The civil privileges (fueros) of the Toledo Mozarabes, which, though in 1147 Pope Eugene III had definitely put them under the jurisdiction of the bishop of the diocese, including a certain amount of independence, were confirmed by Alfonso VII in 1118, by Peter in 1350, by Henry II in 1379, and by Ferdinand II in 1504, by Charles II in 1699, and by Philip V in 1740. But in spite of this the Roman Rite prevailed so much that it was introduced even into Mozarabic churches, which only used the old rite for certain special days, and that in a corrupted form from old and imperfectly understood MSS. This and the dying out of many Mozarabic churches in the tenth century, the breaking up of the old Moorish kingdoms, and the introduction of the Gothic Rite, which was more easily learnt by primitive Christians, led to the decline. There was a spasmodic attempt at a revival, when in 1436 Juan de Todesillas, Bishop of Segovia, founded the college of Aniago (originally a Benedictine house, a little to the south-west of Valladolid), where the priests were to use the Gothic Rite. The foundation lasted five years and then became Carthusian. Thus, when the last Mozarabes of Toledo became Archbishop of Toledo in 1495, he found the Mozarabic Rite in a fair way to become extinct. He employed the learned Alfonso Ortiz and three Mozarabic priests, Alfonso Martinez, parish priest of St. Eulalia, Antonio Rodrigues of Sts. Justa and Rufina, and Jeronymo Gutierrez of St. Luke, to prepare an edition of the Mozarabic Missal and the Office of the Breviary, which appeared in 1502. He founded the Mozarabic Chapel in Toledo cathedral, with an endowment for eighteen chaplains, a sacristan and two mosos servientes, and with provision for a sung Mass and the Divine Office daily. Soon afterwards, in 1517, Rodrigo Arias Maldonado de Talavera founded the Capilla de San Salvador, or de Talavera, in the Old Cathedral of Salamanca, where fifty-five Mozarabic Masses were said yearly. They were later reduced to six, and now the rite is used there only once or twice a year.

When the church of St. Mary Magdalen of Valladolid was founded by Pedro de la Gasca in 1567, an agreement was in the same year, in which it is said that she said there every month. This foundation was in existence when Flores wrote of it in 1748, but is now extinct. At that time also the offices of the titular
saints were said according to the Mozarabic Rite in the six Mozarabic churches of Toledo, and in that of Sts. Justa and Rufina the Mozarabic feast of the Samaritan Woman (first Sunday in Lent) was also observed. Except for the Capilla Muzárabe in the cathedral, all else was Roman. In 1553 Pope Julius III regulated mixed marriages between Mozarabic and Roman Christians. The children were to follow the rite of the father, but, if the eldest daughter of a Mozarabic married a Roman, she and her husband might choose the rite to which she and her children should belong, and if she became a widow she might return to the Mozarabic Rite, if she had left it at her marriage. These rules are still in force, and the writer is informed by Dom Pérotin that the present Mozarabes are so proud of their distinctive rite, involving, as it does, particular titles like “Antiphonary of the Office sung by the choir” or said by the celebrant or the deacon, were usually combined in one book, a sort of mixed sacramentary, antiphonary, and lectionary, usually with musical neumes to the sung portions. Most of the MSS. are very imperfect, and it is not quite clear under what name this composite book was known. Probably it was called “Antiphonary of the Office sung by the choir” or said such books existed also as antiphoniers with choir parts only and sacramentaries with the priest’s part only, and the usual modern practice is to call the composite books by the descriptive name of “Offices and Masses”. They contain under each day the variables of Vespers and Matins and of the Mass. The Mozarabic Rite has made few changes in the shape of some of the invariables, as a model of a complete Mass. The Missale Omnium Oferentium, the separate book answering to the Ordinary of the Mass (see Section V, The Mass), does not exist in any early MS., but there is a Missa Omnimo in the principal Silos MS. of the “Liber Ordinum”, which is a model of the type that was used. In some cases “Offices and Masses” was supplemented for the Divine Office by the Psalter, which in its fullest form (as in the British Museum Add. MS. 30851) contained the whole book of Psalms, the Canticles, chiefly from the Old Testament, sixty-seven to a hundred in number, the Hymns for the year, and the “Hore Pontificales”. For the office of Vespers there is no supplement, but the Prophecies, Epistles, and Gospels are found also in a separate book known as “Liber Comitis”, “Liber Comices” or “Comes”. The Prayers of Vespers and Matins and the Prayers which follow the Gloria in Excelsis at Mass are also found combined in the “Liber Orationum”, and the Homilies read at Mass are collected in the “Homiliarium”, though some are also given in the composite “Offices and Masses”. The occasional services of the Ritual and Pontifical are found in the “Liber Ordinum”, which contains also a number of Masses. There is one MS. (at Silos) which contains the Lessons of the now obsolete nocturnal Office. The following is a list of MSS. of these books: 

II. MSS. AND EDITIONS.—Of the existing MSS. of the Mozarabic Rite many, as might be expected, are in the cathedral chapter library at Toledo, but until quite recent times the Benedictine Abbey of Silos, between thirty and forty miles to the south of Burgos, possessed nearly as many. Most of these are now elsewhere, some having been purchased in 1878 by the British Museum, and others by the Paris Bibliothèque Nationale. There are other MSS. in the Royal Library, in the Library of the Royal Academy of History, in the Archdiocesan archives, in the Cathedral Library at Leon, in the University Library at Santiago de Compostela, and in the chapter library at Verona. It will be seen from the list which follows that nearly all the existing MSS.

come either from Toledo or from the neighbourhood of Burgos. There is also an interesting collection of transcripts, made from 1752 to 1756 under the direction of the Jesuit Father, A. M. Burriel, from Toledo MSS. in the Biblioteca Nacional at Madrid. All the original MSS. are anterior to the conquest of Toledo in 1085, most of them being of the tenth or eleventh century. The arrangement of the books of that period was peculiar. The variable parts of the Mass and of the Divine Office whether sung by the choir or said by the celebrant or the deacon, were usually combined in one book, a sort of mixed sacramentary, antiphonary, and lectionary, usually with musical neumes to the sung portions. Most of the MSS. are very imperfect, and it is not quite clear under what name this composite book was known. Probably it was called “Antiphonary of the Office sung by the choir” or said such books existed also as antiphoniers with choir parts only and sacramentaries with the priest’s part only, and the usual modern practice is to call the composite books by the descriptive name of “Offices and Masses”. They contain under each day the variables of Vespers and Matins and of the Mass. The Mozarabic Rite has made few changes in the shape of some of the invariables, as a model of a complete Mass. The Missale Omnium Oferentium, the separate book answering to the Ordinary of the Mass (see Section V, The Mass), does not exist in any early MS., but there is a Missa Omnimo in the principal Silos MS. of the “Liber Ordinum”, which is a model of the type that was used. In some cases “Offices and Masses” was supplemented for the Divine Office by the Psalter, which in its fullest form (as in the British Museum Add. MS. 30851) contained the whole book of Psalms, the Canticles, chiefly from the Old Testament, sixty-seven to a hundred in number, the Hymns for the year, and the “Hore Pontificales”. For the office of Vespers there is no supplement, but the Prophecies, Epistles, and Gospels are found also in a separate book known as “Liber Comitis”, “Liber Comices” or “Comes”. The Prayers of Vespers and Matins and the Prayers which follow the Gloria in Excelsis at Mass are also found combined in the “Liber Orationum”, and the Homilies read at Mass are collected in the “Homiliarium”, though some are also given in the composite “Offices and Masses”. The occasional services of the Ritual and Pontifical are found in the “Liber Ordinum”, which contains also a number of Masses. There is one MS. (at Silos) which contains the Lessons of the now obsolete nocturnal Office. The following is a list of MSS. of these books:

Offices and Masses.—(a) Toledo, Chapter Library, 35.4, eleventh century. Contains from Easter to the twenty-second Sunday after Pentecost. Belonged to the parish of St. Olalla (Eulalia) at Toledo. (b) 35.5, tenth or eleventh century, 194 ff. Contains from the first Sunday of Lent to the third day of March. (c) 35.6, eleventh century, 199 ff. Contains from Easter to Pentecost and feasts as far as SS. Just and Pastor (6 Aug.). (d) Madrid, Royal Academy of History, F. 190, tenth or eleventh century, 230 ff. Belonged to the Monastery of San Millan (St. Emilius) de la Cogolla in the Rioja. (e) Madrid, Biblioteca Nacional, formerly at Toledo (35.2), eleventh century, 121 ff. Contains the Lenten Offices up to Palm Sunday. Colophon “Finitur deo gratias hic liber per manus ferrandini dominus presbiteri eglesie sanctuarum juste et ruine civitatis Toleti in mense Aprilis.” (f) Silos, eleventh century, paper octavo, 154 ff. (g) British Museum, Add. 30544, tenth century, 183 ff. Contains the Annunciation (18 Dec.), St. Thomas, Christmas, St. Stephen, St. Eugenia (27 Dec.), St. James the Less (26 Dec.), St. James the Great (30 Dec., but called St. John), St. Columba (31 Dec.), the Circumcision, Epiphany, St. Peter's Chair (22 Feb.),
Ascension, and the Sunday after the Ascension. The Mass for the Annunciation is a model Mass with something of the Mozarabic liturgy inserted in some of the Masses; and the liturgical part is preceded by a collection of Homilies. Belonged to the Abbey of Silos. (h) British Museum, Add. 30845, tenth century. Contains Offices and Masses for the Feast of St. Quiricus (4 or 20 May), and of Feasts from St. John Baptist (24 June) to St. Emilian (12 Nov.), thirteen in all, though not all in their proper order. Belonged to the Abbey of Silos. (i) British Museum, Add. 30846, tenth century. Contains Offices and Masses for Easter Week, followed by the Canticles for the same period, and the Hymns for Easter tide to Pentecost, including the Feasts of Sts. Engratia (16 April), Torquatus and Philip (1 May), and the Invention of the Cross (9 May). An edition of the MS. which deserts itself as “Antiphonarium de toto anni circulo, a festivitate S. Aciscil [17 Nov.] usque ad finem”, containing the choir parts, but not the priest’s part of the Offices and Masses. This is the book known, quite erroneously, as the “Antiphoner of King Wamba”, presented to the Cathedral Library at Leon by King Wamba c. 1010, the cellum MS. of the eleventh century (Era 1107 = A.D. 1069), 200 ff., transcribed by one Arias, probably from a much older book, which perhaps did belong to King Wamba (672–80). Dom Férotin describes it as very complete.

Sacramentaries.—(a) Toledo Chapter Library, 35.3, L. 3005, 177 ff. Contains Masses for the year. In the initial of that for St. Peter’s Chair (22 Feb.) are the words “Elenus Abbas Acsi indignus scriptus” (sic). It belonged to the parish of St. Olalla (Eulalia) at Toledo. Dom Férotin describes it as a Sacramentary, and says that it is complete. An edition by him will soon be published. (b) There is also a Sacramentary of the same date with a readable number by Burriel, Eguren, and Simonet, which is said by them to contain “Missas omnes tam de tempore quam de sanctis per totum anni circulum”. There is a copy of it among the Burriel manuscripts at Madrid, and Eguren ascribes the original to the ninth century.

Psalter.—(a) Madrid, Biblioteca Nacional, formerly at Toledo (35.1), tenth century, 174 ff. Contains the Psalter with antiphons, the Canticles, and the Hymnal. On f. 150 are the words “Abundantius presbyter librum mauro presbytero scriptor” (sic). The prologue of the Hymnal is an acrostic in verse which reads “Mavricio obtante Verianino edidit. This book is of a style and construction like the Psalter, Canticles, and Hymnal in his edition of the Mozarabic Breviary. There is a copy among the Burriel MSS. (b) British Museum, Add. 30851, eleventh century. Contains Psalter, Canticles, Hymnal, and “Hore Canonice”, the last (though imperfect) being much fuller than the printed Breviary and containing the now obsolete Night Offices, as well as the other Hours and a number of offices for special occasions. It has been edited by J. P. Gilson for the Henry Bradshaw Society. (c) Santiago de Compostela, University Library, Gabinete de Reservados No. 1, dated Era 1093 (A.D. 1055), “Petrus erat scriptor, Fructuos de- nique pictor.” Contains Psalter, 100 Canticles, and the Night Offices, but not the Hymnal. The Psalter is preceded by a poem addressed by Florus of Lyons to Hydradius (here called Ysidorus Abbass), Abbot of Novalase near Susa in Piedmont (825–7). There is a full description of this MS. in Férotin’s “Deux Manu- scripts wisigothiques de la Bibliothèque de Ferdinand I.” (d) Royal Library, Madrid, 2 J. 5, dated Era 1097 (A.D. 1057). Contains Psalter and Hymnal, nearly agreeing with the Compostela Psalter. There is a formula of confession, in which the names of Queen Sancia and the Infanta Urraca appear, and which contain an extraordinary list of sins. The MS. belonged in the fourteenth century to the Benedictine monastery of St. Maria de Aniago near Simancas, which in 1455 was united with a monastery in Briviesca (Section I. History and Origin), then to the Colegio de Cuencia at Salamanca. It is fully described in Férotin’s “Deux Manuscrits wisigothiques”. (e) A Psalter and Canticles of the tenth century, 122 ff., sold at the Silos sale in 1878, present owner unknown.

Liber Comices, Liber Comitibus, Comes, containing the Prophesies, Epistles, and Gospels used at Mass. (a) Paris, Bibliothèque Nationale, Nouv. Acquis. Lat. 2171, eleventh century. Belonged to Silos from 1067, when it was given to the Cathedral by Sancha, sister of King Wamba, in 1060, or about 1075. Edited by Dom Moita (Maredsous, 1893). (b) Toledo, Chapter Library, 35.8, ninth or tenth century. Imperfect, containing only from “Dominica post infantum” to the Saturday of the fourth week of Lent. (c) Leon, Cathedral Library. A little earlier than 1071, when it was given to the Cathedral by Bishop Pelagius, to celebrate the eighth Sunday of Advent and ends with what it calls “the twenty-fourth Sunday”. According to Dom Férotin it is rich in Votive Masses, but incomplete in much else.

Liber Ordinarium.—(a) Silos, dated Era 1090 (A.D. 1052), 344 ff. Copied by Bartolommeus Presbyter for Pelayo, Archbishop of San Prudentio, at San Roman in the Rioja. Dom Férotin states that it is the very copy sent in 1065 to Alexander II. San Prudentio was a cell of Albeida. Of the four books sent to Rome one was “Liber Ordinum majoris Albalden[cis] Cenobi”, and one of the deputation, Eximino of Oca, was a personal friend of St. Dominic of Silos. The MS. contains a very full collection of the Ritual and Pontifical Offices and a large number of votive and other Masses. Fully edited and described by Dom Férotin in his “Liber Ordinarium”. (b) Silos, dated Era 1077 (A.D. 1039). Written by Joannes Presbyter. Contains Calendar, Baptism, Visitations etc. of the Sick, Commendation of the Dead, Matrimony, a large collection of prayers and blessings, and Votive Masses. Edited by Dom Férotin. (c) Silos, eleventh century, 142 ff. Contains also Hours, which are offices for every hour of the twelve, as well as Ordo Peculiaris (Aurora), ante Completa, ad Completa, post Completa, ante lectulum, and in nocturnis. Edited, except the Hours, by Dom Férotin. (d) Madrid, Academia-12. 5, 131 ff., dated Era 1107 (A.D. 1124), eleventh century, 155 ff. Belonged to San Millan de la Cogolla in the Rioja. Contains a Ritual and a number of Masses. Edited by Dom Férotin.

The descriptions of all the above MSS. (except
those in the British Museum, which the writer has examined for himself) are worked out from those given by Fétroin, Ewald and Loewe, Simonet, Eguren, and the list of the Burriel transcripts in Fernandez de Navarrete’s “Coleccion de Documentos” (see bibliography). The chief MSS. are Roman, and the principal MSS. will appear in Dom Fétroin’s forthcoming edition of the Mozarabic Sacramentary. The lists of Toledo MSS. given by Lorentzana and Pinius are too vague for purposes of identification. The four MSS. (Add. 30847-30850), described in the Catalogue of Additional Manuscripts of the British Museum for 1878 as Mozarabic are all Roman, three being Romanon-monicastic and one secular.

Psalter, Canticles, Hymnal, and Hours.—In Lorentzana’s Breviary of 1775 and the Migne reprint, from the Toledo manuscript. In the Henry Bradshaw Society’s Publications, vol. XXX, edited by J. P. Gilson, London, 1905, from the British Museum MS.

Liber Comunicus. —Edited by Dom G. Morin from the Psalter in “Anecdota Maredsolanae”, I, Maredsous, 1893.

III. THE LITURGICAL YEAR.—In the present printed books, the offices are divided after the Roman fashion into “Officium Canonicum per Annunum” (answering to the Officium de Tempore) and the “Sanctorale.” As in the Roman books, the fixed feasts from Christmas Eve to the Epiphany (except that the Breviary puts two in the “Sanctorale”) come in “de Tempore”, and the Missal, but not the Breviary, includes also St. Clement (23 Nov.), St. Saturninus (29 Nov.), St. Andrew (30 Nov.), St. Eulalia (10 Dec.), the Annunciation (18 Dec.), and St. Thomas the Apostle (21 Dec.) in the same chart, thus the three Christmas feasts come in “Sanctorale.” In the manuscripts (e.g. in the two Libri Oratorium, Add. MS. 30852 and the Verona MS. printed in Bianchini’s edition of Thomasius, which has a very complete year) the two parts are not distinguished, and the whole set of days, fixed and movable, are given in one series. The “Officium per Annunum” of the modern books begins with the first Sunday of Advent, as in the Roman, but the “Sanctorale” begins with Sts. Julianus and Basilissa (7 Jan.), and ends in the Missal with St. Eugenia (12 Dec.), while the Breviary includes in it also Sts. Justus and Abundus (10 Dec.), the Annunciation (18 Dec.), St. Thomas the Apostle (21 Dec.), so as to keep the Epiphany immediately after Advent Sunday, the Missal has for St. James the Great (30 Dec.), and St. Columbus (31 Dec.). There are six Sundays of Advent, as there were in the Gallican and are now in the Ambrosian. The key day for Advent Sunday is therefore St. Martin (11 Nov.), as it is in the Ambrosian Rite, and, as according to the Council of Mâcon (581), it was in the Gallican, but Advent Sunday is that next after, not, as in the Roman, that nearest to the key. Thus Advent Sunday may be on any day from 12 to 18 Nov.

The four feasts which follow Christmas Day are now the same as in the Roman Rite, including St. Thomas of Canterbury. The next day is the Translation of St. James the Great and the last day of the year is St. Columba, Virgin and Martyr, though the Calendar of the Missal includes also St. Silvester. But, according to the Calendar of the Breviary, the twenty-ninth is “Jacobi Fratris Domini”, and there is an office for his feast, as well as a direction to use the Common of one pontiff martyr for St. Thomas of Canterbury, and for the thirtieth there is an Office for the feast (translation) “Sancti Jacobi Fratris Sancti Joannis”. In the Missal St. James the Lesser is not mentioned here in the Calendar, but the Mass of the twenty-ninth is his; there is nothing of St. Thomas, and the table of contents of the Ximenes Missal refers to the Mass of that day as “in translatione Jacobi Zebedeti”, which it certainly is not. There is no Mass for the Translation of St. James the Great in the printed books, though in the ancient Manuscript of the Breviary, the full Mass “Omnim Offenentum” instead of the Ordinary; but in Add. MS. 30844 (tenth century) there is one which follows the Mass of St. James the Lesser, though by mistake it is called by the name of St. John the Evangelist. In that MS. the days after Christmas are St. Stephen, St. Eugenia, St. James (Frater Domini), St. James the Greater, and St. Columba, leaving one day unoccupied. In Add. 30850, a tenth-century Liber Oratorium, “De Alisione Infantum”, which according to the present calendars would occupy that day (28 or 29 December), is given next after the Epiphany. In the Hymnal printed with Lorentzana’s Breviary, the vacant day is occupied by an Office for the Evangelist, and the rest are as in Add. 30844. The Circumcision is on 1 January. If a Sunday occurs between that day and the Epiphany it is “Dominica ante Epiphaniam”. The Mass is that of the Kalends of January (i.e. New Year’s Day). The three days before the Epiphany are “Jeniam in Kalendis Januarii”, said to have been set apart as fasts in contempt of Superstitiones gentium. They are “days of penance” kept during Advent ob impietatem Priscillianistarum, who, denying the Incarnation, fasted at that season. There are analogous instances of this sort of fasting (or not fasting) ad lite et contentiones in the Byzantine practice of not fasting on certain days before Lent begins because of the ambitions of the Armenians and the Ninevite Fast of the Jacobites and Nestorians. After the Epiphany (called also “Apparitio Domini”) to Lent nine Sundays are given, the last being “Dominica ante Cineres”, the rest being numbered one to eight “Post octavam Epiphaniae”.

Ash Wednesday (Penta quarta in capite jejuni) is an event in late Roman and Gallican usage, but not inserted, for the Sunday that follows, though called “Dominica prima Quadragesimae”, has a Mass and an Office in which Alleluia is used, and at Vesper there is the well-known “Ending Alleluia” (Alleluia Perenne) hymn. In the Hymnal this hymn is entitled “Ymnus in carnes tollendas”. The true liturgical Lent does not begin till the Monday after Ash Wednesday. The old Mass Lections of the Sundays in Lent have been disturbed in their order in consequence of the Gospel for the first Sunday (Christ in the Wilderness) being given to Ash Wednesday, and that of the second (The Samaritan Woman) is given to the first, that of the third (The Healing of the Blind Man) to the second, and so on; so as to keep the “Immissa deiendo” and “Immissa mediant” for Mid-Lent Sunday, that of the fifth (the Raising of Lazarus) is given to the third and a new
Gospel (The Good Shepherd) is given to the fifth. The sixth is Palm Sunday, called only "Dominica in Processu" but including, between the Prophecy and Epistle at Mass, the Traditio Symboli in the form of "Sermon on the Mount and Populum." On Maundy Thursday there occurs the same process of removing one of two consecrated Hosts to the Altar of Repose (called monumentum and Sepulchrum) as in the Roman Rite, and there is a service ad lavandos pedes, in both cases with different words. The Washing of the Feet takes place "clausis ocellis et laevis omnibus foris projectis", and the feet of certain priests are washed by the bishop and dried by the archipresbyter. "Poeiae ad cenam conveniunt." On Good Friday there is a penitential service "ad Nonam pro indulgentia," which consists largely of preces interspersed with cries of various cases of the word "indulgentia" many times repeated, and contains passages similar to the Improperia of the Roman Rite, as well as lections, including the Passion according to St. Matthew. It is the remains of the solemn reconciliation of penitents, and is mentioned by the fourth Council of Toledo (633), canon vi. This is followed by the Adoration of the Cross and the Procession and Communion of the Precruciified. The Easter Eve services are similar to those of the Roman Rite, except that the Easter Candle, the Procession (of which there are only ten, seven of which agree more or less with those of the Roman Rite, though not all in the same order), and the Blessing of the Font. But the words used throughout are very different. Even the "Exultet" is not used, but another hymn of similar import. Before the BENEDICTIO CERI there is a "Benediction of the Parchment," and the Litany is used for two processions, to the Font before the Blessing and back again after it.

From Easter to Pentecost there is no peculiarity except that the numbering of the Sundays includes Easter Day and that the four days before Whit-Sunday are called merely (e.g., the time of Satur- dioxide) these fasts came at Pentecost, though they answered to rogation or litany days. Leslie conjectures that the alteration was made because of the Whit-Sunday baptisms. There is no Blessing of the Font on the vigil of Pentecost, but there are allusions to baptism in the services of the vigil and the day itself. The following Sunday only commemorates the Holy Trinity in certain of the processions at Mass for which there is a direction to use those of Palm Sunday which have allusions to the Trinity, instead of those for the Sunday, which are to be transferred to the following Tuesday, in the title "in die Sanctissime Trinitatis," and in the hymns in the Breviary Office. One may say that any thing definite about it, is treated as the Octave of Pentecost and the allusions are to the Holy Spirit. Corpus Christi is kept on the following Thursday, and the Mass and Office, though naturally enough influenced by the Roman proper, are composed on a purely Mozarabic plan. In the Missal seven Sundays after Pentecost have Masses, and on the second Sunday before the first of December the Kalends of November. In the Breviary the Sundays after Pentecost are only three. There is a direction in the Breviary that if there is no Feast on any Sunday during that season, one of these three offices must be used. Two sets of three-day fasts occur in this season, one before the Feast of St. Cyprian (13 Sept.) and one before that of St. Martin (11 Nov.). They have nothing to do with either St. Cyprian or St. Martin, whose days only serve as key-days to them (cf. Holy Cross and St. Lucy, as key-days to the September and December ember-days). The November fast is called "jejunia Kalendarii Novembris." They are really days of Litany or Rogation, and are kept at St. Leidiana. Leidiana (29 Sept.) is evidently mentioned by the fifth Council of Toledo (can. i), though obviously by a mistake it calls it "dies Iudum Decembris," and the November one by the Council of Gerona. In the Santorale there are of course a large number of Spanish saints who either do not occur at all or receive only cursory mention in the Roman Calendar, but the Church has many that are common to the whole Church, and these have been added. There are two modern forms of the Calendar. In that prefixed to the Breviary a rather small number of days are marked, hardly any (as in the Ambrosian Calendar) during the possible Lenten period, but offices or references to the Calendar are given in the large appendix for a great number of other saints. In that prefixed to the Missal all these days are put in one series, as their Masses are in the body of the book. There are a good many discrepancies in the existing MS. calendars, and it is not always quite easy to determine the exact date of some of the older feasts, but now most of the days which are common to both have been assimilated to the Roman. The Annunciation is kept twice, on 25 March and on 18 December. The last, called "Annunciation S. Mariae Virginis de O," is really the "Expectatio Partus B. M. V." Its name is referred to a curious custom in the Toledo Use, according to which the Church ring a large bell on that day, to signify, it is said, the eager desire of the saints in Limbo, the Angels in Heaven, and of all the world for the birth of the Saviour. This or the Antiphons known as the "Great O's" may be the cause of the name, which is known outside Spain. The first day of Lent (666) ordered that the Annunciation be kept on that day, but 25 March came either in the Lenten or Easter period, and thus was unsuitable, and shortly afterwards St. Idefonseus, with reference to this decree, calls it "Expectatio Puerperi Deiparae." In the printed Missal the same Mass is ordered also for 25 March, but no Office is given in it. (Of the Breviary custom of keeping the Annunciation on the sixth Sunday of Advent for the same reason.) Sometimes there are other disagreements between the modern Missal and Breviary. Thus, the Decollation of St. John Baptist is given for 29 Aug. (the Roman, and also the Byzantine day) in the Missal, but for 24 Sept. (the old Mozarabic day, as appears from the MSS.) in the Breviary. In both, 1 May is Sts. Philip and James, and the Mass is the same, mutatis nominibus, as that of Sts. Peter and Paul, while the Office is similar to that of Sts. Simon and Jude. But in the MSS. St. Philip alone is mentioned, St. James the Less being, as we have seen, already provided with a day in Christmas week. St. Stephen is given nothing. But 1 May is also the feast of St. Torquatus and his companions, the Apostles of Spain, who naturally eclipse the other Apostles. The Sunday before the Nativity of St. John Baptist is kept as "Dominica pro adventu S. Joannis Baptistae." As its position with regard to the general sequence of Sundays and Ember Days, it is like any other Sunday in the Sandorale. The classification of feasts is very simple. There are Principal Sundays, which are those of Lent and Advent, and of course Easter Day and Whit-Sunday. Feasts are "sex capparum," "quatuor capparum," and "novem lectionum," the last being also called "duarum capparum." The distribution of these titles is occasionally rather arbitrary, and the Missal and Breviary do not always agree. If a feast comes on a Principal Sunday it is transferred to the next day, unless that is a greater feast, when it is put off to the next free day. If two equal feasts fall on the same day (the example given is Sts. Philip and James and St. Torquatus), the office which is given to that of September 29 is repeated the next day, unless the other is the Vescio (patronal feast) of the church, in which case the one with a proper is transferred. If a feast comes on an ordinary Sunday, the
Sunday is omitted (quia satis habebit locum per annum) and the feast kept. During the Octave, which are kept "secundum Regulam Gregoriam" any vacant day of the Octave, but the Office is not said solemniter except on the Octave day. If a greater feast is followed by a lesser one, the Vespers is of the greater but the last Lauda, with its prayer, is of the lesser. These rules, which do not differ in principle from those of the Roman Rite, are prefixed to the printed breviary. Their comparative simplicity is probably more apparent than real.

IV. THE DIVINE OFFICE.—The present Mozarabic Divine Office differs from all others in several points. As a general rule, which applies to every other rite, Eastern or Western, the Divine Office may be defined as the recitation of the Psalter with accompanying antiphons, litanies, prayers, canticles, etc., and the nucleus is the more or less regular distribution of the Psalter through the Canonical Hours, generally of one week. In the Mozarabic Rite there is now no such distribution of the Psalter. Psalms are used at all the Hours except Vespers—when, except in fasts, they are not used at all, but, as a rule, the fixed psalms stand. In the first three days of Lent, except the three-day fasts before the Epiphany, St. Cyprian's Day, and St. Martin's Day, and the four-day fast before Pentecost, there are three selected psalms (or sometimes one or two psalms divided into three) at Matins, Terce, Sext, and generally at None, and the Psalter is used at Vespers, but there is no consecutive order; some psalms are used many times, while others are omitted altogether. In the week after the first Sunday after the Epiphany, psalms i ... xxi, xxii, xxiv are said consecutively at Matins and Terce, three psalms or divisions of psalms at each until the Thursday, two at Terce only, and one at Prime, Vespers, and, as in the Roman, the psalms on the Saturday. In the MSS. (e.g. in the Psalter in Add. MS. 30851) there are indications of a more regular distribution of the psalms. At Matins, which is a morning and not a night Office, there are no lessons like those of the Roman Rite and its variants, but a certain similarity of construction exists in the sets of three Antiphones followed by a responsory, which sets, though normally there is only one, are increased to two, three, four, and even five on certain days, though this increase is rather capricious and inconsistent. The Silos Lectionary of 1059 consists of lessons for the now obsolete Night Office; such lessons as there are now occur at Lauds, when they are not omitted. In (9) Benediction and the sometimes called Prophetia, and at Prime, Terce, Sext, and None, where there are two short Lessons, a Prophetia from one of the Prophets or from the Apocalypse and an Epistola from one of the Epistles. These have about four variations with the seasons, except during the fasts, when there are long additional lessons at Prime, Sext, and None (cf. the lessons at Terce during Lent in the Ambrosian Rite), varying every day and also of varying number. Another peculiarity is the existence of an extra hour, called Aurora (also Ordo Peculiaris), before Prime. In a Liber Ordinum at Silos, besides the usual Hours and this Ordo Peculiaris, Offices are given for all the intermediate hours of the twelve, as well as ante Completa, post Completa, and ante Lectum. Vespers, Matins, and Lauds are very variable, but there is much less variability in the Lesser Hours and Compline. A considerable part of the Office is made up of responsoriai, constructed on similar principles to those constructed in the Mozarabic Rite, called by the various names of Antiphona, Lauda, Sona (or Sonae), or Mututinarium according to their position in the Office. (Antiphona also means the antiphon of a psalm or canticle, which is of the same form as in the Roman Rite.) They vary in form, but the general plan is: Verse, Response, Verse, repetition of first Response. Gloria second repetition of Response or of first Verse and Response. The first Lauda at Vespers and the Sona are generally without the Gloria and the second repetition of the Response. These various responsories and also the psalms, canticles, etc. are generally followed by Orationes, which are usually found on them, or with or without special reference to the day or season.

The construction of the Hours is as follows: Before every Hour except Lauds, which follows on after Matins: Kyrie eleison, Christe eleison, Kyrie eleison; Pater Noster; Ave Maria, are said secretly, kneeling. Then, standing, In nomine D.N.J.C. lumen cum pace. R. Deo gratias. V. Dominus sit semper vobiscum. R. Et cum spiritu tuo. This elongated form of the Dominus vobiscum is said very frequently after collects and responses and in various other places. The form of the Gloria, which also occurs very frequently, is: Gloria et honor Patri et Filio et Spiritui Sancto in secula seculorum. Amen.

Vespers (Ad Vesperos).—(1) Lauda followed by its oratio. Alternative names are psalmus and vesperinum, and the words are nearly always the same. This form of Lauda has the Gloria. (2) Sona on Sundays and feasts, but not on ferials except in paschal time. This is also without Gloria. (3) Alleluia, followed by an antiphona with Gloria. Sometimes there are two antiphones, each followed by its oratio. In Lent, on the fasts, and in the week after the octave of the Epiphany in both, its antiphon takes the place of this antiphona. (4) Second Lauda, with Alleluia interspersed in rather variable fashion, with Gloria. The Regula in the beginning of the Breviary has this definition: "Antiphona est quae dicetur sine Alleluia; et Lauda quae cum Alleluia dicitur", but this is not an exhaustive definition. (5) Hymn. This of course varies with the day. There is a great wealth of hymns in the Mozarabic Breviary. (6) Supplicatio, a bidding Prayer generally beginning "Oremus Redemptorem mundi D.N.J.C., cum omni supplicatione rogemus", and continuing with a clause applicable to the day, with response: "Preces aeternae omnipotentis Deus", and Kyrie eleison, Christe eleison, Kyrie eleison. (7) Capitula, a prayer of the diffuse Gallican type, often embodying the idea of the Supplicatio. (8) Pater noetre, divided into petitions with a response of Amen to each except "Panem nostrum etm": when it is "Quia Deos", and followed by an occasionally varying Em-}
few additions on Saturdays, the principal Feasts, in Lent (when there is also a short "Ordo ante Completoria"), and "De traditio Domini" (Passiontide) after the psalms, some variant hymns, and "Miseratione," with variant capitula and Benedictiones ora, on each day of the week, and on Paschal time, and sometimes Ps. i.ii. (4) The Antiphona. These are in sets of three antiphona and a responsorium. The last only differs from the antiphona in name. To each is appended its oratio. During the first three weeks of Lent and the fasts of Epiphany, Pentecost, St. Cyprian, and St. Martin, and on four days of the week after the Octave of the Epiphany, three varying psalms with antiphons and orations followed by a responsorium and oratio take the place of the antiphona. There is usually only one set of Antiphona etc., but there may be (e.g. on the Feast of Sts. Fructuosus, Augurius, and Eulogius) as many as five. On Sundays Matins begins with the hymn "Eterne redemptoris Christi," and except of Ps. i.ii. (i.e. only Ps. iii. is said), there are three psalms (iii.1, and lvi) with their orations, instead of only one of these.

Lauds (In Laudibus) follows immediately on Matins with no preliminary except "Dominus at semper vobiscum." Its order is: (1) A variable Canticum from the Old and occasionally from the New Testament, with a antiphona before the first; and sometimes an oratio follows. On Christmas Day the Magnificat is said in addition to the first Canticum and on the Annunciation instead of it. (2) On Sundays and feast days, the Canticum "Benedictus es Domine Deus Patrum nostrorum" (Daniel, iii. 32 sq.), which includes a verse against the exercise of the最高的, is sometimes followed by an oratio. On ferials an antiphona or responsorium, called Maturnalium, takes the place of this canticle. (3) The Sono, generally the same as that at Vespers. This, as at Vespers, is not used on ferials, except in Paschal time. (4) The Laudate Psalms (exviii, cxlvii, cxli, cl) preceded by a variable Canticum. On some ferials only Ps. cxlvii is ordered. (5) The Propheta, a lection from the Old Testament, or in Paschal time from the Apocalypse. (6) The Hymn of the day. (7) Supplicatio, as at Vespers. (8) Capitula, as at Vespers. (9) Pater noster and Embolismus, as at Vespers. (10) Lauda, as at Vespers. (11) Benedictio, as at Vespers. The order of these last two is reversed. The last six are as a rule a different set from those at Vespers.

(12) Commemorations, as at Vespers. (13) Dismissal, as at Vespers. In Lent and in the other fasts, Lauds begins with Psalm I and its antiphon. On these occasions Ps. iii. is used at Matins.

Aurore.—very simple office, without variations, said at Vespers only on ferials, Ps. cxlix, cxlvii, pta. 1-3, under the one antiphon, "Deus in adjutiori transit," 2) Lauda. (3) Hymn "Jam nami noctis transit," with its versicle, of which there are three variants. (4) Kyrie eleison etc. (5) Pater noster with Embolismus, as said at Vespers. (6) Preces, a short litany for all sorts and conditions of men. There are two forms of this.

Prime, Terce, Sext, None.—These are constructed on the same plan, and may be taken together. The order is: (1) The Psalms. At Prime, seven (lxxvi, cxli, cxlv, 1-12; cxlvii, 13-21; cxxvi, eight ps. 4-6); at Terce, four (cxiv, cxvii, pta. 7-9); at Sext, four (lxxiv, cxiv, cxvii, pta. 16, 17, 18); at None, four (cxiv, cxvii, cxlv, pta. 18, 19, 20). In each case under one antiphon, (2) Esponorium, varying with the day. These variations are chiefly "comons" of classes of saints and for Lent, Advent, Christmas, and Easter. The Psalms and Responsoria are without orations. (3) Propheta, a lection from the Old Testament or Apocalypse. (4) Epistles, a lection from the Epistles. At Prime these lessons do not vary and are very short: at Terce, Sext, and None, and on the Matins of the fasts, a short expository oration is added, following Lent and on the fasts, when these Hours are differently arranged, there are very long lections. (5) Lauda, with Alleluias or "Laus tibi etc." (6) Hymns. There are a few variants for different seasons in each hour. (7) At Prime on Sundays and Feasts here follow the Te Deum, Gloria in Excelsis, and Credo; on ferials, instead of the first two, the Benedictus es Domine Deus (Dan., iii) and the Miserere (Ps. I) are said. At the other three Hours the Clamores, short supplications for mercy and pardon (a different set for each Hour), are said here. (8) Supplicatio, as at Vespers. (9) Capitula, as at Vespers. (10) Pater noster etc., as at Vespers. (11) Benedictio, as at Vespers. The last four have only a few variants, and generally have reference to the usual events commemorated at the Hours. On the fasts and in the week after Epiphany there are special lessons varying in number, and these are generally followed by three psalms, with their antiphons and orations and a responsorium with its oratio, as at the Matins of those seasons. Then follow Preces, the Hymn, Capitula, time for the next Sacrament, etc.

At the end of Vespers, Compline, and Lauds certain fixed Commemorations, appropriate to the Hour, are said, and after Compline and the Lesser Hours, Salve Regina is said throughout the year, but after Lauds, Salve Regina, Alma Redemptoris Mater, Ecce Mater genuit Salvatorem, Sub tum praedium, and Regina celi after the Annunciation and the Ascension. There are other variations, for at Vespers, Matins, and Lauds nearly everything is variable according to the day and the season, and a good deal is so at the Lesser Hours. Some few things may have been altered and added since, but the Divine Office as described above, which is fast in form of the Roman liturgy, still preserves many essential material in structure from that indicated in the tenth and eleventh century MSS. in the British Museum, except that there were formerly also certain Night Offices—"Ordo ante Lectum," "Ad Nocturnum," "Ad Medium Noctis" etc.—which are given in Add. 30831 and elsewhere. Possibly these were only for monastic use.
ably derived from offerentia, a word which is used by Tertullian (Adv. Marc., xxxix) in the general sense of the act of presenting an offering, but which was perhaps used by the Roman to express the idea of the Gloria with but no reference to the Holy Offering. Thus it may be conjectured that the Spanish expression was originally "Missale Omnium Offerentiarum", "Missal of all Masses", which is just what it is. It has been suggested that offerens may have been used in very debased Latin in the sense of an act of offering as well as of one who offers. This would explain the Mozarabic phrase in still better.

The Order of the Mass is as follows:

(1) The Preparation.—This consists of prayers during vesting, which for the most part resemble those of the Roman Rite in meaning and sometimes in actual wording. These are followed by a responsory and oratio for pardon and purity, after which the priest goes to the altar and says Ave Maria. In nomine D.N.J.C., Sancti Spiritus adae nobis gratia, Judica me, with the Antiphon Introibo, Conforeor, with the absolution and the subsequent versicles and responses. The Confiteor differs from the Roman form and there are versicles and responses before it. Then Auer a nobis, a longer form than the Roman. Then follows the Stabat Mater. The priest first kisses the cross on the altar, kisses the altar, and says a responsory "Salve crux pretiosa" and an oratio.

A good deal of this preliminary matter was borrowed by Cardinal Ximenes from the Toletan (Roman) Missal, and is not Mozarabic. On great feasts the priest directly he enters sings to a rather florid piece of plain chant: a prayer "Per gloriam nominis tui etc." for help.

(2) The Preparation of the Chalice and Paten.—The corporal is unfolded, the chalice and paten are ceremonially purified, the wine is poured into the chalice, the water is blessed and poured in, and the bread is placed on the paten. To each of these acts there is a responsory and oratio. A duty between the Missal. The priest, before Mass, instead of at the Offertory, is to be inferred from the Irish tracts (see Celtic Rite). It is still the Byzantine practice, and is retained by the Dominicans at low Mass. Yet in the Mozarabic Missa Omnium Offerentiarum there is a direction to put wine into the chalice during the Epistle, but it is not done.

(3) The Epistle.—This is the same as at low Mass, with the difference that the reader then signs the Gospel with the cross and kisses it, saying: "Ave Verbum Divinum: reformatio virtutum: restitutio sanitarum."

(4) The Gospel.—This consists of: (a) The Lauda, a verse between two Alleluias. It is what St. Germanus calls the Sonus, sung during the procession of the Oblation. There is no point of interest, but it is being sung the Oblation ceremonies go on.

(b) The oblation of the bread and wine, with prayers resembling but not identical with the Roman. It is at the covering of the chalice with the filiola (pall) that the prayer containing the words "omnium offerentium" (see above) is said. (c) The Blessing of the oblation, for which there is a special oratio, similar to that in the Roman Rite, but the priest signs the Gospel with the cross and kisses it, saying: "Ave Verbum Divinum: reformatio virtutum: restitutio sanitarum."

(11) The Offertory.—This consists of: (a) The Lauda, a verse between two Alleluias. It is what St. Germanus calls the Sonus, sung during the procession of the Oblation. There is no point of interest, but it is being sung the Oblation ceremonies go on.

(5) The Lauda, a verse between two Alleluias. It is what St. Germanus calls the Sonus, sung during the procession of the Oblation. There is no point of interest, but it is being sung the Oblation ceremonies go on.

(6) The Prophecy.—This is a lection usually from the Old Testament, except in Paschal time, when it is from the Apocalypse. (See Ambrosian Rite.) During Lent and other Fasts, there are two of these lections, one from one of the books of Solomon and the other from the Pentateuch or one of the Historical Books.

(7) The Hymnus Trium Puerorum occasionally follows the Prophecy. This is the Benedictus es (Dan., iii, 52-5) with an abridged form of the Benedicticle, the whole preceded by Dan., iii, 49-51, rather freely quoted. The fourth Council of Toledo (can. xiv) ordered this "in omnium missarum solemnitate."

(8) Psallendo (a responsory).—On the second and third Sundays and on weekdays in Lent it is a Tractus, which consists of psalm verses without repetitions, as in the Roman Rite. The Tract or Psallendo of Sundays of Lent, a Psalm of Ps. xcv, 1-7 (in the Tractado Simbolo comes here, is followed by the Preces, a short penitential litany, differing each Sunday. Neale points out that these are in verse, though not written so.

(9) The Epistle, or in Paschal time a lection from the Acts of the Apostles, preceded by "silentiwm facite", proclaimed by the deacon before the Gospel, at the Missal is read.

(10) The Gospel, preceded only by a short prayer "Conforta me Rex Sanctorum" and the "Munda cor meum corpusque ac labia" (the rest as in the Roman Rite), followed by the Blessing, which is not in the Roman form. These of course are said secretly. The giving out of the Gospel and the response and the censing of the Gospel. The priest sings the Gospel with the cross and kisses it, saying: "Ave Verbum Divinum: reformatio virtutum: restitutio sanitarum."
Pain Bénit) was used in France, and formerly in England. The form of this is nearly identical with the first of those given in the Roman and Sarum Missals. But as it is now no longer used: (h) In the Litusbo, with only the first three verses of the psalm. It is followed by a final blessing: "super oblationem cum tribus digitis".

(12) The Prayer of Humble Access, said with bowed head by the priest.

St. Isidore in his "Eymologies" (vi, 19) mentions a dismissal of the communicants with a deacon's Proclamation as occurring at this point. Here begins the Missa Fidelitum, which contains the Seven Prayers spoken of by St. Isidore. These seven prayers are:

(13) Ad Missam Oratio, Oratio Missae, or simply Missa.—This is often, but not always, a Bidding Prayer. The Gallican name is Praefatio. It is followed in the Mozarabic by "Agios, Agios, Agios, Domine Rex eternus, tibi laudes et gratias" sung by the choir, preceded by Oremus (one of the only two instances of this word), and followed by a short invitation to intercessory prayer, a very much compressed form of the Frez (see CÆLITIC RITE; GALICIAN RITE; priest.

(14) Alius Oratio.—This, in the Gallican books, is generally headed "Collectio sequitur". The Reichenauf fragments (see GALICIAN RITE) are not always quite clear as to whether there are one or two prayers here, and whether this is to be identified with the Collectio or the Ante Nomina of those leaves, but neither of those two is the Ante Nomina which follow, nor has the Mozarabic Alius Oratio, except in the varying ending "Per misericordiam tuam, Deus noster, in cujus susceptu sanctorum Apostolorum et Martyrum, Confessorum atque Virginum nominis recitantur". This is followed by another fixed passage reciting how Sacerdotes nostreri [here, according to Leonis] Dei et regis obediremus, et suum episcopum, the bishop of Toledo and other metropolitan of Spain Papa Romensis [here the name of the reigning pope was inserted] et reliqui [i. e. according to Leslie's conjecture, the Bishops of Carthage, Milan, Lyons etc.], and all priests, deacons, clerks, and surrounding peoples offer the oblation for themselves and for all the brotherhood with a response: "Offertum pro se et pro universa fraternitate". Then follow the Dyptichs or lists of names commemorated, which are in two parts, Apostles and Martyrs, a list consisting of Our Lady, St. Zachary, St. John (Baptist), the Innocents, the Apostles and St. Mark and St. Luke. To this there is a response "et omnium Martyrum". The second list is "Icmm pro spiritibus paussianum", with forty-some names, beginning with Sts. Hilary, Athanasius, Martin, Ambrose, and Augustine, and going on with a list of Spanish persons, many of them archbishops of Toledo, both before and after the Conquest. To this the response, as in the Stowe Missal (see CELITIC RITE), is "et omnium passionis".

(15) The Oratio Post Nomina continues the intersection. This, the third prayer of St. Isidore's list, is variable with the day, except for the ending, "Quia tu es vita vivorum, sanitas infirmorum et requies omnium defunctorum in aeterna secula seculorum".

(16) The Pazz, with the prayer Ad Pacem, St. Isidore's fourth prayer. The prayer is variable with a fixed ending, "Quia tu es vera pac nostra etc." After the prayer the priest pronounces the benediction, "Gratia Dei Patriis omnipotensis, pac et die picto D. N. J. C. et communicatio Spiritus Sancti sit semper cum omnibus nobis". In all the principal Eastern liturgies except that of St. Mark, this passage from Co. 15:13-14 comes immediately before the Suresa corda dialogue, its place before the Paz being taken by eipher Natus or its equivalent. In St. Mark and in the Roman it does not occur, but in the latter ever since the late fourth, or early fifth century at least, the Paz has been associated with the Consecration, not with the beginning of the Missa Fidelitum. In the Gallican the Paz comes as in the Mozarabic. The Ambrosian now follows the Roman, but probably did not always do so. (See AMBROSIAN RITE; CELTIC RITE; GALICIAN RITE.) In the Mozarabic Mass, the priest says "Quomodo adstitit poema facite," and thechorus responses, "Pacem semem do vobis," "Novum mandatum do vobis, etc.", during which "accipiat Sacerdos pacem de patena", saying "Habete oculus dilectionis et pacis ut apsi sita sancti sanctissimi Dei," and gives the kiss of peace to the deacon (vel puerus), who passes it on to the people.

(17) The Ilatio or Italatio.—This is called Praefatio in the Roman and Contestatio or Immolatio in the Gallican. With the Post-Sanctus it forms St. Isidore's fifth prayer. There are proper Illationes to every Mass. The form is similar to the Roman Preface, but generally longer and more diffuse, as in the Gallican. It is preceded by a longer dialogue than the usual one: "Interdictio et altare Dei motum est. M. Ad Deum qui laetificat seclorum", etc. V. Aurea ad Dominum. R. Habemus ad Dominum. V. Suresa Corda. R. Leveamus ad Dominum. V. Deo ac D. N. J. C. qui est in coelis dignas laudas, dignae gratias referamus. B. Dignum et justum est. V. Dignum et justum est, etc. The Ilatio ends in all manner of blessings, but says nothing by way of an angel to the Sanctus. This is "Sanctus, Sanctus, Sanctus, Dominus Deus Sabaoth. Pleni sunt coeli et terras gloria majestatis tuae. Osanna filio David. Benedictus et Agnus, Agnos, Kyrie o Theos."

(18) The Post-Sanctus, part of St. Isidore's fifth prayer, is nearly the same regardless to the day, but almost always begins "Vere sanctae fuerunt benedictus D. N. J. C.", and generally ends "Ipse Dominus ac Redemptor aeternus". All liturgies except the Roman and the Romanized Celtic have some form of a very similar Post-Sanctus, which leads up to the Recital of the Institution. Even the Ambrosian has one for Easter Eve. The occurrence of a part of the Intercession after the Sanctus in the Roman makes a great difference here. The last words of the Mozarabic Post-Sanctus ought to anticipate "Qui pridie etc."; as in the Gallican, but there is an interpolation—"more suad imperite ut interpellationi manifesta est," as Leslie says—follows: "Adesto, adesto, Jesu bone Pontificex in medio nostrorum, Jesu sancta et sanctissima, et sancti fies hanc oblationem ut sanctificata sumamus per manus sancti Angeli tui [cf. the clause "Supplicas te rogamus" of the Roman Canon sancte Domine et Redemptor aeterno. The age of the interpolation is unknown, but it is probably much older than the Ximenian Missal, though it does not occur in the Missale Ordinale Oteri Ordinarium of 1052. It may have originated as a sort of parenthesis ed juculation (influenced by the Roman Canon) said secretly by the priest with bowed head before beginning the Recital of the Institution, which, like the Post-Sanctus, was possibly then said aloud. The present printed form of the Recital is that of I Cor., xi, 29-5: "D. N. J. C. in qua nocet transubstantiat et". This agrees with the principal Eastern liturgies, but the Gallican had "Qui pridie quam pateretur" or some variant thereof, and the Mozarabic must once have had the same, possibly (as Leslie suggests) combining both datings with "Qui pridie quam pateretur" and "in ipso nocte quam transubstantiat e tecum et" etc. The form in the Silos Ordinalium of 1052 begins the Recital immediately in Toledo 35.7 it begins "Quoniam Dominus Jesu in qua nocte." It is certain that the Roman form of the
Words of Institution was not used by the Spanish Church before the mission of Zannello (see above) in 924. It was then that the practice arose of saying the Roman form, instead of what was written, and that is what is done now. In the Ximienian edition the Roman Words were not printed at first, but later were printed on separate slips and gummed on to the margin. In the later editions they appear as footnotes in an enlarged edition in the printed Missal after the Consecration of each species.

(19) The Post-Pridie.—St. Isidore calls it confirmatio sacramenti, "ut oblatio quo Deo offeritur sanctificata per Sanctum Spiritum corpori Christi et sanguine confirmetur," which seems as if he took it to be an Epiklesis (q. v.), needed to complete the consecration, but not the substance of it. An ancient form tersely states the substance of "verba Dei . . . salicet, Hoc est corpus meum," being the "substantia sacramenti." In the Gallican books there are several of these prayers with some sort of Invocation of the Holy Spirit, some quite unmistakable, others quite vague. The majority have no sign of any Epiklesis, and this is the case with the Mozarabic, perhaps fourteen or fifteen Masses have either a definite Epiklesis or what with some ingenuity and emendation can be made to look like one, while in the rest it is generally the Great Oblation, often with allusions to the day. It is followed by a fixed prayer resembling the clause Per quem haec omnia in the Roman Canon, and a second elevation preceded by "Domine, et triumphus corde cœrdum meorum aut dicamus". On Sundays and most feasts sex caparum and quattuor caparum in the Creed is recited; it has this several verbal differences from the Roman form, among others, cedimus, confitemur and expectamus, visificatorem, adorandum et con- glorificandum, Omousion Patris, hoc est spondatum sum Patris Dei. St. Isidore (De Eccl. Off., I, xvi) mentions the recitation of the Creed "tempore sacrificii," but with him sacrificium sometimes means the offertory, sometimes the whole Mass. On certain days, chiefly in Lent and in votive Masses, there is an Antiphona ad Confractorem Pannis (cf. the Confractotum of the Ambrosian Rite), said instead of the "Fideum quam cordem cœrdum cœrdum." During it or the Creed the Fraction takes place. The Host is first divided into two halves, then one half is divided into five and the other into four parts. Seven of these particles are arranged in the form of a cross, five, named Corporatio (Incarination), Nativitas, Circumciscotio, Ap- pearition, and Ascension; and on the other part, and two, named Mors and Resurrection, the arms. These last are arranged on either side of the Particle Nativitas with the Gloria and Regina, placed together on one side. (For instances of complicated Fractions, see CELTIC RITE; GALLICAN RITE) Then the priest washes his fingers, "purget bene digitos," and, the chalice being covered, says aloud "Memento pro vivis!"

(20) The Ad Orationem Dominicum, St. Isidore's seventh and last prayer, varies with the day, and, like the Agos after the Ad Missam Oratio is preceded by Oremus. It ends introducing the Pater Noster, sung by the priest, the choir responding Amen to each clause except "Panem nostrum quotidiam da nobis hodie" when the response is "Quia Deus es!". The invariable Embolismus is a long intercessory prayer followed by the Commixture. The particle Regina is held over the chalice, during Paschal time and on Corpus Christi, with the words "Vicit Leo ex tribu Judæ, radix David, Alleluia, Qui sedes super cherubim, radix David," and, on Palm Sunday, with the words "Sancta Sanctis et conjunctio Corporis D. N. J. C. sit aumenitis et potantibus nobis ad veniam et defunctis fideliibus praestetur ad requiem."

(21) The Benediction.—The deacon proclaims "Humilisite vos ad Benedictiorem," and the priest pronounces a Blessing in three, four, or five clauses, vari- able according to the day, with a response of Amen to each clause. In the Gallican Rite the long Benediction was reserved for bishops only, a short form (Pax et caritas D. N. J. C. et communicatio sanctorum omnium sit semper nobiscum) being said by priests. The Benedictions continued in France long after the extinction of the Gallican Rite (see GALIICAN RITE) and in England. In the Sarum Missal of 545 the directions are given for Episcopal Benediction, with the same preliminary proclamation as in the Mozarabic.

(22) The Communion.—The choir sing a fixed re- sponse of Ad Accidentes, beginning "Gustate et videte," composed of Fs. xxxiii, 8, 1, 22, with Alle- luia after each verse. There are varieties in Lent and Eastertide (cf. CANTERBURY; GALLICAN). The same verses are used in the specification of St. Cyril of Jerusalem and occur in some Eastern liturgies. Then follows the antiphon which answers to the Roman Communio which is usually "Refecti Christi Corpora et Sanguine, te laudamus, Domine. Alleluia (3)," with a variant in Lent "Replebunt est gaudio os nostrum, etc." This is followed by the Post-Communion, a prayer or a Building Prayer variable with the day, but with a rather small selection, only a few days having separate proper Post-Communions of their own, four or five being used over and over again, one for Feasts of our Lord and another for saints' days, varied only in the name of the feast. During the singing of the Ad Acci- dentes and Communion the priest continues his communi- cation, with private devotions not unlike those of the Roman Rite, but including the two "Ave in evum, etc.", passages which are found also in the Sarum and other local Missals. Just before his communion the priest holds the particle Regina over the chalice saying aloud "Memento pro mortuis" (or "pro defunctis", for both forms are used). The Communion and Post-Communion are very elaborate.

(23) The Dismissal.—Of this there are two forms, that for ordinary days being "Missae acta est in nomine D. N. J. C. periculum cum pace. R. Deo gratias," and that for greater feasts, "Solemnia completa sunt in nomine D. N. J. C. votum nostrum at accet- tum cum pace. R. Deo gratias." Then follows "Salve Regina" with verses and responses and the col- lect, "Concede nos famulos tuoe etc.", which of course is not Mozarabic, and after that the Blessing "In unitate Sancti Spiritus benedictus vos Pater et Filius."

It will be seen that the fixed elements of this Mass are very few. These are: the Preparations; generally the Gloria; the Prayers etc. of the Offertory; the collect; the Sanctus; the Recital of the Institution with its preliminary prayer; a prayer following the Post- Pridie; the Creed; the priest's part of the Fraction, Commixture, and Communion; the Lord's Prayer and Embolismus, but not its introduction; and the Salee Regina and Blessing. The variables, which in point of time and written space, not far the larger proportion of the Mass, are: The Officium (Introit); the Oratio after the Gloria, the Prophecy, the Psallemo; the Epistle; the Gospel; the Laude; the Sacrificium; Ad Missam Oratio; Aita Oratio; Post Nomina; Ad Pa- cem; Ilatio; Post-Sanctus; Post-Pridie; Antiphona ad Confractorem Pannis; Ad Orationem Dominicum, the Benediction; Ad Accidentes; Communio; Post-Com- munion; the Dismissal. To these may be added the additional Canticles on certain days.

VI. THE OCCASIONAL SERVICES.—At the present day those who belong to the Mozarabic Rite use the Roman Ritual, and, as their bishop is the Archbishop of Toledo, who is head of the Roman Pontificate, it is used for the Liturgy of the Missal which is changed, and used is not used. The four existing MSS. of the Liber Ordinum, which contains these servers, are all of the eleventh century, and belonged either to Silos or to San Millan de la Cogolla. There are none at all, and when Cardinal
Ximenes had the Missal and Breviary printed, there was evidently no need to print a Ritual and Pontifical, as they were probably no longer used. Of the eleventh century MSS. of the Liber Ordinum published by Dom Férrotin, one (the Silos MSS. of 1052) contains a very complete set of occasional services. They consist of: (1) The Blessing of Oil, Salt, and Water; (2) Baptism, Confirmation, and the Institution of the Sick; (3) The Blessing of Virgins, Brides, Widows, and Convers; (4) The Order of Penance and Reconciliation of heretics and schismatics and for the conversion of Jews; (5) The Order of Death and Burial; (6) Ritus pro Rege observandus; (7) Various Blessings; (8) Orders for Holy Week and Easter; (9) Certain Masses. These are followed by a large number of Masses chiefly votive. Of these services the following may be noted:

(1) Baptism.—The order is—(a) Insufflation. The priest breathes thrice, with the words "Exorcizo te immunde spiritus hostia humana generis". (b) Insig- niation. The sign of the Cross on the forehead, and exorcism towards the west. (c) Unction with oil on mouth and ears, with "Effeta, effeta cum sancto spiritu in odorem suavitatis. Bene omnia fecit et surdo fecit audire et mutos loqui". (d) Imposition of hands. (e) Traditio symboli. (f) Blessing of the font preceded by exorcism. (g) Interrogations and Renunciations. (h) Baptism, with "Ego te baptizo in nomine Patris et Filii et Spiritus sancti". (i) Confirmation on forehead, with "Signum vitæ æternæ quod dedit Deus Pater Omnipotens per Jesum Christum Filium suum credentibus in salutem". (k) Imposition of hands, with prayer. (l) "Post haec velatur a sacerdote infantes ipsi qui baptizati sunt caput; quo peracto communicat ece" (i.e. the Vesting and Communion). (m) Three days the children are brought to the priest, who says over them the "Benedictio de Alba". Except in the case of converts from Arianism, no separate order of Confirmation is given. The Chrismation and Imposition of hands after Baptism, followed as it was by Communion, was evidently the only normal form of Confirmation. In the case of Arians, the words are: "Et ego te chrismo in nomine Patris etc., in remissionem omnium peccatorum ut hæc vitæ estamnem", followed by the imposition of hands and a prayer. The ceremony of feet-washing, retained in the Celtic and Gallican Bpatismcs, does not appear in the Spanish Liber Ordinum, though mentioned by the council of Elvira in 305 (see Gallican Rite).

(2) Oratio super eum qui capillos in sola fronte tondere vult—"which looks like a relic of the Celtic tonsure (see CELTIC RITE), but, as Dom Férrotin conjectures, is probably of the nature of an offering "des prémisses de la chevelure" (cf. the Tyssecaula, seven days of hair, in the Byzan- tine Rite)—by "Oratio super parvulum quem parentes ad doctrinam offerent" and "Benedictio super parvulum qui in ecclesia ad ministerium Dei detondituri". The "clericus" of the next section is evidently also "parvulus". The sacrata has a ring given to him with the words: "Ego ianitor aditum et prepositus pestierungarum". The custos librorum receives "anulum de scrinii", and is also appointed "senior scrinariam". Then follows a curious "Ordo super eum qui barbarum tangere cupit". The priest takes wax from a taper and puts a crumb of it on the right, left, and middle of the chin. Prayers are said alluding to the anointing of Aaron's beard. Then the priest intonally in meditamentum of the words: "Ego cum eis et caputulat qui barbam tangit dicens, In Nomine etc. et acspit in limine nittido. Peracta ista omnia absolvit donecias, Missa acta est. Et poeta hic est monachus radiat barbam". The ordinations of subdeacon, deacon, archdeacon, priest, archpriest, and abbob are very simple. "To the subdeacon is given by the archdeacon the "ministerium ads manus lavandos" and a chalice and paten. The bishop gives him the book of St. Paul's Epistles. The bishop puts the stole (orarium) on the left shoulder of a deacon, and delivers a "ferula" to an archdeacon and archpriest, a "manuale" (book of sacraments) to a priest, and a staff and book of the Rule to an abbot. In each case these are accompanied by prayers and a confused address addressed to the newly ordained, which is more or less a declaration of his duties and status. In the case of a priest the assistant priests are directed to lay their hands on him as, vested in stole and chasuble, he kneels before the altar, and, though there is no direction for the bishop to do so, it is evident from the wording of his "Benedic- tio" that he lays his hands on the head. There is no order given for the consecration of a bishop. The blessings of nuns and other religious are quite simple, veiling with prayer and benediction, and for an abbas the delivery of a staff and the putting on of a mitre.

(3) The Function of the Sick is given together with an order for the blessing of the unguent. This was done on the Feast of St. Cosmas and Damian, the physician martyrs (27 Sept.), not, as elsewhere in the West, on Maundy Thursday. The bishop makes a cross (a cross pâtié with a pendant and the A and G is figured in the book) with a prophylaxis (style), saying an antiphon "Sicut unguentum in capite etc.", and a prayer and benediction, both referring to the healing of the sick. The Unction of the Sick follows only, with the sign of the Cross and the words "In nomine Patris etc.". Antiphons referring to sickness and its healing are then said. There is provision for anointing many sick persons at the same time.

The rest of the occasional services do not call for much remark. They are for the most part very similar to those of present-day practice in those found in the Roman Ritual. They include, however, the omission of a type found also in the Greek Euchologion for the cleansing of any polluted person, place, or thing, e.g. "super his qui morticinum comedunt vel suffocatum, super ves in quo etc. aliquid immunem eccidenti", etc., and the Orders when the king goes out to battle with his army, and when he returns, have a considerable historical interest.

HENRY JENNER.

Mozart, JOHANN CHRYSOSTOMUS WOLFGANG AMADEUS, one of the greatest musical geniuses in history, b. at Salzburg, Austria, 27 Jan., 1756; d. at Vienna, 5 Dec., 1791. His father, Leopold Mozart, assistant choirmaster and court musician to the Prince-Archbishop of Salzburg, was one of the most distinguished musicians of his time. He was the author of the best method for violin-playing written up to that period, and was a man of thorough education and sterling character. Realising his son's extraordinary endowments, and also the great musical gifts of his daughter Maria Anna, five years Wolfgang's senior, he devoted all his energy and knowledge to their education. Wolfgang at the age of three was wont to spend whole hours at the piano, discovering, to his great joy, consonant intervals, and was not yet four when he began to receive from his father systematic training in piano-playing and in the theory of music improvising even before he could write notes. Violin-playing came to him practically by intuition, a fact which he demonstrated to the astonishment of his father and a company of artists, by performing at first sight the second violin part in a trio for stringed instruments. He was not yet five when his father wrote for him a theme for the piano with variations, which he had himself composed. So correct was the child's ear that he would remember the tone pitch of a violin which he had heard even weeks before. His sensitiveness was such that harsh sounds were distressing to him, a blast of a trumpet almost causing him to faint away.

Wolfgang was not yet eight years old when his father undertook a concert tour with his two children, visiting Munich, Vienna, and Passau. Everywhere their performances, especially the boy's, created great astonishment. In 1763 Leopold Mozart visited Paris with his progeny, and the following April London, where they remained until July, 1764. Received and feted by royalty and people of high station, the Mozart children, but particularly Wolfgang, were considered the musical wonders of the world. On their way back to Salzburg they visited The Hague and the principal cities of France and Switzerland. During all these travels, and the distraction and excitement incident thereto, Wolfgang made progress in all branches of musical and other knowledge. He composed constantly and in almost every known instrumental form. Returned home, he devoted himself to the mastery of counterpoint, and the perfecting of his technique in piano, violin, and organ-playing. His parents too, regarding the boy's reported achievements as a composer, invited Wolfgang to his palace, forbidding communication of any kind with him, and giving him the text of the first part of an oratorio, prepared by the archbishop, to set to music. The second and third parts of this work were composed by Michael Haydn and Anton Cajetan Adlgasser respectively. It was published at Salzburg in 1767, and performed during Lent of the same year. A year later, at the age of twelve, Wolfgang visited Vienna anew, and was commissioned to write an opera buffa, "La Finta Semplice", for which Marco Coltellini furnished the libretto. Intrigues of all kinds, especially on the part of the members of the theatre orchestra, who objected to playing under the direction of a twelve-year-old boy, prevented its performance.

Returning to Salzburg, Wolfgang was appointed concert-master, at first without compensation, but later was allowed a monthly stipend of twelve florins. Leopold Mozart, chafing under Wolfgang's lack of recognition, made every effort to secure for him a suitable appointment in the larger field of Munich and Vienna, and also Florence, but not succeeding, he finally decided to visit Italy, with a view to gaining there the prestige which success in that country then carried with it. In Bologna they became acquainted with Padre Giambattista Martini (1706-1784), the most learned musician of his time. This master put Wolfgang through tests in contrapuntal writing, which the latter withstood with ease and consummate skill. In Rome young Mozart performed his famous feat of scoring Allegri's "Miserere" for double chorus, after listening to its performance on Wednesday of Holy Week. Hearing the work repeated on the following Friday, he had but a few minor corrections to make in his manuscript. After being created Knight of the Golden Spur, feted, and acclaimed throughout Italy by the artistic and aristocratic world as the greatest living musical genius, Wolfgang returned to his modest position in Salzburg. Again and again he tried to find a more congenial atmosphere in Munich, Mannheim, Paris, and elsewhere, but without success.

He continued, except for occasional visits to other cities for the purpose of conducting new works, to reside in Salzburg until his twenty-first year, when he took up his permanent abode in Vienna.

An offer from Frederick William II of Prussia to become court conductor at Berlin at a salary of three thousand thalers he refused on patriotic grounds. Mozart was now in full maturity of his powers, creating with astonishing rapidity works which will remain classic for all time: operas, symphonies, quartets, concertos, etc., all of which increased his fame, but did not ameliorate his material condition. Not only was due recognition denied him, but his life was one continuous battle for existence. His application for the assistant conductorship of the imperial opera house failed. He applied for a similar position at the cathedral of St. Stephen, in the hope of ultimate promotion to the post of choir-master. Only on his deathbed did he receive the news of his appointment. The great master died at the age of thirty-four and was buried, with the least possible expense, in extreme poverty, in a painter's grave; his exact resting-place being now unknown. Only a few persons followed his remains to the cemetery.

Mozart's individuality was of an exquisitely delicate, tender, and noble character. His operas, "Don Juan", "The Magic Flute", "The Marriage of Figaro", "Così fan tutte", "La Clemenza di Tito", on so-
count of their melodic beauty and truth of expression, have as strong a hold upon the affections of the musical public as they did upon that of the nineteeenth century. His instrumental works continue to delight musicians the world over. As a composer for the Church, however, he does not, even artistically, reach the high level he maintained in other fields. In his day the music of the Church, Gregorian chant, was practically ignored in Germany, and sadly neglected in other countries. Mozart had but little knowledge of the masters of the sixteenth century, and consequently his style of writing for the Church could not have been influenced by them. The proper of the Mass, which brings singers and congregation in intimate touch with the liturgy of the particular day, was rarely sung. The fifteen masses, litanies, offertories, has great "Requiem," as well as many smaller settings, most of them written for soli, chorus, and orchestra, in the identical style of his secular works, do not reflect the spirit of the universal Church, but rather the subjective conception and mood of the composer and the Josephinist spirit of the age. What Mozart, with his Raphaelesque imagination and tender sympathies, had been for church, he had lived at a different time and in different surroundings, or risen above his own, can easily be imagined.

JOSPEH OTTEN.

Mostena Indians.—A group of some half dozen tribes constituting a distinct linguistic stock upon the headwaters of the Beni river, Department of Beni, in north-western Bolivia. Among their peculiar customs is the "cowade." In the early part of the eighteenth century, through the efforts of the Jesuits, a part of the missionary "cowade" was reduced to Christianity, and 1,300, are living in three mission towns, viz., Mochanes (founded 1725), Santa Ana, and Magdalena, all on the Beni river, near the confluence of the Mapisai.

JAMES MOONEY.

Mosetta, a short, cape-shaped garment, covering the shoulders and reaching only to the elbow, with an open front, which may be fastened by means of a small number of buttons; at the neck it has a very small and purely ornamental hood. The privilege of wearing the mosetta belonged properly to cardinals, but the pope, cardinals, exempt abbots, abbots general, and the four prelates of diocesani; only a special privilege may be worn by other ecclesiastics, abbots, canons, etc. Cardinals wear the mosetta over the mantelletta, but bishops wear it without the mantelletta; the latter, however, may wear the mosetta only within their own jurisdiction, outside of which the mantelletta must be worn instead of the mosetta. Canons who have the privilege of wearing the mosetta may not use it outside of the church, save when the chapter appears in corpo (as a corporate body). The pope's mosetta is always red, except that, in Easter week, he wears a white one. As regards material, his mosetta during the winter half-year, that is, from the feast of St. Catherine to Ascension Day, is made of velvet or of cloth according to the character of the day or ceremony; in the summer half-year it is made of satin or fine woollen material (merino). It is edged with ermine only in the winter half-year. A cardinal's mosetta is generally red; the colour is pink on Gaudeole and Lactare Sundays, and violet in penitential seasons and for mourning. According to the time of year, it is made of silk or wool. When worn by bishops, prelates, canons, etc., the mosetta is violet or black in colour; the material for these dignitaries is properly not silk but wool (camel). Cardinals and bishops have the privilege of wearing the mosetta as a habit (e.g. the Benedictines, Dominicans, etc.) retain for the mosetta the colour of the outer garment of the habit of the respective order. This also applies to abbots and Reformed Augustinian canons who have the privilege of wearing the mosetta. The mosetta is not a liturgical vestment, Consequently, for example, it was not worn by priests and deacons. Sometimes it is traced back to the cappa, this making it merely a shortened cappa; sometimes to the almuita. From which of the two it is derived, is uncertain. The name mosetta permits both derivations. In all probability the garment did not come into use before the middle of the twelfth century, and certainly worn in the latter half of the sixteenth century, as is proved by the fresco of Melozzo da Forli painted in 1477: "Sixtus IV giving the Custody of the Vatican Library to Platina.

From the beginning the mosetta has been a garment distinctive of the higher ecclesiastical dignities, the pope, cardinals, and bishops. (See Hood.)

BRAUN, Die liturg. Gewandung im Occident u. Orient (Freiburg, 1907), 357 sq.; BARBIER DE MONTAULT, Traité pratique de la construction des églises, II (Paris, 1878), 508, 519, 541, 561; Ceremon. episc. I, i, n. 3; iii, nn. 1-4.

JOSEPH BRAUN.

Mosti, Luigi, controversialist, b. at Bergamo, 26 May, 1746; d. near Milan, 24 June, 1813. He entered the Society of Jesus in 1763, and on its suppression was received into the Diocese of Bergamo, where he was shortly made a canon, and appointed archdeacon and priest and examiner of candidates for the priesthood. The zeal and ability with which he opposed the progress of Jansenism in Italy gained him a well-merited reputation, and Pius VI called him to Rome, where he became an Apostolic missionary. He was elected a member of the Academy degli Arcadi (see Academ. Ital., vol. viii), and held the chair of ecclesiastical history in the University of Bergamo, which had been restored in Naples. Born out at length by his charitable labours and penitential practices, he retired to the residence of Marquis Scotti near Milan, where he died. Among his important writings are: "Vera idea del Gianesismo" (1781); "Storia compendiosa della scienza della nuova chiesa d'Utrecht" (Venice, 1785); "Storia della chiesa d'Utrecht" (Venice, 1787); "Compendio storico-cronologico . . . sopra il Baianismo, Gianesismo e Neo-ennelismo" (Foligno, 1792), all against Jansenism; "Il falso discepolo di S. Agostino e d. I. Tommaso" (Venice, 1779), a defence of Molinism. He translated from the English the Duke of Buckingham's "Fifty Points for Controversy; Answering the Roman Catholic Roman" (Basingstoke, 1789); and from the French, "Les projets des incrédules pour la ruine de la religion, dévoilés dans les œuvres de Frédéric, roi de Prusse" (Assisi, 1791).

HUNTER, Nomenclator, III, 540; Vita del P. L. Mosti (Novara, 1822).

A. A. MACERLE.

Mrk, Ignatius, second Bishop of Marquette, U. S. A., b. 16 October, 1818, in Hotove, in the Diocese of Laibach (Carinthia), Austria; d. at Marquette, 2 Jan., 1901. He made his classical studies in the gymnasium of Laibach and his theology in the local diocesan seminary. On 13 August, 1837, Prince-Bishop Anton Aloys Wolf raised him to the priesthood. To qualify for a tutorship in the house of Field-Marshall Baron Peter Pirquet, the young priest passed a rigorous state examination, and sojourned two years at Legnano near Verona, Italy, then an Austrian possession. In 1840 he returned to his native diocese and occupied several curacies as assistant before emigrating to the United States five years later. Bishop Lefebvre of Detroit received him cordially, and sent him immediately to Arbre Croche to assist the celebrated Indian missionary, Father Francis Piche. For two years the missionaries
worked fruitfully together, and, when in 1851 Piers removed to Minnesota, Mrak retained charge of the Indian mission. For his devotion to the red race Baraga appointed him his vicar-general, and upon the death of Baraga he was created second Bishop of Marquette. For a long time he refused to accept, but, finally yielding to the urgency of Archbishop Purcell, he was consecrated Bishop on 9 February, 1869. After ten years’ devotion to the administration of the diocese, although he was not unaccustomed to hardships, his health began to fail, and he was permitted to resign in 1879, and was made titular Bishop of Antioch. For some years he remained with his successor, Bishop Vertin, and, when necessity required, performed the duties of an ordinary. On the return of his health, his love for the Indians awoke, and he returned to the Indian missions, which he had left so reluctantly to accept the episcopate. Bishop Richter of Grand Rapids most cordially welcomed him, and at his own request gave him an Indian mission at Eagle Town, Leelan County. Here he lived a simple life sharing his small annuity of eight hundred dollars with the two Dominican Sisters whom he had induced to open a school for his charges. In his eighty-first year he retired to Marquette, and filled thenceforth a chaplaincy at St. Mary’s Hospital to the last day of his life. His charity was as proverbial as his humility. He outlived his successor in the episcopate, and saw the election of the fourth bishop, whom he himself had raised to the priesthood. His body rests in the vault under the cathedral by those of his predeccessors, Baraga and Vertin. For his labors, as Bishop of Marquette (Houghton, Michigan, 1900); Verwaltung, Life of Bishop Baraga (Milwaukee, 1900); Briefe der Leipziger Stiftung im Erzbistum Österreich (Vienna, 1832–85); Diocesan Archives (Marquette).

Antoine Ivan Rezek.

Mühlbacher, Engelbert, historian, b. at Gresten, Austria, 4 Oct., 1843; d. at Vienna, 17 July, 1903. He received his classical education at Vienna, his father’s native city. In 1862 he became a novice of the Recoletines of the Austrian Canons at St. Florian. After completing his theological studies there, he was ordained priest in 1867. As Arneth relates in his memoirs, historical studies had been successfully cultivated at St. Florian’s since Provoost Arneth’s time, and Mühlbacher was soon active in this domain. Among his writings are articles on St. Florian’s Chartulary, Reichersberg, and the literary productions of St. Florian’s. In 1872 we find Mühlbacher studying under Julius Ficker at Innsbruck, where after two years he received the degree of Doctor of Theology. He then hastened to Vienna to finish his historical training under Sickel’s guidance. When Ficker entrusted the youthful scholar with the revision of the Carolingian period of Böhmmer’s “Regesta”, he was directing him to a domain in which he was to do imperishable work. In 1878 he was formally received as academical lecturer into the philosophical faculty of the University of Innsbruck, and between 1880 and 1890 he published his masterly edition of the imperial “Regesta” of the Carolingian period. Sickel says, “the technique of compiling regesta received exemplary development at Mühlbacher’s hands, and his work served as a model for the entire new edition of the imperial “Regesta”. In 1892 Mühlbacher was entrusted with the editing of the Carolingian documents for the Monumenta Germaniae Historica, at the same time it was necessary to bring out a new edition of his Carolingian “Regesta”. The two works proved of mutual assistance, and Mühlbacher devoted the greatest care and diligence to his tasks. He was able to see only the first part of each work through the press, but left considerable material for the use of his successors. No other German scholar was so well qualified to write the “Deutsche Geschichte unter den Karolingern”, which appeared in 1896. Since 1879 Mühlbacher edited the “Mitteilungen des Institutes für österreiacher Geschichtsforschung”. In 1881 he was appointed extraordinary, and in 1896 ordinary professor at Vienna. In 1895 Ficker turned over to him the management of the “Regesta Imperii”. With the utmost energy he took in hand the arrangement of the Austrian State Archives, and the preparation of the more recent history of Austria. His learning and efforts did not fail to receive due recognition. He was chosen an active member of the
MULLER

Muller, Adam Heinrich, publicist and political economist, convert, b. at Berlin, 30 June, 1779; d. at Vienna, 17 Jan., 1829. It was intended that he should study Protestant theology, but from 1798 he devoted himself in Gottingen to the study of law, philosophy, and natural science. Returning to Berlin, he was persuaded by his friend Gents to take up political science rapidly. He was appointed referendary in the Kurbarkische Kammer in Berlin, he travelled in Sweden and Denmark, spent about two years in Poland, and then went to Vienna, where he was converted to the Catholic Faith on 30 April, 1805. From 1806 to 1809 he lived at Dresden as tutor of a prince of the Saxe-Weimar family and lecturer on German literature, dramatic art, and political science. In 1808 he edited with Heinrich von Kleist the periodical "Phobus." In 1809 he returned to Berlin, and in 1811 to Vienna, where he lived in the house of Archduke Maximilian of Austria-Este and became the friend of Clement Maria Hoffbauer. In 1813 he was appointed imperial commissioner and major of the auxiliaries in Tyrol, and took part in the war against France, and later on, as counsellor of the government, in the reorganization of the country. In 1815 he was
called to Vienna, and went to Paris with the imperial staff. On the conclusion of peace, he became Austrian consul-general for Saxony at Leipzig, and agent for Anhalt and Schwartburg. He edited the literary periodicals: "Deutscher Staatsanzeiger" (1816-18) and "Unparteiischer Literarischer und Kirchenkorrespondent," and attended the ministerial conferences at Carlsbad and Vienna (1819-20). In 1826, at the instance of Prince von Metternich, he was ennobled as Ritter von Nittersdorf, was recalled to Vienna (1827), appointed imperial counselor, and employed in the service of the chancellor.

Müller was a man of great and versatile talents, an excellent orator, and a suggestive writer. Several of his works were based upon his own lectures; the most important (besides the above-mentioned periodicals) are: "Die Lehre von Gegensatz" (Berlin, 1804); "Vorlesungen über die deutsche Wissenschaft u. Literatur" (Dresden, 1806; 2nd ed., 1807); "Von der Idee der Schönheit" (lectures; Berlin, 1809); "Die Elemente der Staatskunst" (lectures; 3 parts, Berlin, 1809); "Ueber König Friedrich II. u. die Natur Würde u. Bestimmung der preussischen Monarchie" (lectures; Berlin, 1810); "Die Theorie der Staatsausbahrung u. ihre Fortschritte in Deutschland u. England" (2 vols., Neuwien, 1811); "Verzeichnung der in Deutschland u. England erschienenen Theilnahmen an der Internationalen Schriftstellerkonferenz in England" (2 vols., Vienna, 1812); "Von der Notwendigkeit einer theologischen Grundlage der gesamten Staatswissenschaften u. der Staatswirtschaft insbesondere" (Leipzig, 1820; new ed., Vienna, 1898); "Die Gewerbe-Polizei in Beziehung auf den Landbau" (Leipzig, 1824); "Zwölf Reden über die Beredtsamkeit u. deren Verfall in Deutschland" (Leipzig, 1817); "Die Fortschritte der Staatswissenschaften in Deutschland" (2 vols., Neuwien, 1812; Leipzig, 1817); "Zwölf Reden über die Beredtsamkeit u. deren Verfall in Deutschland" (Leipzig, 1817); "Die Fortschritte der Staatswissenschaften in Deutschland" (2 vols., Neuwien, 1812; Leipzig, 1817); "Von der Notwendigkeit einer theologischen Grundlage der gesamten Staatswissenschaften u. der Staatswirtschaft insbesondere" (Leipzig, 1820; new ed., Vienna, 1898); "Die Gewerbe-Polizei in Beziehung auf den Landbau" (Leipzig, 1824); "Vorschlag zu einem historischen Ferien-Cursus" (Vienna, 1830). A book which was written by him in 1817 on the occasion of the Protestant jubilee of the Reformation and entitled, "Etwas das Goethe gesagt hat. Beleuchtet von Adam Müller. Leipzig den 31 Oktober, 1817," was printed but not published (reprinted in Vienna, 1910). Nevertheless, Traugott Krug's reply, entitled "Etwas, das Herr Adam Müller gesagt hat," was published under the title noch etwas, das Luther gesagt hat" (Leipzig, 1817), appeared in two editions.

In the field of literature and aesthetics, Müller belongs to the Romantic school. He is a Romanticist even in his specialty, politics and political economy. As Eichendorff says in his "Geschichte der poetischen Literatur Deutschlands" (new ed., by W. Koch, Kempten, 1906, p. 352), Müller "mapped out a domain of his own, the application of Romanticism to the social and political conditions of life." Müller himself declares: "The reconciliation of science and art and of their noblest ideas with serious political life was the purpose of my larger works" (Vermischte Schriften, 2d ed., 1817). He wrote the "Elemente der Staatskunst," originating in lectures delivered before Prince Bernhard of Saxe-Weimar and an assembly of politicians and diplomats at Dresden in the winter 1808-09. It treats in six books of the state, of right, of the spirit of legislation in antiquity and in the Middle Ages, of money and national wealth, of the economical factors of the state and the state of the relation between the state and religion. Müller endeavored to comprehend the connexion between political and social science, and, while using the historical method, to base them upon philosophy and religion. (Cf. the preface to the first volume of the "Elemente", where he treats exhaustively of the different laws of the "Code civil" and the "Code civil des prétre des lois"; cf. also the sixth book of this work, and the above-mentioned work of 1820.) With Edmund Burke, Friedrich von Gents, Joseph de Maistre, and Karl Ludwig von Haller, he must be reckoned among the chief opponents of revolutionary ideas in politics. In his work, "Von der Notwendigkeit einer theologischen Grundlage der gesamten Staatswissenschaften" (1820), Müller rejects, like Haller (Restauration der Staatswissenschaften, 1816), the distinction between constitutional and civil law, which rests entirely on the false idea of the state's omnipotence. His ideal is medieval feudalism, on which the reorganization of modern political institutions should be modelled. His position in political chauvinism is defined by his strong opposition to Adam Smith's system of materialistic-liberal (so-called classical) political economy, or the so-called industry system. He is thus also an adversary of free trade. In contrast with the economical individualism of Adam Smith, he emphasizes the ethical element in national economy, the duty of the state toward the individual, and the religious basis which is also necessary in this field. Müller's importance in the history of political economy is acknowledged even by the opponents of his religious and political point of view. His reaction against Adam Smith, says Roscher (Geschichte der National-Oekonomik, p. 763), "is not blind or hostile, but the colophon of the system. The reactionary and feudalistic thought in his writings, which agreed so little with the spirit of the times, prevented his political ideas from exerting a more notable and lasting influence on his age, while their religious character prevented them from being justly appreciated."

FRIEDRICH LAURITZ.

Müller, Johann, physiologist and comparative anatomist, b. at Coblenz, 14 July, 1801; d. at Berlin, 28 April, 1858. He was the son of a shoemaker, but his mother succeeded in obtaining for him a good education. A student at the collegium of his native city, he went to the University of Bonn in 1819. While a student he won a prize for an original work on "Respiration of the Fucus," a thesis that has been declared the best scientific work ever presented by a student in a prize competition. He received his degree of doctor for a thesis on animal movement. In 1822 he became Professor at Bonn, and in 1830 ordinary professor of medicine. Before teaching at Bonn he had studied for two years with Rudolph at Berlin, and in 1832 was appointed his successor in the professorship of anatomy there. In 1847 he was elected Rector of the University.

Müller is justly regarded as the founder of modern physiology. His claim to this title rests not only upon his personal contributions to science, but also upon his power of co-ordinating the results ob-
tained by his predecessors, and of directing into new fields of investigation the disciples who profited by his suggestive teaching. To accuracy of observation he added such a grasp of principles and so clear a comprehension of the bearing of other sciences upon physiology that his reasoning, based throughout upon facts, is philosophical in breadth and penetration.

His first monograph, an elaboration of his prior essays, appeared in Latin and was published in 1790 and was followed (1826) by two others on optical illusions and on the comparative physiology of vision. The last-named abounds in observations upon the structure and functions of the eye in lower animals, especially in insects. Among the other subjects to which Müller devoted careful and successful research may be mentioned: reflex action, the chemical composition of blood plasma, the presence of chondrin in cartilage, hermaphroditism in human beings, the minute structure and origin of glands in man and animals, the lymph hearts of amphibians, and those ducts of the preliminary kidney in the fetus which have since been called by his name. His study of the lower animals resulted in the discovery of alternate generations and in his embryological account of the metamorphoses of echinodermata.

From 1834 to 1840 he edited the "Archives of Anatomy and Physiology" (Müller's Archives) and contributed articles to various scientific reviews. His own contributions to medical literature number over two hundred, most of them of great significance. His edition of the "Handbuch der gesammten Medizin, Menschen", which was published in 1833 and has appeared in numerous editions and translations. But the benefit which he rendered to science as an original investigator and medical editor is surpassed by his work as a teacher. Among his pupils were most of the men who made Germany the Mecca for scientific students in the latter half of the eighteenth century. They included Virchow, Helmholtz, Schwann, Du Bois-Reymond, Lieberkühn, Max Schultz, Brücke, Claparède, Haeeckel, Henle, Guido Wagener, Reichert, Ludwig, Vierordt, and Kölliker. All of these men agreed in proclaiming him the foremost physiologist of his time. Most of the important scientific societies of the world honoured him. Throughout his life he was loyal in his adherence to the Catholic Church, and his fellow-Catholics of the Rhine land have erected a noble monument to his memory at Coblenz.

VIRCHOW, Johann Müller (Berlin, 1858); BROCKE, Medical Texts (London, 1850); DE BOIS-REYMOND, Götterwürdiger aus Johanns Müller (Berlin, 1860); WALSH, Makers of Modern Medicine (New York, 1910).

JAMES J. WALSH.

MÜLLER (REGIOMONTANUS), Johann, German astronomer, b. in or near Königsberg, a small town in lower Franconia (Dukedom of Coburg), 6 June, 1436; d. in Rome, 6 July, 1476. The name of the family agreed with the trade of the father who operated a mill. Regiomontanus signed himself Johannes de Montenegro, while in foreign countries he was known as Joannes Germanus or Francus. His calendars were published under various names, like Meister Hans von Kungberg. About the age of twelve he was sent to Leipzig to study dialectics. In the university matriculations (published by Erler, 1895) his name is not registered. Hearing of the celebrated astronomer Peurbach (George of Peurbach in Upper Austria, 1423-61), Müller left Leipzig for Vienna, where he was matriculated in 1450 as Johannes Moilitor de Kunispeorg. In 1452 he received the bacca laureate and in 1457 the title Magister. Lectures of heliocentric theory are recorded as early as 1469; his work on perspective, in 1460 on Euclid, in 1461 on Virgil's Bucolics. His master and friend Peurbach showed him how incorrect were the Alphonsine Tables and how false the Latin translations of the Greek astronomers from intermediate Arabic translations. To-
Müller, Karl, professor at Düsseldorf, b. at Darmstadt, 29 Oct., 1818; d. at Neuhausen, 15 Aug., 1893, belongs to the more recent members of a school of German art painters who have succeeded felicitously in popular but beautiful representation of religious devotion, and gave new renown to the Düsseldorf school even in foreign lands. His style, delicate even to softness, exhibits, however, as much naturalness, freshness, simple piety and spiritual peace as the subjects demand. Schadow, director of the Düsseldorfl academy, had selected in 1827 the nineteen-year-old student, along with his brother Andreas, and Deger (who were later joined by Ittenbach), for the contemplated fresco paintings in the Fürstenburg church on the Apollinarisberg at Remagen. They had first to study carefully in Italy the technique of fresco painting, then little known. Karl Müller arrived in Rome at the end of 1829. The study and imitation of the art treasures of the Eternal City, as later of those of Florence, Pisa, Assisi, and other places, brought to maturity his great natural talent. His taste for landscape, which he brought with him from Düsseldorf, now found the greatest encouragement; he regarded moreover the study of models as indispensable in the practice of art. He later fell into the love for the Italian friends mutually helped each other by artistic excursions. His evenings he spent in composition and the like. At the end of four years the master brought home his characteristic German religious style, lightly mingled with some Southern elements. In his principal paintings of the "Crowning" and the "Birth of Mary" he set himself, according to the judgment of connoisseurs, the equal of the elder Deger. The former painting unfortunately is in a bad light the greater part of the year. The lower part, the Apostles by the grave, out of which spring lilies and roses, is widely known. The leading scene in the upper part presents the Virgin kneeling bowed before the child, with the brightness of the beauty of colour. The painter worked so long over the "Birth of Mary" that he hoped to succeed in some degree in satisfying the spirit at once of Raphael and of Dürer. In this work the eight typical women especially deserve to be noticed. Besides these there belong to Müller in the same church the "Annunciation", "The Virgin" and "The Lamb of God", "The Immaculate Conception", "Jesus and the Samaritan Woman", "Wonder of Roses", "Immaculate Conception", "Joseph with the Boy Jesus", "The Disciples in Emmaus", the popular round pictures; "Mary and Elizabeth", the "Holy Family at Work", also "The Holy Family", "The Holy Night", and so on. Of the highest value in art are the altar painting, "Christ with the Disciples at Emmaus," which he undertook for the church of St. Remigius at Bonn, and his last cartoon for the same church, completed by his nephew Franz Müller.

G. GIETMANN.

Mullock, John T., Bishop of St. John's, Newfoundland, b. in 1807 at Limerick, Ireland; d. at St. John's, Newfoundland, 26 March, 1869. He became
a Franciscan and was educated at St. Bonaventure's College, Seville, and at St. Isidore's, Rome, where in 1830 he was ordained priest. After long service in Ireland, he was recalled to Rome and appointed in 1847 coadjutor to Bishop Fleming of St. John's, Newfoundland, with the right of succession, and was consecrated by Cardinal Fransen on 27 December, 1847, at St. Isidore's, Rome. In July, 1850, he succeeded Bishop Fleming. The church made great progress in Newfoundland during the episcopate of Dr. Mullock, a new diocese—bishops of Grace—being erected. The splendid cathedral of St. John's, begun in 1841, was consecrated on 9 September, 1855. Dr. Mullock always took a keen interest in the commercial development of Newfoundland, and was most enthusiastic about its natural resources. He was frequently consulted by the governor on matters relating to the welfare of the colony, and many of his suggestions relating to the fisheries and other matters were adopted. Before leaving Ireland he was a frequent contributor to the periodical literature of the day, and took an active part in the Irish literary movement of the forties. Long before the first attempts to lay a submarine cable across the Atlantic was made (1857), Dr. Mullock had on several occasions published publicised the feasibility of connecting Europe with America by means of submarine telegraph. He was the first to bring before the English-speaking world the life and works of the great Saint Alphonse Maria Liguori, publishing his "Life" at Dublin in 1846, and in the following year a translation of the saint's "History of Their Life and Consecration." He appeared at Dublin his "Short History of the Irish Franciscan Province", translated from the Latin work of Francis Ward; he also wrote "The Cathedral of St. John's, Newfoundland and its consecration" (Dublin, 1856).

Gregory Cleary.

Münch-Bellinghausen, Baron Eligius Franz Joseph von (pseudonym: Friedrich Halm), an Austrian dramatist, b. at Cracow, 2 April, 1806; d. at Vienna, 22 May, 1871. He was educated at the seminary of Melk and later at Vienna, where he studied philosophy and jurisprudence, and where he began his official career in 1826. Even as a boy he took a keen interest in the theatre and since 1833 enjoyed the friendship of his former teacher, the Benedictine Most Rev. Efan von der Burg, who himself was a strong bent for the drama and encouraged the poet to offer his drama "Griselidis" to the Hofburg theatre. Its successful production in 1835 established Halm's reputation as a playwright and henceforth he continued to write for the stage with varying success. In the meantime he advanced in his official career, becoming Government councillor in 1840 and Klatus (chief keeper) of the Court Library in 1844, a position that Grillparzer had sought in vain. He was elected member of the Academy of Sciences in 1852 and life member of the Upper House of Parliament in 1861. In 1867 he was appointed superintendent of the two court-theatres, but three years later resigned this position which disputes had made distasteful to him. His health also had been failing. Of his many dramatic works the best known are "Griselidis" (1837); "Der Sohn der Wildnis" (1842); and "Der Fechter von Ravenna" (1857). "Griselidis" is based on the well-known story of the faithful wife whose loyalty and devotion are put to the severest tests. In this drama, which was a triumph in the end, "Der Sohn der Wildnis" (The Son of the Wilderness) is a romantic drama depicting the power of womanly love and virtue over rude barbarian strength. It was presented on the English stage under the title of "Ingomar the Barbarian". "Der Fechter von Ravenna" (The Gladiator of Ravenna), regarded as Halm's best work, is a tragedy having for its hero Thumelicus, a follower of Don Juan, from the Roman rule. Theatrically these plays are very effective, but the characters are improbable and the situations are often strained. Their popularity, which they owe largely to their smooth, polished diction and skilfully interspersed lyrics, has not been lasting. Of Halm's numerous other dramas we may mention "Phlegor in Darmstadt" (1843); "Wildfeuer" (1884); and a German version of Shakespeare's "Cymbeline" that appeared on the stage in 1842. Halm is also the author of lyrics, short stories, and of a narrative poem "Charfreitag" (Good Friday) (1884). A complete edition of his works, arranged in chronological order, appeared at Vienna (1893–94). There are also translations posthumously by Faust Pachler and Emil Kuhl (Vienna, 1872); selections were edited by Anton Schlosser (Leipzig, —).

See the introduction to Schlegel's edition: Sei 92 in Alben der literarischen Dichter (Vienna, 1830) 139 sq.; Rudolf Gottschall, Porträt und Studien, V (Leipzig, 1876), 83–92; Hans Hoppé, Strophen und Erinnerungen (Stuttgart, 1876).

Arthur F. J. Remt.

Munden, John, Venerable. See Haydock, George, Venerable.

Mun-dwiler, Fintan, abbott of the Benedictine monastery of St. Meinrad, Indiana, b. at Dietikon in Switzerland, 12 July, 1835; d. at St. Meinrad's Abbey, 2 February, 1875. He studied at the monastery school of Einsiedeln in Switzerland where he took the Benedictine habit in 1854, made profession on 14 Oct., 1855, and was raised to the priesthood on 11 Sept., 1859. A year later he accompanied his confère, Martin Marty, afterwards Bishop of St. Cloud, to the newly founded monastery of St. Meinrad in Indiana. Having arrived there in September, 1860, he taught in the monastery and attended the usual monastic duties. While stationed at Terre Haute, Indiana (1864), he organized the German Catholic Congregation of St. Benedict, for which he built a church in 1865. In 1869, when St. Meinrad was raised to an abbey and Father Marty became its first abbot, Father Fintan was appointed prior and master of novices. While Abbot Marty was in the Indiana in Dakota (1876–80), Prior Fintan was admistrator of the abbey, and, upon the resignation of the former, who had meanwhile been appointed Vicar Apostolic of Dakota, Fintan was elected abbott of St. Meinrad on 3 February, 1890, and received abbatial consecration from Bishop Chatard of Vincennes on 16 May, 1890. Though spared the cares of the dispensations of monastic discipline, he in no way neglected the secular interests of his abbey. He enlarged the college, founded the Priory (now Abbey) of Subiaco in Arkansas and the Priory (now Abbey) of St. Joseph in Louisiana, and obtained from Rome the permission to erect the Helveticco-American Congregation of the Benedictines, of which he was the first president. When St. Meinrad's Abbey was destroyed by fire on 2 Sept., 1887, the undaunted abbot rebuilt the monastery on even a greater scale, founded a commercial college at Jasper, Indiana, and assisted in the foundation of the Priory of St. Gall in North Dakota. But, in the midst of temporal cares, he remained a man of prayer. He laboured at the spread of the adoration of the Blessed Sacrament and was a fervent promoter of the Priest's Eucharistic League. In 1893 he took part in the Eucharistic Congress held at Jerusalem.

Munster, School of. See Limerick, Diocese of.
Munich-Freising, Archdiocese of (Monacensis et Freisingensis), in Bavaria.—This archdiocese originated in the ancient Diocese of Freising. The Church of St. Peter was built in 704 by St. Curbianus, who, after his consecration, came in 716 to organize the Church in Bavaria. On a mountain near Freising the saint erected a Benedictine monastery and a school. He was succeeded in the government of the abbey by his brother Erembert. When St. Boniface in 738 regulated ecclesiastical affairs in Bavaria he transferred the government of four dioceses to Erembert, who chose the first Bishop of Freising, which see was made suffragan to Mainz. The sanctuary of Our Lady, which existed on the mountain near Freising before the coming of St. Curbianus, became the cathedral, and was served by the Benedictine monks. At the time the diocese embraced the country of the Upper Issar from the Inn to the water sheds of the Inn and the Isar. The third bishop, Joseph of Verona (747-64), established a collegiate church in Iasn, and shared in the founding of the convents of Schäftlarn and Scharnitz, placing the government of the latter in the hands of Abbot Atto. The last-named foundation was particularly significant, in view of the later activities of the abbey of Pustertal.

Other important convents of the diocese were Tegetmes, Moosburg, Immlington, Altomünster, Schliersee, and Rot-on-the-Inn. The learned Arbo, or Arbo (764-81), the biographer of St. Curbianus, translated the remains of this saint from Mainz to Freising and interred them in the church of St. Michael in the city of Freising. It was not until 785-86 that a church was built (765-68) in the church of Our Lady. During his episcopate, Duke Tassilo II presented Innichen to the Abbot of Scharnitz. With the newly acquired territory, Freising gained a port of entry into Carinthia, and the diocese soon acquired possessions also in Styria and Carniola. Atto, Abbot of Scharnitz, also Archbishop of Salzburg (775-810), secured for Freising the bishopric of Christianstadt and Slavonic lands of the Pustertal. On the summit of the mountain upon which Freising cathedral stood he erected a second Benedictine monastery under the same government as the first. During his time the diocese was made suffragan to Salzburg. Hitto (811-34) made a visitation of his diocese; he installed a provost and six priests in the church on the mountain Weihenstephan near Freising.

During the episcopate of his successor Erchambert (855-84), a deed of gift for the first time mentions cathedral canons, who were not monks (842 and 845), the cathedral chapter being thereafter composed of monks and lay canons. Under Ottobald (875-83) and Waldo (883-903), bishops of the house of Constance, the monastic element in the cathedral chapter gradually withdrew; the Benedictines of the cathedral mountain seem to have abandoned it and to have established themselves at the foot of the Weihenstephan. Waldo rebuilt the cathedral, which had been burned down; he was given juridical and financial rights during Abbots of Monastery and received from Louis the Child in 906 the right of free choice of bishops for the cathedral chapter.

The Hungarians gained an entry into Bavaria and destroyed almost entirely the spiritual life of the country. Bishop Otto fell in a battle against them in 908. Under St. Lambert (908-57), Freising was set on fire by the Hungarians and many people were slain. After the victory of Otto I at Lechfeld, peace came again to the city, and the Church of Freising, under the guidance of competent rulers, rose from its ruins, and acquired new possessions. Abraham, of the race of the counts of Gossa (930-94), obtained for his diocese from Emperor Otto I extensive possessions in Carinthia, Gottschalk, Knight of Hanburg (994-1006), obtained for Freising a coinage, the privilege of holding fairs, and civic rights; and Egilbert of Moosburg (1000-39), the founder of the Benedictine Abbey of Weihenstephan, which replaced the old convent of the canons, was the recipient of additional possessions. In the 12th century the diocese or those foundations which the colonies founded from the diocese were remarkably successful in development and stability. During the disturbances resulting from the conflict of investitures, Ellenhard, Count of Meran (1052-78), was ever to be found on the side of Henry IV, who repeatedly visited the bishop in Freising; Meginhard, Count of Scheuern (1078-88) distinguished himself in spreading the Christian doctrine in Bohemia, was more favourable to the pope; Heinrich I, of Ebersdorf (1098-1137), was in his turn an adherent of the emperor. Heinrich I lived to see the destruction of Freising by Duke Welf, and, when dying, bequeathed his possessions to the diocese.

Adalbert, a most distinguished bishop, was consecrated successor by Otto I (1137-58), the historian and philosopher. He saved the see from the ruin which threatened it, re-established many monasteries, and delivered the diocese from the oppressive jurisdiction of the counts of Scheyern. A Cistercian himself, he once more established monastic discipline and austerity. In the last years of his administration occurred the destruction of the episcopal bridge over the Danube, which works near Oberfohring by Duke Henry the Lion, who transferred the custom houses and bridge site to the upper part of Oberfohring, placing them in the village of Munich on the Isar. Albert I (1158-84) brought the diocese safely through the conflicts of Barbarossa with the pope; he restored the cathedral, which had been burned down in 1119, making it greater and more magnificent; his successor Otto II (1184-1220) completed the work, the cathedral being consecrated in 1205. The troubled period of the thirteenth century was generally unfavourable to the spiritual life of the diocese; in addition, the acquisition of property through donations ceased, and, in particular, the Kingdom of Wurttemberg (1258-1278) and Emicho of Wittelsbach (1263-1311), organized and brought together their scattered possessions by purchase, sale, and exchange. By inheriting Wurdenfels (1294), the diocese became an immediate principality of the empire.

The schism which occurred under Louis the Bavarian, who divided the Church of Freising. In opposition to the bishops chosen by the cathedral chapter, which was favourable to the emperor, three others were named in succession by the pope, and for a century and a half the popes appointed the bishops of this diocese, ignoring the privilege of free choice possessed by the chapter. In 1359, Bishop Albert of Hohenburg (1349-50), chancellor of Charles IV, the diocese recovered from the evil effects produced by the schism. His successors were in great part lords from Austrian territory. In opposition to Bishop Nicodemus of Scula (1421-43), named by Martin V, who proved himself an excellent regent and promoter of ecclesiastical reform, the cathedral chapter selected the vicar-general Johann Grünwalder, recognized by the antipope, Felix V, and by Duke Albert of Bavaria; but after the resignation of Heinrich II of Schlick (1443-48), appointed by the pope, he obtained general recognition as bishop, and showed himself to be eminently fitted for the office (1448-52). His successor, Johann IV of Tuelbeck (1453-73), was the first bishop in many years to receive his election to the cathedral chapter. He resigned in favour of his chancellor, the pious Sixtus of Tannberg, who worked zealously for reform and for the maintenance of ecclesiastical discipline. During his time, Veit Armepe wrote his history of Bavaria and of Freising.

After the death of Sixtus, the chapter elected in succession three bishops of Wittelsbach: Ruprecht (1495-98), Philipp (1499-1541), and Heinrich (1541-1551); of these, however, only Philipp received consecration. Given up to field sports, Philip
nevertheless steadfastly opposed the ecclesiastical innovations which seemed about to gain a footing in his diocese. Philipp was also administrator of the Diocese of Naumburg. Under Bishop Leo (1352–39), a visitation of the bishopric took place. Morita of Sandell (1599–96), an ardent councilor in favour of Duke Ernest of Bavaria (1556–1612). The latter was at the same time Bishop of Hildesheim, of Liège, Elector of Cologne, and Bishop of Münster. On account of his zealous activity in the North German sees, he was unable to remain long at Freising. Nevertheless he introduced many reforms, established a ducal and ecclesiastical council in Munich, and promulgated the first Bavarian concordat (1583). Under the pious Vitus Adam von Gebeck (1818–51), the bishopric was shockingly devastated by the Thirty Years' War. Emperor Ferdinand II conferred upon him and his successors the dignity of Prince-bishops.

Once more two princes of the house of Bavaria were elected to the See of Freising: Albert Sigismund (1652–85), at the same time Bishop of Ratisbon and Provost of Ellwangen, an art-loving prince, who adorned the cathedral with a magnificent portal; and Joseph Klemens (1685–94), brother of the Elector Max Emanuel, an ostentatious and extravagant prince, also Bishop of Ratisbon, Elector of Cologne, and Bishop of Liège. Particularly much esteemed was his election by the professors being the learned Benedictine Meichelbeck, who wrote the history of the bishoprics of Freising. Johann Theodor, Duke of Bavaria (1727–63), in whose hands were united the Dioceses of Ratisbon, Liège, and Freising, built an ecclesiastical seminary at Munich (1735). Klemens Wenceslaus of Saxony (1765–88), who from 1769 was also Bishop of Ratisbon and coadjutor of Augsburg, resigned the See of Freising when, in 1768, he was chosen Elector of Trier. Ludwig Joseph von Welden (1769–88) was specially distinguished for his erection of schools for the people. During his episcopate, a papal nuncius was sent for to the See of Freising. Karl Theodor was established in Munich (1786), which was the immediate cause of the convoking of the Congress of Ems. Maximilian Prokop, Count of Törting-Jettenbach (1788–89), was succeeded by the last Prince-Bishop of Freising, Joseph Konrad von Schroffenberg (1780–1803), the dissolution of the diocese taking place during his lifetime (d. 4 April, 1803, at Berchtesgaden).

At the time of the secularization of church property, the prince-bishopric fell to Bavaria, the parts lying in Austria and the Tyrol being turned over to Salzburg. The reformers undertook the destruction of monasteries and diocese, numerous churches were sold for the material they contained, graves were desecrated, the sacred vessels were sold at auction or melted down, and the libraries were plundered or spoiled of their treasures. Owing to the dissolution of the cathedral chapter by the Bavarian Government, the election of a vicar capitular was impossible, and the spiritual guidance of the diocese was entrusted to the vicar-general, Heckenstaller, appointed from Salzburg, who, in 1819, was named vicar Apostolic of the Diocese of Freising. The most important of the temporal functions were performed by the coadjutor Bishop of Ratisbon, Johann Nepomuk von Wolf. After the concordat between Pius VII and King Max Joseph I (5 June, 1817), an orderly condition of affairs was again finally inaugurated. From the territory of the dissolved Sees of Freising and Chiemsee, and the former Provostship of Berchtesgaden was created the Archdiocese of Munich-Freising, with the seat of the archbishop and the cathedral chapter in Munich. The new archdiocese was also to comprise those portions of the former Prince-Bishopric of Salzburg which lay on the left bank of the Inn. On the other hand, those parishes in the Tyrol, Carinthia, Carniola, etc., which were formerly under the bishops of Freising and Chiemsee, were subjected to the Ordinaries of Salzburg and Brixen. The church of Our Lady in Munich was made the cathedral. The Bishops of Augsburg, Passau, and Ratisbon became the suffragans of the new ecclesiastical province. The papal Bull of circumcision, "Dei ac Domini nostri", bears the date of 1 April, 1818.

Lothar Anselm, Freiherr von Gebsattel, dean of the cathedral of Würzburg and a personal friend of the king, was named the first archbishop (1817). As, at the same time as the publication of the concordat, a religious edict had been promulgated as part of the constitution, which again unfairly abrogated many of the stipulations of the concordat, Gebsattel refused to take the oath to abide by the constitution; and it was only after the Tegernsee proclamation of the king, 15 Sept., 1821, that he was consecrated in the cathedral of Munich (1821). He attained great distinction by his regulation of ecclesiastical affairs. Under his rule, a large number of monasteries were re-established, in the interests of the arts and charitable institutions were erected. In Freising, on the site of the old episcopal residence, which Louis had restored to the bishop in 1826, an ecclesiastical seminary was established, to which were added later a lesser seminary, a gymnasium, and a lyceum.

His successor was Karl August, Count of Reissach, previously Bishop of Ellwangen, who became Bishop of Munich. He became unpopular under Maximilian II because of his efforts to uphold the rights of the Church. The king finally used his influence to have him withdrawn, and Pius IX in 1855 raised him to the cardinalate and called him to Rome. Gregor von Scherr (1856–77), former Archbishop of Metten, endeavoured to preserve the Catholic character of the schools. For the maintenance of the lesser seminaries of the diocese which had been obliged to receive an exceptionally large number of candidates to the priesthood, he founded St. Corbinian's Association, and erected a lesser seminary in Freising. He introduced into his diocese the devotion of the perpetual Adoration of the Blessed Sacrament, and instituted pastoral conferences of the clergy. At the Vatican Council, he voted with the minority, but submitted at once to the decision of the council. The last years of his episcopate were emblazoned by the support which the Bavarian Government, under the leadership of Lutz, minister of war, gave to the Old Catholic movement, whose founder (Döllinger) and most zealous champions were resident in Munich.

His successor, Anton von Steichchele (1878–89), the learned church historian and historiographer of the Diocese of Augsburg, by the foundation of Church Building Associations kept pace with the ever-growing City of Munich by the erection of churches and chapels, and enlarged the seminary at Freising. In January, 1887, he summoned the bishops of Bavaria to a conference at Freising, which resulted in a resolution to send to the Government a joint memorandum in regard to the status of the Catholic Church in Bavaria, which when carried into effect brought about a better arrangement of the relations between Church and State and granted to the Church a greater influence upon the intermediate and higher schools. Under Archbishop Antonius von Thoma (1889–97), the Old Catholic question was finally settled in a manner favourable to the Catholic Church and to justice. Franz Joseph von Stein (1897–1909) fearlessly espoused in the Bavarian Court the cause of the Catholic Church regarding instruction, upholding Catholic
knowledge as opposed to the unchecked freedom of university teaching. In accordance with the requirements of the times, he bestowed special care upon the encouragement of Catholic orders and associations, the fostering of Christian charity, the education of the clergy, and the awakening and conservation of the spirit of the Church in the hearts of the people. The present archbishop is Franz Bettinger, appointed on 23 May, 1909, and consecrated, 15 Aug.

Statistics.—The archdiocese comprises the Bavarian districts of Upper Bavaria, excepting those portions lying west and north of the Danube, 48 communes in the domains of Landshut, and Vilshburg in the district of Lower Bavaria. The suffragan dioceses are Augsburg, Passau, and Ratibon. The diocese is divided into 16 deaneries, 3 town commissariats (Munich, Landshut, and Freising), 417 parishes, 20 expositures (parishes in all but the name) and vicarates. The diocese has 460 benefices and manual benefices (i.e., benefices the incumbents of which may be removed at the will of a superior), 400 curacies, and 100 other places where church services are held. The clergy numbers (1910) 412 priests, 162 invested beneficiaries, 677 other priests, 210 regular priests (in 1861), about 461 religious men, and 1,069,300. In addition to the cathedral chapter, there are three collegiate churches: in Munich (St. Cajetan's), Laufen, and Tittmoning.

For the education of the clergy there are lesser seminaries in Scheeßen (conducted by the Benedictines) and in Freising, having respectively 173 and 215 students, as well as a seminary of the diocesan seminary fund, viz., the archiepiscopal seminary in Freising, with 117 students, and the Georgianum, founded in 1894 by Duke Georg the Rich at Ingolstadt, now transferred to Munich and administered by the State, with 103 students, of which, however, only 23 belong to the Diocese of Munich-Freising. The students attend the University of Munich or the Technische Hochschule at Munich, the University of Munich and at the state lyceum at Freising.

The following orders are represented in the archdiocese:—The Benedictines possess the two Abbeys of Scheeritten and St. Boniface in Munich, founded by King Louis I, as well as the Abbeys of Ettal and Schlehdorf, 244 seminarians, 413 students, and 23 seminarians of the so-called "Welsches Kappen" (Romanesque cape), are the town's most famous landmarks. Other churches are St. Peter's, the oldest parish church of the city, dating from the year 1180, built in the Gothic and later restored in the Baroque style; St. Jacob am Anger, the oldest church in Munich, still retaining its original structure from the eleventh century; the court church of St. Michael, built 1583-97, the most distinguished ecclesiastical production of the German Renaissance; the court church of St. Cajetan, built (1663-75) for the Theatines, in the Baroque style; the church of St. Louis, built (1530-44), mainly through the generosity of King Louis I, in the form of the famous fresco of the "Last Judgment" by Corinthiaco; the court of All Saints, built in 1827-37 in the Romanesque-Byzantine style; and the Basilica of St. Boniface, built (1835-50) for the Benedictines, in the form of an early Christian basilica, containing frescoes taken from the life of St. Boniface. The numerous churches of the" city: and the churches which were erected in Munich during the last ten years, and constitute one of the beauties of the city, e.g., those of St. Anna, St. Paul, St. Joseph, St. Rupert, bear witness to the people's devotion.

Of the other churches of the archdiocese, the following are worthy of mention: the cathedral of Freising, built 1161-1315, one of the most celebrated and altered, in which is to be found the shrine containing the relics of St. Corbinian; the Gothic church of St. Martin, in the city of Landshut, dating from the fourteenth and fifteenth centuries, surmounted by the highest tower in Bavaria; in the same city the church of St. Jodok, also in the Gothic style, built in 1335-88; the Romanesque church of Moosburg, erected 1180; the collegiate churches of Tegernsee, Isen, Berchtesgaden, Illmünster, Dietramszell, and others. The places of pilgrimage include the church of the Ducal Hospital in Munich, Maria-Eich, Maria-Rammersdorf, Maria-Blutenburg in Munich, Maria-Eich at Traunstein, Tuntenhausen, Ettal, Scheyern, Mariadorf, Birkenau, and Heiligenthum at Erding.

University of Munich.—It was first established (1472) at Ingolstadt (q. v. for its history up to 1800).
In 1800 it was transferred to Landshut, and, later, by decree of Ludwig I (3 Oct., 1826) to Munich, where it has developed in peace. Its earliest location was the former cloister of the Jesuits, but in 1840 it removed to a building which has since (1896) been considerably enlarged. Through the munificence of the Wittelsbach dynasty, abundant provision has been made for its organization and equipment, and it now ranks as the second largest among the German universities. The revised statutes were published in 1835, and new regulations for the student body in 1849. The fourth centenary of the university was celebrated in August, 1872. The faculty of theology at Munich has a long list of distinguished names: Allioto, Dollinger, Haneberg, Hergenröther, Klee, Möhler, Phillips, Permaneder, Reischl, Schegg, Thalhofer. The Collegium Georgianum, founded in 1494 by George the Rich for the special benefit of theological students, was transferred to Munich with the rest of the university, and still serves its original purpose. The faculty numbers (1910) twelve professors and nine Dozenten; there are 150 theological students. Among illustrious representatives of the other sciences may be mentioned: in philosophy, Schelling; in chemistry, Liebig; in surgery, Thiersch (1848–95), and Nussbaum (1860–90); in medicine, Ringseis (1817–80); in history, Giesbrecht (1862–89); in Germanic philology, Schmoller (1827–29); in Celtic philology, Zeuss (1847–56). In 1910 the total number of instructors was 252; of students, 6896.

JOSEPH LINS.

Münkác, Diocese of, in Hungary, of Greek Catholic Rite, suffragan of Gran. It dates from the fifteenth century. Until then the Greek Ruthenians who had emigrated to Hungary a generation before, 1254, were subject to the See of Przemysł. In 1458 the Diocese of Münkác is mentioned for the first time in a document of King Mathias as a parish with episcopal jurisdiction. It was probably established before 1455, as its creation was apparently that Lucas, the occupant of the see, had already exercised the usual jurisdiction for a considerable period. Its history is connected with that of the Basilian monastery at Csernekehgy near Münkác, established supposedly in 1390 by Duke Theodore Koriakovics, but demonstrably as late as 1418. The bishopric probably falls within the sixteenth century. Until 1641, when union with Rome took place, Mün kác endeavoured to extend its episcopal jurisdiction over the thirteen districts (Komitate) of Hungary, later its territory. The second period lasts from 1641 to 1771, when the see was canonically established. A third period brings its history down to the present. Of its history for the fifteenth and sixteenth centuries we know very little, especially in regard to the mode of episcopal appointment, although it was probably by election until 1561, with the exception of the nomination in 1458. In King Wladislav II’s documents a certain John is mentioned as bishop in 1491 and 1498; thence until 1551 we hear nothing more about the bishoprics of Münkác, at least in the see was occupied. The first document recording the actual appointment of a bishop dates from 1623. In 1641, under Bishop Theodore Tharasovics (1639–48), union with Rome was facilitated by the wish to have done with dependence on the lords of Münkác, but George Rákóczi I of Transylvania, Lord of Münkác, being unfavourably disposed towards union, took Tharasovics prisoner, and, although the latter obtained his freedom in 1642, he did not regain possession of the see. In 1649 the union with Rome was again proclaimed by the clergy of Münkác influenced by Bishop George Jakusich of Eger; henceforth, especially from 1689, date the efforts of the bishops of Eger to bring Münkác into close relation.

After the union of 1649, Peter Parthenius was appointed Bishop of Münkác, and was confirmed both by King Leopold and the Pope. His death was followed by a period of decadence: the diocese was divided into several parts, administered more or less independently of one another, and conflicts arose between the prince and both the Church and the Rákóczi family, concerning the right of nomination to the see. Appointed bishop in 1689 through the efforts of Archbishop Kolonics, Joseph de Camélis, a Greek, devoted his chief energy towards fostering the religious life of the people and extirpating incontinence among the clergy. To promote these objects he held twice synods within the diocese, the first of which being of special importance. After Camélis’s death the right of appointment was again disputed. King Joseph I appointed Joseph Hodemarsky bishop in 1705; Francis Rákóczi II, as Lord of Münkác, filled the episcopal office independently; the Holy See, on its part, appointed an administrator, not regarding the bishop as elected. Finally, in 1715, the Holy See had to resign the see in 1715, and the endeavours of the bishops of Eger to treat Münkác as a suffragan thus triumphed. Hodemarsky’s successor, Gennadius Bisancioi (1716–33), had already acted as vicar Apostolic. Both he and still more his successor, Michael Olaszvaky, contested the authority of the Bishopric of Eger. In 1758 Bishop Bradács, continued the conflict, and finally triumphed. In 1771 the see of Münkacs was established canonically by Clement XIV, Bradács becoming first canonical bishop. Under him the chapter, with seven canons, was also established. In 1816 the See of Eperjes was separated from Münkacs, and in 1856 the four parishes of the vicariate on the opposite side of the See of Szamsoeyváz. Basil Popovics (1837–64) made a lasting impression on the religious life of the diocese; Stephen Pankovics (1866–74) displayed great activity in the domain of diocesan administration, and John Pásztélyi-Kovács (1879–94) performed especially prominent service in the cause of public education.

A. ALDÁSY.

Münster, Diocese of (Monasteriensis), in the Prussian Province of Westphalia, suffragan of Cologne.

I. Secular History.—The earliest name of Münster was Mignegeforn, the later form being Mignardeford, while from 1076 it was called by the Latin
name Monasterium. It is first mentioned in 795, when St. Ludger founded a monastery here, and the place importance later rose. Even at this early date it must have been a place of some importance. Among the earliest possessions of the Church at Münster were three large landed estates, apparently the gift of Charlemagne. These lands, at least in part, lay within the area of the later city. They were called the Brochhof, the Kampwördehof, and the Biepinghof. The Kampwördehof belonged to the bishop and, probably for this reason, bore his name. The Brochhof was owned by the cathedral chapter, the Kampwördehof belonged later to the collegiate church of St. Moritz, to which it was apparently assigned when the church was founded. The fourth great estate, and one that is mentioned from the earliest days, the Judehof. The Judehof also belonged to the bishop and, as the land was originally given to the Church, by which it was given in fief to a family called Jüdefeld. In 1386 the cathedral chapter obtained it by purchase. Near these four estates were quite a number of farms owned independently by free peasants; many of these in the course of time came into the possession of the Church. The monasteries maintained the vast extent of the land and properties on the ground now surrounding the cathedral. From the beginning the monastery was independent of the jurisdiction of the count. How large a district enjoyed this immunity cannot now be ascertained. Neither, for lack of original authorities, can the extent of the guild in which the free peasants were included. The latter were not part of the property and the jurisdiction of the community and the legal jurisdiction exercised in it. In regard to the public administration of justice, Münster was from the earliest times under the authority of the Counts of Dretingau until, on account of the privileges granted by Otto I, the rights of the count were transferred to the bishop, who exercised them, especially in that part of the region which was later to be the city government up to the fourteenth century. The representatives of the city were the burgomasters, first mentioned in 1253, and the assessors, mentioned in 1221. Besides its judicial authority, the body of assessors performed the duties of a city council. It was presided over by the burgomasters, who, from the beginning, were elected by the citizens (guden luden) who had the right of voting. Taking advantage of the bishop's pecuniary needs, the municipality gradually obtained large rights and privileges. Thus, besides its own autonomy, it acquired the military authority, the administration of a number of church prebends, and supreme jurisdiction in certain cases. By the end of the fourteenth century it had a court formed from its own council. After 1309 it was represented in the diet of the diocese along with the cathedral chapter and the lower nobility.

Nevertheless, the bishop always appointed the judges and reserved to himself the confirmation of sentence in important cases. He levied the crown-taxes which, however, he generally mortgaged; he owned the mint, and claimed certain rights at the death of every citizen. The guilds formed by the leading trades in the fourteenth century (in the sixteenth century seventeen guilds are mentioned) originally exercised no control over the city government; by the second half of that century they had become a city federation. Thus federated, the guilds were able to influence both the internal and external affairs of the city, working apparently in amicable agreement with the Council. In 1447 the federated guilds were regarded as a ruling corporation co-ordinate and acting in union with the Council. Their veto could stop any proceedings of the Council which was still chosen from the patrician body. On the other hand, the Council retained a certain right of supervision over the internal affairs of the guilds. A good understanding between Council and guilds was, therefore, the primary condition for a prosperous development of the city. As a matter of fact the two bodies worked harmoniously together until the outbreak of the diocesan feud which split the city into two armed camps (see below, under 11). In 1454, after the close of this feud, it was decided to choose the burgomasters and members of the Council henceforward from both the patricians and mass of the citizens. This arrangement was maintained until the Anabaptist outbreak. Internal peace promised a great increase in commerce, learning flourished greatly. Münster was regarded as the leading commercial city between the Rhine and the Weser, and the school conducted by the Canon Rudolf of Langen had a great reputation.
In 1533–35, however, Münster was the scene of the wild excesses of the Anabaptists. During the episcopate of Bishop Frederick III, brother of Hermann of Wied, Archbishop of Cologne, the doctrines of Luther spread widely in the Diocese of Münster. In his agreement (14 March, 1533) Bishop Francke of Waldeck ceded to it full religious liberty and granted the six parish churches to the adherents of the new doctrine, in return for which the city promised him obedience and support against the cathedral chapter. From 1533 the city undertook the preparation of new church ordinances. The drawing up of a form of worship was assigned to Bernt Rothmann, a preacher of Anabaptist proclivities. Supported by some preachers from Wassenberg in Jülich and by the Melchiorites (followers of Melchior Hoffman), he began to spread his views. The strength of the Anabaptist party was steadily increased by accessions from Holland, until, in February, 1534, their leaders, John of Leyden, a tailor, and Jan Matthias, a baker, came to Münster from Haarlem, when the sect gained complete control of the city, and the peaceable minority either left the city voluntarily or were expelled. The Anabaptists now indulged in the wildest orgies in "the New Jerusalem," as they called Münster, introducing polygamy and communism, plundering and murder. The ancient monasteries were destroyed.

Notwithstanding his inclination to Protestantism, the bishop was now obliged to go to war with the city in order to maintain his secular authority. In alliance with Philipp of Hesse, he began (28 February, 1534) a siege of the city in which John of Leyden, as king of the New Zion, had established a reign of terror. After 27 days' stubborn fighting (24 March, 1535) the leaders of the insurrection were executed with horrible tortures and their bodies were exposed in three cages hung on the tower of St. Lambert's Church. The return of the expelled citizens and the restoration of the Catholic Church proceeded slowly. A small Protestant community was still maintained. In 1553 the city regained its old privileges and rights. Trade, commerce, and learning once more flourished. Although disputes now arose between the guilds and the town council, and these two combined against the growing importance of the bishop, Münster enjoyed general peace and prosperity until the Thirty Years' War. Whether the city was to pay heavy contributions, but it was not utterly impoverished like so many other cities.

The peace negotations carried on at Münster by the Catholic Powers, beginning in 1643, led to the neutralisation of the city and its substantial benefit. Thus encouraged, the Council, a few years after a new agreement of Westphalia, persuaded the citizens to make a bold attempt to throw off the sovereignty of the bishop and raise Münster to the rank of a free city of the empire. In the struggle with the Prince-Bishop Christopher Bernhard of Galen, Münster was defeated in March, 1661. It lost its privileges, and an episcopal citadel, the Paulsburg, was erected in the western part of the city. But, the prince-bishops, who had ruled, did Münster regain its full civic liberty. After the Seven Years' War, during which Münster was not able to hold out against a second siege, in 1759, the fortifications were turned into promenades, and the citadel razed. In place of the latter a castle was built in 1768 as a residence for the prince-bishop. In 1790 a part of the city was destroyed by a fire, which the city at that moment suppressed Jesuita and of the Abbey of Überwasser. A circle of learned men gathered at Münster around the Princess Galitzin, amongst them being Frederick Leopold Count zu Stolberg and Overbeck.

