaro" and "Don Giovanni." Another name worthy of note is that of Constantino Brumidi (q.v.), who produced many noteworthy paintings, among them those in the Capitol at Washington, where he died in 1880. Father Joseph M. Finotti (q.v.), the author of "Bibliographia Catholica Americana" and several other widely known works, came to this country from Italy in 1845. There have been several other individuals worthy of note. At the time of the Revolution of '48 many well-known Italians came to the United States and lived there for some time. The best known of these was Garibaldi, who resided two years on Staten Island working in a candle factory.

Since the year 1850, when Italian immigration to America began to assume its present enormous proportions, the problems arising out of it have become extremely grave for both the Italian and the United States Governments. At first, owing to the great density of the population of Italy—257 to the square mile in 1881, and 294 in 1910—this movement of the surplusage was regarded in the mother country as a great relief. Now, however, both agricultural labourers and those available for building and manufactures having become scarce, in proportion to the larger demands of a growing industrial and commercial activity, the Italian Government has become seriously alarmed at this continued drain upon the population. Laws have been enacted, or are being prepared, ostensibly for the protection of the emigrants, but in reality to preserve for Italy the fruit of the labour of her children. It is true that many millions went to Italy from the United States, but this sum, which is placed by some authorities at as high a figure as sixty million, hardly repays Italy for the loss she sustains, first in having nurtured and partly educated hundreds of thousands of men who have afterwards given their
The rise of the civil employees, the pensions, and the expenses of worship, only a small part of the national budget remained available for national expenditures such as the army, navy, public instruction, railways, police, the maintenance of prisons, etc. Under these conditions depressed labour had to find another field and a better market. Agriculture was no longer profitable, in many places. Unimproved lands, with primitive methods, did not yield great profits, and a large part of these were absorbed by taxation.

The letters of the first emigrants announced to their friends the favourable conditions of the labour market abroad, and especially in the United States. A rush of emigration followed immediately. One good news was confirmed by returning emigrants, with “fortunes” of a few hundred dollars. Since then the stream of immigration has continued with two interruptions caused by the two great industrial crises of 1893 and 1907. The official statistics of Italian immigration into the United States, from 1831 to 1908, are given below. It should be remembered, however, that the figures previous to 1890 are not so accurate as those for the succeeding years.

It should be borne in mind, however, that a large number of immigrants returned to Italy, and therefore, in the official statistics, some immigrants are necessarily counted twice and even three times. Statistics have not been compiled of the number of immigrants returning to Italy, but from what has been observed during the last few years when more attention has been given to this important phenomenon, it is safe to say that almost one million of the Italians counted in the general total of immigrants into the United States have returned to Italy. Their number, however, is perhaps more than made up by the children of Italian parentage born in the United States. On account of the fact that the period of the influx of immigrants from the great cities, many of these American-born Italians may be considered as Italian rather than American. The number of the Italians in the United States at the beginning of the year 1910 can therefore be roughly estimated at about 2,250,000.

**General Characteristics and Distribution.**

In the statistics taken by the Federal Government at the immigration station, the Northern Italians are separated from the Southern Italians and Sicilians. From these statistics it appears that, of the total Italian immigration into the United States, 80 per cent is composed of Southern Italians and Sicilians. This means that the Latin type is ethnically predominant among them, since the Northern Italians, as is well known, have a considerable Teutonic element in their composition. One outstanding fact is that those Italians who emigrate to the United States with the intention of returning to Italy include only a very small proportion of women. On the whole the women constitute not more than 30 per cent of the Italians in the United States—according to some estimates considerably less. But the percentage of Italian women passing through the immigrant station at Ellis Island, which was almost negligible ten years ago, is now rapidly increasing.

Economically, the Italian element has not contributed as largely to the progress of the United States as have other races. They have, however, enjoyed their share of American prosperity. Italians pay taxes to the City of New York on more than 100,000,000 dollars value of real estate. They have, besides, large sums in the banks. The silk industry is to a large extent in their hands, and so is the fruit and grape industry in California. They carry on an extensive manufacture of macaroni in many cities, while their unwillingness to give up their national dishes is partly responsible for the rapid increase of Italian-American commerce which, in 1909, exceeded 100,000,000 dollars. Eighty per cent of the Italian immigrants are unskilled workers. The number of skilled workers among them was very small, nearly all the immigrants being rustics up to a few years ago, but the proportion is rapidly increasing, while the immigrants from the cities are beginning to come in larger numbers.

Statistics of Italian marriages are lacking, but it is a fact that the Italian prefers to marry an Italian, and many Italian girls cross the ocean by every steamer and are married to the men who have sent for them at the immigration station. Statistics are also lacking as to the birth rate among the Italians in America. In the State of Massachusetts the average number of children in families in which both parents are American, that is, are children of natives, is less than two, while the number in families in which the husband and wife are foreign born is over four. This, perhaps, may be taken to be a fair average for the Italian families in the United States. The Italians can be considered one of the strongest races among the immigrants, and it is safe to note that, on account of the crowding in the cities, of the lack of air in the tenements, and perhaps also because of ignorance of practical hygiene, mortality among them in this country is 3-6 per cent, that is, higher than that of any other nationality. In deaths from measles, diphtheria, scarlet fever, and broncho-pneumonia, Italians reach a higher percentage than any other nationality.

The Italian working population of the United States is approximately 1,200,000. Of these 500,000 were engaged in agriculture, and 400,000 in trades, mining, etc., before, it is safe to say that almost one million of the Italians counted in the general total of immigrants into the United States have returned to Italy. Their number, however, is perhaps more than made up by the children of Italian parentage born in the United States. On account of the fact that the period of the influx of immigrants from the great cities, many of these American-born Italians may be considered as Italian rather than
of Italian immigrants were occupied in agriculture at home and do not engage in agricultural pursuits in the United States. Only a small part of the Italians coming to the United States devote themselves to agriculture. It is worth noting that 60 per cent of the Italians engaged in agriculture in the United States come from Northern Italy, although Northern Italian towns are few in the city. In the East, where truck-farming and chicken-raising can be made very remunerative, Italians have established themselves on the small farms abandoned by the children of Americans who go to the city. Thus the northern coast of Boston, all but the Connecticut Valley, and the western part of the State of New York have several hundred farms occupied by Italians. In the southern part of New Jersey, also, the Italians have devoted themselves to agriculture and especially to grape-growing. It is in California, however, that Italians have achieved most success as cultivators.

Throughout the South, and especially in Louisiana and Texas, the Italians work as farmers with remarkably good results. In West Virginia their success is not so marked, and some promising colonies have failed miserably. The states which have the largest proportion of immigrants are the New England States: with 200,000, of whom 50,000 live at Boston; New Jersey 250,000, of whom 60,000 live at Newark; New York, 700,000, of whom 500,000 live in the City of New York; Pennsylvania, 300,000, of whom 100,000 live at Philadelphia; Illinois, 100,000, of whom 50,000 live at Chicago; Louisiana, 60,000, of whom 30,000 live at New Orleans; California, 50,000, of whom 25,000 live at San Francisco. Of the Northern Italians, four-fifths are found in the States of Illinois, Ohio, New Jersey, Colorado, California. Of the Southern Italians and Sicilians, four-fifths are found in the States of Florida, Mississippi, Pennsylvania, New Jersey, and Connecticut.

As to occupation, the Italians of the New England States, of New York, and New Jersey are chiefly occupied in mills or on railroads; in Pennsylvania a large number are working in the mines, where, however, the Slavic element is growing stronger every day. The steel and coke industries in Pennsylvania also employ a considerable number of Italians.

From what precedes it appears at once that 87 per cent of the Italians of the United States are settled in the New England and North Atlantic divisions, and that only 13 per cent crowd into the large cities. This congestion presents a problem. The phenomenon, however, is not peculiar to the Italians; it is also to be observed in the case of other nationalities which are in the same economic condition as the Italians. The city offers a large number of various resources; it furnishes work to the newcomers, and it needs the work for a variety of occupations which he alone can fill. The Italian immigrant is perhaps the most adaptable of all in this respect; he is intelligent, in most cases sober, faithful in his work, always looking for an opportunity to increase his salary. He goes from one shop to another, from the railroad tracks to the mill. The country offers the Italian immigrant a kind of occupation which he looks upon with disgust, an occupation which reminds him of centuries of oppression and slavery. There was a time in Italy when agriculture was productive, when the owners of the land gave their energetic tenants their wards; but landowners began to live in the city and neglect the country, and the country which had produced enough for lord and peasant, now produced enough for neither. Yet these poor serfs of the soil, in whom the love of the fields is inborn, bring that love with them to the city. The small Italian is unable to accumulate enough to buy the piece of land they long for in their native village. Those who have studied the problem of the distribution of Italian immigrants in the United States have forgotten two most important facts: (1) the disgust of the immigrants for agricultural work, which they associate with sufferings and poverty; (2) the desire—almost general—among the immigrants to return to their native land. The first of these two facts is only temporary and disappears with the passage of time.

Italians do not come to the United States with the idea of settling there, as did the immigrants from North-Western Europe a generation or two ago. It is true, however, that almost all Italian immigrants ultimately adopt the United States as their permanent home, based on the idea that it is their only country. So many have asked: If it be true that the vast majority of the Italian immigrants settle permanently, with their families, in the United States, why not try to distribute them better in the West and South, instead of letting them crowd into the cities of the East? Such reasoning as this has led to efforts on the part of the Federal Government to distribute the Italian immigrants more advantageously—such, for example, as the establishment of the information bureau at Ellis Island. This is like applying a social and economic cure to what is essentially a psychologic phenomenon. The Italian is the most idealistic of all immigrants. The money which he wants to accumulate, which he has reason to believe he will sooner accumulate in the city than in the country, he does not want for its own sake. The feelings of the Italian who leaves his country have been beautifully described by Manzoni in his masterly novel: "To the mind of him who voluntarily departs in the hope of making a fortune in a strange country, the dreams of wealth vanish... He is astonished at his own courage in having gone so far, and would return home at once if he did not think that at some future day he will be able to return rich. Sad and moving is the country where rows of houses, and the streets upon streets, take away his breath; in presence of the magnificent monuments which tourists admire, he can only think with painful yearning of the little farm, of the village, of the little house which he has long desired to possess, and which he will buy when he returns rich to his native mountains." It is this mental attitude that defeats every attempt to properly distribute the Italian immigration: anxious, above all, to return to Italy with a certain sum of money, the immigrant knows that he can earn that sum more quickly in the city than in the country, and for that reason he prefers the city. Here is the key to the present unsolved problem; for this point of view is common to all immigrants except those—obviously unsurisable as settlers in the United States—whose criminal past debars them from all hope of a return to Italy.

How can the newly arrived immigrant be persuaded that, whatever he may think now, he will eventually be glad to make his and his family's home in the United States? Even if it were possible to persuade him of this, there would still remain the financial difficulty. To go West, he needs money—to buy land, to live during the first years, to take care of the family in Italy—and the average Italian immigrant comes here with just enough money to pass through the immigration station. In most cases the money spent for the journey represents a loan, which must be repaid out of the immigrant's first earnings. This explains in part the large sums of money sent back to Italy by immigrants. (For the average immigrant to the United States, some 30 per cent of the money spent in Italy goes back to Italy; the very fact that they can go, and who, in most cases, have already found employment for them. In many cases the newcomer
is placed in the hands of some Italian "banker," who sells passages, acts as notary public, sells real estate, and furnishes contractors with Italian labour. The immigrants are at first glad to accept whatever employment may be offered them; when the initial difficulties have been overcome by their persistence and sagacity, to be made to understand that they cannot be as quickly made in America as they had imagined, they next discover the economical advantage of maintaining the whole family in America rather than dividing earnings between board in America and remittances to Italy. The wife, or the betrothed one, is then thought over with the idea of working hard, side by side, so as to be able the sooner to return to Italy together. They buy furniture on the installment plan and spend their savings; the children grow up in America without any knowledge of Italy or the Italian language. Then one of the old people at home dies, and the crisis comes. The immigrant goes back to Italy and finds that, accustomed as he now is to a different environment, he no longer feels at home in his native country. He regulates his family affairs and brings with him to America his surviving parent. Thus the home is transplanted to the United States, and the Italian becomes an American in reality and appearance.

How long does it take for the average immigrant to go through this process? Sometimes two or three years, sometimes fifteen or even twenty. It is certain, however, that when this evolution is completed the immigrant is a city dweller, and cannot be induced to give up city life.

The only hope of solving the problem would seem to be in giving good advice to intending emigrants before they leave Italy. An Italian peasant will always sooner believe a fellow-townsmen, however ignorant, than an agent of the Government. Experience in other countries shows that a successful agricultural colony of Italians grows very rapidly, while an unsuccessful one just as rapidly disappears. Every effort should therefore be made to reach the Italian in his own country through his friends in America, in such a way as to convince him that it will be to his advantage to go to some agricultural settlement where others of his countrymen are successful and prosperous. As the Italian immigrant can, unquestionably, be of more service, both to himself and to his new country, as a farmer than as a sweat-shop worker or a miner, any expenditure with a view to the attainment of this desirable result would be well repaid.

Religious Organization.—Since the discovery of the new continent the sons of Saint Francis have been indefatigable in their work in the new vineyard of the Lord. When the immigrants began to come in large numbers the Franciscans were already at work among them, following them, instructing them, and comforting them in the trials of their new life. St. Anthony's Church, founded in 1866, was the first Italian parish to be organized in the Archdiocese of New York, and its pastors, the Franciscan Fathers, have exerted a powerful influence over the country, faithfully imitating their seraphic founder by their zeal. Notable among the pioneer Franciscans were Father Pamphilo da Magliano, founder of St. Bonaventure's College at Allegany, New York; Leo Pacelli, first pastor of St. Anthony's church and parish, New York; Anacleto de Angeli, who raised a monument to his order by building the church and convents of St. Anthony. The Franciscans were followed by the Jesuits, the Scalabrinis, Fathers, the Salesians, the Passionists, and the Augustinians. The American episcopate has at all times endeavored to provide the Italian immigrants with priests and Churches. In many cases these efforts did not prove very successful on account of the difficulty of persuading Italians to support their church, a difficulty which can easily be explained when it is borne in mind that the Church in Italy is supported by what might be called indirect taxation. Whenever possible, parochial schools have been established, and in most of them both English and Italian are taught. These schools are looked upon very favourably by the Italians, and an effort ought to be made to increase their influence, so that when the parents are brought to the Church through the influence of the pupils of the parochial schools.

In New York City, where the problem of Italian immigration is more acute than anywhere else in the country, Archbishop Farley has done his utmost, helped by Dr. sec., the bishop of the diocese. Archbishop Quigley of Chicago, Bishop Fitzmaurice of Erie, and Bishop Canevin of Pittsburgh have done much to give Italian churches and schools. In some cases priests of other nationalities have even learned the Italian language in order to be able to minister to the needs of the Italians, and a most notable instance of this kind is that of Father C. Winkel, of the Diocese of Erie, who for many years has faithfully worked among the Italians of the bituminous mines of western Pennsylvania. Among the laymen who have contributed of their wealth to promote the religious welfare of the Italians must be mentioned the members of the Iesin family who built the Iesin Church, South against Methodist Church, N. Y., and several churches and schools in the mining towns of western Pennsylvania. The Church does not neglect the immigrants at their first landing. It is then that they need most assistance. The San Raffaele Society was organized in New York in the year 1893 for the protection of Italian immigrants. Archbishop Farley is the president, the Rev. Gerardo Ferrante is the superintendent, and the Rev. G. Moretto is the managing director. There are in the United States two Italian Catholic weeklies: the "Italiano in America," published by the Salesians, and the "Verita," published partly in English at Philadelphia. One of the strongest evidences of the religious disposition of the Italians in the United States is the fact that over one-half of the eight hundred benevolent societies existing among them bear the names of patron saints of various Italian towns, and in most cases a yearly festival is celebrated in honour of the patron. These festivals, and the parades of all kinds for which they are the occasions, are somewhat apt to give outsiders an unfortunate impression of popular Italian religion. It is true that among the lower classes the cult of the saints is misunderstood and overemphasized, but at the same time these celebrations are proof of a strong attachment to their native homes and of the religious feeling with which it is associated. It is to be regretted that unscrupulous liquor dealers make of these festivals the occasion for a sale of intoxicants which indirectly leads to disorders and even murders.

The following religious statistics are taken from the "Official Catholic Directory":—

Archdiocese of Baltimore: 3 Italian churches; 3 priests.

Archdiocese of Boston: 8 Italian churches; 15 priests; 2 parochial schools (8 Franciscan Sisters; 4 Sisters of the Sacred Heart), attended by 724 pupils.

Archdiocese of Chicago: 10 Italian churches; 6 Fathers, O.S.M.; 13 secular priests; 1 parochial school (10 Sisters of the Sacred Heart), attended by 850 pupils.

Archdiocese of Cincinnati: 1 Italian church; 1 priest.

Archdiocese of Milwaukee: 2 Italian churches; 2 priests.

Archdiocese of New Orleans: 1 Italian church; 5 priests.

Archdiocese of New York: 26 Italian churches; 55 priests; 6 parochial schools (20 Sisters of the Third Order of Saint Francis, 3 Sisters of Jesus and Mary, 10 Sisters of Charity, 7 Sisters of the Sacred Heart, 31 lay teachers), attended by 3397 pupils; 1 industrial
school for boys and girls; 15 chapels; 1 college; 1 seminary; 1 Catholic hospital, with 27 Sisters of the Sacred Heart; 1 home for immigrants, with 2 Sisters of the Sacred Heart; 1 orphan asylum, with 13 Sisters of the Sacred Heart and 202 inmates; 1 day nursery, with 8 Palatine Sisters, 56 boys and 52 girls.

Archdiocese of Oregon City: 1 Italian church; 2 priests.

Archdiocese of Philadelphia: 13 Italian churches; 21 priests; 3 parochial schools (25 Sisters of St. Francis), attended by 1615 pupils; 1 orphan asylum, with 10 Sisters of St. Francis; 1 industrial school, kindergarten, and day nursery, with 22 missionary Sisters of the Third Order of St. Francis, 164 boys, and 162 girls.

Archdiocese of St. Louis: 3 Italian churches; 5 priests; 1 parochial school (2 lay teachers), attended by 117 pupils.

Archdiocese of St. Paul: 2 Italian churches; 2 priests.

Archdiocese of San Francisco: 3 Italian churches; 5 priests.

Diocese of Albany: 4 Italian churches; 4 priests; 1 seminary with 8 professors and 90 students.

Diocese of Altoona: 2 Italian churches; 2 priests; 1 parochial school with 56 pupils.

Diocese of Brooklyn: 11 Italian churches; 16 priests; 2 parochial schools, with 3 Sisters of St. Francis of the Immaculate Conception, 13 Sisters of the Sacred Heart, 3 lay teachers, 815 pupils; 1 kindergarten, with 3 teachers, 52 boys, 85 girls.

Diocese of Buffalo: 8 Italian churches; 12 priests; 4 parochial schools, with 2 Sisters of St. Joseph, 10 Sisters of St. Mary, 8 Sisters of St. Francis, 983 pupils.

Diocese of Burlington: 2 Italian churches; 2 priests.

Diocese of Cleveland: 7 Italian churches; 7 priests.

Diocese of Columbus: 2 Italian churches; 2 priests.

Diocese of Davenport: 1 Italian church; 1 priest.

Diocese of Denver: 3 Italian churches; 5 priests; 2 parochial schools, with 8 Sisters of the Sacred Heart, 10 Sisters of Charity, and 620 pupils.

Diocese of Detroit: 1 Italian church; 1 priest; 1 parochial school with 78 pupils.

Diocese of Duluth: 2 Italian churches; 2 priests.

Diocese of Erie: 6 Italian churches; 7 priests; 1 parochial school, with 2 Sisters of Mercy and 170 pupils.

Diocese of Fall River: 1 Italian church; 1 priest.

Diocese of Harrisburg: 3 Italian churches; 3 priests.

Diocese of Hartford: 6 Italian churches; 9 priests; 3 parochial schools, with 2 Sisters of the Precious Blood, 10 Missionary Sisters of the Sacred Heart, 5 Sisters of Our Lady of Compassion, and 320 pupils.

Diocese of Helena: 1 Italian church; 1 priest; 1 parochial school, with 5 Sisters of Charity, 1 lay teacher, and 270 pupils.

Diocese of Indianapolis: 1 Italian church; 1 priest.

Diocese of Little Rock: 1 Italian church; 1 priest.

Diocese of Marquette: 4 Italian churches; 4 priests.

Diocese of Mobile: 1 Italian church; 1 priest.

Diocese of Monterey and Los Angeles: 2 Italian churches; 2 priests.

Diocese of Nashville: 1 Italian church; 2 priests; 1 parochial school, with 4 Sisters of Charity of Nazareth and 140 pupils.

Diocese of Natchez: 1 Italian church; 1 priest.

Diocese of Newark: 19 Italian churches; 20 priests; 6 parochial schools, with 4 Baptistine Sisters, 4 Missionary Sisters of the Sacred Heart, 2 Sisters of Charity, 5 Sisters of St. Francis, 4 Sisters of the Immaculate Conception, 1 Lay sister, and 1289 pupils; 1 orphan asylum with 12 sisters and 92 orphans.

Diocese of Peoria: 1 Italian church; 1 priest.

Diocese of Pittsburgh: 13 Italian churches; 20 priests; 2 parochial schools, with 4 Sisters of the Third Order of St. Francis, 1 lay teacher, and 307 pupils.

Diocese of Providence: 2 Italian churches; 5 priests.

Diocese of Rochester: 3 Italian churches; 3 priests, 1 parochial school, with 5 Sisters of St. Joseph and 271 pupils.

Diocese of Sacramento: 1 Italian church; 1 priest.

Diocese of St. Augustine: 1 Italian church; 1 priest.

Diocese of Scranton: 12 Italian churches; 15 priests; 1 parochial school, 6 Missionary Sisters of the Sacred Heart, and 200 pupils.

Diocese of Seattle: 1 Italian church; 1 priest; 1 parochial school, with 1 Missionary Sisters of the Sacred Heart and 110 pupils.

Diocese of Springfield: 4 Italian churches; 4 priests.

Diocese of Superior: 3 Italian churches; 3 priests; 1 parochial school, with 4 Franciscan Sisters and 200 pupils.

Diocese of Syracuse: 1 Italian church; 2 priests.

Diocese of Trenton: 12 Italian churches; 14 priests.

Diocese of Wheeling: 5 Italian churches; 6 priests.

Summary: 219 Italian churches; 315 priests; 41 parochial schools; 254 teachers, including 70 Sisters of the Sacred Heart, 27 Sisters of Charity, 12 Franciscan Sisters, 4 Sisters of the Immaculate Conception, 24 Sisters of the Third Order of St. Francis, 4 Baptistine Sisters, 3 Sisters of St. Dominic, 7 Sisters of St. Joseph, 38 Sisters of St. Francis, 2 Sisters of the Precious Blood, 4 Sisters of Charity of Nazareth, 5 Sisters of Our Lady of Compassion, 4 Sisters of Jesus and Mary, 2 Sisters of Mercy, 2 Sisters of St. Mary, 30 lay teachers, and 1260 pupils; 1 orphan asylum; 1 kindergarten; 1 day nursery with 8 Palatine Sisters, 230 boys and 224 girls; 2 seminaries; 1 Catholic hospital; 1 home for Italian immigrants; 3 orphan asylums with 317 orphans.

For statistics of the immigration movement, see the Reports of the Commissioner General of Immigration (Department of Commerce and Labor, Washington, D.C.) and the Bulletin of the Italian Emigration (published at Rome by the Ministry of Emigration, Ministry of Foreign Affairs). For a general survey of Italian Immigration, see Fasciari, Il Popolo Italiano nell'Italia Moderna (Milan, 1909), xxiv. For social, moral, and economic condition of the Italians in the United States and for statistical statistics, see Litt, Gesellschaftliche Verhältnisse der Italiener in Amerika (New York, 1905). For conditions among Italians occupied in agriculture in the United States, see Pedocini, Il Popolo Italiano (New York, 1897). For an exhaustive study of Italian immigration from the Italian point of view, see Fresi, Gli Italiani negli Stati Uniti del Nord (Milan, 1909).

JOHN DE VILLE.

Italo-Greeks, the name applied to the Greeks in Italy who observe the Byzantine Rite. They embrace three classes: (1) the ecclesiastical communities which have followed the Greek Rite since the Byzantine period; (2) the Greek colonies in the various Italian cities, and at Rome, which are not in the Gregorian manner, but on the contrary, are of the same religious rite as the Byzantine; (3) the descendants of the Greeks and Albanians who emigrated in masse into Southern Italy after the Turkish occupation of the Balkans, and established towns, or at least formed powerful groups by themselves; they long maintained their native language and customs, and even now observe the Greek Rite, though in other respects they have been absorbed in the Italian population.

(1) As to the first class, it is difficult to say whether the Greek Rite was followed in any diocese of Southern Italy or Sicily before the eighth century. But the gradual hellenization of the Greek Church as well as the founding of numerous Greek monasteries, must have affected liturgical life. The spread of Greek monasticism in Italy received a strong impulse from the Saracen invasion of Palestine and Egypt, and later from the iconoclastic persecutions. The monks, in their monastic regulations, were not infrequently chosen from their number, the diocesan liturgy, under favourable conditions, could easily be changed, especially since the Lombard occupation of the inland regions of Southern Italy cut off the Greeks in the South from communication with the Latin Church, whose intellectual culture, moreover, was far inferior to that of Byzantium.
When, in 726, Leo the Isaurian, by a stroke of his pen, withdrew Southern Italy from the patriarchal jurisdiction of Rome and gave it to the Patriarchate of Constantinople, the process of hellenization became more rapid; it received a further impetus when, on account of the Saracen occupation of Sicily, many Greeks and hellenized Sicilians repaired to Calabria and Apulia. Still it was not rapid enough to suit the Byzantine emperors, who desired lest those regions should again fall under the influence of the Western Empire, like the Duchy of Rome and the Exarchate of Ravenna. Finally, after the Saxon emperors had made a formidable attempt to drive the Greeks from the peninsula, Emperor Nicephorus Phocas and the Patriarch Photius legalized the re-establishment in 968, to adopt the Greek Rite. This order aroused lively opposition in some quarters, as at Bari, under Bishop Giovanni. Nor was it executed in other places immediately and universally. Cassano and Taranto, for instance, are said to have always maintained the Latin Rite. At Trani, in 983, Bishop Rodostomo was allowed to retain the Latin Rite, as a reward for aiding in the surrender of the city to the Greeks. About the middle of the eleventh century, however, Bishop Giovanni II joined the schism of Michael Cerularius. In every diocese there were always some churches which remained Greek in Rite; but after the restoration of that rite, there remained Greek churches with native Greek clergy.

The restoration of the Latin Rite began with the Norman conquest in the eleventh century, especially in the first period of the conquest, when Norman ecclesiastics were appointed bishops. Another potent factor was the reform of Gregory VII, who in his efforts to repress marriage among the Latin clergy found no small obstacle in the example of the Greek priests. However, he and his successors recognized the Greek Rite and discipline wherever it was in legitimate possession. Moreover, the Latin bishops ordained the Greek as well as the Latin clergy. In the course of time the Norman princes gained the affection of their Greek subjects by respecting their rite, which had a strong support in the numerous Basilian monasteries (in the fifteenth century there were still 52 monasteries of the Order of St. Basil alone). The latinization of the dioceses was complete in the sixteenth century. Among those which held out longest for the Greek Rite were Acerno (and perhaps Gravina, 1302; Gerace, 1467; Oppido, 1472 (when it was temporarily united to Cerignola); Bisignano, 1565; Bova, to the time of Gregory XIII, etc.). But even after that time many Greek priests remained in some dioceses. In that of Otranto, in 1583, there were still two hundred Greek priests, nearly all native. At Reggio, Calabria, Count Ruggero in 1092 had given the Greeks the church of S. Maria della Cattolica, whose clergy had a protopapa, exempt from the jurisdiction of the bishop; this was the case until 1611. In 1695 there were in the same dioceses fifty-nine Greek priests; after thirty years there was only one. Rosano still had a Greek clergy in the seventeenth century. The few native Greek priests were afterwards absorbed in the tide of immigration (see below). Of the Basilian monasteries the only one left is that of Grottaferrata, near Rome. In Sicily the latinization was, for two reasons, accomplished more easily and radically. First, during the rule of the Saracens most of the Greeks lived among the Arabs, and so it came about that the installation of Latin bishops encountered no difficulty; secondly, the Normans had come as liberators, and not as conquerors.

(2) Important Greek colonies, founded chiefly for commercial reasons, were located at Venice, Acona (where they obtained from Clement VII and Paul III the church of S. Anna, which they lost in 1833, having been declared schismatistical in 1797). Bari, Locoe (where, even in the nineteenth century, in the church of S. Nicola, Dido was buried, though in the Greek tongue, in the Latin Rite), Naples (where they have the church of SS. Pietro e Paolo, erected in 1526 by Tommaso Paleologo Assagni), Leghorn (where they have the church of the Annunciation, 1607).

In Rome, where Greek was the official language of the Church until the third century, there was always a large colony observing the Greek Rite. From the end of the sixth century until the ninth and tenth there were several Greek monasteries, among which were Cella Nova, near S. Sabas; S. Erasmo; S. Silvestro in Capo to which the monastery next to S. Maria Antiqua was at the foot of the Aventine. Like other nations, the Greeks before the year 1000 had their own schola at Rome. It was near the church of S. Maria in Cosmedin. Even in the pontifical liturgy—at least on some occasions—a few of the chanted passages were in Greek; the custom of singing the Epistle and Gospel in both Latin and Greek dates from that period (Gaisser, "Brani greci nella liturgia latina" in "Rassegna Gregoriana", 1902, nos. 7, 8, 9). At present (1909) there are in Rome two Greek Catholic churches: S. Atanasio, belonging to the Greek College, and S. Maria in Acquapendente, the church of the Basilian monks of the Congregation of Choueire.

(3) Besides the first large emigration of Albanians, which took place between 1467 and 1470, after the death of the celebrated Scanderbeg (when his daughter, who had become the Princess of Bisignano, invited her countrymen to the Kingdom of Naples), there were two others, one under Sultan Selim II (1566-1574), directed to the ports along the Adriatic and to Leghorn; the other about 1740. In the course of time, owing to assimilation with the surrounding population, the number of these Italo-Greeks diminished, and not a few of their villages became entirely Latin. The following is a list of towns with an Albanian population. In Calabria and Basilicata: Castrogiove, Farneto, S. Paolo, S. Costantino, Plataia, Civita Perelle, Frassineto, S. Basilo, Fermo, Lungro, Acquaformosa (Calabria), Marri, S. Beato di Ercolano (Diocese of S. Marco and Bisignano), Macchia, S. Demetrio Corone, S. Cosmo, S. Giorgio Albanese, Vaccarisi Albanese (Diocese of Rossano); a total of 37,000 souls and about fifty priests. Five other districts in the same region are completely latinized. In Sicily, Italo-Greeks still abound at Villafranca di Bari, Palermo, Palazzolo, Contessa Entellina (Diocese of Monreale), Mezzofuso, Palermo (Diocese of Palermo), and Messina, where in the church of S. Maria del Graffeo the Latin Rite is observed in the Greek tongue; a total of about 22,000 souls and forty priests. Other Italo-Greek colonies were at Villa- badessa (Diocese of Atri and Penne); Pianezza, near Acquapendente; and Cargese, in Corsica.

To educate the clergy of these Greeks Gregory XIII founded in 1577 at Rome the Greek College of S. Atanasio, which served also for the Greek Catholics of the East and for the Ruthenians, until a special college was instituted for the latter purpose by Leo XIII. Among the alunni of S. Atanasio was the celebrated Leo Allatius. Another Greek ecclesiastical college was founded at Palermo in 1715 by P. Giorgio Gazzetta, founder of an oratory of St. Philip Neri among the Greeks. The latter college was established by the monastery of SS. Pietro e Paolo existed from 1603, erected by the Propaganda to supply priests for Albania. It was suppressed in 1746. Finally Clement XII, in 1736, founded the Corsini College in the ancient Abbey of S. Benedetto d'Alcamo, whence it was transferred in 1794 to S. Demetrio Corone, in the ancient Basilian monastery of S. Adriano. Since 1849, however, and...
especially since 1800, this college has lost its ecclesiastical character and is now secularized.

Ecclesiastical Status.—The Italo-Greeks are subject to the jurisdiction of the Bishop of Rome; several times, but in vain, they have sought exemption. However, the popes have long wished them to have a titular archbishop, resident in Rome, for the ordination of their priests, and to lend splendour to Divine service. The first of these was Gabriele, titular Archbishop of Myra, and successor (1698). When he established the Corsoini College, he placed it in charge of a resident bishop or archbishop of the Greek Rite. At present this episcopus ordinariis for the Greeks of Calabria resides at Naples. In 1784 the Greeks of Sicily obtained from Pius VI an episcopus ordinarius, resident at Piana dei Greci border; naturally, the position of a people whose rite and discipline differed in many points from those of the surrounding population, required special legislation. Benedict XIV, in the Bull "Etsi pastoralis" (1742), collected, co-ordinated, and completed the various enactments of his predecessors; to this date the southernmost portions of the kingdom has always endeavoured to respect the rite of the Italo-Greeks; on the other hand, it was only proper to maintain the position of the Latin Rite. No member of the clergy may pass from the Greek to the Latin Rite without the consent of the pope; and no layman was allowed to participate in the formation of the bishop. The other forms of mixed marriages belong to the Latin Rite. A Greek wife may pass to the Latin Rite, but not a Latin husband to the Greek Rite. Much less would a Latin be allowed to become a priest of the Greek Rite, thus evading the law of celibacy. As regards the Exarchate, any promise of Greeks and Latins is forbidden, except in case of grave necessity, e.g. if in a given locality there should be no Greek church. Where custom has abolished communism under both kings, a contrary usage must not be introduced. 

U. BENIGNI.

Italy.—In ancient times Italy had several other names; it was called Saturnia, in honour of Saturn; Oceania, introducing land of the Taurians; Ausonia; Hesperia, land to the west (of Greece). Trrhynnea, etc. The name Italy (Istria), which seems to have been taken from vitulus, to signify a land abounding in cattle, was applied at first to a very limited territory. According to Nissen and to others, it is to be identified with the southernmost portion of the peninsula of Calabria; but some authorities, as Cochin and Gentile, hold that the name was given originally to that country between the Sele and the Lao which later was called Lucania. We find the name Italy in use, however, among Greek writers of the fifth and the fourth centuries b. c. (Herodotus, Thucydides, Aristotle, Plato); and in 241 b. c., in the treaty of peace that ended the First Punic War, it served to designate peninsular Italy; while in 202 b. c., at the close of the Second Punic War, the name of Italy was extended as far as the Alps.

CHARACTERISTICS.—Italy has an area of 110,648 square miles, of which 91,393 are on the Continent of Europe, and 19,253 on the islands. The area of Italy, therefore, is little more than half that of France.

Under the Romans and in the Middle Ages, under the powerful republics of Amalfi and of Pisa, of Genoa and of Venice, Italy ruled the Mediterranean Sea, which, however, after the discovery of America, ceased to be the centre of European maritime activity. The centre of European interests was carried towards the east; the bishops of Rome; several times, but in vain, they have sought exemption. However, the popes have long wished them to have a titular archbishop, resident in Rome, for the ordination of their priests, and to lend splendour to Divine service. The first of these was Gabriele, titular Archbishop of Myra, and successor (1698). When he established the Corsoini College, he placed it in charge of a resident bishop or archbishop of the Greek Rite. At present this episcopus ordinariis for the Greeks of Calabria resides at Naples. seizure of Rome in 1870 see the articles TEMPORAL POWER and PAPAL STATES.

Coast-line and Sea.—The coast-line of the Italian Peninsula measures 2100 miles. Its principal harbours are the Gulf of Genoa, the first commercial port in Italy, the Gulf of Spezia, an important naval station; Civitavecchia, an ancient harbour; the harbours of Gaeta, Naples, and the Gulf of Taranto; Brindisi, a natural port; the Gulf of Manfredonia, and the lagoons of Venice. The principal seas are: (1) the Sea of Italy, or Tyrrenian Sea, which lies between the islands of Sicily, Sardinia, and Corsica and the mainland. It slopes from its shores to its centre, where it attains a depth of more than two and one-quarter miles, and scattered over it are the Tuscan Archipelago, the Ponza and Panathenian Island groups, the Egadi Islands, the volcanic Island Ustica, and the Lipari or Eolian Islands, the latter being all extinct volcanoes with the exception of Stromboli. The tides of this sea vary by only eight or twelve inches; it abounds in coral banks, and anchovy, sardine, and tuna fishing is remunerative along the coasts of Sicily and Sardinia.

(2) Ligurian Sea.—The Gulf of Genoa is the most inland and also the most northerly part of this open sea, which extends to the south as far as the Channels of Corsica and of Piombino, through which it communicates with the Tyrrenian Sea. It is open towards the Mediterranean, while its south-western limit is a line drawn from Cape Lardier, in Provence, to Cape Revellata in Corsica. The tides of this sea vary from six to eight inches. On account of its depth and of the absence of tributary rivers, it contains few fish.

(3) Sea of Sicily; Sea of Malta.—That branch of the Mediterranean that lies between Tunis and Sicily is called the Channel of Tunis or of Sicily, and has a minimum breadth of 90 miles. The branch that separates the Maltese Islands from Sicily is called the Malta Channel and has a minimum breadth of 51 miles. In the former, at an average depth of 100 fathoms, there is a submarine bank that unites Africa and Sicily; it has extensive shoals, known for their volcanic phenomena. Sponge and coral fisheries in this sea are lucrative. The tides are higher than those of other Italian waters, and a singular phenomenon, called marrobbio, is observed here, being a violent and dangerous boiling of the sea, having, possibly, a volcanic origin.

(4) Ionian Sea.—This is an open sea between Sicily and the Calabrian and the Salentine peninsulas, and the western coasts of the Balkan Peninsula; it communicates with the Tyrrenian Sea by the Strait of Messina, a passage formed by the catastrophes that violently detached Sicily from the Continent. This strait, which is one of the most frequented waterways of Europe, is funnel-shaped, having a breadth of 20 miles at its southern, and of 2 miles at its northern, opening. On the line between the islands of Sicily and Crete, the longest sea travel a distance of 24 miles, the shortest that has been found so far in the Mediterranean Sea. While the tides on the African coast rise over six feet, those on the coast of Italy are very slight; they are all the stronger, however, in the Strait of Messina, where the currents that pass between the Tyrrenian and the Ionian Seas, especially when the wind blows, form vortices and surges that beat violently against the coast of Calabria. The fantasy of the ancients personified these two phenomena, in the story of the Calabrian coast, and Charybdis on the Sicilian side (Homer, "Odyssey," I, xii, Virgil, "Aeneid," III, 420-425).

(5) Adriatic Sea.—This sea lies between the Italian and the Balkan Peninsulas, with an area of 51,000 sq. miles. It abounds in fish of exceptionally good quality.

Orography.—Italy is a country of mountains and hills, with few high table-lands; while, of the latter, the two most important, those of Tuscany and of the Murge, are broken and surmounted by hills and mountainous groups. Lowland plains are, on the contrary, the dominant characteristic of Northern Italy; plains, in fact, occupy about one-third of the surface of the country. The principal mountains of Italy are: (1) The Alps, a system of parallel ranges, at the north of Italy, forming an arc that presents its convex side to the west; they extend from the pass of Cadibona to the masses of Mt. Blanc, which is the highest point of the Alpine range (15,780 feet), and from that point, following a north-easterly direction, they extend to Vienno on the Danube. One of the greater eastern branches of this system, the Carnic and the Julian Alps, diverges in a south-easterly direction and terminates in the Fianona Point on the Gulf of Quarnero. Their length, from the pass of Cadibona to Cape Fiano, is nearly 755 miles. Their mean height is 6500 feet. The Italian watershed is steep, with short spurs and deep valleys, while the opposite side is a gentle slope. Hence the facility of crossing over the Alps from without (France, Germany), and the corresponding difficulty of the passage from the Italian side, as history has shown by foreign invasions. The Alps are of climatic benefit to Italy, for they are a screen against the cold winds from the north, while the vapours of warm winds from the Mediterranean and the Adriatic Seas are condensed on the Alpine heights, producing the copious rains and snows that result in those numerous glaciers which are reservoirs for the rivers. The inhabitants of the Alps are a strong and robust people, sober, and attached to their native valleys. Temporary emigration, due to the nature of the land, is very great, but permanent emigration is rare. With the Alps is connected the typical Italian figure of the chimney-sweep evoked by the fancy of artists and of poets.

(2) The Apennines form parallel trunk chains, arranged in echelon, like the tiers of a theatre; they extend from the Pass of Cadibona to the Strait of Messina and are continued in the northern mountains of Sicily as far as Cape Boso. The range is of much less elevation than the Alps, its mean height being 3900 feet; nor has it the imposing, wild, and varied aspect of the Alps. Its summits are bare and rounded, the valleys deep, and cultivation goes on well up the heights. The sides were once covered with forests,
but that wealth of vegetation has been improvidently destroyed everywhere along this range, and, consequently, iron grey, the ash colour of calcareous rocks, and the red brown of clay and sand-beds are the predominant tints of the country. The highest summit is that of Mt. Corno (5855 feet) in the group of the Gran Sasso. On account of their latitude and of their proximity to Italy, the Apennines at its extremities, but it becomes complex towards the centre, where it consists of a group of parallel chains, arranged in steps, those curving towards the east constituting the Sub-Apennine range; while those groups that extend along the Tyrrhenian and the Adriatic coasts constitute the Anti-Apennine system. Geographers do not agree on the determining lines of these three divisions. We will adopt the line from Cadibona Pass (1620 feet) to Bocca Serriola (2400 feet) between the Tiber and the Metauro Rivers, for the northern division; from Bocca Serriola to the Pass of Rionero between the rivers Sangro and Volturno, for the Central Apennines, and from this point to Cape Armi, for the southern division. The Northern Apennines encircle the southern basin of the Po, in a north-west to south-east direction, and the Pass of Cisa (3410 feet) divides them into two sections, the Ligurian and the Emilic-Tuscan. (a) The Ligurian Apennines form an arc around the Gulf of Genoa and have their crest near and parallel to the coast; but, to the north of Genoa, they deviate towards the east. Their southern spurs are short and steep; those towards the Po are longer and more ramified, the two principal ones being those of Mt. Antola and Mt. Penna, the former of which fans out between the Scrivia and Trebbia Rivers and contains Mt. Ebro (5570 feet) and Mt. Lesima (5760 feet), and it terminates near the Po, forming the Pass of Stradella; that of Mt. Penna, with numerous branches between the Trebbia and the Taro Rivers, contains Mt. Misuraca, or Bue (5930 feet), which is the highest point of this section. The Langhe and the hills of Monferrato, which last are called also Hills of the Po, famous for their sparkling wines, form a species of promontory of the Ligurian Apennines, enclosed between the Po, the Taro and the Scrivia. All this region consists, superficially, of greenish and of yellowish sands, and below the surface, of clay and of bluish marl, alternating with veins of gypsum, of gravel, and at times of lignite. During the Miocene period, this region was a continuation of the Gulf of the Po and communicated with the Mediterranean Sea by the channel, or possibly the archipelago of Cadibona. Four railroads cross this section: (i) the Savona-Torino, with a branch to Alessandria through the Cadibona Pass; (ii) the Genova-Ovada-Asti near the summit of the Turchino; (iii) the Genova-Novig-- with the summit of the Casimera Pass; (iv) the Spezia-Parma, with the Borgallo tunnel. (b) The Emilio-Tuscan Apennines. There are characteristic differences between the two slopes of this section of the Apennines. The branches towards the north-east, that is towards the Adriatic Sea, are parallel, and perpendicular to the crest that separates the waters of the Metauro and the Apennines have no connection with the Emilian Way. The most important branch, on account of its length and ramifications, and also because it separates Northern Italy from Central Italy, is the one which is called Alps of Luna, beginning in the dorsal spur of Mt. Magni (4400 feet), between the Mt. Sibillini and the Metauro Rivers, and in the Apennines have no connection with the Emilian Way. The most important branch, on account of its length and ramifications, and also because it separates Northern Italy from Central Italy, is the one which is called Alps of Luna, beginning in the dorsal spur of Mt. Fucino, to the west. The eastern range extends from the defile of Arquata to the Sangro River and is divided into three stretches, namely, the group of Pizzo di Sevo (7850 feet), from the Tronto River to the Volano; the Gran Sasso d’Italia, between the Vomano and the Murrone, the highest group of the peninsula, its greatest elevation being that of Mt. Corno (9050 feet); and third, the group of the Majoletta, which is preceded by the Morone chain and the highest point of which is Mt. Amaro (9170 feet). Bears are still to be found in these mountains. The middle range of the Abruzzi (Apennines) parts from the Velino River near Mt. Terminillo and divides into the groups of Mt. Velino and of Mt. Sirente, from which the range is continued to the south-east, by the Sannio Mountains, which are separated from those of Majella by the plains of Solinoma and of Cinque- miglia. (f) The Roman Sub-Apennines.—The Saline Mountains rise between the Aniene, the Tiber, the Apennines, of which they preserve both the nature and the direction; the Apennines of Calabria, which are different in direction, aspect, and nature from the Apennines, having an Alpine character; the Murgia range, also differing in origin and characteristics from the Apennines. (h) The Neapolitan Sub-Apennines. This range extends from the Pass of Rionero to the saddle of Conza. Beginning at the north, there is first the highland plain of Carovilli, and then the mountains of Freni or of Campobasso. These are followed by the vast highland plain of the Sannio and by that of Irpinia which forms the eastern border of the Beneventana basin and terminates at the saddle of Conza. This series of elevations, although of medium height, marks the principal axis of the Apennine range. (i) The Neapolitan Tyrrhenian Sub-Apennines are formed of the groups of the Mateese and of the Terminio, and of the Avellino Mountains. The Mateese group, which is totally isolated, has its highest elevation in Mt. Miletto (6700 feet) and consists of two parallel trunks that are very close together, dividing between them a narrow height that contains a small lake. The group of the Terminio (about 6000 feet), which contains Mt. Accettica and Mt. Cervialto, constitutes one of the most important oro-hydrographic points of Southern Italy. They abound in springs, and from them come the fresh waters of the Serino with which Naples is supplied through an aqueduct. Between the two above groups rise the Avellino Mountains that close the Beneventana basin. These are groups that are isolated by deep clefts, chief among them being Mt. Vergine (4800 feet) which has a celebrated sanctuary. (j) The Neapolitan Tyrrhenian Apennines.—This Anti-Apennine range extends in the direction of the Roman Anti-Apennines, through the volcanic group of Roccamonfina and of Mt. Maggiori, to the Volturno River. On the coast is the region of Campi Flegrei, formed of small, extinct volcanoes, then the active volcano Mt. Vesuvius (4070 feet), and after that the Lattari or Sorrento chain which forms the peninsula of Sorrento and terminates at Campiella Point. (k) The Neapolitan Adriatic Anti-Apennines consist of the Gargano group which is entirely isolated and which differs from the Apennines in style and in nature. It projects into the Adriatic Sea (the Gargano Head) for 30 miles and the River Candelaro now takes the place of the branch of the sea that formerly separated this group from the peninsula. The elevation rises steep above that river and the Gulf of Manfredonia, forming a series of forest-covered terraces upon which stand dome-shaped summits, as Mt. Calvo (3460 feet), and sloping down towards the north upon Lake Varano. From this side of Mt. Cornacchia (3800 feet) the Capitanata Mountains branch towards the north and pass across the plain of Apulia on the west. (l) The Apennine Apennines. This Apennine range extends from the Sella di Conza to the Scalone Pass and is bounded by the Sele River, the Opanto with its affluent the Loeche, the Bradano and its affluent the Basentiello, the coast of the Gulf of Taranto, the 19th...
and of the Apennines that are directed towards the valley of the Po never reach the shores of that river; on the contrary, there stretches between the base lines of those two mountain systems the vast plain of the Po. (17,500 square miles), which is compared to a great amphitheatre, open towards the east, and the Apennine watersheds forming its tiers, and the plain its arena. Its uniformity is broken by the hills of Monferrato and by those of the Langhe, by the Euganean hills, and by the Berici Mountains. If the sea should rise 300 feet, it would reach the base of the Monferrato hills and would enter the Apennine valleys; and if it should rise 1300 feet more it would enter the valleys of Piedmont. This plain of the Po, which is divided into plains of Piedmont, Lombardy, and Venice, on the left of the river, and into plains of Transpadane Etruria on its right, was formerly a gulf of the Adriatic Sea that was filled in by the alluvial deposits of the rivers and was levelled by inundations. This process of filling in the Adriatic Sea is continuous, as is shown by the fact that the delta of the Po is carried forward by nearly twenty-six feet each year, while Ravenna, which in the time of the Romans was the mouth of the Adriatic Sea, is now nearly 2000 feet from the mouth of that river; one of them descends gradually from west to east (Cunco, 1700 feet). While this plain covers only a third of the surface of the valley of the Po, it is nevertheless the historical and political centre of that valley.

(2) Plains of Central Italy.—Between the south of the Po River and the Adriatic Sea the plains of Central Italy extend for a lengthy extent of low plains that vary considerably in breadth. These plains are monotonous and sad, in contrast with those of the river valleys, as that of the Ombrone, those of the Arno and of other rivers, which are fertile and beautiful. First there is the plain of Tuscany, divided into the low plains of the basin of the Arno and the Maremma, of which the former were once marshy and unhealthy, especially that of the valley of Chiana; but, through the great hydraulic works of the Medicis of the sixteenth century, they are now most fertile and are model expositions of agriculture. (3) The Tuscan low-lands and lagoons are situated along the line of the river, where the rain-waters become stagnant and where the streams are sluggish on account of the too gentle slope of the land, and therefore they accumulate their refuse; this disadvantage, however, is now turned to profit in the fertilization of the ground by what is known as the filling-in-system. (4) The Roman Campagna.—The lightly undulating Roman Campagna lies on the eastern side of the lower Tiber, and, although it has the monotony and sadness of all plains, it has a grandeur in itself, its beautiful sunsets and in the gigantic and glorious ruins that witness how great a life there was in those now deserted plains and accompanied by herds of cattle and wild boars. The remains of the consular roads that traverse this plain in every direction, reminding one of the victorious armies that marched over them, are now scarcely to be discerned under the brush; the waters, no longer checked, have left their channels and formed extensive marshes, where malaria reigns, and houses and tillage are not to be found on the Campagna at many miles from Rome. (5) The Pontine Marshes.—From Cisterna to Terracina and from Porto d’Anzio to Mt. Circeo lies a swampy expanse, 25 miles in length and from 10 to 11 miles in breadth, called in ancient times Agro Fomenzio, and now Pontine Marshes. It is a land of salt marshes, where cattle are reared and healthy, only a little swamp existing near Terracina; and in the fifth century of the Roman Era the Censor Appius constructed over it the magnificent way that bears his name. But the provinces having been de-
populated by wars, and the cultivation of the soil having been interrupted, the stagnant waters overlaid all. The Consul Cethegus, however, by new drainage, made these lands healthy again, but the civil wars reduced them to a worse condition than the one before, which they were redeemed; and in the time of Augustus, as Horace tells us, the Appian Way ran solitary through that vast swamp. Augustus and his successors attempted to drain the tract once more; but the barbarians destroyed every vestige of their work. Pope Leo I, Sixtus II, Clemens X, and especially Pius VI, resumed the undertaking, and by means of large canals restored it to agriculture; but once more the region is unhealthy, and almost without inhabitants. (6) Plains of Southern Italy.—The plains of Southern Italy cover nearly four-tenths of its surface, the regions which contain more of them being Campania and Apulia. There are none in the Basilicata, and few in Calabria. On the Tyrrhenian Sea, there are (a) the Campania Plain which extends along the coast between the Garigliano and the Sarno Rivers. Over it rise the volcanoes of the Campi Flegrei and that of Vesuvius. This is the Campania Felix of antiquity, a region of extraordinary beauty and of exceptional fertility due to the volcanic soil and to the maritime climate. (b) The Plain of Pesto, or of the Sele, which is much smaller than the first. It is situated at the mouth of the Sele River, not far from where stood Poseidonia, or Paestum, the city of roses, famous for its life of delights and delicacy, but already in ruins at the beginning of the Roman Empire. Now these places are marshy and unhealthy. (c) The Plain of Santa Eufemia, situated at the end of the gulf of the same name and traversed by the Amato River, and the Plain of Gioia, traversed by the River Mesima. They are small, marshy, and unhealthy plains in the shape of amphitheatres, formed by the alluvial deposits of those two rivers. Looking towards the Ionian Sea is the plain of Sibari, where once stood, at the mouth of the Crati River, the Greek city for which the plain is named. It is of alluvial origin and nature, as are the plains of Campania. The plains of the coast of Apulia have their northern terminus in the famous Tavolieri della Puglie which is almost a steppe, treeless, monotonous, and sad, exposed to the winds and traversed by a few streams that change their channels. Formerly this plain was used for winter pasturage, but the soil being fertile, corn is now grown. It is bounded by the Candellarro River, the Apennines, the Oanto River, and the Gulf of Manfredonia. On the Salentine peninsula there is a species of Tavolieri, contained between the Brindisi-Oria railroad and a line drawn from Torre dell' Orso, on the Adriatic Sea, to Nardò on the Ionian.

Vesuvius and Earthquakes.—As Italy in one of the most recently developed parts of the mainland and of the crust that has risen above the waters, it is subject to the phenomena that are due to that internal energy of the earth called volcanism, which is manifested in the various forms of volcanic activity, in earthquakes and in geysers. The valley contains an active volcano, but the Berici Mountains and the Euganean Hills that are rich in thermal springs (as at Abano) were, in remote times, two very active centres, as is shown by the great quantity of volcanic matter around them. In the peninsula of Italy and on the islands, volcanic activity is still very great, especially towards the Tyrrhenian coast. The Apennine zone that extends from the group of Mt. Amiata to Mt. Roccamonfina is almost entirely covered by extinct volcanoes: the San Vincenzo hills, to the north of Campiglia, and the Sassofondino hills, to the west of Roccastrada, and their volcanic nature, as is also the great cone of Mt. Amiata, which is the highest volcanic elevation of the peninsula; to the east of the Amiata rises the picturesque basaltic mass of Radicofani, and the Lakes of Boliena (Vulsinio), Vico (Cimino), Bracciano (Sabatino), and Albano (Latino) are merely the principal craters of the many volcanoes that form the Roman group. A great number of these volcanoes began their activity under the sea which they filled in with their products, creating in this way the broken Campania that consists chiefly of volcanic materials. In the valley of the Tolsoro or Sacco, near Frosinone, rise the Ercinici volcanoes, of which the chief summits are those of Posi, Ticchiena, Caliano, and of San Giuliano; and to the south of the plain through which the Volturino River flows stands the group of extinct craters that constitute Mt. Roccamonfina. The volcanic group of Naples is the most important of one them all, and the most famous, because it contains the oldest active volcano in Europe, namely Mt. Vesuvius (4000 feet). That ancient volcano rises between the destroyed cities of Pompeii and Herculanenum, at about six miles from Naples. Dio- dorus Siculus, Vitruvius, Plutarch, and Strabo speak of it as a volcano that had been extinct for centuries in their day. In the year 79 of the Christian Era it suddenly became active again, burying in molten stone, sand, and ashes the cities of Stabia, Herculanenum, and Pompeii, and by its noxious vapours terminating the life of Piny the Elder. Between the years 79 and 1631 Vesuvius had a few eruptions: those of 203, 472, 512, 689, 913, 1036, 1139, 1500; but, on 16 December, 1631, the diameter of the crater was increased nearly two miles, and nearly 72,000,000 cubic metres of lava were ejected from it in a few hours, while there descended from the summit devastating torrents of boiling mud. Thereafter eruptions became more frequent, the principal ones having occurred in 1737, 1794, 1822, 1858, 1861, 1862, 1868, 1872, and the last in 1906; but flickering flames and smoke are almost always emerging from the crater. The Campi Flegrei to the west of Naples occupy a surface of nearly 80 sq. miles and consist of low craters that have been partly filled in by the waters. Notable among these are Mt. Montenuovo, which was developed in a single night in September, 1530; and Mt. Solfatarum, from the
fissures of which, called chimneys, there constantly emanate smoke and vapours of sulphuretted hydrogen. The Vulture volcanic region to the east of the Apennines is not allied to the Tyrrhenian volcanic region. The Vulture consists of two concentric craters of which the outer one is montane: this contains the two small lakes of Monticchio (2050 feet).

Thermal springs are very abundant in Italy, especially those containing sulphur and carbonic acid. Of gaseous springs, there are in Italy the so-called fumarole that emit aqueous vapour with carbonic acid, the borboni, or fumaroles of Tuscany, and the sulphur-producing spring of Pozzuoli which burst into an eruption in 1198. Near Rome there are the Albula Springs. Lastly there are the mephitic springs that produce carbonic acid, the most famous of them being the so-called Grotta del Cane, near the Lake of Aquno, which is an ancient, extinct crater, near Naples.

Besides her volcanic characteristics, Italy, like Japan, is the classic land of earthquakes. The regions that are most subject to them are (a) the southern parts of the Alps, (b) the coast region of the basin of the Po, from Venice to Pesaro, (c) the Apennines of the Marches, (d) the Abruzzi, (e) Mt. Vesuvius, that of Mt. Vulture, and that of Mt. Etna, (e) the Lucan-Calabrian district, (f) the islands of volcanic origin. Of the famous catastrophes due to earthquakes, the best known are those of 1783, in Calabria, when there were destroyed 100 cities and villages, under the ruins of which 22,000 people were buried; the one of 1857 in the Basilicata that cost 10,000 victims to Potenza and its neighbourhood. The earthquake that shook the western Ligurian Riviera in 1887, although the most terrifying catastrophe of its kind that has befallen continental Italy; was, withal, much less severe than those that have visited the southern portion of the peninsula. Calabria may be said to have been for ten years on the brink of the earthquake that culminated fatally on the morning of 28 December, 1908, when, in a few moments, the city of Messina, with 150,000 inhabitants, the city of Reggio, with 45,000 inhabitants, the town of Sila, and other smaller ones, were razed to the ground, burying more than 100,000 people under their ruins. Italy was comforted by all the civilized nations, and especially the United States, which built a town in the beautiful district of Santa Cecilia, in the neighbourhood of Messina, with nearly 1500 Frenchmen, after the fact, the house is perfectly finished, and painted in white. The United States Avenue, parallel with the sea, and Theodore Roosevelt Avenue, parallel with the torrent of Zaera, divide the town into four quarters that are intersected by streets having the names of those generous Americans who helped in the work: Commodore of the Navy, who was the head of the relief Commission; Lieutenants Buchanan and Spofford; Engineer Elliot, director of construction; Dr. Donelson, and others.

Hydrography. (1) Rivers.—The rivers of Continental Italy empty into the Adriatic and the Ligurian Seas, as, for example, the Po, with its numerous affluents flowing into the Adriatic Sea, after a course of 248 miles, having an average breadth of 330 feet between Trent and Verona, and of 220 feet between Verona and the sea. The Venetian rivers enter the plain charged with alluvial materials that would make them overflow, if they were not held in their beds by artificial embankments. Although the sources of some of these rivers are known, it is difficult to say where and how they empty into the sea; the Bacchiglione is a type of them. (e) The Rivers of Romagna.—The Po di Volano, once a branch of the Po, with which river, however, it has the drainage of the plain near Cento; at Ferrara it divides into two branches, one of which is navigable and, flowing towards the east, empties into the sea at Porto Volano; the other branch, which is not available for navigation,
turns towards the south-east, terminating against the embankment of the Reno, a river that rises near Prunetta, passes to the east of Bologna, flows by Pieve di Cento, and, turning towards the east, enters the old channel of the Po di Primaro and empties into the sea at Porto Primaro, after a course of 124 miles. The Idice, Santerno, and the Senio are its affluents. (d) The rivers of Istria are very short, with little water, and flow in channels from which they disappear into the ground, to appear again in other channels or near the sea. The Recca-Timavo is the most important one of them; after a course of 28 miles in a narrow channel, it disappears into a cave, and it is probable that its waters go through the Carso and that they are the same that emerge from great springs, near Monfalcone, and empty into the Montefalcone Gulf under the name of Timavo. The other rivers, the Dragogna, the Quieto, the Leme, which rises under the name of Fossa, all develop fords at their mouths, and the Fossa disappears and reappears several times; the Arsa empties into the Gulf of Quarnaro.

On account of the bow shape of the Central Apennines the rivers that empty into the Adriatic Sea are very short and almost straight, while those that empty into the Tyrhenian Sea are longer, and have a sinuous course in the longitudinal valleys through which they flow. They cut narrow channels through the mountain ranges or at times form cataracts like those of Marmore, near Terni (530 feet), those of Tivoli, and those of the Fabro. Many of the long valleys between the Asi-Apennine and the Sub-Apennine ranges were occupied by lakes that were either filled in naturally by the alluvial deposits of the rivers or were artificially drained, as were the valley of Chiana, the valley of the Tiber, the plain of Foligno, the lands of Reati, of Fucino, and others. The Arno River, which has an average breadth of from 530 to 500 feet, rises on Mt. Falterona (3400 feet) and flows towards the southeast between the Apennines and the Pratomagno, through a beautiful spacious valley that is the continuation of the Val di Chiana and is called Casentino. It appears that formerly the Arno flowed into the lake that occupied the valley of Chiana and was a tributary of the Tiber through the Paglia. Now the Arno, abreast of Arezzo, arches round the Pratomagno and flows through a series of narrow passes between that chain and the mountains of Chianti. At Pontassieve it receives the Sieve which flows through the valley of Mugello, and then, turning directly to the west, it enters upon the second straight course; it flows through Florence, receives the Bisenzio and the Ombrone of Pistoia and flows through the plain of Prato which was once the bottom of a lake; it enters the Passo di Golfona, 71 miles in length, between Mt. Albano and the mountains of Chianti; thereafter it receives the Pesa, the Elsa, and the Era, on the left, and the Pescia on the right—and in all this second course it flows over a low plain, between powerful artificial embankments. It empties into the sea at 6 miles from Pisa through a delta that is carried forward 10 feet each year. The Tiber (Tiberis).—This is the most famous of all rivers, because there stands on its banks the city which of all has exercised the greatest influence upon the world, in ancient, as well as in modern, times. Geographically, the Tiber is the second river of Italy, in relation to its basin, and the third, in relation to its length, the first and the second being the Po and the Adige respectively. It flows from north to south, winding along the tenth meridian East of Greenwich, with an average breadth of about 500 feet, while the volume of its flood is 9500 cubic feet per second. It has a very sinuous course which is divided into four parts; the first of them is through a longitudinal valley, between the Apennines and the Sub-Apennines, called the Valley of the Tiber, the river passing by the town of Santo Sepolcro and the Città di Castello. It leaves Perugia on the right and receives the Chiascio, a river that has for affluent the Topino, which comes from the plain of Gubbio, and the Marogna which itself receives the abundant waters of the Clitunno. At its juncture with the Chiascio, the Tiber begins its second tract: flowing in a south-easterly direction through a narrow valley of the Sub-Apennines of Umbria, it leaves Todi on its
right and flows through the pass of the Forello, to receive the Paglia near Orvieto. The third division is in a south-easterly direction from the junction of the Paglia to Passo Corese, where the Tiber receives the Nera, its largest tributary. The Nera, near Terrini, receives the waters of the Velino through the falls of Marmore which are 530 feet high, the second waterfall of Italy, and being the fourth division of the Tiber is through the Roman Agro, from Passo Corese to its mouth. The river divides Rome into two parts, and a little beyond the city it receives the Aniene, or Teverone, which forms the waterfall of Tivoli (347 feet) at the town of that name. The Tiber always carries a great load of alluvial material, and consequently its mouth has always made encroach- ment upon the sea, and does now so by about 13 feet each year. The Isola Sacra divides the river into two branches; the southern one which washes Ostia is not navigable; the other, to the north, known as the Flumineo Channel, is navigable and is formed by the so-called Trajan ditch. The Garigliano River in the first part of its course is called the Liri (Litora), but, after receiving the Rapido, it takes the name of Garigliao, because the Rapido in its lower part preserves its ancient name of Gari. Changing its direction into the River flowing into the Mountains into the Gulf of Gaeta. In its higher course the river Liri, near Capistrello, receives the waters of the basin of Fucino through a subterranean passage nearly four miles long, the volume of the waters of the Liri being increased by 10,600 cubic feet per second.

The rivers of Southern Italy empty into three different seas, the Tyrrenanian, the Ionian, and the Adriatic. With the exception of the Volturino, the Sele, the Bradano, the Basento, and the Sinni, none of the streams of Southern Italy deserve the name of river; they have the nature rather of torrents, especially those of Calabria, which, when running full, are very destructive. They flow perpendicularly to the coasts, with the exception of the Candellarino, which flows in a south-easterly direction; those on the Tyrrhenian in their upper courses form longitudinal valleys. The alluvial plain of Sibari, which is the largest plain of Calabria, was developed by the Crati and its affluents.

The principal rivers of Southern Italy are: the Volturno (115 miles) which rises at Capo d’Aapia, on Mt. Rocchetta, with a considerable volume of water, receives the Vandra that flows from the plain of Caro- villi, increased by the waters of the Cavaliere, on the banks of which stands Isenior, and after flows through a broad valley, the bottom of which consists of the alluvial deposits of that river which, at the height of Presenzano, turns into a direction parallel to the Matese Mountains; in former times it probably maintained a southerly direction through the Teverano depression and along the present bed of the Saccione River. It receives the Calore River which flows into the Volturino at almost right angles, while the latter, turning to the west, flows through the Cai-azzo Pass and opens onto the plain at Capua, with a breadth of about 500 feet, and from there on it is navigable as far as the sea (17 miles). It flows into the sea through swampy lowlands that have been developed by its own alluvial deposits. The Sele takes its rise from numerous copious springs. Its principal affluent is the Tanagro, which disappears in the ground at Tola and appears again, about one-third of a mile from the town of Tusa, which is the most important of the Ionian and Secchiari, which constitutes the valley of Cosenza. Near its mouth it receives the Cos- cile, and passes the valley of Cosenza, having been engrossed by the waters of the Pollino. The Basento passes by Potenza and flows into the sea near the ruins of the ancient Metaponto. The Salerno-Potenza-Taranto railroad lies along the whole course of this river. The only stream of any importance on the Southern Adriatic watershed is the Ofanto River which beyond Conza describes an arc around the Vulture mass, the waters from which flow into the Ofanto through the Rendina River; the Loccone is another branch of the Ofanto. The southern branch, the Volturino supplies the waters of the artificial canal by which it is connected with Lake Salpi.

