ances, the ground of which is an unknowable material something; and the best way to organize and systematize all our knowledge of reality is to represent everything as springing from one source, governed by one law. If the law has not been established, the means and the end being an unknown and (speculatively) unknowable God. It is very easy to see how this negative phase of Kant's philosophy affected the subsequent course of philosophy in Europe. The conclusions of the first Critique are the premises of contemporary Agnosticism. We can know nothing except the appearances of things; the senses reach only phenomena; judgment does not go any deeper than the senses, so far as the external world is concerned; science and philosophy fail utterly in the effort to reach a knowledge of substance (noumenon), or anything that is or ever was. From this we see what the soul is, what matter is, what God is, have failed and are doomed to inevitable failure. These are the conclusions which Kant reaches in the "Critique of Pure Reason"; they are the assumptions of the Agnostic and of the Neo-Kantian opponent of Scholasticism.

(2) Kant, it has often been said, tore down in order to build up. What he took away in the first "Critique" he gave back in the second. In the "Critique of Pure Reason" he showed that the truths which have always been considered the most important in the history of knowledge are not founded in metaphysical, that is, purely speculative, reasoning. In the "Critique of Practical Reasoning" he aims at showing that these truths rest on a solid moral basis, and are thus placed above all speculative contention and the clamor of metaphysical dispute. He has overthrown the impositions of a doctrine which Cartesian dogmatism had built on the foundation "I think"; he now sets about the task of rebuilding the temple of truth on the foundation "I ought." The moral law is supreme. In point of certainty, it is superior to any deliverance of the purely speculative consciousness; I am more certain that "I ought" than I am that "I am glad," "I am cold," etc. In point of existence, it is superior to any consideration of interest, pleasure or happiness; I can forego what is for my interest, I can set other considerations above pleasure and happiness, but if my conscience tells me that "I ought" to do something, nothing can gainay the voice of the voice itself at once. I can not obey or disobey. This, then, is the one unshakable foundation of all moral, spiritual, and higher intellectual truth. The first peculiarity of the moral law is that it is universal and necessary. When conscience declares that it is wrong to tell a lie, the voice is not merely intended for here and now, not for "just this once," but for all time and for all space; it is valid always and everywhere. This quality of universality and necessity shows at once that the moral law has no foundation in pleasure, happiness, the perfection of self, or a so-called moral sense. It is its own foundation. Its voice reaches conscience immediately, commands unconditionally, and need give no reason for its behests. It is not, so to speak, a constitutional monarch amenable to reason, judgment, or any other faculty. It exacts unconditional, and in a sense unreasoned, obedience. Hence the "hollow voice" of the moral law is called by Kant "the categorical imperative." This celebrated phrase means merely that the moral law is a command (imperative), not a form of advice or invitation to act or not to act; and it is an unconditional (categorical) command, not a command in the hypothetical mood, such as "If you will, as a German you must study theology." One should not bow to hollow words, overlook the peculiar empty character of the categorical imperative. Only in its most universal "hollow" utterances does it possess those qualities which render it unique in human experience. But as soon as the contingent data, or contents of a specific moral precept, are presented to it, it imposes its universality and necessity on them and lifts them to its own level. The contents may have been good, but they could not have been good unless they were of the sort which the moral law in good except good will—the acceptance, that is, of the moral law.

We know the moral law not by inference, but by immediate intuition. This intuition is, as it were, the primus philosophicum. It takes the place of Descartes' primary intuition. We cannot think of this as thought. From it all the important truths of philosophy are deduced, the freedom of the will, the immortality of the soul, and the existence of God. The freedom of the will follows from the existence of the moral law, because the fact that "I ought" implies the fact that "I can." I know that I can do as I wish; I do it consequently from this I infer that I can. In the order of things, of course, freedom precedes obligation. In the order of knowledge, I infer freedom from the fact of obligation. Similarly, the immortality of the soul is implied in the moral law. The moral law demands complete fulfillment of itself in absolute human perfection. It is the highest perfection that man can attain in this life is only partial or incomplete perfection, because, so long as the soul is united with the body, there is always in our nature a mixture of the corporeal with the spiritual; the striving towards holiness is accompanied by the striving towards the unholy. Freedom is a struggle. There must, therefore, be a life beyond the grave in which this "endless progress," as Kant calls it, will be continued. Finally, the moral law implies the existence of God. And that in two ways. The authoritative "voice" of the law implies a lawgiver. Moreover, the nature of the moral law implies that there be somewhere a good which is not only supreme, but complete, which embodies in its perfect holiness all the conditions which the moral law implies. This supreme good is God.

(3) Intermediate between the speculative reason, which is the faculty of knowledge, and practical reason, which is the faculty of voluntary action, is the faculty which Kant calls judgment, and which is the faculty of aesthetic appreciation. As the true is the object of knowledge, and as the good is the object of action, the beautiful and purposive is the object of judgment. By this peculiar use of the word judgment Kant places judgment itself at once. I can not obey or disobey. This, then, is the one unshakable foundation of all moral, spiritual, and higher intellectual truth. The first peculiarity of the moral law is that it is universal and necessary. When conscience declares that it is wrong to tell a lie, the voice is not merely intended for here and now, not for "just this once," but for all time and for all space; it is valid always and everywhere. This quality of universality and necessity shows at once that the moral law has no foundation in pleasure, happiness, the perfection of self, or a so-called moral sense. It is its own foundation. Its voice reaches conscience immediately, commands unconditionally, and need give no reason for its behests. It is not, so to speak, a constitutional monarch amenable to reason, judgment, or any other faculty. It exacts unconditional, and in a sense unreasoned, obedience. Hence the "hollow voice" of the moral law is called by Kant "the categorical imperative." This celebrated phrase means merely that the moral law is a command (imperative), not a form of advice or invitation to act or not to act; and it is an unconditional (categorical) command, not a command in the hypothetical mood, such as "If you will, as a German you must study theology." One should not bow to hollow words, overlook the peculiar empty character of the categorical imperative. Only in its most universal "hollow" utterances does it possess those qualities which render it unique in human experience. But as soon as the contingent
cannot clearly demonstrate that purpose. The teleological concept is, therefore, like the "ideas" (the soul, the world, God) not constitutive of our experience but regulative of it. The highest use of the aesthetic faculty is the realization of the beautiful and the purposive as symbols of moral good. What speculative reason regards as natural (that is, is natural and purposive order, is suggested by the aesthetic judgment and fully attained by religion, which rests on the practical reason.

Kant, as is well known, reduces religion to a system of conduct. He defines religion as "the acknowledgments which are God's commandments" which describes the essence of religion as consisting in morality. Christianity is a religion and is true only in so far as it conforms to this definition. The ideal Church should be an "ethical republic"; it should discard all dogmatic definitions, accept "rational faith" as its guide in all intellectual matters, and establish the kingdom of God on earth by bringing about the reign of duty. Even the Christian law of charity must take second place to the supreme exigencies of duty. In fact, it has been remarked that Kant's idea of religion, in so far as it is at all Scriptural, is inspired more by the New Testament than by the Old Testament. He maintains that those dogmas which Christianity holds sacred, such as the mystery of the Trinity, should be given an ethical interpretation, should, so to speak, be regarded as symbols of moral concepts and values. Thus "historical faith", he says, is the vehicle of rational faith. For the person and character of Christ he professes the greatest admiration. Christ, he declares, was the exemplification of the highest moral perfection.

Critics and historians are not all agreed as to Kant's rank among philosophers. Some rate his contributions to philosophy so highly that they consider his doctrines to be the culmination of all that went before him. Others, on the contrary, consider that he made a false start when he assumed in his criticism of speculative reason that whatever is universal and necessary in our knowledge must come from the mind itself, and not from the world of reality outside us. These opponents of Kant consider, moreover, that while he possessed the synthetic talent which enabled him to build up a system of thought, he was lacking in the analytic quality by which the philosopher is able to observe what actually takes place in the mind. And in a third, all philosophers to an examination of knowledge the lack of the ability to observe what actually takes place in the mind is a serious defect. But, whatever may be our estimate of Kant as a philosopher, we should not undervalue his importance. Within the limits of the philosophical sciences themselves, his thought was the starting-point for Fichte, Schelling, Hegel, and Schopenhauer; and, in the contemporary philosophic thought in Germany is concerned, whatever of it is not Kantian takes for its distinguishing characteristic its opposition to some point of Kantian doctrine. In England the Agnostic School from Hamilton to Spencer drew its inspiration from the teachings of the Critique of Pure Reason. In France the Positivism of Comte and the neo-Criticism of Renouvier had a similar origin. Kant's influence reached out beyond philosophy into various other departments of thought. In the history of the natural sciences his name is associated with that of Newton in the formulation of the law of gravitation. In biology it is a natural evolution from primitive cosmic nebula. In theology his non-dogmatic notion of religion influenced Ritschl, and his method of transforming dogmatic truth into moral inspiration finds an echo, to say the least, in the exegetical experiments of Renan.

Some philosophers and theologians have held that the objective data on which the Catholic religion is based are incapable of proof from speculative reason, but are demonstrable from practical reason, will, sentiment, or vital action. That this position is, however, dangerous, is proved by recent events. The Immanentist movement, the Vitalism of Blondel, the anti-Scholasticism of the "Annales de philosophie chrétienne", and other recent tendencies towards a non-intellectual foundation of religion have received from ecclesiastical authority shows plainly that they have no clear title to be considered a substitute for the intellectualistic apologetic which has for its ground the reality of the Scholastics.

Kantische Werke, ed. H. HASTENBET (10 vols., Leipzig, 1838-39); a new ed. 1867-69; 2nd ed. 1892-94 (12 vols., Leipzig, 1838-92); KRINSMANN (8 vols., Berlin, 1856-65); FRMANN Academy of Sciences (Berlin, 1892-93); MÜLLER, Konf's Critique of Pure Reason (New York, 1896); MOENKJOS, same title (London, 1854); Prolegomena, paraphrased and translated by MABEY and BERNARD (London, 1872-73); 2nd ed. 1889); ABBOTT, Critique of Practical Reason (London, 1879; 4th ed., 1889); WATSON, Selection (London, 1888); the literature on Kant is abundant. Of the many expository works the following are to be named: CAIRK, Critical Philosophy of Kant (2 vols., London, 1878); BLACKWOOD'S Philosophical Classics (Edinburgh, 1892); GARNER, Critique on the Philosophy of Kant: a Translation, NETTELSTEIN, II, 1-15, 2nd ed. 1869, Kant and His English Critics (London, 1888); IDEM, The Philosophy of Kant Explained (German, 1898). In German: PATEK, Die Lehren Kant's, 3rd ed. 1899); In French: CHLAK, Kant in Grand Philosophes (Paris, 1900).

Jean-CLERGE, Le movement catholique kantien en France en Kant Studien, 111, II and ill (reprint, Paris, 1902); and FONTAINE, Les influences katienes, etc. (Paris, 1892), give an account of the influence of Kant on contemporary thought and culture.

William Turner.
from Maribor to Celovec, and from Beljak to Fran-
sensfeste.

The principal towns are: Celovec (24,000), see of the prince-bishop, and head-quarters of the Slovenian literary society of St. Mohor, which circulates 500,000 books annually among its members; St. Vid; Krka; Goram; and Beljak (elevation 4620 feet); Beljak (the old Roman stronghold Santicum); Plajberg; Tržiš Pontafel; Sv. Višarje (5500 feet high). The political administration of the province is in the hands of the governor residing at Celovec. The eastern part of the diocesan district is under the jurisdiction of Beljak, which is an independent district administered by the governor. The country has its own legislature for internal affairs and sends seven delegates to the imperial diet.

To the bishop belong jusa presentationis et investitura, and in some parishes patronatus privatagi; the diocese is coextensive with the province, and is divided into 23 deaneries and 265 parishes. There are, moreover, 15 Protestant parishes. In the year 1856 Lower Karin-
thisa belonged to the Bishop of Maribor, Styria, who in the previous year had moved his see from St. And-
rew's to Celovec, the district was incorporated with the Diocese of Klagenfurt. The diocesan seminary is at Celovec; and there are 12 monasteries. There are 379 schools and 4 colleges. The public schools are supported by the local government; German is used in 210, Slovenian in 129, and in 40 schools both languages are taught. The Benedictines have a college at St. Paul.

History.—The name Karinthia is derived from Karini, a Celtic people. The Slovenian name Koroško, originates from the tribe of the same name, the Koro-
tani, or Gorotani, people dwelling in the mountains. The Celtic people Taurisci were there in the fourth century B.C., and in the first century of our era, the Augustus, Karinthia formed a part of Noricum. At the end of the sixth century of the Christian era the land was peopled by Slovenes flying from the persecutions of the Avars. At that time Noricum was claimed by the Frankish kings, devastated by Germanic migration, and passed into the hands of the dukes of Bavaria. Tassil, Duke of Bavaria, ravaged the country, but in the following year (596) the Slovenes were avenged. Tassil died in 612, and was succeeded by his son Garbaldi II, who was defeated by the Slovenes at Ajunt. In alliance with the prince of Aquitaine, Garbald I, and in the battle of Bagolj, the duke of Bavaria and bishops of St. Vitus, Garbald was elected in king (627). The Franks, Langobardi, and Alamanni did not look with friendly eyes on this new state, and King Dagobert declared war against Garbald; the Slovenes, though victorious, suffered severely, and then invaded Bavaria; they settled themselves, later, up and down Styria, Tirol, and Salzburg. Karinthia had its own princes subject to the governor of Styria, eastern Tirol and Krain, and in 705 successfully defended its boundaries against the Duke of Furlan. The first Slovene Prince of Karinthisa was Borut (748), vassal of the Franks and of St. Vitus the Shah; Borut died and was succeeded by his son Karath, and his grandson Hotimer, who was the last prince of the old ruling family. After the defeat of the Langobardi and Tassil, Duke of Bavaria, Charlemagne took possession of Karinthia, and made it a margravate.

The treasures of Christianity in Karinthia are lost in obscurity, though it is certain that the Gospel came from Aquileia and from Salzburg. In the days of Samo, St. Amand came to preach in south-western Noricum (630). Bishop Rupert of Worms was invited to build churches and to erect monasteries. His successor Vitalis was more successful among the Slovenes than any of his predecessors. All its parishes held in the diocese of Salzburg, especially Tassil (748 to 788) and Virgilus, laboured to Christianize Karinthia. The latter deservestobe called the Apostle of the Slovenes in Karinthia. The oldest churches are Our Lady's, and the church of Paterjion at Turji. Arnus, successor to Virgilus, appointed Theodoric (803) Bishop of Karin-
thisa. In the first half of the ninth century there were three bishoprics on Karinthian soil. From 788 to 970, the See of Salzburg did not have a bishop; the three imperial emperors; by the Treaty of Verdun (843) it passed into the hands of Louis the German, whose grand-
son Arnulf was the first to bear the title of Duke of Karinthia. Louis gave the province to his son Carlo-
man (856), who in a short time allied himself with his father's enemies, the Moravians. In this he was imprisoned by his father, but was afterwards re-
leased and given command of Bavaria, Karinthia, and part of Pannonia. After Carlsman's death, Arnulf joined Upper Pannonia to the ecclesiastical district of Karinthia; about this time the Slavonic liturgy and gospels, as translated by Sts. Cyril and Methodius, were introduced into Karinthia, but the bishops of Salzburg were opposed to the liturgy. The counts of Furlany tried to gain control of Karinthia and Croatia, but were defeated by Louis, Prince of the Pannonian Croats, who repulsed the invasion of Balderie (819). In 829, a Slavone prince (c. 823), was famous for his piety and charity.

Louis the Child, Otto I, and Henry II disregarded the invasion of the Huns, and Karinthia was left to defend itself. The Langobardi of Germany took possession of the Zilll valley; and all the possessions of the natives who fell in battle were given to German settlers, or to churches or monasteries of German origin. From 976 to 1335 Karinthia was the property of various ruling families. Emperor Otto III sepa-
rated it from Bavaria (995). In the twelfth century the noble family of Sponheim held it, and when that family became extinct (1269) the Bohemian King, Charles, annexed it to his dominions. In the year 1072, the Diocese of Karinthia, now known as Klagenfurt or Krisa Skofija, was founded by Arch-
bishop Gebhard of Salzburg. It had six monasteries for Dominican and Benedictine nuns. Henry V tried to gain possession of the church property, but Bishop Konrad censured him, and forced him to desist. Duke Engelbert made a like attempt, but was brought to penance by Leopold the Holy. Ottocar II renounced all his possessions save Bohemia and Moravia; and Karinthia came under the rule of Rudolf of Hapsburg, German Emperor, who handed over its administration to Count Harald of Jemni in 1334. In the year 1307, the Austrian Duke Albrecht took possession of the land, and since then it has been joined to the empire. The "Iron" Duke Ernest (1414), was the last to be appointed Duke of Karinthia ac-
cording to the old usage and right. The Turks plundered the country many times; in 1476 and in 1478 they invaded the villages, and in 1493 laid siege to Beljak. At this time the serfs, to the number of 6000, dissatisfied with the money standard, took up arms under pretense of defending the country against the Turks, but at the first sight of them the Turks flew, and many thousands were captured. The revolt started again in 1515 for better administration of justice, and was settled on 24 April, 1518, and an imperial degree proclaimed the city of Celovec capital of Karinthia.

Three bishoprics, Salzburg, Bamberg, and Goritsa, had possessions in Karinthia. But in 1529 and 1539 one-third of them were secularized, and sold by the governor to meet military expenses. Bamberg sold Maria Theresa its whole property for one million florins, and 4 per cent bonds amounting to 351,000 florins. The Diocese of Salzburg, in 1803 and 1806, sold all its land and property. The first Apostle of Lutheranism in Karinthia was one Vol-
todt, guardian of the Minorites at Volkeberg; and
KARLSBURG 608

KASKASKIA

after him a rich peasant and mine owner, Veitmooser; later on came more ardent preachers from German universities. The miners were agents in the work of Protestantism, for they were all Germans. Emperor Ferdinand favoured Utraquistism, but he afterwards returned his court to Protestantism and appointed a practical Catholic, Count Nagoral, as governor of Karinthis. A demand was made on Ferdinand for freedom of religion, which he denied, and the repression of Protestantism went on. The Bishop of Seckau, Martin Brenner, with an armed force surrounded Lutheran houses and churches, burned their books, and called on all to swear allegiance to the Catholic Faith or to leave the province. He was a Utraquist, and appointed priests to the vacant parishes, and in a short time nearly all the country was Catholic.

In the year 1604 the Jesuits came to Celovec and were given the church of Holy Trinity. Joseph II. centralised the government. In the war of 1809 Austria ceded to Napoleon the district of Beljak, and he joined it to Illyria. In 1815 it was given back to Austria, and in 1826, together with the district of Celovec, formed part of Austrian Illyria, and was given to the imperial governor at Ljubljana. Karinthis was proclaimed an independent crownland in the year 1849.

KARNOWSKI (KARNCOVJUS), STANISLAUS, Archbishop of Gnesen and Primate of Poland, b. about 1526; d. at Lowicz, in the Government of Warsaw, 25 May (a.l., 8 June), 1603. As early as 1563 (according to Wioszawski, Wladislaus, Kalsich), and rendered great service to religion and education by founding, besides several schools, a seminary for priests in his episcopal residence. By order of the Synod of Petrikov (1577), he made a new collection of synodal laws under the title "Constitutiones synodorum metropolitanae ecclesiae Gnesensis provincialium" (Krakow, 1579). His policy of religious influence in Poland was great. Under King Sigismund II Augustus (1548-72) the Reformation made great progress in Poland, especially the Calvinist teaching, while the Lutherans and Socinians bitterly opposed each other. When Sigismund died, Henry of Valois, later Henry III. of France, was elected King of Poland. On his entry into Meseritz, Karnkowski welcomed him in the name of the Polish estates. The archbishop also attended the coronation (1574), and tried to keep the new king in Poland, but in the same year the French throne fell vacant and he returned to France. Karnkowski then urged the election of Stephen Báthori, Prince of Transylvania. The latter was suspected of favouring the Reformation, but under the influence of Karnkowski he declared openly for Catholicism, and was crowned king 1 May, 1576, by Karnkowski, as Uchański, Primate of Poland and Archbishop of Gnesen, had refused to crown him.

Uchański died 5 April, 1581, and Karnkowski was named his successor in the same year (21 April) in the archiepiscopal See of Gnesen and Primary of Poland; as such, he governed Poland after the death of Stephen Báthori (12 Dec., 1586). Eventually he succeeded in electing as king Sigismund III Vasa (1587-1632). Through this young king, formerly Crown Prince of Sweden, and reared a good Catholic by his mother Katharina, Karnkowski hoped to stay the progress of the Reformation in Poland. After Cardinal Hosius, the archbishop was the most prominent opponent of the Polish Reformation. He favoured the Jesuits in every way, built a college for them at Kalisch, and a seminary at Gnesen. He established an institute for twelve noble students, which is still extant, under the direction of the cathedral chapter of Gnesen.

In 1684 he was elected to translate the Holy Scriptures into Polish; this translation was approved by the pope and is still regarded as a classic (Sommerovgel, "Bibl. de la C. de J.", VIII, 1234 sq.). Karnkowski wrote several important works, mostly theological; among them are: "Eucharistia", forty discourses in Polish on the Blessed Sacrament (Krakow, 1602); "De laudes Redemptionis" (Krakow, 1607); "De jure provinciali terrarum civitatumque Prussiae" (Krakow, 1574); "Liber epistolae familiaris et illustrium virorum" (Krakow, 1844). He is buried in the Jesuit church at Kalisch.

KASKASKIA INDIANS, formerly chief tribe of the confederacy of Illinois Indians (q. v.). The name is of uncertain etymology, but may possibly have reference to a "hide scraper". With the other Illinois they probably made their first acquaintance with the French at the Jesuit mission station of Chegoimogen (Lapointe near Bayfield, Wisconsin), established by the noted Father Claude Allouez in 1666. In 1673, Father Marquette, on his return from the lower Mississippi, was kindly received at their village, and on their earnest request returned later and founded among them in April, 1675, the Mission of the immaculate Conception, the first of the Illinois missions, apparently about the present site of Utica, Raisin Co., Illinois. On his death, a month later, the work was suspended until taken up again in 1677 by Alouez, who remained until the arrival of Lasalle in 1679, by whom the mission was turned over to the Recollects, Fathers Gabriel de la Ribourde and Zeno-bius Membré. In consequence of the opposition of the Indians and the attacks of the Iroquois, the murder of Father Ribourde by the Kickapoos, the Recollect tenure was brief. In 1684 Allouez returned, but withdrew a second time on the rumoured approach of Lasalle from the south in 1687. In the latter year also the Jesuit Father James Gravier visited the tribe.

In 1692 the celebrated Jesuit Father Sebastian Rasle restored the mission, which continued thenceforward under Jesuit auspices for a period of eighty years. In 1693 Gravier (q. v.) took charge and with Binneteau, Pinet, Marest, and others laboured with much success until his death in 1706 from a wound received at the hands of a group of Shawnees and Peorias. He compiled the first grammar of the language, and about the year 1700 was instrumental in settling the tribe in a new village about the present Kaskaskia, Illinois, near the mouth of the river of the same name, which remained their principal town and mission station until their final removal from the State. When visited by Charlevoix in 1721 the Kaskaskia were considered Christian, although a considerable portion of the other Illinois still adhered to their old forms.

Notwithstanding the apparent success of the mission, the whole tribe in a period of decline from the hostilities of the northern tribes and the wholesale dissipation introduced by the French garrisons. In 1746 the Kaskaskia, who may have numbered originally 2000, were reported at 800, and in 1778 at 210, including 60 warriors. In 1762 the Jesuits
were suppressed by the French Government, and any later work was carried on by secular priests. In 1795 the Kaskaskia first entered into treaty relations with the United States, and in 1832, together with the kindred Peoria, they ceded all of their remaining original territory in Illinois and were assigned to a reservation in what is now north-eastern Oklahoma, where they still reside, the entire confederated band, including Kaskaskia, Peoria, and other representatives of the old Illinois, together with the remnant of the Wea and Piankishaw of Indiana, numbering only 200 souls, not one of whom is full-blood, and not more than a dozen of whom retain the language.

**JAMES MOONEY.**

**KASSA.** See Cassovia, Diocese of.

**KASSAI.** A Prefecture Apostolic of Upper Kassai, erected as a simple mission in 1901, and detached as a prefecture Apostolic from the Vicariate of Belgian Congo since 20 August, 1901. The residence of the prefect Apostolic is the mission of St. Joseph de Lualaba-Kassai, the chief town of which is Lualaba, in the district of Lualaba-Kassai, the chief town of which is Lualaba, residence of the district commissioner. The prefecture, at the time of its creation, comprised almost all the Lualaba-Kassai district. It was bounded on the north by the Vicariate of Belgian Congo (district of the Equateur); on the east by the same vicariate (territory of the Katanga Company); on the south by the Portuguese Congo; and on the west by the Lukue river. In 1908 it was enlarged by taking as its boundaries on the east the left bank of the Lualaba, and on the west the Prefecture of the Kwango, which is in charge of the Jesuit Fathers.

The climate is hot and damp and the ground marshy. Fever is endemic, while the "sleeping sickness" makes great ravages among the blacks and may be communicated to white men by the tsetse fly. The languages used are those of the Bena Lulua, the Baluba, the Bunanioka, and the Bakuba, the Bakete, and the Balambo. It is impossible to fix even approximately the number of inhabitants, more than half of the prefecture being as yet unexplored. All that can be said is that the population numbers millions of pagans all devoted to a rude fetishism. Man lives there in the primitive state; in certain regions, among others that of the Bakete, the natives, men and women, all are entirely naked. Only one religious order of men is engaged in the evangelization of this country, the Congregation of the Immaculate Heart of Mary of Scheut-les-Bruxelles; there is also a single religious order of women, the Sisters of Charity of Ghent, Belgium.

Kassai, which was established at Lualaba in November, 1891, when Père Cambier arrived alone at Lualaba to commence the evangelization of these regions, eleven residences have been established. They are, in the order of their foundation: (1) St.-Joseph de Lualaba; (2) Méréza Salvador (Kala Kufumba); (3) St.-Trudon de Lusambo; (4) Hemptinne St-Benoit; (5) Tielen St-Jacques; (6) Bena Makima St-Victorien; (7) St-Antoine de Lusambo; (8) Lusambo; (9) Udema; (10) Pangu-hopital; (11) Lige-Sacreé-Coeurs at Katanga. Besides these large residences tended by at least three priests or two priests and a lay brother, nineteen fermes-chapelles (or Christian villages) have been established in the prefecture. They are named: (1) Louvain-Alma-Mater; (2) Grammont Notre-Dame sur la Montagne; (3) Notre-Dame de Lourdes; (4) Lourdes-Notre-Dame; (5) Ypes; (6) St-Antoine; (7) Flobeq Notre-Dame de la Paix; (8) Tshibala Notre-Dame de Congo; (9) Louvain Adolphe Edmond; (10) Courtrai St-Amand; (11) Kasangai St-Remi; (12) Bakete; (13) Tshifwadi Sacreé-Ceur; (14) Tshiela; (15) Kanjiki St-Jean; (16) Hely St-Aignan; (17) Merode Westerloo; (18) Lige St-Urban; and (19) Harelbeke St-Charles.

The religious in charge are thirty-three priests and thirteen brothers of the Congregation of Scheut, and twenty Sisters of Charity of Ghent, who live in three residences, St-Joseph, St-Trudon de Lusambo and Hemptinne St-Benoit. There are in the prefecture about twenty churches and chapels, over five thousand Catholics and about six thousand catechumens; eleven schools, attended by about eight hundred boys and five hundred girls. Over seven hundred orphans are cared for in orphan asylums.

The Prefect Apostolic of Upper Kassai is Most Rev. Emeri Cambier, born at Flobeq (Belgian Hainaut), 2 January, 1865. He was ordained priest 20 November, 1887, arrived in the Congo in 1888, at Lualaba bourg in 1891, and in 1904 was placed at the head of the newly created prefecture Apostolic. The King of Belgium has lately named him an officer of the Royal Order of the Lion in recognition of his services in South Africa.

**EMERI CAMEIER.**

**KAUFFMANN, ANGELICA.** b. at Coire, in the canton of Grisons, Switzerland, 30 October, 1741; d. at Rome, 5 Nov., 1807. She was the pupil of her father, Johann Joseph, a painter of mediocre talent, who, nevertheless, had an excellent knowledge of the principles underlying his art, and initiated Angelica at an early age into the difficult use of colours. An astonishingly precocious child, she was summoned to Como by the bishop, Monsignor Nevroni, who desired her to make a portrait of him, at which time she had not yet come. Francis III of Este, Duke of Modena and Governor of Milan, declared himself her protector. Cardinal Roth invited her to Constance and commissioned her to paint his portrait. At the same time Angelica showed a great aptitude for music.
and singing, and some of her father’s friends strongly urged her to give up painting, but in vain. This eye, she has represented in a picture, showing herself, between Painting and Music, bidding farewell to Music. Nevertheless, while cultivation of the latter less ardently than the other, she was still a clever musician. Italy again attracted her; after visits to Parma and Florence, successively, she arrived, in 1783, at Rome, where she attended Winckelmann’s courses in perspective. On a visit to Venice she made the acquaintance of some English noblemen, and as a result of this meeting was her decision to take up residence in London (1766). Reynolds, whose portrait she executed, accorded her a most flattering reception, and urged her for her a passion to which she could never give any encouragement. Among the pictures which she painted in England we may mention “The Mother of the Gracchi”, “The Sacrifice of Messalina”, the “Meeting of Edgar and Elfrida”, and “Cupid and Psyche.” She also engraved many of her works. Her vanity made her the victim of a cruel deception: she allowed herself to be captivated by the engaging manners of a stranger who represented himself to be Count Frederick de Horn, and married him (1767). When the imposture was discovered, a separation followed (1768). The talent of Angelica Kauffmann, suggestive of the Reynolds manner, was highly appreciated in England. The Royal Academy of London elected her as one of its original members. Gessner and Kloost stock sang of her, and the latter, in recognition, received a sentimental picture. The pretended Count de Horn having died in 1781, Angelica was free to contract a second marriage; she married the Venetian painter, Antonio Zucchi, and they determined to return to Italy. After a sojourn at Venice, during which Angelica painted “Leonardo da Vinci dying in the arms of Francis I,” they visited Naples and then went to Rome to establish themselves permanently. There she opened a salon, where G. de Rossi and Seroux d’Aign court, the latter then engaged on his “Histoire de l’art par les monuments,” were frequently to be seen. Goethe, when he visited Rome, was also received in her salon, and speaks of it in the account of his journey. She painted for the Empress Joseph II, who was then travelling in Italy, the “Return of Arminius victorious over the legions of Varus” and “Aeneas celebrating the Funeral Rites of Palladas.” In the last years of her life she was sorely tried by reverses of fortune and by the death of her husband (1795). The poverty does not terrify me,” she confided to an intimate friend, “but the loneliness kills me.” She languished for some twelve years. The academicians of St. Luke assisted at her obsequies in the church of S. Andrea delle Fratte, where she was buried. It was chiefly as a portraitt-painter that Angelica Kauffmann was distinguished; her portraits are wondrously fresh and glowing in brilliancy. In this genre, the portrait of the Duchess of Brunswick, sister of George III, is considered her masterpiece. Her portrait of herself is to be seen in the Berlin Museum. Her historical pictures are altogether inferior; the sentimentality of the period in which she lived contributed to their vogue, and they have since declined considerably in the general esti-
mation, chiefly because the drawing leaves too much to be desired.

**Gérard de Rouzi, Vita di Angelica Kauffmann pittrice (Florence, 1810); Kontynenburg, Kunstdenkmäler von Ang elic Kauffmann (1848); Röckl, Angelica Kauffmann (2 vols., Paris, 1838); Wessely in Kunst und Künstler des Mittelalters und der Neuzeit (Leipzig, 1876).**

**Gaston Sorelais.**

**Kauffmann, Alexander, poet and folklorist, born at Bonn, 14 May, 1817; died at Wertheim, 1 May, 1893.** He came of a well-known patrician family, whose members were prominent during the eighteenth century, some being in the city regiment of Bonn and others in the service of the former Elector of Cologne. Kauffmann was related to the two historical painters, Andreas and Karl Müller. At Bonn he studied jurisprudence, languages, and history; in 1844 he was appointed teacher of Prince Karl von Löwenstein-Wertheim-Rosenberg, who, in 1850, made him keeper of the archives at Wertheim, which post he retained until his death. He published “Gedichte” (1852), “Mainsagen” (1850), and “Unter den Reben” (1871). His original research for Karl Simrock’s legends of the Rhine, and his own legends of the Main are very valuable. He collaborated with the highly imaginative poet Georg Friedrich Dahn in “Mythoterpe, ein Mythen-Sagen- und Legendenbuch”; did critical research work on “Cassarius von Heisterbach” (1850, 1862); and translated “Wunderbare Geschichten aus den Werken des Cassarius von Heisterbach” (1888-91). His posthumous “Biographie des belgischen Domini kaners Thomas von Chantimpire” was published in 1899.

**Leopold Kauffmann, Chief Burgomaster of Bonn, brother of the above, b. 13 March, 1821; d. 27 Feb., 1898.** With his brother Alexander, he attended the grammar school of his native city, and in the year 1840, through Ernst Moritz Arndt, who had shortly before been reinstated in his professorship, Kauffmann was matriculated as student of law at the University of Bonn. Together with his scientific studies he cultivated an intelligent love of music and singing; held inspiring intercourse with such composers as Felix Mendelssohn, Bartholdy and Franz Liszt, with poets like Gottfried Kinkel, and with his future wife Johanna, née Mocell; and with these artistic friends he founded a poetical society called the “Maikäfersbund.” On the occasion of the first Beethoven festival and of the unveiling of the Beethoven Monument, in the summer of 1845, Kauffmann founded the still eminent male choral society of Bonn, the “Concordia.” When the revolutionary disturbances broke out in May, 1848, and many of the burgomasters in the Rheinish provinces voluntarily gave up their positions, he was appointed first government referendary of the burgomaster administrator at Uhlheim, the next year later deputy landrath or president of the District of Zell on the Moselle. In October, 1850, he was elected Burgomaster of Bonn, which at that time contained 18,000 inhabitants, and assumed office in the following May. In 1859 he received the title of chief burgomaster. Among the important enterprises which he planned for the welfare of the city, and which he car-
ried out with prudence and energy, may be mentioned the foundations for extensive docks on the Rhine, the drainage of the entire city, laying out new plans for alignment and rebuilding, and eventually for a canal. For the systematic aid of the poor he laid out the city in districts; he also built an asylum for the insane. He provided for the young by a systematic reorganization of the school system, as well as for the support of the orphans. Very successful too were his exertions for the artistic adornment of the beautiful cemetery of Bonn, of the tombs of Schiller's widow and his son Ernst, those of the composer Robert Schumann, and the poet A. W. von Schlegel.

Kaulen was appointed by the King of Prussia a life member of the Upper House on the nomination of the city of Bonn. On the question of reforming the army, he voted with the so-called constitutional deputies on 11 October, 1862, for the budget as arranged by the Lower House. On the hundredth anniversary of Ludwig von Beethoven (b. at Bonn, 12 Dec., 1770), the Beethoven Hall was built. In August, 1871, the Beethoven musical festival, and in August, 1873, the Schumann festival were held, two significant musical events, the success of which was largely due to Kaufmann, and which procured for Bonn the character of a first-class city. After the Vatican decree of 18 July, 1870, Bonn and Munich became the centres of the Old Catholic movement. Whilst several of Kaufmann's most esteemed friends joined the new sect, he always remained true to the Church. In 1874 he was unanimously re-elected burgomaster for the third time by the town council of Bonn, for a term of twelve years, but he became a victim of the Kulturkampf. Although he recognized the necessity for the government taking measures with the object of regulating its attitude towards the Church, and declared himself prepared in his official capacity to accept the May laws, his confirmation was refused by the administration on 8 May, 1875, a measure which resulted in an interpellation by Windlof in the Reichstag and the Prussian Diet. At the end of 1876, Kaufmann was elected to the Lower House from the electoral district of Münchlen-Glabbach, joined the Centre party, and soon became a member of its governing majority. In the Reichstag he frequently spoke in the interests of art and science. He was likewise one of the founders of the "Gürrengesellschaft", for fostering science in Catholic Germany (1876), and for the first fifteen years was its general secretary. After 1852, he was vice-president of the Borromean Society for Good Deeds. In 1884 he refused re-election to the Reichstag, and henceforth devoted himself to the promotion of art and of useful undertakings, particularly to the decoration of Bonn cathedral. Among his writings may be mentioned: "Albrecht Dürer" (Cologne, 1881; 2nd ed., 1887); "Rieder und das Rheinland" (1884); "Philipp Veit, Vorträge über Kunst" (1891).

KARL HOEBER.

Germany.

KAULEN.

FRANZ PHILIP, Scriptural scholar, b. 20 March, 1827, at Düsseldorf; d. at Bonn, 11 July, 1897. He attended the gymnasia in his native city, studied theology at the University of Bonn from 1846 to 1849, and was ordained priest at Cologne on 3 September, 1850. For several years he was engaged on the mission in various stations of the Diocese of Cologne, until in 1859 he was appointed lecturer at the Koxhaling school at Bonn. In 1862 he received the degree of Doctor of Divinity from the University of Würzburg in virtue of a commentary on the Book of Jonas; in 1863 he obtained a chair of Old Testament exegesis at the University of Bonn; in 1880 and 1882 he was appointed extraordinary and ordinary professor respectively at the University of Bonn. In 1880 he was raised to the dignity of a domestic prelate by Leo XIII; in 1900 he received the grand cross of the Order of the Knights of the Holy Sepulchre, and in 1903 he was made a member of the Biblical Commission. During the same year (1903) he was compelled to give up teaching owing to an apoplectic stroke.

The study of the Bible was Kaulen's aim from the beginning. He kept before his mind even when engaged in the ministry or in the conferences at the theological seminary of Bonn the duty of tendering the Bible to it or kindred subjects. His principal works are: (1) "Lingua Mandechurica Institutiones", a grammar of the Manchu language (Ratisbon, 1857); (2) "Die Sprachverwirrung zu Babel", or the confusion of languages at Babel (Mainz, 1861); (3) "Librum Jonas ex Interpretatione Fr. Kaulen", or a commentary on the Book of Jonas (Mainz, 1862); (4) "Geschichte der Vulgata", or a history of the Vulgate (Mainz, 1861); (5) "Sprachliches Handbuch zur biblischen Vulgata", or a linguistic manual to the Latin Vulgate (Mainz, 1870); (6) "Einleitung in die Heilige Schrift Alten und Neuen Testamentes", or Introduction to the Sacred Scripture of the Old and New Testament (Freiburg, 1876-86); (7) "Assyrien und Babylonien" (1876); (8) "Der biblische Schöpfungsbericht", or the Biblical account of the creation (Freiburg, 1902); (9) "Thomas von Villanova, ein Büchlein von der göttlichen Liebe", or a book on devotion. (10) Three books of devotion. "Alleluja", "Brot der Engel" and "Bread of the Angels", and "Die ewige Anbetung" and the perpetual adoration. The books of Kaulen were much in demand; some—e. g. the grammar to the Vulgate, the "Introduction" and "Assyria and Babylon"—passed through several editions.

A lasting monument of his theological learning is found in the second edition of the "Kirchenlexikon". The first edition of this work which comprised 11 volumes, a supplement, and a general index, was issued by the publishing firm of Benjamin Herder (q. v.). A second edition, necessary for a larger circle of readers, the copyrightship was entrusted to Dr. Joseph Hegenröther, then professor in Würzburg, but, at the elevation of the latter to the cardinalate in 1879, was finally given to Dr. Kaulen, who presided over the work until it was completed. The new or second edition comprises twelve volumes and a general index; the first volume appeared in 1886, the last in 1901, and the index compiled by the Rev. Hermann Joseph Kamp, with an introduction on the divisions of theology by Dr. Melchior Abfalter, in 1903. Kaulen was helped in this gigantic enterprise by the Rev. Dr. Hermann Streber, by the Rev. A. M. Weiss, O.F.P., who prepared the catalogue of subjects, and by a large number of contributors, the list of whom is given at the end of the last volume. The part taken by Kaulen consisted in editing the articles contributed, in revising several articles taken over from the first edition, and in contributing many articles of his own; the enumeration of his personal contributions is almost five columns in the general list of contributors. The selection of Kaulen for this great theological work was most fortunate. In the preface to the first volume, written in 1882, he declared that the articles should combine depth of learning with ecclesiastical correctness and a clear, intelligible presentation of the subject, which programme was carried out through the entire work.

FRANCIS J. SCHLIEPER.

KAUNITZ, WENZEL ANTON, an Austrian prince and statesman, b. at Vienna 2 February, 1711; d. there 27 June, 1794. His parents had destined him for the Church, and at the age of thirteen years he already held a canonry at Münster. Soon, however, he gave up the idea of becoming an ecclesiastic, and studied law at Vienna, Leipzig, and Leyden. He afterwards undertook an extensive educational journey through England, France, and Italy, and was then made auile counciller in 1735. At the German Diet of Ratisbon
in 1739 he was one of the imperial commissioners. In March, 1746, he was sent on a diplomatic mission to France. He was in Turin in April, 1742, was appointed Austrian ambassador at Turin. Two years later he was appointed minister plenipotentiary to the Government of the Netherlands, in which capacity he was to act as the actual ruler of the Netherlands, because Archduke Joseph, whom Maria Theresa had invested with the government of the Netherlands, died a week after his arrival, and her husband, Prince Charles of Lorraine, was commanding the Austrian army in Bohemia against the King of Prussia. When Brussels was taken after a three weeks' siege by Maurice de Saxe on 20 February, 1746, Kaunitz went to Austria. He remained in the Tyrol, which is in the area that place, he left for Aachen, whence his urgent request to be recalled from his difficult position was finally heeded by the empress in June, 1746. In 1748 he represented the interests of Austria at the Congress of Aachen, and reluctantly signed the treaty on 23 October, 1748. Extremely displeased at the treaty, which deprived Austria of the provinces of Silesia and Glatt, guaranteeing them to Frederick II, Kaunitz sought a way to regain these provinces and destroy the predominance of the King of Prussia. He advocated an alliance with France, and, when sent as ambassador to Berlitz, he was sent to the Congress of Vienna in 1756 to lay the foundation for this alliance, which, however, was not concluded until six years later. In 1753 he was recalled and became chancellor of state and minister of foreign affairs.

Towards the end of 1755 he again began negotiations with France concerning an anti-Prussian alliance. This time the circumstances were in his favour. France felt itself slighted at the alliance into which Prussia had entered with England, and a defensive alliance between Austria and France, known as the Treaty of Versailles, was entered into on May, 1756. This treaty was a very preliminary to the so-called Second Treaty of Versailles, signed on 5 May, 1757; in this it was stipulated that the two powers would fight against the King of Prussia, until Silesia and Glatt were restored to Austria. A similar alliance was effected with Russia on 2 February, 1757. Both these alliances were the effect of a power struggle which practically gave up control of the affairs of the Austrian Empire during the ensuing Seven Years War. Maria Theresa placed implicit reliance in his ability and devotion to his country, and no reform of any importance was undertaken during her rule, which did not originate from Kaunitz or bear his stamp. In 1760 he founded the Austrian Council of State, consisting of six members, improved the financial management, and introduced various other governmental changes. In 1764 he was created a prince of the empire with the title of Count von Rittert. The paramount influence which Kaunitz wielded during the reign of Maria Theresa grew considerably less during the reign of her son, Joseph II. In the main, Joseph II and Kaunitz pursued the same ends, viz. territorial expansion, increase of the central state authority and limitation of the authority of the nobility, to Paris in September, 1750, began the supervision of the latter over the former even in the minstation ritual and disciplinary regulations, a better education of the common people, and more consideration for their legal rights. But, despite the unity of their aims, they had numerous disagreements, because while Kaunitz was still able to give up his visions of reverence towards the other. In addition, Kaunitz was extremely vain and eccentric. He spent hours preparing his elaborate toilet at which he was assisted by a host of servants, having each a particular duty to perform. He manifested a childish fear of contagious diseases and could not bear to hear the word death or plague mentioned in his presence. Emperor Joseph in a letter to his brother Leopold, written about two weeks before his death, says of Kaunitz: "Would you believe that I have not seen him for two years? Since the day on which I returned sick from the army I can no longer go to him, and he does not come to me for fear of contagion". Despite his manifold faults, Kaunitz always had Austria's welfare, as he understood it, at heart, and his long experience and cau-}

KAVANAGH

KAVANAGH

EDWARD, American statesman and diplomat, b. at Newcastle, Maine, 27 April, 1795; d. there, 21 Jan., 1844. He was educated at Harvard College, and came to America from Ireland in 1780, settled in Maine, and became a prosperous merchant and shipowner. His mother, Sarah Jackson, was a native of Boston and a convert to the Catholic Faith. Their home was for many years a centre of hospitality for the missionary priests labouring in Maine. One of these, Father afterwards Cardinal Cheverus, was an intimate friend of the family. Edward Kavanagh entered Georgetown College in 1810, and changed to St. Mary's, Baltimore, in 1812. His classical studies were completed in Europe, where he acquired a useful familiarity with modern languages. Returning home, he devoted himself to his father's business, which had suffered severely in the War of 1812, and to the study of law. He was admitted to the Bar, and was esteemed as a counsellor. Failing in an attempt to enter the diplomatic service, he turned to politics, was elected to the Maine Legislature in 1826, was secretary of the Senate in 1830, and in 1831, as commissioner, explored the northern frontier of the State and presented to the governor a valuable report on the subject. Elected to Congress in 1831, he served two terms. In 1835 he was named chargé d'affaires at Lisbon, Portugal, and ranked as chief American representative in that country. Though Portugal was in the throes of revolution and bankruptcy during the five years of his residence.
Mr. Kavanagh settled all claims pending at his arrival, and negotiated a favourable commercial and navigation treaty. He resigned in 1841, and returning to Maine, was elected to the State senate as its presiding officer. The following year he was elected to the Senate of the United States, and he was chosen to be one of four commissioners to negotiate at Washington the preliminaries for the Webster-Ashburton Treaty. On the resignation of Governor Fairfield, Mr. Kavanagh succeeded to the office of governor which he held nine months. He suffered from demoralism during the latter years of his life. He died sustained by the sacraments of the Church of which he was a faithful and uncompromising member all his life. Though not eloquent, he was a convincing speaker and an accomplished scholar. Longfellow's story, "Kavanagh," is not founded on the Maine statesman's career. He is buried in the shadow of St. Patrick's church, Newcastle (Damariscotta Mills).

Unpublished correspondence and papers in possession of the Kavanagh family, Newcastle, Maine; National Cyclopaedia of Biography, VI (New York, 1896), 300; LAPS, Biographical Dictionary of the U.S., IV (Boston, 1901), 478: Representative Men of Maine, 1895; Maine Historical and Genealogical Recorder, IX (Portland, 1896-97); Allen, Early Landmarks of the County of York, Maine (Portland, 1896); Maine Hist., Soc., Col., VI, 74; Rooms, History of Ancient Shepeet and Newcastle (Bath, 1893), 359; Shepeet, History of Ancient Shepeet and Newcastle, IX (Portland, 1897); Akroyd, O., recollections of her father, 441; 612-5; Curtis, Life of Daniel Webster, II (New York, 1870), 113; Collins, Governor Edward Kavanagh in Historical Records and Studies, V (1900).

CHARLES W. COLLINS.

Kavanagh, Julia, novelist and biographer, b. 7 Jan., 1824, at Thurlow, Ireland; d. 28 October, 1877, at Nice, France. She was an only child. Her father, Morgan Kavanagh, a poet and philologist, was the author of some curious works on the source and science of languages. At an early age she accompanied her parents to London, but soon removed to France, where she received her education and remained till her twentieth year. She then resided in France, with several other long visits later in life, gave her an insight into French life and character, which she portrayed most faithfully in many of her works. In 1844 she returned to London, and at once embraced literature as a profession. She began by writing the articles in the Dictionary of the Day. Her first book, "The Fables of the Irish," a tale for children, appeared in 1847. It was followed by "Madamein" (1848), a story founded on the life of a peasant girl of Auvergne. This gave her a literary reputation which was increased by her historical biographical works: "Women in France during the Eighteenth Century" (1850), "Women of Christianity Exemplary for Acts of Piety and Charity" (1852), "French Women of Letters" (1862), and the companion volume "English Women of Letters" (1862). As a biographer she shows great power and a fine sense of discrimination in portraying her characters, though the claims she makes for her heroines are at times somewhat exaggerated. If is, however, as a novelist, that she is best known. Her studies of French life and character, which are worked into almost all her stories, are excellent and show her at her best. Her plots, though not of great depth, are well developed and of sufficient action to hold the interest. "Her writing" remarked a contributor to the London "Athenæum" at the time of her death, "was quiet and simple in style, but pure and chaste, and characterized by the same high-toned thought and morality that was part of the author's own nature." She wrote about twenty novels, which have had a wide circulation in America and have been translated into French. The best known are "Madamein" (1848), "Nathalie" (1851), "Daughter Burns" (1853), "Rachel Gray" (1855). About 1833 she made a prolonged tour of the Continent, and in 1838 published her experience under the title of "A Summer and Winter in the Two Sicilies".

Her life was rather eventful: a great part of her time was devoted to the care of her widowed mother, who was an invalid. At the outbreak of the Franco-German War, Miss Kavanagh, who was living in Paris with her mother, retired to Rouen and thence to Nice, where she died in her fifty-fourth year. After her death appeared a collection of short tales bearing the appropriate title: "Forget-me-nots" (1878).

Read, Cabinet of Irish Literature (London, 1891); Academy (10 Nov., 1877); Athenæum (17 Nov., 1877); Irish Monthly, VI; preface to Forget-me-nots (1878).

Keheirn, Joseph, educator, philologist, and historian of German literature, b. at Heidesheim, near Mainz, 20 October, 1808; d. at Montauban, Hesse-Nassau, 25 March, 1876. In 1823 he entered the gymnasium in connexion with the diocesan seminary at Mainz, and after its suppression in 1829 he continued his classical studies at the state gymnasium of the same place, where he graduated in 1831. After studying philology at the University of Giessen from 1831 to 1834, he taught at the gymnasium of Darmstadt, 1835-1837, at that of Heidelberg, 1837-1841, and at the newly founded gymnasium of Haarlem in Nassau, 1845-1846, professor at the same place, 1846-1855, director of the Catholic teachers' seminary at Montauban, 1855-1876, and at the same time director of the Realchule at the same place, 1855-1866. He is the author of numerous works, chiefly on the German language, on the history of German literature, and on pedagogy. The best known among them are: "Die dramatische Poesie der Deutschen" (2 vols., Leipzig, 1840); "Grammatik der neunzehnten deutschen Sprache" (2 vols., Leipzig, 1847-51); "Geschichte der katholischen Kanzeleibesamkeit der Deutschen" (2 vols., Ratisbon, 1843); "Die weltliche Beredsamkeit der Deutschen" (Mains, 1846); "Grammatik der deutschen Sprache des 15-17. Jahrhunderts" (5 vols., Leipzig, 1864-66; 2nd ed., 1869); "Biographisch-kritisches Lexikon der katholischen deutschen Dichter. Volume 19. Jahrhunderts" (2 vols., Würzburg, 1868-71); "Handbuch der Erziehung und des Unterrichts" (Paderborn, 1876; 12th ed., 1906); "Ueberblick der Geschichte der Erziehung" (Paderborn, 1873; 11th ed., 1899). He also edited "Katholische Kirchenblätter aus den ältesten deutschen Gesangbüchern" (3 vols., Würzburg, 1859-65); "Lutherische Sequenzen des Mittelalters" (Mains, 1873).

MICHAEL OTT.

Kelly, Benjamin J. See Savannah, Diocese of.

Keller, Jacob, controversialist, b. at Säckingen, Baden, Germany, in 1568; d. at Munich, Bavaria, 23 February, 1631. After entering the Society of Jesus in 1589 and completing his studies, he taught the classics at Freiburg and was professor of philosophy and of moral and dogmatic theology at Ingolstadt. He was appointed rector of the college of Ratisbon in 1605, and of the college of Munich in 1607, which post he held until 1623. In 1628 he was reappointed to the rectorship of Munich, and was still holding the office when a stroke of apoplexy ended his life. Besides his literary and scholastic attainments (for he was regarded as a genius by his contemporaries), he possessed uncommon executive ability, and in spite of his extreme humility was consulted not only by his religious superiors, but also by Maximilian I, Elector of Bavaria, who often sought his advice and entrusted to his care affairs of moment, which he discharged with much success.
His principal works are: "Tyrannicideum" (Munich, 1611) and "Catholisch Pabststumb" (Munich, 1614). The former, which appeared both in German and Latin, was an answer to certain calumnies printed by Goether. It is worth noting that the Jesuits of the Society of Jesus on the subject of tyrannicide. Father Keller showed that the Jesuit teaching was no other than that of the greatest theologians, both Catholic and Protestant. The work on the papacy was a reply to aspersions cast on the Holy See by Jacob Heilbrunner, and is a veritable treatise of the teachers of Catholic teachers of both sexes, school inspectors, and seminaries. His "Lebensblatter, Erinnerungen aus der Schulwelt" (1891) is a work of great interest. After his death was published "Lose Blätter, Pädagog. Zeitbetrachtungen und Ratezüge von Keller" (1897).

KELLNER, Lorenz, educationist, b. at Kalteneber in the district of Eichsfeld, 29 January, 1811; d. at Trier, 27 August, 1886. Son of Heinrich Kellner who had been a pupil of Pestalozzi at Yverdon and had introduced Pestalozzi's methods at the normal school he conducted, the first of its kind in the Catholic district of Eichsfeld. Out of these private courses for the training of elementary school-teachers developed the still-existing seminarium for teachers at Heiligenstadt. Lorenz Kellner graduated at the Gymnasium Josephinum at Hildesheim, and then studied with great success at the evangelical seminarium for teachers at Magdeburg. After being a teacher at the Catholic elementary school at Erfurt for two years, he entered the seminary at Trier. Kellner founded several seminaries both for male and female teachers during the twenty-nine years of his official activity here. In his chief work, "Praktischer Lehrgang für den deutschen Unterricht" (1837-40), the teaching of grammar was systematically connected with the reading-book. This was, for that period, a very important advance when contrasted with the current methods of grammatical instruction. In 1850 appeared his best-known work, "Zur Pädagogik der Schule und des Hauses. Aphorismen," which was translated into several languages. It contains altogether 178 essays which cover the entire field of teaching and training. His "Skizzen und Beobachtungen Entlehnten Erziehungswesens" (3 vols., 1858) was the first and also the best treatment of the history of pedagogy by a Catholic author. In 1863 the Academy of Münster in Westphalia made Kellner Doctor of Philosophy honoris causa, in recognition of his services on behalf of the German language and of pedagogics. Kellner's "Kurze Geschichte der Erziehung und des Unterrichtes" (1877) is a book of practical suggestions for teachers; his "Volksschulkunde" (1882) was a theoretical presentation of his ideas. Catholic teachers of both sexes, school inspectors, and seminaries. His "Lebensblatter, Erinnerungen aus der Schulwelt" (1891) is a work of great interest. After his death was published "Lose Blätter, Pädagog. Zeitbetrachtungen und Ratezüge von Keller" (1897)

Joseph
out a single false or irregular line. Some of the most accomplished of modern draughtsmen have attempted the 'Diagrams of St. Patrick,' but such is the delicacy of the execution, that they have not succeeded in laying them down as hopeless. In a space of one inch square, they counted no less than 158 interlaces of white ribbon with a black border on either side. On the other hand, the pictures of the personages delineated are feeble and primitive, and show but a limited knowledge of the human figure and its relative proportions. No words can describe the beauty and the extreme splendour of the richly coloured initial letters, which are more profuse in the "Book of Kells" than in any other manuscript. The only thing to which they can be compared is a bed of many coloured crocuses and tulips or the very finest stained glass window, in which they equal in beauty of colouring and rival in delicacy of ornament and drawing. The artist possessed a wonderful knowledge of the proportion of colour and the distribution of his material—sienna, purple, lilac, red, pink, green, blue, yellow, the colours most often used—and he managed the shading and tinting of the letters with consummate taste and skill. (On the pigments employed by the illuminator, see Hartley in "Proceed. Royal Dublin Society, Science," N. S., IV, 1885, p. 485.) It is remarkable that there is no trace of the use of silver or gold on thevellum. Sometimes the picture is in black, in which case a yellowish appearance of enamel, and are here and there as bright and soft and lustrous as when put on fresh more than twelve hundred years ago. Even the best photographic and colour reproductions give but a faint idea of the beauty of the original. Especially worthy of notice is the series of illuminated miniatures, including pictorial representations of the Evangelists and their symbols, the Blessed Virgin and the Divine Child, the temptation of Jesus, and Jesus seized by the Jews. These pictures reach their culminating point in what is, in some respects, the most marvellous example of workmanship that the world has ever produced, namely the full-page monogram XP on which occurs in the text of the Gospel of St. Matthew. It is no wonder that it was for a long time believed that the "Book of Kells" could have been written only by angels.

JOSEPH DUNN.

Kells, SCHOOL OF.—Kells (in Gaelic Ceanannus) was the chief of the Irish Columban monasteries. It was founded most probably in 554, that is nine years before Columba founded Iona, and during the second half of the fifth century became the greatest of the insular monasteries. Kells still contains several ancient monuments which tradition closely connects with Columba's residence there. Of these the most interesting is "Columba's House," a tall high-pitched building, of which the ground floor formed an oratory, while the crypt between the convex arching of the oratory and the roof of the building was the chamber or sleeping apartment of the saint. There are also two fine crosses dating probably from the ninth century, when Kells held the principatus of all the Columban monasteries both in Erin and Alba, and which stand in the most prominent place and the most conspicuous situation in the churchyard. The latter is a finely sculptured cross, having on the plinth the inscription Petri et Columbe [cruz], which would seem to imply that it was intended to commemorate the memory of Patrick, who founded the original church of Kells, and Col-

umba, who founded the monastery. There is also a fine round tower, still ninety feet high, built doubtless during the period of the Church of Iona's supremacy over the monastery. The "Book of Kells," called also the Great Gospel of Columcille, which legend attributed to the pen of Columcille himself, was preserved in Kells down to Usher's time. It was stolen in 1006, when the gold was stripped off its cover, but the book and case were afterwards found in a bog. It was regarded as "the chief relic of the Christian world," and Professor Westwood of Oxford declared that "it is unquestionably the most elaborately executed MS. of so early a date now in existence." It is preserved at present in Trinity College, Dublin.

Kells and Iona were always closely connected. Shortly after the house of Iona was burned by the Danes in 802, its abbot fortunately got a "free grant of Kells without a battle"—for it had originally belonged to Columcille. Thereupon a "new religious city"—the old one being probably in ruins—was built in Kells; and the Abbot Cellach of Iona transferred his residence and insular primacy to Kells, which henceforward became the acknowledged head of the Columban houses. The abbot also carried with him the shrine of Columba, which, however, more than once crossed and re-crossed the sea throughout the ninth century. During this and the following centuries Kells became a healthy place for religious and artistic culture, and continued to flourish in spite of the frequent ravages of the Danes. The celebrated Cathach, the battle-standard of the O'Donnells, was preserved in the monastery and enshtered therein in a beautifully wrought casket. It contained a pastrility said to have been written by the hand of Columba himself. Mac Robartaigh, Comharb of Kells, had its marvellous cover made in his own house. His family belonged to Tirhugh in County Donegal, and gave many abbots and sages and scholars at this period to the school of Kells. The most famous of them was the renowned Marianus Scotus, described by Murchadha Mac Robartaigh—a celebrated scribe and commentator on Scripture, to be carefully distinguished from his namesake, Marianus Scotus, the chroniplier. Leaving his beloved Kells he journeyed all the way to Ratisbon, a pilgrim for Christ, and there founded for his countrymen in the land of the stranger the celebrated Monastery of St. James. He himself unwearingly copied the Scriptures, and is described by Aventinus in his "Annals of Bavaria" as "a distinguished poet and theologian, second to no man of his time." The poems are lost, but the commentaries survive though still unpublished.

They include a commentary on the psalms, which was considered so valuable that it was not allowed outside the walls of the monastic library without a valuable deposit being left to secure its safe return. There is also extant in the Cotton collection an unpublished codex containing the treatise of Marianus Scotus consisting of "Extracts from the Writings of Various Doctors on the Gospel." His most famous work, however, was a commentary on St. Paul's Epistles, with marginal and interlinear notes. It is still unpublished amongst the treasures of the Imperial Library of Vienna, and is specially valuable because it contains many entries in the pure Middle Gaelic of the eleventh century, written by a man who was at once an accomplished scribe and most excellent Irish scholar. This learned work shows that Marianus was acquainted with the writings of nearly all the Latin Fathers of the fourth and fifth centuries. It was composed about the last Friday, the sixteenth day before the Kalends of June, 1079. The devoted scribe and commentator, who is commonly and justly styled the Blessed Marianus Scotus, lived for ten years more, and after his death was universally regarded as a saint. He was, after Adamnan, Abbot of Hy, justly esteemed.
as the greatest glory of the Columban schools. His
ameake, the chronicler, died some six years before him.

Kemble, JOHN, VENERABLE, martyr, b. at Rhysdi-
car Farm, St. Weoner's, Herefordshire, 1599; d. at
Widemars Common, Hereford, 22 August, 1679;
son of John Kemble, formerly of Kemble, Wiltshire,
afterwards of Llangarren, and of Urchinfield (now
part of the parish of Hardwicke), and Anne, daughter
of John Morgan, of The Waen, Skenfrith, Monmouth-
shire. His uncle, George Kemble, of Pembroke Cast-
te, Welsh Newton, was the father of Captain Richard
Kemble, who saved Charles II at the battle of Wor-
cester. Ordained priest at Douai College, 23 Febru-
ary, 1625, he was sent on the mission 4 June, and
in his old age lived with his nephew at Pembroke Castle.
Arrived Capt. John Seadmore of St. Peter's church, he was lodged in Hereford Gaol in November,
1678, and condemned under 27 Eliz. c. 2 at the end
of March following. Ordered to London with Father
Charles Baker, he was lodged in Newgate and inter-
viewed by Oates, Bedloe, and Dugdale. Sent back to
Hereford, the aged priest spent three more months in
gaol. Before leaving for his execution he smoked a
pipe and drank a cup of sack with the under-sheriff,
this giving rise to the Herefordshire expression
"Kemble pipe", and "Kemble cup", meaning a part-
ing pipe or cup. Sir John Hawkins in a note to "The
Complot Anglorum" turns Kemble into a Protestant in
Mary's reign. One of the martyr's hands is preserved
at St. Francis Xavier's, Hereford. His body rests in
Welsh Newton churchyard.

B. W. WAINWRIGHT.

Kemp, JOHN, Cardinal, Archbishop of Canterbury,
and Chancellor of England; b. at Wye, Kent, about
1380; d. at Lambeth, 22 March, 1454. He was the
son of Thomas Kemp of Ollantigh and 27th Ashford,
Beatrice Lewkno, and was educated at Merton Col-
lege, Oxford. Having become doctor of laws, he
practised as an ecclesiastical lawyer with such success
that in 1415 he was made dean of the Court of Arches
and vicar-general to the Archbishop of Canterbury.
King Henry V also utilized his diplomatic talent in
military commissions. Appointed Bishop of Rochester
by papal provision, 26 June, 1419, he was consecrated
in the following December. In 1421 he was translated to
Chichester, and eight months later to London, by
provision of Martin V. On the death of King Henry
V, whom he had served as Chancellor of Normandy,
he was made a member of the Senate, in which capacity
he supported Cardinal Beaufort against Humphrey,
Duke of Gloucester. In 1426 he was made first
Chancellor and then Archbishop of York.

His political differences with Gloucester led to his
resigning the chancellorship in 1422, but he continued
to act in public life as a supporter of the peace
party, who wished to end the long war with France.
In 1433 he was the head of the important but fruitless
embassy to the congress of Arras, when a settlement
was vainly attempted under the auspices of the papal
legates. In 1439 he was created cardinal by Eugenue
IV, his title being Sancta Balbina. After the deaths
of his opponent Gloucester and his friend Beaufort, he
set himself to resist the power of the Duke of Suffolk,
and in 1450 he was again a Westminster in that city.
In this capacity he put down the Kentish rebellion, and amid the con-
suming likelihood of civil war remained the mainstay of the king's party against the Yorkists. In 1452 Nicholas
V transferred him from York to Canterbury, giving
him the pallium on 24 Sept. The same pope made
him a cardinal bishop by dividing the See of Porto
from that of Santa Rufina and creating for him the last-named diocese. His last days were agitated by the tumultuous proceedings of the London citizens,
who, supported by the Yorkists, were threatening him
with violence, when the end came. He lies buried in
Canterbury cathedral. More statesman than bishop,
he was accused with reason of neglecting his diocese,
but his private life was distinguished by wisdom,
learning, and uprightness.

KEMPIS, THOMAS A. See THOMAS A KEMPIS.

Kenia, Vicariate Apostolic of, coextensive with
the civil province of Kenya in British East Africa, to
which the station of Limuru is added. It extends east
as far as the Rivers Tana and Soni, and south to the
mountains of Aberdare and the River Guaso-Uguiro,
while its northern limits are as yet indeter-
minate. Originally part of the Vicariate Apostolic
of Northern Zanzibar, it was first entered by several
priests of the Institute Consolata of Turin. In Sep-
tember, 1949, the Sacred College of the Insti-
tegy erected it into an independent mission, and
in 1909 the mission was in turn created a vicariate
Apostolic. Its superior, Father Philippus Perlo, was
made titular Bishop of Maronia and the first head of
the new vicariate. The climate of Kenya is, for the
most part, temperate and healthy. The language of
the natives is chiefly Kikuyu and Kiswahili. The popu-
lation is estimated at between 2,000,000 and 3,000,000,
almost entirely savage, and given over to various
forms of fetishism and nature-worship. Conversa-
tions, however, are being gradually effected. The vicariate includes 17 regular priests of the Institute Consolata; 10 European catechists; 80 chapels—the more im-
portant of which are located at Tusu-Kasongori, Fort
Hall, Limuru, Kekondo, Niere, Mogoiri, and
Karema; schools at the different stations; 1 orphan-
age; the Order of the Institute Consolata with 8
houses and 36 brothers; and the Order of St. Vincent
Cottolengo with 6 houses and 31 sisters.

STANLEY J. QUINN.

Kennedy, James, Bishop of St. Andrews, Scotland,
about 1406; d. 10 May, 1466. Of the ancient house
of Kennedy of Dunure, he was a son of Lady Mary,
doughter of King Robert III, and was therefore a
cousin of James II, then reigning in Scotland. After
studying on the Continent, he was appointed Bishop
of Dunkeld in 1438, and Abbot of Scone soon after-
wards, and in 1440 he succeeded Henry Wardlaw as
Bishop of St. Andrews. In 1444 he founded the new
convent of Bubbleburn, and in 1444 he showed himself a vigorous reformer of the civil and
ecclesiastical abuses rampant in Scotland, and conse-
quently incurred the enmity of many of the nobles.
Kennedy soon resigned the chancellorship, finding it
incompatible with his ecclesiastical duties, to which he
had devoted himself with the greatest delight. His
concern for learning was shown by his foundation and munifi-
cent endowment, in 1450, of St. Salvator's College,
St. Andrews, with the sanction and approbation of Nicho-
laus V and Pius II. He introduced the Franciscan
Observants into St. Andrews, in 1458; and he also
built a vessel—described by his contemporaries as "a vast ship of great burden"—for trading purposes, called the St. Salvator, which remained the property of the sea till 1472, when it was wrecked. At the death of James II, in 1460, Kennedy was chosen a regent of the kingdom, and exercised the office until his death five years later. The remains of his splendid tomb are still to be seen in the ruined chapel of St. Salvator's. Kennedy was one of the most learned, wise, and pious prelates of the ancient Scottish Church.

Kenny, William John. See St. Augustine, Dio-
cese of.

Kenosis, a term derived from the discussion as to the real meaning of Phil., ii, 6 sqq.: "Who being in the form of God, thought it not robbery to be equal with God: But emptied himself (besides himself, taking the form of a servant, being made in the likeness of men, and in habit found as man." The early Reformers, not satisfied with the teaching of Catholic theology on this point, professed to find a deeper meaning in St. Paul's words, and later in the Church, and in their speculations. John Brenz (d. 10 September, 1570), of Tubingen, maintained that as the Word assumed Christ's human nature, so His human na-
ture assumed the Word; hence His human nature not only possessed the Divinity, but had also the power to make use of the Divinity, though it freely ab-
stained from such a use. Chemnits differed from this view. He denied that Jesus Christ possessed the Divinity in such a way as to have a right to its use. The kenosis, or the exinanition, of His Divine attributes was, therefore, a free act of Christ, according to Brenz; it was the conatural consequence of the Incarnation, according to Chemnits.

Among modern Protestants the following opinions have been the most prevalent: (1) Thomasius, De-
litzseh, and Kahnis regard the Incarnation as a self-
emptying of the Divine manner of existence, as a self-
limitation of the Word's omniscience, omnipotence, etc. (2) Gess, Reuss, and Godet contend that the In-
carnation implies a real de potentation of the Word; the Word became, rather than assumed, the human soul of Christ. (3) Ebrard holds that the Divine prop-
erties in Christ appeared under the Kantiuan time-
form appropriate to man; his kenosis consists in an as-
ceasement of the eternal for a time-form of existence. (4) Martensen and perhaps Hutton distinguish a double life of the Word: In the Man-Christ they see a kenosis and a real de potentation of the Word; in the world the purely Divine Word carries on the work of mediator and revealer. According to Godet, as probably also Gess, the Word in His kenosis preserves Himself even of His immutable holiness, His infinite love, and His personal consciousness, so as to enter into a human development similar to ours.

According to Catholic theology, the abasement of the Word consists in the assumption of humanity and the simultaneous occultation of the Divinity. Christ's abasement is seen first in His subjecting Himself to the laws of human birth and growth and to the lowliness of fallen human nature. His likeness, in His abas-
sement, to the fallen nature does not comprise the actual loss of justice and sanctity, but only the pains and passions characteristic of the latter. These fall upon the body, partly on the soul, and consist in liability to suffering from internal and external causes.

(1) As to the body, Christ's dignity excludes some bodily pains and states. God's all-preserving power inhabiting the body of Jesus did not allow any corruption; it also prevented disease or the beginning of cor-

ruption. Christ's holiness was not compatible with decomposition after death, which is the image of the destroying power of sin. In fact, Christ had the right to be free from all bodily pain, and His tormentors had the power to remove or to suspend the action of the causes of pain. But He freely subjected Himself to most of the pains resulting from bodily exertion and adverse external influences, e. g. fatigue, hunger, wounds, etc. As these pains had their sufficient reason in the nature of Christ's body, they were natural to Him.

(2) Christ retained in His also the weaknesses of the soul, the passions of His rational and sensitive appetites, but with the following restrictions: (a) Inor-
dinate and sinful motions are incompatible with Christ's holiness. Only morally blameworthy and affections, e. g. fear, sadness, the share of the soul in the sufferings of the body, were compatible with His Divinity and His spiritual perfection. (b) The origin, intensity, and duration of even these emotions were subject to Christ's free choice. Besides, He could prevent their disturbing the actions of His soul and His peace of mind.

To complete His abasement, Christ was subject to His Mother and St. Joseph, to the laws of the State and the positive laws of God; He shared the hard-
ships and privations of the poor and the lowly. (See COMMUNICATION ICONICAE, 109, 111 sqq. in these chapters; ST. THOMAS, III, Q. XIX-XX, and SALL. URB., IV, XI-XII, in these chapters; PAVOLIUS, Dogmaticus, III, 266-74; BRUCE, Humil-
itations of Christ, 113 sqq.; GORE, Baptism Lectures (1961), 147; HANNA, in The New Jeru-
selem, I, 303 sqq.; On Phil., ii, 6 sqq.

A. J. MAAS.

Kenraughty (KIRCHACHA, KINRECHTIN, OF MAKEN-
RACHTUS; in Irish MACINNIGHARACHAIGH, anglicized HANRATTY AND ENIGHTY), Irish priest, d. 30 April, 1585, at Clonmel, Co. Tipperary. He was the son of a silversmith at Kilmallock, embraced the ecclesi-
asical state, studied abroad, and graduated bachelor in theology. Returning to Ireland, he became chap-

clain to Gerald, sixteenth Earl of Desmond, and shared the fortunes of his patron's struggle against Queen Elizabeth. In September, 1583, a fugitive with the earl, he was surprised on Sliabh Luachra by Lord Roche's gallowglasses, and handed over to the Earl of Ormond. By Ormond's command he was chained to two columns and left to perish. Here he lay in iron, exhorting, instructing, and hearing confession at his prison gate until April, 1585. His jailer was then bribed by Victor White, a leading townsman, to release the priest for one night to say Mass and administer the Paschal Communion in White's house on Passion Sunday. The jailer secretly warned the President of Munster to take this opportunity of apprehending most of the neighbouring recusants at Maas. In the morning an armed force surrounded the house, arrested White and others, seized the sacred vessels, and sought the priest every-

where. He had been hidden under straw at the first alarm, and, though wounded when the heat was probed, ultimately escaped to the woods. Learning, however, that White's life could not be saved but by his own surrender, he gave himself up, and was at once tried by martial law. Pardon and preferrment were offered him for conforming; but he resolutely maintained the Catholic Faith and the pope's authority, and was executed as a traitor. His head was set up in the market-place, and his body, purchased from the soldiers, was buried behind the high altar of the Franciscan convent. He is one of the Irish martyrs whose cause of canonization was introduced.

O'Reilly, Memoirs of those who suffered for the Catholic Faith in Ireland (London, 1888); Murphy, Our Martyrs (Dub-
lin, 1889); Calendar of State Papers (London, 1867); O'Sullivan, Brack, Patricia decaus (Madrid, 1659); Holins in Spicilegium Omorinum, Ist ser. (Dublin, 1874).

Charles Mcneill.
Krenick, Francis Patrick and Peter Richard, Archbishops respectively of Baltimore, Maryland, and of St. Louis, Missouri. They were sons of Thomas Kenrick and his wife Jane, and were born in the older part of the city of Dublin, Ireland, the first-named on 3 December, 1797, and the second on 17 August, 1806. An uncle, Father Richard Kenrick, was for several years prior and priest of St. Nicholas and Myra in the same city, and he cultivated carefully the quality of piety which he observed at an early age in both children.

I.—Francis Patrick was sent by his uncle to a good classical school, and at the age of eighteen was selected as one of the number who were to study for the priesthood. Here he became deeply impressed with the gentle bearing of Pius VII, who had just then been restored to his capital after long imprisonment by Napoleon Bonaparte, and the lesson it taught him bore fruit many years afterwards, when he was called on to deal with the onslaughts on Catholics and their Church in the United States in the years of the Nativist and Know-nothing uprisings. His progress in his clerical studies was rapid; his sanctity conspicuous—so much so as to mark him out for early distinction. He confined himself to the study of his classical books, and the study of the Scriptures, and worked out in his own mind not a few weighty problems. He soon acquired a familiarity with the patristic writings and the Sacred Text that enabled him later on to give the Church in the United States valuable treatises on theological and Biblical literature. He consulted no translations, but took the Hebrew text or the Greek, and pondered on its significance in the light of his own reason and erudition. The rector of Propaganda College, Cardinal Litta, had no hesitation in selecting him despite his youth, when a call came from England for a priest to go to Philadelphia. He was chosen for the chair of theology at Bardstown Seminary, Kentucky. This post he held for nine years, at the same time teaching Greek and history in the College of St. Joseph in the same state, and giving in addition professorial help in every educational institution in the state. He also did much valuable work in the parochial field, and engaged in controversy in the public press with some aggressive polemists of the Episcopal and Presbyterian communions. He made many converts at that time, and in 1826–7 had fifty to his credit, as well as a record of twelve hundred confirmations and six thousand baptisms. His first-fruits in this field were widespread, and his manner most winning.

In 1829 he attended the Provincial Council of Baltimore as theologian to Bishop Flaget, and was appointed secretary to the assembly. There, among the other weighty subjects, had to be considered the distressed state of the Diocese of Philadelphia, then labouring under the troubles begotten of the Hogan schism. Hogan was an excommunicated priest, who persisted in celebrating Mass and administering the sacraments despite the interdict, and had a considerable following in the city. Bishop Connell had by this time become enfeebled and nearly blind, and Rev. William Matthews of Washington had been appointed vicar-general to assist him. Before the council rose it had named Father Kenrick as coadjutor bishop and forwarded the nomination to the Holy See. It was soon confirmed. Doctor Kenrick's title being Bishop of Alton, his consecration he led in Bardstown, assisted by Bishop Flaget, assisted by Bishops England, Conwell, David, and Fenwick, on 6 June, 1830, being then only thirty-four years old. A quarrel with the trustees of St. Mary's broke out immediately on his arrival, resulting in an intercept being placed upon the church and the property; the trustees submitted to their senses, and they gave up the contest for the control of the funds—the power by means of which they had been able to browbeat the preceding ordinaries. Bishop Kenrick soon obtained the passage of a law to prevent the recurrence of such conflicts, by having the bishop's name substituted for those of the trustees in all bequests for the Church. His first thought, after this trouble was over, was the erection of a seminary for the training of young men for the priesthood, the Nativist attack of the past having made the experiment eventually being succeeded by the present seminary of St. Charles Borromeo at Overbrook.

A terrible outbreak of cholera took place in Philadelphia soon after the bishop's arrival, and he gained the gratitude of the authorities and the people at large with his exertions in the midst of the pest. He sent the Sisters of Charity to attend the stricken, and gave the parochial residence of St. Augustine's as a temporary hospital; the local priests, at the same time, went about fearlessly among the stricken, ministering to their spiritual comfort. For these services he was voted public thanks by the mayor and council of the city. To the Sisters of Charity was tendered a service of plate by the grateful authorities, but this offer was promptly and politely declined by those ladies. Soon after this episode Bishop Kenrick set about the utilization of the press for the spread of Catholic doctrine. He started two weekly journals, under the direction of the Reverend John Hughes, afterwards Archbishop of New York. He also began the erection of the Cathedral of St. John the Evangelist to replace St. Mary's, which had been so fruitful a source of trouble to him and his predecessor. Greater trouble soon started up in the form of the anti-Catholic Nativist outbreak of 1844. Furious mobs, maddened by inflammatory harangues about the Bible and the public schools, started out in Philadelphia, as in Boston and other cities, to attack churches and convents. They burned St. Augustine's in Philadelphia and attacked the quarters of the American College at St. John's, but were driven off by the military. They burned many houses in Kensington, the Catholic district, and killed many unoffending people, but were dispersed at length by the soldiery, leaving several of their number dead.

Bishop Kenrick, during this reign of terror, did everything he could to stem the rioting. He ordered the doors of all the churches to be closed and the cessation of Divine worship as a protest against the unpineness of the authorities; the clergy went about in ordinary clothes, and the sacred vessels and vestments were taken from the churches to places of security from the private fury of the people. The effect of restoring a state of peace to the city. The Diocese of Philadelphia had earlier included Pittsburgh and a large part of New Jersey, and in 1843 it was divided, the Rev. Michael O'Connor being consecrated Bishop of Pittsburgh in August of that year by Cardinal Francis at St. Augustine's in Rome. This step proved a great relief to Bishop Kenrick, upon whom the care of his vast diocese and its arduous visitations at a period of primitive crudeness in travelling facilities and accommodation, were beginning to leave a deep mark. In 1845 he visited Rome for the first time since his consecration and was received most graciously by the pope.

In August, 1851, Bishop Kenrick was transferred to Baltimore as successor to Archbishop Eccleston, who had just died. Moreover he received from the Holy See the dignity of Apostolic delegate, and in this capacity he led in Bardstown at the Eleventh Plenary Council of Baltimore in 1852. One of the results of that important gathering was the establishment of branches of the Society for the Propagation of the Faith. It was Archbishop Kenrick also who in 1853 introduced the Forty Hours' devotion into the United States, and the trustees of the Holy Father to collect and forward to him the respective opinions of the American bishops on the
doctrine of the Immaculate Conception. The latter part of the same year found him back in Rome as a participant in the ceremonies attendant on the proclamation of that dogma.

A fresh outbreak of anti-Catholic fury took place soon after the archbishop's return, occasioned by the charges of the Rev. Brother Benedict Mundelein, the inflammatory and lying speeches of the ex-priest, Alessandro Gavazzi, on the nuncio's action while in Bologna during the rising against Austria. Many churches and convents were burned as in the previous outbreak, and many lives were lost in New England and Kentucky in Cincinnati and other cities. But no religious disturbances occurred in Maryland to perturb the archbishop's closing years. The Civil War, however, soon came to rend his heart, and he died on the morning after the battle of Gettysburg (8 July, 1863), his end being hastened, it was believed, by the rumours of the terrible slaughter that went on not far from his residence. When Bishop Kenrick went to Philadelphia in 1830 there were only four churches in the city and one in the suburb, and ten priests; when he left it in 1857, the diocese contained 94 churches and many religious institutions, and was the home of 160 priests and 800 religious, besides numerous religious orders. The chief literary works of Archbishop Kenrick were a new translation of the Bible, with a commentary; a "Moral and Doctrinal Theology"; a "Commentary on the Book of Job"; "The Primacy of Peter", and letters to the Protestant bishops of the United States on Christian unity.

II. — Peter Richard had to work closely in the scrivener's office of his father after the latter's death in order to help to maintain his mother and himself, as well as carry on the business, but was enabled by his own industry and his uncle's help to enter Maynooth College at the age of twenty-one. Previous to his entry he had acquired a well-taught knowledge of the essentials by Father Richard, while his taste for secular literature had been acquired through associations with the unfortunate poet and littérateur, James Clarence Mangan, who had for several years worked beside him as a clerk at the scrivener's desk. After five years' assiduous study he was ordained to the priesthood by Archbishop Murray of Dublin, and, on the death of his mother, after a few months of local missionary work, left for the United States on the invitation of his brother and took up work with him in Philadelphia. He was given the post of president of the seminary, to which he devoted himself with great vigour and care.

This was in the latter part of 1833. During his seven years of missionary work with his brother he produced several works which built up his fame as a theologian, as "Validity of Anglican Ordinations Examined" (Philadelphia, 1841), "New Month of Mary", and "History of the Holy House of Loretto". In 1840 he left for Rome, with the idea of entering the Jesuit Order, but was dissuaded from carrying out his intention by the superior in Rome. Bishop Rosati met the young priest there, and requested the Holy See to give him to the See of St. Louis, and, after a journey by way of Canada, he was with his character and qualities. The Holy See assented, and both returned from Rome to have the ceremony of consecration performed in the United States. This was done in Philadelphia, Bishop Rosati officiating and the new prelate's brother and Bishop Lefevre of Detroit assisting, while Bishop England delivered the consecration sermon.

The new bishop was given the title of Dras, and had the right of succession in St. Louis. Bishop Rosati died a short time afterwards on a special mission in Haiti, and the care of the diocese devolved upon his young coadjutor at a much earlier period than either of them anticipated. It was not a sinecure, for the financial affairs of the Church in St. Louis were in a deplorable condition. There was a very heavy debt on the cathedral, and he found the Catholics of the diocese by no means anxious to remove it. The bishop then saw that he must either resign or get other means of raising funds, and he took the bold course of getting into the real-estate business. He was most successful. A local gentleman named Thornton made a bequest of $20,000 dollars, a munificent sum, and many of the inflammatory and lying speeches of the ex-priest, Alessandro Gavazzi, on the nuncio's action while in Bologna during the rising against Austria. Many churches and convents were burned as in the previous outbreak, and many lives were lost in New England and Kentucky in Cincinnati and other cities. But no religious disturbances occurred in Maryland to perturb the archbishop's closing years. The Civil War, however, soon came to rend his heart, and he died on the morning after the battle of Gettysburg (8 July, 1863), his end being hastened, it was believed, by the rumours of the terrible slaughter that went on not far from his residence. When Bishop Kenrick went to Philadelphia in 1830 there were only four churches in the city and one in the suburb, and ten priests; when he left it in 1857, the diocese contained 94 churches and many religious institutions, and was the home of 160 priests and 800 religious, besides numerous religious orders. The chief literary works of Archbishop Kenrick were a new translation of the Bible, with a commentary; a "Moral and Doctrinal Theology"; a "Commentary on the Book of Job"; "The Primacy of Peter", and letters to the Protestant bishops of the United States on Christian unity.

A local gentleman named Thornton made a bequest of $20,000 dollars, a munificent sum, and many of the
Kentigern (or Mungo), Saint, bishop, founder of the See of Glasgow, b. about 518; d. at Glasgow, 13 January, 603. His real name was Theoderic. He was the daughter of a British prince, Lothus (from whom the province of Lothian was called); his father's name is unknown. According to Jocelyn's life of Kentigern, the saint was born at Curoles in Fife, and brought up until manhood by St. Serf (or Servaunus) at his monastery there; but whether this is true or not, his missionary labours, and his new church at Glasgow, prove him to have been a great saint through the whole of the Kingdom of Strathclyde, and the Christian King of Struthclyde, Roderick Hael, welcomed the saint, and procured his consecration as bishop, which took place about 540. For some thirteen years he laboured in the district, living a most austere life in a cell at the confluence of the Clyde and the Molenad, and making many converts by his holy example and his preaching. A large community grew up around him, became known as "Clagscu" (meaning the "dear family") and ultimately grew into the town and city of Glasgow.

About 553 a strong anti-Christian movement in Strathclyde compelled Kentigern to leave the district, and he retired to Wales, staying for a time with St. David at Menevia, and afterwards founding a large monastery at Llanellwy, now St. Asaph's, of which he appointed the holy monk Asaph superior in succession to himself. In 573 the battle of Arthurset secured the triumph of the Christian cause in Cambria, and Kentigern, at the earnest appeal of King Roderick, returned thither, accompanied by many of his Welsh disciples. For eight years he fixed his see at Hoddam in Dumfriesshire, evangelising thence the districts of Galloway and Cumberland. About 581 he finally retired, and later miracle stories were told of how he was visited by St. Columba, who was at that time labouring in Strathclyde. The two saints embraced, held long converse, and exchanged their pastoral staves.

Kentigern was buried on the spot where now stands the magnificent cathedral dedicated in his honour. His remains are said still to rest in the crypt. His festival is kept throughout Scotland on 13 January. The Bollandists have printed a special mass for this feast, dating from the thirteenth century.

Jocelyn of Furness, Life of Kentigern, c. 1185, printed, with notes, in the First Series, Lives of the Scottish Saints (Paisley, 1889-95), is the only ancient authority, except a fragment of c. 1184; see Jocelyn, St. Ninian and St. Kentigern in t. xiv (Edinburgh, 1874); see also Stack, Life of St. Mungo (Glasgow); Forrester, Kalendar of Scottish Saints (Edinburgh, 1872), 373-82; Edmonds, The Early Scottish Church (Edinburgh, 1900), ix; BELLERBEK, Hist. of Cath. Ch. of Scot., I (Edinburgh, 1887), 149-157; Acts SS. (Brussels, 1883), II, 97-103.

D. O. Hunter-Blair.

Kentucky, a state situated between the parallels of latitude 36° 30' and 39° 6' N., and between the meridians 82° and 89° 35' W. The state is named after the Indian tribe that lived in the region. The first European settlement in what is now Kentucky was established by the French in the late 17th century. Kentucky became a state in 1792. Kentucky is known for its rich history, including the American Revolution and the Civil War, as well as its role in the tobacco and bourbon industries. It is also home to the University of Kentucky, one of the largest public universities in the United States. The state is divided into 120 counties, with the capital being Frankfort. The state is known for its natural beauty, including its forests, lakes, and mountains. The climate is generally mild, with warm summers and cool winters. The state is home to a diverse range of wildlife, including deer, turkey, and raccoon. The state is also known for its history of agriculture, including tobacco, corn, and wheat.
stock of $17,078,500, an aggregate surplus of $5,283,739.56, and individual deposits amounting to $55,-
400,000. The total real estate and personal estate of Kentucky aggregating $114,158,595.84. There are 406 state banks and trust companies with an aggregate capital of $19,642,770, an aggregate surplus of $5,504,746, and deposits aggregating $66,947,965.84.
Mining.—The chief mineral products of Kentucky are coal (the most important of all), petroleum, nat-
ural gas, fluor spar, clay products, and national lead. The total mineral output for 1907 amounted in value to $19,294,341.
Agriculture.—Of the total area of Kentucky in 1900, farm lands occupied 85.9 per cent, and of this 62.5 per cent was improved. The average size of the farms has shown gains. In 1890 the average was 93.7 acres, which is less than half what it was fifty years previous. More than 67 per cent of the farms are operated by owners of the land. Indian corn (maize) is the principal crop, exceeding in average and value that of all the other leading crops combined. In 1908 the total area planted in Indian corn was 3,866,000 acres; in wheat, 758,000 acres; in oats, 173,000 acres; in hay, 500,000 acres; in tobacco, 240,000 acres. The total value of all principal crops in 1908 was $92,566,600. Kentucky produces nearly all the hemp grown in the United States; but the demand for this product has so far decreased that in 1900 only 14,107 acres were planted in the state. More tobacco is grown in Kentucky than in any other state in the Union, the product being twice as much as that of North Carolina, which is next in rank. The Kentucky crop usually equals one-third of the total production of the United States.
Grazing.—On account of the climate, the large pro-
duction of grain, and the excellence of the pasturage, stock-raising is very extensively carried on. The total value of live stock in 1900 was $95,100,000—horses, $37,905,000; mules, $21,942,000; horned cattle, $25,312,000; other live stock, $39,441,000. The Blue-Grass Region is the home of the Kentucky thoroughbred, the best known and most highly valued horse in America. No other part of the country devotes so much attention to the raising of horses of fine breed, and nowhere else in America are so many farms devoted exclusively to that purpose. The cattle industry is in Fayette County, though many valuable breeding farms are in the adjoining counties.
Manufactures.—Kentucky is an agricultural state. Its manufactures depend largely upon the products of its farms. Corn- and grist-mills are its principal manufacturing concerns. Other enterprises closely allied with the production of the products of the farms—tobacco, distilled and malt liquors, lumber and timber products. A comparison of industrial conditions in 1900 and in 1903 shows an increase in the latter year of 73.4 per cent in capital invested, 26.3 in wages paid, and 20.8 in value of output. Although Kentucky is the leading tobacco-growing state in the country, there has been a decrease in the manufacture of this product in the state, so that Kentucky, formerly the second state of the Union in the value of its output of manufactured chewing and smoking tobacco and snuff, is now third, with a total output of $13,117,000 for the year 1905.
Transportation.—The Ohio River affords a means of transportation along the full length of the state's northern boundary, and the Mississippi River on the west. The Cumberland and Tennessee Rivers are navigable for steamboats across the entire width of the state. Kentucky and Green Rivers are navigable for more than one hundred miles of their course. In 1900 there were 3093 miles of railroad, and 3574 miles in 1908. The total valuation of railroad prop-
erty for purposes of taxation in 1908 was $63,753,699; the gross receipts for the same year were $40,464,504, and the net earnings $11,641,856.

Education.—The Kentucky State University, a public institution owned by the state, is located at Lexington in Fayette County. Each county is en-
titled annually to send one student to the university for each 3000 white pupils in its public schools, and one for each fraction of 3000 over 1500, based on the last official census preceding the appointment. Each county is entitled to at least one appointment. Students, except those entered solely in the departments of law and medicine, are entitled to (fee tuition, room, rent, fuel, light, and all other advantages of the un-
iversity. This institution was formerly the Agricul-
tural and Mechanical College of Kentucky, and was established in 1865. By an Act of the Legislature, in 1908, the name was changed and it became the State University.
The total number of students in all departments in 1909 was 772, and there were 61 professors and assist-
ants. There are two normal schools for the training of whitemen, one at Richmond, in Madison County, and the other at Bowling Green, in Warren County. There is also a normal school for colored students at Frankfort (the state capital), in Franklin County. All of these institutions are maintained by public taxation.
Each county in the state, excluding cities and towns having separate school systems, and graded school districts whose tax levy is not less than 20 cents, con-
stitutes a school district. Each district is divided into educational divisions. There may be four, six, or eight of these divisions, as deemed expedient. Educa-
tional divisions are required to contain as nearly as possible an equal number of pupils. Each of these educational divisions is in turn divided into school districts, and each school district elects one trustee. Most of the trustees from the school districts constitute a division board, and organize as such for the purpose of caring for the schools in their respective educational divisions. The chairmen of the division boards constitute the county board of education, and this county board has general supervision over all educational matters in the county; is authorized to establish, and when established has charge of the county high schools; estimates the needs and requirements of the schools and certifies to the county governing body the amount of money necessary to be raised for school purposes in the county. The county is required to levy a tax on the general school district not exceeding 20 cents on every $100 of the assessed value of property in the district, to meet the requirements of the County Board of Education. All cities of the first, second, third, and fourth classes—i. e. all cities having a population in excess of 3000—maintain separate school systems in accordance with the provisions of their respective charters.
The state at large levies a general tax over the en-
tire state, and this fund is used in the payment of salaries of teachers. The local sub-divisions provide school buildings and pay all other expenses incidental to the maintenance of the schools. The total number
of children of school age, according to the last school census, was 759,352. The actual number enrolled in the public schools was 441,377, and the average daily attendance 293,691. The total number of teachers was about 9000. In 1808 there were 24,610 Catholic children attending the Catholic schools of the state. There was expended in the last fiscal year by the state and local taxing districts for public school purposes, exclusive of expenditures for the State University, normal schools, schools for the blind, deaf and dumb, etc., $3,891,306.65.

CHARITIES AND CORRECTION.—There are there asylums for the insane: one situated at Lexington in Fayette County, another at Lakeland in Jefferson County, and the third at Hopkinsville in Christian County. All of these institutions have competent superintendents and physicians in charge. Inmates who are without means are maintained by the state. There is an institution for feeble-minded children at Frankfort, where children between the age of six and eighteen years whose condition of mind is such that they can be taught to read or write, and can be educated to do work, are received, and if unable to pay are maintained by the state. At Danville, in Boyle County, the Kentucky School for the Deaf is established, and near Louisville, in Jefferson County, there is an institution for the education of the blind. Indigent and afflicted children are received at these institutions and educated at the expense of the state. The Kentucky Confederate Home, for the benefit of Kentucky's indigent and infirm veterans of the Confederacy, is in Jefferson County, and is maintained by the state. The legislature makes annual appropriations for the support of the Kentucky Children's Home Society, a private corporation devoted to the care of homeless and destitute children, and it has also made an appropriation for the assistance of a sanitarium at Louisville for the treatment of persons afflicted with tuberculosis.

There are two state prisons: one at Frankfort, and the other at Eddyville in Lyon County. The management is by a board of commissioners of three members elected by the Legislature, and the convicts are worked under the contract system. The prison commissioners have the power to parole prisoners, except in cases of rape or incest, or where the prisoner has previously served a term of imprisonment or broken his parole. Prisoners convicted of murder cannot be paroled until they have served at least five years. The governor has the power of granting reprieves or pardons in all cases except treason, and the General Assembly alone has the power of granting the pardon. Houses of reform for boys and girls are established in Fayette County. Juvenile offenders under twenty-one years of age are committed to these institutions.

The courts are authorized to fix an indeterminate sentence for such offenders, so as to keep them confined until they have attained the age of twenty-one. The management of these institutions is vested in the prison commissioners, who are authorized to parol and discharge such inmates whenever their conduct is such as to warrant the belief that they will in future conduct themselves properly.

GENERAL HISTORY.—Kentucky was originally a part of Fincastle county, Virginia. It became a separate county in 1776. In 1743, when De Soto's survivors descended the Mississippi River as far as Kentucky, there are records of numerous expeditions into the state. In 1654 Colonel Wood, an Englishman, is said to have explored as far as what is now the western boundary of the state, and in 1673 the renowned Jesuit missionary, Father Jacques Marquette, descended the Mississippi as far as the Ohio. From Marquette we have the first authentic account of the Indian tribes inhabiting what is now the western portion of the state. In 1730 John Salling, while exploring the Roanoke River, was captured by the Indians and carried through Kentucky to the Tennessee River. He was afterwards captured by the Illinois tribe and taken to Kaskaskia, where he was ransomed. A Frenchman named Longueil descended the Ohio in 1739, and discovered Big Bone Lick in what is now Boone County, and in 1747 Dr. Thomas Walker of Virginia crossed the Cumberland Mountains and discovered the Cumberland and Kanawha Rivers, after most extensive explorations, and the most important as bearing upon the actual settlement of Kentucky, were made about the year 1769 by Daniel Boone, John Findlay, and four others from North Carolina. Part of this expedition returned after a short time, but Boone remained in Kentucky for two years and then returned to North Carolina, intending to lead a party into Kentucky for permanent settlement. In 1774 John Harrod conducted a party of forty persons into the territory and settled at Harrodsburg. The year following, Daniel Boone brought his party and erected a fort and established a settlement at Boonesboro.

These were the first settlements in Kentucky. There were no resident Indian tribes in the central and eastern portion of the territory at this time, but numerous bands of savages traversed it, and the first settlers were constantly harassed, the fort at Boonesboro being attacked three times. In 1775 Richard Henderson purchased from the Cherokee Indians many thousand square miles of land in Kentucky and attempted to organize a separate state under the name of Transylvania. He proceeded to the extent of sending a delegate to Congress, but his representative was not recognized, and Virginia declared his purchase from the Indians invalid. In 1778 about twenty families accompanied General George Rogers Clark upon his expedition against the British posts in Illinois. They landed on a large island just above the Falls of the Ohio River, directly opposite the present site of Louisville, and immediately erected blockhouses and established a settlement. Each year a portion of these settlers moved to the main shore and erected a fort at a point which is now the foot of Twelfth Street. On 17 April, 1779, a public meeting was held and the town was definitely established by the election of trustees. There is no record indicating the religious belief of any of these early settlers, but from some of the names appearing in the records of the town prior to 1800, it is fair to assume that there were a number of Irish Catholics.

In 1780 Virginia, in order to afford a better government, divided Kentucky into three counties, but the settlers, who had by this time become quite numerous, believed that their interest would be better served by separation from the parent state. Eight separate conventions were held before a satisfactory agreement of separation was arrived at, and it was not until July,
1790, that the territory was formally separated. By an Act of 1 February, 1791, Congress authorized the admission of Kentucky into the Union, the Act be-
coming effective 1 June, 1792. In April, 1792, the first
Constitutional Convention assembled at Danville in
what is now Boyle County, and adopted a constitu-
tion. The first Legislature met at Lexington in June,
1792, elected Isaac Shelby governor, and decided upon
Frankfort as the capital of the state. In 1798 a
second Constitution was adopted, which made Shelby
the first governor and other state officers elective by the
people. The second Constitution remained in force from 1800
to 1850, at which time a new Constitution was adopted
which remained in force until 1891, when the present
Constitution became effective, upon its ratification by
the people.

One of the most interesting incidents in the history of Kentucky was what is known as the Old-Court and
New-Court controversy. In the early days of Ken-
tucky coin had been very scarce, and commerce among
the people had been carried on generally by the bar-
tering of merchandise. In 1802, under the pretext of
forming a company for insuring cargoes on the western
waters, the Kentucky Insurance Company obtained a
charter from the Legislature in which there was fraud-
ulently inserted a clause giving it the right to issue
paper money. Thus commenced a period of wild-cat
money. Between 1806 and 1820 more than forty
banks were chartered with similar power and with an
aggregate capital of $9,920,000. These banks were
generally conducted in a very loose and unbusinesslike
manner. The state was flooded with paper money,
and a period of wild speculation followed, resulting in
the inevitable panic. To afford relief, the Legislature,
between the years 1822 and 1826, passed various laws,
but the Court of Appeals held them unconstitutional.
In 1824 the Legislature, exasperated by the action of
the Court of Appeals, attempted to legislate the court
out of office and to establish a new court. One of
the bitterest fights in the history of the state followed.
The old court declined to recognize the right of the
Legislature to oust it from office, and refuse to recog-
nize as constitutional the court established by the
Legislature. In 1826 the issue of the old court and the
new court brought about an election, characterized by
the most intense excitement, which resulted in the
triumph of the Old-Court party, and the election of the
Legislature which repealed the Acts attempting to
establish the new court.

Kentucky has taken a very active part in the mili-
tary affairs of the nation. In the war of 1812 about
7000 troops—a number far in excess of Kentucky's
population—served in the Federal army. A portion of
these soldiers served in the North under Harrison,
and the balance in the South under Jackson. At the bat-
tle of New Orleans fully one-fourth of Jackson's army
was made up of Kentuckians. In the Mexican War
Kentucky's quota should have been 2400 men, but she
sent more than 10,000. And in the Civil War, when
the people of the state were divided in their sympa-
thies, about 80,000 men enlisted in the Federal army
and about 40,000 in the Confederate army.

The Know-nothing lodges made their appearance
in Kentucky in 1854, and spread with the utmost
rapidity; so much so that in 1855 the American, or
Know-nothing, Party elected its candidates for gover-
nor and the other state offices. Intense bitterness
towards Catholics was manifested all over the state
at this election, but in the city of Louisville fanatical
frenzy reached its climax. A mob dominated the city
on election day (Alter Monday), Catholics were sa-
momed, their property plundered, and their houses
destroyed. Twenty-four persons killed, many wounded,
and more than twenty houses of Catholics destroyed,
was the sum of the outrages of this day of horrors.
The city government was under the control of the
Know-nothings and no serious effort was made to pro-
tect life or property. Insult and violence were the lot
of the Catholic people on all sides. Fortunately,
the good sense of the people rebelled against the domina-
tion of this party of violence; its candidates were de-
feated in the general election of the following year,
and within a few years the last vestige of the party dis-
appeared. (See also LOUISVILLE, DIOCESE OF.)

RELIGION.—Growth of the Church in Kentucky.—The
Boone family were among the first Catholic set-
tlers of Maryland, and upon the strength of this fact
it has been contended that Daniel Boone was a Cath-
olic. Nothing, however, that is recorded of the life
of this famous Kentucky pioneer seems to support this
contention. In all probability, Dr. George Hart and
William Coomes, who accompanied John Harrod,
and settled at Harrodsburg in 1774, were the first
Catholics to arrive in Kentucky. Dr. Hart, if not the first, was cer-
tainly one of the first physicians to settle in Kentucky.
He practised his profession at Harrodsburg until about
the year 1786, when he moved to the vicinity of
Bardstown, in what is now Nelson County, in order to
join his co-religionists who had recently emigrated
from Maryland.

The first distinctively Catholic body of immigrants
came from Maryland in the year 1786. A league of
sixty families, mostly from St. Mary's County in that
state, was formed for the purpose of migrating to
Kentucky, and in the same year twenty-five of these
families, under the leadership of Basil Hayden, ar-
ived in Kentucky and settled near the present site of
Bardstown (Nelson County). In the following year a
second settlement, about ten miles distant from the
first, but on better lands, was begun by Edward and
Charles Beaven. Between this date and 1795 five
separate bodies of Catholic immigrants settled in the
vicinity of these earlier settlements, and a thriving
Catholic colony was begun. In 1796 one of the com-
panies of immigrants, while on its way to join the first
settlers in Nelson County, attracted by the beauty and
fertility of the country through which they were pass-
ing, decided to go no farther, and settled in what is
now Scott County, near the centre of the famous Blue-
Grass Region. By 1796 it is estimated that there were 300 Catholic families in Kentucky.

The first missionary priest to reach Kentucky was the Rev. M. Whelan, who came in the year 1787 with a band of immigrants under the leadership of Edward Hylan. In 1790 Father Whelan returned to Maryland. Six months later the Rev. Wm. De Rohan arrived, but without faculties and unaccredited to Kentucky. He performed such service as he could, but the settlements were without full priestly attention until 1793, at which time the Rev. Stephen Theodore Bardin (q. v.) and Father Ehrenreich, a native of Belgium, joined him. Father Nerincx laboured in the state for nineteen years, sharing with his associate all the hardships of this most trying mission, and by his wonderful zeal and great piety materially promoting the progress and prosperity of the Church. He died in St. Mary's Church, near the landing place, in 1811. Louis Tarascon arrived at Louisville in the year 1806 and settled near the Falls of the Ohio, to engage in the millin business, utilizing the falls for power. These colonists were, or at least should have been, Catholics, but the early missionaries do not appear to have considered them very faithful children of the Church. However, when the first church was built, in 1811, the name of J. A. Tarascon appears on the list of trustees for the new parish. Father Bardin was the first pastor, and continued as such until 1817, when he was succeeded by the Rev. C. J. Chabrat, like him, a Frenchman, who was in turn succeeded by the Rev. Philip Horstman, a native American.

In 1808 the Diocese of Bardstown was erected, to include in its jurisdiction the whole of Kentucky as well as Tennessee (see LOUISVILLE, DIOCESE OF). In 1841 the see was transferred to Louisville, and in 1853 the see of the Diocese of Kentucky was brought into existence the present ecclesiastical division of the State of Kentucky into the two dioceses of Louisville and Covington.

Kentucky enjoys the distinction of having been the first great nursery of the Faith in the United States west of the Alleghenies. This was the consequence of this fact (which will be more especially dealt with in the article LOUISVILLE, DIOCESE OF) was a remarkably early development of new religious congregations in the old Diocese of Bardstown. In Marion County, the Sisterhood of Loretto, founded in 1812 as "Friends of Mary," the Root of the Cross, in Nelson County, the Sisters of Charity of Nazareth, founded in the same year, were almost, if not quite, the earliest religious institutes to originate in the United States (see Loretto, Sisters of; Nazareth, Sisters of Charity of). Of the older institutes of women, the Sisters of the Third Order of St. Dominic have been established in Kentucky since 1822; the Sisters of the Good Shepherd, since 1842; Ursuline Nuns, since 1858; Benedictine Nuns, since 1859; Sisters of the Poor of St. Francis, since 1860; Visitandines, since 1864; Sisters of Mercy, since 1867; Little Sisters of the Poor, since 1869; the Sisters of Notre Dame and others have come in more recently. Among the religious orders of men, the Order of Preachers found their first home in the United States near Springfield, Washington County, Kentucky (St. Rose of Lima, 1806), where they are still flourishing; the Trappists founded their famous Abbey of Gethsemani (q. v.), in Nelson County, in 1843; the Franciscans took charge of the parish of St. Boniface, Louisville, in 1849; the Benedictines came to Covington in 1858. Other male religious orders in Kentucky are the Passionists, Xaverian Brothers, Brothers of Mary, and Fathers of the Resurrection. The total Catholic population of the state is estimated at 189,854, about three-fourths of that number (which includes upwards of 4000 coloured Catholics) being in the Diocese of Louisville.

Legislation Directly Affecting Religion.—The Bill of Rights of the Constitution of Kentucky guarantees to all citizens the right to worship God according to the dictates of their conscience, and it also provides that no public funds raised for educational purposes shall be used in the aid of any church, or sectarian or denominational school. It is further provided by statute that no sectarian, infidel, or immoral publications shall be used or distributed in the common schools of the state; nor shall any sectarian, infidel, or immoral doctrine be taught therein. The court of last resort in Kentucky, in construing these provisions of the Constitution and Statute of the State, declared (Graded School, 120 Ky. 608); held that they are not violated by reading verses from the King James Version of the Bible, without note or comment, nor by the recital of the following prayer: "Our Father who art in heaven we ask Thy aid in our day's work. Give us wisdom and strength to do all our duties, so that if we should be taught, may teacher and pupil have mutual love and respect. Watch over these children both in the schoolroom and on the playground. Keep them from being hurt in any way, and at last when we come to die may none of our number be missing around Thy throne. These things as we ask in Christ's name." The laws of the state provide that no work or business shall be done on Sunday except the ordinary household offices or other work of necessity or charity, or work required in the operation of a ferry, skiff, steamboat, or steam or street railway. But persons who belong to a religious society which observes some other day than Sunday are not liable for the penalties provided in this act if they actually observe as a Sabbath one day in each seven. There are specific enactments penalizing the sale of liquor, barbering, pool and billiard playing, and hunting. The enforcement of the law is the work of the county officers, particularly in the cities. So also with reference to the sale of liquor on Sunday. In some of the cities this law is not enforced at all, in others some effort is made towards its enforcement, and in some places it is rigidly enforced. The law provides that if any proceeding is directed by any person to be done on a particular day of the month, and that day happens to fall on Sunday, the proceeding shall be had, or the act done, on the following day.

Oaths may be administered by any judge of a court, notary public, clerk of a court, examiner, master commissioner, and justices of the peace of the circuit or county. Persons refusing for conscientious reasons to take an oath may affirm. The oath is ordinarily administered by the officer and the person to be sworn, both raising their right hands, the officer repeating the oath and the person responding: I do. Testimony taken out of the state, to be used in proceedings in the courts of the state, may be taken before a commissioner appointed by the governor or by any other person empowered by commission directed to him by consent of the parties, or by order of a court; or before the judge of a court, justice of the peace, mayor of a city, or a notary public. Any person profanely cursing or swearing is liable to a fine of one dollar for each offense, and every oath is deemed a separate offense. If the offense is committed in the presence of a court of record or justice of the peace, the said court or justice may instantly,
without further proof, inflict the penalty. Instances of the enforcement of this law are very rare.

There is no law providing for prayer at the sessions of the Legislature, but it is the custom to open the daily session of both branches of the general assembly with prayer. The ministers of the various denominations representing the churches of the capital city are invited without prejudice or partiality. The Catholic priest takes his turn with the others.

The legal holidays recognized by law are Christmas and New Year’s Day. Other legal holidays are Washington’s Birthday, Decoration Day (30 May), Independence Day, Labor Day (first Monday in September), and all days specially designated by the President of the United States or the governor of the state.

No clergyman or priest, without the consent of the person confessing, is permitted to testify concerning any confession made to him in his professional character in the course of discipline enjoined by the Church to which he belongs.

Any number of persons may associate to form a corporation, having no capital stock, for religious, charitable or educational purposes. Incorporation may be effected by the persons concerned filing articles of incorporation with the Secretary of State, and having the same recorded in the county court of the county where the corporation intends to conduct its business. Corporations must be organized as the proposed corporation, the object for which it is organized, and such other facts as the incorporators deem proper to mention. Such corporations have the right to contract and be contracted to, sue and be sued, to have and use a common seal, and to receive and hold property. They are not subject to the general laws relating to corporations, except that they must designate an agent upon whom service of process may be had, and that they are at all times subject to visitation by the Legislature.

Places actually used for religious worship, with the grounds attached thereto, not exceeding one-half acre in cities and towns, and not exceeding two acres in the country; places of burial not held for profit; institutions of purely public charity and institutions of education not used or employed for gain; all parsonages and residences owned by any religious society and occupied by the minister of any religious denomination, with not exceeding one-half acre in the city, and two acres in the country, are exempt from taxation. This constitutional provision has been construed as to bring within its meaning seminaries for the education of youth, to meet the minister, even though its management is denominational. So also other educational institutions under similar control, even though tuition is charged. Property of the Young Men’s Christian Association is also held exempt under this provision of the Constitution, so also orphan asylums and homes for sick, indigent, and homeless persons are held exempt, even though they are denominational and controlled; provided they are not operated for gain. The expression “purely public charity” used in the Constitution, has been defined by the Court of Appeals of Kentucky as meaning a charity which performs in whole or in part a duty which the Commonwealth owes to the sick, indigent, homeless, and helpless. All institutions, therefore, which aid the state in the performance of this duty are exempt from taxation. These exemptions, however, do not apply to local assessments for street-improvements, against which there is no exemption provided by law.

Clergymen are not required to serve on petit juries, though they may do so. But there is no such exemption from service on grand juries. Militia service in actual practice is, of course, purely voluntary, but clergymen are not exempt in the event of enforced enlistment.

Marriage and Divorce.—Marriage is prohibited and void (1) when either party is an idiot or a lunatic; (2) when either of the parties has a husband or wife living in undivorce; (3) when not contracted in the presence of an authorized person or persons; (4) however, that if the person attempting to perform the marriage ceremony had no authority, and yet either of the parties believed he had such authority, and the marriage is consummated under that belief, it will be valid; (5) when at the time of the marriage the male is under fourteen and the female under twelve years of age; (6) when one person is white and the other is a negro. A man is not permitted to marry his mother, grandmother, sister, or grandchild, nor the widow or divorced wife of his father, grandfather, son, or grandson, nor the daughter, granddaughter, mother, or grandmother of his wife, nor the daughter or granddaughter of his brother or sister, nor the sister of his father or mother. A woman cannot marry her father, grandfather, brother, son, or grandson; nor the widower or divorced husband of her mother, grandmother, daughter, or granddaughter; nor the son, grandson, father, or grandfather of her husband; nor the son or grandson of her brother or sister, or the brother of her father or mother. All marriages coming within any of the above-mentioned degrees of relationship are void. If, however, a marriage is valid where contracted it will be recognized as valid in Kentucky solemnized by the priest of any denomination in regular communion with any religious society, who has obtained a licence for that purpose from the county court of the county of his residence. The county judge and such justices of the peace as the county court may authorize may solemnize marriage, or it may be solemnized by consent given in the presence of a religious society having no officiating minister, where either party is a member of such religious society, and the ceremony is in conformity with the usage prevailing in such society.

Judgments in divorce cases are entered without the intervention of a jury. Courts of general equity jurisdiction hear and determine all such actions. Divorce may be granted for the following reasons: To both parties; first, for such impotency or malformation as prevents sexual intercourse; second, living apart without cohabitation for five consecutive years next to the marriage; third, for the action of the party in fault; first, abandonment for one year; second, living in adultery; third, condemnation for felony; fourth, the existence of some loathsome disease; fifth, force, fraud, or duress in obtaining the marriage; sixth, union with a religious society which forbids husband or wife cohabiting, or the marriage, or the wife when not in like fault; first, on account of a confirmed habit of drunkenness accompanied with a wasting of his estate and failure to suitably provide for his family; second, habitually behaving towards his wife, for a period of not less than six months, in a cruel manner; third, such cruel beating or attempted beating or injury as indicates an outrageous temper and probable danger to the wife.—To the husband: first, where the wife is pregnant by another man at the time of marriage; second, when not in like fault, habitual drunkenness on the part of the wife for not less than one year; third, adultery or such lewd or lascivious behavior as indicates unchastity. Divorced persons may marry again, but only one divorce shall be granted the same person, except where adultery or any of the grounds for which divorce may be granted to both parties is charged. Divorce from bed and board may be granted for any other cause deemed sufficient by the court. An absolute divorce restores to the parties all property obtained from the other either before or during marriage in consideration thereof. The custody of children is determined by the chancellor from the proof in the case.
Sale of Intoxicants.—Under the operation of local-option laws, 96 of the 119 counties of the state have voted out liquor. The larger cities, however, are not affected by these laws. It is forbidden to ship liquor into local option territory, but this law is generally not enforced. There has been no case involving transportation from points outside the state.

Wills and Testaments.—Every person more than twenty-one years of age may dispose of his or her estate by will. Wills are required to be attested by two subscribing witnesses unless wholly written and signed in persons. There is no intestate succession upon charitable bequest, but the State imposes a tax of 5 per cent upon all bequests over $500, including those for charitable purposes, except where made to husband or wife, father or mother, child or children or their lineal descendants, or the husband or wife of a daughter or son.

Cemeteries.—All cemeteries not conducted for profit are exempt from taxation. The directors or trustees of incorporated cemeteries are required by law to make a full and complete report of the financial condition of the association to the stock-holders and lot-owners. Severe penalties are provided for unlawfully disturbing graves or monuments.

FRANK M. TRACY.

KEON, MILES GERALD, journalist, novelist, colonial secretary, lecturer, last descendent of the Keons, of Keonbrooke, County Leitrim, Ireland; b. 20 February, 1821; d. at Bermuda, 3 June, 1875. He was the only son of Myles Gerald Keon, barrister, and on his mother's side was descended from the Falons of Runnymede, County Roscommon. Both parents dying in his infancy, Keon was left to the care of his maternal grandmother and, later, to that of his uncle, Francis Philip, Count Magswy. He studied at the Jesuit college at Stonyhurst, where he wrote the prize poem on Queen Victoria's accession (Stonyhurst Magazine, no. 32). An adventurous pedestrian tour across the Continent followed graduation, terminating in a brief service in the French army in Algeria. On his return to Bermuda he studied law at Gray's Inn, London, and was called to the Bar. In 1843 he published "The Irish Revolution, or What can the Repealers do? And what shall be the New Constitution?" ("Tablet", IV, 532), and, in 1845, a vindication of the Jesuits (Oxford and Cambridge Review, September, 1845), a controversial article that provoked more than passing interest. The results of his pedestrian tour and military service were apparent in a series of contributions to Colburn's "United Service Magazine" (from September, 1845, to October, 1846). For a few months in 1846 he became editor of "Dolman's Magazine" at Forest Hall. In November of that year, married Anne de la Pierre, daughter of an English army officer. In 1847 appeared his "Life of Saint Alexis, the Roman Patrician". For the next twelve years he served on the staff of the "Morning Post", becoming its representative at St. Petersburg in 1850. In 1852 his first novel, "Harding the Money-Spinner", appeared, serially, in the "London Journal", but in 1856, on the occasion of the coronation of Alexander II, he was again at St. Petersburg representing the "Morning Post". It was on this occasion that he met Boucher de Perthes, in whose reminiscences Keon is pleasantly appreciated. He returned in 1859 from Calcutta, where he had been sent "under government" to edit the "Bengal Hurkuru", he was appointed colonial secretary at Bermuda, a position which he held until his death. In 1866 appeared "Dion and the Sibyls, a romance of the First Century". The year following, at Mechanics' Hall, Hamilton, he gave a course of lectures on "Government, its Source, its Form, and its Means", declining, subsequently to lecture in the United States on account of his official position. He attended the opening of the Council of the Vatican at Rome in 1869.

JARVIS KELLEY.

Kerkuk, Diocese of (Chechennia), is a Chaldean Uniat diocese. The ancient name of the city was Karka of Bel-Slok, in the Bel-Garmel, a province of the Persian Empire. Christianity flourished there very early. In 318 two brothers, Adurpawa and Mihrarsis, with their sister Mahdoukht, were martyred there. In the fifth century, under King Yezdegid II (439–57), the "History of the city of Bel-Slok, makes mention of hundreds and thousands of martyrs slain in this city (Moseinger, "Monumenta Syriacae", II). Mention may also be made of a bishop, Mara, in the fourth century, with six nuns: Thekla, Danak, Tatou, etc.; the Bishop St. Isaac, in the fifth century; St. Sirina, in 559; etc. The "Synodicon Orientale" (Paris, 1905, 674) mentions nine metropolitans of Bel-Slok and 132 bishops or bishops of various cities, 410 and 612. Lequien (Oriens Christ., II, 1331) speaks of others, many of whom were Catholics. At the beginning of the nineteenth century a number of Nestorians recognized the authority of the pope, who created for them the Diocese of Kerkuk. At present it contains 6000 Catholics, 15 stations, 16 churches and chapels, 22 native priests, and 5 primary schools. The city of Kerkuk itself, which has 30,000 inhabitants and constitutes a sanjak in the vilayet of Mosul, contains only about 300 or 400 Catholics, the remainder of the inhabitants being Mussulmans, Jews, or Nestorians.

S. VALHÉ.

KERNAN, FRANCIS, lawyer, statesman, born in Steuben County, New York, 14 January, 1816; d. at Utica, New York, 7 September, 1892; son of General William Kernan, who came to America from County Cavan, Ireland, in 1799, and Mary Ann Stubs, his wife. He attended Georgetown College, D. C., from 1833 to 1836, studied law in Utica, N. Y., in the office of Joshua A. Spencer, and later became his partner. He won fame as an advocate of ability, especially in legal conflict with such leaders of the bar as Denio, Jenkins, Beardsley, Doolittle, Hunt, and Conkling. His rank in his profession was well summed up by Judge Martin Grover, as being without a superior as an all-round lawyer at the bar of New York State. In dress, manner, decision, learning, and unassuming dignity of bearing and geniality, he was a very type of the old school of the bar.

Kernan's political services to his country covered a wide range. He was school commissioner of Utica, manager of the New York State Hospital, official reporter of the Court of Appeals from 1854 to 1857, member of the Constitutional Convention of 1867, regent of the University of the State of New York from 1870 to his death, member of Assembly from 1860 to 1862, member of the House of Representatives from 1863 to 1865, United States Senator from 1876 to 1882. In all these positions he was conspicuous for ability, fidelity to his convictions, zeal in their defense, and, being an able and skilled debater, he spoke extemporaneously, with clearness, vigour, and feeling, and to the point; his speeches were models of clear and convincing statement and analysis. He
numbered among his friends Abraham Lincoln, Horatio Seymour, Samuel J. Tilden, Thomas F. Bayard, Grover Cleveland, and other distinguished Americans, and to counsel and advice were often sought by them. Both as a member of the New York Assembly and as a congressman, he was a “War Democrat”. In Congress he rendered important service as a member of the judiciary committee, and was thoroughly in accord with the national government and its policy to maintain the integrity of the Union. He showed so decided a spirit of justice and moderation that he was often consulted by President Lincoln on matters pertaining to the conduct of the war.

In July, 1876, at the St. Louis convention, Senator Kerr was nominated for the presidency. In the Democratic convention of 1884, held at Chicago, he was not a delegate, but he was present at the special request of the leaders of his party and was one of the most efficient advocates, outside of the convention, for the nomination of Grover Cleveland. In the disastrous Democratic campaign of 1872, he was a candidate for governor against John A. Dix. He was a devout and practical Catholic, frequently assisting at Mass and approaching the sacraments. He represented Georgetown College at the Catholic Congress of laymen at Baltimore in 1889, and delivered a memorable address on that occasion. In charity he gave much, considering his means, as he was never a very wealthy man, to his church and to charitable institutions; and his legal advice was often freely given to the clergy and to his Alma Mater, Georgetown College, which bestowed upon him the degree of Doctor of Laws.

Kerr’s home life was very happy. In 1843 he married Mary A. Devereux, daughter of Nicholas Devereux, of Utica, who was one of the principal founders and benefactors of the Catholic Church and its charitable institutions in Central and Western New York. He brought up a family of ten children and was a great home-lover, with no fondness for the thought of a round-the-world club life. He was fond of reading of an innocent game of cards, and was a fine conversationalist. Occasionally, but not often, he attended dinners and receptions in Washington and Utica. Duty, not pleasure, was his watchword. He often worked in his hotel at night over lawsuits and congressional speeches. In person he was tall, had a good figure, and an attractive, intellectual face. Without pretense or sham, he was one of nature’s gentlemen. His old age was calm, genial, peaceful, and contented. He served his country and his Church to the best of his ability and was a shining example of what a Catholic lawyer and statesman should be.

Thomas P. Kernan.

Kerry and Aghadoe, Diocese of (Kerriensis et Aghadoensis), suffragan of Cashel, Ireland, is sixty-six miles in length, and sixty-one in breadth, containing 1,600,000 acres, and extending over the whole County of Kerry and a portion of that of Cork; in 1901 the Catholic population was 187,346. This diocese, in its actual condition, was constituted by the union of two very ancient sees—Ardert and Aghadoe, but the precise date of this incorporation cannot now be definitely ascertained. All we know is that it had taken place before the Synod of Rathbramail (1110); for it was there proposed and sanctioned that the see of the then united Diocese of Ardfert and Aghadoe should be transferred to Tralee. Our ecclesiastical historians give a detailed account of the various journeys of St. Patrick, who, though visiting the neighbouring County of Limerick, never set foot in Kerry, being content (as the ancient chroniclers say) with giving this remote corner of Ireland his blessing, while abstaining from the vantage point of West Limerick and viewing the lofty mountains and vast bogs of ancient Kerry. Nevertheless, we know from many sources that Christianity was introduced here at a very early period. This fact is attested not merely by the annalists, but also by the many monuments of great antiquity and Christian character which still exist in various districts of the diocese. The first bishop whom we find mentioned in connexion with the history of Kerry, was named Erc, and there can be no reasonable doubt that this bishop was St. Erc of Slane, who died according to the Annals of Ulster in 532. He exercised an episcopal jurisdiction in the county before the birth of St. Brendan, and, from what we read about his relations with that saint, must have resided there almost continuously for several years afterwards. It is very probable he came to Kerry soon after the mission of St. Benignus, who was sent by St. Patrick in 450 to preach to the tribes of West Munster, and “to unite them to the Church by the saving waters of baptism.” This visit of St. Benignus was comparatively short, for he was called away to North Clare and Connaught, where his apostolic labours may have been more urgently needed. To complete, however, the conversion of Kerry thus auspiciously begun by Erc, one of his most zealous and devoted bishops, St. Erc, who had spiritual charge not only of Kerry, but also of a wide range of south-west Limerick, in the heart of which lay the convent of St. Ita at Killeedy, over which he seems to have had jurisdiction. He was the special friend of St. Brendan, the patron of Kerry, whose feast is celebrated on 16 May. There is not among the ancient saints of Erin a more interesting figure than this patron of Kerry. His travels by land, and still more his voyages by sea, have made him famous from the earliest times. Very ancient manuscript copies of his famous seven years’ voyage in the Atlantic Ocean are found in several European libraries, while his romantic career was a favourite theme with the poets and romancers of medieval Europe. (See Brendan, St.)

The other ancient see included in the modern Diocese of Kerry, is that of Aghadoe. Another native saint, Finan Cam, was the first to build a church at Aghadoe, which in after times became the see of a bishop. It was this saint also who founded the famous monastery and school of Innisfallen, a lovely island in the Lower Lake of Killarney. It is said there that one of the greatest of Ireland’s kings was educated—Brian Boru, who destroyed the power of the Danes at Clontarf in 1014, while his distinguished professor, Maelseathin O’Carroll, was most probably the original compiler of the famous Annals of Innisfallen. The principal copy of this valuable work is
preserved in the Bodleian Library at Oxford. It begins with a general history of the great empires of the world dating to A. D. 450. The remainder, and the most valuable portion of the page, consists of an abridgment of an old Irish manuscript, containing a brief chronicle of Ireland to 1319. This monastery, owing to its situation, escaped the ravages of the Danes, who had worked such ruin on other churches in Kerry. Unfortunately, there are few records of the early bishops either of Ardfert or Aghadoe previous to the Norman invasion in the twelfth century. All we know is, each had its distinct succession of bishops, and each cathedral had its separate chapter. But these, in the days of persecution, were allowed to lapse. The chapter of Kerry was re-established by Brief of His Holiness, Pius IX, in 1853. Owing to persecution, and the want of a resident clergy in the country, this archdiocese had no bishops from 1610 to 1641, and again from 1653 to 1703, being governed during both these periods by vicars Apostolic. From this latter date there has been no interruption in the episcopal succession. Many of its bishops have been men of distinction. We may mention Dr. Richard O'Connell (1641–1653), who at a very trying time successfully resisted the determined attacks of heresy on the faith of the people. In modern times Kerry had Dr. David Moriarty (1856–1877), a most accomplished pulpit orator, and Dr. Daniel McCarthy (1878–1881), professor at the College of Maynooth and author of valuable works on Sacred Scripture. The religious orders were introduced into the diocese chiefly through the piety and zeal of some of the ancient lords of the county. The Franciscans came to Ardfert in 1523, to Muckross in 1440, and to Lislaughtin in 1464. The Dominican convent in Tralee was founded in 1213. The Cistercians built the Abbey of Kyrie Eleison in Ordoney in 1154, while at a much earlier period religious communities existed at Killagha in the parish of Kilcolean, at Derrinane, at Ratoo, etc. During the reigns of Henry VIII and Elizabeth all these religious establishments were destroyed, the priests were expelled, while their property was confiscated. The successful career of Cromwell and his lieutenants had a still more disastrous effect on the religious condition of this remote see in southwest Munster. In modern times there has been a similar development. Though finer and more elaborate cathedrals, and the parochial churches throughout the diocese, were utterly ruined in days of persecution, there has been a complete restoration from the wreck and disaster of those sad times. The Dominicans are again established in Tralee, while the Franciscans flourished in the last century and are still in Muckross, not far away. The parish churches, which were mostly thatched cabins not so long ago, are now magnificent stone structures raised throughout the zeal and energy of a faithful priesthood, aided by the generosity and religious spirit of the laity of the county. The ancient cathedrals of Ardfert and Aghadoe are now in ruins, but the modern cathedral of Kerry, canonically erected in the ancient parish of Aghadoe by special Brief dated 18 May, 1858, surpasses even old Ardfert—still magnificent, though in ruins. It was designed by Pugin and was begun under Bishop Egan in 1840. For over fifty years it remained in an unfinished state, but the present occupant of the See of Kerry and Aghadoe, Most Rev. Dr. John Mangan, has with characteristic energy undertaken the completion of this magnificent structure according to the original designs of its celebrated architect. Mangan was born in the parish of Listowel in 1843, and was educated at Killarney and Maynooth, where he won the highest academic distinctions. His missionary life in Kerry was mainly spent in the parishes of Glenariff and Kenmare, which, owing to their extent, always demanded great labour on the part of their pastor. As a reward for his energy and zeal, he was appointed archdeacon of Aghadoe, parish priest of Kenmare, and vicar-general of the diocese in 1901. He was raised to the episcopate, 21 July, 1904. This diocese consists of 51 parishes, has 49 priests, 22 assistant ministers, and 69 curates. It has 99 churches, 2 friaries, 5 monasteries, and 17 convents.

DENIS O'CONNOR.