By the Imperial delegate's enactment, the city of Münster and a part of the diocese fell to Prussia, which had already (23 May, 1802) made an agreement concerning it with the Consul Bonaparte. The Prussian troops under Blücher entered the city, 3 August. A commission accompanied the army to shape the constitution and administration of the newly-acquired district conformably with the Prussian model. Although the president of the commission, Freiherr von Stein, in 1810 to 1811 to France, as the old city-government was dissolved and replaced by the French municipal organisation. Many good measures of administration were introduced, but the enthusiasm for them was rapidly chilled by the extensive billeting of soldiers upon the citizens, and by arbitrary action, especially in ecclesiastical matters. When, therefore, after the overthrow of the Napoleonic power at the battle of Leipzig, the Prussians again entered Münster, they, in turn, were greeted with great joy. The Prussian Government was wise enough to retain many improvements made by the French, which they further developed, so that the city quickly reached an unprecedented prosperity. In 1813 a new city ordinance was applied to Münster. The population, 13,000 at the beginning of the nineteenth century, rapidly increased with the growth of commerce and traffic, and, as capital of the Province of Westphalia, the quiet cathedral city developed into an important centre of traffic for North-Western Germany.

By the cession of 1806, Münster had 81,468 inhabitants, of whom 67,221 were Catholics, 13,612 Protestants, and 555 Jews; in 1910 the population was about 87,000, including 72,800 Catholics. The city has 25 Catholic churches and chapels, including 12 parish churches. Catholic institutions of learning are: the theological faculty of the university with (in the summer of 1910) 316 students; the seminary for priests; 2 preparatory seminaries, namely, the Collegium Borromæum and the Collegium Ludgerianum; a Catholic state gymnasium; a seminary for teachers; a high school for girls.

II. Dioecesan History.—Towards the end of the Saxon War, Charlemagne founded, about 795, several small dioceses. The city was the seat of a bishop in 818. There was an archbishopric of Münster, or Mimirgerinseif. The first bishop was Ludger, who, since the year 787, had been a zealous missionary in five Frisian "hundreds", or districts. The territory of the Diocese of Münster was bounded on the west, south, and north-west by the Dioceses of Utrecht, on the east and north-east by Osnabrück. The diocese also included districts remote from the bulk of its territory, namely, the five Frisian hundreds on the lower Ems (Hugmerki, Hunsau, Vifelga, Federigtau, and Emgaau), also the island of Bant, which has disappeared, leaving behind it the islands of Borkum, Juist, and Norderney. Münster has already been mentioned in possession of the island estates of the sea. Most of the territory over which the bishop eventually exercised sovereign rights lay north of the river Lippe, extending as far as the upper Ems and the Teutoburg Forest. The most important accession was in 1252, when the see purchased the Countship of Vechta and the district of the Ems with the town of Meppen. The country between the new dioceses was acquired later: in 1403 the district about Cloppenburg and Cotte was gained. In 1406 the manorial domain of Ahaus and the castle of Stromberg with its jurisdiction; and in 1429 Wiedehausen in pledge from the Archdiocese of Bremen. This last addition made the new territory, which was entirely separate from the southern part, a compact body subsequently known as "the lower diocese"; it remained an integral part of the Diocese of
Münster until the Reformation, which somewhat reduced its size; what was left was retained until the secularization.

St. Ludger established his see as Mimgernoford and founded there a monastery, following the rule of Bishop Chrodegang of Metz, bishop and clergy living in community. But the most important monastery founded by St. Ludger was the Benedictine Abbey of Werden, which became a nursery for the clergy of the diocese. He also assisted in founding the convent of Nottuln, under his sister Heriburg. He was succeeded in the administration of the diocese by two nephews, Gerfrid (809–89) and Allfrid (829–49), both of whom were important prelates. The special concession of Werden with the diocese ceased on the appointment of the next bishop, Luitbert (840–71), who was not related to the family of the founder. There were even disputes between the bishop and the monastery, which the Synod of Mainz settled in favour of the latter, awarding it the right of freely electing its abbot. Bishop Wulflheim (875–95) changed the collegiate body founded by Ludger into a cathedral chapter, with which he divided the property till then held in common, the bishop having thenceforth his special residence. Among the religious foundations of the diocese in the ninth century should be mentioned the monasteries for women at Liesborn (810) and Herford (817). But the most important monastery, Hermann I (1032–42) founded the Abbey of Our Lady of Ueberwasser; Bishop Frederick I, Count of Wettin (1084–84), established the collegiate church of St. Moritz at Münster; Bishop Erpfo (1085–97) built the church of St. Lambert. Both the two just named and Bishop Durchad of Holte (1085–1118) were partisans of the emperor in the investiture conflict. During the episcopate of Dietrich II, Count of Zutphen (1118–27), several Premonstratensian and Cistercian abbeys arose. Hermann II (1174–1203) founded collegiate churches for the canons of St. Ludger and St. Martin.

The twelfth century was marked by a considerable growth of the bishops' secular power. Bishop Ludwig I, Count of Tecklenburg (1169–73), restored to the see the temporal jurisdiction over its domains previously exercised by the Counts of Tecklenburg. Hermann II, like his immediate predecessors, Frederick II, Count of Are (1152–58), and Ludwig I, was a partisan of Frederick Barbarossa. With the overthrow of Henry the Lion, Duke of Saxony, the last obstacle in the way of the complete sovereignty of the bishops was removed, and Hermann appears as a great feudal lord of the empire. During the episcopate of his second successor, Dietrich III of Isenberg (1218–26), the position of the bishop as a prince of the empire was formally acknowledged in 1220 by Frederick II. Hermann II was the last bishop directly appointed by the emperor. Dissensions arose about the election of his successor, Otto I, Count of Oldenburg (1204–18), and Emperor Otto IV decreed that thenceforward the cathedral chapter alone should elect the bishop. The See of Cologne retained the right of confirmation, and the empyrean in the investiture. The bishop's temporal authority was limited in its exercise to the right to appoint or dismiss canons, an early taxation, the consent of representative bodies of his subjects was necessary. Among these, the cathedral chapter appears early in the thirteenth century; later, the lower nobility, and, lastly, the city of Münster. In course of time the cathedral chapter extended its rights by agreements made with bishops before election.

The temporal power of the see increased greatly during the episcopate of Bishop Otto II, Count of Lippe (1247–59). The city, at the same time, struggled to become independent of the bishop, not, however, with complete success, notwithstanding its alliance with the cathedral chapter. Even as early as the fourteenth century the bishops were frequently engaged in disputes with the great nobility, particularly with the prelates of the diocese, generally to those possessing lands in the neighbourhood; only too often the diocese was administered for the benefit rather of the bishop's family than of the Church. The bishops were, in consequence, frequently involved in the quarrels of the nobility; ecclesiastical affairs were neglected and the see suffered. Conditions were at their worst during what is known as the Münster Diocesan Feud (1450–57). The arbitrary conduct of Bishop Henry II of Mör (1424–50) had aroused a very bitter feeling in the city. After his death the majority of the cathedral chapter elected Wulfram of Mör, brother of Henry and also of the Archbishop of Cologne, while the city and a minority of the chapter demanded the election of Eric of Hoja, brother of Count John of Hoja. Although the election of Wulfram was confirmed by the pope, open war for the possession of the see broke out, and Wulfram was unable to gain possession of the city of Münster. In 1457, after his death, a compact was made by which both parties divided the city, and the privileges of the city were confirmed, while both parties recognized the new bishop appointed by the pope, John II, Count Palatine of Simmern (1457–66). After order had been re-established, the ecclesiastical reform of the diocese was taken seriously in hand. Bishop Henry III of Schwarzburg (1466–96), Count John of Simmern, and Bishop Engelbert of Lauenburg (1506–22) produced excellent results by holding synods and reforming religious foundations. Rudolf of Langen and John Mummellui made the cathedral school a nursery of humanism.

Under the indulgent and thoroughly worldly Frederick III (1522–52), brother of the Archbishop of Cologne, Hermann of Wied, Lutheranism spread rapidly after 1524, especially in the city. Scarcely any opposition to the innovation was made by the next bishop, Franz of Waldeck (1532–53), who from the first planned to aid the Reformation in his three dioceses of Münster, Minden, and Osnabrück, in order to form out of these three a secular principality for himself. He enjoyed the support of his endangered authority, to proceed against the Anabaptists in the city of Münster; but he did little for the restoration of the Faith, and at last joined the Smalkaldic League. William of Ketteler (1553–57) was more Protestant than Catholic: although he regarded himself as an administrator of the old Church, and took the Tridentine oath, he refused to comply with the demands of Rome, and resigned in 1557. Bernhard of Raesfeld (1557–66) was genuinely devoted to the Catholic Faith, but he, too, finding himself unequal to the difficulties of his position, resigned. John of Hoja (1566–74), a faithful Catholic, in order to reorganize ecclesiastical affairs, undertook a general visitation of the diocese, which occupied him from 1567 to 1573. The visitation revealed shocking conditions among clergy and people, and showed to what extent the Reformation had spread in the diocese under previous bishops. Not only were Protestant ideas predominant in the northern part of the country, or "lower diocese", but the western part as well had been almost entirely lost to the Church. In the diocesan affairs of the diocese, too, the Faith had suffered greatly.

The good this bishop accomplished was almost undone after his death. His successor, John William of Cleves (1574–85), inherited the Duchy of Cleves in 1575, married, and gave up the administration of the diocese. A long diplomatic battle as to his successor arose between the Catholic and Protestant powers,
during which the diocese was administered by Cleves. The maintenance of Catholicism in the diocese was assured by the victory of Ernst of Bavaria (1585–1590). After his death, Bishop Ferdinand of Bavaria, the newly-founded Bishoprics of Groningen and Liège, and Archbishop of Cologne. He zealously undertook the Counter-Reformation, invited the Jesuits to aid him, and encouraged the founding of monasteries of the old orders, although he could not repair all the losses. The western part of the Frisian district under the ecclesiastical jurisdiction of Münster was transferred, in 1580, to the newly-founded Bishoprics of Groningen and Deventer, and with them fell into Protestantism. In the same way the possessions of the Counts of Bentheim-Steinfurt and some other fortified towns passed from the ecclesiastical jurisdiction of the bishop. The two immediate successors of Bishop Ernst laboured in the same spirit. Ferdinand of Bavaria (1612–30) was at the same time Elector of Cologne and Bishop of Paderborn, Hildesheim, and Liège. He founded a seminary, which he placed under the direction of Jesuits. Christopher Bernhard of Galen (1650–78) was equally efficient both as bishop and as secular ruler: he forced the refractory city of Münster, after a long siege, to acknowledge his sovereignty, and, by leading in foreign troops, gained parts of the Archdiocese of Bremen and of the Diocese of Werden in a war with Sweden, restored church discipline, and established a school system for his territory.

The immediate successors of the three distinguished rulers just mentioned were: Ferdinand II of Münster, by marriage Maximilian Henry of Bavaria (1683–88), Frederick Christian of Plettenberg (1688–1712), and Francis Arnold of Wolf-Metternich (1708–18). Unfortunatley, under these men church discipline declined, and much that was excellent decayed for lack of proper care, or, like the seminary for priests, ceased to exist. Nevertheless, the bishop, Bishop, a zealous, and church-loving Clement Augustus of Bavaria (1719–61), who was also Elector of Cologne, and Bishop of Paderborn, Hildesheim, and Osnabrück. During his episcopate the diocese suffered terribly, in 1734–35 and during the Seven Years War, being almost ruined financially. The succeeding bishop, Maximilian Frederick of Königsegg-Rothenfels (1761–84), who was also Elector of Cologne, was a weak, though well-meaning, man. Happily, he left the administration of the Diocese of Münster to a young cathedral canon, Franz Friedrich Wilhelm von Fürstenberg (q. v.), during whose administration the diocese attained unexpected prosperity. At the election of an auxiliary bishop, the Fürstenbergian institution was helped by Monsignor Karl Joseph of Austria, who became the last Prince-Bishop of Münster and Elector of Cologne (1774–1801). Upon the death of Maximilian Franz, his nephew, the Archbishop Anthony Victor, was elected, but could not enter upon the administration on account of the opposition of Prussia, which had long coveted the domain of the Church in Northern Germany.

In 1803 the diocese was secularized by the Imperial Delegates Enactment and broken up into numerous parts. The larger share was assigned to Prussia, which took possession in March, 1803. The rich treasury of the cathedral was transferred to Magdeburg and has never been returned. Freiherr von Fürstenberg administered as vicar-general the ecclesiastical affairs of the diocese even during the short supremacy of the French (1806–13). After his death, in 1810, the administrator was his former coadjutor, Clement Augustus von Droste-Vischering, later Archbishop of Cologne. In the years 1813–15 the diocese was administered, without the authorization of the pope, by Father Theodor, and the Marquis appointed by Napoleon, and to whom von Droste-Vischering had given his faculties by subdelegation. In 1813 the principality was again ceded to Prussia.

Upon the ecclesiastical reorganization of Prussia, completed by the Bull of 16 July, 1821, "De salute anarchum", the diocese was given its present boundaries (see below). The see had been vacant for two years when, in 1823, the new bishop, Caspar Max, Freiherr von Droste-Vischering (1824–46), who, having been auxiliary bishop of the diocese since 1826, had confirmed many hundreds of thousands and ordained over 2200 priests. His administration was greatly hampered by the petty and far-reaching supervision of the Government. In place of the university, suppressed in 1818, he was able to open, in 1832, an academy with philosophical and theological faculties; in 1902 this academy became a university. Ecclesiastical life in the diocese was in a somewhat unsatisfactory condition, the clergy being largely inclined to Rationalistic and Hermeneutics opinions.

An intellectual and religious revival throughout Germany followed the events at Cologne in 1837 (see Cologne). This revival and the larger freedom granted the Catholic Church of Prussia under King John Charles Frederick (1815–1840) began the struggle for freedom of conscience and for the organization of the diocese. During the episcopate of John Gregory Müller (1847–70), fruitful popular missions were held in many places, many churches were rebuilt, and a large number of religious houses and benevolent institutions were founded with the active assistance of the bishop. After the death of John Bernhard Brinkmann (1870–89), laboured in the service of the Church, during the Kulturkampf he suffered fines, imprisonment, and, from 1875 to 1884, banishment. He was obliged to witness the destruction of much that had been established by his predecessors and by himself. The present bishop is Hermann Dingelstad, born 2 March, 1872, was elected 15 August, 1899, consecrated 24 February, 1890.

Statistics.—The Diocese of Münster includes: the Prussian Department of Münster in Westphalia; the parish of Lette, in the Department of Minden; three enclaves in the Department of Aremberg; the city district of Duisberg; the districts of Dinslaken, Rees, Cleves, Gildern, Kempen, and Mörs in Rhein Prussia; the city of Wilhelmshaven in the Province of Hanover; the Duchy of Oldenburg. The 406 parishes of the diocese are distributed in 22 deaneries, of which 12 are in Westphalia, 8 in Rhein Prussia, and 2 in Oldenburg. In 1910 there were in the diocese 1,427, 203 Catholics, 664,737 Protestants, 8,758 Jews. The Catholic population at the last census (1909) was engaged in parochial work, teaching, or ecclesiastical administration; 74 were absent on leave or were retired; there were 133 regulars. In addition, 38 seculars not belonging to the diocese were domiciled in it. There has been an unbroken succession of auxiliary bishops since 1218. The cathedral chapter consists of 8 canons, and 6 honorary canons. The vicariate-general is composed of the vicar-general, 6 ecclesiastical councillors, a notary Apostolic for the diocese, a justiciary, 3 secretaries, and 7 other officials. Besides the officialstät at Münster, there is also one at Vechta for the Oldenburg section of the diocese. The diocesan institutions are: the seminary for priests (36 students who were already deacons in 1910), the Colledge Borromæum for theological students (182 students), the Collegium Ludgerianum (111 pupils), the institute for Church music— all at Münster; at Godesdœck, near Goch, an episcopal seminary for assistant priests, and the Collegium Augustinianum; 4 episcopal institutions for poor priests, and the Maristes. There are 9 hospitals. In them are 1600 epileptic women and girls. There are 13 ecclesiastical professors in the theological faculty and one in the philosophical faculty at Münster. Among the state-aided Catholic higher schools are 11 Gymnasien, one
Realschule, 6 seminaries for male and 2 for female teachers. There are also a large number of high schools for girls, generally carried on by nunns and lay religious, with 27 houses of religious orders and congregations. The members conduct most of the 25 Catholic institutions for public benefit and charity in the municipality. The male orders and congregations represented in the diocese are: Franciscans, 5 monasteries, 40 fathers, 13 clerical novices, 11 lay brothers; Capuchins, 4 monasteries, 34 fathers, 9 clerics, 23 brothers; Dominicans, 2 monasteries, 12 fathers, 7 lay brothers; Benedictines, an abbey and a priory, 15 fathers, 28 brothers; Dominicanes, 2 monasteries, 12 fathers, 7 lay brothers; Society of Missionaries of the Sacred Heart of Jesus, 1 house, 19 missionaries; Alexian Brothers, 1 institution for the care of insane men, 46 brothers; Brothers of Mercy, 2 houses, 41 brothers; Brothers of St. Francis, 3 houses, 19 brothers. Female religious orders and congregations: Benedictine nuns of the Perpetual Adoration, 3 houses, 151 sisters; Sisters of the Visitation of Mary, 1 house, 35 sisters; Poor Clares, 3 houses, 92 sisters; Ursulines at Dorsten, where they have a higher school for girls, a boarding-school for girls and a school for younger children; 66 sisters; Sisters of Mercy, mother-house at Münster, 81 branches in the diocese, 240 sisters; Sisters of Our Lady of Charity of the Good Shepherd, mother-house and branch house, 125 sisters; Sisters of the Divine Providence, a mother-house, 63 filial houses, and 640 sisters who conduct a large number of schools for girls, homes for the sick, and for the needy and for the aged; and 140 nurses. Nursing Sisters of the Third Order of St. Francis, a mother-house, 83 branch houses, 894 sisters; Sisters of Our Lady, a mother-house, 41 branch-houses, which carry on boarding schools, day-schools, homes for girls etc., 590 sisters; Sisters of the Christian Schools of Mercy, who conduct higher schools for girls, day-schools, seminariums, etc., 245 sisters; Good Shepherd, 146 sisters; Poor Serving Maids of Jesus Christ, 4 houses, 47 sisters; Poor Franciscans of the Sacred Heart of Jesus and Mary, a hospital with 7 sisters; Sisters of Penitence and Christian Charity of the Third Order of St. Francis, 3 houses, 152 sisters; Sisters of St. Charles Borromeo at Cleves, 15 sisters; Grey Sisters of St. Elizabeth, 5 sisters; Salesians of the Holy Cross, 4 houses, 99 sisters; Missionary Sisters of the Sacred Heart of Jesus, a mother-house, 78 sisters; Dominican Nuns from the mother-house at Aremberg in the Diocese of Trier, 3 houses, 10 sisters. Among the religious associations are: the association of priests, young men's associations (84), Marian societies (266), jocund societies in 81 towns, merchants' associations (30), workmen's unions (134), miners' unions (47), sodalities for men (77), congregations of Catholic young women (250), societies of Christian mothers (2325), the Bonifaciusverein, the Societies of St. Vincent, of Blessed Albertus Magnus, etc.

The most important church on this part is the cathedral (built for the most part between 1225 and 1365, in the transition period from Romanesque to Gothic architecture, while the great doorway, built in 1516, is later Gothic in style); the Gothic church of St. Lambert, built on the site of an old parish church, in the second half of the fourteenth century, with a new Gothic tower, about 112 feet high, added in 1857–90, to replace the tower which had hung the iron caskets that held the bodies of the executed Anabaptists; the church of Our Lady, a fine fourteenth-century Gothic building erected on the site of the chapel of the Virgin, built by St. Ludger; the church of St. Ludger, built about 1170, enlarged 1383; the collegiate church of St. Morris, founded 1070, and enlarged, 1502, in Renaissance style; the church of St. Michael in the old town, and the church of St. Peter and Paul in the new town, both in Gothic style. From this period, Münster is divided into five parishes, one in the old town, three in the new town, and one in the rural district. The most important church in the city is the cathedral, which was the seat of the bishop of Münster, who had jurisdiction over the diocese of Soest and the bishoprics of Coesfeld, 1826–37; Erbach, bishop of Münster (1637); Trier, bishop of Münster (1652); von Detten, bishop of Münster in Westfalen, with his diocese, and the cathedral of the now vanished bishopric of Münster (1516); Dom zu Münster (1804); Bremen, Diocesan Church in Münster; Eichholz and the Evangelical Church in Münster (1900); Hünfte, Münster in the 7-year war (1908). On the Diocese: Westfälisches Urkundenbuch, I–VIII (Münster, 1808) (especially 1812 and 1903); Eichholz; Die Geschichte des Bistums Münster, I–IV (Münster, 1851–1900); Code X. Rodt, Die Abthes von Münster (Münster, 1896); Kühnlen, Die die Gedenkteilen und die Geschichte des Bistums Münster (Münster, 1893); Dahm, Die Abthes von Münster (Münster, 1893); Dr. W. Meurer, Die älteste Geschichte des Bistums Münster, I–IV (Münster, 1893).—On the Cathedral, see also the Annalisten, Westphalen, Münster, 1910. See also ANABAPTISME, WESTFALEN, J. L. T. H. LINS.

University of Münster.—The town of Münster in Westphalia obtained its university in 1771 through the initiative of the prince-bishop's vicar-general, Freiherr von Fürstenberg.

The foundation for the university was the cathedral school at Münster, which dated from the Middle Ages. This school, about the end of the thirteenth century, had reached such a high standard of instruction through the efforts of the famous humanist Rudolph von Langen (1438–1519). The disturbances caused by the Anabaptists (1533–35) had a depressing influence, but Dean Gottfried von Raesfeld succeeded in restoring it to its former position by turning its supervision over to the Jesuits in 1588. The school, now called Gymnaisum Paulinum, was enlarged by the addition of new buildings in spite of its purely ecclesiastical education of priests, and was raised by Pope Urban VIII to the rank of an academy, 9 Sept., 1629. The latter action was taken at the urgent request of Prince-Bishop Ferdinand I (1612–31), who also obtained from the Emperor Ferdinand II the document of 21 May, 1631, with which the latter granted permission to found a complete university with faculties. The death of the bishop, the disturbances of the Thirty Years' War and the want of funds prevented the execution of this plan during the next century and a half. The clever work of Vicar-General Franz Friedrich von Fürstenberg finally accomplished the desired end: on 4 May, 1771, Maximilian Friedrich von Königseig-Rotenhof signed the document making Münster a university. Pope Clement XIV granted the university, in a bull dated 28 May, 1773, all the privileges, indulgs and liberties which other universities enjoyed. The charter, signed by Emperor Joseph II in Vienna, is dated at the same time. Very soon, more than the town of Fürstenberg, as a university, laboured earnestly for the development of the university. He filled it with the spirit of positive Christianity, so that it had a beneficent influence at a time when rationalistic philosophy and false enlightenment appeared everywhere. In 1803 Münster was ceded to Prussia by the imperial deputation assembled at Ratisbon. The Prussian administration was particularly interested in the university, but endeavoured to do away with its Catholic character. His successor,
President von Vincke, accomplished this purpose and dismissed Fürstenberg, the founder of the university, in 1805. In the autumn of 1806 the French took possession of the town. During the seven years' sway of the foreigners no remarkable progress was made in the university. After Münster had again become Prussian, Münster's law professors and other professors had to decide whether the university should be reorganized or removed to another town. No decision was reached until King Frederick William III in 1815 promised his new subjects on the left bank of the Rhine that a university would be established on the Rhine. His promise led to the founding of the University of Bonn in 1818. The founding of the University of Bonn finally led to the issue of a royal decree, dated 1 July, 1902, restoring to the academy a faculty of law and the title "University" (since 1907 "Westphälische Wilhelms-Universität", in honour of the Emperor William II). In 1906 there followed the establishment of the chairs and institutions required for the teaching of law in Bonn, the further extension of which may be expected in the next few years.

Noteworthy among the teachers of the old episcopal university were: Clemens Becker, S.J., professor of canon law and moral theology (d. 1790); Joh. Hyac. Kistemaker, philologist and theologian, who taught the classical languages from 1786 to 1854, and, later on, exegesis. A. M. Spriekmann laboured as a jurist in Münster from 1778 to 1814, when he was called to the University of Breslau and later, in 1817, to Berlin. Anton Bruchhausen, S.J., professor of physics (1773-82), gained a great reputation among German scientists through his "Institutiones physicae" (1775); and the philosopher H. H. O. Dittrich (1773-83) and many others.

George Hermes was professor of dogmatic theology in Münster from 1807-20; he founded the so-called Hermesianism, a rationalistic tendency in theology, and d. in 1831 at Bonn, where he taught from 1820; his teachings were condemned at Rome in 1836. J. Th. H. Katerkamp, who was counted among the friends of Princess Galitzin, was professor of theology. Of the teachers in the academy there deserve to be mentioned the neo-scholastic Stöckl, professor of philosophy (1862-71); furthermore, Wilhelm Störcke, interpreter of Portuguese poems (Camoens) and professor of German literature (1839-1905); and especially Johann Wilhelm Hittorff, since 1852 professor of physics and chemistry, who discovered the cathode rays, and made valuable investigations concerning electric phenomena in vacuum tubes and contributions to the theory of ions. Mention should also be made of Professors Berlage (dogmatists), Reineck (Old Testament exegetics), and Bisping (New Test. exegesis), Schwane (dogmatists).

The number of students has increased from 68 in 1813 to 127 in 1840, and to 480 in 1890, with 47 lecturers in the faculty of medicine, 12 professors, 2 dozenten, and 1 reader; in the law faculty, 7 ordinary and 3 extraordinary professors, 4 dozenten, and 1 lecturer; in the life sciences, 8 dozenten, 2 lecturers, and 1 reader; in the philosophical faculty, 28 ordinary and 6 extraordinary professors, 14 dozenten, and 4 lecturers; in the medical faculty, 1 extraordinary and 2 ordinary professors, 2 lecturers, 1 dozent.

Piper, "Die allgemeine Universität Münster" (Münster, 1892); Ram- man, "Die Universität Münster" (Münster, 1890); 3. Jahrgang (1905), pp. 187-201, 241-260; 10, 268-270, 275-277; 11, 270-272; 12, 270-272; 13, 270-272. See also the official annual reports, two Senate resolutions (1826, 1830), on the development and present condition of the university and another on the same subject by the Magistrate of the City of Münster (1810).

W. ENGELKEMPER.

Münster, Eugène.—French savant and historian; b. at Soulz-sous-Forêts, near Mülhausen, Alsace, 11 June, 1845; d. at Paris, 2 November, 1902. He took up the study of law, but turned aside from the legal profession to contribute to the "Revue Alsacienne" and the "Comptes-rendus de l'Académie des sciences de l'Empire". His most important works were the inaugurations of the two "Revue de l'Années"—one at the time that—following upon the great efflorescence of learned criticism in Germany—attention was being directed to France to the organized study of history. Albert Dumont founded at Rome the École Française, in the Farnese Palace, and Eugène Münster became one of the first pupils. Among his fellow-students was Louis Duchêne, who afterwards became director of the school. Münster explored the Vatican Archives and Library, and began to amass that vast fund of erudition which he revealed in later years. From that time he devoted himself to the task of unravelling the history of art in Italy. About the year 1858, he, together with such scholars as Morelli and Milanesi, contributed to the immensity of the program undertaken, by which he was to accomplish his studies of art, engraving, its tapestry-weaving, its pottery, its cabinet-making—contribute, as so many expressions of contemporary thought, to form the genius of its painters, sculptors, and architects. Captivated by Rome where the fairest years of his life had been spent in studious research, he never ceased to regard the Rome of Julius II and Leo X., of Bramante, Michelangelo, and Raphael, as the highest expression of human civilization. This attitude of mind at times hindered his doing justice to other schools—for instance, to those of Venice and Siena.

The earliest works of Münster at once won for him a high place among the historians of art. In "Les Alpes et les Grisons dans le XVIe et XVIIe siècles" (6 vols., 1875-98) he has collected evidence to show the splendid part played by the papacy as leader of the Renaissance. When two volumes of this work had appeared, his author issued "Précurseurs de la Renaissance" (1881), and followed this with "Raphael", to which it is a sort of introduction. The "Précurseurs" and "Raphael" are still classics (1st ed. 1851; 2nd ed. 1886); to them must be added a small but important volume "Les Historiens et les critiques de Raphael" (1884), in which Münster defends traditional against modern criticism, especially against Morelli. He afterwards developed his cherished ideas in a work which became the most important work in France on Italian art, "Histoire de l'art à l'Italie, au temps de la Renaissance" (I, "Les Primitifs", 1888; II, "L'Age d'Or", 1891; III, "La Fin de la Renaissance", 1895). His views are not very original, his taste is somewhat academic, with a bourgeois tinge; but this history is nevertheless a most valuable popular treatment of this glorious period. His picture of the Renaissance is completed by an entire study, "Léonard de Vinci," which appeared in 1898. These books form a group by themselves; Münster published many others, some of them works of sheer erudite research, but most of them bearing on the main work of his life, and forming supplements or additions to it. Among the former are: "Notes sur les mosaiques d'Italie" (1874-
appointed him archivist and librarian in Modena, which position he held until his death. In 1716 Muratori became, in addition, provost of St. Maria della Pomposa, and conducted this parish with great zeal until 1733. He continued publishing unedited writings, first among which was a volume, "Anecdota graeca" (Padua, 1709). At the same time he cultivated literature, as is shown by his works, "Della perfetta poesia italiana" (Modena, 1706) and "Riflessioni sopra il buon gusto nelle scienze e nelle arti" (Venice, 1708). He even intended to establish something like a general socity of Italian literature, and as early as 1763 published for this purpose, under the pseudonym "Lamindo Pritiano", a plan "Primi disegni della republica letteraria d'Italia". In 1708 a quarrel broke out between the Holy See (aided by the emperor) and the Dukes of Este, over the possession of Comacchio, which involved the sovereignty of the district of Ferrara. M uratori supported the claims of his sovereign and of the house of Este against the pope by means of numerous historical and archaeological researches, which he later on utilized in the preparation of a great historical work, "Antichità Estensi ed Italiane" (2 vols., Modena: 1st vol., 1717; 2nd vol., 1740). He continued studying the sources for a history of Italy, and as a fruit of his untiring researches there appeared the monumental work, "Rerum italicarum Scriptores ab anno zero christianum 500 ad annum 1500". It was published in twenty-eight volumes with the assistance of the "Società Palatina" of Milan (Milan, 1723-51). A new critical edition is now (since 1900) appearing in serial form under the direction of Giuseppe Carducci and Vittorio Fiorini in "Città di Castello", J. Calligaris, J. Filippi, and C. Merkel published "Indices chronologici" (Turin, 1885) for the same. At the same time Muratori edited a collection of seventy-five essays on different historical themes, entitled "Antiquitates italicæ medii ævi" (6 vols., Milan, 1737-42), as an elucidation and supplement to his work on the sources. In the third volume of this collection there is found the Muratorian canon (q. v.) which is of the greatest importance for the history of the New Testament canon. In order to render these researches accessible to greater masses of his countrymen, he himself published a new edition of "Anecdota graeca" (3 vols., Milan, 1751). Other important publications of sources are his collections of ancient inscriptions ("Novus thesaurus veterum inscriptionum", 4 vols., Milan, 1739-42), the fourth volume containing also the ancient Christian inscriptions; and the edition of the Roman Sacramentaries ("Liturgia romana vetus" 2 vols., Venice, 1748), of value to this day. He wrote a great chronological representation of Italian history ("Annali d'Italia" 12 vols. quarto, Milan, 1744-49), based upon the numerous sources which he published or which otherwise were known. After his death this work was re-edited and continued (Milan, 1753-56 in 17 vols.; new edition in 18 vols., 1815-21).

The great mind of this learned man was not limited to the wide province of history; he was also interested in religious questions and he published...
a work, which attracted considerable attention, on the question as to how far freedom of thinking might go 'in religious matters.' De inquisitorum moderatione in religionis negotiis' (Paris, 1714). Many of his views and opinions were openly challenged; for instance those concerning the Immaculate Conception of the Blessed Virgin and the manner of worshiping the saints. Another work, which touches upon religious questions, 'Della regolare divisione de' Cristiani' (Venice, 1723), also called out (Mazzella, 1723). He still continued his literary activities, as is shown by his works on Petrarch ('Vita e rime di F. Petrarca.' Modena, 1711) and Castelvetro ('Vita ed opere di L. Castelvetro,' Milan, 1727). On philosophy he wrote, 'Filosofia morale esposta' (Venice, 1735), 'Delle forze dell'intendimento umano' (Venice, 1733); and 'Della vita' (Venice, 1745). Law and politics are treated in 'Governo della Peste politico, medico ed eclesiastico' (Modena, 1714; frequently reprinted), 'Defetti della Giurisprudenza' (1741), 'Della pubblica felicità' (1749). Muratori really proved himself to be a universal genius of rare calibre, at home in all fields. As a churchman and statesman he showed equal ability as a literary man; he was zealous in the ministry, charitable to the poor, and diligent in visiting the abandoned and imprisoned. He corresponded with a large circle of acquaintances. A collection of his letters by Selmi appeared in Venice (2 vols., 1789); another by Ceruti in Modena (1885). A complete collection has been published by M. Campari ('Epistolario di L. A. Muratori,' Modena, 1901 sq.). In spite of many attacks which he had to suffer for his religious views, and notwithstanding many of his opinions regarding ecclesiastical politics were not approved of in Rome, he was highly esteemed in the most exalted ecclesiastical circles, as is shown in the letter which Benedict XIV., on 15 Sept., 1748, wrote to him with the intention of easing his troubled mind. Cardinal Ganganelli, later on Clement XIV, also sent him a letter in 1748, in which he assured him of his highest esteem and respect.

Muratori, Vite della vita dei L. A. Muratori (Venice, 1750); 8th ed. (1770); I. A. Muratori (Modena, 1818); I. A. Muratori in Annali d'Italia, I (Milan, 1818); R. Bonn, Historiographia italica, IV (1840), 19-391; Historische-politische Blätter (1874), 353, 524; Gay, L. A. Muratori, padre della storia italiana (Asti, 1885).

J. P. Kirsch.

Muratorian Canon, of Muratorian Fragment, after the name of the discoverer and first editor, L. A. Muratori (in the 'Antiquitates italicae,' III, Milan, 1740, 551 sq.), the oldest known canon or list of books of the New Testament. The MS. containing the canon originally belonged to Bobbio and is now in the Bibliotheca Ambrosiana at Milan (Cod. J 101 sup.). Written in the eighth century, it plainly shows the uncultured Latin of that time. The fragment is of the highest importance for the history of the Biblical canon. It was written in Rome itself or in its environs about 180-200; probably the original was in Greek, from which it was translated into Latin. This Latin text is preserved solely in the MS. of the Ambrosiana. A few sentences of the Muratorian Canon are preserved in some other MSS., especially in codices of the eighth and ninth centuries in Munich, Venice, and other libraries; no mere list of the Scriptures, but of a survey, which supplies at the same time historical and other information regarding each book. The beginning is missing; the preserved text begins with the last line concerning the second Gospel and the notices, preserved entire, concerning the third and fourth Gospel. Then there are mentioned: The Acts, St. Paul's Epistles (including those to the Galatians and the Hebrews); the two Epistles to the Laodiceans and Alexander; the Apocalypse; the Epistles of St. Jude and two Epistles of St. John; among the Scriptures which "in catholica habentur" are cited the "Sapietia ab amicis Solomonis in bonorum ipsius scriptus", as well as the Apocalypses of St. John and St. Peter, but with the reason that some will not allow the latter to be read in the church. Then mention is made of the Pastor of Hermas, which may be read anywhere but not in the divine service; and, finally, there are rejected false Scriptures, which were used by heretics. In consequence of the barbarous Latin there is no complete understanding of the corrigendum of the sentence. The author, many conjectures were made (Papias, Hippolytus, Caius of Rome, Hippolytus of Rome, Rhodon, Melito of Sardis were proposed); but no well founded hypothesis has been adduced up to the present. The Muratorian Canon was newly edited by Tregelles, 'Canon Muratorianus' (Oxford, 1867); Westcott, "A general survey of the history of the canon" (6th ed., 1889); Buchanan, in "Journal of Theol. Stud." VIII (1907), 540-42; Harack in "Zeitschr.f. Kirchengesch.," III, 595-99; Prefeuchten in "Analecta, kürzere Texte zur Geschichte der alten Kirche und des Kanons"(2nd ed., Tübingen, 1910), 27-35; Rauschen, "Florilegium patristicum," I (Bonn, 1903). The value of the Canon as a historical source is very great, and it was employed by J. K S. Kuen, Das Muratorische Fragment (1892); Chapman in "Revue Benedictine" (1904), 240 sq., 359 sq.; Robinson, "The Authorship of the Muratorian Canon in The Expositor, 1 (1890), 401 sq.; Harnack, II (1906), 210 sq.

Muret, Marc-Antoine, French humanist, b. at Muret, near Limoges, in 1526; d. at Rome, in 1585. He studied at Poiets and was greatly influenced by Scaliger, whom he twice visited at Agen. He taught successively at Poiets (1546), Bordeaux (1547), and Paris. Becoming intimate with Doria, Joseph du Bellay, and the poets of the Pleiad, he published in French a commentary on the "Amours" of Ronsard (1553) and a collection of Latin verses, the "Juvenilia." His prosperity seemed unclouded, when accusations of heresy and immorality drove him from Paris to Toulouse, and thence to Lombardy. At last he settled at Venice, where he taught for four years (1555-58).

To the Venetian period of Muret's life belong his editions for Paulus Manitius, of Horace, Terence (1555), Catullus, Tibullus, and Propertius (1558), to which must be added the three orations "De studiis litterarum" (1555). It was at Venice that he became connected with Laminus. In 1558 Muret published the first eight books of his "Variae lectiones", which occasioned Laminus to accuse him of plagiarism and brought their friendship to an end. With the year 1559 began the insecure period of Muret's life, when he devoted himself to private tuition. He next entered the service of Ippolito d'Este, Cardinal of Ferrara, in whose suite he went to Paris, and thence to Rome, where he spent the remainder of his life (1563-85) expounding Aristotle, Cicero, Plato, Juvenal, and Tacitus, and teaching jurisprudence. In 1572 he received Holy orders.

Muret's editions of Latin authors and translations of Plato and Aristotle, while they hardly entitled him to a place with the Humanists, show a good taste, acumen, and care. As a stylist, he was long esteemed one of the modern masters of Latin. He succeeded in imitating Cicero rather by a felicitous resemblance between his own temperament and that of his model than by any painfully laborious
search for Ciceronian locutions, and he felt compelled to protest against the exaggerations of contemporary Ciceronians. He himself tells of an amusing incident, when he purposely employed, in speaking Latin, a word not to be found in Nisichius's Ciceronian Lexicon: some of his hearers exclaimed in horror at the apparent slip, and then, when he showed them the word in question on the first leaf of that same lexicon, they explained that the scholars were actually in their plaudits. His most interesting work, "Variae lectiones" (1559, 1580, 1585), contains not only observations on ancient authors, but notes of real value in relation to the history of his own times. Such, for instance, is his account of a conversation with his patron, the Cardinal of Ferrara, about St. Peter's. His election had put an end to the cardinal's ambitions (XVI, 4). Muret's works were edited by Ruhnken (Leyden, 4 vols., 1789), and another edition appeared at Verona (5 vols., 1727-30). Besides the editions of authors above mentioned, we are indebted to him for Cicero's Catalan Orations (Paris, 1581), the first book of his Tuscanian Disputations, his "Philosophies" (Paris, 1592), Seneca's "De providentia", and some notes on Sallust and Tacitus.

Paul Lejay.

**Muri (Muri-Gries),** an abbey of monks of the Order of St. Benedict, which flourished for over eight centuries at Muri near Basle in Switzerland, and which is the subject of a work published under Austrian rule at Gries near Bozen in Tyrol.

The monastery of St. Martin at Muri in the Canton of Aargau, in the Diocese of Basle (but originally in that of Constance), was founded in 1027 by the illustrious house of Hapsburg. Rha, a daughter of Frederick the Great, who was the lord of Hapsburg, and Werner, Bishop of Strasburg, with one accord gave the lands, which each possessed, to a monastery which they established in that place. To people the new foundation a colony of monks was drawn from the Abbey of St. Meinrad at Einsiedeln, under the leadership of Prior Regimbold, on whose death in 1055 the first abbot was chosen in the person of Burwald. During his rule the abbey church was consecrated in 1064; it was for many years the burial place of the Hapsburg dynasty. About this time the community was reinforced by the accession of a new colony of monks from the Abbey of St. Blaise in the Black Forest, one of whom, the blessed Ludger of Gries, was the eloquent and enthusiastic apostle of the Gospel to the Savoyards till his holy death 31 December, 1066.

During the Middle Ages the monastery, like so many hundreds of similar institutions of the Benedictine Order, pursued its quiet work of religion and civilisation, and enjoyed the advantage of being governed by a remarkable succession of able men. Among the names of its most distinguished abbots are those of Rachelin; Cuno, founder of its school, and a generous benefactor to the library of the monastery; Henry Scheuk who greatly increased its landed property; and Henry de Schoenwerd. The history of the last named presents a curious instance, almost without parallel, of a whole family embracing the religious life. The father with his sons entered the abbey of the monks, whilst his wife and daughters betook themselves to the adjoining convent of nuns, a community which later on was transferred to Hermetschwil, a mile or two distant from Muri. The good reputation enjoyed by the Abbey of Muri procured it many friends. In 1114 the Emperor Henry V took it under his special protection; and the pope on the whole was glad to attach it to his See for its welfare; it would seem, however, that the use of pontificalia was not granted to the abbeys of Muri until the time of Pope Julius II (1503-1513).

Like all other institutions the place had its vicissitudes of good and bad fortune. It was laid low by two disastrous configurations, in 1300 and in 1383; wars and risings checked for a time its prosperity. It recovered somewhat of its old life under Abbot Conrad II, only to suffer again under his successor George Russinger in the war between Austria and Switzerland. Russinger had taken part in the Council of Constance and had caught something of the reforming spirit of that assembly, and in the meantime he was aggregating his community to the newly formed Confraternity of Bursfeld, the first serious attempt to bring about among the continental monasteries of northern Europe a sane and much needed reform of the Black Monks of St. Benedict. It was owing to him too that the Helvetic Confederation took over, as it were, the duties of an Hapsburg friars. The abbeys of Muri, being among those by which, it strengthened both in its inner life and observation, and safe under the protection of the new political powers, was enabled to withstand the shock of the religious wars and ecclesiastical upheavals which marked the advent of the Protestant Reformation. When the first fury of that movement had abated Muri was fortunate in having a man of remarkable ability. Dom John Jodoc Singesin elected in 1596 proved himself a second founder of his monastery, and extending his care to the other Benedictine houses of Switzerland is rightly revered as one of the founders of the Swiss Congregation established in 1602. Largely through his efforts discipline was maintained, where reprobate monks had recently walked forth from Muri to ravage the half ruined cloisters; by his wisdom suitable constitutions were drawn up for such communities of nuns as had survived so many revolutions. His successor Dom Dominick Thuchdi was a man of like mould and a scholar whose works were held in great repute. He was born at Basle and died there in 1662. His "Opus, generale edificio, comitia de Hasburg" is his best known work.

With the eighteenth century fresh hopes came to Muri. The Emperor Leopold I created Abbot Placid Zurlauben and his successors Princes of the Holy Roman Empire, and spent a vast sum of money in rebuilding and embellishing the monastery and church, the ancient mausoleum of the imperial family. The abbey continued to flourish and was a great and at times a most reverend house. The order of the Passion of Christ and the Confessio of the monks, who held together and were soon a force to be reckoned with, invited them to undertake the management of the cantonal college at Sarnen. The kindly offer was accepted, and there the main body of the monks resided, the Lord Abbot himself taking his share in the school work. In 1838, until the Austrian Emperor, Ferdinand I, offered them a residence of their own, they moved to an old priory of Augustinian Canons of the Lateran which had been unoccupied since 1807. The Holy See concurred in the grant, and confirmed the transfer of the community of Muri to Gries by a Brief of Gregory XVI, dated 16 September, 1844.

In order
to avoid complications the house of Gries was continued in its former status as a priory and incorporated with the Swiss Abbey of Muri, which is regarded as temporarily located in its Austrian dependency, the Abbey of Muri being at the same time Prior of Gries.

The persecution which drove the community from its state at home to Muri seems in no way to have lessened the numbers and good works of the monks; indeed there has been an notable increase in the personnel of the convent in recent years and fresh demands are ever being made on their manifold activities. At Gries itself, the centre of this fraternity of nearly a hundred monks (over seventy priests and clerics, the rest who constitute the monastic family of St. Martin of Muri, the monks conduct a college of 158 boys, and also a training college for schoolmasters attended by nearly sixty students; while at Sarnen in Switzerland their college educates about two hundred and forty boys, and at the technical school in the same place, carried on by the monks, the classes number usually between seventy and eighty scholars. The Abbey of Muri has under its care live "incorporated" parishes with two chapels of ease serving for the spiritual needs of about nine thousand souls; another parish, not incorporated with the abbey, ministers to about 418 people; and the oversight of the convent long established at Hermetschwil-Ilbatal near Muri is also included in the work of the monks of Muri-Gries.

**John Gilbert Dolan.**

**Murillo, Bartolomé Esteban, Spanish painter:** b. at Seville, 31 December, 1617; d. there 5 April, 1682. His family surname was Esteban; that of Murillo, which he assumed in accordance with an Andalusian custom, was his mother's. His father was an artisan. An orphan at the age of ten, Bartolomé was brought up by his uncle, J. A. Lagares, a barber. He became the pupil, probably while still very young, of Juan del Castillo, a mediocre painter, but good teacher, whose atelier was at that time much frequented. It is said that, to gain a living, the young man in those days made argus—cheap paintings on rough canvas sold at country fairs (fairs), and shipped to America by traders. The Museum of Cadiz claims, but without proof, that one of these Murillos is painted by him in 1641. Velasquez, Bartolomé's painter and the friend of Olivares, was himself a native of Seville; he welcomed his young compatriot and gave him the entree to all the royal galleries, where Murillo saw the masterpieces of Titian, Veronese, Tintoretto, and Rubens, not to mention Velasquez himself. He spent three years here, and this was all his travel. He returned to Seville in 1644, to live in Cadiz in 1661, but once, in 1661, when he went to Cadiz to paint an altar for the Capuchins which he never had the time to finish. A full from his sedentary or else a serious illness—accounts differ—forced him to let himself be taken back, hurriedly, to Seville, where he died after a brief period of suffering.

This period of a very pure life, and perfectly happy, is spent within that one Sevillian horizon which the artist never wished to change for any other. His paintings in the porteria of the Minims made a celebrity of him at the age of twenty-eight (1646). From that time he devoted himself to work on a large scale for the convents of his native Seville, work which, in some respects, recalls the Giottesque paintings of the fourteenth century. In contrast with Velasquez and the Madrid school, Murillo is wholly a religious painter. With the exception of a few portraits and some genre pieces, not one profane picture of his is known to exist. The product of his life's work is summed up in the great cycles of the Franciscan (1670-74), of the Caridad Hospital (1670-74), of the Capuchins (1676), of the Venerables Sacerdotes (1678), of the Augustinians (1680), and, lastly, of the Cadiz Capuchins, together with a large number of pictures made at different times for the cathedral of Seville or other churches and many devotional works for private individuals. Murillo was the local painter of a country where all sentiment was still merged in the one sentiment of religion. The critics have distinguished three periods, or manners, in his work: the cold, the hot, and the "vaporous". The classification is foolish and pedantic. It is enough to look at his "Angels' Kitchen" (1646), his "Birth of the Virgin" (1655), and his "Holy Family" (1670), all in the Louvre. Here we can see nothing but the natural evolution of a talent which from first to last pursued but one ideal—the poetical transfiguration of facts and ideas.

This ideal is already fully perceivable in the first of the examples cited, or in the "Death of St. Clare" (Dresden Museum), which also belongs to the porteria series. In the "Angels' Kitchen", as in many others of his paintings, the artist's problem is to combine the supernatural with the real and familiar. Here we have a holy Franciscan in ecstasy, lifted from the ground, while angels with shining wings attend to the service of the rectorcy and wash the pans; and lastly, some spectators are peeping through a half-open door. The whole scene is cast into a field of light, displayed with admirable clearness, without a suggestion of hiatus between the three parts which are so diverse in character.

From this period date those few genre paintings which may be regarded as exceptional works of Murillo, the most famous example being the "Pouillox" of the Louvre. Like every great Spanish painter, Murillo is a realist, and goes as far as any other in the pathetic painting of suffering. But he refuses to paint those horrors with the frightful didtantism, the cold, cruel detachment, of other Spanish artists. For him, pain and misery are objects of pity, not of curiosity or pleasure. Alone of the great painters of his race, his genius is tender, compassionate. Murillo's work is always exact and sound, is never altogether impersonal or objective. In spite of himself, he communicates, together with the record of the reality, the emotions which it produces in himself; he does not alter its form, but he adds to it something of his own. In Spain, the classic land of brutal observation, of the "shore taken from life" served up raw and bleeding, Murillo invents, combines, achieves compositions. He has an imagination, and he does not make a point of honour of ignoring it. With more than average gifts for portraiture—as witness his portrait of Padre Cabanillas, at Madrid, or the admirable figure in the Museum of the Hispanic Society in New York—he made very few portraits. On the other hand, he has the gift and the instinct for story-telling. The Italian...

sense of fine arrangement, of a happy symmetry and harmonious balance of grouping, as in his Holy Family with two Beggars, a painting upon which he alone seems to have possessed in his age.

Murrillo was a great painter of sentiment. Like Rembrandt, he understood that the true language of the Gospel was the language of the people. Like him, he especially delighted in the merciful and tender aspects of the Gospel. Nothing can be more touching than the 'Piedad,' the sorrow of the Hercules; not even Rembrandt's treatment of that subject—or his sketches on the same parable in the Prado. Like Rembrandt, he loves to bring the sacred truths near to us, to make us see them as intimate and familiar realities, to show us the Divine all about us in our lives. Murrillo, no doubt, has the defects of these qualities. But he is unerring in his power of expressing himself. His Homilies, his sermons, reflect the solemn seriousness of the painting. In his 'Apostles,' his grace, lack the seriousness that trials should have imparted. His serene smile lacks that intangible quality of having been through sorrow. Failing this experience, the soul tends somewhat to levity and to preciosity. This pre-eminence as, superlatively, the painter of the Immaculate Conception seems to have been overshadowed in the circumstances of his birth. At Seville, in 1617, the dogma of the Immaculate Conception was solemnly promulgated for Spain; and this splendid celebration took place in Murillo's native city only a few months before his birth. The pictorial treatment of the Assumption has its main outlines, by a vision said to have been vouchsafed to a Franciscan of the sixteenth century, and a hundred examples of it are found among earlier painters. The mere theological dogma of the Immaculate Conception — exemption from the original sin—necessarily eluded all material representation; the effects of its influence are seen in the mystic visions. The body is seen exempt from all the laws of gravitation. Murrillo has treated this theme more than twenty times, without repeating himself or ever wearying: six versions at Madrid, six others at Seville; the famous Louvre picture (dated 1678), and still others scattered over Europe—all these did not exhaust the painter's enthusiasm or his power of expressing apothecary.

It is a remarkable fact that these pictures, which represent the most transcendentally spiritual action, are the most thoroughly feminine paintings in Spain. But for religious representations of the Blessed Virgin and the saints, indeed, woman is almost absent from Spanish painting. When we select from the romantic women, the infantas or meninas of Velasquez, retain nothing of feminine charm: they are simulacra and phantoms without verisimilitude. Side by side with these apparitions, Murillo's Virgins produce a comforting effect of relief. Here are women, true and vital, with the most thoroughly external charms of their sex. In them the impulse of love rises to ecstasy, and without Murillo Spanish painting would be deprived of its most beautiful love poems. Many persons, it is true, see in this style of painting the symptoms of decadence in Spanish religious sentiment. This question of the soundness or unsoundness of his devotional tendencies cannot be treated here, but it may at least be claimed for Murillo that his art—notably in these Immaculate Conceptions—is no less genuinely religious than the dry productions of, say, a Philippe de Champaigne.

LOUIS GILLET.

Murner, Thomas, greatest German satirist of the sixteenth century, b. at Oberheinheim, Alsace, 24 Dec., 1475; d. there, 1537. During the epoch immediately preceding and during the early years of the Reformation, these three figures are among the most prominent among the loyal champions of the Church in Germany, namely Johann Geiler von Kaysersberg, his friend Sebastian, the well-known satirist, and Thomas Murner, the ablest and most formidable of Luther's opponents. In 1481 Murner's parents, pious people in comfortable circumstances, settled in Strasbourg, where his father, practised as an advocate. Thomas, who was of delicate health, entered the Franciscan Order at the age of sixteen. After his ordination, he began his restless and unsettled life, visiting the most celebrated universities either as a student or as a teacher. He studied theology at Paris, philosophy and mathematics at Cracow, and law at Freiburg, where he obtained his degree of Bachelor of Theology in 1500. Six years later, when again at Freiburg, he was made Doctor of Theology. In 1518 he graduated Doctor of Laws at Basle. His impulse towards a roving life was due, not only to his love of learning, but also to his mission as a preacher and his zeal for the interests of his order. From 1519 he took part in the controversies which began with the appearance of Luther as a reformer. In 1523 he went to England and was cordially received by Henry VIII, whose book on the sacraments he had translated into German the previous year. On his return to Strasburg, he found himself compelled to fly before the rebellious peasants and seek refuge at Luzerne. Here he became the intimate friend of Zwingli. Together with Dr. Eck, he took part in the religious discussion at Baden in 1528. When Zwingli was taken in the first War of Kappel (1529), Murner was to have been given up. He managed, however, to escape, and, after many wanderings, was appointed pastor in his birth-place, where he spent the rest of his days.

As an author, Murner was at first an enthusiastic friend of Humanism. In Cracow he lectured on literature and aesthetics, and in Freiburg on Vergil, whose 'Enide' he had translated. In token of gratitude for his appointment as poet-laureate in 1505, he dedicated this translation to Emperor Maximilian. In his 'Ludus studentum Friburgensium' (1511), Murner explains the rules of prosody and quantity after the fashion of a game of chess and backgammon. This method he had already employed four years before in Cracow in his 'Chartiludum logicae', but his application of it to jurisprudence provoked the derision of the lawyers. His sympathy with Humanism did not save him from the censure of his superiors when he attacked Wimpeling's 'Germania', which aimed at proving that Alsace had never belonged to France. Murner's defence of his position, the 'Germania nova', was suppressed by the Strasbourg authorities: a further attempt at justifying himself against the attacks of the partisans of Wimpeling also proved unsuccessful, and did not prevent his opponents from distorting his name into Murnar (growing fool).

Even, in this early controversy, Murner had shown a sharp eye for his opponents' weaknesses, and a marked gift for exposing them to ridicule: in his subsequent writings, he is revealed as a master of satire. Just as Geiler illustrated his popular sermons with comparisons drawn from everyday life, Murner compares, in his "Andächtige geistliche Badefahrt" (1511), the forgiveness of sins to a hydropathic treatment. In "Narrenschöpfung" and "Schelmenzunft" he deals with the same subject as Brant's "Narrenschiff", but his work is entirely original in treatment and far surpasses the earlier work in its popular appeal, its wit, and its infinite wisdom-degenerate as it is in theological soundness. His subsequent satires, "Gäuchmann" ('Fools' Meadow) and "Die Mühle von Schwindelach und Gretmüllerin Jahrzeit", in which he severely criticizes a special kind of fools, the "fools of love", form a kind of sequel to the "Schelmenzunft". There is no
station, either clerical or lay, that is spared from his castigation.

The appearance of Luther diverted Murner's satire into a new course. Regarding the Wittenberg monk at first as a well-intentioned ally in the battle against the evils afflicting the Church, Murner addressed to him in 1520 an appeal entitled "Christliche und brüderliche Ermahnung an den hochgelehrten Doctor Martin Luther", which was followed soon after by other pamphlets refuting and warning him and beseeching him to abandon his ruinous undertaking. In his "Neues Lied vom Untergang des christlichen Glaubens" (1521), Murner gives feeling expression to his sorrow over the destructive tendencies of the religious innovation. But, when the sole effect of his attempts at conciliation was to bring upon him a shower of death threats and pamphlets, Murner dealt Luther a crushing blow in his work, "Von dem grossen Lutherischen Narren wie ihn Doctor Murner beschworhen hat". Here Murner rises to heights of satire elsewhere unattained during this whole epoch. All the reformatory endeavours are embodied in the "Great Fool", and the newly-founded Church with its "Great Fool" as its chief is depicted in a more sinister light than Murner's daughter Adelheid, who "has a shocking scald-head." Murner wrote many other satires against the reformers, but none which in energy and wit equals this work. This work, so full of fight and honest zeal for the old Faith, was subjected to much calumnry and derision during his lifetime, but was never vanquished in print or in pamphlets. Later generations did him justice. Lessing intended to write a "defence" of Murner, and literary historiographers (especially Kurtz, Vilmar, and Godeke) have recognized his great importance in the history of literature. Critics have pointed out in his works a peculiar and original metrical and rhythmical system which distinguished him from all poets of his time. His "Great Fool" had in it something peculiar, something degenerate. As the only Catholic writings of Jansen-Pastor, Gesch. des deutschen Volkes, VI (15th ed., 1901): SALEER, Illustrate Gesch. der deutschen Litt. (in course of publication), pp. 525-24.

N. SCHEID.

MURO-LUCANO, DIOCESE OF (MURANENESIS), in the province of Potenza, in Basilicata, southern Italy. The town is situated on the site of the ancient Numistri, at the foot of the Apennines, the scene of a battle between Hannibal and Marcellus in the second Punic war. The town has a beautiful cathedral; and it was in its castle that Queen Joan of Naples was killed by order of her adopted son, Charles of Durazzo. The first Bishop of Muro of whom there is mention was Leo (1049). His bishop Antonio (1376) became a partisan of the antipope Clement VII; he was therefore driven by Carlo di Durazzo to seek refuge at Polson, whereupon Clement VII suppressed the Diocese of Muro. In 1418, however, Guiduccio de Forta was appointed to a vacant diocesan see, and learned the cardinals as well as in canon law; among his successors were Flavio Orsini (1560), who became a cardinal; the poet Gian Carlo Coppola (1643), who later became Bishop of Gallipoli, his native town; Alfonso Pacello (1674), founder of a congregation of priests for the care of the sick of the diocese. The see is suffragan of Conza; it has 12 parishes with 40,290 inhabitants, 100 secular priests, 2 religious houses of women, and an educational establishment for girls.

CAPPELLUTI, La Chiesa d'Italia, XX (Venice, 1857).

U. BENIGNI.

MURRAY, DANIEL, Archbishop of Dublin, b. 1768, at Sheephawk, near Arklow, Ireland; d. 1852 at Dublin. He was educated at Dr. Betagh's school in Dublin and at Salamanca and ordained priest in 1790. After some years as curate in Dublin he was transferred to Arklow, and was there in 1798 when the rebellion broke out. The soldiers shot the parish priest in bed, and Murray, to escape a similar fate, fled to the city, where for several years after he ministered as curate. In 1809 at the request of Archbishop Troy he was appointed coadjutor-bishop, and in 1813, on Dr. Troy's death, he became Archbishop of Dublin. While coadjutor he filled for one year the position of president of Maynooth College. Dr. Murray was an uncompromising opponent of the "veto" and a strong supporter of the Catholic Association. On other questions he was less advanced, and was in such favor at Dublin Castle that he was placed on the Privy Council, which he declined. He supported Stanley's National Education scheme and was among the first Education Commissioners; he also wished to tolerate the Queen's Colleges, in opposition to the views of Archbishop MacHale. He had no hesitation, however, in accepting the adverse decision of Rome, and was present at the Synod of Thures where the Queen's Colleges were formally condemned. He was a charitable, kindly man, respected even by his opponents.

MURRAY, JAMES D. See COOKTOWN, VICARIATE APOSTOLIC OF.

MURRAY, PATRICK, theologian, b. in Clones, County Monaghan, Ireland, 18 November, 1811; d. 15 Nov., 1852, in Maynooth College. He received his early education at Clones, and was sent to Maynooth College 25 August, 1829, the year of Catholic emancipation, among the first class of emancipated entrants, went through the ordinary course with great distinction and was elected a Dunboyne, or senior student in June, 1835. Towards the end of the Dunboyne course he accepted a curacy in Francis Street, Dublin, where in a short time he acquired the reputation of a zealous worker and an eloquent preacher. He was appointed professor of English and French in Maynooth, on 7 Sept., 1838, after the usual concursus, or examination, and after three years in this position he was appointed professor of theology, and another brilliant concursus, on 27 August, 1841. The remainder of his life was devoted to theological science. In 1879 he was appointed prefect of the Dunboyne Establishment, which position he retained until his death in 1882. His principal works are: "Essays, Chiefly Theological" (4 vols., Dublin, 1850-53); "De Ecclesia Christi" (5 vols., Dublin, 1856-57); "De Ecclesiae Christianae compendium" (Dublin, 1874); "De Gratia" (Dublin, 1877); "De Veneratione et Invocazione Sacerdotii", etc.; "De Impedimentis Matrimonii Dirimentibus" (Dublin, 1881); "Prose and Verse" (Dublin, 1867); "Lectures (on Moore's poetry) before Cork Young Men's Society" (Cork, 1856).

Dr. Murray was a man of high intellectual power, of big projects, and of great activity and perseverance. He would certainly have risen to great eminence in the world of literature, had he remained professor of English, as he was possessed of literary and poetical gifts of a high order. But he chose the domain of theology. He wrote for the Dublin Review and for magazines. In 1850 he undertook the intention of publishing a series of volumes on subjects chiefly theological, to supply the Catholic laity with exact and reliable information on the debated religious questions of the day. He published four volumes under the title: "Essays, Chiefly Theological". But though he intended at the beginning to extend the work to seven or
MUSEUMS

eight volumes, he discontinued the Essays after the fourth volume, to devote himself to the great work of his life, his "De Ecclesiae Christi". This work involved immense labour. It is a work of great learning, a masterpiece in positive and controversial theology, which at one time saved the Church from the ascendancy of dogmatic theologians. While not neglecting the views of the continental reformers, the author made a special study of the works of all the leading Anglican divines; and hence his work became the standard authority for the exposition and refutation of the then-current Anglican views about the Church. Though written in 1800, ten years before the Vatican definition, the author with great power establishes the doctrine of papal infallibility. The treatise, "De Gratia", excellent in itself, was intended as a textbook for students; as was also the less perfect work, "De Veneratione et Invocatione Sanctorum". Dr. Murray was ever kind and considerate for his students, by whom he was always respected and loved. He was of a retiring disposition, of a deeply religious nature, and of great saintliness of life.

HEALY, Maynooth College; Its Centenary History, 1796–1885 (Dublin, 1885). DANIEL COGHLAN.

Museums, Christian.—Though applicable to collections composed of Christian objects representative of the Middle Ages, archaeologists use the term for museums which abound chiefly in Christian objects antedating the Middle Ages, namely, sarcophagi, inscriptions and products of the minor arts. These objects, as also those peculiar to the Middle Ages, are found in a large number of museums, but not many of these institutions are exclusively or even primarily devoted to the study of pre-reformation Christian objects. The first collections that were formed (by humanists, by the Medici in Florence, etc.) occasionally included the earlier types or works of medieval art, but more on account of their artistic merit than because of their character. Collections of inscriptions had been made from the time of the Renaissance, but Christian inscriptions found no place among them. It was not until after the discovery of the Roman catacombs by Antonio Bosio that these inscriptions were visited by collectors from Rome and other cities. The first Christian museum, properly so called, was that of the Vatican, and its origin dates from Benedict XIV, who founded it under the name of "Museum Christianum". Thanks to Marchi and De Rossi, the collections were taken over and form the Lateran Museum, founded by a decree of Pius IX in 1854. For Christian antiquities no other museums equal the latter in point of importance. During the pontificate of Benedict XIV (1740–60) a taste for Christian antiquities was developed by other distinguished men, e.g., Cardinal Pasquini and Cardinal Quirini, Borgia and Carafa, whose diligent searches were prolific of important results.

Italy is particularly rich in valuable collections of antique Christian relics. In Rome, besides the Christian Museums of the Vatican and the Lateran, the Museo Kircheriano and the San Paolo, Propaganda, and Campo Santo collections are all noteworthy. The atrium of the main churches, e.g., St. Mark, Santa Maria in Trastevere, and St. Agnes, also the Grotte Vaticane, have Christian inscriptions or sculptures, and collections of inscriptions have been made in the vicinity of several Roman catacombs, e.g., St. Domitilla and St. Agnes; mention should be made also of private collections. Moreover, almost all the large museums of Italy and the treasuries of some churches have objects belonging to the early Christians, e.g., the Museum and Library of Brescia and those of the Uffizi at Florence, the municipal Museum of Florence, the Trivulzi collection, the treasuries of the cathedrals of Milan and Monza, the Museo Nazionale al Palermo, the Museum of the Villa Cassia at Syracuse, etc. Outside of Italy, important collections of Christian antiquities are less numerous, although those of Cairo, Alexandria, Athens, of St. Louis of Carthage (the Lavigerie Museum), of Arles, Autun, Trier, etc., deserve mention. The museums of the great capitals, London, Paris, Berlin, where the treasures of some churches, e.g., the cathedral of Sens, have ivories and various works of art dating from the early Christian epoch. Such works, chiefly of Coptic origin, and very ancient, have lately been introduced into many collections.

Church treasuries, especially the richer ones of some German churches (cathedrals of Cologne, Trier, Hildesheim, Bamburg and the abbatial church of Eisen, etc.), are noted for their reliquaries and may pass for the oldest Christian museums.

In addition to the large museums of all countries, many museums of industrial art, provincial museums, private collections and archaeological societies, also episcopal museums, e.g., the rich ones of Cologne and Utrecht, contain many valuable and ancient Christian relics of an artistic kind. As a Christian museum of the Middle Ages, the Schnütgen collection at Cologne deserves special notice. It contains many religious objects, chalices, crosses, ecclesiastical vestments, etc., and offers a better opportunity than any other collection for studying the changing forms of these objects from age to age. A word is due to the museums that have been organized as an auxiliary to the collections of higher education. The most remarkable Christian museum of this kind is that of the University of Berlin, founded 1849–1855 by Ferdinand Piper. Although largely representative of the Middle Ages, it is unparalleled for its facsimiles of Christian antiquities. More recently M. G. Millet founded at the Ecole des Hautes Etudes, in Paris, a special museum, rich in copies and stereotypes gathered during the explorations and study tours made by French scholars. (See LATERAN, CHRISTIAN MUSEUM OF; VATICAN.)

R. MAERE.

Mush, an Armenian Catholic see, comprising the sanjak of Mush and Seert, in the vilayet of Bitlis. It was created by Leo XIII in 1883, and numbers about 5000 faithful, 7 secular priests, 7 churches or chapels, 5 schools, and an establishment of the Venetian Mechitarists. The chief stations outside of Mush are some neighbouring villages such as Bitlis or Tarsus. The town is built on a hill at the foot of a ruined citadel and in the midst of vineyards; below stretches a well-cultivated plain, about fifty miles long by eighteen miles wide. The climate is healthy and the country tolerably rich, but exposed to constant invasions of the Kurds and other nomads, who terrorize the inhabitants, especially the Christians. Burned by an Armenian party in 1909, the town of Mush has about 27,000 inhabitants, of whom 3,000 are Armenian Catholics, 10,000 Armenian schismatics, and 700 Protestants, the rest being Musulmans. Besides the Catholic bishop there is an Armenian Gregorian bishop; also a Protestant missionary. The celebrated Moses of Shoren was born in the neighbouring village of Choren Mixed. (See VAILLÉE, La Turquie d'Asie (Paris, 1851–1854), 571–72; MISSIONES CATHOLICAE (Rome, 1907), 757.)

S. VAILLÉE.

Mush (alias Ratcliffe). JOHN, priest, b. in Yorkshire, 1551 or 1552; d. at Wenge, Co. Bucks, 1612 or 1613, not as Bishop Challoner thought, in 1617. Having spent six months in the English College at Douai he went to Rome (1576) where he studied for seven years. Ordained priest, he returned to England (1583) and laboured at York, being confessed...
to Venerable Margaret Clitherow who suffered for harbouring him, and Venerable Francis Ingeley. Arrested 28 Oct., 1588, and condemned to die, he escaped with the help of a servant. For his part in the North becoming a recognized leader among his brother priests. When the dissensions among the imprisoned priests at Wisbech broke out in 1595, he with Dr. Dudley went there to arbitrate. Failing in this, together with John Colleton he set himself to devise some organization of a voluntary character among the clergy which might supply the want of episcopal government much felt after the death of Cardinal Allen in 1594. Opposed by Persons, it was rendered superfuous by the appointment of an archpriest (1599). In the ensuing controversy Musch was one of the appellant clergy who appealed to Rome against the archpriest. In connexion with this he wrote "Declaratio Motu" in 1602, with Champney Bluct and Cecil, went as a deputation to Rome where for eight months they fought for their petition. Their petition, first for six bishops and then for six archpriests, was refused; but though the archpriest succeeded in maintaining his position, the appellants were acquitted of the charges of rebellion and schism. One of the leaders in the early religious revival in England, Musch of the group of fifteen priests who signed the protestation of allegiance to Queen Elizabeth (1603). In his later years he acted as assistant to two successive archpriests, Blackwell and Birkhead, in Yorkshire, but he seems to have been acting as chaplain to Lady Dormer in Buckinghamshire at the time of his death. He is remembered as one of "The Sixty One Lamentations" and as editor of "Songs of Virtue" (1629). Mentioned in Ex., xv, and in Judges, v. Often the prophets are elated by sacred music. David beautified religious ceremonies by hymns and the use of instruments (Amos, vi, 5; 11 Esd., xii, 35; II Par., xxix, 25 sqq.). With him appears Asaph in the role of poet and singer, and the names of Asaph and other familiar names from the days of David, Elisha, and Isaiah are to be found in the Inner Temple, London. Dodd also says he wrote against the apostate priest Thomas Bell, and Pitts quotes his English translation of "Lectiones Panagotarli Turini", but these latter works are not now known to exist.

EDWIN BURTON.

Music, Ecclesiastical.—By this term is meant the music which, by order or with the approbation of ecclesiastical authority, is employed in connexion with Divine service to promote the glorification of God and the edification of the faithful.

Nature and Significance.—Just as St. Philip Neri spontaneously sang the prayers of the last Mass which he celebrated, so is all true religious music but an exalted prayer—an exultant expression of religious feeling. Prayer, song, the playing upon instruments, and action, when arranged by authority, constitute the elements of public worship, especially of an official liturgy. Thus was the case with the pagans, the Jews, and also in the Church from time immortal. These elements constitute, when combined, an organic unity, in which, however, music forms a part only on solemn occasions, and then only in accordance with the regulations of proper authority. As man owes to God that which is highest and most beautiful, music may employ on these occasions her noblest and most effective means. Church music has in common with secular music the combination of tones in melody and harmony, rhythm, tempo, dynamics, or distribution of power, tone-colour in voice and instruments, the simpler and more complicated styles of composition. All these, however, must be adapted to the liturgical action, if there be such, to the words uttered in prayer, to the devotion of the heart; they must be calculated to edify the faithful, and in short must serve the purpose for which Divine service is ordained. For assuming a character of independence and mere ornament, acts as an auxiliary to the other means of promoting the worship of God and as an incentive to good, it not only does not interfere with the religious ceremony, but, on the contrary, imparts to it the greatest splendour and effectiveness. Only those who are not responsive to its influence, or stubbornly cultivate other ways of devotion, can imagine that they are distracted in their worship by music. Appropriate music, on the contrary, raises man above commonplace everyday thoughts into an ideal and joyous mood, rivets mind and heart on the sacred words and actions, and introduces him into the proper devotional and festive atmosphere. This appropriateness takes into account persons and circumstances, variations being introduced according to the nature and use of the texts, according to the character of the liturgical action, according to the ecclesiastical season, and even according to the various needs of the contemplative orders and the rest of the faithful.

In order to honour God by means of music as well as by the other arts, and to heighten his religious exaltation by joyous singing. This significance of singing in connexion with Divine service has never been lost sight of. Under the Old Law the music of the Temple filled, in compliance with the commands of God Himself, a very elaborate and significant part. In Ps, xcvii, the people of God are exhorted to "sing praises to our God with a psalm, and to make melody in your hearts to the Lord" (Eph., v, 19). Tertullian relates that during Divine service Holy Scripture was read and psalms sung, and that even Pliny had ascertained that the Christians honoured their Lord before dawn by singing a hymn (Apol., ii). Thus, in confirmation of the regulations herefore followed by the Church", quotes the testimony of Philo, who relates that the Therapeutes, during their festive repasts, sang psalms from Holy Writ and other hymns of various kinds in solemn rhythm in monodic style with choroi rhapsodians (Hist. eccl., i, xviii). Whatever may have been the nature of the singing of the Therapeutes, Eusebius bears testimony to the traditional custom of the Church. While St. Augustine restricted the singing of the psalms to a kind of recitation, St. Ambrose introduced in Milan (and the greater part of the Western world) with great success antiphonal singing of the psalms "after the manner of the East". St. Augustine asks himself whether it is not better to sing passages of scripture derived from singing, but concludes his reflection by concurring with existing practices, and frequently testifies to the customs of his time (cf. Conf., ix, 7; x, 33; in Ps. xxi and xlvi; Retr., ii, 11). St. Jerome, refer-
ring to Eph. v. 19, exalts as follows the young whose duty it is to sing in Church: "Let the servant of God sing in such a manner that the words of the text rather than the voice of the singer cause delight, and that St. Paul's spirit may depart from those who are under its dominion, and may not enter into those who make a theatre out of the house of the Lord". A certain class of liturgical singers are also mentioned in the "Canones aposterorum". The above-mentioned antiphonal and responsorial chant intended for the people shows that the singing was not confined to the choir. St. Paul's spirit may depart from those who are under its dominion, and may not enter into those who make a theatre out of the house of the Lord. A certain class of liturgical singers are also mentioned in the "Canones aposterorum". The above-mentioned antiphonal and responsorial chant intended for the people shows that the singing was not confined to the choir. St. Paul's spirit may depart from those who are under its dominion, and may not enter into those who make a theatre out of the house of the Lord.

The Church Regulations.—The interest taken by the Church in music is also shown by her numerous enactionary permissions. Anything that is not expressly prohibited by the Church is worthy of Divine service. The right of the Church to determine the matter and manner of what shall be sung in connexion with her liturgy is incontestable. Narrow-minded musical partisans seem disposed to fear that music as an art does not receive due consideration, if it be not permitted to go its own way unconstrained. This is a misunderstanding, not only in the theory that art is an end in itself, and should not serve, except indirectly, any end outside of and other than itself. This principle could only have a certain justification, if the external dependency were to hinder the full development of music. But this is not the case. In point of fact, the history of its development shows that ecclesiastical music need not compare between its achievements and those of secular music. Many competent musicians have frankly admitted this in the case of the simple Gregorian chant—not only men like Witt and Gevaert, but also Halévy, Mozart, and Berlioz. Halévy considers the chant "the most beautiful religious song by that exactitude". Mozart's treatment of "Gloria" would gladly exchange all his music for the fame of having composed the Gregorian Preface", sounds almost hyperbolic. Berlioz, who himself wrote a grandiose Requiem, declared that "nothing in music could be compared with the effect of the Gregorian Dies irae". "It is not the antithesis of music, but an affirmation of music, as far as the cost of music is concerned. All that song is nothing compared with these chants". "The fundamental power, animating all music which is not made but which grew (as is the case with the folk-music), belongs pre-eminently to Gregorian chant." For this reason Gevaert considers the most characteristic quality of the chant to be the fact that it never grows stale, "as though time had no power over it". "In Beethoven, Liszt, and other modern composers, simple artistic means produce the deepest and most lasting impression, when skilfully employed. The first requisite is that the sentiments contained in the text be given true expression, and be not obscured by obtrusive external forms. It must be acknowledged that pieces like the Te Deum, Lauda Sion, the Lamentations, the Requiem Mass, as well as many an introit, gradual, and tract, afford a never-failing pleasure, that they employ only the simplest means to express the desired mood, that they are admirably adapted to promote devotion.

The Church, however, does not despise artistic means of a more elaborate nature, as is shown by the longrettents and the Requiem Mass (in the Vatican edition) and still more by ecclesiastical polyphonic music (Palestrina style). Upon this style modern musicians of the first rank have pronounced favourable judgment. Wagner was an enthusiastic admirer of Palestrina; Mendelssohn made every effort to collect masses, "improperia, psalms, motets of the old masters, which he preferred to all ecclesiastical music by modern composers. Also there are, indeed, many works by Orlandus de Lassus, Allegri, Vittoria, wherein the most elaborate means of expression are used, but which, nevertheless, conform to every liturgical requirement and are, as it were, spontaneous outpourings of adoring hearts (cf. contrapuntal or polyphonic music). Besides plain chant and the polyphonic style, the Church also admits to her service homophonic or figured compositions with or without instrumental accompaniment, written, not in the old ecclesiastical modes, but in one of the modern major or minor keys. Gregorian chant the Church most warmly recommends, the polyphonic style she expressly praises, and the modern she at least tolerates. According to the "Motu proprio" of Pius X (22 Nov., 1903), the following are the general guiding principles of the Church: "Sacred music should possess, in the highest degree, the qualities proper to the liturgy, or more precisely, sanctity and purity of form from which its other character of universality spontaneously springs. It must be holy, and must therefore exclude all vanity, not only in the composer, but in all who execute it. It must be true art, for otherwise it cannot exercise on the minds of the hearers that influence which the Church meditates when she receives into her liturgy the art of music. But it must also be universal, in the sense that, while every nation is permitted to adapt the ecclesiastical words to its own language, music which may be said to constitute its native music, still these forms must be subordinated in such a manner to the general characteristics of sacred music, that no one of any nation may receive an impression other than good on hearing them.

Regarding modern music, the "Motu proprio" says: "The Church has always recognized and honoured progress in the arts, admitting to the service of religion everything good and beautiful discovered by genius in the course of ages—always, however, with due regard to the liturgical laws. Consequently, modern music is also admitted in the Church, since it, too, furnishes compositions of such excellence, solid construction, and a certain kind of gravity, that they may influence the performance of the liturgical functions. Still, since modern music has mainly served profane uses, care must be taken that musical compositions in this style admitted to the Church may contain nothing profane, be free from reminiscences of theatrical motives, and be not fashioned, even in their external forms, after the fashion of profane pieces." It is very much to be regretted that the greatest masters of modern times, Mozart, Joseph Haydn, and Beethoven, devoted their wonderful gifts mainly to secular uses, and that their masses are entirely unsuitable for liturgical purposes—an unsuitability freely acknowledged by Mendelssohn. The inadmissibility lies in their treatment of the sacred text, the instrumentation, in the fact that they do not conform to the liturgical action, and often in an undue elaboration of form which seriously interferes with the devotion of the faithful. A few compositions by these masters (such as Mozart's Ave verum) do not deserve this reproach. The mere fact that a Gloria or Credo by Haydn, for instance, delays the progress of the service twenty minutes, while the other parts of these masses are of equal length, is sufficient to render them unsuitable for liturgical use. The following words from the "Motu proprio" are applicable to numberless compositions: "Among the different forms of modern music, those which are suitable for accompanying the functions of public worship is the theatrical style, which was in the greatest vogue, especially in Italy, during the last century. This, of
its very nature, is diametrically opposed to the Gregorian chant and classic polyphony, and therefore to the modern practice of divinity music. With the intrinsic structure, the rhythm and what is known as the conventionalism of this style adapt themselves but ill to the requirements of true liturgical music."

This wish of the Church, so frequently reiterated, should never be ignored by composer or performer. As the sacredness of the liturgy has caused the Church to direct that the priest, to the utmost of his powers, should employ in the fulfilment of his duties—which regulations he may not disregard without sinning—so also the regulations concerning church music are binding on the singers, whether the reasons for these regulations be understood by the individuals or not. It is indeed true, as a source of inestimable value, owing to special circumstances, sometimes excusable. The regulations are contained in the Missal, the "Ceremoniale episcoporum", and the decrees of councils and of the popes. The universally binding decrees of the Congregation of Rites are collected in "Decreta authentica", and have been, since 1908, published in "Acta Apostolicae Sedis". For local directions need no special publication for those immediately concerned. It is in some cases legitimate to assume that, in unessential matters, a given rule has rather a directive than a prescriptive character, provided the wording does not declare the contrary. Decree binding by plan or general conditions, binding only in the place to which they have been directed. In some cases it is legitimate to inquire about and remonstrate against a regulation before it becomes binding. Whenever exceptionally serious difficulties stand in the way, positive laws are not binding, unless the lawgiver explicitly insists on their fulfilment. Ordinary breaches in local conditions, which may, in the application of a given law, sometimes use their own discretion. Customs of long standing are to be treated with some leniency, unless ecclesiastical authority explicitly determines the contrary. Answers to inquiries contained in the "Decreta Authentic" or "Acta Apostolicae Sedis" are usually considered as binding, if they are for general and not merely for local application. The degree of binding depends on the importance of the matter in question, and it may be gathered from the degree of firmness or emphasis with which the lawgiver inculcates a given law. The verbal and musical texts are equally subject to ecclesiastical control. The use of the Vesperal edition of the Gregorian chant has been binding since 25 Sept., 1905. However, bishops may, owing to local difficulties, defer the execution of the law. (The command is given in mild form: "It is our most keen desire that bishops", etc.) The "Motu proprio" directs that all other musical performances be watched over by a commission appointed by the ordinary, so that in all places compositions of the proper character and within the capacity of the singers may be performed.

Regulations, so wise as these, compel our obedience. Consequently, the Holy Father has a right to expect that "we obey from the conviction that by so doing we act from reasons which are clear, plain and beyond dispute." Consideration of the purpose for which music is employed in church, of its close connexion with the liturgy, and of the inspiration of the Holy Ghost, is sufficient basis for this conviction. No one is bound to admire, as in every particular unsurpassed and unsurpassable, the prescribed chant. It is sufficient that the Gregorian chant be the supreme model for all Catholic church music and approve its use. We are not asked to abandon every personal scientific and aesthetic view, or to eschew research and theoretic discussion. If, however, the lawgiver does not urge the immediate execution of a law wherever, on account of the difficulties to be overcome, it is more likely to do more harm than good, it must not be understood that by these means the Church means to relax the requirements of the local existence of the Church. No, but the difference in our own taste be considered an obstacle. The regulations concerning church music are generally binding under pain of sin, and subtle distinctions to escape this responsibility are useless. For the composer of genius these prescriptions are not fetters, but rather serve to show him how to make his music a source of artistic inspiration. From the rules and traditions of the Church, as the performance of a sacred drama, the exposition of a battle scene, or even a statue representing a pagan deity. The performance of such music directs the attention not to the altar but to the organ loft. Musicians themselves have frequently failed to recognize clearly the difference between concert and church music, to deviate from religious compositions in secular cantatas and extracts from their operas for church purposes. A mass has also been compiled from some of Haydn's profane compositions. The "waxing of notes", the complete absorption of our consciousness by artistic melodic or harmonic conceptions and sensuous melodies, the display of instrumental virtuosity and dramatic effects of tonal masses put all devout recollection of the sacrificial act and all heartfelt prayer. March, dance, and other jerky rhythms, bravura arias, and the crash of instruments affect the senses and nerves, but do not touch the heart. Even a reminiscence of the concert hall is a distraction to those who wish to pray.

Not the least element in the effectiveness of such music is the sacred texts, which inspire composer, singer, and hearer, although in different ways. In the "Motu proprio" we read: "The liturgical text must be sung as it is in the books, without alteration or inversion of the words, without undue repetition, without breaking syllables and always in a manner intelligible to the faithful who listen." Only in this way are the sacredness of the text and the needs of the hearer safeguarded. For all official chants (Mass, Vespers, etc.) the texts are prescribed, and are in the Latin language. On this point the "Motu proprio" says: "It is not lawful to confuse the order or to change the prescribed text for other reasons, but it is lawful to change it entirely or in part. However, it is permissible according to the custom of the Roman Church, to sing a motet to the Blessed Sacrament after the Benedicium in a solemn mass. It is also permitted, after the Offertory of the mass has been sung, to execute during the time that remains a brief motet to words approved by the Church." On account of the diversity and changeableness of modern languages, the Church retains for her liturgical functions (even for the simple misa cantata) the Latin language, hallowed by ages of service. Nor does she permit that individual prayers and chants be translated into the vernacular for liturgical purposes. (The most important decision on this point will be found in the "Decreta authentic" under "Cantilena" and "Cantus"). The "Motu proprio" says: "It is forbidden to sing anything whatever in the vernacular in solemn liturgical functions; much more to sing in the vernacular the variable or common parts in the Mass and Office."

For the Church, as the monastic liturgy, the Church joins her own traditional musical form, which characterizes her chant and distinguishes it from the music of concert and opera. The "Motu proprio" says: "The different parts of the Mass and of the Office must remain, even musically, that particular concept and form which ecclesiastical tradition assigned to
them, and which is admirably expressed in the Gregorian chant.” By retaining her musical form for her various chants (e.g. for the Sanctus, the hymns, the psalms), or admitting of its modification only within certain limits, the Church protects her own music against the intrusion of music with the accompaniment of the organ is also permitted. In some special cases, within due limits and within the proper regards, other instruments may be allowed, but never without the special licence of the ordinary, according to the Ceremoniale episcoporum. As the chant should always have the principal place, the organ or instruments should merely sustain and never suppress it. It is not permitted to have the chant preceded by long preludes or to interrupt it with intermezzo pieces. The pianoforte and noisy and frivolous instruments (e.g. drums, cymbals, and bells) are absolutely excluded. Wind instruments, by their nature more turbulent and obtrusive, are admissible only as an exception to the rule that the sacred word belongs in the first place in the churches, and not to instrumental additions or the trivial scraping found in most of the churches pieces to-day. Catholic Church music can regain its former purity only by a return to the purely vocal style. If an accompaniment is considered absolutely necessary, the genius of Christianity has provided the instrument worthy of such function, the organ.” (Gesammelte Werke, II, 337). There is no doubt that those qualities absolutely necessary to church music, namely modesty, dignity, and soulfulness, are more inherent in the purely vocal style than in any other. Reserve and humble restraint befits the house of God. Sentimental and effeminate melodies are incompatible with the dignity of church music. In polyphonic a cappella style, and a composer's temptation to indulge in them is more easily counteracted by this style than any other. Like the external attitude of the worshipper in church, the vocally interpreted liturgical word and the organ-playing must be respectful and decorous. That vocal music is in general more impressive than the mechanically produced tones of instruments is undeniable. Religious feeling finds its most natural expression in vocal utterance, for the human heart is the source of both devotion and song.

From these considerations it follows that the tone quality, tempo, and rhythm of vocal music accompanied by the organ, are more in harmony with the religious mood than is the character of orchestral instruments. The organ can indeed be sweeping and powerful, but its tone volume is always more even, and is not so subject to the arbitrary will of the player as is the orchestra. Orchestral instruments permit of a wide range in the division and subdivision, retarding and accelerating in unison, which are not conducive to the calm necessary for prayer. The organ holds good with regard to rhythm. Just as the great flexibility, the frivolous or passionate character of irregular rhythm in general are expressive of a worldly, superficial, and restless mood, so is reposeful and symmetrical rhythm expressive of and conducive to a prayerful mood. A slow and orderly movement is more in keeping with the nature of the organ. It was not by accident that the measured rhythm of Gregorian chant was early abandoned, nor is it desirable to interpret in too mechanical a rhythm even the polyphonic works of the old masters. The more the purely mechanical element yields to the expression of the religious mood the more suitable the organ becomes for church. On the other hand, a delicately defined measure is aesthetically preferable to excessive freedom. Another element of the highest importance in church music, which is indeed generally suggested by the text, is the interrelation between the melodic phrases, the rhythmical proportion or symmetry between the various parts of the composition: these seem to conform externally to the breathing of the singers and internally to the emotions of the pious heart, while the measure is solely a means to regulate time.

Finally must be considered, as one of the distinctive attributes of church music, the character of the Gregorian modes. The modes, which have most in common with our modern modes, are based on the principle of the minor third, the symbol of moderation and restraint, greatly predominate in Gregorian chant.
Harmonic music has gradually narrowed down to the two modes or keys, major and minor: the major key has freer motion, greater brightness and decision, while the minor scale in its lower portion has a hesitating and mysterious character, and resembles the major key more closely in its upper portion. The major character, as we have it in our C major scale, occurs very seldom in Gregorian chant. The self-restraint so delicately conveyed in the church modes completely disappears in the apparently boundless freedom and stormy movement of concert music. The latter makes use of the chromatic element, modulation from one key into another, tone colour, the various forms of composition (sonata, etc.), and every other artistic means to carry the hearer from one mood to another and finally to heighten the impression to the degree of passion. As such purposes are foreign to church music, it makes of these means, whenever it employs them, a different use. It will be remembered that the contrapuntal vocal school, at one period in its history, also degenerated into artificiality and the cultivation of form for its own sake, the music was worship by the Church, but also remedied by repeated reforms since the Council of Trent.

VARIUS PARTS OF THE DIVINE SERVICE.—The Church has frequently legislated concerning even the smallest details of the liturgy. In connexion with the Mass, the centre of Catholic worship, the service of various offices—e.g. the recessional, the entrance into the sanctuary, the preparation of the altar, and the offering of the oblation—has been fixed in detail, and the prayers and responses prescribed. The Motu proprio of Pius X says: "The different parts of the Mass and Office must retain, even musically, that particular concept and form which ecclesiastical tradition has assigned to them, and which is admirably expressed in Gregorian chant. Different, therefore, must be the method of composing an introit, a gradual, an antiphon, a psalm, a hymn, a Gloria in excelsis..."

In particular the following rules are to be observed:

(a) The Kyrie, Gloria, Credo, etc. of the Mass must preserve the unity of composition proper to their text. It is not lawful, therefore, to compose them in separate pieces in such a way that each of such pieces may form a complete composition in itself, and be capable of being detached from the rest and substituted by another.

(b) In the office of Vespers it should be the rule to follow the 'Ceremoniale Episcoporum', which prescribes the Gregorian chant for the psalmody, and permits figured music for the verses of the Gloria Patri and the Iesu.
choir with the so-called falso-bordoni or with verses similarly composed in a proper manner.

"It may also be allowed sometimes to render the
group of the Gregorian chant., in their entirety in music, provided the
form proper to psalmody be preserved in such composi-
tion, that is to say, provided the singers seem to be
psalmody among themselves, either with new mot-
tifs or with those taken from the Gregorian chant
based upon it.

The parts known, as di concerto, are therefore for
ever excluded and prohibited.

"(c) In the hymns of the Church the traditional form
of the hymn is preserved. Thus, it is not lawful to
compose, for instance, a 'Tantum ergo' in such wise
that the first strophes present a romanza, a cavatina,
an adagio, and the 'Genitori' an allegro.

"(d) The antiphons of the Vespers must be, as a
rule, rendered with the Gregorian melody proper to
each. Should they, however, in some special case, be
sung in figured music they must never have either the
form of a concert melody or the fullness of a motet or a
cantata."

All this shows not only the great solicitude of the
Church to foster worthy ecclesiastical music, but also
the desirability of her regulations on the matter.
Greater latitude is given at benediction services. It
is lawful to sing hymns in the vernacular before the
Blessed Sacrament exposed, but, immediately before the
Benediction, the 'Tantum ergo' and 'Genitori'
must be sung in Latin, either to a Gregorian melody or
certain settings, as a liturgical close. During and after the removal of the Blessed Sacrament,
it is permitted to sing in the vernacular. An antiphon
or hymn in honour of the Blessed Virgin may also be
sung, but only after the reposition. If litanies (san-
tioned by the Church or the ordinary) be sung, there
must be no omissions, although the invocations may be
taken from the pilgrimage of three, four, five, or six
novis. As in the case of the 'Tantum ergo', all pre-
scribed liturgical chants, like the 'Te Deum', must be
sung in Latin: any text chosen on the choir's own ini-
tiative, however, may be sung in the vernacular.

SINGING BY THE PEOPLE.—Singing by the people, so
widely customary at different devotions (Benediction of
the Blessed Sacrament, low Mass, etc.), requires special
mention. The participation of the people in the
singing of the Gregorian chant has been discussed
under CONGREGATIONAL SINGING. Singing in the
vernacular may not be substituted for the latter.
This abuse crept in after the Reformation, and flour-
ished in the eighteenth century, particularly in Ger-
moving and even widely practised in Germany. It is
therefore necessary to advert briefly to the question of women's participation in choir.
As the injunction of the Apostle that women
keep silence in church was never made applicable in
the matter of her participation in the singing of the
congregation, and as in religious communities of
women the liturgical chant has to be performed by
women, we may take it for granted that in our ordi-
nary lay choirs, representing the congregation, the
participation of women is not forbidden. The follow-
ing words from the 'Motu proprio' have, however,
caused a great deal of uncertainty: "With the excep-
tion of the melodies proper to the celebrant at the altar
and to his ministers, which must always be sung only
in Gregorian chant and without the accompaniment
of the organ, all the rest of the liturgical chant belongs
to the choir of levites; therefore, singers in church,
even when they are laymen, are really taking the place
of the ecclesiastical choir."

On the same principle it follows that singers in church have a real liturgical
office, and that, therefore, women, as being incapable of
the chant, must be kept out of the choir of the church.
When, then, it is desired to employ the acute voices of
soprano and contralto, these parts must be taken by
boys, according to the ancient usage of the
But the Holy Father speaks here (as in the beginning) of the choir of levites, among whom laymen may be included, and declares soon after these qualifications: that it is for women ecclesiastical habit and surplice. But our ordinary lay choir represents not only the congregation, but also the official choir, without wishing to play the role of "levites"; for this reason it is not stationed in the sanctuary, and no one would think of proposing that its members, like acolytes, should wear the ecclesiastical habit. The lay choir is simply a substitute for the absent *chorus cantorum*, in the liturgical sense, as is the nun for the absent acolyte when she supplies from a distance the responses to the celebrant during the celebration of Mass.

Consequently, the presence of women in choirs is excusable under certain circumstances, although choirs composed of men and boys are for many reasons preferable. It is true that an inquiry about this point received an apparently negative answer on 18 Dec., 1908, but this was in regard to the conditions described in the inquiry (*prout exponitur*), and it is added that the Decree is to be understood in the sense that the women must be kept entirely separate from the men, in such a way that no occasion is given for all conduct unbecoming to the sacred edifice. From these clauses it appears that, in principle, choirs composed of men and women are not inadmissible; however, the desirability of banishing every possible occasion of indecency from the church renders it preferable to employ boys, rather than women, in choirs. The only condition which must be adhered to is that the一声 questionable, since solos in church are admissible only within certain limits (Motu proprio). A choir composed of women only is not forbidden (Decree of 17 Jan., 1908). To employ non-Catholics in church as singers and organists is only tolerated in case of urgent necessity, because they neither believe nor feel the wronging.

**REFORM IN PRACTICE.**—The decadence of the Gregorian chant is to be ascribed primarily to the development of and preference given to polyphony. To this cause is due the disappearance from the chant of its original rhythm and the serious neglect of its simpler form. Even before the Council of Trent, ecclesiastical authority had recognized the abuses which had crept into polyphonic music. The Gregorian melodies, however, even in the hands of the contrapuntists, retained their character in a wonderful manner. Nevertheless, the contrast between the two kinds of music led, at the beginning of the seventeenth century, to the abbreviation of the long melismas and to a different use of the intervallic progressions, and many less important modifications (Graduale Medicaeum). Many other editions, edited according to the same principle, followed until the revised "Medicarum" (printed in Ratisbon) became in 1878 the official chant book of the Church (cf. Decreto, n. 3830). Meanwhile, the liturgical researches of the Benedictines of Solesmes had led (since 1903-4) to the new restoration, in the Vatican edition, of the chant from the manuscripts of the twelfth century. Endeavours to restore the earlier neumed texts (tenth-century), mainly on account of the primitive rhythm, have so far met with little success.

The "Motu proprio" of Pius X had for its main purpose the reform of church music in general, and covers about the same ground as the "Regolamento per la musica sacra," which the Congregation of Sacred Rites issued under Leo XIII, which applied more particularly to Italy (Decr. auth., loc. cit.). On the basis of these regulations, with which the earlier provisions of the modern decrees are in entire agreement, composers, singers, and theorists are to carry on their work of reform. They constitute the principle which the Cæcilienverein (Cecilian Society) has long endeavoured to put into practice in Germany, Italy, North America, and elsewhere. Dr. F. X. Witt, burning with zeal for the cause of reform, founded this society in 1888, and, shortly after its papal approbation, it became known as the German "Guido. The main object of the society is to cultivate the chant, polyphony, hymns in the vernacular, organ-playing, and orchestral music in conformity with the regulations of the Church. The reform endeavours were by no means confined to Germany, but extended to Holland, Italy, the United States, etc. The introduction of the Vatican edition of the chant has been, since the decree of Pius X, the main object of the society's activity. In the restoration and worthy performance of the traditional chant, the Benedictines have, even before the publication of Dom Pothier's work (Les melodies gregoriennes, 1880), displayed the greatest zeal. Thus, the fathers of Solesmes in France, Beuron in Germany, St. Anthon in Flanders, Malines in Belgium, Prague and Seekau in Austria, co-operate with the Cecilians of every part of the world in carrying out the wishes of the Holy Father and the bishops in regard to the reform of church music. Every one is under obligation to do what he can in his own particular field.

It is well to state briefly in didactic form what the Church requires in the restoration of chant. The first requisite is the recognition that the chant, as the true music of the Church, must be studied and performed with the greatest care. Whenever difficulties stand in the way of the introduction of the Vatican edition, the bishops will take such measures as are in conformity with the will of the pope. Schools for church music may, in this respect, give good results, as shown in the case of the Benedictines of Solesmes (viii, 27, 28): "Let care be taken to restore, at least in the principal churches, the ancient *schola cantorum*, as has been done with excellent fruit in many places. It is not difficult for a zealous clergy to institute such *schola*, even in the minor and country churches—nay, in them they will find a very easy field for gathering in the songs of Psalms and the adults to their own profit and the edification of the people. Let efforts be made to support and promote in the best way possible the higher schools of sacred music where these already exist, and to help in founding them where they do not. It is of the utmost importance for the Church herself to provide for the direction of its apostolate according to the true principles of sacred art."

In a similar sense it is the will of the Holy Father that in the study of liturgy attention should be directed to the principles governing liturgical music, and that aesthetic appreciation should be fostered. Singers must be humbly submissive to their pastor, and especially to the liturgical choir; they must not entertain the notion that the chant can be sung without due preparation, as though it were a question of merely singing the notes. Courses in the chant are given in various centres, and excellent books of instruction exist in great numbers (e.g., Singenberger's "Guide to Church Music"). To mention only one point, it is important to master, with the instructions of the Benedictines, the proper rhythmical divisions of periods and phrases as well as the *legato* delivery of the long jubilations.

In general, it is now-a-days impossible to do entirely without polyphonic music. It constitutes a welcome means of giving splendour to feast-days, but is a source of danger if over-indulged in. The words of the best masters of polyphony have been made accessible for study and execution by excellent editions (e.g., the works of Palestrina in Habert's edition). There is certainly no dearth of compositions in the modern homophonic style; we have but to consult the catalogues of the Cecilian and the above-named "Guide." It is better to produce and to study new compositions within the capacity of the choir than to introduce new works frequently, without completely mastering them. Critics who write on church music,
musicians, and choir-directors, should familiarize themselves with the spirit and regulations of the Church in regard to music by means of the numerous theoretical manuals. It is the spirit which vivifies; the form serves merely to give it expression. Without studying the liturgy (at least, that part of it directly connected with the music) and the texts in the original or in translations as close as possible to the original, it is not possible to penetrate into this spirit. The Church may claim our ready allegiance and respect for the laws and regulations which she, for grave reasons and to deal with existing conditions, has enacted.

In theoretical and artistic questions, however, everyone enjoys freedom. Thus the Congregation of Rites has declared (and this is the only declaration of its kind which I know): "While students of the chant always have enjoyed full freedom, a privilege which they will not be deprived of in the future, to ascertain by scientific research what was the primitive form of the chant, and what modifications it has undergone in subsequent periods (a very laudable inquiry analogous to that being prosecuted by learned scholars into the primitive rites and other departments of the liturgy), only that form of the chant which His Holiness has proposed to us, and which has been approved by the Congregation of Sacred Rites, may to-day be considered as authoritative and legitimate" (Decr. auth., n. 3830). As for choirmasters, the text continues, "But as the faithful productions which do not conform to the intentions of the Church, even if the music in itself be beautiful, nor should they aim at a mere display of their own powers thereby to gain fame and merely delight their hearers. They should, on the contrary, endeavour to imitate in their compositions the simple and unadorned melody of the Church. The faithful are not bound to accommodate themselves to the capacity of ordinary choirs. With these considerations before him, the choirmaster has to choose his music, penetrate into its spirit so that he may be able to impart the same to his singers, who must sing not only correctly but also with devotion. Order and discipline among the performers are important factors in obtaining the desired results. According to the "Motu proprio", "only those are to be admitted to form part of the musical chapel of a church who are men of known purity and probity of life, and these should by their modesty and devout bearing during the liturgical functions show that they are worthy of the holy office they exercise." The interpretation of a performance depends greatly on the interpretation, it is incumbent upon the choir-master to insist upon distinct pronunciation of the words, a noble tone quality, and a simple expression of the mood. Church music should be free from exaggerated and exaggerated expression of joy or correspondence to sentimental yearning, and theatrical effects of any kind; it should be the utterance of fervent prayer springing from faith and charity. The good intention of the singers will not only find its eternal reward, it will also evoke gratitude and respect.

The twofold aspect of the principle laid down by the Sacred Congregation for our guidance in the matter of singing in the vernacular is expressed as follows: "The Congregation urgently admonishes that hymns in the vernacular no matter of what character, should gradually and unostentatiously be eliminated from liturgical functions. On the other hand, pious hymns to approved texts, which are extensively employed, particularly in Germany during different devotions and before the Liturgy of the Sorrowful Queen of the Blessed Virgin, are by no means prohibited" (3 April, 1883; Krutscheck, 3rd ed., pp. 151, 177). Songs in the vernacular, alternating with prayer, are suitable during low Mass (within narrow limits, however), benediction, but especially during processions outside of the church. An excellent means for fostering this desirable practice is the careful training of the school children, whose singing need not, however, be confined to hymns in unison, and who also may be allowed to perform occasionally more elaborate compositions in two or more parts. The singing, however, should not be permitted to gain precedence over prayer. The hymn-book should at the same time be a prayer-book, and praying aloud should alternate with the singing. The interpretation and spirit of the hymns be carefully explained to the children. The performance should be free from dragging and slurring, faults which should be strongly discouraged by the organist. Arbitrary, unindicated pauses should be avoided. The children, especially, should be taught to respond to the celebrant at the end of the verse and to gradually do the same thing. No one exercises a greater influence in the reform of church music than the organist, provided he be animated by the spirit of the Church. His playing should be, like the chant of the Church, simple and grave, devotional and objective. Song preludes and intermezzi during liturgical functions are forbidden. The organ must be subordinate to the singing, must support and not drown it. The purely vocal style is the ideal of the Church. The papal choir, the Sistine, has always excluded instrumental music. The more humble and subordinate the rôle of the organist, the more faithful and conscientious he should be in filling it. He should never occupy the front of the nave, play a part in the service, or indulge in flashy improvisations, or keep the celebrant waiting. In extra-liturgical functions, however, he may move somewhat freely. It is decidedly preferable to play the works of good masters than to improvise. In preparing for a great liturgical function, he should aim at giving suitable and full expression to the spirit of the celebration of the feast, and the performance is indispensable, especially to the musician of mediocre talent, even though he always keep the text before him. He must be able to perform this with absolute sureness, mastery, and freedom. He must know how to modulate from one key into another, how to proceed from one number to another, what key to choose for the hymns sung by the congregation, how to transpose the chant from one key into another, how to combine the organ stops, and (to a certain extent at least) how to improvise and to harmonize at sight. Under no circumstances must he permit himself to carry reminiscences of the concert and opera into the church.

As to the use of instruments, other than the organ, we should remember the words of St. Pius X: "In the Church ordinary is necessary, and that their nature must always be in keeping with the occasion and the place. The employment of a full orchestra forms an exception (cf. Motu proprio, cited above). The wisdom of these restrictions has been cheerfully recognized by such unprejudiced authorities as Wagner and Beethoven—a fact which must be too often stated. The former maintained that "genuine church music should be produced only by voices, except a 'Gloria' or similar text." As early in his career as 1848 this master ascribed the decadence of church music to the use of instruments. "The first step toward the decadence of genuine Catholic church music was the introduction of orchestra instruments. Their character and independent use have imparted to religious expression a sensuous charm, which has proved very detrimental, and has affected unfavourably the art of singing itself. The virtuosity of instrumentalists provoked imitation on the part of singers, and soon a worldly and operatic taste held sway in church music. The past part of sacred text, e.g. the 'Kyrie Eleison', because a vehicle for operatic arias, and singers trained for Italian opera were engaged as church singers" (Gesammette Werke, II, 335). Every reform has, in accordance with the will of the Church, to be carried out in such a manner that a greater evil may not result—that is, gradually and without causing unnecessary friction.
MUSIC

sensu), but yet with firmness, regardless of one's personal views. Moral necessity alone dispenses from a command of the Church. It must be considered as progress when features either forbidden or discouraged by the Church (e.g., hymns in the vernacular during liturgical functions, the use of orchestral instruments, women in choirs) are no longer fostered, and when one abuse after another is gradually reduced to a minimum. Those in charge should not cater to the false ideas of the people, but should make every effort by the performance of better compositions to ennoble popular taste. Offence is perhaps most easily given, when old and favourite hymns, though of an inferior quality, are withdrawn; modern hymn-books, however, contain such an abundance of excellent melodies that no harm is likely to be done. Harmony has never been discussed above its difficulty. The fundamental conditions for success are a good choir of men and boys, a capable organist, and a judicious choice of masses and other compositions by the choir-director.

The Vatican chant, however, presents difficulties of a special nature. It is true that mere recitation on a straight tone may in some cases be resorted to. It has also been customary from time immemorial to assign to a few chosen singers the more difficult passages. In regard to the rhythm, accent, and other points we now know the precise intentions of the Holy See. The "Aetius Apostolicae Sedis" (1910, pp. 145 sq.) contains a letter from the Prefect of the Congregation of Rites to the Archbishops of the German Church, in which this publication becomes binding on all. In this letter the direction is given that the rhythmical interpretation of the Vatican edition is to be in accordance with the rules laid down in the preface to the Graduale. The wish is also expressed that no contrary methods should be advocated in the press, as they would only cause confusion and retard the progress of the reform. Theoretic discussions seem not to have been prohibited, except in so far as they might interfere with the introduction of the Vatican edition (cf. the decree of the Congregation of Rites quoted above, which was issued under similar conditions—Decr. auth., n. 3830). A considerable latitude is allowed in the interpretation of the document. The attempts, disapproved of by the Holy Father, are characterized in a rather mild manner; critics are asked to abstain from attempting that which, in the present state of archaeological studies, can have no other result than to spread confusion and divert attention from the real work of restoring the Gregorian chant to its rightful place. In the opinion of the Prefect, we should make every effort to introduce the Vatican edition in conformity with the will of the pope. By studying the symmetrical construction of the melodies in the light of the explanations of the Benedictines, which are undoubtedly of high aesthetic value, the execution becomes not only much easier but the profound beauty of the chant revealed to us.

Religious Music.—Finally that class of religious music which may not be placed in the same category with real church music, must be mentioned. The masses by Mozart, Haydn, and Beethoven have already been spoken of. The musical interpretation of the text and their operatic form render them little suited to the church. We must also name the older Protestant masters, John Sebastian Bach and G. F. Handel, whose works for Protestant services undoubtedly deserve to be studied by the church musician. The greater latitude accorded to organ playing in the Protestant cult has given occasion to the highest productions of contrapuntal harmony. We are not less aware of the fact, however, that the predominance in their works of the instrumental element, with its obtrusive arias, duets, and choruses, is in opposition to the spirit of the Catholic liturgy, which finds a more suitable medium of expression in the purely vocal style. John Sebastian Bach (b. at Eisenach, 1385; d. at Leipzig, 1750) has also set Catholic liturgical texts to music. His Mass in B minor is considered one of his greatest works, among which his oratorio, the "Passion according to St. Matthew," must be also included. Among his other compositions for Sundays and festivals, preludes and fugues hold a prominent place. He was also distinguished in the field of chamber music. George Frederick Handel (b. at Halle, 1685; d. at London, 1759) was the first to introduce oratorios, music dramas of a sacred character, into England. He composed oratorios as well as operas, cantatas, and suites. His Messiah was written in 1742.

The oratorio, which Handel brought to the highest degree of perfection (Messiah, Judas Maccabaeus, Israel in Egypt, etc.), stands midway between secular and liturgical music. Originally intended as an ethical-religious reaction against the Florentine opera, it treats Biblical and legendary themes in a lyric-dramatic form, but without dramatic action. It consists of recitations, arias (duets, trios, quartets), and choruses with a brilliant orchestral accompaniment. On account of its semi-operatic form the oratorio is not available for congregation singing. It requires for its performance a choir in former times to perform settings of the Passion in church on Good Friday. The cantata (perfected by Bach) is more lyric and less epic in style with a somewhat more modest instrumentation. The cantata and oratorio are both developments from the antiphonal sacred chants and the mystery plays of the Middle Ages. Since the beginning of the thirteenth century, existed the cantus firmus in the vernacular and also more pretentious compositions, such as the lays of the troubadours, minnesingers, and mastersingers, and the madrigal. The folk-song of olden times, springing directly from and resembling the music of the Church, was often employed as motif or canons firmus in masses and other liturgical compositions, proceeding which would not be allowed now-a-days. Christian pilgrims were wont to sing antiphonal hymns having for their burden the life and death of our Saviour and similar subjects. The dramatic element inherent in these subjects was contained in the liturgy itself. It had only to be brought into conjunction with epic recitation and references of the sacred plays in order to develop into the mystery plays, which had their secular counterparts. As far back as the eleventh century these mystery plays on feast-days served to present to the people in dramatic form the Passion, Resurrection, and Last Judgment. Their original home was the church and the monastery, from which they had later to be banished. The sacred and semi-eclesiastical or simply religious music of the Middle Ages had a decisive influence in the transformation of polyphonic music into the harmonic or homophonic, and a comparison between the various styles is a great aid in determining the character of genuine church music.

It is as important to-day as ever that we carefully distinguish between simply religious music—be it never so beautiful, artistic, and conducive to private devotion—and that kind of music which the Church requires for her services. Outside of the Church each one may sing such melodies to religious texts as best satisfy his own pious mood; he may even indulge his aesthetic predilections in choosing his hymns. The house of God, however, demands an entirely different attitude; we must realize that we are there to pray, that we may not force our personal mood on our fellow Christians, but that, on the contrary, we must follow with devout attention and pious song, according to the
It was with the advent of monody (see Harmony) that the use of instruments in connexion with the voices received a great impetus. The closely-knit, compact polyphonic structure which had predominated up to this time, needed no extraneous aid for its effectiveness and sonority. This was not the case with the new style of composition rapidly superseding the old school. It depended to a great extent for its tonal solidity and artistic existence on the aid of the instruments.

The great perfection reached in the construction of stringed instruments in the sixteenth century was both a manifestation of, and an aid to the growing tendency; virtuosity, not only on stringed, but also on wind instruments was a common accomplishment. The character and individuality of the instruments, so to speak, were being made available as means of expression for the subjective moods, dramatic feelings, and conceptions of the composer.

While all this development had, up to the first half of the sixteenth century, served mainly secular purposes, it was through Ludovico Grossi da Viadana (1564–1627) that the use of instruments became more common in churches. While choirmaster in Mantua and in Venice, this master published his "Cento concerti ecclesiastici", compositions to sacred texts, for one or more voices and basso continuo, or figured bass played on the organ and supplemented by violins, bass viol, and wind instruments, a species of compo-
sition in vogue before his time. A contemporary of Viadana, Giovanni Gabrieli (1557–1612), who was choirmaster of St. Mark's, Venice, went a considerable step further than any one before him. He wrote not only numerous works for voices and instruments, but created works for instruments alone, and discovered the principle of modern orchestration by doubling the voices in octaves and applying the same process to the organ and other instruments. Another contemporary, Francesco Cavestri, destined to exercise a momentous influence, not only on the growth of the use of instruments but also on the future development of liturgical music itself, was the birth of opera with the first performance (1594) of Jacopo Peri's "Dafne" in Florence. This new art form, originating as it did with the humanistic spirit of the time and being a return to the musical and literary ideals of antiquity which enthralled the cultivated classes of the day, soon gained an enormous popularity and completely overshadowed all previously accepted ideals in popular favour. It was but a short time before the spirit and forms of the theatre, instruments and all, found their way into the Church. With the former the same was true: the old polyphonic dominates the liturgical music. The effect of the new style on the modern liturgical music which has come down to us belonging to one or the other of the Gregorian modes) it was now the spirit, taste, and passions of the world as expressed in opera which were in the ascendency and began to dominate the compositions to liturgical texts. It was natural that the people should return to church the forms of composition which delighted them so much in the theatre. The severe simplicity of liturgical chant was set aside; polyphony was considered too formal and artificial. The spirit of universality animating them had to yield to the new style expressions of individual feeling enhanced by the sensitive charm of the instruments. That which was in accordance with the prevailing and growing taste of the generality was, if not desired, at least tolerated by those in authority, and there was no hindrance to the triumphal conquest by instrumental music which we have witnessed since.

New purely instrumental forms were developed and cultivated in the course of the seventeenth and eighteenth centuries in Germany, the most fruitful soil of all, until the symphony was evolved, through which the composer gives utterance to all the conflicting emotions which sway him. Peri, for the accomplishment of his first opera, "Dafne", used but a few instruments, namely, a
harpsichord (one of the predecessors of our modern pianoforte), a lute, a viola da gamba (forerunner of our violoncello), an archlute, or lute of a larger size, and a triple flute, while Claudio Monteverdi (1567–1643) employed in his opera "Orfeo" the formidable number of ten atto or stops, two cornelli, one flauto (small flute), one clarino (trumpet) and three trombe sordine (muted trumpets). While this was a formidable sonorous body, orchestra in our present day sense, that is, the utilization of the various instruments in accordance with their nature, tone quality, and compass, and their combination, with a view to the greatest variety of tone colour and sonority, was yet to be evolved. While Giovanni Carissimi (1604–74) in his oratorios, employs the instruments with more appreciation of their individuality than was manifested before him, it remained for his gifted pupil Alessandro Scarlatti (1657–1725), founder of the Neapolitan school, to establish the norm for the use of the orchestra in a way that has remained unaltered for more than a hundred years. Scarlatti's orchestra for his oratorios and operas consisted of first and second violins, violas, violoncellos, basses, two oboes (from hautbois, "high wood") developed from the ancient calamus, "reed"; French, chalumeau, German, schalmey), two bassoons (corresponding to the oboes in the lower octave), a timpani, and the brass instrument. The use of this pattern of instruments was still in vogue in the time of Haydn and Mozart, and was used in most of their works for the Church except that they sometimes added two flutes, two clarinets (woodwind instrument of ancient origin), so called on account of the resemblance of its tones to the high tones of the clarino or trumpet), and two trumpets, their use gradually increasing from modern masters added timpani (kettle-drums) and three trombones.

The instrumental idea gained such a firm hold that a very large proportion of all the music written for the Church was with orchestral accompaniment. At cathedral and other churches large orchestras were performed, many of which remained unaltered day by day, notably in Dresden, Breslau, Freiburg-in-Baden, Munich, and Vienna. In innumerable other places, the world over, the orchestra, without being always present, would be called into service on festival occasions. Up to the middle of the nineteenth century it was considered by composers practically impossible to interpret musicae text of the Mass or requiem without calling to their aid all the resources and means of expression afforded by a complete orchestra. While Beethoven, in his "Missa in C" and "Missa solemnis", as well as Cherubini in his numerous works to liturgical texts, does not go beyond the so-called classical orchestra, that is, first and second violins, viola, flute, oboe, clarinet, bassoon, horns, trumpets, trombones, and kettle-drums, Liszt and Gounod in addition to these also employ the piccolo (small flute), contrafagotto, or bassoon bassoon, the harp, cymbals, and tuba (a brass instrument serving as a bass to the trombone family). The extreme limit in instrumental tone display in modern times was reached, however, in Hector Berlioz's "Requiem Mass", performed (1837) for the first time in Notre Dame, Paris. In this work all previous efforts in the way of tonal expression are far surpassed. Besides an orchestra of one hundred and thirty instruments, including sixteen kettle-drums, the author employs in the "Tuba mirum" four separate groups of brass instruments. By mixing the trumpets calling from the four corners of the earth on the day of the Last Judgment. With this work, the last word of a mind and age which still believe but no longer adore, subjectivism finds its supreme manifestation, and the orchestra its most potent means of expression. The Church has never encouraged, and at most only tolerated, the use of instruments. She enjoinas in the *Camerale Episcoporum* that permission for their use should first be obtained from the ordinary. She holds up as her ideal the unaccompanied chant and polyphonic, a capella, style. The Sistine Chapel has not even an organ.

From time to time regulations have been issued governing the use of instruments and condemning existing abuses. In 1728 Benedict XIII rebuked a community of Benedictine nuns in Milan for using other instruments than the organ during high Mass and Vespers. He also forbade the Franciscans to use any other instrument than the organ in their conventual churches. Benedict XIV in his encyclical *Annis qui nunc vertentem* (19 February 1749) tolerates only the organ, stringed instruments, and bassoons. Kettle-drums, horns, trumpets, oboes, flutes, pianos, and mandolins are prohibited. In the *Regolamento* of 1884, flutes, trumpets, and kettle-drums are permitted on account of the improved manner in which they are now used as compared with former times. In the *Regolamento* G. M. Gh. Vicar of Rome, Patrizi, prohibited (1842) the use of instruments in the Roman churches, with the exception of a few to be used in a becoming manner in accompanying the singing, and then only after permission had been secured from the proper authority. This order was renewed in 1856 by the same cardinal in the name of Pius IX, in *Motu proprio* on church music (22 November, 1903) in paragraph III, says, "Although the music proper to the Church is purely vocal music, music with the accompaniment of the organ is also permitted. In some special cases, within due limits and with the proper regard for other instruments may be allowed, but never without the special license of the ordinary, according to the prescription of the 'Ceremoniale Episcoporum'. As the chant should always have the first place, the organ or instruments should merely sustain and never suppress it. It is not permitted to have the chant preceded by long preludes, or to have it interrupted with intermezzo pieces*. Etc. Among those services of the Church which have received survival to the present day are the Missa Papae Marcelli, Missa Papae Clari, Missa Papae Honorii III, Missa Papae Honorii IV, etc., with works for voices and instruments for liturgical use; are, I. Mitterer, G. J. E. Stehle, M. Brosig, Max Filke, George Zeller, L. Bonvín, S.J., C. Greith, F. X. Witt, P. Griesbacher, J. G. Meurer, and J. Rheinberger. The present trend is, however, decidedly away from the instrumental idea and back to the purely vocal style. And it is recognized, and in many places actually declared, that the new version of the liturgical chant, proposed to the Catholic world by Pius X, gains its full beauty and effectiveness only when sung without instrumental accompaniment of any kind.

**Musti**, a titular see of Proconsular Africa, suffragan of Carthage. This town, which was a Roman municipium as early as 800 B.C., is mentioned by Ptolemy, IV, 3, 33, the "Itinerarium Antonini", the Peutinger Table, and the Ravenna geographer, Vivus Sequestor, who narrates the killing at this place of an enormous serpent by Regulus. Its ruins, called Mest Henshur, are seen in the vicinity of the koubba of the marabout Sidi Abderahman, and of Koff (Tunis). Worthy of mention are two fine gates, and a triumphal arch. The inscriptions call
the inhabitants Musticienses or Mustitani; the latter name is also used by St. Augustine. In 411, at the time of the Carthage conference, Musti had besides two Donatist bishops (Felicianus and Cresconius) two Catholic bishops (Victorianus and Leonius). Anto- nius was one of the bishops exiled by huneric in 482. Musti was then included in Proconsular Numidia. In 464 Bishop Januarius signed the letter of the bishops of Proconsular Africa to Paul, Patriarch of Constantinople, against the Monothelites.

S. PÉTRIDES.

MUSIUS, MANUIOS, learned Greek humanist, b. 1470 at Retimo, Crete; d. 1517 at Rome. The son of a rich merchant, he went, when quite young, to Italy, where he studied Greek at Florence, under the celebrated John Lascaris, whom he afterwards almost equally in classical scholarship. In 1503 he became professor of Greek at Padua, where he taught with great success. Later at Venice, he lectured on Greek, at the expense of the republic, and became a member of the Aldine Academy of Hellenists. Musiuros rendered important service to the promotion of the earliest printed editions of the Greek authors, and his handwriting formed the model of Aldus's Greek type. He contributed greatly in giving to the Aldine editions the accuracy that made them famous, while his reputation as a teacher was such that pupils came from all countries to hear him lecture. Erudite, who had attended his lectures at Padua, testifies to his wonderful knowledge of Latin. To his profound scholarship the editions of Aristophanes, Plato, Pindar, Hesychius, Athenaeus, and Pausanias owed their critical correctness. In 1499 he edited the first Latin and Greek lexicon, "Etymologicum Magnum", printed by Zacharias Colliger of Castlereagh, and incunabula are by so much more valuable, the first Greek epigraphs which with the elegy on Plato published in the Aldine edition (Venice, 1513) are about his only extant writings.

EDMUND BURKE.

MUTIS, José Celestino, eminent naturalist and scientist in South America, b. at Cadiz, Spain, 6 April, 1732; d. at Bogotá, Colombia, 2 Sept., 1808. Mutis studied medicine at Seville and Madrid and, from 1757, practised as a physician at Madrid, where he applied himself to botany. Soon afterwards he went to Mexico, where, in 1771, he was appointed Viceroy of New Granada, Mesa de la Cerda (Marqués de la Vega). In November, 1760, he landed in Cartagena, and remained in New Granada for five decades. By his great zeal for science and his untiring and versatile activity, he became more and more the soul of all scientific undertakings in Spanish South America. Although he at first taught mathematics and, after the end of his life, founded an observatory in Bogotá and directed the same as astronomer, he devoted his energies almost wholly to researches in the natural history of New Granada, even continuing this work, when, in 1772, he became a cleric (priet?) and canon at the cathedral of Bogotá. During the last years of his life at Bogotá he had planned the botanical exploration of the whole country, intending to write a book on the flora of New Granada. For his researches he maintained subterfuges at Cácase and La Montuosa, which Linné supposed to be situated in Mexico. He settled in Mariquita after he had been appointed in 1783 by Charles III, under the viceroy and Archibishop Gómez, leader of the "Expédition botanique du Nuevo Reino de Granada", which was founded by the State. Here, as Alexander von Humboldt, an eyewitness, relates, Mutis laid out a plantation of cinchona. Mutis was obliged to train his whole staff of assistants (collectors, painters, engravers, etc.; he also taught several native botanists, e. g., Zca, Codias, and Rebeco, afterwards his nephew and successor, Sinforoso Mutis. At that time, Mutis was widely known; Linné, who received from him South American plants and corresponded frequently with him, calls him "phytologist americanorum princeps". Linné's son defined the genus Mutisia in 1781. The Spanish botanist Cavanilles lauded him in 1791 as "botanicorum facile princeps". At Bogotá, where he spent the last ten years of his life, the famous explorers Humboldt and Bonpland stayed with him for two months in 1801, filled with admiration for his rich collections. Their famous work, "Plantae equinoctiales" (1818), is adorned with a beautiful portrait of Mutis, and Humboldt erected a monument to the "illustrious missions" of Mutis, and again in writing his biography ("Biographie universelle", XXX, Paris, 1831).

Subsequent generations were perhaps justified in judging Mutis less favourably, but it is unjust on the part of some critics to seek to degrade Mutis to the position of an unimportant amateur or to abuse him. He committed the same errors as other botanists of his day, but he worked assiduously, and kept up his interest in his studies; he published his results to his own satisfaction, and thus published almost nothing during his life-time. He, furthermore, had the misfortune to have his scientific legacy at first remain totally unnoticed in consequence of the political disorders of that time. His museum consisted of 24,000 dried plants, 5,000 drawings of plants by his pupils, and a collection of woods, shells, resins, minerals, and other natural objects. These treasures arrived safely at Madrid in 105 boxes, and the plants, manuscripts, and drawings were sent to the botanical gardens, where they were buried in a tool-house. Mutis's cinchona investigations render his work of lasting importance. While he was the first to discover the genuineness of the cinchona tree for New Granada—he became known with certainty only after his death—he rendered important services by his study of the cinchonas, their geographical distribution in Colombia, their species and varieties, and their utilization for medicine. This is shown by the trade, which developed in such a manner that e.g. the export of Cinchona bark from New Granada 1,200,000 pounds of cinchona bark in 1806, while previous to 1776 this country produced no quinquina at all. This is furthermore shown by Mutis's writings, which, however, were not printed in full until 1870. Mutis himself published in 1793 and 1794 a short monograph on cinchonas in "El芣o de la quína" in manuscript to Madrid, but the war with France prevented its publication; in 1828 the Spanish physician Fernández de Gregorio edited the first three parts of this work with Mutis's portrait ("El arecado de la quína. Discurso que contiene la parte médica de las cuatro especies de quínacas oficiales", Madrid, 1828, 263 pages). The manuscript of the work was also covered by Clemente R. Markham in a shed in the botanical gardens of Madrid; he published it under the title: "Tabula synoptica ad specierum generis Chin-
chose determinerem. Quinolide parva quarta" (edited in Markham, "The Cichloncha species of New Granada," London, 1867). The tables, which Mutis selected for this work, were published in 1870 in facsimile by Friant, "Nouvelles études sur les Quinolides," Paris. Through the kindness of some special investigators, it was evident, as some special investigators confessed, that Mutis had penetrated deeply into the study of the cinchonias of Central Colombia. It may be mentioned that Mutis distinguished four species of cinchona with an officinal bark, and he added to them twenty-four varieties. For other manuscripts of Mutis see Colmeiro; a part of Mutis's correspondence is to be found in the work: "A selection of the correspondence of Linnaeus and other naturalists" (London, 1801).