(2) Lakes.—The Italian region has more lakes than rivers, especially on the plain of the Po, at the foot of the Alps. They are usually divided into (a) pre-Alpine lakes, (b) volcanic lakes; and (c) post-lakes of Pre-Alpine Lakes. These lakes that temper the climate of the Continental portion of the pre-Alpine region are one of the principal causes of the fertility of the soil, making possible the cultivation of the southern plains. The zone that contains them extends from Lake Orta to Lake Garda and is north of the moraine hills that close the entrance of the valleys of the Central Alps. Lake Orta or Cusio, north-west of Arona, is 950 feet above the level of the sea and has an area of about 7 sq. miles, with a maximum depth of 80 fathoms; its waters flow through the Nigglia River into the Ticino River; and the Arona, a stream that itself empties into Lake Maggiore (Lacus Verburnus). This lake stretches from north to south, the principal streams that flow into it being, at the north, the Ticino and the Maggi; on the west the Toce, and on the east the Tresa, which flows from Lake Lugano, and the Bardello which flows from Lake Varese. The River Ticino flows into Lake Maggiore at Magadino and leaves it at Sesto Calende. In its Gulf of Pallanza, Lake Maggiore contains the Borromean Islands, so famous for their beauty. The principal towns situated on the shores are Locarno in Canton Ticino, Pallanza, Intra, Luino, and Arona, the birth-place of St. Charles Borromino, where a static water level was fixed in 1697, having a height of 100 feet, including the pedestal, and representing the saint in the act of blessing Arona. Lake Lugano or Ceresio lies between Lake Maggiore and Lake Como; the Agno is the principal stream that flows into it, while its waters empty into Lake Maggiore through the Tresa River. On the shores of this lake are Lugano at the north, and Por- lezza at the north-east, Capolago at the south, and Ponte Tresa at the west. Lake Como or Lario is formed by the River Ardja that enters the lake at Colico and leaves it at Lecco, to form the minor lakes of Pescarenico and the Colterno. A stream flowing from Lake Como are the Merca, which receives the Lario, and the Pioverna. To the north of Lake Como is the minor lake of Mezzola through which flows the Mera. This small lake is in reality the nar-rowed part of Lake Como, developed by the alluvial deposits of the Adige. Bellagio Post divides Lake Como into two branches, the south-western one, which terminates at Como, and a south-eastern branch called Lake Lecco. Its varied shores are beautiful gardens of luxuriant vegetation, studied with villages, chapels, inns, and sumptuous villas. Manzoni made it still more celebrated by the description he gave of it in his immortal novel, "I Promessi Sposi". Lake Iseo or Sebino is situated between Lakes Como and Garda, at the entrance of the valley of Camonica, and is formed by the Oglio River which enters it at Lovere and flows from it at Sarnico. It contains the island of Monte Isola. Then next in importance after Lake Garda or Benaco is the largest of the Italian lakes and the most southerly one of the Sub-Alpine region. The River Sarse is the principal stream that flows into it, while the Mincio is its chief outlet. Its smiling shores are covered with a growth of southern vegetation. The Iseo passage upon them being Riva, Soló, Desenzano, Peschiera, and Berga. The narrow peninsula of Sermione that pro-
trudes into the lake between Desenzano and Salò was the happy sojourn of the Latin poet Catullus (Catul., XXXI, 1); it is nearly two miles in length. Lake Idro is formed by the Chiasso River, which is an affluent of the Oglio; it has an area of over 4 sq. miles, and its surface is 1200 feet above the level of the sea. Other minor lakes are: Arcoggia, Ascogna, Assoe, Ivrea, Varese, Alsezio, Pusiano, Amnone, and Segrino, between Como and Lecco; Lake Endine or Spinone between Val Seriana and Lake Iseo; Lake Molveno, Lake Ledro, west of Riva, and Lakes Caldonazzo and Levico, from which flows the Brenta.

The lakes of the peninsular, being smaller than those of Continental Italy, are, almost all of them, of a volcanic nature, or are coast lakes. The lakes of Montepulciano and of Chiussi, however, at the southern extremity of the valley of Chiana, constitute a class of their own, together with Lakes Perugia and Massaciucchi, the latter, on the mountain group of the same name, having a length of 2.5 miles and a breadth of 626 mile. To this class belongs also the small Lake of Pergusa, in the Erei Mountains, in Sicily. The Lake of Perugia or Trasimeno is the largest lake of peninsular Italy and contains three islands, Polvese, Maggiore, and Minore. Its shores are low and marshy, and its waters, which abound in fishes, are carried by an artificial outlet into a sub-affluent of the Tiber. The lake is a remnant of a larger one that covered nearly all of the valley of Chiana, and there is a project on foot to drain it dry. It was near Lake Trasimeno that Hannibal defeated the Romans in 217 B.C. The two minor lakes of Montepulciano and of Chiussi are of the same nature, and were probably a part of Lake Trasimeno. At the first of the two begins the Canal of Chiana, a work of the Grand Dukes of Tuscany, which drains the Chiana valley and directs its waters into the Arno. From the second flows the Chiana River, which empties into the Paglia, an affluent of the Tiber. Therefore, through these two lakes, connected by a canal, the Tiber and the Arno communicate with each other.

(b) Volcanic Lakes. - Volcanic lakes are very plentiful in the peninsula; they are so called because they occupy the craters of extinct volcanoes, which accounts for their small dimensions. The principal one among them is Lake Bolsena (Lacus Vulturnus), containing two islands, Biscina and Martana, on the second of which, it is said, Amalasuntha, the only daughter of Theodoric, was killed by Teodato in 534. The outlet of this lake is the Lago di Vico. The other lakes of the same nature are those of Bracciano or Sabatino and Vico (Lacus Ciminius), which is situated between Lakes Bolsena and Bracciano at a height of 1500 ft. above the level of the sea; also Lakes Albano and Nemi, near Rome, on the Albanian Mountains, having an area of 2.53 sq. m., and of 524 sq. m., respectively, and an altitude of 961 ft. and of 1096 ft. Lake Albano having a depth of 585 ft., and Lake Nemi, a depth of 112 ft.; lastly, Lakes Averno, Agnano, and Lucrino, with others, in Campi Flegrei, and Lake Guerra, to the northwest of Mt. Etna. (c) Coast Lakes. - The Italian region abounds in lakes of this kind, but in many cases, rather than lakes, they are swamps that should be drained and their sites redeemed for agriculture. Among them the best-known are Lake Varano, to the north of Mt. Gargano; that of Salpi, between the Ofanto and the Carapelle Rivers; Lake Lesina; Lake Massaciuccoli, at the mouth of the Serchio (nearly 15 sq. miles); Lake Orbetello, at the mouth of the Ombrone, with an area of 10 sq. miles; Lake Salso between the Carapelle and Manfredonia; Lake Fondi to the east of Terracina; and the Lake of Fogliano, to the west of the Pontine Marshes; the lakes of Alimeni, in the Salentine peninsula, and of Quarato, near Cassia.

(3) Canals. - There is no country in which a system for the distribution of waters is more complete than that of northern Italy, a pre-eminence which the other portions of the kingdom do not share. In the country between the Adda and the Ticino, especially, a close network of canals and ditches, rivulets and aqueducts, now meeting, now separating from each other, intersecting or passing over and under one another, makes all the waters, whether of spring, river, or rain, available. Probably works of this kind existed in ancient times; it is certain, however, that they were resumed in the twelfth century; and from that time, the Italians spent enormous sums of money on this undertaking and employed in it a special intelligence that established their position as the first hydrologists of Europe. There is no greater manifestation of the wealth and of the civilization of medieval Italian Republics than these gigantic works.

Physical Divisions. - Northern Italy is divided into the following regions, Piedmont, Lombardy, Venice, Emilia, and Liguria, which are politically subdivided into provinces. Piedmont, Lombardy, and Venice are the subjects of special articles.

Emilia is subdivided into the provinces of Bologna, Ferrara, Forli, Modena, Parma, Piacenza, Ravenna, Reggio nell' Emilia. Emilia, a region through which passes the ancient Emilian Way, whence the name, is quadrilateral in shape and embraces the territory formed by the north-east watershed of the Northern Apennines, and by the triangular plain, the sides of which are the Emilian Way, the Po, and the Adriatic Sea. The former is a rolling country ploughed by torrential streams that have washed out deep valleys, on which account its inhabitants live on the mountain sides; the apex of the triangular plain points towards Piacenza, while the base between Rimini and the mouths of the Po attains a length of 60 miles. It is a part of the great plain of the Po, the origin and nature of which it shares. In the district between Ferrara, the Po della Maestra, and Ravenna, it has lands that have not yet been drained, containing the so-called salati or lagoons of Comacchio, abounding in fish, and near which stands the town of the same name. They are connected with the sea by the Magnavacca Canale. Some of these valleys, like the polders of Holland, have been drained and are very fertile. The River Reno divides this region into two parts: the western, Emilia properly so-called, and the eastern, Romagna, a name that recalls the time when Ravenna was capital of the Western Roman Empire, and therefore called Romandola, meaning Little Rome. All the roads from France, Germany, and Austria that lead directly to Brindisi, and by the Suez Canal to the Indies, pass through Emilia. The climate of this region is almost the same as that of the Continent, and agriculture is its chief industry, principally corn, sugar-beet, and cattle raising. In the lands around Bologna and Ferrara the cultivation of hemp predominates, of which staple
these two districts are the chief centres of production. The cities of Emilia, with the exception of Ferrara and Ravenna, are all built on the Emilian Way, which skirts the base of the Apennines. Piacenza (pop. 36,000), on the Po, was an ancient Roman colony that lived a idle life in the Middle Ages and was, with Guastalla, a duchy of the House of Farnese. It is now a stronghold, defending the Pass of Stradella. Its communal palace of the thirteenth century and its cathedral of the twelfth century are notable structures. Piacenza was the birth-place of Melchiorre Gioia (1279) and of the famous man of letters, Pietro Giordani. To the south-west of this city is the Field of Roncaglia, where the Emperor Frederick Barbarossa convoked his feudal lords to support the claims of the empire (1154-1159). The city of Bobbio (pop. 5000), on the River Trebbia, is famous for the convent founded there by St. Columbanus; and on the lower course of that river was fought a battle in 218 a. c. between Hannibal and the Romans, and one between MacDonald and Suvoroff in 1799. On the Arda is Florenzuola d’Arda (pop. 12,000), the birthplace of Cardinal Giulio Alberoni. In its neighbourhood were discovered the ruins of the ancient Veolo, and an ancient statue of Augustus. Borgo a, Tar on the River, where it receives the Ceno, is Foronna, where Charles VIII of France defeated the Italian Confederation in 1495. In the valley of Stirone is Salsomaggiore, famous for its therapeutic springs; and in the plain is Borgo San Don nino (pop. 12,000), with its Gothic cathedral, and Busseto, the birth-place of the great musician Giuseppe Verdi. Parma (pop. 48,000), a very ancient Etruscan city on the Parma River, contains noble monuments, such as its cathedral and its baptistery. It became famous by its defence against Frederick II, who besieged it unsuccessfully (1247-48). It was the capital of a duchy under the princes of the House of Farnese and under the Bourbons of Spain. At the foot of the Pietra Bismantova (3440 feet) is the Castle of Canossa, where Queen Adelaide took refuge and where Gregory VII humiliated the Emperor Henry IV. Reggio (pop. 59,000), on the Crostolo River, once the capital of Cisalpine Gaul, was the birth-place of the poet Ariosto and of the famous astronomer of our times, Angelo Secchi, S. J. Where the River Secchia opens into the plain, stands Sassuolo, famous on account of its volcanic phenomena, called salare, and to the north-east is Modena (pop. 91,000), the ancient Roman city of Mutina, which became the capital of a duchy and was the birth-place of the naturalist Spallanzani, of Sado leto, of Sigonio, and of Tassoni. It contains a military school. Vigolana is the birth-place of Ludovico Antonio Muratori, and contains the famous Abbey of San Silvestro. Faenza (pop. 40,000) on the Lamone River was once famous for its majolica, called Faience by the French. It is the birth-place of the physicist Torricelli. Cesena (pop. 42,000) is the birth-place of Pius VI and of Pius VII. Rimini (pop. 44,000), at the termination of the Emilian, and the beginning of the Flaminian Way, is rich in historical memories. It contains the birthplace of Augustus, the birth of St. Francis, called the Malatestian Temple, after the Malatestas, lords of the city, who caused the church to be built by Leon Battista Alberti. Two hours from Rimini, between the Marecchia and the Conca Rivers, rise San Leo, the stronghold where Berengarius II was made prisoner and where the famous Cagleron died. Ravenna (pop. 36,000), a most important port under the Romans, became the capital of the Western Empire, later the capital of the Goths, and finally of the Greek Exarchate. It has exceptionally fine examples of Byzantine architecture, among which should be mentioned the basilica called the Archiepiscopal, the church of St. Apollinare, and the shrine of the Virgin. It was in this city that the immortal Catholic poet Dante Alighieri died, and where also is preserved his sepulchre. The ancient military port that was constructed by Augustus is now covered over, and the town is at a distance from the coast, with which it is connected by a small canal, 5 miles in length. Along the coast stretches the famous Pineta, 25 miles long, and from 1 to 25 miles broad; but the negligence with which it is treated makes it unsightly. It embraces the provinces of Genoa and Porto Maurizio and is bounded by the Apennines and the Ligurian Alps, and by the Rio and the Magra rivers. It is a mountainous country, with no other plains than the small one near Albenga. The mountain spurs that project into the sea make an attractive view at the point of which is the port of Genoa. Rains, especially in the Apennines, are abundant (50 inches). This region is separated from the rest of Continental Italy by steep mountain ranges, but this barrier has been over come by railroads that have made Liguria the natural outlet to the Mediterranean Sea for the valley of the Po and for western Germany. It has a maritime climate, but the natural fertility of its soil does not correspond with that climatic advantage, and therefore its inhabitants devote themselves to a seafaring life, as the fisheries along this coast are not remunerative. Sixty-one per cent of the population live on the coast, and 11 percent of the coast is devoted to the culture of oil, fruits, and flowers; but commerce is its chief industry. Between the Pocevera and the Bisagno Rivers, in the form of an amphitheatre, stands Genoa. (q. v.)

Central Italy contains five regions: Tuscany (q. v.), Umbria, Lazio, the Marches, Abruzzo and Molise. While northern Italy may be called the head, central Italy is the heart of Italy, for it was this section of the country which in ancient times, as well as in the Middle Ages, was dominated by its power, by its laws, and by its religion, as in modern times by its arts and by its letters. The fertile genius of its inhabitants, together with the happy conditions of its soil and freedom from prolonged foreign domination, all conspire to intensify an artistic and literary sentiment and to maintain in the race the ethnical type of its ancestors, the Etruscans, the Marsians, the Umbrians, and the Latins—who together conquered the world. The chief occupation of its inhabitants is farming, there being few manufacturing industries. Although this section has a coast-line of 600 miles, it has only three ports: Ancona, which is the only one on the Adriatic Sea, and Leghorn and Civitavecchia on the Tyrrhenian Sea. Ancona, Sabaudia, and Sora are towns without inhabitants, owing to the malaria, Tuscany and Lazio have little or no seafaring populations; the corresponding shores on the Adriatic Sea, however, are abundantly peopled, but, as they are straight and low, they have no natural harbours, and consequently at the mouths of rivers small canal-ports have been dug out for fishing craft. This explains why the Marches and the Abruzzi have a considerable seafaring population that is devoted to the fishery, and not to navigation, as is the case in Liguria and Venice. The principal inland cities are Florence, on the banks of the Arno, and contains the famous Academy and Medici Library; Siena, Perugia, Urbino, and Pesaro, are famous cities that flourished in past centuries; but they have not a brilliant future under present economical conditions.

Umbria consists of a single province called Perugia. It has an area of 3800 sq. miles, an estimated population, on 1 January, 1906, of 693,253 inhabitants. It is an essentially mountainous region, of which the elevation is determined by the dorsal aspect of the Apennines and by the parallel chains of the Umbrian Sub-Apennines that form the upper basin of the Tiber, the valley of Poligno, and the basin of the lower Tiber. Its affluent, the river of Norcia, the basin of the Sibenni, the basin of the Sabine mountains. In the Middle Ages, the preference given to the Tuscan roads over the Flaminian Way, left Umbria in an isolated position, on
which account it lived apart a life of faith and of artistic inspiration all its own. It has a mild climate, and agriculture is the chief occupation of its inhabitants. Perugia (pop. 61,000), one of the twelve Etruscan Lucumonies or sacred towns, not far from the Tiber, contains many monuments of art, for the most part churches, and many antiquities. It was the adopted country of the Perugian Pietro Varrone a writer of the first rank. Orvieto (pop. 15,000) is famous for its magnificent thirteenth-century cathedral, one of the grandest in Italy, especially on account of its splendid façade. At Gubbio, on the Chiascio, the Gubbio Tables were found. Assisi, the birth-place of St. Francis and of St. Clare, was the cradle of the Order of the Friars Minor. Its convent and church contain treasures of the mystic art of Umbrian painters and are the objects of devout pilgrimages. Spoleto (pop. 55,000), between the Ticino and the Maroggia Rivers, was the seat of a powerful Longobard ducy, and afterwards the residence of the Frankish dukes, of whom the last two, Guido and his son Lambert, were Kings of Italy. Terni (pop. 80,000), the ancient Interamna, home of the historian Tacitus, is now the site of important metallurgical works that use the waters of the Nera River, into which flows the Velino, over the famous Falls of Terni. Norcia (Nursia) was the home of St. Benedict; Narni, a very ancient city on a precipitous height near the Nera, was the home of the Condottiere Gattamelata; Rieti is on a high plain called Agro Restitno, one of the most fertile lands in Italy, where celebrated grain is produced.

Lazio consists of but one province, called Rome, and has an area of 7,400 sq. miles, a population estimated to be 1,300,014 inhabitants, on the 1st January, 1908. Its boundaries are the Mediterranean from the mouth of the Flora to Terracina, and the Rivers Liri, Turano, Farfa, Tiber, and Paglia. It includes the Roman Sub-Apennines and Anti-Apennines, the deserted, undulating Roman Campagna, the Pontine Marches, and the promontories of Linaro, Anzio, and Crecce. The lands on the right of the Tiber, formerly inhabited by the Etruscans and afterwards conquered by the Romans, constitute the territory of Viterbo and the Campagna of Civitavecchia. The Albanian and Sabine hills and the valley of the Tiber among the Comaros, better known by the name of Agro Romeno; the valley of the Sacco or Tiber, with the hills that surround it, forms a region that is called Cicerchia on account of the style of footwear affected by its inhabitants. Lazio has essentially a maritime climate. The principal occupations of the inhabitants are the grazing of corn, grapes, oil, and olives, and the raising of horses and of cattle. The region is represented by Rome, that owes its origin and the beginning of its greatness to the advantages of its topographical position. In the volcanic zones of the Roman Anti-Apennines the centres of population are on the hill-tops; the principal ones being Accio, Apennineto, the Etruscan city on the Paglia, that received its name on account of a neighbouring waterfall; Bolsena, on the lake of the same name; Montefiascone, to the south of that lake, famous for its Moscato wine; Viterbo, on the skirts of Mt. Cimino, rich in historical memories of the popes, and in the neighbourhood of which are the famous hot springs called Bulicame; Civita Castellana, near the ruins of the ancient Faleria and of the Castello di Piaterno, where Otto II died; Corneto, built on the site of the ancient Tarquinia; Civitavecchia (pop. 17,000), the ancient Centumcellae, a port that has brought fame to what was for a time the chief port of Rome (q.v.). Ostia, founded by Ancus Marcius, was the ancient port of Rome, but now its ruins are totally buried and at a distance of one and a half miles from the sea. In the valley of the Aniene is Subiaco, and near it the cave to which St. Benedict, the founder of monasticism in the West, was wont to withdraw; Tivoli (Thur) contains many ruins of ancient monu-

ments and palaces. The falls of the Aniene River at this point furnish Rome with electricity. In this neighbourhood are found the rich quarries of travertine marble that the Romans used so much in their monuments, and the sulphur springs, which are a bathing resort. By the wooded and vine-clad Albanian hills are the Castelli Romani, small villages that are popular summer resorts; Frascati, near the ruins of ancient Tusculum; Castelgandolfo, the papal villa; Marino: Ariccia, that has a splendid viaduct; Albano and Velletri (pop. 19,000). In the valley of the Sacco are Palestrina, upon the ruins of the ancient Praeneste, which was the home of Pier Luigi, known as Palestrina, the prince of sacred music. Here remain still the ruins of the Temple of Fortune, famous for its oracles, called auspicia praenestina. Anagni, the home of Boniface VIII, who there received grievous offence at the hands of Sciarra Colonna and of Nogaret, envoy of Philip the Fair, King of France. Alatri, which has a Pelasgian burial-ground; Terracina (pop. 11,000) on the sea, the former Anxur, a watering-place that was much frequented by the ancient Romans.

The Marches, comprising the provinces of Ancona, Ascoli Piceno, Macerata, Pesaro e Urbino, is bounded by the Apennines, the Adriatic Sea, the Marecchia River at the north, and the Tronto at the south; it unites the ancient maritime Umbria and the northern half of the ancient Picenum. Originally, its elevation was formed by a group of mountain chains, parallel to the Apennines and diminishing in height as they approached the sea, but the rivers washed their way through these hills, cutting deep passes into them, so that now are seen only some isolated trunks that indicate the primitive direction of the chains. The climate of the Marches is less mild than that of Tuscany, and agriculture is its chief industry, while the fisheries, if they were well directed, would make the fortune of the numerous portion of the population that lives by that industry. This region, which in ancient times was inhabited by different peoples, became Romanized after the Flaminian Way, which was the chief outlet of Rome, had been carried through; but it lost somewhat of its impor-

Cathedral of Anagni (XI Century)
tance when preference came to be given to the shorter way through Tuscany. It is a mountainous country that was subject to petty lordships, some of which were promoters of literature and the arts. The principal centers of population and places of historic interest are Urbino (pop. 28,183), the birthplace of the duchy (1213-1631) that was made famous by its fine arts; it was the birthplace of Raphael and of Bramante; Pesaro (pop. 25,000) at the mouth of the Foglia, the birthplace of the great musician Gioachino Rossini, and of the philosopher Terenzio Mammiani; Sassocorvaro (pop. 29,000), the birthplace of Pope Clement X; Jesi (pop. 25,000), the birthplace of the Spanish Emperor Frederick II; Ancona (pop. 56,000), on the inshore of a hill which forms an angle projecting into the sea. After Triest and Venice it is the most important port on the Adriatic Sea; it is famous for its heroic and successful defense when besieged in 1144 by Frederick Barbarossa. Not far from the mouth of the Musone, on a pleasant height, is Loreto, with its famous sanctuary, erected from plans by Bramante, and which according to pious tradition contains the Holy House of Nazareth that was transported from Damascus, to the cave where later was erected this beautiful temple in honour of the glories of the Virgin. Macerata (pop. 23,000), between the Chienti and the Potenza, containing a university; Recanati (pop. 17,000), the birthplace of the modern lyric poet Giacomo Leopardi; Tolentino (pop. 13,000), famous for its sanctuary of St. Agostino, the burial place of the Holy Virgin; Livorno, city of the Chiesa di S. Agostino. It was here that the treaty was signed between Napoleon I and Pius VI in 1797, and here, also, Murat was defeated in 1815. Camerino (pop. 12,000) was once the seat of a duchy, and has still a free university; Fermo (pop. 21,000) distinguished itself in the First Punic War by its fidelity to the Romans, whence its name; and finally, on the right of the Tronto, amid fertile lands, is Ascoli Piceno (pop. 29,000), a very ancient city and an enemy of Rome.

Abruzzi and Molise.—The boundaries of Abruzzi and Molise are the Tronto River, the Adriatic Sea, the Fortore River, and an irregular line towards the Apennines. This region consists of the Altipiano or Abruzzo-Aquilano, along the seashore, which is divided into Abruzzo Teramano and Chietino; Molise, that consists of the entire watershed between the Sangro and the Fortore Rivers; the Marsica, which is formed of the valleys of the Fucino River on the west, the Liri and of the Salto. The climate is variable; severe on the uplands of Aquila and mild on the coast. The land is not very fertile, but pastoral pursuits are considerably developed: the flocks go for wintering to the Agro Romano or to Apulia, and especially to Capitanata, following very ancient grazing tracks called tratturi, which the flocks alone use. Industries are not flourishing, but they are being developed by the hydro-electric plants. The central part of this region may be called the Helvetia of the peninsula; in ancient times it was the home of the intrepid Sabines. Mussomeli, Pescara, and Pescara, which more than a century checked the progress of Roman arms. They were subjugated, and then revolted under the Italic League; but Rome triumphed again, and from that time these people furnished the sinew of the Roman armies. Being a mountainous and poor country, it had little importance in the Middle Ages. Abruzzians have a great love for their native region; each winter great numbers of them, poor, honest, and industrious, go in search of work to Rome and to Naples, but invariably return to their homes in the spring, with their savings. This population furnishes the backbone of Italian peasants, shepherds, and a mass of boys, hotel servants, and policemen. The principal centres of population are Teramo (pop. 24,000) on the Tordinio River, formerly the capital of the Pretuzzi, whence the name Aprutium, Abruzzo; Aquila (pop. 21,000) on the Aterno River, founded in 1240 by Frederick II, not far from the ruins of Ammotto, the capital of the Sabines and birth-place of Sallust; it is famous for its saffron; Solmona (pop. 18,000), a city of the Feligni and the home of Ovid; Castel di Sangro, a strategic point on the main road from the Po to the Adriatic; Lanciano (pop. 18,000) has a beautiful cathedral; Campobasso (pop. 15,000), having a very old cutlery industry, and Tagliacozzo, at the source of the Salto or Imle River, an affluent of the Velino, where Conradin was defeated by Charles of Anjou, in 1268. Campobasso, as the capital of the small district of the Fucino River, is the most important place in the Marsica.

Southern Italy.—The line drawn from the mouth of the Trigno River, on the Adriatic Sea, to that of the Garigliano, on the Tyrrenhian Sea, marks the shortest distance between those two waters and separates Southern from Central Italy. This division of the peninsula lies between three seas, the Adriatic, the Ionian, and the Tyrrenhian, and at its southern extremity, bifurcates into two peninsulas, the Salentine, which follows a south-easterly direction, and the Calabrian, which follows a south-westerly direction; and there are many more points of division. Before the invasion of the Goths, in the 5th century, central Italy, it has yet other smaller peninsulas; they are the peninsula of Gargano, that of Sorrento, the promontory of Monteoliveto, and the headland of Sila, between the Gulf of Squillace and of Taranto. The distance between the Gulf of Salerno and that of Taranto is 100 miles; between the mouth of the Fucino River and the Tyrrenhian Sea, 30 miles; and between the Gulf of Squillace and of Santa Eufemia 18 miles. Southern Italy is divided into the following regions: Campania, Apulia, the Basilicata, and Calabria. On account of its distance from the rest of Italy, which was increased by the wars of the papacy and the austere life of its upper class, Southern Italy had a civil and political life of its own; it suffered little from the incursions of the barbarians, but was occupied by the Greeks and by a few Normans who established there the first Kingdom of Italy. The Carlsbergians and the Othonians did not succeed in binding it to the empire. Notwithstanding the fact that the peoples of the two watersheds of Southern Italy were politically united for eight centuries, and notwithstanding the undeniable ascendency of Naples, its capital, the various sections of which this region consists were almost strangers to each other until within the last century, although the Apennines provided an obstacle to communication between the different parts of the country; this was due to the want of roads, for which little provision has been made, although laws have been passed to that effect. The great majority of the inhabitants are agriculturists whose homes, contrary to the custom in Northern and Central Italy, are in the towns, in which they have all the vices, without any of the rural virtues. The country is divided into vast estates whose owners live at Naples or abroad, so that the labourer gives his day's work without any interest or love for the soil he cultivates. The soil is very fertile and rewards every agricultural effort. The crops are: wheat, corn, wine, olives, almonds, figs, and vegetables. Nevertheless, the length of coast, the region contains a sparse maritime population, and therefore secures little advantage from a sea that teems with riches for other people. Its industries are as yet little developed; nevertheless, there is already a naval arsenal at Castellamare, important metallurgical works at Naples and at Pozzuoli; factories for farinaceous foods, cotton mills, and others (Laws of 31 March, 1904, and 15 July, 1906, in favour of the Basilicata, of the South of Italy, Sicily and Sardinia).
the Liri. Its elevation is formed by the Neapolitan and the Lucan Sub-Appennines and by the Neapolitan Apulian and Campanian, which form three different sub-regions, the Campania Plain or Terra di Lavoro, the Beneventana Basin, and the mountains of Cilento. The ancient Campania (from campus), so famous for the fertility of its soil and for the enchantments of its coast, extended from the Garigliano to the Gulf of Policastro and was the ancient seat of the Oscans and of the Ausoni. It was later subjugated by the Etruscans and the Samnites, and later still by the Romans, who made it a place of recreation. This delightful region, which seems to have been destined always to be conquered, whether by Romans or Greeks, Normans or Saracens, conquerors to itself, by the fascination of its beauty. Its climate is variable, and agriculture is the chief occupation of its people; the raising of cattle, however, is not much pursued. The industries are few, but they are being developed gradually by means of fiscal assistance, for which provision is made by the recent law that was promulgated in behalf of Southern Italy. The chief cities of this section are placed along the coast, between the coast and the Sub-Appennines, and between this mountain range and the Appennines. In the valley of the Liri is the thriving town of Sora (pop. 16,000), with its famous paper mills, called the Fibreno, after the waterfall of this tributary of the Liri which furnishes their power; the town is of Pelasgic origin; Arpino, the birth-place of Marius and of Cicero; Pontecorvo, a former possession of the Church; Aquino, the home of Juvenal and of St. Thomas, the prince of scholastic philosophy; on the Gari is Cassino, above which stands upon an eminence the great Abbey of Montecassino, mother-house of the order established in 519 by St. Benedict of Nursia and the most ancient monastery in western Europe; Capua (pop. 14,000), on the Volturno River, a strong town that was the battle of the ruins of ancient Casilinum, where Narses defeated the Goths, and further to the south-east is Santa Maria Capua Vetere (pop. 22,000), occupying a part of the site of ancient Capua, which proved so harmful to the interests of Hannibal, and which, until the defeat of the Longobardi, remained the second city of Italy; it was determined by the Saeculum, the town of the Beneventana basin is Benevento (q. v.). Avellino is an agricultural city in the neighbourhood of which is the famous sanctuary of Monte Vergine to which pilgrimages are made. In the Campania plain are Caeretana (pop. 52,000), founded by the Longobardi in the eighth century, and a village named Fiore, which is celebrated by Charles III of Bourbon; this wonderful architectural production of Vanvitelli, after many years of depopulation, is about to be restored by Victor Emmanuel III; Nola (pop. 15,000), a very ancient city where Augustus died and where were born St. Paul and Giordano Bruno; Aversa (pop. 23,000), the first possession of the Normans in Italy; Montesarchio, southeast of Benevento, is probably in the neighbourhood of the ancient Caedia on the Appian Way; from which the famous pass, so fateful to the Romans, was named the Caedia Forks. On the coast is Gaeta, a stronghold; it has a good port and is noted for the sieges that it underwent in 1799, 1806, and 1861. Pius IX took refuge there in 1848, as did also the last King of Naples, Francis II of Bourbon. Naples is treated in a special article (q. v.). In Pozzuoli (pop. 17,000) the ruins of the Temple of Apollo can be seen; the city was the residence of Ptolemy I, who reigned there under his splendid of the town, near which is obtained the pozolana earth that is excellent for building purposes. At the foot of Mt. Vesuvius are Portici and Resina, under which, at a depth of from 65 to 100 feet lies Herculaneum that was buried under torrents of lava in the year 79 of the Christian Era. Further to the east are the ruins of Pompeii, buried also by the eruption of Mt. Vesuvius; but, contrary to what happened, at Herculaneum, Pompeii was buried under heaps of ashes, on which account the excavations that were begun there in 1748 were relatively easy, and now the town is almost entirely unearthed. Another city destroyed by Mt. Vesuvius, in the same eruption, was Stabiae over which is now built Castellamare, amid attractive surroundings, and having a good harbour and important docks. Sorrento, a beautiful spot, was the home of Torquato Tasso. The Parthenopian Islands rise around the Bay of Naples; they are Nisida, at the entrance of the Gulf of Baja; Procida that gave its name to the conspirator Giovanni da Procida, the enemy of the French; Ischia, with the volcano of Epomeo; Capri, mountainous, picturesque, and famous for its blue cave and for its wines; it was the last home of Tiberius. Salerno (pop. 42,000) is at the northernmost point of the gulf of its name; it was once the seat of a famous school of medicine and was an important place under the Longobard and the Norman kings; the cathedral of St. Matthew, where the great Pope Gregory VII is buried, was erected by Robert Guiscard and is one of the grandest Norman structures in Italy. Amalfi, in the Middle Ages, was one of the strongest of the maritime republics, a rival of Genoa and of Pisa, was destroyed by them. It had the glory of framing laws, the "Amalfian Tables," by which maritime and commercial regulations were regulated. Cava dei Tirreni contains a famous abbey of the Benedictine Order. To the south-east of the mouth of the Sele are the much admired ruins of Paestum, which was founded by the Greeks, about the year 600 B.C., under the name of Poseidonia; the Temple of Neptune there is one of the most beautiful examples of Greek architecture in existence. Eboli (pop. 12,000) is an important road centre of this part of Italy.

Apulia comprises the provinces of Bari or Terra di Bari, Foggia or Capitanata, Lecce or Terra d'Otranto. The territorial boundaries of this region are the coast of the Ionian Sea, as far as the mouth of the Brindisi, this river and its tributary the Basentello, the Saddle of Spinazzola, the Locone, the crest of the Appennines and the whole of the mountains of Capitanata as far as the mouth of the Biserno, its topographical configuration is determined by the Promontory of Gargano, by the heights of the Maglie, and by the Tavoliere. The Maglie heights and the Promontory of Gargano at one time were two separate islands, and it is probable that the southern Maglie, to the south-east of Brindisi and Taranto were also islands. Apulia was debarred from exercising influence on neighbouring peoples, and its subjugation by them was made easy by reason of its position, its topographical conditions and the character of its inhabitants, the Apulians, the Daunians, the Mea-
Apianus, the Japygians, who were never of a warlike disposition. In ancient times, as at present, Apulia was the station between the East and the West; it was in the possession of the Greeks until the tenth century, when the Normans conquered it and established there the county of Galatina. Apulia, their first possession, is a region that has a mild climate and is essentially an agricultural country, wonderfully fertile in some parts; it has the disadvantage of lacking a sufficiency of water, but this defect is being remedied by the construction of a great aqueduct that will bring the waters of the Sele to this section. Its chief products are wines, oil, grains, chestnuts, and figs. Messina and Crotone are as yet little developed. Its principal towns are Foggia (pop. 53,000), the capital, on the right bank of the Celone River, in the heart of the Tavoliere; it is a railroad centre and a grain and wool market; it contains the notable ruins of the palace of Frederick II; Lucera (pop. 17,000), an ancient city upon a height, destroyed in the seventh century and rebuilt by Frederick II, who took it Saracen from Sicily; Mandremonia (pop. 12,000) was founded by King Manfred, near the ruins of Spitonum; Monte Sant' Angelo, at the head of Gargano, contains the famous sanctuary of St. Michael the Archangel, famous for the victory of the Spaniards over the French in 1503; Barletta (pop. 42,000), a former fortress, on the coast; here occurred the challenge of Barletta on 16 May, 1503; and in its neighbourhood was Canne, where Hannibal destroyed the Roman army; Trani, a port that was famous during the Crusades; Bari (pop. 78,000), a commercial port, containing the famous sanctuary of St. Nicholas. In the interior is Canosa (pop. 24,000), the ancient Cauna, not far from the position on the Ointo River where the Romans found refuge after the defeat of Canne; it contains the ruins of a temple and also that of Ebbonem the crusader; Altamura, on the Murgie Mountains, was the birthplace of the musician Mercadante. Terra d'Otranto, which comprises nearly the entire Salentine peninsula, was called the Tuscany of Southern Italy. Its four important seaports, Brindisi, Otranto, Taranto, and Gallipoli are situated respectively at the angles of a quadrangle, in the interior of which is Lecce, the capital. Brindisi (pop. 25,000), which is built on two inlets in the shape of horns, was in the time of the Romans the most important commercial and naval port, where the Appian, the Trajan, and the Taranto sea tines terminated. In the Middle Ages, but in our days it has returned to new life and has become a station of communication with India. Otranto is famous for its saxes by the Turks in 1480. Gallipoli (pop. 14,000) does a considerable commerce in oil and in wines. Taranto (pop. 61,000), the ancient Tarantum, is on the canal that unites the Mare Grande and the Mare Piccolo; it was founded by the Spartans, and through the fall of Sibari, became the strongest and richest town of Magna Graecia, but decayed after its defeat by the Romans; now it is one of the three principal points of naval defence and supply, where it controls the two divisions of the Ionian Sea. The town is situated on the Apennines, the Ointo River, the group of Mt. Santa Croce, the Maddalena Mountains, the Poliino group, and the Ionian Sea. It has the shape of a hirsehoe, with its caks on the Ionian Sea. Originally the Basilicata must have been a high plain, like that of Sisla, but having been deeply ploughed by the waters, it became a rough and desolate country, in which the communication is difficult. Its coasts are infected by malaria, on account of the swamps formed by the rivers and of neglect; and yet on these now deserted coasts there flourished Metapontum and Eraclea, cities of Magna Graecia. Besides its dense forests, the mode of life of its inhabitants, separated as they are from the rest of the country on account of the difficulty of communication, contributes to keep this region in a condition inferior to that of the other parts of the kingdom. The climate varies with the altitude: some parts are subject to sudden changes. Agriculture and herding are the principal occupations of its people, among whom industries and commerce are not developed. In view of the fact that the country is divided into vast estates, the peasants are very poor, and they emigrate, so that the numerous abandoned huts and farms are becoming desolate. Potenza (pop. 16,000), the chief town, built at a height of 2700 feet above the sea, near the source of the Basento River, is relatively a modern city, because the ancient one, which was on the plain, at the place called La Murata, was destroyed by Frederick II and by Charles of Anjou. Metapontum (pop. 15,000), on the slopes of Mt. Vulture, was the capital of the Normans and a stronghold of Robert Guiscard. Venosa was the home of Horace; Matera (pop. 17,000) has a splendid site.

Calabria comprises the provinces of Catanzaro or Calabria Ulteriore, Cosenza or Calabria Citeriore, Reggio Calabria or Calabria Ulteriore I. Calabria includes the extreme western limit of the Italian peninsula and is connected with the rest of Italy by the Polino group, which is its northern boundary; on all other sides it is bounded by the sea. A considerable narrowing between the Gulf of Santa Eufemia and Squillace divides Calabria into its northern and southern parts. In ancient times it was called Bruzio, and on its Ionian coast stood the luxurious Sibari and the powerful Cotrone, with other famous cities of Magna Graecia. In the Middle Ages the pirates infested the coasts, whose plagues were driven away from the mountains and abandoned the care of the waters so that the coasts became swampy; this is the reason why Calabria does not furnish a maritime population in proportion to the development of its coasts. Calabria is the land of all Europe that is most desolated by earthquakes. Its climate varies, according to altitude, between a southern climate on the Ionian coast and an Alpine one on the heights. It is an agricultural country of which the principal products are grain, oil, wines, figs, and especially bergamot, for the extraction of its essence. The extensive forests of Sila produce the greatest amount of this most valuable product. The prevalence of vast landed estates keeps the labourers in poverty, and they emigrate to countries beyond the sea. Beginning at the north, the principal cities are Cosenza (pop. 21,000), capital of the Bruttians, on the Crati River, at its confluence with the Basento, in the bed of which, according to tradition, Alaric was buried with his treasures. On the mountain sides there are distributed sixteen Albanian towns, of which Spezzano is the most important. Corigliano (pop. 13,000) has a beautiful castle. San Giovanni in Fiore (pop. 13,000), on the Sila, was so called on account of a famous abbey founded in 1044 by Urban II, to which the pope who landed at the mouth of the Neto River to bring about an insurrection in Calabria, were defeated and taken prisoners. Castrovillari (pop. 10,000) is an ancient city on the slopes of the Polino, and Paola on the Tyrrhenian coast, the birth-place of St. Francis of Paola, the founder of the Order of Minims (1416-1507), contains a very famous sanctuary. Catanzaro (pop. 32,000) is built upon a height above the valley of Marcellina. Squillace, on the gulf of the same name, was the birth-place of Cassiodorus, a civil officer of Theodoric. Cotrone, on the site of the victorious rally of Sibari, and seat of the Pityuses, is the only a small port. At Pizzo, on the Gulf of Santa Eufemia, Joachim Murat, once King of Naples, was shot 17 October, 1815. Niceastro (pop. 18,000) has a population of Albanian origin. Filadelfia was founded.
in 1783 by the survivors of Castelmenardo, a town that was destroyed by an earthquake. Reggio (pop. 45,000), a beautifully situated city of Greek origin, has undergone many calamities at the hands of men and by the action of nature; it was devastated by the Romans, by Totila, by the Saracens, by the Pisans, by Robert Guiscard, and by the Turks, and it was almost totally destroyed by the earthquake of 1738. It rose again, beautiful and splendid, but a more terrible earthquake, on 25 December, 1908, reduced it to a heap of ruins, under which were buried more than the half of its inhabitants. As has been seen, large cities are numerous in Italy; in fact, that country contains a greater number of them, in proportion to territorial extent and to population, than does any other country.

Aeduct of Claudius

in Europe; there are 65 cities with a population of more than 35,000 inhabitants each. This abundance of large cities, surrounded by smaller ones, is of great historical and artistic importance; it is also the cause of the limited influence of the capital upon the life of the nation, in contrast with the rule that obtains in other countries.

Climatology.—As a whole, Italy has a good climate, due to the Alpine wall that screens it from the northern wind and to the sea that surrounds it on three sides. From the Tyrrhenian and the Adriatic Seaward vapours, with alternating winds, those from the south-west (Libeccio) and those from the south-east (Scirocco), which blow from the middle of September to the end of spring and which accumulate the sea vapours on the Apennine heights, where they are precipitated in rain and snow, and whence they furnish to the soil the humidity necessary for vegetation. Unhappily, the ill-advised devastation of forests over a great portion of the Apennines has destroyed, in great measure, what provident nature had done in that connection for the good of Italy. The mean rainfall as a rule is between 20 inches and 40 inches, but it is subject to a considerable fluctuation on account of topographical conditions; so that it increases to a maximum of 100 inches on the Alps. The Tyrrhenian coast has a heavier waterfall than that of the Adriatic; while the plain of Apulia and the Salentine peninsula are the driest regions of Italy. In the north, the most copious rainfalls occur in October and in the spring, and then the rivers of the valley of the Po are at their highest, whereas little rain falls in winter. In peninsular and in insular Italy the winter rains, on the contrary, are heaviest, and the absence of drainage causes the waters that overflow from the river-beds to inundate the lowlands of the coast and thereby to develop malaria, from which only six provinces are free. The regions where this evil prevails to the greatest extent are the Tuscan Maremma, the Roman Agro, the Basilicata, and almost the whole of Sardinia. Snow falls with frequency in the Alpine region and in the valley of the Po; it is more abundant along the Adriatic watershed than on that of the Tyrrhenian Sea.

Fauna and Flora.—Italy lies within the Palearctic region, in which live a majority of the animals useful to man. It lies within the Mediterranean division of the floral kingdom and contains five botanical divisions: (1) The Alpine region, limited to the higher parts of the Alps and of the Apennines, between the highest line of forest vegetation and the lowest line of perpetual snows; characteristic of it are the edelweiss (Leontopodium alpinum), the rhododendron and the Alpine grasses of the reed (Cyperaceae), the rush and the clover variety. (2) The mountain or forest region, of which the pines and beeches are characteristic. (3) The region of the Po, devoid of forests and of evergreens; here grow vines, the elm, the mulberry, the poplar, the willow, the elder, hemp, flax, etc. (4) The Mediterranean or evergreen region, which comprises the remainder of the peninsula and of which are characteristic the evergreen trees and plants, as the olive, the fir, the cypress, the orange, the lemon, the myrtle, and the oleander. (5) The submarine region, which comprises the various sea-woods. The Italian flora contain 14,912 species, of which 325 have been introduced from Asia, Africa, and America.

Demography.—(1) The People of Italy.—It would seem that in the quaternary period man lived in Italy,
together with species of animals that have been lost or have emigrated, and witnessed those great commotions of the earth through which the sea receded from the lands of the Po, the Apenines arose, and the volcanoes and mountains of Campania became detached from the mainland. There has been much discussion as to the origin of the early inhabitants of Italy, as to the way by which they came, and as to the periods of their immigration, but, until now, only the most contradictory hypotheses have been reached. The most recent results that have been furnished by palaeontology, by linguistics, and by archaeology lead to the conclusion that Italy and a considerable part of Western Europe were primitively occupied by a race having a dolichocephalic cranium, and therefore of a branch of the family of the Cham. Relatively nearer to our times, there are two orders of the Aryan immigration into Italy: the primitive and the posterior immigrations. In the former (1200-900 B.C.) we find two very ancient races, the Messapico-Iapygian, which came of the Illyrian trunk, and the Italic, properly so called. It would seem that the Messapians came by sea from Greece; and at a later period, by land, the Iapygians, who occupied the Adriatic coast, migrated to Campania by the sea, probably, the historical Autochthonians of the peninsula. The Italics, who are divided into two great families, the Latins and the Umbrians, descended into Italy from the East, or, as seems more probable, from the North, by the valleys of the Inn, of the Adige, and of the Alpe, and occupied the territory of the Po; but other peoples appearing, they moved to the south of the peninsula and became identified with the Latins, occupying the western watershed and dividing into the branches called Oscans, Ausonians, and Enotrians or Italics. Then came the Umbrians, whose rule lasted a short time; and, having been defeated by the Gauls on the Po and by the Etruscans on the Arno, they withdrew to that region to which they gave the name of Umbria. But, a great family of this race, the Sabines, passed farther on and established itself on the highland of Rieti, nearer Campania and Apulia; and having increased greatly in their new territory, they gave origin to the Samnian, Marsian, Pelignian, Vestinian, Marrucinian, and other peoples.

That broad territory that lies between the right of the River, the Apennines, and the sea, came to be inhabited by the Etruscans, called also Rasenians or Tyrrhenians. As to the origin of this people there are two theories, one that of Herodotus, which taught that the Etruscans came by sea, driven from Lydia by famine; and the other, that of Niebuhr, Mommsen, and Helbig, according to which the Tyrrhenians came into Italy by land, over the Rhetian Alps. Of the primitive inhabitants of Italy, these were the ones who reached the highest degree of civilization, as is shown by the splendid remnants of their cities and by the objects found in their tombs; it is a pity that their language is not yet known. Later immigrations were those of the Gauls and of the Greeks. The Gauls, who were formerly held to be of Celtic origin, which now, having been confirmed, came down the Alps beginning of the sixth century B.C., divided into several families: Cenomanian, Insubrian, Boian, Senonian, etc. They were harsh and rapacious people, who made Cisalpine Gaul return to the barbarous state out of which the Etruscans had taken it, and often, in later historical ages, their nefarious influence was carried over the whole of Italy. On the southern portion of the peninsula there were established numerous Greek colonies, whose cities, as we have seen, arose to great power and splendour, whence the name Magna Graecia, given to the southern part of Italy. The north was inhabited by the Ligurians and by the Venetians, the origin of which race is not yet established. Some persons consider the Ligurians to be a very ancient race, preceding the Aryans and allied to the Iberians, while other authori-

ties hold that the Ligurians were of Celtic origin. However that may be, this people occupied a great portion of the western watershed of Italy, and then, expelled by the Italics and by the Etruscans, they sought new homes on the Rhone and on the Pyrenees.

It seems that the Ligurians were the first to come to Illyria and that its expansion in Continental Italy was stopped by the Gauls; at any rate, this people, who, unlike the Etruscans, had not abandoned a pastoral life and its habits, knew a great deal about agriculture, which was the basis of private life and social relations among the peoples of the third and second centuries before Christ, but whose economy was extremely poor and which, owing to the Illyrian, was even further impoverished.

(2) Population.—In 1770 the population of the territory that now constitutes the Kingdom of Italy was in round numbers 16,477,000 inhabitants; at the beginning of the nineteenth century it had grown to 18,125,000; and the census of 1901 showed a population of 32,475,253 inhabitants, implying an average annual increase of 7.38 per cent from 31 December, 1881. On 1 January, 1908, Italy had 33,909,776 inhabitants, being, therefore, the sixth state of Europe from the standpoint of population. The mean density of the population is 267 inhabitants per sq. mile; that of the cities, which is 6600 per sq. mile, is higher than that of Great Britain and Ireland; but, when it is considered that those countries are agricultural, industrial, and commercial while Italy is devoted essentially to agriculture, and is backward in the development of that industry, its population is shown to be inferior to that of the cities, accounts for only about 3.8 per cent. The population, moreover, is very unevenly divided over the territory, according as life is more or less easily supported by the fertility of the soil, by industry, or by commerce. The most crowded population is that of the province of Naples: 3448 inhabitants per sq. mile; after that come the provinces of Milan, the district of Genoa, the coast of Apulia, between Barletta and Monopoli, and the slope of Mt. Etna. The province of Sassari is the least inhabited (80 inhabitants per sq. mile); but there are extensive regions, such as the Roman Campagna and the plateau of the Murgia, that are almost uninhabited. As to the distribution of population, 71.8 per cent of the inhabitants live in towns and 28.2 per cent live in a country life. It is only in Venice and in Tuscany that the numbers of the town and country dwellers almost balance each other, while in Emilia, the Marches, and Umbria the country people do not exceed the towns, while the opposite is the case in Sicily and in Sardinia. It is to be regretted that an ever-increasing tendency towards agglomeration is manifested, which, together with the absence of the landowners from the small centres where their properties are located, is the source of great economical, educational, and moral evil.

Foreign residents in the kingdom, on 10 January, 1901, which is the date of the last census, numbered 61,606, of whom 37,762 were permanent residents, and of these there were 9079 Swiss, 7985 Austrians, 5748 Germans, and 5033 French, after which came in order of number the English and the Norwegians.

The highest averages of marriages are furnished by Abruzzi and Molise (9:1), Campania and Calabria (8:1), Apulia (8:2), and the Basilicata (9). The highest birthrates are those of Lombardy, Venice, Apulia, and Calabria. And here it may be observed that depopulation through the vice of neonatalism begins to show itself also in Italy, especially in the large cities, considering that the average of 36, in 1872-75, is reduced now to 31.4, notwithstanding the fact that the average of marriages has remained approximately constant; and while there is an average excess of 10.6 per 1000, the number of births is also inhabited by the Ligurians and by the Venetians, the origin of which race is not yet established. Some persons consider the Ligurians to be a very ancient race, preceding the Aryans and allied to the Iberians, while other authori-
which is found especially in the cities of more than 100,000 inhabitants. In 1907 there were 4,338 for every 100 births, including those born dead. The lowest averages of mortality are furnished by Piedmont and by Liguria (19.7); and the highest are those of Lombardy (23.2), the Abruzzi (22.7), the Basilicata (27.7) and Sardinia (22.4). Tubercular and intestinal maladies and tuberculosis furnish the highest figures to the death-rate, together with acute and chronic bronchitis and heart disease. In 1907 there were 1,315 homicides (3.9 per 100,000 inhabitants) and 2,312 suicides (8.9 per 100,000 inhabitants).

(3) Emigration.—It is subject to this very important sociological phenomenon, not only on account of over-population, as some believe, but because capital does not promote industries, which is due to a moral as well as to an economic cause, the former being a lack of confidence between lender and borrower, and the latter, an exaggerated fiscalism and the want of a protective tariff; it is due also to a social cause, namely the subverting theories with which socialism inspires the working classes. These are the true mediate reasons for Italian emigration that produces a lack of labour, and, therefore, economical disorder, which itself is the immediate cause of Italian emigration; all the other causes, such as the example of relatives and of friends who emigrate, the cheapness of travel, the facility of receiving news and of returning home, and the propaganda of navigation companies are of little consequence, when they do not rest upon economic uneasiness—which has been the determining element of every migratory movement in the world—nor can any human power prevent its effects. The law of 31 January, 1901, regulates emigration, and it is to be hoped that its provisions will remain in force, because the state should not promote, encourage, or guide the current of emigration. Figures are clearer than words in these matters.

</table>

The difference between temporary and permanent emigration is no longer taken into account in statistics, for the very good reason that it does not show positive facts, either because of the facility of translocation, or because the emigrant, having found work and comfort at the place to which he emigrated, may establish there his home. In any case, temporary emigration occurs more frequently from the provinces of Venice, Lombardy, and Piedmont, and is directed more especially towards France, Switzerland, Austria, and the Balkans. Sixty-four per cent of the emigrants are farm labourers. The regions that furnished the largest numbers to the total emigration in 1906 were Piedmont, Venice, the Marches, the Abruzzi, Campania, the Basilicata, Calabria, and Sicily. With relation to transoceanic emigration the largest proportions per 100,000 were furnished by the Marches (2222), the Abruzzi (3569), Campania (2677), the Basilicata (3764), Calabria (3583), and Sicily (3390). From 1 July, 1906, to 30 June, 1907, there emigrated to the United States 235,731 Italians, nearly 43 per cent of the total of emigration. In 1907, during the economical crisis in the United States, 154,500 Italians who had emigrated returned to their country, and there was a suspension in emigration—only a suspension, because in the first six months of 1908 there were 218,482 emigrants, of whom 187,086 went to the United States, an increase of 152,320 and 151,406, respectively, over the figures for the same period of 1898. The undesirable element in Italian emigration is not furnished by the illiterate cafone, who has given and continues to give—actual value to lands in the United States, but rather, by ungodly educated emigrants who use their unfortunate fellow-countrymen, as well as the native of his class, for their own ends. Is Italian emigration a good or an evil? For the economy of Italy it is a good, seeing that the credit of Italians in foreign countries, on 31 December, 1908, in the savings postal accounts amounted to 290,479,711.94 lire ($12,000,000 nearly), and the deposits of emigrants for the period of 1 January, 1907, to 31 August, 1909, amounted to 21,702,664.20 lire. In other words, there are nearly 4,000,000 Italians scattered over the world, like the overflow of a prolific and sober race, in search of better living; and over the world is said advisedly, because the Italian emigrant, overcoming all obstacles, as poverty and ignorance, goes, exploited and little protected withal, into distant lands, among peoples whose customs are totally different from his own, and whose languages are unknown to him. This adaptation to climate and to social life is indicative of his cosmopolitan character.

(4) Language and Religion.—Although the population of Italy is ethnically mixed, and although there is considerable variation in its physical types, it is nevertheless different from that of all the other countries of Europe in the astonishing unity of its culture, of its language, and of its religion. That which is foreign is soon absorbed; and the Italian nation has the further advantage that, among a population of nearly 36,000,000 inhabitants, only 2,000,000 of them are subject to permanent foreign governments. The Roman conquest spread popular Latin, first, over Italy, and then over the known world; it was at first slowly altered by the linguistic habits of the various countries, and then, more rapidly, through the decay of the Roman Empire and through distance from Rome. Thus originated the Romance or neo-Latin languages, and the first of them, by its historical excellence, is the Italian, which is the pure and clear continuation of vulgar Latin, because the latter, in Italy, was unaccompanied by other tongues. Formerly was the principal commercial language known by foreign peoples, especially by those of the Levant. At present it is spoken by nearly 36,000,000 people.

The dialects that properly belong to the Italian system are the Tuscan, which is the typical and the literary language of the Italians, the Venetian, Corsican, Sicilian and Neapolitan, the Umbro-Romish and the Marchesian. To the Gallo-Italian system belong the dialects of Liguria and Piedmont and the Lombard-Emilian. Those are the principal dialects, spoken in the various regions after which they are respectively named, having themselves subdivisions that are due
to phonetic alterations. To the neo-Latin non-Italian dialects belong the Franco-Provençal, which is spoken in the high valleys of the Western Alps, and the Latins of the Grisons, in Friuli, and in Molise. The German language is spoken in Piedmont and in Venetia by the descendants of colonies that were established in those provinces in the eleventh and in the twelfth centuries. The language of Albania is spoken by the descendants of colonists who went to Southern Italy and to Sicily, in 1461, with Skanderbeg after the fall of Albanian independence. The descendants of the Greeks who migrated to Calabria and to the territory of Otranto, between the ninth and the eleventh centuries, preserve their original language. In all, there are 770,000 persons in Italy who speak languages other than Italian.

The predominant religion is the Catholic, to which belong 97-12 per cent of the population. The census of 1901 showed the presence of 65,595 Protestants and of 33,617 Jews, while 793,276 persons made no mention of their religion in their declarations.

(5) Arts.—In the first half of the Middle Ages, among the fine arts religious architecture reached a certain degree of perfection; the churches which it created reproduced the ancient Roman basilicas (Santa Maria Maggiore, San Clemente, and others, in Rome), and the ornaments, octagonal and semicircular vaults of the Roman baths; in this way the Christian-Roman or neo-Latin style was developed. At the same time the Greeks brought the Byzantine style to Italy (San Vitale in Ravenna, 537, and San Marco in Venice, 876). Towards the year 1000 there appeared in Italy the Romanesque style, which substituted the vaulted roof for the plain ceiling (the cathedral of Pisa); while Arabic influence was felt in Sicily in the construction of the magnificent cathedral of Monreale and of its adjacent cloister. Towards the latter part of the Middle Ages, painting, through the impetus given to it by Giotto, produced true masterpieces. Among the painters who became famous at that time are Senesi, Buoninsegna, and Martini, the two Gaddi, Fra Angelico, and Masaccio, who was the true founder of the modern school of painting. Among the famous sculptors were the two Pisano, Orgagna, Giberti, and Donatello, whom we shall mention later (1466), who may be called the Masaccio of sculpture. Finally, we should name Luca della Robbia, a popular sculptor who invented the terra-cotta process that is known by his name. The erroneously so-called Gothic style that was developed in France was brought into Italy; where, however, it was not fully adopted, except in the north, the church of St. Stephen in the cathedral of Milan; the churches of Santa Maria Novella and of Santa Croce in Florence, the cathedrals of Siena and of Orvieto and others are based upon it, as are, among other civil edifices, the Ducal Palace in Venice, the Orgagna Loggia, in Florence, and the communal palaces of Udine and Siena.

The Renaissance in the first decades of the sixteenth century led to the further development of the fine arts, and great masterpieces were produced. Here it is enough to mention the three great names of Leonardo da Vinci (1452-1519), Michelangelo Buonarroti (1474-1564), and Raphael Sanzio (1483-1520), which have made that age immortal. In architecture Roman forms were adopted, and the first examples of Renaissance architecture were the churches of Santa Maria dei Miracoli in Venice, San Lorenzo in Florence, etc.; and among civil buildings, the Pazzi and the Sassetti palaces of Florence, the Palazzo Uguccione di Urbino, etc. The best architects were Bramante, Giacomo Barozzi, called Vignola, Peruzzi, Palladio, the two Sangallo, Sansovino, and Buonarroti, who planned the cupola of St. Peter's. Sacred music reached its acme in the compositions of Palestrina (1529-1594). The straining after odd and exaggerated forms which were condemned in the literature of the seventeenth century also appears in the architecture and in the sculpture of that time. Bernini (1598-1680) and Borromini (1599-1672) in the seventeenth century introduced the baroque style which was disfigured by their imitators. But painting remained free from the defects of that period, through the influence of Doci, Sassoferrato, the two Carracci, Alban, Domenichino, and Guido Reni. The heavy and comforted manner of building in the seventeenth century gave way to a lighter but peculiar style marked by ornamentation; it was brought to Italy from France. This style, which is called rococo, corresponds to what in literature is known as preciosity; but towards the middle of the eighteenth century classical forms were revived, especially in Italy, in the works of Vanvitelli and Juvarra, while Canova restored its simplicity to sculpture, combining the study of nature with that of classic forms. Music also continued its ascendant progress under Pergolesi, Porpora, and Paisiello. In the nineteenth century architecture attempted the "liberty" style, which came from beyond the Alps; sculpture developed, as is shown by the names of Bertolini, Tenerani, Dupré, Monteverde, and others; but painting produced less noted names (Celestino, Fraccassini, Morelli, Maceri, Michetti, etc.). Profane music, on the other hand, reached its greatest height in form, initiated by Rossini and the operas of Bellini.

ECONOMICAL FACTORS.—(1) Agriculture.—Italy was once the classic land of agriculture; but, in our day, notwithstanding a reawakening that foretells better times, it is one of the countries in which agriculture is most backward. This is due to many causes, of which the chief is fiscalism and the landlord system (there were 3,351,498 landed proprietors in 1852, which number was reduced to 3,286,691 in 1901); absenteeism and the inertia of the large landowners, the ignorance of agriculture and the lack of capital and of agrarian credit are also to blame. And consequently the average yield of the farms in Italy is less than one-half the yield in Germany and England, notwithstanding better conditions of soil and of climate. Exact data concerning these matters will not be had until the valuations that are made concernable to the law of March, 1886, are available. So far as wine is concerned Montello, a remarkable product, to the silk-worm industry and to the cultivation of tobacco. But, in order to remedy this evil, there was established, in 1907, an office for the express purpose of collecting agricultural statistics. The production of wheat is inferior to the demands of the population, and great quantities for that staple are imported, notwithstanding the high duties. On the other hand, there is an over-production of wine. The cultivation of vegetables is important, as is also that of kitchen herbs and of fruits, in which there is a great deal of exportation that could be profitably increased if refrigerator cars were used for transportation, as in America. In the production of silk-worms, Italy is the leading country of Europe, and the third, after Japan and China, in the world: in 1906, there were produced 538,380 new cocoons, and the native and the imported cocoons that were spun by the factories throughout the kingdom produced a total of 26,000 tons. Among industrial plants hemp and flax hold an important place in Italian agriculture, there being a yearly product of nearly 80,000 tons of the former and of nearly 20,000 tons of the latter, furnished in greater part by Lombardy. Among the other industrial plants are the sumac and the marmal in Sicily, from which in Autumn the first products are obtained, and the manufacture of hate, etc. Cotton is imported from America, and of late years there has been a successful effort to cultivate beet-root for the manufacture of sugar, and also to cultivate tobacco, which, in 1905, yielded a product of more than 7000 tons from 12,500 acres. Horticulture has made notable progress

226
in recent times, especially in Tuscany and on the Ligurian Riviera, which has an exceptionally favourable climate for this industry. Unfortunately, notwithstanding so many favourable conditions, agriculture, which is so prosperous in England, in Italy is in a rudimentary state as yet. Between 1867 and 1906 there were rearested, at the expense of the Government and with its assistance, 114,000 acres, costing in all $1,700,000, a very small showing in the presence of the serious problem of reforestation.

(2) Livestock.—There is not much raising of live stock in Italy, not enough even to supply the home demand, in which that country is behind the nations of Central and of Northern Europe; and it is not easy to understand why agriculturists do not profit by the advantages offered by the Government in this connection. The animals that are chiefly raised are oxen, horses, asses, mules, goats, sheep, and hogs. On account of the natures of the different peoples, in northern Italy is found chiefly the raising of the larger animals, while on the peninsula the raising of smaller animals is prevalent. Poultry and eggs are a special source of wealth; still their supply is not equal to the demand. The fisheries, of river and of sea, are neglected by the Government; each year there is a retrogression in these pursuits that is stayed by the co-operative efforts of a few fishermen of the Adriatic shores of the Marches, assisted by their priests.

(3) Minerals.—In view of the lack of coal, Italy is not very rich in mineral products, although lignite, anthracite, and peat are not scarce. It is the first country in the production of sulphur, however, as we have seen, when speaking of Sicily; formerly there was no competition in this commodity, but now California has closed the American markets to the Italian produce. Italy abounds in salt (Salsomaggiore and Volterra); it is rich also in iron ores of the best quality, found in the regions of Brescia, Bergamo, and Como, and more especially in the island of Elba. In Liguria, Piedmont, and Venice is found copper, but more abundantly in Tuscany, near Campiglia Maritima, where there is a great establishment for smelting the ores of Lansi and of Mt. Temperino; these mines were known to the Etruscans and to the Romans, who left there the traces of their industrial spirit. The greatest yield of mercury is obtained from the mines of Grosseto, Mt. Amiata, and from those of Siena. In 1906 the total production of minerals, in which 69,224 workmen were employed, amounted to a value of $20,000,000. Another source of wealth to Italy are the quarries that produce valuable materials for construction, as pozzolana (cement), volcanic tufa, calcare, sandstone, etc., and stone, such as decorative and statuary marbles, granite, slate, peperino etc., as well as other materials for use in the arts, such as pumice stone, lithographic stone, asbestos, and colouring clays, etc. Italy is rich in thermal and in mineral waters that compare favourably, from the therapeutic standpoint, with those of other countries, and they could be made the sources of considerable profit, if they were competently exploited. Among these thermal waters special mention should be made of those of Acqui (Alessandria), Salsomaggiore (Parma), Tese (Benevento), and Bornio. Among the mineral waters, the following obtain highest favour: Monte Cateni (Tuscany), Recaro (Venice), San Gemini and Nocera (Umbria), and Ischia and Casamicciola (Naples).