Kerressenbrooch (Kerressenbroek), Hermann von, teacher and historian, b. at Münster, in the Duchy of Pommern, d. at Osnabrück, 5 July, 1558. He attended school first at Paderborn, and after 1533 at Münster until his parents were banished from that city by the Anabaptists. He completed his studies at Cologne, where, in 1541, he received his degree of Bachelor of Philosophy and the Liberal Arts. In 1545 he left Cologne to teach in a superior school, probably at Düsseldorf, after which he was rector at Hamm (1548–50), and head of the Pauline Gymnasium at Münster, which had formerly held a high reputation. After twenty-five years of fruitful activity there, he was chiefliey dependent on the means contributed from the parents of their pupils. A still extant programme of studies of the Pauline Gymnasium for the year 1551, entitled "Ratio studiorum scholae Monasteriiensis secundi" (in Driver, "Bibliotheca Monasteriensia", Münster, 1793, I, 265–72), shows that as teacher he laid great stress on grammar, especially in Latin and Greek, advocating also the study of Hebrew, but utterly disregarding the exact and historical sciences (Reulien). He required a high degree of skill in the preparation of written work, and careful and constant practice in oral recitation. Pupils were expected to be the most exact master, while as a practical organizer of the school system he was received everywhere with open arms. But while in his capacity of teacher he was held in high repute, as historian he suffered much unpleasantness and even persecution; his literary work had a strong influence on his career, as the cause, as it was, of his frequent change of habitation. His first known work, written while he was at Cologne, was a poem in metric hexameters, "Brevis descripition bellii Monasteriensis contra anabaptistica monstra gesti", skilful in workmanship, but of slight importance. His principal work deals with the same subject, "Historia Anabaptistarum Monasteriensium", as might be expected from a humanist it is embellished with rhetorical flourishes which produce at times an unpleasant effect. It was written on a broad scale, forming a history of the whole city from 1524 to 1554. The author claims that his data in the period of formation, in addition to the accounts of many eyewitnesses, is his own experiences, which placed him in a position to give a complete picture of the bloody disturbances of these times. He lacked, however, the essential qualifications of an historian, the critical faculty and impartial judgment, so that the work, written at the instance and with the assistance of the cathedral chapter, was in
parts most biased, to the prejudice of the municipal authorities and the patricians. Their anger being roused, they compelled him to retract several passages as being erroneous, to destroy his manuscript, and to promise on oath to write no more books. This work was published in 1730 at Leipzig by Mencke in "Scriptores Rerum Germanicarum," vol. III, and in a German translation at Frankfurt in 1771 under the title "Geschichte der Wiedererwachenen Kaiserlichen Hanseat. Niederlande". A revised edition was published without a revised edition: "Hermann a Kerssenbroch anabaptistus fiorus Monasterium incitam Westphaliam metropolim evetentis historia narratio" (Münster, 1899), parts of it being extremely instructive. The Kerssenbroch's position in Münster having become insecure, he went to Paderborn, and while there, in spite of his oath, he published "Catalogus episcoporum paderbonensium eorumque acta" (Lemgo, 1578), availing himself of Gobelinus Persona and others. The open violation of his oath lost him the respect of many friends, and forced him to leave Paderborn. At Werd he prepared a vindication, which, however, was never printed, "Causa cum capitatis M. Hermann a Kerssenbroch succincta narratio cum earunadem vera et solida confectione". To revenge himself upon his enemies, he resorted to a means which imperilled his life; he wrote a biting satire on the "Protestants", to which his opponents sent a delegation to Werd to call him to account for perjury and breaking his oath, and his only safety lay in flight.

PATRICKUS SCHLAGER.

Kervyn de Lettenhove, JOSEPH-BRANCO-CONSTANTIN, Baron, Belgian statesman and historian, b. at Saint-Michel-lez-Bruges, 17 August, 1817; d. there, 3 April, 1891. He entered very early on a political career, and in 1861 was sent to the Chamber of Representatives by the district of Ezeloo. He took an active part in most parliamentary debates on foreign affairs and public instruction, and in 1870 upon the accession of his party, the Constitutional Catholics, he received the portfolio of the Interior. His ministerial career, however, was short-lived; he made the mistake of appointing to the government of Limburg P. de Decker, a former minister, whose name had been connected with financial failure (see BELGIUM), and was compelled to resign. He remained in the Chamber of Representatives, but gradually withdrew from politics and devoted his time to historical researches. He had already won some fame in that field: in 1856 the French Academy had crowned his work "Etudes sur les Chroniques de Froyaart". Kervyn travelled extensively in Europe, visiting most libraries and archives of note, gathering data for his historical works, some of which have modified on a number of points the prevailing opinion of his time. His style is grave and somewhat bombastic, while his arguments have been charged, but without sufficient reason, with unfaithfulness to Queen Elizabeth, William the Silent, and Mantix de Sainte Aldegonde. His most important works, besides the one already mentioned, are: "Histoire de Flandre" (Brussels, 1847-90); "Lettres éclairant sur l'université de Comines" (Brussels, 1847); "Chroniques relatives à l'histoire de la Belgique sous la domination des ducs de Bourgogne" (Brussels, 1870-7); "Marie Stuart" (Paris, 1889); "Relations de la Belgique et de l'Angleterre sous le règne de Philippe III" (Brussels, 1882-91).

Kervyn de Lettenhove, Biography, 1 (Bruges, 1880); 2nd ed. (Bruges, 1883); "Kervyn de Lettenhove, Académies de Belgique, 1890; "Bibliografia de Belgique" (Brussels, 1890); "Bibliographie Académique" (Brussels, 1893).

PIERRE MARIQUE.

Ketteler, WILHELM EMMANUEL, Baron von, Bishop of Mainz, b. at Münster, in Westphalia, 25 Dec., 1811; d. at Burghausen, 13 July, 1877. He was about to enter the Prussian bureaucracy when, in 1837, the persecution conducted by Prussia against the Archbishop Droste-Vischere of Hildesheim touched Ketteler's religious spirit and led him to resign. In 1841 he studied theology at Munich University, and in 1843 he completed his preparation for the priesthood at the Seminary of Münster. In 1844 he became a curate at Beckum and in 1846 rector of Hopsten in Westphalia. Elected by the District of Teckelburg and Warendorf to the Frankfort Parliament in 1848, Ketteler distinguished himself by his broad and discerning intelligence of the social movements of his time. In the oration which he delivered 21 Sept., 1848, at the funeral of General Auerwald and Prince Trinchnowsky, victims of the great body of the German people from responsibility for the crime. At the Catholic Congress of Mainz (Oct., 1848), one of the first of the great meetings of German Catholics, he offered a toast to "the plain people" and declared that as religion has need of freedom, so has freedom need of religion. Finally, during the year 1848, he preached at Mainz two sermons, on the Catholic theory of property and on the duties of Christian charity, developing the sociology of St. Thomas Aquinas, and demonstrating the manner in which it answered every social need of the times. He became rector of St. Hedwig in Berlin, Oct., 1849, with Bishop Diepenbrock of Bremen, which the task of bringing back to Catholicism the famous Prot-
KETTLEL

estant novelis, Ida von Hahn-Hahn. He reorganized the large St. Hedwig Hospital, and for the first time since the Reformation led a Corpus Christi procession through the streets of Berlin.

In 1849 the nomination of Professor Schmid as bishop by the canons of Mainz was rejected by Pius IX, to whom Schmid's views were justly an object of suspicion. The chapter after some opposition proposed three names to Pius IX, among them Ketteler's, and on 15 March, 1850, the pope named him bishop of that see. The circumstances of his nomination and its acceptance by the grand-ducal Government of Hesse marked a defeat for the Josephist bureaucracy which for twenty-five years had tyrannized over the Church in all the small states of the ecclesiastical province of the Upper Rhine. Ketteler immediately inflicted two more defeats upon them. In 1851 the theological seminary of Mainz and thereby freed his clergy from the influence of the theological faculty of Giessen, where the State had hitherto required Catholic seminarians to study; moreover he called a "concordat" for some vacant rectories without asking the permission of the State. Through his institution of diocesan conferences and the introduction of numerous male and female congregations, Mainz became a model diocese. The Brothers of St. Joseph and the Sisters of Providence, two orders founded by Ketteler, were destined to a larger growth. As to the relations between the Church and the State in the Grand Duchy of Hesse, they rested chiefly on the good understanding between Ketteler and Dalwigk, the minister. Their written agreement (1854) was not approved by Rome. They preferred that all the bishops of the ecclesiastical province of the Upper Rhine should act as a unit in their struggle against the legislation which the smaller German states were seeking to impose on all of them. The new agreement, which, after a visit to Rome, Ketteler negotiated with Dalwigk (1856), was sent to Rome by the bishop for approval, but was never returned. Until 1870 religious peace was maintained in Hesse through the harmonious relations between the bishop and the minister.

Religious Conflicts in Baden.—Ketteler played a very active part in the difficulties which broke out between the Baden government and Archbishop Vicari. He published a brochure defending the latter, and a visit of Ketteler's to Carlshagen, in January, 1854, almost brought about an understanding between Vicari and the Prince Regent of Baden. Bismarck, however, then Prussia's plenipotentiary at Frankfort, exercised such a strong influence over the Baden ministry that the attempted reconciliation failed. In 1865, when the opposition of the Catholics to the Baden school law caused a severe persecution, Ketteler invoked the intervention of Emperor Francis Joseph, and in two pamphlets refuted the formula of Lamen, according to which "law was the public conscience superior to private consciences." After Archbishop Vicari's death (1868) it was again Ketteler who defended against Minister Jolly the electoral right of the Freiburg canons. At Ketteler's suggestion, on the occasion of the eleventh centenary of St. Boniface, were inaugurated the conferences of German bishops; since then they have grown more frequent and are almost nominal since 1869. In this way Ketteler was the chief promoter of an institution which for the past forty years has greatly aided the cohesion and strength of the German episcopate. During 1864—66 his name was mentioned for the archbishopric of Posen or Cologne, and Bismarck seemed for a moment to favour the nomination.

Ketteler as a Social Reformer.—Ketteler thought that he was not exceeding his rights as a bishop when he spoke authoritatively on social questions. In 1848 he believed that social reform had to begin with the interior regeneration of the soul. Later he was to enter more deeply into economical problems. When, about 1853, the Liberal Congress was the Socialists Lassalle made forcible appeals to the German workmen, Ketteler studied their doctrines and even consulted Lassalle in an anonymous letter on a scheme of founding five small co-operative associations of workmen.

The Labour Question and Christianity.—In a book published in 1864, "The Labour Question and Christianity", he adopted Lassalle's criticism of the modern treatment of labour, and admitted the reality of an insurmountable law. In opposition to Schule-Delitsch he pointed out the futility of the remedies proposed by the Liberals, he condemned the class distinctions, and even accepted the idea of co-operative unions to be established, not as Lassalle wished, by state subvention, but by generous aid from Christian capitalists. In a Socialist meeting at Rondsorf, 23 May, 1864, Lassalle paid homage to Ketteler's book. On his side, Ketteler, the Catholic workmen had asked in 1866 if they could conscientiously join the "workingmen's association" founded by Lassalle, was disposed to dissuade them from so doing, owing to the anti-religious spirit of Lassalle's successors; nevertheless in his reply he duly acknowledged Lassalle's "respectful recognition of the depth and truth of Christianity". At this time he counted particularly upon the initiative of Christian charity for the organization of productive co-operative associations destined to restore social justice on a more equal scale. In 1869 he went still further: in a sermon preached near Offenbach, 25 July of that year, he particularised certain reforms, where the "hours of labour, prohibition of child-labour in factories, prohibition of women's and young girls' labour"; these claims, he thought, should be presented to the public authorities. In Sept., 1869, at the Fulda conference of the German bishops, he showed how necessary for the Church's work was the intervention of the Church in the name of faith, morals, and charity. He also made clear the right of workingmen to legal protection and urged that in every diocese some priests should be selected to make a study of economic questions. This Fulda discourse of Ketteler brought the Church of Germany into closer relations with the new social activity; on the other hand, his programme for protection of labour, taken up again in 1873 in his pamphlet on "Catholics in the German Empire", long served the German Centre as a basis for their social claims.

Doctrinal Controversies: The Vatican Council.—Though not professionally a theologian, Ketteler made his influence felt in the various doctrinal controversies of his time. In his "Liberty, Authority, and Church" (1862) he took a stand on the question of Liberalism, and set forth the Christian attitude towards the various meanings of the word liberty. "School" which Ketteler published in his seminary at Mainz, and whose chief representatives were Moufang and Heinrich, was noted for its adherence to Scholastic theology and its hostility to the anti-Roman tendencies of "Germanism" and "German Science.
represented by Döllinger and the Munich School. The former urged with much tenacity the theological seminaries, as preferable to theological faculties in the universities, for the education of the Catholic clergy, and earnestly strove, since 1862, for the establishment of that free Catholic university in Germany which is yet a desideratum. Despite this firm attitude, Ketteler had great intellectual influence, and contributed a theological viewpoint to what he had been told. He built a garrison in Munich under the pseudonym of "Guirius." He circulated in the council a pamphlet of the Jesuit Quarella, which in some respects seemed to militate against the doctrine of infallibility, but he did not personally accept all the theories of this work. It was he who suggested the petition of May, 1870, in which a number of bishops demanded that the eleven chapters of the "Schema" on the Church be taken up before entering on the discussion of infallibility. On 23 May he declared in a plenary meeting that he had always believed in papal infallibility, but he asked whether the theological proofs put forward sufficed to justify its dogmatic definition. He was not present at the final vote and left Rome after a written declaration that he submitted beforehand to the decision of the council. In September, 1870, he signed, with other German bishops, the Heilige Gements in favour of the newly defined dogma.

Ketteler and German Unity.—The political changes that took place in Germany, and the indirect effect they might have upon Catholic interests, were a source of much anxiety to him. When Austria's defeat (1866) filled the Catholics of Germany with consternation, and proved that the dream of an Austrian Germany was quite over, Ketteler tried to revive their courage in his "Germany after the War of 1866." He advised them to meet halfway the coming changes, and to let no one surpass them in their love of the German Fatherland. On the other hand, he sought Prussia not to be misled by those who would make her an instrument of Protestantism or of certain philosophical theories, and urged the respect of all existing political and social autonomies.

After the establishment of German unity (1870-71), Ketteler's chief concern was to obtain for German Catholics in the new empire such liberties and guarantees as the Constitution granted them in Prussia. This much he demanded in a letter to Bismarck (1 Oct., 1870), also during a visit he paid him in the spring of 1871, and in a speech in the Reichstag (3 April, 1871), where he served as a deputy from the Bielefeld constituents of Waldm.-Lancken. On the National Liberal party, on the contrary, urged the new empire towards religious persecution. Ketteler conferred once more with Bismarck, on 16 March, 1871, again pleaded with him for the Catholics, and then, on 14 March, 1872, resigned his seat in the German Parliament. He kept in touch, however, with religious politics, and wrote important pamphlets against the Prussian Kulturkampf, also against the papal measures by the French Liberals, yet influential with Dalwigk's successors, were inaugurating in Hesse. During the Kulturkampf his share in the Fulda episcopal conferences was often predominant. He and Archbishop Melchers of Cologne were potent in the decision passed in 1873 urging the bishop and the State to oppose the Roman Laws by absolute passive resistance, and, on the other hand, advocating a conciliatory attitude towards the Prussian law on the administration of church property. In 1873 he views on the rights of Christianity and of a bishop led him to enter the broader political field in his book on "The Catholics in the German Empire" in which he drew up a plan for the establishment of an effective connection between the Church and the State. He corresponded frequently the Liberalism of 1848, sincerely respectful of religious belief, with the "National Liberalism" of Bismarckian Germany, the old German idea of local autonomy with the idea of centralization borrowed from France. He hated in Bismarckian Germany the spread of political absolutism quite as in modern industrialism he hated the development of capitalist absolutism. The spirit of initiative which characterized this bishop is well set forth in a letter written 6 May, 1870, to Haffner, future Bishop of Mains: "I am heart and soul attached to the new great institute which the Christian truths will create for all human relations." Of him Windthorst said, in 1890: "We venerate him unanimously as the doctor and leading champion of Catholic social aspirations."
(in Matt., xvi, 19). The promise there made finds its explanation in Isaías, xxii, in which "the key of the house of David" is conferred upon Eliacim, the son of Hilkias, as the symbol of planetary authority in the Kingdom of Judá. Christ by employing this expression clearly designed to signify his intention to confer on St. Peter the supreme authority over His Church. For a consideration of the text in its dogmatic bearing, see Pope; Primacy. In the present article our sole purpose is to give a brief historical account of the meaning attached to the expression by ecclesiastical writers.

I. The Fathers.—(1) In the Fathers the references to the promise of Matt., xvi, 19, are of frequent occurrence. Almost invariably the words of Christ are cited in proof of the Church's power to forgive sins. The application of the symbol of planetary authority in the Kingdom of Judá, for the promise of the keys is immediately followed by the words: "Whatsoever thou shalt bind upon earth," etc. Moreover, the power to confer or to withhold forgiveness might well be viewed as the opening and shutting of the gates of heaven. This interpretation, however, restricts the sense somewhat too narrowly; for the remission of sins is but one of the various ways in which ecclesiastical authority is exercised. We have examples of this use of the term in such passages as August., "De Doctrina Christi," xvii, xviii: "Quid liberator et misericordius facere potuit ... nisi ut omnia donaret congregationes, quae mundam instituit Ecclesiam sibi ... ut quoverter in terra soluta essent in ccelo" (How could He [Christ] have shown greater liberality and greater mercy ... than by granting full forgiveness to those who shall turn from their sins ... He gave these keys to His Church, therefore, that whatever it should remit on earth should be remitted also in heaven) (P. L., XXIV, 25; cf. Hilary, "In Matt.", xvi, P. L., IX, 1010).

It is comparatively seldom that the Fathers, when speaking of the power of the keys, make any reference to the supremacy of St. Peter. When they deal with that question, they ordinarily appeal not to the gift of the keys but to his office as the rock on which the Church is founded. In their references to the potestas clariam, they are usually intent on vindicating against the Montanist andNovatian heretics the power inherent in the Church to forgive. Thus St. Augustine in his De Haeresibus, declares that the authority to bind and loose was not a purely personal gift to St. Peter, but was conferred upon him as representing the Church. The whole Church, he urges, exercises the power of forgiving sins. This could not have been the gift been a personal one (tract. I in Joan., n. 12, P. L., XII, 1271; P. Ser. cec. xcv, in P. L., XXXVIII, 1349). From the passage just quoted, the Montanists have drawn the curious conclusion that the power to forgive sins belongs not to the priesthood but to the collective body of Christians (see Cheetham in "Dict. Christ. Antiq."

There is, of course, no suggestion of this meaning. St. Augustine merely signifies that the power to absolve was to be imparted through St. Peter to members of the Church's hierarchy throughout the world. Some few of the Fathers, however, are careful to note that the bestowal of this power upon St. Peter alone, apart from the other Apostles, denoted his primacy among the twelve (Optatus, "De Schism. Don."

17, in P. L., XI, 1087). Origen dilates at length on this point, but teaches erroneously that the power conferred upon the Twelve in Matt., xviii, 18, could only be exercised within certain restrictions of place, while that conferred upon St. Peter in Matt., xvi, 18, was in an universal extent (Comm. in Matt., P. G., XIII, 1179).

(2) Occasionally, though infrequently, Christ's promise is not restricted to signify the power to forgive sins, but is taken in the fuller meaning of the gift of authority over the Church. Thus St. Gregory in his letter to the Emperor Maurice, after quoting Christ's words in Matt., xvi, 18, 19, writes: "Habilis he [Peter] received the keys of the kingdom of heaven, the power to bind and to loose in the Kingdom of Judá. Christ by employing this expression clearly designed to signify his intention to confer on St. Peter the supreme authority over His Church. For a consideration of the text in its dogmatic bearing, see Pope; Primacy. In the present article our sole purpose is to give a brief historical account of the meaning attached to the expression by ecclesiastical writers.

II. The Scholastics.—By the Scholastic theologians the precise significance of the term was closely analysed. (1) The view which is now universally accepted is exposed at length by Suarez (De Pot., disp. xvi). According to him, the phrase as employed by Christ in His promise to St. Peter denotes the gift of ecclesiastical authority in its widest scope. This authority was to be in a sense peculiar to St. Peter and his successors in the chief pastorate; for they alone were to possess it in its fullness. But it was to be exercised in due measure by the other members of the College of Bishops according to several degrees. Thus understood, the potestas clariam includes (a) the power of order, namely power exercised in regard to sacrifice and sacrifice, (b) the power of jurisdiction, and (c) the power to define in questions of faith and morals. The various powers were conferred upon the Church were held to belong either to the clavis potestiae or to the clavis scientiae, the latter of these two being understood to signify the power to teach, while the other departments of authority pertained to the clavis potestiae. The distinction is, however, a theological refinement, and is not involved in the expression itself. Suárez urges, Christ, when using the plural form, did not intend to indicate that the gift was twofold.

(2) The meaning attached to the term by the older Scholastics was, however, different from this. They followed the patristic tradition, and confined its significance to the judicial authority of the College of Bishops. The power of the keys, St. Thomas tells us (Summa Theol., Supp., Q. xvii, art. 2, ad 1ºm.), is a necessary consequence of the sacerdotal character. It is, in fact, identical in essence with the power to consecrate and to offer the Holy Sacrifice of the Mass. The one sacerdotal gift is applied to different departments in the different systems; but it appears to be the teaching of Pope John XXII in a well-known passage dealing with this subject (Extravag., tit. xiv, De verborum significatione, c. v, Quia quorumdam). The definition, "Clavis est specialis potestas ligandi et solvendi qua judex ecclesiasticus dignus recipere et indignus excogitare debeat a regno," the keys are a special power of binding and loosing by which the ecclesiastical judge should receive the worthy [into the kingdom of heaven] and exclude the unworthy therefrom, generally accepted in the Scholastic period (Pet. Lomb., "Sent.", IV, dist. xviii, John XXII, loc. cit.; St. Thomas, loc. cit.), might seem indeed to include jurisdiction in the external as well as in the internal forum. But in point of fact it was not so understood. The distinction between the clavis potestiae and the clavis scientiae was employed here. By the clavis scientiae was understood the priestly authority which is not to interrogate the penitent and thus obtain cognizance of the facts of the case; by the clavis potestiae, the authority to grant or refuse absolution.

The view just exposed is inadmissible as an interpretation of Christ's words. For it is plain that He desired to confer by them some special prerogative on
Kharput, Armenian Uniat diocese created in 1850. The city of Kharput, Armenian Karperpet, which means "rocky fortress," is very ancient. Although it was built under the first Armenian kings it has nevertheless no history. It is situated on a mountainside and there are still to be seen the ruined fortress and ancient tower, also well preserved. Because of its height and also owing to its lack of water, Kharput is being by degrees abandoned by its inhabitants, who have preferred to take up their abode in Mezrez, a city about three miles from the plain. The two cities are in constant communication and Kharput still contains 30,000 inhabitants. It is the capital of the vilayet of Mamouret-ul-Aziz recently created. The Armenian Catholic diocese numbers 3000 faithful, 8 parishes, 6 churches, 3 chapels, 14 stations, 14 primary schools, chiefy at Kharput-Mezrez and Malatia. There are about 72,000 Christians throughout the vilayet, which contains about 600,000 inhabitants. The Armenian Protestants have a large American mission at Kharput, which is the headquarters of all those in Armenia.

Khosru (Khosrau). See Persia.

Kiang-nan, Vicariate Apostolic of.-The present vicariate comprises the two provinces of Kiang-siu and Ning-hwei. Its alluvial lands make it, especially Kiang-siu, one of the most populous and best peopled provinces of China. The number of inhabitants of both provinces exceeds 60,000,000. Father Matteo Ricci, S.J., was its first missionary, introducing the Catholic religion into this country at the end of the sixteenth century. He found a powerful aid in the person of the famous Chinese minister, Paul Siu Kwang-ki, whom he met first at Kwang-tung and later at Peking. Baptized in 1603 at Kiang-nan, Paul Siu returned to Shanghai, his native place, and there converted many pagans. In 1607 he took with him from Peking Father Lazzaro Cattaneo, who built a residence and a chapel still to be seen at Shanghai. Returning to Peking, he at first followed the Jesuit Fathers in their disgrace, was restored to favour in 1628, and died in 1633. In 1641 his remains were transferred to Zhi-chou, where they still rest, and his principal establishment of the new mission is in the vicinity of his tomb. The Jesuits Francesco Brancati and Geronimo de Gravina were at this period building the churches of Sung-kiang, Su-chou, Tsang-ming; Father Sambriani, those of Nan-king, Chin-kiang, Yang-chou, Hwai-nan. The mission of Kiang-nan enjoyed peace from 1644 to 1661, during which time there were too few for the work. In 1660 the Vicariate Apostolic of Kiang-nan was created and confided to Bishop Ignazio Cotolendi of the Paris Society of Foreign Missions. During the persecution from 1664 to 1671 twenty Jesuits were exiled to Macao, Father Verbiest at Peking obtaining their release in the latter year. After the death of Kiang-hi, Yung Cheng exiled all the missionaries of the provinces; a few, however, succeeded in hiding themselves and, helped by twelve or fifteen Chinese priests, attended to the wants of the Christians. In 1690 Alexander VIII created the Diocese of Nanking, raising it under the jurisdiction of the Archbishop of Goa and with authority over the provinces of Kiang-nan and Ho-nan. The first Bishop of Nan-king was Alessandro Ciceri of Milan, a Jesuit, consecrated at Macao on 2 Feb., 1696. His last successor was Gaiatano Pires-Pireis, a Portuguese Lazarist (d. at Peking, 1839). After 1836 the Diocese of Nan-king was governed by Apostolic administrators until 1856, when the episcopal see was abandoned.

In 1736 the mandarins commenced a bloody persecution which lasted a whole century. At Kiang-nan the Father Tristan of Athenburg, who was the last Jesuit to be arrested. The superior of the mission, Father Anthony Joseph Henriches, was pursued and surrendered on 21 Dec., 1747. Both missionaries were strangled at Su-chou 17 Sept., 1748. The process of their beatification is not yet finished. Three Jesuit missionaries followed in Kiang-nan, viz. Fathers Ignatius Peres, Martin Corre, and Godofry of Lening ten hoven, named Bishop of Nan-king on 15 May, 1752, and consecrated at Macao on 22 July, 1756. He remained thirty years at Kiang-nan with two Chinese Jesuit priests, Mark Kwan and John Yau. It is related that in 1754 Bishop Godofry entered Su-chou and was received by chair-dealer to ordain him. He was arrested on 25 May, 1757, and, not before sorrowfully proclaiming as bishop the dissolution of his own Society. Before his death, he obtained the favour of re-entering the Society, yet surviving in Russia. For the next fifty years only Chinese priests conducted the Kiang-nan mission. In 1830 two Portuguese Lazarists, Fathers Miranda and Henriches, arrived in Kiang-nan. From 1835 to 1840 Fathers Ferdinand Faivre and Peter Lavassie made temporary sojourns in the mission. In reality, from 1877 till the return of the Jesuits in 1840, Kiang-nan was governed by native priests, who kept alive the Faith.

In 1833 Gaiatano Pires-Pereis was made Bishop of Kiang-nan, and resided at Peking, delegating his powers to Father Henriches, a Lazarist like himself residing at Macao. On 1 Oct., 1838, Mgr Peres, last Bishop of Nan-king, conferred the powers of vicarapostolic on Father Lourde, then Vicar Apostolic of Shan-tung and administrator of the Diocese of Nan-king and consecrated titular Bishop of Canopus. He arrived at Kiang-nan in 1842, and obtained some French Jesuits from the Propaganda and from Father Roothan, then General of the Society of Jesus. Fathers Gotseved, Benjamin Brueyve, and Francois left Europe on 25 April, 1840.
In 1842 a treaty between England and China resulted in the opening of five Chinese ports, among them Shanghai. Five new fathers and one brother left France for China in 1842. They made the voyage with M. de Lagrange, ambassador of France to Peiping, who became the first bishop of the Catholic religion in China. Bishop de Besi appointed Father Brueyre to found the seminary, which was opened on 3 Feb., 1843, with twenty-three students. In 1853 it was established at Song-kia-tu. In 1849 all the Christian settlements were confided to the French Jesuits; they contained four thousand seven hundred and fifty Christians. The rebels invaded in 1853 a great part of the province and remained there eleven years. The Jesuit Fathers established themselves in 1847 at Zi-ka-wei near the tomb of Paul Siu, at which period the orphanages of the mission were commenced. An asylum for girls was founded in 1855 at Wan-tung. In 1853 the Chang-mau rebels (Tai-ping) took possession of Nanking, then of Shanghai, but abandoned the latter in 1854.

Bishop de Besi left for Rome in 1847, leaving the government of the mission to his coadjutor, Bishop Maresca. In 1849 the latter was named administrator of the Diocese of Nan-king, but returned to Europe, owing to ill-health, on 8 April, 1855. On 13 Nov. of the same year he died at Naples. The Diocese of Nan-king was then suppressed, and the Vicariate Apostolic in Chinese, and entrusted to the French Jesuits. Father Pierre André Borinjet became administrator Apostolic in 1856. During the eight years of his administration the rebels laid waste all the Christian missions of Kiang-nan, except that of Shanghai. Then followed the wars of the French and English against China, beginning in 1857. A treaty was signed in 1858, but the war was renewed in 1860, at the end of which entrance into China was obtained. In 1859 the rebels held only Nan-king, but suddenly became stronger. Father Masse was arrested by them, but made his escape; his brother Louis, however, was killed while defending the orphanage of Tai-kia- wan. The orphan asylum was pillaged and burned, and many Christians were massacred. A few Chinese natives of Manila were able to defend Tung-kia-tu and Zi-ka-wei. In 1862 Admirals Hope and Protec opened a campaign, but the latter was killed at Nan-kia. Major Gordon, who commanded from four to six months, latter recaptured the country but was dismissed in 1866 by the Chinese. At the end of the same year the rebels were driven out of every place they had held. The missions, however, suffered much in the meantime. Father Vuillaume was killed on 4 March, 1862; between 1856 and 1864 twenty-four missionaries died, and before the close of 1865 six or seven were victims of typhus. Bishop Borinjet died of cholera on 31 July, 1862. Mgr Hippolyte Adrien Languijatt, Bishop of Seregopolis and Vicar Apostolic of Chi-li since Sept., 1856, was named Vicar Apostolic of Kiang-nan on 2 Feb., 1865, and continued administering the Chinese and the French rebels. He went to Rome in 1867, and brought back with him religious Helpers of the Souls in Purgatory and some Carmelites. He founded the observatory about the same period, and took part in the Vatican Council of 1870, but in 1874 a stroke of apoplexy almost disabled him for any active service. The following are the statistics for the years 1866 and 1878: in 1866, 42 European priests and 12 Chinese priests, 184 missions, 71,184 Christians, and 5033 pupils in the schools; in 1878, 56 European and 26 native priests, 655 missions, 93,310 Christians, 9135 pupils in the schools.

Father Carrère suffered much at Nan-king. Driven out of this city by Li Hung Chang, he was recalled by the consul of France from Shanghai; he died on 17 Aug., 1868. A hospital for aged men was established at Shanghai in 1867, and the St. Francis Xavier School was opened. A severe persecution broke out in 1876. In March some residences were pillaged, and a catechist massacred. On 13 July a Chinese priest was massacred with one of his servants and a boy from the school. The church was pillaged, and the bodies of the victims were consumed. The girls of the school and their teachers were taken into captivity. Everywhere the property of the Christians was pillaged, and their chapels burned. Bishop Languijatt died during this persecution, at Zi-ka-wei, on 29 Nov., 1878. Bishop Valentine Garrier, the present coadjutor, was named his successor; he was fifty-four years old, and governed the mission nineteen years. The accounts of his administration from 1879 to 1899 are as follows: in 1879, 55 European and 26 Chinese priests, 550 missions, 345 schools for boys with 6222 pupils, 213 schools for girls with 2701 pupils, 95,175 Christians; in 1898, 116 European and 40 Chinese priests, 896 missions, 390 schools for boys with 10,663 pupils, 449 schools for girls with 5208 pupils, 115,177 Christians.

The fathers succeeded finally in establishing themselves in the centre of Ngaun-hwei. In 1882 Bishop Garnier sent missionaries to Su-chou-fu, the most northerm prefecture of the province of Kiang-su. The fathers bought a house in the city, and then commenced their difficulties, which lasted fourteen years. On 5 Feb., 1889, the European concession of Chi- nian Nanking was attacked by the inhabitants of the United States was pillaged and burned, but the church and residence of the mission were spared. On 2 May, 1891, some of the rabble besieged the orphanages of the mission, but soldiers rescued the orphans. On 12 May, 1891, Wu-hu and then Nang-king were attacked, but the presence of a French vessel saved them. However, five or six chapels were pillaged or burned in the interior of the provinces. Tranquillity was restored, thanks to the presence of Admiral Bernard. Bishop Garnier died on 14 July, 1898. Bishop Simon was named vicar Apostolic in Jan., 1899, and consecrated on 25 June; he died on 10 Aug. of the same year at Wu-bu. At the end of 1900 Bishop Paris, superior of the mission, was named vicar Apostolic and titular Bishop of Bilanda. The following was the condition of the mission in 1907: 1 bishop; 142 Jesuits, of whom 26 are Chinese; 35 native priests; 969 churches or chapels; 1 grand seminary at Zi-ka-wei with 29 students; 1 little seminary at Kiang-nan with 73 students; 558 schools for boys with 14,175 pupils; 604 schools for girls with 9360 pupils; 2 colleges for boys with 408 students; 3 colleges for European girls with 766 students (at Shanghai); 1 English school with 543 pupils; 1 French school with 336 pupils; 6 hospitals with 3898 patients; 6 asylums for old men with 117 inmates; 75 orphanages with 6584 children; 29 Little Brothers of Mary; 32 Carmelite nuns, 20 of whom are natives; 91 Helpers of the Souls in Purgatory, 33 of whom are natives; 31 Sisters of Charity; 9 Little Sisters of the Poor; 137 Chinese religious; 145,219 Catholics, and 99,881 catechumens.

**Kiang-i, Vicariate Apostolic of Eastern.**—The mission of Eastern Kiang-i was separated from the northern mission of Kiang-su in 1885. It includes 8,000,000 inhabitants and is formed from the four prefectures of Fu-chou-fu, Yao-chou-fu, Kwang-hsin-fu, and Kien-chang-fu. The first vicar Apostolic is the present incumbent, Mgr. Casimir Vie, a Lazarist, named in 1885 titular Bishop of Tchien-nan. He resides at Fu-chou-fu. The Catholic community included in 1899: 1 bishop, 16 Lazarists (including three Chinese), six native priests, six Sisters of Charity, forty-eight Sisters of St. Ann, fifty-six schools with...
1910 pupils, sixty-six churches and chapels, twenty-five seminarians, ten orphanages with 622 children. In 1951, Bishop Paul Ferrant was consecrated coadjutor Bishop of Barbaliou; he assumed the direction of the mission in 1905. In the succeeding years the mission of Northern Kiang-si was the scene of bloody persecutions. Father Lacruche and five Little Brothers of Mary were massacred at Nan-chang on 25 Feb., 1906; the mission and the school were burned. Three other missionaries and five Daughters of Charity saved their lives by fleeing to Kiu-kiang.

The mission of Northern Kiang-si comprises to-day (1910) the six following civil prefectures: Kiu-kiang-fu, residence of the vicar Apostolic, Yoei-chou-fu, Nan-chang-fu, capital of the province, Nan-kang-fu, Liu-kung-fu, and Yuan-chou-fu, with a total of ten million inhabitants. In 1899 the Catholic mission included: 2 bishops, 11 Lazarist priests, of whom two were Chinese, 2 native priests, 14 Daughters of Charity, 5071 Catholics. Condition of the mission in 1907: 1 bishop, 16 European missionaries, 4 native priests, 98 churches and chapels, 2 seminaries with 24 students, 50 schools with 1439 scholars, 1 school directed by the Little Brothers of Mary, 24 Daughters of Charity, 8395 Catholics. In 1908: 1 bishop, 18 European missionaries, 4 native priests, 110 churches and chapels, 11,397 Catholics. Missiones Catholicae.

Kiang-si, VICARIATE APOTOLIC OF NORTHERN. — Father Matteo Rieci of the Society of Jesus was the first missionary who entered the Province of Kiang-si at the end of the sixteenth century. It was during his voyage from Canton to the capital of China, that he remained some time in this province and preached the Gospel with success. After him, during the seventeenth century, some missionaries belonging to different religious orders came. Innocent XIII organized this province into a vicariate Apostolic, and entrusted it to Rev. Fr. Alvaro Benavento of the Augustinian Order, appointing him titular Bishop of Ascalon. The new vicar fixed his residence at Kan-chou-fu. During his administration the Jesuit Fathers built beautiful churches and teaching Christian communities at Yao-chou, Kiu-kiang, and Nan-chang, capital of the province. Bishop Benavento died at Macao, 1705. He was not replaced on account of the persecution. The mission was entrusted to Bishop Ventallot, Vicar Apostolic of Fu-kien. The vicars Apostolic of Fu-kien maintained the mission of Kiang-si under their jurisdiction till the appointment of Bishop Carpena, who in 1838 that the missions of Kiang-si and Che-kiang be removed from his jurisdiction and transferred to the Lazarist Fathers. In 1722 Father Etrecolles, S.J., at King-te-chen, went to make a mission study on the Chinese moulding. In 1785 the first Lazarist missionaries arrived at Peking to take the place of the Jesuit missionaries. They were charged with the missions of Kiang-si and Kiang-nan. Unable to go themselves in those missions on account of the persecutions of Yung-ching and Kien-long, they delegated the native priests to visit the Christians. In 1790 Blessed Clet was sent to Kiang-si where no European missionaries had set foot during the preceding forty years. He remained alone during three years. The persecution broke out again during the reign of Kiu-kung. Blessed Clet, assisted by Chinese Lazarists, administered during this time the mission to the Lazarist Fathers. He was arrested at Ho-nan in 1819, and on 18 Feb., 1820, suffered death by strangulation at the age of seventy-two. In 1832 Father Laribe arrived in Kiang-si.

In 1833, at the request of Bishop Carpena, Kiang-si and Che-kiang were separated from the Vicariate Apostolic of Fu-kien. Bishop Rameaux, former missionary of Hu-pe, was named vicar Apostolic of the new vicariate formed by the union of Kiang-si and Che-kiang. At this time there were approximately 6000 Chinese in Kiang-si. In 1845 Bishop Rameaux died of apoplexy. The mission of Che-kiang was separated from that of Kiang-si and Bishop Laribe was named Vicar Apostolic of Kiang-si. The mission then numbered 9000 Christians. Bishop Delaplace soon replaced Bishop Laribe, but the new bishop was transferred to Che-kiang in 1854, and Bishop Dancour succeeded him. From 1856 to 1858 the ravages of Changmou (Tai-ping) reduced the Christians to 6000. In 1870, at the arrival of Bishop Bray, there were 7388 Christians and more than 1059 catechumens. There were then 4 European missionaries and 10 native priests. In 1874 Leo XIII divided Kiang-si into the Vicariates of Southern Kiang-si and Northern Kiang-si. Finally, in 1888, the Vicariate Apostolic of Eastern Kiang-si was separated from Northern Kiang-si. Bishop Paul Ferrant was consecrated coadjutor Bishop of Barbaliou; he assumed the direction of the mission in 1905. In the succeeding years the mission of Northern Kiang-si was the scene of bloody persecutions. Father Lacruche and five Little Brothers of Mary were massacred at Nan-chang on 25 Feb., 1906; the mission and the school were burned. Three other missionaries and five Daughters of Charity saved their lives by fleeing to Kiu-kiang.

The mission of Northern Kiang-si comprises to-day (1910) the six following civil prefectures: Kiu-kiang-fu, residence of the vicar Apostolic, Yoei-chou-fu, Nan-chang-fu, capital of the province, Nan-kang-fu, Liu-kung-fu, and Yuan-chou-fu, with a total of ten million inhabitants. In 1899 the Catholic mission included: 2 bishops, 11 Lazarist priests, of whom two were Chinese, 2 native priests, 14 Daughters of Charity, 5071 Catholics. Condition of the mission in 1907: 1 bishop, 16 European missionaries, 4 native priests, 98 churches and chapels, 2 seminaries with 24 students, 50 schools with 1439 scholars, 1 school directed by the Little Brothers of Mary, 24 Daughters of Charity, 8395 Catholics. In 1908: 1 bishop, 18 European missionaries, 4 native priests, 110 churches and chapels, 11,397 Catholics. Missiones Catholicae.

V. H. MONTANAR.

Kiang-si, VICARIATE APOTOLIC OF SOUTHERN. — Southern Kiang-si was separated from the Northern mission of Kiang-si in 1879, and organized into an independent vicariate Apostolic. The mission possessed at the time 3000 Catholics among a population of ten million. This part of Kiang-si had been greatly neglected up to this time on account of its remoteness. Father Rouger, a Lazarist, was the first superior of the new mission. He retained the title of pro-vicar till 1884, when he was named vicar Apostolic. He established his residence at Ki-nang-fu. At his death in 1887, Mgr Cogret assumed the direction of the mission. The latter came from Peking, and found only two missionaries in the mission. Southern Kiang-si was often a prey to persecution. In 1884 the Christian districts were pillaged. At the end of August, 1900, the chapels on the frontiers of Kwangtung were again pillaged, then burned, and the Christians driven from their homes. Later, towards the end of September, 1907, Father Candigiglia, an Italian Lazarist, and more than sixty Christians were massacred at Ta-ho-li; the churches and more than twenty Christian villages were pillaged and destroyed by fire. The following is the account rendered at different periods of the condition of the mission. In 1899: 1 bishop, 16 priests, 27 churches and chapels, 2 seminaries with 28 students, 4 colleges with 87 students, 7 native Daughters of St. Anne, 4 orphan asylums with 138 children, 5229 Catholics, and more than 4500 catechumens. In 1905: 1 bishop, 15 missionaries, 6 native priests, 43 churches and chapels, 2 seminaries with 42 students, 1 college with 30 students, 4 orphan asylums with 317 children, 4 Little Brothers of Mary, 5 Daughters of Charity, 15 native Daughters of St. Anne, 8637 Catholics, and about 3000 catechumens. Missiones Catholicae.

Kickapoos. See Kickapoo Indians.

Kickapoo Indians. — Apparently corrupted from a longer term signifying "roamers": a tribe of Algonquian stock, closely related dialectically to the Sauk and Foxes, and living when first known in south central Wisconsin, whence they gradually moved southward, taking up a position about the lower Wabash in Illinois and Indiana, upon lands seized from the Illi-
nois and Miami. In their general habit, as well as in their mythology and ceremonial forms, they closely resembled the Sauk and Foxes. They were agricultural, occupying fixed villages of bark houses in summer and oval mud-dwelling wigwams in winter, and making frequent excursions into the plains beyond the Mississippi to hunt the buffalo and steal horses. As the name implies they were noted for their roving and adventurist disposition. Their religious belief centered about two mythical hero brothers, to whom all gifts were attributed, and who ruled in the spirit world. They held the dog particularly sacred. They had a system of eleven clans (see INDIANS), which is still kept up, descent following the male line, and the name of the individual indicating the clan to which he belonged. As a people the Kickapoo have usually been noted for their warlike spirit and their civilization. They are possibly identical with a tribe mentioned by the Jesuit Druillettes in 1658, but were first definitely met by Allouez about 1669, as visitors, with other tribes, at the Francis Xavier Mission, on Green Bay, Wisconsin. In 1680 they killed the Recollect missionary Father Gabriel de la Ribourde on the banks of the Illinois. They joined the French in the long war beginning in 1712, and in 1728, together with the Mascoutens, captured Father Ignatius Guignas and constrained him to the stake, but afterwards adopted him and through his influence made peace with the French the next year. They joined later against the English in 1756, and aided the northern tribes in the ensuing destruction of the Illinois, and joined the same tribes and the English in the revolutionary wars and the War of 1812.

Between 1809 and 1819 they ceded all their lands in Illinois and Indiana, removing first to Missouri and later to Kansas. About this period a noted prophet named Kanakuk arose among them preaching the doctrine of temperance, peace, and a return to the old Indian life. About the year 1852 a large party left the main body in Kansas and moved down into Texas and thence into Mexico, where they were joined later by others and became known as the Mexican Kickapoo. In 1873 a part of these were induced to return and were settled in central Oklahoma, but the rest remain in Mexico, upon a reservation granted by the Mexican Government, in the Santa Rosa Mountains, eastern Chihuahua. Both in Kansas and Mexico they are noted for their conservative and unprogressive tendency. They refuse the operation of an unfortunate allotment agreement in 1891 with power to sell their allotted lands, the Oklahoma band has been rendered practically homeless. A few are under the influence of the Catholic mission at Sacred Heart or of the Friends working in the same region, but the majority are still heathen.

From a possible two thousand when first known, they have decreased to about eight hundred souls in 1908, of whom one hundred and ninety-five were in Kansas, two hundred and thirty-four in Oklahoma, and the rest in Mexico. There has been a scattering movement from Oklahoma to Mexico for the past five years.

Kielce (Russian Kireitzy), Diocese of (KIELCENSI), in the southern part of Russian Poland, comprises the government (province) of Kielce and a part of the government of Piotrkow. Kielce, the episcopal see, contains four Catholic churches, one Orthodox and one Protestant church, and a Jewish synagogue. The church of the Assumption, now the cathedral, was founded in 1173 by Gideon, Bishop of Cracow. The beautiful church of the Holy Trinity was founded in 1646. The church of St. Adalbert (twelfth century) is built with red sandstone, and the church of St. George in winter, and the magnificent church of St. Michael the Archangel was founded in 1221 by Ivan Odrowski, Bishop of Cracow. The diocesan seminary was founded by Bishop Stanislaus in 1727, and now (1910) has ten professors and seventy-nine seminarians. Kielce has also a bracteal, in the form of the Society of the Sisters of Charity, and two high schools. The Diocese of Kielce, first erected in 1807 by Pius VII, was separated from and made subject to the Archdiocese of Cracow. At present it is a suffragan of Warsaw. The first bishop, Adalbert de Boza Gorski (1753-1817), of Cracow, incurred the enmity of the Russians, and on his death the diocese was suppressed and again added to Cracow. Afterwards, owing to strong Russian supervision, it was detached from Cracow and placed under Warsaw. Pope Leo XIII re-established the diocese 26 December, 1882. The second bishop was Thomas Theophilus Kulinski (1829-1907), who was again hostile to the Russian Government, but since his death the see has been vacant. The diocese, divided into eight deaneries, has (1910) 944,604 Catholics; 5323 Orthodox; 3560 Protestants; and 103,759 Jews; 242 parish churches; 21 other churches; 141 chapels; 333 secular clergy, and in 1784, aided the Government; 1 convent of Norbertines with 12 nuns; and 10 establishments of the Sisters of Charity with 47 sisters.

Kieran, Saints.—There are many Irish saints of this name, but the most celebrated is St. Kieran of Clonmacnoise (see CLONMACNOISE). Of the others, St. Kieran of Seir-Kieran and St. Kieran of Dysert Kieran are the best known. The founder is Seir-Kieran, Kings County (about A.D. 450), and also of the See of Ossory (see OSSORY, DIOCESE OF). His history is obscure, but he flourished during the greater part of the fifth century, and is venerated in England, Ireland, France, and Spain. The only church permitted by the Government; 1 convent of Norbertines with 12 nuns; and 10 establishments of the Sisters of Charity with 47 sisters.

Kieran, St., patron of Connemara, is commemorated on 30 April, and St. Kieran, son of Coilán, on 19 May. The friend of the Irish author, a history, and in 1738, aided the Government; 1 convent of Norbertines with 12 nuns; and 10 establishments of the Sisters of Charity with 47 sisters.

Kildare, School of.—Kildare (Irish: Cill-Dara), originally known as Drum Cruaidh, or the Ridge of Clay, situated in Magh Liffe, or the Plain of the Liffe, was known to be called Cill-Dara, or the Church of the Oak, from the stately oak-tree so much loved by St. Brigid, who under its branches laid the foundations of what in process of time became a monastic city. Through the influence and talent for rule and organisation possessed by the holy foundress the little oratory she built soon expanded into a large double establishment, one portion being for women, the other for men, and crowds of devotees flocked thither from far and near to make pilgrimages or hear words of heavenly wisdom from the lips of the "Saviour of the Gael." "Seeing, however, that the official biography, that this state of things could not exist without a pontiff to consecrate her churches and ordain the sacred ministers, she chose an illustrious anciestor, celebrated for his virtues and his miracles, that as bishop he might aid her in the government of the Church, and
that nothing should be wanting for the proper discharge of all ecclesiastical functions." In these words of the biographer, "ut ecclesiam in episcopali dignitate cum eâ gubernaret", there is surely nothing to justify the absurd statement sometimes made that Brigid had any authority over, or gave canonical jurisdiction to, this illustrious anchoress. She simply selected him to govern the establishment under her advice and guidance, and he got his jurisdiction in the ordinary way. In those days of violence and turmoil a needed sense of security would be afforded a convent of nuns by having hard by a house of monks with an apostolic bishop at their head. And not only did Brigid procure the renowned St. Conlaeth to rule and ordain, but she had another bishop, St. Naddraoich, to preach and teach the Gospel, and thus she hoped to make Kildare a great and independent home of sanctity and learning. And such in truth it became.

Cognitous, a monk of Kildare in the eighth century, and the author of what is known as the "Second Life of St. Brigid", calls Kildare "the head-city of all the bishops", and Conlaeth and his successors "archbishops of the bishops of Ireland", and goes on to refer to the primacy of honour and domestic jurisdiction acknowledged in the abbess of this city by all the abbesses of Ireland. To this primacy, maintained all along, is due the unique distinction enjoyed by Kildare of having recorded by the annalists, till comparatively recent times, the succession of its abbesses in parallel columns with that of its abbots. Cognitous also makes mention of the enormous crowds that, in his time, used to come to Kildare from "all the provinces of Erin", especially on St. Brigid's feast-day, 1 February, to pray and to have cures effected at her venerated shrine. From the interesting description he gives of the church we learn that it was very spacious and beautiful, that it had divisions rigidly distinct for the men and the women, and was lavishly adorned with pictures and embroidered hangings, which set off its highly ornamental windows and doorways.

Unhappily, no portion of this church now remains, nor indeed of any of the ancient buildings, with the exception of the Round Tower. This tower, the loftiest in Ireland—being 136 feet 7 inches high—has an elaborately worked doorway of a graceful finish rarely met with in those hoary sentinels of the past. Bishop Conlaeth, himself a man of remarkable artistic genius, founded at Kildare a school in metal work which grew and prospered as the years went on. And from Cognitous Barry we learn to what a high pitch of perfection the art of illumination had been brought in that city.

Nothing, he says, that he saw at Kildare impressed him so much as the "Evangelistarium", or manuscript of the Four Gospels, according to the version of St. Jerome, which, by reason of the extraordinary grace and ingenuity displayed in the letters and figures, looked rather like the work of angels than of men. The famous "Book of Leinster" was probably copied from originals preserved in the School of Kildare, by Finn MacGormain, who became Bishop of Kildare in 119.

Even during the most stormy periods of the school's history we find recorded interesting facts and dates concerning its professors. We read of Colthac, who died in 1069, and was celebrated for "his universal knowledge of ecclesiastical discipline"; and of Ferdomnaigh, the Blind, who was deeply versed in the knowledge of the Sacred Scriptures. In 1135 Diarmait MacMurrough, of contemptible memory, "forebly carried away the Abbess of Kildare from her cloister, and compelled her to marry one of his own people"; and in the following year Diarmait O'Brien and his brothers sacked and set fire to the town. But the school continued in spite of the ravages of native and foreign despoiler. The holy fire called the "inextinguishable", which had probably been kept alight since the days of Brigid, was put out by order of Henry de Londres, Archbishop of Dublin, who perhaps thought the practice savoured of superstition. Our opinion is that it simply arose from a desire on the part of the spiritual daughters of St. Brigid to secure a means by which lamps might be kept perpetually burning before the shrines of their sainted foundresses. Be that as it may, the fire was kindled again by the Bishop of Kildare, and with a steady flame it burned till the fierce storm of persecution in the reign of Elizabeth extinguished it and every other monastic light in Ireland.

JOHN HEALY.

Kildare and Leiglinn, Diocese of (Kildareensis et Leiglinensis), one of the four suffragans of Dublin, Ireland. These two dioceses continued to be separate from their foundation until 1678, when, owing to the extreme tenuity of the episcopal revenues—about fifteen pounds a year each—the Diocese of Leiglinn was given in commendam by the Holy See to the Bishop of Kildare, Dr. Mark Forstall. The Diocese of Kildare includes the northern half of that county, the eastern portion of King's County, as far as Tullamore, and the two northern baronies of Queen's County, and it embraces the ancient territories of Offaly, Carbury, and Hy Faelain. Its direction lies east and west. The Diocese of Leiglinn lies north and south, including one half of Queen's County, all County Carlow, and portions of Kilkenny, Wexford, and Wicklow Counties. It embraces ancient Leix, which connects it with Kildare, and a portion of Úi Céinsealaigh. The united diocese is one of the largest dioceses in Ireland, comprising 1,022,529 acres; and the Catholic population, according to the census of 1901, was 100,977 out of a total of 149,168.

History.—When St. Patrick had preached the Gospel in the North and West of Ireland, he turned his steps to the South, and coming into Leinster from Meath by Drum Ureballi he passed through Straffan and Clane to Naas. Pitching his tent on its green, he there baptized its joint kings, Ailill and Illan, sons of Dunfing, and Ailill's two daughters, Mogain and Fedelm. Their people seeing this soon embraced the Gospel also, and Patrick placed his nephew, Auxilius, as bishop at Kilkesbee, a few miles south of Naas, and anecdotally with Mac Tail as bishops at Old Kilcullen. From here he went towards Athy, founding churches at Narraghmore and other places, and, crossing the Barrow, continued his journey by

THE CATHEDRAL, CARLOW (1228)
Ballydams and Stradbally to Morett. Here he built a church and then turning north re-crossed the Barrow south of Rathangan, and going by Lullymore, Allen, and Kilcock, he returned to Tara. These events occurred about the year 448. Later on he made a second journey into Leinster, and coming to Rathvilly in County Carlow he baptized King Crimthan, his wife Mel, and his son and heir, Dathi. He translated Iserimus (Fith) from Kilcullen to Aghade. At Donaghmore in Ui Ceinnsealagh he met his old friend Dubtach, the chief bard of Erin, who alone amongst King Laoghaire's household had continued to salute the saint, accompanied by Fiacc, his gifted pupil and successor-apparent. Patrick, being in need of a suitable candidate for the episcopacy, consecrated Fiacc on Dubtach's recommendation, and placed him at Domnach Fiacc, midway between Clonmore and Aghold. Years afterwards he transferred him to Sletty, blessing his church there, and making his see quasi-metropolitan. This pre-eminence afterwards passed to Ferns, then to Kildare, and later on to Dublin. The fame of Fiacc's virtues and miracles followed him from Domnach Fiacc, bringing crowds of pilgrims to Sletty, and especially grew up of which he was the first abbot. St. Fiacc practised extraordinary austerities even in his old age, spending each Lent in the cave of Drum Coblai (the doon of Clopook), so that the fame of his sanctity still survives in the district. He died in 510. In the next century the See of Sletty was transferred to Leighlin, which means either "the half glen" or "the white plain".

St. Laserian (also called Molaise) was the first bishop and patron saint of Leighlin, b. 566; d. 18 April, 639. He was the son of Cairle de Bitha, a Ulster noble, and Gobhan, daughter of a Scottish king. Part of his youth was spent in Scotland. On his return home he refused the chieftainship of his clan, went into retirement, and ultimately set out for Rome, where he studied for fourteen years and was ordained by Gregory the Great. Returning to Leighlin he entered the great monastery which St. Gobban had established, and soon found himself its abbot; St. Gobban having retired in his favour and gone into Osse. This establishment soon became famous, and contained as many as 1500 monks. St. Laserian took the leading part in settling the Easter controversy. He presided at the Synod of Clonard, where he successfully defended the Roman computation, and was sent by the council as delegate to Rome. There, in 633, he was consecrated first Bishop of Leighlin by Honorius I. On his return from the centre of Catholic unity Laserian pleaded the cause of the Roman practice so powerfully at another synod in Leighlin that the controversy was practically ended for the greater part of the country. The list of his successors, sometimes called abbots and sometimes bishops, is practically complete. The cathedral of Leighlin was built about the middle of the twelfth century, and is the finest Gothic church of wood. It was plundered several times both by the Danes and by the native chieftains, and the great religious establishments of Sletty and Killeshin shared the same fate. In the reign of Henry VIII it was seized by the Reformers, was made a Protestant church, and has continued as such since. The sufferings of the Catholics were so severe during the persecutions which raged over Ireland for more than two centuries, that towards the end but a remnant of the clergy remained. What the number of the clergy was in these dioceses before the Reformation, we cannot say for certain; but from the ecclesiastical ruins we have the means of forming a fair estimate. Over these dioceses, at the present day, there lie scattered the moulder ruins of 240 churches and 63 religious houses, bearing mute but eloquent testimony to the persecutions borne by the Catholics, and to the numbers of the clergy who suffered banishment or death. Nor were these convents small or unimportant; there were many large monasteries of the different religious orders, including the four great Cistercian Abbeys of Jerpoint, Kilree, Baltinglass, and Clongowes. The abbey church of Duiske, Graignamanagh, is one of the few abbey churches at present in possession of their rightful owners, and actually devoted to the service of the old religion. There were eight round towers in these dioceses, two of which are still standing at Kildare. That on the eastern rampart of the Pale can be traced for a mile between Clane and Clongowes College.

**Abbey and Shrine of St. Brigid.**—Before the time of St. Laserian of Leighlin, St. Conleth and St. Brigid were the patron saints of Kildare. The latter was a native of the district, though born at Faughart, near Dundalk. In 487 she received the religious habit from St. Macaille, Bishop of Croghan in Offaly, and coming to Kildare formed a community of the pious virgins who flocked around her. Her first house was a humble cell under a large oak, which gave Kildare its name—"Cilligre—"Cille of the Oak." The fame of her sanctity attracted such a conourse of pilgrims to Kildare that a city soon sprang up which included a religious community of men. To meet the spiritual wants of the new city St. Brigid requested the appointment of a bishop. Great deference was paid to her wishes, and, as she had recommended St. Conleth, she was consecrated the first Bishop of Kildare about 490. He had been leading the life of a recluse at Old Connell near Newbridge, was a skilful artificer in gold and silver; and the ancient crosier in the museum of the Royal Academy is believed to be the work of his hands. It is said that the gold of which it was made and its relics see BRIGID, SAINT. Kildare with its church was plundered and burned frequently. Sometimes it suffered from the Danes, sometimes from the native chieftains, and sometimes by accident. Its records give about twenty-five catastrophes of the kind. At the Reformation the cathedral was seized by the Protestants, and a portion of it was used for a church. The rest of the building became a ruin, and so remained till 1875-96, when it was completely restored by private contributions, and is now the Protestant cathedral.

**Bishops of Kildare.**—The bishops of Kildare were frequently called abbot-bishops and bishops of Leinster down to the Synod of Kells. The record of succession is practically complete down to the union of the two dioceses. For the episcopal lists see, besides Gams and Ewel, Brady, "Episcopal Succession in England, Scotland, and Ireland" (Rome, 1877). Dr. Lestrange (1497-1577) was consecrated Bishop of Kildare in 1555, and early in Elizabeth's reign, when the bishops of Ireland were summoned before the Lord Deputy to take the oath of supremacy, the Bishop of Kildare peremptorily refused, and being asked the reason of his refusal replied: "All ecclesiastical authority is from Christ, who is a woman, even His blessed mother. How then can it be sworn that in future ages God would confer it on a woman?" He added: "The Apostle has commanded
that no woman should dare even to speak with authority in the church, much less to preside and govern there."

KILIAN

KILIAN. See GALWAY AND KILMACDUAGH, DIOCESE OF.

Kilian (KILLENA, CILLINÉ), Saint, Apostle of Frangonia and martyr, b. about 640 of noble parents probably in Ireland (according to others in Scotland, though Scotia tulta, as it is called by the elder "Passio"), may also in medieval times have meant Ireland. The later "Passio" says: "Scotiae quinto, prout Hibernia dicta est", 8 July, probably in 688. He was distinguished from his youth for his piety and love of study, and, according to the later "Passio", embraced the monastic life. Trithemius and later writers say that he was a monk in the celebrated monastery of Hy; that he was later the abbot of this monastery is also held by Trithemius; however, that, a supposition, cannot be proved. The statement in the older "Passio" that Kilian was raised to the purple before leaving his native land may be accepted as trustworthy, although the later "Passio" refers this event to his sojourn in Rome. In accordance with the custom then prevailing in the Irish Church, he was assigned to parishes, and was thus district bishop or travelling bishop. One day he made up his mind to be a missionary, left his native country with eleven companions, travelled through Gaul, thence across the Rhine, and finally reached the city of Würzburg, inhabited by the Thuringian (Frankish) Duke Gottert, who was, like his people, still pagan. Kilian resolved to preach the Gospel here, but first journeyed with his companions to Rome to receive missionary faculties from the pope. John V, whom he expected to find, had died meanwhile (2 August, 689), and was succeeded by Conon from whom Kilian obtained his faculties. From the sources already cited, we learn that the arrival of St. Kilian and his companions at Würzburg and the journey to Rome occurred in the summer of 688, that they arrived in the latter city in the late autumn, and that their labours at Würzburg continued during 687 and the following years. The original group separated on the return journey—some departing to seek other fields of missionary work, while St. Kilian with two companions, the priest Coloman and the deacon Totnan, came back to Würzburg. He took this town as the base of his activity, which extended over an ever-increasing area in East Frangonia and Thuringia. Duke Gosbert with a large part of his subjects to Christianity. Concerning the cause of the martyrdom of the three missionaries, the early documents supply the following information: After Duke Gosbert had become a Christian, St. Kilian explained to him that his marriage with Geilana, his brother's widow, was unlawful under the Christian dispensation, and secured the duke's promise to separate from her. In consequence of this action, Geilana plotted vengeance against the saint, and caused him and his two companions to be secretly murdered in the absence of the duke, their corpses being immediately buried at the scene of the crime together with the ecclesiastical vestments, and holy writings. This is generally held to have happened on 8 July, 689, although opinions vary as to the exact year. The early documents relate further that, after the duke's return, Geilana at first denied any knowledge of what had become of the missionaries; the murderer confessed his crime, and died miserably, Geilana also dying insane. Recent critics, especially Hauck and Riezler (see bibliography), question without sufficient grounds the authenticity of these statements in the matter of detail, especially as regards the cause and the immediate circumstances of the martyrdom of the three missionaries. Through prejudice against the Irish Church the Protestant party has also disputed the absolutely reliable information about the journey to...
Rome undertaken by St. Kilian and his assistants. His missionary labours through Eastern Francia and his martyrdom are, however, accepted without question by everyone. Although Kilian's work was not discontinued after his death, St. Boniface on his arrival in Thuringia found at least evidence of his predecessors' labours. The relics of the three martyrs, after wonderful cures had brought renown to their burial place, were transferred in 743 by Saint Burchard, first Bishop of Würzburg, to the Church of Our Lady, where they were temporarily interred. Later, when Burchard had obtained Pope Zachary's permission for the public veneration, they were solemnly transferred—probably on 8 July, 752—to the newly finished Cathedral of the Saviour. Still later they were buried in St. Kilian's vault in the new cathedral erected on the spot where tradition affirms the martyrdom to have taken place. The New Testament belonging to St. Kilian was preserved among the treasures of Würzburg Cathedral until 1805, and since then has been in the university library. Kilian is the patron saint of the diocese, and his feast is celebrated in Würzburg on 8 July with great solemnity.

The chief source of information is the older and shorter "Passio" (which begins "Fuit vir vitae venerabilis Kilena nomine"), formerly considered to date from the tenth or ninth century. Emmerich (after the example of the "Histoire littérale de la France", IV, Paris, 1738, p. 86), and Hefner (see below) on very good grounds now connect the appearance of this chronicle with the solemn translation of the relics in 752, which raises its historic value beyond the reach of attack. The later and more voluminous "Passio" is an amplified and embellished version of the shorter one and cannot be relied upon when the accounts differ. Both have been published by H. Canisius, "Antiques lectiones", IV, pt. ii (Ingolstadt, 1603), pp. 625-47; by Mabillon, "Acta Sanctorum O.S.B.", II (Paris, 1669), pp. 997-103; in the "Acta Sanctorum" for 8 July (see below), and finally, with a collection of later sources and with the Offices of St. Kilian of the Würzburg Church, by Emmerich (see below).

The Cathedrale, Ballina

Kilkenny, Diocese of (Alladensis). It is one of the five suffragan sees of the ecclesiastical Province of Tuam, and comprises the north-western part of the County Mayo with the Barony of Tireragh in the County Sligo. In all there are 22 parishes, some of which, bordering on the Atlantic Ocean, consist mostly of wild moorland, sparsely inhabited. The geographical Dictionary sets down the length of the diocese as 45 miles, the breadth 21 miles, and the estimated superfluities as 314,300 acres—of which 43,100 are in the County Sligo, and 271,200 in the County Mayo. In the census returns for the year 1901 the Catholic population is given as 69,848, of which the non-Catholic as 3576. The foundation of the diocese dates from the time of St. Patrick, who placed his disciple St. Muredach over the church called in Irish Cell Alair. In a well that still flows close to the town, beside the sea, Patrick baptized in a single day 12,000 converts, and on the same occasion, in presence of the crowds, raised to life a dead woman whom he also baptized. Muredach is described as an old man of Patrick's family, and was appointed to the Church of Killala as early as 442 or 443. His feast-day is 12 August. It is probable that he resigned his see after a few years, and retired to end his life in the lonely island in Donegal Bay which has ever since borne his name, Innismurray. It was at Killala that Patrick baptized the two maidens whom he met in childbed at Foilth Wood by the western sea, and whose voices in visions of the night had often piously called him to come once more and dwell amongst them. He did come, and he baptized them, and built them a church where they spent the rest of their days as holy nuns in the service of God.

Little or nothing is known of the successors of Muredach in Killala down to the twelfth century. Of the sainted Bishop Cellach, for example, we learn merely that he came of royal blood, flourished in the sixth century, and was foully murdered at the instigation of his foster-brother. His name is mentioned in all the Irish martyrologies. Beyond doubt, however, the most illustrious of them all belongs to modern times. With pardonable pride the people of Killala still, and will ever, recall the fact that John McHale, Archbishop of Tuam, was a child of their diocese, and, if we may so speak, served his apprenticeship as bishop amongst them. He was born at Tubbernavine, at the foot of Mount Nephin, 6 March, 1791; became Coadjutor Bishop of Killala in 1825, bishop in 1834, and later in the same year was transferred to Tuam, where for nearly half a century he exercised a more potent influence on the ecclesiastical history of Ireland than perhaps any of his contemporaries, with the single exception of O'Connell. He died 7 November, 1881, and is buried in the sanctuary of the Tuam cathedral. After him came Doctor Finan, a Dominican priest of remarkable piety and attainments, but rather by continental training, to direct the affairs of an Irish diocese. On his resignation in the year 1838, a parish priest of the Archdiocese of Tuam, Rev. Thomas

Friedrich Lauchert.

Kilkenny. See Omagh, Diocese of.
KILLALOE

Feeney, who had formerly been professor and president of St. Jarlath's College, Tuam, was chosen for the task of repairing the injury that ecclesiastical discipline had suffered during his reign. Feeney is said to have been the most heroic of the bishops in the circumstances. Thirty-five years of his firm and resolute rule obliterated practically all traces of the wrangled controversies that distracted the diocese under his predecessor.

The town of Killala is remarkable in Irish history as the scene of French under General Humbert landed in 1798. The exact spot is by the rocky ledge in the outer estuary of the Mow known as "St. Patrick's Rocks", from which it is said that the saint set sail when making his escape as a poor young slave from Ireland. The French officers occupied the palace of Breckan and remained in the town for a short time with his lordship and family. The bishop has written a most interesting and authentic account of these gentlemen which he himself saw and heard. Along the left bank of the river are the ruins of several monasteries: Rocker, a Friary of the Augustinians; Strickacre, a Franciscan Priory of Strick, founded in 1460. The beautiful Abbey of Moyne still stands nearly perfect on a most picturesque site just over the river, and further on, north of Killala, was the Dominican Abbey of Rathfran, also delightfully situated. On the primitiveness of Errew running into Lough Conn there was a Monastery of Priests, where are still comparative recent times. A fine round tower in Killala itself, still in perfect preservation, indicated the ancient celebrity of the place as an ecclesiastical centre. Indeed it may be safely stated that in no other portion of Ireland of equal extent were the labours of St. Patrick and the holy founders of religious institutions who came after him so arduous and full of interest as in this beautiful district of Tír na nÓg.

Tireragh and Tirawley need not rely entirely for their fame on the traditions of the past, near or remote. Under the present occupant of the See of Killala religion has made quiet but very gratifying progress. One may judge of the learning and ability of Dr. Conolly, from the fact that in Maynooth he held a distinguished place in the class that produced such men as the Cardinal Primate of Ireland and Archbishop Carr of Melbourne. After several years of fruitful work as professor and master in the Diocesan Seminary called in 1892 from the parish of Croesmolina to the Diocesan seminary of Muckross. His rule has been characterized by prudence, and justice that is well tempered with mercy. Amongst his most conspicuous services to the twin cause of religion and education must be reckoned the building and equipping, from funds raised almost exclusively from his own faithful priests and people, of the splendid seminary that now graces the town of Ballina, and bids fair to revive the old name of the School of Killala founded by St. Patrick. The bishop lives in a plain but commodious dwelling at Ballina, hard by the diocesan seminary, which since its opening has been the dearest object of his episcopal zeal.

JOHN HEALY.

KILLALOE (Laoní) Diocese of, a suffragan of Cashel; it comprises the greater part of County Clare, a large portion of Tipperary, and parts of King's and Queen's Counties, Limerick, and Galway. Its Irish name is Cill-da-Lua, so named from St. Lua, an abbot who lived about the end of the sixth century, and whose oratory can still be seen in Friar's Island, near the town of Killaloe. Though St. Lua gave his name to the diocese, St. Flannan is its patron saint. He was of royal lineage, his father being the saintly Theodoric, King of Thomond, who towards the close of his life received the monastic habit from St. Colman at Lismore. St. Flannan came from the north of Ireland, and is said to have been consecrated at Rome by John IV about 640. In the time of St. Flannan, the Diocese of Killaloe was not so extensive as it is at present. It did not then include the old dioceses of Roscrea and Inniscathay. It was only when these were suppressed at the end of St. Finbarr's life, in the first quarter of the twelfth century, that Killaloe assumed its present shape, which is almost coterminous with the boundaries of the ancient Kingdom of Thomond. The parish of Seir Kieran in King's County, though in Thomond, was allowed to remain subject to the Diocese of Osory, out of respect to the memory of St. Kieran.

The old See of Roscrea grew around a monastery founded there by St. Cronan about the middle of the sixth century. This monastery became a famous school, and it was within its walls that the scribes who wrote for St. Cedd and St. Bede resided. The monks of Roscrea now in the Library of Trinity College, Dublin, for which Tadhg O'Carroll, chief-tain of Ely, made a costly shrine in the twelfth century. The Diocese of Roscrea was coextensive with the territory of the O'Carrols, added to that of the O'Kennedys. Ware holds that St. Cronan was Bishop of Roscrea, that the Church of Roscrea was modelled on the Church of St. John the Baptist in Canterbury, and that the irregularity of the Lateran Council of 1179 was due to the fact that Roscrea became an episcopal see. Like the Diocese of Roscrea, the Diocese of Inniscathay grew around the monastery of Inniscathay, founded by St. Senan in the early part of the sixth century. There is no question about St. Senan being the first bishop of the Diocese of Inniscathay, which comprised the Barony of Moyarta, Clonderlaw, and Itbreckin, in Clare; the Barony of Connello, in Limerick; and in Kerry, the ancient region of the Hy-Fidgente. The last Bishop of Inniscathay was Hugh O'Brechain, who died in 1188. Nevertheless there were titular bishops of the see up to the close of the fourteenth century. The remains of the cathedral church of Inniscathay and a round tower now mark the ancient see of St. Senan. The Clog-oir, too, still in existence in County Clare, is a highly-prized relic of Inniscathay. St. Breccan's churches of Carmantle, Doora, and Clooney, St. Cronan's abbey of Lus na Tola's church at Dysert, St. Senan's church at Ballinaclash, and St. Molua's church at Bishop's Island, near Kilkee, St. Caimin's church and school at Inisaltra, St. Brendan's and St. Cronan's abbey at Birr and Roscrea may be named amongst hundreds of churches, schools, and hermitages, which covered Killaloe like a network and which, in their decay attest to the devotion to the Catholic Faith of the far-famed Dalgais.

Some of these foundations deserve mention. Inisaltra, a green little island in Lough Derg, was a celebrated nursery of sanctity and learning in Thomond. It is associated principally with St. Caimin, who made Inisaltra the seat of a very famous school, which attracted pupils even from foreign countries. A fragment of the commentary on the Psalms collated with the Hebrew text, written by St. Caimin (640), is preserved in the Franciscan convent, Merchant's Quay, Birr. Birr also was a celebrated seat of learning in Thomond, founded by St. Brendan (550). The Gospels of McRegol, now in the Royal Library, were written by McRegol, Abbot of Birr, in 820. Terryglass also was a school of great repute founded by St. Columba (552). It was here that St. Patrick is said to have baptised the Dalgaic from Northern Thomond, who crossed Lough Derg in their coracles to meet him. The monastery of Lorri, founded by St. Ruadhan (550), can claim that it was within its walls that the famous Stowe Missal, now in the library of Lord Ashburnham, was written; but the desertion of Tara owing to the alleged cursing of St. Ruadhan, is without
historical foundation. The abbeys at Ennis and Quin are striking illustrations of the piety and munificence of the foremost chieftains of the Dalguis.

About 1240 Donogh Carbreach O’Brien built the monastery for Conventual Franciscan friars. It was called Killaloe and was the finest house of the order in Ireland, and ultimately it became the occasion of Ennis being made the capital of County Clare. Even in ruin it is beautiful; the east window especially is much admired for its size, grace, and symmetry. Here are buried some of the Kings of Thomond and the chieftains. The Abbey of Quin is one of the noblest remains of monastic antiquity in Ireland, and is in so perfect a state of preservation that little more than a roof is required to make it fit to house the monks and have their chant daily re-echo within its walls. It was founded by Sheds McNamara in 1402. In 1641 a college was opened at the abbey, which soon had eight hundred students. But the most interesting historical remains, despite the small town of Killaloe, the ancient seat of the bishop, which is built on a ridge commanding a fine view of Lough Derg. For here we have the oratory of St. Luna in Friar's Island, the very perfect stone-roofed oratory of St. Flannan, and St. Flannan’s cathedral, built in 1160 by Donald O’Brien, King of Limerick, near the site of Brian Boru’s royal palace of Kincora. St. Flannan’s cathedral was, till the early years of Elizabeth’s reign, the Catholic cathedral of the Diocese of Killaloe. Since then it has been in Protestant hands. Owing to the cruel persecution of the Catholic religion and its bishops and priests, and the suppression of the monasteries in Clare at the opening of the reign of Queen Elizabeth, the churches and monasteries fell into decay and ruin, the Holy Scriptures being offered up on some rock on a mountain-side, or some lowly “Mass house”. It is only since the time of Catholic Emancipation, a glorious era in the annals of Killaloe when the priests of Clare gave powerful aid to O’Connell to win the Clare election, that a “second spring” has come, and that Thomond has been again covered with handsome and commodious churches.

The first successor of St. Flannan in the Diocese of Killaloe whose name has come down to us, is Cormac O’Mulcaigh, who died in 1019; and from the death of St. Flannan to the time of the learned O’Leargheas in 1160, the names of only five prelates have been recorded. But from this period the succession becomes regular and complete. In 1179, Constantine O’Brien, fifth in descent from Brian Boru’s, was Bishop of Killaloe: he attended the Council of Lateran. Conor O’Heny, another Bishop of Killaloe, also attended the Council of Lateran in 1215. Cormac Ryan, a Franciscan friar, and brother of a chieftain, was consecrated Bishop of Killaloe in 1576. He had a remarkable career. From the time of his appointment he used his marked ability and great organising power in aid of the Earl of Desmond, who championed the Catholic cause, and succeeded in obtaining for him the support of Gregory XIII and Philip of Spain. For years he shared in all the perils of the insurrection, and he was regarded by Elizabeth and her minions as a most formidable opponent. When the Desmond insurrection ended in disaster, he escaped to the Continent, and died at Lisbon in 1617. John O’Moloney was another eminent Bishop of Killaloe. He was born in Killan, County Clare, in 1617, was a doctor of the Sorbonne, and his appointment to Killaloe, had been canon of Rouen, in France. He was named bishop by Propaganda in 1671, at the urgent request of the Catholics of the diocese, his qualifications for the exalted office being set forth in various testimonials from the doctors of the University of Paris, and several prelates and archbishops. In 1683 he was named by the Irish bishops to visit France and endeavour to induce the French king and his minister to found an Irish ecclesiastical college in Paris. He succeeded in his mission, and a few years later the Irish college, of which he is regarded as the founder, was opened. In 1689 he was named Bishop of Limerick, retaining Killaloe in administration, but he was soon forced to flee to France, where he died in 1702 at the Sulpician house at Issy, near Paris. The present bishop is the Most Reverend Dr. Fogarty, born in 1859 near Newnagh, County Tipperary. Before his elevation to the episcopate he was vice-president of Maynooth College, where he had been for fifteen years previously a distinguished professor of dogmatic and moral theology. His consecration took place in 1904, at the pro-cathedral at Ennis, the seat of the bishop and also of a well-equipped diocesan college.

The diocesan chapter, including dean, archdeacon, and canons, was re-established by papal decree on 11 February, 1903. Catholic population, 137,574, according to census of 1901; non-Catholic population, 8529; parishes, 57; secular clergy, 142; parochial and district churches, 143; houses of regular clergy, 2; vis. Franciscans at Ennis, Cistercians at Roscrea; convents of Sisters of Mercy, 12; Convent of Sacred Heart, 1; number in community, 198; monastic houses, 6; number in community, 63.

KILLARNEY. See KERRY AND Aghadoe, Diocese of.

KILMACDUagh. See GALWAY and KILMACDUagh, Diocese of.

KILMORE, Diocese of (Kilmoresis), Ireland, includes almost all Cavan and about half of Leitrim. It also extends into Fermanagh, and half of both Meath (Kilmahin Wood) and Sligo (Ballintrillick). It is accordingly seen to be roughly coincident with ancient Breffney, embracing both Breffney O’Rourke and Breffney O’Reilly. St. Fedlimid, or Felim, who flourished in the early part of the sixth century, is the first known Bishop of this half of that primitive diocese. The appointment of the diocese, and his feast is celebrated on 9 August, the day of his death. A holy well near the old Catholic cathedral of Kilmore still bears his name.
From Hugh O’Vinn, appointed 1136, to Andrew MacBrady, consecrated in 1445, the bishops of this see were often styled Episcopi Breifna; and no bishop outside of Brefny is known to have ever claimed jurisdiction over it. With a hiatus or two, all its rulers during this period have been ascertained. Many of them are also sometimes called bishops of Triburna, probably from the name of a village near Butlersbridge, close to which village was the episcopal church and most probably the episcopal residence. The spot now marked by the grave-yard of Urney (Triburna) contains some remains of this very ancient structure.

Towards the middle of the fifteenth century the above-mentioned Andrew MacBrady (1445-55) rebuilt on a much larger scale the primitive church of St. Pedemil, situated about seven miles due south of Triburna, and in 1454, with the approval of Pope Nicholas V, made it his cathedral. Thenceforth this church (cill mór, i.e. great church) imparted its name to the surrounding parish and also to the diocese, just as the church of Triburna did before, or just as the town of Cavan has given its name to the whole County of Cavan. Bishop MacBrady lived at Kilmore. During the penal times many of his successors, in striving to discharge their sacred functions, suffered untold hardships. Richard Brady (1580-1607), for instance, was three times thrown into chains. In 1601 the friary of Multifarnam, in which he sought refuge, was burned over his head by the English soldiers. As late as the middle of the eighteenth century, Bishop Andrew Campbell (1755–1799 or 1770), to escape the dangers that beset him, had to go on his visitations disguised as a Highland piper. A beautiful oil-painting representing him so attired is preserved in the dining-room of the diocesan college at Cavan. The cathedral chapter of Kilmore originally consisted, besides the bishop, of eleven canons, together with a dean and an arch-deacon. But in 1636 the latter two titles alone remained. Of later years they too have wholly disappeared. The seal of the ancient chapter of “Tibrina” was dug up at Urney about sixty years ago.

In 1638 Kilmore was described as having forty parishes. In July, 1704, in compliance with the provisions of the act passed the previous year for “registering the popish clergy”, thirty-nine Kilmore “popish parish priests” gave in their names. “Curates or assistants” were excluded, being placed on the same footing as regulars, and “had to depart out of this Kingdom in the 20th July” under divers pains and penalties. It is worth noting that twelve of these thirty-nine priests had been ordained by Oliver Plunket, the saintly Primate of Armagh; and one of them, the Rev. Owen McHugh of Killeasher, at Rome, in 1682, by Pope Innocent XI. Three parishes claim to have been founded by St. Patrick in person: Drumlease, Clooneclare, and Oughteragh (now Ballinamore).

Father Maguire, a well-known controversialist, died parish priest of the last-mentioned place. Drumlease derives its name (drum-lias, ridge of the huts) from the sheds. St. Patrick is said to have raised there; and the neighbouring village of Dromahair was for long called Carrig-Padruig, or Patrick’s Rock. The saint, struck by the scene of beauty of the surroundings, designed to establish there his primatial see. For twenty years he left his foster-son and destined successor, Benignus, in charge of it; and it was only towards the end of his life that he reluctantly changed his intention, and adopted Armagh.

In the seventh century the diocese gave illustrious names to the Church; to the parish of Mullagh we owe St. Kilian (d. 688), the Apostle of France; to Killinskere, St. Ultan (d. 656); and to Templeport, St. Aidan, or Mogue (d. 651). Inishmaghath, in the next century, was probably the birthplace of the scholarly St. Tighernach; Ballaghameohan, in the previous century, was under the care of St. Moling (or Lasair; d. 563), the founder of Devenish; his copy of the Gospels, which was encased in a reliquary about the year 1001, is now in the Dublin Museum.

The most famous religious house in Kilmore was St. Mary’s friary in Cavan town, founded by the O’Reily’s in 1300. The Dominicans were the first religious to be introduced; in 1393 they left and were replaced by Francisians. After the Suppression, in the time of James I, the monastery was converted into a courthouse. In the beginning of the last century it was used as a Protestant place of worship. The crumbling tower of this church is all that remains of it. In its graveyard the remains of three noted Irishmen were interred: Owen Roe O’Neill, Ireland’s noblest soldier, who died at Cloughoughter in 1649; Hugh O’Reilly, Bishop of Kilmore (1625–28), Primate of Armagh (1620–52), and founder of the Catholic Confederacy; most probably also Myles O’Reilly, surnamed the Slasher, Ireland’s greatest swordsman. Their graves were purposely concealed through fear of desecration, and cannot now be pointed out.

The other chief family of Brefney, the O’Rourke’s, founded Creevelea (creve, branch, and liath, grey) beside Dromahair in 1508, and brought thither the Francisians. A beautifully chased silver chalice, bearing an inscription declaring that it was presented to this monastery in 1619 by Mary the wife of “Thaddeus Ruaire”, is still in use in Butlersbridge chapel in the parish of Cavan. Creevelea, as the annals declare, and as its ruined chancel and cloistered kitchen and the most imposing of the many noble structures that the Francisians had. The priory of Drumlane, established before 550, was confiscated in 1670. Its round tower is still in a good state of preservation. An abbey yet traceable beside St. Pedemil’s church in Kilmore is said to date from the sixth century, and to have been founded by St. Columcille. On Trinity Island, two
nailes to the west of it, the White Canons of St. Norbert established in 1237 or 1230 the Abbey of Holy Trinity. It was consecrated in 1570. A beautifully carved doorway, transferred from its ruins, now adorns the vestry of Kilmore Protestant cathedral, the memorial church of the Anglican bishop Beecham.

The Protestant cathedral and episcopal palace and gardens are located on the sites once sanctified by St. Fedlimid and St. Columbea. At Mounteenonnaught, at Ballylinch in Kilmore, and also at Drumullanmore there existed as late as the seventeenth century long houses. Dr. Archdall, though chargeable with no crime but that of being endowed; in 1605 they were granted by King James I to Sir Edward Moore, ancestor of the Earls of Drogheda. Kilmainham Wood, County Meath, a preceptory belonging to the Knights Templars, was erected by the Preston family some time in the thirteenth century. On the shores of Lough Melvin in Ballagheameen, Leitrim, St. Tighernagh founded a convent for his mother St. Mella, who died before 787. It was known as Doiremelle. He also built for himself the monastery of Killachad somewhere in County Cavan. On Church Island in the lake just mentioned, d. 546, St. Patrick's bell-tower, had a caretaker called Kilclare. Finally on Lackagh mountain, near Drumkeeran, St. Natalis (d. 563) founded the monastery of Kilnaile, whose beeves cell may still be traced on the bleak mountain top amid the rocks and brown heather.

The Catholic population of the diocese in 1901 numbered 109,319—a decline of nearly one-third since the census of 1871—and its non-Catholic population, 24,447, a somewhat greater decrease. It has 42 parishes, and usually 104 or 105 priests. St. Patrick's College, Cavan, opened by Dr. Conaty in 1874, replaces St. Augustin's College, Killala. Bishop Bowler, d. 1839; it is one of the finest diocesan buildings in Ireland. The Poor Clares, brought to Cavan town in 1861, care for an industrial school or orphanage. In 1872 they established a second convent at Ballyjamesduff. The Sisters of Mercy have convents at Belturbet, Ballina and Cootshell. All the communities are in charge of the technical and primary schools. Infant and intermediate schools for boys are at Manorhamilton and Ballyjamesduff. The Most Rev. Andrew Boylan, CSSR, (b. 1842), a native of the diocese, consecrated Bishop of Kilmore in 1907, died on 25 March, 1917.

**Joseph Meehan.**

**Kilwardby, Robert.** Archbishop of Canterbury. Cardinal-Bishop of Porto and Santa Rufina, died at Viterbo, 11 Sept., 1279. Nothing is known of his birth or early life, except that he studied at Paris and probably Oxford. For many years he taught grammar and logic at Paris with special success, devoting particular attention to the development of the use of the syllogism, during which time he composed numerous treatises on grammar and philosophy. Of these works "De divisione scientiarum" was widely studied, as is evidenced by the numerous MS. copies still extant. Later in life he also wrote some theological works: "De passione Christi" and "De sacramento alterius", and commentary on St. Paul's Epistles. Subsequently, having joined the Order of Preachers, he abandoned his secular career and became a Dominican, devoting himself to theology and the study of the Scriptures and the Fathers. In 1261 he was chosen provincial of his order in England, an office which he held till 1272. Shortly after he ceased to be provincial he was chosen by Pope Gregory X. to fill the See of Canterbury, which had then been vacant for two years. As archbishop-elect he, together with other nobles and prelates, proclaimed Edward I as King of England on the death of Henry III, and appointed a regency to govern the kingdom till the new king returned from the Crusades. He was consecrated at Canterbury on 20 Feb., 1273, by the Bishop of Bath and Wells, William de Cobham, the pope having named him as the consecrating prelate. On 8 May he received the pallium, and he was enthroned at Canterbury in September of the same year, he being the first friar to become metropolitan.

As archbishop he showed little interest in politics, but was very involved in the administration of his spiritual duties. Having held a convocation in London, he entered upon a thorough visitation of the province. This was interrupted in 1274, as he had to leave England to attend the Council of Lyons. Here he distinguished himself as an ardent supporter of the pope's authority, and his own reputation as a great master of theology added weight to his advocacy. On his return to England he resumed his canonical visitation, travelling through the large dioceses of Winchester and Lincoln. In 1276 he visited the University of Oxford, where he condemned several errors, depriving masters who held erroneous opinions, and took other steps to defend the doctrine. In the same year (16 June, 1276) he had the consolation of attending the translation of the relics of St. Richard at Chichester, whose life he had encouraged his brother Dominic, Ralph Bocking, to write. As primate he held two important provincial synods in 1273 and 1274, in which the lower clergy were granted fuller representation than had formerly been allowed. In his private life he was noted for his sanctity, his charity to the poor, and his success as a peacemaker. He was a great benefactor of his own order, and bought the site for a Dominican house at Cowley in Berkshire. In 1278 he succeeded the II nominated Kilwardby as Cardinal-Bishop of Porto and Santa Rufina, and on 25 July he left England for Italy, taking with him all the registers and archives of Canterbury Cathedral. This unfortunate loss has never been recovered, and the earliest records of the see are those of his successor Archbishop Pockham, who vainly endeavoured to recover the lost papers. The change of life was too severe for an old man, and he fell ill shortly after joining the papal court at Viterbo. There he died in the following year and was buried in the convent of his own order.

**Kilwardby, BENEDICTINE ABBEY of, in Ayrshire, Scotland, in the town of the same name, where a church was said to have been founded early in the eighth century by St. Winning. Winning has been identified by some scholars with St. Finnian of Moville, an Irish saint of much earlier date; other authorities say he was a Welshman, called Vynnyn, while the Aberdeen Breviary published 1854 gives Scotland as his birthplace. What is certain is that there was a Christian church at Kilwinning, and also a monastery of Cuddes, several centuries before the foundation of the Benedictine house by Hugh de Morville, Constable of Scotland, and a great territorial magnate of the district, somewhere between 1146 and 1161. Timothy Pont, who had been prior of the Abbey, now lost, and who wrote in 1608, gives 1171 as the date, and Richard de Morville (one of the murderers of St. Thomas of Canterbury) as the founder; but the weight of evidence is in favour of Hugh and the earlier date. The structure of this monastery," says Pont, "was solid and grave, all of freestone cut in the church fair and sturdily after ye modell of ylat of

**Edwin Burton.**
Glasgow, with a fair steeple of 7 score feet of height, yet standing quhen I myselve did see it. "The length of the church was 60 feet, breadth of the nave sixty-five feet; and the monastic buildings covered several acres.

A community of Tyronesian Benedictines was brought from Kelso; the abbey was soon richly endowed by royal and noble benefactors, possessing grants of four and a half miles of land, and the tithes of twenty parish churches, and a revenue equivalent to some £20,000 a year. For nearly four centuries Kilwinning remained one of the most opulent and flourishing Scottish monasteries. The last abbot was Gavin Hamilton, who whilst favouring the Reformation doctrines was also a liberal patron of Quidelues. He was forced to take the field in a fight outside Edinburgh in June, 1571. The suppression and destruction of the abbey soon followed, and its possessions, held for a time by the families of Glencarin and Raith, were erected in 1603 into a temporal lordship in favour of Hugh, Earl of Eglinton, whose successors still own them. The Earls of Eglinton have taken some pains to preserve the remains of the buildings, which include the great west doorway with window above, the lower part of the south wall of nave, and the tall gable of south transept with its three lancet windows. The "fair steeple" was struck by lightning in 1822 and fell down five years later.

Kimberly, Vicariate Apostolic of (Kimberley, zinc), suffragan of Adelaide, erected by Leo XIII, 5 May, 1887. The Vicariate of Kimberley embraces the whole district of that name, and is under the Apostolic administration of the Bishop of Geraldton. The territory forms one of the six land districts into which Western Australia is divided, and in this, the north-west portion of the state, a plentiful supply of gold is found. The Bishop of Perth, Dr. Matthew Gibney, whose diocese was charged with the administration of the Kimberley Vicariate, was early engaged in dettaorticizing the aborigines of the district. Under his direction, a reserve was thrown open to the aborigines of the district.

On 4 June, 1890, he set out in person, with Abbot Ambrose of the Trappist Order, to observe the conditions of the locality, and the journey resulted in the establishment of a mission station, the Holy House of the Sacred Heart, at Beagle Bay. The Bishop of Geraldton, Dr. Gibney, represented by the recommendation of Cardinal Moran, the fathers of La Trappe took charge of the mission. The natives, computed at between five hundred and six hundred, were found mostly on the western coast in the vicinity of Beagle Bay. The country was well wooded, deficient in water courses, but abounding in springs, with luxuriant vegetation in the neighbourhood of the swamps. A temporary monastery was constructed of wood covered with large sheets of bark, and at a few yards distance was erected a church of the same poor material. Difficulty was experienced in maintaining the staff of not less than ten promised to the Government in return for certain concessions, and the abbot was forced to leave the community for a year (February, 1891–March, 1892) through the necessity of obtaining recruits.

On the departure of the Trappists for Europe, the Pallotine Fathers, or Fathers of the Fious Society of Missionaries, were introduced into the territory under the instrumentality of the Bishop of Geraldton, under whose jurisdiction the vicariate had meantime passed. Besides the chief house at Beagle Bay, the mission has flourishing stations at Broome and Disaster Bay, and from the beginning good results have been achieved in the work of Christianizing the natives. In 1903, the mission was given to the undertaking by the erection of a commodious monastery and convent; the missionary society, too, was strengthened by the coming of one priest and five lay brothers. Since that date a new church and school have been raised. In June, 1907, nine sisters of the Order of St. John of God arrived at the mission from Subiasco, Perth. This community, under the direction of Mother Antonia O'Brien, is engaged in teaching the girls and attending to the sick. During the last three years remarkable progress has been made; the mission at the present time (1910) numbers four priests, twelve brothers, and nine sisters. There are churches at Beagle Bay and at Broome. Schools have also been established at these two towns. Father, who has resided from Perth, has an attendance of 56 girls and 55 boys. The latter, also a mixed school founded from the Beagle Bay institution, has 39 pupils. Both are in charge of the sisters of St. John of God. (See Australia, Period of Comparative Calm.)

P. J. MACAULEY.

Kimberly in Orange, Vicariate of (Kimberley, zinc), or Orangeburg, in South Africa, which at the present date is under British rule. Kimberley in Orange became in the division of the Vicariate of Good Hope part of the Eastern District, and later on part of the Vicariate of Natal. In 1886 it became a separate vicariate comprising Basutoland, Griqualand-West, Bechuanaland, and the Orange River Colony (then Free State). On 9 May, 1894, Basutoland was separated and made an independent prefecture. At the present day the vicariate includes the Orange River Colony, Griqualand-West, and Bechuanaland, and since the late Anglo-Boer war all this territory is under British rule. The whole vicariate lies between the Tropic of Capricorn and the southernmost point of the Orange River Colony, and between 22° and 30° East Longitude. Before the discovery of diamonds the white population was practically composed of Boers. The number of Catholics was insignificant. The towns now in existence were then mere small villages or had no existence at all. But in 1870 Kimberley began to attract attention; diamonds had been first discovered about three years previously by John O'Reilly, and immigration brought to South Africa and especially to Kimberley multitudes of Europeans, most of them Irish and English. By the time it was recognized that there was already a priest in Bloemfontein, Father Hoendervangers of the Order of Saint Norbert, who had followed the troops as military chaplain during a war between the British and Boers in 1854. He built a church which was replaced by a new one in 1858. When Father Hoendervangers left Bloemfontein he was replaced by Father Victor Bompard, sent by Dr. Joliivet to minister to the scanty Catholic population. For some time the number of Catholics remained limited to eight or ten. All of them were poor and consequently unable to support the priest who very often saw himself upon the verge of starvation. However, Father Bompard never swerved from his duty; he was always ready to face sacrifice. His greatest trial was neither starvation nor physical sufferings, but the fruitlessness of the soil he had to cultivate. Being obliged to live in the midst of an element prejudiced against anything which might remind them of the former way of life, Father Bompard lived on his labours were to remain apparently fruitless for several years. The Boers were at that time, as they are now, unwilling to hear of another creed than their own. Their ministers never wearied of railing at and abusing pope and priests. Owing to such a spirit conversions have been always few; many prejudices, how-
ever, have been overcome by schools conducted by nuns of various orders.

When Kimberley started into existence the number of Catholics in the locality necessitated the frequent visit of the priest and very soon the establishment of a parochial church—St. Michael's. Father Richard Hidien used to visit them occasionally. Father Hidien finally established a Catholic Society and began the erection of an hospital. A poor and small chapel was first erected, but owing to the increase of the Catholic congregation, a larger and more substantial one was planned and built. Its erection is due to the indefatigable Father Hilary Lenoir, O.M.I. The whole vicariate is greatly indebted to him for all the missions he has founded or helped to found; Kimberley, Mafeking, and Harrismith, have thanks to him, their churches and presbyteries. When, in 1886, a separate vicariate was erected, the Right Reverend Anthony Gaughrine, O.M.I., was appointed the first vicar Apostolic; he was elected in May, 1886, consecrated on 10 August, 1886, and died in Kimberley on 15 January, 1901. On 29 January, 1902, his brother, the Right Rev. Matthew Gaughrine, O.M.I., was elected to replace him, and was consecrated Bishop in Tonver on 16 March, 1902. Under the jurisdiction of these two bishops the Vicariate of Kimberley has seen its churches and schools multiplied. In 1910 the vicariate possesses: 16 churches and chapels; 19 priests (of whom 16 belong to the Order of the Oblates of Mary Immaculate); one college under the management of the Christian Brothers, where over 500 boys receive a thorough education. The Sisters of the Holy Family conduct 6 parochial schools and 3 boarding schools. The Sisters of Mercy have two schools, a boarding school in Mafeking and a parochial school in Vryburg. The Sisters of St. Jactud conduct at Taungs a school for natives. Taungs has been up to the present day the only native mission. It was founded in May, 1888, by Father Porto, O.M.I., and counts over 400 Catholics. The total number of children frequenting Catholic schools is at present over 1200. Besides the schools, there is in the Vicariate of Kimberley an establishment for orphans, the poor, and the aged; it is managed by the Sisters of Nazareth. The devotedness and self-sacrifice of these sisters have not a little contributed to overcome the prejudices of Protestants who help them generously in the upkeep of their establishment, where over one hundred and fifty children and over 500 adults are cared for. It is to be noted that all the primary schools are in part supported by the Government. Besides the 16 Oblates and the 3 secular priests, 3 lay brothers, 11 Christian Brothers (Irish), 42 Sisters of the Holy Family of Bordeaux, 14 Sisters of Nazareth, 5 Sisters of St. Jactud, and 12 Sisters of Mercy are carrying out the work of regeneration in the vicariate.

One of the great obstacles to evangelization in this vicariate is caused by the fact of the population being scattered and unsettled. This prevents the priest from being in continual touch with his flock. The success of the work on the native has not seen an increase of mission work amongst the natives, who far outnumber the white population. At present the mining industry seems to be the only source of material wealth, and its duration is uncertain. In the farming districts, though communication has been facilitated by the construction of railways, the future seems precarious owing to droughts, cattle diseases, locusts, etc. As a consequence the population is unsettled and shifting, and sacerral vocations within the vicariate are hardly to be expected for the present. Catechisms and prayer books in the native language have, however, been compiled by Father Porto who made an extensive tour of Bechuanaland, in 1898, and discovered that the natives, while akin in race and speech to the Basutos, are more rooted in fetishism.

A. LANGOUEY.

KIMCHI, DAVID. See COMMENTARIES ON THE BIBLE.

Kingdom of God (in Matthew, generally, KINGDOM OF HEAVEN).—In this expression the innermost teaching of the Old Testament is summed up, but it should be noted that the word kingdom means rule as well; thus it signifies not so much the actual kingdom as the sway of the king—cf. the Chaldaic μαγιαρα, Dan., iv, 28-29. The Greek βασιλεία of the New Testament also has these two meanings—cf. Aristotle, "Pol.", 11, xi, 10; 11, xiv; 11, xiii, 10. We find the teaching of the New Testament foreshadowed in the theocracy sketched in Ex., xix, 6: "In the establishment of the kingdom, I Kings, viii, 7: "They have not rejected thee, but me, that I should not reign over them." Still more clearly it is indicated in the promise of the theocratic kingdom, II Kings, vii, 14-17: "It is God Who rules in the theocratic king and Who will avenge any necessity which the Psalter the same thought is found; cf. Ps. 6, 1; xiii; 6, xxi; 23; lxxxviii, 12, etc. In these passages it is constantly insisted that God's throne is in heaven and that there is His kingdom; this may explain St. Matthew's preference for the expression "kingdom of heaven" as being more familiar to the Hebrews for whom he wrote. The Prophets dwell on the thought that God is the Supreme King and that by Him alone all kings rule; cf. Isaías, xxvii, 16, 20. And when the temporal monarchy has failed, this same thought of God's ultimate rule over His people is brought into clearer relief till it culminates in the grand prophecy of Dan., vii, 13 sq., to which the thoughts of Christ's hearers must have turned when they heard Him speak of His kingdom. In that vision the power of ruling over all the forces of evil as symbolised by the four beasts which are the four kingdoms is given to "one like the son of man".

At the same time we catch a glimpse in the apocryphal Psalms of Solomon of the way in which, side by side with the truth, there grew up among the carnal-minded the idea of a temporal sovereignty of the Messias, an idea which was (Luke, xix, 11; Matt., xviii, 1; Acts, vii, 25) to be handed on to the following generations; cf. especially Ps. Sol., xvii, 23-28, where God is besought to raise up the King, the Son of David, to crush the nations and purify Jerusalem, etc. In the Greek Book of Wisdom, however, we find the most perfect realisation of what was truly implied by this "rule" of God—"She [Wisdom] led the just man through direct paths and shewed him the kingdom of God", i.e. in what that kingdom consisted.

In the New Testament the speedy advent of this kingdom is the one theme: "Do penance; for the kingdom of heaven is at hand," declares the Baptist; and, Christ's opening words to the people do but repeat that message. At every stage in His teaching the advent of this kingdom, its various aspects, its precise meaning, the way in which it is to be attained, form the staple of His discourses, so much so that His discourse is called "the gospel of the kingdom". And the various shades of the expression which the expression bears have to be studied. In the mouth of Christ the "kingdom" means not so much a goal to be attained or a place—though those meanings are by no means excluded; cf. Matt., v, 3; xii, 14—"it is rather a tone of mind (Luke, xvi, 2, 21), it stands for an influence acting on men's minds if they would be one with Him and attain to His ideals; cf. Luke, ix, 55. It is only by realising these shades of meaning that we can do justice to
the parables of the kingdom with their endless variety. At one time the "kingdom" means the sway of grace in men's hearts, e.g. in the parable of the mustard seed (Matt. iii. 31 sq.; cf. Matt. xiii. 31 sq.); and thus, too, it is opposed to and explained by the opposite kingdom of the devil (Matt. iv. 8; xii. 25-26). At another time it is the goal at which we have to aim, e.g. Matt. iii. 3. Again it is a place where God is pictured as reigning (Mark v. 37 sq.; cf. the second petition of the "Our Father"—"Thy kingdom come"—we are taught to pray as well for grace as for glory. As men grew to understand the Divinity of Christ they grew to see that the kingdom of God was also that of Christ—it was here that the faith of the good thief excelled; "Lord, remember me when thou comest into thy kingdom." So, too, as men realised that this kingdom stood for a certain tone of mind, and saw that this peculiar spirit was enshrined in the Church, they began to speak of the Church as "the kingdom of God" (cf. Col. i. 13; I Thess. ii. 12; Apoc. xi. 6 sq.; x. 10 sq.; xi. 9 sq.; xii. 7 sq.). And He presents it to the Father; cf. I Cor. xv. 23-28; II Tim. iv. 1. The kingdom of God means, then, the ruling of God in our hearts; it means those principles which separate us off from the kingdom of the world and the devil; it means the benign sway of grace in men's hearts in such a way as to be that Divine institution whereby we may make sure of attaining the spirit of Christ and so win that ultimate kingdom of God where He reigns without end in "the holy city, the New Jerusalem, coming down out of heaven from God" (Apoc. xxi. 2).

Kings, First and Second Books of, also known as First and Second Books of Samuel.—For the First and Second Books of Kings see KINGS, THIRD and FOURTH BOOKS OF.—In the Vulgate both titles are given (Liber Primus Samuei, quem nos Primum Regum dicimus, etc.); in the English editions and the Protestant versions the second alone is recognized, the Third and Fourth Books of Kings being styled First and Second Books of Kings.

To avoid confusion, the designation "First and Second Books of Samuel" is adopted by Catholic writers when referring to the Hebrew text, otherwise "First and Second Books of Kings" is commonly used. The testimony of Origen, St. Jerome, etc., confirmed by the concordance summary appended to this book, as well as by the Hebrew MSS., shows that the two books were originally formed but one, entitled "Samuel." This title was chosen not only because Samuel is the principal figure in the first part, but probably also because, by having been instrumental in the establishment of the kingdom and in the selection of Saul and David as kings, he may be said to have been a determining factor in the history of the whole period comprised by the book. The division into two books was first introduced into the Septuagint, to conform to the shorter and more convenient size of scrolls in vogue among the Greeks. The Book of Kings was divided into two at the same time, and the four books, being considered as a consecutive history of the Kingsdoms of Israel and Judah, were named "Books of the Kingdoms" (Bashanot Ḳeḇəloḵi). St. Jerome retained the division into four books, which from the Septuagint had passed into the Itala, or old Latin translation, but changed the names "Books of the Kingdoms" (Libri Regum) into "Books of the Kings" (Libri Regum). The Hebrew text of the Books of Samuel and of the Books of Kings was first divided in Bomberg's edition of the rabbinical Bible (Venice, 1516-17), the individual books being distinguished as I B. of Samuel and II B. of Samuel, and I B. of Kings and II B. of Kings. The division into two books was adopted in the subsequent editions of the Hebrew Bible and in the Protestant translations, and thus became current among non-Catholics.

King, James Version. See Versions of the Bible.

Kings, First and Second Books of, also known as First and Second Books of Samuel.—For the First and Second Books of Kings see KINGS, THIRD and FOURTH BOOKS OF.—In the Vulgate both titles are given (Liber Primus Samuei, quem nos Primum Regum dicimus, etc.); in the English editions and the Protestant versions the second alone is recognized, the Third and Fourth Books of Kings being styled First and Second Books of Kings. To avoid confusion, the designation "First and Second Books of Samuel" is adopted by Catholic writers when referring to the Hebrew text, otherwise "First and Second Books of Kings" is commonly used. The testimony of Origen, St. Jerome, etc., confirmed by the concordance summary appended to this book, as well as by the Hebrew MSS., shows that the two books were originally formed but one, entitled "Samuel." This title was chosen not only because Samuel is the principal figure in the first part, but probably also because, by having been instrumental in the establishment of the kingdom and in the selection of Saul and David as kings, he may be said to have been a determining factor in the history of the whole period comprised by the book. The division into two books was first introduced into the Septuagint, to conform to the shorter and more convenient size of scrolls in vogue among the Greeks. The Book of Kings was divided into two at the same time, and the four books, being considered as a consecutive history of the Kingsdoms of Israel and Judah, were named "Books of the Kingdoms" (Bashanot Ḳeḇəloḵi). St. Jerome retained the division into four books, which from the Septuagint had passed into the Itala, or old Latin translation, but changed the names "Books of the Kingdoms" (Libri Regum) into "Books of the Kings" (Libri Regum). The Hebrew text of the Books of Samuel and of the Books of Kings was first divided in Bomberg's edition of the rabbinical Bible (Venice, 1516-17), the individual books being distinguished as I B. of Samuel and II B. of Samuel, and I B. of Kings and II B. of Kings. The division into two books was adopted in the subsequent editions of the Hebrew Bible and in the Protestant translations, and thus became current among non-Catholics.

Contents and Analysis.—I—II Books of Kings comprise the history of Israel from the birth of Samuel to the close of David's public life, and cover a period of about a hundred years. The first book contains the history of Samuel and of the reign of Saul; the second, the history of the reign of David, the death of Saul marking the division between the two books. The contents may be divided into five main sections: (1) I, i—vii, history of Samuel; (2) viii—xv or, better, xv, history of Saul's government; (3) xvi—xxxi, Saul and David; (4) I, i—xx, history of the reign of David; (5) xxi—xxiv, appendix containing miscellaneous matter. The division between (3) and (4) is sufficiently indicated by the death of Saul and by David's accession to power; the other sections are marked off by the summaries, historical charts, and lists of personages included in the xxv, however, which is an introduction to what follows, according to the subject-matter belongs to (2).

(1) History of Samuel.—Samuel's birth and consecration to the Lord, i, i—ii, 11. Misdeeds of the sons of Heli and prediction of the downfall of his house, ii, 12-36. Samuel's call to the prophetic office; his first vision, in which the impending punishment of the
by the other tribes, ii, 8–32. Abner, the commander of Ishboeth’s forces, having quarreled with his master, submits to David and is treacherously slain by Joab, iii. Ishboeth is assassinated; David punishes the murderers and is acknowledged by all the tribes, iv, 5.

David at Jerusalem.—Jerusalem is taken from the Jebusites and becomes the capital, v, 6–16. War with the Philistines, v, 17–25. The ark is solemnly carried from Carithaism to Sion, vi. David thinks of building a temple; his intention, though not accepted, is rewarded with the promise that his throne will last forever, vii, 2. Victory over the Ammonites is gained by the capture of Rabbath, vii, 24–31. Amnon revives Thamar, the sister of Absalom; the latter has him assassinated and flies to Gessur; through the intervention of Joab he is recalled and reconciled with his father, viii, 1–14. Rehoboam succeeds Solomon, ix. Daughters of Jerusalem fly from Jerusalem; Siba, Mibphiboeth’s servant, brings him provisions and accuses his master of disloyalty; Semei curses David; Absalom goes in to his father’s concubines, xv–xvi. Achithophel counsels immediate pursuit, but Absalom follows the advice of Chusai, David’s adherent, to delay, and thus gives the fugitive king time to cross the Jordan, xvii. Battle of Mahanaim; Absalom is defeated and slain by Joab against the king’s order, xviii. David’s intense grief, from which he is aroused by Joab’s remonstrance. At the passage of the Jordan he pardons Semei, receives Mibphiboeth back into his good graces and invites to court Berzella, who had supplied provisions to the army, xix, 1–39. Jealousies between Israel and Judah lead to the revolt of Seba; Amasa is commissioned to raise a levy, but, as the troops are collected too slowly, Joab and Abisai are sent with the bodyguard in pursuit of the rebels; Joab treacherously slays Amasa. Summary of officers, xix, 40–xx.

(5) Appendix.—The two sons of Respha, Saul’s concubine, and the five sons of Merob, Saul’s daughter, are put to death by the Gabaonites, xxx, 1–14. Various exploits against the Philistines, xxx, 15–22. David’s psalm of thanksgiving (Ps. xvii), xxxi. His last words”, xi, 1–31. Early Davidic and Da- videntian poems, xxxii, 8–38. The numbering of the people and the pestilence following it, xxxiv.

UNITY AND OBJECT.—I–II Books of Kings never formed one work with III–IV, as was believed by the older commentators and is still maintained by some modern writers. Although the consecutive numbering of the books in the Septuagint and the account of David’s last days and death at the beginning of III Kings seem to lend colour to such a supposition. The difference of plan and method pursued in the two pairs of books shows that they originally formed two distinct works. The author of I–II gives a more or less brief sketch of each reign, and then refers his readers for further information to the source whence he has drawn his data; while the author of I–II furnishes such full and minute details, even when they are of little importance, that his work looks more like a series of biographies than into his good graces and invites to court Berzella, who had supplied provisions to the army, xix, 1–39. Jealousies between Israel and Judah lead to the revolt of Seba; Amasa is commissioned to raise a levy, but, as the troops are collected too slowly, Joab and Abisai are sent with the bodyguard in pursuit of the rebels; Joab treacherously slays Amasa. Summary of officers, xix, 40–xx.

(5) Appendix.—The two sons of Respha, Saul’s concubine, and the five sons of Merob, Saul’s daughter, are put to death by the Gabaonites, xxx, 1–14. Various exploits against the Philistines, xxx, 15–22. David’s psalm of thanksgiving (Ps. xvii), xxxi. His last words”, xi, 1–31. Early Davidic and Dav-
that it is impossible to determine the length of the period covered by them. The position taken by the author of III–IV, with regard to the facts he relates, is also quite different from that of the author of the other two sections of the book: he either praises or blames the various rulers, especially with respect to forbidding or allowing sacrifices outside the sanctuary, while the latter rarely expresses a judgment and repeatedly records sacrifices contrary to the prescriptions of the Pentateuch without a word of censure or comment. Lastly, there is a marked difference in style between the two sections of the book: the latter shows strong Aramaic influence, whereas the first two belong to the best period of Hebrew literature. At the most, it might be said that the first two chapters of the third book originally were part of the Book of Samuel, and were later detached by the author of the Book of Kings to serve as an introduction to the history of Solomon; but even this is doubtful. These chapters are not required by the object which the author of the Book of Samuel had in view, and the work is a complete whole without them. Besides, the summary, II, xx, 23–26, sufficiently marks the conclusion of the history of David’s time (the chapter is so closely connected with the following that they have been belonged to the Book of Kings from its very beginning.

The general subject of I–II Kings is the foundation and development of the Kingdom of Israel, the history of Samaria being merely a preliminary episode intended to explain the circumstances which brought about the establishment of the royal form of government. On closer examination of the contents, however, it is seen that the author is guided by a leading idea in the choice of his matter, and that his main object is not to give a history of the first two kings of Israel, but to relate the providential foundation of a permanent royal dynasty in the family of David. This strikingly appears in the account of Saul’s reign, which may be summarised in the words: elected, found wanting, and rejected in favour of David. The detailed history of the struggle between David and Saul and his house is plainly intended to show how David, the chosen of the Lord, was providentially preserved amid many imminent dangers and how he ultimately triumphed, while Saul perished with his house. The early events of David’s rule over united Israel are told in few words, even such an important fact as the capture of Jerusalem, which scarcely merit a mention, is in itself little insisted on, but his zeal for God’s worship and its reward in the solemn promise that his throne would last forever (II, vii, 11–16) are related in full detail. The remaining chapters tell how, in pursuance of this promise, God helps him to extend and consolidate his kingdom, and does not abandon him even after his great crime, though he punishes him in his tenderest feelings. The conclusion shows him in peaceful possession of the throne after two dangerous rebellions. The whole story is thus built around a central idea and reaches its climax in the Messianic promise, II, vii, 11 sqq.

A L T H O U G H T O N E S T A T E M E N T .—The Talmud attributes to Samuel the whole work bearing his name; this strange opinion was later adopted by St. Gregory the Great, who nately persuaded himself that Samuel wrote the whole book. The death of David and the ascension of Solomon are variously placed. The books of Samuel and 1 and 2 Kings form one book in the LXX, and in the Apocrypha the two books are divided into 1 Kings and 2 Kings. The book of Nathan the prophet, and in the book of Gad the seer.” But the wording of the text indicates that there are three distinct works. Besides, the unity of plan and the close connexion between the different parts exclude composite authorship; we must at least admit a redactor who combined the three narratives. This redactor, according to Hummelauer, is the prophet Nathan; the work, however, can hardly be placed so early. Others attribute it to Ezra, or Neheims, Eschias, or Edras. None of these opinions rests on any solid ground, and we can only say that the author is unknown.

The same diversity of opinion exists as to the date of composition. Hummelauer assigns it to the last days of David; two others, Cornelis Leemans and Haenricus van Marle, place it under Roboa; Kaulen, under Abiam the son of Roboa; Haenricus, not long after David; Ewald, some thirty years after Solomon; Clair, between the death of David and the destruction of the Kingdom of Judah. According to recent critics it belongs to the seventh century, but received retouches as late as the fifth or even the fourth century. No sufficient data are at hand to fix a precise date. We can, however, assign certain limits of time within which the work must have been composed. The explanation concerning the dress of the king’s daughters in David’s time (II, xi, 25) presupposes that a considerable period had elapsed in the interval, and points to a date later than Solomon, during whose reign a change in the style of dress was most likely introduced by his foreign wives. How much later is indicated by the remark: “For which reason Siecleag belongeth not to the kings of Judah till this day” (I, xxv, 8). The expression kings of Judah implies that at the time of writing the Kingdom of Israel had been divided, and that at least two or three kings had reigned over Judah alone. The earliest date cannot, therefore, be placed before the reign of Abiam. The latest date, on the other hand, must be assigned to a time prior to Josiah’s reform (621 b.c.). As has been remarked, the author repeatedly records without censure or comment violations of the Pentateuchal law regarding sacrifices. Now it is not likely that he would have acted thus if he had written after these practices had been abolished and their unlawfulness impressed on the people, since at this time his readers would have taken scandal at the violation of the Law by such a person as Samuel, and at the toleration of unlawful rites by a king like David. The force of this reason will be seen if we consider how the author of III–IV Kings, who wrote after Josiah’s reform, censures every act of the former kings, yet is silent on this subject. (II, iii, 2, explains it. The purity of language speaks for an early rather than a late date within the above limits. The appendix, however, may possibly be due to a somewhat later hand. Moreover, additions by a subsequent inspired revisor may be admitted without difficulty.

SOURCES.—It is now universally recognized that the author of I–II Kings made use of written documents in composing his work. One such document, “The Book of the Just,” is mentioned in connexion with David’s lament over Saul and Jonathan (I, i, 18). The can-tile of Anna (I, ii, 3–4) points to a document later than this, which deals with the history of David; the narrative of the hymn of thanksgiving (II, xxii, 2–51; cf. Ps, xcvii), and his “last words” were very probably also drawn from a written source. But besides these minor sources, the writer must have had at hand, at least for the history of David, a document containing much of the historical material which he narraes. This we infer from the passages common to I–II Kings and the First Book of Paralipomenon (Chronicles), which are shown in the following list:

| I K. xxvi | Par. x, 1-12 |
| ii, 1-2 | ii, 1-12 |
| ii, 3-5 | ii, xi, 1 |
| v, 1-10 | xii, 26-31 |
| v, 11-25 | xxv, 14-39 |
| i, 11-19 | vi, 12-23 |
| ii, 1-19 | vii |
| xvi, 1-3, 43 | xvi, 1-3, 43 |
| xxv, 25-29 | xxiv |
| xvi, 1-3, 43 | xvi, 4-6 |
| | xxiv |
| | xvi, 4-6 |
| | xxiv |
Although these passages often agree word for word, the differences are such that the author of Paralipomenon, the later writer, cannot also have copied from I-II Kings, and we must conclude that both authors made use of the same document. This seems to have been an official record of important public events and of matters pertaining to the administration, such as was probably kept by the court "recorder" (II Kings, viii, 10, 16). And only by the same connotation do we understand the "Chronicles of King David." (I Par., xxvii, 24.) To this document we may add those others mentioned in I Par. (xxix, 29) as sources of information for the history of David, namely, the "Book of Samuel," the "Book of Gad," and the "Book of Nathan." These were works of the three Prophets, as we gather from II Par. (xxvii, 29), and hardly neglect writings recommended by such names. Samuel very probably furnished the matter for his own history and for part of Saul's; Gad, David's companion in exile, the details of that part of David's life, as well as of his early days as king; and Nathan, information concerning the latter part, or even the whole, of his reign. Thus between them they would have fairly covered the period treated of, if, indeed, their narratives did not partially overlap. Besides these four documents other sources may occasionally have been used. A comparison of the passages of I-II Kings and I Par, given in the last section above shows further that both writers frequently transferred their source to their own pages with but few changes; for, since one did not copy from the other, the agreement between them cannot be explained except on the supposition that they more or less reproduce the same document. We have therefore reason to believe that our author followed the same course in other cases, but to what extent we have no means of determining.

The Critical Theory.—According to recent critics, I-II Kings is nothing but a compilation of different narratives so unskillfully combined that they may be separated with comparative ease. In spite of this comparative ease in distinguishing the different elements, the critics are not agreed as to the number of sources, nor as to the particular source to which certain passages are to be ascribed. At present the Wellhausen-Budde theory is accepted, at least in its main outlines, and is very generally applied to this theory, II, ix-xx, forms one document, which is practically contemporary with the events described; the rest (excluding the appendix) is chiefly made up of two writings, an older one, J, of the ninth century, and a later one, E, of the end of the eighth or beginning of the seventh century. They are designated J and E, because they are either due to the authors of the Jahwist and Elohist documents of the Hexateuch, or to writers belonging to the same schools. Both J and E underwent modifications by a revisor, J' and E respectively, and after being welded together by a redactor, RJE, were edited by a writer of the Deuteronomic school, RD. After this redaction some further additions were made, among them the appendix. The different elements are thus divided by Budde:—

J.—I, ix, 1-xxxxv; xi, 1-11, 15; xiii, 1-7a, 15b-18; xiv, 1-46; xvi, 14-23; xvii, 5-6; xlv, 20-30; xx, 1-10, 18-39; 42b; xxii, 1-4, 6-18, 20-23; xxvii, 1-4xxx; xxxv, 1-9, 10b, 12-32; iii; iv, 1-3, 6-10, 17-25; vi, 1-33; xii, 1-9, 13-31; xiii-xx, 22.

E.—I, 1-4; ii, 1-48; vii, 1; xv, 2-34; xvii, 11, 14-58; xviii, 1-4; xix, 1-4; xx, 1-18; xxi, 1-9; xxi, 10; xxi, 12; xxi, 12-xxv; xxix; xxxvii. I, 1-6, 10-13, 16-18; II, 1-4; ii, 1-28; ii, 11-22a, 23-26; iii, 1-iv, 1a; vii, 2-12; 22; x, 17-24; xii.

RJE.—I, 1, 25-27; xi, 12-14; xv, 1; xviii, 21b; xix, 2-3; 7; xx, 11-20, 40-42a; xxii, 10b; xxiii, 14b-18; xxiv, 16, 20-22a. I, 1, 5.
seemance, differ in every detail. This is the case with the two accounts of Saul's disobedience and rejection, with the two narratives of David's sparing Saul's life, and of his seeking refuge with Achish. Such narratives cannot be identified, unless the improbability of the events be admitted (3) and it be considered probable that Saul should on two different occasions have disregarded Samuel's directions and that the latter should repeat with greater emphasis the announcement of his rejection? Or that in the game of hide-and-seek among the mountains David should have twice succeeded in getting near the person of Saul and should on both occasions have refrained from harming him? Or that under changed conditions he should have entered into negotiations with Achish and become his vassal? Even where the circumstances are the same, we cannot at once pronounce the narratives to be only different accounts of the same occurrence. It is not at all strange that Saul in his insane moods should twice have attempted to spare David, or that the loyal Ziphites should twice have betrayed to Saul David's whereabouts. The two accounts of Saul among the prophets at first sight seem to be real doublets. The expression used in the other case—"Wherefore do they say to Saul, David enquired of the Lord?" (xix. 21)—naturally imply that the proverb did not exist before, but may be understood to say that it then became popular. The translation of the Vulgate, "Unde et exivit proverbium", is misleading. There is no double mention of David's flight from court. When in xxi, 10, he is said to have fled from the face of Saul, nothing more is affirmed than that he fled to avoid being taken by Saul, the meaning of the expression "to flee from the face of" being to flee for fear of some one. The double narrative of Saul's election is obtained by tearing asunder parts which complement and explain one another. Many a true story thus handled will yield the same results. The story as it stands is natural and well connected. The people, disgusted at the conduct of the sons of Samuel, and feeling that a strong central government would be an advantage for the defence of the country, request a king. Samuel receives the request, but will not appoint the time and place for the election. In the meanwhile he anoints Saul, who is later designated by lot and acclaimed king. All, however, did not recognize him. Influential persons belonging to the larger tribes were very likely piqued that an unknown man of the smallest tribe should have been chosen. Under the circumstances Saul wisely delayed assuming royal power till a favourable opportunity presented itself, which came a month later, when Naas besieged Jabes. It is objected, indeed, that, since the Jabesites did not send a message to Saul in their pressing danger, they were slow in sending a message which Saul has not yet been presented, but the reluctance of a double narrative is clearly indicated. But even if the Jabesites had sent no message, the fact would have no significance, since Saul had not received universal recognition; nothing, however, warrants us to read such a meaning into the text. At all events, Saul on hearing the news immediately exercised royal power by threatening with severe punishment anyone who would not follow him. Difficulties, it is true, exist as to some particulars, but difficulties are found also in the theory of a double account. The two accounts of Saul's death are really contradictory; but only in one determining detail: the murder of the Amalecites who brought to David the news of Saul's death, and nothing indicates that the writer intends to relate it as true. We need have little hesitation in pronouncing it a fabrication of the Amalecites. Lying to promote one's interests is not unusual, and the hope of winning David's favour was a sufficient inducement for the man to invent his story.

With regard to the apparent contradiction between xvi, 14-23, and xvii, it should be remarked that the circumstances are quite different. Soom. xvi. 12-13 and xvii, 55-xviiii. 5. This form of the text is held to be the more original, not only by some conservative writers, but by such critics as Cornill, Stade, W. R. Smith, and H. P. Smith. But though this text, if it were certain, would lessen the difficulty, it would not entirely remove it, as David still appears as a boy unused to arms. The apparent contradiction disappears if we take xvi, 14-23, to be out of its chronological place, a common enough occurrence in the historical books both of the Old and of the New Testament. The reason of the inversion seems to be in the desire of the author to bring out the contras between David, upon whom the spirit of the Lord came from the day of his anointing, and Saul, who was thenceforth deserted by the spirit of the Lord and troubled by an evil spirit. Or it may be due to the fact that with xvii the author begins to follow a new plan, and that therefore he has to choose a point of transition of some details concerning David's family, if xvii, 17-21, is original. According to the real sequence of events, David after his victory over Goliat returned home, and later, having been recommended by one who was aware of his musical skill, he was persuaded to go to the court of Saul. This form is preferred by Ewald, as it connects the history of Saul more closely with that of the person of Saul. This explanation might seem inadmissible, because it is said (xvii, 2) that "Saul took him that day, and would not let him return to his father's house." But as "on that day" is often used in a loose way, it need not be taken to refer to the day on which David slew Goliat, and room will thus be left for the incident related in xvi, 14-23. It is not true, therefore, that it is impossible to reconcile the two accounts, as is asserted. The so-called contradictory statements may also be satisfactorily explained. As xxii is a summary of Samuel's administration, the words "the Philistines... did not come any more into the borders of Israel" must be taken to refer only to Samuel's term of office, and not to his whole lifetime; they do not, therefore, stand in contradiction with xiiii, where an invasion during the reign of Saul is described. Besides, it is not said that the Philistines were not further attacked by the Israelites; the following clause: "And the house of the Lord was against the Philistines, all the days of Samuel", rather supposes the contrary. There were wars, indeed, but the Philistines were always defeated and never succeeded in gaining a foothold in the country. Still they remained dangerous neighbours, who might attack Israel at any moment. Hence it could well be said of Saul, "He shall save my people out of the hands of the Philistines" (ix, 16), which expression does not necessarily connote that they were then under the power of the Philistines. Ch. xiii, 19-21, which seems to indicate that the Philistines were occupying the country, is generally acknowledged to be misplaced. Further, when Samuel delegated his powers to his sons, he still retained his office, and when he did resign it, after the election of Saul, he continued to advise and reprove both king and people (cf. i, xiii, 23); he can therefore be truly said to have judged Israel all the days of his life. The last contradiction, which Budde declares to be inexplicable, rests on a mere quibble about the verb "to see". The context shows clearly enough that when the writer states that "Samuel saw Saul no more till the day of his death" (xv, 25), he means that Saul had no further dealings with Saul, and not that he never beheld him again with his eyes. Really, it is likely that a redactor who, we are told, often harmonizes his sources, and who plainly intends to present a coherent story, and
not merely a collection of old documents, would allow glaring contradictions to stand? There is no sufficient reason, then, why we should not grant a historical character to the section I, i—II, viii, as well as to chapters and other ancient versions. Other intermediates, namely, like touches, minuteness of detail, bright and flowing style—which move the critics to consider the latter part as of early origin and of undoubted historical value, are equally found in the first.

The Hebrew Text, the Septuagint, and the Vulgate—The text has come down to us in a rather unsatisfactory condition, by reason of the numerous errors due to transcribers. The numbers especially have suffered, probably because in the oldest manuscripts they were not written out in full. In I, vi, 19, seventy men become "seventy men, and fifty" and thirty, in xii, 18; seventy from the footnotes II, vii, 26, changed into horsemen. Michol, who in II, vi, 23, is said to have had no children, in II, xvi, 8, is credited with the five sons of her sister Merob (cf. I, xviii, 9; xxv, 44; II, iii, 15). In I, xii, 19, Goliath is again slain by Elchanan, and, strange to say, though I, x, 21, speaks of the man who slew the brother of the giant, some critics here also see a contradiction. Badan in I, xii, 17, should be changed to Abdon or Barak, and Samuel, in the same verse, to Samson, etc.

Many of these mistakes can readily be corrected by a comparison with the Septuagint, the version that is closest to the Hebrew text in all the ancient versions. Others anticipate all dates and translations, and are therefore found in the versions as well as in the Massoretic (Hebrew) text. In spite of the work of correction done by modern commentators and textual critics, a perfectly satisfactory critical test is still a desideratum. The Septuagint differs considerably from the Massoretic. Besides some transpositions, it contains a number of additions; while on the other hand it omits (in the Vatican MS, printed in the Sixtine and Swete's edition) some passages, of which I, xvi, 12-31, 55—57, xvi, 10-11, 17-19, are the most important. Many passages many have been interpolated in the Massoretic text of double translations. The Septuagint is without doubt to be preferred to the Massoretic text in many instances; in others the case is not so clear. The Vulgate was translated from a Hebrew text closely resembling the Massoretic; but the original text has been interpolated by additions and duplicate translations, which have crept in from the Itala. Additions occur, I, iv; v, 6, 9; vii, 18; x, 1; xi, 1; xii, 15; xiv, 22, 41; x, 3, 12; xvi, 36; xlii, 11, xxx; xii, 15; i, 20; x, 23; x, 19; xii, 21, 27; xiv, 30; duplicate translations, I, ix, 25; xii, 32; xx, 15; xiii, 13; i, 11, 18; iv, 19; x, 19; xv, 12.

Kings, The Three. See Magi.