M. ROMPEL.

Mussarelli, Alfonso, a learned Italian Jesuit, b. 22 August, 1749, at Ferrara; d. 25 May, 1813, at Paris. He entered the Jesuit novitiate on 20 October, 1768, and taught grammar at Bologna and Imola. After the suppression of the order in 1773 he received a benefice at Ferrara and, somewhat later, was made director of the Collegio dei Nobili at Parma. Pius VII summoned him to Rome, and appointed him to the office of the Pontifical Treasury. When Pius VII was exiled in 1809, Mussarelli was also obliged to leave Rome and was transported to Paris, where he spent his remaining life at the convent of the Dames de Saint-Michel. He wrote numerous theological, philosophical, and ascetical works. His chief production is a collection of philosophical-theological treatises published repeatedly under the title: "Il buon uso della Logica in materia di Religione" (6 vols., Foligno, 1787-9), with additions by the author (10 vols., Rome, 1807; 11 vols., Florence, 1821-3). The collection contains sketches on the theological questions of the day such as: abuses in the Church, the temporal power of the pope, religious toleration, ecclesiastical immunity, riches of the Church and its clergy, primacy and infallibility of the pope, auricular confession, religious orders, indulgences, Gregory VII, moral liberty, etc. This collection of treatises, with the exception of the last five, was translated into Latin by Zeldmayer de Buzita ("Bonus usus logicae in materia religionis"), Kaeckesch, 1815-7. A French translation of 42 treatises was published in Paris in 1837. Two other important productions of Mussarelli are: "L'Emilio disingannato" (4 vols., Siena, 1782-3) and "La confutazione del contratto sociale di Gian Jacopo Rousseau" (2 vols., Foligno, 1794) — the former is a refutation of Rousseau's "Emile", the latter of his "Contrat social". The most popular of Mussarelli's many ascetical works is "Il mese di Maria o sia di Maggio" (Ferrara, 1785) of which about 100 editions have been issued (new ed., Bologna, 1901). It has been translated into English "The Month of May or the Month of May," London, 1848, 1857; Spanish ("Las Vegas", New Mexico, 1857, 1888); Portuguese (Oporto, 1890); French (Paris, 1851, and often previously); Arabian (4 ed., Beyrout, 1872); and adapted to the German (Mainz, 1883). Another little work that has been translated into English is: "Il buon uso delle vacanze" (Parma, 1798). Its English title is: "A Method of spending the Vacation profitably. Addressed to the Youth who frequent the Schools of the Society of Jesus," London and Dublin, 1848.

Mykonos. See Tinos, Dioecese of.

Mylapur. See Saint Thomas of Mylapur, Dioecese of.

Mylassa, a titular see of Asia Minor, suffragan of Aphirosidae or Stauropolis, in Caria. This city, the ancient capital of Caria, was the home of the kings of the province before that honour passed to Halicarnassus. It was situated on a little promontory, at the foot of a beautiful white marble which was used for the construction or decoration of the city's temples and other buildings. Mylassa was taken by Labienus in the civil wars. In the Greek-Roman period it enjoyed a season of brilliant prosperity, and the three neighbouring towns of Olympe, Labranda, and Euromos were included within the territory of this city. It is dedicated to Zeus Osogos, which recalled to Pausanias (VIII, 3, 3) the Acropolis of Athens, and those of Zeus Karios and of Zeus Labranodos, or Stratios (Strabo, XIV, ii, 23). Mylassa is frequently mentioned by the ancient writers. At the time of Strabo the city boasted of remarkable orators, Euthydemos and Hybreus. Various inscriptions tell us that the Phrygian cults were represented here by the worship of Sabazios; the Egyptian, by that of Isis and Osiris. There was also a temple of Nemesis.

Among the ancient bishops of Mylassa was St. Ephrem (fifth century), whose feast was kept on 23 January, and whose relics were venerated in the church of Father of Pity; the name of Le Quien, Cyril, Cyril Pindar, or Paul, are mentioned by Nicephorus Callistus (Hist. ecle., XIV, 52) and in the Life of St. Xene. Le Quien mentions the names of three other bishops (Oriens christianus, I, 921), and since his time the inscriptions discovered refer to two others, one anonymous (C. I. G., 2571), the other named Basil, who built a church in honour of St. Stephen (see H. C. H., XVIII, 616). The St. Xene referred to above was a noble virgin of Rome who, to escape the marriage which her parents wished to force upon her, donned male attire, left her country, changed her name to Eusebia to that of Xene (stranger), and lived first on the island of Cos, then at Mylassa. The site of the city is now occupied by a little village called Milas, in Mylassa, inhabited by a few hundred schismatic Greeks, and containing some fine ruins. The Cyclopean walls surrounding the sacred enclosure of the temple of Zeus Osogos are still visible, as well as a row of fourteen columns. Focke (Travels, II, 2), in the eighteenth century, saw the temple of Augustus and Xene, the materials of which had been used by the Turks to build a mosque. There is also a twostoried tomb, called Diatoga, believed to be a simplified copy of the famous tomb of Mausolus, who was a native of Mylassa.

S. Salaville.

Myndus, a titular see of Caria, suffragan of Stauropolis. This city, known through its coins and the quite frequent mention made of it by ancient historians and geographers, was inhabited by a Greek colony from Troizen. It was situated on the coast of Caria, lying a little northwest of Halicarnassus on the most northerly of the three Dorian peninsulas. Although a seaport and fortified town, its role was an unimportant one, the chief event in its history being that, aided by Halicarnassus, it repulsed an attack by Alexander the Great. The "Notitiae episcopatum" allude to it as late as the twelfth or thirteenth century as one of the suffragan sees of Stauropolis. However, the names of its bishops are known: Archelaus, who attended the Council of Ephesus in 431; Alphius, who assisted at the Council of Chalcedon in 451; John who was pres-
ent at the Council of Constantinople in 680; and another John who went to the Second Council of Nicaea in 787. Myndus is now the little port of Gümüşhâli Lîmân (Liman-port) in the vilayet of Smyrna where the remains of a pier and some other ruins are to be seen.

Le Quien, Orient chrét., I, 915; Smith, Dictionary of Greek and Roman Geography, s. v.; L'Ebre, Asia Minor, 226.

S. PÉTRIDÈS.

MYRA, a titular see of Lycia in Asia Minor. The city was from time immemorial one of the chief places in the province. It was situated on the banks of the River Andracos, twenty stadia from the sea (Appian, "Bell. civil.", IV, 82; Strabo, XIV, iii, 7, Pliny, XXXII, 8; Ptolemy, VI, vi, 3; Stephen of Byzantium, s. v.). The hamlet of Andracos served as its port. On his way from Gaza to Rome St. Paul stayed at Myra (Acts, xxvi, 5); at least the "excertus receptus" reads thus, but the Vulgate has substituted Lystra. The Codex Beza, the Gigas Bible, and the ancient Egyptian version also mention Myra after Patara of Lycia (Acts, xxi, I). The "Acta Pauli" probably testifies to the existence of a Christian community at Myra in the second century (Harnack, "Missione und Apologetik des Christentums", 465, 487).

Le Quien, I, 965-70) opens his list of the bishops of this city with St. Nicander, martyred under Domitian about A. D. 95, and whose feast is celebrated 4 November (Acta SS., Nov., II, 225). As to St. Nicholas Thaumaturgus, venerated on 6 December, the "Index" of Theodores Lector (sixth century) is the first document which inscribes his name among the martyrs of Nicaea in 325 (Gelzer, "Patrum Nicenorum nominis", 67, n. 151). Theodosius II made the flourishing city of Myra the capital of Lycia and, it is said, erected there a church to St. Nicholas. Peter, Bishop of Myra composed in defense of the Council of Chalcedon a treatise against St. Nicholas and his followers (Bibliotheca, Codex 23). At the Sixth Ecumenical Council (787) two bishops of Myra, Theodore and Nicholas, assisted, one representing the orthodox party, the other the Iconoclasts.

Eubel ("Hierarchia catholica medii aevi", II, 1370) mentions five Latin titulaires of the fifteenth century. At present Myra is only a village called Dembre in the sanjak of Adalia and the vilayet of Koniah. Its ruins are numbered among the most beautiful of Asia Minor. Among them are the remains of a temple of Apollo, mentioned by Pliny, those of a magnificent theatre, several burial-places hewn in the rock, with tombs inscribed in Lycian and Greek, some of them octagonal. Numerous Christian ruins are also found, among them those of the Church of St. Nicholas, around which Russians have recently erected a monastery.

Fellows, Discoveries in Lycia, I (London, 1857), 189; Spratt and Forrest, Travels in Lycia, I (London, 1847), 131; Teixeira, Asie Mineure, 691-94; Ramsay, St. Paul, the Traveller and the Roman citizen, 297, 300, 319; Cunet, La Turquie d'Asie (Paris, 1892), 575-77.

S. SALAVILLE.

MYRNA, a titular see of Asia Minor, suffragan of Ephesus. Herodotus (I, 149) mentions it as one of the eleven cities of Colossae, which says it was built by the Amazon Myrina, also assigned to it an "Eolani" of Gorgon (Geographia, XII, iii, 21; viii, 6; XIII, iii, 6); Xenophon (Hellenica, III, i, 6) relates that Artaxerxes gave it to a chiefman named Gorgon. According to Pliny (Hist. nat., V, 30; XXXII, 6) it was famous for its oysters, and must have borne the name of Sebasteopolis, of which mention appears elsewhere. But there is another clue. The (Bulletin de correspondance hellénique, V, 283) tells us that Myrma formed part of the Kingdom of Pergamus in the third century B.C. Destroyed by an earthquake under Tiberius (Tacitus, "Annales", II, 47) and again under the Emperor Trajan (Orosius, VII, 12), it was each time rebuilt. It was the birth-place of Agathias, a Byzantine poet and historian of the sixth century. The names are known of some of the bishops of this diocese, which still existed in the fourteenth century: Dorotheus, 431; Proterius, 451; John, 553; Cosmas, 787 (Le Quien, "Orients Chrs.", I, 705). The site of Myrina was discovered at a place called Kalabassary in the eaza of Menemen and the vilayet of Smyrna, at the mouth of the Hodja-Tchai, in the ancient Phrygica. The remains of the harbour and the arsenal have disappeared under the alluvia of the river. Excavations (1880-1882) brought to light about four thousand tombs, dating from the two centuries immediately preceding the Christian Era, in which were found numerous objects representing the divinities of the Greek pantheon; children's toys, relics of the animals, etc.; probably these may be seen to-day in the Museum of the Louvre.

S. VALIÈRE.

MYRIOPHYTUM, titular see of Thracia Prima and suffragan of Heraclea. The early history of this city is not known. We find it mentioned for the first time in connexion with an earthquake which destroyed it in the year 1063 of our era (Murault, "Essai de chronologie byzantine", I, II, 3). It was visited by Cyril Lxicene about 1350 (Hist. III, 76). As a suffragan of Heraclea we find it, under the title of Peristasis and Myriophyton, mentioned first in a "Notitia episcopatum" of the end of the fifteenth century (Gelzer, "Ungedruckte . . . Texte der Notitiae episcopatum", 633). The title of Peristasis existed already 1170 (Parthey, "Hisoria Synodeorum", 103). In the sixteenth century Myriophyton displaced Peristasis, and the diocese took the name of Myriophyton and Peristasis (Le Quien, "Orients christianus", I, 1151). No change has since taken place, except that among the Greeks in 1908 it was elevated to an autocephalous metropolitan see. To-day Myriophyton is a rather busy port on the Sea of Marmora; the city numbers 5000 Greeks and 400 Turks. The sedia Archiepiscopal includes only ten parishes with about 22,000 souls, of whom Peristasis alone includes about 6000.

Dandos, Thracika (in Greek, Athens, 1892), 72-83.

S. VALIÈRE.

MYSORA (MAISOUR), DIocese of Mysorensis, in India, suffragan to Pondicherry, comprises the territories of the Mysore native state, the British provinces of Coorg and Collegal, part of Wynad and the taluk of Ossoor, Salem district; surrounded by the dioceses of Madras, Poona, Goa, Mangalore, Coimbatore, and Pondicherry. The Catholic population is about 48,202. The diocese, like the rest of the Pondicherry province, is under the Paris Society of Foreign Missions. The clergy are 65 in number (53 European and 12 native priests), having the care of 123 churches and chapels. They are assisted by the Brothers of the Immaculate Conception, the Brothers of St. Gabriel, the Nuns of the Good Shepherd Order, the Little Sisters of the Poor, the Sisters of St. Joseph of Tarbes, and Native Sisters of St. Anne and also of the Immaculate Conception. The cathedral and the bishop's residence are at Bangalore.

History. — Originally Mysore belonged to the Archdiocese of Goa, but what early mission work was done there is a matter of obscurity. In the Canarese or western portions a mission seems to have been established about the middle of the seventh century, in the eastern or Tulagi portion another mission was brought into existence about the year 1703 by two French Jesuits who came from Vellore and founded churches at Bangalore, Devanhalli, Chikka, Ballapoores, and elsewhere. But their work was stopped and partly destroyed by the fanaticism of the sultan, Tipu (1782—99). The district came under the Foreign
Mission Society of Paris in 1776, which at that date began work at Pondicherry. The celebrated Abbé Dubois (b. 1765, d. 1848), himself a member of the Foreign Missions, spent most of his life among the Canarese Christians of Ganjam, Puthally, and Sattullali (see Dubois). In the Vicariate of the Coromandel Coast (Pondicherry), erected in 1836, but was separated in 1845, and erected into a distinct vicariate-Apostolic in 1850, at the same time as the district of Coimbator. On the establishment of the hierarchy in 1866 it was made into a diocese suffragan to Pondicherry with the same boundaries as now.

**Succession of Prelates.**—**Vicars-Apostolic:** Stephen Louis Charbonaux, 1850-73; Joseph Augustine Chevalier, 1874-1880; Jean-Yves-Marie Coaud, 1880-90 (became first bishop in 1886); second bishop, Eugene-Louis Kleiner, 1900 (absent in Europe since 1903); Augustin Francis Basle, coadjutor with right of succession, 1906, now ruling the diocese.

**Institutions.**—St. Joseph’s College, Bangalore, teaching up to F. A. Standard, with 600 pupils; Bangalore Convent School under the Nuns of the Good Shepherd, with 494 pupils; St. Patrick’s School, Shooli, with 156 pupils; St. Francis Xavier’s School for girls, Cleveland Town, with 138 day-scholars; St. Aloysius School, Bangalore, with 210 pupils; native students of the Immaculate Conception, with 26 students; St. Louis’ Boarding School, with 58 boarders; the Brothers of the Immaculate Conception, training school for teachers, with 10 European students; convent school at Mysore, under the Good Shepherd Nuns, with 185 pupils; St. Joseph’s School, Mysore, with 142 pupils; native Sisters of St. Anne, in charge of five native schools, one for the natives of the Immaculate Conception, girls’ school at Setthally, also a dispensary; Majannah Thumby Cheety School for caste girls, under the Sisters of St. Joseph of Tarbes, Bangalore, with 136 pupils. **Charitable Institutions.**—St. Patrick’s Orphanage, Bangalore, with 100 inmates; St. Martha’s public hospital and dispensary, Bangalore, to charge of the Good Shepherd Nuns, 70 beds; eye infirmary under the same; Little Sisters of the Poor, Bangalore, with 101 inmates; two orphanages at Bangalore and Mysore under the Good Shepherd Nuns with total of 263 inmates; also 2 Magdalene Asylums with 219 inmates. Four agricultural farms for orphans, round which Christian villages have been formed. Four places in the diocese; several small orphanages in country parishes.

Ernest R. Hull.

**Mysteries, Pagan.** See **Paganism.**

**Mystery (Greek μυστήριον, from μύειν, “to shut,” “to close”).**—This term signifies in general that which is unknown, or valuable knowledge that is kept secret. In pagan antiquity the word mystery was used to designate certain esoteric doctrines, such as Pythagoreanism, or certain ceremonies that were performed in private or whose meaning was known only to the initiated, e. g., the Eleusinian rite. The word is also used in the sense of a mystery in the sense of what belongs to the Godhead (see **Discipline of the Secret**). In the New Testament the word mystery is applied ordinarily to the sublime revelation of the Gospel (Matt. xiii, 11; Col. ii, 2; I Tim. iii, 9; I Cor. xv, 51), and to the Incarnation and life of the Saviour and His manifestation by the preaching of the Apostles (Rom. xvi, 25; Eph. iii, 4; vi, 19; Col. i, 26; iv, 3). In conformity with the usage of the inspired writers of the **New Testament** theologians give the name mystery to revealed truths that surpass the powers of natural reason. Mystery, therefore, in its strict theological sense is not synonymous with the incomprehensible, since all that we know as incomprehensible, i. e., not adequately comprehensible as to its interior meaning; nor with the unknowable, since many things merely natural are accidentally unknowable, on account of their inaccessibility, e. g., things that are future, remote, or hidden. In its strict sense a mystery is a supernatural truth, one that of its very nature lies beyond the finite intelligence. Theologians distinguish two classes of supernatural mysteries, the absolute or theological and the relative. An absolute mystery is a truth whose existence or possibility could not be discovered by a creature, and whose essence (inner substantial being) can be expressed by the finite mind only in terms of analogy, e. g., the Trinity. A relative mystery is a truth whose innermost nature alone (e. g., many of the Divine attributes), or whose existence alone (e. g., the positive ceremonial precepts of the Old Law), exceeds the natural knowing power of the creature.

**Catholic Doctrine.**—The existence of theological mysteries is a doctrine of Catholic faith defined by the Vatican Council, which declares: “If any one should deny that in Divine Revelation there are mysteries properly so called (cetera et propria dicta mysteria), but that through reason rightly developed (per rationem rite excultam) all the dogmas of faith can be understood and demonstrated from natural principles: let him be anathema” (cens. III, De fide et ratione, can. 1). This teaching is clearly explained in the **Sermo Speciosissimo**, which was cited in part by the Vatican Council, is I Cor., ii. Shorter passages are especially Eph., iii, 4-9; Col., i, 26-27; Matt., xi, 25-27; John, i, 17-18. These texts speak of a mystery of God, which only infinite wisdom can understand, namely, the designs of Divine Providence and the other life of the Godhead (see also Wisdom, ix, 16-17; Rom. xi, 30). Tradition abounds with testimonies that support this teaching. In the Brief “Gravissimas Inter” (Denzinger, “Enchiridion,” ed. Bannwart, nat. 1666-74), Pius IX defends the doctrine of supernatural mystery by many citations from the works of the Fathers. Numerous other patristic texts that bear on the question are quoted in the “Die Theologie der Vorzeit,” II, 75 sqq.; V, 220 sqq.; and in Schäffler’s “Neue Untersuchungen über das Dogma von der Gnade” (Mainz, 1867), 466 sqq. The manifold excellence of Christian revelation offers many theological arguments for the existence of supernatural mysteries (cf. Scheeben, “Dogmatik,” i, 24).

**Reason and Supernatural Mystery.**—(1) Errors.—The existence of supernatural mysteries is denied by Rationalists and semi-Rationalists. Rationalists object that mysteries are degrading to reason. Their favourite argument is based on the principle that no medium exists between the reasonable and the unreasonable, from which they conclude that the mystery of the Incarnation is not a mystery (Pfeiferer). This argumentation is fallacious, since it confounds incomprehensibility with inconceivableness, superiority to reason with contradiction. The mind of a creature cannot, indeed, grasp the inner nature of the mysterious truth, but it can express that truth by analogies; it cannot fully understand incomprehensibility, but it can still express the mystery of faith, but it can refute successfully the objections which would make a mystery consist of mutually repugnant elements. Rationalists further object that the revelation of mysteries would be useless, since it is the nature of reason to accept only the evident (Toland), and since the knowledge of the incomprehensible can have no influence on the moral life of mankind (Kant). To
answer the first objection we have only to recall that there is a twofold evidence: the internal evidence of a thing in itself, and the external evidence of trustworthy authority. The mysteries of revelation, like the facts of history, are supported by external evidence and therefore they are evidently credible. The second difficulty rests on a false assumption. The religious life of the Christian is rooted in his faith in the supernatural, which is an anticipation of the beatific vision (St. Thomas, "Comp. Theol., ad fratrem Reg.," cap. ii,); a profound act of religious homage (cf. Cutrerler, "Apologia," II, 2 ed., Münster, 1855, 23). Some Rationalists, trusting to far-fetched similarities, pretend that the Christian mysteries were borrowed from the religious and philosophical systems of Panagon. A study of the origin of Christian suffices to show the absurdity of such an explanation. Semi-Rationalism explains mysteries either as purely natural truths expressed in symbolic language (Schelling, Bader, Sabatier), or as solvable problems of philosophy (G. W. Leibniz). The errors of both were condemned in a pontifical letter to the Archbishop of Cologne in 1587, and in another to the Bishop of Breslau in 1860 (Denzinger, "Enchiridion," ed. Bannwart, nn. 1655-1688); those of Froshammer, in the Brief "Gravisissimae Inter.," 11 Dec., 1862.

(2) Relations of Natural and Supernatural Truth. — (a) Authority. — The mysteries contained in supernatural revelation are not simply disconnected truths lying beyond the realm of natural things, but a higher, heavenly world, a mystical cosmos whose parts are united in a living bond. (Scheeben, "Dogmatik," I, 25.) Even in those parts of this vast system that have been revealed to us that is the beatum (ibid., 16). In his treatise, "Das Mysterien des Christentums," Scheeben has sought to show the logical connexion in the supernatural order by considering its supreme mystery, the internal communication of Divine life in the Trinity, as the model and ideal of the external communication to the creature of the Divine life of grace and glory. This supernatural is more real than any human wisdom, because, although incomplete, it has a nobler object, and through its dependence on the unfailing word of God possesses a greater degree of certitude. The obscurity which surrounds the mysteries of faith results from the weakness of the human intellect; which, like the eye that gazes on the sun, is blinded by the fulness of light. (b) Harmony of Natural and Supernatural Truth. — Since all truth is from God, there can be no real warfare between reason and revelation. Supernatural mysteries as such cannot be demonstrated by reason, but the Christian apologist can always show that the truths of his Mysticism are the necessary and the conclusive (St. Thos., "Suppl. Boot. de trinitate," Q. ii, a. 3). The nature of God, which is infinite and eternal, must be incomprehensible to an intelligence that is not capable of perfect knowledge (cf. Zigliara, "Propedectica," I, ix). The powerlessness of science to solve the mysteries of nature, a fact that Rationalists admit, shows how limited are the resources of the human intellect (cf. Daumer, "Das Reich des Widersammen und Geheimnisvollen," Ratisbon, 1872). On the other hand reason is able not only to recognize wherein consists the special mysteriousness of a supernatural truth, but also to dispel to some extent the obscurity by means of natural analogies and to show the way in which the constituent individuals are united, as are also the members of a body, to effect a common end: while the parts they severally play correspond to the functions of the bodily organs. They form a moral unity. This, of course, is true of the Church, but the Church has also a unity of a higher order: it is not merely a moral but a mystical body. This truth, that the Church is the mystical body of Christ, all its members being guided and directed by Christ the head, is set forth by St. Paul in various passages, more especially in Ephesians, iv, 4–13 (cf. John, xv, 5–8). The doctrine may be summarized as follows: (1) The members of the Church are bound together by a supernatural life communicated to them by Christ (ibid., 5). Christ is the centre and source of life to Whom all are united, and Who endows each one with gifts fitting him for his position in the body (ibid., 7–12). These graces, through which each is equipped for his work, form it into an organized whole, whose parts are knit together as though by a system of ligaments and joints (ibid., 6). (2) The Church has its growth and increase, growing in extension as it spreads through the world, and intensively as the individual Christian develops in himself the likeness of Christ (ibid., 13–15). (3) In virtue of this union the Church is the fulness or complement (νηστίου) of Christ (Eph. i, 23). It forms one whole with Him, and the Apostle even speaks of the Church as "Christ" (I Cor. xii, 12). (4) This union between head and members is conserved and nourished by the Holy Eucharist. Through this sacrament our incorporation into the Body of Christ is alike outwardly symbolized and inwardly actualized. "We being many are one bread, one body; for we all partake of the one bread and one body." (1 Cor. x, 17.)

Mystical Phenomena. See THEOLOGY, MYSTICAL.

Mystical Sense of Holy Scripture. See EXEGESIS.

Mystical Theology. See THEOLOGY, MYSTICAL.

Mysticism (from μυστήριον, to initiate), according to its etymology, implies a relation to mystery. In philosophy, Mysticism is either a religious tendency and characteristic of the human soul, or a system of thinking with the Divinity, or a system growing out of such a tendency and desire. As a philosophical system, Mysticism considers as the end of philosophy the direct union of the human soul with the Divinity through contemplation and love, and attempts to determine the processes and the means of realizing that end. This contemplation, according to Mysticism, is not based on a merely analogical knowledge of the Infinite, but on a direct and immediate intuition of the Infinite. According to its tendency, it may be either speculative or practical, as it limits itself to mere knowledge or traces duties for action and life; contemplative or affective, according to the object of the mystic's meditation being the nature or the part of the will; orthodox or heterodox, according as it agrees with or opposes the Catholic teaching. We shall give a brief historical sketch of
MYSTICISM and its influence on philosophy, and present a criticism of it.

Professor J. S. Mill.—In his "History of Philosophy", Cousin mentions four systems, between which, he says, philosophical thought has continually wandered, viz., Sensism, Idealism, Scepticism, and Mysticism. Whatever may be thought of this classification, it is true that Mysticism has exercised a large influence on philosophy, becoming at times the basis of whole systems, but always working as an element into their constitution. Mysticism dominated in the symbolic philosophy of ancient Egypt. The Taoism of the Chinese philosopher Lao-tse is a system of metaphysics and ethics in which Mysticism is a fundamental element (cf. De Harles, "Laozte, le premier philosophe chinois", in "Memoires couronnees et autres de l'Academie des Sciences, lettere et arts"). The same may be said of Indian philosophy; the end of human reflection and effort in Brahmanism and Vedantism is to deliver the soul from its transmigrations and absorb it into Brahma forever. There is little of Mysticism in the first schools of Greek philosophy, but it already takes a large place in the system of Plato, e.g., in his theory of the soul and the transcendent ideas, and in his doctrine of recollection and intuition. The Alexandrian Jew Philo (30 B.C.—A.D. 50) combined these Platonic elements with the data of the Old Testament, and taught that every man, by freeing himself from matter and receiving illumination from God, may reach the mystical, ecstatic state of soul and body (καθαρσις, καιρος), matter inactive, and the principle of perfection. The human soul had its existence in the world-soul until it was united with matter. The end of human life and of philosophy is to realize the mystical return of the soul to God. Fleeing itself from the sensuous world by purification (καθαρσις), the human soul ascends by successive steps through the various degrees of the metaphysical order, until it unites itself with the world-soul, as it unites itself with the One, and sinks into it; it is the state of ecstasy.

With the admission of Mysticism into the Church, the Christian Church enters into a new period. The Fathers recognized indeed the partial truth of the pagan system, but they pointed out also its fundamental errors. They made a distinction between reason and faith, philosophy and theology; they acknowledged the aspirations of the soul, but, at the same time, they emphasized its essential inability to penetrate the mysteries of Divine life. They taught that the vision of God is the work of grace and the reward of eternal life; in the present life only a few souls, by a special grace, can reach it. On these principles, the Christian school of Alexandria opposed the true gnosis based on grace and faith to the Gnostic heresies. St. Augustine teaches indeed that we know the essence of things in rationibus exteris, but this knowledge has its starting point in the data of sense (cf. Quæstiones, LXXXIII, c. xlv). Pseudo-Dionysius, in his various works, gave a systematic treatment of Christian Mysticism, carefully distinguishing between rational and mystical knowledge. By knowledge, he means knowledge through the order of the universe, but through the wonderful order of the universe, which is a participation of the divine ideas ("De Divinis Nominibus", c. vii, §§ 2–3, in P. G., III, 887 sq.). There is, however, he adds, a more perfect knowledge of God possible in this life, beyond the attainments of reason even enlightened by faith, through which the soul contemplates directly the mysteries of Divine life. The contemplation of life is possible only to a few privileged souls, through a very special grace of God: it is the θεομορφία, the "wondrous image".

The works of Pseudo-Dionysius exercised a great influence on the following ages. John Scotus Erigena (ninth century), in his "De Divinæ Naturæ", took them as his guide, but he neglected the distinction of this master, identifying as anathema alike the dogma of the Trinity and of Christ. His position was adopted by the Romish Church, and there was also a restatement of Erigena’s principles with Amaury de Bène, Joachim de Floris, and David of Dinant. A legitimate element of Mysticism, more or less emphasized, is found in the works of the Schoolmen of the thirteenth century. In the fourteenth and fifteenth centuries there was, as a protest against a formalism that was crowning the edifice of scholastic philosophy, a new mystical movement (cf. J. Ruysbroek, Gerson, Peter d’Ailly, Denys the Carthusian, and others). In the sixteenth and seventeenth centuries, the "Theologia Germanica", and, to a certain extent, Nicholas of Cusa (1401–84) with his theory of the coincidentia oppositorum. Protestantism, by its negation of all ecclesiastical authority and by avowing the "real presence" of Christ in the Eucharist, found a new forum for the logical outcome in the Mysticism of its most pantheistic exponents.

Protestant Mysticism is represented by Sebastian Frank (1490–1542), by Valentine Weiler (1533–88), and especially by J. Böhme (1575–1624), who, in his "Aurora", conceived the nature of God as containing in itself the energies of good and evil, and identified the Divine nature with the human soul whose operation is to kindle, according to its free will, the fire of good or the fire of evil (cf. Deuszen, "J. Böhme ueber sein Leben und seine Philosophie", Kiel, 1897). Reuchlin (1455–1522) developed a system of cabalistic Mysticism in his "De arte cabalistica" and his "De verbo mirifico". We may also assign to its influence of Mysticism the ontological system of Matthias von Rapperswil and the Ontologists of the eighteenth and nineteenth centuries. The romantic Mysticism of Fichte (1762–1814), Novalis (1772–1801), and Schelling (1775–1854) was a reaction against the Rationalism of the eighteenth century. A pseudo-Mysticism is also the logical outcome of the Idealism and evolutionary Subjectivism of modern Protestants, inaugurated by Lessing (1728–81), developed by Schleiermacher (1768–1834), A. Ritschl (1822–89; cf. Goyau, "L’Allemagne Religieuse, Le Protestantisme" 6th ed., Paris, 1906), Sabinier, etc., and accepted by the Modernists in their theories of vital immamance and religious experience (cf. Encyclopædica "Pascendi"). See Modernism.

Carriccius.—A tendency so universal and so persistent as that of Mysticism, which appears among all peoples and influences philosophical thought more or less throughout all centuries, must have some real foundation in human nature. There is indeed in the human soul a natural desire for, an aspiration towards, the highest. The highest, not the highest, but the infinite good. We know by experience and observation that the knowledge and enjoyment of created things cannot give the fulness of truth and the perfection of beatitude which will completely satisfy our desires and aspirations. There is in our soul a capacity for...
more truth and perfection than we can ever acquire through the knowledge of created things. We realise that God alone is the end of man, that in the possession of God alone we can reach the satisfaction of our aspirations. Cf. S. Thom., Theol., I, Q. ii, a. 1, ad 1um; Q. xii, a. 1; Q. xliv, a. 4, ad 3um; I-II, Q. iii, a. 8; “Contra Gentes”, III, cc. i, xxv, 1; “De Veritate”, Q. xxii, a. 2; “Compend. Theologie”, 104, etc. Cf. Sestili, “De naturali intelligentia animae appetitu intundii divinam essentiam”, Rome, 1896. But the rational effort of our intelligence and positive aspirations of our will find here their limits. Is there truly possible a union of our reason and will with God more intimate than that which we possess through created things? Can we expect more than a knowledge of God by analogical concepts and more than the beatitude proportionate to that knowledge? Here human reason cannot answer. But where reason was powerless, philosophers gave way to feeling and imagination. They dreamt of an intuition of the Divinity, of a direct contemplation and immediate possession of God. They imagined a notion of the universe and of human nature that would make possible such a union. They built systems in which the world and the human soul were considered as an emanation or part of the Divinity, or at least as containing something of the Divine essence and Divine ideas. The logical outcome was Pantheism.

This result was a clear evidence of error at the starting-point. The Catholic Church, as guardian of Christian doctrine, through her teaching and theologians, gave the solution of the problem. She asserted the limits of human reason: the human soul has a natural capacity (potentia obedientialis), but no exigency and no positive ability to reach God otherwise than by analogical knowledge. She condemned the immediate vision of the Beghards and Beguines (cf. Denzinger-Bannwart, “Enchiridion”, nn. 474–5), the pseudo-Mysticism of Eckhart (ibid., nn. 501–29), and Molinos (ibid., nn. 2121–88), the theories of the Ontologists (ibid., nn. 1859–65, 1891–1930), and Pantheism under all its forms (ibid., nn. 1801–5), as well as the vital Immanence and religious experience of the Modernists (ibid., nn. 2071–109). But she teaches that, what man cannot know by natural reason, he can know through revelation and faith; that what he cannot attain to by his natural power he can reach by the grace of God. God has gratuitously elevated human nature to a supernatural state. He has assigned as its ultimate end the direct vision of Himself, the Beatific Vision. But this end can be reached only in the next life; in the present life we can but prepare ourselves for it with the aid of revelation and grace. To some souls, however, even in the present life, God gives a very special grace by which they are enabled to feel His sensible presence: this is true mystical contemplation. In this act, there is no annihilation or absorption of the creature into God, but God becomes intimately present to the created mind and this, enlightened by special illuminations, contemplates with ineffable joy the Divine essence.

Mythology. See Paganism.
Nabonucedonosor.—The Babylonian form of the name is Nabu-kudurri-usur, the second part of which is variously interpreted ("O Nebo, defend my crown", or "tiara", "empire", "landmark", "work"). The original has been more or less defaced in the Hebrew, Greek, and Latin transliterations, from which are derived the modern English forms, Nabuchodonosor, Nebuchadnezzar, and Nebuchadrezzar. On the whole, Nabuchodonosor appears to be nearer to the original Babylonian pronunciation than Nebuchadrezzar and especially Nebuchadnezzar (A. V., Ezra, ii, 1) taken from the Massoretic transliteration, and would be still nearer if the "é" were restored to the second element where "é" has crept in. Two kings of this name are known to have ruled over Babylon.

Nabuchodonosor I (c. 1152–1124), is the most famous monarch of the dynasty of Pashi or Isin. A prince of untiring energy, he led the Chaldea armies east and west, against the Lulubi, Elam, and Syria, and although twice defeated by the Assyrian king, Ashshur-shesh-ishi, succeeded in arresting for a time the decay of the first Babylonian Empire (see Babylon, II, 183).

Nabuchodonosor II is often mentioned in various parts of Holy Writ, and will claim our especial attention here. He was the oldest son of Nabopolassar, the Chaldean restorer of Babylonian independence. His long reign of forty-three years (c. 605–562 B.C.) marks the zenith of the grandeur reached by the short-lived second Babylonian Empire (625–538). Although we possess long inscriptions of Nabuchodonosor, yet as these deal chiefly with the account of his architectural undertakings, our knowledge of his history is incomplete, and we have to rely for information mostly on the Bible, Berosus, and Greek historians. Of the wars he waged either before or after his coming to his father's throne, nothing need be said here: their recital can be read in this Encyclopaedia, II, 183–84; only let it be remarked that after the Cimmerians and Scythians were definitively crushed, all his expeditions were directed westwards, although a powerful neighbour lay to the North: the cause of this was that a wise political marriage with Amuthia, the daughter of the Median king, had insured a lasting peace between the two empires.

Nabuchodonosor seems to have prided himself on his constructions more than on his victories. During the last century of Ninevah's existence Babylon had been greatly devastated, not only at the hands of Sennacherib and Assurbanipal, but also as a result of her own renewed rebellions. Having heard of his father's work of reconstruction, aimed at making his capital one of the world's wonders. Old temples were restored; new edifices of incredible magnitude (Diodor. of Sicily, II, 95; Herodot., I, 183) were erected to the many gods of the Babylonian pantheon; to complete the royal palace begun by Nabopolassar, nothing was spared, neither "cedar-wood, nor bronze, gold, silver, rare and precious stones"; an underground passage and a stone bridge connected the two parts of the city separated by the Euphrates; the city itself was rendered impregnable by the construction of a triple line of walls. Nor was Nabuchodonosor's activity confined to the capital; he is credited with the building of the Tower of Babel, the opening of a port on the Persian Gulf, and the building of the famous Median wall between the Tigris and the Euphrates to protect the country against incursions from the North: in fact, there is scarcely a place around Babylon where his name does not appear and where traces of his activity are not found.

These gigantic undertakings required an innumerable host of workmen: from the inscription of the great temple of Marduk (Meissner, "Assyr. Studien", II, in "Mitteil. der Vorderas. Ges.", 1904, III), we may infer that most probably captives brought from various parts of Western Asia made up a large part of the labouring force used in all public works.

From Nabuchodonosor's inscriptions and from the number of temples erected or restored by this prince we gather that he was a very devout man. What we know of his history shows him to have been of a humane disposition, in striking contrast with the wanton cruelty of most of the iron-souled Assyrian rulers. It was owing to this moderation that Jerusalem was not captured and repeatedly sacked and finally destroyed only when its destruction became a political necessity; rebel princes easily obtained pardon, and Nebuchadnezzar himself, whose ungratefulness to the Babylonian king was particularly odious, would, had he manifested less stubbornness, have been treated with greater indulgence (Jer., xxxviii, 17, 18); Nabuchodonosor showed much consideration to Jeremiah, leaving him free to accompany

666
the exiles to Babylon or to remain in Jerusalem, and appointing one of the Prophet's friends, Godolias, to the governorship of Jerusalem; he granted likewise such a share of freedom to the exiled Jews that some rose to a position of prominence at Court and Baruch thought it a duty to exhort his fellow-countrymen to have the welfare of Babylon at heart and to pray for her king. After Baruch in 739 had passed the middle of his life, Nabuchodonosor, inspired from on high, prophesied the impending ruin to the Chaldean Empire (Berosus and Abydenus in Eusebius, "Prep. Evang.", IX, xii). The Book of Daniel (iv) records how God punished the pride of the great monarch. On this mysterious chastisement, which some think connected with the madness called apoplexy as well as on the interregnum which it must have caused, Babylonian annals are silent: clever hypotheses have been devised either to explain this silence, or in scanning documents in order to find in them traces of the wanted interregnum (see Oppert, "Expedit. en Mesopot." I, 186-187; Vigouroux, "La Bible et les decouvertes modernes", IV, 337). Nabuchodonosor died in Babylon between the second and sixth months of the forty-third year of his reign.

CHARLES L. SOUVAY.

Nacchiante (Naclantus). Giacomo, Dominican theologian, b. at Florence, d. at Chioggia, 6 May, 1454, where Michael iguatus afterwards Pius V, was his fellow-student. He subsequently taught philosophy and theology for a number of years, in the college of St. Thomas of Minerva, Rome. Paul III, struck with his talents, made him Bishop of Chioggia (3 June, 1544). At the Council of Trent his vigorous protest against the words of the decree of the IV Session (8 April, 1546), which asserts that the traditions of the Church are to be received with the same reverence and piety as the Scriptures, cast some suspicions on his orthodoxy; but he gave a reverent assent to the decree, when he saw it confirmed by the authority of so great an assembly. Other serious suspicions of his orthodoxy seem afterwards to have been formed. As for his remark, his see is vindicated from such charges by the grave affairs of trust which were assigned him under Pius IV. His works were published by Pietro Fratino at Venice in 1567. Among the more important are "Enarrationes . . . in ep. D. Pauli ad Ephesios", "In ep. ad Romam", "S. Scriptura medulla"; "Tractata in XVIII theologales"; "Theoremata metaphysica"; "Theoremata theologicae".

EDWARD P. GARESCHÉ.

Nachtagl (Nachtagall). See Luscinius, Ottmar.

Naccola (Nacoleia).—A titular metropolitan see in Phrygia Salutaris. This town, which took its name from the nymph Nacolla, had no history in antiquity. It was there that Valens deified the usurper Procopius; under Arcadius it was occupied by a garrison of Goths who revolted against the emperor. At first dependent on Synnada, the see became autocephalous between 787 and 802, and metropolitan between 1035 and 1066. Seven of its bishops are known, among them being Constantine, one of the chief supporters of Iconoclasms under Leo the Isaurian, who rejoiced to abjure his error before the patriarch, St. Germanus, and was condemned as an hereapist at the Second Council of Nicea (787). Nacolla is the modern village of Seyyid el-Ghâzi, chief town of Nahi, in the Villayet of Brusa, about twenty-two miles southeast of Eski Sheir. The name of the village is derived from Seyyid (Sidi) el-Battâl, an Arab sheikh who died in 1011, near the Isaurian, and buried in a tekke of Bektashi dervishes founded by the mother of the Seljukian sultan, Aladdin the Great. Seyyid el-Ghâzi contains some unimportant ruins.

S. PéTRIDES.

Nagasaki, Diocese of (Nagasakiensis).—Nagasaki, capital of the prefecture (ken) of the same name, is situated on a small peninsula on the south-eastern coast of the Island of Kiushiu, Japan. Its harbour, enclosed on three sides by mountains sloping down to the sea-shore and sheltered on the fourth (the entrance) by numerous islands, is one of the safest and most important in Japan. Being the first port of entry for vessels coming from the south and west, it is also one of the leading coal-stations of the Far East. The principal industries of the town are the manufacture of engines and ship-building. It imports mainly cotton, coal, sugar, and petroleum; among its exports are coal-tar, flour, cephalopod, and tobacco. In the first ten centuries of our era there are no certain references to the town under no less than seven distinct names, of which Fukayone Ora (Fukay Bay) is the best known. Its present name is probably derived from a certain Nagasaki Kotaro, who, about 1185-90, received Fukayone Ora as his fief. Prior to the arrival of the Christian missionaries, however, Nagasaki was an insignificant village.

Although St. Francis Xavier's missionary labours in Japan were confined to the territory now included in the Diocese of Nagasaki, and the ecclesiastical history of this territory is practically identical with the early Christian history of Japan, the town of Nagasaki appears not to have been visited by the missionaries until 1509. In this year Father Vilela, S.J., erected a church on the site of a pagoda which had been given him by the Christian lord of the district, and in 1571 had already made 1500 converts. In 1570 the Portuguese began trading with Nagasaki. Yimayemon, the imperial governor of the province, received them kindly, and, perhaps too confidently, conducted them thence alone, and thus to prevent others from obtaining firearms, affected to favour the Christian religion. When, however, the traders and missionaries, as a safeguard against future oppression, insisted on his recognizing the ecclesiastical authority over the territory of Nagasaki, he showed great hesitation and yielded to their wishes only when the missioners themselves withdrew and chose some other headquarters if their request were refused. From the arrival of the foreigners dates the rapid growth of Nagasaki, numbers of the native merchants settling in the town in the hope of enriching themselves by foreign commerce. By 1587 the last traces of the Buddhist and Shinto religions had vanished from the district, which already contained three principal churches (called by the Japanese Ki-kwan or "strange sight") and numerous chapels. To 1587 must also be referred Hideyoshi's sudden change of attitude towards Christianity (see Japan). Influenced by the bonzes' insinuations concerning the ultimate end of their missioners, he issued, during a month's fast, (24 July), a decree prohibiting the practice of that religion and ordering the Jesuits to leave Japan within twenty days. Subsequently, however, the taiko grew calmer and consented to ten fathers remaining at Nagasaki, nor did he adopt any active measures to suppress Christianity as long as outward respect was shown for his decrees.

Edward F. Garesché.
The San Felipe incident, however (see JAPAN), led to a new persecution in 1596, and twenty-six missionaries (6 Franciscans, 3 Jesuits, and 17 Japanese Christians) were crucified at Nagasaki in 1597. Persistent rumors that the talk was to revisit Kiushiu in person led the Governor of Nagasaki, who had previously shown himself not unfavourable towards the Christians, to send a force to destroy the churches and residences of the missionaries in 1598. In the territory of the present Diocese of Nagasaki 137 churches of the Jesuits were demolished, as well as their college in Amakusa and their seminary in Arima. The death of Hideyoshi on 16 Sept., 1598, put an end to this persecution. Ieyasu, anxious to promote commerce with the Philippines, allowed free ingress to the missionary nations, and issued a charter that set no conditions; all who should receive baptism, showed at first no hostility to Christianity. In 1603 Nagasaki, the population of which had grown from about 2500 to 24,500 in fifty years, possessed eleven churches. About 1612 or 1613 the shoguns—assisted, it is to be feared, by some English and Dutch captains—succeeded in thoroughly alarming Ieyasu as to some imaginary intrigue between certain of his officers and the representatives of Philip III of Spain and Portugal. On 27 January, 1614, orders were issued for the expulsion of the missionaries and the destruction of the churches. In 1622, Nagasaki was the scene of the "Great Martyrdom." (See Martyrs, Japanese.) In 1629 the expulsion was completed, or temporarily for the Jesuits, who were at last allowed to bring about the introduction of paper pictures, which were first used, but later more durable images were utilized—at first wood, and still later (1669) 20 bronze images cast by an engraver of Nagasaki from metal obtained from the altars of the demolished churches. Between the 4th and 9th day of the first month of each year all suspect Christians were required to submit to the test of fire upon the threatened loss of all they possessed. Those who refused were banished from their homes, and when again caught, if still recalcitrant, were taken to the boiling springs of Shimabara and thrown in, or subjected to crucifixion and various kinds of refined torture. Loaded into action by such persecution and by the miseries consequent on the suppression of the religious houses, which had been the only source of alleviation for the needs of the impoverished peasantry, the people rose in revolt, in 1637, but, after some fierce fighting, were crushed by the shogun's forces, assisted by Dutch artillery. In 1640 four Portuguese envoy.s from Macao were seized at Nagasaki, and, on refusing to apostatize, were put to death.

For more than two centuries after 1640, Japan was practically closed to the outside world. The persistent attempts of missionaries to penetrate into the country during the sixteenth and seventeenth centuries had no other success than that of winning them the martyr's crown. The discovery of a large body of Christians by Father Petijean on 17 March, 1805, when he was establishing the first Catholic church in Nagasaki, after the reopening of Japan to the missionaries, has been referred to in the article JAPAN. In 1806 this zealous missionary was created Bishop of Myriophye and Vicar Apostolic of Japan, and in 1876, on the division of the territory into two vicariates, he retained the administration of Southern Japan (1879-85). On the cessation of persecution (see JAPAN), Mgr Petijean devoted his whole energy to winning back into the Fold the descendants of the old Christians, organizing the first Christian districts, and founding a seminary for the formation of a native clergy. He was succeeded as Bishop of Osaka by Father Mgr. Cousin (5, April, 1842), now Bishop of Nagasaki. Father Cousin landed in Japan in 1866, and was the first missionary to penetrate into the Goto Islands. In 1869 he founded the first Catholic station at Osaka, where he laboured for eighteen years. Created Bishop of Aomori in 1885, on succeeding Mgr Petijean, he fixed his residence at Nagasaki, when Southern Japan was divided into two vicariates, in 1887. In 1890 the First Synod of Japan was held at Nagasaki, of which Mgr Cousin became first bishop, on the establishment of the Japanese hierarchy, in 1891. In 1897 the third centennial of the twenty-six Japanese martyrs, canonized by Pius IX in 1867, was celebrated by the construction and solemn consecration of the new cathedral of Nagasaki. The episcopal jubilee of Bishop Cousin was celebrated in 1910. During his episcopate of twenty-five years, Bishop Cousin has laboured to increase the native clergy and to extend the work of the mission. He has ordained 40 Japanese priests, founded 35 new stations (with residences), established 103 parochial churches, and erected 60 churches and chapels. During his administration the Catholic population has more than doubled.

The Diocese of Nagasaki includes Kiushiu and the neighbouring islands—Amakusa, Goto, Iketsuki, Tsushima, Oshima, and the Ryukyu (Lu Chu) Archipelago. The total population is about 7,584,900; the Catholic population was 47,104 on 15 Aug., 1910 (23,000 in 1885). The personnel of the mission is: 1 bishop, 36 missionaries (French), 26 diocesan priests (Japanese), 6 tonsured clerics, 35 native (male or female) catechists labouring for the conversion of pagans, 350 catechists entrusted with the instruction of the Christian communities, 15 itinerant baptizers (female, 12, male, 3), 962 religious sisters, including 17 of education and charity, are: 17 Brothers of Mary (14 foreigners, including 3 priests), 21 Sisters of the Holy Child Jesus (Chauffailles—5 Japanese), 16 Franciscan Sisters (Missionaries of Mary), 8 Sisters of St. Paul of Chartres (3 Japanese), 10 communities of native women, with 177 members. The establishments include: 40 missions, mostly in 35 sub-stations; 153 Christian communities; 67 blessed churches and chapels; 52 unblessed oratories and chapels; 1 seminary with 31 students (8 theological; 4 philosophical; 19 studying Latin); 1 Apostolic school with 18 pupils (10 postulants of the Brothers of Mary); 1 college, primary and commercial, with 325 pupils (30 boarders); 1 school for women catechists, with 15 pupils; 3 boarding-houses for girls with 224 pupils; 1 professional school, with 18 pupils: 1 primary school for girls, with 149 pupils; 2 kindergartens, with 149 pupils, 8 orphanages, with 64 children (65 boarders); 2 workrooms, with 39 workers; 1 leper asylum, with 28 patients; 3 hospitals, with 479 patients (4005 patients cared for); 15 conference halls for religious instruction (total number of hearers about 2730). The Brothers of Mary have the direction of the Apostolic school and the college. The Sisters of the Holy Child Jesus manage 2 boarding-houses (high-schools), the professional school, primary school, kindergartens, 2 orphan asylums, 1 hospital dispensary, 1 conference hall, and 1 work-room. The Francisca Sisters have charge of the leper asylum, 1 hospital, 3 dispensaries, 2 conference halls, 1 orphan asylum, and 1 work-room; the Sisters of St. Paul of Chartres; 1 boarding-house (high-school), 1 hospital dispensary, 1 conference hall, and 1 orphan asylum. As the State insists on the attendance of all children between the ages of six and twelve at the secular public primary schools, parochial schools are practically impossible in Japan. The administrative statistics for the year ending 15 Aug., 1910, are: baptisms of adults, 592 (208 in extremis and 384 abjurations); baptisms of pagan children (in extremis), 811; baptisms of taostic children (in extremis), 29,414; paedical denominations, 25,015; Holy Viaticums, 340; extreme unctions, 476; marriages, 323; known deaths, 1097; increase, 1179.

THOMAS KENNEDY.

NAGPUR, DIocese OF (NAGPURensis), in India, sufragans to Madras. Formerly the north-western portion of the Vicariate Apostolic of Vizagapatam, it was erected into a diocese on 29 July, 1887, and its boundaries finally readjusted on 10 July, 1895. It comprises the greater portion of the Central Provinces, Berar, a portion of the Indore State, a strip of the Nisam's dominions as far south as the Godavere River, etc., the boundaries being in many parts independent of civil divisions. The area is about 124,000 square miles with a Catholic population of 15,000 out of a total population of 3,500,000 inhabitants. The diocese is divided by 28 priests of the Congregation of the Missionaries of St. Francis de Sales, Annecy, and 7 secular clergy, assisted by 7 brothers of the above congregation; 13 Franciscan Brothers from Paderborn in Germany; 4 Sisters of St. Joseph from St. Jean de Maurienne, Savoy; 23 Daughters of the Cross; and 28 Catechist Sisters of Mary Immaculate. The diocese has 12 churches and 53 chapels. The cathedral, bishop's residence, and diocesan seminary are at Nagpur.

HISTORY.—Although the territories comprised under Nagpur were included within the Vicariate of the Great Mogul, there is no trace of any missionary ever having set foot there till the beginning of the nineteenth century. Both Ajmer, Nizamabad, and Jaunlah were first visited by priests of the Goan jurisdiction, from Pooa, about 1514. A chapel in honour of St. Anthony existed at Takli, suburb of Nagpur, where the troops of the Raja of Nagpur were quartered. Another was built in Kamptee, and held in great veneration by native Christians. A Goan priest died there in 1683. Some other Goan priests established themselves at Aurangabad, and built a chapel in honour of St. Francis Xavier in 1816; another chapel was built by them at Karran, two miles from Aurangabad. Military cantonments for British troops were created at Kamptee in 1821, and at Jaunlah in 1827. The Goan priests retained their jurisdiction in these parts until 1839, when, in consequence of the Apostolic Brief "Multa praecrite" of 24 April, 1838, the district fell to the jurisdiction of the Vicar Apostolic of Madras. In January, 1839, priests from Madras took possession of Kamptee and Jaunlah. They were Fathers Brecan (died 1844) and Egon at Kamptee from 1839-44. Father Brecan was at the same time superintendent of the hospital, whose registers are preserved in the bishop's residence at Nagpur, subsequently became Vicar Apostolic of Hyderabad and then Archbishop of Hobart Town, Tasmania, where he died in 1908. In 1845 some missionaries of St. Francis de Sales, from Annecy (Savoy, France), were appointed to the charge of the northern portion of the Vicariate of Madras, which was thus separated and made into the Vicariate of Vizagapatam. They took possession of Aurangabad, Jaunlah, and Kamptee in 1846, and visited Nagpur, Ellibelpur (1849), Jubbulpur (1850), and Khandwa. Jubbulpur became a military cantonment in 1857. From 1846 to 1870 Nagpur was a sub-station of Kamptee, and then became a residential station. It developed into the headquarters of the mission when the district was finally separated from Vizagapatam and made into an episcopal see, suffragan to Madras, in 1887.

SUCCESSION OF BISHOPS.—Alexis Riccaz, 1887-92; Charles Felix Pelvart, 1893-1900; J. M. Crochet, 1901-06; E. F. X. Bodin, 1906-07; F. E. Coppel, present bishop from 1907.

INSTITUTIONS.—Schools for Boys: St. Francis of Sales' College, Nagpur, Calcutta, with 350 pupils, also industrial school, printing press and Catholic young men's institute; St. Francis of Sales' Native School, Nagpur, with 220 pupils; St. Joseph's Day School, Kamptee, with 130 pupils; St. Aloysius' School, Jubbulpur, with 120 pupils; small schools at Amraoti and Aurangabad; native training school at Ghoghaorgaon with 15 boarders, and 26 other schools in the villages with 215 pupils; thirty schools in Khandwa under 25 catechist teachers with 396 pupils; 17 schools round Ellibelpur under 17 catechists with 155 pupils.

Charitable Institutions.—Poohouse, Nagpur, with 18 inmates; a leper hospital with 30 inmates; 14 dispensaries in various places; boys' orphanages at Nagpur, Kamptee, Thans, Jubbulpur, and Amraoti, with 249 inmates, and girls' orphanages at the same places with 229 inmates. St. Vincent de Paul Society at Nagpur; catechumenates at Ghoghaorgaon, Khandwa, and Ellibelpur; training schools for catechists at Ghoghaorgaon and Ellibelpur with 100 students. The mission centres are (1) Ghoghaorgaon near Aurangabad, created in 1893, with 55 villages, 23,288 Catholics, and 26 schools; (2) Passan near Bilaspur, opened in 1900 with 80 Catholics; (3) Aulia in Khandwa, opened in 1902. 36 villages with 2100 Catholics and 30 school; (4) Ellibelpur in Berar, opened in 1903, with 16 villages with 870 Catholics.

Nahanes, or “People of the Setting Sun”, a tribe of the great Déné family of American Indians, whose habitat is east and west of the Great Divide, just north of latitude 58° N. Broadly speaking they are divided into two branches, the eastern and the western Nahanes. The latter are themselves subdivided into the Thalhthans, so called after their general rendezvous at the confluence of the river of the same name with the Steckine, and the Takus, whose territory is the basin of the Taku River, together with the upper portions of the streams which flow northward to the Lewes, as far east as the upper Liard River. The Kaskas live just west, and through the Rocky Mountains, and by speech, physique, and sociology they are eastern Nahanes, while just east of them in the same range lies the Thalhtans, called the ranch of the tribe roams over the mountains of the Mackenzie, and while the tribe cannot now number much more than 1000 souls, viz., 175 Thalhtans, 200 Kaskas, 150 Takus, and 500 eastern Nahanes proper. The latter, as well as the Kaskas, are pure nomads, without any social organization to speak of, following patriarchal lines of their descent and laws of inheritance, while the westernmost Nahanes have adopted the matrilineal institutions of their neighbours on the Pacific Coast, the clans, with petty chiefs (some of whom are quite influential and are occasionally women), potlatches or public distributions of goods or eatables, creation of the dead, ceremonial dances, etc. Physically they also resemble the coast Indians, with whom they have intermarried to a great extent, and from the language of whom they have borrowed not a few words.

From a religious standpoint the Nahanes have fared badly. The secluded position of the western branch and the nomadic habits of the eastern subdivision have conspired to keep them away from religious influence. At no event contact with the miners of the Cassiar goldfields has been considered detrimental to the Nahanes of the Far West and sadly thinned their ranks. The Anglican Church has for a dozen years or so maintained a mission at Thalhtian, which has met with a limited measure of success. The only visit of a Catholic priest to the same was paid
by the writer in the summer of 1903, and it is understood that it is now to be followed up by either the establishment of a permanent post there or by periodic visits of Oblate missionaries. As to the eastern branch of the tribe, they have been more or less within reach of the priests of the Mackenzie valley. To this day, however, both east and west of the Rockies the tribe can be pointed out as one of the least civilized of the North American Indians.

See bibliography to DENÉS, HAZEN, AND LECHEUREUX; MORICE, \textit{The Nah'ane and Their Language in Transactions of the Canadian Institute} (Toronto, 1900).

A. G. MORICE.

\textbf{Nachato, Bartolomé de Torres. See Torres Nachato, Bartolomé de.}

\textbf{Nahum}, one of the Prophets of the Old Testament, the seventh in the traditional list of the twelve Minor Prophets.

\textbf{NAME.}—The Hebrew name, probably in the intensive form, \textit{Na'um} (Gesenius-Hutsech, "Heb. Gramm.", § 846, g.), signifies primarily "full of consolation or comfort," hence "consoler" (St. Jerome, \textit{consolator}), "comforter." The name Nahum was apparently of not rare occurrence. Indeed, not to speak of a certain Nahum listed in the Vulgate and Douay Version (II Esd., vii, 7) among the companions of Zoroabel, and another who seems to have been rather named Elnoah (II Esd., i, 2; Heb. has Rehum in both places), St. Luke mentions in his genealogy of Our Lord a Nahum, son of Hesli and father of Amos (iii, 25); the Mishna also occasionally refers to Nahum the Mede, a famous rabbi of the second century (Shabb., ii, 1, etc.), and another Nahum who was a scribe or copyist (Pekah, ii, 6); inscriptions show names like Nahum and Pharnaciai (Gesenius, "Monum. Phcen.", 133; Boeckh, "Corp. Inscrip. Graec.", ii, 25, 26; "Corp. Inscrip. Semiut.", i, 123 a-b').

\textbf{THE PROPHET.}—The little we know touching the Prophet Nahum must be gathered from his book, for nowhere else in the canonical Scriptures does his name occur, and extracanonical Jewish writers are hardly less reticent. The scant positive information vouchsafed by these sources is in no wise supplemented by the worthless stories concerning the Prophet put into circulation by legend-mongers, and which may be found in Carpzov's "Introduct. ad lib. canon. Bibliorum Vet. Test." (III, 380 sqq.). We will deal only with what may be got from the canonical Scriptures. Nahum is the only available first-hand document at our disposal. From its title (i, 1), we learn that Nahum was an Elcoseite (so D. V.; A. V., Elkosite; Heb., הֶלְכַּשְׁ ב). On the true import of this statement commentators have not always been of one mind. In the prologue to his commentary on the book, St. Jerome informs us that some understood Elcoshite as a patronymic indication "son of Elcosh," he, however, holds the commonly accepted view that the word Elcoshite shows that the Prophet was a native of Elcgosh.

But even understood in this way, the intimation given by the title is disputed by biblical scholars. Where, indeed, should this Elcgosh, nowhere else referred to in the Bible, be sought? (1) Some have tried to identify his place, Amlath, with the place where the tomb of Nahum is still shown. According to this opinion, Nahum was born in Assyria, which would explain his perfect acquaintance with the topography and customs of Ninive exhibited in the book. But such an acquaintance may have been acquired otherwise; and it is a fact that the tradition connecting the two places with Nahum cannot be traced back beyond the sixteenth century, has been conclusively proven by Assemani. This opinion is now generally abandoned by scholars. (2) Still more recent and hardly more credible is the view advocated by Hitizig and Knobel, who hold that Elcgosh was the old name of the town called Capharnaum (i.e., "the village of Nahum") in the first century: a Galilean origin, they claim, would well account for certain slight peculiarities of the Prophet's dictation that smack of provincialism. Apart from the somewhat precarious etymology, it may be objected against this identification that Capharnaum, however well known a place it was at the New Testament period, is never mentioned in earlier times, and, for all we know, may have been founded at a relatively recent date; moreover, the priests and the Pharisees would most likely have asserted less emphatically "that out of Galilee a prophet riseth not" (John, vii, 52) had Capharnaum been associated with our Prophet in the popular mind. (3) Still, it is in Galilee that St. Jerome located the birthplace of Nahum ("Comment. in Nah." in P. L., X, 212) supposed to be Elkozech, in N. Galilee; but "out of Galilee doth a prophet rise?" might we ask again. (4) The author of the "Lives of the Prophets" long attributed to St. Epiphanius tells us "Elcgosh was beyond Beth-Gabre, in the tribe of Simeon." (Greek text in P. G., XI, LIII, 499; Syriac text in Nestle, "Syrische Grammatik, Chrestomathia," 99). He unquestionably means that Elcgosh was in the neighbourhood of Beth-Gabre (Beth Jibrin), the ancient Eleutheropolis, on the borders of Judah and Simeon. This view has been adopted in the Roman Martyrology (1 December; "Begabar" is no doubt a corrupt spelling of Beth-Gabre), and finds more and more acceptance with modern scholars.

\textbf{THE BOOK.}—\textbf{Contents.}—The Book of Nahum contains only three chapters and may be divided into two distinct parts: the one, including i and ii, (Heb., i-ii, 1-3), and the other consisting of iii, 1, 3-iii (Heb., ii, 4-iii). The first part is more undetermined in tone and character. After the twofold title indicating the minor subject-matter and the major of the book (q. 1), the writer enters upon his subject by a solemn affirmation of what he calls the Lord's jealousy and revengefulness (i, 2, 3), and a most forceful description of the fright which seizes all nature at the aspect of Yahweh coming into judgment (i, 3-6). Contrasting admirably with this appalling picture is the comforting assurance of God's loving-kindness towards His true and trustful servants (7-8); then follows the announcement of the destruction of His enemies, among whom a treacherous, cruel, and god-ridden city, no doubt Ninive (although the name is not found in the text), is singled out and irretrievably doomed to everlasting ruin (9-14); the glad tidings of the oppressor's fall is followed by a psalm of glory for the people of God (i, 15; ii, 1; Heb., ii, 1, 3).

The second part of the book is more directly than the other a "burden of Ninive"; some of the features of the great Assyrian city are described so accurately as to make all doubt impossible, even if the name Ninive were not explicitly mentioned in ii, 8. In a first section (ii, ii, 4-6), the Lord forgives the sin of Ninive, and tells her that her fasts are null (6-9; Heb.: 7-10); and now Ninive, once the den where the lion hoarded rich spoils for his whelps and his lionesses, has been swept away rich for ever by the mighty hand of the God of hosts (10-12; Heb., 11-13). The second section (iii) develops with new details the same theme. The bloodthirstiness, greed, and craft of Ninive are more fully depicted, her walls thrown down, her women washed away as the waters when the flood came; most graphically depicted (1-4); complete and shameful will be her downfall and no one will utter a word of pity (5-7). As No-Amon was mercilessly crushed, so Ninive likewise will empty to the drear the bitter cup of the Divine vengeance (8-11). In vain does she trust in her stronghold, her warriors, her preparations for a siege, and her officials and scribes
(12–17). Her empire is about to crumble, and its fall will be hailed by the triumphant applause of the whole universe (18–19).

Critical Questions.—Until a recent date, both the unity and authenticity of the Book of Nahum were unchallenged, and the text of the Assur-
menkh, ii, § 75, Wellhausen (Skizzen und Vorarbeiten, 1893, p. 155), and Cornill (Einleitung, 1892, p. 188), and the objections alleged by a few against the gen-
uniness of the words "The burden of Nineve" (i, 1) and the description of the overthrow of No-Ammon (iii, 8–10) were regarded as trifling cavils not worth the trouble of an answer. In the last few years, however,
the document has had a new turn: facts hitherto unnol-
ticed have added to the old problems concerning au-
thorship, date, etc. It may be well here for us to bear
in mind the twofold division of the book, and to begin
with the second part (ii, i, 3–iii) which, as has been
noticed, unquestionably deals with the overthrow of
Nineve. That these three chapters of the prophecy
can constitute a unit and should be attributed to the same
author, Happel is the only one to deny; but his odd
opinion, grounded on unwarranted alterations of the
text, cannot seriously be entertained.

The date of this second part cannot be determined
to the year; however, from the data furnished by the text
it can be determined if the sufficient evidence of ma-
terial is obtained. First, there is a higher limit which we
have no right to overstep, namely, the capture of
No-Ammon referred to in iii, 8–10. In the Latin Vul-
gate (and the Douay Bible) No-Ammon is translated by
Alexandria, whereby St. Jerome meant not the great
Egyptian capital founded in the fourth century b. c.,
but a city in Assyria, more exactly somewhere in Assyria
stood Alexandria ("Comment. in Nah."). iii, 8: P. L.,
XXV, 1260; cf. "Ep. CVIII ad Eustoch." 14: P. L.,
XXII, 890; "In Is.", XVIII: P. L., XXIV, 178; "In
Os.", IX, 3–6; P. L., XXV, 892). He was mistaken,
however, and so were Champollion and Brugsch, ac-
cording to whom No-Ammon should be sought in Lower
Nubia, or, as Pharaohs, ii, 123–130; As-
syrian and Egyptian discoveries leave no doubt whatever
that No-Ammon is the same as Thebes in Upper
Egypt. Now Thebes was captured and destroyed by
Assur-bani-pal in 664–663 b. c., whence it follows that
the opinion of Nicephorus (in the edition of Geo. Syn-
cell, "Chronographia", Bonn, 1829, i, 759), making
Nahum prophesy in 628 b. c., is impossible. The early
tradition according to which this prophecy was ut
15 years before the fall of Nineve (about 721
b. c.; Josephus, "Ant. Jud.", IX, xi, 3), and the con-
cclusions of those modern scholars who, as Pussey,
Nägelsbach, etc., date the oracle in the reign of Exe-
chias or the earlier years of Manasseh, ought to be dis-
carded as impossible. The lower limit which it is al-
lowable to assign to this part of the Book of Nahum is,
of course, the fall of Nineve, which a well-known
inscription of Nabonidus permits us to fix at 607 or 606
b. c., a date fatal to the view adopted by Eutychius,
that Nahum prophesied five years after the downfall
of Jerusalem (therefore about 593–591; "Annal." in
P. L., XXI, 361). Within these limits it is difficult to fix the date more
precisely. It has been suggested that the freshness of the allusion to the fate of Thebes indicates an early
date, about 660 b. c., according to Schrader and Orelli; but the memory of such a momentous event
would long dwell in the minds of men, and we find
hardly any trace of it in one of his utterances delivered
about 702 or 701 b. c. recalling with the same vivid-
ness of expression Assyrian conquests achieved thirty
to forty years earlier (1a, x, 3–4). Nothing there-
fore compels us to assign, within the limits set above,
664–606, an early date to the two chapters, if there are
cogent reasons to conclude to a later date. One of
the arguments advanced is that Nineve is spoken of as
having lost a great deal of her former prestige and
sunk into a dismal state of disintegration; she is, more-
ever, represented as beset by mighty enemies and pow-
erless to avert the fate threatening her. Such condi-
tions existed when, after the death of Assurbanipal,
Babylonia succeeded in regaining her independence
(625), and the Assurbanipalid dynasty began
(623; Kuenen, Van Hoonacker). Modern critics
(Davidson, Kennedy, etc.) appear more and more in-
clined to believe that the data furnished by the
Prophet lead to the admission of a still lower date,
namely the moment before the actual invasion of
Assyria by a hostile force and the commencement of
the attack on its capital (Kennedy). The "mauler"
indeed, is already on his way (ii, 1; Heb., 2); frontier
fortresses have opened their gates (iii, 12–13); Nineve
is at bay, and although the enemy has not yet invested
the city, to all appearances her doom is sealed.

We may now return to the first part of the book.
This first chapter, on account of the transcendent
ideas it deals with, and of the lyric enthusiasm which
permeates it throughout has not inappropriately been
called a psalm. Its special interest lies in the fact
that it is an alphabetical poem. The first to call at-
tention to this feature was Frohmeyer, whose obser-
ations, however, did not extend beyond vv. 3–7.
Avaluing himself of this key, Bickell endeavoured to
arrange a parallelism of the twenty letters of the alphabet.
He found all the words of the whole passage and include the twenty-two letters of the alphabet, and he attempted repeatedly but
without great success ("Zeitschr. der deutsch. morg.
Gesell."). 1880, p. 599; "Carmina Vet. Test. metrice,
1882; "Zeitschr. für kath. Theol.", 1886), to restore the
psalm to its pristine integrity. This failure did not
arouse Gunkel, who was the first to point out that the
poem is alphabetical throughout, although it is difficult, owing to the present condition of the text, to trace the initial letters Ε to Ν (Zeitschr. für
alttest. Wissenschaft., 1893, 233 sqq.). This was for
Bickell an incentive to a fresh study (Das alphab. Lied
in Nah. i–ii, 3, in "Sitzungsberichte der phil.-hist.
 Classe der kaiser. Akademie der Wissenschaften.", Wien,
1894, 5 Abhandl.), the conclusions of which show a
notable improvement on the former attempts, and
suggested to Gunkel a few corrections (Schöpfung
und Chaos, 120). Since then Nowack (Die kleinen Prophet-
aten, 1897), Gray ("The Alphab. Poem in Nah.")." in
"The Expositor", for Sep. 1898, 207 sqq.), Arnold
("Com. in Nah.", i–ii, 3, in "Wissenschaft.", 1901, 225 sqq.), Happel (Das Buch des
Prop. Nah., 1903), Marti (Dodekakap. erklärt,
1904), Lohr (Zeitschr. für alttest. Wissenschaft.
1905, I, 174), and Van Hoonacker (Les douze petits proph.,
1908), have more or less successfully undertaken
the difficult task of extricating the original psalm from
the textual medley in which it is entangled. There
is among them, a sufficient agreement as to the first
part of the poem (N–); but the second part still remains a
classical ground for scholarly tilte.

Wellhausen (Die kleinen Prophet., 1898) holds that
the noteworthy difference between the two parts from
the point of view of poetical construction is due to the
fact that the writer abandoned halfway his undertak-
ing to write acrostically, and that the material which he
worked out separately from an unacrostic original.
The first corrector went as far as the line begin-
ning with the letter Θ, and as the last sentence closed on
the word Ψ, he noted in the title that his revision
extended from Θ to Ψ; and so the mysterious Ψ–Ψ
(later on misconstrued and misspelled ΨΨ) has
neither a patronymic nor a gentile notation. Critics
are inclined to hold that the disorder and corruption
which disfigure the poem are mostly due to the way it
was tacked on to the prophecy of Nahum: the upper
margin was first used, and then the side margin; and as,
in the latter instance, the text must have been over-
crowded and blurred, this later on caused in the sec-

Charles L. Souvay.

Nails. Holy.—The question has long been debated whether Christ was crucified with three or with four nails. The treatment of the Crucifixion in art during the earlier Middle Ages strongly supports the tradition of four nails, and the language of certain hist. rical writers (none, however, earlier than Gregory of Tours, "De glor. mart.", vi for the supposed sermon of St. Cyriakus, "De passione", iii, 6 (fascicle), favours the same view. On the other hand, from the thirteenth century, Western art began to represent the feet of the Crucified as placed one over the other and pierced with a single nail. This accords with the language of Nonnus and Socrates and with the poem "Christus patiens" attributed to St. Gregor Nyssen, which speaks of three nails. More recent archaeological criticism has pointed out not only that the two earliest representations of the crucifixion (the Palantine graffito does not here come into account), viz., the carved door of Santa Sabina in Rome, and the ivory panel of the British Museum, show no signs of nails in the feet, but also Ambrose ("De obitu Theodossii" in P. L. XVI, 1402) and other early writers distinctly imply that there were only two nails (see Billerbeck, "Kreuza u. Kreuzigung Christi"). Further, St. Ambrose informs us that St. Helen had one nail converted into a bridegroom's horse (early commentarists quote Zach., xiv, 20, in this connexion), and that an imperial diadem was made out of the other. Gregory of Tours speaks of a nail being thrown (deponi), or possibly dipped into the Adriatic to calm a storm. It is impossible to discuss these problems adequately in brief space, but the information derivable from the general archaeological of the practice of crucifixion as known to the Romans does not in any way contradict the Christian tradition of four nails.

Very little reliance can be placed upon the authenticity of the thirty or more holy nails which are still venerated, or which have been venerated until recent times, in such treasuries as that of Santa Croce in Rome, or those of Venice, Aachen, Reichenberg, Prague, etc. Probably the majority began by professing to be facsimiles which had touched or contained filings from some other nail whose claim was more ancient. Without conscious fraud on the part of anyone, it is very easy for imitations in this way to come in a very brief space of time to be reputed originals. The bride of Constantinople is believed to be identical with a relic of this form which for several centuries has been preserved at Carpentras, but there is another claimant of the same kind at Milan. Similarly the diadem of Constantine is asserted to be at Monza, and it has long been known as "the iron crown of Lombardy".

Naim (NAIN), the city where Christ raised to life the widow's son (Luke, vii, 11-17). The Midras (Bereshit rabba, 88) gives the significance 'agree-
able" to a place called Naim (Nain) in the territory of Issachar, in Galilee. Eusebius and St. Jerome (Onomasticon) place Naim south of Mount Thabor, and not far from Dor. Now, opposite to Thabor, and a mile and a half north of the En-Gedi (doublings the Biblical En-Gedi), lies a village called Nahun ("pleasantness"). It is situated on the north-western ridge of Jebel Dahy, the Little Hermon, and commands a magnificent view. There are traces of ruins beyond its boundary to the north, but no sign of fortifications. "The gate of the city" (Luke, vii, 12) might have belonged to a wall of enclosure, built to protect the place against marauding tribes, as was often the case in the East. A steep path leads up to the village, passing by the site of an ancient church which had been converted into a mosque, "Moukâm Lidn Aisa" (Oratory of the Lord Jesus). The mosque, having fallen into ruins, was replaced by another in the vicinity. In 1880 the Franciscans bought the ruins of the first building, and erected thereon a chapel. Not far away may be seen Jewish rock-tombs. Thus the details of Naim's graphic story find an easy localization.

NAME, Baptismal. See Baptism, sub-title XV: Names, Christian.

Names of Jesus, Religious Communities of the. — (1) Knights of the Name of Jesus, also known as Seraphim, founded in 1334 by the Queens of Norway and Sweden to defend their respective countries from the onslaught of heathen hordes. They did not survive the Reformation. (2) Sisters of the Name of Jesus comprise six congregations founded in France during the sixteenth century in the Dioceses of Besançon, with mother-house at Grande-Fontaine, Paris; of Valence (1815 or 1825), mother-house at Lorial; of Rodez, mother-house at Ste-Radegonde; of Toulouse (1827); and of Marseilles (1852). These sisters devote themselves chiefly to the work of teaching and caring for the sick. (3) Confraternity of the Name of Jesus, formed by the amalgamation of the Portuguese Confraternity of the Most Holy Name of Jesus, founded by Andreas Dias, O.P., in 1432, with the Spanish Confraternity of the Most Holy Name of God, established by Diego Victoria, O.P., in the sixteenth century. Approbation was granted by Popes Paul V (1606) and Innocent XI (1678), and the confraternity was enriched with indulgences and placed under the Dominican general.

Names of Mary, Feast of the Holy. — We venerate the name of Mary because it belongs to her who is the Mother of God, the holiest of creatures, the Queen of heaven and earth. Gen., xvi, 1, translates the Hebrew term for the object of the feast is the Holy Virgin bearing the name of Miriam (Mary); the feast commemorates all the privileges given to Mary by God and all the graces we have received through her intercession and mediation. It was instituted in 1513 at Cuenca in Spain, and assigned with proper Office to 15 Sept., the octave day, 716. It was celebrated by the Spanish Breviary by St. Pius V, by a Decree of Sixtus V (16 Jan., 1587), it was transferred to 17 Sept. In 1622 it was extended to the Archdiocese of Toledo by Gregory XV. After 1625 the Congregation of Rites hesitated for a while before authorizing its further spread (cf. the seven decrees, Analécte Juris Pontifici, 1, LVII, 1921). But it was celebrated by the Spanish Trinitarians in 1640 (Ordo Hispán., 1640). On 15 Nov., 1658, the feast was granted to the Oratory of Cardinal Berulle under the title: Solemnitas glories Virginis, dupl. cum oct., 17 Sept. Bearing the original title, SS. Nomina B.M.V., it was granted to all Spain and the Kingdom of Naples on 26 Jan., 1671. After the siege of Vienna and the glorious victory of the Sobieski over the Turks (12 Sept., 1693), the feast was extended to the universal Church by Innocent XI, and assigned to the Sunday after the Nativity of Mary by a Decree of 25 Nov., 1683 (duplex majus); it was granted to Austria as d. é. classis on 1 Aug., 1694. According to a Decree of 8 July, 1908, whenever this feast cannot be celebrated on its proper Sunday on account of the occurrence of some feast of a higher rank, it must be kept on 12 Sept., the day on which the victory of Sobieski is commemorated in the Roman Martyrology. The Calendar of the Nuns of Perpetual Adoration, O.S.B., in France, of the year 1827, has the feast with a special Office on 25 Sept. The feast of the Holy Name of Mary is the patronal feast of the Clerics Regular of the Pious Schools (Piarist) and of the Society of Mary (Marians), in both cases with a proper office. In 1666 the Discalced Carmelites received the faculty to recite the Office of the Name of Mary four times a year (duplex). At Rome one of the twin churches at the Forum Trajani is dedicated to the Name of Mary. In the Ambrosian Calendar of Milan the feast of the Holy Name of Mary is assigned to 11 September.

Frederick G. Holweck.

Names, Christian. — "Christian names", says the Elizabethan antiquary, Camden, "were imposed for the distinction of persons, surnames for the difference of families." It would seem from this that, even in the sixteenth century, the etymological and historical significance of the phrase "Christian name" was growing dim, and it is commonly quite forgotten in our own time. But the phrase "Christian name" is not merely the forename distinctive of the individual member of a family, but the name given to him at his "christening," i.e., his baptism. It should be remembered that in pre-Reformation England the laity were taught to administer baptism in case of necessity with the words: "I christen thee in the name of the Father, and of the Son, and of the Holy Ghost," or, as is more common, "baptise," and "Christian name" means baptismal name.

Origins. — Some vague idea that nomina sunt omnia (names are omens) seems to be a sort of primitive human instinct. Thus throughout Old-Testament times the significance of names passed as an accepted principle. They were usually given in reference either to some trait in the child, actual or prophetic, or to some feeling or hope in the parent at the time of its birth. It was only a very slight development of this idea to suppose that a change of condition appropriately demanded a change of name. Thus the conversion of Abram into Abraham (the "father of many nations"") Gen., xxviii, 3, 12-15, was the renunciation of the covenant of circumcision and ratified a claim to God's special benediction. In view, then, of this recognized congruity and of the Hebrew practice of giving a name to the male child at the time of its circumcision on the eighth day after birth (Luke, i, 59), it has been maintained that the custom of conferring a name upon the newly baptised was of Apostolic origin. An instance in point is declared to be found in the case of the Apostle of the Gentiles who before his conversion was called Saul and afterwards Paul. But modern scholarship, and with reason, has altogether rejected this contention. The baptism of St. Paul is recorded in Acts, ix, 18, but the name Paul does not occur before Acts, xi, 26, while Saul is used several times in the interval. We have no more reason to connect the name Paul with the Apostle's bap-
dissem than we have to account in the same way for the giving of the name Cephas or Peter, which we know to be due to another cause. Moreover, it is certain, both from the inscriptions of the catacombs and from early Christian literature, that the names of Christians in the first three centuries did not distinctly differ from the names of the pagans around them. A reference to the Epistles of St. Paul makes it plain that even the names of heathen gods and goddesses were borne by his converts after their conversion as before. Hermes occurs in Rom., xvi, 14, with a number of other purely pagan names, Euphrates in Phil., iv, 18, Phebe, the deaconess, in Rom., xvi, 1. Not less conclusive are the names which we find in the Christian inscriptions of the earlier period or in the lists of the names of the deceased in the Catacombs. There are names like Anxora (see Turner, "Eccl. Occident. Mon. Juris." I, 36–50; II, 50–53), or again in the lists of martyrs. Even at a later date the names are of a most miscellaneous character. The following classification is one that has been worked out by J. Bass Mullinger founded on Martigny.

A.—Names without Christian significance and probably derived from pagan ancestors:—(1) names derived unchanged or but slightly modified from pagan mythology, e. g., Mercurius, Bacchus, Apollo (I Cor., xvi, 12), Hermogenes (Rom., xvi, 4), etc.; (2) from religious rites or omens, e. g., Augustus, Auspicium, Augurinus, Opistus; (3) from numbers, e. g., Primus, Primula, Secundus; (4) from places, e.g., Eburnius, from colours, e. g., Albinus, Candidus, Rufus, etc.; (5) from animals and birds, e. g., Agnes, Aetius, Columba, Leo, Taurus, Ursula, etc.; (6) from agriculture, e. g., Agricola, Armentarius, Palatinus, Stercoreus, etc.; (7) from flowers, e. g., Balsamia, Flosculus, Narcissus, Rosula; (8) from jewels, e. g., Chrysanthis, Maccolla; (9) from religious offices, e. g., Papae, from martyr life or the sea, e. g., Emerentiana, Navigia, Pelagia, Scutarius, Thalassus; (10) from countries, cities, rivers etc.; Afræus, Cydnus, Gallus, Jordanis, Macedonius, Maurus, Sabina, Sebastianus, etc.; (11) from the months, e. g., Aprilis, Januarius, Junius, etc.; (12) from personal qualities, etc., e. g., Aristote, Hilarius, Modestus, Pubdens, etc.; (13) from servile condition, e. g., Servus, Servilius, Vasnalis, Vernaculius, (14) names of historical celebrities, e. g., Cæsarius, Cornelius, Pompeius, Ptolemeus, Vergilus.

B.—Names of Christian origin and significance.—(1) Names apparently suggested by Christian dogmas, e. g., Anastasis, Athanasius, Christophorus, Redemptor, etc.; (2) names derived from persons or things, e. g., Ephiphanis, Eulogia, Natalis, Paecalis, Sabbatius, and the frequently recurring Martyrius; (3) from Christian virtues, e. g., Agape, Elpis, Fides, Irene, with such derivatives as Adelphius, Agapetus, Caritoos, etc.; (4) pious sentiment, e. g., Aedoeata, Ambrosia, Benedictus, Deostatis, etc., and possibly such names as Gaudens, Hilarus, Illuminas, Victoriamus, Vincentius, but it is very hard to be sure that any distinctively Christian feeling is here latent.

On the other hand though the recurrence of such names as Agnes, Balbina, Cornelius, Felicitas, Ireneus, Justinus, etc. may very probably be due to veneration for the martyrs who first bore these names, it is rather curious that the names of the saints of the New Testament are but rarely found while those of the Old Testament are hardly less uncommon. Susanna, Daniel, Moyseus, Tobias, occur pretty frequently, but it is only towards the end of the fourth century that we find the name of our Blessed Lady or become at all familiar with those of the Apostles. Even then we cannot feel that in the saints in particular there is any intentional reference to the Apostle and to the Gentiles, but Johannes at least, and Andreas, with Petrus and its derivatives like Petronia, Petrius, Petronilla, etc. are less open to doubt. The name of Mary occurs occasionally in the catacomb inscriptions towards the close of the fourth century, for example, in the form Livia Maria in pace (De Rossi, "Rom. Sot." I, 143) and there is a martyr Maria assigned to the date A.D. 256 (De Rossi, "Rom. Sot." III, 200 sqq. and compare other instances of the name, De Rossi, "Inschr. Christ." I, 331; II, 160 and 173).

Change of Name at Baptism.—If we could trust the authentic and contemporary character of the Acts of St. Balsamus, who died in A.D. 334, we have an early example of the connexion between baptism and the giving of a name. "By my paternal name", this martyr is said to have declared, "I am called Balsamus, but by the spiritual name which I received in baptism, I am known as Peter." It would seem in any case that the assumption of a new name was one of the things to which the Church instructed Christians. Eusebius the historian took the name Pamphilus from Pamphilus the martyr whom he especially venerated. Earlier still St. Cyprian chose to be called Cyprianus Cecilius out of gratitude to the Cecilius to whom he owed his conversion. Moreover St. Dionysius of Alexandria (c. 260) declared "I am of opinion that there were many of the same name as the Apostle John, who on account of their love for him, and because they admired and emulated him, and desired to be loved by the Lord as he was, took to themselves the same name, just as many of the children of the faithful are called Paul or Peter" (Eusebius, "Hist. Eccl." VII, xxv). It would be only natural that the assumption of a new name at baptism, in which the catechumen, then probably as now, had to be addressed by some distinctive appellation. On the other hand it seems likely that the imposition of a new name at baptism only became the invariable rule after infant baptism had become general. Every child had necessarily to receive some name before baptism or on the day before. After birth, this must have offered a very suitable opportunity for the public recognition of the choice made.

No doubt the thirtieth of the supposed Arabian Canons of Nicaea: "Of giving only names of Christians in baptism is not authentic, even though it is of early date; but the sermons of St. John Chrysostom seem to assume in many different places that the conferring of a name, presumably at baptism, ought to be regulated by some idea of Christian edification, and he implies, though this does not seem to be borne out by the evidence now available, that such had been the practice of earlier generations. For example he says: "When it comes to giving the infant a name, caring not to call him after the things of this world or after things of the night, but for light lamps and give them names and so name the child after the one which continues burning the longest, from thence conjecturing that he will live a long time" (Hom. in Cor. xii, 13). Similarly he commends the practice of the parents of Antioch in calling their children after the martyr Meletius (F. G., L, 515), and again he urges his hearers not to give their children the first name that occurs, nor to seek to gratify fathers or grandfathers or other family connexions by giving their names, but rather to choose the names of holy men conspicuous for virtue and for their courage before God (F. G., LIII, 179). History preserves sundry examples of such a change of name in adult converts. Socrates (Hist. Eccl., VII, xvi) tells us of Athenais who married the Emperor Theodosius the Younger, and who previously to marriage was baptised (A.D. 421) receiving the name Eudoxia. Again Bede tells us of the case of King Cædwalla who went to Rome and was baptised by the Pope Sergius who gave him the name of Peter. Dying soon afterwards he left his name in the name of Pæbæ in. Later he says "Hic deposuit est Cædwalla qui est Petrus" was long pointed out (Bede, "Hist. Eccl." V, vii). Later we have the well-known instance of Guthrum the Danish leader in England who after his long contest with King Alfred was eventually defeated and, consenting to so-
cept Christianity, was baptised in 878 by the name of Ælhestan.

**Practice Regarding Names.**—But while various Fathers and spiritual writers, and here and there a synodal decree, have exhorted the faithful to give no names to their children in baptism but those of the sainted saints or of the angels of God, it must be confessed that there has never been a time in the history of the Church when those injunctions have been at all strictly attended to. They were certainly not heeded during the early or the later Middle Ages. Any one who glances even casually at an extensive list of medi eval names, such as are perhaps best found in the indexes to the volumes of legal proceedings which have been edited in modern times, will at once perceive that while ordinary names without any very pronounced religious associations, such as William, Robert, Roger, Geoffrey, Hugh, etc. enormously preponderate (William about the year 1200 was by far the most common Christian name in England), there are also always a very considerable number of exceptional and out-of-the-way names which have apparently no religious associ ations at all. Such names, to take but a few specimens, as Ademar, Alina, Ailward, Albreza, Alditha, Amsury, Aesselins, Avice, Aystorius (these come from the old Anglo-Saxon, and from the Latin respectively, and are of the Canterbury school), are of frequent occurrence. The point however cannot be dwelt on here. We may note on the other hand that a rubric in the official "Rituale Romanum" enjoins that the priest ought to see that unbecoming or ridiculous names of deities or of godless pagans are not given in baptism (euret ne obsequemur, fabulasque et ridiculas vel inani mum, doctrin vel impiorum ethnocorum hominum nomina imponen tur). Some of the seventeenth century French rituals have gone further than this. For example that of Bourges (1666) addressing parents and godparents urges: "Let them give to boys the names of male saints and to girls those of women saints as right order requires, so that we may be distinguished between the children of Piety like Eseter (Pâques), Christmàs (Noel), All Saints (Toussaint) and others that are sometimes chosen." Despite such injunctions "Toussaint" has become a not uncommon French Christian name and "Noel" has spread even to England. The addition of Marie, especially in the form Jean-Marie, for boys, and of Jeanne, especially in the form Jeanne-Marie, for girls, is strange on the other hand that the name Mary has by no means always been a favour ite for girls, possibly from a feeling that it was too august to be so familiarly employed. In England in the twelfth century Mary as a Christian name is of very rare occurrence. George again is a name which despite the veneration of the warrior saint as patron of Eng land, was by no means common in the thirteenth and fourteenth centuries, though strangely enough it grew in popularity after the Reformation. A writer who has made a minute examination of the registers of Oxford University from 1560 to 1821, has made out the following list of the more common names borne by the students in order of popularity: John, 3526; Thomas, 2777; William, 2546; Richard, 1691; Robert, 1222; Edward, 957; Henry, 908; George, 647; Francis, 447; James, 424; Nicholas, 326; Edmund, 298 (see Oxford Hist. Soc. Transactions, XIV). In Italy and Spain it has always been a tolerably common Practice to call a child after the saint upon whose feast.

**Confirmation Names.**—The practice of adopting a new name was not limited to baptism. Many medieval examples show that any notable change of condition, especially in the spiritual order, was often accompanied by the reception of a new name. In the eighth century the two Englishmen Winfrith and Willibald going on different occasions to Rome received from the reigning pontiff of the time, the names respectively of Boniface and Clement. So again Emma of Normandy when she married King Ethelred in 1002 took the name Ælfgifu; while, of course, the reception of a new name upon entering a religious order is almost universal even in our own day. It is not strange, then, that at confirmation, in which the interposition of a godfather emphasises the resemblance with baptism, it should have become customary to take a new name, though usually no great use is made of it. In one case, however, that of Henry III, King of France, who being the godson of our English Edward VI had been christened Edouard Alexandre in 1551, the same French prince at confirmation received the name of Henri, and by this he afterwards reigned. Even in England the practice of adopting a new name at confirmation was remembered after the Reformation, for Sir Edward Coke declares that a man might validly buy land by his confirmation name, and he recalls the case of a Sir John Chetwyne, who, having the name of Common Pleas, whose name of baptism was Thomas and his name of confirmation Francis (Co. Litt. 3s).

**Names, Hebrew.**—To the philosopher a name is an artificial sign consisting in a certain combination of articulate sounds, whereby a particular class of people are wont to designate one thing and distinguish it from all others. If the name conveys an idea, it is merely because of a wholly artificial relation once arbitrarily established between the name and the thing it stands for. Primitive people, using a language as it is handed down to them without inquiring into its origin, are inclined to make much of names. This is true of the old Semitic peoples, especially of the Hebrews. All Hebrew names were supposed to bear a significance, as originally individual subjects were called by a name expressive of some of their characteristics, e.g., Edon, red; Essu, hairy; Jacob, supplanter. They were carefully and solemnly selected, especially personal names. Leaving aside cases where the name was Divinely given (Abraham, Gen., xvii, 5; Isaac, Gen., xvii, 19; Ismael, Gen., xvi, 11; John, Luke, i, 13; Jesus, Matt., i, 21; etc.), the naming of a child usually devolved upon the parents, and, it appears, preferably upon the mother. The women of the family (Ruth, iv, 17), or the neighbours (Luke, i, 59), talked over the name to be given. The name seems to have been given ordinarily at the time of the birth; but at a late period the day of circumcision was more usual (Luke, i, 59; ii, 21). Of the customs connected with the naming of cities we know nothing except what may be casually deduced from the names themselves, and what is said of a few cities named after their founders and conquerors (Gen., iv, 17; Num., xxxii, 42; Deut., iii, 14; Jos., xix, 47; etc.). So intimate was the relation conceived to be between the individual and his name, that the latter came frequently to be used as an equivalent of the former; "to be called" means "to be", the name being taken to be equal to the person of him or her. Nothing is more eloquent of this fact than the religious awe in which the Hebrews held the name of God (see JEHovah). Similar notions prevailed with regard to all proper names. Nor were the Hebrews an exception: all Semitic peoples, and, to some extent, all other primitive peoples shared the same belief. This is why the study of these names is looked upon by students of history as a sort of key to the knowledge of the reli-
gnious and social conditions of these peoples. We shall here discuss only Hebrew names: I. Divine Names; II. Personal Names; III. Place Names.

I. Divine Names.—Yahweh.—Jehovah (q. v.), the traditional form of this name in Western languages, is based on a misunderstanding of the Massoretic vocalization. The name Yahweh, of which an abbreviated form, Yah, and a spelling, Yhwh, seem to have become popular, is derived doubtlessly from the verb hašōw, "to be," and is best translated by "he is" (Lagrange in "Revue Biblique," 1903, pp. 370-86; 1906, pp. 383-86). 'El, which is found among all Semitic peoples (Phoen., Arab.: 'El; Assy.: 'Išu; Aram.: 'Aššu), is, in the Bible, appellative in most cases, but was certain-ly used in a proper name (so, e.g., in Gen., xlviii, 20; xxxvi, 8). Its etymology to the present day a much mooted question: some derive the word from a root 'al, "to be strong;" others from yl', which might connote the idea of "being the first;" others finally from 'Išh, by which, at an early stage of the development of the Semitic languages the idea of mere relation (case ad) was conveyed. According to the first two opinions, the name is intended primarily to express the superiority of the Divine nature, whereas, according to the third, God is 'El because He is the term of the aspirations (finis) of mankind (Lagrange, "Études sur les religions sémitiques," 70 sqq., especially 78-90; "Revue biblique," 1903, pp. 363-70). Lagrange states that the name is often translated as Elohim, sometimes used as appellatives, but more frequently as proper names. The plural form of the latter to some extent still puzzles grammarians and students of the religious belief of the Hebrews (see Gesenius-Kautzsch, "Hebr. Gramm.," § 124, g-i; Prat, "Le nom divin est-il intensif en hébreu?" in "Revue des études hébraïques," p. 207; Schürer, "The Religion of the Semites," London, 1907, 445; Lagrange, "Études sur les religions sémitiques," 77). We need not dwell upon the many cases where 'El and 'Elohim are used as appellatives, either by themselves, or as parts of compound names such as 'El Roy (the God of the apparition), 'El Olam (the Eternal God), 'El Elyon (the Most High God), 'El Sebaoth (the God of Hosts), etc. (see Lagrange in "Revue biblique," 1903, pp. 364-67). Shadday.—As to the name Shadday, which is found sometimes alone, and at other times in connexion with 'El ('El Shadday), it was originally an adjective conveying possibly the idea of fecundity (Gen., xvi, 1; xlix, 25) or of highness (Ps. 68, 18). But it more emphatically denotes their threats of divine punishment, spoke as if the word were related to shadad, to "devastate;" but the people at large, unmindful of these etymological niceties, used Shadday merely as a substitute for 'El, perhaps with the special connotation of "Almighty."

II. Personal Names.—Personal names are either purely Hebrew or hebraized. To the latter category belong not only (passing over foreign names such as Tegiel-phalasar, Asuerus, etc.) Babylonian (Daniel-Balt-hassar) and Persian (Hadassa-Esther) names assumed by some persons of Hebrew origin living in far-away countries, and the Greek and Latin names in use among Jews of late times. Jointly with their Hebrew or Aramaic names (John-Mark; Saul-Paul, etc.), but also certain very old names which were handed down by tradition, such as Cain, Abel, Noah, Abraham, etc., and treated by the sacred writers as Hebrew words. There is scarcely any doubt but that in passing from one language to the other these names were preserved. Of the etymology Schürer's explanation pretends to interpret the Hebrew form, the meaning arrived at can hardly be more fanciful. It is from the original language of these names that their meaning should be sought (so Abram and Abraham may be explained from the Assyr. Abi-rāmā, or Abi-rāmē, "my father loveth"); Sarai and Sara from Sharat, "the great princess"); Lot from Lātū, or Lātī, the "consumer;" from the Egyptian might be explained likewise a few names, e. g., Moes, "the child," etc.). Of the pure Hebrew names some are simple and others compound. Simple names appear to have been more frequent in early times, but some are in reality hypocoristic, i. e., abbreviated forms of compound names, as Saul (asked), David (beloved), Nathan (he has raven), which were probably combined with a Divine name, Yah or 'El.

Simple Names.—Of the simple names a few seem to have been suggested by particular circumstances, especially circumstances attending the child's birth: e.g., Jacob (the supplanter), Joseph (possibly an hypo- coristic form of the name Jacob; so Joseph was at one time a favourite name for the young man of the family). A large class of proper names for men and women is made up of adjectives denoting personal characteristics. Here are a few instances: Acan (afflicting), Achar (possessor), Agar (wanderer), 'Amos (strong), Amri (eloquent), Aod (praising), Assaph (gatherer), Asor (happy), Asir (live), Ath (bound), Ašāī (dwarf), Balāq (vain), Baruch (blessed), Betar (sweet-smelling), Dālilah (yearning). Doēg (anxious), Edom (red), Eṣṭōn (woman-like), Gaddel, Geddil (tall), Gedon (destroyer), Hedel (fat), Job (ruthlessly treated), Laban (white), Manahem (com- sole), Nabal (fool). Nachor (painting or smoring), Nahum (grand), Nāshir (name of the name, backward), Orman (nimble), Osîn (long-eared), Pheesēr (lame), Ruth (friend), Sepho (bald-headed), etc.

Names of animals and of plants were at the same period not infrequently given to persons both by the Hebrews and by their neighbours, the Chanaanites and others. Among the names of animals assumed as proper names are the names of birds (see, for example, the names of the vulture, Aman (wild goat), Caleb (dog), Deborah (bee), Eglon (calf), Gaal (beetle), Habsa, in N. T. Aga-bus (locust), Hula (wasp), Jabol (chamois), Jonas (dove), Nahas (snake), Ozi (goose-like), Rachel (ewe), Saphan (coney), Seba (gazelle), Sephora (little bird), Sual (jackal), Tabitha (Aram., gazelle), Tola (worm), Zeb (wolf).—Of the names of plants, apparently less frequently used than those of animals, here are a few instances: Asena (bush), Cessia (a kind of balsam-tree), Cos (thorn), Elias (oak), Elon (terebinth), Ha-daas (myrtle), Oren (pine), Susan (lyle), etc. Some modern scholars explain the relatively frequent recurrence of these two kinds of names among Palestinian communities as, in other cases also, a method which scholars maintain, prevailed in early times. This is hardly the place to discuss such a question. It is illogical to extend to all primitive peoples religious conceptions observed in some few; were we to yield to the fascination for totems which prevails among some writers, we might consider as traces of totemism such English names as Wolf, Hawthorne, and the like. Granting even that the names mentioned above are unmistakable signs of totemism among the early populations of Palestine, it would by no means necessarily follow that these names manifest the prevalence of the same religious ideas among the Hebrews. Hebrew was not the primitive language of the descend- ants of Abraham, they having adopted it (from the natives of the land of Chanaan) naturally along with the language they adopted certain of their modes of speech.

Sometimes names of things, also of natural phenomen- ena, even (though rarely) abstractions, and words referring to trades or avocations were taken as proper names. Of the etymology of the names of trades: Abdon, Obed (servant), Amon (architect), Bersellai (blacksmith), Charmi (vina-dresser), Somer (watch- man, Zamri (singer); of the former: Agag (fire), Abod (union), 'Amos (burden), Anna (grace), Barac (light- ning), Besec (thunderbolt), Cis (straw), Core (frost), Ephron (dust), Hon (strength), Mary (stoutness),
Disobedience, see Num., xii, Naboth (fruit), Ur (light), Samson (sun), etc.

Compound Names.—Compound personal names are so numerous that only a few main points concerning them can be touched on here. First comes the question of the exact meaning of these names. Although the sense of each part separately is usually clear enough, yet that of the compound is not. The difficulty is to decide whether these parts are in genitive relation, or in relation of subject to predicate (the verb in the latter case being understood). In certain names, no matter which view is taken, the meaning remains practically the same; it is immaterial whether “Eliasher” be interpreted “God of help” or “God is help”; but with names like Abinadab, the difference in both constructions becomes marked, for “Father of generosity” is by no means equivalent to “my father is generous”. Since no rule for all cases is available, for the sake of clearness it will be well to divide compound names into three classes: (1) Names having as one of their component parts a term connoting either kindred (father, son, etc.) or accidental relations (e.g., servant); (2) Names (known as theophoraneous names) containing a Divine element; (3) Names including terms both of kindred and Divinity.

(1) There is no doubt but that only a genitive relation obtained between the first element and the second in their first element Ben (son), Bath (daughter), Ebed or Obed (servant). Thus Benjamin is to be interpreted “son of the right hand”, Bethsheba, “daughter of the oath”; Obed-edom, servant of Edom. Names in which the first element is Ab (father), Ah (brother), Amm (uncle by the father's side) are to be considered sentences, for such a construction is possible only to names such as Abigail, Abiasag, etc., if they meant “father of joy”, “father of error”, would be most unsuitable for women. The name Achab some regard as a possible exception to this rule (it might then be interpreted “brother of the father”—uncle), whether this exception is warranted remains problematical. As to the letters (') and (u) (frequently introduced after the first element of this class of names (Abi, Achi, Ammi), it seems rather a connecting vowel than a personal suffix.

(2) Theophoraneous names were at all times widely used among Semitic peoples. To limit ourselves to names found in the Bible, although names including the name of God (El) are not infrequent (El Rapha, El Shaddai). They are numerous, yet they were not in use as early as those formed with 'El. These names have for their other component element either a verb or a noun. In the former case, the Divine name is the subject of the verb (Elissama, “God heard”; Jonathan, “Yahweh gave”); in the latter the Divine name may be regarded again as the subject, and the noun as the predicate (Elissua, “God is salvation”); Joose, “Yahweh is salvation”.

Not only the name of the true God, but also names of foreign deities, especially Adon, Baal, Melek, entered into the composition of names taken by Hebrews at a period when the relations of God's people with their neighbours were most intimate. Naturally such names became common, their kindred being used as names of those including Yah or 'El. Hence Adonizedee shall be understood “Adon is justice”, etc.; but Esbaal can hardly mean anything else than “man of Baal”. In this connexion it is noticeable that at a later period abhorrence of these foreign deities prompted first the reading, and then afterwards the writing of Bosheth rather than Bosheth (Laboath, for Isbaal). Moreover, it matters not, in theophoraneous names, whether the Divine element stands in the first or in the last place (theophoraneous names have among western Semitic peoples only two component parts, contrary to the Assyrian and Baby- lonian). Thus for Nathan-El is equivalent to El-Nathan, Joose to Issaia, etc.

Not unfrequently two Divine names are united to form a compound, as in Joel, Elimelech, etc. In these cases it is clear that we should see a sentence expressing an act of faith in the divinity of the god the subject of the sentence. Accordingly Joel will be interpreted “Yahweh is God”, and Elimelech “Melek is Yahweh”. On the other hand, the names Adon and Melek cannot mean “Adon is Yahweh” or “Melek is Yahweh”, because, unlike ‘El, Yah is never appellative; in these words, Adon and Melek are common nouns, and the compounds are equivalent respectively to “Yahweh is master” and “Yahweh is king”.

(3) The rules laid down for interpreting the above classes of compound names are equally applicable to those made up of a word denoting relationship and a word denoting divinity. If the first part of these names be Ben, Bath, Bar (Aram., son), Ebed, Iah (man), a genitive relation may be understood to exist between it and the second part; thus Benadad or Barhadad stands for “son of Hadad”; Abdeel for “servant of God”; Esbaal for “man of Baal”. On the other hand, if the first element be Ah, Ahab, Amm or the like it seems that the relation to the Divine name should be regarded rather as one of predicate to subject. It is clear that the interpretation indicated here is the right one, for otherwise some names would convey absurd meanings: surely Ahiab, Abiel, Abbaal, Aboel, cannot mean “brother of Yahweh”, “of God”, “of Baal”. There might be no objection, absolutely speaking, in words like Achiel, Achia, being understood “brother of God”, “of Yahweh”; but it is hard to believe the sense could be, as it is, different when the elements appear in the reverse order, as in Joaah.
considering these names as Hebrew, since Hebrew is the Chassanite language of the early inhabitants of Palestine, adopted by the Israelite conquerors.

In all countries, many names of places have been suggested by the topography. The Palestinians named the mountain Ramiah, Ramath-edem, Ramath-judah, Ramathaim; for the same reason we would name them "Height"; they said Gabaa, Gaba, Gaban, as we would say "Hill"; their Sela (Petra) would be our "Cliff"; what we might style our "Hollow" they called Horen or Horonaim. They had their Lebanon as we have our "White Mountains"; and where we would say "Black Rock", they said Hauran; the names of some of their rivers: Jordan, Cedron, Sichor, resemble our "Rapids", "Dusky", "Blackwater". Argob means a layer of rich soil; Horeb or Jabes, dry lands; Accaron, "Bad Lands". "Spring" and "Well" were then as now a prominent element in compound names of places (hence, Ender, Engadik, etc.; Beroth, Bersabee, etc.); to a native of the Holy Land, Hammat, Hammam sounded like "Hot Springs" to us. A large proportion of compound names are made up of Hasar (enclosed settlement), Carith, Ir, Qir (city), Beth (house), and another element the origin of which is not always obvious (Cariarith, Bethlehem). Sometimes also the locality derived its name from some "tree" or "fruit". Abimilcham. The fruit of the kind of Rhamnus), Baca (mulberry-tree), Abel-karam, Bethacarem, Escol, Sorec (vine); Dilan (cucumber); Ela, Elath, Elik, Eloth, Elon (oak and terebinth); Gamzel (acamaro); Luas (almond-tree); Mount Olivet; Remon (pomegranate); Rithmah (broom); Samir, Bethaceta (ascacia); Betafitra (apple of Bita or a taking-tree).

Places named after animals are not rare in Palestine: Acrabim (scorpion), Aiaon (stag), Arad (wild ass); Eglon, Eglaim (eagle), Ephron, Ophra (gazelle); En-gaddi (kid), Etam (hawk); Bethhagla (partridge); Humza (lizard); Lais, Lebatho (lion); Irna-has (snake); Beth-nemra (leopard); Para (cow); Sebaim, Sebain (jackal); Haasar-eusa, -eum (horse); Telaim, Bethcar (lambs); Zora (boar-net); etc.

An important and interesting class of topographical names have reference to the religious practices of the early inhabitants of Chanaan. Such cities as Beth-ssames, Ennsenes, the various Hares clearly owed their name to their use as grazing places. Abraham was, perhaps such names as Sin, Sinai (Babyl. Sin, i.e., Moon-god), and Jericho, tell us of places consecrated to the cult of the moon. Many were the cities and mountains dedicated to the Chassanites to the various Baals. Even Babylonian gods possessed shrines in Palestine: the names of Mt. Nebo, Nebo of Moab, Nebo of Juda (Ed, ii, 29), are of themselves very suggestive; Anath, the female companion of Anu, gave her name to Beth-Anath, Beth-Anoth, Anathoth; Bel was honoured in Riba (Ar-bela); Ishtar in Astaroth, Astaroth-carnaim, Beestern; the name Beth-Dagon needs no comment.

Finally a certain number of distinctly Hebrew names, which either superseded older ones, or were given to, or modified, have special interest because they took their origin from events enshrined in the memory of the Hebrews. Bersabee recalls the league of Abraham and Abimelech (Gen. xix, 20); Eseq, the quarell of the herdsmen of Gerara with those of Isaac (Gen. xxvi, 20); Bethel, the vision of Jacob (Gen., xxviii, 17); likewise the names Abel-Midian, Berar, Meribah (Ex., xvii, 7), Thabeera (Num., xi, 3), Horna (Num., xxii, 3), Galgala (Jos., v, 9), Bokim (Judges, ii, 5), Abenerser (I Kings, vi, 12), Pherex Oza (II Kings, vi, 8), etc., were for the Hebrew people so many records of the memorable past. And this custom of renaming places in commemoration of momentous facts persisted until the times of the New Testament, as we gather from the (Aramaic) name Hacealada (Matt., xxviii, 18; Acte, i, 19) given to the potter's field bought with blood in Jerusalem.

CHARLES L. SOUVAT.

Names of Jesus and Mary, sisters of the Holy, a religious congregation founded at Longueuil, Quebec, 8 December, 1844, under the patronage of Bishop Bourget of Montreal, for the Christian education of young girls. The institute is based upon the religious community of the Sisters of St. Joseph at Montreal. The institute was incorporated by act of the Canadian Parliament, 17 March, 1845. A Decree cum laude was issued by Pius IX, 27 February, 1863, and a further Decree of 4 September, 1877, approved the institute; the constitutions received definite approval 29 June, 1901, and the institute was divided into seven provinces, 11 May, 1894. Later increased to nine, 25 August, 1910. Under the direction of Rev. J. Allard three Canadian aspirants—Miss Eulalie Durocher, Miss Henriette Céré, and Miss Mélodie Dufrêne—were trained according to the institute of the Holy Names of Jesus and Mary established by Mgr Eugène de Maesand of Marseilles. They took simple religious vows at Longueuil, 5 November, 1878. The name of St. Mary’s School was changed to St. Mary’s Academy and College, Portland, this school
was empowered to confer degrees (July, 1893), also to grant a Teachers' State Certificate good for five years, and a Teachers' State Diploma qualifying the holder for life. In 1907, an Act of the Washington State Legislature, afterwards ratified by the State Board of Education, made attestation of the attainment of the B.S. in Education (or the equivalent) for admission into the teaching profession in the State of Washington mandatory. In 1909, the school was accredited by the North Central Association of Colleges and Secondary Schools of the United States and Canada.

2 Other provinces are located in the United States. That of California, established at Oakland (1868) by Bishop Meek, possesses a novitiate since 1871; the New York province includes Florida. Quebec has four provinces: Ontario, one; Manitoba, one. Attached to Ontario are parochial schools in Detroit and Chicago. St. Mary's, Portland, opened (1890) a refuge for destitute and orphaned children and still conducts a Home for Orphan Girls. The congregation numbers (1910) 500 members, 1257; novices, 110; postulants, 81. It conducts 99 schools, residential, select, and parochial, attended by 24,205 pupils. Of these establishments, 48 are in the United States.

MAGGIE R. MADDEN.

NAMUR, DIocese OF (Namurcensis), constituted by the Bull of 12 May, 1559, from territory previously belonging to the Diocese of Liege, and made suffragan of the new metropolitan See of Cambrai. The Concordat of 1870 would recognize the limits of Namur to coincide with those of the Department of Sambre-et-Meuse, and to be suffragan of Meclins. On 14 Sept., 1823, the Diocese of Namur was increased by the territory of Luxembourg, which had formerly belonged to the Diocese of Metz, and which, forming, under the First Empire, part of the Departments of the Forêts and the Ardennes, had been given, in 1815, to the Kingdom of the Netherlands. After the Revolution of 1830, which brought about the separation between the Grand Duchy of Luxembourg and the Belgian Province of Luxembourg, the City of Luxembourg received a vicar Apostolic. In 1840 the jurisdiction of this vicar was extended to the whole grand duchy. On 7 October, 1842, the jurisdiction of the Diocese of Namur was definitively restricted to the two Belgian Provinces of Namur and Luxembourg.

In 1047, Albert II, Count of Namur, caused the erection, on the site of an ancient chapel, which an unauthenticated legend says was dedicated by Pope Cornelius in the third century, of a collegiate church, served by the descendants of the Abbots who administered justice within their lands. The first dean, Frederick of Lorraine, brother-in-law of Albert II, about 1050 secured from the chapter of Mainz a portion of the head of St. Aubain, martyr. The collegiate church took the name of St. Aubain the Martyr. In 1057 Frederick became pope under the name of Stephen IX. The various successors of Albert II enriched this foundation with numerous privileges. In 1209 Innocent III, by a Brief, took it under his protection. In 1263 Baldwin, Emperor of Constantinople, heir of the counts of Namur, sold the countship to Guy de Dampierre, Count of Flanders, and the House of Dampierre also protected the collegiate church. In 1429 Couin John III sold it to Philip the Good, Duke of Burgundy. Thenceforth, until the French Revolution, Namur belonged to the House of Burgundy-Austria, except during the years 1692–95, when it was occupied by Louis XIV. Charles the Bold, Philip the Fair, Charles V, Albert and Isabella all knelt and took the oath in the sanctuary of St. Aubain. This church thus held a most important position in the political life of the country. It was rebuilt in the eighteenth century after the model of St. Peter's at Rome, as the cathedral.

The Church of Namur resisted Josephinism. In 1789, under the provisional Act of Joseph II, the image of the Blessed Virgin was carried in processions through the streets in honour of the Immaculate Conception. Under the Directory, the vicar capitular, Stevens, formerly a professor in the University of Louvain, and famous for his opposition to Josephinism, directed the clergy by mysteriously circulated communications issued from his hiding-place at Fleury-la-Rivière. After the Concordat, Leopold-Claude de Bexon had been made Bishop of Namur, Stevens feared that the new bishop would be too compliant towards Napoleon. The pamphlets which he circulated under the title "Sophisme dévolé" advised the clergy to refuse admission to the Concordat. As it would be taken by the State for admission to the Organic Articles. A petite équipe formed of persons calling themselves "Steenistes" was formed in the diocese. It was strengthened by the subservience of Bishop Bexon, whom age had weakened, for the prefect Peres and by the circular (13 November, 1802) in which he denied having disapproved of the Organic Articles. At last Bexon resigned, 15 Sept., 1803, and was succeeded by Pissani de la Gaude. But Stevensism continued to exist. Stevens admitted that the Concordat was legitimate, and that the new bishops might be received; he only protested against the formula of adhesion to the Concordat. But the Stevensists went farther: they held that the jurisdiction of the bishops was radically defective, and that the aforesaid lease of the Organic Articles was null and void for the Stevensists. Stevens died 13 February, 1828. He submitted all his writings to the Holy See, which never passed judgment. Since 1806 the right of appointing the dean and chapter of Namur has been in the pope's hands. In 1884, in the absence of a dean and chapter, the pope, Pius IX, established the title of cardinal deacon of the Holy Name of Jesus. The Diocese of Namur honours with special veneration Sts. Maternus, Servatius (Servais), and Remacu.
lous, the first apostles of the Diocese of Tongres, which
later became that of Liège (q. v.), and some saints of
the Diocese of Liège, Sts. Lambert, Hubert, and
Juliana. Mention may also be made of St. Foillan,
Irish origin, founder, in 690, of the monastery of
Fosses; St. Begge, sister of St. Gertrude of Nivelles,
and foundress, in 692, of the monastery of Andenne,
which she presided over; St. Hadelin, founder of the
monastery of Cellies, d. about 690; St. Walhère, or
Voxy, parish priest of Ohany (thirteenth century); St.
Mary of Oignies, b. at Nivelles about 1177, celebrated
for her visions, in d. at the bégugnais of Oignies, where
her director, Jacques de Vitry, who became Bishop of
St. Jean d’Acre and cardinal, wished also to be buried.
Lastly, the Diocese of Namur honours in a special
manner the Martyrs of Gorkum, whose relics it pos-
sesses. At Arlon, which now belongs to the diocese,
was born Henri Busch, famous as “Bon Henri”,
founder of the shoemakers’ and the tailors’ fraternities
in Paris (seventeenth century).

The religious congregations administer in the Di-
ocese of Namur, according to “La Belgique Charit-
able”, 2 orphanages for boys, 7 for girls, 1 mixed, 18
hospitals or infirmaries, 4 clinics, 194 infant schools,
1 house of rescue, 6 houses for the care of the sick in
their homes, 1 asylum for deaf mutes, 2 houses of
retract, 1 insane asylum. In 1907 the Diocese of
Namur numbered 583,722 inhabitants, 36 deaneries,
37 parishes, 677 sucursals, 96 auxiliary chapels, 111
curacies paid by the State.

Georges Goyau.

Nancy, Diocese of (Nanciensis et Tullensis),
comprises the Departments of Meurthe and Moselle,
France, suffragan of Besançon. The See of Nancy is
the heir, so to speak, of the celebrated See of Toul.

St. Mansuetus, Apostle of the Leuci and first Bishop
of Toul, and according to some a disciple of St. Peter,
cannot have been anterior to the fourth century.
The days of his saintly successors, Amonatus, Alchus,
and Celsinus, cannot be determined. Among the bishops
of the diocese may be mentioned: St. Auspicius (about
470); St. Ursinus (Our); St. Clouva in 596, who
requested an ecclesiastical to instruct him in the teachings
of Christianity; St. Epvre (Aper) (500-505), brother of
St. Evrone (Apromia); St. Alband (about 508), es-
ctablished a community of ecclesiastics from which
originated the Abbey of St. Epvre; St. Leudinus-Bodo
(second half of the seventh century), founder of the
monastery of Bon Moustiers; and brother of St. Sal-
berge, foundress and first abbess of the monastery of
Laon; St. Jacob (756-65); St. Gauzelin (922-62), who
reformed the monastery of St. Epvre and founded that
of Notre-Dame de Bouzicules; St. Gerard (963-94);
Bruno of Dagsberg (1026-51), eventually St. Leo
Ligier (1449-60); Cardinal John of Lorraine (1517-43),
who held twelve sees in six large abbeys; Charles of
Lorraine, cardinal of Vaudemont (1580-87); Cardinal Nicholas Francois of Lorrain-
e (1625-34); Andre du Saussay (1649-75), author of “Martyrologium Gallicanum”.

The title of count and the rights of sovereignty of
the episcopal Bishops of Toul originated in certain
grants which Henry the Fowler gave to St. Gauzelin in
927. The See of Toul was disturbed by the Conflict of
Investitures in 1108. The chapter was divided; the
majority elected Riquin of Commercy bishop; the
minority chose Conrad of Schwarzenburg. Henry V
declared for the latter; Ponsel II for the former, but
nevertheless he granted Conrad the title of bishop,
provided he performed no episcopal office. In 1271
grave differences broke out again in the chapter of
Toul; after seven years’ vacancy the Holy See re-
sinded the four elections made by the chapter, and in
1278 Nicholas III personally appointed as bishop Con-
rad of Tübingen. Thenceforth it was generally the
Holy See which appointed the bishops, alleging vari-
ous reasons as the vacancies arose; hence the many
Italian prelates who held this important see until 1552.
when Toul was occupied by France. In 1597 Charles
III, Duke of Lorraine, impatient of his dependence on
a diocese henceforth French, asked Clement VIII for
the dismemberment of the See of Toul and the creation
of a see at Nancy; this failed through the opposition

of Arnaud d’Ossat, Henry’s ambassador at Rome.
Clement VIII, however, decided that Nancy was to
have a primatial church and that its prelate would
have the title of primate of Lorraine and wear episco-
pal insignia, but should not exercise episcopal juris-
diction.

In 1777 and 1778 Toul lost territories out of which
were formed two new dioceses: Saint-Dié and Nancy,
both of them suffragan of Trier. The Concordat of
1802, which suppressed Toul, made Nancy the seat of
a vast diocese which included the three Departments
of Meurthe, Meuse, and Vosges; the latter two were
detached from Nancy in 1822 on the re-establishment
of the Dioceses of Verdun and Saint-Dié. When
France lost Alsace-Lorraine in 1871, Nancy lost the
arrondissements of Sarrebourg and Château-Salins
which, having become German, were united with the
Diocese of Metz. Nancy however annexed the ar-
rondissement of Briey which remained French, and
was detached from the Diocese of Metz (consistorial
decrees of 10 and 14 July, 1874). Since 1824 the
bishops of Nancy have borne the title of Bishops of
Nancy and Toul, as the ancient Diocese of Toul is
almost entirely united with Nancy. It has had some
illustrious bishops: Forbin-Janson (1824-44); Darboy
(1859-83); the future Cardinal Lavergne (1863-67);
and the future Cardinal Foulon (1867-82). Since
1165, whenever the Bishop of Toul officiated pontifi-
cally, he wore an ornament called surhumeral, or ra-
ionale, a sort of pallium covered with precious stones,
which decoration he alone of all the bishops of the
Latin Church wore. A brief of 16 March, 1865, re-
stored this privilege to the bishops of Nancy and Toul. Concerning the insinuations of the Old Catholics in 1870 apropos of this Brief, see Grandther, "Geschichte des Vatikanischen Konzils", II, 589, and III, 748. St. Sigisbert, III (630-54), King of Austrasia, and founder of twelve monasteries, is patron of the City of Nancy.

On 5 Dec., 1572, Gregory XIII signed the Bull for the erection of a university at Pont-à-Mousson; the faculties of theology and arts were entrusted to the Jesuits; the learned Father Sirmond made his profession there, and in 1681 Queen Mary Stuart established a seminary for twenty-four Scotmen and Irishmen. St. Peter Fourier was a pupil of this seminary. Cardinal Mathieu (d. 1908) was for many years parish priest of Pont-à-Mousson. The congregation of Our Lady of Refuge was founded at Nancy for penitent women in 1627, by Elizabeth of Ranfaing, known as Sister Mary Elisabeth of the Cross of Jesus. This congregation had numerous houses throughout France. Mattaincourt, the parish of St. Peter Fourier, belonged to Toul when the saint established his important foundations in the seventeenth century.

The chief pilgrimage centres are: Notre-Dame de Bon Secours, at Nancy, dating from the fifteenth century, and for which King Stanislaus built (1738-41) a large sanctuary on the site of the humble chapel erected by King René; Notre-Dame de Sion, at Saxe-Sion, dating from the episcopate of St. Gerard, and whose madonna, broken during the Revolution, was replaced in 1802 by another (miraculous) statue of the Blessed Virgin; and St-Nicolas du Fort, in honour of St. Nicholas, Bishop of Myra, patron saint of Loraine.

Prior to the enforcement of the Associations Law of 1901, there were in the diocese, Carthusians, Jesuits, Dominicans, Oblates of Mary immaculate, Redemptorists, and several orders of teaching brothers, one of which, the Brothers of the Christian Doctrine (founded in 1822 by Dom Fréchard, former Benedictine of Senones Abbey), had its mother-house at Nancy.

Orders of women: the Canonesses Regular of St. Augustine of the Congregation of Notre Dame, a teaching order founded at Vezelay in 1629, and transferred to Lunéville in 1850; Sisters of St. Charles, a nursing and teaching order, the foundation of which in 1831 is due to the laymen, Joseph and Emmanuel Chauvenel; Sisters of the Christian Doctrine, called Vatelottes, a nursing and teaching order founded about 1718 by the Duke of Lorraine and Father Jean-Baptiste Vatelot; Sisters of the Holy Childhood of Mary, a nursing and teaching order which Canon Claude Daunot took thirty-five years to establish (1820-55); Sisters of the Holy Heart of Mary, a teaching order founded in 1842 by Bishop Manuau and Countess Clara de Gondrecourt; Daughters of Compassion, a nursing order of Servite tertiaries, established in 1854 by Abbé Thiriet at St-Firmin.

The religious congregations of the diocese conduct 6 crèches, 57 day-nurseries, 2 institutions for sick children, 1 school for the blind, 1 school for deaf-mutes, 3 boys' orphanages, 23 girls' orphanages, 12 teaching rooms (industrial), 3 schools for apprentices, 32 hospitals or asylums, 17 houses for visiting nurses, 16 houses of retreat, 1 insane asylum. In 1909, the Diocese of Nancy had 517,508 inhabitants, 29 deaneries, 462 succursal parishes, and 91 vicariates.

NANNI, GIOVANNI. See ANNIUS OF VITERBO.

Nantes (NANNETES), Dioecese of (NANCELIENSIS).—This diocese, which comprises the entire department of Loire Inferieure, was re-established by the Concordat of 1802, and is suffragan of Tours. According to late traditions, St. Claurus, first Bishop of Nantes, was a disciple of St. Peter. De la Borderie, however, has shown that the ritual of the Church of Nantes, drawn up by preconvent Helius in 1263, ignores the apostolic mission of St. Claurus; that St. Peter's nail in the cathedral of Nantes was not brought thither by St. Claurus, but at a time subsequent to the invasions of the Northmen in the tenth century; that St. Felix of Nantes, writing with six other bishops in 567 to St. Radegund, attributes to St. Martin the chief rôle in the conversion of the Nantais to Christianity; that the traditions concerning the mission of St. Claurus are later than 1400. The earliest list of the bishops of Nantes (made, according to Duchesne, at the beginning of the tenth century) does not favour the thesis of a bishop of Nantes prior to Constantine. The author of the Passion of the Nantes martyrs, St. Donatian and Rogatian, places their death in the reign of Constantius Chlorus, and seems to believe that Rogatian could not be baptized, because the bishop was absent. Duchesne believes that the two saints suffered at an earlier date, and disputes the inference of the ancient writer concerning the absence of the bishop. He believes that the first bishop of Nantes, whose date is certain, is Desiderius (453), correspondent of Sulpicius Severus and St. Paulinus of Nola. Several bishops, it is true, occupied the see before him, among others St. Clarus and St. Similianus, but their dates are uncertain. Mgr. Duchesne considers as legendary the St. Emilianus supposed to have been Bishop of Nantes in Charlemagne's reign and to have fought the Saracens in Burgundy.