Of late years Italy has not been idle in regard to the redemption of lands: from 1884 to the present time nearly 4,000,000 acres have been redeemed, whether by the process of filling-in, by draining, or by the use of hydraulic machines. In 1905 the King of Italy, at the petition of the American agriculturist Lubin, initiated the establishment of an International Agricultural Institute which, totally independent of all political and national connection, should study agricultural conditions in the different countries for the general good. All the Powers accepted the initiative and appointed each a representative in accordance with it, so that the institution is now an accomplished fact.

(4) Industries.—Industries and manufactures fell from the prosperous condition in which they were in the Middle Ages when Italy was the teacher of other countries. Political dissensions, internal strife, and lack of technical instruction, the want of capital, and an exaggerated protectionism produced a certain relaxation and want of care, in consequence of which national industry neither followed the progress of the times nor even produced the supply required by national demand; and it fell entirely upon the discovery of steam, which revolutionized the economy of peoples and of states. But in recent years Italy has reawakened and, notwithstanding obstacles in the way of development, increased by an exaggerated and ill-advised fiscalism, has made notable progress in its industrial life, especially through the intelligent efforts of its northern population, to the extent, in fact, of attaining the highest ranks in the silk industry, as well as in those of cotton, wool, leather, of the metals, and of alimentary products (cheese, salted meats, and pastes). Notable also are the soap industry, the chemical products and the paper industries, the manufacture of artistic furniture of jewellery, of objects in straw, matches, glasses, beads, porcelains, majolica, mosaics, and, in general, all of the artistic industries, due to the natural good taste of the Italian people. Visitors to Italy take into the country from $60,000,000 to $80,000,000 each year. Available fuel and motor power are the measure of industrial activity, and in 1887, in which year regular investigations on these points began, the amount of fuel used in the industries aggregated a tonnage of 4,004,685, representing a value of $18,000,000 while, in 1905, according to the most recent statistics, the tonnage was 6,912,183, with a value of $33,000,000. The importation of coal alone, deducting the amount of that commodity that was exported or entered
into the manufacture of conglomerates, was nearly 6,000,000 tons. The total sum of the various motor forces available on 1 January, 1904, according to the statistics of the "Ispettorato generale dell' Industria e Commerce," published in 1905, was as follows: steam engines, 2,472,133 horse power; motors, 45,855 horse power; hydraulic forces, 490,000 horse power; motors of other kinds, exclusive of windmills, 446,000 horse power—total, 3,008,452. As regards textile industries, in which Italy is making an effort to regain the primacy that it enjoyed in the glorious Middle Ages, we give in Table 2 the following approximate data:—

The mechanical industries, in the working of iron, are also growing, as in the manufacture of arms, foundries, and naval construction. Coal has been used until now almost exclusively in the industries, and consequently Italy is yearly a tributary to foreign countries in the sum of nearly 50,000,000; but now it can be guaranteed electric power derived from numerous watercourses, an inexhaustible wealth that Raddi estimates to be equal to 10,000,000 horse power. This is the white coal, according to the happy expression of Bergès, which will be capable of supplying both the great and the small industries; and the Italian mind must have presaged this new force, in which the future prosperity of Italy lies, seeing that in this country, where, nearly a century ago, Volta discovered the electric pile, there have appeared also the two greatest transformers of electrical energy, Pacinotti and Galileo Ferraris; while Marconi, utilizing the Heritian waves, has opened up a new horizon.

The principal centres of the silk industry are Milan, Como, Genoa, Turin, and Florence; those of the cotton industry are Milan, Bergamo, Como, Turin, Novara, Genoa, Salerno, Udine, and Padua; the principal centres for the wool industry are the Biellese, Vicenza (Schio), and Tuscany; the principal centres for the manufacture of woolen fabrics and for the woollen industries in Lombardy, Emilia, Venice, and Campania; the metallurgical industries are centred at Follonica (Grosseto), Cecina, Piombino, Portoferro, Terni, Isernia, and Pertusella in Sardinia. Pozzuoli, Terni, and Brescia enjoy a high reputation for their metallurgical industries in general, and for the manufacture of arms in particular, while the products of important shops in Lombardy, Piedmont, Venice, Tuscany, Liguria, and Naples, in marine engines, railroad supplies, automobiles, and kindred productions enjoy high favour. Naples, Leghorn, Spezia, Genoa, and Sestri Ponente have considerable dock yards, and the largest naval arsenals are at Spezia, Venice, Naples, Castellammare di Stabia, and Taranto. Italy occupies an important position with regard to the industrial trades, the development of which is being promoted through the establishment of the museums of Turin, of Rome and of Naples, and by the opening of industrial schools. Florence, Venice, and Rome are famous for their mosaic productions; Venice, the Romagna, the Milanese, and Tuscany, for their terra-cotta, majolica, and porcelain arts; Venice and Murano for their mirrors, for glass, and for glass beads; Naples, Genoa, Leghorn, and Sestri Ponente for their manufacture of glass, Naples, Venice, Rome, and Florence, for their bronzes, statues, pictures, tapestry, etc. Tuscany, and especially Florence, enjoys a good reputation for the manufacture of straw hats, as do the establishments of Piedmont, Lombardy, and Liguria for the manufacture of paper, and especially so Fabbrano, in the Marches, for its hand-made paper, one of the oldest establishments of its kind in Europe. Milan is the principal centre of Europe for the printing of music and is the chief centre of Italy for papermaking. In alimentary products Liguria and Naples lead for pastry, and Bologna and Modena for their sausages; Liguria for salt fish; Lombardy for its cheeses; Tuscany and Liguria lead in the production of oil. The best-known wines, enjoying high esteem in foreign countries, are Barolo, Balsamina, Gugnolino, and Vernaccia of Piedmont; Sangiovese and Canino, of the Romagna; Chianti, Pomino, and Rufina, of Tuscany; Orvieto and Aleatico, of Umbria; the wines of the Roman Castelli; Taurasi, Capri, and Falerno, from the southern provinces.

(5) Commerce.—More intimate relations with the principal powers, with which Italy has commercial treaties, and the increase of ways of communication by land and sea, especially the tunnelling of the St. Gothard, and the Simplon, and the opening of the Suez Canal, have facilitated commercial relations and have increased the interest of traders in all the countries. This is sufficiently shown by the fact that, while the sum total of Italian commerce in 1861 was of a value of $3,200,000, it was of a value of $922,000,000 in 1907, exclusive of precious metals, of which amount $552,000,000 represent the imports, and $370,000,000 the exports; the commercial interests are Lombardy, Piedmont, Liguria, and Venice, which is due not only to the greater activity of the inhabitants of those regions and to their contact with the neighbouring foreign peoples, but also to the many good highways of those provinces, and to their navigable canals, which are the third rank are Emilia, Tuscany, the Marches, Umbria, and Lazio. The commerce of Southern Italy and of Sicily is yet at a low standard, although it is slowly awakening. The greater portion of foreign commerce is done by maritime transportation, the most active ports being those of Genoa, Leghorn, Naples, Palermo, Catania, Brindisi, and Venice. The economical conditions of Italy, on the whole, are not unfavourable, but the nation is far from enjoying the prosperous conditions to which other countries have attained in this regard. The weak points are in the backward unscientific condition of agriculture, in the raising of cattle, waving on the verge of excessive cultivation; while there is a considerable danger in the exaggerated protectionism that gradually is fixing its roots in the sentiment of the people and in that of nations.

The merchant marine is not at the height that it attained in the Middle Ages under the glorious maritime republics, and a complication of historical and of geographical causes, added to the inertia of Governments and to the lack of judicial protection, have obstructed its favourable progress. Nevertheless private enterprise has not been abated in the development of the merchant marine, although it has not attained the favourable results that have crowned like efforts in other countries. In the last four years, however, the Societé di Navigazione Generale Italiana, the Veloce Company, the Italy Company, the Italian Lloyd, the Sabaudo Lloyd, and the Società Sicula-Americana have added thirty-five large, twin-screw, transatlantic steamships to the emigrant service, with a capacity of 240,000 tons burden, and accommodation for nearly 70,000 passengers, which was done at an expense of not less than $28,000,000. The Italian merchant marine occupies the seventh position among those of the large countries. The State, to assure the merchant marine, and to secure partial and compensative construction of the ships and for repairs that are carried out in Italian yards, amounting in all to a yearly maximum of $1,600,000. This system, however, which has been in force since 1886, and in—
volving a larger sum of money, has not produced the results desired, because the cost of construction in Italian yards is higher than in those in other countries, and consequently the Government’s compensation is without practical effect. According to a new bill, the direct aid of the State would assist the mercantile marine by a compensation of equipment for a duration of not less than ten months per ton burden and by compensation for velocity, for every half mile above a 14-knot speed, as well as per ton. For ships constructed in foreign yards, the bill provides that these compensations be one-half of those granted in the case of ships that are built at home. It grants a great many reimbursements of taxes and other compensations to the thirty-one shipyards of the kingdom, if they use the home metallurgical products. This bill continues the former policy of uniting the metallurgical, the shipyard, and the navigation interests. The sum total of merchandise that was shipped or unloaded in 1906 amounted to 23,287,916 tons, of which

In sum, the paper circulation on 31 December, 1907, amounted to 2,289,060,360 lire, or 68 lire per head of the population.

(2) Labour Organisation.—The highest wages for workmen in the manufacturing industries and in commerce is of slightly more than a dollar a day, and the lowest is 30 cents, for men; and the salaries for women vary from 60 to 10 cents a day. According to the census of 1901, there were 2,471,672 wage-earning women, above the age of 9 years, as compared with 5,862,572 men; and according to the declaration made by employers conformably with the law of 19 June, 1902, concerning the work of women and of children, there were, in 14,510 establishments, 414,915 workmen and 414,975 working women. The laws of 17 May, 1908, and of 30 June, 1903, compel the employer, in some trades, to insure his workmen against accidents in work, and by the law of 8 July, 1853, the Cassa Nazionale was established for that purpose, without, however, prohibiting such insurance in private companies or in syndicates of mutual insurance. According to the statistics of the Ufficio del Lavoro, working men and women, insured and non-insured, who suffered through accidents, in 1906, numbered 166,561, of whom 9963 were women; there were 398 cases of death and 259 accidents in which many workmen suffered. It should be noted that the great increase in the number of accidents is not to be ascribed to a noteworthy increase of industrial activity, or to less prudence, but rather to the malice of the workmen, and it is extremely doubtful whether there does not exist a medical criminal school, established for the purpose of encouraging the most serious and dangerous injuries. Recently a bill has been introduced into the Legislature to remove these evils, which cause high insurance premiums and are otherwise detrimental to industry and to insurance societies. The statistics compiled by the “Ispettorato generale del Credito e della Previdenza” in 1906 show that there were 63,369 accidents for which financial compensation to the amount of $120,900 was paid. In 1905 there were 540,850 workmen insured in the Cassa Nazionale di assicurazione; the number of injured among them amounted to 145,50 per 1000, and the indemnities paid to $830,000. In the third quarter of the year 1906 there were 48,621 accidents.

Regarding the organization of workmen, on 1 January, 1908, there were 4477 leagues, having a membership of 612,804 industrial workmen; on 1 January, 1909, there were 95 camere del lavoro, having 3854 sections with 501,220 members; 43 of these camere belonged to the Confederazione del Lavoro; there were 22 federazioni of trades, on 1 January, 1908, with 2550 sections and 191,599 members. There were 2814 leagues registered in the camera del lavoro, and 1324 in the federazioni of trades, while 339 were independent. In 1906 there were 1902 strikes, affecting 255,809 workmen; in 1907 there were 1983 strikes, involving 276,535 workmen, and in 1908 there were 1543 strikes in which 218,289 workmen participated. The year 1907 developed the greatest number of strikes.
much in excess of those of 1903, in which latter-named year there occurred the maximum of industrial strikes. The chief cause of strikes related to wages, to the monopoly of labour, and to discipline, and, as is natural, the first two produced the greatest number, and times of discipline more than those related with the monopoly of labour. In 1906 20-5 per cent of the strikes were entirely successful, while 2-53 per cent were unsuccessful; in 1907, 25-5 per cent succeeded, as compared with 27-7 per cent that failed; in 1908, 21-1 per cent were successful and 26-4 per cent concluded. The remainder were partly successful. In the first quarter of 1909 there were 217 strikes, in which 34,118 workmen took part. There are in all Italy 69 organizations for the defence of the demands of workmen in the industries and in commerce.

The habit of making savings, which is one of the forms of natural provision, and also that of attending to the needs of parents have always obtained among Italians, especially in the labouring classes, whether agricultural or industrial, with greater force, in fact, than that of physical and intellectual development, and this is reflected in the remittances made by emigrants. From such remittances and savings banks, these fruits of economy were merely hoarded up by individuals and exposed to the dangers of loss; and when those banks were established, however, offering ample security through the supervision of the State, and also facilities in relation to time and place, the proportion of savings was vastly increased. In 1872, there were 120 savings banks in Italy, a number that has increased now to 208, while the number of depositors, which was 676,237, has now grown to 2,048,364. The aggregate of deposits in 1872 amounted to nearly $100,000,000, and is now equal to $400,000,000. The people’s banks, which take savings accounts, had, in 1898, deposits to the sum of $75,000,000, and now have deposits of a total of $147,000,000; and the post-office savings bank that was established in 1876 has now 5,000,000 depositors, with accounts to their favour of more than $300,000,000. The sum total of savings, therefore, may be estimated, in round numbers, at $800,000,000. Unhappily the savings banks are obliged to invest their deposits in state bonds and in first-class hypothecary loans, while the post-office bank invests deposits in loans to the Communes and to the provinces; the former, therefore, are useful to the many other industries in the manufacturing and other branches of agriculture. Here it may be observed that while the figures given above are evidence of the habit of Italians of making savings, which is nothing but deferring consumption, those figures show also the want of the habit of placing savings in profitable investments, that other form of provision which consists in renouncing the possession of the sum saved, that is, of the power of consumption, to transform it into other powers, or for one’s own security against want. Hence the slow and laboured progress of the professional unions and of the leagues, of the so-called cooperative, assistance against sickness, loss of employment, or old age, the existence of which institutions depends upon the contributions of their members. Possibly this condition may be in a measure due to the malversation of funds by the directors of such corporations and to the failure of kindred establishments that are without solid foundations or competent direction, all of which causes have increased the want of economical confidence that is instinctive in the Italian character. The proof of this is furnished by the national bank that was established in 1898 for insurance against disability and against old age; in agreement with the law of 31 May, 1907, No. 376; for in this establishment, notwithstanding its total amount of funds of nearly $13,000,000, there were registered on 28 February, 1909, only 297,719 workmen, mainly by public corporations which, in their own interests, wished to provide for the old age of their employees.

COMMUNICATIONS.—(1) Highways.—The highways of Italy, exclusive of those bordering on private property, in 1904, measured in the aggregate 85,757,300 miles; while there was a total length of 33,400 miles of mule and foot roads. (2) Railways.—In Italy, the Napoli-Portici, was opened on 4 October, 1839; in 1871 there were 3960 miles of railroad in operation, and on 30 June, 1907, there were 10,705 miles of railroads. The principal railroad lines are: (1) the one from Turin to Venice, by Novara, Milan, and Verona; (2) that from Florence to Genoa, the station of the Indies, by Piacenza, Bologna, Ancona, Foggia, Bari, and Otranto; (3) that from Genoa to Naples, by Pisa, Rome, Salerno, and Reggio-Calabria. The Italian railroads and those of France communicate by two lines, that from Genoa to Marseilles and that from Turin to Lyons, through the Fréjus, and they will soon connect, also, by the Cuneo-Nice line. They connect with the Swiss and with the German railroads by the Novara-Luino-Bellinzona line, by the Milan, Chiasso, Lugano, Bellinzona, and Airolo (the St. Gotthard road), by the Genoa, Alessandria, Novara, Dome establishment, and other lines. The Italian railroads connect with those of Austria by the Verona-Trent (the Brennero line), by the Venice-Udine (the Pontebbana line) and by the Udine, Cormons, Görs, and Monfalcone line. (3) Tramways.—The first tramway that was operated by mechanical traction was opened in 1875 between Turin and Montelieri, and on 31 December, 1904, there were 2450 miles of tramway lines in operation, 475 miles being electrified; and the combined personnel employed on all these lines included 14,742 persons. With the tramways are connected waterways, aggregating a length of 110 miles and 150 miles by navigable canals. Interior navigation, however, has been neglected until now by Italy, to the detriment of commerce and of industry, and it is a matter for congratulation that the Bertolini bill, bearing upon this matter, became law on 2 Jan., 1910. (4) The Postal Service.—On 30 June, 1908, the postal-telegraph offices and the places for collection numbered together 10,580, an average of 28 for each 100,000 inhabitants; there were, moreover, 143 such offices on wheels or afloat. This important public service is due in great measure to mutual conventions between Italy and other countries. In the last 10 years, from 9 October, 1874, and developed in subsequent congresses (Berne, 1876; Paris, 1878 and 1880; Lisbon, 1885; Vienna, 1891; and Washington, 1897), leading to the establishment of the Universal Postal Union. In some foreign places where the Italian colonies are considerable, whether through the number of emigrants or by the importance of their commerce, post-offices have been established, as in the Republic of San Marino, in Albania, Tripolitania, and Crete, at Constantineople, Valona, Salonica, Jerusalem, and in the Italian colony of Eritrea and Somalia. On 30 June, 1908, there were 198 post offices in the postal and telegraphic service, and in 1908-1909 the postal, telegraph, and telephone receipts continued to increase, notwithstanding the effects of the great economical crisis in the United States that caused a stagnation in business, in exchanges, and in emigration. The combined expenses in 1898-1899 amounted to $12,490,000, and in the last year of the following decade, that is, 1907-1908, they amounted to $24,610,000. The combined issue of stamps, postal orders, post-cards, cards for packages, registrations, and answers prepaid amounted in value to $17,296,000. During the fiscal year there were 12,743,309 packages mailed, and 2,205,214 packages received from foreign countries. These figures were due to the creation of the United States, providing for the direct exchange of packages of from
64 lb. to 11 lb., which came into force on 1 August, 1908. There were established 11 automobile services; and in order to expedite the distribution of letters and of telegrams in Rome, Milan, and Naples, there is about to be established the pneumatic postal service of the American engineer Batcheller, in a total length of 226 miles. By the year 1902, 5 April, the postal service of the navigation lines between Italy and the islands of Sicily and of Sardinia was placed under the administration of the railways of the State, while the postal and the commercial service of other lines is entrusted to private parties, with the association and control exercised by the State. For the benefit of all, profits above 5 per cent. must be paid. The contract period is limited to twenty years; the present contracts coming to an end on 30 June, 1910.

(5) Telegraphs.—Statistics for 30 June, 1908, show that there were 30,650 miles of telegraph lines, with 1,570,044 miles of wire. The submarine cables belonging to the State are of a combined length of approximately 1,250 miles. There are 5,312 telegraph offices belonging to the Government, while the number of those belonging to railroads and to other companies is 2,582; in all, 7,894.

(6) Telephones.—Telephone service was established in Italy in 1881, and, until 1907 it was furnished by private companies, except for international communication; but, by the law of 15 July, 1907, the State assumed control of city telephones, for which purpose it established the Direzione Generale dei Telefoni. There are 10 international lines, and 300 lines between cities. Moreover, there are four submarine telephone cables of a combined length of 22 miles. On 30 June, 1908, there were 2,988 telephone employees and 50,278 subscribers to city telephones.

(7) Wireless Telegraphs.—Italy has 14 fixed wireless telegraph stations that transmitted, in the period of 1907-1908, 1,475 messages, containing 29,320 words, and received 4,760 messages containing 77,186 words.

History.—With the foundation of Rome (754 B.C.), the historical life of Italy begins. About 600 B.C. the Gauls appear settled on either side of the Po (Padus); to the west along the Mediterranean are the Ligurians, and eastward around the Adriatic the tribes of Venice and Istria. In central Italy the Etruscans, of mysterious origin, had reached a high degree of civilization, as their sepulchral architecture and art remain to prove. Their neighbours, the Italic, were divided into two great groups, the Latin tribes and those of the Etruscan origin. To the northwards again was "Etruria Magna" (Magna Graecia), a number of Greek colonies, the most important of which was Tarentum. This is not the place to relate how gradually the small city of Rome extended its rule until all Italy, the Mediterranean lands, Gaul and Germany, Egypt and the Later Orient, i.e., the known world ( terra incognita) acknowledged its authority (see Rome). In those centuries of conquest and assimilation Rome was alternately a kingdom, a republic, and finally an empire. It was under the first Roman emperor, Augustus Caesar, and through his world-wide edict, that Jesus Christ came to be accepted by all classes of the Jewish and Gentile world, and in an incredibly short time the religion of the Crucified One had been established at Rome (Romans, i, 17; xv, 23; Suetonius, "Vita Claudii", xxv; Tertull., "De Praescr.", xxvi; Taeit., "Ann.", lib. XV, xlvii; see Peter, Saint; Paul, Saint), had penetrated all parts of the world, and has become the official religion in almost all of the major non-Semitic countries of the world. The churchs of these countries, in their turn, have sent missionaries to speak of the more or less reliable claims of many Italian cities to Apostolic origins for their churches (Cappelletti, "Le chiese d'Italia", Venice, 1844-71; J. Rivière, "La propag. du Christ. dans les trois premiers siècles", Paris, 1907). The historian Eusebius exhibits the most interest in the events which preceded Constantine (see Fabricius, "L. salutaris Evangelii"; Harnack, "Mission und Ausbreitung des Christenthums", 2nd ed., Leipzig, 1905; Duchesne, "Hist. Ancienne de l'Eglise", I, Paris, 1906, and Idem, "The Roman Church before Constantine", New York, 1909).

Political necessity eventually led to the abandonment of Rome as the administrative centre of the unwieldy empire and the foundation (327) of a new city (Constantinople, New Rome) on the site of ancient Greek Byzantium, in a situation so incomparable for defence and attack that for many centuries the new city was impregnable (Bury, "History of the Later Roman Empire", London, 1889). In the meantime had been fought (311) near Rome the battle of the Milvan Bridge which sealed the fate of paganism, though in the higher classes and amid the rural population it lingered to the end of the fourth century (De Broglie, "L'église et l'empire romain au IVe siècle."); Paris, 1856-66; Duchesne, "Hist. ancienne de l'Eglise", II, Paris, 1907; Allies, "The Formation of Christendom", IV, VI, London, 1861-95; G. Boissier, "La fin du paganisme", 5th ed., Paris, 1907). Out-of-
"Konige der Germanen", Munich, 1861-97). Rome itself was on the point of falling into their hands, when Pope Stephen II made his famous journey across the Alps, 754 (see Pope) to intercede at the Western Empire (see Byzantine in the Byzantines (Von Schack, "Normannen in Sicilien", 1889; Von Heinemann, "Normannen in Unteritalien u. Sicilien", I, 1894; Chalandon, "Domination normande en Italie et en Sicile", Paris, 1907; Don- dorf, "Normannen u. ihre Bedeutung f. europ. Kultur", 1913). Owing to them, and to the hearty support of the Lombard League of cities, the papacy was victorious in the first phase of its conflict with the empire (Peace of Venice, 1177). Matilda, Countess of Tuscany (1064-1115), had meanwhile passed away, and left to the papacy her vast territories in the north of Italy, and Mantua, Ferrara, etc., a new bone of contention with the empire that asserted its lordship over rights of inheritance and administration (Tozzi, "La Contessa Matilde", 3rd ed., Rome, 1886; Renée, "La grande Italiane", Paris, 1859; M. Huddly, "The Countess Matilda", London, 1905). When Emperor Henry VI married in 1194 Constance, heiress of the great Norman house, the Kingdom of Sicily (with Southern Italy) passed into the hands of the Hohenstaufen, a combination most odious to the papacy, which rightly feared the near extinction of its independence. Out of Internal Crisis and Political and the royal crown of Sicily arose the second phase of the great medieval conflict between pope and emperor (see Frederick II; Gregory IX, Pope; Honorius III, Pope) that ended (1265) in the complete ruin of the Hohenstaufen and the establishment of a French dynasty, the House of Anjou, on the throne of Naples. Only a few years did Charles of Anjou retain Sicily, for the native population came to detest the French knights and in the famous "Sicilian Vespers" (1282) cast off the yoke of France and called in the Spanish line of Aragon (Broglio, "Storia del Vespri Siciliano", Milan, 1838; see "Science e Pede", 1832-34). Meantime, Italian genius had been cultivating variously during this stirring thirteenth century. Education had been nobly fostered by the growth of universities like Bologna and Padua, created or protected by the papacy, law and order had been put on a firm basis, and a more general recognition of the Roman law (see Law; Pandects); and by the new codification of the canon law (Decretals, Papal; Corpus Juris Canonici); religion had been honored and confirmed by the rise of the Mendicant orders (Franciscans, Dominicans); the fine arts had been enriched, especially in architecture and sculpture by the return of Greek characteristics (C. Lenormant, "La Grande Grèce", Paris, 1884).

With Otto I the German imperial authority reasserted (951) its right to the crown of Italy, and henceforward the episcopal see of Northern and Central Italy, in order to sustain its claims (Cantù, "Storia degli Italiani", 4th ed., Turin, 1893-96; M. Hartmann, "Gesch. Italiens im Mittelalter", 1897-1903; Leo, "Gesch. der ital. Staaten", 1829-32). Secularly minded bishops were only too often imposed on the population of these cities, which soon resented the feudal rights and privileges of their spiritual rulers, while these, on the other hand, found support in the German emperor, whose ambitions aimed at that period culminated in the world-empire that Otto III (d. 1002) hoped to realize (Drescher, "Kultur u. Sittenwandel d. ital. Geistlichkeit im 10. u. 11. Jahrhundert", Berlin, 1890; A. Vogel, "Rathenius v. Verona u. das 10. Jahrhundert", 1854; Atto of Ver- celli, "De pressuris ecclesiasticis", in P. L., CXXIV). The second half of the eleventh century ushered in the long and disastrous conflict between the papacy and the emperors (Gregory VII, 1073-1085 and Henry IV (d. 1106). Meanwhile a new political power, the Normans, had been growing up in Southern Italy at the expense of the Byzantines, the Saracens, and the remnants of the former Lombard duchies. During the first half of the eleventh century the foundation of the second Lombard kingdom, it united it with his own, and by new gifts added the greater part of the exarchate to the papal possessions.

The generosity of the faith, the political results of the attempt to spread Iconoclasm in Italy, the hard necessity of the presence of imperial agents in the Roman Church (see PERNUS SHONNZ), again in 774, at the call of Pope Adrian I, Charlemagne entered Italy, and suppressed the Lombard kingdom, united it with his own, and by new gifts added the greater part of the exarchate to the papal possessions.

The generosity of the faith, the political results of the attempt to spread Iconoclasm in Italy, the hard necessity of the presence of imperial agents in the Roman Church (see PERNUS SHONNZ), again in 774, at the call of Pope Adrian I, Charlemagne entered Italy, and suppressed the Lombard kingdom, united it with his own, and by new gifts added the greater part of the exarchate to the papal possessions.
and the Fredericks. The former power of empire and papacy was now eagerly divided up between their more or less authorized representatives, and soon the "age of the despots", the "nubes tyrannorum", set in, bold and resourceful men who kept and increased on all sides the power they had once obtained. The Visconti and Sforza at Milan, the Baglioni at Perugia, the Malatesta at Ravena, the Scaligers at Verona, and a hundred others are types of a masterful and unique race that dominated for personal ends the prevailing anarchy (J. A. Symonds, "The Age of The Despots" New York, 1888). The great Spanish captain and cardinal, Gil d' Albornos, between 1350 and 1370 restored in great measure the papal authority in its hereditary possessions (Wurm, "Cardinal Albornos", 1894), but it was not until after the close of the Western Schism (1417) that in Martin V the States of the Church again recognized in a practical way the domination of the pope (Von Reumont, "Gesch. d. Stadt Rom", Berlin, 1867).

Fifteenth-century Italy beheld the famous reform councils of Basle (1431), Ferrara-Florence (1438–39), the vain attempts at a parliamentary organization of the Roman Church, the equally vain efforts at reunion with the Greeks, the fall of Constantinople (1453), the rapid and influential development of a pagan-minded humanism (Symonds, "The Revival of Learning in Italy", New York, 1888; Burchardt, "The Culture of the Renaissance") and of the fine arts, the moral disorders of some high-placed ecclesiastics, offset however by an extraordinary development of sanctity (St. Bernardine of Sienna, St. John Capistran, St. Antonine of Florence, St. Frances of Rome, and others). For a while the well-known "five states" of Italy (Milan, Venice, Florence, Naples, Rome) represented the political order, but from the end of the fifteenth and the first half of the sixteenth century Spain and the pope divided the mastery of the peninsula until early in the eighteenth century. After vain efforts to establish its suzerainty at Naples and Milan, France was obliged to abandon the rich prize, and after the first quarter of the sixteenth century no longer repeated its earlier attempts at the hegemony of the peninsula. The Protestant Reformation made little headway in Italy, owing to the vigorous measures of the civil and ecclesiastical order, the antipathetic genius of the people, the Inquisition (reorganized at Rome, 1542), the Society of Jesus (1540), the Council of Trent (1545–63), the lives of holy reformers like St. Charles Borromeo, the new orders and congregations, and the combined religious, ecclesiastical, and theological activities known as the Counter-Reformation (Canità, "Gli eretici d' Italia", Florence, 1865–67; see Protestantism; Socinianism; Bruno, Giordano).

The seventeenth and eighteenth centuries offer a rather sad spectacle in the various politico-ecclesiastical conflicts of Catholic states with the Holy See, in large measure, however indirectly, a result of the Thirty Years War (1618–48), e. g. Naples apropos of the so-called Monarchia Sicula; the conflict of Venice in 1605–07 with Paul III, on which occasion its state-theologian, Fra Paolo Sarpi, contributed powerfully to the Venetian opposition; the stubborn purpose of Victor Amadeus II, Duke of Savoy, to control fully all larger ecclesiastical appointments in his state; the offensive attitude of Louis XIV apropos of his ambassador's impossible privileges (1685), and other similar troubles. To these may be added the political workings of Jansenism (see Jansenius and Janseniæm; also Unigenitus) and Gallicanism (q. v.), and the concern for the safety of Christendom against the encroachments of Islam. By the Treaty of Utrecht (1713–14) Austria succeeded Spain in Northern Italy (Mantua, Milan) and later (1737) obtained the Grand Duchy of Tuscany. Savoy received Sardinia (1720) and by the middle of the century, Naples and Sicily, Parma and Piacenza acknowledged the rule of Spanish Bourbons. The ecclesiastical relations of the new powers with the Holy See, much troubled in the previous fifty years, were placed on a more satisfactory basis by a series of concordats, with Sicily in 1741, Sardinia in 1742, and Milan in 1745 (Vincenzo Nussi, "Concordata" etc., Rome, 1870). The Patriarchate of Aquileia, whose territory lay partly in Austria and partly in the Republic of Venice, was divided into two archiepiscopal sees, Görz for Austria and Udine for Venice. Italy was henceforth alternately the instrument of Spanish or Austrian policy, as was seen when in 1767 the Bourbons of Naples, Parma, and Piacenza expelled the Jesuits, and in 1786 when the ill-famed Synod of Pistoia promulgated in Italy the anti-ecclesiastical principles and measures of the Austrian Emperor Joseph II (see Prus VII, Pope; Ricci, Scipio). Religious life nevertheless flourished in Italy where the orders of the Redemptorists (1732) and the Passionists (1741) were established by their
respective holy founders, St. Alphonseus Liguori and St. Paul of the Cross. Ecclesiastical learning was also vigorously cultivated, and few ages show more erudite scholars than Muratori, Mansi, Bianchi, Bianchi, the Balleoni brothers, Zaccaria, Noris, and others.

The French Revolution put an end to the ancient Republic of Venice (1797) which fell to Austria, while the latter lost Lombardy, where the short-lived Cisalpine Republic of northern Italy was soon followed by the equally ephemeral Illyrian (Genoa, 1796), the Roman (1798), and the Porteinepan (Naples, 1799) republics. The Congress of Vienna (1815) restored the ante-revolution situation, save in Venice, which remained subject to Austria, henceforth mistress of northern and central Italy, the rest of Italy being subject to three other powers, the Kingdom of Sardinia (Turin), the papacy, and the Spanish Bourbons of Naples and Sicily. The second quarter of the nineteenth century is noted for a deep unrest in Italy against Austrian rule (the Carbonari, also Massini, Gioberti, Balbo, and others) culminating in a general adoption of all the instruments to the House of Piedmont whose prime minister, Cavour, was henceforth the soul of the new Italian unity (Kraus, "Cavour", Munich, 1901; Von Reumont, "Charakterbilder", 1886). The revolutionary agitations of 1848 led to the flight of Pius IX to Gaeta and the establishment of the Roman Republic, supported by the French under General Oudinot (July, 1849).

Prior to 1859, Italy was divided into the following states: the Kingdom of Sardinia, the Duchies of Modena, Parma, and Piacenza, the Grand Duchy of Tuscany, the Pontifical States, the Republic of San Marino, the Kingdom of the Two Sicilies, and the Principality of Monaco. The Italian territories subject to foreign powers were: Corsica, belonging to France; the group of Malta, belonging to England; the Canton Ticino, belonging to Switzerland; Lombardy, Venice, Trent, Triest, and Istria, belonging to the Austrian Empire. In 1848 Piedmont went to war with Austria for Italian independence, but was defeated at Novara in 1849. Ten years later, however, Piedmont made an alliance with France, the second war of independence was declared, and Austria having been defeated at Solferino, 20 July, 1859, by the Piedmontese army, which consisted of the Two Sicilies and the Kingdom of Piedmont. In 1860 the Duchies of Modena and Parma, the Grand Duchy of Tuscany and the Roman- gnas (12 March), the Marches and Umbria (5 November), Naples and Sicily (21 October), were incorporated with Piedmont, and on 17 March, 1861, the Parliament was proclaimed the Parliament of Italy. On 10 May, 1866, by its alliance with Prussia, Italy obtained Venice; finally, on 20 September, 1870, Rome, having been taken by force of arms, declared its union with the Kingdom of Italy through the plebiscite (2 October) of that year.

In the formation of the new kingdom, says Minghetti, the revolution was the impelling force, not abandoned, however, to the hands of conspirators unorganized and without authority, but directed by the government of Piedmont, especially by Baron Cavour, who used it in the interest of Piedmontese supremacy, while he appealed to the sentiments of independence and of Italianism very strong in the people of northern Italy. By these two forces, ably manipulated, Cavour secured the political unity of Italy under the sceptre of Savoy. The unification of Italy was essentially an act of the Piedmontese Government; otherwise Cavour had no instrumentality to accomplish the object that once Italy was created it remained to create Italians, nor would there be still, after fifty years of legal unity, that latent germ of regionalism which occasionally asserts itself more or less vigorously. If the truth of history be regarded, it will be recognized that the idea of Italian unity arose towards the end of the eighteenth century; with the exception perhaps of Machiavelli, who thought Duke Valentino (Cesar Borgia) able to bring about the union of the Italians, not one of the great men of Italy like Dante, Petrarch, and others, and none of them considering Italian unity. Joachim Murat, by his Rimini proclamation (1815), first suggested this idea but was not understood and was left to perish alone. His idea, however, was taken up and was vigorously pressed by the enemies of Christianity who held that, if, under the pretext of the union of Italy, his temporal power should be wrested from the pope, the Church of Christ would of necessity come to an end. In 1871 Rome was declared the capital of the Kingdom of Italy. In that same year Pius IX refused to accept the Law of Guarantees (see Guarantees, Law of), and in 1877 issued the decree "Non Expedit" against Catholic participation in elections to the Italian Chambers. Pius X modified this measure (1905), and has permitted, under given circumstances, the participation of Catholics in the national elections.

**POLITICAL AND CIVIL GOVERNMENT.**—(1) **Political Establishment.**—The Kingdom of Italy took the form of a constitutional monarchy, hereditary in the male line of the House of Savoy, according to the Salic law, and conformably to the Fundamental Statute that was promulgated by King Charles Albert on 4 March, 1848, for the Sardinian states. This statute which was extended to the provinces annexed by the Piedmontese realm, is similar to the French Constitution of 1830; according to it, sovereignty is divided between the king and the nation, the latter electing its representatives by popular suffrage. The legislative power is exercised by the king and Parliament, which consists of the Senate and of the Chamber of Deputies. With the exception of the right of initiative, which is common to all, these three governmental entities have each special functions: it is the province of the king to convolve both houses of Parliament, to close the sessions, to dissolve the Chamber of Deputies, to sanction and promulgate the laws. The Senate and the Chamber of Deputies have the functions of legislation and of watching over the finances, that is to say, the approval of the state budget, which is prepared by the executive branch of the Government; the houses of Parliament have also the function of announcing to the king the administrative matters; it is exercised through inter rogation, interpellation, inquest, committees of vigilance, and by other means. Laws of taxation, however, and those concerning the budget must first be approved by the Chamber. On the other hand, the Chamber is the only one to judge of the constitutional validity of the laws; if the king vetoes a law the house may be turned into a high court of justice, to pass upon cases of high treason and of attempts against the security of the State and to judge the ministers who may be accused by the Chamber of Deputies. The latter consists of 508 members who are elected upon the uninominal system by as many electoral constituencies, into which the nation is divided, there being an average population of 66,000 inhabitants for each constituency; the constituent districts may be changed every five years. The period between two general elections is called a legislatura, of which there have been 23, since 5 May, 1848, when the first legislatura was opened. The electoral franchise is exercised by all male citizens who, enjoying their civil and political rights, have attained the age of twenty-one years, know how to read and write (Electional Law of 28 March, 1895), and have the minimum value of a local cadastral tax. All citizens who have attained the age of thirty years and who enjoy political and civil rights are eligible to office. In 1909 there were 2,930,473 registered voters, an average of 11.7 per cent of the total population of the kingdom. In the last general election there were 1,905,957 voters, or 65.0 per cent of the total electorate.
ITALY
The Senate consists of members, partly hereditary (the princes of the blood), and partly appointed by the king for life, and without a definite limitation in their number, the age of forty years being a requisite for appointment. Since 1848, 1392 senators have been appointed by the authorization of the king, and counting the princes of the blood, who become senators at the age of twenty-one years and receive the voting power at the age of twenty-five. Senators and deputys enjoy personal immunity in penal matters, and therefore the Senate alone is competent to judge a senator; while, to judge a deputy, the magistrates must have the consent of the Chamber of Deputies. A senator or a deputy cannot be arrested, except in flagrante delicto. Their service is without financial remuneration. The king, as the head of the executive power, has the assistance of ministers who are responsible to Parliament; they constitute the cabinet, and are responsible collectively for the official acts of each. They are named and dismissed by the king, who, however, in the exercise of this function must hold in account the manifest tendencies of the Chamber; wherefore the government of Italy is strictly parliamentary. The minister-president of the council of ministers, representing the president of the council, represents the unity of action of the Government, in contradistinction to the diversity of functions among the different ministers. The royal prerogatives are: power to declare war, to conclude treaties of peace and of alliance, providing they do not touch the territory or funds, the right of pardon, and that of decree. In the relations of individuals to the State the constitution establishes the following general principles of justice: legal equality, individual liberty, inviolability of domicile, that of property and of public debt, liberty of the press, freedom of association and of meetings, and, finally, equity and proportion in taxation.

(2) Church and State.—The first article of the constitution of the kingdom declares the Catholic religion to be the only state religion. Nevertheless the Italian State and its jurisprudence are athetical; and in all solemn public functions, as in speeches from the throne, for several years past, any reference to the Divinity is studiously avoided, while the Government, whether conservative or liberal, has always been more or less covertly Voltairean and given to State-worship. The famous formula of Cavour, "A free church in a free state", which is a truth in the United States of America, is banished in public notices and in the documents of the Church; in all else the Church, in civil and in parliamentary matters, is subject to the State through a jus singulare, which places it in a worse condition than a private citizen in regard to property rights. The laws affecting the Church in Italy are mainly Articles 1 to 10 of the Fundamental Statute of the kingdom; the fundamental constitutional law of 13 May, 1871, on the prerogatives of the sovereign pontiff and on the relations of the State to the Church, called the Law of Guarantees; the law on the suppression of regular and of secular ecclesiastical legal entities, and on the rights of the clergy and of the clergy in the Church; the law of 5 August, 1867). By the eighteenth article of the constitution, excepting Rome and the six suburbanicarian bishops sees, the revenues from ecclesiastical benefices that are vacant belong as of royal right to the Crown, which, after deducting expenses of administration and those incurred in the interest of the vacant benefice, ought to apply the funds to purposes of worship and of charity, such as subsidies to priests and parochial needs, public worship, and the repair of poor churches. By the Law of Guarantees, the person of the sovereign pontiff is sacred and inviolable; offences committed against the king; royal honours are granted to him; the precedence recognized in him by Catholic sovereigns is maintained, and he is given the right to have guards for his person and for the protection of his palaces. The latter, that is the Vatican, the Palace of the Lateran and the Villa of Castel Gandolfo, with all their appurtenances, enjoy the right of extraterritoriality, which makes them free from visitations and inspections by public authorities, without the authorization of the pontiff and the consent of the sovereign ministry is freed from all intervention by extraneous authority, and to this end the pope is given the right to post his decrees on the doors of the churches of Rome, without censorship and with immunity for those persons whose office it is to make such publica- tions. The law also ensures to the sovereign pontiff free freedom of correspondence with the Catholic world, there being preserved to him, with this object, the head houses of the various religious orders in Rome, while he is given the faculty of establishing postal and telegraphic offices, with employees of his choosing, at his residence. The envoys of the pope and those accredited to him by foreign powers are guaranteed the prerogatives and immunities that are recognized in diplomatic agents, by international law. Finally, the law sets aside an annuity of $645,000, to be paid to the pope for the needs of the Holy See, for the maintenance of the pontifical property and the salaries of servants attached to his person; this annuity is exempted from taxation for all time. During a vacancy of the pontifical throne no judicial or political authority may interfere with the personal liberty of cardinals, and the Government is obliged to protect the meetings of the cardinals of external influence. The cardinalate is among the titles that make the holder eligible to the Senate, and, in matters of ceremonial precedence and of military honours, cardinals are made equal with the princes of the blood. The law assigns a sum of $30,000 to be paid to the Holy See for the maintenance of the houses of the various religious orders, excepting that of the Jesuits. The right of royal executur over the acts of the sovereign pontiff and that of royal placet over the acts of diocesan bishops, is exercised by the State only in regard to the use of ecclesiastical property and to the provision for the benefices, except in the city of Rome and in the suburbanicarian sees; this royal prerogative, however, is of a provisional nature, because it is to cease with the re-arrangement of ecclesiastical property that is promised by the Law of Guarantees. All religious character has been taken from maternity and from oaths; all intervention that the Church formerly exercised in public matters and in the internal concerns of the Church; in all else the Church, in civil and in parliamentary matters, is subject to the State through a jus singulare, which places it in a worse condition than a private citizen in regard to property rights. The laws affecting the Church in Italy are mainly Articles 1 to 10 of the Fundamental Statute of the kingdom; the fundamental constitutional law of 13 May, 1871, on the prerogatives of the sovereign pontiff and on the relations of the State to the Church, called the Law of Guarantees; the law on the suppression of regular and of secular ecclesiastical legal entities, and on the rights of the clergy and of the clergy in the Church; the law of 5 August, 1867. By the eighteenth article of the constitution, excepting Rome and the six suburbanicarian bishops sees, the revenues from ecclesiastical benefices that are vacant belong as of royal right to the Crown, which, after deducting expenses of administration and those incurred in the interest of the vacant benefice, ought to apply the funds to purposes of worship and of charity, such as subsidies to priests and parochial needs, public worship, and the repair of poor churches. By the Law of Guarantees, the person of the sovereign pontiff is sacred and inviolable; offences committed against the king; royal honours are granted to him; the precedence recognized in him by Catholic sovereigns is maintained, and he is given the right to have guards for his person and for the protection of
revenues, less 5 per cent for the expenses of administration, exception being made of parishes, confraternities, artistic buildings and those destined to religious cult, and the building necessary to these bodies in pursuance of their liturgical, educational, or charitable activities. Simultaneously with the suppression of ecclesiastical bodies, there was established an autonomous administration, independent of government superintendence, called Fondo per il Culto, with the function of administering the property of the suppressed bodies and, in the name of the State, disposed of the same, with a consequent transfer of about 25 per cent of its value and converted into public bonds, and of applying the income thereof to the purposes of religion and charity. The first duty of this administration was to provide for the charges upon the suppressed bodies in the cases of the existence of their personal incumbents, under the right to require such provision through process of law; the duty also devolved upon this establishment of paying pensions to the members of suppressed religious orders; and when the pensions become extinct, three-fourths of the capital sum registered in favour of the Fondo per il Culto, representing the property of the suppressed corporations, will revert to the State. The administration is also obliged to supplement the episcopal incomes that may not have reached the sum of $1200, as also to supplement the salaries of parish priests whose net income is less than $200. Under the pretext of distributing the remainder, as a revenue in equitable proportions among the different ecclesiastical and substantial reality to bolster up the Fondo per il Culto, upon which were imposed expenses beyond its resources, all the ecclesiastical bodies that were retained are obliged to make yearly increasing contributions, called "quota of assistance". As to the confraternities, the law places them under the power of the Fondo per il Culto to manage and direct their operations in this field, and authorizes the communes to require them to divert their resources to lay works, for local benefit, allowing the confraternity only a minimum annuity for expenses of religious worship. Wherefore, of all the property of the Church in Italy, the State has left only a small portion to the bodies that have been retained, and that under strong vigilance and censorship, as regards either the diminution or the increase of the property, and the expenditure made on them. Another proprietary body, to establish a fund for religious cult; and a small part was taken from the Church, to be returned to lay patrons who might ask for it, or to apply it to purposes of instruction and of beneficence. In short the greater part of the ecclesiastical property, under the guise of showing and by subtle expedients, was confiscated.

(3) Ecclesiastical Circumcision.—The territory of the kingdom is divided into 275 dioceses, including that of Rome, the Pontifical See, of which the bishop is the Vicar of Jesus Christ, successor of the Prince of the Apostles and Pontiff of the Universal Church; 16 dioceses are suburbanicarian, namely, Ostia and Velletri, Porto and Santa Rufina, Albano, Frascati, Palestrina, and Sabina. The titular cardinals, i.e. the suburbanicarian sees, the titular churches, and the diaconal ones existing in Rome number 75. Of Italian sees, 75 are immediately subject to Rome, of which 13 are governed by archbishops, and the remaining 62 constitute 37 ecclesiastical provinces, consisting each of a metropolitan see, which is one of the archdioceses, and of a number of suffragan sees that are governed by bishops. Among the metropolitan sees, that of Venice is that of a patriarchate. There are 11 abbeys and places which are declared to be the episcopal see of Rome, divided into parishes, of which there are 20,835 in all the kingdom; there are 60,446 churches, chapels, and public oratories, the service of which is maintained by 69,310 priests, regular and secular. The episcopal seminaries have 21,453 students. There are 30,564 religious; lastly, the Catholic educational establishments consist of 532 schools for boys, having 55,870 scholars, and 1302 for girls, with 102,491 scholars. The (4) Codice Napoletano, law of 1799, the civil, the commercial, the penal, the civil procedure, the penal procedure, the military, and the mercantile marine codes. The confusion between Roman and canon law, Germanic and Italian written law, and local common law obstructed the straightest path toward a more uniform motion of justice; and this gave rise to the first codifications, chief among which in Italy is the "Codice Vittorino", formulated in 1723, under Victor Amadeus II of Savoy; but the most important and best prepared work of codification was without doubt the "Codice Napoleonico", which was published on 21 May, 1804, and which served as a model for the civil legislation of almost every country in Europe or in America, including the states into which Italy was divided; the present civil code of the kingdom is directly derived from it, and for this reason, the history of French law is of great importance for the interpretation of Italian law. The authors of the Napoleonic Code were not carried away by the doctrines of the school of natural right, as were German legislators, but they sought in the countries de droit coutumier and in the jurisprudence of parliamentaries to guide the Roman written law, the Germanic law, and the law of the land most harmoniously to the needs of the modern state. Once this code had constituted itself into a nation, there was found the need of a common civil code which should unify the various codes of the former states of the peninsula; accordingly, on 25 June, 1865, there was published the Civil Code of the Kingdom of Italy, which went into force on 1 January, 1866. This code, which is based upon Roman law, is the only civil law of the land; and it needs some reformation to make it consonant with new economical and social needs. The code consists of three books and, like the French code, follows the clear and traditional Galian division: "Omnis jus, quo utinam, aut ad personas, aut ad res, aut ad actiones pertinet." Furthermore, the code is preceded by twelve articles which, as leges legum, lay down rules for the publication, the interpretation, and the application of laws in general. The very ancient rules of merchant guilds, which date back to the infancy of the kingdom, was taken away; the greatness of the Italian communes, were the source of the commercial legislation, and little by little they were systematically put in order, so that between the years 1200 and 1800 the various statutes, when approved by the overlord, came to constitute the written mercantile law of the different states of Italy. The provisions of Louis XIV (1673, 1851) the commercial law was codified and from this the Napoleonic Code was partly taken (1808). The latter was carried by French arms into many European countries. The Italian Code, the Albert Code of 1842, and the code of 1865 also modeled, on the French Code. But the one of 1865 was no longer in harmony with the modern conditions of traffic, it was succeeded on 1 January, 1883, by the new Code of Commerce, which shows progress by the wealth of its contents, by its recognition of the freedom of the contracting parties, by its simplicity of its forms, by the conciseness of its language, and by its efficacious protection of credit, especially in regard to exchange. Rumania adopted this code, almost literally, in 1857. Contrary to the order obtaining in civil matters, the law regards commercial matters as resting, primarily, on the code of commercial laws in the Staatsordnung. The commercial practice is divided into three places, one on civil law. The code is divided into four books; the first relates to commerce in general, the second to maritime commerce and to navigation, the third to bankruptcy, and the fourth to commercial causes.
Before the unification of Italy, each one of the states into which the country was divided had penal laws of its own; when, however, the union had been accomplished, the Albert Code of 1859, which was in force in Piedmont, was made applicable to the other states, excepting Tuscany, where there remained in force the Code of 1833. Reasons, analogous to those suggested for the civil code, or for sanitary matters, were apparent the need of a new penal code, and one was published on 30 June, 1889, which came into force on 1 January of the following year. This code deals first with transgressions and punishments in general, and then with transgressions in detail, and it adopts the usual, ordinary and exceptional applications of the law to felonies and misdemeanors. On the other hand, in the case of participation of several persons in a crime, by articles 63 and 64, the law accepts the sound doctrine of aiding and abetting, while the system of intensive cumulation of punishments of Bauer was adopted for cases of multiplicity of crimes and punishments. With regard to relapsed criminals the following principles were adopted: (a) relapse into crime aggravates its malice against the State; (b) such malice may be incurred even though the criminal has not hitherto been brought to the bar for his crimes; (c) the fact that a crime is habitual must be kept in sight; (d) a crime can only be branded as habitual if committed within a certain fixed period of time dating from last conviction. The system of punishment adopted, and known as the Irlandese, consisted in (a) a period of solitary confinement; (b) a period of hard labour with solitary confinement at night; (c) a period of intermediate imprisonment; (d) a period of ticket-of-leave. Imprisonment for life has taken the place of the death sentence, and periods of imprisonment for various offences vary from three days to twenty-three years, with or without hard labour according to the nature of the offence. Another penalty enforced for periods of not less than a month and not more than three years is enforced residence within assigned limits but without imprisonment. The only financial punishment is in the nature of a fine of not less than $2 and not more than $2000. Finally, there is the loss of civil and political rights, and of public office, which may be temporary, for periods varying from three months to five years, or it may be perpetual. The punishments for misdemeanours are arrest for not less than one day or more than 2 years, and fine, of not less than $0.20 or more than $400, and finally suspension from the practice of a profession or of a trade, for a period of not less than one year or more than two years. Domiciliary arrest and judicial reprimand may be substituted for other punishments; admonition, surveillance, and forced residence in a certain place are additional punishments. A recent law sanctions conditional condemnation. Causes that may nullify the trial besides the death of the accused, are amnesty, or withdrawal of the charge by the interested party, and prescription. A special reason for annulling a trial in cases of misdemeanour is voluntary surrender. Amnesty, pardon and rehabilitation are special causes of the nullification of a trial. In civil proceedings the usual course is to issue a summons citing the individual to appear for trial on a fixed day. Arrest in civil proceedings is the exception. Finally, as the present Code of Penal Procedure does not fulfil the modern requirements of a speedy trial and of fairness to the accused, several modifications have already been introduced, especially in the case for the purpose of avoiding the evils of long preliminary arrest, which violates the principle of habeas corpus, especially as the State pays no indemnity to those detained in prison while awaiting trial.

(6) Judicial Establishment. — Justice emanates from the people and is administered in his name by judges whom he appoints. To secure judicial independence judges cannot be withheld, and their residences cannot be changed. In Italy the function of the judge is limited to recognizing the existence of a law and to applying it. As regards the acts of the executive power, these, to be valid before the courts, must be conformable to the laws. For the administration of justice the kingdom is divided into five principal districts with High Courts of Appeal, for civil cases, subdivided into twenty districts with Courts of Appeal, for both civil and criminal cases and consisting each of one or more Assize Courts, which have only criminal jurisdiction; there are 162 districts of civil and criminal tribunals, and 1535 prelature, or petty-sessions courts having civil and criminal jurisdiction. Every commune, according to its population, has one or more arbitration judges, dealing only with civil cases. These unskilled officials may be called on to arbitrate money disputes, and they have the right to pass sentence in trials not involving sums of more than $20. The prator, who sits alone in his court, is the representative of the law in the popular imagination, and the State attaches to his office many functions of a purely administrative nature; in civil matters his court is also one of appeal from the sentence of the arbitration magistrates, and it is the court of first instance for civil cases involving sums of more than $20 and less than $300, and for cases of possession, whatever be the sums involved, excepting questions of taxation, in which only the tribunals have jurisdiction. The prator has jurisdiction in all felonies and misdemeanours in which the accused may be sentenced to confinement or imprisonment for not more than three months, to restriction of residence for not more than one year, or to a fine of not more than $200. Each tribunal consists of three members and has civil and commercial jurisdiction, as a court of first instance, in all cases that are above the competency of the prator, from whose judgments there is an appeal to the tribunal. In criminal matters, the Tribunal is the court of first instance, in cases not belonging to the jurisdiction of the prators or of the Assize Courts, and it hears appeals from the sentences of the prator. Jurisdiction in the second instance, in cases that are appealed from civil or criminal tribunals, belongs to the Courts of Appeal, which consist each of five members. The Assize Courts consist each of a president, who is a state judge, and of twelve citizens, called jurors, who are selected by lot from the district lists of those who are duly qualified by age and by intelligence to fill the office. The Assize Courts have jurisdiction in criminal cases in which the punishment may be imprisonment or other restriction of personal liberty, for a period of not less than five years or more than ten years, and also in cases concerning political rights, those relating to the offences by ministers of religion in the exercise of their functions, and to public violations of the liberty of the press.
The High Courts of Appeal are the supreme custodians of the law and of judicial functions, and therefore their jurisdiction is limited to matters of law, determining only the question of legal error on the part of inferior courts, confirming the sentence, if such error be found, or, on the contrary, annulling the sentence and ordering the rehearing of the case by another judge. If the new judge does not observe the principles of law laid down by the High Court of Appeal, the defeated party may again appeal to a competent High Court of Appeal, which will then upon deciding on the merits of the case, such decision to be final. Concurrency of the decisions of the High Courts of Appeal, which are established respectively at Turin, Florence, Naples, and Palermo, that of Rome is final in criminal, in revenue, and in ecclesiastical matters. According to statistics of 1904, published in 1908, civil proceedings were instituted in 1,909,356 cases, an average of 67 per cent of the population, the greater number of which originated in the southern provinces; the criminal statistics of the year show 304,685 indictments, 523,206 for felony and 281,477 for misdemeanours. The number of convictions, which in 1831 was 305,393, was increased by 24,352 in 1889, and by 378,250 in 1879, and by 433,095 in 1897, and by 484,060 in 1901. The results of the execution of criminal sentences, resistance to authorities, commercial dishonesty, crimes against public and private morality, and criminality among juveniles have increased. All suggest remedies for this condition of things, ignoring, either through stupidity or malice, the fact that the only remedy consists in religious education.

(6) **Administrative Departments.**—The ministries are the superior directing offices of the Italian administration at the capital; each one of them is under a minister assisted by a sub-secretary of state; they are eleven in number, and are known as Ministers of the Interior, of Foreign Affairs, of Finance, of the Treasury, of War, of the Navy, of Clemency, of Justice and of Religious Worship, of Public Works, of Agriculture, of Industry and Commerce, and of Public Education. There is a Council of State, the function of which is to advise the Government; it is a supreme assembly whose duty it is, besides that of administrative justice, to give the administration "opinions", which are called "obligatory" in those cases in which the law obliges the minister to seek such opinions; and in these cases, if the Council be not consulted, the administrative act is unconstitutional and legally void. The supervision of the state over the public administration, is the Court of Accounts; its chief functions are to examine all decrees, from the standpoint of their legality, and thereafter to affix to such decrees its approval, after which they become executive, to control and audit all income and expenditure, to represent the State in all litigation over public funds or other securities of the State or for which the State is liable, and over those salaried officials guilty of peculation or mal-administration of public funds.

(7) **Political Divisions.**—The kingdom is divided into 25 provinces, 296 counties, 1,805 borghi, and 8,920 communes. The province and the commune are self-governing entities, having a legal personality, exercising their activity in their own interest and indirectly in the interest of the State; they are, moreover, territorial organs of the national administration. On the other hand, the district is a hierarchical division of the province, while the borough is a division of the large communes or an aggregation of small ones and is an electoral territory, and in some measure a judicial and fiscal one. Although the commune is a natural division, like the Italian province, it is a creation of the Italian law. In the province, which is re- garded as a territorial division, the State exercises its functions through a prefect, who represents the central executive power and is assisted by a prefectural council and an office of his own. Under him are the sub-prefects at the capitals of districts, the executive and governmental offices, and the public charities. In the commune the State exercises its functions through a syndic, who, therefore, is a government officer. The province and the commune are bodies which are self-governing and are called respectively provincial council and communal council; they consist of a membership that varies in numbers according to population, there being from sixty members to twenty members in the provincial councils, and from eighty to fifteen in the communal council, all of whom are elected by the people. The president of the provincial council is the deputation, consisting of from ten to six members, according to population, while that of the commune is composed of the syndic and the communal board, which consists of from ten to two members called assessors. All of these bodies are drawn from their respective councils. The prefect, representing the State, exercises juridic control over all the acts of the provincial council, of the communal council, of the deputation, and of the boards; and if they be not according to law, he annuls them. By administrative control, a semi-elective assembly, called provincial board, over which the president presides. Crimes of public credit, all of those acts of the above bodies that are beyond those of normal administration, as are the alienation or the hypothecation of capital, expenses that are binding upon the budget for more than five years, regulations, etc. Finally, for weighty reasons of public order or because of maladministration, the Communal Council may dissolve the communal or the provincial councils and name, to replace them, a commissary for the commune, and a commission for the province, for the time required to reconstruct the councils.

(8) **Administration of Justice.**—In Italy, conformably with the principles of comune jura and jurisdictio, all differences between the citizen, the self-governing political divisions of the country, and the State are referred to the judicial power, whether it be a question of civil or of political rights; but controversies concerning private interests or damage through a given act of the Government are referred to two administrative bodies which have jurisdiction in litigation of this nature; they are the administrative board, in each province, and the Council of State (sections 4 and 5). The former determines the right and wrong, in the first instance, of cases of illegality on the part of provincial or of communal executive authorities; in the second instance, in acts that may be done by those officials to the detriment of private persons or of corporations in cases that are enumerated by the law. The Council of State judges in cases of appeal from the decisions of the provincial administrative boards (section 5); moreover it exercises jurisdiction alone in cases of incompetence, of abuse of power, or of violation of the law by a deliberating administrative body, except in regard to acts of government done in the exercise of political power (section 4). By this novel institution, which the executive power has borrowed from the judicial, the Staeutaxe, has been given for the first time to the State the not remote possibility of conflict between the judicial and the executive powers, the Court of Cassation of Rome, which is the supreme organ of the judicial branch of government, has the deciding power. Finally, for the protection of the property of the commune, under certain conditions, the actio popularis procuratoria may be exercised by any taxpayer, as actio suppletiva, to supplement the work of the communal authorities, or as actio correctiva, in pursuance of a right of the commune against its functionaries; but the actio popularis, or motion on behalf of the people, must be made before the usual magistracy, whether criminal or civil, excluding, however, the administrative magistracy.

(9) **Finance.**—The new Kingdom of Italy not only inherited the financial burdens of the former Italian
states, but also bore those of the debt incurred on account of the wars and of the expense of maintaining the army on a war footing, so that the first budget (1862) was closed with a deficit of nearly $30,000,000, which in 1866, on account of the war for the acquisition of Venetia, was increased to $81,000,000. From that time the financial policy of Italy has had no other purpose than to balance its budget, and consequently new taxes were imposed upon the people, e. g. by the taxation of the grinding of cereals and by an increase of one-tenth on all direct taxation, while the expense of civil administration was increased from $6,900,000 to little less than $4,000,000 by increasing the annexation of Venice; and the military expenses were reduced from $116,000,000 to little more than $37,000,000. As, notwithstanding these measures, the deficit continued, the law of 11 August, 1870, increased existing taxation and created new taxes, till finally, in 1875, the budget closed with a surplus of nearly $3,000,000; nevertheless the former deficits still weighed upon the treasury: 50 per cent of the receipts was disbursed in the payment of interest on debt, and the compulsory acceptance of paper currency encumbered circulation and maintained money at a high price. There were still no sound principles of taxation, and the State was not able to pay the public services, and that in the same period of time in which the public expenses for civil administration, which in 1886 were $3,750,000, are now more than $8,000,000, having increased 221-49 per cent, while those of the public services have increased about 219-53 per cent. The increase of $35,500,000 between 1868 and 1897-1908 in the ordinary military expenses is the result of an increase in the war budget of $17,200,000 and of $18,300,000 for the navy. The nominal capital of the public debt on 30 June, 1908, was $2,655,000,000.

The law on the administration of the property of the State and on the general accounts, and the corresponding rules and regulations, enacted, etc., are all conditions for accounting, whether in regard to economical or to property matters or in regard to the budget.

DEFENCE OF ITALY.—The Alps and the sea, the natural boundaries of Italy, constitute the best frontiers that a nation could desire, while they do not isolate the country from the neighbouring states. But the many political vicissitudes that Italy has undergone have left considerable portions of the Alpine region in foreign hands; consequently the northern barrier is partially nullified for defensive purposes; and with a view to strengthening the weakened points of the western frontier, many fortifications were built, as those of Zuccarello, St. Bernard, Tenda, Fenestrelle, Assietta, Cenisio, and others. The River Po constitutes the second line of defence, protected along its western portion by the fortresses of Genoa and of Alessandria; at the centre, by those of Piacenza and Pizzighettone, and on the east, by the Quadrilateral and by Venice. The Northern Apennines constitute the third line of defence; it is not as strong as the former two, but is none the less important because it is oblique to the line of invasion; on the west it has the fortresses of Genoa and of Piacenza, and on the east those of the Apennines. Italy in fact has no lack of good positions for defence, but they are of little value if the army be not supported by a powerful fleet. It should be noted, as history shows, that the determining events of war in Italy always take place—or thus far have done so—on the Continental portion of the territory. The present parliamentary committee of inquiry for the army, in order to correct the serious defects in the defence of the frontier, has proposed the establishment of new defensive works costing approximately $28,000,000 for the land frontiers, and $10,000,000 for the coasts.

(1) Army.—The army is divided into the permanent army, the movable militia, and the territorial militia. All citizens capable of bearing arms are obliged to serve in the army or in the navy (law of 6 August, 1888); this compulsory service extends from 20 to 39 years of age, partly in the ranks and partly under unlimited leave; while service in the ranks should be three years, a new law of 29 May, 1898 reduced service to two years. After the eighth or ninth year of compulsory service, the citizen is transferred from the permanent army to the movable militia, where he remains registered until 31 December of the twelfth year of compulsory service, and during the last seven years of it he is in the territorial militia. The recruitment is done under the mixed system, that is, national, with movable posts, in time of peace, to strengthen the sentiment of union; and territorial in the case of
mobilization; the first is based upon the district, and the second upon the regimental reserves. In 1907 and 1908, 225,000 men constituted the army on a peace footing; on this basis the average strength of a company of infantry is 80 men. About 29,300 men of all arms (except cavalry) on unlimited leave are recalled each cent. Therefore more than one third of the men are not with their company, as compared with 75 who are recalled in Germany, 100 in France, and 135 in Austria-Hungary. The contingent of men that must join the ranks is determined annually by Parliament and is thereafter divided among the provinces, the districts, and the companies. The first draft; that is, the over and above that number are given unlimited leave and belong to the second draft. Whether a man will belong to the first or second draft will depend on the number of men in his year, on the number of recruits wanted, on the chance of his drawing a high number from the urn, and on the number of recruits dismissed as unfit for military service. The third draft consists of young men who have been declared capable of bearing arms, but who are exempt from service in the ranks for family reasons, determined by law (law of 15 December, 1907). Soldiers registered in the second class, that is, those not called to arms because of fitness or other, but for a combined length of time of not more than six months (law of 24 December, 1905). The rapid or progressive increase in the losses of the yearly contingent, notwithstanding the growth of the population, is alarming. In the decade comprising the call of those born between 1864 and 1873, 1.84 per cent of those registered were excused from service; in the call for 1906 the proportion of those excused from service was 26.09 per cent, 14.48 per cent of these on account of weak chests and 19.24 per cent on account of diseased constitutions, making 39.72 per cent excused. Nevertheless, more than one third of those excused from service owe their release to lack of nutrition or to the effects of vicious living, and in 1909, 39 out of every 100 conscripts have been found unfit to bear arms; in the southern provinces those unfit for service amount to three-fifths of the whole; Sicily furnishes an average of 1 out of 5 competent for the service, and Sardinia only 1. The insufficiently nourished come from the country, and those broken down by vice from the towns and large centres. There is a markedly increasing reluctance among the young men in answering the call to arms and in presenting themselves for military training. In 1896, 5.1 per cent were disaffected; in 1905, 8.1 per cent were disaffected; in 1906, 8.8 per cent; and in 1906 alone the number of defaulters was 11,443. Nor does the number seem to have diminished in succeeding years.