Kings, Third and Fourth Books of. — The historical book called in the Hebrew Melachim, i.e. Kings, is in the Vulgate, in imitation of the Septuagint, styled the Third and Fourth Book of Kings. This designation is justified, inasmuch as the historical narration contained in I and II Kings is here continued, and, especially, because the history of David's life, begun in I and II, is here concluded. It is, on the other hand, an independent work, distinct from the Books of Samuel (i.e. I and II Kings) in its origin and its style, as well as by reason of the purpose it has in view. It was written two centuries later, in the middle of the first century B.C. (i.e. 185). Its division into three parts is confirmed by the passage, just in the middle of the history of Ochosias—did not exist in early times, and has only been introduced later into the Hebrew editions from the Septuagint and the Vulgate. A division into three parts would be more in keeping with the contents. The second part (II Kings, xii—17) is perhaps the most interesting, and contains the enactments concerning the succession to the throne and his last instructions, comprises the history of Solomon: his God-given wisdom, the building of the temple and royal palace, the splendour of his reign, his great fall on account of which God announced to him the breaking up of his realm. The second part (II Kings, xii—17) gives an historical survey of the kindred Kingdoms of Judah and Israel: Jeroboam's falling away from God and worship of the golden calf, the continuous wars between the succeeding kings of Israel and Judah up to Achab, the endeavours on the part of Elias to bring back to God the people misled by Achab, the destructive alliances between the house of Achab and the house of David, the miracles, prophecies, and activity of Eliseus, the destruction of the race of Achab by Jehu, Athaliah's abortive attempt to destroy the house of David, the other line of contemporaneous kings of Judah and Israel until the end of the last-named kingdom, with an epilogue setting forth the causes of the fall of the latter. The third part (IV Kings, xviii—xxv) treats of the history of the Kingdom of Judah after the reign of Ezechias: his miraculous deliverance from the power of the Assyrians, his bestial conning with the Babylonians, which gave rise to the Babylonian Captivity and Exile, the historical account of the reign of Manasses, whose sins evoked the pronouncement of the ruin of Judah, of Josias, who restored the temple, renewed the covenant with God, and endeavoured to stamp out idolatry, of the last kings up to the destruction of Jerusalem by the Babylonians, with a short postscript concerning the Judeans who had remained behind, and the delivery of King Josachim from his imprisonment. The Books of Kings were not completed in their present form before the middle of the Exile. Indeed IV Kings, xxv, 27-30, relates that Josachim was released from bondage (562), and admitted to the court of Babylon for "all the days of his life".

According to the Babylonian Talmud (Baba bathra, fol. 15, 1), the Prophet Jeremias is the author. Not a little among both older and newer critics is the question of whether this is the case, and whether it is the best possible solution of the problem. It is indeed remarkable that Jeremias' activity is not alluded to—his name not even mentioned—although he stood in close relation to the events of the last few years, while everything other prophets (e.g. Elias, Eliseus, Isaia) did for kings and people is carefully noted. In case
Jeremiah was the author, we have to accept the explanation that he did not consider it suitable to relate here what he had set forth at length in his prophesy. Paul, and the Lord can overlook all the seed of Israel. IV Kings, ii, 3, 4; ix, 3-9; xi, 11, 33-39; xiv, 7-11; xvi, 12 sqq.; IV Kings, x, 30-33; xiii, 3; xii, 16; xxi, 15-17; xxiv, 3-20, bring out the same idea. In this manner the writer teaches that the unlawful cult offered in the high places and the idolatry practised in the Temple and of the adorations of the prophets were the cause of the downfall of Israel and of Judah. Still this is not the entire purpose of the work. The repeated calling to mind of the promises of the God Who had pledged a permanent reign to David, the acknowledgment of the mercy of the God Who, on account of David, Ex. 28:58; II Kings, jx, 14, and Josias, had suspended the judgment pronounced upon Judah—all this served to revive the hope and confidence of the remnant of the people. From this they were to learn that God, just in His wrath, was also merciful in His promises to David and would be faithful to His promise of sending the Messiahs, whose kingdom should endure. Not the word, but the idea and the action, might be called an historical elucidation and explanation of Nathan’s oracle (II Kings, vii, 12-16).

The writings upon which the Books of Kings are based and to which they refer more than thirty times are the “book of the words of the days of Solomon” (I Kings, vii, 5, 7, 11, 12, 22, 27, 29, 31) (A. V., book of the chronicles) of the kings of Israel” (xiv, 19; etc.), and the “book of the words of the days of the kings of Judah” (xix, 29; etc.). In the opinion of many, these “chronicles” are the official annals kept by the chancellors of the different kings. However, it is by no means certain that the office designated by the Hebrew word ma‘azir signifies chancellor (Vulg. a commentarius); still less certain is it that it was part of the duty of the chancellor, who belonged to the king’s household, to keep these annals. It is true that David (II Kings, viii, 10), Solomon (I Kings, iv, 3), Ezechias (IV Kings, xvii, 18), and Josias (II Par., xxxiv, 8) counted among their officials a ma‘azir, but whether the other kings of Judah and of Israel employed such an officer we find nowhere indicated. Even if it were historically certain that so-called year-books were kept in the two kingdoms by such an office, there is little probability that this was true in Israel in spite of so many revolutions and regicides, there remains still the question whether these are really the “chronicles” which serve as a basis for the Books of Kings. The chronicles of other peoples, as far as they have been preserved, are in cuneiform characters and comprise the annals of their petty states, not the rise to the glory of the kings, their deeds of arms, the edifices they built, etc. Our historical work, however, also relates the sins, prevarications, and other atrocities of the kings, which were not likely to be recorded in the year-books by court officials during the lifetime of their kings. According to IV Kings, xxxi, 17, “The act of Manasses . . . and his sin which he sowed . . . is not written in the book of the words of the days [A. V. book of the chronicles—II Kings, xxxi, 17] of the kings of Judah?“
chronicles of the kings of Judah" (A. V. I Kings, xiv, 29). The writer of II Par., x-xii, gives an account of the same which in contents and form is almost identical, and refers to "the books of Semeias the prophet, and of Addo the seer" (II Par., xii, 5). The same holds of the history of the following kings of Judah. After an account, often in almost the same words, now elaborate and then again more concise, we find in the Book of Kings the "book of the chronicles" and in II Par. the "prophetic writings" given as sources. It must be added that, while in the life story of four of the seven kings in II Par., reference to the source is omitted, these are also absent in the Books of Kings. Is it then not probable that it is one and the same source whence both writers have gathered their information? The "book of the chronicles" quoted in III and IV Kings the writer of II Par. designates by the then usual appellation, "the book of the kings of Judah and Israel". The prophetic writings referred to by this writer are divisions of the last-named book. This the writer states explicitly (II Par., xx, 34) of "the words [or the writings] of Jehu the son of Hanani"; (his source for the history of Josiah): they are "collated into the books of the kings of Israel and Judah"; also (II Par., xxxii, 32—Vulg.) of "the vision of Ithai, son of Amos"; it is embodied in "the book of the kings of Judah and Israel". Consequently, the source utilised by both writers is nothing else but the collection of the writings left behind by the successive kings. That the author of the Book of Kings has thoroughly consulted his sources, is constantly evident. Thus he is able to describe the labours and miracles of Flavius Josephus and Eusebius as witnesses to the reliability of our book of sacred history. Especially notable in this respect are the inscriptions concerning the Oriental races discovered during the last century.

Since the deciphering of the Assyro-Babylonian inscriptions, the chronology of the period of Kings before 730 B.C. has become untenable. We give here the points of chronological contact between the Assyro-Babylonian history and Sacred Scripture, as also those of Egyptian history.

---

**Notes.**

1. From Assyrian to Judah.

1. 854 B.C. Salophalaras II, in the summer of his sixth year, vanquished Benadad of Syria (III Kings, xx, 1), the predecessor of Hasar, with other kings, among them Achab of Israel, in the battle of Karkar.

2. 842 B.C. Salophalaras II, in his eighteenth year, receives a tribute from Jehu.

3. 738 B.C. Thelgathphalaras III (Phul, IV Kings, xv, 19) receives, in his eighth year, tribute from Manahem.

4. 733 B.C. War between the Thelgathphalaras and Rasin of Syria; siege of Damascus. "Joashas of Judah", i.e. Achab, brings presents from the Thelg-

---

Elias and Eliseus with such minuteness and in so fresh and vivid a manner as to make it plain that the original narrator was an eyewitness. This is why he consults the sources and refers the reader to them in his account of the life of almost every king; not a few expressions have been taken over verbally (cf. III Kings, viii, 8; ix, 21; xii, 10; IV Kings, xiv, 7, etc.). The authenticity of his history is further strengthened by its agreement with the accounts of II Par. The difficulties which appear at the superficial perusal of these Sacred Writings vanish after an attentive study, what seemed contradictory proving to be an amplification or else entire new matter. In many places the historical reliability of the Books of Kings is confirmed by what the prophetic writings of Isaiah, Jeremiah, Osee, Amos, Micheas, and Sophonias report concerning the same events, either by direct mention or by allusion. Even profane historians of antiquity, Berosus, Manetho, and Menander, are quoted by...
phalasar. Conquest of Israelitish territory by Thegathpalasar.
(5) 731-0 (? B.C. "Pakacha", i.e. Phacee (Hebr. Pakacha), is killed, and "Assi", i.e. Osea, is set over Israel, by Thegathpalasar.
(6) 722-1 B.C. Samaria is taken possession of, in the early part of Sargon’s reign, by the Assyrians.

B. From Scripture.—
(1) Towards the end of Solomon’s reign, Jeroboam I fled into Egypt to S-esae. In the fifth year of the reign of Roboam, Jerusalem was plundered by the same Sesse (I Kings, xi, 40; xiv, 25). Sesse I probably reigned about 940-19 B.C.
(2) In, or shortly before, the fourteenth year of Asa’s reign, "Zara the Ethiopian" (Hebr. Zerach) declared war against Asa (II Par. A. V. II Chron.), xiv, 9; cf. xv, 10 sqq.). Some commentators think that Zara was a king of Egypt, namely, Osorkon I or II. The first was the successor of Sesse I. The second cannot be placed chronologically.
(3) Benadad II (III Kings, xx, 1), the contemporary of Salmanasar II, was contemporary with Achab and Joram of Israel. Joram died during the reign of Benadad’s successor, Hazael. According to Assyrian sources, Benadad was, in 846, still King of Syria.
(4) Hazael, who, according to Assyrian inscriptions, was already ruling in 842, was contemporary with Jehu, Joas of Judah, and Joash of Israel (IV Kings, xiii, 22). In 805, Ramman-nirari III conquered Damascus under the Syrian King Marri, who was possibly the Biblical Benadad (III), contemporary of Joash of Israel (ibid., v. 25).
(5) Manahem honours Phul, King of the Assyrians, ninth of Osee, is taken by the Assyrians (IV Kings, xvii, 5, 6; xviii, 10, 11). Salmanasar reigned from January, 726, to January, 721. Sus (or Seve), mentioned in IV Kings, xvii, 4, as ‘’king of Egypt,’’ is not identified with certainty. Some think him to be Sabaka, whose chronology, as also that of Theraes (IV Kings, xix, 9), has not been determined. Under Sargon of Assyria is mentioned, in the year 707, one Sib’u, or Sib’e, as “prince [nurtan, or sultan] of Musri.”
(10) Ezechias received, in or shortly after his fourteenth year, an embassy from Merodach-Baladan (V. D. Berodaich Baladan), who was King of Babylon from 721 to 710, and again, for 9 months, in 703. See IV Kings, xx, 1, 6, 12.
(11) Sennacherib of Assyria besieged Ezechias at Jerusalem. The date given for this event, “in the fourteenth year of King Ezechias” (IV Kings, xviii, 13; and Is., xxxvi, 1) is either misplaced or incorrect. The event took place, according to IV Kings, xx, 6, after the recovery of Ezechias in his fourteenth year (i.e. fifteen years before his death), and after the arrival of the Babylonian embassy.
(12) Death of Josias in a combat with Nechao, King of Egypt (IV Kings, xxix, 29). Nechao (Necho II) ascended the throne in 610.
(13) Battle near Carchemish (Characim, Karchemish) between Nechao and Nabuchodonosor of Babylon in the fourth year of Joakim (Jer., xlvi, 2; cf. xxy, 1; and IV Kings, xxiv, 1). According to the account of Hierothes in Flavius Josephus, Nabuchodonosor, after having slaughtered the Egyptian army near Carchemish, marched on to Syria and Palestine in order to invade Egypt. Arrived at the confines of

with presents (IV Kings, xv, 19-20). That Phul is identical with Thegathpalasar III is apparent from the fact that, in the year 729, according to Assyrian inscriptions, Tukulti-paletarsaras, and Babylonian inscriptions Pulu, becomes King of Babylonia, and that this same king, according to the same sources, died in 727.
(6) Phace and Raazin, King of Syria, besiege Acha in Jerusalem (IV Kings, xvi, 5). Achaas calls Thegathpalasar to his assistance (ibid., v. 8).
(7) Damascus is taken by Thegathpalasar, and Raazin is killed (IV Kings, xvi, 9). Achaas visits Tukulti-paletarsaras, and is returned to Damascus (ibid., v. 10).
(8) Thegathpalasar, during the reign of Phacee, takes possession of Israel’s territory. Phacee is conspired against and slain by Osee, and the latter becomes king (IV Kings, xv, 29, 30).
(9) Salmanasar besiegers Samaria, which, in the third year of the siege, the sixth of Ezechias, and the this country, he received the news of the death of his father, Nabopolassar. Returning to Babel to assume his administration, he confided the Jewish, Phoeni-.
(14) Nabuchodonosor takes Judea (Jechonias) as a prisoner to Babylon, and begins to rule (ibid., v. 10).
according to Israelitish dating, it was 589. Jer., lii, 81. "In the seven and thirtieth year of the captivity of Joachin, king of Judah, in the twelfth month, the fifth and twentieth day of the month, Evilmerodach king of Babylon, in the first year of his reign [i.e. 582 B.C.], lifted up the head of Joachin, king of Judah, and brought him forth out of prison" (incorporated in IV Kings, xxv, 27), evidently follows Babylonian dating. All these datings point to 598 as the year when Joachin was carried away.

(16) In his eighth year, or the beginning of his ninth year, Sedecias revolted against Nabuchodonosor and called to his assistance Egypt, namely, the newly elevated Pharaoh Hophra (D. V. Ephrée), who ascended the throne in 589 (probably the first half of the year)—IV Kings, xxiv, 20 (cf. xxv, 1); Jer., xxxvii, 4 (A. V. xxxvii, 5); xliv, 30; Ezckh., xvii, 15.

(16) The siege of Jerusalem began in the tenth month of the ninth year of Sedecias (IV Kings, xxv, 1; Jer., xxxix, 1; II, 4). According to Jer., xxxi, 1, the tenth year of Sedecias coincides with the eighteenth year of Nabuchodonosor. Jerusalem was taken in the eleventh year of Sedecias, the nineteenth year of Nabuchodonosor, in the fourth month (IV Kings, xxv, 8; Jer., lii, 29). According to Babylonian chronology, this was the eighteenth year of Nabuchodonosor (Jer., lii, 29).

(17) The fourth month of the eleventh year of Sedecias falls in the nineteenth year (Israelitish chronology) of Nabuchodonosor. From this it appears that the fourth month (Thammuz) of the first year of Sedecias falls in the ninth year of Nabuchodonosor. As Joachin's abdication took place in the eighth year of Nabuchodonosor, it is very probable that Sedecias became king in this, the eighth year.

The table on the opposite page gives the chronology of the kings of Judah and of Israel, as nearly as possible in accordance with the figures of the Bible, in conjunction with the data of profane history. In this connexion it must be noted that: (1) The years B.C. are figured from Nisan to Nisan, which month usually began with the new moon after the vernal equinox; (2) the years during which the kings reigned are understood to be enumerated in accordance with their accession to the throne, and not according to the beginning of the year therefore, to consider the dates B.C. here given as—within a year, earlier or later—more or less inaccurate. Dates marked with an asterisk (*), however, be regarded as reasonably exact.

The inaccuracies in the chronology of the Bible are attributable to various causes. In many cases they are due to what should be "corrections" on the part of the copyists, who did not understand certain passages or sought to bring certain dates into agreement with an error of long standing. Thus the discrepancy of twenty years excess in the reign of Azarias has also been carried through the synchronisms of the Israelitish kings, Zacharias, etc. The synchronistic comparisons between Joatham, Achaez, and Ezckhias, on the one hand, and Phacee and Osee, on the other, form a very inaccurate combination, brought into the Bible by the speculations of successive copyists and commentators.

The statement, tolerably accurate chronologically, concerning the beginning of Osee's reign, "in the twentieth year of Joatham" (IV Kings, xv, 20), who, be it noted, only reigned sixteen years (v. 33), seems to have originated with some one who did not wish to mention the godless Achaez. The twenty years of the reign of Phacee, in whose second year Joatham became king, stand in relation to the twentieth year of Joatham like cause and effect. The synchronisms of Ezckhias with Osee got into the Bible through the undoubtedly genuine "twelfth year of Achaez", during which Osee became an independent king, by means of the following arithmetical calculation:—
Phææce became king in the 52nd year of Azarias. 1735, 12th, Achaz.
Ose 725, 12th, Places.
Azarias reigned 52 years.
Joatham 16.
Achaz 16.
Total 81 years to Ose.
52 years to Azarias.
50 years to Ose.
Total 84 years to Ezechias.
Subtract 81 years to Ose.
There remain 3 years of Ose till Ezechias became king.

That the reverse is not the case, that is, that the twelfth year of Achaz is not the result of a calculation, is shown by the fact that the other possible calculations would produce the fourth, and not the twelfth, year of Achaz. The other reckonings are as follows:—

<table>
<thead>
<tr>
<th>Year</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>52 years of Azarias</td>
<td>52 years of Azarias.</td>
</tr>
<tr>
<td>50 years to Ose</td>
<td>16 years to Joatham.</td>
</tr>
</tbody>
</table>

Less 68 to Achaz.

50 years to Ose

There remain 4 to Achaz when Ose becomes king.

The year 68 of Azarias = 17 Phææce = 16 Joatham = 4 Achaz = 1 Ose.

From this it appears that not the "twelfth year of Achaz", but the "twentieth year of Joatham", is reckoned. The calculation was correct in regard to Ose's beginning as vassal of Assyria. But some one else confused this with the declaration of independence of Ose in the twelfth year of Achaz, and thus arrived at the "third year of Ose" before the beginning of Ezechias, whence resulted further synchronistic statements between Ose and Ezechias. That these synchronisms are not historical, but must have been introduced into the Bible by a "speculator", is proved by what follows:—

VIII.—42

pression of the unfriendly attitude towards the Assyrians which was favoured by Ezechias. This is the light in which we can understand the unwise Assyrian against Juda. But cause and effect must be connected according to time. As to the year 713 or shortly afterwards (for the delivery of Ezechias), there can, then, be no discussion. The year 703 is probably correct; Merodach-Baladan had then regained the throne of Babylon, and Sennacherib already ruled in Assyria. Thus the recovery of Ezechias would have
taken place in about 704. While this would be his fourteenth year, 718–7 would then be his first, which calculation also agrees with other data. Cf. Winckler, ‘Alttest. Unters.’, 135.

(2) If Jehu is said to have been king in 728–7, then Achara could not have reigned more than seven or eight years. For in this case the father would at most have been only seven years older than the son (cf. what follows). For a joint reign of Exekias and Achara is out of the question, and the supposition that Exekias was not his son is in view of II Kings, xvii, 1, and II Par., xxviii, 27, without sufficient basis. Neither can another interpretation of the word son, accepted a number of times in the Books of Kings by Herzog, be considered a fortunate hypothesis.

By the anticipation of the twenty-nine years’ reign of Achara there resulted a shortage of ten years which has probably been made up by lengthening the reign of Manasses by ten years.

The year 730 as the beginning of Osee’s reign is, according to Biblical statistics, reasonably certain. For in his sixth or seventh year, and in the twelfth year of Achara, he rose against Salamanasar (IV Kings, xvii, 9; cf. xiv, 9), and in his ninth year Samaria was taken. The year 722–1 being the ninth, 730 is consequently the first. The Assyrian account of the death of Phacea and the nomination of Osee is usually placed by Assyriologists at about 734–732, since Thelaghphalas was not in Palestine again after 732. The reasoning is not convincing. The course of events after 735–4 is probably as follows. The Antiassyrian party in Palestine, of which Rasin of Damascus was the head and moving spirit, organized an uprising and endeavoured to draw the other nations into it. Hence the alliance between Rasin and Phacea again, which declined to participate in the uprising, and their endeavour, on the death of Joatham, to keep his son Achara from the throne. Achara appealed to Thelaghphalas for assistance. The latter immediately made for his object, namely, the subjection of Syria and the conquest of Damascus, without neglecting to occupy also the surrounding districts which belonged to Israel. Cf. IV Kings, xvi, 7–9; and xx, 29. After the fall of Damascus in the summer of 732, Tyre and Israel must have been conquered, but, when winter approached, Thelaghphalas turned all further operations over to his own, which, according to his own inscription (dispatched against Tyre), and retired to Ninive. The territory of Israel was taken possession of, perhaps partly while the monarch was still in command; but, before Samaria could be taken, Osee, supported by the Antiassyrian party, had executed his stroke and caused Phacea to flee. Sargon was the victor on the annexation of Tyre, Israel, and Ascalon to 731–30, and the appointment of Osee as Assyrian vassal king over Israel need not be placed before 730. (Cf. Winckler, op. cit., 132, eqq.)

The chronology of the kings of Juda, as approximatively deduced above, has still to be compared with their ages at the commencement of their respective reigns—given in Holy Scripture for most of them. If we assume that, in the co-regencies which we have considered, the age at the beginning of the co-administration is indicated, we arrive at about the following dates of birth—

The variants 42, 20, and 8, in connection with Ocho-
Pastor at St. Raphael, Glengarry, since 1804, was nominated first vicar-Apostolic of the district. His consecration took place on 31 December, 1829, in the Ursuline chapel at Quebec. The bishop continued to reside for some years at St. Raphael, which thus became the first episcopal see in the new province and the second established in all Canada. It was to Glengarry that the bishop brought, in 1803 and 1804, the members of the Ursuline nuns of Bonaventure, who afterwards became the Ursulines of Glengarry, despoiled in Scotland in 1802. In 1804, to minister to the scattered Catholic settlers and Indians in the vast Province of Upper Canada, there were but two priests, the Rev. Alexander Macdonell (afterwards bishop) and an assistant. About 1814 the number of priests had increased to six, two at St. Raphael, one at Perth, one at Kingston, and two at Sandwich. The vicariate was created a diocese by Pope Leo XII in a Brief dated 27 January, 1826, and Kingston was named the see. It was the first diocese established in a British colony since the so-called Reformation. In this year Bishop Macdonell applied for a coadjutor, and the Rev. Thomas Weld, an English priest, was consecrated Bishop of Amycla and coadjutor of Upper Canada on 6 August, 1826. The state of his health did not permit Bishop Weld to come to Canada. He remained some years in England, and, going to Rome, he was made Cardinal by the Pope on 17 February 1844.

The beginning of a diocesan seminary was made at St. Raphael, where Bishop Macdonell established the College of Iona, under the direction of Rev. William P. Macdonald, afterwards vicar-general for twenty years. He was also the editor of "The Catholic", the first Catholic journal published in the English language in Canada. It was a vigorous polemical weekly, and was issued at Kingston in 1830–31, and at Hamilton from 1841 to 1844.

The bishop had resided at York, now Toronto, for some years, and came to Kingston in 1836. One of his earliest acts was to obtain from the Legislature an Act of Incorporation for the Regiopolis College at Kingston. The cornerstone of the college was laid on 11 June, 1838. This building is now used as a hospital by the Sisters of the Hôtel Dieu. The college became a famous seat of learning, and continued its useful work until it was temporarily removed to Queen's University in 1869. On another site in the city, Regiopolis College was reestablished by the late Archbishop Cleary, and is now in a flourishing condition under the presidency of the archbishop, the Most Reverend Dr. Gauthier. A new coadjutor was appointed in 1835 in the person of the Rev. Remigius Gaulin, who became the second Bishop of the diocese of the vicarate-apostolic of Northern Canada erected before 1200. Pope Alexander III confirmed the royal foundation to the second abbot, Reinierius, in 1174; and by 1229 the abbey was in a position to send out a colony to the newly-founded monastery of Culross, in Fife, Scotland. Killoss was richly endowed by David's successors, and also by private benefactors, among its possessions being the valuable salmon fisheries on the River Findhorn, granted by Robert Bruce and confirmed by James I and James IV. The abbots were mitred, with a seat in Parliament, and the house had a special prominence and influence as the burying place of the church and books for the library; but the most illustrious of the twenty-four abbots who ruled the monastery was his successor, Robert Reid, who held the priory of Beauty in commendam, together with the Abbey of Killoss. This wise, learned, and excellent prelate was sent as the king's commissioner to Henry VIII to treat for peace,
and again to France in connexion with the marriage of James V. He erected a new library and other buildings at his abbey, and carefully administered the property of the house. He became Bishop of Orkney in 1541, and his nephew Walter succeeded him as abbot. Walter conformed to Protestantism, and alienated most of the nobility, which were led into a tempest of persecution. In 1561 in favour of Edward Bruce, created Lord Bruce of Kinnloss, a title still enjoyed by his descendant the Earl of Elgin, although the lands of Kinnloss were sold in 1643 to Brodie of Lethen, which family now owns them. Only a few fragments remain of the abbey buildings, including the west cloister, fragment of a temple, and a two-storied building with groined roof, traditionally called the "priest's chambers." The church has entirely disappeared.

**D. O. HUNTER-BLAIR.**

**KINO, EUSEBIO, a famous Jesuit missionary of the seventeenth and eighteenth centuries; b. 10 August, 1644, in Welschtirol (Anuaniensia); d. 15 March, 1711. Kuhn (his German name; Kino representing the Italian and Spanish form) entered the Upper German Province of the Society of Jesus in 1669. He received his degree of Doctor of Sacred Theology in 1673 and was professed as a Jesuit. He was then named to the post of Superior of the Province of New Spain in 1667.**

**KINO INDIAK** (pronounced Kii-o-wa, Latin spelling, Spanish form: Cayugas; Comanche form: Kiowa, from Ka-i-gwu, the name used by themselves, of uncertain etymology).—An important Plains tribe, constituting a distinct linguistic stock, the Kiowa, now located in western Oklahoma, but formerly residing in the mountains about the heads of the Missouri River, in western Montana, in close alliance with the Cree. From this position they gradually drifted southward along the Plains, and after having been driven from the Black Hills region by the Sioux about the year 1800, made their principal headquarters upon the upper Arkansas. About the year 1790 they made war with the Comanche with whom they were long at enmity, and since they had been closely confederated, and in company with whom they made constant raids far down into Texas and old Mexico, even as far as Zacatecas, until finally confined upon a reservation in 1869. In this southern movement they were accompanied by a small detached tribe of Athapascan stock, commonly known as Kiowa Apaches, who, in everything but language, are a component part of the Kiowa tribe. The Kiowa made their first treaty with the Government in 1837. In 1867 they joined with the Comanche, Cheyenne, and Arapaho in the noted Medicine Lodge treaty, by which they agreed to open up a reservation, but it was not until after the decisive battle of the Washita, under General Custer, 27 November, 1868, that they fulfilled their promise. Among their noted chiefs of this period were Setangy, or Satank, "Sitting Bear," Settai or Satanta, "White Bear," the "orator of the Plains," and Gu-pigo, "Lonel Wolf." In the later troubles Setangy was shot to pieces while resisting military arrest, Settai committed suicide in prison, and Lone Wolf, with a number of others, was deported to Florida for a term of three years.

In 1873 the first educational work in the tribe was undertaken by the Quaker woman C. Battey, but he was compelled to desist a few months later in consequence of the general outbreak of the confederated southern Plains tribes (1874-1875), in which Lone Wolf headed the hostile Kiowa. Since then there has been no serious disturbance. Under an agreement negotiated in 1872, but not essentially modified before its final ratification in 1900, the reservation of the associated tribes was thrown open to white settlement, each Indian receiving an allotment of 160 acres, besides his share of the selling proceeds, and they are now American citizens. Before their subjection to reservation reservation, the Kiowa was a typical equestrian Plains tribe, living in buffalo-skin tents, dressing in buckskin, with paint and feathers, depending almost entirely upon the buffalo for subsistence, without agriculture, pottery, basketry, or fixed abode, constantly raiding in every direction, and with a reputation even among Indians for turbulent ferocity. They were used to bows and arrows, lance, and shield, which last was made of toughened buffalo hide. There was no single head chief. Instead of a clan system (see Indians) they had a division into six (formerly seven) bands, including the Kiowa-Apache. On occasion of tribal gatherings, as at their great annual Sun Dance, each of the bands occupied an appointed place in the camp circle.

They had also a military organization of six orders, each with its own ceremonial dance and regulations.
Kircher, Athanasius, celebrated for the versatility of his knowledge and particularly distinguished for his knowledge of the natural sciences, was born on 2 May, 1602, at Gehis a small town on the northern bank of the Upper Rhone (Buchonia); d. at Rome, 28 Nov., 1680. From his birthplace he was accustomed to add the Latin epithet Bucho, or Buchonian, to his name, although later he preferred calling himself Paliensis after Fulda, the ancient capital of the country where the Athanasius was given him in honour of the saint on whose feast he was born. John Kircher, the father of Athanasius, had studied philosophy and theology at Mainz, without, however, embracing the priestly calling. As soon as he had obtained the doctor's degree in the latter faculty, he went to lecture on theology in the Benedictine house at Seligenstadt. Athanasius studied humanities at the Jesuit College in Fulda, and on 2 Oct., 1618, entered the Society of Jesus at Paderborn. At the end of his novitiate he repaired to Cologne for his philosophical studies. The journey thither was on account of the confusion caused by the Thirty Years' War, attended with great danger. Together with his study of speculative philosophy the talented young student devoted himself especially to the natural sciences and the classical languages, for which reason he was shortly afterwards called to teach these branches at the Jesuit College in Helvetia. In Mainz, where Kircher (1625) began his theological studies, he attracted the notice of the elector through his ability and his skill as an experimentalist. In 1628 he was ordained priest, and hardly had he finished his last year of probation at Speyer when the chair of ethics and mathematics was given to him by the University of Würzburg, while at the same time he had to give instructions in the Syrian and Hebrew languages. However, the disorders consequent on the years obliged him to only once to go first to Lyons in France (1631) and later to Avignon.

The discovery of some hieroglyphic characters in the library of Speyer led Kircher to make his first attempt to solve the problem of hieroglyphical writing, which still baffled all scholars. At Aix he made the acquaintance of the well-known French senator, Nicolas Peiresc, whose magnificent collections aroused in Kircher the highest interest. Recognising in Kircher the right man to solve the old Egyptian riddle, Peiresc applied direct to Rome and to the General of the Jesuits to have Kircher's call to Vienna by the emperor set aside and to procure a summons for the scholar to the Eternal City. This generous intention was favoured by Providence, inasmuch as Kircher, on his way to Vienna, was shipwrecked near Civitá Vecchia, and arrived in Rome before the knowledge of his call thither had reached him. Until his death (28 Nov., 1680), Rome was now to be the principal scene of Kircher's manifold activity, which, soon developed in such an astonishing way that pope, emperor, princes, and prelates vied with one another in furthering and supporting the investigations of the learned scholar. After six years of successful teaching in the Roman College, where he lectured on physics, mathematics, and oriental languages, he was released from these duties that he might have freedom in his studies and might devote himself to formal scientific research, especially in Southern Italy and Sicily. He took advantage of a trip to Malta to explore thoroughly the various volcanoes which exist between Naples and that island. He left Rome in 1638 the Strait of Messina, where, besides the noise of the surge, a dull subterranean rumble attracted his attention. At Trapani and Palermo his interest was aroused by the remains of antediluvian elephants. But before all else he tried to discover the subterranean power of the volcanoes of Etna and Stromboli, then in eruption; public attention had been called to such mysterious phenomena by the frightful eruption of Vesuvius in 1630.

When Kircher left Messina in 1638 to return to Naples, a terrible earthquake occurred which destroyed the city of Euphemia. Like Pliny before him (A.D. 79), Kircher wished to study at close range this powerful conclusion of nature. On reaching Naples he once climbed Vesuvius, and had himself lowered by means of a rope into the crater of the volcanic mountain and with the help of his pantometer ascertained exactly the different dimensions of the crater and its inner structure. As the firstfruits of his travels he published, for the Knights of Malta, "Specula Meditensis Encyclica sive syntagma novum instrumentorum physico-mathematicorum" (Messina, 1638). It was forty years later that the fully matured results of these investigations appeared in Kircher's great work, the "Mundus Subterraneus", in two volumes (Amsterdam,
KIRKWALL

1678), which enjoyed the greatest repute in his time; not only did it give an incentive to the more searching investigation of subterranean forces, but it contributed much to their final explanation. When again in Rome, Kircher began collecting all kinds of antiquities and ethnologically important remains, thus laying the foundation of the well-known museum which, as the "Museum Kircherianum", still attracts to-day so many visitors to the Roman College. Epoch-making also were Kircher's labours in the domain of deciphering hieroglyphics, and, on the excavation of the so-called Phaenician obelisk, he succeeded in supplying correctly the portions which had been concealed from him. It must be remembered that in those days little or no attention was paid to this subject, and that it was therefore in itself a great service to have taken the initiative in this branch of investigation, however lacking his efforts may have been in the fundamental principles of the science as it is known to-day. Kircher also gave an impetus to the intimate study of the relations between the different languages: Latin, Greek, Hebrew, Chaldaic, Syrian, Samaritan, Arabic, Armenian, Coptic, Persian, Ethiopian, Italian, German, French, and Portuguese.

Thus in the most varied branches of science Kircher played the rôle of pioneer. Even medicine received his attention, as is shown for example by his treatise, "Scrutinium physico-medicum contagiosi luis, que pestis dicitur" (Rome, 1658). He also tried to form the langue geologique (an "epigraphia seu archaeographia linguarum, quo omnibus totius mundi populis poterit quia correspondere", Rome, 1663). His scientific activities brought him into scientific correspondence with scholars labouring in the most different fields, as the numerous volumes of his extant letters show. It is to his inventive mind that we owe one of the earliest of our counting machines: the speaking-tube and abacian harp were perfected by him. He was also the inventor of the magic lantern which has since been brought to such perfection and is to-day almost indispensible.

That the most valued judgements should be formed and expressed on a man of such encyclopaedic knowledge was only to be expected. He tried to find a grain of truth even in the false sciences of alchemy, astrology, and horoscopy, which were still in his time much in vogue, nor is it surprising that in the province of astronomy he did not at this early date develop a Copernican System.

With all his learning and the vast amount of adulation which he received on all sides, Kircher retained throughout his life a deep humility and a childlike piety. In 1629 he had intimated to his general his desire to devote his life exclusively to the spreading of the Faith in baptism, but this wish remained unfulfilled, and, to console himself for this disappointment, he erected during his last years a sanctuary (della Mentorella) in honour of the Mother of God on the crest of the Sabine Hill near Rome, whither, during his lifetime as now, thousands made pilgrimages and found healing from their ailments. In this sanctuary Kircher himself was buried, and at the beginning of the twentieth century this place of pilgrimage was distinguished by a gigantic statue of our Divine Redeemer on the neighbouring crest of Gussandgole. To give an approximate idea of Kircher's literary activity it is only necessary to remark that during his sojourn in Rome, no less than forty-four folio volumes came from his pen. A full list of his writings is to be found in Sommervogel, "Bibli. Scriptorum S. J.". Besides the works already named, it is sufficient to mention here: "Magna sive de arte magnetica" (Rome, 1640); "Cologne, 1646); "Lingua egypitica restituta" (Rome, 1643); "Ars magna lucet et umbra" (Rome, 1644); "Musurgia universalis sive ars consone et dissoni" (Rome, 1650); "Itinerarium extaticum s. officium secularis" (Rome, 1650); "Iter extaticum secundum, mundi subterranei prodromus" (Rome, 1657); "Obe- liscus Pamphilii" (Rome, 1650).

KISALUDY

Kisaludy, a parish, also a royal and parliamentary burgh and chief or county town of Orkney, in the north of Scotland (the name is Scandinavian, "Kirkju- varg", i.e., "church-bay"). The original church was dedicated to St. Olaf (died 1030), and the lands of the parish are still called St. Olas. The importance of Kisaludy is due, first, to its having long been the residence of the Norse earls of Orkney, who, while nominally under the Kings of Norway, were practically independent; and, second, from its having become the seat of the bishops of Orkney. Magnus, Earl of Orkney, was treacherously killed by his cousin Haco about 1115; and his nephew Ronald undertook, if he recovered possession of the islands from Paul, Haco's son, to build a stone minster at Kisaludy in memory of his uncle Magnus, whose sanctity was said to be attested by miracles soon after his death. Ronald eventually became sole ruler of Orkney, and St. Magnus's church was begun in 1137, and was constituted the cathedral of the See of Orkney, which had been founded in 1102 (as a suffragan of Trondheim, in Norway), the bishop's seat having been originally at Birsay.

The cathedral was not completed by the founder, but additions were made by successive bishops of Orkney, this fact accounting for the great variety of architecture which it presents. It is one of the two ancient Scottish cathedrals (the other being Glasgow) which have been preserved entire to the present day; and, though not of any great size, remains, both within and without, one of the most striking and impressive churches in the kingdom. Its total length (outside) is 234 feet, width of transept 101 feet, height of tower 133 feet. The tall steeples surmounting the tower was struck by lightning in 1671. The three bells in the tower are all of pre-Reformation date, though one was recast in 1682. The cathedral escaped destruction in the sixteenth century, owing to the zealous efforts of the bishop; but it fell into decay in succeeding centuries, there being no funds to keep it in repair, until in 1805 and 1845 a certain amount of restoration was done by private benefactors and by the Government. Many ancient tombs of former bishops remain in the cathedral, the choir of which is now used as a Presbyterian place of worship. Only a fragment of the episcopal palace—a tower built by Bishop Reid in 1540—now remains, and the castle's castle has entirely disappeared.

KISALUDY

Kisaludy (Sáhók, Sáhók), a Sáhók, poet; b. at Sáhók, Hungary, 27 Sept. 1772; d. at Sáhók, 25 October 1844. He went to school at Raab and later studied philosophy and law at Freiburg. In 1792 he became a lay brother and engaged in the study of law, and having joined the army, was appointed to the Hungarian legions in Vienna. During his sojourn there he was especially attracted to the Hungarian writers living in Vienna at that time. In 1793 he was transferred to Italy, and remained at Milan during the revolution of 1848. After the return of Napoleon to 1796, Kisaludy was sent a prisoner of war to France, and confined in Provence, but was given his freedom the same year; went to Klagenfurt, and from there was transferred to the Wallis regi-
ment and sent to Würtemberg. He took part in the Rhine campaign in 1799, but sent in his resignation the same year. He married his early love, Roszi Ságedly, in 1800.

In 1802 Kisfaludy participated in the insurrection of the Hungarian nobles, as orderly officer to the Palatine, by whose command he later wrote an account of the uprising. He became a member of the Hungarian Academy in 1830, and was chosen an honorary member in 1835. He lost his wife in 1832, but later married again, shortly after which his second wife also died. The last years of his life were spent in his native town. Kisfaludy is particularly prominent as a lyric poet. His love-songs, which appeared under the name of "Liebesieder Himly's", the first part in 1801, the second in 1807, assured him an immense popularity among his associates. The songs revealed the influence of Roszi Ságedly's love, both before and after their marriage. The metrical rendering of his poems is that of the sonnet; they undeniably show the influence of his stay in Provence, and the impress of Petrarch's songs, and yet they are in no wise servile imitations of the latter. His "Märchen aus der Ungarischen Vorzeit" is the best of his later works; he also tried the field of drama, but with little success.

(2) Károly Kisfaludy, author, brother of the above; b. at Tét, 5 Feb., 1788; d. at Pesth, 21 Nov., 1830. He was the originator of the romantic tendency in the national Hungarian literature and comedy, also pioneer in the field of Hungarian novel-writing. His birth having cost his mother her life, he was brought up by his sister. He pursued his studies at Raab, but did not finish his studies as his elder brothers did, as his mother died while he was a boy. A successful military career, taking part in the wars with Italy. He resigned his commission in 1811, causing a breach with his father, which, in spite of repeated attempts at reconciliation, was never healed; nevertheless he was not disinherited. Even during his military career, Kisfaludy assiduously cultivated literature, and henceforth he devoted himself to it. When he could no longer expect any pecuniary assistance from home, he earned his living as an artist in Vienna and Italy and, later, on his return to Hungary. At the same time his literary energy was not dormant. Besides poetry, he wrote plays and dramas. In 1818-19 he experienced not a little dramatic success. About this time he published his first work in the field of Hungarian comedy, which likewise met with popular favour. He made up for his lack of early education by deep study, he became still more capable of his language, more modern, his productions little by little bearing evidence of this culture.

His style was rather romantic than classical, and not infrequently approached modern realism. His influence, especially on the public, became ever greater, so that in a certain sense he was the centre of the Hungarian literary life in Pesth. In 1821 he published the first volume of his annual "Aurora", the leading literary review of his time, which numbered the most prominent writers among its contributors. After Kölosey, he was the first to cultivate the ballad, he also wrote elegies, Italian verse, and national songs. Of his prose works, his humorous ones are better than the more serious, as his comedies are better than his dramas; the Hungarian national novel also owes its ascendancy to him. An early death snatched him away in the midst of his literary activity. The Kisfaludy Society, so named in honour of him, was established in 1836, and is devoted to the cultivation of good literature. The Hungarian national theatre also honors him by giving yearly one of his plays. He is not alone in his books, but still his influence on the writers of his day, whose leader and model he was, is in this way proving himself of immortal service as the regenerator of Hungarian literature. Many editions of his works were issued by Franz Toldy, and one in six volumes by Bánóczi (Budapest, 1839).

Toly, "Lives of Hungarian Poets" (Pesth, 1870), in Hungarian; Szentgyörgyi, "Lives and Works of Hungarian Writers" (Budapest, 1899), IV, 400-27, in Hungarian.

A. Aldády.

Kiss.—Four times in the Epistles of St. Paul we meet the injunction, used as a sort of formula of farewell, "Salute one another in a holy kiss" (ἐν φιλαμέναις δίψης), for which St. Peter (1 Pet., v, 14) substitutes "in a kiss of love" (ἐν φιλαμέναις διαφήμαι). It has been suggested by F. C. Conybeare (The Expositor, 3rd Ser., ix, 461, 1884) on the basis of Philo's "Questiones in Exodum" (ii, 78 and 118) that this was an imitation of a practice of the Jewish synagogues. The evidence adduced, however, is very slight. In any case it seems probable that in those very early days the custom of Christians so saluting each other was not necessarily confined to the time of the liturgy. Such salutations were no doubt used somewhat promiscuously even between those of opposite sexes in token of fraternal solicitude and charity (πιετας et caritas pignus, as St. Ambrose, "Hexaem.", VI, i, 68, points out), and the modesty and reserve which so many of the pre-Nicene Fathers inculcate when speaking of this matter must be held to have reference to other occasions than the kiss of peace in the liturgy. This is also implied by Tertullian, who speaks of the pagan husband's reluctance that his Christian wife should "meet one of the brethren with a kiss" (alculat fraudum ad oculum convenire, "Ad Pastor.," ii, 4). So far as the second interpretation is concerned, it was so interpreted that any synaxis of the faithful where there was reading of the Scriptures terminated in a salutem of this kind, and it is even possible that the appearance of the kiss in certain liturgies at the Mass of Catechumens is due to the same cause. In any case we have definite evidence that a kiss was on some occasions bestowed outside the actual liturgy. After baptism the newly initiated, whether infants or adults, were embraced first by the baptizer and then by the faithful who were present (see Cyprian, "Ad Fidum Episc.," Ep. ixi, 4, and Chrysostom, Hom. i, "De Mort. et Leg. Scrip."). The kiss of the Roman period and that in some of the later rituals of baptism is probably a survival of this practice.

Again a kiss was and still is given to the newly ordained by the bishop who ordains them. Similarly after the consecration of a bishop and, at a later date, after the coronation of a king, the personage so exalted, after he was enthroned, was at first kissed, while a kiss, no doubt suggested by the Scriptural example of the prodigal son, was enjoined in many of the rituals for the absolution of a penitent. Of the kiss solemnly exchanged between those newly betrothed something will be said under Μαντακος (q.v.), but we may note here that the kiss was customarily bestowed a last kiss, which then had a quasi-liturgical character, upon the dying or the dead. The prohibition against kissing the dead which was issued by the
Counsel of Auxerre, a.d. 578, almost certainly had some relation to the abuse at that time prevalent of placing the Blessed Sacrament in the mouth of the dead or burying it with them. It may be added that throughout the Middle Ages an almost religious solemnity found expression in the public sumptuousness of a kiss, a token of amity. Remarkable examples of this may be found in the history of the quarrels of Henry II with St. Thomas of Canterbury, and of Richard Cœur de Lion with St. Hugh of Lincoln. In the latter case the bishop is recorded to have taken hold of Richard by his mantle and kissed him with a kiss which overcome by such persistence, recovered his good humour and bestowed on the saint the salute which was his due.

Kiss of Peace.—It is not easy to determine the precise link between the "holy kiss" and the liturgical "kiss of peace", known in Greek from an early date as εἰκών (i.e. pax, or peace). This latter may be quite primitive, for it meets us first in the description of the liturgy given by St. Justin Martyr (Apol., I, 65), who writes: "When we have completed the prayers we salute one another with a kiss (ἀλληλον φιλαμενω δευτερων υπερεικεν τω εικων) wherever there is bread and wine the bishop and the bishop's cup is placed. This passage clearly shows that in the middle of the second century the usage already obtained—a usage now claimed as distinctive of the liturgies other than Roman—of exchanging the kiss of peace at the beginning of what we call the Offertory. The language of many Oriental Fathers and of certain contemporary canons further confirms this conclusion as to the primitive position of the Pax. Thus St. Cyril of Jerusalem (Cat. Myst., v, 3) speaking of the time between the washing of the celebrant's hands and the Sursum Corda which introduces the Anaphora, or Preface, says, "Then the deacon cries out aloud: 'Embrace ye one another and let us salute each other. . . . The kiss is the sign that our souls are united and that we banish all remembrance of injury'." Many other Fathers (e.g. Origen, Pseudo-Dionysius, and also St. John Chrysostom, 'De Comp. Cordis', i, 3) speak in a similar tone and use language which implies that the Pax preceded the oblation of the elements. Even the so-called "Canons of Hippolytus", referred by some to Rome in the third century, though Funk ascribes them to a much later date, imply that the kiss was given at the Offertory. The same was undoubtedly the case in the Monarabic and the Gallican liturgies. Later, after the kiss of peace was united to the Commonion, and it must have followed shortly after the Pater Noster as it does at present. Thus Pope Innocent I in his letter to Decentius (a.p. 416) blames the practice of those who give the Pax before the Consecration and urges that it was meant as a token that "the people give their assent to all things already performed in the mysteries".

Another clear testimony of about the same date occurs in a sermon attributed to St. Augustine, but probably written by St. Caesarius of Aries (P. L. XXXVIII, 1101): "After this [the Lord's prayer], Pax vovera Vittu fnde (And with thy holy kiss pe desceoun) conveys the salute to the sub-deacon, and the sub-deacon to the canons or clergy in the stalls. The Western Church, however, has not been the only one to discover that the ceremony of the Pax could not be decorously maintained when manners had grown less austere. Among the Greeks there is some early reference to this. Just before the Creed, which itself precedes the Anaphora, the celebrant says, "Peace be to all", and then he kisses the gifts (veiled), while at the same time the deacon kisses his own oration, or stole. In the Syrian rites, the deacon touches the priest's hands, then moves his own hands down his face to his breast. In the later Byzantine liturgy, the deacon then kisses the gifts, and before he finally leaves the altar, the deacon kisses. The sweetness of peace is, in the Western Church, the result of a long tradition. It seems to be pretty generally held that this position before the Offertory was the primitive position of the liturgical kiss of peace even at Rome. Dom Cabrol and others incline to the view that the kiss formed the natural sequel to the commemoration of the living and of the dead, and that all these three elements, which originally belong to the Offertory, were deliberately transferred elsewhere in the course of some revision of the Roman Liturgy. The commemoration of the living and of the dead being inserted separately in the great consecratory prayer, or Canon of the Mass, while the Pax was made to follow the Pater Noster, having been attracted to that position by the words "Forgive us our trespasses," etc. (Cabrol, "Origines Liturgiques," Paris, 1906, pp. 360-361). However, the rival theory, that there were originally two occasions when the kiss of peace was given, one before the Offertory and the other before the Communion, does not lack probability; for St. John Chrysostom, in the Prayer Book of Serapion, and Anastasius Sinaita seem all to know of some such rite before Communion, and the practice of kissing the bishop's hand before receiving the Blessed Sacrament (see Card. Rampaolla, "S. Melania giunore", note 41) may possibly be connected with it. According to this second theory, the bishop would kiss the Pater, the Roman and the Oriental liturgies omitted one of these salutations, the Oriental retaining that at the Offertory, the Roman that at the Communion. In any case it is certain that in the early Middle Ages the kiss of peace was most intimately associated in idea with the reception of Communion (see Pseudo-Legrand, "Confesionalia", xxxv, in Wasserschleben, "Bussordnungen", p. 315), and it seems probable that the omission of the Pax in Masses for the Dead was due to the fact that Communion was not distributed to the faithful at such Masses.

From a very early date also, the abuses to which this form of salutation might lead were very carefully guarded against. Both in the East and the West women and men were separated in the assemblies of the faithful, and the kiss of peace was given only by women to women and by men to men. Then in about the twelfth or thirteenth century the use of the instrumentum pacti, or osculatorium, known in English as the "pax-board" or "pax-brede", was gradually introduced. This was a little plaque of metal, ivory, or wood, generally decorated with some pious carving and provided with a handle, which was first brought to the altar for the celebrant to kiss at the proper place after the consecration; it was then placed upon the altar, and the celebrant conducted his offertory in turn at the altar rails. But even this practice in course of time died out, and at the present day the Pax is only given at High Mass, and is hardly anywhere communicated to the congregation. The celebrant kisses the corporal spread upon the altar (he used formerly in many local rites to kiss the sacred Host itself) and then, placing his hands upon the arms of the deacon, he presents his left cheek to the deacon's left cheek but without actually touching it. At the same time he pronounces the words Pax tecum (Peace be with thee); to which the deacon replies, Et cum Spiritu tuo (And with thy holy kiss pe desceoun) conveys the salute to the sub-deacon, and the sub-deacon to the canons or clergy in the stalls. The Western Church, however, has not been the only one to discover that the ceremony of the Pax could not be decorously maintained when manners had grown less austere. Among the Greeks there is some early reference to this. Just before the Creed, which itself precedes the Anaphora, the celebrant says, "Peace be to all", and then he kisses the gifts (veiled), while at the same time the deacon kisses his own oration, or stole. In the Syrian rites, the deacon touches the priest's hands, then moves his own hands down his face to his breast. In the later Byzantine liturgy, the deacon then kisses the gifts, and before he finally leaves the altar, the deacon kisses. The sweetness of peace is, in the Western Church, the result of a long tradition. It seems to be pretty generally held that this position before the
still passed among the people from lip to lip, but the truth seems to be that each one merely bows to his neighbour and touches his hand (see Brightman, ‘Liturgies Eastern and Western’, 1896, p. 655).

It is clear that in the earliest times a kiss was not only a token of love, but also under certain circumstances a symbol of profound respect. For example, the son of Simach (Ecclus., xxx. 5) describes how he would borrowers, when they wish to ingratiate themselves, "kiss the hands of the lender," to show how they esteemed the vowe". It is in accordance with this symbolism, so universally understood and practised, that the Church enjoins the kissing of many holy objects, e.g. relics, the book of the Gospels, the cross, blessed palms, candles, the hands of the clergy, and nearly all the utensils and vestments. In the Latin liturgy, the kiss at the altar is repeatedly kissed by the celebrant in the course of the Mass, and this practice is of very ancient date. The earliest of the Ordines Romani mentions it twice, but only twice: first, when the bishop ascends to the altar at the beginning, and secondly, at the Ordinary, when he comes to kiss the altar. The kiss at the throne. Innocent III speaks of the altar being kissed three times, but in the days of Durandus nine such salutations were in use, as at present. By a symbolism prevalent from a very early period the altar was regarded as typical of Christ, the God-Man, abiding permanently with His Church in the Sacrament of the Altar. The conception is preserved, for example, in the address now made to the candidate in the Ordination of a subdeacon. The appropriateness of kissing the altar before the salutation Dominus vobiscum need not be insisted upon: it clearly implies that the greeting comes, not from the priest only, but from Christ, the head and corner-stone, to the faithful who are the members of His Church. On the other hand the prayer said by the priest, on first ascending to the altar, indicates that this kiss has also special reference to the relics therein enshrined.

Kissing of the Feet.—The veneration shown in the kissing of a person's hand or the hem of his garment is accentuated in the kissing of the feet. This is probably implied by the phrase of Isaiah (xxlv. 23): “Kings...shall lick up the dust of Thy feet.” Under the influence, no doubt, of the ceremonial of kingship, as manifested in the cultus of the Roman emperors, the kissing of the feet prevailed at an early date among the usages of the papal court (see Lattey, “Ancient King-Worship”, Lond., 1909, C. T. S. pamphlet). We read of it in the first “Ordo Romanus” belonging to the seventh century, but even earlier than this the Liber Pontificalis attests that the pope “proffered respect to Pope John I (523-26), as later on Justinian II also did to Pope Constantine. At the election of Leo IV (847) the custom of so kissing the pope's foot was spoken of as an anachronism. It is not, therefore, wonderful that a practice supported by so early a tradition should still be observed even at our days, and give the solemn to the Mass by the Latin and Greek subdeacons, and quasi-liturgetically in the “adoration” of the pope by the cardinals after his election. It is also the normal salutation which papal etiquette prescribes for those of the faithful who are presented to the pope in a private audience. In his De altaris mysterio (VI, 9), Innocent III explains that the ceremony indicates “the very great reverence due to the Supreme Pontiff as the Vicar of Him whose feet were kissed by the woman who was a sinner”.

Klaczko, Julian, Polish author, b. at Vilna, 6 November, 1825, of Jewish parents; d. at Cracow, 26 November, 1906. After taking the doctor's degree in 1847 at the University of Königsberg, he went to Heidelberg to continue his studies under Gervinus, who appointed him a collaborator on the “Deutsche Zeitung”, a periodical for Russian and Polish affairs. In 1848 he spent some time in the Grand Duchy of Posen and published at Berlin his first political pamphlet, “Die deutschen Hegemonen”, an open letter to Gervinus against the incorporation of Posen in the German Confederation. About this time he resolved to become a Christian, but deferred his baptism for a time, owing to financial reverses. Klaczko was left without means, and in 1850 went to Paris, where he supported himself by his literary labours. His articles written in French, and published chiefly in the “Revue de Paris”, were so brilliant as to win speedy fame for the young author. He was allowed to visit England, and from 1857, free to enter the Church, and he was accordingly baptised. From 1857 to 1860, with the collaboration of Valerian Kalinka, he published a monthly, “Wiadomosci Polskie” (Polish News), the general tone of which was opposed to revolutionary impulses and tended to uplift the Polish mind. As a literary and aesthetic standpoint, Klaczko's articles were the most effective and most brilliant that had ever appeared in the Polish language. The periodical was put under the ban in Russian Poland and Galicia, and in 1860 also in Prussia, after which it had to be discontinued on account of a lack of subscribers.

In 1862 there appeared in the “Revue Des Deux Mondes” Klaczko's “Le poete anonyme”, the first adequate appreciation of Sigmund Krasinski, and so excellently done that it became the basis of all later accounts of the poet. This paper assured Klaczko's literary reputation among the French. Soon afterwards occurred the unfortunate uprising of 1863. While any Polish organisation or activity outside of Poland itself was now impossible, Klaczko did not forget the cause of his country. From official diplomatic sources he compiled information on all the details of the Danish and Polish questions, and in 1868 published his “Etudes et notes” (London), a veiled criticism of the policy of the Powers, to the disadvantage of all save Russia and Prussia. The “Etudes” caused a great sensation, which was increased by the author's subsequent work “Les préliminaires de Sadowa”, in which he shows how Austria was drawn into a war with Russia. Klaczko's writings bore such strong testimony to his political talents that he was appointed by Count Benst on the Ministry of Foreign Affairs, holding in addition a seat in the Galician Diet at Lemberg, and in the Austrian Reichsrat. Having made a speech in the Diet which was out of harmony with Austria's policy of neutrality during the war of 1870, he resigned his public offices and returned to Paris penniless, to devote himself with renewed vigour to the artistic and literary pursuits of his youth. After several years of work he published “Causeries florentines”, a study of Dante in the form of a dialogue, containing in one volume the substance of all that scholars and critics had said on the subject. Even before this he had produced, in 1875, his “Deux chanceliers”, a brilliant portrayal of the characters and policies of Princes Bismarck and Gortschakoff. Finally, he planned an extensive work under the title of “La peinture et la Renaissance” and was interrupted by death, produced on the papacy by the worldly spirit of some pontiffs, without in the least derogating from the greatness of any epoch. Of the three volumes “Julius II”, “Leo X”, and “Clement VII and the Sack of

Kleß, Heinrich, German theologian and exegete, b. at Münstermaifeld, in the Rhine Province, 20 April, 1800; d. at Munich, 28 July, 1840. At the age of seventeen he entered the seminary of Mainz, where he distinguished himself by his piety, his talent, and that unremitting application to study which characterized him throughout his later life. In 1824, the year after his ordination, he was appointed to the professorship of exegesis and ecclesiastical history in the same seminary, and in the following year also to that of philosophy. In 1828 he obtained the Doctorate of Theology from the University of Würzburg, after presenting the thesis "Tentamen theologico-historicum de chiliasmum primorum seculum". In 1829 the Government of Baden tendered him the chair of exegesis at Freiburg, vacated by Hug, and at the same time offered him a professorship either at Breslau or Bonn. He chose Bonn; but his position there was a difficult one. Hermes and Hermesianism reigned supreme, and the presence of Kleß, an exponent of sound Catholic principles, was viewed with unconcealed disfavour by his Rationalistic colleagues. His tact and genial manners, his attractive lectures and learned works, however, gradually won him influence. After a ten years' stay at Bonn, during which he taught dogmatics and moral theology, the history of dogma and exegesis, Kleß was induced by the conflict between Archbishop von Droste-Vischersing of Cologne and the Hermesian professors to accept the call to the University of Munich as successor to Möhler in the chair of dogmatic theology and exegesis, but a premature death carried him off within a year. Kleß's intense devotion to work enabled him to publish a number of works within a comparatively short period. "Die Religion", a work which shows his close acquaintance with the Fathers, appeared at Frankfurt in 1827. Then followed in rapid succession: "Commentar über das Evangelium nach Johannes" (Mainz, 1830); "Commentar über den Römerbrief" (Mainz, 1830); "Kurzes System der katholischen Dogmatik" (Bonn, 1831); "Encyclopädie der Theologie" (Mainz, 1832); "Aufruf an die Christen" (Mainz, 1833); "Die Ehe, dogmatisch-archäologische Abhandlung" (Mainz, 1833; 2nd ed., 1835). His most important work is the "Katholische Dogmatik" in three volumes, which went through four editions (Mainz, 1834-5, 1840, 1844, and 1861), and next to the "Lehrbuch der Dogmengeschichte" in two volumes (Mainz, 1837-8). A posthumous work, "Grundriss der Ethik", was edited by Himloehn (Mainz, 1843, 2nd ed., 1847). Although Kleß was animated by a thoroughly Catholic spirit, and by his "Katholische Dogmatik" helped to promote sounder Catholic ideas among the German clergy, they largely infected with Liberalism, some of his views, as, for instance, on the origin of the human soul and on the fate of children who die without baptism, are open to criticism.

Kleßner, Eugène Louis. See Mtsone, Diocese of.

Kleß, Melchior, cardinal and Austrian statesman, b. at Vienna, 10 February, 1852; d. at Wiener-Neustadt, 18 September, 1860. While France was governed by Cardinal Richelieu, Austria also had her cardinal minister of State; but whereas the former had but one journées des dupes, the latter lamented his downfall for years. Kleß's parents were Protestants, and his father was a baker. He studied philosophy at the University of Vienna, and was with his parents brought into the fold of the Church by the court chaplain, Father Georg Pender, S.J. He attained the Doctorate of Theology in 1577, when he was assigned a canonry, and, even while in minor orders, he preached and held conferences at Korneuburg and in the vicinity, making many conversions. In 1579 he became doctor of philosophy and provost of St. Stephen's at Vienna, which dignity he carried with him when he entered the University, and was finally ordained to the priesthood. As early as the following year he was appointed councilor of the Bishop of Passau for Lower Austria. Rudolf II, impressed by the vigour and success of his campaign against Protestantism, entrusted him with the work of the counter-Reformation, which became his life-work. He brought back into the fold the cities of Baden, Krems, and Stein, though not without great difficulty, nor indeed without actual risk of his life. In 1585 he was made imperial councilor by Rudolf II, who three years later appointed him court chaplain and administrator of the Diocese of Wiener-Neustadt. It took him but little to restore the Catholic rule in this thoroughly disorganized bishopric. He was compelled in doing so to be constantly on guard against the monastic council, which, in a memorial on the subject, he calls, "the cause of all evil, the champion of godless prelates and priests against their bishop, a parasite." In 1598 Kleß was named Bishop of the Diocese of Vienna, which was spiritually and materially in a state of degradation. He was not consecrated until 1614, and received the purple from Paul V in 1618. In 1611 Matthias placed Kleß at the head of his privy council. As such he held full sway in the Government. He himself admits that he "spoke, wrote, and negotiated" for the emperor. It was the question of the succession to the throne which caused his downfall. Kleß had every reason to fear that his influence would wane, if Archduke Ferdinand were once formally declared to be the heir apparent. For the Bohemians, having thrown their governor out of the window of the palace at Prague for the second time, broke out into open rebellion, and Kleß could not be induced to take energetic measures against them, the Archdukes Max Emanuel and Philipp and Ferdinand of Austria. On 20 July, 1618, he was seized in an antechamber of the undecided emperor, and had him conveyed to the fortress of Ambra. A few days later he was brought to the castle of Innsbruck, whence he was transferred after a year to the monastery of Georgenberg. In November, 1622, the Castle of Sant' Angelo in Rome became his place of confinement. He was granted his freedom by the emperor in June of the following year, but was to remain in Rome. He lived to enjoy the satisfaction of seeing himself solemnly brought back to Vienna on 25 January, 1628, and reinstated as bishop. He decreed that the Feast of the Immaculate Conception on 8 December be henceforth observed in his dioceses "in the same manner as Sundays and other prescribed holy days", and in spite of the nuncio's protestation, he strove to maintain the peculiarly Viennese custom whereby Holy Communion was distributed on Good Friday. His heart reproaches him, as is shown by the high altar of the cathedral church, where, while his body rests in the cathedral of St. Stephen's,
KLEUTGEN, Josef Wilhelm Karl, German theologian and philosopher, b. at Dortmund, Westphalia, 9 April 1811; d. at St. Anton near Kaltern, Tyrol, 13 Jan., 1883. He began his studies with the intention of becoming a priest, but, owing to the Protestant atmosphere of the school which he attended, his zeal for religion was weakened. From 28 April, 1831, to 1 Jan., 1831, he studied philosophy at the University of Munich. He was intensely interested in Plato's philosophy and the Greek tragic poets. Though he clung to the Faith, it ceased to be the ruling principle of his life, and he fell into a deep melancholy. In this state he was to enter upon a secular career, when he suddenly received what he always regarded as a special illumination from heaven. Still he was not at rest. During the preceding years he had imbted certain ideas from Lessing's and Herder's writings, which he could not reconcile with the Christian Faith. After several days of personal conflict he betook himself to prayer, and to his astonishment many of his difficulties vanished at once; the remainder disappeared gradually. At Easter, 1832, he entered the theological academy of Münster, and after two terms went to the seminary at Paderborn, where he was ordained sub-deacon on 22 Feb., 1834. On 28 April he entered the Society of Jesus at Brig, Switzerland, and, to avoid any trouble with the German Government in the matter of military service, he became a naturalized citizen in one of the Swiss cantons, and changed his name to "Petters". After his ordination to the priesthood in 1837 he was professor of ethics in Fribourg, Switzerland, for two years; then taught rhetoric in Brig from 1840 till 1843. In 1843 he was appointed professor of sacred eloquence in the German College, Rome. During his residence in Rome and the vicinity (1843-74), besides pastoral work and the composition of his principal writings, he was substitute to the secretary of the General of the Jesuits (1843-56), secretary (1856-62), consultant of the Congregation of the Index, and collaborator in the preparation of the Constitution "De fide Catholicis" of the Vatican Council. He composed the first draft of the Encyclical "Etiam Patria Scholasticismi" (1843-4). He played a leading part in the revival of Scholastic philosophy and theology, and so thorough was his mastery of the teachings of St. Thomas Aquinas that he was called Thomas redivivus (Thomas returned to life). With the object of combating the doctrines of Hermes, Hörner, and Günther, he composed his "Theologie der Vorzeit" and "Philosophie der Vorzeit", works which upon their appearance were pronounced in many quarters to be epoch-making. When he died, Leo XII said of him: "Erat princeps philosophorum" (he was the prince of philosophers). Some years before his death he was made a cardinal priest and the foremost extraordinary to the Benedittest Convent of St. Ambrose in Rome. The nuns of this convent honoured as a saint one of their sisters who had died fifty years before. This was reported to the Holy Office, and everyone concerned was severely punished; Kleutgen and the ordinary confessor (both men of exceptional holiness) were suspended, because of lack of prudence in directing the nuns, for awhile even from saying Mass.

Kleutgen consequently left Rome and went to the secluded shrine of Our Lady in Calcro, where he wrote the greater part of his "Theologie der Vorzeit" and "Philosophie der Vorzeit". At the urgent request of several bishops, especially Archbishop Stein, Apostolic Vicar of Calcutta, his superior general recalled him to Rome to place his talents and learning at the disposal of the council, and Pius IX removed all ecclesiastical censures as soon as he became acquainted with the works which Kleutgen had written. In 1879 the Old Catholic journal, Die Zeit, reported that Kleutgen had been condemned by the Roman Inquisition to an imprisonment of six years on account of complicity in the poisoning of a Princess of Hohenlohe; but, on 7 March, Juvelen Pelami, Notary of the Inquisition, testified that Kleutgen had never been summoned before the Holy Office, much less been given such a charge, and consequently had not been punished by it. Possessed of high gifts and vast erudition, and, in consequence, very much in the public eye, Kleutgen was also a model religious and a man of austere simplicity. He was very fond of the poor, and they in turn almost wholly adored him. While he preached, his plain, straightforward, simple language had an appeal even for the intelligence of the most illiterate; and when in conversation with the learned, who often came to consult him, his flow of speech was as free, copious, and unembarrassed as though he were relating from a book.

Kleutgen's principal works are: "Die alten und die neuen Schulen" (Mains, 1846; Münster, 1869); "Ueber den Glauben an das Wunderbare" (Münster, 1848); "Ars dieendi" (Rome, 1847; Turin, 1903); "Die Theologie der Vorzeit" (3 vols., Münster, 1853-65; 6 vols., 1867-74); "Lehrbuch der Dienerinnen Gottes" (Münster, 1869); "Die Philosophie der Vorzeit" (2 vols., Münster, 1860-3; Innsbruck, 1878), translated into French and Italian; "Die Verurteilung des Ontologismus" (Münster, 1868), translated into French and Italian; "Zu meiner Rechtfertigung" (Münster, 1868); "Vom intellektual und dem angeborenen Ideen"; "Zur Lehre vom Glauben" (Münster, 1875); "Die Ideale und ihre wahre Verwirklichung" (Frankfurt, 1868); "Ueber die Wünsche, Befruchtungen und Hofungen in Betreff der bevorstehenden Kirchenversammlung" (Münster, 1868); "Briefe aus Rom" (Münster, 1868); "Freundschaften" (Regensburg, 1872; 2 vols., 1880-5); "Die oberste Lehrgewalt des römischen Bischofs" (Trier, 1870); "De ipso Deo" (Ratisbon, 1881); "Das Evangelium des heiligen Matthäus" (Freiburg, 1882).

KLINKOWSTRÖM, Friedrich August von, artist, author, and teacher, b. at Ludwigsburg in Swedish Pomerania on 31 August, 1778; d. at Vienna, 4 April, 1853. This famous convert came from an old Pomeranian noble family. At the age of sixteen, in deference to the wishes of his father, a lieutenant-colonel in the Swedish army, Friedrich adopted the military calling, but only remained in the service from 1793 to 1802. After this he was allowed to follow his own inclination and become a painter. To perfect himself in this studies, he went to the famous Dresden Gallery. His genius for the whole came to him the mind showed a strong leaning towards the Catholic Church. After four years of successful study he was called home and obliged to remain there quietly for two years, owing to the gloomy political condition of the country after the battle of Jena. Then a great longing seized him for "Lei, tho Un.Die". He therefore first studied at Paris, where the victorious Napoleon had amassed the richest art treasures from all lands. His stay in Paris lasted nearly two years, and terminated happily with his engagement. Finally in 1810 he started for Rome. But the quickly formed friendship with Thorvaldsen, Rauch, Overbeck, and other artists, urging him to leave Rome, caused Klinkowström to be obliged to look about for an assured position. This led him to Venice to take a place as instructor, and his marriage followed in 1812.
But the grave political situation after the battle of Leipzig led the quiet artist once again to join the army. He displayed great activity in forming the volunteer corps in Leipzig, Dresden, and Aachen. After the Treaty of Paris, he returned to Vienna, where he found that during his absence his wife had been received into the Catholic Church by Father Klemens Hofbauer. When he was told of this, he exclaimed: "So Louise has become a Catholic before me." A few months after this he followed the example of his "dear Louise" and converted to the quiet years of painting and literary work. He devoted himself particularly to children's books, for which he provided designs and illustrations, gradually working up to his true calling, the instruction of youth. There had been a plan under discussion for some time in Vienna to found a school for the sons of the higher nobility. But the difficulty was to find the right man, one qualified to undertake the work and carry it out within the provisions of the Austrian School Laws. Such a one was found in Klinkowström. The new foundation was opened in 1818, and enjoyed the personal favour of the emperor; the fact that the empress also showed an active interest and even supervised personally, naturally lent assistance to the school. The founder devoted himself unsparingly to its direction, maintenance, and advancement, and his efforts were eminently successful. Contemporary opinion is unanimous in declaring that for excellence and importance Klinkowström's school took precedence over all other educational institutions of the day. His untiring zeal used up all his strength, so that, owing to ill-health and increasing suffering, he was obliged in 1834, after sixteen years of personal guidance, to give over the school to others. He died six months after this, his wife having died before him, in 1821. Both his oldest and youngest sons, Joseph and Max, entered the Jesuit Order, and became renowned preachers. The third son, Klemens, the head of the house in Austria, has acquired as Imperial and Royal Archivist a literary fame, while to the fourth son, Alphons, we are indebted for an excellent biography of his father. The only daughter joined the Order of Salesians after her father's death.

VON KLINKOWSTRÖM, Friedrich August von Klinkowström und seine Nachkommen (Vienna, 1877; Historisch-politische Blätter, lxxxi, 40 sqq.; RESERNTAL. Konventualbilder.

(2) JOSEPH VON KLINKOWSTRÖM, eldest son of the preceding, b. 30 August, 1813; d. 30 March, 1876. He received his early education at his father's school, and in 1833 entered the Jesuit novitiate at Graz, not completing his novitiate and the study of rhetoric and philosophy, he taught for three years in the lower forms of the gymnasium. He made his theology in Rome, where he was ordained priest in 1846. On his return to Graz he taught rhetoric, and subsequently, during the confusion caused by the revolution of 1848, held the position of tutor in a noble Westphalian family. When, two years later, the great popular missionary movement began in Germany, Father Klinkowström was allotted to the German missionaries, and proved himself to be unusually efficient. He continued his studies in 1852, and his sermons caused so great a sensation in Vienna that the emperor expressed a desire to see him. The result of the interview was the establishment of a Jesuit community in Vienna. Here from 1859 to 1872, in which year his strength began to fail, Klinkowström continued his preaching activity, his great gift of eloquence and his deep fervour making a great impression, especially on educated laymen.

BELOW, 100 Lebensbilder aus der österr.-ungar. Provinz der Gesellschaft Jesu (Vienna, 1902).

(3) MAX VON KLINKOWSTRÖM, youngest son of Friedrich, b. 21 October, 1819; d. 28 March, 1896. Until his ordination Father Max was educated on the same general lines as his brother Joseph. From that time, however, the young scholastic led a more active life. Even while making his theology in Innsbruck he took part, under the direction of the celebrated Francis X. Weninger, in the popular missions in Tyrol and Vorarlberg. During his returns he was appointed curate-in-charge at Kirchberg, to him an unwelcome change. This was followed by a still sadder experience, when he was chosen to accompany a band of Catholic emigrants to Australia. This expedition resulted for him only in suffering and privations. After two years he was allowed to resume his chosen work of popular missions. He was a regular and highly esteemed preacher on Sundays and holy days, now at Vienna and Prague, and now at Innsbruck and Presburg, from 1857 to 1887, save for two short interruptions—in 1859, when he served as chaplain in Northern Italy, and in 1871, when he escorted a band of pilgrims to the Golden Jubilee of Pius IX. His last office, which he occupied from 1887 to 1891, was that of superior and preacher at the cathedral of Laibach. Then, after a slight apoplectic stroke, his health failed, and he spent the remainder of his life at Kalksburg near Vienna.

BELOW, 100 Lebensbilder aus der österr.-ungar. Provinz der Gesellschaft Jesu (Vienna, 1902).
interest in the problems of the day, and soon became one of the most important leaders of the greater German party in Northern Germany, the Austrian Ambassadors in St Petersburg, through his efforts the year 1865 the King of Hanover created a commission for the care of the state archives and made Kloppe reporter with the title of archivist. He went over the state archives, instituting important innovations in the manner of preserving them, which have been also adopted in the Prussian archives. During the year 1866 he spent his time at headquarters near the king, in whose services he made two dangerous journeys to Frankfurt and Bavaria. After the capitulation of Langensalza he went to Vienna, where he drew up a petition for peace for his sovereign to King William of Prussia. He now settled permanently in Vienna, and entered a faithful and fruitful life as well as a devoted admirer of George of Hanover, as shown by his book, "King George V. Every inch a King" (Hanover, 1878). In 1873 he became a convert to Catholicism. In consequence of his historical investigations he had for years convinced of the truth of the Catholic Church, giving expression to this view in his three works, "Studien über Katholizismus, Protestantismus und Gewissensfreiheit" (Schaffhausen, 1857), "Wird Deutschland wieder Katholisch werden?" (Schaffhausen, 1859), and "Der evangelische Oberkirchenrat in Berlin und das Konzil von Worms" (1869).

His numerous historical writings can be divided into three groups. The first deal with German and Prussian history, the most important works being the following: "Das Restitutionssedikt im nordwestlichen Deutschland" (Göttingen, 1860); "Der König Friedrich II. von Preußen und die deutsche Nation" (Schaffhausen, 1860-7); "Tilly im dreissigjährigen Kriege" (2 vols., Stuttgart, 1861), enlarged edition under the title: "Der dreissigjährige Krieg bis zum Tode Gustav Adolfs" (Paderborn, 1891); "Die preussische Politik des Friedericianismus nach Friedrich II." (Schaffhausen, 1867); "Rückblick auf die preussische Annexion des Königreichs Hannover" (Munich, 1868). The work on Tilly found great favour among Catholics, and the Emperor of Austria, as well as the Kings of Bavaria, Belgium, and Hanover, almost simultaneously sent him their gold medals for services rendered. On the other hand, his work on Frederick II evoked sharp criticism from Prussian circles, and brought forth many replies, most of which he answered convincingly, as in his "Klein- deutsche Geschichtebaumeister" (Freiburg, 1863).

The second group of writings are on the philosopher Leibniz. In 1861 Kloppe made a proposal to the King of Hanover to publish Leibniz's works. For this purpose he thoroughly examined his entire literary remains, and subsequently published: "Die Werke von Leibniz gemäß seinem handschriftlichen Nachlass in der Bibliothek zu Hannover. Erste Reihe: Historisch-politischer und staatswissenschaftlicher Schriften" (11 vols., Hanover, 1894-84). The completion of this work, however, was made impossible, as Bismarck forbade him the use of the Hanoverian library. The French Academy of Sciences in a letter to Kloppe lamented this interdiction on behalf of science. Later Kloppe gave himself up to the exhaustive study of the history of the Stuarts. He had taken up this study with great zeal when he was in England in 1859, and in 1870 instituted further investigations of the English archives. The most important work that we have to thank him for on this subject, and one which is perhaps his masterpiece, is: "Der Fall der Verfassung und der Staat in den Staaten der Hanover in Gross-Britannien und Irland im Zusammenhang der europäischen Angelegenheiten von 1660-1714" (14 vols., Vienna, 1875-88).

The interest he took in the history of Austria, his second home, is shown in his two works: "Das Jahr 1833 und der folgende grosse Türkcnkrieg bis zum Frieden von Carlowitz, 1699" (Graz, 1882), and "Correspondenz epistolare tra Leopoldo I imperatore di Austria e P. Marco d'Aviano, Sappienza" (Graz, 1886), which was dedicated to Pope Leo XIII on the jubilee to celebrate his fiftieth year as a priest. We are indebted to Kloppe above all for the new lines of historical research which he pointed out to Catholics, his works proving incontrovertibly in defiance of all attacks that the study of original documents based on the facts carried on with an incorruptible love of truth, will expose the errors of existing history.

Compare the biography written by his son in Biographisches Jahrbuch, VIII (Berlin, 1900), 17-23.

Patricius Schlegler.

Knab, Joseph, master of religious plastic art, b. at Ploieşti, Tyrol, in 1819; d. at Munich in 1881. He was the son of poor parents, and was first apprenticed to Renn, a wood-carver at Innsbruck, after which he studied ancient German wood-carving at Munich under Entres. Later he worked in the studio of Sickinger, and became, in 1839, a professor at the polytechnical school of the "Verein für Hebung der Oberösterreichischen Künste," and in 1859 he entered the art institute of Mayer. The chair of ecclesiastical sculpture at the Academy of Munich was entrusted to him (1863) in recognition of his principal work, the "Coronation of The Virgin" in the Frauenkirche. The figure of Mary, which is more than life size, stands at the middle of the high-altar, with six angels doing her reverence. The crown is laid on her head by the Heavenly Father and His Divine Son, between whom hovers the Holy Ghost; forms of saints and angels appear in the beautiful framework. The composition and execution, the harmonious grouping and draping of the figures, show a masterly technique. Knab also studied antique art as well as nature. His manner was original. From the Middle Ages he seems to have derived only religious inspiration; the above-mentioned work breathes genuine piety. His other works, chiefly in wood, are characterized by a strong and deeply religious feeling, not at all sentimental; the softness and delicacy of his colouring are perhaps in many cases excessive. Knab is one of the Roman- tics, and frequently recalls Overbeck and Führich. Like these he is a lover of the German Middle Ages and of what appeals to the German people, into whose life and character his travels through Tyrol, Swabia, and the Rhine country gave him a deep insight. His work at the Mayer Institute, where he not only produced numerous drawings and sketches, but also trained capable scholars, was of very important practical benefit for the diffusion of a cultivated taste in religious art. Most of his works are in Bavaria (Munich, Haid- hausen, Passau, Eichstätt, Velden), but there are also some in Stuttgart, Merkemheim, and in other places. The subjects are: "Christ and the Apostles"; "Christ on the Cross"; several single statues of the Madonna (one for Lord Acton), the Madonna in a group, St. Anne (much admired at the Munich Exhibition of 1873 on account of its artistic merit) and St. Afra (Augsburg) was the first of the artist's works to attract attention. He left a son, Karl (d. 15 June, 1904), who studied painting in the school of Piloty and became a successful landscape artist.

Kneipp, Sebastian, Bavarian priest and hydrotherapist, b. at Stephansreid, Bavaria, 17 May, 1821; d. at Wörishofen, 17 June, 1897. The child of poor parents, he became a weaver like his father, but, during his time as a journeyman, constantly cherished
the hope of becoming a priest and spent all his spare time in study. With the aid of a friendly priest he was enabled to enter the gymnasium. Five years of severe study and privation brought with it a breakdown in health. Kneipp had developed a consumption. His attention was called to the value of hydrotherapy and he began some experiments on himself. While at Dillingen during the winter of 1849, he used to bathe for a few minutes two or three times a week in the Danube, and then hurry home to his room. He says: "I never derived any harm from these cold exercises but also, as I deemed, small benefit." His health was somewhat improved the next year, and he entered the Georgianum, a seminary for theological students at Munich, when he was nearly thirty. Here he continued his hydrotherapeutic experiments, discovering nothing new, but systematizing them. He soon found that the old suggestions as to the use of water were entirely too violent. He was ordained priest in 1852 and became chaplain successively in Biberach, Boos, and St. George in Augsburg. In 1855 he was made confessor to the nuns at the convent of Wörthofen and assistant in the parish; in 1880 he became the parish priest.

While still a curate he practised hydrotherapy for the benefit of the poor, and his success in curing their ailments attracted wide attention. People from neighbouring parishes began to flock to him; the rich and the poor came to be treated, and he spread throughout Germany. His little book, "My Water Cure," went through many editions and was translated into many languages, while people from all over Europe began to flock to him. Many of them were greatly benefited. Pfarrer Kneipp's system consisted of the regulation of the daily life, through simplicity of diet, and the plentiful use of cold water internally and externally. Many of the recommendations of cold water popularly attributed to him are exaggerations. He says most emphatically: "I warn all against too frequent application of cold water. Three times I concluded to remodel my system and relax the treatment from severity to mildness and thence to greater mildness still." His general rules were early to bed and early to rise, with a walk in the dewy grass in the bare feet, simple meals, no stimulants, not too much meat, and an abundance of cereals. To him we owe the idea of a great dietary made up of milk, coffee. Kneipp Societies were formed in Germany and in the United States for the better execution of his regulations. Since his death they have dwindled, and his methods are being lost sight of, showing that it was the personality of the man rather than his system which gave him fame. He discovered what was known before and had been allowed to lapse. Many well-known Europeans became his personal friends, and many prominent, and even royal, personages took up his method of treatment and were benefited. His "So sollt ihr leben" (1890) has been translated into many languages. Leo XIII made him a monsignor.

KNEIPP, MEINE WASSERKUR (1886—tr. Edinburgh, 1891), contains a sketch of his life.

JAMES J. WALSH.

Knight, William, Venerable, put to death for the Faith at York, on 29 November, 1596; with him also suffered Venerables George Errington of Herst, William Gibson of Ripon, and William Abbot of Howden, in Yorkshire. William Knight was the son of James Knight, of Batta, Duffield, Derbyshire. On coming of age he claimed some property, left to him by his father, from his uncle, a Protestant, who denounced him to the authorities for being a Catholic; he was at once seized and committed to the custody of Colyer, a pursuivant, who treated him with indignity and severity. He was sent in October, 1593, to York Castle, where William Gibson and George Errington were already confined, the latter having been arrested some years previously for participation in a rising in the North. A certain Protestant clergyman, who had chanced to develop a friendship for him, gained his freedom he had recourse to an act of treachery: feigning a desire to become a Catholic, he won the confidence of Knight and his two companions, who explained the Faith to him. With the connivance of the authorities, he was directed to one Henry Abbot, then at Jersey, who promised to bring them all together to reconcile him to the Church. Thereupon Abbot was arrested and, together with Knight and his two comrades, accused of persuading the clergyman to embrace Catholicism—an act of treason under the penal laws. They were found guilty, sentenced to be hanged, drawn and quartered, and suffered their martyrdom with joy and fortitude at York, on 29 November, 1596.

BARTHOLOMEW, Recollections in Trouble of our Catholic Forefathers related by themselves. First series, ed. by MORRIS (Lon-

Knighton (CNIHTHON), Henry, a fourteenth-century chronicler. Nothing is known of his career except that he was a canon of St. Mary's, Leicester, and that he was present when St. Benedict and the twelve monks of Fotheringhay Abbey in 1363. His chronicle was first published by Tywysden in "Historiae Anglicanae scriptores decem" (1652); a critical edition by Lumby in the Rolls Series contains an exhaustive study of the only two manuscripts which have survived. Both are now in the British Museum. This work consists of five books and covers the history of England from the accession of Edgar in 959 to the year 1386, in which it abruptly ends. The sudden conclusion suggests that the writer died in or about that year, though from an earlier passage in the work we know that he was threatened with blindness so that he may have been forced to desist through loss of sight. A later writer from the same community continues the story (book V) from 1377 to 1395. The first three books are of no historical value, as they consist of admitted transcripts from Higden, whom Knighton supplements with unacknowledged extracts from Walter of Hemingburgh. He ensured the preservation of numerous valuable documents by writing out the initial letters of the chapters in books I and II should spell Henricus CNIHTON. The really important part of his work is the fourth book, which was written from his own knowledge, and which contains facts, particularly with regard to domestic history, not to be found in any other chronicler. A feature of his work is the economic particulars in which the work abounds. He carefully records the rate of wages, the prices of grain, wine, and cattle. He throws much light on the effects of the Black Death on the labour market, and on the inroads made on the feudal system by the liberation of the adscripti glebae. He also details the evil effects of the pestilence which caused a dearth of priests that was supplied by the ordination of candidates ill-prepared and but little suited for the sacred ministry.

EDWIN BURTON.

Knights of Columbus, a fraternal and benevolent society of Catholic men, founded in New Haven, Conn., 2 Feb., 1882, and chartered by the Governor of Connecticut, 29 March, 1882. The organizers and incorporators were the Reverend M. J. McGivney, the Reverend P. F. Lawlor, James T. Mullen, Cornelius T. Driscoll, Dr. M. C. O'Connor, Daniel Colwell, William M. Geary, John T. Kerrigan, Bartholomew Healey, and Michael Curran. The purpose of the society is to develop a practical Catholicism among its members, to

EDVIN BURTON.
promote Catholic education and charity, and, through its insurance department, to furnish at least temporary financial aid to the families of deceased members. On 15 May, 1882, the organizers, as a Supreme Committee, met at the first meeting in the home of Savior Council, No. 1, New Haven. From this time on, subordinate councils were organized in the different cities and towns throughout the State of Connecticut, but it was not until 15 April, 1886, when a subordinate council was established at Westerly, R. I., that the order was extended beyond the borders of the parent state. The Supreme Committee then enacted a law providing that a Supreme Council should be established, composed of the Supreme Committee and delegates from subordinate councils, each council being entitled to one delegate for each fifty members. The number of delegates under this arrangement proved too large, the Supreme Council, on 14 May, 1886, resolved itself into a Board of Government, composed of the Board of Directors, formerly the Supreme Committee, and the Grand Knight and a Past Grand Knight of each subordinate council of the state.

Owing to the rapid growth of the society, the Board of Government, in 1892, provided for the organization of State Councils, composed of two delegates from each subordinate council in the state. On 29 April, 1893, the Board of Government was succeeded by the National Council, composed of the State Directors and the Past Grand Knight of each Council, and by one delegate from every thousand members of the insurance class. In October, 1893, associate members were first admitted to the order. The establishment of the associate class was intended for those advanced in years, or unable to pass a physical examination, but has gradually been extended to comprehend all eligible men not desiring the insurance feature. On 22 February, 1900, the first instance of the fourth degree took place in New York City, when more than twelve hundred candidates from all parts of the United States received this degree.

The order is now established in every state and territory of the United States, in every province of Canada, in Newfoundland, the Philippine Islands, Mexico, Cuba, Panama. Councils are to be established in Porto Rico and in South America. The membership, divided into two classes, insurance and associate members, 12,638 in March, 1910, 74,900 in December, 1912, 114,713 associate members, 10,000 insurance members, and 160,703 associate members, a total of 235,612. Insurance policies are issued for $1000, $2000, and $3000, to desirable risks between the ages of 18 and 60. The rate for each member increases every five years unless the age of 60 is attained, after which he pays a level premium based upon his age at initiation. The society has paid to the beneficiaries of deceased members $4,438,728.74.

The Knights of Columbus have done notable work in promoting Catholic education and charity, providing education and homes for Catholic orphans, endowing scholarships in Catholic colleges, giving lectures on Catholic doctrine, endowing hospital beds, providing sanitoria for its sick members, maintaining employment bureaux, and, in general, performing the work of the apostolate of the laity. In 1904 the order presented to the Catholic University at Washington $50,000 for a chair of American History, besides several thousand dollars for library purposes, and is at present engaged in raising $500,000 to endow 50 scholarships in the University.

The work of lectures to non-Catholics on questions of Catholic teaching and belief has always appealed to the spirit of the order, and of the past year has not been without some success. Splendid results have attended the lectures so far delivered. They have led to a better understanding of the Catholic faith on the part of non-Catholics, and a more friendly attitude towards it; they have shown that bigotry is on the wane, and that the non-Catholic mind is open to conviction. The series of lectures delivered by the Right Reverend Bishop J. J. Keane of Cheyenne, Wyo., in Denver, in 1909, inaugurated the work. At Cedar Rapids, Iowa, eighty-five per cent of the audience signed the manifesto. The proceeds of the Knights of Columbus, was non-Catholic. The work has been taken up successfully in Buffalo, Milwaukee, Houston, Los Angeles. It is a movement which does not aim at attacking any man's belief, but at building up charity among men 'and', in the words of Bishop Keane, bringing us all closer together. Catholic students in several cities have established Catholic libraries, and in many others have catalogued the Catholic books in the public libraries.

The erection of a memorial to Christopher Columbus, in the City of Washington, by the United States Government, is due in a measure to the work of the Knights of Columbus. The "Columbus Day" (12 October), which is observed at present in fifteen states of the Union (California, Colorado, Connecticut, Illinois, Kentucky, Maryland, Massachusetts, Michigan, Missouri, Montana, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, and Wisconsin), was instituted largely through the efforts of the Knights, who are now striving to make it a national holiday.

EDWARD HEARN.

Knights of the Cross (ordo Militaris Crucigerorum cum Ruba Stellae), a religious order famous in the history of Bohemia, and accustomed from the beginning to the use of arms, a custom which was confirmed in 1292 by an ambassador of Pope Nicholas IV. The grand master is still invested with a sword at his induction into office, and the congregation has been recognized as a military order by Popes Clement X and Innocent XII, as well as by several emperors.

There is much discussion as to the real beginnings of this order, some authorities, among others the Bohemianists, tracing it back to Palestine, where the first members were supposed to have borne arms against the Saracens. On the other hand, however, is the contemporary custom of establishing a religious congregation at the time of the foundation of a hospital, as well as the fact that in no document is there any trace of the Palestinian Crusaders going to Bohemia. Moreover, in a parchment Breviary of the order dated 1356 the account of foundation contains no allusion to such a lineage. The order is first found in Bohemia as a fraternity attached to a hospital at Prague under a community of Clarissæ, established by Princess Agnes, daub of Przemysl and Queen Constantia, in 1233. In 1235 the hospital was richly endowed by the queen with property formerly belonging to the German order, a gift confirmed by Pope Gregory IX (18 May, 1236), who stipulated that the revenues should be divided with the Clarissæ monastery. After three years, during which the head of the congregation had gone to Rome as the accredited representative of Abbess Agnes, and the congregation had been formally constituted an order under the Rule of St. Augustine by Gregory IX (1238), the abbess (1239) resigned all jurisdiction over the hospital and its possessions into the hands of the Holy See. Twelve days later the pope formally assigned these to the recently confirmed Knights of the Cross, who were to hold them forever in lieu to the Holy See, on condition of the yearly payment of a nominal sum. Blessed Agnes built for the order a new hospital at the Prague Bridge, which was taken as the nucleus of a house, and to the title of the order was added in latere (pede) pontis (Pragensis) [at the foot of the (Prague) bridge]. She also petitioned the Holy See for some mark to distinguish these knights from other Cruciferi, with whom they bore in common the red cross of the crus-
der. To this was added Bishop Nicholas of Prague, on the authorization of the pope, a red six-pointed star (10 Oct., 1230), probably from the arms of the first general, Albrecht von Sternberg.

The order, which by 1253 had extensive possessions in Bohemia, soon spread to neighbouring lands. The Breslau house in particular was the centre of many other foundations. It is Bohemia, in an especial manner, to which the knightly habit has adhered inestimable services. Their success in hospital work is evidenced by the rapidity with which their houses multiplied, and the frequent testimony borne to it in documents of kings and emperors. Within two decades after their foundation the care of souls had become as important as their hospital work, so quickly had the methods been replaced by prayer. Numberless churches were entrusted to them in all parts of Bohemia, particularly the West, where they formed a bulwark of the Faith during the ravages of heresy in that region; the Tabortites murdered the pastor of St. Stephen's at Prague, and the Hussites destroyed the mother-house and brought the order almost to the point of dissolution, but it recovered sufficiently to offer strenuous resistance to the advance of the Reformed teachings. In the war with Sweden the members of the order justified their claim to the title of knights during the siege of Eger, fighting side by side with the townsmen, and to the end with them their last crust. Their hospital at Prague was also the first refuge of other orders who came to work for souls in Bohemia, among others the Jesuits (1555) and Capuchins (1599). For almost a hundred and fifty years the archbishops of Prague held the post of grand master and were supported almost entirely by the revenues of the order. Only on the restoration of the possessions of the archdiocese at the end of the seventeenth century was the grand master again elected from among the members, and a general reform instituted. George Ignatius Paschial (1694–99), the first grand master under the new regime, showed himself zealous for the restoration of the primitive ideals, especially that of charity. Even to the present day the Prague monastery supports twelve pensioners and distributes the so-called "hospital portion" to forty poor.

Many knights have won enviable reputations in the world. Among others Nicholas Rosarzowa (d. 1692), celebrated mathematician and astronomer: John Francis Beckowsky (d. 1725), who established at Prague an herbarium which is still in existence, and Zimmermann, the historian.

At the present time, besides the mother-house at Prague, there are about 26 incorporated parishes, and 85 professed members, several of whom are engaged in gymnasia and the University of Prague. There are benefits at Hadris, Vienna, where the order has been established since the thirteenth century, Eger, Brux, and Schaan.

---

Knoll, Albert (Joseph), dogmatic theologian of the Order of Friars Minor Capuchins, b. at Brunneck in northern Tyrol, 12 July, 1768; d. at Bosen, 30 March, 1838. He was ordained to the presbyterate in 1788, and five years later was appointed to teach dogmatic theology in the Capuchin convent at Meran. He held this position for twenty-four years. Having been elected to the office of definator general in 1847, he went to Rome, but returned to Bosen, in 1853, where he lived the remainder of his days. While in Rome he wrote his "Institutiones Theologiae Dogmaticae Generalis seu Fundamentalis" (Innsbruck, 1852). The following year he published at Turin the first volume of his "Institutiones Theologiae Theoreticae seu Dogmatico-Polemica", which was followed by five other volumes, the last one appearing in 1860. In this work the author observes the "Apologia theologica" and "Obiter dicta" and is in sympathy with the recent developments in dogmatic theology. His brief but accurate descriptions of both ancient and modern heresies, his frequent and happy quotations from the writings of the Fathers, the masterly way in which he handles such difficult subjects as grace, free-will, and original sin, place him among the foremost theologians of the nineteenth century. He wrote a compendium in two volumes of the "Institutiones Theologiae Theoreticae" which was published at Turin in 1868. The last edition of the larger work, corrected and amended by Father Gottfried of Grau, was published at Innsbruck in 1891. In Knoll's "Expositio de obituum morbo", a treatise on the obligations of the Francis- can rule, has been commended as a faithful interpretation of the spirit of St. Francis.

HUTTER, Nomenclator Literarum, III, 691-2.

STEPHEN M. DONOVAN.
Knowledge, being a primitive fact of consciousness, cannot, strictly speaking, be defined; but the direct and spontaneous consciousness of knowing may be made clearer by pointing out its essential and distinctive characteristic. It will be helpful first to consider briefly the current uses of the verb “to know.”

To say that I know a certain man may mean simply that I have met him, and recognize him when I meet him again. This implies the permanence of a mental image enabling me to discern this man from all others. Sometimes essential more than features with external features is implied. To know a man may mean to know his character, his inner and deeper qualities, and hence to expect him to act in a certain way under certain circumstances. The man who asserts that he knows an occurrence to be a fact means that he is in belief the evidence is more obscure and indistinct than in knowledge, either because the grounds on which the event rests are not so clear, or because the evidence is not personal, but based on the testimony of witnesses, or again because, in addition to the objective evidence which draws the assent, there are other general conditions and principles. The intuition is expressed in many languages by the use of two different verbs—by γνωσις and σιβενα, in Greek; by cognoscere and scire, in Latin, and by their derivatives in the Romance languages; in German by kennen and wissen.

I. ESSENTIALS OF KNOWLEDGE.—(1) Knowledge is essentially the consciousness of an object, i.e., of any thing, fact, or principle belonging to the physical, mental, or metaphysical order, that may in any manner be reached by cognitive faculties. An event, a material substance, a man, a geometrical theorem, a mental process, the immortality of the soul, the existence and nature of God, may be so many objects of knowledge. Thus knowledge implies the antithesis of a knowing subject and a known object. It always possesses an objective character, and any process that may be conceived as merely subjective is not a cognitive process. Any attempt to reduce the object to the subject that would result in destroying the fact itself of knowledge, whichimpliesthe object, or not-self, as clearly as it does the subject, or self. (2) Knowledge supposes a judgment, explicit or implicit. Apprehension, that is, the mental conception of a simple present object, is generally numbered among the cognitions of sense, yet not itself, but only in the strict sense knowledge, but only its starting-point. Properly speaking, we know only when we compare, identify, discriminate, connect; and these processes, equivalent to judgments, are found implicitly even in ordinary sense-perception. A few judgments, the truth of a proposition, based as it were on its own merits. The latter consists in the recognition of the truth of a proposition by seeing its connexion with another already known to be true. The self-evident proposition is of such a nature as to be immediately clear to the mind. No one who understands the terms can fail to know that two and two are four, or that the whole is greater than any one of its parts. But most human knowledge is acquired progressively. Inductive knowledge starts from self-evident facts, and rises to laws and causes. Deductive knowledge proceeds from general self-evident propositions in order to discover their particular application. In both cases the process may be long, difficult, and uncertain. A man must have been satisfied with negative conception and analogical evidence, and, as a result, knowledge will be less clear, less certain, and more liable to error. (See Deduction; Induction.)

VIII.—43
III. THE PROBLEM OF KNOWLEDGE. — The question of knowledge belongs to various sciences, each of which takes a different point of view. Psychology considers knowledge as a mental fact whose elements, conditions, laws, and growth are to be determined. It endeavours to discover the behaviour of the mind in knowing, and the development of the cognitive processes of its elements. It supplies the other sciences with the data on which they must work. Among these data are found certain laws of thought which the mind must observe in order to avoid contradiction and to reach consistent knowledge. Formal logic also takes the subjective point of view; it deals with these laws of thought, and, neglecting the objective side of knowledge, separates it into its formal elements necessary to consistency and valid proof. At the other extreme, science, physical or metaphysical, postulating the validity of knowledge, or at least leaving this problem out of consideration, studies only the different objects of knowledge, their nature and properties. As to the crucial questions, the validity of knowledge, its limitations, and the relations between the knowing subject and the known object, these belong to the province of epistemology (q. v.).

Knowledge is essentially objective. Such names as the "given" or the "content" of knowledge may be substituted for that of "object", but the plain fact remains that we know something external, which is not formed by, but offered to, the mind. This must not, however, cause us to overlook another fact equally evident. Different minds will frequently take different views of the same object. Moreover, even in the same mind, knowledge undergoes great changes in the course of time; judgments are constantly modified, enlarged or narrowed down, in accordance with newly discovered facts and ascertained truths. Sense-perception is influenced by past processes, associations, contrasts, etc. In rational knowledge a great diversity of elements is produced by personal dispositions, innate or acquired. In a word, knowledge clearly depends on the mind. Hence the assertion that it is made by the mind alone, that it is conditioned exclusively by the nature of the thinking subject, and that the object of knowledge is in no way outside of the knowledge itself. To use Berkeley's words to be acquainted to be known (esse est percipi). The fact of the dependence of knowledge upon subjective conditions, however, is far from sufficient to justify this conclusion. Men agree on many propositions, both of the empirical and of the rational order; they differ not so much on objects of opinion, but much on what they really know as on what they think they know. For two men with normal eyes, the vision of an object, as far as we can ascertain, is sensibly the same. For two men with normal minds, the proposition that the sum of the angles in a triangle equals two right angles has the same meaning, and, both for several minds and for the same mind at different times, the knowledge of that proposition is identical. Owing to associations and differences in mental attitudes, the fringe of consciousness will vary and somewhat modify the total mental state, but the focus of consciousness, knowledge itself, will be essentially the same. St. Thomas will not be accused of idealism, and yet he makes the nature of the mind an essential factor in the act of knowledge: "Cognition is brought about by the presence of the known object in the knowing mind. But the object is in the knower after this fashion, for the knowledge is after the fashion of his own nature" (Summa theol., I, Q. xii, a. 4). What is this presence of the object in the subject? Not a physical presence; not even in the form of a picture, a duplicate, or a copy. It cannot be defined by any comparison with the physical world; it is not generic, a cognitive likeness, a species intentionalis.

When knowledge, either of concrete realities or of abstract properties, is said to consist in the presence of an object in the mind, we cannot mean by this object something external in its absolute existence and isolated from the mind, for we cannot think outside of our own thought, and the mind cannot know what is not somehow present in the mind. But this is no sufficient ground for accepting extreme idealism and looking upon knowledge as purely subjective. If the object of an assent or experience cannot be absolute reality, it does not follow that to an assent or experience there is no corresponding reality; and the fact that an object is reached through the conception of it does not justify the conclusion that the mental conception is the whole object. To say that knowledge is a conscious process is true, but it is only a part of the truth. And from this to infer, with Locke, that, since we can be conscious only of what takes place within ourselves, knowledge is only "conversant with ideas", is to take an exclusively psychological view of the fact which asserts itself primarily as establishing a relation between a mind and an external reality. Knowledge becomes conversant with ideas by a subsequent process, namely, by the reflection of the mind upon its own activity. The subjectivist has his eyes wide open to the difficulty of explaining the transition from external reality to the mental difficulty which, after all, is but the mystery of consciousness itself. He keeps them obstinately closed to the utter impossibility of explaining the building up by the mind of an external reality out of mere conscious processes. Notwithstanding all theorizing to the contrary, the facts impose themselves that in knowing the mind is not merely active, but also passive; that it must conform, not simply to its own laws, but to external reality as well; that it does not create facts and laws, but discovers them; and that the right of truth to recognition persists even when it is actually ignored or vitiated. The fact is precisely that the mind relates to the knowing process, but, to use the metaphor of St. Augustine, the generation of knowledge requires another cause: "Whatever object we know is a co-factor in the generation of the knowledge of it. For knowledge is begotten both by the knowing subject and the known object." (Deinde in his generatione haec causa has to be maintained that there are realities distinct from ideas without falling into the absurdity of maintaining that they are known in their absolute existence, that is apart from their relations to the knowing mind. Knowledge is essentially the vital union of both.

It has been said above that knowledge requires experience and thought. The attempt to explain knowledge by experience alone proved a failure, and the favour which Associationism found at first was shortlived. Recent criticism of the sciences has accentuated the fact, which already occupied a central place in scholastic philosophy, that knowledge, even of the physical and mental worlds, implies factors transcending experience. Empiricism fails completely in its endeavour to explain and justify universal knowledge, the knowledge of uniform laws under which facts are brought to unity. Without rational additions, the perception of what is or has been can never give the knowledge of what will certainly and necessarily be. True as this is of the natural sciences, it is still more evident in abstract and rational sciences like mathematics. Hence we are led back to the old Aristotelian and Scholastic view, that all knowledge must be known, or very knowable, or else not be knowledge. If the development of knowledge is given in experience, in order to reach its perfection. It needs reason interpreting the data of observation, abstracting the contents of experience from the conditions which individualize them in space and time, removing, as it were, the outer envelope of the concrete, and going to the core of reality. Thus knowledge is not, as in Kantian criticism, a synthesis
of two elements, one external, the other depending only on the nature of the mind; not the filling up of empty shells—a priori mental forms or categories—
with the unknown and unknowable reality. Even abstract knowledge reveals reality, although its object cannot exist outside of the mind without conditions of time and place, and in the act of knowing directly with it.

Knowledge is necessarily proportioned or relative to the capacity of the mind and the manifestations of the object. Not all men have the same keenness of vision or hearing, or the same intellectual aptitudes. Nor is the same reality equally bright from all angles from which it may be viewed. On the contrary, even though the sun may perceive rays beyond the red and the violet of the spectrum; higher intelligents may unravel many mysteries of nature, know more and better, with greater facility, certainty, and clearness. The fact that we do not know everything, and that all our knowledge is inadequate, does not invalidate the knowledge which we possess, any more than the horizon which bounds our view prevents us from perceiving more or less distinctly the various objects within its limits. Reality manifests itself to the mind in different ways and with varying degrees of clearness: Some objects are bright in themselves and are perceived immediately; others are borrowed, thrown on them light borrowed elsewhere, by showing by way of causality, similarity, analogy, their connexion with what we already know. This is essentially the condition of scientific progress, to find connections between various objects, to proceed from the known to the unknown. As we recede from the self-evident, the path may become more difficult, and the progress slower. But, with the Agnostic, to assign clearly defined boundaries to our cognitive powers is unjustifiable, for we pass gradually from one object to another without break, and there is no sharp limit between sciences and metaphysics. The same instruments, principles, and methods that are recognised in the various sciences will carry us higher and higher, even to the Absolute, the First Cause, the Source of all reality. Induction will lead us from the effect to the cause, from the imperfect to the perfect, from the contingent to the necessary, from the dependent to the self-existent, from the finite to the infinite.

And this same process by which we know God's existence cannot fail to manifest something—however little—of His nature and perfections. That we know Him imperfectly, by way chiefly of negation and analogy, is clear. But what do we know in this respect of God? We can know God only so far as He manifests Himself through His works which dimly mirror His perfections, and so far as our finite mind will allow. Such knowledge will necessarily remain infinitely far from being comprehension, but it is only by a misleading confusion of terms that Spencer identifies the unknowable with the incomprehensible, and denies the possibility of any knowledge of the Absolute because we can have no absolute knowledge. Seeing "through a glass" and "in a dark manner." is far from the vision "face to face" which our limited mind is incapable without a special light from God Himself. Yet it is knowledge of Him who is the source both of the world's intelligibility and truth, and of the mind's intelligence.

C. A. DUBRAY.
the knowledge of God inferior to immediate vision is imperfect and unworthy of Christ (I Cor., xiii, 9-12); Jesus repeatedly asserts that He knows the Father and is known by Him, that He knows what the Father knows. There is a difficulty in reconciling Christ's sufferings and surpassing great sorrow with the beatitude implied in His beatific vision. The answer is: since the Lord could be in the nature of Christ without allowing its glory to overflow into His sacred body, the happiness of the beatific vision too might be in the human soul of our Lord without overflowing into and absorbing His lower faculties, so that He might feel the pang of sorrow and suffering. The beatific vision may be effectually given to a saint without any sorrow and joy, resulting from the perception of different objects (cf. St. Thom., III, Q. xiii, a. 5, ad 3; St. Bonav., in III, dist. xvi, a. 2, q. 2); the martyrs have often testified to the ecstatic happiness with which God filled their souls, at the very time that their bodies were suffering the extremity of torment.

(2) Christ's Infused Knowledge. The existence of an infused science in the human soul of Jesus Christ may perhaps be less certain, from a theological point of view than from His continual and original fruition of the vision of God; still, it is almost universally admitted that God infused into Christ a human intellect a knowledge of God, and to this end He bestowed a knowledge which is not acquired gradually by experience, but is poured into the soul in one flood. This doctrine rests on theological grounds: the Man-God must have possessed all perfections except such as would be incompatible with His beatific vision, as faith or love; or with His sinlessness, as penance; or again, with His office of Redeemer, which would be incompatible with the consummation of His glory. Now, infused knowledge is not incompatible with Christ's beatific vision, nor with His sinlessness, nor again with His office of Redeemer. Besides, the soul of Christ is the first and most perfect of all created spirits, and cannot be deprived of a privilege granted to the angels. Moreover, a created intellect is simply perfect only when, besides the vision of things in God, it has a vision of things in themselves; God only sees all things comprehensively in Himself. The God-Man, besides seeing them in God, would also perceive and know through His intellect, which is able to comprehend all things within the limits of His knowledge, as if seeing them in God. The human intellect of Christ supports the existence of such infused knowledge in the human intellect of Christ: St. Paul speaks of all the treasures of God's wisdom and science hidden in Christ (Col., ii, 3); Isaías speaks of the spirit of wisdom and counsel, of science and understanding, resting in Christ (xii, 14); St. Thomas says that Christ has not given His Spirit by measure to His Divine envoy (John, iii, 34); St. Matthew represents Christ as our sovereign teacher (Matt., xxiii, 10). Besides the Divine and the angelic knowledge, most theologians admit in the human intellect of Jesus Christ a science infused in a certain way and in a manner comprehensible to the mind in the ordinary way, similar to that granted to Adam and Eve (cf. St. Thom., III, Q. 1, a. 2; QQ. viii-xii; Q. xv, a. 2).

(3) Christ's Acquired Knowledge. Jesus Christ had, no doubt, also an experimental knowledge acquired by the natural use of His faculties, through His senses and imagination, just as happens in the case of common human knowledge. To say that His human faculties were wholly inactive would resemble a profession of either Monothelitism or of Docetism. This knowledge naturally grew in Jesus in the process of time, according to the words of Luke, ii, 52: 'And Jesus grew in wisdom and stature, and in favor with God and men'. Understood in this way, the Evangelist speaks not merely of a successively greater manifestation of Christ's Divine and infused knowledge, nor merely of an increase in His knowledge as far as outward effects were concerned, but of a real advance in His acquired knowledge. Not that this kind of knowledge implies an enlarged object of His science; but it signifies that He gradually came to know, after a merely human way, some of the things which He had known from the beginning by His Divine and infused knowledge.

II. EXTENT OF THE KNOWLEDGE OF JESUS CHRIST. It has already been stated that the knowledge in Christ's Divinity was the beatific vision. As to the experimental knowledge acquired by Christ, it must have been at least equal to the knowledge of the most gifted of men; it appears to us wholly unworthy of the dignity of Christ that His powers of observation and natural insight should have been less than man's. But the main difficulty arises from the question as to the extent of Christ's knowledge flowing from His beatific vision, and of His infused amount of knowledge. (1) The Council of Baalae (Sess. XXII) condemned the proposition of a certain Augustinus de Roma: 'Animas Christi videt Deus tam clare, et intense quam clare et intente Deus videt seipsum'. (The soul of Christ sees God as clearly and intimately as God perceives Himself). It is quite clear that, however perfect the human soul of Christ is, it always remains finite and limited; hence its knowledge cannot be unlimited and infinite. (2) Though the knowledge in the human soul of Christ was not infinite, it was most perfect and embraced the widest range, extending to the Divine ideas already realised, or still to be realised. Nescience of any of these matters would amount to positive ignorance in Christ, as the ignorance of law in a judge. For Christ is not merely our infallible teacher, but also the universal mediator, the supreme judge, the sovereign king of all creation. (3) Two important texts are urged against this perfection of Christ's knowledge: Luke, ii, 52 demands an advancement in knowledge in the case of Christ; this text has already been considered in the last paragraph. The other text is Mark, xii, 32: 'Of that day or hour no man knoweth, neither the angels in heaven, nor the Son, but the Father.' After all that has been written on this question in recent years, we see no need to add anything to the traditional explanations: the Son has no knowledge of the judgment day which He is to communicate; or, the Son has no knowledge of His creation, from His human nature as such; or again, the Son has no knowledge of the day and the hour, that has not been communicated to Him by the Father. (See Mangenot in Vigouroux, "Dict. de la Bible", II, Paris, 1889, 2268 sq.)

Since the time of the Nestorian controversy, Catho-
lics have had no ground for questioning the doctrine concerning the knowledge of Christ (cf. Leporius, "Libellus Emendationis", n. 40; Eulogius Alex., "In Phot.", cod. 230, n. 10; S. Gregorius Magnus, lib. X, epp. xxxv, xxxvi; Sophron., Ep. Syn. ad Ser-
gium"; Damascenius, "De Hsr.", n. 85; Nat. Alex., Hist. Eccl., in sec., sec. 111, n. 3, sec. 111, n. 4). As to the Fathers preceding the Nestorian controversy, Leontius Bys-
tinus simply surrenders their authority to the oppo-
sites and our doctrine concerning the knowledge of Christ: Petavius represents it as partly undecided; but the early Fathers may be excused from error, because they were closely against the Arian heresy, so that they endeavoured to establish Christ's Divinity by removing all ignorance from His Divine nature, while they did not care to enter upon an ex professo inves-
tigation of the knowledge possessed by His human nature. At that time there was no call for any such study. After the patriarchs (especially the Cappadocians) and Hugh of St. Victor exaggerated the human knowledge of Christ, so that the early Scholastics asked the question, why God's Omniscience could be communicated, while His Omnipotence was incomunicable (Lomb., "Libre Sent.", III, d. 14). But even at this period, at least a modified difference was admitted to exist between the Om-
The Tory element in the population, composed almost wholly of adherents of the Church of England, was most prominent in its resistance to that principle. Many of these were secretly opposed to the total independence of the colonies. In New York, most numerous, they had been the governing class; theirs was the state Church; their wealth and social standing gave them a large share in the direction of public affairs which they rightly judged would be lost to them by the establishment of the republic on the principles of freedom and democracy which Jefferson and, when their mother country was compelled to acknowledge the independence of the colonies, over 30,000 of these Tories voluntarily deserted themselves, most of them to England and Canada. Those who remained became identified with the political party known as the Federalists. Successful for a time in retaining the control of the newly-organized government, the leaders of that party "strove to preserve the political ascendency of Protestantism in the states both by Federal legislation affecting the naturalization of emigrants and by preventing legislation in their respective states for the establishment of Catholicism on the principles of the Roman Catholic faith and, (2) the exclusion of foreign-born citizens from all offices of trust and emolument in the government, whether federal, state, or municipal. It may be added that Roman Catholics of Irish origin, whether native or foreign-born, were at all times the special objects of the American Protestantism, and that the "foreigners", contemptuously so called, against whom the Know nothings denunciations were levelled, and who were to be excluded from the rights of citizenship, were for the most part Irish immigrants to the United States professing the Roman Catholic faith. This Native American spirit may be regarded as the natural and logical development of the liberty of conscience and personal independence which was given to the new country by its founders. To what extent the rights of the Foreigner, who professed and practiced the Roman Catholic religion, and the laws which remained on the Statute Books down to the time of the War of Independence.

With the organization of government and the adoption of a written Constitution, the question of religious toleration naturally arose, and the principle of freedom of religion was incorporated in the Federal Constitution (Art. VI) which declared that "no religious test shall ever be required as a qualification to any office or public trust under the United States." This liberty of conscience was further assured by an amendment adopted in 1791, which declared that "Congress shall make no laws respecting an establishment of religion or prohibiting the free exercise thereof." While the policy of the National Government was thus defined, and its law-making power was restrained from legislation hostile to the principle of freedom of religion, the individual states had reserved the right to regulate the question of religion and of a state Church within their respective jurisdictions, and the elimination from the Constitutions of the various states of the religious disqualifications which they contained was deferred. Roman Catholics was accomplished slowly and not without much resistance on the part of a considerable portion of the population: Thus, it was not until 1833 that the union between Church and State in the Commonwealth of Massachusetts was dissolved, and Catholics were relieved from having to pay taxes for the support of the state (Protestant) Church. New Jersey retained its anti-Catholic Constitution until 1844, and only in 1877 did New Hampshire expunge from its Constitution the provision disqualifying Catholics from holding office in that state. These, with instances from other states which might be added, show how the principle of the Roman Catholic religion still survived. Freedom of religion as asserted in the Federal Constitution was not by any means universally accepted in theory, still less in practice.
American and Knownothing movements which America has witnessed, political hostility and religious prejudice, and neither, appear as the motive and inspiration. Knownothingism was only the development and application of the principles of Native Americanism whose character and origin we have briefly sketched.

During the half-century preceding the Knownothing era, the movements involved in that movement had been frequently agitated. Catholics and foreigners were denounced, mainly from Protestant pulpits, as enemies of the Republic. Books and newspapers calculated to inflame the passions of the mob against their Irish and Catholic neighbours were extensively circulated. The bishops were excommunicated, their religion misrepresented and ridiculed, and acts of violence were committed against Catholics and their property. The burning of the Convent of the Ursuline nuns at Charlestown, Mass., in 1834, by a Native American mob, and their cruel treatment of the unoffending nuns and their pupils, were the most notable manifestations, up to that time, of the evil effect of religious hatred. In 1835 the first formal organization of the partisans of the Native American movement under that name, was effected at New York City. Various newspapers, such as "The Protestant", "The Protestant Vindicatrix", "The Downfall of Rome", with headquarters in New York and New England, as aids to the movement. The "evils of Popery" and the danger to arise to the Republic from tolerating the practice of the Catholic religion were staple topics of discussion by no considerable number of ministers of religion, and under the impulse of these incitements the spirit of religious prejudice was kept alive; there were new aggressions upon the rights of Catholic citizens, the peace and order of the community were occasionally disturbed by acts of violence, and another decade in the history of Native Americanism terminated in the bloody riots which occurred at Philadelphia, in 1844, when several Catholic churches were attacked by the Native American mob, and two of them, St. Michael's and St. Augustine's, were deliberately fired and reduced to ashes, and the safety of those that remained were so endangered by the hostile demonstrations of the mob that pistol-fire was suspended by order of Bishop Kenrick, and on Sunday, 12 May, 1844, all Catholic churches in that city were closed. Many houses tenanted by Irish Catholics were likewise wantonly destroyed by fire, some of the inmates were shot down at their own doors, and a number of other unoffending persons were murdered.

The party whose members were soon to be described as "Knownothings" was formally organized in 1852 in the City of New York. Although begun as a local society, it was designed to become a national organization. Its leaders had planned to concentrate in a single party the effect of the Native American order already in existence and the "American Republicans", the "Order of United Americans", "Sons of America", and "United American Mechanics of the United States" formed the nucleus of the new party. It adopted the title of "National Council of the United States of North America." Among the leaders at the outset were the "Star-spangled Banner" and was sometimes familiarly spoken of as "Sam". Its published ritual declared (Article II) the purpose of the organization to be "to protect every American citizen in the legal and proper exercise of all his civil and religious rights and privileges, and to resist all who Gare misused of the Church of Rome and all other foreign influence against our republican institutions in all lawful ways; to place in all offices of honour, trust or profit in the gift of the people or by appointment none but Native American Pro- testant citizens" (see American Politics, Book I, pp. 57-9). Article III declared "that a member must be a native-born citizen, a Protestant either born of Protestant parents or reared under Protestant influence, and neither, appear as the motive and inspiration. Knownothingism was only the development and application of the principles of Native Americanism whose character and origin we have briefly sketched.

During the half-century preceding the Knownothing era, the movements involved in that movement had been frequently agitated. Many houses tenanted by Irish Catholics were likewise wantonly destroyed by fire, some of the inmates were shot down at their own doors, and a number of other unoffending persons were murdered.

The party whose members were soon to be described as "Knownothings" was formally organized in 1852 in the City of New York. Although begun as a local society, it was designed to become a national organization. Its leaders had planned to concentrate in a single party the effect of the Native American order already in existence and the "American Republicans", the "Order of United Americans", "Sons of America", and "United American Mechanics of the United States" formed the nucleus of the new party. It adopted the title of "National Council of the United States of North America." Among the leaders at the outset it was called the "Supreme Order of the Star-spangled Banner" and was sometimes familiarly spoken of as "Sam". Its published ritual declared (Article II) the purpose of the organization to be "to protect every American citizen in the legal and proper exercise of all his civil and religious rights and privileges, and to resist all who are misused of the Church of Rome and all other foreign influence against our republican institutions in all lawful ways; to place in all offices of honour, trust or profit in the gift of the people or by appointment none but Native American Protestant citizens" (see American Politics, Book I, pp. 57-9). Article III declared "that a member must be
In the Thirty-fifth Congress, which assembled in December, 1855, there were seven or five Know-Nothing members elected as such. In 1856 Horace Greeley wrote: "The majority of the Banks men"—Banks being the candidate for Speaker of the House of Representatives—"are now members of Know-Nothing councils and some twenty or thirty of them actually believe in that article. Have the addressing committees declared that two-thirds of that and nearly all of that of Pennsylvania are Know-Nothings". In 1855 the Know-Nothing party suffered a serious reverse in Virginia, when Henry A. Wise, the Democratic candidate, was elected governor of that state, chiefly on the issue of his antagonism to Native American principles and practices. In December, 1856, a mob of the determined partisans of the Know-Nothing party held a convention at which they nominated Millard Fillmore as candidate for President. Opposed to them in that election were the Democratic party and the newly organized Republican party, both of whom had expressed their dissent from Native American principles. Speaking of this selection, Schouler says: "Their candidate Fillmore met with the most ignoble defeat, receiving only the eight electoral votes of Maryland, his adversary, James Buchanan, the nominee of the National Democratic party being triumphantly elected. For the North, as for the South, and their provisions too, the defeat was overwhelming. It was apparent that the American or Know-Nothing party had now nearly evaporated" (History of the U. S., IV, p. 357).

The American people had weighed the claims of the Know-Nothing party to be regarded as the saviors of the republic and had witnessed the criminal excesses to which that party had resorted in its efforts to secure political control, and the sober sense of the great mass of the people had repudiated both. Moreover the great controversy over slavery coupled with the claim of the right of a state to secede from the Union was pressing upon the attention of the country. The exclusion of new states and other questions, so that upon the election of President Lincoln (1860) Know-Nothingism as an organized party had ceased to exist, and only its disagreeable memory remained.

The history of Know-Nothingism would be very imperfectly told without some account of the wrongs inflicted upon Catholics and the criminal excesses committed by the partisans of that movement. The same bitter attacks against Catholics and the same incitements to violence could not fail to produce results similar to those which had characterized the earlier Native American movements. In 1851 the large settlement in Providence exerted over the establishment there of a community of Sisters of Mercy under the direction of Mother Xavier Warde. The cottage occupied by the sisters was attacked at night, and all the windows broken. In daytime, as the sisters passed through the streets, they were hooted at and other provocations were aimed at them and they were openly threatened with the destruction of their convent. So persistent were these threats that the Mayor requested the sisters to abandon their residence in Providence so as to avert the threatened disorder. Soon afterwards a mob of Know-Nothing partisans fully armed was assembled whose purpose of attacking the convent had been openly announced. The bishop's house and one or more of the churches were likewise marked for destruction. After fruitless appeals to the civil authorities for protection, the Irish Catholics of Providence, under the prudent and resolute lead of Bishop O'Reilly, prepared to resist the movement and repel all violent attempts. The mob marched to the convent, but, finding it guarded by a number of Catholic Irishmen, with Bishop O'Reilly present and declaring that the sisters and their convent should be protected at whatever cost, the Know-Nothing leaders decided not to molest the convent, and the mob dispersed.

In 1853, on the occasion of the visit to America of Archbishop Bedini, Apostolic Nuncio to the Court of Brazil, a great outcry was raised by the Know-Nothing element throughout the country, with whom were joined certain Italian refugees who had emigrated to escape the consequences of their criminal conduct at home. In all the cities visited by the archbishop brutal demonstrations were made against him. At Boston, Baltimore, Wheeling, St. Louis, and Cincinnati, where the Nuncio took part in various solemn religious celebrations, there were scenes of disorder, and in some cases of bloodshed, provoked by the Know-Nothing speakers both lay and clerical, as well as by the anti-Catholic press. At Cincinnati, in December, 1853, a mob of the determined Know-Nothingites, in various sorts, and carrying lighted torches and ropes, marched to the cathedral intending to set it on fire and, as was believed, to hang the Nuncio. There was an encounter with the police, and the mob was dispersed, but not until after shots had been fired and several persons wounded. During 1854 there were numerous assaults upon Catholic churches throughout the country by the Know-Nothing element. St. Mary's church at Newark, N. J., was invaded by a mob made up of Know-Nothings and Orangemen from New York City; the windows were broken, some of the sacred vestments were thrown out of the window. An Irish Catholic, shot and killed. In October of the same year, at Ellsworth, Maine, Father John Bapst, S.J., was dragged from the church, robbed of his watch and money, tarred and feathered, and ridden about the village on a rail.

On 4 July, at Manchester, N. H., St. Anne's church was attacked, its windows broken and furniture destroyed, the priest compelled to seek shelter away from his home, and the houses of Irish Catholics were likewise attacked, the inmates driven out, even the sick being dragged from their beds. At Bath, Me., the mob broke in and threw into the fire the altar and the pulpit, set fire to the building which was reduced to a heap of ashes. At Dorchester, Mass., a keg of gunpowder was placed under the floor of the little Catholic church, it was fired at three o'clock in the morning and resulted in almost the total destruction of the building. Another Catholic church, at Sidney, Ohio, was equally destroyed. At Massillon, Ohio, another church was burned, and an attempt made to burn the Ursuline Convent at Galveston, Texas. At Lawrence and at Chelsea, Mass., the Catholic churches were attacked by the Know-Nothing mob, the windows smashed, and much other damage done. St. Mary's church at Jerusalem, Me., was burned and later its cross was sawed off the spire. A fire was started in the church of Sts. Peter and Paul in Brooklyn, and the building was saved only by the intercession of the police aided by the militia, who drove off the mob. St. Mary's Church at Saugerties, N. Y., was set on fire and nearly destroyed by the fanatics, and an attempt made to burn the church at Palmyra, N. Y. The following year (1855), at Louisville, Ky., the elections were attended with such rioting and bloodshed, the result of Know-nothing agitation, that the day (5 Aug.) acquired the name of "Bloody Monday". The cathedral was invaded by the mob and was saved from destruction only by the prudence of Bishop Spalding, who, in a letter to Bishop Kenrick summing up the results of the day's proceedings, said: "We have just passed through a reign of terror surpassed only by the Philadelphia riots. Nearly one hundred poor Irish churches have been burned and some twenty houses have been consumed in the flames. The City authorities, all Know-nothings, looked calmly on and they are now endeavouring to lay the blame on the Catholics" (see "Life of Archbishop Spalding", by J. L. Spalding, p. 183).

While their ignorant followers were engaged in these lawless proceedings the leaders were exerting them-
selves in various directions to secure legislation hostile to Catholics, especially to Irish immigrants, then most of the anti-Catholic bills were proposed to authorize the visitation and inspection of convents and other religious institutions by state officials, and in Massachusetts, in 1854, such a law, known as the Nunnerys Inspection Bill, was actually passed. Under this a legislative commission was appointed and in a very offensive manner visited several Catholic colleges and convents. In several states, notably in New York, church property bills were proposed which were designed to destroy the title to Catholic church property, which for the most part stood in the name of the bishop, there being then no law for the incorporation of Catholic churches by which such title might be securely held. In Congress efforts were made to restrict the benefits of the Homestead Laws to those who were actual citizens of the United States, and the old-time proposal to extend the period of residence to twenty-one years before a person could be admitted to citizenship was constantly agitated. Of lesser importance were the laws and ordinances passed in Massachusetts disbanding various volunteer militia companies bearing the name of some Irish patriot and composed for the most part of Catholic Irishmen.

In recent years, measures were advocated in the newspaper organs, both secular and religious, of the Knownothing party. The New York Church Property Bill evoked the newspaper controversy between Archbishop Hughes and Senator Brooks which attracted attention all over the country. In addition, many booklets and pamphlets were put in circulation in support of the Knownothing claims. Much of this literature was grossly insulting to Catholics and especially to the Irish members of that Church, and the Catholic press of those days was busily engaged in meeting the charges made against the Church. Speaking of Knownothingism, the bishops (Niccolay and Hoy) in their "Life of Lincoln" (Vol. II, p. 343) said: "Essentially it was a revival of the extinct Native American faction based upon a jealousy of and discrimination against foreign born voters, desiring an extension of their period of naturalization and their exclusion from office; also based upon a certain hostility to the Roman Catholic religion."

Schouler, another non-Catholic historian, says (History of the United States, Vol. V, p. 305): "They [the Knownothings] revived the bitter spirit of intolerance against the Roman Catholic Church such as ten years before had been shown in the riots of Charleston, in South Carolina, by recruiting the handmaid of popular ignorance and bent on chaining Americans to the throne of the Vatican. . . . Catholic churches were assaulted every now and then by some crowd of Bible bigots helped on by the brawny friends of free fight inflamed by street preachers and the revelations of persecuted Jews and 'escaped nuns' etc." Speaking of the partisans of the movement, Bishop J. L. Spalding said (Life of Archbishop Spalding, p. 174) they were "the depraved portion of our native population." He added: "It was not the American people who were seeking to make war on the Church, but merely a party of religious fanatics and unprincipled demagogues who as little represented the American people as did the mobs whom they incited to bloodshed and incendiarism. Their whole conduct was un-American and opposed to all the principles and traditions of our free institutions."

Brownson spoke of their prejudices as "contemptible": "The Native-American Party," said he (Essays and Reviews, p. 428), "is not a party against admitting foreigners to the rights of citizenship, but simply against admitting a certain class of foreigners. It does not oppose Protestant Germans, Protestant Englishmen, Protestant Scotchmen, not even Protestant Irishmen. It is really opposed only to Catholic foreigners. It is a party truly an anti-Catholic party, and is opposed to everything which the Irish from this country are probably from Ireland, and the greater part of these are Catholics."

Peter Condon.

Knox, John, Scotch Protestant leader, b. at Haddington, Scotland, between 1505 and 1515; d. at Edinburgh, 24 November, 1572. All the older biographies assign his birth to 1505, but recent authorities (Lang, Hay Fleming, etc.) give grounds for the later date from contemporary evidence, and from certain facts in his career. Nothing authentic is known of his ancestry or kinsfolk, excepting that his mother was a Sinclair; his father was probably a small farmer. Educated at the Haddington burg school, he is not known to have graduated at any university, though both Glasgow and St. Andrews claim him. There is much uncertainty as to his knowledge of Latin and French, and his acquaintance with the works of some of the Fathers, and he seems to have acquired a smattering of Greek and Hebrew in later life. His mastery of vernacular Scotch is shown in his "History", as well as the fact that he had studied law, for his citations from the Pandects are apt and not infrequent. We know from his own words that he was a priest—"one of Baal's shaven sort", as he expresses it—and practised as a notary by ecclesiastical authority. In a still extant document he is styled "Johannis Knox, sacri altaris minister, sancte Andrei dioecesae auctoritate apostolica notarius". Nothing was foretold of his clerical career; and we can only surmise that he had already begun to doubt, if he had not actually repudiated, the Catholic tenets by 1540, when we first find him engaged as private tutor to certain "bairns", a profession in which he continued until 1547. The names of some of his pupils have come down to us, but we know nothing of the details of his life until 1545, when his own "History of the Reformation", written some eighteen years later and largely autobiographical in character, first brings him before us.