Among the noteworthy bishops are: St. Felix (550-83), whose municipal improvements at Nantes were praised in the poems of Fortunatus, and who often mediated between the people of Brittany and the Frankish kings; St. Pacharius (end of seventh century); St. Gohard (Gohardus), martyred by the Northmen in 845, with the monks of the monastery of...
Aindre; Actardus (843–71), during whose time the Breton prince, Nemenoë, in his conflict with the metropolis See of Tours (q. v.), created a see at Guerande, in favour of an ecclesiastical of Vannes, in the heart of the Diocese of Nantes; the preacher Copeau (1621–36). The diocese venerates: the monk St. Hervé (sixth century); the hermit Sts. Friard and Saint-Martial of Paris, first church of Cambon (sixth or seventh century); the English hermit Vital, or St. Vital (seventh or eighth century); the Greek St. Benoît, Abbott of Masserac in Charlemagne's time; St. Martin of Vertou (d. 601), apostle of the Herbaugis district and founder of the Benedictine monastery of Vertou; St. Hermeland, sent by St. Leo the Great to Britain to propagate the faith; and St. Alban, sent to convert the British in the seventh century to found on an island in the Loire the great monastery of Aindre (now Indret); the celebrated missionary St. Amand, Bishop of Maastricht (seventh century), a native of the district of the Herbaugis. Blessed Francoise d'Amboise (1427–85), who became Duchess of Brittany in 1450, had a great zeal in the foundation of the Little Brothers of St. Vincent Ferrier, rebuilt the choir of the collegiate church of Notre-Dame, and founded at Nantes the monastery of the Poor Clares. Widowed in 1457, she resisted the intrigues of Louis XI, who urged her to contract a second marriage, and in 1468 became a Carmelite nun at Vannes. In 1477, at the request of Sixtus IV, she restored the Benedictine convent of Fontevraud near Nantes, the Obedience of the Anjou. In 1477 it was a native of the diocese. The Abbey of La Meilleraye, founded in 1132, was the beginning of an establishment of Trappist Fathers, who played a most important part in the agricultural development of the country. The crusades were preached at Nantes by Blessed Robert of Arbrissel, founder of the Venerable Order of the Charteries of Blois, and Nantes from his rival Jean de Montfort in 1341. On 8 August, 1499, Louis XII married Anne of Brittany at Nantes—a marriage which later led to the annexation of the Duchy of Brittany to the Crown of France (1532). Chateau briant, a town of the diocese, was a Calvinistic centre in the sixteenth century. For the Edict of Nantes (1558), which granted Protestant religious freedom and certain political prerogatives, see HUGENOTS.

In 1665, by order of Louis XIV, Cardinal Retz was imprisoned in the castle of Nantes, from which he contrived to escape. A college was created at Nantes in 1680 for the education of Irish ecclesiastics. Certain regions were-won during the Revolution, the scene of the War of Vendée, waged in defence of religious freedom and to restore royalty. At Savernay in December, 1793, succumbed the remains of the Vendean army, already defeated in the battle of Choleot. The atrocities committed at Nantes by the terrorist Carrier are well-known. Four councils were held at Nantes, in 664, 1127, 1264, and 1431. The mausoleum of Francis II, last Duke of Brittany, executed in 1507 by Michel Colom, is one of the finest monuments of the Renaissance. The chief places of pilgrimage of the diocese are: Notre-Dame de Bon Garant at Orvault, a very old pilgrimage, repeatedly made by Francis II, Duke of Brittany; Notre-Dame de Bon Secours at Nantes, a pilgrimage centre which dates back to the fourteenth century; Notre-Dame de Toutes Aides. Notre-Dame de Miséricorde was a place of pilgrimage in 1026 in memory of the miracle by which the country is said to have been freed from a dragon; the present seat of the pilgrimage is the Church of St. Similien at Nantes. Before the law of 1801, the diocese counted Capuchins, Trappists, Jesuits, Missionary Priests of Mary, Augustinians, Franciscans, Missionaires of Africa, Premonstratensians, Sulpicians, and several orders of teaching brothers. The Ursulines of Nantes were established by St. Angela of Merci in 1840.

Among the congregations for women originating in the diocese are: the Sisters of Christian Instruction, a teaching order founded in 1820 at Beignon (Diocese of Vannes) by Abbé Deshayes, of which the motherhouse was transferred to St-Gildas des Bois in 1828; Sisters of the Immaculate Conception, a teaching and nursing order, founded in 1853 (mother-house at La Haye-aux-Bois); Franciscan Sisters, founded in 1871 (mother-house at St-Philbert de Grandlieu); Oblate Franciscan Sisters of the Heart of Jesus, founded in 1875 by Mlle Gazeau de la Brandanniere (mother-house at Nantes). At the beginning of the twentieth century, the religious congregations of the diocese conducted three écoles, 44 day nurseries, 3 homes for sick children, 1 institution for the blind, 1 deaf and dumb institution, 6 boys' orphanages, 17 girls' orphanages, 3 homes for poor girls, 1 institution for the extinction of mendicity, 2 houses of mercy, 1 house to supply work to the unemployed, 1 vestiary, 10 houses of visiting nurses, 7 homes for invalids and for retirement, 23 hospitals or asylums. The Diocese of Nantes has 604,971 Catholics, 52 parishes, 209 succourable parishes.

Scolia christ. GEORGES GOYAT.

Nantes, Edict of. See HUGENOTS.

Nanteuil, Robert, French engraver and crayonist, b. at Reims, 1623 (1626, or 1630); d. at Paris, 1678. Little is known of his early life save that his father, a merchant of Reims, sent him to the Jesuit school, where he received a splendid classical training but no encouragement to draw. In every spare moment he was busy with his pencil or burin, and he even engraved on the trees in the forest. He cut in wood the name of a "Christ" and a "Virgin," copying from old copper plates. He later went to the Benedictines, who fostered his artistic bent; one of the order, who patiently sat for him, is seen in the "Buste d'un Religieux" (published in 1644). He also engraved ornaments for his thesis in philosophy in 1645 (Piety, Justice, and Prudence Saluting the University), both these early attempts with the graver being notable successes. His family being in dire financial straits, Nanteuil went to Paris (1648), and worked with Regnoss, whose sister he had married. His style now changed and developed quickly; his first method had been to use straight lines only, shallow or deep; then he practised cross-hatching and added stippling for the middle-tints (in this following Boulanger). The acme of his style shows special strokes and individual treatment for each part of the face and for each texture of the draperies. His crayon and pastel por-
traits brought him a pension of 1000 liras and the appointment of Royal Engraver (1658), together with an atelier in the Gobelin. Two years later Louis XIV issued an edict, mainly inspired by Nanteuil, lifting engraving out of the realm of mechanical arts and giving to engravers all the privileges of other artists.

Nanteuil’s bold, broad, and vigorous pastel or crayon life-size sketches have nearly all disappeared, for he used them only as studies for his engravings; and his rich, yet delicate and silvery tones, his splendid modelling of the face, his suggestion of colour throughout the plate and unaffected justness of the likenesses are largely due to his following the fresh and often wet chalks. He engrossed portraits of many of the princes of Europe and of all the celebrated men of France in Louis XIV’s time. Of the Grand Monarque alone he made nineteen portraits at various periods of his life. He was rich, affable, and very generous, and would often send back payments for great plates when he found the sitters were poor. He was revered by the nobility and men of letters, and himself wrote poetry and recited pleasantly. His verses are often to be found beneath his portraits. He was the pioneer of modern engraving, and much of his work equals and strongly resembles the best of recent times. He was a rapid and prolific worker, many of his 243 plates being life-size. Fairthorne, a great collector of his works, learned much from him, and Edelinck was his friend and follower. His masterpieces are: J. B. van Steenbergen (after Duchatél), called “L’Advocat de Hollandie” (1688); M. de Pomponne (after Le Brun); Jean Loret; Duchesse de Nemours; and Marshal Turenne. A few of his chalk originals are in the Louvre and all of his 243 plates are in the Musée Richelieu.

LEIGH HUNT.

Naples. See Neaphtali.

Naples, the capital of a province in Campania, southern Italy, and formerly capital of the Kingdom of Two Sicilies; the most memorable of these is the bay of Naples, on the Capodimonte, the Vesuvius, and the Posilipo hills, in one of the most enchanting spots upon the earth. The most populous town in Italy, its suburbs stretch along the bay, as far as Torre Annunziata. Naples is a very industrial town, and its fisheries, navigation, and commerce are very important. The yards by Loretto, a centre of the port, and near the Royal Navy. In its neighbourhood, the vine and all species of esculent plants are cultivated; and fruits and vegetables are exported in great quantities. The silk industry is very important. Naples has frequently been damaged by the eruptions of the neighbouring Vesuvius, and the most memorable occurred in the year 72 of the Christian era, the first eruption of Vesuvius after several centuries of inactivity; in 205, 407, 512, 982, and 1139, the eruptions were less violent; until 1631, the volcano gave no signs of activity, and was covered with vegetation; there were more or less violent eruptions, however, in 1650, 1694, 1707, 1723, 1794, 1804, 1805, 1822, 1828, 1839, 1850, and 1872; the eruption of 1904 was one of the most violent of all, and caused the ruin of Ottaviano and of San Giuseppe.

Buildings.—Sacro.—The cathedral or church of Saint Januarius, begun by order of Charles of Anjou in 1272, on the site of the ancient Stefania cathedral of S. Gennaro, is one of the finest buildings in Italy; the façade of Nicolò Pisano, Maglione, and Muccio, is in Gothic style with three naves; the façade, modified by the restoration of 1788, has been brought again to its original style; its principal door is a work of Babbcuccio Piferino (1407), while its chapel of St. Restituta is said to date from the time of Constantine. The fourteen pilasters are adorned with busts of famous archbishops of Naples. In the crypt, which was built by Malvito by order of Archbishop Carafa, is venerated the body of St. Januarius, taken there from Montevergine in 1479. Of the lateral chapels, that of the Treasure is the most notable; it is there that the head of St. Januarius and the amputated leg of blood are preserved (see Januarius, St.). The cathedral contains the superb sepulchres of Innocent IV and of Cardinal Minutoli, the second, a work of Girolamo d’Auria; also, valuable thirteenth-century frescoes of Santafede, Vincenzo Porti, Luca Giordano, and others, and paintings by John of Nola, Franco, Fontana, and others. Among the most remarkable are the church of St. Augustine of the Mint, which has a pulpit of the fifteenth century, sculptures by Vincent d’Angelo and Gian da Nola, and a painting by Diana (the Communion of St. Augustine); the church of the Holy Apostles, restored in 1908 by the labour of famous artists, among whom were Giordano, Marco da Siena, Bonomini, and others; a fine series of letters, high altar being the work of Cagiano; the church of S. Domenico Maggiore, dating from 1255, is rich in paintings, mosaics, and sepulchres, and in the ancient monastery connected with this church is the cell of St. Thomas Aquinas; the church of Dona Regina, built by Mary of Hungary, in 1300, and renewed by the Theatine Guarino in 1670, contains valuable paintings and frescoes, and also, in its tomb, the body of the pope, with two wings that have porticoes, is adorned with paintings of the nineteenth century. The church of San Giacomo of the Spaniards (1540) is decorated with works of art; St. John Carbonara (1343) contains the mausoleum of King Ladislaus and of the constable Serpignanni Caracciolo, and paintings by famous artists. The church of St. Barbara, a work of Giovanni di Sale, has a beautiful bas-relief of the Madonna with angels over the principal entrance, and another fine bas-relief within the edifice; adjacent to the church is the cell inhabited by St. Francis of Paula. The church of St. Clare (1310), restored in 1752, contains the mausoleum of Robert the Wise and of other personages, and also, in its chapel of St. John Nepomucen, a pulpit is a graceful work of art. The church of Santa Maria del Carmine, built in the thirteenth century, and restored in 1769, contains the tomb of Conradin executed by Schoepf in 1574 by order of King Louis of Bavaria. The church of St. Mary of Pedirotta, where each year, about September, popular feasts are celebrated; the church of St. Gennaro, the church of Mt. Olivet (1411) contains many works of art, and also the tomb of the architect Charles Fontana; the church of St. Peter ad Ulamam, so called because it contains an altar upon which St. Peter is said to have celebrated Mass. The church of Santa Maria del Parto, built by the poet Sannazaro, contains the mausoleum of its founder, a work of Fra Giovanni Montorsoli; the church of S. Paolo Maggiore, built on the ruins of the ancient temple of Castor and Pollux, after the plans of the Theatin Grimaldi; the church of SS. Severinus and Sosius, which is very ancient, was restored in 1490 and in 1609. While painting the vault of this temple, the artist Correggio, falling from the scaffolding, was killed (1519). But the most fallible of his fall; other artists have also adorned this church with fine works. The church of the Most Holy Trinity, or the New Gesù, an ancient palace converted into a church by the Jesuit Provedo (1584). Mention should be made, however, of the catacombs, near the
church of St. Januario of the Poor, famous in the second century, and of the new cemetery, rich in artistic monuments, among which are the Pietà by Calli in the chapel, and the statue of Religion by Angelini.

Secular.—The Royal Palace, which ranks among the grandest of palaces on account of the majestic severity of its style, was begun in the early part of the seventeenth century by the viceroy Count of Lenne according to the designs of Domenico Fontana; it has a sumptuous interior, and contained valuable artistic collections, one of which, consisting of 40,000 engravings, is now at the Museo Nazionale. There is another royal palace at Capodimonte, built by Charles III, where there is a collection of arms and of modern paintings; the Palace of the Prefecture is a modern; S. Giacomo Palace, formerly the residence of the minister of State, now contains the municipal and scientific institute, a nautical institute, and many intermediate schools. The National Library has nearly 300,000 volumes, and the Brancacciana Library more than 115,000 volumes. The State Archives are very important. Nearly all of the great families of the ancient Kingdom of Naples built sumptuous palaces, the private monumental architecture of Naples antedating that of Florence. Naples has more than 60 charitable institutions, some of which date from the thirteenth century, as, for example, the boarding-school of St. Eligius (1273), accommodating 300 young girls; the Casa Santa dell' Annunziata (1304); the boarding-school del Carmelo (1611); for 300 girls; and St. Januario of the Poor (1669). Few ancient monuments are to be found at Naples; there is the piercing of the Pizzofalcone (crypto nepotiorum), 815 m. in length, done by one Cocceius, probably under Tiberius, and there are the ruins of villas of the ancient

other offices. The Capuan Castle, built by William I in 1131, and thereafter the residence of the Durazzos, of the sovereigns of the house of Aragon, and of the viceroy, is now the court-house; the Castle of the Egg, also built by William I (1154), is at present a barracks and a fort, as are also Castel del Carmine and Castelnuovo, built by Charles I, and having a triumphal arch of Alfonso of Aragon. Castel San Erasmo is a fort, situated upon a height commanding the city and the harbour. The museum of ancient art at Naples is one of the best of its kind in the world; its chief sculptures, the Hercules, the Farnese Bull, and others, are from the collections of the Farnese family, and it possesses many interesting objects found in the ruins of Pompeii and Herculanum, frescos and mosaics, among others; it contains also rich collections of cameos, coins, and inscriptions (Neapolitan laws), besides a gallery of pictures. At S. Martino, a former convent of the Cistercians, there is a collection of paintings by Neapolitan artists, which belonged, for the most part, to that monastery. The Filanzieri Museum and the Gallery of the Fondi palace should also be noted. The aquarium for the study of submarine animal life was established by the cooperation of several countries, among them, the United States. There is in Naples a university founded in 1224, furnished with various scientific collections and with a library of more than 260,000 volumes; the town has a seminary, a theological institute, a naval institute, and many intermediate schools. The National Library has nearly 300,000 volumes, and the Brancacciana Library more than 115,000 volumes. The State Archives are very important. Nearly all of the great families of the ancient Kingdom of Naples built sumptuous palaces, the private monumental architecture of Naples antedating that of Florence. Naples has more than 60 charitable institutions, some of which date from the thirteenth century, as, for example, the boarding-school of St. Eligius (1273), accommodating 300 young girls; the Casa Santa dell' Annunziata (1304); the boarding-school del Carmelo (1611), for 300 girls; and St. Januario of the Poor (1669). Few ancient monuments are to be found at Naples; there is the piercing of the Pizzofalcone (crypto nepotiorum), 815 m. in length, done by one Cocceius, probably under Tiberius, and there are the ruins of villas of the ancient

CHURCH OF ST. FRANCIS OF PAULA, NAPLES
Built by Ferdinand I, King of the Two Sicilies—Modeled after the Roman Pantheon

city, of a theatre and some temples; there is also the tomb of Vergil on the Pozzuoli road.

History.—Naples was founded by Greeks from Cumae, and Cumae, according to Mommsen, is the Palaeopolis to which Livy refers as existing not far from Naples and as being allied with the latter city against the Samnites. Naples, also, was obliged to receive the Samnites within its walls and to give to them participation in the government of the city, which explains her ambitious conduct towards Rome during the Samnite War (326 B.C.). In alliance with Rome, Naples furnished only ships. During the Punic War, the town was so strongly fortified that Hannibal did not venture to attack it. When Roman citizenship was offered to Naples, the latter accepted, on condition that it should retain its language and its municipal institutions; and consequently, even in the time of Tacitus, Naples was a Greek city, to which those Romans who wished to devote themselves to the study of philosophy betook themselves by preference. In the games, called Sebastia, celebrated at Naples every five years, Nero once appeared. In 476, the last Emperor of the West was relegated to this city. The capture of Naples by Belisarius, in the Gothic War, when he entered the city through the tube of the aqueduct (538), is famous. Totila captured the town in 543, but the battle of Mt. Vesuvius decided the fate of the Goths, and Naples came under the Byzantine power, receiving a duc who depended
on the Exarch of Ravenna; and that condition remained, even after the invasion of the Lombards. In 642, under the Empire, he attempted to seize Ravenna, but his independence, and the exarch Exulaterius defeated and killed him in the following year. A hundred years later, at the instance of the iconoclast, Leo the Isaurian, Exulaterius moved upon Rome to assassinate Pope St. Gregory II, but he was compelled to turn back, and was killed by the infuriated people. From that time on, the Byzantine influence at Naples was merely nominal; in place of a dux, there was frequently a consul in command of the city, which flourished in wealth, and displayed military virtues in the defence of its independence against the Lombard dukes of Benevento, Spoleto, Capua, and Salerno, and also against the Saracens; in 850, however, the town was taken, and burned, by Roger I, Duke of Calabria. The unhappy Sergius drove the Saracens from the island of Ponza, while his son Cessarius, in 846, went to the assistance of Leo IV against the same foe, and in 852, freed Gaeta; but to save their commerce, the Neapolitans thereafter allied themselves with the Mohammedans. Bishop Athanasius II imprisoned Sergius and proposed in the meantime for duke, to the Byzantine general, Maniakiis, his Sicilian undertaking, and, indignant at being defrauded of their reward, turned their arms against the Byzantines. Their subsequent conquest laid the foundation of what came to be the Kingdom of the Two Sicilies, or the Kingdom of Naples. After their victory near Gaeta in 1041, the Normans of Calabria and Apulia, with the exception of the seaboard towns; their capital was established at Melfi, and the twelve counts divided the territory among themselves—they reconquered by the Byzantines having been frustrated by the defection of Maniakiis. In 1052, Argyros was again defeated, near Sipontum, and the troops of Leo IX were defeated near Civitella; whereupon the pope confirmed the Normans in the possession of their conquests. The first count of Apulia whose title was recognized was William of the Iron Arm, who was succeeded by his brothers, Drogo (1046), assassinated at the instigation of the Byzantines; Humphrey; and, in 1067, Robert, elected Guiscard, by the rebels. In 1060, Orlando (1063) and Bari and Brindisi (1071), submitted to Byzantine rule in Italy, while (1059) he obtained from Nicholas II the title of Duke of Calabria, Apulia, and Sicily, which island he had yet to conquer. On the other hand, he took the oath of allegiance to the pope, so that all his possessions and future conquests should be held of the Holy See. The pope acquired a new defender, especially against the empire, and also a new encumbrance. The conquest of Sicily was accomplished by Roger, a brother of Robert, after a struggle of thirty years (1061-1091); the first city of the island that was taken from the Saracens was Messina; Girgenti and Syracuse were among the last (1060-1067); the Musulmans, however, were given the freedom of the country. Meanwhile, Robert conquered the Republic of Amalfi (1072) and the Duchy of Salerno (1077), the last remnant of the Lombard power. He attempted the conquest of Epirus in 1052, but died in 1085, contemplating a movement against Venice. Robert was succeeded by Roger (1068-1111), William II (1111-1127), and then Roger II (1127-1154). The latter, in 1189, had reduced Prince Richard of Capua to vassalage, and, it is said, obtained from Urban II the dignity of hereditary legate of the Holy See (see MONARCHIA SICULA); and his son Roger II became duke of all those states, with Palermo for his capital. In 1130 the antipope, Anacletus II, conferred upon him the title of King of Sicily, bestowed by Innocent II (1139), to whom Roger renewed the oath of allegiance. On the other hand, Naples under its duke, Sergius VII, had thrown open its gates to Roger, who extended his power in Epirus and Greece (1142 sq.), and also in Africa (Tripoli and Bona, 1152). He gave new constitutions to his states, protected education, promoted agriculture and industry, especially the silk and textile branches, and during his reign Sicily increased in population. His successor William the Wicked (1154) became a prisoner of Matteo Bonellocapo, one of the conspiring barons, but was freed by the people. William the Good (1166-89) conquered Durazzo and Saloniki. His heiress was his aunt, Constance, who married Henry VI, the future Emperor of the empire. As this was contrary to the wishes of the people and of the Holy See, who desired the kingdom to be independent of the empire, Tancred was acclaimed king. Tancred, an illegitimate offspring of the royal house, was soon succeeded by his son William III. Henry VI triumphed in 1184, and was crowned in the cathedral of Benevento, in which the congregation, instead of the infant Frederick I (the II of Germany), whose tutors were entrusted by Constance to Innocent III. In the long contest for the succession of the empire, Innocent finally permitted Frederick to occupy both thrones, on condition that the two Governments should remain separate and independent of each other, that is, at the ascension of the former, the younger should not be inherited by the same prince. These conditions were not fulfilled, and the long struggle between the emperor and the Holy See arose, made all the more bitter by the ecclesiastical usurpations of Frederick. Conrad and Conradin continued the struggle, as did King Manfred, a natural son of Frederick II; and the latter was deposed and beheaded in reality as sovereign. The Holy See (Innocent IV, Clement IV, and Urban IV) as suzerain of the kingdom, offered it to whoever would free the pope of the domination of the Swabians; and Charles of Anjou, a brother of St. Louis, King of France, offered himself. Manfred perished in the battle of Benevento (1266), and Conradin, after his defeat at Tagliacozzo, was taken to Naples and executed in the Piazza del Mercato (1268). Naples then became the capital of the kingdom, to which, however, Peter III of Aragon laid claim on account of his marriage to a daughter of Manfred. The people, who could not endure French rule, opened the way for him by the Sicilian Vespers (1282), and Sicily remained under the rule of the Greek; but, under James, second son of Peter, it became an independent kingdom. When the former was called to the throne of Aragon (1295) he wished to restore Sicily to Charles II, but a brother of James, Frederick II, was acclaimed king by the Sicilians, and Charles, although several times illustrious, was obliged to make peace with Calabria (1302), and to recognize Frederick as King of Trinacria. Frederick was succeeded by Peter II (1336), Louis (1342), and Frederick III (1355-77), who were continually at war with Naples, and always under the domination of the two parties into which the nobility was divided, the National and the Catalonian. Mary, daughter and heiress of Frederick, was married to Martin, son of the King of Aragon, who re-united Sicily to that realm in 1410, and was succeeded by Alfonso V (1416-58). The throne of Naples had been inherited by Robert the Wise (1309-1343), whom the Guelphs of Italy regarded as their leader, and who aspired to the conquest of the Italian peninsula. He was succeeded by his daughter Joanna I, Queen of Naples, and the first of whose husbands, Andrew of Hungary, was brutally murdered in 1345. Louis of Hungary came to avenge his brother's death, and drove Joanna from Naples; but he was obliged to return to his coun-
try, and after a long war Joanna was restored (1832). Having no children, she adopted as her heir Louis of Anjou, a brother of Charles V, King of France. This action led Charles of Durazzo to declare war upon Joanna, in which he received the support of Urban VI; the queen was killed (1382), and Louis, also, having died (1384), the throne was left to Charles without a contest, but Charles died in Hungary in 1386.

Many who were dissatisfied with the regency for Ladislaus I, the minor son and heir of Charles, called to the throne Louis (II) of Anjou, also a minor, and thereby gave rise to a new war between the Durazzo and the Angevin parties. Ladislaus was victorious (1400) and sought to restore to Naples its preponderance in Italy; in this attempt, he invaded the Papal States (1402), but was driven from Rome in 1404. His successor was Joanna II (1414-1434), who was noted for the perversity of her life. Louis III (of Anjou) declared war against her in 1420, on which account she adopted Alfonso V, son of Ferdinand of Aragon and Sicily; but as that prince wished the immediate possession of the kingdom, Joanna adopted Louis III, and after his death in 1434 his brother René. The latter, assisted by Filippo Visconti, defeated the Sicilian fleet of Alfonso near Ponzia, in 1435; Alfonso himself was taken prisoner to Milan, but was soon set at liberty, and received even the assistance of Filippo to conquer Naples, which he accomplished in 1442, establishing Spanish rule in that kingdom, which he left to his illegitimate son; over to Cambodia, Sicily remained united to Aragon. Ferdinand refused to pay tribute to the pope, his suzerain, usurped ecclesiastical rights, violated boundaries, and in other ways provoked the displeasure of the barons of the kingdom and of Innocent VIII; the latter, therefore, gave his support to the barons, who revolted (1445-97), but Jeanne de Médicis, his ordinary, Scarcely had Alfonso II ascended the throne (1494), when Charles VIII, wishing to maintain the rights which he claimed to inherit from the House of Anjou to the throne of Naples, undertook his famous expedition into Italy. Alfonso II, knowing the hatred in which he was held, abdicated in favour of his son Ferdinand II; vainly, however, for almost without striking a blow, Charles became master of the kingdom. His success was but transitory, and Ferdinand was able to return to Naples in 1496, leaving the principal ports of the Adriatic coast in the hands of the Venetians. By the Treaty of Granada, Ferdinand the Catholic and Louis XII divided the Kingdom of Naples, and the latter appointed his brother, Charles VIII, to govern it; the latter died in 1498, and his son became Charles VII, who in 1503, when Andrea Doria suddenly passed over with his fleet to the side of the Spaniards, who remained masters of the country. There were a great many insurrections against Spanish rule; in 1547, on account of the attempt to introduce the Inquisition; in 1599, at the instigation of Tommaso Campanella, O.P., in 1647 (Giuseppe d'Alfiero to Messina, and Masaniello at Naples) it was proposed to offer the crown to Duke Henry of Guise; in 1674, there was a revolt at Messina; all of these insurrections were suppressed.

In the war of the Spanish succession, Naples was conquered by the Austrians for Charles III, son of Emperor Leopold, and pretender to the throne of Sicily, who invaded the Lombardies. By the peace of Utrecht (1713), Sicily was given to King Amadeus of Savoy, but in 1720, it was reunited to Naples. In 1734 Charles of Bourbon, son of Duke Philip of Parma, assisted by the Spanish general Montemar, conquered Naples without much difficulty and took the name of Charles III; the Austrians attempted in the following year to retrieve their loss, but were defeated at Velletri. Charles introduced many reforms, several, however, to the disadvantage of the Church (Tannucci ministry), and consequently he had difficulties with the Holy See which were not entirely cleared away by the concordat of 1755. When Charles ascended the throne of Spain, he left Naples to his third son Ferdinand.

Having failed to drive the French from the Papal States in 1798, Ferdinand was compelled to withdraw to Sicily; the French invaded Naples, and in January, 1799, proclaimed the Parthenopian Republic. The kingdom was soon restored, however, through the efforts of Cardinal Fabrizio Ruffo Scilla. In 1806, his son was succeeded by his grandson,"

Napoleon I (Bonaparte), Emperor of the French, second son of Charles-Marie Bonaparte and Maria-Lettia Ramolino, b. at Ajaccio, in Corsica, 15 August, 1769; d. on the Island of St. Helena, 5 May, 1821.

His childhood was spent in Corsica; at the end of the year 1778 he entered the college of Autun, in 1779 the military school of Braine, and in 1780 the military school of Paris. In 1785, when he was in garrison at Valence, as a lieutenant, he occupied his leisure with researches into the history of Corsica and read many of the philosophers of his time, particularly Rousseau. These studies left him attached to a sort of Deism, an admirer of the personality of Christ, a stranger to all religious practices, and breathing defiance against "sacerdotism" and "theocracy". His attitude under the Revolution was that of a citizen devoted to the new ideas, in testimony of which attitude we have his scolding letter, written in 1790, to Battafoco, a deputy from the Corsican noblesse, whom the "patriote" regarded as a traitor, and also a work published by Bonaparte in 1793, "Le souper de Beauregard", in which he takes the side of the Mountain in the Convention against the Federalist tendencies of the Girondins.

His military genius revealed itself in December, 1793, when he was twenty-four years of age, in his recapture of Toulon from the English. He was made a general of brigade in the artillery, 20 December, and in 1794 contributed to Masséna's victories in Italy. The political suspicions aroused by his friendship with the younger Robespierre after 9 Thermidor of the Year III (27 July, 1794), the intrigues which led to his being removed from the Italian frontier and sent to command a brigade against the Vendéens in the west, and ill-health, which he used as a pretext to refuse his post and became the victim of the Terror, were the cause of his political end. He contemplated leaving France to take command of the sultan's artillery. But in 1795 when the Convention was threatened, Bonaparte was selected for the duty of pouring grape-shot upon its enemies from the platform of the church of Saint-Roch (13 Vendémiaire, Year IV). He displayed great magnanimity in his victory, and midst the ravages of the Convention, and the earthquake of the Girondins, he never lost hope nor his memory of the country of his birth. His return to Italy was viewed as a victory, and he went on to win a great victory at Marengo, and to earn at once the gratitude of the Convention and the esteem of its enemies.

The Campaign in Italy.—On 8 March, 1796, he contracted a civil marriage with the widow of Alexandre de Beauharnais, Marie-Josephine-Rose Tascher de la Pagerie, who was born in Martinique, in 1763, of a family originally belonging to the neighbourhood of Blois. In the same month Napoleon set out for Italy, where the Directory, prompted by Carnot, had appointed him commander-in-chief against the First Coalition. The victory of Montenotte, over the Austrians commanded by Beauhieu, and those of Millesimo, Dego, Ceva, and Mondovi, over Celle's French and Austrian troops, to complete the conquest of Sardinia, to conclude the armistice of Cherasco (25 April, 1796). Wishing to effect a junction on the Danube with the Army of the Rhine, Bonaparte spent the following May in driving Beauhieu across Northern Italy, and succeeded in pushing him back into the Tyrol. On 1 May he was ordered by the Directory to leave half of his troops in Lombardy, under Kellermann's command, and march with the other half against Leghorn, Rome, and Naples. Unwilling to share the glory with Kellermann, Bonaparte replied by tendering his resignation, and the order was not insisted on. In a proclamation to his soldiers (20 May, 1796) he described his intention of driving the Tiber to chastise those who had "whetted the daggers of civil war in France" and "basely assassinated" Basseville, the French minister, to "re-establish the Capitol, place there in honour the statues of heroes who had made themselves famous", and to "arouse the Roman people benumbed by many centuries of bondage". In June he entered the Romagna, appeared at Bologna and Ferrara, and made prisoners of several prelates. The Court of Rome demanded an armistice, and Bonaparte, who was far from eager for this war against the Holy See, granted it. The Peace of Bologna (23 June, 1796) obliged the Holy See to give up Bologna and Ferrara to French occupation, to pay a indemnity of two hundred thousand louis d'or, to pay to the French 2,700,000 pounds, confiscate, 500 manuscripts, and the busts of Junius and Marcus Brutus. The Directory thought these terms
too easy, and when a prelate was sent to Paris to negotiate the treaty, he was told that as an indispensable condition of peace, Pius VI must revoke the briefs relating to the Civil Constitution of the clergy and to the Inquisition. The pope refused, and negotiations were broken off; the fleet again assembled at Toulon, where an attempt had been made to renew them. During these pourparlers between Paris and Rome, Bonaparte repeated the repeated efforts of the Austrian Wurmser to reconquer Lombardy. Between 1 and 5 August, Wurmser was twice beaten at Lonato and again at Castiglione; between 8 and 15 September, the battles of Roveredo, Pramollano, Bassano, and San Giorgio forced Wurmser to take refuge in Mantua, and on 16 October Bonaparte created the Cispadan Republic at the expense of the Duchy of Modena and of the Legations, which were pontifical territory. Then, 24 October, he invited Casault, the French minister at Rome, to re-open negotiations with Pius VI ("so as to catch the old fox"); but on 28 October he wrote to the same Casault: "You may assure the pope that I have always been opposed to the treaty which the Directory has offered him, and above all to the manner of negotiating it. I am more ambitious to be called the preserver than the destroyer of the Holy See. If they will be sensible at Rome, we will profit by it to do to that fine race part of the world what we have done to other; and to calm the conscientious fears of many people." Meanwhile the arrival in Venetia of the Austrian troops under Alvincz caused Cardinal Bussa, the pope's secretary of State, to hasten the conclusion of an alliance between the Holy See and the Court of Vienna; of this Bonaparte learned through intercepted letters written to Archduke Charles on 13 December, 1796 and Rivoli (14 January, 1797) and the capitulation of Mantua (2 February, 1797), placed the whole of Northern Italy in his hands, and in the spring of 1797 the Pontifical States were at his mercy.

The Directory sent him ferocious instructions. "The Roman religion," they wrote, "will always be the irreconcilable enemy of the Republic; first by its essence, and next, because its servants and ministers will never forgive the blows which the Republic has aimed at the fortune and standing of some, and the prejudices and habits of others. The Directory requests you to do all that you deem possible, without rekindling the torch of fanaticism, to destroy the pontificals and the monastic orders, and to establish other power or—which would be still better—by establishing some form of self-government which would render the yoke of the priests odious." But at the very moment when Bonaparte received these instructions he knew, by his private correspondence, that a Cisalpine Republic was beginning in France. Clarke wrote to him: "We have become once more Roman Catholic in France", and explained to him that the help of the pope might perhaps be needed before long to bring the priests in France to accept the state of things resulting from the Revolution. Considerations such as these must have made an impression on a statesman of Bonaparte's house, at about this period, said to the parish priests of Milan: "A society without religion is like a ship without a compass; there is no good morality without religion." And in February, 1797, when he entered the Pontifical States with his troops, he forbade any insult to religion, and showed kindness to the priests and the monks, even to the French ecclesiastics who had taken refuge in papal territory, and whom he might have caused to be shot as émigrés. He contented himself with levying a great many contributions, and laying hands on the treasury of the Santa Casa at Loreto. The first advances of Pius VI to his "dear son General Bonaparte" were met by Bonaparte's threatening that he would not treat. "I am treating with the invariable value of priests [celle prêtre], and for this once Saint Peter will again save the Capitol," he wrote to Joubert, 17 February, 1797. The Peace of Tolentino was negotiated on 19 February: the Holy See surrendered the Legations of Bologna, Ferrara, and Ravenna, and recognised the annexation of Avignon and the Comtat Venaissin by France. But Bonaparte had taken care not to infringe upon the spiritual power, and had not demanded of Pius VI the withdrawal of those briefs which were offensive to the Directory. As soon as the treaty was signed he wrote to Pius VI to express to him "his perfect esteem and veneration"; on the other hand, feeling that the Directory would be displeased, he wrote to it: "My opinion is that Rome, once deprived of Bologna, Ferrara, the Romagna, and the thirty millions we are taking from her, can no longer exist. The old machine will go to pieces of itself." And he proposed that the Directory should take the necessary steps with the pope in regard to the religious situation in France.

Then, with breathless rapidity, turning back towards the Alps, and assisted by Joubert, Masséna, and Bernadotte, he inflicted on Archduke Charles a series of defeats which forced Austria to sign the preliminaries of Leoben (18 April, 1797). In May he transformed Genoa into the Ligurian Republic; in October he imposed on the archduke the Treaty of Campo Formio, by which France obtained Belgium, Corsica, and the whole of the Dalmatian coast of the Adriatic, and the whole of the Istrian peninsula, while Venice was made subject to Austria. The Directory found fault with this last stipulation; but Bonaparte had already reached the point where he could act with independence and care little for what the politicians at Paris might think. It was the same with his religious policy: he now began to think of restoring the popes to France. The pope was restored peace in France. A note which he addressed to the Court of Rome, 3 August, 1797, was conceived in these terms: "The pope will perhaps think it worthy of his wisdom, of the most holy of religions, to execute a Bull or ordinance commanding priests to preach obedience to the Government, and to do all in their power to strengthen the established constitution. After the first step, it would be useful to know what others could be taken to reconcile the constitutional priests with the non-constitutional."

While Bonaparte was expressing himself thus, the Councils of the Five Hundred and the Ancients were preparing a law to recall, annul, and restore to their civil and political rights the priests who had already taken the oath of the Civil Constitution of the Clergy. But Directors Barrès, Rewbell, and Laveyrelle-Lépeaux, considering that this act jeopardised the Republic, employed General Augereau, Bonaparte's lieutenant, to carry out the coup d'état of 18 Fructidor against the Council of Five Hundred (4th, 1797), and which was once more a prey to a Jacobin and anti-Catholic policy. These events were immediately echoed at Paris, where Joseph Bonaparte, the general's brother, and ambassador from the Directory, was asked by the latter, to favour the Revolutions party. Disturbances arose: General Duhaut was killed in Joseph Bonaparte's house, and the Directory demanded satisfaction from the Holy See. General Bonaparte had just returned to Paris, where he apparently confined himself to his functions as a member of the Institute (Scientific Section). He was by no means anxious to lead the expedition against Rome, which the Directory was projecting, and contented himself with giving Berthier, who commanded it, certain instructions from a distance. For this expedition for Berthier's entry into Rome and the proclamation of the Roman Republic (10-15 February, 1798), and for the captivity of Pius VI, who was carried off a prisoner to Valence, see Pius VI.

The Campaign in Egypt.—While in Paris, Bonaparte induced the Directory to adopt the plan of an expedition to Egypt. His object was to make the Mediterranean a French lake, by the conquest of
Malta and the Nile Valley, and to menace England in the direction of India. He embarked on 19 May 1798. The taking of Malta (10 June), of Alexandria (2 July), the battle of the Pyramids (21 July), gave Bonaparte the uncontested mastery of Cairo. At Cairo he affected a great respect for Islam; reproached with this later on, he replied: "It was necessary for General Bonaparte to know the principles of Islamism, the government, the spirit of the people, and their relations with Constantinople and Mecca. It was necessary, indeed, for him to be thoroughly acquainted with both religions, for it helped him to win the affection of the clergy in Italy and of the ulamas in Egypt." The French troops in Egypt were in great danger when the naval disaster of Aboukir, inflicted by the English, was followed, from Europe, by the Treaty of London, which took sides with England; in the spring of 1799, Bonaparte made a campaign in Syria to strike both Turkey and England. Failing to effect the surrender of Acre, and as his army was suffering from the plague (May, 1799), he had to make his way back to Egypt. There he re-established French prestige by the victory of Aboukir (25 July, 1799), then, learning that the Second Coalition was gathering an army against the armies of the Directory, he left Kléber in Egypt and returned secretly to France. He landed at Fréjus, 9 October, 1799, and was in Paris seven days later. Besides certain political results, the expedition to Egypt had borne fruit for science: Egyptianology, however, did not arrive from the Institut d'Egypte (Institut d'Égypte) by Bonaparte.

Bonaparte, First Consul.—While Bonaparte was in Egypt, the religious policy of the Directory had provoked serious troubles in France. Deportations of priests were multiplying; Belgium, where 6000 priests were proscribed, was disturbed; the Vendée, Normandy, and Brittany, where the people of the west of France was angry and uneasy. Spurred on by his brother Lucien, president of the Five Hundred, allied with Directors Sieyès and Roger-Ducos, Bonaparte caused Directors Gohier and Mounis to be imprisoned, and broke up the Five Hundred (18 Brumaire; 9–10 November, 1799). The Directorial Constitution was suppressed, and France thenceforward was ruled by three consuls. First Consul Bonaparte put into operation the Constitution known as that of the Year VIII, substituted for the departmental administrators elected by the citizens, others appointed by the Executive Power, and re-organized the judicial and financial administrations. He commissioned the Assembly of the Five Hundred to draw up the "Constitution of the Year XIII", which Vendeans, and authorized the return of the non-juring priests to France on condition of their simply promising fidelity to the laws of the republic. Then, to make an end of the Second Coalition, he entrusted the Army of Germany to Moreau, and, himself taking command of the Army of Italy, crossed the Great St. Bernard (13–16 May, 1800). He was the operation of Desaix, who was mortally wounded, crushed the Austrians (14 June, 1800) between Marengo and San Giuliano at the very spot he had marked on the map in his study in the Tuileries. The Peace of Lunéville, concluded with Austria, 9 February, 1801, extended the territory of France to 102 departments.

Bonaparte spent the years 1801 and 1802 effecting internal reforms in France. A commission, established in 1800, elaborated a new code which, as the "Code Napoléon", was to be promulgated in 1804, to formally introduce some of the "principles of 1789" into French law, and thus to complete the civil results of the Revolution. But it was Napoleon's desire that, in the religious issue of the Revolution, the Church should have a place, and consciences should be set at rest. The Concordat with the Holy See was signed on 17 July, 1801; it was published, together with the Organic Articles, as a law, 16 April, 1802. For these two acts, one of which established the existence of the Church in France, while the other involved the possibility of serious interference by the State in the life of the Church, see CONCORDAT; ARTICLES, THE ORGANIC. Napoleon never said, "The Concordat was the great fault of my reign." On the contrary, years afterwards, at St. Helena, he considered it his greatest achievement, and congratulated himself upon having, by the signature of the Concordat, "erased the fallen altars, put down the icons, obliged the faithful to pray for the Republic, expropriated the scruples of those who had acquired the national domains, and broken the last thread by which the old dynasty maintained communication with the country." Fox, in a conversation with Napoleon at this period, expressed astonishment at "the peace having insinuated upon the marriage of priests"; "I had, and still have, to go elsewhere to speak peace," Napoleon replied, "theological controversies are allayed with water, not with oil." The Concordat had wrecked the hopes of those who, like Mme de Staël, had wished to make Protestantism the state religion of France; and yet the Calvinist Jaoucourt, defending the Organic Articles before the Tribunat, gloried in the definitive recognition of the Calvinist religion by the state. The Jewish religion was not recognized until later (17 March, 1808), after the assembly of a certain number of Jewish delegates appointed by the prefects (29 July, 1806) and the meeting of the Great Sanhedrim (10 February, 9 April, 1807); the State, however, did not take unto itself the powers of the rabbis. Thus did the new master of France regulate the religious situation in that country.

On 9 April, 1802, Caprara was received for the first time by Bonaparte in the official capacity of Pius VII's legate a latere, and before the first consult an oath which, according to the text subsequently published, was subscribed by the "Ministers of Justice, the laws, constitution, the laws, statutes, and customs of the republic, and nowise to derogate from the rights, liberties, and privileges of the Gallican Church. This was a painful surprise for the Vatican, and Caprara declared that the words about Gallican liberties had been interpolated in the "Moniteur". Another painful impression was produced at the Vatican by the attitude of eight constitutional priests whom Bonaparte had nominated to bishoprics, and to whom Caprara had granted canonical institution, and who afterwards boasted that they had never formally abjured their adhesion to the Civil Constitution of the clergy. In retaliation, the Roman Curia demanded of the Pope that he cease to be a formal adherent of the Civil Constitution, but Bonaparte opposed this and when Caprara insisted, declared that if Rome possessed too far the consuls would yield to the desire of France to become Protestant. Talleyrand spoke to Caprara in the same sense, and the legate desisted from his demands. On the other hand, however, Bonaparte was opposed, especially by the allocation of 24 May, 1802, in which Pius VII demanded the revision of the Organic Articles, he ended by allowing it to be published in the "Moniteur" as a diplomatic document. "A spirit of conciliation on both sides tended to promote more cordial relations between the two powers. The proclamation of Bonaparte as consul for life (August, 1802) increased in him the sense of his responsibility towards the religion of the country, and in Pius VII the desire to be on good terms with a personage who was advancing with such long strides towards omnipotence.

Bonaparte took care to gain the attachment of the renewed Church by his favours. While he dissolved the associations of the Fathers of the Faith, the Adorers of Jesus, and the Panarists, which looked to him like attempts to restore the Society of Jesus, he permitted the reconstitution of the Sisters of Charity, the Sisters of St. Thomas, the Sisters of St.
Charles, and the Valletot Sisters, devoted to teaching and hospital work, and made his mother, Madame Léonie Bonaparte, protectress of all the congregations of hospital sisters. He favoured the revival of the Institute of the Christian Schools for religious instruction of boys; side by side with the lycees, he permitted secondary schools under the supervision of the priests, but directed by ecclesiastics. He did not rest content with a mere financial aid; he provided the pecuniary obligations to the Church to which the Concordat had bound the State; in 1803 and 1804 it became the custom to pay stipends to canons and dessevènants of succursall parishes. Orders were issued to leave the Church in possession of the ecclesiastical buildings not included in the new circumcision of property. The State provided that both by the revenue to endow diocesan seminaries, Bonaparte granted the bishopric national estates for the use of such seminaries and the right to receive donations and legacies for their benefit; he even founded, in 1804, at the expense of the State, ten metropolitan seminaries, re-established, with a government endowment, the Lazaret house for the education of missionaries, and placed the Holy Sepulchre and the Oriental Christians under the protection of France. As to the temporal power of the popes Bonaparte at this period affected a somewhat complaisant attitude towards the Holy See. He restored Pesaro and Ancona to the pope, and bought it with the restitution of Bologna and Ferrara, sanctioned by the Court of Naples. After April 1803, Cacault was replaced, as his representative at Rome, by one of the five French ecclesiastics to whom Pius VII had consented to grant the purple late in 1802. This ambassador was no other than Bonaparte’s own uncle, Cardinal Joseph Fesch (q. v.), whose secretaries for a long time was Chateaubriand, recently made famous by his “Le gène du Christianisme”. Most of Bonaparte’s grievances against Cacault was a saying attributed to the latter: “How many sources of his glory would cease if Bonaparte ever chose to play Henry VIII!” Even in those days of harmony Cacault had a presentiment that the Napoleonic policy would yet threaten the dignity of the Holy See.

The idea of a struggle with England became more and more an imperious obsession of Bonaparte’s mind. The Peace of Amiens (25 March, 1802) was only a truce: it was broken on 22 May, 1803, by Mortier’s invasion of Hanover and the landing of the English in French Guiana. Napoleon forthwith prepared for a new campaign, and Decour, as he wished to be called, intended to invade England. The Duc d’Enghien, who was suspected of complicity with England and the French Royalists, was carried off from Ettenheim, a village within the territory of Baden, and shot at Vincennes, 21 March, 1804, and one of Cardinal Fesch’s first acts as ambassador at Rome was to demand the extradition of the French émigré. Welschinger was in the service of Russia, and whom Bonaparte regarded as a conspirator.

Napoleon Emperor. The Coronation.—While the Third Coalition was forming between England and Russia, Bonaparte caused himself to be proclaimed hereditary emperor (30 April–18 May, 1804), and at once surrounded himself with a brilliant Court. He created two princes imperial (his brothers Joseph and Louis), seven permanent high dignitaries, twenty great officers, four of them ordinary marshals, and ten marshals in active service, a number of posts at Court open to members of the old nobility. Even before his formal proclamation as emperor, he had given Caprara a place near him in the entourage to be sent to Reims, like the ancient kings, but at Notre-Dame de Paris. On 10 May, 1804, Caprara warned Pius VII of this wish, and represented that it would be necessary to answer yes, in order to retain Napoleon’s friendship. But the execution of the Duc d’Enghien had produced a deplorable impression in Europe; Royalist influences were at work against Bonaparte at the Vatican, and the pope was warned against crowning an emperor who, by the Constitution of 1804, would promise to maintain “the laws of the Concordat”, in other words, the Organic Articles. Pius VII and Consalvi tried to gain time by dilatory replies, but these very replies were interpreted by Fesch at Rome, and by Caprara at Paris, in a sense favourable to the emperor’s wishes. At the end of June, Napoleon joyfully announced, at the Tuileries, that the pope had promised to come to Paris. Then Pius VII tried to obtain certain religious and political advantages in exchange for the journey he was asked to make. Napoleon declared that he would have no conditions dictated to him; at the same time he promised to give the pope proofs of his respect and love for religion, and to listen to what the pope might have to submit. At last the cleverness of Talleyrand, Napoleon’s minister of foreign affairs, conquered the scruples of Pius VII; he declared, at the end of September, that he would accept Napoleon’s invitation if it were officially addressed to him; he asked only that the ceremony of consecration should not be distinct from the coronation proper, and that Napoleon would undertake not to detain him in France. Napoleon had the invitation conveyed to Pius VII, not by two bishops, as the pope expected, but by a general; and before setting out for France, Pius VII signed a conditional act of consecration, reviving the same provisions as in 1792, should Napoleon prevent his returning to Rome; then he began his journey to France, 2 November, 1804.

Napoleon would not accord any solemn reception to Pius VII; surrounded by a hunting party, he met the pope in the open country, made him get into the imperial carriage,乘车.., and, with his entourage, spent the night, in this fashion took him to Fontainebleau. Pius VII was brought to Paris by night. The whole affair nearly fell through at the last moment. Pius VII informed Josephine herself, on the eve of the day set for the coronation of the empress, that she had not been married to Napoleon in accordance with the rules of religion. To the great annoyance of the emperor, who was already contemplating a divorce, in case no heir were born to him, and was displaying a lively irritation against Josephine, Pius VII insisted upon the religious benediction of the marriage; otherwise, there was to be no coronation. The religious marriage ceremony was secretly performed at the Tuileries, on the evening of 18 December, and the next day, in broad daylight, but at about four o’clock in the afternoon, by Fesch, grand almoner of the imperial household. As Welschinger has proved, Fesch had previously asked the pope for the necessary dispensations and faculties, and the marriage was canonically beyond reproach. On 2 December the coronation took place. Napoleon arrived at Notre-Dame in the hour appointed. Instead of allowing the pope to crown him, he himself placed the crown on his own head and crowned the empress, but, out of respect for the pope, this detail was not recorded in the “Moniteur”. Pius VII, to whom Napoleon granted but few opportunities for conversation, had a long memoranda drawn up by Antonelli and Caprara, setting forth his wishes; he demanded that Catholicism should be recognized in France as the dominant religion; that the divorce law should be repealed; that the religious communities should be re-established; that the Legations should be restored to the Holy See. Most of these demands were to no purpose: the most important of the very few concessions by the emperor was his promise to substitute the Gregorian Calendar for that of the Revolution after 1 January, 1806. When Pius VII left Paris, 4 April, 1805, he was displeased with the emperor.

But the Church of France acclaimed the emperor. He was lauded to the skies by the bishops. The par-
ish priests, not only in obedience to instructions, but also out of patriotism, preached against England, and exhorted their hearers to submit to the conscription. The splendour of the Napoleonic victories seemed, by the enthusiasm with which it inspired all Frenchmen, to blind the Catholic Church to Napoleon's failures, the manner in which their Church should be governed. He had reorganized it; he had accorded it more liberal pecuniary advantages than the Concordat had bound him to; but he intended to dominate it. For example, in 1806 he insisted that all periodical publications of a religious character should be conscripted into one, the "Journal des curés," published under his supervision. On 15 August, 1806, he instituted the Feast of St. Napoleon, to commemorate the martyr Neopolis, or Neopolas, who suffered in Egypt under Diocletian. In 1806 he decided that ecclesiastical positions of importance, such as cures of souls of the first class, could be given only to candidates who held degrees conferred by the university, adding that these degrees might be refused to those who were notorious for their "ultramontane ideas or ideas dangerous to authority." He demanded the publication of a single catechism for the whole empire, in which catechism he was called "the image of God upon earth," "the Lord's anointed," and the use of which was made compulsory by a bull. Napoleon, as King of Italy, took the Iron Crown of Lombardy, he was offended because the pope did not take part in the ceremony. When he asked Pius VII to annul the marriage which his brother Jerome Bonaparte had contracted, at the age of nineteen, with Elizabeth Patterson of Baltimore, the pope replied that the decrees of the bull of 1793 against clandestine marriages applied only where they had been recognized, and the reply constituted one more cause of displeasure for the emperor, who afterwards, in 1806, obtained an annulment from the compliant ecclesiastical authorities of Paris. And when Consalvi, in 1805, complained that the French Civil Code, and with it the divorce law, was infringing on the rights of Napoleon formally refused to make any concession. The great war which the emperor was just then commencing was destined to be an occasion of conflict with the Holy See. Abandoning the preparations which he had made for an invasion of England (the Camp of Boulogne), he turned against Austria, brought about the capitulation of Ulm (20 October, 1805), made himself master of Vienna (13 November), defeated at Austerlitz (2 December, 1805) Emperor Francis I and Tsar Alexander. The Treaty of Pressburg (26 December, 1805) united Dalmatia to the French Empire and the territory of Venice to the Kingdom of Italy, made Bavaria and Wurttemberg vassals of Napoleon, granted Baden, and transformed it into a grandduchy, and reduced Austria to the valley of the Danube. The victory of Trafalgar (21 October, 1805) had given England the mastery of the seas, but from that time forward Napoleon was held to be the absolute master of the Continent. He then turned to the pope the question of the papal See. To prevent a landing of Russian and English troops in Italy, Napoleon, in October, 1805, had ordered Gouvion Saint Cyr to occupy the papal city of Ancona. The pope, lest the powers hostile to Napoleon might some day reproach him with having consented to the employment of a city of the Pontifical States as a base of operations, had protested against this arbitrary exercise of power: he had complained, in a letter to the emperor (13 November, 1805), of this "cruel affront," declared that since his return from Paris he had "experienced nothing but bitterness and sorrow," and threatened to dismiss the French ambassador. But the treaty of Pressburg and the dethronement of the Bourbons of Naples by Joseph Bonaparte and Mascheria (January, 1806), did not increase the Italian situation. From Munich Napoleon wrote two letters (7 January, 1806), one to Pius VII, and the other to Fesch, touching his intentions in regard to the Holy See. He complained of the pope's ill-will, tried to justify the occupation of Ancona, and declared himself the true protector of the Holy See; he was the friend of "the friends of God," concluded: "whenever you consult only your own heart and the true friends of religion." His letter to Fesch was much more violent: he complained of the refusal to annul Jerome's marriage, demanded that there should no longer be any minister either of Sardinia or of Russia in Rome, threatened to send a Protestant as his ambassador to the pope, to appoint a senator to command in Rome and to reduce the pope to the status of mere Bishop of Rome, claimed that the pope should treat him like Charlemagne, and assailed "the pontifical camarilla which prostituted religion." A reply from Pius VII (29 January, 1806), asking for the return of Ancona, was dated 1806. The pope's fury was not appeased. In a letter to Pius VII (13 February), he declared: "Your Holiness is the sovereign of Rome but I am its emperor; all my enemies ought to be yours;" he insisted that the pope should drive English, Russian, Sardinian, and Swedish subjects out of his dominions, and close his ports to the ships of those powers with which France was at war; and he complained of the slowness of the Curia in granting canonical institution to bishops in France and Italy. In a letter to Fesch he declared that, unless the pope acquiesced he would reduce the condition of the Holy See to what it had been before Charlemagne. An official note from Fesch to Consalvi (2 March, 1805) defined Napoleon's demands: the cardinals were in favour of rejecting them, and Pius VII, in a very beautiful letter, dated 21 March, 1806, monstronomed with Napoleon, declared that the pope had no right to embroil himself with the other states, and must hold aloof from the war; also, that there was no emperor of Rome. "If our words," he concluded, "fail to touch Your Majesty's heart, and you are unwilling to conformable to the Gospel, we will accept every kind of calamity as coming from God." Napoleon, more and more irritated, reproached Pius VII for having consulted the cardinals before answering him, declared that all his relations with the Holy See should thenceforward be conducted through Talleyrand, ordered the latter to reiterate the demands which the pope had just rejected, and replaced Fesch as ambassador at Rome with Alquier, a former member of the Convention. Then the emperor proceeded from words to deeds. On 6 May, 1806, he caused Civitá Vecchia to be occupied. Learning that the pope, before recognizing Joseph Bonaparte as King of Naples, wished to cede the Neapolitan sovereignty of the Holy See over the Neapolitan Kingdom, he talked of "the spirit of light-headedness" (esprit de vérité) which prevailed at Rome, remarked that, when the pope thus treated a Bonaparte as a vassal, he must be tired of wielding the temporal power, and directed Talleyrand to tell Pius VII that the pope was past when the pope's replies were not in line. Talleyrand was informed (16 May, 1806) that, if Pius VII would not recognize Joseph, Napoleon would no longer recognize Pius VII as a temporal prince. "If this continues," Napoleon went on to say, "I will have Consalvi taken away from Rome." He suspected Consalvi of having sold himself to the English. Early in June, 1806, he seized Benevento and Pontecorvo, two principalities which belonged to the Holy
See, but which were shut in by the King of Naples.

Yielding before the emperor's wrath, Consalvi resigned his office; Pius VII unwillingly accepted his resignation, and replaced him with Cardinal Consoli. But the first dispatch written by Consoli under Pius VII's dictation confirmed the pope's resistance to the emperor's interference and imperious will. Napoleon, in the presence of the whole court, threatened to dismember the Pontifical States, if Pius VII did not at once, "without ambiguity or reservation", declare himself his ally (1 July, 1806). A like ultimatum was delivered, on 5 July, to Cardinal Consoli at Alquier. Continental affairs were clearer. Napoleon's attention, at the time, was not directed to the pontificate; the only immediate result of his ultimatum was the emperor's order to his generals occupying Ancona and Civitâ Vecchia, to seize the pontifical revenues in those two cities. On the other hand, the constitution of the Imperial University (May, 1806), preparing for a state monopoly of teaching, loomed up as a peril to the Church's right of teaching, and gave the Holy See another cause for uneasiness.

The Confederation of the Rhine, formed by Napoleon out of fourteen German States (12 July, 1806), and his assertion of a protectorate over the same, resulted in Francis II's abdication of the title of emperor of Germany; in its place Francis took the title of emperor of Austria. The emperor's defeat at Austerlitz dealt by Napoleon, that Holy Roman Germanic Empire which had exerted so great an influence over Christianity in the Middle Ages. The pope and the German emperor had long been considered as sharing between them the government of the world in the name of God. Napoleon had definitively annihilated one of these "two halves of God", as Victor Hugo has termed them. Frederick William II of Prussia became alarmed, and in October, 1806, formed, with England and Russia, the Fourth Coalition. The stunning victories of Austerlitz, won by Davoust, and Jena, won by Napoleon (14 October, 1806), were followed by the entry of the French into Berlin, the King of Prussia's flight to Köniaigberg, and the erection of the Electorate of Saxony into a kingdom in alliance with Napoleon. From Berlin itself Napoleon launched a decree (21 November, 1806) by which he organized the Continental blockade against England, aiming to close the whole Continent against English commerce. Then, in a series of bold strokes, he shrewdly induced the fall of the Jacobin republics in the four pontifical Provinces of Macerata, Spoleto, Urbino, and Foligno to be occupied by General Le marrol (October, 1807). Pius VII then revoked Cardinal Bayanne's powers. It was evident that, not only did Napoleon require of him an offensive alliance against England, but that the emperor's pretensions, and those of his new minister of foreign affairs, Champagny, Talleyrand's successor, were now beginning to encroach upon the domain of religion. Napoleon claimed that one third of the cardinals should belong to the French Empire; and Champagny let it be understood that the emperor would soon demand that the Holy See should respect the "Gallican Liberties", that is say, that the pope should give up to the French, or entitled to include the clauses or reservations calculated to alarm consciences and spread divisions in His Majesty's dominions. Henceforth it was the spiritual authority that Napoleon aspired to control. Pius VII ordered Bayanne to reject the imperial demands. Napoleon then (January, 1808) decided that Prince Eugène and King Joseph should place troops at the disposition of General Miollis, who was ordered to march on Rome. Miollis at first pretended to be covering the rear of the Neapolitan army, then he suddenly threw 10,000 troops into Rome (2 February). Napoleon wrote to Champagny that it was necessary "to accustom the people of Rome and the French troops to live side by side", so that the French should act in an insensible way, it might insensibly cease to exist as a temporal power, without anyone noticing the change. Thus it may be said that, in the beginning of 1808, Napoleon's plan was to keep Rome. In a manifesto to the Christian powers, Pius VII protested against this invasion; at the same time, he accepted the news, and on the 3rd, he wrote to Consalvi, with great courtesy. Champagny, on 3 February, again insisted on the pope's becoming the political ally of Napoleon, and Pius VII refused. The instructions given to Miollis became more severe every day; he seized printing presses, journals, post offices; he decimated the Sacred College by having seven cardinals conducted to the frontier, because Napoleon accused
On 10 June Miollis had the Pontifical flag, which still floated over the castle of S. Angelo, lowered. Pius VII replied by having Rome placarded with a Bull excommunicating Napoleon. When the emperor received news of this (20 June) he wrote to Murat: "So the Pope has shown his malice to me. No more half measures; he is a raving lunatic who must be confined. Have Cardinal Pacca and other adherents of the pope arrested." In the night of 5-6 July, 1809, Radet, a general of gendarmerie, by the orders of Miollis, entered the Quirinal, arrested Pius VII and Pacca, gave them two hours to make their preparations, and took them away from Rome at four in the morning. Pius VII was taken to Savona, Pacca to Fenestrelle. Meanwhile Napoleon, completing the work of crushing Austria, had been the victor at Essling (21 May, 1809) and at Wagram (6 July, 1809), and the Peace of Vienna (15 October, 1809) put the finishing touch to the humiliation of Austria by handing over Carniola, Croatia, and Friuli to France, at the same time obliging the Emperor Francis to recognize Joseph as King of Spain. The young German, Staps, who attempted to assassinate Napoleon at Schönbrunn (13 October), died crying: "Long live Germany!"

**Discussions with the Captive Pius VII; Second Marriage: Ecclesiastical Councils of 1809 and 1811.**—The conflict with his prisoner, the pope, was another embarrassment, a new source of anxiety to the emperor. At first he took all possible steps to prevent the public from hearing of what had happened at Rome: the "Moniteur" made not the slightest allusion to it; the newspapers received orders to be silent. He also wished his皇宫 commissary to be ignored; the newspapers must be silent on this point also; but the Bull of Excommunication, secretly brought to Lyons, was circulated in France by members of the Congregation, a pious association, founded 2 February, 1801, by Père Delputte, a former Jesuit. Alexis de Noailles and five other members of the Congregation were arrested by the emperor's command, and his anger extended to all the religious orders. He wrote (12 September, 1809) to Bigot de Préameneu, minister of public worship: "If on 1 October there are any missions or congregations still in France, I will hold you responsible." The celebrated Abbé Fraysinus had to discontinue his sermons; the Lazarists were expelled from Paris; the Jesuits were expelled from France; the pope consulted Bigot de Préameneu as to the expediency of laying the Bull before the Council of State, but abstained from doing so.

It was not long, however, before he had to face an enormous difficulty: there were more than twenty bishoprics vacant, and Pius VII declared to Fesch, to Caprara, and to Maury that, so long as he was a prisoner, so long as he could not communicate freely with his natural counsellors, the cardinals, he would not provide for the institution of the bishops. Thus the life of the Church of France was partially suspended. In November, 1809, Napoleon appointed an "ecclesiastical council" to seek a solution of the difficulty. With Fesch as president, this council, composed of the members Cardinal Maury, Barral, Archbishop of Tours, Duvoisin, Bishop of Nantes, Emery, Superior of S. Sulpice, Bishops Canaveri of Vercelli, Bourlier of Evreux, Mannay of Trèves, and the Barnabite Fontana. Bigot de Préameneu, in the name of the emperor, laid before the council several sets of questions relating to the affairs of Christendom, general and particular, those of France, and lastly to those of Germany and Italy, and to the Bull of Excommunication.

In the preamble to its reply, the council gave voice to a petition for the absolute liberty of the pope and the recall of the cardinals. It declared that if a general council were assembled for the settlement of the religious questions then pending, the pope's presence at the council would be necessary, and that a national
council would not have sufficient authority in ques-
tions affecting the whole Catholic Church. It also
declared that the pope could not complain of any es-
tential violation of the Concordat, that, when he ad-
vanced his temporal spoliation, as one reason for his
refuse to the bishopric, was confounding the temporal order with the
spiritual; that the temporal sovereignty was only an accessory of the
canal authority, that the invasion of Rome was not a violation of the
Concordat, and that the national council would interpose an appeal from the Bull of Ex-
communication either to the general council or to the pope.

The manner in which canonical
institution might be secured for the bishops, if the
pope should continue his resistance, was twice dis-
cussed. Urged by the Government, the council ad-
mitted that, taking the circumstances into considera-
tion, the conciliatory institution given by a metropoli-
tan to his suffragans, or by the senior suffragan to a
new metropolitan, might possibly be recognized by a
national council as provisionally, a substitute for
pontifical Bulls. Emery, thinking the council too
lenient, refused to endorse the answers, which were
sent to Napoleon on 11 January, 1810.

On 17 February, 1810, the Act regulating the Ro-
man territory and future condition of the pope, in-
trusting the Holy See in the person of Pope Pius VI,
was passed unanimously by the senate. The Papal
States, in accordance with this decree, were to form
two departments; from Rome, which was declared the
first city of the empire, the prince imperial was to take
his title of king. The emperor, already crowned once
at Notre-Dame, was to go within ten years to be
crowned at St. Peter's. The measure was so lastingly
unequal of two millions. The empire was to charge itself
with the maintenance of the Sacred Congregation of
Propaganda. The pope, on his accession, must promis-
se to do nothing contrary to the four articles of the
Gallican Church. Another Act of the Senate, of 25
February, 1810, made the Declaration of 1802 a gen-
eral law of the empire. Thus did the pope absolve him-
self that he would reduce the papacy to servitude
and bring Pius VII to live in Paris. He even prepared
a letter to Pius VII in which he told him: “I hold in
execution the principles of the Bonifaces and the
Gregorys. It is my mission to govern the West; do
not meddle with it.” This letter he would have had
to send to Rome by his envoy, who were to give
not to Pius VII that in future the pope must swear alle-
liance to Napoleon, as of yore to Charlemagne, and
and to inform him that he himself would be dispensed
from this obligation, but that he must undertake not
to reside at Rome. Napoleon expected in this way
to bend the pope to his will. Wiser counsellors, how-
ever, prevailed upon him not to send this insulting
letter.

Nevertheless, to carry out his plan of removing
the papal throne from Rome, he ordered Moliès to
compel all the cardinals who were still at Rome to set
out for Paris, and to have the Vatican archives trans-
ported thither. In 1810 there were twenty-seven Ro-
man cardinals in Paris: he lavished gifts upon them,
intimidated them, made them fear the court, in order to
write and urge Pius VII to yield; but, following the
advice of Consalvi, the cardinals refused.

It was in the midst of these bitter conflicts with the
church that, Napoleon desiring an heir, resolved to
divorce Josephine. Ever since the end of 1807 Met-
ternich had been aware of the reports that were cur-
tently about Josephine's activities in her private
(lois concordataires) to divorce Josephine her consent to
this divorce; some time after, Fouc'h had made a similar
attempt with no better success. In December, 1809,
at Fontainebleau, in the presence of Prince Eugène,
Josephine's son, the emperor induced her to consent;
and on 15 December, this was solemnly proclaimed in the
throne room, in the presence of the Court, in an ad-
dress delivered by Napoleon, and another read by the
unhappy Josephine, who was prevented by her tears
from finishing it. The Act of the Senate (16 Decem-
ber), based on a report of Lacêpède, the naturalist,
himself a member of the Senate, ratified the divorce.

This bond the pope alone was competent to dis-
solve; Louis XII had had recourse to Alexander VI;
Henry IV to Clement VIII; but Napoleon, excom-
municated by his prisoner Pius VII, could not apply
to him. Cambacérès, the arch-chancellor, sent for the
diocesan officials of Paris and explained to them
that the marriage of Napoleon and Josephine had been
invalid in consequence of the absence of the parish
priest of the two parties and of witnesses. In vain
did they object that only the pope could decide such a
cause; they were told to commence proceedings, and be
quick about it. On 26 December, the promoter of the
case, Rudemare, begged Cambacérès to submit the
matter to the ecclesiastical council over which Fesch
presided. 18 December 2 was his request to the offi-
cial, Boisleve, for a declaration of nullity of the marriage, alleging, this time, that
there had been absence of consent on Napoleon's part.

On the next day the ecclesiastical council replied that
if the defect of Napoleon's consent could be proved to
the officiality, the marriage would be null and void.

Fesch and Cambacérès, Félix de Duron, Boisleve, and
Berthier as witnesses. The testimony of Fesch was very
confused; he explained that the pope had given him the necessary dispensations to bless
the marriage; that two days later he had given Josephine a marriage certificate; that the emperor had then up-
braided him, declaring to him that he (the emperor) had only agreed to this marriage in order to quiet the
empress, and that it was, moreover, impossible for
him to renounce his hopes of direct descendants. The
other two witnesses told how Napoleon had repeatedly
expressed the conviction that he was not bound by
this marriage and that he regarded the ceremony only
as "a mere concession to circumstances [acte de pure
circumstances] which ought not to have any effect in the
future".

On 9 January the diocesan authorities declared the
marriage null and void, on the ground of the absence
of the lawful parish priest and of witnesses; it pro-
nounced this decision only in view of the "difficulty in
the way of having recourse to the visible head of the
Church, to whom it has always belonged in fact to
pronounce upon these extraordinary cases." The
promoter Rudemare had concluded with the recom-
mandation that the tribunal should at least lay a pre-
cept upon the two parties to repair the defect of form
which had vitiated their marriage; Boisleve, the offi-
cial, refrained from proffering this invitation. Rude-
amre then asked the emperor to his viziers to
pronounce upon these extraordinary cases.

On 12 January, 1810, the official, Lejean, with much
greater complaisance, admitted both the
grounds of nullity advanced by Cambacérès—that is,
not only the defect of form, but also the defect of the
emperor's consent. He alleged that the civil marriage
of Napoleon and Josephine had been annulled by the
decree of the Senate, that he had been consecrated
(lois concordataires) the religious marriage ought to
follow the civil, and that the Church could not now
ask two parties who were no longer legally married to
repair the defects of form in their religious marriage.
Thus, he declared, the marriage was religiously an-
nulled. It may be noted here that the Catholic
Church cannot be held responsible for the excesses
complaisance shown in this matter by the ecclesiasti-
cal council and the diocesan authorities of Paris. On 21 January, 1810, Napoleon resolved to ask for the hand of Marie-Louise. The French ambassador at Vienna, at the request of the Archbishop of Vienna, gave his word to the Tuilerie: he had previously been informed that the sentence pronounced by the diocesan authorities of Paris was legal. At last all the religious obstacles to the celebration of the new marriage were disposed of.

It took place on 1 April, 1810, but thirteen of the cardinals then in Paris refused to be present. These thirteen cardinals were turned away when they presented themselves at the Tuileries two days later; the minister of public worship informed them that they were no longer cardinals, that they no longer had any right to wear the purple; the minister of police forwarded them, two by two, to small country towns; their pensions were suppressed, their property sequestered. "People called them 'the black cardinals'. The bishops and priests of the Roman States were treated with similar violence; nineteen out of thirty-two bishops refused the oath of allegiance to the emperor, and were imprisoned, while a certain number of non-juring parochial clergy were interned in Corsica, and the emperor announced his intention of reducing the number of dioceses and parishes in the Roman States to those of five hundred, to which his ancestors, by the Concordat, had reduced them. In the persecution coincided with fresh outbreaks to his prisoner, the pope, through the Austrian diplomat Lebzeltern (May, 1810). Pius VII's reply was that, to negotiate, he must be free and able to communicate with the cardinals. In July Napoleon sent Cardinals Spina and Caselli to Savona, but they obtained nothings. With his words at the Tuileries king a day he was breaking it in two. Chablé, the pope's custodian, showed him the addresses in which some of the chapters were expressing their submission to the emperor, but Pius VII was inflexible. A commission of jurisconsults in Paris, after discussing the possibility of a law regulating the canonical institution of bishops without the pope's cooperation, ended by deciding that to pass such a law was almost equivalent to schism.

Napoleon was not willing to go so far. He summoned the ecclesiastical council which he had already established and, 8 February, 1811, proposed to it these two questions: (1) All communication between the pope and the emperor's subjects being impossible, should the pope receive any dispensations ordinarily granted by the Holy See? (2) What canonical means is there of providing institution for bishops when the pope refuses it? Fesch and Emery tried to sway the council towards some courses which would save the papal prerogative. But the majority of the council answered: (1) That recourses might be had, putting aside the bishops for the dispensations in question; (2) That a clause might be added to the Concordat stipulating that the pope must grant canonical institution within a stated time; failing which, the right of institution would devolve upon the council of the province; and that, if the pope rejected this amendment of the Concordat, the council would, in respect to the bishops, consider itself as conferring the dispensations in question, and as far concerned bishops. The council added, that if the pope persisted in his refusal, the possibility of a public abolition of the Concordat by the emperor would have to be considered; but that these questions could be broached only by a national council, after one last attempt at negotiation with the pope.

On 16 March, 1811, according to the council, the bishops of the French realm were notified to the Tuileries the members of the council and several of the great dignitaries of the empire; inveighing bitterly against the pope, he proclaimed that the Concordat no longer existed and that he was going to convoke a council of the West. At this meeting Emery, who died on 23 April, boldly faced Napoleon, quoting to him passages from Bossuet on the necessity of the pope's liberty. Pius VII not yielding to a last summons on the part of Chablé, the council was convoked on 25 April to meet on 9 June. By this step Napoleon expected to subdue the pope to his will. In pursuance of a plan outlined by the philosopher Gerando, Archbishop Barral, and Bishops Duvoisin and Mammay arrived at Paris to take possession of the Bulls of institution. They were joined by the Bishop of Faenza, and arrived at Savona on 9 May. At first the pope refused to discuss the matter, not being free to communicate with his cardinals. But the bishops and Chablé insisted, and the pope's physician added his efforts to theirs. They represented that the Church was becoming disorganized. At the end of nine days, the pope, who was neither eating nor drinking anything, being very much fatigued, consented, not to ratify, but to take as "a basis of negotiation" a note drawn up by the four bishops to the purport that, in case of persistent refusal on his part, canonical institution might be given to bishops after six months. The pope then stipulated that the bishops started for Paris with this note; at seven o'clock the pope summoned Chablé and told him.
that he did not accept the note in any definitive sense, for he considered it only a sketch, and that he had made no formal promise. He said that the envoy of the Vatican should be sent after the bishops to warn them of this. The courier bearing this message overtook the bishops at Turin on 24 May. Pius VII warned Chabrol that if the first note were exploited as representing an arrangement definitely accepted by the pope, he would make a noise that should resound through the whole Christian world. Napoleon, in his blindness, resolved to do without the pope and put all his hopes in the council.

Council of 1811 — The council convoked on 9 June, 1811, was not opened at Notre-Dame until 17 June, the opening being postponed on account of the baptism of the King of Rome, just born of Marie-Louise. Paternal pride and the seemingly assured destiny of his throne, rendered Napoleon still more inflexible in regard to the pope. Only since 1905 has the truth about this council been known, thanks to Welshinger's researches. Under the Second Empire, when D'Haussonville wrote his work on the Roman Church and the First Empire (see below), Marshal Villain said in his allusions that he obtained it from the archives of the council. These archivesWelshinger was able to consult. Boulogne, Bishop of Troyes, in his opening sermon affirmed the solidarity of the pope and the bishop, while Fesch, as president of the council, made all its members swear obedience and fidelity to Pius VII. Unluckily, the sermon was not well received, and the pope asked for a second sermon on the evening of 19 June, at Saint-Cloud. The emperor had packed his council in very arbitrary fashion, choosing only 42 out of 150 Italian bishops to mix with the French bishops, with a view to ecumenical effect. A private bulletin sent to the emperor, 24 June, noted that the fathers of the council themselves were divided as to the propriety of their proceedings. The opposition to the emperor was very firmly led by Broglie, Bishop of Ghent, seconded by Aviara, Archbishop of Bordeaux, Dessele, Bishop of Chambray, and Hirn, Bishop of Tournai. The first general assembly of the council was held on 20 June. Bigot de Présaneu and Marescalchi, ministers of public worship for France and Italy, were present and read the imperial message, one draft of which had been rejected by Napoleon as too moderate. The final version displeased all the bishops who had any regard for the papal dignity. Napoleon in this document demanded that bishops should be instituted in accordance with the forms which had obtained before the Council of Trent, to be vacant for a longer time, “more than sufficient time for appointing a new incumbent.” He wished the council to present an address to him, and the committee that should prepare this address to be composed of the four prelates he had sent to Savona. The address, which was prepared in advance by Duvosin, one of these four prelates, was an expression of consent on Napoleon’s wishes. But the council decided to have on the committee besides these four prelates, some other bishops chosen by secret ballot, and among the latter figured Broglie. Broglie discussed Duvosin’s draft and had a number of changes made in it, and Fesch had some trouble in keeping the committee from at once demanding the liberation of the pope. The address, as voted, was nonsensical. It was not what Napoleon expected, and the audience which he was to have given to the members of the council on 30 June, did not take place.

Another committee was appointed by the council to inquire into the pope’s views on the institution of bishops, and to ask the pope to declare against Duvosin, by a vote of 8 to 4, a resolution to the effect that, in this matter, nothing must be done without the pope, and that the council ought to send him a deputation to learn what was his will. Napoleon was furious and said to Fesch and Barral: “I will dissolve the council. You are a pack of fools.” Then on second thought, he informed the council that Pius VII had declared that he had formally promised canonical institution to the vacant bishoprics and had approved a clause enabling the metropolitans themselves in future, after six months’ vacancy of any see, to give canonical institution. Napoleon required the council to issue a note to this effect and send a deputation to thank the pope. First the committee voted as the emperor desired. But on further consideration, suspecting some stratagem on the emperor’s part, it recalled its vote, and, on 10 July, Hirn, Bishop of Tournai, speaking for the committee, proposed to the council that no decision be made until a deputation had been sent to the pope. Then, on the morning of 11 July, Napoleon pronounced the council dissolved. The lone Bishop of Boulogne were imprisoned at Vincennes. The emperor next thought of turning over the administration of the dioceses to the prefects, but presently took the advice of Maury, vis., to have all the members of the council called up, one by one, by the minister of public worship, and their personal assent to the imperial decrees obtained. After five days devoted to conversations between the minister and certain of the bishops, the emperor reconvened the council for 5 August, and the council, by a vote of 80 to 13, passed the decree by which canonical institution was to be given within six months, either by the pope or, if he refused, by the bishops who approved this decree tried to palliate their transgression by saying that they had no idea of committing an act of rebellion, but formally asked for, and hoped to obtain, the pope’s assent. Napoleon believed himself victorious; he held in his hands the means of circumventing the pope and organizing without his co-operation the best administrative machinery of which the pope had brought the Sacred College, the Dataria, the Penitentiary, and the Vatican Archives to Paris, and had spent several millions in improving the archiepiscopal palace which he meant to make the pontifical palace. He wished to remove the Hôtel-Dieu, install the department of the Roman Curia in its place, and make the quarter of Notre-Dame and the Isle de Saint-Louis the capital of Catholicism. But his victory was only apparent: to make the decree of the national council valid, the pope’s ratification was needed, and once more the resistance of Pius VII was to hold the emperor in check.

On 17 August Napoleon commissioned the Archbishop of Toulon and Mechin, the Patriarch of Venice, the Bishops of Evreux, Trier, Feltro, and Piacenza to go to Savona and demand of the pope his full adhesion to the decree of 5 August; and the bishops were even to be precise in stating that the decree applied to episcopal sees in the former Papal States, so that, in giving his assent, Pius VII should by implication assent to the abolition of the temporal power. That Pius VII might not allege the absence of the cardinals as a reason for postponing his decisions, Napoleon sent to Savona five cardinals on whom he could rely (Rovere, Dugnani, Fabrizio Ruffo, Bayanne, and Doria), with instructions to support the bishops. The emperor’s artifice was successful. On 8 September, 1811, Pius VII declared himself ready to yield, and charged Roverella to draw up a Brief approving the Decree of 5 August, and on 20 September the pope signed the Brief. But even then, the Brief as it was, was not what Napoleon wanted: Pius VII abstained from recognizing the council as a national council, he treated the Church of Rome as the mistress of all the others, and did not promise to give canonical institution to the bishoprics of the Roman States; he also required that, when a metropolitan gave canonical institution, it should be given in the name of the pope. Napoleon did not publish the Brief. On 17 October he ordered the deputation of prelates to notify the pope that the
decree applied equally to bishoprics in the Roman States. This interpretation Pius VII then formally repudiated, and announced once more that any further decision on his part would be postponed until he should have with him a suitable number of cardinals. Napoleon first sent his second legate, Monsignor Ghezzo, to Turin, and to Troyes, whom he forced to sign their sees and caused to be deported to various towns, then, on 3 December, he declared the Brief unacceptable, and charged the prelates to ask for another. Pius VII refused.

On 9 January, 1812, the prelates informed the pope, from the emperor, that, if the pope resisted any longer, the emperor would act on his own discretion in the matter of the institution of bishops. Pius VII sent a personal reply to the emperor, to the effect that he (the pope) needed a more numerous council and facility of communication with the faithful, and that he would then do, "to meet the emperor's wishes, all that was consistent with the duties of his Apostolic ministry."

By way of rejoinder, Napoleon dictated to his minister of public worship, on 9 February, an extraordinarily vehement letter, addressed to the deputation of prelates. In it he refused to give Pius VII his liberty or to let the "black cardinals" go back to him; he made known that if the pope persisted in the refusal to govern the Church, they would do without the pope; and he added: "If he refuses to cooperate, he is guilty of sacrilege."

Chabrol, the prefect of Montenotte, read this letter to Pius VII, and advised him to surrender the tiara. "Never," was the pope's answer. Then on 23 February, Chabrol notified the pope, in the emperor's name, that Napoleon considered the Concordats abrogated, and that he would no longer permit the pope to interfere in any way in the canonical discretion of the bishops. Pius VII answered that he would not change his attitude. Mme de Staël wrote to Henri Meister: "What a power is religion which gives strength to the weak when all that was strong has lost its strength!"

The difference between the pope and the emperor naturally reacted upon the feelings of the clergy towards Napoleon, and upon the emperor's policy towards religion. From this time Napoleon refused the seminarians any exemption from military service. He made stricter the university monopoly of teaching, and Broglio, Bishop of Ghent, who, after leaving the prison of Vincennes, had continued to correspond with his clergy, was sent to the Island of Sainte-Marguerite.

**Last Great Wars: Concordat of Fontainebleau.**

At this time Napoleon was absolutely drunk with power. The French Empire had 130 departments; the Kingdom of Italy 240. The seven provinces of Illyria were subject to France. The rigour of the Continental blockade was ruining English commerce and embarrassing the European states. The war would have liked Napoleon, master of the West, to leave him freedom of action in Poland and Turkey; enraged at receiving no such concessions, he approached England. The French armies in Spain were exhausting their strength in a savage and ineffectual war against the seven provinces of Spain, but oppression notwithstanding, Napoleon resolved to attack Russia also. At Dresden, from March to June, 1812, he held a congress of kings, and prepared for war. It was at Dresden, in May, 1812, that, under pretext of satisfying the demands of Francis Joseph for gentler treatment of the pope, Napoleon decided to have Pius VII removed from Fontainebleau; the fact is that he was afraid the English would attempt a coup de main on Savona and carry off the pope. After a journey the painful incidents of which have been related by d'Haussonville, following a manuscript in the British Museum, Pius VII reached Fontainebleau on 19 June. Equipages were placed at his disposal, he was desired to appear in public and officiate; but he refused, led a solitary life in the interior of the palace, and gave not the least indication of being ready to yield to Napoleon's demands.

Napoleon definitely declared war against the tsar on 22 June, 1812. The issue was soon seen to be dubious. The Russians devastated the whole country, and in advance the French suffered many frightful pitched battles as much as possible. The victories of Borodino (7 September, 1812), an extremely bloody one, opened to Napoleon the gates of Moscow (14 September, 1812). He had expected to pass the winter there, but the conflagration brought about by the Russians forced him to retrace his steps westward, and the retreat of the "Grande Armée" so heroically covered by Marshal Ney, cost France the lives of thousands of heroic soldiers. The passage of the Beresina was glorious. As far as Lithuania, Napoleon shared the sufferings of his army, then he hastened to Paris, where he suppressed General Malet's conspiracy and prepared a new war for the year 1813. When he set out for Prussia it was his idea to extend his march beyond that country, through Asia to India, to knock over "the scaffolding of mercantile greatness raised by the English, and strike England to the heart." "After this," he declared, "it will be possible to settle everything and have done with this business of Rome and the pope. The cathedral of Paris will become that of the Catholic world."

If Bossuet were living now, he would have been Archbishops of the French territory, and would still be at the Vatican, which would be much better for everybody, for then there would be no pontifical throne higher than that of Notre-Dame, and Paris could not fear Rome. With such a president, I would hold a Council of Nice in Gaul."

But the failure of the Russian campaign upset all these dreams. The emperor's benevolent attitude towards the Church was now modified. On 29 December, 1812, he wrote with his own hand an affectionate letter to the pope expressing a desire to end the quarrel. Duvoisin was sent to Fontainebleau to negotiate a Concordat. Napoleon's demands were these: the pope must swear to do nothing against the four articles; he must condemn the behaviour of the black cardinals towards the emperor; he must allow the Catholic sovereigns to choose two-thirds of the cardinals, take up his residence in Paris, accept the decree of the council on the canonical institution of bishops, and agree to its application to the bishoprics of the Roman States. Pius VII spent ten days discussing the matter. On 18 January, 1813, the emperor came to Fontainebleau and spent many days in stormy interviews with the pope though, according to Pius VII's own statement to Count Paul Van der Vrekken, on 27 September, 1814, Napoleon committed no act of violence against the pope. On 25 January, 1813, a new Concordat was signed. In it there was no mention either of the Four Articles, or of the nomination of cardinals by the Catholic sovereigns, or of the pope's place of residence: the six suburban dioceses were left at the pope's disposition, and he could moreover provide directly for ten bishoprics, either in France or in Italy — on all these points Napoleon made concessions. But on the other hand, the pope confirmed the decree of the Council of 1811 on the canonical institution of bishops.

According to the very words of its preamble, this Concordat was intended only "to serve as basis for a definitive arrangement." But, on 13 February, Napoleon had published it, just as it stood, as a law of the Empire. This was very much to the emperor's liking; the emperor had no right to convert "preliminary articles" thus into a definitive act. On 9 February the imprisoned cardinals had been liberated by Napoleon; going to Fontainebleau, they had found Pius VII very anxious on the subject of the signature he had given, and which he regretted. With the advice of Consalvi, he prepared to retract the "preliminary articles". In his letter of 24 March to Napoleon he reproached him-
self for having signed these articles and disavowed the signature he had given. Napoleon had failed egregiously. He did not listen to the advice of the Comte de Nassigny, the liberal minister of young age, by no means, expressed the opinion that the pope ought to be set at liberty and sent back to Rome. It has been claimed that Napoleon had said to his ministers of State: "If I don't knock the head off, the shoulders of some of those priests at Fontainebleau, matters will never be arranged." This is a legend; on the contrary, he decided that the removal of public worship to keep secret the letter of 24 March. Immediately, acting on his own authority, he declared the Concordat of Fontainebleau binding on the Church, and filled twelve vacant sees. On 5 April he had Cardinal di Pietro removed from Fontainebleau and threatened to "do the same for Cardinal Paccia.

In the Dioceses of Ghent, Troyes, and Tournai, the chapters regarded the bishops appointed by Napoleon as intruders. The irregular measures of the emperor only exasperated the resistance of the clergy. The Belgian clergy, warned by Count Van der Vrecken of the pope's retraction, began to agitate against the imperial policy. Meanwhile, on 25 April, 1813, Napoleon assumed command of the Army of Germany. The victories of Luitpold (2 March), Bautzen (26 May) weakened the Prussian and Russian troops. But the emperor made the mistakes of accepting the mediation of Austria—only a device to gain time—and of consenting to hold the Congress of Prague (July). A letter from Pius VII, secretly carried in the face of orders given by Van der Vrecken, warned the Congress of Prague that the pope formally rejected the articles of 25 January. Napoleon continued nevertheless to send from his headquarters with the army severe orders calculated to overcome the resistance of the Belgian clergy: on 6 August he caused the director of the seminary of Ghent to be imprisoned, and orders to be taken to Magdeburg; on 4 August he had the canons of Tournai arrested. But his perils were increasing. Joseph had been driven out of Spain. Bernadotte, King of Sweden, one of Napoleon's own veterans, was driving the French troops out of Stralsund. Under Schwarzenberg, Blücher and Bernadotte, three armies were forming against the empire for a total of 500,000. He was victor at Dresden (27 August), but his generals were falling away on all sides. He was deserted by the Bavarian contingents in the celebrated "Battle of the Nations" at Leipzig (19-19 October), the defection of the Wurttembergers and the Saxons was the chief cause of his defeat. The victories of Hanau (30 October) and Königstein (6 November) enabled his troops to get back to France, but the Allies were soon to enter that land.

Liberation of the Pope: End of the Empire.—The liberation of the pope figured on the programme of the Allies. In vain did the emperor send the Marchesa di Brignoli to Consalvi, and Fallot de Beaumont, Archduchess of Austria, for a Papal mission. In vain, on 18 January, 1814, when he learned that Murat had gone over to the Allies and occupied the Roman provinces on his own account, did he offer to restore the Papal States to Pius VII. Pius VII declared that such a restoration was an act of justice, and could not be made the subject of a treaty. Mean- time, Blücher and Schwarzenberg were advancing through Burgundy. On 24 January, Lagorée, the commandant of gendarmes who had guarded Pius VII for four years, announced to him that he was about to take him back to Rome. The pope was conveyed by short stages through southern and central France. Napoleon defeated the Allies at Saint-Dizier and at Val Joux, and had to be satisfied with peace on condition that Napoleon should restore the boundaries of France to what they were in 1792. He refused. As the Allies demanded the liberation of the pope, Napoleon sent orders to Lagorée, who was taking him through the south of France, to let him make his way to Italy. On 10 March the prefect of Montélimar received orders to have the pope conducted as far as the Austrian outpost on the Rhône, and the capture of Piacenza. The captivity of Pius VII was at an end.

The war was resumed immediately after the Congress of Châtillon. In five days Napoleon gave battle to Blücher at Champaubert, Montmirail, Château-Thierry, and Vauchamp, and hurled him back on Chalons; against Schwarzenberg he fought the battles of Quigues, Montmirail, and Méry, thus opening the way to Troyes. But Lyons was taken by the Austrians, Bordeaux by the English. Exhausted as he was, Napoleon beat Blücher again at Craonne (7 March), retook Reims and Epernay, and contemplated cutting off the retreat of Blücher and Schwarzenberg on the Rhine. He caused a general levy to be decreed; but the Allies had their agents in Paris. Marmont and Mortier capitulated. On 31 March the Allies entered Paris. On 3 April the Senate declared Napoleon dethroned. Returning to Fontainebleau, the emperor, determined to try one last effort, was stopped by the defection of Marmont's corps at Bourgogne. On 20 April he left Fontainebleau; on 4 May he was in Elba.

At the end of ten months, learning of the unpopularity of the regime founded in France by Louis XVIII, Napoleon secretly left Elba, landed at Cannes (1 March, 1815), and went in triumph from Grenoble to Paris (20 March, 1815). Louis XVIII fled to Fontainebleau. The Hundred Days. Napoleon desired to give France liberty and religious peace forthwith. On the one hand, by the Acte Additionnel, he guaranteed the country a constitutional Government; on the other hand (4 April, 1815), he caused the Duke of Vicenza to write to Cardinal Pacca, and he himself wrote to Pius VII, letters in a personal spirit, while the Rota was commissioned to treat with the pope. But the Coalition was re-formed. Napoleon had 118,000 recruits against more than 800,000 soldiers; he beat Blücher at Ligny (16 June), whilst Néry beat Wellington at Quatre Bras; next day, at Waterloo, Napoleon was victorious over Bliow and Wellington (18 June). The Rota, more than 30,000 Prussians, under Blücher, resulted in the emperor's defeat. He abdicated in favour of his son, set out for Rochefort, and claimed the hospitality of England. England declared him the prisoner of the Coalition and, in spite of his protests, had him taken to the island of St. Helena. There he remained until his death, which was strictly consigned by the Emperor. The letter of Napoleon to General Auguste, Gourgaud, and Bertrand those "Mémoires" which entitle him to a place among the great writers. Las Casas, at the same time, wrote day by day, the "Mémorial de Sainte-Hélène", a journal of the emperor's conversations. In the first of his captivity, Napoleon complained to Montholon on February 1, 1815, "My soul to hear Mass", he said. Pius VII petitioned England to accede to Napoleon's wish, and the Abbé Vignali became his chaplain. On 20 April, 1821, Napoleon said to him: "I was born in the Catholic religion. I wish to fulfill the duties it imposes, and receive the succour it administers." To Montholon he affirmed his belief in God, read aloud the Old Testament, the Gospels, and the Acts of the Apostles. He spoke of Pius VII as "an old man full of tolerance and light", "Fatal circumstances", he added, "embroiled our cabinets. I regret it exceedingly." Lord Rosebery has attached much importance to the paradoxes with which the emperor used to tease his auditors, a necessity he felt from the supremacy of Mohammedanism, Protestantism, or Materialism. One day, when he had been talking in this strain, Montholon said to him: "I know that

GEORGES GOYAU.

NAPOLÉON III (CHARLES-LOUIS-NAPOLÉON), originally known as LOUIS-NAPOLÉON-BONAPARTE, Emperor of the French; b. at Paris, 20 April, 1808; d. at Chislehurst, England, 6 January, 1873; third son of Louis Bonaparte, King of Holland and Hortense de Beauharnais, daughter of the Emperor Josephine. After the fall of the First Empire, Hortense, who had been separated from her husband, took her two sons to Geneva, Aix in Savoy, Augsburg, and then (1824) to the castle of Arenenberg in Switzerland. Louis Napoleon had for tutor the scholar Le Bas, son of a member of the Convention. The "principle of nationalities" attracted him in youth, and with his brother, he took part in an attempt to release the prisoners arrested by the State of the Church, in 1831. He was on the point of setting out for Poland when he heard that the Russians had entered Warsaw. On the death of the Duke of Reichstadt (1832) he regarded himself as the heir of the Napoleonic Empire. The Republican press, engaged in a struggle with Louis Philippe's government, manifested a certain sympathy for Louis Napoleon. Though Casimir Périer had expelled him from France in 1831, and a few officers from Strasburg attempted, but failed in, a coup de main (1836). In his book, "Idses Napoléoniennes," published in 1838, he appears as the testamentary executor of Napoleon I. He held social and political reforms in his teeth. After his return from the United States, in 1831, he published (in London, 1840) a treatise on the constitution of the United States. In 1842, he was imprisoned for life, notwithstanding his defence by Berryer. While in prison at Ham, he wrote, among other brochures, one on the "Extermination of Pauperism." He escaped from Ham in 1846. After the Revolution of 1848 he returned to Paris, became a member of the Constituent Assembly, and finally was elected President of the Republic by 5,562,834 votes, on 10 December, 1848.

Presidency of Louis Napoleon.—Before his election Louis Napoleon had entered into certain engagements with Montalembert in regard to freedom of teaching and the restoration of Pius IX, who had been driven from Rome by the Roman Senate. In 1849 Oudinot's expedition made its direct attack on the Roman Republic, April, 1849, and the Constituent Assembly passed a resolution of protest (7 May, 1849), a letter from Louis Napoleon to Oudinot requested him to persist in his enterprise and assured him of reinforcements (8 May, 1849); at the same time, however, he also urged him to retreat to Rome to negotiate with Mazzini, an agreement soon after dissuaded. In this way the difficulties of the future emperor reveal themselves from the beginning; he wished to spare the religious susceptibilities of French Catholics and to avoid offending the national susceptibilities of the Italian revolutionists—a double aim which explains many an inconsistency and many a failure in the religious policy of the empire. "The more we study his character, the more nonplussed we are," writes his historian, de la Gorce. Oudinot's victory (29 June, 1849) having crushed the Roman Republic, Napoleon, ignoring the decided Catholic majority in the Legislative Assembly, elected on 18 June 1849 to address to the Codé, a sort of manifesto in which he asked of Pius IX a general amnesty, the secularization of his administration, the establishment of the Code Napoléon, and a Liberal Government. The Legislative Assembly, on
Montalbemb't motion, voted approval of the "Motu Proprio" of 12 September, by which Pius IX promised reforms without yielding to all the president's imperative demands. The president was dissatisfied, and forced the Falloux Cabinet to resign; but he was soon working with all the influence of his position for the passage of the Falloux Law on freedom of teaching—a law which involved a great triumph for the Catholics—while, in the course of his journeys through France, his deferential treatment of the bishops was extremely marked. And when, by the Coup d'Etat of 2 December, 1851, Louis Napoleon had dissolved the Assembly, and by the blicicite appealed to the French people as to the justice of that act, many Catholics, following Montalbemt and Louis Veulliot, decided in its dismemberment of the Eménil 744. The 2015 votes (21 November, 1852). The Dominican Lacroix, the Jesuit Ravignan, and Bishop Dupanloup were more reserved in their attitude. Lacroix went so far as to say: "If France becomes accustomed to this order of things, we are moving rapidly towards the Lower Empire".

Dictatorial Period of the Empire, 1852-60.—The first acts of the new government were decidedly favourable to the Church. By the "Decree Law" of 31 January, 1852, the congregations of women, which previously could be authorized only by a legislative act, were made authorized by simple decree. A great many bishops and priests hailed with joy the day on which Louis Napoleon opened a new day (30 January, 1853) of his marriage with the Spanish Eugénie de Montijo, which seemed to assure the future of the dynasty. At this very time Dupanloup, less optimistic, published a pastoral letter on the liberty of the Church, while Montalbembt began to perceive the forms which made him fear that the Church would not always have reason to congratulate itself on the new order. For some years the Church enjoyed effective liberty: the bishops held synods at their pleasure; the budget of public worship was forthcoming; cardinals sat in the Senate as of right; the civil authorities appeared in religious processions; missions were given; from 1852-60 the State recognized 982 new communities of women; primary and secondary educational institutions under ecclesiastical control increased in number, while, in 1852, Pères Petetot and Gratry founded the Oratory as a Catholic centre of science and philosophy. Catholics like Ségur, Cornouet, Baudouin, Cochon, and the Vicomte de Cavaignac, had viewed the entente between church and state with enthusiasm. Napoleon III was anxious that Pius IX should consent to come to crown him at Notre Dame. This request he caused to be preferred by Mgr de Ségur, auditor of the Rota, and Pius IX explained that, if he crowned Napoleon III, he would also be obliged to go and crown Francis Joseph of Austria, hinting at the same time, that Napoleon IV could come to Rome; and he gave it to be understood that, if the emperor were willing to suppress the Organic Articles, he, the pope, might be able to accede to his request at the end of three months. Pius IX also wished Napoleon III to make the Sunday rest obligatory and abrogate the legal necessity of civil marriage previous to the religious ceremony. After two years of negotiations the emperor gave up this idea (1854), but thereafter his relations with the Church seemed to be somewhat less cordial. The Bull in which Pius IX defined the Immaculate Conception was admitted into France grudgingly, and after some very lively opposition on the part of the Council of State (1854). Bishop Mouffet of Montauban denounced to the Council of State for infringement of the Organic Articles, while the "Correspondant" and the "Univers", having defended the bishop, were rigorously dealt with by the authorities. Lastly, the return to the Cour de Cassation (Court of Appeals) of the former procureur général Dupin, who had resigned in 1852, was looked upon as a victory for Gallican ideas.

The Crimean War (1853-56) was undertaken by Napoleon, in alliance with England, to check Russian aggression in the direction of Turkey. The Fall of Sebastopol (8 September, 1855) compelled Alexander II to sign the Treaty of Paris (1856). In this war Piedmont, thanks to its minister, Cavour, had played a part. But the consequences of the Crimean War were serious for France. Piedmont was treated as one of the Great Powers. After all, the Italian Question interested the emperor more than any other, and upon this ground difficulties were about to arise between him and the Church. As early as 1856 Napoleon knew, through Cavour, that the Piedmontese programme involved the dismemberment of the Empire of Austria, and the depopulation of the French Government the Congress of Paris expressed a wish that the pope should carry out liberal reforms, and that the French and Austrian troops should soon leave his territories. The attempt on the emperor's life by the Italian Orsini (14 January, 1858), set in motion a policy of severe repression ("Law of General Security" and proceedings against Proudhon, the socialist). But the letter which Orsini wrote from his prison to Napoleon, beseeching him to give liberty to twenty-five million Italians, made a lively impression upon the emperor's imagination. Pietri, the prefect of police obtained from Orsini another letter, pledging his political friends to renounce all violent methods, and to see the enfranchisement of Italy was the price to be paid for this assurance. From that time, it was Napoleon's active wish to realize Italian unity. On 21 July, 1858, he had an interview with Cavour at Plombières. It was agreed between them that France and Piedmont should secure for themselves the right to drive the Austrians from Italy, and that Italy should become a confederation, under the rule of the King of Sardinia, though the pope was to be its honorary president. The result of this interview was the Italian War. For this war public opinion had been schooled by a series of articles in Liberal and government organs—the "Sicile", "Presse", and "Patrie"—by Edmond About's articles on the pontifical administration, published in the "Moniteur", and by the anonymous brochure "L'Empereur Napoléon III et l'Italie" (really the work of Arthur de la Guérinière), which denounced the spirit of opposition to reform shown by the Italian governments. Catholics tried to obtain Napoleon's assurance that he would not compromise the papal state, and on 5 July the Representatives (Corps Législatif) the Republican Jules Favre asked: "If the government of the cardinals is overthrown shall we shed the blood of the Romans to restore it?" And the minister, Baroche, made no answer (26 April, 1859). But Napoleon, in the proclamation announcing his departure for Italy (10 May, 1859), declared that he was going to deliver Italy as far as the Adriatic, and that the pope's power would remain intact. The victories of the French troops at Magenta (4 June, 1859) and Solferino (24 June, 1859) coincided with insurrectionary movements against the papal authority. Catholics were alarmed, and so was the emperor; he would not appear as an accomplice of those movements, and on 11 July he signed the treaty of Villafranca. Austria ceded Lombardy to France, and France retroceded it to Sardinia. Venetia was still to belong to Austria, but would form part of the Italian Confederation which would be under the honorary presidency of the king of Sardinia. The pope would produce the indispensible reforms in his state. In November, 1859, at Zurich, these preliminaries were formally embodied in a treaty.

Neither the pope nor the Italians were pleased with the emperor. On the one hand the pope did not thank Napoleon for his hints on the way to govern the Romagna, and an eloquent brochure from the pen of
Dupleix denounced the schemes which menaced the pope. On the other hand it was plain to the Itali-ans that the French would choose the papacy to Italy as far as the Adriatic. Napoleon then dreamed of settling the affairs of Italy by means of a congress, and Arthur de la Guérinière's pamphlet, "Le pape et le congrès," demanded of Pius IX, in advance, the surrender of his temporal power. On 1 January, 1860, Pius IX denounced this pamphlet as a "monument of heresy" and on 10-11 to the bishop wrote a formal refusal a letter from Napoleon advising him to give up the Legations. A few months later, the Legations themselves joined Piedmont, while Napoleon, by making Thouvenel his minister of foreign affairs and by negotiating with Cavour the annexation of Nice and Savoy to France, proved that he was in a position to demand of the pope's temporal power than to the temporal power of the pope. Meanwhile the Catholics in France commenced violent press campaigns under the leadership of the "Univers" and the "Correspondant". On 24 January, 1869, the "Univers" was suppressed. The minister of state, Billault, prosecuted the Catholic publications and press. On March 1, Napoleon, at Baroche, on 2 April, announced in the Corps Législatif, that the French troops would not leave Rome so long as the pope was unable to defend himself. But Napoleon only too anxious to withdraw his troops, at one moment thought of having them replaced by Neapolitan troops, and then proposed to Pius IX, that 3500 of those soldiers of the pope's were a large number of French Legitimists; Lamoricière, their commander, had always been a foe of the imperial regime. Napoleon III was annoyed, and ordered his ambassador at Rome to enter into negotiations for the withdrawal of the French troops: on 11 May, 1860, it was decided that within three months the soldiers given to the pope by Napoleon III should return to France.

In the meantime, however, Garibaldi's campaign in Sicily and Calabria opened. Farini and Cialdini, sent by Cavour to Napoleon, represented to him (28 August) the urgent necessity of checking the Italian revolution, that Garibaldi was about to march on Rome, and that the French, as a consequence of the restoration of order in Italy, for which purpose the Piedmontese must be allowed to cross the pontifical territories so as to reach the Neapolitan frontier. "Faites vite (act quickly)", said the emperor, and himself left France, travelling in Corsica and Algeria, while the Piedmontese troops invaded Umbria and the Marches, defeated the troops of Lamoricière at Castelfidardo, captured Ancona, and occupied all the States of the Church except Rome and the province of Viterbo. Napoleon publicly warned Victor Emmanuel that, if he attacked the pope without legitimate provocation, France would be obliged to oppose him; he withdrew his minister from Turin, leaving instead only a chargé d'affaires, and was a mere spectator of that series of events which, in February, 1861, ended in Victor Emmanuel's being proclaimed King of Italy. The expedition to Syria (1859), in which 50,000 French troops went to the relief of the Maronite Christians, who were being massacred by the Druses with the connivance of the Turks, the two expeditions to China (1856-58), the fall of the Rhétoriciens, the reunion of Italy resulted, among other things, in the restoration to the Christians of their religious establishments, and the joint expedition of France and Spain (1854-62) against the Annamese Empire, which avenged the persecution of Christians on Annam and ended in the conquest of Cochinchina by France, merited for the armies of the Church. Still the attitude of Napoleon III in regard to Italian affairs caused great pain to Catholics. Falloux in an article entitled "Antécédents et conséquences de la situation actuelle", published in the "Correspondant", implied that Napoleon was an accomplice in the Italian revolution. The Catholic associations formed to collect subscriptions for the pope's benefit were suppressed, and Pius IX, in the consistorial allocution of 17 December, 1860, accused the emperor of having "feigned" to protect him.

**Liberal Period of the Empire, 1860-70.**—It was just at this time that the emperor, by the decree of 24 November, 1860, made his first concession to the opposition, and to liberal ideas of independence and power of initiative to the Legislature. But the Liberal opposition was not disarmed, and the Catholic discontent was aggravated by his Italian policy. The emperor replied to Pius IX by publishing la Guérinière's book, "La France, Rome et l'Italie", a violent arraignment of Rome. Then Bishop Pie of Poitiers published his pastoral charge in which the words, "Lavet tes mains, O Pilate (Wash thy hands, O Pilate)", were addressed to Napoleon III. In the Senate, an amendment in favour of the temporal power of the pope was lost by only a very small majority; in the Corps Législatif, one-third of the deputies declared themselves for the pontifical cause. The emperor asserted his Italian sympathies more and more clearly: in June, 1862, he recognized the new kingdom; he sent an ambassador to Turin, and to Rome two partisans of Italian unity; and he used his influence with Russia and Prussia to procure their admission of the Kingdom of Italy. One striking symptom of the emperor's changed feelings towards the Church was the circular of January, 1862, by which Persigny declared all the St. Vincent de Paul societies dissolved. Following upon Garibaldi's blow at the Pontifical States, which had been stopped by his defeat at Aspermonte (29 August, 1862), General Durando, minister of foreign affairs in the Rattazzi cabinet, declared in a circular that "the whole Italian nation demanded its capital". Thus were the Italians proclaiming their eagerness to be installed at Rome. Fearing that at the forthcoming legislative elections the Catholics would revolt from the imperial party, Napoleon suddenly manifested a much colder feeling for Italy. The Catholic influence of the empress gained the upper hand of Prince Napoleon's anti-religious influence. Thouvenel was supplanted by Drouin de Lhuys (15 October, 1862), who was made to give out a curt statement that the French Government had no present intention of taking any action in consequence of the Durando circular, thus bringing about the fall of the Rattazzi cabinet in Italy. A great many Catholics recovered their confidence in Napoleon; but a political alliance between a certain number of Liberal Catholics, devoted to the Royalist cause and members of the Republican party resulted, in
June, 1833, in the return of thirty-five Opposition members to the Chamber, mostly men of great ability. Republicans and Monarchists, Freethinkers and Catholics, they grouped themselves around Thiers, who had been Louis Philippe's minister, and who won the confidence of Catholics by pronouncing unequivocally in favour of the temporal power. But the alliance between Republicans who wanted Napoleon to desist from protecting the temporal power and Catholics who thought he did not protect it enough, could not be very stable. From 1862 to 1864 the emperor did nothing in regard to Italy that could cause Pius IX any uneasiness. He was at that period busy with the early stages of the Mexican War, in which he had very imprudently allowed himself to become involved. Four years before, a democratic riset had arrived in Mexico, and the French troops, early in 1867, and the execution of Maximilian, brother of the Emperor of Austria, whom France had caused to be proclaimed Emperor of Mexico. The impression created by this disaster notably increased the strength of the Opposition in France.

Negotiations between Napoleon III and Italy recommenced in 1864, the Italian Government beseeching the emperor to put an end to the French occupation of the Pontifical States. The Convention of 15 September, 1864, obliged Italy to refrain from attacking the actual possessions of the Holy See and, on the contrary, promised that it would use its influence to hasten the evacuation of Mexico by the French troops, early in 1867, and the execution of Maximilian, brother of the Emperor of Austria, whom France had caused to be proclaimed Emperor of Mexico. The impression created by this disaster notably increased the strength of the Opposition in France.

The speech of Thiers against Italian unity, denouncing the imprudence of the Imperial policy, was loudly applauded by the faithful supporters of the Holy See. Napoleon III, a prey to indecision, no doubt asked himself from time to time whether his policy was a wise one, but the circumstances which he himself had created carried him along. Late in 1864 he thought of negotiating an alliance between the Courts of Berlin and Rome, a policy which Bismarck, son of Venetia, but fearing the serious necessity of arming against France. By the end of 1866 the withdrawal of the French troops which had guarded the pope's palace was complete. But Napoleon at the very time when he was thus carrying out the Convention of 15 September was organizing at Antwerp a legion to be placed at the disposal of the pope; he once more exacted of Italy a pledge not to invade the Papal States; he conceived a plan to obtain from the Powers a collective guarantee of the pope's temporal sovereignty. On 3 November, 1866, he wrote to his friend Francesco Arose: "People must know that I will yield nothing on the Roman question, and that my mind is made up to carry out the guarantee of 15 September, to support the temporal power of the pope by all possible means". But the season of ill-luck and of blundering was setting in for the Imperial diplomacy. None of the Powers responded to Napoleon's appeal. Italy, displeased at the organization of the Antibe Legion and the confidence reposed by the emperor in Rouher, a devoted champion of Catholic interests, complained bitterly: Napoleon answered by complaining of the Garibaldian musters that threatened the pope's territories. When the Garibaldians made an actual incursion, on 25 October, 1867, the French troops which had for some weeks been concentrated at Toulon, embarked for Civitavecchia and helped the papal troops defeat the invaders from Sicily. Cardinal Antonelli asked that the French forces should be directed against those of Victor Emmanuel, but the emperor refused. Menabrea, Victor Emmanuel's minister, though he gave orders for the arrest of the Garibaldians, published in spite of Napoleon, a circular affirming Italy's right to possess Rome. Napoleon would not release him from the coils of the Roman Question; he was still thinking of a European congress, but Europe declined. At the close of 1867, Thiers' speech in support of the temporal power gave Rouher occasion to say, amid the applause of the majority, "We declare it in the name of the French government, Italy shall not take possession of Rome. Never, never will France tolerate such an assault upon her honour and her Catholicity". That never was extremely unpleasant to the Italian patriots. The emperor had offended both the pope and Italy at the same time. When the Vatican Council was convoked the imperial government manifested no antagonism. M. Emile Ollivier, president of the Chamber, and minister of Foreign Affairs, in a speech to the Italian Legation in Rome, 18, July, 1867, that the States ought not to interfere in the deliberations of the council. His colleague Daru instructed Banneville, the French ambassador to Rome, on 20 February, to protest in the name of French Constitutional law against the programme of enactments "De ecclesia", and to try to bring about concerted action. It was in the interests of the Ministry of Foreign Affairs, for the reputation of 10 March, Daru confined himself to reiterating his objections in a memorandum (5 April) which Pius IX declined to submit to the council. M. Ollivier, against the requests of certain anti-infallibilist prelates, directed Banneville not to try to meddle in the proceedings of the council.

In 1870 Prince Leopold of Hohenzollern's claim to the crown of Spain brought on a conflict between France and King William of Prussia. A dispatch relating to a conversation which took place at Ems, between William and Napoleon's ambassador, Benedetti, was, as Bismarck himself afterwards confessed, tampered with in such a way as to make war inevitable. The French government repented of the refutation of the charge made by him in the Reichstag (5 December, 1874), that the empress and the Jesuits had desired the war and driven him into it. The German historian Sybel has formally cleared the empress and the Jesuits of this accusation. (On this point, which has provoked numerous polemics, see Dohr, "Jesuitentaufe", 4th ed., Freiburg, 1904, pp. 877-79). Pius IX wrote to Emperor William offering his good offices as mediator (22 July, 1870), but to no purpose. As for the Italian government, on 16 July, 1870, it refused an alliance with France because Napoleon had refused it Rome. On 20 July Napoleon promised that the imperial troops should be recalled from Rome, but no more, and so, as usual, he offended both the pope, whom he was about to leave defenceless, and Italy, whose highest ambitions he was ceasing. The negotiations between France and Italy were continued in August, by Prince Napoleon, who made a visit to Florence. Italy absolutely insisted upon being allowed to take Rome, and, on 29 August, Visconti Venosta, minister of Foreign Affairs, announced that the right of the Italians to have Rome for their capital. The anti-Catholic controversialists of France have often made use of these facts to support their allegation that the emperor would have had the Italian alliance in the War of 1870 if he had not persisted in his demand that
the pope should remain master of Rome, and that Italy’s abstinence entailed that of Austria, which would have helped France if Italy had. M. Welschinger had gathered fellow soldiers, and, no condition to be of material assistance to France. After the surrender of Sedan (2 September, 1870), Napoleon was sent, a prisoner, to Wilhelmshöhe, where he learned that the Republic had been proclaimed at Paris, 4 September, and that the Piedmontese had occupied Rome (20 September). The 14th of November, 1870, by which date, as the Parisian times before, confirmed the emperor’s dethronement. After the Peace of Frankfort he went to reside at Chiselsurt, where he died. His only son, Eugène-ouis-Jean-Joseph-Napoléon, born 16 March, 1856, was killed by the Zulus, 23 June, 1879. Napoleon III left unfinished a ‘Vie de César’, begun in 1865, with the assistance of the historian Dege, and, of which three volumes were published. His history still affords occasion for numerous polemics animated by party feeling. The portrait of him drawn by Victor Hugo’s ‘Les Châtiments’ is extremely unfair. Napoléon was a tender-hearted dreamer, kindness was one of his most evident qualities. As regards his personal reputation, he was faithful to his duties. Much of the censure which his foreign policy has merited is equally applicable to the anticlericals and the Republicans of his time, whose press organs were clamouring for French aid towards the speedy realisation of Italian unity, while their systematic opposition, in 1868, to the Government programme for education was partly responsible for the military weakness of France in 1870.

The works of Napoleon III, including those written before he became emperor, his speeches as president, and his military works were published in 5 volumes, Paris, 1894—57, and 1899; Tiberius, Napoléon III et l’Empire (2 vols., Paris, 1896); DE LA Gorce, Histoire du second Empire (Paris, 1895—92); BLANCHARD (1895), Life of Napoleon III (4 vols, London, 1889); VIOT, Life of Napoleon the Third (London, 1889); WOTERT, Le régime de Napoléon III (Paris, 1891); LEGENDRE, L’Empereur Napoléon III (Paris, 1895—1910); GHIRAUAUD, Napoléon III uniame (Paris, 1896); WELSCHINGER, Le Gare de 1870, causes et responsabilité (3 vols., Paris, 1910). On Napoleon III and the Italian question, see bibliographies to Fallois, Montalembert, Duplaing, Pius IX, Véryl, also GIAICOMETTI, La question italienne (Paris, 1892); IRIAT, L’union italienne (2 vols., Paris, 1898—99); TRONNEL, Le secret de l’empeu (Paris, 1899); CHIALLA, Politique supérieure de Napoléon III et de Cavour in Italy e in Ungheria (Turin, 1899); RENZI, Il regno di Napoléon III, Roma e Napoléon III, Italia (Paris, 1907); BONIFACI, Vita di Francesco Arsen (Turin, 1894); CASTIGLIONE, Un Portrait inedit de Napoléon III et de la question de l’Italie (Paris, 1911). It is true that the honour of characterising the attitude of Napoleon III in Italian affairs.

GEORGES GIOUVA.

Napier (or Napper), GEORGE, VENERABLE, English martyr b. at Holywell, manuscript Oxford, 1580; executed at Oxford 9 November, 1610. He was the son of Edward Napper (d. in 1558), sometime Fellow of All Souls College, by Anne, his second wife, daughter of John Peto, of Chesterton, Warwickshire, and niece of William, Cardinal Peto. He entered Corpus Christi College 5 January, 1565—6, but was ejected in 1568. He ran away in 1570. On 24 August, 1570, 24 years old, a inmate to the English College at Reims, and by December, 1580, he had been imprisoned. He was still in the Wood Street Court, London, on 30 September, 1588; but was liberated in June, 1589, on acknowledging the royal supremacy. He entered the English College, Douai, in 1596, and was sent on the mission in 1603. He appears to have lived with his brother William at How. He was arrested at Kirtlington, Oxford, in 1601, from Woodstock, very early in the morning of 19 July, 1610, when he had on him a pyx containing two consecrated Hosts as well as a small reliquary. Brought before Sir Francis Eure at Upper Heyford (Wood says before a justice named Chamberlain), he was strictly searched, but the constable found nothing but his black thread and thimble. The next day he was sent to Oxford Castle, and indited at the sessions soon after under 27 Eliz., c. 2 for being a priest. The possession of the oils was held to be conclusive and he was condemned, but reprieved. In gaol he reconciled a convent of nuns, and in 1580, but died the next morning. His head according to Wood was set up on Tom Gateway; according to Challoner’s less probable statement on Christ Church steeple. His quarters were placed on the four city gates, but at least some were secretly removed, and buried in the chapel (now a barn) of Sanford manor, formerly a preceptory of Knights Templar.

JOHN B. WINEWRIGHT.

Narbonne. See TOULOUSE, ARCHIDIOCESE OF.

Nardi, Dacapo, Italian historian: b. at Venice, 11 March, 1563. His father, Salvestro Nardi, belonged to an old Florentine family, originally from the suburbs of the city. Jacopo was an earnest follower of Savonarola, whose death he witnessed. He was attached to the Republican party, under which he held various offices in the State, but nevertheless kept on friendly terms with the Medici after their restoration in 1512, and even composed pages for them. Having been concerned in the Republican revolution of 1527, he was banished from Florence in 1530, and took a leading part in the efforts of the exiles to return, pleading their cause against the tyranny of Duke Alessandro before Charles V, in 1536. He finally settled at Venice, where he died in poverty. All his contemporaries bear witness to his upright and noble character. Before his exile, Nardi composed two comedies ‘L’Amicizia’ and ‘I Due Felici Rivali’, together with a few cantis carnascialeschi, or carnival-songs. The later date belongs to the latter. The most important works are translations from Livy and Cicero, and his Life of Antonio Giacomini, an austere soldier of the republic who died in 1517. His ‘Istorie della città di Firenze’ (History of the City of Florence) was written in the last years of his life. It deals with the tragic epoch in Florentine history from 1494 until within a few years of the author’s death, and is especially noteworthy for its high moral tone and its faithful record of the events in which Nardi himself had shared.

Gelli, ed., Istorie della città di Firenze di Jacopo Nardi (Florence, 1888); GARBOLINI, La vita e le opere di Jacopo Nardi (Florence, 1897); PERRILLAT, La vita e le opere di Jacopo Nardi (Florence, 1901).

EDMUND G. GARDNER.

Nardò, Diocese of (NERITONENSIS), in southern Italy. Nardò was already an episcopal see, when, about 761, Greek monks arrived there, fleeing from the persecutions of the Iconoclasts. Paul I assigned to those monks the episcopal palace and the revenues of the see, then vacant, and sponsored the foundation of the Diocese of Brindisi. The monastery became a centre of Greek culture; but, in 990, Urban II put Latin Benedictines there, and Paschal II gave episcopal jurisdiction to the abbots; for a long time the Greek and Latin rites were maintained together at the monastery. In 1388, a bishop was established at Nardo for the antipope Clement VII’s illegitimate sons, as Clement VI had done for Boniface IX, who entrusted the care of the diocese to the Archbishop of Otranto. The latter proposed to
suppress the Greek Rite in the diocese, but, at the instance of the Benedicentes and of King Ladislaus, the pope maintained the repression on the Greek Rite. It is known that the Greek Rite was obtained in sixteen towns of the diocese, and that there was a protopope at Balatonke. The see was re-established in 1413, in favour of Giovanni degli Epifani. Other bishops were Ambrogio Salvi, O.P. (1569), who introduced the reforms of the Council of Trent; Fabio Fornari (1568), who also opposed to abolish the use of the Greek Rite: Lelio Landi (1607), a learned Orientalist, employed by the Congregatio de auxiliis and also in the correction of the Vulgate; Fabio Chigi (1635), who became Alexander VII; Antonio Sanfelice (1707), founder of a public library and of a workhouse for girls. The diocese is directly dependent on the Holy See. It has 16 parishes, with 70,500 inhabitants, 2 houses of Franciscans, and 4 religious houses of women, 2 schools for boys, and 4 for girls.

**Narni and Terni, United Dioceses of (Narniere et Ternensi), in Central Italy.** Narnia is the ancient town of the Sabines; in 300 B.C. and 299 n. c., it was besieged by the Romans, who destroyed the city and sent there a Latin colony, changing the name to Narnia. Luitprand captured the town in 726, but Pope Zacharias persuaded him to restore it to the Duchy of Rome in 742, after which it remained under pontifical rule. From 1198 to 1214, Narnia was ruled against Innocent III, who temporarily suppressed its episcopal see. The churches of this city contain many paintings of the ancient Umbrian school. This town is the birthplace of the Blessed Lucia of Narnia, a tertiary of St. Dominic, who died in 1544, and of the condottiere Erasmo Gattameleata. Narnia is celebrated by its first bishop the Martinianus, who died in the second half of the fourth century; St. Maximus, who was bishop in 425, was succeeded by his two sons Heracles and Pancratius; St. Gregory the Great shows that, at Narnia, at that time, there were still pagans to be converted; Bishop John I (940) was succeeded by his son, the bearded John XIII; among other bishops were: William, a Franciscan, whom Urban V employed against the Fraticelli (1367); and Raimondo Castelli (1565), founder of the seminary.

In 1908, the sees of Narnia and of Terni were united. Terni is on the Nerina, in its confluence with the Velino; the magnificent cascade of the latter is well-known through the noble description by Lord Byron in "Childe Harold". Terni is the ancient Interamna Nahars of the Umbrians, and its former splendour is witnessed to by the ruins of an amphitheatre in the garden of the episcopal palace, a theatre, and baths near the church of St. Nicholas. The cathedral and other churches, are built on the sites of pagan temples. After the Lombard invasion, Terni belonged to the Duchy of Spoleto, and with the latter, came into the Pontifical States; it was at this town that Pope Zacharias entered into the agreement with King Luitprand for the restitution of the cities of Bieda, Orte, Bomarzo, and Amelia to the Duchy of Rome. It is believed that the gospel was preached at Terni by St. Peregrinus, about the middle of the second century. The townspeople have great veneration for St. Valentinus, whose basilica is outside the city, and was, probably, the meeting-place of the first Christians of Terni. There were other martyrs from this city, among them, the first Bishop of Terni, the holy virgin Agape. In the time of Totila, the Bishop of Terni, St. Proculus, was killed at Bologna, and St. Domnina and ten nuns, her companions, were put to death at Terni itself. After the eighth century Terni was without a bishop until 1217, in which year the diocese was re-established. Among its bishops since that time, were Ludovico Massacio III (1460), who governed the diocese for fifty years; Guido Manucci (1625), who gave the high altar to the cathedral, and Francesco Rapaccioli (1646), a cardinal who restored the cathedral. The united sees are immediately dependent upon Rome; they have 57 parishes, with 66,600 inhabitants, 3 religious houses of men, and 1 of women.

**Nashville, Diocese of,** comprises the entire territory of the State of Tennessee. From its inland location and peculiar civil history, it has not profited much from the tide of immigration. Its present development has been chiefly due to its own internal work. There is little need of consulting any historical references as to the growth of the Church in Tennessee since no such work of any importance exists. This is chiefly due to the fact that heretofore the diocese was in an embryo state and those who could write its history had neither time nor opportunity to do what was so much needed. Up to twenty years ago, or in the decade of 1880-90, much of the diocesan history could have been learned from the early pioneers of Catholicity, or their children, who were then living. The Diocese of Nashville was established 28 July, 1857, having been separated from the Diocese of Bardstown (now Diocese of Louisville) and the first Bishop of Nashville was Rt. Rev. Richard Pius Miles, consecrated at Bardstown, 16 Sept., 1838. Before this date there is no authentic record of any ecclesiastical missionary work in what is now the State of Tennessee, except in sporadic efforts. The earliest records attainable are two letters in the archives of Baltimore, dated 1793, from Father Pichon, concerning an offer from John Sevier, the first governor of Tennessee, that Father Badin might arrange for the immigration of at least one hundred Catholic families for whose maintenance the governor guaranteed sep-
NARNI

PIAZZA GARIBALDI AND LATERAL FAÇADE OF THE CATHEDRAL
PORTICO OF THE CATHEDRAL
The offer of the warrior-statesman was not accepted; however, although many dozen Catholic names are to be found today among the inhabitants of east Tennessee, probably due to the fact that the insurgents of Ireland were sold into a species of slavery by the English government to the American colonists. That they or their children have fallen from the old faith of their fathers can be accounted for by the fact that the exiles had then neither church nor priests, nor Catholic schools. For a good many years the present writer has been seeking information as to early Catholic settlers and Catholic work, but must confess the evidence very doubtful as to whether the first priestly ministrations were in the neighbourhood of Nashville or Knoxville. Civic history and geographical position seem to give them the preference.