The law of 20 June, 1897, divides the Italian army in time of peace into twelve army corps of two divisions each; the territory of a division is subdivided into eighty-eight districts, the recruiting for each division being under the charge of from two to seven of these districts in time of peace, while mobilization is under the charge of the regimental reserves. Each division consists of two brigades of infantry, one of cavalry and one of artillery, besides two skeleton regiments of infantry and one section of artillery of the movable militia. The Bersaglieri and the Alpine regiments are under the direct orders of the commanders of army corps. The territorial service of troops and of administration is under territorial direction, 13 for the territorial service, 15 for the engineers, 12 for the sanitary corps, 12 for the commissary department, and 13 military tribunals. There are 96 regiments of infantry, two of them grenadiers, and 94 of the line, and consisting each of 3 battalions of 4 companies, each company in time of war consisting of 3 battalions, with 1 cyclist company for each regiment: 7 Alpine regiments that are divided into 22 battalions and 76 companies. The permanent army and the movable militia are armed with the Mannlicher-Carcano rifle, model 91, calibre 6.5 mm., with a fixed magazine for 6 cartridges; the territorial militia is armed with the modification of the Wetterly rifle. The total force of the army in time of peace consists of 15,765 officers, 272,817 non-commissioned officers, 5,886 men, and 52,548 horses and mules. In 1908 the army on a war-footing amounted to 3,401,978 men, that is, 272,817 men under arms; 488,407 men on leave; 372,560 in the movable militia, and 2,274,757 belonging to the territorial militia, besides 39,067 officers.

The infantry and cavalry officers are educated at the Military School of Modena, and those of the artillery and of the engineers at the Military Academy of Turin; there are, moreover, the military colleges of Naples and of Rome for primary military education, while the School of War, the School of Application for the artillery and the engineers, the Central School of Marksmanship for artillery, furnish instruction to officers; non-commissioned officers are taught at the Central Military School of Defence; and surgeons are trained at the School of Applied Military Hygiene.

The service of military intendency is exercised by a twelve months' service of peace beginning the 1st of May and ending the 31st of August; and by a twelve months' service of peace beginning the 1st of August and ending the 31st of July, with vigour and vigilance, and by twenty-four commissariat sections, stationed with each commander of an army corps or of a division. This body, in time of war, has the duty of assuring the subsistence of the army, of managing the funds, and of providing the uniforms and equipment; while the accountants have charge of the accounts and administration in these matters. The regiments provide themselves by means of the fixed allowance granted by the State per man and per day of service as follows: daily pay 10 centimes; food 61 centimes; uniform 12 centimes; extras 16 centimes, total, 90 centimes, or nearly 20 cents. This allowance goes to meet the cost of mess, uniform, etc., and is used by each regiment to best advantage.

The permanent Council of Administration of the regiment has charge of the regiment's administrative matters and is responsible to the ministry. This system, which has the merit of being a well-ordered decentralization of power does not satisfy present military requirements; whether through the interference of the central administration or because the assignment is no longer in harmony with economical conditions, the messes of the regiments are either in danger to be abolished.

(2) Navy.—For the administration of the navy the coasts of the Kingdom of Italy are divided into three maritime departments: Spezia, Naples, and Venice. The department of Spezia comprises the coast from the French frontier to Terracina, the island of Sardinia and its dependencies, and the Tuscan Archipelago; the department of Naples comprises the coast from Terracina to Cape Santa Maria di Leuca and the island of Sicily and its dependencies; the department of Venice includes the littoral from Cape Santa Maria di Leuca to the Austrian frontier. The twenty-four maritime divisions are divided into two admiralty sections, the navy, consisting of the depots of stores and of coal, the maritime fortifications and the sixty-four telegraphic posts along the coast are all under their respective maritime division. The recruiting for the navy is, in principle, identical with that for the army: all citizens registered in the twenty-four maritime divisions are liable to be called to naval service, those whose time are put on unlimited leave, and are at once transferred to the permanent army, so that, with the exception of the officers, there is scarcely any naval reserve. In 1906 they were in the naval service 23,143 men, 85 on the coasts, and 2,065 officers; total men, 25,277. In 1906, 75 per cent of the time are put on unlimited leave, and are at once transferred to the permanent army, so that, with the exception of the officers, there is scarcely any naval reserve. In 1906 there were in the naval service 23,143 men, 85 on the coasts, and 2,065 officers; total men, 25,277. In 1906, 75 per cent of the time are put on unlimited leave, and are at once transferred to the permanent army, so that, with the exception of the officers, there is scarcely any naval reserve.
There were, moreover, 2 battleships, 1 protected cruiser, and 10 torpedo-boats in course of construction. In 1909–1910 the expenses on naval construction are estimated to amount to $30,000,000. Italy is the seventh of the naval powers and has an efficient tonnage of 150,980. The naval academy at Leghorn and the engineering school of Venice provide officers for the navy.

Education.—In the Kingdom of Italy education is divided into a primary or elementary, secondary and superior, and the scholastic administration, in general, is under the Ministry of Public Instruction, which is assisted by a partly elective Superior Council, consisting of thirty-two members; local educational administration, excluding universities, is under the prefect, so far as the communes and the heads of families are concerned, is, as yet only a laudable wish, seeing the very slow diminution in the numbers of those unable to read and write, to the census of 1872, constituted an average of 68.7 per cent of the population; the same class, in the census of 1901, furnishes a corresponding average of 52.3. The illiterate among the army conscripts born in 1886 numbered 50,642, or 29.3 per cent of the enrolled, and the corresponding figures of the navy conscripts born in 1885 were 5833 or 48.7. In the marriages contracted in 1906 there was a proportion of 29.3 per cent of the men, and 42.1 per cent of the women illiterate. The causes of permanent illiteracy, notwithstanding expenditure and govern-

a provincial scholastic council, the superintendent of studies, the board of vigilance for the technical and nautical institutes, and the district inspectors of the elementary schools. Elementary instruction is divided into two grades, the lower and the superior, each of which is divided into three classes, and the law compels the communes to furnish it; it is, as a rule, gratuitous, and parents and guardians are obliged to see that their charges receive it between the ages of six years and twelve years, unless they provide otherwise for their children’s instruction (laws of 15 July, 1877, and 8 July, 1904). The State furnishes primary instruction also, in schools established in foreign parts. No citizen is allowed to vote who has not passed the examination at the end of the primary course. The normal schools train the teachers of the elementary schools. It is evident, however, that compulsion in regard to this elementary education, both
dent effort, are poverty of workmen’s families, which are constrained to make their children earners before they have reached the age of twelve years; the moral debasement of the teachers who, with some exceptions, have become apostles of socialism and atheism, because of their miserable remuneration, which is inferior to the salary of a workman; the want of care on the part of the communes in regard to the hygiene of the schools, which makes the school a repellent rather than an attractive centre; the fact that the agricultural population is scattered through the country, which makes profitable attendance at school difficult for the children; many children leave school without having acquired instruction, knowing scarcely how to write their names. What are the remedies? There is only one: the liberty of elementary teaching in the broadest sense of the word, not only as regards the teachers but also as regards the course of studies, ex-

According to the law of 13 November, 1859, secondary instruction is of two kinds, classical and technical. The classical course of the first grade is given in the gymnasium (colleges) and extends over a course of five years; that of the second grade is given in the lyceums, the course being three years. The technical instruction is also of two grades, the first, given in the technical schools, lasts three years, and the second, in the technical or in the nautical institutes, the course lasting four years. Ordinarily the burden of secondary instruction is divided among the State, the province, and the communes.

There are thirteen government institutes for the study and assistance of the fine arts, and as many other establishments of the same kind that are not governmental, with two hundred and twenty-seven teachers. In the school year of 1903-1906 these Palermo, Parma, Pavia, Pisa, Sassari, Siena, and Turin. There are four free universities, those of Perugia, Camerino, Urbino, and Ferrara. Higher education is also furnished by three law schools connected with the lyceums of Aquila, Bari, and Catanzaro, by the three
polytechnic schools of Milan, Turin, and Naples, by the Finishing Institute of Social Science at Florence and by the Scientific and Literary Academy at Milan. In the scholastic year of 1893-1894, these universities, endowed by 22,289 students, an average of 71.9 per 100,000 inhabitants; and in the scholastic year of 1905-1906 the number of students was 27,069, an average of 81 per 100,000 of the population. The professors are divided into ordinary (who are irre- movable), extraordinary, and special lecturers, and prov- dents. The university is governed by a rector, appointed by the king on the recommendation of the body of ordinary professors, by an academic council, consisting of the rector and of the presidents of the different faculties, and by the general assembly of professors. There are other institutions connected with public instruction, as the libraries, some of which enjoy the prerogative of incorporation, while others are merely the property of the State, of the commune, or of the province. The public has not the same free use of all these libraries, there being a distinction between those that are accessible to the public and those that are accessible to other institutions, or to offices, as those of the min- istry, of the Senate, of the Chamber of Deputies, etc.; the first are public in the full sense of the word, while the second are so only upon certain conditions. Only persons over the age of sixteen years may receive books from them. Among these is the library of the University of Bologna, consisting of a number of books, and of the libraries of other universities. These are per- mitted to be taken out of the library only in special cases. There are approximately 1830 libraries open to the public, 32 of them belonging to the Government.

Other educational institutions are: the national boarding schools for boys, and those for girls, under the direct supervision of the Ministry of Public In- struction; institutions belonging to the provinces or to the communes; endowed institutions; the seminaries; and private boarding schools. Those of the Govern- ment are 43 in number for boys, and 8 for girls, and according to the last statistics the former had 4165, and the latter 593 pupils. The others together num- ber 880, with 60,000 boarders. There are no precise statistics as to the teachers in boarding schools for boys; it is known, however, that in 1906, 30 of the directors, approximately, were laymen, while the re- mainder were ecclesiastics. In 320 boarding schools, all the teachers were laymen; in 215 all were ecclesiastics, and in the remainder of these schools the teachers were, some ecclesiastics, and some laymen. The number of persons who are connected with the administration and with the teach- ing in these schools, is placed out with nearly 10,000, of whom only 3587 are lay, the remainder belonging to the secular clergy or to religious congregations. New publications, including the new editions of works already published, amounted to 9975 in the year 1900, at which time statistics on this subject were discontinued; this was exclusive of monthly publications, which, in 1898, amounted to 971. There were 151 new daily papers, and the total number of periodicals in 1905 was 3120, published in 363 cities, 815 of these publications dealing with politics, and 147 daily. Lombardy has the greatest proportion of periodicals (544), and the Basilicata the smallest (11).

Charities.—Charity, which was unknown to pagan- ism, is a Christian growth that found a fertile soil in Italy, the home of the head of the Christian Church, and under his influence that country developed a wealth of benevolent institutions for the relief of every form of suffering. While the Constitution has promul- gated laws to prevent the waste of the funds of the public charities (Sess. VII, "De reform.", c. xv; Sess. XXV, "De reform.", c. viii). And the stream of charity flows on, notwithstanding the exclusion of the Church from all intervention in charitable works, for, between 1881 and 1900, there were founded 1629 new charitable in- stitutions, with a combined capital of nearly $27,000,- 000, while the donations and legacies of that same period, to already existing establishments amounted to 31,529, with an aggregate value of $56,000,000. There are 27,078 charities with a capital of $400,000,000, an average of $12 per inhabitant; their combined income is nearly $34,000,000, and their charitable disbursements amount to $22,000,000. The English system of official charities (taxation on behalf of the poor) is unknown in Italy, where charity is left to the voluntary acts of individuals, and as we shall see is made compulsory only in fixed cases. The law of 17 July, 1890, limits the action of the State to protecting and favouring the free exercise of public charities, to watching over the opera pie, which are the chief benefactors of the poor, and to reforming them by the union of several, by statutory revision, and by the changing of their purpose. In Italy the forms in which charity is generally practised are: aid to infants (founding asylums, orphanages, asylums for education, hospices, etc.); aid to those who are in want and unable to work (recreation for mendicants, dormitories, etc.); eleemosynary aid (to hospitals, hospices, etc.); hospital aid (hospitals, insanes, hospitals, etc.); and monti di pietà. The law requires the existence of a charity association in each commune for the care of the interests of the poor; it's members are taken from the communal council and of the municipal councilors, according to the population. The charitable asso- ciation and the opera pie are required by law to give aid in urgent cases, to support the needy who are unable to work, where there is no local home for the poor, and to care provisionally for orphans and for deserted mothers, for the blind, and for the deaf mutes who are poor.

Besides the work of institutions that are created for the purpose, the State, the province, and the commune are obliged to provide otherwise for certain public charities; thus the commune is compelled to provide sanitary service, doctors, midwives, surgeons, and medicines for the poor, when they are not provided for by any institution. The province is bound to care for the insane poor, and the law divides between the province and the commune the expense of the support of foundlings. Lastly, the support of those who are unable to work regularly, is the charge of the State, of the province and the commune are unable to provide for them. According to the last statistics, in 1899, the provinces spent $5,000,000 in public charity; the provinces spent $4,600,000; and the State, in 1905-1906, spent $1,500,000. There were assisted by orphan asylums and dormitories directly by the State and by the provinces in the five years from 1902 to 1906, 127,536 children, of whom 8456 were born in lawful wedlock. According to the last statistics of the monti di pietà; on 31 December, 1903, there were 327 of these establish- ments that loaned money on 4,790,358 pledges to the amount of $4,140,000, of which 1,405,206 were re- viewed for an amount of $4,889,205; there were also 4,425,422 redemptions for an amount of $13,348,493 and 412,336 sales of a total amount of $769,345.

All institutions of public beneficence are under the watchful care of the Government with the assistance of a superior council for public aid and charity, which has an advisory function. In all that concerns eco- nomic ends, local vigilance is exercised by provin- cial commission; and the administration of any opera pie may be dissolved for grave reasons, but must be reconstituted.

Hygiene AND HEALTH.—Sanitation, which is an important juridical and social function of the modern State, has made no little progress in Italy, where it is regulated, in general, for all the kingdom by the law of 7 August, 1907, by other sanitary laws, and by cor-Responding rules and regulations, while it is regulated for local purposes by various provincial and communal
regulations of importance. The sanitary laws provide for the safety of the public health by a series of imposts on the citizen, and by police restrictions regarding the practice of medicine, of surgery, of the veterinary art, of pharmacy, and of obstetrics, all of which professions are subject to supervision and have special obligations imposed upon them for the security of the sick and for the gratuitous attendance of the poor.

In order to prevent the spreading of infectious diseases, physicians are obliged to denounce cases of infectious disease, and citizens are obliged to submit to visitations, to disinfections, and to vaccination. Under this head comes a special supervision over aqueducts, the sewage system, and the right of the Minister of the Interior to prevent or to suppress evils regarded as causes of contagious disease. There are, moreover, burial laws, the chief end of which is to prohibit the burial of bodies elsewhere than in cemeteries, exception being made in favour of illustrious personages and of private burial grounds that are situated in the country and not open to the public. Landing in Italy is made under special supervision, for which purpose there is a medical officer in each

In Africa; Italy also entered upon the course of colonial conquest, and consequently it has come into the possession of territories, and has created protectorates and zones of influence on the western coast of the Red Sea, on the Gulf of Aden, and on the Indian Ocean.

The direct possessions of Italy are the colonies of Eritrea and Italian Somalia (Benadir). The colony of Eritrea originated in the possession of the Bay of Asab, which was proclaimed by the law of 8 July, 1882. The colony extends along the western coast of the Red Sea from Cape Kasar (18°24' N) to Cape Doumeirah (12°30' N) on the Strait of Bab-el-Mandeb. From Cape Kasar the boundary line has a generally south-western direction to the confluence of the Khor-Um-Hagar and the Setit Rivers. The southern or Abyssinian boundary is formed by a line drawn towards the west from the confluence of the Khor-Um-Hagar and the Setit Rivers, along the latter stream, to its confluence with the Maiteb, and follows the course of the latter to the Mareb at the confluence of the Mali-Ambessa; it follows the Mareb River as far as its junction with the Beless, and then the latter river, after which it follows the course of the Muna, and turning to the south-east, at a distance of 37 miles from the coast, it reaches the frontier of French Somalia, near which the boundary line leaves the extremity of Doumeirah and follows the watershed line of the promontory of the same name for one mile, and then the place called Bisidro on the Weima; from this point it turns east and south-east as far as Daddato (Italo-British Agreements of 15 April, 1891; 7 December, 1898; 1 June, 1899; 16 April, and 22 November, 1901; Italo-French Protocols of 24 Jan-

port. There are many pure food regulations, the first of which is the right of inspection and that of providing evidence of suspected articles by the sanitary authorities, the establishment of laboratories for chemical analysis, the prohibition of slaughtering unhealthy animals, or of any animals outside of the regular slaughter houses. Special attention is given to preventing the adulteration of wines and to the prevention of skin diseases.

Hygiene is under the Minister of the Interior, and in charge of the prefects, the sub-prefects and the syndics, under him. He is assisted by a superior sanitary council, or advisory body, and by a General Directory of Sanitation; the prefect is assisted by a Provincial Sanitary council; the former care for the sanitary conditions of the whole kingdom; the latter, for the communes of the whole province. In each province there is a physician and a provincial office whose function is to watch over the sanitary service, the hygienic conditions of the communes, the sanitary institutions and the execution of the sanitary laws; the physician investigates the causes of diseases and inspects pharmacies, hospitals, etc. There is a provincial veterinary whose business is to supervise disease among animals. In each commune, moreover, there is a sanitary officer, who, besides his supervisory duties, must inform the syndic and the provincial physician of all circumstances that may in any way affect health or hygiene.

Foreign Possessions.—(1) Colonies.—At about the time of the Mahdi's revolt in Upper Egypt, European nations were seized with the desire of acquiring

uary, 1900, and 10 July, 1901; Italo-British Ethiopian Convention of 15 May, 1902; Italo-Ethiopian Conventions of 10 July, 1900, and 16 May, 1908). The Archipelago of Dahlac and the minor islands along the Dancala coast belong to the Colony of Eritrea. The Colony of Somalia consists of that region of eastern Africa that lies between the Sultate of Obbia, which is an Italian protectorate, the Giuba River, the Gulf of Aden, Ethiopia, and Eritrea. The boundary between Somalia and the Ethiopian Empire is a line that, beginning at Dolo, reaches the confluence of the Daua and the Ganaule Rivers, and, to the north of the fourth parallel, it takes an easterly course, as far as Uebi-Scebeli, which is located at the extreme north of the Badili Addi country; from Uebi-Scebeli it follows a north-easterly direction towards British Somaliland.

The Colony of Eritrea, within its present boundary, has an area of nearly 50,000 sq. miles, of which the Dahlac Archipelago occupies 530, and its population is 279,531 inhabitants, of whom 3849 are Italian. The area of the Colony of Somalia may be estimated at 146,000 sq. miles, with half a million of inhabitants who, along the coast, are Somalis, and in the interior, Gallas. The plain of Danakil and the coast country about Massowah, in Eritrea, are worthless for agricultural purposes, but the higher portion of the territory and the land which are intermediary between it and those of the coast and which are watered by the Barka and by the Anseba Rivers, may become fertile through a good system of irrigation. In the colony there is little industry and less commerce, as is shown by the statistics
of the custom house of Massowah, which show imports for a value of 2 millions of dollars, and exports for $600,000, approximately. The United States send to the country annually, it sends to the custom house, in English bottoms, for a value of about $40,000, and they export a small amount of hides. Commerce by caravan with Ethiopia increases continually; in 1906 it amounted to $1,200,000 for imports, and nearly $2,000,000 for exports. The commerce of the country is in the hands of Greeks, and of Russians, Indian merchants. Hair, musk, wax, medicinal plants, and especially pearls and mother-of-pearl, are exported. The imports of the Colony of Somalia for 1906 amounted to $720,000, and the exports to $540,000. The principal exports include animal products, hides, hides, and skins. The arrivals at the port of Massowah numbered 146 steamships, and 1893 sailing vessels, with an aggregate tonnage of 164,148; the clearances were 147 steamers and 1874 sailing vessels, with an aggregate tonnage of 204,814. In Eritrea there are 10 post offices, for both the postal and telegraph services; there are 4 of the kind in Somalia. The number of postal orders issued in the Colony of Eritrea in 1904–1906 was 28,619, to the value of $3,850,000, and 14,507 were cashed, for an aggregate sum of $2,770,000. There were 2395 deposits in the postal savings banks, amounting in all to $100,000, and there were 11,752 savings withdrawals of $70,000. The number of telegrams sent was 15,697, and of those received, 2610. The telegraph system of Eritrea consists of (a) Massowah-Assab and the Assab-Perim cables, which connect with the wires of the Eastern Telegraph Company; (b) the land line of Massowah-Assam-Cheren-Balderar, which at Kassala connects with the Sudano-Egyptian wires; (c) the Asmara-Addis-Abeba line. The law of 14 July, 1907, authorized the expenses for the establishment of wireless telegraph stations at Asmara, in the Colony of Eritrea, and at Mogadiisch, Brava, Merka Giumbai, Barbada, and Lugh, in Somalia. The first railroad line, the Massowah-Saati, 164 miles long, was opened in 1887; thereafter, the line was extended to Ghinda, and so attained a length of 43 miles. In 1907 the Ghinda-Asmara line, 31 miles long, was opened to traffic. The colonial budget is approximately $2,000,000, both for receipts and expenses; and the nation's African expert, Dr. G. S. (1899), estimated that they would amount to $1,700,000, exclusive of provisions and materials to the army and to the navy. The corps of colonial troops consists of 126 officers and 4451 men, 193 horses, 521 small mules, 147 mules, and 10 scouting camels. Each one of the colonies is governed by a civil governor, assisted by a council, who are placed under his orders. The chief centres of population in Eritrea are Massowah (population, 10,000), situated upon an islet that is connected with the mainland by an embankment, Keran (population, 2000), and Asmara, the capital. The chief places in Somalia are the ports of Brava, Merka, Mogadisch, Marshack, and Obbia. The administration of justice is under colonial judges, and is based upon Moslem jurisprudence (Cheri), the common native law (Testur), and the different religious regulations and habits.

(2) Protectorate.—Under the protectorate of the Kingdome of Italy are (a) the territory of the Sultan of the Migiartina, which extends along the coasts of the Gulf of Aden and of the Indian Ocean from Bender-Zia (49° E. of Greenwich) to Cape Bovven in the Bay of Dar-es-Salih (Convention of 7 April, 1889, and 18 August, 1904); (b) the territory of Nogal, the head of the coast, which is called the Maziad territories, this territory extends from Cape Bovven to Cape Garad (Agreement of Illig, 5 March, 1905); (c) the territory of the Sultan of Obbia, which extends from Cape Garad to the northern boundary of the territory of Varasek, 2° 30' N. (Treaty of 8 February, 1889). The limits of the zone of influence in Somalia were established by the Italo-British protocols of 24 March, 1891, and 5 May, 1894. They first established the western and the southern boundaries by a line which, from the extreme point of the Gulf of Elba, at a degree of northern latitude, and from there to the thirty-fifth meridian E. of Greenwich, where it reaches the Blue Nile. The second protocol established the boundary by a line from Gildesa towards the eighth degree of N. latitude, along the north-eastern frontier of the Sudan; but, from the point of Gildesa, if from that point, the line follows latitude 8° N. to its intersection with parallel 48° E. of Greenwich, whence it goes to the intersection of latitude 9° N. with the parallel of 49° E. of Greenwich, and thence on follows that meridian to the sea. Bender-Zia, although situated to the west of the forty-ninth meridian, is included within the sphere of Italian influence.

By the agreement of 7 June, 1902, the Chinese Government recognized the concession of Tien-tsin, in China, a small territory that is situated on the right of the Pei-ho River, which constitutes the southern boundary for nearly a mile. From the 18th century, this territory was in the hands of the Austrian and the Russian, and is conterminous with the Russian concession, and is on the west with the Austrian concession, while the lands of the Imperial Chinese Railroad Company form its northern boundary; its area is nearly 18 sq. miles and it contains a village and some salt mines; its native inhabitants number about 17,000. The concession is in charge of the consul, who is assisted by an administrator.

For the history of Italy see the medieval annals, best collected in the monumental work of Muratori, Scriptores Romanorum, etc. (200–1600) in folio with modern notes. In the new ed., small 8°, Citra di Castello, 1900; see also his valuable Annali d'Italia—from the beginning of the Christian era to 1749—(12 vols., Milan, 1744–49); RIGORDI, Histoire du drapeau italien, 1700–1800; Balian, Storia d'Italia (2nd ed., Modena, 1894); Heid, Storia della constituzione dello Stato italiano, 1870–1902; SIMONI, Histoires des républiques italiennes du moyen âge (Paris, 1817–18), non-Catholic and often prejudiced; LANZANI, I contenuti dei privilegi regolanti la polizia civile ecclesiastica, 1715–1900, and his Romanische Forschungen zur Reichs- und Reichsstaatschichte Italiens (Innsbruck, 1894); MANN, History of the Popes in the Early Middle Ages (St. Louis, 1894, etc.), and Pأنشأ, History of the Popes since the End of the Middle Ages, tr. Anthorbus (London and St. Louis, 1902); VAN DUEREN, Pouvoir temporel des Papes (Lille, 1890); PERTILE, Storia del diritto italiano (Padua, 1887–88); LITTA, Famiglie celebri italiane (Milan, 1815–69); COPPI, Le università in Italia nel medio evo, 2nd ed. (Milan, 1868); SIMONI, Storia della politica degli Stati uniti d'Italia, and his L'Italia (3 vols., 1855–69); AMORE, L' italo cattolica (1885–95); DEZON, Monds., V, 1856, 45–51. Histories of Italy should be read with caution, as writers are frequently moved by anti-papal or anti-Catholic prejudice or passion.

LUIGI TACCHI VENTURI.

ITALIAN LITERATURE.—Origins and Development.—The modern language of Italy is naturally derived from Latin, a continuation and development of the Latin actually spoken among the inhabitants of the peninsula after the downfall of the Roman Empire. It is still disputed how far this spoken Latin was identical with the classical literary language of Rome, the Latinus toquus, and how far it was a mixture of the two—the latter, owing to the changed social conditions, predominating. A small number of words derived from Greek are in part relics of the epoch of Byzantine domination, in part words introduced later through the Greek commerce: the Saracen invasions have left traces in a very few Arabic words, chiefly in Sicily: a certain number of words have come indirectly from the Latin through French or Provençal; even the long centuries of Teutonic conquests and inroads caused a comparatively slight influx of words of Germanic origin.

In the "De Vulgari Eloquentia" (i, 10–16), Dante speaks of the "many discordant varieties of the Italian vernacular", and rejects them all in favour of the "illustrious, cardinal, courtly, and curial vernacular in Italy", the standard and ideal national
language, "which belongs to every city of Italy, and seems to belong to none, and by which all the municipal dialects of the Italians are measured, weighed and compared. These dialects fall into three groups: (1) Ligurian, Piedmontese, Lombard and Emilian, and Sardinian, which form a Gallo-Italian group apart from the vernacular of the rest of the peninsula; (2) Venetian, Corsican, Sicilian, Neapolitan, Umbrian, and the dialects of the Marches and of Rome, which, though divergent from the true Italian, form one system with it; (3) Tuscan. But the national and literary language, the "illustrious vernacular", is one and the same throughout the land. This language is not an artificially formed Italian, stripped of the accidental peculiarities of place and race; but substantially the vernacular of Tuscany, and more particularly of Florence, as established by the great Florentine writers of the fourteenth century, adopted by those of other districts in the Renaissance, and formulated by the famous Accademia della Crusca, which was founded in the latter part of the sixteenth century.

From the seventh century onwards, we begin to find traces in extant documents of the use of the vernacular, in the shape of forms that are more or less Italian inserted into the corrupt Latin of the epoch. Italian familiar names of men and Italian names of places rapidly appear; and, in a document of 960 in the Archives of Montecassino, a whole sentence, four times repeated, is practically Italian: "Sao ko belle terre, per kelle fini que ki contene, trente anni le possette parte sancti Benediktii (I know that these lands, within these boundaries that are here contained, the party of St. Benedict has possessed them thirty years). A confessio, or formula of confession, from an abbey near Norcia, probably of the end of the eleventh century, shows passages still nearer to the Italian of to-day. Fifty years later we meet literary composition in the vernacular. The inscription formerly on the cathedral of Ferrara, of 1135, consists of two rhyming couplets of Italian verse. Four lines, known as the "Cantilena Bellunese", also in rhymed couplets, inserted in a fragment of a chronicle, allude to the treaty of Castelbarco by the people of Belluno in 1193. In a contrasto (a dialogue in verse between lover and lady) by Raimbaut de Vaqueiras (c. 1190), the lady answers in Genoese to the Provencal advances of the poet. The "Ritmo Laurenziano", a cantilena in praise of a bishop by a Tuscan, and the "Ritmo Caseinese", an obscure allegorical poem in the Apulian dialect, are both probably of the end of the twelfth century. To the same epoch belongs a series of twenty-two sermons in a northern Italian dialect mixed with French, published by Wendelin Foerster, which are the earliest extant specimens of vernacular preaching in Italy. The Thirteenth Century (Il Duecento).—The Italians naturally regarded the language and traditions of Rome as their own, and still clung to the use of Latin while a vernacular literature was already flourishing in France and Provence. Italian literature, strictly speaking, begins with the early years of the thirteenth century. Among the influences at work in its formation must first be mentioned the religious revival wrought by St. Francis of Assisi and his followers, bearing lyrical fruit in the lauda, the popular religious song, especially in Central Italy. St. Francis himself composed one of the earliest Italian poems, the famous "Cantica del Sole", or "Laudes Creaturarum" (1225), a "sublime improvisation" (as Paschal Robinson well calls it) rather than a strictly literary production. The growing self-consciousness of the individual states and cities later gave rise to the chronicles and local histories. Provencal troubadours, who settled at the petty Courts of Ferrara and Monferrato, or passed southwards into the Kingdom of Sicily, brought the conventions of their artificial love poetry with them. Equally influential was the Franciscan movement, though in a totally different spirit, was the impulse given to letters by the highly cultured, but immoral and irreligious court of the Emperor Frederick II and his son Manfred, whose Kingdom of Sicily included not only that island, but also Naples and all the south of the peninsula.

Dante wrote: From the fact that the royal throne in Sicily, it came to pass that whatever our predecessors wrote in the vulgar tongue was called Sicilian" (V. E., i, 12). The writers of this Sicilian school were drawn from all parts of Italy. They did not normally use the Sicilian dialect, but wrote in a vernacular practically identical with what became the literary language of the whole nation. Their productions are almost exclusively love poems derived from those of Provence. Frederick himself (d. 1250) and his chancellor, Pier delle Vigne (d. 1239), wrote in this fashion. Many of these poets, like Ruggiero de Amicis (d. 1246), Arrigo Tenta (d. 1247), and Percivalle Doria (d. 1264), were of high social position, notable for their historical knowledge of the epoch, dying on the scaffold or the battlefield; but their lyrics are lacking in individuality, conventional, and artificial in sentiment and treatment. Noteworthy poets of this school are Giacomo da Lcntino, "Il Notaro", who was one of the emperor's notaries in 1233; Rinaldo d'Aquino, a kinsman of St. Thomas, whose lament of a girl whose lover had gone on the Crusade was probably written in 1242; Giacomo Pugliese da Morra, in whom we find a trace of popular realism; and Cielo dal Camo, or d'Alcamo, whose contrasto, "Rosa fresca aulentissima", now held to have been written after 1231, is strongly tinged with the local dialect of Sicily. A personal note is struck in the pathetic poem of King Enzo of Sardinia (d. 1272), "S'evo trovasse", written from his prison at Bologna, which brings the Sicilian epoch to a dramatic close. The last poet of the Sicilian school is Guido delle Colonne (d. after 1288), who also wrote "Historia Trionfo" in Latin prose, and is mentioned with praise by both Dante and Chaucer.

The earlier Tuscan poets, such as Pannuccio dal Bagno, of Pisa, and Folcacincho de' Folcacincheri, of Siena (c. 1250), are closely associated with the Si-
cians. But from the outset the Tuscans did not restrict themselves to erotic poetry, but sang of religious, satirical, and political themes as well. Guittone del Viva (1230–94), known as Fra Giuntone d’Arezzo, shows how well he imitated the Provençal love lyric, but writes with vigour and sincerity in his religious and political poems, especially in his canzoniere on the defeat of the Florentines at Montaperti (1260). He is also the author of a collection of letters, one of the earliest achievements of Italian prose. By the middle of the century, in addition to the canzone, a new type of poetry—so-called dolce stil nuovo—evolved, which Dante speaks of as a new style, of which Guido Guinizelli of Bologna (d. 1276), who founded the school of Tuscan poetry, was the most notable. Of a far higher order, however, is the poet who inaugurated the “Vita Nuova,” Dante’s most personal work, the “Vita Nuova,” and thereby founded a school to which the poets of the last five centuries have belonged, even as their predecessors had adhered to that of Guittone. The chief of these is Guido Cavalcanti (d. 1300), the chosen friend of Dante. He composed an elaborate canzone on the philosophy of love, in which poetry is smothered by metaphysics; but in his minor lyrics, original in motive and personal in sentiment, he brought the “ballata” and the sonnet to a degree of perfection previously unattained. With him and Dante is associated another Florentine poet, Lapo Gianni (d. 1323), whose work belongs to this epoch although he outlived it. In another vein, we have the humorous and satirical pieces of Boccaccio (d. circa 1370) and the “Tesoretto” of Brunetto Latini (d. 1294), an allegorical didactic poem which influenced the external form of the “Divina Commedia.” The religious poetry of Umbria, developing under Franciscan influence, culminates in the mystical laudi of Jacopone da Todi (d. 1306), and珗is truly inspired sacred poetry that the world has seen.

In comparison with the poetry, the Italian prose literature of this century is insignificant. The chief chronicler of the epoch, Fra Salimbene di Parma (d. 1288), wrote in Latin; Brunetto Latini composed his encyclopedic work, the “Tesoro,” in French. Many of the literary productions formerly assigned to this period are now known to belong to a later epoch, and it is impossible to say with certainty whether those that are authentic should be placed at the end of the thirteenth or at the beginning of the fourteenth century. Among these are the “Cento Novelle Antiche,” a collection of stories drawn from various sources, and the “Tavola Ritonda,” an Italian version of the Romance of Tristram. Fra Ristoro of Arezzo, in 1282, completed an elaborate treatise on cosmography, “Della Composizione del Mondo.” Most of the prose of this epoch is simply translated from the Latin or French. To Bono Giamboni (d. after 1296), a Florentine who italized Brunetto Latini’s “Tesoro,” are ascribed three ethical treatises (possibly of a later date), based upon medieval Latin models, but not mere translations; the most important of these, the “Introduzione alle Virtü,” derived in part from Boethius and Prudentius, is a striking religious allegory in which the Soul is led by Philosophy to the palace of Faith to witness the triumph of the Church, and herself attain to spiritual freedom.

The Fourteenth Century (Il Trecento).—Through the triumph of the Guelfs, the chief place in Italian culture is now held by Florence instead of Sicily, which becomes mainly republican in temper (even when supposedly imperialist) and Italian literature has become more popular. The philosophical glory of St. Thomas causes even belles lettres to be deeply tinged with scholasticism; while the growing antagonism to the political actions of the popes, particularly during the Babylonian Captivity of Avignon, gives an anti-clerical tone to much of the poetry and prose of the century. At the close of the epoch, the revival of classical studies begins to make itself felt. In the hands of three great Tuscan writers—Dante Alighieri (1265–1321), Francesco Petrarca (1304–1374), and Giovanni Boccaccio (1313–1375)—the national literature and the national language appear in full maturity and artistic perfection.

In his “Vita Nuova” (c. 1295), Dante still belongs to the preceding century, while uplifting the ideals of love set forth by Guido Guinizelli to the heights of Catholic mysticism. His “Rime”, more particularly his “Convivio” (c. 1306—unfinished, but the earliest monumental work of Italian prose) he intended to bring down the scholastic learning of his age to the understanding of the general reader. The “Divina Commedia” (1314–21), the noblest expression of the Italian spirit in poetry and a landmark in the history of man, sums up the intellectual gain and the spiritual progress of the nine centuries since the fall of the Roman empire, while faithfully depicting the highest aspirations and whole moral atmosphere of the poet’s own epoch. In spiritual insight, dramatic intensity, sureness of touch, and terseness of expression, it has never been surpassed. In it modern Europe first produced a masterpiece to rival those of the classical world. Petrarca brings the canzone and the sonnet to their ultimate technical perfection in his lyrical poems, the “Canzoniere” or “Rime”, a series of miniature paintings of all the varying moods of the soul passing through earthly love and patriotic enthusiasm to find its rest in religion. His “Trionfi”, a poem in tercets, in ten cantos, deal with the same matters in allegorical fashion, giving a symbolic representation of his own life. In his voluminous Latin writings—letters, treatises, and poems—he appears as the first of
the Humanists, the precursor of the Renaissance. The worshipper of Dante and intimate friend of Petrarch, Boccaccio, in his "Filostrato" and "Teseide," established *ottava rima* (previously only used in popular verse) as the normal measure for Italian narrative poetry. In his "Ameto" he introduced the prose pastoral and the *verneale* elegy. His grossly immoral "Fiammetta" may be said to inaugurate the modern psychologica novel. In the hundred stories of the "Decameron," he gave perfect artistic form to the *novella*, or short story, imbuing it with modern life. Written in an ornate and poetical prose, lacking in simplicity and directness, the "Decameron" gives an unsurpassable picture of certain aspects of fourteenth century society, but is disfigured by obscenity, and permeated by a superficial and sensual ideal of life.

This century in Italy, as elsewhere, is the golden age of vernacular ascetical and mystical literature, producing a rich harvest of translations from the Scriptures and the Fathers, of spiritual letters, sermons, and religious treatises no less remarkable for their fervour and unctue than for their linguistic value. From the earliest years of the *Trecento* have come down the sermons of the Dominican, B. Giordano da Rivalto (d. 1311). The exquisite "Fioretti di San Francesco," now known to be a translation from the Latin, date from about 1328. Prominent among the spiritual writers, who thus set themselves to open the Church's treasury to the unlearned, are the Augustinians, B. Simone Fidati da Cascia (d. 1348) and Giovanni da Salerno (d. 1388), whose works have been edited by P. Nicola Mattioli; and the Dominicans, Domenico Cavala, a copious translator, and Jacopo Passavanti (d. 1357), whose "Speechio della Vera Pentenenza" is a model of style and language. The admirable letters of B. Giovanni Colombini (d. 1367) and the mystical poetry of his follower, Bianco dall' Anciolina (El Bianco di Siena), have the glowing fervour, the Divine madness, of the first Franciscans. In a less exalted vein, the epistles of the monk of Vallombrosa, B. Giovanni dalle Celle (d. 1396), extend from the forties to the nineties of the century. Supreme above them all, a figure worthy, from the mere literary point of view, to stand by Dante and Petrarch, is St. Catherine of Siena (1347-80), whose "Dialogo" is the greatest mystical work in prose in the Italian language, and whose "Letters" have hardly been surpassed in the annals of Christianity.

Minor poets are numerous. Cecco Angiolieri of Siena (d. circa 1312), the Italian Villon, wrote humorous and satirical sonnets of amazing vigour and originality on subjects mainly drawn from low life. Folgore da San Gimignano (d. after 1315) pictured the fashionable existence of the young nobles of Siena with the touch of a painter. Guittone d'Arezzo (d. 1337), also known as Cino da Pistoia (d. 1337), also won renown as a jurist; the friend of Dante, whose "Rime" he imitated, his best amatory and political lyrics are hardly unworthy of his master. Francesco da Barberino (d. 1348), who was influenced by French and Provencal models, is the author of two somewhat insipid allegorical didactic poems. A higher note is struck by the Florentine exile, Fazio degli Uberti (d. after 1368), whose "Dittamondi," a long poem in *terza rima," was intended as an earthy parallel to Dante's Sacred Poem, doing for this world what he did for the other" (Rossetti); he surpassed himself in splendid patriotic lyrics, which give spirited expression to the new national Ghibellinism of Italy. Antonio Pucci da Firenze (d. 1374) is the chief literary representative of the popular poetry of the age.

With the early years of the century begins the series of chronicles and diaries in the vernacular. Dino Compagni (d. 1324), to whom is also ascribed the "Intelligenza," an allegorical poem in *novella*, describes the factions of the Bianchi and Neri in Florence with patriotic indignation and impartiality. Giovanni Villani (d. 1348) and his brother Matteo (d. 1363) wrote the whole story of Florence from the legendary origins down to the year of the latter's death; their work, in addition to its supreme historical value, is a monument of the purest Tuscan prose. Minor chroniclers arose all over Italy; we will mention only the two Sienese, Agnolo di Tura and Neri di Donato, and the Benedicente Abbot Niccolò of Gavello, who wrote the "Libro del Polistore," a kind of unexcelled history (still only in part published) which ends in 1367. In fiction, the "Reali di Francia" of Andrea da Barberino, written at the end of the century, renders the chivalrous tales of Charlemagne and his Paladins from the French; the "Pecorone" of Ser Giovanni Fiorentino (c. 1378) is a collection of tales in imitation of Boccaccio. Franco Sacchetti (1335-1400), less artificial than Boccaccio, adapted the *novella* to a moral purpose; he also wrote evangelical sermons, and poems, both playful and serious, frequently of real lyrical beauty, in which the literature of the Florentine *Trecento* comes to a pleasant close.

**The Renaissance.**

There are two distinct epochs in the history of the Italian literature of the Renaissance: the earlier, including the greater part of the fifteenth century (Il Quattrocento), from the return of the popes from Avignon (1377) to the invasion of Charles VIII (1494); the later, comprising the sixteenth century (II Cinquecento), from the defeat of the French at Fornovo (1495) to the devolution of the Duchy of Ferrara to the Holy See (1597). Allowing for some necessary overlapping, the literature of the epoch falls into two corresponding periods.

The *Quattrocento* is an intermediate period between the mainly Tuscan movement of the fourteenth and the general Italian literature of the sixteenth century. It has developed under the auspices of the princes who were forming hereditary states on the ruins of the communes, and is at first marked by the continuance of the work (inaugurated by Petrarch):
of recovering classical writers and copying manuscripts, while the vernacular was despised, and authors attempted to write Latin verse and prose in the manner of the ancients. Greek scholars flocked to Italy, and the influence of Plato, translated into Latin by Leonardo Bruni (d. 1444) and Marsilio Ficino (d. 1499), became paramount. The latter, who was bent on harmonizing Plato with Christianity, and who also translated Plotinus, was instrumental in founding the Florentine neo-Platonic Academy. Some of these Humanists were purely pagan in spirit, like Poggio Bracciolini (d. 1459), Antonio Beccadelli, called Panormita (d. 1471), and Francesco Filelfo (d. 1481). But there were others, such as the Camaldolese monk, Ambrogio Traversari (d. 1439), Palla Strozzi (d. 1462), Giannozzo Manetti (d. 1459), Guarino Veronese (d. 1460), Vittorino da Feltre (d. 1446), and Giovanni Pico della Mirandola (d. 1463-94), who attempted to reconcile their worship of antiquity with their living faith in the Catholic Church. Among these Christian Humanists were two popes, Nicholas V (d. 1455) and Pius II (d. 1464). A vivid picture of the literary life of the age is given in the Vite d’uomini illustri of the Florentine bookseller, Vespasiano da Bisticci (1421-98). In the earlier part of the century, vernacular literature is of minor importance. Leonardo Giustiniani of Venice (1388-1446) wrote popular love poetry and religious lyrics, some of which have been attributed to Jacopone da Todi. The Florentine architect, Leon Battista Alberti (1406-72), is the author of artistic treatises and moral dialogues, especially the four books of Della Famiglia, in a Tuscan tinged with Latinisms. Fco Belcari (1410-84) wrote mystery plays and religious poems, and also lives of B. Giovanni Colombini and his followers, with the devout simplicity of an earlier age. Also in religious literature we have the ascetical letters of B. Giovanni Dominici (d. 1419), a strenuous opponent of the pagan tendencies of the classical revival, and the vernacular sermons (1427) of St. Bernardine of Siena.

In the latter part of the century, mainly through the influence of Lorenzo de’ Medici and the dukes of Ferrara, Italian again triumphed. Three poets appear, almost of the first class: Lorenzo de’ Medici himself (1449-92), Angelo Poliziano (1454-94), and Matteo Maria Boiardo (1434-94). Of extraordi-inary versatility as a poet, print of his striking personality especially in his subjects drawn from country life, shows a keen feeling for nature. The ballate and sonette of Poliziano have the true lyrical note, while his Stanze per la Glostra are impregnated with the spirit of Florentine painting, and his Orfeo handles a mythological subject in the style of a religious mystery play. Boiardo’s Canzoniere, somewhat Petrarchan in tone, but largely original in form, is the finest collection of love poems of the century; his unfinished Orlando Innamorato, a poetic romance in ottava rima, gives fresh life to the Carlowingian legends by informing them with the spirit of the Arthurian cycle. Among later poets of the Medicean circle, Luigi Pulci (1432-1484), in his Morgante, treated the adventures of Orlando with a fantastic mingling of seriousness and japery; Girolamo Benivieni (1453-1542), a noble mystical and patriotic spirit who outlived his age, sang of celestial love “according to the mind and opinion of the Platonists” (1457), and became the lyrical interpreter of the aspirations of Savonarola. At the northern courts, the blind poet Francesco Bello followed in Boiardo’s footsteps with his Mambrìano (1496); the Ferrarese courtier Antonio Tebaldeo (1463-1537), whose poetry all belongs to the fifteenth century, exaggerated the defects of the age and versified the politics of his patron, Antonio Camelli, called II Pistoia (1440-1502), produced an extraordinarily vivid series of satirical sonnets which are historical documents of high importance. In the South, the two chief literary figures are the Neapolitans, Giovanni Pontormo (1429-1503) and Jacopo Sannazaro (1458-1539). The former, who gave his name to a famous academy, wrote only in Latin, which, alike in prose and verse, he used as though it were his own tongue. The latter owes his fame to his Latin “Elogio Piscatorum” and his Italian Arcadia, in prose and verse, which influenced the literature of Elizabethan England; his chief Latin poem, De Partu Virginis, was not published until 1526. The most important Italian historical work of the fifteenth century is the Storie di Milano of Bartar- dino Corio (1459-1510), of special value for its minute and vivid picture of the reigns of the dukes of the Sforza family.

The Cinquecento witnessed the Tuscan vernacular finally established as the literary language of Italy, and the classical studies of the past bearing fruit no longer in pedantic imitation, but in a national literature which is classical only in its perfection and in its adherence to the rules of the Latin language of ancient Rome. Machiavelli’s political and historical works, admirable in clarity, brevity, and efficiency of expression, penetrating in insight, and at times noble in patriotic aspiration, are among the masterpieces of the age. Machiavelli’s works are, therefore, a testimony to the vitality of Italian literature and the enduring power of the Renaissance spirit.
Stained with the licentiousness and lack of noble ideals that characterize the age. His "Satires", or epistles in verse, give a perfect portrait of the poet himself, and sketch the life of the times with a master's hand. In his "Rime", notwithstanding occasional Petrarchan imitations, we recognize a sincerity of utterance and an originality of thought which are rare in the lyrical poetry of that day. Next to these two giants stands Francesco Guicciardini (1483–1540), pitiless investigator of men's secret motives in his "Storia d'Italia" and his political writings, endowed with a rare power of historical portraiture, but devoid of enthusiasm and all lofty aspirations.

A higher ideal of life and conduct is expressed in the "Cortegiano" of Baldassare Castiglione (1478–1529), the picture of the perfect gentleman, which at the close rises on the wings of Platonic love to the mystical contemplation of celestial beauty. Pietro Bembo (1470–1547), the literary high-priest of the century, touched the latter theme, less nobly in his "Asolani"; his poetry is little more than a servile imitation of Petrarch; but his "Prose", in which he formulated the rules of the Italian language, and the zeal with which he set the example of editing the vernacular classics, were influential in creating a standard of good taste. To the same poetic school as Bembo belongs the Petrarchists, Francesco Maria Molza (1489–1544), Giovanni Guidiccioni (1500–41), Giovanni della Casa (1503–50), all noted for perfection of technic rather than for originality of thought; Vittoria Colonna (1490–1547), whose saintly life illumines her poetry, Gaspare Stampa (1523–54), in whose lyrics we find the faithful delineation of a profound and unhappy passion; and the great artist, Michelangelo Buonarroti (1475–1564), raised above the others by loftiness of thought and rugged vigour of style. A versatile Southern, Luigl Fusillo (1510–68), shows marked individuality alike in his lyrics and in his idyllic poems. Among burlesque poets are the witty but immoral Francesco Berni (1498–1533), and Teofilo Folengo (1492–1544), whose "Macaroni", or "Baldus", is a burlesque epic written in an extrava- gant but subtle blend of Latin and Italian, the poesia maccheronica, of which he was the perfecter but not the inventor.

Didactic poems in blank verse, in imitation of Virgil's Georgics, were composed by Giovanni Rucellai (1475–1526) and Luigi Alamanni (1495–1556), while Gian Giorgio Trissino (1478–1550), one of the chief literary critics of the age, employed the heroic metre in his "Italia liberata dai Goti". Numerous writers strove to tread in Ariosto's footsteps with romantic epics, of which the "Amadigi" of Bernardo Tasso (1493–1569), the father of Torquato, is the most successful. In the religious poetry of Celso Magno (1536–1602), we find the renovation of spiritual ideals caused by the Catholic reaction, and this is no less marked in Torquato Tasso (1544–95), with whom the poetry of the Italian Renaissance ends. Modelled upon classical rules, Tasso's "Gerusalemme Liberata" is at once a heroic and a religious epic, stately and musical, in which the minor charms of romance and sentiment are not lacking. He likewise won a high place as lyrist and dramatist, and, at the end of his life, composed a didactic poem, "Il mondo della cura"; the merits of which are theological rather than poetical.

The Renaissance in Italy produced no great national drama. The Italian comedy of the Cinquecento is directly imitated from Plautus and Terence, but attempts to adapt the plots and characters of the Latin in playwrights to the conditions of life in the sixteenth century. Here, as in the romantic epic, Ariosto stands supreme. His earlier comedies (1508–1509) are written in prose, his later (1520–1531) in verso sdrucciolo, blank verse ending in a daicty, intended to reproduce the trimeter iambic of the Latin comedians. They give us vivid pictures of the times; the dialogue is natural and brilliant, the characterization superficial but clever; but they are disfigured by deplorable obscenity. Between Ariosto's earlier and later comedies come the "Calandr" of Bernardo da Bibiena (1513) and the "Mandr agola" of Machiavelli (after 1512), both in prose; the latter is a work of real dramatic power, but for its immorality to the last degree. This, unfortunately, applies to much of the comedy of the century, and is found at its worst in the plays of the infamous Pietro Aretino (1492–1556). The tragedies are poorer, and have no relation with the life of the age; they are mere rhetorical imitations of the Greek tragedians and of Seneca, the "Torrismond" of Torquato Tasso (1587) alone rising above mediocrity. Far more attractive are the pastoral lyric dramas, Tasso's "Aminta" (1573) and its worthy rival, the "Pastor Fido" of Battista Guarini (1585), masterpieces of their kind, in which what is artificial and conventional in sentiment is idealized and made acceptable by the melodiousness of the poetry with which it is clothed.

Besides Machiavelli and Guicciardini, Florence produced a number of admirable historians, especially Jacopo Nardi (1476–1555), Donato Giansotti (1492–1572), and Benedetto Varchi (1526–65). At Venice, beside the official histories of Bembo and Paolo Paruta (d. 1598), we have the voluminous "Diarii" of Marino Sanudo (1466–1536), which enable us to reconstruct the public and private life of the republic day by day. Angelo di Costanzo (1507–91) wrote the history of Naples, with simplicity. The autobiography of Benvenuto Cellini (1500–71) and the series of "Vite" of the painters, sculptors, and architects, by Giorgio Vasari (1531–74) bring the artistic side of the Renaissance vividly before our eyes. Bernardino Baldi (1533–1617), also an idyllic and didactic poet of an austere spirit, composed admirable monographs on the lives and times of the first two dukes of Urbino. Two novelists, Matteo Ban-
dello (1480–1560) and Giambattista Giraldi (1504–75), have the merit of being less immoral than Boccaccio. Among minor prose treatises the “Galateo” of Giovanni della Casa, a manual of good breeding, has made its title proverbial. The translation of Tacitus by Bernardo Davanzati (1529–1608) is a model of style. Among grammarians and literary critics, besides Bembo, Trissino, and Varchi, should be mentioned Leonardo Salvisti, who played a leading part in the foundation of the “Accademia della Crusca” in 1582. The spiritual element in vernacular literature is represented by the “Vita e Transito della beata Osanna da Carpi” by Girolamo Montolivetano (1505); the “Trattato del Purgatorio” of St. Catherine of Genoa (d. 1510); the mystical writings of her godchild, the Carmelite nun, Battista Vernazza (d. 1587); the Letters of St. Catherine de’ Ricci (d. 1590); and the “Combattimento Spirituale” (circa 1385) of Lorenzo Scoppa, still so widely used among us for purposes of devotion.

The Decadence.—The creative genius of the Italians had been exhausted by the Renaissance, and the life of the nation crushed down by the foreign yoke of Spain, imposed on the peninsula by the Treaty of Cateau-Cambrésis (1559). Already in the latter part of the sixteenth century the decline had set in; it lasted through the whole of the seventeenth (II Seicento), and the first half of the eighteenth century (II Settecento), which together form the least fruitful epoch in the history of Italian literature. Exaggeration and extravagance, with corrupted taste and frantic striving after novelty (in part a reaction against the rigid classicism in which the Renaissance ended), are the characteristics of earlier seventeenth-century poetry, of which the most typical work is the “Adone” of the Neapolitan poet, Giovannibattista Marini (1569–1628), a profoundly serious poet with a pretended ethical intention. Alessandro Tassoni (1565–1635) parodied the heroic poem in his comic epic, “La Scaccia Rapita,” and assailed the Spanish oppressors of his country in his prose “Filippiche.”

A new school of lyrical poetry was inaugurated by Gabriello Chiabrers (1552–1637), who attempted, with only partial success, to adopt the metres of the Greek and Roman poets for Italian verse. He was followed, with less refined taste and more virility, by Fulvio Testi (1593–1646), whose patriotic poems strike a higher note. Among satirical poets, natural fruit of a corrupt age, is the Neapolitan painter, Salvatore Rosa (1615–73). The inevitable reaction against the inflated manners of the Marinisti led to a movement for reforming Italian poetry by a return to nature and simpler ideas. To this latter school belong Vincenzo Ficaja (1642–1707), a deeply religious poet, the best of whose sonnets are the poetic gems of his age, Benedetto Menenzi (1649–1716), a Florentine priest, who was also successful as a writer of satires; and Alessandro Guidi (1650–1712), called “the Italian Pindar,” who introduced greater freedom into the rhythmical structure of the canzone. This movement culminated in the famous “Accademia dell’Arcadia,” inaugurated at Rome in 1690, which soon sank into an affected pastoralism and artificial simplicity, as false to nature and to true poetry as the mannerisms which it was intended to combat.

Although the greatest Italian of the epoch, Galilei Galilei (1564–1642), belongs to science rather than to literature, his writings are distinguished by his highest literary excellences. Francesco Redi (1626–1698), a distinguished physician, was also a poet and philologist. Three Jesuits are among the chief prose writers of the century, combining devotion and learning with a literary style which, though far less free than Galilei’s from the faults of the age, is unsurpassed by any of their contemporaries: Father Orazio Pallavicino (1607–1667) composed the official history of the Council of Trent, in refutation of that of Fra Paolo Sarpi (1552–1623), and ethical and religious treatises, of which the “Arte della Perfezione Cristiana” and the four books “Del Bene”, philosophical dialogues held in the villa of Cardinal Alessandro Orsini at Bracciano, are still read; Father Daniele Bartoli (1608–83), a prolific and brilliant author, wrote the history of the Society of Jesus in a style which is typical of the Seicento at its best; Father Paolo Segneri (1624–94) reformed the art of religious oratory and freed it from the corruptions of the times. Prominent among historians is Cardinal Guido Benvenuto Enrico Caterino Davila (1576–1631), who wrote on the Civil Wars of France. A little later, the study of history was set upon a scientific basis by Giambattista Vico (1668–1744) and Lodovico Antonio Muratori (1672–1750). Vico showed how history is illumined by the application of jurisprudence and philosophy; Muratori, that worthy priest to whom the student of the Middle Ages owes more than to any other man, taught by his own example that history must be founded in documentary research, and prepared the ground for subsequent scholars. In philology and literary criticism much was mentioned Carlo Dati (1619–76), who is associated with the Accademia della Crusca (of which the first Dictionary had been published in 1612); Gianvincenzo Gravina (1664–1718), who was one of the founders of the Academia; and the Sienese, Girolamo Gigli (1660–1722), the zealous editor of St. Catherine. Jesuit Girolamo Tiraboschi (1731–94) compiled the voluminous history of Italian literature which is still indispensable.

By the middle of the eighteenth century dynastic changes had swept away most of the old decendants of the reigning houses, and by the Peace of Aachen (1748) the reactionary yoke of Spain was forever lifted from Italy. The latter half of the century shows a moral and intellectual awakening, but at the same time the growth of a sceptical and irreligious spirit, due in part to French influence. It is an epoch of scientists and political economists, among the latter Cesare Beccaria (1738–94) winning the most permanent fame. In poetry, Pietro Trapassi (1698–1782), better known as Metastasio, brought the melodrama to the ultimate
perfection of which it is capable, investing it with tragic dignity and lyrical beauty. Carlo Goldoni (1707–93) reformed Italian comedy, withdrawing it from pedantry and buffoonery to the representation of real life and character. With Giuseppe Baretti (1736–1808), who landed literary affections and pleaded for virile sincerity in letters, Piedmont made a significant entry into Italian literature. Finally, two great poets arose, a Lombard priest and a Piedmontese nobleman, who anticipated the new age and used poetry as an instrument for social progress: Giuseppe Parini (1720–90) and Vittorio Alfieri (1749–1803). Parini’s chief poem, “Il Giorno”, satirizes the corrupt and effeminate life of the aristocracy, and protests against the injustice of class; his “Odi”, no less admirable in style, bring the same virile note into lyrical poetry. Alfieri, besides composing robust sonnets and satires, produced a long series of austere and powerful tragedies which are in the main a protest against every kind of tyranny and oppression, and a trumpet-call to the nation to put on the armour of manliness and endurance.

Modern Literature.—At the beginning of the nineteenth century the ideals of the French Revolution had penetrated into Italy, while the establishment first of the Cisalpine Republic and then of the short-lived Napoleonic Italian kingdom inspired national feeling and gave hope of ultimate independence. These events had naturally a profound influence upon Italian literature, which, for the next fifty years, is divided between the Classic and the Romantic schools; the former attempting to accomplish the work of renovation by adapting classical models to the new conditions, the latter appealing less to form than to the picturesque aspects of history (particularly of the Middle Ages), to popular sentiment, and to nature.

Daniele Barberi (1754–1828) is the head of the Classical school in poetry, though his earlier works belonged to the preceding century. With no great originality, no stability of thought or constancy of ideals, he has inexcusable fertility and a vigour of style that is frequently impressive. Ugo Foscolo (1778–1827) is, like Monti, a literary critic as well as poet, but a consistent patriot. His masterpiece, “I Sepolcri”, is a poetical epistle in blank verse, classical in thought, lofty in style, and rich in imagery; the “Ultima lettiera di Jacopo Ortis”, his best known prose work, is an unwholesome and morbid production. Among minor writers of the Classical school are the poet Ugo Foscolo (1773–1828), the translator of the Odyssey, who answered Foscolo’s “Sepolcri” from the religious standpoint; Antonio Cesari (1769–1828), a priest of Verona, whose aim was to purify the language by the standard of the Tuscan writers of the Trecento; Giuilio Perticari (1777–1822), the son-in-law of Monti, with whose linguistic labours in connexion with the revision of the “Vocabolario della Crusca” he was closely associated; Carlo Botta (1766–1837), who attempted to follow in the footsteps of the Latin historians and the great Florentines of the sixteenth century. Belonging more to the Classic than the Romantic school, Gios-

Vittorio Alfieri

quited love, combined with loss of the Catholic Faith, in which he had been reared, drove him into crude pessimism. No Italian since Petrarch had reached the lyrical beauty of his “Canti”, in which the contrast between the past and present of his country, the worship of antiquity, and theMW discusion, hopeless love, and, at length, even the contemplation of nature find utterance in sheer despair.

The founder of the Romantic school is Giovanni Berchet (1783–1851), of Milan, who in 1816 characterized the Classical school as “poetry of the dead”, and the Romantic school as “poetry of the living”. His own patriotic lyrics, a little later, won him the title of “the Italian Tyttaeus”. To the Romanticists belongs the noblest figure in Italian literature of the nineteenth century, the great Catholic writer, Alessandro Manzoni (1785–1873), whose life was real, and his art inspired, by religion and patriotism alike. In his “I尼Sacri” (1815–22), he gives lyrical expression to the chief mysteries of the Faith; in his ode on the death of Napoleon, “Il Cenno Maggio”, he passes judgment on the mighty conqueror’s career in the light of religion. His lyrical dramas, “Il Conte di Carmagnola” (1820) and “L’Adelechi” (1822), are deficient in true dramatic qualities, but notable for the choral interludes, patriotic no less than religious in their aim. The same ideals form his masterpiece, “I Promessi Sposi” (1827), a realistic romance with a historical background, as admirable in characterization and description, in pathos and in humour, as it is lofty in its idealism. To the school of Manzoni, similarly combining fervent Catholicism with nationalistic enthusiasm, belong Tommaso Grossi (1790–1833), poet and novelist; Silvio Pellico (1789–1854), whose “Le Mie Prigioni” describes with pathetic detail and Christian resignation his cruel imprisonment at the hands of the Austrians; and Cesare Cantù (1804–95), better known for his later voluminous works on history. Political considerations colour most of the literature of the middle of the century, whether it be the historical writings of Cesare Balbo (1789–1853), the satirical and patriotic poems of Giuseppe Giusti (1800–50), the revolutionary lyrics of Gabriele Rossetti (1753–1854), the tragedies of Giovannibattista Niccolini (1782–1861), or the once admired romances of Francesco Domenico Guerraz (1804–73). The “Storia d’Italia nel Medio Evo” of Carlo Troya (1784–1838), the “Storia della Repubblica di Firenze” of Gino Capponi (1718–1839), and the “Storia dei Musulmani” of Sigismondo Amari (1806–89) are works of more permanent value. Niccolò Tommaso (1802–74), poet and patriot, who united the study of philology with that of philosophy, made his name dear to students of Dante and St. Catherine.

Midway between this epoch and our own, belonging by the character of his art to the old rather than to the new era, stands a true, though not a great, poet, Giacomo Zanella (1820–89), a learned professor and devout Catholic priest. In Zanella’s work the cult of science, the love of nature, an ardent patriotism, and profound religious convictions are nobly blended. He is at his best in his lyrics; and in the last of these, an ode to Leo XIII, he pleads for a reconciliation between Church and State, the wedding of the Cross.
of Christ with the Savoyard cross on the national banner. Since the unification of Italy, more has been accomplished in economics and in social science than in pure literature. One modern Italian, indeed, takes his place among the foremost European poets of the nineteenth century (for collectio, see p. 124). A bitter opponent of the Christian ideal and a strenuous democrat, Carducci has given poetic form to the anti-clerical side of the Revolution that has made Italy one, and has expressed the paganism that is latent in the Italian genius. In his masterpiece, the "Ora" (b. 1867) is noticed by modern musicologists (e.g., Durandus, IV, 57—cf. "Micrologus", xxxvi; etc.) since about the eleventh century. The three Roman Ordines before the tenth century know only the form *Ite missa est*. The explanation is that originally the people were not dismissed on such days, but stayed in church for further prayers after Mass, suitable to fasting days (so Boni, *Rerum liturg. libri duo*, II, xx, n. 3). This is confirmed by a now extinct medieval custom of singing *Benedicamus Domino* at the end of midnight Mass at Christmas, because Lauda follow at once (Durandus, op. cit., IV, 57, §7). So the idea obtained its fi nale est immediately after the text continues: "Then the seven candles are carried before the pontiff to the sacristry" (ed. Atchley, p. 146). It was not till the sixteenth century (Missa of Pius V) that the accretions to the Mass that had gradually been introduced (Placent, blessing, last Gospel—all originally private prayers) were definitely recognised as part of the liturgy to be said at the altar.

The corresponding dismissals in the other Western rites are: at Milan, V, "Procedamus in pace," R. "In nomine Christi"; Mosarabic, "Solemnia commendationis"; Mozarabic, "Dies Iubilaeorum"; Latin, IV, 57—&c., "Cum sancto acceptum cum pace," R. "Deo gratias" ("Missa Mixtum", P. L., LXXXV, 120). Of the Eastern rites that of the "Apostolic Constitutions" dismisses the people with the form: "Go in peace" (Brightman, "Eastern Liturgies", p. 27). The Antiochene and Byzantine Liturgies end with the deacon’s announcement: "Let us go forth in peace," R. "In the name of the Lord"; and then a short "prayer of dismissal" said by the celebrant (op. cit., 67, 397); so also the Alexandrine Rite (ibid., 142); while the Nestorians have only a prayer and blessing by the celebrant (ibid., 303).