The most prominent exponent of the new doctrines in Scotland at this time was Wishart, who had come home from his travels in Germany a confirmed Protestant, and was expounding his tenets in Haddington and other parts of the Scottish Lowlands. Bitterly hostile to Cardinal Beaton, the great champion of the Catholic cause, Wishart (whose most devoted adherent and disciple at this time was) was deeply involved in the intrigues of the Protestant party with Henry VIII of England for the kidnapping or murder of the cardinal. Wishart was arrested in January, 1546, and burned at St. Andrews on 1 March; and on 29 May Beaton was murdered at the same place in revenge for Wishart's death. The assassination was approved and applauded by Knox, who describes...
the deed with a gleeful and mocking levity strangely unbecoming in a Christian preacher, though his panegyrists speak of it merely as his "vein of humour". Some months later we find him, with his pupils, shut up in the castle of St. Andrews, which Beaton's murderers and their friends held for some months against the English Armada and the Queen Mother. On 31 July 1547, the besiegers being reinforced by a large French fleet, the castle was surrendered, and Knox was imprisoned with some others for nineteen months on board the French galleys and at Rouen. His captivity, however, was not rigorous enough to prevent him from delivering his theological treatise, and preaching to his fellow-prisoners.

In 1549 Knox was free to return home; but he preferred to stay for a time in England, where, under Edward VI, he would feel himself secure, rather than to expose himself to fresh arrest in Scotland. He received a state licence to preach at Berwick, where he remained two years, and was then transferred to Newcastle, and at the same time appointed a royal chaplain. He preached at least twice before the young king, and in October, 1552, was nominated to the bishopric of Rochester, which he refused, declining in to the city of London. His own alleged reason for declining these preferments was that he thought the Anglican Church too favourable to Roman doctrine, and that he could not bring himself to kneel at the communion service. When Edward VI was succeeded in July, 1553, by his Catholic sister Mary, Knox continued his preaching for a time, and, as long as he remained in England, took care not to attack the new sovereign, for whom indeed he published a devout prayer. But early in 1554 he thought it prudent to take refuge in Dieppe, having meanwhile gone through a form of marriage with Maryjane, fifth daughter of Sir. Bowes, a Calvinistic lady of fashion, living in Newcastle, who had taken him as her spiritual adviser. From Dieppe he went to Geneva, partly to consult Calvin and other divines as to the lawfulness and expediency of resisting the rule of Mary Tudor in England and Mary of Guise, just appointed Regent, in Scotland; but he got little satisfaction from his advisers. In September, 1554, he accepted the post of chaplain to the English Protestants at Frankfort; but his Puritanism revolted against the use of King Edward's prayer-book and of the Anglican ceremonial. Schism arose in the congregation: Knox's opponents accused him of comparing the English services of 1554 to those of Geneva, and he was ordered by the authorities to leave Frankfort, and returning to Geneva he ministered for a time to the English congregation there. In August, 1555, however, an urgent summons from his mother-in-law, Mrs. Bowes, caused him (as he says, "maist contrarious to mine own judgement") to set out for Scotland and join his wife at Berwick. The new doctrines had made headway during his absence, and he found himself able to preach both in public and in the country houses of his supporters among the nobles and gentry. At a historic supper, given by his friend Erskine of Dun, it was formally decided that no "believer in the Evangel!" could attend mass; and the external separation of the party from Catholic practice, as well as doctrine, thus became complete. Knox, whose religion had now become entirely of the Old-Testament type, boldly proclaimed that adherents to the new religion were truly descended from the Jews and sacrificed their children to Moloch, and that the extermination of idolaters was the clear duty of Christian princes and magistrates, and, failing them, of all individual "believers". In the letter, however, which he addressed about this time, on the advice of two of his noble supporters, to the queen regent, he assumed an attitude of toleration only for toleration for his co-religionists. The letter contained at the same time violent abuse of Catholics and their beliefs, and threatened the regent with "torment and pain everlasting", if she did not act on his counsel. Mary seems to have treated the effusion with silent contempt, which Knox resented bitterly; but it was no doubt with the conviction that the time was not yet come for the triumph of his cause that he returned to his ministry in Geneva (in the summer of 1556), sending his wife and her mother thither before him. Immediately on his departure he was cited to appear before the judges in Edin- burgh, condemned and outlawed (in absence) as con- tumacious, and publicly burnt in effigy.

Until the end of 1558 Knox continued at his post in Geneva, imbibing from Calvin all those rigid and autocratic ideas of church discipline which he was subsequently to introduce into Scotland — England would have none of them — and which were to be followed by unrest, persecution, and civil war. His two sons, Nathaniel and Eleazar, were born to him at Geneva, and he was joined there by Mrs. Locke and other female admirers from England and Scotland. Glencairn and other friends tried to persuade him in 1557 to come back, on the ground that persecution was diminishing, and he actually got as far as Dieppe on his journey home. Here his courage seems to have evaporated; and after ministering for a time to the Dieppe Protestants he went back to Geneva. During 1558 his pen was constantly busy: he published his letter to the queen regent with comments, and his famous "First Blast of the Trumpet against the Monstrous Regiment of Women", directed against Mary Tudor, Mary of Guise, Catherine de' Medici, and the youthful Mary Stuart, who had just married the French Dauphin. In other writings he declared that every Christian man (i.e. Protestant) had a right to slaughter every idolater (i.e. Catholic), if he got an opportunity. In a "Brief Exhortation to England" he insisted on the expulsion of all "drags of Popery" and the introduction of the full "Kirk discipline" of Calvin and Geneva; and in his "Treatise on Predestination" he answered the "blasphemous cavillations" of an Anabaptist. The last-named work was not published until 1560.

At length, in the first days of 1559 (Queen Mary of England having been succeeded by her sister Elizabeth a few weeks previously), Knox deemed it safe or opportune to leave Geneva for Scotland. He came to Dieppe, and, finding himself refused a safe-conduct through England, travelled by sea from Dieppe to Leith, arriving on 2 May. He had already heard by letter that the Scottish Protestants were no longer in any danger. The queen regent had indeed been denounced and condemned by proclaimation attacks on priests, disturbance of Catholic services, invasion of churches by lay preachers, and religious tumults in general. But she was already in the grip of deadly illness, was meditating a retirement to France, and, notwithstanding certain advices from that country, had neither the power nor the intention of organizing any movement to suppress the Protestant party in the realm, which was growing daily in power and influence. St. Giles's Church in Edinburgh had been
the scene of a riot, followed by the flight of the Catholic clergy. The Lords of the Congregation were practically in arms against the regent; and Knox, who had never seemed to be the least anxious for lonely martyrdom, showed himself full of fight and courage with a stout body-guard at his back. Repairing to Dundee, he found the Protestants masters and unchallenged. Striking and sudden as the storm was, Knox preached a series of inflammatory sermons which culminated on 25 May, when the mob of that city—angered, according to Knox, by the regent's having broken her pledge of toleration to the preachers (see however as to this, Lang, "Knox and the Reformers"), and under the weight of exasperation against the parish church and several of the monasteries. A private letter from Knox describes these deeds of violence and outrage as done by the "brethren"; but in his "History"—written partly for the followers of Calvin, who rebuked and condemned such works of pillage—he ascribes them to the "rascal multitude," with no reference to their having been inspired by his own harangues or encouragement.

The Protestants, entrenched in Perth (the only fortified town in Scotland), were now in open rebellion against the regent, who advanced with her troops. A truce with the Congregation resulted in a treaty, by which the Protestants were to be allowed complete freedom of worship, and no French troops were to be quartered in the town. Knox meanwhile moved on with his friends to St. Andrews, and, in spite of Archbishop Hamilton's threat that if he dared to preach there he should be saluted with "a dozen of curiously formed glass bottles," Knox proceeded there, with the result that the St. Andrews mob repeated the work of sacking and pillage which had followed his sermons at Perth. The wreck of other great abbeys, such as Socone and Lindores, followed; the Congregation was restored; Stirling was occupied by English forces and burned, the regent meanwhile retreating to Dunbar. Knox accompanied them to the capital, where the same scenes of devastation of churches and monasteries were repeated, and on 7 July he was chosen minister of the Edinburgh Protestants. "We mean no tumult, no alteration of authority," he wrote to one of his friends in Geneva, "but only the reformation of religion, and suppressing of idolatry." Knox wrote these words while actually in full revolt against the "authorities" of the regent of the realm, with the further professed desire to prevent the lawful queen, Mary Stuart, from being reinstated on the throne.

On 22 July the regent and her advisers suddenly determined to march upon Edinburgh, before the Congregation could concentrate its scattered forces, and the Protestants consequently decided to come to terms, one of the articles of the treaty being that the capital was to be free from those of its own religion. The choice of the majority would certainly not have been in favour of the new doctrines, and this and other points of the agreement were openly violated by the Congregation, who left preachers in possession of the churches, and retired to Stirling. Conscious at this juncture of the immense advantage of gaining the support of England, now a Protestant kingdom, they determined to appeal to Elizabeth, and to send Knox on a mission to her powerful minister Cecil. Knox had already written to Cecil with a letter for the queen which wore or less an apology for his hurry-pamphlet, "The Placard or Blast Against the Monstrous Blast." He sailed from Fife to Northumberland, and thence in August to Berwick, the governor of Berwick, and finally brought back to Stirling letters from Cecil more or less favourable to the demands of the Congregation for help, but indefinite in their terms. Further correspondence, however, elicited from Sadler, Elizabeth's agent, a gift of money, which encouraged the Scotch Protestants to believe that the Queen of England was on their side. Knox in a letter to Geneva, dated 2 September, describes his labours as envoy of the Congregation, and adds that ministers are now permanently appointed to eight of the chief towns in Scotland. A few weeks later, the regent being then at Leith, which she had strongly fortified and garrisoned with French troops, the Congregation took a bold step. Encouraged by English sympathy, and to escape imminent moral and religious danger, the powerful Earl of Arran took to their cause, they proceeded to depose—or, as Knox thought it more prudent to describe the measure, to suspend from office—the regent in the name of the young king and queen, whose great seal was counterfeited in order to give more legal validity to the step. Leith was vigorously besieged, but unsuccessfully, and Knox continued to appeal energetically to England for money, troops, and military commanders. The result was that Elizabeth sent a fleet to the Firth of Forth; the Congregation, thus reinforced, renewed the siege of Leith, and the regent took refuge in Edinburgh Castle, where she died on 10 June, 1560. Knox viliified this unfortunate princess to the end, but neither contemporary opinion nor the judgment of history has accepted his verdict, or his outrageous aspersions on her moral character. A month after her death the Treaty of Edinburgh was signed by representatives of England and France for the withdrawal from Scotland of the French and English troops. The Congregation held a solemn thanksgiving service at St. Giles's Church, Knox of course taking the leading part, and profiting by the occasion to prescribe to the pulpit the course which the Protestant leaders were bound to follow to secure the triumph of their cause. That triumph was indeed now imminent. Parliament met on 1 August, Knox preaching daily to crowded audiences "speciall and vehement" harangues on the need of rebuilding the temple, in other words of "restoring the privacy of religious worship by force of law" and restoring the spirit of the assembly—at which, by the way, the sovereign was not represented, and for which she had issued no writ of summons, and which was consequently not really a parliament at all—was never in doubt. The new Confession of Faith, drawn up by Knox and his friend, was inserted word for word; the authority of the pope was abolished; the celebration of Mass was forbidden—"under certain penalties", as one of Knox's biographers mildly remarks, the penalty for the third offence being in fact death. The formality of praying the young king and queen to God for the success of these enterprises was not dispensed with. Knox boldly says that such ratification was unnecessary—a mere "glorious vane ceremony". The Catholic Church of Scotland was extinct, as far as human power could extinguish it, and the Protestant religion officially established. Parliament rose on 25 August, having commissioned Knox and three other ministers to draw up the plan of church government, known as the "First Book of Discipline", which was ready by the date (20 December, 1560) of the first meeting of the newly constituted "General Assembly" of the Kirk, of which Knox was of course the most prominent member. The "Book of Discipline" was founded on the codes of various Protestant bodies, more especially on the Ordinances of Geneva and on the formularies of the German Church founded in London in 1550, both very familiar to Knox and both thoroughly Calvinistic in spirit. The opening words are that all doctrine contrary to the new evangel must be suppressed as "vieded and abhorrable" and that everyone of the "ancient superstition" must be cleared out of the land. The several districts of Scotland were to be under the spiritual charge of officials known as superintendents, until such time as ministers were forthcoming for each parish; and there was provision for a comprehensive scheme of national education, elementary, secondary,
and university. This plan, for which it has been customary to give all the credit to Protestantism, was devised on lines already laid down by the ancient Church; but as a matter of fact it was never carried into effect. Nor were the provisions for the diversion of the wealth of the old Church to national purposes and the disregard of the Protestant ministry resigned to Knox, but they had no idea of giving up their own share of the ecclesiastical plunder. "Converted in matter of doctrine", says Lang, "in conduct they were the most avaricious, bloody, and treacherous of men." Such as they were, they were the pillars of the new Church and the new religion.

In December, 1560, died the young King Francis II of France, "husband to our Jesebel", as he is styled by Knox, who lost his own wife, Marjorie Bowes, about the same time. The whole situation in Scotland was now changed. The Catholic earls sent Bishop John Lesley to invite the widowed queen to land in the Catholic north; but she distrusted them, not without reason, and confided rather in her Protestant half-brother, Lord James Stewart, who promised that she should be allowed the private celebration of Mass in Scotland. Mary landed at Leith on 19 August, 1561, and on Sunday, 24 August, she attended Mass in the chapel at Holyrood. This was followed by protests and riots; Knox publicly declared that "one mass was more fearful to him than 10,000 armed men", and in an interview with the queen inveighed against "that Roman antichrist", denounced the Catholic Church as a harlot, compared himself to Paul and Queen Mary to Nero, and indulged in much other abuse which he reports copiously in his "History" (suppressing most of Mary's replies) and calls "reasoning". The question of the queen's privilege to have her own Catholic services became a burning one: Lord James (now created Earl of Moray), Morton, Marischal, and other leading nobles and bishops supported the queen, while many of the preachers on the other. It was suggested to refer the question to Calvin; but the lords' view was meanwhile accepted, and Mary kept the Feast of All Saints with what Knox calls "mischievous solemnity". He continued his tirades against the queen both privately and from the pulpit, sometimes reducing her to tears by his violence. In the spring of 1562 he held a public controversy on the doctrine of the Mass with Abbot Quintin Kennedy, a Benedictine of Crossrague; and he also had a controversial correspondence with an able Catholic apologist, Ninian Wigt, who defended the Church of Rome.

Some months later Knox found himself in trouble for having summoned the "brethren" from all parts of Scotland to Edinburgh to defend—apparently by violence, if necessary—one Cranstoun, who was to be tried for brawling in the chapel royal. Knox's letter was interpreted by the council as treasonable, but when brought to trial he was judged to have done nothing more than his duty in summoning the brethren in time of danger. Soon after this—in March, 1564—greater surprise seems to have been caused by the second marriage of Knox, his bride being a girl of sixteen, Margaret Lauder, the daughter of Mr. John Lauder, the Laird, and the "people of God". He makes no mention of the fact himself in his "History". The Lords of the Congregation, in the summer of this year, publicly censured Knox for his violence in speech and demeanour against the queen, but Knox retorted with his usual references to Ahab and Jesebel, and maintained that idolaters must "dwell in fear where the seconers mount up against the "people of God". The Lords in vain cited the opinions of Luther, Calvin, Melancthon, and other Continental Protestants as entirely opposed to Knox's views, and requested him to write and ascertain their judgment on the questions at issue. Knox flatly refused to do so, as he describes himself, "the messenger from Mr. Calvin, and other Kirks", and, as he always produced Scriptural texts to back up his opinions, the Lords were silenced if not convinced. A year later he was again in conflict with the council in consequence of a vehement attack he had made from the pulpit on Mary and the young king-consort, Darnley, in their presence, about a month after their marriage. He was formally suspended for a time from preaching, but he seems to have regarded the Protestant ministry as resigned to the Church (not the council) commanded him to abstain he would obey "so far as the Word of God would permit": in other words, he would obey even the Church only so far as he himself thought fit. This particular sermon, which he printed with a preface, is the only extant specimen of his pulpit eloquence; it is extremely long, and dull to read, whatever may have been its effect when delivered.

The situation in Scotland was now, from the point of view of Knox and his friends, a gloomy one. Moray and the other lords who had protested against Mary's marriage to Darnley were now in exile; all hope of the queen's conversion to Protestantism was at an end; and her Catholic secretary Rizzio was high in her confidence, indeed her chief adviser. Whether Knox was actually privy to the foul murder of Rizzio before the queen's eyes on 9 March, 1566, is a matter of doubt; but his chief associate in the chamber at Holyrood, he was called "just and worthy of all praise" shows that his subsequent approval was beyond any doubt whatever. He thought it well at this juncture to leave Edinburgh for a time, and retired to his friends in Ayra, where he busied himself with the writing of his "History". In December he received a leave from the General Assembly leave of absence from Scotland for six months, so that he was not a witness of the events of the first half of 1567, which included the murder of Darnley, the abduction of Mary by Bothwell, and her marriage to him on 15 May, 1567. The queen was already, after the disaster of Carberry Hill, a prisoner at Lochleven, where she died on 10 July, and at once resumed, in spite of the dissuasion of Throgmorton, the English Ambassador, his pulpit invectives against the sovereign and his denunciations of the national alliance with France. On 29 July, Knox went to Stirling to preach at the coronation of the young king, James VI, when he protested against the rite ofunction as a relic of popery. The appointment of Moray to the regency brought him again into close association with Knox, who, however, after the fall of the queen, his great antagonist, never seems to have regained his former prominence in the country. "I live as a man already bereaved of all affairs", he wrote a little later to Moray's agent in England, "Foolish Scotland", he said on another occasion, "hath disobeyed God by sparing the queen", and he seemed constantly harassed and haunted by a dread of her restoration. Her escape from Lochleven appeared to justify his worst fears, but a fortnight later she was hopelessly defeated at Langside, and was a fugitive to England. Henceforth Knox's declining forces were devoted to his ministerial work, which he seems to have carried on with many intervals of weariness and depression. "With his one foot in the grave", as he describes himself, "the messenger from Mr. Calvin in January, 1569, was a great blow to him. He preached the Regent's funeral sermon in St. Giles's Church and, according to one of his admirers, "moved three thousand persons to shed tears for the loss of such a good and godlike governor". The shock of this event doubtless affected his health, and he was struck by apoplexy in the autumn, and never entirely recovered.

Knox continued to preach in his church in Edinburgh, but with the nobles, Protestant as well as Catholic, many of them his own former friends, in league for the queen's restoration, he was no longer at home or at ease. At the end of 1571 he retired to St. Andrews, where he remained for fifteen months, continuing to write, and preaching
occasionally, notwithstanding his infirmities, with his old fire and vehemence. In August, 1572, Mary's adherents having left Edinburgh, Knox was persuaded to return thither. The news of the massacre of St. Bartholomew had just reached Scotland, and Knox thundered from his pulpit (to which he had almost to be dragged), in the French ambassad- dor's denunciation of "that cruel murderer and false traitor, the King of France". On 9 November he took part in the induction-services of Mr. Lawson as minister of St. Giles's in his place; and fifteen days later, on 24 November, 1572, he died in his house at Edinburgh. Some narrations of his illness and death (by Richard Bannatyne and Thomas Merton) are printed by Laing in his edition of Knox's "Works" (vol. VI). At his burial, two days later, the Regent Morton uttered the well-known words, "Here lieth a man who in his life never feared the face of man." The facts of his life perhaps hardly justify these laudatory words. "Knox," says his learned and sympathetic biographer and editor, Dr. Laing, "cannot be said to have possessed the impetuous and heroic boldness of a Luther.

On more than one occasion he displayed a timidity or shrinking from danger scarcely to have been expected from one who boasted of his courage to suffer death in his country's cause." On his own showing he was courageous enough in his personal encounters with his unfortunate queen; but, according to another of his Protestant biographers, "he was most valiant when he had armed men at his back, and the popular idea of his personal courage, said to have been expressed by the Regent Morton, is entirely erroneous.

As to Knox's religion, it is sufficient to say, without questioning the sincerity of his convictions, that the reaction from the Catholicism of his youth seems to have landed him outside the pale of Christians united with the spirit of his Old Testament and with the gloomy austerity of the ancient prophets, he displays neither in his voluminous writings nor in the record of his public acts the slightest recognition of the teachings of the Gospel, or of the gentile, mild, and forgiving character of the Christian dispensation. Genial, amiable, and kind-hearted he may have been in private life, though it is difficult to see from what premises his panegyrists deduce his possession of those qualities; but the ferocity and unrestrained violence of his public utterances stand out, even in the rude and lawless age in which he lived, as surpassing almost everything recorded of his contemporaries, even those who were closely in sympathy with his political and ecclesiastical views. It is to his credit that he died, as he had lived, a poor man, and that he never enriched himself with the spoils of the Church which he had abandoned—"a trait in which he contrasts singularly with the Protestant laity who were his friends and adherents. Of his ability and his power of influencing those among whom he lived and laboured, there is no room to doubt. His gifts as a speaker and a preacher we have to take on the evidence of his contemporaries, whose testimony there is no need to question; of his command of his native tongue we have abundant proof in his writings, in particular in his "History", by far the most remarkable specimen of the vernacular Scots of the sixteenth century which has come down to us. The best edition of it is in his collected "Works", edited by David Laing in six volumes.

The "Life of Knox" (of whom no contemporary portrait exists) is the woodcut of him in Beza's "Icones", published at Geneva in 1680, and often since reproduced. Lord Torphichen possesses a portrait of him painted a century later, probably from Beza's. The so-called Somerville portrait, maintained by Carlyle to be the only authentic likeness of Knox, apparently represents a divine of the seventeenth century. Knox was survived by his widow, who married again, and by two sons of his first marriage (who both died childless), and three daughters of his second. Descendants of his youngest daughter still exist.

Knut. See CANUTE.

Kober, FRANZ QUHRN von, German canonist and pedagogue, b. of simple countryfolk on 6 March, 1821, at Warthhausen, Biberach, Württemberg; d. at Tübingen, 25 January, 1897. He first attended the Latin school in the neighbouring town of Biberach, and subsequently, in accordance with the desire expressed for Catholic theologians of the Diocese of Rottenburg, entered the preparatory seminary at Ebingen on the Danube. From 1840 to 1844 he pursued his studies in the seminary (Wilhelmsstift) of Tübingen, and on 4 September, 1846, was ordained priest in Rottenburg. After only a few years' cure of souls at Ulm, Franz Kober became a tutor in the seminary at Tübingen, and lectured on philology and the Pauline Epistles. From 1848 he taught canon law, to counteract the evil influence of the Josephinist professor Warmkönig, of the faculty of law, on which Catholic theological students even in Würt- temberg had depended for their training in canon law according to a custom existing in Austria since Joseph II. On 28 January, 1851, Kober became professor extraordinary in the faculty of Catholic theology, teaching pedagogy, didactics, and the Pauline Epistles. He was appointed professor ordinary of canon law and pedagogy on 8 September, 1857, having been professor extraordinary since 19 April, 1853. As such he wrote with good historico-legal method some excellent works: "Der Kirchenbann" (1857); "Die Suspension der Kirchendiener" (1862); "Die Deposition und Degradation" (1867), which belongs to ecclesiastical criminal subjects ("Das Interdit"); "Die körperliche Züchtigung als kirchliches Straf- mittel gegen Kleriker und Mönche"; "Die Gefängnis- strafe gegen Kleriker und Mönche"; "Die Geldstrafen im Kirchenrecht") in a series of essays, the majority being lengthy treatises, published in the "Archiv für das katholische Kirchenrecht" and especially in the "Theologische Quartalschrift" of Tübingen. In the last-named periodical appeared other essays on canon law ("Der Ursprung und die rechtliche Stellung der Generalkiriken"; "Der Einfluss der Kirche und ihrer Gesetzgebung auf Gesundheit, Humanität und Zivilisation"; "Medizin und Kirchenrecht"; "Die Residenz- pflicht der Kirchendiener bei feindlichen Verfolgungen und ansteckenden Krankheiten") and many book-reviews. Kober was also a frequent contribu- tor to the first and second edition of the Freiburg "Kirchenlexikon".

Sigmuller, Theol. Quartalschr., LXX (1897), 506 sqq.

JOHANNES BAPTIST SIGMULLER.

Koberger (KOBBERGER, COBBERGER) ANTHONY, German printer, publisher, and bookseller, b. about 1445; d. at Nuremberg, 3 October, 1513. He was descended from an old family of skilful artisans who had belonged to the town council as early as 1350, and was a goldsmith before he became a printer. After the completion of the first dated volume (Alcinous, 24 Nov., 1472), Koberger developed an activity reaching out in all directions, and about 200 works appeared before the year 1500.
mostly in folio form and some in bindings. In 1480 it had already outstripped Schöffer of Mainz, and, until practically the end of the fifteenth century, was the most important print-shop in the world. From a chance statement we learn that Koberger used twenty-four presses a day for his printing and employed over a hundred workmen. His publications demonstrate the generous plan on which his work was done. The paper will still outlast centuries. The type is almost exclusively strong and carefully set, and, in spite of its narrowness, gives a good, readable round script, which was later very widely used. An Antiqua type, resembling the Venetian, first appeared in 1492. The graceful Bible type of 1483, which is a facsimile of the writing used in fifteenth-century documents, deserves special mention. The beauty of the letterpress is greatly enhanced by tasteful arrangement of the sentences, often a difficult matter (for example in "Canon Law," 1482–83; "Boethius," 1486). Koberger took no less pains to have his print clear and black, using a newly-cast fount, as well as to have the books lucidly subdivided and decorated by the rubricator and illuminator. The employment of woodcuts in the Bible of 1483, which was embellished with 109 vignettes, marks a new epoch in the history of printing, and opened the way for such works as Schedel's "Weltchronik" (1493), a book which, with its 1,300 woodcuts from the drawings of the famous Wohlgemut and Pleydenwurff, was almost too profusely decorated. This latter, the greatest illustrated work of the century, greatly influenced the development of the woodcut, and especially the work of Dürer, who was drawn towards Koberger, not only as the godfather of the latter, but also by bonds of personal friendship. Towards the end of the century, the business of the printing-house greatly diminished, the last proof appearing in 1504. Publication by contract occupied a prominent place in Koberger's enterprises; this, together with the war, pestilence, and other disturbances, was doubtless the chief cause of the dissolution of the printing-house. For some years previously he had had printing done for him at Basle and Strasbourg, and from 1510 to 1525 the presses of Nuremberg, Hagenau, Strasbourg, Basle, Paris and Lyons were busily engaged with his work.

After Anthony Koberger's death (1513), his cousin Henry, who was nearly ten years his junior, took charge of the business as trustee for Anthony's children. He, too, was a business man of great ability and under Anthony's supervision had from the year 1480 displayed great business activity, especially in foreign countries. He took charge of the business under the more or less official partnership until the children were of age. The eldest son Anthony, a wayward youth, died in 1532; the second, Hans the younger, was actively engaged in the business of the house until his death in 1552. The publishing-house and the retail book trade were gradually given up before 1532, but the hereditary occupation of goldsmith and jeweller, which Anthony had never abandoned, still for a long period engaged the attentions of the family. Thus, when the family became extinct in 1629, it still possessed extensive landed property. As a printer, Koberger had built up a wholesale trade such as was seldom commanded before the discovery of the steam press. Yet he is more renowned as the founder of a wholesale publishing-house, handling all the scientific literature of his time, and dominating the book trade of the world. On the same large scale this "king of booksellers" had developed into a valuable asset of his house an honourable hawking trade. The scholarly Latin literature of the Middle Ages and its tendencies formed the main basis of his world-wide commerce. Of great merit are his special editions of the classical literature of the Fathers of the Church. His editions of the Bible are also very important; before the year 1500 fifteen different editions appeared, while the whole output of the house exceeded thirty folio editions, including some in binding. The Kobergers participated for a short time in the sale of the Reformation literature, and, at some periods were rivals of Elzevir in 1532. But further than this they took no part in the popular agitation. They remained true to the old principles of their world-renowned house, and devoted themselves to the sale of scientific works.

Kobler, Andreas, historian, b. at Mühldorf in Bavaria, 22 June, 1516; d. at Klagenfurt, 15 November, 1592. He made his preliminary studies at Salzburg, then studied theology at Vienna, and in 1536 was called to Mühldorf. Möller and Göres appear to have awakened in the young theologian his preference for the study of history. After his ordination (1540) he was a curate on the mission for four years, after which he entered the novitiate of the Society of Jesus at Graz. Later he was sent to America on account of the disturbances of 1548 in his own country, and was attached to the New York mission for five years, being occupied as professor of mathematics. Returning to Europe, he taught at Pressburg until 1587, when he was sent to Innsbruck as professor of church history. In 1585 he held this chair for four years, and was one of the college of Innsbruck from 1586 to 1666. In 1587 he became once more professor of mathematics at Innsbruck, and for two years rector of the college there. Returning then to Innsbruck, he dedicated nine years to literary work, was appointed superior (1587) of the seminary at Klagenfurt, where he was still vigorous and active in the pulpit when death overtook him in his seventy-sixth year. His literary works are for the most part on historical subjects. Besides contributions to periodicals, Kobler published: "Floriane Bauge, ein Jesuit in Paraguay" (1780); "Die Aufhebung der Gesellschaft Jesu" (1781); "Zwischen den Klostern im IX. Jahrhundert" (1786); "Die Äbtissin und Bekenner der Gesellschaft Jesu in England während der Jahre 1550–1681" (1816); "De Maistre, fünf Briefe über den öffentlichen Unterricht in Russland" (from the French); "Die Studien über die Klosterte des Mittelalters" (from the English, 1867); "Katholische Leben und Mittelalter" (from Remmig Digby's "More Catholic," 1887–9).

Kochanowski, Jan, b. at Szwyna, 1530; d. at Lublin, 22 August, 1554. He was inscribed in 1544 as a student in Crakow University, but left on account of the plague. We find him studying at Padua in 1552 under the best instructors. There he wrote many of his Latin elegies in imitation of Tibullus and Propertius; these early works have little value. Thence he travelled to France, where he lived till his mother's death in 1557, writing more and better Latin poetry. On his return to Poland he received his inheritance of Czarnola, and was for some time a courtier, first of some great lords, then at the Royal Court. During this period he produced, together with his best Latin elegies, his Polish poem Frazski (trilles). The former are the first really inspired poetry that appeared in Poland. The Frazski, comical and witty but sometimes coarse, are very instructive, showing what social life was at that time. His "Zgoda" (Concord) and the "Satsy" are political in subject. Very last of all his works is the "Lachy," the "Dzwoblasz" (The Standard) and "Wrożki" (Omens—in prose). This latter was a pamphlet warning Poles against future dangers and dissensions. He began his metrical translation of the Psalms, wrote more lyrics in Polish and Latin, and the poems "Dzwoblasz" and
"Sobotka" (description of certain old Polish customs). He is believed to have married about 1574. After Henry of Valois's flight from Poland, Kochanowski wrote two short Latin poems: the ode, "In Conventu Stesicensi", and "Gallo Crocicthi", the latter being a reply to an attack on Poland by the French poet, Philip Desportes. King Balthasar was Kochanowski's patron, and of his verses hitherto are full of political allusions to his reign. His "Odprawopaloów" (The Envoy Dismissed), dramatic in form, urged the nobles to fight Russia. In 1579 his "Psalter" was complete, written in a most beautiful style, and in 1580 appeared his last and best work, "Elegiae" (in Latin and Polish), a memorial to a little daughter's death. Kochanowski is the first true poet of his nation in point of time, and first, too, in excellence until Mickiewicz. The representative of the Polish chivalry and civilisation of his period, for his fellow-countrymen he is truly great, having created poetry and made it a gift to his nation—which none but the greatest could do. In religion, though influenced by Protestantism and the humanistic trend, he never ceased to be a Catholic, even when attacking the morals of priests and popes. He distinctly declares that disunion in religion would imperil the country, and bade innovators "go to Trent".

(Warsaw, 1890); Fleckiewicz, Life of J. K. in complete edition of works. IV (Warsaw, 1897); Löwenfeld, Lateinische Dichtungen des J. K. (Warsaw, 1897); Tarnowski, Jan Kochanowski (Kracow, 1885).

S. Tarnowski.

Kochowski, Vespasian, b. at Sandomir ?, 1633; d. at Krakow, 1699. He received his education at the Jesuit College, Sandomir, served in the army, and then spent the rest of his life on his estate. Sobieski valued him so much that he took him on his famous expedition to Vienna, the literary result of which was the "Commentarius de bello adversus Turcas". This and his other Latin chronicles are the best of his time and country. The collection of his short poems, entitled "Busy Idleness", contains many beautiful verses, and many more are curiously the subjects raised from religion to very coarse topics. They are also love poems, pleasing in their simplicity and nobility of sentiment; there are beautiful lamentations on his brother's death; and there are satirical poems full of wit and humour. Of all later poets he reminds us most of Kochanowski, though the romantic element is bluer but far more than Kochanowski a writer of what may be called historical poetry, and his pieces in this style are perhaps the finest he has written. From the death of Wladislaw IV till the election of Sobieski, every event of note is celebrated by a separate poem. What strikes one most is the religiously patriotic tone of his poetry. His "Psalmody", a work of great and genial originality, is distinguished by this tone. Some psalms are merely pious; but in others his prayer falls into a description of the war with the Turks, and mingle there with such outbursts of gratitude to God for victory, that one comes to feel personally more attached to this poet than to others more famous than he was. The Biblical form adapted to secular things constitutes a point of resemblance between Kochowski's poetry and the creations of several modern poets (Mickiewicz's "Book of the Pilgrimage", Słowiński's "Anhelo", etc.). Vienna saved by the Arta of God. Passages and even a certain epic talent, but is marred by want of artistic finish, proportion, and harmony. The same may be said of "The Stone of Testimony", a poem written to defend Lubomirski. His purely religious poems, "Christ Suffering" and the "Virgin's Garden" are distinctly inferior.

Order, Life of Vesp. J. Kochowski Kochowski in Transactions of the Krakoé Acad. of Sciences, phil. dept., XXXII. Tarnowski, V. Kochowski na swoich 80-letniu (Kochowski from a contemporary standpoint) (Lemberg, 1898). S. Tarnowski.

Kögler, Ignaz (called Lai in Chinese), with Father Adam Schall (q. v.) the most important of the five German Jesuits who visited China in 1579. He worked in the old Chinese missions, b. 11 May, 1680, at Landeberg in Bavaria; d. at Peking, 30 March, 1746. He entered the Society of Jesus on 4 Oct., 1696, and taught mathematics and Hebrew from 1712 to 1714 in the University of Ingolstadt (cf. Mederer, "Annalen", Ingolstadt, 1730 and "Annales Jansenitennullen Prunti"; Eichstädt, 1808), 178-54, and went to China in 1715. On account of his extraordinary and wide learning he enjoyed great consideration at the imperial court, and held the office of president of the mathematical astronomical tribunal for thirty years. He was a mandarin of the second class, and was even from 1731 a member of the supreme court of equity (Li-pu), a position which had never before been held by a foreigner ("Welt-Bott", No. 676). In accepting these positions, however, he refused the stipends attached to them. Father August von Hallestein, his biographer, considers him "one of the most cultivated minds that ever came into these countries" (ibid., No. 587). Kögler carried on a brisk scientific correspondence with a number of European scholars, such as Eusebius Amort and T. S. Bayer, the Orientalist, sending to the last-named many valuable contributions, for his "Museum Sinicum" (St. Petersburg, 1730) (cf. "Miscellanea Berolinensia", 1737, pp. 185, 189 sqq.; Gottfr. von Murr, "Journal", VII, 240 sqq.; IX, 81 sq.; "Neues Journal", I, 147 sqq.; II, 303, sqq.). He was twice visitor of the mission, and provincial of the Chinese and Japanese province, and, during the persecution which began under Emperor Yung-ching, had the main support of the suffering mission, which, through his influence at court, he so cleverly and bravely protected, and which so deeply deplored his death.

A. Huonder.

Kohlmann, Anthony, educator and missionary, b. July 1773, at Kalenberg, Alsatia, in the Rhine District; 11 April, 1836. He is to be ranked among the lights of the restored Society of Jesus, and among its most distinguished members in America, where he spent nearly a quarter of a century of his laborious life. At an early age he was compelled by the troubles of the French Revolution to go to live in Switzerland, where at the college of Fribourg he completed his theological studies and was ordained priest. Soon after, in 1796, he joined the Congregation of the Fathers of the Sacred Heart. With them he laboured zealously for two years in Austria and Italy as a military chaplain. From Italy he was sent to Dillingen in Bavaria, as director of an academy, then to Berlin, and next to Amsterdam to direct a college established by the Fathers of the Faith of Jesus, with whom the Congregation of the Sacred Heart had united (11 April, 1799). The Society of Jesus in Russia having been recognised (1801) by Pope Pius VII, Father Kohlmann entered the novitiate at Dumbéu on 21 June, 1803. A year later, in response to a call for additional
workers in the United States, he was sent to Georgetown, D. C., where he was made assistant to the master of novices, and went on missionary tours to the several German congregations in Pennsylvania and Maryland.

Affairs in the Church in New York having gone badly, Bishop Carroll picked him out as the person best qualified to introduce the needed reforms and to restore order, and with his fellow Jesuits, Benedict Fenwick and four scholastics, James Wallace, Michael White, James Redmond, and Adam Marshall, he took charge there in October, 1808. It was a time of great commercial depression in the city owing to the results of the Embargo Act of 22 December, 1807. The Catholic population, he states in a letter written on 8 October, consisted of "Irish, French, and as many Germans; in all according to the common estimation of 14,000 souls". Such progress was made under his direction that the cornerstone of a new church, old St. Patrick's Cathedral, the second church erected in New York City, was laid on 8 June, 1809. He started a classical school called the New York Literary Institution, which he carried on successfully for several years in what was then a suburban village but is now the site of St. Patrick's Cathedral on Fifth Avenue. In April, 1812, he also started a school for girls in the same neighbourhood, in which he who came at his instance for that purpose from their convent at Cork, Ireland.

About the same time Father Kohlmann became the central figure in a lawsuit that excited national interest. He had been instrumental in having stolen goods restored to a man, who demanded in court that the priest should reveal from whom he had received them. Father Kohlmann refused to do this, on the ground that his information had been received under the seal of confession. The case was taken before the Court of General Sessions, where after a trial the decision rendered by De Witt Clinton was given in his favour. Its principle was later embodied in the statute law passed on 10 December, 1828, which enacted that "No minister of the Gospel or priest of any denomination whatsoever shall be allowed to disclose any confession made to him in his professional character in the course of discipline enjoined by the rules or practices of his denomination." To a report of the case when published Father Kohlmann added a presentation of the teachings of the Church on the Sacrament of Penance. (Sampson, "The Catholic Question in America", appendix, New York, 1813.) The book excited a long and vigorous controversy with a number of Protestant ministers, and was followed in 1821 by an attack on "Irunitarianism, Theologically and Philosophically considered", in which Father Kohlmann replied to the assertions of Dr. Jared Sparks and other Unitarian leaders.

New York had no bishop as yet, the first appointed having died in Italy before he reached his see, and Father Kohlmann, in governed as administrator for several years. In 1815, expecting the early arrival of the second bishop (Connolly), he returned to the college of his order at Georgetown, D. C., as master of novices, and in 1817 became superior. In 1824, when Leo XII restored the Gregorian University to the direction of the Society of Jesus, Father Kohlmann was summoned to Rome to take the chair of theology, which he filled for five years. One of his pupils then was the subsequent Pope Leo XIII; another became later Archbishop of Dublin, and the first Irish cardinal (Paul Cullen). Leo XII and Gregory XVI both held Father Kohlmann in high esteem; he was attached as consultant to the staffs of the College of Cardinals and several of the important Congregations, including that of Extraordinary Ecclesiastical Affairs, of Bishops and Regulars, and of the Inquisition. The last part of his life he spent as a confessor in the church of the Gesù, where during the Lenten season of 1836 he overtaxed himself and brought on an attack of pneumonia that ended his career.

Koller, Marian Wolfgang, scientist and educator, b. Feistritz in Carniola, Austria, 31 October, 1816; d. of cholera at Vienna, 19 October, 1866. His work was very thorough; after studying the rudiments at Feistritz he went to Laibach, where he spent nine years (1802-11) in classical, philosophical, and scientific studies, and completed his school life by a course in higher mathematics at Vienna. From 1814 to 1816 he acted as private tutor in a family at Steinbach, and whilst here he was so attracted by the life and work of the Benedictines of Kremsmünster that he finally entered their novitiate on 5 October, 1816, taking the name Marian in place of his baptismal name of Wolfgang. He was ordained priest on 18 August, 1821, and after three years of very successful work in the parish of Sippachau he was recalled to Kremsmünster to teach natural history and physics. In 1830 he was relieved of the professorship of natural history and appointed director of the astronomical observatory, and during the next seventeen years by dint of indefatigable labours he increased the high repute of the observatory throughout Austria. He continued also to teach physics until 1839, when he was given general charge of the student body. His administrative abilities were so great as to attract the attention of the authorities at Vienna, where he was called in 1847. From this time on he was employed in high offices either in the University of Vienna or in the Department of Education, which was at that time undergoing a process of reconstruction. All matters pertaining to the Realeschulen, and to the polytechnic, nautical, and astronomical institutions, were placed under his immediate care, and, as a mark of appreciation for his share in the thorough organization of the Realeschulen, the emperor bestowed on him the Cross of the Order of Leopold on 27 May, 1859. In 1848 he was elected member of the Imperial Academy of Sciences, and always took a very active part in its proceedings. He was also an active writer, and contributed to various scientific periodicals and articles on astronomy, physics and meteorology. To his high intellectual abilities was added the charm of a genial character, and he thus won not only the esteem but also the affection of those with whom he came into personal contact. His principal work is the "Beleuchtung der periodischen Zeitschriften", published in the "Wiener Denkschrift" (1850).

Kolping, Adolph. See GESELENVEREINE.

Konsirsk, Stanislaus, b. in 1700; d. in 1773. This great reformer of Polish schools was a Friar who, during his long period of ordination and on his visit to Rome after his ordination, had the first idea of his life's mission. Returning to Poland through France and Germany (whose systems of education he studied on his way), and at first unsuccessful in his plans, he set to compiling the "Volumina Legum", the first volume appearing in 1732. About the same time of Audun he had the courage to form a society of which he wrote much in favour of Stanislaus Leszcynski, and, subsequently travelling in the Netherlands and in France, stayed for a time at the exiled king's court. Here he became convinced that reform in politics must be preceded by reform in education, and, returning home in 1738, he attempted to
change the subject-matter and methods of education in Poland. Good school-books and teachers were necessary; the latter he tried to train himself as “Magister novitiatorium” at Rzeszow college, and then sent them either to be tutors of young noblemen or to study abroad at his own cost. In 1740 he opened a collegium nobilium at Warsaw, a most important experiment. In the first year he had but one pupil, in the second there were more than ten, while in the third he had not room for all who came. The teachers he had instructed now began to help him in writing school-books, etc. In 1754 he built a college and obtained from Benedict XIV a change in the rule of the order; henceforth every Piarist was to be a teacher. The new schools as Piarist confreres and education was no longer a privilege of the nobility alone. The classics, history and geography, natural science, philosophy, Roman and Polish law, were taught, together with the modern languages; and for the first time the Polish tongue was taught as a separate subject. Mental, rather than purely mnemonic, work was encouraged; moral education was insisted upon; emulation succeeded to fear; self-sacrifice, honour, patriotism were inculcated as the duties of a citizen. Konarski had found theathers in use; he maintained the custom, thinking these performances might become very instructive, had Racine and Corneille performed, and himself wrote a tragedy, “Epaminondas.” He also introduced discussions and debating societies for advanced pupils. Together with this, he laboured to reform style in Poland, wrote “De emendandis eloquentiae vitis,” and attacked the bad taste prevalent at the time. The Piarist schools succeeded so well that all others were obliged to follow his reform. Konarski was subjected to envious attacks, and the Papal nuncio, Durini, suspected his orthodoxy. He cleared himself by his book, “De religione honestorum hominum.”

Holland effected a complete reformation in education, he returned to politics. From 1760 to 1763 appeared his “Effective Way of Deliberating,” which proved that the right of one to member of veto to the proceedings of the whole Diet had never been a law, but an evil custom, and showed from the procedure of other parliaments that a working majority was sufficient. The impression made was very great; it became, and even the most bigoted partisans of the veto were convinced. Thenceforward this custom was doomed—in itself a great step forward and a preliminary to the constitution of the Third of May. But the book contains many other valuable ideas. His style is clear, and his book may safely be recommended to the Piarist publications (v. g. the “Diplomaticus Codex”), and the “Volumina Legum” is his work. A great admirer of French civilization and taste—which, however, were not without danger in their tendencies, as was subsequently seen—he was also the last Latin writer in Poland; his “Pastoral Lyric” (1767) are perfect in style and diction. King Stanislaus Augustus caused a medal to be struck in his honour, with the well-merited inscription, “Sapere aude.”

König, Joseph, theologian and exequte, b. at Hau sen on the Aach, District of Hegau, Grand Duchy of Baden, 7 Sept., 1819; d. at Freiburg im Breisgau, 22 June, 1900. He was ordained to the priesthood in 1845. In 1847 König was privadozent, in 1854 extraordinarius, and from 1857 to 1894 ordinary, professor of Church history, and holder of the benefices, 11 chaplaincies attached to foundations. At the close of 1909 the secular priests numbered 998, the regular 83. The diocese contains 1,476,942 Catholics, 50,037 non-Catholic Christians, and 11,372 Jews. The great majority of the inhabitants are Czechs. Of the 32 vicariates and includes 1 curatus canonicalis (cure of souls combined with jurisdiction), 2 provostships, 3 archdeaneries, 38 deaneries, 404 parishes served by secular priests, 16 parishes served by members of orders, 10 other benefices, 11 chaplaincies attached to foundations. At the population is partly German and partly Czech. Three-quarters of the parishes are wholly Czech, over one-fifth wholly German, the rest include both German and Czech Catholics. The great majority of the secular clergy are Czechs, who minister even in parishes that are partly at the University of Freiburg of German priests. This latter phenomenon is to be explained partly by the fact that the Liberal tendencies long prevalent in Bohemia have influenced German students against the priestly life; partly by the material conditions of the German parishes, which, being mainly in the mountains and far afield, repel German candidates for the priesthood. The cathedral chapter
KÖNIGHOFEN

consists of the dean, who is also vicar-general, 7 regular and 6 honorary canons; the episcopal consistory is composed of the dean and 9 councillors. The ecclesiastical education of students is divided into a preparatory seminar for priests, founded in 1802 and connected with the theological institute (1909): 6 professors, 3 tutors, 75 students; a seminary for boys, opened in 1860, with at present 142 pupils; the gymnasia of the Benedictine Abbey of Braunau. The religious community is efficiently enlivened by legends, jokes, and interesting details concerning the lives of the people. He possessed a good knowledge and availed himself very freely of the sources of medieval prose and poetry (particularly Ekehard, but also Eusebius, Bede, Hermannus Contractus, Martinus Polonus, and others). On the other hand, those sections which treat of contemporary history are very valuable. In politics he was an adherent of King Louis the Bavarian, and to his imperialistic sentiments united a very strongly marked feeling for German nationality. Greatly influenced by the Alsatian chronicler Closener, he has himself been in many cases the authority for later historians. The chapter of the "Chronik" contains an alphabetical list of historical events with dates, forms thus a kind of compendium of history, and was often copied separately. The "Chronik" was printed as early as 1474, and later at Strasbourg in 1698. The best edition is that of Hegel in "Chronica del duci Ludovico Il Giovane", VIII-LX (Leipzig, 1870-1). In addition we possess a Latin-German glossary by Könighofen, which may, however, in its essential details be traced to Closener.

KÖNINGS, Anthony, b. at Helmond, Diocese of Bois-le-Duc, Holland, 24 August, 1821; d. 30 June, 1884. After a brilliant course in humanities he entered the diocesan seminary, where he soon became conspicuous for his great piety and his eager thirst for learning. Feeling a call to the monastic life, after mature deliberation he entered in 1842 the Redemptorist novitiate at St. Tong, Belgium, but was permitted to make a religious profession on 6 November, 1845. His superiors, recognizing the ability of the young cleric, sent him at once to the house of higher studies to afford him time to prepare for the work of teaching. He was ordained priest at Wittern, on 21 December, 1864. After being engaged for some time as teacher in the philosophical college of the congregation, he was called to fill the chair of moral theology and later that of canon law. Whilst holding these posts, he was appointed prefect of students, a most important office in the congregation.

For some time he was also master of novices, and accompanied the provincial, Very Rev. F. Dechamps (afterwards Archbishop of Mechin and cardinal), to Rome. Later he visited Rome a second time to take part in the general chapter of 1855, which united all the different provinces and decided upon Rome as the residence of the superior general of the order. Father Könings was appointed rector of Amsterdam, and in 1860 of the house of studies at Wittern, which post he continued to occupy until 1865, when he was appointed Provincial of Holland. In 1870 he was sent to the province of Baltimore to take part in the work of teaching moral theology and canon law to the young clerics of the Redemptorist house of studies at Ilchester, Maryland. Therefortheon all his zeal and learning, his piety and his experience were employed in training the clerics of the congregation for the arduous work of the ministry. As professor of moral theology he soon felt the need of a suitable text-

VIII-44

doubtedly an excellent preparation for his principal work, the "Chronik". The latter he began in 1832; he twice revised it, and brought it down to the year 1415. One of the first universal historical works in German prose, it includes also a territorial history of Alsace and a local history of Strasbourg. Recognizing the needs of his time, he wrote it for the Klugen, that is, cultivated, laymen, "who read such things as eagerly as learned Parsons". His narrative is therefore popular, and frequently enlivened by legends, jokes, and interesting details concerning the lives of the people. He possessed a good knowledge and availed himself very freely of the sources of medieval prose and poetry (particularly Ekehard, but also Eusebius, Bede, Hermannus Contractus, Martinus Polonus, and others). On the other hand, those sections which treat of contemporary history are very valuable. In politics he was an adherent of King Louis the Bavarian, and to his imperialistic sentiments united a very strongly marked feeling for German nationality. Greatly influenced by the Alsatian chronicler Closener, he has himself been in many cases the authority for later historians. The chapter of the "Chronik" contains an alphabetical list of historical events with dates, forms thus a kind of compendium of history, and was often copied separately. The "Chronik" was printed as early as 1474, and later at Strasbourg in 1698. The best edition is that of Hegel in "Chronica del duci Ludovico Il Giovane", VIII-LX (Leipzig, 1870-1). In addition we possess a Latin-German glossary by Könighofen, which may, however, in its essential details be traced to Closener.

KÖNINGS, Anthony, b. at Helmond, Diocese of Bois-le-Duc, Holland, 24 August, 1821; d. 30 June, 1884. After a brilliant course in humanities he entered the diocesan seminary, where he soon became conspicuous for his great piety and his eager thirst for learning. Feeling a call to the monastic life, after mature deliberation he entered in 1842 the Redemptorist novitiate at St. Tong, Belgium, but was permitted to make a religious profession on 6 November, 1845. As professor of moral theology he soon felt the need of a suitable text-

VIII-44
book, less voluminous than the old manuals and one more adapted to the peculiar conditions existing in North America. Father Konings thereupon undertook the task of writing such a handbook, which he subsequently published in two volumes (Boston, 1874).

This work, based on the moral theology of Gury, was greeted with hearty approval on its appearance, not only on account of the simplicity of its language, but also by reason of the succinct form into which he cast the teach of the great theologian St. Alphonsus. He was the first to give a methodical exposition of the views of the saint regarding the vexed question of equiprobalism. His thorough acquaintance with American law also greatly enhanced the value of his work. A devoted son of the great doctor who inherited the honors of the Catholic professorship of St. Alphonsus. Later, at the suggestion of the Rt. Rev. T. Mullen, Bishop of Erie, Pa., he published a commentary on episcopal faculties (intended for the United States), a work which was afterwards revised and enlarged by Rev. Jos. Putzer, C.S.S.R. It has since gone through four more editions. In addition to these works he published several smaller books on various theological subjects. He rendered a great service to the cause of the parochial schools by his little work, "De Absolutio Parentibus, etc.", a pamphlet which despite strong opposition, was taken by the Holy Office as an Instruction to the bishops of the United States. As a matter of fact the very words of Konings were employed in the Instruction sent by the Holy Father and incorporated in the "Acta et Decreta Concilii Plenarii Baltimorensis tertii", p. 279 sq.

Since that time this Instruction has been the norm in the difficult matter of providing parents that send their children to the public schools. The gist of his pamphlet is found in his "Moral Theology".

Konings, on account of his great learning, was consulted by prelates and priests from the entire United States; he was invited to examine candidates for degrees in theology and canon law, and was summoned as an expert in trials touching ecclesiastical questions, especially in the celebrated trial resulting from the financial difficulties of the late Archbishop of Cincinnati, J. B. Purcell. His last charge was that of prefect of the second novitiate, in which the Redemptorist priests immediately after ordination and immediately after their Apostolic work of the missions. Whilst occupying this post, he fell seriously ill, but nothing could daunt his zeal. From his sick-bed he continued his work of instructing and directing with his experience the young priests committed to his care. In the midst of these labors he passed away to his eternal reward. To honor him in the Freeman's Journal (12 June, 1884), "those who studied him found him a profound theologian, and a true exponent of St. Alphonsus. The beacon light of theologians in America has gone down, but his fame will linger in the heart of the Catholic Church in America. As a scholar he was known to the world!"

Konings's writings include the following: "Theologia Moralia", two editions by Konings and two by H. Kuper, C.S.S.R.; "Commentarium in Facultates Apostolicas" (New York, 1884); "De Absolutione Parentibus qui prolem sollicitis publicis et promissis instituent tradunt negligentia necesse" (Boston, 1874); "Bulla Jubilaei 1875 cum notis practicis" (New York, 1875); "SS. D. N. Leonis XIII Litterarum Apostolicae quibus extraordinarium Jubilium indicatur in usum cleri noti praecellenter illustratum" (2 editions, New York, 1881); "General Confession Made Easy" (New York, 1870), and in German "Die Generalbeichte erleichtert"; "Theologia Moralis Fundamentalis seu Tractatus de Actibus Humanitatis" (New York, 1882); "Verordnungen fur die Missionen und apostolische Werkzaehler", he left in manuscript: "Introductio in Just Canonicum"; "Compendium Juris Canonicum"; "De Jure Regularium"; and a complete set of cases in moral theology (Latin) for American students, some of which were published under the initial "R" in "The Pastor", edited by the late W. J. Wiseman.

JOHN A. HANDLEY.

Konrad, surnamed der Pfaffen (the priest), a German epic poet of the twelfth century, author of the "Rolandlied", a version of the popular "Chanson de Roland". We know almost nothing concerning his life. In the epilogue of the Heidelburg MS., the poet calls himself "der Pfaffe Kuonrat", and informs us that he translated from the French, first into Latin, and then into German, without adding or omitting. We learn further that the French original was procured for him by Duke Henry, at whose request he composed his lay. Formerly it was supposed that this Duke was Henry the Lion (1156-80), and that the poem was composed between 1173 and 1177. But it is now agreed that the duke in question was Henry the Lion, who ruled Bavaria from 1125 to 1191. The date of the composition of the poem would then be about 1131, in which year Henry is known to have made a journey to Paris, where he presumably procured the French manuscript. The lay itself was written in Bavaria, probably at Ratisbon, as is indicated also by the frequent mention of Bavarian names and places. That a translation was first made into Latin is shown by the numerous Latin endings that remain. The German version, however, is not slavishly literal. A comparison with the French original, as we know it, reveals quite a number of additions, especially in the way of passages in praise of the Norman princes and people. The crusading spirit, already noticeable in the "Chanson", is still more marked in the German poem. The fervour of the crusader has displaced the patriotic enthusiasm of the French epic, and gives the "Rolandlied" a pronounced religious tone. Charlemagne is depicted as the model Christian prince, while Roland is the personification of the Christian knight's life in battle for his Faith. Yet the influence of the folk-epic is quite evident, as, for instance, in the passage where the emperor's dazzling eyes are described. Altogether, there are 9044 verses. The form is the short rhymed couplet, the rhyme being often mere alliteration. Roland has been accredited with the authorship of the "Kaiserschronik", but not on convincing evidence.

We possess no complete MS. of the poem. The oldest and most important MS., that of Strasburg, was burned during the siege of 1870. A portion of it had appeared in print in Schiltemberg's "Thesaurus" as early as 1727. Next in importance is the Heidelberg MS., adorned with thirty-nine miniatures. The other existing MSS. are mere fragments. Editions by Grimm, "Rualandies lie" (Gottingen, 1838), based on the Heidelberg MS.; and by Bartsch (Leipzig, 1874), based on the Strasbourg MS. Selections by Piper, "Die Spielmannschiickung", II, 14-91 (in Kirsch- nem, "Deutsche National Litteratur", II).

Goldner, "Rolandslied des Pfaffen Konrad" (Munich, 1887); Barchfellner, "Studien zur Rolandsliedliteratur" (Halle, 1898); cf. introduction in Piper's edition.

ARTHUR F. J. REMY.

Konrad of Lichtenau, a medieval German chronicler, d. at Urspring, in the year 1240. He descended from a noble Swabian family, and resided for some time at the imperial court. Having become a monk, probably during a temporary residence in Rome at the court of Pope Innocent III, he entered
the Premonstratensian Order, and in 1226 became Abbot of the monastery of Ursberg in Bavaria, where he died. For a long time he was reputed the sole author of the so-called "Chronicon Urspergensis," which narrates the history of the world from King Ninus to a.p. 1229. But critical investigation has shown that the work consists of several parts, of different authors, and that the first parts, down to 1215, were written, in part at least, by Ekkehard of Aura (q. v.); a continuation, from 1216 to 1223, was added by Abbot Burchard (d. 1230), Konrad's predecessor as Abbot of Ursberg. Then Konrad continued the work to 1229 and made the final reduction. Later continuators like Karl von der Eiden broke the chronicle down to 1507. The first edition was brought out by Miller and Foeni-seca at Augsburg (1515) from a copy in the possession of Konrad Peutinger. Another edition, by Melanthon and Mylius appeared at Basel (1569). It was this edition that erroneously attributed the sole authorship of the chronicle to Konrad. The last edition was printed at Strasbourg in 1609. The "Chronicon" was edited by Abel and Weiland in the "Mon. Germ. Hist.: Script."(XXIII, 333–83; separate edition at Hanover, 1674.

Christian Uspergenskronik und ihr Verfasser (Berlin, 1809). The critical discussions and bibliographies were by Wattenbach, Deutschlands Geschichtsquellen im Mittelalter, 11th ed., Berlin, 1917. Bibliographie Historica Medii Aevi (Berlin, 1896), 12 v.v. Burchardus (p. 178), Chronicon Urspergensis (p. 190), and Ekkehardus (p. 400).

Konrad of Würzburg. For Konrad of Würzburg, see Conrad of Würzburg.

Konrad of Magdeburg, scholar and writer, probably at Mainz, near Schweinfurt, Bavaria, 2 February, 1306; d. at Ratisbon, 11 April, 1374. The dates of birth and death are not absolutely certain, and Konrad himself calls his native place Magenberg. He studied at Erfurt and Paris; at the latter he received the degree of Master of Arts, and he taught philosophy and theology there for several years. In 1337 he was made head of St. Stephen's school at Vienna. From 1342 he lived at Ratisbon, where he was first a parish priest, proving himself to be an able preacher. Later he became a cathedral canon, and member of the town council. In 1357 he made a journey to the Curia at Avignon. Konrad is one of the most prolific German writers of the fourteenth century. His best-known and most widely read work is his "Buch der Natur," which is still of importance for the history of culture. According to his own statement he was engaged in writing it in 1349. A Latin poem, "De naturis rerum," of the Dominican Thomas of Cantimpré (d. 1263), served as model. Konrad, however, prepared his book with considerable freedom; much of the original was omitted, his own observations were introduced, corrections were made, and so on. His work gives a survey of all that was known of natural history at that time and is, besides, the first natural history in the German language. It was widely read up to the sixteenth century, and numerous manuscript copies of it are still extant, eighteen being at Munich. The first printed edition with a date is of 1475, and was issued at Augsburg from the shop of Hans Bämler, under the title of "Puch der Natur." It was printed at least six times before 1500; some of the editions were illustrated, all are now rare incunabula. A new edition of the original text was issued by Franz Pfeiffer (Stuttgart, 1861), with an introduction; an edition in modern German verse by H. Schulz (Greifswald, 1917).

Konrad's numerous other writings there should be mentioned: the "Sphära," a small compendium in German of astronomy and physics, prepared from the Latin work of Joannes à Sacrobosco; the poem "Planetae ecclesiae in Germania" (1337); a hymn in praise of the Virgin; and a work on "Speculum fidei-cum-humanae" (1348); "De errores us Begehardorum et Beguinarum"; "De translatione imperii" (1355); the large work "OEconomica," written between 1353 and 1363; "Tractatus contra mendicantes ad Papam Urbanum V"; several biographies of saints, and some historical treatises, chiefly dealing with the local history of Ratisbon. In his writings Konrad shows himself to be a strong adherent of the pope, an opponent of the philosophy of Ockham, and a stern critic of the moral failings of his age and of the clergy.

Priffler and Schulz, see above; Braunmiller in Kirchenlexikon, s. v. Konrad von Magdenburg; Allgemeiner Deutscher Biographen, XVI (Leipzig, 1893); Creuzer, Mythologie, gives the date of death incorrectly as 1398; Lohne, Deutschlands Geschichtsquellen im Mittelalter, I (3rd ed., 1861), p. 223.

Joseph Rompel.

Konrad of Würzburg, a Middle High German poet, b. about 1230; d. at Basel, 1257. He was the most important of the romancers that followed the three great masters of the Middle High German epic. His special model was Gottfried von Straßburg. He lived mostly at Strasbourg and Basel. Like Gottfried he was of burgher rank and hence is called Meister, not Hir. His poems consist of metrical romances, minnesongs, and Sprüche or sayings. Among the latter, the "Sprüche des Georg, der Ritter," is a version of the well-known Lobhenglin legend. It is preserved only in fragmentary form and is based indirectly on the French poem "Chevalier au Cygne." In this version the Grail does not figure at all. Other short narrative poems are "Otto mit dem Bein" (Otto with the Beadle), "Hans von Kempten," and the famous "Herzmähre" (Tale of a Heart), a fantastic tale of knightly loyalty and love. A more ambitious effort is "Engelhart," one of those extravagant stories of friendship so popular in the Middle Ages. For his lengthy epic Konrad used French source materials. The poem, written probably about 1277, is based on the French romance of Denis Pyramus, and has for its subject the adventures of the knight Partonopeus and the fairy Meliur. The bulky epic on the Trojan War is based on Benoît de St-More's "Roman de Troie," with additions from Ovid. It contains upwards of 50,000 verses, but not all of them are Konrad's own. The costumes and atmosphere are not at all antique but thoroughly medieval. Besides these epic, Konrad wrote also poems of allegorical or legendary content. "Der Werte Löhn" ("The World's Reward") is an allegory showing the vanity of worldly things. Noticeable sources Konrad composed poems in the legends of St. Alexius, Pantaleon, and Pope Sylvester, also stories of asceticism and martyrdom. His most important religious poem is in honour of the Blessed Virgin, entitled "Die goldene Schmiede" (The Golden Forge). The poet conceives himself as a smith who is working a precious ornament for the Virgin out of epithets and attributes. Another allegorical poem in strophes, called "Klage der Kunst" (Complaint of Art), laments the decay of taste for poetry. There is little originality in Konrad's work; its chief merit lies in its technical perfection. The "Pforten," together with songs and sayings, was edited by Barsch (Vienne, 1874); the "Schwanritter" by Roth (Frankfort, 1861); "Kaiser Otto" and "Herzemmäre" by Lambel in his "Erzählungen und Schwanä" (2nd ed., Leipzig, 1883); "Der Werte Löhn" (Frankfort, 1849); "Engelhart" by Haupts (Leipzig, 1844); "Die goldene Schmiede" by W. Grimm (Berlin, 1940); "Silvester" by the same (Göttingen, 1841); the "Trophicohnen Krieg" by A. von Keller (Stuttgart, 1858).

Arthur F. J. Rem.

Konigs, Ferdinand, German missionary of the eighteenth century, b. 2 December, 1703, at Warras-
din, Croatia; d. 10 September, 1758. Having joined the Society of Jesus in 1719, Konisg—a name that is variously written Konschak and (in its Spanish form) Consag or Gonzaga—went to Mexico in 1739, and after 1744 worked principally in the mission of Lower California, of which he was one of the most prominent apostles. He was at first superior of San Ignacio, and later visitor of the whole mission. "It is hardly possible," writes Clavigero (op. cit. in pra.) "to tell all that this zealous man accomplished notwithstanding his delicate health. A thorough explorer and the learning of the cartographer were combined with the missionary's ardent zeal for souls, and his exploration of the maritime country as far as the Rio Colorado entitles him to an important place in the history of the exploration of America.

For Konisg's literature of the following:
1. in manuscript: "Historia de las Misiones de la California," used by Venegas in his "Noticia de la California" (Madrid, 1757);
2. "Carta del P. F. C. de la Comp. de Jesús, Visitador de la Mis. de Cal.", with forty-three pages of explanation (1 Oct., 1748);
3. "Descripción de la Tierra de los Californiales," by the P. F. Gonzaga de la Comp. de Jesús, 1746", in the British Museum; various documents in Simancas, Spain, Est. leg., 5040, 118, 5042, 19;
4. (2) printed: a letter of date 1731 in the "N. Welt-Bott," no. 743;
5. "Diario de California" (Paris, 1767); account of the expedition to the Pacific under de la Conception, i.e. de las Californias.

Koran, the sacred book of the Mohammedans, by whom it is regarded as the revelation of God. Supplemented by the so-called Hadith, or traditions, it is the foundation of Islam and the final authority in dogma and belief, in jurisprudence, worship, ethics, and in social, family, and individual conduct. The name Koran, or better Qur'an, from the Arabic stem Qār'a, "to read," "to recite," means the "Reading," the "Revelation," i.e. the "Book of God." It is also called—to select a few of many titles—"Alkīthā (The Book)," "Furqān" ("liberation," "delivery," of the revelation), "Kitāb-ul-lāh" (Book of God), "Al-tanzfīl" (The Revelation). It consists of one hundred and fourteen suras or chapters, some being almost as long as the Book of Genesis, others consisting of but two or three sentences. It is smaller than the New Testament, and in its present form has no chronological order or logical sequence.

Contents and Analysis. The Koran contains dogmas, legends, history, fiction, religion and superstition. In social, family and political, threats, liturgy, fanciful descriptions of heaven, hell, the judgment day, resurrection, etc.—a combination of fact and fancy often devoid of force and originality. The most creditable portions are those in which Jewish and Christian influences are clearly discernible. The following analysis is based on Sir William Muir's chronological arrangement (op. cit. infra).

First Period. Suras 103, 91, 106, 101, 95, 102, 104, 82, 92, 105, rhapsodies, which may have been composed before Mohammed conceived the idea of a Divine mission, or of a revelation direct from Heaven. These suras are called Nahy, or the Prophet's traditions.

Sura 96, the command to "recite in the name of the Lord"; sura 111, the unity and eternity of the Deity; sura 74, the command to preach, the denunciation of one of the chiefs of Mecca who scoffed at the resurrection, unbelievers threatened with hell; sura 111, Abu Lahab (the Prophet's uncle) and his wife are cursed.

Third Period (from the beginning of Mohammed's public ministry to the death of the Holy Family): Suras 87, 97, 88, 80, 81, 84, 89, 84, 85, 83, 78, 77, 76, 75, 70, 109, 107, 55, 56, descriptions of the resurrection, paradise, and hell, with references to the growing opposition of the Korish tribe.

Fourth Period (from the sixth to the tenth year of Mohammed's ministry).—Suras 67, 33, 32, 39, 73, 79, 84, 93, 113, 34, 31, 69, 68, 41, 71, 99, 28, 4, 47, 59, 44, 57, 30, 56, 64, 48, 62, 60, 51, narratives from the Jewish Scriptures and from rabbinical and Arab legends; the temporary compromise with idolatry is connected with sura 53.

Fifth Period (from the tenth year of Mohammed's ministry to the Flight from Mecca).—Suras 46, 72, 35, 95, 39, 18, 27, 42, 40, 38, 20, 43, 12, 11, 10, 31, 16, 43, 28, 22, 21, 17, 16, 13, 29, 7, 113, 114. The suras of this period contain some narratives from the Gospel, enjoin the rites of pilgrimage, refute the cavillings of the Korish, and contain vivid descriptions of the resurrection, judgment, heaven, and hell, with proofs of God's unity, power, and providence. Gradually the suras become longer, some of them filling many pages. In the later suras of the fifth period Medina passages are often interpolated.

Last Period (suras revealed at Medina.).—Sura 98: on good and bad Jews and Christians. Sura 2: the blessed is the one who is exalted from the red heifer described in verse 67 as having been sacrificed by the Israelites at the direction of Moses. It is a collection of passages on various subjects, delivered during the first two or three years after the Flight. The greater portion relates to the Jews, who are sometimes exulted and sometimes reproved. Biblical and related traditions are interpolated. This sura contains the order to change the Qibla (or direction at prayer), a denunciation of the disaffected citizens of Medina, injunctions to fight, permission to bear arms in the sacred months, and much matter of a legislative character promulgated on first reaching Medina, with passages of a later date interpolated. Sura 3 belongs partly to the time immediately after the Battle of Bedr, which is described. Another part relates to the defeat of Ohod and the second expedition to Bedr. The Jews are referred to in terms of hostility. The interview with the Christian deputation from Naerath and the reference to the "Book of God" (see supra) is of a later date. Passages pertaining to the farewell pilgrimage are introduced with other (probably) earlier texts on the rites of pilgrimage. Sura 8 contains instructions on the divisions of the spoil taken at Bedr. Some parts are in the old Meccan style and the Korish are frequently referred to; it was written after the Meccans were enjoined, and idolaters of Mecca threatened. In sura 62 the Jews are denounced for their ignorance; the Friday service is to take precedence of secular engagements. In sura 5 the Jews are reviled; the doctrines of the Christians are controverted; it contains also civil ordinances and miscellaneous restrictions. Sura 59, on the siege and expulsion of the Banu Nadhir. Sura 4 is entitled "Women", from the large portion devoted to the treatment of wives and the relation of the sexes. There are also ordinances on the law of inheritance and general precepts, social and political. Idolatrous Meccans are to be shunned, and there are animadversions against the Jews. Sura 58: on divorce and other social questions. The "disaffected" are blamed for taking the part of the Jews. Sura 65: on divorce and kindred subjects, with some religious observations. Sura 63: menaces against the civil disorders; in its language it looks back to the expedition against the Banu Mustaliq. Sura 24: vindication of Ayisha, with the law of evidence for conjugal unfaithfulness, and miscellaneous precepts. Sura 33, composed of portions covering the year A. H. 5. The marriage of the Prophet with Zeinab, wife of
his adopted son, is sanctioned. There are various passages on the conjugal relations of Mohammed, the siege of Medina, and the fall of the Banu Qureizah. Sura 57: injunctions to fight and contribute towards the expenses of war. The disaffected are warned. Chastity, and not begetting of children, is enjoined. The Prophet legislates on war; speedy victory is promised.—The remaining suras belong exclusively to the last five years of the Prophet's life. Sura 48 refers to the truce of Hodeibah, and the prospect of victory and spoil to be obtained elsewhere. Sura 60: on the treatment of the wounded, and the right of a free Meccan to expel idolaters of Mecca to be shunned. Sura 66: on the affair of Mohammed and the Coptic maid. Sura 49: blaming the profession of the Bedouin Arabs as insincere, chiding the deputation which called out rudely at Mohammed's door, and exhorting believers against distrust and uncharitableness among themselves.

Sura 9 treats of the campaign to Tabuk (A. H. 9). It opens with the "release" promulgated at the pilgrimage of the same year and declares the antagonism of Islam to all other religions. All but Mohammedans are excluded from Mecca and the rites of pilgrimage. Idolaters are threatened with slaughter and slavery. Wars are defined as holy wars.
prophecy is no longer merely trying to convert his hearers by examples, promises, and warnings; he addresses them as their prince in general, praising them or blaming them for their conduct, and giving them laws as occasion required." "The Qur'an" in "Sacred Books of the East," 1, Oxford, 1880, pp. LXI, LXII, and LXIII.

Sources.—The sources of the Koran may be reduced to six:—(1) The Old Testament (canonical and apocryphal) and the hybrid Judaism of the late rabbinical period. During Mohammed's time the Jews were numerous in many parts of Arabia, especially around Medina. Familiarity with them is undoubtedly responsible for many Old Testament stories alluded to in the Koran. Later Judaism and Rabbinism are equally well represented (Geiger, "Was hat Mohammed aus dem Judenthum aufgenommen?", Wiesbaden, 1833; "Judaism and Islam", Madras, 1898). (2) The New Testament (canonical and apocryphal) and various heretical doctrines. On his journeys between Syria, Hijaz, and Yemen, Mohammed had every opportunity to come in close touch with Yemenite, Abyssinian, Ghasanid, and Syrian Christian heresies; his influence of orthodox Christianity upon the Koran has been slight, apocryphal and heretical Christian elements, on the other hand, are one of the original sources of Koranic faith. (See Muir, op. cit. infra, 66-239; Tisdall, "The Original Sources of the Qur'an", London, 1912, pp. 5-51.) (3) Sabianism, a combination of Judaism, Manicheism, and old disfigured Babylonian heathenism. (4) Zoroastrianism.—On account of Persia's political influence in the north-eastern part of Arabia, it is natural to find Zoroastrian elements in the Koran. (5) Hanifism, the adherents of which, called Hanifs, must have been considerable in number and influence, as it is known from contemporary Arabian sources that twelve of Mohammed's followers were members of this sect. (6) Native ancient and contemporary Arabian heathen beliefs and practices.—Weillhausen has collected in his "Reise des arabischen Heidentums" (Berlin, 1897) all that is known of pre-Islamic Arabian heathen belief, traditions, customs, and superstitions, many of which are either alluded to or accepted and incorporated in the Koran. From the works of Ash-Shahristsâni, who wrote a history of the various sects and creeds, and Abu-Fida, the well-known and generally admitted author of the twelfth century, it is clear that the religious beliefs and practices of the Arabs of Mohammed's day form one of the most heathen sources of Islam. From this heathen source Islam derived the practices of polygamy and slavery, which Mohammed sanctioned by adopting them.

Authorship, Compilation.—It is generally admitted that the Koran is substantially the work of Mohammed. According to the traditionalists, it contains the pure revelation of God, its primary Author. Mohammed, the Koran tells us, was inspired by the Holy Ghost, Whom he held to be an angel, and Whom he called, in later chapters, written at Medina, by the name of Gabriel.

Opinions vary as to Mohammed's ability to read and write. Some traditionalists maintain that prior to the Divine revelation he could neither read nor write, but that immediately afterwards he could both do; others believe that even before the revelation he could read and write; while others, again, deny that he could ever do so. Thus it is uncertain whether any of the suras were written down by the Prophet himself or all delivered by him orally and afterwards written down by others from memory.

The Koran is written in Arabic, in hymned prose, the style differing considerably in the various suras, according to the various periods of the Prophet's life. The language is universally acknowledged to be the most perfect form of Arabic speech, and soon became the standard by which other Arab literary compositions had to be judged, grammarians, lexicographers, and rhetoricians presuming that the Koran, being the word of God, could not be wrong or imperfect.

Mohammed's hearers began by trusting their memories to retain the words of the revelation they had received from him. Later, those who could write traced them in ancient characters on palm leaves, tanned hides, or dry bones. After the Prophet's death all these fragments were collected. Zaid ibn Harithah, Mohammed's uncle, was charged by Abu-Bekr, the first caliph, to collect all that could be discovered of the sacred text in one volume. The chapters were then arranged according to their length and without regard to historical sequence. The revision made twenty years later affected details of language and grammar rather than the arrangement of the text.

The best and most accessible edition of the Koran is that of Flügel, "Al-Quran: Corani textus Arabicus" (Leipzig, 1834 and since). Maracci's famous Latin translation of the Koran, with a refutation and commentary, is still unique and useful: "Alcorani textus Latinus" (1898). The standard English versions are those of Sale (London, 1734), with a still useful introductory essay; Rodwell (London, 1861), arranged in chronological order; and Palmer in "Sacred Books of the East" (Oxford, 1880).

Arabic commentary by Tabari, Zamakhshari, and Rabi'awi. The classical work on the Koran is Nöldeke, "Geschichte des Korans" (Göttingen, 1900); revised ed. Schuclly (2 vols., Leipzig, 1909). See also Schinz, "Das Leben und die Lehre des Mohammed" (3 vols., Berlin, 1885); Muir, "The Canon, its Composition and Teaching" (London, 1903); Bell, "Historical Development of the Quran" (London, 1885); Wehrart, "A Comprehensive Commentary on the Quran" (4 vols., London, 1882); Soundes, "Dictionary of Islam" (London, 1885); s. v. Quran; Tisdall, "The Original Sources of the Qur'ân" (London, 1905); Hirschfeld, "New Researches into the Composition and Rectification of the Quran" (London, 1882); Füredi, "Islamismus" (Milan, 1902); Lives of Mohammed by Muir (London, 1858; 1897); Speiser (Alhabbad, 1861); Weil (Stuttgart, 1894); Kirmse (Leipzig, 1894); Grimm (Münster, 1892-95); Beel (Copenhagen, 1903); Marquoloth (London, 1906). History of Arabic literature by Broekelmann, Hant, Psehl, and Nicholson. See bibliography to MOHAMMED AND MOHAMMEDANISM.

Kosiuzsko, Tadeusz, Polish patriot and soldier, b. near Novogrudok, Lithuania, Poland, 12 February, 1752; d. at Solothurn, Switzerland, 18 October, 1817. He was educated at the military schools of Warsaw and Versailles, and attained the rank of captain in the Polish army. When the American Revolution broke out he embarked for the scene of conflict and, joining Washington's army, received a commission as officer of engineers, 18 October, 1776. He was awarded the distinction through the war, was made a brigadier general, and was voted the thanks of Congress. He then returned to Poland and lived for several years in retirement. In 1789, when the Polish army was reorganized, he was appointed a major-general and fought gallantly under Prince Poniatowski against
the Russians. At the second partition of Poland, he resigned his commission and went to live in Leipzig. He had helped to overthrive Poland in 1794, and was wounded and captured by the Russians at the battle of Maciejowice, 10 October. Imprisoned for two years, he was liberated by Emperor Paul on parole and with many marks of esteem. Thereafter his life was passed in retirement. In 1797 he revisited the United States, receiving everywhere great honour and distinction. Congress voted him a grant of land and an addition to his pension. On his return to Europe he took up his residence near Paris, spending his time in agricultural pursuits. In 1806 Napoleon wished him to join in the invasion of Poland, but he felt bound by his parole to Russia and refused. He went to live in Switzerland in 1810, making his home at Solothurn, where he was killed by a fall from a horse. His remains, by direction of the Emperor Alexander, were taken to Krakow, where they were interred with solemn pomp in the cathedral near the tombs of Poniatowski and Sobieski. A mound 150 feet high, made of earth taken from every battle-field in Poland, was piled up in his honour in the outskirts of the city.

**Kostka, Stanislaus.** See Stan- islaus KOSTKA, SAINT.

**Kotor.** See Cattaro, Diocese of.

**Koudelka, Joseph M.** See Cleveland, Diocese of.

**Kovno.** See Samogitia, Diao- cese of.

**Kozman, Stanislaus and John, two brothers who took part in the Polish insurrection of 1831, and subsequently fled the country. Stanislaus settled in England, studied its institutions, and strove to make both nations, England and Poland, acquainted with each other. John lived in France, was zealous in spreading Catholic ideas, and, when his wife died, became a priest. Later he went to Poland, and, as editor of the "Posen Review", became the centre of religious and political life there; Stanislaus aided him in his work and, returning to Posen, became president of the Society of Friends of Science. Both were ardent Catholics, able reformers of the 'courageous politicians, and had minds of exceptional power.**

**Stanislaus Kozman (b. in 1811; d. in 1883), when a student at Warsaw, had written some poetry, very romantic but only of average worth; later, in England, he set to translating Shakespeare, a work which occupied him for thirty years, and was not complete at his death; he also translated poems by Byron, Moore, Southey, Shelley, Cowper, and especially the splendid passages of Campbell on Poland. He was secretary to the Society of Friends of Poland, and in close relation, with Lord Dudley Stuart. His translations of Shakes- peare, though naturally not perfect, are as good as those in any other language. Of his original work, the poem best known in his days was entitled "The Master of the World", addressed to Mickiewicz, Krasinski, and Zaleski in 1846. He especially worshipped and loved Krasinski, two of whose books ("The Day of To-Day" and "The Last One") first appeared as Kosmian's, as the author would not otherwise have published them. Their success put Kosmian in a very false and painful position, which he described in one of his poems—an imitation of Dante's "Inferno". Several other poems of a patriotic and religious tendency are also de- serving of notice. His prose consists mainly of essays, many of which were published together in two volumes under the title "England and Poland". The first volume contains important information for those interested on that period of Polish history: what the English thought, what they knew of Poland, how far their friendly feeling went, why the ma- jority of the nation were indifferent to what might befall Poland, and so on. The second was interesting for the contemporary Polish reader, giving particulars of English institutions, life, politics, and literature—in the last respect nothing so good has since appeared in Polish. But it is impossible to notice separately all the multitudinous short articles that he wrote; those which deal with literary criticism are especially admiring. He was a practical man of action, a born journalist—unpop- popular indeed, because, being a fervent Catholic, he condemned conspiracies and did not confound revolution with a war for independence. He lived and died comparatively unknown.**

**John Kozioman, b. in 1812; d. in 1877. As priest and author he wrote for upwards of twenty years in the "Posen Review"; his articles have been collected in three volumes (1881). Specially noteworthy are the programme of the Review, "That she may fulfil her mission, Poland must be united to the Church".; "The Two Idolatries", i.e., Revolutionism and Pan-slavism; and his last essay, "Duties are permanent." He also wrote a great deal about Italian affairs and in favour of the Temporal Power. We may also mention a controversial essay with the Jesuit F. Gagarin (a Russian convert), who maintained that the great obstacle to the conversion of the Russians is that they identify Catholicism and Poland. His literary articles are not very numerous. He and his brother were the first secular workers for the revival of Catholic convictions in Poland.**

Count of Ortenburg, in the fourteenth century, and they preserve their Tyrolean German dialect. Over 99 per cent of the people are Catholics; the remainder includes 319 Schismatics, 509 Protestants, 24 Armenians, 96 Jews, 7 infidels. Ninety-six per cent of the soil is produeed arable, and are now in the Germanic Museum at Nuremberg.

The memorial bronze monument over the Schreyer and Landauer tomb in the church of St. Sebaldis was completed in 1492; three of its reliefs, highly coloured, represent Christ carrying the Cross, His burial and resurrection, with a landscape for background. Later, Kraft undertook, at the request of Imhoff, the famous marble tabernacle in the church of St. Laurence. Decorated with tall slender turrets, a canopy, carved figures, and finely chiseled ornaments, it tapers gradually to its summit. Four bases and three carved figures, of the master and his two apprentices, support the pedestal, above which rises the rectangular tabernacle, richly decorated with delicate reliefs and with the figures of angels and saints in the numerous surrounding niches. It is universally admired as one of the most beautiful creations of Gothic art, and legend records that it was softened at the touch of Kraft's chisel, to harden again in the new form which was imparted to it. Among the master's works are also three handsome sepulchral monuments with statues of the Madonna, besides an "Entombment of Christ," and "Christ on Mount Olivet." Kraft's technical skill is amazing. His scenes from the Passion show deep feeling, his portrayal of saints is noble and full of expression, though his executioners are vulgar and repulsive. Gothic idealism seems to merge into a native realism; not Italian beauty of form, but native German strength, simplicity and pity give value to his art.

WAGNER, Nurnberger Bildhauerwerke des Mittelalters. I. Nurnbergische Künstler nach ihrem Leben und ihren Werken. pt. XI: particularly DARY, Adam Kraft (Berlin, 1897); IDERM. Peter Vicher and Adam Kraft (Bielefeld, 1905).

G. GIESSMANN.

KRAIN or CARNIOLA (SLOV. KRAJSKO), a duchy and crownland in the Austrian Empire, bounded on the north by Karinthia, on the north-east by Styria, on the south-east and south by Croatia, and on the west by Trieste, Gorizza, and Istria; area, 3857 sq. miles; population, 510,000. The Julian and Karavanke Alpes traverse the country. The highest mountain peaks are Triglav, 9090 feet, Stenanzik, 5900 feet; Terglav, 9300 feet, on the top of which Jacob Aljaz, priest and tourist, erected a cylindrical hut of steel, capable of accommodating 4 or 5 persons. The principal rivers are the Save, the Trischa Bistrica, the Korka, the Kamniska Bistrica, the Sora, the Lubiana, the Mura, the Krka, and the Kupa which serves as a boundary with Croatia. The principal lakes are Crno, spreading into seven lakes, of which the highest is over 6000 feet above sea-level; Bohinjko; Blesko, in the middle of which on an island is built a church to the Blessed Virgin, and nine others. The water supply is abundant. Mining is not of much importance, except in the Pb and Zn mining industry. Agriculture here is chiefly raising crops and fruit, and cattle breeding. The main products are rye, wheat, barley, hemp, tobacco, hops, etc. The chief industries are weaving, there are many sawmills and foundries. The capital is Ljubljana, the city of the Emperor箫troj, the seat of the prince-bishop, population, 40,000; it was known to the Romans as Tavenna, and was destroyed by Obri in the sixth century. Ljubljana is divided into Upper Ljubljana or Gorenska, Lower Ljubljana or Donjensko, and Central Ljubljana and Novo Mesto. The chief larger cities and towns are: Kamnik, Kranj, Triglav, Vrhnika, Vipava, Idria (which has the richest quicksilver mine in the world), Tuzjak, Ribnica, Metlika, Novo Mesto, Vače (famous for its prehistoric graves). The mean average temperature in spring is 59°; in summer, 77°; in autumn, 55°; and in winter, 26°. Politically the country is divided into 11 districts consisting of 359 communes; the state capital is the residence of the imperial governor. The districts are: Kamnik, Kranj, Radovljica, the neighbourhood of Ljubljana, Logatec, Postojna, Litija, Krko, Novo Mesto, Ormož, and Goteschi or Kočevje. There are 31 judicial circuits. The duchy was constituted by rescript of 20 December, 1860, and by imperial patent of 26 February, 1861, modified by legislation of 21 December, 1867, granting power to the home parliament to enact all laws not reserved to the imperial diet, at which it is represented by eleven delegates, of whom two are elected by the landowners, three by the cities, towns, commercial and industrial boards, five by the village communes, and one by a fifth curia. The ballot is secret, every duly registered male twenty-four years of age has the right to vote. The home legislature consists of a senate of 14 members, and the lower house, among whom the prince-bishop sits ex officio. The emperor convenes the legislature, and it is presided over by the governor. The landed interests elect ten members, the cities and towns eight, the commercial and industrial boards two, the village communes six, the court. The business of the chamber is restricted to legislating on agriculture, public and charitable institutions, administration of communes, church and school affairs, the transportation and housing of soldiers in war and during manoeuvres, and other local matters. The land budget of 1901 amounted to 373,290 crowns (870,750 dollars)

Ecclesiastical History.—In early Christian times the duchy was under the jurisdiction of the metropolitans of Aquileia, Syrmium, and Salona; but in consequence of the immigration of the pagan Slovenes, this arrangement was not a lasting one. After they had embraced Christianity in the seventh and eighth centuries Charlemagne conferred the major part of KRAIN on the Patriarchate of Aquileia, and the remainder on the Diocese of Trieste. In 1100 that patriarchate was divided into five archdeaconries, of which KRAIN was one. Emperor Frederick III, 8 December, 1461, established the Diocese of KRAIN, a suffragan of Zadar, and under its bishop, directly to the pope, and this was confirmed by a Bull of Pope Pius II, 10 September, 1462. The new diocese consisted of part of Upper KRAIN, two parishes in Lower KRAIN, and a portion of Lower Styria.
and Karinthia; the remaining portion of Krain was attached to Aquileia, later on to Gorizia and Trieste. At the redistribution of dioceses (1787 to 1791) not all the parish churches in Krain were included in the Diocese of Ljubljana, but this was accomplished in 1833, by taking two deaneries from the Diocese of Trieste, one from Gorizia, and one parish from the Diocese of Lavant, so as to include all the territory within the political boundaries of the crownland. The diocese is divided into five archdeaconries, 25 deaneries, two chapters with 17 canons, 236 parishes, 1336 churches, 204 chapels, 722 priests, 572,613 Catholics of the Latin Rite, and 360 of the Oriental Rite. The following congregations of men have houses in Krain: Oeisterian Franciscans 4, Capuchins 2, Brothers of Charity 1, Jesuits 1, Congregati of Minims 1, priests of the German Order 1, Salesians 2. Congregations of Women: Ursulines 3 convents, Carmelites 1, Sisters of Charity 12 houses, including two schools. Krain has a diocesan seminary and one resident college for boys. The patron of the duchy is St. Joseph, and the patrons of the diocese, St. Hermagoras and St. Florinus, Marcellus.

Education.—The school system was founded by state law of 14 May, 1859, and of 2 May, 1883. There are 386 schools, of which 327 are public. Attendance is compulsory, from the age of seven to fourteen. There are two training schools for teachers: one for boys, opened in 1798, and another for girls. The secondary schools are9, the comprehensive public schools 20, the gymnasiums 5, the institutions of higher learning 6, the institutions of technical instruction 5, the schools of music and art 2, and the specialized schools 5. The institutions of technical instruction are also given in singing and on the pipe organ. The Museum Rudolfinum has a famous library. The inspection of the schools is under a school-board. The parochial priests have the right of visiting the schools or of appointing substitutes. The schools are supported from national, regional, and local taxes. The provincial school-board is the highest school authority for all the schools, except those subject directly to the minister of instruction and worship. It consists of twelve members, of whom two are priests. There is a literary society, the "Matica Slovene", and a Catholic daily paper, "Dnevnik.

Slovenes in the United States.—There are in the United States about 100,000 Slovences organized into two great benevolent associations on religious principles. They possess the following churches: St. Joseph's, Joliet, Ill.; St. Stephen's, Chicago, Ill.; St. Michael's, Toledo, Ohio; St. Mary's, Chicago, Ill.; St. John's, Detroit, Mich.; St. Joseph's, Leadville, Col.; St. Mary's, Pittsburgh, Pa.; St. Joseph's, Forest City, Pa.; Holy Family, Kansas City, Kansas. Joliet has one parish school, and one Catholic weekly paper. The saintly bishop, Frederic Baraga, author of the first grammar of the Indian language, Bishops Ignatius Mrak, and John Vertin, Slovences, were pioneers in apostolic work in upper Michigan, as well as Bishops James Trobec and John Starlia, who are still living. Civil History.—Before the coming of the Romans (c. 200 a. c.) the Taurisci dwelt in the north of Krain, the Pannones in the south-east, the Iapodes or Carni, a Celtic tribe, in the south-west. Under Roman rule, the northern part was joined to Noricum, the south-western and south-eastern parts and the city of 'Arsoma to Venice and Istriia. In the time of Augustus all the region from Friuli to Celje belonged to the province of Savia. After the fall of the Western Roman Empire (476), Kra in was incorporated into the Kingdom of Italy, and (493) under Theodoric it formed part of the Ostrogothic kingdom. Between the upper Save and the Sotcha lived the Carni, and towards the end of the sixth century the Slovences peoples that region called by Latin writers Carnia, or Carniola, i. e. part of greater Carnia. Later on with the coming of the Slovences language the name was changed into the Diocese of Ljubljana, in German "Chraimmarcha", "Chrihe", "the boundary". The new inhabitants were subjected to the Avars, but thrust off their yoke, and joined the great Slavic state of Samo. Krain was governed by the Franks about the year 738. When Charlemagne established the new kingdom of Francia, Krain was a part of it. After the division of Friuli, Krain became an independent province, having its own Slovenian margrave residing at Kranj, subject to the governor of Bavaria at first, and after 876 to the Dukes of Karinthia. Henry IV gave it to the Patriarch of Aquileia (971). In the Middle Ages the Church held much property in Krain; thus in Upper and Lower Krain, the Bishop of Friesing became (974) a feudal lord of the city of Skofja Loka, the Bishop of Brixen held Bled and possessions in the valley of Bohinj, and the Bishop of Lavant got Mokronog. Among secular potentiates the Dukes of Meran, Gorizia, Bubenberg, and Zilli held possessions given to them in fief by the patriarchs of Aquileia. The dukes governed the province nearly half a century, and finally Krain was given in fief with the consent of the patriarch to Frederick II, of Austria, who obtained the title of duke, 1218. Frederick was succeeded by his son, Louis III. His nephew, Karin, married a relative of the patriarch, and endowed the churches and monasteries, established the government mint at the city of Kostanjecica, and finally (1268) willed to Otokar II, King of Bohemia, all his possessions and the government of Karinthia and Carniola. Otokar was defeated by Rudolf II of Hapsburg, and at the meeting at Augsburg, 1282, he gave in fief to his sons Albrecht and Rudolf the province of Krain, but it was leased to Count Majnhardt. Duke Henry of Karinthia claimed Krain; and the Dukes of Austria asserted their claim as successors to the Bohemian kingdom. Henry died 1335, Jan, King of Bohemia, renounced his claims, and Albrecht, Duke of Austria, got Krain; it was proclaimed a duchy by Rudolf IV, in 1364. Frederick IV united Upper, Lower, and Central Krain as Metrika and Pivka into one duchy. The union of the dismembered parts was completed by 1607, Tobacco cultivation took place from 1797, and from 1805 to 1806. After the Treaty of Vienna, 1810, Napoleon erected Illyria, with Ljubljana as its capital, and Krain formed a part of the new territory from 1809 to 1813. The defeat of Napoleon restored Krain to Francis I, with larger boundaries, but at the extinction of the Illyrian kingdom, it was confined to the limits outlined at the Congress of Vienna, 1815.

M. D. Krampončič.

Krimer, John (also called Issittor, the Latin form of his surname), b. about the end of the fourteenth century, he must have died between 1437 and 1440, as a manuscript of the Carthusian monastery of Memmingen speaks of a gift made to it by Krimer in 1437, and the general chapter of the Carthusian Order held in 1440 mentions his death.

Having entered the charterhouse of Buxheim, in the Diocese of Augsburg, Bavaria (whence he is sometimes called John of Buxheim), he there led the life of a pious and obedient religious. There, also, he wrote sundry works, including two treatises published by D. Pez in his "Bibliotheca ascetica". The first of these
is entitled "Breviloquium animi cujuslibet religiosi reformativum"; it consists of two parts. In the first part the author teaches a good religious divers means and practices which he should observe in order to remain a faithful child of the Church, to acquire, on earth, the grace of perfection and, in heaven, lasting happiness. In the second part, by a faint allegory, he puts the religious on his guard against the faults of monastic life which are represented by twenty birds of prey, the eagle, the vulture, the hawk, the owl, etc., whose characteristics and manners he describes. Though written in a rude, uncultured style, the work was much read in the middle ages of the Middle Ages. The subject of Krämer's second book is sufficiently indicated by its title, "Tractatus exhortativus ad evitandum malam iram". In these two books we find the spirituality peculiar to the Carthusians of the fifteenth century: a rigorous asceticism, relieved somewhat (under the influence of Denis the Carthusian) by a few touches of mystical tenderness. An unpublished treatise, "De Objectivo nimbo" has also been sometimes attributed to Krämer, but without sufficient warrant.

Krasinski, Ignatius, in Warsaw, 1801. He took orders in early youth, and soon after became a canon, travelled abroad, preached the coronation sermon for King Stanislaus Poniatowski, by whose favour he shortly got a bishopric in what was soon to become Prussian Poland. Frederick II then made his acquaintance, and it was to amuse this king, they say, that Krasinski wrote his "Monachomachia". In 1775 there appeared a satire, "Hymnus" (The Monachomachia), purporting to be the reply of the monks to the author's "Monachomachia". It is clear enough, but a bishop ought rather to have made an effort to reform the monks than to have laughed at them, and to have written it for a Protestant king's amusement was a greater blunder if the charges were true: as a Catholic, as well as a Pole, he could not be the friend of the Prussian king. Krasinski felt this, and wrote his "Anti-Monachomachia" to destroy the bad impression made. In 1776 he published "Dowiadczynski", a novel written under the influence of contemporary English fiction—partly a clever satirical sketch of character, partly describing an ideal community, and imitating Johnson's "Rasselas". The latter part is so much feebler in its description of an impossible Utopia that it mars the other.

The best part of Krasinski's poetry is his "Satires" (1778) and his "Fables". The former, witty, soberly ironical, without a fall, exagerration, or malice, and perfect in form, remind us of Horace: they are historically important as pictures of the state of Poland, and are very patriotic in tendency. The national faults and aberrations are pointed out wittily always, and sometimes with sorrowful eloquence. "Pan Poldor", though in form a prose novel, has a like aim. The tale diverts us, but its moral is the essential thing, and both are excellent. From the highest duties to the meanest particulars of religious, family, and social life, all is pointed out in the best and noblest way. Surely, if a book could have regenerated Poland, "Pan Poldor" has done it.

The "Fables" (1779) are, like all others at that time in Europe, imitations of Lafontaine's, but none were so like their model as Krasinski's. Like Lafontaine's, Krasinski's are amongst the best ever written, while in colour they are distinctly original, because Polish. The "Martyrs of the Thirty Years' War" (1780), an heroic poem written in order to give an epos to Polish literature, is a failure, though far superior to Voltaire's famous "Henriade". But it is impossible even to name all his works—"Epistles" in verse, comedies, some not without merit, lives of great men, novels, and notes. Let us mention his "Poetic Art", "Gardens", and his "Translation of Ossian". He died in 1801 at Berlin, seven years after his elevation to the Archbishopric of Warsaw, and by a quaint allegory he puts the religious on his guard against the faults of monastic life which are represented by twenty birds of prey, the eagle, the vulture, the hawk, the owl, etc., whose characteristics and manners he describes. Though written in a rude, uncultured style, the work was much read in the middle ages of the Middle Ages. The subject of Krämer's second book is sufficiently indicated by its title, "Tractatus exhortativus ad evitandum malam iram". In these two books we find the spirituality peculiar to the Carthusians of the fifteenth century: a rigorous asceticism, relieved somewhat (under the influence of Denis the Carthusian) by a few touches of mystical tenderness. An unpublished treatise, "De Objectivo nimbo" has also been sometimes attributed to Krämer, but without sufficient warrant.

Krasinski, Stanislaw, Count, son of a Polish general, b. at Paris, 19 Feb, 1812; d. there, 23 Feb., 1859. He lost his mother (Mary, née Princess Radziwill) in early childhood. From boyhood he loved study, and, as a student in Warsaw, distinguished himself as a sympathizer with the Romantic literary movement. But, when—against his will and purely to obey his father—he was forced to return, he presented himself at Nicholas's Court, his health gave way. Permitted to withdraw to Vienna, he brought out his first great work, those which he had written previously being far inferior. "Niebojska Komedia" (The Infernal Comedy, 1833) is the struggle between the old order and the new: each has its champion, both are self-seeking, faithless, and end in despair. This work was paraphrased and expanded by Edward Robert, Lord Lytton, as "Oval, the Fool of Time" (1869). In 1836 "Irydion" appeared. It is distinctly patriotic in tone: a young Greek dreams of delivering his country from the Roman yoke, attempts under Heliogabalus to do so, and, in order to have the Christians on his side, becomes one of them. His vengeance fails, and at the end Christ, his judge, condemns not his patriotism but his evil deeds and want of trust in Providence. After "Irydion" until the appearance of "Precedwit" (Before Dawn) Krasinski passed through a period of little literary activity but much philosophic thinking, during which his works were few and of little importance.

"Before Dawn" is a most beautiful poem, and was intended by Krasinski to be his last. The poet sailing in a boat with Beatrice, his loved one and the source of his inspiration, he assembles some of the heroes of old Poland, which makes him happy, for Czarniecki reveals to him the destiny of Poland, the only nation which preserved the spirit of Christianity: thence its present sufferings and its future greatness. Shortly after the publication of "Before Dawn", Krasinski married Elizabeth Bania. In 1845 he began to write his "Psalms of the Future", poems inspired by the desire to prevent his country from rushing into an abyss, for he had been informed that an armed rising was close at hand. The "Psalms of Faith, Hope, and Love" appeared together, followed (in 1848) by the "Psalms of Sorrow and of Good-will". The last marks what is perhaps the very highest summit of Krasinski's inspiration. Here, as in "Before Dawn", he makes Poland the "Chosen Nation of the Lord". His other works are: "The Day of To-Day", and "The Last One", both published in 1848, but written long before; "Resurrection", a "Glosa de St. Magdalen", which has no name but "The Unfinished Poem", and which as a whole, though he had been working at it before 1840, is much inferior to his best productions. After 1848 Krasinski's health, which had been feeble, gave way completely. He spent some time in Baden and Heidelberg, but ended it in prison. By 1849 found him in a congenial climate; but his last years, saddened by family losses, were spent in a state of great physical suffering.
Krusiński's poetry, possibly the noblest of all contemporary efforts to base politics on the principles of Christianity, has been noticed by all such political questions as touch upon a happier future for the world. The "Infernal Comedy" deals with all Europe as a whole and in general; "Trydyon" enquires how any particular nation is to be regenerated; "Before Dawn" gives the answer, as also do the "Gioia" series of writings, published in the "Rommer Jahrbücher des Vereins von Alterthumsfreunden" and in the "Serapem", deals with particular features of the history and archaeology of Trier. In this manner Kraus was led on to the study of Christian archaeology in general, and then to Christian art in all its aspects, and man conveys the whole of the history of art as a whole, of antiquity or to contemporaries, whether English, Polish, or German. His defects (redundancy of ornament, exaggeration in thought, turgidity of style), conspicuous only in his feeble works, pass unnoticed in his greatest creations, of which they cannot impair the grandeur. No Polish author writes with greater splendour and majesty. He is representative of the noblest trends of the thought of his time, and eloquently expressive of his nation's sufferings, whilst he warns her not to go astray and point out the way to salvation. He is indeed one of the mightiest minds that Poland ever brought forth.

S. Tarnowski.

Kraus, Franz Xavier, ecclesiastical and art historian, b. at Trier, 18 September, 1840; d. at San Remo, 28 December, 1901. He completed his studies in the Trier gymnasiun, began his theology in 1858-90 in the seminary there, and finished it in 1862-64, having passed in France the time from the autumn of 1860 to the spring of 1862 as tutor in distinguished French families. He was ordained a priest by the suffragan bishop Eberhard of Trier, 23 March, 1864. Even after he became a priest, he continued his studies in theology and philology at the universities of Würzburg, Freiburg—where he had received the degree of Doctor of Philosophy in 1862, and received that of Doctor of Divinity in 1865—and Bonn. In the autumn of 1865 he became beneficiary of Pfazel near Trier, where he developed a zealously literary activity, interrupted by several stays for the progress of his studies in Paris, Belgium, and to Rome in January, 1870. In the spring of 1872 he was attached to the faculty of philosophy at the University of Strasbourg as professor extraordinary of the history of Christian art, and in the autumn of 1878 he succeeded Johann Alxog as professor of church history at Freiburg. In 1880 he was made grand-ducal privy councillor, and held the office of pro-rector of the university for the period 1890-1. He was also curator of religious antiquities in the Grand Duchy of Baden, and from 1883 a member of the Baden Historical Commission.

Kraus was a man of brilliant and versatile talents, a scholar of great learning, a clever and elegant writer, and, in spite of ill-health and the acute bodily sufferings of his closing years, an author of wonderful productivity, who delighted in his work. Although, from an ecclesiastical standpoint, much of his literary work is greatly to be deplored and rejected, and though his political activity—to which we shall refer later—did not always influence favourably his intellectual labours, his achievements of positive and permanent value form a sufficiently imposing array to entitle Kraus to a place among the ablest scholars of the nineteenth century. After his departure from Freiburg (1882) he began his independent literary career with small works on the history of early Christian literature in the first centuries and the Middle Ages, among them: "Egidius von Rom" (in "Oesterreichische Vierteljahresschrift für Kath. Theologie", 1, 1882); "Observationes criticae in Synesi Symposium epistulas" (Salzburg, 1883); "Studien über Synesios von Kyrene" (in "Theologische Quartalschrift", XLVI, 1865); "Der Briefwechsel Papst Pius VI. mit Seneca" ("Veröffentlichungen der Kaiserlichen Akademie der Wissenschaften", XLIX, 1867), and later "Ueber das Martyrium des Ignatius von Antiochien" ("Theol. Quartalschrift", LV, 1873). Of the edition of the "Opera omnia" of Thomas a Kempis, undertaken by Kraus, only the first volume appeared ("Opuscula", Trier, 1868). Kraus reached the end of his days, after reaching the field of research for which he seemed particularly qualified, and in which he was to accomplish his best work. Among other larger or smaller publications we may mention: "Beiträge zur Trierischen Archäologie und Geschichte. I. Der heilige Nagel in der Domkirche zu Trier" (Trier, 18685); "Die Kunst bei den alten Christen" (Frankfort-on-the-Main, 1858); "Die christliche Kunst in ihren frühesten Anfängen. Mit besonderer Berücksichtigung der neuesten Resultate der Katakomben-Forschung populär dargestellt" (Leipzig, 1872); "Ueber den gegenwärtigen Stand der Frage nach dem Inhalte und der Bedeutung der römischen Blutampullen" ("Forschungen zur Spurtenenfamil vom Palatin" (Freiburg, 1872); "Roma sotterranea: Die römischen Katakomben. Eine Darstellung der neuesten Forschungen, mit Zugrundelegung des Werkes von J. Spencer Northcote and W. R. Brownlow" (Freiburg, 1873; 2nd ed., 1879); "Ueber das Studium der Kunswissenschaft an den deutschen Hochschulen" (Strasbourg, 1874); "Ueber Begriff, Umfang, Geschichte der christlichen Archäologie und die Bedeutung der monumentalen Studien für die historische Theologie. Akademische Antrittsrede" (Freiburg, 1879); "Synchronistische Tabellen zur christlichen Kunstgeschichte" (Freiburg, 1880).

These were followed by the great works which constitute Kraus's chief claim to an enduring fame: "Kunst und Alterthum in Elsass-Lothringen. Beschreibende Statistik im Auftrage des kaiserlichen Oberpräsidiums von Elsass-Lothringen herausgegeben" (4 vols., Study to Paris, 1876-77), "Die römischen Baupläne der christlichen Alterthümer" (2 vols., Freiburg, 1882-6); "Die Kunstdenkmäler des Grossherzogthums Baden" (vols. I-IV, 1, Freiburg, 1887-1904—is being continued by other authors); "Die christlichen Inschriften der Rheinländen" (2 vols., Freiburg, 1890-95) and lastly his "Die Beziehungen der christlichen Kunst" (vol. I and the first half of volume II, Freiburg, 1896-1900). The second half of volume two, which brings the description of the Italian Renaissance to a close, was published by Joseph Sauer in 1908. This work combined the results of all Kraus's labours in the field of art, and his chief merit lies in the description of the connexion of art with the general and religious culture of the different periods. Other important publications belong to the special history of art: "Die Wandgemälde der St. Georgskirche zu Oberzell auf der Reichenau" (Freiburg, 1854); "Die Miniaturen des Codex Egberti in der Stadtbibliothek zu Trier" (Freiburg, 1884); "Die Miniaturen der Mainzer Liederhandschrift" (Strasbourg, 1887); "Die mittelalterlichen Wandgemälde im Grossherzogthum Baden" (with H. von Oechelhäuser, vol. I, Darmstadt, 1893); "Die Wandgemälde der Sylvesterkirche zu Liernheim" (Munich, 1902).

Kraus's literary leanings were directed towards Italy. After a close study of Dante, covering years of labour, he published the work, which must be ranked among his greatest: "Dante. Sein Leben und sein Werk. Sein Verhältniss zur Kunst und Politik" (Berlin, 1897). Though his opinions may not be in all cases incontestable, this work will always claim a
prominent place in Dante literature. Somewhat earlier he had published "Luca Signorelli's Illustrationen zu Dante's Divina Commedia" (Freiburg, 1892).

His collected "Essays" also belong to Kraus's most brilliant works (part I, Berlin, 1894; part II, Berlin, 1901); they are of a literary, historical, and political character, and the majority appeared originally in the "Deutsche Rundschau"; particularly noteworthy are the essays "Antonio Rosmini"—for whom Kraus had a particular veneration—and "Francesco Petrarca der Theologe" (1911). Compared with the more congenial occupation of literature and art, Kraus's work on church history takes second place. His "Lehrbuch der Kirchengeschichte für Studierende" (1st ed. in 3 parts, Trier, 1872-5; 4th ed., 1896; French translation: "Histoire de l'Eglise par F. X. Kraus, tr. by B. P. Godet et C. Verschaffel" (4 vols., Paris, 1891-2) contains much that is excellent, but has also serious defects. It is distinguished by clear and perspicuous arrangement, based more or less on that of the well-known manual of the Protestant historian Kurz, and by its elegant and interesting narrative, but its statement of fact is frequently neither sufficiently nor reliably exact. One misses the calm objectivity of the historian, the author showing in many instances the inordinate influence which his liberalizing views exerted over his judgment. This bias naturally aroused enmity, and as it was still more emphatic in the second edition of 1892, Kraus was compelled to withdraw this edition and revise it. The revised edition appeared in 1887 with the ecclesiastical imprimatur. The first edition of the church history was followed by the "Synchronistische Tabellen zur Kirchengeschichte" (Trier, 1876) and "Charakterbilder aus der christlichen Kirchengeschichte" (Trier, 1877), which were designated the fourth and fifth divisions of the ecclesiastical history, but had really the character of separate works. Among his less important ecclesiastico-historical works are "Briefe Benedictus XIV. an den Canonico Francesco Paggi in Bologna 1727-1758" (Freiburg and Tübingen, 1884; 2nd ed., 1888); "Medicean Rome" in "The Cambridge Modern History" II (Cambridge, 1903), 1-35. Mention should also be made of his preparation of the tenth edition of Alzog's "Handbuch der allgemeinen Kirchengeschichte" (2 vols., Mainz, 1832), and his "Gedächtnissrede auf Johannes Alzog Professor an der Universität Freiburg" (Freiburg, 1879). His political rather than his ecclesiastical views are reflected in "Die Erhebung Italiens im 19. Jahrhundert: Cavour" (Mainz, 1902—"Weltgeschichte in Charakterbildern", vol. V).

As a politician Kraus displayed an extensive journalistic activity, which, from the Catholic standpoint, is greatly to be regretted. Personally, he was a man of deep religious feeling and Catholic faith, but, from association with the Liberal Catholics in France, Italy, and Germany, he soon became imbued with their views on ecclesiastical policy. At the time of the Vaticano Council he entered into close connexions with the opposition party, and kept up these relations for some time. He remained in the Church, but the strife had engendered in his mind a certain bitterness. In many anonymous or pseudonymous articles written for the Liberal press, he gave vent to his dissatisfaction with certain ecclesiastical conditions—often with excessive severity and bitterness. The "Kirchenpapstliche Briebe" in the "Beilage zur Allgemeinen Zeitung" (1895-9), written under the pseudonym of "Spectator", created a great sensation. It is to him that we owe the distinction between "religious and political Catholicism", a formula in which he imagined he had found the solution of many difficulties.

The permanent services of Kraus as a scholar are, however, sufficiently great to permit us to draw a veil of oblivion over his political errors and his secret activity on behalf of Liberalism.

FRIEDRICH LAUCHERT.

KRAEL, KARL, Austrian meteorologist and astronomer, b. at Ried, Upper Austria, 4 Nov., 1798; d. at Vienna, 21 Dec., 1862. He received his early education at the Benedictine Abbey of Kremsmünster, under the noted astronomer P. Boniface Schwarzenbrunner. There he joined in the work at the observatory. He studied law for financial reasons, but, in 1825, decided to give it up and to devote himself exclusively to the mathematical and physical sciences. In 1827 he became assistant at the observatory of the Vienna University, then, 1831, adjunct at the observatory of La Brera of Milan. In 1838 he was transferred to the Prague Observatory, of which he became director in 1845. He found this observatory in a very poor condition and was therefore obliged to confine his work more to teaching. He introduced into Austria the study of a new science, that of terrestrial physics. The necessary instruments he obtained by personal privations and persistent efforts. He organized a rational system of magnetic and meteorological observations, which soon placed Prague in the same class with such observatories as that of Göttingen, which was richly endowed and which was directed by the great Gauss.

The emperor conferred upon him the cross of Knight of the Order of Francis Joseph. A member of the Imperial Academy of Vienna since its foundation in 1847, he submitted to it his project of the establishment of a central station for magnetic and meteorological observations in Austria. This was realized at Vienna in 1851. He was made the first director and at the same time became professor of physics at the University of Vienna. His systematic observations, begun at Milan and Prague, soon extended first over Bohemia and later over the entire empire to the shores of the Adriatic, as well as to Turkey and the Black Sea. His religious convictions were very pronounced, and, far from clashing with his scientific occupations, they added a new force to them. He contributed a number of papers and reports on the improved magnetic apparatus, and constructed some self-registering meteorological instruments. The work at Prague was published in eleven volumes, 1839-1850, under the title of "Magnet. und Meteorol. Beob. zu Prag".

Other publications are: "Cenni storici e teoreticoli sulle comete" (Milan, 1832); "Beob. über den grossen Kometen von 1843" (Prague, 1843); "Natur und Bewegung der Kometen" (Prague, 1843); "Mag. und geogr. Ortebestimmungen im Oester. Kaiserthum" (5 vols., Vienna, 1840-1851); "Die Anleitung zu magnet. Beobachtungen" (3 vols., Vienna, 1858); "Horizontale Komponente der magnetischen Erdkraft" (Vienna, 1833). He edited "Astronomisch-meteorologisches Jahrbuch für Prag" (Prague, 1842-1845) and also "Jahrbucher der Centralanstalt für Meteorologie und Erdmagnetismus" (1849-1862).

WILLIAM FOX.

KREITEN, WILLIAM, literary critic and poet, b. 21 June, 1847, at Gangelt near Aachen; d. 6 June, 1902, at Kerkrade (Kirchraith) in Dutch Limburg. At the age of sixteen he entered the Jesuit novitiate of Friedrichsruh at Münster. After receiving his classical
education at Münster and Amiens, he began his philosophical and theological studies at Maria Laach in 1868, but was compelled to interrupt them the following year on account of ill-health. From 1869 to 1871 he pursued literary studies at Münster. When the Jesuit was expelled from Germany, in 1872, Kreitner was one of the sixteen monks of the Bavarian Church. Though continually suffering, he was one of the chief workers on "Stimmen aus Maria Laach," to which he contributed numerous essays on literary subjects and of the reviews of current Catholic literature from 1874 to 1902. His larger works in the field of historical and criticism are "Voltaire, Ein Beitrag zur Entstehungs geschichte der Liberalismus" (Freiburg im Br., 1878; 2nd ed., 1884); "Molieres Leben und Werke" (Freiburg im Br., 1887; 2nd ed., 1897); "Lebrecht Dreyss. Ein Lebensbild" (Freiburg im Br., 1897); a critical edition of the poems of Annette von Droste-Hülshoff with an exhaustive bibliography (1889); a great Westphalian poetess (Münster, 1884–6; 2nd ed., 1900); a series of twenty-one articles in "Stimmen aus Maria Laach" on Blaise Pascal and his works. His poetic works are "Heimatweisen aus der Fremde" (Aachen, 1882), the second edition of which has many additional poems and is entitled "Tier Weg entlang." (Paderborn, 1889; 10th ed., 1904); translations of selections from the modern Provençal Christmas hymns of Louis Simon Lambert, entitled "Bethlehem" (Freiburg im Br., 1882; 2nd ed., 1893). Furthermore, Kreitner completed and published a biography of Klemens Brentano, which had been begun by the friend of his youth, J. B. Diel, S. J., 2 vols. (Freiburg im Br., 1877); edited the other posthumous works of Diet, 2 vols. (Freiburg im Br., 1882), and Brentano's "Die Chronik des tiefen Schülers" (Munich, 1883; 2nd ed., 1888). His last work was a collection of eight hundred aphorisms entitled "Allerlei Weisheit." (Paderborn, 1901).

Michael Ott.

Kremsmünster, Benedictine abbey in Austria, on the little river Krems, about twenty miles south of Lins, on the little river Krems, about twenty miles south of Linz; founded A.D. 777 by Tassilo II Duke of Bavaria, who richly endowed it, as did subsequently Charlemagne and his successors. The first colony of monks came from Lower Bavaria, and Fatericus was the first abbot. The position and reputation of the monastery soon became such that its abbots, in the absence of the bishop of the diocese (Passau), exercised the episcopal jurisdiction. In the tenth century the abbey was destroyed in an invasion of the Hungarians, and its possession restored among the Duke of Bavaria and other nobles and the bishops, but it was restored, and recovered its property, under Emperor Henry II, when the holy and zealous Gottard became abbot. In the following century Kremsmünster shared the general decadence of religious houses, and fell into decay, which was fortunately arrested by the action of the emperors at Aix in 1144, when he completed a community from Gottesau, and introduced the reformed observance of Cluny into the abbey. After this it became known as one of the most flourishing houses in Germany, "excelling all other abbeys," says an anonymous chronicler, "in observance and possession of lands, buildings, books, paintings, and other possessions, and in the number of its members prominent in learning and in art." The monastic library was famous, and drew eminent scholars to study at Kremsmünster, where several important historical works were written, including histories of the bishops of Passau and of the dukes of Bavaria, and the chronicles of the abbey itself. Schrödl (Kirchenlex., VII, 1053) gives a list of writers connected with Kremsmünster from the eleventh to the fourteenth century, and of their books, which comprised 3,000 volumes. One of the most distinguished abbots was Ulrich Schopenhaufer (1454–1484), and it was owing to his attainments and zeal, and those of his disciple and successor Johann Schreiner (1505–1524), that at the critical time when the Reformation errors were beginning to spread in Germany, the Kremsmünster held firmly to the old faith and doctrines.

From the Reformation period onwards nearly every abbot who ruled the monastery proved himself pious and learned, zealous and patriotic, ready to make all needful sacrifices for his country and his emperor. Abbot Lechner, towards the middle of the sixteenth century, constituted the hitherto private monastic school into a public school, and did much to preserve Catholicism in the district, where the Protestant doctrines had become widely prevalent. Abbot Weiner (1558–1565) unfortunately favoured the new teaching, thus introducing trouble and nearly developed into disruption. This was, however, prevented by the zeal of succeeding abbots; and Abbot Wolfredt especially (1813–1839) brought the monastery into so highly flourishing a condition that he was known as its third founder; while its reputation as a house of studies and learning was even increased under his successor, Plegidt Böchler (1644–1669). Among the abbots of the eighteenth century the most prominent and distinguished was Alexander Fiel- millner (1731–1759), who built the great observatory, constructed many roads on the monastic estate, and was a man of most edifying life and good works. Towards the end of this century the drastic and innovating policy of the Emperor Joseph II, especially with regard to the religious houses of his dominions, brought Kremsmünster, like other great foundations, to the verge of suppression; but it happily escaped this fate. The house suffered much during the long Napoleonic wars, and was slow in recovering its position. It was not until the abbacy of Thomas Mitterdorfer (1840–1860) that, with its material position reinforced, and learning and discipline again flourishing within its walls, it regained all its former prestige. One of the most illustrious abbots in recent times was Dom Celestin Gans. Celebrated in 1877 the eleven-hundredth anniversary of the foundation, became Archbishop of Vienna in 1881, and was raised to the cardinalate in 1884 (d. 1889). The present abbot is Dom Leander Caerny, who succeeded Abbot Achatneter in 1905.

The community of the Benedictine Abbey numbers about a hundred members. The abbey has the cure of souls of twenty-six parishes (population over 42,000), and within the precincts are a Gymnastrium, or boys' school (300 pupils), of high reputation, and a school of philosophy. The imposing pile of buildings, as they now stand, are mostly of the sixteenth century. The valuable library contains some 70,000 volumes, 1700 manuscripts, and nearly 2000 incunabula. There is an interesting collection of objects of natural history in the lower part of the observatory, which is eight stories high; and a curious feature is the series of fish tanks devoted to the study of Passau. In the monastery are the works of Benedictine abbots (Linz, 1848); Ritter-Sachens, Annals monast. Cresmoniensis (Paris, 1846); and the works of Benedictine abbots of the Nuremberg (Leipzig, 1729), II, 57.
KIRSHNAGAR

Diocese of (Kishnagrensis).—The boundaries of the Diocese of Kirshnagar are: on the north, the Archdiocese of Calcutta and the Prefecture Apostolic of Assam; on the east, the Diocese of Dacca; on the south, the Bay of Bengal and the Archdiocese of Calcutta; on the west, the Archdiocese of Allahabad. The diocese is divided from north-west to south-east by the Ganges, into two portions nearly equal in extent. Since the last delimitation of territory (1888) it comprises five districts on the western side of the Ganges, viz.: Khulna, Jessore, Nadiya, Faridpur, and Mursidabad; and six districts on the eastern side of the Ganges: Rajshahi, Bogra, Maldah, Krishnagar, Rangpur, and Paiguri, and the native State of Kuch Behar. The first five districts belong to the civil province of Bengal and the other six to the new province called Eastern Bengal and Assam. The population of the whole diocese, according to the latest census (1902), is over eighteen millions. In 1855, six districts of the Vicariate Apostolic of Western Bengal, viz.: Jessore, Nadiya, Mursidabad, Rajshahi, Bogra and Maldah, were provisionally united under the name of Central Bengal Mission; and, at the request of the Vicar Apostolic of Western Bengal, three missionaries from the Seminary of the Archdiocese of Milan were sent out to work for that mission. There were then scarcely a hundred Catholics in the whole mission. In the year 1870 the Central Bengal Mission was definitely separated from the Vicariate of Western Bengal; the provinces of Bhutan and Assam and a few other districts were added to it; and the mission was created a prefecture Apostolic (June, 1870), Father Marietti being the first prefect. On 1 September, 1886, it was constituted a diocese under the hierarchy, and Right Rev. Dr. F. Pozzi was consecrated first bishop, 13 February, 1887. In 1889 the provinces of Bhutan and Assam were detached from the Diocese of Kirshnagar, and the see was restored to its present territory. Bishop Pozzi died in October, 1905, and was succeeded by the present bishop, Dr. S. Taveglia, consecrated 4 November, 1906.

The Catholics of the diocese (August, 1909) number 6247, besides 691 catechumens. With the exception of about four hundred Europeans and Europeans, all the other Catholics are native converta. Working in the diocese at present are: one bishop; eleven missionaries of the Seminary of Foreign Missions of Milan, residing in eight different stations; sixteen Sisters of Charity of Lovere (Italy), distributed in four different houses. There are thirteen churches and fifteen schools and hospitals in the villages, which are used as places of worship, as shelters for the visiting missionary, and sometimes as schoolrooms. There are three orphanages for native boys and three for native girls, with over two hundred children entirely supported by the mission and under the direction of the Sisters of Charity. Scattered in several districts there are twenty-five mission schools attended by over five hundred children, Christian and pagan. The Sisters of Charity are also in charge of a public hospital and three mission free dispensaries; and they also direct two homes for widows and catechumens, and a home for incurables. The Madras Catholic Directory (Madras, 1909); Catholic Calendar (Calcutta, 1910).

F. ROCCA.

KRZYSKII. See CzIBIUM, Diocese of.

Kromer, Martin, a distinguished Polish bishop and historian; b. at Bicz in Galicia in 1512; d. at Heilsberg, Ermland (now East Prussia), on 23 March, 1589. He was the son of a substantial citizen who, desirous of a public career for his son, sent him to the University of Cracow in 1525 and there obtained a degree in philosophy. Afterwards he studied theology at Bologna and at Rome. When he returned to Poland he was appointed secretary to Gamrat, Bishop of Cracow, and shortly afterwards he was made secretary to Prince Sigismund August. The latter was so pleased with him that, when he afterwards ascended the Polish throne, he entrusted Kromer with many high official duties, and in order to enable him to receive promotion to even higher dignities the king elevated him in 1552 to the rank of a nobleman. Kromer was charged with diplomatic missions to the Viennese Papacy, and to the Council of Trent. In Poland he had complete charge of the national archives, arranged the various documents and materials in systematic form, and in doing so devoted himself especially to the history of his country. At the suggestion of the king he compiled the annals of Poland in Latin, entitled De origine et rebus gestis Polonorum" in thirty books, which was published at Basle in 1555, and treated of the history of Poland from the earliest times down to the year 1506. It was translated into German by Heinrich Pantaleon and also published at Basle in 1562, and was likewise translated on two different occasions into Polish and published at Cologne in 1589 and at Cracow in 1611. In this history Kromer showed himself a keen critic, with a graceful style and polished Latinity, and he was particularly successful in setting forth clearly and accurately the intricate political relations of Poland with the neighbouring states. It is to be regretted, however, that his history ended without describing the events of the very epoch which he knew so well from his own participation therein. Following this, he published at Cologne in 1577 his great geographical and descriptive work, "Polonia, sive de situ, populis, moribus, magistratibus et republicis regni Polonicii", in two books, which still remains an important source of information about contemporary Poland. It was translated into Polish by Kondratowicz and published at Wilna in 1583. He had even turned his attention to music, for in 1584 he had published a volume at Cracow entitled "De musica figurata". He took a very active part in opposing the spread of Protestantism in Poland. His various polemical writings, his sermons, and his catechism were all written in Polish and in a simple style devoted to the enlightenment of the people; they formed an energetic protest against the introduction of the new Lutheran and Calvinistic doctrines. In 1570 he was appointed by Cardinal (then Bishop) Stanislaus Hosius as coadjutor in the Diocese of Ermland, where together with the latter he wrote popular works in explanation and defense of the Catholic Faith. A year after the death of Hosius in 1579 Kromer was made Bishop of Ermland, and held that see until he died in 1589.

ANDREW J. SHIMAN.

Krzynski, Andrew, date of birth uncertain; d. in 1535. A typical humanistic poet, a most supple courtier for whom poetry was to be a source of renown and profit, Krzycki was well-read in Latin poetry and knew the language to perfection, and was a master of epigrams, pointed and spirited in style and diction. His individuality was conspicuous; his talent, though not creative, and confined to imitations of the ancients, was by no means insignificant; his wit, mordant and at times coarse. His verses, whether laudatory or satirical, were mostly written to commemorate notable occasions. In 1512, for instance, he celebrated in verse the marriage of King Sigismund I with Barbara Zapolya; Krzycki subsequently became chancellor to the youthful queen. When the king won the victory of Orsza, he again wrote a poem, and sent verses to the king, complimenting him with his victory and supporting the model of Ovid's "Epistulae Herodii"; these, in a letter to Krzycki, Erasmus praised enthusiastically. After Barbara's death he continued to be chancellor in the household of Bon Stef, Sigis-
Kuhn, Johannes von, theologian, b. at Würzburge in Würtemberg, 19 Feb., 1806; d. at Tübingen, 8 May, 1887. He pursued his classical studies at Gmünd, Ellwangen, and Rottweil, and courses in philosophy and theology from 1825 to 1830 at Tübingen; entered the seminary at Rottweil in the autumn of 1830, and was there ordained on 14 Sept., 1831. In the autumn of 1832, he became professor of New Testament exegesis in the Catholic theological faculty then attached to the University of Giessen. At Easter, 1837, he was called in the same capacity to the University of Tübingen, where, in 1839, he was appointed to the chair of dogmatic theology. He retired in 1842 to clear the way, with remarkable gifts for philosophical and theological speculation, and with Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy, with which he was the first in Germany to make it clear that its basis of conclusions was philosophy. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy, with which he was the first in Germany to make it clear that its basis of conclusions was philosophy. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy, with which he was the first in Germany to make it clear that its basis of conclusions was philosophy. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy, with which he was the first in Germany to make it clear that its basis of conclusions was philosophy. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy, with which he was the first in Germany to make it clear that its basis of conclusions was philosophy. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His work in this field closed with the important, though unfinished work, "Das Leben Jesu" (1834, 183), in which he opposed the destructive tendencies of Strauss. After he had taken the chair of dogmatic theology at Tübingen, he made the study of speculative dogma life work. His most important work is the "Katholische Dogmatik", an undertaking of wide scope which unfortunately was never completed. The following parts appeared: Vol. I., 1st part: Einleitung in die katholische Dogmatik" (Tübingen, 1846; 2nd ed., 1862); Vol. II.: Die christliche Lehre von der gottlichen Dreieinigkeit "(1857). Kuhn had already outlined his speculative work in the paper "Ueber Princip und Methode der speculativen Theologie" (University programme, Tübingen, 1840). Among his other works which were issued in part independently, and in part in the Tübinger "Theologische Quartalschrift", many bear a polemical character. His treatment of the fundamental questions on the relation of faith and knowledge, of philosophy and theology, brought about a controversy first with the Hermansians, and in later years with the advocates of the neo-Scholastic philosophy (Clemens, Schäzler). In the analysis of the Hermansian anti-Catholicism, Glauben und Wissen, with Rücksicht auf extreme An- sichten und Richtungen der Gegenwart" (Tübingen, 1839), is partly devoted. The "Philosophie und Theologie" (Tübingen, 1860) was directed against the philosopher Franz Jacob Clemens von Bonn, as was also the essay, "Das Verhältniss der Philosophie zu der theologischen Lehre" ("Theologische Quartalschrift", 1862, pp. 541–602; 1863, pp. 3–33). In 1863 and the subsequent years, Kuhn was engaged in a controversy with Constantine von Schäzler, first in regard to a free Catholic University and later on the dogmatic question of the relation of nature and grace, of the natural and the supernatural. On the former question he wrote "Die historisch-politischen Blätter über eine freie katholische Universität Deutschlands und die Freiheit der Wissenschaft" (Tübingen, 1863); on the latter he wrote "Das Natürliche und das Unsinnige (1864). Schäzler then published his important work, "Natur und Übersinnlichkeit. Das Dogma von der Gnade und die theologische Fage der Gegenwart. Eine Kritik der Kuhn'schen Theologie" (Mainz, 1865), and later "Neue Untersuchungen über das Dogma von der Gnade" (Mainz, 1867). It was especially against these two works that Kuhn directed his last important book, "Die christliche Lehre von der göttlichen Gnade. Erster und letzter Theil: Die ursprüngliche Gnade und die damit zusammen- hängenden Untersuchungen über den Begriff und das Wesen der Gnade überhaupt, mit besonderer Berich- tung auf die Scholastik und deren neueste Umdeutung" (Tübingen, 1868). A prospective second volume, in which the grace of Redemption was to be set forth from a positive and theoretical standpoint, never appeared. Of Kuhn's earlier works we may mention a few others, which were published in opposition against the Pantheistic, anti-Christian theories of contemporary philosophy: "Die moderne Spezierung auf dem Gebiet der christlichen Glaubenslehre" ("Theologische Quartalschrift", 1842, pp. 171–225; 1843, pp. 3–75; 179–226; 405–67); "Die Schelling'sche Philosophie und ihr Verhältniss zum christlichen Dogmatismus" ("Theologische Quartalschrift"., 1844, pp. 57–88; 179–221; 1845, pp. 3–39). Kuhn also opposed Hegel's philosophy of religion in the above-mentioned "Ueber Glauben und Wissen" (1839). Schmidt, Zur Erörterung der Johannishvolkent von Kuhn in Theol. Quartalschrift (1867), pp. 331–8; IDM, Geschichtsbriefe auf Groß, ev. v. Kuhn (Rottweil, 1887); IDEM in Kirchen- und Staatsld., s. v. "Kuhn" (Stettin, 1891); Deutsche Biographie, LI, pp. 418–20. Regarding Kuhn's philosophy, see also Schmid, "Wissenschaftliche Richtungen auf dem Gebiet des dogmatischen Theologischen in neuerer Zeit", (1862); Schmid, "Wissenschaftliche Richtungen auf dem Gebiet des dogmatischen Theologischen in neuerer Zeit", (1862); Werner, Gesch. d. kathol. Theologie (Miinchen, 1866), pp. 499 sqq., 637 sqq.; Gumper, "Kuhn und seine Schule in dem Weltall der Philosophie" (Tübingen, 1858); "Ueber Glauben und Wissen in Annalen der philosoph. christie, LXXXVII (1857), pp. 26 sqq., 163 sqq. Friedrich Lauchert.