The first authentic records of a priest in Tennessee are contained in the archives of St. Mary's cathedral, Nashville, when Father Abell came (1820) from Bardstown to attend the few Catholics then living in Nashville. Shortly after his arrival, Father Abell undertook the building of the first church in Tennessee, at Nashville, a small building on what is now Capitol hill. The State Capitol now occupies the site. Father Abell visited Nashville as a mission for four or five years, and then (1849) Father Durbin took charge, and about the following year he was assisted by Father Brown who made Ross Landing (now Chattanooga) his headquarters, and near that place, in 1853 and 1855, Bishop Miles. After a difficult journey on horseback and in a canoe from Bardstown, Ky., Bishop Miles took possession of his diocese and early in 1839, began his first episcopal visitation of Tennessee. At the end of his journey he declared that he did not find more than three hundred Catholics in Tennessee. In 1840, he left the Cincinnati Sisters at the first church, under the management of Father McEler; it has since been rebuilt as St. Peter's by the Dominicans. In 1844 he laid the corner stone of St. Mary's cathedral, Nashville. In addition mission churches were established in outlying stations so that in 1847 Bishop Miles was able to report to Rome that he had 8 priests, 6 churches, 8 chapels, and a Catholic population of about 1500.

In 1849 a church was erected at Jackson; in 1852 one at Chattanooga; in 1854 one at Knoxville; in 1856 one at McEwen; in 1857 one at Edgefield (now east Nashville); in 1858 one at Shelbyville (later discontinued); and in 1859 one at Nashville (church of the Most Sacred Heart). In 1860 the Bishop of Memphis for the territory of Missouri, Iowa, and Illinois, at the outbreak of the Civil War, and he was succeeded by Bishop Whelan. His diocese became the greatest theatre of war; his cathedral was converted into a hospital; his flock scattered. The burden proved too great for his strength, and in 1863 he was forced to resign. Two years later Bishop Feehan succeeded him. Under his direction, new priests were added to the diocese, new churches were built, especially St. Patrick's (1866), St. Bridget's (1870), and St. Joseph's (1875), all at Memphis. In 1881 St. Columba's church in East Nashville was built, to replace the old St. John's church, which was burned down a few years previously. In the decade 1870–80, mission churches were erected at Humboldt, Belbuck, and Lawrenceburg; Bishop Feehan reported to Rome (1860) that his diocese had 30 churches of which 18 had resident priests, besides numerous stations. This was a rapid growth, when we consider the ravages of pestilence which visited the people during 1873, 1878, and 1879, and which buried from the ranks of the Catholics in Memphis alone in the early years of the Missouri mission. Though some 2000 families strong in the seventeenth century, they have dwindled at the present day to some 1500 adherents living on the Shat-el-Arab near the Persian Gulf. It is the only Gnostic sect that has survived and the sacred writings of which are still extant; a few

X.—45
remnants excepted, the writings of the so-called Christian Gnostics have perished. I Names, II Doctrines, III Discipline and Ritual, IV History.

I Names. Mandean (ܡܕܝܢܐ) is a Babylonian-Aramaic word in dialectic form, meaning: Gnostic, gnōstikos, "those who are good at knowing". The Hebrew word for knowledgeתְנֵי Madda is of the same root and is the main adjective from which the noun Mandaya is derived. It is the name adopted by the sect itself, being employed in their sacred books, and is characteristic of their worship of the מַדְיָןָא תְנֵי the φοινική or "knowledge of life". Another name also found in their sacred books is that of Sabians (ˠsʔbjan) which means Baptists (βαπτιστεῖς) to baptize with water. The name is identical with the Mohammedans (sing. Sābi, pl. fr. SUB'U) from the Koran (Sure V, 73; II, 59; XXII, 17) in which Christians, Sabians, and Jews are enumerated as religions which can be tolerated by Islam. It is based on the prominence of frequent baptism in their religious discipline and hence they are no doubt referred to as the Fathers as Hemerobaptists ἡμεροβάπτισται i.e., practising daily baptism. The name w6b6lu was even known in Greek writers. The name, however, most frequently used in their sacred literature is that of Nasoreans, ܢܣܘܪܝܢ which is also the usual Arabic (sing. Nasr, pl. Nasrā) for Christians. The conclusions concerning the sects and beliefs or the Manicheans have no leaning towards Christianity, but rather contempt and hatred for it; nor do their doctrines betray any approximation to Christian beliefs, except perhaps in that of the existence of a saviour, although some of their ceremonies bear a superficial resemblance to Christian mysteries. If, however, we remember that the Manicheans in Europe perished as the true Christians, though their system has but the use of half a dozen terms in common with Christianity, and that some Gnostic sects had barely any similarity with the Church of Christ, though self-styled Christians, it becomes less strange that even Mandean should have styled themselves Nasoreans. The term Kristiānā, as translatation of the Greek word, they reserve for the followers of Jesus Christ. Christianity was no doubt a name to conjure with, but the absence of any reason for the adoption of the title remains a mystery. It is suggested by some that the name is only given to the most perfect amongst them, but this seems contrary to fact. The name “Christians of St. John in the East” or “Christians or Nasoreans” has an extraordinary veneration for St. John the Baptist, who figures largely in their mythology. This veneration, together with the similarity of their rites to Christian sacraments, led the first missionaries from Europe to regard them as descendants of the Christians baptized only with the baptism of St. John. The conjuration against the Nationale at Paris and have been published by Petermann (Thessaurus s. Liber Magnus, vulgo Liber Adami, etc., Berlin, 1867) in Nasorean script and language. The form is not unlike Estrangela with vowels added in the modifications of the consonants, and the latter closely resembles that of the Aramaic in the Talmud. The text of the Manichean gnostic free Latin translation was published by Norberg (London and Goth, 1817). Selections from the Gensis (about one fourth) have been translated into German by Brandt. This book is arbitrarily divided into two sections, called the Right and the Left Gensis from the curious Nasorean custom of writing these two portions in one volume but in inverted positions, the left being used at funerals and being written for the benefit of the dead. The Gensis is a collection of writings from all ages and sources, some dating even after the Mohammedan conquest. Another sacred book is the Kolosta, or "Summa" or practical vademecum containing hymns, liturgies, rites for marriages, etc. (published as Qoleta by Euting, RVD, 1867). The Sidé de de la mort i.e. the "Lectures of the Kings" was published in 1905 by Litzbarski and translated with commentary by Ocher in 1905. The Diwan, a priestly ritual, was published by Euting (1904), but the Aṣfar Malwaše, a astrological work on the signs of the Zodiac, is not yet published. In recent years many Nasorean inscriptions on pottery have added to our knowledge of their popular superstitions (Poin, "Une incantation en Mandâitê", Paris, 1892; "Inscriptions Mand." Paris, 1898-9; Litzbarski, "Ephem f. Sem. Epigr.", Giessen, 1900).

These sources show Nasoreanism to be a form of Gnosticism which stands towards late Babylonian and Platonism somewhat as Neo-Platonism stands towards the Greek and Roman Pantheon. It is an attempt to allegorize the ancient myths as being phases of man's creation and salvation, though Nasoreanism never rides it by itself of fantastic Eastern imagery. Probably through Nabataean commerce these southern Gnostic ideas reached the Jordan, and the east of the Jordan and developed a worship of St. John the Baptist. Their daily baptism is however earlier than St. John's practice and is probably the cause of their belief regarding St. John rather than the effect of it. They likewise absorbed a great deal of Indian and Parsee philosophy till they developed their doctrine of the Light-King, which is similar to the Manichean concept of the universe, though without an absolutely rigid dualism. No religion therefore bears a nearer resemblance to Nasoreanism than that of Mani, who himself was an eastern Baptist in his youth. Finally, through contact with the monothéism of Jews, Christians, Mohammedans, and later Parsees, they gradually drifted towards the acceptance of one God. Their worship of the Light-King is one of singular beauty and elevation. Their eschatology is extremely intricate; the cosmic is called by the mystical name Utara (ܐܘܛܪܐ) which means: Riches or Potencies; Hebrew עָלָה. It will suffice to mention a few prominent ideas. Pira Rabbâ is the source and origin of the universe; and a mistake in her is called the sin of the Carmelite Ignatius a Jesus, who lived some years in Bassa and wrote a description of the sect (1652).

II. Doctrines. These are to be gathered from a voluminous compilation called Genza or "The Treasure", and sometimes Sidra Rabbâ or "The Great Book", of which copies dating from the sixteenth and seventeenth centuries are in the Bibliothèque nationale at Paris and have been published by Petermann (Thessaurus s. Liber Magnus, vulgo Liber Adami, etc., Berlin, 1867) in Nasorean script and language. The form is not unlike Estrangela with vowels added in the modifications of the consonants, and the latter closely resembles that of the Aramaic in the Talmud. The text of the Manichean gnostic free Latin translation was published by Norberg (London and Goth, 1817). Selections from the Gensis (about one fourth) have been translated into German by Brandt. This book is arbitrarily divided into two sections, called the Right and the Left Gensis from the curious Nasorean custom of writing these two portions in one volume but in inverted positions, the left being used at funerals and being written for the benefit of the dead. The Gensis is a collection of writings from all ages and sources, some dating even after the Mohammedan conquest. Another sacred book is the Kolosta, or "Summa" or practical vademecum containing hymns, liturgies, rites for marriages, etc. (published as Qoleta by Euting, RVD, 1867). The Sidé de de la mort i.e. the "Lectures of the Kings" was published in 1905 by Litzbarski and translated with commentary by Ocher in 1905. The Diwan, a priestly ritual, was published by Euting (1904), but the Aṣfar Malwaše, a astrological work on the signs of the Zodiac, is not yet published. In recent years many Nasorean inscriptions on pottery have added to our knowledge of their popular superstitions (Poin, "Une incantation en Mandâitê", Paris, 1892; "Inscriptions Mand." Paris, 1898-9; Litzbarski, "Ephem f. Sem. Epigr.", Giessen, 1900).

These sources show Nasoreanism to be a form of Gnosticism which stands towards late Babylonian and Platonism somewhat as Neo-Platonism stands towards the Greek and Roman Pantheon. It is an attempt to allegorize the ancient myths as being phases of man's creation and salvation, though Nasoreanism never rides it by itself of fantastic Eastern imagery. Probably through Nabataean commerce these southern Gnostic ideas reached the Jordan, and the east of the Jordan and developed a worship of St. John the Baptist. Their daily baptism is however earlier than St. John's practice and is probably the cause of their belief regarding St. John rather than the effect of it. They likewise absorbed a great deal of Indian and Parsee philosophy till they developed their doctrine of the Light-King, which is similar to the Manichean concept of the universe, though without an absolutely rigid dualism. No religion therefore bears a nearer resemblance to Nasoreanism than that of Mani, who himself was an eastern Baptist in his youth. Finally, through contact with the monothéism of Jews, Christians, Mohammedans, and later Parsees, they gradually drifted towards the acceptance of one God. Their worship of the Light-King is one of singular beauty and elevation. Their eschatology is extremely intricate; the cosmic is called by the mystical name Utara (ܐܘܛܪܐ) which means: Riches or Potencies; Hebrew עָלָה. It will suffice to mention a few prominent ideas. Pira Rabbâ is the source and origin of the universe; and a mistake in her is called the sin of the Carmelite Ignatius a Jesus, who lived some years in Bassa and wrote a description of the sect (1652).
This female monster of chao5 Nasoreans called the Holy Ghost, the Deceiver (spirit is feminine in Aramaic) or Ruha, no doubt to spite the Christians. This Ruha has a son called Ur, the prince of devils. Manasseh, a son of Adanadam, claimed the "existence of God" is without motion. With the help of Abel, Seth, Enos, and Adakas there is breathed into him the spirit of life. The seven planets, however, and the twelve signs of the Zodiac constitute an evil influence in the world, which is continually being overcome by the Manda de Hayye. With the doctrine of the Light-King, the Father of the sons, begets Manda de Hayye or Protanthropos, Adam as the First man. This Manda de Hayye becomes incarnate in Hibil the Glorious or Hibil Ziva (חִבִּיל הָיוֹם). Kessler pointed remarks that if Manda is the Christ then Hibil is the Jesus Christ of Nasoreanism. Hibil's descent from Adam now plays a great role in their theorizing. Hibil is the Saviour and the Prophet of the man of God. He is Marduk attempting to displace Jesus of Nazareth. A last emanation of the Light-King was John the Baptist, who with Hibil, Seth, and Enos are brethren of the Manda de Hayye. Frequent mention is made of heavenly Jordans, being streams of living waters from the transcendental realm of light. Hibil Ziva was baptized in 360,000 of them before his descent to the nether world.

III. Discipline and Ritual.—The Nasoreans strongly repudiate all ideas of celibacy and asceticism; they have a true Semitic contempt for the unmarried and repeatedly inculcate the precept "incest is a sin to all the human family" and turn it into denial as useless and unnatural, and if they observed the Mohammedan facts at least in outward appearance it was only to avoid trouble and persecutions. They are the reverse of Manicheans; there may be much evil in this world but man is bound to make the best of it. No wonder Mani left them. They observe no days of fasting, no weeks of mourning, no Lent, no Easter, no Christmas, no Thanksgiving, no Independence Day. Their food is not consecrated to them, they eat no game or anything which is strangled or forbidden to them, all food prepared by strangers, and even food bought in the market, must be washed. They have no special hours for prayer except that they must only pray when it is light, no prayer is heard as long as it is dark. Not the Mohammedan Friday, or the Jewish Sabbath, but the Christian Sunday is their weekly holy day. This, however, is not a conscious imitation of the Christians, whose "Carpenter-god" they hate as a son of the devil. The religious observance of other holidays seems of more recent origin, though no doubt their civil observance, as in the case of New Year's day (first day of Wintermonth; their months have thirty days with five intercalary days) of Paskas Lanksin, is sufficient evidence, being a festival of ancient Babylonia. They observe Ascension day (of Hibil Ziva returning from Hades) on the eighteenth of first Springmonth, the Great Buddhist Festival on the intercalary days, the Feast of the Egyptians apparently drowned in the Red Sea under Pharaoh (they were not really drowned, but crossed to the west) in the feeds expressly Nasoreans), and a few other feasts. They possessed a hierarchical priesthood to whom they paid a profound veneration. Their patriarch is the Rash Amma, chief of the people, but they seem but rarely to have had such a dignitary; legend says only one before and one after John the Baptist. A kind of bishops, priests, and deacons form the hierarchy; they are called Ganzivra, Tarmidha, and Shecandha, or Tresa-

ner, Disciple, and Messenger. The ordination to the priesthood is preceded by a so-called retreat of sixty days during which the candidate submits to many quaint rules and baptisms. The Shecanda is only an assessor, but the priest's privilege is the power to baptize; the bishop is the actual ruler of the community. They possess three great sacramental rites, Masbutha or baptism; Pehta and Mabuha or communion, really morsel (bread) and draught (water); and Kusta or troth, a handshake and plighting of troth. Baptism, always in flowing or living water of rivers, is the greatest of all the rites. Children are baptized as soon as they can bear total immersion. Self-baptism is frequent; the priest when baptizing used originally the formula: Thou art signed with the sign of life: The Name of the Life and the Manda de Hayye is named over thee. Baptism takes place on Sunday and on many other occasions when forgiveness of sins is required. It is followed by a kind of anointing with moist sesame. Communion is given in thin unleavened cakes kept in the priest's house and a handful of water. Kusha is a solemn sign of fellowship with brother Nasoreans. "Breadths of the flesh pass away, Kusha brethren remain forever", says the proverb. The history of the Nasoreans is unknown. The Gensa contains a Book of Kings of a pseudo-historical character, but the utter confusion of their historical reminiscences makes it difficult to find a kernel of truth. The Nasoreans were lost to history till Ignatius a Jesuit brought the news of their existence. They have been a prominent religion, as they were classed with Christians in the eyes of the Mohammedans. It is often held that they once actually dwelt in Palestine near the Jordan and immigrated into Chaldea. Their bitter hatred of all that is Jewish or Christian (for Moses is a false prophet, Jesus, the Great Deceiver, whom Enos justly brings to the cross), together with their extensive use of Biblical names, would seem to indicate that through their "theology" is Indian-Babylonian they were once historically connected with Jewish Christians.

Natal, Vicariate Apostolic of.—The history of the Catholic Church in South Africa goes back to 1806, when a Priest in the Cape was appointed. But they were saved from the wreck of the Marichal near the Cape of Good Hope. But they were only allowed to land, and no permission was given them to minister to the few Catholics who were already in Cape Town. It was not until 1803 that a Catholic priest was permitted to say Mass in Cape Colony. Fathers were only allowed to reside with permission. When the French Prinsen landed at Cape Town in 1803; the following year they were expelled. Pius VII by letters Apostolic dated 8 June, 1818, appointed the Rt. Rev. Edward Bede Slater, O.S.B., the first vicar Apostolic of the Cape of Good Hope and the neighbouring islands, Mauritius included. Bishop Slater on his way to Mauritius in 1820, and a year before the French took over Cape Town in charge of the Catholics. In 1826 Rev. Theodore Wagner became resident priest. He was succeeded by Rev. E. Rishton in 1827. On 6 June, 1837, Gregory XVI established the Vicariate of the Cape of Good Hope, separate from Mauritius, and from that time Cape Colony had its own bishops.

South Africa, comprising the country between Cape Agulhas and the tenth degree of south latitude and
between the tenth and fortieth degrees of east longitude, was too much for one bishop. On 30 July, 1847, Pius IX raised a new diocese for the eastern portion of Cape Colony. This new vicariate included first the eastern district of Cape Colony, Natal, and the Orange Free State (Orange River Colony since the late South African war). The same pontiff on 15 November, 1830 separated Natal and the Orange Free State from the Eastern Vicariate. The first bishop appointed by Rome to take charge of the Eastern Vicariate was the Rt. Rev. Aidan Deveraux, D.D. He was consecrated bishop at Cape Town, 27 December, 1847 by the Right Rev. Dr. Griffith. When Pius IX erected the Vicariate of Natal, on 15 November, 1830, the area of the new vicariate comprised all the portion of South Africa extending outside the then existing dioceses of Cape Town and Grahamstown. Apostolic was the Right Rev. Dr. Allard, O.M.I. He landed at Port Natal with five missionaries of the same French order. The name of this colony dates from Vasco da Gama, the Portuguese voyager, who sighted its headlands on Christmas Day, 1497, which suggested the name of Terra Natalis. In 1760 the British had a settlement on the present harbour of Durban, speedily abandoned; and more than a hundred years passed before Natal was again visited by Europeans.

After several wars between Dutch, British, and natives, Natal was declared a British colony in 1843. Nine years later, Dr. Allard and his five companions landed at Port Natal, and found that the priest had been residing in Natal. The country had been occasionally visited by a priest from Cape Colony. The first missionary who ministered to the Catholics of Natal was Rev. Father Murphy, sent by Bishop Deveraux. Its area is about 35,371 square miles, and it is bounded on the north by Transvaal Colony, on the west by Griqualand East and the Indian Ocean; on the south by Cape Colony (Pondoland); and on the west by Cape Colony (Griqualand East), Basutoland, and Orange River Colony from which it is separated by the Drakensberg Mountains. At the time of the advent of the first missionaries, the white element of the population was almost insignificant. Agriculture was practically unknown. Industry, at present a source of wealth, was altogether ignored.

The Catholic population was then composed of about two hundred in Durban and three hundred in Pietermaritzburg; it comprised only the white element, immigrants from England and especially from Ireland. To this are added schools: at Pietermaritzburg, Zululand, and the Transkei, which districts formed a portion of the Vicariate of Natal, was altogether uncivilized. The agents of the London Missionary Society had organized some missionary work for the civilization of natives. But they came out rather as officials of the Government, and therefore were not altogether ready to go through the hardships of missionary life. Besides the Europeans and natives, there was the scattered Dutch population. Natives and Dutch were not prepared to receive the Catholic faith. Among the former, superstitions, a sickening immorality, and polygamy, and among the latter, prejudices, and hatred against the Church of Rome, rendered for many years all the efforts of the missionaries apparently fruitless. However disheartening was the result of their work, the pioneers remained at their post. For seven years they had not the consolation of registering one soul for the Catholic Church, yet the intrepid and courageous Dr. Allard wanted push further his expeditions against paganism.

He for his part, unhesitatingly went among the natives, to whom the missionaries wished to devote themselves altogether, and he called the new mission St. Michael. Here they were destined to battle against many obstacles, privation of the necessities of life, difficulty of communication, and poverty, which drove the missionaries to the verge of starvation. The address of the Eastern Vicariate to Dr. Allard to found missions as far as Basutoland. Religious increase was slow, owing to the small number of missionaries and the degradation of the population. Communication was extremely slow and difficult, and was generally either by wagons drawn by oxen, or on horseback; during the rainy season travel was very dangerous, owing to the swollen rivers. Amidst such hardships and privations Dr. Allard felt that his life was drawing to a close. He retired to Rome, where he died soon after. Under his successor, Rt. Rev. Dr. Charles Jolivet, O.M.I. appointed 30 Nov., 1874, the Vicariate of Natal has made rapid progress in the way of Christianity and civilization. New missions were founded all over this immense vicariate, and new chapels and schools for Europeans and natives were opened. Many obstacles which in the beginning had rendered the missionary work very difficult were removed. Communication became easier, owing to the new railways and roads laid out across the country by the Government of Natal. Missionaries and their work has been distinctly beneficial to the natives on a very large scale, owing to the advent of some Trappists into the Colony of Natal, who afterwords were organized into the "Congregation of the Missionaries of Mariannhill". They have devoted themselves entirely to the evangelization of the natives, and as statistics show, their efforts and labours have been crowned with success. The native population has increased, and hampered much the missionary work in this vicariate, but the consequences of this war have practically disappeared. Through the treaty agreed to by the British and the Boers, the Districts of Utrecht, Vryheid, and Waskerkerst were ceded to Natal and have been added to this vicariate, which now comprises the three previously described districts, Natal proper, Transkei, Swasiland, and Zululand.

The present bishop (1910) is Rt. Rev. Henri Delalle, O.M.I., appointed in 1904. The white population of the vicariate is estimated to be about 100,000; natives, Indians, and Malays, 1,000,000; the Catholic population is 25,737 (whites, 7,458; natives, 15,227; coloured, 3,052). Priests: Oblates of Mary Immaculate, 38; Missionaries of Mariannhill, 46; secular priests: Europeans, 4, natives, 3. There is a seminary, with eleven theological students. Lay brothers: Oblates of Mary Immaculate, Europeans, 4, native, 1; Missionaries of Mariannhill, 305; Marist Brothers, 7. Number of churches, 59; missions, 49. Number of schools: 1st degree, 533, 395 native and coloured, 62, pupils, 1864; for coloured, 10, pupils, 472; most of the schools are conducted by nuns. Orders of women: Sisters of the Precious Blood, 324; Sisters of the Holy Cross, 55; Sisters of Nazareth, 12; Sisters of the Holy Family, 92; Dominicans, 138; Augustinians, 67; Franciscans, 12; Sisters of Kermaria, 13. Two schools for the whites, 13, and 24 for coloured, and 1 orphanage for coloured children are under the management of the Augustinian Sisters; and a house for orphans and aged is under the care of the Sisters of Nazareth House, with about 260 inmates. At the Bluff the Sisters of the Holy Family have an orphanage for European children; they have a novitiate at Bellair, with 10 novices. The Dominican Sisters have their mother-house at Oakford, and have also schools at Noodsberg, Generasso, Dundee, and Newcastle. At Ladysmith and Pietermaritzburg, there are 2 hospitals, and 2 sanatoriums of the Augustinian Sisters.

Besides the numerous boarding-schools established in different parts of the vicariate, there are many Sunday schools under the control of the Government, and receive a subsidy proportioned to the number of pupils.
Natal Day.—Both the form natalis (sc. dies) and natalicium were used by the Romans to denote what we call a birthday, i.e. the anniversary of the day when a man was born. Also the Greek words γενέσθαι and γενέσθησαι were similarly employed. But in both Greek and Latin a certain extension of this primitive use seems to have taken place even in pre-Christian times. In Latin natalis apparently came, at least sometimes, to mean little more than “anniversary” and it was used of the accession day of the emperor as well as of his birthday. Moreover we know that the games celebrated on an emperor’s birthday during his life, were often continued after his apotheosis upon the anniversary of his birthday as if he were still living. In Greek γενέσθαι came to be used in a similar way. It goes on “which day is observed as a memorial of a dead person by sacrifices and other rites (cf. Herodotus IV, 26). This commemoration is said to have taken place not upon the anniversary of the day of death but upon the actual birthday of the defunct person (C. I. G. 3417, and Rhode, “Psyche”, 4th ed., I, 230). When, therefore, the Christians of Smyrna about 150 A.D. wrote to describe how they took up the bones of St. Polycarp “which are more valuable than precious stones and finer than refined gold, and laid them in a suitable place, where the Lord will permit us to gather ourselves together, as we are able, in gladness and joy and to celebrate the birthday of his martyrdom” (Eusebius, “Hist. Eccl.”, v. 24, 31), it is not easy to say how far they were influenced by pre-existing pagan usages. This phrase “the birthday of his martyrdom” certainly seems to indicate the commemoration of the day on which he died, and all the subsequent history of the Church confirms the practice of keeping this as the usual feast of any saint on whose day a martyr’s death occurred. That the Greeks also commonly celebrated what they called απόλογος, (commemorative sacrifices), on the anniversary of the death of parents, it would seem that the faithful of the early Church did little more than Christianize a pagan custom. This they accomplished, first by offering the holy sacrifice of the Mass in honour of their deceased brethren instead of the blood or flesh of animal victims, and secondly by giving to this commemoration of a true believer’s passage to another life the name γενέσθησαι, or in Latin natalis, rather than to the day upon which he had been born into this world.

One cannot however entirely eliminate the doubt whether the celebration of Christianity γενέσθαι and natalis had not already come to mean little more than “anniversary” or “commemoration rite”. Tertullian says “oblationes pro defunctis pro natalicis annuis die facimus” (De Corona, cap. 3), which seems to mean “we offer Masses for the dead on their anniversary as a commemoration rite”.

Similarly the Chronographer of 354 refers at the beginning of his calendar against 22 February, “VIII Kal. Martias Natale Petri de cathedra”; where natale clearly signifies anniversary rather than birthday. Indeed where we find the Fathers emphasizing the etymology of the word, their language rather suggests that they expected the primary meaning of “birthday” to pass unnoticed. In any case the sense of anniversary alone fits a wide range of phrases which met us in the calendars and other documents of the fifth, sixth, and seventh centuries. Avitus of Vienne (d. 518) and Eligius of Noyon (d. c. 650) both refer to Maundy Thursday under the name “natalis calicis” (the commemoration of the chalice), a reference, of course, to the institution of the Eucharist, 1 Cor. 11:24, 25. After this there the feast appears under the same name in the calendar of Polemius Silvius of 448. Again in the Leonian Sacramentary we have the phrase “in natali episcoporum”, which the context shows to mean the anniversary of a bishop’s consecration (cf. Proboet, “Die ältesten röm. Sacramentarien”, 124 and 247, and Paulinus of Nola, “Ep. 20”), while the Gelasian Sacramentary uses such expressions as “natale consecrationis disiconi”, etc. So also in the Hieronymian Martyrology (c. 590), besides the constantly recurring natale applied to the festivals of martyrs we have, e.g. on 2 Aug., “In Antiochia natalis reliquiarum Stephani protomartyris et disiconi. None the less a certain stress seems to be laid on the Christian origin and in mos- tary inscriptions upon the idea that the day of a man’s death was his birthday to a new life. Thus St. Ambrose (Serm. 57, de Depos. St. Eusebii) declares that “the day of our burial is called our birthday (natalis), because, being set free from the prison of our crimes, we are born to the liberty of the Saviour”, and goes on “who says that this day is observed as a great celebration, for it is in truth a festival of the highest order to be dead to our vices and to live to righteousness alone.” And we find such inscriptions as the following:

Parente filio mercurio pecce
Runt qui vixit annv et mesenes vll
Natus in pace id febb

Where “natus in pace” clearly refers to eternal rest. So again Origen had evidently some similar thought before him when he insists that “of all the holy people in the Scriptures, no one is recorded to have kept a feast or held a great banquet on his birthday. It is only sinners and sinning souls who have great rejoicings over the day on which they were born into this world below” (Origen, “in Levit.”, “Hom. VIII.”, in Migne P. G., XIII, 495). Naturally a certain amount of confusion resulted from this use of the same word natalis sometimes to signify natural birth, sometimes the passage to a better life. The former was consequently often distinguished as “natalis in carnale genuinum”, “natalis de nativitate”, the latter as “natalis passionis” or “de passione”, sometimes abbreviated as N. P.

Hermann Thurston.

Natalis Alexander. See Alexander, Natalis.

Natches, Diocese of (Natchezensis) established 28 July, 1837, comprises the State of Mississippi. Catholic missionary work in this territory began with the expeditions of Marquette, La Salle, and Iberville. Iberville planted a colony in 1699 to the east of the Natchez, and Marquette, on his return from the Illinois in 1706, founded the Mississippian mission on a site near Savanne, Rossalie, on a site within the present city of Natchez. Capuchin, Jesuit, and secular priests laboured in this field, having missions at Biloxi, Natchez, and Yazoo. Early in the history of the missions, Fathers St. Cosme and Foucault, seculars, were martyred by the Indians, as were the Jesuits Du Poisson, Souart, and Senat. In 1757 three priests from Salamanca, Fathers McKenna, White, and Savage, settled at Natchez and erected promising missions there and in the vicinity. When the territory passed from Spain to the United States, these missions were practically abandoned. Much valuable property was lost to the Church, and the efforts made to recover it were in vain. For many years the Catholics of Natchez depended upon chance visits of priests.

The first Bishop of Natchez, John Mary Joseph Chanche, was b. 4 Oct., 1795, at Baltimore, whither his parents had fled from San Domingo. He joined the Sulpiians, and was president of Mount St. Mary’s when appointed Bishop. He was consecrated 14 Nov., 1840, at Buffalo, by the Bishop of the Diocese of the Missouri, the only priest in the state. Father Brogad, who was there but temporarily. Taking up the rôle of a simple missionary, he began to collect the Catholics and organize a diocese. In 1842 he laid the corner stone of the present beautiful cathedral, and opened an acad-
emy for girls. In 1848 he invited the Sisters of Charity to Natchez. At the First Plenary Council, in 1852, Bishop Chanche was chief promoter. He died shortly after, and the see of the Council of Natchez, Md., leaving his diocese with 11 priests, 11 churches erected, and 13 attendant missions. James Oliver Van de Velde was transferred from Chicago to Natchez, 29 July, 1853. He served the diocese but two years. On 23 Oct., 1853, he broke his leg, and a fever set in which quickly developed into yellow fever; he died 13 Nov., 1855.—(See Chicago, Archdiocese, by W. Charles; Rev. John Van de Velde was succeeded by William Henry Elder (q. v.).) The next bishop, Francis Janssens, was b. at Tillburg, North Brabant, Holland, studied at Louvain, and was ordained 21 Dec., 1867. In 1870, he was rector of the cathedral at Richmond, Va., and later vicar-general of that dioce of under Bishops Gibbons and Keough. He was consecrated Bishop of Natchez, 1 May, 1881, and promoted to be Archbishop of New Orleans, 7 August, 1888. Thomas Heslin was b. in County Longford, Ireland, 1847, and on the completion of his classical studies, came to America at the invitation of Archbishop Odin. He entered the seminary of Bouligny, New Orleans, was ordained in 1868, and was appointed to the See of Michael's, New Orleans, when he received his appointment as Bishop of Natchez. He was consecrated in 1889.

The religious institutes represented (1910) in the diocese are: Lazarist Fathers; Josephite Fathers (three charges); Fathers of the Society of the Divine Word (three charges); Brothers of the Sacred Heart, (six houses); Sisters of the Holy Child (two houses); Sisters of Charity (Nasareth); Sisters of the Perpetual Adoration; Sisters of St. Francis; Sisters of St. Joseph; Sisters of Mercy; School Sisters of Notre Dame; Sisters Marianne of the Holy Cross; Sisters of the Holy Ghost. There are 39 secular and 7 regular priests; 53 churches with resident priests, 42 missions, 31 parochial schools, 1 college preparatory school, 2 academies (for girls; 32 parochial schools, 5 ecclesiastical students, 2 orphans' asylums (158 inmates). Total of young people under Catholic care, 4,988; total Catholic population, 25,701.

Catholic Directory (1910); Sura, Defenders of Our Faith: The Catholic Church in the U. S. Brother Charles.

Natchitoches, Diocese of, former title of the present Diocese of Alexandria (Alexandrinensis), which comprises all the northern part of Louisiana above 31° N. lat., with an area of 22,212 square miles. The Venerable Antonio Margil (q. v.), whose canonization is in process, was the first priest to minister within the territory now forming the diocese. From the Aya Indians, west of the Sabine river, Father Margil heard of the Adaves Indians, and in March, 1717, he located them near Spanish Lake, in what is now Sabine county, La. He founded the mission of San Miguel de Linares and built there probably the first church in Louisiana, for, according to the historian Martin, who visited Natchitoches in 1725, he found there "about 100 cabins, two or three dwelling houses, and a miserable storehouse which had been at first occupied as a chapel, a shed being now used for that purpose." Leaving Father Gusman in charge, Father Margil journeyed on foot to Natchitoches to minister to the French Catholics there, and then went back to Spain. In 1718, during the brief war with Spain, St. Denis, the French Commandant at Natchitoches, invaded the Adaves mission, plundered it, and carried away church vestments. Father Margil heard of it, and in 1721 came back, hunted up the Adaves who had taken refuge in the forests for fear of the French, rebuilt their church, which he dedicated to St. Isidore, and remained there for the rest of his life. For many years afterwards the Adaves mission was attended from San Antonio by the Franciscans, who attended also the missions of Nacogdoches and St. Augustine, Texas. In 1725 there were 50 Catholic families at Natchitoches. In 1728 Father Maximin, a Capuchin, was stationed in the diocese. There is no record to show how the eastern portion of the diocese was evangelized; the Catholic names, however, given to villages and lakes contiguous to the Mississippi, show that priests must have visited that country, probably the Jesuits, who in the eighteenth century had charge of the Indians along the Mississippi under the Bishop of Quebec. The records show that in 1829 Father Martin of Ayovelles attended the Catholics on the Red, Black, and Ouachita rivers; that, in 1840 and after, Father J. Timon, afterwards Bishop of Buffalo, made regular trips from Texas to attend the north Louisiana missions, and that Father O'Brien, a Dominican from Louisville, attended yearly the Catholics along the Mississippi. The Catholics located on the rivers of the state often drifted to New Orleans on barges to have their marriages blessed and their children baptized, and came back cordelling their boats.

In 1852 the Fathers of the First Council of Baltimore recommended to the Holy See the division of the Archdiocese of New Orleans, the formation of the Diocese of Natchitoches and the appointment of Father Martin, parish priest of Michael's, New Orleans, when he received his appointment as Bishop of Natchitoches. He was consecrated in 1889.

Bishop Augustus M. Martin (1802-1875), born in Brittany, inherited the deep faith of the Bretons. A protégé of Abbé Jean-Marie de Lafayennais, as a seminarian, he was encouraged by Bishop de la Haye to come to France in Paris under Cardinal Prince de Troy and Vicar-General J.-M. de Lafayennais. There he came in contact with Montalembert and other disciples of Félicité de Lafayennais, and acquired the polished manners that never left him. In 1839, while chaplain of the royal college in Rennes, he met Bishop de la Haye, who became his sponsor and friend. He was ordained for six years was vicar-general. His health failing, he came to Louisiana, and in 1852 was vicar-general of Mgr Blanc of New Orleans. Bishop Martin left a collection of unpublished letters that tell interestingly the history of his diocese, his struggles with poverty, his many trips to France to recruit his clergy. A fluent writer, his letters to the provincial chapter of the diocese were inserted in the "Annals"; the bishops of the Second Council of Baltimore and those of the provincial Council of New Orleans delegated him to write letters of thanks to the directors of the Propagation of the Faith for their generous contributions. Both letters were reproduced in "Les Missions Catholiques." Bishop Martin left an organized diocese with 20 priests, the Sisters of the Sacred Heart with one convent at Natchitoches, and the Daughters of the Cross with their mother-house and several convents in the diocese.

He was succeeded by Bishop F. X. Lerat, also a Breton, the hero of seven yellow fever epidemics, and founder of the Sisters of Mercy in Louisiana. He remained in Natchez only two years, being selected as coadjutor to the Archbishop of New Orleans. He died in 1887.

Bishop Anthony Dubuis succeeded him. Born near Lyons, France, he came to this country in 1855, was pastor in New Orleans for 26 years, and one of the theologians of the Second Council of Baltimore. Consecrated in 1885, he died in 1904, having finished the cathedral and built an episcopal residence at Natchitoches.

The present bishop is Right Rev. Cornelius Van De Ven, born at Oirschot, Holland, 16 June, 1865. He studied in the diocesan seminary of Bois-le-Duc, was ordained 31 May, 1885. He served a year. After filling important posts in the Archdiocese of New Orleans, he was consecrated Bishop of
Nathanael, one of the first disciples of Jesus, to whom He was brought by his friend Philip (John, i, 43–51). It is generally held that Nathanael is to be identified with the Apostle Bartholomew of the Synoptic writers. The latter make no mention of Nathanael, but in their lists of the Twelve, one, Bartholomew, is always designated by his family name Bar-Tolmaï (son of Tolmaï), and this it is he whom the author of the Fourth Gospel designates by his personal name Nathanael. The main reasons on which this assumption rests are: (1) that the circumstances under which Nathanael was called do not differ in solemnity from those connected with the call of Peter, whence it is natural to expect that he as well as the latter was numbered among the Twelve; (2) Nathanael is mentioned as present with other Apostles after the Resurrection in the scene described in John, xxii; (3) Nathanael was brought to Jesus by Philip (John, i, 45), and thus it seems significant that Bartholomew is always mentioned next to Philip in the lists of the Twelve given by the Synoptists (Matt., x, 3; Mark, ii, 18; Luke, vi, 14).

James F. DRISCOLL.

Nathinites, of Nathineans (NATHINEANS, the given ones; LXX generally of Nathaneús, once [I Chron., ix, 2] of δῆδωμεν), an inferior class of Temple servants. The name occurs in seventeen passages of the O. T., and the Vulgate renders it always by the adapted transcription Nathaneús, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathaneel, Nathanael, Nathanael, Nathanael, Nathanael, Nathanael, Nathanael, Nathanael). In this instance Nathanael served the interests of the country as well as those of David and Solomon by averting a civil war. He is credited by the Chronicler with having written a part of the history of David, together with Samuel the seer and Gad the seer (I Chron., xxix, 29; II Chron., xxix, 25). The tiempo Nathanael's death is not given, but his name is mentioned in Ecclus., xlvi, 1.

(2) NATHAN, son of David and Bethsheba (II Kings, v, 14; I Chron., iii, 5, xiv, 4). The name Nathan augmented by the theophorous prefix or suffix is borne by other members of the family of David. Thus one of his brothers was Nathanael (I Chron., ii, 14), and one of his nephews, Jonathan (II Kings, xxxi, 21).

(3) NATHAN, father of Azarias and Zabud, important functionaries of the court of Solomon (III Kings, iv, 5). By some scholars he is identified with Nathan the prophet (1), and by others with Nathan the son of David (2). These two persons are merely conjectural. His son Zabud is designated as the son of Nathan by the Chronicler (I Chron., ii, 36), and by others by the name of Zabud (4). This indication, among many others, that the functions of the priesthood were not at that period exercised exclusively by the descendants of Aaron.

(4) NATHAN, son of Ethel and father of Zabud (1 Chron., ii, 30), of the tribe of Judah and of the branch of Caleb. His grandfather Jeraa was an Egyptian slave to whom Seeman gave one of his daughters in marriage (1 Chron., ii, 34–55).

(5) NATHAN, one of the prominent Jews of the time of the Captivity, chosen by Esdras together with several others to find levites for the temple service when the Jews were camped on the banks of the Ahava preparing to return to Palestine (I Esdr., vii, 16). See also, NATHAN, one of the men of one of four classes mentioned in I Esdr., x, 39. He was among those who, at the command of Esdras, put away the foreign wives they had married.

James F. DRISCOLL.

Nathan, (נַתַּן, God-given), name of several Israelites mentioned in the Old Testament.

(1) NATHAN, successor of Samuel and prophet in the time of David and Solomon. No indication is given as to his origin, and he appears in the narrative for the first time when David is contemplating the erection of a house to the Lord (II Kings, vii). He assures the monarch of the Lord's support and of the divinely ordained establishment of his kingdom for all time, but dissuades him from the idea of building a temple stating that this honour is reserved for his son and successor (II Kings, vii, 13; I Chron., xvii, 1–15). Nathan appears later to reproach David in the name of the Lord for his crime of adultery and murder narrated in II Kings, xi, and, after skillfully proposing the allegory of the poor man's little ewe lamb, warns the king with the words: "Thou art the man!" He then declares the anger of the Lord and the punishments that are to fall upon David, although in view of the latter's repentance his sin is pronounced forgiven, for his crimes had given occasion to the enemies of the Lord to blaspheme (II Kings, xii, 1–15). The prophet next appears on the scene when it is question of securing to Solomon the succession to the throne of his father.

Adonias, betrothed to Joab and the high priest Abia-thar, made an attempt to have himself proclaimed king. The plan was frustrated by Nathan who, first through Bethsaida and later in a personal interview, informed David as to the doings of Adonias, and persuaded the aged monarch to confirm his promise in favour of Solomon, his heir (I Kings, i, 3–17). He stands proclaimed king by the fountain of Gihon (III Kings, i, 8–45). In this instance Nathan served the interests of the country as well as those of David and Solomon by averting a civil war. He is credited by the Chronicler with having written a part of the history of David, together with Samuel the seer and Gad the seer (I Chron., xxix, 29; II Chron., xxix, 25). The timing of Nathan's death is not given, but his name is mentioned in Ecclus., xlvi, 1.

(2) NATHAN, son of David and Bethsheba (II Kings, v, 14; I Chron., iii, 5, xiv, 4). The name Nathan augmented by the theophorous prefix or suffix is borne by other members of the family of David. Thus one of his brothers was Nathanael (I Chron., ii, 14), and one of his nephews, Jonathan (II Kings, xxxi, 21).

(3) NATHAN, father of Azarias and Zabud, important functionaries of the court of Solomon (III Kings, iv, 5). By some scholars he is identified with Nathan the prophet (1), and by others with Nathan the son of David (2). These two persons are merely conjectural. His son Zabud is designated as the son of Nathan by the Chronicler (I Chron., ii, 36), and by others by the name of Zabud (4). This indication, among many others, that the functions of the priesthood were not at that period exercised exclusively by the descendants of Aaron.

(4) NATHAN, son of Ethel and father of Zabud (I Chron., ii, 36), of the tribe of Judah and of the branch of Caleb. His grandfather Jeraa was an Egyptian slave to whom Seeman gave one of his daughters in marriage (I Chron., ii, 34–55).

(5) NATHAN, one of the prominent Jews of the time of the Captivity, chosen by Esdras together with several others to find levites for the temple service when the Jews were camped on the banks of the Ahava preparing to return to Palestine (I Esdr., vii, 16). See also, NATHAN, one of the men of one of four classes mentioned in I Esdr., x, 39. He was among those who, at the command of Esdras, put away the foreign wives they had married.

James F. DRISCOLL.
Though not of the Jewish race, it is probable that the Catholicae learned and practised the Jewish religion. Nehemias (II Esd., x, 29) classses them with those who were separated from the people to serve the law of God, but according to the Talmud they were a despised class and were debarred from contracting marriage with Jewish women. They were carved out in captivity with the others by Nahumodonosor, and according to Esdras, 612 of them including those called "the children of the servants of Solomon") returned to Palestine: 392 with Zorobabel (I Esd., ii, 43-58; II Esd., vii, 47-60), and 220 with Esdras eighteen years later (I Esd., viii, 20). After the return the Catholicae were placed in a middle class of the hierarchy, and they were especially the lot of the monasticism in the Latin Church. At the period when they were not detailed for service in the Temple, the others in Jerusalem, where, as Nehemias informs us (I Esd., iii, 26, xi, 21), they inhabited the Ophel quarter, i.e., the southeast part of the city, and near the gate leading to the fountain now known as the Fountain of the Virgin. From this they drew the water of which copious use was made in the sacrificial and other sacred functions. They had officers chiefly chosen from among their own ranks (II Esd., xi, 21; cf. I Esd., ii, 43; II Esd., vii, 47). Like the priests and levites they were exempted from taxation. The Catholicae are mentioned in the New Testament. 

James P. Driscoll.

National Union, Catholic Young Men's.—This association was organized on 22 February, 1875, at a meeting held in Newark, New Jersey, at the call of Very Rev. George H. Doane, who became its first president. It includes about one hundred organizations, representing an estimated aggregate of about 30,000 persons and extends as far west as Mankato, Minnesota. Its objects are the furtherance of practical, religious, and physical advancement of Catholic youth, and the development of better citizens and Catholics. The means principally relied upon are: the conscientious practice and profession of the Catholic religion; the establishment and promotion of Catholic libraries, reading-rooms, and gymnasia; fraternal unity between all organizations aiming in whatever way at the promotion of the Union's objects; mutual assistance and enlightenment; maintenance and conduct of an athletic league giving special attention to boys of the parochial schools; dissemination of selected courses in reading among Catholic libraries; courses of lectures to Catholic young men's associations, and securing to organizations of the National Union the privilege of having their members received as guests by the other organizations of the Union. Originally, delegates met annually, and did little in the interim but enlist the co-operation of other organizations in its works. At the present time, it is engaged in other educational works, which are conducted largely through diocesan unions performing the National Union's functions within their respective districts.

In 1878 the National Union inaugurated the movement for obtaining appointments of a greater number of Catholic chaplains to the army and navy—a movement which was entirely successful. At about the same time, it began the agitation to secure recognition of the religious rights of the Indians. At the convention of 1879, the establishment of coloured literary societies, free night-schools, the fostering of a more general activity among young men in teaching Sunday-school, and the establishment of a lecture bureau were among the questions discussed; by 1883 much had been done along these lines. In 1883 the Third Plenary Council of Baltimore, in the Pastoral Letter of the Bishops and Archbishops, says of the work of the National Union: "We consider as worthy of particular encouragement associations for the promotion of useful social union among Catholics, and especially those whose aim is to guard the young men against dangerous influences, and to supply them with the means of innocent amusement and mental culture. And in order to acknowledge the great amount of good that the Catholic Young Men's National Union has already accomplished, to promote the growth of the Union, and to stimulate its members to greater efforts in the future, to spiritually bless their aims and endeavours, and we recommend the Union to all our Catholic young men."

The Catholic Summer School at Plattsburg, New York, is a direct outgrowth of the National Union. Plans for its establishment having been discussed and approved at the conventions, and carried into effect by Warren E. Mosher, the secretary of the National Union at the time, and the founder of the Summer School. The National Union has also furthered the cause of education by contributing to the endowment funds of the Catholic University of America.

At the convention of 1886, held in New York City, a committee was appointed to prepare a plan of regulations for the school. It met at the convention of 1897 held at Elizabeth, New Jersey. Under the original organization it had always been required that the president and first vice-president should be clergymen: this was now changed, the various departments of the Union were organized on a business basis, the athletic work was systematized by establishing the Catholic Amateur Athletic League, a branch of the National Union with complete control over all athletic affairs of the Union, and a complete and efficient literary and lecture system was instituted.

It was only in this year that a proper plan was drawn for the continuation of the activity of the Union between conventions. The reorganization also created the office of the spiritual director, who is practically the senior officer of the National Union, and is supreme in all matters affecting faith and morals. The National Union has always been conducted by voluntary effort, but its activities have now grown to such an extent that they require an efficient paid force, for which purpose an adequate endowment fund is now being raised.

W. C. Sullivan.

Nativity of the Blessed Virgin Mary, Feast of the.—The earliest document commemorating this feast comes from the sixth century. St. Romanus was the great ecclesiastical lyrst of the Greek Church, composed for it a hymn (Card. Pitra, "Hymnogr. Graeca", Paris, 1876, 191) which is a poetic sketch of the apocryphal Gospel of St. James. St. Romanus was a native of Emesa in Syria, deacon of Berytus and later on at the Blachernae church in Constantinople, and composed his hymns between 630 and 638 (P. Masis in "Byzant. Zeitschrift", 1906). The feast may have originated somewhere in Syria or Palestine in the beginning of the sixth century, when after the Council of Ephesus, under the influence of the "Apocrypha", the cult of the Mother of God was greatly intensified, especially in Syria. St. Andrew of Crete in the beginning of the eighth century preached several sermons on this feast (Lucius-Anrich, "Anfänge des Heiligenkultus", Tübingen, 1906, 468). Evidence is wanting to show why the eighth of September was chosen for its date. The Church of Rome adopted it in the seventh century from the East; it is found in the German (seventh cent.) and the Gregorian (eighth to ninth cent.) Sacramentaries. (622; 366) It prescribed a litany and procession for this feast (P}
L., xxxviii, 897 sqq.). Since the story of Mary's Nativity is known only from apocryphal sources, the Latin Church was slow in accepting this oriental festival. It does not appear in many calendars which contain the Assumption, e.g. the Gotho-Gallican, that of Luxeuil, the Tolcedan Calendar of the tenth century, and the Menologion of Basil II. But this feast was later substituted by historical proofs. The feast is found in the calendar of Sonnatius, Bishop of Reims, 614–31 (Kellner, "Heerology", 21). Still it cannot be said to have been generally celebrated in the eighth and ninth centuries. St. Fulbert, Bishop of Chartres (d. 1028), speaks of it as of recent institution (P. L., xxi, 320, sqq.); the three sermons he wrote are the oldest genuine Latin sermons for this festival (Kellner, "Heerology", London, 1908, 230). The octave was instituted by Innocent IV (a. 1243) in accordance with a vow made by the cardinals in the concil of the autumn of 1241, when they were kept prisoners by Frederick II for three months. In the Greek Church the apostasia (separation from Christ, fear of God, etc.) is a center of the feast and the solemnity of the Exaltation of the Cross, 13 and 14 Sept. The Copts in Egypt and the Abyssinians celebrate Mary’s Nativity on 1 May, and continue the feast under the name of "Seed of Jacob" 33 days (Anal. Juris Pont., xxi, 403); they also commemorate it on the first of every month (priv. letter from M. G. A. M., Alkemade). The Church of the Copts has adopted the Greek feast, but keep it 10 Sept. (Nilles, "Kal. man.", II, 696, 706). LUCIUS-ANTH., Anfänge des Heiligenkalubs (Tübingen, 1904); HOLMECK, Fasti Mariani (Freiburg, 1894), 118 sqq. FREDERICK G. HOLMECK.

Naturalism is not so much a special system as a point of view or tendency common to a number of philosophical and religious systems; not so much a well-defined set of positive and negative doctrines as an attitude or spirit pervading and influencing many doctrines. As the name implies, this tendency consists essentially in looking upon nature as the one original and fundamental source of all that exists, and hence the only one in which any being can find its being. The limits of nature are also the limits of existing reality, or at least the first cause, if its existence is found necessary, has nothing to do with the working of natural agencies. All events, therefore, find their adequate explanation within nature itself. But, as the term means (q. v.) and natural are themselves used in more than one sense, the term naturalism is also far from having one fixed meaning. (I) If nature is understood in the restricted sense of physical, or material, nature, naturalism will be the tendency to look upon the material universe as the only reality, to reduce all laws to mechanical uniformities and to look upon the universe of spirit and matter. Mental and moral processes will be but natural phenomena, or the results of matter rigorously governed by its laws. (II) The dualism of mind and matter may be admitted, but only as a dualism of modes or appearances of the same identical substance. Nature includes manifold phenomena and a common substratum of the phenomena, but is beyond its ultimate and proper definition, it requires no principle distinct from itself. In this supposition, naturalism denies the existence of a transcendent cause of the world and endeavours to give a full account of all processes by the unfolding of potencies essential to the universe under laws that are necessary and eternal. (III) Finally, if the existence of a transcendent First Cause, or personal God, is admitted as the only satisfactory explanation of the world, Naturalism claims that the laws governing the activity and development of irrational and of rational beings are never interfered with. It denies the possibility, or at least the fact, of any transitory intervention of God in nature, and of any revelation and permanent supernatural order for man.

These three forms are necessarily exclusive; what the third denies the first and the second, a fortiori, also deny; all agree in rejecting every explanation which would have recourse to causes outside of nature. The reasons of this denial — i.e., the philosophical views of nature on which it is based — and, in consequence, the extent to which explanations within nature itself are held to suffice, vary greatly and constitute essential differences between them.

I. Materialistic Naturalism asserts that matter is the only reality, and that all the laws of the universe are reducible to mechanical laws. What theory may be held concerning the essence of matter makes little difference here. Whether matter be considered as continuous or as composed of atoms distant from one another, as being exclusively extension or as also endowed with an internal principle of activity, or even as being only an aggregate of centres of energy without any real extension (see Atomism; Dynamism; Mechanism), the attitude of Naturalism is the same. It claims that all realities in the world, including the proofs of consciousness, are but manifestations of what we call matter, and obey the same necessary laws. While some may limit their materialistic account to nature itself, and admit the existence of a Creator of the world, or at least leave this question open, the general tendency of Materialism is towards Atheism and exclusive Naturalism. Early Greek philosophers and atomists produced nature to unity by pointing to a primordial element out of which all things were composed. Their views were, implicitly at least, Animistic or Hylomorphic rather than Materialistic, and the vague formative function attributed to the Nous, or rational principle, by Anaxagoras was but an exception to the prevailing naturalism. Pure mechanism was developed by the Atomists (Democritus, Epicurus, Lucretius), and the soul itself was held to be composed of special, more subtle, atoms. In the Christian era materialism in its exclusive form is represented especially by the French school of the latter half of the eighteenth century and the German school of the latter half of the nineteenth century, but its real source and whatever takes place in the world is the result of material causes and must be explained by physical antecedents without any teleology. Life is but a complex problem of physics and chemistry; consciousness is a property of matter; rational thought is reduced to sensation, and will to instinct. The mind is a powerless accompaniment or epiphenomenon of certain forms or groupings of matter, and, were it suppressed altogether, the whole world would still proceed in exactly the same way. Man is a conscious automaton whose whole activity, mental as well as physiological, is determined by material antecedents. What we call the human person is but a transitory phenomenon of the material arrangement of elements, giving rise to special mental results; and it goes without saying that in such a system there is no room for freedom, responsibility, or personal immortality.

II. Pantheism in its various forms asserts that God, the First Reality, World-Ground, or Absolute, is not transcendent and personal, but is the universal world, and that the real nature of nature are only manifestations of this one common substance. For the Stoics, He is the immanent reason, the soul of the world, communicating everywhere activity and life. According to Scotus Erigena, "God is the essence of all things, for He alone truly is" (De divisione naturæ, 11); nature includes the totality of beings and is divided into (1) uncreated and creating nature, i.e., God...
as the origin of all things, unknowable even to Himself; (2) created and creating nature, i.e., God as controller and exectorial of all things; (3) created and not-creating nature, i.e., the world of phenomena in space and time, all of which are participations of the Divine being and also theosophy, or manifestations of God; (4) neither created nor creating nature, i.e., God as the end of all things to whom all things ultimately return. Giordano Bruno also professes that God and the finite determinations of the infinite substance. As absolute substance, God is natura naturans; as manifesting himself through the various modes of phenomena, he is natura naturata. To-day Monism reproduces essentially the same theories. Mind is not reduced to a property, or epiphenomenon, of matter, but both matter and mind are like parallels; they are both as phenomena or substances the same ultimate reality. What is this reality? By some, explicitly or implicitly, it is rather conceived as material, and we fall back into Materialism; by others it is claimed to be nearer to mind than to matter, and hence result various idealistic systems and tendencies; by others, finally, it is declared to be strictly unknown and thus Monism comes into close contact with Agnosticism (q.v.). Whatever it may be ultimately, nature is substantially one; it requires nothing outside of itself, but finds within itself its adequate explanation. Either the human mind is incapable of any knowledge bearing on the question of origins, or this question itself is meaningless. Nature and natural knowledge are eternal. The simultaneous or successive changes which occur in the world result necessarily from the essential laws of nature, for nature is infinitely rich in potencies whose progressive actualization constitutes the endless process of inorganic, organic, and mental evolution. The evolution and differentiation of the one substance according to its own laws and without the guiding agency of a transcendent intelligence is one of the basic assumptions of Monistic and Agnostic Naturalism. Nor is it possible to see how this form of Naturalism can consistently escape the consequences of Materialistic Naturalism. The supernatural is impossible; at no stage can there be an essential or accidental manifestation or mode of the common substance, including in himself the twofold aspect of matter and consciousness. Moreover, since God, or rather "the divine", as some say, is to be found in nature, with which it is identified, religion can only be reduced to certain feelings of admiration, awe, reverence, fear, etc., caused in man by the phenomena of nature, its laws, beauties, energies, and mysteries. Thus, among the feelings belonging to "natural religion", Haeckel mentions "the astonishment with which we gaze upon the starry heavens and the microscopic life in a drop of water, the awe with which we trace the marvelous working of energy in the motion of matter, the reverence with which we grasp the universal dominance of the law of substance throughout the universe" ("Die Welträthsel", Bonn, 1899, V, xviii, 396-97; tr. McCabe, New York, 1900, 344).

III. For those who admit the existence of a transcendent First Cause of the universe, naturalism constitutes an undue limitation of God's omnipotence in the world. God is only Creator, not Provider. He cannot, or may not, interfere with the natural course of events, or He never did so, or, at least, the fact of His ever doing so cannot be established. Even if the soul of man is regarded as spiritual and immortal, and if, among human activities, some are exempted from the determinism of physical agents and recognized as the free action of man, that action must be due to a transcendent nature in which includes the laws governing spirits as well as those governing matter. But these laws are sufficient to account for everything that happens in the world of matter or of mind. This form of naturalism stands in close relation with Rationalism and Deism. Once established by God, the order of nature is unchangeable, and man is endowed with all that is required even for his religious and moral development. The consequences are clear: miracles, that is, effects produced by God himself and transcending the forces of nature, must be rejected. Prophecies and so-called miraculous events either are explainable by the known, or hitherto unknown, laws of nature or, if they are not that unexplainable, their nature must be denied, and the belief in their reality attributed to faulty observation. Since, for religious and moral, as well as for scientific truths, human reason is the only source of knowledge, the fact of a Divine Revelation is rejected, and the contents of such supposed revelation can be accepted only so far as they are rational; to believe in Divine prophecy is to believe in natural destiny, man needs no supernatural means—neither sanctifying grace as a permanent principle to give his actions a supernatural value nor actual grace to enlighten his mind and strengthen his will. The Fall of Man, the mysteries of the Incarnation and the Redemption, with their implications and consequences, are, to natura naturata, impossible. Prayers and sacraments have only natural results explainable on psychological grounds by the confidence with which they inspire those who use them. If man must have a religion at all, it is only that which his reason dictates. Naturalism is directly opposed to the Christian Religion. But even within the fold of Christian thinkers, of whom those who are exponents of Rationalism and a supernatural order, several naturalistic tendencies are found. Such are those of the Pelagians and Semipelagians, who minimize the necessity and functions of Divine grace; of Baius, who asserts that the elevation of man was an exigency of his nature; of many sects, especially among Liberal Protestants, who fall into more or less radical Rationalism; and of others who endeavour to restrict within too narrow limits the divine agency in the universe.

IV. General Considerations.—From the fundamental principles of Naturalism are derived some important consequences in esthetical, political, and ethical sciences. In esthetics Naturalism rests on the assumption that beauty and harmony are inherent in natural forms, without the necessity of idealization, and without any regard for the laws of morality. Social and political Naturalism teaches that "the best interests of public society and civil progress require that in the constitution and government of human society no more attention should be given to religion than if there were no religion at all, or at least that no dishonor should be made between true and false religion" (Pius IX, Encyc. "Quanta cura", 8 Dec., 1864). Leo XIII lays it down that "the integral profession of the Catholic Faith is in no way consistent with naturalistic and rationalistic opinions; the sum and the substance of which is to do away altogether with Christian institutions, and, disregarding the rights of God, to attribute to man the supreme authority in society" (Encyc., "Immortale Dei", 1 Nov., 1885). Moreover, like individual organisms, social organisms obey fatal laws of development; all events are the necessary results of complex antecedents, and the task of the historian is to record them and to trace the laws of their sequences, which are as strict as those of sequences in the physical world.

In ethics, the vague assumption that nature is the supreme guide of human actions may be applied in many different ways. Already the principle of
Stoics, formulated first by Zeno, that we must live consistently or harmoniously with nature (τὸ ἰδιαγομένου τῷ φύσει τῷ φύσεω ὑπομένον) and stated more explicitly by Cleanthes as the obligation to live in conformity with nature (τὸ ἰδιαγομένου τῷ φύσεω) gave rise to several interpretations, some understanding nature exclusively as human nature, others as the whole universe. Moreover as man has many natural tendencies, desires, and appetites, it may be asked whether it is moral to follow all indiscriminately; and when they are conflicting or mutually exclusive, so that a choice is to be made, on what ground must certain activities be given the preference over the others? Before the Stoics, the Cynics, both in ancient Greece and in its practice, had based their rules of conduct on the principle that nothing natural can be morally wrong. Opposing customs, conventions, refinement, and culture, they endeavoured to return to the pure state of nature. Rousseau, likewise, looks upon the social organization as a necessary evil which contributes towards developing conventional standards of morality. Man, according to him, is naturally good, but becomes depraved by education and by contact with other men. This same theme of the opposition of nature and culture, and the superiority of the former, is a favourite one with Tolstoi. According to Nietzsche, the current standards of virtue are against nature, and, because they favour the poor, the weak, the indolent, the incapable, the injurious as charity, compassion, pity, humility, etc., they are obstacles in the way of true progress. For the progress of mankind and the development of the "Superman", it is essential to return to the primitive and natural standard of morality, which is energy, activity, strength, and superiority; the most powerful and not the most refined.

If ethical naturalism is considered in its relation with the three philosophical views explained above, it sometimes means only the rejection of any duties based on a Divine Revelation, and the assumption that the only source of right and wrong is human reason. Generally, however, it means the more radical tendency to treat moral science in the same manner as natural science. There is freedom nowhere, but absolutely everywhere. All human actions, as well as physical events, are necessary results of antecedents that are themselves necessary. The moral law, with its essential distinction of right and wrong conduct, is not a fact, but a more subjective result of associations and instincts evolved from the experience of the useful and agreeable, or of the harmful and painful, consequences of certain actions. It is, nevertheless, a motive that prompts to act in certain directions, but the effectiveness of which is strictly determined by the degree of its intensity in a given individual compared with the resistance it encounters on the part of antagonistic ideas. Thus, the science of ethics is not normative: it does not deal with laws existing antecedently to human actions, and which these ought to obey. It is genetic, and endeavours to do for human actions what natural science does for physical phenomena, that is, to discover, through an inference from the past, the rules of human conduct, the laws to which it happens to conform.

It is impossible to state in detail the attitude of the Catholic Church towards the assumptions, implications, and consequences of Naturalism. Naturalism is such a wide and far-reaching tendency, it touches upon so many points, its roots and ramifications extend in so many directions, that the reader must refer to the cognate topics treated in other articles.

In general it can only be said that Naturalism contradicts the most vital doctrines of the Church, which rest essentially on Supernaturalism. The existence of a personal God and of Divine Providence, the spirituality and immortality of the soul, human freedom and responsibility, the fact of a Divine Revelation, the existence of a supernatural order for man, are so many fundamental teachings of the Church, which, while recognizing all the rights and exigencies of nature, rises higher, to the Author and Supreme Ruler of nature.

NATURAL LAW. See LAW, NATURAL.

NATURAL RIGHT. See Right.

Nature etymologically (Latin natura from nasci, to be born, like the corresponding Greek γένος from γενέω, to bring forth) has reference to the production of things, and hence generally includes in its connotation the ideas of energy and activity. It will be convenient to reduce to two classes the various meanings of the term nature according as it applies to the natures of individual beings or to nature in general.

1. In an individual being, especially if its constitutive elements and its activities are manifold and complex, the term nature is sometimes applied to the collection of distinctive features, original or acquired, by which such an individual is distinguished from other beings. Thus it may be said it is the nature of one man to be taller, stronger, more intelligent, or more sociable than another. This meaning, however, is superficial; in philosophical terminology and even in ordinary language, nature refers to something deeper and more fundamental. These features are manifestations of a man's nature; they are not his nature. Nature properly signifies that which is primitive and original, or, according to etymology, that which a thing is at birth, as opposed to that which is acquired or added from external sources. But the line that divides the natural from the artificial cannot be drawn with precision. The terms of being never change except under the influence of external agencies, and in the same circumstances, their mode of activity is uniform and constant. Organisms present a greater complexity of structure, power of adaptation, and variety of function. For their development out of a primitive germ they require the co-operation of many external factors, yet they live without them. The principle of activity by which external substances are elaborated and assimilated. In any being the changes due to necessary causes are called natural, whereas those produced by intentional human activity are called artificial. But it is clear that art supposes nature and is but a special adaptation of natural aptitudes, capacities, or activities for certain aesthetic and useful purposes. Stars, rivers, forests, are works of nature; parks, canals, gardens, and machines are works of art. If necessary conditions are realized, where the seed falls a plant will grow naturally. But the seed must be placed purposefully amid certain surroundings, the growth of the plant may be hastened, its form altered, and, in general, the mode of natural activity may be modified. By training the aptitudes of an animal are utilized and its instincts adapted for specific ends. In such cases the final result is more or less natural or artificial according to the mode and amount of human intervention.

In scholastic philosophy, nature, essence, and substance are closely related terms. Both essence and substance imply a static point of view and refer to constituents or mode of existence, while nature implies a dynamic point of view and refers to innate tendencies. Moreover, substance is opposed to accidents, whereas we may speak of the nature and essence not only of substances but also of accidents like colour, sound, intelligence, and of abstract ideals like virtue or duty. But when applied to the same
substantial being, the terms substance, essence, and nature in reality stand only for different aspects of the same thing, and the distinction between them is a mental one. Substance denotes the thing as requiring no support, but as being itself self-existent; essence properly denotes the intrinsic constitutive elements by which a thing is what it is and is distinguished from every other; nature denotes the substance or essence considered as the source of activities. "Nature properly speaking is the essence (or substance) of things which have in themselves as such a principle of activity (or self-movement)," (Metaphysics, 1015a, 13). By a process of abstraction the mind arises from individual and concrete natures to those of species and genera.

A few special remarks must be added concerning human nature. This expression may mean something concrete, more or less different in various individuals, or more generally something common to all men, i.e., the abstract human nature by which mankind as a whole is distinguished from other classes of living beings. In both cases it is conceived as including primitive and fundamental characteristics, and as referring to the source of all activities. Hence nature, as the internal principle of action, is opposed to the externality of coercion which are external principles of action and prevent the normal play of human faculties. It is opposed also, but less strictly, to education and culture which at times may be the checking of natural tendencies, at times also their development and perfection. Education, physical and mental, is not a primitive endowment; it must be acquired and is built upon nature as on its foundation. In this sense habit has been termed a second nature. But although education is due largely to external causes and influences acting on the mind and the organism, from another point of view it is also the unfolding of innate aptitude, and hence partly nature.

As between nature in general and art, so between human nature and education there is no clear dividing line. Natural is also frequently contrasted with conventional; language, style, gestures, expressions of feelings, etc., are called more or less natural. This opposition becomes more acute in the theories of Hobbes and Rousseau who lay stress on the antithesis between the primitive or natural state of man and the present social condition due to the contract by which men agreed to surrender their rights into the hands of the common authority.

From the theological point of view the distinctions between nature and person and between the natural and the moral order are as old as human existence. The former arose from the dogma of the Trinity, i.e., of one Divine Nature in three persons, and chiefly from that of the Incarnation i.e., of the two Natures, Divine and human, in the one Divine Person in Christ. The Human Nature in Christ is complete and perfect as nature, yet it lacks that which would transform it, viz., the union of the human with the divine, which constitutes the positive character of the human existence as negative, as Scotists hold, namely the mere fact that a nature is not assumed by a higher person, or, as Thomists assert, some positive reality distinct from nature and making it incomunicable.

The faculties of man are capable of development and perfection, and, no matter what external influences may be at work, this is but the unfolding of natural capacities. Even artificial productions are governed by the laws of nature, and, in man, natural activities, after they are perfected differ not in kind but only in degree, from those that are less developed. The supernatural order is above the exigencies and capacities of all human nature. It consists of an end to which the whole of man's life is directed, and to which, in a certain sense, the intuitive vision of God in heaven—not the mere discursive and imperfect knowledge which is acquired by the light of reason—and of the means to attain such an end, namely, a principle which must be added to natural faculties so as to uplift them and make them capable of knowing and reaching this higher destiny. More specifically it includes an enlightenment of the intellect by a positive revelation of God manifesting man's spiritual end and the conditions for obtaining it; it also implies for every individual the indispensable help of Divine grace both actual, by which God illumines and strengthens human faculties, and sanctifying, by which human nature is elevated to a higher mode of activity. Hence theologians oppose the state of purity in which God manifestly has placed man, to the supernatural state to which in fact man was raised.

II. Nature is frequently taken for the totality of concrete natures and their laws. But here again a narrower and a broader meaning must be distinguished. Nature refers especially to the world of matter, in time and space, governed by blind and necessary laws, and thus excludes the mental world. Works of nature, opposed to works of art, result from physical causes, not from the actual adaptation by human intelligence. This signification is found in such expressions as natural history, natural philosophy, and in general, natural science, which deals only with the constitution, production, properties, and law of material entities, and is all-inclusive, embracing mind as well as matter; it is our whole world of experience, internal as well as external. And frequently nature is looked upon as a personified abstraction, as the one cause of whatever takes place in the universe, endowed with qualities, tendencies, efforts, and will, and with aims and purposes, and it is arrived at as a reality.

The problems to which the philosophical study of nature has given rise are numerous. All however centre around the question of the unity of nature: Can all the beings of the world be reduced to one common principle, and if so what is this principle? The first Greek philosophers, who were the first philosophers of nature, endeavoured to find some primitive element out of which all things were made; air, water, fire, and earth were in turn or all together supposed to be this common principle. The problem has persisted through all ages and received many answers. Aristotle's primary matter, for instance, is of the same nature in all things; and to-day ether, or some other substance or energy is advocated by many as the common substratum of all material substances. After static unity, dynamic unity is looked for, that is, all the changes that take place in the universe are referred to the same principle. Dynamism (q. v.) admits forces of various kinds which, however, it tries to explain in terms of one or several primary forces, the only one form of energy manifesting itself in different ways. Mechanism (q. v.) holds that everything is explainable by the sole assumption of movement communicated from one substance to another. Teleological views give to final causes a greater importance, and look upon the ends of various beings as subordinated to the one end to which the universe tends to realise.

If nature includes both mental and physical phenomena what are the relations between these two classes? On this point also the history of philosophy offers many attempts to substitute some form of Monism for the Dualism of mind and matter, by reducing mind to a special function of matter, or matter to a special appearance of mind, or both to a common substratum.

Finally, is nature as a whole self-sufficient, or does it require a transcendent ground as its cause and principle? Is the nature naturans one and the same with the nature naturata? By some these expressions are understood in a particular sense, the one denotes all primary natures, the other all phenomena; by others the natura naturans, as first cause, is held to be really distinct from the natura naturata, as effect. This is the question of the existence
and nature of God and of his distinction from the world. Here the question of the possibility of miracles is suggested. If nature alone exists, and if all its changes are absolutely necessary, everything takes place according to a natural determination. On the contrary, God exists as a transcendent, intelligent, and free cause of nature and its laws, not only nature in all its details depends ultimately on God's will, but its ordinary course may be suspended by a miraculous intervention of the First Cause. (See Arts; Naturalism; Supernatural; Grace.)

C. A. Dubray.

Naturism, the term proposed by Réville to designate the worship of nature. It differs from Naturalism, which is not a religion, but a system of atheistic philosophy, and from natural religion, which sets forth those truths about God and man attainable by the native power of human reason and forming the prolegomena to Revelation, e. g., the existence of God, the spiritual and immortal nature of the human soul, the moral order. As a theory of religion Naturism exhibits two phases: I. Ethical Naturism. II. Philosophic Naturism. III. Science-Naturism.

I. Ethnographic Naturism.—According to Réville, Naturism is the primitive form of religion, the basis and source of all existing forms. This is the thesis of comparative mythology, which is said to reveal a primitive nature worship. Its foundation is a tangible assumption that (1) the nature of the products of evolution, which maintains that man is a development by slow and successive stages from the animal; hence the corollary advanced by Spencer and Thomas as the first principle in the evolutionary history of religion, viz., that primitive man was a creature of emotion, not of intelligence which is the product of more advanced culture; (2) the ethnographic assumption that primitive man existed in the savage state, a condition and mode of life akin to that prevailing among the non-civilized races of to-day, e. g., Tylor, Lubbock, Tiele, Réville, and Spencer.

The core and essence of nature-worship is that nature is associated with God. When we say that, Réville is in touch with de Brosses and Comte, who claim that Fetishism is the primitive religion and by Fetishism understand the primitive tendency to conceive external objects as animated by a life analogous to that of man. He differs from Tylor, who specifies the cause of the animation, e. g., spirits or souls, and Comte, 1805-1857, who holds that the primitive animation in its initial stage is not Fetishism, but becomes so when in process of development the spirit or soul is distinguished from the object. Thus with Réville, the Animism of Tylor and Spencer is the intermediate link between Naturism and Fetishism. Tylor, however, considers nature-worship as the common foundation of all religious conceptions. Admitting the stages of this process defy any more accurate definition. Giddings follows Tylor in holding that religious ideas are of two groups: animistic interpretation of the finite, and animistic interpretation of the infinite ("Induct. Sociol.", New York, 1901). In like manner Blackmar teaches that nature-worship was nothing more than spirit-worship localized in the worship of nature of nature (Elem. of Sociology, New York, 1905). On the other hand Guynn calls Naturism, Physiolyatri, of which zoalatr, i. e., worship of animals, is a department (The Non-Religion of the Future, New York, 1907). Hadden holds that primitive folk do not draw a sharp distinction between this kind of animalism and pantheism (The Study of Man, New York, 1898). Jastrow says that the savage and primitive man does not differentiate between such an object of nature as the sun and its personification as a being possessing life in some form, and teaches that it is an axiom of primitive man's science to ascribe life to all things (The Study of Religion, London, 1902). Schrader says the common basis of the ancient Indo-European religion of the Aryan peoples is the transference to anthropomorphic deities of the commonest objects of the world, and attempts his "Prehistoric Antiquities of the Aryan Peoples", tr. by Jevons, London, 1899). Hence the discovery of the soul or spirit as distinct from the object is the origin of Animism. This theory was sometimes called personification of natural forces, but only in the sense that nature is conceived as living, as vital with creative and preserving powers. Personification, in the strict sense of investing material things with the attributes of a person is far above the power of early man and appears only in later forms of developed belief. Hence, according to Réville, there is first the naive cult of natural objects as possessing life and in some way supposed to influence man; this is followed by Animism and Fetishism; and finally the third stage known as the natural mythologies founded on the dramatization of nature, e. g., the historic polytheisms of China, Egypt, Babylonia, of the Teutonic, Greek, Latin, and Vedic mythologies.

Primitive man faces the world about him in childlike wonder. The succession of the seasons, of night and day, of storm and cloud, the growth of living things, exhibit nature in constant and varied changes. He views natural phenomena as the effects of causes beyond his comprehension and control. Consciousness of his own agency, though unable yet to distinguish soul from the parts of the body, he attributes agency like his own to the objects which surround him. Awe and delight possess him. Having no idea at all of God, writes Keary, he makes the things themselves gods by worshipping them ("Early Relig. Develop." in Nineteenth Cent., Aug., 1878). Hence Brinton writes that nature is known to man only as the thing which manifests itself in change (The Religious Sentiment, New York, 1876). Ratzel explains this craving for causality in an animistic sense as tending to vivify all the higher phenomena of nature by attributing to them a soul, and applies the word Polytheism to all the religious conceptions of mankind, except the Oriental ("Hist. of Mankind", tr. Butler, London, 1896). With Réville the phenomena of change exhibit a vital principle analogous to man's own and this principle of life vaguely conceived by primitive man but strongly felt is the origin of religion; in a later stage of development Vitalism passes into Animism (The Tree of Life, Paris, 1903). Brinton holds that the difference between Naturism and Spiritism is largely a difference of emphasis, because neither can be excluded from the interpretation of a primitive which as yet has made no sharp separation between subject and object. Hence the worshippers of nature seems to ally himself with external objects which, as he surveys them anthropomorphically, seems to support and mirror of his own fleeting fancies. The natural object is not conceived by primitive man as either friendly or inimical to him. In the particular view of Fetishism the physical and psychical further appears. Thus Shaw in the primitive Naturism resulting from the contact of man with the phenomena of the external world, attempts to reconcile the psychological theories of fear as set forth by Hume, Clode, Tiele, and even the desire either natural with Brinton or morbid by Feuerbach.

Pfeiderer holds that nature is animated throughout, that this view was just as natural for the childlike fancy of the primitive man as it is still to-day for the adult. Pfeiderer thus assumes that the peculiar novelty in the idea of nature is not to be explained by the fact that the primitive man only compared natural phenomena...
with living beings or even that he thought of them as a domicile or operation of spirits of human origin. Such a view would suppose a definite distinguishing of the sense element and of the supersensible element; but this distinction only appeared later, whereas, for the original mythological notion, the sense element and the object of worship were not distinguished as one. He says the real sources of religion are external nature and the soul of man; for the prehistoric belief in spirits, out of which developed the belief in God, cannot yet be properly called religion; it only contained the germs of religion. Tylor teaches animation of nature, but, as with him the soul or spirit and the object of worship were not distinguished, it is only under the concept of Fetishism. De la Saussaye objects to this view on the ground that nature-worship bears the strongest impress of originality, and therefore is not a phase of Fetishism, which is not original. Darwin seems to combine the ascension of life to natural objects, dreams, and fears (Descent of Man, I, p. 65). Thomas says that, while theoretically separable, magic religion, belief in ghosts and in nature-worship practically run into one another and become inseparably mingled; therefore it is idle to attempt to establish a priority in favour of any one of them (Social Origins, Chicago, 1899).

De la Saussaye confesses that it is equally difficult to distinguish the germs of nature-worship in the opposite direction. The classification of religions shows how wide an area it covers. Thus Tiele divides the religions of the world into nature-religions and ethical religions, and holds that the latter developed from the former. Caird keeps the same division, but uses the terms "objective" and "subjective," and says they unite in Christianity. He adds, "It is not without a reason to the classification of Tiele, that the higher nature-religions contain ethical elements. Hegel holds the primitive religion was an immediate nature-religion, which betrays its features in various primitive peoples and in a more advanced form in Chinese, Pali, and Sanskrit culture. The transition from the lowest stage to the next higher, according to him, is effected by means of the Persian dualism, the Phoenician religion of pain, and the Egyptian religion of mystery. De la Grassière (Des religions comparées, Paris, 1899) says Naturism is at the origin of religions. He distinguishes a lesser Naturism and a greater Naturism. The former Naturism passes in animism, which in turn develops into Fetishism, Idololatry, and Anthropomorphism. With its earlier forms the object is adored in its concrete reality; at a later period, the soul or spirit is separated from the object and becomes the real object of worship. Lesser Naturism embraces the primitive gods, e. g., those which personify the woods, mountains, and rivers. It has many forms, e. g., worship of the one God in Greek and Egyptian mythology, worship of trees, e. g., laurels of Apollo, myrtle of Venus, worship of groves as with Druids, worship of stones, water, springs, lakes, mountains, the elements. Hence it embraces the mythological naiads, fauns, dryads, fairies, and sirens.

A great many naturalists refer to the gatherings of objects and especially heavenly bodies, e. g., sun, moon, stars. This he says is the basis of the Vedic religion, e. g., Varuna, i. e., heaven at night, Mitri, i. e., heaven at day, Indra, i. e., rain, Agni, i. e., fire, and survives in Sabeism. This Naturism is at the origin of Greek and Latin mythology, e. g., Zeus, i. e., the Heaven, Aurora, i. e., the dawn, Apollo, i. e., light, Hephaestus, i. e., the maker. In Oriental states, Tiele holds that the religions of the Red degraded and negroes are just as much nature religions as the Babylonian, the Vedic, and Greek, though he admits a great difference exists between the former and the latter. Von Hartmann designates the lowest stage of religion as "naturalistic henotheism." Jastrow holds that man's consciousness of his own weakness and the temptation of the overwhelming strength of nature furnishes the motive for seeking support from certain powers of nature and to accomplish this he must make them favourably disposed to him. He says this theory can be variously put, hence can furnish a starting point for pessimistic views, e. g., Von Hartmann, and of still closer relations, for instance, in the universe, and it appeals to minds in sympathy with religion as to those, e. g., Feuerbach, who regard religion as an illusion.

Thus Naturism teaches that man originally was destitute of religion, and that ignorant awe in face of natural forces was the cause of his earliest faith. But this theory cannot be accepted. (1) It bases, viz. that man has evolved from an animal state, is false. "We know now," writes Max Müller "that savage and primitive are very far indeed from meaning the same thing" (Anthrop. Relig., 150). Talcott Williams shows the necessity of revising and limiting the confidence with which the modern savage has been used to explain a nobler past (Smithsonian Report of 1896). Müller and Kuhn refute Mannhardt and Meyer by showing that popular beliefs of modern folk-lore are fragments of a higher mythology. (2) It does not explain how man gained the predicate God, which is the real problem of religion. Jastrow says mere personification of nature lacks a certain spiritual element which appears to be essential to genuine religious feeling in man. Hence, he adds, Müller postulated "the preception of the Infinite" (Hibbert Lectures, 1878), and Tiele appeals to "man's original unconscious innate sense of infinity" (Elem. of the Scienc. of Rel., II, 233). Thus Fairbairn says, "the constitutive element is what mind brings to nature, not what nature brings to mind" (Sound of the Philos. of History and Religion, New York, 1876).

(3) The theory is defective, for it does not explain all the facts of early religious consciousness. If nature were the only source of religion, man would express Ideas of God in terms drawn from nature alone. Now the science of language shows that primitive man expresses his idea of God: (a) In terms drawn from physical nature, e. g., Dyaus Pitar of the Indo-Europeans; Zeus pater of the Greeks; Jupiter of the Latins; Tiet, i. e., heaven, of the Chinese; the Persian Dāvā; the Cēliche Dīa from the Sanscrit root Div, i. e., to shine. (b) By moral and metaphysical concepts: thus, e. g., Jahweh, the one living, e. g., the living one; El, i. e., the powerful shown in Elohim, Allah, Babylonia; Shaddai, i. e., the mighty; Bel, i. e., the lord; Molech, i. e., king; Adonai, i. e., lord. Such concepts are found with barbarous peoples, e. g., Unkulu of the Zulus, i. e., father; Papang of the Australian, i. e., father; the Mongolian Teng-wi; and Hannish Tanzi, i. e., lord of the sky. Further more the earliest Indo-European conception of God is Dyaus Pitar, i. e., the heaven-father. Hence the idea of paternity is characteristic of their primitive consciousness. Such a concept is too sublime and elevated to be explained on the principles of Naturism; which is utterly unable to account for the second and subsequent ideas of God.

The main support for the theory of Naturism is the Vedic religion. It is true that traces of nature-religion are found in the Vedas. But to say that the Vedic gods are nothing more than nature personified or that nature-worship is the primitive type of Indian religion is to betray the superficial observer. The moral and spiritual conceptions are older than the physical faith. It is not that the Aryan view of nature as active is not ground to hold that for this reason they worshipped nature. We express ourselves after this fashion in ordinary conversation. The great truth shown by the Vedas is the fact of degeneracy.

II. PHILosophic naturism.—This phase is based on the philosophic unity of animated nature. The ancient cosmogonies represent the efforts of the bu-
man mind to attain a unity amid the multiplicity of external things. In the Stoic conception of God as the one and all, it is set into juxtaposition with the intellect for the purpose of giving scope to the exercise of the religious emotions. Hence it was that these philosophers could look with indulgent tolerance upon the religious practices of the common people. The basic principle with both was the same, e.g., the worship of animated nature. To the cultured Romani the identity of Spirit was conceived as a philosophic unity; to the ordinary mind it was viewed in manifold forms and activities which were the source and explanation of their countless nature-deities. Pantheism in its various forms exhibits the same thought. This is especially true of modern Pantheistic theories. The substance of Spinoza, the synthesis of all that is, the identity of Substance, the absolute nature of Hegel is at basis the same conception. Its religious significance is twofold: (a) the more spiritual and metaphysical form appears in Neo-Hegelianism which teaches the unity of human and Divine consciousness. This reflects the nature-philosophy of Hegel which exhibits the idea, i.e., God in its finitude. (b) The idealism of Buddhism, in which the idea of the Absolute is deified, is also a form of transcendentalism. To Emerson as to Goethe, God was the soul of the world. Emerson seems to consider religion as the delight which springs from a harmony of man and nature. Emerson taught that the universe is composed of the soul, not of the mind, and its final end is the not me, i.e., physical nature; art, other man, and his own body. Hence in germ the worship of humanity is contained in Emerson's teaching, just as it is latent in Neo-Hegelianism, and appears in the Hegelian evolution of the idea, i.e., the Absolute or God, when viewed from its human side, i.e., as a human product.

III. SCIENCE-NATURISM.—This is the religion of the science-philosophy and appears under two forms: (a).

The religion of humanity was first presented in systematic form by Comte, and contains the principles of the humanitarian theories so prevalent a generation ago. God does not exist or at least cannot be known, therefore mankind calls forth the sole and supreme expression of our veneration and service. (b). Cosmic religion, a title invented by Fiske, and designated the homage of reason to forces of nature or the awe of phenomena which suggest mysterious and destructive power. Spencer speaks of the emotion resulting from the contemplation of the unknowable into which as in Swedenborg's vision, questions resolved themselves. Comte develops this thought and makes the essence of religious emotion very largely consist in the sense of mystery. To Fiske the unknowable manifests itself in a world of law and is yet conceived to be in itself something beyond these manifestations. Hence worship is ever the dark side of the shield of which knowledge is the bright side. The Maitre Sienna, Pâ Students of religion as morality touched by emotion becomes with Tyndall poetry and emotion in face of matter instinct with mind. Cosmism, according to Fiske, is, however, more than a mere sentiment. He says the fundamental principle of religion is obedience to the entire requirements of nature. This is righteousness, just as sin is a wilful violation of nature's laws.

Science-Naturism finds its most complete delineation in Sceley's "Natural Religion." He uses the term "Natural Religion" in contrast with the supernatural. In rejecting supernaturalism and submitting to science is presented a theology to which, he says, all men do actually agree, viz., nature in God, and God in nature. Hence there is no power beyond or superior to nature nor anything like a cause of nature. Whether we say God or prefer to say nature, the important thing is that our minds are filled with the sense of a power, to all appearance infinite and eternal, a power to which our own being is inseparably connected, in the knowledge of whose existence we have a natural conviction of which we find a beatific vision. Religion begins with nature-worship which in its essence is admiration of natural objects and forces. But natural mythology has given place to science, which sees mechanism where will, purpose, and love had been suspected before and drops the name of God, to take up instead the less awful name of Nature. Nature is the name comprehending all the uniform laws of the universe as known in our experience. It is the residuum that is left after the elimination of everything supernatural, and comprehends man with all his thoughts and aspirations not less than the forms of the material world.

Science, according to Seeley, we have the kernel of Christianity and the purified worship of natural forms, i.e., the higher paganism. He holds that this is not Pantheism, for not the individual forms of nature are the objects of worship, but nature considered as a unity. Art and science as well as morality, form the substance of religion, hence culture is the essence of religion. Culture is his form of religion. From the view of his church, in his view, in the individual is identified with culture, in its public aspect is identified with civilization. For Seeley the Church is the atmosphere of thought, feeling, and belief that surrounds the State; it is in fact its civilization made more or less tangible and visible. His universal Church is universal civilization. And as science is the nucleus of the system, so, as science is not only the truth and truth, so the term civilization expresses the same threefold religion, shown on a larger scale in the characters, institutions, and customs of nations. (Cf. Animism; Deity; Fetishism; Totemism; Transcendentalism.)

JOHN T. DRIESEL.

NAUSEA (Latinized from the German Grau). FREDERIC, Bishop of Vienna, b. c. 1480 at Waischenfeld (Blancanтиun) in Frisonia; d. 6 Feb., 1552, at Trent. He was the son of a wagonmaker and received his early education at Bamberg and probably at Nuremberg under John Cochlaus; with Paul of Schwartzberg, canon of Bamberg, he pursued humanitarian, juristic, and theological studies at Pavia, Fadus, and later at Salzburg, there obtaining degrees in Law and Divinity. Cardinal Lorenzo Campeggio, Archbishop of Bologna and papal legate in Germany, employed him as secretary and as such Nausea was at the Diet of Nuremberg (1524), at the convention of Ratisbon, at the Diet of Olm, and for a time at Rome. In 1538 he accepted the parst of St. Bartholomew at Frankfurt-on-the-Main and the dignity of canon, but was soon obliged to leave on account of the intrigues of the Lutherans who even excited popular riots against him. He came to Aschaffenburg and (1526) to Mainz as preacher of the cathedral. He attended the Diet of Speier (1529) and was chosen counsellor and preacher (1529). At the room of King Francis (1536), he was made rector to John Faber, Bishop of Vienna, succeeding him in 1541. Nausea laboured zealously for the reunion of the Lutherans with the Catholics, and together with other prelates, asked Rome to permit the clergy to marry and the laity to
use the communion cup. He also advised Cologne or Ratibon as the place for holding the General Council. He was prevented from being present at the opening of the Council of Trent by contrary orders from the king, but met Paul III at Parma (1546) and there gave to him his “Sylvae Synodales”. When the Council was reopened at Trent in 1551, he was present, taking an active part in its deliberations, especially on the Sacraments. Only a short attendance was granted him, for he died there of a fever. His body was brought to Vienna and buried in the cathedral.

In the Acts of the Council Naeusa is praised for his great knowledge, his exemplary virtues, and his ecclesiastical learning. “In the year in which the congregation met,” says the “Trid.”, “I. Zagreb, 1874, 652.” Among his writings are: “Dictichs” on the works of Lactantius; “Ars Poetica”; sermons and homilies on evangelical subjects, the Sacrifice of the Mass, the Blessed Virgin Mary, the life of a true Christian; “Catechismus cath.” (Cologne, 1843); “Pastoralium inquisitionum elenchi tres” (Vienna, 1547); “On the Resurrection of Christ and of the dead” (Vienna, 1551); etc. For full list see Metaner.

FRANCIS MERRSHAM.

Navajo Indians, numbering about 20,000, constitute the largest group of Indians belonging to the Athapaskan or Déné stock. Other groups of the same stock are the Apaches (Ndé), Lipanes (Lipa Ndé), Hupas of California, and various Déné tribe inhabiting British Columbia and Alaska (see Déné). This post is a minor group of the Navajo, who come from the extreme north. They themselves have a vague tradition of “Diné Nahodloni”, i.e., “other Navajos”, living far away. According to their myths they emerged from lower worlds somewhere in the San Juan Mountains in south-western Colorado. At present they occupy an extensive reservation in the north-east corner of Arizona and the north-west corner of New Mexico; but many of them live beyond its borders, especially towards the south. Formerly their habitat extended somewhat farther to the north-east.

They are first mentioned in the writings of Zuist-Salmerón in 1626, as Apaches de Navabo. In 1630, a Franciscan, Alonso Benavides, went to the King of Spain mentions the “Province of the Apaches of Navajo” and adds that “these of Navajo are very great farmers, for that is what Navajo signifies—great planted fields”. Consequently the word “Navajo” may be derived from the Spanish race meaning “plain, or field”. The Navajos call themselves Diné, that is, have its origin at between the treaty of peace he concluded between the Navajo and Pueblo Indians at Santa Clara in 1630. Previous to this date, as Benavides states, and subsequently, till 1862, an almost continuous guerilla warfare existed between the Navajo and the Pueblo Indians and Mexicans. The number of Navajo captives in Mexican families in 1802 had been taken to 1500 and 3000. In 1846 Colonel Doniphan made an expedition into the Navajo country, in 1849 Colonel Washington, in 1854 General Sumner. In 1859 war again broke out, and in 1860 the Navajos attacked Fort Defiance. Colonel Miles and Colonel Bonneville and General Canby made campaigns against them. When the war broke out, all the troops were withdrawn from the Navajo country, whereupon the Navajos rode over the country rough-shod. In 1862 General Carleton sent Colonel Kit Carson with a force against the Navajos. He subdued them, and, mainly by killing their stock and destroying their crops, forced them through starvation to surrender, whereupon about 7300 were transferred to Fort Sumner in south-eastern New Mexico. About 1500 never surrendered; about 400 fled from Fort Sumner to their old homes. On 1 June, 1868, General Sherman concluded a treaty with them by which they were permitted to return.

Ever since they are a peaceful, pastoral people, living by, with, and off their herds and sheep and goats. Though the arid character of their country prevented them from grazing purposes only—forces them to lead a nomadic life, yet most of the families have one abode for their main home, generally in a well-watered valley, where they raise corn, beans, potatoes, melons, oats, alfalfa, etc. The Navajo women weave the famed Navajo blankets of genuine wool, of superb durability, beauty and variety of design, and careful execution, whilst a number of the men are clever silversmiths, making silver necklaces, belts, bracelets, wristlets, rings, buttons, etc., of rare beauty, out of Mexican silver dollars. They have always been self-supporting. They have little of the sullen, reticent disposition attributed to Indians generally; and are cheerful, friendly, hospitable, and industrious. Their government is democratic; there is no chief of the whole tribe, and their local chiefs are men of temporary and ill-defined authority, whose power depends largely upon their personal influence, their eloquence, and their reputation for wisdom and justice. The tribe is divided into about 38 families, or gens, each one of the several original or nuclear clans. Exogamous marriages with Mexicans, Utes, Apaches, but more especially with the neighbouring Pueblo Indians, captured or enslaved and eventually adopted into the tribe, are responsible for a number of clans. In consequence there is nothing like a pronounced or prevailing Navajo type. Every variety of form and figure can be found among them. Marriage is contracted early in life. Polygamy and divorce are still prevalent. Their marriage ceremony is only permissible at the marriage of a virgin. The vows of abortion, infanticide, race suicide, are practically unknown among them.

The elaborate system of pagan worship, expressed in chants, sacrifices, sand paintings, dances, ceremonies, some of which last nine days, make the Navajo appear intensely religious. Though they have no conception of one supreme being, their anthropomorphic deities are numerous and strikingly democratic. The ideas of heaven and hell being unknown to them, they are Mencheros, or, of course, happy with the life of happiness with the peoples of the lower worlds. They are firm believers in witchcraft and charms. Their pathology is largely mythological. Diseases are attributed to evil beings, to malign influences of enemies, and to various occult agencies. Their remedies are largely magical and constitute an integral part of their religion. The superstitions, ceremonies, and customs are diligently kept alive by an extraordinary large number of medicine-men who wield a powerful influence among them. Though Protestant missionaries have been among the Navajos since the early Eighties, and have at present (1910) eleven different missions, an hospital, and three small schools, the work of their adherents is very limited. After the unsuccessful attempt of Fray Benavides in 1630 to Christianize the Navajos, Padre Menchero, in 1746, induced several hundred to settle at Cebolleta, now a Mexican town north of Laguna; but the enterprise soon came to an end. In 1749 Padre Menchero made another attempt, re-establishing the Cebolleta mission and the attempt was renewed in 1769, now a Laguna village; but on 24 June, 1750, the Indians abandoned them to return to their wilderness. On 13 October, 1897, the Franciscans of Cincinnati, Ohio, accepted the Navajo mission at the request of Mgr. Stephan, Director of the Bureau of Catholic Indian Missions, and of Mother Drexel. The missionaries took charge at St. Michael's, Arizona, on 7
NAVARRE

October, 1898. On 3 December, 1902, an industrial boarding-school for the Navajos, erected by Mother Drexel, was opened at St. Michael's, and has since been conducted by her community, the Sisters, of the Blessed Sacrament. At present (1910) the school is attended by 150 Navajo pupils. A church mission was established at Chin Lee, Arizona, in 1905, and a chapel built at Lukachukai, Arizona. 231 children and adults have been baptized at St. Michael's, and 78 have made their first Holy Communion. The way has been prepared; the Navajos are well-disposed towards the Catholic missionaries and give found hopes for an abundant harvest of pupils. A branch mission was established at Chin Lee, Arizona, in 1905, and a chapel built at Lukachukai, Arizona. 231 children and adults have been baptized at St. Michael's, and 78 have made their first Holy Communion. The way has been prepared; the Navajos are well-disposed towards the Catholic missionaries and give found hopes for an abundant harvest of pupils.

Much attention has been given by the Franciscans to the study and construction of the Navajo language. In 1910 they published "An Ethnologic Dictionary of the Navajo Language", and also "A Navajo English Catechism of Christian Doctrine for the Use of Navajo Children"; other works are in preparation.

MATTHEWS, Navajo Legends (Boston, 1897); IDEM, The Moun-

ANECEL WEBER.

NAVARE.—The territory formerly known as Na- vare now belongs to two nations, Spain and France, according as it is south or north of the Western Pyrenees. Spanish Navare is bounded on the north by French Navare, on the north-east by the Province of Huesca, on the east and south-east by the Pyrenees of Saragossa, on the south by the Provino of Logroño, and on the west by the Basque Provinces of Guipus- coa and Alava. It lies partly in the mountainous region of Navarre and partly in the plain of Navarre. The principal city, Donajou, or St. Jean-Pied-de-Port, stands on the River Nive, in the Arrondissement of Bayonne.

HISTORY.—The history of the two divisions of the country is identical until the year 1512, when Spanish Navare was conquered by Ferdinand the Catholic, the northern part remaining French. Little is known of the history of the country, but it is said that neither the Romans nor the Visigoths nor the Arabs ever succeeded in permanently subjugating the inhabitants of the Western Pyrenees, who had always retained their own language. The capture of Pam- plona by Charlemagne in 778 was not a lasting victory; in the same year the Basques and Navarrese defeated his forces. The successive occupations of Pamplona seems to have been again taken by the Franks. When, however, the Frankish emperors, on account of difficulties at home, were no longer able to give their attention to the outlying borderlands of their empire, the country, little by little, entirely withdrew from their allegiance, and about this time began the formation of a dynasty which soon became very powerful. The first King of Pamplona of this dynasty was Eneco Arista (839), his elder brother, Garcia Somen, having received as a dukedom Vas- conia, the original NAVARE. After the death of Eneco Arista (852), the two territories were united and Semen Garcia, the eldest son of the Count of Navarre, who was chosen king. In 910, the Pame- nrese and Navarrese gave the Crown to the son of Arista, Garcia II Eneco, who zealously defended his country against the encroachments of Islam, but was killed at Aybar (882) in a battle against the Emir of Cordova. He was succeeded by his eldest son Fortun Garcia, who was held a prisoner for fifteen years by the infidels, and who, after a reign of twenty-two years, became a monk at Leyra, the oldest convent in Navare, to which no less than seventy-two other con- vents were subject.

The choice of the Navarrese now fell upon his son Sancho Garcia I, surnamed Abarca (905—925), who fought against the Moors with repeated success and joined Ultra-Puertos, or Basse-Navarre, to his own dominions, extending its territory as far as Najera. As a thank-offering for his victories, he founded, in 924, the convent of Albeda. Before his death, all Moors had been driven from the country. His suc- cessor, Garcia Sanchez (925—70), surnamed El Temblm (the Trembler), who had the support of his ege- neral and diplomatic abilities, was engaged in a number of conflicts with the Moors. Under the sway of his son, Sancho el Mayor (the Great)—970—1033, the country attained the greatest prosperity in its history. He seized the country of the Pisuerga and the Céa, which belonged to the Kingdom of Leon, conquered Castile, and ruled from the boundaries of Galicia to the Pyrenees. At his death the unfortu- nately divided his possessions among his four sons, so that the eldest, Garcia, received Navare, Guipuscoa, Vizcaya, and small portions of Bearn and Bigorre; Castile and the lands between the Pisuerga and the Céa went to Fernando; to Gonzalo were given Sobrarbe and Ribagorza; the Countship of Aragon was divided between his sons. The country, which had never been again united: Castile was permanently joined to Leon, Aragon enlarged its territory, annex- ing Catalonia, while Navare could no longer extend its dominions, and became in a measure dependent upon its powerful neighbours. Garcia III (1035—54) was succeeded by Sancho III (1054—70), who was murdered by his erstwhile vassals.

In this period of independence the ecclesiastical affairs of the country reached a high state of development. Sancho the Great was brought up at Leyra, which was also for a short time the capital of the Dio- cese of Pamplona. Beside this see, there existed the Bishopric of Oca, which was united in 1079 to that of Pamplona. In 1035 Sancho the Great re-established the See of Palencia, which had been laid waste at the time of the Moorish invasion. When, in 1045, the city of Calahorra was wrested from the Moors, under whose dominion it had been for more than three hundred years, a see was also founded here, which in the same year was united to the See of Najera and, in 1088, that of Alcanena, under which it was to remain at least as long as that of the present diocese of Vitoria. To Sancho the Great, also, the See of Pamplona owed its re-establishment, the king having, for this purpose, convoked a synod at Leyra in 1022 and one at Pam- plona in 1023. These synods likewise instituted a re- form of ecclesiastical life with the above-named con- vers as a centre.

After the murder of Sancho III (1076), Alfonso VI, King of Castile, and Sancho Ramires of Aragon, ruled jointly in Navare; the towns south of the Ebro to- gether with the Basque Provinces fell to Castile, the remainder to Aragon, which retained them until 1134. Sancho Ramires (1078—94) and his son Pedro Sanchez (1094—1104) conquered Huessa; Alfonso el Batallador (the Fighter) (1104—1134), brother of Pedro Sanchez,
secured for the country its greatest territorial expansion. He wrested Tudela from the Moors (1114), reconquered the entire country of Bureia, which had been lost to Navarre in 1042, and advanced into the Province of Burgos; in addition, Roja, Najera, Logroño, Calahorra, and Alfaro were subject to him, and, for a short time, Bayonne, while his ships-of-war lay in the port of Guipuzcoa. The issue (1134), Navarre and Aragon separated. In Aragon, Alfonso’s brother Ramiro became king; in Navarre, García Ramírez, a grandson of Sancho the Great, who was obliged to surrender Rioja to Castile in 1136, and Tarragona to Aragon in 1157, and to declare himself a vassal of King Alfonso VII of Castile. He was utterly dependent upon the revenues of churches and convents. His son, Sancho García el Sabio (the Wise—1150–94), a patron of learning, as well as an accomplished statesman, fortified Navarre within and without, gave charters (fueros) to a number of towns, and was never defeated in battle. The reign of his successor, the last king of the race of Sancho the Great (1194–1224), Sancho el Fuerte (the Strong), was more troubled. He appropriated the revenues of churches and convents, granting them instead important privileges; in 1198 he presented to the See of Pamplona his palaces and possessions in that city, this gift being confirmed by Pope Innocent III on 20 January, 1198. While he was absent in Africa, to which he had been induced to go on an adventurous expedition, the Kings of Castile and Aragon invaded Navarre, and as a consequence, the Provinces of Alava and Guipuzcoa were lost to him.

The greatest glory of Sancho el Fuerte was the part he took in the battle of Las Navas de Tolosa, where, though through his valour, the victory of the Christians over the Calíf En-Nasir was made decisive. When in 1234 he died in retirement (el Encerrado), the Navarrese chose to succeed him Thibault de Champagne, son of Sancho’s sister Blanca, who, from 1234 to 1253, made of his Court a centre where the poetry of the Troubadours was welcomed and fostered, and whose reign was peaceful. His son, Theobald II (1253–70), married Isabel, the second daughter of St. Louis of France, and accompanied the saint upon his crusade to Tunis. On the homeward journey, he died at Trapani in Sicily, and was succeeded by his brother, Henry I, who had already assumed the reins of government in his absence for seven years (1271–74). His daughter Juana not yet being of age, the country was once more invaded from all sides, and the queen mother, Blanca, sought refuge with her daughter at the court of Philip the Bold of France, whose son, Philip the Fair, had already married Juana in 1284. In 1276, at the time of the negotiations for this marriage, Navarre was under French domination, and, until 1285, was subject to Kings Philip the Fair (d. 1314), Louis X Hutin (1314–16), his brother, Philip the Tall (1316–22), and Charles the Fair (1322–28). As Charles died without male issue, and Philip of Valois became King of France, the Navarrese declared themselves independent and called to the throne Joanna II, daughter of John Hutin, and her husband Philip of Evreux (1328–1343), surnamed the Wise. Joanna waived all claim to the throne of France and accepted for the counties of Champagne and Brie those of Angoulême, Longueville, and Mortain.

Philip devoted himself to the improvement of the laws of the country, and joined King Alfonso XI of Castile in battle against the Moors (1343). After the death of his mother (1349), Charles II assumed the reins of government (1349–57), and, on account of his deceit and cruelty received the surname of the Wicked. His eldest son, on the other hand, Charles III, surnamed the Noble, gave the land once more a peaceful and happy government (1357–1425), exerted his strength to the utmost to lift the country from its degenerate condition, reformed the government, built canals, and made navigable the tributaries of the Ebro flowing through Navarre. As he outlived his sons, he was succeeded by his daughter Blanca (1425–42) and her husband John II (1429–79), son of Ferdinando I of Aragon. As John II ruled Aragon in the name of his brother Charles (Charles of France), and the little Prince Carlos (Charles), in Navarre, only with the rank of governor, whereas Blanca had designed that Charles should be king. In 1450, John II himself repaired to Navarre, and, urged on by his ambitious second wife, Juana Enríquez of Castile, endeavoured to obtain the succession for their son Fernando (1452). As a result a clever stratagem of war was built round the family of the Agramonts supported the king and queen, and that of the Beaumonts, called after their leader, the chancellor, John of Beaumont, espoused the cause of Charles; the highlands were on the side of the prince, the plains on that of the king. The unhappy prince was defeated by his father at Aybar, in 1451, and held a prisoner for two years, during which he wrote his famous Chronicle of Navarre, the source of our present knowledge of this subject. After his release, he sought in vain the assistance of King Charles VII of France and of his uncle Alfonso V of Naples; in 1460 he was again imprisoned at the instigation of his step-mother, and the Catalans rose in revolt at this injustice, and he was succeeded by his brother named governor of Catalonia. He died in 1461, without having been able to reconquer his kingdom; he named as his heir his sister Blanca, who was, however, immediately imprisoned by John II, and died in 1464. Her claim descended to her sister Leonor, Countess of Ampurdans and Pelfría, and after her death and that of John II, which occurred almost simultaneously, to her grandson, Francis Phobus (1479–83). His daughter Catharine, who, as a minor, remained under the guardianship of her mother, Madeleine of France, was sought by Ferdinand the Catholic as a bride for his eldest son; but she gave her hand (1494) to the French Count of Perigord, Jean d’Albret, a man of vast possessions. Nevertheless, Ferdinand the Catholic did not relinquish his long-cherished designs on Navarre. As Navarre refused to join the Holy League against France, declared itself neutral, and would have prevented the passage through the country of Ferdinand’s troops, the latter sent his general Don Francisco de Béjar to besiege the strongholds of St. Jean-Pied-de-Port, and the priors of Saint-Pierre-d’Urbist, and Haro. Meanwhile, the administration was united with that of France; it was still called a kingdom. After Henry IV, the kings of France bore also the title King of Navarre. The Basque language is still spoken in most of the provinces.

NAVARRETE, ANDREW L. See New Guinea, Vicariate Apostolic of.

NAVARRETE, DOMINGO FERNÁNDEZ, Dominican missionary and archbishop, b. c. 1610 at Peñafiel in Old Castile; d. 1689 at Santo Domingo. He received his education there and on completion of his studies was offered the chair of Thomistic theology in several Spanish universities. He preferred, however, to devote his life to the conversion of the heathen, and in 1646 with twenty-seven of his brethren left his native land and proceeding by way of Mexico, arrived in the Philippine Islands, 23 June, 1648. He taught theology in the Dominican University of St. Thomas, Manila. In 1657 with several of his brethren he went to China and, after learning the language, took up missionary labour chiefly in the province of Po-ki-en. The persecution which broke out in 1665 brought disaster to the missions. Forbidden to preach, he occupied himself with the care of the sick and with prayer and fasting on the faith. Being harmered too much he went in 1673 as prefect of the Dominican mission to Rome to lay before the authorities there the question of Chinese Rites which had reached an acute stage between the Jesuits on one side and the Dominicans and Franciscans on the other. He was highly esteemed by Innocent XI, who wished to make him bishop of the Chinese missions. He refused the honour, but on his return to Spain in 1677 the pope, at the suggestion of Charles II, forced him to accept the Archdiocese of Santo Domingo, where he laboured with zeal and fidelity till his death. While on the question of Chinese Rites he was opposed to the Jesuits, sometimes attacking them very severely; in his diocese he entertained the highest regard for them. In his letters to the viceroy and to the king, requesting them to permit the fathers of the Society to establish a college in his residential city, he pays them a glowing tribute.

Among his principal works may be mentioned "Tratados históricos, políticos, éticos y religiosos de la monarquía de China" (Madrid, 1676); "Catecismus, lingua sinica", 2 vols.; "De mirabilibus Dei nominibus, lingua sinica", 2 vols.; "Preceptor ethnicus ex optimis quibusque Sinensium libris extractus, ex eorumdem sententias concinnatus, lingua sinica." Quoted in "Immanuel, S. Ord. Pred., II, 720-33; Touron, Hist. dell'Ordine di S. Dominico, V, 627-38."

JOSEPH SCHROEDER.

NAVARRETE, JUAN FERNÁNDEZ DE, a Spanish navigator and writer, b. at Avalos (Logroño), 8 November, 1765; d. at Madrid, 8 October, 1844. He received his early education partly in his native town and partly at the seminary of Vergara. At the age of fifteen he entered the navy and a little later in 1782 served with distinction in the unsuccessful operations against Gibraltar. The war was ended in 1783, and he was discharged and joined the Mediterranean fleet. He served in various capacities and among the documents he discovered were the diaries of the first and third voyages of Columbus. Having been cleared of all charges and retired from public life rather than recognize the claims of Joseph Bonaparte who had been seated upon the Spanish throne. In 1814, he was made secretary of the Academy of St. Ferdinand, and from 1824 until his death, was a director of the Academy of History. Several times he was elected to represent his province, but the lower house termed the name of "the Spanish Titian." He returned to Spain a painter of repute, and travelled extensively in his native country, leaving works in his hand from his important cities. In 1658 he was made painter to Philip II, received a salary of two hundred ducats, "besides just payment for his work," and was commissioned to decorate the Escorial. In 1575 he completed a "Nativity," wherein are three dominant lighted candles, one from St. Joseph's candle, one from the glory above, and the most radiant of all from the divine Child as in Correggio's "Notte." In one "Holy Family" he painted such strange accessories, a cat, a dog, and a cartridge, that the king made his promise never again to put "such indecent things in a holy picture." Though called "the Spanish Titian," Navarrete was not an imitator of any Italian; he was an original and he painted rapidly, freely, and spontaneously. His composition, especially in groups of figures, was masterly and was excelled only by that of Velásquez. "He spoke by his pencil with the brusura of Rubens without his coarseness." Navarrete's work greatly influenced the development of Spanish art and after his death Lope de Vega wrote: "No countenance he painted was dumb." Despite the artist's inimitability he was an agreeable companion, played cards, read, and wrote much, was broad-minded and generous. When his patron ordered Titian's "Last Supper" to be cut because it was too large for a place in the refectory of the Escorial, it was el Mudo who protested most. In the refectory at Estrella, where he received his first instruction in painting are some of Navarrete's best pictures. The following works may be mentioned: "Holy Family," at Weimar; "St. John in Prison," at St. Petersburg; "St. Jerome," in the Escorial; "Holy Family," in the Escorial.

los viajes y descubrimientos que hicieron para mar los espacios desde el fin del siglo XV (Madrid, 1825, 37), los cuales han sido publicados en ensayos, y ha sido bien leído y citado. Entre sus obras se encuentra "Don Quijote" y "Coleción de documentos inéditos", publicadas en colaboración con otros investigadores. "Disertación sobre la historia de la náutica" y "Bibliotheca maritima española" son dos obras que fueron publicadas después de su muerte, en 1846 y 1851 respectivamente.

**VENTURA FUENTES.**

Navé, arquitecturalmente la central, espacio abierto de una iglesia, que está dividido en el coro y el altar, y separado del público por una barandilla. En general, está decorado con columnas, pilares, o pilares, es conchero con columnas en arcada, y usualmente está sobre el nivel del suelo de la nave que sirve para el lugar de reposo y para los lectores. Luminosamente, el término es usado para indicar que el coro de una iglesia para los devotos, y que incluye el coro y el altar, separados por arcos y columnas. La nave está compuesta de latín, un tipo, posiblemente con algún referente a la "nave" o "santuario" del "Arco de Noah". El término se usa para designar todos los beneficios, ya sea en el siglo Romanes, o en los siglos siguientes, que tienen ventanas y paredes altas, para la iluminación. Durante los siglos III y IV de la Edad Media, este espacio fue el lugar de reunión de los fieles. En el caso de la Edad Media, los fieles tenían que estar en la nave para el servicio y no en el coro. La nave se hizo mayor para poder albergar más fieles y para poder albergar más eventos. La nave se hizo mayor para poder albergar más fieles y para poder albergar más eventos. La nave se hizo mayor para poder albergar más fieles y para poder albergar más eventos. La nave se hizo mayor para poder albergar más fieles y para poder albergar más eventos.
NAZARETH

crease. All were daughters of pioneer settlers (see KENTUCKY, Religion); their zeal and capacity for good works formed their only dowry. They taught the children, spun wool or flax, and wove it into cloth or into cloth of which they fashioned garments for themselves and for Father David's seminarians, who, on their side, found time in the intervals of study to fell trees, hew logs, and build the seminary and convent. The first log house occupied by the sisters received from Father David the name of Nazareth. This name the mother-house has preserved, and thence the sisters are popularly called "Sisters of Nazareth", being thus distinguished from other Sisters of Charity.

Mother Seton could not spare sisters from Emmettsburg to train the new community, as Bishop Flaget had requested, but she sent him the same copy of the Rule of St. Vincent de Paul which he himself had brought her from France, and Father David carefully attended to the training of the novices. In February, 1816, he found the first sisters sufficiently prepared to take the vows. The little body was fairly organized, and its work was fast extending. Miss Eleanor O'Reilly (Sister Ellen), a scholarly woman and experienced teacher, came to them from Baltimore, and to her the early success of the educational work of Nazareth is largely due. The reputation of Nazareth Academy was soon established, and students, even from a distance, crowded the classrooms, although it was not until 1829 that the Legislature of Kentucky granted its charter to the "Nazareth Literary and Beneficial Institution". Sister Ellen prepared others to assist her, establishing what was virtually a normal school for the sisters, which has been zealously maintained ever since. In 1822 the mother-house was removed to a farm purchased for the purpose near Bardstown. Both the convent church and the academy building were completed in 1825. The sisters, at the same time, never lost sight of their primary work of succouring the sick and the poor. In each of their houses destitute children were cared for. St. Vincent's Orphan Asylum was opened in Louisville, after the cholera epidemic, in 1834. Thenceforth schools, hospitals, and asylums grew apace.

Besides the mother-house, the congregation now has sixteen branch academies and high schools modelled upon it. The sisters teach about 15,000 children in parochial schools, and care for more than 5000 sick in their hospitals and infirmaries. On petition of the present superior, Mother Eutropia McMahon, the congregation received the formal approbation of the Holy See, 3 September, 1910, nearly 98 years after its first foundation.

Marie Menard.

Nazareth, the town of Galilee where the Blessed Virgin dwelt when the Archangel announced to her the Incarnation of the Word, and where Christ lived until the age of thirty years, unknown, and obedient to Mary and Joseph. In the manuscripts of the New Testament, the name occurs in a great orthographical variety, such as Nαζαριν, Nαζαρέω, Nαζαρός, Nαζαρειας, Nαζαρινιας, and the like. In the time of Eusebius and St. Jerome (Onomasticon), its name was Nazara (in modern Arabic, en Nasirah), which therefore, seems to be the correct name: in the New Testament we find its derivatives written Ναζαρην, or Ναζαρίως, but never Ναζαρειας. The etymology of Nazara is nazer, which means "a shoot". The Vulgate renders this word by flos, "flower", in the Prophecy of Isaiah (xi, 1), which is applied to the Saviour. St. Jerome (Epist. xlvii, "Ad Marcellam") gives the same interpretation to the name of the town.

Nazareth is situated in the most southerly hills of the Lebanon range, just before it drops abruptly down to the plain of Esdraelon. The town lies in a hollow plateau about 1200 feet above the level of the Mediterranean, between hills which rise to an altitude of 1610 feet. The ancient Nazareth occupied the triangular tract that extends from the mountain on the north, having its point turned to the south. Its northwestern boundary is marked by several Jewish tombs which have been discovered on the slope of Jebel es Likh. The southeastern limit is the small valley that descends from the beautiful spring called St. Mary's Well, which was, no doubt, the chief attraction for the first settlers. In the last fifty years the population has increased rapidly, and amounts at the present day to more than 7000 souls. The modern houses, white and clean, run up all along the hillsides, especially on the north. Spread out in the shape of an amphitheatre, set in a green framework of vegetation, Nazareth offers to the eye a very attractive picture.

History.—The town is not mentioned in the Old Testament, nor even in the works of Josephus. Yet, it was not such an insignificant hamlet as is generally believed. We know, first, that it possessed a synagogue. Neubauer (La géographie du Talmud, p. 190) quotes, moreover, an elegy on the destruction of Jerusalem, taken from ancient Mishnaic Scripture, according to this document, Nazareth was a home for the priests who went by turns to Jerusalem, for service in the Temple. Up to the time of Constantine, it remained exclusively a Jewish town. St. Epiphanius (Adv. Hæreses, I, ii, her, 19) relates that in 339 Joseph, Count of Tiberias, told him that, by a special order of the emperor, "he built churches to Christ in the towns of the Jews, in which there were none, for the reason that neither Greeks, Samaritans, nor Christians were allowed to settle there, viz., at Tiberias, at Diocesarea, or Sepphoris, at Nazareth, and at Capharnaum". St. Paula and St. Sylvia of Aquitaine visited the shrines of Nazareth towards the end of the fourth century, as well as St. Theodosius about 530; but their short accounts contain no description of its monuments. The Pilgrim of Piacenza saw

St. Mary's Well, Nazareth

Besides the historical works referred to under KENTUCKY and LOUISVILLE, see Spalding, Sketches of Kentucky (1844); Barton, Angel of the Battlefield (1897); Annals of the Sisters of Charity of Nazareth; A Brief Historical Sketch of the Sisters of Charity of Nazareth, Kentucky (1908).
there about 570, besides "the dwelling of Mary converted into a basilica", the "ancient synagogue". A little treatise of the same century, entitled "Liber nomenclum locorum ex Actis", speaks of the church of the Annunciation and of another erected on the site of the house "where our Lord was brought up". In 970 Arculf gave Adamnan an interesting description of the basilica of the Annunciation and of the church of the "Nutrition of Jesus".

The toleration which the Moslems showed towards the Christians, after conquering the country in 637, did not last long. Willibald, who visited Nazareth about 725, found only the basilica of the Annunciation, "which the Christians", he says, "often redeemed from the Saracens, when they threatened to destroy it". However, in 808 the author of the "Commemoratorium de casis Dei" found twelve monks at the basilica, and eight at the Precipice, "a mile away from the town". The Greek emperor, John Zimisces, reconquered Galilee from the Arabs in 920, but, five years afterwards, he was poisoned by his eunuchs and his soldiers abandoned the country. The basilica, finally ruined under the reign of the Calif Hakem (1010), was rebuilt by the crusaders in 1101, as well as the church of the Nutrition, or St. Joseph's House. At the same time the Greeks erected the church of St. Gabriel near the Virgin's Well. The archiepiscopal See of Scythopolis was also transferred to Nazareth. After the disastrous battle of Hattin (1187), the crusaders, with the European clergy, were compelled to leave the town. On 25th March, 1254, St. Louis and Queen Marguerite celebrated the feast of the Annunciation at Nazareth; but nine years later, the Sultan Bibars completely destroyed all the Christian buildings, and Nazareth soon declined down to a poor village.

In the fourteenth century a few Franciscan Friars established themselves there, among the ruins of the basilica. They had much to suffer during their stay, and many of them were even put to death, especially in 1385, in 1448, and in 1548, when all the friars were driven out of the country. In 1620 Fakher ed Dtn, Emir of the Druses, allowed them to build a church over the Grotto of the Annunciation; but it was ruined some years later by the Bedouins. The Franciscans nevertheless remained near the sanctuary, and in 1730 the powerful Sheikh Daher el Anwar paid them to erect the church which is still to be seen.

In the fourth century, local tradition indicated the house of the Virgin at the top of the southern point of the hill, which rises some 30 feet over the plain. The dwelling consisted of a little building with a grotto in the rear. Even now, Constantine's baths are to be found in Nazareth. Explorations made in 1909, beneath and around the present church, brought to light the whole plan of the ancient basilica of Constantine. It was built from west to east, divided into three naves by two rows of syenite columns, and the grotto was in the north nave. The church followed the same plan, and even kept the two rows of columns; they only added new pillars and gave to the façade, as well as to the apse, the appearance and solidity of a fortress. The Franciscans erected their church across the ancient building, so as to bring the grotto beneath the central nave. The crypt was always three or four feet below the pavement of the church. Since 1730 there have been fifteen steps leading down to the Chapel of the Angel, and two more to the Grotto itself. The chapel is the traditional site of the house, properly so-called, of the Virgin; at the north end of it, the mosaic pavement is well preserved, and is adorned with an inscription in Greek letters which undoubtedly dates from the sixth century. A beautiful altar dedicated to the mystery of the Annunciation occupies the Grotto. On the left are two columns, apparently certainly placed there in the fourth century.

About 300 paces northeast of the basilica of the Annunciation, "the church of the Nutrition" marked the traditional site of St. Joseph's dwelling, where, after the war of the Angel (Matt., i, 20), he received Mary his spouse with the ceremonial prescribed by the law for matrimony. After his return from Egypt, Joseph came back to Nazareth and, with the Virgin and the Divine Child, again occupied his own house. There Jesus was brought up and dwelt till he left the town at the beginning of His public life. Two documents of the fourth century allude to this place, and two others of the sixth and seventh mention the church of the Nutrition, built over it. Excavations carried on in 1909 brought to light the lower layers of a fine church of the twelfth century, from which a staircase hewn in the rock descends to an irregular grotto excavated beneath the sanctuary. Several interesting details answer to the description given by Arculf in 676. The Franciscans are about to rebuild it.

The mountain "whereon the city is built" ends in a row of hills that overlook the town. On the south,
one mile and a half away, the chain of hills terminates abruptly in two precipitous peaks separated by a deep, wild gorge. The western peak is called Jebel el Qalāb, "Mount of the Leap", or "of the Precipice". A monastery built on this mountain, where the Jews would have cast Christ down headlong, was still occupied by eight monks at the beginning of the ninth century. The ruins now to be seen there belong to the convent of the time of the Crusades.

BARNAKAS MEISTERMANN.

Nazareth. See TARNI AND BARLETTA, DIACES OF.

Nazarite (נס, נַעֲרָי), consecrated to God), the name given by the Hebrews to a person set apart and especially consecrated to the Lord. Although Nazarites are not unknown to early Hebrew history, the only specific reference to them in the Law is in Num. (vi, 1-21), a legal section of late origin, and embodying doubtless a codification of a long-standing usage. The regulations here laid down refer only to persons who consecrate themselves to God for a special time in virtue of a temporary vow, but there were also Nazarites for life, and there are even indications pointing to the consecration of children to that state by their parents.

According to the law in Num. (vi, 1-21) Nazarites might be of either sex. They were bound to abstain during the period of their consecration from wine and all intoxicating drink, and even from all products of the vineyard in any form. During the same period the hair must be allowed to grow as a mark of holiness. The Nazaree was forbidden to approach any corpse, even that of his nearest relatives, under pain of defilement and consequent forfeiture of his consecration. If through accident he finds himself defiled by the presence of a corpse, he must shave "the head of his consecration" and repeat the operation on the seventh day. On the eighth day he must present himself at the sanctuary with two turtle doves or young pigeons, one of which was offered as a holocaust and the other for a sin offering. Furthermore, in order to renew the lost consecration, it was necessary to repeat the above solemn rite for a sin offering. At the expiration of the period determined by the vow the Nazarite brought to the sanctuary various offerings, and with symbolic ceremonies including the shaving of the head and the burning of the hair with the fire of the peace offering, he was restored to his former liberty (Num. vi, 13-21). The meaning symbolized by these different rites and regulations was in part negative, separation from things worldly, and partly positive, viz. a greater fulness of life and holiness indicated by the growth of the hair and the importance attached to ceremonial defilement. The existence of a class of perpetual Nazarites is known to us through occasional mention of them in the Old Testament writings, but these references are so few and vague that it is impossible to determine the origin of the institution or its specific regulations, which in some respects at least must have differed from those specified in Num. (vi, 1-21). Thus of Samuel who is called a "Nazarite of God from his mother's womb" (Judges, xiii, 5), it is merely said that "no razor shall touch his head". No mention is made of abstention from wine etc., though it has been plausibly assumed by many commentators, since that restriction is enjoined upon the mother during the time of her pregnancy. That his quality of Nazarite was considered to be independent of defilement through contact with the dead is plain from the account of his subsequent career and the famous exploits attributed to him. The prophet Samuel is generally reckoned among the Nazarites for life, but nothing is known of him in that connexion beyond what is inferred from the promise of his mother: "I will give him to the Lord all the days of his life, and no razor shall come upon his head" (1 Kings, i, 11). It has likewise been inferred (cf. IV Kings, iii, 2) that the Rechabites were consecrated to the Lord by the Nazarite vow, but in view of the context, the protest against drinking wine which forms the basis of the assumption is probably but a manifestation on the part of the clan of their general preference for the simplicity of the nomadic as opposed to the settled life. In the passage of Amos (ii, 11, 12) the Nazarites are expressly mentioned together with the Prophets, as young men raised up by the Lord, and the children of Israel are reproached for giving them wine to drink in violation of their vow. The latest Old Testament reference is in 1 Mach. (iii, 49, 50), where mention is made of a number of "Nazarites that had fulfilled their days." In the prophecy of Jacob (Gen., xlix, 26), according to the Douay Version, Joseph is called a "Nazarite among his brethren" but here the original word nazar should be translated "chief" or "leader" —Nazarite being the equivalent of the defective rendering nazaraeus in the Vulgate. The same remark applies to the parallel passage in Deuteronomy (xxix, 9) and also to Lam., i, 10. The Hebrew noun nazir (Heb. neszerim) stands for "princes" or "nobles".