**Present Ritual.**—At high Mass, as soon as the last Post-Cummission is ended, the celebrant and ministers go to the middle of the altar and stand in line. The celebrant turning to the people sings, *Dominus vobiscum* (the usual introduction to any announcement), and remains facing them. Then, when the deacon has answered, the deacon turns round and, with hands joined, sings *Ite missa est* to its proper tone, the choir answering *Deo gratias* to the same notes. In the former Missal ten melodies were provided for various solemnities. The idea is to sing this last verse to one of the first three Kyrie melodies with the same chant as that with which it began. To carry this out more completely the new Vatican Missal provides nineteen tones, most of them very elaborate (for *Ite missa est* and *Benedicamus Domino*), corresponding to the various masses in the "Kyriale","
The tone of the first Kyrie should always be used. In figured masses the *Ite missa est* should be sung to the tone of the plain-song mass provided for the occasion. For the Feast of Corpus Christi, a feast day in Italy, and for the Holy Land and he also briefly notes the important events which he believes to be connected with the various places. In this he falls into some strange blunders, as when, for instance, he places the Transfiguration on Mount Olivet. Such errors, however, are also found in the subsequent writers. His description of Jerusalem, though short, contains information of great value for the topography of the city.

Very different from the above is the account of her pilgrimage written by a nun for the sisters of her community towards the end of the same century (c. 350). The Benedictine nun, Cambrennus, who became a nun in 1884, attributed it to Saint (? Silvia of Aquitaine, the sister of Rufinus, prefect of the prætorium under Theodosius the Great and his successor Arcadius, whence it became known as the "Peregrinatio Sancte Silvia". Dom M. Pérotin, however, later showed (Rev. des Questions Historiques, Oct. 1903) that the real author is a native of Galicia, Spain, whose name is variously given as Etheria, Echeria, and Egeria. She seems to have been a lady of importance with friends at court, possibly a relative of Theodosius himself (who was a Galician). Whatever her rank, the clergy, even bishops, addressed her as *Regina*atrice, and two imperial officers gave her a military escort where the road was unsafe. During her pilgrimage of over three years, she visited Western and Eastern Palestine, Ídumea, Sinai, Egypt, Asia Minor, Syria, and Mesopotamia. She is a keen observer, and writes with a certain charm in spite of her crude, provincial Latin.

The work, unfortunately, exists only in a fragmentary state, though the lacunae at the beginning are partly filled up by extracts found in the treatise "De Locis Sanctis" of Peter the Deacon, a writer of the twelfth century (Geyer, pp. 107–21). While it furnishes very valuable topographical details it is the less useful. Her description of the churches and of the religious ceremonies then in use makes it of special interest to the liturgiologist. Its value in this respect is well brought out by Dom Cabrol in his work "La Peregrinatio Silvie: Les églises de Jérusalem, la discipline et la liturgie de la fin du IV siècle" (1935). Since the "Peregrinatio" has often been edited and studied. A study from a philological point of view was published in the United States by Professor Edw. A. Bechtel—"Silvia de Iesu Christo Peregrinatio: The Text and a Study of the Latin" (Chicago, 1902). The Spanish text, however, is useful. The "Peregrinatio" (in the modern form of the name) was followed in 386 by two other ladies of quality, the Roman matron St. Paula and her daughter Eustochium. The account of their pilgrimage through Palestine and Egypt, written by St. Jerome after Paula's death (Epist. civili ad Eustoch.), was intended to make known the virtues of the holy pilgrim, rather than to describe the places she visited; still it contains much useful matter.

No pilgrimage of the fifth century is extant.

The author of the "Epistola ad Faustum", or "Epistola de aliquibus locis sanctis", commonly ascribed to St. Eucherius, Bishop of Lyons (d. A.D. 450), obtained his information by reading the accounts of, and conversing with, pilgrims. The relation of Theodosius "De suiti Terrae Sancte", discovered in 1864, belongs to the first half of the sixth century (c. 530). It is written somewhat after the manner of the "Peregrinatio de Aquitana", and gives the distances between the different sites of the Holy City. Of Theodosius himself nothing certain is known. Little more is known of Antoninus of Piacenza, who made the pilgrimage about 570. In manuscript he is sometimes styled Antoninus the Martyr, through Ignatian confound of the writer with the martyr Arsenius who is venerated at Piacenza. He is the last
writer who saw Palestine before the Moslem conquest. Although he covered in his travels nearly the same extensive territory as the Spanish nun, his work contains but few details not found in other writers; it is, moreover, marred by omissions. He was also the first to describe the Holy Land which is now the most native credulity. A century later (c. 670) the French bishop Aureulf was wrecked on the western coast of Britain after visiting the Holy Land. To this accident we owe St. Adamnan’s “De locis sanctis libri tres.” Having been hospitably received at the court of the famous Monastery of Iona, Aureulf described to him his voyage and drew for him the plans of some of the churches of Jerusalem. Adamnan wrote down the narrative on vellum, and later edited it in three books, adding, however, matter derived from other sources. The work is important, as it contains the first description of Jerusalem after the changes wrought by the Persian conquest under Chosroes (614), and the Arab occupation under Omar (637). It was long accepted as the authority on Palestine. Venerable Bede’s “De Locis Sanctis” is mainly taken from Adamnan’s work St. Willibald, nephew of St. Boniface and Bishop of Eichstätt, and who occurred in his youth for about years (721–729), three of which he spent in the Holy Land. In his latter days he related his life and travels to the nuns of the monastery of Heidenheim. Two reports of his story have come down to us. The first, “Hodiernoicon Sancti Willibaldi,” was written (c. 755) by a relative of the writer, the author of the “Story of his life,” who notes which she took while he was speaking. The other, “Itineraireum Sancti Willibaldi,” was probably composed from memory, after Willibald’s death, by one of the two deacons who accompanied him in his visits to the monastery. Though better in style, it is less reliable than the first, and contains details which the writer obtained elsewhere. The last Itinerarium of any consequence before the Crusades is that of the French monk Bernard, who with two of his fellow-religious visited Egypt and Palestine (868–9). He is the first to make mention of the holy fire which is now such a conspicuous feature in the Greek celebration of Holy Saturday in the church of the Holy Sepulchre. Of the unimportant works of the next two centuries, the relation of Ingulf, Abbot of Croydon, may be mentioned, because it shows to what dangers pilgrims were exposed at that time. Of the seven thousand persons who accompanied him on his pilgrimage (1064) more than three thousand perished.

With the beginning of the Crusades the works on Palestine become very numerous, and after the loss of the country by the Latins they increase rather than diminish. Those which relate to the events of the crusading period do not concern us here. They may be found in such collections as Bongard, “Gesta Dei per Francos” (Hanau, 1611), “Recueil des historiens des croisades” (Paris, 1844–80), and “Publications de la Société de l’orient Latin, Série Historique” (Geneva, 1874–85). Of the others, a long list of which is given by Röhrs, only the most important can be noticed. The first of these is the relation of the Russian monk (hagimenos) Daniel, the earliest extant record of a Russian pilgrimage to the Holy Land. He came thither shortly after the Christian occupation (c. 1100), and visited most of the holy places and sanctuaries, not only the monastery of St. Sabas as guide. His description of what he himself saw is generally accurate, and he gives a fair picture of the country a few years after it was taken by the Crusaders. The Russian text with a French translation was published by Noroff (St. Petersburg, 1854); an English translation is in the monastery of St. Sabas. The “De locis sanctis libri tres” of the Blessed Rubruq (the Latin author Rubruck) is a work of importance. The first part of the text, “Itinerarium,” describes the author’s journey to the Holy Land, and contains a description of his adventures on his journey to Persia, and of the manners, customs, and religion of the Persians. It is owing to this second part that the work was soon translated into Italian and French. The Latin text of the “Itinerarium” was first published in 1837, and later by B. D. Laurens in “Itineraria” (Leipzig, 1864; 2nd ed., 1873). For an extensive notice of Rubruck, see “Rev. Bibl.”, II (1893), pp. 44, 182, 584. “De Itinere Terra Sancte” by Ludolph, pastor of Suchum in the Diocese of Paderborn, is considered the best relation of the fourteenth century. The author spent five years in Palestine (1336–41). John Polony—by some to be a German, by others a Pole—is, as far as we know, the first pilot who drew a map (now unfortunately lost) of the Holy Land. His “Peregrinatio ad Terram Sanctam” (1422) is in many places copied from Burchard de Monte Sion. The best work of the fifteenth century is the voluminous “Evagioratium in Terra Sancte, Arabic et Egypti peregrinacionem” of the Dominican Felix Faber, or Fabri. The author, who was twice in the East (1480 and 1483), is somewhat credulous, but reliable in what he himself observed. For travels to the Far East during the fourteenth century see Pordenone, Blessed; Rubruq, William of; Polo, Marco.

F. BRETTEL.

Itinerarium, a form of prayer used by monks and clerics before setting out on a journey, and for that reason usually printed at the end of the Breviary, where it can be conveniently found when required. Most probably the use of such prayers originated in monastic observance. The early rules of the Fathers of the Desert—St. Anthony and St. Pachomius—as well as that of St. Basil, legislate minutely as to the behaviour of monks when travelling, and impose various restrictions and duties upon them. St. Benedict, whose rule, more than any other, has exerted so great an influence over all ecclesiastical customs monastic and otherwise, in the Western Church, laid down (chap. lvii) that when any of the brethren were to be sent on a journey, they should, before setting out, commend themselves to the prayers of the abbot and community, by whom they were to send
be daily remembered during their absence from the monastery. According to monastic tradition, if the absence were to be only a short one, i.e. if they were to return the same or the following day, they merely asked the abbot for blessing, united to the conclusion of one of the canonical hours, and then requested the prayers of the community.

But if the journey was to occupy a longer time, a more solemn form of itinerarium was customary. Kneeling or lying prostrate at the altar steps, some venerables and pious persons were invited over them by the abbot, who then dismissed the travellers with his blessing and the kiss of peace. This was most likely the origin of the itinerarium as we have it at present. The constitutions of the various orders and congregations usually legated for the particular prayers to be used by their members before a journey, and the duty of a community to pray for those who may be travelling is fulfilled at the present day by the vespers “Divinum auxilium”, said for absent brethren at the end of each of the canonical hours. The inclusion of the itinerarium in the secular Roman Breviary indicates that its use is at least recommended to all clerics, though not obligatory. The “Ceremoniale Episcoporum” directs that a prelate ought to recite it with his chaplains or household before commencing a journey; and Gavanti mentions an ancient pontifical containing a longer form of itinerarium for eight years of prelates. The usual form consists of the canticle “Benedictus” with antiphon, certain versicles, and several collects. Two of these latter are very ancient, being found in the Gregorian Sacramentary. In some modern editions of the monastic Breviary a shorter form of itinerarium is also given, for use “ante ambulationem extra monasterium”.

G. CYPRIAN ALSTON.

Ittenbach, FRANZ, historical painter; b. at Königs-winter, at the foot of the Drachenfels, in 1813; d. at Düsseldorf, 1879. He was a pupil at the age of nineteen at the Academy of Düsseldorf, receiving also private lessons from his president, Schadow. He was an exceedingly religious man, and associated with himself three of his friends and fellow-students, Karl and Andreas Müller, and Ernst Deger, and the four men travelled about in Germany, studying and painting together. He persistently declined any commissions for mythological or pagan subjects, and as a rule devoted his energies exclusively to church decoration, preceding the execution of his greatest works by devout religious exercises, including confessions and communion. His finest paintings are to be found at Bonn, in the church of St. Remigius, and in Breslau in a church dedicated to the same saint. There is also a remarkable “Holy Family” dated 1861, painted for Prince Liechtenstein in his private chapel near Vienna, and many other works by him are in various Catholic churches in Germany. His only important fresco was painted in 1844 in a church at Remagen. He was a very popular painter in court circles, a member of most of the European academies, and the recipient of many medals and decorations. His colouring is correct and delicate, and yet of remarkable brilliance, and his pictures have a suave and attractive religious aspect and create a strong emotion in the minds of those who gaze at them. He painted a few portraits, but they were unimportant; his main work was in his altar-pieces.

See various numbers of the Zeitschrift für Bildende Kunst (1879 and later years).

GEORGE CHARLES WILLIAMSON.

Ives (Yves), SAINT, b. at Kerminster, near Tréguier, Brittany, 17 October, 1253; d. at Louanœ, 19 May, 1303, was the son of a notary of Kerminster, and Azu du Kenquis. In 1267 Ives was sent to the University of Paris, where he graduated in civil law. He went to Orleans in 1277 to study canon law. On his return to Brittany having received minor orders he was appointed "official", or ecclesiastical judge, of the archdeaconry of Renhes (1280); meanwhile he studied Scripture, and there are strong reasons for holding that he joined the Franciscan Tertiaries sometime later at Guingamp. He was soon invited by the Bishop of Tréguier to become his "official", and accepted the offer (1284). He displayed great zeal and rectitude in the discharge of his duty and did not hesitate to resist the unjust taxation of the clergy, which he considered an encroachment on the rights of the Church; by his charity he gained the title of advocate and patron of the poor. Having been ordained he was appointed to the parish of Tredres in 1293 and eight years later to Louanœ, where he died. He was buried in Tréguier, and was canonized in 1347 by Clement VI, his feast being kept on 19 May. He is the patron of lawyers, though not, it is said, their model, for—"Sanctus Ivo erat Brito, Advocatus et non latro, Res miranda populo."

Acta SS., May, V. 248: Life by de la Haye (Moriaux, 1833); and by Norbert (Paris, 1882); DANIEL, Montenez, 1897; ANTONIO (St. Bernard, N. Y., 1897), II. 324-40; VIII. 201-3; XVII. 259. A. A. MACÉBLEAU.

Ives, LEVI SILLMAN, b. at Meriden, Connecticut, U. S. A., 16 September, 1797; d. at New York, 13 October, 1867. He was one of the most distinguished converts to the Church made in the United States through the influence of the Tractarian Movement of 1848-49. The war of 1812 with England broke out while he was at school, and he joined the army, serving for a year. His further education he received at Hamilton College. In 1823 he was ordained a minister of the Protestant Episcopal Church, and officiated at several charges in New York and Pennsylvania until 1831, when he was elected Bishop of North Carolina. Here he took great interest in the education and religious training of the coloured people of that section. Deeply impressed by the Oxford Movement, he founded at Valle Crucis in North Carolina a religious community, called the "Brotherhood of the Holy Cross". The members, a few clergyman and zealous laymen, observed a community rule and went about preaching Tractarian ideas. So warm was the advocacy of the Oxford theories by Bishop Ives that he was arraigned for them before the convention of the Episcopal Church. His explanations were accepted for a time, but then the "Brotherhood of the Holy Cross" was dissolved. In 1852 he went to Rome and made his submission to the pope, and thus, as he said himself, "abandoned a position in which he had acted as a minister of the Protestant Episcopal Church for more than thirty years, and as a bishop of the
same for more than twenty, and sought late in life admission as a layman into the Holy Catholic Church, with no prospect before him, but simply peace of conscience and the expectation that Ivo gives with great confidence, that Ivo was a daughter of the Protestant Bishop Hobart, also became a convert. Returning to the United States he acted as professor of rhetoric at St. Joseph's Seminary, New York, and lectured to the pupils of several convents, concerning himself also in charity work. He was especially the Chatelaine of the Pearl Protectors in New York, and was the first president of that institution.

Ivra. See MAJORCA, DIACESIS OF.

Ivo of Chartres (Yvo, Yvès), Saint, one of the most notable bishops of France at the time of the Investiture struggles and the most important canonist before Gratian in the Occident, born of a noble family about 1040; died in 1118. From the neighborhood of Beauvais, his native country, he went for his studies first to Paris and thence to the Abbey of Bec in Normandy, at the same time as Anselm of Canterbury, to attend the lectures given by Lanfranc. About 1080 he became, at the desire of his bishop, prior of the canons of St. Quentin at Beauvais. He was then one of the best teachers in France, and so prepared himself to infuse a new life into the celebrated schools of Chartres, of which city he was appointed bishop in 1090, his predecessor, Geoffrey, having been deposed for simony. His episcopal government, at first opposed by the tenants of Geoffroy, ranged over a period of twenty-five years. No man, perhaps, is better portrayed in his writings than is Ivo in his letters and sermons; in both he appears as a man always faithful to his duties, high-minded, full of zeal and piety, sound in his judgments, a keen jurist, straightforward, mindful of others' rights, devoted to the papacy and to his country, at the same time openly disapproving of what he considered wrong. This explains why he has been sometimes quoted as a patron of Gallican Liberties and looked upon by Placeus Illyricus as one of the "witnesses to the truth" in his "Catalogue". Very often Ivo was invited to preside over judicial, political, and especially canonical matters. Of his life little more is known than may be gathered from his letters. As bishop he strongly opposed Philip the First, who wished to desert Bertha, his legitimate wife, and marry Bertrade of Anjou (1092); his opposition gained the day. In the Investiture struggle then raging in France, and especially in Germany, Ivo represented the moderate party. Though he died too early to witness the final triumph of his ideas with the Concordat of Worms (1122), his endeavours and his doctrines may be said to have paved the way for an agreement satisfactory to both sides. His views on the subject are fully expressed in several of his letters, especially those of the years 1099, 1106, and 1111 (Epistle, ix, cxlvii, cxxxi, cxxvii, cxxxvii, etc.); these letters are still of interest as to the question of the relationship between Church and State, the efficacy of sacraments administered by heretics, the sin of simony, etc.

The printed works of Ivo of Chartres may be arranged into three categories: canonical writings letters, and sermons. For the canonical works see CANONS, COLLECTIONS OF ANCIENT, sub-title Collection of Yvo de Chartres. Notice it to mention here the "Decretum" in seventeen books and the "Panormia" in eight books, the latter being undoubtedly the work of Ivo himself, with material taken from the Decretals. Both of these were composed before 1096, but the "Panormia" enjoyed a far greater success than the "Decretum"; we immediately find it at Durham and elsewhere in England, at Naumburg in Germany, etc. One of the improvements of this collection on the works of Burchard of Worms (d. 1025) consists in its being written in the French language, and in adding to those of Burchard canons taken from Italian sources. As may be easily seen, theology and canon law are not yet precisely marked off from one another—a defect which holds also for previous collections; the chapters on the Trinity, Incarnation, especially the Council of the Lateran, are in this connexion. But the most important feature of Ivo's work is perhaps his preface, "Prologus", which gives new rules for solving the old problem of the discrepancies occurring in the texts of the Fathers and the councils. The letters of Ivo, 288 in number (Merlet has added 40 more), from which we gather nearly all that we know of his life, are in the edition of Migne together with those of his correspondents. Many are of a special interest as to the political and religious questions of the time; not a few are answers to difficulties referring to moral, liturgical, or canonical matters; some discuss problems of dogmatics. The popularity of these letters was very great, as may be gathered from the fact that they appear in the catalogues of many monastic libraries; numerous manuscripts are still extant. The twenty-five sermons are sometimes treatises on liturgical, dogmatic or moral questions, but are especially used as tools of the great art and science of Bishop Ivo. The "Microcosm", which has been attributed to him belongs to Berndolf of Constance. Other works, such as the "Tripartita" (collection of canons), "Commentary on the Psalms", etc., are still unprinted. The influence of Ivo's works may be seen in the writings of nearly all the theologians and canonists of his day and for some time afterwards: Alber of Liège and Hugh of St. Victor, not to mention others, depend largely on the materials put together in the "Decretum" and "Panormia"; and Hugh has also borrowed from Ivo's sermons on Holy orders, dedication of churches, etc. The connexion of ideas between the "Prologus" and the scheme of Abelard's "Sie et Non" or Gratian's "Concordantia" is obvious. The saint's feast is kept, since 1570, on 20 May; it is not known when he was canonized.

Ivory (Fr. ivoire; It. avorio; Lat. ebur), dentine, the tusks of the elephant, hippopotamus, walrus, and other animals: a tough and elastic substance, of a creamy white, taking a high and lasting polish, largely employed in the arts since prehistoric times, and used extensively in making or adorning ecclesiastical objects by the primitive and medieval Christians. In the museums of Europe there are examples of pre-historic incised and carved ivories, and also many specimens of Egyptian, Assyrian, Greek, and Roman bas-reliefs, statues, diptychs, plaques, and caskets. Many authors frequently allude to ivory, and the Old Testament teems with references to its employment, even using its attributes as poetic qualifications, in the same way as the Church does to-day in the Litany of Loreto ("Tower of ivory"). As soon as the Christians were free to display the symbols of their faith, the classical art then in vogue for this purpose, and among their first aesthetic expressions, carved ivory diptychs were the most important; they followed closely the designs used in consular diptychs, excepting that symbolism and poetic imagery took the place of representations of mythological subjects. They consisted of
two plates of ivory, hinged so as to fold together like a book; the inside of each leaf was slightly countersunk, with a narrow raised margin, so as to hold the wax that received the writing, while the outside of the leaves was profusely adorned with carvings. They were used for various purposes, such as listing the names of the baptized, bishops, martyrs, saints, and between them the names of the living and the dead who were to be prayed for.

That these dipycths suggested ivory plaques for book covers, reliquary doors and triptych shrines, is obvious; hundreds of plaques are in existence, dating from the time of Constantine to the sixteenth century, some of them of exquisite works of art; in the British Museum there is one, six inches by four, divided into thirty panels, less than an inch square, and each compartment contains a scene from the life of the Blessed Virgin, all being beautiful examples of ivory sculpture. Another use the early Christians found for ivory was the making of cylindrical pyxzes from a cross section of the elephant tusk: upon the covers, they carved figures of Our Lord, St. Peter, and St. Paul, and on the side the Apostles and Biblical subjects. Again, somewhat later, no doubt remembering that Solomon made “a great throne of ivory” (111 Kings x. 18), they overlaid their episcopal chairs with ivory tablets, as seen at Ravenna, in the chair of St. Maximian, archbishop of that city (546). After the fifth century, possibly before, ivory crosses were in use; eighty or more of them are now in existence, including those said to have belonged to a number of the saints. At the same time liturgical combs of ivory were in use. A beautiful example, the comb of St. Lupus (623), is in the treasury of St. Etienne at Lens. Representations of the Crucifixion in ivory upon various objects, are common, but not the crucifix. Most of the crucifixes date from the seventeenth century, and of these there are many, but of the earlier ones, only five have survived the action of time and the fanaticism of the Reformers. During the whole of the Middle Ages ivory was extensively used for paxes (instrumenta pacis), tabernacles, portable altars, caskets, holy-water buckets, statuettes, rosary-beads, seals, and the decoration of ecclesiastical furniture.

**Ivrea, Diocese of, suffragan of Turin, Northern Italy. The city is situated on the right bank of the Dora Baltea and has a fine view of the Great St. Bernard. A city of the Etruscans, it received a Roman colony in 90 B.C. In the Lombard period it was the seat of a dukedom. In 870 Emperor Guy of Spoleto gave the Mark of Ivrea to his brother Anscaricus, whose descendants, especially Berengarius II (950) and Arduinus (1002), aspired to the title of King of Italy. Soon after 1002, Ivrea had to contend vigorously for its communal freedom against the marquesses of Montferrat. Finally, in 1248, Frederick II gave it to the Count of Savoy. During the war between France and Spain for the possession of Lombardy there was, for a long time, a Spanish garrison in the fortress of Ivrea. By the Peace of Cateau-Cambrésis (1559) it was restored to Savoy. In 1554, 1644, and 1796, Ivrea was besieged and taken by the French in 1554, 1644, 1796. In 1800 Lannes put the Austrians to flight at the pass of the Chiussella. There is a noteworthy festival at Ivrea, the burning of the scarf (a tree decked out with fireworks), the origin of which is unknown. Legend traces the tradition back to the middle of the fifth century, when the ancient temple of Apollo is said to have been consecrated to the service of the true God. It contains a valuable painting by Perugino. The episcopal see is said to have been established by St. Eusebius of Vercelli about the middle of the fourth century. The first historically certain bishop is Eulogius (c. 451). Among the other bishops were St. Veremundus (969); Hugo (1053), a son of King Arduinus; the Cistercian Abbot Eustace (1205); afterwards Gaetano Gonzaga (1288); Giuseppe di Ceva (1614), who restored the episcopal palace and adorned it with paintings; also the present (1909) Archbishop of Turin, Cardinal Richelmy, made Bishop of Ivrea in 1886. The diocese has 138 parishes, with 220,000 souls; 4 religious houses of men and 10 of women; 6 schools for boys, and 5 schools for girls; and a Catholic paper.

**U. Benigni.**

**Ixtlilxochitl, Fernando de Alba; b. 1568; d. 1648. The most illustrious of the native Mexican historians and the great-grandson of Don Fernando Ixtlilxochitl, fifth son of Netzahualpilli, King of Texoco, and of his wife Doña Beatriz Papantzin, daughter of Cuauhtemoc, last of the Aztec emperors. He was educated in the college of Santa Cruz de Tlatelolco, but, notwithstanding his illustrious birth, education, and ability, he lived for a long time in dire poverty, and the greater part of his works were written to relieve his wants. He gives a detailed account of the important part played by his great-grandfather Don Fernando in the conquest of Mexico and the pacification of the Indians of New Spain, praising him in every possible way, and blaming the ingratitude of the conquerors. “His descendants,” says the writer, “were poor and neglected, or rather they very disgracefully gradually being taken from them.” In “La Entrada de los Españoles en Texoco” he again remarks: “The sons, daughters, grandchildren, and relations of Netzahualcayotl and Netzahualpilli are ploughing and digging to earn their daily bread and to pay ten reales and half a measure of corn to his Majesty. And we, the descendants of a royal race, are being taxed beyond every lawful right.” Partly owing to the appeal made in his works, and partly to the favour of Fray Garcia Guerra, who afterwards became Archbishop and Vicerey of New Spain, some land concessions were granted Don Fernando, and he was appointed interpreter in the Indian court. The “Historia de la Nación Chichimeca” was his last work, but this he left unfinished, having reached only the period of the siege of Mexico. This is the best of his works. The facts are fairly well defined, the chronology is more exact, the editing much better, and more care is taken in the orthography of Texcoco names. His other works contain very important data for the history of Mexico, but they are written without order or method, the chronology is very faulty, and there is much repetition. For his writings he availed himself of the ancient Indian hieroglyphic paintings, and the traditions and songs of the Indians; he indicates those which he has consulted—all of them more than eighty years old. His works, recently published to commemorate the fourth centenary of the discovery of America by Christopher Columbus, are: (1) A summary of all the events that occurred in New Spain and of many other events in the world, last but one of the creation of the world to their destruction, and from the coming of the third Chichimeca settlers up to the invasion of the Spaniards, taken from the original history “La Nueva España”; (2) History of the Chichimecas to the time of the coming of the Spaniards. (To this is added: (a) Part of the history of Netzahualcoyotl; (b) List of...**
154 names of the cities subject to the three kings of Mexico, Tlacopan, and Texcoco; (c) Another section of the history of Netzahualcoyotl; (d) The Ordinances or Laws of Netzahualcoyotl; (e) Account of Netzahualpilli, son of Netzahualcoyotl." (3) Order and ceremonial for the creation of a Lord, established by Topilte, Lord of Tula. (4) The coming of the Spaniards to New Spain. (5) Entrance of the Spaniards into Texcoco. (6) Accounts of the country and settlers of this part of America known as New Spain. (7) Brief account, in the form of a memorial, of the history of New Spain and its dependencies up to the time of the coming of the Spaniards. (To this are added (a) Account of the other Lords of New Spain; (b) Accounts of the origin of the Xochimilcas.) (8) Summary of the History of New Spain from the beginning of the world to the present era, collected and taken from the histories, paintings, written memorials, and folk songs of the natives. (9) History of the Chichemeca nation (95 chapters). (10) Songs of Netzahualcoyotl and historic fragments of the life of the same.—There seems, however, to be but little reason for attributing this last to Ixtlilxochilti.

CAMILLUS CRIVELLI.
Jaca (JACCA), Diocese of (JACCENSA), in the Spanish province of Huesca. Jaca, the chief town of the mountain district of Sobrarbe, is situated on the left bank of the Aragon, a tributary of the Ebro, about 2400 feet above sea-level. The population in 1900 was 4934. It was once the capital of the Jaccetani, a tribe mentioned by Strabo. This territory was the scene of battles between Sertorius and Pompey and later between Pompey's son Sextus and Caesar's generals.

Ecclesiastically Jaca belonged originally to the Diocese of Huesca. When in 713 the town of Huesca was seized by the Moors, its prelates were replaced by itinerant bishops, sometimes called bishops of Aragon, sometimes bishops of Huesca or Jaca, who lived either at Jaca or in the adjacent province of San Pedro de Sires and San Pedro de Sires. A council held at Jaca in 1063 determined anew the boundaries of the Diocese of Huesca, which thereafter included the present dioceses of Huesca, Jaca, and Barbastro, as well as a part of the Diocese of Lérida. Jaca was then made the permanent seat of the diocese. At the same time Sancho II was appointed Bishop of Huesca, and hastened to request the pope to confirm the decisions of the council. Meanwhile, however, King Sancho Ramírez of Aragon (1003-94) had won back from the Moors the city of Barbastro, and had granted it to the Bishop of Roda. García, the new Bishop of Huesca (1076-86), regarded this as an infringement of the rights of jurisdiction granted the Bishop of Jaca by the Council of Jaca. He therefore renewed his petition to the new pope (Gregory VII) to have the decisions of the council confirmed, which request the pope granted (cf. Jaffé, "Reg. Pont. Romani," I, 2nd ed., Berlin, 1885, n. 5096). As, however, Bishop Raimundo of Roda also obtained the confirmation of all his privileges from Gregory, a violent dispute arose between the Bishops of Huesca and Roda as to jurisdiction over the churches of Barbastro, Biella, Gistau, and Alquezar, which in 1080 was decided by the king in favour of the Bishop of Roda. In November, 1096, King Pedro I of Aragon won back Huesca from the Moors, and Urban II now decreed (11 May, 1089) that, instead of Jaca, Huesca should again be the seat of the bishop (cf. Jaffé, op. cit., I, 5703). But Jaca itself had a separate existence under a vicar-general, independent of the Bishop of Huesca. It also retained its own cathedral chapter, which originally followed the Rule of St. Augustine, but in 1270 both this chapter and that of Huesca were secularized. Jaca was again erected into a separate diocese and was made suffragan to the Metropolitan See of Saragossa by a Bull of Pius V (18 July, 1571), which decision was carried into effect on 26 February, 1572. The first bishop was Pedro el Frago, whose forty-second successor is the present bishop, Antolín López y Péláez (consecrated on 4 April, 1905).

Statistics.—According to the diocesan statistics of 1907 Jaca possesses 72,659 inhabitants, 151 parishes, 151 parish churches, 236 public and 10 private oratories, 236 secular priests, 30 regulars, and 54 sisters. The religious orders and congregations in the diocese are: Augustinian Hermits, one monastery and novitiate; Franciscans, 2 houses for the training of boys; Benedictine Nuns, 1 convent with 31 professed sisters in the city of Jaca; Sisters of Mercy of St. Anne, in charge of the hospital at Jaca; Sisters of the Sacred Heart of Mary, 1 house at Jaca; Sisters of Mercy of St. Vincent de Paul, with a school at Jaca, and the Little Sisters of the Aged Poor, with a home for the aged in a suburb of Jaca. The cathedral dedicated to the Most Blessed Virgin of Pillar is a three-aisled basilica in Byzantine style, belonging in the main to the eleventh century; it was consecrated in 1063 and altered in the fifteenth and eighteenth centuries. A religious and civil festival is still held on the first Friday of May; it is called "Primer Viernes de Mayo," in memory of a victory said to have been won over the Moors in the eighth century by Count Ansar aided by the women of Jaca. It is celebrated with a solemn procession in which the entire cathedral chapter takes part. In the environs of Jaca are many hermitages, notably that of San Juan de la Pena. La Vergen de la Cueva is the difficulty problem. and there were, in the twelfth century, three hundred nobles gathered at the time of the Arab invasion and proclaimed García Ximenex King of Sobrarbe.

GREGOR REINHOLD.

JACKSON, HENRY MOORE, knight, b. in Grenada, 1849; d. in London, 29 August, 1908. The youngest son of the Anglican Bishop of the Leeward Islands, he was educated in England at Marlborough and Clifton Colleges, and at the Royal Military Academy. He entered the Royal Artillery in 1870, retiring with the rank of captain in 1883. He entered the colonial service in 1880, when he was appointed commandant of the Sierra Leone Police. He was commissioner for Turks and Caicos Islands, 1885-90, and Colonial Secretary of the Bahama Islands, 1890-93. As Colonial Secretary of Gibraltar, 1894-1901, he fell to his lot to carry out the plans for the new harbour works, which had already received the approval of the Admiralty and of the War Office. His early scientific training enabled him to point out defects in the plans, and to suggest improvements which saved the Government much useless expenditure. In recognition of his efficiency he was made in 1899 a Knight Commander of the Most Distinguished Order of St. Michael and St. George. In 1901 he was appointed Governor of the Leeward Islands, and after holding this position for less than one year was appointed Governor of the Fiji Islands and High Commissioner of the Western Pacific. After a careful study of the history of the colony, and the current economic and political situation, and awaiting a solution, he drew up an exhaustive report, accompanied with a series of recommendations which were accepted almost without modification by the Colonial Office. In Fiji he showed a very remarkable power of inspiring the natives with a belief in the justice of English rule, and with personal attachment to himself. This power he exhibited also in Trinidad, to which he was appointed in 1904. When he landed the colony was still suffering from the consequences of the serious riots, which had recently occurred. After three years of untiring labour the state of feeling among the colourless population had entirely changed. He was appointed Bishop of Cathodic in 1880, and from the day of his reception into the Church he never willingly missed daily Mass. In recognition of his services to the Church in the
various colonies with which he was connected, he was made a member of the Order of St. Gregory the Great in 1904, and as recognition of his great services to the State, the king conferred on him, shortly before his death, the Grand Cross of St. Michael and St. George.

C. SCHREINER.

Jacob, (22 y.; Sept. 13th), the son of Isaac and Rebecca, third great patriarch of the chosen people, and the immediate ancestor of the twelve tribes of Israel. The incidents of his life are given in parts of Gen., xxx, 21–13, wherein the documents (J, E, P) are distinguished by scholars (see Abraham. I, 155). His Hebrew name is 텔(A)l-Babylonian: Ya'куb-כלu), with which compare Israel, Israel etc.—means "supplanter", and refers to a well-known circumstance of his birth (Gen., xxx, 25). His early years were marked by various efforts to get the birthright from his brother Esau. His struggle for it began before he was born (xxx, 22–5). Later, he took advantage of Esau's thoughtlessness and despair to buy from him for a pottage of lentils (xxx, 29–33). In virtue of this purchase, and through a ruse, he finally got it by securing the blessing which Isaac intended for Esau (xxxv, 1–37). Then it was that Jacob, near to death, and apparently also to obtain a wife from his parents' stock, he fled to Haran, the dwelling place of Laban, his maternal uncle (xxxi, 41–xxviii, 5). On his way thither, he had at Luz the vision of the angels ascending and descending by a mysterious ladder which reached from earth to heaven, and of Yahweh renewing to him the glorious promises which He had made to Abraham and to Isaac; in consequence of this, he called the place Beth-El, and vowed exclusive worship to Yahweh Should He accompany him on his way and bring him back safely home (xxviii, 11–22). Jacob's relations with Laban, who was the time of formative experience, and the details of which are perfectly true to Eastern life and need not be set forth here. Besides blessing him with eleven children, God granted to Jacob a great material prosperity, so that Laban was naturally desirous of detaining him. But Jacob, long wearied with Laban's frequent trickery, and also beset by fear of return, departed secretly, and, although overtaken and threatened by his angry father-in-law, he managed to appease him and to pursue his own way towards Chanaan (xxxix–xxx). He managed also—after a vision of angels at Mahanaim, and a whole night's wrestling with God at Phanuel, on which latter occasion he received a new blessing and the significant name of Israel—to appease his brother Esau, who had come to meet him with 400 men (xxxii–xxxiii, 16).

Passing through Socoth, Jacob first settled near Salem, a city of the Semities, and there raised an altar to the God of Israel (xxxiii, 17–20). Concluded to leave on account of the enmity of the Chanaanites—the precise occasion of which is uncertain—he went to Bethel, where he fulfilled the vow which he had made when on his way to Haran (xxxiv–xxxv, 15). Proceeding farther south, he came to Ephrata, where he buried Rachel, who died giving birth to Benjamin, and where he erected a pillar on the site of her grave. Thence, through Migdal-Eder, he came to Hebron, where he was joined by Esau for their father's burial (xxxv, 16–29). In Hebron, Jacob lived quietly as the head of a numerous pastoral family, received with imposing honors all who came to visit him, and was set to death, passed through the pressure of famine, and agreed most reluctantly to his separation from Benjamin (xxxvii, 1–4; xlii, 35–38; xliii, 1–14). The news that Joseph was still alive and invited him to come to Egypt revived the patriarch, who, passing through Bersabee, reached Egypt with his sons and grandchildren (xlv, 25–xlix). There it was given him to meet Joseph again, to enjoy the honours conferred upon him by Pharaoh, and to spend prosperously his last days in the services to the State, the king conferred on him, shortly before his death, the foretold future fortunes of the respective descendants of his sons, and passed away at the age of 147 (xlii, 29–xlix). According to his last wishes, he was buried in the land of Chanaan (I, 1–13). Despite the various difficulties met with in the examination of the Biblical narrative and dealt with in detail by commentators, it is quite certain that the history of Jacob is that of a real person whose actual deeds are recorded with substantial accuracy. Jacob's character is a mixture of good and evil, gradually chastened by the experience of a long life, and upon the whole unworthy of being compared with God, for he was a man of His mercy towards the chosen people. The Talmudic legends concerning Jacob are the acme of fancy.

Jacob of Juterborg (in the world Benedict Stolzenhagen), theologian and canonist, b. of poor parents near Juterborg, in East Frisland, Jan. 29, 1381; d. at Erfurt in 1465. In 1401 he entered the Cistercian monastery of Paradies, in Poland; hence his names Jacobus de Polonia, Jacobus de Paradiso, and Jacobus Cisterciensia. Being sent to the University of Krakow by his abbot, he obtained the degree of Doctor of Philosophy and Theology, and thereafter became professor of theology and preacher at that university. Displeased at the loose discipline of his order, he entered the Carthusian monastery at Erfurt in 1441, taught canon law at the university of that place for many years, and was elected rector in 1450. He was an assistant to the grand master of his Order he is often called Jacobus Carthusianus, Jacobus de Clusa, and Jacobus de Erfordia. He was full of zeal for reform in the Church, and in some of his writings severely criticizes Italian ecclesiastics for bestowing responsible benefices upon incapable and unworthy persons. Like many other great men of his time, he advocated the so-called conciliar theory, that the general council is above the pope.

He is the author of about eighty treatises, mostly on theological and canonical subjects. The following twelve of his works have been printed: "Quodlibetum passuum humanarum," a work of theology explaining the obligations of men in the various states of life; "Tractatus de animabus erutis a corporibus," an interesting treatise on the condition of the human soul after death—seven editions of this work were published; "De valore Missarum pro defunctis celebratarum" (the preceding three incunabula contain neither place nor date of publication; the first came out at Esslingen in 1475, the second at Erfurt about 1463, the third in 1493 at an unknown place). "De causis multarum passionum," edited by Pez in "Bibliothea ascetica" (Ratisbon, 1835), VII, 389–444; "De indulgentia," a dogmatically correct treatise on indulgences, edited by Walch, "Monumenta inedita medii aevi" (Gottingen, 1764), II, 163 sq.; "Petitiones religionorum pro reformatione sui status," edited by Klüpel in "Vetus Bibliotheca eclesiastica" (Freiburg im Br., 1780), 146 sq.; "De negotii pontificii pro viribus ecclesiastic," edited by Walch, loc. cit., I, fasc. 4; "Avemirant Jacobus," a treatise on ecclesiastical music, a memorial addressed to Pope Nicholas V, in which the author urges a reform in the Church, edited by Klüpel, loc. cit., 134 sq.; "De septem statibus ecclesie," edited by Walch, loc. cit., II, fasc. 2; "Sermone monicae" (date and place of publication unknown); "De erroibus et moribus Christianorum" (Lobbeck, 1488); "Livorum consiliant"
to consecrate him bishop personally, and called him to Rome for that purpose; but shortly after the arrival of de Voragine the pope died, and the new bishop was consecrated at Rome during the succeeding interregnum, on 13 April, 1292. The episcopate of Jacopo de Voragine fell in a time when Genoa was a scene of continuous warfare between the Rampini and the Mascalari, the former of whom was styled the latter Gibellines. The archbishop, indeed, effected an apparent reconciliation between the two hostile parties in 1295; but the dissensions broke out anew, and all his efforts to restore peace were useless.

In 1292 he held a provincial synod at Genoa, chiefly for the purpose of removing one of the earliest bishops of Genoa (3247). The cult of Jacopo de Voragine, which seems to have begun soon after his death, was ratified by Pius VII in 1816. The same pope permitted the clergy of Genoa and Savona, and the whole Order of St. Dominic, to celebrate his feast as that of a saint.

Jacopo de Voragine is best known as the author of a collection of legendary lives of the saints, which was entitled "Legenda Sanctorum" by the author, but soon became universally known as "Legenda Aures" (Golden Legend), because the people of that time considered it as a book of the Holy Scriptures. In some of the earlier editions it is styled "Lombardica Historia,", which title gave rise to the false opinion that this was a different work from the "Golden Legend". The title "Lombardica Historia" originated in the fact that in the life of Pope Pelagius, which forms the second last chapter of the "Golden Legend", is contained an abstract of the history of the Lombards down to 1250 (Mon. Germ. Hist.: Script., XXIV, 167 sq.). In the preface to the "Golden Legend" the author divides the ecclesiastical year into four periods, which he counts from four epochs in the history of the Church, with a time of devotion, renovation, reconciliation, and pilgrimage. The body of the work, which contains 177 chapters (according to others, 182), is divided into five sections, viz. from Advent to Christmas, from Christmas to Septuagesima, from Septuagesima to Easter, from Easter to the Octave of Pentecost, and from the Octave of Pentecost to Advent. If we are to judge the "Golden Legend" from an historical standpoint, we must condemn it as entirely uncritical and hence of no value, except in so far as it teaches us that the people of those times were an extremely naive, credulous, and religious people, permeated with an unshakable belief in God's omnipotence and His fatherly care for those who lead a saintly life.

If, on the other hand, we view the "Golden Legend" as an artistically composed book of devotion, we must admit that it is a complete success. It is admirably adapted to enhance our love and respect towards God, to foster our devotion towards His saints, and to animate us with a holy zeal to follow their example. The chief object of Jacopo de Voragine and of other medieval hagiographers was not to compose the Chronicle of the Saints. His scientific treatises for the learned, but to write books of devotion that were adapted to the simple manners of the common people. It is due to a wrong conception of the purpose of the "Golden Legend" that Luis Vives (De causis corrupturarum artium, c. ii), Melchior Canus (De locis theologici, xi, 6), and others have severely dismissed it. The conception that the Bollandists (Acta SS., January, I, 19) and many recent hagiographers have highly praised it. That the work made a deep impression on the people is evident from its immense popularity, and from the great influence it had on the prose and poetic literature of many nations. It became the basis of many passions of the Middle Ages and religious poems of later times. Longfellow's "Golden
Legend", which, with two other poems, forms the
tetralogy entitled "Christus". It was its name and many of its ideas to the "Golden Legend" of de Vogare.

Bernard Guiodis (d. 1331), also a Dominican,
made a vain attempt to supplant it by a more reliable
work of the same character, which he entitled "Spec-
ulum Sanctorum". In 1500 as many as seventy-
four Latin editions of the "Legenda Aurea" had been
published. For a long time the three transitions to
English, five French, eight Italian, fourteen Low Ger-
man, and three Bohemian. The first printed edition
was in Latin, and was produced at Baele in 1470.
Many succeeding editions contain additions of the
lives of later saints or of feasts introduced after the
translation. The best Latin edition was pre-
bred by Graesse (Dresden and Leipzig, 1846, 1850,
and Breslau, 1890). The first English edition was
printed by William Caxton at London in 1483 from
a version made about 1450. It was inscribed: "The
Golden Legend. Finysshed at Westmere the twenty-
day of November/ the yere of our Lord M./CCCC/ LXXXIII/. By me Wylyam Caxton." In this
edition some of the less credible legends of the
original are omitted. The publication was made at
the instance of the Earl of Arundel, who agreed to take "a reasonable number of copies", and to pay and provide a summer and a dormitory (see Putnam, "Books and their Makers in the Middle Ages", New York and London, II, 1897, 118). Cax-
ton's edition was re-edited and modernized by Ellis
(London and New York, 1900). The first French
version that appeared in print was made by Jean
Bataller, and printed at Lyons in 1476. A French
translation, made by Jean Belet de Vigny in the
fourteenth century, was first printed at Paris in 1488.
Recent French editions were prepared by Brunet,
signed M. G. B. (Paris, 1943 and 1965); by de Wysa-
wa (Paris, 1965); and by Rose (Paris, 1962). An
Italian translation by Nicolas Mameri was printed
in 1475, probably at Venice; a Bohemian one was
printed at Pilsen between 1475 and 1479, and another
at Prague in 1495; a Low German one at Delft in
1472, and at Gouda in 1478. A German reproduction
in poetry was made by Kralik (Munch, 1962).

MICHAEL OTT.

JACOPO DA TODI, properly Jacopo Benedetti or
Benedetti, Franciscan poet, b. at Todi in the first
half of the thirteenth century; d. at Collazzone about
1306. Very little is known with certainty about the
life of this extraliminary man. Although the oldest
lives go back only to the fifteenth century, yet a
few earlier records exist. The oldest and most
authentic document we have is Jacopone's signature
to the manifesto of Cardinals Jacopo and Pietro
Colonna against Boniface VIII (q. v.), dated Lun-
ghezza (between Rome and Tivoli), 10 May, 1297. [See
text in "Archiv für Litteratur und Kirchengesch.", V
(1889), 500 sq.] Angelo Claimo in "Chronicon septem
Trubulationum", written about 1323 ("Archiv f. Litt.
und Kirchengesch.", II (1886), 306; Dollinger, "Be-
träge zur Sekten-
gesch.", II (Munich, 1890), 492),
mentions Jacobus Tuderus, an illegitimate friar who
served as aeron and his friars who, in 1294,
sent a deputation to Celestine V (q. v.),
to ask permission
to live separate from the
other friars and observe the Franciscan Rule in its
perfection—a request which was granted. The next
reference to the poet is found in Alvarus Pela-
gius's "De Planctu Ecclesiae", written principally
before 1239 and completed in 1274. About 1335 the
"Catalogus sanctorum Fratrum Minorum" (in "Spe-
culum Vitae beati Franciscii et Societarii eius", Venice,
1604, f. 200 r; cf. the separate reprint of the "Cat-
alogus" by Lemmens, Rome, 1903, 9) uses even
more emphatic words of praise. Some further de-
tails about Jacopone are given in "Summa totius histor-i
virtutum et vitiorum" (Basle, 1497), which is an
epitome of a work of the same title, written by
William Peraldu, a Dominican who died about
thirty years before Jacopo de Vogare. A theo-
lological work, entitled "De operibus et opusculis
Sancti Augustini", was also apparently to be
published but its authenticity has not yet been
estabhshed. It is known that he was a close student
of St. Augustine. Some, relying on the authority of
Sixtus of Sienna, ascribe to him also an Italian
translation of the Bible, but no manuscript or print of it
has ever been found.

BUTLER, Legenda Aurea—Legenda Dorte—Golden Legend
(Bakinson, 1899); RICHARDSON, Jacobus de Vogare and the

JACOPO DA TODI BEFORE THE BLESSED VIRGIN
AFTER GROMPEL IN THE "LAUDI"
(Florence, 1490)
in "Fanfulla della Domenica", Rome, 10 June, 1806), on the ground that this legend has too many points of resemblance with the "Legends of St. Francis". But these resemblances between the lives of saints have already become a commonplace, and in this case are not to be taken seriously. On the other hand, Bertoni is right in rejecting the description of the circumstances under which each of Jacopone's poems was written. This part of his life is rather to be considered as a commentary on the poems of Jacopone. As to the real sources of his life, the author himself, in the Tobler version (see bibliography), points out that he has collected the reminiscences and traditions of Jacopone's contemporaries and older friars in the Umbrian convents of his epoch. With the help of the aforesaid sources and of some allusions in Jacopone's poems, we can gather the following facts of his life. Born at Todi (12257), of the noble family of Benedetti, Jacopone took up the study of law—probably at Bologna, as might be inferred from the fact that this was the most famous school of law at the time, and from the manner in which he speaks of Bologna in the poem "Senno me pare e cortesia" (Modio, "I Cantici del B. Jacopone da Todi", Rome, 1535, 109). On returning home, he entered guiltily into the company of some'avare—-the profession of an advocate (procuratore). In course of time (1267?) he married a noblewoman, who in one version of the legend is called Vanna, daughter of Bernardino, Count of Collemedico (Coldi- mezzo near Todi) (La Verina, IV, 1906, 386). It was the great piety and the tragic death of his young spouse that brought about an entire change in Jacopone. A great feast was being celebrated at Todi—probably in 1268. Among the onlookers was Jacopone's wife in rich array. Suddenly the raised platform from which she was witnessing the spectacle gave way, crushing her fatally. When the poet reached her side, Vanna was lying on the floor. He tore off her dress, he found a hair cloth beneath the splendid robes. The terrible blow caused by his wife's death, together with the evidence of her secret penance for his sins, made such an impression on Jacopone that for many years he seemed to be no longer himself. Abandoning his profession, and wearing the habit of a Franciscan Tertiary (bizzone), he led a roaring life for a full decade (see the poem "Que farai fra Jacopone" in Modio, 73). During this period he was the terror of his friends and relations, and became a sort of Christian Diogenes. It was then probably published in former prospect or of law, Jacopone dei Benedetti, mocked and scoffed at by the boys in the streets of Todi, received the nickname of Jacopone. Once, saddled and bridled like an ass, he crawled on all fours in the public square of Todi; on another occasion, to the great confusion of his family, he appeared at a wedding in his brother's house, tarred and feathered from top to toe. When asked by a citizen to carry home a pair of capons for him, Jacopone brought them to the man's family tomb, saying that this was his true house. Jacopone's folly was however the folly of the Cross, as he says:—

Empaz per lo bel Messia.
A wise and courteous choice Le'd make
Who'd be a fool for the dear Lord's sake.

About 1278 he sought admission into the Order of Friars Minor at his native town, a request which after many refusals was granted. Out of humility, he chose to be a lay brother. In the great convent of S. Fortunato, at Todi, the so-called party of the "Community" of the Franciscan Order certainly prevailed. This party was strongly opposed to that of the more zealous friars, called the "Spirituals." The sympathies of Jacopone were with the latter. Boniface VIII, who had under unusual cir-

stances succeeded Celestine V, the friend of the Spirituals, having recou all privileges granted by his predecessor and thus subjected anew the zealous friars to their regular superiors, and having engaged in a struggle with the two Cardinals Colonna, Jacopone took sides with these two protectors of the Spirituals against the pope. Perhaps there were also personal reasons for enmity between Boniface and the Colonna family, who, according to a young man (1260), obtained an ecclesiastical benefice at Todi, where his uncle Peter was bishop from 1252 to 1276 (see Eubei, "Hierarchia cath. med. avi.", I, 530; Tosii, "Storia di Bonifazio VIII", Monte Cassino, I, 1846, 231; Finke, "Aus den Tagen des Papstes Felix IV", 1831, 127). Among the strongholds of the Colonnas, having been taken in 1298 by the papal troops, Jacopone was imprisoned in the fortress above the town, known to-day as Castel San Pietro. Some of Jacopone's most touching, and also most aggressive, poems were composed in this dungeon. Not even in the great Jubilee of 1300 did Jacopone obtain pardon, the Colonna and their partisans having been excluded from the Jubilee by a special Bull (see text in Tosii, l. c., II, 283). Boni-

face VIII was captured at Anagni on Sept., 1303, and upon his death, which occurred shortly afterwards (Oct. 1303), Jacopone was set free. He was restored to his monastery at Arpino, broken down, tried and purified by hardships, he withdrew first to Pantanelli, a hermitage on the Tiber, three hours distant from Orvieto (La Verina, I. c., 390), then to Collazzone, a small town situated on a hill between Perugia and Todi. There is no record of a Franciscan monastery at that place, but there was a Poor Clare Convent, S. Lorenzo, served as usual by Franciscan Friars (see Liviari Olinger, "Dove è morto il B. Jacopone da Todi?" in "Voce di S. Antonio", Quareacli, 13 Feb., 1907). It was here that Jacopone died on 25 Dec., 1306, just at the moment when the priest was intoning the Mass. His last moments were consolled by the presence of his faithful friend, Blessed John of La Verna, from whom he had especially desired to receive the Last Sacraments, and who really arrived just before the poet's death. His body was brought to Todi and buried in the church of the Poor Claire of Montecristo (Toby, the version of the legend) or Montesanto (Bartholomew of Pisa, Marianus Florentinus), outside the walls of Todi. In 1433 it was discovered in Montecristo and removed to the Franciscan church of S. Fortunato inside the town, where his tomb is still to be seen, both published in former and of law, Jacopone dei Benedetti, mocked and scoffed at by the boys in the streets of Todi, received the nickname of Jacopone. Once, saddled and bridled like an ass, he crawled on all fours in the public square of Todi; on another occasion, to the great confusion of his family, he appeared at a wedding in his brother's house, tarred and feathered from top to toe. When asked by a citizen to carry home a pair of capons for him, Jacopone brought them to the man's family tomb, saying that this was his true house. Jacopone's folly was however the folly of the Cross, as he says:—

Empaz per lo bel Messia.
A wise and courteous choice Le'd make
Who'd be a fool for the dear Lord's sake.

About 1278 he sought admission into the Order of Friars Minor at his native town, a request which after many refusals was granted. Out of humility, he chose to be a lay brother. In the great convent of S. Fortunato, at Todi, the so-called party of the "Community" of the Franciscan Order certainly prevailed. This party was strongly opposed to that of the more zealous friars, called the "Spirituals." The sympathies of Jacopone were with the latter. Boniface VIII, who had under unusual cir-

stances succeeded Celestine V, the friend of the
(Rome, 1869), in archives of the postulator general O.F.M.). The chief obstacle to the confirmation of this cultus lies in the part Jacopone took against Boniface VIII and the satires he wrote against this much calumniated pope.

The cultus of Jacopone is not very rich. In the cathedral of Prato is a beautiful fifteenth-century fresco, often reproduced [for instance by Thode (see bibliography), fig. 66; in "La Verna", IV (1906), 389]. The fourteenth-century Codex Strozzi 174 at the Laurentian Library, Florence, contains a miniature of the poet in the Vision antologica of the Roman (1364-1380, 465); another miniature (certainly conventional) is found in the "Franciscana" of the Portiuncula. The church of S. Fortunato of Todi is adorned by two pictures of Jacopone—one over his tomb (1398), another in a side chapel together with the portraits of four other saints (seventeenth century). Jacopone was believed to have died not so much from bodily ailment as from the excess of Divine love, which at last broke his heart. (Modio, prefacc. The chief interest attaching to Jacopone is derived from his literary works. Of his poems, written in the Umbrian dialect, the early editions exist but no modern critical one. (1) The first is printed at Florence, 1490. It is almost a critical edition and contains 102 Italian pieces. [See accurate description in "Miscellanea Franciscana", I (Foligno, 1886), 21-29.] The other edition, containing (in addition to compositions of other poets) 122 poems, of which seven are in Latin; (2) Venice, 1514—139 songs; (3) Venice, 1546—repetition of the preceding; (4) Rome, 1558—by Modio, with life of Jacopone in the preface, best edition after that of 1490, which it follows in the number of poems (they were 165 in the original), 1615—reprint of the Roman edition with slight alterations; (5) Venice, 1617—by Francesco Tressatti, O.F.M.—the best-known but least critical edition, containing 211 copiously annotated songs, many of which certainly do not belong to Jacopone. Alessandro de Mortiana published a few hitherto unedited poems of Jacopone (Lucca, 1819). Towards the middle of the nineteenth century, Oznam revived general interest in Jacopone by his "Poetes franciscains". Since then many have written on the subject and expressed their appreciation of these remarkable and tender souls, and have drawn so much from some of his productions, as In loco amor mi mi and Amor de caritate, have been attributed to St. Francis himself. Both are at the head of Umbrian poets. Jacopone’s rhymes, simple, at times even rough in expression, but profound and tender in sentiment, were less adapted to the cultured classes than the "Divina Commedia" of Dante, but were sung with enthusiasm by the people. How much Jacopone’s poetry was appreciated down to the seventeenth century is shown by the numberless manuscripts which contain them, often in the particular order of the poems (they were 165), written, and by the fact that almost every old Italian song has been ascribed to him. These laudi were especially in use among the so-called laudesi and the flagellants, who sang them in the towns, along the roads, in their confraternities, and in sacred dramatic representations. Even the "Stabat Mater Dolorosa", the authorship of which is still attributed to Jacopone with greater probability than to any other competitor (Ghir, was sung in the same way. (See, on this point, D’Ancona, "Origini del Teatro Italiano", I, Turin, 1891, 114, 155-62, 550-2.) Jacopone’s prose works are much less known. They consist of small spiritual treatises, somewhat resembling the well-known golden sayings of Blessed Giles (see Ergidius of Assisi), but they are more connected. The Latin text of these may be found in part in Bartholomew of Pisa (I.c.) and in many manuscripts. An Italian version, translated from Bartholomew of Pisa, is found in the "Franciscana" and some other versions of the life of Jacopone. Another fifteenth-century Italian version, ascribed to Feo Beleari, appeared at the beginning of the sixteenth century, together with the treatises of Ugo Panciera at Venice (ed.); ed. Parenti at Modena in 1832; and finally in "Prose di Feo Beleari edito ed inedito", III (Rome, 1843), by Gigli; cf. E. Böhm in "Romanske Studier", I (Halle, 1871), 123-32. Finke (I.c.) suspects that Jacopone wrote the "Stabat Mater" for the Diocesan Archives of Pisa, and directed to the King of France by "illitterus Jacob", belongs to Jacopone.

(1) LIVES.—In Franciscana, a manuscript chronicle by Jacopo Odo (d. 1488), of which four codices exist: two at Perugia, two at Portiuncula (Annales Ordinis Minorum Franciscanorum, in Il Propugnatore, XIX (Bologna, 1866), 151-212. Almost identical with this is the life edited by Tobler in Zeitschrift für romanische Philologie, II (Halle, 1875), 58-90; cf. ibid., II (1879), 178-92; and another of Mariano Florentino (?), edited by Livanus in Luce e Amore, IV (1878), 644-655. (See also the shorter version: Fossettino, Via de’ Santi e Beati di Todi (Perugia, 1927), 98-113; Modio, I Cantici del B. Jacopone da Todi (Rome, 1899), see also: D’Ancona, I poemi, II, 150-9.) There is a shorter version: ROMANISTI, V et VI (1896), 101-4, 184-6. (2) MODERN LIVES.—MACDONnell, Sona di Francesco (London, 1902), 334-68. (3) MODERN VERSIONS OF TRANSLATIONS OF Jacopone’s poetry—see also, ibid., 39-42; Spera, Jacopone da Todi in Quarterly Review (London, Jan., 1910), 53-72; Hodgson, The Most Penitent of them All (a novel); OZANAM, Les Poètes franciscains en Italie au xivé siècle (Paris, 1832), 106-108. (See also: Böhm in Romanistische Studien, 1 (1894), 87-90; cf. ibid., 90-92.) There are also more recent editions—German tr. by Lutterwinkel (Münster, 1833), Italian tr. by Landley (Roma, 1843), D’Ancona, Jacopone da Todi, II, Giulia di Dio del secolo XIII (Pisa, 1883), 2nd series, 1-10 of the entire collection (Rome, 1880, 1883, 1887, 1907), 1904, 1906). (4) Inaccurate and inaccurate, Jacopone da Todi (Rome, 1897), 19-20; BRUGNOLI, Fra Jacopone da Todi, pubblicazione di Società internazionale di Studi Francescani in Assisi (Assisi, 1907). (5) ON WORKS AND PARTICULAR QUESTIONS.—BÖHM, Jacopone da Todi..., in Romanistische Studien, I, Halle, 1875, 123-61; MONCAGGETTI, I Codici Marciani contenenti lauda di Jacopone da Todi (Venezia, 1888); TENNENBOIN, I rari di antiche Poesie italiane religiose e morali con prospettiva dei Codici che concorrono alla produzione delle laudi spirituali (Florence, 1909), preparatory work for critical edition of Jacopone. Partial German translation of Jacopone’s poetry with extensive notes was published by Lutterwinkel and Struck, Augezliche Gedichte Jacopone’s da Todi (Münster, 1904); FELDER, Jacopone’s Bemerkungen über die Laudes in Einigen der Todes Jacopone da Todi in Studien Franciscaner (Covin, Belgium, March and April, 1904); LATTIN, Dante e Jacopone e loro contatti di persona (Berlin and Rome, 1900). On the Stabat Mater Dolorosa see JULLIARD, Dictionary of Hymnology (2nd impression of 2nd ed., London, 1908), 1081-84, where the numerous English translations, old and new, are indicated; see, ibid., 575 and passim; CHEVALIER, Repertorium Hymnologicum, II (Louisviill, 1823), 690-800, with copious bibliography, HENRY, The Two Stabat Matris in American Cath. Quarterly Review, XXVIII (1903), 625; GUE, Der Sogarunen der romanischen Mat (Freiburg in Br., 1892); TENNENBOIN, I Stabat Mater e Donna del Paradiso (Todi, 1887); CARULLI, La Sotia, "La Papa Boniface, molt’appezzato al mondo", La Stabat Mater da Fra Jacopone da Todi (Bologna, 1889); L’Estetica dello Stabat Mater (Siena, 1897); GIOIA, La Stabat Mater Esperiens (Verona, 1885); LATTIN, Il Stabat Mater e la sua prigionia in Luce e Amore, III (Florence, 1896), 931-36. LIVIANUS OLIGER.

Jacotot, Joseph, French educator, b. at Dijon, March, 1770; d. at Paris, 30 July, 1849. He studied in the college of his native city, where, at the age of nineteen, he was appointed professor of classical literature. Later he filled successively the chairs of the methods of sciences (1796), ancient languages (1797), higher mathematics (1803), Roman law (1806), and pure mathematics (1808). As a member of the Representatives during the Hundred Days, he expressed his preference for the Empire, and, at the time of the Second Restoration, his hostility to the Bourbons made it necessary for him to leave France.
Going to Belgium, he taught privately at Mons and Brussels, and in 1818 was appointed professor of the French language and literature in the University of Louvain. The Revolution of 1830 allowed him to return to France, where he founded the stilnous, and in 1838 to Paris, endeavouring to propagate his method of teaching, and working for "the intellectual emancipation" of his fellow-men. His works under the common title of "Enseignement Universel" are: "Langue maternelle" (Louvain, 1822); "Langues étrangères," (Paris, 1831); "Vocabulaire et Peinture" (Louvain, 1824); "Mathématiques" (Louvain, 1828); "Droit et philosophie pédagogique" (Paris, 1839). He also wrote many articles in the "Journal de l'émanicipation intellectuelle," published by his two sons (1829-42), who also edited his "Mélanges et mémorial" (Paris, 1841). When Jacquot began to teach at Louvain, he knew neither Flemish nor Dutch, while many of his pupils could not understand French. To overcome this difficulty he gave them both the French text and the Dutch translation of Fénelon's "Télémaque." They were to memorize these stories in French, and carefully compare them with the Dutch, every day repeating what they knew and adding a little more. After some time Jacquot was surprised at their progress, for with no other help they had mastered the rules of spelling and grammar and could apply them correctly. Encouraged by this success, Jacquot thought he had found a universal method, by which he applied it to a thing which he had never seen: the Arabic language. This method rightly recognizes the necessity of the student's own efforts and mental work, and it also endeavors to apply the principle that all knowledge is so connected that to know one thing well, i.e. to know it in all its connections, supplies the key to a more perfect effort and understanding of the knowledge of the part. Hence it matters little where the student begins, or what book he uses, provided he proceeds rightly. Generally, instead of starting with the first elements, Jacquot would have begun with something complex, which the student himself would analyze into its elements—comparing these, noting their similarities and differences, and thus finding the rules for himself. Among the number of principles which sum up Jacquot's method, we may mention the following: "Know something well, and always refer everything else to that." "Everything can be his own master." "Everything can be learned and taught, whatever he does not know." More paradoxical are the two axioms which are given as the bases of the whole method: "All men are of equal intelligence," that is, are equally capable of learning; "All is in all," that is, the same general ideas are found in every work, and consequently man should start to master them, that is, the whole mind, he must know already. However exaggerated such principles, and even the whole method, may seem, and however vehement at times Jacquot may have been in defending them, it must be conceded that they emphasize a few vital points, the necessity of personal effort and appreciation of the whole, the connection more or less immediate of all ideas, the need of order and method, and the importance of thoroughness in knowledge.

GUILLEMY in Nouvelle Biographie générale (Paris, 1888), v.; KUHN in France, Francod毱sche Lebensbilder der Philosophen, n. (Lananesh, 1905), 507; PERRE in BIBLIOTHEQUE, Dictionnaire de pédagogie, II. (1, Paris, 1856), 1309; QUICKE in Enseignements, III (Gutmann, 1897), 74.

C. A. DUBRAY.

Jacques de Vitry, historian of the crusades, cardinal, Bishop of Acre, later of Toulouse, b. at Vitry-sur-Seine, near Paris, probably about 1160; d. at Rome, 1240. After attending the University of Paris, then in its infancy, he visited Marie d'Oignies, a mystic of the Diocese of Liége, attracted by her reputation for holiness. On her advice he became a canon regular, returned to Paris for ordination to the priesthood, and thereafter devoted himself to preaching; from 1210 to 1213 he was one of the most noted preachers of the crusade against the Albigenses. In fact so great was his success that the Latin clergy of St. John of Acre chose him as their bishop. He accepted the episcopal dignity with the approbation of Honorius III. From Palestine he went to Egypt and was present at the capture of Damietta (1218-20), an account of which he wrote to Pope Honorius, the leaders of the crusading movement attributed his imperious temper and attributed their reverses to his stubbornness. In 1227 he returned to Rome but soon resumed the offensive against the heretics of the Diocese of Liége. In 1229 Gregory IX allowed him to resign the See of Acre, created him a cardinal and gave him a later legate in France and in Germany. He did not long survive his refusal of the Patriarchate of Jerusalem; at his request his body was conveyed to Oignies.