Kulturkampf, the name given to the political struggle for the rights and self-government of the Catholic Church, carried on chiefly in Prussia and afterwards in Baden, Hesse, and Bavaria. The contest was waged with great vigour from 1871 to 1877; it was renewed at various times in the 1880's and 1890's. On one side stood the government, the Liberals, and the majority of the Conservatives; on the other, the bishops, the priests, and the bulk of the Catholic people. Prussia was the chief centre of the conflict. The Prussian government and Prince Bismarck were the leaders in this memorable struggle.
I. CAUSES OF THE KULTURKAMPF—They are to be sought: (1) in the political party-life of Germany; (2) in the trend of ideas among the German people towards the middle of the nineteenth century; (3) in the general European policy of Bismarck after 1870.

1. Moritz von Blankenburg was the leader of the patriotic faction of the Prussian Conservatives. From 1848 on, he declared himself openly and clearly in Parliament for an anti-Roman policy. The Conservatives represented the orthodox Protestants of Prussia, themselves threatened by the liberal movement at that time opposed to all positive Christianity. Nevertheless the attitude of the party was no more capricious. The Conservatives yet held in principle to the Protestant character of the State of Prussia as formerly constituted (i.e., up to the German Revolution of 1848). After the Constitution of 1848, it is true, this exclusively Protestant character of the State was no longer recognized by law. But the Conservatives jealously saw to it that as a matter of fact no change took place in Prussia. It could not be pleasing to them that the Catholics of the Rhineland and Westphalia should gradually rise to power through the new parliamentary institutions. When the German Empire was formed in 1870, and South Germany, in great majority, chose a Protestant imperial minister. In Prussia, the Conservatives conceived the gravest fears for the supremacy of Protestantism in Prussia.

However, the real instigators of the onslaught on German Catholicism were the German Liberals. Their attitude is thus explained: previous to 1850 the Liberal party had long been composed almost entirely of men belonging to narrow professional circles—professors, lawyers, etc., also prominent business men. They united in opposition to political absolutism, and were eager for a larger constitutional life in Germany. But they had also an intellectual bond. With that bond as a common denominator, the party could develop, as so many other German parties, into an umwelt of dignified and unecclesiastical Christianity, they were all inimically disposed towards the Catholic Church and all positive belief. With the help of legislation and state schools they hoped to secure for “free and independent science” (die freie Wissenschaft) an absolute control over the intellectual life of the whole German nation. Indeed, the original pioneers of the Liberal party were as unanimous in their philosophical views of the world and life as they were in their views of the State. In the beginning, they were reduced to the intense struggle to promote equally both policies. Until 1860, however, they considered themselves too weak to undertake vigorous action in behalf of their Kultur aims, i.e., their intellectual and political ideals as described above. Isolated failures of an earlier date (the Kaiser-Wirren, or economo-political troubles of 1837, and the Deutsch-böhmischen movement of Ronge in Baden, 1844-46) still served as warnings. In both cases vast masses of the people had been deeply troubled. Even the middle-class citizens, usually rather indifferent in matters of faith, were not yet ready to participate in religious conflicts of this nature. Their chief aims at that time were political-economical; a little later, after 1850, the passion of national unity stirred deeply the entire Bürgerthum of Germany. But when the Liberal influence increased after 1850 in the Prussian Parliament (Sprecht) and in the rest of Germany, the Liberal leaders began to change their tactics. The Grand Duke of Baden confided to them the organization of the Ministerium, i.e., the civil administration of the State. Forthwith the Archbishop of Freiburg and the clergy of Baden were subjected to the strictest civil supervision. The Catholic Church was stripped of control of its property and revenues, with which, till then, the Government had not interfered. All ecclesiastical influence was expelled from the schools, and an effort made to introduce the spirit of “free science” even into the education of the clergy. It was a prelude of what was to take place throughout all Germany some ten years later. In the summer of 1866 Bavaria offered the Liberals a pretext for the introduction of the spirit of(answer cut off)
source of Hegelianism, that had accomplished the unity of Germany. Most Liberals, on the other hand, while they rejoiced over the settlement of the "German question" on a flat and constitutional basis, regarded the national unity as incomplete so long as the Germans were divided in religion and in the aforesaid fundamental philosophic views. They maintained that a permanent political unity of Germany depended absolutely on unity of religion, language, and education. On this ground they proclaimed the Catholic minority a foreign element in the new empire; it must be either assimilated or exterminated. The deep-rooted religious differences of Germany, thus brought again to the front in connexion with the nation's future, were freshly aroused, though such new occasion was scarcely necessary. Popular sentiment to evoke them, they had, of themselves as it were, and by their own nature, taken on a new life.

As early as 1848, an important "Catholic Movement" sprang up in Germany. During the eighteenth century the German Catholics had been quite outmanoeuvred by the Protestants, and in the early decades of the nineteenth century found themselves politically powerless. Economically they had fallen into the background, nor could they exercise social an equal influence. In general education they were also backward, in comparison with their rivals. Their Catholic consciousness was therefore much weakened; no other religious question could touch it openly and freely. But about the middle of the nineteenth century a change came over the Catholics of Germany, and they awoke to a fresh sense of the power and beauty of their religion. Simultaneously Catholic life took on a new development throughout the entire church, especially during the pontificate of Pius IX. This pope had a wonderful influence over the Catholic masses, whom he filled with a remarkable confidence and zeal, especially as to their public life. In the Syllabus of 1864 he condemned with gravitas earnestness that Liberalism which was then everywhere proclaimed as the heir expectant of Catholicism. Thereupon, he convened an encyclical council, the first in 300 years. At this turning-point the German Catholics, so long eliminated from the political, economic and educational life of their nation, rallied to the defence of their faith against Liberalism. Under papal blessing and the protection of the House of Hapsburg, Christian teaching and life, violently attacked by a multitude of infidel writers, and undertook to withstand the combined hosts of Protestantism and Liberalism. The Liberals, on the other hand, resented bitterly both Syllabus and Papal Infallibility; in some places (Munich, Berlin) Liberals suffered from the violence of mobs. At the very time when the dogma of Papal Infallibility was being proclaimed, Germany was winning her great victories over France; to the Liberals (some of whom were thus minded in the Prussian war of 1866 against Austria) it seemed as if the time had come for the final conflict between the empire and the popes, the last decisive battle of the Reformation against enslavement of religious thought and subjection to ecclesiastical authority. Gradually and almost unconsciously, under the influence of the aforesaid political and ecclesiastical events, a situation that in the Liberal mind originally contemplated only a more or less comprehensive legislation, both as to the schools and the relations of Church and State, developed into one of the most passionate conflicts of principles ever fought out within the limits of a great nationality. This was the state of affairs when, in the fall of 1870, the Prussian Catholic, now satisfied with the restoration of the system of popular association (Vereinungessen) undertook the creation of a new political party, the Centre (Zentrum); on the other hand, in the Reichstag elections of the Spring of 1871 the Liberals overthrew the Conservatives and took up the reins of power. In April, 1871, the mutilations of the tempest were already heard in the opening debates of the Reichstag, especially in the debate on the Address to the Throne, when the Liberals insisted very pointedly on the need of a firm policy looking towards the restoration of the Temporal Power, characterizing any such steps as an interference with the domestic affairs of a foreign people. As yet, however, no one had the courage to let loose the turbulent passions that filled men's breasts, nor was it possible up to the end of 1871 (Memorials of France Holding that the Liberal leaders were ready to open the campaign. The Centre remained on the defensive, occupied chiefly in outlining its parliamentary status. At this juncture Bismarck appeared on the scene.

(3) He was then under strong nervous tension, owing to the extra stress the Liberals were applying to their "high stakes" policy of his previous eight years. He was dominated by the fear that new and more exhaustive wars would soon be necessary in order to defend the unity of Germany then barely won. In this temper he was deeply concerned lest within the empire itself the foreign enemy should find aid and succour from particularists (Prussianists and Poles), an importance he easily over-estimated. At this stage of his diplomacy he was bent on preventing the recurrence of any situation similar to that of 1863-66, when he found himself helpless in the presence of a powerful parliamentary opposition. He was at all times naturally inclined to punishment as an unjustifiable, any kind of parliamentary opposition. Quite indifferent to theories of home government and the division of political authority within the State, he was equally eager for a solid centralization and thorough reinforcement of all national resources, in view always of the foreign enemy. In this spirit he had once fought the Liberals, and compelled his former opponents to become the ardent supporters of his foreign policy. Now, on his return from France, he found before him a party, on the one hand more powerful in a parliamentary sense than the Liberal opposition of the sixties, while on the other it seemed to him gravely perilous in case of a foreign war. He was suspicious of one deputy, Ludwig Windthorst, in whom he at once recognized the real leader of the Centre. While Bismarck was fully aware of the high abilities of Windthorst, he knew also that he was a former subordinate of the House of Habsburg, a Catholic, and had had touch with that dynasty, that he had never approved the exclusion of Austria from the German unity as accomplished by Bismarck, and that he vigorously disapproved the excessive favour shown by Bismarck to the Liberals, both in Prussian and in imperial affaires. He had already suffered a notable defeat at Windthorst's hands in the Tariff Parliament of 1866, on which occasion Bismarck tried in vain to obtain from the assembly anything more than the politico-economical services for which it had been called (i.e. he failed then to secure the peaceful union of the South German States with the North German Confederation). Windthorst at that time had no strong parliamentary following, yet his political strategy had proved successful. But now a strong party was at his back, and, as its acknowledged leader, he lost no occasion to increase its influence. On the one hand he appealed to certain Conservatives, superior to Protestant prejudices, and unalterably opposed to the National Liberals as enemies of Christianity and the traditional German views of the State; on the other he was always ready to combine with those Liberals who had not yet gone unconditionally to Bismarck. This welcoming of caitiff Liberals was a blow to Bismarck's chief cause of complaint. He had also perceived that the Centre from the beginning that the Centre entertained foreign relations inimical to the new German Empire. After the Franco-Prussian War the chancellor seems to have feared a conflict with Russia as champion of the new Panasalism. He had in large measure the
KULTurKAMPF

habitant distrust of Prussia for its Polish subjects, and was persuaded that in case of war they would be on the side of Panalism—that, whether in war or diplomacy, they would always prove a thorn in the side of Germany. He had watched them closely for several years and noted with deep suspicion the alliance of their deputies with the German Catholics. He laid great store by the Holy See, but there was no question as to the Roman Catholic clergy at large for the growth of the Centre, while, under Windthorst’s direction, the party was standing out not only for the rights of the Catholic Church, but also for a definite political programme. This zeal of the German clergy was at this juncture especially odious to Bismarck; despite his clear-headed political realism, his imagination was deeply affected by the idea that Protestant Prussia had restored to Germany its former imperial grandeur precisely when Papal Infallibility was being proclaimed at Rome. In his eyes the empire once more stood over against the papacy; only the Holy See could protect the German individual freedom against submission to ecclesiastical authority. He persuaded himself that Rome was less friendly to the new empire than any other European power, and that it meant to unite against the new Protestant Empire all the Catholic nations of Europe and its own priesthood everywhere. To obtain definite information as to the relations of Rome and the Centre he demanded, in the spring of 1871, through the Bavarian ambassador at the Vatican, that Rome should censure the Centre party for its antagonistic attitude in the Parliament. A friendly answer was given him by the Holy See, but the censure of prominent members of the Centre, notably of Bishop Ketteler, Rome refused to further influence the Catholic party, whereat the indignation of the chancellor was boundless. In the meantime the South German Liberals, foremost among them Prince Heinrich zu und b. zu Hohenlohe-Ingelfingen, had lost all confidence in the Centre, the Catholic clergy, and Rome. Though for a while slow to act, he became daily more convinced that a grave peril for the empire existed in the activity of a powerful parliamentary party of German Catholics under the leadership of a man like Windthorst, and his Reichstag in need of a conservative reform of the Church, and Rome had no intention of abandoning Windthorst, but threatened, in case of refusal, to pillory the party before all Germany as an enemy of the Empire. Shortly afterwards he caused the house of a Polish canon in Posen to be searched by the police, in the hope of finding there correspondence that would enable him to justify his original mistrust of the Centre, the Catholic clergy, and Rome. Now the Catholic Movement, as he knew it since 1850, was for Bismarck something entirely hostile and had been friendly to Austria, and its adherents were numerous in Southern Germany and Westphalia. Moreover, its enthusiasm for Rome and for the independence of the Catholic Church was odious to him. As a Prussian official he believed in a State Church; the Church should not only be under the supervision of the State, but should positively serve the purposes of the State. It seemed, therefore, that the psychological moment had come for the arrest of this Catholic Movement. All Germany was enthusiastic over the new-born imperial unity. To judge by various occurrences within the ranks of Catholicism, it seemed as if Rome had gone too far in its claim of freedom of German Catholics in matters of faith. The Old-Catholic organization then taking shape seemed a likely nucleus for a German National Church, a State Church for Catholics; it would welcome all seceders from Rome and guarantee them a new ecclesiastical life. Old-Catholicism, he argued, must be supported; the Roman Catholic clergy forced to submit; the measures behind the Catholic Movement must be intimidated; the immediate pressure of Roman authority removed from them, and the Centre stigmatized before its constituents as an enemy of the German Empire.

II. Course of the Conflict.—It may be divided roughly into three periods: 1871–72; 1872–78; 1878–91.

A. 1871–72.—The afore-mentioned views of Bismarck concerning the danger of the Centre party were not without fruits. The measures by which Rome was forced to yield were by no means so clearly worked out in the summer of 1871 that he was ready then to begin a systematic onslaught on German Catholicism. For a year and a half his policy was manifested only in individual cases, though in all such cases a unity of attitude toward the Catholic Church was manifest. As early as July, 1871, he abolished the Catholic Section of the Prussian Ministry of Worship and gave over henceforth to officials in great majority Protestant the conduct of all governmental matters pertaining to Catholic churches and schools. His excuse was that the members of the aforesaid Catholic Section of the Department of Worship were guilty of too close relations with the Poles. Towards the end of 1871 he proceeded, on similar grounds, against the Catholic clergy of the eastern provinces of Prussia; he introduced at that time in the Reichstag a law concerning the supervision of instruction and education. This act contemplated the extension of the Jesuit instructions, and at the same time the abolition of ecclesiastical supervision of the primary-school system hitherto exercised conjointly with the civil authorities. Henceforth, whenever the schools of a district were entrusted to ecclesiastical superintendents, their authority was to be derived solely from the State; in large measure, moreover, the Catholic clergy were excluded from any supervision of the schools.

During the discussion of this School Supervision Law, Bismarck made an extremely violent attack (2 Feb., 1872) on Windthorst’s leadership of the Centre, held out to the left the new branch of a political party with the object of abandoning Windthorst, but threatened, in case of refusal, to pillory the party before all Germany as an enemy of the Empire. Shortly afterwards he caused the house of a Polish canon in Posen to be searched by the police, in the hope of finding there correspondence that would enable him to justify his original mistrust of the Centre, the Catholic clergy, and Rome. In this he was unsuccessful. On 4 July, 1872, the Reichstag passed the law against the Jesuits (Jesuitenbesetzung), on the plea that they were the emissaries of Rome in Germany (pretending at the same time to free the bishops from the Jesuit obedience); moreover, the influence of the Vatican over this party. In his eyes the Centre was an outcome of the German Catholic Movement (die katholische Bewegung); deprived of the support of the latter it would collapse. Now the Catholic Movement, as he knew it since 1850, was for Bismarck something entirely hostile and had been friendly to Austria, and its adherents were numerous in Southern Germany and Westphalia. Moreover, its enthusiasm for Rome and for the independence of the Catholic Church was odious to him. As a Prussian official he believed in a State Church; the Church should not only be under the supervision of the State, but should positively serve the purposes of the State. It seemed, therefore, that the psychological moment had come for the arrest of this Catholic Movement. All Germany was enthusiastic over the new-born imperial unity. To judge by various occurrences within the ranks of Catholicism, it seemed as if Rome had gone too far in its claim of freedom of German Catholics in matters of faith. The Old-Catholic organization then taking shape seemed a likely nucleus for a German National Church, a State Church for Catholics; it would welcome all seceders from Rome and guarantee them a new ecclesiastical life. Old-Catholicism, he argued, must be supported; the Roman Catholic clergy forced to submit; the measures
tion to the effect that "in the future he would obey in their entirety the laws of the State." He refused to make the declaration, whereupon his salary was witheld. A similar attitude was expressed by his foreign policy, which was soon shown in his famous papal election dispatch (14 May, 1872), in which he invited the European governments to agree on the conditions under which they would recognize the next papal election. The dispatch was ineffective, equally so Bismarck's attempt to compel the pope to accept, as the German Empire's first ambassador to the Vatican, Cardinal Hohenlohe, brother of the above-mentioned Prince Chlodwig Hohenlohe whose close relations to both National Liberals and Old Catholics were well-known. On this occasion Bismarck uttered the celebrated words: "Nach Cæsar den Cæsaren, nach Papst den Papst!" (We have a Caesar, i.e., he foretold the real issue of the conflict before it had yet fairly begun. Nevertheless he was now fully determined to carry it on to the end. He found a ready instrument in the person of Herr Falk, appointed Minister of Worship in January, 1872, a clever and personally well-meaning man, but a jurist of a very formalistic type and an extreme partisan. The chancellor had already, 7 Feb., 1872, urged the Min-
ister of the Interior to undertake the solution of the Polish question "on a basis of principle, actively, and aggressively"; he now engaged Falk to walk in the same course. He was "to make known with all due cleverness and in every sense the relations of the State to the various religious societies". On the side of the Church her defenders began now to seek the open. The Prussian hierarchy, assembled at Fulda for its an-
nual meeting, issued (20 Sept., 1872) a memorial to all the German States in which the recent anti-eclesiastic.

al laws were restated in the form of a judgment of public opinion, and proof supplied that rights of the Church hitherto acknowledged both by international and national law had been seriously violated. Pius IX, moreover, lifted his voice twice in protest. On the first occasion (24 June, 1872) he said to the German bishops in Rome that Bismarck had placed himself at the head of the persecutors of the Church. "Who knows, however, that but soon the little stone will fall from the mountain and strike the feet of the colossus and shatter it?" Another time (Christmas Consistory, 1872) he spoke reprovingly of "men who not only do not belong to our holy religion, but do not even know it, yet arrogate to themselves authority to decide concerning the doctrines and the rights of the Catholic Church." The popular agitation grew from day to day. The Association of Ger-
man Catholics (Mainzer Verein), founded under the presidency of Baron Felix von Loes, soon counted 200,000 members, and took a much bolder attitude than the Centre, whose leader, Windthorst, observed at all times much moderation.

In the meantime Falk aimed to make the Catholic bishops independent of Rome, the clergy independent of the bishops, and both dependent on the State. They were to be trained in courses designed to accomplish these aims. The education of the clergy was to depend entirely, or nearly so, on the State, and to be carried out in the spirit of the average German Liberalistic education. Next, all ecclesiastical offices were to be filled only after approval by the highest civil authority in each province. In the future all ecclesiastical courts outside Germany should no longer exercise any disciplinary power over the Prussian clergy. From all official Catholic bodies was to lie, in the future, an appeal not only on the part of the accused, but also of the Chief President (on grounds of public interest), to a court composed of civil officials and to be known as the "Royal Court of Justice for Ecclesiastical Affairs". Falk sought also to restrict con-
cerning bishop and clergy on one side, and the bishop and Rome on the other, were intimately bound to one another. He erred most grievously, however, when he made it a criminal offence for any priest to exercise his ministry without due authorization from the civil power, and "silenced" every bishop who refused to comply with the new legislation. In case the German clergy remained loyal to the Church these measures meant the withdrawal of the sacraments from the Catholic people, i.e., the most grievous spiritual suffering. The plans of Falk were formulated in four bills. The first was laid before the Landtag in No-

vember, 1872. (The Catholic Party, i.e., the Centre, although the royal consent was obtained with difficulty and only after insistence on the severity of the afo-

said papal allocution at Christmas of 1872. It was during the discussion of these Falk Bills that the word Kulturkampf was first used. The Landtag (Prus-

sian Assembly) Commission to which the Falk Bills were referred expressed grave doubts as to their constitu-
tional validity, seeing that the Prussian Constitution guaranteed to the Catholic Church an independent ad-
ministration of her own affairs. The Commission did not, therefore, advise the rejection of the Falk Bills, but rather proposed an amendment to the Constitu-
tion to the effect that in all her administration the Church was subject to the laws of the State and the jurisprudential authorized supervision of the same. B. 1875-78. This amendment and the four bills were adopted in May, 1873, hence the term May Laws (Maiengesetz). To hasten their execution the Prussian Ministry at once called the Old Catholics to establish themselves as a Church, and contributed large sums for that purpose. It also encouraged the public adhesion of so-called State Catholics, i.e., Roman Catholics who protested formally their willingness to obey the new laws. Nevertheless, both Old Catho-

lics and State Catholics raised a storm in Rome. On the other hand the unexpected happened in the shape of a remarkable development of ecclesiastical loyalty on the part of the Catholics. The bishops of Prussia had protested beforehand (30 January, 1873) against the forthcoming legislation. On 2 May they issued a common pastoral letter in which they made known to the faithful the reasons why all must offer to these laws a passive but unanimous resistance. On 26 May they declared to the Prussian Ministry that they would not co-operate for the execution of the Falk Laws. Almost without exception the clergy obeyed the mandate of the bishops. Thereupon the punish-
ments prescribed by the laws for their violation were at once applicable; in hundreds of cases fines were soon imposed on the clergy for the execution of their ecclesiastical ministry. As none of the condemned ecclesiastics would voluntarily pay the imposed fines, these were forcibly collected, to the great irritation and suffering of the condemned. Some of the principales began to open, and Falk declared (24 Oct., 1873) that still greater severity would be used. The Ministry of War declared Catholic theological students subject to military service; the Marian congregations were forbidden to exist; the Catholic popular associa-
tions and the political activity of the Centre (public meetings, Catholic press) was subjected to close and
inimical supervision, in every way hindered, and the Catholic population persecuted for their fidelity to
the party. In December, 1873, changes were made in the
organization of the party by the bishops. Reference
to their oath to the pope was stricken out, and an
unconditional observance of the laws of the
State prescribed. These measures, however, did not
produce the desired results. In the November elec-
tions (1873) the Centre returned to the Landtag 90
members instead of its former 56, and to the Reichstag
91 instead of its former 63. The number of its votes
was doubled, and reached about 1,500,000. The num-
ber of Catholic papers increased in 1873 to about 120.
Falk sought to overcome all this Catholic opposi-
tion by fresh ravages on the pastoral ministry. New
laws of the Landtag (May, 1874) supplemented his
authority and put at his disposal new means of
expulsion. It was provided that when a bishop was de-
posed a representative agreeable to the Government
should be appointed; if none such were to be had, ap-
pointments to vacant parishes should lie in the hands
of the "patron" in each parish, or should be taken
by the bishops in consultation with the bishop of the
province. The Reichstag aided by passing a Priests-Expulsion Law (Priester-
ausweisungsgesetz) by which all priests deprived of
their offices for violation of the May Laws were turned
over to the discretion of the police authorities.
During the debates on this law the Archbishops of Posen
and Cologne and the Bishop of Trier were condemned
to imprisonment; later, the Archbishop of Posen
(Count Ledochowski) was deposed. Shortly after
the promulgation of the new May Laws the Ministry saw
it to that all the Prussian sees were vacated. A very
great number of parishes were also deprived of their
pastors. The ecclesiastical educational institutions
were closed. These renewed efforts were no more suc-
cessful than the former measures. No cathedral chap-
ter chose an administrator, and no parish elected a
parish priest. The exiled bishops governed their sees
from abroad through secretly delegated priests. The
faithful everywhere made it possible to hold Divine
Service. The pope declared, 5 Feb., 1875, the May
Laws invalid (irrītās). On all sides exasperation was
well-nigh boundless.

Under these circumstances Bismarck himself took
charge of the situation. His main hope still lay in
proposing the Centre party to his Germany. This empire,
and this stigma he endeavoured by all possible
means to fasten upon it; could he do so, the party
would be isolated in the Reichstag, and soon helpless.
At Kissingen, 13 July, 1874, the Catholic cooperator,
Kullmann, attempted to assassinate him. Though the
chancellor had no evidence to justify his assertion,
he declared in a public session of the Reichstag
that the murderer "held to the coat-tails of the
Centre", and refused to consider any denial of the
charge by that party. Bismarck now called to his
aid two allies which in the past he had always found
serviceable in face of great popular opposition, i. e.
his assistant of the Centre party. The new influence
offered considerably from those of Falk. The latter
saw in the religious life of the Catholic people their
chief fortress, and so attacked it with all earnestness,
hoping to meet with victory in the tumultuary reac-
tion likely to follow any interference with the spiritual
necessities of the people. In this there was for Bismarck
too much idealism; he chose rather to appeal to the
material needs of his opponents. On 22 April,
1875, he obtained from the Landtag the so-called
Sperrgesetz, by which all state payments to the
Catholic bishops were withheld until they or their
representatives complied with the new laws. Another
law of the Landtag (31 May, 1875) closed all
monasteries in Prussia, and expelled from Prussian
territory all members of religious orders, with the ex-
ception of those who cared for the sick—and they were
variously restricted. Finally (20 June, 1875), he dealt
the Catholic Church what seemed to him a crushing
blow; on that date was passed in the Landtag a law
which confiscated all the property of the Church, and
at the same time sanctioned the election of the bishops
by the members of each parish. To accom-
plish this he had previously to commit another act of
supreme violence, i. e. the abolition of those para-
graphs of the Prussian Constitution which concerned
the Church. The aforesaid Kanadeparagraf, or "pulpit-
law", was added by the Reichstag (6 Feb., 1876)
so as to enable the Government to prosecute before
the criminal courts any priest who should criticise
in the pulpit the laws or the administration of the
Prussian State. In the following years sixteen mil-
ion marks (83,250,000) were withheld by the Govern-
ment from the Church, by virtue of the Sperrgesetz;
two hundred and ninety-six monastic institutions
were closed. By the end of 1880, 1125 parish priests
and 645 assistants had fallen victims to the new
laws (out of 4627 and 3812, respectively).
In the circle of their operation 646,000 souls were ent-
tirely deprived of spiritual assistance. With this ad-
dition the Falk Ordinance of 18 Feb., 1876, issued
with Bismarck's consent, by which in the future reli-
gious instruction in the primary schools was to be
given only by teachers appointed or accepted by the
State, i. e., all Catholic ecclesiastical control was
suppressed.

The debates on all these measures were the most
violent ever heard in the German Parliament; it was
apparent that on both sides the leadership would soon
fall to the extremists. On the Catholic side, there-
fore, evidences of moderation were soon forthcoming,
and tended to prevent further extreme measures on
the part of the Government. The bishops felt that
the gravest perils had been successfully met and
averted. The earliest relief was the result of legisla-
tion originally intended to do great damage to the
Catholic cause. The Prussian Civil Marriage Law of
March, 1874 (extended to the German Empire, 6 Feb.,
1875), withdrew from the clergy their former right of
keeping the civil registers, and made civil marriage
obligatory. It was hoped that in this way the laity at
least would be freed from ecclesiastical control, since
neither bishops nor clergy were willing to separate
from Rome. Under the circumstances, however, the
introduction of the compulsory state marriage Law of
the Church. Had marriages remained possible only in
the presence of civilly recognized priests, the Catholic
population, in the end, given the absolute necessity
of marriages, would have had to accept one of two issues:
either they would tolerate the state clergy, or they
would bring pressure to bear on the Catholic clergy
in the sense of obedience to the new laws. On the other
hand the bishops met successfully Bismarck's securali-
ation of the Church property. They declared that in
this respect it was material interests which were chiefly
at stake, and in such cases the Church was always in-
clined to the most conciliatory measures; confiding
therefore, in the ecclesiastical loyalty of the Catholics
they directed them to obey these laws. In the mean-
time by the laws of 7 June, 1876, and 13 Feb., 1878,
Bismarck undertook to sequestrate all Church prop-
erty; he had already failed, however, in his original
purpose. Windthorst, on the other hand, strove earn-
estly to keep as much as possible of the Catholic
Church and to incline them to peace with the Gov-
ernment as soon as the ecclesiastical situation would
permit. In this temper a reconciliation was evidently
no longer remote, much less impossible. It was now
clear to Bismarck that the popular agitation had
reached a height that no material force could control,
and that the civil authority itself was endan-
gered. The chief motive that had originally led him
to enter on this grave conflict with German Catholi-
stem had long since disappeared; since 1875 he no longer feared an anti-German coalition of Catholic powers or a war with Russia. In the meantime those closer relations with Austria had begun; which in 1879 terminated in the actual Triple Alliance. His new foreign policy brought with it a frequent rapprochement with the Catholics. In the Reichstag he could no longer act quite independently of them, and this was another factor in the future reconciliation. The National Liberals in the Reichstag had ceased to be his unconditional supporters in the grave questions of internal reform (politico-economic, social, and financial) that the Catholics and the National Liberals had continued to press. The continued opposition of so large a party as the Centre was henceforth an element of grave danger for all his plans. Conservative Protestants, meanwhile, rebelled against the Liberalism of Falk, which under the circumstances was far more offensive to them than to Catholics. Moreover, Emperor Wilhelm inclined daily more in their direction. Indeed, the position of Falk had become practically untenable.

C. 1878-91.—The death of Pius IX and the election of Leo XIII (Feb., 1878) made possible the restoration of peace in the much troubled Fatherland. At once, and for the first time, in a conciliatory way to Kaiser Wilhelm urging the abolition of the May Laws. His request was refused; at the same time Berlin expressed a desire for reconciliation. In July, 1878, Bismarck had a personal interview with the papal nuncio, Maesia, at Kissingen in Bavaria. However, a full decade was yet to intervene before the May Laws quite disappeared. The proposed basis of negotiations was not calculated at this juncture to bring about the much desired peace. Bismarck insisted that the May Laws should not be abolished by any formal act; he was willing, however, to modify their application, obtain gradually from the Landtag termination of the class struggle, greater freedom of laws, remove certain odious points, etc., all on this condition of a yielding attitude on the side of the Catholics. The latter, indeed, were in this respect praise-worthy. Bismarck further desired that in all measures of relief the Government should appear to take the initiative—of course after proper diplomatic negotiations with Rome. In return he demanded from the Curia an assurance that the Centre party would support the policies of the Government; otherwise the latter could have no interest in a reconciliation.

As a proof of good will he dismissed Herr Falk in 1878; by the law claiming all May Laws. The retiring Herr Puttkamer, whose ecclesiastico-political attitude was more conciliatory than that of his predecessor. Under him the Church began to regain its former influence over the schools. He obtained from the Landtag on three occasions (1880-83) discretionary authority to modify the May Laws; thereby he provided for a restoration of orderly diocesan administration, and the filling of the vacant sees. The vacant parishes, it is true, remained yet without pastors; it was allowed however, to administer them from neighbouring parishes. After 1883 the Sperregezez, or suspension of clerical offices, was not enforced. In 1884 Prussia established an embassy at the Vatican. Bismarck in the meantime held firmly to one point: the obligation of the bishop to make known to the Government all ecclesiastical appointments, and the Government’s right of veto. This much Rome was not disinclined to allow, but demanded a previous formal abolition of the May Laws. It was of no account. Leopold XIII was very anxious to re-establish peace and harmony with Germany, and for that reason chose for his secretary of state, in 1881, Lodovico Jacobini, who had been nuncio at Vienna since 1879, and had conducted the preliminary negotiations. During the negotiations of the papal diplomacy consisted in the excessive stress it laid on the purely politico-ecclesiastical elements of the problem (those which affected the general European situation of the Church), not sufficiently taking into account the fundamental source of the conflict, i.e., the violation of the constitutional law at Prussia. From this point of view it did not seek to co-operate with the tactics of the Centre in that party’s dealings with Bismarck: but it resolved to give permanency to the exertions of his party, to again anchor the rights of the Church in the Prussian Constitution, and to make the latter document guarantee once again the independence of the Church. During these years of more or less fruitful negotiations between Rome and Berlin, the political power of the Centre in the Reichstag grew notoriously; the Government was no longer able to count on a majority against it. By this time the Conservatives had again obtained the upper hand in the Landtag, and soon made evident their intention to abolish completely the Falk system of interference with the disciplinary affairs of the Catholics. The Centre party, however, after all these years, had established a sort of protection, or obligation of making known to the Government all ecclesiastical appointments, with the corresponding civil right of veto. He believed, apparently, that the Kulturkampf agitation would gradually die out, and that the Catholic people grew weary of “a struggle for the constitution and freedom of the independence of the Church”, now that the most burdensome of the May Laws had been withdrawn and a somewhat orderly ecclesiastical life was again possible.

In the meantime the Centre party and its press kept alive a strong Catholic feeling. On the other hand, the foreign situation soon brought up the question of the final abolition of the May Laws. Bismarck was again anxious in regard to Russia, and this time feared an alliance of that nation with France; the recent awakening of Panasium added to his solicitude on this point. He was concerned lest the Vatican should favour the French attacks on Russia. On the other hand he now sought to rally all forces at the disposal of the Government for the suppression of the Polish movement that had by this time taken on large proportions; owing to his Kulturkampf policy, all classes of the Polish people had been deeply stirred during the previous decade, and their attitude now caused the chancellor great anxiety. He hoped, also, that a decisive ending of the ecclesiastical conflict would seriously affect the hitherto intact solidarity of the Centre and weaken notably the popular attachment to the party, whereby its influence, even yet the source of his great political difficulties, would finally diminish. Leo XIII saw clearly that Bismarck was now earnestly desirous of peace; Rome, therefore, it seemed, need no longer be over-timid in the matter of concessions based on suitable guarantees. The pope also hoped that Bismarck would in turn be helpful to him in respect of the German imperial policy towards Italy. Important in this matter was the juncture the most statesmanlike member of the Prussian hierarchy, Bishop Kopp of Hildesheim (now Cardinal, and Prince-Bishop of Breslau), was made a member of the Prussian House of Lords (Herrenkammer). Bismarck still held with tenacity to the former government claims of the Kingdom of Prussia, and as the nominations of parish priests at least should not take place without the Government’s approval. Nor
would be listen to the restoration of the former recognition of the Church by the Prussian Constitution. Finally, he held in its entirety to the state control of the schools. In reality he was able to maintain these three points; on the other hand he yielded to the Church, practically, the control of ecclesiastical education, permitted the re-assertion of the papal disciplinarity of the clergy, allowed the restoration of public worship and the administration of the sacraments, the application of ecclesiastical disciplinary measures (censures, etc.), and held out to the religious orders the hope of returning. This is substantially the content of the two comprehensive laws (21 March, 1885, and 29 April, 1887), that modified the ecclesiastical Laws in an acceptable way and thereby ended formally the long conflict since known as the Kulturkampf.

During the negotiations for the first law the pope had allowed the bishops (25 April, 1886) to lay before the Government for approval the appointment of parish priests. While the second law was under discussion the pope declared that it showed the way to peace, while Bismarck termed it the restoration of a modus vivendi between State and Church. The Centre was deeply suspicious of both laws because the pope did not insist on constitutional guarantees; the interval between these laws, in view of them, the chancellor made a last attempt to obtain through Rome the support of the Centre for his military policy and the foreign aims it implied. He wished the Centre to vote in the Reichstag for the so-called Septennate. A correspondence ensued between Cardinal Jacobini and the President of the Centre Party; Windthorst was not to be moved from his position. It may be said that the hopes of Leo XIII in Bismarck's help respecting Italy were deceived. In the following years the last remnants of the May Laws disappeared. The law prescribing the expulsion of all priests from the government agencies was withdrawn in 1890, and in 1891 the Sitzverbot (i.e. the ecclesiastical salaries, etc., withheld since April, 1875) were distributed to the various German dioceses. For a while it seemed as if another grave conflict would follow, this time apropos of the schools. However, since the early nineties there has prevailed the present quiescent attitude in all matters ecclesiastical and educational. It may be added that the anti-Jesuit legislation was so modified in 1903 as to offer no longer its former exceptional character; the Redemptorists had been previously allowed to return. One important consequence of the Kulturkampf was the earnest endeavor by which Catholics strove in common with the Protestant denominations, so weak they formerly were in both respects was clear to them only after the great conflict had begun. These efforts took the name of the Paritätsschweigungen, i.e. a struggle for equality of civil recognition. In turn the discussions awakened and fed by this movement soon led to a vigorous self-questioning among the Catholic masses as to the fact of, and the reasons for, their backwardness in academic, literary, and artistic life, also in the large field of economic activities (industry, commerce, etc.). On the other hand the reconciliation between Church and State made it possible for the Catholics of Germany to participate more earnestly than hitherto in the public life of the Fatherland, in illustration of which we may point to the notable contributions of the Centre Party (1896–1904) to the solution of the great imperial problems of that period. At present it seems possible that it may be said that the Kulturkampf rightly appears as only the first phase of the vast movement of antagonism in which Catholicism stands over against Protestantism and Liberalism, on the broad field of Prussia, henceforth one of the great powers of Europe, and within that German nation now coexistent in the political unity of the Empire.

Kulturkampf, Dioecese of (Kumbakonensis).—Kumbakonam, signifying in English the “Jug’s Corner,” is a town of 60,000 inhabitants, and is situated in the fertile plain of the Tanjore District about halfway on the railroad which connects Madras with Tuticorin. Although of no great importance to the British Raj (dominion), still, as a religious centre, it enjoys a wide popularity among the Hindus as the seat of one of their holiest shrines in the south of the peninsula. Nothing positive is known of the origin of this shrine, but a mythological legend says that, some time before the Deluge, the mighty god Shiva, desiring to preserve against the coming cataclysm, directed Brahma to get ready an earthen pitcher wherein he could place in safety on a layer of ambrosia, the spark of creative power, the Vedas, and a supply of corn-seed. Brahma having done this, Siva closed the jug and set it on Mount Meru. When the waters prevailed upon the earth, the precious vessel was lifted up by the flood and tossed about upon the waves, until, at last, it rested on the very spot where is now the “sacred” tank of Kumbakom, called the Maghamagham. From time immemorial a solemn festival has been celebrated once in every twelve years to commemorate this event. It begins on the day of February when Jupiter is in conjunction with the full moon in the lunar constellation called Magham. The Hindus believe that, on this occasion, the waters of the “sacred” tank are fecundated by those of the “divine” Ganges, and that whoever bathes in them on the first day of the month is pardoned of all his sins, but also opens the gates of salvation to every one of his ancestors up to the one hundred and eightieth generation. This duodenal solemnity took place recently (1909). It began at the temple of Kumbeshwur, the “Lord of the Jug,” and lasted ten days, during which a greater number of pilgrims and ablations in the Maghamagham. Kumbakonam, seen through European glasses, is a rather dirty and dusty town with vulgar, tortuous streets, where, with the exception of several pagodas, very few buildings are worthy of attention. However, one of these treasures possesses several ancient sculptures and a very valuable library of Sanskrit books. Though not properly speaking an industrial or commercial town, its silk-dyeing, silk-weaving, chintz-stamping, and especially metal industries have won a good repute for its artisans in the South of India. The glory of Kumbakonam is found in the number of learned people who live in it, and in the comparatively high percentage of the young who receive a liberal education in its schools. The college, conducted on distinctly English lines, is under the management of a European gentleman, who is seconded by an efficient body of native teachers. The institution is a national institution for girls. The “big school,” which numbers about 250 students, is placed under the tuition of native Catholic nuns, paid by the municipality. The diocese, which was created in 1899, is entirely on British territory, although it is suffragan to Pondicherry (the capital of French India). It is bounded on the north by the River Vellar, on the west and
south by the Caavy (which divides it from the Dioceses of Madura and Coimbatore), on the east by the Bay of Bengal and the French territory of Karikal. It includes part of the British civil districts of Tanjore, Trichinopoly, South Arcot, and Sale. The first and perhaps the most important is Ormoe's Society of Foreign Missions (Paria), author of the first Catholic version of the Bible in Tamil, and editor of several classical and devotional books in both this and the Bengali languages. The diocesan numbers 85,000 native Catholics (out of a population of about 3,000,000), evangelized by 50 priests, 65 brother-priests, 111 catechists, and 1,000 laymen. In the mission there are 76 schools, with 3,400 children in attendance, 5 orphanages, 4 dispensaries and a hospital under care of the French nuns. A native Catholic gentleman has built at Perumpannuyur a monument church at a cost of about 135,000 dollars (four lacs of rupees), and has also richly endowed it.

Kumigonde, Blessed. See Cunkundes, Blessed.

Kutenai Indians, an important tribe of southeastern British Columbia and the adjacent portions of Montana and Idaho, occupying chiefly the present Kootenay County, B. C., but formerly also the Selkirk Range, from about 52° southwards, including the basins of the Kootenay and Lower Columbia rivers, and extending to Lake Pend d'Oreille in Idaho. They constitute a distinct linguistic stock, designated as the Kitunahan, from the proper name, Kitunag. The meaning of this name is unknown, but it occurs in the form of Cattanahowes on the Mackenzie map of 1801. To their Salishan neighbours they are known as Kalzi, "lake, or water, people", and to the French as Arcas-à-plats, anglicized Flat-bows. They have a distinct tradition of having formerly lived in the plains east of the Rockies, whence they were probably driven by the Blackfeet, their hereditary enemies. Up to a recent period they were in the habit of making annual descents into the Plains, in company with the Flatheads, Kalispel, and Nez Perces, for the purpose of hunting the buffalo. They are commonly differentiated as Upper and Lower (or Flatbow proper), approximately in British Columbia and the United States respectively, with several minor subdivisions and two main dialects. Physically the Kutenai rank as the tallest and best built Indians of British Columbia, being also almost entirely free from blood diseases. They are noted for the ready manner with which they have adopted the European mode of dissipation so prevalent among other tribes of the region. Intellectually they are more stable and capable of continuous mental exertion, while concurrent testimony of traders, travellers, and missionaries places them in the first rank for morality, honesty, reliability, and manly qualities. In their primitive condition the Kutenai lived in small skin or mat-covered tipis, of which the universal sweat lodge (see Indians) was always an important adjunct. They subsisted by hunting, fishing, and the gathering of wild berries and roots, particularly camas (Camassia: see Flatbows for above) upon which the Kutenai are dependent in times of fish for winter. They made no pottery, but were expert basket-weavers, boiling their food in water-tight baskets by means of heated stones. They dressed in buckskin, painted their faces in bright colours, and wore their hair full length, either braided or flowing. Their social organization was extremely stable, and in no trace of the clans or subclans or secret societies common to most other tribes of the region. Each band had its own chief, hereditary in a certain family, who was assisted by a council. Both slavery and polygamy existed, the slaves being captives taken in war. Slaves when free were punished by cutting off one or both ears, and this was inflicted on the adult members of the tribe as a penalty. Orphan children were adopted by their relatives, while near relatives were not allowed to marry. Murder was compounded by a fine or punished with death by the family of the victim. The dead were buried in the ground with all their worldly goods, and the debts of the deceased were paid by the surviving relatives. The religion was the usual Indian Animism, with the Sun, personified as a woman, being the highest and most Bountiful in the world, and to whose homage the spirits of the dead journeyed, to rejoin their friends later in this world at a place of sacred pilgrimage on the shore of Lake Pend d'Oreille. Tabus, fasting, and sacrifice were a part of the system, and the shaman doctors exercised great influence. Among their greatest ceremonies was the feast following the death of a chief, held at a large camp on Kutenai River, U. S., De Smet himself celebrated "the first Mass ever offered in their land" and set up the cross of a mission, which he named in honour of the day "The Assumption". The mission of the Sacred Heart of Mary was founded on the Tobacco Plains, B. C., within the next year, a whole tribe, with the exception of a portion of the Lower Kutenai, accepted almost at once the new faith, in which they have remained steadfast and exemplary ever since. Those within the United States are chiefly gathered upon the Flathead reservation, Montana, by treaty of 1863, where they are still under Jesuit teaching, while some few in Idaho probably retain their old beliefs. Those in British Columbia are under the ministry of the Oblate Fathers, who, assisted by the Sisters of Charity, conduct a successful mission school at Saint-Eugene, near Fort Steele. The school was established in 1874 by Father Leon Fouquet, the first of the Oblates to enter the Kutenai field. The great majority have long since adopted the ways of civilisation, and subside by farming, stockraising, and labouring in the lumber camps and for the white ranchers. The official Canadian report (1908) describes them as "enlightened" in "labor, law and order, and law abiding", "temperate and moral", and "progressing", while the mission work "deserves the greatest praise". In spite of several great epidemic visitations in years past, notably smallpox, the Kutenai have held their own well, thanks to their innate manliness and to their strict observance of the precepts inculcated by their religious teachers. They probably number now nearly as many as at any period in their history and even seem to have largely increased within the past twenty years. Official reports for 1908 give them about 1120 souls, viz: British Columbia, Kootenay Agency, 613; Montana Agency, 406.

Our principal authorities on the Kutenai are: CHAMBERLAIN, De Smet, and the official reports. S.), and of Department of Indian Affairs (Canada) (Ottawa).

James Mooney.

Kwango, Prefecture Apostolic of.—Kwango is the name of a river which flows into the Kassai, which itself is a tributary of the River Congo. The Mission (missione Kwangenses) formed part of the Vicariate Apostolic of Belgian Congo till 8 April, 1892, when a decree was issued, entrusting this new mission to the
Jesuit Fathers of the Belgian province. The late Father Emile van Henhoutzen (1852-1908) was its first superior. He left Belgium 6 March, 1893, with two fathers, one scholastic and two lay brothers, and reached the mission towards the end of May. Unfortunately, owing to the hardships of the voyage, one of the Fathers died on the way. By decree of 30 January, 1903, the Kwango mission was made a prefecture Apostolic (Prefectura Apostolica Kwangensi), the first prefect Apostolic being Father Julian Banckaert, S.J., whose residence is at Kisantu, the chief mission station. The prefecture comprises the civil districts of Eastern Kwango and that of Stanley Pool. It is situated on the Kwango River 25° 30' to 27° E. longitude. Its boundaries are to the north the Kwango River, to the east the range of hills between Rivers Loange and Jumua; to the south Portuguese territory; to the west the River Inkisi and the railway to Leopoldville. The Sisters of Notre Dame de Namur have two important institutions at Kisantu and at Ntemfu, where they provide for more than one thousand native girls. Julian Banckaert, S.J., was born at Bruges in 1847, entered the diocesan seminary, and was ordained in 1871. He joined the Society of the Missionaries of the Sacred Heart at the age of 25. There he was successively a missionary, superior of the mission, and military chaplain, till in 1901, he was sent to the Kwango mission.

**Kwango.**

**J. Banckaert.**

**Kwango, prefecture Apostolic of.**—The mission of Kwango comprises the entire province of that name. As a country, it is very mountainous and extremely poor. The province has a population of about ten million souls divided among several distinct races, the most remarkable of whom are the settlers from Canton, the Hakka, and the wild Yao-tse and Misao-tse. The first missionary to Kwango was the Jesuit Father Ruggieri, who in 1583 endeavoured without success to establish himself at the capital, Kwei-lin. Fifty years later, the Franciscan, Francesco d'Eccalonne, arrived at Wu-chou. About the middle of the seventeenth century, Father Koffer built a church at Kwei-lin and baptized at Nan-ning, under the name of Constantine, a son of the Emperor Yung-il, a pretender to the throne who was still combated in the southern part of the empire the advancing Manchu conquerors. Father Boyum laboured in company with Father Koffer. In 1692 Father Jacques Vital endeavoured to give further impulse to the work of his predecessors, and then came Fathers Chamaya and Lopez. At the same time the Spanish Augustinians established themselves at Kwei-lin and Wu-chou, and the Franciscans at Ping-fo fu. All were expelled in 1724 by the Emperor Yung Cheng, and Kwango thenceforward remained without missionaries for a hundred and thirty years. In 1848 Kwango, united to the mission of Kwang-tung, was confided to the Paris Society of Foreign Missions. In 1854 Blessed Auguste Chapdelaine first entered the province from Kwei-lin, but was arrested and thrown into the prison of Si-lin-hien ten days after his arrival. Liberated after sixteen or eighteen days of captivity, he ministered under this date but baptized several hundred catechumens, but he was again arrested, taken to Si-lin, condemned to death, and executed on 29 February of the same year, with Blessed Lawrence Pe-mu and Agnes Tsau-kong. In 1866 several missionaries again penetrated Kwang-si, but were unable to return to Europe. In 1868 Father Mileur was appointed superior to the mission of Kwei-lin. Under his direction several missionaries were able to enter the province. Among them was Father Foucard, who evangelized Shang-sze, while labouring in the disguise of a wood-cutter to avoid arousing the suspicions of the mandarins.

On 6 August, 1875, Pius IX made Kwango a prefecture Apostolic, and placed it under the authority of Father Jolly, previously missionary in Kwang-tung. At this same period were founded the districts of Kwei-hien and of the “hundred thousand mountains” among the wild Yao-tse. Father Jolly died in 1878, and Mgr Foucard was named bishop of Zela and Prefect Apostolic of Kwang-si. The Chinese authorities placed many obstacles in the way of the free spread of the Gospel. Mgr Foucard was obliged to proceed personally to Pekin and demand justice, but he obtained no satisfaction. The Franco-Chinese War in 1884 served to increase the difficulties of this mission. Fathers afterwards entrusted to the care of Father Fathers with cruel treatment and several Christian communities were uprooted. Only the communities established among the savages and at Si-lin enjoyed relative tranquillity. Mgr Foucard died in 1889, and was succeeded by Mgr Chopuy. Under the direction of the new prefect, other communities were established, and finally a certain measure of liberty was accorded to the missionaries. Often, however, sudden revolts seriously interfered with their labours. Two missionaries, Fathers Mazel and Bertholet, were massacred in different districts. In 1899 Mgr Chopuy died, and in the following year Mgr Lavestenigal was appointed prefect. During the Boxer troubles but three residences and a few other houses belonging to Christians were pillaged. Mgr Lavest subsequently moved his residence from Kwei-hien to Nan-ning, intending to erect a cathedral at the latter place. Two French schools have been established, one at Nan-ning and one at Kwei-lin, by the Little Brothers of Mary. Nuns of St. Paul of Chartres have established themselves at Nan-ning and Long-chau. During 1908 they have relieved 4000 sufferers at their dispensary in Nan-ning and 4000 at that in Long-chau.

The following figures give the condition of the mission at the various periods named: In 1889, 1 bishop, 11 missionaries, 1 seminary, 21 schools with 211 pupils, 16 churches and chapels, 1249 Catholics. In 1900, 1 bishop, 17 missionaries, 1 seminary with 16 students, 24 schools with 310 scholars, 32 churches and chapels, 110 baptisms of native adults and 61 baptisms of native children, 1536 Catholics. In 1908, 1 bishop, 27 missionaries, 4 native priests, 2 seminaries with 16 students, 34 schools with 379 pupils, 311 baptisms of adults, and 113 baptisms of native children, 4214 Catholics.

**Kwang, Prefecture Apostolic of.**—This prefecture comprises the whole province of that name except the civil prefecture of Shing-hing, the three districts of Heung-shan, Yan-ping, and Yeung-taun, which belong to the Diocese of Macao, and the three districts of San-on, Kwai-shin, and Hoi-fung, which belong to the Vicariate Apostolic of Hong-Kong.

St. Francis Xavier was the first missionary who attempted to penetrate the province of Kwang-tung (1552), but he died in the Island of Shang-ch'wan (St. John's Island), south-west of Macao, before he was able to preach Christianity there. In 1556 Father Melchior Barreto penetrated as far as Canton, where he was discussed with the mandarins; other priests followed, and in 1571 Father Ruggieri secured authorization to open a chapel. In 1582 the real founder of Christianity in China, Father Matteo Ricci, arrived at Canton. From Canton Father Ricci went to Shing-hing, then the capital of the province, and afterwards to Shing-chou, where he died for the first time in the celebration of the Mass of Kiang-nan. He then travelled towards Kwang-si and Nanking, establishing on the way Christian settlements, which have persevered to the present time. Until 1658 Kwang-tung was dependent on the Diocese of Macao. In that year it was confided to Mgr de la
Motte Lambert. The priests of the Missions Etrangères then preached there together with the Jesuits, the Franciscans, and the Dominicans. From 1682 to 1710, Mgr de Guéméné and Fathers de Céde and Duppaq established themselves at Shen-chou. The tomb of Mgr de Guéméné (d. 1704) is at Shin-chou, as is also that of Père Lirot (d. 1720). When the persecution of Emperor Yong-ching broke out in 1732 there were 30,000 Christians in the province of Kwang-tung, but all the missionaries were then expelled.

From that time until 1844, when Mgr de Lagrenée obtained the proclamation of religious liberty, the missionaries did not enter Kwang-tung except in disguise. The bishops of Macao had meanwhile regained jurisdiction over the province, but the number of Christians tended by native priests had fallen to 7000 or 8000. On 30 September, 1848, the Congregation of the Propaganda confided this mission to the Société des Missions Étrangères de Paris without removing all jurisdiction from the Bishop of Macao. Father Libois, procurator of the Société de Hong-Kong, was named prefect Apostolic, and Father Guillemin having a mission in Siam, was sent to supervise the province. The progress was slow at first: there were 115 baptisms of adults in 1851, 214 in 1854. In 1853 Father Guillemin was named prefect Apostolic instead of Father Libois. A persecution broke out, and seven missionaries were arrested and thrown in prison. Mgr Guillemin, having a mission in Siam, was sent to end them on 8 Aug., 1856, by nominating Father Guillemin Bishop of Cybistra in partibus infidelium, and by giving him on 17 September, 1858, complete jurisdiction over Kwang-tung, Kwang-si, and Hainan. In 1856 Blessed Auguste Chapdelaine was martyred in Kwang-si with two companions, Blessed Laurence Pe-nu and Blessed Agnes Chow-kong.

As the result of the Anglo-French expedition which ended in the taking of Peking, a treaty was signed on 25 October, 1800. This was the signal for wider liberty for the missionaries. In compensation for the churches which had been destroyed and the property which had been taken from the mission, the bishop obtained the site of the ancient palace of the viceroy, on which were built the seminary and orphanages. With the assistance of Napoleon Il and the Catholics of France was also built the fine cathedral of Canton, on the island of Taishang, a faithful replica of the Par Diast. A chapel in honour of St. Francis Xavier was built at Shang-ch'wan, and this island became a place of pilgrimage for the faithful of Hong-Kong, Macao, and Canton. Baptisms became more numerous, amounting to 740 in 1862 and to 922 in 1867. There were some 300,000 Catholics in 1869. In 1875 the Province of Kwang-si was separated from the Mission of Kwang-tung, while the island of Hai-nan and the district of Heung-shan were ceded to the Diocese of Macao. Three districts were given to the priests of the Missions Etrangères, the Cantonese, which was ministered to 15,000 Catholics; in 1880 it had 23,730 under its care. In 1881, Mgr Guillemin, worn out with labour, left Mgr Chausse, titular Bishop of Capasa, in charge of the mission. In 1884, at the time of the war of Tongking, the missionaries were ordered to discontinue the mission, and had to stay at Hong-Kong for nearly a year. The Christian establishments of Canton were destroyed. The districts of Shun-tak, Sha-tan, Shin-hing, Tong-kun were laid waste, but it is worthy of remark that the districts nearest Tongking suffered the least. In some of these the missionaries were able to continue throughout the hostilities. On the restoration of peace the missionaries and the Christians who had followed them returned to the country. No indemnity was granted either to the missionaries or the Christians, on the pretext that the French would not restore the vessels sunk at Fu-chau.

The report for 1889 gives 1 bishop, 43 missionaries, 7 native priests, 150 churches or chapels, 1 seminary with 125 students, 156 schools, 13,350 pupils, 20,670 catechumens. In 1894 and 1895, during the war between China and Japan, there were some disorders. A missionary was besieged for nine days in a Christian village by a band of soldiers returning from Formosa, and the mandarin of the place had to pay several thousand dollars to induce the soldiers to raise the siege. After the war there was a great conversion movement which lasted several years, especially at K'it-yeung and Tong-kun. In 1898 Father Chanez was slain with eight Christians in his district of Pok-lo. In 1900, during the Boxer uprisings, several missionaries were ordered by the viceroy, then the famous Li Hung Chang, to leave the province, but they all remained at their post. However, in September, when the troops of the allies had been in Peking a month, the chief Christian settlements of Shun-tak, Sha-tan, and Tong-kun were destroyed and the chapels burned by the populace. Mgr Chausse, who was ill, could save the sacred vessels of the district of Chi-hing on the frontiers of Kiang-si. In 1905 five American Presbyterians were massacred at Lin-chou, on the borders of Hu-nan, by an infuriated populace. Since then peace has lasted. The inhabitants of Kwang-tung seem to have decided leaning towards the things of Europe and America. Numerous students go to be educated in Japan, the United States, and Europe. Mgr Méré has founded the College of the Sacred Heart, to teach English and French to the Chinese without distinction of religion. The number of students exceeds 250.

In 1908 the mission of Kwang-tung ceded to the Diocese of Macao the civil prefecture of Shin-hing and the two districts of Yang-ping and Yeung-tsung, belonging to Shin-hing at the time of the fulmination of the decree by the Holy See, instead of which the Island of Hai-nan was given to the Prefecture Apostolic of Kwang-tung. But, as Shin-hing possesses more than 300,000 Catholics, it would be unfair to count them as 300 or 400, it will be readily understood why the reports of the Mission of Kwang-tung number less Catholics in 1908 than in 1907. The statistics for the two years are as follows: 1907, 65 missionaries, 20 native priests, 66 seminarians, 455 churches and chapels, 210 schools, 2050 pupils, 1,137 baptisms of adults, 7002 baptisms of pagan children, 60,000 Catholics; 1908, 73 missionaries, 24 native priests, 70 seminarians, 454 churches and chapels, 250 schools, 3500 pupils, 2214 baptisms of adults, 9586 baptisms of children of pagans, 58,917 Catholics to about 30,000,000 pagans.

KWEI-CHOU, VICARIAT APOSTOLIC OF.—The mission of Kwei-chou embraces the entire province of that name. The country is very mountainous and is principally inhabited by Chinese emigrants from other provinces and the race of aborigines known under the generic term of Miao-tze, who are subdivided into numerous tribes. The Faith was carried for the first time into Kwei-chou by a Portuguese Jesuit towards the end of the sixteenth century. The first vicar Apostolic of the Paris Society of Foreign Missions, Mgr Pallu, was created administrator of Kwei-chou in 1658. In 1708 Father Claude Viallou was made
vicar Apostolic of this province by Cardinal de Tournon, but never entered upon his mission. The Holy See finally joined the mission of Kwei-chou to that of Sze-ch’wan under the direction of the Paris Society of Foreign Missions. From 1769 onwards Mgr Pottier, Vicar Apostolic of Sze-ch’wan, Yun-nan, and Kwei-chou, made a practice of sending a native priest every two years. In 1832 an English missionary was established in Kwei-chou by Christian families migrated thither from Sze-ch’wan. The Venerable Moye visited these settlements in 1774. He was arrested, imprisoned, and eventually expelled from Kwei-chou. In 1815 Blessed Joseph Chang Ta-pong was beheaded at Ta-tung. There were others. In 1846, another was that of Joachim Ho. In 1846 Kwei-chou was detached from Sze-ch’wan and made an independent vicariate Apostolic. Father Stephen Albrand, missionary in Siam, was placed in charge. He found twelve hundred of the faithful in the entire province. He established himself at the capital, Kwei-yang. In 1849 he was created vicar Apostolic and consecrated titular Bishop of Sura. On 28 January, 1858, the blessed martyrs, Jerome Lu Pin-mei, Laurent Wang, and Agatha Lin were decapitated at Mau-keou. In 1850 Mgr Faurie succeeded Mgr Albrand. This same year there were the victories of the Britich and French, the Treaty of Peking guaranteeing religious liberty was signed.

The province, however, ravaged for several years afterwards owing to feuds between the Chinese and Mohammedans. During this period Christians were imprisoned, their parishes pillaged, and their missionaries massacred. On 29 July, 1861, four native Christians were beheaded at Tsin-gai. These were Blessed Joseph Chang, Paul Chen, J. B. Lo, and Martha Wang. In 1862 Blessed John Peter Neel, a French missionary, Martin Wu, John Chang, John Chen, and Lucy I were beheaded at K’ai-chou. In 1867 there were nine missionaries, four native Christians. Notwithstanding the persecution, it was possible in 1866 to record 408 baptisms of adults, and 13,178 infant baptisms among the natives. In 1867 the number baptized included 601 adults and 11,023 infant baptisms; in 1868, 902 adults and 9,322 infant baptisms. Mgr Faurie died in 1872 on his return from Rome, where he had taken part in the Vatican Council. He was succeeded by Mgr Lions, who was consecrated titular Bishop of Basilia in 1872. Peace reigned during several years, and the missionaries were able to greatly augment the number of Christian converts. In 1884, after the Franco-Prussian War, the persecutions were renewed. They were particularly violent in Kwei-chou. The Christians of the capital alone escaped. Hardly had this initial persecution terminated than a second, which was still more terrible, broke out, beginning with the destruction of the Catholic establishments at Chung-king (Sze-ch’wan). The Chinese priest, Father Lin, was massacred, together with his catechist and a neophyte. Many Christians were thrown into prison, and the missionaries were only able to obtain justice by application to Peking. In 1884 Mgr Guehard had been made assistant to Mgr Lions. Upon the death of the latter in 1893, Mgr Guichard took the entire direction of the mission in hand. During the following period peace was secure in the Kwei-chou mission, and the missionaries were able to augment rapidly the number of their converts. In 1900 Kwei-chou again escaped the troubles which were overthrowing the other Catholic missions in China. In 1907 Mgr Seguin was made coadjutor to Mgr Guichard, and consecrated titular Bishop of Pillana.

In 1899 the Catholic community numbered 2 bishop, 29 missionaries, 6 native priests, 66 churches and chapels, 1 seminary with 18 students, 120 schools and orphan asylums ministering to 2031 pupils, 15,000 Catholics. In 1900: 1 bishop, 38 missionaries, 8 native priests, 86 churches and chapels, 2 seminaries with 36 students, 150 schools and asylums with 2844 scholars, 998 native adult and 4634 native infant baptisms, 10,128 Catholics. In 1908: 2 bishops, 51 missionaries, 17 native priests, 3 seminaries with 62 students, 196 schools with 2388 pupils, 13 orphan asylums with 855 children, 1420 native adult and 4713 native infant baptisms or 15,729. 

V. H. MONTANAR.

Kyriz Eleison (Kőpε Θέλω, Lord have mercy: the Latin translation supposes a pronunciation as in Modern Greeks, and is the ejaculation used constantly in all Christian liturgies. Arrian quotes it in the second century: “Invoking God we say Kőpε Θέλω” (Diatribē Epicteti, II, 7). A more obvious precedent for Christian use was the occurrence of the same formula in the Old Testament (Ps. iv, 2; vi, 3; ix, 14; xxv, 11; exxii, 3; lxx, xxxiii, 2; Tob., viii, 10, etc., in the Sept.). In these places it seems already to be a quasi-liturgical exclamation. So also in the New Testament the form occurs repeatedly (Matt., ix, 27; xx, 30; xxv, 22; Mark, x, 47; Luke, xvi, 24; xvii, 13). The only difference is that in these cases it has an accusative after the verb: Kőpε Θέλω με, or Θέλω μεια. The liturgical formula is shortened from this.

History.—It is not mentioned by the Apostolic Fathers or the Apologists. The first certain example of its use in the liturgy is in that of the eighth book of the “Apostolic Constitutions”. Here it is the answer of the people to the various Synagōga (Litanies) chanted by the deacon (Brightman, “Eastern Liturgies”, pp. 4 and 5; cf. “Ap. Const.”, VIII, vi, 4). That is still its normal use in the Eastern rites. The deacon sings various clauses of a litany, to each of which the people answer, Kyrie Eleison. Of the Greek Fathers of the fourth century, Eusebius, Athanasius, Basil, Cyril of Jerusalem, and the two Gregorys do not mention it. But it occurs often in St. John Chrysostom. Its introduction into the Roman Mass has been much discussed. It is certain that the liturgy at Rome was at one time said in Greek (to the end of the second century at least). It is tempting to look upon our Kyrie Eleison as a surviving fragment from that time. Such, however, does not seem to be the case. Rather the form was borrowed from the East and introduced into the Latin Mass later. The older Latin Fathers, Tertullian, Cyprian, etc., do not mention it. Ether, the Franco-Prussian War, is evidently a strange thing to her, and she translates it: “As the deacon says the names of various people (the Intercession) a number of boys stand and answer always, Kyrie Eleison, as we should say, Misere Domine” (ed. Hen eus, Heidel berg, 1908, X, 6, p. 209). The first evidence of its use in the West is the third Canon of the Second Council of Vaison (Vasio in the province of Arles), in 529. From this canon it appears that the form was recently introduced at Rome and in Italy (Milan?): “Since both in the Apostolic See as also in all the provinces of the East and in Italy a sweet and most pious custom has been introduced that Kyrie Eleison be said with great insistence and compunction, it seems good to us too that this holy custom be introduced at Matins and Mass and Vespers” (cf. Hefele- Leclercq, “Histoires des Conciles”, Paris, 1908, pp. 1113-1114; Duchesne, “Origines”, p. 183). The council says nothing of Africa or Spain, or even of Africa in other canons about liturgical practices (Can. v). It appears to mean that Kyrie Eleison should be sung by the people cum grandio affectu. E. Bishop (in the “Downside Review”, 1889) notes that this council represents a Romanizing movement in Gaul.

The next famous witness to its use in the West is St. Gregory I (590-604). He writes to John of Syracuse
to defend the Roman Church from imitating Constantineople by the use of this form, and is at pains to point out the difference between its use at Rome and in the East: "We neither said nor say Kyrie Eleison as it is said by the Greeks. Among the Greeks all say it together, with us it is said by the clerks and answered by the people, and we say Christe Eleison as many times, with more frequent instance in this mass than in others. Many Masses and in daily Masses some things usually said are left out by us; we say only Kyrie Eleison and Christe Eleison, that we may dwell longer on these words of prayer" (Ep. ix in P. L., LXXVII, 956). The last words appear to mean that sometimes other prayers are left out that there may be more time for singing the Kyrie Eleison. We are of course in St. Gregory's time the special Roman use of the alternative form Christe Eleison (unknown in the Gallican and Eastern rites) existed. It seems inevitable to connect the Kyrie Eleison in the Roman Mass with an original litany. Its place corresponds exactly to where it occurs as part of a litany in the Syrian-Byzantine Liturgy; it is still always sung at the beginning of litanies in the Roman Rite too, and St. Gregory refers to "some things usually said" in connexion with it. What can these things be but clauses of a litany, sung, as in the East, by a deacon? Moreover there are still certain canons about it, obviously archaic, where a litany occurs at the place of the Kyrie. Thus on Easter Eve the Mass begins with a litany of which the last clause (Kyrie Eleison, repeated three times; Christe Eleison, repeated three times; Kyrie Eleison, repeated three times) is sung as the celebrant says the first prayers of the Mass, and correspond in every way to our usual Kyrie. So also at ordinations the Litany is sung towards the beginning of the Mass. In this connexion it may be noted that down to the late Middle Ages the Kyrie of the Mass was left out when it had just been sung in a Litany before Mass, as, e.g., in the Rota Rossa of 1378. We may suppose, then, that at one time the Roman Mass began (after the Introit) with a litany of general petitions very much of the nature of the third part of our Litany of the Saints. This would correspond exactly to our great Synapte in the Syrian Rite. Only, from what has been said, we conclude that the answer of the people was in Latin—the "Miserere Domine" of Etherea, or "Te rogamus, audi nos", or some such form. About the fifth century the Greek Kyrie Eleison was adopted by the West, and at Rome with the alternative form Christe Eleison. This was then sung, not as in the East only, but by the people, with the cantors and people. It displaced the older Latin exclamations at this place and eventually remained alone as the only remnant of the old litany.

The first Roman Ordo (sixth-seventh cent.) describes a not yet fixed number of Kyries sung at what is still their place in the Mass. "The school [schola] having finished the Antiphon [the Introit] begins Kyrie Eleison. But the leader of the school watches the Pontiff that he should give him a sign if he wants to change the number of the litany" ("Ordo Rom. primus", ed. Atchley, London, 1905, p. 130). In the "Ordo of Saint Amand", written in the eighth century and published by Duchenne in his "Origines du culte" (p. 442), we have already our number of invocations: "When the school has finished the Antiphon the Pontiff makes a sign that Kyrie Eleison should be said. And the school says it [dicit always corresponds to the liturgical Latin: dicere present Missal: "dicit cantando vel legendo" before the Pater Noster], and the Regionarii who stand below the ambo repeat it. When they have repeated it the third time the Pontiff signs again that Christe [sic] Eleison be said. This having been said the third time he sends that the people say it. And when they have completed it nine times he signs that they should stop." So we have, at least from the eighth century, our present practice of singing immediately after the Introit three times Kyrie Eleison, three times Christe Eleison, three times Kyrie Eleison, making nine invocations altogether. Obviously the first group is addressed to God the Father, the second to God the Son, the third to God the Holy Ghost. The medieval commentators are fond of connecting the nine-fold invocation with other words to fill up the long neumes. The names of the various Kyries in the Vatican Gradual (for instance, Kyrie Cunctipotens genitor Deus of the tenth century, Kyrie magnae Dei potentiae of the thirteenth century, etc.) are still traces of this. As an example of these innumerable and often very long farcings, this comparatively short one from the Sarum Missal may serve:

Kyrie, rex genitor ingenite, vera essentia, eleison.

Kyrie, luminius fons rerumque conditor, eleison.

Kyrie, qui nos tue imaginis signasti specie, eleison.

Christe, Dei forma humana particeps, eleison.

Christe, lux orienis per quem sunt omnia, eleison.

Christe, qui perfecta es sapientia, eleison.

Kyrie, spiritus vivitice, vitis vies, eleison.

Kyrie, utrisque vapor in quo cuncta, eleison.

Kyrie, expurgator secutorum et largitor gratiae; quassumus propter nostras offensiones noli nos relinquere, O consolator doloris animae, eleison (ed. Burntisland, 929).

[Lord, King and Father unbegotten, True Essence of the Godhead, have mercy on us.

Lord, Fount of light and Creator of all things, have mercy on us.

Lord, Thou who hast signed us with the seal of Thine image, have mercy on us.

Christ, True God and True Man, have mercy on us.

Christ, Rising Sun, through whom are all things, have mercy on us.

Christ, Perfection of Wisdom, have mercy on us.

Lord, vivifying Spirit and power of life, have mercy on us.

Lord, Bestower of the Father and the Son, in Whom are all things, have mercy on us.

Lord, Purger of sin and Almoner of grace, we beseech Thee abandon us not because of our Sins, O Consoler of the sorrowing soul, have mercy on us.]

Not to exaggerate the length of the last farcing to fit the neumes of the last Kyrie, which are always longer. Sometimes the essential words are mixed up with the farcing in a very curious mixture of Latin and Greek: "Onditor Kyrie omnium ymas creaturum eleison" (Ib., 932°). The reformed Missal of Pius V happily abolished these and all other farcings of the liturgical text.

In the Roman Rite.—In the Mass, the three groups of invocations are sung by the choir immediately after the Introit. They form the beginning of the choir's part of the Ordinary. A number of plainsong Masses are provided in the Gradual, each characterized and named after the Kyrie that begins it. Although each Mass is appointed for a certain occasion (e. g., for solemn feasts, doubles, Masses of the B. V. M., etc.) there is no law against using them without regard to this arrangement. Moreover, except on feasts, which keep their very simple chants, the various parts (Kyrie, Gloria, etc.) of different Masses may be combined (see rubric after the fourth Creed in the
Vatican "Gradual"). The new Vatican edition also provides a series of other chants, including eleven Kyries, ad Rituem. The Kyrie Eleison (as all the Ordinary and proper of the choir) may also be sung to figured music that does not offend against the rules of Pius X's "Motu proprio" on church music (22 Nov., 1903). Meanwhile the celebrant, having incensed the altar and read the Introit at the Epistle side, says the Kyrie there with joined hands alternately with the deacon, sub-deacon, and surrounding servers. At low Mass the celebrant after the Introit comes to the middle of the altar and there says the Kyrie alternately with the server ("Ritus celebr.") in the Missal, iv, 2, 7). The Kyrie is said in this way at every Mass with the exception of Holy Saturday and also of the Mass on Whitenum Eve at which the prophecies and litany are chanted. On these occasions the cantors finish the litany by singing the nine invocations of the Kyrie. After the prayers at the foot of the altar the celebrant goes up, incenses the altar, and then at once intones the Gloria. But he should say the Kyrie in a low voice himself first. Besides in the Mass, the Kyrie occurs repeatedly in other offices of the Roman Rite, always in the form Kyrie Eleison, Christe Eleison, Kyrie Eleison (each invocation once only). It begins the process ferialis at Lauds, Terce, Sext, None, Vespers; it begins the process at Prime and Compline. It is sung after the Reponsorium at funerals, said at marriages and on many other occasions for blessings and consecrations. In these cases it generally precedes the Pater Noster. It also begins and ends the Litany of the Saints. As an imitation of this, it is always placed at the beginning of the various other private litanies which are imitations of the official one.

In other Rites.—In the first place, the invocation Christe Eleison is purely Roman. With one exception, obviously a Roman interpolation in the Mozarabic Rite, it does not occur in any other use. Local medieval uses had it, of course; but they are only slight local modifications of the Roman Rite, not really different rites at all. In the Gallican Mass, as described by Germanus of Paris, three boys sing Kyrie Eleison three times after the Trisagion which follows the Antiphon at the entrance, then follows the Benedictus. These chants represent the beginning of the Mass (Duchesne, "Origines du Culte", pp. 182, 183). After the Gospel and Homily comes a litany sung by the deacon like the Syrian and Byzantine synapta. The people answer in Latin: Precamur te Domine, misercere; but at the end come three Kyrie Eleissons.

The Milanese rite shows its Gallican origin by its use of the Kyrie. Here, too, the form is always Kyrie Eleison three times (never Christe Eleison). It occurs after the Gloria, which has replaced the older Trisagion, after the Gospel, where the Gallican litany was, and after the Post-communion, always said by the celebrant alone. It also occurs throughout the Milanese offices, more or less as at Rome, but always in the form of Kyrie Eleison three times. The Mozarabic Liturgy does not know the form at all, except in one isolated case. In the Mass for the Dead, after the singing of the chant called Sacrificium (corresponding to the Roman Offertory) the celebrant says Kyrie Eleison, and the choir answers Christe Eleison, Kyrie Eleison ("Missale mixtum" in P.L., LXXXV, 1014, 1015, 1021, 1024, etc.—the various Masses for the Dead). This is obviously a Roman interpolation.

All the Eastern rites use the form Kyrie Eleison constantly. It is the usual answer of the people or choir to each clause of the various litanies sung by the deacon throughout the service (varied, however, by some Coptic, Egyptian and one or two other similar ejaculations). It also occurs many other times, for instance in the Antiochene Rite it is sung twice, at Alexandria three times just before the Communion. In the Byzantine Rite it comes over and over again, nearly always in a triple form, among the Troparia and other prayers said by various people throughout the Office and not as in the Liturgy. A conspicuous place in this rite is at the dismissal (Brightman, 307). In general it may be said to occur most frequently in the Syrian-Byzantine family of Liturgies. In the Syriac liturgies it is said in Greek, spelled in Syriac letters Kūrēllīsōn, also in the Coptic liturgies (in Greek letters of course—nearly all the Coptic alphabet is Greek); in the Abyssinian Rite it is spelled out: Kirilaγos. The Nestorians translate it into Syriac and the Armenians into Armenian. All the versions of the Byzantine Rite used by the various Orthodox and Uniate Churches (Old Slavonic, Arabic, Rumanian, etc.) also translate Kīsē Śēphōn.

ADRIAN FORTECUE.
Labadista, a pietist sect of the seventeenth and eighteenth centuries founded by Jean de Labadie, who was born at Bourg, near Besançon, 11 October 1610, and died at Altona, 13 February, 1674. He was educated by the Jesuits at Bordeaux, joined their order in 1625, and was ordained ten years later. Having left the Society of Jesus in 1639 he preached successfully at Bordeaux, Paris, and Amiens, where in 1640 he was appointed professor of theology. In 1657 he resigned his priestly functions at Abbeville also, and in 1649 withdrew to the Carmelite monastery of Graaf- ville, near Havre, to avoid a conflict with the ecclesiastical and civil authorities. In 1650 he joined the Reformed Church at Montauban, where he was appointed professor of theology in 1657, after the pastoral work at Orange on the Rhône, became extraordinary preacher at Geneva in 1659, and seven years later accepted a call to the French-speaking congregation at Middelburg, Holland, where he refused to subscribe to the Belgian Confession or to recognize the authority of the Reformed Church and founded a separate sect, whereupon he was expelled from the city. He then endeavoured to organize a community first in the neighbouring town of Veere, then at Amsterdam, where he permanently won over to his cause the learned Anna Maria van Schurman. On the invitation of the princess-abbess, Elizabeth, he removed in 1670 with some fifty-five followers to Herford in Westphalia. Having been banished also from this place in 1672, the congregation settled at Altona where De Labadie died. Shortly after his death, his followers, to the number of one hundred and sixty-two finally migrated from Altona to Wiewert in West Friesland. Here they reached the highest point of their prosperity, but even then did not number more than about four hundred. In 1680 they accepted an invitation from the governor of the Dutch colony of Surinam to establish a missionary settlement in his dominions. But the colony of "Providence" which they founded disappeared in 1688. A similar attempt at New Bohemia on the Hudson in the State of New York also ended in failure. The congregation of Wiewert itself dispersed in 1732. In their doctrinal teaching, the Labadists laid great stress on the necessity of interior illumination by the Holy Ghost for the understanding of the Bible. The Church for them was a congregation of holy persons who have been born again from sin. These alone are entitled to the reception of the sacraments. Hence they frowned upon infant baptism, seldom celebrated the Lord's Supper, and declared that marriage with an unregenerated person is not binding. They held property in common, and supported themselves by manual labour and held very lax views regarding the observance of Sunday.

Laban (Lb3", An546), son of Bathuel, the Syrian (Gen. xxviii, 5; cf. xxv, 20); grandson of Nachor, Abraham's brother (xxii, 20, 23; cf. xxix, 5, where he is called "son of Nachor"), brother of Rebecca (xxvii, 29, 55; xxv, 20; xxvii, 43; xxviii, 5), uncle of Jacob (xxviii, 2, xix, 10) and also his father-in-law (xxix, 25; xxx, 25; xxxi, 20; cf. xxxix, 12, 15; xiii, 8, where he is called his "brother"); the father of Lia and Rachel (xxix, 16) and of several sons (xxx, 35; xxxi, 1). Laban's home was in Haran (xxviii, 43; xxix, 4), the city of Nachor (xxv, 10), in Mesopotamia of Syria (xxviii, 2, 5) where Nachor, his grandfather, remained when Abraham and Lot migrated to Chanaan (xi, 31; xii, 4). Hence Laban is also called "the Syrian" or "Aramean" (xxv, 20; xxxi, 20; 24; Heb.). It was here in Mesopotamia that Laban met Abraham's servant and consented to Rebecca's departure to become the wife of Isaac (xxiv, 29, sqq.) (see Abraham). The incident in the subsequent history of the Jewish nation is interesting because of its connection with that of Jacob, his sister's son (Gen., xxix, 10—xxxii, 55) (see Jacob). The latter having arrived in Haran was met by Rachel who notified her father Laban of his brother's (sic) arrival. Laban goes forth to meet Jacob and offers him the hospitality of his home (xxx, 10, 15). Laban invites his nephew to remain permanently with him, even allowing him to fix his own wages. Jacob agrees to work seven years for his uncle, and his wages were to be the hand of Rachel, Laban's younger daughter (xxix, 14—18). These terms appeared satisfactory to Laban, who, at the end of seven years entered into a marriage feast, but, instead of giving his younger daughter Rachel to Jacob, he gave him his elder daughter Lia whom Jacob, however, failed to recognize until after the marriage (xxix, 18—24). When Jacob reproached him with his uncle, Laban agreed to give him his younger daughter on the sole condition that Jacob serve him seven more years. Jacob agreed to this, and at the end of seven years Laban gives his younger daughter Rachel to Jacob (xxx, 24—29).

Having received the wife whom he sought, Jacob resolved to return to his own home, but, Laban, wishing to retain the profitable services of his nephew, once more prevailed upon Jacob to remain with him (xxx, 25—28). The terms stipulated by Jacob this time appeared most advantageous to Laban, but he and his sons soon discovered that Jacob had outwitted them in this last agreement, which procured for Jacob a large increase of flocks (xxx, 29—42). Laban and his sons then began to despise Jacob, who, noticing their change of attitude towards him, and dissatisfied with the treatment accorded him by his uncle, who had changed his wages ten times, secretly departed together with his wives and possessions (xxx, 1—20). Three days later Laban, upon learning of Jacob's departure, remarked the loss of his idols, which Rachel had taken with her, goes in pursuit of the fugitives. After seven days Laban overtakes Jacob near the mount of Galaad, but during the night he is warned in a dream not to inflict any harm on Jacob (xxx, 21—25). The next day Laban meets Jacob on the mountain of Galaad and makes an agreement whereby Jacob is not to harm Laban's daughters, and neither party is to pass with hostile intent the limits set by a heap of stones called "the witness heap". Laban then takes leave of his sons and daughters and returns home, never to be heard of again in history (xxx, 25—31). Laban is then invited by Jacob to search for his idols, and when he fails to find them, thanks to Rachel's shrewdness, he is vigorously upbraided by Jacob (xxxii, 31—42). Laban then demands an agreement whereby Jacob is not to harm Laban's daughters, and neither party is to pass with hostile intent the limits set by a heap of stones called "the witness heap". Laban then takes leave of his sons and daughters and returns home, never to be heard of again in history (xxx, 25—31).

Francis X. E. Albert.

Labarum, the name by which the military standard adopted by Constantine the Great after his celebrated vision (Laetantius, De mortibus persecutorum, c. xiv), was known in antiquity. The original labarum,
designed under the emperor's direction on the day subsequent to the appearance of the "cross of light", is described by Eusebius (Vita Constant., I, 26) as "a long spear, overlaid with gold," which with a transverse bar formed the figure of a cross. "On the top of the whole was fixed a wreath of gold and precious stones, and within this the symbol of the Saviour's name, two letters indicating the name of Christ by means of the initial letters, the letter X intersecting P at the centre." These two letters formed what is known as the monogram of Constantine, so-called—not because it was the invention of this emperor, for it had been used as a Christian symbol prior to his conversion, but—because of the great popularity it enjoyed from the date of its appearance on the imperial standards. From the cross-bar of the spear was sus-

pected a purple banner with the Greek inscription: TO TOTTO NIKA—i.e. conquer by this (sign), usually rendered in Latin "In hoc signo vinces" (in this sign thou shalt conquer). This banner, square in form, covered with a rich embroidery of precious stones, and "being also richly interfaced with gold, presented an indescribable degree of beauty to the beholder." The part of the staff immediately above the embroidered banner was adorned with medallions of the emperor and his children. Fifty soldiers of the imperial guard, distinguished for bravery and piety, were entrusted with the care and defence of the new sacred standard (Vita Constant., II, 8). Standards, similar to the original labarum in its essential features, were supplied to all the legions, and the monogram was also engraved on the soldiers' shields. An idea of some of the deviations in form of the standards furnished to different divisions of the army may be obtained from several coins of Constantine's reign still preserved. On one coin, for instance, the portraits of the emperor and his sons are represented on the banner instead of on the staff; on a second the banner is inscribed with the monogram and surmounted by the equal-armed cross, while the royal portraits, though on the shaft, are below instead of above the banner. In form, the labarum of Constantine was an adaptation of the already existing cavalry standard of the Roman army (Dict. of Christ. Antiq. s. v.); the pagan emblems were merely replaced by Christian symbols. The term labarum, which is of uncertain derivation, was probably familiar in the Roman army from the reign of Hadrian.

MAURICE M. HAMBETT.

Labat, Jean-Baptiste, Dominican missionary, b. at Paris, 1664; d. there, 1738. He entered the Order of Preachers in his native city at the age of twenty years and was professed on 11 April, 1685. After the completion of his philosophical and theological studies he was ordained and for several years taught philosophy publicly to the secular students of Nancy. Abandoning this work he devoted himself to missionary activity and for many years preached in the various churches of France. The missionary fields of America were proving a strong attraction to the zealous clergy of his day, and Labat became filled with a burning desire to assist in the evangelization of the Indians. Accordingly, in 1695, he obtained permission from the general of the order to depart for those colonies of the West Indies which were then under French domination, and laboured among the Indians for thirteen years, until 1706, when he sailed for Italy in the interests of his mission. After attending a meeting of the order at Bologna, and presenting to the general a report of his work, he prepared to return to America, but was denied permission and detained in Rome for several years. During this period he commenced a long contemplated history of the West Indies. The work was finally published in six volumes at Paris, in 1722, with copious illustrations made by himself ("Nouveaux Voyages aux îles Françaises de l'Amérique", Paris, 1722). Labat had a wide reputation as a mathematician and won recognition both as a naturalist and as a scientist. He embodied in the history his scientific observations and treated comprehensively and accurately of the soil, trees, plants, fruits, and herbs of the islands. He also explained the manufactures then in existence and pointed out means for the development of commercial relations. He published similar works on other countries, drawing information from the notes of other missionaries. His two works on Africa have become well known: "Nouvelle relation de l'Afrique occidentale", Paris, 1728, and "Relation historique de l'Ethiopie occidentale" (Congo, Angola, Matamba), after the Italian of Father Cavazzi, Cap. (Paris, 1732). The latter treatise is supplemented with notes and statistics drawn from Portuguese sources.

ECHEARD et QUESIT, Script. O. P., II, 806; REICHELMANN in Kirchenlex., s. v.

IGNATIUS SMITH.

Labbe, Philippe, b. at Bourges, 10 July, 1607; d. at Paris, at the College of Clermont, 17 (16) March, 1667, a distinguished Jesuit writer on historical, geographical, and philosophical questions. He entered the Society of Jesus, 28 Sept. 1623. After literary, philosophical, and theological studies, he successively taught the classes of rhetoric and philosophy; then he held for five years the chair of theology. His memory was quick and retentive, his erudition most extensive and accurate; every year witnessed the production of one or more of his works, so that in the
field of history Labbe and Petauvius have been considered as the most remarkable of all French Jesuits. After his death it was found that his notes and annotations on all kinds of authors were so numerous and extensive as to exceed in bulk what an ordinary scribe in his time or in his lifetime, it was taken up answering the doubts or questions of others; he was constantly consulted on points of history, on questions of literature, on difficulties in moral and scholastic theology. However, he found time to express his devotion to Christ and His Blessed Mother in each of the Latin verse. His biographers emphasize his tender devotion to the Holy Eucharist and the Blessed Virgin.

Sommervogel enumerates more than eighty works left by Labbe, but we have to be satisfied with the titles of only the more important ones. (1) Among the works on philological subjects, we may mention: "Tirocinium Lingue Grecie, etc." (Paris, 1648). The work went through some thirteen or fourteen editions. Labbe had the annoying habit of modifying the titles of his works in their various editions, so that a list of their complete titles is quite impossible here. (2) "La Grecque royale" appeared in Paris, 1640. (3) "De Byzantinis historiae scriptoribus, etc." (Paris, 1648), was valued as a most useful work at the time of its publication. (4) "Concordia sacrae profanae chronologie annorum 5691 ab orbe condito ad hunc Christi annum 1538" (Paris, 1638); the author published several other harmonies of historical dates, which contained a number of dissertations on special questions. (5) "Bibliotheca antijacensiana" (Paris, 1654), is a catalogue of all writings directed against the Jansenists, and gives a brief history of the origin of Jansenism. (6) "Bibliotheca bibliothecarum" (Paris, 1654), a bibliography for the handy use of librarians. The second edition contains an additional part entitled "Bibliotheca nummariia", and describes old medals, coins, weights, measures, and other antiquarian objects. (7) "Sacrosancti Ecclesiae Tridentini Concilii... canones et decreta" (Paris, 1667), is a work containing a great number of documents referring to secular princes and their representatives in the council, and giving also some of the conciliar transactions. (8) But the chief work is the collection of councils entitled "Sacrosanctae concilia ad regiam editionem exacta", published by the joint labour of Labbe and Cossart, and printed in Paris at the expense of the Typographical Society for Ecclesiastical Books. When Labbe died, the vols. I-VIII and XII-XV had been printed; vols. IX and X were in press; Cossart finished these two volumes and also vol. XI. In the sixteenth volume (or the seventeenth, for XI is a double volume) the "apparatus" of the collection has been added by Cossart. A second "apparatus" has been added in vol. XVIII, which contains the treatise "De concilii" by Jacobitus; but this volume is extremely rare and extensive, the price being as high as that of the rest of the collection.

Labour and Labour Legislation.—Labour is work done by mind or body either partly or wholly for the purpose of producing utilities. This definition is broad enough to include the work of the actor, the physician, the lawyer, the clergyman, and the domestic servant, as well as that of the business man, the mechanic, the factory operative, and the farmer. When used without qualification to-day, the word labour usually designates hired labour, and frequently hired manual labour. This usage is only true when the term is used to describe the persons who labour rather than the work or effort. The explanation of this narrower usage is that in most occupations hired labourers are more numerous than self-employing workers, and that among wage-earners manual labourers exceed in numbers those whose activity is predominantly mental. In this article labour always means the labouring classes. When used of the ages preceding and in the industry dealt with in this work, the term is used to describe the persons who labour, but all who got their living mainly through their own labour, and only in a slight degree by employing others. Hence it takes in the master artisans of the Middle Ages, and the agricultural tenants who worked partly on their own account and partly for the feudal lord; for the former this work that is now performed by hired labour, and the latter possessed even less economic independence than do the wage-workers of to-day. Moreover, usage justifies this extension of the terms, labour and labouring class.

Passing over the nomadic and pastoral stages of economic life, because there was then no distinct labouring class, we shall touch briefly upon the condition of labour among some of the great nations of antiquity that were engaged in agriculture, commerce, or industry. A few years ago the majority of scholars held that the earliest form of land-tenure everywhere was joint ownership, and that joint ownership was by all the members of the community. According to the weight of present opinion, if such a condition existed, it has not been proved by positive and convincing evidence. Perhaps the nearest approach to this arrangement in historical times is the clan system, by which the clan, or tribe, or sept, owned the land in common, but allotted definite portions of it for individual cultivation by each member. So far as we know, this system has not played a great part in agrarian history. In ancient Egypt the Pharaoh owned the greater part of the land, and the tenant cultivators, though not in the strict sense slaves, were compelled to live and labour in conditions that differed but little from the most oppressive slavery. Their labour it was that built the Pyramids, the public works at Lake Mosis, and the Labyrinth; there, too, they were exploited to the limit of physical endurance, just as were the Hebrews by the Egyptian taskmasters of a later period. There were some large private estates which were cultivated by a servile population. Indeed, the history of labour down to a little more than one thousand years ago, is for the most part the history of slavery. Judea had few manufactures, and very little commerce; but its working class consisted to a great extent of slaves and compulsory labourers. On the other hand, in many parts of the world, slaves have been better treated than workers of the same condition in Gentile countries. However, the division of Solomon's empire into two kingdoms was caused in large part by the contributions of labour and produce which that monarch exacted from his own people. In later times a large proportion of the independent Hebrew cultivators were deprived of their lands by rich capitalists, and compelled to become slaves or forced labourers. Some of the strongest denunciations of the Prophets were uttered against this form of exploitation. The great trading and manufacturing nation of antiquity was the Phoenician, and most of their activities and achievements in this field seem to have been based upon the labour of slaves.

The industrial and commercial supremacy of the world passed, in the fifth and fourth centuries before Christ to the Greeks, but slave labour continued to be its main support. Although a considerable proportion of the tillers of the soil seem to have been freeholders at the beginning of Greek history, the majority were slaves in classical and post-classical times. During the latter period the slaves considerably outnumbered the free population as a whole; consequently, they must have formed a large majority of the laboring class. Their curious increase, especially at Athens, was not nearly so wretched as that of the Roman slaves during the classical period of that country. They had some protection from the law against inju-
ries, and considerable opportunities of emancipation. In fact, labour seems to have been less disdained in Greece in the fifth and fourth centuries than in any other country at that time, except Judea, and it was certainly held in higher esteem than in Rome. A great deal is said concerning the organizations that existed among the Greek artisans, but they do not appear to have exercised much influence over the conditions of the more prevalent. Many of the artisans were not free in the modern sense of that term. They were members of associations which they were forbidden by law to abandon, and they were not allowed to leave their occupations. The State took this measure on the theory that these labourers were engaged in an industry necessary to the welfare of society. It was, therefore, the duty of the law to provide that this function should be properly discharged. Although this particular restriction of the freedom of labour seems very unreasonable to the modern mind, the fact is that some form of minute regulation of industry has been the rule rather than the exception in Christian times. In the latter days of the empire the slave labourers were chiefly domestic servants, the employees of the large landholders, and the workers in the imperial mines and manufactures. At the beginning of the fourth century the emperor DIOCLETIAN issued an edict fixing the wages of artisans. According to this, and the other edicts of remuneration prescribed in this edict were about the same as those that prevailed in France at the end of the eighteenth century, and a little more than half as high as the wages in that country at the end of the nineteenth century. It was not, however, the purpose of this rescript to benefit the labourer. The rates of wages laid down were maximum rates, and the object was to prevent the price of labour as well as of goods from rising above the point which the emperor regarded as sufficient.

Despite the teaching and influence of Christianity, the laws and institutions, the ruling classes and public opinion, the intellectual classes, and, indeed, the bulk of the people were still pagan. A few years later, CONSTANTINE made Christianity the official religion of the empire, but he did not thereby make the people Christian. The majority were still dominated by selfishness, dislike and contempt for labour, instead of the desire to exploit their fellows, especially through usurious practices. The language employed by Ambrose, Augustine, Basil, Chrysostom, and Jerome against the rich of their time, is at once a proof that the powerful classes were not imbued with the Christian spirit, that they were alienated and that the Christian teachers were the true friends of the poor and the toilers. The doctrine laid down by these Fathers, sometimes in very radical terms, that the earth was intended by God for all the children of men, and that the surplus goods of the rich belonged to right to the needy, has been the most fruitful principle of human rights, and the most effective protection for labour that ever fell from the lips of men. It is, in fact, although not always so recognized, the historical and ethical basis of the now universally accepted conviction among Christian peoples that the labourer has a right to a living wage, and that the work of the poor may not do all that he likes with his own. During this period (the fourth century), likewise, large numbers of men and women who found it impossible to live a life of Christian perfection in the still semipagan society of the time, founded monasteries and convents, and there gave to the world its first effective labor movement in the chrestian state. The number of the clergy was growing, and the work of these foundations gradually became centres of industry and peace, and later on developed into those medieval towns in which labour became for the first time fully self-supporting and free.

By the time of the barbarian invasions in the sixth century, the majority of rural slaves had become either
free tenants or serfs. The latter were soon reduced to their former condition, and all the legislation and customs which, under the influence of Christianity, had been introduced for the protection of the serf were ruthlessly set aside by the new masters of the Roman Empire, the Burgundians. The barbarian tribes generally restored to the landlord the power of removing the serf from the land, and to the master the power of life and death over his slave. Speaking generally, this continued to be the situation down to the time of Charlemagne. From the beginning of his reign the lot of the slaves rapidly improved and their number rapidly decreased, so that by the middle of the tenth century they had almost all been transformed into serfs throughout the Holy Roman Empire. One hundred years later, about seven per cent of the inhabitants of England were slaves, but the institution had practically disappeared in that country by the middle of the twelfth century. In the year 1170 the last remnant of it in Ireland was abolished by St. Lawrence O'Toole.

At the end of Charlemagne's reign practically all the land within his dominions was held by the great warriors, the clergy, and the monasteries. The majority of the peasants were serfs, and the proprietors were feudal lords. Politically, the latter were not only the military defenders of their territory, but to a great extent legislators, administrators, and judges; economically, they had the right to receive from the cultivators of the soil a rent, either in money or in money's worth, according as they chose; in many places, but not always, the serf, while not owned as a slave, became a vassal, in custom, and his tenure of the soil was dependent on the will of his lord. In the course of time the serf was relieved of some of these regular burdens, his labour services were definitely fixed by custom, and his tenure of the land that he cultivated on his own account was made secure by custom, if not by law. Between the eighth and the twelfth century serfdom was the condition of the majority of the labouring class, not only throughout the Holy Roman Empire, but, with the exception of Ireland, all over Europe. Ireland had the clan system. During the period of the discussion we are dealing with the clan was a very considerable measure of progress. With the exception of ordinances mitigating and abolishing slavery, there was no important labour legislation during this period.

Between the twelfth and the end of the fifteenth century, the great majority of the serfs of England became free tenants, that is, they were gradually relieved from the fines and petty exactions imposed upon them by the lord, and from other disabilities, economic and civil; they were permitted to pay their rent in money instead of in labour or produce; they were enabled to sell the soil, and their possession of their holdings was secured by law, or by custom which had the force of law. In France emancipation was not quite so rapid. nor was it so thorough in the individual case; still it had been extended to the great majority of the serfs by the time of the Reformation. It was effected much more slowly in Germany. At the beginning of the Reformation the condition of the majority of the tenants there was that of serfdom, and there existed, in many districts, a considerable number. As a consequence of their revolt and its bloody suppression, their emancipation was set back for at least a century. The majority of the German peasants were still serfs at the end of the eighteenth century. Serfdom lasted in Russia until 1861.

The emancipation of the serfs during the later Middle Ages was due in great measure to the growth of towns and town industries. Attention has already been called to the fact that many of the towns owed their origin to the settlements made and the industries built up by the monks. The latter not only exercised handicrafts themselves, but taught their neighbours to do likewise. In the course of time groups consisting of several hundred, and sometimes of several thousand, persons were centered about the monastery, many of whom were artisans more or less independent of any lord, and having a fairly good realization of their freedom and their rights. And there were very many of the medieval towns arose in this manner. In the twelfth century the towns in England began to purchase charters from the king, the lord, or the monastery, according as each happened to control the land upon which the town was situated. In this manner they obtained or secured a considerable measure of self-government. About the same time the merchants and the artisans began to combine in associations called, respectively, merchant guilds and craft guilds (see GUILDS). The latter, which were much the more important, comprised master-workmen, journeymen, and apprentices. They had generally speaking, a monopoly of their respective trades or crafts, and regulated not only the general conditions in which work was performed, but even the wages of the journeymen and the prices of the product. Their ordinances had for a long time a semi-legal character and all the practical force of a civil law. Thus the towns became the abode of populations that were not subject to the lord, and that were a standing check upon his power, not only because they were free themselves, but owing to the contagion of their example. Moreover, the serf who escaped from the lord and maintained a residence in the town for one year and a day was considered a freeman. The development of the towns and guilds in England was typical, with some differences of time and detail, of Europe generally. In most places the guilds reached their highest degree of efficiency in the fourteenth and fifteenth centuries.

The condition of the labouring classes both in town and country during these two centuries was much better than it had ever been before. In the first place, the worker enjoyed considerable security of position, either on the land that he tilled or in the craft that he pursued. According to the theories of the time, the members of every class performed a social function which gave them a social claim to the protection of their lord, in conformity with their needs and customs. Hence the feudal lord and the monastery were charged with the care of all the inhabitants of their estates, while the guilds were required to find work or relief for their members. Although the workers enjoyed as a whole less individual freedom than they do to-day, their economic position was more secure, and their future less uncertain. There was no proletariat in the modern sense, that is, no considerable number of persons for whose welfare no person or agency was held socially responsible. As to the content of the livelihood obtained by the average labourer of that period, any attempt at a precise statement would be misleading. Nor is it possible to institute any general comparison that would be of value between the welfare of the la-
bourger then and now. This much, however, may be asserted with confidence: the poorest one-tenth of the population were probably better fed and better clothed, if not better housed, than is the poorest one-tenth to-day; for “the grinding and hopeless poverty, just above the verge of actual starvation, so often prevalent in the present time, did not belong to medieval life” (Gibbon’s, “Industry in England”, 177); the labouring class (meaning all persons who got their living as wage-earners or through self-employment, and not by employing others) received a larger share per capita of the wealth then created than our wage-earners obtain from the wealth produced in our time; and, finally, the guild system which governed town industry “did for a time, and in large part, until the end of the eighteenth century, the consumers and producers” (Ashley’s, “English Economic History”, II, 168).

Legislation pertaining to labour during the three centuries immediately preceding the Reformacion was mostly enacted by the towns, the feudal lords, and the guilds. Its main results were the emancipation of the serfs and the privileges by which the guilds were enabled to become the real, if not the nominal, lawmakers in all things affecting the economic welfare of their members. The towns frequently, and the national governments occasionally, regulated the prices of products but little care was taken to satisfy the industrial principle of the time was regulation, not competition. In 1349 the English Parliament enacted the first of the many statutes of labourers that have been passed in that country. It prohibited higher wages than those that had prevailed in 1347, the year before the Black Death. A similar law was enacted at the same time in France. Both ordinances aimed at keeping down the remuneration of the labourer, but neither was very successful.

From the Reformacion until the industrial revolution at the end of the eighteenth century, the history of labour for the most part records a decline from the conditions of the fourteenth and fifteenth centuries. The confiscation of the monastic and guild lands in England under Henry VIII and Edward VI, the evic- tion of large numbers of the tenants from their holdings, the enclosures of these lands and a large part of the common pastures into great estates, and the substitu- tion of large proprietors for custumers, in- creased hardships to the agricultural population. In Germany much the same process of spoliation and impoverishment occurred, although it had begun in that country before the time of Luther. Owing to the Hundred Years’ War and other causes, the rural popula- tion suffered. The small guilds suffered to a greater extent, the net result of which seems to have been unfavourable. As a result of the great increase of capital, and the immense expansion of commerce and industry during this period, the labouring population in the towns and cities increased greatly in numbers and importance. Their condition was as a whole less happy than in the fourteenth and fifteenth centuries. This is particularly true of England, where, in the first half of the sixteenth century, the guild lands were confiscated, and the guilds themselves all but disappeared. Although they continued in France until the Revolution, and in Germany somewhat later, their control over industry in those countries was not as thorough as it had been before the Reformacion. It must be remembered, however, that the power of the guilds would have been checked even if there had been no Reformacion; for they were becoming too exclusive in their membership and too great a barrier to the welfare of the consumer. In fact, these tendencies had already caused a gradual decline in the English guilds before the end of the fif- teenth century. Nevertheless, it remains true that both in England and Germany the Reformacion inflicted great injury on the guilds, and on them upon the whole labouring class. There was no legis-

lation during this period that was of any marked benefit to the labourer. In France and Germany laws were passed restricting the activities of the guilds. In England the Statute of Labourers 1524 was enacted and amended at least ten times in the course of two centuries, was supplanted in 1563 by the famous statute of Elizabeth. It embraced all the most stringent provisions of the preceding laws, with some clauses that were intended for the protection of the worker. But its principal fault lay in the stipulation that wages should be fixed and the law administered by the justices of the peace. The latter generally were keenly interested in keeping wages down, and in exploiting the labourer. So thoroughly did they enforce the law for their own benefit that by the beginning of the eighteenth century wages, famine wages, traditional, and these wages, insufficient by themselves, were supplemented from the poor rate” (Rogers, “The Economic Interpretation of History”, 43). This reference to the poor rate calls to mind the Elizabthan Poor Law, which had been rendered necessary through the confiscation of the guild and monastic lands, and the destruction of the monastic system of poor relief.

The modern industrial era, the factory system, the age of machine production, began, properly speaking, with the industrial revolution. The latter phrase describes the changes that came to pass from the steam engine, spinning machinery, and the power-loom, during the last quarter of the eighteenth century. Among their most important immediate results were: the grouping of workingmen into factories where they tended machines instead of working in their homes with the old and simple tools; the ownership of the factories and machinery by capitalist employers, instead of by the labourers themselves; a great increase in the dependence of the labourer upon the employer; and congestion of the working population in the cities which grew up close to the factories and communal establishments. Hereafter, labour in this article is to be understood of wage-earners only. Simultaneously with the revolution in industrial processes and relations, there occurred a revolution, as thorough if not as sudden, in economic theory and legislation. The teaching of the physiocrats and the eighteenth-century philosophers was in France, the economic-political theories of Smith and Ricardo in England, and the self-interest of the English capitalists, all combined to inaugurate a regime of complete freedom of contract, complete freedom of competition, and almost complete non-intervention of Government in industrial matters. The fixing wages, and requiring a seven-years’ period of apprenticeship, was abolished in 1813 and 1814, and nothing was substituted for the protection of the labourer. While every law that in any way restricted the freedom of the employer or regulated the conditions of employment was abolished, the old Combination Acts, which made labour organizations criminal, were re-enacted in 1799. This act prohibited even the contribution of money in furtherance of a strike. In fact, the prevailing theory of industrial liberty seemed to require that the individual employer should always deal with the individual worker, and to assume that this would be for the best interests of all. Undoubtedly, many of the old regulations, such as the law of apprenticeship, had outlived their usefulness and ought to have been repealed, but some of them were still valuable or could have been made so by amendment. What was needed was not an appropriate series of changes to be effected by all regulations. As a result of the policy of non-intervention, the working classes of England experienced during the first half of the nineteenth century a depth of misery and degradation which has obtained the name of “English wage slavery”.

Long before these conditions had reached their lowest
level, however, some steps had been taken to protect the labouring class by legislation. In 1802 a law was passed which aimed at giving some relief to the pauper children in the cotton factories, and in 1824 the prohibitions of most of the ordinances were abolished. Between 1833 and 1878, the famous English Factory Acts were enacted, amended, and re-enacted, until they provided for safety and sanitation in all workshops, and regulated the hours of labour of women and children, and the age at which the latter were permitted to work. In both countries, the slow transition from the system of handwork to the factory system came somewhat later and somewhat more slowly than in England, and consequently caused less hardship to the weaker members of the labouring class. Moreover, the theory of legislative non-intervention was not so fully developed, except in France and Belgium, where the political philosophy of the Revolution had obtained a strong foothold. The guilds were abolished in France in 1789, and labour unions, strikes, and lock-outs were prohibited during substantially the whole period between that date and the year 1866. The most effective factory legislation was enacted in 1841, but it was not seriously enforced for thirty years. In Belgium the guilds were abolished in 1785, and there was no very important labour legislation until 1856. Most of the laws for the protection of labour in Switzerland came into existence during the last quarter of the nineteenth century. Effective labour laws were not enforced in Italy until 1866. In Prussia the complete abolition of the monopolistic privileges in certain trades enjoyed by certain towns, classes, and organizations took place in 1845, while a general code providing for industrial freedom was adopted in 1869 by the North German States, and after and extended to the whole of the German Empire. In 1881, however, a law was passed which gave to the volunteer guilds a certain privileged position, and the tendency since then has been to confirm that position. Austria likewise retained the guilds and the old industrial regulations longer than England or France, and enacted new legislation during the first half of the nineteenth century. At no time did Austria attempt to carry out the disasterous policy of "complete industrial freedom".

At the present time laws regulating the hours of labour exist in all the countries of Europe. Except in Belgium and Switzerland, the tendency is to apply such legislation to the labour of all adult males, as well as to that of women and children. As yet, however, this regulation has not been applied to adult males generally, but only to those in certain arduous and dangerous occupations. The hours for women and children in mines, factories, and workshops, and frequently in some other occupations, are restricted by most European states to ten per day, while the age at which children may be employed varies from eleven to thirteen in most employments. Regulations providing, with varied degrees of efficacy, for compulsory accident insurance, for sanitation in factories, workshops, and mercantile establishments are practically universal. Many of the countries have compulsory state insurance against sickness and accidents; Germany and Italy have in addition a system of old-age insurance. England requires employers to compensate their employees for industrial accidents, and has a system of old-age pensions. Switzerland and Belgium insure against unemployment. In most of the European countries there are laws providing for the arbitration of industrial disputes, but in none of them is the arbitration compulsory, and in no country do they give special privileges to, labour unions or guilds. In Germany and Austria membership in a guild is indispensable for certain trades. Generally speaking, peaceful strikes and boycotts are everywhere lawful. Boycott was made legal in Great Britain in 1906.

The theory of non-intervention has exercised a stronger influence in the United States than even in England, owing to the fact that it was incorporated into the National Constitution, and in the Constitutions of the States. The prohibitions of class legislation and of interference with freedom of contract have caused American labour laws to be for the most part, "a collection of exceptions to these general provisions" (Adams, "Labor Problems", 464). Between 1840 and 1850, laws were enacted in some of the states limiting the hours of labour for women and children, and in 1877 Massachusetts enacted a code of factory legislation. Since then more than half the states have followed the example set by Massachusetts, and the general tendency points constantly toward more and better regulations for the protection of children. In no state, however, is there a general law limiting the hours of labour for adult males. Such legislation would undoubtedly be construed as contrary to the constitutional guarantee of freedom of contract. The few states that have enacted provisions of this sort have limited their application to occupations involving personal danger to health, safety, or the public welfare. In the federal states the working day of women is restricted, usually to ten hours, on the theory that this is a legitimate exercise of the police power in the interest of private health, or on behalf of a peculiarly weak section of the population. The hours of labour of all children have been set in all states at ten per day, in the majority of cases to ten per day, but in a few instances to eight, nine, eleven, or twelve. Almost all the states set a minimum age at which children may be employed, at least in certain places, such as factories and stores. In the majority of the cases the limit is fourteen years, although it is sometimes one or two years less, and sometimes one or two years higher for certain occupations. Laws governing the safety and sanitation of factories exist in more than half the states. As yet, there is no legislation providing for insurance against disabilities of any sort nor for old-age pensions. The only legal regulations of this nature are based on the common law concerning the employer's liability for accidents occurring to his employees while at work. In many of the states tribunals have been created for the voluntary arbitration of industrial disputes, but none of these boards has been a national characteristic, which applies only to railroads, has been more successful. Labour unions are given no special privileges, except that in some states they are encouraged to incorporate. Strikes are not prohibited, but occasionally the sympathetic strike and frequently the boycott have been forbidden by the courts through the process of injunction.

This brief review of the history of labour looks seems to make a few conclusions tolerably safe. If the labouring class of to-day be taken in the wider sense which we have given it in discussing the ages before the industrial revolution, it is not a nation of nations, which one or two years ever been since the world began. If we use the phrase in the narrower sense of wage-earners, we can still say that the majority of these are now in a better position, materially, socially, and politically, than the labouring class, whether widely or narrowly interpreted, has ever been before. While it is very probably true that the poorest section of the manual workers of the later Middle Ages was in a happier condition materially than the poorest workers of to-day, it is also true that the latter have the advantage socially and politically. And when we recall the sufferings that the toilers have endured through it, and some of them give special privileges to, labour unions or guilds. In Germany and Austria membership in a guild is indispensable for certain trades. Generally speaking, peaceful strikes and boycotts are everywhere lawful. Boycott was made legal in Great Britain in 1906.
the workers were either slaves or serfs, we realise that, in spite of set-backs, there has been great and encouraging progress. When we compare the condition and status of the labourers in medieval days with that of the last century, we cannot doubt that the improvement is mostly due to Christianity, and that continued progress will be in proportion to the influence of Christian ideals in the social order. Some of these ideals are stronger to-day than ever before. In the whole of Europe of the last century, there is an element of justice in the labour contract, and when either party deliberately ignores this factor, its aim is to that extent immoral. This is as true of an organization as of an individual. Though good in its constitution and end, the union might possibly be immoral on account of the disproportionate amount of evil to which it leads. It is doubtful whether any intelligent and unbiased observer would contend that this hypothesis is verified to-day. Although the evil effects of the union are frequent, and sometimes very serious, they seem to be, on the whole, outweighed by its good effects. “An overwhelming preponderance of evidence before the Industrial Commission indicates that the organisation of labour has resulted in a marked improvement in the economic condition of the workers.” (Final Report of the Industrial Commission, p. 802.) And the good results obtained by organization are considerably enhanced by the fact that they could not have been secured in any other way. As Walker, a very conservative writer, says, “Nothing, economically speaking, can save economic society from progressive degradation except the spirit and power of the working class.” (Elementary Course in Political Economy, 266.) A careful survey of the history of labour during the last one hundred years will show with abundant clearness that no entire grade or class of labourers has secured any important economic advantage except by its own organized resistance and aggressiveness. And practically every union has at some time protected the working conditions of its members against deterioration. These facts are merely a result of the system of unlimited competition, not a condemnation of the employing class. If anyone doubt that the evils resulting from the unions are less important morally, economically, and politically, than the benefits that they have produced, let him calmly survey the conditions that would exist in England to-day if the unions were still prohibited by law, as they were during the period of English “wage slavery”, in the early decades of the nineteenth century. If the individual unions are sometimes immoral, and as such forbidden to conscientious working-men, because the organization does more harm than good. This was probably true of the Western Federation of Miners in Colorado a few years ago. The moral judgment to be passed upon unionism from the side of its results applies for the most part to the past. It cannot with certainty be applied to the future in order to determine whether a union or all unions are worthy of condemnation or of approval, except in so far as the past conduct of an organization may create a presumption for the time to come. If the judgment expressed in the last paragraph is sound, the presumption, therefore, is that the labour union in general will in the future be justified from the view-point of its results, and that it may claim the allegiance of conscientious men. And we have already seen that it is lawful in its general constitution and general aims.

I. The Aims and Results of the Labour Union.

—The two general aims, ends, or objects of the union are mutual insurance and better conditions of employment. In the opinion and procedure of the unionists, the second is much the more important. Conditions of employment include wages, hours, sanitation, and safety, and several other circumstances that affect the welfare of the workers. Better conditions mean, in the consciousness of the unionist, not only better conditions than those now enjoyed, but better than he would have if the union did not exist. In other words, the union aims at safeguarding and increasing present benefits. Inasmuch as these benefits rarely exceed, and probably in the majority of instances still fall below, the amount to which labour is entitled in justice, this aim is, in the consciousness of the unionist, the more justified.

The morality of the insurance feature is obvious.

So much for the union in general with regard to its general aims. In any specific instance a union is justified in seeking advantages, whether of wages, hours, or other conditions, only when these are in accord with the law of right. If its members are already re-ceiving all that they are morally entitled to, they of course do wrong when they use the power of their organization to extort more. For, contrary to the prevailing code of morality, the union is not the property of the last days of Greece and Rome with its condition and status to-day, we cannot doubt that the improvement is mostly due to Christianity, and that continued progress will be in proportion to the influence of Christian ideals in the social order. Some of these ideals are stronger to-day than ever before. In the whole of Europe of the last century, there is an element of justice in the labour contract, and when either party deliberately ignores this factor, its aim is to that extent immoral. This is as true of an organization as of an individual. Though good in its constitution and end, the union might possibly be immoral on account of the disproportionate amount of evil to which it leads. It is doubtful whether any intelligent and unbiased observer would contend that this hypothesis is verified to-day. Although the evil effects of the union are frequent, and sometimes very serious, they seem to be, on the whole, outweighed by its good effects. “An overwhelming preponderance of evidence before the Industrial Commission indicates that the organisation of labour has resulted in a marked improvement in the economic condition of the workers.” (Final Report of the Industrial Commission, p. 802.) And the good results obtained by organization are considerably enhanced by the fact that they could not have been secured in any other way. As Walker, a very conservative writer, says, “Nothing, economically speaking, can save economic society from progressive degradation except the spirit and power of the working class.” (Elementary Course in Political Economy, 266.) A careful survey of the history of labour during the last one hundred years will show with abundant clearness that no entire grade or class of labourers has secured any important economic advantage except by its own organized resistance and aggressiveness. And practically every union has at some time protected the working conditions of its members against deterioration. These facts are merely a result of the system of unlimited competition, not a condemnation of the employing class. If anyone doubt that the evils resulting from the unions are less important morally, economically, and politically, than the benefits that they have produced, let him calmly survey the conditions that would exist in England to-day if the unions were still prohibited by law, as they were during the period of English “wage slavery”, in the early decades of the nineteenth century. If the individual unions are sometimes immoral, and as such forbidden to conscientious working-men, because the organization does more harm than good. This was probably true of the Western Federation of Miners in Colorado a few years ago. The moral judgment to be passed upon unionism from the side of its results applies for the most part to the past. It cannot with certainty be applied to the future in order to determine whether a union or all unions are worthy of condemnation or of approval, except in so far as the past conduct of an organization may create a presumption for the time to come. If the judgment expressed in the last paragraph is sound, the presumption, therefore, is that the labour union in general will in the future be justified from the view-point of its results, and that it may claim the allegiance of conscientious men. And we have already seen that it is lawful in its general constitution and general aims.

I. The Aims and Results of the Labour Union.

—The two general aims, ends, or objects of the union are mutual insurance and better conditions of employment. In the opinion and procedure of the unionists, the second is much the more important. Conditions of employment include wages, hours, sanitation, and safety, and several other circumstances that affect the welfare of the workers. Better conditions mean, in the consciousness of the unionist, not only better conditions than those now enjoyed, but better than he would have if the union did not exist. In other words, the union aims at safeguarding and increasing present benefits. Inasmuch as these benefits rarely exceed, and probably in the majority of instances still fall below, the amount to which labour is entitled in justice, this aim is, in the consciousness of the unionist, the more justified.

The morality of the insurance feature is obvious.

So much for the union in general with regard to its general aims. In any specific instance a union is justified in seeking advantages, whether of wages, hours, or other conditions, only when these are in accord with the law of right. If its members are already re-
A. The Strike.—This is probably the most important of the methods, from the side of morals. It cannot be denied absolutely that there is an extreme moral and ought not to be employed unless certain grave conditions are verified. Whether they are all present in a given case, is rarely easy, and sometimes impossible, to determine with certainty. At any rate, the following seem to be the general conditions that ought to be fulfilled before a strike can be justified. First, the workers must be one to which they have a lawful or equitable claim; a peaceful solution of the difficulty must have been tried and found ineffectual; the grievance must outweigh the evil results that are likely to follow from the strike; and there must be good grounds for hoping that the strike will be successful. One of the good effects of well-established unions has been to lessen the number of strikes, and to moderate their excesses and abuses. Violence and the sympathetic strike are less frequent than formerly in connexion with the strike proper, but they are still so prominent as to deserve discussion. In so far as any attempt is made to justify the former, it is usually based on the claim that the labourer has a right to his job, and that he has at least the right to decent conditions of employment, and consequently that he may use force to protect this right against the unjust aggression of the man who employs him. For example, the employer may go out of business, and thus abolish the job, without doing the labourer any injustice. At most, the right to a job is merely the right to continue economic relations with a particular employer. It is, consequently akin to the right of a merchant to the patronage of his customers, or to the right of a man to pursue a lawful good by lawful means. Hence it is a right to a social relation, which leads to a material good, rather than a right to the material good itself. In a general way it is a right to liberty rather than to property; a right to pursue rather than a right to possess. Consequently, it may be deposed as truly as the right to patronage is violated by an unjust boycott; an obtained promise is violated through slander which prevents the would-be giver from carrying out his intention. The nature of the right to patronage will be discussed presently in connexion with the boycott.

Now it would seem that a right to his job in this sense of the phrase does inhere in the labourer who would suffer grave inconvenience if compelled to seek some other occupation; for example, a man with a family who owns a home where he works, and who would be unable to get employment at his trade from another employer in the same city. There is good reason to maintain that the employer who should discharge such an employee without grave reason would sin against not merely charity but justice. Conversely, cases can occur in which the labourers who quit their employer without a sufficiently grave reason will be guilty of injustice toward the latter. If these propositions are not sound, no boycott, however unreasonable, will be unjust merely because of the damage inflicted through the withdrawal of patronage. The labourers that take the places of the striking workers, who are assumed to have this right to their jobs, will by implication take also a sufficiently grave reason for the act. The right of the strikers to the jobs is not valid against other workers who are in grave need. For example, if the latter cannot without great difficulty find employment elsewhere, they will offend neither against charity nor justice when they take the places of the former; for they, no less than the strikers, have a right to seek and obtain a livelihood on reasonable terms. Both classes of workers are counting on advantages that both have a right to pursue and the latter must be interpreted and determined by reference to their respective conditions and needs. Hence it may happen that the prior right of the old employees to their jobs will give way before the sufficiently grave needs of the new-comers. Thus far we have assumed that the employer is attempting to compel his old employees to accept unjust conditions, and if they consent to work for less than living wages, they commit an illicit action, and consequently use immoral means to prevent the old employees from obtaining an advantage that the latter have a right to seek. And yet, the needs of the new men may be sufficiently grave to justify them in submitting to these harsh terms for themselves, and in depriving the older men of their jobs. Suppose, however, that the action of the new-comers finally results in the old employees, or some of them, returning to work on the old, unjust conditions. This is what usually happens when a strike is in the very heart of its progress. If the new men undoubtedly co-operate in producing an unjust effect, that is, in causing injustice to the old employees. The latter are unjustly treated, yet the instrumental agents of such injustice, namely, the new men, will be justified if their needs are such as to compel them to work under unsatisfactory terms. They sometimes lack such justification, particularly when they are professional "strike breakers", and when they would better their condition by holding off, and assisting the striking workers to obtain the just terms that are sought.

In view of the foregoing outline of the equities of the situation, the question concerning the morality of violent methods of supporting a strike may be answered somewhat as follows: As against the employer, the strikers have no right to destroy his property; for this is lawful only as one of the extreme measures of war, and a strike, no matter how just, has not the moral weight of a violating of a just war requirement. Even if the places of the strikers, no violence is lawful when the action of the former is justified by their own needs. Will it be lawful when there is no such justification? May not the strikers forcefully repel unjust assaults upon their rights to decent conditions of employment, just as a man may repel an attack of a burglar? Potter hesitates about giving a categorical answer, contenting himself with the statement that force will certainly not be justifiable when less objectionable means would be effective, or when the good effects to be expected are not great and certain in proportion to the evil effects (De Jure et Justitia, pp. 228, 229). Now, it is certain that the good effects to be obtained through the use of violence are practically never sufficient to outweigh the evil effects; for the benefits that labour would thus secure are insignificant compared with the social disorder and anarchy through which they would be obtained. The interests and rights of a class must yield before the interest and rights of the community. The sympathetic strike occurs when labourers who have no personal grievance quit work in order to aid their fellows. It can be directed either against the employer of the latter, or against some other employer who is not concerned in the original dispute. We have an example of the first kind when the brakemen on a railway strike out of sympathy with the trackmen who have left work because they have been refused an increase in wages. If the cause of the trackmen is just, the brakemen will not be wrong in
thus acting; for the employer's right to the continued services of the brakesmen is valid only so long as he treats them reasonably, and does not use the advantages which he derives from their services for unreasonable ends. When the employer is under an obligation to continue at work cease when a reasonable cause arises. Such a reasonable cause may well be at hand when their continuation at work becomes a means of assisting the employer in his unjust course towards the trackmen, while their withdrawal from his service will be effective in compelling him to do what is right. Their obligation towards their employer gives way before their right morally to coerce him to grant justice to their fellows. If, indeed, they should quit work without any reasonable cause whatever, they would be guilty of unreasonable interference with the employer's right to pursue the advantages to be derived from the railroad industry, but the cause of the unjustly treated trackmen may be sufficient to render the interference reasonable. It is on this principle that a strong nation or a strong man is justified in coming to the assistance of a weak nation or a weak man who is oppressed by a nation or man with whom the assisting nation or man has no business in which it is at personal profit. A sympathetic strike is against another employer than the one concerned in the original dispute, when, for example, bricklayers quit work because their employer continues to furnish material to a builder whose employees are on a strike, it will ordinarily be considered more charitable and just to the employer than if there are extreme cases in which the unconcerned employer would be under an obligation of charity to assist the labourers who are involved in the first strike, by ceasing to have business intercourse with the offending employer, but such cases would be rare, and the result would be the sympathetic strike against employers generally would be morally permissible. For the great body of employers and the general public are not reasonably treated when they are compelled to suffer so great inconvenience in order that an offending employer may be coerced into reasonable treatment of a small section of the community. While we cannot be certain that a general strike is never justified, we can safely say that there is against it an overwhelming presumption.

B. The Boycott.—In general the boycott is a concerted refusal to engage or continue in business or social intercourse with a person or corporation. Like the sympathetic strike, it is of two kinds, primary and secondary, or simple and compound. The primary boycott is carried on against a person with whom the boycotters have had a dispute; the secondary against some person who refuses to join in the primary boycott. The morality of the primary boycott depends upon the grievance that the boycotters have against the boycotted, and the extent to which, and the means by which it is prosecuted. If the labourers have not been unfairly treated by the person with whom they are at variance, they would be the injustices which they are not justified in carrying out. The basis of this right is the same far-reaching principle that we noticed in connection with the right of a man to his job, and of an unconcerned employer to the services of his employees who threaten to make him the victim of a secondary sympathetic strike. It is the principle that every man has a right to seek and obtain material advantages and opportunities on reasonable terms, and without unreasonable interference. Indeed, this is the real basis of even property rights, and the sole final justification of all the recognized property titles. Hence it is a violation of justice to deprive a man of the benefits of social or business intercourse without some sufficient reason. But there can be a sufficient reason. It will be present when the injustice inflicted by the employer is grave enough to justify an injunction against him. Boycott is a reasonable method. After all, the boycott does not differ essentially from the strike, which is also a concerted refusal of intercourse. But the boycott must be kept within the limits of justice and charity in its process and extent. It must be free from violence and other immoral device, and it must be carried so far as to deny to its object the necessities of life, or any of those acts of social intercourse which are demanded by the fundamental human relations,—what the theologians call the "communis signa charitatis". For the sake of clearness and simplicity, the foregoing observations refer only to the boycott against employers; they are not intended to apply to employees unfairly; but it is obvious that lawful boycotts have a much wider application. When the cause and the need are sufficiently grave, the boycott may be employed with due moderation against any unreasonable conduct that injures, harms, or wrongs any person, or any part of the community. The boycotters are encouraged to boycott the perversity of newspapers and theatres. The secondary boycott is directed, as already noted, against "innocent third persons", that is, those persons who refuse to assist in the primary boycott. For example, the labourers refuse to buy from a merchant who employs the boycotters. This is analogous to a manufacturer against whom they have a grievance. In principle it is the same as the secondary sympathetic strike, and in practice it is as well. It is commonly immoral except in extreme cases. It is commonly immoral because it is an unreasonable interference with the right of the unconcerned person to pursue and possess the advantages of social or business intercourse with his fellows, that is, with the person who is originally boycotted and the boycotters themselves. It is an unreasonable interference because it subjects him to what is in most cases an unreasonable inconvenience, that is, the deprivation of intercourse with the boycotted, and with the boycotters. This inconvenience is unreasonable because it is excessive as compared with the moral claims of the boycotters to the co-operation of the man who is compelled to suffer the inconvenience. That is, the former have a right to bestow their patronage where they please, in the name of a general proposition, but the proposition is too general to reflect adequately the equities of the situation. Undoubtedly the labourers, or any other class of persons, are within their rights and exempt from moral censure when they transfer their patronage to someone whom they wish to chastise, in the conviction that he is the agent of a manufacturer in the primary as well—the desire to help a friend is only incidental, while the intention to injure the boycotted person is direct and primary. This is not morally lawful unless the thing that they seek to compel him to do can be reasonably required of him. For example, when labourers withdraw their trade from a manufacturer because he refuses to refrain, at great financial loss, from patronizing a manufacturer who, we will suppose, is justly boycotted by the labourers and their friends, he is compelled to undergo a loss that is out of proportion to his duty of assisting the latter. His right to business intercourse on reasonable terms is violated.