Nazarites appear in New Testament times, and reference is made to them for that period only in the Gospel and Acts, but also in the works of Josephus (cf. Ant. Jud., xx, vi, 1, and Bell. Jud., II, 1, and in the Talmud (cf. Mishna, Nazir, iii, 6). Familiar among them in first century was the Baptist, of whom the angel announced that he should "drink no wine nor strong drink". He is not explicitly called a Nazaree, nor is there any mention of the unshaven hair, but the severe austerity of his life agrees with the supposed asceticism of the Nazarites. From Acts (xx, 23 sqq.) we learn that the early Jewish Christians occasionally took the temporary Nazarite vow, and it is probable that the vow of St. Paul mentioned in Acts, xviii, 18, was of a similar nature, although the shaving of his head in Cenchre, outside of Palestine, was not in conformity with the rules laid down in the sixth chapter of Numbers, nor with the interpretation of them by the Rabbinical schools of first century (cf. E. J. Paz, Hastings, Dict. of the Bible, s. v. Nazarites.) If we are to believe the legend of Hegesippus quoted by Eusebius ("Hist. Eccl.", II, xxiii), St. James the Less, Bishop of Jerusalem, was a Nazaree, and performed with rigorous exactness all the ascetic practices enjoined by that rule of life.

JAMES F. DISCOLL.

Nazarus, Saint, fourteenth abbot of the monastery of Lerins, probably sometime during the reign of the Merovingian Clootair II, 584-629. He successfully attacked the remnants of heathendom on the southern coast of France, overthrew a sanctuary of Venus near Cannes, and founded on its site a convent for women, which was destroyed by the Saracens in the eighth century. His name is inscribed on the calendar of saints of the French Church, on 18 November.

Dict. of Christ. Bap., s. v.; Gallia Christiana, ed. Fiolon, III Paris, 1870, 1; P. RICHER.

Nazarus, John Paul, Dominican theologian, b. in 1556 at Cremona; d. in 1645 or 1646 at Bologna. He entered the order at an early age in his native
town and from the beginning was noted for his spiritual and love of study. It is most probable that he studied divinity and theology in the University of Bologna. He taught with great success in various schools of his order in Italy. In 1592 he was sent by Clement VIII and the General of the Dominicans, Beccaria, to accompany the Apostolic Nuncio to Prague to combat the prevailing heresies. There he spent three years teaching in the Studium Generale of the province, preaching on the University, and defending the faith against the errors of the innovators. Returning to Italy in 1596 he became regent of studies in the convent at Milan. The following year the pope appointed him to defend in a public debate at Chiavenna the Catholic doctrine of the Holy Sacrifice of the Mass against Calvinistic proceedings of the Universal church. His demonstration of the absolute truths of the faith was such a triumph that his services were sought in other parts of the country. In 1620 the citizens of Milan chose him as ambassador to the Court of Philip III of Spain to adjust certain matters of importance to Milan; in May, 1622 he represented as delegate the province of Lombardy at the general chapter held at Milan. He spent the close of his life at Bologna where he occupied himself with teaching and writing. Of his works the following are the most important: "Commentaria et Controversiae in primam partem Summe S. Thomae" (Bologna, 1620) and "in tertiam partem Summe S. Thomae" (Bologna, 1625); "Opera varia theologica et philosophica" (Bologna, 1629); his commentary on the Acts of the Apostles; "De SS. Patrum et doctorum Ecclesiae auctoritate in doctrina theologica" (Bologna, 1633).

Joseph Schroeder.

**Nazarius and Companions, Saints.** In the Roman Martyrology and that of Bede for 12 June mention is made of four Roman martyrs at Bolschioria: Cyrius, Nabor, and Nazarius, who suffered death under Diocletian. Their names were taken from the "Martyrologium Hieronymianum," in the Berne MS. of which (ed. De Rossi-Duschesne, Acta SS., Nov. II [177]) we read: Rome, via Aurelia millario V, Basilica, Tribuli, Nagesi, Magdala, Dini, Aureli, Nazarius. The name Cyrius is mentioned as second name in the list, Tribulus, is derived from a place-name, Tripoli, as is evident from the Echternach MS., and those following it have also an African origin. In an ancient itinerary to the graves of the Roman martyrs (De Rossi, "Roma Sottierranei," I, 183) mention is made of a mortuary chapel of a martyr at Bolschioria, Nazarius, Nabor, Beatus and Cyrius, whose feast is on 10 June. The group of three Roman saints, Cyrius, Nabor, Nazarius, to which was added later Basilides, has in the "Sacramentarium Gelasianum" (ed. Wilson, Oxford, 1884, 174-5) its special form of invocation in the Canon of the Mass. The date and the circumstances of the deaths of Cyrius, Nabor, and Nazarius, and the bones of Saint Nazarius and Nabor were transferred by Bishop Chrodegang of Metz to his diocese (Mon. Germ. Hist., Script., II, 203).

Quoted: Acta SS., June, II, 511 sqq.; Questum, Les martyrologes hist. du moyen-age (Paris, 1906), 31, 325, 374, etc. See also the Martyrology der Christl. Gemeinde zu Rom (Leipzig, 1901), 156 sqq.

**Nazianzus,** titular metropolitan see of Cappadocia Tertia. Nazianzus was a small town the history of which is completely unknown. It is the modern village of Nenizi east of Ak-Serai (formerly Archealis), in the villayet of Koniah, but has sometimes been wrongly identified with Diosarea. At the beginning of the fourth century Nazianzus was suffragan to Cappadocia; under Valens it formed part of Cappadocia Secunda, the metropolis of which was Tyana. Later it depended on Cappadocia Tertia and on Moeceus, and finally became a metropolitan see under the Emperor Diogenes. In 370 it was united to the metropolitan See of Cesarea. Up to the year 1200, fourteen of its bishops are known. Its name is inseparably connected with its illustrious doctor and poet-bishop, St. Gregory.

S. Pétrides.

**Neale, Leonard,** second Archbishop of Baltimore, b. near Port Tobacco, Charles County, Maryland, 15 Oct., 1746; d. at Georgetown, D. C., 18 June, 1817. He was a descendant of Captain James Neale, the founder of the family in America, who settled in Maryland as early as 1642. At twelve Leonard was sent to the Jesuit College at St. Omeris in French Flanders. Thence he went to Bruges, and later to Liège, where he was ordained a Jesuit priest. On the suppression of the Society of Jesus, Father Neale, together with the English Jesuits, repaired to England, where he engaged in pastoral work for many years; but, in response to his petition for a foreign mission, he was assigned to Demarara, in British Guiana, South America, where he laboured from 1779-83. Discouraged by the slow improvement of the people, and with health impaired by the climate, he set sail for America in January, 1784, arriving in Maryland, where he engaged once more himself with his former Jesuit brethren of the Society of Jesus, among them the Rev. John Carroll. During the yellow fever epidemic in Philadelphia, in 1793, the two priests of that city were stricken, and Father Neale gladly took their place. For nearly six years he remained there, acting as vicar-general to the then

J. P. Kirks.
Bishop Carroll of Baltimore. During the second visitation of the yellow fever to Philadelphia in 1797-8, he was overtaken by the dread disease.

In 1798 Bishop Carroll called Father Neale from Philadelphia to succeed Rev. Dr. Dubourg in the presidency of the college at Georgetown. He acted in the dual capacity of president and tutor for several years and under his guidance, the institution was elevated from an academy into a college in 1801. The venerable Bishop Carroll had some time previous to this applied to Rome to name Father Neale as his coadjutor. He was consecrated by Bishop Carroll in 1800, but remained as President of Georgetown until 1806 when he was succeeded by the Rev. Father Moreau.

Up to the death of Archbishop Carroll on 3 December, 1815, Bishop Neale succeeded him and received the pallium from Pius VII the following year. Already nearly seventy years old, he lived most of the time at Georgetown in quiet and retirement, but when his duties as the highest dignitary of the Church in the United States called him to Baltimore, he was remarkably energetic for one of his age and feeble health. While in Philadelphia, Father Neale had made the acquaintance of Miss Alice Lalor, through whose aid he started a small school conducted by three ladies, which was destined to be the seed of a great religious order of female teachers in America. This school was broken up by the stages of yellow fever, but the present institution is revisited by Bishop Neale who requested Miss Lalor with another lady from Philadelphia to come to Georgetown. They associated themselves with the Order of St. Clare, or Poor Clares. In 1805, on the death of their Abbess, the Poor Clares returned to Europe, selling their convent property to Bishop Neale, who conveyed it to Miss Lalor and her associates, who submitted to enter into simple vows in 1813. After his accession to the See of Baltimore, the archbishop petitioned Pius VII for the regular establishment of a monastery of the Order of the Visitation of the Blessed Virgin Mary at Georgetown, which request was readily granted.

His health failing, Archbishop Neale applied to Rome to have Bishop Cheverus of Boston associated with him in governing the Diocese of Baltimore with right of succession. But Bishop Cheverus objected, proposing instead that a coadjutor be appointed with right of succession. To this the archbishop agreed, and Rev. Ambrose Maréchal was selected by Archbishop Neale as the person to be appointed as his coadjutor. By a decree of Pius VII, dated 24 July, 1817, Father Maréchal was appointed coadjutor with right of succession, under the title of Bishop of Stauropolis in partibus infidelium, but before the arrival of the brief the venerable archbishop had already died.

**Nebo, Mount** (Heb. מֵנָב, LXX.: Ναβανός), a mountain of the Abrim (q. v.) range east of Jordan and the Dead Sea, from which Moses surveyed the Promised Land (Deut., xxxii, 49), and where he died (ibid., xxxiv, i, 5). The same is probably mentioned in the wandering in the wilderness (Deut., xxvii, 47): “And departing from Helmondelathaim, they came to the mountains of Abarim over against Nabo” (Heb. Nebo), though here the reference may be to the town (see Nabo). The location of Mount Nebo is doubtful. A comparison of Deut., iii, 27 (cf. Num., xxvii, 12) with Deut., xxxii, 49 indicates that the “top of Phaega” and the “mountains of the high place” of Helmondelathaim are identical. Difficulty arises in that from no point of the Abarim range does it seem possible to behold all the territory mentioned in Deut., xxxiv, 1-3, especially if the “furthest sea” means the Mediterranean sea, as in Deut., xi, 24. By some Nebo is identified with the modern Jebel Neba, an oblong ridge on an elevated plateau five miles south-west of Hesebon, 2700 feet above sea level.

**Hummelauer, Comment. in Deut. (Paris, 1901), 211,533,550 sqq.** Giere, Hours with the Bible, VI (New York, 1890), 150; Butler in Introd. Crit. Comment. (New York, 1898), Deuteronomy, Chap. xxiv.

**James F. Driscoll.**

**Nebraska,** meaning in English, “shallow water,” occupies geographically a central location among the states of the Union and is a part of the Louisiana territory, purchased from France in 1803. It is bounded on the north by South Dakota; on the east by the Missouri River, which separates it from Iowa, and the north-west corner of Missouri; on the south by Kansas and Colorado; and on the west by Colorado, Wyoming, and Montana. It has an area of 76,840 square miles. The surface of the state is mainly an undulating plain with a gradual upgrade from south-east to north-west of about 2300 feet. It is drained by several streams, the principal being the Platte, which is formed by the junction of two forks rising in the Rocky Mountains and flowing east through the centre of the state to the Missouri, and receives many tributaries in its course. The Niobrara flows north to the Missouri, and the Republican in the south empties into the Kansas River. Except at certain seasons, all those rivers are shallow. The population by the census of 1910 is 1,192,214. The climate is exceptionally fine. The mountain breezes sweep over the plains and owing to the splendid drainage, the atmosphere, purged of all malaria, is dry and exhilarating. The annual mean temperature is about 48° Fahrenheit; in winter, 22° and in mid-summer, 75°. The winters are comparatively short and the summers free from excessive heat and humidity.

**Resources.—Nebraska may be described as altogether an agricultural state, being practically without minerals. Deposits of coal have been discovered only in very small quantities. Building stone of the limestone varieties is also found, but not extensively. Excepting in the north-west where there is a barren tract, known as the Bad Lands, rich in fossil remains, the soil is a deep, rich loam, exceedingly fertile. Professor Aughey in Nebraska, its Advantages, Resources, etc., says “One of the most remarkable deposits, and most valuable for settled purposes, in the world, prevails over three fourths of the surface of Nebraska. It is known as the lacustrine or loess deposit.” Beneath this there is a porous subsoil which enables Nebraska to stand a drought much longer than any of the bordering states. The report of the monetary value of Nebraska's farm output for 1909 is extraordinary, when we recollect how recently this territory was part of the desert and so designated on the maps. The accompanying table is taken from the carefully prepared report of H. M. Bushnell's Trade Review, published in Lincoln.

The report covering the manufactures of Nebraska for 1908, issued in August, 1909, by the State Bureau of Labour and Statistics, gives the amount of capital invested as $90,593,659, and the year's output at $100,232,792. The total value of all deeded land, in 1909, embracing 34,419,471 acres, was $1,015,040,225. For 1909, the total valuation of all property in the state exclusive of railroads, was $1,722,197,270; the
valuation of railroads being $274,044,325. The means of communication is almost exclusively by railroads, of which there are 6105 miles in operation.

EDUCATION AND RELIGION.—Educational facilities are exceptionally good. The State University, founded 15 February, 1869, enjoys a high reputation as an institution of learning, especially in all technical branches of science. The professors and teaching staff number 250 persons, with an attendance of 3611 students. The appropriation for actual expenses for the two years ending 31 March, 1911, amounts to $1,238,000. There are 6930 public schools, of which 103 are normal training high schools. The total expenditure for schools for year ending 13 July, 1908, was $6,418,542. Of the amount, $1,340,610, is derived from the state, and the rest is derived from state and federal sources. The state and federal governments provide $60,000, and the principal amount is derived from the local school corporations. Catholic education is well provided for. Besides Creighton University, there are one college for boys, fifteen convent boarding schools for girls, and, including some district schools, practically Catholic, there are one hundred and four parochial schools with an attendance of 7,013 pupils. Of these, 75 are parochial schools under the control of the State University, and three are recognized by the state for normal training work. Of non-Catholic educational institutions, the principal are: Wesleyan University (Methodist), and Cotner University (Christian), both near Lincoln; Bellevue College (Presbyterian) near Omaha; Doane College (Congregational) at Crete; Brownell College (Episcopalian) at Omaha. Other institutions under state control include one penitentiary, one reform school, two industrial homes, three insane asylums, one Home for the Friendless, one institute for the feeble-minded, one hospital for crippled and deformed children, one institute for the blind, one for the deaf and dumb, two homes for soldiers; and five hospitals controlled by the Sisters of St. Francis; two orphan asylums, containing 210 inmates; a reformatory for women, managed by the Sisters of the Good Shepherd; one Industrial and Reform school. The Methodist and Presbyterian have each a hospital at Omaha.

The Constitution of Nebraska guarantees complete freedom of worship and equal rights to men of every creed, but recognition is given to the pre-eminence of Christianity. While there is no law specially directed against blasphemy, there is a statute against profanity which imposes a fine of twenty-five cents for each offense on all over fourteen years who profanely swear by the name of God, Jesus Christ, or the Holy Ghost (sec. 242, Proc. Crim. Code Neb.). The observance of Sunday by abstinence from all unnecessary labour is enforced by state and local ordinances with reasonable strictness, an exemption being made in favour of those who, by a precept of their religion, observe the sabbath as the first day of the week, are administered by raising the right hand and calling God to witness; where conscientious convictions interpose, an affirmation can be made instead. Both houses of the legislature are opened with prayer by a chaplain, appointed to hold office during the session. Statutory law exempts the priest from revealing communications made under seal of the confessional without the consent of the informant (sec. 228, Civil Code, Neb.). Christmas Day is the only religious holiday recognized as such by law.

Ecclesiastical property, by diocesan statute, is vested in the bishop as trustee, but there is no civil statute so ordering. Under secs. 4193-4, Corporations, 1900, Nebraska Civil Code, each parochial church is to organize and incorporate in the manner provided: "The chief, or presiding or executive officer of the religious bodies, sects, and denominations mentioned in the first section of this act, may, at such place in this state as he may appoint for the purpose, convene a meeting of himself and some other officer subordinate to himself, having general jurisdiction throughout the state or part of the state aforesaid, and the priest, presbyter, or clergyman of the proposed church, parish or society, and at least two laymen, residents within the limits thereof, of which the said chief, etc. shall be president and one of the other persons present shall be secretary." These five persons shall then adopt articles of incorporation and shall have power to name the church or parish, decide the manner in which it shall contract and be bound for debts, or convey, encumber or charge the property, regulate succession of members, fill vacancies, name time corporation is to last and decide by what officers its affairs shall be conducted. Under this last clause the diocesan regulation can be changed, as 182,610 votes in a diocesan affair shall be conducted in the parish or church. If five persons neglect to file articles of incorporation for the parish, the diocesan regulation investing the property in the bishop, as trustee, has no recognition from the civil law, and without a supplementary act in amendment, a transfer of the property by the bishop, as trustee, will be ineffective. The five are acts of the organization of the parish, adopted the diocesan rule and then filed articles of incorporation, that the action of the bishop, as trustee, would be legal. Otherwise, the neglect to incorporate obstructs the operation of the diocesan statute. Churches, parochial schools, and charitable institutions are exempt from taxation, and clergymen are also exempt from personal taxes and are not liable to military or jury service. Catholic priests have free access to all state institutions and their courteous treatment has been a rule without exception.

The status of the Bible in the public schools has been the subject of contention, but the decisions of the Supreme Court of the United States in 1872 reversed the State of Nebraska, and the decision was upheld by the Supreme Court of the United States in 1872. In 1899, a teacher in a Gage County school obtained permission from the local school board to have religious exercises during school hours. The reading of the Bible was a feature of the exercises. One Daniel Freeman, a free-thinker, whose children attended the school, objected. The question was referred to the state superintendent, who ruled against Freeman. In the meantime Freeman began an action at law in the Gage County District Court; the decision was against him. The case was appealed to the Supreme Court of the United States and the judgment of the lower court was reversed. Commissioner Armes decided that the reading of the Bible in the public schools was a breach of the Constitution. In this opinion, Commissioners Duffie and Albert coincided. Judge Sedgwick coincided on the ground that the instruction was sectarian. Judge Holcomb also coincided as to the particular case, but held that, excepting its use for sectarian purposes, the reading of the Bible was discretionary with the school authorities (State of Nebraska, ex rel. Daniel Freeman, 101 U.S. 592 (1881), 20 L.Ed. 553). A motion for rehearing was filed 21 January, 1903, and Chief-Justice Sullivan, while overruling the motion for a rehearing, gave the opinion, that "The section of the Constitution which provided that no sectarian instruction shall be allowed in any school or institution supported in whole or in part by the public..."
funds set apart for educational purposes cannot, under any canon of construction with which we are acquainted, be claimed as the property of the state, and, in any part of it, from Genesis to Revelation, may be read in the educational institutions fostered by the state. We do not wish to be understood as either countenancing or discountenancing the reading of the Bible in the public schools. Even where it is an irri
tant element, the question, whether its legitimate use shall be allowed or disapproved, is an administrative
and not a judicial question; it belongs to the school authorities and not the courts. The motion for a
rehearing is overruled and the judgment heretofore rendered is adhered to” (ibid., p. 887).

MARRIAGE AND DIVORCE.—Subject to procuring a
civil license, marriage can be legally performed by
both parties on the same day, and many outsiders were taking advantage of it. To stop this, amendatory enactments were passed by the legislature of 1909. At present, no divorce can be
grant for any cause unless petitioner has had one
year’s actual residence in the state immediately before
bringing suit and shall then have a bona fide intention
of remaining a resident of the state. The parties
unless the marriage was solemnized in the state and
the parties shall have resided therein from the time of
marriage to the filing of petition. No person shall be
etitled to a divorce for any cause arising outside of
the state unless petitioner or defendant shall have re
sided in the same state for at least five years next before
bringing suit for divorce, with a bondfiled in the office
of the clerk, making his or her permanent home in Nebraska.

Liquor Laws.—Liquor laws are strict and well
enforced. The manufacture or sale of intoxicating
liquor is forbidden in many of the smaller towns and
cities, and notably in Lincoln, the capital. Where
the trade is licensed, it is under the system known as high
license and subject to the operation of the Slough
law, the most effective law ever passed for a severe
regulation of the liquor traffic under the license sys
tem. Under its provisions, treating is a misdemeanour
subject to fine; selling to minors is punished by severe
penalties, and the saloon-keeper and those on his bond
are liable to a maximum of $5,000 damages at the
suit of any woman whose husband has been allowed to
become a habitual drunkard by frequenting the saloon
keeper’s place of business. By statute passed during
the legislature of 1909, saloons can sell liquor only be
between the hours of 7 A. M. and 8 P. M. on week days.
Sunday trading is forbidden and the law rigidly
enforced.

History.—(1) Civil.—Up to 1541 the history of
Nebraska is a blank. In that year it is claimed that
Francisco Vasquez de Coronado led a party of Span
iards in search for the fabled Kingdom of Quivira,
supposed to be a land of boundless wealth. It is
claimed that he reached 40° N. Lat., which is the
south boundary line of Nebraska. This is disputed
and critics claim that he did not come further north
than a point in Kansas, near Junction City. In 1662
another Quivira Expedition set forth under command of Don Diego, Count of Pene
losa, and accompanied by Father Nicholas de Freytas who wrote an elaborate and detailed account of
the expedition. It is claimed Penalessa reached the Platte,
where he found a very populous city belonging to
Quivira. As it was burned in one night, it could have been but a large Indian village. Penalessa returned
to Mexico in June, 1662. Not much credence is given to
the story of Penalessa. In 1673 Spain claimed all the
trans-Mississippi region, but ten years later La
Salle asserted the sovereignty of France. In 1762
the French relinquished this territory to Spain, but it was reseeded to France in 1800; finally in 1803
under the name of Louisiana was purchased into the possession of the United States. In
many American works the statement is made, that
the first white men to visit and give a description of
Nebraska were Lewis and Clark. This is incorrect.
The sixth volume of Pierre Margry’s “Découvertes et Etablissements des Français dans l’Amérique” 
(Paris, 1856) now in the library of the St. Louis Historical Society, contains the records of several expeditions to the regions between the Mississippi and the
Missouri and further west. Among them is the original report of the journey of Pierre and Paul Mallet and
their companions across Nebraska on a mission to
Santa Fé to open up trade facilities with the Spaniards
of New Mexico. The party consisted of ten men, and their companions were Philippe Robitaille, Louis
Morin, Michel Beslot, Joseph Belcourt, also Can-
dians, and Jean David, a native of France.

The report reads: “To understand the route taken
by these Canadians to discover New Mexico, it is well
known that it is 100 leagues from the Canones
[Indians] to those of the Missouri on the river of
that name; 80 leagues from there to the Canzes
[Kansas]; 100 leagues from the Kansas to the Octocto-
tates [Otoes] and 80 from there to where the river of
the Panimahas [Omahas] empties into the Missouri
[Omaha Creek in the north-east of Nebraska].” This
nation is located at the mouth of the river of
their name and it was there the discoverers took their
starting-point, 29 May, 1739. All who had hitherto
attempted to reach New Mexico thought they could
find it at the sources of the Missouri, and with that
idea had gone up as far as the Ricaras [Indians], more
than 150 leagues above the Panis [Pawnees], with
which they confounded the modern Omahas and
Omahas. The discoverers, on the advice of some of the
aborigines, took an entirely different direction and
leaving the Pawnees took a route across the country,
retracing their steps almost in parallel with the Missouri.
On 2 June, they met with a river which they called the
Plate [Platte] and seeing that it did not diverge from
the route they had mapped out, they followed up its
right bank for about 25 leagues when they found it
made a fork with the river of the Padocas which empr
ties itself at this point. Three days after that, on
13 June, they crossed to the left bank of said river.
On the fifteen and sixteenth they continued across the
country and on the seventeenth they fell upon another river
which they named Des Costes Blanches. During these
three days, they crossed a country of plains where they
found barely enough wood to make fires and it appears
from their Journal that these plains extended all the
way to the mountains near Santa Fé. On the six-
teenth they camped on the banks of another river
which they crossed and named Rivière Aimable. On
the seventeenth they continued on another river called Rivière des Soucis. On the twentieth they
struck the Rivière des Cances. This river was prob
ably not the Kansas but the Arkansas River. In
any case, both are south of the Nebraska state line, mak
ing it clear that these French Canadian Catholics,
Pierre and Paul Mallet, crossed Nebraska in a south-westerly direction in 1739 on their way to Santa Fé and gave an authentic account of the territory sixty-five years before Lewis and Clark visited it.

Subsequent to that date, many French Canadians and French creoles of Louisiana made their homes in Nebraska; they were bounted upon by the fur-trading expeditions, which married Indian women and lived under the protection of the tribes with which they had become related. When allotting land to the Indians, the government set aside a tract in the north-east part of the state called the "Half-Breed Tract", the French Canadians who had married Indian women settled on this land. Among those who came were Charles Rouleau, Henry Fontenelle, and Michel Barada, who had towns named after them. Sarpys county is also called after a French creole, named Louis Sarpys. As late as 1846, Nebraska had practically no other population than the Omahas, Otoes, Poncas, Pawnees, and Sioux. In that year occurred the Mormon migration and a temporary settlement in the desert was made by them at Florence, near Omaha, lasting for about a year, until they moved on to Utah. The first permanent white settlers came in the train of the '49 rush to California, and on 30 May, 1854, Nebraska was organized as a territory with an area of 351,558 square miles, reaching from 40° N. lat. to 49° N. lat., and from the Missouri to the Rocky Mountains. This was finally cut down to the present area of the state. The creation of the Kansas and Nebraska territories was the cause of the bitter quarrel between the slavery and anti-slavery parties and ultimately led to the secession of the southern states. On 1 March, 1867, President Johnson proclaimed Nebraska a state and added the thirty-seventh star to the American flag. After the Civil War, many of the discharged soldiers secured grants of Nebraska land under the Homestead Law. They were followed by men who worked in the construction of the Union Pacific and Burlington railroads and who bought the land donated to the railroad companies. There was a steady inflow of immigrants and land-seekers until the visitation of the grasshopper plague in 1874, when many settlers became discouraged and left the state. But the rush for land was on, the grasshoppers were forgotten, and an increasing stream of immigration poured in. The state is now divided into numerous counties, the first state in the Union to allow foreign-born immigrants, but the Germans are the most numerous, followed by the Scandinavians, Irish, Bohemians, and British in the order named. In late years Italians have become an immigrating element, but not to any considerable extent. Although the first to enter the state, French Canadian immigrants are not numerous.

Catholic Immigration.—While many Catholics were among the immigrants subsequent to 1849, there was no attempt at Catholic colonization until 1855, when Father Tracy induced a number of Irish families to settle in Dakota County, where their descendants constitute the wealthiest and most prominent section. The inhabitants of the town of O'Neill with eighteen Irish Catholics from Boston, colonized a tract in Holt County; they were followed by others, and a town was laid out which they named O'Neill. O'Neill is now one of the most progressive cities north of the Platte and the centre of a prosperous Catholic community. In 1877 some of those who went to Holt County with General O'Neill, dissatisfied with the outlook there, took up land in Greeley County. In compliment to Bishop James O'Connor of Omaha, General O'Neill named his first town site, O'Connor. The town was subsequently moved to where the church and convent of O'Connor now stand, while the present county seat, Greeley Center, was built half a mile north of the creek. A Catholic company was formed and a tract of land was secured by Bishop O'Connor, John Fitzgerald, William Quan, and William J. Onahan of Chicago, and others, and sold at $2 per acre to Irish colonists from Massachusetts and Pennsylvania. This is now a very prosperous Catholic section embracing the thriving towns of Greely Center, Spalding, and Scotia, and comprising a wealthy farming population. Land purchased at $2 per acre is appraised in 1910 at from $60 to $100 per acre. Besides these organized colonies, many Irish Catholic families drifted into Nebraska during the years preceding 1874. During that period there was also a comparatively large immigration of German Catholics, but without any regular effort at colonization. The growth of the Catholic priest. Platte County is almost entirely populated by German Catholics, the immigration being largely due to the efforts of Father Ambrose, O.F.M., the first Franciscan priest in that section. In Cedar County, there are eight large parishes of German Catholics, who were induced to settle in that district during the same period by the late Father Daxscher, the first pastor of St. Helena in that county. South of the Platte there are also several well-to-do German settlements, but no distinct colonies. There is an Austrian settlement at Bellwood in Buffalo County. Bohemian Catholics are quite numerous north and south of the Platte. The Catholic immigration into Nebraska since the year 1874 has largely settled this land have prospered in a measure beyond their most sanguine expectations. A pleasing feature in regard to Catholic settlement in Nebraska is the frequent intermarriages between the young people of different races, especially between the Irish and German elements.

Catholics hold prominent positions in the political, social, and industrial life of the state. Out of the counties in Nebraska has not yet had a Catholic Governor. Prominent among the benefactors and builders of the state have been Edward and John Creighton, founders of Creighton University and other beneficial institutions in Omaha. John Fitzgerald of Lincoln was also a generous benefactor to Catholic works, religious and educational, in this and other cities. John A. McShane represented the then First Nebraska district in Congress in 1886 and in 1888 was the unsuccessful candidate for governor in opposition to General John M. Thayer. Constantine J. Smyth was attorney-general of the state from 1897 to 1901. The first Catholic newspaper in Nebraska was the Catholic News, which was established in 1867.

(2) Ecclesiastical History.—Ecclesiastically, Nebraska was first under the jurisdiction of the Franciscan Bernard Boil, Provincial of the Franciscans in Spain, according to the Bull of Alexander VI, dated 25 June, 1493. Theoretically, it became part of the ecclesiastical jurisdiction of Spain until 1682, when it passed over to the spiritual domain of the Bishop of Quebec. In 1776 it became subject to the Diocese of Quebec, Canada. General O'Neill, with eighteen Irish Catholics from Boston, colonized a tract in Holt County; they were followed by others, and a town was laid out which they named O'Neill. O'Neill is now one of the most progressive cities north of the Platte and the centre of a prosperous Catholic community. In 1877 some of those who went to Holt County with General O'Neill, dissatisfied with the outlook there, took up land in Greeley County. In compliment to Bishop James O'Connor of Omaha, General O'Neill named his first town site, O'Connor. The town was subsequently moved to where the church and convent of O'Connor now stand, while the present county seat, Greeley Center, was built half a mile north of the creek. A Catholic company was formed and a tract of land was secured by Bishop O'Connor, John Fitzgerald, William Quan, and William J. Onahan of Chicago, and others, and sold at $2 per acre to Irish colonists from Massachusetts and Pennsylvania. This is now a very prosperous Catholic section embracing the thriving towns of Greely Center, Spalding, and Scotia, and comprising a wealthy farming population. Land purchased at $2 per acre is appraised in 1910 at from $60 to $100 per acre. Besides these organized colonies, many Irish Catholic families drifted into Nebraska during the years preceding 1874. During that period there was also a comparatively large immigration of German Catholics, but without any regular effort at colonization. The growth of the Catholic priest. Necessity. In a general way denotes a strict connexion between different beings, or the different elements of a being, or between a being and its existence. It is therefore a primary and fundamental notion, and it has an immediate certitude in its own meanings and applications in philosophy and theology.

In Logic, the Schoolmen, studying the mutual relations of concepts which form the matter of our judgments, divided the judgments or propositions into judgments in necessary matter (in materia necessaria), and judgments in contingent matter (in materia contingens). The judgments in necessary matter were known as propositions per se; they are called by modern philosophers “analytic”, “rational”, “pure”, or “a priori” judgments. The proposicio per se is defined by the Schoolmen as the predicate of which is either a constitutive element or a natural property of the subject in which the case with primary truths, metaphysical, and mathematical principles. (Cf. S. Thom., “In I Anal.”, lect. x and xxxv; “de Anima”, II, lect. xiv.) It is by ignoring the last part of this definition and arbitrarily restricting the concept of analytic judgments to those of which the predicate is a constitutive element of the subject, that Kant invented the false notion of synthetic a priori judgments.

Considered under its metaphysical aspect, being in its relation to existence is divided into necessary and contingent. A necessary being is one of which the existence is included in and identical with its very essence. The different beings which we observe in our daily experience are subject to the beginning, to change, to perfection, and to destruction; existence is not essential to them and they have not in themselves the reason of their existence; they are contingent. Their existence comes to them from an external efficient cause. It is from the real existence of contingent beings that we arrive at the notion and prove the existence of a necessary being—one that produces them but is not produced, one whose existence is its own essence and nature, that is at the same time eternal, all-perfect, infinite, viz., God (see CONTINGENCY). And so in relation to existence, God alone is absolutely necessary; all other beings are contingent.

When we consider the divers beings, not from the point of view of their being, but in relation to their constitution and activity, necessity may be classified as metaphysical, physical, and moral. Metaphysical necessity implies that a thing is what it is, viz., it has the elements essential to its specific nature. It is a metaphysical necessity for God to be infinite, man rational, an animal a living being. Metaphysical necessity is absolute (Plato's Parmenides) in connexion with the activity of the material beings which constitute the universe. While they are contingent as to their existence, contingent also as to their actual relations (for God could have created another order than the present one), they are, however, necessarily determined in their activity, both as to its exercise and its specific extent. This determination is dependent upon certain conditions, the presence of which is required, the absence of one or the other of them preventing altogether the exercise or normal exercise of this activity. The laws of nature should always be understood with that limitation: all conditions being realized. The laws of nature, therefore, being subject to physical necessity, this necessity is absolutely necessary, as materialistic mechanism asserts, nor merely contingent, as the partisans of the philosophy of contingency declare, but they are conditionally or hypothetically necessary. This hypothetical necessity is also called by some consequent necessity. Moral necessity is necessity as applied to the activity of free beings. Man knows the men under certain circumstances, although they are free, will act in such and such a way. It is morally necessary that such a man in such circumstances act honestly; it is morally necessary that several historians, relating certain facts, should tell the truth concerning them. This moral necessity is the basis of historical and moral certitude in its general meanings.

The term is also used with reference to freedom of the will to denote any undue physical or moral influence that might prevent the will from freely choosing to act or not act, to choose one thing in preference to another. The derivatives, necessitation and necessarianism, in their philosophical signification express the doctrine that all events are determined by physical or psychical antecedent conditions (see DETERMINISM; Free Will).

In theology the notion of necessity is sometimes applied with special meaning. Theologians divide necessity into absolute and moral. A thing is said to be absolutely necessary when without it a certain end cannot possibly be reached. Thus revelation is absolutely necessary for man to know the mysteries of faith, and grace to perform any supernatural act. Something is said to be morally necessary when a certain end could, absolutely speaking, be reached without it, but cannot actually and properly be reached without it, under existing conditions. Thus, one may say that, absolutely speaking, as man is able to know all the truths of the natural law or to observe all the precepts of the natural law; but considering the concrete circumstances of human life in the present order, men as a whole cannot actually do so without revelation or grace. Revelation and grace are morally necessary to man to know sufficiently all the truths of the natural law (cf. S. Thom., “Sum. Thol.”, P. Ia, a 1; “Contra Gentil.”, I, iv).

Again, in relation to the means necessary to salvation theologians divide necessity into necessity of means and necessity of precept. In the first case the means is so necessary to salvation that without it (absolute necessity) or its substitute (relative necessity), even if the omission is guiltless, the end cannot be reached. Thus faith and baptism of water are necessary by a necessity of means, the former absolutely, the latter relatively, for salvation. In the second case, necessity is based on a positive precept, commanding some thing the omission of which, unless culpable, does not absolutely prevent the reaching of the end.

George M. Sauvage.
NECKAM, (NECHAM), ALEXANDER OF, English scholar, b. in Hertfordshire, 1157; d. at Kennington, Worcestershire, 1217. His first studies were in the abbey school of St. Albans; his higher courses began in Paris, in the school of Petit Pons. In 1180 he commenced his career as teacher with great success, his comprehensive knowledge of philosophy and theology, and his Latin style, both in prose and verse, attracting many students to his lectures. Returning to England in 1184, he was first appointed teacher at Dunstable, and afterwards at St. Albans. After joining the Augustinian Order, he was chosen, in 1213, Abbot of Cirencester.

Neckam was a prolific writer on various subjects, but his works are, for the most part, still in manuscript. He wrote a grammar, commentaries on Scripture, and the works of Aristotle; theological treatises, and sermons. He also translated the Fables of Æsop into elegiac verse. Only two of his works, however, have been printed: the "De naturis rerum" and the poem "De laudibus divinae sapientiae" (ed. Th. Wright in Rolls Series). In the former he discusses the heavens, the stars, the atmosphere, the earth, water, and living creatures. Neckam is the first European author to mention the mariners' compass.

J. P. Kirsch.

Neorelogies, or, as they are more frequently called in France, obituares, are the registers in which religious communities were accustomed to enter the names of the dead—notably their own deceased members, their associates, and their principal benefactors—with a view to the offering of prayers for their souls. The term "neorelogium," which may at first appear a somewhat misnomer, differed almost as much as the form in which the entries were made. There are necrologies connected with cathedral chapters, others (and those the most numerous) belonging to monasteries and religious houses, others to colleges, such as, e. g. the Sorbonne (in Molinier and Longnon, "Obituares", I, 757-52), others to collegiate churches, others again to parishes, while, as for the registers themselves, some are drawn up in the form of marginal entries in martyrologies or calendars, others form a book apart, but arranged according to the days of the month, others again are mere disorderly lists of names, which seem to have been written down just as they were sent in, or as occasion arose. Not less diversified are the rubrics by which these registers were known. Perhaps the commonest was martirologium, because they often took the form of mere additions to the martyrologium, or list of martyrs and saints commemorated on each day. We find also necrologium, memoriae mortuorum, or memoriale fratum, mortuolatum, liber obituariorum, liber obituariorum, and, more rarely, liber mortuorum, sometimes, owing to its connexion with the calendar, calendarium, sometimes, because the monastic rule was commonly used up in the same book, liber regulae or simply regulae, sometimes, from the occasion when it was read aloud, liber capituli (chapter book), sometimes, in reference to the entries of the names of benefactors, liber fundationum, or liber benefactorum. Also, although Molinier seems to contest this usage ("Les Obituares français", p. 22), such a collection of names, consisting largely of benefactors, was occasionally called liber vitae (book of life).

No better description of the purposes served by these lists and of the spirit which animated the whole institution was ever to be found than that contained in the prologue to the Winchester book of the eleventh century known as the "Hyde Register". In spite of its length, it deserves to be quoted entire: "Behold, in the name of God Almighty and of our Lord Jesus Christ and of His most Holy Mother, the ever-stainless Virgin Mary, and also of the twelve holy Apostles by whose teaching the world is made glorious in the true faith, to whose honor the Minister, which is called the New Minister in distinction to the old monastery hard by, there are set down here in due order the names of brethren and monks, of members of the household also (familiorum), or of benefactors living and dead, that by the perishing memorial of this writing they may be written in the page of the heavenly book, by the virtue of which this family, this family, this family, through Christ's bounty, is fed. And let also the names of all those who have commended themselves to its prayers and its fellowship be recorded here in general, in order that remembrance may be made of them daily in the sacred celebration of the Mass or in the harmonious chanting of psalms. And let the name of each be recited daily by the subdeacon before the altar at the early or principal Mass, and as far as time shall allow let them be recited by him in the sight of the Most High. And after the oblation has been offered to God by the right hand of the cardinal priest who celebrates the Mass, let the names be placed upon the holy altar during the very mystery of the Mass and be commended most humbly to God Almighty: so that as remembrance is made of them upon earth (sicul eorum memoria agitur in terris—a phrase from the Ordinarium Missae), so in the life to come, by His indulgence who alone knows how they stand or are to stand in His Kingdom, those who are of greater merit may be augmented in Heaven, and the account of those who are less worthy may be lightened in His secret judgments. Be ye glad and rejoice that your names are written in Heaven, through Jesus Christ our Lord, to whom with God the Eternal Father and the Holy Ghost, there remains all honour, power, and such necessary virtues.

This account is particularly interesting, because, although the laying of the necrology upon the altar during Mass afterwards fell into disuse, and the names were read in chapter instead of in choir, still the extract clearly shows that the book of obituares had its origin in the old "dipytchas" (see Dipyrchus), or tables, upon which were formerly entered the names which were read out by the priest at the Commemoration of the Living and the Commemoration of the Dead in the Canon of the Mass. So far as can be seen, the recitation of the names of the defunct bishops in the dipytchas was later on represented by the reading of the martyrologium proper, while the commemoration of the benefactors is represented in the form of a necrology. It will be remembered that in the everyday Requiem Mass (missa quotidiana de functorum) of our Missals, the priest is first directed to pray "pro defunctis episcopis seu sacerdotibus", next "pro fratribus, propinquis et benefactoribus", and lastly "pro omnibus fideli bus defunctis". This corresponds to the entry in the necrology, viz., of those included in the martyrologium, those named in the necrology, and those not specially mentioned at all. The entry of the names of the dead in the register of a monastery or other religious institution, and the consequent participation in the prayers and good works of all its members, was a privilege which, from the eighth century onward, was greatly coveted. Such mutual rights of the insertion of the names of deceased brethren in each other's necrologies was a constant subject of negotiation between different abbeys, etc., and at a somewhat later date it became the custom for monasteries to send messengers with "mortuary rolls" (rotuli) requesting the promise of prayers. The necrology also served as a document for the senders to pray for the deceased brethren of the monasteries who rendered them this service. (But for this see Rotuli)

Although the entries in the extant necrologies of monasteries and cathedrals are generally of the brief-
As parallel to this passage of Homer may be mentioned the sixth book of Virgil’s Æneid, which relates the descent of Æneas into the infernal regions. But here there is no true evocation, and the hero himself goes through the abodes of the souls. Besides these poetical and mythological narratives, several instances of necromantic practices are recorded by historians. At Cape Teneaenus Calliopas evoked the soul of Archilochus, whom he had killed (Plutarch, “De sere navis minvis vindicta”, xvi). Periander, tyrant of Corinth, and one of the seven wise men of Greece, sent messengers to the oracle on the River Acheron to ask his dead wife, Melissa, in what place she had laid a stranger’s deposit. Her phantom appeared twice and, at the second appearance, gave the required information (Herodotus, V, xxxi). King Attalus of Pergamum killed Cleonice, whom he had mistaken for an enemy during the night, and in consequence he could find neither rest nor peace, but his mind was filled with strange fears. After trying many purifications and expiations, he went to the psychopompos of Phigalia, or Heracles, evoked her soul, and received the assurance that his dreams and fears would cease as soon as he should have returned to Sparta. Upon his arrival there he died (Pausanias III, xvii, 8, 9; Plutarch, “De sere num. vindo.”, x; “Vita Cimonis”, vii). After his death, the Spartans sent to Italy for psychagogues to evoke and appease his manes (Plutarch, “Desera num. vindo.”, xvii). Necromancy is mixed with one-ironed spells of the Egyptian kind, and was used by those who desired to know if his son’s sudden death was due to poisoning. He went to the oracle of the dead and, while sleeping in the temple, had a vision of both his father and his son who gave him the desired information (Plutarch, “Consolatio ad Apollonium”, xiv).

Among the Romans, Horace several times alludes to the evocation of the dead (see especially Satires, I, viii, 25 sq.). Cicero testifies that his friend Appius practised necromancy (Tuscul. quaest., I, xvi), and that Vatinius called up souls from the netherworld (in Vatin., vi). The same is asserted of the Emperor Drusus (Tacitus, “Annales”, II, xxviii), Nero (Suetonius, “Nero”, xxiv; Pliny, “Hist. nat.”, XXX, v), and Carus (Die Cassius, LXXVII, xv). The grammarians Apion pretended to have conjured up the soul of Homer, whose country and parents he wished to ascertain (Pliny, “Hist. nat.”, XXX, vi), and Sextus Pompeius consulted the famous Thessalian magician Erichtho to learn from the dead the issue of the struggle between his enemy Octavius Caesar and himself (Dio Cassius, LXXIV, VI). Nothing certain can be said concerning the rites or incantations which were used; they seem to have been very complex, and to have varied in almost every instance. In the Odyssey, Ulysses digs a trench, pours libations around it, and sacrifices black sheep whose blood the shades drink before speaking to him. Lucan (Pharsalia, II, 578) speaks of lengthy incantations, and speaks of warm blood poured into the veins of a corpse as if to restore it to life. Cicero (In Vatin., VI) relates that Vatinius, in connexion with the evocation of the dead, offered to the manes the entrails of children, and St. Gregory Nazianzen mentions that boys and virgins were sacrificed and dissected for conjuring up the dead and divining (Orat. I contra Julianum, xiii, in P. G., XXV, 624).

II. NECROMANCY IN THE BIBLE.—In the Bible necromancy is mentioned chiefly in order to forbid it or to reprove those who have recourse to it. The Hebrew term ‘bôbeth’ (sing., ‘bôboth’) denotes primarily the spirits of the dead, or ‘pythons’, as the Vulgate calls them (Deut., xviii, 11). The ‘bôbeth’ were suspected in order to learn the future (Deut., xviii, 10, 11; I Kings, xviii, 8), and gave their answers through certain persons in whom they resided (Leviti., xx, 27; I Kings, xxviii, 7), but is also applied to the persons themselves who were supposed to foretell events under
the guidance of these "divining" or "pythoic" spirits (Levit., xx, 6; 1 Kings, xxviii, 3, 9; Isa., xix, 3). The term yiddde 'onim (from yadda, "to know"), which is also used, but always in conjunction with 'obhash, refers either to knowing spirits and persons through whom they spoke, or to spirits who were known and familiar to the worshippers. The term 'obhash signifies both "a divine being," and "a leprous hand." (Job—xxxii, 19—uses it in the latter sense), but scholars are not agreed whether we have two disparate words, or whether it is the same word with two related meanings. Many maintain that it is the same in both instances, as the diviner was supposed to be the recipient and the container of the spirit. The Septuagint renders 'obhash by ἔφαγον τὸν κάρπον (E£αγασμενον), either because the translators thought that the diviner's alleged communication with the spirit was but a deception, or rather because of the belief common in antiquity that ventriloquism was not a natural faculty, but due to the presence of a spirit. Perhaps, also, the two meanings may be connected on account of the peculiarity of the voice of the ventriloquist, which was weak and indistinct, as if it came from a cavity. Isaiah (viii, 19) says that necromancers "utter" and makes the following prediction concerning Jerusalem: "Thou shalt speak out of the earth, and thy voice shall be heard out of the ground, and thy voice shall be from the earth like that of a man, and out of the land shall come a voice" (xxix, 4). Profane authors also attribute a distinctive sound to the voice of the spirits or shades, although they do not agree in characterizing it. Homer (Ilad, XXIII, 101; Od., XXIV, 9, 9) uses the verb τραυματεύεσθαι, and Statius (Thebais, VII, 770) ἀπολλυτρείεσθαι, both of which mean "to utter a shrill cry." Horace quotes Vergil, speaking of Virgil's shade: ut frater tabula faciet: (Sat., I, 3, 59). Virgil speaks of their vox exigua (Ecneid, VI, 492) and of the gemitus lacrymabolis which is heard from the grave (op. cit., III, 39); and in a similar way Shakespeare says that "the sheathed dead did squeak and gibe in the Roman streets" (Hamlet, I, i). The Mosaic Law forbids necromancy (Levit., xx, 31; xx, 6), declares that to seek the truth from the dead is abhorred by God (Deut., xvii, 11, 12), and even makes it punishable by death (Levit., xx, 27; cf. I Kings, xxviii, 9). Nevertheless, owing especially to the contact of the Hebrews with pagan nations, we find it practised in the time of Saul (I Kings, xxviii, 7, 9), of Isaiah, who strongly reproves the Hebrews on this point, and of David (I Kings, xxxiv, 6; II Par., xxxiii, 6). The best known case of necromancy in the Bible is the evocation of the soul of Samuel at Endor (I Kings, xxviii). King Saul was at war with the Philistines, whose army had gathered near that of Israel. He "was afraid and his heart was very much dismayed. And he consulted the Lord, and the Lord answered him not, neither by dreams, nor by priests, nor by prophets" (5, 6). Then he went to Endor, to a woman who had "a divining spirit," and persuaded her to call the soul of Samuel. The woman alone saw the prophet, and Saul recognized him from the description she gave of him. But Saul himself spoke and heard the prediction that, as the Lord had abandoned him on account of his disobedience, he would be defeated and killed. This narrative has given rise to several interpretations. Some deny the reality of the apparition and claim that the witch deceived Samuel; thus St. Jerome (In Is., iii, vii, 11, in P. L., XXIV, 108; in Ezech., xi, 17, in P. L., XXV, 119) and Theodoret, who, however, adds that the prophesies from God (Qb., LXXIII, LXIV, in P. G., LXXX, 589). Others attribute it to the devil, who took Samuel's appearance; thus St. Basil (In Is., viii, 218, in P. L., XXX, 497), St. Gregory of Nyssa ("De pythoicis, ad Theodos., episc. epist.", in P., XXV, 107-14), and Theodulf (De anima, LXIII, in P. L., II, 794). Others, finally, look upon Samuel's apparition as real; thus Joseph (Antiq. Jud., IV, xiv, 2), St. Justin (Dialogus cum Tryphone Judæo, 105, in P. G., VI, 721), Origen (In Reg., xxvii, "De Engastrymytho," in P., G., XII, 1011-1028), St. Ambrose (In Luc., i, 33, in P. L., XV, 1547), and St. Augustine, who finally adopted this view after having held the other (De diversis quaest., 1, Simplicius, In Pl., L, XL, 1477; Dulcitii quest., VI, in P. L., XL, 162-65; De cura pro mortuis, xx, in P. L., XL, 606; De doctrina christiana, II, xxii, in P. L., XXXIV, 52). St. Thomas (Summa, I, II, Q. clxxiv, a. 5, ad 4 um) does not pronounce. The last interpretation of the reality of Samuel's apparition is favoured both by the details of the profane and by another Biblical text which convinced St. Augustine: "After this, he [Samuel] slept, and he made known to the king, and showed him the end of his life, and he lifted up his voice from the earth in prophecy to blot out the wickedness of the nation" (Eccles., xivi, 23).

III. NECROMANCY IN THE CHRISTIAN ERA.—In the first centuries of the Christian era the practice of necromancy was common among pagans, as the Fathers frequently testify (see, e.g., Tertullian, "Apol.", xxii, P. L., I, 470; De anima, LVI, LVII, in P., II, 790 sqq.; Laetantius, "Divine institutions," IV, xxvii, in P., VI, 531). It was associated with other magical arts and other forms of demonical sorcery, and thus profaned even by another Biblical text which convinced St. Augustine: "After this, he [Samuel] slept, and he made known to the king, and showed him the end of his life, and he lifted up his voice from the earth in prophecy to blot out the wickedness of the nation" (Tertullian, De anima, LVI, in P., II, 793). Nevertheless, even Christians converted from paganism sometimes indulged in them. The efforts of Church authorities, popes, and councils, and the severe laws of Christian canonists, ended this evil, and the task was taken over by Constantine, Constantius, Valentinian, Valens, Theodosius, were not directed specifically against necromancy, but in general against pagan magic, divination, and superstition. In fact, little by little the term necromancy lost its strict meaning and was applied to all forms of black art, becoming closely associated with alchemy, witchcraft, and magic. Notwithstanding all efforts, it survived in some form or other during the Middle Ages, but was given a new impetus at the time of the Reformation by the revival of the neo-Platonic doctrine of demons. In his memoirs (translated by Roesce, New York, 1851, ch. xiii) Benvenuto Cellini shows how vague the meaning of necromancy had become, and how easy it was to be relapsed into. In the evocations in which multitudes of "devils" appeared and answered his questions. Cornelius Agrippa ("De occulta philosophia," Cologne, 1510, tr. by J. F. London, 1651) indicates the magical rites by which souls are evoked. In recent times, necromancy, as a distinct belief and practice, reappears under the name of spiritism (or spiritualism not to be confounded with spiritism). The Church does not deny that, with a special permission of God, the souls of the departed may appear to the living, and even manifest things unknown to the latter. But, understood as the art or science of evoking the dead, necromancy is held by theologians to be due to the agency of evil spirits, for the means taken are inadequate to produce the expected results. In intended evocations of the dead, there may be many things explainable naturally or due to fraud; how much is real, and how much must be attributed to imagination and deception, cannot be determined, but real facts of necromancy, with the use of incantations and magical rites, are looked upon by theologians as the result of human intercourse with the spiritual world, and are, therefore, a special mode of divination, due to demonic intervention, and divination itself is a form of superstition.

NEBRIUS (Nextapor), Patriarch of Constantinople, (381-397), d. 27 Sept., 397, eleventh bishop of that city since Metropoles, and may be counted its first patriarch. He came from Tarsus of a senatorial family, and sat at Constantinople as a member of the second general council (381). When St. Gregory Nazianzen resigned his occupation of that see the people called for Nectarius to succeed him and their choice was ratified by the Council (Socrates, "H. E." V), before August, 381. Sozomen (H. E., VII, 8) adds that Nectarius, about to return to Tarsus, asked Diodorus, Bishop of Tarsus, if he could carry any letters for him. Diodorus, who saw that his visitor was the most suitable person to become Bishop of Constantinople, persuaded Meletius, Bishop of Antioch, to add his name to the list of candidates presented by the council to the emperor. The emperor then, to every one’s surprise, chose Nectarius, who was not yet fifty years of age, and he was consecrated bishop. Tillemont (Mémoires, IX, 486) doubts this story. Soon after Nectarius’ election the Council passed the famous third canons giving Constantinople rank immediately after Rome. A man of no very great power, Nectarius had an uneventful reign with which St. Gregory was not altogether pleased ("Ep." 88, 91, 151, 153; Tillemont, op. cit., IX, 65). Suspected of concessions to the Novatians (Socrates, V, 10; Sozomen, VII, 12), he made none to the Arians, who in 388 burnt his house (Socrates, V, 13). Palsmon says that in 394 he held a synod at Constantinople which decreed that no bishop should be doped without the consent of several other bishops of the same province (Harduin, I, 955). The most important event, however, is that, according to Socrates (V, 19) and Sozomen (VII, 16), as a result of a public scandal Nectarius abolished the discipline of public penance and the office of penitentiary hitherto held by a priest of his diocese. The incident is important for the history of Penance. Nectarius preached a sermon which he afterwards prepared and published ("Mémoires de l’Académie des Inscriptions et Belles-Lettres"), XXIII (1754), 174; Kohlers, De origine et progressu necromantiae mense mensis novembris aequo sabbato et natore tum Graecos tum Romanos per sponsum Festas (Freiburg im Br., 1839), 31; Watten, The Mysteries of Magic (London, 1897), 31; Holmes in Kato’s Cyclopedia of Biblical Literature, s. v. Divination; Whitman, The Bible, s. v. Prophets; in Dict. de la Bible, s. v. Evocation des morts; Schmids in Kirchenlexi- com, s. v. Todtensprechung.

Negligence (Lat. nec, not, and legere, to pick out), the condition of not heeding. More specifically it is here considered as the omission, whether habitual or not, of the care required for the performance of duties, or at any rate, for their full and adequate discharge. In the teaching of St. Thomas, it is rated not only as a characteristic discernible in the commission of all sins, but also as a special sin in itself. Its particular deformity he judges to be the imputable lack of such solicitude as is here and not the obligation of satisfying obligations. He therefore assigns prudence as the virtue to which it is directly opposed. What has been said applies also to actions which are not of precept, once it is resolved to undertake them. Negligence, according to St. Thomas, is initially at least a lack of promptness of will, and is quite distinguishable from torpor or alipshodnus in execution. It is not commonly esteemed to be more than a venial sin. There are, however, two notable exceptions to this statement: (1) if a person is careless to the point of omitting something which is indispensable for salvation (de necessitatis salute), or (2) if the remissness of will be so great as totally to extinguish the love of God in the soul, then, then, then the negligence becomes mortal.

Negligence is a factor to be reckoned with in determining the liability of one who has damaged another in any way. In the court of conscience the perpetrator of damage can only be held responsible and bound to restitution when his action has been attended with moral culpability, i.e., has been done freely and deliberately. Negligence is an act of negligence per se in regard to that measure which is established according to the different subject matter involved. The absence of this degree of care on the part of an agent is assumed by the civil law to be culpable, and is punished with the penalties provided. Thus the common law generally distinguishes three classes of negligence as follows: gross negligence is the failure to employ even the smallest amount of care, such as any person, no matter how heedless, would use for the safeguarding of his own interests; ordinary negligence is the failure to exercise ordinary care, such as a person of ordinary capacity and capable of governing a family would take of his own affairs; slight negligence is the failure to bring to bear a high degree of thoughtfulness persons would maintain in looking after their own interests. The civil law may and does impose the obligation of reparation for harm wrought not only where ordinary and gross negligence are shown, but also at times when only slight negligence is proved to have existed. This obligation holds good likewise in conscience, once the decision of the judge decreeing has been rendered.

Nehemiah, Book of, also called the second Book of Ezra, is reckoned both in the Talmud and in the early Christian Church, at least until the time of Origen, as forming one single book with Ezra, and St. Jerome in his preface (ad Dominorem et Rogatium), following the example of the Jews, still continues to treat it as making one with the Book of Ezra. The union of the two volumes less has its origin in the fact that the documents of which the Books of Ezra and Nehemiah are composed, underwent compilation and redaction together at the hands probably, as most critics think, of the author of Paralipomenon about B. C. 300. The separation of the Book of Nehemiah from that of Ezra, preserved in our editions, may in its turn be justified by the consideration that the former relates in a distinct manner the work accomplished by Nehemiah, and is made up, at least in great part, from the authentic memoirs of the principal figure. The book comprises three sections: I, vii; II, vii—xiii; III, xii, 431. Sections I and III will be treated first, and section II, which raises so many serious literary problems, will be discussed at the end.

Section I: i—vi, (1) comprises the account, written by Nehemiah himself, of the restoration of the walls of Jerusalem. Already in the reign of Xerxes (B. C. 485—65), and especially during the first part of the reign of Artaxerxes I (B. C. 465—44), the Jews had attempted, but with only partial success, to rebuild and secure their capital, a work, up to then never sanctioned by the Persian kings (see I Esd., iv, 6—23). In consequence of the edict of Artaxerxes, given in I Esd., iv, 18—22, the enemies of the Jews at Jerusalem forcibly stopped the work (ibid., 23) and pulled down a part of what had already been accomplished. (2) With these events the beginning of the Book of Nehemiah is con-
nected. Nehemiah, the son of Helchias, relates how, at the court of Artaxerxes at Susa where he fulfilled the office of the king's cup-bearer, he received the news of this calamity in the twentieth year of the king (Neh., i), and how, thanks to his prudence, he succeeded in getting himself sent on a first mission to Jerusalem with full powers to rebuild the walls of the Jewish capital (Neh., ii, 1–8). This first mission lasted twelve years (v. 14; xiii, 6); he had the title of Pehah (v. 14; xii, 26) or Athersatha (vii, 9; x, 1). It had long been the opinion of most historians of Israel that the Artaxerxes of Nehemiah was certainly the first of that name, and that consequently the first mission of Nehemiah fell in the year B. C. 445. The Aramaic papyri of Elephantine, recently published by Sayce, afford moreover the key to the text (v. 14). For in the letter which they wrote to Bahohim, Governor of Judea, in the seventeenth year of Darius II (B. C. 408), the Jewish priests of Elephantine say that they have also made an application to the sons of Sanballat at Samaria. Now Sanballat was a contemporary of Nehemiah, and the Artaxerxes of Nehemiah, therefore, was the predecessor, and not the successor, of Darius II.

(3) On his arrival at Jerusalem, Nehemiah lost no time; he inspected the state of the walls, and then took measures and gave orders for taking the work in hand (ii, 9–18). Chapter iii, a document of the highest importance for determining the area of Jerusalem in the fifth century, contains the inventory of the names of the people who participated in the work. The description of the work, carried out at all points at once under the direction of the zealous Jewish governor, the high priest Eliashib is named first among the fellow workers of Nehemiah (iii, 1). To bring the undertaking to a successful termination the latter had to fight against all sorts of difficulties. (4) First of all, there was the opposition of the Samaritans (iv, 1). The Jews who had returned from captivity almost a century before, had found the country partly occupied by people belonging to the neighboring races, and being unable to organize themselves politically, had seen themselves reduced, little by little, to a humiliating position in their own land. And so, at the time of Nehemiah, we see certain foreigners taking an exceedingly arrogant attitude towards the Jewish governor and his work. Sanballat the Horonite, chief of the Samaritans (iv, 1, 2), Tobias the Ammonite, Goessem the Arabian, claim to exercise constant control over Jewish affairs, and try by all means in their power, by calumny (ii, 19), scoffs (iv, 1 ff.), threats of violence (iv, 10), attempts to turn the king against Nehemiah, to stop him in his work or ruin him. The reason of this was that the raising up again of the walls of Jerusalem was destined to bring about the overthrow of the moral domination, which for many years circumstances had secured for these foreigners.

(5) The cause of the foreigners was upheld by a party of Jews, traitors to their own nation. The prophet Noadias and other false prophets sought to terrify Nehemiah (vi, 14); there were some who, like Samia, allowed themselves to be hired by Tobias and Sanballat to set snares for him (vi, 10–14). Many Jews sided with Tobias on account of the matrimonial alliances existing between his family and certain Jewish families. Nehemiah, however, does not speak of the mixed marriages as if they had been actually forbidden. The father-in-law of Tobias' son, Mosollam, the son of Barachias, on the contrary, was a fellow worker of Nehemiah (vi, 18; iii, 4). The law of Deuteronomy only forbade marriages between Jews and Chanaanites (Deut. vii, 1, 3). (6) Difficulties of a social nature are also treated of by the poor by the rich, who misused the common distress for their own ends, likewise called for the energetic intervention of Nehemiah (v). On this occasion Nehemiah recalls the fact that previous governors had practised extortion, while he was the first to show himself disinterested in the discharge of his duties (v, 15 ff.). (7) In spite of all these difficulties the rebuilding of the wall made rapid progress. We learn from vii, 15, that the work was completely finished within fifty-one days. Josephus (Ant., V, 7, 8) says that it lasted two years and four months, but his testimony, often far from reliable, presents no plausible reason for setting aside the text. The relatively short duration of the work is explained, moreover, considering that Nehemiah had only to repair the damage wrought after the prohibition of Artaxerxes (I Esd., iv, 23), and finish off the construction, which might at that moment have been already far advanced [see above (1)].

Section III: xiii, 4–31. After the expiration of his first mission, Nehemiah had returned to Susa in the following year, and had by his influence urged Artaxerxes (B. C. 433; viii, 6). Some time after, he was charged with a fresh mission to Judea, and it is with his doings during this second mission that xiii, 4–31 is concerned. The account at the beginning seems mutilated. Nehemiah relates how, at the time of his second arrival at Jerusalem, he began by putting an end to the abuses which Tobias, the Ammonite, supported by the high priest Eliasib, was practising in the temple in the matter of the depository for the sacred offerings (xiii, 4–9). He severely blames the violation of the right of the Levites in the distribution of the tithes, and takes measures to prevent its occurrence in future (xiii, 10–14); he insists on the Sabbath being strictly respected even by the foreigners, and he rebukes C. Tachemon, a great-grandson of Elisashib who had married a daughter of Sanballat (xiii, 23–28). To this son-in-law of Sanballat is generally attributed the inauguration of the worship in the temple of Garseim. It is plain that Nehemiah's attitude towards the foreigners who lived in Judea is not so severe as towards the Jews who had returned from captivity, for his relations with them are not touched upon in the Book of Nehemiah. Much more striking are the mixed marriages which he did not interfere with. The treatment of mixed marriages differs greatly from his attitude at the beginning of his first stay at Jerusalem [see section I, (5)].

Section II: vii–xiii, 3, (1) contains accounts or documents relating to the work of politico-social and religious organisation effected by Nehemiah, after the walls were finished. Here we no longer have Nehemiah speaking in the first person, except in vii, 1–5, and in the account of the dedication of the walls (xii, 31, 37, 39). He relates how, after having rebuilt the walls, he had to proceed to erect houses, and take measures for bringing into the town a population more in proportion to its importance as the capital (vii, 1–5; 15). (2) He describes the mixed marriages (vii, 1 ff.) of the families who had returned from captivity with Zorobabel. This list is in I Esd., ii. It is remarkable that in the Book of Nehemiah, following on the list we find reproduced (vii, 70 ff.) with variants, the remark of I Esd., ii, 68–70 about the gifts given towards the work of the temple by Zorobabel's companions, and the settlement of these latter in the country; and again that Neh., viii, 1 resumes the narrative in the very words of I Esd., iii. This dependence is probably due to the redactor, who in this place gave a new form to the notes supplied him by the Jewish governor's memoirs which also explains the latter's being spoken of in the third person, Neh., viii, 9, 13. There is a desire to depict a grand gathering held in the seventh month under the direction of Nehemiah (viii, 9–12) at which Esdras reads the Law (viii, 13). They then kept the feast of Tabernacles (viii, 13–18). When this feast is over, the people gather together again on the twenty-fourth day of the seventh month (ix, 1 ff.) to praise God, confess their sins, and bind themselves by a written covenant faithfully to observe their obligations. Chapter X after giving the list of the subscribers to the covenant, sets forth the obligations, which the people bind themselves to fulfil; in particular the prohibition of mixed marriages (verses 30): the keeping of the Sabbath, especially in their
treatment of foreign merchants (verse 31), the yearly tribute of a third part of a sicle for the Temple (verse 32), and other measures to ensure the regular celebration of sacrifices (verses 33–34), the offering of the first fruits and of the first born (verses 35–37), and the payment and the distribution of the tithes (verses 35–39).

After chapter x it is advisable to read xii, 43–xiii, 1; the appointment of a commission for the administration of things brought to the Temple, and the regulation of the marriages of foreigners from among the community. Chapter xi, 1, 2, recalls the measures taken to people Jerusalem; verses 3–36 give the census of Jerusalem and of the other towns as Nehemia's measures left it. In chapter xii, 27–43, we have the account of the solemn dedication of the walls of Jerusalem; Esdras the scribe is mentioned, as well as the head of a group of singers (verse 35). The list in xii, 1–26, has no connexion whatever with the events of this epoch.

(4) The proceedings set forth in viii–x are closely connected with the other parts of the history of Nehemia. The obligations imposed by the covenant, described in x, have to do with just the very matters with which Nehemia concerned himself more during his second stay (see above, section III). The regulation concerning the providing of the wood for the altar (x, 34) is recalled by Nehemia in xiii, 31, and the very words used in x, 39 (end of verse), we find again in xiii, 11. The covenant entered into by the people during Nehemia's first mission was broken in his absence. The people were to predict the abuses of the high priests, and he was to take steps to prevent them. The statement that the scribes and the Levites were to be the heads of the people is instructive. The attitude he takes towards mixed marriages is quite different from his attitude at the beginning of his first stay [see above section I (5); section III]. This change is explained precisely by the absolute prohibition pronounced against these marriages in the assembly described in x, 44. The fact that in viii–x there is given a list of events belonging to the period of the organization of worship under Zorobabel, the names of Nehemia (viii, 9; x, 1) and Esdras (viii, 1 ff.) having been added later. But there was certainly sufficient reason for the reorganization of worship in the time of Nehemia (cf. the Book of Maccabees) and Nehem., xii). Others on the contrary would regard Neh., viii–x, as the sequel to the narrative of I Esdras, ix–x, and they likewise hold that Nehemia's name has been interpolated in Neh., viii, 9, and x, 1. This theory is equally untenable. It is true that in the Third Book of Esdras (the Greek I Esdras) the narrative of Neh., viii, is reproduced immediately after Neh., x, but the author of the Book of Esdras was led to do this by the fact that Neh., viii, presents his hero as reader of the Law. He has moreover preserved (III Esd., ix, 50) the information of Neh., viii, 9, about the intervention of the Athersatha (Nehemia), Esdras superior, which clearly proves that this account does not refer to the time when the mission of Nehemia was being carried on, but rather to the time when Esdras returned to Jerusalem and was entrusted with the king with full powers for the administration of the Jewish community. See, moreover, the following paragraph.

(5) According to our view the return of Esdras with his emigrants and the reform effected by him (I Esd., viii–x) ought, chronologically, to be placed after the history of Nehemia, and the Artaxerxes, in the seventh year of whose reign Esdras returned to Jerusalem, is Artaxerxes II (b. c. 405–358). As a matter of fact, Esdras finds the wall of Jerusalem rebuilt (I Esd., ix, 9), Jerusalem well populated (x, 1 ff.), the Temple treasure under proper management (vii, 29 ff.), Jonathan, son of Elieias, high priest (x, 6); cf. Neh., xii, 25, Esdras, son of implacable enemies. The Book of Esdras and Nehemia presents the marriages recognized by every one (ix, 1 ff.). The radical reform, which Esdras introduced in this matter without being troubled by foreigners who still held the upper hand at the time of Nehemia's first coming, definitively put an end to the abuse in question which had proved rebellious to all preventive measures (x).

The political and social situation described in the first six chapters of Nehemia [see above, section I (4), (5), (6)], the religious situation to which the proceedings of the gathering in Neh., x, bear witness [see above, section II (3)], do not admit of being explained as immediately following after the mission of Esdras, who particularly, in virtue of the king's edict, disposed of what people regarded as indispensable to the celebration of the place (I Esd., vii, viii, 25 ff.). Esdras's activity is noticeably noticed in Neh., i–vi, and in the list of the subscribers to the covenant (x, 1 ff.). He is mentioned in Neh., vii, 1 ff., and in xii, 35, as fulfilling subordinate functions. Considering the singular number of the verbs in Neh., vii, 9, 10, it is probable that in the former of these verses the 'two veils' have been named as part of the subject of the phrase is due to a later hand.

At the epoch of Nehemia, therefore, Esdras was at the beginning of his career, and must have gone a little later to Babylonia, whence he returned at the head of a band of emigrants in the seventh year of Artaxerxes II (b. c. 398).

(6) Many critics have maintained that in Neh., vii, we have the history of the first promulgation of the "Priestly Code" by Esdras, but the narrative in question does not authorize such an interpretation. Esdras was probably still a very young man at this time, and all he does is to read the Law before the assembled people. It is quite true that in I Esd., vii, there is made mention in the name of the king, so that the laws of God are promulgated "with the abomination of the Gentiles" (verse 14), but besides the fact that we hold the events related in I Esd., vii, to be posterior to Neh., vii [see above (5)], these words must not be understood literally of a new document of which Esdras was the bearer. In the same terms mention is made of the wisdom of his God which Esdras has in mind (verse 14), and when he says that it is oracular it is to Esdras's compatriots already known the Law of their God.

A. VAN HOONACKER.

Nehem, STEPHAN JAKOB, church historian; b. at Ebnat, 24 July, 1829; d. at Nordhausen, 7 Oct., 1902. His family were country people of Ebnat, a village in the district of Neresheim in Württemberg, and upon the conclusion of his studies in the gymnasium Neher devoted himself to the study of theology in the University of Tübingen. After his ordination, he laboured as pastor of Dorfmarshausen near Zürich and finally of Nordhausen (in the district of Ellwangen, Württemberg). In addition, Neher devoted himself throughout his life to intellectual pursuits, principally to canon law and church history, giving his attention, in the latter study, chiefly to the two branch sciences of ecclesiastical geography and ecclesiastical statistics, in which he established himself as a prominent figure. In his first considerable work, which appeared in 1861, he deals with the topic of the privileged Altar (altare privilegiumat). In 1864 he published the first volume of his great and carefully planned work, "Kirchliche Geographie und Statistik", which comprises three volumes (Ratisbon, 1864–68). It was, for that day, the most important work, important work, independent in its method of approach. Its author was one of the first in modern times to recognize the importance of this branch of church history, collecting with great care material often very difficult to procure, and arranging it systematically. His book on the celebration of two Masses by a priest
on the same day pertains to canon law, and it bears the title: "Die Bination nach ihrer geschichtlichen Entwicklung" by J. R. H. Hart (Ziegenbalg, 1874). After 1878 Neher edited the statistical "Personalkatalog" of his own diocese of Rottenburg, and was one of the principal contributors to the second edition of the Kirchenlexikon of Wetzer and Welte. For this work he wrote no fewer than 235 articles, or greater parts of articles. Their content is chiefly matters relating to church history, or ecclesiastical statistics; his best articles are those relating to the latter subject; those of purely historical interest are often imperfect.

J. P. KIRSCH.

NÉLATON, Auguste, famous French surgeon; born in Paris, 17 June, 1807, d. there, 21 Sept., 1873. He made his medical studies in Paris, graduating in 1836 with a thesis on tuberculous affections of bones. All his subsequent university career was passed at Paris. After the publication of his "Traité des tumeurs de la mamelle" he became agrégé in 1839. In 1851 he became professor of clinical surgery with a thesis which attracted much attention and was translated into several languages the following year. As a member of the surgical staff of the St. Louis Hospital, he devised a number of original surgical procedures and operations, was the first to suggest the ligature of both ends of arteries in primary and secondary hemorrhage, and developed several phases of plastic surgery. The Nélaton probe was a well known instrument, subsequently used by him in Garibaldi's case, in 1862, to locate a bullet in the ankle joint. Some of his suggestions with regard to operations were important advances in abdominal and pelvic surgery. He was, lastly, noted as a great teacher of surgery and a consummate operator.

German historian of medicine, in his "Biographical Dictionary of Prominent Physicians of the Nineteenth Century", says of Nélaton: "He was a man of very clear judgment, of ripe experience, of solid wisdom, and deservedly occupies a place as one of the greatest of French surgeons of the nineteenth century." In 1863 he was elected a member of the Paris Academy of Medicine and in 1867 of the French Institute of Science, and became Senator of the French Empire in 1868. His fame as a writer on surgery rests upon his "Elements of Surgical Pathology" (5 vols., Paris, 1854-60). The last volume was completed with the collaboration of A. Jamin. In 1807 Nélaton had an important share in preparing the "Report on The Progress of Surgery in France".

NEMORE, JORDANUS (JORDANUS DE), the name given in MSS. of the thirteenth and fourteenth centuries to a mathematician who in the Renaissance period was called Jordanus Nemorarius. A number of his works are extant, but nothing is known of his life. It is customary to place him early in the thirteenth century. Emile Chaclas, the geometrician, concluded from a study of the "Algorismus Jordani" that its author lived not later than the twelfth century. In the fourteenth century the English Dominican Nicolas Triveth, in a chronicle of his order, attributed the "De ponderibus Jordani" and the "De linea datis Jordani" to Jordanus Saxo, who, in 1222, succeeded St. Dominic as master general of the Friars Preachers. Since then, the identity of Jordanus Saxo with Jordanus Nemorarius has been accepted by a great many authors; it seems difficult to maintain this opinion, however, as the Dominican superior general never adds de Némore to his name, and the mathematician never calls himself Saxo. The literal translation of "Jordanus de Némore" (Giordano of Nemi) would indicate that he was an Italian. Jordanus had a great influence on Spicizius in his "Arithmetica" and in the "De comminibus natura", Roger Bacon quotes his "De ponderibus", as well as a commentary which had been written on it at that period. Thomas Bradwardine and the logicians who succeeded him in the school of Oxford likewise make a great deal of use of the writings of Jordanus. During the Renaissance his "De ponderibus" was one of the books which influenced the development of the science of statics.

The treatises composed by Jordanus de Némore are:

1. "Algorismus", a theory of the elementary operations of arithmetic. An "Algorithmus demonstratus Jordani" was printed at Nuremberg in 1534, by Petreius for Johannes Schöner. The "Algorithmus" represents an anonymous MS. found among the papers of Regiomontanus. It was erroneously attributed to Jordanus, and had really been composed in the thirteenth century by a certain Magister Gernardus (Duhem in "Bibliotheca mathematica", 3rd series, VI, 1905, p. 9). The genuine "Demonstratio Algorismi" of Jordanus, which E. Chasles had already examined, has been translated by A. B. J. von Bayern (G. Eneström in "Bibliotheca mathematica", 3rd series, VII, 1906, p. 24), but is still unpublished.

2. "Elementa Arithmeticae"; this treatise on arithmetic, divided into distinctiones, was printed at Paris in 1496 and in 1514, to the order of Lefèvre d'Étaples, who added various propositions to it. "De numeris et proportionibus" was published by Wallis. "De geometrica" was published in "Math. Phys.", XIV, suppl., pp. 127-66, and again in 1891 by Maximilian Curtze (ibid., XXXVI, "Histor. liter. Abtheilung", pp. 1-23, 41-63, 81-95, 121-138).

3. "De triangulis"—Jordanus himself gave this treatise the name of Philotechnes (Duhem in "Bibliotheca mathematica", 3rd series, V, 1903, p. 321; Archiv für die Geschichte der Mathematik und der Technik", 1, 1909, p. 88). It was published by M. Curtze ("Mittheil. der Copernicusverein für Wissenschaft und Kunst", VI—Thorn, 1887).

4. "Planisphærum"—This work on map-drawing gives, for the first time, the theorem: The stereographic projection of a circle is a circle. It was printed by Valderus, at Bâle, in 1536, in a collection containing the cosmographical works of Ziegler, Proclus, Berosus, and Theon of Alexandria, and the "Planisphere" of Ptolemy. "De Speculis", a treatise on catoptrics, still unedited. "De ponderibus", or better, "Elementa super demonstrationem ponderum", a treatise on statics, in nine propositions, was published, seemingly for the first time, in 1544 by G. Francisca. An introduction to a fragment on the Roman balance attributed to one Charistion, contemporary and friend of Philo of Byzantium (second century, b. c.). This fragment has survived under two forms: (a) a Latin version directly from the Greek, entitled "De canonic"; (b) a ninth-century commentary by the Arab mathematician Thabit Ibn Qurrah, translated into Latin by Gerard of Cremona.

Most of the propositions of the "De ponderibus Jordani" are gravely erroneous. But the last offers a remarkable demonstration of the principle of the lever, introducing the method of virtual work for the first time in mathematical history. Towards the end of the fourteenth century, or the beginning of the fifteenth, an anonymous author expanded the demonstrations in Jordanus's treatise; in this enlarged form, the treatise, combined with the "De canonic", is found in many MSS. under the title "Liber Euclidis de ponderibus". There is also an anonymous commentary on the "De ponderibus", based on ideas apparently borrowed from R. de Gliscins "Geometriae mechanicae". This Aristotelian commentary is attributed by Roger Bacon in his "Opus majus"; together with an enlarged edition of the "Liber Euclidis de ponderibus", it was printed at Nuremberg, in 1533, by
to the effect that Abraham having refused to worship the statue of Nemrod was cast into a fiery furnace. A trace of this legend appears in II Esdr., ix, 7, where the translator of the Vulgate renders the original "Ur of the Chaldees" (from which the Lord called Abraham), by "fire of the Chaldeans". It was only natural that the renown of Nemrod as a builder should have caused his name to be connected with nearly all of the principal mounds and ruins to be found in Mesopotamia.

JAMES F. DRISCOLL.

NEOCAESAREA, a titular see, suffragan of Hierapolis in the Patriarchate of Antioch, sometimes called Caesarea, in "Georgii Cyprii Descriptio orbis romanii" (ed. Gelzer, 1882). Among its bishops were Paul, whose hands were burned by order of Liciinus and who attended the Council of Nicaea in 325 (Theodore, "Hist. ecc.", I, VII); Meletius, opposed to the Council of Ephesus in 431; Patricius (451) and John (553). In the sixth-century "Notitia episcopatus" of Anastasius (Chos d'Orrient, Paris, X, 145) this see is mentioned as a suffragan of Hierapolis. According to Procopius (De Edificiis II, 9), Justinian accomplished great things there. Neocæsarea was a fort on the strait, not far from that point where the site was the actual ruins of Balkiz (La frontière de l'Euphrate de Pompe à la conquête arabe, Paris, 1907, 278 sqq.).

**Neo-Platonism**, ((neofytoς), the newly planted, i.e. incorporated with the mystic Body of Christ), a term applied to all those who have lately entered upon a new and higher state or condition of life, e.g. those who have begun the ecclesiastical life, or have joined a religious order. More particularly is it used of those who, lately converted from heathenism, have, by the sacrament of Baptism, been transplanted into the higher life of the Church. From very early times there have been exhibitions against neophytes, last sense being promoted too quickly to Holy Orders and to positions of responsibility in the Church. Thus the Council of Nicea in its second canon lays down rules on this subject, on the ground that some time is necessary for the state of a Catechumen and for fuller probation after baptism; for the Apostolic decree is clear when it states: “Not a neophyte, lest being lifted up with pride, he fall into the judgment of the devil” (I Tim., iii, 6). The period which should elapse after conversion before promotion is not fixed but (Bened. XIV, “De syn.”, vii, 65–6) is left to the discretion of the bishop and will vary with the individual case. (See *Divorce*, sub-title *Pauline Privilege*.)

**Arthur S. Barnes.**

**Neo-Platonism**, a system of idealistic, spiritual-philosophical thought, tending towards mysticism, which flourished in the pagan world of Greece and Rome during the first centuries of the Christian era. It is of interest and importance, not merely because it is the last attempt of Greek thought to rehabilitate itself and restore its exhausted vitality by recourse to Oriental religious ideas, but also because it definitely entered the service of pagan polytheism and was used as a weapon against Christianity. It derives its name from the fact that its first representatives drew their inspiration from Plato’s doctrines, although it is well known that much of the thought on which the system is founded is not genuine work of Plato. It originated in Egypt, a circumstance which would, of itself, indicate that while the system was a characteristic product of the Hellenic spirit, it was largely influenced by the religious ideals and mystic tendencies of Oriental thought.

To understand the neo-Platonic system in itself, as well as to appreciate the attitude of Christianity towards it, it is necessary to explain the two-fold purpose which actuated its founders. On the one hand, philosophico-religious thought in the Hellenic world had proved itself inadequate to the task of moral and religious regeneration. Stoicism, Epicureanism, Eclecticism and even Gnosticism each having failed in the task of “making men happy”, and each in turn failed. Then came the thought that Plato’s idealism and the religious forces of the Orient might well be united in one philosophical movement which would give definiteness, homogeneity, and unity of purpose to all the efforts of the pagan world to rescue itself from impending ruin and destruction. On the other hand, the pagan point of view, the aggressiveness of Christianity began to be realized. It became necessary, in the intellectual world, to compose on the Christians by showing that Paganism was not entirely bankrupt, and, in the political world, to rehabilitate the official polytheism of the State by furnishing an interpretation of it, that should be acceptable in philosophy. Speculative Stoicism had reduced the gods to personifications of natural forces; Aristotle had definitely denied their existence; Plato had sneered at them. It was true, therefore, that the growing prestige of Christianity should be offset by a philosophy which, claiming the authority of Plato, whom the Christians revered, should not only retain the gods but make them an essential part of a philosophy, based on the origin of neo-Platonism. It should, however, be added that, while the philosophy which sprang from these sources was Platonic, it did not disdain to appropriate to itself elements of Aristotelianism and even Epicureanism, which it articulated into a Syncretic system.

**I. Forerunners of Neo-Platonism.**—Among the more or less eclectic Platonists who are regarded as forerunners of the neo-Platonic school, the most important are Plutarch, Maximus, Apuleius, Enesidemus, Numenius. The last-mentioned, who flourished towards the end of the second century of the Christian era, had a direct and immediate influence on Plotinus, the first systematic neo-Platonist. He taught that there are three gods, the Father, the Maker (Demiurgos), and the World. Philo the Jew (see Philo Judaeus), who flourished in the middle of the first century, was also a forerunner of neo-Platonism, although it is difficult to say whether his doctrine of the mediation of the Logos had a direct influence on Plotinus.

**II. Ammonius Saccus, a porter on the docks at Alexandria, is regarded as the founder of the Alexandrian school. Since he left no writings, it is impossible to say what his doctrines were.** We know, however, that he had an extraordinary influence over men like Plotinus and Origen, who willingly abandoned the professional teachers of philosophy to listen to his discourses. According to Eusebius, he was born of Christian parents, but reverted to paganism. The date of his birth is given as 242. No certain information on his life is available.

**III. Plotinus, a native of Lycopeia in Egypt, who lived from 205 to 270 was the first systematic philosopher of the school.** When he was twenty-eight years old he was taken by a friend to hear Ammonius, and Thrasyllos forth for eleven years he continued to study, and later to be the lectures of the porter. At the end of the first discourse which he heard, he exclaimed: “This man is the man of whom I was in search.” In 242 he accompanied the Emperor Gordian to Mesopotamia, intending to go to Persis. In 244 he went to Rome, where, for ten years, he taught philosophy, counting among his pupils all of the Emperor Elagabalus, and his son, and his wife Salonina. In 253 he retired to Campania, and spent his life as a hermit, making disciples, including Porphyry, and there he died in 270. His works, consisting of fifty-four treatises, were edited by Porphyry in six groups of nine. Hence they are known as the “Enneads”. The “Enneads” were first published in a Latin translation by Marsilius Facins (Florence, 1492); of recent editions, the best are Breuer and Moser’s (Oxford, 1855), and Kirchhoff’s (Leipzig, 1856). Parts of the “Enneads” are translated into English by Taylor (London, 1787–1817).

Plotinus’ starting-point is that of the idealist. He meets what he considers the paradox of materialism, the emphatic assertion that the soul is spirit, and the emphatic assertion of the existence of spirit. If the soul is spirit, it follows that it cannot have originated from the body or an aggregation of bodies. The true source of reality is above us, not beneath us. It is the One, the Absolute, the Infinite. It is God. God exceeds all the categories of finite thought. It is not correct to say that He is a Being, or a Mind. He is Over-Being, over-Mind. The only attributes which may be appropriately applied to Him are Good and One. If God were only One, He should remain forever in His undifferentiated unity, and there should be nothing but God. He is, however, good; and goodness, like light, tends to diffuse itself. Thus, from the One, there can be infinite Folds (Neo), which is the image of the One, and at the same time a
partially differentiated derivative, because it is the world of ideas, in which are the multiple archetypes of things. From the intellect emanates an image in which are a matter, a form, and a quality. It is described in figurative language, and thus its precise philosophical value is not determined. Similarly the One, God, is described as light, and Matter is said to be darkness. Matter, is, in fact, for Plotinus, essentially the opposite of the Good; it is evil, and the source of all evil. It is unreason and wherever it is present, there is not only a lack of goodness but also a lack of reality. God alone is free from Matter; He alone is Light; He alone is fully real. Everywhere there is partial differentiation, partial darkness, partial unreason; in the Intellect, in the World-Soul, in Souls, in the material universe. God, the reality, the spiritual, is, therefore, contrasted with the world, the unreal, the material. God alone, the One, everything else is appearance, or phenomenon.

Man, being composed of body and soul, is partly, like God, spiritual, and partly like matter, the opposite of spiritual. It is his duty to aim at returning to God by eliminating from his being, his thoughts, and his actions, everything that is material and, therefore, bequeathed by matter from God. It existed before its union with the body; its survival after death is, therefore, hardly in need of proof. It will return to God by way of knowledge, because that which separates it from God is matter and material conditions, which are only illusions or deceptive appearances. The first step, therefore, in the return of the man to God is the understanding of the being of the soul, withdrawing from the world of sense by a process of purification (katastasis), frees itself from the trammels of matter. Next, having retired within itself, the soul contemplates within itself the indwelling intellect. From the contemplation of the Intellect within, it rises to a contemplation of the Intellect above. Henceforth forever, He is a spiritual being, a man of

God, a prophet, and a wonder-worker. He commands all the powers of nature, and even bends to his will the demons themselves. He sees into the future, and in a sense shares the vision, as he shares the life, of God.

IV. Porphyry, who in beauty and lucidity of style excels all the other followers of Plotinus, and who is distinguished also by the bitterness of his opposition to Christianity, was born A.D. 233, probably at Tyre. After having studied at Athens, he visited Rome and there became a devoted disciple of Plotinus, whom he accompanied to Campania in 263. He died about the year 330. Of his work "Against the Christians" only a few portions have been preserved. Christian apologists, have come down to us. From these it appears that he directed his attack along the lines of what we should now call historical criticism of the Old Testament and the comparative study of religions. His work "De Antro Nymphaeum" is an elaborate allegorical interpretation and defence of pagan mythology. His "Apostrophe to Philosophy" is an exposition of Plotinus' philosophy. His biographical writings included "Lives" of Pythagoras and Plotinus in which he strove to show that these "god-sent" men were not only models of philosophic sanctity but also soteriouthis, or "wonder-workers", endowed with theurgic powers. The best known of all his works is a logical treatise entitled "Evagoras", an introduction to the Categories of Aristotle. In a Latin translation made by Boethius, this work was very widely used in the early Middle Ages, and exerted considerable influence on the growth of Scholasticism. It is, as is well known, a passage in this "Isagoge" that is said to have given occasion to the celebrated controversy concerning universals in the eleventh and twelfth centuries. In his expository works on the philosophy of Plotinus, Porphyry lays great stress on the importance of theurgic practices. He holds, of course, that the practices of asceticism are the starting-point on the road to perfection. One must begin the process of perfection by "thinning out the veil of matter" (the body), which separates the spiritual and material things. Then, as a means of further advancement, one must cultivate self-contemplation. Once the stage of self-contemplation is attained, further progress towards perfection is dependent on the consultation of oracles, divination, bloodless sacrifices to the superior gods and bloody sacrifices to demons, inferior powers. V. Iamblichus, a native of Syria, who was a pupil of Porphyry in Italy, and died about the year 330, while inferior to his teacher in power of exposition, seemed to have a firmer grasp of the speculative principles of neo-Platonism and modified more profoundly the metaphysical doctrines of the school. His works bear the titles of "Organon" and "Summary of the Doctrines of the Doctrines". Whether he or a disciple of his is the author of the treatise "De Mysteriis Egyptianorum" (first pub. by Gale, Oxford, 1678, and afterwards by Parthey, Berlin, 1857), the book is a product of his school and proves that he, like Porphyry, emphasized the magic, or theurgic, factor in the neo-Platonic scheme of salvation. As a result of the development of Plotinus' system, he devoted attention to the doctrine of emanation, which he modified in the direction of completeness and greater consistency. The precise nature of the modification is not clear. It is safe, however, to say that, in a general way, he forestalled the effort of Proclus to distinguish three subordinate emanations, or stages, in the process of creation.

While these philosophical defenders of neo-Platonism were directing their attacks against Christianity, representatives of the school in the more practical walks of life, and even in high places of authority, carried on a more effective warfare in the name of the school. Hierocles, pro-consul of Bithynia during the reign of Valerian, and the patrician of the Christians of his province, but wrote a work, now lost, entitled "The discourse of a Lover of Truth, against the Christians", setting up the rival claims of neo-Platonic philosophy. He, like Julian the Apostate, Celeus (q.v.), and others, was roused to activity chiefly by the claim which Christianity made to be, not a national religion like Judaism, but a world-wide, or universal, religion. Julian sums up the case of philosophy against Christianity thus: "Divine Government is not through a special society (such as the Christian Church) teaching an authoritative doctrine, but through the order of the visible universe and all the variety of civic and national institutions. The underlying harmony of the world is the basis of everything, and is the secret of the order of the universe" (Whitaker, "Neo-Platonists", p. 155). It is in the light of this principle of public policy that we must view the attempt of Iamblichus to furnish a
systematic defence of Polytheism. Above the One, he says, is the Absolutely First. From the One, which is the uncreative, unproductive, passive, self-determining, self-constituted, the Intellectual and the Intelligible, is essentially dual. Both the Intellectual and the Intelligible are divided into triads, which are the superterrestrial gods. Beneath these and subordinate to them, are the terrestrial gods whom he subdivides into three hundred and sixty celestial beings, seventy-two orders of sub-celestial gods, and forty-two genera which could claim to be the semi-divine heroes of mythology and the philosopher-saints such as Pythagoras and Plotinus. From this it is evident that neo-Platonism had by this time ceased to be a purely academic question. It had entered very vigorously into the contest waged against Christianity. At the same time, it had not ceased to be a force which could claim to be a living remnant of pagan culture. As such, it appealed to the woman-philosopher Hypatia, whose fate at the hands of a Christian mob at Alexandria, in the year 429, was cast up as a reproach to the Christians (see Citha of Alexandria). Among the contemporaries of Hypatia at Alexandria was another Hierocles, and the comment on the Pythagorean "Golden Verses".

VI. Proclus, the most systematic of all the neo-Platonists, and for that reason known as "the scholastic of neo-Platonism," is the principal representative of a phase of philosophic thought which developed at Athens during the fifth century, and lasted down to the year 452. The occasion was the death of Plutarch. The Athenian school was Plutarch, the Great (not Plutarch of Chaeronea, author of "Lives of Illustrious Men"), who died in 431. His most distinguished scholar was Proclus, who was born at Constantinople in 410, studied Aristotelian logic at Athens, where he later occupied the chair of Plutarch. He died at Athens in 452. He is the author of several Commentaries on Plato, of a collection of hymns to the gods, of many works on mathematics, and of philosophical treatises, the most important of which are: "Theological Elements," 

"Theological Elements," 

(printed in the Paris ed. of Plotinus' works); "Platonic Theology" (printed, 1618, in a Latin translation by Emilius Portus); shorter treatises on Fate, on Evil, on Providence, etc., which exist only in a Latin translation made by William of Moerbeka in the thirteenth century. These are collected in Cousin's edition, "Procli Opera," Paris, 1820-25. Proclus attempted to harmonize and to systematize the teaching of Plotinus by means of Aristotelian logic. The cardinal principle on which his attempt rests is the doctrine, already foreshadowed by Iamblichus and others, that in the process of emanation there are always three subordinate stages, or moments, namely the original (μόρβος), emergence from the original (εξέλοιθος) and return to the original (επέδρεω). The reason of this process is enunciated as follows: the derived is at once unlike the original and like it; its likeness is the cause of its derivation, and its likeness is the cause, or reason, of the tendency to return. All emanation is, therefore, serial. It constitutes a "chain" from the One down to the antithesis of the One, which is matter. By the emanation from the One come the hexades", the supreme gods who exercise providence over worldly affairs; from the hexades comes the "triazl", intelligible, intelligible-intellectual, and intellectual, corresponding to being, life, and thought; each of these is, in turn, the origin of a "hebdolm", a series corresponding to the chief divinities of the pagan pantheon, the "deeds" or "forces" of the gods, which alone are operative in nature, although, since they are the lowest derivatives, their efficacy is least. Matter, the antithesis of the One, is inert, dead, and can be the cause of nothing except imperfection, error, and moral evil. The birth of a human being is the descent of a soul into matter. The soul, which, however, may ascend, never, may descend, cannot ascend. The ascension of the soul is brought about by asceticism, contemplation, and the invocation of the superior powers by magic, divination, oracles, miracles, etc.

VII. The Last Neo-Platonists.—Proclus was the last great representative of neo-Platonism. His disciple, Marinus, was the teacher of Damascius, who, along with the Saracens the learned, was murdered, and was the successor of Proclus, who died in 529. Damascius was accompanied in his exile to Persia by Simplicius, celebrated as a neo-Platonic commentator. About the middle of the sixth century John Philoponus and Olympiodorus flourished at Alexandria as exponents of neo-Platonism. They were, like Simplicius, commentators. When they became Christians at the time of the suppression of paganism, Plato came to an end. The name of Olympiodorus is the last in the long line of scholarchs who began with Speusippus, the disciple and nephew of Plato.

VIII. Influence of Neo-Platonism.—Christian thinkers, almost from the beginning of Christian speculation, found in the spiritualism of Plato a powerful aid in their understanding of the spiritual world and human soul which pagan materialism rejected, but to which the Christian Church was irrevocably committed. All the early refutations of psychological materialism are Platonic. So, too, when the ideas of Plotinus began to prevail, the Christian writers took advantage of the support thus lent to the doctrine of the immortality of the human soul. The Christian world of matter. Later, there were Christian philosophers, like Nemesius (flourished c. 450), who took over the entire system of neo-Platonism so far as it was considered consonant with Christian dogma. The same may be said of Synesius (Bishop of Ptolemais, c. 410), except that he, having been a pagan, did not, as a logical consequence, feel that neo-Platonism had value as a force which unified the various factors in pagan culture. At the same time there were elements in neo-Platonism which appealed very strongly to the heretics, especially to the Gnostics, and these elements were more and more strongly accentuated in heretical systems; so that St. Augustine, who knew the writings of Plotinus in a Latin translation, was obliged to exclude from his interpretation of Plotinus many of the tenets which characterized the neo-Platonic school. In this way, he came to profess a Platonism which in many respects is nearer to the doctrine of Plato's "Dialectes" than is the philosophy of Plotinus. "Pseudo-Plotinian" oppositions of modern authors of neo-Platonism had the widest influence in later times, and who also reproduced most faithfully the doctrines of the school, is the Pseudo-Dionysius (see Dionysius, THE PSEUDO-APOPEGATHE). The works "De Divinis Nominibus", "De hierarchia coelesti", etc., are now admitted to have been written at the end of the fifth, or during the first decades of the sixth century. They are the pen of a Christian Platonist, a disciple of Proclus, probably an immediate pupil of that teacher, as is clear from the fact that they embody, not only Proclus' ideas, but even lengthy passages from his writings. The author, whether intentionally on his part, or by some mistake on the part of his readers, came to be identified with Dionysius who is mentioned in the Acts of the Apostles as a convert of St. Paul. Later, especially in France, he was further identified with Dionysius the first Bishop of Paris. Thus it came about that the works of the Pseudo-Apoepegate, after having been used in the East, first by the Monophysites and later by the Catholics, became known in the West and exercised a widespread influence through the Middle Ages. They were translated into Latin by John Scotus Eriugena about the middle of the ninth century, and in this form were studied and commented on, not only by mystic writers, such as the Victorines, but also by the typical representatives of
Scholasticism, such as St. Thomas Aquinas. None of the later scholastics, however, went the full length of adopting the metaphysics of the Pseudo-Arcopagite in its essential principles, as did John Scotus Eriugena in his “De divisione naturae.” After the reorganization of the Athenian school of philosophy by John Philoponus in the 5th century, the representatives of neo-Platonism went, as we have seen, to Persia. They did not remain long in that country. Another exodus, however, had more permanent consequences. A number of Greek neo-Platonists who settled in Syria carried with them the works of Plato and Aristotle, which, having been translated into Syriac, were afterward lost. It was, however, preserved. Thus, towards the middle of the twelfth century, began to re-enter Christian Europe through Moorish Spain. These translations were accompanied by commentaries which continued the neo-Platonic tradition commenced by Simplicius. At the same time a number of anonymous philosophical works, written for the most part under the influence of the school of Proclus, some of which were ascribed to Aristotle, began to be known in Christian Europe, and were not without influence on Scholasticism. Again, works like the “Fons vitae” of Avicebron, which were known to be of Jewish or Arab origin, were neo-Platonic, and helped to determine the doctrine of the scholastics. For this reason the Schoolmen, Scoto-Erasmianus is acknowledged by Scotus himself to be derived from Avicebron. Notwithstanding all these facts, Scholastic philosophy was in spirit and in method Aristotelian; it explicitly rejected many of the neo-Platonic interpretations, such as the unity of the Active Intellect. For this reason all unprejudiced critics agree that it is an exaggeration to describe the whole Scholastic movement as merely an episode in the history of neo-Platonism. In recent times this exaggerated view has been defended by M. Picavet in his “Esquisse d’une histoire comparée des philosophies médiévales” (Paris, 1907).

The neo-Platonic elements in Dante’s “Paradiso” have their origin in his interpretation of the scholastics. It was not until the rise of Humanism in the sixteenth century that the works of Plotinus and Proclus were translated and studied with that zeal which characterized the Platonists of the Renaissance. It was then, too, that the theurgic, or magic, elements in neo-Platonism were made popular. The same tendency is found in Bruno’s “Enchiridion Campestre,” and later in Plotinus in the direction of materialistic Pantheism. The active rejection of Materialism by the Cambridge Platonists in the seventeenth century carried with it a revival of interest in the neo-Platonists. An echo of this appears in Berkeley’s “Sirius,” the last phase of his opposition to materialism. Whatever neo-Platonic elements are recognizable in the transcendentalists, such as Schelling and Hegel, can hardly be cited as survivals of philosophical principles. They are rather inspirational influences, such as we find in Platonizing poets like Spenser and Shelley.

**Neo-Platonic philosophy.**—The ethicoreligious society founded by Pythagoras, which flourished especially in Magna Grecia in the fifth century B.C., disappears completely from history during the fourth century, when philosophy reached the zenith of its perfection at Athens. Here and there, however, there appears a philosopher who reverts to the Pythagorean doctrine of numbers, and in a general way manifests the tendency of the school towards religious ethics and the practices of asceticism. Beginning with the middle of the first century B.C., a more systematic attempt was made to philosophize on the speculative philosophy of the Pythagoreans and combine it with the practice of astrology and sorcery. The first of these systematic neo-Pythagoreans was Figulus, a Roman philosopher who lived at Alexandria about the middle of the first century B.C., and was a friend of Cicero. Other Romans also contributed to the movement, the chief of whom were Vatinus and the Sextites. It was, however, the Alexandrine school that was, of course, conceived without any reference to the claims of Christianity. Their original aim—to save the pagan world from moral and social ruin by the introduction of the religious element into the practice of astrology and philosophy—was, of course, conceived without any reference to the claims of Christianity. But as soon as the Christian religion came to be recognized as a factor in the intellectual and political life of the Roman Empire, philosophy, in the form of Neo-Pythagoreanism, made active campaign against the Christians, proclaimed its own system of spiritual regeneration, and set up in opposition to Christ and the Saints the heroes of philosophical tradition and legend, especially Pythagoras and Apollonius of Tyana.

**Speculative System.**—The neo-Pythagoreans were methodical eccentrics. They admitted into their speculative system not only the traditional teachings of the Pythagorean school but also elements of Platonism, Aristotelianism, and Stoicism. Besides, they derived from Oriental religions with which they were in contact at Rome as well as at Alexandria, a highly spiritual notion of God. There was, naturally, very little coherence in a system developed from principles so divergent. Nevertheless, there was a sort of unity in the school even in respect of fundamental tenets. Nevertheless, it may, in general, be said that the school placed God, the supremely spiritual One, at the head of all reality. This, of course, was Oriental in its origin. Next, they interpreted the Pythagorean doctrine in a Platonic sense, when they taught that numbers are the thoughts of God. Thirdly, borrowing from Stoicism, they went on to maintain that numbers, emanating as forces from the divine thoughts, are, not indeed the substance of things, but the forms according to which things are fashioned. From Aristotle they borrowed the doctrine that the world is eternal and that there is a distinction between terrestrial and celestial matter. They also accepted Aristotelian influence, is dominated to a great extent by the belief that the stars are deities and that the powers of air, earth, and sky are demons.

**Ethics and Religion.**—In their theory of conduct the neo-Pythagoreans attach great importance to personal asceticism, contemplation, and the worship of a purely spiritual deity. This asceticism is an essential part of their ethical system that freedom from the trammels of matter and final union with God are to be obtained only by invoking the aid of friendly spirits and God-sent men and by thwarting the efforts of malign demons. This latter principle led to the practice of magic and sorcery and eventually to a good deal of charlatanry. The principle that the friendly spirits and the souls of god’s special messengers aid
men in the struggle for spiritual perfection led to the practice of honouring and even deifying the heroes of antiquity and the representatives of wisdom such as Pythagoras and Apollonius. In view of the philosophers of this school wrote "Lives" of Pythagoras which are full of fabulous tales, stories in which more than natural wisdom, skill, and sanctity are attributed to the hero. They did not hesitate to invent where exaggeration failed to accomplish their aim, so that they gave only too much justification to the modern critic's description of their biographical activity as representing the "Golden Age of Apocryphal literature". In this spirit and with this purpose in view Philostratus, about the year A.D. 220, wrote a "Life of Apollonius" which is of special importance because, while it is not a professed imitation of the Gospels, it was evidently written with a view of rivalling the great narrative. Apollonius was born at Tyana in Cappadocia four years before the Christian era. At an early age he devoted himself under various masters, to the study of philosophy and the practice of asceticism. After the five years of silence imposed by the rule of Pythagoras, he began his journeys. Throughout Asia Minor he travelled from city to city teaching the doctrine of the sect. In time he journeyed to the far East in search of the wisdom of the magi and the brahmins, and, after his return, took up once more the task of teaching. Later he went to Greece, and thence to Rome, where he lived for a time under the emperor Nero. In 69 he was at Alexandria, where he attracted the attention of Vespopius, who enquired of his narrative. Apollonius was cast into prison, but escaped to Greece, and died two years later. The place of his death is variously given as Ephesus, Rhodes, and Crete. Into the framework of these facts Philostratus weaves a tissue of alleged miraculous events, prophecies, visions, and prodigies of various kinds. It is important to remark in criticism of this narrative that Apollonius lived one hundred years after the events which he describes. Moreover, according to Philostratus's own account, Apollonius did not lay claim to divine prerogatives. He believed that the "virtue" which he possessed was to be attributed to his knowledge of Pythagorean philosophy and his observance of its precepts. He held as a general principle that anyone who attained the same degree of wisdom and asceticism could acquire the same power. The parallele, therefore, which was drawn between his extraordinary deeds and the miracles narrated in the Gospels does not stand the verdict of criticism. Our Lord claimed to be God, and appealed to His miracles as a proof of His divinity. Apollonius denied his own divinity. Finally, it should be remembered that the Pythagorean biographers openly acknowledged "the principle of permitting exaggeration and deceit in the cause of philosophy" (Newman). The "Lives" of Pythagoras and Apollonius are to be judged by the standards of fiction and not by the canons of historical criticism. Those who have examined and criticised the distinction, have tried to make capital against Christianity out of this class of Pythagorean literature are Lord Herbert and Blount, mentioned in Newman's essay on Apollonius, and Jean de Castillon, who was instigated by Frederic the Great.

"Philostratus's Life of Apollonius, and the Letters sacred to the latter were published in PHILOSTRATUS, Opera Omnia (Leipzig, ed. OLIVERIUS, 1789); (ed. of KNAPP, 1870-71); the works of NEWTON, LAMBCHURCH, in LAMBCHURCH, "Apuleius: De Morte"; (ed. of NAUMANN, 1877). ZELLER, "Philosophie des Altertums", III, 3rd ed. (Leipzig, 1873), 70 ff.; NEWTON, "Historical Sketches, 1 (London, 1895), 301 ff.; TURNER, "History of Philosophy" (Boston, 1903), 204 ff.

WILLIAM TURNER.
through the active intellect (intellec tus agens) an ab-
stract representation of the sensible object is provided
for the intellectus possibile s. Hence the characteristic
of the idea, its non-materiality, and on this is based
the principal argument for the spirituality and immor-
tality of the soul. Here, too, is the foundation of logic
and of the theory of knowledge, the justification of our
judgments and axioms.

Upon knowledge follows the appetitive process,
sensory or intellectual according to the sort of knowl-
edge. The will (appetitus intellectualis) in certain con-
ditions is free, and thanks to this liberty man is the
master of his destiny. Like all other beings, we have an
intensity of the theory of knowledge, the justification of
our judgments and axioms.

Natural happiness would result from the full de-
velopment of our powers of knowing and loving. We
should find and possess God in this world since the
corporeal world is the proper object of our intelligence.
But above nature is the order of grace and our sup-
natural happiness will consist in the direct intuition of
God, the beatific vision. Here philosophy ends and
theology begins.

II. ADAPTATION TO MODERN NEEDS.—The neo-
Scholastic programme includes, in the next place, the
adaptation of medieval principles and doctrines to our
present needs and demands. Many of these are less in-
compatible with progress than out-and-out
relativism. Vita in motu. To make Scholasticism
rigid and stationary would be fatal to it. The doc-
trines revived by the new movement are like an
inherited fortune; to refuse it would be folly, but to
manage it without regard to actual conditions would
be worse. With this understanding the “Aquinas
should be our beacon, not our boundary” (“Der Ka-
tholismus und das zwanzigste Jahrh. im Lichte der
Kirchlichen Entwicklung der Neuzeit,” Stuttgart,
1902, 252). We have now to pass in review the vari-
ous factors in the situation and to see in what respect
the new Scholasticism differs from the old and how far
it adapts itself to our age.

(1) Elimination of False or Useless Notions.—Neo-
Scholasticism rejects the theories of physics, celestial
and terrestrial, which the Middle Ages grafted on the
principles, otherwise sound enough, of cosmology and
metaphysics; e. g. the perfection and superiority of
astral substance, the “incorruptibility” of the heav-
ens, the “animal spirits”, the “immortal souls” or the
“spirits”; the influence of the stars on the generation of
earthly beings, the four “simple” bodies, etc. It fur-
ther rejects those philosophical theories which are dis-
proved by the results of investigation; e. g. the
diffusion of sensible “species” throughout a medium
and their introduction into the organs of sense. Even
the Scholastic ideas that have been retained are not
all of equal importance; criticism and personal con-
viction may retract or modify them considerably,
without injury to fundamental principles.

(2) Study of the History of Philosophy.—The medi-
evial scholars cultivated the history of philosophy solely
with a view to its utility; i. e. as a means of gathering
the deposit of philosophical and theological truths of
ancients and, especially, for the purpose of refuting
error and thus emphasizing the value of their own doc-
trine. Modern students, on the contrary, regard
every human fact and achievement as in itself signifi-
cant, and accordingly they treat the history of philos-
ophy in a spirit that is more disinterested. With this
new attitude, neo-Scholasticism is in full sympathy;
it does its share in the work of historical reconstruction
by employing critical methods; it does not attempt to
condense the opinions of others into a syllogism and
refute them with a phrase, nor does it commend the
practice of putting whole systems into a paragraph or
two in order to unburden them with depth or inten-
tive. Neo-Scholasticism, however, does not confine
its interest to ancient and medieval philosophy; its
chief concern is with present-day systems. It takes
issue with them and offsets their theories of the world
by a synthesis of its own. It is only by keeping in
touch with actual living thought that it can claim a
place in the twentieth century and command the at-
tention of its opponents. And it is only by having
again from a discussion in which it encounters Posi-
tivism, Kantism, and other forms or tendencies of
modern speculation.

(3) Cultivation of the Sciences.—The need of a phi-
losophy based on science is recognized to-day by every
school. Neo-Scholasticism simply follows the exam-
ple of the Aristotelian and medieval philosophy in
taking the data of research as the groundwork of its
speculation. That there are profound differences be-
tween the Middle Ages and modern times from the
scientific point of view, is obvious. One has only to
consider the multiplication of the sciences in special
lines, the autonomy which science as a whole has
acquired, and the clear demarcation established be-
tween popular views of nature and their scientific inter-
pretation. But it is equally plain that neo-
Scholasticism must follow up each avenue of investi-
gation, since it undertakes, as Aristotle and Aquinas
did, to provide a synthetic explanation of phenomena
by referring them to their ultimate causes and deter-
mining their place in the universal order of things; and
this undertaking, if the synthesis is to be deep and
comprehensive, presupposes a knowledge of the details
furnished by each science. It is not possible to explain
the world of phenomena while neglecting the phenom-
en that make up the world. “All that exists, as con-
templated by the human mind, forms one large system
one complex fact.” “A man should be our beacon, not our boundary” (“Der Katholizismus und das zwanzigste Jahrh. im Lichte der Kirchlichen Entwicklung der Neuzeit,” Stuttgart, 1902, 252). We have now to pass in review the various factors in the situation and to see in what respect the new Scholasticism differs from the old and how far it adapts itself to our age.

(1) Elimination of False or Useless Notions.—Neo-
Scholasticism rejects the theories of physics, celestial and terrestrial, which the Middle Ages grafted on the principles, otherwise sound enough, of cosmology and metaphysics; e. g. the perfection and superiority of astral substance, the “incorruptibility” of the heavens, the “animal spirits”, the “immortal souls” or the “spirits”; the influence of the stars on the generation of earthly beings, the four “simple” bodies, etc. It further rejects those philosophical theories which are disproved by the results of investigation; e. g. the diffusion of sensible “species” throughout a medium and their introduction into the organs of sense. Even the Scholastic ideas that have been retained are not all of equal importance; criticism and personal conviction may retract or modify them considerably, without injury to fundamental principles.

(2) Study of the History of Philosophy.—The medi-
evial scholars cultivated the history of philosophy solely with a view to its utility; i. e. as a means of gathering the deposit of philosophy and theological truths of ancients and, especially, for the purpose of refuting error and thus emphasizing the value of their own doctrine. Modern students, on the contrary, regard every human fact and achievement as in itself significant, and accordingly they treat the history of philosophy in a spirit that is more disinterested. With this new attitude, neo-Scholasticism is in full sympathy; it does its share in the work of historical reconstruction by employing critical methods; it does not attempt to condense the opinions of others into a syllogism and refute them with a phrase, nor does it commend the practice of putting whole systems into a paragraph or two in order to unburden them with depth or inductive. Neo-Scholasticism, however, does not confine its interest to ancient and medieval philosophy; its
lidity met with no challenge, whereas, in the twentieth century, its very possibility is at stake and, to defend it against the concerted attack of Hume and Kant and Comte, the true significance of such concepts as being, substance, absolute, cause, potency, and act must be explained and upheld. It is true that, in a more technical sense, God is not unknowable; to rebut the charges preferred by Herbert Spencer against the traditional proofs of God's existence; to deal with the materials furnished by ethnography and the history of religions; and to study the various forms which monism and immanentism nowadays assume.

Cosmology can well afford to insist on the traditional proofs of matter and form, provided it pays due attention to the findings of physics, chemistry, crystallography, and mineralogy, and meet the objections of atomism and dynamism, theories which, in the opinion of scientific authority, are less satisfactory as explanations of natural phenomena than the hylomorphism (q. v.) of the Scholastics. The theory also allows, once the subject of ridicule, is nowadays endorsed by some of the most prominent scientists. In psychology especially the progressive spirit of neo-Scholasticism makes itself felt. The theory of the substantial union of body and soul, as an interpretation of biological, psychical, and psycho-physiological facts, is far more serviceable than the externalised spirit of Descartes on the one hand and the Positivism of modern thinkers on the other. As Wundt admits, the results of investigation in physiological psychology do not square either with materialism or with dualism whether of the Platonic or of the Cartesian type; it is only Aristotelian animism, which brings psychology into harmony with biology, can satisfactorily meet the case. The satisfactory metaphysical interpretation of experimental psychology ("Grundzüge d. phsiov. Psychologie" II, 540). So vigorous indeed has been the growth of psychology that each of its offshoots is developing in its own way: such is the case with critique, aesthetics, didactics, pedagogy, and the numerous ramifications of applied psychology. On the various lines, unknown to medieval philosophy, neo-Scholasticism is working energetically and successfully.

Its criminology is altogether new: the older Scholasticism handled the problem of certitude from the deductive point of view: God could not have misshaped the faculties with which He endowed the mind in such a way as to make knowledge of things possible. On the other hand, proceeds by analysis and introspection; it states the problem in the terms which, since Kant's day, are the only admissible terms, but as against the Kantian criticism it finds the solution in a rational dogmatism. Its aesthetics holds a middle course between the extreme subjectivism of many modern thinkers who would reduce the beautiful to a more impression, and the no less extreme objectivism which the Greeks of old maintained. It is equally at home in the field of experimental psychology which investigates the correlation between conscious phenomena and their physiological accompaniments; in fact, its theory of the substantial union of body and soul explains its covert influence on the various psycho-psychological theories corresponding to each psychical process.

The laws and principles which the modern science of education has drawn from experience find their adequate explanation in neo-Scholastic doctrine; thus, the intuitive method, so largely accepted at present as an essential element in education, is based on the Scholastic doctrine that nothing can be known through the avenue of sense. In the study of ethical problems, neo-Scholasticism holds fast to the vital teachings that prevailed in the thirteenth century, but at the same time it takes into account the historical and sociological data which explain the varying application of principles in successive ages. In view of contemporary systems which, on a purely experimental basis, attempt to set aside all moral imperatives and ideas of value, it is necessary to insist on the older concepts of good and evil, of finitude and obligation—a need which is easily supplied by neo-Scholastic ethics. As to logic, the most perfect part of Aristotle's great constructive work and therefore that which has been least modified up to the present time, its positions still call for defence against the inroads of writers like Mill, who regard the syllogism as a "solemn farce". Accordingly, with due consideration for modern modes of thinking, neo-Scholasticism adapts the teaching of the Middle Ages to actual conditions. Even as regards the relations between philosophy and religion, there are important changes to note. For the medieval mind in the Western world, philosophy and theology were identical until about the twelfth century. In the thirteenth the line of demarcation was clearly drawn, but philosophy was still treated as the preliminary training for theology. This is no longer the case; neo-Scholasticism assigns to philosophy a value of its own as a rational explanation of the world, on a par in this respect with Positivism and other systems; and it welcomes all who are bent on honest research, whether their aim be purely philosophical or apologetic.

Parallel with these modifications are those which affect the pedagogical phase of the movement. The methods of the earlier centuries were so closely dependent on the culture of that age; hence they have been replaced by modern procedures, curricula, and means of propagation. It would be ill-advised to wrap neo-Scholastic doctrine in medieval envelopes, e. g. to write books on the plan of the theological "Summe" or the "Quodlibetal Questions" which characterized, the thirteenth century. Without at all lessening its force, syllogistic demonstration gains in attractiveness when its essential characteristics are retained and clothed about with modern forms of presentation. In this connexion, the use of living languages as a means of exposition has obvious advantages and finds favour with many of those who are. Among these is another...
1904), Dupont, and Lepidi in Belgium; Farges and Dornet de Vorges (1910) in France, who with other scholars carried on the work of restoration before the First World War appealed for a clarification of the doctrine. For the first time, as true in various letters, recognized its importance; but it was the encyclical "Etterni Patris" of Leo XIII (4 Aug, 1879) that imparted to neo-Scholasticism its definitive character and quickened its development. This document sets forth the principles by which the movement is to be guided in a progressive spirit, and by which the medieval doctrine must take on new life in its modern environment. "If," says the pope, "there be anything that the Scholastic doctors treated with excessive subtlety or with insufficient consideration, or that is at variance with well-founded teachings of later date, or is otherwise improbable, we by no means intend that it shall be proposed to our age for imitation; . . . we certainly do not blame those learned and energetic men who turn to the profit of philosophy their own assiduous labours and erudition as well as the results of modern investigation; for we are fully aware that all this goes to the advancement of knowledge."

In Italy, the movement was vigorous from the start. The Academia di San Tommaso, founded in 1784, published, up to 1891, a review entitled "La Scienza Italiana." Numerous works were produced by Zigliara (1833-93), Satolli (1839-1909), Liberatore (1810-92), Barberis (1847-95), Schifini (1841-1906), de Maria, Talamo, Lorenzelli, Ballerini, Matusi, and others. The Italian writers at first laid special emphasis on particular problems without paying sufficient attention to the sciences or to the history of philosophy. Recently, however, this situation has undergone a change which promises excellent results.

From Italy the movement spread into the other European countries and found supporters in Germany and England. Stöckli, the "Glocke der philosophie Chrétienne" (Paris, since 1830); "Revue néo-scolastique de Philosophie" (Louvain, since 1894); "Revue de Philosophie" (Paris, since 1885); "Revue des sciences philosophiques et théologiques" (Kain, Belgium, since 1907); "Revue Thomiste" (Paris, since 1893); "Philosophisches Jahrbuch für Philosophie und spekulative Theologie" (Paderborn, since 1887); "St. Thomas Blätter" (Ratisbon, since 1888); Bôlesleti-Folýóirat (Budapest, since 1886); "Revista Lulliana" (Barcelona, since 1901); "Cienas Tomista" (Madrid, since 1903) in addition to various periodical publications not specially devoted to philosophy have given neo-Scholasticism their cordial support.

Various commentaries on the Encyclical "Etterni Patris" by Van Wijngaarden, L. Encyclop. des Sciences philosophiques et religieuses, LXXI (1879); SCHRIND, Die Philosophie des N. Thomae und ihre Bedeutung für die Gegenwart (Würzburg, 1881); ROYCE, Pope Leo's Philosophical movement and its relation to modern thought in Res. Cath. Pedag. M. DE WULF.

Nephtali (A. V., Néphtali), sixth son of Jacob and Bala (Gen., xxx, 8). The name is explained by a paenonym, which causes no small perplexity to commentators. Modern interpreters, following Simonis and Gesenius, translate it "Wrestlings of God have I wrestled [D. V., "God hath compassed me"] with my sister, and I have prevailed." According to this rendering, Nephtali would mean "my wrestling", or simply "wrestling". But, according to Gen., xlix, 21, tell us Nephtali was the first to announce to Jacob that Joseph was alive; in another passage of the same Targum, Nephtali is mentioned among the five whom Joseph presented to Pharaoh (Gen., xlvii, 2). According to the apocryphal "Testament of the twelve Patriarchs", he died in his one hundred and thirty-second year in Egypt. These details, however, are unreliable; in point of fact, we know nothing with certainty beyond the fact that he had four sons: Jaziel, Gunni, Jezer, and Sallem (Gen., xlv, 24; Num., xxvi, 48 sqq.; I Par., vii, 13).

The Tribe of Nephtali numbered 35,400 men "able to go forth to war" (Num., i, 42), being thus the sixth in importance among the tribes of Israel. The second census brought it down to the eighth place, and reported only 45,400 warriors (Num., xxvi, 48-50). During the wanderings of the Israelites in the desert, the tribe of Nephtali, under the command first of
Ahira, and later on of Phedael, was always united with the tribes of Dan and Aser. When spies were sent from the desert of Pharan to view the land of Chanaan, Nahabi, the son of Vass, and with him the tribe in the expedition (Num., xiii, 15). The territory allotted to Neptali in Chanaan lay to the extreme north of Palestine, and was bounded (Jos., xix, 33-34) on the north by the River Leontes (Nahr el-Qasmiyeh), on the east by the course of the Jordan as far as 12 miles south of the Sea of Galilee, on the west by the tribes of Asir and Zabulon, and on the south by that of Issachar. Including some of the finest land in Palestine, "it invites the most slothful to take pains to cultivate it" (Joseph., "Bell. Jud.," III, iii, 2). Naturally, the Chanaanites of that district were most unwilling to give up their rich possessions; the Book of Judges possibly even implies that the Hebrews could not approach the inhabitants (Judges, v), or in the south, in the territory of Neptali, the tribe of Issachar, called on that account "Galilee of the Gentiles" (Isa., ix, 1; IV Kings, xv, 29). Finally, they banded together under Jabin and Sisara to drive the Israelites out of the land. How this confederacy was defeated by Barac, a man of Cedees, with the warriors of Zabulon and Naphtali, in the battle of the Jordan, and the glory of Neptali, needs not be recounted here (Judges, iv, v). Again, with Gedeon, warriors of Neptali took part in the pursuit of the Midianites in pursuit of the Midianites (Judges, vii, 23), and sent to David at Hebron a contingent of 1000 captains and 37,000 men "furnished with shield and spear" (I Par., x, 34). And the men of Neptali, according to Josephus (Antiq., xvi, 10, 1), "in accordance with Emath", the key to northern Palestine, were "inured to war from their infancy" ("Bell. Jud.," loc. cit.).

CHARLES L. SOUVAT.

Nepi and Sutri (Nepesi et Sutrin), united sees of the province of Rome, central Italy, in the Ciminiæan region. Nepi is situated on a hill of tufts, and is surrounded by great walls; its cathedral, which occupies the site of an ancient temple of Jupiter, contains paintings by Titian, Perugino, and Zuccari; the communal palace was begun by Vignola, and the fort was built by Peter Louis Farnese. There still exist at Nepi the ruins of an amphitheatre and of ancient baths, from which several statues in the Vatican museum are taken. Later on, the church of St. King Nestanibis I, with an Egyptian inscription, Nepete and Sutriam, as these cities were called, belonged to the Faliscans, who called the Romans to their assistance when the Etruscans invaded them; the invaders (359, 311, 310), after twice defeating the Romans, went beyond the Ciminaire forest to attack the Etruscans in Etruscan territory. Wherefore, Livy calls these towns "clausura Etruria"; in 352, they became Latin colonies. In the Gothic War Nepi was one of the last strongholds of the Goths. The town was sacked by the Lombards in 569, and then fell into decadence. In the eighth century, however, it became the seat of Tuto, a Lombard dux, known for his interference in the papal election of 768. Whereupon, the struggle between the emperors and the popes, Nepi was imperial during the reigns of Alexander II, Nicholas II, Gregory VII, and Innocent II; on the one hand, in 1160, it fought against the commune of Rome, and in 1244, was besieged by Frederick II. A feudal possession, first of the precepts of Vico, and then of the Orsini, in 1537 to 1545, it was erected into a duchy in favour of Peter Louis Farnese; and when the latter was transferred to Parma, Nepi returned to immediate dependence on the Holy See. In 1798 the French set fire to the cathedral and to the episcopal palace, in which last edifice valuable archives were lost. The existence of an early Christian cemetery testifies to the great antiquity of the see, which is, as its evangelizer, St. Poltemus, who, it is claimed, was a disciple of the Apostles. In 419, Eudius, pope of Rome, Boniface I, was made Bishop of Nepi; Bishop Paulus was sent as visitor to Naples by St. Gregory the Great; Bishop Stephanus, in 685, was one of the presidents and papal legates of the Council of Constantine, being one of the solidi which were remitted to him at the tintinnabulum. The sees of Nepi and Sutri were united in 1435.

Sutri is placed, like a hanging garden, upon a steep hill on the Cassian Way; the ancient town occupied two hills connected by a bridge, and its walls, built of great tufa rocks, are yet to be seen. In the neighbourhood, there are many Etruscan tombs; the ancient amphitheatre, burned out of the solid rock, is a remarkable work. The cathedral is of the thirteenth century, modernized by frequent alterations. Santa Maria della Grotta is an interesting church. The history of Sutri in antiquity resembles that of Nepi, for Sutri also was taken by the Lombards in 569, but was retaken by the exarch Romanus; Luitprand likewise took the town by December in 973 and restored it to "St. Peter". As the city is on the Cassian Way not far from Rome, it was, as a rule, the last halting-place of the German emperors on their way to the city, and sometimes they received there the papal legate. Two famous synods were held at Sutri, one in 1046, at which Sylvester II was deposed, and resigned the tiara; the other in 1087. Here also the agreement of 1111 between Paschal II and the emperor Henry V was concluded. In 1120, the antipope Gregory VIII withdrew to Sutri, and was besieged there by Calixtus II; he was finally delivered up to the pope by the Sutrians (1121). After this, the possession of the city was frequently contested by the Guelfs, of Vico, and the Ghibelline prefects of Vico, especially in 1264. Sutri was contained in the Duchy of Nepi. This town also has an ancient Christian cemetery, where the body of St. Romanus was found, who is the patron of the city; the cathedral possesses a statue of him by Bernini. Among the martyrs of Sutri is St. Felix (about 273). The first bishop of known date was Eusebius (453); other bishops were Martinus, or Marinus, who was sent as ambassador to Otho I in 963; Benedictus, who, in 975, became Pope Benedict VII; the famous Bishop Bonitho (Bonizo), historian of the Gregorian epoch, who was driven from his diocese by the anti-papal faction between 1003 and 1013; Bishop Bonitho II, the last Bishop of Nepi, was united to Nepi under Bishop Luke de Tarlaris (1345); under Pomponius Cesu (1519), who became a cardinal, the cemetery of St. Savinella was discovered; Michael Ghislieri (1556) became Pope St. Pius V; Joseph Chianti (1701) founded the seminary; Camillus Simeoni (1782) was exiled by the French and became a cardinal. In the territory of this diocese is the city of Braciano on the lake of the same name (lacus Sabatius); it is believed by some to be the ancient Forum Claudii, the bishop of which was at the council of Pope Melchisedec in 303; others identify the Forum Claudii with Oriolo, which is in the Diocese of Viterbo. The united sees of Nepi and Sutri are immediately dependent upon Rome; they have 31 parishes, with 42,400 inhabitants, 13 religious houses of men, and 13 of women, 10 of which maintain schools.