Among his works are letters to Pope Honorius, which form an important source of the history of the crusades, and a series of five books (De senectute, De virtutibus, De vita Christiana, De vita ecclesiastica, De vita mundana) for the use of preachers; a "Liber de mulliibus Leidienibus," the most celebrated of these being Marie d'Oignies, whose wonderful visions the author relates (ed. Acta SS., June, IV, 565, 666), finally the "Historia Orientalis seu itinerarium," his principal work, an account of his journeys, and of the crusades in the Holy Land in the thirteenth century. He was an inquiring and observant mind and conceived the plan—a remarkable one for the age in which he lived—of writing a geographical description of Palestine. The first book is wholly devoted to that land and gives the history from the time of Moses; describing the expansion of Islam, he gives many picturesque details concerning Oriental idolaters, the Turcomans, the Bedouins, and especially the Assassins, subjects of the Old Man of the Mountain. His account of the crusades is followed by praise for the fertility of Palestine under Christian domination, and for the efforts of the Italians, French, Germans, Bretons, and English to colonize it. He likewise dwells upon the characteristics of the various indigenous nations and of the "Pullani," half-breeds, to whose vices he attributes the reverses of the Christians. The writer then undertakes to give a complete history of the geography of the country, and gives a great many particulars, half real and half fabulous, regarding its climate, flora, fauna, minerals, its barbarous and extraordinary nations, the Amazons, etc. The honey gathered from the reeds (ex calaminthus) was, of course, only cane sugar. A striking feature of the account is that which he gives of the magnetic compass: "Acus ferrea postquam ad damnamum contigerit, ad stelam septentrionalis quam velut axis firmamenti alis versentibus non movetur, semper convertitur. Unde valde necessaria est navigantium in mari." (Bon- garde: "Gesta Dei," 1, 1168.) The remainder of the book is a history of the Kingdom of Jerusalem. Book II, a dimly painted picture of the Christians of the East, closes with an account of the monastic orders and the hierarchy of Palestine. A third book, the story of the Egyptian crusade, is not from Jacques de Vitry, but from the pen of Oliver the Scholastic, Bishop of Paderborn.

Historia orientalis, ed. BONGARE, Gesta Dei per Francos, I, 1047-1145; French tr. in Guizot's Collection des mémoires. Book I: DAUVIV (Histoire des croisades) (2 Vols., French), XVIII (1835); BARRUE, Jacques de Vitry (Paris, 1885).

LOUIS BREHIER.

Jacquier, FRANCOIS, French mathematician and physicist, b. at Vitry-le-François, 7 June, 1711; d. at Rome, 3 July, 1758. His early education was entrusted to an ecclesiastic, who soon recognized in
him an inclination to science and mathematics, and endeavoured to cultivate it. When sixteen years old, François entered the Order of Friars Minor, and after profession was sent to Rome, to complete his studies in the French convent of the order, La Trinité du Mont. With the permission of his superiors he returned to the Nieuwe Alberoni as a sort of mental diversion, devoted himself to the study of the ancient languages. He became very proficient in Hebrew, and spoke Greek as though it were his mother-tongue. His labours and learning gained for him the patronage of Cardinals Alberoni and Portocarrero. He accompanied Cardinal Alberoni on his legation to Ravenna, and was appointed to inspect the work begun by Manfredi to prevent the repeated inundations of that territory. On his return he was given the chair of Sacred Scripture at the College of the Propaganda, and was also detailed by the general chapter of the Friars Minor, assembled at Marseilles, to work upon the annals of the order. The King of Sardinia named him professor of physics at the University of Turin in 1745, but Cardinal Valenti, prime minister of Benedict XIV, eager to retain so learned a man in Rome, had him assigned to the Collegio Clementino, then in the college. Here he was in continual demand for consultation upon scientific matters. In 1763 he was appointed instructor in physics and mathematics to the young Prince Ferdinand at Parma. He was appointed in 1773 to the chair of mathematics at the Roman College, in the occasion of the suppression of the Jesuits. At his death he was connected with nearly all the great scientific and literary societies of Europe. The most important of his works are: (1) "Isaac Newtoni philosophiae naturalis principia mathematica, perpetuis commentariis illustrata" (4 parts in 3 vols., Rome, 1738-42), in collaboration with P. Leclerc; (2) "Per una nuova formula si calcolano i danni della cupola di San Pietro" (4to, Rome, 1743); (3) "Elementi di perspettiva secondo i principi di Taylor" (8vo, Rome, 1745); (4) "Institutiones Philosophiae ad studia theologica potissimum accommodata" (6 vols. in 12mo, Rome, 1757), reprinted many times at Rome, Venice, and in Germany, and later translated into Spanish; (5) "Elementos del calculo integral" (4to, Parma, 1768), a work highly esteemed and more complete than any that had been published up to that time.

E. P. TITMAN.

JEÃŒN, DIOCESE OF (GIENNESIA), in Southern Spain. The city of Jaén, capital of the province of the same name, is situated in north-eastern Andalusia on the lower part of the north-eastern slope of Monte Jabal-ecus about 100 feet above sea-level, in 1884 the population was 28,434. During the period 1013-90 the city of Jaén, the Romans' Aurgi, was the capital of the independent Moorish Kingdom of Djarwan, and was reconquered from the Moors by St. Ferdinand III of Castile and Leon in April, 1249. According to local tradition, the first bishop was supposed to be one of the seventy disciples. He is said to have been sent to Southern Spain, together with St. Torquatus and five other pupils of the Apostles, by Sts. Peter and Paul, and to have settled at Ilturgis (now Andújar), where he is reputed to have suffered martyr- dom. According to the Chronicle of Herrera, the Hispanizm Sanetorum Torquati etc., in "Acta SS.", III, May (Brussels, 1680), 442-4; Terrones y Robres, "Vida, martirio, transición y milagros de S. Eufrasio, obispo y patron de Andújar" (Granada, 1657). Other predecessors of the bishops of Jaén are, according to local tradition, the bishops of Carakan (Episcopi Carakani), who lived in the period 258-656, and finally four of the bishops of Baena (Episcopi Beataiensis), flourishing between the seventh and the thirteenth centuries. The list of the bishops proper of Jaén does not begin until 1248, when the see was transferred from Baena to Jaén. The last Bishop of Baena was Fray Domingo, O.F. (1227-45); the first Bishop of Jaén was Pedro I Martinez (1249-50). The most notable among the sixty-four bishops who have governed the Diocese of Jaén are: St. Pascual de Jesús (1290-1300) and Gonzalo de Zuñiga (1422-56), who both died as martyrs in Moorish prisons; the sixty-fourth bishop, Juan José Laguarda y Fe- nollers (1906-9), was appointed Bishop of Barcelona at the consistory of 29 April, 1909, since which date to the See of Jaén has been suffragan of Granada.

Statistics.—The Diocese of Jaén is suffragan of Granada: it is bounded on the north by the Diocese of Ciudad Real, on the east by the Archdiocese of Toledo, on the south by the Archdiocese of Granada and the Diocese of Guadix, on the west by the Diocese of Cordova. According to the latest official diocesan statistics (1 January, 1905) it contains about 395,000 inhabitants, 12 deaneries (arciprestazgos) divided into 136 parishes, 136 parish churches, and 6 dependent churches. There are four male religious congregations with 4 monasteries, 10 cloistered female congregations with 27 houses, and 11 enclosed religious of both sexes. The chapter of the cathedral at Jaén has 12 canons, besides which the old chapter (6 canons) still exists at Baena. There is also the theological seminary of San Felipe Neri at Baena in addition to the diocesan seminary (Seminario Conciliar) at Jaén. Other educational institutions are the Colegio del Santísimo Sacramento for theological studies, and the Colegio de San Eufrasio for the education of choir-boys, both at Jaén. The massive Cathedral of the Assumption of the Blessed Virgin stands in the highest part of the city of Jaén. It was begun in 1532 by Pedro de Valdelvira, and is a fine specimen of early Spanish Renaissance. In a name of the main façade stands the statue of the Virgin, Rostro or Santa Faç, a handkerchief of Saint Veronica, which is annually exhibited to the people on Good Friday and on the Feast of the Assumption.

Die Eximia Jurado, Catalogo de los obispados de las iglesias de la diocesis de Jaen (Madrid, 1854); De Ruyte, Historia eclesiastica del reino y obispado de Jaen (Jaen, 1854), the first part of which is alone printed, the second part being in the National Library at Madrid (M.S. Q. 88); del Bicho, Santos y santuarios del obispado de Jaen y Baena (Madrid, 1858); Gams, Kirchens. von Spanien, III (Ratis- bon, 1876), i, 48 sq., 160, 420 sq.

GREGOR REINHOLD.

Jaenbert (JANBERHT, JANBRHHT, JANBERT, LAMBERT, JANBRHT, GENGEBERT), thirteenth Archbishop of Canterbury; d. at Canterbury 11 or 12 Aug., 791: the exact date is uncertain; Flaw- ence of Worcester and the Anglo-Saxon Chronicle place it in 790; Symeon of Durham, the better authori- ty, in 791. Nothing is known of his life till 780, when he was elected Abbot of St. Augustine's, Canterbury, and blessed by Archbishop Bregwin. When the archbishop died he was buried at Christ Church, and Jaenbert asserted the rights of his own abbey as the traditional burying-place with such vigour that ac- cording to a late tradition the monks of Christ Church elected him archbishop to avoid the appeal to Rome. He was consecrated on 2 Feb., 766, and received the pallium from Pope Paul I in 767. During his pontifi- cate the struggle of Kent against the growing power of Offa of Mercia ended in the defeat of the former and the recognition of the latter as suzerain. For the aggrandizement of Mercia involved the creation of a separate Anglo-Saxon independent of Canterbury, and though Jaenbert opposed this vigorously, Offa obtained the pope's consent, and the papal legates George and Theophylact held a council at Chelsea in 787 where Jaenbert was forced to surrender much of the jurisdiction of Canterbury to King Eadberht of Mercia. He moved the see of Canterbury to Lichfield. The extent of the territory transferred is not recorded. Silver coins were minted by Jaenbert,
he being the earliest Archbishop of Canterbury of whose coinage specimens have been preserved.

EDWIN BURTON.

Jaffa, a titular see in the Patriarchate of Jerusalem. The city of Jaffa is very ancient. Even before the arrival of Josue in Palestine it is mentioned on the pylon of Karnak and the cuneiform tablets of Tell-el-Amarna. Several Greek authors, relying on native legends, traced its foundation to Joppe (Cassiopeia), daughter of Æolus, and made it the scene of the fable of Andromeda exposed on a rock.

b. c.) his brothers Jonathas and Simon Machabeus took final possession of the city (I Mach., x, 74-6). Pompey captured it from the Jews in 63 b. c., and during the period of more than a century, until it became entirely Roman, the city changed masters several times.

Jaffa, which had now become Joppe, soon counted Christians among its inhabitants. It was there that St. Peter raised to life the widow Tabitha, a name interpreted Dorcas (Acts, ix, 36-42), whose tomb is still the object of a popular pilgrimage; there, too, in the house of Simon the Tanner, he had the symbolic vision of the unclean animals (Acts, x, 1-23). At the time of the great Jewish revolt against the Romans, Joppe was taken by Cestius Gallus, Governor of Syria, and its inhabitants slaughtered to the number of 8400. The fugitives from the city and vicinity afterwards reassembled there, and turned to piracy, which brought about a second interven-

and delivered by Perseus. Assigned to the tribe of Dan (Jos, xix, 46), Japho, or Jaffa, seems not to have belonged to the Jews before the reign of David, who conquered the maritime region (Judges, i, 34; xviii, 1; II Kings, viii, 1; Eccles., xlviii, 8). In the time of Solomon it served as the port of landing for the cedars sent by Hiram for the construction of the Temple of Jerusalem (II Par., ii, 16). After the death of Solomon it probably recovered its independence or fell into the power of the kings of Israel. The Prophet Jonas took ship there for Tharsis (Jonas, i, 3), and King Ezchiahs brought it once more under the power of the Kingdom of Judah (IV Kings, xviii, 8). In this condition it is several times mentioned in the inscriptions of the kings of Assyria, whose domination passed later to the Chaldeans and Persians. In the reign of Cyrus Jaffa again served as a landing-port for the materials destined for the reconstruction of the Temple (I Esd., iii, 7). After the expedition of Alexander the Great (333 b. c.) the city passed into the power alternately of Syria and Egypt. In consequence of violent wrong done the Jewish population, Judas Machabeus attacked the harbour at night and burned all the vessels (II Mach., xii, 3-7). Shortly afterwards (about 142

tion of the Romans and the violent death of 4200 persons. The city was then razed to the ground. Being without importance during the first centuries of Christianity, Joppe did not possess a bishop until the fifth century (Lequien, "Oriens Christianus", III, 627); a very small number of its Greek or Latin bishops are known (ibid., III, 625-30, 1291; Eubel, "Hierarchia catholica mediæ ævi", Munich, I, 297; II, 186). After the Arab conquest and the destruction of Cesarea Maritima in the seventh century, Jaffa acquired some importance and became the chief seaport of Palestine. Captured by the crusaders, it became, under Godfrey of Bouillon, the County of Jaffa and Ascalon, feudatory to the King of Jerusalem. One of its counts, John of Ibelin, wrote the principal book of the Assizes of the Kingdom of Jerusalem (see ASSIZES OF JERUSALEM). Taken by Saladin in 1187, and surrendered to Richard Coeur de Lion in 1192, Jaffa was reconquered in 1197 by the Sultan Malek-el-Adel, who had 20,000 Christians massacred there. In 1204 it fell once more into the power of the Christians, who held it until 1268, when Sultan Bibars of Egypt took possession of it and completely destroyed it. Bonaparte took it by assault in 1799, and was accused, perhaps
wrongfully, of having poisoned the Ottoman garrison and his own soldiers infected with the pest. Ibrahim Pasha, the son of Mehmet Ali, captured the city in 1831, and seven years later it was destroyed by earthquake.

Jaffa is connected by railroad with Jerusalem; its harbor and docks are of great importance, and shipping vessels are numerous. The city is surrounded by magnificent orange groves, and has now entirely recovered from all its misfortunes, the desolation and desolation of anti-Christian population being more than 40,000 souls. Among these are 5000 Jews, 1000 Protestants (mostly foreigners), 3350 Orthodox Greeks, 100 schismatic Armenians, 1770 Catholics (of whom 1010 are Latins, 215 Maronites, 510 Melchites, and 35 Syrians). The remainder of the population (about 30,000) is Musulman. Franciscan Fathers direct the parish church and a school for boys. The Brothers of the Christian Schools have a boarding-school, two day-schools, and a commercial school. Italian Catholics also have a school for boys. The Sisters of St. Joseph and the Franciscan nuns have each a boarding and a day school. There is also a French high school. The other (non-Catholic) Christian communities, especially the Protzestants, also have schools, hospitals, and orphanages.

S. Vailhé.

Jaffa, Diocese of (Jaffennise), situated in the northern portion of Ceylon, comprises the northern and north-central provinces of the island. Christianity in Jaffa dates back as far as the time of St. Francis Xavier. In 1548 St. Francis visited Mannar and came to Jaffa to persuade the king to cease his persecutions against the Christians. In 1580, under the protection of the Portuguese, the first Catholic church was built at Jaffa. The whole peninsula surrendered in 1591 to Andrea Furtado de Mendoza. Almost the entire population subsequently abjured idolatry and embraced Christianity. The fort of Jaffa capitulated to the Dutch in 1658. At that time there were in the peninsula 50 priests, 1 Jesuit college, 1 Franciscan and 1 Dominican convent, and 4 churches. The Dutch immediately manifested the most hostile disposition towards the Catholics. The parish priests and monks were banished, and giving shelter was declared a capital offence. From that time dates the long persecution which ended only with the surrender of Ceylon to the British in 1796. To this diocese belongs the Island of Mannar rendered famous by the apostolic labours of St. Francis Xavier and by the martyrdom of from 600 to 700 Christians, who were executed by order of the King of Jaffa. Madhu, though a solitary spot in the middle of the jungle, has also its historical fame. For a long time during the Dutch persecution it was the refuge of native Christians. To this spot they had transported a statue of Our Lady which is now enshrined in the new church. Madhu has developed into an important pilgrimage, where more than 40,000 pilgrims congregate every year for the feast of the Visitatio. In 1845 Ceylon was divided into the two vicariates of Colombo and Jaffna, with Bishop Orazio Bettachini as vicar apostolic of the Oblates of Mary Immaculate arrived in Ceylon. In 1857 the Jaffna vicariate was handed over to the Oblates, and on the death of Bishop Bettachini, Bishop Semeria, O.M.I., was appointed vicar apostolic. In 1888 Bishop Christopher Bonjean, O.M.I., succeeded Semeria for nine years in India and in 1856 had crossed over to Ceylon to join the Oblate Congregation.

During his administration a great impulse was given to primary education. The pernicious effects of the Protestant and Hindu schools were more than counterbalanced by the activity of the bishop and the missionaries. Subsequently Bishop Bonjean was transferred to the metropolitan See of Colombo. Bishop Theophile Meluish, O.M.I., who succeeded at Jaffa and, following in his footsteps, was named Archbishop of Colombo in 1893. In the same year Henri Jouilain, O.M.I., was appointed Bishop of Jaffa.

The entire population of the diocese is 499,200; the Catholic numbering 45,600. The diocese is in the hands of the Oblates; 3 secular priests help in the parochial ministry. The total number of missionaries is 46. Attached to the cathedral is St. Martin's seminary for the education of junior students aspiring to the priesthood. St. Patrick's college and boarding school is the most flourishing institution of the northern province. It has a staff of 6 European fathers, 1 native father, 2 brothers, and 15 native professors. The average number of students is 450. It is especially devoted to higher English education, and prepares its students for the Cambridge Junior and Senior examinations and for the London University Intermediate and University degrees. The Board of Education is competent to come into closer contact with non-Catholics and especially with the higher classes of Hindus. For this purpose a Hindu boarding school was attached to St. Patrick's college. The boarders number 100, with good prospects for the future. Jaffa convent, conducted by the Sisters of the Holy Family of Bordeaux, follows the same junior and senior courses, for the education of girls, as St. Patrick's. To the convent is attached a girls' orphanage. The native Brothers of St. Joseph are occupied in teaching at Jaffa, Kayts, Manaar, and Mullaitivu. The native Brothers of St. Peter conduct for the two schools and important stations of the diocese. There are 127 schools under the control of the missionaries, for the vernacular and primary English education. At the two industrial schools of Colombo and Mullaitivu 125 orphan boys are taught agriculture and useful trades. The diocese has conferences of St. Vincent de Paul and young men's associations for the working classes. St. Joseph's Catholic Church is the home of the Jaffa Catholic Guardian, a weekly paper devoted to the interests of the diocese. A Catholic Club has just been founded for the purpose of defending the interests of Catholic youth. See Catholic Directory (Madura, 1908); Bonjean, Jaffna Directory.

Jainism, a form of religion intermediate between Brahminism and Buddhism, originated in India in pre-Christian times, and has maintained its heretical attitude towards Brahminism down to the present day. The name is derived from jina, conqueror. The historical development of Jainism is not clearly understood. The Jainas are one of the six most important religions in India. It is a purely Indian religion and has spread to Ceylon, the Maldives, and Java, and has been carried to the West by mission work. Jainism is a form of self-denial and asceticism.

monastic Brahminism. Of the reputed founder of Jainism we have but few details, and most of these are so like what we read of the beginnings of Buddhism that one is strongly led to suspect that here at least one is dealing with a variation of the Buddha-legend. According to Jainist tradition, the founder lived in the same period as Buddha, being either the younger or the precursor of Buddha. His family name was Jnatriputra (in Prakrit, Nattaputta), but, like Gotama, he was honoured with the laudatory names of Buddha, the enlightened, Mahavira, the great hero, and Jina, the conqueror. These last two epithets came to be held in common by all teachers, while the name Buddha was associated almost exclusively with Gotama. Like Buddha, Jina was the son of a local raja who held sway over a small district in the neighbourhood of Benares. While still a young man he felt the emptiness of a life of pleasure, and gave up his home and princely station to become an ardent follower of the Brahman ascetics. If we may trust the Jainist scriptures, he carried the principle of self-mortification to the extent that he went about naked, unsheltered from the sun, rain, and winds, and lived on the rudest vegetarian fare, practising incredible fasts. Accepting the principle of the Brahmin ascetics, that salvation lay in the cessation of desire, he passed into the step of rejecting as useless the Vedas and the Vedic rites. For this attitude towards the Brahman traditions he was repudiated as a heretic. He gathered eleven disciples around him, and went about preaching his doctrine of salvation. Like Buddha he made many converts, whom he organized under a monastic rule of life. Associated with them were many who accepted his teaching in theory, but who in practice stopped short of the monastic life of extreme asceticism. These were the lay Jainists, who, like the lay Buddhists, contributed to the support of the monks.

As in the case of the Buddhists, the Jain monks have for ages been split into two sects. The White-Robed Sect, whose monks are clothed in white garments, is the more numerous, flourishing chiefly in N. W. India. To this sect belong a few communities of Jainist nuns. The naked ascetics, forming the other sect, are strongest in the South of India, but even here they have become less numerous in the last century from the evil of eating. As the Buddhist creed is summed up in three words, Buddha, the Law, the Order, so the Jain creed consists of the so-called three jewels, Right Belief, Right Knowledge, Right Conduct. Right Belief embraces faith in Jina as the true teacher of salvation and the acceptance of the Jainist scriptures as his authoritative teaching. These scriptures are less extensive, less varied, than the Buddhist, and, while resembling the latter to a large degree, lay great stress on bodily mortification. The canon of the White-robed Sect consists of forty-five Agamas, or sacred texts, in the Prakrit tongue. Jacobst, who has collated some of these texts in the "Sacred Books of the East", is of the opinion that they cannot be older than 300 B.C. According to Jainist tradition, they were preceded by an ancient canon of fourteen so-called Purvas, which have totally disappeared. With the Jainists, "Right Knowledge" embraces the religious view of life and of the end of man, while "Right Conduct" is concerned with the main ethical precepts and with the ascetic, monastic system.

The Jainist, like the Buddhist and the pantheistic Brahmin, takes for granted the doctrine of Karma and its implied re-births. He, too, views every form of existence, bodily or spiritual, as a cause and effect. Freedom from rebirth is thus the goal after which he aspires. But, while the pantheistic Brahmin and the primitive Buddhist looked for the realization of the end in the extinction of conscious, individual existence (absorption in Brahma, Nirvana), the Jainist has always tenaciously held to the primitive traditional belief in a final abode of bliss, where the soul, liberated from the necessity of rebirth on earth, enjoys forever a spiritual life. To attain this end, the Jainist, like the Buddhist and the pantheistic Brahmin, holds that the traditional gods can aid but little. The existence of the gods is not denied, but their worship is held to be of no avail and is thus abandoned. Salvation is to be obtained by personal effort alone. To reach the longest of the three "paths" it is necessary to purify the soul of all that binds it to a bodily existence, so that it shall aspire purely and solely after a spiritual life in heaven. This is accomplished by the life of severe mortification which Jina set the example. Twelve years of ascetic life as a Jainist monk and eight re-births are necessary to constitute the purgatorial preparation for the Jainist heaven. While the Jains are not worshippers of the Hindu gods, they erect imposing temples to Jina and other venerated teachers. The images of these Jainist saints are adorned with lights and flowers, and the faithful walk around them while reciting sacred mantras. Jainist asceticism is a little more than a veneration of a few saints and heroes of the past.

On its ethical side—the sphere of Right Conduct—Jainism is largely at one with Brahminism and Buddhism. There are, however, a few differences in the application of the principle of non-killing. The sacredness of all kinds of life implied in the doctrine of metempsychosis has been more scrupulously observed in practice by the Jain than by the Brahmin or the Buddhist. The Brahmin tolerates the slaughter of animals for food, to provide offerings for the sacrificial fire, or to show hospitality to a guest; the Buddhist does not scruple so nervous a life, but the Jain reprobrates meat-food without exception as involving the unlawful taking of life. For similar reasons the Jain does not content himself with straining his drinking water and with remaining at home during the rainy season, when the ground is swarming with lower forms of life, but when he goes forth, he wears a veil before his mouth, and carries a broom with which he sweeps the ground before him to avoid destruction of insect life. The Jainist ascetic allows himself to be bitten by gnats and mosquitoes rather than risk their destruction by brushing them away. Hospitals for animals have been founded in the United States by Jain benevolence, bordering at times on absurdity. For example, in 1834 there existed in Kutch a temple hospital which supported 5000 rats. With all this scrupulous regard for animal life, the Jain differs from the Buddhist in his view of the lawfulness of religious suicide. According to Jainist ethics a monk who has practised twelve years of severe asceticism, or who has found after long trial that he cannot keep his lower nature in control, may hasten his end by self-destruction.

**Jamaica,** the largest of the British West Indian islands, is situated in the Caribbean Sea, between latitude 17° 43' and 18° 32' N., and longitude 76° 11' and 78° 30' W. It is 90 miles south of Cuba, 101 miles west of Haiti, and 554 miles from Colon. The nearest point of the continent of America is about 400 miles southwest of the island. The name Jamaica is derived from the Iroquois word *hamama,* meaning water and wood, signifying a fertile land. The island is 144 miles long, and from 21 to 49 miles broad. Its area is...
Two of them possess very remarkable curative properties: the hot sulphurous springs of Bath, and the warm saline spring at Milk River.

### Population and Vital Statistics

**Population** and *Vital Statistics.—The first recorded attempt at enumerating the population of Jamaica was in 1650, when "the reliefs of the army" were stated to be 2200, and the planters, merchants, and others about the same number. In 1775, there were 13,737 whites, free coloured 4093, slaves 19278. In 1834—the year of negro emancipation—it was computed that there were 15,000 whites, 5000 free blacks, 40,000 coloured, 311,070 slaves, making a total of 371,070. In June, 1844, the census gave whites 13,816, coloured 81,074, and blacks 346,374; total 441,264. The population in 1891 was 639,493, of whom 14,692 were white, 121,755 were coloured, 498,724 black, 10,116 coolies (East Indians), 481 Chinas, and 3025 not described. The total estimated population in 1907 was 830,261. The Registrar-General’s statistics show that upwards of 65 per cent of births were those of illegitimate children. Many of these are the offspring of consent or permanent concubinage rather than of promiscuity. In this connection it may be remarked that the number were not for the accommodation of the majority of this people some two generations ago were permitted and encouraged to breed like cattle, and were denied admission to the marriage state. In 1881 there were over 10,000 Catholics in Jamaica; in 1891 there were 12,000; and at the present day (1907) there are 14,000. The annual birth rate for ten years, 1896-7 to 1906-7, was 36.5 per 1000 of the estimated mean population. For the same period the mean average death-rate of population per 1000 was 23.2. The population of Kingston is some 50,000, Spanish Town 5090, Montego Bay 4760, Port Antonio 2500, Falmouth 3100, Mandeville 1500.

### Climate and Meteorology

**Intimately associated with vital statistics comes the question of climate. Jamaica, being a tropical island, was formerly looked on as injurious as a residence to the inhabitants of northern latitudes. This theory has been completely refuted, and for many years past the invalid and tourist is resorting in increasing numbers to the "Riviera of the West", which is an ideal sojourn for the health-seeker. The diversity of surface, from the plains to the plateaux and mountain slopes, affords a variety of climate suitable to any requirement. The table given in the next column will illustrate this fact, at various altitudes.**

**Meteoralogical records are wanting for Manchester and St. Elizabeth highlands, which are much drier than other hill districts of the island. There are many mineral springs valuable for the cure of acute and chronic diseases, especially gout and rheumatism.**

### History

Jamaica was discovered by Columbus on 3 May, 1494. He landed probably at or near St. Ann's Bay, called by him Sancta Gloria, owing to the great beauty of the environs. Nine years later his caravels were wrecked at Puerto Bueno—the present Dry Harbour. He gave the name Santiago to the island, which was but partially colonised by the Spaniards, and was never popular with them. They first introduced horses, cattle, sheep, goats, pigs, and domestic poultry. To the Spaniards Jamaica is also indebted for the orange, lemon, lime, and other fruit trees; the coffee tree is due however to British initiative about the year 1721. From the constituents of the shell mounds throughout the island and the absence therefrom of all objects of a European character, it would appear that these accumulations represent the kitchen middens of the pre-Columbian aboriginal inhabitants. These remains, found principally in caves, comprise: (a) cranial and other bones (human), (b) stone implements (sella, etc.,) (c) objects of pottery (various), (d) ornamental beads (chaledony); kitchen middens containing shells (principally marine), broken pottery, fish and bone tools, stone implements, and ashes. Their cottages were built on stockade posts set vertically in the ground; for natural food was depended principally on the sea, and on their festivals or barbecues the entire village went out on marine or river excursions. Their gardens yielded arrow-root, beans, cassava, cucumbers, melons, maize, and yams; for fruit they had the guava, mammea, papaw, and star-apple. They cultivated cotton and woollen it for cordage and twisted it into yarn for making garments. The only domestic animals were probably the mussels, duck and the alia, a small dog. The aborigines were most probably a tribe of the Arawaks, and not Caribs, who were cannibals. The Arawaks were a gentle and inoffensive people as their name (meal-esters) signifies. They believed in a Supreme Being (Jocahuna), in a future state, and had a tradition about a deluge. Their form of government was patriarchal. They smoked tobacco and played a football game called bato, in which both men and women joined.

### Spanish Occupation

A review of the period of Spanish occupation is one which reflects very little credit on Spanish colonial administration in those days. Their treatment of the aboriginal inhabitants, whom they are accused of having practically exterminated, is a grave charge, and if true, cannot be condoned on the plea that such conduct was characteristic of the age, and that as bad or worse was perpetrated by other nations even in later years. In the few places where the Spaniards settled, they invariably built a church, sometimes a monastery, and occasionally a theatre. Sevilla-Nueva (or Sevilla...
d'Oro) was the capital of the island from 1510 till 1520, when Diego Colombo founded a new capital, Santiago de la Vega, which is now known as Spanish Town. The town of 1521 was formed by the expulsion of the native Indians from the island. Soon after, Africans were imported into Jamaica as slaves. Las Casas, deservedly called "Protector-General of the Indians," was instrumental in inducing the pope to issue a Bull in 1542, restoring the Indians to freedom. Unhappily this concession came too late for the aborigines and was the end of the island. Soon after, Africans were imported into Jamaica as slaves. The discreditable failure to capture San Domingo by the expedition under Admiral Penn—father of the founder of Pennsylvania—and General Venables, described by Carlyle as "the unsuccessful enterprise Oliver Cromwell had conceived and ended in a successful descent on Jamaica, which was captured in May, 1655. Engish Occupation.—"To signalise the capture of St. Iago" by the English "a small leaven of Puritan feeling and a large amount of ruffianism led the troops' into a display of energy. . . . The abbey and the two churches were demolished and the bells melted down for shot." (Gardner.) The poet Milton, secretary to Cromwell, justified this invasion of the West Indies on the ground of "the most noble opportunities of promoting the glory of God, and enlarging the bounds of the Kingdom of Christ, which we do not doubt will abundantly reward all those who shall participate in the West Indies." The advent of the English adventurer gave a considerable impetus to trade with the outside world. The chief seaport of the island, now Port Royal, soon became "a nest of iniquity and a centre of rude luxury, the emporium of the loot of the buccaneer. . . . no form of vice was wanting, no indulgence too extravagant or too licentious to be permitted or enjoyed in total lawlessness. . . ." But it paid the penalty of its lawlessness, being wiped out by an earthquake on 7 June, 1692, after which event Kingston, the present capital, was established. As a means of repeopling the island, which was being depopulated by fever, a large number of Royalists in Ireland were seized and sent out as slaves by the English. "As a result of Cromwell's Irish policy one thousand young women and the same number of young men were by order of the Council of State arrested in Ireland and shipped to Jamaica, while the sheriffs of several counties of Scotland were instructed to proceed to the colonies with robbers and vagabonds, male and female, and transport them to the island." (Ellis.) In 1660 the population of Jamaica was about 4500 whites, and some 1500 negroes. Jamaica was ceded to England by the treaty of Madrid in 1670. On the accession of James I, Sir John Fenwick (who later became a Jesuit Monk), was appointed governor of Jamaica. One of his suite was Sir Hans Sloane, founder of the British Museum.

Slavery.—The war with the American colonies met with little sympathy in Jamaica. The assembly petitioned George III to grant more political autonomy to the struggling colonists. In 1778 France, which had recognized the independence of the new republic, was forced into war by England, and Jamaica, like the rest of the West Indies, suffered accordingly. Seven years later the maroons, or half-breed negroes, rose in rebellion, repulsed both the colonial militia and the regular troops, devastated large tracts of country, and were not finally overpowered till 1795. Some 600 of them, men, women, and children, were deported to Nova Scotia, and subsequently to Sierra Leone. In the eighteenth century 700,000 negro slaves were landed in Jamaica. When, in 1807, the slave trade was abolished in the British colonies, there were some 320,000 slaves in Jamaica. Slavery was destined to continue there for more than another quarter of a century. The local Government, which consisted almost entirely of slave holders and sympathizers with slavery, was a negrophobic plutocracy, and the Anglican, or Episcopal, clergy were in sympathy with the assembly, as they were dependent on it for their stipends. Ministers of other Protestant denominations were expelled for the education and enlightenment of the negroes, only to be reviled, hindered, and persecuted by the dominant party. A serious outbreak among the slaves occurred in 1831, property to the value of $3,600,000 being destroyed. The law emancipating the slaves passed by the British Parliament was the work of the Jamaica Assembly in 1833 under strong protests, and on 1 August, 1834, slavery was abolished in the island. The number of slaves for whom compensation was paid by the British Government was 225,990, the amount awarded having been $29,269,875. As an immediate result of the emancipation of the negroes, the want of labour was soon experienced. In 1844 immigration of hill-coolies from Hindustan was sanctioned by the Legislative Council. During the past sixty years, some 30,000 Hindu agricultural labourers have been imported into the island, of whom over 10,000 have, during the last twenty years, returned to India, taking back with them more than $350,000 in government bills of exchange.

Catholic Revival.—From the time of the expulsion of the Spaniards in 1655, and especially after the adoption of the Toleration Act of 1688, which "afforded the Catholic minority of society an opportunity of combating the encroachments of the British power in the West Indies." (Gardner), Catholic revival in the island was debarked. It was not until 1792 that the first instalment of freedom of worship was granted to them. Dr. Douglass, Vicar Apostolic of the London District, and ecclesiastical superior of the Catholics in the British West Indies, sent out an Irish Franciscan, Father Quigley, in 1798, who did pioneer work for seven years, and died in 1805. He was succeeded by Fathers Rodrigues d'Arango and Campos Benito, both Franciscans. By a Brief of Gregory XVI dated 10 January, 1837, the British West Indies were divided into three vicariates Apostolic: the Windward Islands, British Guiana, and Jamaica. Father Benito was appointed first vicar Apostolic of this island in 1837. The same year two Jesuits, Fathers Gotham, an Englishman, and Dupeyron, a Frenchman, arrived. They, with the vicar Apostolic and Father Duquesmay, the first native of Jamaica raised to the priesthood, formed the whole ecclesiastical establishment of the Archdiocese. After an outbreak in Jamaica in October, 1850, claiming over 300,000 victims; the Catholic clergy won the highest praise for their self-sacrifice and heroism during the plague. In 1855 the vicar Apostolic, Benito, died and was succeeded by Father Dupeyron, S.J., the first Jesuit to act as Vicar Apostolic of Jamaica.

Jesuit Administration.—We have now to deal with the mature development of the mission in the nineteenth century. Numerically it was small, but it had attracted public attention by its philanthropic and religious work. With the accession of Father Dupeyron the mission mission formed formally under the control of the Society of Jesus, and has remained so ever since. The new vicar Apostolic, hampered like his predecessors by a paucity of labourers and scantiness of resources, could continue only to watch over and safeguard that which had already been effected. In 1857 four Sisters of the Third Order Regular of St. Francis arrived in Jamaica from Glasgow, to instruct the coloured children. In a short time they opened a poor school and subsequently a high school for young ladies, both destined to do excellent work. In 1866 Father Joseph Sidney Woollett, S.J., of the English province, received sub-deacon's order. In 1869 Father Patrick Francis Fearon, S.J., arrived from England. He was a distinguished graduate of the University of Oxford, and had been a Fellow of Worcester College, and subsequently dean and bursar. In 1849 he accepted the incumbency of Shadwell, near Leeds. Becoming a Catholic in 1851,
he joined the Society of Jesus at the age of thirty-eight. He was a most zealous, self-denying, hard-working priest, an eloquent and persuasive preacher, and a cultured scholar; yet for years he taught the poor school for boys (St. Joseph’s), until his health broke down. He died in 1891. The number of Catholics in Jamaica in 1872 did not exceed 6,000; a greater portion of them lived in Kingston, where there were two churches. Seven chapels supplied the wants of the sparsely scattered rural Catholic population. There were about 400 children, boys and girls, attending the convent schools and St. Joseph’s in the capital. In 1878 these buildings were destroyed by fire, and the property of the congregation was burned. In 1888 the Right Reverend Charles Gordon, S.J., D.D., who succeeded Father Porter as vicar Apostolic, had been consecrated Bishop of Thatta in partibus infidelium. He set about supplying the most pressing needs of the mission. Efficient elementary schools were started. In 1891 Holy Trinity Church was improved, a tower, the Lady chapel, a sacristy, and baptistery being added at a cost of $12,500. Finally a hall to afford recreation and instruction for Catholic men, and for the meetings of the church guilds and sodalities, was completed in 1905 and named “Gordon Hall” after its founder. The hall and church were destroyed by the earthquake of 1907. Dr. Gordon also brought the Salesians into Jamaica, placing at their disposal a large property, Reading Pen, near Montego Bay, to be used for an agricultural college. In 1894 the care of the Jamaica mission was transferred to the Maryland-New York province of the Society, from the English province which had served it from the year 1855. In 1906 Father John Joseph Collins, S.J., was appointed administrator Apostolic of the vicariate, and in 1907 he was raised to the episcopacy as Bishop of Antiphilus in partibus infidelium and Vicar Apostolic of Jamaica.

Education—One of the first subjects to which the friends of emancipation turned their attention after the abolition of slavery was the education of the freed population of the West Indies. In Jamaica, however, there had been very little progress. The grant which had been made by the imperial Parliament was not paid before 1844, and all that was done for elementary education in Jamaica was the grant of $15,000 per annum by the legislature for the next twenty years. A training college for educating teachers was established in 1870. In 1890 some Spanish Jesuits, who had been banished from New Granada by the liberal revolutionist party, arrived at Kingston and opened what was called the Spanish College and what is now St. George’s College, a school of higher education for boys of the middle and upper classes. Most of the refugee priests left Jamaica shortly afterwards for Guatemala, but the work they inaugurated could not be destroyed. In 1884 St. Boniface College was founded. The college was closed about 1895, and opened again in 1898. Many prominent men in the island of all denominations have been educated there. In 1870 it ceased to be a boarding establishment. On the coming of the American Jesuits, the college was transferred to the site of the former Seminary of St. Boniface. Elementary education for Catholics had been left very much in abeyance up to Bishop Gordon’s arrival in 1889. The convent primary school had not more than 150 children, St. Joseph’s school for boys not as many, and some half-dozen schools in various parts of the island, with a fluctuating attendance of under one hundred, were all that represented Catholic elementary education in Jamaica. The advent of the Sisters of Mercy from the parental house in Ballyvarty, in December, 1896, brought a new and vital impetus to Catholic education. Fifteen years later there were in all some two thousand children attending the various schools of the Sisters of St. Francis, and considerably over one thousand in the schools of the Sisters of Mercy. In addition, there are two Roman Catholic convent schools (in the same way as in the past) at the Government industrial schools (under Government), and a high school for girls. A house of mercy has also been established for the protection of young women.

Recent Events.—The history of the colony from 1850 to 1865 might be described as a political tempest in a teapot. The Assembly and the Executive were at a dead-lock. Trouble was brewing in the country. During 1864 a severe drought had greatly impoverished the people, and the American Civil War had increased the price of imported bread-stuffs. Agitators had called on the coloured population to support themselves by a complete boycott of the work of the white planters, and “bread and blood for freedom” was raised. A partial rebellion, limited to the parish of St. Thomas, broke out among the black population in 1865. Some magistrates and officials were butchered at the beginning of the outbreak, but martial law was proclaimed, and the rebellion was quickly suppressed by methods which a Royal Commission pronounced later to have been unnecessarily severe. The chief agitators were hanged, after which Governor Eyre was recalled by the British authorities and was succeeded by Sir John Peter Grant, during whose term of office (1865–72) a number of important reforms were introduced. He brought an order in council abolishing the Legislative Assembly and establishing Crown government. The new legislature was designated the “Legislative Council of Jamaica” consisting of the Governor, six official members, and three non-official members. A privy council was also provided; a new revenue system was established; the police were re-arranged or founded. In 1871 the State, or Anglican, Church in Jamaica was disestablished. The seat of the civil government was transferred from Spanish Town to Kingston during the same year. The Koli sugar estates were completed at a cost of $650,000 have in recent years converted the lowlands of the parish of St. Catherine into a huge banana plantation. In 1868 the cultivation of cinchona as an economic industry was started by Government; and the rapidly increasing banana trade between Port Antonio and the United States has been the salvation of the island financially during the last twenty-five years.

In Nov., 1875, a cyclone occurred, followed by another in Aug., 1880. The advent of Sir Henry Norman as governor to the colony in Dec., 1883, was accompanied by the establishment of a revised constitution (promulgated by an order in council of Queen Victoria), consisting of a governor, a privy council, and a legislative council. The first is appointed by the sovereign for five years, and holds office during the sovereign’s pleasure. The privy council consists of the governor (as senior magistrate being, with some few exceptions, the chief judge of the court of lieutenant-colonel), the colonial secretary, the attorney-general; and such other persons, not to exceed eight, provisionally appointed by the governor, subject to the approval of the sovereign. The legislative council consists of the president (the governor), five ex-officio members, ten nominated members, and fourteen elected members (one for each of the fourteen parishes).

In 1890 the Jamaica Government Railway was sold.
to an American syndicate for $500,000 in cash, and $3,500,000 in second mortgage debentures. An international exhibition was opened (27 Jan., 1891), by the then Prince George of Wales. The guarantee fund was $120,000; total visitors, 302,830. Sir Henry Blake was then administering the affairs of the colony as Governor.

In 1893 a board of education was formed. The abolition of fees in elementary schools was provided for by a house tax. In 1896 a scheme for the sale of Crown lands to small settlers was instituted. In 1898 direct cable service between Jamaica and England was established. The Imperial Direct Line of steamers was inaugurated with $200,000 annual subsidy—half from Jamaica, and half from the Imperial Government. Port Royal was created a separate parish in the same year.

Agriculture and Commerce.—There is an agricultural society with some fifty affiliated branches in the various parishes of the island. Lectures and practical demonstrations have been organized by the society. Of the 2,500,000 acres of land in Jamaica, 1,310,000 are in wood and ruinate, and 775,000 under cultivation (560,000 grazing land, and 215,000 under tillage). There are 145,000 acres of government or Crown land unoccupied. The following table shows the area under cultivation the last year of each of the three decades:

<table>
<thead>

</table>

In 1902-3 over 14,000,000 bunches of bananas valued at $5,673,750 were exported. Over 95 per cent of these went to America. It was officially estimated that the loss to the island by the cyclone the following year, through destruction and damage to crops and buildings and loss of trade, was $12,500,000. The estimated number of cattle, horses, etc., in the island in 1904-5 was: horned stock, 107,695; horses, 57,905; asses, 18,500.

Shipping.—Number and tonnage of vessels that entered in the ports of the island for the year 1907—

</table>

Thus the relative importance of the island’s exports that year was: sugar 6:3, rum 7:1, coffee 4:7, dyewood 4:4, pimento 4:2, fruit 53:8, tobacco 1:4, minor products 17:8. Of the exports, 57:2 per cent in value went to the United States of America, and 29:8 per cent to the United Kingdom.

Governor—Gold and silver coins current in Great Britain and Ireland are legal tender to any extent, and local nickel pennies, half pennies, and farthings are legal tender to the extent of twelve pence (one shilling) in one payment. Paper money consists of the notes of the Colonial Bank, and of the Bank of Nova Scotia, of £1 to £5 and upwards. The other coins here are American gold coins. English weights and measures are in use in the colony. There are three daily newspapers published at Kingston and twelve others (six weekly, four monthly, and two quarterly) at Kingston and other parts of the island.

Means of Communication.—The whole length of main roads on the island aggregates close on 2000 miles; they are sufficiently broad almost everywhere for a double line of traffic, and are generally maintained in excellent condition. The best railway in Jamaica was opened between Kingston and Spanish Town in 1845. It was extended to Old Harbour in 1887, and from there to Porus in 1885, as well as the branch line to Ewarton from Spanish Town in the same year. In 1890 American capitalists extended the line to Almonte Bay, a distance of 115 miles, and to Port Antonio, a distance of 54 miles. The electric tram line, some 24 miles in extent, serves Kingston and its suburbs. The first steamship communication between Jamaica (Kingston) and the United States (New York) was begun in 1890. Jamaica joined the Universal Postal Union in 1887. There is a fortnightly mail service to and from England direct, also one via New York, a weekly service to the United States. There are 160 post and 64 telegraph offices in the island; and two lines of cables connect Jamaica with America.

The Earthquake of 1907.—A shock of earthquake of great severity occurred about 3:30 p.m. on Monday, 14 January, 1907. It lasted for upwards of twenty seconds; its greatest intensity was experienced along the foreshore of Kingston harbour. A large proportion of the buildings of the capital were either destroyed or badly damaged. The injuries to the submarine cables indicate that the gravamen of the shock was experienced at a depth of about a mile. The greater part of the business area of the city was destroyed, most of it by fire. The loss of life and property was estimated at about 800 persons and about $10,000,000 (handbook of Jamaica, 1907). Most of the churches in the city were wrecked or damaged beyond repair, and the majority of the public buildings, institutions, and the two convents, and their schools suffered equally. The cataclysm was one of the most calamitous events which has occurred in the history of the colony. Generous offers of pecuniary aid were made by most of the large cities of the United States, but were declined by the local Government. Some of the ships of the United States Atlantic fleet landed a party of medical officers, and equipment for the temporary field hospital at the Jesuits’ college at Winchester Park. These surgeons did excellent work. A body of American marines was landed at the request of the authorities to quell an uprising among the prisoners at the general penitentiary. This action was subsequently taken exception to by the governor, and consequently the American admiral had no alternative but to withdraw his squadron, leaving, however, supplies, medicines, etc., for the use of the sufferers. Subsequently the Imperial Government expressed regret at the action of its representative, who shortly afterwards resigned. A Mansion House (London) fund to relieve the distress was promptly started, and realised some $277,000. A free grant was made by the Imperial Parliament of $750,000 and a temporary loan of $4,000,000 at 3 per cent. The funds subscribed from all sources were distributed by a relief committee. Up to 31 Dec., 1908, loans to the value of $1,317,150 had been made. Thanks to the energy of J. Collins, the vicar Apostolic, most of the damaged Catholic schools were repaired in a few months. A new Catholic church dedicated to the Holy Trinity is being erected near Winchester Park, in place of the former one which was ruined by the earthquake.

Dependencies.—The Turks and Caicos Islands, which geographically form part of the Bahama group, are dependencies of Jamaica. They have an area of 162½ square miles and a population of some 5300.
The exports are salt and sponges. The seat of government is at Grand Turk, the town containing 1750 inhabitants. The Cayman Islands, having an area of about 225 square miles, are situated some 180 miles to the W. N. W. of Negril Point, Jamaica. They were discovered by Christopher Columbus and named by him in 1503. Until the 19th century the coast swarmed. The estimated population of the three islands, Grand Cayman, Cayman Brac, and Little Cayman, is 5000 for the largest island, and about 1000 between the two smaller islands. The exports are coco-nuts, turtles, phosphates, ropes, copra, etc., made from the palm-thatch which grows in abundance. Shipbuilding to a limited extent goes on; sloops and schooners of from 40 to 70 tons register are built from native woods, mahogany, cedar, calabash, cashew, etc., and sold in Cuba. The Cayman group has an administrator and local justices and forms a dependency under the jurisdiction of Jamaica.

J. F. DONOVAN.

James, Deme, French missionary, date and place of birth unknown; d. in France, 1625; an important figure in the early history of the Church in Canada. In 1615 he was chosen by his superiors in France as provincial commissioned and chief of the first band of Recollect friars, who were also the first missionaries of Canada. Leaving France on 24 April, 1615, he arrived at Tadoussac on 24 May, and went immediately with Champlain to meet the savages at Sault St. Louis. On 24 June, 1615, at Rivière des Prairies, he celebrated the first Mass said in the country by its first missionaries. In 1616 Father James returned to France with Champlain to urge before the king and the "Associates of Rouen" the material and spiritual interests of the colony. In 1620, again elected provincial provincial, he returned to Canada with Champlain and his wife. On reaching Quebec he exhorted the colonists to obey the vicar and his lieutenant, Champlain, having completed the first regular event of the Recollects at Quebec, he blessed it (a) and dedicated it to Our Lady of the Angels. He returned to France in 1621.

James, Edward, Venerable. See Ralph Crocken, Venerable.

James, Epistle of Saint.—The questions concerning the Epistle were treated in the following order: I. Author and Genuineness; II. Tradition as to the Canon; III. Analysis and Contents of the Epistle; IV. Occasion and Object; V. To whom addressed; VI. Style; VII. Time and Place of composition.

I. AUTHOR AND GENUINENESS.—The author is commonly identified with the Lord’s brother, the Bishop of Jerusalem. The evidence is in the turtles with which the Lord’s brother must be identified with James, the son of Alphaeus, (by far the most probable). Internal evidence (contents of the Epistle, its style, address, date, and place of composition) points unmistakably to James, the Lord’s brother, the Bishop of Jerusalem. James, has been, in the best texts, that fulfills the conditions required in the writer of the Epistle. External evidence begins at a comparatively late date. Some coincidences, or analogies, exist between the Epistle and the Apostle’s Fathers (Clement of Rome, the Pastor Hermas, St. Justin, St. Ireneus; see Miensert, “Der Jacobusbrief,” Freiburg im Br., 1905, p. 55 sqq.). The literary relation between the Epistle of James and the Epistle to the Romans is doubtful. Its later recognition in the Church, especially in the West, with which it is always associated, it was written for Jewish Christians, and therefore not widely circulated among the Gentile Churches. From the middle of the third century, ecclesiastical authors cite the Epistle as written by St. James, the brother of the Lord. See the testimonies in the section following. The greater part of the Church in the West Church identify the author with James the Apostle. In the Eastern Church, however, the authority of Eusebius and St. Epiphanius may explain some ecclesiastical doubts about the Apostle origin of the Epistle, and consequently about its canonicality.

II. TRADITION AS TO CANONICITY.—In the first centuries of the Church the authenticity of the Epistle was doubted by some, and amongst others by Theodoret of Mopsuestia; it is therefore deuterocanonical. It is wanting in the Muratorian Canon, and because of the silence of several of the Western Churches regarding it, Eusebius classed it as "apocryphal" or "contested writings" (Hisp. eccle., III, xxv; II, xxiii). St. Jerome gives the like information (De vir. ill., ii), but adds that with time its authenticity became universally admitted. In the sixteenth century its inspired character was contested by Erasmus and Cajetan; Luther strongly repudiated the Epistle as "a letter of straw." and "unworthy of the apostolic Spirit," and this solely for dogmatic reasons, and owing to his preconceived notions, for the Epistle refutes his heretical doctrine that Faith alone is necessary for salvation. The Council of Trent dogmatically defined the Epistle of St. James as canonical. As the solution of this question of the history of the canon of the Epistle of the Church depends chiefly on the testimony of the ancient Fathers, it remains to be seen whether it is quoted by them as Scripture. (a) In the Latin Church it was known by St. Clement of Rome (before A.D. 100), the Pastor Hermas (about A.D. 150), St. Irenæus (125-2027, 208), Tertullian (d. about 240), St. Hilary (d. 366), St. Philaster (d. 385), St. Ambrose (d. 397), Pope Damasus (in the canon of about A.D. 382), St. Jerome (346-420), Rufinus (d. 410), St. Augustine (430), and its canonicity is unquestioned by them. (b) In the Greek Church of Alexandria (d. 217), Origen (d. 254), St. Athanasius (d. 373), St. Dionysius the Areopagite (about A.D. 500), etc., considered it undoubtedly as a sacred writing. (c) In the Syrian Church, the Peshito, although omitting the minor Catholic Epistles, gives that of St. James; St. Ephraem uses it frequently in his writings. Moreover, the most notorious heretics of Syria recognized it as genuine. Thus we find that Nestorius ranked it in his Canon of Sacred Books, and James of Edessa adduces the testimony of James, v. 14. The Epistle is found in the Coptic, Sahidic, Ethiopic, Arabic, and Armenian versions. Although, therefore, the canonicity of the Epistle of St. James was questioned by a few during the first centuries, there are to be found from the very earliest ages, in different parts of the Church, numerous testimonies in favour of its canonicity. From the end of the third century its acceptance as inspired, and as the work of St. James, is universal, as clearly appears from the various lists of the Sacred Books drawn up since the fourth century.

III. ANALYSIS AND CONTENTS OF THE EPISLLE.—The subjects treated of in the Epistle are many and various; moreover, St. James not infrequently, whilst elaborating a certain point, he also digresses. He presents his arguments and premises once more his former argument; hence it is difficult to give a precise division of the Epistle. It is doubtful whether the sacred writer
intended any systematic arrangement of subject; indeed, it is more probable that he did not, for in the Hebrew Sapiential Books of the Old Testament, Proverbs, Ecclesiastes, Ecclesiasticus, to which the present Epistle may in many ways be likened, the order in which the moral sentences stand does not seem to suggest any connexion between them. It will therefore be more expedient to give a simple enumeration of the subjects treated of in the Epistle:—Inscription (i, 1); persecutions are to be borne with patience and joy (2-4); wisdom must be asked of God with confidence (5-8); humility is recommended (9-11); God is not the author of evil but of good (12-18); we must be rich in good works (19-21); not only good works, but also good words are necessary (22-27). Against respect of persons (ii, 1-13); another exhortation to good works (14-26). Against the evils of the tongue (iii, 1-12); against envy and discord, 13-18. Against wars and contentions (iv, 1-3); against the spirit of this world and pride (4-10); against detraction (11-13a); against vain confidence in worldly things (13b-16). Against the rich that oppress the poor (v, 1-6); exhortation to patience in the time of oppression (7-11), and to avoid swearing (12); of the anointing of the sick (13-15); of prayer (16); we must have at heart the conversion of sinners (17-20); note (iv, 19-21); note (v, 18; 21); note (vi, 1-2). The Epistle is written to the Jewish Christians outside Palestine, who, for the greater part, were poor and oppressed. This we gather with certitude from the inscription (i, 1), and from various indications in the text. A. The words, i, 1, "to the twelve tribes" can mean the whole Jewish nation; but the words following, which are scattered national, designate clearly the Jews of the Dispersion. The Jews in Palestine, surrounded by Gentiles, were not considered as "scattered abroad." That he addressed the Jewish Christians only becomes evident by the fact that the author styles himself "the servant of God, and of our Lord Jesus Christ," and by this he signifies that he wrote to the disciples of Christ only. B. That the readers were Jewish appears still more evidently from the Epistle itself. St. James takes for granted that those whom he addressed were well versed in the writings of the Old Testament. Moreover, he calls them not only his "brethren," which name taken by itself does not remove all doubt, but he so clearly shows them to be Christians that it is incomprehensible how any critics understand unconverted Jews to be the "brethren" to whom the Epistle was written. Thus in i, 18, he writes to those whom God "of his own will hath gotten by his own mercy, to a glorious, immortal life," and shows that St. James inclines especially: patience and perseverance in adversity, temptations, and persecutions; the necessity of good works, mercy, and charity. For the question of apparent opposition between St. James and St. Paul with regard to "faith and works" see Romans, Epistle to the. IV. OCCASION AND OBJECT.—A. Occasion.—St. James seems to have been moved to write his Epistle on witnessing that the first fervour of the Jewish Christians had grown cold, and that, owing to various causes, both external and internal, a certain spirit of persecution began to manifest itself: (1) External Causes.—The New Christian converts found themselves at first the object of the indifference only of their fellow townsfolk, the greater number of whom still remained in unbelief; but this attitude very soon changed to one of hostility and even of persecution. These early converts, belonging as they mostly did to the poorer classes, found themselves oppressed by the wealthy unbelievers; some were refused employment, others were denied their wages (v, 4); at other times they were mercilessly dragged before the tribunals (ii, 6); they were persecuted in the synagogues, where, besides, they were subjected to the "whipping" (v, 11-13). (2) Internal Causes.—In the midst of these trials the faith of many began to languish (ii, 14, 20, 26), and the evil ways they had abandoned at their conversion were gradually indulged in once more. Thus it came to pass that the poor were despised in the sacred assemblies (i, 1-9); there were breaches of brotherly charity (ii, 7): some arrogated to themselves the office of teacher who were unfitted (iii, 1, 13); many were guilty of detraction and other sins of the tongue (iii, 1-12; iv, 11-13); there were contentions and lawsuits (iv, 1-2); some indulged in swearing (v, 18); some refused to be reminded that patient prayer (v, 13, 17-18); pride and vainglory were yielded to (v, 6-10); even some of the sacred rites seem to have been overlooked (v, 14-16). Such were the evils that the Epistle sought to remedy. B. Ob ject.—St. James wrote his Epistle for a moral purpose, and he wrote in co-operation of Bishop of Jerusalem, in order: (1) to exhort them to constancy in the faith in spite of the persecutions and trials they were undergoing, and to give them comfort in their tribulations; (2) to correct the abuses and extirpate the evils amongst them, by urging them to make their conduct conformable to the faith, and by reminding them that faith alone would not save them unless they added good works. V. TO WHOM ADDRESSED.—St. James wrote his Epistle to the Jewish Christians outside Palestine, who, for the greater part, were poor and oppressed. We gather with certitude from the inscription (i, 1), and from various indications in the text. The words, i, 1, "to the twelve tribes" can mean the whole Jewish nation; but the words following, which are scattered national, designate clearly the Jews of the Dispersion. The Jews in Palestine, surrounded by Gentiles, were not considered as "scattered abroad." That he addressed the Jewish Christians only becomes evident by the fact that the author styles himself "the servant of God, and of our Lord Jesus Christ," and by this he signifies that he wrote to the disciples of Christ only. B. That the readers were Jewish appears still more evidently from the Epistle itself. St. James takes for granted that those whom he addressed were well versed in the writings of the Old Testament. Moreover, he calls them not only his "brethren," which name taken by itself does not remove all doubt, but he so clearly shows them to be Christians that it is incomprehensible how any critics understand unconverted Jews to be the "brethren" to whom the Epistle was written. Thus in i, 18, he writes to those whom God "of his own will hath gotten by his own mercy, to a glorious, immortal life," and shows that St. James inclines especially: patience and perseverance in adversity, temptations, and persecutions; the necessity of good works, mercy, and charity. For the question of apparent opposition between St. James and St. Paul with regard to "faith and works" see Romans, Epistle to the. IV. OCCASION AND OBJECT.—A. Moreover, he calls them not only his "brethren," which name taken by itself does not remove all doubt, but he so clearly shows them to be Christians that it is incomprehensible how any critics understand unconverted Jews to be the "brethren" to whom the Epistle was written. Thus in i, 18, he writes to those whom God "of his own will hath gotten by his own mercy, to a glorious, immortal life," and shows that St. James inclines especially: patience and perseverance in adversity, temptations, and persecutions; the necessity of good works, mercy, and charity. For the question of apparent opposition between St. James and St. Paul with regard to "faith and works" see Romans, Epistle to the.
from the famine foretold by Agabus (Acts, xi, 28-30), and usually identified with one mentioned in Josephus (Antiq., XX, ii, 5), a. d. 45. B. Place of Composition.

—The Epistle was probably written by St. James in Jerusalem, where fellow-students of the Lord had assembled towards the close of his life (see James the Less, Saint), and this opinion finds favour with nearly all its critics. Consult Introductions to the New Testament. It will suffice to recall here its contents and special study, which the earlier bibliography is mentioned.

A. CAMERLYNCK.

James of Brescia, theologian of the fifteenth century. He entered the Dominican Order at Brescia, his native city, in 1425, and was appointed to the office of inquisitor. He aided the papal auditor, Bernardo da Bruceo, in putting an end to the teaching of impious doctrines at Bergamo. He also took a prominent part in the controversy between the Dominicans and the Minorites with regard to the mode of celebrating Easter. On 29th March, 1462, St. James of the Marches, a celebrated Minorite preacher, maintained in a sermon at Brescia that the Blood separated from the Body of Christ during His Passion was thereby separated from His Divinity, and consequently was not entitled to adoration during the time that Christ remained in the sepulchre. As this doctrine had been proscribed by the Council of Constance in 1351, James of Brescia cited James of the Marches to appear before his tribunal in case he should not retract. A dispute at once arose between the Dominicans and Friars Minor. Shortly before, in a Bull written at Tivoli, Pius II had declared that it was not contrary to Christian Faith to hold that Christ did not reassemble a part of the Blood He shed in His Passion. This declaration narrowed down the controversy to the question: Whether the Blood which Christ shed in His Passion and reassembled was admissible as the Blood of the Son of God during the three days that it was separated from His Body. The affirmative was maintained by the Dominicans, the negative by the Minorites. The pope ordered a solemn disputation to be held before the pontifical court at Christmas, 1462 (1463, according to many). James of Brescia was one of the three theologians who represented the Dominicans. Among the Minorite champions was Francesco della Rovere, later Pope Sixtus IV. After a debate of three days, a consultation was held by the pope and the cardinals, but no definitive conclusion was reached. In a Constitution of 1 August, 1464, two weeks before his death, Pius forborne all further disputation on the subject. A full presentation of the Dominican side of this controversy is preserved in an unpublished treatise written by James of Brescia and his two colleagues. Other theological works attributed to James are no longer extant.

J. A. MCLYNN.

James of Edessa, a celebrated Syrian writer, b. most likely in A. D. 633; d. 5 June, 708. He was a native of the village of Ein-débbé, in the district of Gumyah, in the province of Antioch. During several years he studied Greek and Holy Writ at the famous convent of Kennessé, on the left bank of the Euphrates, opposite Europus (Carchemish). After his return to Syria he was appointed Bishop of Edessa, about A. D. 684, by the Patriarch Anastasius II, his cousin, whom he had assisted in his consecration. To enforce canonical rules and to confine at their infringement, he resigned his see after a four years' episcopate, and withdrew to the convent of Kaisum (near Samosata). The more lenient Habibih succeeded him as Bishop of Edessa. Shortly afterwards he accepted the invitation of the monks of the monastery of Deyr-e Antioch (then the See of Antioch) to reside at their convent, and there he commented for eleven years on the Sacred Scriptures in the Greek text, doing his utmost to promote the study of the Greek tongue. Owing to the opposition which he met on the part of some of the monks who did not like the Greeks, etc., he betook himself to the great convent of Tell-Adda (the modern Tell-Addi), where, for nine years more, he worked at his revision of the Old Testament. Upon Habibih's death he took possession again of the episcopal See of Edessa, resided in that city for four months, and then went to Tell-Adda to fetch his library and his pupils, but died there. James of Edessa is approved by the prominent part he took in the synod which the Jacobite patriarch Julian convened in 706, and by one of his letters in which he speaks of the orthodox Fathers of Chaledon as "the Chaledonian heretics." In the literature of his country he holds such the same part as St. John the Chalcedonian does among the Latins (Wright). For his time, his erudition was extensive. He was not only familiar with Greek and with older Syriac writers, but he also had some knowledge of Hebrew, and willingly availed himself of the works of Jewish scholars, whose views he often records. His writings, which are not all extant, are both varied and numerous. Among them may be noticed, first, his important revision of the Old Testament. This work was essentially Massoretic. James divided the Sacred Books into chapters, prefacing to each chapter a summary of its contents. He supplied the text with numerous marginal notes, of which one part gives readings from the Greek and the Syriac versions at his disposal, and the other part indicates the exact pronunciation of the words of the text. Some of the notes contain extracts from Severus of Antioch; while, at times, glosses are inserted in the text itself. Unfortunately, only a small portion of his writings have come down to us. These are: practically the whole Pentateuch and the Book of Daniel, preserved in the Bibliothèque Nationale at Paris (Syr. nos. 26, 27); the two Books of Samuel with the beginning of King, and the prophecy of Isaiah, found in the British Museum (Add. 14229, 14231), and at different times, by Phillips, Wright, Schottler, and Nestle; (3) letters treating of questions relative to Holy Writ, and mostly yet unpublished. As a liturgical author, James of Edessa drew up an anaphora, or Liturgy, revised the Liturgy of St. James, wrote the celebrated "Book of Treasures," containing the baptism of the blessing of water on the eve of Epiphany, and of the celebration of Matrimony, which may be added his translation of Severus's order of Baptism, etc. He is also the author of numerous canons; of important homilies, a few of
which survive in MS.: of a valuable "Chronicle", which he composed in 692, and of which a few leaves only are extant; of an "Enchiridion", or tract on the "General Letter of James", a translation of his "Homilies Cathedrales", written in Greek by Severus of Antioc; and of the "Octoechos" by the same author; of a biography of James of Sarugh; of a translation from the Greek of the apocryphal "History of the Rechabites"; of a Syriac grammar, a few fragments of which are extant in the Libre du monde in which he advocated and illustrated a novel system of indicating the vocical element not found in the Syri- ian alphabet; and, finally, of an extensive correspondence with a large number of persons throughout Syria.

Francis E. Gigot.