On the other hand, cases do occur in which an unconcerned person may reasonably be required to give up the advantages of business relations with the man against whom the primary boycott is directed; if he
refuses, he may rightfully be made the object of a secondary boycott until he is ready to act reasonably. A clothing merchant who obstinately continues to buy his supplies from a boycotted manufacturer of "sweat-shop" goods would seem to be a case in point. For this reason, no good business has any reason to do otherwise than to refuse dealing with him, and the secondary boycott will not only tend to induce the merchant to assist the original boycott, but will directly and in itself increase the scope of the latter. Consequently, here, secondary boycott is not only lawful and always right. Lawyers, and occasionally judges, condemn it on the ground that it involves threats, or that it causes injury to a man's business, or that it implies a conspiracy, but every one of these features is contained in a strike. Whatever may be the legal aspect of the matter, a threat is not morally wrong per se. Its morality depends upon what is threatened, and how, and why. Injuries indirectly caused, which is the case in strikes and boycotts, are justified whenever all the conditions are present which render morally lawful the performance of an act not bad in itself, but which produces both good and bad effects. The morality of a strike is determined by its purpose. Although the Anthracite Coal Strike Commission denounced the secondary boycott unreservedly, the particularly immoral and cruel instances cited show that the commission had in mind the abuses of the practice rather than the practice itself. Nevertheless, the abuses seem to be so frequent in actual life that we cannot wonder at the attitude of those who wish to have the practice forbidden by positive law.

C. The Closed Shop, or the Union Shop. These phrases point to that method or policy of the unions by which their members refuse to work with non-unionists in the same establishment or employment. Now, if, as sometimes happens, the unions refuse to admit non-unionists to membership on reasonable terms, in order to monopolize the trade or employment, their action will, generally speaking, be uncharitable, if not unjust. But if the union is willing to admit all capable workers, and if it has a sufficient reason for pursuing the closed-shop policy, the latter will be neither unjust nor uncharitable. Among the considerations advanced in justification of the policy are the following: The non-unionist ought to help to defray the expenses of organization, from which he derives so much benefit; the presence of non-unionists at an establishment often prevents that peace and discipline which is one of the aims and results of an agreement between the union and the employer, and provokes constant bickering between the two classes of workers, and, most important of all, the average employer strives to suppress gradually the unionist employees or to reduce their wages to the lower level accepted by the non-unionists. In a word, the general defence of the closed-shop policy is that it is indispensable to effective organization. The employment inevitably tends to become all union, or no union. This defence is both justifiable, and on justified, but in the sense that, if it does give a true account of the situation, the closed-shop policy is justifiable; for, as a general rule, organization is necessary to obtain just conditions for labour. Of course there are exceptions to this rule. We speak here only of what generally happens, without inquiring into the frequency of the exceptions. In so far as the closed shop is necessary as a means to reasonable conditions of employment, it will not be immoral, as against either the non-unionist or the employer. Neither is deprived of his right to enter economic relations and pursue his livelihood on reasonable conditions. It would not merit much consideration if it said would comply with that condition which alone makes justice possible for the mass of his fellow-workers, and it is unreasonable that he should desire to work as a non-unionist when such action tends to produce unjust circumstances for all. There are, indeed, cases in which the inconvenience of joining the union is great, as compared with the harm that would be done to the class through the opposite course. Membership in the union would then be an unreasonable employment. The closed-shop policy is often objected to, on the ground that it deprives the non-unionist of his natural right to work. In this assertion the right to work, which no one denies, and which cannot possibly be violated except by physical restraint, is confused with the right to work in certain conditions of social relations. The specific demand of the non-unionist is that he shall be permitted to work beside members of the union. If this were an unconditional right it would contradict and annul a similar right of the unionist, namely, the right not to work beside the former. One of these rights is no better than the other. In point of fact neither is genuine, for there can be no such prerogative as an unconditional right to a social relation. The right of a non-unionist to work in the same shop with a unionist is no more unconditional than the right to strike, to boycott, or to enter any social relation which requires the consent of the other party. A condition of employment is a special condition, and it is valid only when these are reasonable. In the hypothesis that we are considering, membership in the union is such a reasonable condition, while refusal to enter is unreasonable. Hence, if the closed-shop policy is necessary in order to obtain proper conditions of employment for the body of the labourers, it will not violate the right of the non-unionist, even if it prevents him from obtaining any employment; for the right in question is dependent upon the contingency that it be exercised within reasonable limits. To deny this is implicitly to assert that the unionists are obliged to work in conditions that are unreasonable. Finally, the policy under discussion may properly be opposed by an employer who otherwise treats his employees fairly. Contrary to the impression that seems to be prevalent, the closed shop is not an innovation. It was enforced for centuries by the guilds, and for a long time in many places it was sanctioned and prescribed by civil legislation (Cf. Ashley, "English Economic History", I, 82). Practically speaking, the law forbade a man to work at his trade unless he belonged to the guild. What the civil law could then command, individuals can now with reason seek to obtain by persuasion, bargaining, and contract.

The methods and policies discussed in the foregoing pages exhibit all the more important moral aspects of the labour union. All these practices involve economic relations which are a means of obtaining material goods. If the relations were not necessary to this end, they could not become the basis of rights. Since they are necessary, they give rise to a right, which, like all other rights, is limited by the end to which it is a means, and is sufficiently realized when it can be exercised on reasonable terms. On this principle only; that is, in the only kind of right, whether to life, property, or liberty. And all that has been said in connexion with the strike, the boycott, and the closed shop, was merely an attempt to apply this general and far-reaching principle. To forestall misunderstanding, it may be well to note that every violation of justice through labour-union methods is also a violation of charity, and that charity may sometimes be offended without any breach of strict justice.

D. Limitation of Output and of Apprentices.—The practice of restricting the amount of work to be performed by the non-union on a given day, or to refuse to allow a given number of his union members to be employed, is generally willing to admit. But it is probably less frequent than the opponents of the union assert. In itself this method is not wrong, and it may even be
L Auberge. Competent authorities maintain that the exceptional workman is often constituted the pacemaker for all the others, and that the intensity of exertion demanded by many forms of high-speed machinery has considerably reduced the working-life of the workers. "The Social Unemployment of the 19th Century," p. 733). In such cases the union does well to endeavour to keep the output of the average man down to an average reasonable limit. When the restriction goes beyond this, and is motivated by indolence or by the desire of making a job last longer, it is clearly unjustifiable and dishonest. To the complaint of the employer that in many of the skilled trades the union will not permit the training of a sufficient number of apprentices, the unionist replies with a simple denial. The explanation of the difference between them is largely in their different standards of sufficiency. Both recognize that a scarcity of apprentices tends to make wages high, but they do not agree as to the point at which wages are sufficiently high. Since the employer is generally able to pass the extra cost of labour on to the consumer, he is not seriously in any danger of becoming under-capitalized. In other words, the supply of skilled workers is kept so low that their wages are unreasonably high. The workers who are able and willing to qualify for the trade are also injured, inasmuch as they are compelled to enter a lower and less remunerative occupation. At what precise point in the wage scale a real injustice is done to the consumer, it is practically impossible to say; but, since such a point can be reached, since the men in those trades where limitation of apprentices is enforced are, as a rule, sufficiently organized to defend their just interests, and since a considerable injury is done to those who are excluded from the trade, the practice would seem to be of doubtful moral correctness. After all, a labour union can become a real monopoly, capable of practising extortion upon the community as truly, though not as extensively, as a monopoly of products.

While the unions are a necessity of our present industrial system, they are nevertheless, both in spirit and in many of their methods, a necessary evil. They are too often established and maintained on the theory or conviction that the competition between employer and employee is a veritable war, in which the object is to secure for all that is possible to secure, and in which the victory is always to the stronger force. If competition were restrained by law or by some other species of social control within the limits of reason and morality, if the taking of exorbitant profits and the reduction of wages below the level of decent living were alike rendered impos-

sible, the union would still be desirable, indeed, just as organization is desirable for every class of men whose interests are common; but a far greater proportion of its activities could be devoted to mutual help, especially in the form of insurance, and a much smaller proportion to the struggle for the abolition of unfair terms, and to economic warfare generally. In that better, though still remote, day, most of the extreme methods of the union, such as the strike, the boycott, and the closed shop, could be discarded in favour of milder practices, such as collective bargaining, insurance, and education.

century, and the centre stone (which is octagonal and was formerly inlaid with brass imagery) is still preserved in the museum of that city. These labyrinths are supposed to have originated in a symbolic allusion to the Holy City, and certain prayers and deviations doubtless accompanied the perambulation of their intricate maze.—In modern times, gnomes are fantastic arrangements of lofty and interlaced box hedges in a garden as at Hampton Court, where it is difficult to find one's way to the centre.

THOMAS H. POOLE.

Laç, Stanielas du, Jesuit educationist and social worker, b. at Paris, 21 November, 1835; d. there, 30 August, 1909. His father, Louis Paul Albert du Lac de Fugères, was descended from a noble family, noted in history as early as 1206, and his mother was Camille de Rouvroy de Lamairie. Entering the novitiate of the Society of Jesus at Issenheim, in Alsace, October 28, 1853, he studied theology at Laval till 1869, when he was ordained priest by Mgr. Wicart, 19 September. The following summer (1870) he was made rector of the new College of Sainte-Croix, at Mans, where, during the Franco-Prussian war, he organized an efficient hospital service. During the ten months of his rectorship at Mans, twenty-two thousand soldiers sojourned successively in his college. In October, 1871, he succeeded the martyred Father Léon Douroudray as Rector of the Ecole Sainte-Geneviève, generally called "La Rue des Postes," an institution which prepared candidates for the great military and scientific schools of France. During his rectorship, from 1872 to 1881, 213 of his pupils were admitted to the Ecole Centrale, 279 to the Ecole Polytechnique, and 830 to Saint-Cyr.

With a rare combination of firmness and gentleness he trained his students to be such fearless Catholics that they gradually infused a Catholic spirit into the military school of Saint-Cyr. This, together with their unparalleled success at the entrance examinations, was the real cause of the closing of the Jesuit colleges in 1880 and of the subsequent persecution of the Church in France. In 1880 he founded a new French college, St. Mary's, at Canterbury, England, where he remained as rector nine years, venerated and loved by all who met him, Protestants as well as Catholics. The last ten years of his life were spent in Paris, Versailles, as preacher, director of souls, and founder of the "Syndicat de l'Aigüille," a collection of loan and benefit societies for needlewomen, dressmakers, seamstresses, especially those young sewing girls who are called midinettes. As early as 1901 this syndicate, which has spread all over France, counted more than two thousand members and two hundred lady patronesses in Paris alone, where its two restaurants, reserved exclusively for members, had served more than a million meals, and where its preventive zeal had saved and consoled thousands of young women. Father du Lac had been for many years, in the eyes of the ignorant anti-Catholic multitude, the personification of the scheme of Jesuit, while the Catholics who knew him best thought him only too frank, too apt to waste his kindness on men whose hatred of the Church is immeasurable. He wrote two books: "France" (Paris, 1889), which dwells particularly on the relation between the Rector of St. Mary's, Canterbury, and his French boys; and "Jésuites" (Paris, 1901), a defence of the Society of Jesus, containing many autobiographical reminiscences. In the last long months of illness God took him away from the strife of tongues into the solitude of a religious house which was not his own, a hospital where he died in poverty and perfect trust.

La Calzada. See CALAHORRA and LA CALZADA, Diocese of.

Lace.—(Lat. laqueus; It. laccio, trine, merletto; Sp. lazo, encaje, pasamanos; Fr. lacis, dentelle; Ger. Spitze).—I. HAND-MADE LACE.—(1) Classification.—(a) Needle-made lace, or needlepoint (trine ad ago), which has three divisions:—(i) Lacies, lace made by working various needlepoint stitches on a specially prepared knotted netting (modano) or twisted netting (buratto). (ii) Lace made by the needle on a foundation of woven linen—the pattern sometimes made by drawing threads together by the needle, sometimes by cutting portions of the linen away and sewing over the remaining threads. This linen lace is called drawn-work (tela tirata) and reticello or cut-work (tela tagliata). A Venetian chalice-cover of the seventeenth century has a background of cut-work, the figures being worked in punto in aria. (iii) Needle lace made without any foundation at all, and hence called punto in aria. This includes every variety of needle-made or point lace made entirely without foundation, such as Venice and Spanish flat point and raised point, point de France, Alençon point, point de gaze, etc. However widely dissimilar these laces may be in their designs and styles of execution, they all come under the head of needlepoint lace.

(b) Bobbin-point lace, which is made with bobbins on a pillow (trine a fusellì) or by crochet, tatting or simply twisting and knotting threads by hand into fringe as in macramè (Sp. meropec). There are three chief ways of making bobbin-lace. (i) Early or peasant lace.—A tape, sometimes plain, sometimes ornamented, is made on the pillow, and joined up as required, but is not cut or finished off until the pattern is completed. (ii) Genoese, Milanese lace, etc. (Figs. 1 and 2).—Complete sprays or patterns are made and finished on the pillow and afterwards placed as required and joined by brides or by a réseau. (iii) Mechlin, binche, valenciennes, etc.—The same bobbins which were first filled and placed on the pillow continue throughout the process, and complete both pattern and ground of the lace.

(2) History.—Among the Egyptian antiquities discovered in 1809 by Professor F. Petrie, at Aurneh, it is interesting to recognize the square knotted mesh netting, similar to the laces called modano. This netting covers the vases found at the side of the coffin of a
remarkable burial of the seventeenth dynasty (1800 B.C.). Other specimens of lace made with bobbins (Fig. 9; Cluny Museum) and of lace stitches worked on linen have been found in Egyptian tombs of the first to the third century, and fine specimens of these are in the Victoria and Albert Museum, London, and in the Cluny Museum, Paris. For many subsequent centuries we possess no actual specimens of lace fabrics, but records, illuminated manuscripts, sculpture, and paintings give us evidence that hand-work in lace and on linen was continuously and gradually developed into the beautiful products of the fifteenth, sixteenth and seventeenth centuries. It will be worth while to quote some ancient references. The "Ancres Riwle of the thirteenth century cautions nuns against devoting too much time to lace and ornamental work, to the detriment of work for the poor. The record of a visitation at St. Paul's, London, in 1295, mentions laces under the name of album filum nodatum (knotted white thread). A roll of the possessions of the Knights Templars after their suppression in 1312 includes an inventory of the Temple Church, London. An item in this is "one net which is called Esponum to cover the Lectern."

On the question of design, as indicating the date of lacework, the early geometric character of design inspired by the East was modified as early as the eighteenth century, as we see, by realistic ornamentation, such as

![Fig. 2. Flounce of Milanese Bobbin Lace XVII Century, Pollen Collection, London](image)

![Fig. 3. Border of Needlepoint Worked at the convent of Youghal, Ireland, XIX Century](image)

punte tirate and is evidently of Eastern origin; the flounce of pillow lace was added at a later date.

Dr. Daniel Rock has pointed out that the long strips of laces and linen lace of early work, now sometimes found, were covers for the lectern; and this is confirmed by the fact that the figure subjects are usually worked across the width of the piece, as in a remarkable piece dating from the fifteenth century. This is a strip of tela tirata, six feet by twelve and one-half inches, probably worked by the nuns at Assisi as a lectern cover, and representing, among other sacred subjects, St. Francis receiving the Stigmata (Fig. 7, Pollen Collection). Existing records as early as the twelfth century mention "worked albs" belonging to the Abbey of St. Albans, and in an inventory of 1466 of St. Stephen's, London, we read of "worked altar cloths and towels" and some with three "rayes" at each end. These "rayes" were rows of insertion of reticello work.

There is no doubt that the Church was the first patron of lace-making in Europe, and the finest existing specimens both of early and late work were made to decorate albs, Mass vestments, etc. A very curious specimen of linen lace of pre-Reformation times is the pyx veil now existing in the parish of Hesthill in Suffolk. This beautiful square, entirely worked in...
lace tirata, has a hole in the centre through which the chain passed to hang the vessel containing the Blessed Sacrament.

Two examples of the flourishing industry of modern production of needle-point are given. Fig. 3 is a border worked at the convent at Youghal, Ireland. Fig. 4 is from the school of Burano, in Venice, patronised by the Holy Father, the Queen of Italy, and others.

Spanish needlepoint laces may be identified by a certain over-elaboration of design and ornaments. Much seventeenth- and eighteenth-century church lace came from Spain at the time of the Revolution and suppression of the monasteries in 1830: hence the name “Spanish point” is often given to gros point de Venise. The lace now made in Spain is distinctly derived and actually named from Flemish and Italian originals. Barcelona makes much silk lace.

A Venetian lace-designer was invited to France by Henry III about 1580, and lace-making was established in Auvergne. Fifty years later an edict of the Toulouse Parliament put a stop to this flourishing industry, and the inhabitants of Velay and Le Puy were reduced to misery, but by the exertions of the Jesuit Father John Francis Regis (afterwards canonized by Clement XII) the obnoxious law was repealed, and the saint is still the patron of lace-making. Lace in those days was even technically under the protection of the Church, among the names of stitches being “Pater”,

The earliest lace-pattern books now existing are dated 1527, which proves that the art was already well known and practised, as the patterns given in these books are only practicable for very experienced workers. From this time in Venice began the punto in aria, worked first as flat point and punto adorío, and then with numberless enrichments constituting raised, or rose, point, punto de neve, or rosalline point, caterpillar point, etc. The flowing scrolls and graceful, though always conventional flowers, are characteristic of the splendid Venetian laces. In the Victoria and Albert Museum, London, is a very remarkable set of Mass vestments, chasuble, stole, maniple, and chalice veil, made entirely of the finest seventeenth-century Venetian rose point; the veil has emblems of the Blessed Sacrament, the vine, ears of corn, etc. In the same place is a splendid altar-frontal of seventeenth-century gros point de Venise.

It should be remembered that many articles made for church use in early times are much to be admired as a testimony to zeal and devotion. But some,

such as the lace chasubles and the alb in Fig. 8, the rubrics at present in force would not approve of for use in the sanctuary. Albs and cottas should have the major part of linen; lace, to be correct, should be only twelve inches deep, as an alb flounce, and there should be no frill of lace at the neck.

"Ave Maria", "Chapelet", etc. More than 100,000 workers now make pillow lace and point Arabe, as the modern guipure is called, at Le Puy, and lace is also made in the departments of Cantal and Vienne, and at Mirecourt in the Vosges. Alençon had an early lace-making industry, and portions of laces made for church use about 1550 by the then Duchess of Alençon are now to be seen in the museum of that town. Later, the needlepoint industry of Alençon was founded by Venetian workers imported by the State in 1665, and the magnificent point de France was the result (Fig. 5). The French modifications of Venetian design were most ambitious and ingenious, and in any important piece of point de France may be found every variety of realistic design, or emblems of religion, war, or the arts, together with portraits of great personages and heraldic devices. Towards the end of the eighteenth century a less ambitious style was adopted, the Alençon laces lost their Venetian character, and the designs became for the most part a series of small floral patterns. Needlepoint is still made at Alençon by two or three hundred workers. Pillow lace flourished in Belgium and Holland from the fifteenth century and attained its apogee in the eighteenth; the designs closely followed the fashions of France and Italy. Magnificent flounces for albe of Brussels point

France may claim to have perfected them. The stock- ing machine was no doubt the parent of lace-making machinery. The machines were started at Nottingham in England, early in the nineteenth century, and were called bobbin-net, or point-net, machines, and the lace first made was often finished and enriched by hand. Owing to the destruction of more than a thousand stocking frames and lace machines by rioters, it was made a capital offence in 1812 to destroy machines. Imitation lace was shown at the Exhibition of 1851, and English lace now employs designers for lace of all kinds, and produces machines making the heaviest, as well as the finest, of modern laces. Calais in France, St. Gall in Switzerland, and Plauen in Saxony are centres of activity and enterprise in the production of lace fabrics, and the value of lace manufactured in England, France, Switzerland and Germany exceeds a billion dollars annually.

MARIA M. POLLEN.

Lacedonia, Diocese of (Laquedoniensi), in the province of Avellino, Southern Italy. Lacedonia is named in history for the 'laureate' kings of the Kingdom of Naples against King Ferdinand I, which took shape in the cathedral of Lacedonia (1484). The episcopal see dates from the eleventh century. The first known bishop is Desiderius, mentioned in 1062, but he is known to have had predecessors. Among the other noteworthy bishops were Fra Guglielmo Neritone (1392); Antonio Dura (1506); Gianfrancesco Carducci (1564); the distinguished mathematician Marco Pedaceca (1554); the learned and virtuous Giacomo Candido (1606); Giacomo Giordano (1651), who built the episcopal palace and planned a new cathedral; Benedetto Bartolo, who was seized by the brigands and later redeemed by the Marquess of Carpi; Morea (1684), who suppressed certain festivities of pagan origin celebrated on the vigil of Epiphany, and laid the corner-stone of the new cathedral; Francesco Ubaldino Romanz (1798), under whom the Diocese of Lacedonia was increased by unification for the adjoining diocese subject to the Metropolitan of Benevento, and which dates at least from the tenth century, when a Bishop Benedetto is mentioned (964). Lacedonia has suffered much from earthquakes, especially in 1694 and 1702. The diocese is a suffragan of Conza and Campagna, and has 11 parishes with 28,600 souls, 1 Capuchin monastery, and 1 house of the Daughters of St. Anne.

Cappelletti, La chiesa di l'Italia, XX (Venice, 1857). U. BENIGNI.

La Chaise (Chaise), François d'Aix de, confessor of King Louis XIV, b. at the mansion of Aix, in Forez, Department of Loire, 25 August, 1624; d. at Paris, 20 January, 1709. He entered the Jesuit novitiate at Reanne in 1649; after teaching the humanities and philosophy for some time at the Collège de la Sainte Trinité at Lyons, he became rector of the same college and, somewhat later, provincial of his order. In 1675 he succeeded the deceased Father Ferrier as confessor to King Louis XIV, and filled this influential but extremely delicate position conscientiously for thirty-four years. He is often accused of having connived at the king's liaison with Madame de Montespan, and of having advised the revocation of the Edict of Nantes and the violent suppression of Protestantism. The facts are that La Chaise used all his influence to put an end to the king's ill-considered affair with Madame de Montespan and finally succeeded, with the help of Madame de Maintenon, in breaking the liaison. After the death of Queen Maria Theresa in 1683, he advised the king's marriage to Madame de Maintenon, through whose
influence the king and the whole court of Versailles underwent a wholesome change.

It is not known in how far La Chaise was connected with the revocation of the Edict of Nantes, but it is probable that, like most other Catholics of France, he advocated it. The accusation that he advised the use of force to effect a Protestant state, without foundation, and does not harmonize with the admitted mildness of his character. Saint-Simon (Mémoires, IV, 285-7), Voltaire (Séize de Louis XIV, III, 305), and other enemies of the Jesuits testify to his kindness and humanity. He corresponded with Edward Coleman concerning lawful means for behalf of the foundation of the Catholics in England; but a letter concerning the extortion of Protestantism, allegedly to have been written by La Chaise to Father Petre, the confessor of James II of England, has been proved to be a forgery. As a mark of esteem King Louis XIV presented him with Mont-Louis, a beautiful tract of land in the southeast part of Paris. In 1804 it was converted into a cemetery, and it is still known as Père Lachaise.

CHARITÉLABRIE, Le Père de la Chaise, confesseur de Louis XIV [signature], 1891; SOMMEOVRE, Bibliothèque de la Compagnie de Jésus, II (Brussels, 1891), 1033-40.

MICHAEL OTT.

Lacordaire, Jean-Baptiste-Henri-Dominique, the greatest pulpit orator of the nineteenth century, b. near Dijon, 13 May, 1802; d. at Sorèze, 21 Nov., 1861. When he was only four years old he lost his father, and was thenceforth under the care of his mother, "a brave Christian" but no poet. She came of a family of lawyers, and brought her son up for the bar. While still at school he lost his faith. From Dijon he went to Paris, to complete his legal studies under M. Guillenmain. His first efforts at the bar attracted the attention of the great Berruyer, who predicted for him a successful career as an advocate. Meantime, however, he regained his faith, and resolved to devote himself entirely to the service of God. He entered the seminary of Issy, 12 May, 1824, and, in spite of the reluctance of the superiors, was ordained by Mgr de Quelen, Archbishop of Paris, 22 Sept., 1827. His first years in the ministry were spent as chaplain to a convent and at the Collège Henri IV. This work was little to his taste. Accordingly, when Mgr. Dubois, Bishop of New York, visited Paris in 1829 in search of priests for his diocese, he found a ready volunteer in the young Abbé Lacordaire. All around the Church devoted to the Master, Lacordaire left starting to be made the Revolution broke out (July, 1830). The Abbé de Lamennais, at this time at the height of his reputation as a defender of the Church, immediately offered him the post of collaborator in "L'Avenir," a newspaper intended to fight for the cause of "God and Freedom." The story of this famous journal belongs to the article Lamennais. Here it will be enough to mention that Lacordaire gladly accepted the offer, and abandoned his proposed journey to America. He and Montalembert, whom he first met at the office of "L'Avenir," were the principal contributors. Their purpose was to reconvene all State protection and assistance, and to demand religious freedom, not as a favour, but as a right. They advocated free speech and a free press, and exhorted the Catholics to avail themselves of these weapons in defense of their rights. Their religious teaching was strongly Ultra- conservative; as a result, the Lettres and the article on seven occasions was from Lacordaire's pen. He did not write on abstract subjects; his line was to take some event of the day—some insult to religion, some striking incident in the action of Catholics in other countries, particularly Ireland—and make this a topic for denunciation. Mgr de Quelen. He now decided to enter the Dominican Order, whose name of "Friars Preachers" naturally appealed to him. Meantime he preached a course of conferences at Metz in the
Lenten season of 1838, which were equally successful with those of Notre-Dame. His "Mémoire pour le Rétablissement des Frères Prêcheurs" was preliminary to his reception of the habit at the Minerva in Rome (9 April, 1839). Next year he made his vows (29 March) and returned to France. The old house of the restored order was established at Nancy in 1843; a second at Chalais in 1844; a novitiate at Flavigny in 1845; and finally a French province was erected with Lacordaire as first provincial.

Meantime, in the Advent of 1843, the conferences were held in Notre-Dame, and continued one break until 1852. At first King Louis Philippe endeavoured to prevent the resumption of the conferences, but the new archbishop, Mgr Affre, was firm, and merely required that the preacher should wear a canon's rochet and mozetta over his Dominican habit. The interest in the conferences was greater than ever. It was noted that the orator had gained in depth and brilliancy by his years of retirement. And here it will be well to describe briefly the nature of the conferences and the causes of the extraordinary interest which they aroused. The old-fashioned sermon—telem, exordium, three points, and peroration—dealt with politics and more Rubricology, but to believers. It reached its highest perfection at the hands of Bossuet, Bourdaloue, and Massillon. The clergy in the first part of the nineteenth century went on preaching as before, speaking of the same subjects, bringing forward the same arguments, using the same methods; forgetting all the while that they had to appeal not only to believers but also to infidels. It was Lacordaire's merit that he discerned the necessity of a complete reform; new subjects, new arguments, new methods must be adopted. The matter must be apologetic, and, as apologetics vary according to the nature of the enemy's assault, it must be adapted to meet the attacks of the day. With the rare insight of genius, Lacordaire began where the ordinary apologist ends. He took the Church as his starting-point, considering her as a great historical fact, and drawing from her existence, her long-continued duration, and her social and moral action the proof of her authority. Thus the first conferences in 1835 treated of the Church's constitution and her social activity. In the second course he went on to speak of the doctrines of the Church viewed in their general aspect. When he resumed the conferences in 1843 he spoke of the effect of the doctrine upon the human soul, upon the soul (humility, chastity, and other virtues), and upon society. Again, before treating of God, he took Christ for the subject of the best known of all the series (1846). From the Son he passed to the Father (1848), proving the existence of God and dealing with His work of creation. From God he descended to man and the doctrine of man's Fall and Redemption (1849-50). The coup d'état prevented the continuance of the conferences in Notre-Dame, but a further course was delivered at Toulouse in 1854, treating of life, natural and supernatural.

The material of the conferences was quite unlike that of the ordinary sermon. There was no opening text, or prayer; no firstly, secondly, thirdly; no pause between the divisions. After a short exordium, indicating the subject to be dealt with, he plunged at once in medias res, and let his subject grow upon his hearers. His voice, feeble at the beginning, gradually grew in volume until it rang through the vast vault of the cathedral, sometimes breaking out into a cry which thrilled the hardest hearts. His gestures were graceful and yet full of vigour; his dark eyes flashed out the fire that was burning in Notre-Dame. "He chased the moment, coming freely to his lips after careful preparation of the matter and the main lines of his discourse; indeed, his most brilliant passages were inspired by some movement among his audience, or some sudden emotion within himself. We can understand the state of prostration produced by such delivery, and how his strenuous efforts tended to shorten his life.

The government of Louis Philippe came to an ignominious end in Feb., 1848. In his opening conference of that year, delivered at Notre-Dame, while the revolutionists were still standing, Lacordaire welcomed the Revolution in language which was greeted with prolonged applause. Now at last he hoped to carry out his old programme of "God and Freedom"—without youtual excesses that favoured the policy of "L'Avenir". A new parliament was started under his editorship, but he wrote little in its columns. He realised that his strength lay rather in speech than in writing. In the elections he accepted a nomination for Paris, but obtained only a small number of votes. He was, however, returned for the department of Bouches-du-Rhône. He took his seat on the Extreme Left, clad though he was in his Dominican habit. A few benches below him sat his former friend and master, now his bitter foe, Lamennais. The invasion of the Assembly by the rabble convinced him that his dream of a Catholic republic was not to be; he became, and was twice elected, a Royalist, and some months later gave up the editorship of "L'Ere Nouvelle". He did his utmost to prevent the Church from becoming identified with the Empire established by Napoleon III. For this reason he refused to continue his conferences in 1852, though urged to do so by Mgr Affre. The last course of the conferences was delivered in the church of Saint-Roch in 1853. It was a sermon on the text: "Esto vir" (III Kings, ii, 2), and was an outspoken attack on the new Government. After this it was impossible for him to remain in Paris. For the rest of his life he had charge of the military chapels in the department of Tarn, where he inculcated the duties of manliness and patriotism as well as religion. Though he was devoted to his youthful pupils, he naturally felt that he was exiled and silenced. In 1861 (24 Jan.) he was called out of his obscurity to take his seat in the Academy—an honour which cast a gleam of brightness over his last days. It was at this time that he uttered the famous words: "J'espère mourir en religieux pénitent et en libéral impénitent." Towards the end of the year (21 Nov.) he passed away at Sorèze, after a long and painful illness, in his sixtieth year.

Lacordaire was of middle height, sparely but strongly built. He always objected to sit for his portrait, but one day at Sorèze he submitted. He is represented seated, and absorbed in prayer, with his hands crossed one over the other, for the Elevation bell was ringing in the church when the portrait was taken. Besides his "Eloges funèbres" (Drouot, O'Connell, and Mgr Forbin-Janson) he published: "Lettre sur le Saint-Siège"; "Considérations sur le système philosophique de M. de Lamennais"; "De la liberté d'Italie et de l'Eglise"; "La vie de S. Dominique". "La vie de la Ville Madeleine". Some of the conferences were finally printed, and contain many sublime passages, but are of little historical value. Mme Swetchine said of him: "On ne le connaîtra que par ses lettres." Eight volumes of these have already been published, including his correspondence with Mme Swetchine and Mme de la Tour de Pins, and "Lettres à des Jeunes Gens", collected and edited by his friend H. Perreyve in 1862 (tr. Derby, 1864; revised and enlarged ed. London, 1902). Amongst Lacordaire's most celebrated works are his "Conférences" (tr. vol. I only, London, 1851); "Dieu et l'homme" in "Conférences de Notre-Dame" (tr. Derby, 1855); "Lettres à l'Auteur" (tr. London, 1869); "Dieu" (tr. London, 1870).

("Œuvres du R. P. H. D. Lacordaire" (Paris, 1873); "FOSSERT, VIE DE LACORDAIRE" (Paris, 1870); "CROJAC, LE R. P. LACORDAIRE, sieur virtuose et religieux" (Paris, 1866); Tr. THE LIVING LIFE OF LACORDAIRE (9th ed., London, 1901). These two lives mutually

Jean Thodore Lacaordaire, a distinguished French entomologist, brother of the famous preacher of the same name, b. at Reccey-sur-Ouese, Cote d’Or, 1 Feb., 1801; d. at Liége, 18 July, 1870. As a boy he was very fond of natural history and especially the study of insect life. Family circumstances, however, made it necessary for him to adopt a mercantile career; he was sent to Havre, and at the age of twenty-four sailed for South America. He soon after began to devote himself to the study of zoology. Visiting South America four times between the years 1825 and 1832, he travelled on foot through extensive districts in order to study the rich insect fauna, particularly the beetles. In his essay ‘Des Morts et des Gaz’ for Intervening years were spent at Paris, where he made the acquaintance of the foremost contemporary French zoologists and devoted himself entirely to scientific studies. In 1836 he was appointed professor of zoology and comparative anatomy in the University of Liége, which he held until his death, more than thirty years later.

He was a deeply religious man, particularly in his declining years, and one of his daughters became a nun. His scientific activity was conspicuous, unselfish, and untiring, and he was honoured with membership in many learned European societies. His principal works, which he began to publish in 1834, show independent and thorough research, and a full command of the extensive literature of entomology; while his first work, ‘Introduction à l’Entomologie’ (2 vols., Paris, 1834–38), relates to the whole science of entomology, the subsequent volumes deal exclusively with beetles (Coleoptera). In 1842 was published ‘Monographie des Érotyliens’; in 1845–48 (Paris, 2 vols.), ‘Monographie des Coleoptères subpentamères de la famille des Phytophages’, published also in the ‘Mémoires de la Société Royale des Sciences de Liége’. But his most important work was the monumental ‘Nouvelles Insectes’, with the sub-title, ‘Genera de Coleoptères’ (Paris, 1854–1876, 12 tomes in 14 vols.); it contains a detailed description of all the then known genera of beetles, numbering about 6000. Although Lacaordaire devoted the last eighteen years of his life to this work, he could not finish it. The last three volumes were written by his pupil, F. Chapuis. The text of this great work is accompanied by an atlas of 134 plates.

Chapuis in the preface to Vol. X of Genera des Coleopteres (1879); Krenkel, ‘Das Christum und die Verbreitung der neueren Naturwissenschaft’ (Freiburg, 1904).

Joseph Rompel.

La Crosse, Diocese of (Crossensis), erected in 1858, included that part of the State of Wisconsin, U. S. A., lying north and west of the Wisconsin River. In 1905 the establishment of the Diocese of Superior subdivided this territory and reduced it to the Counties of Adams, Buffalo, Chippewa, Clark, Crawford, Dunn, Eau Claire, Grant, Iowa, Jackson, Juneau, La Crosse, Lafayette, Marathon, Monroe, Pepin, Pierce, Richland, Sauk, Trempealeau, Vernon, and Wood; an area of 17,299 square miles. It is supplied to Milwaukee, Duluth and other cities by the Diocese there were ministering to the scattered Catholic population. Among the twenty-two priests who had to care for twenty-three churches and about fifty stations. Besides the English and German congregations provision had also been made for Poles and Italians. Franciscan sisters and lay teachers had charge of six parish schools. The Rev. Michael Heiss, then head of St. Francis’s Seminary, Milwaukee, was elected as the first bishop, and consecrated 6 Sept., 1868. He was born at Piatkowski, Bavaria, 12 April, 1815; two years later he entered the University of Munich, where Mohler, Dobler, and Góres were professors, intending to study law, but changed his mind, took a course in theology, and was ordained at the age of twenty-two. Knowing the need of German priests in the United States, he arrived in New York 17 December, 1842, and was affiliated to the Diocese of Milwaukee. Two years later he moved to Milwaukee at the invitation of Bishop Henni, and in 1846 erected the first parish church in that city, his charge extending over an area of fifty-two miles. He opened a seminary in a private house, which was subsequently merged into the Seminary of St. Francis, of which he was president. During the twelve years of his administration in La Crosse, he built several churches, including the cathedral, and the episcopal residence. While president of St. Francis’s Seminary he published in English ‘The Four Gospels Examined and Vindicated on Catholic Principles’ and ‘The New Testament Survey’. In 1856 he took a part in the Councils of Baltimore in 1844 and 1866, and Pius IX made him a member of one of the four great commissions of bishops engaged in the preparatory work for the Vatican Council, 1869–70. On 14 March, 1860, he was appointed coadjutor with right of succession to the Archdiocese of Milwaukee, and to succeed 7 September, 1881. He died at La Crosse, 26 March, 1890.

Kilian Flasch, second bishop, was born at Retsstadt, Bavaria, 16 July, 1837. His parents took him to the United States when he was ten years old, and settled near Milwaukee. He made his academic studies at Notre Dame University, and his theological course at St. Francis’s Seminary, where he was ordained 16 September, 1859. With two brief intermissions he spent the subsequent years as professor and rector of this seminary until he was selected as the successor of Bishop Heiss and was consecrated Bishop of La Crosse, 24 August, 1881. During his administration of ten years he laboured zealously to increase the churches and the schools of the diocese, and died after a long illness, 3 August, 1891.

James Schwebach, his vicar-general, succeeded him as the third bishop of La Crosse, and was appointed 25 February, 1892. He was born at Platten, Luxemburg, 15 Aug., 1847. He made his early studies at the college of Diekirch, and in 1864 emigrated to the United States, where he completed his course at the Seminary of St. Francis, Milwaukee, and was ordained 17 July, 1870. Soon after, appointed rector of St. Mary’s Church, La Crosse, he built two schools and two churches there, under Bishops Heiss and Flasch. The latter appointed him vicar-general and administrator of the diocese.

Religious communities in the diocese.—Men: Jesuits, Dominicans, Fathers of the Holy Ghost, Missionary Fathers of the Sacred Heart, Franciscan Sisters of the Perpetual Adoration, Sisters of the Third Order of St. Dominic, Sisters of the Sorrowful Mother, Hospital Sisters of St. Francis, School Sisters of Notre Dame, Sisters of St. Dominic, Franciscan Sisters of Charity, School Sisters of St. Francis, Sisters of the Third Order of St. Francis of Assisi, Sisters of St. Benedict, Polish Sisters of St. Joseph, Sisters of the Society of the Divine Saviour. Priests, 177 (26 religious); churches with resident priests, 126; missions with churches, 86; stations, 6; chapels, 24; college, 1; students, 223; academies for girls, 2; pupils, 292; schools, 10; general hospitals, 2; general hospitals, 2, 4874, girls, 5044; orphan asylums, 2; inmates, 180; total young people under Catholic care, 10,468; hospitals, 5; Catholic population, 112,400.

Official Catholic Directory, 1890–1910; Catholic Family Almanac (New York, 1892); Benevier’s Almanac (New York, 1888, 1892, 1895).
LACTANTIUS

736

LADERCHI

LACTANTIUS, LUCIUS CECELIIUS FIRMIANUS, a Christian apostle of the fourth century. The name Firmianus has misled some authors into believing that he was an Italian from Fermo, whereas he was an African by birth and a pupil of Arnobius who taught at Sicea Veneria. An inscription found at Cirta in Numidia, which mentions a certain L. Cecilius Firmianus, has led to the conclusion in some quarters that his father belonged to that place (Harnack, "Chronologie d. alt.-chr. Lit.", II, 416). Lactantius was born a pagan and in his early life taught rhetoric in his native place. At the request of Emperor Diocletian he became an official professor of rhetoric in Nicomedia. One of his poems (Hodoeporicum) is an account of his journey from Africa to his new home. It is probable that his conversion to Christianity did not take place until after his removal to Nicomedia. It seems clear, however, that he could not retain his position as public teacher after the publication of Diocletian's first edict against Christians (24 Feb., 303). After his dismissal it was not easy to find pupils in that Greek city who would patronize a teacher of Latin, and he was in consequence reduced to such poverty that he at times lacked the necessaries of life (St. Jerome, "Chron.", ad. ann. Abr. 2335). In those circumstances he attempted to make a living by writing. The persecution compelled him to leave Nicomedia, and from the outbreak of hostilities until perhaps 311 or 313 he had to find a home elsewhere. The friendship of the Emperor Constantine raised him from penury, and though very old (extrema senectute) he was appointed tutor in Latin to the emperor's son Crispus. This new appointment compelled him to follow his charge to Trier where he spent the remainder of his life. It seems very probable that his transfer to Trier did not take place until 317, when Crispus was made Caesar and sent to that city. Crispus was put to death in 326, but when Lactantius died and in what circumstances is not known. Like so many of the early Christian authors, Lactantius in all his works betrays his dependence on classical models, and, true to the requirements of his profession, he is polished rather than profound. He well merits the designation of the "Christian Cicero" bestowed on him by the humanists, for he exhibits many of the characteristics as well as the graces of his master. Among the works from his pen still extant, the earliest is the "De Opificio Dei", written in 303 or 304 during the Diocletian persecution, and dedicated to a former pupil, a rich Christian official named Demetrianus. The apologetic principles underlying all the works of Lactantius are well set forth in this treatise, which may be considered as an introduction to his great work "The Divine Institutions" (Divinum Institutionum Libri VII), written between 304 and 311. This, the most important of the writings of Lactantius, is systematic as well as apologetic, and was intended to point out the faults of pagan belief and the reasonableness and truth of Christianity. It was the first attempt at a systematic exposition of Christian theology in Latin, and though aimed at certain pamphleteers who were aiding the persecutors by literary assaults on the Church, the work was planned on a scale sufficiently broad to silence all opponents. The strength and the weakness of Lactantius are nowhere better shown than in this work. The beauty of the style, the choice and aptness of the terminology, cannot hide the author's lack of grasp on Christian principles and his almost utter ignorance of Scripture. The "dualestic and panecyral" passages which have been borrowed ultimately from his pagan pen, but from that of some one who lived close to his time, probably a rhetorician of Trier. The "Epitome Divinarum Institutionum", made by Lactantius himself at the request of a friend named Pentadus, is much more than a mere abbreviation, rather a more summary treatment of the subject dealt with in the older work. Another treatise, "De Ira Dei", directed against the Stoics and Epicureans, is supplementary to the "Divine Institutions" (II, xvii, 5) and deals with anthropomorphism in its true sense. Knowing the bent of Lactantius's mind it is not surprising that the only historical work we have from his pen, the "De Mortibus Persecutorum", should have an apologetic character. In this work we have an account of the frightful deaths of the principal persecutors of the Christians, Nero, Domitian, Decius, Vale- rian, Aurelian, and the emperor who gave him the idea himself, Diocletian, Maximian, Galerius, Maximus. This work, notwithstanding the manifest bias of the author, is of prime importance as a source for the last and greatest of the persecutions, though, somewhat strangely, the style is not so perfect as might be expected. The full text is found only in one manuscript, which bears the title: "Lucii Cecelii liber ad Donatum Confessorem de Mortibus Persecutorum". Many attempts have been made to show that the work was not written by Lactantius; however, the coincidences of name, both of author and recipient, the similarities in style and train of thought which the works of Lactantius, are too striking to admit of such a possibility. The chronological difficulties which Brandt thought he discovered are shown by Harnack to have no weight (Chronologie, II, 423). Of the poems attributed to Lactantius only one, besides the "Hodoeporicum", is genuine, viz. the "De Ave Phoeni- cri", an account, in eighty-five distichs, of the fabu- lous eastern bird which is reborn from its own ashes every thousand years. The poem "De Resurrectione" was written by Venantius Fortunatus, and the "De Passione Domini" is by a medieval huntsman. St. Augustine (De Vir. Ill. c. Ixx) mentions two other works, "Symposium" and "Grammaticus", which have not been preserved.

LACY, RICHARD. See MIDDLESBROUGH, DIACREE OF.

LADERCHI, JAMES, an Italian Oratorian and ecclesiastical historian, b. about 1678, at Faenza near Ravenna; d. 25 April, 1738, at Rome. He is chiefly known for his continuation of the "Annales" of Baro- nius and Raynalduz, which he brought down from the year 1566 to 1571. His work, though of some usefulness, is not sufficiently critical and is encumbered with numerous unimportant documents. It appeared at Rome (1728-1737), and extends from volume XXXV to volume XXXVII in the latest edition of Baroni (Bar-le-Duc, 1864-83). Laderchi was also the author of several other historical works, two of which in- cluded himself in the establishment of the "Life of St. Peter Damian" (Vita Sancti Petri Damiani, Rome, 1702) was mercilessly but ex- cessively criticized in the anonymous work entitled: "Sejani et Rufini dialogus de Laderchiana historia S. Petri Damiani" (Paris, 1705). When he published the second edition of the "Life of St. Peter Damian and companions" (Acta passionis SS. Crescenti et soci- orum martyrdom, Florence, 1707), the Servite G. Ca- passi attacked their authenticity and trustworthiness in a letter to the Roman scholar Fontenot. The lat- ter fell into the hands of Laderchi, who published it with a refutation. This book was translated from Latin into German and published under the title "Nuge Laderchiana" (Genoa, 1709). The ecclesiastical authorities seem to have put an end to the controversy; both works were placed on the Index (22 June, 1712). These contro
verses probably occasioned the composition of "La Critica d’oggi" by Laderchi (Rome, 1726). He was also the author of the following works: "De Basilicis SS. Martyrum Petri et Marcellini dissertatio historica" (Rome, 1705); "Acta S. Caecilii et transliterata basilica illustrata" (Rome, 1722); "Acta SS. Christi mensis Ianuarie, in catachrismum, triarcharum et prophetarum, confessorum, cultus perpetuos in Ecclesia catholica assertus et illustratus" (Rome, 1730).

N. A. WEBER.

Ladislaus, Saint, King of Hungary, b. 1040; d. at Neutra, 29 July, 1095; one of Hungary’s national Christian heroes. He was the son of Béla I; the nobles, after the death of Geisa I, passed over to Solomon, son of Andrew I, and chose Ladislaus to be their king in 1077. It is true that he made peace with Solomon, when the latter gave up all claims to the throne of Hungary; however, later on he rebelled against Ladislaus, who took him prisoner and held him in the fortress of Visegrád. On the occasion of the canonization of Stephen I, Ladislaus gave Solomon his freedom, but in 1086 Solomon, with the aid of the Hungarian Cumans, rebelled against Ladislaus a second time; the latter, however, vanquished them, and in 1089 gained another victory over the Turkish Cumans. In 1091 Ladislaus marched into Croatia, at the request of his sister, the widowed Queen Helena, and took possession of the kingdom for the crown of Hungary, where in 1092 he founded the Bishopric of Agram (Zagreb). In the same year (1092), he also founded the Bishopric of Grosswardein (Nagy-Várás), in Hungary, which, however, some trace back to Stephen I. Ladislaus governed the religious and civil affairs of his kingdom with a firm hand, particularly at the great assembly of the Imperial States at Szaboš, that might almost be called a synod. He tried vigorously to suppress the remaining heathen customs. He was buried in the cathedral of Grosswardein. He still lives in the sagas and poems of his people as a chivalrous king. In 1192 he was canonized by Celestine III.

Laennec, René-Théophile-Hyacinthe, d. at Quimper, in Brittany, France, 17 February, 1751; d. at Kerlouan, 13 August, 1826, a French physician, discoverer of auscultation, and father of our modern knowledge of pulmonary diseases. He was the son of a lawyer of the same name, and he was able to recall those of his better known compatriot De Forges Maillard. His mother died when he was six, and the boy went to live with his grand-uncle the Abbé Laennec. At the age of twelve he proceeded to Nantes where his uncle, Dr. Laennec, was professing in the medical faculty at the time. He was destined for the seminary of the university. He became a pupil of Corviant, Napoleon’s great physician, who had reintroduced into medicine Auenbrugger’s neglected method of diagnosis by percussion of the chest. Laennec followed up the idea, so readily suggested by this, of listening to the sounds produced within the chest and, after twelve years of careful study and observation, laid the foundation of the modern knowledge of diseases of the chest. He also invented the stethoscope, the first of the instruments being suggested by his desire to save a young woman’s modesty from the shock of having him listen directly to her chest. Roger sums up what Laennec had thus accomplished when he says that Laennec’s ear opened to man a new world in medical science (Roger, "La Medecine à l’affranchie"). Laennec published his book on the subject in 1819, with the modest motto in Greek “the most important part of an art is to be able to observe properly.” Prof. Benjamin Ward Richardson declared (Disciples of Aesculapius) that “true student of medicine reads Laennec’s treatise on mediate auscultation and the use of the stethoscope once in two years at least as long as he is in practice. It ranks with the original work of Vesalius, Harvey and Hippocrates.” Practically nothing of importance has been added to our knowledge of auscultation since Laennec wrote his book. Besides this he made very careful studies in pathology, especially on diseases of the liver. He was the first to study hydatides exhaustively, and it is to him we owe the name cirrhosis of the liver. Alcoholic cirrhosis is often spoken of as Laennec’s cirrhosis. He threw much light on sclerotic conditions generally. Unfortunately while studying tuberculous over assiduously at a time when its contagion was scarcely suspected, he contracted the disease and died at the early age of forty-five.

Laennec was noted for his kindness and was beloved by his colleagues and his students. He showed himself especially obliging towards his English-speaking pupils. As might be expected of a student from his BRETON heritage and training, he was intensely religious and was a devout Catholic all his life. A characteristic story illustrates this: On his way to Paris with his wife he was thrown from his carriage. When the vehicle was righted and they had once more been seated he said to her: "Well, we were at the third decade;" then they went on with the rosary they had been reciting just before the accident. His charity to the poor became proverbial and his principal solicitude towards the end of his life was to keep as far as possible from giving trouble to others. Dr. Austin Flint in his biography of Laennec said “there are few men of his age in whom is a striking instance among others disproving the vulgar error that the pursuit of science is unfavourable to religious faith.” He was one of the greatest clinical students of medicine of the nineteenth century. His principal work is "De l’auscultation médiate," Paris, 1819.

Letare Medal. See HOLY CROSS, Congregation of.

Letare Sunday, the fourth, or middle, Sunday of Lent, so called from the first words of the Introit at Mass, “Letare Jerusalem”—“Rejoice, O Jerusalem.” During the first six or seven centuries the season of Lent commenced on the Sunday after the Epiphany and was always celebrated with religious observance and services, and thus comprised only thirty-six fasting days. To these were afterwards added the four days preceding the first Sunday, in order to make up the forty days’ fast, and one of the earliest liturgical notices of these extra days occurs in the special Gospels assigned to them at the Westminster Sermons on the Sunday before Lent; the two Sundays after the first were formerly observed on the last Sunday of the middle of Lent, and it was at one time observed as such, but afterwards the special signs of joy per-
the Esquiline, on his way to his lectures where many eager hearers awaited him. He was a very conscientious professor, especially learned in Roman antiquities but exclusively a Latinist. He had declined to study any language but Latin. He died a Christian death. Alexander VI wished his obsequies at the church of Aracoeli to be magnificent. More than forty bishops attended. He was buried at San Salvatore in Lauro.

In the last period of his life, Pomponius Leto wrote short antiquarian treatises ("De magistratibus, aedificiis et legibus Romanorum"; "De romane urbis antiquitate"; "Compendium historiarum ab intestitu Gordiani usque ad Justinum III."). He produced an edition and commentary on the whole of Virgil, under the name of Julius Sabinus or Pomponius Sabinus (Rome, 1487–1490). He owned one of the most precious manuscripts of the poet, the "Medicus". Besides this, he edited the first edition of Quintus Curtius (about 1475), of Virgil's "Divinae M. (Rome, 1471), of Nonius Marcellus (Rome, about 1470). A little later he published the letters of the younger Pliny (Rome, 1490). We also owe to him the preservation of a part of the work of Festus. His MSS., which were first in the library of Fulvio Orsino and later at the Vatican, show his wide knowledge, his conscientious collation of authors, his art in reviving classical antiquity in the very land of pagan past. He had collected in his home on the Esquiline sculptures and inscriptions. He stands as one of the best representatives of Italian Humanism, uniting great love of the ancients and knowledge with enthusiasm to a purity of morals rare in such surroundings.

Leto, Pomponius, humanist, b. in Calabria in 1425, d. at Rome in 1497. He was a bastard of the House of the Sanseverino of Naples, Prince of Scafro, but owing to his great admiration for antiquity and the Roman Republic he would not recognize them as connexions. When very young he went to Rome and became a pupil of Valla. His brilliant capacities won him admiration and success. He wished to live the life of the ancients. His vineyard on the Quirinal was cultivated in accordance with the precepts of Varro and of Columella, and he was himself regarded as a second Cato. On holidays he went fishing or caught birds in his time-tweezers; sometimes he would simply spend the day in the open air, refreshing himself at a spring among the trees of the Tiber. One of the important and first known complete MSS. of Plautus, that of Cardinal Orsini (now Vaticanus 3870), had been brought to Rome in the year 1428 or 1429. It was suggested that the plays it contained should be performed in the palaces of the prelates. Leto became stage director of the performances. Finally, he and a few kindred souls, Platina, the future librarian of the Vatican, Sabellius, afterwards prefect of the Library of San Marco of Venice, founded a semi-pagan academy. Its members assumed Latin names and celebrated every year the festival of the Pallas—anniversary of the foundation of Rome. They also met to consecrate a new member. A prelate consecrated Mass, Leto delivered the eulogy. Latin recitations followed and a banquet closed every meeting. At other times, the members gave Latin farces much like the Atellane. But Paul II, a pope who did not favour the Humanists, occupied the Chair of Peter. Leto was looked upon as a seer of Christianity and conspirator. Venice delivered him into the hands of the pope. Confined in the Castle of Sant' Angelo in 1468, he with Platina and others was tortured. However, he defended himself and reminded them that he had maintained the immortality of the soul, a belief often discussed by the Humanists. The pontificate of Sixtus IV (1471) Leto was released and the academy allowed to continue its meetings. He lectured in the Roman University. He was often seen at daybreak, descending, with lantern in hand, from his home on
Lafitau, JOSEPH-FRANÇOIS, Jesuit missionary and writer, b. at Bordeaux, France, 1 Jan., 1651; d. there, 1746. He entered the Society in 1696, and the general, Tamburini, yielding to his entreaties, sent him to China. Appointed to the mission of Saint-Louis (Caughnawaga), he made a thorough study of Iroquois character and usages, as a preparation to his great work "Mémoires des Sauvages américains comprise aux mœurs des premiers temps," published in 1724. It was then that he discovered ginseng, a root highly prized as a panacea in China and Tartary, one ounce selling for as high as three ounces of silver. This discovery created an excitement comparable to that caused later by the finding of gold in California and Australia; but the exportation of the root, after promising immense profits to Canadian traders, rapidly decreased, owing to overproduction and inferiority of quality due to hasty and artificial desiccation. Lafitaus treatise on ginseng (1718) drew public attention to this apparent source of prosperity. In 1717, Lafitau returned to France in the interests of the mission, chiefly to obtain authorization from the Iroquois settlers at its present site, which was preferable to the former on account of its greater fertility. He likewise pleaded for the repression of the liquor traffic. In spite of his wish to return to Canada, where his knowledge of Indian languages and customs rendered him so valuable that Father Jules Gareau wished to have him recalled, he was retained in France, and there his later years were spent in writing several works, among which, besides those already mentioned, figures his "Histoire des découvertes et des conquêtes des Portugais dans le Nouveau-Monde" (1733). After Charlevoix, Lafitaus is the most remarkable historian and naturalist ever sent to Canada by the Society of Jesus.

LIONEL LINDSAY.

Laflace, LOUIS-FRANÇOIS RICHER, French-Canadian bishop, b. 4 Sept., 1818, at Ste-Anne de la Pérade, Province of Quebec; d. 14 July, 1888. He studied the classics and theology at Nicolet College. Having offered his services to the pioneer Bishop Provencher of Red River, he was ordained in 1844, and travelled 750 leagues by canoe to reach St. Boniface. In 1846 he left with Father Taché for the mission of La Crosse island, 300 leagues distant. Besides the Sauteux language, he mastered those of the Crees and Montagnais prevalent in the North-West, and was the first Father to use the later text form. In 1849 Pius IX preconized him Bishop of Arath in partibus infidelium. Five years of illness and suffering leaving him an infirmity in one of his limbs which he bore to the end of his life, he begged to be released from the burden of the episcopate and have Father Taché succeed him in the Bulls of nomination. In 1851 he directed the most incredible defence of 80 half-breeds against 2000 Sioux near Turtle Mountain, North Dakota. After a siege of two days (13 and 14 July), the assualants spied the missionary in surplice and stole, and withdrew, convinced that the Great Spirit protected the half-breeds. In 1856 he retired to St. Patrice, where he engaged in astronomy, and philosophy at Nicolet College, of which he was appointed president in 1859. In 1886 Bishop Cook of Three Rivers chose him for coadjutor, and in 1870, when he might seem vulnerable. Besides these works should be mentioned: "Mémoires de la Cour de France pour les années 1688, 1689" (Amsterdam, 1731).

HAUMONVILLE, Les grands événements français (Paris, 1891); AUBRY, Les mémoires d'histoire et de littérature d'un pèlerin d'Amérique (Paris, 1882); SAINTE-BEUVE, Portrait de femmes célèbres (Paris, 1886).

PIERRE MARIE.

La Fontaine, JEAN DE, French poet, b. at Chateau-Thierry, 8 July, 1621; d. at Paris, 13 April, 1695. He was the eldest son of Charles de La Fontaine, a deputy-ranger, and Françoise Fidoux. After he had finished his studies at the college of his native town, he entered the Oratory (2 April, 1641) and was sent to the Seminary of Saint-Magloire. At the end of a novitiate of eighteen months, he realized that he was not fit for the religious life and returned to the world. He studied law and was admitted to the bar, a fact now proved by the title given him in several of his official deeds. In 1647 he married Marie Héricart, who gave him a son in 1653. Their married life proved unhappy, and they agreed to live apart (1658). From his childhood he had shown a strong fondness for poetry. When a boy he used to write verses for his own pleasure. The first work he published was an imitation of Terence's "Ennuceus" (1654). Two years later he was introduced to Fouquet, who granted him a pension with the understanding that the poet should send every month, as a receipt for the financial, some little piece of poetry —a verse or ocarine—. For six years he divided his time between Paris and Chateau-Thierry, giving six months to his official functions and six months to the pleasures of a courtier's life. In 1664 he was sworn in as a gentleman-in-waiting to the Dowager Duchess of Orleans, and was installed in the Luxembourg. It was at this time that he made the acquaintance of Molière, Racine, Boileau, and Chapel. Three series of "Contes", the first six books of his "Fables", and "Peyrub", a novel, were published from 1665 to 1671. The poet was in full possession of his genius and had acquired a great reputation. In 1672, having squandered his fortune, he sold his park and settled in Paris. For the remainder of his life he had to depend on the generosity of his patrons. He
first lived at Madame de la Sablière's, in the Rue Saint-Honoré (1672–93), where he met a most brilliant society and became the intimate friend of men like Turenne, the Prince of Conti, Condé, La Rochefoucauld, and distinguished ladies like Mme de Sévigné, Mme de La Fayette, Mme de Thiers. In 1674 he published a new series of "Contes", which were seized by the lieutenant of police, and, in 1678, five books of "Fables", that Mme de Sévigné pronounced "divine". He was elected to the French Academy, but his election was suspended by Louis XIV, on account of the scandal of the "Contes", and finally approved only in the following year, after the poet had publicly atoned for his licentious works in a "Ballade" published in the "Mercure" (January, 1684), and had promised "to be good". When Mme de la Fayette died, in January, 1685, he was sheltered by M. d'Hervart, maître des requêtes in the Parlement of Paris. A few months before, having been taken dangerously ill, he had begun to come back to the faith of his youth. In spite of his bad conduct, he had been indifferent rather than incredulous. The last two years of his life were most edifying. When he died, they put him into his shroud found him wearing a hair-cloth. He was buried in the cemetery of the Holy Innocents, in Paris. On account of his vivid and picturesque descriptions of the manners of animals, his wit, and his admirable naïveté, as well as the concise and firm composition of his little poems, he will forever be regarded as the greatest of French fabulists.

LOUIS N. DELAMARRE.

Laforêt, Nicolas-Joseph, Belgian philosopher and theologian, born at Graide, 23 January, 1823; died at Louvain, 26 January, 1872. After the regular theological course at the seminary of Namur, he entered the University of Louvain, where he applied himself especially to the study of Oriental languages, Holy Scripture, and philosophy. In 1848, he was appointed to the chair of moral philosophy at the university, and the same year, received the doctorate in theology. Two years later he became president of the Collège du Pape. Upon the death of Mgr de Ram, the bishops of Belgium chose Laforêt to succeed him in the regency of the university. One of his main tasks was the foundation and organization of the schools of civil engineering, industry, and mines. He also established a new literary and pedagogical school, the Justus Lipsius Institute. Moreover his example and advice were a constant encouragement for both professors and students. Laforêt was a prebendary Apostolic ad instar participantium, an honorary canon of the cathedral of Namur, an officer of the Order of Leopold, a commander of the Order of Christ, a member of the Royal Academy of Belgium, and of the Roman Academy of the Catholic Religion. Besides a great number of articles, especially in the "Revue catholique", Laforêt's main works are: "Dissertatio historico-dogmatica de methodo theologico, aevae de auctoritate Ecclesiae catholicæ sanitum regulæ fidei christianæ" (Louvain, 1849); "Études sur la civilisation européenne considérée dans ses rapports avec le christianisme" (Brussels, 1850); "La vie et les travaux d'Arnold Tite" (Brussels, 1853); "Principes philosophiques de la morale" (Louvain, 1852; 2nd ed., under the title "Philosophie morale", Louvain, 1855); "Les dogmes catholiques exposés, prouvés et vengés des attaques de l'hérésie et de l'incéritulité" (Brussels, 1854); "Lettres de mon oncle Louis, d.s.d., and new ed., New York, 1909; Germ. tr. by Vossen, "Der moderne Unglaube und seine Hauptursachen", Mains, 1873); "Histoire de la philosophie" (Brussels, 1866–67), which includes only the history of ancient philosophy, the author dying before he completed the work; "Les martyrs de Gorem" (Louvain, 1867; Germ. tr. Münster, 1867); "Le syllabus et les plaies de la société moderne", a posthumous work, including the life of the like Mme de Sévigné, Mme de La Fayette, Mme de Thiers. In 1674 he published a new series of "Contes", which were seized by the lieutenant of police, and, in 1678, five books of "Fables", that Mme de Sévigné pronounced "divine". He was elected to the French Academy, but his election was suspended by Louis XIV, on account of the scandal of the "Contes", and eventually approved only in the following year, after the poet had publicly atoned for his licentious works in a "Ballade" published in the "Mercure" (January, 1684), and had promised "to be good". When Mme de la Fayette died, in January, 1685, he was sheltered by M. d'Hervart, maître des requêtes in the Parlement of Paris. A few months before, having been taken dangerously ill, he had begun to come back to the faith of his youth. In spite of his bad conduct, he had been indifferent rather than incredulous. The last two years of his life were most edifying. When he died, they put him into his shroud found him wearing a hair-cloth. He was buried in the cemetery of the Holy Innocents, in Paris. On account of his vivid and picturesque descriptions of the manners of animals, his wit, and his admirable naïveté, as well as the concise and firm composition of his little poems, he will forever be regarded as the greatest of French fabulists.

LOUIS N. DELAMARRE.

Laforêt, Nicolas-Joseph, Belgian philosopher and theologian, born at Graide, 23 January, 1823; died at Louvain, 26 January, 1872. After the regular theological course at the seminary of Namur, he entered the University of Louvain, where he applied himself especially to the study of Oriental languages, Holy Scripture, and philosophy. In 1848, he was appointed to the chair of moral philosophy at the university, and the same year, received the doctorate in theology. Two years later he became president of the Collège du Pape. Upon the death of Mgr de Ram, the bishops of Belgium chose Laforêt to succeed him in the regency of the university. One of his main tasks was the foundation and organization of the schools of civil engineering, industry, and mines. He also established a new literary and pedagogical school, the Justus Lipsius Institute. Moreover his example and advice were a constant encouragement for both professors and students. Laforêt was a prebendary Apostolic ad instar participantium, an honorary canon of the cathedral of Namur, an officer of the Order of Leopold, a commander of the Order of Christ, a member of the Royal Academy of Belgium, and of the Roman Academy of the Catholic Religion. Besides a great number of articles, especially in the "Revue catholique", Laforêt’s main works are: "Dissertatio historico-dogmatica de methodo theologico, aevae de auctoritate Ecclesiae catholicæ sanctitum regulæ fidei christianæ" (Louvain, 1849); "Études sur la civilisation européenne considérée dans ses rapports avec le christianisme" (Brussels, 1850); "La vie et les travaux d’Arnold Tite" (Brussels, 1853); "Principes philosophiques de la morale" (Louvain, 1852; 2nd ed., under the title "Philosophie morale", Louvain, 1855); "Les dogmes catholiques exposés, prouvés et vengés des attaques de l’hérésie et de l’incéritulité" (Brussels, 1854); "Lettres de mon oncle Louis, d.s.d., and new ed., New York, 1909; Germ. tr. by Vossen, "Der moderne Unglaube und seine Hauptursachen", Mains, 1873); "Histoire de la philosophie" (Brussels, 1866–67), which includes only the history
work, however, and the one by which he is best known, is his "Historia general de España", which he published in Madrid (1830-1839, 30 vols.). A second edition (15 vols.) was published in 1874-1875. Among his other works may be mentioned his "Teatro social del siglo XIX" (1846), dealing with the manners and customs of the day; "Viaje aerostático del Fray Gerundio y Tirabucle". The latter is divided into two parts, the first being a review of aerial navigation, and the second, a description of the political situation in Europe. The important events of 1848 caused him to write his "Revista Europea" which he published as a periodical for about one year. His works are all written in an easy, flowing, popular style.

VENTURA FUENTES.

**Lagana, a titular see in Galatia Prima. The town is mentioned by Ptolemy, V, 1, 14, and in several ancient geographical documents, often with an altered name and with no historical information. It received the name of Anastasiopolis in the 5th century, of Anastasius I (491-518), and is very probably to be identified with the actual Bey-Bazar, chief town of a casa of the vilayet of Angora, with 2500 Musulman inhabitants. Lagana, or Anastasiopolis, had an episcopal see, suffragan of Anchialus, and mentioned by the "Notitia Episcopatarum" up to the twelfth and thirteenth centuries. Lequien (Oriens Christi, I, 485-88) wrongly took these names as indicating two distinct sees, and his list of bishops is very incorrect. It must be revised as follows: Euphrasius, who attended the Council of Nicaea, 325; Theodotus, end of the sixth century; Timothy, his successor; St. Theodor the sycoce, c. 22 April, 613; Genesius, present at the Councils of Constantinople, 680 and 692; Theophilius, at Nicaea, 787; Marianus, at Constantinople, 879.

S. PÉTRIDÉS.

**Lagrené, Pierre, a missionary in New France, b. at Paris, 12 Nov. (al. 28 Oct.), 1658; d. at Quebec in 1726. He was of a noble family. In 1674-1775, he studied philosophy at La Flèche (1679-81), and after teaching some time, was ordained priest, and in 1694 was sent to the Canada mission. After a short stay at Lorette, spent in the study of the Huron language, he was stationed (1697-1701) at Sault St. Louis with the Iroquois, then returned to Lorette for a year. In 1704 he was back at Sault St. Louis, where he remained until transferred to Montreal in 1707, of which residence he was named superior in 1716. This position he still occupied in 1720. During the last eleven years of his stay in Montreal, besides his spiritual ministrations to the transient bands of Indians, and the ordinary ministry of the Church, he was director of the Montreal Congrégation des Hommes, then in its infancy. This sodality, affiliated to the Roman, 3 May, 1693, by the General of the Society of Jesus, under the title of the Assumption of Our Lady, passed into the hands of the priests of St-Sulpice, when the last Jesuit at Montreal, Father Bernard Well, died in 1791. To Father Lagrené it owes in great part its admirable organisation, which has enabled it to resist to the present the test of time. On 10 August, 1710, Lagrené had the satisfaction of seeing the completion of the church (23 Oct.) was completed 24 May, 1709. Among his works are the following: "Essai sur l'héroïsme", followed by a second volume, "Héroïdes et Poésies fugitives" (Paris, 1762). In the following year, his tragedy "Warwick" met with a failure. He became extremely acquainted with Voltaire, whose "son" he professed to be, and whom he imitated so closely that he was nicknamed "the monkey of Voltaire". A few other tragedies—"Timoléon" (1784), "Pharamond" (1765), and "Gustave Wasse" (1768)—were a complete failure. In 1768 he entered the "Bibliothèque" then a famous magazine, and contributed some remarkable articles. His dramas, "Mélanie ou la réligieuse" (1770), a violent attack upon the religious vows, the representation of which was forbidden by the censors, was enthusiastically received by the public and widely read, although it is the most tedious book that has ever been written. Three years in succession he won the prize in the competition instituted by the French Academy, with his "Éloge de Henri IV" (1770), "Éloge de Fénélon" (1771), and "Éloge de Racine" (1772) respectively. In 1776 he was elected to the Academy. He then once more attempted to work for the stage and force the admiration of the public, but failed anew. His tragedies, "Menzicoff" (1778), "Les Barmécides" (1778), "Jeanne de Naples" (1781), "Les Brames" (1783), "Coriolan" (1794), and "Virginie" (1796), were received worse than the others; or was a complete failure. In 1785 he was made professor of literature in the Lyceée, a school recently established in Paris by Plâtre du Rozier. The lectures he gave in that institution were published in eighteen volumes (Paris, 1799-1808) under the title of "Lycée, ou Cours de littérature". To this work, written in a style sufficiently clear and eloquent, is now antiquated. When the French Revolution broke out, he welcomed it with enthusiasm until he was sent to prison (1794). Once set free, he renounced his former ideas and became a zealous Catholic. His last works bear the stamp of his new-found faith. Among them may be mentioned: "De la guerre déclarée par nos derniers tyrans, du Raisson, à la Morale, aux Lettres et aux Arts" (Paris, 1796); an epic in six books, "Le Triomphe de la Religion, ou le Roi Martyr", published after his death; "La prophétie de Casotte", which was regarded by Sainte-Beuve as a masterpiece.

**Peignot, Recherches historiques, bibliographiques et littéraires sur la vie et les ouvrages de La Harpe (Paris, 1830); Sainte-Beuve, Coursées du Loua, VI, 379; Larousse de la langue et de la littérature française, VI (Paris, 1894).**

LOUIS N. DELAMARRE.

**La Haye, Jean de, Jesuit Biblical scholar, b. at Bauffe, Hainaut, 26 Sept., 1540; d. at Douai, 14 Jan., 1614. The Jesuit catalogue of admission makes Douai his birthplace. The Belgian poet-historian, Philippe Brasseur, devotes five distichs to Father de La Haye in "Sydera illustrium Hannoniae Scriptorum" (p. 135), and says the great scholar was born at Bauffe,
and made his early studies at Chèvres near by. De La Haye entered the novitiate of the Society of Jesus on 13 Feb., 1655. After the usual training in the spiritual life, the classics, philosophy, and theology, he entered upon his life-work, and taught philosophy and Sacred Scripture at Louvain and Douai. 'The works of de La Haye that made his reputation as a Biblical scholar are the Gospel harmony and commentary, "Evangelistarum Quaternio" (Douai, 1607), is a harmony of the four Gospel narratives; the words of each Evangelist are retained and set in what the author deemed to be the historical order of the life of Christ. 'Triumphus Veritatis Ordinarii Evangelii Quadrigata Instructum in Paulum et Petrum S. I. Epistulam' (two vols., Douai, 1609) is a Gospel commentary quaintly entitled "the triumph of truth borne in upon the four-horsed chariot of the Gospel-hymn and backed up by the army of the Fathers." The array of citations from the Fathers is a veritable and a redoubtable array, which makes it regrettable that this rare old book has not been reissued. "Apparatus Evangelicorum" (Douai, 1611) gives a scientific treatment of the most questions in regard to the Four Gospels. Huster, Nomenclator; SommervogeL, Bibl. de l'ev. de, J., IV (Paris, 1883).

La Haye, Jean de, Franciscan Biblical scholar, b. at Paris, 20 March, 1593; d. there 15 Oct., 1661. He passed his boyhood in Spain and received the Franciscan habit in the province of St. Gabriel of the Alcantarine Reform. He taught philosophy and theology, and distinguished himself as pulpit orator. Being called to France in 1620, he was assigned important offices both in the order and at the Court of Louis XlII. De La Haye is the author or editor of some forty folio volumes, besides several unpublished manuscripts. He edited the works of St. Bernardine of Siena, and the writings of St. Francis and St. Anthony of Padua, but his project of bringing out all important works by Franciscan authors in a "Bibliotheca Ordinis Minorum" was not realized. Designed principally for the use of preachers are his commentaries "In Genesim, sive Arbor vitae concionatorum," 4 vols.; "In Exodum, vel Concionatorum virga, percussiones pecna
tores," 3 vols.; "In Apocalypsim," 3 vols. We have here his two most important works of monumental importance, namely, the "Biblia Magna," 5 vols. (Paris, 1643) and the "Biblia Maxima," 19 vols. (Paris, 1660). The text of the Vulgate forms the basis of the two. In the former the author quotes verbatim, after every chapter, the commentaries of Gagneau, Estius, Sez and Tironius, but whereas in the latter he appends to each extract the various readings of the versions, a paragraph in which the harmony of these readings and the literal meaning of the text are briefly discussed, and (3) annotations drawn from the commentators above cited, but headed, in this case, by Nicolaus Lyranus, O.F.M. The methods followed by the author have been pronounced excellent, and the wonderful assiduity and toil to which the twenty-four volumes bear witness have been the object of undivided praise; yet it has been rightly observed that the prolegomena and his own interpretations of the text are lacking in judgment and solidity. Withal, the "Biblia Maxima," and even more so the "Biblia Magna," will continue to be of invaluable service to the student of exegesis.

Wadding, Scriptores (Rome, 1908), s. v.; SharaLea, Supplem
ta, s. v.; Joanne, s. v.; Januarius, s. v.; Alhaye; Jeiler, ibid., s. v.; Huster, Nomenclator.

La Hire, Philippe de, mathematician, astronomer, physicist, naturalist, and painter, b. in Paris, 18 March, 1605; d. 1718. As Fontenelle said, an academy in himself. His father, Laurent de La Hire (1606-1650), was a distinguished artist. Philippe first studied painting in Rome, where he had gone for his health in 1660, but on his return to Paris, soon devoted himself to the classics and to science. He showed particular aptitude for mathematics, in which subject he was successively the pupil and associate in original investigation of Desargues. In 1678, he was made a member of the Academy of Sciences, needed encouragement in connexion with the construction of a map for the Government, he made extended observations in Brittany, Guienne, Calais, Dunkirk, and Provence. In 1683, he continued the principal meridian north from Paris, Cassini at the same time continuing it south, and, in 1732, Stiparini, in 1791, by the use of the pendulum, made important observations, which led to the phenomena of the Earth's rotation in connexion with the construction of a map for the Government. His attainments won him professorships both at the Collège de France, in 1682, and at the Academy of Architecture. Two of his sons rose to distinction, Gabriel-Phlippe (1677-1719), in mathematics, and Jean-Nicolas (1685-1727), in botany. Industry, unselfishness, and piety were noteworthy traits of his character.

The chief contributions of La Hire were in the department of pure geometry. Although familiar with the analytic method of Descartes, which he followed in many of his later work, important works were developed in the method of the ancients. He continued the work of Desargues and of Pascal and introduced into geometry, chiefly by a new method of generating cones in a plane, several conceptions related to those of recent times. In his exhaustive work on conics, published in 1685, not only simplified and improved the demonstrations of many well-known theorems, but he also established several new ones, particularly some concerning the theory of poles and polars, a subject not fully developed until the nineteenth century. In this work appears the first time the term "La Hire" of La Hire which were, for the most part, published in the "Mémoires" of the Academy of Sciences, and which treat of mathematics, astronomy, meteorology, and physics, the following are the most important:

"Nouvelle Méthode en Géométrie pour les points des superficies coniques et cylindriques" (1673);
"Nouveaux Éléments des Sections Coniques... Les Lieux Géométriques: Les Constructions ou Effec
tions des Equations" (in one vol., Paris, 1679); "Traité de Gnomonique" (1682); "Sections coniques in novem libros distributae" (Paris, 1685); "Tables... du soleil et de la lune" (1686); "Tables... du soleil de la lune et de la voûte céleste" (1689); "Mémoire sur les épicycloïdes" (Paris, 1994); "Tabulæ astronomicae" (1702); "Traité des rou
telles" (1704); "Mémoire sur les conchoïdes" (1708); "Traité de mécanique" (Paris, 1729).

Paul H. Linnerman.

LaHore, Diocese of (LaHoreensib), in northern India, part of the ecclesiastical Province of Agra. Its boundaries comprise the civil Province of the Punjab, except two small portions assigned to Kashmir and Agra respectively. It also includes the native state of Bahawalpur. Down to the sixteenth century Christianity seems never to have come in touch with the Punjab. During the reign of Akbar, and in his successor, Sher Shah, and in Jahangir, and in Shah Jehan, after 1656, the Mogul court visited the Mogul court, spending part of their time at Fatehpur-Sikri and at Lahore (1579-81). Akbar's successor, Jahangir, allowed some Portuguese Jesuits to build a church and establish a mission at Lahore, and assigned a salary for their maintenance. In their favour was written by Father J. F. de Wana in 1696, the famous "Journey to the Mogul Emperor, Shah Jahan, who, being a strict Moslem, withdrew the pension and ordered the church
to be pulled down. Some fragments of it still remained when Lahore was visited by the French traveller Thévenot in 1665; but these have since been totally effaced, and from that time all traces of Christianity disappeared from the place. About 1637 the Holy See established the Vicariate of the Deccan, which soon afterwards (1669) became the Vicariate of the Great Mogul, with an indefinite extension over the whole of the Mogul empire. But missionary enterprise was limited to the southern parts, such as Surat, Golconda, Bijapur, etc., nothing being done for the Punjab. From 1720 this vicariate came to be centred in Bombay, and so acquired that name. In 1784 the northern portion, including the Punjab, was divided off and attached to the mission of Tibet, which had been assigned to Italian Capuchins in 1703. The Prefecture Apostolic of Tibet developed into the Vicariate of Agra in 1822. It continued to include Lahore till 1880, when the Punjab was divided from Agra and made into a separate vicariate. In 1882 the limits of the Vicariate of Lahore were more exactly defined and made to include Kashmir. In 1886, when the Indian hierarchy was established, Agra was elevated into an archbishopric with the Diocese of Lahore as one of its suffragans. In 1887 Kashmir and Kahistan were separated into a new prefecture Apostolic. Down to 1889 the Lahore diocese was in charge of the Italian Capuchins, but in that year it was taken over by the Belgian province of the same order in whose hands it now remains. The following is a list of the bishops who have governed Lahore:—Paul Tosi, Bishop of Rhodiopolis, Vicar Apostolic of Patna, took charge of the new vicariate in its formation in 1880 and became the first Bishop of Lahore in 1886; Symphorien Mouard, transferred from the Seychelles in 1888; Emmanuel van den Bosch, 1891, transferred to Agra in 1892; Godfrey Peckmans, 1892; Fabian Anthony Eestermans, from 1905.

Out of a total of 16,000,000 inhabitants the Catholic population is calculated at about 5700. The diocese is served by 38 Capuchin fathers and contains 30 churches and chapels. Of educational institutions for boys there are the following: St. Anthony’s High School, Lahore, for Europeans and Eurasians, with 108 pupils; Anglo-vernacular school, Dalwal, with 280 native pupils; St. Francis’s primary school, Lahore, under the Tertiary Brothers of St. Francis of Assisi, with thirty orphans; elementary schools at three other places with 300 pupils. Agricultural school orphanage at Maryabad, under the same territories, with thirty orphans. Educational establishments for girls: two under the Nuns of Jesus and Mary, namely, at Lahore with sixty boarders and sixty day-scholars, and at Sialkot with sixty-seven pupils; four under the Sisters of Charity, namely, St. Mary’s Convent, Multan, with about eighty-six pupils, St. Joseph’s Orphanage, Lahore, with thirty native pupils, including a founding home and high class school for native girls, Convent of the Sacred Heart, Dalhousie, with forty-six pupils; and St. Vincent’s convent dispensary, school, and catechumenate at Khushpur—two under the Franciscan Nuns of the Propagation of the Faith, namely, Convent School with catechumenate at Maryabad, with seventy-five children, and a lunatic asylum for females at Lahore. Total, 5 high schools, 15 middle or primary schools, 2 industrial schools, 5 orphanages, 1 home for abandoned children, 6 free dispensaries, and 1 lunatic asylum. The mission at Lahore, Multan, Firozpur, Amritsar, Jalandhar, Dalhousie, Sialkot, Mean-Meer, Maryabad, Adah, Sahowala, Khushpur, Francisabad, and Lyallpur. A new cathedral at Lahore, in the Romanesque style, and of notable size and magnificence, built at a total cost of about four lacs of rupees, was consecrated 19 November, 1907.

Lahore, Diocese of (Labacensis), Austrian bishopric and suffragan of Görz, embraces the territory of the Austrian crown-land of Carniola (Krain).

History.—The Diocese of Lahore was founded in the fifteenth century. From the overthrow of the Kingdom of the Avars (811) to the date of the erection of the new see, the region now included in the diocese always belonged ecclesiastically to the Patriarchate of Aquileia, of which is formed one of the five archidIOconsates. The German emperors repeatedly invested the patriarchs of Aquileia with the title and authority of Margrave of Krain (as in 1077, 1093, 1210), but the patriarchs were never able to maintain themselves in this position for any length of time. Rudolf of Habsburg secured the territory for the House of Habsburg, and as in the later Middle Ages the secular power of the patriarchs of Aquileia had been almost entirely acquired by the Republic of Venice, Frederick III determined in 1461 to found a new see and detach the province ecclesiastically also from Aquileia. The erection of the Diocese of Lahore was confirmed in 1462 by Pius II, who made it directly dependent on the Holy See. The first bishop was Sigismund von Lamberg (1463-86). The new diocese did not include the whole of Carniola, large portions of which were subject to the bishops of Brezen and Freising, while on the other hand parts of Carnithia and Styria, where the episcopal resident of Oberberg was situated, belonged to Lahore. The work of the bishops was greatly hampered by this irregular distribution of their territory. The teachings of Luther gained a footing in the diocese under the second bishop, Christoph Rauber (1495-1536), and still more under his successor, Franciscus Kazianer von Katenstein (1534-44). The new doctrines found warm supporters in two cathedral canons, Primus Truber and Paul Wiener, so that by the middle of the sixteenth century the great part of the nobility and almost a majority of the middle class professed Protestantism.

Bishop Johann Tautescher (1580-97), who lived most of the time at Graz with Archduke Karl, energetically combated the further advance of the new doctrine, and laboured incessantly for the reform of the clergy, the promotion of church services, and the re-establishment of the Catholic Faith. Still greater credit is due to his successor, Thomas Chroen (1589-1830), called the “Apostle of Krain”, who in a few years brought about the triumph of the counter-Reformation in the city and diocese. His success was...
LAICIZATION

largely due to the aid received from the Archdeacon Fer-

dinand, who had become Emperor Ferdinand II in 1597,

and from the Jesuits who had been called to Lai-

bach. In 1616 the bishop sent a detailed report of his

labours to Pope Paul V (cf. Joseph Schmidlin: Die

katholiken in Deutschland von den Decennien des

siegreichen Krieges", I, Freiburg, 1908, 33–50;

concerning Bishop Chroën see the monograph by Stepi-

schneg, Salzburg, 1856). On the reorganization of

the dioceses by Joseph II, Laibach was raised to an

archdiocese (1787), the elevation being confirmed by

Pius VI in 1788. The Archdiocese of Görz was sup-

pressed on 1 July 1823, and Laibach absorbed the di-

ceses of Zengg-Moedru, Gradisca, and later also Triest.

In 1807 Pius VII dissolved the Archdi-

ocese of Laibach, and made it once more a simple di-

ocese directly dependent on the Holy See. On the

re-elevation of Görz to an archdiocese in 1830, Laibach

was made suffragan to it and given its present bound-

aries. The then Bishop of Laibach, Antonius Aly-

sius Wolf (1824–59), received as compensation the

title of prince-bishop. The present bishop is Antonius

Bonaventura Jeglič (b. 20 May, 1850, at Begunjče; con-

secrated 12 September, 1897, at Serajevo).

Since higher ages still stand in the dioceses of

5 arch-

deaneries: Laibach, Upper Krain, Interior Krain, Mid-

dle Krain, and Lower Krain. These are subdivided

into 22 deaneries. At the beginning of 1909 the see

contained 17 cathedral prebends, 266 parishes (of

which 28 were vacant), 1 vicarship, 3 ancient chap-

laincies, 17 Expositures (i.e. filial churches joined to

the mother church only by some unimportant link to

recall their former relations), 235 positions for

assistant clergy (95 vacant), 36 other benefices, 321

parish churches, 1000 dependent churches, 11 mon-

astery churches, 229 chapels. Besides the prince-

bishop's canons are 14 canons, 444 parish priests,

76 ecclesiastics in other positions, 51 priests retired

on pensions, 134 regulars. The population consists

of 572,613 Catholics, about 400 Protestants, 290 Or-

thodox Greeks, 145 Jews. The language spoken by

the great majority of the inhabitants of the diocese

(about 94 per cent.) is Slovenian. German is spoken

in the larger cities like Laibach and Rudolstadt, and in

the German-speaking centre of Gotschee. The cathe-

edral chapter consists of 12 regular and 6 honorary ca-

nones; they are nominated in part by the emperor, in

part by noble families and the provincial council, and

also by the free appointment of the bishop. Since

1493 a collegiate chapter has also existed in connex-

tion with the parish church of St. Nikolaus at Rudolfswurt;

it consists of a mitred provost and 4 members. The

consistory of the prince-bishop is made up of the ca-

thedral chapter, 2 honorary canons, and 2 other mem-

bers. The training of the clergy is provided for by a
diocesan theological institute, founded in 1791, which

has a pro-rector, 8 professors, and 3 instructors; a dio-

cesan clerical seminary with 63 students, and a semi-

nary for boys, the Collegium Alumnorum, founded in

1846, which has 36 students. Ecclesiastical profes-

sores are the religious institutions of the Stra-

veit near Laibach (190 students), in the 3 gymnasia

and the upper high school at Laibach, also in other

schools.

The religious orders and congregations for men in

the diocese are: Cistercians, 1 abbey at Sittich, 12

priests, 3 clerics, and 14 lay brothers; Carthusians, 1

monastery at Pletrije, 29 priests, 31 brothers; Francis-

cans, 5 monasteries, 49 priests, 17 clerics, 32 lay

brothers; Capuchins, 2 ,monasteries, 8 priests, 6

brothers; Brothers of Mercy, 1 monastery, 1 priest, 18

brothers; Jesuits, 1 residence, 7 priests, 3 coadjutors;

Society of St. Vincent de Paul, 1 residence, 24 priests,

6 clerics, 5 lay brothers; Fathers of the Teutonic Order,

1 branch monastery, 8 priests, 2 clerics, 1 lay brother;

Salesians, 2 houses, 10 priests, 24 clerics, 33 novices,

7 brothers. The religious orders and congrega-

for women in the diocese are: Ursulines, 187 in 23

houses with which are connected primary schools and

2 seminaries for female teachers; Discalced Carmelites

Nuns, 1 convent with 16 sisters; Sisters of Christian

Charity, 284 sisters in 17 houses, nearly all of which

are connected with hospitals, orphanages, insane asyl-

ums, and similar institutions. Society of St. Vincent

(Third Order of St. Francis, 68 sisters in 4 houses; 1

orphan asylum, and 3 schools; Sisters of Mercy of the

Holy Cross, 7 sisters attached to the home for girls,

Josephinum, at Laibach. Among the religious asso-

ciations of the diocese are: the Society of St. Herma-

nius, which, like the Society of St. Charles Borromeo

(q.v.), encourages the diffusion of good literature; the

Society of St. Cyril and Methodius, which aims to

promote religious and national instruction in the ele-

mentary schools; the Third Order of St. Francis; the

Society of St. Vincent de Paul, and the Congregation of

Mary. The Cathedral of St. Nikolaus was built 1700–07 in

Renaissance style by the Jesuit Andrea Pozzo. hardly

any large churches of the early Middle Ages still exist,

on account of the repeated incursions of the Turks into

Krain from 1396. The largest Gothic church of the

province is the church of St. George in Kamnik (completed

1491, of which the church at Bischofshäck, erected in

1532, is a copy. The finest churches in the Baroque style

are: the Franciscan church at Laibach (1546), the

church of St. Peter (eighteenth century) at the same

place, and the church of St. Jakob (1714), also at Laibach.

von Krain.

JOSEPH LINS.

Laicization (Lat. laicus, lay).—The term laity signifies the aggregation of those Christians who do not form part of the clergy (see LARRY). Conse-

quently the word lay does not strictly connote any

type of hostility towards the clergy or the Church,

much less towards religion. Laicization, therefore,

considered etymologically, simply means the reducing

of persons or things having an ecclesiastical chara-

acter to a lay condition. In the course of time, and

especially in France, the word lay has assumed a decid-

edly anti-clerical and even anti-religious meaning,

which has extended also to the derivatives laïcize and

laicization. This change seems to have origi-

nated in the struggles and controversies, at once

religious and political, that have arisen in that
country in connection with the educational question:

teachers belonging to religious congregations (con-

greganistes) have been driven from the public schools;

all religious instruction has been forbidden therein;

and this new lay character (laïcised) of the public

school has been declared to be essential and inviolable.

The expression, once current, has received a formidable

extension and an aggressive anti-religious meaning as

applied to everything relating, whether more or less

remotely, to the Catholic Church and even to religion

in general. So it is usual to designate as "laicized"

any institution withdrawn from the influence of ecle-

siastical or religious authority, or from which the

priest and his ministry have been excluded. A "lay"

school, therefore, is one in which, not only is no place

found for the catechism or the priest, but wherein the

instruction given ignores all religion and God him-

self; "lay" legislation is that which is inspired by no

religious idea, which looks on society as atheistic, and

reduces religious worship to the purely voluntary acts

of individuals; finally, the "lay" State, or Govern-

ment, is one that recognizes no Church, no religion,

and which excludes even the name of God from all its
institutions or establishments, and from all its acts. An attempt has been made to set up a "lay" morality, i.e. a moral code independent of all revealed religion, if Christian morality were aught else than the dictates of natural law; while some think they can extol the moral life without a Deity, without a future life, and with no real responsibility—a determinist morality which is the very negative of all morality. (See Ethics.)

To laicize, then, is to give this lay character to whatever had not previously had it—or, at least, not entirely. It is to exclude religion from entering in at all into the life of the nation; to separate the way education, the courts of justice, the army, the navy, the hospitals—in a word all activities under the control of the public authorities have been laicized in France. Laiization is the externalization and product of the rationalistic, anti-Catholic, and anti-religious movement. It is evident, therefore, that laicization, thus understood, goes far beyond "equality", by which the State recognizes equal rights as possessed by various confessions or religions; it is much more than "neutrality", the attitude adopted by the State in its dealings with the diverse confessions, making them all equal in the eyes of the law, quite different from "separation", it is a complete abolition of the official character of the Church, as hitherto recognized by the State, abolished. In addition to all this, the "laicization" of which we are speaking implies the negation of all religion in matters concerning temporal society; it is the ultimate outcome of absolute Rationalism applied to social life as at present.

Looked at historically, laicization is the final outcome of what was formerly called "secularization", i.e., the hostile action of the secular power, which has succeeded in despoliation the Church of the prerogatives and dominion, which she enjoyed in European society as moulded by the influence of Christianity for centuries. It is true that all the European nations have not moved with equal rapidity in this matter, and that they are far from having all arrived at the same point in their evolution towards complete secularization. Moreover, it must be recognized that this movement, hastened, in so far as concerns the Catholic religion, by the Reformation, has been retarded and partially eliminated in non-Catholic countries—where the civil power already possesses more or less complete influence, if not authority, over the Church. In Catholic countries, in the presence of an independent religious authority which it even accuses at times of being foreign. But if we abstract from local differences, the main lines of this secularizing movement, as yet incomplete, are clearly traceable in all the nations of the Christian world. It is advancing towards two not disconnected results: first, it is marking off more and more distinctly the sphere of action of the two powers, "the spiritual and the temporal", as the Gallicans formerly said; secondly, the secular power, while it frees itself from the influence of the spiritual power, confines the latter to a purely spiritual domain, depriving it generally of the privileges it enjoyed in the Christian societies of the Middle Ages.

It is not the object of this article to give the history of secularization, which rather belongs to the history of each country where it has been attempted or effected. This is only a cursory review, pointing out in their chronological order the various stages and the diverse aspects of the movement. If at first we consider the privilege situation of the Church in the Roman Empire, and the intimate union of the two powers occasionally confused, we must admit that the Church, though greatly favoured, was in real danger of losing its property to the imperial authority arrogated to itself in religious affairs. The Church received from the emperors, not only considerable endowments, but numerous privileges: she acquired an official position such as had been held by the ancient pagan religion. The Theodosian Code and, still more, that of Justinian are impregnated with Christianity: the bishops are official personages and the emperor executes ecclesiastical duties. Yet it is clear that he controls the Church. He is no longer the power merely of formalities and the title "Bishop of the Exterior", convokes councils, makes and unmakes bishops, and legislates in ecclesiastical and even spiritual matters. Under these circumstances, the only peril for the Church lay in too close a dependence on the civil authorities, a misfortune that happened to the Church in ancient paganism. On a few occasions she did suffer some violence—e.g. certain attacks on the popes, and the laicization of the monasteries by Constantine Copronymus (767).

The situation of the Church in the Western kingdoms that rose on the ruins of the empire was different. The two authorities are still closely united, but the power of the king is less, while the Church is the civilizing element, and represents the tradition of government. As a natural result, her influence preponderates; she receives considerable gifts from kings and princes, and from the faithful; her influence is constantly extended. Thus, when the feudal order came into being, many ecclesiastical dignitaries were in possession of extensive rights, and some were of considerable size. The kings were always influential, and even real power, over the Churches in their realms; they took part in the selection of bishops, when they did not elect them; they called the bishops together in councils or mixed assemblies; they authorized and confirmed disciplinary canons, which they afterwards published as state or capitular laws; but they did not interfere with the purely spiritual power. Under the Church the State had not to fear any hostile civil legislation; yet she had to submit to a certain amount of usurpation on the part of the royal power, particularly in connexion with episcopal elections and church property. The institution of the precaria, by which princes bestowed on their lay servants, especially their fellow-warriors, the revenues of churches and monasteries, was really a secularization of the goods of the Church. The abuse had existed in the sixth century, but it developed to an alarming extent under Charles Martel (716-41), who adopted the system to reward his soldiers (see Charles Martel; Frankish). The system was confirmed in the presence of an independent religious authority which it even accuses at times of being foreign. But if we abstract from local differences, the main lines of this secularizing movement, as yet incomplete, are clearly traceable in all the nations of the Christian world. It is advancing towards two not disconnected results: first, it is marking off more and more distinctly the sphere of action of the two powers, "the spiritual and the temporal", as the Gallicans formerly said; secondly, the secular power, while it frees itself from the influence of the spiritual power, confines the latter to a purely spiritual domain, depriving it generally of the privileges it enjoyed in the Christian societies of the Middle Ages.

Under Pepin and Carloman, sons of Charles Martel, the Frankish councils, especially that of Lectestes (also called Lifstines and Leptines), in 743, corrected the abuse to a certain extent (Hefeke, "Hist. des conciles", III, 342 sqq.). Canon ii, owing to the circumstances of the times, does not go to the Church a tax of a silver penny per hearing (casata); on the death of the beneficiary the property returns to the Church, though the prince may bestow it again. In this way the Church's right of property was safeguarded against indefinite transmission, and at the same time she enjoyed some portion of the revenues accruing from her property. Although less common, the practice continued for a long time, gradually changing into the system of "commendations". The latter, though differing judicially from the precaria, had the same effect so far as the property of the Church is concerned: the revenues were diverted to the prince purely as a reward for his good services, named by the king. This abuse spread extensively in the ninth century, especially under Emperor Lothair, and we find reforming councils of the Frankish Em-
pure, particularly that of Meaux (845), striving to end it. In the tenth century, when the papacy had grown weak and was unable to counterbalance the civil power, the dignities and property of the Church were invaded by the creatures of kings and emperors: the Othos and their successors made the popes and, at times, the imperial insignia; they invaded the dignities with cap and ring, symbols of ecclesiastical jurisdiction. Such secularization would soon have proved fatal to the necessary independence of the spiritual power. The liberation of the Church from secular control was accomplished by Gregory VII. After long years of struggle, the separation of the spiritual and temporal powers was marked; the dispute about investitures was ended by the Concordat of Worms (1122); lay influence was eliminated from the elections of popes and bishops, from ecclesiastical trials, synods, and, to a large extent, from the administration of church property; and under the great popes who succeeded Gregory VII it seemed for a while as if the ideal of the Christian world was realized, the Catholic nations forming one family under the high suzerainty of the pope, the representative of God upon earth, among nations and individuals.

This was the apogee: the movement towards secularization began in the twelfth century, under the influence of Innocent, the school of Bologna witnessed a revival of the Roman Law; the laws of the Cesaras became the basis of the claims of the secular power; and, while the canonists, finally systematizing the ecclesiastical laws, were establishing the thesis of pontifical power, indirect or even direct, over empires and kingdoms (the Bull "Unam sanctam"), the imperial and royal jurisconsults were building up the opposite thesis, and claiming for secular princes entire independence in temporal matters, authority in ecclesiastical matters not strictly spiritual, and eventual liberties for the clergy and the civil authorities. Their opinion was supported by the pope, and these jurisconsults ecclesiastical privileges and immunities were graceful concessions of the civil authorities, who could, consequently, withdraw them. From that time laicalization had begun, thenceforward carried into effect, not by expedients or by violence, but on principle; it was a battle of systems, in which the secular power, becoming more and more centralised and conscious of its strength, was destined always to prevail.

The struggle which, as before, centres around the temporal goods of the Church, begins with Philippe le Bel and Philip the Bold and Edward I, who imposed taxes on church property; after having resisted as a matter of principle, the pope authorised their imposition, provided it was done with his consent. In this way the canonical immunity of ecclesiastical property was violated. Later it was the jurisdiction of the Church in mixed matters which yielded little by little to that of the royal courts: these adjudicated, not only in questions arising out of marriage—e.g. inheritances, legitimacy of children, adultery—but also in most cases relating immediately to matrimony or benefices, whether presenting questions of fact or involving bare right of possession, further, the system of appeals against so-called abuses of ecclesiastical power (appel comme d’abus) permitted almost all ecclesiastical acts to be brought, if the State so chose, under the cognizance of the royal judges. Papal Bulls and decrees of councils were recognized only after examination and in virtue of royal authority; municipalities, they had to be ratified in order to obtain the force of laws. In regard to benefices, the pontifical laws were openly resisted; the royal prerogative of nomination to vacant benefices was exercised, and the Pragmatic Sanction of Bourges, under Charles VII (1438), applying in France the quasi-eclesiastical principles of the Council of Basle, acknowledged the principle of reservation and forbade direct appeals to Rome. If the principle of spiritual jurisdiction was safeguarded by the Concordat of 1516 between Leo X and Francis I, this agreement, nevertheless, abandoned to the civil power all control of the temporal possessions of the Church. The clergy of France came to depend more on the king than on the pope: Louis XIII forbade the holding of ecclesiastical assemblies and councils without the royal permission; Louis XIV put into practice the most advanced principles of Gallicanism, and remodelled the affairs of the Church almost as if he were a Justinian; his parliamentary courts, his grand conseil adjudicated in all ecclesiastical affairs, except questions of dogma and purely spiritual matters. In a word, while the Church was treated with favour and was enjoyed numerous privileges, it was in no better yielding to the State all authority in temporal or mixed affairs.

Other Catholic countries followed in the same path. The extreme limits of this encroachment of secular power were reached by the minute ecclesiastical regulations of Joseph II of Austria. In other countries the Reformation greatly advanced the policy of secularization. The privileged situation of the Church in the matter of temporal property had been weakened by the errors of John Hus and Wycliffe, and the troubles resulting therefrom. Soon the leaders of the Reformers took a hand in the secularization of the Church princes and gave them, with the property of the Church, an almost absolute authority over the new religious bodies. In many German principalities, in England, and in the countries of Northern Europe, the Church disappeared, her goods were confiscated, pillaged, or else transferred to the new religious organizations. It suffices to recall the secularizations of the Teutonic Knights and their property and then, in England, the confiscation of the monasteries and churches under Henry VIII and his successors. Ecclesiastical jurisdiction was also secularized and taken over by the civil powers, or at most had a second-class degree with the clergy, who were entirely dependent on the civil power. A little more, and the two powers would have blended into one.

To return to the Catholic Church, the most complete secularization was that effected by the French Revolution; if the movement seemed at first to be the advantage of the "constitutional church", a creation of the civil power, and afterwards to that of a vaguely Deistic form of worship, it was to the profit of the sovereign State, freed from all religion, rationalistic if not atheistic. The facts are well known: church property was confiscated by law into "juroirs", or "constitutionalists", and "non-juroirs" an absolute proscription of the Catholic religion. The functions confided for ages to the Church were again assumed by the State: schools, hospitals, registration of births, marriages, and deaths, marriage itself, and even worship—all was secularized. And when, after the storm, the Concordat of 1801 restored the Church to her official position, everything or almost everything remained secularized. The property that had been confiscated and sold was not returned to her; the places of worship left at her disposal still remained the property of the civil authorities; public teaching had become a function of the State, whose permission she had to obtain for her few schools; civil life and marriage were regulated independently of her, while awaiting the re-establishment of divorce; her tribunals were no longer acknowledged; the members of her hierarchy were officially recognised, but only as functionaries in the State, to hold in accordance with the law at least, a survival of the old regime; her former immunities were restricted and finally abolished.

Like the other developments of the Revolution, the policy of secularization was imitated by the different States in varying degrees. The ecclesiastical principles of the Thirty years' War, the principle of reservation and forbade direct appeals to Rome. If the principle of spiritual jurisdiction was safeguarded at the beginning of the nineteenth century, and the movement culminated in
the suppression of the Papal States, swallowed up in the new Kingdom of Italy. Ecclesiastical property, especially in the city of Rome, was confiscated by partial secularization in the eighteenth century, was confiscated in Spain (1820, 1835, and 1837), in Portugal (1833), in Mexico (1856), and, for the most part, in Italy (1866). Almost everywhere the ecclesiastical immunities (see Immunity) disappeared, legislation became more secular, cures were established, and the Church, except in the case of Divine worship, excluded from public service, or participating in it only by the favour of the sovereign State.

In this brief exposé it has not been intended to generalize to any great extent. The situation is not the same in all respects, and the doctrine "less is more" of secularity and laicisation have been carried to the extreme limits. On the other hand, we are far from overlooking those deeply rooted general causes of the transformation of modern society which have rendered inevitable a certain amount of secularisation. There is no longer unity of faith: various confessions have multiplied and mingled in the same country; temporal interests have assumed a preponderating importance in the life of each state; ideas of religious toleration and liberty have spread and are accepted everywhere. In a word, the ideal harmony between the two powers is no longer capable of realization. Any marked separation of the two authorities is not without certain advantages for the Church. But while all this must be recognised, it remains true that laicisation pushed to extreme limits is contrary to Catholic teaching, and therefore must be condemned; moreover, it is injurious to the real interests of temporal society. To understand the position of the Church in this matter, we must first make allowance for her just protests against violation of her acquired rights. Theoretically, the Church can and does submit to secularisation that does not affect her rights as a spiritual society or interfere with the exercise of these rights in concrete social contexts, the demand (1830) of Alcalá naturally varying according to time and place. However, she must condemn any measures that affect her essential rights and the freedom necessary for the exercise of her sacred ministry. No principle can justify in a society composed of Christians the exclusion of every Christian idea, nor in any human society the exclusion of all religion and of the Deity. The Catholic doctrine on the juridical relations of the Church and the State is explained elsewhere (see Pius IX, "Syllabus", prop. 39 sq., 77 sq.). But the most superficial attention to the influence of religion, especially of the Catholic Church, is necessary for the moral sufficiency of the Church. The laicisation and danger of laicisation, even when this is not identical with legalized persecution of the religious idea.

(See also State. For the present progress of laicisation in France, see France, VI, 179 sqq. For the facts relating to the history of the different countries see England; France; Germany; etc. Also Invention, Conflict, Galianism; Louis XIV, etc.)

The principal facts may be found in Sigmüller, Kirchenrecht (2d ed., 1899), containing a full bibliography. On the question of ecclesiastical rights, see Catholic, institutio juris publici ecclesiastici, I (Rome, 1890); Weber in Kirchenrecht, s. v. Secularisation der Kirchenmacht (for Germany).

A. Boudinhon.

Laines (Layne). James, second general of the Society of Jesus, b. in 1512, at Almansor, Castilla, in 1512; d. at Rome, 19 January, 1574.

His family, although Christian for many generations, had descended from Jewish stock, as has been established by Sacchini (Historia Societatis Jesu, II, sec. 32). Laines graduated in arts at the University of Alcalá (1531), and won his licentiate in philosophy the next year. A young Castilian and his friend Salmerón had heard of Ignatius Loyola. To meet him, they betook them to the great University of Paris (1533) and there fell under the spell of the spirituality, poverty, and obedience which, as second to Loyola and was one of the seven who, on 15 August, 1534, made the vows of religion in the chapel of St. Denis, on Montmartre. Three years were now spent by Laines, in works of charity and zeal, for the most part in Northern Italy. In 1537, Ignatius sent him to Flanders to prepare the text of "Admiranda," the Holy Father. Paul III discussed doctrinal questions with them. He was struck by their bearing and learning, granted them permission to be ordained priests and to go to the Holy Land. This pilgrimage was prevented by political troubles. Laines was sent to Spain to teach there the "Admiranda," his calling was teaching. His teaching and preaching were productive of immense good in those unsettled days. Rome, Venice, and Vicenza were saved from heresy by his labours. Paul III became an enthusiastic admirer of the new society. He chose three Jesuits, Laines, Salmerón, and Lejévre as sole papal theologians to the Council of Trent. The latter died in Rome before the council began its sessions. Laines and Salmerón were joined by two other Jesuits at Trent, Lejévre, who represented the Bishop of Augsburg, and Covillon the theologian to the Duke of Bavaria.

At Trent, Laines and Salmerón stood out most prominently. These dogmatic discussions, in the early sessions of Trent, took place without formalities. The theological discussions were under the charge of Cardinal Cervini, later Pope Marcellus II; he arranged that Salmerón should be among the first speakers on each topic, so as to set down the right doctrine from the outset. Laines should be the last to speak, so as to avoid repetition and point out clearly the errors of preceding theologians. The two Jesuits were immensely influential against some of the Lutheran ideas whereas, fortunately not a few of the theologians of the council were tainted. The bishops asked for copies of the writings of Laines and Salmerón. While the two papal theologians thus bore the brunt of the battle for Catholic truth in the matter of justification, at Trent, strong influence was brought to bear on Ignatius to send Laines to do apostolic work in Florence. Salmerón prevented such a loss to the council by telling Ignatius the political purpose of the council. Subsequently, Laines did his greatest service to the council in the discussion on justification. Jerome Seripando, a most devoted and saintly man, who later presided over the sessions of Trent, tried to combine the Catholic with the Lutheran ideas of justification. But Laines came to prominence in this matter of the imputed justice of Christ (Theiner, "Acta Con. Trid.", I, 235). The answer of Laines so pleased the Fathers of Trent that they honoured it by incorporating it word for word in the Acts of the council, a unique honour. On 13 January, 1547, by unanimous vote, their clear and definite decree on justification was passed unanimously, the doctrines which Laines had stood for being defined. Hereafter, whereas very few theologians were allowed to speak an hour, Laines was privileged to address the assembly for three hours or more. We are not surprised to find Salmerón writing to Ierger, 20 January, 1547: From Trent: "were, without any exaggeration whatever, to take away one of its eyes from this council" (Epistola Salmerón, 20 Jan., 1547). In April, 1547, Laines went with the council to Bologna, where he spoke on penance and extreme unction. The opposition of Charles V, preventing many theologians from reaching Bologna, the council was indefinitely pro-
rogued. When the Fathers met a second time at Trent (1 May, 1551) Laines (now provincial of the Jesuits in Italy) and Salmerón were there as papal theologians. It is said that the decrees and canons of the Fourteenth Session were at this time written by him (Cartas de S. Ignacio, I, 491).

After the death of St. Ignatius (1556) Laines was elected vicar-general of the Society; about two years later he became its second general (1558). Paul IV in 1561 insist ed on the triennial election of a general and the chancing of the Office in the church by the Jesuits. His wish was only verbally expressed, and that by a messenger. After his death (1559), at the advice of eminent canonists, Laines discontinued the choir, and observed the constitutions of the order in regard to the generalate. A new difficulty now confronted him. Twelve votes were wanted to choose a successor for Paul IV, the reform party being intent upon electing him. His entreaties and sudden departure for parts unknown saved him from the possibility. To Laines is due the adoption of the "Constitutiones" of the Society, and the importance that higher education be placed by its wording, in detail, general principle of its institution. Notwithstanding the labours incident to the governing of his order, Laines still busied himself with the battle of the Church against heresy and neglect of ecclesiastical discipline. Pius IV sent him as theologian to the famous Conference of Polesy (1561) along with Cardinal Ippolito d'Este. There he engaged the Calvinistic ministers in dispute before the Queen Regent Catherine de' Medici. In his absence, Salmerón was vicar-general at Rome. Meanwhile the third convocation of Trent was opened (18 January, 1562). Two Jesuits were present, Covillon and Canisius. Pius IV was not satisfied, nor were the party of reform, that the two protagonists of former convocations were absent; Salmerón, Laines, and Polanco were straightway ordered by the Holy Father to go to Trent as his theologians. Salmerón was the first to arrive. He spoke three hundred sermons, who are gloved by the Pope as reached in Trent in August, 1562. He was the first, as papal theologian, to speak on the Sacrifice of the Mass. His proofs were well under way, when the Fathers voted to allow him the whole of the next day for his discourse, which he delivered from a platform in the body of the Church. Then only in matters dogmatic but in the practice of refusing the cup to the faithful, prevailed in the twenty second session.

The matter of the next session was exceedingly delicate—the question of orders, involving as it did the origin of episcopal jurisdiction. Laines was one of the committee appointed to draw up the decrees and canons on the Sacrament of Orders; and to him the rest of the committee consigned that task. At the very outset of the discussions, the question of the Right of bishops came up; the discussions were carried on vigorously for nine months. Laines stood firm for the Divine origin of the powers of the order of bishops, the Divine right of the episcopal body to jurisdiction and the conferring of this jurisdiction upon each individual bishop directly by the pope and not by God. On two other occasions at Trent Laines disputed the original origin of episcopal jurisdiction. In the end the council left the sole form of episcopacy in abeyance; but no one holds that the monarchical episcopacy succeeded a period of anarchy or of government by a community where all had equal authority. The organization of all Christian Churches under the authority of the bishops and clergy, as early as the third century, is

LAITY

Laité (Gr. λαίτε, "the people"); whence Latin, "one of the people") means the body of the faithful, outside of the ranks of the clergy. This article treats the subject under three heads: (1) General Idea; (2) Duties and Rights of the Laity; (3) Privileges and Restrictions of the Laity.

General Idea.—Whereas the word faithul is opposed to infidel, unbaptized, one outside the pale of Christian society, the word laity is opposed to clergy. The laity and clergy, or clerics, belong to the same society, but do not occupy the same rank. The laity are the members of this society who remain where they are, and the clerics, those who are the depositaries of sacred or spiritual authority under its triple aspect, government, teaching, and worship, i.e. the clergy, the sacred hierarchy established by Divine law (Conc. Trid., Sess. XXIII, can. vi); in the second place, those who over whom this power is exercised, who are governed, taught, and sanctified, the Christian people, the laity: though for that matter clerics also, considered as individuals, are governed, taught, and sanctified. But the laity are not the depositaries of spiritual power; they are the flock confided to the care of the shepherds, the disciples who are instructed in the Word of God, the subordinate and not the superior, whose task it is to assist towards their last end, which is eternal life. Such is the constitution which Our Saviour has given to His Church. This is not the place for a detailed demonstration of this assertion, the proof of which may be reduced to the following points: (1) Lainé, who was a Jesuit in the Church: on the one hand, a distinction between the governed and those governing is necessary in every organized society; now Jesus Christ established His Church as a real society, endowed with all the authority requisite for the attaining of its object. On the other hand, in the Church, government has always been in the hands of those who were entrusted with authority with the teaching of doctrine and the care of Divine worship. If one studies without prejudice the New Testament and the beginnings of Christianity, some doubt may arise on certain matters of detail; but the conclusion will certainly be that every Christian community had its superiors, these superiors had a stable spiritual authority, and this authority had as its end the exclusive care of religious functions (including teaching) as well as the government of the community. There have been differences of opinion concerning the origin of the monarchical episcopacy, which soon became the sole form of episcopacy in the Church; but no one holds that the monarchical episcopacy succeeded a period of anarchy or of government by a community where all had equal authority. The organization of all Christian Churches under the authority of the bishops and clergy, as early as the third century, is
so evident as to place beyond all doubt the existence at that time of two distinct classes, the clergy and the laity. Moreover, in all societies among which Christianity had spread, religious service had already its special classes, and the Church would have retrograded if its worship and its sacrifice had not been entrusted exclusively to a special class.

Christ selected the Apostles from among His disciples, and among the Apostles He selected Peter to be their head. He entrusted them with the furtherance of His work on earth, they have the keys of spiritual authority, for they are the keys of the Kingdom of Heaven (Matt., xvi, 19); He gave them the mission to teach and baptize all nations (Matt., xxviii, 18); to them also He addressed those words at the Last Supper: "Do this in commemoration of me." (Luke, xx, 19). As soon as the Church begins to live, the Apostles appear as its leaders; they are distinct from the "multitude of believers"; it is into their ranks that they bring the consecrated grapes of the Holy Ghost, Saul and Barnabas, whom they receive with the imposition of hands (Acts, xii, 2). Where St. Paul founds Christian churches: also all by the "Spirit of the Lord, the Spirit of the Church of God." (Acts, xx, 28); the Pastoral Epistles reveal to us a directing body composed of the bishops, or priests, and deacons (I Clement, xiii, 4); and they it is, especially the bishops, who perform exclusively the liturgical services (Ep. Ignat., "Ad Magnesiam," v. 3). It is true that the clergy, or the body represents the church, not to individual moral perfection. It is true that the clergy, being dedicated to the service of the altar, are thereby bound to strive for perfection; yet neither their virtues nor their failings influence in any way their powers. On the other hand, the clergy, besides their right to aspire freely to admission into the ranks of the clergy, on complying with the requisite conditions, are exalted to exercise every virtue, even in the highest degree. They can also bind themselves to observe the evangelical counsels, under the guidance of the Church, in either the world, as did the ancient ascetics, or by way of deviation, as the religious houses. But ascetics, nuns, and unordained members of religious associations of men were not originally in the ranks of the clergy, and, strictly speaking, are not so even to-day, though, on account of their closer and more special dependence on ecclesiastical authority and guidance, they are among the acknowledged clergy in the broader sense (see Religious). The juridical condition of the clergy in the Christian society is therefore determined by two considerations: their separation from the clergy, which excludes them from the performance of acts reserved to the latter; and second, their subjection to the spiritual authority of the Church, without which they are excluded from the clergy which is of obligation for the laity, abstracting from individual cases when there may be a legitimate excuse. On the other hand, more or less frequent confessions and communions, hearing of daily Mass, frequenting the Divine Office, asking for specific ceremonies (for instance, churching) celebration of Masses, obtaining services and prayers for the dead, or for other intentions, are things that are perfectly legitimate and are counseled, but are optional. We may also mention the obligatory or free acts intended for the personal sanctification of the laity, which do not require the help of the clergy: private prayer, the recitation and abstention on fast days, Sundays and holy days of obligation, and, lastly, in general all that relates to the moral life and the observance of the commandments of God.

Duties and Rights of the Laity.—Having come through Baptism to the supernatural life, being members of the Christian society and adopted children of God, the laity belong to the "chosen race," the "royal priesthood" (I Peter, ii, 9) formed of all those who are born again in Christ. They have therefore a right to share in the common spiritual goods of the Christian society, which implies a corresponding obligation on the part of the clergy to bestow on them these goods, in as far as this bestows requires the intervention of the ministers of religion and of the spiritual authority. But if the laity are to share in these common goods they must employ more or less frequently the means of sanctification instituted by Jesus Christ in His Church, and of which the clergy have been put in charge. Further, the laity, being subject to ecclesiastical authority, must obey and respect it; but in return they have the right to obtain from it direction, protection, and service. Thus, for the laity rights and duties are relative: the first duty of a Christian is to believe; the first obligation imparted to the laity is, therefore, to learn the truths of faith and of religion, at first by means of the catechism and religious instruction, and later by being present at sermons, missions, or retreats. If they are thus obliged and directed to attend the Church, they have a right to be heard and consecrated to require their priests to give them and their children Christian teaching in the ordinary way.

Second, a Christian's moral conduct should be in keeping with his faith; he must, therefore, preserve his spiritual life by the means which Jesus has established in His Church: the Divine service, especially the Mass, the sacraments, and other sacred rites.

This necessity of having recourse to the pastoral ministry gives rise to a right in the laity as regards the clergy, the right of obtaining from them the administration of the sacraments, especially Penance and the Holy Eucharist, and others according to circumstances. It may be an obligation imposed by a command of the Church, or necessitated by personal reasons; in other cases, it may be a matter of counsel and left to the devotion of each one. This is a subject which exhibits most clearly the difference between a precept and a counsel with regard to our outward Christian life. Assistance at Mass on Sundays and holy days of obligation, annual confession, Easter communion, the reception of the viaticum (q. v.) and the last services of religion, the celebration of marriage in the prescribed form, the baptism and religious instruction of children, and, finally, the rites of Christian burial—these are all the matters of the clergy, yet the clergy which is of obligation for the laity, abstracting from individual cases when there may be a legitimate excuse. On the other hand, more or less frequent confessions and communions, hearing of daily Mass, frequenting the Divine Office, asking for specific ceremonies (for instance, churching) celebration of Masses, obtaining services and prayers for the dead or for other intentions, are things that are perfectly legitimate and are counseled, but are optional. We may also mention the obligatory or free acts intended for the personal sanctification of the laity, which do not require the help of the clergy: private prayer, the recitation and abstention on fast days, Sundays and holy days of obligation, and, lastly, in general all that relates to the moral life and the observance of the commandments of God.

From these obligatory and optional relations existing between the laity and the clergy there arise certain duties of the former towards the latter. In the first place, respect and deference should be shown to the clergy, especially in the exercise of their function, on account of their sacred character and the Divine authority with which they are invested (Conc. Trid., Sess. XXV, c. xx). This respect should be shown in daily intercourse, and laymen inspired with a truly Christian spirit do homage to God in the person of His ministers, even when the conduct of the latter is not in keeping with the sanctity of their state. In the second place the laity are obliged, in proportion to their
means and the circumstances of the case, to contribute towards the expenses of Divine service and the fitting support of the clergy; this is an obligation incumbent on them in return for the right which they have to the services of their priests with regard to the Mass and the administration of the Sacraments, and under two distinct classes: certain gifts and offerings of the faithful are intended in general for the Divine services and the support of the clergy; others, on the contrary, are connected with various acts of the sacred ministry which are freely asked for, such as the stipends for Masses, the dues for funeral services, marriages, etc. There is no fixed sum for the former class, the matter being left to the generosity of the faithful; in many countries they have taken the place of the fixed incomes that the various churches and the clergy were possessed of, arising especially from landed property; they have likewise replaced the tithes, no longer recognized by the secular governments. The latter class, however, are fixed by ecclesiastical authority or custom and may be demanded in justice; not that this is paying for sacred things, which would be simony, but that they are offerings for the Divine service and the clergy, on the occasion of certain definite acts (see **Offerings; Tithes**).

There remains to speak of the duties and rights of the laity towards the ecclesiastical authority as such, in matters foreign to the sacred ministry. The duties, which affect both laity and clergy, consist in submission to legitimate authority: the pope, the bishops, and, in a proportionate degree, the parish priests and other acting ecclesiastics. The decisions, judgments, orders, and directions of our lawful pastors, in matters of doctrine, morals, discipline, and even administration, must be accepted and obeyed by all members of the Christian society, at least in as far as they are subject to that authority. That is a condition requisite to the well-being of any society whatsoever. However, in the case of the Christian society, authoritative decisions and directions, in as far as they are concerned with faith and morals, bind not merely to exterior acts and formal obedience; they are, moreover, a matter of conscience and demand loyal interior acceptance. On the other hand, seeing that in the Church the superiors have been established for the welfare of the subjects, so that the pope himself glories in the title "servant of the servants of God," the common right to the care, vigilance, and protection of their pastors; in particular they have the right to refer their disputes to the ecclesiastical authorities for decision, to consult them in case of doubt or difficulty, and to ask for suitable guidance for their religious or moral conduct.

**Privileges and Restrictions of the Laity.**

Since the laity is distinct from the clergy, and since Divine worship, doctrinal teaching, and ecclesiastical government are reserved, at least in essentials, to the latter, it follows that the former may not interfere in purely clerical offices; they can participate only in a secondary, privy, and inferior capacity, and to a more or less explicit authorization. Any other interference would be an unlawful and guilty usurpation, punishable at times with censures and penalties. We will apply this principle now to matters of worship, teaching, and government or administration.

(1) As to the Liturgy. — As to Divine service, the liturgy and especially the essential act of the Christian worship, the Holy Sacrifice, the active ministers are the clergy alone. But the laity really join in it. Not only do they assist at the Sacrifice and receive its spiritual effects, but they offer it through the ministry of others. For hereby they can and even more be obliged to, bring and offer at the altar then, there of the sacrifice, i.e., the bread and wine; that is what they really do to-day by their offerings and their stipends for Masses. At several parts of the Mass, the prayers mention them as offering the sacrifice together with the clergy, especially in the passages immediately after the consecration: "Unde et memores, nos servti tu (the clergy) sed et plebs tua sancta (the laity) . . . offerimus praecae Majestati tuae, de tuis donis ac datis", etc. The laity reply to the salutations and prayers by the priest and they are limited to tempus prayer; especially do they share in the Holy Victim by Holy Communion (confined for them in the Latin Liturgy to the species of bread), which they can receive also outside of the time of Mass and at home in case of illness. Such is the participation of the laity in the Liturgy, and although they are limited to tempus prayer, all the active portion is performed by the clergy.

Regularly, no layman may sit within the **presbyterium**, or sanctuary, nor may he read any part of the Liturgy, much less pray publicly, or serve the priest at the altar, or, above all, offer the Sacrifice. However, owing to the almost complete disappearance of the inferior clergy, there has gradually arisen the custom of appointing lay persons to perform certain minor clerical duties. In most of our churches, the choirboys, schoolboys, sacristans, and chanters, serve low Masses and Missa cantatae, occupy places in the sanctuary, and act as acolytes, ministers, and even as lectors. On such occasions they are given, at least in solemn services, a clerical costume, the crosier and surplice, as if to admit them temporarily to the ranks of the clergy and thus recognize and safeguard the principle of excluding the laity. It is only to the Mass, to the Mass, and to all liturgical services: the laity are separated from the clergy. In processions especially, confraternities and other bodies of the laity precede the clergy; the women being first, then the men, next regular clergy, and lastly the secular clergy.

In the administration of the sacraments, the sacramentals, and other like liturgical offices, the same principle applies, and ordinarily everything is reserved to the clergy. But it should be mentioned that the laity may administer baptism (q.v.) in cases of necessity, and though not of practical importance with regard to adults, this frequently occurs when children are in danger of death. In the early ages, the faithful carried away the Blessed Eucharist to their homes and gave themselves the Holy Communion (cf. Tertullian, "Ad uxorern", ii, 5). That was a purely material administration of the sacrament, and hardly differed from the reservation of the Blessed Eucharist for the sick; in other ages, the consecrated host was placed in the hand of each communicant. We should mention also the use of the blessed oil by those who were sick, if that be considered an administration of extreme unction (cf. the Decretal of Innocent I to Desentius of Eugubium, n. 8; serm. cclxv and cclxxii; appendix of the works of St. Augustine, really the work of St. Cassarius of Arles). But those practices have long since disappeared.

As to matrimony, if the sacrament itself, which is none other than the contract, has as its authors the lay persons contracting, the liturgical administration is reserved to the ecclesiastics. It may be asked whether, in those cases, there is nothing to prevent the laity from using the liturgical prayers in their private devotions, from reciting the Divine Office, or the various Little Offices drawn up particularly for them, or from joining in associations or confraternities to practise together and according to rule certain pious exercises, the confraternities having been formed lawfully in virtue of episcopal approbation.

(2) As to Doctrine.—The body of the faithful is strictly speaking the Ecclesia docta (the Church taught), in contrast with the Ecclesia docens (the teaching Church), which consists of the pope and the bishops. When the question is whether the laity, when teaching of religious doctrine, the laity is neither competent nor authorized to speak in the name of God and the Church (can. xii et sq. lib. V. tit. vii, "De haereticis"). Consequently they are not allowed to preach in church, or to
undertake to defend the Catholic doctrine in public discussions with heretics. But in their private capacity, they may most lawfully defend and teach their religion by word and writing, while submitting themselves to the control and guidance of ecclesiastical authority. Moreover, they may be appointed to give doctrinal instruction more or less officially, or may even orate, defend the faith, or give excellent help to the clergy in teaching catechism, the lay masters in our schools give religious instruction, and some laymen have received a missio canonica, or due ecclesiastical authorization, to teach the religious sciences in universities and seminaries; the importance of this, for the Church, is that the laymen are to be submissive to the legitimate teaching authority.

(3) As to Jurisdiction and Administration.—The principle is that the laity as such have no share in the spiritual jurisdiction and government of the Church; but they may be commissioned or delegated by ecclesiastical authority to exercise certain rights, especially when there is no question of strictly spiritual jurisdiction, for instance, in the administration of property. The laity are incapable, if not by Divine law at least by canon law, of real jurisdiction in the Church, according to chap. x, "De constit." (lib. I, tit. ii): "Alius autem non ordinatur nisi persona sacerdotalis a pontifici constituta," i.e., the laymen have no authority over things or persons ecclesiastical; it is their duty to obey not to command. Therefore no official acts requiring real ecclesiastical jurisdiction can be properly performed by the laity; if performed by them, they are null and void. A layman therefore cannot be at the head of a Church or any Christian community, nor can he legislate in spiritual matters, nor act as judge in essentially ecclesiastical cases. In particular, the laity (and by this is not meant ordinary laymen, who do not bestow ecclesiastical jurisdiction on clerics under the form of an election properly so called, conferring the right to an episcopal or other benefice. An election by the laity only, or one in which the laity took part, would be absolutely null and void (c. liv., "De elect.") (see ELECTRON.) But this refers to canonical election strictly so called, conferring jurisdiction or the right to receive it; if it is merely a question, on the other hand, of selecting an individual, either by way of presentation or a similar process, the laity are not excluded, for the canonical institution, the source of spiritual power, is ecclesiastical, not ecclesiastical authority. That is why no objection can be raised against the principle we have laid down from the fact that the people took part in the episcopal elections in the first ages of the Church; to speak more accurately, the people manifested their wish rather than took part in the election; the real electors were the clerics; and lastly, the bishops who were present were the judges of the election, so that in reality the final decision rested in the hands of the ecclesiastical authority. It cannot be denied that in the course of time the secular power encroached on the ground of spiritual power, a matter there was the case of the Pope taking the temporal elections; but the Church always asserted her claim to independence where spiritual jurisdiction was involved, as may be clearly seen in the history of the famous dispute about investitures (q. v.).

When jurisdiction properly so-called is duly protected, and there is question of administering temporal goods, the laity may and do enjoy as a fact real rights recognized by the Church. The most important is that of presentation or election in the wide sense of the term, now known as nomination, by which certain laymen select for the ecclesiastical authorities the person they wish to see in temporal benefices or offices. The best known example is that of nomination to sees and other benefices by temporal princes, who have obtained that privilege by concor-

data (q. v.). Another case recognized and carefully provided for in canon law is the right of patronage. This right is granted to those who from their own resources have established a benefice or who have at least amply endowed it (contributing more than one-third of the revenue). The patrons can, from the moment of foundation, reserve to themselves and their descendants, the right to choose the person to whom they will give the benefice, or to mention other privileges rather honorary in their nature; in exchange for these rights, they undertake to protect and maintain their foundation. The right of active patronage consists principally in the presentation of the cleric to be invested with the benefice by the ecclesiastical authority, and is subject to certain conditions. The right of passive patronage consists in the fact that the candidates for the benefice are to be selected from the descendants or the family of the founder. The patrons enjoy by right a certain precedence, among other things the right to a more prominent seat in the churches founded or supported by them; sometimes, also, they enjoy other honours; they can reserve to themselves a part in the administration of the property of the benefice; finally, if they fall upon evil days, the Church is obliged to help them from the property that was acquired through the generosity of the laity who established and endowed it. It is clear, and particularly that of presentation, are concessions made by the Church, and not privileges which the laity have of their own right. It is but equitable that those who furnish the resources required by the Church should not be excluded from their administration. For this reason the participation of the laity in the administration of church property, especially parish property, is justified.

Under the different names such as, "building councils", "parish councils", "trustees", etc., and with rules carefully drawn up or approved by the ecclesiastical authorities, and often enshrined in civil law, there exist almost everywhere administrative organizations charged with the care of the temporal goods of churches and other ecclesiastical establishments; most of the members are laymen; they are selected in various ways, generally co-optation, subject to the approval of the bishop. But this honourable office does not belong to the laity in their own right; it is a privilege granted to them by the Church, which alone has the right to administer her own property (Conc. Plen. Baltim. III, n. 284 sq.); they must conform to the regulations and act under the control of the ordinaries. The reservations of ecclesiastical jurisdiction rests; lastly and above all, they must confine their energies to temporal administration and never encroach on the reserved domain of spiritual things (Conc. Plen. Baltim. II, n. 201; see BUILDINGS, ECCLESIASTICAL). Lastly, there are many educational and charitable institutions, founded and directed by laymen, and which are not strictly church property, though they are regularly subject to the control of the ordinary (Conc. Trid., Sess. VII, c. xv; Sess. XXII, c. viii); the material side of these works is not the most important, and to attain their end, the laity who govern them must be directed by the advice of their pastors, whose loyal and respectful auxiliaries they will prove themselves to be.