CAPPELLUTI, La Chiesa d'Italia, V; RANCIMARTI, Memorie storiche della città di Nepi, etc. (Odò, 1845-47); NISI-LANDI, L'antica città di Sutri (Rome, 1897).

U. BEGNINI.

NEPVEU, Francis, writer on ascetical subjects, b. at St. Malo, 29 April, 1639; entered the novitiate of the Society of Jesus 12 October, 1654, when but fifteen years old. Successively professor of Grammar, of Humanities and Rhetoric for six years, and of Philos.
ophy for eight years, he was afterwards employed in the government. In 1679 he was made superior at Nantes; in 1684 rector at Vannes; in 1694 and 1700 rector at Orleans; in 1697 at Rouen; in 1704 at Rennes where he was director of retreats until his death, 17 February, 1708. Father Nepveu, described as a man of great zeal and intelligence, wrote voluminously on theological and canon law subjects, and his works have passed through many editions, having been translated into various languages. Among his more important works are numbered the following: "De l'amour de Notre Seigneur Jésus-Christ, et des Moyens de l'acquérir" (Nantes, 1684), has gone through no less than fourteen editions in France, selections from it were printed in English, Dutch, and English, and a complete edition appeared in Paris, 1893, and it has been translated into German, Italian (six editions), Spanish, Flemish, Polish, and English, ed. by the Rev. Henry J. Coleridge, S.J. and issued by Burns and Oates, 1869; "Retraite selon l'esprit et la méthode de Saint Ignace" (Paris, 1677, 514 pp.), also numbers fourteen editions of the original and translations have been made into German, Spanish, Flemish, Italian, and six editions in Latin; "Méthode facile d'oraison, réduite en pratique" (Nantes), went through more than twelve editions in French and was several times issued in Spanish; "Pénitences et Réflexions Chrétiennes pour tous les jours de l'année" (4 vols, Paris, 1695), had eighteen French editions, and was joyfully received, being translated into some eleven editions in foreign languages; "L'esprit du Christianisme ou la Conformité du Chrétien avec Jésus-Christ" (Paris, 1700, 380 pp.), went through twenty-four editions, and three editions of extracts therefrom appeared in Belgium, also translated into foreign languages, ten editions coming out in the first twenty years of its appearance, of which number nearly a score, may be had in the authorities cited below.

Edward F. Garéché.

**Nereus and Achilleus, Domitilla and Pancratius, Saints and Martyrs.**—The commemoration of these four Roman saints is made by the Church on 12 May, in common, and all four are named in the Proper of the Mass as martyrs. The old Roman lists, of the fifth century, and which passed over into the Martyrologium Hieronymianum, contained the names of Nereus and Achilleus, on behalf of whom there was in the Catacomb of Domitilla on the Via Ardeatina; in the same calendar was found the name of St. Pancratius, whose body rested in a catacomb of the Via Aurelia. The notice in the more complete version given by the Berne Codex, runs as follows: "IIIId. Id. Maii, Rome in cimiterio Prætextati natalis Nerei et Achillei fratrum, et natalis Pancratii viam Aureliam milie secundo" (On 12 May at Rome in the cemetery of Prætextati the natal day of Nereus and Achilleus, and the natal day of St. Pancratius, on the Aurelian Way at the second milestone; "ed. de Rossi-Duchesne, Acta SS., Nov., 11. [90]. In the invocation of the Mass for their feast, in the "Sacramentarium Gelasianum," the names of Nereus and Achilleus alone are mentioned, and this is because only their invocation in the Mass was entered in the collection, the feast of St. Pancratius being celebrated in the church built over his grave on the Via Aurelia. In the Mass of his festival, the formula of which is unknown to us, his name is mentioned, and the mention of it is that of the fourth and following centuries there was celebrated on 12 May in both places, at the grave of Saints Nereus and Achilleus on the Via Ardeatina, and at that of St. Pancratius on the Via Aurelia, a special votive Mass. The Itineraries of the graves of the Roman martyrs, written in the seventh century, are unanimous in their indication of the resting-place of these saints (de Rossi, "Roma sottoterranea," I, 180—83). The church which was erected in the fourth century over the grave of St. Pancratius, stands today in somewhat altered style. The legend describing the martyrdom of the saint is of later origin, and not reliable historically; it is probable that he was put to death by a priest of Valerian (257—60) or in that of Diocletian (304—06). The church built over the grave of Sts. Nereus and Achilleus in the Via Ardeatina, is of the latter part of the fourth century; it is a three-naved basilica, and was discovered by de Rossi in the Catacomb of Domitilla. Amongst the numerous objects found in the catacombs there were two small gold cushions, a deëforium ornamented with sculptures representing the death of the two saints by decapitation; one of these pillars is perfectly preserved, and the name of Achilleus is carved upon it. There was also found a large fragment of a marble slab, with an inscription composed by Pope Damasus, the text of which is well-known from an ancient copy. This oldest historical mention of the two saints (Weyman, "Vier Epigramm des hl. Papstes Damasus", Munich, 1905; de Rossi, "Inscriptions christiannes," II, 31; Ihm, "Damasi epigrammata", Leipzig, 1895, 12, no. 8) tells how Nereus and Achilleus as soldiers were obedient to the tyrant, but suddenly being converted to Christianity, were put to death. In Achilleus was the martyr's death; as to the date of their glorious confession we can make no inference. The acts of these martyrs, legendary even to a romantic degree, have no historical value for their life and death; they bring no fewer than thirteen different Roman martyrs into relation, amongst them even Simon Magus, according to the apocryphal Acts of Peter and Paul. These Acts, written in Greek and Latin; according to Achelis (see below) the Greek was the original text, and written in Rome in the sixth century; Schuetz (see below) on the other hand holds the Latin to have been the older version, and seeks to prove that it emanated from the first half of the fifth century; so remote a date is improbable, and the sixth century is to be preferred as the source of the Acts. According to these legends Nereus and Achilleus were eunuchs and chamberlains of Flavia Domitilla, a niece of the Emperor Domitian; with the Christian virgin they had been banished to the island of Ponta, and returning to Rome they had put to death the two martyrs on an estate of the Lady Domitilla near the Via Ardeatina, close to that of St. Petronilla. The author of this legend places the two saints quite differently from Pope Damasus, in his poem: as Nereus and Achilleus were buried in a very ancient part of the catacomb of Domitilla, built as far back as the beginning of the second century, we may conclude that they are among the most ancient martyrs of the Roman Church, and stand in very close relation to the Flavian family, of which Domitilla, the foundress of the catacomb, was a member. In the Epistle to the Romans, St. Paul mentions a Nereus with his sister, to whom he sends greetings (Rom., xvi, 15), perhaps even the martyr was a descendant of this disciple of the Apostle of the Gentiles. Owing to the purely legendary character of these Acts, we cannot use them as an argument to aid in the controversy as to whether there were two Christians of the name of Domitilla in the family of the Christian Flavian, or only one, the wife of the Consul Flavius Clemens (see Flavia Domi-
tilla). As to other legends of martyrs, they are especially noted in the old martyrologies as martyrs of the faith in Africa, or as being natives of that country (e.g., in the Martyrologium Hieronymianum, 11 May, 15 or 16 October, 16 Nov.) though there is one of the name in the present Roman Martyrology under date of 18 Oct., nothing more is known.
Neri, ANTONIO, Florentine chemist, b. in Florence in the sixteenth century; d. 1614, place unknown. We have but few details of his life. Dr. Merret, an English physician, who translated his work only fifty years after its first publication, states in his preface that he could find no account whatever of the author. It is known however that he was a priest and devoted to the study of chemistry: he travelled somewhat extensively in Italy and Holland, and during these journeys gathered up the manufacture of glass and its treatment for various purposes. This knowledge he gave to the world in his book "L'Arte Vetraria", which for a long time formed the basis of most other works on this subject. It is a book rich in detail, giving the then known methods of making glass, of colouring it, and of imitating precious stones. The original work has appeared in the following editions: Florence, 1612; Florence, 1616; and Milan, 1817. In 1662 Merret translated it into Latin, adding to it notes and a commentary of his own; this was published at Amsterdam in 1668 and again in 1681. It was translated into German by Johann Kunckel, who published a revised and enlarged edition of it in 1670, and this was translated into French, "Art de la Verrerie de Neri, Merret et Kunckel", etc., "Traduits de l'Allemand par M. D.***" (Paris, 1752).

BRUNET, Manuel du Libraire, IV (Paris, 1863); Poedendorff, Handwörterbuch der Geschichte der exakten Wissenschaften, II (Leipsig, 1863); preface to the various translations mentioned above.

EDWARD C. PHILLIPS.

Nerinx, CHARLES, missionary priest in Kentucky, founder of the Sisters of Loretto at the Foot of the Cross, b. in Herffelingen, Belgium, 2 Oct., 1761; d. at Ste. Genevieve, Mo., 12 August, 1824. He was the eldest of the fourteen children of Dr. Schenck, at Engghien, and studied at Engghien and Gheel, made his philosophy at Louvain, and entered the theological seminary of Mechlin in 1781. Ordained in 1785, he became vicar at the cathedral of Mechlin, where he was noted for his zeal among the working classes. In 1794 he obtained the pastoral charge of Evergigs-Meerbeke, where the devotion to the spiritual interest was people developed that deep love for children which later characterized his missionary labours in America. During his incumbency he wrote several theological treatises: the manuscripts of which are still preserved in the parish archives. The French Directoire repressed his activity and ordered his arrest, but he eluded the gens d'armes (1797) and for four years was in hiding at the Hospital of Dendermonde, where he continued his ministry amid continual dangers. He came to America in 1804, Bishop Carroll assigning him to Kentucky in 1805. The district given to his charge was over two hundred miles in length and over half the State. He lived in the saddle; every year of his apostolate was marked by the organization of a new congregation or the building of a church. Of all the missionaries who worked in that field none deserves so well the title of "Apostle of Kentucky". His direction of souls was so efficient and enlightened that to this very day the grand-children of his penitents are still profoundly known for the spirituality and worth of his teachings. He died at Louisville, 1809, the year of his return to the United States, and was buried in the crypt of the church of St. Mary, in the same city. His body was later removed to the crypt of his own church and now rests in repose beneath the altar.
emperor that, ascending the rostrum in the Forum Romanum, he himself placed the crown on the head of Tividates. At the same time a dangerous war broke out in Britain. Strong camps and forts had been built there in the first years of Nero’s reign, and the province grew over night; the fortunes of those who had been condemned at law, of freedmen, of all pretenders by birth filled the depleted exchequer, and the coin was deliberately debased. All efforts to stem these disasters were vain, and the general misery had reached its highest, when in A. D. 64 occurred the terrible conflagration which burnt entirely three, and partly seven, of the fourteen districts into which Rome was divided. The older authors, Tacitus and Suetonius, say clearly, and the testimony of all later heathen and Christian writers concurs with them, that Nero himself gave the order to set the capital on fire, and that the people at large believed this report. Nero was in Antium when he heard that Rome was in flames; he hastened thither, and is said to have ascended the tower of Maccenas, and looking upon the sea of flame in which Rome lay engulfed, to have sung on his lyre the song of the ruin of Antium.

In place of the old city with its narrow and crooked streets, Nero planned a new residential city, to be called Neronia. For six days the fire ravaged the closely built quarters, and many thousands perished in the flames; countless great works of art were lost in the ruins. Informers, bribed for the purpose, declared that the Christians had set Rome on fire. Their doctrine of the nothingness of earthly joys in comparison with the delights of immortal souls in heaven was an enduring reproof to the dissolute emperor. There began a fierce persecution throughout the empire, and through robbery and confiscation the Christians were forced to pay in great part for the building of the new Rome. In this persecution Saints Peter and Paul were martyred in Rome in A. D. 67. Broad streets and piazzas were planned by the imperial architects; houses of stone arose where before stood those of lime and wood; the Domus aurea, enclosed in wonderful gardens and parks, in extent greater than a whole former town-quarter astonished men by its wonder and beauty. In order to compass the colossal expenditures for these vast undertakings, the temples were stripped of their works of art, of their gold and silver votive offerings, and justly or unjustly the fortunes of the great families confiscated. The universal discontent thus aroused resulted in the conspiracy of Calpurnius Piso. The plot was discovered, and the conspirators and their families and friends condemned to death. Among the most prominently they were Seneca, Lucan, Petronius, and the Stoic Thrasea Petus, of whom Tacitus said that he was virtue incarnate, and one of the few whose courage and justice had never been concealed in presence of the murderous Caesar. Poppea too, who had been brutally kicked by her husband, died, with her unborn child soon after. Finally the emperor started on a
pleasure tour through lower Italy and Greece; as actor, singer, and harp player he gained the scorn of the worshippers in their temple at Acrocorinthus. He was educated by his grand uncle, Patriarch Gregor Vokasier and afterwards by the varthab, or doctor of theology, Stephen Manuk. Having been consecrated bishop by his brother, Patriarch Gregory III, he was sent to preach throughout Armenia. He was present at the Latin Council of Antioch in 1141 and closed the council with his own hands. In 1146, he was sent to the Latin Emperor Manuel Comnenus, laboured hard to unite the Greek and Armenian Churches. The union, however, was never consummated, the majority of the bishops remaining obstinate. Nerses is regarded as one of the greatest Armenian writers. His prose works include: "Prayers for every hour of the day" (Voskans, 1822); and "In the Letters of the Patriarch of Rome to Manuel Comnenus (tr. Latin by Capelleti, Venice, 1833). He wrote in verse: "Jesu Orti", a Bible history; an "elegy" on the capture of Edessa; a "History of Armenia"; two "Homilies", and many hymns. In the "Jesu Orti", the elegy on Edessa, and the first letter to Manuel Comnenus, we find testimonies to the barbarities of the Crusaders, and a wish that the throne of the Armenian emperor would sit on again upon the imperial throne.

Schiller, Gesch. der röm. Kaiser, I (Gotth., 1883); Stölzle, Tacitus über den Brand von Rom in Stammen aus Maria Losch, LXXVIII (Freiburg, 1910); 2; von Domasewicz, Gesch. der röm. Kaiser, II (Leipzig, 1909).

Karl Hoebner.

Nerses I-IV. Armenian patriarchs.—Nerses I, surnamed the Great, d. 373. Born of the royal stock, he spent his youth in Cessarea where he married Sandutch, a Maronite princess. After the death of his wife, he was appointed chamberlain to King Arshak of Armenia. A few years later, having entered the ecclesiastical state, he was elected catholicos, or patriarch, in 353. His patriarchate marks a new era in Armenian history. Till then the Church had been more or less identified with the royal family and the nobles; Nerses brought it into closer connection with the people. At the Council of Ashtarak he promulgated numerous laws on marriage, fast days, and Divine worship. He built schools and hospitals, and made a great number of dispositions. Some of these reforms drew upon him the king's displeasure, and he was exiled, probably to Edessa. Upon the accession of King Bab (369) he returned to his see. Bab proved a disloyal and unworthy ruler and Nerses forbade him entrance to the church. Under the pretence of seeking a reconciliation, Bab having invited Nerses to his palace poisioned him.

Nerses II, said to have been born at Aschdarag in Bagrekand, was patriarch from 548 to 557. He was a Jacobite Monophysite (cf. Ter-Minassiantz, 163-64). Under him was held the Second Council of Tivon or Dovin (554).

Nerses III of Ischkan, surnamed Schinogh, "the church builder", was elected patriarch in 641; d. 661. He lived in days of political turmoil. The Armenians had to choose between the Greeks and the Persians, and their new conquerors, the Arabs. Nerses remained friendly to the Greeks, whilst the military chiefs sided with the Arabs. Constans II (642-48) hastened into Armenia to punish the rebels and subject them to the Church's control, and a nephew of a rich man, a roof-bishop, went forth to meet him, and declared they accepted the Council of Chalcedon. Disagreement with the satrap Theodorus compelled Nerses to withdraw from the administration of the patriarchate from 652 to 658.

Nerses IV surnamed Klaïentši from the place of his birth, and Schnorkhal, "the Gracious", from the grace of his heart, was elected to the see in 1123. He was educated by his grand uncle, Patriarch Gregory Vokasier and afterwards by the varthab, or doctor of theology, Stephen Manuk. Having been consecrated bishop by his brother, Patriarch Gregory III, he was sent to preach throughout Armenia. He was present at the Latin Council of Antioch in 1141 and closed the council with his own hands. In 1146, he was sent to the Latin Emperor Manuel Comnenus, laboured hard to unite the Greek and Armenian Churches. The union, however, was never consummated, the majority of the bishops remaining obstinate. Nerses is regarded as one of the greatest Armenian writers. His prose works include: "Prayers for every hour of the day" (Voskans, 1822); and "In the Letters of the Patriarch of Rome to Manuel Comnenus (tr. Latin by Capelleti, Venice, 1833). He wrote in verse: "Jesu Orti", a Bible history; an "elegy" on the capture of Edessa; a "History of Armenia"; two "Homilies", and many hymns. In the "Jesu Orti", the elegy on Edessa, and the first letter to Manuel Comnenus, we find testimonies to the barbarities of the Crusaders, and a wish that the throne of the Armenian emperor would sit on again upon the imperial throne.

Nerses of Lambron, b. 1153 at Lambron, Cilicia; d. 1198; son of Oschin II, prince of Lambron and nephew of the patriarch, Nerses IV. Nerses was well versed in sacred and profane sciences and had an excellent knowledge of Greek, Latin, Syriac, and probably Coptic. Ordained in 1169, he was consecrated Archbishop of Tarsus in 1176 and became a zealous advocate of the union of the Greek and Armenian Churches. In 1179 he attended the Council of Hroncla, in which the terms of the union were discussed; his address at this council is considered a masterpiece of eloquence and style. The union was decided upon but never consummated owing to the death of Emperor Manuel Comnenus in 1180. Manuel's successors abandoned the negotiations, and persecuted the Armenians, who, with the help of the Latins, returned to the Latins. Leo II, Prince of Cilicia, desirous to secure for himself the title of King of Armenia, sought the support of Celestine III and of Emperor Henry VI. The pope received his request favourably, but made the granting of it dependent upon the union of Cilicia to the Church of Rome. He sent Conrad, Archbishop of Mayence, to Tarsus, and the terms of union having been signed by Leo and twelve of the bishops, among whom was Nerses, Leo was crowned King of Armenia, 6 January, 1198. Nerses died six months afterwards, 17 July. Nerses is justly regarded as one of the greatest writers in Armenian literature. He deserves fame as poet, prose writer, and translator. He wrote an elegy on the death of his uncle, Nerses IV, and many hymns. His prose works include his oration at the Council of Hroncla (tr. Italian by Aucher, Venice, 1812; tr. German by Neumann, Leipzig, 1834); Commentaries on the Psalms, Proverbs, Ecclesiastes, Wisdom, and the Minor Prophets; an explanation of the liturgy; a letter to Leo II and another to a bishop of the see of Echmiadzin; a translation from Greek into Armenian of the Rule of St. Benedict; the "Dialogue" of Gregory the Great; a life of this saint; and the letters of Lucius III and Clement III to the patriarch, Gregory. From the Syriac he trans-
lated the "Homilies" of Jacob of Serugh and, probably, from the Coptic, the "Life of the Fathers of the Desert". Some writers ascribe to him an Armenian version of a commentary of Andreas of Caesarea on the Apocalypse: Nereus in his original writings frequently refers to the primacy and infallibility of the Pope.

Nestorius and Nestorianism.—I. The Heresiarch. —Nestorius, who gave his name to the Nestorian heresy, was b. at Germanicia, in Syria Euphratesensis (date unknown); d. in the Thebaid, Egypt, c. 451. He was living as a priest and monk in the monastery of Euprepius near the walls, when he was chosen by the Emperor Theodosius II to be Patriarch of Constantinople in succession to Simplicius. He had a high reputation for eloquence, and the popularity of St. Chrysostom's memory among the people of the imperial city may have influenced the Emperor's choice of another priest from Antioch to be court bishop. He was consecrated in April, 428, and seems to have made an excellent impression. He lost no time in showing his zeal against heretics. Within a few days of his consecration he excommunicated a number of heretics from the West, but his action was not well received and he persuaded Theodosius to issue a severe edict against heresy in the following month. He had the churches of the Macedonians in the Hellespont seized, and took measures against the Quartodecimans who remained in Asia Minor. He also attacked the Novatians, in spite of the good reputation of their bishop, Philip, whom he accused of fleeing from the West, because of which he had been exiled, not being well acquainted with their condemnation ten years earlier. He twice wrote to Pope St. Celestine I for information on the subject. He received no reply, but Marius Mercator, a disciple of St. Augustine, published a memoir on the subject at Constantinople, and presented it to the emperor, who duly proscribed the heretics. At the end of 428, or at latest in the early part of 429, Nestorius preached the first of his famous sermons against the word Theokos, and detailed his Antiochian doctrine of the Incarnation. The first to raise his voice against it was Eusebius, a layman, afterwards Bishop of Dorylaim and the accuser of Eutyches, one of the priests of the city, Philip and Proculus had been bishops before 423; dates for the patriarchate, preached against Nestorius. Philip, known as Sisetas, from Side, his birthplace, author of a vast and discursive history now lost, accused the patriarch of heresy. Proculus (who was to succeed later in his candidature) preached a flowery, but perfectly orthodox, sermon, yet extant, to which Nestorius replied in a simple and discursive discourse, which  we also possess. All this naturally caused great excitement at Constantinople, especially among the clergy, who were clearly not well disposed towards the stranger from Antioch. St. Celestine immediately condemned the doctrine. Nestorius had arranged what he considered very much the running of a council. He now hastened it on, and the summons had been issued to patriarchs and metropolitans on 19 Nov., before the pope's sentence, delivered through Cyril of Alexandria, had been served on Nestorius (6 Dec.). At the council Nestorius was condemned, and the emperor, after much delay and hesitation, ratified its finding. It was confirmed by Pope Sixtus III.

The lot of Nestorius was a hard one. He had been handed over by the pope to the tender mercies of his rival, Cyril; he had been summoned to accept within ten days under pain of deposition, not a papal definition, but a series of anathemas drawn up at Alexandria under the influence of Apollinaris forgeries. The whole council had not condemned him, but only a portion, which had not awaited the arrival of the bishops from Antioch. He had refused to recognize the jurisdiction of this incomplete number, and had consequently refused to appear or put in any defence. He was now thrust out of his see by a change of mind on the part of the feeble emperor. But Nestorius was proud: he showed no sign of yielding, even when it came to terms; he put in no plea of appeal to Rome. He retired to his monastery at Antioch with dignity and apparent relief. His friends, John of Antioch and his party, deserted him, and at the wish of the Emperor, at the beginning of 433, joined hands with Cyril, and Theodoret later did the same. The bishops who were suspected of being Nestorian, were deposed. An edict of Theodosius II, 30 July, 435, condemned his writings to be burnt. A few years later Nestorius was dragged from his retirement and banished to the Oasis. He was at one time carried off by the Nabians (not the Blemmyes) in a raid, and was restored to the Thebaid with his hand and one rib broken. He gave himself up to the governor in order not to be accused of having fled.

The recent discovery of a Syriac version of the (lost) Greek apology for Nestorius by himself has awakened new interest in the question of his personal orthodoxy. The (mutilated) manuscript, about 800 years old, known as the "Bazaar of Heracleides," and recently published (Loofs, "Bazaar," 1910), reveals the persistent odium attached to the name of Nestorius, since at the end of his life he was obliged to substitute for it a pseudonym. In this work he claims that his faith is that of the celebrated "Tome," or letter, of Leo the Great to Flavian, and excuses his failure to appeal to Rome by the general practice of which he was the victim. A fine passage on the Eucharistic Sacrifice which occurs in the "Bazaar" may be cited here: "There is something amiss with you which I want to put before you in a few words, in order to induce you to amend it, for you are quick to see what is seemly. What then is this fault? Presently the mysteries are set before the faithful like the mess granted to his soldiers by the king. Yet the army of the faithful is nowhere to be seen, but they are blown away together with the catechumens like chaff by the wind of indifference. And Christ is crucified in the symbol [κατὰ τὸν τόπον], sacrificed by the sword of the prayer of the Priest; but, as when He was on the Cross, the disciples have already fled. Terrible is this fault,—the betrayal of Christ when there is no persecution, a desertion by the faithful of their Master's Body when there is no war" (Loofs, "Nestorians," Halls, 1905, p. 341).

The writings of Nestorius were originally very numerous. As stated above, the "Bazaar" has newly been published (Paris, 1910) in the Syriac translation in which alone it survives. The rest of the fragments of Nestorius have been most minutely examined, pieced together and edited by Loofs. His sermons show a real eloquence, but very little remains in the original Greek. The Latin translations by Marius Mercator in style and substance have been preserved. Batiffol has attributed to Nestorius many sermons which have come down to us under the names of other authors: three of Anthanasius, one of Hippolytus, three of Amphilectus, thirty-eight of Basil of Seleucia, seven of St. Chrysostom; but Loofs and Baker do not accept the ascription. Mercati has pointed out four fragments in the acta of the Bishop of Maron (ed. Amelii in "Sscript. Cassin."") (I, 1887), and Armenian fragments have been published by Lidtké.

II. The Heresy.—Nestorius was a disciple of the school of Antioch, and his Christology was essentially that of Diodorus of Tarsus and Theodore of Mopsuestia, both Cilician bishops and great opponents of Arianism. Both died in the Catholic Church. Dior
dorus was a holy man, much venerated by St. John Chrysostom. Theodore, however, was condemned in person as well as in his writings by the Fifth General Council, in 553. In opposition to many of the Arians, who taught that in the incarnation the Son of God assumed a human body in which His Divine Nature took the place of soul, and to the followers of Apollinaris of Laodicea, who held that the Divine Nature supplied the functions of the higher or intellectual soul, the Antiochenes insisted upon the completeness of the humanity which the Word assumed. Unfortunately, they represented this human nature as a complete man, and represented the Incarnation as the assumption of a man by the Word. The same way of speaking was common enough in Latin writers (assumere hominem, homo assumptus) and was meant by them in an orthodox sense; we still sing in the Te Deum: "Tu ad liberandum susceptorum hominem", where we must understand "ad liberandum hominem, humanum naturam suscepiens". But the Antiochene writers did not mean that the "man assumed" (δὲ ληφθεὶς ἄνθρωπον) was taken up into one hypostasis with the Second Person of the Holy Trinity. They preferred to speak of συνέλειται, "united"; rather than οἰκεῖος, "unified". They implied that the human dignity and power, and must be worshipped together. The word person in its Greek form ἄνθρωπος might stand for a juridical or fictitious unity; it does not necessarily imply what the word person implies to us, that is, the unity of the subject of consciousness and of all the internal and external activities. Hence we are not surprised to find that in the writings of the Sons, and that Theodore practically made two Christs, and yet that they cannot be proved to have really made two subjects in Christ. Two things are certain: first, that, whether or not they believed in the unity of subject in the Incarnate Word, at least they explained that unity wrongly; secondly, that they used most unhappily the language that the term person gave to the doctrine of the union of the Manhood with the Godhead—language which is objectively heretical, even were the intention of its authors good.

Nestorius, as well as Theodore, repeatedly insisted that he did not admit two Christi or two Sons, and that he frequently asserted the unity of the person. On arriving in Constantinople, he declared that the very different theology which he found rife there was a form of Arian or Apollinarian error. In this he was not wholly wrong, as the outbreak of Eutychianism twenty years later may be held to prove. In the first months of his pontificate he was implored by the Pelagian Julian of Eclanum and other expelled bishops of his church to recognize their orthodoxy and obtain their restoration. He wrote at least three letters to the pope, St. Celestine I, to inquire whether these petitioners had been duly condemned or not, but he received no reply, not (as has been too often repeated) because the pope imagined he did not respect the condemnation of the Pelagians by himself and his predecessors. Unfortunately, he did nothing of the kind. St. Cyril had sent to Rome his correspondence with Nestorius, a collection of that Patriarch's sermons, and a work of his which he had just composed, consisting of five books "Contra Nestorium". The pope had them translated into Latin, and then, after assembling the customary council, considered at Belf with great approval of St. Cyril's conduct, whilst he delivered the execution of this vague decree to Cyril, who as Patriarch of Alexandria was the hereditary enemy both of the Antiochene theologian and the Constantinopolitan bishop. Nestorius was to be summoned to recant, without which he and his followers must be rejected. The council can well be imagined. St. Cyril said himself obliged to draw up a form for the recantation. With the help of an Egyptian council he formulated a set of twelve anathemas which simply epitomise the errors he had pointed out in his five books "Against Nestorius", for the pope appeared to have agreed with the doctrine of that work. It is unfortunate to notice that up to this point St. Cyril had not rested his case upon Apollinarian documents and had not adopted the Apollinarian formula μαθημάτων σαρκομυθίας from Pseudo-Athanasius. He does not teach in so many words "two natures after the union", but his work against Nestorius, with his depth and precision of St. Leo, is an admirable exposition of Catholic doctrine, worthy of a Doctor of the Church, and far surpassing the treatise of Cassian. The twelve anathemas are less happy,
for St. Cyril was always a diffuse writer, and his solitary attempt at brevity needs to be read in connexion with the work which it summarizes.

The anathemas were at once attacked, on behalf of John, Patriarch of Antioch, in defence of the Anti-Chinese School, by Andrew of Samosata and the great Theodoret of Cyrus. The former wrote at Antioch; his objections were adopted by a synod held there, and were sent to Cyril as the official view of all the Oriental bishops. St. Cyril published separate replies to these two antagonists, treating Andrew with more respect than Theodoret, to whom he is contemptuous and sarcastic. The latter was doubtless the superior of the Alexandrian in talent and learning, but his views were so radical that he has no match for him as a theologian. Both Andrew and Theodoret show themselves captious and unfair; at best they sometimes prove that St. Cyril's wording is ambiguous and ill-chosen. They uphold the objectionable Anti-Chinese phraseology, and they reject the hypo-statis union (ordo et substantia) as well as the phrase ousia ousia as orthodox and unscriptural. The latter expression is indeed unsuitable, and may be misleading. Cyril had to explain that he was not summarizing or defining the facts about the Incarnation, but simply putting together the principal errors of Nestorius in the heretic's own words. In his books against Nestorius he had occasionally made mention of the anathemas; he gave a perfectly faithful picture of Nestorius's view, for in fact Nestorius did not disown the propositions, nor did Andrew of Samosata or Theodoret refuse to patronize any of them. The anathemas were certainly in a general way approved of by the Council of Ephesus, but they have never been formally adopted by the Church. Nestorius for his part replied by a set of twelve contra-anathemas. Some of them are directed against St. Cyril's teaching, others attack errors which St. Cyril did not dream of teaching, for example that Christ's Human Nature became through the union uncreated and without beginning, a silly conclusion which was later ascribed to the sect of Monophytes called Aeticites. On the whole, Nestorius's new programme emphasized his old position, as also did the violent sermons which he preached against St. Cyril on Saturday and Sunday, 13 and 14 December, 430. We have no difficulty in defining the doctrine of Nestorius so far as words are concerned: Mary did not bring forth the Godhead as such but the Godhead as God's Son. The two are distinct in the temple of the Godhead. The man Jesus Christ is this temple, "the animated purple of the King", as he expresses it in a passage of sustained eloquence. The Incarnate God did not suffer nor die, but raised up from the dead him in whom He was incarnate. The Word and the Man are to be worshipped together, and he adds: οψιν ουσιν ουσιν υποθεσης ουσι (Through Him that bears I worship Him Who is borne). If St. Paul speaks of the Lord of Glory being crucified, he means the man by "the Lord of Glory". There are two natures, he says, and one person; but the two natures are regularly spoken of as though they were two persons, and the sayings of Scripture about Christ are to be interpreted according to the Incarnation. The Man to whom the Word. If Mary is called the Mother of God, she will be made into a goddess, and the Gentiles will be scandalized.

This is all bad enough as far as words go. But did not Nestorius mean better than his words? The Oriental bishops were certainly not all unbelievers in the univarian doctrine; in the presence of Theodoret, Cyril made peace with them in 433. One may point to the fact that Nestorius emphatically declared that there is one Christ and one Son, and St. Cyril himself has preserved for us some passages from his sermons which the saint admits to be perfectly orthodox, and therefore wholly inconsistent with the rest. For example: "Great is the mystery of the gift! For this visible infant, who seems so young, who needs swaddling clothes for His body, who in the substance which we see is newly born, is the Eternal Son, as it is written, the Son who is the Maker of all, the Son who binds together in the swathing-bands of His assisting power the whole creation which would otherwise be destroyed. And again: "The Godhead is without beginning, the powerful God, so far, O Arius, is God the Word from being subject to God." And: "We recognize the humanity of the infant, and His Divinity; the unity of His Sonship we guard in the nature of humanity and divinity." It will probably be only just to Nestorius to admit that he fully intended to safeguard the unity of Christ in the presence of Theodoret. But he did not maintain the unity and his teaching logically led to two Christs, though he would not have admitted the fact. Not only his words are misleading, but the doctrine which underlies his words is misleading, and tends to destroy the whole meaning of the Incarnation. It is impossible to deny that teaching as well as wording which leads to such consequences is heresy. He was therefore unavoidably condemned. He reiterated the same view twenty years later in the "Bazaar of Heralclides", which shows no real change of opinion, although he declares his adherence to the Tome of St. Leo.

After the council of 431 had been made into a law by the emperor, the Anti-Chinese party would not at once give way. But the council was confirmed by Pope Sixtus III, who had succeeded St. Celestine, and it was received by the whole West. Antioch was thus isolated, and at the same time St. Cyril showed himself ready to make explanations. The Patriarchs of Antioch and Alexandria agreed upon a "creed of union" in 433 (see Eusebius, H. E. III). And some others would not accept it, but declared the word heretics to be heretical. Theodoret held a council at Zeugma which refused to anathematize Nestorius. But the prudent Bishop of Cyrus after a time perceived that in the "creed of union" Antioch gained more than did Alexandria; so he accepted the somewhat hollow compromise. He says himself that he commended the person of Nestorius whilst he anathematized his doctrine. A new state of things arose when the death of St. Cyril, in 444, took away his restraining hand from his intemperate followers. The friend of Nestorius, Count Ireneus, had become Bishop of Tyre, and he was persecuted by the Cyrillic party, as well as by his fellow countrymen. It had been a great teacher in that city. These bishops, together with Theodoret and Domnus, the nephew and successor of John of Antioch, were deposed by Dioscorus of Alexandria in the Robber Council of Ephesus (449). Ibas was full of Anti-Chinese theology, but in his famous letter to Maris the Persian he disapproved of Nestorius as well as St. Cyril, and at the Council of Chalcedon he was willing to cry a thousand anathemas to Nestorius. He and Theodoret were both restored by that council, and both seem to have taken the view that St. Leo's Tome was a rehabilitation of the Anti-Chinese theology. The same view was taken by the Monophysites, who looked upon St. Leo as the opponent of St. Cyril. St. Leo rejoiced at this reversal of Roman policy, as he thought it. Loofs, followed by many writers even among Catholics, is of the same opinion. But St. Leo himself believed that he was completing and not undoing the work of the Council of Ephesus, and as a fact his teaching is but a clearer form of St. Cyril's doctrine. It was seen that the reuse of Nestorius. But it is true that St. Cyril's later phraseology, of which the two letters to Successus are the type, is based upon the formula which he felt himself bound to adopt from an Apollinarian treatise believed to be by his great predecessor Athanasius; αἱ φασὶν τοῦ Ἀθανασίου ἑσταυρωθήσεται. St. Cyril found this formula an awkward one, as his treatment of it shows,
and it became in fact the watchword of heresy. But St. Cyril does his best to understand it in a right sense, and goes out of his way to admit two natures even after the union to begat, an admission which was to save Severus himself from a good part of his heresy.

That Loofs or Harnack should fail to perceive the vital difference between the Antiochene and St. Leo’s conception of the Catholic doctrine of the two natures, and therefore not catching the perfectly simple explanation given by St. Leo, is easily explicable by their being absolutely unable to understand the Catholic doctrine of the two natures, and therefore not catching the perfectly simple explanation given by St. Leo. Just as some writers declare that the Monophysites always took υἱοθετία in the sense of ἀνθρωποθετία, so Loofs and others hold that Nestorius took υἱοθετία always in the sense of ἀνθρωποθετία, and meant no more by ὑποστάσεις than he meant by ἀνθρωποθετίαι. But the words seem to have perfectly definite meanings with all the theologians of the period. That the Monophysites distinguished them, is probable (see MONOPHYSITES AND MONOPHYSITISM), and all admit they are unquestionably meant by ὑποστάσεις a subsistent nature. That Nestorius cannot, on the contrary, have taken nature to mean the same as ὑποστάσεις and both to mean esse in the sense is obvious enough, for three plain reasons: first, he cannot have meant anything so absolutely opposed to the meaning given to the word ὑποστάσεις by the Monophysites; secondly, if he meant nature by ἄνθρωποθετία he had no word at all for “substance” (for the word ἀρχή was too vague and elastic a concept even as “substance”); thirdly, the whole doctrine of the Theodore of Mopsuestia, and Nestorius’s own refusal to admit almost any form of the communicatio idiomatum, force us to take his “two natures” in the sense of subsistent natures.

The modern critics also consider that the orthodox doctrine of the Greeks against Monophysitism—that in fact the Chalcedonian doctrine as defended for many years—was practically the Antiochene or Nestorian doctrine, until Leontius modified it in the direction of conciliation. This theory is wholly gratuitous, for from Chalcedon onwards there is no orthodox controversialist who has left us any considerable remains in Greek by which we might be enabled to judge how far Leontius was an innovator. At all events we know, from the attacks made by the Monophysites themselves, that, though they professed to regard their Catholic opponents as Crypto-Nestorians, in so doing they distinguished them from the true Nestorians who openly professed two hypostases and condemned the words of St. Cyril. Hence it was not until Leontius of Antioch and Theodoret had made peace with St. Cyril, no more was heard in the Greek world of the Antiochene theology. The school had been distinguished, but small. In Antioch itself, in Syria, in Palestine, the monks, who were exceedingly influential, were Cyriacans, and a large proportion of them were to become Monophysists. It was beyond the Greek world that Nestorianism was to have its development. There was at Edessa a famous school for Persians, which had probably been founded in the days of St. Ephrem, when Nisibis had ceased to belong to the Roman Empire in 363. The Christians in Persia had suffered terrible persecution, and Roman Edessa had attracted Persians. Under the direction of Ibas the Persain school of Edessa imbibed the Antiochene theology. But the famous Bishop of Edessa, Rabbbula, though he had stood apart from St. Cyril’s council at Ephesus together with the bishops of the Antiochene patriarchate, the council of the Persians was a violent, Cyriacan, and he did his best against the school of the Persians. Ibas himself became his successor. But at the death of this protector, in 457, the Persians were driven out of Edessa by the Monophysites, who made themselves all-powerful. Syria then becomes Monophysite and produces its Philoxenus and many another writer. Persia simultaneously becomes Nestorian. Of the exiles from Edessa into their own country nine became bishops, including Barsumas, or Barsāmūn, of Nisibis and Acacius of Beit Aramaghe. The school at Edessa was finally closed in 459.

At this time the Church in Persia was autonomous, having renounced all subjection to Antioch and the "Western" bishops at the Council of Constantine 410. The ecclesiastical superior of the whole was the Bishop of Seleucia-Ctesiphon, who had assumed the rank of catholics. This prelate was Baburūs or Babowai (457–84) at the time of the arrival of the Nestorian professors from Edessa. He appears to have received them with open arms. But Barsāmūn, having become Bishop of Nisibis, the new sinking city of Edessa, broke with the weak catholics, and, at a council which he held at Beit Lapat in April, 484, pronounced his deposition. In the same year Babowai was accused before the king of conspiring with Constantinople and cruelly put to death, being hung up by his ring-finger and also, it is said, crucified and scourged. There is not sufficient evidence for the story which makes Barsāmūn his accuser. The Bishop of Nisibis was at the time in high favour with King Peroz (457–84) and had been able to persuade him that it would be a good thing for the Persian kingdom if the Christians in it were all of a different complexion from those of the Empire, and had no tendency to associate towards the Empire or Arabia. They therefore were now officially under the sway of the "Henoticon" of Zeno. Consequently all Christians who were not Nestorians were driven from Persia. But the story of this persecution as told in the letter of Simeon of Beit Arsam is not generally considered trustworthy, and the alleged number of 7700 Monophysite martyrs is quite incredible. The town of Jerash alone retained Monophysite. But the Armenians were not gained over, and in 491 they condemned at Valarapat the Council of Chalcedon, St. Leo, and Barsāmūn. Peroz died in 484, soon after having murdered Babowai, and the energetic Bishop of Nisibis had evidently less to hope from his successor, Balash. Though Barsāmūn at first opposed the new catholics, Acacius, in August, 485, he had an interview with him, and made his submission, acknowledging the necessity for subjection to Seleucia. However, he excused himself from being present at Acacius’s council in 484 at Seleucia, where twelve bishops were present. At this assembly, the Antiochene Christology was affirmed and the canon 117, after the controversy of the clergy was repeated. The Synod declared that they despised vainglory, and felt bound to humble themselves in order to put an end to the horrible clerical scandals which discredited the Persian Magians as well as the faithful; they therefore enacted that the clergy should make a vow of chastity; deacons may marry, and for the future a priest is to be ordained only a priest except a deacon who has a lawful wife and children. Though no permission is given to priests or bishops to marry (for this was contrary to the canons of the Eastern Church), yet the practice appears to have been winked at, possibly for the regularization of illicit unions. Barsāmūn himself is said to have married a nun named Mamōd; but according to Marco this was at the inspiration of King Peroz, and was only a nominal marriage, intended to ensure the preservation of the lady’s fortune from confiscation.

The Persian Church was now organized, if not thoroughly united, and was formally committed to the Christology of A, and the doctrine of the two natures by the king as envoy to Constantinople, was obliged to accept the anathemas against Nestorius in order to be received to Communion there. After his return he bitterly complained of being called a Nestorian by the Monophysite Philoxenus, declaring that he "knew nothing" of Nestorius. Nevertheless Nestorius has always been venerated as a saint by the Persian Church. One thing more was needed for the
Nestorian Church; it wanted theological schools of its own, in order that its clergy might be able to hold their own in theological argument, without being tempted to study in the orthodox centres of the East or in the numerous and brilliant schools which the Monophysites were now establishing. Babylon opened a school at Nisibis, which was to become almost as famous than its parent at Edessa. The rector was Narses the Leprous, a most prolific writer, of whom little has been preserved. This university consisted of a single college, with the regular life of a monastery. Its rules are still preserved (see Nisibis). At one time we hear of 900 students. Their great doctor was Theodore of Mopsuestia. His commentaries were studied in the translation made by Ibas and were treated almost as infallible. Theodore's Canon of Scripture was adopted, as we learn from "De Partibus Divinar Legis" of Junilius (P. L., LXVIII, and ed. by Kihn), a work which is a translation and adaptation of the published lectures of a certain Paul, professor at Nisibis. The method is Aristotelian, and must be connected with the Aristotelian revival which in the Greek world is associated chiefly with the name of Philoponus, and in the West with that of Boethius.

The fame of this theological seminary was so great that Pope Agapetus and Cassiodorus wished to found one of the same kind in the city of Ravenna. They attempted it, but the attempt was made impossible in those troublous times; but Cassiodorus's monastery at Vivarium was inspired by the example of Nisibis. There were other less important schools at Seleucia and elsewhere, even in small towns.

Barsadma died between 492 and 495, Accacius in 496 or 497. Narses seems to have lived long to see the Nestorian Church which they founded, though cut off from the Catholic Church by political exigencies, never intended to do more than prolong an autonomy like that of the Eastern patriarchates. Its history consisted mainly in its refusal to accept the Councils of Ephesus and Chalcedon. It is interesting to note that it was under Narses nor under Epiros speaks of the school of Nisibis as heretical. They were probably aware that it was not quite orthodox, but the Persians who appeared at the Holy Places as pilgrims or at Constantinople must have seemed like Catholics on account of their hatred to the Monophysites, who were the great enemy in the East. The official teaching of the Church of the Mohammedans, Sarabantani, ed. Curston (London, 1842); and especially the rich information in the Nestorian texts themselves; Girmondi, LAmi e altri Scrittori di Nisibis (Ed. Illyrica), 2 vols., Rome, 1874; cocci. Netherlands (Ger. Niederlande; Fr. Pays Bas). — The.—The Netherlands, or Low Countries, as organized by Charles V, under whom the Burgundian era ended, comprised practically the territory now included in Holland and Belgium, thenceforth known as the Spanish Netherlands. For the previous history of this country see Burgundy and Charles V. Shorn of their northern provinces by the reorganization as the Commonwealth of the United Provinces (1579), the Spanish Netherlands, on theiression to Austria (1713–14) were reduced to the provinces now embraced in Belgium, subsequently called the Austrian Netherlands.

The Spanish Netherlands.—When Philip II by the declaration of his father, Charles V (v.), became sovereign of the Low Countries and took up the government of the Seventeen Provinces, he found them at...
the senith of their prosperity, as is evident from the description given in 1567 by Luigi Guicciardini in his "Descrittione di tutti i Paesi Bassi" (Tottius Belgii descriptio, Amsterdam, 1613).

Few countries were so well governed: none was richer. Antwerp had taken the place of Bruges as commercial metropolis; every day saw a fleet of 500 sea-going craft enter or leave its port. Of Ghent (Gand), his native town, Charles V used to say joicely: Je mettrais Paris dans mon Gand (I could put Paris in my glove (gand)). Luxury, however, corrupted the earlier good morals of the people, and humanism gradually undermined the faith of some in the upper classes. Protestantism too had already effected an entrance, Lutheranism through Antwerp and Calvinism from the French border. The Anabaptists also had adherents. In addition the more powerful of the nobility now hoped to play a more influential part in the government than they had done under Charles V, and were already planning for the realization of this ambition. The situation presented many difficulties, and unfortunately Philip II was not the man to cope with them. He had little in common with his Low-Country subjects. Their language was not his; and he was a stranger to their customs. From the day he quitted the Netherlands in 1556, he never saw them again, and it was as a foreigner he entered Spain. He was despotic, severe, crafty, and desirous of keeping in his own hands all the reins of government, in minor details as well as in matters of more importance, thereby causing many unfortunate delays in affairs that demanded rapid transaction. He was on the whole a most unsuitable ruler in spite of his reputation. He visited the different offices and the time and pains he consecrated to them.

It must be said in justice that from a religious point of view, he brought about one of the most important events in the history of the Netherlands when he caused the establishment of fourteen new dioceses. The want had long been recognized and the sovereigns, particularly Philip the Good and Charles V, had often thought of this measure. In all the seventeen provinces there were but four dioceses: Utrecht in the north; Tournai, Arras, and Cambrai in the West; and all of them were subject to foreign metropolitans, Utrecht to Cologne and the others to Reims. Moreover the greater part of the country was under the control of the Habsburgs, and a loyal advice was given Trier, Maastricht, Verden, St. Omer, Boulogne, Cambrai, Huy, Tournai, Arras, Cambrai, and Reims. Hence arose great difficulties and endless conflicts. The Bull of Pope Paul IV (12 May 1559) put an end to this situation by raising Utrecht and Cambrai to archiepiscopal rank, and by creating fourteen new sees, one of them, Mechlin, an archbishopric. The others were Antwerp, Gent, Bruges, Ypres, St. Omer, Samur, Bois-le-Duc (Herkenbosch), Roemden, Haarlem, Deventer, Leeuwarden, Groningen, and Middelburg. This act, excellent from a religious point of view, gave rise to many complaints. To endow the new sees it was found necessary to incorporate with them the richest abbeys in the country, and in certain provinces these carried the rights and privileges of a state, and did not hesitated being for the future exercised by the bishops, the result was that the king who nominated them gained a considerable influence in the Parliament, which had hitherto always acted as a check on the royal power. To aggravate matters, the Protestant faction spread a rumour that the erection of the new bishoprics was but a step towards introducing the Spanish Inquisition into the Netherlands. Lastly the abbeys began to complain of their lost autonomy—the place of the abbot being now occupied by the bishop.

The opposition of the nobles was led by two men, remarkable in different ways. On one hand was the Count of Egmont (see Egmont, Lamoral, Count of), the victor at St. Quentin and Gravelines, a brave man, frank and honest, a lover of popular—weak in character and lacking in political shrewdness. On the other hand stood William of Nassau, Prince of Orange, surnamed "the Silent", a politician and diplomat of the first rank, filled with ambition which he well knew how to conceal, having no religious scruples, being Catholic, Luther, or Calvinist, or a man who had made the downfall of Spanish rule the one aim of his life. Grouped around these two chiefs were a number of nobles irritated with the Government, many of them deeply involved financially or morally corrupt like the too-well-known Brederode. They kept up the agitation and demanded fresh concessions day by day. They insisted upon the recall of the Spanish soldiers, and the king yielded (1561). They demanded more moderate language in the public placard against heresy, and even sent the Count of Egmont to Spain to obtain it (1565); and Egmont, having been flattered and feted at the Spanish Court, came back convinced that his mission had been successful. Soon, however, royal letters dated from the Forest of Segovia, 17 and 20 October, 1565, brought the king's formal refusal to abate one jot in the repression of heresy.

The irreconcilable attitude of the king created a situation of increasing difficulty for the government of Margaret of Parma. Heresy was spreading everywhere, and with the fall of Liège it had obtained a foothold in the smaller towns and even in country places. Protestant preachers, for the most part renegade monks or priests, like the famous Dathenus, assembled the people at "sermons" in which they were exhorted to open war on the Catholic religion. Calvinism, a sect better organized than Lutheranism, began to make headway in the Countries. It had supporters in every grade of society; and although its members continued to be a small minority, their daring and clever propaganda made them a most dangerous force in presence of the inaction and sluggishness of the Catholics. Stirred up by these Calvinist preachers, Catholic and Protestant nobles formed an alliance which was called Le Compris des Nobles, with the object of obtaining the suppression of the Inquisition. A body of them numbering several hundred came to present a petition to that effect to the regent (3 April, 1566). It is related that as she showed signs of alarm at this demonstration Count de Berlaymont, member of the Council of the Indies, went up to her and said: "Rassurez-vous, Madame, ce ne sont que des guerres" (Courage, Madam, they are only beggars). The confederates at once took up the word as a party name, and thus this famous name made its entry into history.

On that same day the Gueux meant to remain faithful to the king, jusqu'à la beseuse (to beggary), as one of their mottoes had it. They seemed to have been made up of Catholics and Protestants, indiscriminately, who were partisans of religious tolerance; and Vire les Gueux was originally the rally-cry of a sort of national party. This, however, was a delusion soon apparent. The Calvinist leaders held the movement in their hands and did not hesitated to use the strength to disclose its real fanatical opposition to the Catholic Church. Roused and excited by the impassioned appeals of the preachers, the rowdy element of the people perpetrated unheard-of excesses. In the latter part of August, 1566, bands of iconoclasts scourched the country, wrecking and pillaging churches, and in a few days they had destroyed among them the magnificent cathedral of Antwerp. These crimes opened the eyes of many who up to that time had been too lenient with the sectarians. Public opinion condemned the iconoclastic outrages and sided with the Government, which thus suddenly found its position greatly strengthened. Once more, unfortunately, Philip II was not equal to the occasion. Instead of skillfully profiting by this turn of events to
win back those who were shocked by the violence of the heretics, he looked on all his subjects in the Nether-
lands as most by his lavish kindliness, as if he would make an example of them. Against the
advice of the regent, despite faithful Granvelle, in
spite of the pope, who exhorted him to clemency, he
dispatched the Duke of Alva to the Low Countries on
a punitive expedition (1567). Straightsided William of
Orange and the more compromised nobles went into
exile. Recklessly and trusting to his past services, the
Count of Egmont had refused to follow them. His
mistake cost him dear, for Alva caused him and Count
du Hornois to be arrested and brought before a sort of
court martial which he called the Conseil des Troubles,
but known more popularly as the Conseil du Sang
(Blood Tribunal). The accused men, being members of
the Golden Fleece and trusted to his only by their
order; but in spite of this privilege they were judged,
condemned, and executed (1568).

When the two counts were arrested, Margaret of
Parma resigned her office, and the Duke of Alva was
appointed her successor; with him began a system of
merciless repression. Blood flowed freely, and all the
treacheries of the people were used. In September
the Spaniard Juan Vargas, chief-justice of the Council
of Troubles, replied to complaint of the University of
Louvain that its privileges had been violated: non
curamus privilegios vestros. (We are not concerned with
your privileges.) Besides this, heavy taxes, 10
per cent on the sales of chattels, 5 per cent on the sale of
wine and tobacco, and the imposition of the popular discontent, and turned even a number of
good Catholics against the Government. The Protes-
tants, encouraged by these events, began military
operations by land and sea, and the gueux des bois
(Land-Beggars) and the gueux de mer (Water-Beggars)
started a guerrilla warfare and a campaign of pillage
which brought havoc and fear everywhere, followed by
the Duke of Orange and his brother, Louis of Nassau.
But the Duke of Alva frustrated all their efforts,
and when he had repulsed Louis at Jemmingen, and
prevented William from crossing the Geete, he caused
a statue of himself to be set up at Antwerp repre-
senting him crushing under foot the hydra of
anarchy. Then just as he thought he had mas-
tered the rebellion, news was brought that on
1 April, 1572, the Water-Beggars had taken the port of
Briel. Henceforth in the very heart of the Low
Countries they had a point for rally or retreat, and
their progress was rapid. In quick succession they
captured many towns in Holland and Zeeland. These
Vendetta perpetually pursued the invaders, but the
Marck, Lord of Lumen, for the most part ruffians devoid of all human feeling. When they
took the town of Gorkum they put to death in a most
barbarous manner nineteen priests and monks who re-
fused to abjure their Catholic Faith. The Church
venerates these brave victims on 9 July, under the
title of the Martyrs of Gorkum. About the same
time Louis of Nassau took Mons in Hainault, and
William of Orange made a second descent on the
country with an army of hirelings that committed
frightful excesses. But he failed before the superior
forces of the Duke of Alva. Mons was recaptured and
William once more driven out. Alva then turned his
arms against the provinces of the north: Zutphen,
Naarden, and Haarlem fell successively into his hands
and were treated most shamefully, but contrary to his
hopes the rest of the rebel country did not submit.

At last Philip II realized that the duke's mission
had failed. Yielding to the entreaty of his most
faithful subjects—the bishops and the University of
Louvain—Alva was again appointed governor and
successor Don Luis de Requesens. During his brief
regency (1573-75) Don Luis did not succeed in restoring
royal authority in the revolted districts, although he
showed greater humanity and an inclination to con-
ciliate the disaffected. Nor was he more successful
in capturing the town of Leyden which withstood one
siege after another. His death left the country in a state of anarch.

The Council of State took over the reins of govern-
ment pending the arrival of the new regent, Don John
of Austria, brother of Philip II. It was a favourable
moment for the ambitious schemes of William of
Orange. Thanks to the intrigues of his agents, the
members of the Council of State were arrested and did
not regain their freedom till those most attached to the
king's interests had been removed and others appointed
in their places. This packed council was but a tool of
the Prince of Orange, and its first act was to convene
the States-General to deal with the affairs of the coun-
try, without any reference to the king. On the motion of
the Council of State, the representatives of the
rebel provinces of Holland and Zeeland, where the
authority of the prince was still unquestioned, and
together they debated a scheme for
securing tolerance for all forms of worship until such
time as the States-General should have finally decided
the matter, also for obtaining the removal of the Span-
ish occupation. But in fact, an event happened which filled the whole country
with fear and horror. The Spanish soldiers, who for a
long time had received no pay, mutinyed, seized the
city of Antwerp, and pillaged it ruthlessly, seven thou-
sand persons perishing during these disorders, which
were usually referred to as the Spanish Fury. The
 Prince of Orange, who had been camped
near Ghent, despatched the famous
Pacification of Ghent on 8 November,
1576.

Thus triumphed the crafty and artful diplomacy of the
Prince of Orange. He had succeeded in causing
the loyal provincies to vote toleration of worship, while
the provinces of Holland and Zeeland of which he was
master were still restricted in their limits to the practice of the Catholic religion. No doubt it was
stipulated that this refusal was only provisional, and that
the States-General of the seventeen provinces
would finally settle the question; but meanwhile
Protestanism gained an immense advantage in the Catholi-
c province without giving anything in return.
Furthermore the prince had taken the precaution to
have it stipulated that he should remain admiral and
regent of Holland and Zeeland, and all these measures
were passed in the name of the king whose authority
they completely defied.

Such was the situation when the new regent arrived.
On the advice of his best friends he ratified by his
party perpetual the system of his predecessors in the
main clauses of the Pacification of Ghent, which rallied to
him a majority of the people. Then set about es-
ablishing his authority, no easy task in face of the
unwearying effort of the Prince of Orange to prevent
it. When, in order to obtain a reliable stronghold,
he seized the citadel of Namur, the States-General,
prompted by William of Orange, declared him an
enemy of the State and called in as regent Archduke
Matthias of Austria, to whom William succeeded in
being made lieutenant-general. Don John defeated the
army of the States-General at Gembloux, and Wil-
liam made a fresh appeal to foreign Protestants. From
all the neighbouring countries adventurers flocked in
to fight the Catholic Government. The Calvinists
took sorr of the large cities, Brussels, Antwerp,
Ghent, and held them in a state of terror. In the last-
named town two of the leaders, Hembyeze and Ryhove,
gave themselves up to every excess, persecuted the
Catholics, and endeavoured to set up a sort of Protest-
ant republic as Calvin had done at Geneva. To crown
these mistakes, the prince was stricken with ar
sclerosis by illness in 1578, and all seemed lost for the Catholic
religion and the royal authority.

But the eyes of the Catholics were at last opened.
Seeing that under pretext of freeing them from Span-
ish tyranny they were being enslaved under Protestant states they turned from William’s party and sought once more their lawful king, in spite of the just complaints they had against his government. This revolutionary movement was most marked in the Walloon provinces: Artois, Hainault, and French Flanders in the van; Namur and Luxemburg joining them later. It began as a league among the nobles of these provinces who styled themselves the Malcontents, and who broke with the States-General to recognize anew the authority of Philip II. It was they who prevented the realization of the great scheme of William of Orange to federate the seventeen provinces in a league of which he was to be the head, and which would ultimately cast off all allegiance to the king. When he assembled a greater number of the Malcontents and himself with them, the northern provinces in the Union of Utrecht (1579), under the name of the United Provinces, and with proclaiming the deposition of Philip II at least within these provinces. To the Malcontents, therefore, is due the credit of saving the royal authority and the Catholic religion in the Belgian provinces.

The new regent, Alessandro Farnese, son of the former regent, Margaret of Parma, grasped the situation admirably. He entered into negotiations with the Malcontents, and reconciled them with the king’s government by redressing their grievances; then with their support he set about recovering by force of arms the towns in the northern provinces which had fallen into Spanish hands. One after the other they were recaptured, some, like Tournai and Antwerp, only after memorable sieges, till at last Ostend alone of all Belgium remained in Protestant hands. And now the popular regent was preparing for a campaign against the northern provinces, demoralized by the assassination of their stadtholder in 1584, when once more, hapless II’s ill-ordered policy ruined everything. Instead of allowing Farnese to continue his military success in the Netherlands, Philip used him as an instrument of wild projects against France and England. At one moment obliged to take part in maritime preparations against England, and at another to cross the frontier in support of the League against Henry IV, Farnese had to leave his task unfinished, and he died in 1592 of a wound received in one of his French expeditions. His death was the greater misfortune for Belgium because Maurice of Nassau, son of William of Orange, and one of the greatest war-capitans of the age, was just then coming to the front.

It is not a happy policy must be tried. He betook himself of separating the Catholic Netherlands from Spain, and of giving the sovereignty to his daughter Isabella and her husband the Archduke Albert of Austria; in the event of their being childless the country was to revert to Spain (1586). This was one of the most important events in the history of Belgium, for in 1584, when once more, an independent nation, acquired a national dynasty, and might now hope for the return of former prosperity; that this hope was frustrated was the result of events which defeated the plans of statecraft and the wishes of the new sovereigns.

During the short space of their union (1588-1621) Albert and Isabella lavished benefits on the country. Ostend was recaptured from Holland after a three-years’ siege which claimed the attention of all Europe, and a truce of twelve years (1609-21) made with the United Provinces was employed to the greatest advantage. The damage done by the religious wars was repaired; more than three hundred chateaux and noble houses were founded or restored; local customs were codified by the Perpetual Edict of 1611, which has been called the most splendid monument of Belgian law; public education was fostered in every way, and the new sovereigns brought about the founding of many colleges by the protection they extended to the religious teaching orders. More over they showed themselves generous patrons of science, literature, and art, and protected the interests of commerce and agriculture. Blameless in their private life and deeply pious, they gave an example of virtue on the throne not always to be found there. Unfortunately they died childless, Albert in 1621, Isabella in 1633, and their death put an end to the preceding prosperity of Belgium. Once more the country was drawn into endless wars by Spain, who fought chiefly against France, and became the battle-field of numerous international conflicts. It was repeatedly despoiled of some of its provinces by Louis XIV, and cruelly plundered by all armies, friendly and hostile, that marched across its plains. The seventeenth century was the most calamitous of all to Belgium. The condition of Belgium until the peace of Utrecht (1713), which followed by that of Rastatt put an end to the long and bloody wars of the Spanish Succession which gave Spain to the Bourbons and handed over the Catholic Low Countries to the Hapsburgs of Austria.

It would be a mistake to suppose that all these calamities, domestic and foreign, had left Belgium entirely unfruitful from the point of view of civilization. Nothing could be more false; though it is a charge often made even in Belgium by writers whose prejudices would fain discover in Catholicism a retarding force for Belgium’s progress. The University of Louvain, which Bellarmine, and Justus Lipsius had taught, had always been the centre of orthodoxy, and did not cease even during the sixteenth and seventeenth centuries to manifest great activity, chiefly in the domains of theology and law, which were expanded there by a large number of eminent scholars. Side by side with Louvain stood the University of Douai founded in 1562 by Philip II as a breakwater against heresy, and it also sent forth many famous men. Among the new bishops were men whose fame for learning was only equalled by their well-known piety. It is no doubt true that the controversies of the day have left their mark on the religious life of that period. Thus, Michael Badius, a professor at Louvain, was condemned by Rome for his theories on free will, predetermination, and justification, but he retracted in all humility. His teaching came up again in a more pronounced form in a pupil of one of his pupils, Cornelius Jansen, Bishop of Ypres, and it is well known how the "Augustinians", a posthumous work of which appears in it, a work which is called Jansenism. Another manifestation of the intellectual and scientific activity of Belgium was the beginning of the celebrated collection known as the "Acta Sanctorum" by the Belgian Jesuits. Héribert Rowsewyde drew up the plans for the undertaking, and Father Jan van Bolland began to carry them out, leaving the continuation of the work to his collaborators, the Bollandists. Amongst these Hensen and Papelbroch in the seventeenth century contributed brilliantly to the work which has not yet reached its conclusion.

If, apart altogether from the religious aspect, we would complete the picture of Belgium’s culture in the seventeenth century, we have but to recall that art reached its acme in the Flemish School, of which Rubens was the head, and Van Dyck, Teniers, and Jordaens the greatest masters after him. It would thus be easy to prove that the Catholic Low Countries, though caught as in a vise between powerful neighbours and ever in the throses of war, did not give way to despair, but in the days of direct calamity drew from their own resources, and, as it were, were abased with abilities which have served to adorn even our present-day civilization.

THE AUSTRIAN NETHERLANDS.—The Treaty of Utrecht opened an era of comparative peace and prosperity for the Catholic Netherlands, but did not bring contentment. The Austrian regime under which the
country was now to exist was that of an absolute monarchy, which by continued encroachments on the traditional privileges of the people, drove them at length to rebellion. It was not merely its absolutism, it was the anti-religious atmosphere of the Government which really aroused the people. The actuating principle of the Government in its dealings with the Catholic Church was to assert its supremacy and to make rules for the Church, even in purely religious matters. This policy, which is known as Josephinism, from Joseph II, its most thoroughgoing exponent, had prevailed at the Austrian Court from the beginning. It found a theorist of great authority in the famous canonist Van Espen (1646-1728), a professor at the University of Leiden. His writings justified and all attacked on the liberty of the Church. The opposition between the tendencies of the Government, which threatened alike the national liberties and the rights of the Church, and the aspirations of the Belgian people, devoted alike to religion and liberty, gave rise during the Austrian occupation of the country to endless misunderstandings and unrest. The situation was not, however, uniformly the same. It varied under different reigns, each of which had its own peculiar characteristics.

Under the reign of Charles VI (1713-1740) Belgium quickly learned that she had gained nothing by the changing of her rulers. One of the clauses of the Peace of Utrecht had conferred upon the United Provinces, called the Treaty de la Barrière (the Frontier Treaty) entitling the United Provinces to garrison a number of Belgian towns on the French frontier as a protection against attacks from that quarter. This was a humiliation for the Belgians, and it was aggravated by the fact that these garrison troops were under the command of the Protestant Church of their religion, had many religious quarrels with the Catholic people. Moreover, the United Provinces, controlling the estuary of the Scheldt, had closed the sea against the port of Antwerp since 1585; so that this port which had at one time been the foremost commercial city of the north was now deprived of its trade. This was a fresh injustice to the Catholic Low Countries. To all this must be added the oppressive and ill-considered policy of the Marquess de Prié, deputy for the absent government-general, Prince Eugene of Savoy. Prié, like another Alva, treated the country with the utmost severity. When the labour guilds of Brussels protested vigorously against the government tactics, Prié, turning the river Zenne into a tidal channel, caused the aged François Annensess, syndic or chairman of one of these guilds, to be arrested and put to death (1719). The citizens of Brussels have never forgotten to venerate the memory of their fellow-townman as a martyr for public liberty. The Government compensated the nation by founding the East and West Indian Trade in 1722. This company, which was enthusiastically hailed by the public, was of immense benefit in the beginning, and promised an era of commercial prosperity. Unfortunately the jealousy of England and of the United Provinces sealed its fate. To win the consent of these two powers to his Pragmatic Sanction, by which he hoped to secure the undisputed succession of his daughter Maria Theresa, the emperor agreed to suppress the Ostend company and once more to close the sea against Belgian trade. His cowardly concessions were of no avail, and at his death in 1740 his daughter was obliged to undertake a long and costly war to maintain her inheritance and Belgium, invaded and conquered by France in 1792, was not restored to the empire till the Peace of Aachen in 1748.

Under the reign of Maria Theresa (1740-80) the Government was in a position to occupy itself peacefully with the organization of the Belgian provinces. On the whole it fostered the material interests of the country, but the principles underlying its religious policy revealed themselves in measures more and more hostile to the Church. The empress herself was of the opinion that the Church ought to be subject to the State even in religious matters. "The authority of the priesthood", she wrote, "is by no means arbitrary and independent in matters of dogma, worship, and ecclesiastical discipline". The state in her service, imbued as it was with the spirit of absolutism and republicanism, was zealous in applying these principles. The more famous among them were the Prince of Kauinz, the Count of Cobenzl, and Mæ Neny. On the slightest pretext they constantly stirred up petty and at times ridiculous conflicts with the ecclesiastical authorities, such as forbidding assemblies of the bishops; trying to prevent the clergy from using the law courts; interfering with the publication of books; forbidding the publication of books; forbidding the publication of books; forbidding the publication of books; and so on. They proceeded to issue decrees compelling the clergy to adopt the terms of the Council of Trent, and to suppress the various religious orders, and in general to bring the Church under the sway of the State. The effect of these measures was to make the Church less and less a power in the State.

But there came a great change as soon as Joseph II mounted the throne (1780). He was the son of Maria Theresa, a pupil of the philosophers, and inspired by their teachings, was ever ready to defy and disregard the Church. As was not unusual in his day he held the opinion that the State was the source of all authority, and the source of all civilizing progress. He set himself without delay to apply his policy of "enlightened despotism". Forgetful of his coronation oath to observe the constitutions of the several Belgian provinces he began a career of reform which ended by destroying the Church. By an edict of tolerance, which he was to publish in 1781 an edict of toleration, by which Protestants were freed from all civil disabilities, a just measure in itself, and one that might well be praised, it were not that, in the light of his subsequent actions it betrayed the dominant idea of his whole reign, namely, hostility to the Catholic Church. The Church, he thought, was a part of the creature of the State, subject to the control and supervision of the civil power. He undertook to realize this ideal by substituting for the Catholic Church governed by the pope a national Church subject to the State, along the lines laid down by Febronius, who had met with many supporters even within the ranks of the clergy. The measures he adopted to enslave the Church were endless. He forbade religious orders to correspond with superiors outside the country; he forbade the bishops to ask Rome for dispensations in matrimonial cases. He tried to gain control of the education of the clergy by erecting a central seminary to which he endeavored to force the bishops to send their future priests. He interfered with the Jesuits and the University of Louvain because he considered them too orthodox. He suppressed as useless all convents of contemplative orders and all pious confraternities, and replaced them by one of his own invention which he grandiosely called "The Confraternity of the Active Love of our Neighbour". He prohibited all
Nederlanden (5 vols., Antwerp, 1878-80); Piet, Le royaume de Marie-Thérèse dans les Pays Bas autrichiens (Louvain, 1874); DISCAILLON, Les Pays Bas sous le royaume de Marie-Thérèse (Brussels, 1872); DELPLACE, Joseph II et la révolution française (Bruges, 1971); HUBERT, Les guerres de la Bourgogne dans les Pays Bas autrichiens (Brussels, 1902); IDEM, Le voyage de Joseph II au Pays Bas (1781) (Brussels, 1900).

GODEFROY KURTH.

Netter, Thomas, theologian and controversialist, b. at Safron Walden, Essex, England, about 1375; d. at Rouen, France, 2 Nov., 1430; from his birthplace he was commonly called Waldensian. He entered the Carmelite Order in London, and pursued his studies partly there and partly at Oxford, where he took degrees, and spent a number of years in teaching, as may be gathered from the titles of his works (all of which are now either lost or untraced). He espoused the opinions of the Erasmians, which embrace the whole of philosophy, Scripture, Canon Law, and theology, that is, a complete academical course. He was well read in the classics and the ecclesiastical writers known at the beginning of the fifteenth century, as is proved by numerous quotations in his own writings. Only the dates of his ordinations as acolyte and subdeacon are record, 1394 and 1395. His public life began in 1409, when he was sent to the Council of Pisa, where he is said to have upheld the rights of the council. Back in England he took a prominent part in the prosecution of Wycliffites and Lollards, assisting at the trials of William Tailor (1410), Sir John Oldcastle (1413), John Wycliffe (1428), presenting his case against Lollardism, and writing copiously on the questions in dispute ("De religione perfectorum", "De paupertate Christi", "De Corpore Christi", etc.). The House of Lancaster having chosen Carmelite friars for confessors, an office which included the duties of chaplain, almoner, and secretary and which was extremely lucrative, Netter, who had succeeded Stephen Patrington as confessor to Henry V and provincial of the Carmelites (1414), while other members of the order held similar posts at the courts of the dukes of York and of Clarenc, of Cardinal Beaufort, etc. No political importance seems to have been attached to such positions.

In 1415 Netter was sent by the king to the Council of Constance, where the English nation, though small in numbers, asserted its influence. He must have interrupted his residence at Constance by one, if not several, visits to his province. At the conclusion of the council he, with William Cluyt, doctor in Divinity, and two knights, was sent by the English king as an embassy to the Archduke of Austria, the Duke of Lithuania, and the Grand master of the Teutonic Knights. The pope was represented by two Italian bishops, and the emperor by the Archbishop of Milan. The object of the mission was to bring about a mutual understanding and prevent the failure of the papal army against the Hussites. It has been asserted several times on this occasion Netter converted Vitore, Grand Duke of Lithuania, to Christianity, and was instrumental in his recognition as king and his subsequent coronation. Although all this is doubtful, it is possible that Netter did exercise some influence during his brief stay in eastern Europe, for he has been styled the Apostle of Lithuania; he also established several convents of his order in Prussia. He returned to England in the autumn of 1420, and devoted the remainder of his life to the government of his province and the composition of his principal work. Fragments of his correspondence late published throw a light on his endeavours in the former capacity, showing him a strict reformer, yet kind and clement.

Henry V having died in his arms, he appears to have acted as tutor (rather than as confessor) to the infant King Henry VI, whose piety may be attributed, at least in part, to Netter's influence. He accompanied the young king to France in the spring of
1430, and died six months later in the odour of sanctity. Miracles having been wrought at his tomb, the question of the confirmation of his cult is at present (1810) before the Congregation of Rites. Of his numerous works only the "Doctrina antiquitatem fidei ecclesiae catholicae" has permanent value. It is in three parts, the first of which might be termed "De vera religione," the second bears the title "De sacramentis adversus Wiclefistas" etc., and the last "De sacramentibus." The first two were presented to the pope, who on 8 August, 1437, expressed his satisfaction, encouraging the author to continue his useful and learned undertaking, and communicating to him the text of the Bull condemning the errors of Wyclif "Dudum ab apostolorum." Nevertheless the work, owing to its bulk, would have fallen into oblivion had not some Carmelites, notably Ludovicus de Berlino, discovered it in the library of Paris and secured its publication (1523). It was reprinted at Paris (1532), Salamanca (1557), Venice (1571 and 1757). It is a complete apologia of Catholic dogma and ritual as against the attacks of the Wycliffites, and was largely drawn upon by the controversialists of the sixteenth and seventeenth centuries.

Zimmermann, Monumenta histor. Carmel., 1 (Lipsia, 1907), 442 sq.

Benedict Zimmermann.

Neugart, Trudpfort, Benedictine historian, b. at Villingen, Baden, 23 February, 1742; d. at St. Paul's Bernardin in Jerusalem, 15 December, 1825. Of middle-class origin Neugart studied in the classical schools of the Benedictine Abbeys of St. George and St. Blasien, entered the order at the latter monastery in 1759, and was ordained priest in 1765; in 1767 he was appointed professor of Biblical languages at the University of Freiburg. In 1789 he was made professor of theology. While engaged in this work he published a treatise on penance, "Doctrina de sacramentis penitentiae recte administrando" (St. Blasien, 1778). His abbot, Gerbert, had planned the publication of a Church history of Germany on a large scale ("Germania sacra"). In 1780 at his request Neugart began to collect the historical data for the Diocese of Constance. On Gerbert's death in 1793, Neugart declined the dignity of abbot but accepted the provostship of Krozingen, near Freiburg, so as to be able to devote himself entirely to historical studies. He published the original charters and documents for the history of the Diocese of Constance in a separate part dedicated by the author, "Episcopatus Constantiniensis sive transjurane circius dioecese Constantien-" (1, St. Blasien, 1791; II, St. Blasien, 1795). With this as a basis he wrote at Krozingen the first instalment of his history of the Diocese of Constance "Episcopatus Constantiniensis Alemannicus sub metropolit Moguntinum" (part I, vol. I, to the year 1100, St. Blasien, 1804). The number of manuscripts of the office antiphons, there being special rubrics in the liturgical books as to the days on which they should be sung or not sung. The more important use of the term is that in which it means the signs used in the notation of Gregorian Chant. Akin to this use is the one which applies it to the tones or groups of tones in MSS. notated in Roman notation. In this sense the term cannot be traced farther back than the eleventh century. The names of the various signs, too, seem to date from about the same period. Previously the general name for the notation was usus. The names of the single signs varied with time and place. The tables of names found in several MSS not only have different names for the same sign, or different signs for the same name. In this article we shall use the names as applied in the Preface to the Gradual recently issued from the Vatican printing establishment.

The neumatic notation of Plain Chant is first met with in MSS of the ninth century and, with slight modifications, is to be met with to this day. Whether its use goes much farther back, whether, in particular, St. Gregory the Great employed notation in his typical Antiphonarium, cannot be said with certainty. The fact that at the date of our earliest MSS. the insufficiency of the notation was felt, and various efforts were made to supply the defect, would seem to promise the development of considerable duration. On the other hand the fact that from the beginning we find several families of notation like those of St. Gall and Metz, which,
while agreeing in the main principles, show considerable divergence in matters of detail, would seem to suggest that at the time when these families started, only the fundamental idea had been conceived, while the full development of the whole system took place more or less independently at the various centres. Judging by the consideration mentioned first, we should have no difficulty in believing that St. Gregory used neumatic notation in his Antiphonary. In accordance with the second view, however, we should feel inclined to put the beginning of neumatic writing about the eighth century.

As to the origin of the neums students are now on the whole agreed that they are mainly derived from the accent marks of the grammarians. In that way, of course, they point back to Greece. From the fact, however, that some of the signs in the developed system look like signs in Byzantine notation, and that some of the names are Greek in origin, some investigators have concluded that the whole system was taken over from Greece. Recently J. Thibaut has defended this theory in a rather fanciful book, "Origine Byzantine de la Notation Neumatique de l'Eglise Latine". But the prevailing opinion is that the neumatic system is of Latin growth.

Accordingly the fundamental principle is that the rise and fall of the melody are expressed by the signs of the accentus acutus (\(\Upsilon\)) and the accentus gravis (\(\Sigma\)). The acutus, being drawn upwards, from left to right, indicates a rise in the melody, a higher note; the gravis, being drawn downwards, a fall in the melody, a lower note. From the combination of these two signs there result various group signs: (1) \(\Theta\), acutus and gravis, a higher note followed by a lower one, a descending group of two notes (clivis); (2) \(\Delta\), gravis and acutus, lower and higher notes (pes or podatus); (3) \(\Sigma\), acutus, gravis, acutus; a group of three notes of which the second is the lowest (porrectus); (4) \(\Upsilon\), gravis, acutus, gravis; a group of three notes of which the second is the highest (torculus); and so on. In these combinations the elements generally preserve their original form pretty clearly, except that the angles are often rounded off, as indicated below. When used singly, the acutus, too, retained its shape fairly accurately and from its shape received the name virga (virgula). The gravis, however, was generally converted into a short horizontal line (\(-\)), or a dot (\(\cdot\)), or something similar, and hence received the name of punctum. In this form it is also used in an ascending group of three or more notes (\(\times\), scandicus) and in a
similar descending group (\(\flat\), climaxus). More complicated combinations were designated as modifications of the simpler groups. The addition of a lower follows on the same syllable. An analysis of all the cases of liquescence occurring in the MS. Gradual 339 of St. Gall is made in the second volume of the “Palæographic Musicae” (pp. 41 sqq.), where the subject is treated very fully. This analysis shows that by far the largest number of cases (2450 out of 3504) occur when a vowel is followed by two or more consonants the first of which is one of the “liquida” (l, m, n, r) either within a word (like sanctor) or through the collocation of two words (as in le). A considerable number is found before an explosive dental at the end of a word followed by another word beginning with one or more consonants (317 before t, 48 before d). Forty-nine times it is found before a final s followed by another consonant (e.g. nobis Domine) and six times before in Israhel; seventy-three times before g, thirty-two times before two consonants the second of which is j (e.g. adjutor), forty-six times before single m, thirty-four times before a single g followed by e or i. One hundred and fifty-nine times on the diphthong au, and two hundred and eighty-eight times before a single j (including one hundred and fifty-three cases on aisleu).

It is clear from what has been said, that this liquescence must be connected with the proper pronunciation of the consonants. But as to what it should mean in the rendering, authors are not agreed. Thus the preface to the Vatican Gradual says: “ipse cogente syllabarium natura, vox de una ad alteram limpidi transiens tunc liquescit; ita ut in ore compressa non faciet videratur, et quasi dimidium a more, sed potestatis amittat.” This is not easy to translate, but it would seem that the last tone of the liquescent sound should “lose one half, not of its length, but of its strength”. The “Palæographic Musicae” on the other hand, says that in the exact pronunciation of certain combinations of consonants an obscure vowel sound enters between them, so that a word like confundantur would sound confundant-

Thus even the clivis (more correctly clinis) was at an early period called virga flexa, and the torculus could be considered as a pes flexus. The sign \(\\text{\textbullet}\) would be a porrectus flexus, the \(\\text{\textbullet}\) a torculus resupinus, etc. Again the placing of several puncta before a sign is expressed by the term prepuinctis, their addition after a sign subpunctas. In accordance with that a scandius is a virga prepuinctis; a clivus, a virga subpunctis; \(\\text{\textbullet}\), scandius subpunctus, or, also compoundas the last-named adjective indicating the addition of punctus before and after.

A special modification of the neum form is that which is called liquescent or semivocal. It consists generally of a shortening, attenuating, or curling of the last stroke. It occurs only at the transition from one syllable to the next and there only in certain circumstances. It is never found when another neum
mentioned above, which comprise the large majority of all the cases. Also to the case of single m and j (or i), the latter partaking of the nature of the liquid consonants. It would further apply to the case of gn, if we suppose that that combination was pronounced ny,

Mrs. Ex. 2

and to the case of final s, if that consonant was voiced, when it also could be sung. In the case of the diphthong au the liquescence would consist in the transition from the first vowel to the second. The remaining cases of double consonants should be explained by analogy, the liquescence consisting simply in the shortening of the vowel sound made for the purpose of distinct pronunciation of the group of consonants without loss of time. This explanation would have the further advantage of being in accordance with the practice of the best choirs that nowadays make a peculiar study of Plain Chant.

Some of the liquescent neums have special names.

Intr.

\[ \text{ti- a.} \]

Mrs. Ex. 3

Thus the liquescent politus is called epiphonus, the liquescent elvis, cephalicus, the liquescent climasus, anicus.

In addition to the neums which are derived from the accents and which form the groundwork of the neumatic system, there is another class which may be taken as indicating special effects. They have, as Wagner has pointed out, as a common feature, the book form. In the first place we mention the strophicus, having the shape of a comma (,). When occurring singly, it is called apostrophus, when doubled, distrophus; when trebled, tristrophus. The apostrophus is generally found at the end of another neum, or followed by a distrophus at a higher pitch; it is never used as a single note over a syllable. When added to a neum, it is generally represented in the later staff notation manuscripts at the same pitch as the last note of that neum. But there is reason to believe that originally there was an interval smaller than a semitone between those two notes. The distrophus and tristrophus indicate a quick repetition of the same note, possibly again with a minute difference of pitch between the repeated notes.

Akin to the apostrophus is the oriscus, having a shape somewhat like this : . Apostrophus and oriscus are sometimes interchanged in different manuscripts. In a few instances the oriscus, however, is

The illustrations which accompany this article are
of the Introit itself are merely indicated by the cues In Med., Et impieb., and Stola. The signs for the single notes are the plain virga and the round punctum, the former on the last syllable of xohannus, the second and third syllables of adimplens, etc., the latter on the second syllable of Gratia, the second syllable of Dei, the first of xohannis, etc. In the podatus the gravis is a short horizontal stroke, the acutus a straight virga joining almost at a right angle; see third syllable of Gratia, third of salutifer, third of dogmata, etc. There is also a second form consisting of a disjointed punctum and virga, see third syllable of Gloria (last line on left page), first syllable of xristus

Illustration II ("Palæogr. Mus.", IV, pl. A) is from a MS. written in the monastery of Einsiedeln at the end of the tenth or the beginning of the eleventh century. It belongs to the St. Gall school of notation. The affinity of this school to the Anglo-Saxon is evident. There are, however, a number of peculiarities. First we find a greater variety of signs. Thus the virga appears in two forms, one slightly curved to the right and vanishing at the top, the other straighter and with a thickening at the top. This second variety arises, graphically, from its being drawn downwards, the pen spreading itself a little at the start of the stroke. For the rendering it indicates a longer form of the note. We find the first form on the first syllable of Ostende, the fifth of misericordiam, etc., the second on the second syllable of Ostende (first sign),
on the first syllable of tuam (second sign), etc. Similarly we have for the punctum, besides the dot form, that of a short horizontal line. This is also sometimes used for one of the puncta of the clamicus (first syllable of tuam, third and sixth neums, etc.) and towards the end of the group neuma on nobis (fifth sign from the end) we see a trigon subpuncte, the last dot of the trigon and the added punctum being drawn out. The podatus appears in three forms; first with rounded corner, as on the third syllable of Alleluia (first sign); second with some pen pressure on the initial stroke and a fairly square angle, as on the fourth syllable of Alleluia (third sign); and third, with a more elaborate gravis, as in the final neuma of nobis (second last sign). The first may be considered as the normal form, the second marks a firmer rendering of the first note, and the third a decided leaning on it. The torculus appears in its plain form (second syllable of Ostende, fourth syllable of misericordiam) and with pen pressure on both graves (\textsuperscript{2/3}) marking a prolongation of the whole figure (first syllable of tuam, seventh sign). The two forms of the pressus, minor and major, are found in the final neuma of Alleluia (fourth last and last signs). Of liquescent signs we have a scandicus liquescenta on the first syllable of Alleluia, a distropha liquescenta on the third, an epiphon on the last syllable of misericordiam.

A second peculiarity of the St. Gall notation is the occasional addition of a little stroke to the neums, marking a prolongation of the affected note. The "Paléographie Musicale" (IV, pl. 17) has given the name epimasa to this little addition. Mention has already been made of the thickening of the head of the virga, which often amounts to a distinct stroke. Our illustration gives examples of a similar addition to the last note of the torculus: \(\text{O}^1\) instead of \(\text{O}\); the last of the porrectus, the first and the second of the clivis. The epimasic torculus is seen in the final neuma of nobis (before the first trigon). The first sign in the same neuma is also an epimasic torculus followed by another long punctum. On the first syllable of tuam we have an epimasic porrectus, followed by two puncta, while the plain porrectus appears on the first syllable of domine (third sign). The clivis with epimasa to the first note is found on the first syllable of tuam (first sign) and twice towards the end of the neuma on tuam. On the second syllable of nobis, after the torculus subpunctu already mentioned, we have a clivis with the epimasa attached to the second note, the clivis being preceded by two short puncta and followed by a long one.

Thirdly, we find as a peculiarity of this notation the addition of certain letters. These are often called "Romanian" letters, because a St. Gall writer of the eleventh century attributes their use to a singer named Romanus who, according to him, brought the chant from Rome to St. Gall towards the end of the eighth century (see "Pal. Mus.", IV, pl. 9; Wagner, "Einleitung", II, 114). The letterae significativa are of two classes, one referring to rhythm, the other referring to pitch. Of the former class we find in our illustration frequently the c (celeriter) and the t (tenete). At the beginning of the Offitory (last line of illustration) we find also the m (medioeciter) modifying the effect of the preceding c. Of the second class we find the c (equaliter) enjoining the same pitch between domine and misericordiam between the second and third syllables of misericordiam and between tuam and et.

To give a clearer idea of the meaning of the neums in this illustration we subjoin the notation of the same piece according to the Vatican edition, pointing out only the few differences in the two readings. On the first syllable of "Alleluia" the Vatican edition omits the liquescence; similarly on the third syllable of that word and on the final syllable of "misericordiam". It may be mentioned in this connexion that a very frequent use of liquescence is characteristic of the St. Gall school. The strophs on Alleluia and tuam are given as ordinary puncta. Similarly the special sign for the pressus has disappeared and is replaced by a doubling of the first note. The first of these two notes of the same pitch is then sometimes combined with the pre-
(the first punctum connected with the pes in the manner of a torculus and the second, liquecent, bent back to the left) on the second syllable of collaudant and a porrectus compunctis liqueces on the last syllable of filium. The oriscus is found after the podatus on

\[ \text{feat illum: et elegit cunx ex omni arte. Decit uti popeta et legem utr et discipline: rex illum feat uti. Statuisti uti retenementu creasti: et oriantur cum zona ushace.} \]

\[ \text{Et vindicta dieis coelona glo} \]

\[ \text{Ec. Judas ut pulae facer.} \]

IT \( \text{am} \) \( \text{ui} \) \( \text{am} \) \( \text{ui} \) \( \text{em.} \) \( \text{Stundum volatam.} \)

\[ \text{ill. vii.—ms. 411 (341) (xiv century)} \]

Bibliothèque Mazarine, Paris

agatha and the quilisma, consisting of two books, on the second syllable of domino, the second of angeli and the first of dei, in each case a porrectus being joined to it.

Another peculiarity of this school is the frequent use of disjoint neums, all of which indicate a prolongation of the notes. Mention was made of a disjoint podatus in connexion with the first illustration. We find it here on in and the first syllable of celebrantes. A torculus of this kind is shown in the second syllable of martyris. The descending figures are indicated by the puncta placed perpendicularly. Thus we have a clivis on the second syllable of omnes, the second

\[ \text{ill. viii.—gothic neums (a. d. 1435)} \]

Cathedral Library, Trier

The comparison with the reading of the Vaticana will show a close resemblance. We only notice that on gaudenti and angeli the MS. adds a liquecent note to the podatus and porrectus subpunctis, and on celebrantes has twice a porrectus for the strophic clivis, which suggests that the apostrophia (oriscus) was sung slightly higher than the last note of the clivus, as mentioned above.

Illustration IV is taken from an eleventh-century MS. of Silos, written in the Mozarabic notation ("Pal. Mus.", I, pl. II) in order to show that even this is based on the same principles. The usual forms of virga, punctum, podatus, clivis, torculus, porrectus

(before the quilisma) and the third of domino, the third of angeli (where the lower one got attached to the l), etc.; a climacus on angeli, preceding the quilisma.

We note further the use of literae significationes. Thus we have the c used in the same sense as in the St. Gall school, on agader. Similarly a t appears at the bottom of the illustration under the word meli. The a on Gaudeamus stands here for augete and is, therefore, synonymous with the t, whereas in St. Gall

will be recognized easily. The other features will be explained with reference to the modern form of the Vatican Gradual. The piece occurs in the Roman Liturgy as Introit of the Saturday after the fourth Sunday of Lent. On the last syllable of Silentes the MS. has a pes subpunctis, with the puncta joined together, representing the same notes as the staff notation without the pressus. On the first syllable of semen the MS. has a clivis instead of the single note of the Roman version, on the second, the punctum and
torculus (placed one over the other) are only graphically different from the pes and clivis. On the first syllable of equas a tristopha takes the place of the trigon. On the second syllable of dicti the MS. omits the last note of the print. On the second syllable of dominus the disjunct punctum and clivis correspond to the conjoint torculus. The second figure on non is a liquecent torculus. It begins below with the graavis to which the acutus is attached in the usual manner, but the last, liquecent, graavis is represented by a curve to the left of the acutus. The remaining slight differences are like those already explained.

As has been sufficiently indicated, the neums merely marked the rise or fall of the melody. They gave, in themselves, no clear information as to the exact amount of the rise or fall. In other words, they did not mark the intervals. A podatus, e.g., may indicate a second, a third, a fourth or a fifth without change in its form. This may now be accepted as an established fact. The various efforts made from time to time, most recently by Fleischer in his "Neumenstudien", to find interval significance in the neums, have failed completely. It is clear then, that at no time could the melody be read absolutely from the neumatic notation. Rather this served merely as an aid to memory. Nor did the choir sing from the notation. The MS. was only for the choir-master, or at most for the solo singer. The whole body of the Plain Chant melodies had to be committed to memory in the rehersals and we know now that many of the contemporary writers that it took a singer several years to become acquainted with all the melodies. In the course of time, as oral tradition began to grow less reliable, a desire was felt to have also the amount of rise or fall fixed. Accordingly we find even at the date of our earliest MSS. the use of letters, added to the neums, to indicate to the singer how far the melody rose or fell, as we have mentioned above. These indications, however, were again merely vague and could not finally satisfy. Various efforts which space forbids us to detail here, were then made to supplement the neumatic notation. All of them, however, were destined to disappear before the introduction of a new principle, which was to distinguish the higher or lower pitch of the tones by the higher or lower position of the notations, grading the distances between the notes in strict accordance with the intervals. Attempts in this direction can be noticed even in the class of MSS. which have been considered up to this. Our example of Mets notation shows pretty clearly an endeavour on the part of the notator to reduce the notes to a common pitch. The full, systematic carrying out of this idea is found in the tenth century, first in the Lombardic notation, shortly afterwards in the Aquitanian. Illustration V, taken from an eleventh-century Versciullary and Procyry from St. Martial in Limoges ("Pal. Mus.", II, p. 80) belongs to the latter class, which is further illustrated by the notes accommodated to a pitch. The full, systematic carrying out of this idea is found in the tenth century, first in the Lombardic notation, shortly afterwards in the Aquitanian. Illustration V, taken from an eleventh-century Versciullary and Procyry from St. Martial in Limoges ("Pal. Mus.", II, p. 80) belongs to the latter class, which is further illustrated by the notes accommodated to a pitch. The full, systematic carrying out of this idea is found in the tenth century, first in the Lombardic notation, shortly afterwards in the Aquitanian. Illustration 

In the staff thus perfected the neums were written according to the forms that had been previously in use in the various localities, such modifications being introduced as were necessary in order to avoid ambiguity of the notes, notably the thickening of the head of the acutus. Illustration VI, taken from a twelfth-century Gradual of St. Evroult ("Pal. Mus.", III, p. 194), shows the process clearly. It has four dry lines drawn on the parchment, of which the one for f was coloured red, that for g green. The other two lines have the clef letters a and e.

From the thirteenth century the notes began to be written larger, so that they might be read by a number of singers at the same time. The thickening of the strokes at the exact place where notes occur also became more pronounced. Thus gradually in the Latin countries the type shown in the foregoing illustration evolved which is practically the one adopted in our modern chant books.

Illustration VII ("Pal. Mus.", III, pl. 207 B) is taken from a fourteenth-century plenary Missal belonging to Notre Dame in Paris. In the first line on the right-hand column the group a c b g has been written twice by mistake. Of interest is the disappearance of the g at the end of the final neuma, also the substitution of c for b on floreat at the end of the group on per (which word is written a little too far to the left).

Illustration VIII ("Pal. Mus.", III, pl. 146) shows the peculiar type of notation which developed in Germany and is called Hufnapelachrift (horseshoe-nail writing). The illustration is from a Gradual written at Trier in 1435. There are five black lines, but the f line was coloured red. The illustration shows clearly that a second line was drawn over the first. In the third staff we find the g clef and the red f line drawn in the space between c and g. Melodically the frequent substitutes of c for b is remarkable (Hufnapelachrift, etc.). This is a peculiarity of the German tradition.

For the rhythmic signification of the neums see the article on CLAVICERE.

The principal work on the subject is the "Puphlographia Musicula", published in quarterly issues since 1888, from the editorial board at Tournai. An exhaustive list of the earlier literature is given in the preface to the first volume. Supplemental to this are
the publications of the Plain Song and Medieval Music Society (London, since 1868). A good handbook is Wagner, Neumann's Bibliographie der Musikerportraits in den Gregorianischen Melodien (Freiburg, 1903). Also, Gregorian Melodies by the Benedictines of Stammhous (London, 1897); Fließbacher, Neumens-Studien, part I (Leipzig, 1896); part II (Leipzig, 1897); part III (Berlin, 1894); Molitor, Deutsche Choral-Vogendrucke, (Ratisbon, 1904); Thaler, Originals Briskan de la Notation Neumétique de l'Église Latine (Paris, 1907). On Byzantine notation see also Rieman. Die Byzantinische Notenschrift im 10. bis 15. Jahrhundert (Leipzig, 1899). On the Latin abbreviations of the monasteries, see Mocquereau, Le Nombre Musical Gregorien, I (Tourna, 1908).

H. BEWERRUDE.

Neumann, Johann Balthasar, b. 1867 at Eger; d. 1753 at Würzburg, master of the rocco style and one of the greatest and most productive artists of the eighteenth century; distinguished as a decorator, but more so as an architect. He came from Eger to Würzburg as a cannon founder, and served chiefly with the French army. After he had traveled to perfect himself as an architect, he followed that profession in southern Germany and on the Rhine, entering into such successful competition with the French masters of the period that de Cotte and Boffrand, who judged his plans for the episcopal palace at Würzburg, afterwards eagerly laid claim to the authorship. While in Pfedl, Bishop Frans von Schönborn, in 1719, Neumann laid the cornerstone of the palace (1720). It is ostentatious but habitable, a vast rectangle, 544 ft. by 169 ft., with five well laid out courts and three entrance gates ornamented with pilasters, columns, and balconies. The throne room with the splendid adjoining state apartments, and the court chapel, although externally remarkable, are thrown in sumptuous splendor with an enormous outlay in material and skill. The baroque style of the edifice is here replaced by the most finished decorative rocco. The details are frequently of marvellous beauty; the arrangement, notwithstanding the overcrowding, is not inharmonious, although in combination it is without the harmony and simplicity so obvious in his unrestricted power over material substances. The interior decoration for a palace built at Bruchsal for another Schönborn, Bishop of Speyer, are magnificent, though simpler. For a third Schönborn he built a castle at Coblenz which is the most interesting and inharmonious proportions and splendid arrangement. A palace in Werneck is also his work. He completed the designs for palaces in Vienna, Carlsruhe, etc. The cathedral of Speyer, destroyed by the French army, was restored by Neumann with a clever adaptation of the existing conditions. In the façade, which was later restored, Neumann is the prevailing taste in every detail. In the restoration of the west side of Main cathedral he was unsuccessful, and more so with his piecework on the cathedral of Würzburg. In addition to these restorations he built the Pilgrims' church at Vierzehnheiligen, and the collegiate church at Neresheim, both important buildings, with oval spires, vast arched windows, and exquisite porticoes, (La. Théâtre, 1894); III, Kirchen, Alg. Kunstgesch. (New York, Cincinnati, Chicago, 1909).

G. GERTMANN.

Neumann, John Nepomucene, Venerable, fourth Bishop of Philadelphia, Pennsylvania, U. S. A., b. at Prachatits, Bohemia, 28 March, 1811, erroneously set down as Good Friday by his biographers; d. at Philadelphia, 5 January, 1860. From childhood he evinced signs of a vocation to the priesthood, and entered the seminary of Budweis in 1831. A profound theologian, thoroughly versed not only in all branches of sacred learning but in the natural sciences as well, particularly in botany, he spoke fluently many Slavic dialects and at least eight modern languages, besides being master of Latin, Greek, and Hebrew. When Bishop of Philadelphia he learned Irish to help the Irish immigrants in his diocese. Finishing his course at the University of Prague with distinction in August, 1855, he returned to Budweis, his native diocese, for ordination. While at the seminary, the letters of Father Baraga, afterwards Bishop of Marquette, Michigan, written to the Leopold Missionary Society, inspired Neumann with the desire of consecrating himself to the American missions. Accordingly, while yet a seminarian he landed in America (2 June, 1836), was adopted, and (25 June, 1836) ordained by Bishop Dubois of New York, who sent him without delay to western New York, where he laboured for four years amid incredible hardships. In 1840 he entered the Redemptorist Congregation, and was the first of its members to be professed in America, 16 January, 1842. For three years Neumann was superior of the Redemptorists at Pittsburg, where he built the church of St. Philomena and by labours especially among the German-speaking people, won the gratitude and praise of Bishop O'Connor. In 1846 he was made vice- provincial of the Redemptorists in America, and in 1852 at the suggestion of Archbishop Kenrick of Baltimore Pius IX gave Father Neumann a command under obedience to accept the Bishopric of Philadelphia, to which he was consecrated by Archbishop Kenrick at St. Alphonsus, Baltimore, 28 March, 1852. In his solicitude for his flock he visited the larger congregations of his diocese every year and the smaller ones every two years, remaining several days in the country places, preaching, hearing confessions, confirming, visiting, and anointing the sick. He once walked twenty-five miles and back to confirm one boy.

Indefatigable in the cause of education, both ecclesiastical and secular, he raised the standard of study and discipline at the Academy of St. Charles Borromeo, and founded (1859) an ecclesiastical preparatory college, to this day a credit and a blessing to the great diocese of Philadelphia. One of his first acts was to provide Catholic schools. At his consecration (1852) there were but two parochial schools in Philadelphia; at his death eight years later, their number was nearly one hundred. The boys he entrusted to the Christian Brothers, and the girls to different sisterhoods: St. Joseph, Charity, Immaculate Heart of Mary, Notre Dame of Namur and Notre Dame of Munich. These last he helped to establish firmly in the United States, and befriended in many ways. He introduced the Sisters of the Holy Cross from France to take charge of an industrial school. At the advice of Pius IX he founded the Philadelphia branch of the Sisters of St. Francis, and he was also the staunch
friend of the Colored Oblate Sisters in Baltimore, whom by his tact and charity he saved from dissolution. In five years he erected fifty churches and completed the exterior of the cathedral. Conspicuous at the first Plenary Council of Baltimore (1852), he was one of the American bishops invited by Pius IX to Rome in 1854 for the definition of the dogma of the Immaculate Conception. Noted for his devotion to the Most Blessed Sacrament, Neumann was the first American bishop to introduce the Forty Hours devotion into his diocese in 1853; he also inaugurated the practice now in vogue in Baltimore of reciting the Litany of the Blessed Virgin and the Rosary before High Mass on Sundays and Holy Days. His remains lie interred in a vault before the altar in the lower chapel of St. Peter's Redemptorist church, Philadelphia. Neumann left no published works except two catechisms of Christian Doctrine, which received the approbation of the First Plenary Council of Baltimore, a Bible history, confraternity manuals, a Latin pamphlet on the Forty Hours, and Acts of the synods held by him every two years. His pastoral letters are remarkable for their solidity, beauty, and unctuousness. On 15 December, 1896, he received the title of Venerable and the authorities of Rome have under consideration the act of beatification.

JOSEPH WISSEL.

NEUMANN, Franz, preacher, writer on theological, controversial and ascetical subjects, and author of many works in Latin and German, was born in Munich, 17 January, 1827; d. at Augsburg, 1 May, 1875. He entered the Society of Jesus 3 October, 1712, and after his studies in the Society, taught rhetoric and belles lettres for ten years. He then for two years preached on the missions, when he was made director of the celebrated Latin sodality at Munich, a post which he filled for seven years. From 1752 to 1763 he preached at the cathedral of Augsburg with extraordinary success. His controversial sermons, directed in a great part against the false teachings of the Lutherans, and in particular against the apostate monk Rothfischer, and Chladonium, were of a solidity of argument that baffled all the efforts of his adversaries. Father Neumann produced a surprising number of volumes: Latin plays for the use of his Latin sodality, which periodically staged such productions for the pleasure and edification of the literary men of Munich; sermons which he had delivered in the pulpit of Augsburg cathedral; works on asceticism, treatises on Rhetoric and Poetry, and some essays on theology in defence of the Jesuit system. Some of his Latin plays were republished in his two collections "Theatrum Asceticum" and "Theatrum Politicum," "Theatrume Asceticum, sive Meditationes Sacre in Theatro Congregationis Latinæ de B. V. Marie, ab Angelo Salutati exhibite" Monachi verno ipsojuni temporibus anno 1747," 571 pp., Innsbruck and Augsburg, 1747 (5 editions), contains dramatic renderings of such subjects as the conversion of St. Augustine, devotion to the B. V. Mary, the evil of sin, the fear of God, Divine Mercy and Love. "Theatrume Politicum sive Tragediae ad commenda-tionem Virtutis et Vitiorum detestationem," Augsburg and Innsbruck, 1760, 518 pp., contains epitaphs on the lives of Emperor, Papianus, Anastasius, Dicoros, Tobias, and Sara, etc. One amusing title which occurs is "Procursus judiciales contra fortes temporis". These plays, besides numerous others, were published also in separate booklets. On his ascetical writings probably the most famous and most valuable is the excellent little book "Ideae Theologiae Asceticae," Scientiae Sanctorum, de summa fama elegantissima work first published in Rome by Alexander Monaldi in 1839. It has gone through five editions in Latin and has been translated into various languages. The English edition bears the title: "The Science of the Spiritual Life." He wrote also several works in defence of Probabilism. Of his literary treatises the "Ideae Poetici" deals with the precepts and use of Rhetoric: "Ideae Poetici" is a similar volume on poetry and in the title he tells us the uses of the art, "Ad Ingeniorum Culturam, Animorum Oblac-tationem ac Morum Doctrinam"—ends which he had very well kept in mind in his own dramatic works. A tribute to Father Neumann on the occasion of his jubilee in religion styles him: "The Champion of Faith and Good Morals, a Follower and Rival of the great Paul, the Hammer of the Heretics, Physician of Sinners and Oracle of the Just!" His works, as enumerated in Sommervogel, number 112 books and pamphlets.

EDWARD F. GARESCHE.

NEUSUM, DIACORE (HUNG. BÉSZTERCÉBÁNTA; LAT. NEUSOLIENSIS), founded in 1776 by Maria Theresa. Cardinal Peter Paxmány had already contemplated founding four new sees in order to give the Archdiocese of Gran; one of these was Neusohl, but this project was dropped in 1636. Instead of four sees, four Jesuit colleges were established in Kassa, Neusohl, Koszy, and Szarfon. After the suppression of the Jesuit Order the project of the new diocese was again taken up. On 7 December, 1775, Maria Theresa informed the cathedral chapter of Gran that it had been decided to establish a new see, and asked the chapter to state what revenues would be assigned to it. On 11 January, 1776, the new diocese was founded by royal decision, and on 13 March, the papal decree was made public. Baron Franz Berchold was named the first bishop (1776-90), and in 1778-85 held the first canonical visitation. His efforts to meet the diocese materialy were unsuccessful, and the great fire of 1782, which destroyed the episcopal residence, had such a bad effect upon the see, that Joseph II contemplated giving it up, and planned the transfer of Berchold to the see of Gran, but the bishop opposed the plan, as well as the use of the diocese with that of Székcs and Roessnyó. The cathedral, lyceum and the four archdeaneries were founded in the time of Bishop Anton Mackay (1818-23). A diocesan synod was held at Neusohl 21 November, 1821, where the diocesan constitution was drawn up, which is valid to this day. Bishop Joseph Rudnycziuk (1841-50) was persecuted by the Austrian Government on account of his political views, and on 20 August, 1846, was arrested and sentenced to six years imprisonment, and deprived of his episcopal honours. He retracted in 1850, whereupon he was released from prison. Among the more recent bishops Arnold Tottenham was distinguished. He was appointed bishop in 1885. The present bishop is Wolfang Radnó (1885-91) since 1855 the cathedral chapter possesses its own insignia, and is composed of six members; there are also six titular canons. The diocese has a provost, 112 parishes, and 371 chapels; there are 168 priests and 49 clerics, 2 monasteries and 2 nunneries. In 1902 the Catholic population numbered in all 223,779 souls.

Das Katolische Ungarn (Catholic Hungary) (Budapest, 1901): Schematismus diocesis Neusolensis pro anno 1868.

A. ALDÁST.

NEUTRA (NITHIR; NTITTRA), DIACORE (NITRIN- SIS), in Western Hungary, a suffragan of Gran. The
exact date of its foundation is unknown. Some attribute the foundation to Fridigit, wife of Rosenmund, the Marco Polo of the Thirteenth Century, who visited Svatopuk in the Thirty-fifth year of his life, but without any more evidence than the alleged foundation by Archbishop Wolf of Lorech. Nor is the see a direct continuation of one which existed in Svatopuk's time and was suffragan of Prag-Potzeover; neither is it probable that the saintly King Stephen founded it. The see was probably founded in the time of King Colomus, but about 1185-87, although St. Ladislaus had it in contemplation, for a royal document still exists, in which he endows the church at Neutra with much property. The church, dedicated to St. Emmeram, was there in the lifetime of St. Stephen, and is supposed to have been endowed by Queen Gisela. Gervasio was the first bishop (1105-14) followed by many others, but the see was not restored to the archbishopric of Prague till 1460, when St. Ladislaus increased the revenues of the see to which the city of Neutra belonged from the middle of the thirteenth century. The cathedral chapter was in all probability established at the same time as the see; but until the seventeenth century very little is known about it. There were only nine canons in the thirteenth century, but the number was increased to ten in 1780. The see shared the fate of the country, the invasion of the Turks, the Hussites, internal quarrels, all of which wrought much mischief, especially the disastrous battle of Mohacs (1526). The see was in time deprived of its revenues which fell into the hands of the laity. Valentine Toore Bres, a wealthy citizen, bought them and had them confirmed by the Emperor Thurló, after which the latter's brother, Bishop Franz Thurló, acquired them, but later on became a Protestant. The Reformation found a foothold in Neutra, owing to the sympathy of certain noble families. Bishop Paul Bornemissos tried to restore the financial conditions of the see, but unsuccessfully; during the wars of the Empire, the city was seized by the imperial troops and only returned to Neutra in 1607. Bishop Franz Forzach was the first bishop to oppose the spread of the Reformation (1596-1607); his work was carried on by his successors, especially by the Jesuits, who since 1645 worked zealously for the re-establishment of the Catholic religion. In the seventeenth and eighteenth centuries religious orders settled in the diocese. The cathedral as it stands to-day was erected by Ladislaus Erdomyl (1796-36). Among the more famous bishops was August Roskoványi (1859-92), famed as a theologian and canonist. Bishop Emmerich Bende has been bishop since 1893; his coadjutor with right of succession is Count William Bathynay. The see includes an area of 471 square miles and is divided into 4 archdeaconies. There are 148 parishes, 237 priests, 194 of whom are parish priests; also 15 religious orders, numbering 145 members, of both sexes. In 1907 the Catholic population numbered 350,398. The cathedral chapter is composed of ten canons, and there are six titular canons, also 3 titular abbots.

NEVADA, a Western state of the United States, bounded on the North by Oregon and Idaho, on the East by Utah and Arizona, and on the South and West by California. It lies between the latitudes of 35° (in its extreme southern point) and 42° north, and between the meridians of 114° and 120° longitude. The extreme length of the state from north to south is 483 miles, while its extreme breadth from east to west is 320 miles. The total area of the state of Nevada is 110,590 square miles.

CLIMATE.—The climate of Nevada is dry, pleasant, and healthful. Summers are, as a rule, very warm, except in the high mountainous districts, while the winters are generally long and sometimes severe. In late spring and early autumn there prevails a warm, dry, north wind which has often disastrous effects, as it is generally accompanied by sand storm. The mean temperature in January is 28°, while that of summer is 71°. The average rainfall throughout the year is ten inches, and the greater part of this precipitation comes between the months from December to May.

POPULATION.—The history of the population of Nevada since 1850 presents some of the most interesting figures in the United States Census records. From the time of the early settlements in 1850-60 to the years of the great mining developments (1855-1860), the population rapidly increased from a few hundred pioneers to 60,000 people, while after 1885 (decentralization of silver) it declined until the end of the century, and from that time began to increase very rapidly. The figures showing the population of Nevada, according to U. S. Census Reports, are significant of these fluctuations: 1860, 6,857; 1870, 42,491; 1880, 62,226; 1890, 45,761; 1900, 42,335; 1910, 81,575.

MINERAL PRODUCTION.—The mineral production of Nevada consists chiefly of gold and silver. For the year 1908 the entire mineral production, consisting of gold, silver, copper, lead, and a little lead, was valued at $19,043,820, while in 1909 the gold production alone was valued at $15,908,400 and that of silver at $4,657,000, or a total production of $20,565,400 in gold and silver alone.

Agriculture and Stockraising.—The agricultural products of Nevada for 1909 were valued thus: wheat, $1,074,000; oats, $1,165,000; barley, $228,000; potatoes, $459,000; hay, $5,187,000. From these figures it can be seen that the production of hay is an important one, being greater in 1909 than the entire production of silver. In stock raising the most important industry is that of sheep. In 1909 the entire number of sheep in the state was 1,635,000 and the total number of wool produced was 21,740,972 lbs. Cattle raising is also an important industry.

Histori.—The first European to visit what is now the State of Nevada, was, in all probability, the Franciscan Friar Francisco Gárces. Father Gárces started from Sonora, in northern Mexico, with Colonel Anza for California in 1775. In this famous journey, Gárces stopped at the junction of the Gila and Colorado Rivers, in order to explore the surrounding country and establish a mission. No settlements were made or mission founded, but from the account of Father Gárces' journey as given by Father Pedro Font, who accompanied Gárces and wrote a fairly complete history of their travels, it seems practically certain that they visited Nevada, which was then, and in fact until 1850-60, a nameless desert. The next to visit Nevada were also Franciscan missionaries. These were Fr. Atanasio Domínguez and Fr. Silvestre Velez de Escalante, who on their journey to Monterey, California, turned to the East, crossed the Colorado River at the 37° parallel, crossed the extreme southern part of what is now Nevada, and proceeded to explore Utah. These friars also merely explored these regions and no settlements were made nor missions established. After these visits of the Franciscans it is very probable that the military expeditions
from New Mexico from time to time reached the Colorado River near Nevada, but we have no record of any expedition having actually crossed over into the territory in question. In 1825, however, Peter Skeen Ogden, an American trapper from the Columbia River in the North-West, accompanied by a few men started to explore the country to the south-east and reached the river now known as the Humboldt River, in the present State of Nevada, which was in 1825 a nameless country, lying between California (which was then an indefinite stretch of country north of southern California) and New Mexico, which included in 1825, Arizona and parts of Utah and Colorado. All the above territories, with unsettled boundaries on the north and east, belonged to Mexico until the treaty of Guadalupe-Hidalgo in 1848, and the Mexican War, when they were ceded to the United States. Long before these events, however, Utah and Nevada were settled by Americans and even provisional government established. After the explorations of Ogden and his companions, American adventurers, mostly trappers, went to Utah and Nevada, among whom was Kit Carson (then living in Taos, New Mexico), who in company with many others visited the country in 1831, 1833, 1844, 1845. In 1843-44, Fremont with Carson and Godey, conducted various explorations, largely hunting expeditions, into Nevada, and in 1844-45, Eliza Stevens, with a small party, among whom were two women, passed through Nevada on his journey from California. Fremont's expedition was the first caravan to traverse all this stretch of territory. After the Mexican cession of 1848 and the discovery of gold in California, Nevada was frequently traversed by the gold seekers and other western pioneers on their way to California. Shortly after the signing of the treaty of Guadalupe-Hidalgo, the Mormon settlements were formed in the valleys of Salt Lake, established the State of Deseret, a commonwealth which was to include what is now Utah, Nevada, Arizona, parts of Colorado, Wyoming, Oregon, and California. These Mormons found it profitable business to meet the travellers on their way to California and furnish them provisions. In these trading expeditions they advanced south and west from Salt Lake City, and in 1849, they founded the first settlement in what is now Nevada near the Carson River. In 1850, Congress organized the territories of Utah (what is now Utah and Nevada), New Mexico (what is now New Mexico and Arizona), and the State of California. The territory now comprising the State of Nevada was formed into the Territory of Nevada, under the political control, therefore, of the Mormons. Congress had fixed the western boundary of the Territory of Utah as the Sierra Nevada. The fact that the Sierra Nevada was continually kept in mind as the barrier between Utah and California, may have given an occasion to call the adjacent territory east of Nevada, Nevada, though the name does not come into prominence until 1860. By 1856, the mines were being strongly developed and American immigration was rapidly settling Carson County. A political conflict between the Mormons and the Gentiles for the control of the governmental affairs of Carson County (which included practically all of what is now Nevada) lasted for several years. In 1865 the citizens of this county, mostly gentiles, petitioned the Government of the United States to be annexed to California or be organized as a separate territory. The Government gave little heed to these demands, and for five years the political struggle raged fiercely between the two factions. Congress at last allowed the citizens of Nevada to organize a state government, and in 1861 Nevada County, Utah, was organized as the Territory of Nevada. James W. Nye was appointed as the first territorial governor. Three years later a constitutional convention was held, a State constitution adopted, and in 1864 Nevada was admitted as a State, and H. G. Blaisdel was elected the first governor. During the years 1865-85, the material developments in Nevada made rapid strides, though continually hampered by a heavy debt contracted since the early days of territorial legislatures.

**Government.**—Nevada was a part of the Territory of Utah from 1850 to 1861, a separate territory from 1861 to 1864, and organized as a State in 1864. The State constitution when first adopted secured various privileges to mining interests. While at first this seemed to be an incentive to the development of the rising mining industries, it soon proved to be unfair to the commonwealth at large. A long series of litigations, costly to both sides, ensued between the State and the mine owners, in view of the amendments to the constitution and the series of developments of the American War, when they were ceded to the United States. Long before these events, however, Utah and Nevada were settled by Americans and even provisional government established. After the explorations of Ogden and his companions, American adventurers, mostly trappers, went to Utah and Nevada, among whom was Kit Carson (then living in Taos, New Mexico), who in company with many others visited the country in 1831, 1833, 1844, 1845. In 1843-44, Fremont with Carson and Godey, conducted various explorations, largely hunting expeditions, into Nevada, and in 1844-45, Eliza Stevens, with a small party, among whom were two women, passed through Nevada on his journey from California. Fremont's expedition was the first caravan to traverse all this stretch of territory. After the Mexican cession of 1848 and the discovery of gold in California, Nevada was frequently traversed by the gold seekers and other western pioneers on their way to California. Shortly after the signing of the treaty of Guadalupe-Hidalgo, the Mormon settlements were formed in the valleys of Salt Lake, established the State of Deseret, a commonwealth which was to include what is now Utah, Nevada, Arizona, parts of Colorado, Wyoming, Oregon, and California. These Mormons found it profitable business to meet the travellers on their way to California and furnish them provisions. In these trading expeditions they advanced south and west from Salt Lake City, and in 1849, they founded the first settlement in what is now Nevada near the Carson River. In 1850, Congress organized the territories of Utah (what is now Utah and Nevada), New Mexico (what is now New Mexico and Arizona), and the State of California. The territory now comprising the State of Nevada was formed into the Territory of Nevada, under the political control, therefore, of the Mormons. Congress had fixed the western boundary of the Territory of Utah as the Sierra Nevada. The fact that the Sierra Nevada was continually kept in mind as the barrier between Utah and California, may have given an occasion to call the adjacent territory east of Nevada, Nevada, though the name does not come into prominence until 1860. By 1856, the mines were being strongly developed and American immigration was rapidly settling Carson County. A political conflict between the Mormons and the Gentiles for the control of the governmental affairs of Carson County (which included practically all of what is now Nevada) lasted for several years. In 1865 the citizens of this county, mostly gentiles, petitioned the Government of the United States to be annexed to California or be organized as a separate territory. The Government gave little heed to these demands, and for five years the political struggle raged fiercely between the two factions. Congress at last allowed the citizens of Nevada to organize a state government, and in 1861 Nevada County, Utah, was organized as the Territory of Nevada. James W. Nye was appointed as the first territorial governor. Three years later a constitutional convention was held, a State constitution adopted, and in 1864 Nevada was admitted as a State, and
to the West of the same meridian, belong ecclesiastically to the Diocese of Salt Lake, Province of San Francisco, while the territory west of the 117th meridian, with the exception of Austin and the country bordering on the Reese River, belong to the Diocese of Sacramento, of the same province. According to the Bureau of the Census of the United States (Bulletin No. 105, Religious Bodies, 1906) the Catholic population of Nevada was then 9,970, or 66% of the entire religious population of the State. The following are the principal denominations of the State and the church members in each: Catholics 9,970, or 66% of the total; Episcopalian 1,210, or 8%; Latter Day Saints 11,455, or 74% (Jews 3,306, or 4%); Presbyterians 520, or 3 1/4%; Baptists 316, or 2%.

Catholic Immigration.—Catholics have gone to Nevada at different times, along with the general influx of population into the Western States from the Middle States in 1845-75. Since the very beginning of the history of the State, the Catholic Church has been an important factor in the upbuilding of the commonwealth and the welfare and education of the people. The difficulties encountered were not easy to overcome in the midst of an unsettled, careless, and often lawless community in the years 1850-70. After the establishment of the first Catholic churches in the new country by Fathers Gallagher, Monteverde, and Murray, and the Monongahela Fathers in 1843, a Catholic mission was established in 1853 in Nevada. In 1864, the Nevada orphan asylum, two Catholic schools, St. Mary's school for girls and St. Vincent's school for boys, and St. Mary's hospital, all under the care of Sisters.

Religious Polity.—The State constitution guarantees to all individuals absolute freedom of worship and tolerance of religious sentiment. By statutory law, all amusements, business transactions, opening of saloons and gambling, are forbidden on Sundays, but the law has never been rigidly enforced. There is no law demanding a compulsory administration of a fixed form of oath, and a simple affirmation or negation suffices before the law. There are no statutory laws or regulations that prohibit blasphemy or profanity. It is customary to open the Legislature, the school year at the State University and many of the public schools with prayer, but there are no laws either for or against such practices. By statutory law, however, religious instruction of any kind is absolutely forbidden in the public schools, and the public school funds cannot be used for sectarian purposes. Sunday, New Year's Day, Washington's Birthday, Thanksgiving, and Christmas are designated by law as non-judicial days and are observed as legal holidays. There is no law recognizing religious holidays as such. No statutory law exists as regards the seal of confession, but it is presumed that there is the same inviolability. Church or public church property that is used only for church purposes is by law exempt from taxation, and malicious injury to churches or church property is by law punishable by fine or even imprisonment. The lawfully licensed clergy of all denominations is exempt from jury and military service. Marriages by any licensed minister, or a civil judge. With the consent of the parents marriage may be contracted by a man and woman of the ages of eighteen and sixteen respectively, and without the parents' consent only at the ages of twenty-one and eighteen or over respectively. The parties contracting marriage must not be near kin than second cousins, or cousins in the second blood. The divorce laws of the State are very liberal. By the State law, divorces may be granted for impotency, adultery, desertion, infamy, cruelty, drunkenness, or neglect to provide.

Banking, History of Nevada, Colorado and Wyoming (San Francisco, 1890); Biennial Reports of the Nevada Legislative Council, Public Instruction of Nevada (Carson City, 1900); Bureau of the Census of the United States: Bulletin No. 105, Religious Bodies (Washington, 1906); Cutten, Compiled Laws of the State of Nevada, 1881-1900 (Carson City, 1900); Catholic Directory (Milwaukee and New York, 1910); History of Nevada (Oakland, 1881); International Year Book (New York, 1900); Report of the United States Commissioner of Education (Washington, 1908, 1909); University of Nevada, Register for 1899-1900 (Carson City, 1910).

AURELIO M. ESPINOSA.

Neve, titular see of Arabia, suffragan of Bostra.

Two of its bishops are known: Petronius, who attended the Council of Ephesus in 431, and Jobius, who was present at that of Chalcedon in 451. Isaac, a third bishop, mentioned by Le Quen about 540 ("Oriens christ."); II, 864) was not a bishop of Neve but of Nineve, and lived at the end of the seventh century. Of "Echos d'Orient", IV, 145, Neve is noticed in the "Nothitia episcopatum" of Antioch in the sixth century ("Echos d'Orient", X, 145), and the city of Neve is referred to by George of Cyprus ("Descriptio orbis romanis", ed. Gelzer, 54) in the next century. The "Revue biblique" published (III, 625) some Greek inscriptions from the locality. The Museum of the Bibliothèque Nationale in the Palais de l'Institut, now occupies the site of this former see and the tower of the ancient Christian church is still visible. Neve must not be confounded with Mount Nebo, situated about 94 miles south of the town.

S. VAILLÉ.

Nève, Félix-Jean-Baptiste-Joseph, orientalist and philologist, b. at Ath, Belgium, 13 June, 1816; d. at Louvain, 23 May, 1889. His parents were devout Catholics. Graduated with distinction from the Catholic college of Lille, Nève completed a course of academic studies at the University of Louvain, obtaining in 1838 the Degree of Doctor of Philosophy and Letters. His pronounced taste for classical and oriental languages led him to pursue higher studies under the tuition of the most distinguished scholars of his age. Professors Lassen of Bonn, Tierisch of Munich, and Burnouf of Paris. He became acquainted with many oriental scholars, some of them already famous, others destined like himself to win fame in after years. Among these were Muir, Wilson, A. Weber, Kuhn, Max Müller, and the distinguished orientalist and Catholic priest, Dr. W. H. Goetze. In 1841 Nève was appointed to the chair of Greek and Latin Literature in the University of Louvain, and while teaching the classics, gave a course of studies in the Sanskrit language and literature. This work he kept up with unsparing energy and marked success for thirty-six years, at the same time making known the results of his studies in books and in articles contributed to the "Journal Asiatique", "Annales de Philosophie Chrétienne"). "Correspondant", and other periodicals. When in 1877 he was released from his arduous duties with the title of professor emeritus, his industry continued unabated, and for the next fifteen years a series of publications came from his pen. He was a member of the Asiatic Society of Paris, the Asiatic Society of London, the Royal Academy of Belgium, and was a Knight of the Order of Leopold.

To Nève belongs the honour of giving the first impulse to the cultivation of Sanskrit studies in Belgium. The most important of his numerous publications in this field are: "Études sur les hymnes du Rig-Veda, avec un choix d'hymnes traduits pour le premier fois en français" (Louvain, 1842); (2) his fine study of the ancient Brahmin cult of the Ribhanas, "Études sur les hymnes du Rig-Veda, avec un choix d'hymnes traduits pour le premier fois en français." (Louvain, 1842); (3) his fine study of the ancient Brahmin cult of the Ribhanas, "Étud...
addressés a ces divinités" (Paris, 1847); (3) his translation of the Indian drama based on the story of the epic hero Rama, "Le dénouement de l'histoire de Rama. Outtara-Rama-Charita, drame de Bhavabhouti, traduit du sanskrit" (Brussels, 1880); (4) his collection of essays on the Vedanta philosophy and the epic and dramatic poetry of India, published under the title "Époques littéraires de l'Inde" (Brussels, 1883).

Nève was also learned in the Armenian language and literature. A number of valuable translations and studies based on Armenian texts came from his pen. Among these may be mentioned: (1) the Armenian story of the Tatar invasion, "Exposé des guerres de Tamerlan et de Schah-Rokh dans l'Asie occidentale, d'après le chronique arménienne inédite de Thomas de Medzoph", published in "Mémoires de l'Académie Royale de Belgique" (1861); (2) the Armenian account of the exploits of Godfrey de Bouillon, "Les chevs belges de la première croisade d'après les historiens arméniens" (Brussels, 1859); (3) the valuable collection of studies on early Christian Armenian prayers and hymns entitled "L'Arménie chrétienne et sa littérature" (Louvain, 1888). Among the publication of Nève bearing on philosophy, a place of honour should be given to his account of the learned men who in the sixteenth and seventeenth centuries laboured for the upbuilding of the University of Louvain, "La renaissance des lettres et l'essor de l'érudition ancienne en Belgique" (Louvain, 1893); LEFEVRE, Née en Annuaire de l'Université de Louvain (1894); WILLEM, Née in suppl. of Journal de Bruxelles (Aug., 1892).

CHARLES F. AIKEN.