James of the Marches, Saint, Franciscan, b. of a poor family named Gangala, at Monteprandone, March of Ancona, Italy, 1391; d. at Naples, 28 Nov., 1456. He is known for his translation of the "Homilies Cathedrales" into Greek by Severus of Antioch and of the "Octoechos" by the same author; for his biography of James of Sarugh; for a translation from the Greek of the apocryphal "History of the Rechabites"; for a Syriac grammar, a few fragments of which are extant in the Libre du monde in which he advocated and illustrated a novel system of indicating the vocical element not found in the Syri- ian alphabet; and, finally, of an extensive correspondence with a large number of persons throughout Syria.

people of means, as appears from the following facts. Zebecche was a fisherman of the Lake of Gullio, who probably lived in or near Bari, perhaps in Capernum; and had some boatsmen or hired men as his usual attendants (Mark, i, 20).

Salome was one of the pious women who afterwards followed Christ and "ministered unto him of his substance" (cf. Matt., xxvii, 55 sq.; Mark, xv, 40; Luke, viii, 2 sq.; xxiii, 55-56, 1 sq.). She was personally known to the high-priest (John, xvii, 10); and must have had wherewithal to provide for the Mother of Jesus (John, xix, 27). It is probable, according to Acts, iv, 13, that John (and consequently his brother James) had not received the technical training of the rabbinical schools in this learned and without an official position among the Jews. But, according to the social rank of their parents, they must have been men of ordinary education, in the common walks of Jewish life. They had frequent opportunity of coming in contact with Greek life and language, which were already widely spread along the shores of the Galilean Sea. Some authors, comparing John, xix, 25, with Matt., xxvii, 56, and Mark, xv, 40, identify, and probably rightly so, Mary the Mother of James the Less and of Joseph in Mark and Matthew with "Mary of Cleophas" in John. As the name of Mary Magdalene occurs in the Gospels, they identify further Salome in Mark with "the mother of the sons of Zebecche" in Matthew; finally they identify Salome with "his mother's sister" in John. They suppose, for this last identification, that four women are designated by John, xix, 25, the Syriac "Pesito" gives the reading: "his mother and his mother's sister, and Mary of Cleophas, and Mary Magdalene". If this last supposition is right, Salome was a sister of the Blessed Virgin Mary, and James the Greater and John were first cousins of the Lord; this may explain the discipleship of the two brothers, Salome's request and their own claim to the first place in His kingdom, and their commendation by the Blessed Virgin to her own nephew. But it is doubtful whether the Greek admits of this construction without the addition or the omission of sal (and). Thus the relationship of St. James to Jesus remains doubtful.

The Galilean origin of St. James in some degree explains the energy of temperament and the vehemence of character which earned for him and St. John the name of Boanerges, "sons of thunder" (Mark, iii, 17); the Galilean race was religious, hardy, industrious, brave, and the strongest defender of the Jewish nation. When John the Baptist proclaimed the kingdom of God among the Jews, St. John became one of His disciples and he was directed to "the Lamb of God" and afterwards brought his brother James to the Messias: the obvious meaning of John, i, 41, is that St. Andrew finds his brother (St. Peter) first and that afterwards St. John (who does not name himself, according to his habitual and characteristic silence about himself) finds his brother (St. James). The call of St. James to the discipleship of the Messias is reported in a parallel or identical narration by Matt., iv, 18-22; Mark, i, 19 sq.; and Luke, v, 1-11 (see Camerlynck-Coppieters: "Synopsis", Bruges, 1908, 13 sqq.). The two sons of Zebecche, as well as Simon (St. Peter) and his brother Andrew with whom they were in partnership (Luke, v, 10), were called by the Lord upon the Sea of Galilee, where all four with Zebedee and his hired servants were engaged in their ordinary occupation of fishing. The sons of Zebecche "forthwith left their nets and followed the Messias" (Matt., iv, 22), and became "fishers of men". St. James was afterwards with the other eleven called to the Apostleship (Matt., x, 1-4; Mark, iii, 13-19; Luke, vi, 12-16; Acts, i, 13). In all four lists the names of Peter and Andrew, James and John form the first group, a prominent and chosen group (cf. Matt., xiii, 3); especially Peter, James, and John.
three Apostles alone were admitted to be present at the miracle of the raising of Jairus’s daughter (Mark, v, 37; Luke, vii, 51), at the Transfiguration (Mark, ix, 1; Matt., xvii, 1; Luke, ix, 28), and the Agony in Gethsemanl (Matt., xxvi, 37; Mark, xvi, 33). It is remarkable that the name of James is not mentioned (except in Luke, viii, 51; ix, 28; Acts, i, 13—Gr. Text) before that of his brother seems to imply that James was the elder of the two. It is worthy of notice that James is never mentioned in the Gospel of St. John; this author observes a humble reserve not only with regard to himself, but also about the members of his family (cf. Camerlynck, “De quarto Evangelii auctore,” II, Bruges, 1900, p. 317).

Several incidents scattered through the Synoptics suggest that James and John had that particular character indicated by the name “Boanerges,” sons of thunder, given to them by the Lord (Mark, iii, 17): they were burning and impetuous in their evangelical zeal and severe in temper. The two brothers showed their fiery temperament against “a certain man casting out devils” in the name of the Christ; John, answering, said: “We [James is probably meant for John] forbade him because he followed us not” (Luke, ix, 49). When the Samaritans refused to receive Christ, James and John said: “Lord, wilt thou that we command fire to come down from heaven, and consume them?” (Luke, ix, 54; cf. v. 49). On the last journey to Jerusalem, their mother Salome came and said to Jesus: “Lo, my two sons may sit, the one on thy right hand, and the other on thy left, in thy kingdom” (Matt., xx, 21). And the two brothers, still ignorant of the spiritual nature of the Messianic Kingdom, joined with their mother in this eager ambition (Mark, x, 37). And, on their assertion that they are willing to drink the chalice that He drinks of, and to be baptized with the baptism of His sufferings, Jesus assured them that they will share His sufferings (ibid., v. 38—39). James was the crown of martyrdom fourteen years after this prophecy. A. d. 44, Herod Agrippa I, son of Aristobulus and grandson of Herod the Great, reigned at that time as king over a wider dominion than that of his grandfather. His great object was to please the Jews in every way, and he showed great regard for the Mosaic Law and Jewish customs. In pursuance of this policy, he Bull of the Passover (Acts, xvi, 37; Acts, xii, 2; cf. Matt., xvi, 4), he perpetrated cruelties upon the Church, whose rapid growth incensed the Jews. The zealous temper of James and his leading part in the Jewish Christian communities probably led Agrippa to choose him as the first victim. He killed James, the brother of John, with the sword (Acts, xii, 1—2). According to a tradition, which, as we learn from Eusebius (Hist. Eccl., II, ix, 2, 3), was received from Clement of Alexandria (in the seventh book of his lost “Hypo- typoses”), the accuser who led the Apostle to judgment, moved by his confession, became himself a Christian, and they were beheld together. As Clement testifies expressly that the account was given him “by those who were before him,” this tradition has a better foundation than many other traditions and legends respecting the Apostolic labours and death of St. James, which are related in the Latin “Passio Jacobi Majores,” the Ethiopic Acts of James etc. (cf. Lipsius, “Apostrophén Apostelgeschichten und Apostellegenden”, Brunswick, II, 1884, 201 sqq.). The tradition asserting that James the Greater preached the Gospel in Spain, and that his body was translated to Compostela, claims more serious consideration.

According to this tradition St. James the Greater, having preached Christianity in Spain, returned to Judea and was put to death by order of Herod; his body was miraculously translated to Iria Flavia in the north-west of Spain, and later to Compostela, which town, especially during the Middle Ages, became one of the most famous places of pilgrimage in the world. The vow of making a pilgrimage to Compostela to honour the sepulchre of St. James is one to which many of his own or ordinary right can dispense from it (see Vow). In the twelfth century was founded the Order of Knights of St. James of Compostela (see Order of Knights of St. James of Compostela, Order of).

With regard to the preaching of the Gospel in Spain by St. James the Greater, we have raised: (1) St. James suffered martyrdom a. d. 44 (Acts, xii, 2); and, according to the tradition of the early Church, he had not yet left Jerusalem at this time (cf. Clement of Alexandria, “Strom.”, VI; Apollinius, quoted by Euseb., “Hist. Eccl.,” VI, xviii). (2) St. Paul in his Epistle to the Romans (a. d. 58) expressed the intention to visit Spain (Rom., xv, 24) just after he had mentioned (xv, 20) that he did not “build upon another man’s foundation.” (3) The argument ex silentio: although the tradition that James founded an Apostolic see in Spain was current in the year 700, no certain mention of such a foundation is not with early writers nor in the early councils; the first certain mention we find in the ninth century, in Notker, a monk of St. Gall (Martyroly., 25 July), Walafred Strabo (Poema de XII Apost.), and others. (4) The tradition was not unanimously admitted afterwards (see Walafred Strabo). (5) The evidence is weak, while scholars like Baronius, Alexander Natalis, Etius, and Tillemont reject it. The Bollandists however defended it (see Acta Sanctorum, July, VI and VII, where other sources are given).

The authenticity of the sacred relics of Compostela has been questioned and is still doubted (see Ermoni in Vigouroux, “Dictionnaire de la Bible,” s. v. “Jacques (Saint) le Majeur”). Even if St. James the Greater did not preach the Christian religion in Spain, his body may have been brought to Compostela, and this was already the opinion of Notker. According to another tradition, the relics of the Apostle are kept in the church of St-Saturnin at Toulouse (France), but it is not improbable that such sacred relics should have been divided between two churches. A strong argument in favour of the authenticity of the sacred relics of Compostela is the Bull of the Pope, Dec. 28, 1884. (See Compostela; James, Epistle of; Saint; James the Less, Saint.) A. Camerlynck.

James the Less, Saint.—I.—The name “James” in the New Testament is borne by several:—(1) James, the son of Zebedee, Apostle, brother of John, Apostle (see James the Greater, Saint). (2) James, the son of Alpheus, Apostle: Matt., x, 3; Mark, iii, 18; Luke, vi, 15; Acts, i, 13. (3) James, the brother of the Lord: Matt., xii, 42; Mark, vi, 3; Gal., i, 19. Without a shadow of doubt, he is identified with the James of Gal., ii, 2; Acts, xii, 17; xv, 13 sqq.; xxi, 18; I Cor., xv, 7. (4) James, the son of Mary, brother of Joseph (or James): Mark, xv, 40 (where he is called δε τοῦ μαθητή “the little,” not the “less,” as in the D. V., nor the “lesser”); Matt., xxvii, 56; probably the son of Cleophas or Clopas: John, xix, 25, where Maria Cleophas is generally translated “Mary the wife of Cleophas,” as married women are commonly distinguished by the addition of their husband’s name. (5) James, the brother of Jude: Jude, i, 1. Most Catholic commentators identify Jude with the “Justus Judaeus” as “the brother of James” (Luke, vi, 14; Matt., i, 13), called thus because his brother was better known than himself in the primitive Church (see Jude, Epistle of Saint). The identity of the Apostle James (2), the son of Alpheus and James (3), the brother of the Lord and Bishop of the Church of Jeru-

salem (Acts xv, xxii), although contested by many critics and, perhaps, not quite beyond doubt, is at least most highly probable, and by far the greater number of Catholic interpreters is considered as certai

tly the Apostle of St. James, the brother of the Lord, is to be found). The objection moved by Mader (Biblische Zeitschrift, 1908, p. 393 sqq.) against the common statement that "Apostles" in Gal., i, 19, is to be taken

strictly in the sense of "The Twelve" has been strongly

inspired by Steinheil (Der Katholik, 1909, p. 207 sqq.). The James (5) of Jude i, 1 must certainly be identified with James (3), the brother of the Lord and the Bishop of Jerusalem. The identification of James (3), the brother of the Lord and James (4), the son of Mary, and probably of Cleophas or Clopas offers some difficulty. This identification requires the identity of Mary, the mother of James (Matt., xxvii, 56; Mark, xv, 40), with Mary the wife of Cleophas (John, xii, xix), and, consequently, the identity of Alpheus (2) and Clopas (4). As Clopas and Alpheus are probably not two different transcriptions of the same Aramaic name "Alpheus" it is now how false the frequent supposition that different names have been borne by one man. Indeed, there are several examples of the use of two names (a Hebrew and a Greek or Latin name) to designate the same person (Simon-Petras; Saulus-Paulus), so that the identity of Alpheus and Cleophas is by no means impossible.

On the whole, although there is no full evidence for the identity of James (2), the son of Alpheus, and James (3), the brother of the Lord, and James (4), the son of Mary of Clopas, the view that one and

the same person is described in the New Testament in these three different ways, is far the most probable. There is, at any rate, very good ground (Gal., i, 19; ii, 9, 12) for believing that the Apostle James, the son of Alpheus is the same person as James, the brother of the Lord, the well-known Bishop of Jerusalem of the Acts.

As to the nature of the relationship which the name "brother of the Lord" is intended to express, see BRETHREN OF THE LORD.

II.—Had we not identified James, the son of Alpheus with the brother of the Lord, we should only know his name and his Apostleship. But the identity once admitted, we must consequently apply to him all the facts which we have by virtue of the New Testament. We may venture to assert that the training of James (and his brother Jude), had been that which prevailed in all pious Jewish homes and that it was therefore based upon the knowledge of the Holy Scripture and the rigorous observance of the Law. Many facts point to the diffusion of the Greek language and culture throughout Judea and Galilee, as early as the first century B.C.; we may suppose that the Apostles, at least most of them, read and spoke Greek as well as Aramaic, from their childhood.

James was called to the Apostolate with his brother Jude. In the third description of the Apostles, he stands in the head of the third group (Matt., xi, 3; Mark, x, 37; Luke, vi, 16; Acts, i, 13). Of James individually we hear no more until after the Resurrection. St. Paul (I Cor., xv, 5—7) mentions that the Lord appeared to him before the Ascension.

Then was the sight of James till St. Paul, three years after his conversion (A.D. 37), went up to Jerusalem. Of the Twelve Apostles he saw only Peter and James the brother of the Lord (Gal., i, 19; Acts, ix, 27).

When in the year 44 Peter escaped from prison, he desired that news of his release might be carried to James who held already a marked preeminence in the Christian church in the castle. On the 9th of September (A.D. 51) he gives his sentence after St. Peter, declaring as Peter had done, that the Gentile Christians are not bound to circumcision, nor to the observance of the ceremonial Mosaic Law, but at the same time, he urged the advisability of conforming to certain ceremonies and of respecting certain of the scruples of their Jewish fellow-Christians (Acts, xv, 13 sqq.). On the same occasion, the "pillars" of the Church, James, Peter and John, "Barnabas and Lucius, and Manaen and Barnabas the right hands of fellowship; that we should go unto the Gentiles, and they unto the circumcision" (Gal., ii, 9). He publicly commended the great charter of Gentile freedom from the Law, although he still continued the observance in his own life, no longer as a sine qua non, but as a matter of most venerable and national custom, trusting to "be saved by the grace of the Lord Jesus Christ" (Acts, xv, 11).

When afterwards some came from James to Antioch and led Peter into dissimulation (Gal., ii, 12), his name was used by them, though he had given them no such commandment to enforce their interpretation of the concordat which, on his proposal, had been adopted at the Council of Jerusalem. When St. Paul after his third missionary journey paid a visit to St. James (A.D. 58), the Bishop of Jerusalem and "the elders" "glorified the Lord" and advised the Apostle to take part in the ceremonies of a Nazarene vow, in order to avoid how false the claim had become that the Law as no longer to be regarded. Paul consented to the advice of James and the elders (Acts, xxxi, 1 sqq.). The Epistle of St. James (see JAMES, EPISTLE OF SAINT) reveals a grave, meek, and calm mind, nourished with the Scriptures of the Old Testament, given to prayer, devoted to the poor, resigned in persecution, the type of a just and apostolic man.

III.—Traditions respecting James the Less are to be found in many extra-canonical documents, especially Josephus (Antiq., XX, ix, 1), the "Gospel according to the Hebrews" (St. Jerome, De vir. ill., 11), Hegesippus (Eusebius, "Hist. eccl." II, xxiii), the pseudo-Clementine Homilies (Ep. of Peter) and Recognitions (I, 72, 73), Clement of Alexandria (Hypot., vi, quoted by Eusebius, "Hist. eccl.", II, i). The universal testimony of Christian antiquity is entirely in accordance with the information derived from the canonical books as to the fact that James was Bishop of the Church of Jerusalem. Hegesippus, a Jewish Christian, who lived about the middle of the second century, relates (and his narrative is highly probable) that James was called the "Just", that he drank no wine nor strong drink, nor ate animal food, that no man touched his food unless he was bondservant himself or made for himself or make up the bath, and lastly that he was put to death by the Jews. The account of his death given by Josephus is somewhat different. Later traditions deserve less attention.

For bibliography see JAMES, EPISTLE OF SAINT; Protoevan- gelium Jacobs and Liturgy of St. James.

A. CAMERLYNCK.

JAMES THOMPSON (alias JAMES HUDSON), Blessed, martyr, b. in or near York; having lived nearly all his life in that city, d. there, 28 Nov., 1552. He arrived at Dr. Allen's college at Reims 19 September, 1550, and in May of the next year, by virtue of a new apos-
died in and for the Catholic Faith. While he was hanging, he first raised his hands to heaven, then beat his breast with his right hand, and finally made a great sign of the cross. In spite of his sentence, he was neither disembowelled nor quartered, but was buried under the gallows.

Janauschek, Leopold, Cistercian, b. at Brunn, Moravia, 13 October, 1827; d. 23 July, 1898, at Baden, near Vienna. In 1846 he received the religious habit at the Cistercian Abbey of Zwettl, Lower Austria, where he was professed in 1848. His superior then sent him to their house of studies at Heiligenkreuz near Vienna, where he studied philosophy and theology, and after his ordination to the priesthood was made professor of history and canon law. His learned works on these sciences soon attracted attention and won for him in 1858 the chair of ecclesiastical history at the University of Vienna. In 1859 he was recalled by his superiors to Heiligenkreuz, where he continued as professor until 1877. During this time he composed his first great work, "Originum Cisterciensium Liber Primus" (Vienna, 1877), in which he describes the foundation of the Order of Citeaux, its organization and extension, and mentions many of those who, under various titles, had honoured it. He gives a lengthy account of 742 ancient abbeys of monks, founded between the end of the eleventh and the end of the seventeenth centuries. Each of the genealogical and chronological tables, as well as the entire work itself, supposes colossal labour of research and compilation. He was unable to publish the second volume, which was to have been devoted to the monasteries of Cistercian nuns, and for which he had collected a great deal of material; but it will be utilized by the continuator of his work. He also published a work of less importance on the history of the Cistercian Order.

His second great work is entitled "Bibliographia Bernardina". In 1891, on the occasion of the eighth centenary of the birth of St. Bernard, the Cistercian Congregation of Austria prepared four volumes for the glory of this illustrious doctor, under the title of "Xenia Bernardina". Janauschek gave his assistance in the preparation of the first three volumes, but the fourth, "Bibliographia Bernardina" (Vienna, 1891), was entirely his own work. He there treats successively of the different editions of the works of St. Bernard and his translations, the essays on the life of the saint, various panegyrics, his biographers, the inscriptions in his honour, the opinions of ecclesiastical historians, etc. These great works of Janauschek exhibit profound research, unconquerable perseverance, and great skill in classification. For these works the author was obliged to search many libraries and consult numerous archives; the books noticed in the "Xenia Bernardina" amount to 2761 printed, and 119 manuscript volumes. The author was also obliged to communicate with many learned men. Despite weak health, which for many years permitted him to work only at rare intervals, he persevered at his great task until interrupted by death.

Edmond M. O'Rebrech.

Jandel, Alexandre Vincent, general of the Dominican Order, b. at Gerbevilliers (Lorraine), 18 July, 1810; d. at Rome, 11 December, 1872. He was remarkable from his earliest years for intelligence and resolution, qualities derived chiefly from his mother, a person of rare endowments, who did not fear to succour priests during the Revolution. After a brilliant collegiate course at Nancy, he entered the diocesan seminary in that city, where his success was equally great. Jandel was ordained priest 20 September, 1834, then appointed professor of Scripture, and soon afterwards rector of the seminary at Pont-à-Mousson. The young superior was regarded as a model of sanctity and learning. At this time he became acquainted with Bautain, Gerbet, Ratiabonne, and many other distinguished men, among them Lacordaire. Such was the impression made on him by Lacordaire, that he began to think of entering the Dominican Order, which the great preacher proposed to restore in France, where it had been destroyed by the Revolution. In 1839 he therefore went to Rome, consulted Gregory XVI on the matter, and finally received the habit on 15 May, 1841. Two years afterwards Jandel and Lacordaire commenced the great work of re-establishing their order in France. Lacordaire was an orator; Jandel was a ruler of men, calm, grave, sagacious, and consecrated to the missions of tradition and the practice of missions, and acting in collaboration. Though he had not the genius of his associate, he preached with great results. A sermon at Lyons on the power of the Cross led to his being challenged by a Freemason to prove the truth of his words in the lodge; he entered it, produced his crucifix, and made the sign of the cross; instantly the lights were extinguished, the furniture was thrown about, and all but he fled in terror from the scene of confusion.

Many holy persons in France placed themselves under his guidance. Pius IX, however, called him to Rome, and made him in 1855 abbot of the Dominican Order ad beneplacitum, and in 1855 general for six years. He was soon recognized as the greatest religious superior and one of the most enlightened spiritual directors in the city. Of those whom he instructed at this time, two may be mentioned: Cardinal Manning and Father Burke. A born administrator, he infused new life into the order. Several provinces were re-established, and houses opened everywhere. The Dominican nuns (second order) and tertiaries were also greatly indebted to his zeal. He also did much to promote devotion to the rosary, and tried to propagate the doctrine of purgatory. Such were the services he rendered to the Holy See especially as regarded the Zouaves, that Pius IX, who was warmly attached to him, intended to make him a cardinal; but Providence disposed otherwise, for he was elected general of the order, 7 June, 1862. He visited Ireland twice, and only weak health prevented him from visiting America. New editions of liturgical books and of the "constitutions" or legislation formed part of his characteristic work. He also paid great attention to foreign missions. During his term of office sixteen Dominicans were beatified or canonized. He possessed at two different times the order (Ghent, 1871), and he is justly considered as one of the greatest generals that the order has had during the seven centuries of its existence.

The standard authority is Correrie, Vie de l'Archevêque Père Jandel, ancien suprême des Prêtres-Fréres (Paris, 1890).

Reginald Walsh.

Jane Frances de Chantall, Saint, born at Dijon, France, 28 Jan., 1572; died at the Visitatio Convent, Moulins, 13 Dec., 1641. Her father was president of the Parliament of Burgundy, and leader of the royal party during the League that brought about the triumph of the cause of Henry of Navarre, afterwards called Baron de Chantall, and lived in the feudal castle of Bourilly. She restored order in the household, which was so
bravely, and yet she was exceedingly sensitive. Celse-Bénigne was an incorrigible duelist. She prayed so fervently that he was given the grace to die a Christian death on the battlefield, during the campaign against the Ile of Rë (1627). He left a daughter who became the famous Marie Thérèse de Chantal. After his death, the added interior crosses which, particularly during the last nine years of her life, kept her in an agony of soul from which she was not freed until three months before her death.

Her reputation for sanctity was widespread. Queens, princes, and prelates flocked to the reception from the Visitation. Wherever she went to establish foundations, the people gave her ovations. “These people,” she would say confused, “do not know me; they are mistaken.” Her body is venerated with that of St. Francis de Sales in the church of the Visitation at Annecy. She was beatified in 1751, canonized in 1767, and 21 August was appointed as her feast day.

The life of the saint was written in the seventeenth century, with inimitable charm, by her secretary, Mother de Chaussy. Mgr Bougaud, who died Bishop of Laval, published in 1863 a “Histoire de Sainte Chantal” which had a great and well-deserved success.

The works of the saint comprise instructions on the religious life, various minor works, among which is the admirable “Deposition for the Process of Beatification of St. Francis de Sales”, and a great many letters. The saint’s qualities are seen in her precise and peremptory style, void of any suppressed emotion, and bursting forth spontaneously from the heart, anticipating in its method the beautiful French of the seventeenth century. The book which may be called her masterpiece, “Réponses sur les Règles, Constitutions et Coutumes,” a truly profound and complete code of the religious life, is not in circulation.

RAFAEL FERNIN.

JANER, FERDINAND, theologian, b. at Hirschau, in the Upper Palatinate (Bavaria), 4 Feb., 1836; d. 1 November, 1895. He completed his studies at the Latin school of Amberg, taking his philosophical course at that lyceum, studied theology at Würzburg and Ratiburg, and was ordained priest 13 August, 1858. After devoting himself to parish work for a time, he again took up his studies at Würzburg, where he obtained the degree of Doctor of Theology, after which he was successively, chaplain at Weiden, in 1863 prefect of the Ratiburg seminary, 1886 professor of religion and history at the gymnasium of Speyer, 1867 professor of ecclesiastical history, Christian archeology, and history of art at the Ratiburg lyceum, 1883 diocesan consultant. He retired from active life in the year 1888.

Jamer’s principal work is “Geschichte der Bischöfe von Regensburg”, the three published volumes of which bring the history to the sixteenth century (Ratisbon, 1883–86). He also wrote: “De factis dogmaticis” (Würzburg, 1861); “Infallibilium ecclesiam Catholicam esse in diuidicandis factis dogmaticis” (Speyer, 1866); “Das officium unius martyris de communi in Zusammenhang erklärt.” (Speyer, 1867); “Das Heilige Land, und die heiligen Stätten, ein Pilgerbuch” (Ratisbon, 1839); “Missale parvum sive Missale Romanum in breviore mit commodiorum formam redactum” (Ratisbon, 1870); “Die Bauhütten des deutschen Mittelalters” (2nd ed., Leipzig, 1876); Nicolaus von Weiz, Bischof zu Speyer” (Würzburg, 1854); “Die Schotten in Regensburg, die Kirche zu St. Jacob und deren Nordportal” (Ratisbon, 1885); a translation of the Breviary “Das römische Brevier in deutscher Sprache” (4 vols., Ratisbon, 1890). He also wrote “Personen-und Sachregister zu Habs, Die Con-
vertigen seit der Reformation", I-X (Freiburg im Breisgau, 1872).

_Friedrich Lauchert._

**Janow.** See Lublin and Podlachia, Diocese of.

**Janow, Matthew of,** a medieval ecclesiastical author, b. in the fourteenth century in Bohemia; d. at Prague, 30 Nov., 1394. Son of Wenzel of Janow, a Bohemian knight, he began his studies at Prague and continued them at the University of Paris where he graduated after nine years. Hence his title of "Parishian-Master (Magister Parisionis)." In 1381 he was appointed canon and confessor in the cathedral of Prague, offices which he held until his death. He was never a preacher of the first rank, but was conspicuous for his great zeal in the confessional. Between the years 1388 and 1392 he composed several treatises which he later collected under the title "Regula Veteris et Novi Testamenti". The work has never been published in its entirety, nor is it to be found complete in any one manuscript. Parts of it were wrongly ascribed to John Hus and published with his works in parts I, 376-471.

Janow attributed the evils in the Church to the contemporary Papal Schism, the large number of papal exemptions and reservations, and the excessive importance attached by some Christians to adventitious external practices. Owing to the abuses which at times attended the vaccination of saints and relics, he ultimately advocated the removal of such special objects of piety from the churches. He was misled in this extreme view by his desire of promoting an intense interior devotion to the Blessed Eucharist. The frequent and even daily reception of Holy Communion by the laity was, according to him, not only desirable but almost necessary. At the Synod of Prague in 1389 such encouragement of daily Communion was prohibited, and the veneration of images defended. Janow's retraction of his erroneous views and his repeated protestations of never-failing loyalty to the Catholic Church are sufficient evidence that he cannot be styled, as is frequently done, a forerunner of Hus.

_N. A. Weber._

**Jansen (Jansens, Janssen, Janssenius of Jansenius Gandaviensis), Cornelius, the Elder, exegete, b. at Hulst, Flanders, 1510; d. at Ghent, 11 April, 1576.** He received his early education at Ghent from the Brethren of the Common Life (called at Ghent the Hieronymites), and later studied theology and Oriental languages at Louvain. After he had become a licentiate of theology in 1534, he lectured, at the request of the abbot of the Premonstratensian Abbey of Tongerlo, to the young monks on the Holy Scriptures until 1542, from which date until 1562 he discharged the duties of pastor of the parish of St. Martin at Courtrai (Courby) with great success. Having finally attained the degree of Doctor of Theology in 1562, he was immediately appointed professor of theology at the University of Louvain, became in the following year dean of the collegiate seminary of St. James, and at the request of the Council of Trent was delegate of the university. On his return, King Philip II appointed him first bishop of the newly founded See of Ghent, which dated only from 1559. For a long time he refused to assume the dignity, on account of the difficult conditions in the diocese, and was not consecrated until 1564. As Bishop of Ghent, he devoted himself especially to checking the advance of Protestantism, and to carrying out with the greatest earnestness the decrees of the Council of Trent. With this object in view, he founded a seminary for priests at Ghent in 1569, held diocesan synods in 1571 and 1574, and published a ritual for his diocese. He was entrusted with the compilation of a ritual to be used in the ecclesiastical province of Mechlin, but did not finish it. While at Tongerlo he made a great deal, and, as pastor at Courtrai, had already become widely known for his excededal work.

Among Jansen's writings is the "Concordia evangelica" (Louvain, 1549), which he later added to the "Commentarius in Concordiam et totam historiam evangelicam" (Louvain, 1572), and thus formed a whole work. He published also: "Commentarius in Proverbs Salomonis" (Louvain, 1567), and "Commentarius in Ecclesiasticum" (Louvain, 1569), both of which were republished in one work at Antwerp in 1589; "Commentarius in Omnis Psalmos Davidicuos" (Louvain, 1569), with an historical introduction to each psalm, an excellent paraphrase of the text, and explanation of the difficult passages; "Paraphrases in ea Veteris Testamenti Cantica, quex feria seconius totius annui uusae ecclesiasticus observat" (Louvain, 1569). After his death appeared: Annotaciones in Librum Sententiae (Louvain, 1577).

Cornelius Jansen was one of the most distinguished among the exegetes of the sixteenth century, and his master-piece, the aforesaid "Concordia Evangelica", was epoch-making in the history of Catholic exegesis, for he insisted on the literal interpretation, as against the mystical interpretation of his predecessors, emphasized also the importance of the original text, and of a profound study of Oriental languages as aids to a full comprehension of the Vulgate.

_Patrickius Schlaeger._

**Jansen, Johann, historian, b. 10 April, 1829, at Xanten, Germany; d. 24 December, 1891, at Frankfort-on-the-Main.** He received his early education in a school of his native town, but his course was interrupted, however, from the early part of 1842 to the spring of 1844, during which time he worked as an apprentice to a coppermith. It soon became apparent, however, that he had no aptitude for this trade, and he was allowed to return to school. In 1846 he went to the gymnasium of Recklingshausen, from which he graduated in the autumn of 1849. In the spring of 1854 he entered the universities of Münster, Louvain, Bonn, and Berlin, where he devoted himself to the study of theology and history; in August, 1853, he obtained the degree of Doctor of Philosophy from the University of Bonn, in virtue of a Latin dissertation on the life of Wilibrord, Abbot of Stablo and Corvey (1098-1158); in August, 1854, he opened a course of history as Privatdozent at the Academy of Münster, but shortly afterwards, in September of the same year, he was asked to take the chair of history for the Catholic students of the gymnasium at Frankfort-on-the-Main. He retained this position up to the time of his death in 1891.

Not satisfied with attending to the ordinary duties of the class-room, Jansen devoted his spare time to historical research, the results of which were embodied in many learned volumes. At the same time he took every opportunity to visit centers of historical interest. From 1849 to 1854 he spent several months in Italy and Rome, where he consulted the archives of the Vatican on matters relating to the Thirty Years War and to the first partition of Poland. In 1875-76 he was a deputy to the Prussian Diet, joined the Centre party, and spent much time in Berlin. This service to the capital was not only to defend the interests of his constituency in Parliament, but also to widen the range of his knowledge by personal intercourse...
with learned and public men. From the days of his childhood he conceived the desire of serving God in the priesthood. The delicate state of his health prevented the execution of this intention; but finally he was ordained priest at Limburg, 26 March, 1860. In 1866 he was appointed spiritual counsellor by Archbishop Hermann von Vicari of Freiburg, and in 1880 Pope Leo XIII made him a prelate and a prothonotary Apostolic ad instar participiorum.

Janssen is the author of many valuable works on historical subjects. It was while he was at the University of Louvain that he resolved to make the study of history his principal work for the remainder of his life. His first work was a Latin biography of Abbot Wibald, which appeared in a revised form in C. Imann (1854). In 1856 he published a volume of historical documents relating to the Diocese of Münster (Die Geschichtsquellen des Bisthums Münster, 3 vols.). In 1861 appeared the essay "Frankreichs Rheingebiete und deutschfeindliche Politik in früheren Jahrhunderten", in which he laid bare the traditional diplomacy of France hostile to Germany at interest upon extending the boundary line as far as the Rhine. In 1863 he published an essay upon Schiller as a historian (Schiller als Historiker), in which he made it plain that the great German poet, in his historical writings, indulged too much in his imagination. For many years afterwards he preserved a manuscript material found in the archives of Frankfort; and the result of these labours was the publication of "Frankfurts Reichsbriefe", 1376–1519 (2 vols., 1863–73). In the essay "Zur Genesis der ersten Theilung Polens" (1866) he explained the circumstances under which the former Kingdom of Poland was robbed of part of its dominions by neighbouring countries. A biography of the man who considered him his teacher and guide appeared in three volumes in 1868 under the title "Johann Friedrich Boehmers Leben, Briefe und kleinere Schriften". In 1876–77 appeared in two volumes another biography of a renowned scholar and convert to the Catholic Faith, Count Friedrich Leopold zu Stolberg. In the work "Zeit- und Lebensbilder" (1875) he published in book form a number of essays on the men and events of his time.

The most important work is his "History of the German people" (Geschichte des deutschen Volkes seit dem Ausgang des Mittelalters). The first suggestion of such an undertaking was made by his master and friend, Johann Friedrich Boehmer, in 1853. At first he planned to write a complete history of Germany from its earliest times to his own day; but soon he saw his plan had to be abandoned, and he confined himself to the period beginning with the end of the Middle Ages. Eight volumes have appeared; six were given to the public by Janssen himself (1876–88), and two by his pupil and friend Ludwig Pastor (1893–94) from materials collected by Janssen; and they reach as far as the time of the Thirty Years War, which commenced in 1618. The great merit of this work is that Janssen treated not only of the political but also of the religious, social, and economic conditions of Germany, that he was very faithful to the sources of information and very impartial, that he made the authorities speak for themselves and that he destroyed the common conception, according to which the Middle Ages presented nothing but corruption and moral decay. Valuable additions to this work are found in two small volumes written in reply to adverse criticism ("An meiner Kritiker" 1881, "Ein zweites Wort an meine Kritiker" 1884). Most of the works of Janssen had a large sale, and appeared in several editions; this is particularly the case of the "History of the German People", which has been translated, partly, at least, into French and English. Janssen was a very prolific writer; to the works which have just been mentioned he added a number of articles written for reviews and other publications.

Owing to the literary and critical merits of his works, Janssen must be placed among the foremost Catholic historians of the last century. In his great work he deals much with the origin and the great leaders of the Protestant Reformation, yet he is always most moderate in tone, and never uses expressions which might give offence. The same attitude of reverence and respect was shown in his personal relations towards those who differed from him in faith; and in this manner he won the esteem and confidence of Protestants, among whom he found many friends.

Despite Janssen's great learning he remained humble; worldly honours and ecclesiastical dignities had no attraction for him. In 1864 efforts were made to win him for the diplomatic service of the Vatican; some time later he was mentioned for a vacant bishopric; in 1883 Pope Leo XIII contemplated summoning him to Rome for the direction of the Vatican Archives; in 1890 the cardinalate was to be conferred upon him; but he preferred in escaping all these honours. He gave often and abundantly to the poor, to the sick, to churches, and to institutions of mercy. An asylum for the poor and abandoned children of Frankfort, erected in 1894 in the town of Oberursel, owes its existence largely to his efforts. Janssen was a great scholar and an exemplary priest, though he never exercised the ecclesiastical ministry.

**Francis J. Schafer.**

**Janssenius and Jansenism.**—Cornelius Janssen, Bishop of Ypres (Cornelius Janssenius Ypresensis), from whom Jansenism derives its origin and name, must not be confounded with another writer and bishop of the same name, Cornelius Janssenius Gandavenensis (1510–1575), of whom we possess several books on Scripture and a valuable "Concordia Evangelica".

I. LIFE AND WRITINGS.—The subject of this article lived three-quarters of a century later than his namesake. He was born 23 Oct., 1555, of a Catholic family, in the village of Accoi, near Leerdom, Holland; died at Ypres, 6 May, 1638. His parents, although in moderate circumstances, secured for him an excellent education; they sent him first to Utrecht. In 1602 we find him at the University of Louvain, who entered the Collège du Faucon to take up the study of philosophy. Here he passed two years, and at the solemn promotion of 1604 was proclaimed first of 118 competitors. To begin his theological studies he entered the Collège du Pape Adrien VI, whose president, Jacques Janson, imbued with the errors of Bavinus and eager to spread them, was to exert an influence on the subsequent course of his ideas and works. Having hitherto been on amicable terms with the Jesuits, he had even sought admission into their order. The refusal he experienced, the motives of which are known to us, seemed not to be altogether unrelated to the aversion he subsequently manifested for the celebrated society, and for the theories and practices it championed. He was also associated with a young and wealthy Frenchman, Jean du Verger de Haurnanne, who was completing his course of theology with the Jesuits, and who possessed a mind subtle and cultured, but restless and prone to innovations, and an ardent and intriguing character. Shortly after his return to Paris towards the end of 1604, du Verger was joined there by Janssenius, for whom he had secured a position as tutor. About two years later he attracted him to his home, his native town of Brou, making him appointed director of an episcopal college. There, during eleven or twelve years of studies ardently pursued in common, on the Fathers and principally on St. Augustine, the two friends had time to exchange thoughts and to conceive daring projects. In 1617,
while du Verger, who had returned to Paris, went to receive from the Bishop of Poitiers the dignity of Abbot of St-Cyrans, Jansenius returned to Louvain, where the presidency of the new Collège de Sainte-Pulchérie was confided to him. In 1619 he received the degree of Doctor of Theology, and afterwards obtained a chair of exegesis. The commentaries which he wrote, and the polemical writings of a polemical nature, brought him in a short time a deserved renown.

These writings of Jansenius were not at first intended for publication, in fact, they did not see the light until after his death. They are concise, clear and penetrative, orthodox in doctrine. The principal ones are "Pentateuchus, sive commentarius in quinque libros Mosis" (Louvain, 1639); "Synopsis in Proverbs, Ecclesiastes, Sapientiam, Habacuc et Sophoniam" (Louvain, 1644); "Tetrateuchus, seu commentarius in quatuor Evangelia" (Louvain, 1639). Some of these exegetical works have been printed more than once. Among his polemical works are: "Alexipharmacum civibus Sylvestriensis propinatum adversus ministrorum fascinum" (Louvain, 1630); then, in reply to the criticism of the Calvinist Gisbert Voet, "Spongia notarum quibus Alexipharmacum astutius ad Veritatem ducuit" (Louvain, 1631). Jansenius published in 1635, under the pseudonym of Armacanus, a volume entitled "Alexandri Patricii Armacani Theologi Opera Gallica seu de justitia armorum regis Galliae libri duo". This was a bitter and well-merited satire against the foreign policy of Richelieu, which was summed up in the odd fact of the "Most Christian" nation and monarchy constantly allying themselves with the Protestants, in Holland, Germany, and elsewhere, for the sole purpose of compassing the downfall of the House of Austria.

The same author has left us a series of letters addressed to the Abbot of St-Cyran, which were found among the papers of the person with whom they were sent and printed under the title: "Naisissant du jansénisme découverte, ou Lettres de Jansénius à l'abbé de St-Cyran depuis l'an 1617 jusqu'en 1635" (Louvain, 1654). It was also during the course of his professorate that Jansenius, who was a man of action as well as of study, journeyed twice to Spain, whither he went as the deputy of his colleagues to plead at the Court of Madrid the cause of the university against the Jesuits; and in fact, through his efforts their authorization to teach humanities and philosophy at Louvain was withdrawn. All this, however, did not prevent the correspondence from continuing, chiefly with a work of which the general aim, born of his intercourse with St-Cyran, was to restore to its place of honour the true doctrine of St. Augustine on grace, a doctrine supposedly obscured or abandoned in the Church for several centuries. He was still working on it when, on the recommendation of King Philip IV and Boonen, Archbishop of Mechlin, he was raised to the See of Ypres. His consecration took place in 1636, and, though at the same time putting the finishing touches to his theological work, he devoted himself with great zeal to the government of his diocese. Historians have remarked that the Jesuits had no more cause to complain of his administration than the other religious orders.

He succumbed to an epidemic which ravaged Ypres, and died, according to eyewitnesses, in dispositions of great piety. When on the point of death he dictated to his chaplain, Reginald Lameus, with the command to publish it after taking counsel with Libert Fromondus, a professor at Louvain, and Henri Calenus, a canon of the metropolitan church. He requested that this publication be made with the utmost fidelity; as, in his opinion, it was impossible to add anything new and changed. "If, however," he added, "the Holy See wishes any change, I am an obedient son, and I submit to that Church in which I have lived to my dying hour. This is my last wish." The editors of the "Augustinus" have been wrongly accused of having intentionally and disloyally suppressed this declaration; it appears plainly enough on the second page in the original edition. On the other hand its authenticity has been contested by means of internal and several arguments, founded notably on the discovery of another will, dated the previous day (5 May), which says nothing regarding the work on which he was to be published. But it is quite conceivable that the dying prelate was mindful of the opportunity to complete his first act by dictating to his chaplain and confirming with his seal this codicil, according to which, referring to the testamentary executors, was written only half an hour before his death. It has been vainly sought, a priori, to make the fact appear improbable by alleging that the author was in perfect good faith as to the orthodoxy of his views. Already, in 1619, 1620, and 1621, the authenticity of St-Cyran bore unmistakable traces of a quite opposite state of mind; in it he spoke of coming disputes for which there was need to prepare; of a doctrine of St. Augustine discovered by him, but little known among the learned, and which in time would astonish everybody; of opinions on grace and predestination which he dared not then reveal "lest like so many others I be tripped up by Rome before everything is ripe and seasonable". Later, in the "Augustinus" itself, (IV, xxv-xxvii), it is seen that he severely disguises the close connexion of several of his assertions with certain propositions of this Doctor, though he ascribes the condemnation of the latter to the contingent circumstances of time and place, and he believes them tenable in their obvious and natural sense.

Nothing, therefore, authorized the rejection of the famous declaration, or testament, of Jansenius as unauthentic. But neither is there any authorization for suspecting the sincerity of the explicit affirmation of submission to the Holy See which is therein contained. The author, at the time of his promotion to the doctorate in 1619, had defended the infallibility of the pope in a most categorical thesis, conceived as follows: "The Roman Pontiff is the supreme judge of all religious controversies; when he defines a thing and imposes it on the whole Church, under penalty of anathema, his decision is just, true, and infallible." The end of his work (III, x, Epilogus omnium) we find this protestation perfectly parallel with that of the Testament: "All whatsoever I have affirmed in these various and difficult points, not according to my own sentiment, but according to that of the holy Doctor, I submit to the judgment and sentence of the Apostolic See and the Roman Church, my mother, to be henceforth adhered to if she judges that it must be so; and I refuse to build anything on the contrary, and anathematize it if she decrees that it should be condemned and anathematized. For since my tenderest
childhood I have been reared in the beliefs of this Church; I imbibed them with my mother's milk; I have grown up and grown old while remaining attached to them; never to my knowledge have I swerved therefrom a hair's breadth in thought, action or word; and I am still firmly decided to keep this faith in order to present it to thee, before the judgment-seat of God." Thus Jansenius, although he gave his name to a heresy, was not himself a heretic, but lived and died in the bosom of the Church. In view of the fact that he consciously and deliberately aimed at innovation or reforming, it would be absurd to ascribe to him the guilt of heresy, or declare that his attitude was in no wise presumptuous and rash; but impartial history may and should take into account the peculiar atmosphere created about him by the still smouldering controversies on Calvinism and the widespread prejudices against the Roman Curia. To determine the extent to which these and similar circumstances, by deluding him, necessarily diminished his responsibility, is impossible; that is the secret of the text.

II. THE "AUGUSTINUS" AND ITS CONDEMNATION.—After the death of Jansenius, the internuncio Richard André appointed the state of Adam, must be divided into volumes of which the first, chiefly historical, is an exposition in eight books of Pelagianism; the second, after an introductory study on the limitations of human nature, devotes one book to the state of innocence or the grace of Adam and the angels, four books to the state of fall and the darkness of the state of pure nature; the third volume treats in ten books of "the grace of Christ the Saviour", and concludes with "a parallel to the error of the Semi-pelagians and that of certain moderns", who are no other than the Molinists. The author, if we are to accept his own statement, laboured for twenty years on this work, and to gather his materials he had ten times read the whole of St. Augustine and thirty times his treatise against the Pelagians. From these readings emerged a vast system, whose identity with Bal- lainism is not skilful arrangement nor subtle dialectic concealment.

His fundamental error consists in disregarding the supernatural order; for Jansenius, as for Baisius, the vision of God is the necessary end of human nature; hence it follows that all the primal endowments designated in theology as supernatural or prenatural, including exemption from concupiscence, were simply man's due. This first assertion is fraught with grave consequences regarding the original fall, grace, and justification. As a result of Adam's sin, our nature, stripped of elements essential to its integrity, is radically corrupted and depraved. Mastered by concupiscence, the will of Augustine, as to original sin, the will is powerless to resist; it has become purely passive. It cannot escape the attraction of evil except it be aided by a movement of grace superior to and triumphant over the force of concupiscence. Our soul, henceforth obedient to no motive save that of pleasure, is at the mercy of the delectation, earthly or heavenly, which for the time being attracts it with the greatest strength. At once inevitable and irresistible, this delectation, if it come from heaven or from grace, leads man to virtue; if it come from nature or concupiscence, it determines him to sin. In the one case existence of a return to the common impulse by the preponderant impulse. The two delectations, says Jansenius, are like the two arms of a balance, of which the one cannot rise unless the other be lowered, and vice versa. Thus man irresistibly, although voluntarily, does either good or evil, according as he is dominated by grace or by concupiscence; he never resists either the one or the other. In this system there is evidently no place for purely sufficient grace; on the other hand it is easy to discern the principles of the five condemned propositions (see below).

In order to present it to thee, before the judgment-seat of St. Augustine, Jansenius based his argument chiefly on two Augustinian conceptions: on the distinction between the auzilium sine quo non granted to Adam, and the auzilium quo, active in his descendants; and on the theory of the victorious "delectation" of grace, and of God's grace which he remarks "in sufficere to make clear the double mistake. In the first place the auzilium sine quo non is not, in the idea of Augustine, "a grace purely sufficient", since through it the angels persevered; it is on the contrary a grace which confers complete power in actus primo (i.e. the ability to act), in such a way that, this being granted, nothing further is needed for action. The auzilium quo, on the other hand, is a supernatural help which bears immediately on the actus secundus (i.e. the performance of the action) and in this grace, in so far as it is distinguished from the actus primo, included the efficacious graces by which man works out his salvation, or the gift of actual perseverance, which gift conducts man infallibly and invincibly to beatitude, not because it suppresses liberty, but because its very concept implies the consent of man. The delectation of grace is a deliberate and rational choice, which Hippo explicitly opposes to necessity (voluptas, non necessitas); but what we will and embrace with consenting pleasure, we cannot at the same time not will, and in this sense will we necessarily. In this sense also, it is correct to say, "Quod amplius nos delectat, secundum quoddam hosque necessitatem" (i.e. in acting we necessarily follow what gives us most pleasure). Finally, this delight is called victorious, not because it fatally subjugates the will, but because it triumphs over concupiscence, fortifying free will to the point of rendering it invincible to natural desire. It is thus clear that we can say of men sustained by and faithful to grace, "Invictissime quasi bonum est velint, et hoc deserere invictissime nonint." The success of the "Augustinus" was great, and it spread rapidly throughout Belgium, Holland, and France. A new edition, bearing the approbation of the doctors of the Sorbonne, soon appeared. On the other hand, on 1 August, 1641, a decree of the Holy Office condemned the work and prohibited its reading; and the following year Urban VIII renewed the condemnation and interdict in his Bull "In eminenti". The pope justified his sentence with two principal reasons: first, the violation of the decree forbidding Catholics to publish anything on the subject of grace without the authorization of the Holy See; second, the reproduction of several of the errors of Baisius. At the same time, and in the interests of peace, the sovereign pontiff interdicted several other works dedicated against the "Augustinus". Despite all these wise precautions the Bull, which some pretended was forged or interpolated, was not received everywhere without difficulty. In Belgium, where the Archbishop of Mechlin and the university were rather favourable to the new ideas, the controversy lasted for ten years. But it was France which henceforth became the chief centre of the agitation. At Paris, St-Cyran, who was powerful through his relations besides being very active, succeeded in spreading simultaneously the doctrines of the "Augustinus" and the principles of an exaggerated moral and disciplinary rigorism, all under the name of the "Augustinus", and succeeded especially in winning over to his ideas the influential and numerous family of Arnauld of Anilly, notably Mère Angélique Arnauld, Abbess of Port-Royal, and through her the religious of that im-
portant convent. When he died, in 1643, Doctor Antoine Arnauld quite naturally succeeded him in the direction of the movement which he had created. The new leader lost no time in asserting himself in startling fashion by the publication of his book "On Frequent Communion", which would have been more correctly entitled "Against Frequent Communion", but he projected such a vast show of erudition, and a great display of ingenuity, did not a little towards strengthening the party.

Although the Sorbonne had accepted the Bull "In eminenti", and the Archbishop of Paris had, in 1644, proscribed the work of Janseni, it continued to be read, and was recommended; and the pretext that authority had not rejected a single well-determined thesis. It was then (1649) that Cornet, syndic of the Sorbonne, took the initiative in a more radical measure; he extracted five propositions from the much-discussed work, two from the book "On Frequent Communion", and submitted them to the judgment of the faculty. This body, prevented by the Parlement from pursuing the examination it had begun, referred the affair to the general assembly of the clergy in 1650. The greater number considered it more fitting that Rome should pronounce, and eighty-five bishops wrote in this sense to the Pope, deeming it unwise to contain the first five propositions. Eleven other bishops addressed to the sovereign pontiff a protest against the idea of bringing the matter to trial elsewhere than in France. They demanded in any case the institution of a special tribunal, as in the "De auxillis" affair, and the opening of a debate in which the theologians of both sides should be allowed to submit their arguments. The decision of Innocent X was what might have been expected: he acceded to the request of the majority, keeping in view as far as possible the wishes of the minority. A commission was appointed, consisting of fifteen cardinals and thirteen theologians, some of whom were known to be distinctly against the Jansenists. Its laborious examination lasted two years: it held thirty-six long sessions, of which the last ten were presided over by the Pope in person. The "Augustinus" which, as has been said, had friends on the bench, was defended with skill and tenacity. Finally, its advocates presented a table of three columns, in which they distinguished as many interpretations of the five propositions: a Calvinistic interpretation, rejected as heretical; a Pelagian or Semipelagian interpretation, identified by them with the traditional doctrine, also to be cast aside; and lastly, their interpretation of the idea of St. Augustine himself, which could not but be approved. This plea, skilful as it was, could not avert the solemn condemnation, by the Bull "Cum occasione" (31 May, 1653), of the five propositions, which were as follows: (1) Some of God’s commandments are impossible to just men who wish and strive (to keep them), considering the powers they actually have; the grace by which these precepts may become possible is also wanting; (2) In the state of fallen nature no one ever resists interior grace; (3) To merit, or demerit, in the state of fallen nature we must be free from all external constraint, but not from interior constraint; (4) The circumstance which prevails is the necessity of interior preventing grace for all acts, even for the beginning of faith; but they fell into heresy in pretending that this grace is such that man may either follow or resist it; (5) To say that Christ died or shed His blood for all men, is Semipelagianism, which five propositions were rejected as heretical, the first four absolutely, the fifth if understood in the sense that Christ died only for the predestined. All are implicitly contained in the second, and through it, all are connected with the above-mentioned erroneous conception of the state of innocence and the original fall. If it is true that the fallen man never resists interior grace (second proposition), it follows that a just man violates a commandment of God did not have the grace to observe it, that he therefore transcends it through inability to fulfil it (first proposition). If, however, he has sinned and thus demerited, it is clear that, to demerit, the liberty of indifference is not requisite, and what is said of demerit must also be said of its correlative, merit (third proposition). On the other hand, if grace is often wanting to the just, since they fall, it is wanting still more to sinners; it is therefore impossible skill and a grace of erudition and assurance to every man, the grace necessary for salvation (fifth proposition). If this be so, the Semipelagians were in error in admitting the universal distribution of a grace which may be resisted (fourth proposition).

III. REVISION OF THE JANSENISTS.—Well received by the Sorbonne and the General Assembly of the Clergy, the Bull "Cum occasione" was proscribed with the royal sanction. This should have opened the eyes of the partisans of Jansensi. They were given the alternative of finally renouncing the errors, or of openly resisting the supreme authority. They were thrown for the moment into embarrassment and hesitation, from which Arnauld extricated them by a subtlety: they must, he said, accept the condemnation of the five propositions, and reject them, as did the pope; only, these propositions were not part of the body of the doctrine; of that the most skilled could not be found therein, it was in another sense than in the pontifical document; the idea of Janseni was the same as that of St. Augustine, which the Church neither could, nor wished to, censure. This interpretation was not tenable; it was contrary to the text of the Bull, so that less than to the minds of the resistance, which had preceded it, and throughout which these propositions were considered and presented as expressing the sense of the "Augustinus." In March, 1654, thirty-eight bishops rejected the interpretation, and communicated their decision to the sovereign pontiff, who thanked them, as 'a demonstration of the justice of the Church, and as nothing less in an attitude opposed alike to frankness and to logic. The occasion soon arrived for them to support this with a complete theory. The Due de Liancourt, one of the promoters of the party, was refused absolution until he should change his sentiments and accept purely and simply the condemnation of the "Augustinus." Arnauld took up his pen and in two successive letters protested against any such exaction. Ecclesiastical judgments, he said, are not all of equal value, and do not entail the same obligations; where there is question of the truth or falsity of a doctrine, a judges depending on his own conscience, the doctrine of St. Augustine itself, from the virtute of its Divine mission is qualified to decide; it is a matter of right; but if the doubt bears upon the presence of this doctrine in a book, it is a question of purely human fact, which as such does not fall under the jurisdiction of the supernatural teaching authority instituted in the Church by Jesus Christ. In the former case, the Church having pronounced sentence, we have no choice but to conform our belief to its decision; in the latter, its word should not be openly contradicted, it claims from us the homage of a respectful silence, but not that of an interior assent. Such is the famous argument, which Arnauld defends against criticism. The doctrine of the Reformed Church is the right and fact, which was not to be the basis of their resistance, although which the recalcitrants pretended to remain Catholics, united to the visible body of Christ despite all their obstinacy. This distinction is both logically and historically the denial of the doctrinal power of the Church. For how is it possible to teach and defend revealed doctrine in if its affirmation or denial cannot be disavowed in a book or a writing, whatever its form or its extent? In fact, from the beginning, councils and popes have approved and imposed as orthodox certain formulas and certain works, and from the beginning have proscribed others as being tainted with heresy or error.

The expedient contrived by Arnauld was so opposed to both fact and reason that a number of Jan-
It would be a mistake to believe that this direct intervention of the pope, sustained as it was by Louis XIV, completely ended the stubborn opposition. The religious, like the Jansenists under whose privilege of being acknowledged by the Court to have been condemned by the Council of Trent, had resented others or deceived themselves. All of them, moreover, through personal intercourse, preaching, or writing, displayed extraordinary activity in behalf of their ideas. They aimed especially, following the tactics inaugurated by St. Cyran, at introducing them into religious orders, and in this way they were in a measure successful, e.g., with the Oratory of the Good Jesus, and the Congregation Against the Jesuits, in whom from the first they had encountered capable and determined adversaries, they had vouched a profound antipathy and waged a war to the death. This inspired the "Provinciales" which appeared in 1656. These were letters supposedly addressed to a provincial correspondent. Their author, B. S. Pascal, abusing his admirable genius, therein lavished the resources of a captivating style and an inexhaustible sarcastic humour to taunt and decry the Society of Jesus, as favouring and propagating a relaxed and corrupt moral code. To this end the errors of the Catechism of the Council of Trent, as well as the malicious exaggerations, were made to appear as the official doctrine of the whole order. The "Provinciales" were translated into elegant Latin by Nicole, dismissed for the occasion under the pseudonym of Wilhelmus Wendroochus. They did a great deal of harm. But the pope, listening to the Strozzi, against the faction, had, by 138 votes against 68, condemned the latest writings of Arnauld, and, on his refusal to submit, it dismissed him, together with sixty other doctors who made common cause with him. The assembly of bishops in 1656 branded as heretical the unfortunate theory of right and of fact, and reported its decision to Alexander VII, who had just succeeded Innocent X. On 16 October the pope replied to this communication by the Bull "Ad sanctam Beatam Petri sedem". He praised the clear-sighted firmness of the episcopate and confirmed in the following terms the condemnation pronounced by his predecessor: "We declare and define that the five propositions have been drawn from the book of Jansenius entitled 'Augustinus', and that they have been condemned in the sense of the same Jansenius, and we once more condemn them as such." Relying on the profound respect and esteem with which the following year (1657) drew up a formula of faith conformable thereto and made subscription to it obligatory. The Jansenists would not give in. They claimed that no one could exact a lying signature from those who were not convinced of the truth of the matter. The religious of Port-Royal were especially conspicuous for their obstinacy, and the Archbishop of Paris, after several fruitless admonitions, was forced to debar them from receiving the sacraments. Four bishops openly allied themselves with the rebellious party: they were Henri Arnauld of Angers, Buzenval de Beauvais, Caulet of Parniers, and Pavillon de Ath. Some claimed besides that the Roman pontiff alone had the right to exact such subscription. In order to silence them, Alexander VII, at the instance of several members of the episcopate, issued (16 February, 1657) a new Constitution, beginning with the words, "Regimini Apostolici". In this he enjoined, with threat of canonical penalties for disobedience, that all ecclesiastics, as well as all religious, men and women, should subscribe to the following very denounce formulary: "I, N——, submitting to the Apostolic constitutions of the sovereign pontiff, in consequence, therefore, of the fourth, fifth, and sixth, and 16 October, 1656, sincerely repudiates the five propositions extracted from the book of Jansenius entitled 'Augustinus', and I condemn them upon oath in the very sense expressed by that author, as the Apostolic See has condemned them by the two above-mentioned Constitutions" (Enchiridion, 1658).

VII. 19
convened their synods, but, as later became known, all four gave oral explanations authorizing respectful silence on the question of fact, and it would seem that they acted thus with some connivance on the part of the mediators, unknown, however, to the nuncio and perhaps to d’Estrées. But this did not prevent them from affirming, in a common address to the sovereign pontiff, that they themselves and their priests had signed the formulary, as had been done in the other dioceses of France.

D’Estrées for his part wrote at the same time: “The four bishops have just conformed, by a new and sincere subscription, with the other bishops.” Both letters were sent by the nuncio to Rome, where Lyonne, also alleging that the signatures were absolutely regular, insisted that the affair should be brought to an end. For this reason the pope, who had received these documents 24 September, informed Louis XIV of the fact about 28 September, expressing his joy for the “subscription pure and simple” which had been obtained, announcing his intention to restore the bishops in question to favor and requesting the king to do the same. However, before the Briefs of reconciliation thus announced had been sent to each of the four prelates concerned, rumors which had at first been dismissed by the cardinals, and afterward with regard to their lack of sincerity, grew more definite, and took the shape of formal and repeated denunciations. Hence, by order of Clement IX, Bargellini had to make a new investigation at Paris. As the final result he sent to Rome a report drawn up by Violar. This report stated with regard to the four bishops: “They have condemned and caused to be condemned the five propositions with all manner of sincerity, without any exception or restriction whatsoever, in every sense in which the Church has condemned them”; but he then added explanations concerning the question of fact which were not altogether similar. The pope, not more perplexed than before, appointed a commission of twelve cardinals to obtain information. These secured, it seems, the proof of the language made use of by the bishops in their synods. Nevertheless, in consideration of the very grave difficulties which would result from opening up the whole case again, the majority of the commission held that they might and should abide practically by the testimony of the official documents and especially by that of the minister Lyonne regarding the reality of the “subscription pure and simple”, at the same time emphasizing anew this point as the essential basis and the condition sine qua non of peace.

The four Briefs of reconciliation were then drawn up and dispatched; they bear the date, 19 January, 1669. In them Clement IX recalls the testimony he had received “concerning the real and complete obedience with which they had sincerely subscribed to the formulary, condemning the five propositions without any exception or restriction, according to all the senses in which they had been condemned by the Holy See.” He remarks further that being “most firmly resolved to uphold the constitutions of his predecessors, he would not admit any violation of the principle of the restriction or exception”. These preambles were as explicit and formal as possible. They prove, especially when compared with the terms and object of the formulary of Alexander VII, how far wrong the Jansenists were in celebrating this termination of the affair as the triumph of their formula of 1662, and in conceiving themselves of the distinction between right and fact. On the other hand it is clear from the whole course of the negotiations that the loyalty of these champions of a stainless and unfaltering moral code was more than doubtful. At all events, the sect profited by the muddle which was called to extend it, and to press it still further and to get a stronger hold on several religious congregations. It was favoured by various circumstances. Among them must be included the growing infatuation in France for the so-called Gallican Liberties, and in consequence a certain attitude of defiance, or at least indolence, towards the supreme authority; then the Declaration of 1682, and finally the unfortunate affair of the Régale. It is worthy of remark that in this last conflict it was two Jansenist bishops of the deepest dye who had drawn up the formula, which upheld the rights of the Church and the Holy See, while the greater number of the others too readily bowed before the arrogant pretensions of the civil power.

V. JANSENISM AT THE BEGINNING OF THE EIGHTEENTH CENTURY.—Despite the silence and equivocation which it allowed to continue, the “Peace of Clement IX” found a certain justification for its name in the period of relative calm which followed it, and which lasted until the end of the seventeenth century. Many minds were tired of the incessant strife, and this very weariness favoured the cessation of polemics. Moreover the Catholic world and the Holy See were at that time preoccupied with a multitude of grave questions, and through force of circumstances Jansenism was relegated to second place. Mention has already been made of the signs of a recrudescence of Gallicanism betrayed in the Four Articles of 1670 and the failures of which the Régale was the subject. To this period also belongs the sharp conflict regarding the franchises, or droit d’asile (right of asylum), the odious privilege concerning which Louis XIV showed an obstinacy and arrogance which passed all bounds (1687). Moreover, the Quietist doctrines spread by de Molinos, and which seduced for a brief period even the pious and learned Fénelon as well as the relaxed opinions of certain moralists, furnished matter for many condemnations on the part of Innocent XI, Alexander VIII, and Innocent XII (see Quietism). Finally, another impassioned debate has drawn into the controversy several groups of the most distinguished and best intentioned theologians, and which was only definitively closed by Benedict XIV, namely the controversy concerning the Chinese and Malabar Rites. All these combined causes had for a time distracted public attention from the contents and the partisans of the “Augustinus”. Besides, “Jansenism” was beginning to serve as a label for rather divergent tendencies, not all of which deserved equal reprobation. The out-and-out Jansenists, those who persisted in spite of everything in upholding the principle of necessitating grace, were the true leaders of the five propositions, had almost disappeared with Pascal. The remainder of the really Jansenist party, without committing itself to a submission pure and simple, assumed a far more cautious demeanour. The members rejected the expression “necessitating grace”, substituting for it that of a grace efficacious “in itself”, seeking thus to identify themselves with the Thomists and the Augustinians.

Abandoning the plainly heretical sense of the five propositions, and repudiating any intention to resist legitimate authority, they confined themselves to denying the infallibility of the Church, toifying on dogmatic facts. Then, too, they were still the fanatic presachers of a discouraging rigorism, which they adorned with the names of virtue and austerity, and, under pretext of combating abuses, openly antagonised the incontestable characteristics of Catholicism, especially its unity of government, the traditional comity of nations and the international character which heart and feeling play in its worship. With all their skilful extenuations they bore the mark of the levelling, innovating, and arid spirit of Calvinism. These were the Jansenists. They formed therefore the bulk of the sect, or rather in them the sect properly so-called was called to extend itself, side by side with them, though side by side with them, and bordering on their tendencies and beliefs, history points out two other well-defined groups known as the “duped Jansenists”
and the “quasi-Jansenists”. The first were in good faith pretty much what the *sine Jesu Christo* were by system and tactics; they appear to us as convinced adversaries of necessitating grace, but no less sincere defenders of efficacious grace; rigorists in moral and sacramental questions; often opposed, like the Parlementarians, to the rights of the Holy See; generally favourable to the novices of the... In matters of worship and discipline. The second category is that of men of Jansenist tinge. While remaining within bounds in theological opinions, they declared themselves against really relaxed morality, against exaggerated popular devotions and other similar abuses. They were greater zealots of the Roman Catholic faith, but their zeal, agreeing with that of the Jansenists on so many points, took on, so to speak, an outer colouring of Jansenism, and they were drawn into closer sympathy with the party in proportion to the confidence with which it inspired them. Even more than the “duper” Jansenists they were extremely useful in screening the sectarians and in securing for them, on the part of the pastors and the multitude of the faithful, the benefit either of silence or of a certain leniency.