A. BOUDINON.

Lake Indians, called by themselves SENJUITE, and possibly identical with the LAHANNA of Lewis and Clark in 1805, a small tribe of Salishan stock, originally ranging along Columbia River in north-east Washington from about Kettle Falls to the British line. In 1850 Fort Colville with the Columbia was established by the Hudson Bay Company in their company but remained almost unchanged until Christianized in 1846, chiefly through the efforts of the Jesuit Father Adrian
Hoecker, who in that year established the summer mission of St. Paul at the Falls. In 1870 they were officially designated a mission. In 1871, going fishing, selling their furs to the traders, well fed and clothed, peaceful, friendly, independent, and Catholic in religion. They numbered then 239. In 1872 they were collected with other kindred tribes upon Colville Reservation in the same territory. With the other confederated tribes they were received by the mission of Saint John Francis Regis, at Ward, in charge of the Jesuit Fathers, assisted by the Sisters of Charity of Providence. They numbered 283 in 1908, a considerable increase over earlier figures. (See also KALISPEL INDIANS."

James Mooney.

**Lallemant, Charles**, b. at Paris, 17 November, 1587; d. there, 18 November, 1674. He was the first superior of the Jesuit missions in Canada, and his letter to his brother dated 1 August, 1626, inaugurated the series of "Relations" about the missionary work in that country. Thwarted by the Trading Company at Quebec in his efforts to evangelize the Indians, he went to France to obtain permission to return to America his vessel was captured by Kirke who was then blockading the St. Lawrence, and he was sent as a prisoner to England. A second attempt resulted in shipwreck off Cape Canso, and on his way back to France in a fishing smack which picked him up he was wrecked a second time on the coast of Spain. He finally reached America in 1632 after Quebec was restored to the French. He was the friend and confessor of Champlain, who died in his arms. He returned again to France in 1638, where he became procurator of the Canadian missions, vice provincial and superior of the "Professed house" in Paris. It was he who obtained the concession of the Island of Montreal for the colony of Dauversière, and he also got Maisonneuve and Jeanne Mance to engage in the undertaking. When there was question of appointing the first Bishop of Quebec, his candidate was Lallemant, the superior of a spiritual work, not generally known, entitled "La vie cachée de Notre Seigneur Jésus-Christ," and is not to be confounded with Louis Lallemant who is the author of "Les conférences spirituelles".

T. J. Campbell.

**Lallemant, Gabriel**, Jesuit missionary, b. at Paris, 10 October, 1610; d. in the Huron country, 17 March, 1649. He was the nephew of Charles and Jerome Lallemant, and became a Jesuit at Paris, 24 March, 1630. He arrived in Canada, 20 September, 1649, and after remaining in Quebec for two years, was sent to the Huron missions as de Brébeuf's assistant. He was scarcely a month when the Iroquois attacked the settlement of St. Ignatius which they burned, and eleven men were killed on the mission. Lallemant was then de Brébeuf and Lallemant. After setting fire to the village and killing many of the inhabitants, they led the two priests back to St. Ignatius where they were tied to stakes and after horrible torture put to death. Lallemant stood by while his companion was being killed. De Brébeuf expired at the last moment. Lallemant, who had been with them six that evening and lasted until nine o'clock next morning. When the Iroquois withdrew, the bodies of the two priests were carried over to St. Mary's where they were interred. Some of the relics of Lallemant were subsequently carried to Quebec.

T. J. Campbell.

**Lallemant, Jerome**, alias Hierosme, Jesuit missionary, b. at Paris, 27 April, 1593; d. at Quebec, 16 November, 1655. He returned to the missions of Paris, 20 October, 1610. Arriving in Canada 25 June, 1635, he immediately went to the Huron missions as superior. He took the first regular census of the Indians, instituted the organization of the donnes or lay assistants of the missionaries, and re-arranged the different missionary posts attached to the new establishment of St. Mary's on the Wye the central one. In 1645 he returned to Quebec as general superior. In 1656 he was recalled to France and in 1658 was made rector of the Royal college of La Flèche; but was hardly installed when he was asked for by Laval as vicar general of Quebec. He left at once for France, and acted as his vicar during all the troubles with the Governors d'Argenson, d'Avaugour, and de Mesy, and also with de Quelusy who was an aspirant for the Bishopric of Quebec. He remained superior and vicar-general until the end of his life. He wrote many of the "Relations," and also most of the only volume we have of the "Journal des Jésuits".

T. J. Campbell.

**Lallemant, Jacques-Philippe**, French Jesuit, b. at St.-Valéry-sur-Somme about 1660; d. at Paris, 8 April, 1707. Little is known of him beyond his writings. He took part in the discussions of the question of returning to America and in 1704 wrote the "Journal historique des assemblées tenues en Sorbonne pour condamner 'es Mémoires de la Chine" (Paris, 1700), a defence of his confère Leconte against the Sorbonniste, Jacques Lefèvre. In his "Histoire des Contestation sur la Diplomatique" (Paris, 1708) he sided with the Jesuits Hardouin and Papbroch against the Benedictine Mabillon. His principal works, however, are against the Jansenists. In close succession he published: "Le Père Quesnel séditieux dans ses Réflexions sur le Nouveau Testament" (Brussels, 1704); "Jansenius condamné par l'Eglise, par lui-même et par ses défenseurs" (St.-Augustin" (Brussels, 1705); "Le véritable esprit des nouveaux disciples de St-Augustin" (Brussels, 1706-7); "Les Hexaples ou les six colonnes sur la Constitution Unigenitus" (Amsterdam, 1714), with a number of pamphlets in defence of the same; "Entretiens au sujet des affaires présentées par rapport à la religion" (Paris, 1734-1743). The better to counteract Quesnel's "Réflexions morales," Lallemant composed, in collaboration with other Jesuits (e. g. Bouhours and Michel), "Réflexions morales sur le Nouveau Testament traduit en français" (Paris, 1713-24), which Fénéon styled very pious and one of the most read through any part of the sacred text. This work, translated into many languages, enjoyed a well-deserved popularity, and the latest edition (Lille, 1836) was warmly praised by the "Revue Catholique." Lallemant is also the author of "Le Sens propre et littéral des Psaumes de David" (Paris, 1709) and of "L'Imitation de Jésus-Christ, traduction nouvelle" (Paris, 1740), of which there have been countless editions and translations. The "Mémoires de Trévoux" (Aug., 1713, and May, 1714) contain several dissertations with Lallemant's initials, and the Jansenists attributed to him several writings like the "Mandement de M. de Vicintille contre les Nouvelles Ecclésiastiques" (1732) and the supplement to the "Nouvelles Ecclésiastiques" (1734-8).

**Lallemant, Louis**, French Jesuit, b. at Châlons-sur-Marne, 1588; d. at Bourges, 5 April, 1635. After making his studies under the Fathers of the Society of Jesus, he entered that order, and having completed the usual course of study and teaching which is
the lot of its younger members, he was ordained, and

taught philosophy and theology for some time until he

was made master of novices, an office he filled for four

years. He was, however, transferred to the post of di-
pointed director of the fathers in third probation; but

after three years in this difficult post he broke down in

health, and was sent to the college of Bourges, in the

hope that change of occupation would restore him.

The hope was not to be fulfilled; and he died after a

few months. He has been called the "Balthasat Alvares of

France, and not without reason.

His ideals were no less heroic and his efforts after

them as uncompromising as those of that great mas-
ter of spiritual life. Like him also, he expected from

others what he did himself. He set, therefore, the big-

gest idea before his disciples, especially the Fathers

of the third probation, and required them to rise to

such ideals. Moreover, as Father Balthasat Alvares

may be held to have contributed not a little, through

the great masters of spiritual life he formed, to fix that

special type of spirituality which characterized the

Spanish Jesuits, so to Father Lalor's teaching may

be traced in no small measure the special spirituality of

the French Jesuits, which the eminent men who

came under his teaching and formation diffused

throughout the French provinces. He is known to

day chiefly by his "Doctrine Spirituelle," a collection

of his discourses and instructions. His pupils and, in

particular, his spiritual, Father Jean Rigoleuc, one of his disciples, and de-

tailing very thoroughly his spiritual method.

Champion, La Doctrine Spirituelle du P. Louis Lallemant (Paris, 1848); GUILLEMIN, Memoires de l'Assistance de France, 5 April; PATRIGNANI, Memoria della Compagnia di Gesù.

HENRY WOODS.

LALOR, TERESA, co-foundress, with Bishop Neale of

Baltimore, of the Visitation Order in the United

States, b. in Ireland; d. 9 Sept., 1846. Her child-

hood, spent on a farm, gave such evident fea-

tures of a vocation to the religious life that Bishop

Napahan of Ossory had made arrangements for her

entrance into a convent of his diocese, when she

was obliged to accompany her family to America.

Arriving at Philadelphia in 1797, she became ac-

quainted with Père d'Herin, pastor of St. Joseph's

church in that city, and under his direction she

devoted herself to works of piety and charity.

He recognized in her an instrument for the formation of

a religious community, and with this object in view

an academy was opened for the instruction of girls.

But an epidemic of yellow fever carried off Miss

Lalor, and as Father Neale was transferred in 1799 from Philadelphia, to become president of Georgetown College, she also went to Georgetown, D. C., and was for a time domiciled with a small community of Poor Clares, exiled from France. On the departure of the Poor Clares from America, Miss Lalor and two companions opened a school of their own in a

house which stood within the present grounds of the Visitation convent, the oldest house of the order in the United States. The "pious ladies," as they were
called, aspired to become religious, and, as Bishop Neale was greatly in favour of the rule of St. Francis de Sales, he wished to affiliate them with the order

founded by the saintly Bishop of Geneva; but the disturbed condition of ecclesiastical affairs in Europe prevented this until 1816, when he obtained a grant from Pius VII for the community to be considered as belonging to the Order of the Visitation, sharing in all the advantages that the order enjoyed. Miss Lalor and Teresa with two other sisters was professed on the feast of the Holy Innocents of that same year, and

became the first superioress of the Georgetown Con-

vent. She lived to see three other houses of the

instituted founded, of which the mother-house: Mo-

selle de Reims, Kew, and Bay Shore, N. Y., were transferred to St. Louis, in 1833; and Baltimore, in 1837. She was

assisted in her last moments by Archbishop Eccles, of Baltimore. She was about seventy-seven years of

age, forty-six of which had been spent in the enclosure where her remains repose, with those of Bishop Neale, in the crypt beneath the chapel of the convent

which they founded.

LATEROP (GEORGE PARSONS AND ROSE HAWTHORNE), A

Story of Courage (Cambridge, Mass., 1840); MS. of the Visita-

tion convent, Georgetown, D. C., a short account of the life

of the foundress of the Visitation Order in America.

E. DEVITT.

LA LUSERNE, CÉSAR-GUILLAUME, French cardinal, b.

at Paris, 1738; d. there, 1821. He studied at the

Collège de Navarre, and rose, through the influence of

his kinsman Lamoignon, to the See of Langres (1770),

thus obtaining the first benefice of the Palatinate. In this

capacity he took part in the Assemblée des Notables

(1788) and in the États-Généraux (1789). The calling

efforts of his desires to keep the "Constituante" within

the limits of moderation caused him to withdraw from

that body. In 1791, he refused to take the constitu-

tional oath and emigrated to Constance and Venice

where he gave a generous hospitality to the French

exiles and wrote extensively. Under the Restoration he

returned to France, became cardinal and state

minister (1817) and was re-appointed to the See of

Langres which he had resigned at the time of the Con-

stituent Assembly. His pastoral works are: "Oraison funèbre de Louis XV" (Paris, 1774); "Considérations sur divers points de la morale chrétienne" (Venice, 1795-

1799); "Explication des évangiles des dimanches et des fêtes" (Venice, 1807); "Considérations sur la déclaration du clergé de France en 1822" (Paris, 1821).

An excellent apologist and a loud exponent of Catholic faith and Christian ethics, La Luserne, like Frayssinous, Talleyrand-Périgord and Bausset, was a

belated representative of the old Gallicanism. His

efforts to revive it failed, owing partly to the fall of the

Bourbons and partly because of the galaxy of brilliant

sisters who, in "L'Avenir" and other publications, gave to France a definite Roman orientation.

J. F. SOLLIER.

LAMARCK (LA MARCK; post. abbr. Lam., zool. Lm.),

JEAN-BAPTISTE-PIERRE-ANTOINE DE MONET, CHE-

VALIER DE, a distinguished botanist, zoologist, and

natural philosopher, b. at Barentin in Picardy (de-

partment of Somme), France, 18 December, 1744; d. at

Paris, 18 December, 1829. His father, Pierre de

Monet, intended him for the priesthood, so Lamarck

first studied at the Jesuit college at Amiens. Upon

the death of his father, however, he joined, in 1671,

the French army in northern Germany, and on the day

of his arrival, during the War of the Spanish Succession, was made an officer on the field of battle for bravery.

When twenty-four years old he was obliged, on account of

illness, to leave the army with a very small pension.

While supporting himself by working as clerk in a

bank at Paris, he studied medicine, meteorology, and

botany in his spare hours. He never published medi-

cine, and his numerous meteorological writings have

no scientific value; the same is true of his physical and

chemical works, in which he opposed Lavoisier. They

were all written to support himself and his family.

It was otherwise with the different branches of biology:

from 1778 he was an able botanist, from 1794 a

zoologist, about 1800 began his speculative labours upon

the variation of species.

In 1778 he wrote in six months the first complete

account of the flora of France, "Flora franciaca" (3

vols., Paris, 1778; 3rd ed. edited by de Candolle, 8

vols., 1805-15). Lamarck's work and in several treatises, Lamarck explained the
analytical, dichotomous system of determining the species of plants, a system originated by him and now much used. In classification he maintained the principle, in opposition to Jussieu, that a single part, no matter how small, was not sufficient for the classification of the plant but that, in classification, all parts should be considered. This work led to his acquaintance with Buffon and in 1779 gained his election to the Académie of Sciences. With Buffon's son he then travelled through Holland, Germany, and Hungary, once more in Paris, he joined the "Encyclopédie méthodique," for which he wrote the first four volumes of the "Dictionnaire de botanique" (Paris, 1783–96). In this work the genera of plants are skillfully treated in alphabetical order from A to P; the great collections of Paris being exhaustively drawn upon. The large atlas "Illustration des Genres," which accompanied the work, contains 900 plates. Lamarck began a "Histoire naturelle des végétaux" (Paris, 1802), as part of the compilation "Suites de Buffon"; Mirbel continued the "Histoire naturelle" from volume III to XV. In the meantime Lamarck had received, in 1799, the position of keeper of the Jardin des Plantes, assistant to Daubenton, but he soon lost it. At no time in his life he was in very prosperous circumstances. When the Muséum d'Histoire Naturelle was reorganized in 1793 there were no professors of zoology. The professorship for the lower animals was offered to Lamarck, and he had the courage at the age of forty-nine to teach himself zoology. He commenced his zoological lectures in 1794 and carried them on until blindness forced him in 1818 to transfer them to the entomologist Latreille.

Lamarck began by separating the animal kingdom into the two important divisions of vertebrates and invertebrates. He sought to develop the classification of invertebrates ("Système des animaux sans vertèbres", Paris, 1801), and established numerous new genera and species for them. His most important zoological work is the "Histoire des animaux sans vertèbres" (7 vols., Paris, 1815–22; 2nd ed., 11 vols., 1838–45). Particular mention should be made of Lamarck's investigations concerning molluscs, especially his studies of the geologically important fossil molluscs. For the last twenty years his reputation has been far greater than in his lifetime in a steadily increasing degree. His theoretical views concerning life-forms which were often regarded by his contemporaries, as by Cuvier, only as droll, fantastic crotchets, unworthy of notice or even of contradiction, are now considered by many biologists as showing in the highest degree the originality of genius. These views are expressed in numerous treatises issued during the period 1802–20 but especially in his work "Philosophie zoologique" (2 vols., Paris, 1809, 1839, 1873, etc.; lately translated into other languages). They are the basis of that form of evolution which as Lamarckism, and of late in sharp opposition to Darwin's neo-Lamarckism, has distinguished adherents among biologists, zoologists, and paleontologists. These adherents, however, do not agree among themselves. Every year in increasing number appear popular and scientific works upon Lamarck and Lamarckism. His ideas were partly influenced by Maillet, Condillac, Rousseau, and especially by Buffon. Lamarck can with more right than Darwin be called the originator of the theory of evolution, just as he was also the first to choose the form of a genealogical tree to illustrate the genetic connection of organisms. According to him only a few species have died out; for the most part they have been modified. However, the work of Lamarckism means almost all the opposing forces, postulated by Lamarck, of phylogeny: the use or disuse of the organs, occasioned by need, consequently by a factor inherent in the life-form, is said to call forth adaptations which become permanent by heredity. Lamarck was, therefore, a vitalist, not a materialist; he was also neither an atheist, nor irreligious, nor an opponent of the Scriptures. On the contrary, in regard to the creation of man he frankly asserted the authority of the Bible higher than his own ideas. At least there is no valid reason for regarding his words relative to this as hypocritical, as many Lamarckians do. Lamarck's name is perpetuated in botany in the genera Monetia, Markea, Lamarchea, and Lamarcia. In 1809 a monument to him was unveiled in the Museum d'Histoire Naturelle at Paris.

Of the extensive literature on Lamarck may be mentioned:
Cuvier, Éloge de Lamarck (Paris, 1833); Cosson, The Origin of the Fossil (New York, 1887); Packard, Lamarck; the Founder of Evolution (New York, London, 1859); Darwinius and Lamarckismus (Munich, 1906); Lortet, Verleihungen über Descendenztheorien (Geneva, 1906–08); Borchardt, Geschichte der Zoologie (Leipzig, 1917); Pierron, Goupil, and Delage in Acad. des Sciences, Inst. de France, CXLIX (Paris, 1899); Rödl, Geschichte der biolog. Theorien (Leipzig, 1895–99).

Joseph Rompel

Lamartine, Alphonse de, poet, b. at Mâcon, Saône-et-Loire, France, 21 Oct., 1790; d. at Paris, 1 Mar., 1869, a son of a noble and Christian family, Lamartine at an early age read selected passages from the Bible, later from Fénelon, Bernard, Saint-Pierre, Chateaubriand, Mme de Staël, Racine, Voltaire, Parny, and among foreign poets, Dante, Petrarch, Shakespeare, Ossian, especially the last, who was then very popular. About the age of twenty he met at the house of one of his relatives at Naples a little cigarette girl called Graziella, who captured his heart or his views concerning his works. Two years later, in 1814, when he was a member of the life-guards, he made the acquaintance of a delicate young woman, the wife of a physician named Charles, who died shortly afterwards. This ideal passion and the grief which followed so soon upon its blossoming revealed him to himself. Henceforth he had been an imitator; henceforth he would accept no guide save his own inspiration. Madame Charles is the Julie of his "Rahel" and the Elvire of his poems. He made his entrance into the field of poetry by a masterpiece, "Les Méditations Poétiques" (1820), and awoke to fullness; he may be said to have taken glory by storm. His other poetical works are "Les Secondes Méditations" (1823); "Harmonies Poétiques et Religieuses" (1830); "Jocelyn" (1836); and "La Chute d'un Ange" (1838); two fragments of a great epic which he dreamed of dedicating to humanity, and lastly the "Recueillements Poétiques" (1839), in which he returned to lyricism, but without equaling his early works. He had already made himself known in prose. In 1835 he published the "Voyage en Orient," a brilliant and bold account of the journey he had made in royal luxury, to the countries of the Orient, and in the course of which he had lost his only daughter. Henceforth he confined himself to prose. He published volumes on the most varied subjects (history, criticism, personal confidences, literary conversations) especially during the Empire, when, hav-
Lamb retired to private life and having become the prey of his creditors, he condemned himself to what he called “literary hard-labour in order to exist and pay his debts”. He finally retired to his native town of Poissy, where he wrote the “Histoire des Girondins” (1847). Lamartine had long been taking part in politics, and had been elected a member of Parliament in 1833. He displayed astonishing ability as an extempore speaker, his brilliancy and grace being joined to fluency and action, and he formed a formidable opposition against the government of Louis-Philippe. The “Histoire des Girondins” was an episode in this: it was written with the desire to glorify the principles and the men of the French Revolution, without, however, approving their crimes. Immediately becoming popular the author shook in the provincial government at the death of the monarchy (1848). But his popularity was ephemeral and the Coup d’état of 2 December, 1851, caused his return to literature for the remainder of his life. He died quietly, almost forgotten.

In him France lost a great poet; Lamartine may be reproached with not paying sufficient attention to the poetic vocation for which he affected an aristocratic disdain. Hence his lack of revision and faultiness of plot, whenever his plot required detailed thinking out, as in his longer compositions; hence also his carelessness in rhyme and sometimes even in syntax. Even when he is an improviser who abandon himself to nature. But on the other hand he displays great simplicity, imagination, ease, fullness, and melody.

When the “Meditations” first appeared they revealed to France an entirely new kind of poetry, one which, according to the phrase of the author, “c’est un jeu stérile de l’esprit pour renaitre fille de l’enthousiasme et de l’inspiration”. In fact, despite the softness of the sentiments to which he abandoned his heart, he was a writer of rare elevation. No poet has sung of God with more Christian love than he in his earliest works; though in later life he became a mere spiritualist, he returned in his old age to the religion of his youth, and died the death of a Christian. But at every period he loved to see the Creator through the transparent veil of the creature and to sing to Him hymns of adoration.

Lamb, Paschal, a lamb which the Israelites were commanded to eat with peculiar rites as a part of the Passover celebration. The Divine ordinance is first recorded in Exodus, xii, 3–11, where Yahweh is represented as giving instructions to Moses to preserve the Hebrews from the last of the plagues inflicted upon the Egyptians, viz. the death of the firstborn. On the tenth day of the first month each family (or group of families, if they are small) is commanded to take a lamb without blemish, male, of one year, and keep it until the fourteenth day of the month, and sacrifice it in the evening. The blood of the lamb must be sprinkled on the transom and doorposts of the houses in which the paschal meal is taken. The lamb should be roasted and eaten with unleavened bread and wild lettuce.

The whole of the lamb must be consumed—head, feet, entrails—and if anything remains of it until morning it must be burned with fire. The Israelites are commanded to eat the meal in haste, with girded loins, shoes on their feet, and staves in their hands, “for it is the Phase (that is, Passage) of the Lord”. The blood of the lamb on the doorposts served as a sign of immunity against the destroying angel, who smote in one night all the firstborn in the land of Egypt, both man and beast. This ordinance is repeated in abridged form in Numbers, xix, 11, 12, and again in Deuteronomy, xvi, 2–6, where sheep and oxen are mentioned instead of the lamb.

That the Paschal Lamb prefigured symbolically Christ, “the Lamb of God”, who redeemed the world by the shedding of His blood, and particularly the Eucharistic banquet, or new Passover, has always remained the constant belief of Christian tradition.

Lamb, The, in Early Christian Symbolism.—One of the few Christian symbols dating from the first century is that of the Good Shepherd carrying on His shoulders a lamb or a sheep, with two other sheep at His side. Between the first and the fourth century eighty-eight frescoes of this type were depicted in the Roman catacombs.

The significance which may be attached to this symbol, according to Wilpert’s interpretation, is as follows. The lamb or sheep on the shoulders of the Good Shepherd is a symbol of the soul of the deceased being borne by Our Lord into heaven; whereas the two sheep accompanying the Shepherd represent the saint already enjoying eternal bliss. This interpretation is in harmony with an ancient liturgical prayer for the dead of the following tenor: “We pray God... to be merciful to him in judgment, having redeemed him by His death, freed him from sin, and reconciled him with the Father. May He be to him the Good Shepherd and carry him on His shoulders [to the fold]. May He receive him in the following of the King, and grant him to participate in eternal joy in the society of the saints” (Muratori, “Lit. Rom. Vet.”, I, 751). In catacomb frescoes this petition is represented as already granted; the deceased is in the company of the saints.

Another cycle of catacomb paintings (not numerous) represents a lamb, or a sheep, with a milk-pail either on its back or suspended from a pastoral staff. A unique fresco of this order shows a shepherd milking a sheep, while still another shows a milk-pail on an altar between two sheep. The frescoes of this type (of the sheep and milk-pail) were, until recently,
generally regarded as symbols of the Eucharist, but
Mgr. Wilpert dissent from the received opinion, and
regards all frescoes in which allusions to milk occur as
symbolic of the joys of Heaven. While both the earli-
ner interpretations depend on a well-known text of the
Acts of Sts. Perpetua and Felicitas. While in
prison awaiting martyrdom, St. Perpetua tells us she
believed in a vision "an immense garden, and in the
centre thereof the tall and venerable figure of an old
man in the dress of a shepherd, milking a cow. When
Raising his head, he looked at me and said, 'Welcome,
my daughter.' And he called me to him and he gave
me of the milk. I received it with joined hands and
partook of it. And all those standing around said
'Ges. Amen.' And at the sound of the voice I awoke,
tasting an indescribable sweetness in my mouth." The
community of ideas between this description and the
catacomb frescoes of the sheep and milk-pail is so
apparent that, at first view, the current interpreta-
tion of this class of representation would seem to be
obviously accurate. Wilpert, however, calls atten-
tion to the fact that the things described in the
vision of St. Per-
petua took place
not on earth, but
in heaven, where the Eucharist is no longer received.
Hence he regards the frescoes of the milk-pail class as
symbolic of the joys which the soul of the deceased
possess in paradise.

The lamb, or sheep, symbol, then, of the first class
described, has, in all catacomb paintings and sar-
cophagi of the fourth century, always a meaning asso-
ciated with the condition of the deceased after death.
But in the new era ushered in by Constantine, the
Great the lamb appears in the art of the basilicas with
an entirely new significance. The general scheme of
apseal mosaic decoration in the basilicas that every-
where sprang into existence after the conversion of
Constantine, confounded in the main to that described
by St. Paulinus as existing in the Basilica of St. Felix
at Nola. "The Trinity gleams in its full mystery," the
saint tells us. "Christ is represented in the form of a
lamb; the voice of the Father thunders from heaven;
and through the dove the Holy Spirit is poured out.
The Cross is set above by a circle of light as by a
crown. The crown of this crown are the apostles
themselves, who are represented by a choir of doves.
The Divine unity of the Trinity is summarized in
Christ. The Trinity has at the same time its own em-
bles: God is represented by the paternal voice, and
by the Spirit; the Cross and the Lamb denote the
Holy Victim. The purple background and the pictur-
ery indicate royalty and triumph. Upon the rock He
stands Who is the Rock of the Church, from which
flow the four murmuring springs, the Evangelists, liv-
ing rivers of Christ" (St. Paulinus, "Ep. xxxii, ad
Severum", §10, P. L., LXI, 336). The Divine Lamb
was usually represented in apsidal mosaics standing on
the mystic mount, whence flow the four streams of
Paradise symbolizing the Evangelists; twelve sheep,
six on either side, were further represented, coming
from the cities of Jerusalem and Bethlehem (indic-
cated by small houses at the extremities of the scene)
and proceeding towards the Lamb. The lower sône,
in no longer in existence, of the famous fourth-century
mosaic in the church of St. Petronian, Rome, origi-
nally represented the lamb on the mountain, and prob-
ably also the twelve sheep; the existing sixth-century
apseal mosaic of St. Cosmas and Damian at Rome,
gives a good idea of the manner in which this subject
was represented.

According to the "Liber Pontificalis", Constantine
the Great presented to the Lateran baptistery, which
he founded, a golden lamb, resting on a golden
cross, which was placed between two silver statues of Christ
and St. John the Baptist; the Baptist is represented
holding a scroll inscribed with the words: "Ecce Agnus Dei, ecce qui tolit pecata mundi." From the
fifth century the head of the lamb began to be encir-
cled by the nimbus. Several monuments also show
the lamb with its head surmounted by various forms of
the Cross; one monument discovered by de Vogüé
in Central Syria shows the lamb with the Cross on its
back.

The next step in the development of this idea of
associating the Cross with the lamb was depicted in
a sixth-century mosaic of the Vatican Basilica,
which represented the lamb standing on a throne, at
the foot of a Cross studded with gems. From the
pierced side of this lamb, blood flowed into a chalice,
whence again it issued in five streams, thus recalling
Christ's five wounds. Finally, another sixth-century
monument, now forming part of the ciborium of St.
Mark's, Venice, presents a crucifixion scene with the
two thieves nailed to the cross, while Christ is repre-
sented as a lamb, standing erect at the junction of the
crosbeams. One of the most interesting monuments
showing the Divine Lamb in various circumstances is
the sarcophagus of Junius Bassus (d. 358). In four of
the spandrils between the niches of the sarcophagus,
Christ, in the character of a lamb, is represented as
follows: (1) raising Lazarus, by means of a rod, from
the tomb; (2) being baptized by another lamb, with a
dove dominating the scene; (3) laying the sick in
baskets, by the touch of a rod; (4) joining three
other lambs. Two other scenes show a lamb re-
cieving the Tables of the Law on Mount Sinai and
striking a rod whence issues a stream of water.
Thus, in this series, the lamb is a symbol, not only of
Christ, but also of Moses, the "Shepherd of the Three
Children in the fiery furnace." The fresco in the
cemetery of Praetextatus, showing Susanna as a
lamb between two wolves (the elders), is another
example of the lamb as a symbol of one of the
ordinary faithful.

Maurice M. Hassett.

Lambeck, Peter, generally called Lambechianus,
historian and librarian, b. at Hamburg, 13 April,
1628; d. at Vienna, 4 April, 1699. After studying
under private tutors and at the Johanneseum, he
entered in 1644 the gymnasium under the influence of
Friedrich Lindenborg, and especially of his mother's brother, Lucas Holste (Holstein, Hol-
stenius), the most distinguished philologist, anti-
quarian, and critic of his time. The latter had early
recognized his nephew's gifts, and entered into a lively
Correspondence with the lad of being, his
recommendation Peter went in 1645 to Holland to

continue his studies, and at the University of Amsterdam, came in contact with many scholars, especially the philologist Gerhard Johann Voss. He later left the Netherlands at his uncle's wish and went to Paris, where his relationship with the celebrated Holste, as well as his own abilities, secured him access to the most distinguished scholars of his time. At the age of twenty-one, he received the degree of Doctor of Laws. After finishing his studies, he made a tour through France, Liguria, and Etruria, and spent two years in Rome, where under the special direction of his uncle, who in the interim had become papal librarian, he undertook classical and historical researches. When barely nineteen years of age, he learned from the commentaries on Auli Gellii Noctes Atticas, Paris, 1647) had already brought him the approval of the learned public of Paris.

On his return to Hamburg, he was made in 1652 professor of history at the gymnasium, and in 1664 became rector. He had many enemies on account of his successes, and, being accused of atheism, decided to give up his position. He was confirmed by his unfortunate marriage in his decision to leave the country and return to Rome. Here he soon won the favour of Alexander VII. Queen Christina of Sweden, then resident at Rome, also exercised a great influence over him, and some time he entered the Catholic Church. To secure a permanent position he went to Vienna, where Emperor Leopold appointed him librarian and court historiographer. In this position he performed great services by his arrangement of the library, and especially by his catalogues of its treasures ("Commentaria in Bibliotheca Caesaris Vindobonensis libri VIII", Vienna, 1655-79; re-edited by Kollar, 1766-82). These catalogues are even of-day of value, being especially important for the numerous contributions they contain to our knowledge of the Old German language and literature. Of great importance for the history of literature is the "Friedrichshain" (Hamburg, 1659), of which a second enlarged edition was issued by J. A. Fabricius (Leipzig, 1710), with a biographical sketch of the author, published separately at Hamburg in 1724. The "Friedrichshain" was the first comprehensive history of literature, chronologically arranged. Lambeck also published among other works a history of his native town ("Origines Hamburgenses ab anno 808 ad annum 1292", 2 vols., 1652-61), and researches into the history of the Byzantine Empire ("Syntagma originum et antiquitatum Constantinopolitanarum", Paris, 1682).

PACIFICUS SCHLAGER.

Lambert (Lambers), Saint, martyr, Bishop of Maestricht, b. at Maestricht between 633 and 638; d. at Liége, between 698 and 701. His parents, who belonged to the nobility, gave him a very religious education, and chose as his preceptor St. Landaldaus, priest of the cathedral church at Maestricht. Later, Lambert received instruction from St. Theodardus (656 or 660), whom he succeeded in the See of Maestricht. During the calamitous days of Ebiron, Mayor of the Palace, Lambert, having defended the interests of King Childeric, was forced to flee from Maestricht.

When Pharamundus administered his see, Lambert spent seven years (674-81) in the well-known Abbey of St. Gall, and became so identified with it that he died there. In 681 Ebiron received his well-earned retribution, and Pepin of Heristal became mayor of the palace, at first of Austrasia, but in 687 of the whole domain of the Franks. Pepin, who liked Lambert, permitted him to return to Maestricht and resume the archbishopric. Some time later we find Lambert as a missionary in Toxandria, the present Holland and Brabant of to-day. In order to spread the Gospel, he descended the River Meuse as far as Tiel and laboured along its banks in company with St. Willibrord, who had come from England in 691. It is very probable that Lambert came in contact with Sts. Wiro, Plechelmus, and Otger, who had built a church and monastery on the Petersburg, later called the Odilenberg, near Roermond. St. Landradaid aided Lambert in founding the Abbey of Maastricht.

For several centuries a controversy has been carried on concerning the manner of the saint's death. According to tradition, Lambert became a martyr by his defence of marital fidelity. The Bollandists, Maillot, Valois, Leconte, Pagi and others held, however, that the saint was killed by Frankish nobles in anger for the failure of a plundering expedition. Kurth in 1876 critically examined the centuries-old tradition and documents, and in hand, proved beyond further doubt that Lambert was martyred because of his defence of the marriage tie. Pepin of Heristal lived for many years in irreproachable wedlock with the pious Plechelmus, who bore him two sons. Later he entered into unlawful relations with Alpais, who became the mother of Charles Martel. When no one had the courage to remonstrate with Pepin, Lambert went to his court like another John the Baptist. Alpais, fearing that Pepin might heed the admonitions of the saint, appealed to Emperor Louis the Deacon. Lambert had sought revenge and caused Lambert to be assassinated in the chapel of Sta. Cosmas and Damian, built by St. Monulphus, at Liége. His heart was pierced by a javelin while he was at the altar. The servants of the martyr placed his remains in a vessel, descended the Meuse to Maestricht, and buried them in the cemetery of St. Peter, in the vault of his parents, Aper and Herasplundis, beneath the walls of Maestricht. Between 714 and 723, St. Hubert exhumed the remains and had them translated to Liége, whither he had transferred, presumably as early as 723, his episcopal See. The saint is celebrated every 12th Sept., a large number of churches have St. Lambert as their patron.

Acta SS. Sept. V: STEPHANDRVS, VITA S. LAMBERTI IN MIONA, P. L. CXXXII, 643; DEMARIA, Vie de S. Lambert, ed. vers par H. Baudet de St-Amand, et documents du Xe siecle (Liége, 1878); ALBERS, DE H. LAMBERTVS, XXe bishop of Maestricht in "Archaeologia" van Alberdingh 74p (Amsterdam, 1898); KURTH, Etude critique sur St. Lambert et son premier biographe en Annales de l'Académie d'Archéologie de Belgique, XIII, 3rd series, III.

P. ALBAS.

Lambert Le Bâgé, priest and reformer, lived at Liége, Belgium, about the middle of the twelfth century. The son of poor people, he was ordained priest in a more or less legitimate way, and was probably parish-priest of St-Christophe at Liége. He began preaching against the abuses and the vices of the clergy, protecting against simony, the ordination of sons of priests, and certain customs in the administration of the Sacrament of Baptism and the celebration of Mass. Some of his opinions are not above suspicion, his ideas for instance concerning the day of rest, and Masses for the dead. In time he gathered about him a popular following, for whom he translated into the vernacular the Life of the Blessed Virgin, the Acts of the Apostles, and the Epistles of St. Paul, with commentaries; these translations unfortunately have not been preserved. Probably at this period he organized the association known as Bognes, whose name cannot be derived philologically from "to beg" (i.e. to pray), but is probably derived from the French word Bâgé (stammerer) given to Lambert in Whi's time, in fact the foundation is attributed by several contemporary and trustworthy authorities. But he also had adversaries, especially among the clergy, and it was to refute them that he wrote a defence of his theses, entitled "Antiphraenum Petri". His writings are considered a man very learned for his time; they are filled with quotations, not only from the Bible, but also from the Fathers of the Church (e. g. St. Gregory, St.
Augustine, and St. Bernard), and even from profane authors like Ovid, Virgil, and Cicero. Accused of heresy, he was condemned and imprisoned notwithstanding his appeal to the Holy See. He succeeded on many occasions to escape and went over to the Antiochian Calistus III, who had been recognized by Baoul of Za-}

ning, Prince-Bishop of Liège. He wrote to the pope several letters in justification of his doctrines and conduct, but the result of these endeavours is not known. In all probability he returned to Liège and died there in 1777.

M. A. PAYEN.

Lambert of Hersfeld, a medieval historian; b. in Franconia or Thuringia, c. 1024; d. after 1077. On 13 March, 1068, he entered the Benedictine monastery of Hersfeld and was elected prior in the same year, at Aschaffenburg, by Bishop Liutpold of Mainz. Immediately after his elevation to the priesthood he started on a pilgrimage to the Holy Land without previously obtaining the permission of his abbot. On 17 September, 1059, he returned to Germany and, according to a story reported by his abbot, Meginer, who was then lying on his deathbed, pardoned for this act of disobedience. Only once more during the rest of his life did Lambert leave his monastery. It was in the year 1071 when, by order of his abbot, Rudhard, he spent fourteen weeks at the monasteries of Siegburg and Saalfeld, studying the reform which had been introduced into these monasteries from the Italian monastery of Fruettaria in Piedmont. Lambert was not favourably impressed with the reform. In his opinion the old monastic discipline, if strictly observed, was more in accordance with the spirit of St. Benedict than the reform of Fruettaria.

Lambert of Hersfeld is best known to the world as the author of "Annales Lambertii", a chronicle of the world from its beginning to the year 1077. Up to the year 1040 the Annals of Lambert are little more than a reproduction of preceding Annals; from 1040 to 1068 they become more diffuse, and to some extent based on personal observation and the authority of eyewitnesses; from 1068 to 1077 they widen into an elaborate history of the times written in the elegant style of Sallust and ranking among the most perfect literary productions of the Middle Ages. The impartiality and truthfulness of Lambert as a historian were unquestioned until the middle of the nineteenth century. The German historian Ranke ("Zur Kritik fränkisch-deutscher Reichsanalisten") printed in "Abhandlungen der Berliner Akademie" (Berlin, 1854), 436 sq. was the first to discredit Lambert's reliability on the basis of his history, which has been corroborated by the results of succeeding historians, some of whom have charged him even with wilful falsifications of historical facts. Lefarath and Eigenbrodt (loc. cit. in bibliography below) attempted to rehabilitate Lambert, but with little success. They believe that the history may not have been a wilful falsifier of historical facts, as has been asserted by Delbrück and Holder-Egger (loc. cit. below) it is an established fact that he was prejudiced against Henry IV, so much so on account of the emperor's encroachments upon the rights of the pope as on account of the injury sustained by the monastery of Hersfeld from the encroachment of the tithes in Thuringia (see Lambert's "Annales", ad annum 1073, pp. 141 sqq.). Though not in sympathy with the great ideas of Gregory VII, he was prepossessed in his favour simply because the emperor was his enemy. His method, moreover, of writing history was to a great extent pragmatic. Instead of impartially investigating into the motives of his historical personages, he is often led by his prepossessions and prejudices to give a very subjective clothing to historical facts.

Lambert is also the author of "Vita Lulli" a life of Archbishop Lullius of Mainz who founded the monastery of Hersfeld in 768. It was written between 1063 and 1073, is of even less historical value than the "Annales", but, like the "Annales", it is a masterpiece of pure and elegant latinity. His history of Hersfeld, entitled "De institutione ecclesiae Hervefeldensis", has been lost, with the exception of the prologue and a few fragments. It was written before the year 1076. His epic on the history of his times has been entirely lost. Some historians thought it was identical with "Carmen de Bello Saxonic" written by an unknown author shortly after the victory of Henry IV over the Saxons (1075), but of late this opinion has lost ground. The complete works of Lambert were edited, with a learned disquisition, by Holder-Egger "Lamperti monachi Hersfeldensis opera" (Hanover, 1884). The "Annales" are printed separately in "Mon. Germ. Script. III, 22-263. They are also in P. L., up to the year 1040, CXLI, 450-582, and from the year 1040 to 1077, CXLVI, 1053-1248. Lambert's "Vita Lulli" is also printed in Acta SS., 16 October, VII, 1083-1091 and in "Mon. Germ. Script. XV, 1, 132-148. A new edition of the "Vita Lulli" has been obtained from the manuscript of the monastery (Innsbruck, 1894–99), II, 191, sq., and Kurze in "Deutsche Zeitschrift für Geschichtswissenschaft", New Series (Freiburg im Br., 1888), II, 174 sq., attempt to prove that Lambert is identical with Abbot Hartwig of Hersfeld.

LAMBERT

Lambert of St-Bertin, Benedictine chronicler and abbot, b. about 1060; d. 22 June, 1125, at St-Bertin, France. He came of a distinguished family, and, when still young, entered the monastery of St-Bertin. He afterwards visited several famous schools in France, having first laid the foundation of his subsequent learning by the study in his own monastery of grammar, theology, and music. For some time he filled the office of prior, and in 1095 was chosen abbot at once by the monks of St-Bertin and by the canons of St-Omer. He was thus drawn into closer relations with Clotild, and insinuated through the Cluniac monks and his own monastic reforms in his somewhat distant monacal monastery. Needless to say, he encountered no little opposition to his efforts, but, thanks to his extraordinary energy, he finally secured acceptance for his views, and rehabilitated the financial position of the monastery. He was a friend of St. Anselm and exchanged verses, still extant, with Reginald of Canterbury. Liihin- mann in "Neues Archiv der Gesellschaft für ältere Geschichte", XII, 1888, pp. 526; 531-34). Even during his lifetime, Lambert was lauded in glowing terms for his great learning by an admirer—not a monk of St-Bertin—in the "Tractatus de moribus Lambertii", ed. H. W. B. Hart ("Mon. Germ. Hist. SS.", V, 2, 946–53). This work mentions several otherwise unknown writings of Lambert, e.g. "Sermones de Veteres Testamento", also studies on free will, the Divine prescience, original sin, origin of

M. A. PAYEN.
LAMBERT, Jacques de, Jesuit missionary, b. at Rouen, 1641; d. at Quebec, 1710. He joined the Society in 1661, and proceeded to Canada in 1675 to labour almost uninterruptedly on the Iroquois missions until his death. At Onondaga he discerned the soul of a saint in the Algonquin captive, Catherine Tegawktha, whom he instructed and baptised. He helped his brother Jean to pacify the Iroquois, irritated by Governor de la Barre's untimely campaign. After a few years of respite in Quebec and Montreal, he returned to Onondaga at the request of the natives, only to leave it in 1709 through the intrigues of Abraham Tenaker. Like his elder brother, he lived among the Iroquois during a period when the rivalry of the French and English to secure the alliance of that fierce nation endangered the lives of the missionaries. Charlevoix says he was "one of the holiest missionaries of New France"; he was called the "Divine man" by the Indians.

JEAN DE LAMBERVILLE, elder brother of the preceding and also a Jesuit missionary, b. at Rouen, 1633; d. at Paris, 1714. He joined the Society in 1656, and came to Canada in 1669. He spent fourteen years with the Onondaga Iroquois. His patriotic aim was to maintain peace between the French and Indians, with the latter of whom his influence was paramount. When Denonville secretly prepared to avenge the humiliating conditions of peace resulting from the Barraque's rash expedition, Lamberville's life was greatly exposed through the governor's fault, as he had been deceived into convoking the assembly at Cataraqui where several Iroquois chiefs were treacherously captured and condemned to the galleys; his reputation for honesty and uprightness alone saved him. He vainly strove to prevent the devastation of the Tsaumontouan villages, of which the massacre of Laechin by Brébeuf (1639) was the retaliation. When the Onondagas and Mohawks harassed the French allies, Lamberville consented to negotiate peace. His wise diplomacy obtained a mitigation of the humiliating terms proposed at Governor Dongan's instigation, and Denonville duly praised his ability and devotedness. From France where shattered health forced him to retire, he tried to come back to his mission, but his death intervened in 1714. The Menology of the Society says that "he had the spiritual physiognomy of Brébeuf."

LIONEL LINDSAY.

Lambillette, Louis, Belgian Jesuit, composer and paleographer of Church music; born at La Hamaide, near Charleroi, Belgium, 27 February, 1827, and died at Paris, 27 February, 1855. His name is now chiefly remembered in connection with the restoration of Gregorian music, which he inaugurated and greatly promoted by his scientific researches and publications. At the age of fifteen, he became organist of Charleroi; he was subsequently in a similar capacity at Dinant-sur-Meuse. In 1830 he was appointed choirmaster and organist of the Jesuit College of Saint-Auchel, Amiens. While exercising these functions he also studied the classics, and at the end of five years, in 1835, he entered the Society of Jesus. The thirty years of his Jesuit life were spent successively in the colleges of Saint-Auchel, Fribourg, Estavayer, Briguelette and Vaugirard. While occupied in teaching and directing music, he gave himself up more entirely to composition, with a view to enhancing the splendour of both the religious ceremonies and the solemn occasions in those newly founded colleges. His powers of composition were necessarily checked by the limited ability of his performers, his orchestra, like his chorus, being entirely recruited from the ranks of the students; nevertheless his facility and his fluency were such that he could produce new music for church services in a very short time, producing in the course of time, besides his celebrated volumes of cantiques (French hymns or sacred songs), a vast number of motets, short oratorios, masses and secular cantatas, mostly for four-part chorus and orchestra. This music became very popular, especially in educational institutions. Late in life Lambillette regretted having published those written improvisations without taking time to revise them. After his death a revision of the greater part of them was made and published (Paris, 1870) by his pupil, Father Camille de la Croix, S.J., and by Louis Dessenne, organist of Saint-Sulpice, and afterwards of St. Francis Xavier, New York.

The irreligious levity of some of Louis Lambillette's church music is condemned by his own writings in which he upheld the correct principles; that he did not always remember them in practice is owing no doubt to the utterly secular style prevalent in his day. He spent his best energies in seeking to restore to Gregorian music its original sweetness and melodious character. The decadence of the liturgical chant had been brought about by its faulty execution, and this in turn was due to the corrupt versions that had been in use. As a Jesuit, he paid close attention towards a radical restoration the celebrated Benedictine Abbé Dom Guéranger, in his "Institutions Liturgiques", had laid down the principle that "when a large number of manuscripts of various epochs and from different countries agree in the version of a chant, it may be affirmed that those MSS. undoubtedly give us the phrase of St. Gregory." Acting upon this principle, Lambillette for many years gathered and compared all the documents that were to be found in the Jesuit houses. He next undertook to visit and re-visit almost every country of Europe, exploring libraries, secular and monastic, in search of the most ancient MSS. and treatises bearing on the history or the theory of the chant.

His success surpassed all his expectations when, in the library of the former Benedictine Abbey of St. Gall in Switzerland, he found himself in presence of what seems to be the most authentic Gregorian MS., in existence, i.e. a transcription from the original "Anthophorion of St. Gregory", brought from Rome to St. Gall by the monk Romanus in the closing years of the eighth century. The doubts of Féts and Danjou regarding the identity of this document are proved by Lambillette to be founded on mere conjectures. This volume of 131 pages of old parchment, the elegant binding of which depicts ancient Etruscan sculptures, contains all the Graduals, the Alleluias, and the Tracts of the whole year, in the ancient neumatic notation (a sort of musical stenography), together with the so-called Romanian signs, i.e. the special marks of time and expression added by Romanus. The discovery was not preceded, not without serious difficulty, in obtaining permission to have a facsimile of this manuscript made by an expert copyist. This he published (Brussels, 1851), adding to it his own key to the neumatic notation, and a brief historical and critical account of the document. The appearance of the "Anthophorion de St. Grégoire" made a deep impression on the
LAMBIN, 760
LAMBRUSCHINI

A learned world, and obtained for its author a Brief of congratulation and encouragement from Pope Pius IX, 1 May, 1852, and a very honourable mention from the Pope himself in his Bull of 12 June, 1852, the same year. Lamblin now undertook to embody the results of his investigations in a new and complete edition of the liturgical chant books. He lived to finish this extensive work, but not to see its publication. The Gradual and the Vesperal appeared 1855-1856 in both Gregorian and modern notations, under the editorship of Father Dufour, who was for years the successor of Lamblin the elder. He also published the "Esthétique," a volume of 418 pages, 8vo., setting forth Lamblin's views on the theory and the practice of Gregorian music. This treatise is the best testimony to the author's untiring zeal and critical ability.

Dom Pothier, the learned Benedictine, who has gone over the same ground, and who has just succeeded in completing the Gregorian restoration, says of the "Esthétique" that it is "filled with precious information" (Mélanges Grégoriennes, p. 145, note). At the same time he calls attention to some serious errors in translation, and even in reading, on the subject of rhythm, which, he holds, have been conclusively refuted by Chanoine Contier, in his "Méthode de Plain Chant," pp. 96 et seq. De Monter also speaks of grave errors and numerous assertions contrary to its own method, that have crept into the treatise. He attributes the fault to Lamblin in his his Lamblin's scales to the editors of this posthumous work (p. 207). Lamblin's "Gradual" and "Vesperal" were adopted by only a small number of French dioceses.

The time had really not yet arrived for the practical application of theories, nor for the introduction of the full text of St. Gregory. This Lamblin seemed to have felt when he so far yielded to the temper of his generation as to make some of those very cuts and alterations which had been the chief reproach of former editions. Twenty-five years were still to elapse before the classical work in Gregorian music, the "Mélodies Grégoriennes" by Dom Pothier, O.S.B., could make its appearance (Tournay, 1880), and another twenty-five before the teaching of Dom Pothier was to receive official sanction and practical application through the Vatican edition, now in progress of publication. To Father Louis Lamblin belongs the credit of having successfully inaugurated this important work. By his writings the impulse of Gregorian restoration was forced upon the world; by his researches and especially by the publication of the "Antiphonarium of St. Gregory," this arduous enterprise was placed on a solid, scientific basis. His contemporaries placed the following inscription on his tomb at Vaugrard:

Qui cecinit Jesum et Mariam, eruditque tenebris Gregorium, hume superius inerme, Christi, choris.

Receive, O Christ, into Thy choirs above him who sang the praises of Jesus and Mary, and rescued the music of Gregory from the darkness of ages.

The detailed list of works is given by Sommervogel in Bibliothèque de l'Oeuvre de Jésus, IV (Paris, 1888); also by De Monter in Dictionnaire des biens et critique, I, p. 310. Louis Lamblin et ses frères, which contains a portrait by Jacquot, and two autographs (Paris, 1871); Didot. Nouvelle biographie générale; Fétis. Biographie des musiciens, 2nd ed.; Le Glat, Supplément au Dictionnaire de l'Art, 1856; Soullier, De la restauration du chant grégorien in Etudes religieuses, XLVI (1860), 12-15.

J. B. YOUNG.

Lamb, Denis (Dionysius Lambris), French philologist, b. about 1520, at Montreuil-sur-mer, in Picardy, 1572. The effects of the shock given to him by the Massacre of St. Bartholomew. He began his studies at Amiens. He entered the service of the Cardinal de Tournon, whom he accompanied on two visits to Italy (1549-53; 1555-60). In this way he saw Rome, Venice, and Lucca, and was brought into contact with Italian scholars such as Faerno, Muret, Sirisleo, Fulvio Orsini. During his sojourn in Venice, at the suggestion of the Cardinal de Tournon, he translated Aristotle's "Ethics" (1558). In the year he translated the same "Politics" (1567), and also various orations of the orators and of Demosthenes (1565, 1587). Shortly before his death he published a discourse on the usefulness of Greek studies and on the method of translating Greek into Latin (1572). On his return to France (1561) he was appointed royal professor of Latin language and literature in the Collège de France, but the ""Bible de Tours"" was transferred to the chair of Greek. However, excepting his translations and an edition of Demosthenes (1570), his most important works are editions of Latin authors: Horace (1561), Lucretius (1564), Cicero (1568), Cornelius Nepos (1569). In the matter of these four authors Lambin's work shows a marked advance, and opens a new era in the history of their text. He does not, however, indicate with sufficient exactness the manuscripts he consulted. It is evident that for Lucretius he had examined one of the two manuscripts recognized as fundamental by Lachmann. Moreover, the commentary on Horace and Lucretius is extensive and accurate, contains many quotations, correct remarks, and explanations based on a profound knowledge of Latin. Lambin does not affect the rigorous method of modern philologists. Like older scholars he is often capricious, arbitrary, erratic. Despite these defects, Lambin's edition of Cicero has an important value and is consulted even to-day.

In 1559 Muret published his "Variae Lectiones". Lambin recognized in it some of his own notes on Horace, and accused Muret of having abused his confidence and plagiarized him. In 1561 he published an answer to Muret. The two other friends, moreover, were separated by their tendencies. Muret had become a friend of the Jesuits, whom Lambin detested on account of their differences with the University of Paris. Lambin was regarded by the Catholics of Italy as inclined to heresy, although on 8 July, 1568, he, with seven of his colleagues, took the oath of Catholicism. Before his death Lambin had undertaken a commentary on Plautus, and had begun the notes on the thirteenth play, the "Mercator." His notes, though imperfect and unmethodical, were published (1767) after his death.

Lamburcshini, Luigi, Cardinal, b. at Sestri Levante, near Genoa, 6 May, 1775; d. at Rome, 12 May, 1854. As a youth he entered the Order of the Barnabites, on account of which his learning he was made consultor of several Roman Congregations, and in 1815 accompanied Cardinal Consalvi to the Congress of Vienna in the capacity of secretary. After his return to Rome he was made secretary of the Congregation of Extraordinary Ecclesiastical Affairs, then recently instituted by Pius VII, and thus took a great part in concluding concordats with various states, especially with Naples and Bavaria. In 1819 he was appointed Archbishop of Genoa and governed the archdiocese with prudence and zeal. His efforts to rescue the diocesan archives, his pastoral letters exhibit much spiritualunction. In 1827 Leo XII sent him as nuncio to Paris, but the Revolution of July, 1830, compelled him to interrupt his mission. On his return to Rome he was made a cardinal (1831) by Gregory XVI, who, on the resignation of Cardinal Bernetti, appointed Lam-
LAMBOT, JOSEPH, VENDEMBE, English martyr, b. 1569; d. at Newcastle-on-Tyne. The day of his death is variously given as 23 June, 23 July, and 27 July, and the year as 1592 and 1593; but from a letter of Lord Huntingdon it is clear he died before 31 July, 1592, and Father Holty’s Stonyhurst MS. says he died on a Monday, so that the probable date is 24 July, 1592. He was the second son of Thomas Lambton of Malton-in-Rydall, Yorks., and Katharine, daughter of Robert Birkhead of West BRANDON, Durham. He arrived at the English College, Reims, in 1584, and at the English College, Rome, in 1585. Being allowed to curtail his theological course, he was ordained priest when only twenty-three, and sent on the mission on 22 April, 1592. He was arrested at Newcastle on landing with the Ven. Edward Waterson, and condemned at the next assizes under 27 Eliz., c. 2. He was put down alive, and the depriver of Flen who acted as hangman refused to complete the sentence, which was at last carried out by a Frenchman practising as a surgeon at Kenton.

JOHN B. WADSWORTH.

LAMEGO, DIOCES OF (LAMECENSIS), situated in the district of Vizeu, province of Beira, Portugal. The city has a Gothic cathedral, with a high tower, and a Moorish castle, and is known as the meeting-place of the famous parliament of 1413, which decided the hereditary succession for the kingdom of Portugal and established the old feudal Cortes, convened for the last time in 1598; the Cortes of Lamego spoken of in modern Portuguese history is the one called by Dom Miguel after he had dissolved the constitution in 1825. According to local but unreliable tradition, he received the Gospel from St. James the Greater, or St. Paul. Many Portuguese authorities mention as first Bishop of Lamego Petrus Rathensis, who is said to have been a disciple of the Apostle St. James, and who subsequently became first Bishop of Braga and a martyr (see BRACA, ARCIDIACONE OP.). The authentic history of the See of Lamego begins with Bishop Sar- dinarius, whose signature appears in connexion with the Second (Third) Council of Braga (572) among the suffragans of the well-known Martin of Braga. Shortly before this, at the Council of Lugo (569), at the commission of King Theodomir, several new dio- ceses were created. It is probable, therefore, that the foundation of the See of Lamego took place between 569 and 572. Among its early bishops are: Philippus (c. 580-59), Profuturus (c. 630-33), Witaricus (c. 646), Filimirus (563-56), but scarcely more than their names is known. In 1190 the See of the Lusitanian sees was made, by which Lamego was placed under the jurisdiction of Mérida (Hefle, “Conciliengeschichte,” III, 2nd ed., Freiburg im Br., 110). From 693 to 576 there is a gap in the episcopal list of Lamego. On the invasion of the Moors, in 714, the Bishop of Lamego, a temporary, was obliged to take refuge in the Asturias. It is not until 576 that we again come across a Bishop of Lamego, Argimirus (Flórez, “Españ Grajada,” who is apparently identical with Argimirus (II) who, in 899, took part in the consecration of the cathedral of Compostela (cf. Lope Ferreiro, “Historia de la Santa A. M. Iglesia de Santiago de Compostela”, II, Santiago, 1899, 192). It is doubtful if even the few known bishops of Lamego who are mentioned during the time of the Moors (except Argimirus, Brandericus, Pantaleon, and Jocoubs) resided at all at Lamego; it is probable that they were only titular bishops, especially as Almanser of Cordova destroyed the city in 982. This confusion lasted till Ferdinand the Great reconquered the city in 1037 (or 1038) and the Church was reorganized. In 1071 a Bishop Peter of Lamego is mentioned in a deed of gift by the Infanta Francisca, daughter of Ferdinand III at the Church of Tuy. The see seems to have been vacant for several decades, as is evident from a letter of Pope Paschal I (1099-1118) to Bishop Mauritius of Cimbra. When Portugal was established as an independent kingdom, in 1143, by Alfonso I, the See of La- mego was revived and the Augustinian Mendicant Oridina.
(d. 1176) became the first bishop. It was at that
time a suffragan of Braga. At the instance of Arch-
bishop Peter of Santiago de Compostela, Innocent III,
in 1199, re-arranged the Dioceses of Coimbra, Vizeu,
Lamego, and Évora (the present Guarda), allotting
that of Braga to the Archdiocesie of Braga and the last
two to Santiago de Compostela. The Lamego, op. cit. IV,
274 sqq.; Lopez Ferreiro, op. cit. V, 29 sqq.). Lamego
remained a suffragan of Compostela until the Archdi-
cocese of Lisbon was established in 1394, after which it
was a suffragan of that see. The diocese was enlarged
in 1442, when the dioceses of Riba Côa was ceded to
Portugal, and the Kingdom of Portugal, enclosed the
district that belonged to the Spanish See of Ciudad
Rodrigo, but once joined to Portugal, it became part
of the Diocese of Lamego. Clement XIV (10 July,
1770) created the Diocese of Pinhel (Pinhelmis) in the
aforesaid district, which, however, was suppressed by
Leo XIII by the Bull "Gravissimum" (30 Sept.,
1881), which replaced Lamego under the metropolitan
of Braga and gave new limits to the diocese.
Lamego is bounded on the east by the Diocese
of Guarda, on the south by that of Vizeu, on the west
by Coimbra, and the north by Porto and Braga; it has
(1899) 273,741 inhabitants, 283 parishes, 283 parish
churches, 1144 public chapels, 314 secular priests,
one college for boys at Lamego conducted by Benedictines;
2 houses of Portuguese Franciscan nuns, one house of Sisters of St.
Joseph of Chuyé, and one of Franciscan nuns. The present
bishop (1910) is Francisco José de Veira e Brito,
who was born 5 June, 1850, at Rendufeio (Archdio-
cese of Braga), studied at Coimbra, was professor of
theology at the seminary at Braga, also canon and
vicar-general there. On 13 Jan., 1892, he was nomi-
nated to the See of Angra (Azores), and in 1902 was
transferred to Lamego. He restored the cathedral and
the palace, studied the cathedral seminary, and assisted in the
founding of a new Catholic workingmen's club.

GREGOR REINHOLD.

Lamennais, (1) Félicité Robert de, b. at Saint-
Malo, 29 June, 1782; d. at Paris, 27 February, 1854. His
father, Robert de Lamennais, was a merchant of Saint-Malo,
who, on the request of the States of Brittany in acknowledgment of his
patrician devotion. Of the six children born of his marriage with Gratienne
Lorin, the best-known are Jean-Marie (see below) and
Félicité. The latter, though delicate and frail in phys-
ique, early exhibited an exuberant nature, a lively but
indocile intelligence, a brilliant but highly impression-
able imagination, and a will resolute to obstinacy and
vehement to excess.

Education.—At the age of five Lamennais lost his
mother, and one absorbed in business, was the
obliged to confide the education of Jean-Marie and Fé-
licité to Robert des Sourdains, the brother-in-law of his
wife, who had no children of his own. Jean-Marie and Félicité—or Féli,
as he was called in the family—were
taken to live with their uncle at La Chénaine, an estate not far from Saint-Malo, which Félicité was afterwards
to make famous. At La Chénaine there was a well-
filled library in which works of piety and theological
books were mingled with the ancient classics and the
works of the eighteenth-century philosophers. Féli-
cité was not very docile at his lessons, and, to punish him, his uncle sent him to Saint-Sulpice, where he
was supposed to be shut up in the library. The child acquired a taste for the books he
found around him, and read voraciously and indis-
criminately all that came to his hands, good and bad. He even multiplied reasons for being shut up in the li-

Chénais, while his brother was called, as vicar-general, to Saint-Brieuc. There Félicité completed another work, in which also he had his brother’s collaboration, and which was to have been printed and published at Paris in 1814. In opposition to Napoleon, who wished to be free to meet the Pope in person, the brothers vindicated the pope’s exclusive claim to the canonical institution of bishops. This work marked the beginning of Lamennais’s long struggle against Gallicanism. However, the fall of Napoleon, coming some months before the book appeared, made it no longer appropriate, and it was not actually a success of the time. Lamennais next published a violent article against the imperial university; indeed, when Napoleon returned from Elba, the young writer, thinking himself insecure in France, went over to England, where he found a temporary asylum with M. Carron, a French priest who had established in London a school for the children of émigrés.

On his return to France after the Hundred Days, Lamennais made M. Carron his confidant and took up his residence near him in Paris. Under the influence of this worthy priest and on the advice of M. Beysserre, a Sulpician, he decided, though not without strong repugnance and some sharp prickings of conscience, to take the Holy orders, and was ordained a priest on 9 March, 1817.

Struggle against Infidelity and Gallicanism.
—Towards the end of the same year appeared the first volume of the “Essai sur l’indifférence en matière de religion”. From the beginning to end the book was a vigorous attack on that indifference which appears (1) among those who, seeing in religion nothing but a political institution, think it a necessity only for the masses; (2) among those who admit the necessity of a religion for all men, but reject Revelation; (3) among those who recognize the necessity of a revealed religion, but deny all the truths which that religion teaches with the exception of certain fundamental articles. While open to some criticism in regard to the development of its ideas and the force of some of the arguments employed, the “Essai” brought to Catholic apologetics a new strength and brilliancy, and at once commanded public attention. Not content with a defensive attitude in the presence of incredulity, it attacks the enemy boldly, supported by all the resources of dialectic, invective, irony, and eloquence. The clergy and all educated Catholics thrilled with joy and hope, when this champion entered the lists as one of the fathers of the Church. Indeed with Bossuet and Pascal that this priest, yesterday unknown, was now compared. In the pulpit of Notre-Dame de Paris Frayssevaux hailed Lamennais as the greatest thinker since Malebranche. Meanwhile, editions of the “Essai” came rapidly from the press; 40,000 copies were sold within a few weeks, it was translated into many foreign languages, and its perusal affected in some places notable returns, in others brilliant conversions to Catholicism. Some of these converts, such as Mme de Lacan (afterwards, by her second marriage, the Baronesse Cottu), Benoît d’Azy, Sénac, Boé, and other first-hand epistolary correspondents of Lamennais. These letters, with other published since then or about to be published (addressed to such friends as Mme Cornulier de Lucinière, de Vitrolles, Coriolis, Montalembert, Berruyer, Marion, Vaurin, David Richard), add considerably to our knowledge of his writings, and add considerably to the last knowledge of his works. With their aid we can witness the intimate workings from day to day of a mobile and impressionable mind; in them we perceive an aspect of his character which so seldom appears in his other works—his loving, kind, and tender disposition, lavish in devotion and free in outspokenness.

Lamennais was now looked upon as the most eminent personality among the French clergy; visitors flocked to see him; the press solicited his contributions. He promised his collaboration to “Le Conservateur”, a royalist paper of the Extreme Right party, for which Chateaubriand and de Bonald were writing. Lamennais, however, cared much less for politics than for religion, and continued to write for “Le Conservateur” only in defence of Catholic interests. For him it was not enough to discredit infidel philosophy: he meant to put something else in its place. He believed that the Cartesian rationalism which had recently attacked the foundations of Christian faith, and therefore necessarily of human charity, could be combated by a system which should firmly re-establish both. To this object he devoted the second volume of the “Essai”, published in 1820. The philosophic system which he expounded in this volume was based on a new theory of certitude. In the main, his theory is that certitude cannot be given by the individual reason; it belongs only to the general reason, that is to say, to the universal consent of mankind, the common sense, that it is derived from the unanimous testimony of the human race. Certitude, therefore, is not created by evidence, but by the authority of mankind; it is a matter of faith in the testimony of the human race, not the results of free inquisition. In the last chapters of the book this philosophic system supports an entirely new method of apologetics. There exists, says Lamennais, a true religion, and there exists but one, which is absolutely necessary to salvation and to social order. Only one criterion will enable us to discern the true religion from the false, and that criterion is the authority of testimony. The true religion, therefore, is that which can put forth on its own behalf the greatest number of unanswerable testimonies. Thus, for instance, it is the case with the Christian, or rather the Catholic religion. It is in reality the true, the only religion which began with the world and perpetuates itself with it. The result of a primitive revelation, this unique religion has perfected itself in the course of ages without being essentially modified; Christians now believe all that the human race has believed, and the human race has always believed what Christians believe. The last two volumes of the “Essai” (1823) were devoted to this thesis. In these attempts to prove, with the aid of history, that the chief dogmas of Christianity have been and are still upheld on an unanswerable testimony, profound throughout the world. Naturally, these last volumes failed to secure the success which the first had attained.

The philosophic system of Lamennais, like his apologetics, called forth serious objections. It was pointed out that this philosophy and apologetics favoured scepticism by denying the validity of individual evidence. For if the latter can furnish no certitude, how can we expect any from the general reason, which is itself a synthesis of individual reasons? It was also a confusion of the natural and the supernatural orders, of philosophy and theology, to base both alike on the authority of the human race: and, since according to him both alike are based on human testimony, religious faith was at once reduced to human faith. These criticisms and others irritated Lamennais without convincing him of his error; he submitted his book to
Rome, and, in reply to his critics, wrote the "Défense de l'Essai" (1821). Rome confined its intervention to giving its imprésuratur to an Italian translation of the "Défense de l'Essai". Lamennais himself soon visited the city of Vatican. He received very kindly and at one time even thought of making him a cardinal, despite his excitable character and exaggerated ideas. On his return to France, Lamennais showed a greater determination than ever to combat Gallicanism and irreligious Liberalism. On the occasion of a ministerial ordinance prescribing the teaching of the famous Declaration of 1802 (see Catholicism, VI, 384), he published his "Religion considérée dans ses rapports avec l'ordre civil et politique" (1825), in which he denounced Gallican and Liberal tendencies as the joint causes of the harm done to religion, and as equally fatal to society. Irritated by these attacks, a majority of the French bishops, who were moderate Gallicans, signed a protest against this pamphlet which accused them of leanings towards schism. Lamennais was also cited before the Tribunal of the Seine for attacking the king's government and the Four Articles of 1822 in their character of existing laws. Defended by his friends, especially Casanouze, Béning, Frayssinous, Clausel de Montale, Bishop of Chartres, and other representatives of moderate Gallican principles.

On the other hand, he derived valuable assistance from a certain number of young men, eclesiastics and laymen, who gradually formed a group of which he was the centre. Of these the best known are Gerbet, de Salinis, Lacordaire, Montalembert, Rohrbacher, Cambladet, Maurice de Guérin, Charles de Sainte-Foy, Eugène and Léon Boré, de Hézec. With them Lamennais founded the "Congrégation de St. Pierre", a religious society whose distinctive duty was to defend the Church by the study of theological and other sciences, by propagating Roman doctrines, by teaching in colleges and seminaries, by giving missions and spiritual direction. Hardly had this congregation come into existence when Mgr. Dubois, Bishop of New York, appealed to it to supply teachers to the Catholic University which it was then proposed to found in that city. The Revolution of 1830 put an end to this project. The congregation, however, was organized; one house—La Chênaie, Malestroit, and Paris—but it lived only about four years. Obliged to reckon with the demands of the Liberals, whom the elections had returned to the Chamber of Deputies, the government of Charles X had revoked (15 June, 1828) former legislative enactments against the religious congregations—particularly against the Jesuits, eight of whose colleges were closed. Although ill-disposed towards the Jesuits on account of their lack of sympathy for his philosophic system, Lamennais took up their defence in a book published in 1829 under the title "Progrès de la Révolution et de la guerre contre l'Eglise". His attitude towards the King and the Church was reproached with their Gallicanism and their concessions to the enemies of religion. Here, for the first time, Lamennais openly broke with monarchy, setting his highest hopes upon political liberty and equal rights. "An immense liberty", he said, "is indispensable for the development of those truths which are to save the world." This was what he called "catholicizing liberalism". The work met with enormous success. The bishops themselves protested almost unanimously against the Government's action. Not, however, that they approved of Lamennais' violent language, but the Archbishop of Paris even condemned the work, and this drew from Lamennais two open letters in which the archbishop's Gallician ideas were unreservedly criticized.

When the Revolution broke out the next year (July, 1830), sweeping the Bourbons away and lifting the House of Orleans to the throne, Lamennais beheld without regret the departure of the one, and without enthusiasm the accession of the other dynasty. "Most people", he wrote in his letters, "would prefer a republic frankly declared: I prefer a Bourbon restored.

Thereupon he thought only of the defence of Catholicism against the triumphant party, who never forgave it the favour it had enjoyed from the fallen monarchy. While labouring to ward off the danger which menaced the Church, he hoped at the same time to ensure its survival by settling up its defence on the basis of equal rights, uniting its cause with that of public liberties. With this end in view he founded the journal "L'Avenir" (16 October, 1830) and his "General Agency for the Defence of Religious Liberty". With Lacordaire, Gerbet, Montalembert, and de Coux, he waged a grim battle in defence of Catholic ideas against the hostility of the government, of Roman ideas against the Gallicanism of the clergy, and of his system of the "common sense of mankind" against rationalistic philosophy. The force of his blows, the boldness of his ideas, his outspoken sympathy for every cause of temporal and spiritual persecution was evidence against him and gave rise to suspicion of his orthodoxy. To set himself right in the face of all this hostility, he suspended the publication of "L'Avenir" (15 November, 1831), and went to Rome to submit his cause to Gregory XVI. Though accompanied by Lacordaire and Montalembert, there the pronounced welcome of 1824. He waited a long time, but received no definite answer: then some days after his departure from Rome, appeared the Encyclical "Mirari vos" (15 August, 1832), in which the pope, without expressly designating him, condemned some of the ideas advanced in "L'Avenir"—the liberty of the press, liberty of conscience, revolt against princes, the need of regenerating Catholicism, etc. At the same time a letter from Cardinal Paccia informed Lamennais that the pope had been pained to see him discuss publicly questions which belonged to the authorities of the Church.

LAMENNAIS OUT OF THE CHURCH.—Having forthwith declared that out of deference to the pope he would not resume the publication of "L'Avenir", Lamennais suppressed the "General Agency", went back to La Chênaie, and there apparently kept silence. In his heart, however, he felt the echoes of which reached the outer world through his correspondence. Rome was stirred by this behaviour, and demanded frank and full adhesion to the Encyclical "Mirari vos". After seeming to yield, Lamennais ended by refusing to submit without reserve or qualification. Little by little, he began by declining his ecclesiastical functions (December, 1833) and ended by abandoning all outward profession of Christianity. The amelioration of humanity, devotion to the welfare of the people and of popular liberties, dominated him more and more. In May, 1834, he published the "Paradis du courant", through the apocalyptic diction of which was revealed a secret rage against the established social order: in it he denounced what he calls the conspiracy of kings and priests against the people. In this way he loudly declared his rupture with the Church, and set up the symbol of his new faith. Gregory XVI hastened to condemn in the Encyclical "Singulieres nos" (15 July, 1834) this book, "small in size, but immense in perspicacity", and at the same time censured the philosophical system of Lamennais. One after another, all his friends abandoned him, and, as if to break finally with his own past, Lamennais wrote a volume on "Les Affaires de Rome". His relations with Gregory XVI in his own favour, his relations with Gregory XVI. After this he published only works inspired by his new democratic tendencies, repeating with no great show of originality the ideas of "Les Paroles d'un croyant".
the whole foundation of which consisted of a few humanitarian commonplaces, relieved here and there with vague socialism. The Government having in 1835 caused the arrest of 121 revolutionaries in connexion with certain disturbances, Lamennais consented to undertake the defence of his new friends before the peers. In 1836, he published in the "Bibliothèque des deux Mondes", the "Revue du Progrès" and "Le Monde", he published a series of pamphlets, e.g. "Le Livre du peuple" (1839), "L'Esclavage moderne" (1839), "Discussions critiques" (1841), "Du passé et de l'avenir du peuple" (1841), "Amicisapandis et Darvandas" (1846). In these writings he expounds his vision of the future, his doctrine against society and the public authorities. One of his works, "Le Pays et le Gouvernement" (1840) brought down on him a year's imprisonment, which he served in 1841.

Mention should here be made of his "Esquisse d'une philosophie", published from 1841 to 1846. It comprises a treatise on metaphysics in which God, man, and nature are studied by the light of reason only. Many of the opinions maintained in this book remind one that it was begun when its author was a Catholic, but there are many others which betray his later evolution. These essays are burdened with anti-Christian notes and reflections. It was not the first work of piety that Lamennais had published. From 1809 he had devoted his moments of leisure to the translation of the "Spiritual Guide" of Louis de Blois. In 1824 he published a French version of the "Imitation of Christ". Lamennais, who, more than any of his contemporaries, has possessed his brilliant literary qualities, but he had a more robust constitution, and was temperamentally calmer and more equable. He shared, as we have, his brother's education, his studies, and his first labours. But an active ministry was more to Jean's taste. Leaving the tranquility of the, reclusively intellectual apostleship, he became, after the suppression of the College of St-Malo, vicar-general to the Bishop of Saint-Brieuc. Later he was also vicar-general of the Great Almoner of France, the Cardinal Prince of Troy, and of the Bishop of Rennes. Wherever he went, he did not spare himself—establishing colleges, seminaries, communities of women, and schools. He took an active part in the foundation of the Congregation of St. Peter, of which he had almost always the practical management and for a time the title of superior general. In fact, it was on account of his apostolic labours that he derived from Mgr. Dubois the title of Vicar General of New York, which, he felt, was offered him seventeen times—he devoted himself wholly to what was the great work of his life, the Institute of the Brothers of Christian Instruction. He had established it in 1817 to supply the wants of Christian teaching in country districts too poor to secure the services of the Boarding Schools of St. Jean Baptiste de la Salle, who were not allowed to work singly. When he was still vicar-general of Saint-Brieuc, he would seek in the fields and assemblage in his own home young peasants, whom he himself instructed in the ways of piety and to whom he imparted elementary knowledge. From these beginnings grew the colony of L'Antigone, which was the parent of many of a similar institution established by M. Gabriel Deshayes, Vicar-General of Vannes, soon associated themselves. In 1820 he had about 50 disciples; in 1829 he had 133; over 260 in 1831; 650 about 1837. When he died, 800 were scattered throughout Brittany, Gascony, in the colonies of L'Antigone at Cayenne, and Haiti, whither they had been sent by the French government. This great and rapid success
was due chiefly to the skilful and energetic administration of Jean de Lamennais. For forty years he was the one who attracted and trained the recruits, guided the young teachers, opened and visited the schools. He also won for them the gratitude of the public author. The approbation of his benefaction was declared under the patronage of the Bishop of Vannes. His native land has not forgotten him. At Ploërmel a statue has been raised to the memory of this man, who perhaps has done more than any other in the nineteenth century for the Christian education of the people. In the beginning of the twentieth century, before the persecution in France scattered the teaching congregations, his institute was more prosperous than ever and counted among its members about 2700 religious, giving instruction to 75,000 scholars, and distributed among 460 institutions, of which one was in Canada.

Lamoignon, Family of, illustrious in the history of the old magistracy, originally from Nivernais. Owing to the nearness of the University of Bourges, the Lamoignons, in the sixteenth century, had the benefit of the excellent juridical instruction given there.

Charles de Lamoignon (1614–73) was the pupil of the renowned jurisconsult Alciat.

Chrétien de Lamoignon (1667–1836), son of the preceding, was a pupil of Cujas. Both this and the foregoing were members of the Parlement of Paris.

Marie des Landes (1576–1651), wife of Chrétien de Lamoignon, was associated in work with St. Vincent de Paul, who called her the mother of the poor; and she founded an association for the deliverance of those imprisoned for debt.

Madeleine de Lamoignon (1609–87), daughter of Guy, was sent by the French East India Company for her first communion, also assisted St. Vincent de Paul. Owing to her co-operation the saint was able to found the Hotel-Dieu and establish the institution for foundlings. When she died, a contemporary said, "The poor have lost one hundred thousand crowns."

George Goyau.

Lamont, Johann von, astronomer and physician, b. 13 Dec., 1805, at Braemar in Scotland, near Ball- moral Castle; d. 6 Aug., 1879, at Bogenhausen near Munich, Bavaria. He was educated in a private school in Scotland. Fath, Julius, in his Geschichte der Astronomen, says that he was a representative of the Scotch monastery of St. Jacob at Ratisbon, accidentally met the boy after the death ofwe father in 1816 and took him to Germany as a novice. He was received into the Benedictine Order and taught mathematics and astronomy in the University of Edinburgh. In 1852 he was also appointed professor of astronomy at the University of Munich.

His scientific achievements are classified under three heads: astronomical, geodetic, and physical. His technical dexterity was such as to make the employment of a measuring instrument in his home at Bogenhausen possible. The observatory was built up as a workshop. With the excellent one and one-half inch refractor furnished him in 1836 he studied especially nebulae and star-clusters, laying the foundation for such investigations. From observations of the moons of Uranus he calculated its mass (1837). Memoirs of the Irland Society, XI, a room in his house was fitted up as a workshop. La Moricière, Louis-Christophe-Léon Juchault de, French general and commander-in-chief of the papal army, b. at Nantes, 5 February, 1806; d. at the château of Prouzel, near Amiens, 11 September, 1865. His father was descended from an old Breton family whose device was Spes mea Deus. His mother was Désirée de Robineau de Bouçon. He made his classical studies at the Collège d'Angers, and afterwards entered the Ecole Polytechnique, in Paris, in 1826, and two years later the École d'Application at Metz. In 1828 he left the latter school with a commission as sub-lieutenant in the engineers and was sent to Montpellier. In 1830 he joined the detachment that took possession of Algiers, and was made a captain of Zouaves as a reward for gallant conduct.

In 1833 he was despatched by the French government to organize the “Bureau Arabe,” a sort of tribunal whose mission was to serve as mediator between Frenchmen and Arabs. His authority was so great among the native tribes that he never carried any arms while travelling through the country, but only a stick with which to defend himself, and this caused him to be named Bou-Arous (father with a stick). After the capture of Vienne he was promoted major and in 1835 lieutenant-colonel of Zouaves. In that capacity he took part in many a coup de main, inspiring his troops with indomitable courage, and always placing himself at the most perilous

spot. His intrepidity at the storming of Constantine gained him the rank of colonel (1837). In 1840, after the engagement of Mousaia, he was raised to the rank of brigadier-general and was given the command of the division of Oran. In the following year he played the most prominent part in the expulsion of the hostile tribes of Lethen and Mascara. Thanks to his skilful tactics and intrepidity, he subdued the tribe of Filtaas (1843), and was created lieutenant-general. He next went to Morocco (1844), drove back the Moorish troops at Lalla-Maghnia, and contributed largely to the success of the battle at Ida-y-Sirou (1845). Toward the end of that year, he was entrusted with the temporary government of Algeria. He then crowned his military career by surrounding Abd-el-Kader, who was compelled to surrender (23 November, 1847). Algeria being pacified, the distinguished soldier thought of retiring from military life and taking an active part in politics.

In 1846, having been elected deputy by the district of Saint-Calais (Sarthe), he had opposed the Guiscot cabinet and created a stir by his speeches on Algeria and promotion in the army. On 21 April, 1847, he married Amélie d'Auberville. In February, 1848, he was arrested for a few days on the pretext of his participation in the Barrot cabinet, which he gave up when the Revolution burst out, causing the downfall of Louis Philippe. Having been elected to the Constituent Assembly (April, 1848) by the Department of Sarthe, he fought against the popular insurrection in June. On 28 June he again accepted the portion of war and the latter continued his efforts towards the organization of Algeria. When Louis Napoleon, whose ambition he was strongly opposed, entered upon the presidency of the French Republic (20 December, 1848), he left the Cabinet and continued, as a deputy or as vice-president of the Assembly, to antagonize the Government. In the Coup d'Etat (2 December, 1852), he was arrested, imprisoned, first at Mazas, then at Ham, and finally expelled from France. His political career had lasted only four years; his exile lasted nine years. This was the most distressing period of his life. He first travelled in England and Germany and then settled in Belgium, pining in his enforced idleness, and longing for active occupation. It was then that he came back to the faith of his youth. For many years, without being an infidel, he had neglected his religious duties, and even for a time had gone astray with the Saint-Simonians. Yielding to the entreaties of his friend Charles de Montesquiou-Fezensac, the great historian, he returned to the fold and, as he afterwards wrote, he renewed his religion one by one all the articles of the Credo. From that time to the day of his death he lived according to his faith as a devout Catholic.

In 1860 his cousin, Mgr. de Mérécé, induced him to take command of the papal army. It was a hazardous task. Ignoring the jealousy of his established military reputation, he went to Rome. It took only one year to convince him that the undertaking was hopeless. His 8000 men were defeated by the 50,000 men of Cialdini at Castelfidardo (18 September, 1860), and Ancona was obliged to surrender. He bore this reverse to his relations with his reputation with that nation. Deeming his services no longer useful to the papal army, he returned to France, and went to live in his château of Chaillon (Maine-et-Loire). A national subscription was collected to present him with a sword of honour, but he emphatically declined to receive it, on the ground that he was only a defeated general. The only distinction he ever accepted, under personal pressure from Pope Pius IX, was the Cross of the Order of Christ. His last years were devoted to pious works. He built a church at his own expense for the poor parish of Loroux-Beconnais, and contributed a large sum to the rebuilding of the abbey that was the foundation of which he had founded. He took pleasure in reading religious books, among which the Holy Bible, the “Summa Theologica” of Saint Thomas, and the “History of the Church” by Darras, were his favourites.
When he encyclical letter of 8 December, 1864, was published, he read it with delight, being happy to find in it an answer to many questions which distressed him. His death was sudden. His name is now extinct, as he left only daughters, having lost his only son in 1859, but his name will last forever as that of a gallant and a true Christian.

Oraciones funebres de La Mort de Lammairi, by P. Poli (Pollet, 1866) and Dupanloup (Orleans, 1863); Koller, Le Général de La Mort de Lammairi (2 vols., Paris, 1874); Houdet, Citations converses contemporanes de Lammairi (Paris, 1890); Baumard, La foi et ses victoires (Paris, 1892).

LOUIS N. DELAMARRE.

Lammairi, Wilhelm, confessor of Emperor Ferdinand II, b. 29 December, 1570, at Dochem, Lue-emburg; d. at Donchamps, 22 February, 1648. His father, Everard Germain, was a farmer and a native of La Moire Mannic; hence the name Lammairi. Lammairi studied first at the gymnasiuim of Trier, and then went to Prague, where he received his doctor's degree, and in 1590 entered the Jesuit Order. Ordained priest in 1596, he was called to the University of Graz as professor of philosophy in 1600, became professor of theology in 1606, and in 1614 was appointed prior of the Jesuit College at the same place. Between the years 1621 and 1623 he was in Rome, but he became in the latter year rector of the Jesuit College at Vienna, and in 1637 rector of the academic college in that city (the present university). From 1643 to 1645 he was provincial of the Austrian province of his order, but was compelled to relinquish this office on account of the gout, which made his visitations a task of the greatest difficulty. During the last years of his life, he established a seminary for poor students in Vienna, the "Ignatius- und Franciscus-Seminarium für Stipendien". After the death of his fellow-Jesuit Martin Becanus in 1624, he became the confessor of his, and as such was active in the political affairs of the time. He was an esteemed and influential counsellor of the emperor, so much so indeed that his enemies affirmed that it was not the emperor, but the Jesuits who ruled the empire. When the Protestants were compelled to give up all ecclesiastical property taken from the Catholics (Edict of Restitution, 1629), Lamarrini was influential in having it used for the propagation of the Catholic Faith. He also took part in the proceedings against Wallenstein (Jan., 1634). He was offered a large sum by the Senate of Hamburg in recognition of his services on the occasion of the election of Ferdinand III as King of Rome. The city of Augsburg, in gratitude for the services he had rendered to it, erected a costly altar in the church of the Viennese Novitiate. On one occasion only was he placed in an unpleasant position, namely when the Spaniards accused him of espousing the cause of their enemies, the French, and tried to have him banished from court. But Lammairi was able to vindicate himself. By advice many Jesuit institutions were established in the empire. He took a leading part in the Counter-Reform in Austria, Styria, Bohemia, and Moravia. On the biography of Ferdinand II upon which Lammairi laboured appeared, "Ferdinand II, Romanorum Imperatoris, Virtutes" (1638); this has been republished frequently, and in different languages. Lammairi was scholarly, pious, unpretentious, and upright. He was called by Urban VIII "Author of Christian Morals", a true and perfect companion of Jesus. That he was impostal, that he received hush-money, and that he stirred up his brethren to lie and deceive or to use violence against heretics, are unfounded tales that call for no mention in serious history.

Lamp and Lampadarii. — There is very little evidence that any strictly liturgical use was made of lamps in the early centuries of Christianity. The fact that many of the services took place at night, and that after the lapse of a generation or two the meetings of the Christians for purposes of worship were held, at Rome and elsewhere, in the subterranean chambers of the Catacombs (q. v.), makes it clear that lamps must have been used to provide the necessary means of illumination. Of these lamps, mostly of terra cotta and of some form, some appear to have been used in the liturgy, especially in the liturgy of the mass, where they are mentioned. They were used to light the altar, and to light the chandelier, and to light the candlestick, and to light the lamp, and to light the oil lamp, and to light the candle, and to light the candle. The lamp was used in the Church in the days of Constantine, something has already been said under the heading Candelabrum (q. v.). Such "polyvandela" (q. v.) long remained a conspicuous feature of Byzantine worship. For the connexion of lamps with the liturgy at an earlier age it may be sufficient to quote a few sentences from a recently published homily of the Syrian Narsai, who died A.D. 512, descriptive of the liturgy. "The priests," he says, "are still, and the deacons stand in silence, the whole people is quiet and still, subdued and calm. The altar stands crowned with beauty and splendour, and upon it is the Gospel of life and the adorable wood [i. e. the cross]. The mysteries are set in order, the censers are smoking, the lamps are burning, and the deacons are hovering and blandishing [fans] in likeness of watchers" (Homoleti, "Liturgical Homilies of Narsai", p. 12). It is curious that in nearly all the earliest representations of the Last Supper a lamp is indicated as hanging over the table. When we remember that the pilgrim who, about 580, wrote the so-called "Brevisarius", saw what purports to have happened in the chamber of the Last Supper, preserved there as a precious relic, it is easy to understand that the early Christians may have attached a quasi-liturgical significance to the lighting of lamps during the Holy Sacrifice. At the present time interest principally centres in the lamp which burns perpetually before the Blessed Sacrament, and it has been the custum with many
LAMPETIANS

writers (see e. g. Corbet, "Hist. du sacrement de l'Eucharistie," II, 413 sq., and Thalhofer, "Liturgik," I, 670) to represent this as a tradition of very early date. But the testimonies upon which this opinion is based are, many of them, quite illusory (see "The Month," April, 1907, pp. 380 seq.). St. Paulinus of Nola, indeed, seems to speak of a silver lamp continu- ing burning in the church—

Paulo Crucis ante decus de limine edem
Continuum scaphus est argentus aptus ad usum.

But there is no indication that this bore any reference to the Blessed Sacrament. It would seem rather to be suggested by the context that it was of the nature of a well-known and usual custom for 1st thieves. No really conclusive evidence has yet been produced which warrants us in declaring that the practice of honouring the Blessed Sacrament by burning a light continually before it is older than the latter part of the twelfth century. Still, it was undoubtedly the custom for some hundreds of years before this to burn lights before relics and shrines as a mark of honour—

the candles burnt by King Alfred the Great before his relics, and used by him to measure the hours, are a famous example—and it may be that this custom generally extended to the place where the Blessed Sacrament was kept. The constant association of burning lights with the Holy Grail in the Grail romances is suggestive of this. But the great movement for providing a perpetual lamp before the altar must undoubtedly be traced to the preaching in France and England of a certain Eustace, Abbot of Fleury, about A.D. 1100. "Eustace also laid it down," says Walter of Coventry, speaking of his visit to England, "that in London and in many other places, there should be in every church where it was practicable, a burning lamp or some other perpetual light before the Lord’s Body. Shortly after this we begin to find the practice en- joyed by the clergy and by laymen (e.g. at Durham, in 1240, at Saumur, in 1276, etc.), and this custom rule these and similar injunctions recognize that, owing to the cost of oil and wax, such requirements could hardly be complied with in the poorer churches. It was not until the sixteenth century that the maintenance of a light, wherever the Blessed Sacrament was reserved, was recognized as a matter of strict obligation. At present the official "Rituale Romanum" (Tit. IV, cap. 1) prescribes that "both by day and night two or more lamps or at least one [lampiones plures vel saltam una] must burn continually before the Blessed Sacrament," and the responsibility of seeing that this is carried out rests with the minister. This custom of lighting the lamp of the presence was extended to the altar of the Blessed Sacrament. It seems, however, that this direction of the "Ceremoniale Episcoporum" (I, xii, 17) might easily suggest that at least in the larger churches more lamps than one should be lit, but always an odd number, that is to say, three at least before the high altar, and five before the altar of the Blessed Sacrament. It seems, however, that this direction of the "Ceremoniale" is to be understood as applying only to greater festivals. During all the Middle Ages the burning of lamps, or sometimes candles, before relics, shrines, statues, and other objects of devotion was a form of piety which greatly appealed to the aims of the faithful. Almost every bishop of early English sees with delight the veneration of its lights by private beneficence was sometimes surprisingly great. It not infrequently happened that every guild and association maintained a special light of its own, and, besides these, we hear constantly of such lights at various shrines. The term "Hok-light" (which seems to have to do with a popular festival kept on the second Monday or Tuesday, 3 days after Easter Sunday), the "Rood light," the "Egg light" (probably maintained by contributions of eggs), the "Bachelors light," the "Maidsen’s light," the "Soul’s light," etc. Many of these bequests will be found conveniently illustrated and classified in Dun- can and Hussey’s "Testamenta Cantiana," Lond. 1841.

Lampadarii were slaves who carried torches before consuls, emperors, and other officials of high dignity both during the later Roman Republic and under the Empire. There seems no special reason to attribute to the lampadarii any ecclesiastical character, though their function was later taken by the acolytes and other clerics who preceded the bishop or celebrant, carrying torches in their hands, in the solemn procession to the altar and in other processions. Thalhofer, Liturgik, I (Freiburg, 1883), 668-68; Schlop in Archiv. f. Kirschen-, VII, 73-72; Rousset, Les Maigres, VI (Paris, 1885), I-33; Leclercq, Manuel d’archéologie, II (Paris, 1907), 567-70; Garbocci, Storia dell’ Arte Cristiana, VI (Rome, 1904), plates 47-72; Hottram R.V. in Dict. Christ. Antiq. (1880); De Waal, in Kraus, Realencyclopädie, II (1886), 267-79. See also Chevalier, Topolob. A full account of all that is known of the lampadari may be found in Durenborg and Segal De Dictionnaire des Antiquités, II (Paris, 1854), 900, where fuller references are given. Most other accounts are not reliable. Herber Thurston.

LAMPRECHT

LAMPIANS. See MESSALIANS.

Lamprecht, surname der Pfaffes (The Priest), German poet of the twelfth century, of whom practically nothing personal is known but his name and the fact that he was a cleric. He is the author of the "Alexandria," the first German secular epic composed on a French model. According to the poet’s own statement this model was a poem on Alexander the Great by Albéric de Besançon, of which only a portion of the beginning, 105 verses in all, is preserved (discovered and published by Paul Heyse, Berlin, 1856). The poem contains the story of the life and death of the great Macedonian conqueror as it was current in Greek and Latin versions of the early Middle Ages, such as the Greek romance of Pseudo-Callisthenes, dating from the third century A.D., the Latin translation of Julius Valerius, the epitome thereof, and especially the free Latin version made by the Neapolitan archbishop Leu in the tenth century, known as the "Historia de prelis." A comparison of Lamprecht’s opening lines with the fragment preserved of the French original shows that he followed his source with tolerable fidelity, adding, however, occasional moralizing comments or remarks of a learned nature further. He followed the model closely, and in short rhymed couplets, the rhyme being very imperfect. Besides Albéric’s poem, which, as far as we know it, is based on Valerius, Lamprecht used also the "Historia de prelis" and an "Iter ad paradisum," especially in the narration of the marvels seen by Alexander in the Far East, and in the account of the hero’s journey to Paradise. There alliteration is re- fused him, and he is made to realize the emptiness of earthly glory. Thus the close of the poem is distinctly moralizing in tone; the career of the great conqueror is but an illustration of the dictum concerning the vanity of earthly things. The poem seems to have been written in Middle Rhenish territory about 1130, at a time, therefore, when the crusades had brought the East nearer to the Western world, and when stories of its marvels were sure to find an eager audience. We possess three manuscripts of Lamprecht’s poem, one from Vorau which is not quite complete, one from Strasbourg dating from 1187, which is about five times as extensive as the preceding, and lastly a version interpolated in the manuscript of a Basle chronicle. The relationship of the manuscripts to one another is indeterminate. The "Vorau" manuscript is regarded as the oldest and most authentic; that of Strasbourg as an amplified recension. The Basle man
LAMPS

LAMPSACUS

LAMPS, EARLY CHRISTIAN.

Of the various classes of lamps that remain from Christian antiquity there is probably none so numerous as the class of small clay lamps adorned with Christian symbols. Lamps of this character have been found in all the ancient churches, but the Roman catacomb lamps are especially remarkable for their fragility and for the large numbers of these that still exist. They bear no intrinsic mark of their Christian origin. These lamps belong to two categories; the more ancient manufactured in the early imperial period, and the later in the Constantinian epoch. Even in this not very conspicuous department of arts and crafts there was a notable decline between the first and the fourth or fifth century; the clay lamps of the former period are of far superior craftsmanship to those of the latter. In form also there is a difference between the two species; lamps of the classic period are made with an ascending perforated handle, whereas the lamps typical of the Christian period somewhat resemble a boat or a shoe with an unperforated handle running to a point. In lamps of Egyptian origin the handles were soldered on after the lamp itself was moulded. The favourite symbol, though no means the only one, was the monogram of Constantine. In some instances they were adorned with a figure of a saint, occasionally accompanied by an inscription. Bronze lamps of Christian origin have also been found, and, though far rarer than the clay lamps described, they are of much greater interest. One of the most remarkable is a bronze lamp of the fifth century, now in St. Petersburg, which takes the form of an early Christian basilica. Of equal interest is a bronze lamp in the Uffizi gallery at Florence; it has the form of a ship, with inflated sails and two statues of bronze, supposed to represent St. Peter and St. Paul, at the prow. Bronze lamps also exist in the forms of a dove, a duck, a peacock, a crow, etc. The museum of Algiers contains a specimen of a lamp mounted on a pedestal, of excellent workmanship, ornamented with the apocalyptic Greek letters A and Ω, and a dolphin. Many of the gold and silver lamps presented by Constantine the Great to the Lateran Basilica were also in the form of dolphin. "G. Sol-ber Pontificis" informs us; lamps in the form of the symbolic fish were probably common, though only one of terra cotta is known. The lamps presented by Constantine to the Lateran—a truly imperial gift—were altogether 174 chandeliers and candlesticks, which furnished, it is calculated, 8730 separate lights. The most precious of these is the chandelier of pure gold, weighing fifty pounds and ornamented with fifty dolphins, which hung from the eiborium; the chains in addition weighed twenty-five pounds. Before the principal altar stood a magnificent chandelier, weighing fifty pounds, adorned with twenty dolphins. The nave was lighted by forty-five silver standards (fora candelabra), the right aisle by forty and the left by forty-five. Besides these chandeliers for lamps, the nave contained fifty silver standards for candles; before each of the seven altars of the basilica stood a candelabrum ten feet high, made of copper inlaid with reliefs in silver representing the Prophets. Gifts of precious candelabra, though fewer in number, were also presented by Constantine to the basilicas of St. Peter, St. Paul, St. Croce, St. Agnes, and St. Laurence ("Liber Pontificalis", ed. Duchesne, I, 172 sqq.).

MAURICE M. HASSETT.

LAMPSACUS, a titular see of Hellespont, suffragan of Cyzicus. The city is situated in Asia, at the entrance to the Hellespont, opposite Callipolis, in a region known as Berysia, which seems to indicate the establishment of Berycides from Thrace. It was probably called Pitussa prior to its colonization by the Ionian cities of Phocaea and Miletus. The elder Miltiades, when he had been established in possession of Thracian Chersoneseus, declared war against the inhabitants of Lampsacus, who made him prisoner, and re-
LAMUEL

771

LAMY

leased him only in submission to the threats of Crossus. During the Ionian revolt Lampscus fell into the power of the Persians. The "great king" gave its territory to Themistocles that he might supply himself with its wine, which was very famous; but the city itself continued the attacks of an army of Syriacs. After the battle of Mycal (479 B.C.), Lampscus joined the Athenians, but revolted after the unsuccessful expedition to Sicily; being unfortified, however, it was easily recaptured by the fleet of Strombichides. After the death of Alexander, it was forced to defend itself against the attacks of an army of Syriacs. It voted the golden crown to the Romans and became their ally. Its prosperity continued under the empire; gold and silver staters of Lampscus are extant, and its coins of the imperial period range from Augustus to Gaius. The city possessed a fine piece of sculpture by Lyssippus, representing a lion couchant, which was carried off by Agrippa to grace the Campus Martius at Rome. It was the home of many famous men, e.g. the historian Charon, Anaximenes the orator, Adimantus, and Metrodorus, a disciple of Epicurus who himself lived at Lampscus for three years. It must be excellent one since the highest office of the scene worship that was paid to Priapus. Its name has been conjecturally introduced into the Vulgate (I Mach., xv, 23) in place of the Greek name Sampsce, or Sampsame, in the list of the cities to which the letter of the consul Lecius was sent; and this correction is an excellent one since the city to which was known by the name of Sampsce or Sampsame.

St. Trypho, martyred at Nicea, was, according to the legend, buried at Lampscus. Its first known bishop was St. Parthenius, under Constantine. In 364 the see was occupied by Marcian, a Semi-Arian or Macedonian; in that year there was held at Lampscus a council of bishops the majority of whom belonged to that party. Marcian, summoned to the Ecumenical Council of Constantinople, in 381, refused to retract. Other known bishops of Lampscus were Daniel, who assisted at the Council of Chalcedon (451); Harmonius (458); Constantine (680), present at the Council of Constantinople; John (787), at Nicea; St. Eusebemon, a correspondent of St. Theodorus the Studite, and a confessor of the Faith for the veneration of images, under Theophilos. The See of Lampscus is mentioned in the "Notitiae episcopatum" until about the twelfth century. Lampscus is now a village of about two thousand inhabitants, the chief part of a caza in the sanjak of Bigha; it is called in Greek Lampaski, and in Turkish Lepeisk.

LAMUEL, name of a king mentioned in Prov., xxxi, 1 and 4, but otherwise unknown. In the opening verse we read: "The words of king Lamuel. The vision wherewith his mother instructed him." The name occurs again in verse 4: "Give not to kings, O Lamuel, give not wine to kings..." The discourse, which contains many parables, is supposed to end with verse 9. Some modern scholars (see Revised Version, Prov., xxxi, 1, margin) render the first passage thus: "The words of Lamuel, king of Massa, whom his mother taught him." Massa is mentioned in Gen., xxv, 14 (cf. I Par., i, 30), among the sons of Ismael, and his kingdom is consequently supposed to have been in Arabia. In etymological form the name Lamuel is kindred with Lamuel (Gen., xlvi, 10) and Samuel (I Par., iv, 24). In signification it is cognate with Lacil (Numb., iii, 24) meaning (a man consecrated) "to God".

James F. Driscoll.

LAMUS, a titular see of Issauria, suffragan of Seleucia. In antiquity this village is mentioned by Strabo, XIV, 671, and Ptolemy, V, viii, 4 (and 6). It was situated at the mouth of the River Lamus which formed the boundary between Cilicia Aspera and Cilicia Propria. Lametis was the name of the whole district. To-day it is the wretched village of Adana, with existing remains of an ancient fortress. After the death of Alexander, it was forced to defend itself against the attacks of an army of Syriacs. It voted the golden crown to the Romans and became their ally. Its prosperity continued under the empire; gold and silver staters of Lampscus are extant, and its coins of the imperial period range from Augustus to Gaius. The city possessed a fine piece of sculpture by Lyssippus, representing a lion couchant, which was carried off by Agrippa to grace the Campus Martius at Rome. It was the home of many famous men, e.g. the historian Charon, Anaximenes the orator, Adimantus, and Metrodorus, a disciple of Epicurus who himself lived at Lampscus for three years. It must be excellent one since the highest office of the scene worship that was paid to Priapus. Its name has been conjecturally introduced into the Vulgate (I Mach., xv, 23) in place of the Greek name Sampsce, or Sampsame, in the list of the cities to which the letter of the consul Lecius was sent; and this correction is an excellent one since the city to which was known by the name of Sampsce or Sampsame.

St. Trypho, martyred at Nicea, was, according to the legend, buried at Lampscus. Its first known bishop was St. Parthenius, under Constantine. In 364 the see was occupied by Marcian, a Semi-Arian or Macedonian; in that year there was held at Lampscus a council of bishops the majority of whom belonged to that party. Marcian, summoned to the Ecumenical Council of Constantinople, in 381, refused to retract. Other known bishops of Lampscus were Daniel, who assisted at the Council of Chalcedon (451); Harmonius (458); Constantine (680), present at the Council of Constantinople; John (787), at Nicea; St. Eusebemon, a correspondent of St. Theodorus the Studite, and a confessor of the Faith for the veneration of images, under Theophilos. The See of Lampscus is mentioned in the "Notitiae episcopatum" until about the twelfth century. Lampscus is now a village of about two thousand inhabitants, the chief part of a caza in the sanjak of Bigha; it is called in Greek Lampaski, and in Turkish Lepeisk.

LAMY, Bernard, Oratorian, b. at Le Mans, France, in June, 1640; d. at Rouen, 29 Jan., 1715. At the age of twelve he was placed under the tuition of the Oratorians of his native town, and soon evinced more than ordinary talent for the study of the humanities. He entered the congregation of the Oratory, and, after studying philosophy at Paris and at Saumur, was appointed professor in the college of Vendôme and later at Juilly. He was ordained to the priesthood in 1667, and after teaching a few years at Le Mans he was appointed to a chair of philosophy at the Universities of Angers. Here his teaching was attacked on the ground that it was too exclusively Cartesian, and Reclus the rector obtained in 1675 from the state authorities a decree forbidding him to continue his lectures. He was then sent by his superior to Grenoble, where, thanks to the protection of Cardinal Le Camus, in 1687, translated into French by order of the Bishop of Châlons under the title "Introduction à la lecture de l'Écriture Sainte" (Lyons, 1689). (2) "Harmonie, sive Concordia quatuor Evangelistarum," a harmony or concordance of the Four Gospels (Paris, 1689). In this work he contends that John the Baptist was twice called by this name, first by order of the Sanhedrin, and later by Herod in Galilee. He maintains also that the Saviour and His Apostles did not eat the paschal lamb at the Last Supper, and that the Crucifixion occurred on the day on which the Jews celebrated the Passover. He considers Mary Magdalene, Mary the sister of Lazarus, and the sinner mentioned in Luke, vii, 37 sqq. to be one and the same person. These and other opinions involved him in animated controversy with Bulteau, pastor of Rouen, Jean Pléud, Le Nain de Tillemon, and others (see "Traité historique de l'ancienne Pièce des Juifs," Paris, 1693). His "Harmonie," however, is the groundwork of his introduction (Lyons, 1696; Jena, 1709; Amsterdam, 1710). It was translated into French by Abbé de Bellegarde (Paris, 1697) and by Abbé Boyer (Lyons, 1709). In this work he calls in question the historical character of the books of Tobias and Judith, and maintains that even after the Council of Trent a difference of authority should be recognized between the proto-canonical and deutero-canonical books of the Bible. (4) "Défense de l'ancien sentiment de l'Eglise latine touchant l'office de sainte Madeleine" (Rouen, Paris, 1697). (5) A volume of commentaries on his previous works (Paris, 1699). (6) A Latin treatise on the Ark of the Covenant (Paris, 1720), a posthumous work published by Père Desmollets, who prefixed to the volume a biography of the author.
LAMY, François, an ascetical and apologetic writer of the Congregation of St-Maur, b. in 1636 at Montreuil in the Department of Eure-et-Loir; d. 11 April, 1711, at the Abbey of St-Denis near Paris. While fighting a duel he was saved from a fatal sword-thrust by a book of the Rule of St. Benedict which he carried in his pocket. Seeing the danger of God it this remarkable occurrence, he took the Benedictine habit at the monastery of St-Remi at Reims in 1658. Shortly after his elevation to the priesthood he was appointed prior of St-Faron at Meaux, but a year later resigned this position out of humility. During 1672-5 he taught philosophy at the monasteries of Mont-Saint-Quentin and St-Médard in Soissons. He was the first of the Maurists to teach the Cartesian system of philosophy. In 1676 he came to St-Germain-des-Prés near Paris where he taught theology until 1679. The general chapter of 1687 appointed him prior of Reims in the Diocese of Meaux, which was ordered by the king to resign his office in 1689. The remainder of his life he spent in literary pursuits at St-Denis. He was one of the most famous writers of his time and was an intimate friend of Bossuet. Of his twenty printed works the following are the most important: "Vérité évidente de la Religion Chrétienn.- (Paris, 1684); "Le Nouveau Calvaire", "L'Am- isme Rensevé, ou réfutation du système de Spinoza" (Paris, 1696; 2nd ed., Brussels, 1711); "Sentiments de piété sur la profession religieuse" (Paris, 1697); "De la Connaissance de soi-même" (6 vols, ibid., 1694-8; 2nd ed., 1700), which raised a controversy between the author and Malebranche concerning the disinterested love of God; "L'Incrédule amené à la Religion par la Raison" (ibid., 1710); "De la Connaissance et de l'Amour de Dieu" (ibid., 1712); "Lettre d'un théologien à un de ses amis" (ibid., 1699); "Plainte de l'apologiste des Bénédictins à MM. les prélats de France" (ibid., 1699). In the last two treatises the author defends the Maurist edition of the works of St. Augustine against the Jansenists and the Jesuits.

TASIN, Histoire littéraire de la Congrégation de St-Maur (Brussels, 1770), 351-47; Le Cenre, Bibliothèque historique et critique des auteurs de la Congrégation de St-Maur (La Haye, 1726), 185-95.

MICHAEL OTT.

LAMY, Thomas Joseph, Biblical scholar and orientalist, b. at Ohey, in Belgium, 27 Jan., 1827; d. at Louvain, 30 July, 1907. Ordained priest in 1853 after completing his studies at Floreffe and at the seminary of Namur, he founded the Congregation of St-Maur in 1858 and received from his professors, Beelen (q. v.), the distinguished exegete and orientalist, and LeFebre, who was well versed in positive theology, his impulsion towards Biblical, Oriental, and patristic studies. He obtained the degree of Doctor of Theology in 1859. His career as professor at Louvain began in 1858 and continued uninterrupted till the year 1900, comprising courses in Hebrew, Syriac, introduction to Sacred Scripture, and exegesis. Lamy succeeded Beelen on the latter's retirement in 1875. His writings, though voluminous for enumeration here, are listed in the bibliography of the university down to 1905, under one hundred and fifty-eight entries. His most valuable contributions to learning took the form of editions of many previously unpublished Syriac writings, notably his collection in six volumes of St. Ephraem's hymns and discourses, under the title "Sancti Ephraemi Syri Hymnorum." The Chiericardi's "Chronicorum Ecclesiasticorum" of Bar Hebraeus. It is freely admitted that his editions of text are marred by numerous errors, chiefly typographical. He is most widely known by his "Introductio in Sacram Scripturam", in 2 vols., which ran to six editions, an erudite collection of materials valuable in their day. Of his commentaries the most noted are his Latin com-

mentary on Genesis, in 2 vols. (2nd ed., 1883-4), and his French commentary on the Apocalypse (1885-94). Neither in his introduction nor in his commentaries did Lamy grapple with the difficulties of the day; his ideas, acquired in the sixth decade of the nineteenth century, remained unmodified till the end. His "Introduction" passed almost unaltered through six editions. Lamy's numerous articles show his great devotion to the Church, to his university, and to his country, as well as a marked predilection for Biblical and patristic studies. Before his death, which occurred at the age of eighty, Lamy was engaged in the revision and annotation of a French translation of the Bible. Besides his professorial labours, he served his university for thirty years as president of the College Marie Thérèse. By his simplicity, his goodness, his piety, and kindness of heart, he won numerous friends in all ranks of society and exerted a gentle but effective and wide influence for good. Lamy received many honours from learned societies and from his country; he was made domestic prelate (1866) by Leo XIII, and member of the Biblical Commission (1903) by Pius X.

LADEVRE in Annaire de l'Université Catholique de Louvain (1901), pp. cxxvi-cxxxii, biographical notice, p. cxxxvi. Remarks by the rector, Mgr. Herbeربطية: REINHOLD in Buchboden, Kirchliche Handz., s. v. For bibliography, see Annaire Université Catholique de Louvain, Bibliographie, 1894-1900, 66-72; also Premier Suppment, 1899-1901, 8-9; Deuxièmes Suppment, 1901-1903, 11-13; Troisièmes Suppment, 1905-11.

JOHN F. FENLON.

LANA, Francesco, b. 10 Dec., 1831, at Brescia in Italy; d. in the same place, 22 Feb., 1887. Mathematician and naturalist, he was also the scientific founder of aeronautics. He belonged to the ancient family of the Counts of LenaTersi, which had come to Brescia as early as the fourteenth century from the neighbourhood of Bergamo. Trained by his teachers in his native city, he entered the novitiate of the Society of Jesus in Rome on 11 Nov., 1847, and in 1851 made his philosophical and theological studies in the Roman College of the Society. He later taught the humanities for a short time at Terni, where the town council through gratitude to him and his family granted him the freedom of the city. After this he was mainly engaged as professor of physical science and mathematics, principally at Ferrara, until delicate health necessitated his return to his native Brescia. He there performed the duties of confessors and was engaged at the same time on the publication of his great work on physical science, "Maugonum naturae et artis". Eliminating everything that was uncertain, this work was to treat in nine volumes the entire field of the natural sciences on strictly geometrical principles, and on this basis carefully made experiments. Unfortunately Lena himself could publish but two of these volumes (1864, 1868), but a third appeared at Parmo after his death. The work found favourable notice in the learned publications of the time, though Lena's principal achievement lay in another direction.

In 1870 he had published, as an advertisement for his chief work, a small volume entitled "Frodromo"
LANCE

The Holy. — We read in the Gospel of St. John (xix, 34), that, after our Saviour’s death, “one of the soldiers with a spear [lanced] opened his side and immediately there came out blood and water”. Of the weapon thus sanctified nothing is until the pupil of the famous military chronicler, Aeneas Silvius Pierius Valesius (a. p. 570), describing the holy places of Jerusalem, tells us that he saw in the ancient Bible of Mount Zion “the crown of thorns with which Our Lord was crowned and the lance with which He was struck in the side”. The mention of the lance at the church of the Holy Sepulchre in the so-called “Breviarium”, as M. de Mélly points out (Exuvie, III, 32), is not to be relied on. On the other hand, an old manuscript of the Laurentian Library at Florence, illuminated by one Rubalbus in the year 586, the incident of the opening of Christ’s side is given a prominence which is highly significant. Moreover, the name Longinus, if, indeed, this is not a later addition—is written in Greek characters by the scribe of the manuscript. In the face of this text, it is impossible to believe that the name Alexio is in any way connected with the lance (Αλεξιος). This is as it may, a spear believed to be identical with that which pierced our Saviour’s body in the Sainte Chapelle. During the French Revolution these relics were removed to the Bibliothèque Nationale, and, although the Crown has been happily preserved to us, the other has now disappeared.

As for the second and larger portion of the lance, Arculpus, about 670, saw it at Jerusalem, where it must have been restored by Heraclius, but it was then venerated at the church of the Holy Sepulchre. After this date we practically hear no more of it from pilgrims to the Holy Land. In particular, St. Willibald, who came to Jerusalem in 715, does not mention it. There is consequently some reason to believe that the larger relic as well as the point had been conveyed to Constantinople before the tenth century, possibly at the same time as the Crown of Thorns. At any rate its presence at Constantinople seems to be clearly attested by various pilgrims, particularly Russians, and, though it was deposited in various churches in succession, it seems possible to trace it and distinguish it from the companion relic of the point. Sir John Mandeville, whose credit as a witness has of late years been in part rehabilitated, declared, in 1357, that he had seen the blade of the Holy Lance both at Paris and at Constantinople, and that the latter was a much larger relic than the former. Whatever the Constantinople relic was, it fell into the hands of the Turks, and in 1492, under circumstances minutely described in Pastor’s “History of the Popes”, the Sultan Bajazet sent it to Innocent VIII to conciliate his
favour towards the sultan's brother Zizin, who was then the pope's prisoner. This relic has never since left Rome, where it is preserved under the dome of St. Peter's. Benedict XIV (De Beat. et Canon., IV, ii, 31) states that he obtained from Paris an exact drawing of the point of the lance, and that in comparing it with the lance in St. Peter's, the Pope saw that the two had originally formed one blade. M. Mély published for the first time in 1904, an accurate design of the Roman relic of the lance head, and the fact that it has lost its point is as conspicuous as in other, often quite fantastic, delineations of the Vatican lance. At the Pope's request, the vestrying of the Roman VIII, that doubt as to its authenticity were felt at Rome, as Burchard's "Diary" (I, 473-486, ed. Thuanus) plainly shows, on account of the rival lance known to be preserved at Nuremberg, Paris, etc., and on account of the supposed discovery of the Holy Lance at Antioch by the revelation of St. Andrew, in 1096, during the First Crusade. Raynaldi, the Hollandists, and many other authorities believed that the lance found in 1098 afterwards fell into the hands of the Turks and was that sent by Bajazet to Pope Innocent, but from M. de Mély's investigations it seems probable that it is identical with the relic now jealously preserved at Aix-la-Chapelle. This is never in any proper sense a lance, but rather the head of a standard, and it may conceivably (before its discovery under very questionable circumstances by the crusader Peter Bartholomew) have been venerated as the weapon with which certain Jews at Beirut struck a figure of Christ on the Cross; an outrage which was believed to have been followed by a miraculous discharge of blood.

Another lance claiming to be that which produced the wound in Christ's side is now preserved among the imperial insignia at Vienna and is known as the lance of St. Mauritius. This weapon was used in or near 1273 in the coronation ceremony of the Emperor of the West, and from an earlier date as an emblem of investiture. It came to Nuremberg in 1424, and it is also probably the lance, known as that of the Emperor Constantine, which enshrined a nail or some portion of a nail of the Crucifixion. The story told by William of Malmsbury of the giving of the Holy Lance to King Athelstan of England by Hugh Capet seems to be due to a misconception. One other remaining lance reputed to be that concerned in the Passion of Christ is preserved at Cracow, but, though it is also said to have been there for centuries, it is impossible to trace its earlier history.

The one work of authority which thoroughly discusses all the available evidence is that of M. F. de Mély published at Paris in 1904 as the third volume of the Erudite Sacra Constantinopolitana of the Comte de Riant. It contains authentic drawings never before published and a valuable selection of pièces justificatives. Besides this all-important work, the reader may be referred to Ronsard de Fleury, Mémorie sur les Instruments de la Passion (Paris, 1870), 272-75; Burellius, H. V. Lance in Dict. de la Bible; Schenke in Kirchenlex., VII, 1418-22; Martin, Reliques de la Passion.

HERBERT THURSTON.

Lancelotti, Giovanni Paolo, canonist, b. at Perugia in 1522; d. there, 23 September, 1590. He graduated doctor of law in 1546, and taught that science shortly afterwards (1547 or 1548) in the university of his native town. Except for two short sojourns at the seats of jurisdiction of his See in Perugia, in the study of law and belles-lettres. He owes his world-wide reputation to his "Institutiones Juris Canonici", the text of which is reproduced in most editions of the "Corpus Juris Canonici". Following the example of Emperor Justinian, who had entrusted to three professors the task of drawing up an elementary work entitled the "Institutiones", intended for use in the schools, Lancelotti conceived the plan of a like work on canon law. Paul IV charged him officially with the execution of his plan, and for this purpose he went to Rome in 1557. To his great regret, neither Paul IV nor who died in 1559, nor his successor Pius IV, gave authentic and official approbation to his work, published by Lancelotti at Perugia in 1653 as an entirely private venture. The "Institutiones" are divided into four books, and treat succinctly, and with much acuteness and erudition, judgments and crimes. This division was inspired by the principle of Roman law: "Omne jus quo utimur vel ad personas attinet, vel ad res, vel ad actiones". (All our law treats of persons, or things, or judicial procedure.) It is a small and very simple didactic work, and may be considered a convenient resume of canon law. Its divisions have been followed by broad lines by all authors of elementary treatises on canon law, and they have also borrowed its title "Institutiones". Lancelotti, however, erred when he applied to canon law the unsuitable divisions of Roman law. Having been published before the promulgation of the Council of Trent, this work had not the advantage of following its decrees; subsequent editors have remedied this defect by notes and commentaries. The best-known editions are those of Doujet (Paris, 1684; Venice, 1739), and Thomasius (Halle, 1715-17). Lancelotti's other writings are: "Institutionum Juris canonicorum commentarius" (Perugia, 1579), in which he gives the history of his aforesaid work; "De comparatione juris pontificii et caesarie et utriusque interpretandi ratione" (Lyons, 1574); "Regularum ex universo pontificio jure libri tres" (Perugia, 1587); "Questio an in cautio de non offenso praedicto comprehendatur bannici notarii temporis" (Lyons, 1587).

VERMIGNOLI, Biografia degli Scrittori Perugini, II (Perugia, 1829), 40 sqq.; SCHULTE, Die Geschichte der Quellen und Literatur des canonicum Rechts (Stuttgart, 1873-80), III, 481 sqq.; SCHERER in Kirchenlex., s. v.

A. VAN HOVE.

Lanciano and Ortona, Archdiocese of (Lancianense et Ortonensis).—Lanciano is a small city in the province of Chieti, in the Abruzzi, Central Italy, between the Pescaia and the Trigno. The ancient city is S. Maria Maggiore with its Norman portal. Until 1515 Lanciano was subject to the Bishop of Chieti. In 1562 Pius IV, to end a dispute with that bishop, made it an archdiocese without suffragans. The first bishop was Angelo Maczani, who was succeeded by Cardinal Egidio Canisio (1552); the first archbishop was the Dominikan Leonardo Marini (1560). In 1818 the See of Ortona was united to that of Lanciano by Pius VII. Ortona is a very ancient city in the province of Chieti, on the Adriatic Sea, and has a small port from which it carries on commerce with Dalmatia and the Adriatic coast of Italy. Charles I, King of Sicily, assigned the revenues of this port to the Vatican. It was here that Gregory XII, fleeing from Cividale, landed on Neapolitan territory (1409), and went thence to Gaeta. Ortona was an episcopal see even in the time of Gregory the Great, who mentions the Bishop Ca-luminous and his predecessor Blandinus. Another bishop was Joannes, who in 916 was the papal legate at the Council of Altheim. There is no record of a Bishop of Ortona after the tenth century. Pius V in 1570 re-established the see, to which in 1569 that of Campi was united. When, in 1818, Ortona was united to Lanciano, Ortona was abolished. The archdiocese has 20 parishes, with 61,000 faithful, 2 religious houses of men, and 6 of women.

U. BENTINI.
Land-Tenure in the Christian Era.—The way in which land has been held or owned during the nineteen hundred years which have seen in Europe the rise and establishment of the Church is a matter for historical inquiry. Strictly speaking, the way in which such ownership or tenure of the land is not only legally established, but even owned, is a matter of historical inquiry also. But the determination from record of motive and of mental attitude is always a disputable thing, whereas the determination of legal definition and of public acts is a matter of documentary and of ascertainable record. During the last two generations concerning the nature of the State and its institutions its formation into a social and material order, were made of the ethical history of land-tenure or land owning a capital point of discussion, and, to support what was until lately the chief academic view, recorded and ascertainable history was pressed and even warped into the service of theory.

It is the object of this article to set forth what is rigidly ascertainable in the matter, to distinguish it from what is doubtful, and again from what is merely hypothetical.

The modern theory to which allusion is here made is the conception that property in all its forms has no direct relation with personality, is not an extension of nor support of human dignity and the human will (which, strictly, can only attach to persons), but is a mechanical arrangement or institution deriving its authority from the State, not from the nature of man, and not, therefore, from the purpose of his Creator.

In this aspect of property many modern apologists, apparently divergent, join. Thus, he who will assert that property is necessary in order to give the required impetus to human effort, or that its acquisition is the proper reward of the virtue (as he imagines it to be) of cunning, or that the State, in his view, is incapable of evil proceeding from the imperfections of their nature, is really at one in his general theory of the thing with his apparently irreconcilable opponent who will assert that property is robbery because its existence tends to produce an inequality in material enjoyment. Again, the philosopher who analyses what is called economic, or Ricardian, rent, and emphasizes its collective quality, however much he may privately support the laws that defend private property, betrays by his whole method of thought his conception that property is adventitious and not native to man. In general, all the modern (Christian and (in its acuteness) anti-Christian thought which the nineteenth century has suffered, regards property, among other human establishments, as a thing not having about it that quality which we call sacred. It reposes upon no ultimate moral sanction: it is a function to be expressed in terms of common or private utility. The far-reaching consequences of this philosophy it is not the purpose of these pages to discuss; it has produced, not only the insecurity and the extended poverty, but also the shameless financial spirit of our time; it has put speculation in the place of production, and removed in so far as it has both powerful the permanent economic bases of society.

The opposite philosophy bears no name; and here we have a phenomenon to be paralleled in many another case. Thus we know the modern attitude which regards matrimony as a contract, but we have no name for the view of that vast majority to which such a view is opposed. The whole continence ideal implies that the modern conception that the State has no authority over the citizen—the theory called Anarchist—but we have no name for the public and popular philosophy of the vast majority to which such a doctrine is fundamentally immoral. We must proceed, therefore, without generalization. and postulate that all modern observers will immediately admit, the contrast between those who have with regard to property in all its forms the novel attitude described, and those who continue to repose in the older conception of property as a thing connected with the ultimate ethical sense of man.

For the purposes of this article the interest of that great quarrel lies in this: that the academies and universities (from which any appeal of course, in all such novelties, long-lived or short-lived, proceed), in their determination to disestablish the sense of property as an absolute thing, have pressed into their service historical evidence; and this is especially the case in regard to property in land. Man is a land animal: without land he cannot live. All that he consumes and produces is in the condition of a material being is ultimately referable to land. Nay, the prime condition of all, mere space in which to extend his being, involves the occupation of land. Land, therefore, in all ages has been safeguarded in a peculiar manner from the perils which attach to the abuse, or even the natural process, of private property in any material. And whether those safeguards have been, or are, an assertion of the ultimate domination of the State over land, or institutions to make inheritance in land secure, or to safeguard it against the fluctuation of fortune, or to guarantee a proportion of it for what is essential to the common life of men, or to forbid the acquisition in more than certain areas by one family—no matter what the guarantees are or have been, they ultimately repose upon the prime and self-evident truth that without land man cannot be. To the truth that land is necessary for the life of man, another truth equally self-evident lends added force. But, that, whereas all other forms of property can be replaced, land cannot be replaced. A man or a group of men can, if the laws be sufficiently bad or sufficiently laxly observed, forestall the market in wheat so as to control the whole supply of wheat for a certain period, but they cannot as a necessity of life control the period unless they also control the land, for which is perishable. Perishable, also, is every other form of things subject to private property, with the exception of land. Vest all the land in the community in one family or one group of families, make their tenure of it fixed, and it is self-evident that the whole of the community will be utterly dependent upon it or them. In other words, a State must, if it is to remain a State, set up in the case of land guarantees and safeguards against the perils attaching to the institution of property which it need not set up in the case of other forms of property.

We shall, therefore, always find in the historical records of every community, however fixed and absolute its conception of the right of private property in land, some land held in common, some land the property of the State or the municipality, and even that land which in the hands of individuals or corporations treated legally in a manner different from, stricter than, and contrasting with, the manner in which other forms of property will be treated.

Seizing upon this truth, the school of philosophy alluded to above has attempted to establish a scheme of historical progress whereby it has been pretended that men in their first conception of land thought of it as mere space, heritable by none and open to all: that from this men, organized in strict communities, proceeded to give the community rights over land which it forbade to individuals, and to leave the government of the tribe or of the village absolute over the land. In this conception the private profit of frequently exercised—to determine a common tillage and a common pasture. Next (this hypothesis imagined) the mutations of allotment grew rarer, and the watching of common rights less jealous, until at last were found—what every man can now see round him in European civilization—all the elements of private property and, side by side with them a certain proportion of communal and public territory. The rights which are exercised over this last or ancient customs which
attach to it are called (in the terminology of this academic theory) "survivals from an original communism in land".

Now, before any examination of the true history of land-tenure can be attempted, it is of the first consequence to rid the mind of all such vagaries. There is not a note of fact in support of the whole hypothesis: it is but one out of many which might be framed. It corresponds to the temper, if not of our own day, at any rate of yesterday in the intellectual circle of Europe; it would, were it true, powerfully support one part of their general philosophy and of their general attitude toward human development. But, as truth is no proof, the historian must content himself with ignoring it.

Lest this statement should seem too abrupt in the ears of those who are accustomed to hear this hypothesis dogmatically affirmed as historical truth, it is but just to notice in passing the type of arguments upon which it repose.

Records are produced and contemporary evidence is given of an absolute communism. These records, as they are commonly legendary or at the best extremely vague, are more relied upon than contemporary evidence, which is in this department very scarce indeed. In spite of these admitting that legendary evidence or contemporary observation of isolated instances establishes the possibility of man's tolerating a communism in land, it in no way establishes a progress from communism towards private property. To attempt to do so is to argue in a circle. To call communism wherever it appears, even in a very imperfect form, "primitive", and to call the private property where it appears "a later development", is merely to beg the whole question. It is a process against which the student must be warned, because it is, or has been, of the greatest possible value in every development of the generation of intellectualism. It is logically vicious and often monstrously insincere. There is no single case determinable in history of a regular progression from communism in land to private property. There are cases innumerable of the domain of private property encroaching, as the years pass, upon the domain of public or communal property. And there are numerous, though less numerous, cases of communal property extending after an earlier restriction and growing at the expense of private properties. But to pretend that a regular scheme of development is ascertainable or conceivable is simply to affirm an historical truth something for which we find that no historical evidence exists.

With this preface, which, if lengthy, is necessary to any just conception of the business, let us turn to the evidence before us.

The limits of the Christian Era form not only the natural limits for an article in such an encyclopedia as this, but also an excellent historical limit wherein to frame our inquiry. For the birth of Christ was, roughly, contemporaneous with the expansion of the art of writing over the tribal civilizations of Northern and Western Europe, and roughly contemporaneous also with that organization of all the known world, and especially of the ancient Oriental states and cities under the united and simple scheme of Roman rule. In other words, one medium in which ancient records could be preserved upon the one hand and new records—established on the other, such a medium, coexisting almost from the time of the Exodus, and contemporaneous with the beginning of the Christian Era. A generation before that era opened saw Gaul occupied by Roman arms; the last limits reached by the same forces, the last independence of the North African littoral extinguished in Carthage to the West, in the Italian civilizations which lay behind the Alps, and after the founding of the Catholic Church saw the occupation of Britain at one extreme of the Roman boundaries and the complete absorption of Judea at the other.

We have, therefore, from the first century of the Christian Era, clear records, and upon the basis of such records we can establish our judgment. What we discover is roughly as follows:

The whole life of the land throughout the whole of this area, to which apply the Roman scheme of law and the Roman appetite for record, regards private property in land as a scheme native and necessary to man. But the absolute quality of this right and the extent of the area over which it is exercised differ very much with the times and the world. The civilization which Rome had superseded in Gaul and was in process of superseding in Britain, the civilization of which she took note, though she did not supersede it, in the Germanies, and which her religion was later to develop in Ireland, was not municipal, but tribal.