NEVERS, DIocese of (NIVERNEM), includes the Department of Nièvre, in France. Suppressed by the Concordat of 1801 and united to the See of Autun, it was re-established in 1823 as suffragan of Sens and took over a part of the former Diocese of Autun and a part of the former Diocese of Auxerre (see SENS). The "Gallia Christiana" mentions as first Bishop of Nevers St. Eligius, restored to health in the reign of Clovis by St. Severinus, Abbot of St. Maurice. According to Duchesne the first authentic bishop is Tauricanus, promoted by St. Odovaces in 517. A number of former bishops of Nevers are venerated as saints: St. Arey (Ariqius) 549–52; St. Agriculta (580–94); St. Jerome (800–10) who rebuilt in honour of the martyrs Quiricus and Julitta, the cathedral until then dedicated to Sts. Gervaisius and Protasius. It is possible that in the seventh century three other saints occupied the See of Nevers: St. Dit (Dedatus), the same person who died a hermit in the Vosges; St. Nectarius and St. Itier (Itherius). The following bishops of Nevers were notable: the future cardinal Pierre I Bertrandi (1320–22) who, in 1329–30, defended ecclesiastical immunities against the barons in the celebrated conferences of Paris and Vincennes presided over by Philip VI; Charles de Bourbon (1540–47) subsequently cardinal and whom the Leaguers wished to make King of France under the name of Charles X; Spifame (1548–58) who became a Calvinist in 1559, and was afterwards accused of forgery and beheaded at Geneva in 1556; the polemist Sorbin de Ste-Foi (1578–1600) a voluminous writer. Among the saints of this diocese must be mentioned: St. Ambrose, priest; Pérux and Pérélion, martyrs between 272 and 303; St. Paroże (Patrinus), Abbot of Nevers in the sixth century; the hermit St. Franchy (Francoacius); the priest St. Vincent of Magny in the ninth century; Blessed Nicholas Apollaine, canon of the collegiate church of Prémery (fifteenth century) whose cassock Louis XI claimed as a relic. Claude Seuchet, constitutional Bishop of Calvados during the Revolution, was a native of the diocese.

In 1168, William IV, Count of Nevers, willed to the Bishop of Bethlehem in Palestine the small town of Pantenon near Clamecy, also the hospital at Clamecy founded by his father William III in 1147. In 1223, owing to the incursions of the Musulmans in Palestine, the Bishop of Bethlehem settled at Clamecy, and received jurisdiction over the hospital and the faubourg of Pantenon; his successors were chosen by the counts, later by the dukes of Nevers, with the approval of the pope and the king. In 1413 Charles VI tried to obtain for the titular bishops of Bethlehem the privileges enjoyed by the other bishops of the realm, but the French clergy were opposed to this and the titular of Bethlehem was always considered a bishop in partibus infidelium. The assembly of the clergy of France in 1635 granted the bishops of Bethlehem an annual pension. Christopher Aubry, founder of the Missionary Priests of the Congregation of the Blessed Sacrament and celebrated for his sermons to the galleys-slaves of Marseilles was Bishop of Bethlehem 1651–63. The Abbey of La Charité-sur-Loire, founded in 1056, and known as the "eldest daughter" of Cluny, was inaugurated in 1106 by Pascal II; the celebrated Suger, then a simple cleric, left an account of the ceremony. The Benedictine Abbey of Corbigny, founded under Charlemagne was occupied by the Huguenots in 1563, as a basis of operations. Bernadette Soubrère (see LORDES, NOTRE-DAME DE) died in the Visitation Convent of Nevers, 12 December, 1875. The chief places of pilgrimage in the diocese are: Notre Dame du Port, in the district of d'Heuille, dating from the fourteenth century; Notre Dame de Fauboulvin at Corancy, dating from 1590; Notre Dame du Morvan at Dun-sur-Grand Ry, dating from 1876. Prior to the enforcement of the law of 1901, the Diocese of Nevers counted Marists, Oblates of Mary Immaculate, Oratorians, and several orders of teaching brothers. A special section for women which originated in the diocese must be mentioned: the Ursuline nuns, a teaching order founded in 1622 at Nevers by the Duke of Gonzaga and the Nevers aldermen; the Hospitalers, founded in 1639 at La Charité-sur-Loire by Sister Méard-Varet; the great congregation of Sisters of Charity and Christian Instruction, founded in 1850, mother-house at Nevers. At the beginning of the
twenty-first century the religious congregations of the diocese had charge of 22 day nurseries, 5 orphanages for girls, 2 sewing rooms, 18 hospitals or asylums, 1 large retreat house, and 1 large palace. The abbey, 2 religious houses for the care of the sick in their own homes. In 1908 the Diocese of Nevers had 313,972 inhabitants, 95 parishes, and 272 successor parishes.

Gilles Christian, XII, sous (1770), 525-65; Instrumentum, 297-358; Duchesne, Fasces Episcopi, II, 475; Filoux, France pontificale, Nevers (Paris, 1866); Poumberneu, Histoire des comptes et des ducs de Nevers (Paris, 1897); de la Peltrie, Monument aux morts d'Abbaye (Paris, 1852); CHNOYER, Hagiologie Nivernoise (Nevers, 1858); Obsc. Monographie de la cathedrale de Nevers, suivie de l'histoire des évêques de Nevers (Paris, 1854).

GEORGE GOYAU.

Neville, EDMUND (alias Sales), a Jesuit, b. at Hopeut, Lancashire, 1605; d. in England, 18 July, 1647. Educated at St. Omer, he entered the English College, Rome, 20 June, 1621, where he distinguished himself in philosophy. He joined the Jesuits, 24 May, 1626; was stationed at Ghent, 1636, and sent on the London mission, 1637. He was professed, 3 August, 1640; served in the Oxford district, 1642, and in South Wales, 1645. Being a suspected priest he was seized under the Commonwealth but succeeded in escaping to the "Palm of Charity and Fortitude" (St. Omer, 1630), an account of the Japanese persecutions; a "Life of St. Augustine" and "Second Thoughts" both unprinted. (2) His uncle EDMUND NEVILLE (alias Elijah NELSON), probably the son of Sir John Neville of Liversedge, b. in Yorkshire about 1563; d. 1643, his death hastened by the treatment at the hands of the Roundhead agent. Ordained for the English mission, 12 April, 1608, he entered the Society, 1609. He is considered to have been the de jure seventh Earl of Northumberland. (3) Many members of the Scarsbrick family of Scarsbrick Hall, near Ormskirk, became Jesuits during the penal times and assumed the alias "Neville". Among them were Edward SCARBRICK (Neville), b. at Scarsbrick, Lancashire, 27 April, 1616; d. at St. Omer, 10 July, 1675. He entered the Society at Watten, 7 September, 1660, and was stationed at Liége, 1671, and St. Omer, 1675. Sent to England, he was one of Oate's intended victims. James II appointed him royal chaplain. He was instructor of the Jesuit tertiates at the Warren, 1662. He returned to Lancashire where he died 19 Feb., 1670-9. He wrote "Life of Lady Warner" (St. Omer, 1691); "Catholic Loyalty" (London, 1688); "Rules and Instructions for the Sodality of the Immaculate Conception", etc.

(4) EDWARD NEVILLE (Scarbrick), b. 1663; d. 15 November, 1735. He became a Jesuit, 1682; served on the London mission, 1701, and after 1729 at Bushey Hall, Waltham, Essex. (5) EDWARD NEVILLE (Scarbrick), b. 1698; d. 7 July, 1778. He entered the Society, 7 September, 1728. Superior of the Derbyshire mission in 1764, he laboured also in Lancashire. (6) SIR EDWARD NEVILLE, son of Baron Bergavenny, a courtier of Henry VIII, took part in the war in France, and was made the king's standard bearer, 1531. He married Elizabeth, daughter of Lord Windsor. Arrested 3 November, 1538, on the charge of conspiracy with the brother of Cardinal Pole, he was sent to the Tower, tried at Westminster, and beheaded for the faith, 5 December.

A. A. MACERLEAN.

New Abbey.—The Abbey of Sweetheart, named New Abbey Pow, or New Abbey, in order to distinguish it from Dundrennan in the same county, is situated near the River Pow, in the parish of Loch Ken-droch, Kirkcudbrightshire, Diocese of Galloway, about eight miles from the town of Dumfries, Scot-

land. The title of Abbey of Sweetheart was given by the foundress of the abbey, Lady Devorgilla, daughter of Alwyn, Lord of Galloway, in 1204. The monastery in order to keep in it a casket of ivory and silver, in which was emblemated the heart of her husband, King John de Baliol. Sweetheart is the last in order of the Cistercian abbeys in Scotland. It was begun in 1275, being a daughter of Dundrennan, of the lineage of Clairvaux. Henry, the first abbot, built a magnificent church therein, in English style; it measured 203 feet in length, with a central tower 22 feet high; it had a nave with aisles, transepts with chapels on their eastern sides, and a choir without aisles. The monastic buildings were in proportion, and were surrounded with a massive granite enclosing wall, from eight to ten feet high, large portions of which still remain. "The history of Sweetheart, except that the Maxwells, lords of Kinkoon, whose castle was near by, and who were descendants of the Maxwell kings, were great benefactors of the place. The most celebrated superior of the abbey was Abbot Gilbert Broun, the last of the line. He continued to uphold the Catholic faith long after the Reformation, being the eloquent opponent of Protestantism. He was denounced several times on the charge of enticing to "papistry" from 1578 to 1605; he was seized by his enemies in 1605 in spite of the resistance of the whole countryside, taken prisoner, and conveyed to Edinburgh, whence he was banished. He then became rector of Borthwick College, Paris, where he died in the age of eighty-four. The possessions of Sweetheart Abbey passed into the hands of Sir John Spottiswoode in 1624, and with them the title of Lord of New Abbey. The monastery soon became a mere quarry for those who wanted ready-cut material for building. The chapter, with the remains of the library over it, and a part of the church were inclosed in 1527. HENRIQUEZ, Menologium Cisterciense (Antwerp, 1630); JONGERUS, Notitia Abbatiarum Ord. Cistercensium (Cologne, 1640); LIEUWES, Origines Cisterciensium Tomus I (Venetiis, 1677); BARRETT, The Scottish Cistercians (Edinburgh); REGIA, S. M. de Newbottle: A Statistical Account of Scotland.

EDMUND M. OBRECHT.
olics at Mount Hope, Macopin, Basking Ridge, Tren-
ton, Ringwood, and other places. The settlement at 
Macopin (now Echo Lake) was made by some German
Catholics sometime before the Revolution and their
descendants make up the parish to-day.

During the Revolution Father Francis' army brought
many Catholics through the State. In the camp at
Morristown the Spanish agent Don Juan de Miralles,
died 28 April, 1780, and his funeral was conducted by
Father Seraphin Bandol, chaplain of the French Minis-
ter, who came specially from Philadelphia to adminis-
ter the last sacraments to the dying Spaniard. Wash-
ington and the other officers of the army attended the
ceremony. When in the following May the remains
were removed to Philadelphia, Congress attended the
Requiem Mass in St. Mary's church. It was at Mor-
rrstown in 1780, that the first official recognition of St.
Patrick's Day is to be found in Washington's order
book, still preserved there at his headquarters. Mar-
bois, writing from Philadelphia, 25 March, 1785, gives
the number of Catholics in New York and New Jersey
as 1700; more than half of these were probably in
New Jersey. There were many French refugees from
the West Indies in Princeton, Elizabeth, and its vicin-
ity, and Fathers Vianney, Tissotarr, and Malou used
to minister to them from St. Peter's, New York, in the
early part of the century. Filled churches, and conser-
vatories, and other industries started in various sec-
tions of the State, brought Catholic immigrants. The
Auguistinian Missionary, Father Philip Larisy, vis-
ited Paterson about 1821, and the first parish in the
State, St. Francis, Trenton, was established in 1814.
Newark's first church, St. John's, was opened in 1823,
the second in 1828. In 1830, Bishop Matthew H. Mull
er erected the first church in Paterson. In New Bruns-
wick the first Mass was said by Rev. Dr. Power of New
York in 1825, and the first church was opened by Rev.
Joseph A. Schneller, 19 December, 1831. In Jersey
City, originally called Paulus Hook, Mass was first
said in 1830, and the first church opened by the Rever-
end Robert Handley, Bishop Muller's successor in 1833,
was the wooden church of the German Congregati-
on of German Catholics before mentioned had a
church as early as 1829. Thus during the first
half of the nineteenth century there was a slow but
steady growth of the Faith all over the State, and as it
was receiving a substantial share of the great inflow
of Catholic immigrants, the Holy See deemed the time
opportunity to separate it from the Diocese of New York,
and the See of Newark was erected. The Reverend
James Roosevelt Bayley (q. v.), then secretary to
Bishop Hughes of New York, was chosen the first
Bishop of Newark, and consecrated 30 October, 1853.
There were then between fifty and sixty thousand
Catholics in his diocese, for the most part Irish and
German.

In organizing the new diocese Bishop Bayley found
he could count on only twenty-five priests. There
were no diocesan institutions except small orphanages,
and the people were poor and of little social influence.
In the interest of Catholic education, one of his chief
concerns, he founded the Madison Congregation of
the Sisters of Charity (q. v.), and to supply the lack of
funds for the work of new churches, he obtained
assistance from the Association of the Propagation
of the Faith of Lyons, France, and the Leopoldine
Society of Vienna. Seton Hall College was opened
by him in September, 1866, and everywhere the dio-
cesan responded to the energy of his zeal and practical
effort. In the year 1867, 97 priests to 63, and a monastery of Benedictines and
another of Passionists was established. The Sisters
of Charity became a community of 87 members, con-
ducting 17 different establishments. Other notable
additions were 2 convents of Benedictine nuns, 2 of
German Sisters of Notre Dame; 2 of Sisters of the
Loreto, and 1 of St. Francis Xavier's. The Academy
for young ladies, a boarding school for boys, and par-
ish schools attached to most of the churches, while the
old wooden chapels had been replaced by buildings of
brick and stone. "All this has been done," the bishop
wrote, "in the midst of a population of emigrants,
comparatively poor, without incurring a great debt!".
In twelve years the Association of the Propagation
of the Faith gave the diocese $26,600. This progress,
too, was made in spite of much local narrowness and
bigotry, the culmination of which on 5 November,
1854, resulted in a riot during which an anti-Catholic
mob desecrated and sacked the little German church
of St. Mary in Newark served by the Benedictine
Father Nicholas Balleis. In this disturbance a Cath-
olic was killed and several others wounded.

Bishop Bayley was promoted to the Archdiocese
of Baltimore, 30 July, 1872, and his successor as
second bishop of the see was the Right Reverend
Michael Augustine Corrigan (q. v.) consecrated 4
May, 1873. He successfully overcame a number of
problems, problems, which demanded the attention of
a House of the Good Shepherd for girls 24 May, 1875,
in Newark, a protectory for boys about the same time
at Denville, and in June, 1880, in Newark a community
of Dominican Nuns of the Perpetual Adoration, from
Ouilly, France. On 8 and 9 May, 1878, an import-
ant synod was held, and in July, 1881, the Diocese of
Newark, which clove the portion of the Newark
territory in the southern section, was estab-
lished. On 1 October, 1880, Bishop Corrigan was
made titular Archbishop of Petra and coadjutor of
New York, and to succeed him as third Bishop of
Newark, the Rev. Dr. Winand M. Wigger, then pastor
at Madison, was chosen and consecrated 18 October
1881. Bishop Wigger was born of German parents in
New York City, 9 December, 1841, and made his
classical studies at St. Francis Xavier's College, New
York. His theological course was followed at Seton
Hall and at the college of Brignole-Sale, Genoa, Italy,
where he was ordained priest 10 June, 1865. Follow-
ing the example of his predecessors Bishop Wigger
organized the diocesan schools and undertook the chief solicitude. In 1883 he removed the Catholic
Protectory to Arlington and established the Sacred
Heart Union to aid in its maintenance. The Fifth
Diocesan Synod was held by him 17 November, 1886,
at which strict regulations were enacted in regard to
funerals and the attendance at parochial and public
schools. On 11 June, 1899, he laid the corner stone
of a new cathedral church at Newark, and soon after
was forced to go abroad in search of rest and health.
On his return he took up his duties with zeal, but died
of pneumonia, 5 January, 1901. The record of his
administration shows a character entirely disinterested
and unselfish united to a poverty truly apostolic.
Bishop Edward V. O'Hare, the Vicar-General and
successor of J. O'Hara, was elected the choice of
the Holy See as fourth bishop, and was consecrated
25 July, 1901. Born at Newark, 11 June, 1855, he
made his college course at Seton Hall. In 1873 he
was sent to the American College at Rome where he
spent four years. After another year at Louvain he was
ordained priest 22 December, 1877, and on his return
to Newark, was appointed rector of Seton Hall College
where he became Director of the Seminary in which
he remained for the following eighteen years. He was
then named vicar-general and on 30 October, 1895, rector of St. Joseph's. Early in his adminis-
tration he adopted measures for the completion of
the new cathedral of the Sacred Heart, begun by Bishop
Wigger, making with the latter the jubilee of the diocese.
At this it was shown that in
the brief space of fifty years, there had been an increase of tenfold in the number of churches and ninefold in the number of priests, with 10,000 Catholic children attending 167 Catholic schools and institutions, and 396 priests attending the 416 churches and chapels throughout the State. Religious communities now represented in the diocese are: men: the Jesuits, Passionists, Benedictines, Carmelites, Dominicans, Franciscans, Salesians, Pious Society of the Missions, the Christian Brothers, Alveriors, and Xaverians; women: Sisters of Charity (Newark), Sisters of St. Benedict, Sisters of Christian Charity, Sisters of St. Francis, Sisters of Charity (Gray Nuns), Dominican Sisters of the Perpetual Rosary, Sisters of St. Dominic, Sisters of St. Francis, Sisters of the Poor of St. Francis, Sisters of the Good Shepherd, Sisters of St. Joseph, Daughters of St. Paul, Sisters of Notre Dame, Sisters of St. Joseph of Peace, Little Sisters of the Poor, Felician Sisters, Sisters of the Sorrowful Mother, Pallotine Sisters of Charity, Missionary Sisters of the Sacred Heart, Daughters of Our Lady of Help, Franciscan Sisters of the Immaculate Conception, Baptistine Sisters.

Societies (1910): Priests, 368 (regulars, 88); churches with resident priests, 192; missions with churches, 36; stations, 10; chapels, 82; seminary, 1, students, 42; students in Europe, 7; seminaries of religious, 3, students, 31; colleges and academies for boys, 6; academies for girls, 12; parish schools, 116, pupils, 52,600; orphan asylums, 12, inmates, 2,400; industrial and charitable institutions, 1, boys, 1, inmates, 180; young people under Catholic care, 56,000; hospitals, 10; houses for aged poor, 2; other charitable institutions, 8; Catholic population, 385,000.

New Brunswick. See CHATHAM, Diocese of; SAINT JOHN, Diocese of.

New Caledonia, Vicariate Apostolic of.—New Caledonia, one of the largest islands of Oceania, lies about 900 miles east of Queensland, Australia, between 20° 10' and 22° 16' S. lat., and between 164° and 167° E. long. It is about 250 miles long by 30 broad, and has an area of 7650 square miles. It is a French colony, its principal dependencies being the Isle of Pines and Loyalty Islands (including Lifou, Mare, and Uvea). Its population, together with that of these dependencies, is estimated at 33,000 inhabitants (15,000 free; 11,100 of convict origin); 29,000 of the inhabitants of New Caledonia are deeply indented, and the island is almost entirely surrounded by an immense madreporic reef, which now retires to some distance from and now approaches close to the shore, but regularly leaves a broad channel of water between itself and the island. This species of canal, in which the sea is always calm, greatly facilitates communication with the various settlements on the coast. The island is very mountainous, and about one half of its area is thus uncultivable. The so-called central chain, which divides the island into an eastern and a western section, attains the height of over 5500 feet. The hills which fringe the coast, and at times rise sheer from the water, do not in general exceed 1000 feet. The bays, however, between these lesser ranges stretch good-sized plains of great fertility, admirably watered by numerous streams which the natives skillfully utilize for purposes of irrigation. The streams of the same basin usually unite to form one river which is navigable for vessels of light draught for about a dozen miles from the coast. Unlike most intertropical regions, the island has no well-defined wet season, some years being very rainy and others characterized by prolonged droughts. The scenery is wonderfully beautiful and for salubrity of climate is almost unrivaled. The temperature rarely reaches the extremes of 96° by day during the hot season (December to March) and 36° by night during the cold months. May and July are the intermediate months. The population has divided the island into three sections: the convict settlement, that reserved exclusively for the natives, and the remainder which is leased to colonists by the French Government. The chief agricultural products are coffee, maize, sugar, grapes, and pineapples, while efforts are being made at present to foster the cultivation of wheat. The island yields also valuable deposits of nickel, cobalt, chrome, and copper ores, all of which are being exploited chiefly by Australian miners. Discovered by Captain Cook in 1774, the island was occupied by the French in 1853, and on 2 Sept. 1863, a decree was passed authorizing the establishment of a convict settlement there. In May, 1864, the first convicts arrived, and between that date and 1896, an aggregate of about 22,000 were transported thither. As no convicts have been sent since 1896, the convict element of the population is rapidly diminishing. Nouméa is the chief town and the seat of government. It has an excellent harbour for the improvement of which a large sum of state money has been expended. The colony is administered by a governor, assisted by a council consisting of various officials and two notables nominated by the governor. There is also an elective general council.
The ethnology of the natives, whose number is gradually decreasing, is somewhat uncertain, but they probably spring from a mixed Melanesian and Western Polynesian stock. Their height is above that of the average South Sea Islander; they are as a rule well built and quite erect; their colour varies from a very dark brown to a light complexion, and their hair is coarse and woolly. Cannibalism, which was generally practised, and occurred at all events in the south, appears in consequence of the strict measures taken by the administration. Although the men of the same tribe live together in the greatest harmony (such being in fact a leading dictate of their religious belief) intertribal wars have been always frequent, and have been in the past almost the sole occasion of cannibalism. The mode of death is usually as exciting as the most intelligible of their numerous and in very many cases peculiar taboos. The native religion is so closely intertwined with superstitions that distinction is rather difficult. The natives undoubtedly have a firm belief in a future life; the dead are supposed to live under the great mountain Mo, where the good are welcomed after death and where the general conditions bear some striking analogies to the Harmonic Hades. Ancestral worship is universally practised among the pagan natives, and there is a special class whose office it is to feed the deceased kinsmen, partly by consuming the food as their proxies and partly by exposing it for them in a taboo hut. The natives live together accordance to the tribes under the authority of a chief, who unless under a taboo, is an extensive authority in purely native affairs. The food of the natives consists of yams, taros, sugar-cane, dried fish, and shell-fish. At various places on the island are held markets, at which the natives of the coast and of the mountains meet to exchange produce, dancing forming a regular feature of the transaction.

New Caledonia was separated from Central Oceania and erected into a distinct vicariate Apostolic by decree of 2 July and Brieaf of 13 July, 1847. Besides the main island, the vicariate includes the Isle of Pines and the Belep and Loyalty Islands. The mission is entrusted to the Marist Fathers, who, besides ministering to the French settlers and convicts, have devoted themselves sedulously and with the greatest success to the conversion of the natives. According to the latest statistics the vicariate includes: 35,000 Catholics (11,500 natives); 48 missionary priests and 40 brothers of the Marist Congregation; 126 sisters; 61 catechists; 68 churches and several chapels; 48 schools with 800 pupils; 15 institutions for 150 boarders, and present vice Apostolic, who is the fourth to fill the office, is Mgr. Chaurion, titular Bishop of Caropoli.

THOMAS KENNEDY.

Newcastle. See HEXHAM AND NEWCASTLE, DioceSE OF.

Newfoundland, a British colony of North America (area 42,734 square miles), bounded on the north by the Strait of Belle Isle, which separates it from its dependency Labrador (area 120,000 square miles), on the east and south by the Atlantic Ocean, and on the west by the Gulf of St. Lawrence, lies between 46° 35' and 51° 40' lat. N., and 52° 35' and 59° 25' long. W. It was the first portion of North America discovered by European voyagers. The Cabots sailed from Bristol in 1497, and on 24 June of that year, the festival of St. John the Baptist, they landed in the harbour to which they gave the name of St. John's, which is now the present capital. The Cabots, like all the early navigators, had in view not only the discovery of new lands, and the increase of the power and wealth and territory of the mother country, but also the spread of the Gospel and the conversion of the heathens to the Christian Faith. Hence they brought with them priests and missionaries. Those who accompanied Cabot were Augustinians or "black friars". We may be sure that Mass was celebrated on these shores in 1497.

In the year 1500 the Portuguese under Gaspar de Cortereal took possession of the country and founded the settlement and Church of Placentia. In 1534 the French voyager, Jacques Cartier, visited the country, and explored the Gulf of St. Lawrence. He was followed by chaplains with him who celebrated Mass at Catalina in Newfoundland, and Brest, or Old Fort, on Labrador. In 1622 Lord Baltimore founded his colony of Ferryland. He brought out three Jesuit Fathers with him, and had Mass celebrated regularly, "and all other ceremonies of the Church of Rome were used in a manner as free and liberal as in Italy." In 1660 a complaint made against him to the Board of Trade by the Protestant clergyman, Mr. Stouarton. In 1650 the French founded a church at Placentia on the site of the one abandoned by the Portuguese. But none of these attempts succeeded. The real foundation of the Catholic Church in Newfoundland is due to priests from Ireland, who came out towards the close of the eighteenth century.

The population of the country by the last census, taken in 1901, was 217,037. Of these the Catholics number 75,657, members of the Church of England 71,470, Methodists 60,700. The remainder belong to different denominations, viz. Presbyterians, Congregationalists, Baptists, and others.

All denominations are equally recognized by the law, and there is no Established Church. In the early history of the country the Catholics were looked on as a proscribed class by the governors of the time, who were generally commanders of British war-ships. Priests were hunted and persecuted, people who harboured them were fined. Mass was not to be celebrated in their houses, they were imprisoned, and hanged, and their houses either burned or pulled down. In one unique case a house where Mass had been celebrated was towed into the sea and sunk. These acts were undoubtedly illegal, as there was no law in the statutes of the country penalizing the exercise of the Catholic Religion, but the penal laws of Ireland were supposed to be applicable to Newfoundland. However, the principle would not work both ways, and when Catholic Emancipation was granted to Ireland these same interpreters of the law held that the privileges of Emancipation did not apply to Newfoundland. During the whole course of his episcopate Bishop Fleming fought against the laws, and succeeded in obtaining full freedom for the Catholics.

In educational matters Catholics also enjoy every freedom. The denominational system is established by law. A sum is granted by Government amounting to about $1.13 per capita of the population, or $5.25 per pupil actually attending school. It is true this amount is small as compared with some of the Canadien Provinces, or States of the Union, but a large amount is paid by private individuals to Catholic colleges and convents which is not included in the above figures. The results compare most favorably with those of other countries. About thirty years ago a branch of the Irish Christian Brothers was introduced, an immediate impulsion was given to education throughout the island, and it is now at a very high standard. The Brothers have charge of two very large schools in St. John's—St. Patrick's and Holy Cross schools. There are ten class-rooms, containing about a thousand boys. The Brothers also have charge of the college in which some of the best boys in the island are educated. Here are trained the pupils teachers who will have charge of the public schools throughout the island. The college is affiliated to the Oxford Examination Board and the London University Board. A local council of higher education (non-denominational) looks at the local Examinations.
The Rhodes bequest gives three places for Newfoundland in perpetuity. They are all filled this year for the first time, and of the three occupant two are pupils of the College of St. Bonaventure. There are thirteen convents of Sisters of the Presentation Order in the country (9 in St. John's Diocese, 3 in Harbor Grace, and 1 in St. George's), and eight convents of the Sisters of Mercy (5 in St. John's, 2 in Harbor Grace, and 1 in St. George's). The Presentation order have free schools, the nuns being paid out of the Government grant. The Sisters of Mercy have, besides free schools, a paying school and a boarding academy. The total number of children attending school is over 13,000. There are also two orphan asylums, or industrial schools, one under the Sisters of Mercy for girls, and one under the Sisters of the Bonaventure, both containing about 200 orphans, or one for every 375 of the Catholic population, which, considering that this is a maritime and fishing colony, and the losses at sea are abnormal, is not an excessive number.

The Catholic religion is not only holding its own, but advancing rapidly in Newfoundland. The most harmonious relations exist between the different denominations, which are only interrupted on occasions of public excitement, when persons aspiring to political position and honours do not scruple to stir up feelings of religious bigotry and theological hatred among the more simple-minded of the people. A great future is opening up for religious denominations. Large industries are being developed, and every year brings some of the new developments being principally in the Dioceses of Harbor Grace and St. George's.

M. F. Howley.

New Granada. See Colombia, Republic of.

New Guinea, the second largest island and one of the least known countries of the world, lies immediately north of Australia, extending from the equator to about 12° S. lat. and from 130° 50' to 154° 30' E. long. It is 1490 miles in length, its maximum breadth is about 430 miles, and its total area some 310,000 sq. miles. Its population is placed at the purely conjectural figure of 875,000. An examination of the report of D'Abreu, who was long credited with the discovery of New Guinea (1511), shows that he only reached the eastern coast of Further India (Cambodia); whether José de Meneses (1520), Saavedra (1536), and Grijalva (1537) reached New Guinea is still uncertain. But there can be no doubt in the case of Jingo Ortiz de Retas (1545), who landed at the mouth of the St. Augustine (near modern Pointe Carpentier). A Spanish settlement in the country in the name of the King of Spain. It was he who gave the island the name of Nueva Guinea. On Mercator's map of 1569 New Guinea and numerous places and islands on its northern coast are indicated. Luis de Torres (1606), whose name is commemorated in the strait separating New Guinea from Australia, was the first to circumnavigate the island. The voyages of Tasman (1643-44), Vuiik (1653), and Kayto (1674) added greatly to our knowledge of the southern and eastern coasts, and in the eighteenth century, thanks to the efforts of Dutch, English, and French explorers (Schouten, Lemaire, Capt. Cook, De Bougainville, etc.), the picture of the island began to assume a more vivid reality.

However, Captain William Dampier's map of the north-western portion of the island, while exhibiting a great advance beyond the preceding, shows how erroneous still were the views concerning the exact contour of the island. The rapid growth of European interest in Australia in the nineteenth century resulted in 1853 in the French voyages of exploration multiplied, although, owing to the warlike and cannibal character of the natives, landings were still few. It was only during the last decades of the century that active exploration of the island began. Numerous successful expeditions (Maco-
Jubilee River (navigable by whale boat 120 miles) and the Fly (navigable by whale boat 600 miles), both of which discharge into the Gulf of Papua. No important river is known to exist in the western section of the island, which is of course still a terra incognita.

The climate of New Guinea is characterized in general by its great heat and humidity, and in the low-lying districts fever abounds. Although, generally speaking, the temperature seldom rises above 104° in the most exposed portion, it rarely falls below 88°. The climate is, however, tempered by the regular winds from the south-east and north-east, and at an altitude of 3000 feet above sea level is pleasantly cool. The annual rainfall varies from 30 to 130 inches along the coasts, rain falling more abundantly in the north and north-east than along the southern seaboard. The so-called climate is aggravated by the numerous mosquitoes and the leeches, which infest themselves through the most closely woven clothing and whose bite often occasions burning ulcers.

To the great uniformity seen in the geographical build of the island corresponds a general ethnical uniformity among its inhabitants (see, however, "Journal of the Ethnological Society of Great Britain and Ireland", XXIX, London, 1909, pp. 246 sqq., 314 sqq.). In the case of a country so vast and still so little explored, we must confine ourselves to indicating the general characteristics of the inhabitants, passing over the local differences which manifest themselves in the native customs and mode of life. The Papuans, as their name indicates, are dark-skinned people of southeast Asia, closely related to the Malay: they are taller than the Malay, with dark brown or black in colour, have a smooth skin, narrow forehead, dark eyes, dolichocephalous skull, and prominent nose. Their black, naturally frizzled hair is usually artistically arranged. They wear a lavish number of bracelets (mostly of stone), with unguent obsidian and ostrich feathers; they are employed by certain tribes as an outward token of mourning. Necklaces are also generally worn: they are usually made of rings of vegetable fibre or, in the case of the wealthier natives, of wild boar's teeth. The lower limbs are less usually adorned, except on festive occasions. Agriculture is as yet little developed; the natives depend for their sustenance mainly on their hunting (wild boar, opossum, crocodile, wild fowl), fishing, and the wild sago, which grows in the greatest abundance in the valleys and marshy lands and which, according to the missionaries, largely responsible for the unprogressive state of the natives.

A comparatively high sense of justice exists among the native tribes, each community possessing its strictly defined hunting and fishing grounds and sago fields. Many of the tribes are celebrated for their skill in boat-building. Commerce is carried on between the maritime and inland tribes. The trading is not confined to exchange: wild boar's tusks and in certain districts bracelets and stone hatchets are accepted in payment. Of the greatest value and universally recognized as a medium of exchange are the small glass pins and jewelry. These are generally believed to be the product of the old Indian glassworkers, and the natives instantly detect modern productions, which are little valued. While cannibalism still exists on the island, the members of the same tribe or community live together in the greatest peace. In general the strictest endogamy is practised, and there are certain well-defined degrees of relationship within which marriage is forbidden. The wife, for whom payment is almost always made to her relatives, attends not only the birth of her child, but also her death, and the custom is almost always practised: all observers testify to the kind manner in which wives are treated, and to the modesty and high moral character of the Papuan women in general. Though with no definite views concerning a deity, the Papuan believes in another self or soul, which deserted the body temporarily during sleep and finally after death. Disease and death never result from natural causes: they are always the result of evil spirits, acting either directly or through a poisoner. Against these evil influences talismans (mostly pieces of carved wood, crocodile teeth, etc.) are carried. The native weapons are the bow and arrow, knives of bamboo, stone clubs, spears, and hardwood shields and clubs.

New Guinea is divided politically into the Dutch, German, and English protectorates, the last two being known officially as Kaiser-Wilhelmland and the Territory of Papua. In 1884 Great Britain proclaimed its protectorate over the south-eastern portion of the island, and in 1885, after Germany had annexed the north-eastern section, the delimitation of the boundaries of the two countries was effected by the Anglo-German treaty of that year, Holland retaining the portion of the island west of 141° E. long. The boundary line between the German and British sections runs from 5° S. lat. at the 141st meridian E. to 8° on the coast. The Anglo-Dutch Treaty of May, 1885, opened the island to the Dutch. The black population of the British territory is 90,540 sq. miles; its population about 500,000 natives and 1250 whites. Cocos-nuts, rubber, sisal hemp, Mirva fibre, coffee, tea, and tobacco are cultivated. The forests contain valuable timbers (sandalwood, etc.); gold is found in the Louisiade Archipelago, on the mainland, and on Woodlark Island. The chief rivers are Bara, Barai, and Sarmesi, Daru, and Bonagai. The German territory has an area of about 70,000 sq. miles, and a population of 110,000 (?) natives and 391 foreigners (184 white). Its development is entrusted to the German New Guinea Company, but its administration is undertaken by the Imperial Government. The principal settlements are Bismarck. The principal vegetable produce is sago,橡胶, and sago palms, bamboo, ebony, and other woods abound: coco-palms and casouchou are grown on the small area yet under cultivation. Gold has been recently discovered on the Bismarck Mountains. Dutch New Guinea has an area of 150,000 sq. miles; its population is estimated purely conjecturally at 292,000. Although it is considered by some authorities the richest part of the island, very little attempt has been made to develop it. Extensive coal-fields exist near the north-western coast. The principal settlement is Merauke. The fauna of New Guinea is very poor in mammals; only about seventy-five species are known, the most important being the wild cat, mouse, bat, seal, and dog. The avifauna is, on the other hand, both numerous and various, and includes among the five hundred known species many (such as the celebrated bird of paradise) which are peculiar to New Guinea and some other islands in this region.

Mission History.—On 1 July, 1885, the first Catholic priest, Father Verjus, set foot on Papuan soil. He devoted himself immediately to the care of the sick and the study of the native language, but was soon compelled to withdraw in consequence of the opposition of the Protestant missionaries and the pressure they brought to bear on the British authorities. A change of governors allowed the return of the Catholic missionaries, and on 1 May, 1889, British New Guinea was erected into a vicariate Apostolic and Father Navarre appointed vicar Apostolic. He introduced the Sisters of the Sacred Heart of Issoudun, who rendered valuable assistance by instructing the native girls, taking charge of the churches and chapels, and even founding stations in the interior. On 12 April, 1893, the pms were consecrated by Bishop Léonard of Limyra and coadjutor to Mgr Navarre. The task of conversion is attended with great difficulty, as the adult native, though he shows no resentment to his religious customs being ridiculed, obstinately adheres
to them, even when they cause him excessive physical exertion. The latest statistics assign to the mission: 20 missionaries, 21 brothers, 38 sisters (all of the Sac- cred Heart of Jesus Congregation), 15 catechists, 7 stations with church and school, 2 orphanages, 28 schools with 1400 pupils. The Prefecture Apostolic of Dutch New Guinea was separated from the Vicariate Apostolic of Batavia on 22 December, 1902. Attended at first by the Jesuits, it was later entrusted to the Missionary Fathers of the Sacred Heart of Issoudun. The present prefect is Rev. Patrice Noyene (residence on the Island of Langur), appointed in January, 1903. The mission now contains 14 Fathers and 11 Brothers of the Sacred Heart; 7 Sis- ters of Our Lady of the Sacred Heart; 16 native cate- chists; 2911 Catholics; 210 catechumens; 4 churches with resident priest; 12 churches without residence; 12 sub-stations; 16 schools with 300 pupils. (For Ger- man New Guinea, see KAISERWILHELMSLAND.)

THOMAS KENNEDY.

NEW HAMPSHIRE. New Hampshire, the most northerly of the thirteen original states of the United States, lying between 70° 37' and 72° 37' west long., and between 42° 40' and 45° 18' 23' north lat. It comprises an area of 9305 square miles, and according to the census of 1910, has a population of 430,572. New Hampshire is bounded on the south by Massachusetts, the dividing line passing through the center of the state. It is about 28 miles north of the Merrimac; thence westerly, following the course of the river at the same distance to a point three miles north of Pawtucket Falls, thence westerly fifty-five miles to the western bank of the Connecticut; on the east by the Atlantic for about eighteen miles from said southern boundary to the mainline of the railroad; thence due north to the State of Maine to the Canada line, the dividing line between Maine and New Hampshire beginning at the middle of the mouth of Pisquetqua harbour, thence up the middle of the river to its most northerly head, thence north, two degrees west, to the Canada line; on the north by the Province of Quebec, the dividing line passing through the center of the state at the rivers emptying into the St. Lawrence from those emptying into the sea; on the west by the Province of Quebec, southerly to the forty-fifth parallel of latitude, and by the State of Vermont, the line passing from the north-west head of the Connecticut river along the middle of that river to the forty-fifth parallel of latitude, thence due west to the Canada line, following the western bank of that river to the Massa- chusetts line. The south-west part of the Isles of Shoals, off the coast of New Hampshire, belongs to that state, the rest to Maine, the dividing line passing between Cedar and Smutty Nose Islands, Maine and Star Island, the most populous of the group in New Hampshire.

PHYSICAL CHARACTERISTICS. New Hampshire is a state of hills and mountains, sloping gradually from north to south. A range of hills runs through the state from the southern boundary nearly to its nor- thern extremity, buttressed at uneven intervals, south of the White Mountains, by Mounts Monadnock, Kearsarge, and Gilpin. The country between sprays into the plateau of the White Mountains, some thirty miles long by forty-five wide, and from sixteen to eighteen hundred feet high. From this pla- teau arise some two hundred peaks in two groups: the White and Sandwich Mountains to the eastward, and the Franconia to the westward. This range divides the waters of 1200 Androscoggin, the Saco, and the Merrimac rivers on the east from those of the Con- necticut on the west. The White Mountain region is strikingly grand. Here Mount Washington (6290 feet) and Mount Adams, Jefferson, Clay, Monroe, and others each rise nearly a mile in height. The fame of the beauty and sublimity of this region is world-wide and attracts countless visitors. In the south-eastern por- tion of the state, from the Merrimac valley to the sea, the land is lower and much of it fertile. Two-thirds of the largest cities and towns of the state are in this section. The cli- mate is rugged and healthy, the air pure and bracing. In summer the summers are short and change- able, but the autumn is generally delightful. The winters are very severe, though less so in the valleys of the Connecticut and Merrimac. Cold weather usually lasts eight months, with snow half that period.

RESOURCES. Agriculture. The soil of the state outside the mountain regions is well watered and fairly productive, and good crops are raised of the ordinary farm staples: hay, corn, oats, potatoes, etc., but the chief food supply comes from the west. The industries: The growth of the last census was a point of 900 the gross value of the manu- factures in the state is placed at $123,610,904, the net value at $85,008,010. These manufactures are largely confined to the cities and leading towns, which contain 65.8 per cent. of the establishments, manufactu- res 79.2 per cent. of the value, and pay 81.4 per cent. of the wages. Among the chief manufactures are for goods of leather, about $20,300,000; leather goods, $23,000,000; lumber, $9,125,000; woolens, $7,700,- 000; paper and pulp, $7,125,000; machinery, cars, car- rriages, and furniture. Minerals. Chief among the mineral products is granite, of which there are valuable quarries at Concord, Hooksett, Mason, and other towns. Steatite or soapstone is also found in quanti- ties at Franconia and at Galeford. Apples, at Franconia being one of the most valuable in the Union. Graphite, mica, limestone, and slate are also found. Commerce. New Hampshire has but one sea- port, Portsmouth, which has considerable coasting trade. The importation of foodstuffs and raw ma- terial, and the distribution of her vast volume of manu- factures constitute the chief domestic commerce, carried on chiefly by rail. Foreign importations come chiefly through Boston. The coast is covered by a network of steam and electric railroads, connecting every city and town of any importance with the business centres.

EDUCATIONAL SYSTEM. The state has always care- fully provided for education. Under the Constitution (Part II, art., 52), it is the duty of the legislature and magistrate to cherish the interests of literature, the sciences, and all seminaries and public schools; to en- courage private and public institutions, rewards, and immunities for the promotion of arts, sciences, etc.; but no money raised by taxation shall ever be applied for the use of the schools or institutions of any religi- ous denomination. The law directs that every child from eight to fourteen shall attend school at least twelve weeks each year. Practically every town is a
school district and may raise money by taxation for school purposes, and may, separately or uniting with other districts, establish a high school, or contract with academies in its vicinity for instruction of its scholars. The districts are under the general control of the State Superintendent of Public Instruction, appointed by the governor. In 1908 there were 2127 public schools, with a membership of 54,472 pupils, under 2990 teachers, of whom 255 were men. Manual training is provided in Manchester, Concord, Portsmouth, Rochester, and Berlin.

Evening schools are maintained in three cities, intended by 365 pupils, of which 308 are male. In places of 4000 people and over, 796 children attend kindergartens. The New Hampshire School for the Feeble Minded, at Laconia, has 89 inmates, under 4 instructors. There were 53 public high schools, with 243 teachers (84 men), and 5250 pupils. The State Normal School at Plymouth (founded 1870) has 14 teachers and 181 pupils. The model schools Another normal school is in prospect. The total revenue from taxation for the public schools (1906–7) was $1,293,013. Apart from Catholic schools, there are 24 secondary schools reported in 1908, with 167 teachers and 3235 pupils, over 900 of these being elementary. Among the private academies, the Henry School of Wolfeboro has special mention. The New Hampshire College of Agriculture and the Mechanical Arts at Durham (founded 1867) is an excellent and liberally endowed state institution with 196 students (1908), 9 men and 13 women in general science; 48 men and 2 women in agriculture, and 124 men in engineering; professors and instructors, 21, with 18 professors, 3 assistants, and 156 students. There is a fine state library at Concord and excellent libraries in all the cities. Every town of any importance either has its own library or is in easy reach of excellent library accommodations.

HISTORY.—Civil.—The first to settle in the limits of New Hampshire seems to have been David Thomson, a Scotchman, who in 1622 was granted 6000 acres and an island in New England (N. H. State Papers, XXV, 715). Forming a partnership with some Plymouth merchants in his case of a lot south of the Piscataqua, calling the place Little Harbor. Nothing is known of this settlement, except that about three years afterwards Thomson moved to an island in Boston harbor which still bears his name. It is claimed with reason that at about the same time William and Edward Hilton settled a few miles further up the Piscataqua at what was called Hilton's Point or Northam, now Dover, though the formal grant of their patent was 1630 (Belknap, "Hist.,” 8). Also, that all these men were sent by John Mason, Ferdinando Gorges, and a company of English merchants. In 1621, 1622, and 1629, Sir Ferdinando Gorges, an officer in the English navy, and Captain John Mason, merchant, and afterward a naval officer and Governor of Newfoundland, both royal favorites, procured various grants of what is now New Hampshire and a great deal more, from the Plymouth Company, organized by James I "for the planting, ruling, and governing of New England”, and apparently under some arrangement with Thomson and others interested, sent over some 60 men and women duly supplied and furnished, by whom settlements were made on both sides of the Piscataqua near its mouth. Building a house, called Mason Hall, they began salt works, calling the settlement Strawberry Bank; while at Newitchwannock, now South Berwick, Maine, they built a saw mill. Things went along presumably well till Mason died in 1653, after which the houses and cattle were taken to satisfy the wages and claims of his servants. Neither he nor Gorges seem to have reaped any profit from their investment. The claims of the Mason heirs were a bone of contention till 1758, when a settlement was effected. On two different occasions they delivered the colony from Massachusetts's sway on account of the influence the claimants had first with Charles II in 1679 and again with William III in 1692.

The settlements spread slowly, the people coming chiefly from Hampshire County, where Mason had held a lucrative office under the crown and from which he had named the plantation "New Hampshire". In 1650 John Wheelwright and a number of his followers were franchised and banished from Boston for his religious opinions, settled, with some adherents, at Squamscott Falls, as being outside the Massachusetts patent, calling the place Exeter, and here they organized a local government, creating three magistrates, the laws to be made by the townsmen in public assembly, with the assent of the magistrates. The settlement of Dover and Strawberry Bank (Portsmouth) soon followed the example of Exeter and established local self-government. It is important to note that Mason, Gorges, Thomson, the Hiltans, and the wealthy merchants associated with them, were devoted supporters of the Church of England. The powerful Massachusetts Bay Company, alarmed at the intense Puritanism, soon turned its attention to the struggling Anglican colonies on its northern borders, which it determined to seize. Proceeding with consummate craft and skill, they laid out the town of Hampton, clearly within the Mason patent, and set it with people from Norfolk (Belknap, 1, 38), over whom they had absolute control. Among these were Lord Say and Brook, others, to buy up the Hilton patent at a cost of £150, and to send over large numbers of West of England Puritans and a minister who built and fortified a church on Dover Neck (Belknap, 1, 32). Jealousies, fears, and factions arose between the old settlers and the new comers. Then emissaries from the Bay appeared at the time on the Piscataqua (Fry, 37), “to understand the minds of the people and to prepare them”, and their report was entirely satisfactory to their principals. They then (1641) got the purchasers of the Hilton patent to put it solemnly under the government of Massachusetts. And the time being ripe, and England too distracted with other affairs, Massachusetts assumed jurisdiction over the New Hampshire settlements (October, 1641). Very soon after Puritans appeared among the settlers and obtained possession of the principal offices, dividing among themselves a goodly share of the common lands (Fry, 30). They silenced the Anglican minister of Portsmouth, seized the church and school, and the fifty acres of glebe that had been granted that church by Governor Williams and the people, and in due time turned them over to a Puritan minister. Minister Wheelwright left Exeter and went to Maine.

For nearly one hundred years, or until the capture of Quebec by Wolfe and the subsequent surrender of Canada (1759–63), the development of New Hampshire was seriously impaired by the Indian wars, her territory being not only the borderland, but also in the
war-path of the Indians from Canada to the New England settlements. These wars seem to have been occasioned by the misdeeds, aggression, or treachery of the whites (Belknap, "Hist," I, 133, 242). There is no doubt that encroachments on their lands and fraud in trade gave sufficient grounds for a quarrel and kept up jealousy and fear (Belknap, I, 123). And the same writer gives the eastern settlers of New England but a poor character or religion and deems their conduct unattractive to the Indians (Hist., II, 47). Such would surely be the drowning by some rascals of the Sacc chief Squando's babe; while the treachery of Major Waldron in 1676 in betraying them in time of peace in his own home, and consigning two hundred of them to slavery or death, was never forgotten nor forgot by the white people (Kane, 33), and on the people till it was avenged in his blood on his own hearth-stone in the Indian attack on Dover in 1689. But through war or peace the population steadily increased. Estimated at between 3000 and 4000 in 1679, it was placed at 52,700 in 1767, and in 1775 at 85,300. The settlers, of course, were mainly English, but about 1719 a colony of one hundred families of Ulster Protestants came from Ireland to Massachusetts and after many trials a number of them settled on a tract in New Hampshire above Haverhill, known as Nutfield, where they established the towns of Londonderry and Derry; the rest settling in different parts of the country. They were hardy and industrious; they cleared the colony, the somnolent, and fit it to be the New Testament. After the capture of Quebec the settlements increased more rapidly, soon clashing in the west with New York's claims, till the boundary was settled by royal decree in 1764.

None of the thirteen colonies was better satisfied with British rule than New Hampshire. She had an extraordinary governor and had received fair treatment from the home government. It is true that patriots took alarm at the assumption of power to tax the people without their consent, and at the severity exercised towards the neighbouring sister colony; and took due precautions to consult for the common safety; also, that when the king and council prohibited the exportation of powder and military stores to America, the citizens, in December, 1774, quietly removed one hundred barrels of powder, the light cannon, small arms, and military stores from Fort William and Mary in Portsmouth harbour to more convenient places. The provincial convention, early in 1776, in forming a provisional government, publicly declared that the people, observing the British emperor would rejoice if a reconciliation could be effected, but when they saw the home government persevere in its design of oppression, the Assembly at once (15 June, 1776) instructed its delegates at Philadelphia to join in declaring the thirteen colonies independent, and pledged their lives and fortunes thereto. This pledge was well redeemed through the war from Bunker Hill to Bennington and Yorktown, and New Hampshire's soldiers under Stark and Sullivan, Scammell and Gilley, and others, did their full part and more; while the hardy sailors of Portsmouth and its vicinity did gallant service in the navy under Paul Jones, whose ship, "The Ranger" was built and fitted out at that port. After careful consideration New Hampshire adopted the Constitution, 21 June, 1788, being the ninth state to do so; thus making the number required to give it effect. During the war of the Rebellion, notwithstanding considerable difference of party opinion, the state supported Lincoln and contributed its full share of men to the Union army and navy.

Ecclesiastical.—It was not eighty years from Henry VIII to Mason, and so it was that men imbued with the spirit of the English penal laws settled New Hampshire, whether of the Cavalier stripe, such as Mason, Gorges, and the Htons, or Puritan, such as Higgins, the Waldrons, and the Moodies. In the book of the Puritan the word "toleration" was not written, or only mentioned to be denied and scoffed at by the gravest and most venerable of their teachers and upon the most solemn occasions. President Oakes calls toleration "The first born of all abominations" (Election Sermon, 1673). "Having its origin," says Shepherd, "with the devil!" (Election Sermon, 1662). As Dr. Belknap sums it up, "Liberty of conscience and toleration were offensive terms and they who used them were supposed to be the enemies of religion and government" (Hist., 84). The rigidity with which this idea was carried out towards their brethren who differed with them is shown in the case of Roger Williams, and the people of Salem, who were disfranchised and had their property righted over them, all in the favour of liberty of conscience; Williams escaping only by flight to Narragansett Bay; and in multitudes of other instances, as well as in their merciless persecution of the Quakers, extending to imprisonment, scourging, mutilation, and death; as witness their laws from 1656 to 1661, and the barbarities perpetrated under them. It was during Massachusetts' usurpation in New Hampshire, and probably by one of the parties she colonized on the Hilton Patent, the notorious Richard Waldron, that the three Quakers, Anna Coleman, Mary Tomkins, and Alice Ambrose were ordered to be whipped, like infamous criminals, from Dover through eleven towns, and to the diaphragm of the church by John Brown, the sawyer; and that the Quakers were ordered to leave the Massachusetts line; where the victims were rescued and set free by some ruse of the Cavalier Doctor Barefoot, and some friends, as the story goes, Waldron's warrant running in Massachusetts also.

Such being their attitude towards their Protestant brethren, it is easy to understand why so few Catholics appeared among the early settlers. Finally they were banned by the charter of the Plymouth Council, which excluded from New England all who had not taken the Oath of Supremacy. Catholics were denied the right of freemen under the Royal Commission of 1679, which required the Oath of Supremacy and this was endorsed by the General Assembly held at Portsmouth the following year; and in 1680 an odious and insulting test-oath was imposed on the people under pain of fine or imprisonment. The proscription of Catholics continued to disfigure the state constitution even after the adoption of the federal constitution. The State Constitutional Convention of 1791 refused to amend the constitution of 1784, by abolishing the test oath. In 1832, by the thirteenth amendment, it became the duty of governor, councillor, state senator, and representative, the vote standing thirty years to fifty-one nays. It is significant that the names of those voting nay are not entered on the record (Journal, p. 52). The convention of 1876 abolished all religious disqualifications, and this was adopted by the people except as to one measure empowering the governor to reside at their own expense for public, "Protestant" teachers of religion and morality. The convention of 1889 voted to abolish this distinction; but this vote also failed of ratification, and the discrimination still remains a blot on the fairest and first of all written American state constitutions.

First Catholic Missions.—In 1816 Rev. Virgil Barber, an Episcopal minister and principal of an Academy at Fairfield, N. Y., son of Rev. Daniel Barber of Claremont, N. H., observing a prayer-book in the hands of a Catholic servant, made inquiries which resulted in his giving up his school and pastorate and becoming a Catholic. Afterwards, by agreement between himself and his principal, he and his son entered the Jesuits, and Mrs. Barber and her four daughters entered convents. Father Barber was ordained in 1822 and sent to Claremont, where he built a small brick church and academy, still standing; and according to Bishop Fenwick in 1825 there were
about one hundred and fifty persons, almost all converts, attending it. The following year Father Barber was sent by Bishop Fenwick to visit the eastern part of the diocese and found one hundred Catholics in Dover, eager for a church. In 1828 Father Charles Frenche was assigned to that mission, which extended from Dover to Bangor. Father Frenche built the church of St. Aloisius in Dover (dedicated 1830), the second Catholic church in the state. In 1833 Father Lee was appointed resident pastor, and the following year he was succeeded by Father Patrick Canovan. In 1835 the Catholic population of the state is given as 385; in 1842 it was placed at 1370, ministered to by Fathers Daly and Canovan. Then came the emigration from Ireland, first to Manchester, N. H., in 1848 there were five hundred Catholics, and Bishop Fitzpatrick sent thither Rev. William McDonald, a wise, far-seeing, zealous, and devoted priest. A church was soon built, the present church of St. Anne, rebuilt in 1852. In 1857 he built a convent near the church for the Sisters of Mercy, organized schools, using the basement of the church till he could build or purchase buildings. The influx of Irish Catholics continuing, in 1867 he built St. Joseph’s church, now the cathedral. He secured eligible sites for a church, a school, and charitable purposes; an orphan asylum, a Home for Aged Women, and a fine brick school for girls. Emigration from Canada set in, which extended into New England, and in 1871 a Catholic priest, Rev. J. H. Chevalier, was sent to Manchester, where he built a fine church and developed a flourishing parish. Father McDonald died in 1885, greatly beloved, honoured, and lamented by his fellow citizens, irrespective of creed. A beautiful mortuary chapel was erected by Bishop Bradley over his remains. He was succeeded in 1888 by the late Father O’Donnell and Millette of Nashua, Barry of Concord, Murphy of Dover, O’Callaghan of Portsmouth and other zealous priests built up fine parishes in the chief manufacturing centres.

In 1853 Maine and New Hampshire were created a diocese. Father David W. Bacon, consecrated bishop in 1855, died in 1874, and was succeeded (1875) by the Right Rev. J. A. Healy. In 1884 the state was made the Diocese of Manchester with Father Denis M. Bradley, then pastor of St. Joseph’s, as its first bishop. Under Bishop Bradley, a man of great mental power and breadth of view, of quick perception and sound judgment, singularly sweet in manner, and suddenly devoted to his calling, the progress of the diocese was almost incredible. The tide of French Canadian immigration to the manufacturing centres of the state now increased tremendously and the new bishop spared no pains to procure the best pastors to care for the ever-increasing flock. Two other magnificent brick churches, for 3600 elements, St. Mary’s and St. George’s, with schools for each sex, and convents for the sisters, were built, together with all the usual parish institutions. In 1884 there were 45,000 Catholics in the state, with 27 churches, 5 convents, 40 priests, and 3000 children in the parochial schools. After nineteen years, there were 100,000 Catholics, 91 churches, 24 chapels, 32 stations, 107 priests, 12,000 children in the parochial schools, 4 hospitals, 4 homes for aged women. Bishop Bradley died 13 December, 1903, and was succeeded in 1904 by Bishop John B. Delaney, whose untimely death in June, 1906, cut short his administration. His successor is the present bishop, Right Rev. George Albert Guertin. The new prelate has evidently brought to his position, administrative ability that marked his career as a priest, and his work thus far has already borne rich fruit. There are now in the diocese over 126,000 Catholics, with 118 secular priests, and 19 regulars; 99 churches, 24 chapels, and 34 stations; over 15,000 children in the parochial schools, 7 orphan asylums, caring for 718 orphans, 5 homes for working girls, with many other charitable institutions. No Catholic has yet held the office of Judge of the Supreme Court; recently a Catholic, Hon. John M. Mitchell of Concord, was appointed judge of the Superior Court of the State.

Religious Polity.—Freedom of worship is now recognized as 'a natural and unalienable right' under the Constitution; and no one can be held to account for exercising the same as his conscience dictates, or for his sentiments or persuasion; or be compelled to pay to the support of another persuasion; and no subdivision of one denomination to another shall ever be established by law (Bill of Rights, Art. 6). All work, business, and labour of one's secular calling are to be free from the disturbance of any person or property for exercising the same as his conscience dictates, or for his sentiments or persuasion; and no person shall engage in any play, game or sport on that day (Gen. laws; Ch. 271). The form of oath of office prescribed in the Constitution is, 'I do solemnly swear, etc.—so help me God.' Or, in case of persons scrupulous of swearing, "This I do under the pains and penalties of perjury." The same forms are followed in respect to witnesses in the courts, but any other form may be used which the affidavit professes to believe may be more binding on the conscience. Open denial of the existence of God, or wilful blasphemy of the name of God, Jesus Christ, or the Holy Ghost, or to curse the name of God, or the Bible, are punishable with severe fine and sureties for good behaviour for a year. Profane cursing or swearing is punishable by fine of one dollar for first offence, and two dollars for subsequent offences. Opening the legislature by prayer is a matter of custom since 1745, though not as early as 1809, the Assembly was opened by one's own prayer or reading the Lord's Prayer. Christmas Day is a religious festival on the first day. Under the Puritan regime whoever kept Christmas Day had to pay five pounds, over twenty-four dollars (Commissioners Rep. to King). The seal of confession is not recognized by law. No instances of its being attacked have arisen, and probably public opinion would frown down any such attempt.

Incorporation of Charities.—Apart from special incorporation by the legislature, easily obtainable, any five persons may associate themselves together and become a corporation for religious or charitable purposes, by filing articles of agreement with their town clerk, and the Secretary of State. The law does not put any restraint on such societies. A religious society, though not incorporated, is a corporation in this state, for the purpose of holding and using donations or grants worth not more than $5000 a year. Any officers, such as trustees or deacons, of any church, if citizens, shall be deemed a corporation, to hold any grants or donations of the above value, except to them and their successors, to their church or to the poor. No religious society shall be dissolved, or its right to any property affected, by failure to hold its annual meeting, to choose its officers, or for any informality in electing or qualifying its officers, or for any defect in its records.

Taxation.—All "Houses of Public Worship" are exempt from 3% taxation; also twenty-five hundred dollars of the value of parsonages owned by religious societies and occupied by their pastors; also school houses and "Seminaries of learning." Ordained ministers are exempt from jury duty, but not from military duty. The sale of liquor is regulated by a stringent high licence law, sale for sacramental purposes being expressly recognized and coming under a low licence fee, ten dollars.

Marriage and Divorce.—The age of consent, for females is thirteen, for males fourteen. Marriages to the degree of first cousins are incestuous and void, and the issue illegitimate. Marriages may be solemnized by a justice of the peace in his county, or by an ordained minister in good standing, resident in the
STATE; also by ministers out of the state, commissioned by the governor to be legally authorized officers. Children born before marriage and duly acknowledged thereafter are deemed legitimate. The legitimacy of the children is not to be affected by decree of divorce unless so expressed in the decree. If one of the parties thereto believed they were lawfully married and the marriage was consummated, it is valid, although before a supposed but not actual justice or minister, or under an informal or defective certificate of intention. The causes for legal divorce are impotency, adultery, extreme cruelty, conviction of crime entailing over a year's imprisonment; treatment seriously injuring health or reason, habitual drunkenness, refusal to cohabit or support, and refusal for six months, when conjoined with religious belief (Gen. Stat. Ch. 174). Where legal cause for divorce exists, all the objects of separation—non-access, non-interference, non-publishing of name, alimony, custody of children—can be obtained without a legal divorce, should the injured party so desire (Stat. 1906).

PRISONS AND REFORMATORIES.—The rules of all prisons, houses of correction, or public charitable or reformatory institutions, shall provide for suitable religious instruction and ministration to the inmates. These are to have freedom of religious belief and worship, but may not interfere with proper discipline. Each prison shall have a place for the religious instruction of twenty-one years of age, and sound mind (married women included), may dispose of any right in property by will in writing, signed by the testator and subscribed in his presence by three credible witnesses. No seal is required. Husband or wife may waive the provisions of a will and take the share allowed them respectively by law.

CHABITABLE BEQUESTS.—These are governed by the principles of the common law. The courts will order them to be executed according to the true intent and will let no trust lapse for want of a trustee (2 N. H., 21-55; N. H., 467-470-39; N. H., 139).

The following is a rough estimate of the nationality of the Catholic population of the diocese:

| French Canadians | 66,200 |
| Irish            | 52,250 |
| Poles           | 5,000  |
| Lithuanians     | 1,500  |
| Ruthenians      | 750    |
| Italian         | 6,000  |

The principal non-Catholic denominations is as follows:

| Congregationalists | 19,070 |
| Methodists         | 12,529 |
| Baptists           | 9,741  |
| Free Baptists      | 6,210  |
| Unitarians         | 3,829  |
| Universalists      | 1,903  |
| Advent Christians  | 1,608  |
| Christians         | 1,303  |
| Presbyterians      | 842    |

CHAB. A. O'CONNOR.

NEWHEBRIDES, VICARIATE APPOSTOLIC OF, in Oceania, comprises the New Hebrides, with Banks and Torres, islands situated between 15° and 21° S. lat. and between 160° and 170° E. long. The total area is about 580 sq. miles. The indigenous population, which has decreased considerably, amounts to about 75,000; they are for the most part of an olive or brown complexion, varying in darkness. Their languages, which are of the Melanesian family, belong to the Huli race and their religious worship has for its object the souls of the dead, but they also recognize a higher Being who is good. The white population is about 1000, nearly 650 of whom are French, and 300 English. The islands belong jointly to France and Great Britain under what is known as the "Condominium of the New Hebrides". They were discovered in 1606 by the Spaniards under Quiros, and were named Tierra Austral del S. Esperitu. In 1768 the French navigator, Bougainville, in sailing round the globe, came upon the same group and named them the Grandes Cyclades. Six years later, Cook discovered the islands and gave them their present name. According to the account of Quiros, the Franciscans, who acted as missionaries to these islands, are said to have held three masses in a chapel built on the shore, and even held a procession of the Blessed Sacrament. Nevertheless, the islands had to wait long for the preaching of Catholic missionaries. Not until January, 1857, did four Marist priests, sent by Mgr Fraysee, Vicar Apostolic of New Caledonia, definitively establish here the first missions. They continued their labors, however, developed rapidly, and in 1900, at the petition of Mgr Fraysee, the New Hebrides were separated from his jurisdiction and made a prefecture Apostolic, under Père Douceré, of the Society of Mary. In 1904 this mission became a vicariate Apostolic, and Père Douceré, as vicar Apostolic, was consecrated titular Bishop of Teneruthis. His residence is at Port-Vila. The staff of the mission now comprises 26 priests and 3 lay brothers of the Lyons Society of Mary. Their labours are seconded by 16 religious women of the regular Third Order of Mary, and a certain number of native catechists. There are 12 missionary residences, besides numerous annexes. Each mission has its schools. Near the episcopal residence is established a training-school for native catechists. Religious instruction and education for white children are secured by two schools at Port-Vila: a school for boys, conducted by the Little Brothers of Mary; one for girls, under the sisters of the mission who also serve the hospital at Port-Vila and conduct at Malico a crèche for little orphans. Conversions from paganism progress slowly, but continuously. The native Catholics, now numbering rather more than one thousand, are well instructed and faithful to their religious duties. There are about 600 white Catholics, and this number is increasing rapidly, both by births and by immigration.

P. DOUCERÉ.

Newhouse, Abbey of, near Brockelsby, Lincoln, the first Premonstratensian abbey in England, was founded in 1143 by Peter de Gousel, with the consent of his lord, Hugh de Bayeux, and the approbation of Bishop Roger, Bishop of Exeter. The Abbey was founded by the Abbey of Ligueus near Caletis, France, then under the rule of Abbot Henry. On their arrival in England the White Canons were hospitably received by William, Earl of Lincoln, who confirmed the donations made to Celro, the first Abbot of Newhouse, by Peter de Gousel the founder, by Ralph de Halton, and Geoffrey de Tours. The abbey was built in honour of Our Lady and St. Martial, Bishop of Limoges. In time Newhouse became the parent house of eleven of the Premonstratensian houses in England. The Abbey of Newhouse represents an abbey at full length, with his crozier and the inscription: Sigill. conventus Sci Marcialis. Ep. Li. de Newhouse. Of this abbey which was granted (9 Henry VIII) to Charles Duke of Suffolk, many of the old foundations still remain. The names of twenty-six abbots are known, the last being Thomas Harpham, who was abbot from 1534 to the suppression of the abbey by Henry VIII. The following list gives in alphabetical order the names and the dates of foundations of the Premonstratensian or Norbertine abbots, made from the time the abbey was first established in England at the time of the Reformation: Alnwick, Northumberland, this was the first foundation made from Newhouse (1147); Barlings, near Lincoln (1154); Bileigh, near Maldon, Essex (1180); Coverham, Yorkshire (originally established at Swanby, 1160); Croxton, near Melton Mowbray, Leicestershire (1162); Dale, Derbyshire (1162); St.
New Jersey, one of the original thirteen states of the American Union. It ratified the Federal Constitution on 18 December, 1787, being preceded only by Delaware and Pennsylvania. The capital of the state is Trenton. The extreme length of New Jersey from north to south is 160 miles, its extreme breadth 70 miles, and its gross area 7815 square miles. It is situated between 38° 55' 39" and 41° 21' 19" N. lat., and between 73° 53' 51" and 75° 33' 3" W. long. It is bounded on the north by New York State, on the east by the Hudson River and the Atlantic Ocean, on the south by Delaware Bay, and on the west by the Delaware River. In 1910 the population was 2,537,167 (1,883,669 in 1900), the state being thus, notwithstanding its large mountainous and forest areas, more densely populated than the most fertile of the prairie states or the great manufacturing States of New York or Pennsylvania. New Jersey has, in proportion to its area, more miles of railway than any other state, the majority of the eastern trunk lines traversing it. Its farms yield a larger income in proportion to the area cultivated than the richest states of the Mississippi valley. In manufactures it ranks sixth in the Union.

Physical Characteristics.—Much of the northern part of New Jersey is mountainous and much of its southern half is covered with forest. The state divides itself naturally into four belts, differing in age, in the nature of the underlying rocks, and in topography. The Appalachian belt, made up of the Kittatinny range and valley, forms the north-western part of the state. This ridge is due to tilted-up layers of hard rock, which have been able to resist the agents of weather, while the softer rocks were being slowly worn away to form the Kittatinny valley. The Kittatinny Mountains constitute the highest land in the state, and are clothed with forests; the valley, which is one of the most fertile parts of the state, is devoted to general farming and grazing. There are no large cities, except Philadelphia, and no manufacturing pursuits. The Highland belt is the oldest part of the state, and is a portion of the very ancient mountain system of which the Blue Ridge Mountains are a worn-down remnant. The Highblands (generally less than 1500 feet high) are a region of lakes, forests, and picturesque valleys, but are not a productive farming section. Here, in ancient crystalline rocks are foundiable beds of iron and of zinc ore, but there are no large cities and no extensive manufacturing. The Piedmont belt is a rolling plain from which rise abrupt ridges of hard trap rock. The Palisades along the Hudson and the Orange or Watchung Mountains are the most prominent of these ridges. While the rocks of the Piedmont plain are mostly sandstone and shale, the trap-rocks are covered in clay sheets. This, the belt of densest population, many cities, great manufacturing activity, and generally productive soil, is by far the most wealthy part of the state. The northern part of New Jersey was covered by the ice sheet of the glacial period. As a result, there are many swamps, lakes, and waterfalls, a glacial sheet with many boulders, and montane mineral deposits formed by glacial action. These hills are composed of till, gravel, boulders, etc., brought together by the advancing ice sheet and piled up along its front. The coastal plain is the youngest, flattest, and largest of the four natural divisions of the state, of which it forms more than one half. It is composed of layer upon layer of sand, clay, gravel, and marl sediments, that were, in past ages, slowly deposited in the ocean waters along the coast, and afterwards into a low, sandy plain. The marl belt and a few other portions are alone fertile. More than half of the coastal plain is covered with pine forests and is thinly peopled. Outside of the larger cities, the raising of fruit and vegetables for the city markets and the manufacture of glass are the chief industries. The sea-coast is fringed with summer resorts.

Civil History.—The precise date of the first settlement in New Jersey is not known, though it is believed that the Danes or Norwegians, who crossed the Atlantic with the Dutch colonists, began a settlement at Bergen about 1621. Ten years previously an attempt had been made to form a settlement at Jersey City. In 1623 the Dutch West India Company sent out a ship under the command of Captain Cornelius Jacobse Mey. Entering Delaware Bay, he gave his name to its northern cape, and then, sailing proportionate to its abundance, and masts, built Fort Nassau, which may be considered the first permanent settlement of the state. In 1632 Charles I granted to Sir Edmund Pownen a vast tract of land embracing New Jersey, Pennsylvania, Delaware, and Maryland, although he had previously granted Maryland to Lord Baltimore. In 1634 Pownen made a grant of ten thousand acres to Sir Thomas Danby on condition that he would settle one hundred planters on it, and would not permit "any to live thereon not believing or professing the three Christian creeds commonly called the Apostolical, Athanasian, and Nicene." In 1642 Pownen sailed up the Delaware River, which he named "The Charles", and founded at Salem City a settlement of seventy persons. The efforts of Thomas and George Pownen to assert their claims to the lands granted to their grandfather proved futile, the possessions having fallen into other hands after the latter had retired to England. In this section of the commonwealth. In 1664, prior to the grant of Charles I to Pownen, King James had granted a new patent for Virginia (ignoring that of Sir Walter Raleigh, dated 1584), in which was included the territory now known as the New England States, New York, New Jersey, Pennsylvania, and Maryland. The possession of New Jersey, Pennsylvania, and adjacent lands was subsequently claimed by the Dutch, and New Sweden, and then by the Swedes. The former built Fort Nassau on the Delaware near Gloucester. Disputes as to the rightful possession of this territory continued until 12 March, 1664, when Charles II royal disregard for previous patents, grants, and charters, deeded to his brother James, Duke of York, a vast tract embracing the whole of New England, New York, and all of what is now New Jersey. This was accompanied by active preparations to drive the Dutch from America, as their possession of New Jersey, if acquiesced in, would practically separate the New England Colonies from Virginia, Maryland, and the Carolinas. In the summer of 1664 armed vessels appeared in New York harbor, and after negotiations the Dutch surrendered.
upon the west, Delaware bay or river, and extendeth southward to the main ocean as far as Cape May, at the mouth of Delaware bay, and to the northward as far as the East river or river of Delaware, which is forty-one degrees and forty minutes of latitude, and worketh over thence in a straight line to Hudson river, which said tract of land is hereafter to be called by the name or names of Nova Cassarea or New Jersey". This name was given in honour of Carteret's gallant defence of the Island of Jersey (Cassarea), of which his governorship during the parliamentary wars. This grant regarded the Dutch as intruders, and Berkeley and Carteret not only became rulers, but acquired the right to transfer the privilege to others. Measures were speedily devised for populating and governing the country. The proprietors published a constitution, dated 10 February, 1664, by which the government of the province was to be exercised by a governor, a council, and a general assembly. The governor was to receive his appointment from the proprietors. On the same day that the instrument of government was signed, Philip Carteret, a brother of one of the proprietors, received a commission as Governor of New Jersey, and landed at Elizabeth in August, 1666. By granting a liberal form of government, in advance of any other colonies well located for agriculture, commerce, fishing, and mining, Carteret and Berkeley attracted settlers not only from England, but from Scotland, New England, and particularly from Long Island and Connecticut. These planters were largely Calvinists from Presbyterian and Congregational communities, and occupied the main land in New Jersey, in the north shore of Monmouth county. The valley of the Delaware remained unsettled. The Calvinists brought with them into East Jersey their distinctive views upon religious and civil matters.

The first Legislative Assembly met at Elizabeth-town on 26 May, 1665. The session lasted four days, and was brought to a close by harmony and strict attention to the business for which the burgesses and representatives were summoned by Governor Carteret. It may be noticed that this assembly passed laws by which twelve distinct offences were made punishable with death. The assembly adjourned sine die, and seven years elapsed before another conference of the colony. New York by the British was, on 30 July, 1673, was followed by the subjection of the surrounding country, including the province of New Jersey. The whole of the territory, however, was restored to the English Crown by the Anglo-Dutch Treaty of 9 February, 1674. The second General Assembly began its sessions on 5 November, 1674, and met concerned in the proper military defence of the province, the institution of regular courts, and the assessment of taxes. A code of capital laws was adopted, similar to that passed in 1668. On 18 March, 1673, Lord Berkeley disposed of his right and interest in the province to John Fenwick and a representative of the men of the ministry of Quakers, or Friends, for the sum of one thousand pounds. John Fenwick received the conveyance in trust for Edward Bylling, and a dispute as to the terms having arisen, William Penn was called in as arbitrator. He gave one-tenth of the province and a considerable sum of money to Fenwick, the remainder of the territory being adjudged to Bylling. In 1678 a division of the Carteret and Berkeley interests occurred. By the "Indenture Quintipartite", dated 1 July, 1786, the line of division was made to extend across the province from Little Egg Harbor to a point in the Delaware River in forty-one degrees N. lat. These divisions were known respectively as East and West Jersey, and the line then fixed was rendered, and the two portions included together under a royal government. After Berkeley's transfer the dominant influence in West Jersey was that of the Society of Friends. Salem was settled in 1675; Burlington, Gloucester, and Trenton about five years later, while within ten years the "shore" communication of Cape May and Tuckerton came into existence. The Society of Friends established in West Jersey a series of communities in which the life of the people was different from that of East Jersey. As East Jersey resembled New England in civil government, so West Jersey resembled Virginia. The political and social centres of the large plantations were the shire towns; slave-holding was common; a landed aristocracy was established there. It is true that the Indians and, under the advice of William Penn and his friends, good faith was kept with the Indians. Capital punishment was practically unknown, and disputes were frequently settled by arbitration.

Two elements of discord marked the genesis of East Jersey and West Jersey. One was external, and arose from the attitude of the Duke of York. As we have already noted, New Jersey was recaptured in 1673 by the Dutch, who held the colony until the early spring of 1674. A question arose as to the Duke of York's title after 1674; reconveyances were made, but in spite of past assurances the duke claimed the proprietary right of government. To that end Sir Edward Andros was appointed Governor of New Jersey, and a climax was reached in 1680 when the proprietary Governor of East Jersey was carried prisoner to New York. In 1681 the Crown recognized the justice of the proprietors' contention, and local government was re-established, but not before the seeds of disaffection were sown that bore fruit in the Revolution and War of American Independence. The contest between the Board of Proprietors and the small landowners. Both in East and West Jersey, Carteret and Berkeley and their assignees had transferred to wealthy combinations of capitalists (mostly non-resistant) much of the broad acreage of the colonies. With the Union of New Jersey in 1702 their right of selection of governors and members of executive councils, which right Carteret and Carteret derived from the Crown, with "quit-rent" agitation in East Jersey, led to much bitterness. Finally, disgusted with turmoil and recognizing the sentiments of revolt entertained by the people, the Boards of Proprietors surrendered to the Crown in 1702 their right of government, retaining only their interest in the soil. The two New Jerseys were now united and the two provinces became the royal colony of New Jersey. Queen Anne appointed Lord Cornbury, Governor of New York and New Jersey, but each continued to have a separate assembly. In 1738 New Jersey petitioned for a distinct administration, and Lewes was elected governor. The population was then about 40,000. The last royal governor was William Franklin, the natural son of Benjamin Franklin. The opening of the Revolution found New Jersey sentiment unevenly crystallized. Few, if any, favoured absolute independence. There were three elements. One, the Tory and conservative element, led by William Franklin, embraced nearly all the Episcopalians, a vast portion of the non-combatant members of the Society of Friends, and some East Jersey Calvinists. Another element was composed of men of various shades of belief, some in favour of continual protest, others desirous of compromise. This included at the outbreak of the struggle most of the Calvinists, some few Quakers of the younger generation, and the Irish and Scotch. The third party drew its support from a few bold, aggressive spirits of influence, whose following included men who believed that war for independence would benefit their fortunes. The part played in the Revolution by New Jersey has been frequently told. The patriots succeeded in winning over Princeton and Trenton; Monmouth and Red Bank are ever-memorable, while the raids at Salem, Springfield, Elizabeth, in the valley of the Hackensack, and the winter at Morris-
town are a part of national history. Lying between New York and Philadelphia, its soil was a theatre where war was at one time the Tory element suppressed, finding its expression in open hostility, or in the barbaric cruelties of the “Pine Robbers” of Monmouth, Burlington, Gloucester, and Salem counties. Though under suspicion, the Society of Friends was neutral, for conscience’ sake, remaining faithful to the teachings of its creed. The source of the struggle found the people of New Jersey jubilant and not disposed to relinquish their sovereignty. The Articles of Confederation were weak and had become a byword and a jest. There was much state pride and much aristocratic feeling among the old families who continued to dominate state politics.

New Jersey History.—Early Missionary Efforts.—The comparative liberality of the proprietary rule of Berkeley and Carteret, especially in religious matters, attracted some Catholic settlers to New Jersey. As early as 1672 we find Fathers Harvey and Gage visiting both Woodbridge and Elizabethtown (then the capital of New Jersey) for the purpose of ministering to the Catholics in those places. Robert Vanquellen, a native of Caen, France, and a Catholic, lived at Woodbridge, and was surveyor general of that section of New Jersey in 1669 and 1670. Catholics were, however, regarded with some suspicion and considerable bigotry at times manifested itself. A Catholic by the name of William Douglass, when elected a rector in 1678, Father Malou died, and he was elected because of his religious convictions, from the General Assembly of 1668. In 1691 the New York Assembly passed the first anti-Catholic enactment, which was followed by laws strongly opposed to Catholics and their beliefs both in New York and New Jersey. Lord Cornbury, appointed governor in 1701, was instructed by Queen Anne to permit liberty of conscience to all persons except “papists”.

The first Catholics in New Jersey were probably those who availed themselves of the grant made by Charles I in 1632 to Sir Edmund Powel, and of Powel’s conveyance in 1634 to Thomas Danby. In this way a Catholic settlement was founded near Salem. The fine clay found at Woodbridge attracted some Catholics to that place as early as 1672. The ship “Philip”, which is said to have brought Carteret to America, also transported several French Catholics, who were skilled as salt makers, to New Jersey. The records show Hugh Dunn and John and James Hannah coming in 1674. Samuel Hannah, in 1830, was unable to bear the toleration which the Catholics were enjoying in the province, endeavored to arouse ill-feeling against them by accusing them of complicity in the “Negro Plot”. In the persecution thus aroused Father John Ury, a Catholic priest (see Flynn, op. cit. in bibliography, pp. 21–2), who had exercised unostentatiously his sacred ministry in New Jersey, and had been engaged for about twelve months in teaching at Burlington, was put to death in New York City, the real cause being the violent hostility of the rabble towards the Catholic name and priesthood. Father Robert Harding arrived in Philadelphia from England in August, 1740, when the City of Brotherly Love contained only 2000 homes. He laboured in New Jersey from 1762 until his death in 1772, at the age of seventy years. Father Ferdinand Farmer, whose family name was Steenmeyer (q. v.), may be considered the true missionary of New Jersey.

In “First Catholics in New Jersey”, in 1744, Father Theodore Schneider, a distinguished Jesuit, published a history in which he visited New Jersey and celebrated Mass at the iron furnaces there. Having some skill in medicine, he was accustomed to cure the body as well as the soul; and travelling about under the name of Doctor Schneider he obtained access to places whither he could not otherwise have gone without great personal danger. Sometimes, however, his real character and discommodities of his profession were discovered in New Jersey. He used to carry in his missionary excursions a manuscript copy of the Roman Missal, carefully written in his own hand. He died on 11 July, 1764. Patrick Colvin seems to have been the only Catholic resident in Trenton in 1776. He was interested in the cause of the patriots, and helped to furnish the boats used to transport General Washington’s army across the Delaware on 25 December, 1776. Captain Michael Kearney, a Catholic, lived near Whippany in Morris County on his large estate, consisting of about one thousand acres, known as “The Irish Lott”. The inscription on his tomb bears witness to his genial hospitality, and to his having served as a transport General Washington’s army across the Delaware on 5 April, 1777. Molly Pitcher (née McCauley), who acquired fame at the Battle of Monmouth, was a Catholic girl. One Pierre Malou, who had been a general in the Belgian Army, was a resident of Princeton from 1785 to 1799; he purchased five hundred acres of land there. John Henry May, who died in 1807, sailed for Europe in order to bring his wife and two sons to New Jersey. On the return voyage his wife died. He returned to Europe, became a lay brother of the Society of Jesus; afterwards he studied theology, and was later raised to the priesthood, came to America again and was stationed in Madison. Father Malou also made his way to New York, and died in 1827, and is buried under St. Peter’s Church in Barclay Street.

When Bishop John Carroll returned from England he received Father John Rossiter, an Augustinian, into his diocese in 1790. On 27 May, 1799, the Augustinians were given permission to establish colleges of the order in the United States. The establishment of missions in New Jersey at Cape May and at Trenton in 1803 and 1805, and at Paterson a little later. St. John’s parish at Trenton, now the parish of the Sacred Heart, was the first parish established in New Jersey (1799). St. Joseph’s Church in Philadelphia was the first parish church for the Catholics of Pennsylvania, New Jersey, and New York. The Father Harding above referred to was pastor of this parish, and is said to have been the first priest to have visited New Jersey prior to 1762. St. John’s Church in Newark was built in 1828, and the first pastor was Rev. Gregory Bryan Pardow. Father Pardow was born in Warren County, New Jersey, and was named coadjutor of the first Catholic parish founded in Newark. During and after the terrible famine in Ireland about 1848 a great number of Irish Catholics came to New Jersey. About this time Father Bernard J. McQuaid (q. v.) began his missionary career in New Jersey. He became pastor at Madison in 1848, and had missions at Morristown, Dover, Mendham, Berkeley, and Springfield. His parish extended from Madison to the banks of the Delaware, including Morris, Somerset, Warren, and Sussex Counties, besides Short Hills in Essex and Springfield in Union. He opened the first Catholic school in New Jersey at Madison; built the Church of the Assumption at Morristown; St. Joseph’s at Mendham; and St. Rose’s at Springfield, now removed to Short Hills. He became rector of St. Patrick’s pro-cathedral at Newark in 1855, upon the arrival of the Bulls from Rome appointing James Roosevelt Bayley, first Bishop of Newark; he built Seton Hall College and was its first president, and brought the Sisters of Charity into the Diocese of Newark.

DIOCESES AND CATHOLIC POPULATION.—The State of New Jersey is divided ecclesiastically into the Dioceses of Newark and Trenton, which are treated in separate articles. The total Catholic population of the state is about 500,000.
Legislation on Matters Directly Affecting Religion.—The First Constitution of the State of New Jersey, adopted at the Provincial Congress held at Burlington on 2 July, 1776, was a declaration that no resident inhabitant of this colony shall be denied the enjoyment of any civil right merely on account of his religious principles, but that all persons professing a belief in the faith of any Protestant sect, who shall demean themselves peaceably under the government, as hereby established, shall be capable of being elected into the civil and military stations of the public service, or to sit in either branch of the Legislature, and shall fully and freely enjoy every privilege and immunity enjoyed by others their fellow-subjects. The Constitution agreed upon in convention at Trenton in 1844, and ratified by the people at an election held on 13 August, 1844, guarantees the free exercise of worship, and further provides that "no religious test shall be required as a qualification for any office or public trust; and no person shall be denied the enjoyment of any civil right merely on account of his religious principles." In it there is no discrimination in favour of Protestants as in the earlier instrument.

The law states that the state preserves the rights of worldly employment or business, except works of necessity or charity, on Sunday. Oaths are administered to all witnesses in courts of justice either by the ceremony of the uplifted hand or on the Bible, except where one declares himself, for conscientious reasons, to be scrupulous concerning the taking of an oath, in which case his solemn affirmation or declaration is accepted. Blasphemy and profanity are prohibited by statute and punishable by fine, while perjury is punished by fine and imprisonment, besides disqualification afterwards on the part of the person convicted to give evidence in any court of justice. The sessions of the Legislature are, through custom, opened by prayer. Caution is required by or before any judge, justice of the peace, or other magistrate administering any oath or legislature. The judge shall be delivered to the said religious society, institution, or organization, or any officer thereof. In Chapter 274 of the Laws of 1910, which makes such licences necessary, it is provided that "nothing in this act contained shall be deemed or taken to render any common law or other marriage, otherwise lawful, invalid by reason of the failure to take out a licence as is herein provided."

With certain limitations, decrees of nullity of marriage may be rendered in all cases, when (1) either of the parties has another wife or husband living at the time of a second or other marriage, (2) the parties are within the degrees prohibited by law, (3) the parties, or either of them, are at the time of marriage physically and incurably impotent, (4) the parties, or either of them, were, at the time of the marriage incapable of consenting thereto, and the marriage has not been subsequently ratified, (5) at the suit of the man, when she was under the age of sixteen years at the time of the marriage, unless such marriage be confirmed by the suit arriving at the marriage, (6) (a) after arriving at the marriage, when she was under the age of eighteen at the time of the marriage, unless such marriage be confirmed by the suit arriving at such age. The decree of nullity of marriage does not render illegal the

Chase, and hold lands, legacies, donations, and other personal property to an amount not exceeding $3000 a year (exclusive of the church edifices, school-houses, parsonages, and lands or other property belonging to the church or erected), and burying-places. The religious corporation may grant and dispose of its real and personal property; but all proceedings, orders, and acts must be those of a majority of the corporation, and not of a less number, and to be valid must receive the sanction of the bishop. Under an Act of the Legislature approved on 11 April, 1908, any Roman Catholic diocese may become a corporation, and be able unlimitedly to acquire and hold real and personal property. The legal corporate title of the Newark diocese is "The Roman Catholic Diocese of Newark"; that of the Trenton Diocese is "The Diocese of Trenton." Church property is exempt from taxation; parsonages and other lands, where the clergymen live, are exempt from taxation; and the lands wherein they stand, are exempt from an amount not exceeding $5000.

Marriage and Divorce.—A revision of the statutes relating to marriage, enacted in 1910, empowers the following officers to perform marriages between such persons as may lawfully enter into the matrimonial relation: the mayor, or his deputy, the pastor of the church, the president of the supreme court, the chancellor and each vice-chancellor, and each judge of the court of common pleas and justice of the peace, recorder and police justice, and mayor of a city, and every "stated and ordained minister of the gospel"; and "every religious society, institution or organization in this State may join together in marriage the person in said society, or when one of such persons is a member of such society, according to the rules and customs of the society, institution or organization to which they or either of them belong." The same act renders absolutely void any marriage within the following prohibited degrees of relationship: "A man shall not marry any of his ancestors or descendants, or of his sister, or the daughter of his brother or sister, or the sister of his father or mother, whether such collateral kindred be of the whole or half blood. A woman shall not marry any of her ancestors or descendants, or her brother, or the son of her brother or sister, or the brother of her father or mother, whether such collateral kindred be of the whole or half blood." Since 1 July, 1910, it is necessary for persons intending to be married to obtain first a marriage licence and deliver the same to the clergyman, magistrate, or person who is to officiate, before the proposed marriage can be lawfully performed; but, if the marriage is to be performed by a priest or minister of the gospel, or clergyman, or organization, the licence shall be delivered to the said religious society, institution, or organization, or any officer thereof. In Chapter 274 of the Laws of 1910, which makes such licences necessary, it is provided that "nothing in this act contained shall be deemed or taken to render any common law or other marriage, otherwise lawful, invalid by reason of the failure to take out a licence as is herein provided."
issue of any marriage so dissolved, except where the marriage is dissolved because either of the parties had another wife or husband living at the time of a second or other marriage. Such marriage shall be deemed void from the beginning, and the issue thereof shall be illegitimate. The grounds for absolute divorce are: (1) adultery; (2) wilful, continued, and obstinate desertion for a term of two years; (3) desertion et thoro may be decreed for (1) adultery; (2) wilful, continued, and obstinate desertion for the term of two years; (3) extreme cruelty in either of the parties. In all cases of divorce a mensa et thoro, the court may decree a separation for ever thereafter, or for a limited time, with a provision that, in case of a reconciliation at any time thereafter, the parties may apply for a restoration of the decree, and upon such application the Court shall make such order.

Wills.—All persons of sound mind and of the age of twenty-one years are legally competent to dispose of property by will. No specific form of words is necessary in a will, but the testator must state in the document that it is his will; and it must be signed, and declared or published, by the testator as his will in the presence of at least two subscribing witnesses. The witnesses must sign in the presence of the testator, and in the presence of each other. A codicil to a will must be made and executed with the same requirements as a will, regarding declaration of its character, signature of witnesses. Wills are legal under some rare circumstances, as in cases of sudden dangerous sickness or accident, in the presence of at least three competent witnesses, and at the request of the person about to die. Devises and bequests may be validly made for charitable and religious purposes and to religious societies.

The parochial corporation statute enables church corporations to hold title to "burying places," and the Diocesan Corporation Act of 1908 makes the diocesan corporation "capable unlimitedly" of acquiring and holding "leases, legacies, devises, moneys, donations, goods and chattels of all kinds, church edifices, school houses, college buildings, seminaries, parsonages, Sisters' houses, hospital, or phan asylum, reformatories and all other kinds of religious, ecclesiastical, educational and charitable institutions, and the lands whereon the same are, or may be erected, and cemeteries or burying places and any lands, tenements and hereditaments suitable for any or all of said purposes, in any place or places in any state or the several parts thereof, to lease, sell, grant, demise, alien and dispose of; . . . to exercise any corporate powers necessary and proper to the carrying out of the above enumerated powers, and to the carrying out of the purposes of such corporation and its institutions."

Education.—A single little Dutch school in Bergen (now Jersey City) in 1662 marked the beginning of the free public school system in New Jersey. That was almost two hundred and fifty years ago and since that time the schools have increased gradually in number and size until, according to the New Jersey School Report of 1909, there are now 2,052 public schools in New Jersey, with a total school capacity of 626,719. The total value of the school property is estimated at $33,900,466.00. There are 11,235 teachers employed, of which 1250 are men and 9985 are women. These receive an average yearly salary of $718.40. For the school year 1908-9 the current expenses of the schools amounted to $11,593,201; the cost of permanent improvement was $986,597, and some 5,221,122.10.

The total appropriation of $17,227,331. The total enrollment of pupils for the same year was 424,534. The state superintendent, at the head of the state department of public instruction, exercises a general supervision over the public school system of the state. He is appointed by the governor, as also is the state board of education, which consists of two members from each congressional district. The county superintendents of schools are appointed by the state board of education. This board also exercises supervision over the different state educational institutions, such for example as the normal schools. Each of the many school districts, into which the state is divided, has its own school or schools, controlled by officers, who are the voters of the district elect. In the larger towns there are superintendents or supervising principals and school-boards, appointed by the mayor.

New Jersey has two state normal schools—one at Trenton and one at Montclair. The school at Trenton was established in 1855 by an Act of the Legislature, and has in connexion with it the State Model School. The Montclair State Normal School was formally opened on 28 September, 1908. The increasing demand for professionally trained teachers, and the inability of the State Normal School at Trenton to meet it, had made another normal school necessary. At Beverly is the Farnum School, a preparatory school associated with the Newport School; at Trenton is the State School for Deaf Mutes; at Bordentown the Manual Training and Industrial School for Colored Youths; and connected with Rutgers College is the State Agricultural College. The principal institutions for higher education in New Jersey are Princeton University at Princeton (founded 1746); Stevens Institute of Technology at Hoboken; Rutgers College at New Brunswick (founded 1766); Queens College, 1766; Bordentown Female College at Bordentown; Saint Peter's College, Jersey City; Saint Benedict's College, Newark; Seton Hall College, South Orange (founded 1856). The three last-mentioned are Catholic institutions. (For full statistics concerning the Catholic schools, see the articles on the Dioceses of Newark and Trenton.)

Newman, John Henry (1801-1890), Cardinal—Deacon of St. George in Velabro, divine, philosopher, man of letters, leader of a Hungarian movement, and the most illustrious of English converts to the Church. b. in the City of London, 21 Feb., 1801, the eldest of six children, three boys and three girls; d. at Edgbaston, Birmingham, 11 Aug., 1890. Over his descent there has been some discussion as regards the paternal side. His father was John Newman, a banker, his mother Eugenia Augusta Founder, of London as engravers and paper-makers. It is stated that the name was at one time spelt Neumann; it is certain that many Jews, English or foreign, have borne it; and the suggestion has been thrown out that to his Hebrew affinities the cardinal owed, not only his cast of features, but some of his decided characteristics, especially in music, mathematics, his dislike of metaphysical speculations, his grasp of the concrete, and his nervous temperament. But no documentary evidence has been found to confirm the suggestion. His French pedigree is undoubtedly. It accounts for the religious training, a modified Calvinism, which he received at his mother's knees; and perhaps it helped towards the
"Lucid concision" of his phrase when dealing with abstruse subjects. His brother Francis William, also a writer, but wanting in literary charm, turned from the English Church to Deism; Charles Robert, the second son, was very erratic, and professed Atheism; one sister was the chief author, for Newman's early thoughts, and for his judgment on the great religious revival known as the Oxford Movement, of which he was the guide, the philosopher, and the martyr. His immense correspondence, the larger portion of which still awaits publication, cannot essentially change our estimate of one who, though subtle to a degree bordering on refinement, was also impulsive and open with his friends, as well as bold in his confidences to the public. From all that is thus known of him we may infer that Newman's greatness consisted in the union of originality, amounting to genius of the first rank, with a deep spiritual temper, the whole manifesting itself in language of perfect purity and unadulterated humanism. His system has a wide range of interest, and in a personality no less winning than sensitive. Among the literary stars of his time Newman is distinguished by the pure Christian radiance that shines in his life and writings. He is the one Englishman of that era who upheld the ancient creed with a knowledge that only theologians possessed in England, and a fervour akin to that of the saints. It is this unique combination that raises him above lay preachers de sanctitate mundi like Thackeray, and which gives him a place apart from Tennyson and Browning. In comparison with him Keble is a light of the sixth magnitude, Pusey but a devout professor, Liddon a less eloquent Laocordaire. Newman occupied in the nineteenth century a position recalling that of Bishop Butler in the eighteenth. As Butler was the Christian champion against Deism, so Newman is the Catholic apologist in an epoch of Agnosticism, and amid theories of evolution. He is, moreover, a poet, and his "Dream of Gerontius" far excels the meditative verse of modern singers by its happy combination of calm and dramatic scenes of the world behind the veil. He was brought up from a child to take great delight in reading the Bible; but he had no formed religious convictions until he was fifteen. He used to wish the Arabic tales were true; his mind ran on unknown influences; he thought life possibly a dream, himself an angel, and that his fellow-angels might be deceiving him with the semblance of a material world. He was "very superstitious", and would cross himself on going into the dark. At fifteen he underwent "conversion", though not quite as Evangelicals practise it; from works of the school of Calvin he gained definite dogmatic ideas; and he rested "in the thought that both the Fancy and the Reason are self-evident beings, myself and my Creator". In other words, personality became the primal truth in his philosophy; not matter, law, reason, or the experience of the senses. Henceforth, Newman was a Christian mystic, and such he remained. From the writings of Thomas Scott of Aston Sandford, to whom he owed much, he learned the doctrine of the Trinity, supporting each verse of the Athanasian Creed with texts from Scripture. Scott's aphorisms were constantly on his lips for years, "Holiness rather than peace", and "Growth only evidence of life". Law's "Serious Call" had on the youth a Catholic or ascetic influence; he was born to be a missionary; thought it God's will that he should lead a single life; was enamoured of quotations from the Fathers given in Milner's "Church History", and, reading Newton on the Prophecies, felt convinced that the pope was Antichrist. He had been at school at Ealing near London from the age of seven. Always thoughtful, shy, and affectionate, he took no part in games, and was the first of his set to rise early, read the Waverley Novels, imitated Gibbon and Johnson, matriculated at Trinity College, Oxford, Dec., 1816, and in 1818 won a scholarship of £50 tenable for nine years. In 1819 his father's bank suspended payment, but soon discharged its liabilities in full. Working too hard for his degree, Newman broke down, and gained in 1821 only third-class honours. But his powers could not be hidden. Oriel was then first in reputation and intellect among the Oxford Colleges, and of Oriel he was elected a fellow, 12 April, 1822. He ever felt this to be "the turning point in his life, and of all days most memorable".

In 1821 he had given up the intention of studying for the Bar, and resolved to take orders. As tutor of Oriel, he considered that he had a cure of souls; he was ordained on 13 June, 1824; and at Pusey's suggestion became curate of St. Clement's, Oxford, where he spent two years in parochial activity. And here the views in which he had been brought up disappointed him; "Calvinism was not a key to the phenomina of human nature; it had no effects on the human heart. It would not work. He wrote articles on Cicero, etc., and his first "Essay on Miracles", which takes a strictly Protestant attitude, to the prejudice of those alleged outside Scripture. But he also fell under the influence of Whately, afterwards Anglican Archbishop of Dublin, who, in 1826, made him his vice-president. In 1830, at a meeting of the Congregationalists, he was shot in the leg by a demagogue; at a meeting of the Whig Club, in 1832, he was struck by a whisk, but the man fled. He was then after his own ideas, taught him the notion of Christianitas as a social and sovereign organism distinct from the State, but led him in the direction of "liberal" ideas and nominalistic logic. To Whately's once famous book on that subject Newman contributed. From Hawkins, whom his casting vote made Provost of Oriel, he gained the Catholic doctrine of tradition and baptismal regeneration, as well as a certain precision of terms which, long afterwards, gave rise to Kingsley's misunderstanding of Newman's methods in writing. By another Oxford clergyman he was taught to believe in the Apostolic succession. And Butler's "Analogy", read in 1833, made an era in his religious opinions. A school of men is to say that this deep and searching book became Newman's guide in life, and gave rise not only to the "Essay on Development" but to the "Grammar of Assent". In particular it offered a reflective account of ethics and conscience which confirmed his earliest beliefs in a lawgiver and judge intimately present to the soul. On another line it suggested the sacramental system, or the "Economy", of which the Alexandrians Clement and St. Athanasius are exponents. To sum up, at this formative period the sources whence Newman derived his principles as well as his doctrines were Anglican and Greek, not Roman or German. His Calvinism dropped away; in time he drew from the Roman and Eastern Church, fiercely anti-Arian; and Whately saw the elements of a fresh party in the Church gathering round one whom Oriel had chosen for his intellectual promise, but whom Oxford was to know as a critic and antagonist of the "March of Mind".

His college in 1828 made him Vicar of St. Mary's (the college church), and in its pulpit he delivered the "Parochial Sermons", without eloquence or gesture, for he had no popular gifts, but with a thrilling earnestness and a knowledge of human nature seldom equalled. When published, it was said of them that they "beat all other sermons out of the market as Scott's tales beat all other stories". They were not controversial; and there is little in them to which Catholic theology would object. Their chara
tended style, fertility of illustration, and short sharp energy, have lost nothing by age. In tone they are severe and often melancholy, as if the utterance of an isolated spirit. Though grave and even tender-hearted, Newman's peculiar temper included deep reverence, but the least of his own possessions, as he was a man of impetuous thought and self-denying practice. In 1832 he quarrelled with Dr. Hawkins, who would not endure the pastoral idea which Newman cherished of his college work. He resigned his tutorship, went on a long voyage round the Mediterranean with Froude, and came back to Oxford, where on 14 July, 1833, Keble preached the Assize sermon on "National Apostasy." That day, the anniversary of the French Revolution, gave birth to the Oxford Movement.

Newman's voyage to the coasts of North Africa, Italy, Western Greece, and Sicily (Dec., 1832-July, 1833) was a romantic episode, of which his diaries have preserved the incidents and the colour. In Rome, Newman at the time of the papal catena, as mother of religion to his native land, laid a spell on him never more to be undone. He felt called to some high mission; and when fever took him at Leonforte in Sicily (where he was wandering alone) he cried out, "I shall not die, I have not sinned against the light." Off Cape Ortegal, 11 Dec., 1832, he composed one of the most passionate and original of his poems, which prophesied that the Church would yet reign as in her youth. Recalled in the Straits of Bonifacio, he sought guidance through the tender verses, "Lead, Kindly Light," deservedly treasured by all the English-speaking races. They have been called the marching song of the Tractarian host. But during the earlier stages of that journey it was not clear, even to the leader himself, in what direction they were moving—away from the Revolution, certainly. Reform was in the air: ten Irish bishops had been suppressed; disestablishment might not be far off. There was need of resistance to the enemies without, and of a second, but a Catholic, reformation within. The passive Church must somehow be restored in England.

Others met in committee and sent up an address to Canterbury; Newman began the "Tracts for the Times," as he tells us with a smile, "out of his own head." To him Achilles always seemed more than the host of the Achæans. He took his motto from the Iliad: "They shall know the difference now." Achil-les went down into battle, fought for eight years, won victory upon victory, but was defeated by his own weapons when "Tract 90" appeared, and retired to his tent at Littlemore, a broken champion. Nevertheless, he had done a lasting work, greater than Laud's and Cowley's. If what Newman had resuscitated the Fathers, brought into relief the sacramental system, paved the way for an astonishing revival of long-forgotten ritual, and given the clergy a hold upon thousands at the moment when Erastian principles were on the eve of triumph. "It was so soon after 1830," says Pattison grimly, "that the Tracts desolated Oxford life." Newman's position was designated the Via Media. The English Church, he maintained, lay at an equal distance from Rome and Geneva. It was Catholic in origin and doctrine; it anathematised as heresies the peculiar tenets whether of Calvin or Luther; it could not but protest against "Roman corruptions," which were recurrences on primitive Oxford life." Newman's position was designated the Via Media. The English Church, he maintained, lay at an equal distance from Rome and Geneva. JOHN HENRY CARDINAL NEWMAN

PAINTING BY W. W. OULESS—ETCHING BY P.-A. RASON
Two names are associated with a change so momentous—Wiseman and Ward. The "Apologia" does full justice to Wiseman; it scarcely mentions Ward (see Oxford Movement). Those who were looking on might have predicted a collision between the Tractarians and Protestant England, which had forgotten the Caroline divines. This came about on occasion of the Tract 90. It was the least interesting of all Newman's publications. The tract was interdicted to keep stragglers from Rome by distinguishing the corruptions against which the Thirty-Nine Articles were directed, from the doctrines of Trent which they did not assail. A furious and universal agitation broke out in consequence (Feb., 1841). Newman was denounced as a traitor, a Guy Fawkes at Oxford; the University authorities made a mistake in the case and called the tract "an evasion," Dr. Bagot, Bishop of Oxford, mildly censured it, but required that the tracts should cease. For three years condemnations from the bench of bishops were scattered broadcast. To a mind constituted like Newman's, imbued with Ignatian ideas of episcopacy, and unwilling to perceive that they did not avail in the English Establishment, this was an ex cathedra judgment against him. He stopped the tracts, resigned his editorship of "The British Critic," by and by gave up St. Mary's, and retired at Littlemore into lay communion. Nothing is clearer than that, if he had held on quietly, he would have had a wider day. "Tract 90" did go so far as many Anglicans attempt at reconciliation since. The bishops did not dream of coercing him into submission. But he had lost faith in himself. Reading church history, he saw that the Via Media was no new thing. It had been the refuge of the Semarians, without whom Arias could never have flourished. It made the fortune of the Monophysites; it preserved the Church of Alexandria out of the snare and fallen a prey to Mohammed's legions. The analogy which Newman had observed with Dispensary being enforced from another side by Wiseman, writing on the Donatists in "The Dublin Review." Wiseman quoted St. Augustine, "Securus judicat orbis terrarum," which may be interpreted "catholic consent is the judge of controversy." Not antiquity studied in books, not the bare succession of bishops, but the living Church now broke upon him as alone peremptory and infallible. It ever had been so; it must be so still. Nicea, Ephesus, and Chalcedon thus bore witness to Rome. Add to this the grotesque story of the bishops' largesse to the fruit of an alliance with Lutheran Prussia, and the Anglican theory was disproved by facts.

From 1841 Newman was on his death-bed as regarded the Anglican Church. He and some friends lived together at Littlemore in monastic seclusion, under a hard rule which did not improve his delicate health. In February, 1843, he extracted in a local newspaper his severe language towards Rome; in September he resigned his living. With immense labour he composed the "Essay on the Development of Christian Doctrine," in which the apparent variations of dogma, formerly objected by him against the Catholic Church, were explained on a theory of evolution, curiously anticipating on certain points the great work of Darwin. It has many original passages, but remains a fragment. On 9 Oct., 1845, during a period of excited action at Oxford, Newman was received into the Church by Father Dominic, an Italian Passionist, three days after Renan had broken with Saint-Sulpice and Catholicism. The event, although long foretold, found the world and the Church by. Its importance was felt; its causes were not known. Hence an estrangement which only the exquisite candour of Newman's self-delineation in the "Apologia" could entirely heal.

His conversion divides a life of almost ninety years into equal parts—the first more dramatic and its perspective ascertained; the second as yet imperfectly told, but spent for a quarter of a century sub luce magnam, under suspicion from one side or another, his plans thwarted, his motives misconstrued. Called by Wiseman to Oscott, near Birmingham, in 1846, he proceeded in October to Rome, and was there ordained by Cardinal Fransoni. The Pope approved of his scheme for establishing in England the Oratory of St. Philip Neri; in 1847 he came back, and, besides setting up the London house, took mission work in Birmingham. Thence he moved out to Edgbaston, where the community still resides. A large school was added in 1858. The spacious Renaissance church, consecrated in 1858, is a memorial of the forty years during which he made his home in that place. After his "Sermons to Mixed Congregations," which exceed in vigour and irony all others published by him, the Oratorian recluse did not strive to gain a footing in the capital of the Midlands. He always felt "paucorum honorum sum"; his charm was not for the multitude. As a Catholic he began enthusiastically. His "Lectures on Anglican Difficulties" were heard in London by large audiences; "Loss and Gain," though not much of a story, abounds in happy strokes and personal touches; "Callista" recalls his voyage in the Mediterranean by many delightful pages; the sermon at the Synod of Oscott entitled "The second Spring" has care and delicate touches which any reader may know it by heart. "When Newman made up his mind to join the Church of Rome," observes R. H. Hutton, "his genius bloomed out with a force and freedom such as it never displayed in the Anglican communion." And again, "In irony, in humour, in eloquence, in imaginative force, the writings of the later years, as we may call them, by far surpass the writings of his theological apprenticeship." But English Catholic literature also gained a persuasive voice and a classic dignity of which hitherto there had been no example.

His own secession, preceded by that of Ward (amicable conflicts of the angriest kind at Oxford), and followed by many others, had alarmed Englishmen. In 1850 came the "Papal Aggression," by which the country was divided into Catholic sees, and a Roman cardinal announced from the Flaminian Gate his commission to "govern" Westminster. The nation went mad with excitement. Newman delivered in the Corn Exchange, Birmingham, his "Lectures on the Position of England in the Universal Church" (he wrote them from start to finish and, to George Eliot's amazement, they revealed him as a master of humorous, almost too lively sketches, witty and scornful of the great Protestant tradition. An apostate Italian priest, Achilli, was haranguing against the Church. Prompted by Wiseman, the Oratorian gave particulars of this man's infamous career, and Achilli brooded over the charge of libel. Newman, at enormous expense, collected evidence which fully justified the accusations he had made. But a no-papery jury convicted him. He was fined £100; on appeal, the verdict was quashed; and "The Times" admitted that a miscarriage of justice had taken place when Newman was declared guilty. Catholics all the world over came to his relief. His thanks are on record in the dedication of his Dublin "Lectures." But he always remembered that to Wiseman's haste and carelessness he owed this trial.

There was much more trouble awaiting him. The years from 1851 to 1870 brought disaster to a series of noble projects in which he aimed at serving religion and the Church. He was expelled from the Congregation of the "Godless" colleges in 1847, to undertake a university of their own. Neither men nor ideas were forthcoming; the State would not sanction degrees conferred by a private body; nevertheless, an attempt could be made; and Newman was appointed rector, November, 1851. Three years passed...
as in a dream; in 1854 he took the oath. But he had, in 1852, addressed Ireland on the "Idea of a University" with such a largeness and liberality of view as Oxford, if we may believe Pattison, had never taught him. The "Lectures" end abruptly; they gave him less satisfaction than any other of his works; yet, in conjunction with his brilliant short papers in the "University Magazine", and academic dissertations to the various "Schools" they exhibit a range of thought, an urbanity of style, and a pregnant wit, such as no living professor could have rivalled. They are the best defence of Catholic educational theories in any language; a critic perhaps would describe them as the Via Media between an obscurantism which tramples on the rights of knowledge and a Free-Thought which will not hear of any limitation. He died in 1854, in poverty and melancholy; they defended the teaching of the classics against a French Puritan clique led by the Abbé Gaume. This was pretty much all that Newman achieved during the seven years of his "Campaign in Ireland". Only a few native or English students attended the house in St. Stephen's Green. The bishops were divided, and Archbishop MacHale opposed a severe non possumus to the rector's plans. In administration difficulties sprang up; and though Newman won the friendship of Archbishop Cullen and Bishop Moriarty, he was not always treated with due regard. The status of titular bishop had been promised him; for reasons which he never learnt, the promise fell through. His feeling toward the Church and the world became more and more acute; but at 1858, he retired from the rectorship. Its labours and anxieties had told upon him. Another large enterprise, to which Cardinal Wiseman invited him only to balk his efforts, was likewise a failure—the revision of the English Catholic Bible. Newman had selected a company of revisors and had begun to accumulate material when a small publishing house pleaded on the other side, and Wiseman, whose intentions were good, but evanescent, allowed them to wreck this unique opportunity.

During the interval between 1854 and 1860 Newman had passed from the convert's golden favours into a state which resembled criticism of prevailing methods in church government and education. His friends included some of a type known to history as "Liberal Catholics". Of Montalembert and Lacordaire he wrote in 1864: "In their general line of thought and conduct I enthusiastically concur and consider them to be before their age." He speaks of "the unchildish aims, the thwarted projects, the unquenchable manly aspiration found in their "Lettres"...". That moving description might be applied to Newman himself. He was intent on the problems of the time and not alarmed at Darwin's "Origin of Species". He had been made aware by German scholars, like Acton, of the views entertained at Munich; and he was keenly sensitive to the difference between North and South and the delicate questions of policy or discipline. He looked beyond the immediate future; in a lecture at Dublin on "A Form of Infidelity of the Day" he seems to have anticipated what is now termed "Modernism", condemning it as the ruin of dogma. It is distressing to imagine what Newman's horror would have been, had his intuition availed to tell him that, in little more than half a century, a "form of infidelity" so much like what he predicted would claim him as its originator; on the other hand, he would surely have taken comfort, could he also have foreseen that the soundness of his faith was to be so vindicated as it has been by Bishop O'Dwyer, of Limerick, and above all, the vindication so approved of by his apostolic successors. In March, 1908, to that bishop. In another lecture, on "Christianity and Scientific Investigation", he provides for a concordat which would spare the world a second case of Galileo. He held that Christian theology was a deductive science, but physics and the like were inductive; therefore collision between them need not, and in fact did not really occur. He resisted in principle the notion that historical evidence could do away with the necessity of faith as regards creeds and definitions. He deprecated the intrusion of amateurs into divinity; but he was anxious that laymen should take their part in the movement of intellect. This led him to encourage J. M. Capes in founding the "Rambler" and H. Wilberforce in editing the "Westminster Review". But likewise it brought him face to face with a strong reaction from the earlier liberal policy of Pius IX. This new movement, powerful especially in France, was eagerly taken up by Ward and Manning, who now influenced Wiseman as he sank under a fatal disease. Their quarrel with J. H. N. (as he was then generally called) was not quite ended, but it was bated; but much embittered correspondence is left which proves that, while no point of faith divided the parties, their dissensions threw back English Catholic education for thirty years.

These misunderstandings turned on three topics:—the "scientific" history which was cultivated by the "Rambler", with Newman's partial concurrence; the proposed oratory at Oxford; and the temporal power, then at the crisis of its fate. Newman's editorship of the "Rambler", accepted, on request of Wiseman, by way of compromise, lasted only two months (May—July, 1859). His article, "On Consulting the Laity in Matters of Doctrine", was denounced with horror at Rome, but nothing was done. Wiseman's residence in Menevia. Leave was given for an Oratorian house at Oxford, provided Newman did not go thither himself, which defeated the whole plan. A sharp review of Manning's "Lectures on the Temporal Power" was attributed to Newman, who neither wrote nor inspired it; and these two illustrious Catholics were never again clearly to their interest; but they were not temporally powerful; his fears were justified; but prevision and the politics of the day could not well be united. Of all Christians then living this great genius had the deepest insight into the future; but to his own generation he became as Jeremiah announcing the fall of Jerusalem. Despondency was his prevailing mood when, in January, 1864, from an unexpected quarter, the chance of his life was given him. Charles Kingsley, a bold, picturesque, but fiercely anti-Catholic writer, dealing, in"Macmillan's Magazine", with J. A. Froude's "History of England", let fall the remark that "Truth, for its own sake, had never been a virtue with the Roman clergy. Father Newman sometimes suggests that it is God's will that involves not to be; that cunning is the weapon which heaven has given to the Saints wherein to withstand the brute male force of the wicked world which marries and is given in marriage. Whether his notion be doctrinally correct or not, it is at least historically so." These assertions had no foundation whatever in fact. Newman demanded formal acknowledgment of the Oxford sermons generally; he withdrew his charge in terms that left its injustice unreproved; and thus he brought on himself, in the pamphlet which his adversary published, one of the most cutting replies, ironical and pitiless, known to literature. He returned to the assault. "What then does Dr. Newman mean?" was his question. The answer came in the shape of an "Apologia pro Vita sua", which, while pulverizing enemies of the Kingsley stamp, lifted Newman to a height above all his detractors, and added a unique specimen of religious autobiography to our language. Issued in seven parts, between 21 April and 2 June, 1864, the book was worked at as of old in the Abbey of St. Mary de Moot, in London, under the direction of Father Lane, who was its editor. Materials in expectation of some such opportunity had been collecting since 1862. But the duel which led up to an account of Newman's most intimate feelings exhibited sword-play the like of which can be scarcely found outside Pascal's "Provincial
Letters" and Lessing's "Anti-Goeze". It annihilated the opponent and his charge. Not that Newman cherished a personal animosity against Kingstaley, whom he had never met. His tone was determined by a sense of what he owed to his own honour and the Catholic priesthood. "Away with you, Mr. Kingstaley, and fly into space!", were his parting words to a man who was not the more conciliary thing in the world to encounter. Then the old Tractarian hero told the story of his life. He looked upon it with the eye of an artist, with self-knowledge like that of Hamlet, with candour, and pathos, and awe; for he felt a guiding power throughout which had brought him home. The handling was unaffected, the portraits of Oxford celebrities true and lusty, the line sharp and dry. In 1848, "it is interesting to see and to ponder on the conquering of place and power at St. Mary's moved on with a tragic interest. His brief prologues are among the jewels of English prose. A word from St. Augustine converted him, and its poignant effects could not be surpassed in the "Confessions" of the saint himself. The soliloquy, as we may term it, which describes Newman's attitude since 1845, presents in a lofty view his apology, which is not a surrender, to those Catholics who mistrusted him. Though he never would discuss the primary problems of Theism ex professo, he has dwelt on the apparent chaos of history, goodness defeated and mortal efforts futile, with a piercing eloquence which reminds us of some lament in Shakespeare. Newman teaches that in the struggle of the ages, the victors are not the men who are to be dealt with the greatest, but that there is a principle and power with a will, a resolve to stand by experience; and a subtlety of expression corresponding to his fine analysis. He believed in "implicit" logic, varied and converging proofs, indirect demonstration (ex impossibili or ex absurdo) a assent, in short, in not a mechanical echo of the age but an echo of a new world, which his faith had revealed in its journey towards the old faith wherein lay the charm that drew it on. Reality became more fascinating than romance, the problem which staggered Protestants and modern minds—how to reconcile individual genius with tradition, private judgment with authority—was resolved in Newman's great example.

Amid acclamation from Catholics, echoing the "aves vehement" of the world outside, he turned to the philosophy which would justify his action. He began the "Grammar of Assent". Still, Manning, now archbishop, Talbot, chamberlain of Pius IX, W. E. Gladstone, dispassionate, polemics and technical arguments, a living soul had revealed in its journey towards the old faith wherein lay the charm that drew it on. Reality became more fascinating than romance, the problem which staggered Protestants and modern minds—how to reconcile individual genius with tradition, private judgment with authority—was resolved in Newman's great example.

Under these impressions he sent to his bishop, W. B. Ullathorne, a confidential letter in which he branded, not the Fathers of the Council, but the journalists and other partisans outside who were abounding in violent language, as "an insolent and aggressive faction". The letter was surreptitiously made public; a heated controversy ensued; but Newman took no further part in it. That was one of the most difficult matters of the dogmatic definitions; and in 1874 he defended the Church against Gladstone's charge that "Vaticanism" was equivalent to the latest fashions in religion (see his "Letter to the Duke of Norfolk"). Newman's demeasure towards authority was ever one of submission; but, as he wrote to Phillips de Gray the Queen's Serjeant, he "defended the Church, with sympathy with parties, or extreme opinions of any kind. In recommending the Creed he would employ "a wise and gentle minimisation", not extenuating what was true but setting down nought in malice. The "Grammar of Assent" illustrates and defends this method, in which human nature is not left out of account. It is curiously Baconian, for it eschews abstractions and metaphysics, being directed to the problem of concrete affirmation, its motives in fact, and its relation to the personality of the individual. This hitherto unexplored province of apologetics lay dark, while the objective reasons for assent had engaged attention; we might term it the casuistry of the future. Newman wrote that it "is in all acquaintance with the human heart, which has its own; a resolve to stand by experience; and a subtlety of expression corresponding to his fine analysis. He believed in "implicit" logic, varied and converging proofs, indirect demonstration (ex impossibili or ex absurdo) a assent, in short, in not a mechanical echo of the age but an echo of a new world, which his faith had revealed in its journey towards the old faith wherein lay the charm that drew it on. Reality became more fascinating than romance, the problem which staggered Protestant and modern minds—how to reconcile individual genius with tradition, private judgment with authority—was resolved in Newman's great example.

As a sequel and crown to the "Development" this often touching volume (which reminds us of Pascal) completes the author's philosophy. Some portions of it he is said to have written ten times, the last chapter many times more. Yet that chapter is already in part antiquated. The general description, the history of, for instance, several centuries, is not all objections. How far it bears on Kant's "Practical Reason" or the philosophy of the will as developed by Schopenhauer, has yet to be considered. But we must not torture it into the "pragmatism" of a later day. As Newman held by dogma in revelation, so he would never have denied that the mind enjoys a vision of truth founded on reason. He was a mystic, not a sceptic. To him the reason by which he judged himself was "implicit" rather than "explicit", but reason nevertheless. Abstractions do not exist; but the world is a fact; our own personality cannot be called in question; the will is a true cause; and God reveals Himself in conscience. Apologetics, to be persuasive, should address the individual; for real assents, however multiplied, are each single existences. Even a universal creed becomes in this way a private acquisition. As the "Development" affords a counterpart to Bossuet's "Variations", so the "Grammar" may be said to have reduced the "personal equation" in controversy to a working hypothesis, whereas in Protestant hands it had served the purposes of anarchy.

For twenty years Newman lay under imputations at Rome, which misconstrued his teaching and his character. This, which has been called the ostracism of a saintly genius, undoubtedly was due to his former friends, Ward and Manning. In February, 1878,
Plutarch died; and, by a strange conjunction, in that same month Newman returned to Oxford as Honorary Fellow of Trinity College, "dear to him from undergraduate days". The event provoked Catholics to emulation. Moreover, the new pope, Leo XIII, had also lived in exile from the Curia since 1846, and the Virgilian sentiment "Haud ignara malo" would come home to him. The Duke of Norfolk and other English peers approached Cardinal Manning, who submitted their strong representation to the Holy See. Pope Leo, it is alleged, was already considering how he might distinguish the aged Oratorian. He intimated, accordingly, in February, 1879, his intention of bestowing on Newman the cardinal's hat. The message affected him to tears, and he exclaimed that the cloud was lifted from him forever. By singular ill-fortune, Manning understood certain delicate phrases in Newman's reply as declining the purple; he allowed that statement to appear in "The Times", much to everyone's confusion. However, the end was come. After a hazardous journey, and in broken health, Newman arrived in Rome. He was created Cardinal-Deacon of the Title of St. George, on 12 May, 1879. His higher speech, equal to the occasion in grace and wisdom, declared that he had been the life-long enemy of Liberalism, or "the doctrine that there is no truth in religion, but that one creed is as good as another", and that Christianity is "but a sentiment and a taste, not an objective fact, not miraculous".

Hitherto, in modern times, no simple priest, without duties in the Roman Curia, had been raised to the Sacred College. Newman's elevation, hailed by the English nation and by Catholics everywhere with unexampled enthusiasm, was rightly compared to that of Beatrizar after the Council of Florence. It broke down the wall of partition between Rome and England. To the many addresses which poured in upon him the cardinal replied with such point and felicity as often made his words gems of literature. He had revised all his writings, the last of which dealt somewhat tentatively with Scripture problems. Now his hand would serve him no more, but his mind kept its clearness always. In "The Dream of Gerontius" (1865), which had been nearly a lost masterpiece, he anticipated his dying hours, threw into concentrated, almost Dantean, verse and imagery his own beliefs as suggested by the Offices of Requiem, and looked forward to his final pilgrimage, "alone to the Alone". Death came with little suffering, on 11 Aug., 1890. His funeral was a great public event. He lies in the same grave with Ambrose St. John, whom he called his "life under God for thirty-two years". His device as cardinal, taken from St. Francis de Sales, was Cor ad cor loquitur (Heart speaketh to heart); it reveals the secret of his eloquence, unaffected, graceful, tender, and penetrating. On his epitaph we read: Ecce umbrae et imaginibus invisibilis (From shadows and symbols into the truth); it is the doctrine of the Economy, which goes back to Plato's "Republic" (bk. VII), and which passed thence by way of Christian Alexandria into the philosophy of St. Thomas Aquinas, the poetry of the Florentine, and the schools of Oxford. John Henry Newman thus continues in modern literature the Catholic tradition of East and West, sealing it with a martyr's faith and suffering, steadfast in loyalty to the truth, while discerning with a prophet's vision the task of the future.

As a writer of English prose Newman stands for the perfect embodiment of Oxford, deriving from Cicero the lucid and leisurely art of exposition, from the Greek tragedians a thoughtful refinement, from the Fathers a preference for personal above scientific teaching, from Shakespeare, Hooker, and that older school the use of idiom at its best. He refused to acquire German; he was unacquainted with Goethe as with Hegel; he took some principles from Coleridge, perhaps indirectly; and, on the whole, he never went beyond Aristotle in his general views of education. From the Puritan narrowness of his first twenty years he was delivered when he came to know the Church as essential to Christianity. Then he enlarged that conception till it became Catholic and Roman, an historical idea realised. He made no attempt, however, to widen the Oxford basis of learning, dated 1830, which remained his position, despite continual reading and study. The Scholastic theology, except on its Alexandrian side, he left untouched; there is none of it in his "Lectures", none in the "Grammar of Assent". He wrote forcibly against the shallow enlightenment of Brougham; he printed no word concerning Darwin, or Huxley, or even Celsus. He lamented the fall of Dollinger; but he could not acquiesce in the German idea by which, as it was in fact applied, the private judgment of historians overruled the Church's dogmas. Conscience to him was the inward revelation of God, Catholicism the outward and objective. This twofold force he opposed to the agnostic, the rationalist, the mere worshipping. But he seems to have thought men premature who undertook a positive reconciliation between faith and science, or who attempted by a vaster synthesis to heal the modern conflicts with Rome. He left that duty to a later generation; and, though by the principle of development and the philosophy of concrete assent providing room for it, he did not contribute towards its fulfilment in detail. He will perhaps be known hereafter as the Catholic Bishop Butler, who extended the "Analogy" drawn from experience to the historical Church, proving it thus to be in agreement with the nature of things, however greatly transcending the visible scheme by its message, institutions, and purpose, which are alike supernatural.

The best authorities on Newman are his own writings: Collected Works (36 vols., popular ed., London, 1885); My Campus in Ireland (London, 1858); Meditations and Devotions (London, 1885); Addresses and Replies (London, 1906) (the last three posthumous, ed. by Neville); Letters and Correspondence (1855). E.g. ANNE MOSLEY (London, 1891). See also monographs by Hutton (London, 1891); BARRY (London, 1904); Baxendall (Paris, 1907); Lilly in Dict. of Nat. Biography, s. v.; and useful: Wilphord Ward, W. H. Ward and the Oxford Movement (London, 1889); IORM, Life and Times of Cardinal Newman (London, 1897); Purcell, Life and Writings of Newman (London, 1895); DE Lisle and Purcell, Life and Times of Ambrose Philipps de Lisle (London, 1900); Garskett, Lord Adon and his Order (London, 1898); with caution T. MOSLEY, Reminiscences of Newman (London, 1892). See also bibliography under Oxford Movement.