But the error remained too active in the hearts of the Jansenists, to be cured by such means for a very long time. At the beginning of the eighteenth century it manifested itself by a double occurrence which revived all the strife and trouble. The discussion began afresh with regard to the "case of conscience" of 1701. A provincial conference was supposed to inquire whether absolution might be given to a cleric who declared that he held on certain points the sentiments "of those called Jansenists", especially that of respectful silence on the question of fact. Forty doctors of the Sorbonne, among them some of great renown, such as Natalis Alexander, decided affirmatively. The provincial council condemned Catholics, and the "case of conscience" was condemned by Clement XI (1703), by Cardinal de Noailles, Archbishop of Paris, by a large number of bishops, and finally by the faculties of theology of Louvain, Douai, and Paris. The last-named, however, as its slowness would indicate, did not arrive at this decision without difficulty. As for the doctors assigned, they were terrified by the storm they had let loose, and either retracted or explained their action as best they might, with the exception of the author of the whole movement, Dr. Petitpied, whose name was erased from the list of the faculty. But the Jansenists, thanks to the support of the pope, at the same time did not yield. For this reason Clement XI, at the request of the Kings of France and Spain, issued 16 July, 1703, the Bull "Vineam Domini Salvaoth" (Enchiridion, 1350) in which he formally declared that respectful silence was insufficient for the obedience due to the constitutions of his predecessors. This Bull, received with submission by the assembly of the clergy of 1705, in which only the Bishop of Saint-Pons obstinately refused to agree with the opinion of his colleagues, was afterwards promulgated as a law of the State. It may be said to have officially terminated that period of half a century of agitation occasioned by the signing of the formulary. It also terminated the existence of Port-Royal des Champs, which up to that time had remained a notorious centre and hotbed of rebellion.

When it was proposed to the religious that they should sign the Bull, they would consent only with this clause: "that it was without derogating from what had taken place in regard to them at the time of the peace of the Church under Clement XI". This restriction brought up again their entire past, as was clearly shown by their explanation of it, and therefore led to no result. Cardinal de Noailles urged them in vain; he forbade them the sacraments, and two of the religious died without receiving them, unless they were secretly from a disqualified priest. As all measures had failed, it was high time to put an end to this scandalous resistance. A Bull suppressed the title of the Abbey of Port-Royal des Champs, and reunited that house and its holdings to the Paris house. The Court gave peremptory orders for a prompt execution, and, despite all the means of delay contrived at the last moment, nothing wavered. The pontifical sentence had its full effect. The surviving choir religious were scattered among the convents of the neighbouring dioceses (29 October, 1708). This separation had the desired good results. All the rebellious nuns ended by submitting, save one, who died at the Convent of Blois without the sacraments, in 1716. The Government wishing to eradicate even the trace of this nest of errors, as Clement XI called it, destroyed all the buildings and removed elsewhere the bodies buried in the cemetery.

During the disputes concerning the "case of conscience", a new book came cautiously on the scene, another "Augustinus", pregnant with storms and tempeste, as violent as the first. The author was Paschase Quesnel (q.v.), at first a member of the French Oratory, but expelled from that congregation for his Jansenistic opinions (1684), and since 1689 a residence at Brussels where the head of whom he succeeded in 1696 as leader of the party. The work had been published in part as early as 1671 in a 12mo volume entitled "Abrégé de la morale de l'Evangéliste, ou pensées chrétiennes sur le texte des quatre évangelistes". It appeared with the hearty approbation of Vialar, Bishop of Chalon, and, thanks to a style at once attractive and full of jargon which seemed in general to reflect a solid and sincere piety, it soon met with great success. But in the later development of his first work, Quesnel had extended it to the whole of the New Testament. He issued it in 1705, 1706, 1713, in an edition entitled "Four large volumes entitled, "Nouveau testament en françois, avec des réflexions morales sur chaque verset". This edition, besides the earlier approbation of Vialar which it inopportune bore, was formally approved and heartily recommended by his successor, de Noailles, who, as subsequent events showed, acted imprudently in the matter and without any secure foundation as to the contents of the book. The "Réflexions morales" of Quesnel reproduced, in fact, the theories of the irresistible efficaciousness of grace and the limitations of God's will with regard to the salvation of men. Hence they soon carried forth the sharpest criticism. And indeed this was the case at the time of the last of the Jesuits, the guardians of the Faith. The Bishops of Apt (1703), Gap (1704), Nevers, and Besançon (1707) condemned them, and, after a report from the Inquisition, Clement XI proscribed them by the Brief "Universi dominici" (1708) as "containing the propositions already condemned and as manifestly savouring of the Jansenist heresy". Two years later (1710) the Bishops of Luçon and La Rochelle forbade the reading of the book.

Their ordinance, posted in the capital, gave rise to a conflict with Noailles, who, having become cardinal and Archbishop of Paris, found himself under the necessity of withdrawing the approbation he had formerly given at Châlons. However, as he hesitated, less through attachment to error than through self-love, to take this step, Louis XIV asked the pope to issue a solemn constitution and put an end to the trouble. Clement XI then ordered a new and very minute examination, and in the Bull "Unigenitus" (8 September, 1713) he condemned 101 propositions which had been taken from the book (Enchiridion, 1351 sq.). Among these were some propositions which, in themselves and apart from the context, seemed to be on a orthodox footing, and with him eight other bishops, though they did not refuse to prosebe the book, seized this pretext to
ask explanations from Rome before accepting the Bull. This was the beginning of lengthy discussions, the greatest of which was the death of Louis XIV (1715), who was succeeded in power by Philippe d'Orléans. The regent took a much less decided stand than his predecessor, and the change soon had its effect on various centres, especially on the Sorbonne, where the sectaries had succeeded in winning over the majority. The faculties of Paris, Reims, and Nantes, who had received the Bull, revoked their previous acceptance. Four bishops went even farther, having recourse to an expedient of which only heretics or declared schismatics had hitherto been thought to have recourse to. They were: the Bull "Unigenitus" to a general council (1717). Their example was followed by some of their colleagues, by hundreds of clerics and religious, by the Parlements and the magistracy of the state. All these, for a long time undecisive and always inconsistent, ended by appealing also, but "from the pope obediently to the pope better informed and to a general council."

Clement XI, however, in the Bull "Pastoralis officii" (1718), condemned the appeal and excommunicated the appellants. But this did not disarm the opposition, which, involved Bull as the first; Naillol himself published a new appeal, no longer chiefly to the pope "better informed", but to a council, and the Parlement of Paris, suppressed the Bull "Pastoralis". The multiplicity of these defections and the arrogant clamour of the appellants might give the impression that they constituted, if not a majority, at least a very imposing minority. Such, however, was not the case, and the chief evidence of this lies in the well-established fact that enormous sums were devoted to paying for these appeals. After allowing for these shameful and suggestive purchases, we have still to account for the Bull as a whole. The return of Naillol, who was about eighteen bishops, and three thousand clerics. But without leaving France, we find opposed to them four cardinals, a hundred bishops, and a hundred thousand clerics, that is, the moral unanimity of the French clergy. What is to be said, then, when the important protagonists is compared to the whole of the Churches of England, the Low Countries, Germany, Hungary, Italy, Naples, Savoy, Portugal, Spain, etc., which, on being requested to pronounce, did so by proscribing the appeal as an act of schism and foolish revolt? The polemics, however, continued for about six months. The return the Naillol, who published without restriction in 1726, six months before his death, was a telling blow to the party of Quesnel. Henceforth it steadily grew less, so that not even the scenes that took place at the cemetery of Saint-Médard, of which mention is made below, restored it. But the Parlements, eager to declare themselves and to apply their principles, continued for a long time to refuse to receive the Bull "Unigenitus". They even made it the occasion to meddle in scandalous fashion in the administration of the sacraments, and to persecute bishops and priests accused of refusing ordination to those who would not submit to the Holy See.

VI. THE CONVOLUSIONAIREs.—We have reviewed the long series of defensive measures contrived by the Jansenists: rejection of the five propositions without rejection of the "Augustinus"; explicit distinction between the question of right and the question of fact; restriction of themedium to the Bull and the "artifices". The tactics of respectful silence, and appeal to a general council. They had exhausted all the expedients of a theological and canonical discussion more obstinate than sincere. Not a single one of these had availed them anything at the bar of right reason or of legitimate authority. They then thought to invoke in their behalf the direct testimony of God Himself, namely, miracles. One of their number, an apostle, a rigorist to the point of leaving once passed two years without coming to fragments; for, in the retired and penitent life, the déacon François de Paris, had died in 1727. They pretended that at his tomb in the little cemetery of Saint-Médard marvellous cures took place. A case alleged as such was examined by de Vintimille, Archbishop of Paris, who with proofs in hand declared it false and suppositions (1731). But other cures were claimed by the party, and so noise abroad that soon the sick and the curious flocked to the cemetery. The sick experienced strange agitations, nervous commotions, either real or simulated. They fell into violent transports and insisted that they had beheld the déacon and the convulsionaries of Cévennes had denounced the papacy and the Mass. In the excited crowd women were especially noticeable, screaming, yelling, throwing themselves about, sometimes assuming the most astounding and unseemly postures. To justify these extravagances, complacent admirers had recourse to the theory of "figuration". As in their eyes the fact of the general acceptance of the Bull "Unigenitus" was the apostasy predicted by the Apocalypse, so the ridiculous and revolting scenes enacted by their friends symbolized the state of upheaval which, according to them, an impending conflagration was about to convert thus to a fundamental thesis such as had been met with in Jansenius and St-Cyrano, and which these latter had borrowed from the Protestants. A journal, the "Nouvelles Ecclesiastiques", had been founded in 1729 to defend and propagate these ideas and practices, and the "Nouvelles" was profusely spread, thanks to the pecuniary resources furnished by the "Bolle à Perrette", the name given later to the capital or common fund of the sect begun by Nicole, and which grew so rapidly that it exceeded a million of money. It had hitherto served chiefly to defray the cost of ap-- it was the only ap-- the "Nouvelles" was profusely spread, thanks to the pecuniary resources furnished by the "Bolle à Perrette", the name given later to the capital or common fund of the sect begun by Nicole, and which grew so rapidly that it exceeded a million of money. It had hitherto served chiefly to defray the cost of ap--
distinctions and divisions, we may ask how we are to judge what took place at the cemetery of Saint-Médard and the matters connected therewith. Whatever may have been said on the subject, there was absolutely no trace of the Divisio of the Church, in which it was needless to recall St. Augustine's principles that all prodigies accomplished outside the Church, especially those against the Church, are by the very fact more than suspicious: "Præter unitatem, et qui facit miracula nihil est". Two things only call for remark. Several of the so-called miraculous cures were made the subject of a judicial investigation, and it was proved that they were based only on testimonies which were either false, interested, preconceived, and more than once retracted, or at least valueless, the echoes of diseased and fanatic imaginations. Moreover, the convulsions and the secessions certainly took place under circumstances which mere good taste would reject as unworthy of Divine wisdom and holiness. Not only were the cures, both acknowledged and claimed, supplementary of one another, but cures, convulsions, and secessions belonged to the same order of facts and tended to the same concrete end. We are therefore constrained in confessing that God did not appear in the whole or in any of its parts. On the other hand, although fraud was discovered in several cases, it is impossible to ascribe them all indiscriminately to trickery or ignorant simplicity. Critically speaking, the authenticity of some extraordinary phenomena and events is beyond question, but the place publicly and in the presence of reliable witnesses, particularly anti-sectarian Jansenists. The question remains whether all these prodigies are explicable by natural causes, or whether the direct action of the Devil is to be recognized in some of them. Each of these opinions has its adherents, and the former seems difficult to uphold despite, and in part perhaps because of, the light which recent experiments in suggestion, hypnotism, and spiritism have thrown on the problem. However this may be, one thing is certain; the things here related served only to discredit the cause of the party which exploited them. Jansenists themselves came at length to feel ashamed of such practices. The excesses connected with them more than once forced the civil authorities to intervene at least in a mild way; but this creation of fanaticism succumbed to ridicule and died by its own hand.

V. IN HOLAND AND THE SCHISM OF Utrecht.—Injurious as Jansenism was to religion and the Church in France, it did not there lead to schism properly so called. The same does not hold good of the Dutch Low Countries, which the most important or most deeply implicated of the sectaries had long made their meeting place, finding there welcome and safety. Since the United Provinces had for the most part gone over to Protestantism, Catholics had lived there under the direction of vicars Apostolic. Unhappily these representatives of the pope were soon won over to the doctrines and intrigues of which the "Augustinians" were the origin, and the Jansenist Néercassel, titular Archbishop of Castoria, who governed the whole church in the Netherlands from 1663 to 1686, made no secret of his intimacy with the party. Under him the country began to become the refuge of all whose obstinacy forced them to leave France and Belgium. Thither came such men as Antoine Arnauld, du Vaucel, Gerberon, Quesnel, Nicole, Petitpied, as well as a number of priests, monks, and nuns who preferred exile to the acceptance of the pontifical Bulls. A large number of these deserters belonged to the Congregation of the Oratory, but other orders shared with it this unfortunate distinction. When the French revolution was at its height, the Carthusians of the Paris house escaped from their cloister during the night and fled to Holland. Fifteen Benedictines of the Abbey of Orval, in the Diocese of Trier, gave the same scandal. Peter Codde, who succeeded Néercassel in 1686, and who bore the title of Archbishop of Sebaste, went further than his predecessor. He refused to sign the formulary and, when summoned to Rome, defended himself so poorly that he was first disposed to expel him from the jurisdiction, and then deposed by a decree of 1704. He died still an inhabitant of 1710. He had been replaced by Gerard Potkamp, but this appointment and those that followed were rejected by a section of the clergy, to whom the States-General lent their support. The conflict lasted a long time, during which the episcopal elections were not held. In 1723, the Chapter of Utrecht, i.e., a group of seven or eight priests who assumed this name and quality in order to put an end to a precarious and painful situation, elected, on its own authority, as archbishop of the same city, one of its members, Cornelius Steenhoven, who then held the office of vicar-general. This election was not canonical, and was not approved by the pope. Steenhoven nevertheless had the audacity to get himself consecrated by Varlet, a former missionary bishop and coadjutor Bishop of Babylon, who was at that time suspended, interdicted, and excommunicated. He was consumed by this schism and died in 1725. Those who had elected him transferred their support to Barchman Wuitiers, who had recourse to the same consecrator. The unhappy Varlet lived long enough to administer the episcopal unction to two successors of Barchman, van, as the Opposition was called, in public and in the presence of reliable witnesses, particularly anti-sectarian Jansenists. The question remains whether all these prodigies are explicable by natural causes, or whether the direct action of the Devil is to be recognized in some of them. Each of these opinions has its adherents, and the former seems difficult to uphold despite, and in part perhaps because of, the light which recent experiments in suggestion, hypnotism, and spiritism have thrown on the problem. However this may be, one thing is certain; the things here related served only to discredit the cause of the party which exploited them. Jansenists themselves came at length to feel ashamed of such practices. The excesses connected with them more than once forced the civil authorities to intervene at least in a mild way; but this creation of fanaticism succumbed to ridicule and died by its own hand.

VI. THE DECISION AND END OF Jansenism.—During the second half of the eighteenth century the influence of Jansenism was prolonged by taking on various forms and ramifications, and extending to countries other than those in which we have hitherto followed it. In France the Parlements continued to pronounce judgments, to inflict fines and confiscations, to suppress episcopal ordinances, and even to address remonstrances to the king in defence of the pretended right of the episcopate to abominate and even to depose the last sacraments. In 1756 they rejected a very moderate decree of Benedict XIV regulating the matter. A royal declaration confirming the Roman decision did not find favour in their eyes, and it required all the remaining strength of the monarchy to compel them to register it. The sectaries seemed by degrees to detach themselves from the primitive Jansenism, but they retained unabated the spirit of insubordination and schism, the spirit of opposition to Rome, and above all a mortal hatred of the Jesuits. They had vowed the ruination of that order, which they always found blocking their way, and in order to attain their end they succeeded, among the Catholic princes of Europe, in increasing it to a certain extent. The ministers in Portugal, France, Spain, Naples, the Kingdom of the Two Sicilies, the Duchy of Parma, and elsewhere to join hands with the worst leaders of impiety and philosophy. The same tendency was dis-
played in the work of Febronius, condemned (1764) by Clement XIII; and, instilled into Joseph II by his councillor Godfried van Swieten, a disciple of the revolting church of Utrecht, it became the principle of the emancipation of the free corps of monks, gathered together by the sacratian-emperor (see FEBRONIANISM). It raged in similar fashion in Tuscany under the government of the Grand Duke Leopold, brother of Joseph II; and found another manifestation in the famous Synod of Pistola (1780), the decrees of which, at once the quintessence of the principle of the heresy of Jansenism, were repulsed by the Bull of Pius VI, "Auctorem fidei" (1794). On French soil the remains of Jansenism were not completely extinguished by the French Revolution, but survived in some remarkable personalities, such as the constitutional Bishop Grégoire, and in two religious congregations, as the Sisters of St. Martha, who did not return in a body to Catholic truth and unity until 1847. But its spirit lived on, especially in the rigorism which for a long time dominated the practice of the administration of the sacraments and the teaching of moral theology. In a great number of French seminaries, Bailly's "Théologie", which was impressed with this rigorism, remained the standard textbook until Rome in 1852 put it on the Index "donee corrigatur". Among those who even prior to that had worked energetically against it, chiefly by offering in opposition the doctrine of Augustinus, two persons are deserving of special mention: Gouset, whose "Théologie morale" (1844) had been preceded by his "Justification de la théologie morale du bienheureux Alphonse-Marie Liguori" (2nd ed., 1832); Jean-Pierre Berman, professor at the seminary of Nancy for twenty-five years (1828-1853), and author of a "Théologie moralis ex S. Ligorio" (7 vols., 1855).

Such is, in outline, the historical account of Jansenism, its origin, its phases, and its decline. It is evident that, besides its attachment to the "Augustinus" and its rigorism in morals, it is distinguished among heresies for crafty proceedings, chicanery and lack of frankness on the part of its adherents, especially their pretence of remaining Catholics without renouncing their errors, of staying in the Church despite the Church itself, by skillfully eluding or braving with impunity the decisions of the supreme authority. Such conduct is beyond doubt without a parallel in the annals of Christianity previous to the outbreak of Jansenism; in fact, it would be incredible if we did not in our own day find in certain groups of Modernists examples of this astonishing and absurd duplicity. The deplorable consequences, both theoretical and practical, of the Jansenist system, and of the policy which sprang therefrom, may readily be gathered from what has been said, and from the history of the last few centuries.

From the theological standpoint see the treatises De Deo Creator: also the treatises De Gratia, especially those of Tournel, Mazella, Palmieri, and Battoli. Among good handbooks are Foschi, Protectiones dogmaticae, III and V (Freiburg, 1885, 1887); Tangueray, Synopsis theologiae dogmaticae specialis, I and II (12th ed., Paris, 1908); especially St. Deuchamps, De haeresibus ianuenses ab Apostolico Sedere (Paris, 1854); and Paquier, la Jansenisme, étude doctrinale d'apres les sources (Paris, 1890). A helpful study is: Hartn, Histoire du Jansenisme depuis son origine jusqu'en 1844 (Paris, 1881); Mémoires du P. R. R. Rapin sur l'Eglise et la cour, la ville et le Jansenisme (4 vols., Paris, 1866); De Mar, Histoire des cinq propositions de Jansenius (3 vols., Liège, 1899); Luchtert, Histoire polémique de Jansenius (3 vols., Rome, 1711); Letranger, Histoire de la constitution Unigenitus (5 vols., Liège, 1879); Schulte, Die Constitution Unigenitus (Freiburg, 1876); van den Peerbroeck, Considerations Nécessaires pour Tyr espary, as mort, son testament, ses épiphanies, Brussels, 1882.

JANSSEN, JOHN. See BELLEVILLE, Diocese of.

JANSSENS, ABRAHAM, Flemish painter, b. at Antwerp about 1573; d. probably in the same place about 1631. He is also known as Janssens Van Nuyssens, and several of his pictures are signed with this name, which it is believed he adopted from his mother's family with the object of distinguishing himself from other members of the Janssens family, contemporary artists. He was a pupil of Jan Snellinck in 1585, according to some writers, but it is believed that this date is a little too early; he was greatly influenced by the seven-year-old Rubens, who was already recognized as one of the most promising of the young artists, and by the Latin poet and humanist Pieter Breughel the younger, the son of "Velvet" Breughel, and the second of his sons, named Abraham like his father, became a painter, and was admitted a member of the Guild of Painters in 1638.

A story was started by Houbraek who is to the effect that Janssens, a bitter opponent of Rubens, but Houbraek's work is the only authority for this legend, and the author appears to have had a spite against Janssens, and to have said everything that was possible to injure his character. Janssens was a contemporary of Rubens, and a man who appears to have been very much respected in Antwerp, spoken of in terms of friendship and affection by other artists, and recognized as a man of great genius, taking a high position in the very first rank. It seems to be most unlikely that Houbraek's story is a truthful one, especially as there is no evidence whatever in support of it. The beautiful scenes of pictures are to be seen at Antwerp, especially in the churches of the Carmelites and St. Charles, and in the cathedral, the painting of the "Entombment" in the Carmelite church being one of his very finest productions. There are three important paintings by him in the Antwerp Museum, two in the cathedral at Ghent, one in the cathedral at Bruges, a remarkable mythological scene representing Venus and Jupiter in Brunswick, and a fine picture of St. Cecilia at Cologne. Other galleries containing works by this important artist are those of Berlin, Brussels, Cassel, and Vienna. In at least two of his pictures he worked in collaboration with Snyders, the flowers and fruit in his picture of Pomona at Berlin, and the animals in his representation of Atlas and in the same gallery, having been painted by his friend. In splendour of colouring and in vigour of composition he was surpassing his contemporary in Antwerp as a man of profound talent and great skill. Many of his pictures were engraved.

HOUBRAEK, De Groote Schouwburg der Nederlantse (Amsterdam, 1718); KRAEMER, De Laeken, Le Jansenisme (Amsterdam, 1857); ROMBOUTS, Les Liaisons et autres Archives, etc. (Paris, 1864).

GEORGE CHARLES WILLIAMSON.

JANSSENS, JOHANN HERMANN, Catholic theologian, b. at Maseyck, Belgium, 7 Dec., 1783; d. at Engis, 23 May, 1853. After completing his theological studies in Rome he was appointed professor in the College of Fribourg, Switzerland, in 1800. While in this position, which he held until 1816, he composed his "Hermeneutica", which, however, was not published until 1818, after he had been appointed professor of Scripture and dogmatic theology in the ecclesiastical seminary of Liège. His teaching in this institution was taxed with heresy, and in 1838 he was removed and made pastor of Engis. Shortly afterward, and against the will of his ecclesiastical superiors, he accepted the chair of anthropology and metaphysics in the philosophical college of Louvain. He retained this position until the Revolution of 1830, when the college was suppressed. In 1835 he was returned to Engis, where he composed a history of the Netherlands (3 vols., Liège, 1840), written from the Protestant standpoint. Outside of Belgium he is chiefly known through his first publication, "Hermeneutica Sacra seu Introductio in omnes et singulos libros sacros Veteris et Novi Testamenti". A French translation of this work was published in 1820.
tion of this work, the original of which had reached its nineteenth edition in 1897, was published by Paeaud as early as 1828. A fifth edition of this translation, edited by Claire and Sionnet, was published in 1898.

James F. Driscoll

Januarius, Saint, Martyr, Bishop of Beneventum, is believed to have suffered in the persecution of Diocletian, 303 A.D. With regard to the history of his life and martyrdom, we know next to nothing. The various collections of "Acts", though numerous (cf. Bibliotheca Hagiographica Latina, n. 4115-4140), are all extremely late and untrustworthy. Bede (c. 733) in his "Martyrologium" has epitomized the so-called "Acta Bononiana" (see Quentin, "Les Martyrologes historiques", 76). To this source we may trace the following entry in the present Roman Martyrology, in a very strange way, as though it had but freshly been shed."

It is especially this miracle of the liquefaction which has given celebrity to the name of Januarius, and to this we turn our attention. Let it at once be said that the supposition of any trick or deception is always out of the question, as candid opponents are now willing to admit. For more than four hundred years this liquefaction has taken place at frequent intervals. If it were a trick it would be necessary to admit that all the archbishops of Naples, and that countless ecclesiastics eminent for their sanctity and for their great sanctity, were accomplices in the fraud, as also a number of secular officials; for the relic is so guarded that its exposition requires the concurrence of both civil and ecclesiastical authority. Further, in all these four hundred years, no one of the many who, upon the supposition of such a trick, must necessarily have been in the secret, has made any revelation or disclosed how the apparent miracle is worked. Strong indirect testimony to this truth is borne by the fact that even at the present time the rationalistic opponents of a supernatural explanation are entirely disinclined as to how the phenomenon is to be accounted for.

What actually takes place may be thus briefly described: in a silver reliquary, which in form and size somewhat suggests a small carriage lamp, two phials are enclosed. The lesser of these contains only traces of blood and need not concern us here. The larger, which is a little flagon-shaped flask four inches high and about two and a quarter inches in diameter, is normally rather more than half full of a dark and solid mass, absolutely opaque when held up to the light, and showing no displacement when the reliquary is turned upside down. Both flasks seem to be so fixed in the lantern cavity of the reliquary by means of some hard gummy substance that they are hermetically sealed. Moreover, owing to the fact that the dark mass in the flask is protected by two thicknesses of glass it is presumably but little affected by the temperature of the surrounding air. Eighteen times in each year, i.e. (1) on the Saturday before the first Sunday in May and the eight following days, (2) on the feast of St. Januarius (19 Sept.) and during the octave, and (3) on 16 Dec., a silver bust believed to contain the head of St. Januarius is exposed upon the altar, and the reliquary just described is brought out and held by the officiant in view of the assembly. Prayers are said by the people, begging that the miracle may take place, while a group of poor women, known as the "zie di San Gennaro" (aunts of St. Januarius), make themselves specially conspicuous by the fervour, and sometimes, when the miracle is delayed, by the extravagance, of their supplications.

In 1859, an officiant usually holds the phials in his extremities, without touching the glass, and from time to time turns it upside down to note whether any movement is perceptible in the dark mass enclosed in the phial. After an interval of varying duration,
usually not less than two minutes or more than an hour, the mass is gradually seen to detach itself from the sides of the phial, to become liquid and of a more or less milky appearance, e.g., a mixture of the phosphates to froth and bubble up, increasing in volume. The officiant then announces, "Il miracolo è fatto", and the reliquary containing the liquefied blood is brought to the altar rail that the faithful may venerate it by kissing the containing vessel. Rarely has the liquefaction failed to take place in the expositions of May or September, but by the end of 16 Dec. the mass remains solid more frequently than not.

It is of course natural that those who are reluctant to admit the supernatural character of the phenomenon should regard the liquefaction as simply due to the effects of heat. There are, they urge, certain substances, e.g., a mixture of the phosphates, at which have a very low boiling point. The heat produced by the hands of the officiant, the pressing of the sunbeams, of the lights on the altar, and in particular the candle formerly held close to the reliquary to enable the people to see that the mass is opaque, combine to raise the temperature of the air sufficiently to melt the substance in the phial—a substance which is assumed to be blood, but which no one has ever analysed. Further, ever since the early years of the eighteenth century, sceptical scientists, by using certain chemical preparations, have reconstructed the phials which were destroyed. What is to say, they have been able to exhibit some red substance which, though at first apparently solid, melted after an interval without any direct application of heat. None the less, it may be said with absolute confidence that the theory of heat affords no adequate explanation of the phenomena observed.

For more than a century careful observations of the temperature of the air in the neighbourhood of the relic have been made on these occasions and the records have been kept. It is certain from the scientific memoirs of Professors Fergola, Punzo, and Spezio and that there is no direct relation between the temperature, and the time and manner of the liquefaction. Often when the thermometer has stood at 77°Fahrenheit or even higher, liquefaction has been delayed for so much as twenty or even forty minutes, while on the other hand the contents of the phial have sometimes liquefied in considerably less time than when the temperature remained at 60°Fahrenheit or 55°F. Moreover, the heat theory by no means accounts for another remarkable fact observed for quite two hundred years past. The mass in melting commonly increases in volume, but when it solidifies again it does not necessarily return to its original bulk. In some cases the volume of the phial increased by repeated movements, such as those that the reliquary experiences when the moment of liquefaction is impatiently waited for. Further, such a viscous fluid easily cakes upon the walls of the containing vessel, and admits large air bubbles which cause the deceptive appearance of a change of volume.

Professor Albini claims to have reproduced all the phenomena with a compound made of powdered chocolate and the serum of milk. On the other hand, those who have studied closely the process of liquefaction of the contents of the phial declare that such an explanation is absolutely impossible. Moreover, there seem to be well-attested instances of liquefaction taking place both in the case of this and other similar relics of blood which have been standing by itself without any movement whatsoever.

Accordingly, the suggestion has also been made (see Di Pace, "Ipotesi scientifica sulla Liquefazione", etc., Naples, 1905) that the phenomenon is due to some form of psychic force. The concentration of thought and will of the expectant crowd and the invocation of the "aunts of St. Januarius" are held to be capable of producing a physical effect. Against this, however, must be set the fact that the liquefaction has sometimes taken place quite unexpectedly and in the presence of very few spectators.

Probably the most serious difficulty against the miraculous character of the phenomenon is derived from the circumstance that the same liquefaction takes place in the case of other relics, nearly all preserved in the neighbourhood of Naples, or of Neapolitan origin. These include relics which are affirmed to be the blood of St. John the Baptist, St. Stephen the martyr, of St. Pantaleon, of St. Patrius, of St. Nicholas of Tolentino, of St. Aloysius Gonzaga, and others. In the case of the alleged liquefaction of the so-called "Milk of Our Lady" (see Putignani, S.J., "De Redivivo Sanguine S. Januarii", Naples, 1723, I, 90) or of the fat of St. Thomas Aquinas (see Macintosh, Valiently, reprinted in 1884), it is to say, they have probably a purely fiction, but the phials traditionally associated with the names of St. John the Baptist, St. Stephen, and St. Pantaleon undoubtedly still exhibit on the respective feast days of these saints phenomena exactly analogous to those shown in the case of the more famous relic of St. Januarius. Further, it is asserted by eyewitnesses of scientific credit and high respectability that a block of basil at Pozzuoli, reputed to bear traces of the blood of St. Januarius, grows vividly red for a short time in May and September at the hour when the miracle of the liquefaction takes place in Naples (see Cavena, "Le Chêbre Miracle de S. Janvier", 1909, 277–300).

Three other points attested by recent investigators seem worthy of special note. (1) It now appears that the first certain record of the liquefaction of the blood of St. Januarius dates from 1389 (see de Blaisis, "Chromatographe in Inconnus", Naples, 1887, 85), and not from 1456 as formerly supposed.

(2) In 1902 Professor Sperindeo was allowed to pass a ray of light through the upper part of the phial during liquefaction and examine this beam spectroscopically. The experiment yielded the distinctive lines of the spectrum of blood. This, however, only indicates that there are no detectable traces of blood in the contents of the phial (see Cavena, "Le Chêbre Miracle", 262–275).

(3) Most remarkable of all, the apparent variation in the volume of the relic led in 1902 and 1904 to a series of experiments in the course of which the whole reliquary was weighed in a very accurate balance. It was found that the weight was not constant any more than the volume, and that the weight of the reliquary when the blood filled the whole cavity of the phial exceeded, by 26 grammes, the weight when the phial seemed but half full. This very large difference renders it impossible to believe that such a substantial variation in weight can be merely due to an error of observation. We are forced to accept the fact that, contrary to all known laws, a change goes on in the contents of this hermetically sealed vessel which makes them heavier and lighter in a ratio roughly, but not exactly, proportional to their apparent bulk (Cavena, 333–39). The reality of the miracle of St. Januarius has repeatedly been made the subject of controversy. It has had much to do with many conversions to Catholicism, notably with that of the elder Herder. Unfortunately, however, allegations
ST. JANUARIUS

SILVER DUST, CAPPella DEL TESoro, NAPLES
JAPAN

have often been made as to the favourable verdict expressed by scientific men of note, which are not always verifiable. The supposed testimony of the great chemist, Sir Humphry Davy, who is declared to have seen this belief in the genuineness of the miracle, seems to be a case in point.

Though in many respects uncritical, the best account of the miracle of St. Januarius is that given by Cavend, Le Chérub Miroirs de S. Janvier (Paris, 1600). From the historical side, fuller details may be found in Toccalattela, Memoria Storico-critica dell' Invenzione della S. Sangue di S. Gennaro (Naples, 1812); among recent works may be mentioned: Januario, Il Sangue di S. Gennaro (Naples, 1802); two articles by Silva and Sper- rendi, La Sangue di S. Gennaro: detta Statua e Later, per il centenario della morte del 1805; also Sperrendi, Il Miroirolo di S. Gennaro (3rd ed., Naples, 1808); Thurston, The Tablet, 22 and 24, 1805, 1806. A correspondence by a connoisseur was published in a French journal.

Earlier dates are Fucino, La Toca di S. Gennaro (Naples, 1808); Idee, Indagini ed osservazioni sulla Toca (Naples, 1808); Alberini, Dieuboni della Accademia delle Scienze fariche e matematiche (Naples, 1804), series II, vol. IV (1804), 24-27; Acta SS., 11 Sept. There is also an excellent article by Lexog in Miere, Dictionnaire des Pétrophiles et des Miroirs (1889), 1004-1014. The older books, such as those of Foggiana, Tottini, Falcone, etc., are too numerous to mention. The first books in English are: The Miroirolo of S. Gennaro (3rd ed., Naples, 1808); Thurston in The Tablet, 22 and 24, 1805, 1806. A correspondence by a connoisseur was published in a French journal.

The straits separating the principal islands are the Strait of Soya or La Pérouse between Hokkaido and the Sakhalin Islands, the Strait of Tsugaru between the Great Island Honshu and Hokkaido, and the Strait of Shimonoseki between the southernmost island of Shikoku and the islands of Kagoshima, Yatsushiro, Amagusa, Shimabara, etc.

Lakes.—The largest is Lake Biwa, which is about 180 miles in circumference, 364 miles long, and 124 miles wide. According to tradition Lake Biwa was formed by an earthquake in 286 B.C. Renowned for the beauty of its scenery, its praises have often been sung by the poets. After Lake Biwa the best known are Lake Suwa in Shinano, Lake Hakone, on the summit of the mountain of the same name, Lake Chuzenji in Shimotakai, west of Nikko, 154 miles in circumference, 4757 feet above sea-level. The cascade of Kegon, one of the most beautiful and renowned of Japan, is on this lake.

Rivers.—The slopes of the mountains being so close to the sea, the watercourses are not very long. They are for the most part only torrents, few of them capable of carrying boats, but they are utilized for rafting timber, etc.

Mountains.—In Japan the mountains cover two-thirds of the surface of the soil. The country is traversed by two chains of mountains, one a part of Sakhalin Island, the other south of Formosa, and the southern part of China crossing Formosa. These two chains meet in the middle of the Great Island (Honshu), dividing it into two parts which present striking contrasts as much from the political as from the geographical point of view. The highest peaks are situated at the intersection of these two chains, about the thirty-fifth parallel, which has caused tourists to give them the name of the Japanese Alps. The highest are Niitaka in Formosa (12,850 feet), and Fuji (12,395 feet) in Honshu. This last mountain must have been formed by the same earthquake which hollowed out Lake Biwa (286 B.C.).

It is a volcano of composite type, 11,000 feet high, with its regular outline and its majestic beauty it has furnished an inexhaustible source of inspiration to Japanese artists, poets, etc.

Valleys.—Although very mountainous, the country is not devoid of valleys, the principal ones being those of Etchigo, Sendai, and Kwan, with Tokio and Yokohama, and a population of 6,000,000 souls, of Mino and Owari (1,150,000 souls), of Kina, with Kyoto, Osaka, and Kobe (2,600,000 souls), of Tsukushi in Kiusiu. The oil mines of this valley furnish 67% of the total production of the mines of Japan.

Volcanoes.—Three chains of volcanoes exist in Japan. The Kuriles, Fuji, and Kirishima contain 200 volcanoes, of which 100 are still active. The principal ones are Tarumai, Noboribetsu, Komagatake, Agatsuma, Bandai, Kusatsu, Kaimon, Sakurajima, Fuji, Kirishima, Asama, and Aso. This last, situated north-east of Higo, numbers five peaks, the highest of which reaches an altitude of nearly one mile. It is perhaps the largest volcano in the world, its craters having an extent of 15 miles from north to south, 10 miles from east to west. It was in eruption in 1884, 1889, and 1896.

Earthquakes.—Their number is proportionate to the number of volcanoes. From 1883 to 1897 there were 17,750, that is, 1365-per year, and nearly 31 per day. From 1596 to 1877 Japan was visited by 100 more or less disastrous earthquakes. According to minute researches made by a commission of scholars, the number of earthquakes and volcanic eruptions which have
caused more or less damage from the beginning of historical times to the present day must equal 2006. One of the most terrible was that of 1855 at Tokio, in which more than 100,000 persons perished and the greater part of the city was destroyed.

Mineral Springs.—A compensation for the damage caused by the volcanoes Japan has a large number of mineral springs. There are at least 100 which, because of ease of access and their medicinal qualities, are much frequented.

Chills, Typhoons.—During the cold season, which begins in October and ends in April, Japan is visited by the north and the west wind, the atmospheric pressure being lower on the Pacific Ocean than on the continent. The contrary is the case from May to October, because the wind then comes from the south and east. This difference of atmospheric pressure gives rise to numerous typhoons, which often cause great disasters. To mention only that of 1902, the number of persons killed equalled 3639, vessels lost 3244, houses destroyed or damaged 695,062. Total loss, 29,742,081 yen.

Rain, Snow.—Japan is one of the most rainy countries in the world. The average yearly rainfall is about 61 inches. The average number of rainy or snowy days per year is 150. There are 98 meteorological stations, where six observations are made daily, at two, six, and ten o'clock, morning and evening (13° E. of Greenwich time).

Imperial House.—Dynasty (Teishitsu).—The form of the Japanese Government is an hereditary and constitutional monarchy. A single dynasty has reigned in Japan since the foundation of the empire. The present emperor is the one hundred and twenty-second descendant of Jimmu Tenno, first emperor of Japan. His own name is Mutsuhito; he has no family name, since he is supposed to be descended directly from the race of the gods. Born 3 November, 1852, he succeeded his father Komei Tenno, 13 Feb., 1867, and was crowned 12 October, 1868. On 28 December of the same year he married the Princess Haruko, third daughter of Kuge Ichijo Tadaka, a noble of the first rank, b. 28 May, 1850. Yoshihito Haru no miya, son of the emperor, b. 31 August, 1879, was proclaimed heir apparent, 31 August, 1887. On 10 May, 1900, he married Sadako, fourth daughter of Duke Kuko, by whom he has had three sons.

Estate of the Imperial Family (Koazoku).—There are fourteen branches of the imperial family: Fushimi, Arisugawa, Kan-in, Higashi-Fushimi, Kwacho, Yamashina, Kaya, Kun, Nishimoto, Kita-Shirakawa, Komate, Takeda, Asaka, Higashi-Kuni. The first four families have the title of Shino (princes of the blood), and constitute the four branches from whom must be chosen the heir to the throne, if the emperor dies without issue. The others have the title of O (princes). The first, when they are of age, have by right a seat in the House of Peers. The others may only sit there by order of the emperor. These last may also succeed a nobleman or be adopted by him. All the branches of the imperial house are not equal. They may be neither arrested nor summoned before a court without the command of the emperor, nor marry without his permission, nor ally themselves with any save the family designated by him. If they commit an act unworthy of their rank, the emperor has the right to reduce them to the imperial house of dukes, or to deprive them of their imperial title of prince. If they are wasteful of their property, they may be interdicted and forced to submit to the appointment of an administrator of their property.

Estates of the Crown.—According to present data the Crown possesses 12,135 acres of built land, representing a value of 4,572,745 yen; 7,060 acres of forests valued at 123,809,642 yen; and 300,770 acres of divers territory estimated at 2,319,808 yen. Its bonds and stocks represent in gross a sum of 30,000,000 yen, while the amount of its treasure is unknown.

Crown Laws.—In the Constitution is inserted a collection of laws known as the Code of the Imperial House (Koishita Tempan), in twelve chapters, which govern the Crown. This code regulates the succession to the throne, and the coronation ceremonies, fixes the majority of the prince imperial, and the various members of the imperial family. It contains laws concerning the regency, the family council, the governor to be assigned to an emperor in his minority, the expenses of the court, possible disputes between members of the emperor's family, the disciplinary measures to be taken against persons who are charged with the collection of imposts (in the provinces), with the possessions of the Crown, etc. He had eight ministers under his jurisdiction. After the Restoration the Kunaisho was retained, but underwent two modifications, one in 1870, the other in 1889. To-day the Kunaisho is charged with the affairs of the emperor's household. A minister is at the head charged with the administration and all the employees of the ministry are under his immediate jurisdiction. He has control of the nobility, regulates the civil and religious ceremonies, distributes the favours, presents, or rewards granted by the emperor, notifies those interested of the decrees raising them to a dignity or an office, and is the executor of all the regulations of the imperial household. He is assisted by a vice-minister and fifteen councillors, all chosen by the emperor. The chief of these are the chamberlain, the keeper of the seal, the emperor's steward, the master of ceremonies, the director of the bureau of domestic, and the director of the bureau of the nobility. The number of the employees of the imperial household is 2534; salaries, 1,003,505 yen.

Decorations.—In Japan there are six orders of decoration conferred as reward of merit: (1) Order of the Chrysanthemum (Kikutoshu), created in 1876, reserved to sovereigns and members of princely families; (2) Order of Paulownia (Tokiawaso), created in 1876, granted to princes and very exalted personages; (3) Order of the Rising Sun (Kyokujitensho), created in 1875, conferred for military and civil services; 8 classes: (4) Order of the Precious Clouds (Kiyosanzushi), created in 1888, to reward military and civil services; 8 classes; (5) Order of the Crown (Hokowo), created in 1888, reserved to women; 8 classes; (6) Order of the Golden Kite (Kinkocho), created in 1890, rewards extraordinary military facts, and entitles to a pension. In recognition of meritorious deeds which, however, do not deserve a decoration, the Government awards certificates, medals, and cups of gold, silver, or wood. The number of Japanese thus decorated or rewarded reaches into the millions. On 31 March, 1908, the number of persons decorated and entitled to a pension was 76,822. Pensions furnished by the Government, 9,063,000 yen. Number of decorations distributed in 1903, 3914; in 1905, 36,357; in 1907, 37,602, not counting the decoration of the Golden Kite. Decorations of the Golden Kite in 1904, 2316; in 1905, 27,649; in 1906, 73,810; in 1907, 1180; number of persons who have received certificates, medals, gold, silver, or wood, 2,492,510; in 1906, 2,512,818; in 1907, 1,305,018. This shower of decorations was caused by the war with Russia. The number of foreigners decorated by the Japanese Government was, on 31 March, 1907, 417, and that of Japanese decorated by foreign governments, 542.

Titles of Nobility.—The class of nobles (Koazoku) comprises the ancient nobles of the court (Kuge), the ancient lords of the provinces (Daimio), and those who have been ennobled since the Restoration, or the new
nobility (Shin-Kawazoku). Graduated titles were created in 1854 for these nobles of various degrees, in Japanese Ko, Ko, Haku, Shi, and Dan, corresponding to the marquisate, count, viscount, count, and baron. Nobility is hereditary, and on 31 March, 1908, this class consisted of 15 dukes (Ko), 36 marquesses (Ko), 100 counts (Haku), 375 viscounts (Shi), and 376 barons (Dan), that is 901 families, comprising 4600 members, which form the Manchurian Court. Besides the title of nobility there are purely honorary dignities forming a sort of court hierarchy. This hierarchy was established in Japan in the reign of the Empress Suiko (A. D. 603). In 682 the number of degrees was raised to forty-eight; in 702 it was fixed at thirty. At the Restoration, this number was retained but very much simplified. At present there are eight degrees, each, except the first, being divided into two, which gives a total of fifteen. These titles or dignities (I-Kai or Kurai) are awarded to nobles, to functionaries of high rank, or to citizens who, while not belonging to these classes, have rendered signal services to the nation. These dignities carry with them certain rights, e.g. that of assisting at the emperor's reception on a certain day of the year. They are conferred only on Japanese. The number of persons honoured with these titles was in 1897, 50,908, among them 133 in the ranks of Funkoku and Military Officers. The former are called Bunkwan and the latter Bukwan. Both are divided into four classes, Shinnin, Chokunin, Sonin, and Hannin. The Shinnin, who form the highest class, receive their investiture from the hands of the emperor himself. The decree of promotion bears the seal of the empire and is countersigned by the president of the Council. The Chokunin are appointed by a decree of the emperor, bearing the seal of the empire. The Sonin are appointed by the cabinet on presentation by the ministers. The Hannin are appointed by their respective ministers. Civil and military officials of the rank of Shinnin, 46; civil official of the rank of Chokunin, 370; Sonin, 705; Hannin, 51,952. Army and navy: all the generals and admirals have the rank of Chokunin; all the other officers have that of Sonin, and all non-commissioned officers that of Hannin. For the number see under Military Officers. The Chokunin, Sonin, and Hannin are civil or military officials. The statistics for the Chokunin make no distinction between civil and military officials for this exalted degree only.

CONSTITUTION OF THE EMPIRE.—On his accession to the throne the emperor promised to establish a National Diet, and the government of the country. Although proceeding from the free will of the sovereign, the project of a Constitution, before being put into execution, encountered many obstacles and provoked violent contests between the Government and the democratic party. The various phases of these conflicts may be summarized as follows: In 1873 Itagaki and his followers addressed a petition to the Government in which they called upon it to carry out the sovereign's wishes, and in 1880 a campaign was organized throughout the country for the promotion of the rights of the people. In 1881 Itagaki and his followers organized the Liberal Party and vigorously urged forward the movement in favour of the establishment of a parliament. In the same year the emperor promised to promulgate the Constitution within ten years. Finally on 11 February, 1889, the Constitution was promulgated and the Diet of the Nation was opened.

PREROGATIVES OF THE EMPEROR.—The chief rights accorded to the emperor by the Constitution are: to convocate, open, close, and suspend the Parliament; to dissolve the Chamber of Deputies; to issue ordinances having the force of law; under urgent circumstances when the diet is not sitting and on condition that they be submitted to it in the next session, to give orders for the execution of the laws, to maintain peace and promote the welfare of the people, to assume command of the forces at sea and land and to regulate the organization of both, to declare war, to make peace, conclude treaties, proclaim a state of siege, to grant titles of nobility, rank at court, decorations, and other honorary titles, to declare amnesty, to commute penalties, and to rehabilitate.

Rights of the People.—The rights granted to the people by the Constitution are as follows: Every Japanese subject without distinction of class may be promoted to any civil or military rank or public office. No Japanese subject may be arrested, held, or punished except according to law. Except in cases provided for by law, the dwelling of every Japanese is inviolable and is not subject to any domiciliary visit. Secrecy of mailed letters and the rights of property are inviolable. The Constitution further grants liberty of religious belief in all that is not prejudicial to peace and order and the duties of a subject, freedom of speech, of the press, of public assembly, of association, and the right to present petitions in a respectful manner.

Government.—For the management of state affairs the emperor employs several ministers, at the present time nine in number, viz. ministers of foreign affairs, of the interior, of justice, of finance, of war, of the treasury, of public instruction, of agriculture and commerce, and of communications.

Privy Council (Sumitei-in).—The emperor is also assisted by a privy council, created in 1888 and composed of a president, a vice-president, and fifteen members, chosen from among the highest functionaries at least forty years of age. The president of the cabinet and all the members are councillors ex officio. The privy council gives its opinion concerning questions submitted by the emperor, but is not entitled to make proposals, to decide as last resort, nor to exercise executive power. It gives advice with regard to treaties to be concluded with other powers, in urgent cases, in quarrels which may arise between the Government and the Chambers, in fine in all circumstances in which the supreme power is expected to intervene.

Parliament.—The emperor shares the legislative power with two large political bodies, the Chamber of Peers and the Chamber of Deputies. The Chamber of Peers enjoys certain privileges. The emperor may suspend but not dissolve it. The duration of the commission of the peers is seven years, that of the deputies four years. The peers, being appointed by the emperor or by right of birth, are such for life. All the deputies may discuss and vote on the acts of the chambers discuss and vote on projected bills, the budget, taxes, etc., but their decisions do not go into effect till they have received the sanction of the emperor.

The Chamber of Peers is composed of the members of the imperial family, of all dukes and marquesses over twenty-five, of a certain number of counts, viscounts, and barons who have attained their twenty-fifth year and who are elected by their peers, of members aged at least thirty appointed for life by the emperor because of their services or learning, and lusty of forty-five members aged at least thirty, elected from among the fifteen most influential citizens of each district which returns them. Their election must be confirmed by the emperor. The number of these two categories must not exceed that of the members of the nobility. In 1908 the Chamber of Peers was composed as follows: members next year, 97; dukes and marquesses, 28; counts, 17; viscounts, 69; barons, 55; appointed for life by the emperor, 124; chosen from amongst the citizens paying the largest taxes, 45. Total, 361. In the upper chamber there is no political party properly so called; the peers are merely divided into groups, generally composed of members of the same class.
The Chamber of Deputies is composed of two kinds of members, the first returned by the cities having at least 30,000 inhabitants, the others by the districts. Each city and department forms an independent district. To be an elector it is necessary to have attained the age of twenty-five and to have been sentenced to ten yen in direct contribution. One may be a deputy without paying the contribution but it is necessary to have attained at least thirty. Those who are neither electors nor eligible are outlaws, bankrupts, whose property has been confiscated, those who have lost twenty-five yen and to have been sentenced to prison, soldiers in active service, pupils in the public or private schools, professors in the primary schools, ministers of any religion whatever, contractors of government work, officials charged with intervening in the elections, the employees of the ministry of the imperial household, judges, attorneys, collectors, police employees, and general councillors. At present the deputies are divided into four parties: (1) the Government Party (Seiyukwai), which in 1900 replaced the old Liberal Party of Itagaki (1881); (2) the Progressive Party (Shimpoo), or opposition (1890); and (3) the United Party, formed of old imperialists, opportunists, and deserters from the Progressive Party; (4) the New Association (Yushinkwai) or Advanced Party, among whom there are a number of Socialists. The number of deputies (end of March, 1908), 379; number of votes 1,533,676; number of votes cast, 1,533,301; unable to write the candidate's name, 3338. Number of deputies in Government Party, 167; Progressives, 94; United Party, 68; New Association, 36; nobles (former Samurai), commoners, 272.

Diplomatic Corps in Foreign Lands.—Embassies, 7, viz. to England, the United States, France, Germany, Italy, Austria, and Russia. Legations, 8; to Spain, Belgium, Holland, Sweden, China, Siam, Mexico, Brazil. Staff, 90.

Consulates.—Consul general, 11; consuls and vice-consuls, 31; staff, 365. Civil officials and employes of the Government, 152,159; annual salaries, 44,787,112 yen; government engineers, 9492; employes under their supervision, 17,941; total, 27,438; salaries, 9,638,546 yen. Tax bureaux, 18; staff, 8443; annual salaries, 2,122,601 yen.

The number of retired officials, widows, or orphans; persons assisted or pensioned, 206,860. Total amount, 15,847,280 yen.

Political Geography and Local Administration.—Japan is divided into ten large regions comprising eighty-eight provinces. These are: (1) Kinaoi (or Koa Kinaoi), 5 provinces; (2) Tokaido, 15 provinces; (3) Tosa, 13 provinces; (4) San-in, 8 provinces; (5) Hokurokudo, 7 provinces; (6) Sanyodo, 8 provinces; (7) Nankaido, 6 provinces; (8) Saikaido, 9 provinces (Kiwari); (9) Hokkaido, 10 provinces; (10) Taiwan (Formosa), 5 provinces.

Before the Restoration Japan was divided into fiefs (hant), and the total number of fiefs was up to about fifty. The ban established by degrees in the course of the twelfth century were regularly organized by Yoritomo (1192–99). Under the Ashikaga it was no longer the will of the emperor or the shogun but force of arms which designated the rulers. Tokugawa Ieyasu estimated the number of han as more than 300. They were divided into three classes, according to the importance of their revenues, the Dai-han (large fiefs) being worth upward of 400,000 koku of rice, the Chu-han (medium fiefs), from 100,000 to 400,000 koku, and the Sho-han (small fiefs), upward of 100,000 koku.

After the Restoration Japan was divided into departments (ten) and prefectures (fu). The number of these varied several times. To-day for the convenience of the administration the country is divided into three fu, 43 ken, and two special governments (cho), those of Hokkaido and Formosa, comprising altogether 660 districts (gun or kori), 63 municipalities (shi), 1138 towns (cho or machi), and 11,801 villages (son or mura). The three fu (prefectures) are Tokio, Osaka, and Kyoto. Among the municipalities sixteen are more than 50,000 inhabitants and less than 100,000, three more than 100,000 and less than 200,000, and six a population exceeding 200,000 inhabitants. These six cities are Tokio, 1,811,655, inhabitants, Osaka, 995,945, Kyoto, 390,565, Yokohama, 326,035, Nagoya, 283,639, and Kobe, 285,602.

At the head of each department is a prefect assisted by a council of prefecture which represents the central government, while the general council represents the rights and interests of the people. The general council exercises over the finances of the department a control similar to that which the parliament exercises over the finances of the State. They regulate the distribution of taxes and vote on the needs of the departments. All the citizens residing in a department and who pay a direct yearly tax of three yen have the right to vote for the election of councillors. Payment of a tax of ten yen is necessary for eligibility. The prefects are nominated by the Government. At the head of each district is a sub-prefect, at the head of each town or village is a mayor assisted by a council. The departments, districts, towns, and villages have a special budget administered by the general council, the district council, the municipal council, and increased by the amount of the taxes levied by the central Government. These departments, districts, towns, and villages may contract loans with the authorization of the minister of finance. For loans payable in less than three years they are not obliged to secure this authorization. For the financial year 1907–08 the total of the budgets of the departments and municipalities was as follows: receipts, 173,004,325 yen; expenditures, 166,614,817 yen; fund for public relief, 34,884,370; total amount of debt, 89,266,115 yen. Ten years earlier (1897) the receipts amounted to 100,888,000 yen; expenses, 88,817,000 yen; debt, 16,330,000 yen.

Legislation.—For many centuries Japan had no legal code, the moral law and local custom taking its place. In 604, in the reign of the Empress Suiko, Shotoku Taishi promulgated a code of laws in seventeen chapters borrowed from China. This is the earliest code of which mention is made in the history. Later the Emperor Mommu (696–707) appointed a commission of scholars to draw up a new code, and the work was completed and promulgated in 701. It is called the code of the era of Taiho (Taiho-ryo), and save for some modifications was in force until the Restoration. At this time intercourse with foreigners and study of the laws in use in European countries brought home to the Japanese the necessity of a new code, more in harmony with their new situation. With the aid of foreign legalists they undertook this work of codification, which they brought to a successful issue at the end of twenty years. The collection of laws thus produced has since been called the Gokasho. It comprises: (1) the Civil code, the criminal code, the commercial code, and the codes of civil and criminal procedure.

For the application of this new legislation a judiciary organization was created very similar to that which exists in France. It comprises tribunals of justice of the peace (Ku-Saiibansho), lower courts (Chiko-Saiibansho), courts of appeal (Koso-in), and a court of cassation (Taishin-in). The Constitution published February, 1889, established the irremovability of magistrates, who can only be suspended by special law. The tribunals number 338; court of cassation, 1; courts of appeal, 7 (Koso-in, Naga, Hiroshima, Nagasaki, Miyagi, and Hakodate); lower courts (district courts), 49 (at least one to a department); courts of justices of the peace (sub-district courts), 301. Staff of the tribunals, 11,826; judges,
Marriage.—The law exacts the completion of seventeen years for a man and fifteen for a woman. The consent of the parents is required for males under thirty, and for females under twenty-five. Minors must secure the consent of a guardian and of the family. No person who already has a spouse may marry, and the penalty for so doing is two years in prison. An adulterer is forbidden to marry the partner in the sin. Marriage between blood relations is forbidden within all degrees in the direct line, and in the collateral line within the third degree inclusive. Marriage between relations (affinities) is forbidden within all degrees in the direct line, even after divorce, but in the collateral line there is no impediment. All marriages contracted through mistaken identity, fraud, or violence may be annulled within the three months following their celebration. The woman may not marry till six months after the dissolution or annulment of the first marriage. Husband and wife must live together, the law not admitting separation of body. The fact of the marriage should be inscribed on the register of the civil Government, and in default of this formality the marriage does not exist before the law and is without effect. Formerly women could not possess property but now they are accorded this right. The law regulates the conjugal partnership of goods, but husband and wife are at liberty to make a contract. The husband is obliged to provide for the support of the family and to defray the expenses of the children's education. He has the right to administer the property of his wife and to collect the profits, but he is not entitled either to sell it, or to give it as security, or to lend it without her consent. In Japan marriage is always arranged by an intermediary. The law stipulates nothing with regard to the ceremony, which is left to the choice of those concerned. The peasants follow the customs of the country, the chief of which consists in the exchange of cups of wine by the betrothed pair. The Buddhist or Shintoist priests (bonzes or Kamushii) have no share in the celebration of marriage. The Christians marry according to the rites of their religion. Politeness demands that the newly wedded pair pay a visit in the course of a month to all who assisted at the ceremony.

Divorce.—The Japanese law allows divorce, and this divorce annuls all the effects of marriage except the impediment of affinity. Divorce may be granted in two ways, privately or by court sentence. The chief causes for divorce are (1) bigamy; (2) adultery (for a woman); (3) notorious adultery for a man; (4) crimes of forgery, petty larceny, robbery with violence, fraudulent possession, receiving of bribes, obscene acts, and all crimes involving a prison sentence of three years; (5) ill-treatment or grievous injury of the other party or of his father or mother; (6) ill-treatment or grievous injury received from the relations of the other party; (7) abandonment by one of the parties of the other with evil intent; (8) ignorance for three years as to whether the other party is living or dead. Wills.—Every one may dispose of his possessions by will, provided the will is submitted to certain conditions. Those only are incapacitated from making a will who are of unsound mind or who have not attained the age of fifteen. Japanese law recognizes natural heirs and every clause injurious to their rights is null. The Japanese law recognizes three classes of wills, olographic, authentic, and secret. An olographic will (Jhitu-sho sho) is one which the testator writes, dates, and signs with his own hand, and to which he affixes his seal. An authentic will (Kosei-sho sho) is dictated by the testator with the formalities prescribed by law in presence of at least two witnesses, written by a notary (Kosho-nin), who reads the will to the testator and the witnesses. If it is approved the testator and the witnesses should then sign it and affix their seal. The secret will (Jinmu-sho sho) is signed and sealed by the testator and presented by him to a notary in presence of at least two witnesses. The testator declares that it is his will and gives the name and address of him who drew it up. The notary records on the envelope the report of this presentation, whereupon the testator, the witnesses, and the notary sign and affix their seals. Besides these wills Japanese law recognizes others which have only a temporary existence and cease with the circum-

stances which gave rise to them, e. g. military wills, naval wills, wills made in time of contagious disease or at the point of death, if the sick person recovers. To make an act legal every Japanese must affix his seal (Jitsu-in) to that act. A copy (in-kan) should be deposited at the surrogate's office. For foreigners the signature is sufficient. The will goes into effect immediately on the death of the testator; if it is conditional, as soon as the conditions are realized. But to put it into execution the executor must have it signed by the court. The testator may always revoke his will in whole or in part. When the same person has made two wills the second prevails. Anyone is free to reject a will made in his favour. The share reserved to the natural heirs in the direct line is one-half the property, that of the other heirs, one-third.

Prisons (Kangoku).—In the present penal system prisons are divided into two chief classes, civil and military. Civil prisons comprise six categories: (1) criminal or convict prisons for those sentenced to deportation or banishment (three); (2) temporary prisons, in which are confined those sentenced to deportation or banishment until such time as they shall be transferred to their final destination (three); (3) departmental prisons for those sentenced to simple detention and compulsory labour (at least one for each department); (4) detective prisons, destined to receive prisoners who have been indicted and accused persons until the law has decided their case; (5) houses of correction reserved for minors under twenty and for deaf-mutes; (6) jails, for those sentenced to
thirty days' imprisonment by police magistrates. These jails are annexed to the police stations. The prisons are under the jurisdiction of the minister of justice, who appoints the general inspectors and all the employees. Number of civil prisons for the year 1908, 56; bridewells, 92; general inspectors, 56; wardens, 620; engineers and interpreters, 29; physicians, 198; chaplains and instructors, 222; servants of the first class, 7907; of the second class, 302; women servants, 383; employees of various kinds, 230. Total, 9,997. Inmates of penitentiary establishments at the end of 1907: detention prisons, men, 4008; women, 203; houses of detention, men, 46,175; women, 255; houses of correction, men, 738; women, 69. Total, 53,743. The total number of persons sentenced in 1907, men, 114,236; women, 16,748.

Police (K seisatsu).—The police service as it exists to-day was organized at the beginning of the present reign according to the English system. It is divided into two main sections, the administrative police (Gyosei Keisatsu) and the judiciary police (Shito Keisatsu). In the department it is subject to the prefecture, at Tokio to the prefecture of police (Keishicho). It has its courts, which are empowered to judge offenses for which the penalty does not exceed thirty days' imprisonment. On 8 th March, 1872, the police department numbered: chief police stations or bureaus, 713; branch stations, 618; city station-houses, 1841; rural station-houses, 12,648; inspectors or superintendents (Keshu), 1861; police agents (Junsa), 33,855. Crimes, offences, and cases in which the police have had to intervene were registered and classified by violence, 1,239; without violence, 267,630; squindlings, 28,876; total number of robberies, 297,145. Violent deaths: suicides, 9,896; murders, 13,263; sudden deaths, 13,877; victims of accidents and others, 14,015. Total, 23,544. Fires: involuntary, 12,462; incendiary, 1,856; camping, or by laws, 2,882; by lightning, 2174. Total, 15,494. Number of houses burned, 36,669. Public reunions, indoors, 587; number of orators, 1863; in the open air, 87; orators, 55. Total number of arrests made by the police for crimes, offences, or infractions of the law, 778,281.

Hygiene.—The organization of the hygienic service dates from 1872. It began with the organization of a medical bureau, which was suspended in 1875 and replaced by a bureau of health. In 1879 a central board and local boards of public health were established and the service was extended to all the departments. It was extended to all the townships, villages and private committees were formed. The chief regulations relative to hygiene are: the cleansing of houses and drains, which should be done twice yearly under police supervision; the building and improvement of hospitals, prisons, schools, and all public institutions; the location of cemeteries; burial; vaccination; etc. The hygiene service is within the jurisdiction of the police who are charged with enforcing its regulations.

Hospitals and Medical Bodies.—Before the Restoration, Japan had five hospitals located at Nagasaki, Saga, Fukui, Kanazawa, and Osaka. The first in point of time was Nagasaki, founded in 1861. On 31 March, 1908, the number of hospitals was 870, 5 founded by the Government, 205 by the departments, and 660 by private citizens. To all these hospitals, private as well as public, is attached a force of women-nurses, who must be at least eighteen years of age and provided with a diploma. Throughout the empire there are: doctors, 36,776; midwives, 26,387; druggists, 29,813; chemists, 2370. In 1907 the number of persons afflicted with contagious diseases was 71,332; typhus, 27,988; dysentery, 24,942; deaths from contagious diseases, 19,536.

Education.—Until the shogunate of the Tokugawa education was left entirely to the Buddhist priests. Under the Tokugawa (1603-1868) it was con-

fided to lay teachers and during this period of 265 years the Chinese classics were the basis of instruction. But in this aristocratic country knowledge was a privilege together with nobility, and there were no public schools save for the sons of Samurai. However, the lower classes were not wholly abandoned to ignorance. Farmers, mechanics, and merchants received an education by reading books, sometimes connected with the temples, known as Terapogy, and in private schools. To-day freedom to learn is granted in Japan to all degrees of the social scale. Instruction is compulsory from six to twelve years, and non-religious. At the head of public instruction is a minister assisted by boards and corps of inspectors. Schools are divided into primary schools in which class are included the infant schools and the schools for deaf-mutes and the blind, secondary schools, high schools, universities, ordinary normal schools, higher normal schools, special schools, technical schools, and various.

Primary Schools are divided into two classes, common and high schools. The duration of the first is six years, and as the instruction is compulsory, attendance at this school is required from six to twelve years. The certificate of completion of this term secures admission into the public schools which course lasts two years and is optional. Number of primary schools, 27,269; teachers, 116,070; pupils, 6,601,620; average number of children receiving instruction, 96.5%. Private schools, only 249. Infant schools, 361. Women attendants, 984; children, 22,545. Denomination is by parents, Catholic, 12; Episcopalian, 18; Presbyterian, 19; Congregational, 18; and Baptists, 168; pupils, 1,532. The secondary schools for boys were founded as a preparation for the high schools. Graduates of these schools are qualified to obtain position under the Government, according to their abilities, without passing a preliminary examination. The course lasts eight years. Number of schools, 251; founded by the Government and the municipalities, 228; private, 58; teachers, 5,336; pupils, 108,531.

Secondary Schools for Girls.—The duration of the course is from four to five years at choice. To the regular courses may be added special courses for the study of foreign languages or some womanly art, and supplementary courses for pupils desiring to perfect themselves in a particular branch. These courses should not exceed two or three years. Number of schools, 111; public, 98; private, 16; teachers, 1770; pupils, 35,876. The higher schools are a preparation for the university. The course lasts three years, and is divided into three classes which differ among themselves. The instruction given in each class corresponds to the career to which the pupil is destined. Number of schools, 7; all founded by the Government and under its supervision. They are located at Tokio, Sendai, Kyoto, Kanazawa, Okayama, Kumamoto, and Koshima; teachers, 272; pupils, 4888.

Imperial Universities.—There are two of these, one at Tokio and one at Kyoto. The University of Tokio comprises besides the University Hall the faculties of law, medicine, literature, science, agriculture, and engineering. Number of professors: Japanese, 275; foreigners, 15; Japanese students, 5050; foreigners, 39. The University of Kyoto comprises besides the University Hall, the faculties of law, medicine, literature, science, and engineering. Japanese professors, 166; foreign professors, 4; students, 1507. Besides these universities there are about forty public or private schools which assume the name of universities, but for entrance to which it is not necessary to have a diploma from the higher schools. The two most important are the University of Waseda, from 5000 to 6000 students, and that of Keio-gijuku, 1100 students. The former was founded by Okuma in 1882, and the second by Fukusawa in 1865.
FUJI-SAN (PEERLESS MOUNT), THE FAMOUS VOLCANO OF JAPAN