It is generally assumed that tribal civilization is necessarily nomadic or at any rate so far nomadic as the chase and continual warfare connote. The assumption has in it something of truth, but in its absolute form may be very much exaggerated. Thus we can be certain that the Gaulish clan called the Arverni, in spirit, if not in fact, of the warlike colonies which they threw out to the utmost limits of their world, had a fixed seat upon the Yonne, a seat which still remains in the shape of a cathedral city. We can be equally certain that the Averni were a population rooted in and conditioned by the old volcanic region of central France. Negative arguments too long to detain us here suffice to prove that the boundaries of the Basque people on the north of the Pyrenees have been much the same throughout the whole period of recorded knowledge and remain within a few miles to-day what they were during the Wars of the Romans. Yet the Roman attitude and the nomadic character of a tribal system is indefinitely elastic. The tribe may be wholly nomad or it may have settled, while yet preserving its tribal organization and morals, into a fixed set of agricultural villages. This much is certain: that wherever men build, and do not depend for shelter upon tents, the nomadic character of their communities is qualified.

Now the importance of such a consideration lies in this: that a community wholly nomad is necessarily—quite apart from any fundamental conceptions of property—communist in regard to land. Men pass much from place to place and cannot conceive of land otherwise than as a mere space over which they progress, or a mere area of soil from which they draw the sustenance of themselves and their cattle. But the converse question immediately proposes itself: Where the tribal system was not wholly nomadic, how far did settled habitation accompany the establishment of private property in land?—The answer to this question is of capital importance, and we shall return to it after dealing with the other half of the Roman scheme.

That other half, the ancient civilization of the Mediterranean, was municipal; that is, the organization of men was in the main an organization of city states. Agriculture and village settlements existed, the one as a handmaiden to, the other as satellites of, city states which summed up the life of each society. From immemorial time, beyond all record and even beyond the misty horizon of credulity and legend, men had men who claimed the right, and held the right, of the Median. Certain picturesque exceptions, numerically insignificant, by their very contrast lent relief to this fundamental character of Mediterranean life. Rare and sparse Semitic tribes wandered in the deserts beyond its south-eastern corner; Berber horsemen harried the steppes which lay beyond the Ganges, and so on. But the whole scheme of life was municipal. In that scheme we discover at the opening of the Christian
Era a certain attitude towards the tenure of land neither complicated nor difficult to define. Land was everywhere held as private property: it was bought and sold, the most absolute rights conceivable were granted over it by the Roman State. But this does not mean that once his land belonged to the City and to the imperial Government, and, secondly, a hypothesis, but existing records showed how, in the past, society throughout the Mediterranean, though it could not so much as conceive of communism, had made continual efforts to prevent the growth of a class of free men who should be dispossessed of land. The efforts to attain this ideal, now taking the form of popular outbreaks, now of aristocratic legislation, were directed, however, for the most part, towards the proper subdivision of the remaining public lands or to the establishment of a freeholding population upon land which had been acquired by conquest from an enemy.

The institution of slavery must, as the reader need hardly be reminded, be constantly kept in view in connexion with such a scheme of society. The State in the Mediterranean, at the time of which we speak, normally, though not everywhere, consisted of a minority of free men, citizens as we should call them, for whom laboured a majority of men not possessed of civic rights and technically no portion of the State at all. Even under such conditions a class was growing up which, though free, was dispossessed of any property in land. It had appeared very early in the history of Rome, and from the early Roman name for it we draw our modern technical term "the proletariat." But there was a constant instinct in favour of increasing the security of the State by the establishment of such landless men as freeholders and proprietors of the diminishing public lands. This, the object of the Gracchi and the achievement of Julius Caesar, though never finally successful, proved the strong tendency of the Roman State to repossess upon citizens who should be owners and freeholders. Whether we inherit that conception from the Roman polity alone, or whether it is due to the need of the State to maintain a habitable whole, this much is certain, that from the Roman Civil Wars to our own day, the idea of a large number of absolute owners of land forming the best and most natural basis for a state, has endured unbroken and may be called normal to the political mind of Europe.

A number of exceptions indefinitely large might be proposed to so simple a scheme. Local custom varied infinitely, and the learned can discover many a vestige of ancient tenure, but, regarding our starting-point as a whole—regarding as a whole, that is, the civil and agricultural conditions of our era—it was a civilization of freeholders, owners who could buy and sell, balanced by the retention of great areas in the hands of the community for distribution, not for common tillage.

To this conception of land tenure (which is almost identical with that of the French Republican tradition which has imposed itself to-day over the greater part of Western Europe) there was added in the succeeding seven centuries a slow process of modification which is as difficult to estimate in its nature and origins as it is essential to grasp if one is to understand the problem of land in Europe. The absolute tenure of the Roman land remained unchanged in men's minds, in the terminology of their laws, in the phrases of their conversation, and even in the major facts of their society. But there was superimposed upon so simple a conception a novel relationship between the larger and the smaller owners, between the owner and the non-owner who had merely contracted a term of tenure at a rent—nay, even between the owner and the class that had been dispossessed by the State, which transformed the society of Europe. I say this novel relationship arose most gradually during the first seven centuries; it is widely discoverable in law in the eighth century. The darkness of the ninth century, with its violent Barbarian assault, throws society into a crucible; when the chaotic mass crystallizes, we find established and henceforward dominating all the Middle Ages, from the later tenth century to modern times, that conception of land tenure to which is roughly, though somewhat inaccurately, given the title Feudalism.

It is at this point of moment to return to the thread of tribal organization in order that we may discover how far this change in the habit of the Roman mind between the absolute ownership of the early Empire and the conception of tenure in the Middle Ages proceeded from that exterior and barbarous tribal system, and how far it proceeded from some organic internal change within the structure of Roman society.

We have seen that the tribal system was not necessarily nomadic and therefore not necessarily communistic in the matter of land. Its nomadic character varied in intensity, from the purely nomadic hordes who seem to have occupied the great plains of the East of Europe to the more or less fixed clans of the Gauls, with their established central cities or strongholds, and their local ascriptions of areas and boundaries.

Upon the tribes to the east of the Roman Empire, we have very little evidence indeed. It is customary to give to this vague group of Barbarians the name Teutonic; and certainly many of its component tribes (though not all) appear to have certain religious customs, and even the names of certain gods, in common at the opening of the Christian Era. As to the homogeneity of this race, we have evidence quite as contradictory as it is slight. Tacitus, whose main object was the production of a polished literary satire, paints an ideal community, all of one highly distinguishable blood, and exactly possessed of every virtue which he desired, but failed, to find in the Roman State of his time. "Oriental" is the word he uses, not to denote, to strengthen his work, a very considerable number of notes which seem to bear the stamp of actual observation, undertaken, not of course by the writer, but by merchants or soldiers whom he may have interrogated. In the preceding century Julius Caesar, a military writer possessing a very different aim and concerned with accuracy rather than with effect, gives a picture far less favourable. Neither writer, it must be remembered, had any way of appreciating the Germanies and their mixed and floating population within any great distance from the Roman lines. But his chief interest in the nomadic character of these Barbarians. In Caesar's account, paucity of agriculture and the importance of pasture is emphasized; the land is described as held in common by a body which moves from year to year. Their habitations are but temporary huts. The account of Tacitus does not form a consistent whole, and the most important sentence is corrupt in the text that no scholar can vouch for it; but it is generally understood to mean that land (whether pasture or arable we cannot tell) was re-allotted year by year; and it is certain that, as with most Barbarians, very large areas of waste were maintained round the settlement of each tribe. There is practically no other testimony with regard to the tribal system east of the Roman Empire. An enormous mass of guesswork has been erected upon the frail basis of obsolete
customs and supposed vestiges of the past discoverable centuries later when the Germans were civilized by the Christian armies, and notably by those of Charlemagne, and when written records could first set down what had hitherto been fluctuating and perhaps recent legend.

The Western tribal system has another and a much greater importance. We know more about it; it formed the civilisation of a much larger number of men, and of men far more cultivated and therefore more instructive to the Roman mind. Of the Gallic system we know virtually nothing. At the British we can do no more than guess; but the survival of what is called "Celtic" habit in Ireland and its recrudescence (which is also a form of survival) in Wales, after the dissolution of Roman rule, instruct us. The characteristics of that of Wellingborough seems to have been an intense bond of blood and of common interest between the members of one clan. Perhaps the most startling evidence of this is that, when the Catholic Church, for all its elaborate organization, strictly kept records, and, as it were, necessary machinery, took into its unity the independent Celtic tribes, even such an institution as the episcopate was influenced by the tribal scheme, and the bishop was at first the bishop of the tribe or of its monastic institute, not the officer of a municipality, as he was throughout all the rest of the known world.

The restoration of land which could properly be regarded as private property under the tribal system of the West varied indefinitely. Records of course, only begin to exist with the advent, even after the fall of the Roman Empire, of Roman civilization, letters, religion, and law. Not until modern research was at work could the extent of communal ownership of the land be gauged. It was an alien to the earliest chroniclers who wrote in the Roman tongue and under Roman traditions. Even the Welsh written and oral traditions make it difficult to establish a proportion, and certainly the learned in the fields of Welsh, Scottish, and Irish, tribal custom are compelled, for all their learning, to present much more hypothesis than they do direct knowledge.

It is perhaps a just summary that the half of the tribal system which lay exterior to the Roman Empire in the British Isles was conditioned as to its proportion of settling, after tribal lines against the orographical circumstances in which it lived. The districts it occupied in Great Britain were mountainous; the mountain pastures, and the mountain waste, and the mountain forests were communal. The narrow alluvial belts along the valley streams were in part held co-operatively for tillage, and in some part—necessarily in the neighbourhood of habitations—particular and owned. In Ireland, where wide stretches of plain (though of moist plain, suitable chiefly for pasturage) contrasted with the mountain districts, private property in the full mode of acquiring title by purchase or by gift was not precluded; and there were nothing forming for that matter, in the small private properties of the Welsh and Scottish valleys—by a political or ethical character common to the whole tribal system, which was its intensely military character—a character which, it should be remembered, the so-called Celtic tribes of the West poured like an invigorating spiritual stream into the life of the early Middle Ages. This character involved intense loyalties to the clan and to the person of a chief. The conception of an individual owning as against the clan, or defending his particular existence and its economic basis as against his chief, was a conception for the future as it was for the past, and was odious to the spirit of that society. Ownership there was, for there was theft; and a sense of ownership in land, for there are plenty of examples of men raving against unjust spoliation of that form of property as they would rage against unjust spoliation of any other form of property. But the clan was above all military, and the private property, however absolutely felt or universally recognized, was subject to the spirit of sacrifice which is essential to the military temper.

A general appreciation of the tribal spirit of the West, though historically of the first importance, since the Middle Ages were principally inspired by it, does not greatly affect the particular history of land-tenure, because it bears, both numerically and existentially, no slight relation to the work, compact, and stable civilization of Rome, whose internal transformation can alone explain the gradual change from the Roman conception of ownership to the feudal system.

A third province of evidence which would be of the utmost importance to our inquiry is unfortunately lacking and can never be recovered: I mean, the evidence of southern and eastern Britain. There certainly took place an infiltration of tribes, and often, perhaps, of single families, from the Germans into southern and eastern Britain during the fourth, fifth, and sixth centuries. There was no matter of doubt that, from a position originally subsidiary and perhaps insignificant under the Roman Empire, the German-speaking population of southern and eastern Britain increased enormously up to the advent of St. Augustine, just before the dawn of the seventh century. There is again no matter of doubt that the attacks of the Teutonic tribes, who were probably also mainly speakers of Teutonic dialects, from being harassing in the third, and menacing in the fourth, had become a scourge in the fifth century; and the weight of legend, though it is only legend, is too strong to be ignored where it describes their progress in the sixth. A certain number of the hitherto Roman towns in Britain were naturally taken by assault, some perhaps by the pirates alone, some by a combination of these with other Barbarians such as the Celtic Northerners beyond the Roman Wall. At any rate, although there is no direct record, and even in the way of myth only very misleading traditions, upon the worst 150 years of the business, and though southern and eastern Britain disappears from history during that period, yet we may confidently say that the society resulting from the pirate invasions, the resistance of the Roman cities, and the independent British tribes which joined in the fray, was a society in which the features of the tribal organization were very profited by, rather than determined by, a combination of these with other Barbarians. The Celtic Northerners and the British beyond the Wall, as they seemed to have been, were subject to the influence of the Church, nothing in the way of true tribal organization remains. The Roman municipalities have survived the shock, and are all, with the exception of three, upon their feet. The agricultural arrangements of the village have certain local characteristics which appear to differentiate it from its counterpart in Gaul, but these characteristics are slight and unimportant; and with the exception of the increasing change in the popular language (the German elements of which spread further and further), of a considerable admixture of new blood (how much we cannot tell), of
a necessary and obvious loosening of the bonds of society, and of an absence of such military organization as Gaul still preserved, the Roman province of Britain is, at the close of the eighth century, once more a portion of the Roman world. We cannot judge from its then social constitution what former times its institutions may have contributed to the moulding of the State.

Yet another source for the transformation in land tenure which Roman society suffered has been suggested. Some have thought that two institutions present in the Roman Empire in the time of its vigour—the system of early discovered especially in the West, the other civil and developed later in the East under Byzantine law—were the origins of feudalism.

The first of these was the military tenure granted by the Crown to veterans upon the frontiers on condition of military service to be rendered when called for. This case of tenure was exceptional so far as the number of individuals was concerned, but had a wide extension upon the long frontiers of the Empire. It bears a strong resemblance, indeed, to one characteristic of later feudalism, to wit, the connexion between tenant and lord, service in return. In the system, it quite impossible to establish a link between this exceptional, artificial, and occasional system and that whole state of mind which produced (as we shall see later) the feudal system. There is no trace of the one growing out of the other: one does not find an inherited tenure which began under this Roman military experiment and ended as a true feudal estate. The resemblance between the two is mechanical rather than organic, and the analogy is verbal. On examination we find that there is no affinity between the spirit of the one and the spirit of the other.

The second institution was the tenure called emphyteusis, under which land, the domain of the Crown (and other land as well, but especially land under the domain of the Crown), was granted, not on absolute ownership, but in tenancy for certain fixed dues, and once so granted was granted permanently. This system does indeed nearly resemble in form the beneficium, which overlapped with it, but grew later and flourished more vigorously in the West. It lacks, however, the prime character of the beneficium, to wit, the moral bond between the grantor and the grantee, the conception of a personal favour done by the grantor who expects from the grantee personal loyalty. Now this not only links the life of the tenant, but under the forms of the grant in the West were undoubtedly influenced by the strict law of the Empire, there is no organic relation discoverable in history between one and the other. A more direct, a more reasonable, and a more demonstrable process produced out of the material of Roman society, and freed within its own tradition, the structure of tenure later known as feudalism. For, while various forms of settled tenure which had for their characteristic the holding of land from another, in contradistinction to the fundamental and indestructible idea of ownership, were thus arising in the settled civilization still subject to centralized Roman government and chiefly residing in the eastern portion of Christendom, in the western portion the ideas of the time were expressing themselves in another fashion.

The conception of tenure, or holding of another person's land, distinguished from ownership (an idea as fundamental and as indestructible in the West as in the East), was developing in Gaul through the merging of two quite distinct currents of custom. To comprehend these two currents the reader must first postulate as the basis of all Roman society at the close of the Empire and a number of numbers mixing in size from many hundreds to many thousands of acres, each in the absolute possession of an owner who tilled his land with slave labour. These estates were the units of society; they were the parishes into which ecclesiastical organization was divided, the villa into which agricultural industry was divided. One family might possess many; no wealthy or important family possessed less than one. It is their grouping which we shall see building up the feudal system; it is their number which produced the nobility of Europe in the Middle Ages, their chaplains who become the parish priests, their slaves who become the peasantry. This conception once seized, we can understand the nature of the two currents whose fusion resulted in the full production of feudalism, and in the process we shall set out to examine. The two streams were as follows:—

1. The great landowners whom the Roman Empire, while it was still governed strictly from one centre, had left absolute proprietors of their estates, began to arrange themselves in a hierarchy of greater and lesser men: the lesser related to the greater by an understanding which later became a contract, and which carried with it a conception of dependence.

2. The great officers of state being identical in so many cases with the owners of large landed estates, the two ideas of office and of ownership associated together, and, welded, became hereditary as the descent of land was hereditary, it became natural, conversely, to think of ownership, however fixed and continuous, as something held from above, since political power, which was at last inseparably associated with ownership, must of its nature be held from the supreme authority of the State.

We will examine each of these developments separately. Even before the fall of the Empire and the establishment of local generals of armies (some Barbarian, some Roman, and all, soon, a mixture of the two), the tendency of the smaller man to put himself under the protection of the greater man had developed. It was the decay in public authority which produced this tendency. Property was the prime institution that survived, it had a sanction in the popular mind which survived the power of punishment vested in the laws and police of the Roman State. A man was powerful in proportion to the number of estates he owned in a district; he could exercise that power in a number of ways; he could see to it that religious endowments should go to the person or persons he wished; he could found monasteries; he could influence by the weight of his presence the course of public justice; he could give gifts to public works. Thus was the line drawn between an individual and punishment; he could be responsible for taxes. The more estates a man owned in a particular district, the more—as public authority declined, and sense of the sanctity of property remained—did such a man tend to become the real head of the district, in contradistinction to the weakening authority of political machinery. Again, the anarchic character which war was taking on—the irresponsible raids of small but fierce groups of Barbarians—created dangers against which a man best secured himself by establishing a close set of mutual duties between himself and some wealthier man of his neighbourhood. The tendency was opposed to Roman tradition, and, since it worked outside the framework of Roman law, was obviously imetical to the imperial conception; but that conception weakened from generation to generation, and as early as the third century one finds that sort of thing—a sort of thing an established custom vigorous and vital, which the dead framework of the imperial law cannot break. When the chieftains of the small invading tribes, principally German, and the generals of armies had seized upon the machinery of government, had become the new major state, and had resided in the Roman palace of the capital cities, and came to be called local "kings", all attempt to check this natural tendency ceased.
Under the Merovingian Dynasty, which saw a continued decline of central authority, the institution flourished exceedingly. It became normal and almost universal for the small man with one or two estates to be attached, he and his heirs, in a permanent fashion, to a larger man with many estates. The link between the greater and the lesser landowners of a district bore various names. Sometimes the lesser man was said to be in "feud" to the greater; the Latin word fides, i.e., "the bond of honour," was a technical word employed. Sometimes the old Latin term "patronage" was used to signify the same thing. In the tenth century men were already taking it for granted; in the seventh, though it had not yet appeared in written law, it had appeared in many a written document, and was almost universal. Towards the end of the seventh century and the beginning of the eighth a special political movement was apparent in society which not only accepted and sanctioned such arrangements, but actively and consciously favoured them. The great officers of the Crown, and notably their chief, the mayor of the palace, had become stronger than the Crown itself. Now these great officers were also the great landowners; they were the heads of this hierarchy of innumerable individual contracts or understandings or customary relationships. And as these mayors of the palace came nearer and nearer to grasping the supreme power in the State, the chief force behind them was the crowd of men who owed to them and the great officers, their followers, this "fidelity." 

The eighth century witnessed a political revolution which finally confirmed and established, brought into the region of positive law, and launched on its career through the Middle Ages, the full institution of "patronage," or, as it was now called, "seniority." The link of "fidelity" had become the nexus which bound the State together, and feudalism henceforward was the characteristic of society.

This political revolution consisted in the advent to supreme power of the old Roman family of Ferreolus. It was one of the great senatorial families of Roman Gaul established in the district of Narbonne in the fifth century. After many adventures, during which the head of the family at one moment migrated into the German-speaking limits of Gaul, and during which more than one German marriage brought into the old paternal Gallo-Roman stock a mixture of blood on the one side, the Ferreolii occupied the highest office of state in the eastern portion of the monarchy. A certain Pepin (the Gallic name is characteristic) was mayor of the palace—head, that is, of the landed hierarchy and chief officer of state in the eastern half—when, at the end of a series of confused quarrels between the great nobles, he conquered, at the battle of Tistry (687), his rival, the other mayor of the palace, the chief officer of the western half of the monarchy. No racial division is apparent in this confused business, but what is now the wealthiest landed family in all Gaul belonged, in the head of all Gaul—the master of the whole State. Pepin's son Charles broke the invasion of the Saracens; his grandson, another Pepin, was at last crowned king of the whole French State in 757, and it may be said that from that moment the new system of tenure has definitely replaced the old social organization of Rome. For, though Pepin's son Charles recovered, and in a sense made perpetual, the idea of European unity which is summed up in the word empire, yet he never permitted the centralized law, which (so far as was possible in so barbaric a society) he established, to interfere with the natural growth of feudalism. On the contrary, he fostered it, and the capitularies of Charlemagne trust the institution takes on the force of law. The monarch orders them to be observed, and himself concludes arrangements upon the basis of seniortas or feuditas at the very moment when he is attempting to revive the old, impersonal and anti-feudal idea of the Empire.

Such was the gradual growth of feudal tenure from below. A brief outline must now be given of the main branch of its development, its growth from above.

The Roman Cesar in the later times of the Empire entrusted the government of various districts to officials whose military titles sufficiently indicate their origin. A dux (the word we translate by "duke"), or leader, was one thing in one district; acomes (the word we translate by "count"), or cousin, of another. And the provinces of the sovereign, over another. And in the nature of things these offices of state were revokable and dependent upon the will of Government. But the process of society we have just described associated such offices, even towards the end of the Empire, with large estates in land. When the Empire had broken down, and the chieftains of tribes or the generals of armies had seized upon the powers of local government, this association of political power with landed estate tended to become universal; and the confusion of ideas was further aided by the institution of the beneficium. As is still the case in all modern European states with the exception of England, very large tracts of each province were public land. Nor did these tracts necessarily diminish with alienation, sale, etc., for they were recruited by conquest, confiscation, lapse for lack of heirs, and merger. Under the institution of the beneficium, a great landowner, desiring to attach to himself the services of some important person or institution, gave over to such person or institution the usufruct of a certain part of his land on condition of receiving in return services and fidelity, or, as it was later called, "vassalage." After the breakdown of the Empire, the decline in local monarchies—and notably the Frankish monarchies of the North—began to grant such beneficium on a large scale, and by the time of Charlemagne they made inroads into the greater part of the public domain. For generations it was understood that a beneficium was a purely personal contract entered into under the strict conceptions of the Roman law, and, if no term were mentioned, terminable at the latest at the death of the grantor.

It is self-evident, however, that, under the pressure of institutions round it, the beneficium would tend to become the feudal tenure; and so it did. We have, then, under the Merovingian Kings of France, thoroughly established in custom, and, under the Carolignian Dynasty, openly apparent in law, a multitude of royal acts which—whether they are a grant to a faithful servant or the appointment of a trusted man to an office, especially to a local command, or the nomination of one to such a position who is too strong to be refused—all become daily less and less the voluntary and revocable act of an absolute government, more and more the recognition of an established landed system.

But out of these two—the growth of feudalism from below by voluntary interdependence of smaller owners and greater, the growth of feudalism from above by the increasing strong analogy which makes of office and of royal grant a permanent tenure in duty and in honour—the whole feudal system had been welded when the storm of the ninth century broke upon Christendom.

In that storm our civilization nearly disappeared. Its symbol, the imperial name, wholly disappeared; for the establishment of the German Empire in the tenth century and its 300 years' quarrel with Italy was not universal: it left on one side Gaul, Britain, and the re-conquest of Spain, which was characteristic not a national, and as characterized not a European, affair. It suffered the fate of all mere names.

The violent Barbaric assault upon Christendom
LAND-TENURE

which followed the Carolingian period was calculated to make of the feudal conception a stronger thing than the political conception based upon local economic power, was absolutely necessary at such a time.

Perhaps the best example of the way in which tenure had come to be a necessity for men's minds is the grant of Normandy. The story is simple enough. The pirate invasions, though the chief one could not have brought numerous armies, yet sufficiently and continually harried the coasts of northern France. Their action dated from shortly after the death of Charlemagne and continued into the tenth century. The way out of the difficulty is a symbol of all that society then knew. The chief of the feudalized; that is, he must accept the whole body of civilization if he and his followers desire to settle within it. The pirates have come for gain, they have looted enough, and civilization will only permit them to remain within its boundaries if they regularize their position by calling themselves, and living as, Gallo-Roman lords of villages; presumably only the leaders could have such a position, their followers would be tenants under them or armed servants in their halls. Waste village estates, village estates acquired by the forced marriages of heiresses, grants from the Royal domain, would presumably form the basis of this settlement. The head chief (Rollo), for instance, must marry the emperor's daughter; and most significant of all is the limit of the territory granted and the title of the grantee. Rollo is to be a dux, and he is to be the emperor's man, to owe him fidelity, etc. The territorial limits of his jurisdiction are precisely those of an old Roman frontier which has never been allowed to fall into desuetude. Rollo, the dux, holds of the emperor, as his man, the province of the Second Lyonnaise (Gallia Lugdunensis Secunda). Custom will later give to this district the new name of Normandy; but it is based from that day to this with the exact frontier of the third social province. Such a power for absorption has the Roman world even in its worst moment at the end of the fierce Barbarian onslaught, that the new state is within two generations a model of feudalism. The few hundred chiefs are settled as estate-owners in the Roman scheme, side by side with the mere tenants of the Gallo-Roman equal. Their few thousand followers have become serfs, villeins, or armed horsemen upon their manors. The whole is arranged in a strict hierarchy under the hereditary dux, the man of his hereditary feudal lord, the king in Paris, and the Second Lyonnaise presents a perfect model for the feudal hierarchy built up. The fusion of numerous Gallo-Roman lords of estates with a few Barbaric lords of estates interspersed among them that develops the feudal theory most thoroughly and carries it furthest; for the Norman nobility—in England, in Sicily, and in Palestine—were the chief organizers of the Middle Ages.

We have just used the words villeins and serfs, and at this point in our examination of European land tenure in Christian times, the position of the mass of the people deserves our attention. The feudal development of which we have been giving a description concerned a small minority. This minority consisted of the numerous descendants of the great landowners of the Roman Empire and a certain smaller number of Barbarian adventurers who in the troubles of the fifth century (to which must be added other invasions, especially in the fifth and sixth) came with the less established and the units of the Roman scheme, and feudalism was the organization of their owners upon the system of tenure we have described. What of the great mass of the population which in Roman times had cultivated the land of these landowners as slaves?—These also had been transformed in their social condition during the Christian centuries, and the transformation, though it is most obscure in its process, is quite clear in its origin and at its end. The Church, between the fifth century and the sixth, had transformed the Roman slave into the European peasant. The word was retained, and serv was but a form of servus, while villein is but a form of villanus, the agricultural slave at work upon a villa, or Roman country estate. But the political position to which those names attached has utterly changed. Slavery, as an institution did indeed still linger in the tenth century—there are traces of it even in the eleventh—but that slavery is domestic and rare. The man who tills the soil is, at the end of the process we have been describing, not a slave at all. On the other hand his position is quite different from that of the servus; he is no longer the product of the modern European conception of the same political entity.

The Roman estate which has come down, often unchanged even in the details of its boundaries, through all these centuries, will now call a "manor" (a term probably Norman in origin), for under this name it is alluded to in most textbooks. The medie-

val, or feudal, manor had at its head a lord who might be an individual, or a corporation such as a monastery, or an office such as the Crown or the Archbishopric of Canterbury; and these lords were of course the units of which the workings of this lord, the representative of the old Roman slave-owners, was still, in legal phraseology, due the whole work of the villein. Indeed, it was the definition of a villein that he was one, who, rising in the morning, could not tell of his own will what he should have to do before night.

But even if this legal tradition (which by the tenth century was no more than a form of words) had had actual existence in social fact, the villein would have been a very different person from the Roman slave. He had land of his own, a house of his own hereditable in his family, he could be bought or sold, and it would appear that so long as he held his land there was no constraint over his person. He was subject to the common justice of the land, and not to the arbitrary will of his master, and so forth. But much more favourable than this was his actual position, for custom and common opinion had long forbidden him to give more than a fixed number of somewhat complicated dues, varying from estate to estate, to his lord. Of the old Roman estate only a portion (differing again from parish to parish) remained absolutely under the lord's control and was called his "demense," that is "lord's land," from dominium. On this the lord was free to impose what dues he pleased, subject to rules—sometimes two days a week, sometimes three, always excepting holy days. He must also give a certain amount of produce, usually quite small, at stated times, a few eggs at Easter, etc., etc., according to the industry of the place. And he must perform certain services. For the rest, his time was free, and the land apportioned to him was, in nearly every sense, his own. It was his own because it could not be taken from him even under process of debt, nor for that matter could his capital be taken from him under process of debt. It was his own because, though dues and work went with it, yet they could not be raised as, or if, he improved the value of his land: custom forbade it. What is called in modern jargon "the unearned increment" was his, and that is the test of property in land. So was the earned increment which was due to his own labour. More than this, the villein had, side by side with his feudal hierarchy, a social hierarchy of the utmost importance. The common land of the manor, which had formerly been the Roman proprietor's as much as any other part, was now used according to careful rules. The lord might only put so many cattle onto it, the villeins each so many. Similar strict communal rights accrued to him in the woods of the place, in the fisheries, the use of the water-ways.
and of water-power, etc. The village mill was commonly a monopoly of the lords, and one or two other things. To understand the decline of the village life, that is, the decline of the feudal system, it is plain that we had formerly owned and of which they were now but the seigniorial holders. The villein was not said to own, but to hold; he held of his lord in return for service, and by a bond which, though it was not military and honourable, as was fides, was yet based upon the same ethical conception of a moral debt other than a mere financial obligation. The system was complicated by other less common forms of tenure. Thus freeholders were discovered side by side with the villeins—that is, men whose little properties involved some form of service not thought service or degraded; for instance, it was a common, though not a universal, rule that if a man could prove never to have paid anything but a fixed money due for his land, he was to be deemed a freeholder. And all non-servile work for the lord came in the same category. The tenure of the priest was of another kind, and so forth. There were also numerous cases of personal property (the villein might have anything from 15 or 30 acres to as much as 120 or more), but the general frame of society when feudalism was in its vigour was as we have described it.

Caught in the general agricultural system around them were the old Roman municipalities with which this article has not to deal—Orléans, Chartres, Rouen, Limoges, to take a few Gallic names quite at random; Newcastle, London, Winchester, to take three British names equally at random. And these municipalities were, in practice, of course composed of a number of small absolute owners of the land on which their houses and gardens stood. But so strong was the feudal idea that it was extended by analogy even to the cities. A city would have a lord, very often the Crown, or some bishop, or other great officer of state. The public taxes were paid to this lord, in addition to any of feudal nature. When the development of commerce during and after the Crusades made the fiction inconvenient, the lords granted charters, that is, written acknowledgments of the town’s immemorial customs, and often added to these special immunities from interference, in return for money.

Other exceptions to the feudal system are to be found in the allodial lands, which simply means the estates, large or small, which had never got caught in the feudal development at all, but remained held in absolute ownership from an unbroken tradition of Roman institutions. These were especially common in the south of France, and it is characteristic of the organizing power of the Normans that they, in their passion for system, refused to admit so unfavourable a conception within their dominions, so that to this day in England there is technically no such absolute ownership of land possible.

Other exceptions again are to be found in the communal arrangements of the mountain valleys—notably in the Alps and Pyrenees, where the feudal system had never really taken root, and where remote and isolated villages have from time immemorial arranged, and do to this day arrange, their affairs upon an organized system of dues which corresponds to their political system. It should always be remembered that in this most ancient and unchanged of European societies private ownership in land is absolute and most strictly recognized. Communal management attaches only to wood, pasture, and here and there a public field.

The next step in our inquiry must be: How this established feudal system proceeded to its decay. To understand the decline of the feudal system, and the transformation of the feudal tenure into the land-tenure of modern Christendom, it must first be clearly understood that what I have called the indestructible idea of private property in land survived, paradoxical as it may seem, throughout the whole long reign of feudalism. It was present when the absolute owners of the Roman estates begat to group themselves in Gaul into patrons and clients, “lords” and “men,” seniors and juniors; it was present when Charlemagne, in his capitulations, gave the forms of law to the personal link of tenure—military service and loyalty as the condition of holding; it was present after the irrigation of the continent, when feudalism, in a time necessarily military, struck its most vigorous roots. It was present when the Norman lawyers, just before and during the Crusades (that is at the end of the eleventh and during the twelfth centuries), codified the feudal system and erected it into a strict machine of law.

We know that this idea of private property was present in two ways: (1) we know it as a matter of historic fact, because we find land bought and sold and mortgaged; (2) we know it as a matter of historical judgment, because we find land talked of as property, and the personal ownership over it and the right to dispose of it. To these, the conceptions of theft in regard to it, of indignation at its unrighteous occupation, the increasing wealth of it as accruing to a particular owner, etc., etc., all alluded to.

Had society remained primitive for centuries after the full statement of feudalism in the ninth and tenth centuries, the logical clash between the feudal theory of holding for service done and the intimate personal sense of property in land, which is common to all Europeans, might never have taken place. It was quite as easy for a family to go holding an estate from father to son, and to think of it as private property on the one hand and as a tenure on the other. There was a contract in theory, but no contract in fact. True, treason against the lord overlord would have involved the loss of the land just as bankruptcy involves it now, but that was a rare contingency and regarded as the more exceptional because it was disgraceful. Great lords frequently lost their overlordship, lesser lords less frequently, men with single estates or manors very rarely, monasteries and ecclesiastical bodies hardly ever, villeins, one may say, never at all. And the two conceptions, though convenient and regarded as the more exceptional, could have lived peaceably side by side, just as, in our society for the moment, the conception of free contract is living peaceably side by side with the contradictory social fact of a proletariat and a capitalist class.

What ruined the feudal system was the tendency—as society developed in activity, as values changed, as towns grew, as a landless class developed, and as all that accompanies the expansion of a society appeared.—of those who formed the units of feudal societies to define their position with exactitude. Thus, within the village community which was the microcosm of the whole, there came moments when a villein who had long ago commuted his payment in labour for a fixed payment in money was, whether by the change in the value of money or by the rise in the price of labour, more valuable to his lord as a labourer than as a moneyer of dues, and a villein would dispute in the court his right to service. Again, as between lord and overlord, service in men-at-arms, once natural and normal, might become a fixed and mechanical thing. The overlord might find it profitable to accept a redemption of the military service required. Again, the king, in the primitive
feudal conception, was simply the owner of a very large number of estates and of the royal domain (that is the forests and other public land). It was his business, above all, to collect the State's revenues and to pay the State's expenses, in particular the salaries of the State officials. The feudal tenant of a manor was the holder of servitudes, that is, the owner of the land and of the right to use it. The feudal tenant had to pay rent and dues to the lord of the manor, who was the owner of the land and the lord of the manor. The feudal tenant also had to render services to the lord of the manor, such as military service, labor service, and other services.

The development of modern Europe should fix its eyes. Outside the old limits of the Roman Empire fortunes varied. The scantly population of Scandinavia, for instance, drained the State's revenues and the wealthy private gentleman—far the wealthiest private gentleman of the whole realm. But as civilization increased in complexity he could not do this. The functions of the State increased, the king must come for aids to his underlords, who would be bound to give aids by the laws of loyalty and service. The burden of taxes would be an insupportable burden; such mere feudal aids must be supplemented by taxation falling upon all. The Crown was coming back by the mere force of things towards what it had been under Roman rule, before feudalism and tenures were heard of. Meanwhile, the link between the underlord and the lord was loosened, the link between the villein and his lord, or the king and his direct feudal tenants. It was against the interest of the royal courts to allow the overlords to grow strong; that interest would in all countries tend to support a man with one manor who might be fighting an action to prevent that manor exchequing, on some technical ground, to a wealthier local magnate who was his feudal superior. And, side by side with all this, increasing commercial activity, by making land more and more a matter of contract, barter, and sale, broke up the old personal tie upon which the ethical condition of feudalism reposed.

The dislocation of tenures, its reversion towards ownership, was only part of the universal European movement back towards the high civilization of the Empire which was undertaken in the spring of the eleventh century, and which is approaching its climax in our time—then the story of the life of Europe is like the story of the life of a comet, following its orbit; and in that metaphor one may call the ninth century the point of its course most distant from its centre of activity. The breaking-point between the fundamental and indestructible sense of ownership and the feudal conception which had overlain it for a time came, like the breaking-point of so many other strains, with the Renaissance. But the ownership of land did not go through a revolution, as did so many other institutions of that time; did not change abruptly, as did plastic art, nor suffer a catastrophe, as did religion. The forms of tenure were preserved, as they were used to mask what was now no longer tenure but ownership.

Now, from the violent action under feudal forms whereby Henry VIII acquired the land of the Church, and granted it again for ready money to a herd of adventurers, down to our own time there has been no less decided social fact of absolute ownership in land. Tenure, for all practical purposes, disappeared with the sixteenth century. Throughout the seventeenth, the eighteenth, and the nineteenth centuries land has been owned, not held, as a social fact, though in some provinces of Europe (as notably in Britain) legal and technical language has continued to draft in terms of servitudes instead of ownership. In this revolution, however, a social fact of perhaps more consequence to Christendom than any other of the material kind appeared. It did not concern the relation between the lord of the manor and his overlords; it concerned the condition of the masses of the people.

For the fate of the villein or peasant began from the sixteenth century onward to differ profoundly in two types of communities. In those communities which had broken off from the unity of civilization, and were soon to be grouped as Protestant, the lord of the manor tended to become the owner of the land, and in the cities which remained within the unity of the Catholic Church the villein tended to become the owner of the land.

This general formula is the capital historic truth upon which all those interested in the economic
growth of a proletariat therein has brought on other problems. It has produced, under the guidance of certain philosophers, many of them not European in descent, the conception of Collectivism, which, as an abstract theory, denies that old indestructible concept of ownership of the land and would treat all land as the property of the sovereign. But this academic theory has made, and can make, no progress upon the soil, and it may be confidently said that the old Roman idea of absolute and divided ownership is secure.

H. BELLLOC.

Landr, Pope (913-14), a native of the Sabina, and the son of Taiio, elected pope seemingly in July or August, 913; d. in February or March, 914, after a reign of a little over six months. Nothing more is known of him except that he was a worthy man, and granted a privilege to a church in his native Sabina. Liber Pontificale, II, 239; Kegel, Italia Pontificia, II (Berlin, 1907), 73; Mann, Lives of the Popes in the Early Middle Ages, IV, 147 seqq.

HORACE K. MANN.

Landriot, Jean-Francois-Anne, French bishop, b. at Couches-les-Mines near Autun, 1816; d. at Reims, 1874. Ordained in 1839 from the seminary of Autun, he became, after a few years spent at the cathedral, successively: vicaire général, 1842; vicar-general, 1850; Bishop of La Rochelle, 1856, and Archbishop of Reims, 1867. During his ten years' stay at La Rochelle he restored the cathedral, organized the Propagation of the Faith and the Peter's-pence collections, and won a reputation as a pupil orator. A true bishop, he made it a rule to announce personally the Word of God in his cathedral or in the most remote diocesan parishes. At Reims, besides preaching many Advent and Lenten stations, he raised a large subscription for the pontifical army, established several educational institutions, founded an asylum for the aged, and instructed St. Walfroy to the Priests of the Mission. As a member of the Vatican Council, he seemed to have precociously foreseen the definition of papal infallibility, but, once decreed, he adhered to its promulgation and even wrote to his diocesan urging them to accept it unconditionally. Lacroix ("Mgr. Landriot pendant l'occupation allemande", Reims, 1868) shows Landriot's influence in allaying the measure of rigor resorted to by the victorious Germans during their occupation of Reims in 1870. In the question of the ancient classics Landriot refused to subscribe to the extreme views of Gaume and "L'Univers". An eloquent preacher, he was also an ascetic writer of note. Besides his pastoral works collected in the "Œuvres de Mgr. Landriot" (7 vols., Paris, 1864-74), we have from his pen, all published in Paris: "Recherches historiques sur les écoles littéraires du Christianisme" (1851); "Examен critique des lettres de l'Abbe Gaume sur le paganisme dans l'éducation" (1852); "La femme forte" (1862); "La famille chrétienne" (1863); "La famille chrétienne édifiée" (1863); "Le Christ et la tradition" (1865); "Les beautés évangéliques" (1865); "Le Symbolisme" (1866); "L'Eucharistie" (1866); "La Sainte Communion" (1872); "L'Autorité et la liberté" (1872); "L'esprit chrétien dans l'enseignement" (1873); "Institutions sur l'Église dominicaine" (1874); "L'Esprit Saint" (1879), etc.

La France ecclésiastique (Paris, 1878): L'épiscopal français depuis le concordat jusqu'à la séparation (Paris, 1907), v. v.: La Rochelle and France (Reims, 1888); Caumbrette (Reims, 1874); Abba (Reims, 1874), Redort (Autun, 1856).

J. F. SOILLIER.

Langfranc, Archbishop of Canterbury, b. at Pavia, c. 1005; d. at Canterbury, 24 May, 1089. Some say his father was of senatorial rank, others accord him a somewhat humbler station. He received a liberal education according to the standard of the age, notwithstanding the death of his parents during his tender years. On reaching manhood he applied himself to the study and practice of the law with marked success, but left Pavia for the purpose of devoting himself to the pursuit of learning. He made his way to France, and attended himself to a school at Avranches, in Normandy, where he became noted as a teacher. At a later period, a vocation to the religious life developing itself in him, he quitted Avranches secretly, only taking with him one Paul, a relative. His biographer tells us he was received into the ranks of the little poverty-stricken community after the customary period of probation, and applied himself to Biblical studies. In time, he was appointed prior of the monastery by Herluin, and was then enabled to open a school there, which rapidly became famous, and attracted scholars from many parts of Europe, several of whom rose to high rank in after years, especially the future pope, Alexander II, and Anselm, who succeeded Lanfranc both as prior of Bec and as Archbishop of Canterbury.

In May, 1050, being in Rome on business, he attended the council there and opposed the heresies that had of late years been broached by Berengarius on the subject of the Sacrament of the Altar, denying the mode of the Real Presence. Through the contents of a certain letter, Lanfranc cast some doubt of the surmise of Berengarius's erroneous views, but he so ably explained his own opinions that he has stood forth ever since as the principal exponent of the doctrine which has from that date been labelled with the name of Transubstantiation. Needless to say, that doctrine did not take its rise there; or through Lanfranc; but his masterly exposition of the Faith (as always held by the Church implicitly, and merely enucleated by him) was given with a clearness and precision of definition such as has been handed down through succeeding ages to ourselves. During the same year, at the Council of Verceil, he once more upheld the orthodox belief against Berengarius, and again to Tours, in 1055, and finally secured the triumph of truth over error, of authoritative teaching over private interpretation, in the definition of the Lateran Council, held under Nicholas II in 1059. At a later date, probably about 1060, he wrote "De Corpore et Sanguine Domini", against the errors which Berengarius had continued to propound, seminise, notwithstanding various retractions and submissions.

All these activies made Lanfranc a man of such note that William, Duke of Normandy, employed him as one of his counsellors. He, however, forfeited the Duke's favour about 1052-53, on account of opposing William's union with Matilda of Flanders, on the ground of their relationship within the prohibited degrees of kindred, and was, in consequence, ordered to leave the duke's dominions. On his journey to the frontier he happened to meet Duke William, who curiously asked him why he was so obedient to that Lord. Lanfranc jestingly replied that he was obeying them as fast as a lame horse would allow him to do so. William appears to have been mollified by the answer, a reconciliation followed, and it would seem that Lanfranc undertook to forward negotiations for securing the needful dispensation from the pope. This he finally obtained in 1059, as well as the removal of the interdict which had been laid upon Normandy. In 1066 he was appointed to the Abbey of St. Stephen's at Caen, one of the two abbeys lately founded by Duke William and his wife Matilda as one of the conditions of the papal dispensation from matrimonial impediments, and the rapidity of which dispensation was scarcely uncanonical. This year is further remarkable as chronicling the defeat of Harold, King of the English, at Hastings, and the consequent conquest of
England by Duke William. It is generally supposed that Lanfranc had much to do with shaping the duke’s policy of invasion, obtaining the pope’s sanction of the expedition by a papal Bull and the gift of a blessed banner, thereby conferring on the undertaking the appearance of being a holy war against a usurper and a violator of his oath, to some extent, also, identifying it with the cause of ecclesiastics, which was advanced in well advanced in Normandy, but still very backward in England. Stigand, the Archbishop of Canterbury at that period, was in very bad odour with all parties; and in 1070, at a great council at Winchester, he was deprived of his office on charges of simony and uncanonically.

Lanfranc had been elected to the Archbishopsric of Rouen in 1067, but had declined it; now, however, the Conqueror fixed on Lanfranc as his choice of a successor to Stigand, and Lanfranc was at last prevailed upon, unwillingly enough, to yield his consent, at the solicitations of his friends, headed by his former superior, Herviu. After receiving the temporalities of the see from William, he was consecrated at Canterbury on 29 August, by the Bishop of London. He entered on the duties of his high station with advantages of name and learning and experience of the world such as few men have ever brought to a similar office. The king, the pope, the clergy, the counsellor, largely moulded, was without doubt beneficial to the kingdom; for the civil and ecclesiastical courts were separated, and regular synods were held, wherein regulations tending to better discipline were enacted and enforced. The Normanizing of the Church further tended to bring the native ecclesiastics into closer touch with the learning and practice of the Continent; and this was effected by replacing nearly all the Saxon bishops and abbots with Normans, on pretexts grave or slight. Whilst the insolvency of the native clergy was thus beneficially broken down, merrily the thieves of those forgeries, who were themselves, was swept away. Much might well have been retained, but could not stand against the prepossessions of the dominant party, and the effect generally was the destruction of local customs. In particular, the liturgy lost much of its distinctiveness. Hitherto the Saxon Church had kept in close touch with Rome. The old Itala version of the Psalms, for instance—that which is used to this day in the choir of St. Peter’s at Rome—was everywhere employed in England; but the Norman superiors supplanted that ancient version by the Gallicana, to which they were accustomed. A few prelates of Crewe or by signs to the sayings in certain codices, such as, for instance, British Museum Additional MS. 37517 (the Bosworth Psalter), which possibly may have undergone revision at the hands of Lanfranc himself.

Once, however, that Lanfranc was identified with the English Church, he espoused its cause warmly, upholding the dignity and primacy of his own see, by refusing to consecrate Thomas of Bayeux to the archiepiscopal See of York till he admitted his dependence on that of Canterbury. This dispute was carried to Rome, but was thence referred for settlement back to England, when the case was finally decided in favour of Canterbury at a national council held at Winchester, at Easter, 1072. Thomas made his submission to Lanfranc in a council held at Windsor at Pentecost of the same year. In connexion with this incident a grave charge has of recent years been brought against Archbishop Lanfranc by H. Böhmer (in “Geschichte Ers.”), who accuses him of having falsified and forged documents in order to secure the primacy of the See of Canterbury over that of York. M. Saltet (in “Revue des Sciences Écclésiastiques”), 1907, and others, have dealt with the question, exonerating Lanfranc from any personal connexion with the forgeries, if such they were.

Meanwhile Lanfranc had been to Rome in 1071 to receive the pallium from Alexander II, his former bishop at Bec. As Archbishop of Canterbury his influence was so great that he was from time to time consulted by bishops not belonging to his own province or obedience, and he helped in the work of reforming the Church in Scotland. He enforced the observance of celibacy among the clergy in accordance with the decree of the Synod of Hildesheim, which provided that no canons were to be permitted to marry, nor could married men be ordained to the diaconate or the priesthood. But it is clear that at the time a state of degenency existed, and that too drastic measures all at once had to be avoided, since clergy already married were allowed to retain their consorts. He made an attempt to oust the monks at Canterbury and Winchester in favour of secular canons, and secured papal confirmation of the existing practice which had come down from the days of St. Augustine of Canterbury. Many episcopal sees were at this period transferred from obscure villages to rising towns, as Sherborne to Salisbury, Dorchester (Oxon.) to Lincoln, Thetford to Norwich, and Selsey to Chichester. In 1076 he again visited Rome, and, on the return journey, made a tour of Normandy, during the course of which he had the satisfaction of consecrating the church of his old monastic home at Bec.

The king’s stature, as regards the Court of Rome, more than once placed Lanfranc in a situation of extreme delicacy. William refused to allow the bishops of England to leave the kingdom for the purpose of visiting the pope without his consent. For this Lanfranc appears to have incurred the blame and was reproved, being, moreover, summoned to Rome, in 1082, under pain of suspension. He did not go, but it was the inimicities of old age, not contumacy, which prevented him from undertaking the long and arduous journey. It is well, also, to remember that a purely political reason for the king’s refusal may be assigned, and Lanfranc, like, indeed, many others before him, was more at the pope than with the king. The explanation of the pope’s attitude and demand would seem to be that the tribute had come to be looked upon as a token of vassalage, whereas, in its origin, it was unmistakably a free gift. William, while refusing to render homage, promised that the demands of Peter’s pence should be forthcoming. Capital is sometimes made, too, of the fact that William and Lanfranc adopted a hesitating attitude in the case of the antipope Guibert, or Clement III, in 1084. All that can be justly inferred is that they maintained strict neutrality; till such a time as the candidates could be adjudged by proper authority. As that authority was not theirs, neither William nor Lanfranc assumed the prerogative of settling the dispute one way or another. (See Liebermann in “Engl. Hist. Rev.”, April, 1901, p. 328.) In fact, no act of theirs can be instanced as saving the most complicated and fiat submission to the Holy See. (See Martin Rule in “Dublin Rev.”, 3rd series, vol. VI, 1881, pp. 406 sqq.)

Lanfranc strenuously upheld the rights of his Church of Canterbury, when necessary, by legal action, even against the Conqueror’s half-brother, Odo of Bayeux. He also showed himself a munificent benefactor to the see, rebuilding the cathedral after its
destruction by fire in 1067, improving the archiepiscopal estates by his good management, founding hospitals for the sick and indigent of both sexes, and giving liberally to widows and to the poor. His munificence was not confined, however, for as it might be, caused Rufus to put some sort of restraint upon his own extravagant nature, on his own liking. His munificence to his engagements and promises, however, was a source of bitter sorrow to the aged archbishop, and doubtless hastened his death. It had been his accustomed prayer that he might die of some malady which would not affect his reason or his speech, and his petition was granted. An attempt on his life in July, 1089, in a few days brought him to the grave. On 24 May, the last day of his life, his physicians having ordered him a certain draught, he asked to defer it until he had confessed and received the Holy Viaticum. When this was done, he took the cup of medicine in his hand, but instead of swallowing it, calmly breathed his last. He was buried in his own cathedral. In the "Nova Legenda." Lanfranc has the title of Saint, and elsewhere he is called Blessed; but it does not appear that the public honours of sanctity were accorded to him.

When William had to leave England to attend to the affairs of his continental dominions, Lanfranc acted as his viceregent, or regent, in England, and displayed not only activity and sagacity as a temporal ruler, but a mind fit in the "order of things" in the repression of a rising against the Conqueror in 1074. It was probably by his advice, too, that, notwithstanding the violence of that young prince's character, William the Conqueror left England to his second son William Rufus, as by right of conquest, Normandy being then in a position to maintain with most of its independence, and only a large sum of money to his son Henry. The choice of Rufus was, doubtless, because, as having been Lanfranc's pupil, and as having received his knighthood from him, the archbishop's influence over him might be presumed to be of some weight. Lanfranc crowned him at Westminster less than three weeks after the Conqueror's death.

Lanfranc's name is, with that of his successor, St. Anselm, inseparably coupled with the thorny question of investitures, for the differences between king and primate, which came to a head under St. Anselm, showed their beginnings under Lanfranc. Here it is enough to say that his influence over a great ruler, such as the Conqueror, was prevented any but worthv appointments in the Church. But the root of the future evil lay in regarding see merely as portions of the temporal fiefs attached to them, instead of keeping them as a character wholly separate from their temporal adjuncts. So long as they were seen as a ruler—such as the Conqueror—was right-minded, no great harm was to be feared, but when a godless savage like William Rufus saw fit to intrigue unworthy men into sees, or keep sees vacant in order to enjoy their revenues, then great evils arose, and such men were likely to assume—as Rufus did—that spiritual power and jurisdiction derived from them by means of investiture with staff and ring, as well as tenure of the temporalities whose outward symbols were at that time, unfortunately, the same instruments.

Lanfranc saw clearly the distinction between the civil and ecclesiastical capacities in which he was regarded and might be regarded, and it is related of him that in 1082 he encouraged the Conqueror to arrest his brother, Bishop Odo. The king scurried to imprison a clerk, but Lanfranc grimly pointed out that he would not be arresting the Bishop of Bayeux (as it was not for an ecclesiastical offence), but the Earl of Kent—a title he held. Again, in 1088, when William de St. Carilef, Bishop of Durham, was being tried for his share in the rebellion of Odo and the Norman lords, that prelate endeavoured to shield himself under his episcopal character. Lanfranc reminded him, first, that he was not at the bar as a bishop, but as a tenant in chief of the king; secondly, that the bishops judging him were acting in a like temporal capacity. Had that distinction been recognized and borne in mind by William Rufus, the troubles of his reign about investitures need never have arisen.

Lanfranc endeavoured to check the extravagances of the Red King, who, however, proved deaf to his entreaties and remonstrances. Nevertheless, it is certain that, as long as Lanfranc lived, his influence, though not tit for tatt, as the last triumph of the earl, to the St. Albans, whose abbot, his relative Paul, had initiated there a vast scheme of rebuilding. His lifelong love of learning prompted him to foster studies; and even when immersed in the multidutious and anxious affairs attached to his office and to his secular position as chief counsellor to the king, his one idle, as the list of his works, which (considering the calls on his time) is a long one, testifies. His writings were published collectively by d'Archéry in 1648; they may also be consulted in Migne, P. L., CL, and Dr. Giles's edition of his works, published in 1844. Other treatises, now lost, have been attributed to him, amongst which was one that should rightly be ascribed to others.

Henry Norbert Birt.

Lanfranc, Giovanni, also known as Cavallerie Giovanni di Stefano, decorative painter, b. at Parma, 1581; d. in Rome, 1647. As a boy Lanfranc was a page at Piacenza in the service of Count Scodtli, and developing a talent for drawing was placed by the count under Agostino Carracci, with whom he remained for some years, but before he was sixteen he had painted a picture of the Virgin and Saints, which was so much admired that it was considered worthy of being placed in the church of Sant' Agostino at Piacenza. On the death of Carracci, Lanfranc went to Rome and assisted Annibale Carracci in decorative work in the Farnese Gallery, in the Vatican, and in various Roman churches, but the work of his own hand he was able to carry off a commission which had been promised to Domenichino, his great rival, who was born on the same day as himself, and exerting himself to the utmost of his ability to out-do his opponent, he
executed in the cupola of Sant' Andrea della Valle his greatest work, representing the Virgin seated in the clouds, and distinguished by grandeur, clarity, boldness of design, and masterly colouring. He was then attracted to Naples and was occupied for a couple of years in painting the cupola of San Gennaro, and in carrying out similar work in San Martino. Here again he was the rival of Domenichino, who was at work at the cupola of the treasury when he died, and Lanfranco was employed to finish the frescoes, but he destroyed almost all the work of his great rival, excepting the decorations in the angles, and these still remain to prove that with the solitary exception of the cupola in Rome, Domenichino's work was far more accomplished than that of his persistent rival. About this time he returned to Naples, where he spent the remainder of his life, and his productions pleased Urban VIII so much that he conferred upon him the honour of knighthood.

His works can be studied in Madrid, Florence, Paris, Vienna, and Dresden, as well as in the places already mentioned. His best behind him several fine etchings, and a few drawings.

Belloni. Vite de' Pintori Scultori e Architetti Moderni (Rome, 1672), also a similar work on the artist (Rome, 1731), and his description of the Vatican (1753).

George Charles Williamson.

Lang, Matthew, cardinal, Bishop of Gurk and Archbishop of Salzburg, b. at Augsburg in 1468; d. at Salzburg, 30 March, 1540. After receiving a secular education at Ingolstadt, Tbingen, and Vienna, he entered the chancery of Archbishop Berthold von Hennenberg of Mainz, became secretary of Emperor Maximilian I in 1494, imperial councillor in 1501, and chancellor in 1508. The emperor esteemed him very highly, and gave him many ecclesiastical benefices. Allowed to the nobility with the title of "von Wellenburg" in 1498, he became provost of the cathedral of Augsburg in 1500, and shortly after also of that of Constance. In 1503 he was appointed coadjutor, and on 5 October, 1503, Prince-Bishop of Gurk. Though bishop, he remained in the imperial chancery as a layman, not even once visiting his diocese as long as he was Bishop of Gurk (from 1505 to 11 March, 1522). As imperial legate he directed the emperor's negotiations with France, Venice, Hungary, and the pope from 1505 to 1515. On 10 March, 1511, Pope Julius II created him cardinal, but kept him in pello until 24 November, 1512. Despite imperial influence he was unsuccessful in his attempts to have Mainz, Magdeburg, Halberstadt, and Trent, but was finally appointed coadjutor of the See of Salzburg in 1514, against the express wish of Archbishop Leonhard Kutschach of Salzburg. After the death of the latter, on 8 June, 1518, Lang became Archbishop of Salzburg. On 24 September, 1519, he was ordained priest and on the next day consecrated bishop. Though originally a promoter of the schismatic Council of Pisa, he later effected a settlement between the pope and the emperor, and joined the Lateran Council on 3 December, 1512. It was due chiefly to his influence that Charles V was elected emperor in 1519. He also induced Charles V in 1521 to take measures against Luther, suppressed the Peasants' War in his domain between 1525 and 1526, insisted on church reform at the synods which he held in Muhldorf in 1522 and 1537, and joined the league of Catholic princes at Ratibson on 7 July, 1529, a year after the election of "Protestant Germany". Cardinal Lang was a friend of letters, but a proud and ambitious prince of the Church. His suppression of Protestantism and his ecclesiastical reforms were dictated rather by political than religious motives.

Hautzler, Kardinal Matthias Lang und die religiösen Brüder, Innsbruck, 1877-1878 (Salzburg, 1898); Schmidt, Des Kardinals u. Erzbischöfs von Salzburg (1819-40) Matthias Lang Verhalten zur Reformation (Fürth, 1887); Lieders in Michael Ott. Langen, Rudolph von, humanist and divine, b. at the village of Everwinkel, near Münster, Westphalia, 16 February or 1439; d. at Münster, 25 Dec., 1459. His family belonged to the nobility; so that when young Hermann Hamelmann, he received his schooling at Deventer, in the school of Thomas a Kempis, together with Rudolf Agricola, Alexander Regius, Anton Liber of Soest, Count Maurice von Speylenberg, and Ludwig Dringenberg. But this cannot be possible, Thomas was certainly not a teacher. Count Speylenberg and Dringenberg were much older; possibly Agricola and Liber were his schoolfellows, but there is no saying. In 1456 he entered the University of Erfurt, and received the degree of B.A. in 1459, and M.A. in 1460. But before this he was made canon of the cathedral of Münster, and provost of the old cathedral in 1462. He went to Rome in 1466 in connexion with the election of a bishop. But Hamelmann is wrong in what he has to say about his having been the scholar of the most renowned Italian humanists. He was only there a short time. Neither did Count Speylenberg go with him, as he wrote to the university of Münster in 1463, an execration of the other scientists mentioned had been dead a long time. But it is true that Langen absorbed many new ideas in Italy. At Münster he was the centre of literary life, as well as of humanistic efforts. He was surrounded by a group of men of similar tastes. He possessed a good classical library, which he liberally placed at the disposal of others. Young Hermann von dem Busche was one of his pupils, to whom he imparted a love of classical literature. Hamelmann says he went to Rome a second time, with Hermann von dem Busche (1486). But this is not very probable.

Langen's own literary work is not important. It is true that he was well read, but he lacked poetical talent. He wrote a poem about the destruction of Jerusalem, which has not been preserved; also a prose work, which was published in Deventer about 1485. In 1486 the first printing office at Münster, belonging to Johann Limburg, printed his poems. In 1493 he published the "Rosarium beatissima virginis gloriosissimae dei maris Maris"; about 1494 an epitaph on Albertus Magnus, and the "Horae de sancta cruze" in 1496. All these, as well as numerous other lesser poetical attempts, met with no better success than the other collection of 1510. In spite of his desire for his inspiration for all that was noble and good. But Langen's influence upon others was far more important. His most meritorious work was the reform which he brought about in the cathedral school, which took place in 1500. It became a humanistic institution, patterned after the one at Deventer. The course of instruction was changed, and other masters were called. But the school was more indebted to the subrector, Johannes Murrmillius, than to the rector, Timm Kemener; the former was one of the ablest German humanists, and the flourishing condition of the school and its wide influence in 1493, are due to his labours. The school consisted of 74 pupils of the lower order, and 16 of the higher order. The number of abbots and masters was 15. The rector had the title of "Professorum domicilius profecto Münsteri" (Berin, 1900); Böhmer, Das literarische Leben in Münster (Münster, 1906).

Klemens Jössler.
Langéniers, BENOÎT-MARIE, Cardinal, Archbishop of Reims, b. at Villefranche-sur-Saône, Department of Rhône, 1824; d. at Reims, 1 Jan., 1863. He studied humanities at Saint-Nizier, and afterwards at fifteen joined the Order of the Holy Ghost at Duneloup; and theology at St-Sulpice, where he was ordained, 1850. After nine years as curate at St-Roch, he became successively diocesan promoter 1859; curé of St-Ambroise, 1863; then of St-Augustin, 1868; Vicar-General of Paris, and archdeacon of Notre-Dame, 1874. Made Bishop of Tarbes, 1873, he was, the following year, translated to the archiepiscopal See of Reims. The thirty-one years of his episcopate were fruitful ones. Beside obtaining from the French legislature an appropriation of two millions of francs for the restoration of Reims cathedral, he secured for the Trappists the ancient monastery of Igny, and fought hard, at the price of Bisson's, mandamis, at Châtillon the colossal statue of Urban II, whose cultus he had promoted in Rome, built in the suburbs of his metropolis the churches of Ste-Geneviève, St-Jean-Baptiste de La Salle, St-Benoît, and Ste-Clothilde, this latter being afterwards made the seat of an arch-confraternity of prayer for France, and the place of celebration of the fourteenth centenary of Clovis's baptism. When the law of school secularization came into effect, he filled his see with Catholic schools and founded four asylums for orphans. Created cardinal in 1886, he presided as papal legate over the Eucha- ristic Congress of Jerusalem, and Louis XVI. A champion of every noble cause, he took an active part in the beatification of Joan of Arc, the panegyric which he pronounced at Orléans, 1885, being most elo- quent. He fought vigorously the anti-religious legis- lation that was being prepared against Christian education, the religious orders, and the clergy. His "Déclaration des Cardinaux et exposé de la situation faite à l'église de France" (1892), and his "Lettre au Président de la République" (1894), remain as witnesses to his truly episcopal character. However, he cherished above all the title of "Cardinal des ouvriers," given him by the gratitude of the working class, whose interests, spiritual and material, he never ceased to champion. Langénieux enjoyed the friendship of Leo XIII, who consulted him on all matters concerning the Church in France. The universal es- teem in which he was held was abundantly proved by the distinctions which the French, and the most European rulers, stowed on him and by the vast concourse of bishops, priests, and people at his two jubilees and at his funeral. His eulogy was pronounced by Bishop Latty, of Châlons, and Bishop Touchet, of Orléans. Beside the pamphlets mentioned above and a number of occasional discourses, we have from Langénieux's pen: eight pastoral letters (Paris, 1873); 251 mandamis (Reims, 1874–1905); and "Abrégé de l'Histoire de la Religion" (Paris, 1874).

J. F. SOLZIER.

Langvin, LOUIS PHILIPPE ADELAIR. See St. Boniface, Archdiocese of.

Langham, Simon, cardinal, Archbishop of Canterbury and Chancellor of England, b. at Langham in Rutland; d. at Avignon, France, 22 July, 1376. Nothing is known of his early life, but in 1346 he was already a Benedictine monk of Westminster Abbey, representing his house in the triennial chapter. In April, 1351, he was made priest, and in 1355 he became sub- abbot. In this office he proved very successful, ruling well and carrying out many works, including the completion of the cloisters. He became treasurer of England on 21 Nov., 1360, and Bishop of Ely on 10 Jan., 1362. Before consecration he was also elected Bishop of London, but he refused this see, preferring Ely. On 19 Feb., 1363, he received the great seal as chancellor, and he was the first to speak in English, when opening Parliament. He was appointed Arch- bishop of Canterbury on 24 Nov., and received the pallium from the pope on 4 Nov., having previously resigned the chancellorship. As archbishop he was vigilant against false doctrine, condemned certain propositions taught at Oxford, removed one Wyche a — not the well-known heretic of that name—from the bishopric of Canterbury; and censured the demagogue-priest, John Ball. Blessed Urban V created him Cardinal of St. Sixtus, 27 Sept., 1368. His acceptance of this dignity without the king's leave offended Edward III, who seized the Canterbury revenues on the plea that Langham had by his act forfeited the see. Langham resigned the archbishopric on 27 Nov., and early in 1369 joined the papal court at Avignon, being succeeded at Canterbury by Whittlesey. Subsequently he regained the king's favour, but did not return to his native country, though he held several English preponderances in succession, such as the archdeaconery of Wells and Taunton. Greg- ory XI made him a cardinal on 12 July, 1373, and in the following year the monks at Canterbury again elected him as archbishop. The pope refused to confirm this, alleging that he could not spare the cardinal from Avignon. When the Curia was about to return to Rome in 1376, Langham was appointed papal preacher, and Louis XI. A champion of every noble cause, he took an active part in the beatification of Joan of Arc, the panegyric which he pronounced at Orléans, 1885, being most elo- quent. He fought vigorously the anti-religious legis- lation that was being prepared against Christian education, the religious orders, and the clergy. His "Déclaration des Cardinaux et exposé de la situation faite à l'église de France" (1892), and his "Lettre au Président de la République" (1894), remain as witnesses to his truly episcopal character. However, he cherished above all the title of "Cardinal des ouvriers," given him by the gratitude of the working class, whose interests, spiritual and material, he never ceased to champion. Langénieux enjoyed the friendship of Leo XIII, who consulted him on all matters concerning the Church in France. The universal es- teem in which he was held was abundantly proved by the distinctions which the French, and the most European rulers, stowed on him and by the vast concourse of bishops, priests, and people at his two jubilees and at his funeral. His eulogy was pronounced by Bishop Latty, of Châlons, and Bishop Touchet, of Orléans. Beside the pamphlets mentioned above and a number of occasional discourses, we have from Langénieux's pen: eight pastoral letters (Paris, 1873); 251 mandamis (Reims, 1874–1905); and "Abrégé de l'Histoire de la Religion" (Paris, 1874).

J. F. SOLZIER.

Langheim, a celebrated Cistercian abbey situated in Upper Franconia (Bavaria), not far from Mein, in the Diocese of Bamberg. Three brothers of the city of Bamberg made a gift of the estate of Langheim to Bishop St. Otto VIII, who, in 1132, offered it to the Cistercians of the Abbey of La Varenne (now founded by Morimond), under the condition that they should establish there a monastery of their order. Encouraged by St. Bernard, Adam, Abbot of Ebrac, accepted the offer. On 1 August, 1132, he laid the corner stone of the new monastery, and in 1142 the buildings were completed. The first prior of the monastery was Abbot Adam (1141–80), who, by his wisdom and holiness, won the sympathy of the bishops of Bamberg and of the nobles of the surrounding country for the new foundation. Very soon the abbey found itself in possession of considerable revenues, and had a large number of parishes depending upon it. Pope Eugene III and the emperors granted it many privi- leges. All the ancient historians of the order agree in saying that it surpassed every other monastery in splendour and wealth, while one of its distinctive characteristics was the generous hospitality which it extended to all visitors. But this era of prosperity endured scarcely more than two centuries, for in 1385 the Bishop of Bamberg seized part of the property of the abbey, and in 1429 the Hussites destroyed the buildings by fire. After these misfortunes it arose again from its ruins, and enjoyed a return of prosper- ity, until, in 1535, the revolted peasants applied the torch, and razed it to the ground. The abbey had been rebuilt, a period of peace ensued, but in 1632 the Swedish hordes delivered it up to pillage, subjected the monks to every outrage, and left nothing but misery and desolation in their train. It was not until the following century that Abbot Stephen Müsinger (1734–51) had the monastery reconstructed.
in such proportions and with a splendour that recalled the first abbey. During this interval the bishops had again become favourable to the religious, but failed to restore either the property they had usurped or the old-time privileges. The final catastrophe occurred on 7 May, 1802, when fire destroyed the splendid buildings erected by Stephen Mösinger and put an end to Langhe- m. On 23 June, 1803, the community, at that time numbering forty-nine members, was secularised by a decree of the Prince Elector of Bavaria. The religious were dispersed to various places, and the last abbess, Candida Hemmelerin, received a pension of 5000 florins, with which he retired to the Castle of Thiebr, where he died in 1814.

This abbey gave to the Church in Germany many bishops, who distinguished themselves by their zeal in combating error, and in labouring for the conversion of heretics; it also sheltered many writers who were not without merit. We may here mention the monk Engelrich, who wrote the "Leben der hl. Mathilde, Abtissin von Ebstedt"; Simon Scheiner of the seventeenth century, who composed a treatise on the "Virtutes et Mutilita Abbatiae Langheim". The Abbot Moritz Knaue, a distinguished mathematician and astronomer, published different works on the natural sciences, also an ascetical work entitled "Tuba Coeli" (1649-64); but the most pro-

lious author was Joachim H. Jassing, who, after his seclusion, published in the same style on the history of Bamberg and the surrounding country. In 1210 Langheim founded the Abbey of Pless in the Diocese of Prague, Bohemia. In 1445 Abbot Frederick Hengelein built at Frankenthal, as a dependence of the abbey, a church in honour of the "Fourteen Holy Helpers", which became a celebrated and much frequented place of pilgrimage. The care of this church is now confided to the Franciscans.

E. ORECHT.

Langbein, Richard, Venerable, English martyr, b. about 1635; d. at Tyburn, 14 July, 1679. He was the third son of William Langbein of the Inner Temple, Leitice, daughter of Esme Nelle, of Little Wymondley, Herts. He was admitted to the Inner Temple in November, 1646, and called to the bar in 1654. He married a Protestant lady, Dorothy, daughter of Thomas Legatt of Haverford, Essex, and lived at Shire Lane, to the right of Temple Bar. His elevation to the Temple Lane. He was arrested on 15 June, 1667, in connexion with the great fire. Arrested a second time on 7 October, 1678, and committed to Newgate without any previous examination, he was kept in solitary confinement for eight months. On 14 June, 1678, he was brought to the bar at the Old Bailey: Oates, Durdale, Beebe, and France gave evidence against him, and he was found guilty. He was offered a pardon, if he would confess his guilt and also make a disclosure of the property of the Jesuits with which he had become acquainted in his professional capacity. This last he did—probably with the consent of his fellow-prisoner, the provincial, Fr. Whitbread—but, as he persisted in declaring his ignorance of any conspiracy, he was executed. His last words were to the hangman: "I am desirous to be with my Jesus. I am ready and you need stay no longer for me."

John B. WAINWRIGHT.

Langley, Richard, layman and martyr, b. probably at Grimthorpe, Yorks, England, date unknown; d. at York, 1 Dec., 1586. From his father, Richard Langley, of Rotherham Hall, Walton, he probably inherited Rotherham, but for the greater part of his life continued to reside on his estate at Ousethorpe, in the Yorkshire Ridings. Langley gave one of his legacies and a very considerable part of his fortune to assisting the oppressed clergy; his house was freely offered as an asylum to priests. He even constructed a subterranean retreat, perhaps beneath the Grimthorpe dwelling, which afforded them sanctuary. This refuge was betrayed to the President of the North, and on 28 Oct., 1586, a strong band of military was despatched, several justices and ministers of the new religion joining in the quest, to make a domiciliary visitation of the Grimthorpe and Ousethorpe houses. Two priests were found in hiding at the former; at the latter Langley himself was arrested. All three were committed to prison, and subsequently arraigned before the President of the North, the priests because of their office and Langley for harbouring them.

During the investigation Langley was steadfast in his adherence to the Faith. He would not take the new oaths of the national supremacy, nor compromise his religious heritage by siphonizing with the lord president or Privy Council. It was feared that the jury which had first been empanelled to decide upon the case might return a verdict in accordance with the dictates of justice; it was therefore discharged and replaced by another of tried fidelity to the prosecutors. Langley was condemned to death, without any evidence being adduced to establish the fact that he had knowingly sheltered semi-nary priests, and was hanged, drawn, and quartered at York. His remains were refused honourable burial, despite the importance of his family.

P. J. MACAULEY.

Langres (Lingome), Diocese of, comprises the Department of the Haute-Marne. Suppressed by the Concordat of 1801, Langres was later united to the Diocese of Dijon. The bishop bore the title of Dijon and Langres, but the union was never quite complete; there was a pro-vicar-general for the Haute-Marne and two seminaries at Langres, the petit séminaire from 1800 and the grand séminaire from 1817. The See of Langres was re-established in 1817 by Pius VII and Louis XVIII; and Mgr de la Luserne, its pre-Revolution bishop, was to have been re-appointed; but the parliament did not ratify this agreement, and the bishops of Dijon remained administrators of the Diocese of Langres until the Bull "Paterna charitatis" definitely re-established the see. The new Bishop of Langres governed 360 parishes of the old Diocese of Langres, 70 of the old Diocese of Châlons, 13 of the old Diocese of Besançon, 13 of the old Diocese of Troyes, and 94 of the old Diocese of Toul. For the legends concerning the Apostolic origin of the See of Langres and the mission of St. Benignus see DIJON.

Mgr Duchesne considers Senator, Justus, and St. Desiderius (Didier), who was martyred during the invasion of the Vandals (about 407), as the first three bishops of Langres; the theory, therefore, must have been founded about the middle of the fourth century. Among the bishops who, till 1016, resided at Dijon, and exercised till 1731 spiritual jurisdiction over the territory of the present Diocese of Dijon we must
mention: St. Martin (411–20); St. Urban (425–40); St. Paulinus (440–50); St. Aprunculus, the friend of Sidonius Apollinaris and his successor in the See of Clermont (470–84); St. Gregory (509–39), great-grandfather of St. Gregory of Tours, who transferred the relics of St. Martin, and novel, son of St. Gregory (530–72), whose coadjutor was St. Monderic, brother of St. Arnoul, Bishop of Metz; Blessed Michelgetius (589–618); St. Herulphus (759–74), founder of the Abbey of Ellwangen; Blessed Arnoul (774–8); Betto (790–820), who helped to draw up the capitulatons of Charlemagne; Venerable Isaac (809–58); and two other Venerable menons; Venerable Agrin (889–909); Blessed Bruno of Rocay (980–1015), who lived in the monks of Cluny to reform the abbots of the diocese; Venerable Lambert (1015–30), who ceded to King Robert of France the lordship and county of Djon, in 1016; Venerable Gauthier of Burgundy (1163–79); Robert de Torote (1222–40), who became Bishop of Liège in 1240, and established the feast of the Blessed Sacrament; Bertrand de Got (1306–67), uncle of Clement V; Venerable Sebastian Zamet (1615–54), whose vicegeren, Charles de Condren, became later Superior General of the Congregation of the Propagation of the Faith and president of the Sacred Society of Jesus in 1630; Cézir Guillaume de la Luzerne, bishop in 1770, celebrated as an apostolate, deputy to the States General in 1789, and an émigré in 1791. He resigned in 1801, was created cardinal and again nominated Bishop of Langres in 1817, dying in 1821; Pierre Louis Paris (1815–51), celebrated for the part he took in the Assembly of 1848 in the discussions on the liberty of teaching (liberté d'enseignement) and for founding the ecclesiastical college of St. Dixier even before the Lois Falloux (see LOI S F A LLOUX O U D U COU D R AT) was definitely passed. Hugh III, Duke of Burgundy, in 1179 gave the city of Langres to his uncle, Gautier of Burgundy, then bishop; later it was made a duchy, which gave the Duke-Bishop of Langres, as the third ecclesiastical peer, the right of precedence over his metropolitan, the Archbishop of Lyons, at the consecration of the kings of France.

The chief patron of the diocese is the martyrs, Saint Mammes of Césarea (third century), to whom the cathedral, a beautiful monument of the late twelfth century, is dedicated. The Diocese of Langres honours as saints a number of martyrs who, according to the Gallican legend, in the period of Marcus Aurelius, the triplets, Saints Speusippus, Eleusippus, and Melapippus; St. Neo, the author of their Acts, himself a martyr, St. Leonilla, their grandmother, and St. Junilla, their mother. Among other saints we may cite St. Valerius (Valier), a disciple of St. Desiderius, martyred by the Vandals in the fifth century; the hermit St. Godo (Gou), nephew of St. Vandrilus, in the seventh century; St. Gengulphus, martyr, in the eighth century; Venerable Gerard Voinchet (1640–95), canon regular of the Congregation of St. Geneviève in Paris, called to that congregation; Venerable Annick and Venerable Jeanne Marce (1660–73); Venerable Matriel, a priest who died in 1704; Venerable Joseph Urban Hanipaax, a Jesuit, the latter three natives of the diocese, and celebrated for their apostolic labours in Canada.

The diocese was also the birthplace of the theologian, Nicolas de Clémenges, of fourteen centuries, coadjutor and successor of the Church of Langres; and of the Gallican canonist Edmond Richer (1560–1631); of the Jesuit, Pierre Lemoine, the author of an epic poem of St. Louis and of the work "La dévotion asée" (1602–71); of the philosopher, Diderot (1713–84). The historian, Raoul Glaber, monk of Cluny, who died in 1085, is buried in the church of St. Léger in this diocese, when he was touched by Divine grace on the occasion of an apparition. The Benedictine Abbey of Poulangey was founded in the eleventh century. The Abbey of Morimond, the fourth foundation of Citeaux, was established in 1125 by Odolric, lord of Aigremont, and Simon, Count of Bassigny. Blessed Otho, son of Leopold of Austria, Abb of Morimond, became Bishop of Freising in 1143. Henry I, Duke of Normandy, was buried in Morimond. The Augustinian priory of the Val des Ecclésiastes was founded in 1212, at Lusy, near Chaumont, by four doctors of the Paris University, who were led into this awful solitude by a love of retreat.

A religious festival, called the Ordination of the Alleluia, as Langres, never to be numbered, was first celebrated in this diocese in the Middle Ages. On the day when according to the ritual, the Alleluia was omitted from the liturgy, a top on which the word Alleluia was written was whipped out of church, to the singing of psalms, by the choirboys, who wished it bon voyage until Easter. The "Pardon of Chaumont" is very celebrated. Jean de Montmirail, a native of Chaumont, and a particular friend of Sixtus IV, obtained from him, in 1475, that each time the feast of St. John the Baptist fell on a Sunday, the faithful, who, having confessed their sins, visited the church of Chaumont, should enjoy the indulgence of the Langres Gallie. The "Pardon" of Chaumont, celebrated sixty-one times, between 1476 and 1905. At the end of the Middle Ages, this "Pardon" gave rise to certain curious festivities; on stages erected throughout the town were represented fifteen mysteries of the life of St. John the Baptist, while frolics of the devils who figured in the punishment of Herod, through the town and the country, on the Sunday preceding the "Pardon", drew multitudes to the festivities, which were finally called the "deviltries" of Chaumont. In the course of the eighteenth century the "Pardon" became a purely religious ceremony.

In the Diocese of Langres is Vassay, where in 1562 took place the riots between Catholics and Protestants that gave rise to the wars of religion (see HUGUENOTS). Numerous diocesan synods were held at Langres. The most important were those of 1404, 1421, 1621, 1628, 1679, 1723, 1733, 1741, 1753, and six successive annual synods held by Mgr Parisot, from 1841 to 1846, with a view to the re-establishment of the synodal organization and also to impose on the clergy the use of the Roman Breviary (see GÉRANGER). The principal pilgrimages are: Our Lady of Montop near Bar-sur-Seine, dating from the twelfth century; Our Lady of the Hermits at Cuves; Our Lady of Victories at Bourmont; St. Joseph, Protector of the Souls in Purgatory, at Maranville. In 1908 there were still thirteen congregations of nuns in the diocese. The Sisters of Providence, founded in 1802, with their mother-house at Langres, were, at the time of the enforcement of the Associations Law, remarkable for the work they were doing in the schools and hospitals. In 1901 the religious congregations had in the diocese 33 écoles maternelles, 1 agricultural orphanage for boys, 6 orphanages for girls, 7 workshops, 1 school of house-keeping, 2 dispensaries, 16 hospitals, hospices, and homes for the aged, 20 houses devoted for nursing of the sick at home. In 1908, three years after the separation of Church and State, the Diocese of Langres had 226,545 inhabitants, 28 canonical parishes, 416 ancillary parishes, and 49 vicariates.

GEOFFREY GOYAU.
Langton, Stephen, Cardinal and Archbishop of Canterbury, b. in the latter half of the twelfth century; d. at Slindon Manor, Sussex, 9 July, 1228. Although the full extent of his prelateship among his illustrious predecessors, Langton’s fame is hardly equal to his achievements. Even among his own countrymen too few have an adequate knowledge of his merits and of his great services to his country and to the Catholic Church, although his labours were concerned with the two causes specially dear to Englishmen, the Church and the British Constitution. It may be that they think, every one who reads the Bible or enjoys the benefit of civic freedom owes a debt of gratitude to this Cardinal archbishop. If men may be measured by the extent of the work they accomplish, it may be safely said that Langton was the greatest Englishman who ever sat on the throne of Canterbury. It was Langton’s lot to win distinction in all three capacities, as scholar, statesman, and archbishop.

I. The Scholar.—The literary activity of Langton belongs to the earlier part of his life, and it is as a scholar that he first appears in history. Of his boyhood, probably the most remarkable is that he was, as far as we know, the first in England to observe his birth being Matters of inference and conjecture. From the circumstances attending his election to the primatial See of Canterbury it is evident that he was an Englishman. His name itself is clearly taken from some English town, but it is not certain which of the several places so-called has the honour of giving its name to the family of the cardinal, though Mark Pattison confidently asserts that he is known by the surname of Langton from the place of his birth, Langton near Spilsby in Lincolnshire” (op. cit. in bibliogr.). His father was Henry de Langton; his brother Simon de Langton—presumably his junior—seeing that he survived the archbishop twenty years—was Archdeacon of Canterbury, and took an active part in the ecclesiastical and political struggles of the time.

There does not seem to be any evidence of kinship between the archbishop and John Langton, Bishop of Ely, who died in the following century. Stephen’s birth may be fixed approximately by the known dates of his election (1205) and his death (1228). For, since he was already famous as a scholar and had become cardinal before the former date, he could hardly have been then a mere youth, while the fact that he lived for many twenty years and more, and was engaged in active work until his death, would seem to show that he was yet in the prime of life when he was elected archbishop. His birth, therefore, could not fall very much before or after 1160 or 1170. On the same grounds it may be gathered that Langton went to the University of Paris at an early age, for it was with this fame as a teacher of theology that he led the English to Rome and create his cardinal. This act of the great pope and the store he set by Langton’s learning may remind us how one of his predecessors wished in like manner to avail himself of the services of the Venerable Bede—a greater Englishman, with whom Langton had much in common in the character of his learning and in his indefatigable industry as a commentator on Holy Scripture. Thus Pattison naturally mentions the name of Bede in his graphic description of Langton as “that great prelate, who, during a twenty-three years’ occupation of the See of Canterbury, was so busily engaged in public and national affairs, and in the cloister produced more works for the instruction of his flock, than any who, before or since him, have been seated in that ‘Papal chair of the North’—who was the soul of that powerful confederation who took the crown from the head of the successor of the Conqueror.” And yet, next to Bede, the most voluminous and original commentator on the Scripture this country has produced—and who has transmitted to us a work of immortal value—is none of them different institutions, which after the lapse of six centuries are still in force and value among us—Magna Charta, the division of the Bible into chapters, and those institutions which open the series, and form the basis, of that Canon Law which is still binding in our English Courts. In this passage Pattison has incidentally touched on the chief and most enduring result of Langton’s indomitable scholarship, the division of the Bible into chapters—or, in the quaint words of an old chronicler (Trevisa’s translation of Higden’s “Polychronicon”), “he cited the Bible at Parys and marked the chapters.” This statement is true, for Anselm was not an Englishman, and his triumphs were won in fields of thought and politics of less interest to Englishmen. Some churchmen, again, have been great as writers and thinkers, others as statesmen solicitous for the welfare of the whole people, and others as zealous protectors of their flock. It was Langton’s lot to win distinction in all three capacities, as scholar, statesman, and archbishop.

II. The Statesman.—If Stephen Langton had spent the rest of his days in Rome, his great services as a scholar would give us good reason to regard him with reverence, and we might have doubted whether the studious cardinal were likely to accomplish much in the world of action and ecclesiastical administration. It was undoubtedly a severe ordeal to pass from a life
of study to the anxious responsibilities of a primatial see and that struggle with kings and princes which was too often the lot of bishops in those days. Called to fill the see of Canterbury while the memory of Anselm’s banishment and Becket’s martyrdom was yet fresh in men’s minds; Langton found himself, with the archbishop of Canterbury but to “Stephen Langton, cardinal of the Roman see,” the archbishop firmly refused to accept it. Another invitation in 1210 proved equally ineffectual, but, when John at length yielded in his hour of danger and issued letters in due form, Langton lost no time in sending them to the king’s camp at Dover in July, 1213, and was met there by the king, who received him there with feet with words of welcome and submission. John had already on 15 May, 1213, resigned his kingdom to Pandulphe, the pope’s legate, and had received it back as a gift of the Holy See. It might have seemed that the long struggle was now over; and that the archbishop, after his eight years of banishment, could at length enter on a peaceful period of pastoral labour. But it is not likely that Langton himself cherished this illusion. The king’s apparent surrender to the pope had indeed changed the issue, and had gained its object of frustrating the ambitions of the French King, simply as a vassal of the Holy See, and so appeal to the pope for protection. But it still remained to be seen whether John would fulfill his promises, and whether, by ruling with justice, he would conciliate his disaffected subjects. The course he had taken since his submission to Pandulphe gave ground for grave misgivings, and events soon showed there was as yet no room for peace.

But the conflict between John and Innocent was now to be succeeded by the momentous struggle between the king and his barons. And, though Langton’s appointment as primate had been the chief issue in the former strife, his part in the constitutional conflict, while not less conspicuous, was more active and commanding, for, in the words of Pattison, he was the “soul of the movement.” This appears from his strong action at the meeting held at St. Paul’s in London on 25 August, 1213. ‘‘Its ostensible object, says Lingard,’ was to ascertain the damages sustained by the outlaws in the late quarrel. But Langton called the barons aside, read them the charter of Henry, and commented on its provisions. They answered by loud acclamations, and the archbishop, taking advantage of their enthusiasm, administered to them an oath that they would either to conquer or die in the defence of their liberties.’’ When the king was going to wreak vengeance on the barons for their disobedience, Langton firmly insisted on their right to a lawful trial, and added that, if John refused them this justice, he would deem it his duty to communicate all, except the king himself, who took part in this impious warfare. Such was the archbishop’s vigorous line of action at the outset of the struggle which was brought to a successful issue two years later by the signing of the Great Charter at Runnymede. And, if he was the soul of the movement which led to these results, he may justly be regarded as the moral author of the Magna Charta.

It is important to observe that in this constitutional conflict Langton was labouring for the liberties of England and seeking to check the royal tyranny, which was the chief danger to the Church in that country, and which in a later age was to be one of the main factors, and perhaps the greatest, in the conflict between England and the Holy See. In this war he was a bishop fighting for the Church, as well as an Englishman fighting for the liberty of his country. It was natural, however, be remembered that many of these issues were involved in the struggle. There were dangers of excess on either side, and so, with Romans as well as kings have borne the guilt of oppression and injustice, and the common people often suffer more from many tyrants than from one. Bearing this in mind, we can understand how
some may have regarded the struggle from a different standpoint. The pope, naturally more in sympathy with authority than with the apparent rebellion against it, bound moreover by duty and interest to care for the rights of his vassal, and as a result with reports from the king’s side and misrepresentations of the archbishop, might clearly be expected to take a different course from Langton. Thus we find him remonstrating with the pope and the barons, annulling the Great Charter, and bidding the archbishop excommunicate the disturbers of the kingdom. When Langton, though consenting to one general issue of the sentence, refused to repeat the excommunication—partly on the ground that it was issued under a misapprehension, and partly because he wished first to see the pope himself—he was rebuked and suspended from his office. This sentence came to him on his way to Rome to attend the Fourth Lateran Council, and it was confirmed by the pope himself on 4 Nov., 1215. In the following spring Langton was absolved, but was required to remain in Rome until peace was restored. This gave him a brief rest after all his struggles, and in 1218, when both Innocent and John were dead and all parties in England were united under Henry III, he returned to his see.

II. THE ARCHBISHOP.—After his return from Rome in 1218 Langton devoted the closing ten years of his episcopate to peaceful and fruitful pastoral labour. It might be thought that there was little scope here for any great achievements comparable to his earlier work as a scholar and a statesman, and that there would be little to distinguish his life in this time of peace from that of other Catholic prelates. One who had already labourd and suffered so much might well have been pardoned for leaving to younger and more fortunate successors any large works of reform. Yet he has left his mark on the history of Canterbury. See by his code of forty-two canons published in a provincial synod. To quote the emphatic words of a recent biographer. “On Sunday, 17 April, 1222, Stephen opened a church council at Osney which is to the ecclesiastical history of England what the assembly at Runnymede is to her secular history” (Norgate, loc. cit., infra). To quote the words of the same writer, “Chroniclers for Langton’s history are the old English chroniclers, notably Roger de Wenvoer, Flores Historiarum, and the fourteenth century Chronicles all in Ilan (Latin); and contemporary documents in Wilkins, Concilia Magnae Britanniae; I, Letters of Innocent III; D’Aubigny, Spicilegium. See also Lisard, History of England, and especially Chapter V. For Langton, Archbishop of Canterbury in Lives of the English Saints; Norgate in Dict. Nat. Bio., s. v.; Schmid, Uber die kirchliche Geschichte, 2d ed. (1892); Peltet, Hist. de la faculté de théol. de l’Univ. de Paris, I, 278. W. H. KENT.

LANSBERG (John of Landsberg), Carthusian monk and ascetic writer, b. at Landsberg in Bavaria, 1489; d. at Cologne, 11 Aug., 1539. His family name was Gerecht, of which Justus is merely a Latin translation. The, appellation, however, by which he is generally known is John of Landsberg (of Landsberg), his birthplace. After studying philosophy at the University of Cologne, he joined the Charterhouse of St. Barbara at Cologne. He was named novice-master there in 1520, and in 1530 became prior of the Charterhouse near Juliers, where, as prior, he was known to Hertzheim, he was also preacher (consecutator) to the Court of William, Duke of Juliers, and confessor to the duke’s mother. The unhealthy climate of that country, together with the fatigue resulting from his continuous literary labours and his excessive sustenance of health, already impaired, and hastened his removal. Various internal complaints, that in 1534, he had to return to Cologne, where, a few years later, he was named sub-prior and remained in that office until his death. He was a man of saintly life, employing all the time he could spare from his duties towards others “in prayer, contemplation, and writing on ascetical and mystical subjects. His literary works comprise parables and homilies on the Epistles and Gospels of the liturgical year, sermons for Sundays and festivals, meditations and discourses on the Life and Passion of Christ, and a variety of treatises, sermons, letters, and expositions on spiritual life. He was not a polemic. Among his productions the only ones of a controversial kind are two dissertations against Lutheran errors and in defence of the monastic life. These two treatises are all that he wrote in German, his other writings being in Latin. The chief feature of his writings is his unaffected, and tender piety. The love of God for man, calling for a corresponding love of man for God, such is his usual theme treated in various ways. One thing particularly worthy of mark is the frequency with which he speaks of the Heart of Christ, and presagingly exhorts every Christian to take the Sacred Heart as an object of special love, veneration, and imitation. Indeed it may perhaps be said that no one before him had laid down and explained so clearly the principles upon which that devotion is grounded, nor had so developed their practical application. He was one of the last, and was perhaps the most precise in language, whose writings have had the greatest influence on the Blessed Margaret Mary and her mission, and helped to prepare the Catholic mind for the great devotion of modern times. To him also Catholics owe the first Latin edition (Cologne, 1536) of the “Revelations of St. Gertrude”. The best known of his treatises is the “Alloquia Jesu Christi ad animam fidelem”, which has been translated into Spanish, Italian, French, and English. The English translation, done by Philip Howard, Earl of Arundel, who died in the Tower under Elisabeth, has reached its fourth edition (London, 1867). A new and revised edition of all the works of Lanspergus in Latin has been issued by the Carthusian press of Notre-Dame-des-Pres (Tournai, 1890), in five quarto volumes. The same press has published separately the treatise “Pharetra Divini Amorin” (18mo., 1892) and a French version of the “Alloquia”, bearing the title: “Entretiens de Jésus Christ avec une Fille” (16mo., 1892).

BOURJAT, Lanspergus-le-Charette et le dévouement au Sacré-Cœur (Paris, 1878); HARTZHEIM, Biblioth. Coloniens. (Cologne, 1747). EMUND GURDON.

LANTERN, in Italian or modern architecture, a small structure of the top of a dome, for the purpose of admitting light, for promoting ventilation, and for ornament. The name is also given to any such projection, even if it has no such openings and serves merely for decoration. Examples: the Karlskirche (Church of St. Charles Borromeo), Vienna; chapel of Montepulciano, Italy; St. Peter’s, Rome; St. Paul’s, London; St. Isaac’s, St. Petersburg; Sta Maria della Salute, Venice; Sta Maria del Fiore, Florence; the Frauenkirche, Dresden; church of the Val de Grace, Paris; St. Stephen’s, Wallbrook, London; Sta Maria di Monte Santo, Rome; Maddonna della Steceta, Parma; St. Augustine’s, Paris; chapel of the Little Well, Guadalupe, Mexico; church of the Oratory, London; church at Loyola, Biscay, Spain; La Superga, Turin; Sta Maria di Carignano, Genoa; Palermo cathedral.

Topical Architecture: Ecclesiastical Domes (Boston, 1904)

PARKER, Glossary of Architecture, I, 222.

THOMAS H. POOLE.

LANZI, Luigi, an Italian archaeologist, b. at Mont Olmo, near Modena, in 1732; d. at Florence, in 1810. In 1749 he joined the Society of Jesus, on the suspension of which, in 1773, the Grand-Duke of Tuscany made him assistant director of the Florentine Mu-
seum and curate (antiquario) in 1776. His tomb is in the church of S. Croce, near that of Michael Angelo. He applied himself early to the study of ancient and modern literature (Cicero, Dante, Firenzuala), filled several times chairs of rhetoric, and was elected a member of the literary society of the “Arcadians” (where he was called Argillo Celerio). He wrote in Florence his excellent “Guide to the Muse of Sevres” (1750), published in the “Giornale di Pisa” (1782). As an arch-

ecologist, particularly with regard to Etruscan subjects, Marini styles him the Varro of the eighteenth century. His “Saggio di lingua etrusca e di antiche antiche d’Italia” appeared at Rome in 1789 (3 vols.). It was followed by different treatises of the same tenor on ancient art, on sculpture, and on other antiquities. He won still more widespread reputation by his history of modern Italian painting (Storia pittorica dell’ Italia dal risorgimento delle belle arti fin presso al fine del XVIII secolo, 3 vols., Bassano, 1795–96). This work, often reprinted (lastly at Venice, 1837–39), was translated into Ger-

man, French, and English (twice in the latter tongue, by Roscoe, London, 1828, and by Evans, abridged, London, 1831). Lanzi describes the Schools of Art and their development, and opens his narration with the Florentine artists of the thirteenth century, whom he looks upon as the preservers of ancient Italy. He is remarkable for his widespread learning, his masterful grasp of his subject, his sound judgment, and the classic simplicity of his beautiful diction. He never lost his interest in Greco-Roman antiquity, and published at Florence, as late as 1808, a critical edition of Hesiod’s “Works and Days”, with a Latin and an Italian translation (the latter in three-line stanzas). His qualities as a writer matched his proficiency as a humanist, and he published at Florence (1807) three volumes of “Inscriptiones et Carmina”; he left numerous translations from Catullus, Theocritus, and others, either in prose or verse. Lanzi was always a devout and ascetic priest. A collection of his edifying works on the Sacred Heart of Jesus and Mary, and on St. Joseph, was published at Rome in 1809.

Laodicea, a titular see, of Asia Minor, metropolis of Phrygia Pacatians, said to have been originally called Diospolis and Rhosos; Antiochus II colonized it between 261 and 246 B.C., and gave it the name of his wife, Laodice. The city stood on a spur of Mount Salinacus, one mile from the left bank of the Lycus, between the Asopus and Mount Cadmus; its territory lay between the Lycus and the Caprus. In 220 n. c. Achaeus was its king; then it formed part of the Kingdom of Pergamus, and suffered severely during the war with Mithridates, but recovered its prosperity under Roman rule. About the end of the first century B.C. it was one of the principal cities of Asia Minor, both as to industries and commerce, being famous for its woollen fabrics and its sandals. It had received from Rome the title of free city, and it became the centre of a conventus juridicus, which dismissed twenty-four cities besides itself. Its wealthy citizens embellished it with beautiful monuments. One of the chief of them, Polemon, became King of Armenian Pontus—called after him “Polemonia” —and of the coast round Trebizon. The city had a school of medicine and gave birth to the two sects of philosophers, Sophists and Theodicians. Its coins and inscriptions show evidence of the worship of Zeus, Eusebius, Apollo, and the emperors. It is frequently mentioned by the Byzantine historians, particularly in the epoch of the Comneni, and was fortified by the Emperor Manuel. The Mongol and Turkish invasions brought on its decay, and then its complete ruin. Its magnificent remains are to be seen near the village of Denizli, formerly more extensive, but Denizli Ladik (Laodica), in the vilayet of Brousse; they consist principally of a stadium, three theatres, an aqueduct, sarcophagi, etc.

At the beginning of the Christian era, Laodicea was inhabited, besides its indigenous population of Hellenized Syrians, by Greeks, Romans, and an important Jewish colony. There is extant a letter from the authorities of the city to a Roman magistrate in which the former undertake to refrain from molesting the Jews in their religious observances and customs. These Jews sent regularly to Jerusalem a tribute of twenty pounds of gold. Christianity penetrated into the city from the earliest times: St. Paul mentions the Church of Laodicea as closely united with that of Colossians. It had probably been founded by the Colossian Epap-

phras, who shared the care of it with Nymphas, in whose house the faithful used to assemble. Paul asks the Colossians to communicate to the Church of La-

dice the letter which he sends to them, and to read publicly that which should come to them from Lao-

dice, that is, no doubt, a letter which he had written, or was to write, to the Laodicceans (Col., ii, 1 sq.). An apocryphal epistle purporting to be from Paul to the Laodicceans is extant in Latin and Arabic (see APOCYP-

HRA, i, 614, 2). It is written in Greek, and ends the First Epistle to Timothy with these words: “Written at Laodicea, metropolis of Phrygia Pacatians”. The Church of Laodicea is one of the seven (see RAMSAy, The Seven Churches of Asia Minor, London, 1908) to the bishops of which are addressed the letters at the beginning of the Apocalypse (Apo., iii, 14–21). The first bishops attributed to the See of Laodicce are very uncertain: St. Archippus (Col., iv, 17); St. Nymphas (Col., iv, 15; already indicated as bishop of Laodicea by the Apostolic Constitutions, viii, 46); Diotrephes (IV John, 9); Next comes St. Sagarias, martyr (c. 160). Sisinnius is mentioned in the Acts of the martyr Artemon, a priest of his Church. Nunechius assisted at the Council of Nicæa (325). Eugenis, known by an inscription, was probably his successor. The Arian Cercopius was transferred by Constantius to the See of Nicomedia. When Phrygia was divided into two parts, Laodice became the metropolis of Phrygia Pacatiana: it figures under this title in all the “Notitia episcopatum”. Some twenty incumbents are known besides those already enumerated; the last occupied the see in 1450.

There are extant, in Greek, sixty canons of a Council of Laodicea. That this city was virtually held, we have the testimony of Theodoret (“In Coloss.“,” ii, 18, P. L., LXXXII, 619). There has been much discussion as to the date: some have even thought that the council must have preceded that of Nicæa (323), or at least that of Constantinople (381). It seems safer to consider it as subsequent to the latter. The canons are, unfortunately, only a résumé of an older text, and indeed appear to be derived from two distinct collections. They are of great impor-

tance in the history of discipline and liturgy; Protostate authors have often, but quite without reason, invoked one of them in opposition to the other, the former LECQUER, Orienta Christiana, 1, 791–798; SMIT, Dict. Grec.

Laodicceans, Epistle to the. See Apocrypha, su-
title III, (5) Apocryphal Epistles.

Léon. See Soissons, Dioecese.

Léon, Vicariate Apostolic of, separated from the Vicariate Apostolic of Siam by decree of 4 May, 1899.
The vast extent of territory in Further India embraced within the ecclesiastical unit is politically divided. The country to the west of the Mekong River, excepting the Province of Bassak, is included in the Kingdom of Siam; that east of the river is under French rule. The vicariate embraces the whole of the Mekong Valley from the frontier of Tonkin as far as the north of China; on the west is the Mienam with tributary streams; the mountains of Anam and Tongking form the eastern boundary, excluding the district of Attopeu which is attached to the Vicariate of Eastern Cochinchina. The ranks of the missionaries have been frequently thinned owing to the unhealthy nature of the climate; epidemics of cholera morbus and bubonic plague are of constant recurrence.

The vicariate is entrusted to the Paris Society of Missions Etrangères, with residence at Nong-Seng in the province of Nakhon-Phanom. The present Apostolic vicar is Mgr Marie-Joseph Cuaz, titular Bishop of Hermopolia Minor. He was born at Lyons, France, 8 Dec., 1862; elected 30 April, 1899; preconized 22 June, 1899; and consecrated on 3 Sept. of the same year. The history of the territory previous to its formation into a separate vicariate is given in Foiot, "Les Missions", H. (Paris, s. d.), xii; cf. Neher in "Patenhexis", VI, 683. The most recent available religious statistics may be found in Indo-China (French), sub-title Present Conditions of the Catholic Church in French Indo-China.

Missions Catholiques (Rome, 1907); REYNOLDS, BUCHERER, "L'Inde Indo-Chine" (Paris, 1909); GÉRARD, "Les missions catholiques en Indo-China" (1910); HERZER, "Kommunikations- Lexikon", s. v. Laos.

P. J. MACAULEY.

LA PAZ, DIocese OF (PACENSIS), in Bolivia. The city is the capital of the department of the same name, is the most populous city of the Republic of Bolivia, and since 1859 its capital. It is about thirty miles south-east of Lake Titicaca, is connected by railway with the Peruvian harbour town of Puno, situated on the lake, and is 12,200 feet above sea-level. The city is regularly laid out, but built on very steep ground, and according to the last census (1900) has a population of 54,713, chiefly mestizos (called chojos) and Aymarás Indians. The most prominent buildings are a new cathedral built in the eighties of white marble with Corinthian columns, situated on the steep plaza, and the monastic churches of Santo Domingo, San Francisco, and San Juan de Dios. The monasteries attached to these churches, although secularized immediately after the establishment of the republic, were later restored to their respective orders. The most important monasteries of men are San Francisco, La Merced, and La Recoleta; there are also the convents of the Sisters of the Immaculate Conception, and the Carmelite nuns (El Carmen), both new buildings which the city government of La Paz made an unsuccessful attempt, in 1909, to confiscate for school purposes, ostensibly, because, unlike the other orders of women in the city engaged in teaching or nursing, these two devoted themselves to the contemplative life (see the censure of Bishop Amargosa in the "Gaceta Eclesiástico", No. 8, 1909). French Sisters of Charity conduct both the city hospitals and a medical school is attached to the Loniza Hospital for women. The Academia Aymara was founded in 1900 to foster the study of history, and publishes the "Academia Aymara" (La Paz, 1901—). The Sociedad Geográfica de la Paz (seated b. 1880) and issued in 1884 with four sections, for astronomy, physics, political science, and commerce respectively, publishes the "Boletín", as well as separate works. Finally, the Institution Lejón, formed in 1908 from the Federación Encíclopédica, Sociedad Encíclopédica Filantropía and the Unión Filarmonía, for the promotion of the study of natural science, and also of philosophical and sociological studies, issues the "Revista", movement. On 16 July, 1809, citizens and soldiers rose, at first, it is true, only against the French party and in favour of Ferdinand VII, but with the ultimate object of freeing themselves from the mother country. This first uprising was suppressed by General Goyeneche, who was sent from Lima against the insurgents, and had all the chiefs executed. After the battle of Ayacucho La Paz was the head-quarters of General Sucre and since then, at intervals, has been the capital of the country.

The Diocese of La Paz was separated from that of Charcas by Paul V, 4 July, 1605 (see LA PLATA, DIocese OF). In the records of the Audiencia of Charcas, preserved in the "Archivo General de Indias" at Simancas, Diego de Zambrano y Gusmán appears to have been the first bishop, though he apparently did not take possession of his see. The first bishop vouchèd for by history was Domingo Balderrama, O.P., who assumed office in 1610 (d. 1615). He was succeeded in 1616 by Pedro de Valencia, who died in 1631, blind and an octogenarian. The next bishop, highly trained in law and literature, was Feliciano de la Vega, from 1628 Bishop of Popayán, who remained for only a year (1639) at the head of the diocese. He published the first synodal constitutions and died in 1640. Archbishop of Mexico. Among the subsequent bishops the following are prominent: Antonio de Castro y Castillo, O.F.M. (1648–53), whose detailed report on his diocese is preserved in the Archivo General de Indias at Simancas (printed in the "Boletín Eclesiástico", 1916–20, No. 5 sqq.); Juan de Quevedo y Peñalosa y Valdés (1681–95), who finished the first cathedral (1685) and was subsequently transferred to
Chacras. The eleventh bishop, Agustín Rodríguez Delgado, was made Bishop of Panama in 1725 and became bishop of La Paz in 1731, in which capacity, in 1738, he edited the constitutions of the Third Diocesan Synod of La Paz. In 1743 he was appointed Archbishop of Chacras and in 1745 Archbishop of La Paz. At the same time, he undertook the task of organizing the Franciscan monastery and dedicated it on 23 April, 1784. The twenty-sixth bishop, Juan de Dios Bosque (1784–90), published 29 November, 1883, the synodal constitutions still in force. The actual bishop was twenty-eighth Bishop Mr. Nicolas Armentia, O.F.M., has rendered distinguished services in the geographical exploration of Bolivia. He was born 5 December, 1845, at Benerdo in the Spanish province of Alava, received his early education in Biscaglia and in 1860 entered the French Franciscan province of St-Louis. In 1865 he was sent to the Franciscan college at La Paz, where he was ordained in 1869, after which he laboured from 1871 till 1880 as a missionary among the Indians in Tumupasa and Covendo. In June, 1881, he went to the Araunas and Pacificanas on business for the Government. With a knapsack on his back, a yoke, provisions, and a sextant, a breviary in one hand and a compass in the other, he traversed the broad territory between the Beni and Madre de Dios Rivers. He followed the Beni for its entire length and examined the surrounding forests, remaining until 1883. After his return to La Paz he published, in 1884, the result of his explorations under the title “Diario de sus viajes a las tribus comprendidas entre el Beni y Madre de Dios y en el arroyo de Ivón en los dos años de 1882 y 1883”. In May, 1884, Armentia navigated the Madre de Dios, pushing as far as 10° S.lat., exploring the Ortón River (Tahuamanu), and returning, and returning to La Paz in August, 1886. Here, in 1887, he published his second work: “Navegación del Madre de Dios” (in “Biblioteca Boliviana de geografía é historia”), I, translated into Italian by Marcellino da Civezza in his “Storia universale delle missioni Francescane” (VII, Florence, 1894, part IV, 503–603). In this Armentia describes, besides the fauna and flora of the countries he traversed, the customs and tongues of the tribes he visited, especially the Araunas, and laid before the Government a plan showing how the work of civilisation begun by him among these savages could be most effectively carried on. On 22 October, 1901, Armentia, Bishop of La Paz, and 24 February, 1902, was consecrated at Sucre. He published the “Regla Consuetas” of his order in 184 articles (8 Dec., 1903), and wrote a valuable history of the old Franciscan missions in Bolivia under the title “Relación histórica de las misiones Francescanas de Apolobamba, por el famoso N-Trister de Cuopoli” (La Paz, 1903).

The diocese includes the entire Department of La Paz and the Province of Magdalena in the Department of Beni. It numbers 700,000 inhabitants in 72 parishes, served by about one hundred secular priests. The religious congregations represented in the diocese are the Franciscans, with the missionary college of San José, opened at La Paz in 1837; the Franciscan Recollects with various mission schools; the Jesuits with a flourishing college (150 day scholars and 50 interns); the Mercedarians with free schools; the lay brotherhoods of La Paz, and an institute opened in 1887 (a business and trade school). The Sisters of Charity of St. Vincent de Paul, the Sisters of the Most Sacred Heart (Picpus Sisters), the Sisters of the Good Shepherd, and the Daughters of St. Anne devote themselves to teaching schools and run for his glory the Institute of the Immaculate Conception and the Carmelite nuns follow the contemplative life. The cathedral chapter has ten canons.
LAPLAND

Mondo", in which the results are presented without mathematical deductions, showed such linguistic excellence that it secured him a seat among the Forty of the French Academy (1816) and for a time the presidency of that body (1817). The five volumes of the "Mécanique Céleste" made him the Newton of France, and in 1817 he obtained the French Academy of Sciences, first as associate (1773) and then as member (1785), and took a prominent place in the Institute, into which the Academy developed (1796). He was one of the founders of the Bureau of Longitudes and for a while its president. The Royal Society of London and the Royal Astronomical Society of Edinburgh elected him a foreign associate.

Great scientists, like Berthollet, Cuvier, Humboldt, dedicated their works to him. The collected works of Laplace were printed twice: by the Government in seven volumes (1843-47), the Chamber granting forty thousand francs; and again, at the expense of General Laplace (who left a seventy thousand francs for the purpose) and his niece the Marquise of Colbert, in thirteen volumes (1878-1904), under the auspices of the Academy of Sciences. An English translation of the "Mécanique Céleste" by Dr. Bowditch appeared in Boston (1829-39), for five dollars.

Laplace was born and died a Catholic. It has been asserted that to Laplace the Creator was an hypothesis.

The origin of this assertion lies in the misinterpretation of a passage of the "Système du Monde" (Oeuvres, VI, 1835, p. 460), where it is evident that by "vain hypotheses" Laplace meant the Deus ex machina of Newton and the "perpetual miracle" of Leibniz's Harmony. It is true that Laplace indulges in a frivolous remark against Callistus III both in the "Theory of Probabilities" (Introduction, also separately as 'Essai Philosophique') and in the "System of the World" (IV, iv). He partly atoned for it by omitting the remark in his fourth edition of the "Essai". Death prevented him from doing the same in the sixth edition of the "Système du Monde", the correcting of which he had commenced during his last illness. He died at his home in Paris, Rue du Bac, attended by the cure of the Foreign Missions, in whose parish he was to be buried, and the cure of Arceuil, whom he had called to administer the last comforts of religion (de Joannis, p. 27).

Lapland and Lapps.—About 150,000 square miles of the most northerly regions of Europe, from the Atlantic Ocean to the White Sea, from the Pole and the Arctic Ocean to the O.C. lat., are occupied by a partly stationary, partly nomadic people of Mongolian race, usually designated as "Lapps", while their neighbours call the territory over which they migrate "Samelands" and the people themselves "Same", though many prefer the term Fjelman (mountaineers). The country is rich and varied. Radiant days and midnight sun alternate with months of night and twilight, contrasts that can scarcely be found elsewhere on earth. Deep obscure forests surround bright sheets of water; majestic rivers hurry over mighty cataracts to the sea; here ice-capped mountain peaks tower skyward; there immense fields of reigned in the French Academy. The earth conceals all kinds of treasure, thus the inexhaustible iron mines at Gellivare are well known (in 1901 output 1,200,000 tons) as among the richest in the world. The total number of Lapps (the nation as such has exerted no influence on the development of mankind and therefore the present analysis) is about 30,000, of whom 2000 live on Russo-Finnish, 8000 on Swedish, and 20,000 on Norwegian territory.

This singular race is divided into three different groups: mountain, forest, and fisher Lapps. The first two are nomadic and almost entirely dependent upon reindeer. Nearly all the needs of the Lapps are supplied by this useful creature, which closely resembles a stag. The flesh provides his food; from its hide he obtains the moccasin, the hat, the bag, the carpet, the foot and tent covering, while the antlers yield material for knife blades, vessels, etc. During the winter the mountain Lapps move down from their storm driven heights to the sheltering valleys. Here they linger until spring and while here slaughter superfluous animals. They provide themselves with a summer tent (njallas) to save them from depredation. Into the part of the cuoptes (that is sheds resting on piles) not used to dry meat, they bring tools and sledges for the summer. On the approach of spring they return to the green mountain meadows where the reindeer calve and then, having abundant food, supply milk for nourishment and for making cheese. The dwellings of these Lapps consist of an easily movable kota, or conical hut, with skins fastened over the poles and ceilings and in winter roofed over with turf. These huts are fifteen to sixteen feet in diameter at the base and from six to fifteen feet in height; they have entrances but no windows. The smoke from the fireplace in the middle escapes through an opening above. Around the hearth men and dogs, parents, with children and servants, lie on fir or birch twigs covered with skins. Less laborious than the lives of the mountain Lapps are those of the forest Lapps who have fixed places of abode and dwell in log-houses. Twice a year, in spring and autumn, they leave their hearths and devote themselves to hunting and fishing. The rest of the time they are employed, like the mountain Lapps, in breeding reindeer. The forest Lapp is in every respect more favored than the rest of his race, and enjoys such luxuries of civilization as salt, meal, coffee, and tobacco. The fisher Lapps have few resources, and at the best have only a few reindeer to dispose of. They are industrious and depend solely on the often insufficient results of their toil. Absolute pauperism is frequent among them. As to physical traits, the Lapps are usually small and slight in figure like the Scandinavians and Russians; their heads are broad, the profile sharp and the expression somewhat sad. Their complexion is yellowish and the long jaw and pointed chin develop only a scanty beard. They love gay coloured clothes adorned with rude ornaments, silver or tin and make them with much skill. They are not lacking in mental capacity and few Lapps are totally illiterate. Education is provided by means of a few established schools and the aid of travelling teachers. Kindness and gentleness form the bright side of the Lapps' character. Thieving is rare. It is natural that an isolated people, but too frequently the victim of natural forces, should be given over to superstition.

Formerly the Lapps were polytheists. Ibmel appears to have been invested with a sort of leading role among the gods, and his name is still used figuratively. To-day most of the people profess, at least outwardly, the Confession of Augsburg. There are several parishes, e.g. Kautokeins and Karajok in Norway, Karelskina and Jukkejarin in Sweden, where religious service is held in both the Scandinavian and Lapp languages, or only in the latter. It is abridged and the total attendance is slack. About four times the frequency of ever (at the so-called Heligöd), the contrary is true. The multitudes who assemble at that time combine business and pleasure, markets and popular sports with religious celebrations. A few thousand Lapps were Christianized in the sixteenth century by monks and the Russian Orthodox clergy, and were enrolled as members of the Orthodox Church. Their new "religion" was no more seriously taken than the Protestant Christianity of the Southern Lapp.
Attempts at conversion were certainly made during the Middle Ages from Upsala, the archbishop of which was the protector of the nomads of the northern provinces, tributary to Sweden; the missions, however, made no real progress, though at the time of the Cal- man the rich provinces to the south of Upsala were so lively interest in them and a priest named Tolsti was sent to preach the Gospel and erect churches for them. After the schism, Gustavus I Vasa took the matter up again and is said to have sent Brigidite monks from Vaestra to these northern missions. Charles IX has no conspicuous mission, but used the Latin language to be used by preachers, and laid the foundations for much of the work done later. In Norway, instruction in their native language was first given the Lapps in 1714 at the institution of Thomas of Westen. This brought about conversions, but in 1774 when the instructions were once more confined to Danish, the neophytes fell away. In the middle of the eighteenth century an unsuccessful mission was undertaken by the Moravian Brotherhood. Since then much has been done to Christianize and civilize these people. Numerous grammars, dictionaries, and readers have been issued. Great tractates, and portions of the Holy Scriptures translated into their language. Since the repeal of adverse legislation, the Catholic Church has likewise endeavoured to gain influence over these poor nomads. Unlike the Protestant missionaries, fathers of families, the unmarried Catholics of Sweden have chosen the secular laity for their work. The results, indeed, are yet moderate, though the future offers relatively favourable prospects.

F. W. Wittmann.

La Plata, Diocese of (De Plata).—The city of La Plata, capital of the Argentine Province of Buenos Aires, is situated on the right bank of the Rio de la Plata, about 35 miles south-east of the city of Buenos Aires. In 1893 the inhabitants numbered 45,410, and 80,000 in 1907, most of them foreigners, with Italian predominating. When, in 1890, the city of Buenos Aires was ceded to the Federal Government, the national Congress resolved to build a new capital for the Province of Buenos Aires. The foundation stone of this new capital was laid 19 November, 1882; it was named La Plata, and grew rapidly in the 80's, but came to a standstill in 1890, and has not recovered yet. The far-famed artificial water-course assures the town an important future, though its nearness to Buenos Aires has temporarily checked its development. Among the important buildings belonging to the town are those of the National University of La Plata, which was developed, in 1905, out of the provincial university, and now (1909) has four faculties and a yearly budget of 1,080,000 pesos (about $440,000). Attached to the university are the library and university extension, containing 41,000 volumes, the Museo de la Plata, founded in 1877, with valuable anthropological, palaeontological, zoological, and mineral collections, and an astronomical observatory erected in 1882. The pariah church of San Ponciano, built in 1833, served as pro-cathedral until 1901, when the present large Gothic cathedral took its place.

The See of La Plata, by wish of the Argentine Gov- ernment, was granted to the See of Santa Fé and Tucuman, by Bull of Leo XIII, "In Petri Cathedra", 15 February, 1897, and canonically established 30 May, 1897, by an edict of Archbishop Udalsiio Castellano of Buenos Aires. It is a sufrag- an of Buenos Aires, with jurisdiction over the Pro- vince of Buenos Aires, and the territory of La Pampa Central, both of these formerly belonging to the Arch- diocese of Buenos Aires. The diocese and the cathe- dral are under the patronage of the Immaculate Conception, while the Province of Buenos Aires is under the patronage of St. Martin of Tours. The Arch- bishop of Buenos Aires took charge of the new diocese until the appointment, in 1898, of the first bishop, Mgr. Mariano Antonio Espinosa. The present bishop (1909), Mgr. Ngônomucoño Terrero y Escalada, was appointed in 1900. There is also an auxiliary bishop, Mgr. Francisco Albetti, titular Bishop of Sidna.

Neg. 29. Decoys of wood, the number of inhabitants, mostly Catholics; 130 parishes; 260 secular priests and 60 religious. The communi- ties of men are represented in the diocese by: Fran- ciscans, Dominicans, Fathers of the Sacred Heart from the Diocese of Bayonne, Pallottines, Community of the Divine Word, Passionists, Salesians—to whom, since 1896, the Mission of Pampa Central has been en- trusted (see PATAGONIA)—as also Brothers of the Christian Doctrine and Marists. The female communi- ties are: Daughters of Our Lady of Mercy, Sisters of Mary Help of Christians, Poor Sisters of St. Joseph of Bueno Aires, Sisters of the Divine Saviour, of the Blessed Sacrament, of St. Anthony, of the Divine Master, Vincentians, Sisters of the Garden, of Our Lady of Lujar, of the Rosary (native and French), of the Child Jesus, of Mercy, of the Good Shepherd, Franciscan Tertiaries. Sisters of the Cross, of St. Cam- illus, of the Immaculate Conception, Capuchinas, Sisters of the Holy Ghost, Little Sisters of the Poor, French Sisters of St. Joseph, Servants of Mary, of the Holy Union, Dominicanesses of the Annunciation, Franciscans of Charity, of Saint Martha, and Sisters of the Poor of St. Catherine of Siena.

Gregor Reinhold.

La Plata (or Charcas), Archdiocese of (de Plata).—La Plata is, besides being the metropolitan see of Bolivia, the other two are La Paz and Cochabamba. The city owes its origin to the famous sil- vamines of Potosi which are nearby. Owing to the chill climate of Potosi, which is about 1,700 feet above the level of the sea, the wealthy mine-owners conceived the idea of seeking a more pleasant habita- tion for their families, in a milder temperature about sixty miles to the north-east. The city is said to have been founded as early as 1566, under the name of Villa de la Plata (Silver City); it was also long called, from the district in which it is situated, Charcas, or popu- larly, Chuquisaca (Golden Gate). After the victory of General Sucre near Ayacucho (1824), it was named in his honour, Sucre. La Plata is built on a plateau, 4,000 feet above the level of the sea, on the Cochimayo, a tributary of the Pilcomayo, flowing into the river from the left, and is the metropolis of the department of Chu- quisaca, numbering 26,907 inhabitants (1900), chiefly Indians and Mestizos. The city is the residence of the archbishop, who has a medical institute founded in 1806,
a museum of anatomy and natural history, a Franciscan missionary college, built in 1673 by Father Herrera, O.F.M., a flourishing college of arts and industries of the Salesians of Don Bosco (connected with the Oratory), an Oratory of St. Philip Neri, also a geographical society, whose principal work has been the "Diccionario geográfico del departamento de Chuquisaca" (Sucre, 1903). The many churches of the city are for the most part unpretentious, the interiors covered with unsightly stucco work, the interiors with wretched paintings. The only one worthy of note is the Cathedral of Nuestra Señora de Guadalupe, a building with three naves and an imposing tower. This cathedral is remarkable for its wealth of treasures in silver, which, however, is not entirely intact, the exterior work having been halted down by President Melgarejo. The miraculous image of Our Lady of Guadalupe, about seven feet in height, and encrusted with diamonds, rubies, emeralds, and pearls, is still in the church, and is valued at about two million dollars. Of the twenty-four massive silver candelabra, there are two at present weighing each about 110 pounds. Also in the cathedral are a large number of valuable paintings, among others a "Madonna de la Paz" by Murillo, a "Martirdom of St. Bartholomew" by Ribera, a "Crucifixion of St. Andrew" by Montufar. In the adjoining chapel of San Juan de Mata are two artistic statues of St. Clement and St. Aquila, both containing relics of the saints. The spacious sala capitular, or chapter hall, contains the portraits of all the archbishops.

The Diocese of La Plata, or Charcas, was erected by Bull of Julius III, 27 June, 1552, as a suffragan of Lima. On 4 July, 1605, Paul V founded two new dioceses out of La Plata territory, La Paz and Santa Cruz de la Sierra, and on 20 July, 1609, raised La Plata to metropolitan rank. The province formerly embraced, in addition to the two above-mentioned dioceses, practically all the territory now ceded to Chile, Argentina, Panama, Paraguay, etc. To-day the boundaries of the ecclesiastical Province of La Plata coincide with those of the Republic of Bolivia, embracing only the suffragan Dioceses of La Paz, Santa Cruz de la Sierra, and Cochabamba, erected in 1847. The list of bishops of La Plata comprises thirty-six names; that of the archbishops, thirty-six, including the present incumbent of the see. Prominent among them are: Alonso de Peralta (1600–16), who died in the odour of sanctity; Fernando de Arías y Ugarte (1627–30), previously Bishop of Quito and Archbishop of Santa Fé de Bogotá; Miguel de la Torre (1632–43), a true father to the Indians, and died in, 1638, Archbishop of Lima; Gaspar de Villaroel, O.S.A. (1659–67), formerly Bishop of Santiago de Chile and Arequipa, also known as a writer on canon law and exegetics (Hutner, "Nomenclator literarius", 2nd ed., Innsbruck, II, 1893, 138); Cristóval de Castilla y Zamora (1659–82), natural son of Philip IV of Spain, who built the archiepiscopal seminary and the former archiepiscopal palace (now the president's mansion); Bartolomé Gonzales y Poveda (1683–92), who expended a hundred thousand pesos on the erection of the side aisles and the tower of the cathedral; Pedro Miguel de Aranguren (1761–76), formerly Bishop of Córdoba de Tucumán, who built the chapter hall and held the second provincial synod in 1776, during the course of which his death occurred; the Discalced Carmelites José Antonio de San Alberto (1785–1804), a very father of the church, and the founder of the local Oratory; Father Philip Neri is also worthy of mention on ascetical subjects; the Benedicnte Benito María de Moxó y Franckol (1807–16), a well-trained scholar, the author of homilies and also of some polished poems in Latin and Italian, who died at Salta, in Argentina, having been married thither by General Rondeau; Pedro Puch y Solanos (1802–55), who assisted at the Vatican Council. The present (thirty-sixth) archbishop is a Franciscan, Sebastiano Francesco Pifferi, of Italy. He entered the Franciscan Order, 9 November, 1863, made his profession 20 January, 1868, and was ordained to the priesthood, 14 May, 1871. He first worked in Bolivia as commissary general of his order, and in 1905 was appointed titular Bishop of Jericho. He was consecrated archbishop by the Bishop Miguel de los Santos Tabora (1898–1906), on whose death (30 April, 1906) he succeeded to the archiepiscopal See of La Plata.

**Statistics.**—According to a communication from Archbishop Pifferi, of January, 1910, the Archdiocese of La Plata embraces the departments of Chuquisaca, Santa Cruz, Oruro, and Tarija, an area of 165,200 sq. miles, and a population of 805,299. The archdiocese is divided into 13 deaneries (vicariates forane), and comprises 135 parishes, over 200 vice-parishes, with 172 secular priests and 99 regular priests, besides 10 regular clerics not priests, and 26 lay brothers, in 6 monasteries of men, and 159 sisters in 21 houses. There are 70 students in the seminary. The 10 mission stations among the pagan Indians, and 7 mixed stations are all attended from the missionary colleges of the Franciscans. The religious congregations represented in the archdiocese are as follows: Franciscans, with monastery at Sucre and Tarija, all in the province of San Antonio de las Carolas. Of these four monasteries, Potosí (founded 1547), Sucre (mentioned above), and Tarija (1607), have flourishing missionary colleges in charge of missions among the pagan Indians. Moreover, the Oratorians of St. Philip Neri have an oratory at Sucre; Don Bosco's Salesians a college of arts and industries (with oratory) at Sucre; the Lazarists, a house at Sucre; the Discalced Carmelites nuns, monasteries at Sucre and Potosí; the Poor Clares and the Servants of Mary, each a house at Sucre; the Augustinian nuns, a monastery at Potosí; lastly, the Daughters of St. Anne have foundations at Sucre, Potosí, Oruro, Tarija, and Tupiza. In addition to 14 religious schools, there are 2 educational institutions for boys (with 360 pupils) and one for girls (with an attendance of 1200), and 6 hospitals and hospices. Besides the Spanish language, there are Indian dialects still in use—Quichua, Aymará, and Guaraní. St. Barbara, virgin and martyr, is patroness of the diocese.

**Tahure, Un Balanço da história da Episcopia do Rio de Janeiro, list of bishops), pp. 41–51.** On the Franciscan missions of the archdiocese, cf. **Lapparent, Albert Auguste de,** French geologist, b. at Bourges, 30 Dec., 1839; d. at Paris, 12 May, 1938. He made a brilliant course of studies at the Ecole Polytechnique in Paris, graduating there in 1864. He was appointed mining engineer in 1864, he was chosen by Elie de Beaumont as a member of the staff entrusted with the task of drawing the geological map of France. From 1866 to 1880 he contributed, with Delesse, articles on geology to the "Annales des Mines". In 1875 he was made a statutory of the commission on the submarine tunnel between England and
France, and conducted the soundings with such skill that his report was pronounced most valuable and served as a basis for subsequent inquiries on the question. The French Government gave him the Cross of the Legion of Honour. Towards the end of 1875 a chair of geology and mineralogy was founded for him at the Catholic University of Paris. For a few years he occupied that position without severing his connexion with the mining department, and when the leave of absence he had obtained was cancelled (1880), he preferred to give up his official position and continue to teach a science so dear to him in an atmosphere more congenial to his religious convictions. In 1880 he was elected president of the Geological Society of France. Two years later he began to write his "Traité de Géologie," published at Paris in 1884, the style of which work was as remarkable as its contents. He treated the subject in a new way, abandoning the old methods and laying the foundation of the scientific history of the earth. Instead of confining himself to a dry description and to a mere enumeration of fossils, he ventured to make hypotheses on terrestrial dynamics, as well as on the past and present evolutions of the earth. In 1885 appeared his "Cours de Mineralogie," which gained him the presidency of the French Society of Mineralogy, and a prize from the Academy of Sciences. Not long afterwards he began at the Catholic University his lectures on physical geography, a work of such merit that he was offered the chairmanship of the central committee of the Society of Geography in 1895, and was sent to represent the society at the international congress held in London. In 1896 he published his "Leccons de Géographie Physique," a work of decided originality. Lapparent was the first to treat this subject in France, and the success of his lectures at the Catholic University, the first ever given in this department, prompted the French Government to establish a similar chair at the Sorbonne. His chief qualities as teacher consisted in the clearness and method of his treatment. He saw at once the essential points of a question and showed them in a new light. Hence the enduring success of his publications, which were many times reprinted. However deep and complicated the subject, his treatment made for simplicity. In recognition of his services to science, he was elected to the Academy of Sciences in June, 1897, and in May, 1907, when Berthelot died, de Lapparent succeeded him as secretary of that academy.

De Lapparent was not only a prolific author of original scientific works, but also, in the highest sense of the term, a remarkable "popularizer". Considering that the proper rôle of the scientist, holding by his work the closest communion with truth in this world, is to spread this truth abroad, he set forth in words perfectly simple and clear, but withal perfectly exact, the great problems of contemporary science. The style in which he did this derived an added dignity from the very simplicity in which he clothed these abstract themes. He never had recourse to that pretentious pomp of style with which ignorance is wont to mystify the lay mind. De Lapparent's writings embodied the most abstract thoughts, straightway illuminated, however, by his marvellous gift of simplification. His articles in "Le Correspondant" are masterpieces. They were always cordially welcomed, not only by the laity, but also by his colleagues in the world of science. In these articles he gave to the world in popular form his tetrahedral theory of the form of the earth, a theory as simple in principle as it was pregnant in possible applications. He also made known Brückner's curious theory of meteorological periodicity, and discussed the question of the flattening of the earth, a subject to which he succeeded in imparting much new life and significance. In this same happy style de Lapparent wrote that remarkable little work, "Some Thoughts about the Nature of the Earth's Crust," which, although based upon a series of lectures delivered by him to a lay audience, shows wonderful philosophic grasp and scientific comprehension.

LOUIS N. DELAMARRE.
